## CONTENTS

*Missouriensis* is the official publication of the Missouri Native Plant Society. Founded in 1979 as a non-profit corporation, the Society is devoted to the conservation and study of the plants growing wild in Missouri, to the education of the public about the significance of the native flora and its habitat, and to the publication of related information.

## GRASSES OF MISSOURI: AN ANNOTATED CHECKLIST

1

Roy E. Gereau

## Introduction

For more than half of the present century, the system of Bentham (1881), with thirteen tribes grouped into the subfamilies Panicoideae and Festucoideae, provided the conceptual basis for classification within the grass family (Poaceae), and was almost universally employed in standard manuals and floras (e.g. Hitchcock 1951, Steyermark 1963). This system was based mainly on morphological characters of inflorescences and spikelets, and, though useful for cataloging and identifying the genera, led in some cases to highly artificial associations (e.g. *Festuca* and *Eragrostis* together in the Festuceae, *Agrostis* and *Sporobolus* together in the Agrostideae). In addition to external morphology, investigations of cytology (Avdulov 1931, Stebbins 1956, Tateoka 1960), leaf anatomy (Prat 1932; Brown 1958, 1961; Metcalfe 1960), embryology (Reeder 1957, 1962), bicellular microhairs (Tateoka et al. 1959), and chloroplast ultrastructure (Johnson 1964), provided new lines of evidence for grass classification, and led to various suggestions for its reorganization (e.g. Tateoka 1957, Prat 1960, Stebbins & Crampton 1961) based on observed correlations of diverse kinds of characters. The discovery in the mid-1960s of an alternative pathway for carbon fixation in photosynthesis (Hatch & Slack 1966, Hatch et al. 1967) provided an evolutionary rationale for many of these correlations, and an even greater impetus for the recognition of natural groups of grasses based on metabolic syndromes as well as morphological similarity (Brown 1977). Gould & Shaw (1983) provided a good historical summary and a classification of the genera of grasses of the United States, in which they recognized six subfamilies. Clayton & Renvoize (1986) have produced the first comprehensive, worldwide treatment of grass genera since that of Bentham & Hooker (1883, based on Bentham 1881), in which they recognize six subfamilies worldwide and considerably reorganize the subfamilial and tribal arrangement of Gould & Shaw (1983).

The present work is a list of the members of the Poaceae known to occur in the State of Missouri, with the genera arranged according to the system of Clayton & Renvoize (1986) (page numbers following genus names refer to location in Steyermark (1963)). It includes all species reported by Steyermark (1963), a number of additional species documented by literature citations, and two previously unpublished records from the Missouri Botanical Garden Herbarium (MO). Literature citations document nearly all taxonomic and nomenclatural changes from Steyermark (1963), and equivalent names in the *Flora of Missouri* are given in brackets. Though documented as carefully as possible with the opinions and decisions of others, the names used here reflect in all cases my own best judgement as to the entities involved, and are sure to meet with disagreement in

numerous instances. "There is something here to annoy everyone; so do not bother to chastise -- think rather to improve."  
(preface, Clayton & Renvoize 1986)

## POACEAE

### SUBFAMILY ARUNDINOIDEAE

#### Tribe Aristideae

- Aristida* L. (p. 170) (three-awn grass)  
*adscensionis* L.  
*basiramea* Engelm. ex Vasey  
*dichotoma* Michaux  
 var. *curtissii* A. Gray  
 var. *dichotoma*  
*lanosa* Muhlenb. ex Elliott  
*longispica* Poiret (Allred 1985)  
 var. *geniculata* (Raf.) Fern.  
 [= var. *geniculata* sensu Steyermark  
 = *A. intermedia* Scribner & C. Ball]  
 var. *longispica*  
*oligantha* Michaux  
*purpurascens* Poiret (Allred 1986)  
 var. *purpurascens* )  
*ramosissima* A. Gray

#### Tribe Arundineae

- Arundo* L. (p. 116) (giant reed)  
*donax* L.  
*Danthonia* DC. (p. 142) (wild oat grass)  
*spicata* (L.) P. Beauv. ex Roemer & Schultes  
*Phragmites* Adans. (p. 116)  
*australis* (Cav.) Steudel (Clayton 1968) [= *P. communis* Trin.]

### SUBFAMILY BAMBUSOIDEAE

#### Tribe Bambuseae

- Arundinaria* Michaux (p. 81) (cane)  
*gigantea* (Walter) Muhlenb.

#### Tribe Brachyelytreae

- Brachyelytrum* P. Beauv. (p. 168)  
*erectum* (Roth) P. Beauv. var. *erectum*

#### Tribe Diarrheneae

- Diarrhena* P. Beauv. (p. 113) (beak grain)  
*americana* P. Beauv.

#### Tribe Oryzeae

*Leersia* Sol. ex Swartz (p. 190) (cut grass, white grass)  
*lenticularis* Michaux  
*oryzoides* (L.) Swartz  
*virginica* Willd.

*Oryza* L. (p. 190) (rice)  
*sativa* L.

*Zizania* L. (p. 193) (wild rice)  
*aquatica* L.

*Zizaniopsis* Doell & Asch. (p. 193) (water millet)  
*miliacea* (Michaux) Doell & Asch.

#### SUBFAMILY CENTOSTECOIDEAE

##### Tribe Centosteceae

*Chasmanthium* Link (p. 115) (spike grass) (Yates 1966)  
*latifolium* (Michaux) Yates [= *Uniola latifolia* Michaux]  
*laxum* (L.) Yates [= *Uniola laxa* (L.) Britton, Sterns & Pogg.]  
*sessiliflorum* (Poiret) Yates (Raveill & Taylor 1984) [= *Uniola sessiliflora* Poiret]

#### SUBFAMILY CHLORIDOIDEAE

##### Tribe Cynodonteae

*Bouteloua* Lagasca (p. 182) (grama grass)  
*curtipendula* (Michaux) Torrey  
*gracilis* (Kunth) Lagasca ex Steudel  
*hirsuta* Lagasca

*Buchloe* Engelm. (p. 184) (buffalo grass)  
*dactyloides* (Nutt.) Engelm.

*Chloris* Swartz (p. 180) (windmill grass)  
*verticillata* Nutt.  
*virgata* Swartz

*Cynodon* Rich. (p. 177) (Bermuda grass)  
*dactylon* (L.) Pers.

*Gymnopogon* P. Beauv. (p. 180) (beard grass)  
*ambiguus* (Michaux) Britton, Sterns & Pogg.

*Schedonnardus* Steudel (p. 177) (tumble grass)  
*paniculatus* (Nutt.) Trel.

*Spartina* Schreber (p. 179) (cord grass, slough grass)  
*pectinata* Link

##### Tribe Eragrostideae

*Calamovilfa* (A. Gray) Hackel ex Scribner & Southworth (p. 145)  
*longifolia* (Hook.) Scribner

*Crypsis* Aiton (p. 168) (Hammel & Reeder 1979)  
*schoenoides* (L.) Lam. [= *Helicochloa schoenoides* (L.) Host]

- Distichlis*** Raf. (p. 114) (salt grass) (Beetle 1943, 1955)  
*spicata* (L.) E. Greene  
 var. *spicata* [= *D. spicata* sensu Steyermark]  
 var. *stricta* (Torrey) Scribner [= *D. stricta* (Torrey) Rydb.]
- Eleusine*** Gaertner (p. 177) (goose grass)  
*indica* (L.) Gaertner
- Eragrostis*** Wolf (p. 103) (love grass)  
*barrelieri* Daveau (Muehlenbach 1979)  
*capillaris* (L.) Nees  
*cilianensis* (All.) Vign. ex Janchen  
*curtipedicellata* Buckley (Muehlenbach 1979)  
*curvula* (Schrader) Nees  
*elliottii* S. Watson (Muehlenbach 1979)  
*frankii* Steudel  
 (?) *glomerata* (Walter) L. Dewey  
*hirsuta* (Michaux) Nees  
*hypnoides* (Lam.) Britton, Sterns & Pogg.  
*intermedia* A. Hitchc.  
*minor* Host (Koch 1978) [= *E. poaeoides* P. Beauv. ex Roemer & Schultes]  
*multicaulis* Steudel (Muehlenbach 1979)  
*pectinacea* (Michaux) Nees (Reeder 1986)  
 var. *miserrima* (Fourn.) Reeder [= *E. arida* A. Hitchc.]  
 var. *pectinacea* [= *E. pectinacea* sensu Steyermark]  
*pilosa* (L.) P. Beauv.  
*reptans* (Michaux) Nees  
*secundiflora* C. Presl  
 subsp. *oxylepis* (Torrey) S. Koch (Muehlenbach 1969, Koch 1978) [= *E. oxylepis* (Torrey) Torrey]  
*spectabilis* (Pursh) Steudel  
*trichodes* (Nutt.) Alph. Wood
- Leptochloa*** P. Beauv. (p. 176) (sensu McVaugh 1983, Sutherland 1986; not McNeill 1979)  
*dubia* (Kunth) Nees (Muehlenbach 1979)  
*fascicularis* (Lam.) A. Gray [= *Diplachne acuminata* Nash; = *D. fascicularis* (Lam.) P. Beauv.]  
*filiformis* (Lam.) P. Beauv.  
*panicoides* (C. Presl) A. Hitchc. [= *Diplachne halei* Nash]
- Muhlenbergia*** Schreber (p. 153) (muhly)  
*asperifolia* (Nees & Meyen) Parodi  
*bushii* R. Pohl (Pohl 1969) [= *M. brachyphylla* Bush f. *brachyphylla* sensu Steyermark]  
*capillaris* (Lam.) Trin.  
*Xcurtisetosa* (Scribner) Bush (Pohl 1969) [= *M. schreberi* J. Gmelin var. *curtisetosa* (Scribner) Steyermark & Kucera]  
*cuspidata* (Hook.) Rydb.  
*frondosa* (Poiret) Fern.  
 f. *commutata* (Scribner) Fern.  
 f. *frondosa* (Pohl 1969) [= *M. brachyphylla* Bush f. *aristata* E. J. Palmer & Steyermark.; = *M. sylvatica* (Torrey) Torrey var. *sylvatica* f. *attenuata* (Scribner) E. J. Palmer & Steyermark.]  
*glabrifloris* Scribner  
*mexicana* (L.) Trin.  
 f. *mexicana*

- f. ambigua* (Torrey) Fern.  
*racemosa* (Michaux) Britton, Sterns & Pogg.  
*schreberi* J. Gmelin [= *M. schreberi* var. *schreberi* sensu Steyermark]  
*sobilifera* (Muhlenb.) Trin.  
*f. setigera* (Scribner) Deam  
*f. sobolifera*  
*sylvatica* (Torrey) Torrey [= *M. sylvatica* var. *sylvatica* f. *sylvatica* sensu Steyermark]  
*tenuiflora* (Willd.) Britton, Sterns & Pogg.  
 var. *tenuiflora* (Pohl 1969)

- Sporobolus*** R. Br. (p. 161) (dropseed)  
*airoides* (Torrey) Torrey  
*asper* (Michaux) Kunth (Riggins 1977)  
 var. *asper* [= var. *asper* sensu Steyermark; = var. *pilosus* (Vasey) A. Hitchc.]  
 var. *drummondii* (Trin.) Vasey [= var. *hookeri* (Trin.) Vasey]  
*clandestinus* (Biehler) A. Hitchc.  
*cryptandrus* (Torrey) A. Gray  
*heterolepis* (A. Gray) A. Gray  
*indicus* (L.) R. Br. (Clayton 1965) [= *S. poiretii* (Roemer & Schultes) A. Hitchc.]  
*neglectus* Nash [= *S. neglectus* var. *neglectus* sensu Steyermark]  
*ozarkanus* Fern. (Reeder 1975) [= *S. neglectus* Nash var. *ozarkanus* (Fern.) Steyermark & Kucera]  
*pyramidatus* (Lam.) A. Hitchc.  
*vaginiflorus* (Torrey ex A. Gray) Alph. Wood

- Tridens*** Roemer & Schultes (p. 118) (Tateoka 1961)  
*flavus* (L.) A. Hitchc.  
 var. *chapmanii* (Small) Shinn. [= *T. chapmanii* (Small) Chase]  
 var. *flavus* [= *T. flavus* sensu Steyermark]  
*muticus* (Torrey) Nash var. *elongatus* (Buckley) Shinn. [= *T. elongatus* (Buckley) Nash]  
*oklahomensis* (Feath.) Feath.  
*strictus* (Nutt.) Nash

- Triplasis*** P. Beauv. (p. 121) (sand grass)  
*purpurea* (Walter) Chapman

#### SUBFAMILY PANICOIDEAE

##### Tribe Andropogoneae

- Andropogon*** L. (p. 243) (beard grass)  
*elliottii* Chapman  
*gerardii* Vitman  
 var. *chrysocomus* (Nash) Fern.  
 var. *gerardii*  
*ternarius* Michaux  
*virginicus* L.

- Arthraxon*** P. Beauv. (p. 242) (Kiger 1971, van Welzen 1981)  
*hispidus* (Thunb.) Makino var. *hispidus* sensu lato [incl. var. *cryptatherus* (Hackel) Honda]

- Bothriochloa** Kuntze (bluestem)  
*bladhii* (Retz.) S. T. Blake (Dunn 1982)  
*laguroides* (DC.) Herter (Allred & Gould 1983)  
 subsp. *torreyana* (Steudel) Allred & Gould [= *Andropogon*  
*saccharoides* Swartz sensu Steyermark]
- Coelorachis** Brongn. (p. 252) (joint grass) (Clayton 1966)  
*cylindrica* (Michaux) Nash [= *Manisuris cylindrica* (Michaux)  
 Kuntze]
- Erianthus** Michaux (p. 241) (plume grass)  
*alopecuroides* (L.) Elliott  
*ravennae* (L.) P. Beauv.  
*strictus* Baldwin
- Miscanthus** Andersson (p. 241)  
*floridulus* (Labill.) Warb. ex Schumann & Lauterb.  
*sacchariflorus* (Maxim.) Hackel (*DeLozier & Gibbs 1604*, MO)  
*sinensis* Andersson (*Steyermark & Branson 132195*, MO)
- Schizachyrium** Nees (bluestem) (Gould 1967)  
*scoparium* (Michaux) Nash [= *Andropogon scoparius* Michaux]
- Sorghastrum** Nash (p. 252) (Indian grass)  
*nutans* (L.) Nash
- Sorghum** Moench (p. 248) (sorghum)  
*bicolor* (L.) Moench (deWet 1978) [incl. all cultivated species  
 & varieties]  
*halepense* (L.) Pers.
- Tripsacum** L. (p. 254) (gama grass)  
*dactyloides* (L.) L.
- Zea** L. (p. 254) (maize, corn) (Ilitis & Doebley 1980)  
*may* L. subsp. *mays*

#### Tribe Paniceae

- Brachiaria** (Trin.) Griseb. (p. 198)  
*eruciformis* (Smith) Griseb.  
*platyphylla* (Griseb.) Nash
- Cenchrus** L. (p. 240) (sandbur)  
*ciliaris* L. (DeLisle 1963) [= *Pennisetum ciliare* (L.) Link]  
*longispinus* (Hackel) Fern.
- Dichanthelium** (A. Hitchc. & Chase) Gould (Gould & Clark 1978)  
*acuminatum* (Swartz) Gould & C. A. Clark  
 var. *acuminatum* sensu lato, incl. var. *implicatum*  
 (Scribner) Gould & C. A. Clark & var. *lindheimeri*  
 (Nash) Gould & C. A. Clark; (Stephenson 1984, as var.  
*implicatum*) [= *Panicum lanuginosum* Elliott; = *P.*  
*subvillosum* Ashe]  
 var. *longiligulatum* (Nash) Gould & C. A. Clark [= *Panicum*  
*longiligulatum* Nash]  
 var. *villosum* (A. Gray) Gould & C. A. Clark [= *Panicum*  
*praecocius* A. Hitchc. & Chase; = *P. villosissimum* Nash]

- boreale* (Nash) Freckmann [= *Panicum bicknellii* Nash; = *P. calliphylloides* Ashe]
- boscii* (Poiret) Gould & C. A. Clark [= *Panicum boscii* Poiret]
- clandestinum* (L.) Gould [= *Panicum clandestinum* L.]
- commutatum* (Schultes) Gould [= *Panicum commutatum* Schultes]
- depauperatum* (Muhlenb.) Gould [= *Panicum depauperatum* Muhlenb.]
- dichotomum* (L.) Gould var. *dichotomum* [= *Panicum annulum* Ashe; = *P. dichotomum* L.; = *P. microcarpon* Muhlenb.; = *P. nitidum* Lam.]
- latifolium* (L.) Gould & C. A. Clark [= *Panicum latifolium* L.]
- laxiflorum* (Lam.) Gould [= *Panicum laxiflorum* Lam.]
- leibergii* (Vasey) Freckmann [= *Panicum leibergii* (Vasey) Scribner]
- linearifolium* (Scribner) Gould [= *Panicum linearifolium* Scribner; = *P. perlongum* Nash]
- malacophyllum* (Nash) Gould [= *Panicum malacophyllum* Nash]
- oligosanthes* (Schultes) Gould  
var. *oligosanthes* [= *Panicum oligosanthes* Schultes]  
var. *oligosanthes*
- var. *scribnerianum* (Nash) Gould [= *Panicum oligosanthes* var. *helleri* (Nash) Fern., & var. *scribnerianum* (Nash) Fern.]
- ravenelii* (Scribner & Merr.) Gould [= *Panicum ravenelii* Scribner & Merr.]
- sabulorum* (Lam.) Gould & C. A. Clark var. *thinium* (A. Hitchc. & Chase) Gould & C. A. Clark (Raveill & Taylor 1984) [= *Panicum columbianum* Scribner]
- scoparium* (Lam.) Gould [= *Panicum scoparium* Lam.]
- sphaerocarpon* (Elliott) Gould  
var. *isophyllum* (Scribner) Gould & C. A. Clark [= *Panicum polyanthes* Schultes]  
var. *sphaerocarpon* [= *Panicum sphaerocarpon* Elliott]

- Digitaria*** Haller (p. 194) (crab grass)  
*ciliaris* (Retz.) Koeler (Gould 1963, Webster 1987) [= *D. sanguinalis* (L.) Scop. var. *ciliaris* (Retz.) Parl.]
- cognata* (Schultes) Pilger (Veldkamp 1973) [= *Leptoloma cognatum* (Schultes) Chase]
- filiformis* (L.) Koeler
- ischaemum* (Schreber) Muhlenb.
- sanguinalis* (L.) Scop. [= *D. sanguinalis* var. *sanguinalis* sensu Steyermark]

- Echinochloa*** P. Beauv. (p. 232) (barnyard grass) (Gould et al. 1972)  
*colonum* (L.) Link
- crusgalli* (L.) P. Beauv.  
var. *crusgalli*  
var. *frumentacea* (Roxb.) W. Wight
- muricata* (P. Beauv.) Fern.  
var. *microstachya* Wieg. [= var. *microstachya* sensu Steyermark; = var. *occidentalis* Wieg.]  
var. *muricata* [= var. *ludoviciana* Wieg.; = var. *muricata* sensu Steyermark]
- utilis* Ohwi & Yab. (Muehlenbach 1983)

- Eriochloa*** Kunth (p. 197) (cup grass) (Shaw & Webster 1987)  
*acuminata* (C. Presl) Kunth var. *acuminata* [= *E. gracilis*

(Fourn.) A. Hitchc. var. *gracilis*]  
*contracta* A. Hitchc.

***Panicum*** L. (p. 206) (panic grass)

*anceps* Michaux  
*capillare* L.  
*dichotomiflorum* Michaux  
*flexile* (Gattinger) Scribner  
*hians* Elliott  
*miliaceum* L.  
*obtusum* Kunth  
*philadelphicum* Trin.<sup>2</sup> [= *P. gattingeri* Nash; = *P. philadelphicum* sensu Steyermark]  
*rigidulum* Nees (sensu Gould 1975) [= *P. agrostoides* Sprengel, nom. illegit.; = *P. stipitatum* Nash]  
*texanum* Buckley  
*virgatum* L.

***Paspalidium*** Stapf (McVaugh 1983)

*geminatum* (Forssk.) Stapf var. *geminatum* (Gould 1971)  
 [= *Panicum geminatum* Forssk. sensu Steyermark]

***Paspalum*** L. (p. 198)

*dilatatum* Poiret  
*dissectum* (L.) L.  
*floridanum* Michaux  
 var. *floridanum*  
 var. *glabratum* Engelm. ex Vasey  
*fluitans* (Elliott) Kunth  
*laeve* Michaux  
 var. *circulare* (Nash) Fern.  
 var. *laeve*  
 var. *pilosum* Scribner  
*pubiflorum* Rupr. ex Fourn.  
 var. *glabrum* Vasey ex Scribner  
*setaceum* Michaux (Banks 1966)  
 var. *ciliatifolium* (Michaux) Vasey [= *P. ciliatifolium* Michaux var. *ciliatifolium*]  
 var. *muhlenbergii* (Nash) D. Banks [= *P. ciliatifolium* var. *muhlenbergii* (Nash) Fern.]  
 var. *setaceum*  
 var. *stramineum* (Nash) D. Banks [= *P. bushii* Nash; = *P. ciliatifolium* var. *stramineum* (Nash) Fern.]  
*urvillei* Steudel (Raveill & Taylor 1983)

***Setaria*** P. Beauv. (p. 236) (foxtail grass)

*faberi* R. Herrm.  
*italica* (L.) P. Beauv.  
*parviflora* (Poiret) Kerguelen (Kerguelen 1987) [= *S. geniculata* (Lam.) P. Beauv.]  
*pumila* (Poiret) Roemer & Schultes (Kerguelen 1977, Clayton 1979) [= *S. glauca* (L.) P. Beauv.]  
*verticillata* (L.) P. Beauv.  
*viridis* (L.) P. Beauv.

SUBFAMILY POOIDEAE

Tribe Aveneae

- Agrostis** L. (p. 145) (bent grass)  
*elliottiana* Schultes  
*gigantea* Roth (Philipson 1937) [= *A. alba* L. var. *alba*]  
*hyemalis* (Walter) Britton, Sterns & Pogg. var. *hyemalis*  
*perennans* (Walter) Tuckerman  
*stolonifera* L. (Philipson 1937)  
 var. *palustris* (Hudson) Farw. [= *A. alba* L. var. *palustris*  
 (Hudson) Pers.]  
*tenuis* Sibth.
- Aira** L. (p. 139) (hair grass)  
*caryophyllea* L. (Castaner 1983, Freckmann 1983)  
*elegantissima* Schur (Kerguelen 1975) [= *A. elegans* Willd. ex  
 Gaudin]
- Alopecurus** L. (p. 152) (foxtail)  
*aequalis* Sobol.  
*carolinianus* Walter  
*pratensis* L.
- Anthoxanthum** L. (p. 186) (sweet vernal grass)  
*odoratum* L.
- Apera** Adans. (silky bent grass) (McNeill 1981)  
*interrupta* (L.) P. Beauv. [= *Agrostis interrupta* L.]  
*spicaventi* (L.) P. Beauv. [= *Agrostis spicaventi* L.]
- Arrhenatherum** P. Beauv. (p. 140) (oat grass)  
*elatius* (L.) P. Beauv. ex J. S. & C. Presl
- Avena** L. (p. 140) (oats) (Baum 1977)  
*fatua* L. (Haussknecht 1885)  
 var. *fatua* [= *A. fatua* sensu Steyermark]  
 var. *sativa* (L.) Hausskn. [= *A. sativa* L.]
- Beckmannia** Host (p. 179)  
*syzigachne* (Steudel) Fern.
- Calamagrostis** Adans. (p. 144) (reed bent grass)  
*canadensis* (Michaux) P. Beauv.  
*insperata* Swallen  
*stricta* (Timm) Koeler (Sutherland 1986) [= *C. inexpansa*  
 A. Gray]
- Cinna** L. (p. 150) (wood reed grass)  
*arundinacea* L.
- Holcus** L. (p. 142) (velvet grass)  
*lanatus* L.
- Koeleria** Pers. (p. 136) (June grass)  
*pyramidata* (Lam.) P. Beauv. (Greuter 1968) [= *K. cristata* (L.)  
 Pers., nom. illegit.]
- Phalaris** L. (p. 188) (canary grass)  
*arundinacea* L.  
*brachystachya* Link  
*canariensis* L.  
*caroliniana* Walter

*Phleum* L. (p. 153) (timothy)

### Tribe Stipeae

***Oryzopsis* Michaux (p. 168) (mountain rice)**

*racemosa* (Smith) A. Hitchc.

***Stipa* L. (p. 170) (porcupine grass)**

*spartea* Trin.

## Tribe Triticeae

**Agropyron** Gaertner (p. 121) (Runemark & Heneen 1968, Estes & Tyr1 1982)

*desertorum* (Fischer ex Link) Schultes (Muehlenbach 1979)

**Elymus** L. (p. 126) (Runemark & Heneen 1968, Estes & Tyr1 1982)

*canadensis* L. var. *canadensis* (sensu Gould 1975) [= *E. canadensis* sensu Steyermark; = *E. villosus* "Muhl."]

*diversiglumis* Scribner & C. Ball (Church 1967) [= *E. interruptus* Buckley sensu Steyermark]

*elongatus* (Host) Runem. (Muehlenbach 1979, Heneen & Runemark 1972) [= *Agropyron elongatum* (Host) P. Beauv.]

*glaucus* Buckley

*hystrix* L. (McNeill & Dore 1976) [= *Hystrix patula* Moench]

*longifolius* (J. G. Smith) Gould (Gould 1974) [= *Sitanion longifolium* J. G. Smith]

*repens* (L.) Gould (Gould 1947) [= *Agropyron repens* (L.) P. Beauv.]

*riparius* Wieg.

*smithii* (Rydb.) Gould (Gould 1947) [= *Agropyron smithii* Rydb.]

*trachycaulus* (Link) Gould ex Shinn. (Shinners 1954)

[= *Agropyron trachycaulum* (Link) Malte]

*virginicus* L.

**Hordeum** L. (p. 132) (barley)

*Xcaespitosum* Scribner (Mitchell & Wilton 1964) [= *H. jubatum* L. var. *caespitosum* (Scribner) A. Hitchc.]

*jubatum* L. [= *H. jubatum* var. *jubatum* sensu Steyermark]

*pusillum* Nutt.

*vulgare* L.

**Secale** L. (p. 126) (rye)

*cereale* L.

**Triticum** L. (p. 124) (wheat) (sensu Gould 1975)

*aestivum* L.

*cylindricum* (Host) Cesati, Passer. & Gibelli [= *Aegilops cylindrica* Host]

The above list contains the following numbers of accepted taxa within the family Poaceae in the State of Missouri: 6 subfamilies; 17 tribes; 84 genera; 266 species; 4 subspecies; 56 varieties; and 8 forms.

## SUMMARY OF NAME CHANGES

The following is an alphabetical listing of names of taxa in Steyermark (1963) that have been changed, and their equivalents in the present work. Page numbers refer to location in Steyermark (1963); the number and letter in parentheses before the currently accepted name refer to its subfamily and tribe in the present treatment, as follows:

- |                    |                  |
|--------------------|------------------|
| 1. ARUNDINOIDEAE   | 5. PANICOIDEAE   |
| A. Aristideae      | A. Andropodoneae |
| B. Arundineae      | B. Paniceae      |
| 2. BAMBUOIDEAE     | 6. POOIDEAE      |
| A. Bambuseae       | A. Aveneae       |
| B. Brachyelytreae  | B. Bromeae       |
| C. Diarrheneae     | C. Meliceae      |
| D. Oryzeae         | D. Poeae         |
| 3. CENTOSTECOIDEAE | E. Stipeae       |
| A. Centosteceae    | F. Triticeae     |
| 4. CHLORIDOIDEAE   |                  |
| A. Cynodonteae     |                  |
| B. Eragrostideae   |                  |

<u>Name in Steyermark (1963)</u>	<u>Current Name</u>

#### Acknowledgements

I am greatly indebted to Drs. Gerrit Davidse, Charlotte G. Reeder and John R. Reeder for critical reading of and numerous corrections to the manuscript. Thanks are due to George Yatskievych for providing the needling necessary to get this project completed at last and the vigilance to make sure it was done well, and to Joanna Turner for providing a backup conscience when my own proved inadequate. I dedicate this paper to Mary Susan Taylor, for her endlessly enthusiastic sharing of great bibliographic resources on this and many other projects.

---

#### 2

The complex and overlapping pattern of variability in the characters used by Steyermark (1963) and others to distinguish *Panicum gattingeri* from *P. philadelphicum* causes difficulty in the placement of a large proportion of collections, and suggests that these entities may not be distinct at the species level. Although some statistical trends are evident, these seem more on the order of those observed by Reeder (1986) in the *Eragrostis pectinacea* complex, suggesting that *P. gattingeri* may be worthy of recognition as a variety of *P. philadelphicum*, though McGregor (1984) leaves open the possibility that *P. gattingeri* may be a variety of *P. capillare*. Pending field observations during the 1988 growing season, I tentatively place *P. gattingeri* in synonymy with *P. philadelphicum*.

CLADRASTIS KENTUKEA (DUM.-CORSET) RUDD  
IN SOUTHEAST MISSOURI

1

Rodney D. Doolen and Wanda S. Doolen

Yellowwood [*Cladrastis kentukea* (Dum.-Corset) Rudd, syn. *C. lutea* (Michx.) f.) K. Koch.] has been listed as threatened in the United States by Avensu and DeFillipps 1978 in the original Smithsonian report (Fed. Reg.-7-1-75) and has the status of rare in Missouri. Although not exceedingly rare (the species has been used as a cultivated ornamental), Yellowwood trees in native habitat rank amongst the United States' uncommon trees.

The historical range is southern Indiana and southern Illinois through Kentucky, North Carolina, Tennessee, Alabama and Georgia, west to Arkansas, southwest Missouri and eastern Oklahoma. Even though Yellowwood is distributed over this wide area, it occurs infrequently. The historic Missouri distribution is twelve sites from three southwestern counties: Taney, Stone and Barry.

Independent discoveries of the Yellowwood at Sam A. Baker State Park in Wayne County were made in 1983. Members of the Webster Groves Nature Society noted Yellowwood occurrence during a field trip to the park in June. Rod Doolen, located a tree growing on a steep talus-covered hillside in November. Subsequent searches resulted in counting thirty-nine additional individual trees within Sam A. Baker State Park boundaries in Brunot Quadrangle sections 5, 17, 20, & 21 T. 30 N R. 5 E. Sam A. Baker State Park is managed by the Missouri Department of Natural Resources.

The southeast Missouri site is a habitat of rocky hillsides and bluffs with north-northeast exposures along Big Creek Valley. Geologically old, the rocks and bluffs of this area were formed by volcanoes. The rock at the site is known as Mudlick Dellenite, an igneous intrusive of Cambrian age. The individual Yellowwood trees are found along steep (up to 400 feet high) hillsides covered with talus fields of the dellenite, or along bluffs, or in rock strewn ravines which dissect the bluff outcrops. Elsewhere in its range, *Cladrastis kentukea* is reported from limestone substrate, rich woods and/or calcareous bluffs. The southeast Missouri site significantly increases information on the Yellowwood's habitat profile and should lead to redefining the limiting factors long thought to influence the tree's distribution.

The state park has provided a protected environment for the trees since the park's designation in 1925. Associate species at this location include: *Tilia americana*, *Acer saccharum*, *Dryopteris marginalis*, *Polystichum acrostichoides*, *Cornus florida*, and *Prenanthes sp.* The Yellowwood population appears

1

Rt. 1, Box 103d, Patterson, MO 63956

to be stable, typified by both large and small trees. One of the largest individuals possesses a triple trunk. Circumference at dbh of each trunk was measured in 1984 and recorded at 4'11" (149.9 cm), 1'11" (58.4 cm), and 2'2.75" (67.9 cm). The population is healthy but a small amount of disease is evident. Where trees have died, sprouts grow profusely from the stumps. Yellowwood tree flowering is observed at the site during the third and fourth weeks of May.

Herbarium voucher specimens have been deposited at the Department of Natural Resources Herbarium in Jefferson City, MO, and in the reference collections of the authors.

-----

### THE FLOWER

Once in a golden hour  
I cast to earth a seed.  
Up there came a flower,  
The people said, a weed.

To and fro they went  
Thro' my garden bower,  
And muttering discontent  
Cursed me and my flower.

Then it grew so tall  
It wore a crown of light,  
But thieves from o'er the wall  
Stole the seed by night.

Sow's it far and wide  
By every town and tower,  
Till all the people cried,  
'Splendid is the flower.'

Read my little fable:  
He that runs may read  
Most can raise the flowers now,  
For all have got the seed.

An some are pretty enough,  
An some are poor indeed;  
And now again the people  
Call it but a weed.

Tennyson (1908)

**THALIA DEALBATA (MARANTACEAE), A MISSOURI SURPRISE**

1

Susan Price and George Rogers

The odd aspects of *Thalia dealbata* Fraser ex Roscoe, powdery thalia ( $2n = 12$ ), begin with its membership in the Marantaceae, a pantropical family of some 25-30 genera and 400 species, of which only *Thalia geniculata* and *T. dealbata* are indigenous to the continental U. S. *Thalia geniculata* ranges from Florida to Argentina, and is widespread in Africa, where it was probably introduced from the New World (Andersson 1981); *Thalia dealbata* inhabits the southern U. S., predominantly on the Coastal Plain, from South Carolina to Texas, Oklahoma, and southeastern Missouri. The approximately five additional species of *Thalia* reside in tropical America with restriction to wet habitats, a generic characteristic. An overview of *Thalia* with a comprehensive bibliography was published by Rogers (1984) and features detailed drawings and floral description for *Thalia geniculata*. Because *Thalia dealbata* is flowering in the Climatron at the Missouri Botanical Garden further research on this bizarre Missouri native species is possible.

*Thalia dealbata* looks more like it belongs in the deep tropics than in Missouri--the plants can be several meters tall, with inflorescences on scapes towering above *Canna-like* or *Heliconia-like* leaves and far over the head of the observer. This striking relative of cannas, heliconias, and bananas (all members of the Zingiberales) stands out dramatically from surrounding vegetation with which it shares swamps, streambanks, roadside ditches, and ponds. Several specimens at the Missouri Botanical Garden Herbarium came from "swamps" near Poplar Bluff in Butler County, Missouri and Heineke (1983) recently updated its status in that county. This species is also listed for Ripley, Cape Girardeau, Stoddard, and Scott Counties (Steyermark 1963; Wilson 1984). There are collections from Cape Girardeau County dated 1970 at MO. A 1910 report from St. Louis County probably came from cultivated material (Personal comm. with Mike Sweet). The most recent collections Ripley and 1937 Scott counties are 1951 and 1937 respectively. This should not mean that extirpation from these counties has occurred. They do indicate that these counties need to be explored for new populations. Since this species shows up in aquatic gardens and roadside ditches, caution should be exercised in accepting new distribution records. Yet, given the age of the oldest Missouri collections (Appendix), the tight clustering of most Missouri localities, and the overall distribution of *Thalia dealbata*, there is no doubt that the species is native to the state. The authors invite updated distribution information.

*Thalia dealbata* differs conspicuously from *T. geniculata* by having more compact inflorescences and by having the pruinose

bloom, for which *T. dealbata* is named, on the inflorescence axes and bracts. Further, in *T. geniculata*, a single petaloid flap arises vertically from the top edge of the floral hood.

The flowers of *Thalia dealbata* are borne in tightly appressed side-by-side in mirror-image pairs (Figures 1, 7), arranged along an eye-catching zig-zag inflorescence axes (Figure 2). As is characteristic of the Zingiberales, the perianth members are inconsequential relative to the highly modified and largely petaloid androecium (stamens). Consequently the petals and sepals are ignored in in our description. The showy parts of the flower, all purple, are nearly all drastically modified stamens, although this is scarcely discernible at a glance. With one exception, all are devoid of anthers. The androecium consists of the following components: Looking towards the open throat of a horizontal flower, the largest and showiest organ is an outer, flaglike staminode suggestive of a showy, protruding landing platform (Figures 1, 6, 7). Dissected from a bud, it is shaped like a broad paddle (Figure 6).

Above the outer, flaglike staminode is the cucullate staminode, which forms a pouch opening upward and enclosing a style, much like a bun enclosing a (bent) hotdog. Figure 4 illustrates an isolated cucullate staminode, and Figures 3 and 6 show its position relative to other floral organs. At the edge of the cucullate staminode away from the flower's twin, two long narrow appendages ("triggers"), rise vertically and directly into the middle of the (staminal) floral tube and block access to its depths. Here, the tube is narrowed by a callus (described below), and one of the "triggers" is broadened or forked apically (Figure 4.). The cucullate staminode is characteristic of the Marantaceae, but *Thalia* stands apart from other genera by having two rather than one appendage on it.

Inserted near the base of the cucullate staminode and connate with the hood at the edge toward the middle of the flower pair is the only fertile stamen. This is made up of a pollen-bearing fertile half-anther and a flaglike sterile half-anther (Figures 3, 6), the latter projecting vertically from the mouth of the flower above the outer flaglike staminode (Figure 1). In the bud, the fertile "half-anther" rests obliquely against the indented area of pollen deposition on the style (described below) within the cucullate staminode. The sterile "half-anther" lies outside of and alongside the cucullate staminode.

Called the "callose staminode" by some authors, the remaining staminode defines the floral shape by forming a broad, stiff hood over the other staminodes and the style (Figures 1, 3). The edge of the hood toward the other flower of the pair is basally connate with the pollen-bearing staminode. From the inner face of that side of the hood extends the flange (termed the "callus"; Figure 3), which narrows the tunnel under the hood. Looking into the hood, the callus looks a little like one half of a swinging door, but it also bends and extends back into the hood out of sight.

The style that lies inside the cucullate staminode represents an unstable arrangement. It is explosively springy,

and when the flower is probed, it jumps out of the cucullate staminode, curling upward and inward. In untripped flowers, the distal tip of the style ("stylar appendage") slopes back and slopes into the mouth of the tube like a ramp. The stylar appendage approximately continues the upward-sloping landing platform formed by the outer, flaglike staminode in such a way that an insect pushing into the flower would slide its ventral surface over the stylar appendage when entering the throat of the tube (imagine an insect proceeding from left to right over the style in Figure 6). Immediately basal to the stylar appendage on the underside of the style (as it rests in the cucullate staminode) is a scooplake stigmatic cavity (Figures 5, 6), and directly basal to this on the underside of the resting style is a second depression dubbed here the area of pollen deposition (Figures 5, 6). Recall that in the bud this area is in direct contact with the fertile half-anther, which deposits pollen onto it before and/or possibly during the stroke of the style. In dissected (tripped) flowers pollen grains fill the area of pollen deposition except for a hump at its distal end defined by the outer wall of the stigmatic cavity (the hump is represented by the triangle in Figure 5).

The floral morphology and action suggest the following interpretation of the pollination mechanism: In the untripped flower, the style is held in place by the cucullate staminode, which when deformed by jostling of the "triggers" or stylar appendage, releases its grip on the style. This curls upward and inwardly explosively in such a way that the stylar appendage sweeps under the insect; this is followed by the stigmatic cavity scooping pollen off of the visitor's ventral surface; additional pollen is then deposited from the area of pollen deposition onto the ventral surface of the insect. This can be envisioned by mentally bending the style in Figure 6 up and inward to the right under an imaginary insect above it and facing right. However, the motion of the style is a little more complex--its twists during its snap (Figure 3), coming to rest blocking the flower from further visits.

While the flowers can be tripped easily with a pencil (which provides the pencil-bearer with a minor thrill), and the mechanism outlined above is easy to infer, field observations identifying pollinating agent(s) and verification of the mechanism are desired. In Florida, Daniel Austin (pers. comm.) saw diverse insects visit *Thalia* (undoubtedly *T. geniculata*), but only carpenter bees (*Xylocopa*) were able to spring the trap. Muller (1883) mentioned "hive-bees" pollinating cultivated *T. dealbata* in Europe.

At the risk of anticlimax, the surprises do not end with the flowers. Seed dispersal via flotation is evidently aided by some combination of air spaces between the seed and fruit wall, curious air canals in the perisperm, and waxy bracts (Grootjen 1983; Esenbeck 1831). Further, arils on the seeds suggest the possible role of ants in dispersal. Careful field observations still need to be made.

*Thalia dealbata* has not been ignored by artists. An exquisite color plate holds a place in *Curtis's Botanical Magazine* (Figure 7), and Audubon (1966) perched his Golden-

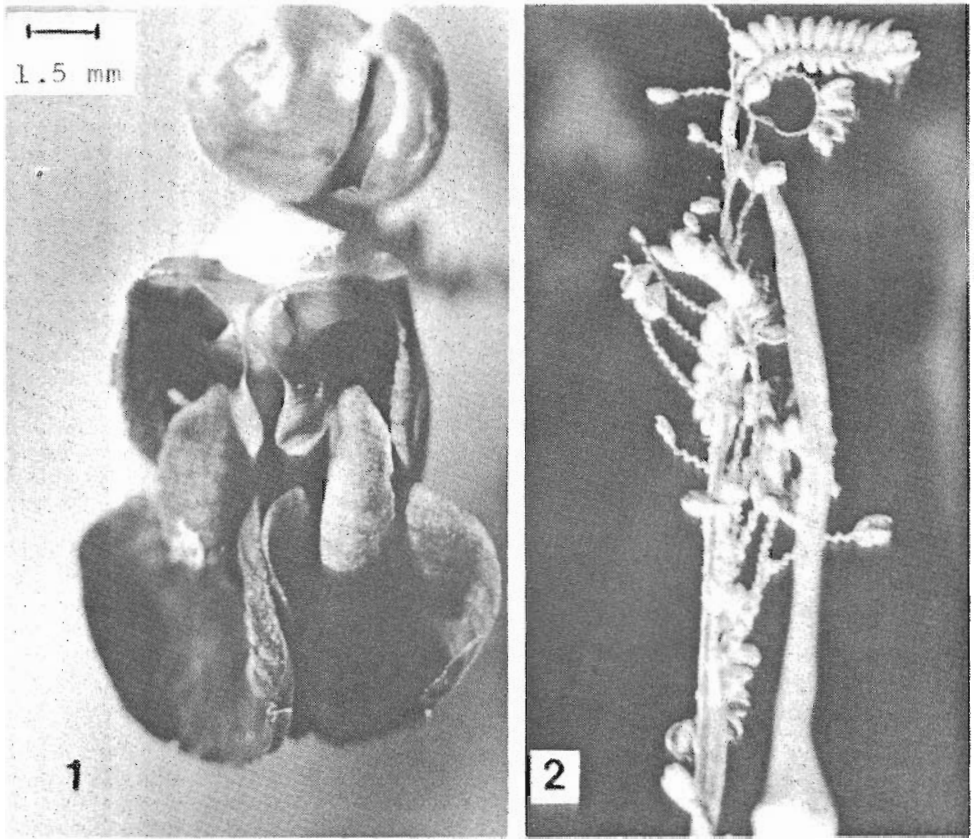

Crowned Kinglet on the powdery thalia.

If you botanize in southeastern Missouri, you may well discover new localities for this rare species or discover new aspects of its floral biology. If nothing else, probe a flower with a thin stick, stand back, and see what happens.

We extend our thanks to Michael Sweet of the Missouri Natural Heritage Program for providing current locality data, to Daniel Austin who generously supplied his observations on *Thalia* pollinators to Rogers in 1983 and to Joyce Dill, horticulturist at the Missouri Botanical Garden who supplied living materials for dissection. This work was done at the Missouri Botanical Garden as part of an effort to expand the botanical knowledge of the living collection.

Figures 1 & 2. *Thalia dealbata*. -- 1. Pair of flowers. Most basal organ is outer, flaglike staminode. Sterile "half-anther" projects, standing vertically, just above staminode. Androecial floral tube defined by hood arches over sterile "half-anther." Buds visible above flower pair. These flowers tripped, with the curled style just visible inside roof of tube in right-hand flower. Perianth not visible. --2. Inflorescence. Note zig-zag rachises (there are about 6 zig-zags per centimeter).

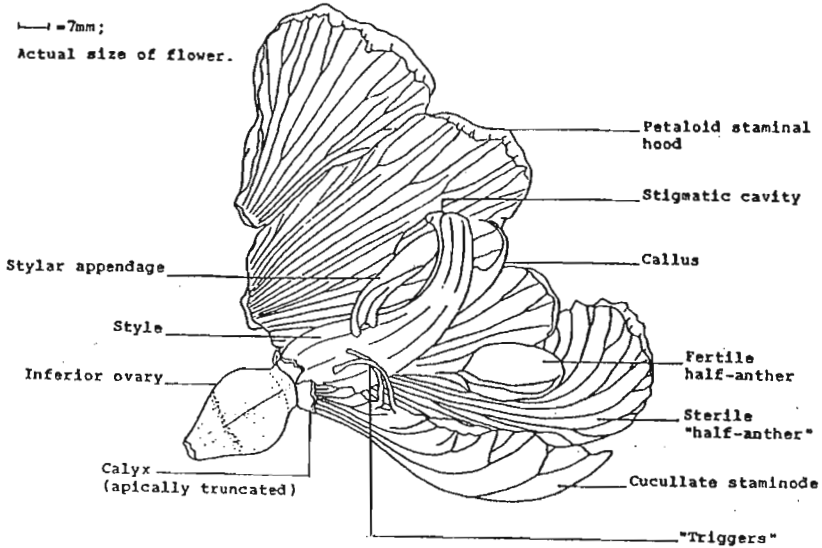

Figure 3. *Thalia dealbata*. Hood from opened flower to show various androecial organs and tripped style. Perianth and outer flaglike staminode not shown. (Drawing by Susan Price).

Figure 4. *Thalia dealbata*. Isolated cucullate staminode; note forked "trigger." (Drawing by Susan Price).

Figure 5. *Thalia dealbata*. Isolated tripped style; triangle is roof over stigmatic cavity. (Drawing by Susan Price).

Figure 6. *Thalia dealbata*. Schematic representation of dissected bud showing relative vertical positions of inner organs. The fertile half-anther rests against the area of pollen deposition on the style within the cucullate staminode. The sterile "half-anther" lies outside the cucullate staminode. The stylar appendage curls back above (or partly alongside) the rest of the style, and the area of pollen deposition is just basal to the stigmatic cavity. (Drawing by George Rogers).

Figure 7. Reproduction of historical color plate of *Thalia dealbata* from *Curtis's Botanical Magazine*, Plate 1690. 1815.

#### APPENDIX

List of specimens of *Thalia dealbata* at the Missouri Botanical Garden (MO) collected in Missouri.

Butler County: swamps, 30 Aug. 1892, *Eggert s.n.*; swamps, 7 July 1892, *Eggert s.n.*; Blue Spring Pike, Poplar Bluff, 19 Aug. 1892, *Eggert s.n.* [this specimen also labeled "Blue Springs"]; Poplar Bluff, swamps, 12 July 1930? [label unclear on year], *J. Kellogg s.n.* Cape Girardeau County: 5.1 mi. W of Delta, Hwy. 25, 26 July 1970, *S. A. Sutter 159*; 1.5 mi. W Delta, Hwy. 25, 19 July 1970, *S. A. Sutter & T. E. Brooks 149*.

### MINUTES OF THE APRIL 23, 1988 BOARD MEETING

**Call to Order.** The meeting was called to order by President Doug Ladd at 7:25 P.M. Other board members present were: Linda Ellis, Ken McCarty, Ginny Wallace, Mervin Wallace and Wally Weber. Other members present at the meeting were: Sue Hollis, Don Kurz, Jim Henry Wilson, Dennis Hall, Nina Bicknese, Julie Binder, Jon Rebman, and Joanna Turner.

**Minutes of the Previous Meeting.** The minutes of the December 5, 1987 meeting held at the Missouri Department of Conservation headquarters in Jefferson City, were approved as amended.

**Treasurer's Report.** Mervin Wallace presented the following operating statement for 12/2/87 to 4/22/88:

Balance on hand 12/2/87	\$4,035.45
Income from operations	
Membership dues	1,863.00
Interest from checking account	135.69
Total income and cash on hand	6,034.14
 Disbursements	
Refreshments--December board meeting	4.26
Bulk mailings	150.00
Printing costs for <i>Missouriensis</i>	198.54
Chapter dues	53.00
Printing--brochures	859.36
Conservation Federation of Missouri dues	357.00
Stamps and envelopes	<u>15.61</u>
Total disbursements	1,368.27
 Balance on hand 4/22/88	 \$4,395.87

#### Standing Committee Reports.

**Membership Committee.** Ginny Wallace announced that the new brochures were helpful in recruiting members and in making the society better known. She also reported that MONPS was listed as a resource in a *Family Circle* magazine article on wildflower gardening, and several requests for information have already been received.

**Environmental Action.** Ken McCarty, reporting for Chairman Paul Nelson, asked members to try to get as many signatures as possible on petitions to extend the sales tax for state parks and soil conservation. Ladd advised us that Nelson had sent a letter for the society to the U.S. Forest Service encouraging the adoption of Alternative A. No Mining in the Mark Twain National Forest.

**Field Trip Committee.** Ken McCarty announced that the annual meeting will be held June 4-5 in Brookfield, with field trips on Saturday to bottomland forest and wet prairie habitats in Pershing State Park, and on Sunday to a marsh and a mesic prairie.

**Atlas Committee.** Wally Weber had no new report, but he introduced Jon Rebman, a student at Southwest Missouri State University, to the group. Jon was responsible for much of the work in getting out the long list of county records published in the last issue of *Missouriensis*, and he was warmly applauded for his efforts.

**Editorial Committee.** Paul Redfearn was unable to attend the meeting but sent word that he had enough material to publish volume 8, number 2 of the journal. However, he said that most of the papers received were of a fairly technical nature, and he would like to balance them with some of a more general nature. Ladd passed out notes taken at the March 21, 1986 meeting of the editorial committee regarding the journal and the newsletter, and he asked members to send him any comments or suggestions they might have.

#### **Old Business.**

President Ladd said the society's cash flow will be discussed at the June meeting. Kay Yatskievych will also report at that time on the recent Conservation Federation meeting which she attended as our representative. Ladd also reported that a letter to Peabody Coal thanking them for cooperating with a recent plant salvage operation is ready to be mailed.

Sue Hollis requested that a current membership list be published in the next issue of *Missouriensis*, and Ginny Wallace said that she would try to supply one by June.

#### **New Business.**

It was announced that Wanda Doolen and Louise Wienchowski have been nominated for one position on the board which will be open in June and Suzy Russell and Joanna Turner for the second opening. Ladd and Ginny Wallace at present are the only members of the awards committee and they requested that nominations be sent in as soon as possible for the June annual meeting. Weber inquired about the status of the grants program, and Ginny Wallace explained that they are on hold pending clarification of the society's financial situation.

Kenton Olson has resigned as vice-president due to time pressures from his recent appointment as dean at his college and also a family illness, and a replacement will have to be appointed.

Ginny Wallace suggested that we consider selling lapel pins similar to those of the Missouri Prairie Foundation, as they are popular, inexpensive, and good money makers. The board voted to authorize her to look into it, and she and Linda Ellis will try to have a drawing to present to the board at the June meeting.

Ladd told of a meeting to be held in North Carolina July 28-30 by about 40 groups interested in forming a native plant

society alliance. It should be an interesting meeting for anyone able to attend.

Weber pointed out that MONPS is approaching its tenth birthday and proposed that we do something to note the anniversary. Ladd suggested a celebration at the annual meeting in June 1989 and said any ideas will be welcome.

Don Kurz informed the board that Carl Hunter, author of *Wildflowers of Arkansas*, would be available as a speaker for the fall meeting in West Plains. The second edition of his book will be available and he has offered to sell them at a 40% discount.

#### Chapter Reports.

Linda Ellis reported for the Kansas City chapter that they have an ongoing project with the Kansas City Department of Recreation and are looking for sources for wildflowers, both seeds and plants.

No representative from Kirksville was present, but Ladd told of their quick response in supplying a crew to help The Nature Conservancy with a burn in north central Missouri.

Ginny Wallace announced that Bill Summers will be giving a program for the Jefferson City chapter, and their Pickle Springs field trip is scheduled for May 7.

Wally Weber said the Springfield chapter is becoming more active and had two recent programs, Jim Key on ferns and Stephan Foster on folk medicine.

#### Announcements

Jim H. Wilson announced that Steyermark's *Flora of Missouri* is out of print and Edgar Denison's *Missouri Wildflowers* might go out of print before his revision is published.

#### Adjournment.

The meeting was adjourned at 8:05 P.M.

Respectfully submitted,

Joanna Turner, Secretary Pro Tem

## MISSOURI BOTANICAL RECORD

Compiled and Edited

By

Wallace R. Weber\*, Jon P. Rebman\*, and William Corcoran\*\*

The *Missouri Botanical Record* is the official register for new county records of all vascular plant taxa in Missouri. To qualify for inclusion in this record, a voucher specimen of the record taxon must be deposited in a recognized herbarium and verified by the curator. Following the format used below, please submit all records to Dr. Wallace R. Weber, Department of Biology, Southwest Missouri State University, Springfield, MO., 65804.

In the *Flora of Missouri*, Steyermark used only a single map number to refer to each species, even though several subspecific taxa were listed. In these instances, various symbols were used to represent each taxon on a single Missouri map with counties. In the *Missouri Botanical Record* a decimal system is now being used, with .1 assigned to the first subspecific taxon listed by Steyermark under each map, .2 for the second, and so on. Point nine nine (.99) is used to designate a species in which Steyermark included one or more subspecific taxa, but which was not specified by the collector. Point zero nine (.09) identifies a taxon not included by Steyermark. The letter v. and f. refer to variety and form respectively, while nv indicates that no subspecific category has been recognized.

The contributor for this issue is Roy E. Gereau, Missouri Botanical Garden, St. Louis, MO. The asterisk before certain scientific names in the following list indicates a nomenclatural change. The name, as listed here, refers to nomenclature used by Steyermark; however, in another paper by Gereau elsewhere in this issue, a preferred nomenclatural change is given for this taxon.

---
