| <p>→ Additional policies and actions that would minimize impacts to air quality and GHG can be found in EIR §4.1, Table 4.1-8, including policies and actions under Objectives 1.A, 1.B, 4.A, 4.B, 6.C, 6.E, 9.D, 10.C, and 26.b.</p> |                                                                                                                                          |                                                                                                                          |                                                                              |                                                                                 |                                                                                                                               |

**1.1. POLICIES BIOLOGICAL RESOURCES**

Table 4.13-10 below lists all applicable policies and actions to minimize impacts associated with biological resources, and identifies with a checkmark (✓) those policies and actions that will minimize the potential impacts on biological resources associated with implementation of the *Draft RTP/General Plan Update* and related planning initiatives.

| <b>TABLE 4.4-10. MITIGATING GOALS, POLICIES &amp; ACTIONS FOR BIOLOGICAL RESOURCES</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                       |                                                                                                                   |                                                                                  |                                                                                                                     |                                                                                                                               |                                                                                                                            |

| <p>consultation with the CDFW; assess existing conditions in the general project vicinity, including the identification of any listed or candidate threatened or endangered species or habitats of special concern, and annual and daily wildlife movement patterns and corridors; describe the impacts of the proposed development upon animal and plant habitat extent, quality and connectivity within the project site and on surrounding areas; and recommend project alternatives or measures and monitoring to avoid or mitigate impacts to animal and plant habitat. Mitigation measures and associated monitoring programs shall be included in the project plans and specifications, and shall be made a condition of approval for the project. The project sponsor shall fund the monitoring and shall be responsible for remedying deficiencies.</p> |                                                                                                       |                                                                                                                   |                                                                                  |                                                                                                                     |                                                                                                                               |                                                                                                                            |
| <p><b>Action 2.A.1.b.</b> Project design should first seek to avoid impacts. Unavoidable impacts should next be minimized, and finally mitigated. Significant impacts to animal and plant habitats can be minimized with cluster development and/or large acre minimum parcel sizes (e.g., in key deer habitat, at least 20 acres for winter range and migration corridors, and at least 40 acres for critical winter range and critical corridors); encouraging future development to locate in less-sensitive areas or on sites adjacent to previously developed areas; encouraging fence designs that allow for the movement of wildlife and protect against mortality (e.g., sage grouse); where necessary, requiring leash laws as a condition of project approval, in order to control domestic animals</p>                                                | ✓                                                                                                     | ✓                                                                                                                 | ✓                                                                                | ✓                                                                                                                   | ✓                                                                                                                             |                                                                                                                            |

| <p>statement of overriding considerations is approved. Potential mitigation measures may include minimizing site disturbance and limiting it to the poorest quality habitat on the parcel (e.g., near trees, away from leks and water, etc.); siting structures taller than 6 feet or above the sagebrush average height outside the line of sight of a lek; minimizing the installation of fencing and all fencing shall be of a wildlife friendly design, which may include the following specifications: not taller than 42", three strands, bottom strand a minimum of 16" from the ground, top wire marked for visibility, lay down and let-down fencing, and avoidance of posts serving as avian predator perches. Other designs may be warranted depending on the wildlife concerns of the areas, and the BLM, USFWS and/or CDFW should be consulted; installing perch deterrents on structures taller than 6 feet or above the sagebrush average height; controlling domestic animals on the property; designating seasonal use restrictions; restoring native vegetation or otherwise improving vegetative habitat, including removal of invasive trees and annual grasses, and reducing fire risk on nearby public lands; contributing financially to an established program undertaking habitat restoration within Mono County; and including other measures developed in consultation with key Bi-State sage grouse partners (e.g., USFWS, CDFW, BLM, USFS), including considerations to mitigate impacts to reduced connectivity and fragmentation.</p> | ✓                                                                                                     | ✓                                                                                                                 | ✓                                                                                | ✓                                                                                                                   | ✓                                                                                                                             |                                                                                                                            |

| road projects to improve hydrologic flow, and raven control at the Benton Crossing Landfill. |                                                                                                |                                                                                                            |                                                                           |                                                                                                              |                                                                                                                        |                                                                                                                     |

→ Additional policies and actions that would minimize impacts to biological resources can be found in EIR §4.1, Table 4.1-8, including policies and actions under Objectives 4.B, 5.C, 6.A, 8.A, 9.H, 18.A, 18.B, 18.C, 21.C and 24.F.

Table 4.5-5 below lists proposed policies and actions that apply to soils and geology, and identifies with a checkmark (✓) those policies and actions that will serve to minimize the potential impacts on soils and geology associated with implementation of the *Draft RTP/General Plan Update* and related planning initiatives.

| <b>Action 3.A.2.a.</b> Development projects including subdivisions shall demonstrate the availability of adequate structural fire protection consistent with SB 1241 and the California Building Code, including safe access for emergency vehicles, safe egress for residents, and adequate water supply prior to or as a condition of permit issuance. Applicants shall provide either a will-serve letter from the applicable fire protection district or a fire protection plan. The fire protection plan shall be part of the development application and shall identify the nature of the local fire hazard, assess the risk of wildland and structural fires presented by the project, and specify measures for detecting and responding to fires on the project site throughout all phases of the proposed development. Project approvals shall include a finding that adequate structural fire protection is or will be available. |                                                                                                  |                                                                                                      |                                                                                                                 |                                                                                                          | ✓                                                                                       |                                                                                                                             |
| <b>Action 3.A.2.b.</b> Require development projects within the sphere of influence of a fire protection district to annex into the district.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                  |                                                                                                      |                                                                                                                 | ✓                                                                                                        | ✓                                                                                       |                                                                                                                             |
| <b>Action 3.A.2.c.</b> Require the formation of a fire protection entity for specific plan areas that include significant residential uses, unless the area is within the Sphere of Influence of an existing local fire protection agency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                  |                                                                                                      |                                                                                                                 | ✓                                                                                                        | ✓                                                                                       |                                                                                                                             |

| <b>Objective 15.C.</b> Preserve, protect, and restore (where appropriate) the cultural resources of Mono County.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | ✓ | ✓ | ✓ |
| <b>Policy 15.C.1.</b> Future development projects shall avoid potential significant impacts to cultural resources or mitigate impacts to a level of non-significance, unless a statement of overriding considerations is made through the EIR process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ✓ | ✓ | ✓ |
| <b>Action 15.C.1.a.</b> Future development projects with the potential to significantly impact cultural resources shall provide an analysis of the potential impact(s) prior to project approval. Examples of potential significant impacts include: disrupting or adversely affecting a prehistoric or historic archaeological site or a property of historic or cultural significance to a community or ethnic or social group, or a paleontological site except as a part of a scientific study; and/or conflicting with established recreational, educational, religious or scientific uses of the area. The analysis shall: be funded by the applicant; be prepared by a qualified person under the direction of Mono County; assess the cultural resources in the general project vicinity; describe the impacts of the proposed development upon cultural resources within the project site and on surrounding areas; and recommend project alternatives or measures to avoid or mitigate impacts to cultural resources. Mitigations shall be included in the project plans and specifications and shall be made a condition of approval for the project. | ✓ | ✓ | ✓ |
| <b>Action 15.C.1.b.</b> Develop criteria in cooperation with other federal, state, and local agencies, to determine which cultural resources are significant.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ✓ | ✓ | ✓ |

| by the applicant; prepared by a qualified person under the direction of Mono County; assess existing conditions in the general project vicinity; identify the quantity of water to be used by the project. Quantities shall be estimated for annual totals, monthly averages, and peak day/peak month usage; identify source(s) of water for the project and provide proof of entitlement. If the proposed source is to be a special district or mutual water system, a "will-serve" letter shall be required. If the proposed source is ground or surface water, the application shall indicate that the proponent has entitlements to the source and quantity of water required; describe impacts of the proposed development on water resources in the project site and surrounding areas, including a drawdown analysis of groundwater (when applicable) through pump test(s); and recommend alternatives or measures to avoid or mitigate impacts to water resources. Mitigation measures and associated monitoring programs shall be included in the project plans and specifications and shall be made a condition of approval for the project. |                                               |                                                                                                          |                                                                                                            |                                                                                                                           |                                                                                  |                                                                                                               |                                                                                        |
| <b>Policy 3.B.7.</b> Limit development to a level that can be reasonably supported by available local water resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                               |                                                                                                          | ✓                                                                                                          |                                                                                                                           |                                                                                  |                                                                                                               |                                                                                        |

| <b>Action 3.E.1.c.</b> In addition to the Groundwater Transfer Ordinance findings, the Planning Commission shall make the following findings to issue a water transfer permit: that the proposed project meets all reasonable beneficial water needs, including uses in-stream and for agricultural operations and recreational purposes, within the basin of origin; and that the proposed project adequately protects water quality, in-stream flows, lake levels, riparian areas, vegetation types, sensitive/rare wildlife and habitat, and related resources such as the visual quality and character of the landscape; and is not likely to increase indirect effects such as flooding, wildfire, and/or sedimentation, or reduce groundwater recharge capacity. Projects that do not adequately protect these resources shall be denied. | ✓                                             | ✓                                                                                                        | ✓                                                                                                          | ✓                                                                                                                         | ✓                                                                                | ✓                                                                                                             | ✓                                                                                      |
| <b>Action 3.E.1.d.</b> The Planning Commission shall review all water export projects in the unincorporated area for consistency with the County General Plan and any applicable Area Plans.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | ✓                                             | ✓                                                                                                        | ✓                                                                                                          | ✓                                                                                                                         |                                                                                  |                                                                                                               |                                                                                        |
| <b>Policy 3.E.2.</b> Implement the Groundwater Transfer Ordinance for out-of-basin groundwater transfers, and consider other local mechanisms to regulate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | ✓                                             | ✓                                                                                                        | ✓                                                                                                          | ✓                                                                                                                         |                                                                                  |                                                                                                               |                                                                                        |

| <b>Action 4.A.1.a.</b> Development projects with potential to significantly impact water quality shall assess the potential impact(s) prior to project approval. Examples of potential significant impacts include: substantially degrading water quality; and/or contaminating a public water supply; and/or causing substantial flooding, erosion or siltation. In areas determined by the County to be of special significance, such an analysis and associated mitigation measures may be required even if the proposed project conforms to water quality standards established by LRWQCB for the project area. The analysis shall be funded by the applicant; be prepared by a qualified person under the direction of Mono County; assess current water quality in the general project vicinity; describe the impacts of the proposed development upon water quality within the project site and on surrounding areas, including a quantification of potential runoff and sedimentation from erosion, contamination that could enter the surface or groundwater system, calculations or mapping related to flooding, and potential cumulative on-site and off-site hydrologic effects on water quality; for projects with the potential to significantly affect groundwater resources, the analysis may be required to include hydrologic | ✓                                             | ✓                                                                                                        | ✓                                                                                                          | ✓                                                                                                                         | ✓                                                                                | ✓                                                                                                             | ✓                                                                                      |

| <b>Objective 5.A. Encourage the retention of agricultural and grazing lands</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                               |
| <b>Policy 5.A.1.</b> Discourage the conversion of agricultural lands to non-agricultural uses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | ✓                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                               |
| <b>Action 5.A.1.a.</b> Future development projects with the potential to convert prime agricultural land to non-agricultural use or to impair the productivity of prime agricultural land (as defined in Government Code Section 56064) shall assess the potential impact(s) prior to project approval. The analysis shall: be funded by the applicant; be prepared by a qualified person under the direction of Mono County; assess existing conditions in the general project vicinity; describe the impacts of the proposed development upon prime agricultural lands within the project site and on surrounding areas; and recommend project alternatives or measures to avoid or mitigate impacts to prime agricultural land to a level of non-significance, unless a statement of overriding considerations is made through the EIR process. Mitigation measures and associated monitoring programs shall be included in the project plans and specifications and shall be made a condition of approval for the project. | ✓                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                               |
| <b>Action 5.A.1.b.</b> Establish adequate minimum parcel sizes for viable agricultural lands and encourage consolidation of undersized parcels. Consider amending the General Plan to address minimum parcel sizes in                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ✓                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                               |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |   |   |
