List of Plant Specimens collected in the Galápagos Islands, Ecuador*

Syuzo Itow¹⁾

Introduction

The Galápagos Islands are located on the equator in the eastern Pacific. All islands are volcanic in origin, created on the Galápagos Hotspot of the Nazca Plate that moves toward east-southeast direction (Holden and Dietz 1972; Hey 1977). The oldest lava is ca. 5 million years of age (Gordon et al. 1978). The archipelago consists of 13 major islands (>10 sq. km) and many islets and reefs. They lie in the southeasterly trade wind zone and receive rather low amount of rainfall in the lowland throughout the year. Fog and clouds, however, envelop the high elevations over 600 m, especially on the windward side of the trade-wind exposed islands. The vegetation zonation ranges from "Dry" in the lowland, through "Transition" and "Moist" zones, to treeless "Highland" zone (Itow and Weber 1974; Itow 1990, 1992).

I visited the archipelago first in 1964 as a member of the Galápagos International Scientific Project (GISP), organized by the University of California, Berkely, and the California Academy of Sciences. The plant specimens listed here are my collections made during my second visit in 1970 and my third in 1978. My stays in the islands lasted from January to June in 1970 and again from January to April in 1978. At that time I carried out vegetation studies on 13 major and 9 smaller islands of the archipelago. The maps (Figures 1-13) attached at the end of the present list give the routes of my field trips on individual islands.

* Contribution No. 559 of the Charles Darwin Foundation for the Galápagos Islands.

1) Plant Ecology Laboratory, Faculty of Liberal Arts, Nagasaki University, Nagasaki 852, Japan.

Specimen number

I collected specimens as vouchers in connection with vegetation sampling. Every specimen has an individual number of its own. For the specimens collected in 1970, the number consists of 9 digits. The first two digits are always "70", that means the year 1970; the 3rd means the month; 4th and 5th mean the day; 6th and 7th are vegetation sample number on that day, excepting in case of "00" which means collections having no relation with vegetation studies. The last two digits that follow the dash show the plant specimen number collected in that vegetation sample. For example, 70/4/23/04-08 means the specimen collected as 8th voucher in the vegetation sample No. 4 investigated on 23 April 1970. Suffix A and B show the duplicate.

In collections made in 1978, specimen numbers consist of 7 digits (example: 78/125-05). Here, the first two digits are always "78" that means the year 1978. The 3rd to 5th digits show the page number of my field notes, and the 6th and 7th digits indicate the plant specimen number collected as voucher in that vegetation sample. Suffix A and B show the duplicate.

In both of the 1970 and 1978 specimens, MAK and KMNH mean that the specimens are stored in the Makino Herbarium of Tokyo Metropolitan University and Kitakyushu Museum and Institute of Natural History, respectively.

Some of the specimens are sterile, because they were collected as vouchers during vegetation sampling. Apart from the vegetation study, I also collected plants when I found good specimens with flowers and/or fruits, and when I encountered plants new to me. Those collections have the number "00" as the 6th and 7th digits in the collections of 1970. In collections of 1978, however, such discriminatory note is not given.

Identification

In 1970, immediately after I finished field work in June in the Galápagos, I visited the late Dr. Ira L. Wiggins at Dudley Herbarium, Stanford University, California, with my collections. At that time, Wiggins had nearly finished the proof and page-setting of Wiggins & Porter's (1971) Flora of the Galápagos

Islands. Prior to this year, my collections made during the 1964 GISP were deposited in Dudley Herbarium and they were already determined by contributors of the Flora. Wiggins returned some of the sheets to me, and I left many new collections at the Dudley Herbarium. These were later transferred to the California Academy of Sciences Herbarium (CAS). Wiggins kindly determined many of my new collections, and further gave me opportunities to access the sheets determined for the Flora. Using those sheets as reference specimens, I studied and determined my collections during the stay at Dudley Herbarium in July and August, 1970, and then brought them back to Nagasaki, Japan. My collections made in 1978 were determined in Nagasaki with the aid of the above-mentioned identified sheets as well as Wiggins and Porter's (1971) Flora. I owe Ira L. Wiggins my thanks for his determinations; the responsibility is my own.

In the present list, I arranged the specimens in the order that Wiggins & Porter (1971) adopted in their Flora. The botanical nomenclature follows the Flora, and also Elliason (1974) and Hamann & Wium-Andersen (1986) for *Scalesia* (Compositae), Richardson (1977) for *Tiquilia* (Boraginaceae), Adsersen (1980) for *Lecocarpus* (Compositae) and Lawesson & Adsersen (1987) for *Darwiniothamnus* (Compositae). The list contains 1486 specimens (including 228 duplicates) and 385 taxa (species, subspecies and varieties), of which 65 taxa are Ferns and Allies, 46 are Apetalae, 128 are Gamopetalae, 99 are Polypetala, and 47 are Monocotyledoneae.

Publications

Part of my vegetation studies based on the voucher specimens listed here have appeared in nine papers and abstracts listed below.

1995. Phytogeography and ecology of *Scalesia* (Compositae) endemic to the Galápagos Islands. *Pacific Science* 49(1): 17-30.

1992. Altitudinal change in plant endemism and species turnover and diversity on Isla Santa Cruz, the Galápagos Islands. *Pacific Science*. 46(2):251-268.

1990. Herbaceous and ericaceous communities in the highland of Santa Cruz, the Galápagos Islands. *Monog. Syst. Missouri Bot. Gard.* 32:47-58.

1988. Population structure, stand-level dieback and recovery of *Scalesia pedunculata* forest in the Galápagos Islands. *Ecological Research* 3:333-339. (Co-author: D. Mueller-Dombois)
1988. Species diversity of mainland- and island forests in the Pacific area. *Vegetatio* 77:193-200.
1988. Distributions of land shells and plants on Santa Cruz and Santa María Islands, Galápagos. *Proc. Ann. Meet. W. Soc. Malacologists, Rohnert Park, Calif., USA*. (Co-author: Shi-Kuei Wu)
1975. Effects of rain-shadow on vegetation distribution in the Galápagos Islands. *XIII Pacific Science Congress, Vancouver, Canada*.
1974. Fens and bogs in the Galápagos Islands. *Hikobia* 7:39-52. (Co-author: D. Weber)
1971. A study of vegetation in the Galápagos Islands. *Noticias de Galápagos* 17:10-13.

Acknowledgements

I should like to extend my sincere gratitudes to the late Dr. Ira L. Wiggins for his kind consideration and valuable comments on my botanical and vegetation studies. My studies and concerns with the Galápagos vegetation would not continue without his encouragement, advice, suggestions and comments. My visit, stay and field trips in the Galápagos were enabled by the Charles Darwin Research Station (CDRS) which has been functioning since its inauguration in 1964. Directors of CDRS were Roger Perry in 1970, and Craig MacFarland and Hendrick Hoeck in 1978; the managers were Rolf Sievers and Gorge Sotomajor, respectively. My stay at CDRS and logistics to field work were supported by these directors, managers and staff members of CDRS. Field work and collection of plant specimens were permitted by the Superintendents of the Servicio Parque Nacional Galápagos (SPNG), Juan Black Maldonado, Jose Villa and Miguel Cifuentes Arias. In the 1970 field trips, I was accompanied by D. Weber, J. Gordillo, or A. Tupiza. The late Robert Silverglij shared field trips to Islas Beagle, Pinzon, Rabida, Eden, and to Santa Cruz highland. T. de Vries took me to Caseta at Tortoise Reserve and to the highland of Santa Cruz to set up permanent quadrats. Two German

postgraduate students accompanied me on the trip crossing Volcan Alcedo, Isla Isabela, from the east coast, upto the summit area, and then down to the west coast. In the 1978 trips, I was accompanied by J. Gordillo or A. Tupiza, To all persons who helped, supported, and companied me, I give my sincere thanks.

Ferns and Allies

Cyatheaceae

Cyathea weatherbyana (Morton) Morton

Along the stream-bed near Media Luna, alt. 550 m. Santa Cruz.

70/4/04/00-03/MAK

In *Sphagnum* bog at San Joaquin, alt. 660 m. San Cristobal.

70/6/04/12-07/MAK

Gleicheniaceae

Dicranopteris flexuosa (Schrd.) Underss.

In a *Sphagnum* bog in grassy zone, between Cerro Puntudo and C. Bandera, alt. ca 650 m. Santa Cruz. 70/4/29/19-01/MAK

Hymenophyllaceae

Hymenophyllum polyanthos (Sw.) Sw.

Epiphyte on *Zanthoxylum fagara*, alt. 880 m. Santiago.

70/4/11/00-09A/MAK; 70/4/11/00-09B/KMNH

North slope of Cerro Crocker, alt. 760 m. (*Scalesia* forest) Santa Cruz.

70/4/30/16-05/MAK

Trichomanes reptans Sw.

In *Scalesia pedunculata* forest, 2 km east of Bella Vista, alt. 300 m. Santa Cruz. 70/3/08/01-16/MAK

Spring at Santa Rosa, alt. 500 m. Santa Cruz. 70/5/06/00-06/MAK

Epiphyte. Near the crater lake of El Junco, alt. 570 m. San Cristobal.

70/6/04/00-19A/MAK; 70/6/04/00-19B/KMNH

Lycopodiaceae

Lycopodium cernuum L.

At Cerro Media Luna, alt. 600 m. Santa Cruz. 70/3/07/00-20/MAK

In a *Sphagnum* bog in grassy zone, between Cerro Puntudo and C. Bandera, alt. ca 650 m. Santa Cruz. 70/4/29/19-03/KMNH

Lycopodium clavatum L.

At Cerro Media Luna, alt. 600 m. Santa Cruz.

70/3/07/00-12A/MAK; 70/3/07/00-12B/KMNH

In the highland. Santa Cruz. 70/4/04/04-01/KMNH

Just below the vertical bog in Crater No. 2, crater group between El Camote

and Cerro Crocker, alt 670 m. (*Ly. clavat.*) Santa Cruz.

70/4/04/05-01/MAK

In a *Sphagnum* bog in grassy zone, 1 km SW of Cerro Puntudo, alt. 690 m.
Santa Cruz. 70/4/29/05-02/MAK

Lycopodium dichotomum Jacq.

Western foot of Cerro Verde, NE of Santo Tomas, alt. 400 m. (*Scalesia cordata*/*Ctenitis* forest) Sierra Negra, Isabela. 70/2/23/05-04/MAK

Lycopodium passerinoides HBK

On the caldera rim of V. Alcedo. Isabela.

70/4/08/00-23A/MAK; 70/4/08/00-23B/KMNH

On the NWW slope between Bahia James and sumit area of the island.
Santiago. 70/4/11/00-05/MAK

Near El Junco Lake. Alt. not recorded. San Cristobal.

70/6/04/00-09A/MAK; 70/6/04/00-09B/KMNH

Lycopodium reflexum Lam.

At Cerro Media Luna, alt. 600 m. Santa Cruz. 70/3/07/00-18/MAK

In a *Sphagnum* bog between El Camote and Cerro Crocker, alt. 690 m.
(Vertical bog) Santa Cruz.

70/4/04/03-04A/MAK; 70/4/04/03-04B/KMNH

Grassland on narrow ridge, south of the Cerro Crocker peak, alt. 790 m.
Santa Cruz. 70/4/30/06-01/KMNH

Lycopodium thyoides Humb. & Bonpl. (= *L. complanatum* L)

At Cerro Media Luna, alt. 600 m. Santa Cruz. 70/3/07/00-17/MAK

Ophioglossaceae

Ophioglossum reticulatum L.

In grassy zone above Media Luna, alt. ca 600 m. Santa Cruz.

70/4/29/00-06A/MAK; 70/4/29/00-06B/KMNH

Polypodiaceae

Adiantum concinnum H & B ex Willd.

On east rim of V. Sierra Negra, alt. 990 m. Isabela.

70/2/22/00-03A/MAK; 70/2/22/00-03B/KMNH

On the caldera rim of V. Alcedo, alt. ca 1000 m. Isabela.

70/4/08/00-14/KMNH

- On the northeast slope of V. Alcedo, alt 960 m. Isabela. 70/4/08/02-01/MAK
- Spring at Santa Rosa, alt. 500 m. Santa Cruz. 70/5/06/00-04/MAK
- Adiantum henslovianum* Hook.f.
- Western foot of Cerro Verde, NE of Sant Tomas, alt. 400 m. (*Scalesia cordata/Ctenitis* forest) Sierra Negra, Isabela. 70/2/23/05-14/MAK
- Along the trail from Academy Bay to Tortoise Reserve, alt. 170 m. Santa Cruz. 70/4/23/01-02B/KMNH
- Zanthoxylum* thicket on the south side of the island, alt. 500 m. Pinta. 78/198-03B/KMNH
- Below the caldera rim of V. Darwin, alt. 1200 m. Isabela. 78/227-04/MAK
- Adiantum macrophyllum* Sw.
- In *Scalesia pedunculata* forest, 2 km east of Bella Vista, alt. 280 m. Santa Cruz. 70/3/08/02-02/MAK; 70/3/08/01-06/KMNH
- Adiantum patens* Willd.
- In grassy zone of V. Sierra Negra, alt. 720 m. Isabela. 70/2/22/01-06A/MAK; 70/2/22/01-06B/KMNH
- Adiantum villosum* L.
- Along the trail from Bella Vista to Cerro Mesa, alt. ca 300 m. Santa Cruz. 70/3/08/00-01A/MAK; 70/3/08/00-01B/KMNH

- In *Sphagnum* bog at San Joaquin, alt. 600 m. San Cristobal. 70/6/04/12-02A/MAK
- Mildella intramarginalis* (Kaulf. ex Link) Trev.
- East end of the caldera floor o Sierra Negra, alt. 880 m. (Eup equiset/Borreria eric) Isabela. 70/2/22/03-02A/MAK; 70/2/22/03-02B/KMNH
- In grassy zone, about 1 km west of Cerro Puntudo, alt. 650 m. Santa Cruz. 70/5/26/00-07A/MAK; 70/5/26/00-07B/KMNH
- Nephrolepis biserrata* (Sw.) Schott.
- At Wittmer's farm, alt. 330 m. Floreana. 70/3/13/00-06A/MAK ; 70/3/13/00-06B/KMNH
- On a steep slope facing SE, alt. 580 m. Pinta.

78/200-02A/MAK; 78/200-02B/KMNH

Nephrolepis cordifolia (L.) Presl

In grassy zone of V. Sierra Negra, alt. 720 m. Isabela.

70/2/22/01-03A/MAK; 70/2/22/01-03B/KMNH

In grassy zone in the highland, alt. 550-800 m. Santa Cruz.

70/3/07/00-06A/MAK; 70/3/07/00-06B/KMNH

At edge of a *Sphagnum* bog in grassy zone between Media Luna and Cerro Crocker, alt. 755 m. Santa Cruz.

70/3/07/04-01A/MAK; 70/3/07/04-01B/KMNH

Miconia belt on south slope of Cerro el Camote, alt. 550 m. Santa Cruz.

70/3/21/03-07/KMNH

Along the trail from Cerro Puntudo to Bahia Borrero, N side of the island, alt. 510 m. (*Scalesia pedunculata* forest) Santa Cruz.

70/3/23/04-03A/MAK; 70/3/23/04-03B/KMNH

In a *Sphagnum* bog between El Camote and Cerro Crocker, alt. 690 m. Santa Cruz. 70/4/04/03-01/MAK

On the caldera rim of V. Alcedo, alt. 1050-1100 m. Isabela.

70/4/08/00-24/MAK

Epiphyte on *Zanthoxylum fagara*, alt. 880 m. Santiago.

70/4/11/00-10/MAK; 70/4/11/00-12/KMNH

In a *Sphagnum* bog in grassy zone, 1 km SW of Cerro Puntudo, alt. 690 m. Santa Cruz. 70/4/29/05-03A/MAKIn a *Sphagnum* bog in grassy zone, between Cerro Puntudo and C. Bandera, alt. ca 650 m. Santa Cruz. 70/4/29/19-02A/MAKNorth slope of Cerro Crocker, alt. 760 m. (*Scalesia* forest) Santa Cruz.

70/4/30/16-04/MAK

Spring at Santa Rosa, alt. 500 m. Santa Cruz.

70/5/06/00-05A/MAK; 70/5/06/00-05B/KMNH

North side of rocky ridge in the summit area of the island, alt. 450 m. Pinzon. 70/5/14/06-03B/KMNH

Near Lake El Junco. San Cristobal.

70/6/04/00-02A/MAK; 70/6/04/00-02B/KMNH

In *Sphagnum* bog at San Joaquin, alt. 660 m. San Cristobal.

70/6/04/12-01A/MAK; 70/6/04/12-01B/KMNH

Sphagnum bog in grassy zone, south side of the main ridge, west of Cerro Crocker, alt. 780 m. 70/6/22/30-02/KMNH

Grassy zone in the highland. Santa Cruz. 70/6/23/00-03/MAK

On a cliff facing to SE, alt. 580 m. Pinta. 78/199-01/MAK

Notholaena galapagensis Weath. & Svenson

In the lava field at Tagus Cove, alt. 100 m. Volcan Darwin, Isabela.

70/4/10/00-03A/MAK; 70/4/10/00-03B/KMNH

Along the trail between Caleta Negra and V. Darwin, alt. 500-550 m. Isabela.

78/224-02/MAK

Pityrogramma calomelanos (L.) Link var. *calomelanos*

At Cerro Media Luna, alt. 600 m. Santa Cruz.

70/3/07/00-21A/MAK; 70/3/07/00-21B/KMNH

Along the stream-bed near Media Luna, alt. 550 m. Santa Cruz.

70/4/04/00-02B/MAK

On the NWW slope between Bahia James and summit area of the island.

Santiago. 70/4/11/00-01/MAK

Zanthoxylum zone between alt. 550-450 m. Pinta. 78/201-01/MAK

Pityrogramma calomelanos var. *aureoflava* (Hook.f.) Weath. ex Bailey

On a steep slope facing SE, alt. 580 m. Pinta. 78/200-01A/MAK

Pityrogramma tartarea Maxon

North side of rocky ridge in the summit area of the island, alt. 450 m.

Pinzon. 70/5/14/06-01A/MAK; 70/5/14/06-01B/KMNH

Polypodium angustifolium Sw. var. *amphostemon* (Kunze) Hieron.

Epiphyte on *Zanthoxylum fagara*, alt. 880 m. Santiago.

70/4/11/00-08/MAK

Polypodium aureum L. var. *areolatum* (H & B) Baker

In grassy zone in the highland, alt. 550-800 m. Santa Cruz.

70/3/07/00-13/MAK

Just below the vertical bog in Crater No. 2, crater group between El Camote and Cerro Crocker, alt 670 m. (Ly. clavat) Santa Cruz.

70/4/04/05-03/KMNH

Along the trail from Bella Vista to Media Luna, alt. 500m. Santa Cruz.

70/5/25/00-04/MAK

Polypodium dispersum A.M.Evans

Between Santo Tomas and V. Sierra Negra, alt. 510 m. (Guava/*Ctenitis sloanei*) Isabela. 70/2/22/01-02/MAK

Between Santo Tomas and V. Sierra Negra. Alt. ca. 500 m. Isabela.

70/2/22/03-03/MAK

Western foot of Cerro Verde, NE of Sant Tomas, alt. 400 m. (*Scalesia cordata/Ctenitis* forest) Sierra Negra, Isabela. 70/2/23/05-03/KMNH

Along the trail from Santo Tomas to Cerro Grande. NE of Santo tomas, alt. 280 m. Sierra Negra, Isabela. 70/2/23/01-09/KMNH

Along the old trail from Bahia Academia to Bella Vista. Transition zone, alt. 130 m. (*Pisonia/Croton/Justicia*) Santa Cruz.

70/3/06/03-03A/MAK; 70/3/06/03-03B/KMNH

On the caldera rim of V. Alcedo, alt. 1050 m. Isabela.

70/4/08/00-11/KMNH

Transition zone near rain guage along the trail from Bahia Academia to Bella Vista, alt. 70 m. (*Pisonia/Chiococca*) Santa Cruz.

70/6/23/06-01A/MAK

Polypodium insularum (Morton) de la Sota

Along a stream-bed near Media Luna, alt. 550 m. Santa Cruz.

70/3/23/00-02B/MAK; 70/3/23/00-02C/KMNH

Epiphyte. Along the trail between Bella Vista and Media Luna, alt. ca. 300 m. Santa Cruz. 70/4/04/00-06/MAK

Near the crater lake of El Junco, alt. 570 m. San Cristobal.

70/6/04/00-12A/MAK; 70/6/04/00-12B/KMNH

Polypodium lanceolatum L.

Transition/Moist zone between Villamil and Santo Tomas. Sierra Negra Isabela. 70/2/21/00-16/MAK

Epiphyte. Along the trail between Bella Vista and Media Luna, alt. ca. 300 m. Santa Cruz. 70/4/04/00-05A/MAK; 70/4/04/00-05B/KMNH

Epiphyte on *Zanthoxylum fagara*, alt. 880 m. Santiago.

70/4/11/00-06/MAK

Polypodium phyllitidis L.

In a coffee plantation at Santo Tomas, alt. 340 m. Sierra Negra, Isabela.

70/2/21/01-01A/MAK; 70/2/21/01-01B/KMNH

In *Scalesia pedunculata* forest, 2 km east of Bella Vista, alt. 280 m. Santa Cruz. 70/3/08/02-03/MAK

Polypodium steirolepis C.Chr.

In grassy zone of V. Sierra Negra, alt. 720 m. Isabela.

70/2/22/01-05/MAK

Epiphyte. Along the trail between Bella Vista and Media Luna, alt. ca. 300 m. Santa Cruz. 70/4/04/00-04/MAK

On the caldera rim of V. Alcedo, alt. 1050-1100 m. Isabela.

70/4/08/03-04/MAK

Epiphyte on *Zanthoxylum fagara*, alt. 880 m. Santiago.

70/4/11/00-11/KMNH

Along the trail between Bella Vista and Media Luna. Santa Cruz.

70/6/23/00-09A/MAK; 70/6/23/00-09B/KMNH

Polypodium tridens Kunze

East end of the caldera floor of Sierra Negra, alt. 880 m. (*Euph. equiset.*/*Borreria eric.*) Isabela. 70/2/22/03-04/MAK

On east rim of V. Sierra Negra, alt. 990 m. Isabela.

70/2/22/00-04/KMNH

Along the trail from Academy Bay to Tortoise Reserve. Santa Cruz.

70/4/23/00-08A/MAK; 70/4/23/00-08B/KMNH

North side of rocky ridge in the summit area of the island, alt. 450 m. Pinzon

70/5/14/06-02/MAK
