|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 4.1(a). Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Action 1.F.2.a.</b> Designate suitable areas for light industrial uses. Criteria used to judge the suitability of a site for industrial uses shall include, but not be limited to, the following: adequate access exists for industrial land uses; industrial development on the site would be compatible with surrounding land uses (e.g., noise levels, fumes, traffic levels); industrial development on the site would not significantly impact existing or potential farming, ranching, or recreational operations; adequate public services and infrastructure for industrial development are available or could be provided; development on the site could be clustered, concentrated, located, or screened to maintain the visual quality of the area. Screening may be achieved through the use of fences, vegetation, topographical features, berms, etc.; and development on the site would avoid potential significant environmental impacts or those impacts could be mitigated as required by Mono County General Plan policies and CEQA. | ✓                                                   |                                                                                                                                                                         |
| <b>Objective 1.G. Protect open space and agricultural lands from conversion to and encroachment of developed community uses.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                     |                                                                                                                                                                         |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Policy 1.1.2.</b> Assess the economic costs and benefits of proposed development projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ✓                                                   |                                                                                                                                                                         |
| <b>Action 1.1.2.a.</b> Future development projects with the potential to have significant local socioeconomic impacts shall provide a fiscal impacts analysis. The analysis shall: be funded by the applicant; be prepared by a qualified person under direction of Mono County; include a market analysis documenting specified cost and demand and phasing elements; analyze applicable significant socioeconomic implications of the project, such as employee housing, jobs generation, impacts on crime rates, impacts on schools, hospitals and other community facilities and services, effects of termination or closure of the project (where applicable) and changes in the quality of life resulting from the proposed project; and recommend project alternatives or measures to avoid or mitigate economic impacts. Mitigations shall be included in the project plans and specifications and made a condition of project approval. Projects having significant socioeconomic impacts may be approved only if a statement of overriding considerations is made through the EIR process. | ✓                                                   |                                                                                                                                                                         |
| <b>Action 1.1.3.a.</b> Impose permit conditions and mitigation measures that offset the impacts of development on governmental services and infrastructure (i.e., County services and other local service providers). Such conditions and mitigation measures shall also address impacts to County services and other local service providers from future development that occurs in the incorporated area. Affected County services include, but are not limited to Social Services, Health Services, including Behavioral Health Services, Libraries, Justice System (Courts, District Attorney and Public Defender, Sheriff, and Probation departments, Regional Parks and Recreation, General Administration and Finance. In accordance with State law (CGC§ 53077), these exactions will not exceed the benefits derived from the project.                                                                                                                                                                                                                                                      | ✓                                                   | ✓                                                                                                                                                                       |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Action 8.A.2.c.</b> Contact public and private landowners in the Valley, including Walker River Irrigation District, for potential sites and interest in participating in a mitigation bank.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                     | ✓                                                                                                                                                                       |
| <b>Action 8.A.2.d.</b> Establish a Wetlands Mitigation Bank Technical Advisory Committee (TAC) for Bridgeport Valley. This group should include a representative from applicable agencies (e.g., USACE, EPA, FWS, SCS, DFG, RWQCB, and Mono County) and a representative of the following: Landowners in an area where wetland impacts will occur and mitigation will be required on a case-by-case basis, Landowners or the managing entity of the area where the mitigation bank will be located, Bridgeport Agricultural Property Owners, US Board of Water Commissioners.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 8.A.3.</b> Work to establish The Land Bank for the Bridgeport Valley.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                     | ✓                                                                                                                                                                       |
| <b>Action 8.A.3.a.</b> The Land Bank shall be established as follows: Goals of the mitigation bank shall be to enhance or create self-sustaining functional ecosystems, providing equal functions and values to those impacted by development; the life of the bank shall be 20 years from its inception. After the original 20 years, the life of the bank shall be renewed on 20-year cycles as needed, barring significant changes in regulations, natural conditions or catastrophes; Parcels eligible to contribute to the bank shall be illustrated on a map; Mitigation sites incorporated into the bank shall be developed and managed in accordance with a management plan prepared with assistance of the Wetlands Mitigation Bank TAC established for Bridgeport Valley. The TAC shall assist in design and implementation of a management plan for the bank. This plan shall include specific debiting and crediting procedures for the bank and shall detail remedial action responsibilities; The Corps shall require periodic inspections conducted with TAC assistance to identify whether the mitigation site is in compliance with the management plan; The management plan shall identify an appropriate methodology to assess pre- and post-mitigation functional values, in order to establish bank credits and debits. To the extent possible, this methodology will be quantitative; The management plan shall specify the methodology that will be used to protect the enhanced or created wetlands in 20-year cycles. This may include conservation/open space easements, deed restrictions, transfer of the property to a tax-paying conservation organization or agency, or other appropriate methods. |                                                     | ✓                                                                                                                                                                       |
| <b>Action 8.A.3.b.</b> Seek funding to support land bank projects in the Bridgeport Valley, including but not limited to, grants, loans or other potential funding from Soil Conservation Service, Grants for sewage effluent treatment, EPA, USFWS, Resources Agency, and Ducks Unlimited.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                     | ✓                                                                                                                                                                       |

| <b>Objective 8.C. At the request of the landowner, reevaluate the jurisdictional status of sites proposed for development that are located in irrigated areas in the Bridgeport Valley when and where irrigation water is no longer applied.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                     |                                                                                                                                                                         |
| <b>Policy 8.C.1.</b> Ensure that accurate and adequate data are collected to permit a reevaluation of wetland status for irrigation-induced wetlands that will meet federal delineation standards.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                     | ✓                                                                                                                                                                       |
| <b>Action 8.C.1.a.</b> The following additional conditions shall apply to altering the irrigation regime, acquiring data, and seeking a reevaluation of jurisdictional status: Areas shall be reevaluated only where a definite project proposal exists; The entire area of the proposed project will be reevaluated; The existing topography in the vicinity of the subject area should not be altered without contacting the USACE; During the reevaluation, livestock may be excluded as necessary (in consultation with SCS) to allow plant species to be identified and catalogued. Cattle exclosures in representative areas may be necessary for monitoring or evaluation; Reevaluation should begin no later than May 1. Water-table levels should be monitored throughout the early growing season by means of pits or piezometer wells, and vegetation should be studied at a time that may vary from mid-May to July, depending upon weather; Data should be acquired at locations on both sides of apparent wetland boundaries. The locations of piezometer wells or other tests of soil conditions (for example, a,a-dipyridil test for reducing conditions) should be representative of the entire subject area. Methodologies in the current jurisdictional wetland manual will be used to define wetlands; As per the new National Technical Committee on Hydric Soils (NTCHS) criteria for hydric soils, poorly drained areas with soil permeability less than 6.0 inches/hour (such as most of Bridgeport Valley) would be determined to meet the mandatory soils and hydrology criteria for jurisdictional wetlands if the water table remains within 1.5 feet of the surface for at least two weeks during the growing season. |                                                     | ✓                                                                                                                                                                       |
| <b>Action 8.C.1.b.</b> Reevaluations of jurisdictional status of proposed project sites located in irrigated areas shall be performed by a qualified professional under direction of the County and in consultation with Soil Conservation Service and USACE. The work shall be funded by the project applicant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                     | ✓                                                                                                                                                                       |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Objective 9.A. Protect the visual characteristics of the Bodie Hills that contribute to the Bodie Experience, and ensure that any development allowed is compatible with the existing rural and historic landscape.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                     |                                                                                                                                                                         |
| <b>Policy 9.A.1.</b> Structures proposed on private lands within the Bodie Hills Planning Area shall be constructed in accordance with the minimum development standards found in the Mono County General Plan Visual Resource Policies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                   |                                                                                                                                                                         |
| <b>Action 9.A.1.a.</b> Develop design guidelines for residential, commercial, and industrial development projects. At a minimum, the following development standards (from the Visual Resource Policies) shall apply: Projects should not dominate the natural environment, and should complement existing community character; the scale, design, and siting of a project should be appropriate for the setting; Building mass should be varied and should be appropriate for the surrounding community or area. Facades in commercial districts should be varied; Project siting and structural design should be sensitive to the climate, topography, and lighting of the surrounding environment; The design, color, and building materials for structures, fences, and signs shall be compatible with the natural environment and/or surrounding community; Visually offensive land uses shall be adequately screened through the use of landscaping, fencing, contour grading, or other appropriate measures; The visual impacts of parking areas shall be minimized through the use of landscaping, covered parking, siting that screens the parking from view, or other appropriate measures; Signs shall comply with the county's Sign Regulations; Standardized commercial structures, designs, and materials shall not be allowed (e.g., a "McDonald's" shall be designed with materials and finishes that harmonize with the surrounding area); Industrial areas shall be as compact as possible; Exterior lighting shall be shielded and indirect and shall be minimized to that necessary for security and safety; All new utilities shall be installed underground in conformance with applicable provisions of the Land Development Regulations; Existing roads shall be used when possible. New road construction should be avoided except where essential for health and safety; Earthwork, grading, and vegetative removals shall be minimized; All site disturbances shall be revegetated with a mix of indigenous species native to the site (based upon a pre-project species survey). A landscaping plan shall be submitted and approved for all projects. | ✓                                                   |                                                                                                                                                                         |
| <b>BLM Resource Management Plan Decision: Manage the main travel corridors into the Bodie Bowl to conform to Visual Resource Management (VRM) II standards.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                     |                                                                                                                                                                         |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Action 13.H.1.b.</b> The County, USFS, other government agencies, and project proponents should coordinate efforts to ensure that the indirect impacts of new development projects are addressed prior to approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 13.H.1.c.</b> Specific plans and accompanying EIRs for large development projects should address the cumulative impacts on recreational resources from increased visitation and use, and on community infrastructure including roads, housing, sewer, water, utilities, fire protection, and schools.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | ✓                                                   |                                                                                                                                                                         |
| <b>Objective 13.I. Maintain the June Lake Village as the Loop's commercial core by providing a wide range of commercial and residential uses in a pedestrian-oriented atmosphere.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                     |                                                                                                                                                                         |
| <b>Policy 13.I.1.</b> Promote the concentration of resident-oriented professional services such as financial management, real estate, law, and healthcare, and community-oriented retail outlets such as grocery stores, pharmacies, and hardware stores, in the Village.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ✓                                                   |                                                                                                                                                                         |
| <b>Action 13.I.1.a.</b> Limit commercial square footage outside June Lake Village. Market studies, fiscal impact analysis and other documentation, as part of the West Village/Rodeo Grounds Specific Plan process, should demonstrate need for large-scale commercial development outside June Lake Village prior to its construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | ✓                                                   |                                                                                                                                                                         |
| <b>Policy 13.I.2.</b> Promote planning studies that concentrate on reducing traffic congestion, enhancing the Village's pedestrian atmosphere and strengthening the commercial district. These planning studies should examine providing an alternative roadway paralleling SR 158 through the Village, off-street parking and pedestrian walkways.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | ✓                                                   |                                                                                                                                                                         |
| <b>Objective 13.J. Through the specific plan process, develop the West Village/Rodeo Grounds into a well-coordinated resort area that provides a balance of resident and visitor housing in close proximity to recreational facilities and other activity centers.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     |                                                                                                                                                                         |
| <b>Policy 13.J.1.</b> Development in the West Village/Rodeo Grounds should be coordinated through the specific plan process. Specific plan(s) should provide for a balance between housing and recreational/entertainment facilities, and locate intensive land uses in the least environmentally and visually sensitive areas. Infrastructure and amenities for the entire area, including sewer, water, roads, circulation, recreational facilities such as a coordinated trail system, housing mix, and the siting of commercial nodes shall be coordinated for the entire area prior to approval of any specific plans. Minor projects adjacent to existing developed areas not requiring the preparation of an Environmental Impact Report may be permitted prior to the adoption of the Specific Plan.                                    | ✓                                                   |                                                                                                                                                                         |
| <b>Action 13.J.1.a.</b> Provide a wide range of resident and visitor housing in close proximity to recreational facilities through specific plan efforts. The overall density of the specific plan area should be limited to 10 units per acre. Through the specific plan and EIR processes, higher densities may be allowed if consistent with the general intent of the Area Plan. Resident housing may include single-family residences, townhouses, duplexes, triplexes and apartments. The specific plan area or other suitable lands should also provide employee housing for at least 25% of June Mountain's anticipated peak period workforce based upon the maximum skier capacity allowed by the USFS special use permit. Visitor housing should consist primarily of full-service hotels with meeting/conference facilities, smaller | ✓                                                   |                                                                                                                                                                         |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Policy 18.B.1.</b> Preserve natural habitat areas by limiting development and curtailing harmful uses on identified wetland areas. Assign top priority to these lands for land exchanges.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                     | ✓                                                                                                                                                                       |
| <b>Action 18.B.1.a.</b> Prohibit the grazing of horses or other livestock on wetland areas such as the meadow and marshes in the Natural Habitat Protection District. A section of the Silver Lake Meadow is the only area falling under this designation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                     | ✓                                                                                                                                                                       |
| <b>Action 18.B.2.b.</b> Limit development in natural habitat zones to retain sensitive environments while allowing for compatible development. The extent of development in the natural habitat protection district will depend upon the amount of land within the district not covered by wetlands (non-conflict areas), and in compliance with the land use designation. Three scenarios can occur: If the entire parcel is covered by wetlands, then a maximum of 2% of the parcel may be altered; If between 1% and 3% of the parcel is covered by non-wetland areas, then the total non-wetland area and wetland area, not to exceed 3% in combination, may be altered; If more than 3% of the parcel contains non-wetland habitat, development will be limited to a maximum of 3% of the total parcel area or 15% of non-wetland areas, whichever is greater. Land alteration limits shall apply to the placement and design of structures, roads, utilities, parking, buildings, walkways, and attendant facilities. In wetland areas, these facilities must be designed and constructed to cause minimum physical disturbance to natural site conditions and be approved by the applicable agency. |                                                     | ✓                                                                                                                                                                       |
| <b>Action 18.B.2.c.</b> Where feasible, locate development on lands devoid of environmentally sensitive habitats.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 18.B.2.</b> Identify and map wetland areas according to federally approved criteria and develop appropriate mitigation measures.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                     | ✓                                                                                                                                                                       |
| <b>Action 18.B.2.a.</b> Encourage USACE and LRWQCB to identify and map wetland areas contained in the natural habitat protection district.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                     | ✓                                                                                                                                                                       |
| <b>Action 18.B.2.b.</b> Pursue grants to fund a wetlands identification, mapping and mitigation study for the natural habitat protection area. Any such study should be conducted in accordance with the technical criteria, field indicators, and identification methods cooperatively established by USACE, EPA, LRWQCB, and other relevant agencies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     | ✓                                                                                                                                                                       |
| <b>Objective 18.C. Promote the development of local water resource to meet future domestic needs in a manner that maintains and protects the natural environment.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     |                                                                                                                                                                         |
| <b>Policy 18.C.1.</b> New water resource projects in the June Lake Loop should not impact natural resources and recreation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                     | ✓                                                                                                                                                                       |
| <b>Action 18.C.1.a.</b> Coordinate efforts with the USFS and June Lake PUD to develop water supplies in an environmentally sound manner. Oppose water developments that will compromise the integrity of the Loop's recreational and environmental resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 18.C.2.</b> Promote the development of a diversified water system to withstand periods of drought without causing undue impacts on the environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ✓                                                   | ✓                                                                                                                                                                       |

| PROPOSED MITIGATING GOALS, POLICIES AND ACTIONS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ENVIRONMENTAL IMPACTS                               |                                                                                                                                                                         |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 4.1(a). Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| Action 18.D.4.a. The County should work with Caltrans, LRWQCB, USFS, June Lake PUD and the community to initiate and/or facilitate programs to reduce the amounts of contaminants in storm water. Street sweeping and other litter cleanup programs should be included in this approach.                                                                                                                                                                                                                                                                            |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 18.D.5.</b> Protect the water quality of June and Gull lakes and other downstream water bodies by improving June Lake Village's drainage system and eliminating other sources of pollution.                                                                                                                                                                                                                                                                                                                                                               | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 18.D.5.a.</b> The County should coordinate efforts with Caltrans, the JLPUD, the USFS and the Lahontan Regional Water Quality Control Board to develop and implement a master drainage control plan for the June Lake Village. This effort should examine alternatives to control runoff into Gull and June lakes, including on-site ponding/retention and undergrounding the drainage ditch between June and Gull lakes. Project funding mechanisms such as bonds and zone-of-benefit charges, among others, also should be considered.                  | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 18.D.5.b.</b> Encourage the LRWQCB to conduct an eutrophication study on Gull Lake and, where feasible, adopt the study's recommendations.                                                                                                                                                                                                                                                                                                                                                                                                                | ✓                                                   | ✓                                                                                                                                                                       |
| JUNE LAKE – CONSERVATION (Air Quality)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     |                                                                                                                                                                         |
| Objective 18.E. Maintain a high level of air quality that protects human health and wildlife, and prevents the degradation of scenic views.                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                     |                                                                                                                                                                         |
| <b>Policy 18.E.1.</b> Reduce automobile use by promoting the development of pedestrian-oriented villages that include convenient, centrally located off-street parking; pedestrian walkways; transit service; direct ski access; and bicycle, hiking and cross-county trails.                                                                                                                                                                                                                                                                                       | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 18.E.1.a.</b> Promote the development of trails for non-motorized modes of transit (e.g., pedestrians, cross country skiers and bicyclists). These trails should link major lodging and parking facilities with recreational and commercial centers and should be maintained year round. Bond issues, grants or development exactions, among others, could be used to fund construction.                                                                                                                                                                  | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 18.E.1.b.</b> Work with the June Mountain Ski Area to develop ski-back trails from the ski area to concentrated use areas.                                                                                                                                                                                                                                                                                                                                                                                                                                | ✓                                                   |                                                                                                                                                                         |
| <b>Action 18.E.1.c.</b> Investigate the feasibility of developing an overhead lift into the Village from the Mountain. If developed, ensure the lift will: 1) operate during the summer months and complement the summer recreation attractions of the Village area; 2) minimize the visual impacts to the Village, June Lake and Gull Lake; and 3) be architecturally compatible with other village developments. If a lift proves infeasible, work with the Ski Area to develop a transit system from the Village and West Village/Rodeo Grounds to the ski area. | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 18.E.1.d.</b> Promote the development of crosswalks in the Village and the June Lake Loop that enhance safety, complement the non-motorized vehicle trails, and promote the Village and Loop's pedestrian atmosphere.                                                                                                                                                                                                                                                                                                                                     | ✓                                                   |                                                                                                                                                                         |
| <b>Action 18.E.1.e.</b> If feasible, use the specific plan process in the Village to promote the development of facilities conducive to the pedestrian-oriented concept.                                                                                                                                                                                                                                                                                                                                                                                            | ✓                                                   |                                                                                                                                                                         |

Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>JUNE LAKE – CONSERVATION (Tourism)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                     |                                                                                                                                                                         |
| <b>GOAL 20: Expand and strengthen June Lake's tourist-oriented economy by stimulating the development of year-round recreational facilities and attracting and retaining a diversity of businesses, while protecting June Lake's scenic and natural resource values, and unique character.</b>                                                                                                                                                                                                                                       |                                                     |                                                                                                                                                                         |
| <b>Objective 20.A. Expand and diversify June Lake's tourist base to provide for the year-round needs of multiple user groups, while maintaining the Loop's character and protecting its scenic resources.</b>                                                                                                                                                                                                                                                                                                                        |                                                     |                                                                                                                                                                         |
| <b>Policy 20.A.1.</b> The June Lake community should work with the USFS, June Mountain, Mono County Tourism Commission, June Lake Historical Society, June Lake Chamber of Commerce, and others in a joint effort to operate a Visitor Center in the Village or other appropriate location, and promote the June Lake Loop.                                                                                                                                                                                                          | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.1.a.</b> Further develop and promote the existing Scenic Byway kiosk as a focal point through ongoing Byway Planning.                                                                                                                                                                                                                                                                                                                                                                                                 | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.1.b.</b> The existing Scenic Byway kiosk should be better utilized, and local volunteers should continue to assist in staffing it and potentially providing programs.                                                                                                                                                                                                                                                                                                                                                 | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.1.c.</b> Continue to explore opportunities for a permanent Visitor Center, potentially combined with a historic museum. The center should serve as a Mecca for tourist activity and as a promotional center for the June Lake Loop. The USFS could provide interpretive tours and campfire activities, while June Lake merchants could use the center to distribute literature on the various lodging, dining, and recreational opportunities.                                                                        | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.1.d.</b> The community should work with the USFS to promote the June Lake Loop at nearby visitor centers, such as the Mono Basin Scenic Visitor Center in Lee Vining and the Mammoth Lakes Welcome Center.                                                                                                                                                                                                                                                                                                            | ✓                                                   |                                                                                                                                                                         |
| <b>Policy 20.A.2.</b> Encourage public recreational use of lakes and creeks that is compatible with the environmental sensitivity of those areas. Consider adjusting public use if increased access causes undue environmental impacts.                                                                                                                                                                                                                                                                                              | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.2.a.</b> The County should work with the USFS to continue to improve the shoreline and stream-bank access along roadside lakes and streams along the June Lake Loop. Access to water bodies should emphasize foot or non-motorized vehicle trails over direct automobile access. Parking areas should be provided near water bodies, but trails should provide shoreline access. Trails should also link with day-parking facilities, campgrounds and other population centers to reduce the need for automobile use. | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Action 20.A.2.b.</b> Encourage and promote backcountry recreation experiences accessible from the June Lake Loop, including fishing, backpacking, horseback riding, and access to Yosemite National Park.                                                                                                                                                                                                                                                                                                                         | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.2.c.</b> Encourage the CDFW to improve the overall quality and potential of the Loop's recreational fishery.                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.2.d.</b> Protect and enhance fish-spawning habitat within June Lake Loop waters.                                                                                                                                                                                                                                                                                                                                                                                                                                      | ✓                                                   |                                                                                                                                                                         |
| <b>Action 20.A.2.e.</b> Cooperate with government and private agencies to inventory the Loop's potential for stream and lake rehabilitation projects. Potential areas could include Parker, Walker and Lower Rush creeks, and siltation of Silver Lake. Once identified, the County and June Lake Public                                                                                                                                                                                                                             | ✓                                                   | ✓                                                                                                                                                                       |

**TABLE 4.1-9 MITIGATING GOALS, POLICIES AND ACTIONS FOR LAND USE**

| PROPOSED MITIGATING GOALS, POLICIES AND ACTIONS                                                                                                                                                                                                                                                                                                                                                   | ENVIRONMENTAL IMPACTS                               |                                                                                                                                                                         |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| impact analysis prior to project approval. (Examples of a substantial, demonstrable negative aesthetic effect include reflective materials; excessive height and/or bulk; standardized designs for specific commercial activities that are not in harmony with the community atmosphere; and architectural designs and features that are incongruous to the community or area and/or that significantly detract from the natural attractiveness of the community or its surroundings.) The analysis shall: be funded by the applicant; be prepared by a qualified person under the direction of Mono County; assess the visual environment in the general project vicinity; provide visual renderings and/or mock-ups, or comparable descriptions of the impacts of the proposed development upon views and scenic qualities within the project site and on surrounding areas; and recommend project alternatives or measures to avoid or mitigate visual impacts. Mitigations shall be included in project plans & specifications and shall be made a condition of approval for the project. | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 21.A.2.</b> Future development shall be sited and designed in a manner that preserves the scenic vistas presently viewed from US 395.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                     | ✓                                                                                                                                                                       |
| <b>Action 21.A.2.a.</b> Comply with Scenic Combining designations along US 395 in order to minimize the impacts of development in the US 395 viewshed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                     | ✓                                                                                                                                                                       |
| <b>Action 21.A.2.b.</b> Continue to enforce the designation of "Open Space" for LADWP lands in order to protect the scenic resources on those lands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     | ✓                                                                                                                                                                       |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| applicable, may be incorporated into the BLM and USFS plans for the planning area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 4.</b> The ALUC land use plan and policies will establish the general parameters for regulation of development within the planning area on non-federal lands. Each local agency or jurisdiction shall be required to amend its general plan to incorporate the provisions of the ALUC Land Use Plan and Policies. Federal agencies may amend applicable land management plans to conform to the ALUP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                                     | ✓                                                                                                                                                                       |

Prevent incompatible land uses in the overflight zone.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     |                                                                                                                                                                         |
| <b>Policy 1.</b> The following are considered incompatible land uses within the airport traffic pattern zone: Any use that would direct a steady light or flashing light of red, white, green or amber colors associated with airport operations toward an aircraft engaged in an initial climb following takeoff or toward an airport landing, unless the use is an FAA-approved navigational signal light or visual approach slope indicator (VASI); any use that would cause sunlight to be reflected toward an aircraft engaged in an initial climb following takeoff or toward an aircraft engaged in a final approach toward an airport landing; any use that would generate large amounts of smoke or steam that may be detrimental to the operation of aircraft; any use that would generate electrical interference that may be detrimental to the operation of aircraft and/or instrumentation; other uses that may affect safe air navigation in this area; uses that would attract large concentrations of birds; uses in the primary traffic pattern zone that on a regular basis would result in concentrations of people exceeding 25 persons per acre. Particularly unacceptable uses are shopping centers, restaurants, schools, hospitals, stadiums/arenas, and office complexes, industries and factories that would exceed the 25 persons per acre requirements; and uses or land divisions that on a regular basis would result in a concentration of people exceeding 25 persons per acre over a 24-hour period, or 50 persons per acre over a period of 2 hours or more within the primary traffic pattern zone. |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 2.</b> Single-family residential or multifamily uses, or land divisions, that would result in a density greater than one dwelling unit per acre may be permitted. Multiple-family projects will be evaluated on an individual basis, with specific attention given to location and concentration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 3.</b> The ALUC shall restrict the development of all new non-compatible land uses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                     | ✓                                                                                                                                                                       |

Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Policy 4.</b> All land uses or use characteristics that may affect safe air navigation or that, because of their nature and proximity to an airport, may pose high risks to the land users shall be avoided or prohibited in the vicinity of an airport.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 5.</b> All residential uses shall be soundproofed as necessary to achieve interior annual noise levels attributable to exterior sources not to exceed 45 dB CNEL in any habitable room with windows closed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 6.</b> Development of Airport Master Plans or Layout Plans, or changes to existing plans of any public use airport that involves significant changes in land use, noise sources, or policy changes in size or type of aircraft to use the airport will, prior to finalizing or modifying the plans, be referred to the ALUC for consideration, as required by Section 21676 (c) of the PUC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 7.</b> No hazardous installations such as above-ground oil, gas or chemical storage facilities, excluding facilities for non-commercial, private domestic or private agricultural use shall be permitted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 8.</b> Except when overriding circumstances exist, a condition for approval of any project, subdivision, land use redesignation, or land exchange shall be the subject of the dedication of an aviation easement to the airport. The aviation easement shall contain and/or address the following: Right-of-flight at any altitude above acquired easements surface; Right to cause noise, vibrations, fumes, dust, and fuel particle emissions; Right of entry to remove, mark or light any structures or growths above easement surfaces; and Right to prohibit creation of electrical interference, unusual light sources, and other hazards to aircraft flight.                                                                                                                                                                                                                                                                                                                                                   |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 9.</b> As a further condition for approval of a residential subdivision or land trade, except where overriding circumstances exist, require the property owners to agree to the following: That it is understood by the owners and the owners' successors in interest that the real property in question lies close to an operating airport and that the operation of the airport and the landing and takeoff of aircraft may generate high noise levels; That the owners shall not initiate or support any action in any court or before any governmental agency if the purpose of the action is to interfere with, restrict, or reduce the operation of the airport or the use of any airport by any aircraft; That the owners shall not protest or object to the operation of the airport or the landing or takeoff of aircraft before any court or agency of government; and The above easement and agreement shall run with the land and shall be binding upon the owners and subsequent owners of the property. |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 10.</b> A buyer notification statement shall be a requirement for the transfer of title of any property located within the airport's planning boundary. This statement should indicate that the buyer is aware of the proximity of an airport, the characteristics of the airport's current and projected activity, and the likelihood of aircraft overflights of the affected property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 11.</b> In addition to the above basic policies, all development subject to a use permit or involved in a land exchange within the planning boundary shall contain the following provisions: It is understood by the owner that the subject property is within the area of influence of an airport and the operation of the airport, including aircraft landings and takeoffs may generate high noise levels; The owner shall not initiate or support any action                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                     | ✓                                                                                                                                                                       |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 4.1(a). Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>OVERALL GOAL. Provide for the orderly growth of the Bryant Field and Lee Vining airports and the area surrounding the airport in a manner that safeguards the general welfare of inhabitants within the vicinity of the airport and the public in general.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                     |                                                                                                                                                                         |
| <b>NOISE GOAL. Protect future development within the Bryant Field/Lee Vining Airport planning boundaries from objectionable airport-related noise by minimizing the number of people exposed to frequent and/or high levels of airport noise.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                     |                                                                                                                                                                         |
| <b>Policy 1.</b> The maximum normally acceptable exterior noise levels for new residential and other noise-sensitive land uses within the Bryant Field/Lee Vining Airport land use planning boundaries shall be 55 dBA CNEL. New residential land uses within the airport noise contours shall include soundproofing to limit interior noise levels to 45 dBA in any habitable room. If a noise analysis, including noise monitoring, is conducted for a particular location and the results indicate that the maximum CNEL will be less than shown on the Bryant Field and Lee Vining Noise Contours Compatibility Maps, then the lower exposure level may be used for the land use evaluation at the discretion of the Airport Land Use Commission (ALUC). | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 2.</b> The maximum noise exposure acceptable for non-residential land uses without special sound reduction construction within the Bryant Field and Lee Vining Airport noise contours is 60/70 dBA CNEL. If a noise analysis, including noise monitoring, is conducted for a particular location and the results indicate that the maximum CNEL will be less than shown on the Bryant Field and Lee Vining Noise Contours Compatibility Maps, then the lower exposure level may be used for the land use evaluation at the discretion of the ALUC.                                                                                                                                                                                                 | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 3.</b> Prohibit noise-sensitive land uses (e.g., residential uses, schools, hospitals) within the 55 dBA CNEL noise contours for Bryant Field and Lee Vining Airport.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 4.</b> Require noise and aviation easements, as necessary, before approving any land trade or major development project within the Bryant Field or Lee Vining Airport land use planning boundaries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                     | ✓                                                                                                                                                                       |
| <b>OVERFLIGHT PROTECTION GOAL: Protect future development within the Bryant Field and Lee Vining Airport planning boundaries from the noise impacts of routine aircraft flights over the community by minimizing the number of people exposed to frequent and/or high levels of airport noise.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                     |                                                                                                                                                                         |
| <b>Policy 1.</b> Prohibit noise-sensitive land uses within the Bryant Field and Lee Vining Airport primary traffic pattern.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | ✓                                                   | ✓                                                                                                                                                                       |
| <b>SAFETY GOAL: Regulate new development in the Bryant Field and Lee Vining Airport planning boundaries in a manner that minimizes the risks associated with potential aircraft accidents by 1) providing for the safety of people and property on the ground in the case of an aircraft accident near the airport, and 2) enhancing the chances of survival of the occupants of an aircraft involved in an accident beyond the immediate runway environment.</b>                                                                                                                                                                                                                                                                                            |                                                     |                                                                                                                                                                         |
| <b>Policy 1.</b> Allowable land use densities and intensities within the Bryant Field and Lee Vining Airport planning boundaries shall be those shown on the Mono County Land Use Maps for the area (see <a href="https://monomammoth.maps.arcgis.com">https://monomammoth.maps.arcgis.com</a> ) and described in the applicable land use designation descriptions.                                                                                                                                                                                                                                                                                                                                                                                          |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 2.</b> New development and land uses on private land in the Bryant Field and Lee Vining Airport planning boundaries shall be restricted to those that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                     |                                                                                                                                                                         |

**TABLE 4.1-9 MITIGATING GOALS, POLICIES AND ACTIONS FOR LAND USE**

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| are compatible with the airport operations and facilities described in the Bryant Field and Lee Vining Airport Master Plan/2020.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 3.</b> New development and land uses within the Bryant Field and Lee Vining Airport planning boundaries shall be consistent with the policies in this plan. Applications for uses that are determined by planning staff not to be consistent with these policies shall not be processed unless they are accompanied by an appropriate proposed amendment to this plan and, if necessary, an appropriate amendment to the Mono County General Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 4.</b> Actions adopting or amending the Mono County General Plan, Specific Plans, the Mono County Land Use Regulations, or building regulations that are applicable to the Bryant Field and Lee Vining Airport planning boundaries shall be consistent with the policies in this plan and shall be reviewed by the ALUC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 5.</b> Undeveloped areas within the Bryant Field and Lee Vining Airport Safety Zone shall remain as open space and shall be designated as Resource Management, Open Space or Agriculture in this plan and in the Mono County General Plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 6.</b> Restrict new residential subdivisions within the Bryant Field and Lee Vining Airport Safety Zone to a minimum lot size of one acre. The development of a single-family unit on an existing residential lot less than an acre in size shall not be subject to these restrictions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 7.</b> Prohibit highly risk-sensitive projects, particularly schools, hospitals and other uses in which the mobility of occupants is effectively limited, within the Bryant Field and Lee Vining Airport Safety Zone. New uses that would result in a concentration of more than 25 people per acre on a regular basis are also prohibited; e.g., shopping centers, restaurants, multifamily residential units, stadiums/arenas, office complexes, and heavy industrial uses.                                                                                                                                                                                                                                                                                                                                                                                                                                | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 8.</b> Above-ground storage of highly flammable or hazardous materials (e.g., oil, gas or chemicals) shall be prohibited within the Safety Zone, except for non-commercial, private domestic, or private agricultural facilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 9.</b> Inform applicants of development projects within the Bryant Field and Lee Vining Airport Safety Zone of potential land use conflicts and applicable restrictions, and ensure that such development does not reasonably restrict airport operations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | ✓                                                   | ✓                                                                                                                                                                       |
| <b>Policy 10.</b> As a condition of approval for any development project or land exchange within the Bryant Field and Lee Vining Airport Safety Zone, applicable avigation easements should be dedicated to the airport. Avigation easements should address the following: Right-of-flight at any altitude above acquired easement surfaces; Right to cause noise, vibrations, fumes, dust, and fuel particle emissions; Right of entry to remove, mark or light any structures or growth above easement surfaces; Right to prohibit creation of electrical interference, unusual light sources, and other hazards to aircraft flight; and Right to prevent erection or growth of all objects above acquired easement surfaces. Avigation easements should extend from the ground elevation of the runways and the defined approach surfaces to 150' above that elevation throughout the primary traffic pattern area. |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 11.</b> Applicants shall acknowledge, in an enforceable legal document, such as an avigation easement: That it is understood by the owner(s) and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     |                                                                                                                                                                         |

Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| particularly cereal grains. FAA recommends that such land uses be kept at least 10,000 feet from any runway used by turbine-powered aircraft.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                     |                                                                                                                                                                         |
| <b>Policy 7.</b> Review development proposals to ensure that the proposed development does not create visual or electronic hazards to flight. Visual hazards include distracting lights (particularly lights that may be confused with runway lights), glare, and sources of smoke. Electronic hazards include any uses that may interfere with aircraft instruments or radio communication. The following restrictions regarding potential visual and electronic hazards apply within the Bryant Field and Lee Vining Airport influence areas: Beacons, spotlights, or similar aircraft navigation markers that are not part of airport operations shall be prohibited. Uses that direct a steady light, including reflected sunlight, or a flashing light of red, white, green, or amber colors toward an aircraft engaged in an initial climb following takeoff, or toward an aircraft engaged in a final approach toward a landing shall be prohibited, unless the use is an FAA-approved navigational signal light or visual approach slope indicator (VASI); Outdoor lights shall be shielded so they are not aimed above the horizon. For projects near the airport, outdoor lighting shall be flight checked at night to ensure it does not blind pilots during landings and takeoffs; Uses that generate large amounts of smoke or steam that could be detrimental to the operation of an aircraft shall be prohibited; Uses that generate electrical interference that could be detrimental to the operation of aircraft and/or instrumentation shall be prohibited. |                                                     | ✓                                                                                                                                                                       |
| <b>ALUC Procedural Policies: These policies delineate the process the Mono County Airport Land Use Commission (ALUC) will use in reviewing local planning actions for compliance with the policies and criteria in the Bryant Field and Lee Vining Airport Land Use Compatibility Plans</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     |                                                                                                                                                                         |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | 4.1(a). Physically divide an established community. | 4.1(b). Conflict with a land use plan, policy, or regulation (e.g. general plan, specific plan, zoning ordinance) adopted to avoid or mitigate an environmental effect. |
| <b>Policy 3.</b> In Bridgeport, the ALUC shall coordinate with the Humboldt-Toiyabe National Forest and the Bureau of Land Management to ensure that development on public lands within the Bryant Field Airport influence area is compatible with the policies in this plan. In Lee Vining, the ALUC shall coordinate with the Inyo National Forest and the Mono Basin National Forest Scenic Area to ensure that development on public lands within the Lee Vining Airport planning boundaries is compatible with the policies in this plan.                                                                                                |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 4.</b> The ALUC shall request the Humboldt-Toiyabe National Forest and BLM Management (for Bryant Field), and the Inyo NF and Mono Basin National Scenic Area (for Lee Vining), to refer proposed projects that may conflict with airport operations, such as those that may create dust, smoke, steam or glare, or attract birds, involve structures of excessive height, or attract concentrations of people, to the ALUC for review and comment.                                                                                                                                                                                 |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 5.</b> Airport-related operations shall be reviewed by the ALUC for consistency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                     | ✓                                                                                                                                                                       |
| <b>Policy 6.</b> The ALUC shall review CEQA documents on projects in the vicinity of airports. The ALUC's role in reviewing CEQA documents is not to provide a formal compatibility determination but to comment on the project to ensure the highest level of compatibility. The ALUC has no authority to disapprove such projects but may offer comments only on the CEQA document. The ALUC may also comment on CEQA documents prepared in conjunction with a project submitted for ALUC review. Again, the ALUC has the authority to make a compatibility determination for the project itself but may only comment on the CEQA document. |                                                     | ✓                                                                                                                                                                       |

| <b>Policy 1.</b> ALUC staff shall review project submittals to assess whether the project is subject to ALUC review and, if so, whether the project submittal is complete. If additional information is needed, ALUC staff shall notify the project proponent immediately. Once the project submittal is complete, ALUC staff shall schedule an ALUC meeting within the required 60-day time frame. ALUC staff shall provide a preliminary review of the project to determine compatibility and shall provide a recommendation to the ALUC in a staff report. The staff report shall be made available to the ALUC and project proponent at least 5 days before the scheduled meeting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                     | ✓                                                                                                                                                                       |
| ALUC Action Choices                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                     |                                                                                                                                                                         |
| <b>Policy 1.</b> When determining whether a land use is consistent or inconsistent with the Bryant Field and Lee Vining Airport Land Use Compatibility Plans, the ALUC shall evaluate the proposal using the policies and criteria in the Bryant Field and Lee Vining Airport Land Use Compatibility Plans. Although this plan recognizes the incompatibility of certain land uses in the airport land use planning area based on noise, safety, and airspace concerns, it also recognizes that there may be specific situations where a normally incompatible use may be considered compatible because of terrain, specific location, or other factors related to the site. After due consideration of applicable factors, the ALUC may find a normally incompatible land use to be acceptable. In such cases, the ALUC shall specify why the exception is being granted, and find that the use would not create a safety hazard, that airspace would not be violated, and that extraordinary circumstances related to the site justify the exception. Exceptions may be granted on a case-by-case basis, and shall not be generalized to include other sites. | ✓                                                   | ✓                                                                                                                                                                       |

The California RTP Guidelines of 2010 state that the purpose of the RTP Policy Element is to " address legislative, planning, financial, and institutional issues and requirements, as well as any areas of regional consensus. The Policy Element presents guidance to decision-makers of the implications, impacts, opportunities, and foreclosed options that will result from implementation of the RTP." The Policy Element also promotes consistent actions by state, regional and local agencies. The focus of the *Draft 2015 RTP Policy Element* remains the same as in previous RTPs: maintaining existing streets and highways, promoting complete streets and developing additional transit and non-motorized facilities.

Table 4.2-10 below lists all applicable proposed *RTP/Circulation Element* policies and actions, and identifies with a checkmark (✓) those policies and actions that will reduce to less than significant levels the potential impacts on land use associated with implementation of the *Draft RTP/General Plan Update* and related planning initiatives.

| in traffic that is substantial in relation to the existing traffic load and capacity of the street system; and/or (2) disrupting or dividing the physical arrangement of an established community. The analysis shall: a. be funded by the applicant; b. be prepared by a qualified person under the direction of Mono County; c. assess the existing traffic and circulation conditions in the general project vicinity; d. describe the traffic generation potential of the proposed project both on-site and off-site; and e. recommend mitigation measures to avoid or mitigate the identified impacts, both on-site and off-site. Mitigations and monitoring programs shall be included in project plans and specifications and made a condition of project approval. Projects having significant adverse transportation impacts may be approved only if a statement of overriding considerations is made through the EIR process. Traffic impact mitigation measures may include, but are not limited to, off-site operational improvements, transit improvements, or contributions to a transit fund or road improvement fund. |                                                                                         |                                                                         |                                                                               |                                                                                 |                                                                  |
| <b>Policy 1.F:</b> Require new development, when found necessary by the Public Works Director and consistent with application laws by County Counsel, to provide dedications for improvements such as bicycle and pedestrian paths, transit facilities, snow storage areas, and rights-of-way for future public roads identified in the Circulation Element, in conformance with the Subdivision Map Act (CGC §66475 et seq.).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |
| <b>Objective 1.F.2:</b> Require new specific plans to contain a detailed plan, including financing, for local roadway and transit improvements as applicable. <b>Timeframe:</b> Ongoing over the 20-year plan timeframe.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |

| arrangement of an established community. The analysis shall: be funded by the applicant; be prepared by a qualified person under direction of Mono County; assess existing traffic and circulation in the general project vicinity; describe the traffic generation potential of the proposed project both on site and off site; and recommend mitigations to avoid or mitigate the identified impacts, both on site and off site. Mitigations and associated monitoring programs shall be included in the project plans and specifications and shall be made a condition of approval for the project. Projects with significant adverse impacts may be approved only if a statement of overriding considerations is made through the EIR process. |                                                                                         |                                                                         |                                                                               |                                                                                 |                                                                  |

| <p><b>GOAL 23: Yosemite National Park is a national and worldwide treasure that must be protected and preserved. Bordering the Park's eastern boundary, and serving as its only access point from Eastern California, Mono County is an important component of the Yosemite region. Through its transportation planning efforts, the Mono LTC will assist in the preservation and protection of the Park while still providing for visitor enjoyment, by strengthening the relationship between the Yosemite region and its eastern access through communities along the US 395 corridor</b></p> |                                                                      |                                                      |                                                            |                                                              |                                               |
| <p><b>Objective 23.A</b> Support the Park's mission to preserve the resources that contribute to Yosemite's unusual character and attractiveness: its exquisite scenic beauty; outstanding wilderness values; diverse Sierra Nevada ecosystems; historic resources including its Native American heritage; and role in national conservation ethic. These resources are to be made available for enjoyment, education and recreation while left unimpaired.</p>                                                                                                                                  | ✓                                                                    |                                                      |                                                            |                                                              |                                               |
| <p><b>Policy 23.A.1.</b> Management of Yosemite's congestion and access should be accomplished in a way that enhances the quality of life and quality of experience in gateway communities.</p>                                                                                                                                                                                                                                                                                                                                                                                                  | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |
| <p><b>Policy 23.A.2.</b> Coordinate with local plans when planning potential gateway corridor improvements to assist in dispersing transportation-related impacts from visitors to Yosemite. Develop an access plan with Caltrans, YNP, and the LTC.</p>                                                                                                                                                                                                                                                                                                                                         | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |
| <p><b>Policy 23.A.3.</b> The importance of Yosemite to the regional economy should be a primary factor when considering opening and closing dates for Tioga Pass.</p>                                                                                                                                                                                                                                                                                                                                                                                                                            | ✓                                                                    |                                                      |                                                            |                                                              |                                               |
| <p><b>Policy 23.A.4.</b> Continue working with Yosemite National Park on traffic and parking-related issues to provide the best visitor experience while supporting environmental preservation within the Yosemite region.</p>                                                                                                                                                                                                                                                                                                                                                                   | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |
| <p><b>Policy 23.A.5.</b> Transit-related infrastructure should maximize consideration for the environment; e.g., convenient, well-signed transit stops with appropriate safety and environmental considerations, including pedestrian and bike linkages.</p>                                                                                                                                                                                                                                                                                                                                     | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |
| <p><b>Objective 23.B.</b> Improve opportunities for access by alternative modes (transit, bicycles, pedestrians, air, other non-auto modes).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                 | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |

| <b>Action 25.A.4.g.</b> Develop land use policies to retain scenic views: North Shore Drive; particularly prominent visual resources in the West Village and Rodeo Grounds areas such as Gull Lake, the Gull Meadow area surrounding the northwest corner of Gull Lake; and the Rodeo Meadow area northwest of the Rodeo Grounds land exchange. Land use policies should retain distinctive visual corridors by using appropriate design measures (limiting building heights, requiring landscaping along the access road through developed areas, using natural topography to visually screen development, and clustering development). Other measures may include retaining existing vegetation along the alignment, limiting areas of cut and fill, using building materials and colors that blend in with the surrounding landscape, and limiting intersections with arterial or collector streets. These types of measures should be incorporated into future specific plans prepared for development in the West Village and Rodeo Grounds areas | ✓                                                                                       |                                                                         |                                                                               |                                                                                 |                                                                  |
| <b>Objective 25.B.</b> Encourage alternative roadway design, improvement and maintenance programs in existing subdivisions that conform to topographical, institutional and economic constraints.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |
| <b>Policy 25.B.1.</b> Limit disruption of built areas when acquiring rights of way by using existing roadways and limiting on-street parking on such roadways when necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |
| <b>Action 25.B.1.a.</b> In situations where existing private roadways cannot meet adopted county Roadway Standards - such as in the design of road improvements for substantially developed subdivisions with substandard lots and streets, where topographical/environmental constraints and existing building placement prohibit reasonable compliance – consider alternative designs prepared by or under the direction of a California registered civil engineer. Alternative designs must provide adequate emergency access in conformance with minimum fire safe standards and                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 4.2(a) Conflict with circulation policy, performance plan, ordinance | 4.2(b) Conflict with a congestion management program | 4.2(c) Increase risks through changed air traffic patterns | 4.2(d) Result in inadequate emergency access, design hazards | 4.2(e) Conflict with adopted multimodal plans |
| <b>Objective 25.G.</b> Develop a program to upgrade roadways and to vacate the County's interest in rights of way in areas where construction may be unfeasible due to topography or other conditions, or where access would be duplicated.                                                                                                                                                                                                                                                                                                                                                                                                                         | ✓                                                                    |                                                      |                                                            |                                                              |                                               |
| <b>Policy 25.G.1.</b> Inventory the existing road system, including the location of paper road easements, identify existing traffic patterns along existing roadways, and analyze the need for future road improvements in undeveloped paper road easements.                                                                                                                                                                                                                                                                                                                                                                                                        | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |
| <b>Action 25.G.1.a.</b> Work with the June Lake community to identify existing traffic patterns and to compile a list of roads suitable for County road vacation. Alignments suitable for vacation would include those that: a. The County has determined to be impassable due to topography (steep slopes and rocky outcroppings) and environmentally sensitive resources such as streams and wetland areas; b. The County has not expended funds on roads in the last five years; c. Duplicate access to a lot or home; d. Does not show as a major road in this Plan; and e. Does not have potential for other public use such as a bicycle or pedestrian trail. | ✓                                                                    |                                                      |                                                            |                                                              |                                               |
| <b>Action 25.G.1.b.</b> During the road inventory process, the County should work with the JLPUD, JLFPD, and SCE to ensure that proposed road abandonments would not hinder existing or future operations.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |
| <b>Action 25.G.1.c.</b> Where feasible, the County should work with USFS to acquire additional rights of way across National Forest lands to facilitate looped road access or roadway alternatives that prevent the disturbance of sensitive resources on private lands. Public meetings/workshops should be conducted to gauge local support for the above loop road(s).                                                                                                                                                                                                                                                                                           | ✓                                                                    |                                                      |                                                            |                                                              |                                               |
| <b>Objective 25.H.</b> Promote the use of non-motorized forms of transportation to minimize the impact of the automobile in the Village, West Village/Rodeo Grounds, and Down Canyon areas and to create pedestrian-oriented areas.                                                                                                                                                                                                                                                                                                                                                                                                                                 | ✓                                                                    | ✓                                                    |                                                            |                                                              | ✓                                             |
| <b>Policy 25.H.1.</b> Provide, where feasible, paths for non-motorized modes of transportation (e.g., pedestrians, Nordic skiers or bicyclists) on rights of way separate from auto roadways. These paths should link major lodging                                                                                                                                                                                                                                                                                                                                                                                                                                 | ✓                                                                    | ✓                                                    |                                                            | ✓                                                            | ✓                                             |

| <b>Action 25.K.5.a.</b> Through the Planning Permit process work with project proponents to locate parking behind and/or below proposed structures, where applicable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ✓                                                                                       | ✓                                                                       |                                                                               |                                                                                 | ✓                                                                |
| <b>Action 25.K.5.b.</b> Work with project proponents to improve existing parking areas and the design and construction of new parking areas. Parking lots should be designed to minimize driveway connections to streets, to minimize impacts of spill-over parking lot lighting on neighboring property owners, and to minimize visual impacts by breaking up paved areas with landscape planters or walkways constructed of materials other than asphalt. Walkways should be designed to promote pedestrian use by separating pedestrian space from parking areas through the use of barriers or a change of materials, and through linkages with existing or proposed pedestrian facilities. | ✓                                                                                       |                                                                         |                                                                               |                                                                                 |                                                                  |
| <b>Policy 25.K.6.</b> Promote the construction of additional on-site parking and limit on-street parking during winter peak periods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |
| <b>Action 25.K.6.a.</b> Require single-family homes to provide two parking spaces per residence. This policy shall apply to all construction that expands the habitable space of an existing single-family home.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | ✓                                                                                       | ✓                                                                       |                                                                               | ✓                                                                               | ✓                                                                |
