

Tethyan Paleocene-Eocene Larger Foraminifera Biostratigraphy: Shallow Benthic Zones

Josep Serra-Kiel, Lukas Hottinger, Esmeralda Caus, Katica Drobne, Carles Ferrández, Anil Kumar Jauhri, György Less, Raiko Pavlovec, Johannes Pignatti, Josep Maria Samsó, Hans Schaub, Erçument Sirel, Amin Strougo, Yvette Tambourau, Josep Tosquella & Elena Zákravská

Version March 1998

Pa & Po

The Shallow Benthic foraminiferal biozones (SBZ) presented here are, in part, the results of the IGCP Projects No. 286 *Early Paleogene Benthos*, and No. 393 *Neritic Events at the Middle-Upper Eocene boundary*, and have been published in a previous paper (Serra-Kiel et al., 1998: Bull. Soc. Géol. Fr., vol. 169, no. 2).

These SBZ biozones cover the Paleocene and Eocene time span from the eastern shores of the Atlantic (Poris and Pyrenean basins) to the central part of the Tethys (India). Basically, they are derived from species ranges observed in many lithostratigraphic sections in the Pyrenean realm, Swiss and Austrian Alps (Schlieren and Gurnigellfisch), various sequences in the Helvetic units, Northern Italy (Verona, Vicenza), Adriatic and Gargano platforms, Crimean Peninsula, Hoymans Basin (Central Anatolia), Nammal Gorge (Pakistan) and Tereria (India).

The SBZ foraminiferal biozonation is the outcome of a revision of the classical biozonation based on Paleocene-Eocene alveolinids, *Assilina* and *Nummulites*, established in the early 1960's by Lukas Hottinger and posteriorly updated by Hans Schaub, Lukas Hottinger, and Katica Drobne. Their typologically-defined biozones, which are in principle oppelzonen, are composite (or concurrent-range) zones, based on faunal assemblages of both concurring and mutually exclusive species from key-localities and key-levels, each of which occupies a definitive chronostratigraphic position. In the resulting discrete biozonation, these biozones are non-contiguous, separated by intervals and not by boundaries; the key-locality assemblages represent the central point of each biozone. They must reflect objective, repeatedly observed breaks in faunal assemblages since many deposits rich in larger foraminifera are often formed in a transgressive context and are separated by relatively long sedimentary hiatuses. Due to their integrated nature

and their ties with the stratotypes of several Paleogene stages, these typologically-defined biozones proved to be quite stable. Various correlations allowed them to be correlated to standard zonations based on planktic microfossils. Moreover, because these biozones are in fact oppelzonen, they are not simple biostratigraphic zones, but possess chronostratigraphic value.

In addition to nummulitids and alveolinids, in the last decades much interest has focused on the taxonomy and biostratigraphy of other Paleogene larger foraminifera from various neritic facies, among which are orthophragmiform, rotaliiform, larger miolid, and conical and discoidal agglutinated species.

In the light of the impressive body of evidence on the Paleogene larger foraminifera, it seemed to proceed feasible one step further in their biozonation, through a critical survey of their first and last occurrences in various neo-Tethyan basins. The present attempt fully incorporates the past twenty years of research into its methodology. Each SBZ biozone corresponds to the Total Range Zone of some larger foraminifera taxa, and is defined using integrated evidence on multiple first appearances (FA's) and last occurrences (LO's) of taxa from all available neritic paleoenvironments, correlated to magnetostratigraphy, which are in turn correlated to standard planktic microfossil biozonations. This correlation is based on data from the authors and from the literature, and is susceptible to be modified as new data will be available.

This chart corresponds to the correlation of the SBZ with the Paleocene-Eocene Time Scale elaborated by Berggren, Kent, Swisher and Aubry (1995: SEPM Spec. Pub., 54), including the Ilerian and Cuisian stages, and the Span Time Boundary for the Paleocene-Eocene boundary according to Molina et al. (1992: Rev. Micropal., 35).

Shallow Benthic Zones (SBZ)

- SBZ 1** (Danian) Defined by the biostratigraphic range of: *Laffiteina bibensis* and *Bangiana hansenii*. The lower boundary corresponds to the Cretaceous-Tertiary boundary.
- SBZ 2** (Seladian) Defined by the biostratigraphic range of: *Miscellanea globularis*, *Ornatonaonion minutus*, *Paralockhartia eca* and *Lockhartia akbari*.
- SBZ 3** (Early Thanetian) Defined by the biostratigraphic range of: *Glomalveolina primaeva*, *Periloculina slovenica*, *Coskinon rajkai*, *Fallotella alavensis*, *Cribrobulimina carniolica*, *Vania anatolica*, *Miscellanea yvettae*, *Pseudomiscellanea primativa*, *Ranikothalia bermudezi*, *Nummulites heberti* and *Discocyclina seuenae*.
- SBZ 4** (Late Thanetian) Defined by the biostratigraphic range of: *Glomalveolina levius*, *Hottingerina lukasi*, *Miscellanea meandrana*, *Daviesina garumnaensis*, *Dictyokathina simplex*, *Nummulites cataris*, *Assilina azilensis* and *Ass. yvettae*.
- SBZ 5** (Early Ilerdian 1) Defined by the biostratigraphic range of: *Orbitolites gracilis*, *Daviesina tenuis*, *Alveolina vredenburgi*, *A. avellana*, *A. aramaea aramaea*, *A. varians*, *Nummulites gamardensis*, *Assilina dandotica* and *Ass. prisca*.
- SBZ 6** (Early Ilerdian 2) Defined by the biostratigraphic range of: *Alveolina ellipsoidalis*, *A. daniensis*, *A. pasticciata*, *A. solida* and *Nummulites minervensis*.
- SBZ 7** (Middle Ilerdian 1) Defined by the biostratigraphic range of: *Alveolina mousoulensis*, *A. subpyrenaica*, *A. decolorata*, *A. laxa*, *Nummulites robustiformis*, *N. carcasoneensis*, *N. praecursor*, *N. obliquatus*, *Assilina arenensis* and *Orbitocyclus schophei neumannae*.
- SBZ 8** (Middle Ilerdian 2) Defined by the biostratigraphic range of: *Alveolina carbarica*, *A. recondita*, *A. brasica*, *Nummulites exilis*, *N. atacicus*, *N. globulus nanus*, *N. globulus latior*, *Assilina leymeriei* and *Ass. canalicula*.
- SBZ 9** (Late Ilerdian) Defined by the biostratigraphic range of: *Alveolina trempina*, *A. citrea*, *A. polatiensis*, *Nummulites involutus*, *Assilina adrianiensis* and *Ass. pomeroni*.
- SBZ 10** (Early Cuisian) Defined by the biostratigraphic range of: *Alveolina schwageri*, *A. indicatrix*, *A. canavarri*, *A. hoymannensis*, *A. cosinensis cosinensis*, *A. minuta*, *Nummulites planulatus*, *N. aquitanicus*, *N. burdigalensis burdigalensis*, *N. subramondi thalmanni*, *N. rotularius*, *N. pavloveci*, *N. subdistans*, *Assilina plana*, *Ass. placentula*, *Ass. aspernisi*, *Ass. karreri*, *Ass. escheri* and *Discocyclina archiaci*.
- SBZ 11** (Middle Cuisian) Defined by the biostratigraphic range of: *Alveolina doinelli*, *A. aff. canavarri*, *A. histrica histrica*, *A. decastri*, *A. cremae*, *Nummulites praevaligatus*, *N. burdigalensis cantabrica*, *N. kapelosi*, *N. escheri*, *N. nitidus*, *N. archiaci*, *Assilina laxispira* and *Discocyclina fortisimferopolensis*.
- SBZ 12** (Late Cuisian) Defined by the biostratigraphic range of: *Alveolina violae*, *A. rakoveci*, *A. azzaroli*, *A. cupisidata*, *Nummulites manfredi*, *N. angularis*, *N. campesinus*, *N. quasileavigatus*, *N. formosa*, *N. coupenensis*, *Assilina maior* and *Ass. cuvillieri*.
- SBZ 13** (Early Lutetian) Defined by the biostratigraphic range of: *Alveolina stipes*, *A. callosa*, *A. coyraisi*, *A. hottingeri*, *Nummulites laevigatus*, *N. obesus*, *N. verneilli*, *N. uranensis*, *N. lehneri*, *N. messinae*, *Assilina parva*, *Ass. tenuimarginata*, *Ass. praespira* and *Ass. spiralis*.
- SBZ 14** (Middle Lutetian 1) Defined by the biostratigraphic range of: *Alveolina munieri*, *Nummulites beneharricensis*, *N. gratus*, *N. aspernensis*, *N. hilariensis*, *N. bousaci* and *Assilina spiralis*.
- SBZ 15** (Middle Lutetian 2) Defined by the biostratigraphic range of: *Alveolina prorecta*, *Nummulites sordens*, *N. crassus*, *N. miliecaput*, *N. taveretensis*, *N. crusafonti* and *Orbitocyclus clouvellei chudeaui*.
- SBZ 16** (Late Lutetian) Defined by the biostratigraphic range of: *Nummulites herbi*, *N. deshayesi*, *N. propuschi*, *N. atricus*, *N. carpenteri*, *N. puigsecensis*, *Assilina gigantea* and *Discocyclina pulcro bolatonicus*.
- SBZ 17** (Early Bartonian) Defined by the biostratigraphic range of: *Alveolina elongata*, *A. fragilis*, *A. fusiformis*, *Nummulites brongniarti*, *N. perforatus*, *N. hottingeri*, *N. puschi*, *N. biarritzensis*, *N. lyelli* and *Discocyclina pulcro baconica*.
- SBZ 18** (Late Bartonian) Defined by the biostratigraphic range of: *Nummulites biedai*, *N. cyrenicus*, *N. vicaryi* and *N. boulengeri*.
- SBZ 19** (Early Priabonian) Defined by the biostratigraphic range of: *Nummulites fabianii*, *N. garnieri garnieri*, *N. cunialensis*, *Discocyclina pratti minor* and *Asterocyclus alicostata danubica*.
- SBZ 20** (Late Priabonian) Defined by the biostratigraphic range of: *Nummulites reticulatus*, *N. garnieri inaequalis* and *Heterostegina gracilis*.
