* *Fagus sylvatica* Linnaeus, European Beech, Copper Beech, of subgenus *Fagus*, section *Fagus*, is sometimes cultivated, but is not known to escape in our area. It has only 5-10 (-12) lateral veins, as opposed to (12-) 15-18 (-20) in *F. grandifolia*. {not keyed} [= V; *? F. sylvatica* ssp. *sylvatica* – X]

Quercus Linnaeus 1753 (Oak)

A genus of about 350-530 species, trees and shrubs, of temperate, subtropical, and rarely tropical regions of the Northern Hemisphere. Oaks are the predominant tree of our area, with a variety of species dominating much of the landscape in nearly every ecological situation. Only in a few specialized (and usually in some sense edaphically extreme) communities are oaks generally entirely absent: deepest Coastal Plain swamps, some Coastal Plain depression ponds, wettest pine savannas, pocosins, spruce-fir forests, highest elevation northern hardwood forests, and mountain bogs. Our oaks are divided into two well-marked sections; other sections occur outside our area. Red oaks (section *Lobatae*, sometimes treated as subgenus *Erythrobalanus*) are characterized by acorns maturing in two years (in one year in *Qu. elliottii*), styles elongate, abortive ovules are at the top of the seed, leaves and leaf lobes bristle-tipped, inner surface of the acorn shell velvety-pubescent, and acorns rooting in spring. Twenty-one of our *Quercus* species are in this group: *Qu. arkansana, Qu. coccinea, Qu. elliottii, Qu. falcata, Qu. georgiana, Qu. hemisphaerica, Qu. ilicifolia, Qu. imbricaria, Qu. incana, Qu. laevis, Qu. laurifolia, Qu. marilandica* var. *marilandica, Qu. myrtifolia, Qu. nigra, Qu. pagoda, Qu. palustris, Qu. phellos, Qu. rubra* var. *ambigua, Qu. rubra* var. *rubra, Qu. shumardii var. shumardii,* and *Qu. velutina*.

White oaks (section *Quercus*, sometimes treated as subgenus *Quercus*) are characterized by acorns maturing in a single year, styles short or absent, abortive ovules at the base of the seed, leaves and leaf lobes not bristle-tipped, inner surface of the acorn shell smooth, and acorns rooting in autumn. Twenty of our *Quercus* species are in this group: *Qu. alba*, *Qu. austrina*, *Qu. bicolor*, *Qu. boyntonii, Qu. chapmanii, Qu. geminata*, *Qu. lyrata*, *Qu. macrocarpa, Qu. margaretta*, *Qu. michauxii*, *Qu. minima, Qu. montana*, *Qu. muehlenbergii*, *Qu. oglethorpensis*, *Qu. prinoides*, *Qu. robur, Qu. similis, Qu. sinuata* var. *sinuata*, *Qu. stellata*, and *Qu. virginiana*. Hybrids within each section are frequent and diverse; hybrids do not naturally occur between the two sections. The live oaks of the southeastern Coastal Plain and Central America are subsection *Virentes*; other white oaks are subsection *Quercus*. References: Nixon in FNA (1997) (overall treatment); Jensen in FNA (1997) (red oaks); Nixon & Muller in FNA (1997) (white oaks); Godfrey (1988); Stein, Binion, & Acciavatti (2003); Cronquist (1991); Duncan & Duncan (1988); Hunt (1990)=Z; Hunt (1994); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Many oak species are well-adapted to ecological situations in which fires frequently burn the ground layer. Fire-maintained communities of the Piedmont and Mountains typically have oaks such as *Qu. stellata*, *Qu. marilandica* var. *marilandica*, *Qu. ilicifolia*, and *Qu. prinoides*. The two latter species are normally shrubby, and have become rarer because of fire suppression (they require fire to prevent larger trees from outcompeting them). In contrast, *Qu. stellata* and *Qu. marilandica* var. *marilandica* become larger and more frequent in fire-suppressed conditions.

Fifteen oak species in our area are typical of upland Coastal Plain communities with at least occasional fire: *Qu. arkansana, Qu. chapmanii, Qu. geminata, Qu. hemisphaerica, Qu. incana, Qu. laevis, Qu, margerettiae, Qu. marilandica* var. *marilandica, Qu. minima, Qu. myrtifolia, Qu. stellata*, and less typically *Qu. falcata, Qu. nigra, Qu. velutina,* and *Qu. virginiana*. Fire suppression of Coastal Plain communities, especially of sandhills, leads to an unnatural increase in the stature and abundance of oaks present. In frequent fire conditions, most oaks will persist as short, shrubby fire sprouts. Additional suggestions of how to recognize fire sprouts of hese species are given below. In general, leaves of fire sprouts are larger and more deeply lobed than normal leaves. In species of the red oak group, the bristle tips are larger and more pronounced. Increased size in leaves is particularly noticeable when an area previously long fire-suppressed is burned (the large underground root system and nutritional resources of a small tree destroyed by fire being devoted to a few very vigorous sprouts). Fire sprouts are often in sunny conditions, which tend to make oak leaves more deeply lobed and more coriaceous than shaded leaves.

White oaks with lobed leaves:
Qu. margaretta – Often forms dense clonal, stoloniferous patches in frequent fire conditions. Tends to retain standard leaf characteristics.
Qu. stellata – Less prone to formal clonal patches. Sprout leaves often very large, with exaggerated lobing.

Red oaks normally with deeply lobed leaves:
Qu. laevis – Not clonal. Vigorous sprouter, leaves more deeply lobed than any other fire red oak. Small sprouts often have vertical leaf orientation characteristic of adults, though vigorous fire sprouts sometimes have more normally disposed leaves. Sprout leaves sometimes very large, with very long, curving lobes.
Qu. falcata – Not clonal. Sprout leaves generally less lobed than typical adult leaves, more like forma *triloba*, but larger and coarser in texture, difficult to distinguish in shape from *Qu. marilandica* var. *marilandica* and *Qu. velutina*. See pubescence differences in main key.

Qu. velutina – Not clonal. Leaves variable, sometimes minimally lobed and closely resembling *Qu. marilandica* var. *marilandica* and *Qu. falcata*. See pubescence differences in main key.

Red oaks normally with unlobed leaves:
Qu. marilandica var. *marilandica* – Sprout leaves sometimes coarsely (though never deeply) lobed. Texture often very coriaceous, shiny, and very stiff. See pubescence characters in main key.
Qu. nigra – Not very typically in fire-prone situations, but sometimes so. Young saplings, as well as fire sprouts, often with wildly different leaves than the typical adult form, frequently deeply lobed (for excellent illustrations showing variability in leaf shapes, see p. 329 of Godfrey, 1988 and pp. 51-52 of Godfrey & Wooten, 1981). Leaves always smaller and more glabrous than those of other fire oaks (except *Qu. hemisphaerica*).
Qu. incana – Generally not strongly clonal and stoloniferous even in frequently burned situations. Fire sprouts and vigorous shoots more prone to lobing than adult trees. Even fire shoots, though, usually with only one to several lobes, and the characteristic bluish-green characteristic holds. See comments above on *Qu. elliottii*.
Qu. elliottii – Strongly clonal via a stoloniferous "runner", never tree-like. Leaves never lobed, even on fire sprouts, though fire sprout leaves can be larger (to 15 cm long and 5 cm wide). Very difficult to tell from fire sprouts or seedlings of *Qu. incana*, best separated by leaf pubescence (white in *Qu. elliottii*, gray in *Qu. incana*), margin (slightly revolute in *Qu. elliottii*, flat in *Qu. incana*), leaf vernation (planate in *Qu. incana*, rolled in *Qu. elliottii*), and acorn maturation (1 year in *Qu. elliottii*, with acorns often on small plants, 2 years in *Qu. incana*, with small plants rarely produing acorns).
Qu. hemisphaerica – Not clonal. Leaves of vigorous shoots and fire sprouts often shallowly lobed, the lobing usually fairly neat and regular, triangular-ascending, and with bristle tips.

Live oaks:
Qu. geminata – Sometimes clonal. Leaves, even of sprouts, not normally with lobes or teeth.
Qu. virginiana – Sometimes clonal. Leaves of vigorous summer shoots (but apparently not spring shoots) often coarsely toothed, very similar to similar leaves of *Qu. hemisphaerica*, but lacking bristle tips (instead the translucent margin with a darker, thickened callus at the tip of the tooth).
Qu. minima – Always clonal. Leaves often with teeth or lobes.

Identification notes: Some oaks with ambiguous leaves are keyed in both Key A and Key D or in both Key B and Key C. The leaves of juvenile (seedling or sapling) branches, fire-sprout shoots, or other vigorous shoots (resulting from similar stimuli such as insect damage) are often much different than typical leaves and are not accounted for in these keys (see discussion at end of generic treatment). Hybrids are frequently encountered; they, too, are not keyed here, but can usually be identified (with difficulty) by their intermediate morphology and by parental context. Trichome types are useful in making and confirming identifications of oaks, since certain types are restricted to various groups of species. Hand lenses of 10× or 20× can be useful, but a compound microscope is far preferable. See Hardin (1992, 1976, 1979), and Thomson & Mohlenbrock (1979).

1 Most of the leaves on a relatively mature tree entire and unlobed (some species frequently with some leaves on a tree, especially those on young or vigorous growth, that are toothed or shallowly lobed, the teeth or lobes generally few and irregular in size or location); [primarily either "laurel oaks" of section *Lobatae* or "live oaks'"of section *Quercus*].....**Key A**
1 Most of the leaves on a relatively mature tree lobed or toothed.
  2 Venation of the leaves neatly and evenly pinnate, the 3-17 (or more) main lateral veins on each side distinctly parallel to each other, each ending in a tooth or shallow, crenate lobe extending < ¼ of the way to the midrib; ["chestnut oaks" of sections *Quercus* and *Cerris*].....**Key B**
  2 Venation of the leaves pinnate, but more branched and irregular, the 1-7 main lateral veins on each side rebranching into prominent side veins, the leaf usually distinctly lobed, at least some of the lobes of some of the leaves of a tree extending > ¼ of the way to the midrib
    3 Apices of the lobes or teeth obtuse (rarely acute), lacking bristle tips; ["white oaks" of section *Quercus*].....**Key C**
    3 Apices of the lobes or teeth acuminate (rarely acute), and with bristle tips; ["red oaks" of section *Lobatae*]...**Key D**

Key A – Leaves (most of them) entire and unlobed (Laurel Oaks and Live Oaks)

1 Leaves broadly obovate or spatulate, 1-2.5 (-3)× as long as wide.
  2 Leaves 10-30 cm long, with rounded, subcordate, truncate, or oblique bases; lower leaf surfaces thinly to densely pubescent with tawny to orange glandlike hairs; [section *Lobatae*].....***Qu. marilandica* var. *marilandica***
  2 Leaves 2-10 (-15) cm long, mostly with cuneate or rounded bases (in some species sometimes subcordate, truncate, or oblique); lower leaf surfaces glabrous, glabrescent, or pubescent, but the pubescence not orange and glandlike.
    3 Twigs of the current year densely and finely hairy, obscuring the surface; [scrubby trees of sandhills from se. SC southward]; [section *Quercus*].....***Qu. chapmanii***
    3 Twigs of the year glabrous or sparsely pubescent; [shrubs, scrubby small trees, or large trees of various habitats].
      4 Leaves grayish beneath; [section *Quercus*].....***Qu. sinuata* var. *sinuata***
      4 Leaves bright green beneath; [section *Lobatae*].

5 Leaves evergreen, (including the petiole) usually < 4 cm long (sometimes to 9 cm long) and < 2 cm wide (to 6 cm wide); lower leaf surface usually entirely glabrous at maturity (rarely with pubescence in the vein axils); leaf blades rarely lobed; [shrub to scrubby tree of sandhills in se. SC and southward]***Qu. myrtifolia***

5 Leaves deciduous, (including the petiole) usually > 5.5 cm long (rarely smaller) and usually 3-5 cm wide; lower leaf surface usually with tufts of hairs in the main vein axils beneath; leaf blades often lobed.

6 Leaves with broadly cuneate to rounded leaf bases, the blades 5-15 cm long; lower leaf surfaces generally pubescent across the surface, and also with tufts in the axils; [of sw. GA westward]..... ..... ***Qu. arkansana***

6 Leaves with cuneate bases, the blades 5-10 (-15) cm long; lower leaf surfaces glabrous, except for tufts of hairs in the vein axils; [widespread in our area]..... ***Qu. nigra***

1 Leaves linear, elliptic, or narrowly obovate, 2-10× as long as wide.

7 Leaves (at maturity) glabrous or at most sparsely pubescent on the surface below, though often with tufts of hairs in the main vein axils.

8 Twigs of the year densely and finely hairy, obscuring the surface; leaves (at maturity) sparsely pubescent beneath; [scrubby trees of sandhills from se. SC south]; [section *Quercus*]..... ***Qu. chapmanii***

8 Twigs of the year glabrous or sparsely pubescent; leaves (at maturity) bright green and glabrous beneath, though often with tufts of hairs in the main vein axils; [medium to large trees, more widespread, mostly of moist habitats, except *Qu. hemisphaerica*]; [section *Lobatae*].

9 Leaves predominantly lanceolate, mostly 6-12 cm long and 0.7-2 cm wide, most of them 5-8× as long as wide, the apex acute; mature leaves with tufts of hairs in the vein axils below, and sometimes also some pubescence on the blade surface near the midrib; blades never with lobes or teeth; leaves deciduous in autumn; young leaves bronze red, emerging tightly rolled lengthwise and appearing linear; [trees of bottomlands and upland depression swamps, mesic uplands, and also weedy and frequent in disturbed successional habitats]..... ***Qu. phellos***

9 Leaves predominantly oblanceolate, obovate, or rhombic, mostly 2.5-10 cm long and 1.5-4 cm wide, most of them 2-5× as long as wide, the apex acute, obtuse, or rounded; mature leaves with or without tufts of hairs in the vein axils below, lacking pubescence on the blade surface; blades sometimes with 1-5 lateral lobes or teeth; leaves persisting until spring, or tardily and irregularly deciduous in winter; young leaves red, yellow, or green, not emerging tightly rolled lengthwise; [trees primarily either of swamp forests, maritime forests, or sandhills, not typically weedy].

10 Mature leaves entirely glabrous below; leaves mostly with acute apices and bristle tips (rarely a few rounded), mostly 2.5-8 cm long and 1-2 (-3) cm wide, the upper surface shiny, the vein network not readily visible when backlit; leaves evergreen (persisting until spring); petiole 0.5-2 mm long; leaves of vigorous growth often with dentate lobes; [trees of dry sandy habitats, such as sandhills and maritime forests]..... ***Qu. hemisphaerica***

10 Mature leaves with tufts of stellate trichomes in the vein axils; leaves mostly with rounded apices (rarely a few acute and then bristle-tipped), mostly 5-10 cm long and (1.8-) 2-4 cm wide, the upper surface dull, the vein network readily visible when backlit; leaves tardily deciduous; petiole 2-6 mm long; leaves of vigorous growth rarely lobed, and then not dentate; [trees of moist habitats, such as floodplain forests]... ..... ***Qu. laurifolia***

7 Leaves (at maturity) persistently and densely pubescent on the surface below, the pubescence in some species so dense and tight as to be difficult to perceive without at least 10× magnification.

11 Leaves bristle-tipped (sometimes the bristle fallen or broken off, but leaving a truncate scar), deciduous in autumn; multi-armed trichomes of the rosulate or multiradiate types, many of the arms ascending or erect (never with the stellate or fused-stellate trichomes characteristic of the live oaks); acorns maturing in 2 years (immature acorns present through the winter on fruiting trees); [section *Lobatae*].

12 Leaves (including petiole) mostly 10-17 cm long, 3.5-7 cm wide; lower leaf surface (at maturity) sparsely to moderately densely pubescent with soft hairs; leaves lustrous dark-green above; [trees of the Mountains, Piedmont, and rarely Coastal Plain]..... ***Qu. imbricaria***

12 Leaves (including petiole) mostly 4-11 cm long, 0.5-3.0 cm wide; lower leaf surface densely covered with soft hairs; leaves lustrous dark-green or bluish-green above; [stoloniferous shrubs and small to medium trees of the Coastal Plain].

13 Leaves 1.5-3.0 cm wide, mostly 2-4× as long as wide, dull bluish-green above; acorns 10-15 mm long; petioles 4-15 mm long; [plant a small to medium tree]..... ***Qu. incana***

13 Leaves 0.5-1.5 cm wide, mostly 4-8× as long as wide, lustrous dark-green above; acorns 8-12 mm long; petioles1-3 mm long; [plant a stoloniferous shrub, to 1 m tall (or to 2 m in fire-suppressed pinelands)].... ..... ***Qu. elliottii***

11 Leaves not bristle-tipped, evergreen (overwintering, falling with the expansion of new leaves in the spring) or deciduous (in *Qu. oglethorpensis*); multi-armed trichomes of the fused-stellate and stellate types, the arms parallel to the leaf surface, radiating from a well developed disc that appears as a white eye or dot at 20-40× magnification (or rosulate or multiradiate in *Qu. oglethorpensis*); acorns maturing in 1 year (immature acorns not present through the winter, unless aborted); [section *Quercus*].

14 Leaves deciduous in autumn; bark gray, resembling *Qu. alba*; [trees of bottomlands and upland clay flats of GA and SC] ..... ***Qu. oglethorpensis***

14 Leaves evergreen (overwintering, falling with the expansion of new leaves in the spring); bark (on the tree species) brownish, deeply furrowed; [trees and stoloniferous shrubs of sandy habitats of the Coastal Plain of GA, NC, SC, and VA].

15 Plant a stoloniferous shrub, to 1 m tall (or to 2 m in fire-suppressed pinelands) ..... ***Qu. minima***

15 Plant a small to large tree.

16 Leaf blades with the margins strongly revolute, and also the sides of the blades generally rolled downward and obscuring part of the lower surface, the leaf appearing boatlike (the depth of the "boat" often approaching the width of the leaf); midvein and major lateral veins impressed on the upper surface and raised on the lower surface (the lower surface therefore appearing rugose); pubescence of the lower surface stellate, both appressed and erect, the individual stellae readily visible at 20× magnification (sometimes at 10× magnification); acorns (1-) 2 (-6) per stalk; [typically a small tree of sandhills near the coast] ..... ***Qu. geminata***

16 Leaf blades flat, or the margins slightly to strongly revolute, the sides of the blade sometimes rolled downward, usually not obscuring part of the lower surface, the leaf not boatlike (the leaf much wider than deep); midvein and major lateral veins not impressed (or very slightly so) on the upper surface and only very slightly, if at all, raised on the lower surface (the lower surface therefore not appearing notably rugose); pubescence of the lower surface stellate, all of it tightly appressed, the individual stellae readily visible only at 30× magnification (sometimes barely distinguishable at 20× magnification); acorns 1-2 per stalk; [typically a salt-pruned shrub to large tree of dunes, estuarine shorelines, and southward of upland flats and slopes] ..... ***Qu. virginiana***

Key B – Leaves with even crenations or teeth (Chestnut Oaks)

1 Scales of the acorn cup prolonged and long tapered; lateral veins terminating in a well-developed bristle; [species planted, rarely escaped]; [section *Cerris*] ..... ***Qu. acutissima***

1 Scales of the acorn cup acute to obtuse; lateral veins terminating in a minute mucro or hardened projection; [species native]; [section *Quercus*].×

2 Acorns on peduncles (2-) 4-7 cm long; acorns 1.5-2.5 cm long; veins ending in crenations usually 6-10 on each side of leaf ..... ***Qu. bicolor***

2 Acorns sessile or on peduncles 0-1 cm long; acorns 1-2 cm or 2.5-3.5 cm long; veins ending in crenations usually 8-15 or 3-7 (if 3-7, then a stoloniferous shrub).

3 Leaves mostly obovate, with rounded teeth (crenations), the teeth sometimes with a minute mucro; hairs of the leaf undersurface clustered in sessile, stellate-appearing clusters of 2-8 hairs; acorns 2.5-3.5 cm long; large trees.

4 Hairs of the leaf undersurface in clusters with a diameter of 0.15-0.5 mm, dense to sparse; bark of mature trees light gray, loose, breaking into plates or scales ..... ***Qu. michauxii***

4 Hairs of the leaf undersurface in clusters with a diameter of 0.1-0.25 mm, sparse; bark of mature trees dark gray, tight, deeply furrowed ..... ***Qu. montana***

3 Leaves mostly narrowly elliptic, narrowly ovate, or narrowly obovate, with sharp ascending, often incurved teeth, the teeth ending in a hardened projection; hairs of the leaf undersurface tiny and stellate, with 6-16 rays; acorns 1-2 cm long; medium to large trees or stoloniferous shrubs.

5 Medium to large tree; veins ending in teeth usually 7-13 on each side of the leaf; leaves 8-20 cm long and 4-10 cm wide ..... ***Qu. muehlenbergii***

5 Stoloniferous shrub to 5 m tall; veins ending in teeth usually 3-7 on each side of the leaf; leaves 4-10 cm long and 2-6 cm wide ..... ***Qu. prinoides***

Key C – Leaves with lobes not bristle-tipped (White Oaks)

1 Lower surfaces of mature leaves glabrous.

2 Leaf lobes with acute apices; sinuses often both broad and "flat-bottomed" (with portions parallel to the midrib); acorn cup covering 2/3 to 3/4 of acorn ..... ***Qu. lyrata***

2 Leaf lobes with obtuse apices; sinuses narrow (often notch-like), narrowly to broadly rounded or triangular (lacking portions parallel to the midrib); acorn cup covering 1/4 to 1/2 of acorn.

3 Leaves mostly 4-10 (-17) cm long, 2-5 (-9) cm wide, with 1-5 shallow lobes or undulations, extending 1/8 to 1/2 of the way to the midrib; acorn cup flat at the base, covering < ¼ of the acorn ..... ***Qu. sinuata* *var*. *sinuata***

3 Leaves mostly 7-20 cm long, 3-10 cm wide, with 3-11 lobes, extending 1/4 to 5/6 of the way to the midrib (if the lobing < ½ of the way to the midrib, then the acorn cup rounded at the base and covering 1/4 to 1/2 of the acorn).

4 Leaf base deeply cordate; [alien, sometimes planted and persistent] ..... ***[Qu. robur]***

4 Leaf base cuneate; [native]

5 Leaves with 7-11 lobes (the sinuses usually deep, those of the larger leaves usually about 2/3 to 5/6 of the way to the midrib), 10-20 cm long, 5-10 cm wide; terminal bud rounded or globose; basal scales of acorn cup thickened, the thickening giving the cup a knobby texture ..... ***Qu. alba***

5 Leaves with 3-7 lobes (the sinuses usually shallow, those of the larger leaves usually ranging from 1/4 to 1/2 of the way to the midrib), 7-15 cm long, 3-8 cm wide; basal scales of the acorn cup thin, appressed, the cup having a rough but not knobby texture ..... ***Qu. austrina***

1 Lower surfaces of mature leaves pubescent, the pubescence varying from dense to sparse (sometimes minute and requiring 10× magnification to be readily visible).

6 Lower surfaces of mature leaves whitish to pale green, with a mixture of minute, sessile, stellate hairs with horizontal tips and longer stellate hairs with erect ascending tips; leaves shallowly lobed (if so, the lobes 9-19) to deeply lobed (if so, the lobes with acute apices), the sinuses extending 1/4 to 4/5 of the way to the midrib.

7 Leaves mostly shallowly lobed at the base, the sinuses extending 1/4 to 1/2 of the way to midrib, grading into mere crenations toward the tip of the leaf, the total number of lobes/crenations usually 9-19; acorns borne on peduncles 2-10 cm long; acorn cup covering 1/3 to 1/2 of acorn, the upper scales with long-acuminate apices ..... ***Qu. bicolor***

7 Leaves mostly relatively deeply lobed throughout the length of the leaf, the sinuses extending 1/2 to 4/5 of the way to the midrib, the total number of lobes 3-13; acorns sessile or borne on peduncles up to 1 cm long; acorn cup covering 1/3 to 3/4 of acorn, the upper scales with acute, long-acuminate, to long-awned apices.

8 Upper scales of the acorn cups thin and acute; acorn cup covering ½ to 3/4 of the acorn; [swamps in the Coastal Plain and lower Piedmont of GA, NC, SC, and VA]..... ***Qu. lyrata***

8 Upper scales of the acorn cups long-attenuate into nearly terete awns; acorn cup covering 1/3 to 1/2 of the acorn; [Mountains of VA] ..... ***Qu. macrocarpa** var. **macrocarpa***

6 Lower surfaces of mature leaves gray, green, pale green, or yellowish, glabrescent or densely pubescent, the hairs few-branched and erect; leaves mostly relatively deeply and obtusely lobed, rarely shallowly lobed (if so, the lobes 3-7), the sinuses extending 1/2 to 4/5 of the way to the midrib, the total number of lobes 3-7; acorns sessile or nearly so.

9 Leaf lobes with acute apices; acorn cup covering 2/3 to 3/4 of acorn ..... ***Qu. lyrata***

9 Leaf lobes with obtuse to rounded apices; acorn cup covering 1/3 to 1/2 of acorn.

10 Woody twigs of the season glabrous or with scattered, deciduous 2-forked hairs; petioles of mature leaves 3-10 (-15) mm long; leaf blades (2.5-) 4-8 (-13.5) cm long, irregularly and often rather shallowly 3-5 (-7) lobed, the overall form of the leaf only rarely cruciform; largest lateral lobes usually at the midpoint of the blade (or even below it), the lobes usually not sublobed, tapering from base to tip; [xeric sandy sites in the Coastal Plain from se. VA southward]..... ***Qu. margaretta***

10 Woody twigs of the season densely and persistently stellate-pubescent, especially toward the tip of the twig; petioles of mature leaves 15-20 mm long (Qu. stellata) or 3-10 (-15) mm long (*Qu. boyntonii* and *Qu. similis*); leaf blades (5-) 7.5-15 (-20) cm long, usually 5-lobed, the overall form of the leaf typically cruciform (*Qu. stellata*) or not (*Qu. boyntonii* and *Qu. similis*); largest lateral lobes of the leaves usually above the midpoint of the blade, these lobes often sublobed or squarish in shape, usually wider near their tips than at their bases (*Qu. stellata*) or not sublobed, tapering from base to tip (*Qu. boyntonii* and *Qu. similis*); [collectively widespread in our area].

11 Leaves usually cruciform, the largest lateral lobes often sublobed or squarish in shape, usually wider near their tips than at their bases, and borne at right angles to the midrib; [usually of dry to dry-mesic upland situations, widespread in our area] ..... ***Qu. stellata***

11 Leaves not cruciform, the largest lateral lobes usually not sublobed, tapering from base to tip, and borne at ascending angles relative to the midrib; [of temporarily flooded calcareous swamps of the Coastal Plain, from SC (NC?) southward in our area (*Qu. similis*) or localized on sandstone in nc. AL (*Qu. boyntonii*)].

12 Rhizomatous shrubs to small trees, generally < 2 m tall; [of sandstone outcrops in nc. AL] ..... ***[Qu. boyntonii]***

12 Single-trunked large trees; [usually of temporarily flooded calcareous swamps of the Coastal Plain, from SC (NC?) southward in our area]..... ***Qu. similis***

Key D – Leaves with lobes or teeth bristle-tipped (Red Oaks)

1 Leaves shallowly 3-lobed near the broad apex (some leaves of sprout or juvenile shoots may be more lobed).

2 Leaf blades 5-15 cm long; lower leaf surfaces glabrous, except for tufts of hairs in the vein axils (or pubescent across the surface in *Qu. arkansana*].

3 Leaves with broadly cuneate to rounded leaf bases, the blades 5-15 cm long; lower leaf surfaces generally pubescent across the surface, and also with tufts in the axils; [of sw. GA westward] ..... ***Qu. arkansana***

3 Leaves with cuneate bases, the blades 5-10 (-15) cm long; lower leaf surfaces glabrous, except for tufts of hairs in the vein axils; [widespread in our area]..... ***Qu.nigra***

2 Leaf blades 10-30 cm long; lower leaf surfaces pubescent across the surface (and often also with denser tufts of hairs in the vein axils).

4 Petioles short and stout, 5-15 mm long; lower leaf surfaces thinly to densely pubescent with a mixture of tawny or orange glandlike hairs and stellate hairs whose structure is easily visible at 10× magnification..... .....***Qu. marilandica*** *var.* ***marilandica***

4 Petioles long and slender, (14-) 20-50 mm long; lower leaf surfaces densely puberulent with tawny stellate hairs whose structure is barely visible at 10× magnification ..... ***Qu. falcata***

1 Leaves shallowly to deeply 5-12-lobed (some of the leaves of *Qu. georgiana* only 3-lobed), the lobes primarily lateral.

5 Mature leaves pubescent beneath on the surface with stellate hairs.

6 Leaves 5-10 (-12) cm long, 5-lobed; shrub or small tree; [w. NC northward] .....***Qu. ilicifolia***

6 Leaves (8-) 10-20 cm long, 5-12-lobed; small to large trees[collectively widespread in our area].

7 Petioles 0.5-1.0 (-1.8) cm long, generally twisted such that the blade is oriented in a vertical plane; leaves all deeply lobed, some of the sinuses extending > 4/5 of the way to the midrib; pubescence of the lower leaf surface greenish yellow, matted, and glandlike, usually sloughing off by late in the year..... ***Qu. laevis***

7 Petioles 2-5 cm long, not twisted so that the blade is oriented in a vertical plane; leaves shallowly to deeply lobed, some of the leaves on a tree generally shallowly lobed, none of the sinuses extending > 2/3 of the way to the midrib; pubescence of the lower leaf surface tawny or gray, stellate, not glandlike, persistent or sloughing off by late in the year.

8 Acorns 12-20 mm long, in a cup 15-25 mm across and 10-12 mm deep; mature leaves loosely and rather coarsely pubescent (the stellate hairs conspicuous and readily distinguishable at 10× magnification), often becoming nearly or entirely glabrous by late in the year (except for tufts of hairs in the vein axils); terminal bud 4-angled, 7-10 mm long, densely gray-tomentose..... ***Qu. velutina***

8 Acorns 10-15 mm long, in a cup 12-14 mm across and 4-5 mm deep; mature leaves densely and finely pubescent (the stellate hairs minute and scarcely distinguishable at 10× magnification), the pubescence permanent; terminal bud only obscurely angled (if at all), 5-8 mm long, brown-puberulent.

9 Base of blades of sun-leaves typically rounded, thus forming a U-shape (some leaves cuneate, angled, or oblique); terminal lobe of leaves generally long-attenuated, narrow (its sides nearly parallel for much of its length), and curved to one side (falcate) (note that trees with the trilobed leaf form will key out above); leaves with 3-7 well-developed lobes, these often very irregular in size, shape, spacing, and orientation; pubescence of lower leaf surface normally tawny (when fresh) ..... ***Qu. falcata***

9 Base of blades of sun-leaves typically cuneate or angled, thus forming a V-shape (some leaves somewhat U-shaped or oblique); terminal lobe of leaves generally short, broadly triangular (its sides normally tapering toward the tip for most of their length), not strongly curved to one side; leaves with 5-9 well-developed lobes, these generally rather uniform in size, shape, spacing, and orientation; pubescence of leaf surface gray..... ***Qu. pagoda***

4 Mature leaves glabrous beneath on the surface, with tufts of hairs in the main vein axils beneath.

10 Petioles 0.5-1.0 (-1.8) cm long, generally twisted such that the blade is oriented in a vertical plane; inner cup-scales of the acorn cup inflexed, thus the cup appearing to have a broadly rounded rim ..... ***Qu. laevis***

10 Petioles 2.5-7 cm long, not twisted so that the blade is oriented in a vertical plane; inner cup-scales of the acorn cup not inflexed, thus the cup appearing to have a sharp rim appressed against the acorn.

11 Terminal buds 4-angled, 7-10 mm long, the bud scales densely gray-tomentose..... ***Qu. velutina***

11 Terminal buds not 4-angled, 3-5 (-7) mm long, the bud scales glabrous or with ciliate margins.

12 Leaves relatively shallowly lobed, the sinuses extending up to 2/3 of the way to the midrib; upper leaf surface dull, not lustrous.

13 Acorn cup covering about 1/4 of acorn; leaf sinuses extending about 1/4 of the way to the midrib; bark of mature trees dark gray to black; [widespread in our area, at low to medium elevations] ....***Qu. rubra*** *var.* ***rubra***

13 Acorn cup covering about 1/3 of acorn; leaf sinuses extending about 1/3 of the way to the midrib; bark of mature trees medium gray; [of the Mountains, mostly at 1000 m and above]..... .....***Qu. rubra*** *var.* ***ambigua***

12 Leaves relatively deeply lobed, the sinuses extending 2/3 to 9/10 of the way to the midrib; upper leaf surface lustrous.

14 Larger lateral lobes of most leaves with 1 bristle per lobe (-2 on some lobes)..... ***Qu. georgiana***

14 Larger lateral lobes of most leaves with 2 or more bristles.

15 Mature leaves mostly 7-12 cm long, 5-11 cm wide (averaging about 9 cm long and 8 cm wide), with 5-7 lobes; acorns (8-) 10-13 (-15) mm long; acorn cup nearly flat at base, covering about 1/4 of the acorn ..... ***Qu. palustris***

15 Mature leaves mostly 10-20 cm long, 8-15 cm wide (averaging about 12-15 cm long and 10-12 cm wide), with 5-11 lobes; acorns (12-) 15-25 (-37) mm long; acorn cup nearly flat, turbinate, or rounded, covering 1/4 to 1/2 of the acorn.

16 Acorn cup turbinate, covering about 1/2 of the acorn; acorn (12-) 15-20 mm long, with 1-3 concentric grooves near the tip; upper surface of leaves bright green ..... ***Qu. coccinea***

16 Acorn cup nearly flat at base, covering about 1/4 to 1/3 of the acorn; acorn 15-37 mm long, lacking concentric grooves near the tip; upper surface of leaves dark green ....***Qu. shumardii*** *var.* ***shumardii***

* ***Quercus acutissima*** Carruthers, Sawtooth Oak. Pd (NC, VA): commonly cultivated as a suburban street tree and also widely planted in "wildlife food plots"; commonly cultivated, rarely (at this time) persistent and spreading, introduced from Japan. This species has been a popular recommendation for "wildlife plantings" in the recent past, and entire stands can be encountered in relatively remote areas, planted by federal and state land management agencies; why "wildlife" species in our area need more oak trees is somewhat mystifying! See Whittemore (2004) for additional information. [= K; *? Qu. acutissima* ssp. *acutissima*]

Quercus alba Linnaeus, White Oak. Pd, Mt, Cp (GA, NC, SC, VA): mesic to xeric forests; common. April; September-November (of the same year). Widespread in e. North America. Historically, one of the most valuable timber trees of eastern North America. *Qu. alba* is probably the most abundant native plant in our area, and in eastern North America, based on biomass, leaf area, and ubiquity. Hardin (1975) discusses introgression between *Qu. alba* and many other species of *Quercus* subgenus *Quercus*. [= RAB, C, F, FNA, G, K, W; < *Qu. alba* – S (also see *Qu. austrina*)]

Quercus arkansana Sargent, Arkansas Oak. Cp (GA): dry bluffs; rare (GA Special Concern). Sw. and wc. GA west in a fragmented distribution to sw. AR and e. TX. [= FNA, K, S; > *Q. caput-rivuli* W.W. Ashe]

Quercus austrina Small, Bluff Oak. Cp (GA, NC, SC), Pd (NC): river bluffs, natural levees of brownwater rivers, over mafic rocks in the Piedmont of NC, on shell or calcareous sediments on the Coastal Plain of SC (Charleston and Beuafort counties); rare (GA Special Concern, NC Rare). April; October (of the same year). Essentially a Southeastern Coastal Plain endemic, ranging from sc. NC south to n. FL and west to MS, nowhere common. [= RAB, FNA, K; < *Qu. alba* – S (apparently)]

Quercus bicolor Willdenow, Swamp White Oak. Mt (VA), Pd (NC, SC, VA), Cp (NC, VA): upland depression swamp forests over mafic rocks such as gabbro or diabase, bottomland swamps with calcareous sediments; uncommon (rare south of VA) (NC Watch List, SC Rare). April; September (of the same year). Widespread in ne. North America, south to NC, SC (Nelson 1993), TN, n. AL, and MO. [= RAB, C, F, FNA, G, GW, K, S, W]

Quercus chapmanii Sargent, Chapman Oak. Cp (GA, SC): dry pinelands; rare (GA Special Concern). February-March; September-November (of the same year). A Southeastern Coastal Plain endemic: se. SC south to FL, west to sw. AL. [= RAB, FNA, K, S]

Quercus coccinea Muenchhausen, Scarlet Oak. Mt, Pd, Cp (GA, NC, SC, VA): xeric upland forests; common (uncommon in Coastal Plain south of VA). April; September-November (of the second year). Centered in the Appalachians, from s. ME south to c. AL, but ranging west to MS, ne. AR, s. IL, and s. MI. [= RAB, C, F, FNA, G, S, W; > *Qu. coccinea* var. *coccinea* – K; > *Qu. coccinea* var. *tuberculata* Sargent – K]

Quercus elliottii Wilbur, Running Oak. Cp (GA, NC, SC): pine flatwoods, especially on loamy soils in the Middle Coastal Plain; uncommon. March-April; September (of the first year). A Southeastern Coastal Plain endemic: se. NC south to s. FL and west to s. MS. Wilbur (2002) discusses the reasons for rejecting the traditional use of *Qu. pumila* for this species; Walter's diagnosis states that *Qu. pumila* has leaves that are glabrous and glaucous below, ruling out application to this species. [= *Q. pumila* Walter – RAB, FNA, K, S, Z, apparently misapplied]

Quercus falcata Michaux, Spanish Oak, Southern Red Oak. Cp, Pd, Mt (GA, NC, SC, VA): upland forests, usually xeric; common (uncommon in Mountains). April; September-November (of the second year). Widespread in se. North America, north to e. OK, s. MO, s. IL, s. IN, s. OH, WV, se. PA, NJ, and reported (apparently without specimen documentation) from Long Island, NY. "*Qu. triloba* Michaux", the form with the leaves only shallowly trilobed at the apex, causes much confusion. Though even medium-sized trees sometimes have leaves only of this form (rather than the typical form, deeply 5-7-lobed, the terminal lobe long-attenuate and falcate), it has no taxonomic merit. [= C, FNA, K, W; = *Qu. falcata* var. *falcata* – RAB, G, GW; > *Qu. falcata* var. *falcata* – F; > *Qu. falcata* var. *triloba* (Michaux) Nuttall – F (the juvenile form); = *Qu. rubra* – S, misapplied; *? Qu. digitata* Sudworth; > *Qu. triloba* Michaux]

Quercus geminata Small, Sand Live Oak. Cp (GA, NC, SC): xeric sandhills near the coast; uncommon (VA Watch List). April; September-November (of the same year). A Southeastern Coastal Plain endemic: se. NC south to FL (where common) and west to s. MS. The alleged occurrence of *Qu. geminata* as far north as se. VA is apparently based on ambiguous specimens that probably are only *Qu. virginiana* (the so-called var. *maritima*). The relative ranges, habitats, and abundance of this species and *Qu. virginiana* in NC are poorly understood. Apparently flowering about 2-3 weeks later than *Qu. virginiana* when growing in close proximity and in similar habitats. [= C, FNA, GW, K, S; < *Qu. virginiana* – RAB; *? Qu. virginiana* var. *maritima* (Michaux) Sargent – F, misapplied]

Quercus georgiana M.A. Curtis, Georgia Oak. Pd (GA, SC): dry slopes and bluffs over granite; rare (SC Rare). April; September-October (of the second year). W. SC south and west through GA to c. AL. [= RAB, FNA, K, S]

Quercus hemisphaerica Bartram ex Willdenow, Sand Laurel Oak, Darlington Oak. Cp (GA, NC, SC, VA): sandhills and other dry, sandy soils, an abundant component of maritime forests with *Qu. virginiana*, and widely planted as a street tree in most parts of our region; common (VA Rare). March-April; September-November (of the second year). Essentially a Southeastern Coastal Plain endemic: se. VA south to s. FL and west to s. TX, north uncommonly in the interior to nc. AL, n. MS, and s. AR. Often confused with *Qu. laurifolia* (see the key for distinctions). *Qu. hemisphaerica* is the semi-evergreen laurel oak planted widely as a street tree in southern cities, often intermixed with the strictly deciduous *Qu. phellos*. [= C, F, FNA, Z; < *Qu. laurifolia* – RAB; = *Qu. laurifolia* – S, misapplied; > *Qu. hemisphaerica* var. *hemisphaerica* – K; > *Qu. hemisphaerica* var. *maritima* (Michaux) Muller – K]

Quercus ilicifolia Wangenheim, Bear Oak, Scrub Oak. Mt (VA), Pd (NC, VA): xeric soils in ridges in the Mountains and monadnocks in the upper Piedmont; common (rare in Piedmont and south of VA) (NC Rare). Late April-June; August (of the second year). Primarily Appalachian: s. ME south to w. VA, w. NC, and e. KY. This scrubby oak is limited in NC to dry summits and upper slopes of Piedmont monadnocks; it is rare and probably declining because of fire suppression (Barden 1985),

though recent ice storms have opened the tree canopy at several of its NC sites. The occurrence of *Q. ilicifolia* in KY was confirmed at the Devil's Teatable, Floyd County (Clark et al. 1997). [= RAB, C, F, FNA, G, K, S, W]

Quercus imbricaria Michaux, Shingle Oak. Mt, Pd (NC, VA), Cp (VA): rich soils of upper floodplains of rivers and creeks, often at the base of the slope into the upland, also on lower slopes, and in forests over diabase in the Piedmont of VA and n. NC; uncommon (GA Special Concern). May; October (of the second year). Primarily midwestern, ranging from NJ, PA, n. OH, s. MI, n. IL, and c. IA, south to e. VA, nc. and w. NC, sc. TN, n. AL, and n. AR. [= RAB, C, F, FNA, G, K, S, W, Z]

Quercus incana Bartram, Bluejack Oak. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): sandhills, primarily in somewhat loamier textured, submesic soils; common (rare in Piedmont) (VA Rare). April; September-November (of the second year). Primarily a species of the Southeastern Coastal Plain, but rarely extending inland into the Piedmont (especially on coarse sandy alluvium): se. VA south to c. peninsular FL and west to e. TX, sw. AR, and se. OK. This oak is recognizable even at a distance by its bluish color. [= RAB, F, FNA, K, Z; = ***Qu. cinerea*** Michaux – C, G, S; *? **Qu. humilis*** Walter]

Quercus laevis Walter, Turkey Oak. Cp (GA, NC, SC, VA): sandhills, primarily in very xeric soils of deep sandy deposits (Carolina bay rims, old beach dunes, early Cenozoic deposits of the Sandhills Province); common (VA Rare). April; September-October (of the second year). Essentially a Southeastern Coastal Plain endemic: se. VA south to s. FL and west to e. LA. The leaves turn an intense orange-red in the autumn (November). [= RAB, C, F, FNA, G, K, S, Z; = ***Qu. catesbaei*** Michaux]

Quercus laurifolia Michaux, Laurel Oak. Cp (GA, NC, SC, VA): mesic to seasonally flooded soils of floodplains, also (rarely) mesic slopes and swamps in maritime forests; common. March-April; September-November (of the second year). A Southeastern Coastal Plain endemic: se. VA south to s. FL and west to e. TX and s. AR. Sometimes confused with ***Qu. hemispherica***, but (in addition to the key characters above) ***Qu. laurifolia*** has blunter leaf tips, flowers about 2 weeks earlier, and generally occupies much moister habitats. [= C, F, FNA, G, GW, K, Z; < ***Qu. laurifolia*** – RAB (also see ***Qu. hemisphaerica***); = ***Qu. obtusa*** (Willdenow) Ashe – S]

Quercus lyrata Walter, Overcup Oak. Cp, Pd (GA, NC, SC, VA), Mt (GA): common in seasonally rather deeply and frequently flooded soils of floodplains of the Coastal Plain, less commonly in seasonally flooded swamps in Triassic basins in the lower Piedmont, and rarely in upland depression swamps of the Piedmont (developed over clays weathered from mafic rocks) and Coastal Plain; common (rare in Piedmont and Mountains). March-April; September-October (of the same year). Primarily a species of the Southeastern Coastal Plain: DE south to nw. FL, west to e. TX and se. OK, north in the inland to w. TN, s. IN, s. IL, and se. MO. Of our oaks, ***Qu. lyrata*** tolerates the wettest habitats, both in terms of depth and duration of flooding. [= RAB, C, F, FNA, G, GW, K, S]

Quercus macrocarpa Michaux *var. **macrocarpa***, Bur Oak, Mossycup Oak. Mt (VA): bottomland forests; rare (VA Rare). New Brunswick and Québec west to s. Manitoba, south to nw. VA, KY, TN, LA, and TX. Variation in this species needs additional study; ***Qu. macrocarpa*** in our area is the typic variety or subspecies if other taxa are recognized. [= K; < ***Qu. macrocarpa*** – C, F, FNA, G, GW, S, W]

Quercus margaretta Ashe ex Small, Sand Post Oak. Cp (GA, NC, SC, VA), Pd (GA): sandhills, typically in slightly loamy or clayey soils, not usual in the deepest and most xeric sands; common (VA Watch List). April; September-November (of the same year). Primarily a species of the Southeastern Coastal Plain: se. VA south to FL and west to TX and se. OK. As stated by F, this oak was "chivalrously named [by W.W. Ashe] in 1903 for Margaret Henry Wilcox, who two years later became Mrs. Ashe." There has been controversy, however, over the spelling of the specific epithet. Some nomenclaturists believe that the original spelling, "*margaretta*" should be treated as a correctable error, according to Articles 73.10 and Recommendation 73C.1 of the International Code, and replaced with "*margarettiae*." [= RAB, C, FNA, G, S; = ***Qu. margarettiae*** Ashe ex Small – K, orthographic variant; = ***Qu. stellata*** var. *margaretta* (Ashe ex Small) Sargent – F]

Quercus marilandica Muenchhausen *var. **marilandica***, Blackjack Oak. Pd, Cp, Mt (GA, NC, SC, VA): uplands forests and woodlands, usually on periodically droughty soils, as over shrink-swell clays, sandstones, deep sands, and sands with clay lenses; common (uncommon in Mountains). April; September-November (of the second year). NY (Long Island), NJ, se. PA, w. VA, s. OH, s. IN, c. IL, s. IA, and se. NE south to s. GA, Panhandle FL, and sc. TX (west to the Prairie border). There are historical accounts of the existence of prairies or barrens in the vicinity of Charlotte in the late eighteenth century, known as the "the blackjack lands." These areas were described as open and prairie-like, until the early nineteenth century, when they became dominated by dense forests of blackjack oak. The previously open condition was almost certainly maintained by fire, perhaps set by the Waxhaw Indians. Blackjack oak has long been considered an indicator of poor soil, as in Guthrie (1820), who states in his discussion of NC, "the Black Jack land is generally poor, though it has sometimes a black appearance, it is wet and loose, and is avoided by farmers, as unproductive." Var. *marilandica* is the widespread taxon; var. *ashei* Sudworth [= ***Qu. neoashei*** Bush] is worthy of recognition at the varietal level at least, and occurs from s. MO and s. KS south to c. AR, e. TX, and sc. TX, especially on the Edwards Plateau (Hunt 1990). [= FNA, K, Z; < ***Qu. marilandica*** – RAB, C, F, G, S, W]

Quercus michauxii Nuttall, Basket Oak, Swamp Chestnut Oak. Cp, Pd (GA, NC, SC, VA), Mt (GA): bottomland forests, especially in fertile soils of upper terraces where flooded only infrequently and for short periods; common (uncommon in Piedmont). April; September-October (of the same year). NJ south to n. FL and west to e. TX and se. OK, north in the interior to s. IL and s. IN. See discussion under ***Qu. montana*** of the application of the name ***Qu. prinus*** Linnaeus. [= RAB, C, F, FNA, G, GW, K, W; = ***Qu. prinus*** Linnaeus – S, possibly misapplied]

Quercus minima (Sargent) Small, Dwarf Live Oak. Cp (GA, NC, SC): pine flatwoods, coastal fringe sandhills; uncommon (NC Watch List). April; September-November (of the same year). A Southeastern Coastal Plain endemic: se. NC (New Hanover County) south to FL, west to s. MS. [= FNA, K, S]

Quercus montana Willdenow, Rock Chestnut Oak. Mt, Pd (GA, NC, SC, VA), Cp (GA, NC, VA): xeric forests of ridges, slopes; common. April; September-November (of the same year). Primarily Appalachian but broadly distributed in e. North America: s. ME, NY, MI, s. UN, s. IL, and se. MO (Smith & Parker 2005) south to c. GA, c. AL, ne. MS (and LA?). The proper application of the Linnaean "***Qu. prinus***" is controversial and unclear, having been debated and variously applied for well over a

century. I have here decided to err on the side of clarity. The name "*Qu. prinus*" has nomenclatural priority over either "*Qu. montana*" or "*Qu. michauxii*", but it is not clear which species was intended; Whittemore & Nixon (2005) have proposed its formal rejection. [= FNA, S, W; = *Qu. prinus* Linnaeus – RAB, C, F, G, K, probably misapplied]

Quercus muehlenbergii Engelmann, Yellow Oak, Chinquapin Oak. Mt, Pd (GA, NC, SC, VA), Cp (GA, SC, VA): slopes and bluffs, on soils derived from calcareous or mafic rocks; common in VA Mountains (rare elsewhere) (NC Watch List). April; October-November (of the same year). S. New England and Ontario west to WI, se. MN, and IA, south to nw. FL, TX, and n. Mexico. The similar *Qu. montana* sometimes has a few leaves with somewhat sharply lobed leaves, but these are minutely mucronate and lack the well-developed callus of *Qu. muehlenbergii*. Additionally, *Qu. muehlenbergii* has a flaky, light gray bark, very different from the dark gray, deeply furrowed bark of *Qu. montana*. [= RAB, C, F, K; = *Qu. muhlenbergii* – FNA, S, W, orthographic variant; = *Qu. prinoides* Willdenow var. *acuminata* (Michaux) Gleason – G]

Quercus myrtifolia Willdenow, Myrtle Oak. Cp (GA, SC): dry pinelands; rare (SC Rare). February-March; September (of the second year). A Southeastern Coastal Plain endemic: se. SC south to s. peninsular FL, west to se. MS. [= RAB, FNA, K, S, Z]

Quercus nigra Linnaeus, Water Oak, Paddle Oak. Cp, Pd (GA, NC, SC, VA), Mt (GA): bottomland forests, especially on levees or second terraces where flooded infrequently and for short periods, less commonly on mesic slopes; common (uncommon in Piedmont). April; September-November (of the second year). Primarily a species of the Southeastern Coastal Plain: s. NJ south to s. FL and west to e. TX and se. OK, north in the interior to se. TN, c. TN, w. and sc. KY (Clark et al. 2005), se. MO, and e. OK. Seedlings and fire sprouts of this species are highly variable; see discussion at end of generic treatment. [= RAB, C, FNA, G, GW, K, S, W, Z; > *Qu. nigra* var. *nigra* – F; > *Qu. nigra* var. *heterophylla* (Aiton) Ashe – F: = *Qu. aquatica* Walter]

Quercus oglethorpensis Duncan, Oglethorpe Oak. Pd (GA, SC): bottomland forests, upland oak flats over clays (Iredell and Enon soils); rare (GA Threatened, SC Rare). April; September-October (of the same year). Ranging (in a widely scattered pattern) from w. SC, to adjacent e. GA, nw. AL (Sorrie pers. comm. 2002), MS, and LA. [= RAB, FNA, GW, K]

Quercus pagoda Rafinesque, Cherrybark Oak, Swamp Spanish Oak. Cp, Pd (GA, NC, SC, VA): bottomland forests, especially on second terraces; common (rare in Piedmont). April; September-November (of the second year). A Southeastern Coastal Plain endemic: e. and c. VA south to nw. FL and west to se. TX and north in the interior to e. TN, s. IL, and s. IN. [= C, FNA, K, S; = *Qu. falcata* var. *pagodifolia* Elliott – RAB, F, G, GW]

Quercus palustris Muenchhausen, Pin Oak. Pd (NC, VA), Cp (VA), Mt (GA, VA): swamps and bottomlands, especially the broader swamps developed in the sedimentary rocks of Triassic basins of the lower Piedmont, isolated upland sag ponds, also widely planted as a street tree in towns and cities; uncommon (rare south of VA) (GA Special Concern, NC Watch List). March-April; October-November (of the second year). MA and NY west to se. IA and e. KS, south to c. NC, nw. GA, sc. TN, n. AR, and e. OK. [= RAB, C, F, FNA, G, GW, K, S, W]

Quercus phellos Linnaeus, Willow Oak. Cp, Pd (GA, NC, SC, VA), Mt (GA): bottomland forests, especially on natural levees and second terraces, also in upland depression swamps developed on clay soils, weedy and successional on slopes and upland sites following disturbance, and widely planted as a street tree in towns and cities; common (uncommon in Piedmont). March-April; September-November (of the second year). Primarily a species of the Southeastern Coastal plain: NY (Long Island), s. NJ, and se. PA south to s. GA and panhandle FL, west to e. TX and se. OK, north in the interior to e. TN, s. KY, w. KY, s. IL, and se. MO, and e. OK. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Quercus prinoides Willdenow, Dwarf Chinquapin Oak. Pd, Mt (GA, NC, VA), Cp (VA): xeric uplands, especially on clay soils derived from mafic rocks, and probably in sites which naturally burned rather frequently; rare (GA Special Concern, NC Rare, VA Rare). April; August-September (of the same year). MA and s. MI south to NC, OK, and TX. Fire suppression in the Piedmont sites where this rare oak occurs has nearly or entirely extirpated it from much of our area. [= RAB, C, FNA, K, S, W; > *Qu. prinoides* var. *prinoides* – F; > *Qu. prinoides* var. *rufescens* Rehder – F; = *Qu. prinoides* var. *prinoides* – G]

Quercus rubra Linnaeus *var. **ambigua*** (A. Gray) Fernald, Gray Oak. Mt (NC, SC, VA), Pd (VA): forests on ridges, slopes, and coves, mostly at over 1000 meters elevation; common. May; September-October (of the second year). Fairly widespread in ne. North America south to PA, and in the Appalachians to w. NC, nw. SC, and n. GA. This and var. *rubra* tend to intergrade and their distinction as even varieties may not be warranted. For discussion of the two varieties, see McDougal & Parks (1984) and Jensen (1977). [= K; = *Qu. rubra* var. *borealis* (Michaux f.) Farwell – RAB, F, FNA; < *Qu. rubra* – C, W; = *Qu. borealis* Michaux f. var. *borealis* – G; = *Qu. borealis* – S]

Quercus rubra Linnaeus *var. **rubra***, Red Oak. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): moist to fairly dry forests of slopes, coves, and ravines, below 1000 meters elevation; common (rare in Coastal Plain). April; August-September (of the second year). Widespread in e. North America, south to e. VA, GA, AL, MS, AR, and OK. [= RAB, F, FNA, K; < *Qu. rubra* – C, W; = *Qu. borealis* Michaux f. var. *maxima* (Marshall) Ashe – G; = *Qu. maxima* (Marshall) Ashe – S]

Quercus shumardii Buckley *var. **shumardii***, Shumard Oak. Pd, Cp, Mt (GA, NC, SC, VA): moist and fertile soils of bottomlands and lower slopes, also in xeric sites over calcareous rocks (such as limestone); uncommon (rare in Coastal Plain and Mountains). April; September-October (of the second year). Sc. PA, OH, s. MI, IN, s. IL, MO, and e. KS south to FL and TX. A number of varieties have been recognized in *Qu. shumardii*, and the morphological and habitat variation needs additional study. Var. *schneckii* (Britton) Sargent is apparently more midwestern, but should be looked for in our area, especially on dry limestone slopes, its preferred habitat. It is allegedly distinguished by the acorn cups rounded to turbinate below (vs. flattened and saucer-shaped in var. *shumardii*). Hess & Stoynoff (1998) tentatively concluded that no varieties should be recognized within *Qu. shumardii*, but they plan additional studies. *Qu. acerifolia* (E.J. Palmer) Stoynoff & W.J. Hess (*Qu. shumardii* var. *acerifolia* Palmer] is an endemic of Magazine Mountain in n. AR and scattered sites in OK; it is best treated as a distinct species, though there has been much debate about its taxonomic status, with opinions ranging from full species to mere form (Smith 1988, Stoynoff & Hess 1990, Johnson 1992, Johnson 1994, Hess & Stoynoff 1998). [= F, FNA, G, K; < *Qu. shumardii* – RAB, C, S, W]

Quercus similis Ashe, Swamp Post Oak, Delta Oak. Cp (GA?, NC?, SC): calcareous stream flats; rare. *Qu. similis* resembles *Qu. stellata*, differing in its less definitely cross-shaped leaves and its distinctly wetland habitat. [= FNA, K; = *Qu. stellata* Wangenheim var. *paludosa* Sargent; = *Qu. ashei* Sterret]

Quercus sinuata Walter *var. **sinuata***, Bastard Oak. Cp (GA, SC): alluvial and slope forests; rare (GA Special Concern, SC Rare). April-May; September-November (of the same year). Se. SC west to TX. [= FNA, K; > *Qu. durandii* Buckley – RAB, S]

Quercus stellata Wangenheim, Post Oak. Pd, Cp, Mt (GA, NC, SC, VA): upland forests and woodlands, especially in clay or rocky soils and in fire communities; common (uncommon in Mountains). April; September-November (of the same year). Se. MA, s. NY, s. PA, s. OH, s. IN, s. IA, and e. KS south to FL and TX. In KS, OK, and TX, post oak is one of the trees that forms the Prairie boundary. There is no question of the distinctness of *Qu. margaretta* from *Qu. stellata*. See *Qu. similis*. [= RAB, C, FNA, G, K, S, W; = *Qu. stellata* var. *stellata* – F; = *Qu. villosa* Walter]

Quercus velutina Lamarck, Black Oak. Mt, Pd, Cp (GA, NC, SC, VA): upland forests and woodlands, especially in fairly xeric and sandy soils; common. April; September-October (of the second year). Widespread in e. North America. [= RAB, C, F, FNA, G, K, S, W]

Quercus virginiana P. Miller, Live Oak. Cp (GA, NC, SC, VA): locally common to abundant in maritime forests and maritime scrub on barrier islands, more rarely inland (though regularly on the mainland from se. NC south, and extending substantially inland from s. SC south), sometimes in dry, fire-maintained habitats more usually occupied by *Qu. geminata*, also planted (especially in the outer Coastal Plain); uncommon (VA Watch List). April; September-November (of the same year). A Southeastern Coastal Plain endemic: se. VA south to FL and west to TX. *Qu. fusiformis* Small of TX has sometimes been treated as a variety of *Qu. virginiana*, but is best separated as a species. Flowering before *Qu. geminata* when growing together. [= C, FNA, GW, K, S; < *Qu. virginiana* – RAB, G (also see *Qu. geminata*); < *Qu. virginiana* var. *virginiana* – F; *Qu. sempervirens* Walter]

Quercus boyntonii Beadle, Boynton Oak. Dry forests. Ne. AL and (possibly) TX. [= FNA, K, S; *Q. stellata* Wangenheim var. *boyntonii* (Beadle) Sargent]

* *Quercus robur* Linnaeus, English Oak, is cultivated in our area and sometimes persists or escapes in ne. United States, south at least to s. PA (Rhoads & Klein 1993). [= FNA, K]

Quercus texana Buckley, Nuttall Oak, Texas Red Oak. Floodplain swamps and bottomlands. AL, TN, w. KY (Clark et al. 2005), west to e. TX. [= FNA, K; = *Qu. nuttallii* E.J. Palmer – F, GW; = *Qu. shumardii* Buckley var. *texana* (Buckley) W.W. Ashe] {not keyed at this time}

FUMARIACEAE Augustin de Candolle 1821 (Fumitory Family)

This family includes 15-20 genera and 500-600 species, herbs, mostly north temperate. The Fumariaceae should likely be merged into the Papaveraceae (Lidén 1981, 1986; Lidén et al. 1997; Judd, Sanders, & Donoghue 1994). References: Stern in FNA (1997); Hill (1992); Lidén (1986, 1981); Lidén et al. (1997); Lidén in Kubitzki, Rohwer, & Bittrich (1993).

1 Corolla with the 2 outer petals spurred or saccate at their bases; [tribe *Corydaleae*].
- 2 Caulescent herbaceous vine (acaulescent in its first year, and appearing to be an herb); ultimate leaf segments 5-10 mm wide ..... ***Adlumia***
- 2 Acaulescent herb with basal leaves; ultimate leaf segments 1-4 mm wide.
  - 3 Leaves basal only ..... ***Dicentra***
  - 3 Leaves cauline and basal ..... ***[Lamprocapnos]***

1 Corolla with only 1 outer petal spurred or saccate at its base.
- 4 Ovary and fruit subglobose, with 1 seed; [tribe *Fumarieae*] ..... ***Fumaria***
- 4 Ovary and fruit elongate, with several to many seeds; [tribe *Corydaleae*].
  - 5 Flowers pink, the petals tipped with yellow; biennial; stem erect, 3-8 (-10) dm tall; capsules erect, 25-35 mm long ..... ***Capnoides***
  - 5 Flowers yellow; annual; stem erect, decumbent, or prostrate, 1-3 (-4) dm tall; capsules erect, ascending, divergent, or pendent, 10-20 (-25) mm long ..... ***Corydalis***

Adlumia Rafinesque ex Augustin de Candolle 1821 (Climbing Fumitory)

A genus of 2 species, herbs, of e. North America, Korea, and Manchuria. References: Boufford in FNA (1997); Lidén in Kubitzki, Rohwer, & Bittrich (1993).

Adlumia fungosa (Aiton) Greene ex Britton, Sterns, & Poggenburg, Alleghany-vine, Cliff-Harlequin, Climbing Fumitory. Mt (NC, VA): cliffs, talus, rocky slopes, rich stream-bottom forests, cool rocky forests; rare (NC Rare, VA Watch List). June-September. Québec west to WI and MN, south to DE, NC, TN, and IN. [= RAB, C, F, FNA, G, K, S, W]

Capnoides P. Miller 1754 (Rock Harlequin)

The genus is monotypic, an herb, of n. North America. Recent studies have emphasized its distinction from *Corydalis*, and its closer relationship to *Adlumia* and *Dicentra* than to *Corydalis* (Lidén 1981, 1986; Lidén et al. 1997). References: Stern in FNA (1997); Ownbey (1947)=Z; Lidén (1981, 1986); Lidén et al. (1997); Lidén in Kubitzki, Rohwer, & Bittrich (1993).

Capnoides sempervirens (Linnaeus) Borkhausen, Rock Harlequin, Tall Corydalis, Pink Corydalis, Pale Corydalis. Mt (GA, NC, SC, VA), Pd (NC, VA): rock outcrops, especially granitic exfoliation domes, but also quartzite, greenstone, and sandstone; uncommon (rare in NC and VA Piedmont) (GA Special Concern). April-June; May-July. Newfoundland west to AK, south to NJ, PA, in and near the mountains to ne. GA, n. OH, n. IN, MN, MT, and British Columbia. [= S; = *Corydalis sempervirens* (Linnaeus) Persoon – RAB, C, F, FNA, G, K, W, Z]

Corydalis Augustin de Candolle 1805 (Corydalis)
(also see *Capnoides*)

A genus of about 400 species, herbs, of temperate regions of the Northern Hemisphere (especially China and the Himalayas). References: Stern in FNA (1997); Ownbey (1947)=Z; Lidén in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers pink, the petals tipped with yellow; biennial; stem erect, 3-8 (-10) dm tall; capsules erect, 25-35 mm long ..... ***[Capnoides]***

1 Flowers yellow; annual; stem erect, decumbent, or prostrate, 1-3 (-4) dm tall; capsules erect, ascending, divergent, or pendent, 10-20 (-25) mm long.

2 Fruits pendent or divergent; spurred petal 7-9 mm long; pedicels 6-15 mm long; seeds 2-2.5 mm wide, with a narrow, acute ring-margin ..... ***C. flavula***

2 Fruits erect or ascending; spurred petal 10-15 mm long; pedicels 1-6 mm long (5-10 mm long in *C. aurea*); seeds 1.0-2.0 mm wide, without a narrow, acute ring-margin.

3 Capsules mostly 15-20 mm long, ca. 1.0 mm in diameter, strongly constricted between the seeds at maturity; inflorescence long, usually far exceeding the poorly-developed upper leaves; ultimate leaf segments 0.5-1.5 (-3.0) mm wide; seeds < 1.5 mm wide; plant slightly to strongly glaucous; [of sandy soils of the outer Coastal Plain]..... ***C. halei***

3 Capsules mostly 10-15 mm long, 1.5-2.0 mm in diameter, slightly or not at all constricted between the seeds at maturity; inflorescence relatively short, barely (if at all) overtopping the upper leaves; ultimate leaf segments 1.0-2.0 (-4.0) mm wide; seeds > 1.5 mm wide; plant green to slightly glaucous; [of circumneutral rock outcrops of the upper Piedmont and Mountains] ..... ***C. micrantha***

Corydalis flavula (Rafinesque) Augustin de Candolle, Short-spurred Corydalis. Pd, Mt, Cp (GA, NC, SC, VA): rich moist forests, especially alluvial forests, glades and outcrops over mafic rocks (such as greenstone); common (rare in NC and SC Coastal Plain) (GA Special Concern). March-April; May-June. S. CT, NY, and s. Ontario west to SD, south to NC, AL, LA, and OK. [= RAB, C, F, FNA, G, K, W, Z; = *Capnoides flavulum* (Rafinesque) Kuntze – S]

Corydalis halei (Small) Fernald & Schubert, Southern Corydalis. Cp (GA, NC, SC): sandy roadsides and disturbed areas; uncommon. March-April; May-June. E. NC south to FL, west to TX, and inland north to MO and OK. F and S recognized it as a species distinct from *C. micrantha*; Ownbey reduced it to a subspecies, citing inadequate morphological differences and some alleged intermediates in OK and MO. The two taxa appear readily separable on morphological, ecological, and geographical grounds; species status seems warranted. [= F; = *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray ssp. *australis* (Chapman) G.B. Ownbey – RAB, FNA, K, Z; = *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray var. *australis* (Chapman) Shinners – C; < *Corydalis micrantha* – G; = *Capnoides halei* Small – S]

Corydalis micrantha (Engelmann ex A. Gray) A. Gray, Slender Corydalis. Mt, Pd (NC): circumneutral rock outcrops and adjacent glades and woodlands; rare (NC Rare). April; June. Ssp. *micrantha* is primarily midwestern, ranging from IL, WI, MN, and SD south to AR, TX, and OK, with disjunct outliers in e. TN and w. NC. Ownbey (1947) had no records of Southern Appalachian populations of *C. micrantha*, and considered ssp. *micrantha* to range no further east than IL and MO; RAB included montane populations in ssp. *australis*, stating "this is the only [subspecies] in our range." Morphologically, however, these populations closely resemble ssp. *micrantha*; their association in the Brushy Mountains with other species disjunct from western or prairie ranges (*Anemone berlandieri, Arabis hirsuta, Pellaea wrightiana*) provides phytogeographic corroboration. [= F; = *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray ssp. *micrantha* – FNA, K, Z; = *Corydalis micrantha* (Engelmann ex A. Gray) A. Gray var. *micrantha* – C; < *Corydalis micrantha* – G; = *Capnoides micranthum* (Engelmann ex A. Gray) Britton – S]

Corydalis aurea Willdenow, south and east to MD, WV (?), and PA (Kartesz 1999). [= G, K; = *Corydalis aurea* var. *aurea* – C, F; = *Corydalis aurea* ssp. *aurea* – FNA; = *Capnoides aureum* (Willdenow) Kuntze – S] {not keyed at this time}

Corydalis crystallina Engelmann, a species of the sc. United States, was collected in 1930 from an oat field at the Georgia Experiment Station in Laurens County. Presumably it was a one-time contaminant in seed and is a waif. Not considered a component of the flora of our area. [= FNA, F, G, K]

Dicentra Bernhardi 1833

A genus of about 12 species, perennial herbs, with a relictual north temperate distribution: e. North America, w. North America, and e. Asia. References: Stern in FNA (1997); Stern (1961)=Z; Lidén in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves cauline and basal..... ***[see Lamprocapnos spectabilis]***
1 Leaves basal only.
  2 Flowers pink, in panicles; rootstock lacking bulblets; ultimate leaf segments generally 3-parted, each part 2-5 mm wide at base, gradually tapering to the tip.
    3 Reflexed portions of the outer sepals 4-8 mm long; [native and cultivated] .....***D. eximia***
    3 Reflexed portions of the outer sepals 2-5 mm long; [cultivated]..... ***[D. formosa ssp. formosa]***
  2 Flowers white or yellowish (very rarely pinkish), in racemes; rootstock with bulblets; ultimate leaf segments not generally 3-parted, about 1 (-3) mm wide, with parallel sides for most of their length, then tapering suddenly to the tip.
    4 Spurs of the corolla rounded, incurved, 2-5 mm long; bulblets yellow, spherical.....***D. canadensis***
    4 Spurs of the corolla elongate, divergent, 7-9 mm longl bulblets white to pink, tear-shaped (narrowed upward)..... .....***D. cucullaria***

Dicentra canadensis (Goldie) Walpers, Squirrel Corn. Mt (GA, NC, VA), Pd, Cp (NC, VA): rich, moist forests, especially rich cove forests in the mountains; common (uncommon in VA Piedmont, rare in Coastal Plain, rare or extirpated in NC Piedmont) (GA Special Concern). April-May; June. S. ME west to s. MN, south to w. NC, n. GA, TN, and MO. [= RAB, C, F, FNA, G, K, W; = *Bicuculla canadensis* (Goldie) Millspaugh – S]

Dicentra cucullaria (Linnaeus) Bernhardi, Dutchman's Britches. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (NC): rich, moist forests, especially rich cove forests in the mountains; common (rare in NC and SC Piedmont and NC Coastal Plain) (SC Rare). March-April; May-June. Nova Scotia west to n. MN, south to GA, AR, and KS; disjunct in WA, OR, and ID. [= RAB, C, F, FNA, G, K, W; = *Bicuculla cucullaria* (Linnaeus) Millspaugh – S]

Dicentra eximia (Ker-Gawler) Torrey, Wild Bleeding Heart. Mt (GA, NC, SC, VA), Pd (NC, VA): cliffs, talus slopes, rocky slopes, rock outcrops, shale slopes; common in VA mountains (rare elsewhere) (GA Special Concern, NC Rare, SC Rare). April-June; July-August. An Appalachian endemic: NY and NJ south to NC and TN. [= RAB, C, F, FNA, G, K, W; = *Bicuculla eximia* (Ker-Gawler) Millspaugh – S]

* *Dicentra formosa* (Haworth) Walpers ssp. *formosa*, native from s. British Columbia south to c. CA, is frequently cultivated and resembles our native *D. eximia*. It has the reflexed portion of the outer petals 2-4 mm long. A variety of cultivars, some apparently derived from hybrids between the 2 species, make identification uncertain in some cases. [= FNA]

Fumaria Linnae 1753 (Fumitory)

A genus of about 50 species, annual herbs, primarily Eurasian. References: Boufford in FNA (1997); Lidén in Kubitzki, Rohwer, & Bittrich (1993).

* ***Fumaria officinalis*** Linnaeus, Fumitory, Earthsmoke. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (VA): sandy fields, disturbed places, escaped from gardens; rare, introduced from Europe. March-May. [= RAB, C, F, FNA, G, K, S; > *F. officinalis* ssp. *officinalis* – K; > *F. officinalis* ssp. *wirtgenii* (W.D.J. Koch) Arcangeli – K]

Lamprocapnos Endlicher (Asian Bleeding Heart)

A monotypic genus, a perennial herb of e. Asia. References: Lidén et al. (1997).

Identification notes: *Lamprocapnos* differs from other "bleeding hearts" (the native *Dicentra eximia* and the western American *Dicentra formosa* ssp. *formosa*) in its leafy stem, the inflorescence borne terminally or opposite a leaf, the leaves much less finely divided, and the flowers about as broad as long (vs. much longer than broad in *Dicentra eximia* and *Dicentra formosa*).

* *Lamprocapnos spectabilis* (Linnaeus) Fukuhara, Bleeding Heart, native to e. Siberia, Korea, and n. China, is frequently cultivated and may persist or weakly naturalize. [= K; *Dicentra spectabilis* (Linnaeus) Lem.]

GARRYACEAE Lindley 1834 (Garrya Family)

Garryaceae is here circumscribed to include *Aucuba* (Bremer et al. 2002). References: Bremer et al. (2002)

Aucuba Thunberg (Aucuba, Japanese-laurel)

* ***Aucuba japonica*** Thunberg, Aucuba, Japanese-laurel, Spotted-laurel. Pd (NC): commonly planted throughout our area, rarely escaping and naturalizing in suburban woodlands; rare, introduced from Japan and se. Asia. The most frequently planted cultivars have the dark green leaves prominently speckled with yellow. [= K]

GELSEMIACEAE (G. Don) Struwe & V. Albert 1995 (Jessamine Family)

A family of 2 genera and about 10 species, shrubs and vines, of tropical and warm temperate America, Africa, and Asia. There is persuasive evidence that *Gelsemium* and *Mostuea* Didr., traditionally treated as part of a heterogeneous Loganiaceae, should be accorded family status as Gelsemiaceae (Backlund, Oxelman, & Bremer 2000; Struwe, Albert, & Bremer 1994; Sennblad & Bremer 1996). The Gelsemiaceae form a clade most closely related to the Apocynaceae (Backlund, Oxelman, & Bremer 2000). References: Backlund, Oxelman, & Bremer (2000); Struwe, Albert, & Bremer (1994); Sennblad & Bremer (1996); Rogers (1986).

Gelsemium Antoine Laurent de Jussieu (Yellow Jessamine)

A genus of 3 species, vines, our 2 species in se. North America (and also Central America) and 1 species in e. Asia. References: Wyatt et al. (1993); Duncan & Dejong (1964); Godfrey (1988); Rogers (1986)=Z; GW.

1 Sepals acuminate apically, persistent on the fruit; capsule elliptical, 1.0-1.6 cm long, 6-8 mm broad, the tapering tip bearing a definite beak about 3 mm long; seeds wingless; flowers odorless (rarely fragrant), usually golden-yellow ..... ***G. rankinii***
1 Sepals obtuse to broadly acute, not persistent on the fruit; capsule oblong, 1.5-2.5 cm long, 8-12 mm broad, very abruptly narrowed to a beak 1.5-2 mm long; seeds with a prominent membranous wing sharply differentiated from the body of the seed; flowers fragrant, usually lemon-yellow ..... ***G. sempervirens***

Gelsemium rankinii Small, Swamp Jessamine. Cp (GA, NC, SC): swamps of blackwater rivers, restricted in NC to the se. corner of the state, most notably the swamps of the Waccamaw and Black rivers; rare north of GA (NC Rare). March-April; September-October. Se. NC south through SC and GA to the FL panhandle, and west to e. LA. See Wyatt et al. (1993) and Duncan & Dejong (1964) for extensive discussions of morphology, habitat, pollination, genetics, distribution, and evolutionary relationships of our 2 species of *Gelsemium*. [= RAB, GW, K, S, Z]

Gelsemium sempervirens St. Hilaire, Carolina Jessamine. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA): in a wide range of habitats, from swamp forests to dry uplands and thickets, also commonly planted as an ornamental; common. March-early May; September-November. VA, se. TN, and AR south to c. peninsular FL and e. TX; disjunct in Guatemala and Mexico (Chiapas, Oaxaca, Puebla, and Veracruz). Jessamine climbs to the tops of trees. [= RAB, F, G, GW, K, S, W, Z]

GENTIANACEAE A.L. de Jussieu 1789 (Gentian Family)
(also see *MENYANTHACEAE*)

A family of about 87 genera and over 1600 species, herbs, shrubs, and trees, cosmopolitan (Struwe & Albert 2002). References: Wood & Weaver (1982); Struwe & Albert (2002).

1 Leaves all scale-like, 1-3 (-5) mm long, appressed to the stem; [tribe *Gentianeae*, subtribe *Swertiinae*] ..... ***Bartonia***
1 Leaves larger, spreading or ascending.
  2 Stem leaves whorled; plants robust, 1-3 m tall; [tribe *Gentianeae*, subtribe *Swertiinae*] ..... ***Frasera***
  2 Stem leaves opposite; plants generally < 1 m tall.
    3 Calyx lobes 2; stem leaves obovate, widest near the rounded tip), 0.5-1.5 cm long, crowded anear the tip of the stem;, basal rosette never present; [of nutrient-rich, mesic forests]; [tribe *Gentianeae*, subtribe *Swertiinae*] ..... ***Obolaria***
    3 Calyx lobes 4-5; stem leaves lanceolate, ovate, elliptic or narrowly elliptic (widest near the middle or toward the base, the tip acute or acuminate), mostly > 1.5 cm long, distributed fairly evenly along the stem, basal rosettes sometimes present; [of various more-or-less open habitats (except some species of *Gentiana*, which can occur in nutrient-rich, mesic forests)].
      4 Corolla lobes 5-14, much longer than the corolla tube, pink or white; [tribe *Chironieae*, subtribe *Chironiinae*] ..... ***Sabatia***
      4 Corolla lobes 4-5, shorter than the corolla tube, blue, lavender, pink or white.
        5 Corolla tube < 2 mm wide; [tribe *Chironieae*, subtribe *Chironiinae*] ..... ***Centaurium***
        5 Corolla tube > 3 mm wide.
          6 Corolla lobes alternating with corolla appendages (appearing as plaits or lobes, these often toothed, notched, or lacerate, sometimes as long as or longer than the true corolla lobes); main stem leaves cuneate at the base; perennial; [tribe *Gentianeae*, subtribe *Gentianinae*] ..... ***Gentiana***
          6 Corolla lobes not alternating with corolla appendages; main stem leaves rounded to cordate at the base; biennial or annual; [tribe *Gentianeae*, subtribe *Swertiinae*].

7 Corolla lobes 4, finely fringed; main stem leaves rounded at base, with lateral veins obscure; biennial ..... ***Gentianopsis***
7 Corolla lobes 5, entire, not fringed; main stem leaves cordate (the cordate bases often overlapping the opposite leaf), with 2-3 well-developed lateral veins (prominently visible on the lower surface); annual..... ***Gentianella***

Bartonia Muhlenberg ex Willdenow (Bartonia)

A genus of 3 species, herbs, of e. North America. The genus has coralloid mycorrhizae and lacks root hairs, and is thus presumably partially mycotrophic. References: Gillett (1959)=Z.

1 Corolla lobes white, 5-10 mm long, spreading, spatulate to obovate, rounded at the apex; flowering in early spring (rarely to early summer) ..... ***B. verna***
1 Corolla lobes green to creamy white, 2-3 (-5) mm long, ascending or erect, oblong to ovate or lance-ovate, acuminate or rounded-mucronate at the apex; flowering in summer or fall.
2 Mid-cauline scale leaves alternate; corolla lobes acuminate at the apex, their margins entire; anthers 0.3-0.5 mm long ... . ***B. paniculata ssp. paniculata***
2 Mid-cauline scale leaves opposite; corolla lobes rounded at the apex, abruptly narrowed to a mucro, their margins erose (uncommonly entire); anthers 0.5-1.1 mm long ..... ***B. virginica***

Bartonia paniculata (Michaux) Muhlenberg *ssp.* ***paniculata***, Screwstem Bartonia. Cp (GA, NC, SC), Mt (GA, VA), Pd (SC, VA): swamps, bogs, pocosins, pocosin ecotones, sphagnous seepages, sinkhole ponds; rare (NC Watch List, VA Watch List). August-October. Ssp. *paniculata* ranges from MA south to FL and west to e. TX, chiefly on the Coastal Plain, but with scattered occurrences inland (to c. VA, w. NC, KY, and AR). Ssp. *iodandra* (B.L. Robinson) J. Gillett is more northern, ranging from Newfoundland south to MA. These taxa have been variously treated (and ignored). Intermediates are alleged to occur in NC, MS, AL, and northward to MA (Gillett 1959, Wood & Weaver 1982). [= K, Z; < *B. paniculata* – RAB, GW; = *B. paniculata* – G; = *B. paniculata* var. *paniculata* – C, F; = *B. lanceolata* Small – S]

Bartonia verna (Michaux) Rafinesque ex Barton, Spring Bartonia, White Bartonia. Cp (GA, NC, SC, VA): wet pine savannas, shores of Coastal Plain depression ponds, other moist sands; uncommon (NC Watch List, VA Rare). February-April (-June). VA (1 site known from City of Virginia Beach) (Belden et al. 2004) and se. NC (Carteret County) south to s. FL, west to se. TX. Perhaps not truly congeneric with the other 2 species; Wood & Weaver (1982) commented that "the species [of *Bartonia*] can be divided into two remarkably distinct groups." [= RAB, GW, K, S, Z]

Bartonia virginica (Linnaeus) Britton, Sterns, & Poggenburg, Virginia Bartonia. Cp, Mt (GA, NC, SC, VA), Pd (NC, SC, VA): bogs, swamps, savannas, pocosin ecotones, pocosins; uncommon (rare in Mountains). July-October. Nova Scotia and Québec west to WI, south to n. FL and LA. [= RAB, C, F, G, GW, K, S, Z]

Centaurium Hill (Centaury)

A genus of about 20 species, herbs, mainly north temperate.

1 Flowers pedicellate, the pedicels 3-5 mm long ..... ***C. pulchellum***
1 Flowers sessile or nearly so (sometimes appearing stalked but with bracteal leaves immediately below the calyx).
2 Inflorescence a corymbiform cyme (about as broad as long, the central axis poorly developed)..... ***C. erythraea***
2 Inflorescence a spikelike cyme (distinctly elongate, the central axis straight) ..... ***C. spicatum***

* ***Centaurium erythraea*** Rafn, Common Centaury, Forking Centaury. Pd (NC, VA), Cp (VA), {GA}: lawns, disturbed areas; rare, introduced from Europe and w. Asia. July-September. [= C, K; = *C. minus* – RAB, later homonym; = *C. umbellatum* – F, G, later homonym]

* ***Centaurium pulchellum*** (Swartz) Druce, Lesser Centaury, Branching Centaury. Cp (VA): disturbed areas; rare, introduced from Europe. June-September. [= C, F, G, K, S]

* ***Centaurium spicatum*** (Linnaeus) Fritsch, Spiked Centaury. Cp (VA): disturbed areas; rare, introduced from s. Europe. July-August. [= C, F, G, K]

Eustoma Salisbury ex G. Don (Prairie-gentian)

A genus of 3 species, annual to perennial herbs, of se., c., and sw. North America south to Mexico and Belize and in the West Indies. References: Shinners (1957)=Z; Wood & Weaver (1982)=Y.

Eustoma exaltatum (Linnaeus) Salisbury ex G. Don, Prairie-gentian. Alkaline prairies, saline coastal areas. AL and FL west to TX, south to Mexico and Belize; West Indies. June-November. [= GW, S, Y, Z; = *Eu. exaltatum* ssp. *exaltatum* – K] {not yet keyed in generic key}

Frasera Walter (Columbo)

A genus of 15 species, herbs, primarily of w. North America. References: Threadgill & Baskin (1978)=Z; Horn (1997).

Frasera caroliniensis Walter, American Columbo. Mt (GA, NC), Pd (GA, SC): rich forests over mafic rocks, upper slopes of cove forests, floodplain forests; rare (NC Rare, SC Rare). Late May-June; September-October. W. NY, nw. PA, and s. Ontario west to IL, MI, MO, and e. OK, south to w. SC, n. GA, and LA, primarily west of the Blue Ridge. Horn (1997) studied the ecology of this species in the Piedmont of SC. [= C, K, S, W, Z; = *Swertia caroliniensis* (Walter) Kuntze – RAB, F, G]

Gentiana Linnaeus 1753 (Gentian)

A genus of about 350-400 species, herbs, primarily temperate and arctic. Even following the removal of *Gentianopsis* and *Gentianella, Gentiana* is a large and apparently heterogeneous group, perhaps not monophyletic. No satisfactory comprehensive treatment is available, however. All of the species treated here as *Gentiana* are in the distinctive group often treated as section, subgenus, or genus *Pneumonanthe*. References: Pringle (1967)=Z; Halda (1996)=Y; Ho & Liu (2001)=X; Ho & Liu (1990); Yuan, Küpfer, & Doyle (1996); Pringle (1977). Key adapted from Z.

Identification Notes: In some species it may be somewhat difficult to interpret the corolla lobes and the corolla appendages. The filaments are alternate to the corolla lobes, and are therefore attached to the lower portion of the corolla appendages.

1 Flower solitary (rarely 2 or 3); corolla spotted within; leaves twisted, oblanceolate to oblinear; [subgenus *Pneumonanthe*, series *Angustifoliae*] ..... ***G. autumnalis***
1 Flowers clustered; corolla not spotted within; leaves planar, mostly lanceolate, elliptic, or ovate (rarely linear); subgenus *Pneumonanthe*, series *Pneumonanthe*].
  2 Calyx lobes keeled, the keel decurrent on the calyx tube; corolla greenish-white or yellowish-white; leaves ovate to lanceolate, acuminate ..... ***G. alba***
  2 Calyx lobes not keeled; corolla white, greenish-white, or variously blue.
    3 Corolla greenish-white (sometimes somewhat purplish); seeds wingless; lower leaves spatulate to obovate..... ..... ***G. villosa***
    3 Corolla blue, purplish, pale blue, or nearly white; seeds winged; lower leaves linear, lanceolate, elliptic, or ovate.
      4 Margins of leaves and calyx lobes entire to minutely denticulate; corolla appendages obliquely triangular, broader than high (sometimes with a minute deflexed segment)..... ***G. linearis***
      4 Margins of leaves and calyx lobes conspicuously ciliate (as seen at 10×); corolla appendages with 2 teeth, as long as broad or longer (sometimes with a deflexed segment, if so, the deflexed segment about as long as the erect one).
        5 Anthers separate at anthesis; outer surfaces of petals suffused with green; calyx lobes linear-subulate, about as long as the tube; corolla lobes 6-14 mm long, about 2× as long as the the free portions of the corolla appendages ..... ***[G. puberulenta]***
        5 Anthers connate at anthesis; outer surfaces of petals not suffused with green; calyx lobes various; corolla lobes usually shorter.
          6 Calyx lobes linear-subulate, broadest at the base, 4× or more as long as broad, shorter than the densely puberulent calyx tube; stems densely puberulent; corolla appendages very unevenly bifid, the narrower segment often deflexed into the corolla tube ..... ***G. decora***
          6 Calyx lobes lanceolate, oblanceolate, ovate, or orbicular, 1-5× as long as broad, longer or shorter than the glabrous or puberulent calyx tube; stems glabrous or puberulent; corolla appendages subequally bifid, both segments erect.
            7 Corollas open to loosely closed; involucral and upper leaves obtuse to acute (rarely acuminate); calyx lobes lanceolate.
              8 Leaves ovate, widest near the base, bright green; calyx lobes longer than the calyx tube; corolla lobes spreading, usually 2-4 mm longer than the appendages ..... ***G. catesbaei***
              8 Leaves linear to elliptic, widest near the middle, dark green; calyx lobes shorter than or about equal to the calyx tube; corolla lobes usually incurved, rarely exceeding the appendages by > 2 mm ..... ***G. saponaria***
            7 Corollas tightly closed; involucral and upper leaves acuminate; calyx lobes ovate-orbicular.
              9 Corolla lobes reduced to a minute mucro or triangular tooth, much exceeded by the corolla appendages ..... ***[G. andrewsii var. andrewsii]***
              9 Corolla lobes aboiut as long as the corolla appendages.
                10 Calyx tubes densely puberulent; stems puberulent; filaments 7-12 mm long; corolla lobes often triangular, about 1/2 as wide as the corolla appendages..... ..... ***G. austromontana***

10 Calyx tubes glabrous; stems glabrous; filaments 10-15 mm long; corolla lobes usually rounded, about as wide as the corolla appendages ..... ***G. clausa***

Gentiana alba Muhlenberg ex Nuttall, Pale Gentian. Mt (NC): habitat unknown (not collected in NC in this century); rare (NC Rare). August-October. Mainly distributed in midwestern United States, from MI west to MN, south to n. AR, *G. flavida* occurs as scattered disjunctions eastward to PA, OH, WV, KY, and w. NC. *G. alba* is the older name; there is controversy, however, over whether it was validly published and applies clearly to the species at hand (see Wilbur 1988c for discussion). [= RAB, K, W, X, Y, Z; = *Gentiana flavida* A. Gray – C, F, G; = *Dasystephana flavida* (A. Gray) Britton – S; = *Pneumonanthe flavida* (A. Gray) Greene]

Gentiana austromontana Pringle & Sharp, Blue Ridge Gentian. Mt (NC, VA): high elevation forests and grassy balds; rare (NC Watch List, VA Watch List). September-October. A Southern Appalachian endemic: s. WV and sw. VA south to w. NC and ne. TN. The flowers of *G. austromontana* are usually a deeper and more intense blue-violet than the similar *G. clausa* and *G. decora*. See Pringle & Sharp (1964) for additional discussion. [= C, K, W, X, Y, Z; < *G. clausa* Rafinesque – RAB, F, G, GW; < *Dasystephana decora* (Pollard) Small – S]

Gentiana autumnalis Linnaeus, Pinebarren Gentian. Cp (NC, SC, VA): savannas, pine flatwoods, sandhills, in a variety of sites varying from moist to very xeric, nearly always associated with *Pinus palustris* and *Aristida stricta*; uncommon, rare in VA (SC Rare, VA Rare). Late September-early January (rarely at other times of the year, such as spring, in response to fire). This species is a "bimodal endemic," occurring in s. NJ and adjacent DE, and from se. VA south through e. NC to nc. SC. The related *G. pennelliana* Fernald (sometimes reduced to a subspecies of *G. autumnalis*) is endemic to the FL panhandle; other siblings occur in Mexico: *G. bicuspidata* (G. Don) Briq., *G. hooperi* Pringle, and *G. longicollis* Nesom. *G. autumnalis* is often overlooked, since it is very inconspicuous except when in flower, it usually flowers at a season when few botanists are about, and sterile plants greatly outnumber fertile ones. Vegetatively it is extremely distinctive once learned; the leaves are glossy, dark-green, opposite, oblanceolate to "oblinear," and twisted and curved in a manner reminiscent of an airplane propellor. [= RAB, C, F, GW, K, X, Z; = *Gentiana porphyrio* J.F. Gmelin – G; = *Dasystephana porphyrio* (J.F. Gmelin) Small – S; = *Gentiana autumnalis* ssp. *autumnalis* – Y; = *Pneumonanthe porphyrio* (Linnaeus) Greene]

Gentiana catesbaei Walter, Coastal Plain Gentian. Cp (GA, NC, SC, VA), Pd (VA): pocosins, moist savanna edges, edges of moist hardwood forests; common (rare in Piedmont). Late September-November. S. NJ south to n. FL, on the Coastal Plain. [= RAB, C, G, GW, K, X, Y, Z; > *G. catesbaei* var. *catesbaei* – F; > *G. catesbaei* var. *nummulariifolia* Fernald – F; > *Dasystephana latifolia* (Chapman) Small – S; > *D. parvifolia* (Chapman) Small – S; = *Pneumonanthe catesbaei* (Walter) F.W. Schmidt]

Gentiana clausa Rafinesque, Meadow Closed Gentian, Meadow Bottle Gentian. Mt, Pd (NC, VA): forests; uncommon. September-October. Mostly Appalachian: ME south to w. NC and ne. TN, extending east and west to adjacent physiographic provinces. [= C, K, W, X, Y, Z; < *G. clausa* – RAB, F, G, GW (also see *G. austromontana*); < *Dasystephana decora* (Pollard) Small – S; = *Pneumonanthe clausa* (Rafinesque) Greene]

Gentiana decora Pollard, Appalachian Gentian. Mt, Pd (GA, NC, SC, VA): forests; common (rare in Piedmont). September-October. A Southern Appalachian endemic: c. WV south through w. VA to w. NC, e. TN, nw. SC, ne. GA. [= RAB, C, F, G, K, W, X, Y, Z; < *Dasystephana decora* (Pollard) Small – S; = *Pneumonanthe decora* (Pollard) Greene]

Gentiana linearis Frölich, Narrowleaf Gentian. Mt (VA): openings in spruce-fir forest near the summit of Whitetop Mountain, VA; rare (VA Rare). September-October. Mainly occurring in ne. United States and e. Canada, west to Lake Superior, and south (scattered) in the Appalachians to sw. VA and e. TN (Chester, Wofford, & Kral 1997). On Mount LeConte (Sevier County, TN), *G. linearis* occurs in thin soils around high elevation outcrops of Anakeesta Slate. See Pringle (1977) for extensive discussion of actual and putative southern occurrences of this species. [= C, F, G, K, W, X, Y, Z; = *Pneumonanthe linearis* (Frölich) Greene]

Gentiana saponaria Linnaeus, Soapwort Gentian. Cp, Pd, Mt (GA, NC, SC, VA): bogs, marshes, wet hardwood forests, other moist to wet habitats; uncommon. Late September-November. NY west to n. IL, south to w. FL and e. TX. A peculiar form with very narrow leaves has been found at several localities in Ashe and Watauga counties, NC and in the South Mountains, NC; it may warrant taxonomic recognition after further study. [= RAB, C, GW, K, W, X, Y, Z; > *G. saponaria* – F, G; > *G. cherokeensis* (W.P. Lemmon) Fernald – F, G; > *G. saponaria* var. *saponaria* – K; > *G. saponaria* var. *latidens* House – K; = *Dasystephana saponaria* (Linnaeus) Small – S; = *Pneumonanthe saponaria* (Linnaeus) F.W. Schmidt] {investigate varieties}

Gentiana villosa Linnaeus, Striped Gentian. Pd, Mt, Cp (GA, NC, SC, VA): upland forests, sandhill/pocosin ecotones; uncommon. Late August-November. Se. PA west to n. KY and w. TN, south to w. FL and e. LA. [= RAB, C, F, G, K, W, X, Y, Z; = *Dasystephana villosa* (Linnaeus) Small – S; = *Pneumonanthe villosa* (Linnaeus) F.W. Schmidt]

Gentiana andrewsii Grisebach var. *andrewsii*, a northern species, ranges south to s. MD and WV; earlier reports of it as far south as GA or NC (as by F and G) are apparently based on misidentifications. An additional variety, var. *dakotica* A. Nelson, occurs from Manitoba and Saskatchewan south in the Great Plains to MO and IL. [= C, K, X, Y, Z; < *G. andrewsii* – F, G; < *Dasystephana andrewsii* (Grisebach) Small – S; = *Pneumonanthe andrewsii* (Grisebach) W.A. Weber var. *andrewsii*]

Gentiana puberulenta J. Pringle, Prairie Gentian, ranges from w. NY west to ND, south to WV, KY, sc. TN (Coffee County) (Chester, Wofford, & Kral 1997), LA, n. AR, and KS. [= C, K, X, Y, Z; = *G. puberula* – F, G, misapplied; = *Dasystephana puberula* (Michaux) Small – S, misapplied]

Gentianella Moench (Agueweed)

A genus of about 125 species, herbs, temperate. The separation of *Gentianella* from *Gentiana* appears to be well warranted; some characters suggest that *Gentianella* is more closely allied to *Swertia*, *Halenia*, and *Lomatogonium* than to *Gentiana* (Wood & Weaver 1982). A molecular analysis has confirmed this (Yuan & Küpfer 1995). References: Gillett (1957)=Z. Key based on Gillett (1957).

1 Calyx 8-10 mm long; calyx tube 3.0-3.5 mm long; calyx lobes 5-6 mm long, elliptic-lanceolate to oblanceolate with thickened margins, and with broadly flattened, frequently nerve-like keels; corolla ca. 20 mm long..... ***G. quinquefolia* var. *occidentalis***

1 Calyx 4-5 mm long; calyx tube 1.5-2.0 mm long; calyx lobes 2.0-2.5 mm long, narrowly triangular with hyaline margins and very prominent keels; corolla 16-18 mm long ..... ***G. quinquefolia* var. *quinquefolia***

Gentianella quinquefolia (Linnaeus) Small *var.* ***occidentalis*** A. Gray, Western Agueweed. Mt (VA): calcareous barrens, dry and dry-mesic limestone woodlands; rare (VA Rare). Late August-October. Var. *occidentalis* A. Gray is more western, from OH and s. Ontario west to MN, east and south to w. VA, sc. KY, AR, and se. KS. [= C, G; < *Gentiana quinquefolia* Linnaeus – RAB, GW, W; = *Gentiana quinquefolia* var. *occidentalis* (A. Gray) Hitchcock – F; = *Gentianella quinquefolia* ssp. *occidentalis* (A. Gray) J. Gillett – K, Z; = *Gentianella occidentalis* (A. Gray) Small – S]

Gentianella quinquefolia (Linnaeus) Small *var.* ***quinquefolia***, Eastern Agueweed. Mt (GA, NC, SC, VA): forests, grassy balds; common. Late August-October. Var. *quinquefolia* is primarily Appalachian, from ME west to w. NY and s. Ontario, south to n. GA and sc. TN. [= C, G; < *Gentiana quinquefolia* Linnaeus – RAB, GW, W; = *Gentiana quinquefolia* var. *quinquefolia* – F; = *Gentianella quinquefolia* ssp. *quinquefolia* – K, Z; = *Gentianella quinquefolia* – S]

Gentianopsis Ma 1951 (Fringed-gentian)

A genus of about 20 species, herbs, of north temperate Asia and North America. The reasons for the recognition of *Gentianopsis* are enumerated by Ma (1951), Iltis (1965), and Wood & Weaver (1982). References: Gillett (1957)=Z; Iltis (1965); Ma (1951).

Gentianopsis crinita (Frölich) Ma, Eastern Fringed-gentian. Mt (GA, NC, VA): sunny or semi-shaded seepage areas over calcareous, mafic, or ultramafic rocks (such as limestone, amphibolite, or serpentinized olivine); rare (GA Threatened, NC Endangered, VA Rare). September-October. ME, s. Ontario, and ND south to NJ, IN, and IA (mostly north of the glacial maximum) and from PA south to nw. NC and ne. GA in the unglaciated Appalachians. Certainly one of the most beautiful of our native plants. [= C, K; = *Gentiana crinita* Frölich – RAB, F, G, GW, W; = *Anthopogon crinitum* (Frölich) Rafinesque – S; = *Gentianella crinita* (Frölich) G. Don ssp. *crinita* – Z]

Obolaria Linnaeus (Pennywort)

A monotypic genus, herb, of e. North America. References: Gillett (1959)=Z.

Obolaria virginica Linnaeus, Pennywort. Mt, Pd (GA, NC, SC, VA), Cp (NC, VA): nutrient-rich, moist forests; common (rare in Coastal Plain south of VA). March-May; May-June. NJ west to OH, s. IN, and s. IL, south to panhandle FL and se. LA (reported from TX). The small purplish-green plants are inconspicuous, often nearly hidden under fallen leaves. *Obolaria* has well-developed mycorrhizae and may be substantially mycotrophic. [= RAB, C, F, G, K, S, W, Z]

Sabatia Adanson 1763 (Sabatia, Rose-gentian, Marsh-pink, Sea-pink)
(contributed by B.A. Sorrie and A.S. Weakley)

A genus of about 20 species, of North America and the West Indies. References: Wilbur (1955)=Z.

1 Flowers with (7-) 8-12 (-14) corolla lobes.
  2 Pedicels < 5 mm long; calyx subtended by linear bracts that usually exceed the corolla lobes; terminal flowers in capitate clusters (less commonly single).
    3 Basal leaves similar in shape and size to the stem leaves; cauline leaves (25-) 35-50 (-65) mm long, (7-) 10-20 (-25) mm wide, 2-4× as long as wide; corolla lobes pale rose or white; [of mountain slopes, restricted in our area to sw. NC and nw. GA] ..... ***S. capitata***
    3 Basal leaves much broader and shorter than the stem leaves; cauline leaves (15-) 40-80 (-100) mm long, 1-3 mm wide, 20-60× as long as wide; corolla lobes medium rose to deep rose; [of bogs and savannas, of the Coastal Plain] ..... ***S. gentianoides***
  2 Pedicels > 10 mm long; calyx not subtended by long bracts; terminal flower single.
    4 Upper stem leaves about as wide as the diameter of the stem, or narrower; calyx lobes terete or semi-terete; stems 6-12 dm tall; [of *Taxodium ascendens-Nyssa biflora* depressions and wet pine flatwoods in se. SC] ..... ***S. bartramii***

4 Upper stem leaves much wider than the diameter of the stem; calyx lobes flat, linear to narrowly oblanceolate; stems 3-12 dm tall; [of various habitats, primarily along the shores of blackwater rivers or ponds, or in tidal marshes].
5 Primary branches opposite; terminal flower short-stalked (much shorter than the first internode of the adjacent branch); stems 5-12 dm tall; [of drawdown blackwater riverbanks and similar situations] ..... ***S. kennedyana***
5 Primary branches usually alternate; terminal flower long-stalked (usually longer than the first internode of the adjacent branch); stems 3-7 dm tall; [of brackish marshes or openings along blackwater streams].
6 Surficial stolons usually absent or poorly developed; internodes commonly much longer than leaves; [of tidal brackish or freshwater marshes] ..... ***S. dodecandra***
6 Surficial stolons usually present and well-developed, elongate; internodes shorter than to equaling the leaves; [of openings of blackwater streams] ..... ***S. foliosa***

1 Flowers with 5-6 (-7) corolla lobes.
7 Upper branches of main stem alternate.
8 Calyx tube strongly winged; corolla lobes pink; [very rare introduction from c. United States] ..... ***S. campestris***
8 Calyx tube not winged; corolla lobes pink or white; [native, primarily of the Coastal Plain, except *S. campanulata* which has disjunct occurrences in the Mountains].
9 Calyx lobes foliaceous, 5-8 mm wide, oblong to oblanceolate, mostly exceeding the corolla lobes..... ***S. calycina***
9 Calyx lobes linear-setaceous, 0.5-2 mm wide, if equaling the corolla lobes then very narrow and not foliaceous.
10 Calyx lobes (3-) 4-7 (-8) mm long; corolla lobes white; [of the Coastal Plain from se. SC southward]..... ***S. brevifolia***
10 Calyx lobes (4-) 6-17 (-23) mm long; corolla lobes pink (rarely white in individual plants); [of the Coastal Plain of GA, NC, SC, and VA, and rarely the Mountains of NC and VA].
11 Plants perennial, often with several stems from a caudex; calyx lobes > 3/4× as long as the corolla lobes, and sometimes exceeding them; [of saturated soils from Coastal Plain savannas to Mountain bogs] ..... ***S. campanulata***
11 Plants annual, solitary; calyx lobes up to 3/4× as long as the corolla lobes; [of brackish marshes and interdune swales] ..... ***S. stellaris***
7 Upper branches of main stem opposite.
12 Corolla lobes pink (rarely white); pedicels at least in part > 5 mm long.
13 Lower half of stem winged; leaves ovate, clasping, < 2× as long as wide; [widespread in our area] ..... ***S. angularis***
13 Lower half of stem not winged; leaves elliptic to lanceolate, more or less tapered to the base, mostly > 3× as long as wide; [of the Coastal Plain or very rarely Piedmont] ..... ***S. brachiata***
12 Corolla lobes white or creamy white; pedicels (above the uppermost bracts or branches) ca. 1-2 (-5) mm long.
14 Lower portion of stem quadrangular, narrowly winged; plants annual or biennial, with 1 (-several) stems arising from a taproot ..... ***S. quadrangula***
14 Lower portion of stem terete, not winged (though the upper stem is quadrangular or angled in *S. difformis*); plants perennial, with several stems arising from a short rhizome; [section *Eusabatia*, subsection *Difformes*].
15 Leaves and upper stem not glaucous; stem terete below, becoming quadrangular or quadrangular-angled above; corolla lobes (5-) 7-15 (-21) mm long; [widespread in our area] ..... ***S. difformis***
15 Leaves and upper stem glaucous; stem terete throughout; corolla lobes (4-) 5-7 (-8) mm long; [of GA southward and westward].
16 Calyx-lobes erect, (0.1-) 0.2-1.5 (-2.0) mm long, as long as or shorter than the calyx-tube; [of sw. GA and n. FL westward to e. LA] ..... ***S. macrophylla* *var.* *macrophylla***
16 Calyx lobes strongly recurved, (1.0-) 1.5-3 mm long, longer than the calyx-tube; [of e. and sc. GA south to ne. FL] ..... ***S. macrophylla* *var.* *recurvans***

Sabatia angularis (Linnaeus) Pursh, Bitter-bloom, Common Marsh-pink. Cp, Pd, Mt (GA, NC, SC, VA): forests, woodlands, marshes, fields; common. July-August; September-October. NY west to s. MI, IL, and e. KS, south to Panhandle FL and e. TX. [= RAB, C, F, GW, K, S, W, Z]

Sabatia bartramii Wilbur, Bartram's Rose-gentian. Cp (GA, SC): margins of *Taxodium ascendens-Nyssa* depressions, wet pine flatwoods; rare north of GA (SC Rare). June-August; August-October. Ne. SC south to s. FL, west to s. AL and se. MS. [= GW, K, Z; = *S. dodecandra* var. *coriacea* (Elliott) Ahles – RAB; = *S. decandra* (Walter) Harper – S]

Sabatia brachiata Elliott, Narrowleaf Rose-pink. Cp (GA, NC, SC, VA), Pd (GA, NC), Mt (GA): sandhills, pine savannas, pine flatwoods; uncommon (VA Watch List). Late May-July; August-September. Se. VA south to s. GA, west to LA, north in the interior to c. TN and se. MO. [= RAB, C, F, GW, K, S, W, Z]

Sabatia brevifolia Rafinesque. Cp (GA, SC): pine savannas; rare north of GA. September-October; October-November. E. SC south to peninsular FL, west to s. AL. [= RAB, GW, K, Z; = *S. elliottii* Steudel – S]

Sabatia calycina (Lamarck) Heller, Coastal Rose-pink. Cp (GA, NC, SC, VA): swamp forests, river banks; common (VA Watch List). June-October; July-October. Se. VA south to peninsular FL, west to se. TX; e. Cuba and Hispaniola. [= RAB, C, F, GW, K, S, Z]

Sabatia campanulata (Linnaeus) Torrey, Slender Marsh-pink. Cp (GA, NC, SC, VA), Mt (GA, NC, VA): pine savannas, bogs; common (rare in Mountains) (VA Rare). June-August; September-October. MA south to n. FL, west to LA and AR; scattered inland as in w. VA, w. NC, c. TN, and KY. [= RAB, C, GW, K, S, W, Z; > *S. campanulata* var. *campanulata* – F; > *S. campanulata* var. *gracilis* (Michaux) Fernald – F]

* ***Sabatia campestris*** Nuttall, Western Marsh-pink, Prairie Rose-gentian, Prairie Sabatia. Mt (NC): roadsides and woodland edges; rare (NC Watch List), introduced from c. United States. July-August; September-October. [= RAB, C, F, GW, K, Z]

Sabatia capitata (Rafinesque) Blake, Cumberland Rose-gentian. Mt (GA, NC): sloping woodlands and meadows, over sandstone or shale; rare (GA Rare, NC Watch List). July-August; September-October. Sw. NC and se. TN south to nw. GA and c. AL. Apparently present in NC, at least formerly, based on a specimen collected "from Cherokee", probably Cherokee County, NC, a remarkably poorly botanized area. [= K, Z; = *Lapithea capitata* (Rafinesque) Small – S]

Sabatia difformis (Linnaeus) Druce. Cp (GA, NC, SC, VA), Pd (NC, SC): pine savannas, bogs, pocosins; common (rare in Piedmont) (VA Rare). May-September; September-December. S. NJ south to peninsular FL, west to s. AL. [= RAB, C, F, GW, K, S, Z]

Sabatia dodecandra (Linnaeus) Britton, Sterns, & Poggenburg, Perennial Sea-pink, Large Marsh Rose-pink. Cp (GA, NC, SC, VA): tidal brackish and freshwater marshes; common (VA Watch List). June-August; August-October. CT south to e. SC and e. GA (Sorrie 1998b). [= F, S; < *S. dodecandra* var. *dodecandra* – RAB (also see *S. foliosa*); = *S. dodecandra* var. *dodecandra* – C, GW, K, Z]

Sabatia foliosa Fernald. Cp (GA, SC): openings along blackwater rivers, rare north of GA. June-August; August-October. E. SC south to n. FL, west to se. TX. [< *S. dodecandra* var. *dodecandra* – RAB; = *S. dodecandra* (Linnaeus) Britton, Sterns, & Poggenburg var. *foliosa* (Fernald) Wilbur – GW, K, Z; > *S. foliosa* – S; > *S. harperi* Small – S]

Sabatia gentianoides Elliott. Cp (GA, NC, SC): pine savannas, bogs; common. July-August; September-October. NC south to n. FL, west to se. TX. [= RAB, GW, K, Z; = *Lapithea gentianoides* (Elliott) Grisebach – S]

Sabatia kennedyana Fernald, Plymouth Gentian. Cp (NC, SC, VA*): seasonally exposed drawdown banks of the Waccamaw River, in adjacent ditches and disturbed flats (in se. NC and ne. SC), and very rarely on shores of beaver ponds (in e. VA, by introduction); rare (NC Threatened, SC Rare). June-August; August-October. This species has a strange, disjunct range, likely related to Pleistocene refugia on the (now) Continental shelf, present in s. Nova Scotia; e. MA and RI; se. NC and ne. SC. The record of the species in e. VA (Caroline County) reported by Fleming & Ludwig (1996) has now been determined to be a deliberate introduction. Studies underway suggest that the Carolina plants may differ varietally from those in New England (Sorrie, pers. comm.). [= C, F, GW, K, Z; = *S. dodecandra* var. *kennedyana* (Fernald) Ahles – RAB]

Sabatia macrophylla Hooker *var. **macrophylla***, Large-leaf Rose-gentian. Cp (GA): wet savannas; uncommon. Sw. GA west to e. LA. [= K, Z; < *S. macrophylla* – GW; = *S. macrophylla* Hooker – S]

Sabatia macrophylla Hooker *var. **recurvans*** (Small) Wilbur, Small's Rose-gentian. Cp (GA): wet savannas; common. E. and c. GA south to ne. FL; it may occur in se. SC. [= K, Z; < *S. macrophylla* – GW; = *S. recurvans* Small – S]

Sabatia quadrangula Wilbur, Four-angle Sabatia. Cp, Pd (GA, NC, SC, VA): sandhills, moist forests, pocosin ecotones; uncommon (NC Watch List). June-September; August-November. E. VA south to FL, west to s. AL. [= RAB, C, GW, K, Z; = *S. paniculata* Michaux – F, S, misapplied]

Sabatia stellaris Pursh, Annual Sea-pink. Cp (GA, NC, SC, VA): brackish marshes; common. July-October; August-November. S. MA south to s. FL, west to LA; Bahama Islands, Cuba, c. Mexico. [= RAB, C, F, GW, K, Z]

GERANIACEAE A.L. de Jussieu 1789 (Geranium Family)

A family of about 11 genera and 700 species, herbs and shrubs, mostly temperate.

1 Leaves pinnately cleft or compound; fertile stamens 5, staminodia 5 ..... ***Erodium***
1 Leaves palmately cleft or compound; fertile stamens 10 (except in *G. pusillum*, and note that anthers are readily deciduous in all species) ..... ***Geranium***

Erodium Linnaeus (Stork's-bill, Filaree)

A genus of about 60 species, herbs, mainly Old World.

1 Leaves simple, deeply lobed but not divided ..... ***E. texanum***
1 Leaves compound, with 3 or more leaflets.
  2 Primary leaflets sessile or nearly so, sometimes connected by blade tissue; blades of the primary leaflets divided nearly or quite to the base; apical pits of mericarp lacking sessile glands ..... ***E. cicutarium***
  2 Primary leaflets petiolulate; blades of the primary leaflets divided <0.75× to the base; apical pits of mericarp with sessile glands ..... ***E. moschatum** var. **moschatum***

* ***Erodium cicutarium*** (Linnaeus) L'Héritier, Heron's-bill, Common Stork's-bill, Redstem Filaree, Alfileria, Pin-clover. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas, fields, lawns; common, introduced from Europe. March-June; April-July. [= RAB, C, F, G, S, W; > *E. cicutarium* ssp. *cicutarium* – K]

* ***Erodium moschatum*** (Linnaeus) L'Héritier *var.* ***moschatum***, Whitestem Filaree. Cp (SC): waste area near wool-combing mill; rare, perhaps merely a waif, native of Mediterranean Europe. April-September. Naturalized south to DE and PA; also in SC Coastal Plain. [= F, K; < *E. moschatum* – C, G, S]

* ***Erodium texanum*** A. Gray, Texas Stork's-bill. Cp (SC): waste areas near wool-combing mill; rare, perhaps merely a waif, native of sc. and sw. United States. [= K]

Geranium Linnaeus 1753 (Geranium, Crane's-bill)

A genus of about 300-430 species, herbs, mainly temperate. House plants called 'geranium' are members of the genus *Pelargonium*. References: Aedo, Aldasoro, & Navarro (1998); Yeo (1984).

1 Petals 12-18 mm long; perennial, from a stout rhizome; anthers >2 mm long; [subgenus *Geranium*, section *Geranium*] ..... ***G. maculatum***

1 Petals 2-13 mm long; annual or biennial, from a taproot; anthers <1 mm long.

2 Leaves compound, at least the terminal segment (and often also the two lateral segments) petiolulate, not connected to the lateral segments by leaf tissue; petals 9-13 (-15) mm long; [rare in our area, restricted to Mountains of VA]; [subgenus *Robertium*, section *Robertium*] ..... ***G. robertianum***

2 Leaves dissected, but not compound, all segments interconnected by leaf tissue; petals 2-10 mm long; [collectively common and widespread in our area].

3 Sepals blunt or acute, or terminating in a minute callus tip; [subgenus *Robertium*, section *Batrachioidea*].

4 Mericarps glabrous, reticulately ridged; stem pubescence an admixture of long eglandular hairs (1.0-1.7 mm long) and short (< 0.5 mm long) gland-tipped and eglandular hairs; stamens (all 10) fertile (note that anthers may fall readily) ..... ***G. molle***

4 Mericarps appressed pubescent, not ridged; stem pubescence of short (< 0.3 mm long), gland-tipped and eglandular hairs; stamens partly sterile (the inner 5 fertile, the outer 5 lacking anthers)..... ***G. pusillum***

3 Sepals awned or subulate, the subulate awn 0.7-3 mm long.

5 Mature pedicels < 1.5× as long as the calyx.

6 Mericarps with spreading hairs about 0.5 mm long, these often gland-tipped; [subgenus *Geranium*, section *Dissecta*] ..... ***G. dissectum***

6 Mericarps with long appressed hairs about 1 mm long, these not gland-tipped; [subgenus *Geranium*, section *Geranium*].

7 Inflorescence diffusely corymbiform (because of long upper internodes), mostly 4-12-flowered; pubescence of stem mostly < 0.5 mm long..... ***G. carolinianum*** *var.* ***carolinianum***

7 Inflorescence a compact corymb (because of notably short upper internodes), mostly 5-25-flowered; pubescence of stem mostly >0.75 mm long..... ***G. carolinianum*** *var.* ***confertiflorum***

5 Mature pedicels >2× as long as the calyx; [subgenus *Geranium*, section *Geranium*].

8 Pedicels spreading pubescent, the hairs not glandular; mature stylar beak ca. 1 mm long .... ***[G. sibiricum]***

8 Pedicels either retrorse-strigose or glandular-villous; mature stylar beak 3-5 mm long.

9 Pedicels glandular-villous ..... ***[G. bicknellii]***

9 Pedicels retrorsely strigose ..... ***G. columbinum***

Geranium carolinianum Linnaeus *var.* ***carolinianum***, Southern Carolina Crane's-bill. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, lawns, pastures, gardens, disturbed areas; common. March-June (and sometimes later). [= C, F, G; < *G. carolinianum* – RAB, S, W; < *G. carolinianum* var. *carolinianum* – K]

Geranium carolinianum Linnaeus *var.* ***confertiflorum*** Fernald, Northern Carolina Crane's-bill. Mt (NC, VA), Pd (VA): fields, roadsides, lawns, gardens, disturbed areas; common. March-June (and sometimes later). [= C, F, G; < *G. carolinianum* – RAB, S, W; < *G. carolinianum* var. *carolinianum* – K]

* ***Geranium columbinum*** Linnaeus, Long-stalk Crane's-bill. Mt (GA, NC, VA), Pd (VA): roadsides, pastures, disturbed areas; common, introduced from Europe. May-July. [= RAB, C, F, G, K, S, W]

* ***Geranium dissectum*** Linnaeus, Cutleaf Crane's-bill. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (GA, NC, VA): roadsides, pastures, disturbed areas; common, introduced from Europe. April-June. [= RAB, C, F, G, K, S, W]

Geranium maculatum Linnaeus, Wild Geranium. Mt, Pd, Cp (GA, NC, SC, VA): cove forests, bottomland forests, other mesic, base-rich forests; common (rare in Coastal Plain). April-June. ME west to Manitoba, south to SC, GA, and ne. OK. Sometimes cultivated. [= RAB, C, F, G, K, S, W]

* ***Geranium molle*** Linnaeus, Dove's-foot Crane's-bill. Pd (GA, NC, SC, VA), Mt (NC, SC, VA), Cp (VA): roadsides, pastures, disturbed areas; common, introduced from Europe and w. Asia. April-July. [= RAB, C, F, G, K, S, W]

* ***Geranium pusillum*** Linnaeus, Small-flowered Crane's-bill. Mt (NC, VA), Pd (SC, VA), Cp (VA): roadsides, pastures, disturbed areas; common, introduced from Europe. May-June. [= RAB, C, G, K, S, W]

Geranium robertianum Linnaeus, Herb Robert. Mt (VA): rocky woodlands, especially over calcareous rocks; rare (VA Rare). June-October. Circumpolar, ranging south in North America to w. VA, nc. TN (Chester, Wofford, & Kral 1997), OH, IN, and IL. Considered by C and G to be introduced in North America, but apparently native. [= C, F, G, K, W]

Geranium bicknellii Britton. South to PA, IN, IL, c. TN. No documentation is known for the reports for VA and WV by Kartesz (1999). [= C, G, K, W; > *G. bicknellii* var. *bicknellii* – F]

* ***Geranium ibericum*** Cavanilles, Iberian Crane's-bill. Mt (NC): rare, spread from horticultural use, native of Europe. Recently been found in Great Smoky Mountains National Park, in both NC and TN (K. Langdon, pers. comm.). [= F, K; *G. nepalense* – C] {not keyed at this time}

* ***Geranium sanguineum*** Linnaeus, Blood-red Crane's-bill. Mt (NC): roadbank, rare, probably persistent or spread from cultivation. [= C, F, G, K] {not keyed at this time; add to synonymy}

* *Geranium sibiricum* Linnaeus, native to Asia, is naturalized south to s. PA (Rhoads & Klein 1993) and is likely to occur in at least the northern part of our area. [= C, F, K]

* ***Geranium thunbergii*** Siebold & Zuccarini ex Lindley & Paxton. Mt (NC), Pd (VA): lawn along Blue Ridge Parkway; rare, native of e. Asia. Reported for NC by Nesom (2000) on the basis of a 1936 specimen. [= K; *G. ibericum* Cavanilles – C, apparently misapplied; = *G. nepalense* Sweet var. *thunbergii* (Siebold & Zuccarini ex Lindley & Paxton) Kudo – F, G] {not keyed at this time, and 'promote' to main text}

GROSSULARIACEAE DC. 1805 (Currant Family)
(also see *ITEACEAE*)

A family of one genus, of the northern hemisphere and montane South America (Andes). The familial distinction from the Saxifragaceae is supported by recent molecular data, though the affinities of Grossulariaceae and Saxifragaceae (sensu stricto) are closer than those of many other groups traditionally included in the Saxifragaceae, such as *Parnassia*, *Lepuropetalon*, and *Penthorum* (Morgan & Soltis 1993).

Ribes Linnaeus 1753 (Currant, Gooseberry)

A genus of about 150 species, temperate, of the Northern Hemisphere and montane South America. The genus is separated into distinctive subgenera, these sometimes maintained as full genera (as by S). Of the species treated or mentioned here, the currants (subgenus *Ribes*) include *R. americanum*, *R. aureum* var. *villosum*, *R. glandulosum*, *R. lacustre*, *R. nigrum*, *R. rubrum*, and *R. triste*. The gooseberries (subgenus *Grossularia*) include *R. curvatum*, *R. cynosbati*, *R. echinellum*, *R. hirtellum*, *R. missouriense*, *R. rotundifolium*, and *R. uva-crispa* var. *sativum*. The dried "currants" commonly available in stores are actually raisins made from a small variety of grape, and have nothing to do with *Ribes*. A molecular study suggests that recognition of *Grossularia* as a genus distinct from *Ribes* is not warranted, though it does form a monophyletic group nested within *Ribes* s.l. (Senters & Soltis 2003; Weigend, Mohr, & Motley 2002). References: Sinnott (1985)=Z; Weigend, Mohr, & Motley (2002); Spongberg (1972); Schultheis & Donoghue (2004); Senters & Soltis (2003). Key adapted from C, F, and Z.

1 Flowers solitary or in corymbs of 2-4; pedicels not jointed just beneath the ovary or fruit, the fruit not disarticulating at maturirty; stems with (0-) 1-3 nodal spines and sometimes also with internodal bristles (especially on young, vigorous growth); [subgenus *Grossularia*].
- 2 Ovary and fruit bristly or spiny; stamens (at full anthesis) either 9-15 mm long, exserted well beyond the calyx lobes (*R. echinellum*) or 1-3 mm long, shorter than the calyx lobes (*R. cynosbati*).
  - 3 Bristles of the ovary and fruit not gland-tipped; stamens (at full anthesis) 1-3 mm long, shorter than the calyx lobes; calyx lobes 2.5-4 mm long; petals 1-2 mm long; [of the Mountains] ..... ***R. cynosbati***
  - 3 Bristles of the ovary and fruit gland-tipped; stamens (at full anthesis) either 9-15 mm long, exserted well beyond the calyx lobes; calyx lobes 4-7 mm long; petals 2-3 mm long; [of the Piedmont or, potentially, Coastal Plain]..... ..... ***R. echinellum***
- 2 Ovary and fruit glabrous; stamens (at full anthesis) 6-12 mm long, exserted well beyond the calyx lobes.
  - 4 Calyx tube white; stamens 9-12 mm long; nodal spines 1-3 per node, 7-18 mm long, stout ..... ***R. missouriense***
  - 4 Calyx tube purplish or purplish-green; stamens 6-8 mm long; nodal spines 0-1 (-2) per node, 3-11 mm long, slender ..... ***R. rotundifolium***

1 Flowers in racemes of 4-many; pedicels jointed just beneath the ovary or fruit, the fruit disarticulating at maturity; stems lacking nodal spines and internodal bristles (except *R. lacustre*); [subgenus *Ribes*].
- 5 Stems (especially young, vigorous growth) with internodal bristles and sometimes internodal spines; fruit bristly, purple or black when mature; racemes drooping..... ***R. lacustre***
- 5 Stems lacking internodal bristles and nodal spines; fruit glabrous or glandular-hispid, red or black when mature (but not both dark and bristly); racemes ascending, spreading, or drooping.
  - 6 Ovary and fruit bristly or spiny with glandular hairs; fruit dark red when mature; racemes ascending; leaves mostly 5-10 cm across, the 5-7 lobes more-or-less acute ..... ***R. glandulosum***
  - 6 Ovary and fruit glabrous; fruit red or black when mature; racemes spreading to drooping; leaves mostly 3-8 cm across, the 3-5 lobes more-or-less obtuse.

7 Leaves with resinous glands beneath; fruits black when mature; [native]..... ***R. americanum***
7 Leaves not glandular beneath; fruits red when mature; [introduced, rarely naturalized]..... ***R. rubrum***

Auxiliary Key to widely distributed *Ribes* of the Mountains

1 Leaves usually 5-10 cm long and wide, serrate or doubly serrate with sharp teeth; plants usually without nodal spines; inflorescence a raceme of 4-15 flowers; pedicel jointed below the fruit..... ***R. glandulosum***
1 Leaves 1-5 cm long and wide, serrate with rounded teeth; plants usually with nodal spines; inflorescence a raceme of 1-4 flowers; pedicel not jointed below the fruit.
2 Ovary with glandular hairs which become stiff spines on the mature fruit; leaf bases cordate to deeply cordate (rarely truncate or cuneate), the angle of leaf tissue mostly 190-230 degrees, moderately to sparsely silvery-pilose beneath, usually on the surface as well as on the veins and in the vein axils; stamens at full anthesis equalling the petals..... ***R. cynosbati***
2 Ovary and fruit glabrous; leaf bases rounded or cuneate (rarely truncate or cordate), the angle of leaf tissue mostly 130-170 degrees, glabrescent to sparsely pubescent beneath (mostly on the veins and in the vein axils); stamens at full anthesis exceeding the petals ..... ***R. rotundifolium***

Ribes americanum P. Miller, American Black Currant. Mt (VA): moist forests, marl marshes; rare (VA Rare). April-June. Nova Scotia west to Alberta, south to w. VA, e. and nc. KY (Clark et al. 2005), IN, NE, and CO. [= C, F, G, K, W]

Ribes cynosbati Linnaeus, Prickly Gooseberry, Dogberry. Mt (GA, NC, VA): moist slopes, periglacial boulderfields, grassy balds, mostly at high elevations; common. May-June; July-September. Ne. United States and s. Canada south to w. NC, e. TN, n. GA, n. AL, AR, and OK. [= RAB, C, G, K, W, Z; > *R. cynosbati* var. *cynosbati* – F; > *R. cynosbati* var. *glabratum* Fernald – F; = *Grossularia cynosbati* (Linnaeus) P. Miller – S]

Ribes echinellum (Coville) Rehder, Miccosukee Gooseberry. Pd (SC): mesic, nutrient-rich forests; rare (US Endangered, SC Rare). March-April; June-September. This species has a remarkable range, known only from a small area of McCormick County, SC and the vicinity of Lake Miccosukee, Jefferson County, FL. Godfrey (1988) has a detailed description of *R. echinellum*. Catling, Dumouchel, & Brownell (1998) discuss its pollination biology. [= K, Z; = *Grossularia echinella* Coville – S]

Ribes glandulosum Grauer, Skunk Currant, Mountain Currant. Mt (NC, VA): periglacial boulderfields, high elevation seeps, spruce-fir forests; uncommon, but locally abundant (VA Watch List). May-June; June-September. Newfoundland and British Columbia, south to VT, MI, and MN, and in the mountains to w. NC and e. TN. [= RAB, C, F, G, K, S, W]

Ribes lacustre (Persoon) Poiret, Bristly Black Currant, Spiny Swamp Currant. Mt (VA): forests, acid swamps; rare (VA Rare). May-June. Labrador to AK, south to MA, PA, w. VA, TN (allegedly), n. OH, MI, MN, CO, UT, and CA. The documentation for the inclusion of *R. lacustre* in the flora of VA is a sterile specimen not definitely identifiable (Wieboldt, pers. comm.). [= C, F, G, K, W]

Ribes missouriense Nuttall, Missouri Gooseberry. Mt (VA): forests, rock outcrops; rare, in VA probably introduced from further west (VA Watch List), but native in KY and TN. April-June; May-July. W. WV, sw. OH, IN, WI, MN, and e. ND south to KY, e. TN (Roane and Grainger counties), s. IL, MO, n. AR, and KS, with scattered occurrences (perhaps escapes from cultivation) in CT, NJ, PA, MD, and VA. [= C, F, G, K, Z; = *Grossularia missouriensis* (Nuttall) Coville & Britton – S]

Ribes rotundifolium Michaux, Appalachian Gooseberry. Mt (NC, SC, VA), Pd (VA): moist slopes, balds, boulderfields, rocky forests, mostly at high elevations south of VA; common (rare in Piedmont). April-May; June-September. An Appalachian endemic: MA, CO, and NY south to w. NC and e. TN. [= RAB, C, F, G, K, W, Z; = *Grossularia rotundifolia* (Michaux) Coville & Britton – S]

* ***Ribes rubrum*** Linnaeus, Garden Red Currant. Mt (NC, VA), Pd (VA): persistent from cultivation and rarely escaped to adjacent fence-rows and disturbed areas; rare, native of Europe. [= K; > *R. sativum* Syme – C, F, G]

Ribes aureum Pursh var. *villosum* Augustin de Candolle, Buffalo Currant, of midwestern United States is cultivated in ne. United States, rarely as far south as our area; it may escape. It also is reported as occurring as a native species as far east as Montgomery County in nc. TN (Chester, Wofford, & Kral 1997). It will key to couplet 6, where trouble will be encountered. It has the hypanthium long-tubular, the flowers golden yellow, and fruits black (rarely yellow). [= K; = *R. odoratum* H. Wendland – C, F, G] {not keyed at this time}

Ribes curvatum Small, Granite Gooseberry. Pd, Mt (GA): rocky upland forests; rare (GA Special Concern). Native from c. and nw. GA (Jones & Coile 1988) and e. TN, in the Cumberland Plateau (Chester, Wofford, & Kral 1997) westward. Also reported for NC by Sinnott (1985), and his report is backed up by specimens. The specimens, however, indicate that the species was cultivated in a botanist's garden; there is no evidence that *R. curvatum* is a native or naturalized component of NC's flora. It will key best to *R. missouriense*; it can be distinguished from all our species of gooseberries by its glandular-punctate leaves, and additionally from *R. missouriense* by its calyx lobes 7.5-9 mm long, sparsely hairy to villous (vs. 5-7.5 mm long, glabrous to sparsely pubescent). [= K; = *Grossularia curvata* (Small) Coville & Britton – S] {not keyed at this time}

Ribes hirtellum Michaux, Northern Gooseberry, ranges south to WV (Tucker County), n. NJ, s. PA, and OH. It will key to couplet 2, where trouble will be encountered. It has glabrous ovaries and fruits, but the stamens are short and included. [= C, K; > *R. hirtellum* var. *hirtellum* – F, G] {not keyed at this time}

* *Ribes nigrum* Linnaeus, Garden Black Currant or Cassis, native to Europe, is cultivated in ne. United States, rarely as far south as our area; it may escape. It will key to *R. americanum*, from which it can be distinguished by its pedicels 2-8 mm long,

much longer than subtending ovate bracts (vs. pedicels 0-2 mm long, shorter than the subtending lanceolate bracts). [= C, F, G, K] {not keyed at this time}

Ribes triste Pallas, Swamp Red Currant, ranges south to WV (Mineral, Pocahontas, and Randolph counties); it may occur in our area. It is very similar to ***R. rubrum***, and will key there. It differs in the following ways: decumbent or straggling shrub (vs. erect), axis and pedicels of inflorescence often with stipitate glands (vs. not glandular). If found in our area, it should be in an obviously native habitat, likely in boggy forests or seepage wetlands at high elevations, and probably in VA. [= C, F, G, K] {not keyed at this time}

* *Ribes uva-crispa* Linnaeus var. *sativum* Augustin de Candolle, Garden Gooseberry, native of Europe, is cultivated in ne. United States, rarely as far south as our area; it may escape. It will key best to ***R. cynosbati***, but differs in the fruits being glandular-pubescent (vs. hispid), and the peduncles and pedicels being short (vs. peduncles 7-25 mm long, pedicels 5-16 mm long). [= K; > ***R. uva-crispi*** – C; = ***R. grossularia*** Linnaeus – F, G] {not keyed at this time}

HALORAGACEAE R. Brown 1814 (Water-milfoil Family)

A family of about 9 genera and 145 species, aquatic and wetland herbs, but also shrubs and trees, cosmopolitan but centered in the Southern Hemisphere. The family is sometimes spelled "Haloragidaceae."

1 Leaves whorled or alternate; stamens 4 or 8; carpels 4; emersed leaves bract-like and much-reduced (except in *M. aquaticum*) ..... ***Myriophyllum***
1 Leaves alternate; stamens 3; carpels 3; emersed leaves foliaceous, little if at all reduced ..... ***Proserpinaca***

Myriophyllum Linnaeus 1753 (Water-milfoil)

(contributed by B.A. Sorrie and A.S. Weakley)

A genus of about 60 species, aquatic and wetland herbs, cosmopolitan, but centered in Australia. References: Crow & Hellquist (2000)=Z; Aiken (1981)=Y.

Identification notes: Stranded plants of *M. heterophyllum* and *M. humile* (and perhaps others) produce leaves that are reduced in size. Leaves and bracts become pectinate or pinnate, so that plants resemble *M. pinnatum*. Such plants are the source of nearly all inland records of *M. pinnatum* in the VA-NC-SC-GA area. *M. heterophyllum* usually flowers and fruits when stranded and may be distinguished from *M. pinnatum* by its much denser disposition of leaves and bracts, and by its dull red fruits obscurely tuberculate (vs. tan or pale brown fruits strongly tuberculate). From stranded *M. humile*, *M. heterophyllum* may be distinguished by leaves and bracts which are clearly whorled and much more densely disposed. *M. humile* differs from *M. pinnatum* by its wholly alternate leaves and bracts, and by its smooth fruits.

1 Leaves reduced to small scales or absent; stems short, erect from substrate ..... ***M. tenellum***
1 Leaves well-developed, pinnately divided with filiform segments; stems elongate, suspended in the water column and/or floating.
  2 Flowers/fruits absent and emersed shoots with leaves closely similar in size and shape to submersed ones; widespread alien ..... ***M. aquaticum***
  2 Flowers/fruits present; emersed shoots present or not.
    3 Flowers/fruits in axils of leaves.
      4 Leaves whorled; emersed stems present and with feathery leaves ..... ***M. aquaticum***
      4 Leaves strictly alternate; flowers/fruits on submersed stems (forma *capillaceum*) or on emersed stems with pinnatifid or pectinate leaves (forma *natans*) ..... ***M. humile***
    3 Flowers/fruits in erect spikes emersed from water, f/f subtended by bracts much smaller than the normally submersed leaves.
      5 Uppermost flowers/fruits alternate; leaves alternate or whorled or both.
        6 Bracts much shorter than floral internodes, varying from pectinate to entire; fruit surface smooth or papillose ..... ***M. laxum***
        6 Bracts usually longer than floral internode, pinnatifid to pectinate; fruit surface strongly tuberculate ..... ***M. pinnatum***
      5 Uppermost flowers/fruits opposite; leaves whorled (technically pseudo-whorled in many *M. heterophyllum*) (note that early season plants of *M. pinnatum* may have flowers opposite, but at least some leaves will be alternate).
        7 Bracts usually > 2× as long as pistillate flowers; stems drying brown, pale brown, or reddish.
          8 Bracts throughout inflorescence pectinate to pinnatifid; winter buds scattered along stem, clavate, falling by early winter; [of DE and northward] ..... ***M. verticillatum***
          8 Distal bracts subentire to serrate, proximal bracts pectinate to serrate; winter buds developed only at base of stem or on rhizomes, usually persisting; widespread ..... ***M. heterophyllum***
        7 Bracts usually < 2× as long as pistillate flowers; stems drying pale tan or whitish.

9 Midstem leaves with 11 or fewer segments on each side of rachis; leaves rounded at apex; stem diameter more-or-less uniform; stem tips usually green; winter buds produced; [native, of DE and northward] ..... ***M. sibiricum***
9 Midstem leaves with 12 or more segments on each side of rachis; many leaves appear truncate or clipped at apex; stem diameter below inflorescence is up to 2× diameter of lower stem; stem tips usually reddish; no winter buds; [widespread alien] ..... ***M. spicatum***

Alternate key

1 Leaves reduced to small scales or absent; stems short, erect from substrate ..... ***M. tenellum***
1 Leaves well-developed, pinnately divided with filiform segments; stems elongate, suspended in the water column and/or floating.
2 Flowers/fruits produced in axils of submersed leaves ..... ***M. humile***
2 Flowers/fruits produced in axils of emersed leaves or on emersed shoots with bracts (reduced bracteal leaves).
3 Emersed shoots with feathery leaves about same size and shape as submersed leaves; flowers/fruits rarely produced; [widespread alien] ..... ***M. aquaticum***
3 Emersed shoots with bracts subtending flowers/fruits; these bracts much different in shape than submersed leaves. [stranded plants may produce bracts and leaves of similar size and shape, but these not feathery].
4 All flowers/fruits alternate; fruits smooth ..... ***M. humile***
4 All flowers/fruits opposite or whorled (or the lower opposite and the upper alternate in *M. pinnatum*).
5 Bracts usually longer than the internodes.
6 Leaves whorled or pseudo-whorled; fruits with low bumps ..... ***M. heterophyllum***
6 Leaves strictly alternate; fruits strongly tuberculate ..... ***M. pinnatum***
5 Bracts usually shorter than the internodes.
7 All bracts pectinate to pinnatifid ..... ***M. verticillatum***
7 Bracts vary from entire to pectinate.
8 Leaves alternate, pseudo-whorled, or both; plain green; [of se. VA and southward] ... ***M. laxum***
8 All leaves whorled, grayish green; [collectively widespread]
9 Midstem leaves with 11 or fewer segments on each side of rachis; leaves rounded at apex; stem diameter more-or-less uniform; stem tips usually green; winter buds produced; [native, of DE and northward] ..... ***M. sibiricum***
9 Midstem leaves with 12 or more segments on each side of rachis; many leaves appear truncate or clipped at apex; stem diameter below inflorescence is up to 2× the diameter of the lower stem; stem tips usually reddish; no winter buds; [widespread alien] ..... ***M. spicatum***

* ***Myriophyllum aquaticum*** (Vell. Conc.) Verdc., Parrot-feather. Cp, Pd, Mt (GA, NC, SC, VA): ditches, slow-moving rivers, pools, ponds; common (rare in Piedmont and Mountains), native of South America. April-June. An introduced species now widespread in se. United States, north to NY, WV, and MO. [= C, GW, K, W, Y, Z; = *M. brasiliense* Cambessedes – RAB, F, G; = *M. proserpinacoides* Gillies ex Hooker & Arnott – S]

Myriophyllum heterophyllum Michaux, Southern Water-milfoil. Cp (GA, NC, SC, VA), Pd, Mt (GA): ditches, slow-moving waters of rivers and streams, pools, ponds; common. April-July. NY west to Ontario and MN, south to FL and TX. [= RAB, C, F, G, GW, K, S, Y, Z]

Myriophyllum humile (Rafinesque) Morong. Cp (VA): floating in an artificial pond; rare (VA Rare). [= C, F, G, K, Y, Z]

Myriophyllum laxum Shuttleworth ex Chapman, Loose Water-milfoil. Cp (GA, NC, SC, VA): limesink depression ponds (dolines), spring-runs, rarely also in lakes; rare (GA Threatened, NC Threatened, SC Rare). June-October. Se. VA south to n. FL, s. AL, and s. MS (Sorrie & Leonard 1999). *M. laxum* and *M. heterophyllum* both have reddish submersed stems and present difficulties in identification when in sterile condition. *M. laxum* has a total of 7-15 (-17) segments per leaf, vs. (15-) 17-31 (-37) segments in *M. heterophyllum*. Documented for VA by a 1922 specimen from Princess Anne County at GH (Sorrie, pers. comm.). [= RAB, GW, K, S, Y]

Myriophyllum pinnatum (Walter) Britton, Sterns, & Poggenburg, Alternate-leaved Water-milfoil. Cp (GA, NC, SC, VA), Mt? (GA, VA): pools, ditches; uncommon (VA Watch List). June-October. MA west to IA and SD, south to GA and TX. [= RAB, C, F, G, GW, K, S, W, Y, Z]

* ***Myriophyllum spicatum*** Linnaeus, Eurasian Water-milfoil. Cp (GA, NC, SC, VA): ponds and impoundments; uncommon? {habitat and range in our area uncertain}, native of Eurasia, confused with *M. sibiricum*, (see below). An introduced species, now widespread in e. United States. Reported for South Carolina by Hill & Horn (1997). [= C, GW, K, W, Y, Z]

Myriophyllum tenellum Bigelow, Leafless Water-milfoil. Cp (NC, VA): natural lakes (Carolina bay lakes), typically growing on the sandy bottoms in water 1-2 meters deep; rare (NC Rare, VA Rare). Newfoundland west to MN, south to PA and NJ, and disjunct south to a few occurrences in VA and NC. [= C, F, G, K, Y, Z]

Myriophyllum sibiricum Komarov. South to DE, and reported for VA. [= C, G, K, Z; > *M. exalbescens* Fernald – F, Y]

Myriophyllum verticillatum Linnaeus. A circumboreal species, south in North America to DE, MD, IN, NE, TX, and CA. [= C, G, K, Y, Z; > *M. verticillatum* var. *pectinatum* Wallroth – F]

Proserpinaca Linnaeus (Mermaid-weed)

A genus of 2-3 species, aquatic and wetland herbs, of e. North America and the West Indies. References: Catling (1998)=Z.

1 Bracteal (emersed) leaves serrate; submersed pectinate leaves with 8-14 pairs of divisions 5-30 mm long; fruits 2.3-6.0 mm wide.
  2 Fruit 2.3-4.0 mm wide, acutely angled, not winged, the sides of the capsule more-or-less planar..... ***P. palustris** var. **crebra***
  2 Fruit (3.5-) 4.0-6.0 mm wide, sharply angled (to somewhat winged), the sides of the capsule concave..... ***P. palustris** var. **palustris***
1 Bracteal (emersed) leaves pinnatifid to pectinate; submersed pectinate leaves with 4-12 pairs of divisions 2-7.5 mm long; fruits 2.0-3.6 mm wide.
  3 Leaves with a flattened rachis 1-4 mm wide, the 7-12 pairs of divisions 2.0-3.5 mm long; fruits 2.3-3.6 mm wide..... ***P. intermedia***
  3 Leaves with a filiform rachis (midrib) 0.2-1.0 mm wide, the 4-9 pairs of divisions 2.0-7.5 mm long; fruits 2.0-2.8 mm wide ..... ***P. pectinata***

Proserpinaca intermedia Mackenzie, Intermediate Mermaid-weed. Cp (NC, SC, VA), Mt (VA); {GA}: wet places; rare (NC Watch List). July-September. Nova Scotia to SC on the Coastal Plain; disjunct in sc. TN. This taxon is intermediate in morphology between *P. palustris* and *P. pectinata*; whether it warrants species status is unclear. If merely a rarely produced first-generation hybrid, it should be treated as a hybrid binomial (*P.* ×*intermedia*); if it forms independent, self-reproducing populations, it should probably be treated as a species. [= RAB, C, F, G, K, Z; < *P. palustris* – GW]

Proserpinaca palustris Linnaeus ***var. crebra*** Fernald & Griscom, Common Mermaid-weed. Cp (GA, NC, SC, VA): wet places, swamp forests; uncommon. June-October. Throughout e. North America and south to the Caribbean and Central America. [= C, F, G, K, Z; < *P. palustris* – RAB, S, W; < *P. palustris* – GW (also including *P. intermedia)*]

Proserpinaca palustris Linnaeus ***var. palustris***, Coastal Mermaid-weed. Cp (GA, NC, SC, VA), Pd (NC, SC), Mt? (GA?): wet places, swamp forests; common. June-October. MA (?) to FL and west to LA, on the Coastal Plain. [= C, F, G, K, Z; < *P. palustris* – RAB, S, W; *P. palustris* – GW (also including *P. intermedia)*]

Proserpinaca pectinata Lamarck, Feathery Mermaid-weed. Cp (GA, NC, SC, VA), Pd (GA): bogs, savannas, ditches, other wet places; common. June-October. Nova Scotia south to s. FL and west to w. LA, mostly on the Coastal Plain, but scattered inland as well, as in c. TN. [= RAB, C, F, G, GW, K, S, Z]

Proserpinaca palustris Linnaeus ***var. amblyogona*** Fernald occurs east to KY, TN, and GA. [= C, F, G, K; < *P. palustris* – GW, S] {not keyed at this time}

HAMAMELIDACEAE R. Brown 1818 (Witch Hazel Family)
(also see *ALTINGIACEAE*)

A family of ca. 27 genera and ca. 87 species, trees and shrubs, tropical to temperate, and especially e. Asian. References: Meyer in FNA (1997); Endress in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves 5-7-palmately lobed and palmately veined, glabrous..... [see ***Liquidambar*** in ***ALTINGIACEAE***]
1 Leaves unlobed, pinnately veined, stellate-pubescent beneath (at least when young).
  2 Petals 0; stamens 12-32; flowers numerous in dense globose or elongate spikes; leaves with a symmetric or asymmetric (oblique) base, the lateral veins marginal for a distance of at least 2-3 mm; [tribe *Fothergilleae*] ..... ***Fothergilla***
  2 Petals 4; stamens 4; flowers few in small clusters; leaves with a weakly to strongly asymmetric (oblique) base, the lateral veins included in the blade tissue or barely exposed for a distance of <1 mm; [tribe *Hamamelideae*] ..... ***Hamamelis***

Fothergilla Murray in Linnaeus 1774 (Witch-alder)

A genus of 2 species, shrubs, of temperate e. North America. References: Meyer in FNA (1997); Weaver (1969)=Z; Endress in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: *Fothergilla major* often occurs with *Hamamelis virginiana*, with which it is easily confused in vegetative condition; a reliable character is the base of the lateral veins (marginal in *Fothergilla*, included in leaf tissue in *Hamamelis*).

1 Leaves stellate-pubescent above, up to 6 cm long and 5 cm wide (the largest < 5.2 cm wide); stamens 12-24; capsules 6.5-10-5 (-13) mm long, the persistent hypanthium 3.4.5 mm long; seeds 4.8-6.3 mm long; [of wet savannas, pocosins, and pocosin margins of the Coastal Plain]..... ***F. gardenii***

1 Leaves glabrous or sparsely stellate-pubescent above, up to 12 cm long and 10 cm wide (the largest > 5.2 cm wide); stamens (18-) 22-32; capsules 8-15.2 mm long, the persistent hypanthium 4-9.2 mm long; seeds 6.2-7.8 mm long; [of rocky habitats of the Mountains and Piedmont] ..... ***F. major***

Fothergilla gardenii Linnaeus, Coastal Witch-alder. Cp (GA, NC, SC): wet savannas, pocosins, and pocosin margins; uncommon (GA Threatened). March-May; September-October. Se. NC (and allegedly se. VA) south to panhandle FL and s. AL. An ornamental prized for its small size and attractive fall color. [= RAB, F, FNA, GW, K, Z; > *F. gardeni* – S, orthographic variant; > *F. parvifolia* Kearney – S]

Fothergilla major (Sims) Loddiges, Large Witch-alder. Mt, Pd (GA, NC, SC): dry ridgetop forests of middle elevation ridges in the mountains, especially along the Blue Ridge Escarpment, summits and upper slopes of Piedmont monadnocks, north-facing bluffs in the lower Piedmont; rare (GA Special Concern, NC Rare, SC Rare). April-May; July-October. C. NC west to ne. TN, south to nc. GA and nc. AL; disjunct in AR. [= RAB, FNA, K, S, W, Z; > *F. monticola* Ashe]

Hamamelis Linnaeus 1753 (Witch-hazel)

A genus of 5-6 species, shrubs and small trees, of e. North America and e. Asia (China and Japan). The other North American species, *H. vernalis* Sargent, is endemic to the Ozark/Ouachita region of AR, OK, and MO. References: Leonard (2006)=X; Meyer in FNA (1997); Lane (2005)=Z; Jenne (1966)=Y; Wen & Shi (1999); Endress in Kubitzki, Rohwer, & Bittrich (1993).

1 Outer surface of calyx scarlet; petals 7-14 mm long, red or reddish (often yellow-tipped), flowering late December to early February; leaves 12-24 cm long, 5-17 cm wide, densely stellate-pubescent below, usually with 11 lateral veins (6 on one side of the leaf, 5 on the other); [plants of pineland ravines in s. MS] ..... ***[H. ovalis]***

1 Outer surface of calyx yellow; petals 6-8 mm long, yellow, flowering October-January; leaves 3.7-16.7 cm long, 2.5-13 cm wide, glabrous to moderately stellate-pubescent beneath, usually with 9 or 10 lateral veins; [plants widespread in our area]

2 Stellate trichomes of the leaves moderately dense to dense, averaging 0.09 mm across, with 7-11 rays; leaves (3.6-) avg. 6.4 (-10.3) cm long, (1.8-) avg. 4.1 (-6.2) cm wide; petals 7-15 mm long, 0.5-0.8 mm wide; [e. SC south to Panhandle FL, west to se. LA in the Coastal Plain] ..... ***H. virginiana*** *var.* ***henryae***

2 Stellate trichomes of the leaves sparse to moderately dense, averaging 0.16-0.40 mm across, with 3-6 (-8) rays; leaves (4.7-) avg. 9.9 (-14.0) cm long, (3.9-) avg. 6.6 (-9.2) cm wide; petals 15-20 mm long, 1 mm wide; [widespread in our area] ..... ***H. virginiana*** *var.* ***virginiana***

Hamamelis virginiana Linnaeus *var.* ***henryae*** Jenne ex C. Lane, Small-leaved Witch-hazel. Cp (GA, SC): sandhill margins, xeric hammocks, streamheads; uncommon. November-January. E. SC (Horry and Hampton counties), s. GA, and panhandle FL west to se. LA. Though cited in Lane (2005) as var. *henryi*, the honoree is collector Mary G. Henry; thus the honorific epithet should be corrected to the feminine form. Additional study is needed of these small-leaved Coastal Plain populations. [< *H. virginiana* – FNA, GW, K, S; = *H. virginiana* var. *henryi* Jenne ex C. Lane – Y, Z, orthographic error; = *H. virginiana* var. *henryae*]

Hamamelis virginiana Linnaeus *var.* ***virginiana***, Witch-hazel. Mt, Pd, Cp (GA, NC, SC, VA): forests; common. October-December; October-November (of the following year). Québec and Nova Scotia west to n. MI and MN, south to FL and TX. The bark is still gathered in large quantities in the Southern Appalachians, as the source for witch hazel liniment. The name "witch-hazel" alludes to its superficial resemblance to *Corylus*, the true hazel, and to its "perverse" habit of flowering in the fall, as it drops its leaves. [= Y, Z; < *H. virginiana* – RAB, C, FNA, G, GW, K, S, W; > *H. virginiana* var. *parvifolia* Nuttall – F; > *H. virginiana* var. *virginiana* – F]

Hamamelis ovalis S.W. Leonard. Apparently endemic to dry-mesic pineland ravines in sc. MS (Perry County) (Leonard 2006). Late December-early February. [= X]

HELIOTROPACEAE Schrader 1819 (Heliotrope Family)

A family of 5 genera and ca. 400 species, trees, shrubs, and herbs, semicosmopolitan.

Heliotropium Linnaeus (Heliotrope, Turnsole)

A genus of ca. 250 species, widespread in tropical and temperate regions. Probably better placed in the family Heliotropiaceae, as it is apparently more closely related to Hydrophyllaceae than to Boraginaceae. Currently under study and additional taxonomic changes may be forthcoming (Hilger & Diane 2003). References: Al-Shehbaz (1991)=Z; Hilger & Diane 2003).

1 Flowers solitary at the ends of short branches; [of limestone habitats from nw. GA westward]; [section *Orthostachys*, subsection *Bracteata*] ..... ***H. tenellum***

1 Flowers in secund, helicoid cymes.

2 Leaves glabrous, succulent, < 7 mm wide; [of saline coastal situations]; [section *Halmyrophila*] .....

..... ***H. curassavicum*** *var.* ***curassavicum***

2 Leaves pubescent, not succulent, > 10 mm wide; [of a variety of mostly disturbed, inland situations].
3 Mericarps separating at maturity; fruit 4-lobed prior to maturation; leaves petiolate, ca. 2× as long as wide; [section *Heliotropium*] ..... ***H. europaeum***
3 Mericarps cohering in pairs at maturity; fruit 2-lobed prior to maturation; leaves petiolate or sessile to subsessile, ca. 2-5× as long as wide.
4 Fruit tuberculate, 4-seeded; leaves sessile to subsessile, ca. 4-5× as long as wide; corolla throat and tube densely villous within; [section *Heliophytum*] ..... ***H. amplexicaule***
4 Fruit longitudinally ribbed, 2-seeded; leaves petiolate, ca. 2× as long as wide; corolla throat and tube glabrous within; [section *Tiaridium*]..... ***H. indicum***

* ***Heliotropium amplexicaule*** M. Vahl, Wild Heliotrope. Cp, Pd (GA, NC, SC, VA): disturbed areas, roadsides, fields; uncommon (rare north of SC), introduced from South America. April-September. [= RAB, C, F, G, K, Z]

Heliotropium curassavicum Linnaeus *var.* ***curassavicum***, Seaside Heliotrope. Cp (GA, NC, SC, VA): edges of brackish and salt marshes, estuarine shores; rare (NC Rare). June-September. Var. *curassavicum* ranges from DE (and farther north as an introduction) south to the New World tropics. Considered by some authors to be introduced and naturalized in our area. Other varieties occur inland in the mw. and w. United States. [= C, K, Z; < *H. curassavicum* – RAB, GW; = *H. curassavicum* – F, G; = *Heliotropium curassavicum* ssp. *curassavicum*]

* ***Heliotropium europaeum*** Linnaeus, European Heliotrope. Cp (GA, NC, SC, VA), Pd (NC, VA): roadsides, disturbed areas; rare, introduced from s. Europe. June-September. [= RAB, C, F, G, K, Z]

* ***Heliotropium indicum*** Linnaeus, Turnsole. Cp, Pd (GA, NC, SC, VA): roadsides, woodland borders, swamps, ditches; uncommon, introduced from South America. July-November. [= RAB, C, F, G, GW, K, Z; = *Tiaridium indicum* (Linnaeus) Lehm. – S]

Heliotropium tenellum (Nuttall) Torrey, Delicate Heliotrope. Mt (GA): limestone glades and barrens; rare (GA Special Concern). WV, KY, IN, IL, IA, and KS south to nw. GA, AL, MS, LA, and TX. [= C, F, G, K, Z; = *Lithococca tenella* (Nuttall) Small – S]

HIPPOCASTANACEAE (Buckeye Family)

(see *SAPINDACEAE*)

HYDRANGEACEAE Dumortier 1829 (Hydrangea Family)

A family of about 17 genera and 190-220 species, trees, shrubs, vines, and herbs, primarily north temperate. As here interpreted, the family Hydrangeaceae includes two well-marked groups, the Hydrangeae (including *Decumaria* and *Hydrangea*) and the Philadelpheae (including *Deutzia* and *Philadelphus*). This group has been shown by molecular research to be unrelated to the Saxifragaceae, and to have its closest affinities to the Loasaceae, Cornaceae, and Nyssaceae (Xiang et al. 2002; Soltis, Xiang, & Hufford 1995; Morgan & Soltis 1993). References: Spongberg (1972); Soltis, Xiang, & Hufford (1995); Morgan & Soltis (1994); Xiang et al. (2002); Hufford in Kubitzki (2004).

1 Woody vine, climbing by aerial rootlets; petals 7-10; [tribe *Hydrangeae*] ..... ***Decumaria***
1 Shrub; petals 5 (rarely 10 in the cultivars of the alien *Deutzia*).
2 Pubescence of leaves and twigs stellate; stamens 10; [a cultivated alien, rarely escaped]; [tribe *Philadelpheae*] ..... ***Deutzia***
2 Pubescence of leaves and twigs simple; stamens 8-10 (*Hydrangea*) or 25-90 (*Philadelphus*); [natives and aliens].
3 Leaf blades 10-30 cm long; inflorescences of 25-many flowers; stamens 8-10; [tribe *Hydrangeae*]..... ***Hydrangea***
3 Leaf blades 3-8 cm long; inflorescences of 1-7 flowers; stamens 25-90; [tribe *Philadelpheae*] ..... ***Philadelphus***

Decumaria Linnaeus (Climbing Hydrangea, Woodvamp)

A genus of 2 species, vines, of e. North America and e. Asia (China). References: Hufford in Kubitzki (2004).

Identification notes: *Decumaria* is readily distinguished from the other opposite-leaved, woody vines in our flora (*Gelsemium, Trachelospermum, Lonicera, Bignonia*, *Campsis*, and *Clematis*) by its leaves (simple, ovate, and usually serrate) and climbing structures (adventitious roots).

Decumaria barbara Linnaeus, Climbing Hydrangea, Woodvamp. Cp (GA, NC, SC, VA), Pd (GA, SC), Mt (GA, NC): swamp forests and bottomlands in the Coastal Plain (and Piedmont of SC), moist forests in the mountains of n. GA, nw. SC, sw. NC; common (rare in Mountains). May-June; July-October. Se. VA south to FL and west to LA and e. TX (Singhurst, Keith, & Holmes 2005), inland to nw. SC, se. TN, and w. TN. This handsome vine climbs to the tops of trees via adventitious roots. The opposite leaves are somewhat fleshy in texture. [= RAB, C, F, G, GW, K, S, W]

Deutzia Thunberg (Deutzia)

A genus of about 60 species, shrubs, mainly Asian. References: Hufford in Kubitzki (2004).

* ***Deutzia scabra*** Thunberg, Deutzia, Pride-of-Rochester. Mt, Pd (NC, VA), Cp (VA): fairly commonly cultivated, persistent around old homesites and escaping to adjacent woodlands; rare, native of Japan and China. First reported for NC (Jackson Co., NC) by Pittillo & Brown (1988). *D. crenata* Siebold & Zuccarini, Chinese Deutzia, is reported as introduced in GA by Kartesz (1999); this may not be taxonomically distinct from *D. scabra*. [= C, F; > *D. scabra* – K; > *D. crenata* Siebold & Zuccarini – K; > *D. scabra* var. *candisissima* (Froebel) Rehder]

Hydrangea Linnaeus (Hydrangea, Sevenbark)

A genus of about 25 species, shrubs, of e. North America and e. Asia. Recent molecular analyses suggest that *Hydrangea* as usually interpreted is polyphyletic (Soltis, Xiang, & Hufford 1995); future taxonomic changes are to be expected. See Dirr (2004) and van Gelderen & van Gelderen (2004) for information on cultivated hydrangeas. References: Pilatowski (1982)=Z; McClintock (1957)=Y.

1 Leaves pinnately lobed, the lobes toothed; inflorescence a panicle; large sterile flowers many (> 20 per inflorescence), borne throughout the inflorescence ..... ***H. quercifolia***
1 Leaves unlobed, merely toothed; inflorescence a corymb (except *H. paniculata*); large sterile flowers absent to relatively few (0-15 per inflorescence), borne around the periphery of the corymb (except *H. paniculata*).
  2 Inflorescence a panicle; large sterile flowers many (> 20 per inflorescence), borne throughout the inflorescence; [large shrub to small tree (to 8 m tall)]; [alien, cultivated and sometimes persistent] ..... ***H. paniculata***
  2 Inflorescence a corymb; large sterile flowers absent to relatively few (0-15 per inflorescence), borne around the periphery of the corymb; [small to medium shrub, to 3 m tall]; [native].
    3 Lower leaf surface glabrous or inconspicuously puberulent, appearing green; trichomes of the lower leaf surface restricted to the midrib and major veins; sterile flowers absent, or, if present, usually < 1 cm in diameter ..... ***H. arborescens***
    3 Lower leaf surface variously pubescent, appearing white or gray; trichomes of the lower leaf surface on veins and interveinal areas; sterile flowers usually present, large and showy, usually greater than 1 cm in diameter.
      4 Lower leaf surface velutinous, pilose, or tomentose, appearing gray; trichomes usually not dense enough to entirely mask the green leaf surface; trichomes with prominent tubercles (as seen at 40× magnification); sterile flowers generally very few (0-3 per inflorescence) ..... ***H. cinerea***
      4 Lower leaf surface densely floccose-velutinous, felt-like, appearing bright white or silver; trichomes dense enough to entirely mask the green leaf surface; trichomes without tubercles, or with small and inconspicuous tubercles (as seen at 40× magnification); sterile flowers generally fairly many (2-15 per inflorescence) ..... ***H. radiata***

Hydrangea arborescens Linnaeus, Smooth Hydrangea. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): forests, especially around rock outcrops and along streambanks; common (rare in Coastal Plain). May-July. NJ, s. NY, OH, IN, IL, MO, and se. KS south to e. NC, c. SC, c. GA, panhandle FL, s. AL, LA, and OK. [= K, S, W, Z; = *H. arborescens* ssp. *arborescens* – RAB, Y; = *H. arborescens* var. *arborescens* – C, G; > *H. arborescens* var. *arborescens* – F; > *H. arborescens* var. *oblonga* Torrey & A. Gray – F]

Hydrangea cinerea Small, Ashy Hydrangea. Mt, Pd (GA, NC, SC): rocky forests and rock outcrops, roadbanks, perhaps strictly or mostly associated with mafic or calcareous rocks; uncommon. May-July. Sw. NC, c. IN, c. IL, and c. MO south to n. SC, sc. AL, and c. AR. [= K, S, W, Z; = *H. arborescens* ssp. *discolor* (Seringe) McClintock – RAB, Y; = *H. arborescens* var. *discolor* Seringe – C, G; = *H. arborescens* var. *deamii* E. St. John – F]

* ***Hydrangea paniculata*** Siebold, Panicle Hydrangea. Mt (NC, VA): persistent after cultivation at old home-sites, sometimes appearing naturalized; rare, native of e. Asia. July-August. [= C, F, G, K]

Hydrangea quercifolia Bartram, Oakleaf Hydrangea. Pd, Mt, Cp (GA, *NC, SC): native in rich foothill forests (very rare), also in disturbed areas, thickets, or forests adjacent to urban or suburban areas; rare, introduced from further south. May-July. C. and sw. TN and nw. SC, south through w. GA, AL, and MS to panhandle FL and e. LA; scattered elsewhere as a remnant or escpae from cultivation. Boufford & Wood (1977) describe an apparently native occurrence in nw. SC. This southeastern native is a spectacular garden plant, frequently planted, rarely escaping or persisting. [= C, F, G, K, S]

Hydrangea radiata Walter, Snowy Hydrangea, Silverleaf. Mt (GA, NC, SC), Pd (NC, SC): rocky forests and rock outcrops, often common and conspicuous on roadbanks; common. May-July. A Southern Appalachian endemic: sw. NC (in the valley of the French Broad River and to its southwest), nw. SC, ne. GA, and se. TN, with outliers (perhaps escaped from cultivation?) in Stokes County, NC and Calhoun County, SC. This attractive species is especially typical of the escarpment gorge region near the tricorner of NC, SC, and GA, in the vicinity of the towns of Highlands, Cashiers, and Rosman, NC, where it is conspicuous along roadbanks. [= K, S, W, Z; = *H. arborescens* ssp. *radiata* (Walter) McClintock – RAB, Y]

Philadelphus Linnaeus (Mock-orange)

A genus of 65 (or fewer) species, shrubs, of north temperate areas. The most recent monographer of the genus, Hu (1954-1955) recognizes many species and varieties on the basis of minor differences in pubescence. Many of the recognized taxa are based only on cultivated material. The native distributions of the varieties have little phytogeographic coherence, and several varieties are often reported from the same site, suggesting that they reflect merely variation within a population (if genetically based at all). For instance, Hu recognizes three varieties in *Ph. hirsutus* and five in *Ph. inodorus*, but these seem to be no more than forms. As Hu writes, "the formerly recognized species, *Ph. grandiflorus* Willd., and *Ph. laxus* Schrad., are merely different forms of a species with heterogeneous leaf shape, size, and margins. Fostered by growers, propagated and distributed through cuttings, these forms have maintained their distinction in gardens since their discoveries. But when they are projected on the spectrum of variations exhibited by a large number of specimens collected from the homeland of *Ph. inodorus* Linn. they appear to be nothing but a few transitional forms. In this paper, these forms are treated as varieties." Hu's "varieties" should be treated as forms or cultivars, if recognized at all. I have taken a conservative approach, though variation in several of our native species could use additional study. References: Hu (1954-1955)=Z; A.E. Weakley (2002).

1 Axillary buds exposed; twigs of the current year villous-hirsute; seeds not caudate; [subgenus *Deutzioide*s, section *Deutzioides*] ..... ***Ph. hirsutus***
1 Axillary buds enclosed; twigs of the current year glabrous; seeds with caudate tails about as long as the embryo; [subgenus *Philadelphus*].
  2 Flowers 1-3 (-9) in a cymule; stamens 60-90; [subgenus *Philadelphus*, section *Pauciflorus*] ..... ***Ph. inodorus***
  2 Flowers 5-9 in a determinate raceme; stamens 20-50; [subgenus *Philadelphus*, section *Philadelphus*].
    3 Bark of the current year brown, exfoliating in its second year; flowers fragrant..... ***Ph. coronarius***
    3 Bark of the current year gray, not exfoliating later; flowers not fragrant or only slightly so ..... ***Ph. pubescens***

* ***Philadelphus coronarius*** Linnaeus, European Mock-orange. Pd (NC), {GA, SC, VA}: cultivated (though moreso in the past than now), and sometimes escaped or persisting around old homesites; rare, native of Europe. May-July. *Ph. coronarius* is the most commonly cultivated *Philadelphus* in our area, though it is currently considered rather old-fashioned. [= C]

Philadelphus hirsutus Nuttall, Hairy Mock-orange, Cumberland Mock-orange. Mt (GA, NC, SC, VA), Pd (SC): bluffs, rock outcrops, rocky woodlands, often with seepage, over mafic or calcareous rocks; rare (NC Watch List, SC Rare, VA Watch List). April-May; June-August. A Southern Appalachian species: sw. VA and KY south and west to w. NC, TN, n. GA, and n. AL. *Ph. sharpianus* Hu, known from e. TN and nc. AR, is similar to *Ph. hirsutus*, allegedly differing in the hypanthium glabrous (vs. more or less pubescent), the leaves strigose-pilose above, glabrous or sparsely strigose or with the nerves only villous beneath (vs. scabrous-hirsute above, uniformly villous beneath); it is probably best considered only a form of *Ph. hirsutus*. *Ph. hirsutus* is cultivated and it may escape outside of the range stated. [= RAB, C, F, G, S, W; > *Ph. hirsutus* – K, Z; > *Ph. sharpianus* Hu – K, Z; > *Ph. hirsutus* var. *intermedius* Hu – Z; > *Ph. hirsutus* var. *nanus* Hu – Z; > *Ph. sharpianus* Hu var. *parviflorus* Hu – Z]

Philadelphus inodorus Linnaeus, Appalachian Mock-orange. Mt, Pd, Cp (GA, NC, SC, VA): rich forests and woodlands, rocky bluffs over mafic or calcareous rocks, and also cultivated and persistent; uncommon (rare in Coastal Plain). April-May; June-August. VA and TN south to panhandle FL, GA, and s. AL (and according to C, also in e. PA). *Ph. floridus* Beadle, known from nw. GA, is similar to *Ph. inodorus*, allegedly differing in the pedicels and hypanthium pubescent (vs. glabrous); it is probably only a form of *Ph. inodorus*. [= RAB, C, G, W; > *Ph. inodorus* var. *inodorus* – F, S, Z; > *Ph. inodorus* var. *carolinus* Hu – Z; > *Ph. inodorus* var. *grandiflorus* (Willdenow) A. Gray – F, Z; > *Ph. inodorus* var. *laxus* (Schrader) Hu – Z; > *Ph. inodorus* var. *strigosus* Beadle – S, Z; > *Ph. grandiflorus* Willdenow – S; > *Ph. gloriosus* Beadle – S; > *Ph. inodorus* – K; > *Ph. floridus* Beadle – K, S, Z]

Philadelphus pubescens Loiseleur, Ozark Mock-orange, Hairy Mock-orange. Mt (GA): limestone bluffs; rare (GA Special Concern). E. TN, KY, nw. GA (Jones & Coile 1988), AL, s. IL, MO, OK, and AR, west of the Blue Ridge. It has been documented from TN counties adjacent to both VA and NC, and is likely to be found in VA, at least. [> *Ph. intectus* Beadle – S; > *Ph. latifolius* Schrader ex Augustin de Candolle – S; > *Ph. intectus* var. *intectus* – Z; > *Ph. intectus* var. *pubigerus* Hu – Z; > *Ph. pubescens* var. *verrucosus* (Schrader) Hu – Z; > *Ph. pubescens* var. *pubescens* – K, Z; > *Ph. pubescens* var. *intectus* (Beadle) A.H. Moore – K]

HYDRASTIDACEAE Martinov 1820 (Golden-seal Family)

A family of 2 genera and 2 species, perennial herbs, of temperate e. North America and Japan. In chemistry, morphology, and anatomy, *Hydrastis* shows some relationship to *Podophyllum* and *Diphylleia* of the Podophyllaceae (often included in the Berberidaceae). Though usually placed in the Ranunculaceae, Tobe & Keating (1985) present evidence from morphology, anatomy, embryology, palynology, chemistry, and cytology that suggests that *Hydrastis* is best recognized as a monotypic family. They contend that "*Hydrastis* represents a relictual primitive group which very early diverged from a common ancestral stock of the Ranunculaceae, Berberidaceae and probably of Circaeasteraceae, and that *Hydrastis* has evolved in its own evolutionary line parallel with other lines leading to the modern representatives of these families." In recent papers on classification of the flowering plants, Thorne (1992) and Reveal (1993) have also accepted Hydrastidaceae as a distinct family. Tobe in Kubitzki & Bayer places *Hydrastis* with *Glaucidium* Siebold & Zuccarini in a bigeneric Hydrastidaceae. References: Tamura in Kubitzki, Rohwer, & Bittrich (1993); Tobe in Kubitzki & Bayer (2002).

Hydrastis Linnaeus 1759 (Golden-seal)

A monotypic genus, an herb, endemic to e. North America. References: Ford in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Hydrastis canadensis Linnaeus, Golden-seal. Mt (GA, NC, SC, VA), Pd (GA, NC, VA): mesic, very nutrient-rich forests, with circumneutral soils, over calcareous or mafic rocks such as limestone, amphibolite, and dolostone, sometimes forming large colonies after canopy disturbance such as logging; rare (GA Endangered, NC Endangered, VA Watch List). April; May-June. VT and MN south to w. and c. NC, n. GA, TN, and AR. Exploited for the herbal trade (and still often used as a home remedy in more remote parts of the mountains, though too rare in our area to support any economically significant wild collection. The root is bitter in taste and contains several alkaloids. Reported for SC (P. McMillan, pers.comm. 2002). [= RAB, C, F, FNA, G, K, S, W)

HYDROLEACEAE Berchtold & J. Presl 1820 (Hydrolea Family)

The Hydroleaceae is not closely related to Hydrophyllaceae; recent molecular data confirm the prevailing view through most of the 19th century that *Hydrolea* was in its own family. References: Ferguson (1998); Hilger & Diane (2003); Angiosperm Phylogeny Group (1998, 2003).

Hydrolea Linnaeus

A genus of about 11 species, aquatic and wetland herbs, of tropical and subtropical regions.

1 Flowers in axillary cymes; leaves 3-14 cm long, 1.5-4 cm wide; axillary spines present in the axils of some leaves; corolla 7-8 mm long.
  2 Calyx and stem sparsely pubescent with spreading hairs 2-3 mm long..... ***H. quadrivalvis***
  2 Calyx and stem glabrous, or minutely puberulent or with sessile glands..... ***[H. uniflora]***
1 Flowers in terminal cymes or corymbs; leaves 2-6 cm long, 0.6-2.5 cm wide; axillary spines present or absent; corolla 10-15 mm long.
  3 Leaves elliptic to lanceolate, 2-3 cm long, 0.6-1.0 cm wide; axillary spines absent or rudimentary.....***H. corymbosa***
  3 Leaves ovate to ovate-lanceolate, 3-6 cm long, 1.5-2.5 cm wide; axillary spines preset, well-developed, to 1.5 cm long . .....***H. ovata***

Hydrolea corymbosa J. Macbride ex Elliott, Skyflower. Cp (GA, SC): pond cypress savannas, depression meadows; rare. Ne. SC south to sw. GA and FL. See Nelson (1993). The author is sometimes stated as J.F. Macbride, but this is an error. [= RAB, GW, K; = *Nama corymbosum* (Macbride ex Elliott) Kuntze – S]

Hydrolea ovata Nuttall ex Choisy, Ovate False-fiddleleaf. Cp (GA): swamps, ponds, ditches; rare. June-August. C. GA west to TX, north in the interior to sc. TN and MO. [= C, F, G, GW, K; = *Nama ovatum* (Nuttall ex Choisy) Britton – S]

Hydrolea quadrivalvis Walter, Waterpod. Cp (GA, NC, SC, VA), Pd (NC, VA): swamp forests, backwater sloughs, marshes, ditches; common (VA Watch List). June-September. Se. VA south to FL, west to LA. [= RAB, C, F, G, GW, K; = *Nama quadrivalve* (Walter) Kuntze – S]

Hydrolea uniflora Rafinesque. Swamp forests, sloughs, marshes. June-September. Mainly in the Mississippi River Alluvial Plain, west to e. TX and east to AL, TN, and KY. [= C, F, G, GW, K; = *Nama affine* (A. Gray) Kuntze – S; = *Hydrolea affinis* A. Gray]

HYDROPHYLLACEAE R. Brown 1817 (Waterleaf Family)
(also see *HYDROLEACEAE*)

A family of about 18 genera and 270 species, herbs and shrubs, nearly cosmopolitan, concentrated in w. North America. References: Wilson (1960a); Constance (1963).

1 Leaves entire, simple; styles 2, distinct to the summit of the ovary.
  2 Flowers in axillary cymes; capsule subglobose; leaves 2-12 cm long..... ***[see Hydrolea in HYDROLEACEAE]***
  2 Flowers solitary or paired in the leaf axils; capsule cylindrical leaves 0.8-1.5 (-3.5) cm long..... ***Nama***
1 Leaves dissected, lobed, or toothed (sometimes the basalmost leaves simple); style fused for a portion of its length, 2-cleft toward the tip; ovary with 1 locule.
  3 Flowers solitary opposite the leaves on the upper portion of the stem (sometimes also terminal in a lax, (1-) 2-6-flowered cyme).

4 Leaves opposite below, alternate above; petals 5-8 mm long; leaves elliptical in outline, pinnatifid into 7-13 lanceolate segments; calyx lobes to 10 mm long in fruit; capsule 4-seeded.....***Ellisia***
4 Leaves all alternate; petals 2-4 mm long; leaves broadly triangular in outline, divided into 3-5 obovate segments; calyx lobes 1-3 mm long; capsule 1-2 (-3)-seeded..... ***Nemophila***
3 Flowers all terminal in 3-many-flowered cymes.
5 Inflorescence repeatedly branched subdichotomously; larger leaf blades > 8 cm wide; stamens well exserted from the corolla (3 mm or more beyond the corolla); plants perennial from fibrous roots .....***Hydrophyllum***
5 Inflorescence with a strong central axis (some secondary branching in *Ph. bipinnatifida*, but not as above); larger leaf blades < 5 cm wide (except *Ph. bipinnatifida*); stamens slightly exserted from the corolla (< 3 mm beyond the corolla) (except well-exserted in *Ph. bipinnatifida*, included in *Ph. covillei*); plants annual (biennial in *Ph. bipinnatifida*) from a taproot.....***Phacelia***

Ellisia Linnaeus (Waterpod)

Ellisia is considered to be a monotypic genus, an herb of c. and e. North America, but generic limits in the Hydrophyllaceae are badly in need of critical reassessment. References: Constance (1940)=Z.

Ellisia nyctelea (Linnaeus) Linnaeus, Waterpod, Aunt Lucy. Pd, Mt (VA): moist shaded forests, especially bottomlands; uncommon. May-June. IN and MI west to Alberta, south to AR and OK; disjunct in e. North America from s. NY and NJ south to sc. VA. Likely to occur in nc. NC. [= C, F, G, GW, K, W, Z; = *Nyctelea nyctelea* (Linnaeus) Britton – S]

Hydrolea
(see *HYDROLEACEAE*)

Hydrophyllum Linnaeus (Waterleaf)

A genus of 8 species, herbs, of e. and w. North America. References: Constance (1942)=Z; Beckmann (1979)=Y; Alexander (1941)=X.

1 Principal cauline leaves palmately lobed, maple-like, differing from the pinnately divided basal leaves.
2 Sepals with small reflexed appendages exserted at each sinus of the calyx; plant biennial from a taproot; stamens exserted 1-3 mm beyond the corolla; leaf lobing relatively shallow and irregular..... ***[H. appendiculatum]***
2 Sepals with appendages absent or rudimentary; plant perennial from fibrous roots; stamens exserted 3-6 mm beyond the corolla; leaf lobing relatively deep and regular..... ***H. canadense***
1 Principal cauline leaves pinnately divided, similar to the basal leaves.
3 Inflorescence and upper stem densely hirsute with spreading hairs 1-2 mm long; leaves pinnatifid with (7-) 9-13 segments, these toothed but not lobed.....***H. macrophyllum***
3 Inflorescence and upper stem glabrate to strigose with appressed to ascending hairs < 0.5 mm long; leaves with 5-7 (-9) segments, some of them sometimes deeply 2-lobed.
4 Corolla deep purple to maroon; lower stem glabrous to slightly (rarely moderately) pubescent with retrorse hairs; [of low to high elevations in the Mountains].....***H. virginianum*** *var.* ***atranthum***
4 Corolla white to lavender or pale purple; lower stem slightly to densely pubescent with retrorse to spreading hairs; [of low elevations of the Piedmont, Mountains, and Coastal Plain].....***H. virginianum*** *var.* ***virginianum***

Hydrophyllum canadense Linnaeus, Mapleleaf Waterleaf, Canada Waterleaf, Broadleaf Waterleaf. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): cove forests, rocky streambanks, other moist and nutrient-rich forests; common (rare in Coastal Plain and in Piedmont south of VA) (SC Rare). May-June; August. VT and s. Ontario west to MI and WI, south to n. GA, AL, AR, and MO. [= RAB, C, F, G, K, S, W, Y, Z]

Hydrophyllum macrophyllum Nuttall, Hairy Waterleaf. Mt (GA, NC, VA): cove forests and other moist rocky forests, especially over calcareous or mafic rocks; rare (GA Special Concern, NC Rare, VA Watch List). May; July. WV west to OH, and IL, south to sw. VA, w. NC, n. GA, and n. AL; reports from AR are erroneous, and are based on material of *Hydrophyllum brownei* Kral & Bates (Peck 2003). The w. North American *H. occidentale* (S. Watson) A. Gray is rather closely related. [= RAB, C, F, G, K, S, W, Y, Z]

Hydrophyllum virginianum Linnaeus *var.* ***atranthum*** (E.J. Alexander) Constance, Appalachian Waterleaf. Mt (NC, VA): cove forests and other moist rocky forests; common. May-June; July-August. N. WV south through w. and sw. VA and e. KY to w. NC and e. TN. Since its naming as a species (Alexander 1941) and subsequent reduction to a variety (Constance 1942) there has been little consensus about this taxon, some regarding it as merely a color form. Alexander lists numerous characters additional to that of flower color; they need further investigation. "*H. atranthum* differs from *H. virginianum* in the dark-violet flowers, the brown hairs on the appendages, brown filaments, corolla-lobes longer than the tube, stamens shorter [11.5 mm] and more slender, and the more numerous leaf-lobes. *H. virginianum* has flowers white to pale lavender or pinkish, white hairs on the appendages, white filaments, corolla-lobes and tube equal in length, filaments longer (13.5 mm) and stouter, and 5-7 leaf-

segments." Beckmann (1979) did not accept the variety, stating that "this pigment combination appears sporadically in other sectors of the species range." Based on herbarium material I have seen darker than usual flowers are found outside of the Southern Appalachians; they do not, however, approach in darkness the flowers of Southern Appalachian material and the somewhat darker-flowered plants outside the Southern Appalachians do not share the stem pubescence character stated in the key above. The general correlation of flower color and lower stem pubescence and the tight geographical range of var. *atranthum* incline me to accept it provisionally as a variety. It is not, however, limited to high elevations, as stated or implied by some authors. The two varieties provisionally accepted here need more careful study, including either statistical studies of morphology, or electrophoretic or molecular studies. [= C, F, G, Z; < ***H. virginianum*** – RAB, K, W, Y; < ***H. virginicum*** – S, orthographic error; = ***H. atranthum*** E.J. Alexander – X]

Hydrophyllum virginianum Linnaeus ***var. virginianum***, Eastern Waterleaf, Virginia Waterleaf. Mt, Pd (NC, VA), Cp (VA): cove forests, moist rocky forests, alluvial forests; common. April-June; July-August. NH and Québec west to ND, south to e. VA, c. NC, KY, s. IN, s. IL, nc. AR, and ne. OK. As discussed by Beckmann (1979) and Constance (1941), ***H. virginianum*** is a closely related vicariant of ***H. tenuipes*** Heller of British Columbia south to CA. See *Phacelia bipinnatifida* for additional suggestions on distinguishing it from this species. [= C, F, G, Z; < ***H. virginianum*** – RAB, K, W, Y; < ***H. virginicum*** – S, orthographic error; = ***H. virginianum*** – X]

Hydrophyllum appendiculatum Michaux, Biennial Waterleaf. S. Ontario and MN, south to sw. PA, WV, e. TN, n. AL (Jackson Co.), MO, and e. KS. It was attributed to NC by Small (1933) on unknown grounds. [= C, F, G, K, Y, Z; = *Decemium appendiculatum* (Michaux) Small – S]

Nama Linnaeus (Fiddleleaf)
(also see *Hydrolea* in *HYDROLEACEAE*)

A genus of about 45 species, herbs, of sw. North America, tropical America, and Hawaii.

* ***Nama jamaicense*** Linnaeus, Jamaica Weed. Cp (SC): lawns; rare, introduced from tropical America (including FL and TX). May. [= K; = ***N. jamaicensis*** – RAB, orthographic variant; = *Marilaunidium jamaicense* (Linnaeus) Kuntze – S]

Nemophila Nuttall (Baby Blue-eyes)

A genus of 11 species, herbs, of North America (mostly w. North America). References: Constance (1941).

Identification notes: *Nemophila* is superficially similar to *Phacelia covillei* and ***Ph. ranunculacea***, with which it often co-occurs. They can be distinguished with the following key.

1 Flowers solitary, on pedicels opposite the leaves, the pedicels mostly > 12 mm long; corolla white (sometimes aging to pale lavender), 2.5-3.5 mm long; fruits ovoid, longer than thick, turning purple at maturity, exceeding the 2-4 mm long calyx lobes..... ***Nemophila aphylla***

1 Flowers borne in 2-6-flowered terminal cymes, the pedicels mostly < 12 mm long; corolla pale blue or lavender, 4-5 mm long; fruits depressed globular and weakly 4-lobed, the apex depressed, remaining green at maturity, shorter than the calyx, the lobes of which expand to 5-8 mm long.

2 Pubescence of the lower stem consisting of appressed to ascending, stiff, pointed hairs; [of rivers in the Atlantic drainage] .....***Phacelia covillei***

2 Pubescence of the lower stem spreading or even retrorse, most of the hairs weak and twisted, and many of them glandular-tipped; [of rivers in the Mississippi drainage].....***[Phacelia ranunculacea]***

Nemophila aphylla (Linnaeus) Brummitt. Cp, Pd (GA, NC, SC, VA): moist, nutrient-rich floodplain forests; uncommon, though often locally abundant. March-April. MD south to panhandle FL and west to TX, north in the interior to e. TN, w. KY, and se. MO. [= GW, K; = ***N. microcalyx*** (Nuttall) Fischer & Meyer – RAB, F, G, S; = ***N. triloba*** (Rafinesque) Thieret – C]

Phacelia A.L. de Jussieu 1789 (Phacelia)

A genus of about 150 species, of North America and South America, concentrated in w. North America. References: Constance (1949)=Z; Levy (1991)=Y; Murdy (1966); Gillett (1968, 1964).

Identification notes: 1. *Phacelia bipinnatifida* and *Hydrophyllum virginianum* are sometimes confused. ***Ph. bipinnatifida*** has the larger and more basal leaves distinctly bipinnatifid, the lower pinnae often stalked (vs. pinnatifid, the basal or terminal pinnae sometimes 2-lobed, all the pinnae more-or-less sessile), pubescence of the upper stem and inflorescence in part glandular (pubescence nonglandular), and seeds 4 per capsule, black (vs. 2 per capsule, light brown). 2. *Phacelia covillei* and ***Ph. ranunculacea*** are superficially similar to and sometimes confused with *Nemophylla aphylla*, which see for discussion.

1 Corolla lobes fimbriate; seeds 4 per capsule.
  2 Corolla white (rarely slightly lavender); pubescence of the stem spreading; lobes of cauline leaves mostly obtuse; seeds 3.0-3.5 mm long ..... ***Ph. fimbriata***
  2 Corolla lavender to blue; pubescence of the stem appressed; lobes of cauline leaves mostly acute; seeds 1.5-3.0 mm long ..... ***Ph. purshii***
1 Corolla lobes entire; seeds 4-15 per capsule.
  3 Stamens 1.5-2 mm long; style 1.5-2 mm long; corolla tubular; seeds globose-ovoid, nearly spherical, 4 per capsule.
    4 Pubescence of the lower stem consisting of appressed to ascending, stiff, pointed hairs; [of rivers in the Atlantic drainage] ..... ***Ph. covillei***
    4 Pubescence of the stem spreading or even retrorse, most of the hairs weak and twisted, and many of them glandular-tipped; [of rivers in the Mississippi drainage] ..... ***[Ph. ranunculacea]***
  3 Stamens 3-10 mm long; style 3-15 mm long; corolla rotate to broadly campanulate; seeds ovoid-angled, 4-15 per capsule.
    5 Corolla 10-15 mm across, blue; plant 10-60 cm tall; seeds 2.5-4 mm long, black; ultimate segments of the leaf 15-45 mm long, 10-25 mm wide; pedicels recurved in fruit; [of moist forests of the Mountains and (very rarely) Piedmont] ..... ***Ph. bipinnatifida***
    5 Corolla 5-11 mm across, white to blue; plant 5-40 cm tall; seeds 1.5-2.2 mm long, brown; ultimate segments of the leaf 5-15 mm long, 5-9 mm wide; pedicels ascending to spreading in fruit; [of alluvial forests, granitic flatrocks, and other habitats, of the Piedmont, Coastal Plain, and Mountains].
      6 Sepals 4-8 mm long, linear or oblanceolate; marginal bristles of sepals spreading, 1.0-1.5 mm long; plants mostly erect ..... ***Ph. maculata***
      6 Sepals 2-4 mm long, narrowly ovate; marginal bristles of sepals appressed, 0.3-1.0 mm long; plants mostly decumbent, branched from the base.
        7 Sepals 2.6-4.0 mm long; petals 4-6 mm long; marginal bristles of sepals 0.6-0.9 mm long; basal leaves with 1-3 pairs of lateral leaflets. the terminal leaflet larger and usually 3-lobed; cauline leaves with 1-3 pairs of rather broad lobes; [of various habitats (including granitic flatrocks and domes) in SC, NC, and VA] ..... ***Ph. dubia** var. **dubia***
        7 Sepals 2.0-3.0 mm long; petals 3.5-5 mm long; marginal bristles of sepals 0.4-0.7 mm long; basal leaves with 4-5 pairs of lateral leaflets, the terminal leaflet about the same size and unlobed; cauline leaves with 2-4 pairs of narrow lobes; [of granitic flatrocks and domes of the Piedmont of SC and southwestward] ..... ***Ph. dubia** var. **georgiana***

Phacelia bipinnatifida Michaux, Fernleaf Phacelia, Forest Phacelia. Mt (GA, NC, SC, VA): cove forests, especially where rocky; common (SC Rare, VA Watch List). April-May; June. W. VA west to s. OH, n. IN, n. IL, and c. MO, south to w. NC, nw. SC, n. GA, c. AL, and n. AR. *Ph. bipinnatifida* var. *plummeri* (= *Ph. brevistyla*) is "based on a variation with sparser pubescence, larger and less divided leaf segments, smaller flowers, and sub-included stamens and style. These variations are not concomitant, and the distribution of forms showing a complete or partial combination of them is sporadic" (Constance 1949). The matter deserves additional study. [= RAB, C, G, K, W, Z; > *Ph. bipinnatifida* var. *bipinnatifida* – F; > *Ph. bipinnatifida* var. *plummeri* Wood – F; > *Ph. brevistyla* Buckley – S; > *Ph. bipinnatifida* – S]

Phacelia covillei S. Watson ex A. Gray, Eastern Buttercup Phacelia. Pd (NC, VA): rich soils of floodplains, and contiguous terraces and slopes; rare (NC Rare, VA Rare). April; May. Ranging in two disjunct areas – c. NC and sc. VA (in the drainages of the Cape Fear, Tar, and Roanoke rivers) and DC, n. VA, and sc. MD (in the drainage of the Potomac River). Most recent authors have included this taxon within the closely similar *Ph. ranunculacea*; as thus broadly defined, *Ph. ranunculacea* was considered to occur in 3 peculiarly disjunct areas; one centered around St. Louis, MO (w. KY, w. TN, e. MO, ne. AR, se. MO, s. IL, and s. IN), one near Washington, DC (DC, n. VA, and sc. MD), and a third in c. NC and sc. VA. Chuang & Constance (1977) reported that the western population center has a chromosome number of n=6, and that the two eastern population centers have n=14. The disparate cytotypes of eastern and western *Ph. ranunculacea* sensu lato led Chuang & Constance to seek morphological differences that would warrant the recognition of separate taxa, but they reported that "no consistent morphological distinction has been found between the two cytotypes." Stem pubescence does, however, show consistent, though subtle, differences between eastern and western populations of this complex. Eastern material has the stem pubescence relatively sparse, consisting of appressed to ascending, stiff, pointed hairs. Western populations have stem pubescence relatively dense, much of it spreading or even retrorse, most of the hairs weak and twisted, and many of them glandular-tipped. Given the disparate cytotypes, correlated with allopatric distribution and slight but consistent morphological differences, it seems best to provisionally recognize two taxa; further study, using chemical and molecular techniques would be valuable. Recognition at the species level is nomenclaturally the more conservative (and here followed) because of the pre-existence of Watson's binomial; varietal status might be the more appropriate. *Ph. covillei* and *Ph. ranunculacea* (sensu stricto) have numerous characteristics that render their inclusion in *Phacelia* uncomfortable (see discussion in Chuang & Constance 1977, Constance 1949, Gillett 1968). See *Nemophila aphylla* for suggestions on distinguishing these two superficially similar species. [= K; < *Ph. ranunculacea* (Nuttall) Constance – RAB, C, F, G, Z]

Phacelia dubia (Linnaeus) Trelease *var. **dubia***, Appalachian Phacelia. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): floodplain forests, rocky forests, fields, roadsides, granitic flatrocks; common. April-May; June. Var. *dubia* ranges from NY and PA west to WV, south to nc. SC, sw. NC, and se. TN. The *Phacelia dubia* complex has been under detailed biosystematic study by Foster Levy and associates (Levy 1991a, 199b, 1997; Levy et al. 1996; Levy & Malone 2001; Levy & Neal 2001; Taylor & Levy 2002; del Castillo 1994, 1998). Male sterile cytotypic variants are common in some populations but formal taxonomic

recognition ius not warranted (Levy 1991a, 1991b; del Castillo 1994, 1998). Additionally, an incipient variety, informally termed "imitator", occurs in c. SC (Levy 1991a; Levy & Malone 2001). These populations are morphologically variable, some more similar to var. *georgiana*, others more similar to var. *dubia*; see Levy (1991a) for further discussion. They may warrant taxonomic recognition, as they are allopatric from each of the 3 named varieties, and show degrees of sterility when bred with each of the three, but morphologic differences have not evolved (Levy & Malone 2001). [= K, Y; < *Ph. dubia* – RAB, C, F, S, W; > *Ph. dubia* var. *dubia* – G; > *Ph. dubia* var. *fallax* (Fernald) Gleason – G; > *Ph. dubia* var. *dubia* – Z (also including var. *interior*)]

Phacelia dubia (Linnaeus) Trelease *var.* ***georgiana*** McVaugh, Georgia Phacelia. Pd (GA): granitic flatrocks; rare. April-May; June. Var. *georgiana* ranges from GA west to ec. AL, in the Piedmont. It has sometimes been attributed to SC, and Levy found plants in SC which morphologically resemble var. *georgiana*, but he concluded that this "imitator" genotype was largely sterile when bred with var. *georgiana*. See var. *dubia* for additional discussion. [= K, Y, Z; < *Ph. dubia* – RAB, C, F, S, W; *?* *Ph. dubia* var. *dubia* – G]

Phacelia fimbriata Michaux, Fringed Phacelia, Blue Ridge Phacelia. Mt (GA, NC, VA): moist forests on slopes and floodplains, at low to high elevations, perhaps mainly over circumneutral soils; uncommon, but locally abundant (GA Special Concern, VA Rare). April-May. Sw. VA south to w. NC, e. TN, and n. GA (Jones & Coile 1988), a Southern Appalachian endemic. [= RAB, C, F, G, K, S, W, Z]

Phacelia maculata Wood, Flatrock Phacelia. Pd (GA, NC, SC): bottomlands, granitic flatrocks; uncommon (NC Rare List). April; May. Sc. NC south to GA and west to ec. AL. [= RAB, K, W, Y, Z; *? Ph. hirsuta* – S, misapplied]

Phacelia purshii Buckley, Miami-mist. Mt (GA, NC, SC, VA): moist forests on floodplains and slopes; rare (GA Special Concern, VA Watch List). May-June. S. PA west to s. Ontario, OH and MO, south to nw. SC, nw. GA, and c. AL. Plants "with smaller flowers, shorter pedicels, and smaller capsules and seeds" are the basis of *Ph. boykinii* and *Ph. bicknellii* (Constance 1949). A study of the matter was initiated and specimens annotated as "*Ph. purshii* ssp. *boykinii*," but the research was not completed and the name was never published; further study is warranted. [= RAB, C, F, G, K, W, Z; > *Ph. purshii* – S; > *Ph. boykinii* (A. Gray) Small – S; > *Ph. bicknellii* Small – S]

Phacelia dubia (Linnaeus) Trelease var. *interior* Fernald, endemic in c. TN. [= K; < *Ph. dubia* – C, F, G, S; < *Ph. dubia* var. *dubia* – Z] {not keyed at this time}

Phacelia ranunculacea (Nuttall) Constance, Western Buttercup Phacelia. In the Mississippi and Ohio river drainages, centered around St. Louis, MO (w. KY, w. TN, e. MO, ne. AR, se. MO, s. IL, and s. IN). [= K; < *Ph. ranunculacea* – RAB, C, F, G, Z]

Phacelia strictiflora (Engelmann & Gray) Gray var. *robbinsii* Constance. East to AL. [= K, Z] {not keyed at this time}

HYPERICACEAE A.L. de Jussieu 1789 (St. John's-wort Family)

It appears from molecular analysis that recognition of the Hypericaceae may (after all) be warranted. *Hypericum* is in a clade with *Podostemum* and *Bonnetia*, sister to a clade including Clusiaceae s.s. (Savolainen et al. 2000). References: Adams (1973)=Z; Godfrey (1988)=Y; Wood & Adams (1976).

1 Petals yellow; stamens fascicled or not, if fascicled then not into 3 fascicles of 3 stamens each; staminodia (hypogynous glands) lacking; perianth 4-5-merous; [tribe *Hypericeae*] ..... ***Hypericum***
1 Petals pale pink; stamens fascicled, in 3 fascicles of 3 stamens each; staminodia (hypogynous glands) present, alternating with the fascicles of stamens; perianth 5-merous; [tribe *Cratoxyleae*]..... ***Triadenum***

Hypericum Linnaeus 1753 (St. John's-wort)

A genus of about 370 species, trees, shrubs, and herbs, primarily temperate. *Hypericum* in our area is a large, complex, and interesting genus, with a number of unresolved questions remaining. The species treated in Key B have often been treated in the segregate genus *Ascyrum*. Evidence from a variety of disciplines now suggests that they should be included in *Hypericum* (Adams & Robson 1961; Calie, Schilling, & Webb 1983; Robson 1996). {The curious bimodal distribution of *H. prolificum* (more than one taxon?). Basis of Small's *H. lobocarpum* in Blue Ridge of NC. And more....} References: Adams (1973)=Z; Godfrey (1988)=Y; Robson (1977, 1981, 1990, 1996, 2001, 2002, 2006)=X; Adams (1962)=V; Adams (1957); Webb (1980); Robson & Adams (1968); Adams & Robson (1961); Calie, Schilling, & Webb (1983); Culwell (1970). Key based in part on Adams (1973), Godfrey (1988), C, and GW.

1 Leaves with an articulation at the very base, this appearing as a narrow line, groove, or abrupt change of color and texture which extends across the petiole; shrub; [section *Myriandra*].
  2 Leaves needle-like, 0.5-1.5 (-2) mm wide, the margins essentially parallel (*H. galioides* keyed here and below); [subsection *Centrosperma*] ..... **Key A1 or A2**
  2 Leaves, at least the largest on the plant, not needle-like, wider than 2 mm, the margins not parallel, the widest point often beyond the middle.
    3 Petals 4; sepals 4 (rarely 2); plant 5-100 cm tall; leaves 2-40 mm long; [subsection *Ascyrum*] ..... **Key B**
    3 Petals 5; sepals 5; plant 50-250 cm tall; leaves (10-) 20-70 mm long; [subsections *Centrosperma* and *Brathydium*]

.....**Key C**

1 Leaves without an articulation at the very base, the petiole merging gradually into the stem with no break, groove, or abrupt change in color or texture; decumbent shrub (*H. buckleyi*) or an annual or perennial herb (suffruticose at the base in *H. cistifolium, H. dolabriforme, H. nudiflorum, H. apocynifolium, H. sphaerocarpum*).
- 5 Leaves ascending or appressed, 1-nerved, < 1 mm wide; inflorescence a compound raceme; [section *Brathys*] .....**Key D**
- 5 Leaves spreading or ascending, generally multi-nerved, > 1 mm wide; inflorescence a dichasial cyme.
  - 6 Capsule 3 (-4) locular; stamens connate at the base into 3 or 5 fascicles; leaves with black glandular dots as well as translucent glandular dots when backlit (except in *H. perforatum*); sepals and/or petals marked with black glandular dots or lines; [section *Hypericum*].....**Key E**
  - 6 Capsule 1-locular; stamens separate or connate at the base, but not grouped into fascicles; leaves with translucent glandular dots, without black glandular dots (when backlit); sepals and petals with translucent glandular lines or dots only, not marked with black glandular dots or lines.
    - 7 Decumbent shrub or suffruticose herb; [section *Myriandra*, subsections *Pseudobrathydium* and *Suturosperma*].....**Key F**
    - 7 Herb; [section *Trigynobrathys*, and section *Myriandra* subsection *Suturosperma*]..... **Key G**

Key A1 – shrubby St. John's-worts with needle-like leaves and flowers with 5 petals and 5 sepals [section *Myriandra,* subsection *Centrosperma*]

1 Longest leaves 5-16 mm.
- 2 Capsules 6-9 mm long; longest leaves 5-10 (-11) mm; flowers 13-15 mm diameter; [of spodosol pine flatwoods]..... ***H. tenuifolium***
- 2 Capsules 3-4.5 mm long; longest leaves 7-16 mm; flowers 13-17 diameter; [of alfisols and ultisols of wet pine savannas, seepage bogs].
  - 3 Flowers 16-17 mm diameter; longest leaves 11-16 mm; plants 2.5-6.5 dm tall; [of wet pine savannas in se. NC to ne. SC] .....***H. species 2***
  - 3 Flowers 13-14 (-15?) mm diameter; longest leaves 7-13 mm; plants 0.5-1.0 dm (rarely to 1.5); [of seepage bogs and wet flatwoods of s. GA to s. FL to w. LA] .....***H. brachyphyllum***

1 Longest leaves 13-30 mm.
- 4 Plant a low shrub <5 dm tall, more-or-less decumbent, forming dense clumps; inflorescence elongate (flowers at up to 5 nodes); flowers 10-12 mm diameter; [of dry to mesic soils of lower piedmont and inner coastal plain of sc. VA-NC-SC-GA-AL; disjunct to rock outcrops of s GA]..... ***H. lloydii***
- 4 Plant an erect shrub 0.5-4 m tall, with single main stem branched above; inflorescence elongate (3-7 nodes) or short (1-3 nodes in *H. fasciculatum* and *H. chapmanii*); flowers 13-26 mm diameter; [of wet soils of the Coastal Plain].
  - 5 Undersurface of most leaves easily seen on both sides of midrib, veins obvious on undersurface, leaves narrowly oblanceolate to oblinear, 1.5-5 (-7) mm wide; inflorescence elongate (3-7 nodes).....***H. galioides***
  - 5 Undersurface usually not seen except for midrib (leaf margins nearly touch midrib its whole length), if undersurface visible then no veins visible, leaves linear, needle-like, 0.5-1.5 mm wide; inflorescence elongate or short.
    - 6 Plant short, <1 m tall; stem <1 cm wide at base; plant unbranched or few-branched, wand-like with narrow crown; [endemic to FL panhandle].....***[H. exile]***
    - 6 Plant tall, normally >0.8 m; stem 1-several cm wide at base; crown broader with many ascending to spreading branches.
      - 7 Young branches, leaves, and sepals strongly glaucous; bark of upper stem and branches silvery gray and smooth; mature plant 2-4 m tall with ascending branches imparting tree-like or vase-like aspect; [restricted to shores of sinkhole ponds in Bay and Washington Counties, FL] .....***[H. lissophloeus]***
      - 7 Young branches, leaves, and sepals not glaucous; bark of upper stem and branches not silvery gray and smooth (except some chapmanii); mature plants variously shaped.
        - 8 Inflorescence elongate (3-7 nodes); stem bark tight, thin, not exfoliating or exfoliating in narrow strips, not revealing buff or pale cinnamon color; if leaf undersurface is exposed it is distinctly paler than upper surface; [usually associated with flowing water (blackwater streams and impoundments)] .....***H. nitidum***
        - 8 Inflorescence short (1-3 nodes); stem bark corky-thickened to spongy, exfoliating in broad strips or sheets revealing buff or pale cinnamon color; if leaf undersurface is exposed it is about the same color as upper surface; [usually associated with static water (Carolina bays, impoundments, beaver ponds, borrow pits, flatwoods depressions, cypress-gum ponds)].
          - 9 Mature plant 2-3 (-4) m tall; branches ascending and imparting a tree-like or vase-like aspect (younger plants may be bushy); youngest internodes terete; [of flatwoods depressions and cypress-gum ponds and stringers of FL panhandle only] ..... ***[H. chapmanii]***
          - 9 Mature plant 0.8-1.5 (-2) m tall; branches spreading and imparting a bushy or gumdrop aspect; youngest internodes with distinct winged ridge on either side; [of Carolina bays, impoundments, beaver ponds, borrow pits, widespread]..... ***H. fasciculatum***

Key A2 – shrubby St. John's-worts with needle-like leaves and flowers with 5 petals and 5 sepals [section *Myriandra*, subsection *Centrosperma*]

1 Plants < 0.6 m tall, erect, decumbent, or matted and with ascending/erect branches.
  2 Longest leaves 5-13 mm; flowers 13-15 mm diameter.
    3 Mature capsule 6-9 mm long; longest leaves 5-10 (-14) mm; [plants of spodosol flatwoods] ..... ***H. tenuifolium***
    3 Mature capsule 3-6 mm long; longest leaves 6-13 mm; [of seepage bogs and wet flatwoods of s GA-s FL-w LA]... ..... ***H. brachyphyllum***
  2 Longest leaves 11-25 mm; flowers 9-17 mm diameter.
    4 Plant unbranched or few-branched, wand-like with narrow crown; restricted to FL panhandle flatwoods..... ..... ***[H. exile]***
    4 Plant densely branched, bushy with broad crown; occurrring only north of FL.
      5 Flowers 10-12 mm diameter; longest leaves 13-25 mm; [plants of dry to mesic soils of lower piedmont and inner coastal plain of se VA-NC-SC-GA-AL, disjunct to rock outcrops of s GA]..... ***H. lloydii***
      5 Flowers 16-17 mm diameter; longest leaves 11-16 mm; [plants of wet pine savannas in se NC-ne SC] .... ***H. species 2***
1 Plants > 0.6 m tall, plants erect.
  6 Longest leaves 6-13 mm, linear, needle-like, permanently tightly revolute with usually only the midrib showing on underside; flowers 13-15 mm diameter; [s GA-s FL-w LA] ..... ***H. brachyphyllum***
  6 Longest leaves (12-)15-30 mm, linear and needle-like or narrowly oblanceolate to oblinear (*H. galioides*), permanently tightly revolute with usually only the midrib showing on underside OR margins revolute during drying but leaving considerable exposed undersurface (*H. galioides*); flowers 13-26 mm diameter.
    7 Leaves narrowly oblanceolate to oblinear, 1.5-5 (-7) mm wide, margins revolute during drying but leaving considerable exposed undersurface, veins obvious on undersurface; flowers 13-15 mm diameter in elongate inflorescences of 3-7 nodes ..... ***H. galioides***
    7 Leaves linear, needle-like, 0.5-1.5 mm wide, permanently tightly revolute with usually only the midrib showing on underside, if undersurface visible there are no veins; flowers 14-26 mm diameter, inflorescences elongate or short.
      8 Plant short, < 1 m tall; stem < 1 cm wide at base; plant unbranched or few-branched, wand-like with narrow crown; [restricted to FL panhandle] ..... ***[H. exile]***
      8 Plant tall, normally > 0.8 m; stem 1-several cm wide at base; crown broader with many ascending to spreading branches.
        9 Plant to 1.5 m tall, with broad bushy or gumdrop aspect; plants widespread.
          10 Inflorescence short (1-3 nodes); bark corky-thickened, exfoliating in sheets and wide strips exposing buff or pale cinnamon color; if leaf undersurface is exposed it is about the same color as upper surface; [usually associated with static water of Carolina bays, impoundments, beaver ponds, borrow pits] ..... ***H. fasciculatum***
          10 Inflorescence elongate (3-7 nodes); bark tight, thin (not corky thickened), not exfoliating in sheets or wide strips; if leaf undersurface is exposed it is distinctly paler than upper surface; [associated with moving water of blackwater streams and impoundments]..... ***H. nitidum***
        9 Plant 2-4 m tall, with tree-like or vase-like aspect; restricted to FL panhandle.
          11 Young branches, leaves, and sepals not glaucous; bark of upper stem and branches normally not silvery gray, variously roughened; inflorescence short (1-3 nodes); [flatwoods depressions and cypress-gum ponds of FL panhandle]..... ***[H. chapmanii]***
          11 Young branches, leaves, and sepals strongly glaucous; bark of upper stem and branches silvery gray and smooth; inflorescence elongate (3-7 nodes); [restricted to shores of sinkhole ponds in Bay and Washington Counties, FL] ..... ***[H. lissophloeus]***

Key B – shrubby St. John's-worts with 4 petals and 4 (rarely 2) sepals [section *Myriandra*, subsection *Ascyrum*]

1 Styles and carpels 3 (rarely 4); leaves (5-) 7-20 mm wide, rounded, subcordate, or cordate-clasping at the base; plant an erect shrub.
  2 Leaves rounded or subcordate at the base; [widespread in our area]..... ***H. crux-andreae***
  2 Leaves cordate-clasping at the base; [of e. GA southward] ..... ***H. tetrapetalum***
1 Styles and carpels 2 (3 in *H. microsepalum*); leaves 1-7 mm wide, mostly cuneate (or if rounded the leaves < 8 mm long and 3 mm wide); erect or decumbent shrub.
  3 Sepals nearly equal in size; styles 3; [s. GA south to n. FL] ..... ***H. microsepalum***
  3 Sepals markedly unequal, one opposite pair large and enclosing the capsule; styles 2; [collectively widespread].
    4 Pedicels 6-13 mm long, soon reflexed; subtending bractlets located near the last pair of leaves; decumbent shrub, to 2 dm tall ..... ***H. suffruticosum***
    4 Pedicels 1-5 mm long, erect; subtending bractlets located midway between the base of the flower and the last pair of leaves; erect or decumbent shrub, mostly 1-15 dm tall.

5 Erect shrub, usually with a single stem, freely branched well above ground level (or from ground level if injured, as by fire, but then the multiple branches still erect rather than decumbent), to 1 m or more tall; leaves usually variable in size and shape, widest near the middle ..... ***H. hypericoides***

5 Decumbent, matted shrub, with several prostrate stems arising from a primary rootstock near ground level, each with numerous erect branchlets, rarely over 3 dm tall; leaves usually relatively uniform in size and shape, widest above the middle ..... ***H. stragulum***

Key C – shrubby St. John's-worts with broader leaves (mostly lanceolate or oblanceolate) and flowers with 5 petals and 5 sepals

1 Leaves cordate-clasping at the base, ovate; [of s. SC southward]; [section *Myriandra*, subsection *Brathydium*] ..... ***H. myrtifolium***

1 Leaves cuneate at the base, oblanceolate, oblong, elliptic, or narrowly elliptic; [collectively widespread]; [section *Myriandra*, subsection *Centrosperma*].

2 Leaves mostly narrowly oblanceolate, the larger 2-3 cm long, 2-5 (-7) mm wide, mostly 5-10× as long as wide; seeds 0.4-0.8 mm long, dark brown ..... ***H. galioides***

2 Leaves mostly oblong, elliptic, narrowly elliptic, or broadly oblanceolate, the larger (2-) 3-7 cm long, 5-15 mm wide, mostly 2.5-5× as long as wide; seeds 0.8-1.3 mm long, amber to medium brown.

3 Flowers solitary, terminal (or in 3-flowered terminal cymes); petals 10-20 mm long; sepals 7-15 mm long; shrubs to 1 m tall ..... ***H. frondosum***

3 Flowers (1-) 3-many in terminal cymes; petals 5-10 mm long; sepals 1.5-8 mm long; shrubs to 3 m tall.

4 Flowers (1-) 3-7 per inflorescence; capsules (6-) 7-14 mm long; larger leaves (4-) 7-14 mm wide ..... ***H. prolificum***

4 Flowers 7-many per inflorescence; capsules (3-) 4.5-6 mm long; larger leaves 1-7 (-11) mm wide.

5 Leaves (1.8-) 2.8-8.3 (-11) mm wide, the widest on a plant always over 4 mm wide; [plants widespread] ..... ***H. densiflorum***

5 Leaves 1.0-3.7 (-4.1) mm wide; [plants of the Ridge and Valley of nw. GA, c. and nw. AL, and e. TN] ..... ***H. interior***

Key D – herbaceous St. John's-worts with leaves ascending or appressed, 1-nerved, < 1 mm wide and with a diffuse, racemose inflorescence

1 Leaves linear-subulate, (5-) 8-20 mm long; capsules 1-1.75× as long as the sepals; seeds coarsely rugose-areolate ..... ***H. drummondii***

1 Leaves scale-like, 1-5 mm long; capsules ca. 2-3× as long as the sepals; seeds minutely and inconspicuously reticulate ..... ***H. gentianoides***

Key E – herbaceous St. John's-worts with broad leaves, 3 (-4) locular capsules, stamens connate at base into 3 or 5 fascicles, leaves with black dots as well as translucent glands (except in *H. perforatum*), and sepals and/or petals marked with black dots or lines

1 Smaller stems strongly wing-angled; seeds 1.0-1.3 mm long; leaves of the main stem (8-) 11-20 (-26) mm long, those of the lateral branches typically much smaller; leaves punctate primarily with translucent glands; [alien, usually in disturbed habitats]; [section *Hypericum*] ..... ***H. perforatum***

1 Smaller stems not wing-angled; seeds 0.6-1.1 mm long; leaves of the main stem (11-) 21-48 (-64) mm long, those of the lateral branches nearly to quite as large; leaves punctate with black glands; [native, in a variety of habitats]; [section *Graveolentia*].

2 Petals (3.0-) 4.3-12.2 (-14.0) mm long; sepals 1.5-6 mm long, conspicuously punctate with black glands (sometimes also black-lined); capsules (2.5-) 3.0-5.4 (-6.0) mm long; [collectively widespread, occurring in the Coastal Plain, Piedmont, and Mountains of NC, SC, and VA].

3 Sepals 3-6 mm long; styles (2.5-) 5.4-7.4 (-9.0) mm long; petals (6.0-) 9.2-12.2 (-14.0) mm long; leaf apices acute ..... ***H. pseudomaculatum***

3 Sepals 1.5-4.0 mm long; styles (1.0-) 1.4-2.4 (-3.0) mm long; petals (3.0-) 4.3-5.9 (-9.0) mm long; leaf apices obtuse to slightly retuse ..... ***H. punctatum***

2 Petals 6-18 mm long; sepals 4-10 mm long, with or without black lines (sometimes also black-punctate); capsules (3.0-) 4.0-7.7 (-10.0) mm long; [endemic to moderate to high elevations of w. NC, sw. VA, and e. TN].

4 Styles (3.0-) 5.6-10.0 (-12.0) mm long; sepals without black lines; petals (5.0-) 11.5-16.1 (-18.0) mm long, without black lines and with round black glands only along the petal margin; longest stamens (8.0-) 10.7-16.3 (-22.0) mm long; cymes relatively few-flowered, (2-) 5-14 (-22) flowers per plant.....***H. graveolens***

4 Styles (1.5-) 1.9-2.9 (-5.0) mm long; sepals with black lines; petals (6.0-) 7.0-9.2 (-11.0) mm long, with black lines and round black glands scattered over the surface of the petal; longest stamens (4.0-) 6.1-8.5 (-10.0) mm long; cymes relatively many-flowered, (5-) 13-61 (124) flowers per plant.....***H. mitchellianum***

Key F – shrubby and subshrubby St. John's-worts

1 Plant a matted, decumbent shrub, 0.5-3 (rarely to 5) dm tall; leaves 1.5-2.5× as long as wide, without axillary fascicles of leaves; flowers solitary or in small simple cymes; [endemic to rock outcrops at moderate to high elevations in the Mountains of sw. NC, nw. SC, and ne. GA]; [section *Myriandra*, subsection *Pseudobrathydium*].....***H. buckleyi***

1 Plant an erect suffrutescent herb, 1.5-10 dm tall; leaves 1.5-5× as long as wide, with or without axillary fascicles of leaves; flowers in compound cymes; [mostly of the Coastal Plain and Piedmont, very rarely in the Mountains and then at low elevations]; [section *Myriandra*, subsection *Suturosperma]*.

2 Larger leaves 4-10 mm wide, 3-5× as long as wide; axillary leaf fascicles present in main leaf axils; seeds pale brown, faintly reticulate, 0.4-0.5 mm long.....***H. cistifolium***

2 Larger leaves 10-30 mm wide, 1.5-3× as long as wide; axillary leaf fascicles absent; seeds dark brown, strongly reticulate, 1.5-2 mm long.

3 Flowers in simple 3-flowered cymes or in compound cymes with up to 8 flowers; sepals 3 mm long, oblong, obtuse apically; capsules ovoid, 8-10 mm long (excluding the styles) and 5-7 mm broad; seeds 1.8-2.0 mm long, cylindric, sometimes slightly falcate, dull brown when mature .....***H. apocynifolium***

3 Flowers usually in many-flowered cymes terminating branches; sepals 1.5-2.0 mm long, usually triangular-acute; capsules ovoid to subglobose, 4-5 mm long (excluding the styles) and 4-5 mm broad; seeds 1.5-1.8 mm long, usually falcate-cylindric, dark purplish-brown and lustrous when mature.....***H. nudiflorum***

Key G – herbaceous St. John's-worts with broad leaves, 1-locular capsules, stamens separate or connate at base, but not grouped into fascicles, leaves with translucent dots, without black dots, sepals and petals with translucent lines or dots only, not marked with black dots or lines

1 Stems and leaves pubescent; [section *Trigynobrathys*].....***H. setosum***

1 Stems and leaves glabrous.

2 Styles united, persistent as a single straight beak on the capsule; [section *Myriandra*, subsection *Suturosperma*].

3 Leaves 3-6 cm long, 4-6× as long as wide, the margins revolute; [plants (in our area) of low elevations in the Coastal Plain].....***H. adpressum***

3 Leaves 1-3 (-4) cm long, 2-3× as long as wide, the margins not revolute; [plants (in our area) of high elevations in the Mountains].....***H. ellipticum***

2 Styles separate, more or less divergent, not persistent as a beak on the capsule; [section *Trigynobrathys*].

4 Styles 2-4 mm long; stamens 50-80.

5 Punctate glands absent on the stem (rarely very few on the internodes of the inflorescence); punctate glands of the leaves small, round, distributed on the lower leaf surface, becoming sparse toward the base of the leaf and toward the midrib; midstem leaves mostly broadest at or beyond the middle .....***H. virgatum***

5 Punctate glands frequent on the stem; punctate glands of the leaves and stem large, oval, distributed evenly and densely on the lower leaf surface, also dense on the upper leaf surface in *H. denticulatum* and *H. harperi* (absent on upper leaf surface in *H. species 1*); midstem leaves usually broadest at or below the middle.

6 Upper surface of the leaf with no punctate glands; inflorescence branches typically with 3-12 pairs of bracteal leaves about 1/2 as large as the foliage leaves; [of shallow soil mats on granitic domes in the Piedmont of NC].....***H. species 1***

6 Upper surface of the leaf with abundant punctate glands; inflorescence branches with at most a few pairs of very small bracts; [of Coastal Plain wetlands, very rarely disjunct inland and then in wetlands].

7 Leaves 5-20 (-24) mm long, 5-15 mm wide, 1.5-3× as long as wide, ovate to obovate to narrowly elliptic, mostly appressed to the stem, mostly shorter than the internodes; sepals 4.0-8.0 mm long, 2.0-4.0 mm wide, acute; lower stem not spongy-thickened with aerenchymatous tissue; [of moist pinelands of the Coastal Plain, very rarely disjunct inland to bog habitats in the Piedmont and Mountains].....***H. denticulatum***

7 Leaves 10-35 (-40) mm long, 3-8 (-12) mm wide, 3-10× as long as wide, lanceolate to linear-lanceolate, mostly ascending to spreading, often equalling the internodes; sepals 3.0-5.0 mm long, 0.8-2.5 mm wide, acute to acuminate; lanceolate to linear-lanceolate; upper portion of stem with numerous axillary branches; lower stem usually spongy-thickened with aerenchymatous tissue; [of upland depression ponds of the Coastal Plain, growing where seasonally inundated] .....***H. harperi***

4 Styles 0.5-1.5 mm long; stamens 5-22.

8 Leaves lanceolate to linear, 6-30 mm long, 0.5-3 mm wide, the leaf base attenuate to cuneate..... ***H. canadense***

8 Leaves ovate to elliptic, 3-35 mm long, 2-15 mm wide, the leaf base rounded to cordate-clasping.

9 Sepals broadest near the base; inflorescence with few or no normally sized leaves, these only low in the inflorescence, giving the inflorescence a naked appearance; [of Coastal Plain pinelands]..... ***H. gymnanthum***

9 Sepals broadest near the middle; inflorescence with many normally sized leaves and leaflike bracts, giving the inflorescence a leafy appearance; [collectively widespread].

10 Ultimate bracts of the inflorescence elliptic, much like the leaves; leaves not paler beneath; sepals obtuse, much shorter than the capsule; capsule 3-5 mm long..... ***H. boreale***

10 Ultimate bracts of the inflorescence linear, differing conspicuously from the leaves; leaves paler beneath; sepals acute, about equalling the capsule; capsule 2-3.5 mm long.

11 Inflorescence branches from the upper 1-6 nodes of the stem, the further branching repeatedly monochasial; stem with apical internode well developed, usually longer than the internode below; sepals broader above the middle, more-or-less imbricate; [of the Coastal Plain]..... ***H. mutilum*** *var.* ***latisepalum***

11 Inflorescence branches from the upper 2-10 nodes of the stem, the further branching mostly dichasial; stem with apical internode shorter than the the internode below or even essentially absent; sepals broader below the middle, not imbricate (rarely broader above the middle and imbricate); [widespread]..... ***H. mutilum*** *var.* ***mutilum***

Hypericum adpressum Rafinesque ex Barton, Bog St.-John's-wort, Creeping St.-John's-wort. Cp (GA, NC, SC, VA): boggy depressions; rare (US Species of Concern, GA Special Concern, NC Rare, SC Rare, VA Rare). July-August. E. MA south to sw. GA in the Coastal Plain; disjunct inland in WV, IN, IL, and sc. TN. See discussion on its habitats and rarity in Sorrie (1998b). [= RAB, C, F, G, GW, K, S, V, X, Z]

Hypericum apocynifolium Small. Cp (GA): mesic bluffs and ravines, ridges and natural levees in floodplains; rare. C. and s. GA west to se. AR and e. TX. [= S, V, X, Y; < *H. nudiflorum* – GW, K, Z]

Hypericum boreale (Britton) Bicknell, Dwarf St.-John's-wort, Northern St.-John's-wort. Cp (VA), Mt (NC?, VA): sinkhole ponds in the Mountains, interdune ponds in the outer Coastal Plain, boggy places; rare (NC Watch List, VA Watch List). Newfoundland and Québec west to w. Ontario, south to VA, NC (?), OH, IN, and n. IL. Hybrids with *H. canadense* have been called *H.* ×*dissimulatum* Bicknell (pro sp.). [= C, F, G, K; = *H. mutilum* Linnaeus ssp. *boreale* (Britton) J.M. Gillett – X]

Hypericum brachyphyllum (Spach) Steudel. Cp (GA, SC?): ponds and wet pinelands; common. E. GA (near SC) south to s. FL, west to s. MS. Also reported from SC (Kartesz 1999); needs confirmation. [= GW, K, V, X, Y, Z; < *H. aspalathoides* – S]

Hypericum buckleyi M.A. Curtis, Granite Dome St.-John's-wort. Mt (GA, NC, SC): thin soil in seasonal seepage around rock outcrops, particularly granitic exfoliation domes; rare (GA Special Concern, NC Watch List, SC Rare). June-August. Sw. NC south to nw. SC and ne. GA, a Southern Appalachian endemic. Wilbur (1995) showed that Curtis's spelling of the epithet, "*buckleii*", should be maintained; however, changes in the International Code of Botanical Nomenclature have reversed this (Robson 1996). [= RAB, GW, S, W, V, X, Z; = *H. buckleii* – K, orthographic variant]

Hypericum canadense Linnaeus, Canada St. John's-wort Cp (GA, NC, SC, VA), Mt (NC, SC, VA), Pd (NC, VA); bogs, pine savannas, ditches; common (rare in Piedmont and VA Mountains). July-September. Newfoundland and Québec west to MN, south to s. GA, n. FL, and MS; also in Holland and Ireland, where considered by some to be native. Hybrids with *H. mutilum* and/or *H. boreale* have been called *H.* ×*dissimulatum* Bicknell (pro sp.). [= RAB, C, G, GW, K, S, W, X, Z; > *H. canadense* var. *canadense* – F; > *H. canadense* var. *galiiforme* Fernald – F]

Hypericum cistifolium Lamarck. Cp (GA, NC, SC): pine savannas, wet pine flatwoods; common. June-August. E. NC south to s. FL, west to e. TX. [= RAB, GW, K, V, X, Y, Z; > *H. cistifolium* – S, in a narrower sense; > *H. opacum* Torrey & A. Gray – S]

Hypericum crux-andreae (Linnaeus) Crantz, St. Andrew's Cross, St. Peter's-wort. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): dry forests and woodlands, pine flatwoods; common (rare in Piedmont and Mountains). June-October. NY (Long Island) and NJ south to s. FL, west to e. TX, primarily on the Coastal Plain, but scattered inland to w. NC and n. GA, also north in the interior to c. TN, s. KY, c. AR, and se. OK. [= GW, K, W, X, Y; = *H. stans* (Michaux ex Willdenow) P. Adams & Robson – RAB, C, V, Z; = *Ascyrum stans* Michaux ex Willdenow – F, G; > *Ascyrum stans* – S; > *Ascyrum cuneifolium* Chapman – S]

Hypericum densiflorum Pursh, Mountain Bushy St. John's-wort. Mt (GA, NC, VA), Pd (NC, VA), Cp (GA, NC, SC): bogs, streambanks, dry to moist forests, rock outcrops, moist forests, pine savannas; common (rare in the VA Piedmont). June-August. Sw. PA south to n. GA and c. AL in and near the Mountains; NJ south to SC in the Coastal Plain; s. GA west to TX in the Coastal Plain. The related *H. lobocarpum* Gattinger is more western, extending east to TN; the basis for attribution of *H. lobocarpum* to "Blue Ridge, N.C." by Small (1933) is unknown. [< *H. densiflorum* – RAB, C, GW, K, W, X, Z (also see *H. interior*); < *H. densiflorum* var. *densiflorum* – F, G (also see *H. interior*); > *H. densiflorum* Small – S; > *H. glomeratum* Small – S]

Hypericum denticulatum Walter, Coppery St.-John's-wort. Cp (GA, NC, SC, VA), Pd, Mt (NC): savannas, wet pine flatwoods, adjacent ditches, borrow scrapes, blackwater stream shores; common (GA Special Concern, VA Watch List). July-September. S. NJ south to e. GA (McIntosh County) (Sorrie 1998b) on the Coastal Plain; disjunct inland in c. and w. NC, sc. TN,

and in s. AL. See discussion under *H. virgatum*. [= K, S; = *H. denticulatum* var. *denticulatum* – RAB, C, F, G, Z; < *H. denticulatum* – GW (also see *H. virgatum*); = *H. denticulatum* ssp. *denticulatum* – X]

Hypericum drummondii (Greville & Hooker) Torrey & A. Gray, Nits-and-lice, Drummond's St.-John's-wort. Pd, Cp (GA, NC, SC, VA), Mt (NC, SC, VA): dry woodlands, woodland borders, fields; uncommon. July-September. MD west to OH, IL, and se. KS, south to panhandle FL and c. TX. [= RAB, C, F, G, GW, K, W, X, Z; = *Sarothra drummondii* Greville & Hooker – S]

Hypericum ellipticum Hooker, Pale St.-John's-wort. Mt (NC?): wet places; rare (NC Watch List). Newfoundland and Nova Scotia west to w. Ontario, south to CT, NY, MI, and MN, and in the mountains to WV, NC (?), and ne. TN (Johnson County) (Chester, Wofford, & Kral 1997), and NC (?). The documentation for C's attribution of *H. ellipticum* to NC is unknown. [= C, F, G, K, V, X]

Hypericum fasciculatum Lamarck, Peelbark St.-John's-wort. Cp (GA, NC, SC): wet pine savannas, beaver ponds, upland depression ponds; uncommon (NC Watch List). May-September. E. NC south to s. FL, west to s. MS. [= RAB, GW, K, V, X, Y, Z; < *H. fasciculatum* – S (also see *H. nitidum* and *H. chapmanii*)]

Hypericum frondosum Michaux. Mt (GA, NC*, VA*), Pd (GA), Cp (GA): rock outcrops and rocky woodlands; rare, native in GA, introduced in NC and VA from further south and west. Late May-July. This species is native and widespread as far east as e. TN (Chester, Wofford, & Kral 1997). [= C, F, G, K, V, W, Y, Z; > *H. aureum* Bartram – S; > *H. splendens* Small – S]

Hypericum galioides Lamarck. Cp (GA, NC, SC): wet pine savannas, wet pine flatwoods, pools, edges of bottomlands; common. June-August. E. NC south to n. FL, west to se. TX. [= RAB, GW, K, V, X, Y, Z; > *H. ambiguum* Elliott – S; > *H. galioides* – S, in a narrower sense]

Hypericum gentianoides (Linnaeus) Britton, Sterns, & Poggenburg, Pineweed, Orange-grass. Mt, Pd, Cp (GA, NC, SC, VA): fields, rock outcrops, woodland borders, eroding areas; common. July-October. ME and Ontario west to MN, south to FL and TX. [= RAB, C, F, G, K, W, X, Z; = *Sarothra gentianoides* Linnaeus – S]

Hypericum graveolens Buckley, Mountain St.-John's-wort. Mt (NC): grassy balds, grassy openings, forests, at high elevations (1200 m or more); rare (NC Watch List). July-August. Nw. NC and ne. TN south to sw. NC, a Southern Appalachian endemic. This and the related *H. mitchellianum* (another narrow endemic to the Southern Appalachians) hybridize, forming local hybrid populations with intermediate characteristics (Culwell 1970). [= RAB, GW, K, S, W, X, Z]

Hypericum gymnanthum Engelmann & A. Gray, Clasping-leaf St.-John's-wort. Cp (GA, NC, SC, VA), Pd (GA, VA), Mt (VA): pine savannas, wet pine flatwoods, sinkhole ponds (Augusta and Rockingham counties, VA), other wet to moist habitats; common (rare in Piedmont). June-September. S. NJ south to n. FL, west to c. TX, and scattered inland in PA, WV, sc. TN, OH, IN, IL, MO, and e. KS; also disjunct in Guatemala (introduced?). [= RAB, C, F, G, GW, K, S, X, Z]

Hypericum harperi R. Keller, Harper's St.-John's-wort. Cp (GA, SC): clay-based Carolina bays, other upland depression ponds, with *Taxodium ascendens*; rare. July-September. E. and c. SC south to sw. GA and panhandle FL. *H. harperi* should be sought in sc. and se. NC, where it may well occur. This species has generally been considered a part of *H. denticulatum* or *H. virgatum*, but Webb (1980) makes a convincing argument for its recognition, including the ecological differentiation and absence of intermediates or hybrids when growing in proximity to *H. denticulatum*. See *H. virgatum* for additional discussion. [= X; < *H. denticulatum* var. *acutifolium* – RAB, Z; < *H. denticulatum* – GW; < *H. harperi* – K; < *H. acutifolium* – S]

Hypericum hypericoides (Linnaeus) Crantz, St. Andrew's Cross. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): dry forests and woodlands; common (uncommon in Mountains). May-August. NJ, w. VA, c. KY, se. MO, and c. OK, south to s. FL and e. TX; also in the West Indies, Mexico, and Central America. [= RAB, C, GW, V, W, Y, Z; > *Ascyrum hypericoides* Linnaeus var. *hypericoides* – F, G; > *Ascyrum hypericoides* Linnaeus var. *oblongifolium* (Spach) Fernald – F, G; = *H. hypericoides* ssp. *hypericoides* – K, X; > *Ascyrum hypericoides* Linnaeus – S; > *Ascyrum linifolium* Spach – S]

Hypericum interior Small, Interior Bushy St. John's-wort. Mt (GA): rocky forests, riverbanks; uncommon. E. and c. TN, nw. GA south to c. AL. Perhaps best treated as a variety of *H. densiflorum*. [= S; < *H. densiflorum* – K, V, X, Z; *? H. revolutum* R. Keller]

Hypericum lloydii (Svenson) P. Adams, Lloyd's St.-John's-wort. Pd (GA, NC, SC, VA), Cp (GA, NC, SC): dry woodlands, sandhills, edges of granitic flatrocks, edges of Altamaha Grit outcrops, roadbanks; uncommon. June-September. Sc. VA south to c. AL. [= RAB, K, V, X, Z; = *Hypericum galioides* Lamarck var. *lloydii* Svenson]

Hypericum microsepalum (Torrey & A. Gray) A. Gray ex S. Watson. Cp (GA): moist to wet pine flatwoods; rare. S. GA south to n. FL. [= GW, K, V, X, Y, Z; = *Crookea microsepala* (Torrey & A. Gray) Small – S]

Hypericum mitchellianum Rydberg, Blue Ridge St.-John's-wort. Mt (NC, VA): grassy balds, grassy openings, forests, seepages, at moderate to high elevations (1000-1900 m or more); rare (NC Watch List, VA Rare). July-August. W. VA, e. WV, and e. TN south to sw. NC, a Southern Appalachian endemic. Robson (2006) interprets this as a hybrid of *H. graveolens* and *H. punctatum* but offers no evidence other than its general morphological intermediacy. [= RAB, C, F, G, GW, K, S, W, Z; = *H.* ×*mitchellianum* Rydberg pro sp. – X]

Hypericum mutilum Linnaeus *var.* ***mutilum***, Common Dwarf St.-John's-wort Mt, Pd, Cp (GA, NC, SC, VA): bogs, marshes, other wet habitats; common. June-October. Newfoundland and Québec west to Manitoba, south to s. FL and c. TX; scattered (probably as an adventive) farther west in North America, in Central and South America, and Europe. Hybrids with *H. canadense* have been called *H.* ×*dissimulatum* Bicknell (pro sp.). [= F; < *H. mutilum* – RAB, C, G, GW, K, S, W, Z; = *H. mutilum* ssp. *mutilum* – X]

Hypericum mutilum Linnaeus *var.* ***latisepalum*** Fernald, Southern Dwarf St.-John's-wort. Cp (GA, SC): marshes and other wet habitats; rare. June-October. Se. SC south to peninsular FL, west to TX (and, according to F, north to s. NJ). Hybrids with *H. canadense* have been called *H.* ×*dissimulatum* Bicknell (pro sp.). [= F; < *H. mutilum* – RAB, G, GW, K, S, W, Z; = *H. mutilum* ssp. *latisepalum* (Fernald) N. Robson – X]

Hypericum myrtifolium Lamarck, Myrtle-leaf St.-John's-wort. Cp (GA, SC): ponds; common (rare north of GA). Small (1933) reports this species from SC; this distribution is now documented by a specimen from Jasper Co., SC (P. McMillan, pers. comm.). Se. SC south to sc. FL, west to se. MS, a Southeastern Coastal Plain endemic. [= GW, K, S, V, X, Y, Z]

Hypericum nitidum Lamarck. Cp (GA, SC): pine savannas; rare (NC Rare, SC Rare). June-August. C. SC south to panhandle FL, west to sw. AL. [= RAB, GW, K, V, Y, Z; *H. nitidum* ssp. *nitidum* – X]

Hypericum nudiflorum Michaux ex Willdenow. Pd, Cp (GA, NC, SC, VA), Mt (GA, NC): streambanks, moist forests; common (uncommon in VA Piedmont). June-July. Se. VA south to panhandle FL, west to e. TX, s. AR, and se. OK; disjunct in Cumberland Plateau of TN. [= RAB, C, F, G, S, W, V, X, Y; < *H. nudiflorum* – GW, K, Z (also see *H. apocynifolium* of the deep South)]

* ***Hypericum perforatum*** Linnaeus, European St. John's-wort. Pd (GA, NC, SC, VA), Mt, Cp (NC, SC, VA): fields, pastures, roadsides, woodland borders; common, introduced from Europe. June-September. See Duncan (1985) for documentation for GA. [= RAB, C, F, G, K, S, W, Z; = *H. perforatum* ssp. *perforatum* – X]

Hypericum prolificum Linnaeus, Shrubby St-John's-wort. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): bogs, seepages, rocky forests, rock outcrops; common (rare in Coastal Plain). June-October. NY west to s. MI and MN, south to GA and LA. [= RAB, C, G, K, W, S, V, X, Z; = *H. spathulatum* (Spach) Steudel – F]

Hypericum pseudomaculatum Bush. Cp, Pd (GA, SC), Mt (GA): wet, moist, or dry forests; rare. June-September. SC south to panhandle FL, west to TX, north in the interior to e. TN, c. IL, s. MO, and c. OK. {records east of the Ozarks need to be studied more carefully} [= RAB, C, G, K, S, X, Z; = *H. punctatum* Lamarck var. *pseudomaculatum* (Bush) Fernald – F]

Hypericum punctatum Lamarck, Spotted St.-John's-wort. Mt, Pd, Cp (GA, NC, SC, VA): fields, woodland borders; common. June-September. Québec west to MN, south to c. peninsular FL and TX. [= RAB, C, G, K, W, X, Z; = *H. punctatum* var. *punctatum* – F; > *H. punctatum* – S; > *H. subpetiolatum* Bicknell ex Small – S]

Hypericum setosum Linnaeus. Cp (GA, NC, SC, VA): pine savannas, wet pine flatwoods, boggy areas, adjacent ditches, fireplow lines, and scrapes; common (VA Rare). May-September. Se. VA south to c. peninsular FL, west to se. TX. [= RAB, C, F, G, GW, K, S, X, Z]

Hypericum species 1 Weakley, Radfords' St. John's-wort. Pd (NC): shallow circumneutral soil mats of granitic domes in the Brushy Mountains; rare (NC Watch List). Apparently endemic to the Brushy Mountains of Alexander and Wilkes counties, NC. This taxon, included in *H. denticulatum* var. *acutifolium* by Webb (1980), differs from typical *H. virgatum* in being profusely branched from the medial and upper nodes (rather than being little if at all branched, and then only from the uppermost nodes), in having leaves with acuminate (rather than acute to obtuse) apices, and electrophoretically (Webb 1980). Additionally, these plants have numerous bracteal leaves along the inflorescence branches (vs. few or none), the punctate glands of the foliage are large and oval, resembling those of *H. denticulatum* (vs. small and round), and the punctate glands are distributed on the lower leaf surface and stem (vs. lower leaf surface only). It may be notable that these same outcrops are phytogeographically interesting, with other disjunct and weakly differentiated races (see *Allium cuthbertii*). Further study is planned. [< H. virgatum included in concept of *H. virgatum* (= *H. denticulatum* var. *acutifolium*, *H. denticulatum* ssp. *acutifolium*) by most earlier authors]

Hypericum species 2 LeBlond. Cp (GA, NC, SC?): wet pine savannas, over ultisols or alfisols; rare? June-September. [included in concept of *H. tenuifolium (=reductum)* by earlier authors]

Hypericum stragulum P. Adams & Robson. Mt, Pd (GA, NC, SC, VA), Cp (NC, VA): dry rocky or sandy woodlands; common (uncommon in Coastal Plain). May-August. MA (Nantucket I.), NY (Long Island), west to s. PA, s. OH, s. IN, s. IL, c. MO, se. KS, and c. OK, south to ne. NC, c. SC, c. GA, n. AL, n. MS, n. LA, and c. TX. [= C, V, W, Z; = *H. stragalum* – RAB, misspelling; = *Ascyrum hypericoides* Linnaeus var. *multicaule* (Michaux ex Willdenow) Fernald – F, G; = *H. hypericoides* (Linnaeus) Crantz ssp. *multicaule* (Michaux ex Willdenow) Robson – K, X]

Hypericum suffruticosum P. Adams & Robson, Pineland St.-John's-wort. Cp (GA, NC, SC): pine savannas and flatwoods; common (rare in NC and SC) (NC Rare). April-June. Se. NC south to c. peninsular FL, west to se. LA. [= RAB, K, V, X, Y, Z; = *Ascyrum pumilum* Michaux – S]

Hypericum tenuifolium Pursh, Sandhill St.-John's-wort. Cp (GA, NC, SC): pine flatwoods, pine savannas, sandhills; common. June-September. Se. NC south to c. peninsular FL, west to panhandle FL and se. AL. Robson (1996) indicates that the older name *H. tenuifolium* Pursh has now been adequately shown to apply to this taxon. [= X; = *H. reductum* (Svenson) P. Adams – RAB, GW, K, V, Y, Z; < *H. aspalathoides* Willdenow – S (also including *H. brachyphyllum*)]

Hypericum tetrapetalum Lamarck. Cp (GA): wet pinelands and in depressional wetlands (open or dominated by *Taxodium ascendens*); uncommon. E. GA (within a few counties of se. SC), south to s. FL, west to panhandle FL. [= GW, K, V, X, Y; = *Ascyrum tetrapetalum* (Lamarck) Vail – S]

Hypericum virgatum Lamarck. Pd, Mt (GA, NC, SC, VA), Cp (GA, SC): woodlands, rock outcrops, woodland borders; common (VA Watch List). Late June-September. MD west to s. OH, s. IN, and s. IL, south to c. NC, c. SC, sw. GA, panhandle FL, s. MS, and se. LA. Though treated by most recent authors as a variety of *H. denticulatum*, *H. virgatum* is better considered as a distinct species. Webb (1980) recognized *H. harperi* as a separate species (it had previously been considered a part of *H. virgatum*), and continued to recognize this taxon as a variety of *H. denticulatum*. However, based on the nature of the punctate glands, size of seeds, inland distribution, etc., it appears that *H. virgatum* is more distantly related to *H. denticulatum* and *H. harperi* than they are to one another; recognition at the species level is warranted for *H. virgatum*. As pointed out by Webb, *H. denticulatum* is primarily tetraploid (n = 24), while *H. virgatum* and *H. harperi* are (as far as is known) strictly diploid. Additionally, the aberrant populations from granitic outcrops in the Brushy Mountains of Alexander and Wilkes counties, NC referred by Webb (1980) to this taxon are distinct, and more closely allied to *H. denticulatum* and *H. harperi*. See *Hypericum species 1* for additional discussion. [= K; < *H. denticulatum* Walter var. *acutifolium* (Elliott) Blake – RAB, C, F, G, W, Z (also

see *H. harperi*); > *H. denticulatum* var. *recognitum* Fernald & Schubert – RAB, F; < *H. denticulatum* – GW; < *H. acutifolium* Elliott – S (also see *H. harperi*); = *H. denticulatum* ssp. *acutifolium* (Elliott) N. Robson – X]

Hypericum ascyron Linnaeus ssp. *pyramidatum* (Aiton) N. Robson, American Great St.-John's-wort. The species is of e. North America and e. Asia; ssp. *pyramidatum* occurs from Québec west to MN, south to s. PA (Rhoads & Klein 1993), MD (Robson 2000), and WV (Kartesz 1999). [= X; < *H. ascyron* Linnaeus – K; = *H. pyramidatum* Aiton – C, F, G] {not keyed at this time} {section *Roscyna*}

Hypericum chapmanii W.P. Adams, Apalachicola St. John's-wort, Tree St. John's-wort. Margins of pond-cypress ponds, pond-cypress stringers, often growing with *Cyrilla parviflora* and *Nyssa ursina*. Endemic to Panhandle FL (9 counties). [= GW, K, V, X, Y, Z; < *H. fasciculatum* – S; = *H. arborescens* Chapman]

Hypericum dolabriforme Ventenat, Glade St. John's-wort. Mt (GA): limestone glades and barrens; rare (GA Special Concern). In nw. GA (Jones & Coile 1988) and e. TN (Chester, Wofford, & Kral 1997); this species should be sought in sw. VA. [= C, F, G, K, S, V, X, Z] {not keyed at this time}

Hypericum exile W.P. Adams. Pine flatwoods. Endemic to Panhandle FL (Bay, Franklin, Gulf, Liberty, and Washington counties). There seems nothing in particular to recommend Robson's reduction of *H. exile* to a subspecies of *H. nitidum*. [= GW, K, V, Y, Z; = *H. nitidum* Lamarck ssp. *exile* (W.P. Adams) N. Robson – X]

Hypericum lissophloeus W.P. Adams. Margins of sinkhole ponds. Endemic to Panhandle FL (Bay and Washington counties). [= GW, K, V, X, Y, Z]

Hypericum lobocarpum Gattinger. Streambanks, river bottoms, pinelands. C. TN (Chester, Wofford, & Kral 1997) and MS west to s. IL, se. OK, e. TX; credited to SC by Robson (1996), based on specimens debated and dismissed by Adams (1973). Late May-September. [= C, K, S, V, X, Z; = *H. densiflorum* var. *lobocarpum* (Gattinger) Svenson – F, G; < *H. densiflorum* – GW] {not keyed at this time}

Hypericum majus (A. Gray) Britton. South to nw. PA (Rhoads & Klein 1993), NJ, DE, and OH (Kartesz 1999). [= C, F, G, K, X] {not keyed at this time}

Hypericum species 3 J. Allison, Georgia St, John's-wort. Cp (GA): seepage bogs, roadside ditches; rare (GA Special Concern). Apparently endemic to the Altamaha Grit region of the GA Coastal Plain. {not keyed at this time}

Hypericum sphaerocarpum Michaux, Barrens St. John's-wort. Mt (GA): limestone barrens; rare (GA Special Concern). East to GA (GAHP 2003), e. and c. TN (Chester, Wofford, & Kral 1997), sw. PA (Rhoads & Klein 1993). [= C, F, G, K, V, X, Z; > *H. turgidum* Small – S; > *H. sphaerocarpum* var. *turgidum* (Small) Svenson] {not keyed at this time}

Triadenum Rafinesque (Marsh St-John's-wort)

A genus of 6-10 species, herbs, of e. North America and e. Asia. Although *Triadenum* has sometimes formerly been included in *Hypericum*, Robson (1977) and others consider it to be more closely related to the tropical Asian shrub *Cratoxylum* Blume. References: Adams (1973)=Z.

1 Leaves narrowed to the cuneate or broadly cuneate (rarely truncate) base.
  2 Lower leaves sessile; sepals acute; leaves lacking translucent or dark glands or punctae ..... ***T. tubulosum***
  2 Lower leaves petiolate; sepals obtuse; leaves with translucent glands and dark punctae ..... ***T. walteri***
1 Leaves clasping, cordate, or subcordate at the base.
  3 Sepals 2.5-5 mm long at maturity, obtuse or acute; styles 0.5-1 (-1.5) mm long (best seen in fruit) ..... ***T. fraseri***
  3 Sepals 5-8 mm long at maturity, acute or acuminate; styles 1.8-3 mm long (best seen in fruit) ..... ***T. virginicum***

Triadenum fraseri (Spach) Gleason, Marsh St.-John's-wort. Mt (NC, VA): bogs, peaty wetlands; rare (VA Rare). July-August. Newfoundland and Québec west to MN, south to NY, PA, w. VA, ne. TN, w. NC, OH, n. IN, and NE. Closely related to *T. virginicum* and reduced to a variety of (or included in) that species by some authors. [= C, G, K; = *Hypericum virginicum* Linnaeus var. *fraseri* (Spach) Fernald – F; < *T. virginicum* – W, Z, in part; = *Hypericum fraseri* Spach]

Triadenum tubulosum (Walter) Gleason, Marsh St.-John's-wort. Cp (GA, NC, SC, VA), Pd (VA): bogs, peaty wetlands, drawdown sloughs along rivers; uncommon (GA Rare, VA Rare). August-September. Se. VA south to n. FL, west to LA, and north in the interior to se. and c. TN, s. IL and s. OH. [= C, G, GW, K, Z; = *Hypericum tubulosum* Walter – RAB; = *Hypericum tubulosum* Walter var. *tubulosum* – F; = *T. longifolium* Small – S]

Triadenum virginicum (Linnaeus) Rafinesque, Marsh St.-John's-wort. Cp, Mt (GA, NC, SC, VA), Pd (GA, VA): bogs, peaty wetlands; common (rare in Mountains and Piedmont). July-September. Nova Scotia west to OH and s. Ontario, south to FL and MS, mostly on the Coastal Plain but scattered inland. [= C, G, GW, K, S; = *Hypericum virginicum* Linnaeus – RAB; = *Hypericum virginicum* var. *virginicum* – F; < *T. virginicum* – W, Z, in part only (also see *T. fraseri*)]

Triadenum walteri (J.G. Gmelin) Gleason, Marsh St.-John's-wort. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests and marshes; common (uncommon in VA Piedmont, rare in VA Mountains). August-September. MD south to n. FL, west to e. TX, north in the interior to s. MO, s. IL, and OH. [= C, G, GW, K, W, Z; = *Hypericum walteri* J.G. Gmelin – RAB; = *Hypericum tubulosum* Walter var. *walteri* (J.G. Gmelin) Lott – F; = *T. petiolatum* (Walter) Britton – S]

ILLICIACEAE A.C. Smith 1947 (Star-anise Family)

A family of 1 genus and about 42 species, shrubs and trees, of temperate and subtropical se. Asia and se. North America (se. United States, Cuba, Haiti, and e. Mexico). The family is most closely related to the Schisandraceae and Winteraceae. References: Keng in Kubitzki, Rohwer, & Bittrich (1993).

Illicium Linnaeus 1759 (Star-anise)

A genus of about 42 species, shrubs and trees, of temperate and subtropical se. Asia and se. North America (se. United States, Cuba, Haiti, and e. Mexico). References: Vincent in FNA (1997); Keng in Kubitzki, Rohwer, & Bittrich (1993); Stone & Freeman (1968).

1 Flowers 2-5-5 cm across; tepals 21-33, red-maroon (rarely white or pinkish); leaf tips acute to acuminate; [section *Illicium*] ..... ***I. floridanum***
1 Flowers 0.8-1.2 cm across; tepals 11-16, yellowish green; leaf tips obtuse or rounded; [section *Cymbostemon*]..... ***I. parviflorum***

Illicium floridanum Ellis, Florida Star-anise. Cp (GA): acid ravines and small stream swamps; rare (GA Endangered). Sw. GA west to e. LA. [= FNA, GW, K, S]

* ***Illicium parviflorum*** Michaux ex Ventenat, Swamp Star-anise, Yellow Anise-tree. Cp (GA): cultivated and persistent; rare (GA Special Concern). April-June. This species occurs in swampy forests, evergreen hammocks, and bayheads and is endemic to scattered localities in central FL; it is in the horticultural trade and has been introduced in various places, including sw. and se. GA. [= FNA, K, S]

ITEACEAE J. Agardh 1858 (Sweetspire Family)

A family of 1 genus and about 20 species, shrubs, of e. Asia, e. North America, and Mexico.

Itea Linnaeus (Virginia-willow, Sweetspire, Tassel-white)

Variously treated in a very broadly-conceived Saxifragaceae (RAB, F, G, GW, W), a less comprehensive Grossulariaceae (C, K), a narrow Escalloniaceae, or a very narrow (single genus) Iteaceae (S), the relationships of *Itea* remain problematic. Recent molecular data suggest that the relationship between *Itea* and other woody "saxifragaceous" genera (including *Escallonia*) is only distant (Morgan & Soltis 1993). *Itea* is here conservatively treated in a narrow Iteaceae. The remainder of the genus (about 20 species) is found in e. Asia and w. Malaysia; the only close relative of our species is *I. japonica* Oliver, of Japan. References: Spongberg (1972); Morgan & Soltis (1993); Bohm et al. (1999).

Identification notes: Sometimes confused needlessly with *Clethra*, whose much more coarsely serrate, obovate leaves contrast with the serrulate, elliptic leaves of *Itea*. Also often confused with *Leucothoe racemosa* in vegetative condition.

Itea virginica Linnaeus, Virginia-willow, Sweetspire, Tassel-white. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): moist forests and thickets, especially along the banks of small streams; common (uncommon in Piedmont and Mountains). May-June. S. NJ south to FL and west to e. TX, north in the interior (especially in the Mississippi Embayment) to s. IL and se. MO. [= RAB, C, F, K, G, GW, S, W]

JUGLANDACEAE A. Richard ex Kunth 1824 (Walnut Family)

A family of about 8 genera and 60 species, trees and shrubs, mostly temperate. References: Stone in FNA (1997); Manos & Stone (2001); Elias (1972); Stone in Kubitzki, Rohwer, & Bittrich (1993).

1 Fruit with husk dehiscent into 4 valves; pith of twigs continuous; leaves with (3-) 5-17 (-19) leaflets, the largest usually the terminal or final 2 lateral; nut with shell smooth, ridged, or irregularly wrinkled (but not deeply furrowed); terminal buds with imbricate (overlapping) or valvate scales; [tribe *Juglandeae*, subtribe *Caryinae*] ..... ***Carya***
1 Fruit with husk indehiscent; pith of twigs chambered (not always developing until autumn of the first year's growth); leaves with (7-) 11-19 (-23) leaflets, the largest usually about halfway up the leaf; nut with shell deeply furrowed in a complex corrugated pattern; terminal buds with valvate; [tribe *Juglandeae*, subtribe *Juglandinae*] ..... ***Juglans***

Carya Nuttall (Hickory)
(by A.S. Weakley & R.K. Peet)

A genus of about 18 species, trees, of e. North America (south into s. Mexico), and e. Asia. *Carya* in our area is separated into two sections, section *Apocarya* (*C. aquatica, C. cordiformis, C. illinoinensis*) and section *Carya* (*C. alba, C. carolinae-septentrionalis, C. glabra, C. laciniosa, C. myristiciformis, C. ovalis, C. ovata, C. pallida*). The southeastern United States is the center of diversity of *Carya*. Our four-state area includes 11 of 13 North American species (including the naturalized *C. illinoinensis* and lacking only a more southern species, *C. floridana* Sargent of peninsular FL, and a south-central species, *C. texana* Buckley, of sc. United States), and 11 of 18 species worldwide. Section *Rhamphocarya* includes a single Asian species. The remaining 4 species in the genus are all in section *Apocarya*: *C. palmeri* Manning of Mexico and 3 Asian species.

C. cordiformis, C. aquatica, C. illinoinensis, C. myristiciformis, C. laciniosa, C. ovata, and *C. carolinae-septentrionalis* are diploids, with n = 16. *C. pallida, C. glabra, C. ovalis*, and *C. alba* are tetraploids with n = 32 (Stone 1961). As suggested by Stone, Adrouny, & Flake (1969), it seems possible that reticulate evolution involving extant or extinct diploid species is responsible for some of the difficulties in the *C. glabra-ovalis* complex. Many hybrids have been described, but some are questionable. Additionally, Hardin & Stone (1984) state that "most of these hybrids are localized and have not led to introgressive populations, or at least none that have been recognized".

Ecologically, *Carya* is one of the more diverse and ubiquitous genera of trees in our area, surpassed in number of species, abundance, and ecological amplitude only by *Quercus* and *Pinus*. This has led to a long tradition of describing large parts of our area (in particular the Piedmont) as being characterized by "oak-hickory" or "oak-pine-hickory" forests (e.g. Küchler 1964; Greller 1988; Schafale & Weakley 1990; Skeen, Doerr, & Van Lear 1993). Ware (1992) and others have recently questioned this tradition, pointing out that *Carya* only rarely dominates or codominates, primarily in specialized circumstances (such as in soils with greater cation concentrations, derived from mafic rocks).

The association of many (but certainly not all) species of hickories with soils with high base status was noted in print as early as 1820 in an account of the landscape of North Carolina. "The sandy pine barrens, and all the lands on which pine is the exclusive growth, are unfriendly to agriculture; but where the pine is intermixed with oak and hickory, the soil is good. Some of our strongest lands have tall pine, mixed not only with hickory and oak, but also with walnut and cherry, and such trees that indicate the best soil. Where hickory prevails, the land is strong" (Guthrie 1820).

Note that the *C. glabra-C. ovalis* portion of this treatment is tentative. In our area, this group has been variously treated as consisting of between 1 and 10 (or more) taxa. For testing, we present here a plausible middle ground treatment in the key and species accounts (4 taxa). References: Stone in FNA (1997); Hardin (1992); Hardin & Stone (1984); Elias (1972); Stone, Adrouny, & Flake (1969); Stone (1961); Mohlenbrock (1986); Sargent (1918); Manning (1950); Hardin (1952); Little (1969); Harrar & Harrar (1962); Stone in Kubitzki, Rohwer, & Bittrich (1993). Key based in part on an unpublished manuscript prepared by Stone & Hardin for the Flora of the Southeastern United States.

Identification notes: Surface vestiture of leaves and bud scales is useful in distinguishing species of *Carya*. Some use of these characters can be made with a 10× or 20× hand lens; better still is a dissecting microscope. It is important to understand the different trichome types mentioned in the key (terminology follows Hardin 1990 and Hardin & Stone 1984). **Short acicular trichomes** are simple, unicellular trichomes tapered to a pointed tip, 0.10-0.35 mm long and with rough walls. **Long acicular trichomes** ("solitary" of Hardin & Stone 1984) are similar to short acicular, but are much larger, 0.45-1.6 mm long, and have smooth walls. **Fasciculate trichomes** are multicellular and have 2-8 straight or curled rays radiating from a clustered base. **Multiradiate trichomes** are similar to fasciculate, but have 8-17 rays, the inner (and usually more upright) rays attached basally above the outer (and usually more spreading) rays. **Capitate glandular trichomes** are unicellular or multicellular, and are distinguished by their bulbous or expanded tip; they are usually 0.02-0.1 mm long. **Peltate scales** are flat or dome-shaped shields or disks, slightly to strongly glandular, (sometimes regularly or irregularly lobed) and can be either sessile or stalked (they are often referred to as scales, resin dots, peltate glands, or lepidote scales). On the lower surfaces of leaflets, peltate scales are of two types: **large peltate scales** are 0.08-0.3 mm in diameter and are round, with smooth or slightly irregular margins, while **small peltate scales** are 0.025-0.12 mm in diameter and are either round, irregularly lobed or regularly 2- or 4-lobed.

1 Terminal buds with 4-6 valvate scales; leaves with 7-13 (-19) leaflets, these symmetrical to strongly falcate; fruit sutures narrowly winged.
  2 Leaves with 7-9 (-11) leaflets, these symmetrical to slightly falcate; fasciculate trichomes with 2-4 rays; terminal bud elongate, flattened, 9-19 mm long, bright orangy yellow to dull orange-tan; [common and widely distributed tree in our area, typically in floodplain and slope forests]..... ***C. cordiformis***
  2 Leaves with (7-) 9-19 leaflets, these slightly to strongly falcate; fasciculate trichomes with 2-8 rays.
    3 Leaves with (7-) 9-11 (-13) leaflets; bark shaggy; lateral petiolules 0-2 mm long; nut flattened and angled in cross-section; kernel bitter; [native, of swamp forests, primarily in the Coastal Plain]..... ***C. aquatica***
    3 Leaves with 11-19 leaflets; bark scaly, with small exfoliating plates; lateral petiolules 0-7 mm long; nut round in cross-section; kernel sweet; [introduced, frequently cultivated, long persistent, and occasionally naturalized] .... ***C. illinoinensis***
1 Terminal buds with 6-15 imbricate scales; leaves with (3-) 5-9 (-11) leaflets, these symmetrical to slightly falcate; fruit sutures not winged (except *C. myristiciformis*).

4 Bark shaggy (on large trees separating in segments to a meter in length); leaves with (3-) 5 (-7) leaflets; serrations of the leaflets densely (or only moderately) ciliate when young, most densely so just below the tooth apex, the hairs sloughing with age but leaving a subapical tuft of white trichomes on at least some teeth.
5 Twigs slender, hardened first-year growth or second-year growth 1-3 mm in diameter; terminal bud 6-15 mm long, glabrous to sparsely puberulent (except for ciliate fringe on the scales), reddish-brown (usually turning black on drying); lower surface of leaflets nearly glabrous, except for tufts of trichomes in the main vein axils, and only slightly lepidote with a few, scattered scales, the large peltate scales yellow and round, the small peltate scales brown, 2- and 4-lobed; terminal leaflet 2-5 (-6) cm wide ..... ***C. carolinae-septentrionalis***
5 Twigs stout, hardened first-year growth or second-year growth (2.5-) 3-6 mm in diameter; terminal bud 9-18 mm long, tomentose, tan to brown (rarely turning black on drying); lower surface of leaflets moderately to densely hirsute with acicular and fasciculate hairs (sometimes the hairs more or less limited to the main veins), and also moderately lepidote, the large peltate scales yellow and round, the small peltate scales dark brown and mostly round; terminal leaflet (4-) 6-15 cm wide ..... ***C. ovata***

4 Bark tight (the ridges typically forming an interlocking diamond pattern), scaly, or shaggy (when shaggy, the separated segments normally much < 1 meter long); leaves with (3-) 5-9 (-11) leaflets; serrations of the leaflets glabrous or ciliate, but lacking subapical tufts of trichomes.
6 Twigs stout; terminal buds 8-20 mm long; leaves with (5-) 7-9 (-11) leaflets; lower surface of leaflets densely hirsute with a mixture of acicular (single), fascicled (2-8 rays), and multiradiate (8-many rays) hairs; small peltate scales of the lower surface of leaflets all round; fruit husk 4-13 mm thick; nuts slightly to strongly 4-angled toward the apex.
7 Bark tight; petiole hirsute; leaflet apex acute; lower surface of leaflets densely hirsute with acicular (single) and abundant 2-8-rayed fascicled and multiradiate hairs; fruit husk glabrous, with pustulate bumps; fruit 3.5-5 cm long; nut 2.5-3.5 cm long; [common in our area] ..... ***C. alba***
7 Bark shaggy; petiole hirtellous; leaflet apex acuminate; lower surface of leaflets hirsute with acicular (single), 2-6-rayed fascicled, and occasional multiradiate hairs; fruit husk pubescent, lacking pustulate bumps; fruit 4-7 cm long; nut 3-6 cm long; [rare in our area] ..... ***C. laciniosa***
6 Twigs slender; terminal buds 3-15 mm long; leaves with (3-) 5-7 (-9) leaflets; lower surface of leaflets mostly glabrous, except for along the midrib and primary veins, and sometimes hirsute on the surface with acicular (single) and infrequent fascicled (2-8 rays) hairs (lacking multiradiate trichomes); small peltate scales of the lower surface of leaflets of various types, 4-lobed and/or irregular scales often more frequent than round scales; fruit husk 2-5 mm thick; nuts not 4-angled toward the apex.
8 Terminal bud 4-10 mm long, predominantly lepidote (also pubescent); leaves with (5-) 7 (-9) leaflets; lower surface of spring leaflets densely lepidote with 4-lobed, irregular, and round peltate scales, giving the undersurface a reflective, silvery-tan, rusty-brown, or bronze sheen.
9 Lepidote scales initially silver, soon turning bronze, and giving the buds, young twigs, and undersurface of the leaves a metallic bronze sheen; fruit 2-3 cm long; [of calcareous swamps, bottomlands and slopes of the Coastal Plain of se. NC, e. SC, and GA] ..... ***C. myristiciformis***
9 Lepidote scales silvery-tan or rusty-brown, giving the buds, young twigs, and undersurface of the leaves a dull or slightly shiny tan or rusty-brown color; fruit 3-5 cm long; [usually of upland and acidic forests and woodlands, collectively widespread in our area].
10 Undersurface of the leaflets with dense, silvery-tan large peltate scales, and fewer and less conspicuous fewer small peltate scales (thus the leaves appearing overall silvery-tan); petiole and rachis hirsute with fasciculate trichomes, and also with concentrations of hairs near the leaflet insertions; [widespread in our area, of upland and acidic forests and woodlands] ..... ***C. pallida***
10 Undersurface of the leaflets with dense, rusty-brown small peltate scales, and fewer and less conspicuous sivery-tan large peltate scales (thus the leaves appearing overall rusty-brown); petiole and rachis with few fasciculate hairs (but densely scaly), and lacking concentrations of hairs near the leaflet insertions; [of the sc. United States, east to MS, and perhaps AL, GA, and western KY and TN, of upland or lowland, acidic or calcareous forests and woodlands] ..... **[*C. texana*]**
8 Terminal bud 5-15 mm long, predominantly pubescent (also sparsely lepidote); leaves with (3-) 5-7 (-9) leaflets; lower surface of spring leaflets slightly to densely lepidote with irregular and round peltate scales (4-lobed peltate scales uncommon).
11 Fruit husk spitting to base at maturity along 2-4 sutures; leaves with (5-) 7 leaflets, pubescent beneath; petiole reddish; fruits typically ellipsoidal; bark tight or often scaly or somewhat shaggy ..... ***C. ovalis***
11 Fruit husk indehiscent at maturity or tardily splitting to base along 1 suture; leaves with (3-) 5 (-7) leaflets, glabrous to pubescent beneath; petiole usually green; fruits ellipsoidal, pyriform, or subglobose; bark tight.
12 Rachis (and also often the petiole and lower surfaces of leaflets) densely pubescent..... ..... ***C. glabra*** *var*. ***hirsuta***
12 Rachis, petiole, and lower surfaces of leaflets glabrous or glabrescent.
13 Husk of fruit 1.5-2.5 mm thick; fruit ellipsoidal, subglobose, to obovoid, 1.5-3.5 cm long; terminal leaflet usually 8-17 cm long; [primarily of the Piedmont and Mountains] .... ***C. glabra*** *var*. ***glabra***

13 Husk of fruit about 3.5 mm thick; fruit pyriform, 2.5-5 cm long; terminal leaflet usually 20-25 cm long; [primarily of the Coastal Plain] ..... ***C. glabra* var. *megacarpa***

Carya alba (Linnaeus) Nuttall ex Elliott, Mockernut Hickory, White Hickory. Pd, Cp, Mt (GA, NC, SC, VA): forests and woodlands; common. April-May; October. MA west to IN and IA, south to FL and TX. One of the most common forest trees of much of our area. There has been confusion and controversy for several centuries over the specific epithet. The oldest basionym available is *Juglans alba* Linnaeus, which apparently included disparate elements, including this taxon and *C. ovata*. Following a more circumscribed typification by Crantz in 1766, the epithet "*alba*" should have been applied to this taxon, but continued to be applied in various ways. Rehder (1945) proposed that *C. alba* should be considered a *nomen ambiguum*, but agreed that it applied correctly to what has often been called *C. tomentosa*. He argued that the use of *C. alba* should be rejected "in order to avoid confusion and ambiguity." However, *C. alba* has not been officially rejected, its application appears to be nomenclaturally clear, and there is no alternative under the International Code of Botanical Nomenclature (Greuter 1988) to its use. For further discussion see Rehder (1945), Howard & Staples (1983), and Wunderlin, Hansen, & Hall (1985). [= K; = *C. tomentosa* (Lamarck ex Poiret) Nuttall – RAB, C, F, FNA, G, W; = *Hicoria alba* (Linnaeus) Britton – S]

Carya aquatica (Michaux f.) Nuttall, Water Hickory, Bitter Pecan. Cp (GA, NC, SC, VA), Pd (GA, SC): swamp forests, where flooded during the winter months; uncommon. April-May; October. Se. VA south to c. peninsular FL, west to e. TX, north inland to se. MO, s. IL, and se. OK. [= RAB, C, F, FNA, G, GW, K; = *Hicoria aquatica* (Michaux f.) Britton – S]

Carya carolinae-septentrionalis (Ashe) Engler & Graebner, Carolina Shagbark Hickory, Carolina Hickory. Pd (GA, NC, SC, VA), Mt (GA): upland flats, especially those weathered from mafic rocks and with shrink-swell soils dominated by montmorillonitic clays, less typically on slopes and bottomlands; uncommon (rare in VA). April-May; October. Sc. VA (Halifax County) south to GA, AL, and MS, and inland northward to c. TN and sc. KY. First reported for VA by Wieboldt et al. (1998). The taxonomic status of *C. carolinae-septentrionalis* has been controversial, with some workers reducing it to variety of *C. ovata* or not recognizing it at all. It seems to us morphologically and ecologically distinctive and to represent an independent evolutionary lineage. Hardin & Stone (1984) found differences in trichomes, and in a study of nut oils, Stone, Adrouny, & Flake (1969) found *C. ovata* "surprisingly distant" from *C. carolinae-septentrionalis*. There are reports that the two taxa are also phenologically separated, *C. carolinae-septentrionalis* leafing out about two weeks earlier than *C. ovata*, when growing together in the c. Piedmont of NC. Though usually ecologically and/or geographically segregated, the two species sometimes occur together or in close proximity to one another; they maintain their distinctness. [= RAB, C, G, K; = *C. ovata* (P. Miller) K. Koch var. *australis* (Ashe) Little – FNA; = *Hicoria carolinae-septentrionalis* Ashe – S; = *C. ovata* var. *carolinae-septentrionalis* (Ashe) Reveal; = *C. australis* Ashe]

Carya cordiformis (Wangenheim) K. Koch, Bitternut Hickory. Mt, Pd, Cp (GA, NC, SC, VA): forests and woodlands, especially in rich, moist alluvial or slope forests; common. April; October. ME and s. Québec west to MN and NE, south to panhandle FL and e. TX. [= RAB, C, F, FNA, G, GW, K, W; = *Hicoria cordiformis* (Wangenheim) Britton – S]

Carya glabra (P. Miller) Sweet *var.* ***glabra***, Pignut Hickory. Mt, Pd, Cp (GA, NC, SC, VA): forests and woodlands; common. April-May; October. *C. glabra* ranges from s. NH west to s. MI, se. IA, and se. KS, south to c. peninsular FL and e. TX; the ranges of the varieties are poorly known. [= F, G; < *C. glabra* – RAB, C, FNA, GW, K; < *C. glabra* var. *glabra* – W; = *Hicoria glabra* (P. Miller) Britton var. *glabra* – S]

Carya glabra (P. Miller) Sweet *var.* ***hirsuta*** (Ashe) Ashe, Hairy Pignut Hickory. Mt, Pd? (GA, NC, SC, VA): forests and woodlands; common? April-May; October. Var. *hirsuta* is apparently primarily Appalachian, variously described as being endemic to the Southern Appalachians or ranging north to s. NH. It needs additional taxonomic assessment. [< *C. glabra* – RAB, C, FNA, GW, K; = *C. ovalis* (Wangenheim) Sargent var. *hirsuta* (Ashe) Sargent – F; = *Hicoria glabra* (P. Miller) Britton var. *hirsuta* Ashe – S; < *C. glabra* var. *glabra* – W]

Carya glabra (P. Miller) Sweet *var.* ***megacarpa*** (Sargent) Sargent, Coastal Pignut Hickory. Cp (GA, NC, SC, VA?): maritime forests and other forests of the outer Coastal Plain; uncommon? April-May; October. Var. *megacarpa* is apparently primarily a tree of the se. United States Coastal Plain, ranging from s. NY south to FL, west to TX, and north in the interior to s. IL. It needs additional taxonomic assessment. [= F, G; < *C. glabra* – RAB, C, FNA, GW, K; ? *Hicoria austrina* Small – S]

* ***Carya illinoinensis*** (Wangenheim) K. Koch, Pecan. Cp, Pd (GA, NC, SC, VA): persistent around dwellings and in pecan orchards, escaped to suburban woodlands, rural forest edges and floodplains; commonly cultivated, rarely naturalized. April-May; October. Native to the sc. United States, now more widespread in the se. United States as a result of cultivation. The spelling of the specific epithet has been a source of controversy. [= C, FNA, K; = *C. illinoensis* – RAB, F, G, GW, orthographic variant; > *Hicoria pecan* (Marshall) Britton – S; > *Hicoria texana* LeConte – S]

Carya laciniosa (Michaux f.) G. Don, Kingnut Hickory, Big Shellbark Hickory. Mt (GA), Cp, Pd (NC): moist, circumneutral, alluvial levee forests along brownwater rivers of the Coastal Plain (NC), streams of the Piedmont (NC) and Mountains (GA); rare (NC Rare). April-May; October. NY and s. Ontario west to IA, south to NC, nw. GA, MS, and OK. This species is sometimes planted, but occurs native in nw. GA, along the Roanoke River (Halifax and Northampton counties, NC) and New Hope Creek (Durham County, NC). [= RAB, C, F, FNA, G, GW, K, W; = *Hicoria laciniosa* (Michaux f.) Sargent – S]

Carya myristiciformis (Michaux f.) Nuttall, Nutmeg Hickory. Cp (GA, NC, SC): nonriverine swamps over calcareous substrates, including calcareous clays and coquina limestone ("marl"), oak flatwoods; rare (GA Special Concern, NC Threatened, SC Rare). April; October. Se. NC south to GA, and from wc. AL west to e. TX and se. OK; disjunct in Mexico (Nuevo Léon and Tamaulipas). The bronze sheen of the leaflets of this species is diagnostic. First reported for NC by Leonard (1971b). [= FNA, K; = *C. myristicaeformis* – RAB, GW, orthographic variant; = *Hicoria myristicaeformis* (Michaux f.) Britton – S]

Carya ovalis (Wangenheim) Sargent, Red Hickory. Mt, Pd, Cp (GA, NC, SC, VA): forests and woodlands; common. April-May; October. MA west to WI, south to GA, MS, and MO. [= RAB, C, K; > *C. ovalis* var. *obcordata* (Muhlenberg &

Willdenow) Sargent – F, G; > *C. ovalis* var. *obovalis* Sargent – F, G; > *C. ovalis* var. *odorata* (Marshall) Sargent – F, G; < *C. glabra* – FNA; = *Hicoria microcarpa* (Nuttall) Britton – S; = *C. glabra* (P. Miller) Sweet var. *odorata* (Marshall) Little – W]

Carya ovata (P. Miller) K. Koch, Common Shagbark Hickory. Mt (GA, NC, VA), Pd, Cp (NC, VA): rich moist bottomlands, slopes, occasionally on dry upland flats; uncommon. May; October. S. ME and s. Québec west to MN and NE, south to GA and TX; also disjunct in Mexico. [= RAB, C, F, G, GW, K, W; > *C. ovata* var. *ovata* – F; > *C. ovata* var. *pubescens* Sargent – F; = *C. ovata* var. *ovata* – FNA; = *Hicoria ovata* (P. Miller) Britton – S]

Carya pallida (Ashe) Engler & Graebner, Sand Hickory, Pale Hickory. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): dry sandy or rocky forests and woodlands; common. April-May; October. S. NJ south to FL, west to TX, inland in the interior to w. NC, KY, s. IL, and AR. [= RAB, C, F, FNA, G, K, W; = *Hicoria pallida* Ashe – S]

Carya texana Buckley, Black Hickory. Reported to occur as far east as KY, TN, and GA (Kartesz 1999), an eastern extent not reported by FNA, which accepts it as far east as MS. Jones (2005) states that w. KY material of *C. pallida* is transitional to *C. texana*. [= FNA, K; > *C. texana* var. *arkansana* (Sargent) Little – C; > *C. texana* var. *texana* – F; > *C. buckleyi* Durand var. *arkansana* (Sargent) Sargent – G]

Juglans Linnaeus (Walnut)

A genus of about 21 species, trees and shrubs, of Mediterranean Europe to e. Asia, and North America to Andean South America. Stanford, Harden, & Parks (2000) present a molecular phylogeny and a discussion of biogeography; our two species are distantly related within the genus, with *J. nigra* most closely related to sw. North American *J. microcarpa* and *J. major,* and *J. cinerea* most closely related to several e. Asian species. References: Whittemore & Stone in FNA (1997); Stanford, Harden, & Parks (2000); Stone & Hardin in SE (in prep.); Stone in Kubitzki, Rohwer, & Bittrich (1993); Stanford (1998).

1 Lower surface of the leaflets densely hirsute with 4-8-rayed fascicled hairs; fruit ellipsoid, densely pubescent with reddish-brown glandular hairs; leaf scars with a velvety ridge along the upper margin; leaves with (7-) 11-17 leaflets; pith dark brown; terminal buds 12-18 mm long; bark of mature trees pale; [section *Trachycaryon*]..... ***J. cinerea***

1 Lower surface of the leaflets hirsute with single and 2-rayed fascicled hairs; fruit spherical or nearly so, lepidote with peltate scales and occasional glandular hairs; leaf scars without a velvety ridge along the upper margin; leaves with (9-) 15-19 (-23) leaflets; pith light brown; terminal buds 8-10 mm long; bark of mature trees dark; [section *Rhysocaryon*].....***J. nigra***

Juglans cinerea Linnaeus, Butternut, White Walnut. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (VA): moist, nutrient-rich forests; uncommon (US Species of Concern, GA Special Concern, NC Watch List, SC Rare, VA Watch List). April-May; October. New Brunswick west to MN, south to n. GA and AR. This tree, formerly common, is afflicted with butternut canker disease, which now threatens its continued existence. [= RAB, C, F, FNA, G, K, W; = *Wallia cinerea* (Linnaeus) Alefeld – S]

Juglans nigra Linnaeus, Black Walnut. Mt, Pd, Cp (GA, NC, SC, VA); moist, nutrient-rich forests; common (uncommon in the Coastal Plain of NC and SC). April; October. MA west to MN, south to nw. FL and TX. The dark brown wood is famous for cabinetry and other uses; it is one of the most prized of North American hardwoods. The nuts, though difficult to crack, are prized for their intense flavor. The husk is used as a dye. Country people dehusk the nuts by putting them in dirt or gravel driveways where the passage of car tires removes the husk but does not crack the nut. [= RAB, C, F, FNA, G, K, W; = *Wallia nigra* (Linnaeus) Alefeld – S]

KRAMERIACEAE Dumortier 1829 (Krameria Family)

A family of a single genus and about 15-18 species, herbs, shrubs, and trees, of warm (and usually dry) parts of s. North America to South America. References: Robertson (1973); Simpson et al. (2004).

Krameria Linnaeus (Ratany)

A genus of about 15 species, herbs, shrubs, and trees, hemiparasitic by haustoria. References: Robertson (1973)=Z.

Krameria lanceolata Torrey, Trailing Ratany, Sandspur. Cp (GA): sandhills; uncommon. AR, TX, and s. KS west to se. CO, se. AZ, Chihuahua, and Coahuila; disjunct eastward in the Coastal Plain of FL and GA (east to Bulloch, Bryan, Evans, and Emanuel counties, GA). [= K, Z; > *K. spathulata* Small – S]

LAMIACEAE Lindley 1836 ***or LABIATAE*** A.L. de Jussieu 1789 (Mint Family)

A family of about 230-250 genera and 6700-7170 species, herbs, shrubs, vines, and trees, cosmopolitan. The placement in the Lamiaceae of several genera traditionally placed in Verbenaceae (e.g. *Clerodendrum*) is strongly supported by several lines of evidence. References: Harley et al. in Kadereit (2004).

subfamily Viticoideae: *Vitex*.

subfamily Ajugoideae: *Ajuga, Clerodendrum, Teucrium, Trichostema*.
subfamily Scutellarioideae: *Scutellaria*.
subfamily Lamioideae: *Galeopsis, Lamiastrum, Lamium, Leonurus, Macbridea, Marrubium, Physostegia, Sideritis, Stachys, Synandra*.
subfamily Nepetoideae:
tribe Elsholtzieae: *Collinsonia, Elsholtzia, Mosla, Perilla.*
tribe Mentheae:
subtribe Salviinae: *Rosmarinus, Salvia*.
subtribe Menthinae: *Blephilia, Clinopodium, Conradina, Cunila, Dicerandra, Hedeoma, Hyssopus, Lycopus, Mentha, Monarda, Origanum, Piloblephis, Prunella, Pycnanthemum, Thymus*.
subtribe Nepetinae: *Agastache, Dracocephalum, Glechoma, Meehania, Nepeta*.
incertae sedis: *Melissa*.
tribe Ocimeae:
subtribe Hyptidinae: *Hyptis*.
subtribe Ociminae: *Ocimum*.
incertae sedis: *Callicarpa*.

Acinos
(see *Clinopodium*)

Agastache Clayton ex Gronovius 1762 (Giant-hyssop)

A genus of about 22 species, herbs, of c. and e. Asia, and North America to Mexico. References: Vogelmann (1985); Lint & Epling (1945); Harley et al. in Kadereit (2004).

1 Leaves densely white tomentose below; corolla blue; [cultivated as an ornamental and rarely naturalized] .... ***[A. foeniculum]***
1 Leaves glabrous to villous beneath, appearing green; corolla yellow, greenish-yellow, or pinkish; [native].
2 Corolla yellow or greenish-yellow; calyx lobes obtuse or subacute, 1-1.5 mm long at anthesis; calyx lobes and bracts green; midstem internodes glabrous or minutely pubescent; lower surface of the leaf pubescent on the veins and surface ..... ***A. nepetoides***
2 Corolla pinkish; calyx lobes acute or acuminate, 2-2.5 mm long at anthesis; calyx lobes and bracts with white or pink margins; midstem internodes at least sparsely long-pubescent; lower surface of the leaf pubescent mainly on the veins .. .. ***A. scrophulariifolia***

Agastache nepetoides (Linnaeus) Kuntze, Yellow Giant-hyssop. Pd (NC, SC, VA), Cp (NC, VA), Mt (GA, NC, VA): woodlands and forests, generally over calcareous or mafic rocks; uncommon (GA Special Concern, NC Watch List). July-September; September-October. VT west to MN, south to nw. GA and OK. In our area, this species occurs mostly in the Piedmont. [= RAB, C, F, G, K, S, W]

Agastache scrophulariifolia (Willdenow) Kuntze, Purple Giant-hyssop. Mt (GA, NC, VA), Pd (NC, VA): rich woodlands and forests, bottomlands; uncommon (GA Special Concern). July-September; September-October. VT west to MN, south to NC, e. TN, n. GA, and e. KS. [= K; = *A. scrophulariaefolia* – RAB, C, G, S, W, an orthographic variant; > *A. scrophulariaefolia* var. *scrophulariaefolia* – F; > *A. scrophulariaefolia* var. *mollis* (Fernald) Heller – F]

* *Agastache foeniculum* (Pursh) Kuntze, Lavender Giant-hyssop, native of w. North America, is cultivated as an ornamental and naturalized in scattered locations in PA (Rhoads & Klein 1993), KY (Kartesz 1999), and elsewhere. [= C, F, G, K]

Ajuga Linnaeus (Bugle, Bugleweed)

A genus of about 40-50 species, herbs, of the temperate Old World. References: Harley et al. in Kadereit (2004)

1 Leaves deeply cleft into narrow segments; corolla yellow; annual ..... ***A. chamaepitys***
1 Leaves entire to shallowly lobed; corolla blue (to white or pink); perennial.
2 Plants not stoloniferous; stems hairy all around ..... ***[A. genevensis]***
2 Plants stoloniferous; stems hairy in lines ..... ***A. reptans***

* ***Ajuga chamaepitys*** (Linnaeus) Schreber, Yellow Bugle, Ground-pine Bugle. Cp (VA): disturbed areas; rare, introduced. May-September. [= C, F, G, K]
* ***Ajuga reptans*** Linnaeus, Carpet Bugle. Pd, Mt (NC, VA), Cp (VA): lawns and roadsides; commonly cultivated, uncommonly established. March-June. [= RAB, C, F, G, K]

* *Ajuga genevensis* Linnaeus, Standing Bugle, is cultivated and rarely escaped in ne. North America, at least as far south as PA (Rhoads & Klein 1993) and MD (Kartesz 1999). [= C, F, G, K]

Blephilia Rafinesque 1819 (Woodmint, Pagoda-plant)

A genus of 3 species, herbs, of e. North America. References: Simmers & Kral (1992)=Z; Harley et al. in Kadereit (2004).

1 Stem glabrate below the middle; leaf lower surface glabrous or with a few unicellular hairs on the midvein; [of moist forests over limestone in n. AL] ..... ***[B. subnuda]***
1 Stem strongly pubescent below the middle; leaf lower surface distinctly pubescent, at least on the larger nerves; [of various moist to dry forests, woodlands, and meadows, collectively widespread in our area].
  2 Lobes of the lower lip of the calyx linear, approaching the sinuses of the upper lip; outer bracteoles acute; leaves with rounded to acutish tips (rather *Prunella*-like); petioles 1-7 (-12) mm long; stem canescent, rarely with intermixed long trichomes; [primarily in the Piedmont] ..... ***B. ciliata***
  2 Lobes of the lower lip of the calyx deltoid, not reaching the sinuses of the upper lip; outer bracteoles long-acuminate; leaves with acuminate to acute tips (rather *Monarda*-like); petioles 9-42 mm long; stem densely to sparsely pubescent with long, spreading trichomes; [primarily in the Mountains) ..... ***B. hirsuta***

Blephilia ciliata (Linnaeus) Bentham. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): woodlands, meadows, forests, usually in circumneutral soils (over diabase, limestone, etc.); uncommon. May-early July; August-October. MA and WI south to c. GA and AR. [= RAB, C, F, G, K, S, W, Z]

Blephilia hirsuta (Pursh) Bentham. Mt, Pd (NC, VA), {GA}: rocky or alluvial forests, montane forests up to at least 5000 feet elevation; common (VA Watch List). Late June-October; August-November. Québec and MN south to NC, AL, AR, and e. TX. [= RAB, C, G, S, W, Z; > *B. hirsuta* var. *hirsuta* – F, K]

Blephilia subnuda R.W. Simmers & Kral is endemic (so far as is known) to the Cumberland Plateau of nc. AL (Jackson and Madison counties). [= K, Z]

Calamintha
(see *Clinopodium*)

Callicarpa Linnaeus 1753 (Beautyberry)

A genus of about 140 species, small trees, shrubs, and lianas, mainly tropical and subtropical. References: Moldenke (1980)=Z; Harley et al. in Kadereit (2004).

1 Leaves 7-23 cm long, stellate-scurfy beneath; peduncles 1-5 mm long ..... ***C. americana***
1 Leaves 2-6.5 (-7) cm long, glabrous or nearly so beneath (except on the midrib); peduncles 10-20 mm long.
  2 Inflorescence supra-axillary, diverging from the twig 1-4 mm above the leaf axil ..... ***C. dichotoma***
  2 Inflorescence axillary, borne directly in the axil of the leaf ..... ***C. japonica***

Callicarpa americana Linnaeus, Beautyberry, American Beautyberry, French-mulberry. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): maritime forests, other forests (especially with sandy or rocky soils), disturbed areas; common (rare in Mountains). June-July; August-October (persisting into the winter). MD and AR south to FL, TX, Mexico; West Indies. [= RAB, C, F, G, K, S, W]

* ***Callicarpa dichotoma*** (Loureiro) K. Koch, Chinese Beautyberry. Pd (NC, VA), Cp, Mt (NC), {SC}: roadsides, powerline rights-of-way, woodland edges, suburban woodlands, bogs; uncommon, native of Asia. September-November. This species is beginning to spread more rapidly in the Southeast. [= RAB, C, K]

* ***Callicarpa japonica*** Thunberg, Japanese Beautyberry. Pf (NC): suburban woodlands; rare, native of e. Asia. Reported for Durham Co., NC by Moldenke (1980); corroborated by specimens from Orange County, NC in 2005. [= K, Z]

Chaiturus Willdenow 1787

* ***Chaiturus marrubiastrum*** (Linnaeus) Reichenbach, Horehound Motherwort. Mt, Pd (VA): disturbed areas; rare, introduced from Europe and n. Asia. June-September. [= K; = *Leonurus marrubiastrum* Linnaeus – C, F, G, S]

Clerodendrum Linnaeus (Glory-bower)

A genus of about 400-500 species, trees and shrubs, mostly tropical and warm temperate, e. and w. hemispheres. References: Steane et al. (1999); Hsiao & Lin (1995); Steane, de Kok, & Olmstead (2004); Harley et al. in Kadereit (2004).

* ***Clerodendrum bungei*** Steudel. Pd (GA, SC), Cp (GA): roadsides and suburban woodlands; rare, introduced from e. Asia. August-September. First reported from South Carolina by Hill & Horn (1997); also reported for our area by W. Duncan (pers. comm.). [= K]

* ***Clerodendrum indicum*** (Linnaeus) Kuntze, Tubeflower, Turk's-turban. Cp (GA, SC): disturbed areas, roadsides; rare, introduced from the Malaysian Archipelago. August-October; November-December. [= K; = *Clerodendron indicum* – RAB, orthographic variant]

* ***Clerodendrum trichotomum*** Thunberg *var.* ***ferrugineum*** Nakai, Harlequin Glory-bower. Pd, Mt (NC), {GA}: roadsides, streambanks; rare, cultivated and strongly naturalized, native of e. Asia. [= K]

* *Clerodendrum chinense* (Osbeck) Mabberley, Stickbush, is cultivated and naturalized in FL, including the Panhandle (Escambia County) (Wunderlkin & Hansen 2004). [= K; ? *C. japonicum* (Thunberg) Sweet var. *pleniflorum* (Schauer) Maheshwari]

* *Clerodendrum japonicum* (Thunberg) Sweet is also cultivated and may be encountered in our area. It is naturalized in MD (Staff of the Bailey Hortorium 1976). [= K]

Clinopodium Linnaeus 1753 (Calamint)

A genus of about {??} 20 species (as here circumscribed), herbs and shrubs, of temperate and subtropical areas of the w. and e. hemispheres. References: Cantino & Wagstaff (1998)=Y; Shinners (1962a)=Z; Shinners (1962f)=X. Key adapted in part from Z.

1 Plant a shrubby perennial, not flowering the first year; [of sandy or rocky habitats of the Coastal Plain and Piedmont, from s. NC southward].
  2 Corolla bright scarlet, 27-50 mm long; calyx 8-18 mm long ..... ***C. coccineum***
  2 Corolla light lavender or pink with darker spots, 10-20 mm long; calyx 6.0-7.5 mm long.
    3 Leaves ovate or elliptic, sharply serrate, not revolute; leaves distinctly petioled; leaf surfaces glabrous ..... ***C. georgianum***
    3 Leaves linear to linear-elliptic, entire, strongly revolute; leaves subsessile; leaf surfaces minutely and densely pubescent ..... ***C. ashei***
1 Plant an herbaceous to suffrutescent perennial, often flowering the first year; [of various habitats, collectively widely distributed in our area].
  4 Stem glabrous or pubescent at the nodes only; leaves of flowering stems linear to oblanceolate; [native, of limestone glades, barrens, and bluffs].
    5 Plant stoloniferous, bearing leafy stolons with ovate leaves; leaves of the flowering stems 1-2 cm long, 1-5 mm wide, entire ..... ***C. arkansanum***
    5 Plant not bearing leafy stolons; leaves of the flowering stems oblanceolate, 2.5-5 cm long, 5-17 mm wide, with several teeth on each side ..... ***[C. glabellum]***
  4 Stem pubescent; leaves of flowering stems elliptic to ovate; [alien or native, generally of disturbed or weedy situations].
    6 Axillary flower clusters sessile, dense.
      7 Whorls with 8 or fewer flowers; calyx 4.5-7 mm long; corolla 7-10 mm long ..... ***C. acinos***
      7 Whorls with > 8 flowers; calyx 7-10 mm long; corolla 12-22 mm long ..... ***C. vulgare***
    6 Axillary flower clusters peduncled, contracted cymes.
      8 Calyx 6.0-10.2 mm long, the hairs inside the throat barely or not exserted; blades of larger stem leaves 2-5 cm long ..... ***C. ascendens***
      8 Calyx 2.8-6.0 mm long, the hairs inside the throat exserted, prominent; blades of the larger stem leaves 0.8-2.4 cm long ..... ***C. calamintha***

* ***Clinopodium acinos*** (Linnaeus) Kuntze, Mother-of-thyme, Basil-thyme. Mt (VA): cultivated, rarely escaped or persisting; rare, introduced from Europe. [= *Satureja acinos* (Linnaeus) Scheele – C, F, G; = *Acinos arvensis* (Lamarck) Dandy – K]

Clinopodium arkansanum (Nuttall) House, Arkansas Calamint. Mt (VA): dry limestone glades; rare (VA Rare). Ontario west to MN, south to w. NY, nw. PA, w. VA, WV, IL, c. TN, and s. WI; also in MO, OK, AR, and TX. There appears to be confusion about the identities and distributions of this taxon and *C. glabellum*. [= K, Y; = *Satureja glabella* (Michaux) Briquet var. *angustifolia* (Torrey) Svenson – C, G; = *Satureja arkansana* (Nuttall) Briquet – F; < *Calamintha arkansana* (Nuttall) Shinners – GW (also see *Clinopodium glabellum*); = *Calamintha arkansana* (Nuttall) Shinners – Z; < *Clinopodium glabellum* (Michaux) Kuntze – S]

* ***Clinopodium ascendens*** (Jord.) Samp., Common Calamint. Cp (VA): rich calcareous slope; rare, introduced from Europe. August. [= *Calamintha sylvatica* Bromf. ssp. *ascendens* (Jord.) P.W. Ball – K; ? *Calamintha officinalis* – Z]

Clinopodium ashei (Weatherby) Small, Ashe's Calamint, Ashe's Savory, Ohoopee Dunes Wild Basil. Cp (GA): xeric sandhills; rare (GA Threatened). Peninsular FL and disjunct in e. GA (Candler and Tatnall counties). [= K, S, Y; = *Calamintha ashei* (Weatherby) Shinners – Z; = *Satureja ashei* Weatherby]

* ***Clinopodium calamintha*** (Linnaeus) Stace, Lesser Calamint, Basil-thyme. Mt, Pd, Cp (NC, VA), {GA}: disturbed areas; common (rarer in NC), introduced from Europe. July-October. [> *Satureja calamintha* (Linnaeus) Scheele var. *nepeta* (Linnaeus) Briquet – RAB, F, G, W; = *Satureja calamintha* (Linnaeus) Scheele – C; > *Satureja calamintha* var. *calamintha* – F; > *Satureja calamintha* var. *nepetoides* (Jord.) Briquet – F, G; > *Satureja calamintha* var. *glandulosa* (Riquien) Briquet – F; > *Calamintha nepeta* (Linnaeus) Savi ssp. *nepeta* – K; > *Calamintha nepeta* ssp. *glandulosa* (Riquien) P.W. Ball – K; = *Clinopodium nepeta* (Linnaeus) Kuntze – S; > *Calamintha officinalis* Moench – Z; > *Calamintha nepeta* (Linnaeus) Savi – Z]

Clinopodium coccineum (Nuttall ex Hooker) Kuntze, Scarlet Calamint, Scarlet Wild Basil, Red Mint Shrub. Cp (GA): sandhills and flatwoods; uncommon. E. GA south to FL and west to s. MS. [= K, S, Y; = *Calamintha coccinea* (Nuttall ex Hooker) Bentham – Z; = *Satureja coccinea* (Nuttall ex Hooker) Bertolini]

Clinopodium georgianum Harper, Georgia Calamint. Cp, Pd (GA, NC, SC): longleaf pine sandhills, dry rocky woodlands; rare (NC Rare). July-September. S. NC south to Panhandle FL and west to LA. [= K, S, Y; = *Satureja georgiana* (Harper) Ahles – RAB; = *Calamintha georgiana* (Harper) Shinners – Z]

Clinopodium vulgare Linnaeus, Wild Basil. Mt, Pd, Cp (NC, VA): pastures, roadbanks, forests, thin soils around rock outcrops; common. July-September. Newfoundland to Manitoba, south to NC, sc. TN, and KS, scattered in the west, widespread in Europe. Plants in our area may reflect both native and introduced genotypes. [= K, S, Y, Z; = *Satureja vulgaris* (Linnaeus) Fritsch – RAB, C, F, G, W; > *Satureja vulgaris* var. *vulgaris* – F; > *Satureja vulgaris* var. *diminuta* (Simon) Fernald & Wiegand – F; > *Satureja vulgaris* var. *neogaea* Fernald – F; > *Clinopodium vulgare* var. *neogaea* (Fernald) C.F. Reed]

Clinopodium brownei (Swartz) Kuntze, Browne's Savory. Cp (GA, SC): floodplain forests, pondshores; rare (GA Special Concern). In sw. GA (Jones & Coile 1988). Reported for SC (Beaufort County, SC) (Daniel Payne, pers.comm. 2006, specimen at CLEMS). [= K; > *Micromeria pilosiuscula* (A. Gray) Small – S; > *Micromeria brownei* (Sw.) Bentham var. *pilosiuscula* A. Gray – GW, X] {not keyed at this time}

Clinopodium dentatum (Chapman) Kuntze, of GA and Panhandle FL. [= K; = *Satureja dentata* (Chapman) Briquet; = *Calamintha dentata* Chapman] {not keyed at this time; add to synonymy}

Clinopodium glabellum (Michaux) Kuntze. Dry-mesic to mesic shaley forests, limestone barrens of c. KY, c. TN, MO, AR, and c. AL. Reports of this for VA (Kartesz 1999) are apparently based on confusion with *Clinopodium arkansanum*. [= Y; = *Satureja glabella* (Michaux) Briquet var. *glabella* – C; = *Clinopodium glabellum* (Michaux) Kuntze – K; < *Calamintha arkansana* (Nuttall) Shinners – GW; < *Clinopodium glabellum* (Michaux) Kuntze – S; = *Calamintha glabella* (Michaux) Bentham]

* *Clinopodium gracile* (Bentham) Kuntze, Slender Wild Basil, introduced in s. AL, FL, LA (Kartesz 1999; Woods, Diamond, & Searcy 2003) and MS (S.W. Leonard, pers. comm. 2005). [= K] {not keyed at this time; add to synonymy}

Collinsonia Linnaeus 1753 (Horsebalm, Richweed, Stoneroot)

A genus of about 4 species, perennial herbs, of e. North America. References: Peirson, Cantino, & Ballard (2006)=Y; Shinners (1962b)=Z; Harley et al. in Kadereit (2004). Key adapted from Y and Z.

1 Inflorescence an unbranched thyrse, the lower nodes with (3-) 6 flowers per node; floral bracts absent; pedicels flattened at base; leaves (2-) 4 (-6), the 4 upper (or only) leaves subverticillate; flowers light pink to lavender; flowering April-June; [subgenus *Micheliella*]..... ***C. verticillata***

1 Inflorescence a panicle (rarely unbranched), the flowers 2 per node; floral bracts present, minute to large; pedicels not enlarged basally; leaves 6 or more, opposite; flowers cream to yellow; flowering July-September; [subgenus *Collinsonia*].

2 Fertile stamens 4; fresh plants with anise scent; [of GA southward and westward]..... ***C. anisata***

2 Fertile stamens 2; fresh plants with lemon scent; [collectively widespread in our area].

3 Blades of the larger stem leaves 4.0-10.5 cm long, with 5-15 teeth on each margin, glabrous or hispidulous on the main veins beneath; plant from a small, rounded tuber-like crown, to 6 cm long and 5 cm in diameter..... ***C. tuberosa***

3 Blades of the larger stem leaves 8-25 cm long, with 11-42 teeth on each margin, glabrous or variously pubescent beneath; plant from an elongate, woody, rhizome-like crown, to 15 cm long.

4 Calyx 2-5 mm long; calyx teeth lance-subulate to narrowly lanceolate; flowers 8-13 mm long..... ***C. canadensis***

4 Calyx 4.5-7 mm long; calyx teeth broadly lanceolate; flowers 12-17 mm long..... ***C. punctata***

Collinsonia anisata Sims, Southern Horsebalm, Anise Horsebalm. Pd, Cp (GA): rich forests; uncommon. Late July-September; September-October. C. GA south and west to Panhandle FL and west to s. MS, on the Piedmont and Coastal Plain. This species is apparently distinct, but Shinners's concept of it included hybrids with *C. canadensis* and aberrant *C. canadensis* (Peirson, Cantino, & Ballard 2006). [= Y; < *Collinsonia serotina* Walter – K, W, Z; < *C. canadensis* var. *punctata* (Elliott) A. Gray –F, misapplied; < *C. punctata* Elliott – S; *? Micheliella anisata* (Sims) Briquet – S]

Collinsonia canadensis Linnaeus, Richweed, Northern Horsebalm. Mt, Pd, Cp (GA, NC, SC, VA): cove forests, rich forests, especially over calcareous or mafic substrates; common. Late July-September; September-October. Québec, MI, and WI south n. FL and LA. [= RAB, C, F, G, K, S, W, Z; < *C. canadensis* – Y (also see *C. tuberosa*)]

Collinsonia punctata Elliott, Florida Horsebalm. Cp (GA, SC): rich woods; rare. Late August-mid October; September-October. S. SC (Barnwell County) to e. LA, on the Coastal Plain. [= Y; < *Collinsonia serotina* – K, Z]

Collinsonia tuberosa Michaux, Stoneroot. Pd (GA, NC, SC), Mt (GA): rich forests, over calcareous or mafic substrates; rare (NC Watch List). Late July-September; September-October. C. NC west to c. TN, south to n. GA and MS (or LA?). Peirson, Cantino, & Ballard (2006) conclude that *C. tuberosa* should be merged into *C. canadensis*, a conclusion not followed here. [= RAB, K, S, W, Z; < *C. canadensis* – Y; = *C. canadensis* Linnaeus var. *tuberosa* (Michaux) A. Wood]

Collinsonia verticillata Baldwin, Whorled Horsebalm. Pd (GA, NC, SC, VA), Mt (GA): rich forests, ranging from moist (cove) forests to rather dry oak forests over mafic or calcareous rocks; rare (NC Rare, SC Rare, VA Rare). Late April-early June; June-July. S. VA west to e. TN, south to w. NC, nw. SC, c. GA, and MS; disjunct in s. OH. The range is strangely scattered and fragmented. [= RAB, C, G, K, W, Y, Z; = *Micheliella verticillata* (Baldwin) Briquet – F, S]

Conradina A. Gray 1870

A genus of 6 species, shrubs and suffrutescent herbs, of temperate se. North America. References: Shinners (1962)=Z; Harley et al. in Kadereit (2004).

1 Leaves densely gray-pubescent above and below ..... ***[C. canescens]***
1 Leaves green above, glabrous or inconspicuously short-pubecsent.
  2 Plants upright to 8 dm tall; calyx tube glabrous or minutely and inconspicuously puberulent; [of the Coastal Plain of Panhandle FL and s. AL] ..... ***[C. glabra]***
  2 Plants decumbent, rooting at the nodes; calyx tube densely short-pubescent and also pilose with longer glandular hairs; [of the Cumberland Plateau of KY and TN] ..... ***[C. verticillata]***

Conradina canescens A. Gray, Gray Rosemary. Sandhills, scrub, flatwoods. January-May. Panhandle FL and s. AL west to s. MS. [= K, Z; > *C. canescens* – S; > *C. puberula* Small – S]

Conradina glabra Shinners, Apalachicola Rosemary. Sandhills. Panhandle FL and s. AL. [= K, Z]

Conradina verticillata Jennison, Cumberland Rosemary. Endemic to flood-scoured cobble bars of the Cumberland Plateau area of ne. TN and se. KY. It has an odor similar to rosemary, and showy purplish flowers. [= K, Z; = *C. montana* Small – S]

Cunila D. Royen ex Linnaeus 1759 (Stone-mint, American-dittany, Wild-oregano)

A genus of about 15 species, herbs, from e. North America to South America. References: Harley et al. in Kadereit (2004).

Cunila origanoides (Linnaeus) Britton, Stone-mint, American-dittany, Wild-oregano. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (NC, VA): dry rocky slopes, other dry slopes; common (rare in NC Coastal Plain). S. NY and PA west to MO, south to c. SC, n. GA, OK, and ne. TX (Singhurst & Holmes 2004). [= RAB, C, F, G, K, W; = *Mappia origanoides* (Linnaeus) House – S]

Dicerandra Bentham 1830

A genus of 9 species, herbs, endemic to se. North America. References: Huck (1987)=Z; Huck (1984)=Y; Huck & Chambers (1997); Harley et al. in Kadereit (2004).

1 Corolla tubular, straight or slightly curved; superior lobe cucullate (hoodlike); stamens and style arching under the hooded upper lobe of the corolla, included or slightly exserted beyond its apex; filaments inserted at 2 levels within the corolla; odor of fresh plant cinnamon-like, spicy; [section *Lecontea*].
  2 Corolla tube ca. 18 mm long, the orifice ca. 2 mm wide; leaves (15-) avg. 25 (-45) mm long, linear, the margins entire; [of s. SC south through much of the Coastal Plain of GA] ..... ***D. odoratissima***
  2 Corolla tube >20 mm long, the orifice ca. 4 mm wide; leaves (19-) avg. 40 (-55) mm long, narrowly oblong, the margins often dentate; [endemic to McIntosh County, GA] ..... ***D. radfordiana***
1 Corolla funnel-shaped, the tube geniculate; superior corolla lobe a lobed, flaring standard; stamens and style exserted, the stamens either widely flaring to the sides or declined along the lower lobe of the corolla; filaments inserted at the same level within the corolla; odor of fresh plant minty; [section *Dicerandra*].
  3 Cymes epedunculate; flowers nearly sessile in compact verticils; pollen white to pale yellow; anther spurs obtuse to barely acute, with domes of minute hairs ..... ***[D. densiflora]***
  3 Cymes on peduncles 3-6 mm long; flowers on pedicels (3-) avg. 5 (-9) mm long; pollen bright yellow; anther spurs acuminate, glabrous.

4 Leaves linear; cymes 3-flowered; corolla white to pale purple; anthers vivid yellow; [widespread in the Coastal Plain of GA south to ne. FL and s. AL].....***D. linearifolia** var. **linearifolia***
4 Leaves narrowly rhombic; cymes 5-7-flowered; corolla purplish red to vivid purple; anthers strongly reddish brown; [of extreme s. GA south into e. Panhandle FL and ne. FL]..... ***D. linearifolia** var. **robustior***

Dicerandra linearifolia (Elliott) Bentham *var. **linearifolia***. Cp (GA): sandhills and flatwoods; uncommon. Mid September-late November. W. and ec. Coastal Plain of GA south to ne. FL and s. AL. This taxon is hexaploid. [= K, Y, Z; < *D. linearifolia* – S]

Dicerandra linearifolia (Elliott) Bentham *var. **robustior*** R.B. Huck. Cp (GA): sandhills and flatwoods; uncommon. Late September-late November. Sc. Coastal Plain of GA (Brooks, Echols, Lowndes counties) (Huck 1987) south to e. Panhandle FL and ne. FL. This taxon is tetraploid. [= K, Y, Z; < *D. linearifolia* – S]

Dicerandra odoratissima Harper. Cp (GA, SC): sandhills; uncommon (SC Rare). Late August-early October. S. SC south to se. GA. This taxon is tetraploid. [= RAB, K, S, Y, Z]

Dicerandra radfordiana R.B. Huck, Radford's Dicerandra. Cp (GA): dry flatwoods and sandhills; rare (GA Special Concern). September-October. Endemic to e. GA (McIntosh County). This species was postulated to be a polyploid derivative of *D. odoratissima* by Huck (1984, 1987); later study has shown that this is not the case (Huck & Chambers 1997). Both taxa are tetraploid. [= K, Y, Z]

Dicerandra densiflora Bentham, reported for GA by Small (1933), but this report is apparently in error. Huck (1987) regards it as endemic to n. peninsular FL. October-early November. This taxon is tetraploid. [= K, S, Y, Z]

Dracocephalum Linnaeus 1753 (Dragon's-head)
(also see *Physostegia*)

A genus of about 45-70 species, herbs, of Eurasia and North America. References: Harley et al. in Kadereit (2004).

* ***Dracocephalum parviflorum*** Nuttall, Dragon's-head. Pd (NC): cultivated ground; rare, native west of the Appalachians. May-July; July-September. [= C, F, G, K; = *Moldavica parviflora* (Nuttall) Britton – RAB]

Elsholtzia Willdenow 1790

A genus of about 35-40 species, herbs, of temperate e. hemisphere. References: Harley et al. in Kadereit (2004).

* ***Elsholtzia ciliata*** (Thunberg) Hylander. Mt (NC): disturbed areas; rare, introduced from Asia. First reported for NC by Leonard (1971b). [= C, F, G, K]

Galeopsis Linnaeus 1753 (Hemp-nettle)

A genus of about 10 species, herbs, of Eurasia. References: Stace (1997)=Z; Harley et al. in Kadereit (2004). Key adapted from Stace (1997).

1 Stem with soft, appressed hairs; stem not swollen at the nodes .....***[G. ladanum** var. **ladanum]***
1 Stem with rigid, bristly hairs; stem swollen at the nodes.
2 Terminal lobe of lower lip of corolla clearly emarginate and also convex (the sides revolute); corolla 13-16 mm long .... ***G. bifida***
2 Terminal lobe of the lower lip of the corolla entire to very slightly emarginate, essentially planar, not revolute; corolla 13-20 (-25) mm long..... ***[G. tetrahit]***

* ***Galeopsis bifida*** Boenninghausen, Bifid Hemp-nettle. Mt (NC): streamsides, pastures, roadsides; rare, introduced from Eurasia. July-frost. [= K, Z; < *G. tetrahit* – RAB, S; = *G. tetrahit* Linnaeus var. *bifida* (Boenninghausen) Lejeune & Courtois – C, F, G]

* *Galeopsis ladanum* Linnaeus var. *ladanum*, Red Hemp-nettle is naturalized in ne. North America, south at least to se. PA (Rhoads & Klein 1993) and may occur in our area. [= F, K; > *G. ladanum* Linnaeus var. *angustifolia* (Ehrhart ex Hoffmann) Wallroth – C, G, misappied]

* *Galeopsis tetrahit* Linnaeus, Common Hemp-nettle is naturalized in ne. North America and may occur in our area. Some of the material reported from our area may be this taxon. [= Z; = *G. tetrahit* var. *tetrahit* – C, F, G; > *G. tetrahit* var. *tetrahit* – K]

Glechoma Linnaeus 1753 (Gill-over-the-ground)

A genus of about 4-10 species, herbs, of temperate Eurasia. References: Harley et al. in Kadereit (2004).

* ***Glechoma hederacea*** Linnaeus, Gill-over-the-ground, Ground-ivy. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): lawns, gardens, disturbed areas; common, introduced from Eurasia. Late March-June; May-July. [= C, K; = *Glecoma hederacea* – RAB, S, W, misspelled; > *G. hederacea* var. *hederacea* – F; > *G. hederacea* var. *micrantha* Moricand – F; > *Glecoma hederacea* var. *parviflora* (Bentham) House – G]

Hedeoma Persoon 1807 (American Pennyroyal)

A genus of about 38-42 species, herbs, of North America, Central America, and South America. References: Irving (1980)=Z; Harley et al. in Kadereit (2004).

1 Leaves elliptic, 4-11 mm wide, slightly to strongly crenate; nutlets subspherical, 0.7-1.0 mm long, 0.6-0.9 mm wide, the surface smoothish, mottled, not glaucous; [subgenus *Hedeoma*] ..... ***H. pulegioides***
1 Leaves linear to narrowly elliptic, 1-4 mm wide, entire; nutlets narrowly ovoid, 1.0-1.3 mm long, 0.4-0.6 mm wide, the surface areolate and strongly glaucous; [subgenus *Saturejoides*].
  2 Calyx teeth convergent, closing the orifice at maturity; bracteoles subtending the individual flower pedicels 1-2 mm long, about ½ as long as the pedicel; leaves (5.0-) avg. 7.7 (-11.0) mm long, (1.2-) avg. 2.2 (-4.0) mm wide, 3-5× as long as wide ..... ***[H. drummondii]***
  2 Calyx teeth spreading (the upper) to slightly convergent (th lower), not closing the orifice at maturity; bracteoles subtending the individual flower pedicels (1.5-) 2.5-6 mm long, generally as long as or longer than the pedicel; leaves (11.0-) avg. 16.4 (-21.0) mm long, (1.0-) avg. 2.2 (-3.0) mm wide, > 5× as long as wide ..... ***H. hispida***

*? ***Hedeoma hispida*** Pursh, Rough Pennyroyal. Pd (GA, SC, VA), Mt, Cp (GA): disturbed areas, pastures, granitic flatrocks; rare, apparently adventive from further south and west. Irving (1980) shows no collections of *H. hispida* closer to our area than e. panhandle FL, c. AL, nc. TN, and s. OH; it may be recently arrived in our area or previously overlooked. First reported for SC by Hill & Horn (1997). [= C, F, G, K, Z]

Hedeoma pulegioides (Linnaeus) Persoon, American Pennyroyal. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): dry soils of woodlands, roadbanks, woods-roads, especially common in shaly parts of the VA mountains; common (uncommon to rare in the Carolinas). Late July-October. Nova Scotia, s. Québec, s. Ontario, MI, WI, and IA south to c. SC, c. GA, and AR. The fragrant oil is apparently very similar to that of the European Pennyroyal, *Mentha pulegium* Linnaeus. The oil is a powerful insect repellant and insecticide, often used on pets to repel fleas. It is also poisonous to humans, however, at least in substantial quantities. It is sometimes used as a tea; native Americans are reputed to have used it as an abortion inducer. This plant should be used with great caution, if at all. [= RAB, C, F, G, K, S, W, Z]

Hedeoma drummondii Bentham. East to MS and AL, where it occurs in black belt prairies. [= K, Z]

Hyptis Jacquin 1786 (Cluster Bushmint)

A genus of about 280-300 species, herbs and shrubs, of warm temperate, subtropical, and tropical America. References: Harley et al. in Kadereit (2004).

1 Leaves lanceolate, narrowed to a narrowly cuneate, subpetiolar base; flowers borne in large, globose heads, 1.5-2.5 cm across, borne on peduncles 2-6 cm long ..... ***H. alata***
1 Leaves ovate, narrowed to a broadly cuneate to truncate base and well-developed petiole (4-6 cm long on larger leaves); flowers borne in irregular verticillate spikes, sessile to pedunculate on peduncles 1-2 mm long ..... ***H. mutabilis***

Hyptis alata (Rafinesque) Shinners, Musky Mint, Cluster Bushmint. Cp (GA, NC, SC): wet pine savannas, margins of swamp forests, wet powerline rights-of-way, ditches; common. Late June-September. Ne. NC south to FL, west to se. TX; also in the West Indies. [= RAB, GW, K; = *H. radiata* Willdenow – S]

Hyptis mutabilis (A. Richard) Briquet, Tropical Bushmint. Cp (GA, SC, VA); rare, perhaps only a waif, introduced from South America. This species is naturalized in disturbed wetlands from e. GA south to s. FL, west to se. LA. [= GW, K, S]

Hyssopus Linnaeus 1753 (Hyssop)

A genus of 2-5 species, herbs, of s. Europe to c. Asia. References: Harley et al. in Kadereit (2004).

* ***Hyssopus officinalis*** Linnaeus, Hyssop. {NC} Reported for NC (see G and S); documentation not known. Introduced from Eurasia. July-October. [= RAB, C, F, G, K, S]

Isanthus Rafinesque
(see *Trichostema*)

Lamiastrum Heister ex Fabricius 1759 (Yellow Archangel)

A monotypic genus, an herb, of w. Europe to Iran, often included in *Lamium*. The generic name may be illegitimate. References: Mennema (1989)=Z; Harley et al. in Kadereit (2004).

* ***Lamiastrum galeobdolon*** (Linnaeus) Ehrendorfer & Polatschek, Yellow Archangel. Pd (VA): disturbed areas; rare, introduced from Europe and e. Asia. Several subspecies are recognized in Europe. [= K; = *Lamium galeobdolon* (Linnaeus) Linnaeus – Z; = *Galeobdolon luteum* Hudson]

Lamium Linnaeus 1753 (Dead-nettle, Henbit)

A genus of about 17-40 species, herbs, of n. Africa and Eurasia. References: Mennema (1989)=Z; Harley et al. in Kadereit (2004).

1 Corolla yellow; anthers glabrous; bracts present, reflexed.....***[see Lamiastrum galeobdolon]***
1 Corolla blue or white; anthers with tufts of hairs; bracts absent or present (if present not reflexed).
  2 Perennial, with rhizomes or stolons; corolla 18-35 mm long, the tube curved; leaves all petioled; [section *Lamiotypus*].
    3 Corolla white; leaves not blotched with white; lower corolla lip with 2-3 teeth on each side; pollen light yellow..... ..... ***L. album ssp. album***
    3 Corolla pinkish-purple (rarely white); leaves usually marked with white; lower corolla lip with 1 tooth on each side; pollen orange .....***L. maculatum***
  2 Annual, lacking rhizomes or stolons; corolla 10-18 (-20) mm long, the tube straight; leaves all petioled **or** upper leaves sessile and clasping.
    4 Leaves subtending flower clusters sessile; [section *Amplexicaule*]..... ***L. amplexicaule var. amplexicaule***
    4 Leaves all petiolate; [section *Lamium*].
      5 Leaves subtending whorls deeply serrate, with many teeth > 2 mm long; nutlets (2.5-) 2.7-3.0 (-3.3) mm long .....***L. dissectum***
      5 Leaves subtending whorls crenate-serrate, with teeth < 2 mm long; nutlets (2.0-) 2.2-2.5 (-2.8) mm long ....***L. purpureum***

* ***Lamium album*** Linnaeus *ssp. **album***, White Dead-nettle, Snowflake. (VA): disturbed areas; rare, introduced from Eurasia. April-September. Reported from our area (VA) by many earlier manuals; not documented in Harvill et al. (1992). [= Z; < *L. album* – C, F, G, K]
* ***Lamium amplexicaule*** Linnaeus *var. **amplexicaule***, Henbit, Henbit Dead-nettle. Cp, Pd, Mt (GA, NC, SC, VA): lawns, fields, roadsides, disturbed areas, gardens, pastures; common, introduced from Eurasia and n. Africa. January-December. [= Z; < *L. amplexicaule* – RAB, C, F, G, K, W]
* ***Lamium dissectum*** With., Cutleaf Dead-nettle. Mt (NC), Pd (VA): lawns, fields, roadsides, disturbed areas; rare, introduced from Eurasia. April-May. This taxon is apparently an allopolyploid derivative (2n=36), resulting from hybridization of *L. purpureum* and another species, perhaps *L. amplexicaule*. Because of its allopolyploid status, this taxon should not be treated as a variety of *L. purpureum*. It is, however, possible that some individuals identified here may be sterile hybrids (2n=18). [= *L. hybridum* Villars – RAB, C, F, G, misapplied; = *L. purpureum* Linnaeus var. *incisum* (Willdenow) Persoon – K, Z]
* ***Lamium maculatum*** Linnaeus, Spotted Dead-nettle. Pd, Mt (NC?, VA): lawns, fields, roadsides, disturbed areas; rare, introduced from Eurasia. April-September. [= RAB, C, F, G, K, Z]
* ***Lamium purpureum*** Linnaeus, Red Dead-nettle, Purple Dead-nettle. Mt, Pd (GA, NC, SC, VA), Cp (NC, VA): lawns, fields, roadsides, disturbed areas, pastures; common, introduced from Eurasia. March-October. Other varieties are found in the Old World. [= RAB, C, F, G, W; = *L. purpureum* var. *purpureum* – K, Z]

Leonotis (Persoon) R. Brown 1810 (Lion's-ears)

A genus of about 9 species, herbs, shrubs, and small trees, of sub-Saharan Africa. References: Iwarsson & Harvey (2003)=Z.

* ***Leonotis nepetifolia*** (Linnaeus) Aiton f. *var. **nepetifolia***, Lion's-ears, Lightning-rod-plant. Cp, Pd (GA, NC, SC): pastures, disturbed areas; uncommon, introduced from s. Africa. Late August-October. [= Z; < *L. nepetifolia* – K; < *L. nepetaefolia* – RAB, S, orthographic variant]

Leonurus Linnaeus 1753 (Motherwort)

(also see ***Chaiturus***)

A genus of 25 species, herbs, of temperate Eurasia. Though *L. marrubiastrum* and *L. sibiricus* are documented in our area only from VA, they are also documented from south of our area; they likely will be found to occur in all four states.

1 Calyx strongly 5-angled, the lower 2 lobes deflexed; upper corolla lip white-villous; leaves lacerately toothed and the larger shallowly lobed ..... ***L. cardiaca***
1 Calyx slightly 5-angled, no lobes notably deflexed; upper corolla lip with densely and finely puberulent; leaves **either** entire to few-toothed (but not lobed) **or** deeply 3-parted, the 3 divisions further lacerately toothed or lobed.
  2 Leaves entire to few-toothed (but not lobed) ..... ***[see Chaiturus marrubiastrum]***
  2 Leaves deeply 3-parted, the 3 divisions further lacerately toothed or lobed ..... ***L. sibiricus***

* ***Leonurus cardiaca*** Linnaeus, Motherwort, Lion's-tail. Pd (SC, VA), Mt (GA, VA), Cp (VA), {NC}: roadsides, pastures, disturbed areas; common, introduced from c. Asia. May-August; July-October. Nelson (1993) reports the occurrence of this species in SC. [= RAB, C, F, G, S, W; *? L. cardiaca* ssp. *cardiaca* – K]
* ***Leonurus sibiricus*** Linnaeus, Siberian Motherwort. Cp (VA): disturbed areas; rare, introduced from Asia. May-September. [= C, F, G, K, S]

Lycopus Linnaeus 1753 (Bugleweed, Water-horehound)

A genus of about 10-14 species, herbs, of temperate Eurasia, North America, and Australia. References: Sorrie (1997)=Z; Harley et al. in Kadereit (2004). Key adapted from Sorrie.

1 Calyx lobes acute at the apex, shorter than or equaling the nutlets.
  2 Plant without tubers; leaf base tapered to a long, winged petiole; corolla lobes 4, erect; leaf teeth (6-) avg. 8.6 (-11) per side ..... ***L. virginicus***
  2 Plant usually with tubers; leaf base subsessile or tapered to a short, winged petiole; corolla lobes 4 or 5, all or some spreading; leaf teeth (2-) avg. 5.0 (-7) per side.
    3 Corolla lobes 4, one erect and three spreading; nutlet tubercles well-developed, deeply toothed; leaf teeth (2-) avg. 4.5 (-6) per side; [of the fall-line sandhills of NC and SC] ..... ***L. cokeri***
    3 Corolla lobes 5, spreading; nutlet tubercles weakly developed, undulate; leaf teeth (4-) avg. 5.4 (-7) per side; [of the Mountains, upper Piedmont, and VA Coastal Plain] ..... ***L. uniflorus***
1 Calyx lobes acuminate to subulate-tipped, much exceeding the nutlets.
  4 Nutlet tubercles not developed or only weakly so.
    5 Calyx 2.0-3.3 mm long; stems and branches glabrous to sparsely pubescent with hairs < 0.5 mm long; leaf teeth sharply acute to short-acuminate ..... ***L. americanus***
    5 Calyx 3.0-4.5 mm long; stems and branches densely to sparsely pubescent with hairs 0.5-1.6 mm long; leaf teeth blunt to acute ..... ***L. europaeus***
  4 Nutlet tubercles well developed.
    6 Leaves evidently petiolate, the petioles narrowly winged ..... ***L. rubellus***
    6 Leaves sessile or subsessile.
      7 Leaves ovate to lanceolate, usually rounded at the base, scarcely reduced upward on the stem ..... ***L. amplectens***
      7 Leaves lanceolate to linear, cuneate at the base, upper leaves conspicuously narrower (and often also shorter) than the lower leaves ..... ***L. angustifolius***

Lycopus americanus Muhlenberg ex W. Barton, American Bugleweed. Cp (NC, SC, VA), Pd (NC, VA), Mt (GA, VA): marshes, bottomlands; common (GA Special Concern). June-November. Newfoundland west to British Columbia, south to FL and CA. [= RAB, C, GW, K, S, W, Z; > *L. americanus* var. *americanus* – F, G; > *L. americanus* var. *longii* Benner – F, G; > *L. americanus* var. *scabrifolius* Fernald – F]

Lycopus amplectens Rafinesque, Clasping Water-horehound. Cp (GA, NC, SC), Mt? (NC?), {VA}: clay-based Carolina bays, other moist habitats; uncommon (NC Watch List). June-November. MA south to FL; disjunct inland around the Great Lakes and (allegedly) in w. NC. [= RAB, C, GW, K, W, Z; > *L. amplectens* var. *amplectens* – F, G; > *L. amplectens* var. *pubens* (Britton) Fernald – F, G; > *L. pubens* Britton – S; > *L. sessilifolius* A. Gray – S]

Lycopus angustifolius Elliott, Narrowleaf Bugleweed, Southern Bog Water-horehound. Cp (GA, NC, SC, VA): bogs, marshes; uncommon (NC Watch List). June-November. Se. VA south to FL, west to e. TX, north in the interior to s. TN and s. MO. [= C, Z; = *L. rubellus* Moench var. *angustifolius* (Elliott) Ahles – RAB, GW; = *L. rubellus* Moench var. *lanceolatus* Benner – F; < *L. rubellus* – G, K, W]

Lycopus cokeri Ahles ex Sorrie, Coker's Bugleweed, Carolina Bugleweed. Cp (NC, SC): sandhill pocosins, boggy streamheads, seepage bogs; uncommon (NC Watch List). July-November. Endemic to the fall-line sandhill region of sc. NC and SC. See Sorrie (1997) for a detailed discussion of this species. [= RAB, K, Z; < *L. uniflorus* Michaux – GW]

* ***Lycopus europaeus*** Linnaeus, Gypsywort, European Bugleweed. Cp (NC, VA): marshes, ditches; uncommon, introduced from Europe. June-November. [= RAB, C, G, K, S, Z; > *L. europaeus* var. *europaeus* – F; > *L. europaeus* var. *mollis* (Kern.) Briq. – F]

Lycopus rubellus Moench, Stalked Bugleweed. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (GA, VA): marshes, swamp forests, bottomlands; common. June-November. ME west to MI, south to FL and TX. [= C, S, Z; = *L. rubellus* var. *rubellus* – RAB, GW; < *L. rubellus* – G, K, W (also see *L. angustifolius*); > *L. rubellus* – S; > *L. velutinus* Rydberg – S]

Lycopus uniflorus Michaux, Northern Bugleweed. Mt (NC, SC, VA), Pd (NC, VA): bogs, seeps, wet forests; common. July-October. Newfoundland west to AK, south to w. NC, AR, and CA. [= RAB, C, F, G, S, W, Z; < *L. uniflorus* – GW (also see *L. cokeri*); > *L. uniflorus* var. *uniflorus* – K]

Lycopus virginicus Linnaeus, Virginia Bugleweed. Cp, Pd, Mt (GA, NC, SC, VA): swamps, bottomlands, other wet habitats; common. July-November. MA west to PA, s. IN, MO, and OK, south to n. FL and e. TX. [= RAB, C, F, G, GW, K, S, W, Z]

In the Great Lakes and St. Lawrence River regions, hybrid swarms involving *L. americanus* and *L. europaeus* are numerous (Webber & Ball 1980). However, to date there is no evidence that these species have hybridized within the Flora region.

Macbridea Elliott ex Nuttall 1818 (Birds-in-a-nest, Macbridea)

A genus of 2 species, herbs, of se. North America. References: Harley et al. in Kadereit (2004).

1 Corolla white (faintly marked with purple in the throat); leaf tips obtuse to rounded; [FL Panhandle] ..... ***[M. alba]***
1 Corolla lavender or pink; leaf tips acute; [se. NC south to s. GA] ..... ***M. caroliniana***

Macbridea caroliniana (Walter) Blake, Carolina Birds-in-a-nest, Carolina Macbridea. Cp (GA, NC, SC): swamp forests, especially in sphagnous seepage areas away from direct flooding, savanna edges, ditches; rare (US Species of Concern, GA Special Concern, NC Proposed Threatened). July-November. Se. NC to s. GA; reported but undocumented from n. FL, AL, and MS. Apparently rare throughout its range. [= RAB, GW, K; = *M. pulchra* Elliott – S]

Macbridea alba Chapman, White Birds-in-a-nest, White Macbridea. Pine savannas. Panhandle FL. [= GW, K, S]

Marrubium Linnaeus 1753 (Horehound)

A genus of about 30-40 species, herbs, of Mediterranean Europe and Asia. References: Harley et al. in Kadereit (2004).

* ***Marrubium vulgare*** Linnaeus, Horehound. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): fencerows, disturbed places; uncommon, introduced from Eurasia. Used for cough-syrups in folk medicine. [= RAB, C, F, G, K, S, W]

Meehania Britton 1894 (Meehania)

A genus of 2-6 species, herbs, ours in temperate e. North America, and the other species in e. Asia. References: Harley et al. in Kadereit (2004).

Meehania cordata (Nuttall) Britton, Meehania. Mt (NC, VA): moist, rocky, forested slopes; uncommon (NC Rare, VA Watch List). Late May-June; June-July. A Central and Southern Appalachian endemic: sw. PA and OH south to nw. NC and ne. TN. [= RAB, C, F, G, K, S, W]

Melissa Linnaeus 1753 (Balm)

A genus of 3-4 species, herbs, from Europe to Iran and c. Asia. References: Harley et al. in Kadereit (2004).

* ***Melissa officinalis*** Linnaeus, Lemon Balm, Common Balm. Mt, Pd (NC, SC, VA), Cp (VA): disturbed areas; rare, introduced from w. Asia. [= RAB, C, F, G, K, S, W]

Mentha Linnaeus 1753 (Mint)

A genus of about 20-25 species, herbs, of temperate Eurasia and n. North America. References: Stace (1997)=Z; Harley et al. in Kadereit (2004). Key largely adapted from C and Stace (1997).

1 Flowers in axillary verticils subtended by ordinary foliage leaves, and separated by internodes of ordinary length.

2 Calyx glabrous throughout, or pubescent toward the tips only; calyx 2-3.5 mm long; plants usually sterile; fresh plant usually with spearmint odor or flavor ..... ***M. ×gracilis***
2 Calyx pubescent throughout its length; calyx 1.5-2.5 mm long; plants usually fertile; fresh plant usually with a rather unpleasant odor of flavor.
3 Leaves subtending the inflorescence mostly broadly rounded at the base; leaves of the inflorescence relatively narrow; [alien]..... ***M. arvensis*** *var.* ***arvensis***
3 Leaves subtending the inflorescence mostly cuneate at the base; leaves of the inflorescence relatively broad; [native, though often in weedy situations] ..... ***M. arvensis*** *var.* ***canadensis***

1 Flowers in terminal spikes or heads, the subtending leaves absent or distinctly smaller than the foliage leaves.
4 Inflorescence a terminal globose to ovoid head of 1-3 verticils.
5 Pedicels, calyx, and leaves pubescent; plants usually fertile..... ***M. aquatica***
5 Pedicels and clayx glabrous, leaves glabrous or nearly so; plants usually sterile..... ***M. ×piperita*** *var.* ***citrata***
4 Inflorescence a spike of several to many verticils.
6 Bracteal leaves much longer than the flowers, resembling the foliage leaves, but smaller or narrower..... ..... ***M. ×gracilis***
6 Bracteal leaves linear to laneolate, little surpassing the flowers.
7 Calyx tube glabrous; leaves glabrous, or with scattered hairs on the lower surface.
8 Petioles of the min leaves 4-15 mm long; spikes stout; plants sterile; fresh plant with peppermint odor or flavor..... ***M. ×piperita*** *var.* ***piperita***
8 Petioles of the main leaves 0-3 mm long; spikes slender; plants fertile; fresh plant with spearmint odor or flavor..... ***M. spicata***
7 Calyx tube pubescent; leaves moderately to densely hairy on the lower surface.
9 Leaves 2-3× as long as wide, broadly cuneate to rounded at the base; leaf serrations sharp; leaf surface nearly planar..... ***M. longifolia***
9 Leaves 1-2× as long as wide, broadly roundec to subcordate at the base; leaf serrations rounded; leaf surface strongly rugose..... ***M. suaveolens***

[Note: The distribution, habitats, phenology, and abundance of all *Mentha* species need herbarium investigation]

* ***Mentha aquatica*** Linnaeus, Water Mint, Lemon Mint. {NC, VA} introduced from Europe. [= C, F, G, S, Z; < *M. aquatica* – K (also see *Mentha ×citrata*)]

Mentha arvensis Linnaeus *var.* ***canadensis*** (Linnaeus) Kuntze, Canada Mint. {NC, VA} [= C; *? M. arvensis* – RAB, misapplied; *? * *Mentha ×villosa* Hudson (pro sp.) [*Mentha spicata* × *suaveolens*]. Introduced south to PA and KY. [= C, K; *? M. alopecuroides* Hull – F]

Micromeria Bentham
(see *Clinopodium*)

Moldavica
(see *Dracocephalum*)

Monarda Linnaeus 1753 (Bergamot)

A genus of about 12-20 species, herbs, of North America. Many of our species are cultivated, especially *M. didyma* in various selected forms. Additional studies are needed on a number of taxonomic problems in *Monarda*. Most of the varieties recognized above have been considered valid by a succession of workers; they do seem to describe morphologically distinguishable (if not entirely discrete) entities which make phytogeographic sense. References: McClintock & Epling (1942)=Z; Scora (1967)=Y; Fosberg & Artz (1953)=X; Gill (1977); Prather & Keith (2003); Harley et al. in Kadereit (2004).

1 Flowers in 2-6 glomerules, terminal and at 2-5 successive nodes down the stem; stamens included; leaves lanceolate to narrowly elliptic, usually broadest near the middle and tapered to a cuneate base, (2.5-) 3-8× as long as wide.
- 2 Calyx lobes attenuated into a spinose awn 2-7 mm long; corolla white to pink; inner bracts subtending the flowers 4-9 mm wide, abruptly acuminate into a spinose bristle ..... ***M. citriodora*** *var.* ***citriodora***
- 2 Calyx lobes narrowly to broadly triangular, acute or long-acuminate but not awned; corolla yellow, spotted with purple; inner bracts 8-14 mm wide, acuminate.
  - 3 Lower leaf surface moderately to densely silvery-tomentose; stem densely villous with spreading or downwardly-curved coarse hairs, lacking coarse, horizontal bristles and short downwardly-curved hairs..... ***M. punctata*** *var.* ***villicaulis***
  - 3 Lower leaf surface pubescent mainly on the midvein and other main veins, appearing green; stem pubescent with short downwardly-curved hairs, also with coarse, horizontal bristles and/or upwardly-curved hairs.
    - 4 Stem with many coarse horizontal bristles, also pubescent with short, downwardly-curved hairs; leaves (40-) 50-70 (-95) mm long, 10-28 mm wide (at least some over 15 mm wide), averaging ca. 3× as long as wide..... ***M. punctata*** *var.* ***arkansana***
    - 4 Stem with few or no coarse horizontal bristles, also pubescent with a mixture of upwardly-curved and downwardly-curved hairs; leaves (25-) 35-55 (80) mm long, 5-17 mm wide (the widest very rarely over 15 mm wide), averaging ca. 4× as long as wide..... ***M. punctata*** *var.* ***punctata***

1 Flowers in 1 (-2) glomerule, terminal (rarely also 1 at the next node down the stem); stamens exserted; leaves ovate to ovate-lanceolate, broadest near the rounded, truncate, or subcordate base, 1.5-3 (-4)× as long as wide.
- 5 Corolla 30-45 mm long, scarlet-red, (3-) 4-8 mm broad at the expanded portion of the throat; [primarily of mountain seepages, streambanks, and boggy places]..... ***M. didyma***
- 5 Corolla 14-33 (-36) mm long, white, lavendar, or purple, 1-3 (-4) mm broad at the expanded portion of the throat; [of various habitats, usually dryish to mesic].
  - 6 Leaves deltoid-ovate to ovate, 2-6 cm wide, usually ca. 2× as long as wide; orifice of the calyx glabrous to slightly hirsute with a few long hairs; upper lip of the corolla 5-8 mm long and not bearded (*M. clinopodia*) or 13-16 mm long and slightly bearded (*M. media*) near its apex; outer surface of the corolla glabrous to evenly pubescent with short curled hairs.
    - 7 Corolla white, greenish, or pale pink, the lower lip purple-spotted; outer bracts subtending the inflorescence green or pale (rarely with a purplish midvein); upper lip of the corolla 5-8 mm long, not bearded..... ***M. clinopodia***
    - 7 Corolla deep purple, the lower lip usually not spotted; outer bracts subtending the inflorescence purple to red; upper lip of the corolla 13-16 mm long and slightly bearded near its apex..... ***M. media***
  - 6 Leaves narrowly-deltoid, ovate-lanceolate to lanceolate, 1-4 cm wide, usually ca. 3× as long as wide; orifice of the calyx densely hirsute with numerous erect, stiff, white hairs; upper lip of the corolla prominently bearded near its apex; outer surface of the corolla evenly pubescent with short curled hairs.
    - 8 Corolla deep purple; middle lobe of the lower corolla lip 4-6 mm long; outer bracts subtending the inflorescence reddish..... ***M. fistulosa*** *var.* ***rubra***
    - 8 Corolla lavendar, rose, or nearly white; middle lobe of the lower corolla lip 2-4 mm long; outer bracts subtending the inflorescence green (rarely the midvein only reddish).
      - 9 Plants 10-30 cm tall; leaves subcoriaceous, glabrous, dark green, shiny; calyx 5-8 mm long, the lobes conspicuously pustulate-glandular; [of limestone glades and barrens]..... ***M. fistulosa*** *var.* ***brevis***
      - 9 Plants 30-130 cm tall; leaves herbaceous, pubescent, light to medium green, not shiny; calyx 7-11 mm long, the lobes not pustulate-glandular; [of various habitats].
        - 10 Pubescence of the petioles and lower leaf surface hirsute or villous, the trichomes spreading, 1-3 mm long ..... ***M. fistulosa*** *var.* ***fistulosa***
        - 10 Pubescence of the petioles and lower leaf surface canescent, the trichomes appressed (sometimes also with an admixture of longer, spreading trichomes)..... ***M. fistulosa*** *var.* ***mollis***

* ***Monarda citriodora*** Cervantes ex Lagasca y Segura *var.* ***citriodora***, Lemon Bergamot. Cp (GA, SC): disturbed places: rare, introduced from a native range centered in TX. June-July; July-August. [= Y; < *M. citriodora* – RAB, F, G; = *M. citriodora* ssp. *citriodora* var. *citriodora* – K; *? M. dispersa* – S; = *M. citriodora* ssp. *citriodora* – Z]

Monarda clinopodia Linnaeus, Basil Bergamot. Mt, Pd (NC, SC, VA): mesic, forested slopes; common. Late May-September; July-October. NJ, w. NY, and IL, south to n. GA and c. AL (some of the range perhaps accountable to cultivation).

There appear to be a number of chemical races in *M. clinopodia* which may warrant taxonomic status. [= RAB, C, F, G, K, S, W, Y, Z; = *M. fistulosa* Linnaeus var. *clinopodia* (Linnaeus) Cooperrider]

Monarda didyma Linnaeus, Bee-balm, Oswego Tea. Mt (NC, SC, VA), Pd (NC, VA), Cp (NC): seepage slopes, periglacial boulderfields with abundant seepage, streambanks, boggy places, usually in strong to moderately filtered sunlight; common, rare in Piedmont, rare in Coastal Plain (where introduced only) (SC Rare). July-September; September-October. ME west to MI, south to PA and OH, and in the Appalachians south to sw. NC, se. TN, and ne. GA (part of the northern range is likely only by introduction). McClintock & Epling (1942) describe 2 forms of *M. didyma*: the "broad-leaved form," with leaves averaging 9.2 cm long and 5.2 cm wide and corollas averaging 35 mm long, ranging south to sc. PA and ne. WV, and the "narrow-leaved form," with leaves averaging 11.8 cm long and 4.4 cm wide and corollas averaging 39 mm long, occurring throughout the range of the species. Further study seems warranted. [= C, F, G, K, S, W, Y, Z; < *M. didyma* – RAB (also see *M. media*)]

Monarda fistulosa Linnaeus *var.* ***brevis*** Fosberg & Artz, Smoke Hole Bergamot, Cedar Glade Bergamot. Mt (VA): limestone outcrops, cliffs, barrens, and glades, and on limestone talus; rare (US Species of Concern). June-August; July-October. Apparently endemic to w. VA and e. WV. This variety is seemingly very distinct (Kimball et al. 2002). It had been collected only a very few times prior to the work of Bartgis (1993), who found it to be a characteristic plant of limestone barrens and woodlands in localized areas in the Ridge and Valley Province of WV. It flowers about a month earlier than *M. fistulosa* in the vicinity (Bartgis, pers. comm.). [= X, Y; = *M. fistulosa* ssp. *brevis* (Fosberg & Artz) Scora, comb. nov. ined. – K; < *M. fistulosa* – W]

Monarda fistulosa Linnaeus *var.* ***fistulosa***, Appalachian Bergamot. Mt, Pd (NC, VA): moist wooded slopes, roadsides, woodland edges, old fields; common. June-September; August-October. CT south to sw. NC, nearly or entirely limited to the Appalachians. I have interpreted var. *fistulosa* and var. *mollis* somewhat differently than some previous workers. A more coherent geographic pattern is achieved by limiting var. *fistulosa* to plants with spreading hairs only. [= F, X, Y; < *M. fistulosa* – RAB, W; = *M. fistulosa* ssp. *fistulosa* var. *fistulosa* – K; < *M. fistulosa* var. *fistulosa* – C, G, Z (also see var. *mollis*); = *M. fistulosa* – S]

Monarda fistulosa Linnaeus *var.* ***mollis*** (Linnaeus) Bentham, Eastern Bergamot. Mt, Pd (NC, SC), {GA, VA}: moist wooded slopes; common. June-September; August-October. See comments under var. *fistulosa*. ME west to MN, south to GA, AL, and se. TX. [= F, X, Y; < *M. fistulosa* – RAB, W; < *M. fistulosa* var. *fistulosa* – C, G, Z; = *M. fistulosa* ssp. *fistulosa* var. *mollis* (Linnaeus) Bentham – K; > *M. mollis* Linnaeus – S; > *M. scabra* Beck – S]

Monarda fistulosa Linnaeus *var.* ***rubra*** A. Gray, Purple Bergamot. Mt (NC, VA), {GA}: moist slope forests; rare (NC Watch List). ME to NJ, and from nw. NC to n. GA, in the Appalachians. Perhaps native only in the Southern Appalachians. A problematic taxon; see *M. media* for comments. [= X, Y, Z; < *M. fistulosa* – RAB, W; = *M. fistulosa* ssp. *fistulosa* var. *rubra* A. Gray - K; < *M. media* – C, F, S]

Monarda media Willdenow, Purple Bee-balm. Mt (NC), {GA, VA}: grassy balds, moist slopes, mostly at high elevations; rare (NC Watch List). July-September; September-October. VT west to IN, south to w. MD; disjunct in w. NC and sw. TN, part of the range perhaps the result of cultivation. *M. media* is a problematic taxon, especially in combination with *M. fistulosa* var. *rubra*. Many have suggested that *M. media* is the result of hybridization or introgression of *M. didyma* with either *M. fistulosa* or *M. clinopodia*, or both (see Scora 1967). Scora (1967) implies that *M. media* consists of hybrids, backcrosses, and "introgressive elements" involving all three pairwise combinations, and the three-way combination, but that *M. fistulosa* var. *rubra* is not of hybrid origin. Needed are studies of *M. media*, *M. fistulosa* var. *rubra*, and their possible parents which go beyond the herbarium and determine the genetics, origin, and population structure of these taxa. It seems best for the moment to recognize (or to attempt to!) *M. media* and *M. fistulosa* var. *rubra* in order to foster additional observation and study, hopefully leading to a more definite understanding of their taxonomic status(es). [= G, K, Z; < *M. didyma* – RAB; < *M. media* – C, F, S (also see *M. fistulosa* var. *rubra*); = *M.* ×*media* Willdenow (pro sp.) – W, Y]

Monarda punctata Linnaeus *var.* ***arkansana*** (McClintock & Epling) Shinners, Arkansas Horse-mint. Mt (NC), Pd (GA): dryish forests over mafic rock; rare (NC Watch List). McClintock & Epling (1942) map and discuss this taxon as endemic to AR and immediately adjacent TX, but mention that "a specimen collected near Columbus, Polk County, North Carolina (Townsend, 1897) is scarcely different from subsp. *arkansana*." Scora (1967) treats var. *arkansana* as similarly endemic, though he cites (but does not map) a specimen from Cherokee County, GA and annotated (following the publication of his paper) a later collection from Polk County, NC as var. *arkansana*. The Polk County, NC material is manifestly var. *arkansana* and might be considered merely aberrant or a chance introduction, were it not for its repeated collection and the phytogeographic interest of the Blue Ridge Escarpment of Polk County, which harbors numerous Ozarkian and other Midwestern disjuncts, such as *Veratrum woodii*. [= Y; < *M. punctata* – RAB, S, W; = *M. punctata* ssp. *punctata* var. *arkansana* (McClintock & Epling) Shinners – K; = *M. punctata* ssp. *arkansana* McClintock & Epling – Z]

Monarda punctata Linnaeus *var.* ***punctata***, Eastern Horse-mint. Cp, Pd, Mt (GA, NC, SC, VA): maritime forests, dunes, roadsides, rocky or sandy woodlands; common, uncommon in Piedmont and Mountains. Late July-September; September-October. [= C, F, Y; < *M. punctata* – RAB, S, W; = *M. punctata* ssp. *punctata* – G, Z; = *M. punctata* ssp. *punctata* var. *punctata* – K]

Monarda punctata Linnaeus *var.* ***villicaulis*** (Pennell) Palmer & Steyermark, Hairy-stem Horse-mint. Cp (NC): disturbed areas, rare, perhaps only adventive in our area. August; October. NY west to MN, south to n. IN and s. MO. [= C, F, Y; < *M. punctata* – RAB, S, W; = *M. punctata* ssp. *villicaulis* Pennell – G, Z; = *M. punctata* ssp. *punctata* var. *villicaulis* (Pennell) Palmer & Steyermark – K]

Monarda bradburiana Beck. East to c. TN (Chester, Wofford, & Kral 1997), KY, and AL. [= G, K; < *M. russeliana* – C, F] {not keyed at this time; synonymy incomplete}

Monarda russeliana Nuttall ex Sims, White Beebalm. East to AL and KY. [= G, K; < *M. russeliana* – C, F (also see *M. bradburiana*)] {not keyed at this time; synonymy incomplete}

Mosla (Bentham) Buchanan-Hamilton ex Maximowicz 1875 (Mosla)

A genus of about 10-22 species, of e. Asia. References: Harley et al. in Kadereit (2004).

* ***Mosla dianthera*** (Buchanan-Hamilton ex Roxburgh) Maximowicz, Mosla. Mt (GA, NC): disturbed areas; rare, introduced from e. Asia. August-September. This species is becoming a noxious weed west of our area (in KY and TN); it should be expected to become more widespread in our area. [= RAB, F, G, K; = *Orthodon dianthera* (Buchanan-Hamilton) Handel-Mazzetti – C]

Nepeta Linnaeus 1753 (Catnip, Catmint)

A genus of about 250 species, herbs, of Eurasia and n. Africa. References: Harley et al. in Kadereit (2004).

* ***Nepeta cataria*** Linnaeus, Catnip, Catmint. Mt (GA, NC, VA), Pd (NC, VA), Cp (NC, SC, VA): fencerows, barnyards, disturbed areas; uncommon, introduced from Eurasia. [= RAB, C, F, G, K, S, W]

Ocimum Linnaeus 1753 (Basil)

A genus of about 65 species, herbs and shrubs, of warm temperate and tropical areas. References: Harley et al. in Kadereit (2004).

* ***Ocimum basilicum*** Linnaeus, Basil. Cp, Pd (GA, NC, SC): commonly cultivated in gardens, rarely persistent for short times around gardens or as a waif on trash-heaps, probably not persistent; commonly cultivated, rarely persistent, introduced from tropical Asia and tropical Africa. [= C, G, K, S]

Origanum Linnaeus 1753 (Oregano, Marjoram)

A genus of about 36-40 species, herbs and dwarf shrubs, of Eurasia. References: Harley et al. in Kadereit (2004).

* ***Origanum vulgare*** Linnaeus, Wild Marjoram. Mt (NC, VA): cultivated in gardens, persistent around gardens or as a waif; commonly cultivated, rarely persistent, introduced from Eurasia. July-September. [= RAB, C, G, K, S]

Perilla Linnaeus 1764 (Perilla, Beefsteak-plant)

A genus of about 1-6 species, herbs, of s. and e. Asia. References: Harley et al. in Kadereit (2004).

* ***Perilla frutescens*** (Linnaeus) Britton, Perilla, Beefsteak-plant. Pd, Mt, Cp (GA, NC, SC, VA): moist disturbed areas; common, introduced from India. August-October; October-December. Two varieties are sometimes recognized. Var. *crispa* (Bentham) Deane (leaves purple above and below; leaf margins laciniate-dentate and also crisped) and var. *frutescens* (leaves purple below; leaf margins dentate, not crisped). These probably represent cultivars more than taxonomically distinct entities. [= RAB, C, G, S, W; > *P. frutescens* var. *frutescens* – F, K; > *P. frutescens* (Linnaeus) Britton var. *crispa* (Bentham) Deane]

Physostegia Bentham 1829 (Obedient-plant)

A genus of about 12 species, perennial herbs, of North America. References: Cantino (1982)=Z; Harley et al. in Kadereit (2004). Key adapted from Z and GW.

1 Leaves, 1 or more of them, conspicuously or inconspicuously clasping the stem.
- 2 Perennating buds borne directly on the primary rhizome or at the ends of short, vertical secondary rhizomes (horizontal secondary rhizomes lacking), the plant thus forming clumps
  - 3 Most or all of the larger leaves sharply serrate; larger leaves usually < 2.5 cm wide and > 5× as long as wide ..... ***Ph angustifolia***
  - 3 Most or all of the larger leaves bluntly serrate to entire; larger leaves usually > 3 cm wide or < 5× as long as wide. ..... ***Ph. purpurea***
- 2 Perennating buds borne at the ends of elongate, horizontal, secondary rhizomes, the plant thus forming clonal patches.

4 Flowers 22-35 mm long; larger stem leaves acute to attenuate at the tip; axis of raceme with at least some of the hairs 0.13-0.25 mm long; larger stem leaves mostly sharple serrate ..... ***Ph. angustifolia***
4 Flowers smaller, **or** most of the leaves obtuse at the tip, **or** hairs of the raceme axis < 0.13 mm long; larger stem leaves bluntly toothed to entire.
5 Flowering calyx tube (1-) 2-4 mm long; flowers < 20 mm long ..... ***[Ph. intermedia]***
5 Flowering calyx tube 3-7 (-8) mm long; flowers usually > 20 mm long.
6 Uppermost pair of leaves below the terminal raceme usually considerably larger than the floral bracts, the next pair of leaves down the stem (1.5-) 2.0-12.8 cm long and 0.3-2× as long as the internode above; principal stem leaves usually widest at or below the middle of the blade ..... ***Ph. leptophylla***
6 Uppermost pair of leaves below the terminal raceme often no larger than the floral bracts, the next pair of leaves down the stem 0.4-3.2 cm long, generally 0.1-0.3× as long as the internode above; principal stem leaves usually widest at or above the middle of the blade..... ***Ph. purpurea***

1 Leaves petiolate or sessile, none of them clasping the stem.
7 All or most of the largest leaves sharply serrate; apex of the leaves acute to attenuate.
8 Axis of raceme with at least some of the hairs 0.13-0.25 mm long; nutlets 2-3 mm long; flowering April to early July (or later if burned) ..... ***Ph. angustifolia***
8 Axis of raceme with hairs < 0.1 mm long; nutlets usually 3-4 mm long; flowering July-October.
9 Perennating buds usually borne directly on the primary rhizome or at the ends of short, vertical secondary rhizomes (horizontal secondary rhizomes usually lacking), the plant thus forming clumps; nonglandular trichomes of the raceme axis < 0.1 (-0.13) mm long; sterile floral bracts usually present below flowers; flowers (16-) 18-37 mm long ..... ***Ph. virginiana*** *ssp.* ***praemorsa***
9 Perennating buds usually borne at the ends of elongate, horizontal, secondary rhizomes, the plant thus forming clonal patches; nonglandular trichomes of the raceme axis frequently 0.15 (0.20) mm long; sterile floral bracts usually not present below flowers; flowers (13-) 14-28 mm long ... ***Ph. virginiana*** *ssp.* ***virginiana***
4 Half or more of the larger leaves bluntly toothed to entire; apex of the leaves obtuse, or acute to attenuate.
10 Calyx and rachis of the inflorescence bearing stalked glands (visible at 10× magnification or greater); nutlets 1.7-2.0 mm long, usually warty over the surface..... ***[Ph. godfreyi]***
10 Calyx and rachis lacking stalked glands; nutlets 2.0-3.6 mm long, smooth.
11 Uppermost pair of leaves below the terminal raceme often no larger than the floral bracts, the next pair of leaves down the stem 0.4-3.2 cm long, generally 0.1-0.3× as long as the internode above..... ***Ph. purpurea***
11 Uppermost pair of leaves below the terminal raceme usually considerably larger than the floral bracts, the next pair of leaves down the stem (1.5-) 2.0-12.8 cm long and 0.3-2× as long as the internode above.
12 Leaves (some of them) present at or after anthesis usually petiolate, the petioles often > 2 cm long, the petiolate leaves typically the lowest and among the largest leaves present ..... ***Ph. leptophylla***
12 Leaves present at or after anthesis usually sessile (rarely a few petiolate, but these with petioles < 2 cm long and the petiolate leaves usually not among the largest leaves present)..... ***Ph. virginiana*** *ssp.* ***virginiana***

Physostegia angustifolia Fernald, Narrowleaf Obedient-plant. Cp (GA): calcareous openings; rare (GA Special Concern). Sw. GA and AL west to KS and TX. [= GW, K, Z]

Physostegia leptophylla Small, Tidal Marsh Obedient-plant, Swamp Obedient-plant. Cp (GA, NC, SC, VA): bottomland hardwood forests, swamps, tidal freshwater or slightly brackish (oligohaline) marshes, rarely wet savannas (GA); uncommon (GA Threatened, SC Rare, VA Watch List). Late May-early August; June-September. Se. VA south to sc. peninsular FL, west to sw. GA and panhandle FL. *P. leptophylla* is a tetraploid; Cantino (1982) suggests that this species may be an allotetraploid, perhaps originating from *P. purpurea* × *virginiana*. [= C, GW, K, Z; < *Dracocephalum purpureum* (Walter) McClintock ex Gleason – RAB, G; > *P. denticulata* (Aiton) Britton – F, misapplied; > *P. aboriginorum* Fernald – F; > *Dracocephalum leptophyllum* Small – S; > *Dracocephalum veroniciformis* Small – S]

Physostegia purpurea (Walter) Blake, Savanna Obedient-plant. Cp (GA, NC, SC): wet savannas, savanna-swamp ecotones, ditches adjacent to former pinelands; uncommon. Late May-early August; June-September. Ec. NC south to s. FL, west to sw. GA and panhandle FL. Cantino (1982) discusses clinal variation within *P. purpurea*. [= GW, K, Z; < *Dracocephalum purpureum* (Walter) McClintock ex Gleason – RAB (also see *P. leptophylla*); = *P. obovata* (Elliott) Godfrey ex Weatherby – F; = *Dracocephalum denticulatum* Aiton – S]

Physostegia virginiana (Linnaeus) Bentham *ssp.* ***praemorsa*** (Shinners) Cantino, Southern Obedient-plant. Mt, Pd, Cp (NC, SC, VA), {GA}: woodlands, glades, seepages, especially over calcareous or mafic rock; common. July-October. OH west to n. IL, south to c. NC, n. FL, TX, NM, and Mexico. [= K, W, Z; < *Dracocephalum virginianum* Linnaeus – RAB, G, S; = *P. virginiana* var. *arenaria* Shimek – C; >< *P. virginiana* var. *virginiana* – F; >< *P. virginiana* var. *speciosa* – F; < *P. virginiana* – GW]

Physostegia virginiana (Linnaeus) Bentham *ssp.* ***virginiana***, Northern Obedient-plant. Mt, Pd, Cp (NC, SC, VA), {GA}: streambanks, seepages, marshes, grassy balds (native occurrences usually over mafic or calcareous rocks), other open or semi-open moist to wet habitats, disturbed areas, ditches; rare as a native, more common as an escape from cultivation. July-October. Native from Québec west to Manitoba, south to e. VA, nc. TN, and ne. KS; escaped elsewhere (as in most of our area). Cantino (1982) discusses ambiguous plants from a zone of intergradation between the 2 subspecies in sw. NC, n. GA, ne. AL, e. TN, and sc. KY. Moreover, garden escapes show some intermediacy between the 2 subspecies, and Cantino (1982) suggests that cultivars are likely inter-subspecific hybrids, stating "because the genetic background of modern cultivars is unknown, they cannot be

reasonably placed in either subspecies and should not be identified below the species level." [= K, Z; < *Dracocephalum virginianum* Linnaeus – RAB, G, S; = *P. virginiana* var. *virginiana* – C; >< *P. virginiana* var. *virginiana* – F; >< *P. virginiana* var. *speciosa* (Sweet) A. Gray – F; > *P. virginiana* var. *granulosa* (Fassett) Fernald – F; < *P. virginiana* – GW]

Physostegia godfreyi Cantino, Apalachicola Dragonhead. Wet savannas and flatwoods, adjacent ditches. Endemic to Panhandle FL. [= GW, K, Z]

Physostegia intermedia (Nuttall) Engelmann & A. Gray. Il, KY, AR, and LA west to OK and TX. Also mapped as widespread in Coastal Plain of GA (Jones & Coile 1988); {investigate}. [= GW, K, Z; = *Dracocephalum intermedium* Nuttall]

Piloblephis Rafinesque 1838

A monotypic genus, a shrub, of se. North America. References: Harley et al. in Kadereit (2004).

Piloblephis rigida (Bartram ex Bentham) Rafinesque, Florida Pennyroyal. Cp (GA): xeric oak scrub, with *Quercus myrtifolia*; rare (GA Special Concern). S. GA to s. peninsular FL. [= K; = *Pycnothymus rigidus* (Bartram ex Bentham) Small – S; = *Satureja rigida* Bartram ex Bentham]

Prunella Linnaeus 1753 (Self-heal, Heal-all)

A genus of about 4-7 species, herbs, of n. temperate areas. References: Harley et al. in Kadereit (2004).

1 Upper leaves pinnatifid; flowers creamy yellow or white (rarely pale blue).....***P. laciniata***
1 Upper leaves entire to obscurely toothed; flowers blue-violet (rarely pink or whitish).
  2 Principal or median cauline leaves lanceolate to oblong, (2-) avg. 3 (-5)× as long as wide; leaf cuneate at the base ....***P. vulgaris* var. *lanceolata***
  2 Principal or median cauline leaves ovate to ovate-oblong, (1.5-) avg. 2 (-2.5)× as long as wide; leaf broadly rounded at the base ..... ***P. vulgaris* var. *vulgaris***

* ***Prunella laciniata*** (Linnaeus) Linnaeus, Cutleaf Self-heal. Mt (NC?, VA), {GA}: disturbed areas; rare, introduced from Eurasia. [= RAB, C, G, K, S]

Prunella vulgaris Linnaeus *var.* ***lanceolata*** (W. Barton) Fernald, American Self-heal. {Mt, Pd, Cp (NC, SC, VA): disturbed areas, pastures, roadsides, bottomland forests; other forests and woodlands; common. April-December. Additional herbarium work is needed to determine the relative ranges, distributions, habitats, and abundances of the two varieties.} Newfoundland west to AK, south to NC, SC?, TN, MO, KS, NM, AZ, and CA. [= C, F, G; < *P. vulgaris* – RAB, S, W; = *P. vulgaris* ssp. *lanceolata* (W. Barton) Hultén – K]

* ***Prunella vulgaris*** Linnaeus *var.* ***vulgaris***, Eurasian Self-heal. {Mt, Pd, Cp (NC, SC, VA): disturbed areas, pastures, roadsides, bottomland forests; other forests and woodlands; common. April-December. Additional herbarium work is needed to determine the relative ranges, distributions, habitats, and abundances of the two varieties. The possible recognition of var. *hispida* also needs assessment} Introduced from Eurasia. Var. *hispida* Bentham, considered to have been originally e. Asian, is alleged to be widespread in se. United States. It differs from *P. vulgaris* var. *vulgaris* in having the "stems, petioles, and often the lower surfaces of leaves densely villous-hispid" (vs. "only sparingly and not conspicuously pilose" – F). [< *P. vulgaris* – RAB, S, W; > *P. vulgaris* var. *vulgaris* – C, F, G; > *P. vulgaris* var. *hispida* Bentham – C, F, G; = *P. vulgaris* ssp. *vulgaris* – K]

Pycnanthemum Michaux 1803 (Mountain-mint, Wild-basil)

A genus of 20-25 species, herbs, of temperate North America. *Pycnanthemum* remains a complicated and difficult group, with speciation apparently having proceeded by allopolyploidy, autoploidy, and aneuploidy. Numerous aberrant forms and (probably) sterile hybrids complicate identification and understanding. References: Chambers (1993); Grant & Epling (1943)=Z; Chambers & Hamer (1992)=Y; Harley et al. in Kadereit (2004).

1 Leaves 1-15 mm wide (to 30 mm wide in *P. setosum*), mostly > 3× as long as wide (except in *P. nudum*); calyx lobes not tipped with a tuft of long, jointed bristles (except *P. clinopodioides*).
  2 Longer calyx lobes 1.5-5 mm long, attenuate-aristate, stiff, whitened; [of Coastal Plain pinelands, rarely in Mountain bogs with Coastal Plain affinities].
    3 Principal stem leaves 5-15 mm wide.....***P. flexuosum***
    3 Principal stem leaves 10-30 mm wide.....***P. setosum***
  2 Longer calyx lobes 0.5-1.6 mm long, deltoid to narrowly triangular, not notably stiff (except in *P. tenuifolium*) or whitened; [widespread in our area, but mainly of the Piedmont and Mountains].
    4 Leaves 10-15 mm wide (or more often even wider, to 25 mm wide, in *P. clinopodioides*); longer calyx lobes 0.7-1.6 mm long, tipped with a few long (1-3 mm) jointed bristles (*P. clinopodioides*) or not tipped (*P. nudum*).
      5 Leaves 3-5× as long as wide, herbaceous; stems and leaves pubescent; [plants from NC northward].....

.....***P. clinopodioides***

5 Leaves 1-2.5× as long as wide, coriaceous; stems and leaves glabrous; [plants from se. SC southward] .... ***P. nudum***

4 Leaves 1-12 (-15) mm wide; longer calyx lobes 0.5-1.5 mm long, variously pubescent but not tipped with a tuft of long jointed bristles.

6 Leaves glabrous on the lower and upper surface, with 2-3 pairs of lateral veins; stems glabrous on the faces and angles (rarely with a few small upwardly-curled hairs on the angles).

7 Leaves 5-15 mm wide, 1-2.5× as long as wide; calyx lobes and inner bracts of the inflorescence herbaceous..... ***P. nudum***

7 Leaves 1-4 (-5.5) mm wide, 8-15× as long as wide; calyx lobes and inner bracts of the inflorescence semi-spinose, their tips subulate, thickened, and stiff .....***P. tenuifolium***

6 Leaves pubescent at least on the lower surface along the midrib and main veins; leaves with 4-5 pairs of lateral veins; stems glabrous or pubescent on the faces, pubescent on the angles.

8 Stems pubescent on the angles only (or distinctly less pubescent on the faces); leaves 3-10 mm wide ....***P. virginianum***

8 Stems pubescent on the faces and angles, the hairs distributed more-or-less evenly; leaves 8-12 (-15) mm wide.

9 Longer calyx teeth 1.0-1.5 mm long; bracts of the inflorescence and leaves glabrous or very sparsely pubescent on the upper surface..... ***P. torreyi***

9 Longer calyx teeth 0.5-1.0 mm long; bracts of the inflorescence (and usually also the leaves) canescent on the upper surface .....***P. verticillatum*** *var*. ***verticillatum***

1 Leaves broad, 15-40 mm wide, mostly 1.5-3× as long as wide; calyx lobes usually tipped with a tuft of long, jointed bristles (except *P. curvipes, P. muticum, P. setosum*).

10 Bracts of the inflorescence glabrous (or very sparsely pubescent) on the upper surface, the margins long-ciliate; calyx lobes and upper part (at least) of the tube with long spreading hairs (independent of the apical tufts) ..... ***P. montanum***

10 Bracts of the inflorescence puberulent on the upper surface, the margins not ciliate; calyx lobes and tube variously glabrous or puberulent (independent of the apical tufts).

11 Calyx lobes not tipped with a tuft of long, jointed bristles.

12 Calyx lobes 1.5-3 mm long, attenuated into a subulate tip; [of the Coastal Plain] .....***P. setosum***

12 Calyx lobes 0.5-1.2 mm long, triangular to narrowly triangular, acute to acuminate, but not subulate; [collectively widespread in our area].

13 Petioles 5-15 mm long; inflorescence corymbose, loose, the branches apparent; [of dry rocky woodlands, in sw. NC, w. SC, and southward] ..... ***P. curvipes***

13 Petioles 0-3 mm long; inflorescence capitate, tight, the branches within the clusters not apparent; [of moist habitats, widespread in our area] ..... ***P. muticum***

11 Calyx lobes usually tipped with a tuft of long, jointed bristles.

14 Calyx not distinctly bilabiate, all of the calyx lobes about the same length, the sinuses about the same depth.

15 Longer calyx lobes 1-2 mm long; [of the Mountains] ..... ***P. beadlei***

15 Longer calyx lobes 2.5-3 mm long; [of the Coastal Plain] .....***P. monotrichum***

14 Calyx distinctly bilabiate, the lower 2 lobes 1.5-2.5× longer than the upper 3 lobes, and separated from each other and the upper 3 lobes by deeper sinuses.

16 Leaves lanceolate, (10-) 15-25 mm wide, > 3× as long as wide.....***P. clinopodioides***

16 Leaves ovate, 13-50 mm wide, < 3× as long as wide.

17 Leaves of the lower and middle stem with lower surfaces glabrate, glandular-punctate, similar in color to the dark green upper surface; calyx 5-7 mm long ..... ***P. beadlei***

17 Leaves of the lower and middle stems with lower surface canescent, distinctly paler than the dark green upper surface; calyx 3-6.5 mm long.

18 Calyx lobes broadly triangular, their apices obtuse, acute, or somewhat acuminate; calyx tube > 2× as long as the longest (lower) calyx lobes.

19 Pubescence of the stem of dense, very small downwardly-curved hairs, usually mixed with scattered longer and spreading hairs.....***P. incanum*** *var*. ***incanum***

19 Pubescence of the stem of sparse, coarse, downwardly-curved hairs .... ***P. incanum*** *var*. ***puberulum***

18 Calyx lobes narrowly triangular, their apices acuminate to attenuate; calyx tube 1-2× as long as the longest (lower) calyx lobes.

20 Mericarps 0.5-1.3 mm long, with a smooth surface, glabrous or with a few short hairs at the tip.....***P. loomisii***

20 Mericarps 1.2-1.5 mm long, with a rugose or pitted surface, densely pubescent at the tip.

21 Stems and lower leaf surfaces canescent, the short hairs often intermixed with longer, spreading ones ..... ***P. pycnanthemoides*** *var*. ***pycnanthemoides***

21 Stems and lower leaf surfaces with coarse, spreading hairs only..... ..... ***P. pycnanthemoides*** *var*. ***viridifolium***

Pycnanthemum beadlei (Small) Fernald, Beadle's Mountain-mint. Mt (NC, SC, VA), Pd (NC): forests, woodland borders; uncommon (GA Special Concern, VA Watch List). August-September. A Southern Appalachian endemic: sw. VA and ne. TN south to sw. NC, nw. SC, and n. GA. A tetraploid species (n = 38), probably an allotetraploid derived from *P. montanum* × *muticum*. [= C, K, W, Y, Z; < *P. incanum* – RAB; = *Koellia beadlei* Small – S]

Pycnanthemum clinopodioides Torrey & A. Gray. Cp, Pd (NC, VA): forests, woodland borders; rare (NC Watch List, VA Rare). July-September. MA south to NC, mostly on the Coastal Plain. A tetraploid species (n = 38). Probably an allotetraploid hybrid. [= C, F, K, Y, Z; < *P. verticillatum* – RAB; = *Koellia clinopodioides* (Torrey & Gray) Kuntze – S]

Pycnanthemum curvipes (Greene) E. Grant & Epling, Tennessee Mountain-mint, Stone Mountain Mountain-mint. Mt (GA, NC), Pd (GA): dry rocky woodlands and rock outcrops (granite or mafic); rare (GA Special Concern). June-August. Sw. NC and se. TN south nc. GA and n. AL; disjunct in nc. TN (Chester, Wofford, & Kral 1997). A diploid species (n= 20). [= K, Y, Z; = *Koellia curvipes* Greene – S]

Pycnanthemum flexuosum (Walter) Britton, Sterns, & Poggenburg, Savanna Mountain-mint. Cp (NC, SC, VA), Mt (NC): moist to wet pine savannas, pocosin margins, mountain bogs, seepage areas on low elevation granite domes; common (rare in Mountains). June-September; September-October. Se. VA south to n. FL, west to s. AL on the Coastal Plain; disjunct inland in bogs and rock outcrops of sw. NC with Coastal Plain affinities and in sc. TN. A diploid species (n = 18). Sometimes mistaken in vegetative condition for *Eupatorium leucolepis*, *P. flexuosum* can be distinguished by its square stem and aromatic odor. *Koellia hugeri* Small, alleged to differ details of the calyx, was established for the plants of bogs of the Blue Ridge; it apparently is not morphologically segregated from other variation within the species (Grant & Epling 1943). [= RAB, C, F, K, W, Y; = *P. hyssopifolium* Bentham – G, GW, Z; > *Koellia hyssopifolia* (Bentham) Britton – S; > *Koellia hugeri* Small – S]

Pycnanthemum incanum (Linnaeus) Michaux *var.* ***incanum***. Mt, Pd (NC, VA): forests and woodland borders; common (uncommon in NC). Late June-August; September-October. VT west to s. OH and s. IL, south to nc. NC, w. NC, and nc. TN. A tetraploid species (n = 38). [= F, K; < *P. incanum* – RAB (also see *P. beadlei*, *P. loomisii*, *P. pycnanthemoides*); < *P. incanum* – C, G, W, Y; > *Koellia incana* (Linnaeus) Kuntze – S; > *Koellia dubia* (Gray) Small – S; = *P. incanum* – Z; = *P. incanum* (Linnaeus) Michaux ssp. *incanum*]

Pycnanthemum incanum (Linnaeus) Michaux *var.* ***puberulum*** (E. Grant & Epling) Fernald. Mt (NC, SC), Pd (NC): forests and woodland borders; rare. Late June-August; September-October. WV and NC south to FL and AL. A tetraploid species (n = 38). [= F, K; < *P. incanum* – RAB (also see *P. beadlei*, *P. loomisii*, *P. pycnanthemoides*); < *P. incanum* – C, G, W, Y; < *Koellia incana* (Linnaeus) Kuntze – S; = *P. puberulum* E. Grant & Epling – Z]

Pycnanthemum loomisii Nuttall, Loomis's Mountain-mint. Pd, Mt (NC, SC, VA), Cp (NC, VA): forests and woodland borders; rare (VA Watch List). Late June-August; September-October. VA west to IL, south to n. FL. A diploid species (n = 19). [= C, K, Y, Z; < *P. incanum* – RAB; = *P. incanum* var. *loomisii* (Nuttall) Fernald – F; < *P. pycnanthemoides* var. *pycnanthemoides* – G; = *P. incanum* (Linnaeus) Michaux ssp. *loomisii* (Nuttall) Hamer]

Pycnanthemum monotrichum Fernald. Cp (VA): sandy woodlands; rare (VA Rare). Allegedly endemic to se. VA. Perhaps only a hybrid or else likely more widespread and merely overlooked. [= F, G, K]

Pycnanthemum montanum Michaux, Appalachian Mountain-mint. Mt (NC, SC, VA): balds, woodlands, forests, and forest edges; uncommon (Va Watch List). June-August; September-October. W. VA and WV south through w. NC and e. TN to nw. SC and n. GA, a Southern Appalachian endemic. A diploid species (n = 20). [= RAB, C, F, G, K, Y, Z; = *Koellia montana* (Michaux) Kuntze – S]

Pycnanthemum muticum (Michaux) Persoon. Mt, Cp, Pd (NC, SC, VA): bogs, wet meadows, moist to wet forests; common (uncommon in Piedmont). June-August; September-October. MA west to MI and MO, south to FL and LA. A diploid, tetraploid, and hexaploid (?) species (n = 20, 40, ca. 54). [= RAB, C, F, G, GW, K, Y; = *Koellia mutica* (Michaux) Kuntze – S]

Pycnanthemum nudum Nuttall, Smooth Mountain-mint. Cp (SC): wet pine flatwoods; rare. Se. SC south to n. FL and se. AL. Small (1933) attributes this species to NC; the documentation is unknown (and doubtful). This is a diploid species (n = 20). [= GW, K, Z; = *Koellia nuda* (Nuttall) Kuntze – S]

Pycnanthemum pycnanthemoides (Leavenworth) Fernald *var.* ***pycnanthemoides***. Mt, Pd (NC, SC, VA): forests and woodland borders; common. July-August. VA and IL south to w. SC and n. GA. A tetraploid species (n = 36). [= F, K; < *P. incanum* – RAB; < *P. pycnanthemoides* – C, Y; < *P. pycnanthemoides* var. *pycnanthemoides* – G (also see *P. loomisii*); < *Koellia pycnanthemoides* (Leavenworth) Kuntze – S; > *P. tullia* Bentham – Z; = *P. incanum* (Linnaeus) Michaux ssp. *pycnanthemoides* (Leavenworth) Hamer]

Pycnanthemum pycnanthemoides (Leavenworth) Fernald *var.* ***viridifolium*** Fernald. Mt, Pd (NC, SC, VA), Cp (NC, VA): forests and woodland borders; uncommon. July-August. VA and WV south to ec. GA and AL. A tetraploid species (n = 36). [= F, G, K; < *P. incanum* – RAB; < *P. pycnanthemoides* – C, Y; > *Koellia pycnanthemoides* (Leavenworth) Kuntze – S; > *Koellia dubia* (A. Gray) Small – S; = *P. viridifolium* (Fernald) E. Grant & Epling – Z; *P. incanum* (Linnaeus) Michaux ssp. *pycnanthemoides* (Leavenworth) Hamer]

Pycnanthemum setosum Nuttall. Cp (GA, NC, SC, VA): dry pinelands; uncommon (rare in VA) (NC Watch List, VA Rare). Mid June-August; August-October. NJ south to GA (FL?), on the Coastal Plain. See Wieboldt et al. (1998) for discussion of the taxonomy and rarity of this species. A tetraploid species (n = 38), probably an allotetraploid derived from *P. flexuosum* × *muticum*. [= RAB, C, GW, K, Y; > *P. setosum* – F, G; > *P. umbratile* Fernald – F, G; = *Koellia aristata* (Michaux) Kuntze – S; = *P. aristatum* Michaux – Z]

Pycnanthemum tenuifolium Schrader. Mt, Pd, Cp (GA, NC, SC, VA): bogs, wet meadows, moist to wet forests; common. June-August; September-October. ME west to MN, KS, and OK, south to FL and TX. A diploid and tetraploid species (n = 20 and 40). [= RAB, C, F, GW, K, W, Y; = *P. flexuosum* – G, Z, misapplied; = *Koellia flexuosa* – S, misapplied]

Pycnanthemum torreyi Bentham, Torrey's Mountain-mint. Mt (NC, SC, VA), Pd, Cp (VA), {GA?}: dry rocky woodlands, over mafic, ultramafic, or calcareous rocks, dry powerline rights-of-way; rare (NC Rare, VA Rare). NH west to IL, south to NC.

A tetraploid and hexaploid species (n = 40 and ca. 60). [= C, G, Y, Z; < *P. verticillatum* – RAB; = *P. torrei* – K, orthographic variant; > *P. torrei* var. *torrei* – F; > *P. torrei* var. *leptodon* (Gray) Boomhour – F; = *Koellia leptodon* (Gray) Small – S]

Pycnanthemum verticillatum (Michaux) Persoon *var.* ***verticillatum***. Mt (NC, SC, VA), Pd (NC, VA), Cp (VA): upland rocky woodlands; common. July-September. Var. *verticillatum* ranges from VT west to MI, south to NC and KY. Var. *pilosum* (Nuttall) Cooperrider ranges from s. Ontario west to MI and IA, south to TN, AR, and OK. It differs in having the stems thickly (vs. thinly pubescent), the lower surface of the leaves evenly pubescent (vs. pubescence chiefly restricted to the midrib). It should be sought in our area. A tetraploid species (n = 38-39). [= C, K; < *P. verticillatum* – RAB (also see *P. clinopodioides*, *P. torrei*); = *P. verticillatum* – F, G, Y, Z; > *Koellia verticillata* (Michaux) Kuntze – S; > *Koellia leptodon* (A. Gray) Small – S; < *P. verticillatum* – W]

Pycnanthemum virginianum (Linnaeus) T. Durand & B.D. Jackson ex B.L. Robinson & Fernald, Virginia Mountain-mint. Mt (GA, NC, VA), Pd (NC, VA), Cp (VA?, NC?): wet meadows and marshes over calcareous or mafic rocks; uncommon (rare in VA Piedmont and VA Coastal Plain) (GA Special Concern, NC Watch List). June-September; September-October. ME west to ND, south to NC, nw. GA, n. AL, and OK. A tetraploid species (n = 40). [= RAB, C, F, G, GW, K, W, Y, Z; = *Koellia virginiana* (Linnaeus) MacMillan – S]

Pycnanthemum albescens Torrey & A. Gray, White-leaved Mountain-mint. Pd (GA): open, mesic forests; rare (GA Special Concern). Reported for NC by Small, as *Koellia albescens*. It is known from nc. GA (Jones & Coile 1988). [= C, F, G, K; = *Koellia albescens* (Torrey & A. Gray) Kuntze – S] {not keyed at this time; synonymy incomplete}

Pycnanthemum floridanum E. Grant & Epling, north to e. GA. [= K] {not keyed at this time; synonymy incomplete}

Pycnanthemum verticillatum (Michaux) Persoon *var.* ***pilosum*** (Nuttall) Cooperrider. {GA}. In c. TN, and reported from a single county in e. TN (Chester, Wofford, & Kral 1997), in se. PA (Rhoads & Klein 1993), and WV (K99). [= C, K; = *P. pilosum* Nuttall – F, G; = *Koellia pilosa* (Nuttall) Britton – S] {not keyed at this time; synonymy incomplete}

Rosmarinus Linnaeus (Rosemary)

A genus of 2-3 species, herb/shrubs, of Mediterranean Europe. Closely related to *Salvia* (Walker et al. 2004), and probably to be combined there. References: Harley et al. in Kadereit (2004).

* ***Rosmarinus officinalis*** Linnaeus, Rosemary. Cp, Pd (NC, SC): gardens; commonly cultivated, rarely persistent or established, introduced from Mediterranean Europe. October-December. [= K]

Salvia Linnaeus 1753 (Sage, Clary)

A genus of about 900 species, shrubs and herbs, almost cosmopolitan. Walker et al. (2004) have determined that *Salvia* as traditionally circumscribed is polyphyletic. References: Epling (1938)=Z; Walker et al. (2004).

1 Leaves predominantly basal.
- 2 Veins of the 3 upper calyx lobes parallel, the lobes themselves minute and widely-spaced (> 1 mm between the 2 lateral teeth), separated by flattish sinuses; basal leaves lobed; [native, though weedy, common throughout our area]..... ***S. lyrata***
- 2 Veins of the 3 upper calyx lobes converging, the lobes themselves minute and spaced within a distance of 1 mm; basal leaves lobed or toothed; cauline leaves toothed (rarely lobed); [alien weeds, rarely naturalized in our area].
  - 3 Upper corolla-lip strongly arched; leaves serrate ..... ***S. pratensis***
  - 3 Upper corolla-lip straight; leaves lobed ..... ***S. verbenacea***

1 Leaves predominantly cauline, not lobed.
- 4 Leaves lanceolate, linear, or narrowly elliptic, the base cuneate to attenuate.
  - 5 Leaves canescent, gray; [introduced, rarely persistent from cultivation in gardens] ..... ***S. officinalis***
  - 5 Leaves puberulent, green; [native, of dry woodlands from sc. NC southward and westward].
    - 6 Stem usually with sparse, antrorse or somewhat spreading pubescence; calyx with antrorse hairs limited to major veins; flowers of mature inflorescences spaced out, most internodes elongate and ranging up to 25 (-34) mm; [plants of Atlantic and Gulf Coastal Plain and adjacent piedmont, from south-central NC to central FL to southeast LA] ..... ***S. azurea*** *var.* ***azurea***
    - 6 Stem usually with dense, retrorse pubescence; calyx with dense antrorse pubescence; flowers of mature inflorescences densely arranged, internodes between flowers very short, only the lowermost 1-3 internodes elongate and ranging up to 12 (-17) mm; [plants of inland and prairie sites, ranging from IL, IA, NE, and eastern CO south to nw. AL, ne. MS, LA, southeastern and central TX]..... ***S. azurea*** *var.* ***grandiflora***
- 4 Leaves rhombic-ovate, the base cordate, truncate, or broadly cuneate.
  - 6 Petiole not clearly differentiated from the leaf blade (leaf tissue decurrent on the petiole for most or all its length); corolla blue; [native, of woodlands] ..... ***S. urticifolia***
  - 6 Petiole clearly differentiated from the leaf blade; corolla blue, white, or scarlet; [introduced, weedy, rare].
    - 7 Corolla scarlet; larger leaves 3-6.5 cm long ..... ***S. coccinea***
    - 7 Corolla blue or whitish; leaves (8-) 12-20 cm long ..... ***S. sclarea***

Salvia azurea Michaux ex Lamarck *var.* ***azurea***, Azure Sage. Cp, Pd (GA, NC, SC), Mt (GA): sandy or rocky woodlands; common (NC Rare). Late August-October; October-November. S. NC south to panhandle FL, west to TX. [= K; < *S. azurea* – RAB, S]

*? ***Salvia coccinea*** P.J. Buchoz ex Etlinger, Scarlet Sage. Cp (GA, SC), Pd (GA): disturbed areas; rare, perhaps only introduced (at least in SC) from farther south and west. May-November. [= RAB, G, K, S]

Salvia lyrata Linnaeus, Lyreleaf Sage. Cp, Pd, Mt (GA, NC, SC, VA): lawns, roadsides, woodlands; common. April-May; May-July. CT west to MO, south to FL and TX. A common and familiar weed. [= RAB, C, F, G, K, S, W]

* ***Salvia officinalis*** Linnaeus, Garden Sage. Cp (VA): cultivated as a garden herb, rarely persistent; rare, introduced from Europe. [= C, F, G, K]

* ***Salvia pratensis*** Linnaeus, Meadow Sage, Meadow Clary. Cp (VA): fields and disturbed areas; rare, introduced from Europe. [= C, F, G, K]

* ***Salvia sclarea*** Linnaeus, Clary. Mt (NC?, VA): cultivated as a garden herb, rarely persistent; rare, introduced from Europe. [= C, G, K, S]

Salvia urticifolia Linnaeus, Nettle-leaf Sage. Pd, Mt (GA, NC, SC, VA), Cp (GA, VA): woodlands and glades, usually over mafic or calcareous rocks; uncommon (rare in Coastal Plain). April-June; May-July. PA west to w. KY, south to SC, c. GA, and AL. Quite showy when in flower. [= RAB, C, F, G, K, S, W, Z]

* ***Salvia verbenacea*** Linnaeus, Wild Clary. Mt (VA), {GA, NC?}: fields and disturbed areas; rare, introduced from Europe. [= C, G, K, S]

Salvia azurea Michaux ex Lamarck *var.* ***grandiflora*** Bentham. {GA}: IL, IA, NE, and eastern CO south to nw AL, ne MS, LA, southeastern and central TX. [= F, K; = *S. pitcheri* Torrey ex Bentham – C, G; < *S. azurea* – S; = *S. azurea* ssp. *pitcheri* (Torrey ex Bentham) Epling] {not keyed at this time; synonymy incomplete}

Salvia chapmanii A. Gray. AL and FL. Uncertain status. [= K, S] {not keyed at this time; synonymy incomplete}

* *Salvia reflexa* Hornemann, Lanceleaf Sage, Mintweed. In c. TN (Chester, Wofford, & Kral 1997). The apparent ascription by C of *S. reflexa* Hornemann to "N.C." is a typographic error for "N.D." This species is, however, sometimes adventive as far east as WV. [= C, F, G, K, Z] {not keyed at this time}

* *Salvia verticillata* Linnaeus, Whorled Clary, is introduced as far south as scattered locations in PA (Rhoads & Klein 1993), MD, and WV (Kartesz 1999). [= C, F, G, K] {not keyed at this time}

Satureja

(also see *Clinopodium*)

Scutellaria Linnaeus 1753 (Skullcap)

(contributed by Bruce A. Sorrie and Alan S. Weakley)

A genus of about 350-360 species, herbs and shrubs, almost cosmopolitan. References: Pittman (1988)=Z; Collins (1976)=Y; Epling (1942)=X; Leonard (1892); Harley et al. in Kadereit (2004).

Identification notes: Recognizable by the "tractor seat"-shaped protuberance on the upper calyx.

1 Flowers axillary, bracts resembling stem leaves; stem leaves sessile **or** petioles < 4 mm.
- 2 Corollas 12-32 mm long ..... ***Sc. galericulata***
- 2 Corollas 5-10 mm long.
  - 3 Lower leaves hastate; plants glabrous ..... ***Sc. racemosa***
  - 3 Lower leaves ovate or deltoid-ovate; plants puberulent or pubescent.
    - 4 Stems glabrate, the pubescence ascending, curled or appressed, eglandular.
      - 5 Median leaves 10-15 mm long; corolla 6.5-9 mm long ..... ***Sc. leonardii***
      - 5 Median leaves 20-40 mm long; corolla 8-10 mm long ..... ***Sc. nervosa***
    - 4 Stems obviously hairy, pubescence spreading, glandular or not (or both).
      - 6 Lower leaf surface with glandular hairs only; leaf veins tending to anastomose along leaf margins ..... ***Sc. australis***
      - 6 Lower leaf surface with glandular hairs or eglandular; leaf veins usually unbranched along margins ..... ***Sc. parvula***

1 Flowers in racemes, bracts much reduced (not leaf-like); stem leaf petioles > 4 mm.
- 7 Corolla tube glabrous within or sparsely hairy, lacking a sharply defined ring of hairs at bend of tube (non-annulate).
  - 8 Racemes secund.
    - 9 Corollas ca. 6 mm long; racemes terminal and axillary ..... ***Sc. lateriflora***
    - 9 Corollas ca. 10 mm long; racemes terminal or terminating axillary branches ..... ***Sc. saxatilis***
  - 8 Racemes not secund, flowers on more than one side of axis.

10 Stems and petioles with ascending hairs; at least some racemes from axillary branches; mid to upper leaves truncate basally ..... ***Sc. saxatilis***
10 Stems and petioles with spreading or retrorse hairs; racemes terminal or in panicles; mid to upper leaves strongly cordate.
11 Margins of lower lip cleft and erose; lower lip with large lateral auricles (flabelliform) ..... ***[Sc. ovata** ssp. **bracteata]***
11 Margins of lip entire; lip undulate or weakly auriculate.
12 Lower lip entirely white with a few blue spots; leaf surface smooth with sparse glandular hairs ..... ***Sc. ovata** ssp. **ovata***
12 Lower lip blue with two longitudinal white bands; leaf surface rugose, usually densely glandular hairy (but may be eglandular).
13 [of the Ridge and Valley (especially shale barrens) of VA, WV, MD] ..... ***Sc. ovata** ssp. **rugosa** var. **rugosa***
13 [of the Blue Ridge (moist talus slopes) of NC, TN] ..... ***Sc. ovata** ssp. **rugosa** var. **1***

7 Corolla tube with sharply defined ring of hairs (annulus) at bend of tube.
14 At least some upper leaves entire.
15 Leaves with stipitate glands ..... ***Sc. multiglandulosa***
15 Leaves without stipitate glands.
16 Corolla glabrous, lower lip with immaculate white central band; leaf bases long-attenuate ..... ***Sc. glabriuscula***
16 Corolla short pilose, lower lip with blue spots or lines on white central band; leaf bases cuneate to deltoid.
17 Lowest pedicels of main axis of inflorescence >4 mm, or if less, then subtending bracts < 13 mm.... ***Sc. arenicola***
17 Lowest pedicels < 4 mm, or if more, then bracts >13 mm..... ***Sc. integrifolia***
14 All leaves serrate or crenate.
18 Second internode below base of inflorescence stipitate glandular.
19 Corollas 24-33 mm long **and** upper surfaces of leaves punctate glandular ..... ***Sc. pseudoserrata***
19 Corollas 14-23 mm long, or if longer, then upper surfaces of leaves eglandular.
20 Corollas 25-36 mm long; bracts elliptic to oblanceolate, apices acute ..... ***Sc. montana***
20 Corollas 14-23 mm; bracts obovate to broadly oblanceolate, apices obtuse.
21 Bases of upper leaves cuneate to rounded; corollas 14-18 (-21) mm..... ***Sc. elliptica** var. **hirsuta***
21 Bases of upper leaves cordate to rounded; corollas 18-23 mm..... ***Sc. ocmulgee***
18 Second internode below base of inflorescence eglandular.
22 Corollas > 21 mm long*.
28 Stems glabrous or glabrate below inflorescence; calyces eglandular; [of the Mountains and Piedmont] ..... ***Sc. serrata***
28 Stems canescent below inflorescence; calyces stipitate glandular or punctate glandular.
29 Lower lip with 20+ blue spots; calyces stipitate glandular; [of peninsular FL and s GA] ..... ***Sc. arenicola***
29 Lower lip lacking blue spots; calyces punctate glandular; [of s SC-se GA; disjunct to c AL]..... ***Sc. mellichampii***
22 Corollas < 21 mm long*.
23 Calyces densely to sparsely canescent, eglandular or with punctate glands (stipitate glands may also be present).
24 Leaves softly villous beneath; calyces and bracts eglandular ..... ***Sc. incana** var. **incana***
24 Leaves glabrate, with appressed hairs on veins.
25 Stems canescent; calyces and bracts densely punctate glandular..... ***Sc. incana** var. **australis***
25 Stems glabrate (rarely puberulent); calyces and bracts eglandular ..... ***Sc. incana** var. **punctata***
23 Calyces pilose with spreading stipitate glandular hairs.
26 Bracts with stipitate glands; leaves eglandular ..... ***Sc. elliptica** var. **elliptica***
26 Bracts without stipitate glands; leaves densely punctate glandular.
27 Corollas 19-22 mm long; [of the Mountains of AL]..... ***[Sc. alabamensis]***
27 Corollas 11-16 mm long; [of the Coastal Plain of SC and GA]..... ***Sc. altamaha***

*Note: in key break 22b, corollas of *S. alabamensis* may reach 22 mm long; its calyces are both stipitate glandular and punctate glandular, thus differing from *S. arenicola* and *S. mellichampii*. In key break 22a, corollas of *S. mellichampii* may be as short as 21 mm; its calyces are punctate glandular only, unlike *S. incana* var. *australis* which has both punctate glands and stipitate glands on calyces.

Scutellaria altamaha Small, Altamaha Skullcap. Cp (GA), {NC, SC}: sandy deciduous forests; rare (GA Special Concern). [= K, S, Y; < *S. mellichampii* Small – RAB]

Scutellaria arenicola Small, Sandhill Skullcap. Cp (GA): sandy scrub; rare (GA Special Concern). Endemic to GA and FL (Kartesz 1999). [= K, S, Y]

Scutellaria australis (Fassett) Epling, Southern Skullcap. Pd (GA, NC, SC, VA), Cp (GA): bottomland forests; rare. VA, WV, KY, IN, IL, MO, and KS, south to Panhandle FL, LA, and e. TX. [= G, X; < *S. parvula* – RAB, S; = *S. parvula* Michaux var. *australis* Fassett – F, K]

Scutellaria elliptica Muhlenberg ex Sprengel *var.* ***elliptica***. Mt, Pd, Cp (GA, NC, SC, VA): mesic to dry forests; common. Late May-June; June-July. NY, KY and MO, south to s. GA, Panhandle FL, LA, and e. TX. [= C, F, G, K, W, Y; < *S. elliptica* – RAB; < *S. ovalifolia* – S; = *S. ovalifolia* ssp. *mollis* Epling – X]

Scutellaria elliptica Muhlenberg ex Sprengel *var.* ***hirsuta*** (Short & Peter) Fernald. Mt (GA, NC, VA), Pd (VA): mesic to dry forests; uncommon. Late May-June; June-July. PA and MI south to n. VA, w. NC, nw. GA, s. AL, and e. TX. [= C, F, G, K, W, Y; < *S. elliptica* – RAB; < *S. ovalifolia* – S; = *S. ovalifolia* ssp. *hirsuta* (Short & Peter) Epling – X]]

Scutellaria galericulata Linnaeus, Hooded Skullcap. Mt (NC, VA): spring-fed seepage; rare. The NC occurrence is based on a single specimen from the 19th century. Reported recently from MD (Steury, Tyndall, & Cooley 1996). [= C, G, K, X; > *S. epilobiifolia* A. Hamilton – F, S]

Scutellaria glabriuscula Fernald, Georgia Skullcap. Cp (GA): {habitat}; rare. Sw. GA and FL Panhandle west through s. AL to s. MS. In GA, AL, MS, and FL. [= K, S, Y]

Scutellaria incana Biehler *var.* ***incana***. Pd, Cp (NC, VA): dry to mesic forests and woodlands; uncommon. NY, OH, IN, and IL, south to e. VA, c. NC, KY, w. TN, MS, and AR. [= C, F, G, K, Y; < *S. incana* – RAB, S; = *S. incana* – X]

Scutellaria incana Biehler *var.* ***punctata*** (Chapman) C. Mohr. Mt (GA, NC, SC, VA): dry to mesic forests and woodlands; common. Southern Appalachian endemic: sw. VA south through w. NC, nw. SC, e. TN to n. GA and ne. AL. [= C, F, G, K, W, Y; < *S. incana* – RAB, S; *S. punctata* (Chapman) Leonard – X]

Scutellaria integrifolia Linnaeus. Cp, Pd, Mt (GA, NC, SC, VA): wet pine savannas, seeps in forests, bottomlands, other moist sites; common. May-July; July-August. MA south to FL, west to TX, northward in the interior to OH, KY, and TN. [= C, G, GW, K, S, W, Y; > *S. integrifolia* var. *hispida* Bentham – RAB, F; > *S. integrifolia* var. *integrifolia* – RAB, F]

Scutellaria lateriflora Linnaeus, Mad Dog Skullcap. Cp (NC, SC, VA), Pd, Mt (GA, NC, SC, VA): alluvial forests, bogs, seeps, marshes; common. July-November. Newfoundland west to British Columbia, south to GA and CA. [= RAB, C, F, G, GW, S, W; > *S. lateriflora* var. *lateriflora* – K]

Scutellaria leonardii Epling, Shale-barren Skullcap, Glade Skullcap. Mt (GA, VA), Pd (NC, VA), Cp (VA): limestone glades, diabase barrens; rare (GA Special Concern). April-May; May-June. MA west to MI and ND, south to se. VA, nc. NC, AR, and OK. [= C, G, W, X; < *S. parvula* – RAB; > *S. nervosa* Pursh var. *ambigua* (Nuttall) Fernald – F; = *S. parvula* Michaux var. *missouriensis* (Torrey) Goodman & Lawson – K; = *S. ambigua* Nuttall – S; > *S. parvula* Michaux var. *leonardii* (Epling) Fernald – F]

Scutellaria mellichampii Small, Mellichamp's Skullcap. Cp (GA, NC?, SC): sandy deciduous forests on river bluffs; rare (GA Special Concern). June; July. Se. SC (se. NC?) south to e. GA. [= S, X, Y; < *S. mellichampii* – RAB; = *S. incana* Biehler var. *australis* (Epling) Collins, comb. nov. ined. – K; = *S. altamaha* Small ssp. *australis* Epling]

Scutellaria montana Chapman, Large-flowered Skullcap. Mt (GA): mesic hardwood (or hardwood-shortleaf pine) forests; rare (US Threatened, GA Endangered). Se. TN south to nw. GA. [= K, S, Y; = *S. serrata* Andrzedowski var. *montana* (Chapman) Penland – F]

Scutellaria multiglandulosa (Kearney) Small ex Harper. Cp, Pd (SC, GA): sandhills, dry sandy bluff forests; rare. SC (Abbeville and Anderson counties) to e. GA, and in Panhandle FL. [= K, S, Y; = *S. integrifolia* Linnaeus var. *multiglandulosa* Kearney – F]

Scutellaria nervosa Pursh, Bottomland Skullcap, Veined Skullcap. Pd (NC, SC, VA), Cp (NC, VA), Mt (VA), {GA}: alluvial forests, mesic forests; uncommon, rare south of VA (GA Special Concern). May-June; June-July. NY, MI, and IA, south to GA, AL, and LA. [= RAB, K, S, W; > *S. nervosa* var. *nervosa* – C, F, G; *S. nervosa* var. *calvifolia* Fernald – C, F, G]

Scutellaria ocmulgee Small, Ocmulgee Skullcap. Cp (GA): bluff forests and other mesic hardwood forests; rare (GA Threatened). Endemic to e. GA. [= K, S, Y]

Scutellaria ovata Hill *ssp.* ***bracteata*** (Bentham) Epling. Mt (GA): dry forests and woodlands; rare. MO south through AR and OK to c. TX; disjunct eastward in s. MS, c. and n. AL, and nw. GA. [= K, W, X; < *S. ovata* var. *ovata* – C, F, G; = *S. ovata* var. *bracteata* Bentham; > *Scutellaria ovata* Hill ssp. *cuthbertii* (Alexander) Epling – K, X; > *S. cuthbertii* Alexander – S; = *S. ovata* ssp. *bracteata* (Bentham) Epling var. *bracteata* – Z] {synonymy incomplete}

Scutellaria ovata Hill *ssp.* ***ovata*** *var.* ***ovata***. {GA, NC, SC, VA}. [= Z; > *S. ovata* ssp. *ovata* – K; < *S. ovata* – RAB, S; >< *S. ovata* var. *ovata* – C, F, G; > *S. ovata* var. *calcarea* (Epling) Gleason – C, G; > *S. ovata* var. *versicolor* (Nuttall) Fernald – C, G; = *S. ovata* ssp. *ovata* – W; > *S. ovata* ssp. *calcarea* Epling – X; > *S. ovata* ssp. *versicolor* (Nuttall) Epling – X; > *Scutellaria ovata* Hill *ssp. venosa* Epling – K, X]

Scutellaria ovata Hill *ssp.* ***rugosa*** (Wood) Epling *var.* ***rugosa***. Mt (VA): shale barrens, other dry woodlands; common. [= *S. ovata* var. *rugosa* – F; > *S. ovata* ssp. *rugosa* – K, W, X; > *Scutellaria ovata* Hill ssp. *pseudoarguta* Epling – K, X; < *S. ovata* – RAB, S; = *S. ovata* ssp. *rugosa* (Wood) Epling var. *rugosa* – Z; > *Scutellaria ovata* Hill *ssp. virginiana* Epling – K, X]

Scutellaria ovata Hill *ssp.* ***rugosa*** (Wood) Epling *var.* ***1***, Appalachian Skullcap. Mt (GA, NC, VA): moist boulderfields at high elevations; rare. [*Scutellaria arguta* Buckley – C, G, K, S, W, X; = *S. saxatilis* Riddell var. *pilosior* Bentham – F; "*S. ovata* Hill ssp. *rugosa* (Wood) Epling var. *arguta* (Buckley) Pittman" – Z (not published)]

Scutellaria parvula Michaux, Dwarf Skullcap. Pd (SC, VA). ME west to MN, south to GA and TX. In c. TN and scattered locations in e. TN (Chester, Wofford, & Kral 1997). [= G, W, X; = *S. parvula* var. *parvula* – C, F, K; < *S. parvula* – RAB, S]

Scutellaria pseudoserrata Epling. Mt, Pd (GA), {NC?, SC}: rich, rocky forests; rare. Also in e. TN (Chester, Wofford, & Kral 1997), nc. and c. GA (Jones & Coile 1988). Cultivated in Highlands, Macon Co., NC. [= K, W, X, Y]

* ***Scutellaria racemosa*** Persoon, South American Skullcap. Cp (GA, SC), Pd (NC): disturbed areas, introduced from South America. Reported from FL, AL, GA, and SC by Kral (1981). Krings & Neal (2001a, 2001b) report it for Chatham Co., NC and discuss its occurrence in se. United States. [= GW, K]

Scutellaria saxatilis Riddell, Rock Skullcap. Mt (GA, NC, SC, VA): June-August. [= RAB, C, G, K, S, W, X, Z; = *S. saxatilis* var. *saxatilis* – F]

Scutellaria serrata Andrzedowski, Showy Skullcap, Serrate Skullcap. Mt, Pd (NC, VA), {GA, SC?}. Mid May-late June. [= RAB, C, G, K, S, W, X, Y; = *S. serrata* var. *serrata* – F]

Scutellaria alabamensis Alexander. AL (Epling 1942, Kartesz 1999). [= K, S, X, Y]

Scutellaria drummondii Bentham *var. **drummondii***, Drummond's Skullcap. Cp (GA): blackland prairies; rare. First reported for GA by Lee Echols in 2005 (pers. comm.). [= K]

Sideritis Linnaeus

A genus of about 140-150 species, herbs and shrubs, of temperate Eurasia. References: Harley et al. in Kadereit (2004).

* *Sideritis romana* Linnaeus, Ironwort, is introduced and naturalized as far south as PA (Rhoads & Klein 1991, Cronquist 1991) and WV (Cronquist 1991). [= C, K] {synonymy incomplete}

Stachys Linnaeus 1753 (Hedge-nettle)

(contributed by John B. Nelson)

A genus of about 300 species, herbs and shrubs, mainly temperate, nearly cosmopolitan (except Australia and New Zealand). References: Nelson (1981)=Z; Nelson & Fairey (1979); Mulligan & Munro (1989); Pringle (2002); Harley et al. in Kadereit (2004).

Keying Note: This treatment will be revised substantially.

Key 1

1 Fruiting calyx lobes deltoid to broadly triangular.
- 2 Stem sides pubescent.
  - 3 Petioles short to absent, blades mostly rounded to truncate; top of blooming stem stiff, erect ..... ***S. eplingii***
  - 3 Petioles well developed, blades commonly cordate at the base; top of blooming stem frequently flexuous, somewhat lax ..... ***S. cordata***
- 2 Stem sides glabrous.
  - 4 Leaf margins serrate or serrulate, but always with sharp teeth; nodes not bearded; stem angles with scattered, swollen-based, short, retrorse trichomes (not spreading pubescent); [plants of the Mountains or upper Piedmont] ..... ***S. latidens***
  - 4 Leaf margins finely crenate; nodes bearded; stem angles abundantly pubescent with 3-celled, spreading hairs; [of the lower Piedmont of NC] ..... ***S. species 1***

1 Fruiting calyx lobes lanceolate, narrowly triangular, or nearly subulate.
- 5 Leaf blades linear to lanceolate.
  - 6 Stem sides with at least moderate pubescence on the highest sterile internode, moderately to densely pubescent on higher internodes; lower leaf surface abundantly pubescent to velvety-pilose ..... ***S. pilosa***
  - 6 Stem sides without pubescence, except for internodes within the inflorescence, which may bear light villous or glandular hairs; lower leaf surface glabrous or pubescent, but not velvety.
    - 7 Leaf blade margins entire to crenate; plants generally glabrous ..... ***S. hyssopifolia***
    - 7 Leaf blade margins serrulate with at least a few teeth; plants glabrous or pubescent.
      - 8 Stems strict or sparingly branched; leaves sessile or barely petioled, the blades crenate to serrate with shallow teeth ..... ***S. aspera***
      - 8 Stems frequently branched from the upper nodes; leaves obviously petioled, the blades sharply toothed ..... ***S. tenuifolia***
- 5 Leaf blades wider, oblong to elliptic.
  - 9 Petioles poorly developed, essentialy absent ..... ***S. hispida***
  - 9 Petioles obvious, frequently 1/5 the length of the blade.
    - 10 Leaf blades sharply serrate, nearly dentate; stem angles abundantly pubescent with spreading or somewhat retrorse, long (to 3 mm) hairs ..... ***S. clingmanii***

10 Leaf margins crenate to serrulate, but never dentate; stem angles glabrous or pubescent (if the latter, then with scattered, stiffish, retrorse hairs).
11 Plant producing thick, segmented, tuber-like rhizomes; stem sides and calyx usually strongly glandular; [weedy, mostly on the Coastal Plain] ..... ***S. floridana***
11 Plant producing slender rhizomes; stem sides and calyx usually scarcely glandular, or glabrous; [not weedy, mostly of the Piedmont and Mountains].
12 Calyx usually abundantly pubescent with stiff, eglandular hairs; fruiting calyx lobes straight ..... ***S. hispida***
12 Calyx usually glabrous to sparingly pubescent; fruiting calyx lobes frequently curved or curling..... ***S. tenuifolia***

Key 2 (Alternate Key)

1 Petioles obvious (at least some of those in the middle portion of the stem at least 1/5 as long as the leaf blade).
2 Calyx tubes glandular.
3 Leaf blade margins strongly serrate (dentate or nearly so); stem angles copiously pubescent with long (to 3 mm), spreading hairs ..... ***S. clingmanii***
3 Leaf blade margins mostly crenate; stem angles glabrate or pubescent with mostly short, retrorse hairs.
4 Calyx lobes about as long as the tube, lanceolate; leaf blades never greater than 3 cm wide..... ***S. floridana***
4 Calyx lobes shorter than the tube, deltoid; leaf blades frequently > 3 cm wide ..... ***S. cordata***
2 Calyx not glandular, or very slightly so.
5 Calyx glabrous to sparsely pubescent; petioles well-developed, especially in shade forms..... ***S. tenuifolia***
5 Calyx variously hairy, but at least hispidulous, frequently strongly hispid; petioles short or long.
6 Petioles usually well developed; blade margins commonly dentate..... ***S. clingmanii***
6 Petioles frequently short to nearly absent; blade margins toothed, but never dentate ..... ***S. hispida***
1 Petioles short or absent.
7 Leaves linear-lanceolate to narrowly lanceolate, usually widest at or near the base; leaf margins entire to crenulate, rarely serrulate, and then mostly toward the apex.
8 Corolla very pale pink to white; leaf blades abundantly pubescent below with appressed hairs, the surface soft-velvety..... ***S. pilosa***
8 Corolla dark pink; leaf blades variously pubescent or glabrate, but never velvety.
9 Leaf blades narrow, 3-6 mm wide; plants generally glabrous to moderately pubescent; blade margins entire to obscurely crenulate..... ***S. hyssopifolia***
9 Leaf blades broader, 5-8 mm wide; plants frequently hispidulous or at least moderately pubescent, or abundantly hairy; blade margins crenulate to serrulate ..... ***S. aspera***
7 Leaves ovate to elliptic, widest near the center or toward the apex, oblong; leaf margins crenate to sharply serrate for nearly the entire length.
10 Stem sides commonly pubescent above ..... ***S. eplingii***
10 Stem sides glabrous, the angles pubescent.
11 Fruiting calyx lobes lanceolate, about half as long as the calyx tube ..... ***S. hispida***
11 Fruiting calyx lobes deltoid or triangular, shorter than half the length of the calyx tube.
12 Leaf margins serrate or serrulate, but always with sharp teeth; nodes not bearded; stem angles with scattered, swollen-based, short, retrorse trichomes (not spreading pubescent); [of the Mountains or upper Piedmont] ..... ***S. latidens***
12 Leaf margins finely crenate; nodes bearded; stem angles abundantly pubescent with 3-celled, spreading hairs; [of the lower Piedmont of NC] ..... ***S. species 1***

Stachys aspera Michaux, Rough-leaved Hedge-nettle. Cp, Pd (GA, NC, SC, VA), Mt (VA): moist or wet sandy soil of savannas, marshes, or swamp forests; uncommon (VA Rare). June-August; August-September. [= C, G, K; = *S. hyssopifolia* Michaux var. *ambigua* A. Gray – RAB, F, GW, Z; = *S. ambigua* (A. Gray) Britton – S; *? S. grayana* House]

Stachys clingmanii Small, Clingman's Hedge-nettle. Mt (NC), Cp? (VA?), {SC?}: cove forests, especially periglacial boulderfields, mostly at high elevations (and see comments below); rare (NC Rare). June-August; September-October. A narrow Southern Appalachian endemic, known only from sw. NC and se. TN. Some plants similar to and perhaps referable to this species occur in Surry County VA (calcareous bushy thickets and ravines) and in IN. [= C, F, G, K, S, W, Z; < *S. clingmanii* – RAB]

Stachys cordata Riddell, Heart-leaved Hedge-nettle, Nuttall's Hedge-nettle. Mt (GA, NC, VA), Pd (NC, VA): moist forests, especially alluvial bottomlands or over calcareous rocks; uncommon (rare in NC) (GA Rare, NC Watch List). June-August; September-October. Primarily montane, but extending east to Stokes County, North Carolina. See Pringle (2002) for a discussion of nomenclature. [= S; = *S. nuttallii* Shuttleworth ex Bentham – K, W, Z; < *S. clingmanii* – RAB; > *S. cordata* – C; > *S. subcordata* Rydberg – C, G; = *S. riddellii* House – F, G; > *S. salvioides* Small – S]

Stachys eplingii J. Nelson, Epling's Hedge-nettle. Mt (GA, NC, SC, VA): mesic forests, bogs, wet meadows over calcareous or mafic substrates; rare (GA Rare, NC Rare, VA Rare). June-August; August-September. This species has a

scattered and sporadic range in the southern and central Appalachians, occurring also in the Ozarks. See Nelson & Fairey (1979) for a discussion of the nomenclatural change. [= C, GW, K, W, Z; = *S. nuttallii* – RAB, F, G, S, misapplied]

* ***Stachys floridana*** Shuttleworth ex Bentham, Florida Betony, Rattlesnake-weed. Cp, Pd (GA, NC, SC, VA): disturbed sites, roadsides; uncommon, probably not native, introduced from Florida. April-July; May-August. The common name "Rattlesnake-weed" refers to the moniliform rhizomes. [= RAB, GW, K, S, Z]

Stachys hispida Pursh, Hispid Hedge-nettle. Mt (NC, VA), Pd, Cp (VA), ?? (GA): wet meadows and mesic forests; uncommon (GA Rare). A highly variable taxon. [= C, G; = *S. tenuifolia* Willdenow var. *hispida* (Pursh) Fernald – F; < *S. tenuifolia* var. *tenuifolia* – K, Z]

Stachys hyssopifolia Michaux ***var. hyssopifolia***, Hyssop-leaved Hedge-nettle. Cp, Pd (GA, NC, SC, VA), Mt (VA): moist soils of savannas, marshes, seasonally flooded sinkhole ponds, roadside ditches; uncommon (VA Watch List). June-August; August-September. [= RAB, F, GW, Z; = *S. hyssopifolia* – C, G, K, S, W; *? S. atlantica* Britton]

Stachys latidens Small ex Britton, Broad-toothed Hedge-nettle. Mt, Pd (GA, NC, SC, VA): mesic forests in coves and on mountain slopes, mountain pastures and forest edges; common (GA Rare, SC Rare). June-August; September-October. [= RAB, C, F, G, S; = *S. tenuifolia* Willdenow var. *latidens* (Small ex Britton) J. Nelson – K, W, Z; < *S. tenuifolia* – GW]

Stachys pilosa Nuttall, Woundwort. Mt, Pd (VA), Cp (SC): marl fens, roadsides, banks of waterfowl impoundments; rare, possibly adventive in part from further west, but some populations at least native. [= *S. palustris* Linnaeus var. *pilosa* (Nuttall) Fernald – C, F, G; = *S. palustris* Linnaeus ssp. *pilosa* (Nuttall) Epling; > *S. pilosa* var. *arenicola* (Britton) Mulligan & Monroe – K]

Stachys species 1, Yadkin Hedge-nettle. Pd (NC, VA): in sandy alluvium along forest edges in river floodplain; rare.

Stachys tenuifolia Willdenow, Smooth Hedge-nettle. Mt (NC), Pd (VA), Cp (NC, SC, VA): wooded alluvial river bottoms, swamp forests, and roadsides; rare (NC Watch List). June-August; September-October. [= RAB, C, G, K, S; > *S. tenuifolia* var. *tenuifolia* – F, Z; > *S. tenuifolia* var. *perlonga* Fernald – F, Z; > *S. tenuifolia* var. *platyphylla* Fernald – F; < *S. tenuifolia* – GW; = *S. tenuifolia* var. *tenuifollia* – W]

* ***Stachys annua*** (Linnaeus) Linnaeus. Cp (VA): disturbed area; rare, probably only a waif. Reported for VA (Kartesz 1999). [= C, F, G, K] {not keyed at this time}

* *Stachys arvensis* (Linnaeus) Linnaeus. Reported for VA by C, G, and K; documentation uncertain (Virginia Botanical Associates 2006). [= C, F, K] {not keyed}

* ***Stachys byzantina*** K. Koch ex Scheele. Pd (VA): roadside; rare, doubtfully established. Reported for VA (Virginia Botanical Associates 2006). [= C, K; = *S. olympica* Poiret – F, G] {not keyed at this time}

Stachys crenata Rafinesque. Reported for AL, KY, FL (Kartesz 1999). [= K]

* ***Stachys germanica*** Linnaeus. Mt (VA): roadsides; rare, doubtfully established. Reported for VA, TN, FL (Kartesz 1999). [= C, F, G, K]

Stachys hyssopifolia Michaux ***var. lythroides*** (Small) J. Nelson. (GA Rare). E. Panhandle of FL. [= Z]

* *Stachys palustris* Linnaeus. South to MD, PA, NJ. [= K; > *S. palustris* var. *palustris* – C, F, G]

Synandra Nuttall 1818 (Synandra)

A monotypic genus, an herb, of e. North America. References: Cantino (1985); Harley et al. in Kadereit (2004).

Synandra hispidula (Michaux) Baillon, Synandra, Gyandotte Beauty. Mt (NC, VA): moist, rich forests; rare (NC Rare, VA Rare). Late April-May; May-June. A broad Appalachian endemic: s. OH west to s. IL, south to sw. VA, w. NC, and n. AL. [= RAB, C, F, G, K, S, W]

Teucrium Linnaeus 1753 (Germander)

A genus of about 100-250 species, herbs and shrubs, nearly cosmopolitan in distribution. References: Harley et al. in Kadereit (2004).

Teucrium canadense Linnaeus ***var. canadense***. {GA, NC, SC, VA}. [= C, F, G, K; < *T. canadense* – RAB, GW, W; = *T. littorale* Bicknell – S]

Teucrium canadense Linnaeus ***var. hypoleucum*** Grisebach. {GA, NC, SC}. [= K; < *T. canadense* – RAB, GW, W; = *T. nashii* Kearney – S]

Teucrium canadense Linnaeus ***var. occidentale*** (A. Gray) McClintock & Epling. (VA). Reported for VA (Kartesz 1999). {investigate} Occurs at least as far south and east as PA (Rhoads & Klein 1993). [= C, G, K; > *T. occidentale* A. Gray var. *occidentale* – F; > *T. occidentale* A. Gray var. *boreale* (Bicknell) Fernald – F]

Teucrium canadense Linnaeus ***var. virginicum*** (Linnaeus) Eaton. [= C, F, G, K; < *T. canadense* – RAB, GW, W; = *T. canadense* – S]

Teucrium cubense Jacquin var. *cubense*. AL. [= K] {not keyed at this time; synonymy incomplete}

Thymus Linnaeus (Thyme)

A genus of about 220-350 species, herbs and shrubs, of temperate Eurasia. References: Harley et al. in Kadereit (2004).

* ***Thymus praecox*** Opiz *ssp.* ***arcticus*** (Dur.) Jalas, Mother-of-Thyme. Pd (NC), Mt (GA): commonly cultivated and sometimes escaped or persisting; rare, introduced from Eurasia. July-September. [= K; *? Th. serpyllum* Linnaeus – RAB, C, F, G, misapplied]

* ***Thymus pulegioides*** Linnaeus, Lemon Thyme. Pd (VA). [= K]

Trichostema Linnaeus 1753 (Blue Curls)

A genus of about 18 species, shrubs, annual and perennial herbs, of temperate North America (especially diverse in w. North America, with a second center of diversity in se. North America). References: Weakley (in prep.)=Z; Harley et al. in Kadereit (2004).

1 Calyx lobes essentially equal; stamens straight, < 10 mm long; leaves acute to slightly acuminate, the two main lateral veins reconnecting to the midvein; [section *Orthopodium*] ..... ***T. brachiatum***

1 Calyx strongly bilabiate; stamens strongly arched, 12-20 mm long; leaves obtuse, the two main lateral veins not reconnecting to the midvein; [section *Trichostema*].

2 Plants annual; larger leaves 3-7 cm long (including the petiole); plants with long internodes near the base, near-basal branches absent, the best-developed branches from the mid or upper stem; hairs on the upper stem long (0.5-2.0 mm long) or short (0.1-0.4 mm long); [collectively widespread, in a wide variety of habitats, primarily inland, though occasionally occurring as a weed in coastal areas].

3 Leaves 2.5-4× as long as wide; longer hairs of the upper stem (0.3-) 0.5-2.0 mm long ..... ***T. dichotomum***

3 Leaves 5-15× as long as wide; longer hairs of the upper stem 0.1-0.3 (-0.4) mm long ..... ***T. setaceum***

2 Plants perennial; larger leaves 1-4 cm long (including the petiole); plants with short internodes near the base, near-basal branches well-developed, these often branching again; hairs on the upper stem short (0.1-0.4 mm long); [restricted to barrier islands, coastal peninsulas, and other maritime situations within 10 km of the ocean].

4 Anthers lemon yellow; leaves ovate-rhombic, 1-1.5× as long as wide; corolla lavender (definitely with a pinkish tint); bark on older stems dark, tight; plants 1-4 dm tall, forming a tight, compact, hemispheric bush; [of maritime dunes, grasslands, and forest openings from 10 km north of Cape Hatteras (Dare County, NC) south to near Cape Romain (Georgetown County, SC] ..... ***T. species 1***

4 Anthers blue; leaves spatulate, the petiole relatively well-developed, 1.5-3× as long as wide; corolla bluish (lacking a well-developed pinkish tint); bark on older stems yellow to tan, somewhat papery; plants 3-7 dm tall, often gangly and irregularly shaped; [of maritime dunes, grasslands, and coastal scrub from e. GA around the FL peninsula west to s. MS] ..... ***T. species 2***

Trichostema brachiatum Linnaeus, Glade Blue Curls, False Pennyroyal. Mt (GA, NC, VA), Pd (NC, SC, VA): shale barrens, outcrops of calcareous or mafic rock, diabase barrens, calcareous dry prairies, disturbed rocky areas; uncommon (NC Rare). August-September. VT and s. Ontario west to MN and NE, south to c. NC, nw. GA, AL, TX, and AZ. Morphology, pollen, and phytogeography suggest the plausible recognition of *Trichostema* section *Orthopodium* (which includes this species andseveral from w. North America) as *Isanthus*, a genus distinct from section *Trichostema* (which includes all other eastern North American species). [= W; = *Isanthus brachiatus* (Linnaeus) Britton, Sterns, & Poggenburg – C, F, K, S; > *Isanthus brachiatus* var. *brachiatus* – G]

Trichostema dichotomum Linnaeus, Common Blue Curls. Cp, Pd, Mt (GA, NC, SC, VA): dry woodlands, disturbed areas, thin soils around rock outcrops; common. August-November. Widespread in e. North America. [= RAB, C, K, S, W, Z; > *T. dichotomum* var. *dichotomum* – F; >< *T. dichotomum* var. *puberulum* Fernald & Griscom – F; = *T. dichotomum* var. *dichotomum* – G]

Trichostema setaceum Houttuyn, Narrowleaf Blue Curls. Pd, Mt, Cp (GA, NC, SC, VA): thin soils around rock outcrops, especially granite flatrocks, dry sandy soils of the Coastal Plain; uncommon (NC Watch List, VA Rare). August-November. CT west to OH, south to FL and TX, primarily on the Coastal Plain. [= RAB, C, F, K, W, Z; = *T. dichotomum* var. *lineare* (Walter) Pursh – G; = *T. lineare* Walter – S]

Trichostema species 1, Dune Blue Curls, Carolina Blue Curls. Cp (NC, SC): dunes on barrier islands, vegetated with perennial grasses (especially *Uniola paniculata*), openings in maritime scrub; rare (US Species of Concern, NC Rare). August-November. Endemic to barrier islands from slightly north of Cape Hatteras, NC south to North Island, Georgetown County, SC, north of Cape Romain. When growing together, the flowering period of *T. species 1* is about 2-3 weeks later than that of *T. dichotomum*. Despite a considerable overlap of blooming period, only one hybrid has been seen, and that in common-garden cultivation in the Piedmont. [= Z]

Trichostema species 2, Florida Blue Curls. Cp (GA): maritime dunes, grasslands, and coastal scrub; uncommon. E. GA around the FL peninsula west to s. MS; Bahamas. [= Z; >< *T. dichotomum* var. *puberulum* Fernald & Griscom – F]

Vitex Linnaeus 1753 (Chaste Tree)

A genus of about 250 species, trees and shrubs, tropical to temperate. References: Harley et al. in Kadereit (2004).

1 Leaves palmately compound; plant an upright small tree ..... ***V. agnus-castus***
1 Leaves simple; plant a sprawling and spreading shrub/vine ..... ***V. rotundifolia***

* ***Vitex agnus-castus*** Linnaeus, Chaste Tree. Cp (GA, NC, VA), Pd (GA, NC, VA), Mt (VA): pastures, woodland edges, suburban woodlands; rare, introduced from Mediterranean Europe. June-July. [= RAB, C, G, S; > *V. agnus-castus* var. *agnus-castus* – K; > *V. agnus-castus* var. *caerulea* Rehder – K]
* ***Vitex rotundifolia*** Linnaeus f., Beach Vitex, Roundleaf Chaste-tree. Cp (GA?, NC, SC): coastal dunes; uncommon, planted for ornament and stabilization and now spreading aggressively as an invasive species. See Roecker & Socha (2004) for additional information. The runners are reported to reach 10 m in length. [= K]

LARDIZABALACEAE Decaisne 1839 (Lardizabala Family)

A family of about 8 genera and 35 species, shrubs and vines, primarily Asian, but also in s. South America. References: Thieret & Kartesz in FNA (1997); Cheng-Yih & Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Akebia Decaisne 1837 (Akebia)

A genus of 5 species, vines, of temperate e. Asia. References: Cheng-Yih & Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

* ***Akebia quinata*** (Houttuyn) Decaisne, Five-leaf, Five-leaf Akebia, Chocolate-vine. Mt, Pd (NC, SC, VA), Cp (GA): escaped from cultivation to roadbanks, suburban woodlands, and floodplains; rare, native of Japan, China, and Korea, potentially invasive and difficult to eradicate. April-June; June-July. [= RAB, C, F, FNA, K]

LAURACEAE A.L. de Jussieu 1789 (Laurel Family)

A family of about 50 genera and 2500-3500 species, trees and shrubs, of tropical, subtropical, and (rarely) warm temperate regions. References: van der Werff in FNA (1997); van der Werff & Richter (1996); Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves evergreen; flowers perfect; [tribe *Perseeae*].
  2 Leaves glabrous, bright green, with yellow callosities in the principal vein axils; crushed leaves with the odor of camphor ..... ***Cinnamomum***
  2 Leaves pubescent to glabrate, dark green, without yellow callosities in the principal vein axils; crushed leaves with the odor of bay ..... ***Persea***
1 Leaves deciduous; flowers imperfect; [tribe *Laureae*].
  3 Some of the leaves with 1-2 (-5) rounded lobes; small to medium trees ..... ***Sassafras***
  3 None of the leaves lobed; medium to large shrubs.
    4 Leaves 4-16 cm long, 2-6 cm wide, obovate, ovate, or broadly elliptic ..... ***Lindera***
    4 Leaves 1.2-4 cm long, 0.5-1.5 (-1.9) cm wide, narrowly elliptic ..... ***Litsea***

Cinnamomum Schaeff 1760 (Cinnamon)

A genus of about 350 species, trees and shrubs, of e. and se. Asia, Oceania, and tropical America. References: Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

* ***Cinnamomum camphora*** (Linnaeus) J. Presl, Camphortree. Cp (GA, NC, SC): disturbed areas; rare, native of eastern Asia, planted as an ornamental and rarely escaped to adjoining areas, such as in Southern Pines, Moore County, NC. April-May. Reported as escaped and apparently naturalized in South Carolina by Hill & Horn (1997). [= FNA, K; = *Camphora camphora* (Linnaeus) Karsten – S]

Laurus Linnaeus 1753 (Laurel, Bay)

A genus of 1-2 species, trees, of Mediterranean Europe, the Canary Islands, Madeira, and the Azores. References: Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

* *Laurus nobilis* Linnaeus, Laurel, Bay, native to the Mediterranean region of Europe and the bay leaf of commerce, is planted as an ornamental and spice, but is not known to escape in our area.

Lindera Thunberg 1783 (Spicebush, Benzoin)

A genus of about 100 species, trees and shrubs, of tropical and temperate Asia, Australia, and e. North America. References: Wofford (1983)=Z; Steyermark (1949); McCartney, Wurdack, & Moore (1989); Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves typically with a thick, subcoriaceous texture (though sometimes thinner in texture if growing in shade), 4-8 cm long, 2-3.5 cm wide, narrowly obovate to oblanceolate, pubescent and strongly whitened below; leaves and bark aromatic, the odor lemony ..... ***L. subcoriacea***
1 Leaves with a thin, membranous texture, 6-16 cm long, 2-6 cm wide, obovate, elliptic, or ovate, glabrous to pubescent below, but not strongly whitened; leaves and bark strongly aromatic, the odor spicy or like sassafras.
  2 Leaf base widely cuneate to rounded; leaves narrowly ovate, reticulate-rugose, with an acute apex, pubescent above, drooping, fragrant when crushed with an odor like sassafras; shrubs colonial, short (to 2 m tall) ..... ***L. melissifolia***
  2 Leaf base cuneate; leaves widely obovate, plane (not rugose), with a short-acuminate apex, glabrous above, borne horizontally, spicy-fragrant when crushed; shrubs not colonial, often multi-stemmed from base, short to tall (to 5 m tall).
    3 Leaves glabrous beneath; young twigs glabrous ..... ***L. benzoin*** *var.* ***benzoin***
    3 Leaves pubescent beneath, at least on the midrib; young twigs pubescent ..... ***L. benzoin*** *var.* ***pubescens***

Lindera benzoin (Linnaeus) Blume *var.* ***benzoin***, Smooth Northern Spicebush. Mt (GA, NC, VA), Pd (VA): rich alluvial forests, mesic forests on slopes with circumneutral soils, bottomlands, swamps; common. March-April; August-September. The species is widespread in e. North America; var. *benzoin* is northern, ranging south to VA and MO, and in the mountains to GA. Where occurring on upland slopes, *L. benzoin* is an excellent indicator of base-rich soils, generally derived from calcareous sedimentary rocks or mafic metamorphic or igneous rocks. [= C, F, G, K; < *L. benzoin* – RAB, FNA, GW, W, Z; < *Benzoin aestivale* (Linnaeus) Nees – S]

Lindera benzoin (Linnaeus) Blume *var.* ***pubescens*** (Palmer & Steyermark) Rehder, Hairy Northern Spicebush. Mt, Pd, Cp (GA, NC, SC, VA): rich alluvial forests, mesic forests on slopes with circumneutral soils, bottomlands, swamps; common. March-April; August-September. Var. *pubescens* is the more southern of the two varieties, ranging through much of se. North America, north to se. VA, sw. VA, s. OH, MI, and MO. Where occurring on upland slopes, *L. benzoin* is an excellent indicator of base-rich soils. [= C, F, G, K; < *L. benzoin* – RAB, FNA, GW, W, Z; < *Benzoin aestivale* (Linnaeus) Nees – S]

Lindera melissifolia (Walter) Blume, Southern Spicebush, Pondberry. Cp (GA, NC, SC), Pd (NC): wet flats and depressions, generally with pocosin shrubs; rare (US Endangered, GA Endangered, NC Endangered, SC Rare). March-April; August-September. This species is southern in range, with a very scattered distribution in se. and c. NC, e. SC, e. & sw. GA, nw. FL, sw. AL (?), nw. MS, se. MO-AR, and se. AR-LA (recent collections unknown from FL and LA). It is nearly extirpated in NC, currently known only from three populations, in Sampson, Bladen, and Cumberland counties. A historic record from Orange County, NC (in the lower Piedmont), collected by Elisha Mitchell in 1820 and 1822, appears to be bonafide (McVaugh, McVaugh, & Ayers 1996). [= RAB, F, FNA, GW, K, Z; = *Benzoin melissaefolium* (Walter) Nees – S]

Lindera subcoriacea B.E. Wofford, Bog Spicebush. Cp (GA, NC, SC, VA), Pd (NC): peaty seepage bogs in headwaters of blackwater streams, in the sandhills and immediately adjacent Piedmont, with other pocosin shrubs; rare (US Species of Concern, GA Special Concern, NC Endangered, SC Rare, VA Rare). March-April; July-August. The overall range of this newly described species is still poorly known; it appears to be a Southeastern Coastal Plain endemic, ranging from se. VA (perhaps s. NJ) south to FL and west to LA. Occurring in our area primarily in a scattering of small populations in the fall line Sandhills of NC and SC, with an outlier or two in "Piedmont pocosins" just west of the Sandhills. Distinctive characteristics of sun-grown plants include the rounded apex of the leaf, the leaf strongly whitened beneath and borne in an ascending to even appressed position in relation to the twigs, and a typically fastigiate or virgate branching pattern, with multiple stems or branches ascending vertically and nearly parallel to one another. Shade plants have a different form. [= FNA, K, Z]

Litsea Lamarck 1792 (Pondspice)

A genus of about 400 species, trees and shrubs, of warm temperate and tropical areas, especially se. Asia and Australia. The genus is very heterogeneous and probably needs division into more natural groups. References: Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

Litsea aestivalis (Linnaeus) Fernald, Pondspice. Cp (GA, NC, SC, VA): margins of limesink ponds and Carolina bays, less commonly in wet depressions dominated by shrubs; rare (US Species of Concern, GA Threatened, NC Rare, SC Rare, VA Rare). March-April; May-June. A Southeastern Coastal Plain endemic: e. MD (Dorchester County) and se. VA (York and Isle of Wight counties) south to n. FL (and allegedly also in LA, based on an old and poorly labeled specimen). The fine, zigzag twigs are distinctive. It grows to 6 m tall, characteristically forming a rounded bush. [= RAB, F, FNA, GW, K]

Persea P. Miller 1754 (Bay)

A genus of about 200 species, trees and shrubs, of Asia and America. The avocado is a member of this genus, *Persea americana* P. Miller. References: Godfrey (1988); Clewell (1985); Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

1 Twigs glabrous or glabrate; lower surfaces of leaves with minute, silvery to shining-golden hairs (the color depending on age), appressed to the surface; peduncles 1-3 cm long; leaves gtending to be smaller and blunter..... ***P. borbonia***
1 Twigs densely rusty-pubescent; lower surfaces of leaves with longer, rusty, often crooked hairs, not appressed, especially evident along the midrib and principal veins; peduncles 4-7 cm long; leaves tending to be larger and more acute..... ***P. palustris***

Persea borbonia (Linnaeus) Sprengel, Red Bay. Cp (GA, NC, SC): dunes, maritime forests, in dry sandy soils on barrier islands, known only north to Carteret County, NC; rare. May-June; September-October. E. NC (Carteret County) south to FL and west to se. TX; reports of the species north of NC are based on the inclusion of *P. palustris* in a broadly defined *P. borbonia*, or are simply in error, based on less hairy plants of *P. palustris*. This species is rare in our area and becoming rarer with the destruction of most maritime forests for the construction of vacation homes and tourist accomodations. [= FNA, G, GW, K; < *P. borbonia* – RAB, F (also see *P. palustris*); = *Tamala borbonia* (Linnaeus) Rafinesque – S; = *P. borbonia* var. *borbonia*]

Persea palustris (Rafinesque) Sargent, Swamp Bay. Cp (GA, NC, SC, VA): swamps, pocosins, bay forests, maritime forests, generally in wet peaty soils, but also in fairly dry, sandy soils in maritime forests; common. May-June; September-October. A Southeastern Coastal Plain endemic: DE, e. MD, and se. VA south to FL and west to se. TX. Though variable in amount of hairs on the leaves, the hairs of *P. palustris* are always of a distinctly different character than those of *P. borbonia*. [= C, FNA, G, GW, K; < *P. borbonia* – RAB, F; = *Tamala pubescens* (Pursh) Small – S; = *P. borbonia* var. *pubescens* (Pursh) Little]

Sassafras Presl 1825 (Sassafras)

A genus of 3 species, trees, of temperate e. Asia (2 species) and e. North America (1 species). References: Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

Sassafras albidum (Nuttall) Nees, Sassafras. Pd, Mt, Cp (GA, NC, SC, VA): a wide variety of forests, old fields, disturbed areas, fencerows; common. March-April; June-July. Widespread in e. United States. The original source of "root beer." [= RAB, C, FNA, G, K, W; > *S. albidum* var. *molle* (Rafinesque) Fernald – F; > *S. albidum* var. *albidum* – F]

LEITNERIACEAE (Corkwood Family)
(see *SIMAROUBACEAE*)

LENTIBULARIACEAE Richard 1808 (Bladderwort Family)

A family of 3 genera and about 270-320 species, insectivorous herbs, cosmopolitan. References: Fischer et al. in Kadereit (2004).

1 Leaves ovate or elliptic, in a basal rosette; carnivory via the viscid-slimy upper leave surfaces; flowers solitary on bractless peduncles ..... ***Pinguicula***
1 Leaves or leaf segments linear, borne along a subterranean or submersed stem; carnivory via specialized bladder-like traps; flowers in (1-) many-flowered racemes, each flower pedicel subtended by a bract..... ***Utricularia***

Pinguicula Linnaeus 1753 (Butterwort)

A genus of about 46-80 species, herbs, of America, Mediterranean Europe, and circumboreal America and Eurasia. References: Schnell (2002b)=Z; Godfrey & Stripling (1961); Wood & Godfrey (1957); Schnell (1980a); Fischer et al. in Kadereit (2004). Key based in part on GW.

1 Expanded corolla < 1.5 cm across; palate not exserted from the throat of the corolla; rosettes usually 2-4 cm in diameter; flowers usually white to pale violet (rarely medium violet); seeds 0.4 mm long ..... ***P. pumila***
1 Expanded corolla > 1.8 cm across; palate markedly exserted from the throat of the corolla; rosettes usually 5-10 (-15) cm across; corolla yellow, violet, or white; seeds (0.4-) 0.5-0.8 mm long.
  2 Corolla yellow..... ***P. lutea***
  2 Corolla lavender-blue or white.

3 Hairs on the lower portion of the scape elongated, pointed, multicellular, nonglandular, transitioning upward to 1-celled glandular hairs; expanded portion of corolla markedly "veiny" (darker along the veins); [of se. NC southward to s. peninsular FL and e. Panhandle FL] ..... ***P. caerulea***

3 Hairs throughout scape glandular; expanded portion of corolla not "veiny;" [collectively of sw. GA and FL Panhandle westward to s. MS].

4 Fresh leaves dull red or reddish green; corolla lobes ca. 2× as long than broad, the lobes notched almost ½ their length ..... ***[P. planifolia]***

4 Fresh leaves bright yellow-green; corolla lobes ca. 1× as long than broad, the lobes notched about 1/4 their length

5 Corolla tube violet, with darker violet veins; hairs of the inner corolla tube white ..... ***[P. ionantha]***

5 Corolla tube yellow, with reddish-brown veins; hairs of the inner corolla tube yellow ..... ***P. primuliflora***

Pinguicula caerulea Walter, Blue Butterwort. Cp (GA, NC, SC): pine savannas and wet pine flatwoods, mostly in the outer Coastal Plain, rarely extending inland to seepages and sandhill-pocosin ecotones in the fall-line Sandhills of NC and SC; uncommon. April-May. Se. NC (Carteret and Johnston counties) south to s. peninsular FL, west to e. panhandle FL. Schnell (1980a) discusses populations with white corollas. [= RAB, GW, K, S, Z; *Pinguicula elatior* Michaux]

Pinguicula lutea Walter, Yellow Butterwort. Cp (GA, NC, SC): pine savannas and wet pine flatwoods, mostly in the outer Coastal Plain, rarely extending inland to seepages and sandhill-pocosin ecotones in the fall-line Sandhills of SC; uncommon (NC Watch List). Late March-May. Se. NC (Pender and New Hanover counties) south to s. FL, west to e. LA. [= RAB, GW, K, S, Z]

Pinguicula primuliflora Wood & Godfrey, Clearwater Butterwort. Cp (GA): clearwater streams and seeps; rare (GA Threatened). Sw. GA, s. AL, Panhandle FL, and s. MS. [= GW, K, Z]

Pinguicula pumila Michaux, Small Butterwort. Cp (GA, NC, SC): pine savannas and wet pine flatwoods; uncommon (rare in NC) (NC Rare). April-May. Se. NC (Carteret and Pender counties) south to s. FL, west to se. TX; and in the Bahamas. [= RAB, GW, K, S, Z]

Pinguicula ionantha Godfrey, Panhandle Butterwort. Pond margins, bogs, flatwoods. Panhandle of FL. [= GW, K, Z]

Pinguicula planifolia Chapman, Chapman's Butterwort. Pond margins, bogs, flatwoods. S. AL, Panhandle of FL, and s. MS. [= GW, K, S, Z]

Utricularia Linnaeus 1753 (Bladderwort)

Utricularia, as monographed by Taylor (1989), consists of 214 species in 35 sections, with a nearly cosmopolitan distribution. In our area, 14 or 15 species in 5 sections are known to occur. References: Taylor (1989)=Z; Schnell (2002b)=Y; Müller & Borsch (2005); Fischer et al. in Kadereit (2004). Key based in part on Z and GW.

1 Flowers white or cream-white, 1-3 mm long; inflorescence peduncles very reduced, the pedicels appearing to arise directly from the stolons; traps 0.3-0.8 mm long; plants floating unattached in water (sometimes deposited land by dropping water, but then the principal branch systems stranded on the soil surface); capsules ca. 1 mm long, fusiform, indehiscent, with 1 seed; seeds essentially smooth, unornamented; leaves absent; [section *Utricularia*] ..... ***U. olivacea***

1 Flowers yellow, pink, or purple (sometimes fading whitish), (2-) 5-20 mm long; inflorescence peduncles well-developed, the inflorescence clearly a raceme; traps 0.2-5.0 mm long (< 0.7 mm long only in the terrestrial species (see key lead 2); plants attached (with principal branch systems within the soil), or floating unattached in water (sometimes deposited on land by dropping water, but then the principal branch systems stranded on the soil surface); capsules 1-8 mm long, globose, subglobose, or ovoid, with many seeds; seeds reticulate, papillose, echinate, multi-angled, or winged (rarely more-or-less smooth); leaves present (sometimes absent in the terrestrial species).

2 Plants attached (with principal branch systems within the soil); leaves absent or simple, linear, grass-like aerial leaves; bladders 0.2-1.1 mm long, most or all on a plant usually < 1.0 mm long; seeds reticulate-alveolate (also angled in *U. resupinata*), 0.20-0.25 mm long.

3 Flowers pink; inflorescence 1 (-2)-flowered; bract at base of the pedicel tubular, attached circumferentially around the stem; aerial leaves (when present) terete, septate; [very rare in our area]; [section *Lecticula*] ..... ***U. resupinata***

3 Flowers yellow (sometimes fading whitish); inflorescence (1-) 2-15-flowered; bract at base of the pedicel peltate or ovate, attached on one side of the stem; aerial leaves (when present) flattened, not septate; [collectively common in our area].

4 Bracts subtending the pedicels peltate (attached near their middles), unattached at either end; pair of bracteoles absent; spur of the corolla oriented forward, more-or-less appressed to the lower lip; aerial leaves (when present) with subacute to obtuse apex; [section *Setiscapella*] ..... ***U. subulata***

4 Bracts subtending the pedicels ovate (attached at their bases), free only at their upper end; pair of bracteoles associated with each bract present, linear to lanceolate; spur of the corolla oriented downward or backward, at approximately a right angle to the lower lip; aerial leaves (when present) with acute apex; [section *Stomoisia*].

5 Corolla 1.5-2.0 cm long; spur 8-12 mm long; raceme usually short, the (1-) 2-6 flowers crowded together, all of them chasmogamous ..... ***U. cornuta***

5 Corolla 0.25-1.5 cm long; spur 5-7 (-9) mm long; raceme usually elongate, the (1-) 2-15 flowers well-spaced, often the lower (sometimes all) cleistogamous and much smaller than the chasmogamous flowers.....***U. juncea***

2 Plants floating unattached in water (sometimes deposited on land by dropping water, but then the principal branch systems stranded on the soil surface); leaves present and dissected into linear segments; bladders 0.7-5.0 mm long, most or all on a plant > 1.0 mm long; seeds papillose, reticulate, ridged, angled, or winged, 0.5-2.0 mm long.

6 Flowers purple; leaves divided into verticillate segments with terminal traps; [section *Vesiculina*]..... ***U. purpurea***

6 Flowers yellow; leaves divided into alternate segments with lateral traps; [section *Utricularia*].

7 Peduncle with whorl of inflated leaf-like organs (floats).

8 Floats 4-7, not fused basally to one another, fusiform, tapering gradually to base and apex from a widest point near the middle; leaves with the 2 primary divisions unequal; bracts of the scape longer than broad, entire; flowers (6-) 9-14 (-17) per scape; apex of corolla spur bifid.....***U. inflata***

8 Floats (5-) 6-8 (-10), fused basally to one another, cylindrical, more-or-less parallel-sided through most of their length, tapering abruptly to base and apex; leaves with the 2 primary divisions equal; bracts of the scape broader than long, the apex slightly to strongly 3-lobed; flowers (1-) 3-4 (-7) per scape; apex of corolla spur usually entire (rarely bifid).....***U. radiata***

7 Peduncle without whorl of inflated leaf-like organs (floats).

9 Main axes distinctly flattened in cross-section, up to 10 mm wide .....***U. foliosa***

9 Main axes round in cross-section.

10 Lower lip of corolla 3-lobed; seeds disk-shaped, not angular or winged; inflorescences of 2 types, the chasmogamous on erect peduncles 5-25 cm long bearing 2-8 flowers, the cleistogamous without a peduncle, the solitary pedicels borne directly on the stolons, 0.5-2 cm long, deflexed..... .....***U. geminiscapa***

10 Lower lip of corolla entire or slightly irregular, not 3-lobed; seeds angular or winged; inflorescences of 1 type (erect, chasmogamous).

11 Upper corolla lip smaller than the lower, entire; capsule circumscissilely dehiscent; seeds 0.7-1.0 mm long, 4-6-angled; corolla without stipitate glands on its external surface.

12 Leaves of one kind only, divided into numerous capillary segments bearing lateral traps; bracts scarcely auriculate; plant distinctly aquatic, floating in water and only rarely stranded; [of the Coastal Plain].....***U. macrorhiza***

12 Leaves of 2 or 3 kinds, some divided into capillary or narrowly linear segments and bearing few or no traps, others divided into fewer capillary segments and bearing more-or-less numerous traps; bracts distinctly auriculate; plants typically in boggy situations, in shallow water or frequently stranded; [**either** of the Mountains at high elevations **or** of various physiographic provinces northward].

13 Broadest leaf segments with 9-20 lateral setae (use 10× magnification); spur of corolla cylindrical, distinctly longer than wide, the apex distinctly curved forward.... ..... ***[U. intermedia]***

13 Broadest leaf segments lacking lateral setae; spur of corolla shortly saccate to broadly conical, wider than long, the apex not curved forward .....***U. minor***

11 Upper corolla lip larger than the lower, obscurely 3-lobed; capsule laterally 2-valved or indehiscent; seeds 0.8-2.5 mm long, lenticular, with an irregular, lobed, or continuous wing; corolla (or at least the spur) with a few to many short stipitate glands (sometimes patchily distributed).

14 Vegetative shoots of 2 kinds, some bearing leafy segments and few or no traps, others bearing reduced segments and more-or-less numerous traps; seeds 1.0-2.5 mm long, with an irregularly deeply lobed or partial wing.

15 Plant anchored in mud up to 100 cm below water surface; green leafy shoots up to 40 cm long and 5 cm wide; peduncle flexuous, to 100 cm long, only the uppermost ca. 10 cm emergent..... ***U. floridana***

15 Plant in shallow water or stranded; green leafy shoots usually not > 10 cm long and 2 cm wide; peduncle erect, straight, to 30 cm long, the uppermost 10-25 cm emergent ..... ***U. striata***

14 Vegetative shoots uniform, all bearing rather sparsely divided leaf segments bearing traps, seeds 0.8-1.1 mm long, with a continuous, circumferential wing, slightly to irregularly lobed.

16 Lower corolla lip 8-10 mm long, about equalling or slightly shorter than the conical 5-9 mm long spur; leaves usually forked twice.....***U. biflora***

16 Lower corolla lip 5-6 mm long, exceeding the blunt 3.5-4.5 mm long spur; leaves usually forked once.....***U. gibba***

Utricularia biflora Lamarck, Longspur Creeping Bladderwort. Cp (GA, NC, SC, VA), Pd, Mt (GA): ponds, lakes, and diches; common. June-October. This species may not be distinct from *U. gibba* (which see for discussion). E. MA south FL, west to TX and OK. [= RAB, C, F, G, GW, W; = *U. pumila* Walter – S, apparently misapplied; < *U. gibba* – K, Y, Z]

Utricularia cornuta Michaux, Horned Bladderwort. Cp (GA, NC, SC), Mt (GA, NC), Pd (GA): shores of limesink ponds (dolines), mountain bogs; rare (NC Watch List). (May-September. Newfoundland and Québec west to n. Ontario, Alberta, and MN, south to s. FL and e. TX; also in the Bahamas and Cuba. Taylor (1989) states that where sympatric with *U. juncea*, *U. cornuta* flowers much earlier. [= RAB, C, F, G, GW, K, W, Y, Z; = *Stomoisia cornuta* (Michaux) Rafinesque – S]

Utricularia floridana Nash, Florida Bladderwort. Cp (GA, NC, SC): in deep water of natural Carolina bay lakes, other natural lakes, and limesink ponds (dolines); rare (NC Rare, SC Rare). July-August. Se. NC south to c. peninsular FL, west to panhandle FL and sw. GA. [= GW, K, S, Y, Z]

Utricularia foliosa Linnaeus, Flatstem Bladderwort. Cp (GA, NC): in deep water of natural lakes and ponds; rare. Se. NC south to s. FL, west to TX (Brown & Marcus 1998); West Indies, South America, Africa. This species is reported for NC by Taylor (1989). See GW for a detailed description of this species. [= GW, K, S, Y, Z]

Utricularia geminiscapa Benjamin, Two-flowered Bladderwort, Hidden-fruited Bladderwort. Cp (NC, VA), Mt (VA): beaver ponds, mucky seepages; rare (NC Rare, VA Watch List). Newfoundland and Québec west to n. MI and n. WI, south to PA and sc. NC. [= C, F, G, K, W, Y, Z]

Utricularia gibba Linnaeus, Shortspur Creeping Bladderwort. Cp (GA, NC, SC, VA), Mt (GA, NC, VA), Pd (SC, VA): ponds, lakes, and diches; uncommon. May-September. Québec west to WI, south to FL and LA; also in the West Indies and Central America and apparently in the Old World. Taylor (1989) includes *U. biflora* in *U. gibba*. Other authors have expressed doubts about the distinction, including RAB ("doubtfully distinct"). Taylor suggests that "further research is clearly indicated, but to be at all meaningful, it must be conducted on a worldwide basis." I have here, for the moment, retained the 2 traditionally recognized species, though intermediates will be encountered. [= RAB, C, F, G, S, W; < *U. gibba* – K, Y, Z (also see *U. biflora*)]

Utricularia inflata Walter, Swollen Bladderwort, Inflated Bladderwort. Cp (GA, NC, SC, VA), Mt (NC): ponds, lakes, ditches; common. May-November. NJ south to s. FL, west to e. TX; disjunct in WA (probably introduced). Also disjunct in an artificial pond in Henderson County, NC (Carl Sandburg Home National Historic Site). [= C, G, GW, K, S, Y, Z; = *U. inflata* var. *inflata* – RAB, F]

Utricularia juncea M. Vahl, Southern Bladderwort. Cp (GA, NC, SC, VA), Pd (NC): shores of limesink ponds (dolines), borrow pits, wet sands; uncommon (VA Rare). July-September. NY (Long Island) and NJ south to FL, west to e. TX and se. AR; also in the West Indies, Central America and South America. [= RAB, C, F, G, GW, K, Y, Z; > *Stomoisia juncea* (M. Vahl) Barnhart – S; > *Stomoisia virgatula* Barnhart – S]

Utricularia macrorhiza Le Conte, Greater Bladderwort. Cp (NC, SC, VA): pools and ponds; rare (NC Watch List, VA Watch List). May-September. Newfoundland west to AK, south to NC, SC, FL, TX, CA, and Mexico; also in e. Asia. See Taylor (1989) for a discussion of the differences between this species and *U. vulgaris* of Europe and w. Asia, with which it has often been combined or associated as a variety. [= K, S, Y, Z; < *U. vulgaris* Linnaeus – RAB, C, F, G, misapplied to American plants]

Utricularia minor Linnaeus, Lesser Bladderwort, Small Bladderwort. Mt (NC): mountain bog at about 1400 meters elevation; rare (NC Rare). Circumboreal, south in North America to NJ, PA, IN, IL, IA, NE, CO, UT, NV, and CA; disjunct in w. NC. [= C, F, G, K, W, Y, Z]

Utricularia olivacea Wright ex Grisebach, Dwarf Bladderwort, Minute Bladderwort. Cp (GA, NC, SC, VA): in floating mats (often algal) in water of limesink ponds (dolines), artificial lakes or beaver ponds; rare (NC Threatened, SC Rare, VA Rare). September-October. NJ south to FL, west to s. AL and s. MS (Sorrie & Leonard 1999), in the Coastal Plain; also in the West Indies (Cuba), Central America, and South America. [= RAB, GW, K, Y, Z; = *Biovularia olivacea* (Wright ex Grisebach) Kam. – S]

Utricularia purpurea Walter, Purple Bladderwort. Cp (GA, NC, SC, VA): in water of ponds, ditches, other slow-moving water; uncommon (VA Rare). May-September. Nova Scotia and Québec west to MN, south to NY, n. IN, s. MI, and WI, and on the Coastal Plain south to s. FL, west to se. TX; also in Mexico, the West Indies, and Central America. [= RAB, C, F, G, GW, K, Y, Z; = *Vesiculina purpurea* (Walter) Rafinesque – S]

Utricularia radiata Small, Floating Bladderwort, Small Swollen Bladderwort. Cp (GA, NC, SC, VA), Mt (VA): ponds, depression ponds, lakes, and ditches; uncommon (VA Watch List). May-November. Nova Scotia south to s. FL, west to TX; disjunct in w. VA, w. TN, nw. IN; reports of this species in Cuba and South America are apparently in error. [= C, G, GW, K, S, W, Y, Z; = *U. inflata* var. *minor* Chapman – RAB, F]

Utricularia resupinata B.D. Greene ex Bigelow, Northeastern Bladderwort, Resupinate Bladderwort. Cp (GA, NC): shores of natural lakes; rare (NC Rare). Nova Scotia west to nw. WI, south (irregular and scattered in part) to FL and sw. GA; also in the Bahamas (Sorrie & LeBlond 1997). Although "the curious gap in the North American range" [NC, SC, and VA] (Taylor 1989) is no longer strictly a gap, *U. resupinata* does appear to have a strangely bimodal range, with a center of distribution in ne. United States and se. Canada and a second extending from se. United States south into the West Indies and Central America. [= C, F, G, GW, K, Y, Z; = *Lecticula resupinata* (B.D. Greene) Barnhart – S]

Utricularia striata Le Conte ex Torrey, Fibrous Bladderwort. Cp (GA, NC, SC, VA), Mt (VA): ponds, lakes, and ditches; uncommon (VA Rare). May-November. Se. MA south to FL, west to e. TX and e. OK. [= K, Y, Z; = *U. fibrosa* Walter – RAB, C, F, G, GW, S, of uncertain application and likely misapplied]

Utricularia subulata Linnaeus, Slender Bladderwort, Zigzag Bladderwort. Cp (GA, NC, SC, VA), Mt (GA, NC, VA), Pd (GA, NC): moist sands or peats of various kinds of acidic wetlands, including wet pine savannas and flatwoods, shores of limesink ponds (dolines), borrow pits, ditches; common (VA Watch List). March-July (-later). In North America primarily in the Coastal Plain, from Nova Scotia and e. MA south to s. FL, west to TX, north in the interior to TN and AR; also in the West Indies, Central America, South America, Africa, and Asia. Taylor (1989) terms this "the most widespread of *Utricularia*

species." [= RAB, C, F, G, GW, K, W, Y, Z; > *Setiscapella subulata* (Linnaeus) Barnhart – S; > *Setiscapella cleistogama* (A. Gray) Barnhart – S]

Utricularia intermedia Hayne, Northern Bladderwort. South to se. PA (Rhoads & Klein 1993), DE, and MD (Kartesz 1999). The report from sc. GA (Jones & Coile 1988) is in error. [= C, F, G, K, Y, Z]

LIMNANTHACEAE R. Brown 1838 (False-mermaid Family, Meadow-foam Family)

A family of 2 genera and 8 species, herbs, of temperate North America. References: Bayer & Appel in Kubitzki & Bayer (2003).

Floerkea Willdenow 1801 (False-mermaid)

A peculiar and monotypic genus, an annual herb, endemic to North America.

Floerkea proserpinacoides Willdenow, False-mermaid. Pd, Mt (VA): moist, rich floodplain forests; rare (VA Watch List). April-May. Nova Scotia and Québec west to British Columbia, south to n. VA, TN, and CA. [= C, F, G, K, S, W]

LINACEAE DC. ex Gray 1821 (Flax Family)

A family of about 14 genera and 250-350 species, trees, vines, shrubs, and herbs, cosmopolitan. References: Robertson (1971)=Y.

Linum Linnaeus 1753 (Flax)

A genus of about 180 species, herbs, of temperate and subtropical areas. References: Rogers (1984)=Z; Rogers (1963)=Y.

1 Petals blue; capsule 6-10 mm long; [section *Linum*].
- 2 Inner sepals with minutely ciliate margins; stigmas slender, elongate; capsule 6-10 mm long..... ***L. usitatissimum***
- 2 Inner sepals entire; stigmas capitate; capsule 5-7 mm long.
  - 3 Flowers homostylous (flowers with stigmas at about the level to slightly above the anthers) ..... ***[L. lewisii** var. **lewisii]***
  - 3 Flowers heterostylous (some flowers with stigmas below the anthers, others with stigmas well above the anthers).. ***[L. perenne]***

1 Petals yellow; capsules 1-4 mm long; [section *Linopsis*].
- 4 Inner and outer sepals all very conspicuously glandular-toothed; annual; leaves with 2 brownish glands flanking the attachment to the stem; styles united basally for (0.2-) 0.5-1.2 (-1.8) mm; [section *Linopsis*, subsection *Rigida*].
  - 5 Sepals 2.3-3.5 mm long, acute; inflorescence consisting of 1 or more elongate and racemiform branches; dried plants dark, purple-dotted..... ***L. harperi***
  - 5 Sepals (3.1-) 3.6-5 (-7.3) mm long, acuminate; inflorescence an open panicle; dried plants pale green..... ***L. sulcatum***
- 4 Outer sepals entire (very rarely sparsely glandular-toothed), inner sepals entire or sparsely to conspicuously glandular-toothed; perennial; leaves without brownish glands flanking the attachment to the stem; styles free; [section *Linopsis*, subsection *Linopsis*].
  - 6 Fruit as long as broad or longer, its apex acute, apiculate, or obtuse, (2-) 2.2-3.2 (-3.3) mm long; leaves mostly 1.3-4.3 mm wide.
    - 7 Leaves (1.2-) 2.3-4.3 (-5.6) mm wide, mostly 25-50 below the inflorescence; septa of the fruit sparsely but conspicuously ciliate; false septa incomplete; fruit apex acute, the exposed portions purple..... ***L. intercursum***
    - 7 Leaves (1.0-) 1.3-2.0 (-3.2) mm wide, mostly 50-120 below the inflorescence; septa of the fruit glabrous; false septa virtually complete; fruit apex rounded to apiculate, the exposed portions purple or yellow.
      - 8 Fruit pyriform, (2.0-) 2.3-2.8 (-3.0) mm long, 1.7-2.6 mm in diameter, the apex rounded, the exposed portions purple; seeds (1.6-) 1.7-2.0 (2.1) mm long; anthers averaging 0.8 mm long..... ***L. floridanum** var. **floridanum***
      - 8 Fruit ovate, (2.8-) 3.0-3.2 (-3.3) mm long, 2.5-3.1 mm in diameter, the apex minutely apiculate, the exposed portions yellow; seeds 2.1-2.4 mm long; anthers averaging 1.2 mm long..... ***L. floridanum** var. **chrysocarpum***
  - 6 Fruit broader than long, its apex depressed, flattened, or broadly rounded, (1.3-) 1.5-2.1 (-2.3) mm long; leaves mostly 1.9-9.3 mm wide.
    - 9 Margins of the inner sepals with conspicuous stalked glands; mature fruits of dried specimens usually adhering to the plant..... ***L. medium** var. **texanum***

9 Margins of the inner sepals glandless, or with a few inconspicuous, sessile glands; mature fruits of dried specimens usually shattering and falling freely.
10 Inflorescence paniculate, the lower inflorescence branches not elongate, their tips not nearly reaching the tips of the upper inflorescence branches; branchlets striate-ridged; leaves mostly opposite (usually to beyond the midpoint from the base of the plant to the first inflorescence branch) ..... ***L. striatum***
10 Inflorescence corymbose, some (at least) of the lower branches of the inflorescence elongate, their tips nearly equalling the tips of the upper inflorescence branches; branchlets terete or nearly so; leaves mostly alternate (usually the opposite leaves of the lower stem not extending beyond the midpoint from the base of the plant to the first inflorescence branch) ..... ***L. virginianum***

Linum floridanum (Planchon) Trelease *var.* ***chrysocarpum*** Rogers, Yellow-fruited Yellow Flax. Cp (GA, NC, SC): wet savannas; rare (NC Watch List). June-October. Se. NC south to s. FL and west to s. MS. [= K, Y, Z; < *L. virginianum* var. *floridanum* Planchon – RAB; < *L. floridanum* – GW; < *Cathartolinum floridanum* (Planchon) Small – S]

Linum floridanum (Planchon) Trelease *var.* ***floridanum***, Florida Yellow Flax. Cp (GA, NC, SC): savannas, sandhill seeps; common. June-October. E. NC south to s. FL and west to LA, also in the West Indies, essentially limited to the Coastal Plain. [= K, Y, Z; < *L. virginianum* var. *floridanum* Planchon – RAB (also see *L. floridanum* var. *chrysocarpum* and *L. intercursum*); < *L. floridanum* – C, F, G, GW; < *Cathartolinum floridanum* (Planchon) Small – S]

Linum harperi Small, Harper's Grooved Flax. Cp (GA): dry pinelands; rare (GA Special Concern). This is a rare taxon of longleaf pine woodlands or savannas in w. FL, sw. GA, and c. AL. It is probably distinct from *L. sulcatum* at the species level, needing additional study. [= *L. sulcatum* Riddell var. *harperi* (Small) Rogers – K, Y, Z; = *Cathartolinum harperi* (Small) Small – S]

Linum intercursum Bicknell, Bicknell's Yellow Flax. Pd, Mt (GA, NC, SC, VA), Cp (NC, VA): dry to moist places; common. June-October. MA south to c. TN, nw. GA, and c. AL; from MA to MD, nearly restricted to the Coastal Plain, in VA, NC, SC, GA, AL, and se. TN, however it is primarily on the Piedmont and Mountains. It also occurs disjunctively in n. IN near the Great Lakes. [= C, F, G, K, W, Y, Z; < *L. virginianum* var. *floridanum* (Planchon) – RAB; = *Cathartolinum intercursum* (Bicknell) Small – S]

Linum medium (Planchon) Britton *var.* ***texanum*** (Planchon) Fernald, Texas Yellow Flax. Cp, Pd, Mt (GA, NC, SC, VA): dry to moist places; common (rare in Mountains). Var. *texanum* ranges from s. ME MI, and n. IL south to c. FL and TX, and in the West Indies. Var. *medium* is limited to area around the Great Lakes. [= C, F, GW, K, W, Y, Z; < *L. virginianum* var. *medium* Planchon – RAB; < *L. medium* – G; < *Cathartolinum medium* (Planchon) Small – S]

Linum striatum Walter, Ridgestem Yellow Flax. Mt, Cp, Pd (GA, NC, SC, VA): bogs, seepages, other wet places, often growing in *Sphagnum*; common. June-October. MA, PA, MI, and IL south to w. FL, LA, and e. TX. [= RAB, C, G, GW, K, W, Y, Z; > *L. striatum* var. *striatum* – F; = *Cathartolinum striatum* (Walter) Small – S]

Linum sulcatum Riddell, Grooved Yellow Flax. Mt (GA, VA), Pd (NC): dry calcareous places in the mountains of VA (where also somewhat weedy in adjacent disturbed areas), diabase barrens in the Piedmont of NC; rare (NC Rare, VA Watch List). May-August. Primarily a species of the Great Plains of s. Manitoba, ND, and MN south through SD, IA, WI, NE, MO, IL, KS, and MO to OK, *L. sulcatum* occurs farther east as a rare disjunct on glades or barrens over rocks such as limestone or diabase. [= RAB, C, F, G, W; = *Linum sulcatum* Riddell var. *sulcatum* – K, Y, Z; = *Cathartolinum sulcatum* (Riddell) Small – S; = *Mesynium sulcatum* (Riddell) A. & D. Löve]

* ***Linum usitatissimum*** Linnaeus, Common Flax. Pd, Cp (NC, SC, VA): disturbed places; rare, native of Europe. This is the flax of commerce, used both for its fiber, the source of flax, and the oil expressed from its seeds (linseed oil). [= RAB, C, F, G, K, S, Z]

Linum virginianum Linnaeus, Virginia Yellow Flax. Mt, Pd (GA, NC, SC, VA), Cp (VA): dry or moist places; uncommon. June-October. MA, NY, Ontario, MI, and IL south to SC, GA, AL, and MO. [= C, F, G, GW, K, W; = *L. virginianum* var. *virginianum* – RAB; = *Cathartolinum virginianum* (Linnaeus) Reichenbach – S]

Linum lewisii Pursh var. *lewisii*, Prairie Flax, a western blue-flowered species, occurs as a disjunct at Smoke Hole Caverns, WV, and several adjacent counties. [= K; < *L. perenne* – C, apparently misapplied to WV material; < *L. lewisii* – F; < *L. perenne* Linnaeus var. *lewisii* (Pursh) Eaton & J. Wright – G; < *Adenolinum lewisii* (Pursh) A. & D. Löve]

* *Linum perenne* Linnaeus, Perennial Flax, is cultivated and "rarely naturalized along roadsides" in scattered locations in PA (Rhoads & Klein 1993) and reported tentatively for VA (Kartesz 1999). [= K; < *L. perenne* – C (also see *L. lewisii*)]

LINDERNIACEAE Borsch, K. Müller, & Eb. Fischer 2005 (False-pimpernel Family)

References: Tank et al. (2006).

Lindernia Allioni (False-pimpernel)

A genus of about 80 species, of warm temperate and subtropical regions of the Old and New Worlds. Probably not a member of Plantaginaceae (Albach, Meudt, & Oxelman 2005). References: Cooperrider & McCready (1975)=Z; Qualls (1984)=Y; Lewis (2000)=X.

1 Fertile stamens 4; calyx lobes connate at anthesis for > ½ their length, later separating; [section *Torenioides*]..... ***L. crustacea***
1 Fertile stamens 2 (with 2 staminodia without anthers, or with rudimentary anthers); calyx lobes distinct to the base at anthesis and after; [section *Brachycarpae*].
2 Pedicels shorter than or about as long as the subtending leaves..... ***L. dubia*** *var.* ***dubia***
2 Pedicels longer than the subtending leaves (or bracteal leaves in some species).
3 Leaves nearly orbicular; stems creeping ..... ***L. grandiflora***
3 Leaves distinctly longer than wide; stems erect (sometimes decumbent at the base and rooting if knocked down by water).
4 Leaves not glandular punctate; seeds 2-3× as long as wide..... ***L. dubia*** *var.* ***anagallidea***
4 Leaves glandular punctate; seeds ca. 1× as long as wide.
5 Leaves primarily in a basal rosette, leaves of the stem strongly reduced upward to bracts; capsule (1.8-) 3.4-7 mm long; [primarily of seepage of flatrocks]..... ***L. monticola*** *("monticola" form)*
5 Leaves primarily on the stem, not conspicuously reduced upward; capsule 1.4-3.4 mm long; [of stream or river banks] ..... ***L. monticola*** *("saxicola" form)*

* ***Lindernia crustacea*** (Linnaeus) F. Mueller. Cp (GA, SC), Pd (SC), {NC}: lawns; uncommon, introduced from Malaysia. September. [= RAB, GW, K, P, X, Y]

Lindernia dubia (Linnaeus) Pennell *var.* ***anagallidea*** (Michaux) Cooperrider. Cp, Pd, Mt (GA, NC, SC, VA): wet sandy or muddy areas; common (rare in Mountains). June-September. Nearly throughout North America, Central America, and South America. The extensive and essentially coincident ranges of the two varieties of *L. dubia* suggests that they may be merely forms, as suggested by Voss (1996). [= C, K, X, Y, Z; = *L. anagallidea* (Michaux) Pennell – RAB, F, G, GW, P; = *Ilysanthes inequalis* (Walter) Pennell – S; < *L. dubia* – W]

Lindernia dubia (Linnaeus) Pennell *var.* ***dubia***. Cp, Pd, Mt (GA, NC, SC, VA): wet sandy or muddy areas; common. May-November. Nearly throughout North America, Central America, and South America. [= C, X, Y, Z; = *L. dubia* (Linnaeus) Pennell – RAB, GW; > *L. dubia* var. *dubia* – F, G, K; > *L. dubia* var. *riparia* (Rafinesque) Fernald – F, G; > *L. dubia* var. *inundata* Pennell – F, G, K; > *L. dubia* var. *major* (Pursh) Pennell – P; > *L. dubia* var. *typica* – P; = *Ilysanthes dubia* (Linnaeus) Barnhart – S; < *L. dubia* – W; = *Gratiola dubia* Linnaeus]

Lindernia grandiflora Nuttall. Cp (GA): depressional wetlands; rare. S. GA south to s. FL. [= GW, K, P, X, Y; = *Ilysanthes grandiflora* (Nuttall) Bentham – S]

Lindernia monticola Muhlenberg ex Nuttall, Flatrock Pimpernel, Riverbank Pimpernel. Pd, Mt (GA, NC, SC), Cp (GA): in seasonal seepage on granitic flatrocks, and on river-scoured siliceous rocks; rare (GA Endangered – "*saxicola*", NC Watch List). April-June (-September). Nc. and sw. NC south to ne. FL and ec. AL. *L. saxicola* appears to be merely a form of *L. monticola*, the leafy stems the result of the basal leaves being covered by silt deposited by floodwaters (Qualls 1984; Lewis 2000); this needs additional study. [= K, X; > *L. monticola* – RAB, GW, P, W, Y; > *L. saxicola* M.A. Curtis – RAB, P, W, Y; > *Ilysanthes monticola* (Muhlenberg ex Nuttall) Rafinesque – S; > *Ilysanthes saxicola* (M.A. Curtis) Chapman – S]

Lindernia diffusa (Linnaeus) Wettstein, is reported for SC by Kartesz (1999) on the basis of specimens at NCU, but the specimens so labelled are actually *L. dubia*. {not keyed}

Micranthemum Michaux

The appropriate generic treatment is unclear. If treated (as here) as including *Hemianthus*, a genus of about 14 species, of tropical to warm temperate America.

1 Calyx lobes uneven, 3 of the sinuses extending about halfway to the base of the calyx, the lowermost sinus extending to the base..... ***M. micranthemoides***
1 Calyx lobes even, all of the sinuses reaching nearly to the base of the calyx..... ***M. umbrosum***

Micranthemum micranthemoides (Nuttall) Wettstein, Nuttall's Micranthemum. Cp (VA): muddy, freshwater intertidal shores; rare, possibly extinct (US Species of Concern, VA Rare). NY (Hudson River) south to VA (Chesapeake Bay, Potomac River, James River). [= F, K; = *Hemianthus micranthemoides* Nuttall – C, G, P]

Micranthemum umbrosum (J.F. Gmelin) Blake, Shade Mudflower. Cp (GA, NC, SC, VA): shallow pools, stagnant streams, wet depressions in swamp forests; uncommon (VA Rare). May-October. Se. VA south to FL, west to TX, and south into tropical America. [= RAB, C, F, G, GW, K, P; = *Globifera umbrosa* J.F. Gmelin – S]

LINNAEACEAE (Rafinesque) A. Backlund 1998 (Twinflower Family)

A family of 5 genera and about 35 species, shrubs and suffrutescent herbs. Various segregate families (or reassignments) of taxa traditionally placed in the Caprifoliaceae have been proposed, including the transfer of *Sambucus* and *Viburnum* to the Adoxaceae, placement of *Diervilla* and *Weigela* in the Diervillaceae (Backlund & Pyck 1998), placement of *Abelia*, *Linnaea*, and *Kolkwitzia* in the Linnaeaceae (Backlund & Pyck 1998), and retention of *Lonicera, Symphoricarpos,* and *Triosteum* in a much

more narrowly circumscribed Caprifoliaceae. Alternatively, all these taxa could be included in the Caprifoliaceae, along with Dipsacaceae and Valerianaceae, as a very broadly circumscribed Caprifoliaceae. References: Backlund & Pyck (1998).

1 Trailing shrubby herb; [native] ..... ***[Linnaea]***
1 Upright shrub; [planted and persistent or weakly naturalizing].
  2 Sepals oblanceolate, the larger > 1 mm wide; fruit and ovaries free, not hirsute ..... ***Abelia***
  2 Sepals lanceolate to linear, < 1 mm wide; fruit and ovaries fused in pairs, densely hirsute ..... ***Kolkwitzia***

Abelia R. Brown

A genus of about 30 species, shrubs, primarily of s. and e. Asia.

* ***Abelia ×grandiflora*** (André) Rehder [***chinensis × uniflora***]. Cp (NC): suburban thickets; commonly planted in our area; sometimes persistent or rarely weakly naturalizing, parent species natives of China. [= K]

Kolkwitzia Graebner (Beautybush)

A monotypic shrub, of c. China.

* ***Kolkwitzia amabilis***, Beautybush. Mt (NC): disturbed areas; planted as an ornamental shrub, rarely naturalized from plantings, native of c. China. [= K]

Linnaea Linnaeus (Twinflower)

A monotypic genus, a trailing weak shrub, circumboreal.

Linnaea borealis Linnaeus ssp. *americana* (Forbes) Hultén ex Clausen, American Twinflower, is documented by an early specimen (1892) from Sevier County, TN, presumably from the Great Smoky Mountains. This population (not recently seen) is disjunct from more northern areas. *L. borealis* ssp. *americana* also occurs in several counties in WV along or near the VA border, and the species might be expected in high elevation or cold sites in nw. VA. [= K; = *L. borealis* var. *longiflora* Torrey – C, G; = *L. borealis* var. *americana* (Forbes) Rehder – F; < *L. borealis* – W; = *L. americana* Forbes; = *L. borealis* ssp. *longiflora* (Torrey) Hultén]

LOGANIACEAE R. Brown ex Mart. 1827 (Logania Family)
(also see *GELSEMIACEAE, SCROPHULARIACEAE, and TETRACHONDRACEAE*)

As here rather narrowly interpreted, Loganiaceae consists of 12 genera (*Mitreola, Logania,* and *Mitrasacme*) and about 300 species, herbs and subshrubs, of tropical, subtropical, and warm temperate areas of the Old and New Worlds. Genera in our area other than *Mitreola* which have traditionally been considered components of the Loganiaceae now are clearly better placed in the small families Tetrachondraceae *(Polypremum*), Gelsemiaceae (*Gelsemium*), and Scrophulariaceae (*Buddleja*), more closely related to other families (such as Rubiaceae) than to Loganiaceae sensu stricto (Struwe, Albert, & Bremer 1994). The affinities of *Spigelia* appear to be with a small group of tropical and subtropical genera, the largest of which is *Strychnos*. Struwe, Albert, & Bremer (1994) treated this group as the family Strychnaceae, based on a cladistic analysis of data. A later, more thorough analysis suggested that Strychnaceae is best recombined with Loganiaceae (Backlund, Oxelman, & Bremer 2000). References: Rogers (1986).

1 Woody vine..... ***Gelsemium*** *[see GELSEMIACEAE]*
1 Herb.
  2 Corolla funnelform, 0.1-0.2 cm long, white..... ***Mitreola***
  2 Corolla tubular, 3-6 cm long, red and yellow..... ***Spigelia***

Mitreola Linnaeus (Miterwort)

A genus of about 6 species, herbs, tropical, subtropical, and warm temperate. References: Nelson (1980)=Y; Rogers (1986)=Z.

1 Leaves 2-8 cm long petiolate or sessile and tapering to a cuneate base ..... ***M. petiolata***
1 Leaves 1-4 cm long, sessile, the base rounded.
  2 Mature seed reticulate; mature capsule smooth to slightly and finely tuberculate; larger leaves ca. 4× as long as wide .... ***M. angustifolia***

2 Mature seed smooth; mature capsule markedly papillose-warty; larger leaves 1.5-2× as long as wide ..... ***M. sessilifolia***

Mitreola angustifolia (Torrey & A. Gray) J.B. Nelson, Narrow-leaved Miterwort. Cp (GA, SC): clay-based Carolina bays, other Coastal Plain depressional wetlands; rare (GA Special Concern). June-August. Se. SC south to n. FL, and west to s. AL and se. MS (Sorrie & Leonard 1999). [= GW, Y; < *M. sessilifolia* – K, Z; = *Cynoctonum angustifolium* (Torrey & A. Gray) Small – S]

Mitreola petiolata (J.F. Gmelin) Torrey & A. Gray, Caribbean Miterwort. Cp, Pd (GA, NC, SC, VA), Mt (GA): swamps, marshes, ditches, other wet habitats; uncommon (rare in the Piedmont) (VA Rare). July-September; September-November. Se. VA south to FL and west to AR and c. TX, north in the interior to nw. GA and c. and se. TN; Mexico, the West Indies, and n. South America. [= GW, K, Y; = *Cynoctonum mitreola* (Linnaeus) Britton – RAB, C, F, G, S]

Mitreola sessilifolia (J.F. Gmelin) G. Don, Small-leaved Miterwort. Cp (GA, NC, SC), Pd (GA, VA): wet savannas, pocosins, ditches, margins of limesink depressions (dolines); common (VA Rare). Late June-August; September-October. Se. VA south to FL, west to e. TX, and in the Bahama Islands. [= GW, Y; = *Cynoctonum sessilifolium* J.F. Gmelin – RAB, C, F, G, S; < *M. sessilifolia* – K, Z (also see *M. angustifolia*)]

Spigelia Linnaeus (Pinkroot)

A genus of about 50 species, herbs, of tropical and warm temperate America. References: Gould (1996)=Z; Rogers (1986)=Y.

1 Corolla scarlet on the outer surface, yellow on the inner surface ..... ***S. marilandica***
1 Corolla light pink to white on the outer and inner surfaces.
2 Corolla 36-50 mm long; pistil 24-27 mm long; sepals 8-11 mm long; inflorescence with 2-4 flowers; [of dolomitic glades in Bibb Co. AL] ..... ***[S. gentianoides** var**. alabamensis]***
2 Corolla 25-30 mm long; pistil 17-19 mm long; sepals 4-6 mm long; inflorescence with 3-8 flowers; [of pine savannas of Panhandle FL] ..... ***[S. gentianoides** var**. gentianoides]***

Spigelia marilandica (Linnaeus) Linnaeus, Pinkroot, Wormgrass. Mt (GA, NC, SC), Pd, Cp (GA, SC): woodlands and forests, usually on circumneutral soils; common. May-June; late June-July. SC, sw. NC (Cherokee Co. and Macon Co.), and TN west to s. IN and OK, south to FL and TX; some floras allege its occurrence north to MD, NJ, and PA. *S. marilandica* likely occurs in sw. VA. [= RAB, C, F, G, K, S, W]

Spigelia gentianoides Chapman ex Alphonse de Candolle var. *alabamensis* K. Gould. Dolostone glades of Bibb County, AL (Gould 1996, Allison & Stevens 2001). [= K, Z]

Spigelia gentianoides Chapman ex Alphonse de Candolle var. *gentianoides*. Pine savannas. FL Panhandle. [= K, Z; = *S. gentianoides* – S, Y (var. *alabamensis* not discovered at the time)]

LYTHRACEAE J. St.-Hilaire 1805 (Loosestrife Family)

A family of about 27 genera and 600 species, herbs, shrubs, and trees, primarily tropical (a few warm temperate). References: Graham (1975)=Z. Keys adapted, in large part, from Z.

1 Plant woody or suffrutescent, a shrub or a small tree 1-10 m tall (with peeling, cinnamon-colored bark); petals present, showy, 8-20 mm long.
2 Flowers in axillary clusters; aquatic shrubs with arching suffrutescent or woody stems; leaves opposite or whorled ..... ***Decodon***
2 Flowers in terminal panicles; terrestrial shrubs or small trees with erect woody stems; leaves alternate to subopposite .... ***Lagerstroemia***
1 Plant not woody, an herb 0.1-1.2 m tall; petals absent or present, inconspiscuous or showy, 1-10 mm long.
3 Stems pubescent.
4 Floral tube (hypanthium) swollen obliquely at its base; capsule dehiscing longitudinally along the upper surface .... ***Cuphea***
4 Floral tube (hypanthium) symmetrical; capsule dehiscing septicidally at the apex ..... ***Lythrum***
3 Stems glabrous.
5 Floral tube cylindric to turbinate, about 2× as long as wide ..... ***Lythrum***
5 Floral tube campanulate to globose, about 1× long as wide.
6 Flowers or fruits (1-) 3-10 in the leaf axils (at least some axils with 2 or more flowers or fruits on a given plant) ..... ***Ammannia***
6 Flowers or fruits solitary in the leaf axils (never > 1 per axil).
7 Capsule indehiscent; petals 0; sepals 4, broadly triangular, lacking intersepalary appendages; seeds spatulate or oblanceolate, about 1 mm long, minutely granular on one face and smooth on the other ..... ***Didiplis***

7 Capsule dehiscing septicidally; petals 4; sepals 4 (-6), triangular, with intersepalary appendages of size about equal to the calyx lobes; seeds hemispheric, about 0.3 mm long, the surface very finely reticulate.. .....***Rotala***

{add *Punica* and *Trapa* to key}

Ammannia Linnaeus (Toothcup)

A genus of about 25 species, herbs, cosmopolitan. References: Graham (1985)=Y; Graham (1975)=Z. Key based on Y.

1 Style included in fruit, thick, 0.5-1.0 mm long (much shorter than the ovary); calyx lobes obtuse, often with the apices minutely mucronate; petals 0, 1, or 4, pale pink to white, to 1 mm long and 1 mm wide .....***A. latifolia***
1 Style exserted in fruit, filiform, 1.5-3.0 mm long (equal to or longer than the ovary); calyx lobes triangular, with acute apices; petals 4 (-5), deep rose-purple or pale lavender, ca. 2 mm long and 2 mm wide.
2 Inflorescence usually a short- or long-pedunculate cyme (sometimes reduced); flowers usually > 3 per axil; petals deep rose-purple; fruits 3.5-5 mm in diameter..... ***A. coccinea***
2 Inflorescence sessile; flowers usually 1-3 per axil; petals pale lavender; anthers yellow; fruits 4-6 mm in diameter..... .....***[A. robusta]***

Ammannia coccinea Rottböll. Cp, Pd, Mt (GA, NC, SC, VA): marshy areas, ditches, exposed muddy river shores and banks, other wet places; uncommon (VA Watch List). July-October. NJ, OH, IN, IL, IA, and SD south to FL and TX; disjunct in CA; south through Mexico and Central America to n. South America. [= RAB, C, F, GW, K, S, W, Y, Z; > *A. coccinea* ssp. *purpurea* (Lamarck) Koehne – G; > *A. coccinea* – F, GW, S, Z (apparently also including *A. robusta*)]

Ammannia latifolia Linnaeus. Cp (GA, NC, SC, VA): tidal marshes, wet places, ditches; uncommon. July-September. NJ south to s. FL and west to TX (mostly on the coastal plain), and also in the West Indies, Yucatan, Central America, and South America. All plants in North America north of Florida have flowers with petals; most plants from FL south through the West Indies into Central and South America have flowers without petals. Graham (1985) considered these forms; additional study is warranted. The name *A. koehnei* Britton is available for the petaliferous North American plant should its recognition prove warranted. [= C, GW, K, W, Y, Z; > *A. teres* Rafinesque – RAB, G; > *A. teres* var. *teres* – F; > *A. teres* var. *exauriculata* (Fernald) Fernald – F; > *A. latifolia* – S; > *A. koehnei* Britton – S]

Ammannia robusta Heer & Regel. OH and British Columbia south to w. KY, w. TN, LA, TX, CA, Mexico, and Belize; West Indies; introduced in NJ and n. South America. [= C, K, Y; < *A. coccinea* – F, GW, S, Z]

Cuphea P. Browne (Waxweed)

A genus of about 260 species, herbs, of America. References: Graham (1975)=Z.

1 Floral tube green, 4.5-6 mm long, glabrous inside; stamens much shorter than the floral tube; petioles to 8 mm long, often very short .....***C. carthagenensis***
1 Floral tube purple-green, 6-10 mm long, villous inside; stamens equal to or exceeding the the floral tube; petioles to 20 mm long.....***C. viscosissima***

* ***Cuphea carthagenensis*** (Jacquin) J.F. Macbride. Cp (GA, NC, SC), Pd (GA): marshes, ditches, wet places; common, native of South America. June-September. [= GW, K, Z; = *C. carthagensis* – RAB (a misspelling); = *Parsonsia balsamona* (Chamisso & Schlechtendahl) Standley – S]

Cuphea viscosissima Jacquin. Pd, Mt (GA, NC, SC, VA), Cp (VA): dry or wet places; uncommon. July-October. NH west to IA and KS, south to c. GA, LA, and e. OK. [= RAB, C, GW, K, W, Z; = *C. petiolata* (Linnaeus) Koehne – F, G; = *Parsonsia petiolata* (Linnaeus) Rusby – S]

* *Cuphea procumbens* Gómez Ortega is reported for NC by Small (1933). Graham (1975) considers this Mexican species to be represented in se. United States only by "garden escapes that do not persist." {not keyed} [= K, Z; = *Parsonsia procumbens* (Gómez Ortega) Heller – S]

Decodon J.F. Gmelin (Water-oleander, Water-willow)

A monotypic genus, a weak shrub, endemic to e. North America. References: Graham (1975)=Z.

Decodon verticillatus (Linnaeus) Elliott, Water-oleander, Water-willow, Swamp Loosestrife, Peatweed. Cp (GA, NC, SC, VA), Mt (GA, VA): natural lakes, limesink ponds, peatlands, peaty swamps, not known in the Piedmont or Mountains of NC or SC, but scattered in the Ridge and Valley of VA; common. July-September. Nova Scotia, Ontario, and MN south to c.

peninsular FL and e. TX. The lower stems are spongy in texture. [= RAB, GW, K, S, W, Z; > *D. verticillatus* var. *verticillatus* – C, F, G; > *D. verticillatus* var. *laevigatus* Torrey & Gray – C, F, G]

Didiplis Rafinesque (Water-purslane)

A monotypic genus, an herb, endemic to e. North America. Perhaps better merged into *Lythrum*. References: Graham (1975)=Z.

Didiplis diandra (Nuttall ex Augustin de Candolle) Wood, Water-purslane. Cp (NC, VA), Pd (SC): stagnant water of pools, streams, and old beaverponds; rare (NC Rare, VA Rare). April-August. VA, IN, and WI south to NC, MS, and LA. [= C, G, GW, K, S, Z; = *Peplis diandra* Nuttall ex Augustin de Candolle – RAB, F; ***Lythrum***]

Lagerstroemia Linnaeus (Crape-myrtle)

A genus of about 53 species, trees, of tropical se. Asia and Australia. References: Graham (1975)=Z.

* ***Lagerstroemia indica*** Linnaeus, Crape-myrtle. Cp, Pd (GA, NC, SC): commonly cultivated, persistent around old plantings, weakly spreading; rare (in the wild), native of Asia. June-September. [= C, K, S, Z]

Lythrum Linnaeus (Loosestrife)

A genus of about 36 species, herbs, cosmopolitan. References: Graham (1975)=Z.

1 Flowers numerous in terminal spike-like thyrses; stamens usually 12; leaves opposite or whorled ..... ***L. salicaria***
1 Flowers solitary or paired in axils; stamens usually (4-) 6; leaves opposite or alternate.
  2 Leaves opposite throughout, mostly shorter than to as long as the internodes, 1-4 mm wide ..... ***L. lineare***
  2 Leaves opposite below, alternate above, mostly longer than the internodes, 2-14 mm wide.
    3 Floral tube 3-4 mm long; petals 2-3 mm long; calyx appendages about the same length as the calyx lobes; branch leaves abruptly and definitely reduced in size relative to the stem leaves, and widely spaced; [of sw. GA southward] ..... ***L. curtissii***
    3 Floral tube 5-6 mm long; petals 5-6 mm long; calyx appendages about 2× as long as the calyx lobes; branch leaves gradually reduced relative to the stem leaves, dense and overlapping; [collectively widespread in our area].
      4 Leaves ovate to lanceolate, widest at a point 1/6 to 1/2 of the way from the base to the apex, the base rounded to subcordate; stems mostly slender, to 8 dm tall; bracteoles mostly at the base of the pedicel ..... ***L. alatum***
      4 Leaves lanceolate to linear-lanceolate, widest at a point 1/3 to 2/3 of the way from the base to the apex, the base cuneate, often narrowly so; stems stout, to 13 dm tall; bracteoles mostly on the upper pedicel, immediately below the floral tube ..... ***L. lanceolatum***

Lythrum alatum Pursh, Northern Winged Loosestrife. Mt (GA, VA), Pd (VA): calcareous meadows, marl fens, and disturbed wet calcareous places; rare (VA Rare). June-September. ME, NY, MI, and ND south to n. and w. VA, e. TN, nw. GA, n. AL, n.. AR, ne. OK, and CO. [= F, S, W; = *L. alatum* var. *alatum* – C, G, GW, K, Z]

Lythrum curtissii Fernald, Curtiss's Loosestrife. Cp (GA): calcareous swamps; rare (GA Threatened). June-early September. Sw. GA south to Panhandle FL; the report from Emanuel County, GA (Jones & Coile 1988) is in error. [= GW, K, S, Z]

Lythrum lanceolatum Elliott, Southern Winged Loosestrife. Cp, Pd (GA, NC, SC, VA): moist to wet places; uncommon (VA Rare). May-September. Se. VA, se. NC, SC, GA, AL, MS, n. AR, and OK south to s. FL, s. TX, and in the West Indies. Although Graham (1975) argues that *L. lanceolatum* should be reduced to a variety of *L. alatum*, her evidence can also be interpreted as warranting specific status. [= RAB, F, S; = *L. alatum* Pursh var. *lanceolatum* (Elliott) Torrey & A. Gray ex Rothrock – C, G, GW, K, Z]

Lythrum lineare Linnaeus, Narrowleaf Loosestrife. Cp (GA, NC, SC, VA): nearly fresh, brackish, and saline marshes; uncommon. July-October. NJ south to FL and west to TX. [= RAB, C, F, G, GW, K, S, Z]

* ***Lythrum salicaria*** Linnaeus, Purple Loosestrife. Mt, Pd (NC, VA), Cp (VA): wet places; uncommon, native of Eurasia. June-September. An extremely noxious weed in the ne. United States, aggressively colonizing and coming to dominate a wide variety of freshwater wetlands, sometimes to the near exclusion of native vegetation. [= RAB, C, G, K, W, Z; > *L. salicaria* var. *salicaria* – F; > *L. salicaria* var. *gracilior* Turczaninow – F; > *L. salicaria* var. *tomentosum* (P. Miller) Augustin de Candolle – F]

Punica Linnaeus (Pomegranate)

A genus of 2 species, trees, of Mediterranean Europe and w. Asia. Sometimes treated in the monogeneric family Punicaceae; here included in Lythraceae, following Angiosperm Phylogeny Group (2003). References: Zohary & Hopf (1994).

* *Punica granatum* Linnaeus, Pomegranate, is reported as cultivated on Hatteras Island (Dare County, NC) (Brown 1959). It is probably not established, but may be persistent. This species has been cultivated in the Old World at least since the 3rd millenium B.C. [= K, S]

Rotala Linnaeus (Toothcup)

A genus of about 44 species, wetland herbs, of temperate to tropical areas. References: Graham (1975)=Z.

Rotala ramosior (Linnaeus) Koehne. Cp, Pd, Mt (GA, NC, SC, VA): marshes, ditches, exposed drawdown muds and silts; common. June-October. Widespread in e. North America, also in the West Indies, Central America, South America, and on the west coast of the United States and Mexico. [= RAB, C, GW, K, S, W, Z; > *R. ramosior* var. *ramosior* – F, G; > *R. ramosior* var. *interior* Fernald & Griscom – F, G]

Trapa Linnaeus (European Water-chestnut)

A genus of 1 highly polymorphic or up to 15 more narrowly defined species, annual aquatic herbs, native of the Old World. Oftwn placed in a monogeneric family, Trapaceae. References: Angiosperm Phylogeny Group (2003).

* ***Trapa natans*** Linnaeus, European Water-chestnut, Water-caltrop. Cp (VA): farm ponds and other stagnant or slow-moving water; rare, introduced from Eurasia and Africa. June-September. [= C, F, G, K]

MAGNOLIACEAE A.L. de Jussieu 1789 (Magnolia Family)

A family of about 7 genera and 223 species, trees and shrubs, tropical and warm temperate, of e. and se. Asia, and from e. North America south through West Indies and Central America to Brazil. References: Hardin (1972); Hardin & Jones (1989)=Z; Meyer in FNA (1997); Figlar & Nooteboom (2004); Frodin & Govaerts (1996); Nooteboom in Kubitzki, Rohwer, & Bittrich (1993); Kim et al. (2001).

1 Leaves about as broad as long, (2-) 4 (-8)-lobed; fruit a 2-seeded, indehiscent samara; [subfamily *Liriodendroideae*] ..... ***Liriodendron***
1 Leaves longer than broad, not lobed (in some species the leaves auriculate-cordate basally); fruit a cone-like aggregate, each follicle dehiscing to reveal the scarlet seed, at first connected to the follicle by a thread-like strand; [subfamily *Magnolioideae*] ..... ***Magnolia***

Liriodendron Linnaeus (Tulip-tree)

A genus of 2 species, trees, relictually distributed, with *L. tulipifera* in e. North America and *L. chinense* (Hemsley) Sargent in c. China and n. Vietnam. References: Nooteboom in Kubitzki, Rohwer, & Bittrich (1993); Weakley & Parks (in prep.), abbreviated as Z.

1 Leaves large, 4-8-lobed, the terminal lobes acute; [of the Mountains, Piedmont, and Coastal Plain (especially brownwater rivers and mesic bluffs and slopes)] ..... ***L. tulipifera* var. *tulipifera***
1 Leaves small, 0-4-lobed, the terminal lobes obtuse to broadly rounded; [of the Coastal Plain, especially fire-maintained, acidic, and peaty sites] ..... ***L. tulipifera* var. *1***

Liriodendron tulipifera Linnaeus *var.* ***tulipifera***, Tulip-tree, Yellow Poplar, Whitewood. Mt, Pd, Cp (GA, NC, SC, VA): mesic forests, cove forests in the Mountains to at least 1500m in elevation, bottomland forests and swamps; common. April-June; September-October. Widespread in e. North America. An important timber tree in the Southern Appalachians. [= Z; < *L. tulipifera* – RAB, C, F, FNA, G, GW, K, S, W, Z]

Liriodendron tulipifera Linnaeus *var.* ***1***, Coastal Plain Tulip-tree, Southern Yellow Poplar. Cp (GA, NC, SC, VA): blackwater swamps, streamhead pocosins in the fall-line sandhills; uncommon. April-June; September-October. Its occurrence in fire-maintained, acid soil habitats in the Coastal Plain is surprising to people used to *Liriodendron* as a tree of mesic, rich soil forests. It is, however, a typical species of streamhead pocosins in the fall-line sandhills, growing with *Pinus serotina*, *Nyssa biflora*, and *Acer rubrum*, and often with scorch marks twenty feet up the trunk. [= Z; < *L. tulipifera* – RAB, C, F, FNA, G, GW, K, S, W, Z]

Magnolia Linnaeus 1753 (Magnolia, Cucumber-tree)

A genus of about 130 species, trees and shrubs, of e. Asia (Himalayas and Sri Lanka to Japan and w. Malaysia) and America (e. North America to West Indies, Central America, and South America). Molecular phylogenetics show *Magnolia virginiana* and *M. grandiflora* as closely related in a New World primarily subtropical clade, *M. macrophylla* in a clade with its close relatives, *M. fraseri* and *M. pyramidata* together, *M. acuminata* as basal in a clade that is otherwise Asian (equivalent to subgenus *Yulania*), and *M. tripetala* grouped in another clade that is otherwise Asian (Azuma et al. 2001). The sections used follow Figlar & Nooteboom (2004). References: Tobe (1998)=Y; Spongberg (1998)=X; Frodin & Govaerts (1996)=V; Azuma, Thien, & Kawano (1999); Azuma et al. (2001); Figlar & Nooteboom (2004); Nooteboom in Kubitzki, Rohwer, & Bittrich (1993); Kim et al. (2001); Hunt (1998).

1 Leaves cordate-auriculate at base; [subgenus *Magnolia*].
  2 Leaves glaucous and finely appressed-pubescent beneath; buds and twigs pubescent; [subgenus *Magnolia*, section *Macrophylla*] ..... ***M. macrophylla***
  2 Leaves green and glabrous beneath; buds and twigs glabrous; [subgenus *Magnolia*, section *Auriculata*].
    3 Stamens 8-15 mm long; leaves (most of them) over 25 cm long; conelike aggregate fruit 6.5-11 (-14) cm long..... ..... ***M. fraseri***
    3 Stamens 4-8 (-10.5) mm long; leaves (most of them) < 25 cm long; conelike aggregate fruit 3.5-5.5 (-6) cm long... ..... ***M. pyramidata***
1 Leaves cuneate to rounded (subcordate) at base.
  4 Leaves evergreen, coriaceous in texture, glossy dark green above as if varnished, rusty tomentose or green beneath; [subgenus *Magnolia*, section *Magnolia*] ..... ***M. grandiflora***
  4 Leaves variably evergreen to deciduous, herbaceous or subcoriaceous in texture, medium green above with a slightly glossy or dull finish; glaucous or green beneath.
    5 Leaves evergreen to deciduous, aromatic when fresh, 8-20 cm long, elliptic, strongly glaucous beneath; [subgenus *Magnolia*, section *Magnolia*].
      6 Leaves evergreen; previous year's stems densely pubescent; mature leaves with pubescent midveins; flowers opening near sundown (2-5 hours later than var. virginiana); medium to large tree, to >20 m tall; [of the Gulf Coast and inland, north and east to s. SC (e. NC?)] ..... ***M. virginiana*** *var.* ***australis***
      6 Leaves evergreen to deciduous (at least tardily); previous year's stems glabrous; mature leaves with few hairs along the midvein below; flowers opening mid-afternoon; shrub to multi-stemmed small tree, to 10 m (rarely to 15 m) tall; [of the Atlantic Coastal Plain and inland, south and west to s. SC and w. NC] .... ***M. virginiana*** *var.* ***virginiana***
    5 Leaves deciduous, non-aromatic,10-50 cm long, either ovate or lance-obovate, green beneath.
      7 Leaf base cuneate-attenuate; leaves 15-50 cm long, broader toward the tip, borne clustered on the end of the twig; buds glabrous; [subgenus *Magnolia*, section *Rhytidospermum*, subsection *Rhytidospermum*] .... ***M. tripetala***
      7 Leaf base rounded to subcordate (often cuneate to widely cuneate in *M. acuminata* var. *subcordata*); leaves 10-30 cm long, broader near the middle or toward the base, borne scattered along the twig; buds pubescent; [subgenus *Yulania*, section *Yulania*, subsection *Tulipastrum*].
        8 Twigs of the current year glabrous; petals greenish or greenish-yellow; medium to large tree..... ..... ***M. acuminata*** *var.* ***acuminata***
        8 Twigs of the current year pubescent, or at least with persistent hair-bases, petals golden-yellow above, light-yellow below; small tree (rarely larger) ..... ***M. acuminata*** *var.* ***subcordata***

Magnolia acuminata (Linnaeus) Linnaeus *var.* ***acuminata***, Cucumber-tree, Cucumber Magnolia. Mt, Pd (GA, NC, SC, VA): mesic to subxeric forests, especially (but by no means strictly) over mafic or calcareous rocks, up to at least 1550m (where growing with *Betula alleghaniensis, Abies fraseri, Picea rubens,* and *Sorbus americana*), ultramafic outcrop barrens (where codominant with *Pinus rigida* and *Quercus alba*); common (rare in Piedmont). April-May; July-August. Widespread in e. North America, primarily in or near the Appalachians. The recognition of two varieties is uncertain (see discussion below). [= C, F, G, V, W, X, Y; < *M. acuminata* – RAB, FNA, K, Z; = *Tulipastrum acuminatum* (Linnaeus) Small – S]

Magnolia acuminata (Linnaeus) Linnaeus *var.* ***subcordata*** (Spach) Dandy, Yellow Cucumber-tree, Showy Cucumber Magnolia. Pd (GA, NC, SC): moist to dry slopes and bottomlands over mafic or calcareous rocks; uncommon. Var. *subcordata* ranges from sc. NC south to AL, in the lower Piedmont in our area. It has been treated variously as a variety, a species, or merged with *M. acuminata*. Coker (1943) discusses its history, distribution, and taxonomic status. Additional study is needed. [= V, X, Y; < *M. acuminata* – RAB, FNA, K, W, Z; = *Tulipastrum cordatum* (Michaux) Small – S; = *Magnolia cordata* Michaux]

Magnolia fraseri Walter, Fraser Magnolia, Earleaf Umbrella-tree. Mt, Pd (GA, NC, SC, VA): mesic forests; common (uncommon in upper Piedmont only). April-May; July-August. A Southern Appalachian endemic: KY and w. VA south through w. NC and e. TN to nw. SC, n. GA, and ne. AL. [= RAB, C, F, FNA, G, K, S, W, Z; = *M. fraseri* var. *fraseri* – V, X; = *M. fraseri* ssp. *fraseri* – Y]

Magnolia grandiflora Linnaeus, Southern Magnolia, Bull Bay. Cp, Pd (GA, NC, SC, VA): maritime forests, mesic Coastal Plain bluffs and flats, bottomlands, now also widely naturalized, spreading from cultivation into wet to mesic forests; common as an introduction (rare in the Piedmont), rare as a native species in NC (NC Watch List). May-June; October. Curtis (1860) states

that "the northern limit of this tree is in Brunswick County, south of the Cape Fear; but it flourishes in cultivation through all the lower part of the State." The pre-Columbian range was apparently from se. NC south to FL, west to e. TX, largely on the Coastal Plain, now somewhat expanded northwards and inland by naturalization from centuries of horticultural planting. This is, of course, the classic "southern magnolia," along with live oak (*Quercus virginiana*), and bald-cypress (*Taxodium distichum*), one of the totem trees of the Deep South. [= RAB, C, FNA, GW, K, S, V, Y, Z]

Magnolia macrophylla Michaux, Bigleaf Magnolia. Pd (GA, NC, SC), Mt (VA), Cp (GA, SC*): mesic forests, primarily over limestone, other calcareous sedimentary rocks (calcareous shales, sandstones, etc.), or mafic rocks (east of the Blue Ridge); rare (NC Rare, SC Rare, VA Rare). May-June; July-August. The range of this species is often stated in such a way as to imply that it is a tree of the southern mountains. Actually, it avoids the Southern Blue Ridge, reaching its greatest abundance in the sedimentary rock Appalachians west of the Blue Ridge, particularly the Cumberland Plateau, and occurs east of the Blue Ridge only as a rare disjunct. ***M. macrophylla*** ranges from s. OH and sw. VA south through e. TN to w. GA, west to AL, MS, n. LA, and se. AR (Sundell et al. 1999); disjunct on Crowleys Ridge in ne. AR (population now extirpated), c. and nc. SC, and e. SC (where probably not native). The leaves are up to 1.1 meter long and 3.5 dm wide. See Williams (1999) for additional information about the discovery and nomenclature of this species. The Gulf Coast endemic *Magnolia ashei* Weatherby is related and is sometimes treated as a variety or subspecies of ***M. macrophylla***. [= RAB, C, F, FNA, G, K, S, W, Z; = ***M. macrophylla*** ssp. *macrophylla* – V, X, Y]

Magnolia pyramidata Bartram, Pyramid Magnolia. Cp (GA, SC): mesic forests, especially of bluffs and ravines; rare (GA Watch List, SC Rare). April-May; August. A Southeastern Coastal Plain endemic: c. SC south to panhandle FL, west to e. TX. Sometimes treated as avariety or subspecies of ***M. fraseri***, to which it is clearly closely related, but the distributional and morphological differences are discrete and I therefore prefer specific status. [= RAB, FNA, K, S, Z; = ***M. fraseri*** Walter var. *pyramidata* (Bartram) Pampinini – V, X; = ***M. fraseri*** Walter ssp. *pyramidata* (Bartram) E. Murray – Y]

Magnolia tripetala (Linnaeus) Linnaeus, Umbrella Magnolia, Umbrella-tree. Pd, Mt, Cp (GA, NC, SC, VA): mesic forests; common (uncommon in Mountains and Coastal Plain). April-May; July-October. Centered in the Southern Appalachians, but avoiding higher elevations, and therefore occurring primarily "around" the Blue Ridge; ranging from sc. and sw. PA, s. OH, s. IN south to SC, GA, nw. FL, AL, and MS; also disjunct in the Ouachita Mountains of c. AR and e. OK. [= RAB, C, F, FNA, G, K, S, W, V, X, Y, Z]

Magnolia virginiana Linnaeus ***var. australis*** Sargent, Southern Sweet Bay. Cp (GA, NC?, SC), Pd (GA), Mt (GA): pocosins, bay forests, and swamps in the Coastal Plain, streamhead pocosins, swamps, and sandhill seeps in the Sandhills, bogs and peaty swamps in the Piedmont and Mountains; common (rare in Piedmont and Mountains). April-July; July-October. Primarily a species of the Southeastern Coastal Plain: s. SC (se. NC?) south to s. FL, and west to e. TX, rarely extending into adjacent, more interior provinces. Morphological, molecular, and chemical studies have shown strong variation in ***M. virginiana***, but the patterns are not clear based on the limited current studies (Azuma, Thien, & Kawano 1999). Tobe (1998), McDaniel (1966), and Figlar (pers. comm. 2005) recommend the recognition of two varieties; additional study is needed. [= F, Y; < ***M. virginiana*** – RAB, C, FNA, G, GW, K, S, V, W, X, Z]

Magnolia virginiana Linnaeus *var.* ***virginiana***, Northern Sweet Bay. Cp (GA, NC, SC, VA), Pd (NC, VA), Mt (VA): pocosins, bay forests, and swamps in the Coastal Plain, streamhead pocosins, swamps, and sandhill seeps in the Sandhills, bogs and peaty swamps in the Piedmont; common (rare in Piedmont and Mountains). April-July; July-October. Se. MA south to w. NC, s. SC, and e. GA. [= F, Y; < ***M. virginiana*** – RAB, C, FNA, G, GW, K, S, V, W, X, Z]

MALVACEAE A.L. de Jussieu 1789 (Mallow Family)

Malvaceae has always been difficult to circumscribe cleanly, relative to members of such families as Sterculiaceae and Tiliaceae. Molecular evidence now adds to morphologic evidence that traditional circumscriptions of these families are highly polyphyletic. Bayer et al. (1999) present a new classification of an expanded Malvaceae, with 9 subfamilies recognized. If circumscribed broadly (as here) to include Sterculiaceae and Tiliaceae, a family of about 243 genera and 4000-4500 species, herbs, shrubs, and trees, of cosmopolitan distribution, but especially diverse in the tropics and subtropics. This family includes several economically important species, including cacao or chocolate, *Theobroma cacao* Linnaeus, and cola, *Cola acuminata* R. Brown. References: Whetstone (1983)=Z; Bayer et al. (1999); Bayer & Kubitzki in Kubitzki & Bayer (2003).

Subfamily Byttnerioideae: *Melochia*

Subfamily Grewioideae: *Triumfetta*

Subfamily Malvoideae:

Tribe Gossypieae: *Gossypium*

Tribe Hibisceae: *Abelmoschus, Hibiscus, Kosteletzkya, Malvaviscus, Pavonia, Urena*

Tribe Malveae: *Abutilon, Alcea, Althaea, Anoda, Callirhoe, Iliamna, Malva, Malvastrum, Modiola, Napaea, Sida*

Subfamily Sterculioideae: *Firmiana*

Subfamily Tilioideae: *Tilia*

Abelmoschus Medikus 1787 (Okra, Gumbo)

A genus of about 15 species, herbs, of the Old World tropics. Perhaps better included in a broadly circumscribed *Hibiscus* (Pfeil & Crisp 2005). References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Abelmoschus esculentus*** (Linnaeus) Moench, Okra, Gumbo. Cp, Pd (GA, NC, SC, VA): frequently cultivated in gardens, rarely persistent or self-seeding the year following; common (in cultivation), rare (as an escape), introduced from Africa. The young capsules are a famous component of southern cooking. [= K, S; = *Hibiscus esculentus* Linnaeus – F]

Abutilon P. Miller 1754 (Indian-mallow, Indian-hemp)

A genus of about 100-160 species, herbs, of tropical and warm temperate areas. References: Fryxell (2002)=Z; Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Abutilon theophrasti*** Medikus, Velvetleaf, Pie-marker, Butterprint. Cp (GA, NC, VA), Pd (NC, SC, VA), Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, introduced from s. Asia. June-October. [= F, G, K, W, Z; = *A. theophrastii* – RAB, orthographic variant; = *Abutilon abutilon* (Linnaeus) Rusby – S]

Alcea Linnaeus 1753 (Hollyhock)

A genus of about 50-60 species, warm temperate Eurasian (Mediterranean Europe to c. Asia). References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Alcea rosea*** Linnaeus, Hollyhock. Cp, Pd, Mt (NC, VA) {GA}: roadsides, dumps, frequently cultivated, less commonly escaped or persistent; rare, introduced from Eurasia. Late May-August (rarely later). [= K; = *Althaea rosea* (Linnaeus) Cavanilles – RAB, C, F, G]

Althaea Linnaeus 1753 (Marsh-mallow)

A genus of about 12 species, herbs, Eurasian. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Althaea officinalis*** Linnaeus, Marsh-mallow. Cp (VA): marshes; rare, introduced from Europe. The roots of this plant were the original source of the mucilaginous paste used to make marshmallows (which are now made with a synthetic mucilage). [= C, F, G, K]

Anoda Cavanilles 1785 (Anoda)

A genus of about 24 species, herbs, of sw. North America, Central America, and South America. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Anoda cristata*** (Linnaeus) Schlechtendahl, Spurred Anoda. Cp (VA), Pd (GA, NC, SC, VA): disturbed areas; rare, introduced from sw. United States, Central and South America. July-October. [= G, K; = *A. crista* – C, orthographic variant; > *A. cristata* var. *cristata* – F; > *A. cristata* var. *brachyanthera* (Reichenbach) Hochreutiner – F]

Callirhoe Nuttall 1821 (Poppy-mallow)

A genus of about 9 species, herbs, of North America. References: Dorr (1990)=Z; Bayer & Kubitzki in Kubitzki & Bayer (2003).

1 Calyx not subtended by an epicalyx.
  2 Inflorescence racemose, corymbose, or nearly umbellate; petals white, pink, or mauve; plants ascending, 1.5-8.5 dm tall; mericarps pubescent with simple, appressed hairs ..... ***[C. alcaeoides]***
  2 Inflorescence paniculate; petals deep red, with a white basal spot; plants erect, 5-20 dm tall; mericarps glabrous ..... ***C. digitata***
1 Calyx subtended by an epicalyx of 3 bractlets.
  3 Calyx lobes distinct and divergent in bud; stems decumbent ..... ***C. involucrata* var. *involucrata***
  3 Calyx lobes valvate in bud, forming a point; stems erect, ascending, or decumbent.
    4 Bractlets of the epicalyx linear, 0.1-1.7 mm wide; peduncles 1-flowered; calyx lobes lanceolate, 7-15.4 mm long; mericarps indehiscent; leaves cordate or ovate in outline, palmately deeply divided into 5-7 lobes ..... ***C. papaver***

4 Bractlets of the epicalyx obovate, 2.5-4.6 mm wide; peduncles several-flowered; calyx lobes deltoid, 2-5 (-6.5) mm long; mericarps dehiscent; leaves triangular, not lobed or only slightly so.....***C. triangulata***

* ***Callirhoe digitata*** Nuttall, Finger Poppy-mallow. Mt (GA): occasionally mowed roadside and adjacent powerline right-of-way, with other species of calcareous prairie habitats, one occurrence recorded to date; rare (GA Special Concern), apparently adventive from its native range in prairies of the Ozark region (nw. AR, sw. MO, se. KS, and ne. OK). [= C, F, G, K, Z]

* ***Callirhoe involucrata*** (Torrey & A. Gray) A. Gray *var.* ***involucrata***, Purple Poppy-mallow. Pd (VA): disturbed areas; rare, adventive from its native range in the midwestern United States. [= C, G, K, Z; < *C. involucrata* var. *involucrata* – F; < *C. involucrata* – G]

Callirhoe papaver (Cavanilles) A. Gray, Woods Poppy-mallow. Cp (GA): forest openings; rare (GA Special Concern). Sw. GA and FL west to e. TX and s. AR (Dorr 1990). [= F, G, K, Z; = *Callirrhoë papaver* – S, orthographic variant]

Callirhoe triangulata (Leavenworth) A. Gray, Sand Poppy-mallow, Clustered Poppy-mallow. Cp (GA, SC, NC): sandhills, sandy scrub, and other dry, open habitats; rare (GA Special Concern). Sc. NC south to GA and west to ec. MA (upper Coastal Plain and lower Piedmont); also sw. WI amd ne. IA south to s. IN and s. IL. [= C, F, G, K, Z; *Callirrhoë triangulata* – S, orthographic variant]

Callirhoe alcaeoides (Michaux) A. Gray, Pale Poppy-mallow. Calcareous prairies, glades, and other open habitats. East to c. TN (Chester, Wofford, & Kral 1997), IL, KY, and AL (Dorr 1990, Kartesz 1999) from a primary distribution in NE, KS, OK, and TX. [= C, F, G, K, Z; = *Callirrhoë alceoides* – S, orthographic variant]

Firmiana Marsili (Chinese Parasol-tree, Phoenix Tree)

A genus of about 12 species, trees, of Africa and Asia. References: Brizicky (1966)=Y; Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Firmiana simplex*** (Linnaeus) W. Wight, Chinese Parasol-tree, Phoenix Tree. Cp, Pd (GA, NC, SC, VA): planted and occasionally naturalized nearby; rare, native of se. Asia, probably China. [= C, K, Y, Z; = *F. platanifolia* (Linnaeus f.) Schott & Endlicher – RAB, S]

Gossypium Linnaeus 1753 (Cotton)

A genus of about 40-50 species, herbs, shrubs, and trees, of warm temperate to tropical areas. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Gossypium hirsutum*** Linnaeus, Upland Cotton. Cp (GA, NC, SC, VA): frequently cultivated crop, especially in sandy soils of the Coastal Plain, rarely adventive or a waif; common (as a crop), rare (as an adventive), introduced from tropical America. [= C, G; *? G. hirsutum* var. *hirsutum* – K; *? G. herbaceum* Linnaeus – F, S; *? G. barbadense* Linnaeus]

Hibiscus Linnaeus 1753 (Hibiscus, Rose-mallow)

A genus of about 200-300 species, trees, shrubs, and herbs, of tropical to warm temperate areas. References: Wise & Menzel (1971); Bayer & Kubitzki in Kubitzki & Bayer (2003). Key based in part on GW.

1 Woody shrub, the stems usually solitary from a creeping rhizome .....***H. syriacus***
1 Herb (sometimes robust and to as tall as 3.5 m), often several from ground level, from a crown or taproot.
  2 Annual from a taproot, to 0.5 m tall; calyx inflated at maturity; capsule 1.0-1.3 cm long; petals 1.5-4 cm long; leaves 2-6 cm long, deeply cleft.....***H. trionum***
  2 Perennial from a crown, usually 0.7-3.5 m tall; calyx not inflated at maturity; capsule 1.7-3.5 cm long; leaves 4-25 cm long, deeply cleft, hastate-lobed, or not at all lobed or cleft.
    3 Leaves and stems harshly scabrous; calyx lobes each with an elongate purplish nectary on the back; [of pine savannas and dry sandy soils of maritime forest edges, from se. NC southward].....***H. aculeatus***
    3 Leaves and stems glabrous, softly pubescent, or slightly scabrous; calyx lobes lacking nectaries; [of marshes and swamps (sometimes cultivated in drier soils), collectively widespread in our area].
      4 Stem glabrous; leaves glabrous; leaves either palmately 3-5-lobed, or prominently halberd-lobed at the base (uncommonly unlobed).
        5 Leaves either palmately 3-5-lobed; petals bright scarlet .....***H. coccineus***
        5 Leaves halberd-lobed at the base (uncommonly unlobed); petals pink or white with a purplish base.....***H. laevis***
      4 Stem pubescent at least when young; leaves pubescent on at least one surface; leaves unlobed or slightly lobed toward the tip.
        6 Upper leaf surface densely pubescent; capsule densely pubescent.

7 Leaf blades 3-lobed ..... ***H. grandiflorus***
7 Leaf blades unlobed..... ***H. moscheutos*** *ssp.* ***incanus***
6 Upper leaf surface glabrous or very sparsely pubescent; capsule glabrous.
8 Petals white or creamy, with a red or purple base; flower stalk bearing a leaf well above the base (often about halfway along its length) ..... ***H. moscheutos*** *ssp.* ***moscheutos***
8 Petals pink (rarely white), with or without a red or purple base; flower stalk without a leaf, borne in the axil of a leaf..... ***H. moscheutos*** *ssp.* ***palustris***

Hibiscus aculeatus Walter, Savanna Hibiscus, Comfort-root. Cp (GA, NC, SC): pine savannas, dry sandy soils of maritime forest edges; uncommon (rare north of SC) (NC Rare). June-August; July-September. Se. NC south to sc. peninsular FL, west to LA. [= RAB, GW, K, S]

Hibiscus coccineus Walter, Scarlet Hibiscus. Cp (GA, *NC, *SC, *VA), *Pd (*NC): marshes, swamp forests, roadside swales, cultivated as an ornamental in yards; rare, presumably introduced from further south, but sometimes appearing native. Native in FL, s. GA, and s. AL. [= GW, K, S]

Hibiscus grandiflorus Michaux, Large-flowered Hibiscus. Cp (GA): tidal marshes, lakeshores, wet flatwoods and savannas; rare (GA Special Concern). E. GA (Chatham Co., adjacent to the SC border) (Jones & Coile 1988) south to s. FL, west to e. LA. [= GW, K, S]

Hibiscus laevis Allioni, Smooth Rose-mallow, Halberd-leaved Marsh-mallow, Showy Hibiscus. Cp, Pd (GA, NC, SC, VA), Pd (GA), Mt (VA): freshwater marshes, exposed riverbanks, sandbars; common. June-August; August-October. S. PA south to FL, west to TX; north in the interior to around the Great Lakes. [= C, K, W; = *H. militaris* Cavanilles – RAB, F, G, GW, S]

Hibiscus moscheutos Linnaeus *ssp.* ***incanus*** (Wendland f.) Ahles, Eastern Rose-mallow. Cp (GA, NC, SC): marshes; rare. June-September; July-October. S. MD south to c. peninsular FL, west to e. TX. [= RAB, GW; < *H. moscheutos* var. *moscheutos* – C; = *H. incanus* Wendland f. – G, S; < *H. moscheutos* ssp. *moscheutos* – K, in part]

Hibiscus moscheutos Linnaeus *ssp.* ***moscheutos***, Eastern Rose-mallow. Cp, Pd, Mt (GA, NC, SC, VA): marshes; common. June-September; July-October. MD west to s. IN, south to n. FL, and se. TX. [= RAB, GW, W; < *H. moscheutos* var. *moscheutos* – C; = *H. moscheutos* Linnaeus – F, G; < *H. moscheutos* ssp. *moscheutos* – K; *H. oculiroseus* Britton – S]

Hibiscus moscheutos Linnaeus *ssp.* ***palustris*** (Linnaeus) R.T. Clausen, Eastern Rose-mallow. Cp (NC): marshes; rare. June-September; July-October. E. MA south to e. NC; also around the Great Lakes in NY, OH, IN, MI, IL, and Ontario. [= RAB, GW, W; < *H. moscheutos* var. *moscheutos* – C; = *H. palustris* Linnaeus – F, G; < *H. moscheutos* ssp. *moscheutos* – K; *? H. moscheutos* – S]

* ***Hibiscus syriacus*** Linnaeus, Rose-of-Sharon, Althaea. Pd (GA, NC, SC, VA), Cp, Mt (NC, SC, VA): escaped or persistent after cultivation, often spreading by rhizomes; uncommon, introduced from e. Asia. June-September; August-October. [= RAB, C, F, G, K, S, W]

* ***Hibiscus trionum*** Linnaeus, Flower-of-an-hour. Pd (GA, NC, SC, VA), Mt (NC, SC, VA), Cp (VA): fields, roadsides, disturbed areas; common, introduced from Europe. [= RAB, C, G, K, W; = *Trionum trionum* (Linnaeus) Wooton & Standley – S]

Hibiscus lasiocarpos Cavanilles, east to c. TN (Chester, Wofford, & Kral 1997), AL, KY, and GA (F, Kartesz 1999). [= F, S; = *Hibiscus moscheutos* Linnaeus ssp. *lasiocarpos* (Cavanilles) O.J. Blanchard – K] {not keyed at this time; add to synonymy}

Iliamna Greene 1906 (Globe-mallow)

A genus of 7 species, perennial herbs, of North America. Some authors (such as Mabberley 1997) include *Iliamna* in *Sphaeralcea*. References: Bodo Slotta & Porter (2006)=Y; Porter & Wieboldt in Terwilliger (1991)=Z; Bayer & Kubitzki in Kubitzki & Bayer (2003).

1 Leaves 5-7-lobed, the lobes narrowly triangular, the sinuses acute; flowers odorless; plant to ca. 1 m in height; [sandstone outcrops on ridgetop] ..... ***I. corei***
1 Leaves 5-7-lobed, the lobes broadly triangular or deltoid, the sinuses obtuse; flowers fragrant; plant to ca. 2.5 m in height; [of river shores and along railroads] ..... ***I. remota***

Iliamna corei Sherff, Peters Mountain Mallow. Mt (VA): in shallow soil in crevices of outcroppings of Clinch sandstone, near the summit of Peters Mountain; rare (US Endangered, VA Endangered). June-August; July-October. Endemic to the summit of Peters Mountain, Giles County, VA. The validity of *I. corei* as a species distinct from *I. remota* is supported by Bodo Slotta & Porter (2006). [= F, Y, Z; < *I. remota* – C, G, W; < *I. rivularis* (Douglas ex Hooker) Greene var. *rivularis* – K]

Iliamna remota Greene, Kankakee Globe-mallow. Mt (VA): shores and gravel bars along rivers, and along railroad embankments; rare (VA Rare). June-August; July-October. W. VA, nw. IN, and ne. IL. Considered by some to be introduced only in our area, however, the VA populations are genetically different than those in IN and IL (Bodo Slotta & Porter 2006). [= F, Y, Z; < *I. remota* – C, G, W (also see *I. corei*); < *I. rivularis* (Douglas ex Hooker) Greene var. *rivularis* – K]

Kosteletzkya K. Presl 1835 (Seashore-mallow)

A genus of about 15-30 species, herbs, of North America, sub-Saharan Africa, and Madagascar. Perhaps better included in a broadly circumscribed *Hibiscus* (Pfeil & Crisp 2005). References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

1 Hairs of the fruit 0.5-1.0 (-1.5) mm long; flowering calyx mostly 6-10 mm long, the bractlets mostly 2.5-6 mm long; petals mostly 1.8-3 cm long; [of VA northward] ..... ***K. virginica* var. *aquilonia***
1 Hairs of the fruit 1.2-2.4 mm long; flowering calyx mostly 8-13 mm long, the bractlets mostly 6-10 mm long; petals mostly 3.2-4.5 mm long; [throughout our area] ..... ***K. virginica* var. *virginica***

Kosteletzkya virginica (Linnaeus) K. Presl ex A. Gray *var.* ***aquilonia*** Fernald, Northern Seashore-mallow. Cp (VA): brackish to freshwater tidal marshes; common. July-October. NY (Long Island) south to VA. While geographic trends are readily apparent, the recognition of infraspecific taxa is made problematic by the non-correlation of various characters. [= C, F, G; < *Kosteletskya virginica* – RAB, orthographic variant; < *K. virginica* – GW, K; < *K. virginica* – S]

Kosteletzkya virginica (Linnaeus) K. Presl ex A. Gray *var.* ***virginica***, Southern Seashore-mallow. Cp (GA, NC, SC, VA): brackish to freshwater tidal marshes; common. July-October. DE south to FL, west to TX; also in the West Indies. [= C; < *Kosteletskya virginica* – RAB, orthographic variant; < *K. virginica* – GW, K; > *K. virginica* var. *virginica* – F, G; > *K. virginica* var. *althaeifolia* Chapman – F, G; >< *K. virginica* – S; > *K. althaeifolia* (Chapman) Rusby – S]

Malva Linnaeus (Mallow)

A genus of about 40 species, herbs, of temperate Eurasia and montane Africa. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

1 Upper leaves deeply 5-7-lobed, the sinuses cut over halfway to the middle; petals 2-3.5 cm long; erect perennial ..... ***M. moschata***
1 Upper leaves less deeply lobed, rarely to as deep as halfway to the middle; petals 0.5-2.5 cm long; prostrate to erect annual or biennial.
  2 Epicalyx of 3 oblong-ovate bractlets; petals reddish purple, 2.0-2.5 cm long; biennial, erect, usually not branched at the base ..... ***M. sylvestris***
  2 Epicalyx of 3 linear or narrowly lanceolate bractlets; petals white or pink, 0.6-1.2 cm long; annual, sprawling, usually branched at the base.
    3 Petals about 2× as long as the sepals ..... ***M. neglecta***
    3 Petals about 1× as long as the sepals ..... ***M. rotundifolia***

* ***Malva moschata*** Linnaeus, Musk Mallow, Rose Mallow. Mt (NC, VA), Pd (VA): pastures, roadsides, barnyards; rare, introduced from Europe. Late May-August. [= RAB, C, F, G, K, W]

* ***Malva neglecta*** Wallroth, Common Mallow, Cheeses. Mt, Pd (GA, NC, VA), Cp (VA) {SC}: pastures, roadsides, barnyards; rare, introduced from Europe. April-October. [= RAB, C, F, G, K, W; = *M. rotundifolia* – S, misapplied]

* ***Malva rotundifolia*** Linnaeus, Small Mallow, Dwarf Mallow, Cheeses. Mt (VA): pastures, roadsides, barnyards; rare, introduced from Europe. [= C, F, G, K, S; = *M. pusilla*, misapplied]

* ***Malva sylvestris*** Linnaeus, Common Mallow, High Mallow, Cheeses. Cp, Pd (NC, SC, VA), Mt (VA): pastures, roadsides, barnyards; rare, introduced from Europe. May-July. [= RAB, C, K, S, W; > *M. sylvestris* var. *sylvestris* – F, G; > *M. sylvestris* var. *mauritiana* (Linnaeus) Boissier – F, G]

* ***Malva parviflora*** Linnaeus. SC, MD, FL, etc. [= K] {not keyed at this time; synonymy incomplete}

* *Malva verticillata* Linnaeus is reported as an introduction as far south as s. PA (Rhoads & Klein 1993), MD, and WV (Kartesz 1999). [= K; > *M. verticillata* var. *verticillata* – C, F, G; > *M. verticillata* var. *crispa* Linnaeus – C, F, G] {not keyed at this time; synonymy incomplete}

Malvastrum A. Gray 1849

A genus of 14 species, herbs, of tropical and warm temperate areas. References: Bates (1967); Bayer & Kubitzki in Kubitzki & Bayer (2003).

Malvastrum hispidum (Pursh) Hochr. Mt (VA): limestone barrens; rare (VA Rare). July-August; August-October. KY, w. VA (Lee Co.), and c. TN, west to IA, KS, and OK. Discovered in our area in 1994 by J.C. Ludwig (Fleming & Ludwig 1996). [= C, K; *Malvastrum angustum* A. Gray – G, S; *Sphaeralcea angusta* (A. Gray) Fernald – F; = *Sidopsis hispidum* (Pursh) Rydberg; = *Sida hispida* Pursh]

* *Malvastrum coromandelianum* (Linnaeus) Garcke, introduced, south to se. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999). [= K]

Malvaviscus Fabricius 1759 (Wax-mallow)

A genus of 3-4 species, herbs, of tropical and subtropical areas. Perhaps better included in a broadly circumscribed *Hibiscus* (Pfeil & Crisp 2005). References: Turner & Mendenhall (1993)=Z; Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Malvaviscus drummondii*** Torrey & A. Gray, Wax-mallow, Turk's-cap Mallow. Cp (GA, NC, SC): disturbed areas; rare, native of TX and n. Mexico. July-October. First reported for NC and SC by Leonard (1971b). Although Turner & Mendenhall 91993) cite Leonard's specimens as *M. arboreus* var. *arboreus*, they were correctly determined by Leonard as *M. drummondii*. Therefore the attribution of *M. arboreus* var. *arboreus* to NC by Kartesz (1999) is an error. [= S; = *M. arboreus* Dillenius ex Cavanilles var. *drummondii* (Torrey & A. Gray) Schery – K, Z; **= *Hibiscus drummondii*** (Torrey & A. Gray) M.J. Young]

Melochia Linnaeus (Chocolate-weed)

A genus of about 54 species, of tropical regions, especially America. References: Brizicky (1966)=Y; Bayer & Kubitzki in Kubitzki & Bayer (2003).

1 Petioles >1.5 cm long; pubescence of the stem and leaves sparse, of stellate, forked, and/or simple hairs; cymes terminal on primary and secondary branches ..... ***M. corchorifolia***
1 Petioles < 1 cm long; pubescence of the stem and leaves dense (tomentose), of stellate hairs; cymes in upper leaf axils ..... ***M. spicata***

* ***Melochia corchorifolia*** Linnaeus, Chocolate-weed. Cp (GA, NC, SC): sandy fields, especially in low, wet places; uncommon, introduced from the Old World tropics. [= RAB, GW, K, S, Y, Z]
* ***Melochia spicata*** (Linnaeus) Fryxell. Cp (GA): disturbed areas; rare, introduced from tropical America. In GA (Kartesz 1999) and FL (Brizicky 1966). [= K; = *Riedlea hirsuta* (Cavanilles) Alphonse de Candolle – S; = *Melochia villosa* (P. Miller) Fawcett & Rendle – Y]

Modiola Moench 1794 (Bristly-mallow)

A monotypic genus, an herb, of North America, Central America, and South America. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

Modiola caroliniana (Linnaeus) G. Don, Bristly-mallow. Cp, Pd (GA, NC, SC, VA): lawns, roadsides, disturbed areas, pondshores; uncommon (adventive in part of its range in our area). Late March-June (sometimes later). Ranging as a native from SC south to FL, west to TX, south into the tropics. [= RAB, C, F, G, GW, K, S]

Napaea Linnaeus 1753 (Glade-mallow)

A monotypic genus, an herb, of temperate c. North America. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

Napaea dioica Linnaeus, Glade-mallow. Mt (VA): floodplains; rare (US Species of Concern, VA Rare). June-August. PA and IA south to sw. VA and s. IL. The original distribution of this scarce species is difficult to determine. See the interesting discussion of this species' occurrence in VA in Wieboldt et al. (1998). [= C, F, G, K]

Pavonia Cavanilles 1787

A genus of about 150 species, of tropical and subtropical areas. Perhaps better included in a broadly circumscribed *Hibiscus* (Pfeil & Crisp 2005). References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

1 Leaves hastate; calyx lobes broadly ovate; carpels un-awned; [introduced species of disturbed habitats] ..... ***P. hastata***
1 Leaves ovate; calyx lobes lanceolate; carpels with 3 apical awns up to 10 mm long; [rare native] ..... ***P. spinifex***

* ***Pavonia hastata*** Cavanilles, Swampmallow. Cp (GA): disturbed areas; rare, introduced from tropical America. In se. GA (Jones & Coile 1988). [= K, S]
Pavonia spinifex (Linnaeus) Cavanilles, Gingerbush. Cp (SC): hammocks; rare. Reported for the vicinity of Charleston, SC on the basis of a specimen collected by Bachman (Chapman 1878). Small (1933) considers this species as likely native, at least in FL. [= K, S; = *Hibiscus spinifex* Linnaeus]

Sida Linnaeus 1753 (Sida)

A genus of about 100 species, shrubs and herbs, of tropical, subtropical, and warm temperate areas. References: Fryxell (1985)=Z; Fuertes, Fryxell, & Jansen (2003); Siedo (1999)=Y; Verdcourt (2004)=X; Bayer & Kubitzki in Kubitzki & Bayer (2003). Key adapted in part from Z.

1 Leaves deeply palmately lobed; plants 1-2 (-4) m tall; petals white; [section *Pseudonapaea*, to be removed from *Sida*]..... .....***S. hermaphrodita***
1 Leaves unlobed; plants 0.2-1 m tall; petals yellow.
  2 Mericarps, styles, and stigmas 5; leaves usually truncate to subcordate at the base; [section *Spinosae*].....***S. spinosa***
  2 Mericarps, styles, and stigmas (6-) avg. 10 (-13); leaves usually cuneate to rounded at the base.
    3 Leaves narrowly elliptic to linear, (3-) 4-20× as long as wide; [section *Ellipticifoliae*].....***S. elliottii* *var.* *elliottii***
    3 Leaves elliptic-rhombic, mostly 2-3× as long as wide; [section *Sidae*].
      4 Leaves and branches borne distichously; stipules usually falcate, several-veined .....***S. acuta***
      4 Leaves and branches borne spirally; stipules linear, 1 (-3)-veined.....***S. rhombifolia* *var.* *rhombifolia***

* ***Sida acuta*** Burman f., Broomweed. Cp (GA, SC): disturbed areas; rare, introduced from the Tropics. June-October. [= K, Z; *? S. carpinifolia* Linnaeus f. – RAB, S]

Sida elliottii Torrey & A. Gray *var.* ***elliottii***, Coastal Plain Sida. Cp (GA, NC, SC, VA), Pd (NC), Mt (GA): stream banks, sandy openings, pineland pond margins, limestone glades and barrens; uncommon (GA Special Concern). July-October. Var. *elliottii* ranges from se. VA south to n. FL, west to LA and north in the interior to c. TN and se. MO. A second variety, var. *parviflora* Chapman, occurs in Peninsular FL, se. TX, and through montane e. Mexico to Guatemala. *S. inflexa*, of se. VA and ne. NC, is alleged to differ as follows: *S. inflexa* with calyx 7-10 mm long, leaves elliptic to narrowly elliptic, 4-20 mm wide, (3-) 4-10× as long as wide (vs. *S. elliottii* var. *elliottii* with calyx 5-7 mm long; leaves narrowly lanceolate to linear, 1.5-7 mm wide, 10-20× as long as wide). [= Y; < *S. elliottii* – RAB, C, F, G, K, S, Z; > *S. inflexa* Fernald – F, K, Z]

Sida hermaphrodita (Linnaeus) Rusby, Virginia Sida, Virginia-mallow. Mt, Pd (VA): sandy or rocky areas along riverbanks; rare. July-August. C. PA and MD west to s. OH, south to DC, WV, w. VA, and ne. TN; disjunct in nw. OH, ne. IN, and s. MI (where presumably native) and with additional collections from e. MA, NY (Long Island), and s. NJ (where probably adventive) (Sp[ooner et al. 1985). Fryxell (1985) comments that this species is so different from the rest of the genus that "one might plausibly argue that it be elevated to generic rank." A molecular phylogenetic analysis suggests that its affinities are not with *Sida*, but with the South American *Sidasodes* (Fuertes, Fryxell, & Jansen 2003). Spooner et al. (1985) provide a detailed review of the species. [= C, F, G, K, S, W, Z]

* ***Sida rhombifolia*** Linnaeus *var.* ***rhombifolia***, Arrowleaf Sida. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA, SC): roadsides, fields, gardens, disturbed areas; common. April-October. Verdcourt (2004) discusses variation in this taxon, and suggests that "studies throughout the entire range of the species will necessitate recognition of more than one species." He recognizes 6 varieties in e. Africa, aside from the Linnaean var. *rhombifolia* (with type in Jamaica). [= X; < *S. rhombifolia* – RAB, C, F, G, K, S, W, Z]

* ***Sida spinosa*** Linnaeus, Prickly Sida, Prickly-mallow, False-mallow. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas, wet fields; common, introduced from the Tropics. June-November. [= RAB, C, F, G, K, S, W, Z]

Sida cordifolia Linnaeus. AL and FL. [= K] {not keyed at this time; synonymy incomplete}

Sphaeralcea St.-Hil.
(see *Iliamna*)

Tilia Linnaeus (Basswood, Whitewood, Linden, Linn)

A genus of about 25-45 species, trees, of temperate regions of North America, Europe and Asia. Hardin's (1990) treatment of American *Tilia* seems a practical and reasonable approach; it gives taxonomic status to the more distinctive (and geographically based) elements of variation, while recognizing the intergradational nature of the variation. Further investigation of this complex group is, however, warranted. References: Hardin (1990)=Z; Bayer & Kubitzki in Kubitzki & Bayer (2003). Key adapted from Hardin (1990).

Identification notes: While the varieties treated below are broadly distinctive and have definite geographic distributions across e. North America, they are imperfectly distinct in geographic areas of overlap. In our area, their identification is particularly problematic in Virginia, where individuals in many parts of the state show intergradation between the northern var. *americana* and the Southern and Central Appalachian var. *heterophylla*.

1 Lower leaf surfaces puberulent with bulbous glands, acicular trichomes, and (rarely) sparsely scattered stellate trichomes; fruiting peduncles and pedicels glabrous or sometimes puberulent; [generally northern, south to VA and w. NC] ....***T. americana* *var.* *americana***

1 Lower leaf surfaces usually tomentose or becoming puberulent, with bulbous glands, acicular trichomes, and a predominance of stellate or fasciculate trichomes; fruiting peduncles and pedicels stellate-tomentulose (becoming puberulent in age); [collectively widespread in our area].
  2 Lower leaf surfaces pale or whitish, densely stellate tomentose with appressed, sessile-stellate trichomes obscuring the surface (rarely becoming puberulent with age but with some stellate trichomes persisting along major veins, the margin, and/or the apex; lateral buds 5-8 mm long; pericarp 0.8-1.0 mm thick; [widespread in our area] .... ***T. americana*** *var.* ***heterophylla***
  2 Lower leaf surfaces grayish or brownish, loosely but densely tomentose with fasciculate and/or stipitate-stellate trichomes, either remaining tomentose or becoming puberulent, or puberulent from emergence and green beneath; lateral buds 3-5 mm long; pericarp 0.5-0.6 mm thick; [generally southern, Coastal Plain and Piedmont of NC, SC, GA and southward and westward] .....***T. americana*** *var.* ***caroliniana***

Tilia americana Linnaeus *var.* ***americana***, Northern Basswood. Mt (NC, VA), Pd, Cp (VA): rich coves, rocky slopes, metabasalt boulderfileds, rich north-facing river bluffs, calcareous Coastal Plain ravines; common (rare in NC) (NC Watch List). June; August-September. New Brunswick and Manitoba south to e. VA, w. NC, and OK. In VA, var. *americana* occurs throughout the northern half of the state, with scattered populations southward in the mountains. [= C, K, Z; = *T. americana* – RAB, G, W; > *T. americana* – F; > *T. neglecta* Spach – F, S; > *T. glabra* Ventenat – S; > *T. truncata* Spach – S]

Tilia americana Linnaeus *var.* ***caroliniana*** (P. Miller) Castig., Southern Basswood, Carolina Basswood. Cp, Pd (GA, NC, SC): mesic forests, in the outer Coastal Plain usually associated with shell deposits, Indian shell middens, or underlying coquina limestone ("marl"); uncommon. June-July; July-August. NC south to FL and west to OK and c. TX. [= K, Z; > *T. caroliniana* P. Miller – RAB, S; > *T. floridana* Small – RAB, F, S; > *T. georgiana* Sargent – S; > *T. littoralis* Sargent – S]

Tilia americana Linnaeus *var.* ***heterophylla*** (Ventenat) Loudon, Mountain Basswood, White Basswood, Linn. Mt, Pd, Cp (GA, NC, SC, VA): rich coves and mesic to dry slopes (the drier sites usually on limestone), often one of the most abundant trees in Southern Appalachian cove forests; common, rare in Coastal Plain. June; July-August. Centered in the Southern Appalachians: sw. PA and WV south to c. NC, wc. GA, FL panhandle, and westward as disjunct populations to the Ozarkian Highlands of s. MO and n. AR. In VA, var. *heterophylla* dominates the scene in sw. VA and along southern Piedmont river bluffs, with disjunct populations in calcareous ravines in the upper Coastal Plain (Surry County); it also extends less commonly into the northern VA mountains and foothills, where var. *americana* is more prevalent, but seems to be absent (or very uncommon) in the Potomac valley east of the Blue Ridge. [= C, K, Z; = *T. heterophylla* Ventenat – RAB, F, W; > *T. heterophylla* – G, S; > *T. monticola* Sargent – G; > *T. australis* Small - S; > *T. eburnea* Ashe – S; > *T. lasioclada* Sargent – S; > *T. michauxii* Nuttall – S; > *T. venulosa* Sargent]

Several European species are planted as street or yard trees; they differ from the native species in having smaller leaves (usually 4-12 cm long vs. 8-25 cm long) and lacking staminodes. Three of the more commonly planted species are *T. platyphyllos* Scopoli, *T. cordata* P. Miller, and *T. ×vulgaris* Hayne [*cordata* × *platyphyllos*]. Planted material should be identified by using appropriate manuals of cultivated species.

Triumfetta Linnaeus

A genus of about 70-150 species, trees, shrubs, and herbs, of tropical regions. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Triumfetta semitriloba*** Jacquin. Cp (GA): disturbed areas; rare, introduced from further south. In sw. GA (Jones & Coile 1988) and FL. [= K, S]

Urena Linnaeus (Caesarweed)

A genus of about 6 species, of tropical and subtropical regions. References: Bayer & Kubitzki in Kubitzki & Bayer (2003).

* ***Urena lobata*** Linnaeus, Caesarweed, Bur Mallow, Congo Jute. Cp (SC): roadsides and vacant lots; rare, introduced from se. Asia. Introduced to se. SC via landscaping plantings, spreading to vacant lots and raodsides (P. McMillan, pers. comm., 2005). [= GW, K, S]

MARTYNIACEAE Stapf 1895 (Martynia Family)

A family of 5 genera and about 16 species, herbs, tropical and subtropical. Bretting & Nilsson (1988) present evidence for maintaining the Martyniaceae as distinct from the Pedaliaceae. References: Ihlenfeldt in Kadereit (2004).

Proboscidea Schmidel 1763 (Unicorn-plant)

A genus of about 9 species, herbs, of warm temperate to subtropical America. References: Thieret (1977)=Y; Bretting & Nilsson (1988)=Z; Ihlenfeldt in Kadereit (2004).

* ***Proboscidea louisianica*** (Miller) Thellung, Unicorn-plant, Devil's-claw, Cow Catcher. Pd (GA, NC, SC), Cp (GA, VA): disturbed areas; rare, introduced from farther west and south (apparently native to the Mississippi valley). The curious fruits are unmistakable. [= RAB, F, GW, Y; = *P. louisiana* – C, G, orthographic variant; = *Martynia louisiana* Miller – S; > *P. louisianica* ssp. *louisianica* – K, Z]

MELASTOMATACEAE A.L. de Jussieu 1789 (Melastome Family)

A family of about 200 genera and 4500-5000 species, trees, shrubs, vines, and herbs, of tropical, subtropical , and warm temperate areas.

Rhexia Linnaeus 1753 (Meadow-beauty)
(by Richard J. LeBlond)

A genus of about 15 species, herbs, of North America. *Rhexia* is the only genus of the Melastomataceae to occur in North America north of s. FL. References: Kral & Bostick (1969)=Z; Bounds (1987); Wurdack & Kral (1982); Snyder (1996).

Identification notes: measurements of the hypanthium are to the base of the calyx lobes.

1 Anthers straight, ca. 2 mm long.
- 2 Stem internodes with at least some hairs; leaves oblong, linear, or spatulate; petals yellow ..... ***Rh. lutea***
- 2 Stem internodes glabrous; leaves ovate, suborbicular, or widely elliptic; petals lavender-rose to pink.
  - 3 Calyx segments blunt to acute; floral tube glandular-pubescent; surface of seeds irregularly ridged .....***Rh. nuttallii***
  - 3 Calyx segments acuminate-aristate; floral tube nearly glabrous except along the calyx lobes; surface of seeds pebbled..... ***Rh. petiolata***

1 Anthers curvate, 5-11 mm long.
- 3 Stem nodes and internodes glabrous; stem and foliage blue-green ..... ***Rh. alifanus***
- 3 Stem nodes and usually also the internodes hirsute; stem and foliage green.
  - 4 Sepal lobes aristate, the awn-tip 0.5-1.5 mm long, and also with flaring, yellowish, stiff hairs 3-5 mm long ....***Rh. aristosa***
  - 4 Sepal lobes obtuse to acuminate, not aristate, the hairs shorter and not yellowish or stiff.
    - 5 Leaves 1-5 (-8) mm wide, linear, linear-elliptic, narrowly oblong, or narrowly spatulate.
      - 6 Petals lavender-rose, (10-) 15-20 (-25) mm long; mature hypanthium 10-14 mm long, with glandular hairs; marginal nerves of leaf abaxial surface either absent or obscure and discontinuous .....***Rh. cubensis***
      - 6 Petals white to pink (-rose-purple), (7-) 9-14 mm long; mature hypanthium 6-10 mm long, glabrous or sparsely glandular-hairy; marginal nerves of leaf abaxial surface prominent..... .....***Rh. mariana*** *var.* ***exalbida***
    - 5 Leaves (5-) 7-20 (-35) mm wide, lanceolate, elliptic, or ovate.
      - 7 Four stem faces at mid-stem about equal, almost flat, the angles sharp or winged.
        - 8 Roots tuberous; stem angles at mid-stem conspicuously winged; hypanthium 7-10 mm long, the neck shorter than the body.....***Rh. virginica***
        - 8 Roots not tuberous; stem angles sharp to narrowly winged; hypanthium 10-12 mm long, the neck as long as or longer than the body .....***Rh. mariana*** *var.* ***ventricosa***
      - 7 Four stem faces at mid-stem markedly unequal, one pair of opposite faces broader, convex, darker green, the narrower pair concave or flat, pale.
        - 9 Mature hypanthium 6-10 (-11) mm long, glandular-setose; petals 12-15 (-18) mm long, glabrous on the lower surface; anthers 5-8 mm long.....***Rh. mariana*** *var.* ***mariana***
        - 9 Mature hypanthium (9-)10-15 (-20) mm long, glabrous or glabrate; petals (18-) 20-25 mm long, glandular-hairy on the lower surface (best seen in bud); anthers 8-11 mm long ..... ***Rh. nashii***

Alternate Key based largely on vegetative characters

1 Stem internodes glabrous.
- 2 Stem nodes as well as internodes glabrous, leaf margins entire or remotely low-toothed apically, glabrous..... ..... ***Rh. alifanus***
- 2 Stem nodes hirsute, leaf margins toothed, the teeth often tipped with hairs.
  - 3 Longest leaves 1.5 (-2) cm long, ovate or suborbicular..... ***Rh. nuttallii*** **or** ***Rh. petiolata***
  - 3 Longest leaves > 2 cm long, lanceolate, elliptic, or ovate.
    - 4 Rhizomes present, roots not tuberiferous or spongy-thickened.....***Rh. mariana*** *var.* ***ventricosa***

4 Rhizomes absent, roots tuberiferous or spongy-thickened.
5 Stem leaves gradually reduced upward ..... ***Rh. virginica***
5 Stem leaves gradually lengthening from the base to mid-stem..... ***Rh. aristosa***

1 Stem internodes (and nodes) hirsute or glandular-hairy.
6 Leaves linear, narrowly elliptic, or broadest above the middle.
7 Plant bushy-branched..... ***Rh. lutea***
7 Plant simple below the cymose inflorescence.
8 Mature hypanthium 10-14 mm long, with glandular hairs; petals lavendar-rose, 1.5-2.0 cm long..... ***Rh. cubensis***
8 Mature hypanthium 6-10 mm long, glabrous or sparsely glandular-hairy; petals white, 1.2-1.5 cm long..... ***Rh. mariana*** *var.* ***exalbida***
6 Leaves lanceolate, elliptic, or ovate, broadest at or below the middle.
9 Four stem faces at mid-stem about equal, almost flat, the angles sharp or winged.
10 Rhizomes present, roots not tuberiferous or spongy-thickened..... ***Rh. mariana*** *var.* ***ventricosa***
10 Rhizomes absent, roots tuberiferous or spongy-thickened ..... ***Rh. virginica***
9 Four stem faces at mid-stem markedly unequal, one pair of opposite faces broader, convex, darker green, the narrower pair concave or flat, pale.
11 Mature hypanthium 6-10 mm long, glandular-hairy; petals 1.2-1.5 cm long, glabrous on the lower surface ..... ***Rh. mariana*** *var.* ***mariana***
11 Mature hypanthium 10-15 mm long, glabrous or glabrate; petals 2.0-2.5 cm long, glandular-hairy on lower surface (best seen in bud)..... ***Rh. nashii***

Rhexia alifanus Walter, Smooth Meadow-beauty. Cp (GA, NC, SC): pine flatwoods and savannas, pocosins borders, more able to tolerate merely moist soils than other *Rhexia* species; common. May-September. A Southeastern Coastal Plain species: e. NC south to n. FL and west to se. Texas. Our tallest and showiest *Rhexia*: the unbranched (unless injured), wandlike stems, with strongly ascending, bluish-green, generally entire leaves make this species unmistakeable. [= RAB, GW, K, S, Z]

Rhexia aristosa Britton, Awned Meadow-beauty, Bristly Meadow-beauty. Cp (GA, NC, SC): clay-based Carolina bays, depression meadows, and limesink ponds (dolines); rare (US Species of Concern, GA Special Concern, NC Threatened, SC Rare, VA Rare). June-September. This species has a very local and disjunct range extending (strictly on the Coastal Plain) from NJ south to AL. The long yellowish bristles at the summit of the calyx/hypanthium are diagnostic. [= RAB, C, F, G, GW, K, S, Z]

Rhexia cubensis Grisebach, West Indies Meadow-beauty. Cp (GA, NC, SC): limesink ponds (dolines); rare (NC Rare). June-September. Se. NC south to s. FL and west to sw. MS; also in the West Indies. [= RAB, GW, K, S, Z]

Rhexia lutea Walter, Yellow Meadow-beauty, Golden Meadow-beauty. Cp (GA, NC, SC): wet pine flatwoods and savannas, seepage slopes, and bogs; uncommon. April-July (and later in response to growing-season fire). A Southeastern Coastal Plain species: e. NC south to n. FL and west to se. TX. The only yellow-flowered *Rhexia* and also our bushiest species. [= RAB, GW, K, S, Z]

Rhexia mariana Linnaeus *var.* ***exalbida*** Michaux, White Meadow-beauty. Cp, Pd (GA, NC, SC): wet pine flatwoods and savannas, wet meadows, ditches, and wet roadsides; uncommon. June-September. NC south to FL and west to MS. Merging into *Rh. mariana* var. *mariana* from FL westward, var. *exalbida* appears quite distinct in NC, and it here recognized for convenience. The white flowers and linear leaves are diagnostic. [= RAB; *Rh. lanceolata* – S; < *Rh. mariana* var. *mariana* – GW, K, Z]

Rhexia mariana Linnaeus *var.* ***mariana***, Maryland Meadow-beauty, Dull Meadow-beauty, Pale Meadow-beauty. Cp, Pd, Mt (GA, NC, SC, VA): pine flatwoods, wet meadows, bog margins, ditches, wet roadsides, often weedy; common. May-October. E. MA south to FL, west to TX, and north to s. IN and IL. [= RAB, G, W; < *Rh. mariana* var. *mariana* – F, GW, K, Z (also see *Rh. mariana* var. *exalbida*); > *Rh. mariana* var. *leiosperma* Fernald & Griscom – F; *? Rh. delicatula* Small – S]

Rhexia mariana Linnaeus *var.* ***ventricosa*** (Fernald & Griscom) Kral & Bostick, Swollen Meadow-beauty. Cp (NC, SC, VA), Pd (NC, VA): pine flatwoods and savannas, clearings in cypress-hardwood swamps, ditches, wet roadsides; uncommon. June-September. NJ south to SC. This variety is closely related to *Rh. mariana* var. *interior* (Pennell) Kral & Bostick, occurring west of the mountains. Gleason & Cronquist (1991) prefer to retain *Rh. interior* Pennell at the species level and hedge relative to the distinctiveness of *Rh. ventricosa*. [= GW, K, W, Z; = *Rh. ventricosa* Fernald & Griscom – RAB, F; < *Rh. interior* Pennell – C]

Rhexia nashii Small, Hairy Meadow-beauty. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): wet pine flatwoods and savannas; pondshores, bogs, marshes, ditches, wet roadsides; common (uncommon in Piedmont). May-October. Primarily a Southeastern Coastal Plain species: e. VA south to s. FL and west to se. LA. [= GW, K, S, Z; = *Rh. mariana* var. *purpurea* Michaux – RAB, F, G]

Rhexia nuttallii C.W. James, Nuttall's Meadow-beauty. Cp (GA): pine flatwoods, bogs; rare (GA Special Concern). Coastal Plain of se. GA west to FL Panhandle, south to s. peninsular FL. [= GW, K, Z; = *Rh. serrulata* Nuttall – S]

Rhexia parviflora Chapman, Small-flowered White Meadow-beauty. Cp (GA): limesink pond margins; rare (GA Special Concern). Occurs in sw. GA (Mitchell County) south into Panhandle FL. [= GW, K, S, Z]

Rhexia petiolata Walter, Ciliate Meadow-beauty, Short-stemmed Meadow-beauty. Cp (GA, NC, SC, VA), Pd (GA, SC): wet pine flatwoods and savannas, pocosin borders, and ditches; common (VA Rare). June-September. May-October. A Southeastern Coastal Plain endemic: se. VA south to n. FL and west to se. TX. The flowers are sessile, the petals ascending. [= RAB, C, G, GW, K, Z; = *Rh. ciliosa* Michaux – F, S]

Rhexia virginica Linnaeus, Virginia Meadow-beauty, Deergrass, Handsome Harry, Wing-stem Meadow-beauty. Mt, Cp, Pd (GA, NC, SC, VA): wet pine flatwoods and savannas, pond shores, bogs, and ditches; common (uncommon in NC Piedmont and NC Coastal Plain). May-October. E. Canada and WI south to n. FL and TX. [= C, G, GW, K, W, Z; > ***Rh. virginica*** var. *purshii* (Sprengel) C.W. James – RAB; > ***Rh. virginica*** var. *virginica* – RAB, F; > ***Rh. virginica*** var. *septemnervia* (Walter) Pursh – F; = ***Rh. stricta*** Pursh – S]

Rhexia ×*brevibracteata* Snyder [***Rh. aristosa*** × ***virginica***] is known as a natural hybrid from the Coastal Plain of NJ (Snyder 1996). {not keyed}

Rhexia mariana Linnaeus var. *interior* (Pennell) Kral & Bostick. Moist to wet areas, ditches, prairies. S. IN, s. IL, s. MO, and se. KS south to c. AL, c, MS, n. LA, and se. OK. [= GW, K, Z; < ***Rh. interior*** – C; = ***Rh. interior*** Pennell – F, G] {not keyed at this time; synonymy incomplete}

Rhexia salicifolia Kral & Bostick, Willowleaf Meadow-beauty. Drawdown zones of Coastal Plain depression ponds and interdune swales. S. AL and FL Panhandle. [= GW, K, Z] {not keyed at this time; synonymy incomplete}

MELIACEAE A.L. de Jussieu 1789 (Mahogany Family)

A family of about 50 genera and 565 species, trees and shrubs, of tropical and subtropical areas. The only native member of the family in e. North America is *Swietenia mahogani* (Linnaeus) Jacquin (West Indian Mahogany), a very valuable timber tree which ranges north to s. FL. References: Miller (1990)=Z in the synonymy.

Melia Linnaeus (Chinaberry)

A genus of 3 species, trees, of the Old World tropics.

* ***Melia azedarach*** Linnaeus, Chinaberry, Carolina Mahogany, Umbrella-tree, Pride-of-India. Cp, Pd (GA, NC, SC, VA), Mt (NC): disturbed areas, abandoned rural yards and fields; common (rare in the Mountains), native to se. Asia, commonly cultivated in our area (mainly in the Coastal Plain) and commonly escaped. April-May; September-October. Rural children often play with the bony drupes, which are poisonous if ingested. [= RAB, C, F, G, K, S, Z]

MENISPERMACEAE A.L. de Jussieu 1789 (Moonseed Family)

A family of about 72 genera and 450 species, vines, shrubs, trees, and herbs, ot tropical, subtropical, and warm temperate areas. References: Rhodes in FNA (1997); Kessler in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves asymmetrically peltate (the stem attached 1-5 mm in from the leaf margin); stamens 12-24; petals 6-9; fruit bluish-black; [tribe *Menispermeae*] ..... ***Menispermum***
1 Leaves not peltate, usually cordate (the stem attached at the leaf margin); stamens 6 or 12; petals 6 or 0; fruit red or bluish-black.
  2 Leaves 3-7-lobed, the sinuses usually deep, the lobes acute; stamens 12; petals 0; fruit bluish-black, 13-25 mm long; [tribe *Tinosporeae*]..... ***Calycocarpum***
  2 Leaves entire to 3-lobed, the sinuses always shallow, the lobes (if present) broadly rounded; stamens 6; petals 6; fruit red, 5-8 mm long; [tribe *Menispermeae*]..... ***Cocculus***

Calycocarpum (Nuttall) Spach (Cupseed)

A monotypic genus, a woody vine, of e. North America. References: Kessler in Kubitzki, Rohwer, & Bittrich (1993).

Calycocarpum lyonii (Pursh) A. Gray, Cupseed, Lyonia-vine. Cp (GA, SC), Pd, Mt (GA): floodplain forests; rare. May-June. Ranging from nw. GA, s. IN, and MO, south to se. SC, e. GA, Panhandle FL, and LA; some of the easternmost occurrences may be adventive or introduced. [= C, F, FNA, G, K, S]

Cocculus A.P. deCandolle (Coralbeads, Snailseed)

A genus of 8 species, woody vines, shrubs, and trees, of tropical, subtropical, and warm temperate regions of North America, Central America, Africa, Madagascar, India, Malaysia, and the Philippines. References: Kessler in Kubitzki, Rohwer, & Bittrich (1993).

Cocculus carolinus (Linnaeus) A.P. deCandolle, Coralbeads, Carolina Moonseed, Snailseed, Red Moonseed. Cp, Pd, Mt (GA, NC, SC, VA): moist to dry forests and thickets; common (rare in VA and in the Mountains of GA, NC, and SC). June-

August. VA south to FL, west to TX, north in the interior to s. IN and MO. Its occurrences in VA may be primarily adventive. [= RAB, C, F, FNA, G, K, W; = *Epibaterium carolinum* (Linnaeus) Britton – S]

Menispermum Linnaeus (Moonseed)

A genus of 2-4 species, vines, of temperate e. North America and temperate e. Asia. References: Kessler in Kubitzki, Rohwer, & Bittrich (1993).

Menispermum canadense Linnaeus, Moonseed, Yellow Parilla. Pd, Cp (GA, NC, SC, VA), Mt (GA, NC, VA): moist nutrient-rich forests, especially on floodplains or lower slopes; common. June-August. Québec west to Manitoba, south to GA and OK. [= RAB, C, F, FNA, G, K, S, W]

MENYANTHACEAE Dumortier 1829 (Buckbean Family)

A family of about 5 genera and 40 species, wetland herbs, of cosmopolitan distribution. References: Wood (1983b)=Z.

1 Leaves trifoliate; inflorescence a raceme ..... ***Menyanthes***
1 Leaves simple; inflorescence an umbel ..... ***Nymphoides***

Menyanthes Linnaeus (Buckbean, Bogbean)

The genus is monotypic, an herb, circumboreal. References: Wood (1983b)=Z

Menyanthes trifoliata Linnaeus, Buckbean, Bogbean. Mt (NC, VA): mountain bogs at high elevations over amphibolite (in the Blue Ridge), boggy marshes over calcareous rocks (in the Ridge and Valley); rare (NC Threatened, VA Rare). May-June. This circumboreal species is widespread in n. North America and n. Eurasia, ranging south in North America to NJ, VA, IN, MO, and CA, and disjunct to Long Hope Valley, Watauga County, NC. The NC populations are disjunct about 400 km from the next nearest populations in VA. McDowell (1984) reported the first documentation of the species for NC. [= C, G, K, W, Z; > *M. trifoliata* var. *minor* Rafinesque – F]

Nymphoides Hill (Floating Heart)

A genus of about 20 species, aquatic herbs, cosmopolitan. References: Wood (1983b)=Z; Burks (2002).

Identification notes: As the scientific name indicates, the leaves of *Nymphoides* bear a superficial resemblance to those of *Nymphaea*. The leaves of *Nymphoides* are more cordate, the two basal lobes more rounded, rather than having a rather sharp corner or angle. *Nymphoides cordata* has much smaller leaves than *Nymphaea*, while the thickly pebbled texturing of *Nymphoides aquatica* is very unlike the glossy smoothness of *Nymphaea*.

1 Flowers yellow; floating stems usually with multiple leaves; capsules 12-25 mm long ..... ***N. peltata***
1 Flowers white; floating stems with single leaves; capsules 3-14 mm long.
  2 Adaxial petal surface bearing a ruffled crest down its length in the middle ..... ***N. cristata***
  2 Adaxial petal surface not crested.
    3 Leaves 5-15 cm wide, roughly pebbled below, thick in texture; stems 1.3-2.5 mm in diameter a few cm below the inflorescence, with conspicuous red spots; tuberous roots of floating clusters stout, blunt-tipped; seeds conspicuously papillate; capsule 10-14 mm long ..... ***N. aquatica***
    3 Leaves 3-7 cm wide, smooth below, thin in texture; stems 0.6-0.9 mm in diameter a few cm below the inflorescence, rarely spotted with red; tuberous roots of floating clusters slender, with pointed tips; seeds smooth (rarely papillate); capsule 4-5 mm long ..... ***N. cordata***

Nymphoides aquatica (Walter ex J.F. Gmelin) Kuntze, Big Floating Heart, Banana Floating Heart. Cp (GA, NC, SC, VA): limesink ponds (dolines), other acidic and nutrient-poor water-filled depressions, sluggish streams, beaverponds, primarily in the Outer and Middle Coastal Plain; uncommon (VA Rare). Late April-September. A Southeastern Coastal Plain endemic: NJ south to FL and west to TX. [= RAB, C, F, GW, K, S, Z; = *N. aquaticum* – G, orthographic variant]

Nymphoides cordata (Elliott) Fernald, Little Floating Heart. Cp (GA, NC, SC): upland depression ponds, sluggish streams, beaverponds, primarily in the fall-line Sandhills; uncommon (NC Watch List). Widespread (though in many parts of its range local) in e. North America, from Newfoundland and Ontario south to FL and LA. [= RAB, C, F, GW, K, Z; = *N. cordatum* – G, orthographic variant; *N. lacunosa* (Ventenat) Kuntze – S, misapplied]

* ***Nymphoides cristata*** (Roxburgh) Kuntze, Crested Floating Heart, Water Snowflake. Cp? (SC): ponds and lakes; rare, native of China and India. Apparently first naturalizing in North America in FL in 2000; introduced for water gardens and aquariums.

* ***Nymphoides peltata*** (S.G. Gmelin) Kuntze, Yellow Floating Heart. Pd (NC, VA): ponds; rare, introduced from Europe. This European native is sparingly naturalized in e. North America; it is sold for cultivation in water gardens, and will likely become more widely naturalized. [= C, F, K; = *N. peltatum* – G, orthographic variant]

MOLLUGINACEAE Hutchinson 1926 (Carpetweed Family)

A family of about 13-14 genera and 120-125 species, herbs, of tropical and warm temperate areas. References: Vincent in FNA (2003b); Boetsch (2002)=Z; Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

Mollugo Linnaeus (Carpetweed)

A genus of about 35 species, annual herbs, of tropical and subtropical regions of both hemispheres, introduced in temperate regions. References: Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

* ***Mollugo verticillata*** Linnaeus, Carpetweed, Indian-chickweed. Cp, Pd, Mt (GA, NC, SC, VA): fields, disturbed areas, drawdown zones on river- and pond-shores; common, introduced from tropical America. May-November. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

MORACEAE Lindley 1847 (Mulberry Family)

A family of about 38 genera and 1100 species, trees, shrubs, vines, and herbs, of tropical, subtropical, and (few) warm temperate areas. References: Wunderlin in FNA (1997); White in SE (in prep.); Rohwer & Berg in Kubitzki, Rohwer, & Bittrich (1993).

1 Herb, 0.3-1.0 m tall; stem without latex; [tribe *Moreae*] ..... ***Fatoua***
1 Shrub or tree, at maturity over 1 m tall, or woody vine growing appressed to masonry; stem bearing translucent to milky-white latex.
  2 Stipules connate, the stipule scar encircling the twig; inflorescence a syconium (the flowers borne on the inner walls of the fleshy receptacle); [tribe *Ficeae*] ..... ***Ficus***
  2 Stipules free, the stipule scar not encircling the twig; inflorescence a spike, head, or catkin (the flowers borne exposed on a contracted or elongated axis or receptacle); [tribe *Moreae*].
    3 Leaves entire, unlobed or shallowly 3-lobed; stems usually thorny.
      4 Fruit 2-3 cm in diameter; petioles 5-20 mm long; leaves 3-7 (-10) cm long ..... ***Cudrania***
      4 Fruit 10-15 cm in diameter; petioles 30-50 mm long; leaves 6-20 cm long ..... ***Maclura***
    3 Leaves serrate, often also 3-15-lobed (the lobes sometimes deep); stems not thorny.
      5 Stems and leaves hirsute; leaves alternate, opposite, and whorled ..... ***Broussonetia***
      5 Stems and leaves glabrous to pubescent; leaves alternate ..... ***Morus***

Broussonetia L'Héritier ex Ventenat 1799 (Paper Mulberry)

A genus of about 8 species, trees, shrubs, and vines, of tropical and subtropical Asia and Madagascar. References: Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

* ***Broussonetia papyrifera*** (Linnaeus) L'Héritier ex Ventenat, Paper Mulberry. Pd, Cp, Mt (GA, NC, SC, VA): urban lots, disturbed areas, roadsides; common, native of e. Asia. April. [= RAB, C, F, FNA, G, K, W; = *Papyrius papyriferus* (Linnaeus) Kuntze – S]

Cudrania Trécul 1847 (Cudrania)

A genus of 1-several species, shrubs, of Asia. References: Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

* ***Cudrania tricuspidata*** (Carrière) Bureau ex Lavallée, Cudrania. Pd (NC), Cp (GA): escaped and naturalized from plantings; rare, native of China and Korea, where cultivated as a food for silkworms. July. Naturalized in Orange County, NC, in McIntosh Co. GA (Jones & Coile 1988), and perhaps elsewhere in our area, where recommended as a hedge plant since at least 1940 (Rehder 1940). [= FNA, K; = *Maclura tricuspidata* Carrière]

Fatoua Gaudichaud-Beaupré 1830 (Crabweed)

A genus of 2-3 species, herbs or weak shrubs, of Asia, Madagascar, and Australia. References: Vincent (2004)=Y; Massey (1975)=Z; Miller & Wood (2003); Kral (1981b); Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

* ***Fatoua villosa*** (Thunberg) Nakai, Crabweed, Mulberry-weed, Foolish-weed. Pd (GA, NC, SC, VA), Cp (GA, SC), Mt (NC): disturbed areas, vegetable and flower gardens; rare, native of Asia (apparently se. Asian islands). July-November. As reported by Massey (1975) and Vincent (2004), *Fatoua* was first reported in the United States (Louisiana) in the early 1960's. As of 2004, its distribution in North America had spread to include 28 states and the District of Columbia, including most states except the Great Plains and Rocky Mountains had spread (Vincent 2004, Sundell et al. 1999, Miller & Wood 2003. Since all early collections seem to be in and around greenhouses and nurseries, it is likely that it has been introduced in horticultural material, perhaps repeatedly (Kral 1981b). *Fatoua* appears to have become a fairly aggressive weed in eastern North America. It can be expected to continue to spread, and has the potential to become noxious. It has alternate, ovate leaves with cordate bases, borne on long petioles (about as long as the leaf blade), the inflorescences are dense cymes borne on peduncles in the axils of leaves. Pubescence of the stem and foliage is uncinulate, giving the plant a "tacky" feel. An excellent illustration appears in Correll & Correll (1982). [= FNA, K, Y, Z]

Ficus Linnaeus 1753 (Fig)

A genus of about 750 species, trees, shrubs, and vines, of tropical, subtropical, and warm temperate areas. References: Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves lobed, 7-30 cm long; [shrub to small tree] ..... ***F. carica***
1 Leaves unlobed, 1-5 cm long; [vine, climbing appressed to walls] ..... ***F. pumila***

* ***Ficus carica*** Linnaeus, Edible Fig, Garden Fig. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): grown for its fruits, persistent from plantings, persisting and naturalizing particularly on barrier islands, where it sometimes forms thickets on dunes, or otherwise in the outer Coastal Plain, where proximity to the ocean ameliorates cold winter temperatures; rare, native of w. Asia. May-August; July-October. This is the common cultivated fig, grown for its fruit in the Mid-east for millenia. [= RAB, F, FNA, K, S]

***** ***Ficus pumila*** Linnaeus, Climbing Fig. Cp (GA): walls, disturbed areas; rare, introduced from s. Asia. Locally common in Charleston and Savannah, where grown on walls as an ornamental and certainly persisting. [= FNA, K]

Maclura Nuttall 1818 (Osage-orange)

A monotypic genus (or sometimes broadened to include *Cudrania* and other genera), a tree, of sc. North America. References: Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

* ***Maclura pomifera*** (Rafinesque) C.K. Schneider, Osage-orange, Bow-wood, Bois-d'arc, Hedge-apple. Cp, Pd, Mt (GA, NC, SC, VA): fields, hedgerows, forests, naturalized from extensive planting in the eighteenth and nineteenth centuries, native of TX, OK, AR, and LA. April-May; October. *Maclura* is a monotypic genus. The large fruits are unmistakeable: yellowish-green, grapefruit-sized, and wrinkled, reminiscent of a giant, spherical mulberry fruit. The wood is extremely heavy, fine-grained, a bright yellow-orange when fresh, but darkening with age, famous for making bows and rarely used in cabinetry. [= RAB, C, F, FNA, G, K, W; = *Toxylon pomiferum* Rafinesque ex Sargent – S]

Morus Linnaeus 1753 (Mulberry)

A genus of about 10-15 species, trees, of warm temperate, subtropical, and tropical areas. References: Endress & Bittrich in Kubitzki, Rohwer, & Bittrich (1993).

1 Upper leaf surface glossy, glabrous or slightly scabrous; lower leaf surface glabrous, or slightly pubescent on the veins and in the vein axils only; ripe fruits black, purple, red, pink, or white ..... ***M. alba***
1 Upper leaf surface dull, scabrous; lower leaf surface pubescent on the veins, veinlets, and the surface between the veins; ripe fruits black or purple ..... ***M. rubra***

* ***Morus alba*** Linnaeus, White Mulberry, Silkworm Mulberry, Russian Mulberry. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas, vacant lots, roadsides, moist forests; uncommon, native of e. Asia. March-May; May-June. [= RAB, C, F, FNA, G, GW, K, S, W; > *M. nigra* Linnaeus – S, misapplied as to our material; > *M. alba* var. *tatarica* (Linnaeus) Seringe]

Morus rubra Linnaeus, Red Mulberry. Cp, Pd, Mt (GA, NC, SC, VA): bottomland forests, mesic slopes, disturbed areas, suburban woodlands; common. April-May; May-June. MA, VT, NY, MI, WI, and se. SD south to s. FL and w. TX, and into

Mexico. The fruits are very variable in quality from tree to tree. *M. rubra* is the only member of the Moraceae native to our area. [= RAB, C, F, G, GW, K, S, W; > *M. rubra* var. *rubra* – K]

MYRICACEAE Blume 1829 (Bayberry Family)

A family of about 3-5 genera and 55 species, trees and shrubs, nearly cosmopolitan. See *Morella* for discussion of our 3 genera. References: Bornstein in FNA (1997); Wilbur (1994)=Z; Elias (1971b)=Y; Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves oblong or linear-lanceolate, pinnatifid, stipulate; fruit in a bristly involucre formed by 8 bractlets ..... ***Comptonia***
1 Leaves mostly obovate or oblanceolate, entire or toothed (especially apically), estipulate; fruit either exposed and densely waxy (*Cerothamnus*), or partially enclosed in 2 wing-like bractlets (*Myrica*).
  2 Fruit spherical, densely waxy, exposed (the 4-6 bractlets small and inconspicuous); terminal buds present; aments inserted on old wood mainly below the leaves; [in our area, common and in the Coastal Plain, Mountains, and Piedmont]..... ***Morella***
  2 Fruit flattened, not waxy, partially enclosed in 2 wing-like bractlets; terminal buds lacking; aments inserted at the summit of the branchlets of the preceding year; [in our area, very rare and restricted to bogs in the Mountains] ....***Myrica***

Comptonia L'Heritier ex Aiton 1789 (Sweet-fern)

A monotypic genus, a shrub, of e. North America, known as fossils from a much broader area. References: Bornstein in FNA (1997); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Comptonia peregrina (Linnaeus) J.M. Coulter, Sweet-fern. Mt (GA, NC, SC, VA), Pd, Cp (NC, VA): in the mountains on xeric ridges at low to medium elevations, usually in fire-maintained habitats, also in xeric and fire-maintained habitats on monadnocks in the upper Piedmont and in dry, sandy sites in the lower Piedmont and fall-line sandhills; common (rare in Piedmont and Coastal Plain) (GA Special Concern, SC Rare). April; August-September. Widespread in ne. North America, south to sc. and w. NC, w. SC, ne. GA, and nc. TN; much more common in the northern parts of its range. [= RAB, C, FNA, K, S, W; > *Comptonia peregrina* var. *asplenifolia* (Linnaeus) Fernald – F, Y; > *Comptonia peregrina* var. *peregrina* – F, Y; > *Myrica asplenifolia* Linnaeus var. *asplenifolia* – G; > *Myrica asplenifolia* var. *tomentosa* (Chevallier) Gleason – G]

Morella Loureiro (Bayberry, Wax-myrtle, Candleberry)

Wilbur (1994) makes a compelling case for the recognition of three genera among eastern North American Myricaceae, and for application of the name *Myrica* to *Myrica gale*. The typification of the genus *Myrica* with *Myrica gale* Linnaeus has been confirmed (Brummitt 1999); thus, the familiar southeastern species placed by many authors in *Myrica* must take another name. Wilbur (1994) prefers to treat our species as subgenus *Cerothamnus* (Tidestrom) Wilbur of genus *Morella* Loureiro; subgenus *Morella* is restricted to e. Asia, the Philippines, and Malaysia, and differs in a number of ways from subgenus *Cerothamnus*, including its fleshy and succulent, rather than waxy and hard, berries. Small maintained *Cerothamnus* at the generic level. Wilbur's inclusion of *Cerothamnus* in *Morella* may well be warranted (and is followed here), but I disagree with his provisional decision to include the taxon treated below as *Morella pumila* in *Morella cerifera*, and the taxon treated below as *Morella pensylvanica* in *Morella caroliniensis*, though their appropriate rank may be questioned. References: Bornstein in FNA (1997); Wilbur (1994)=Z; Wilbur (2002); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

1 Fresh leaves odorless when crushed; flowers unisexual, the staminate and pistillate flowers on different plants; leaves usually entire; [of s. GA south and west]; [subgenus *Cerothamnus*, series *Faya*] .....***Morella inodora***
1 Fresh leaves aromatic when crushed; flowers bisexual, staminate and pistillate on the same plant; leaves usually serrate, at least near the tip; [collectively widespread in our area]; [subgenus *Cerothamnus*, series *Cerothamnus*].
  2 Leaves oblanceolate (generally narrowly so), most of them 0.5-1.5 cm wide, 4-6× as long as wide, evergreen; mature fruits 2.0-3.5 mm in diameter.
    3 Medium shrub to small tree (usually 2-10 m tall), not stoloniferous; leaves of fertile branches 4-9 cm long, 8-20 mm wide; [of a wide range of wetland habitats, including wet Coastal Plain pinelands].....***Morella cerifera***
    3 Small shrub (usually < 1 m tall), strongly stoloniferous; leaves of fertile branches 1.5-4 cm long, 3-8 mm wide; [restricted to Coastal Plain pinelands (or areas formerly so)].....***Morella pumila***
  2 Leaves elliptic to broadly oblanceolate, most of them 1.5-4 cm wide, 2-4× as long as wide, evergreen to deciduous; mature fruits 3.0-7.0 mm in diameter.
    4 Leaves subcoriaceous and more or less evergreen, not revolute (or slightly so if sun-grown), the larger ones usually about 9 cm long and 3.5 cm wide, with punctate glands dense on the lower surface and nearly or entirely absent on the upper surface; fruits 3-4.5 mm in diameter, the fruit wall glabrous or sparsely glandular, the warty protuberances glandular; twigs densely hairy to rarely glabrous; older branches blackish; [of various boggy habitats, widespread in our area].....***Morella caroliniensis***

4 Leaves coriaceous, tardily deciduous, often revolute, the larger ones about 6 cm long and 2 cm wide, with punctate glands fairly dense on both surfaces; fruits 4-6 (-7) mm in diameter, the fruit wall and warty protuberances densely hirsute when young; twigs glabrous to sparsely hairy; older branches whitish gray; [usually of dunes, from Dare County, NC northward]..... ***Morella pensylvanica***

Morella caroliniensis (P. Miller) Small, Pocosin Bayberry, Evergreen Bayberry. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): pocosins, wet savannas and pine flatwoods, sandhill seepage bogs, and other peaty or sandy-peaty wetlands; common. April; August-October. Primarily limited to the Southeastern Coastal Plain, from NJ south to FL and west to TX and AR. [= K; *Myrica heterophylla* Rafinesque – RAB, C, FNA, W, Y; > *Myrica heterophylla* var. *heterophylla* – F; > *Myrica heterophylla* var. *curtissii* (Chevallier) Fernald – F; < *Myrica pensylvanica* – G; < *Cerothamnus carolinensis* – S (also see *Morella pensylvanica*); < *Morella caroliniensis* (P. Miller) Small – Z (also see *Morella pensylvanica*)]

Morella cerifera (Linnaeus) Small, Common Wax-myrtle, Southern Bayberry. Cp (GA, NC, SC, VA): interdune swales (where often dominant), pocosins, brackish marshes, other wet to moist habitats, now also widely planted (including in the Piedmont) as an ornamental or landscaping shrub; common. April; August-October. Widespread in the Coastal Plain of Southeastern United States: NJ south to FL and west to TX. Our most common *Morella*, and also the largest, sometimes becoming a small tree, to at least 10 m tall and 20 cm DBH. See *Morella pumila* for a discussion of the controversial taxonomy of *Morella cerifera* and *Morella pumila*. [= *Myrica cerifera* Linnaeus var. *cerifera* – RAB, Y; < *Myrica cerifera* – C, FNA, GW (also see *C. pumilus*); = *Myrica cerifera* – F, G; = *Cerothamnus ceriferus* (Linnaeus) Small – S; < *Morella cerifera* (Linnaeus) Small – K, Z (also see *Morella pumila*)]

Morella inodora (Bartram) Small, Odorless Bayberry. Cp (GA): acid wetlands, especially in wooded, acid, streamhead "bogs" and bayheads, often associated with *Magnolia virginiana, Persea palustris, Cyrilla racemiflora, Cliftonia monophylla*, and *Woodwardia areolata*; rare (GA Special Concern). A Southeastern Coastal Plain endemic: se. GA west to s. MS. [= K, Z; = *Myrica inodora* Bartram – FNA, GW, Y; = *Cerothamnus inodorus* (Bartram) Small – S]

Morella pensylvanica (Mirbel) Kartesz, Northern Bayberry. Cp (NC, VA): dunes, sometimes even on the foredune and stoloniferously colonizing the upper beach, more typically behind the foredune on secondary dunes and sandy flats, often growing intermixed with *Morella cerifera*, but able to occupy drier sites higher on the dunes, from VA north, also ranging inland in sandy situations; uncommon (restricted in NC to barrier islands of Dare and Currituck counties, but locally common there). April; August-October. This species reaches its southern limit at Avon (Kinnakeet), Dare County, NC. On interdune flats, it often grows intermixed with *Morella cerifera*, but is readily distinguished (even at a distance) by its stoloniferous growth (appearing as dome-shaped clones 3-20 m in diameter), stouter twigs, and tardily deciduous leaves. The twigs of this species are noticeably stouter than those of *Morella cerifera*; measured at 10 cm from the twig tips, they are (2-) 3-5 mm in diameter, those of *Morella cerifera* ca. 1.5-2.5 mm. [= K; = *Myrica pensylvanica* Loiseleur – RAB, C, F, FNA, GW, Y; < *Myrica pensylvanica* – G (also see *Morella heterophylla*); < *Cerothamnus carolinensis* – S (also see *Morella pensylvanica)*; < *Morella caroliniensis* (P. Miller) Small – Z; = *Cerothamnus pensylvanicus* (Mirbel) Moldenke]

Morella pumila (Michaux) Small, Dwarf Bayberry, Dwarf Wax-myrtle. Cp (GA, NC, SC, VA): savannas, pine flatwoods, relatively moist to extremely dry sites in sandhills (under *Quercus laevis* and *Q. geminata*); common (VA Rare). April; August-October. A Southeastern Coastal Plain endemic: se. VA south to FL and west to LA (or TX). Some authors dismiss the distinction between this taxon and *Morella cerifera* as merely environmental, while others treat the two as distinct at the varietal or specific level. In our area at least, they appear to be genetically distinct. They often occur in close proximity (though somewhat different habitats), and maintain their distinctiveness. There are some observations that there is a phenologic difference, with *Morella pumila* peak flowering 3 weeks later than *Morella cerifera* (J. Townsend, pers. comm. 2002). Though the issue remains unresolved, the stoloniferous growth of *Morella pumila* is not merely a fire response; I here maintain the two as distinct, pending further research. A varietal distinction might best reflect the relationship of these two taxa, but the appropriate combinations at the varietal level are not available in either *Cerothamnus* or *Morella*. [= *Myrica cerifera* Linnaeus var. *pumila* Michaux – RAB, Y; < *Myrica cerifera* – C, FNA, GW; = *Myrica pusilla* Rafinesque – F, G; = *Cerothamnus pumilus* (Michaux) Small – S; < *Morella cerifera* (Linnaeus) Small – K, Z]

Myrica Linnaeus 1753 (Sweet Gale)

A genus of two species, shrubs, of temperate and subarctic regions of North America and Eurasia. References: Bornstein in FNA (1997); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Myrica gale Linnaeus, Sweet Gale. Mt (NC): peaty bogs; rare (NC Endangered Species). April; August-September. A circumboreal species, south in North America to NJ, PA, MI, MN, and OR, disjunct from PA and NJ to Henderson County, NC, where considered extirpated at one time, as a result of the destruction of the famous East Flat Rock Bog. This shrub has been relocated at a single site, where it is abundant in a small area (less than 0.25 hectare). [= C, FNA, G, GW, K, S, W, Y; = *Gale palustris* Chevallier – RAB; > *Myrica gale* var. *gale* – F]

MYRSINACEAE R. Brown 1810 (Myrsine Family)

The traditional families Primulaceae, Myrsinaceae, and Theophrastaceae have been repartitioned by Källersjö, Bergqvist, & Anderberg (2000) in order to create monophyletic groups. References: Källersjö, Bergqvist, and Anderberg (2000); Ståhl & Anderberg in Kubitzki (2004).

1 Leaves alternate (or with some opposite or subopposite); flowers white.
  2 Flowers axillary, nearly sessile; leaves 3-10 mm long ..... ***Anagallis***
  2 Flowers in a terminal raceme, pedicellate, the flowers closely spaced, touching, the inflorescence thus appearing cylindrical, and generally drooping at the tip (reminiscent of *Saururus cernuus*); leaves longer; [introduced, rarely naturalized in upland situations] ..... ***Lysimachia clethroides***
1 Leaves opposite or whorled; flowers yellow, white, pink, red, or blue.
  3 Leaves in a single terminal whorl; petals 7 ..... ***Trientalis***
  3 Leaves opposite or whorled (if whorled, with several to many whorls); petals 0 or 5.
    4 Leaves > 2 cm long (sometimes less in *L. nummularia*, and then orbicular, about as wide as long); flowers yellow. ..... ***Lysimachia***
    4 Leaves < 2 cm long (and distinctly longer than wide); flowers red, blue, white, or pink.
      5 Flowers on long pedicels; corolla present ..... ***Anagallis***
      5 Flowers nearly sessile; corolla absent ..... ***Glaux***

Anagallis Linnaeus 1753 (Pimpernel)
(also see *Centunculus*)

A genus of 20-28 species, herbs, mostly Old World. References: Ståhl & Anderberg in Kubitzki (2004)

1 Leaves alternate; flowers subsessile, on thick pedicels 0.3-1.0 mm long; leaf blades 3-10 mm long ..... ***A. minima***
1 Leaves opposite (occasionally in whorls of 3); flowers pedicellate, on slender pedicels 10-25 mm long; leaf blades 5-30 mm long.
  2 Flowers red (rarely white); pedicels usually longer than the leaves ..... ***A. arvensis*** *var.* ***arvensis***
  2 Flowers blue; pedicels usually shorter than the leaves ..... ***[A. arvensis*** *var.* ***caerulea]***

* ***Anagallis arvensis*** Linnaeus *var.* ***arvensis***, Scarlet Pimpernel, Common Pimpernel. Cp (GA, NC, SC, VA), Pd (GA, NC, VA), Mt (VA): lawns, fields, disturbed areas; common, introduced from Europe. April-November. [= C, G; < *A. arvensis* – RAB, F, GW, W; = *A. arvensis* ssp. *arvensis* – K, in the narrow sense; = *A. arvensis* ssp. *arvensis* – S]

Anagallis minima (Linnaeus) E.H. Krause, Chaffweed, False-pimpernel. Cp, Mt (GA, SC), Pd (GA, VA): ditches, wet disturbed areas, savannas, pond margins; uncommon (rare in Mountains, rare in VA). March-June. This species occurs in widely scattered areas, nearly cosmopolitan. [= GW, K; = *Centunculus minimus* Linnaeus – RAB, C, F, G, S, W]

* *Anagallis arvensis* Linnaeus var. *caerulea* (Schreber) Grenier & Godron, Blue Pimpernel, is reported as introduced in PA, KY, OH, and other scattered states north and west of our area (Kartesz 1999). [= C, G; < *A. arvensis* – RAB, F, GW, W; = *A. arvensis* Linnaeus ssp. *foemina* (P. Miller) Schinz & Thellung – K; = *A. arvensis* ssp. *coerulea* Hartman – S]

* *Anagallis monellii* Linnaeus is reported as a waif for Fairfax County, VA by Harvill et al. (1992) and Shetler & Orli (2000). Not keyed. [= K]

Centunculus Linnaeus
[see *Anagallis*]

Glaux Linnaeus 1753 (Sea-milkwort)

A monotypic genus, of north temperate coasts of the Old and New Worlds. *Glaux* appears to be embedded within *Lysimachia* and should be merged into that genus (Hao et al. 2004). References: Hao et al. (2004); Ståhl & Anderberg in Kubitzki (2004).

Glaux maritima Linnaeus, Sea-milkwort. Cp (VA): saline coastal habitats; rare. June-July. The species is interruptedly circumboreal, in North America from Québec south to VA on the east coast, and from British Columbia south to OR on the west coast, also inland in w. North America, from Saskatchewan south to NM. G suggests that *G. maritima* is introduced near its southern limit in the east. [= C, K; > *G. maritima* var. *maritima* – F, G]

Lysimachia Linnaeus 1753 (Loosestrife)

A genus of about 150 species, herbs (rarely shrubs), cosmopolitan. Hao et al. (2004) showed that the traditional subgeneric classification of *Lysimachia* is highly artificial, and that *Glaux* is embedded within *Lysimachia*. References: Coffey & Jones (1980)=Z; Hao et al. (2004); Ståhl & Anderberg in Kubitzki (2004). Key partly adapted from Z.

1 Leaves alternate; flowers white, in a terminal raceme, the tip often lax ..... ***L. clethroides***
1 Leaves opposite or whorled; flowers yellow, borne variously.
2 Leaves nearly round; plant trailing, rooting at nodes ..... ***L. nummularia***
2 Leaves linear, lanceolate, elliptic, or ovate; plant erect (or trailing and rooting at the nodes in *L. radicans*, which has lanceolate leaves).
3 Flowers in a terminal raceme or panicle, subtended by bracts much smaller than the stem leaves.
4 Inflorescence a terminal panicle ..... ***L. fraseri***
4 Inflorescence a terminal raceme.
5 Leaves narrowly ovate, broadest near the base, with 3 prominent veins ..... ***L. asperulifolia***
5 Leaves linear to lanceolate, broadest near the middle, with 1 prominent vein.
6 Leaves linear to narrowly lanceolate, (1-) 2-4 (-8) mm wide; sepals stipitate-glandular .... ***L. loomisii***
6 Leaves lanceolate to elliptic, 7-20 mm wide; sepals glabrous.
7 Flowers in part (the lower) in the axils of well-developed leaves ..... ***L. ×producta***
7 Flowers all in the axils of much reduced linear bracts ..... ***L. terrestris***
3 Flowers axillary, all or most of them subtended by leaves similar in shape to (though often somewhat smaller than) stem leaves not subtending flowers (or with flowers in axillary, peduncled, densely-flowered racemes in *L. thyrsiflora*).
8 Flowers in peduncled axillary racemes in the axils of midstem leaves; petals linear to lanceolate, ca. 5 mm long and ca. 1 mm wide, much surpassed by the stamens ..... [***L. thyrsiflora]***
8 Flowers solitary, all or most of them subtended by leaves similar in shape to (though often somewhat smaller than) normal stem leaves; petals lanceolate to ovate, as long or longer than the stamens.
9 Stem leaves whorled (in adult plants); leaves "punctate" with sinuous, elongate markings (visible with the naked eye, but more readily observed with 10 × magnification).
10 Petals yellow, marked with black lines; sepals 2.5-5 mm long ..... ***L. quadrifolia***
10 Petals plain yellow, not marked with black lines; sepals 5.5-9 mm long ..... ***L. punctata***
9 Stem leaves opposite; leaves not "punctate."
11 Mid-cauline leaves with petioles ciliate their entire length.
12 Mid-cauline leaves 1-2 mm wide; flowers 7-14 mm across; [of ne. AL] ..... ***[L. graminea]***
12 Mid-cauline leaves 4-60 mm wide; flowers 11-26 mm across; [collectively widespread].
13 Mid-cauline leaves ovate to lanceolate, 17-60 mm wide; sepals with 3 (or 6) usually reddish-brown veins ..... ***L. ciliata***
13 Mid-cauline leaves lanceolate to linear, 4-23 mm wide; sepals without reddish-brown veins.
14 Cilia of the petiole extending onto the base of the leaf blade; leaf blade lanceolate to linear, typically about 8-12× as long as wide, cuneate at the base; sepal venation inconspicuous or apparently absent; capsules 2-4.5 mm in diameter ..... ***L. lanceolata***
14 Cilia of the petiole not extending onto the leaf blade; leaf blade lanceolate to ovate, typically 2-4× as long as wide, rounded to cuneate at the base; sepal venation conspicuous; capsules 4-6.5 mm in diameter ..... ***L. hybrida***
11 Mid-cauline leaves with petioles pubescent only along basal portion.
15 Rhizomes absent, new shoots arising from crown of rootstock ..... ***L. tonsa***
15 Rhizomes present, new shoots arising from the rhizome.
16 Plant reclining or trailing, rooting at the nodes ..... ***L. radicans***
16 Plant erect, not rooting at the nodes.
17 Leaf blades linear to narrowly lanceolate, typically 8-14× as long as wide, cuneate to tapering at the base, with a prominent midrib; sepals not conspicuously veined, 1-2 mm wide ..... ***L. quadriflora***
17 Leaf blades ovate to lanceolate, typically 2-4× as long as wide, rounded to cuneate at the base, with the midrib not prominent; sepals conspicuously veined, 0.5-4 mm wide ..... ***L. hybrida***

Lysimachia asperulifolia Poiret, Pocosin Loosestrife, "Roughleaf Loosestrife". Cp (NC, SC): low pocosins, high pocosins, streamhead pocosins, savanna-pocosin ecotones, sandhill-pocosin ecotones; rare (US Endangered, NC Endangered, SC Rare). May-June; August-October. Endemic to the Coastal Plain of NC and SC. *L. asperulifolia* is a very distinctive species, easily recognized vegetatively by its whorls of sessile, rounded-based, acuminate, bluish-green (to yellowish-green when shaded or otherwise stressed) leaves. The leaves of *L. asperulifolia* are not rough; the common name "roughleaf loosestrife" is a misnomer, apparently based on a mistranslation of the specific epithet, the translator assuming that "*asperulifolia*" meant "rough-leaved." The epithet actually refers to the perceived similarity of the leaves to those of the European *Asperula odorata* (treated in this work as *Galium odoratum*), Sweet Woodruff, a plant with which Poiret would have been very familiar. The leaves of *G. odoratum* are similar to those of *L. asperulifolia* in their whorled disposition. Franklin (2001) studied the biology of this rare species. [= K; = *L. asperulaefolia* – RAB, GW, S (an orthographic variant)]

Lysimachia ciliata Linnaeus, Fringed Loosestrife. Pd, Mt, Cp (GA, NC, SC, VA): mesic forests, especially bottomlands and coves dominated by hardwoods; common. June-August; August-October. Newfoundland west to AK, south to GA, AL, MS, AR, KS, NE, CO, NM, UT, ID, and OR. [= RAB, C, F, GW, K, W, Z; = *Steironema ciliatum* (Linnaeus) Baudo – G, S]

* ***Lysimachia clethroides*** Duby. Mt (NC): roadsides (cultivated and rarely persistent or escaped); rare, introduced from Japan. July-August. Collected in the Mountains of NC (Macon County), escaped from cultivation; it is also reported as naturalized in Grundy County, TN (Chester, Wofford, & Kral 1997, Kral 1981). It differs from our other species in its white flowers, in a dense terminal spike (often with secund tip) and alternate leaves. [= C, G, K]

Lysimachia fraseri Duby, Fraser's Loosestrife. Mt (GA, NC, SC): hardwood forests, forest edges and roadbanks, thin soils around rock outcrops, usually flowering only when exposed to extra sunlight by a tree-fall light gap or other canopy opening; rare (GA Rare, NC Endangered, SC Rare). June-August; September-October. W. NC and e. TN south to n. SC, n. GA, and AL; disjunct in s. IL and nw. TN (Stewart County) (Chester, Wofford, & Kral 1997). This rare species is limited in NC to the mountains south of the Asheville Basin, especially in the escarpment gorges of Macon and Jackson counties. Potentially the largest and coarsest of our *Lysimachia* (up to 2 meters tall), *L. fraseri* usually occurs as much smaller seedlings and non-flowering individuals. When a tree-fall light gap occurs, individuals flower and fruit. Even seedlings can be separated from the more common and widespread *L. quadrifolia* by the following characteristics (all best observed at 10×): leaves with a narrow, translucent red border, upper internodes of the stem glandular-puberulent, and backlighted leaf without sinuous, translucent lineations (*L. quadrifolia*: leaves without red border, upper internodes sparsely pubescent with longer, nonglandular hairs, or rarely a few of the hairs with slightly bulbous tips, and backlighted leaf with numerous sinuous, translucent lineations). [= RAB, GW, K, S, W]

Lysimachia hybrida Michaux, Lowland Loosestrife. Cp (NC, SC, VA), Mt, Pd (NC, VA): mesic hardwood forests, wet areas; rare (NC Watch List, VA Watch List). June-August; September-October. ME and s. Québec west to Alberta and WA, south irregularly to n. FL, AR, NE, and AZ. [= C, F, K, W, Z; = *L. lanceolata* var. *hybrida* (Michaux) A. Gray – RAB, GW; = *Steironema hybridum* (Michaux) Rafinesque ex B.D. Jackson – G, S]

Lysimachia lanceolata Walter, Lanceleaf Loosestrife. Mt, Pd, Cp (GA, NC, SC, VA): mesic to relatively dry forests, forest edges, roadbanks, primarily on circumneutral soils; uncommon. June-August; September-October. NJ, PA, OH, MI, and WI south to GA, panhandle FL, AL, MS, LA, and ne. TX. [= C, F, K, W, Z; = *L. lanceolata* var. *lanceolata* – RAB, GW; = *Steironema lanceolatum* (Walter) Gray – G, S; = *Steironema heterophyllum* (Michaux) Baudo – S]

Lysimachia loomisii Torrey, Carolina Loosestrife. Cp (GA, NC, SC): moist to wet savannas, pocosin ecotones; uncommon (GA Special Concern). May-June; August-October. Endemic to the outer and middle Coastal plain of NC, SC, and e. GA. [= RAB, GW, K, S]

* ***Lysimachia nummularia*** Linnaeus, Creeping Charlie, Creeping Jenny, Moneywort. Pd (GA, NC, SC, VA), Mt, Cp (NC, SC, VA): lawns, pastures, seepages, other moist, disturbed places; common (uncommon south of VA), introduced from Europe. May-July; August-September. The leaves have many minute, maroon dots. [= RAB, C, F, G, GW, K, S, W]

Lysimachia ×producta (A. Gray) Fernald (pro sp.). Mt (NC, VA), Pd (VA), Cp (NC): moist areas; rare. May-July; August-October. This is a fertile hybrid of *L. quadrifolia* and *L. terrestris*, sometimes occurring in the apparent absence of one or both parents. [= RAB, C, K; = *L. producta* (A. Gray) Fernald – G, S]

* ***Lysimachia punctata*** Linnaeus, Large Loosestrife, Spotted Loosestrife. Mt (NC): disturbed areas; rare, introduced from Eurasia. June-July; August? First found in NC in 1985 (Weakley *in prep.*). [= C, F, G, K]

Lysimachia quadriflora Sims, Smooth Loosestrife, Four-flowered Loosestrife. Mt (GA, VA), Pd? (NC?): wet meadows and calcareous fens, stream banks; rare (NC Watch List, VA Rare). July-September. MA, s. Ontario, MI, and ND south to w. VA, WV, nw. GA, AL, and AR; mainly north and west of the Ohio River, very rare and scattered in or east of the Appalachians. Reported for c. NC by Coffey & Jones (1980). [= C, F, K, W, Z; = *Steironema quadriflora* (Sims) Hitchcock – G]

Lysimachia quadrifolia Linnaeus, Whorled Loosestrife. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): a wide variety of forests and openings, including pine savannas of the outer Coastal Plain, ranging from moist to very dry; common (uncommon in Coastal Plain south of VA). May-August; August-October. ME west to WI and MN, south to SC, c. GA, AL, and TN. Although the species normally has whorled leaves, immature and small plants often have opposite leaves only. See *L. fraseri* for discussion of vegetative features useful in distinguishing the two species. [= RAB, C, F, G, GW, K, S, W]

Lysimachia radicans Hooker, Trailing Loosestrife. Mt, Cp (VA): moist forests, swamps; rare (VA Rare). June-August. The main distribution of this species is in the Mississippi Embayment, from MO and w. TN south to s. AL, MS, AR, LA, and e. TX; disjunct occurrences in VA and (allegedly) e. NC are curious. The report for NC is from a species list for Nags Head Woods, Dare County; it is unpublished, apparently not documented by an herbarium specimen, and rejected unless additional documentation is found. [= C, F, K, W, Z; = *Steironema radicans* (Hooker) A. Gray – G, S]

Lysimachia terrestris (Linnaeus) Britton, Sterns, & Poggenburg, Bog-candles, Swamp-candles. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): bogs, wet meadows, and swamp forests; uncommon. May-July; August-October. Newfoundland west to MN and Saskatchewan, south to SC, GA, e. TN, and sc. TN. [= RAB, C, G, GW, K, S, W; *L. terrestris* var. *terrestris* – F]

Lysimachia tonsa (Wood) Wood ex Pax & R. Knuth, Southern Loosestrife, Appalachian Loosestrife. Pd (GA, NC, SC, VA), Mt (GA, VA): upland forests, especially over calcareous or mafic rocks; rare (NC Watch List, VA Watch List). May-July; August-October. Sc. VA and KY south to SC, wc. GA, and e. TN. The range is centered on the Southern Appalachians, but the species is essentially absent from the higher mountains – a "doughnut range." [= RAB, C, F, K, W, Z; =*? Steironema intermedium* Kearney – G; = *Steironema tonsum* (Wood) Bicknell ex Britton – S]

* ***Lysimachia barystachys*** Bunge. Reported from a single county in nc. GA (Jones & Coile 1988). [= K] {investigate; not keyed at this time}

Lysimachia graminea (Greene) Handel-Mazzetti, Grassleaf Yellow-loosestrife. Endemic to ne. AL (Little River Canyon area). [= K, Z; = *Steironema gramineum* Greene – S]

* *Lysimachia japonica* Thunberg, native of Japan and China. Reported for WV (Kartesz 1999). [= K] {investigate; not keyed at this time}

Lysimachia thyrsiflora Linnaeus, Tufted Loosestrife, ranges south to NJ, PA, OH, and MO (Kartesz 1999), and MD (from Big Marsh, Kent County) (Steury, Tyndall, & Cooley (1996). [= C, K; = *Naumburgia thyrsiflora* (Linnaeus) Duby] {not keyed at this time; synonymy incomplete}

* ***Lysimachia vulgaris*** Linnaeus, Garden Loosestrife. Pd (VA): disturbed bottomland, native of Europe. Introduced and naturalized south at least to se. and sc. PA (Rhoads & Klein 1993), WV, KY, MD, and NJ (Kartesz 1999). [= C, K] {not keyed at this time; synonymy incomplete}

Another hybrid has been reported: *L.* ×*radfordii* Ahles, a hybrid of *L. loomisii* × *quadrifolia*. It is intermediate between its parents.

Trientalis Linnaeus 1753 (Starflower)

A genus of 2 species, herbs, north temperate. References: Ståhl & Anderberg in Kubitzki (2004).

Identification notes: *Trientalis* can be recognized by its terminal whorl of leaves (4-10 cm long), the one to several white flowers borne on terminal, slender pedicels, each flower typically with 7 petals (inconspicuously united at the bases), each petal acuminate. The plant is reminiscent of a white-flowered *Lysimachia* with only one whorl of leaves.

Trientalis borealis Rafinesque *ssp.* ***borealis***, Starflower. Mt (GA, NC, VA): northern hardwood forests, rich slope forests, often in second-growth areas; uncommon in VA, rare farther south (GA Endangered, NC Rare). May-June. This northern species, widespread in the mountains of VA, and known from a few locations in n. GA and ne. TN (Chester, Wofford, & Kral 1997), was first located in NC only in 1988 (Dellinger 1989). "The attractive white corollas, usually with 7 petals united only at the very base, are open in the late spring and they drop intact – like fallen stars" (Voss 1996). [= K; < *T. borealis* – C, F, G, W]

NELUMBONACEAE Dumortier 1829 (Lotus-lily Family)

A family of 1 genus and 2 species, aquatic herbs, of temperate and subtropical e. North America and e. Asia. References: Wiersema in FNA (1997); Williamson & Schneider in Kubitzki, Rohwer, & Bittrich (1993).

Nelumbo Adanson 1763 (Lotus-lily, Lotus, Sacred-lotus, Sacred-bean)

A genus of 2 species, aquatic herbs, of temperate and subtropical e. North America and e. Asia. References: Williamson & Schneider in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: *Nelumbo* can be immediately distinguished in vegetative condition from the other "pads" (*Nymphaea*, *Nuphar*, and *Nymphoides*) by its peltate leaves, and from the peltate *Brasenia* by the much larger size and roundness of the leaves.

1 Petals yellow; mature fruits ("nuts") usually < 1.25× as long as wide ..... ***N. lutea***
1 Petals pink or white; mature fruits ("nuts") usually > 1.5× as long as wide ..... ***N. nucifera***

Nelumbo lutea Willdenow, Yonkapin, American Lotus-lily, Yellow Lotus, Yockernut, Water-chinquapin, Pond-nuts. Cp (GA, NC, SC, VA), Pd (VA), Mt (GA, VA): ponds, natural lakes; uncommon. June-September. NY and s. Ontario west to MN and IA, south to s. FL and e. TX, and south into the West Indies and Mexico. [= RAB, C, F, FNA, G, GW, K, S, W; *N. pentapetala* (Walter) Fernald]

* ***Nelumbo nucifera*** Gaertner, Sacred-lotus, Oriental Lotus-lily, Pink Lotus. Cp (NC, SC), Pd (NC), Mt (GA): ponds and lakes; rare, introduced from Asia. June-September. [= RAB, C, F, FNA, G, GW, K]

NYCTAGINACEAE A.L. de Jussieu 1789 (Four-o'clock Family)

A family of about 31 genera and 400 species, trees, shrubs, vines, and herbs, of tropical, subtropical, and (less commonly) warm temperate regions, especially diverse in the New World. References: Bogle (1974)=Z; Spellenberg in FNA (2003b); Bittrich & Kühn in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers < 3 mm long, lacking involucral bracts subtending the petaloid calyx ..... ***Boerhavia***
1 Flowers > 10 mm long, with involucral bracts (simulating a calyx) subtending the petaloid calyx ..... ***Mirabilis***

Boerhavia Linnaeus 1753 (Spiderling)

A genus of about 20-40 species, annual and perennial herbs, of tropical, subtropical, and warm temperate regions of the Old and New World. References: Spellenberg in FNA (2003b); Bogle (1974)=Z; Bittrich & Kühn in Kubitzki, Rohwer, & Bittrich (1993).

1 Fruit rounded at apex, stipitate-glandular; perennial..... ***B. coccinea***
1 Fruit flat at the apex, glabrous; annual.....***B. erecta***

* ***Boerhavia coccinea*** P. Miller, Wineflower. Cp (NC, SC, VA): disturbed areas, adventive on ballast; rare, introduced from tropical America. June-September. Contrary to the statement in RAB that this species is "apparently not established," it is well established on the Wilmington (New Hanover County, NC) waterfront. [= RAB, FNA, K; = *Boerhaavia coccinea* – S, orthographic variant]

Boerhavia diffusa Linnaeus, Red Spiderling, Spreading Hogweed. Cp (SC): [= FNA, K, Z] {not keyed at this time} {disentangle *coccinea* and *diffusa*; rewrite key}

Boerhavia erecta Linnaeus, Erect Spiderling. Cp, Pd (GA, NC, SC): sandy fields, roadsides, disturbed areas; uncommon. May-October. NC south to FL, west to TX and AZ, perhaps only introduced in our area. [= RAB, FNA, K, Z; = *Boerhaavia erecta* – G, S, orthographic variant]

Mirabilis Linnaeus 1753 (Umbrella-wort, Four-o'clock)

A genus of about 55-60 species, annual and perennial herbs, of warm temperate America and s. Asia. References: Spellenberg in FNA (2003b); Le Duc (1995); Bittrich & Kühn in Kubitzki, Rohwer, & Bittrich (1993).

1 Petaloid calyx with a narrow tube 3-4 cm long, the spreading portion to 5 cm in diameter; involucre with 1 flower, not expanding in fruit; [section *Mirabilis*] .....***M. jalapa***
1 Petaloid calyx with a broad tube < 0.5 cm long, the spreading portion < 1.5 cm in diameter; involucre with 3-5 flowers, expanding in fruit; [section *Oxybaphus*].
  2 Leaves cuneate at the base, 2.5-6× as long as wide; [native, of dry sandy habitats in s. SC southward] .....***M. albida***
  2 Leaves cordate at the base, 1-2× as long as wide; [introduced, of disturbed habitats] .....***M. nyctaginea***

Mirabilis albida (Walter) Heimerl, Wild Four-o'clock, Pale Umbrella-wort. Cp (GA, SC): sandhills, adjacent disturbed sandy soils; rare (GA Special Concern). May-August. S. SC south to GA, west to TX, north in the interior to c. TN, IA, and KS. [= RAB, C, F, K, Z; = *Oxybaphus albidus* (Walter) Sweet – G; = *Allionia albida* Walter – S]

* ***Mirabilis jalapa*** Linnaeus, Garden Four-o'clock, Marvel-of-Peru. Cp (GA, NC, SC, VA), Pd (NC, SC, VA): disturbed areas, or persistent at former garden sites; uncommon, introduced from tropical America. June-November. [= RAB, C, F, G, K, S, Z]

* ***Mirabilis nyctaginea*** (Michaux) MacMillan, Heart-leaved Umbrella-wort, Wild Four-o'clock. Mt, Pd (NC, VA), Cp (VA): railroad embankments, other disturbed areas; rare, introduced from c. North America. June-October. [= RAB, C, F, K, W, Z; = *Oxybaphus nyctagineus* (Michaux) Sweet – G; = *Allionia nyctaginea* Michaux – S]

Mirabilis linearis (Pursh) Heimerl var. *linearis.* Manitoba and Alberta, south to TN, MS, and CA; scattered elsewhere in e. North America by introduction. [= FNA; < *M. linearis* – C, F, K; < *Oxybaphus linearis* (Pursh) B.L. Robinson – G] {not keyed at this time}

NYMPHAEACEAE R.A. Salisbury 1805 (Water-lily Family)

A family of 6 genera and about 75 species, aquatic herbs, cosmopolitan. References: Wiersema & Hellquist in FNA (1997); Schneider & Williamson in Kubitzki, Rohwer, & Bittrich (1993); Les et al. (1999).

1 Flowers nearly spherical, 2-5 cm in diameter; sepals 6 (in our species), petaloid, green to yellow, incurved; petals many, inconspicuous, scalelike or staminodial; leaves often of 2 types, the submersed leaves (when present) thinner in texture than the floating or emersed leaves; floating or emersed leaves having 60-90% of their surface area with vasculature derived from the midrib; rhizome with triangular or winged leaf scars; [subfamily *Nupharoideae*].....***Nuphar***
1 Flowers hemispheric, 4-20 cm across; sepals 4, greenish, inconspicuous; petals spreading and ascending, white or yellow, showy; leaves of 1 type, floating; floating leaves having 25-40 % of their surface area with vasculature derived from the midrib; rhizome with circular leaf scars; [subfamily *Nymphaeoideae*].....***Nymphaea***

Nuphar J.E. Smith 1809 (Spatterdock, Yellow Pondlily)

A genus of about 16 species, aquatic herbs, of north temperate areas. Beal (1956) recognized 8 taxa of *Nuphar* in North America, which he treated as subspecies of the European *N. lutea*. Voss's (1985) statement (about the genus in Michigan) "our plants are quite easily distinguished ... and they are treated here as closely related species" applies equally (or better!) in our area. References: Beal (1956)=Z; Wiersema & Hellquist in FNA (1997); Padgett (1999)=Y; Schneider & Williamson in Kubitzki, Rohwer, & Bittrich (1993). Key based in large part on FNA.

1 Sepals 5 (or 5-6 in *N. rubrodisca*); stigmatic disc red; fruit deeply contricted below the stigmatic disc; leaf blades 3.5-25 cm long; [section *Nuphar*].
  2 Anthers 1-3 mm long; stigmatic disc with 6-10 deep crenations; stigmatic rays terminating 0-0.2 mm from the margin of the disc; constriction below disc 1.5-5 mm in diameter; leaf sinus 2/3 or more the length of the midrib; leaf blades 3.5-10 (-13) cm long..... ***[N. microphylla]***
  2 Anthers (2-) 3-6 mm long; stigmatic disc with 8-15 shallow crenations; stigmatic rays terminating 0-1.6 mm from the margin of the disc; constriction below disc 5-10 mm in diameter; leaf sinus ca. 1/2 the length of the midrib; leaf blades 5-25 cm long ..... ***[N. rubrodisca]***
1 Sepals 6-9 (-12); stigmatic disc yellow, green, or sometimes reddish; fruit slightly or not at all constricted below the stigmatic disc; leaf blades 7-50 cm long; [section *Astylus*].
  3 Floating leaf blades 2-6× as long as wide, the sinus < 1/4 as long as the midrib; thin-textured submersed leaves often more abundant than the floating leaves; [of blackwater or tidal streams, rivers, and lakes of the Coastal Plain, se. VA, e. NC, e. SC, Panhandle FL, s. AL].
    4 Floating leaf blades 3-6× as long as wide; stigmatic rays elliptic, terminating < 1 mm from the edge of the disk; [of blackwater or tidal streams, rivers, and lakes of the Coastal Plain of se. VA to e. SC] ..... ***N. sagittifolia***
    4 Floating leaf blades 2-3× as long as wide; stigmatic rays linear, mostly terminating 1-2 mm from the edge of the disk; [blackwater streams and rivers, Panhandle FL and s. AL] ..... ***[N. ulvacea]***
  3 Floating leaf blades 1-2× as long as wide, the sinus > 1/3 as long as the midrib; floating or emersed leaves more abundant than submersed leaves; [collectively of various habitats and distributions, but not as above].
    5 Leaf petiole flattened on the upper (adaxial) surface and winged along the margins; fruit usualy purplish; sepals red or maroon at the base adaxially..... ***[N. variegata]***
    5 Leaf petiole terete or slightly flattened, not winged; fruit usually greenish or yellowish; sepals yellow or red at the base adaxially.
      6 Lower leaf surface glabrous to sparsely pubescent; leaves 7-30 cm wide, the lobes acute to broadly rounded; leaves mostly emersed..... ***N. advena***
      6 Lower leaf surface densely pubescent; leaves 20-45 cm wide, the lobes broadly rounded; leaves mostly floating ..... ***N. orbiculata***

Nuphar advena (Aiton) R. Brown ex Aiton f., Broadleaf Pondlily. Cp, Pd, Mt (GA, NC, SC, VA): lakes, ponds, natural depression ponds, old millponds, slow-flowing rivers (blackwater and brownwater); common. April-October. The most widespread and common *Nuphar* in e. North America, ranging from ME west to WI, south to s. FL, Cuba, TX, and n. Mexico. See *N. sagittifolia* for discussion of the two taxa. [= C, FNA; = *Nuphar luteum* (Linnaeus) Sibthorp & J.E. Smith ssp. *macrophyllum* (Small) E.O. Beal – RAB, GW, W, Z; > *Nuphar advena* – F, G; > *Nuphar fluviatile* (Harper) Standley – F, G; > *Nuphar puteorum* Fernald – F; = *Nuphar lutea* J.E. Smith ssp. *advena* (Aiton) Kartesz & Gandhi – K; > *Nymphaea advena* Aiton – S; > *Nymphaea chartacea* Miller & Standley – S; > *Nymphaea fluviatilis* Harper – S; = *Nuphar advena* ssp. *advena* – Y]

Nuphar orbiculata (Small) Standley. Cp (GA): quiet waters in blackwater swamps; uncommon (GA Watch List). A Southeastern Coastal Plain endemic: FL north to ne. GA. [= FNA; = *Nuphar lutea* ssp. *orbiculata* (Small) E.O. Beal – K; > *Nymphaea orbiculata* Small – S; > *Nymphaea bombycina* (Miller & Standley) Standley – S; = *Nuphar advena* (Aiton) Aiton f. ssp. *orbiculata* (Small) D. Padgett – Y; = *Nuphar luteum* ssp. *orbiculatum* (Small) E.O. Beal – Z]

Nuphar sagittifolia (Walter) Pursh, Narrowleaf Pondlily, Bonnets. Cp (NC, SC, VA): blackwater streams, rivers, and lakes, in swift, sluggish, or stagnant water, extending downriver into freshwater tidal areas; uncommon (NC Rare, VA Rare). April-October. Endemic to our area: e. VA south to ne. SC, very conspicuous and locally abundant on shallow bars along rivers such as the Northeast Cape Fear, Black, and Waccamaw, and forming dense colonies in Lake Waccamaw. Apparent hybrids with *N. advena* have been named *Nuphar* ×*interfluitans* Fernald. The submersed leaves have somewhat the texture and appearance of a thin leaf lettuce or the marine alga *Ulva*. This species appears to be closely related to *N. ulvacea* (Miller & Standley) Standley of blackwater rivers of panhandle FL, another phytogeographic connection between se. NC and panhandle FL. DePoe & Beal (1969) and Beal & Southall (1977) argue that this taxon and *N. advena* intergrade clinally, with *N. advena* inland and *N. sagittifolia* in the outer Coastal Plain, and that the two taxa are maintained by water temperatures. This ignores the fact that the two taxa often occur in close proximity to one another in both the inner and outer Coastal Plain. The frequency of so-called intermediates has also been exaggerated; few populations will present any difficulties in identification. I prefer to treat these taxa as species, with rare hybridization or introgression. [= C, FNA; = *Nuphar luteum* (Linnaeus) Sibthorp & J.E. Smith ssp. *sagittifolium* (Walter) E.O. Beal – RAB, GW, Z; = *Nuphar sagittifolium* – F, G, an orthographic variant; = *Nuphar lutea* J.E. Smith ssp. *sagittifolia* (Walter) E.O. Beal – K; = *Nymphaea sagittifolia* Walter – S]

Nuphar microphylla (Persoon) Fernald. Nova Scotia, Québec, and Manitoba south to s. NJ, se. PA, MI, IL, and MN. [= C, FNA, Y; = *Nuphar microphyllum* – F, G; = *Nuphar lutea* ssp. *pumila* (Timm) E.O. Beal – K; = *Nuphar pumila* Timm; = *Nuphar luteum* ssp. *pumilum* (Timm) E.O. Beal – Z]

Nuphar rubrodisca Morong. New Brunswick, Québec, and Ontario south to NJ, PA, MI, and MN. [= FNA; = *Nuphar* ×*rubrodisca* Morong – C; = *Nuphar* ×*rubrodiscum* Morong – F; = *Nuphar rubrodiscum* – G; = *Nuphar lutea* J.E. Smith ssp. *rubrodisca* (Morong) Hellquist & Wiersema – K]

Nuphar ulvacea (G.S. Miller & Standley) Standley, Sea-lettuce Pondlily. Blackwater streams of Panhandle FL and s. AL. [= FNA; = *Nuphar luteum* (Linnaeus) Sibthorp & J.E. Smith ssp. *ulvaceum* (G.S. Miller & Standley) E.O. Beal – GW, K; = *Nymphaea ulvacea* G.S. Miller & Standley – S]

Nuphar variegata Durand in G.W. Clinton. Widespread in ne. North America, south to DE, PA, OH, IN, IL, IA, and NE. [= C, FNA; = *Nuphar variegatum* – F, G; = *Nuphar lutea* ssp. *variegata* (Durand) E.O. Beal – K; = *Nuphar luteum* ssp. *variegatum* (Durand) E.O. Beal – Z]

Nymphaea Linnaeus 1753 (Water-lily)

A genus of about 50 species, aquatic herbs, cosmopolitan. References: Wiersema in FNA (1997); Woods et al. (2005a, 2005b)=Z; Schneider & Williamson in Kubitzki, Rohwer, & Bittrich (1993).

1 Petals yellow; plants producing stolons .....***N. mexicana***
1 Petals white (to pink); plants not producing stolons.
  2 Petiole solid-colored; leaf length/width ratio (length measured from petiole attachment to tip of leaf, along midvein) (0.44-) avg. 0.56 (-0.71); two leaf lobes with rounded lobe tips; lower leaf surface reddish-purple..... .....***N. odorata ssp. odorata***
  2 Petiole striped; leaf length/width ratio (-.55-) 0.63 (-0.73); leaf lobes with pointed tips; lower leaf surface green .... ***[N. odorata ssp. tuberosa]***

Nymphaea mexicana Zuccarini, Banana Water-lily, Yellow Water-lily. Cp (GA, NC, SC): sluggish or stagnant waters; rare, scattered in occurrence and possibly introduced from further south, but the introduction agents may well be wild ducks, such as canvasbacks. June-September. Ne. NC south to s. FL, west to TX, also in sw. US and the New World tropics. [= RAB, FNA, K, Z; = *Castalia flava* (Leitner) Greene – S]

Nymphaea odorata W.T. Aiton ***ssp. odorata***, White Water-lily. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): ponds, sluggish waters; common (uncommon in Piedmont and Mountains). June-September. Newfoundland west to Manitoba, south to FL and TX; also scattered in the w. United States. *N. odorata* is polymorphic, leading to the naming of numerous species, subspecies, and varieties (see synonymy for a few of the named entities). Wiersema in FNA (1997) recognize ssp. *odorata* (all of our plants) and ssp. *tuberosa* (Paine) Wiersema & Hellquist, more western and northern, but approaching our area (see below). Other named entities warrant further evaluation. *N. odorata* var. *gigantea* [= *Castalia lekophylla* Small] occurs on the Coastal Plain, and is considered to differ from var. *odorata* in its larger leaves (1.5-6 dm in diameter vs. 0.5-2.5 dm), larger flowers (mostly > 15 cm wide vs. mostly < 10 cm), and leaves upturned at the margins (vs. flat). *N. odorata* var. *minor* [= *Castalia minor* (Sims) Nyar] is considered to differ from var. *odorata* in its generally smaller size, leaves 5-11 cm in diameter, flowers mostly < 8 cm wide (vs. mostly > 9 cm wide); it may be merely a dwarfed form of extremely nutrient-limited waters of the Coastal Plain. [= FNA, K, Z; < *N. odorata* – RAB; >< *N. odorata* var. *odorata* – C; > *N. odorata* var. *odorata* – F, G; > *N. odorata* var. *gigantea* Tricker – C, F, G; > *N. odorata* var. *stenopetala* Fernald – F; > *Castalia odorata* (W.T. Aiton) Wood – S; > *Castalia minor* (Sims) Nyar – S; > *Castalia lekophylla* Small – S]

Nymphaea odorata W.T. Aiton ssp. *tuberosa* (Paine) Wiersema & Hellquist. South to MD, DE, NJ, PA. [= FNA, K, Z; < *N. odorata* var. *odorata* – C; = *N. tuberosa* Paine – F, G]

NYSSACEAE A.L. de Jussieu ex Dumortier 1829 (Tupelo Family)

A family of 1-3 genera and 8-12 species, trees and shrubs, of e. Asia, se. Asia, e. North America, and Central America. The circumscription and recognition of this family has been controversial; Nyssaceae has sometimes been included in a broadly circumscribed Cornaceae, but this appears to be phylogenetically incorrect (Xiang et al. 2002). References: Xiang et al. (2002).

Nyssa Linnaeus (Tupelo, Sour Gum, Black Gum)

A genus of about 8-10 species, trees and shrubs, of e. North America, e. Asia, se. Asia, and Central America. The only taxon other than those in our area is *N. ursina* Small [*N. sylvatica* Marshall var. *ursina* (Small) Wen & Stuessy], a 2-5 m tall shrub or small tree related to *N. biflora* and endemic to panhandle FL. The only other members of the genus are 2-4 e. and se. Asian species and a recently discovered species of Costa Rica (Hammel & Zamora 1990, Wen & Stuessy 1993). References: Burckhalter (1992)=Z; Wen & Stuessy (1993)=Y; Eyde (1966)=X.

Identification notes: *Nyssa sylvatica* is often mistaken (especially as seedlings, saplings, or fire-sprouts) for *Diospyros virginiana*, because of their similar, alternate, glossy-green, acuminate leaves. *Nyssa* can be distinguished by its three vascular bundle scars per leaf scar (vs. one *Diospyros*), leaves often with a few irregular teeth (vs. never toothed), leaves pale to medium

green beneath (vs whitish-green beneath), leaves lacking dark glands on the midrib above and the outer petiole (vs. present), and leaves glabrous or nearly so below (vs. glabrate to tomentose with curly hairs) (McKenney 1967).

1 Petioles of mature leaves 3-6 cm long; leaves to 30 cm long and 15 cm wide, at least the larger on a tree normally > 8 cm wide, often with a few irregular teeth, these typically located near the widest part of the blade..... ***N. aquatica***
1 Petioles of mature leaves 0.5-2.0 (-2.5 cm) long; leaves to 18 cm long and 10 cm wide, the largest leaves on a tree rarely > 7 cm wide, generally entire, rarely with a few irregular teeth, these typically located toward the leaf apex.
  2 Fruits 20-40 mm long, yellow, orange, or red when mature, the stone winged; pistillate flowers and fruits 1 per peduncle; trees often multiple-trunked, the trunks crooked; mature leaves densely pubescent beneath ..... ***N. ogeche***
  2 Fruits 6-15 mm long, blue-black when mature, the stone slightly ridged to nearly smooth; pistillate flowers (1-) 2-5 per peduncle; trees typically single-trunked, the trunk fairly straight; mature leaves glabrous to pubescent beneath.
    3 Pistillate flowers and fruits (1-) 2 (-3) per peduncle; leaves with thick texture, rather stiff, typically widest beyond the middle, the apex typically obtuse, the margins entire (rarely with a few teeth on vigorous sprouts); trunk swollen or buttressed at base; bark of large trees rough, a vertical ridge-furrow pattern most prominent; [trees of swamps with periodic or seasonal flooding; mostly on the Coastal Plain]..... ***N. biflora***
    3 Pistillate flowers and fruits (2-) 3-5 (-8) per peduncle; leaves with thin texture, pliable, typically widest near the middle, the apex typically acuminate, the margins often with a few irregular teeth near the apex (though sometimes an entire tree with no toothed leaves); trunk not swollen or buttressed at base (even when growing in moist or wet habitats); bark of large trees rough, divided by deep vertical and horizontal furrows into a pattern of squarish checks; [trees of dry to mesic upland forests, less commonly in bottomlands or other wetlands, where flooding occurs at most occasionally and is of short duration; throughout our area] ..... ***N. sylvatica***

Nyssa aquatica Linnaeus, WaterTupelo, Tupelo Gum, Cotton Gum. Cp (GA, NC, SC, VA): river swamps, where inundated for substantial periods of time; common. April-May; September-October. Se. VA south to panhandle FL, west to se. TX, north in the Mississippi Embayment to se. MO, s. IL, and e. KY, primarily on the Coastal Plain, but with scattered locations in other physiographic provinces, such as in sc. TN. [= RAB, C, F, GW, K, S, X, Y, Z; = *N. uniflora* Wangenheim – G]

Nyssa biflora Walter, Swamp Tupelo, Water Gum, Swamp Black Gum. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): blackwater river swamps, depressions in pinelands, pocosins, either where inundated for substantial periods of time or in more-or-less permanently saturated organic peaty soils; common (rare in Piedmont). April-June; August-October. NJ south to s. FL, west to e. TX, primarily on the Coastal Plain, but scattered inland to c. NC, w. SC, c. TN, w. KY (Clark et al. 2005), se. MO, and c. AR. [= G, K, S, Z; = *N. sylvatica* Marshall var. *biflora* (Walter) Sargent – RAB, C, F, GW, X, Y]

Nyssa ogeche Bartram ex Marshall, Ogeechee Lime, Ogeechee Tupelo, Ogeechee Plum. Cp (GA, SC): river swamps and wet forests with peaty soils, also in upland depression ponds; common, rare north of GA (SC Rare). April; August-October. A Southeastern Coastal Plain endemic: se. SC south to c. peninsular FL, west to s. AL. [= RAB, GW, K, X, Y, Z; > *N. acuminata* Small – S; > *N. ogeche* – S]

Nyssa sylvatica Marshall, Sour Gum, Black Gum, Pepperidge. Mt, Pd, Cp (GA, NC, SC, VA): dry or mesic upland forests, less commonly in bottomlands, pine savannas, or upland depressions, where occasionally inundated briefly; common. April-June; August-October. S. ME west to MI and se. WI, south to c. peninsular FL, west to e. TX and e. OK. *N. sylvatica* is quite variable in morphology and ecology, at least some of the morphologic variation correlated with geography and ecology. The status of varieties recognized by previous authors (such as Fernald 1950) needs reassessment. In the Mountains of our area *N. sylvatica* is typically found in dry woodlands, such as pine-oak/heath, with xerophytic species such as *Pinus virginiana* and *Quercus montana*. In the outer Coastal Plain of the Carolinas, *N. sylvatica* often occurs in wet savannas with *Pinus serotina*, where often mistaken (because of the wetland habitat) for *N. biflora*. The leaves turn a brilliant orange-red in fall (often a few on any tree turning prematurely in July or August). [= G, K, S, Z; = *N. sylvatica* var. *sylvatica* – RAB, C, GW, X, Y; > *N. sylvatica* var. *sylvatica* – F; > *N. sylvatica* var. *dilatata* Fernald – F; > *N. sylvatica* var. *caroliniana* (Poiret) Fernald – F]

OLEACEAE Hoffmansegg & Link 1813 (Olive Family)

A family of about 25 genera and 600-615 species, trees and shrubs, nearly cosmopolitan, but centered in Asia. References: Hardin (1974)=Z; Green in Kadereit (2004).

1 Leaves compound.
  2 Leaves pinnately compound with > 5 leaflets; petals absent; fruit a samara; small to large tree; [tribe *Oleeae*, subtribe *Fraxininae*] ..... ***Fraxinus***
  2 Leaves trifoliolate; petals 6-10, yellow, conspicuous; fruit a deeply 2-lobed dryish berry; [tribe *Jasmineae*]..... ..... ***[Jasminum]***
1 Leaves simple.
  3 Flowers bright yellow, showy; fruit a many-seeded capsule; [tribe *Forsythieae*]..... ***Forsythia***
  3 Flowers white, lilac, or purplish; fruit a drupe or 4-seeded capsule.
    4 Leaves cordate or truncate at the base; fruit a 4-seeded capsule; corolla lobes shorter than the tube; flowers lilac or white, in terminal panicles; [tribe *Oleeae*, subtribe *Ligustrinae*] ..... ***Syringa***
    4 Leaves cuneate to rounded at the base; fruit a drupe; corolla lobes either shorter or longer than the tube; flowers white or greenish-white, in terminal or lateral panicles or fascicles.

5 Corolla absent; calyx minute or lacking; flowers in axillary fascicles; [tribe *Oleeae*, subtribe *Oleinae*] ..... ***Forestiera***
5 Corolla present (often conspicuous and showy); calyx present; flowers in lateral or terminal panicles or in terminal subumbellate clusters.
6 Corolla lobes 5-12; flowers in terminal subumbellate clusters; [tribe *Jasmineae*] ..... ***[Jasminum]***
6 Corolla lobes 4; flowers in lateral or terminal panicles
7 Corolla lobes elongate, much longer than the corolla tube; [tribe *Oleeae*, subtribe *Oleinae*]..... ***Chionanthus***
7 Corolla lobes short, no longer than the corolla tube.
8 Inflorescence a many-flowered terminal panicle; leaves generally ovate, elliptic or lanceolate (widest below or at the middle); [tribe *Oleeae*, subtribe *Ligustrinae*] ..... ***Ligustrum***
8 Inflorescence a few-flowered axillary panicle; leaves generally oblanceolate or obovate (widest above the middle); [tribe *Oleeae*, subtribe *Oleinae*] ..... ***Osmanthus***

Chionanthus Linnaeus 1753 (Fringe-tree, Old Man's Beard)

A genus of controversial circumscription, either of only 3 species, limited to se. North America and e. Asia, or (if including *Linociera*) of about 60-100 species, primarily tropical. *Ch. pygmaeus* Small is endemic to scrub in peninsular FL. References: Hardin (1974)=Z.

Chionanthus virginicus Linnaeus, Fringe-tree, Old Man's Beard. Pd, Mt, Cp (GA, NC, SC, VA): dry, mesic, or wet forests and woodlands, granitic flatrocks and domes, glades and barrens over various rocks (including granite, greenstone, etc.), swamp forests in the Coastal Plain, rarely pocosins; common. April-May; July-September. NJ, s. PA, s. OH, and MO south to n. FL and e. TX. *Ch. virginicus* in our area shows a diversity of morphology and correlated habitat that suggests the possible presence of two taxa. Swamp- and pocosin-inhabiting populations in the outer Coastal Plain have leaves 4-8× as long as wide and seem very different than Piedmont dry woodland populations with leaves 1-2× as long as wide; further and more careful study is needed. *Ch. virginicus* is a traditional southern yard plant, often used as a "specimen plant," very showy in spring, particularly when grown to its full size. [= RAB, C, F, G, GW, K, S, W, Z]

Forestiera Poiret 1812 (Forestiera)

A genus of about 15-20 species, shrubs, of sw. and se. North America, Central America, and the West Indies. References: Anderson (1985)=Y; Godfrey (1988)=X; Hardin (1974)=Z; Johnston (1957)=Q; Green in Kadereit (2004).

1 Leaves (6-) 7-8 (-9) cm long, long-acuminate or acuminate (rarely acute) at the apex, the tip sharply pointed; [of swamp forests, sloughs, and ponds] ..... ***F. acuminata***
1 Leaves 1.5-7 (-8) cm long, obtuse at the apex, or if short-acuminate the ultimate tip blunt; [of shell middens and calcareous bluffs].
2 Leaves evergreen, glabrous above, glabrous and punctate below; leaf margins entire..... ***F. segregata*** *var.* ***segregata***
2 Leaves deciduous, at least sparsely pubescent on the midrib above, pubescent and non-punctate below.
3 First-year twigs pubescent, the pubescence evenly distributed (not in 2 lines); petioles moderately pubescent; flowering in early spring from buds on twigs of the previous season; leaves 5-7 (-8) cm long ..... ***F. godfreyi***
3 First-year twigs pubescent, the pubescence in 2 lines on either side of the twig; petioles glabrous (or with a very few hairs; flowering in mid-late summer, the flowers in leaf axils; leaves mostly 2-5 cm long..... ***F. ligustrina***

Forestiera acuminata (Michaux) Poiret, Swamp-privet. Cp (GA, SC): swamp forests, especially over calcareous substrates; uncommon. March; May-June. SC south to n. FL, west to TX, north in the interior to KY, e. and c. TN, IN, IL, MO, and KS. [= RAB, C, F, G, GW, K, S, Q, X, Y, Z]

Forestiera godfreyi L.C. Anderson, Godfrey's Forestiera. Cp (GA, SC): shell middens, maritime forests over shell substrate; rare (GA Special Concern). Mid January-February; April-May. Se. SC (Beaufort and Charleston counties) to e. GA and n. FL. [= K, X, Y; < *F. pubescens* Nuttall – S, in part (apparently)]

Forestiera ligustrina (Michaux) Poiret in Lamarck, Southern-privet. Cp, Pd (GA, SC): upland forests and slopes along streams, mostly on shell middens or calcareous rocks; rare (SC Rare). E. SC south to n. FL, west to se. TX, north in the interior to c. TN and KY. [= K, S, Q, X, Z]

Forestiera segregata (Jacquin) Krug & Urban *var.* ***segregata***, Florida-privet. Cp (GA, SC): calcareous scrub, shell middens, maritime forests and thickets; rare (GA Special Concern, SC Rare). Se. SC south to s. FL, and in the West Indies. Var. *pinetorum* (Small) M.C. Johnston is restricted to s. FL. [= K, Q, Z; > *F. porulosa* (Michaux) Poiret – S; > *F. globularis* Small – S; < *F. segregata* – X]

Forsythia Vahl 1804 (Forsythia, Golden-bells)

A genus of about 7-9 species, shrubs, of e. Asia and se. Europe. References: Hardin (1974)=Z; Green in Kadereit (2004).

1 Mature branches hollow or irregularly pith-filled between the nodes; leaves oblong-ovate, toothed or 3-parted; branches arching when well-developed ..... ***F. suspensa***
1 Mature branches cross-septate (chambered) between the nodes; leaves oblong-lanceolate, toothed; branches upright..... ..... ***F. viridissima***

* ***Forsythia suspensa*** (Thunberg) Vahl, Weeping Forsythia. Pd (GA, NC, VA), Mt (VA): waste places, vacant lots, suburban woodlands; commonly planted and persistent, rarely escaped (native of China). [= C, G, K, Z]
* ***Forsythia viridissima*** Lindley, Greenstem Forsythia. Pd (GA, NC, VA), Cp, Mt (VA): waste places, vacant lots, suburban woodlands; commonly planted and persistent, rarely escaped (native of China). [= C, G, K, W, Z]

Fraxinus Linnaeus 1753 (Ash)

A genus of about 45-65 species, trees, mostly north temperate (Asia, North America, Europe). References: Hardin & Beckmann (1982)=Z; Miller (1955)=Y; Green in Kadereit (2004).

1 Young twigs 4-angled or narrowly 4-winged; [trees of calcareous woodlands in the Mountains of sw. VA and northward and westward]..... ***F. quadrangulata***
1 Young twigs terete (rounded in cross-section); [trees of various habitats, collectively widespread in our area].
  2 Lateral leaflets sessile; calyx absent..... ***F. nigra***
  2 Lateral leaflets with petiolules (1-) 3-20 mm long; calyx present, persisting as a minute cup at the base of the fruits.
    3 Leaves minutely papillose beneath (best seen at magnification of 40× or more), and sometimes also pubescent, more-or-less strongly whitened; wing of the samara decurrent only onto the upper 1/3 (or less) of the samara body ..... ***F. americana***
    3 Leaves glabrous to pubescent beneath (never papillose), green; wing of the samara decurrent onto 1/2 (or more) of the samara body.
      4 Petiolules of the lowermost leaflets 1-9 mm long, all but 1-2 mm narrowly winged; samara mostly < 7 mm wide; calyx 0.5-1.5 mm long..... ***F. pennsylvanica***
      4 Petiolules of the lowermost leaflets 3-20 mm long, not winged (except *F. caroliniana*); samara mostly > 7 mm wide; calyx 1-6 mm long.
        5 Body of samara flattened, winged the full length of the samara body; calyx 1 mm long; leaf scars slightly notched; small tree, often multi-trunked..... ***F. caroliniana***
        5 Body of samara terete or subterete, winged about 1/2 the length of the samara body; calyx 2.5-6 mm long; leaf scars deeply notched; medium to large tree, typically single-trunked ..... ***F. profunda***

Fraxinus americana, White Ash, American Ash. Mt, Pd, Cp (GA, NC, SC, VA): mesic slopes, rich cove forests, dryish calcareous or mafic glades and woodlands (with *Juniperus virginiana* var. *virginiana* and *Carya glabra*); common (rare in Coastal Plain of NC, SC, and GA). April-May; August-October. Nova Scotia west to MN, south to FL and TX. A valuable timber tree. The division into 2 taxa, var. americana and var. biltmoreana, needs further study. [= C, K, W, Z; > *F. americana* Linnaeus var. *americana* – RAB, F, G; > *F. americana* Linnaeus var. *biltmoreana* (Beadle) J. Wright ex Fernald – RAB, F, G; > *F. americana* var. *microcarpa* A. Gray – F; > *F. americana* – S, Y; > *F. biltmoreana* Beadle – S, Y]

Fraxinus caroliniana P. Miller, Water Ash, Pop Ash, Carolina Ash. Cp, Pd (GA, NC, SC, VA): deeply to shallowly flooded swamps; common (rare in Piedmont). May; July-October. Se. VA south to FL, west to TX, primarily on the Coastal Plain. A small tree, sometimes very abundant (and nearly the only subcanopy species) as the understory in *Taxodium-Nyssa* swamps. [= RAB, C, G, GW, K, Y, Z; > *F. caroliniana* var. *caroliniana* – F; > *F. caroliniana* var. *oblanceolata* (M.A. Curtis) Fernald & Schubert – F; > *F. caroliniana* var. *cubensis* (Grisebach) Lingelsh. – F; > *F. caroliniana* – S; > *F. pauciflora* Nuttall – S]

Fraxinus nigra Marshall, Black Ash. Mt, Pd (VA): seepage swamps and mountain streambanks; rare (VA Watch List). April-May; August-October. Newfoundland and Québec west to Manitoba, south to DE, VA, IN, and IA. [= C, F, G, K, W, Y, Z]

Fraxinus pennsylvanica Marshall, Green Ash, Red Ash. Cp, Pd, Mt (GA, NC, SC, VA): bottomlands and swamps, especially along brownwater rivers and streams; common. April-May; August-October. Nova Scotia west to Alberta, south to FL and TX. Variation in this species (see synonymy) needs further study. [= C, GW, K, W, Z; > *F. pennsylvanica* var. *subintegerrima* (Vahl) Fernald – RAB, F, G; > *F. pennsylvanica* var. *pennsylvanica* – RAB, F, G; > *F. pennsylvanica* var. *austinii* Fernald – F; > *F. darlingtonii* Britton – S; > *F. pennsylvanica* – S; > *F. smallii* Britton – S; *?* *F. pennsylvanica* ssp. *pennsylvanica* – Y]

Fraxinus profunda (Bush) Bush, Pumpkin Ash. Cp, Pd (GA, NC, SC, VA), Mt (NC): swamps, especially along blackwater rivers and streams and in freshwater tidal wetlands (as along the James, Pamunkey, Mattaponi, and Rappahannock rivers in e. VA), also in brownwater bottomlands; common (rare in Piedmont and Mountains). April-May; August-October. S. NJ south to n. FL, west to LA, mostly on the Coastal Plain, north in the interior to w. NC, sc. TN, e. AR, se. MO, s. IL, IN, OH, sc. MI, ne. PA, and w. NY. This species has a peculiar distribution; see McCormac, Bissell, & Stine (1995) for additional

discussion. The nomenclature is controversial. [= C, GW, K, W, Z; = *F. tomentosa* Michaux f. – RAB, F, G, Y; > *F. profunda* – S; > *F. michauxii* Britton – S]

Fraxinus quadrangulata Michaux, Blue Ash. Mt (GA, VA): mesic to dry calcareous woodlands and forests; rare (GA Special Concern, VA Watch List). April; July-October. S. Ontario west to s. MI and e. KS, south to sw. VA, e. TN, nw. GA, n. AL, and OK. [= C, F, G, K, S, Y, Z]

Jasminum Linnaeus 1753 (Winter Jasmine)

A genus of about 200 species, shrubs and woody vines, of tropical (and rarely temperate) Eurasia. References: Green in Kadereit (2004)

1 Leaves simple; flowers white ..... ***[J. multiflorum]***
1 Leaves trifoliolate; flowers yellow.
  2 Leaflets 2.5-7 cm long; flowers 3.5-5 cm across ..... ***[J. mesnyi]***
  2 Leaflets 1-3 cm long; flowers ca. 2.5 cm across ..... ***[J. nudiflorum]***

* *Jasminum mesnyi* Hance, Japanese Jasmine, Primrose Jasmine, native of w. China, is planted and often persists. Reported for GA (K). [= K]
* *Jasminum multiflorum* (Burmann f.) Andrews, Star Jasmine, is planted and naturalized at least as far north as Jacksonville, Duval County, FL (Wunderlin & Hansen 2004). [= K]
* *Jasminum nudiflorum* Lindley, Winter Jasmine, native of China, is commonly planted and often persists. It has green stems and yellow flowers. Reported for GA (K). [= K]

Ligustrum Linnaeus 1753 (Privet)

A genus of about 40 species, shrubs and trees, of the Old World. I have here largely followed Hardin (1974), though, as he points out, "the taxonomy and nomenclature of our plants seem uncertain in a few cases" and "it is difficult to determine which are really naturalized in our area." It is possible that not all the species treated below are truly naturalized, and that taxonomic changes will be needed. References: Hardin (1974)=Z; Green in Kadereit (2004). The key is based closely on Hardin (1974).

1 Twigs glabrous.
  2 Corolla tube equalling or shorter than the corolla lobes.
    3 Leaves persistent or tardily deciduous, 6-15 cm long ..... ***L. lucidum***
    3 Leaves deciduous, 3-6 cm long ..... ***L. vulgare***
  2 Corolla tube slightly longer than or up to 3× as long as the corolla lobes.
    4 Leaves persistent and glossy, rounded or broadly cuneate at the base; corolla tube slightly longer than the corolla lobes ..... ***L. japonicum***
    4 Leaves deciduous or semi-evergreen, cuneate at the base; corolla tube ca. 3× as long as the corolla lobes ..... ***L. ovalifolium***
1 Twigs pubescent.
  5 Corolla tube equalling or shorter than the corolla lobes.
    6 Flowers sessile or subsessile ..... ***L. quihoui***
    6 Flowers pedicellate.
      7 Twigs densely pubescent; leaves pubescent on the midrib beneath ..... ***L. sinense***
      7 Twigs minutely puberulent; leaves glabrous ..... ***L. vulgare***
  5 Corolla tube slightly longer than or up to 3× as long as the corolla lobes.
    8 Pedicels pubescent; calyx pubescent ..... ***L. obtusifolium***
    8 Pedicels glabrous; calyx glabrous or slightly pubescent at the base.
      9 Leaves 2-6 cm long; twigs conspicuously pubescent ..... ***L. amurense***
      9 Leaves 4-10 cm long; twigs minutely puberulent ..... ***L. japonicum***

* ***Ligustrum amurense*** Carrière, Amur Privet. Pd (NC, VA), Cp, Mt (VA {SC}: disturbed places; rare, native of n. China. [= RAB, C, F, G, K, Z]
* ***Ligustrum japonicum*** Thunberg, Japanese Privet. Cp (GA, NC, SC, VA), Pd (NC, VA): disturbed places; rare, native of Japan and Korea. [= RAB, K, Z]
* ***Ligustrum lucidum*** Aiton f., Glossy Privet. Pd, Cp (NC): disturbed places; rare, native of China, Japan, and Korea. This species is superficially similar to *L. japonicum*; the lateral leaf veins are translucent in this species. [= K, S, Z]
* ***Ligustrum obtusifolium*** Siebold & Zuccarini. Cp, Pd (NC, VA), Mt (VA): disturbed places; uncommon, native of Japan. [= C, F, G, K, Z]
* ***Ligustrum ovalifolium*** Hasskarl, California Privet. Cp, Pd (NC, VA): disturbed places; rare, native of Japan. [= RAB, C, F, G, K, S, Z]
* ***Ligustrum quihoui*** Carrière, Wax-leaved Privet. Cp (NC, VA): disturbed places; rare, native of China. [= K, Z]

* ***Ligustrum sinense*** Loureiro, Chinese Privet. Cp, Pd, Mt (GA, NC, SC, VA): moist forests, especially alluvial bottomlands; common, native of China. This species is one of the most noxious of our weeds, choking out native vegetation in hundreds of square kilometers of land in our area. The rapidity with which it has engulfed southern wetlands is hinted at by Small's (1933) mention of it only as "an escape in southern Louisiana." [= RAB, C, G, GW, K, S, W, Z]

* ***Ligustrum vulgare*** Linnaeus, Common Privet. Cp, Pd (NC, VA): disturbed places; rare, native of Europe and n. Africa. [= C, F, G, K, S, Z]

Osmanthus Loureiro 1790 (Wild Olive, Devilwood)

A genus of about 15-32 species, shrubs and trees, of se. Asia (most species) and se. North America. References: Hardin (1974)=Z; Green in Kadereit (2004).

1 Leaf margins entire; leaves usually >7 cm long; [native tree of Coastal plain forests] ..... ***O. americanus***
1 Leaf margins spiny-toothed; leaves < 10 cm long; [horticulturally planted, rarely naturalizing] ..... ***O. ×fortunei***

Osmanthus americanus (Linnaeus) Bentham & Hooker f. ex A. Gray, Wild Olive, Devilwood. Cp (GA, NC, SC, VA): maritime forests and (in GA, SC, and extreme s. NC) dry, sandy forests well inland, and reported for wet habitats as well further south; uncommon (VA Rare). April-May; August-October. Se. VA south to FL, west to LA; also in Mexico. *O. megacarpus* Small, sometimes treated as a variety, *O. americanus* var. *megacarpus* (Small) P.S. Greene, is endemic to pine scrub in peninsular FL and differs primarily in having a larger fruit. The very hard, tough, and unsplittable wood is the inspiration for the common name "Devilwood." *O. americanus* is a conspicuous element of maritime forests in most of our area, readily recognizable by the flattened twigs characteristic of the family, and the opposite (often a few subopposite), glossy, evergreen leaves. [= RAB, F, G, GW; = *O. americanus* var. *americanus* – C, K, Z; = *Amarolea americana* (Linnaeus) Small – S]

* ***Osmanthus ×fortunei*** Carrière [= *O. fragrans* × *heterophyllus*], Fortune's Sweet Olive. Pd (NC): suburban woodlands, escaped from horticultural plantings; rare, hybrid originating in Japan of two species native to Japan.

Syringa Linnaeus 1753 (Lilac)

A genus of about 20-23 species, shrubs, from s. Europe to se. Asia. References: Hardin (1974)=Z; Green in Kadereit (2004).

* ***Syringa vulgaris*** Linnaeus, Lilac. Mt (NC, VA): commonly planted, persistent and naturalizing around old farms; rare, native of se. Europe. [= C, F, G, K, Z]

ONAGRACEAE A.L. de Jussieu 1789 (Evening-primrose Family)

A family of about 18 genera and 650 species, herbs, shrubs, and rarely trees, cosmopolitan (especially of temperate and subtropical America). References: Munz (1965)=X; Crisci et al. (1990).

1 Flowers 2-merous, the petals white; fruits with uncinate trichomes; leaves opposite, decussate, borne spreading at right angles to the stem, mostly ovate, on petioles mostly 0.5-8 cm long ..... ***Circaea***
1 Flowers (3-) 4 (-7)-merous, the petals yellow, pink, or white (or absent); fruits lacking uncinate trichomes; leaves alternate (rarely opposite). not decussate, usually ascending or appressed (rarely spreading at right angles to the stem), mostly lanceolate, mostly sessile or subsessile.
  2 Fruit indehiscent; seeds 1-6 per capsule, 1.5-3.5 mm long ..... ***Gaura***
  2 Fruit dehiscent; seeds (10-) 50-many per capsule, 0.3-2 mm long.
    3 Seeds with an elongate coma at one end (wind-dispersed); petals pink or white.
      4 Leaves all alternate; flowers numerous in a terminal raceme (with small bracts); flower buds reflexed, the flowers held horizontally or ascending; petals 10-20 mm long; stigma 4-lobed; plants 10-30 dm tall..... ..... ***Chamerion***
      4 Leaves all or at least the lowermost opposite; flowers few, axillary, or in poorly developed, leafy racemes; flower buds not reflexed, the flowers ascending; petals 2-8 mm long (except 10-15 mm long in *E. hirsutum*); stigma capitate (except 4-lobed in *E. hirsutum*); plants 1-20 dm tall ..... ***Epilobium***
    3 Seeds not comose (gravity-dispersed); petals yellow or absent (rarely white or pink).
      5 Calyx tube not extended beyond the summit of the ovary; sepals persistent on the capsule (rarely deciduous); stamens 4, 8, or 10-14; petals yellow or absent; [primarily of wetlands] ..... ***Ludwigia***
      5 Calyx tube extended beyond the summit of the ovary; sepals deciduous; stamens 8; petals yellow (rarely pink or white); [primarily of uplands] ..... ***Oenothera***

Calylophus Spach

A genus of 6 species, of North America.

Calylophus serrulatus (Nuttall) Raven, east to w. KY. [= K; = *Oenothera serrulata* Nuttall] {not keyed at this time; synonymy incomplete}

Chamerion (Rafinesque) Rafinesque (Fireweed)

There is increasingly strong evidence for the recognition of this group of plants as a genus separate from *Epilobium*. References: Mosquin (1966)=Z; Holub (1972)=Y; Munz (1965)=X.

Chamerion platyphyllum (Daniels) Löve & Löve, Great Willow-herb, Fireweed. Mt (NC, VA): grassy balds, roadsides, disturbed areas; uncommon (NC Rare). July-September. *Chamerion platyphyllum* has a circumboreal distribution; it is a member of a circumboreal complex, consisting of several related taxa that differ in chromosome number, a variety of morphological characters, and distribution. The tetraploid *Chamerion platyphyllum* is generally more southern, extending south in North America to NJ, montane w. NC and ne. TN, n. IN, MN, SD, AZ, NM, and CA; it may be more appropriately treated as a variety or subspecies of *Ch. angustifolium*. The diploid *Chamerion angustifolium* (Linnaeus) Holub is arctic and boreal, extending south in North America to New Brunswick, Québec, Ontario, alpine WY, and British Columbia. The hexaploid is *Chamerion danielsii* D. Löve. [< *E. angustifolium* – RAB, G, GW, W; = *E. angustifolium* var. *canescens* A. Wood – C; >< *E. angustifolium* var. *angustifolium* – F, X; > *E. angustifolium* var. *platyphyllum* (Daniels) Fernald – F; = *Chamerion angustifolium* (Linnaeus) Holub ssp. *circumvagum* (Mosquin) Kartesz – K; < *Chamaenerion angustifolium* (Linnaeus) Scopoli – S; < *Chamerion angustifolium* (Linnaeus) Holub – Y; = *Epilobium angustifolium* Linnaeus ssp. *circumvagum* Mosquin – Z]

Circaea Linnaeus (Enchanter's-nightshade)

A genus of 7-8 species, herbs, of temperate and boreal regions of the Northern Hemisphere. References: Boufford (1983)=Z; Boufford (2005)=Y; Munz (1965)=X; Averett & Boufford (1985); Skvortsov (1979). Key based on Z.

Identification notes: Sometimes confused in vegetative condition with *Phryma*.

1 Flowers opening before elongation of the raceme axis, therefore clustered and corymbiform at the apex of the raceme, borne on erect or ascending pedicels; plant 5-25 (-30) cm tall; fruits clavate, 2.0-2.5 mm long, 0.7-1.2 mm thick, 1-locular ..... ***C. alpina ssp. alpina***

1 Flowers opening after elongation of the raceme axis, more or less loosely spaced, borne on spreading pedicels; plants (12-) 20-100 cm tall; fruits obovoid to pyriform, 2.8-3.9 (-4.5) mm long, 1.5-3.6 mm thick, 2-locular, or the fruits sterile and aborting shortly after anthesis, 1-2-locular when present.

2 All, or nearly all, ovaries developing to maturity; fruit with corky-thickened ribs separated by deep grooves..... ***C. canadensis ssp. canadensis***

2 All ovaries aborting shortly after anthesis (very rarely a few persistent after anthesis); fruit (when somewhat persistent) with low ribs and shallow grooves..... ***C. ×sterilis***

Circaea alpina Linnaeus *ssp.* ***alpina***, Alpine Enchanter's-nightshade. Mt (GA?, NC, VA): moist organic soil at high elevations (especially in spruce-fir and northern hardwood forests), rocky seepages, in spray behind waterfalls, at dripping cliff bases; uncommon. June-September. *C. alpina* is treated by Z as a circumboreal complex of six subspecies. Ssp. *alpina* is itself circumboreal, in North America ranging from Newfoundland and Labrador, west to AK, south to MD, w. NC, e. TN, n. GA (?), KY, n. IL, MN, MT, and WA, disjunct in montane sites southward in the w. United States, such as the Black Hills of SD, and isolated montane sites in CO, AZ, and NM. Another subspecies occurs in w. North America, and four subspecies occur in humid and montane parts of Asia. [= K, X, Z; < *C. alpina* – RAB, F, G, GW, S, W; = *C. alpina* var. *alpina* – C]

Circaea canadensis (Linnaeus) Hill *ssp.* ***canadensis***, Canada Enchanter's-nightshade. Mt (GA, NC, VA), Pd (GA, NC, SC, VA), Cp (GA, NC, VA): mesic, nutrient-rich forests; common (SC Rare). June-August. Nova Scotia and New Brunswick west to se. Manitoba and ND, south to e. NC, c. SC, s. GA, LA, OK, and NE. The systematics of this taxon is controversial, and the best treatment is still unclear. Most recently, Boufford (2005) has treated the complex as 2 species, C. canadensis and C. lutetiana, the former with 2 subspecies, ssp. *canadensis* of eastern North America and ssp. *quadrisulcata* of Asia. Previously, Boufford (1983) treated the complex as a circumboreal complex of 3 subspecies of *C. lutetiana*, including the North American ssp. *canadensis* (Linnaeus) Ascherson & Magnus, the primarily Asian ssp. *quadrisulcata* (Maximowicz) Ascherson & Magnus, and the European ssp. *lutetiana*. Other authors have preferred varietal status for the 3 entities, full species status, no formal status at all (*C. lutetiana* as a polymorphic complex), or associating the more similar pair (North American and Asian) as 2 subspecies separate from the European at specific rank. Boufford (1983) and Averett & Boufford (1985) show convincingly that separate taxonomic status for the three entities is warranted, and that ssp. *canadensis* is more closely related to ssp. *quadrisulcata*. The question of the appropriate taxonomic level remains. Boufford (1983) states that "although subspp. *canadensis* and *quadrisulcata* are placed in *C. lutetiana*, this might not ultimately prove to be the best treatment." Later, flavonoid data showed strong differences between the three taxa, stronger than the differences between many of the other species in the genus (Averett & Boufford 1985). Morphologic differences between the three taxa are fairly subtle but appear to be consistent. The complicated synonymy is perhaps an example of a too-zealous attempt to have nomenclature reflect subtleties of relationship and

evolutionary divergence, our understanding of which is unclear and changeable. [=Y; = *C. lutetiana* Linnaeus ssp. *canadensis* (Linnaeus) Ascherson & Magnus – RAB, K, W, X, Z; = *C. lutetiana* var. *canadensis* Linnaeus – C; = *C. quadrisulcata* (Maximowicz) Franchet & Savatier var. *canadensis* (Linnaeus) Hara – G; > *C. canadensis* var. *canadensis* – F; > *C. canadensis* var. *virginiana* Fernald – F; *C. latifolia* Hill – S; = *C. quadrisulcata* ssp. *canadensis* (Linnaeus) Löve & Löve]

Circaea ×sterilis Boufford, Hybrid Enchanter's-nightshade. Mt (NC, VA): mesic, nutrient-rich forests; rare. June-August. *C. ×sterilis* is reported to occur frequently in the absence of one or both of its parents (Z, Skvortsov 1979), and is therefore treated separately and keyed here. It ranges from Newfoundland west to Ontario and MN, south to w. NC, OH, and WI. It appears to be rare in our area, but should be sought more carefully. Recognition of *C. canadensis* (Linnaeus) Hill as distinct from *C. lutetiana* renders the hybrid binomial name *C. ×intermedia* inappropriate for North American plants, since it is the hybrid of *C. alpina* ssp. *alpina* and the European *C. lutetiana*. [= *C. ×sterilis* Boufford – Y; = *C. ×intermedia* Ehrhart (pro sp.) – RAB, C, K, W, X, Z (but misapplied as to our material if *C. canadensis* is accepted as a species); > *C. canadensis* var. *canadensis* – F, misapplied; > *C. canadensis* var. *virginiana* Fernald – F; = *C. canadensis* (Linnaeus) Hill – G, misapplied]

Epilobium Linnaeus (Willow-herb)
(also see *Chamerion*)

Epilobium is a large genus (ca. 200 species), distributed primarily in boreal and alpine latitudes and elevations. All five of the species in our area reach or approach their southern limits in eastern North America here. There is increasing opinion that *E. angustifolium* and its relatives should be distinguished at the generic level from *Epilobium*, as *Chamerion*. References: Munz (1965)=Z.

1 Leaves all alternate; flowers numerous in a terminal raceme (with small bracts); flower buds reflexed, the flowers held horizontally or ascending; petals 10-20 mm long; stigma 4-lobed; plants 10-30 dm tall ..... [see ***Chamerion***]
1 Leaves all or at least the lowermost opposite; flowers few, axillary, or in poorly developed, leafy racemes; flower buds not reflexed, the flowers ascending; petals 2-8 mm long (except 10-15 mm long in *E. hirsutum*); stigma capitate (except 4-lobed in *E. hirsutum*); plants 1-20 dm tall; [section *Lysimachion*].
  2 Stigma 4-cleft; petals 10-15 mm long ..... ***[E. hirsutum]***
  2 Stigma capitate; petals 2-8 mm long.
    3 Leaves lanceolate, distinctly broader below the middle, flat, the larger generally at least 10 mm wide, toothed.
      4 Principal leaves 3-7 cm long, with obscure marginal teeth, the apices merely acute; internodes (below the inflorescence) glabrous, glabrescent, or with pubescence scattered over the surface; mature coma (attached to plump seeds) nearly white; plants often strict or sparingly branched; seeds striate (with well-developed papillae arranged conspicuously in lines) ..... ***E. ciliatum ssp. ciliatum***
      4 Principal leaves 5-15 cm long, with conspicuous and often irregular marginal teeth, the apices acuminate to attenuate; internodes (below the inflorescence) with lines of pubescence (some internodes on a given plant sometimes with scattered pubescence or glabrous); mature coma cinnamon (attached to plump seeds) brown (pale when immature); plants generally well-branched, with a bushy habit; seeds papillose (the papillae sometimes forming weak lines) ..... ***E. coloratum***
    3 Leaves linear to narrowly lanceolate, broadest near the middle, revolute, the larger generally < 10 mm wide, not toothed.
      5 Pubescence spreading ..... ***E. strictum***
      5 Pubescence appressed.
        6 Upper leaf surface finely and rather densely pubescent ..... ***E. leptophyllum***
        6 Upper leaf surface glabrous or with a few scattered hairs near the midrib ..... ***[E. palustre]***

Epilobium ciliatum Rafinesque *ssp. **ciliatum***, American Willow-herb. Mt (NC, VA): bogs, seeps, disturbed wet places (such as moist edges of logging roads); uncommon (NC Rare). June-September. Newfoundland and Labrador west to AK, south to VA, w. NC, ne. TN, IN, IA, CA, TX, Mexico, Central America; disjunct in Chile and Argentina. [= K; < *E. ciliatum* – RAB, W; = *E. ciliatum* var. *ciliatum* – C; > *E. ciliatum* – F, X, in a narrower sense; > *E. glandulosum* Lehm. var. *adenocaulon* (Hausskn.) Fernald – F; > *E. adenocaulon* Hausskn. var. *adenocaulon* – G, Z]

Epilobium coloratum Biehler, Bronze Willow-herb, Eastern Willow-herb. Mt (GA, NC, SC, VA), Pd, Cp (NC, VA): seepages, moist open places; common (rare in Coastal Plain of NC). June-September. ME west to MN, south to NC, n. GA, AL, AR, and TX. There are some difficulties in distinguishing this species and *E. ciliatum* in our area. [= RAB, C, F, G, GW, K, S, W, Z]

Epilobium leptophyllum Rafinesque, Narrowleaf Willow-herb, American Marsh Willow-herb. Mt (NC, VA): bogs, seepages, and boggy meadows; rare (NC Watch List, VA Rare). July-October. Newfoundland and Mackenzie west to British Columbia, south to w. NC, ne. TN, KS, and CA. [= RAB, C, F, G, GW, K, W, Z]

Epilobium strictum Muhlenberg ex Sprengel, Northeastern Willow-herb, Downy Willow-herb, Soft Willow-herb. Pd (VA): moist places; rare (VA Rare). Québec west to MN, south to n. VA, OH, and n. IL. The single record is regarded as questionable. [= C, F, G, K, Z]

* *Epilobium hirsutum* Linnaeus, Hairy Willow-herb, introduced from Eurasia, ranges south to s. PA (Rhoads & Klein 1993) and WV (Kartesz 1999). [= C, F, G, K, Z]

Epilobium palustre Linnaeus, Marsh Willow-herb, ranges south to DE and ne. PA (Rhoads & Klein 1993). [= C, K; > *E. palustre* var. *palustre* – F, G, Z]

Gaura Linnaeus (Gaura)

A genus of about 21 species, herbs, of North America. The flowers of all our species open about sunset and wither early the following morning. The genus is rather weedy; other western species may be expected to turn up in our area as adventive weeds. References: Raven & Gregory (1972)=Z; Munz (1965)=X.

1 Pedicels 2-4 mm long; fruit with a stipe at maturity; clumped or matted perennials from woody rhizomes or rootstocks; [of sandy habitats of SC and GA southward].
  2 Clumped perennial; petals 4-10 mm long; body of the fruit 5-10 mm long; stipe of the fruit 0.5-4.5 mm long ..... ***G. filipes***
  2 Mat-forming perennial; petals 7-15 mm long; body of the fruit 8-15 mm long; stipe of the fruit 2-8 mm long ..... ***G. sinuata***
1 Pedicels 0-1 mm long; fruit without a stipe; annual, winter annual, or biennial; [collectively of various habitats and more widespread in our area.
  3 Sepals 2-3.5 mm long; petals 1.5-3 mm long ..... ***G. parviflora***
  3 Sepals 2.5-12 mm long; petals 2.5-9 mm long.
    4 Sepals 2.5-8 mm long; leaves 0.1-1.3 cm wide, the widest rarely over 1 cm wide; flowers 3-4-merous (often mixed on a plant); fruits 3-4-angled (often mixed on a plant); [of the outer Coastal Plain of GA, NC, and SC] ..... ***G. angustifolia***
    4 Sepals 8-13 mm long; leaves 0.3-2.5 cm wide, the larger nearly always > 1 cm wide; flowers 4-merous; fruits 4-angled; [primarily of the Mountains and Piedmont of NC, SC, and VA, extending to the Coastal Plain of GA and SC] ..... ***G. biennis***

Gaura angustifolia Michaux, Southeastern Gaura. Cp (GA, NC, SC): open woodlands, sandy fields, roadsides, primarily in the outer Coastal Plain; common. May-September. E. NC (Dare County) south to s. FL, west to e. TX, endemic to the Coastal Plain. [= RAB, K, S, Z; > *G. angustifolia* var. *angustifolia* – X]

Gaura biennis Linnaeus, Biennial Gaura, Northeastern Gaura. Mt (NC, SC, VA), Pd (GA, NC, VA), Cp (GA, SC): roadsides, woodlands, streambanks, disturbed areas; common. June-October. MA and NY west to WI, se. MN, and IA, south to sw. NC, c. GA (Jones & Coile 1988), sc. TN, and c. IL. [= RAB, K, S, W, Z; *G. biennis* var. *biennis* – C, F, G, X]

Gaura filipes Spach, Threadstalk Gaura. Cp (GA, SC), Pd, Mt (GA): sandy fields, disturbed areas, and clearings; common. April-July. SC west to n. TN and s. IN, south to ne. FL and e. LA. [= RAB, C, G, K, W, Z; > *G. filipes* var. *filipes* – F, X; > *G. filipes* var. *major* Torrey & A. Gray – F, X; = *G. michauxii* Spach – S]

* ***Gaura parviflora*** Douglas ex Lehmann, Small-flowered Gaura. Cp (GA, SC), Pd (GA): sandy fields, disturbed areas, and clearings; rare, introduced from further west. May-July. IN and IL west to WA, south to MS, and Mexico; apparently introduced eastward to MA, TN, GA, and SC. Kartesz's (1999) adoption of *G. mollis* as the name for this taxon has been rejected (Wagner & Hoch 2000, Brummitt 2001). [= RAB, F, G, S, Z; = *G. mollis* James – K; > *G. parviflora* var. *parviflora* – X; > *G. parviflora* var. *lachnocarpa* Weatherby – X]

* ***Gaura sinuata*** Nuttall ex Seringe, Texas Gaura. Cp (GA, SC), Pd (GA): sandy fields, disturbed areas, and clearings; uncommon, introduced from further west. April-June. AR and OK south to s. TX, introduced eastward to SC and FL. [= RAB, K, X, Z]

Gaura drummondii (Spach) Torrey & A. Gray. Disjunct eastward in GA (Kartesz 1999). [= K] {not keyed at this time}

Gaura longiflora Spach. East to MD, PA, KY, TN, and AL (Kartesz 1999). [= K; = *G. biennis* Linnaeus var. *pitcheri* Torrey & A. Gray – C, F, G, X; > *G. filiformis* Small – S; > *G. longiflora* – S] {not keyed at this time}

Ludwigia Linnaeus 1753 (Seedbox, Water-primrose, Water-purslane)

A genus of about 82 species, herbs and shrubs, cosmopolitan. References: Peng (1989)=Z; Munz (1965)=X; Nesom & Kartesz (2000)=Q; Zardini, Gu, and Raven (1991)=V; Peng (1984, 1986, 1988); Peng & Tobe (1987); Raven (1963); Munz (1938, 1944); Eyde (1977, 1978, 1981); Raven & Tai (1979); Duke (1955). Key based in part on GW, Z, and Q.

1 Leaves opposite; plants creeping (rooting at the nodes); [section *Dantia*] ..... **Key A**
1 Leaves alternate; plants erect or ascending (not rooting at the nodes), or creeping (rooting at the nodes).
  2 Stamens 8-14; sepals 4-7; petals 4-7; [of various habits, including annual and perennial herbs and shrubs, variously erect, ascending, creeping, or forming floating mats] ..... **Key B**
  2 Stamens 4; sepals 4; petals 0-4; [perennial herbs, with erect ascending flowering stems] ..... **Key C**

Key A – *Ludwigia* with opposite leaves

1 Pedicels of flowers and fruits 5-35 mm long.
  2 Petals 7-11 mm long; pedicels of capsules 15-35 mm long, longer than the leaves ..... ***L. arcuata***
  2 Petals 4-5 mm long; pedicels of capsules 5-16 mm long, shorter than to equalling the leaves ..... ***L. brevipes***
1 Pedicels of flowers and fruits 0-3 mm long.
  3 Stems, leaves, capsules, and calyx densely hirsute; seeds dark reddish-brown, 0.3-0.4 mm long ..... ***L. spathulata***
  3 Stems, leaves, capsules, and calyx glabrous to sparsely puberulent; seeds tan, 0.4-0.8 mm long.
    4 Petals 0; floral tubes and capsules with 4 longitudinal dark green bands; bractlets (borne at or near base of floral tube) absent or present, if present then 0-1 mm long ..... ***L. palustris***
    4 Petals 4; floral tubes and capsules lacking green banding; bractlets (borne at or near base of floral tube) present, 2-4 mm long ..... ***L. repens***

Key B – *Ludwigia* with alternate leaves, 8-14 stamens, 4-7sepals, and 4-7 petals

1 Sepals 4; stamens 8; seeds in 2-several vertical series in each locule, free of endocarp tissue.
  2 Internodes of the stem conspicuously winged on the angles by 2 decurrent wings running down from each leaf base; petals 0.6-1.2 cm long; capsule 1.0-2.0 cm long, 4-angled or 4-winged; [section *Myrtocarpus*] ..... ***L. decurrens***
  2 Internodes of the stem not winged on the angles (or very faintly so); petals 1.0-5.0 cm long; capsule (1.5-) 2-5 cm long, obtusely 4-angled; [section *Macrocarpon*].
    3 Petals (1.5-) 3-5 cm long; sepals ca. 10 mm wide at base ..... ***L. bonariensis***
    3 Petals 1-2 cm long; sepals 3-5 mm wide at base ..... ***L. octovalvis***
1 Sepals 5 (-7); stamens 10 (-14); seeds in 1 vertical series in each locule, loosely embraced or embedded in endocarp tissue.
  4 Stems erect; floral tube much longer than the pedicel; seeds loosely embraced by a corky, horseshoe-shaped segment of endocarp; [section *Seminuda*] ..... ***L. leptocarpa***
  4 Stems (at least the lower portions) decumbent, creeping, or floating in mats (the flowering stems more-or-less erect in *L. grandiflora* and *L. hexapetala*); floral tube much shorter than the pedicel; seeds embedded in the woody endocarp; [section *Oligospermum*].
    5 Flowering stems decumbent, floating, or creeping; stem and leaves glabrous or glabrescent; petals mostly 1-1.5 cm long; anthers 1-1.7 mm long ..... ***L. peploides*** *var.* ***glabrescens***
    5 Flowering stems more-or-less erect; stem and leaves sparsely to densely pubescent with long soft hairs; petals (1.2-) 1.6-3 cm long; anthers 2.5-3.5 mm long.
      6 Sepals (6-) 8-11 (-14) mm long; primary leaves 5-8.5 cm long, 7-11 mm wide, usually linear-lanceolate, usually widest below the middle; petals (1.2-) 1.6-2.0 (-2.6) cm long; style 4.7-6.7 (-8.2) mm long; stems densely villous ..... ***L. grandiflora*** *ssp.* ***grandiflora***
      6 Sepals (8-) 12-19 mm long; primary leaves 5.5-13 cm long, 9-18 mm wide, usually narrowly elliptic to oblanceolate, usually widest above the middle; petals (1.5-) 2.0-2.9 (-3) cm long; style (5.8-) 6-10 mm long; stems sparsely to densely villous (rarely glabrous) ..... ***L. grandiflora*** *ssp.* ***hexapetala***

Key C – *Ludwigia* with alternate leaves, 4 stamens, 4 sepals, and 0-4 petals

1 Pedicels 2-15 mm long; capsules subglobose to spheric or cubic, about as long as wide, box-like, 4-angled, dehiscence by an apical pore (later sometimes also irregularly loculicidal); petals present, 4-15 mm long, persistent or caducous; roots fascicled, fusiform, tuberous; plants lacking basal, stoloniform shoots; [section *Ludwigia*].
  2 Leaves cuneate at base; pedicels 2-5 mm long; nectary discs at base of style flattish, inconspicuous; [widespread in our area, in a wide variety of habitats] ..... ***L. alternifolia***
  2 Leaves rounded or truncate at base; pedicels 4-15 mm long; nectary discs at base of style domed, prominent; [nearly restricted to the Coastal Plain, primarily of pinelands].
    3 Styles 6-10 mm long; plants glabrous, glabrescent, or pubescent with very short hairs; sepals strongly reflexed in fruit ..... ***L. virgata***
    3 Styles 1.5-3 mm long; plants glabrescent or pubescent with short to long, spreading to shaggy hairs; sepals strongly reflexed, spreading, or ascending in fruit.
      4 Sepals narrowly deltoid, broadest at or near the base, 3-4× as long as wide, ascending or spreading in fruit; plants glabrescent to hirtellous with long spreading hairs ..... ***L. hirtella***
      4 Sepals ovate, broadest near the middle, ca. 2× as long as wide, strongly reflexed in fruit; plants pubescent with relatively short, appressed to spreading hairs ..... ***L. maritima***
1 Pedicels 0-1 (-5) mm long; capsules subglobose, obconic, or obpyramidal, about as long as wide or longer than wide, circular to quadrangular in cross-section, dehiscence irregularly loculicidal; petals absent or present, if present (*L. linearis*, *L. linifolia*) then 0-6 mm long and caducous; roots fibrous or rhizomatous; plants frequently with basal, stoloniform shoots; [section *Microcarpium*].
  5 Capsules cylindrical, narrowly obconical, or narrowly obpyramidal, at least 2.5-5× as long as broad; petals present or absent.
    6 Primary leaves of the flowering stems narrowly elliptical, 6-12 (-20) mm wide; petals absent ..... ***L. glandulosa***

6 Primary leaves of the flowering stems linear, 1.5-5 mm wide; petals present.
7 Sepals (3.3-) 4-7 mm long; lateral and marginal veins obscure on lower leaf surface; seeds reddish brown; capsules cylindric, parallel-sided through most of their length, not grooved; anthers 0.5-1.1 mm long..... ***L. linifolia***
7 Sepals 2.3-5 (-5.6) mm long; lateral and marginal veins distinct on lower leaf surface; seeds yellowish; capsules elongate obpyramidal, tapering through most or all of their length, with a shallow longitudinal groove on each face; anthers 1.1-2 mm long.
8 Sepals 2.3-4 mm long, acuminate, the surfaces densely and minutely papillose, the papillae 0.02-0.05 mm long and appressed; capsules 5-8.5 (-10) mm long, 2-4 (-5) mm in diameter; pedicels 0-0.4 mm long; seed surface cells elongate parallel to the seed length (as seen at 20× or more); anthers 1.1-1.6 mm long ..... ***L. linearis*** *var*. ***linearis***
8 Sepals 3-5 (-5.6) mm long, elongate-acuminate to cuspidate, the surfaces densely minutely strigillose, the hairs 0.06-0.10 mm long and appressed to ascending; capsules 5-10 (-12) mm long, 3-5.5 mm in diameter; pedicels 0-3.5 (-5) mm long; seed surface cells elongate transverse to the seed length, or irregular (as seen at 20× or more); anthers (1.1-) 1.3-2 mm long..... ***L. linearis*** *var*. ***puberula***

5 Capsules subglobose, obovoid, or broadly obpyramidal, 1-1.5 × as long as broad; petals absent.
9 Flowers in compact, headlike or elongate spikes, the inflorescence lacking well-developed leaves; stems rarely branched; rhizomes often present..... ***L. suffruticosa***
9 Flowers axillary in the axils of well-developed leaves; stems usually much branched; rhizomes absent.
10 Plants densely pubescent throughout.
11 Sepal apex elongate-acuminate or subcuspidate, reflexed; pubescence of stems and leaves hirtellous (the hairs spreading); seed surface cells suborbicular (as seen at 20× or more); anthers 0.6-0.9 (-1.3 mm long; style 1-2 mm long..... ***L. pilosa***
11 Sepal apex acuminate, ascending; pubescence of stems and leaves strigillose (the hairs appressed) or hirtellous (the hairs spreading); seed surface cells elongate; anthers 0.3-0.8 mm long; style 0.25-1 (-1.25) mm long.
12 Plants hirtellous; capsules oblong-obovoid; sepals greenish on the upper surface; bracteoles (1.5-) 2-4.3 mm long, borne at or near the base of the capsule; seed surface cells elongate transverse to the seed length; anthers 0.3-0.35 mm long; style 0.25-0.5 mm long ..... ***L. ravenii***
12 Plants strigillose; capsules subglobose; sepals yellowish on the upper surface; bracteoles 0.5-1.5 mm long, usually borne on the short pedicel; seed surface cells in patches, some patches with cells elongate parallel to seed length, others with cells transverse to seed length, others with cells diagonal (rather resembling a badly laid-out parque floor); anthers 0.5-0.8 mm long; style 0.55-1 (-1.25) mm long ..... ***L. sphaerocarpa***
10 Plants glabrous or subglabrous throughout.
13 Primary leaves of the flowering stems 4-17 mm long, 1.5-10 mm wide, mostly obovate-spatulate and 1.5-3× as long as wide; capsules 1-1.5 (-2) mm long, containing 10-20 dark reddish-brown seeds; plants typically 1-4 dm tall ..... ***L. microcarpa***
13 Primary leaves of the flowering stems (18-) 30-110 mm long, 2-10 (-20) mm wide, mostly elliptic, lanceolate, oblanceolate, or linear and 4-20× as long as wide; capsules 1.8- 2-7 mm long, containing 40-500 light brown, yellowish, or tan seeds; plants typically 3-10 dm tall.
14 Capsules obpyramidal, the corners narrowly winged with wings 0.3-0.9 mm wide; bracteoles 1.5-4.7 mm long.
15 Stems often distinctly ridged or winged; sepals creamy-white, nearly as long as the capsule; capsule wall bulging out longitudinally between the wings; seed surface cells elongate parallel to the seed length..... ***L. alata***
15 Stems nearly smooth or slightly ridged; sepals greenish, about 1/2 as long as the capsule; capsule wall flat between the wings; seed surface cells suborbicular..... ***L. lanceolata***
14 Capsules oblong-ovoid or subglobose, the corners not winged; bracteoles either 0.5-1.5 mm or 3.5-6.5 (-8) mm long.
16 Bracteoles 3.5-6.5 (-8) mm long; sepals green, the apex long-acuminate, reflexed; capsules oblong-obovoid; seed surface cells elongate parallel to the seed length; [known from our area only in the Piedmont of VA] ..... ***L. polycarpa***
16 Bracteoles 0.5-1.5 mm long; sepals yellowish, the apex acuminate, ascending capsules subglobose; seed surface cells in patches, some patches with cells elongate parallel to seed length, others with cells transverse to seed length, others with cells diagonal (rather resembling a badly laid-out parque floor); [of the Coastal Plain of GA, NC, SC, and VA in our area]..... ***L. sphaerocarpa***

Ludwigia alata Elliott, Winged Seedbox. Cp (GA, NC, SC, VA): interdune ponds, freshwater to slightly brackish (oligohaline) marshes; rare (NC Rare, VA Rare). June-September. Se. VA south to s. FL, west to se. LA; disjunct in Jamaica. This species is a hexaploid (n = 24). One third of the genome of *L. alata* is apparently derived from *L. microcarpa* or its ancestor (Peng 1988). [= RAB, C, F, G, K, Z; > *L. alata* – GW, in part only (also see *L. lanceolata*); > *L. alata* – S, in a narrower sense; > *L. simulata* Small – S]

Ludwigia alternifolia Linnaeus, Alternate-leaf Seedbox. Mt, Pd, Cp (GA, NC, SC, VA): ditches, marshes, open wet places, disturbed wet places; common. May-October. MA west to s. Ontario, s. MI, IA, and KS, south to n. FL and e. TX. [= RAB, G, GW, K, S, W; > *L. alternifolia* var. *alternifolia* – C, F; > *L. alternifolia* var. *pubescens* E.J. Palmer & Steyermark – C, F]

Ludwigia arcuata Walter. Cp (GA, SC): marshes or submerged in water of natural Coastal Plain ponds; rare. June-September. SC south to s. FL, west to panhandle FL and s. AL. [= RAB, GW, K; = *Ludwigiantha arcuata* (Walter) Small – S]

* ***Ludwigia bonariensis*** (M. Micheli) Hara. Cp (NC, SC): freshwater tidal marshes and adjacent disturbed areas; rare, apparently introduced from tropical America. June-September. Locally abundant in disturbed edges of freshwater tidal marshes near Wilmington, NC, perhaps introduced on ship's ballast. Material from Wilmington apparently has larger flowers than material of *L. bonariensis* elsewhere; its source and appropriate taxonomic treatment uncertain and needing further study. First reported for SC by Leonard (1971b). [= RAB, GW, K; = *Jussiaea neglecta* Small – S]

Ludwigia brevipes (B.H. Long ex Britton, A. Braun, & Small) Eames, Long Beach Seedbox, Coastal Plain Water-purslane. Cp (GA, NC, SC, VA): pondshores, blackwater rivers, interdunal swales, borrow ponds, ditches, impoundments, marshes; rare (NC Rare, VA Rare). July-October. NJ south to e. GA (Jones & Coile 1988), in the Coastal Plain. [= RAB, C, F, G, GW, K]

Ludwigia decurrens Walter, Wingstem Water-primrose. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, ditches; common (rare in VA Mountains). June-October. MD, w. VA, WV, s. IN, s. IL, and MO, south to s. FL and TX; also in tropical America. [= RAB, C, GW, K, W; = *Jussiaea decurrens* (Walter) Augustin de Candolle – F, G, S]

Ludwigia glandulosa Walter, Small-flowered Seedbox. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): low forests, marshes, ditches; common (VA Watch List). June-September. E. MD south to n. FL, west to e. TX, north in the interior to c. TN, w. KY, s. IN, s. IL, se. MO, c. AR, and se. OK, primarily on the Southeastern Coastal Plain. A related species, treated by Peng as *L. glandulosa* ssp. *brachycarpa* (Torrey & A. Gray) Peng, ranges from sw. LA north and west to s. OK and c. TX. This species is tetraploid (n = 16). [< *L. glandulosa* – RAB, C, F, G, GW, S, in a broader sense; = *L. glandulosa* ssp. *glandulosa* – K, Z]

* ***Ludwigia grandiflora*** (Michaux) Greuter & Burdet *ssp.* ***grandiflora***, Showy Water-primrose. Cp (GA, SC): ponds, lakes, sluggish waters of ditches or streams; rare. May-September. Se. SC south to FL, west to TX; disjunct in MO, Guatemala, and in s. South America. This taxon is hexaploid (n= 24). See Zardini, Gu, and Raven (1991) and Nesom & Kartesz (2000) for additional information. [= Q; < *L. uruguayensis* (Cambessedes) Hara – RAB, C, GW, K (also see *L. hexapetala*); = *L. grandiflora* (Michaux) Zardini, Gu, & Raven – V]

* ***Ludwigia grandiflora*** (Michaux) Greuter & Burdet *ssp.* ***hexapetala*** (Hooker & Arnott) Nesom & Kartesz, Common Water-primrose. Cp (NC, SC), Pd (GA, NC, VA), Mt (VA): ponds, lakes, sluggish waters of ditches or streams; uncommon (but often locally abundant). May-September. NC south to FL, west to OK and TX; also in CA, Europe, South America, Mexico; also introduced farther north in North America. This taxon is decaploid (n = 40). See Zardini, Gu, and Raven (1991) and Nesom & Kartesz (2000) for additional information. [= Q; < *L. uruguayensis* (Cambessedes) Hara – RAB, C, GW, K, W, in part (also see *L. grandiflora*); < *Jussiaea uruguayensis* Cambessedes – F, G; *Jussiaea michauxiana* Fernald – F; = *L. hexapetala* (Hooker & Arnott) Zardini, Gu, & Raven – V]

Ludwigia hirtella Rafinesque, Rafinesque's Seedbox. Cp (GA, NC, SC, VA), Pd (GA), Mt (GA, NC): savannas, rarely in mountain bogs; common (VA Rare). June-September. S. NJ south to panhandle FL, west to e. TX, north in the interior to KY, c. TN, AR, and se. OK. [= RAB, C, F, G, GW, K, S, W]

Ludwigia lanceolata Elliott, Lanceleaf Seedbox. Cp (GA, NC, SC): interdune ponds, open wet areas; rare (NC Rare). August-September. Se. NC south to c. peninsular FL, west to panhandle FL. This species is tetraploid (n = 16). [= RAB, K, S, Z; < *L. alata* – GW, in part]

Ludwigia leptocarpa (Nuttall) Hara, Water-willow. Cp (GA, NC, SC, VA), Pd (GA, VA), Mt (GA): riverbanks, marshes, and ditches; common, uncommon in VA (VA Watch List). June-September. VA south to c. peninsular FL, west to e. TX, north in the interior to se. MO and s. IL; and in tropical America. [= RAB, C, GW, K, W; = *Jussiaea leptocarpa* Nuttall – F, G, S]

Ludwigia linearis Walter *var.* ***linearis***, Eastern Narrowleaf Seedbox. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): savannas; common. June-September. Var. *linearis* ranges from s. NJ south to c. peninsular FL, west to se. LA, extending inland to the Cumberland Plateau of nc. AL and c. TN. Var. *linearis* is here interpreted to be equivalent to Peng's subglabrous morph. Peng (1989) declines to recognize infraspecific taxa in *L. linearis*, but his discussion makes clear that 2 distinctive entities are present, as characterized by orientation of seed surface cells and characters of leaves, bracteoles, pedicels, sepals, stigmas, and styles (see key). The orientation of seed surface cells, recognized as a distinctive character in other difficult species pairs (such as *L. alata* and *L. lanceolata*) is the most reliable character separating the 2 varieties. This species is diploid (n = 8). [< *L. linearis* – RAB, C, F, G, GW, K, S, W, Z]

Ludwigia linearis Walter *var.* ***puberula*** Engelmann & A. Gray, Western Narrowleaf Seedbox. Cp (GA, NC, SC, VA), Pd (GA, SC): savannas, interdunal swales; uncommon. June-September. Var. *puberula* ranges primarily from c. AL west to c. AR, south to e. TX, with intergradational material extending as far north and east as n. FL and e. NC. Var. *puberula* is here interpreted to include Peng's intermediate morph, densely strigillose morph, and completely glabrous morph (Peng 1989). As pointed out by Peng (1989), the glabrous morph is exactly like the densely strigillose morph except for the absence of pubescence. They often grow together, have essentially the same distribution, and may differ only at a single allele. Peng's intermediate morph is heterogeneous; some likely being truly intermediate between (and possibly hybrid derivatives of) the two varieties here recognized, while others clearly belong to var. *puberula* (based on surface cell orientation and floral characteristics) and merely have an amount of pubescence intermediate between the densely strigillose and completely glabrous morphs. [< *L. linearis* – RAB, C, F, G, GW, K, S, W, Z]

Ludwigia linifolia Poiret in Lamarck, Flaxleaf Seedbox. Cp (GA, NC, SC), Pd (NC): limesink ponds (dolines) and *Taxodium ascendens* savannas; rare (NC Rare). June-September. Nc. NC south to s. FL, west to s. MS; disjunct in Tabasco, Mexico. This species is diploid (n = 8). [= RAB, GW, K, S, Z]

Ludwigia maritima Harper, Harper's Seedbox. Cp (GA, NC, SC): savannas; common. June-September. E. NC south to s. peninsular FL, west to e. LA. [= RAB, GW, K, S]

Ludwigia microcarpa Michaux, Small-fruited Seedbox. Cp (GA, NC, SC), Pd (GA, NC), Mt (GA): in circumneutral or alkaline soils of moist places, over calcareous rock, mafic rock, shell hash, or brackish sands, such as in maritime wet grasslands, savannas and adjacent ditches over coquina limestone ("marl"), and wet clay flats over diabase, often in roadside ditches; uncommon. July-October. Ne. NC south to s. FL, west to se. TX (Brown & Marcus 1998); disjunct inland on calcareous or mafic rocks in nc. NC, n. GA, n. AL, c. TN, and sc. MO; also in the Bahamas, Cuba, and Jamaica. This species is diploid (n = 8). [= RAB, F, GW, K, S, W, Z]

Ludwigia octovalvis (Jacquin) Raven. Cp (GA, NC, SC): marshes, disturbed areas; rare. May-September. Se. NC south to s. FL, west to TX; and widespread in tropical America. [= GW; > *L. octovalvis* spp. *octovalvis* – K; > *L. octovalvis* ssp. *sessiliflora* (M. Micheli) Raven – K; > *Jussiaea angustifolia* Lamarck – S; > *Jussiaea scabra* Willdenow – S]

Ludwigia palustris (Linnaeus) Elliott, Common Water-purslane. Cp, Pd, Mt (GA, NC, SC, VA): moist to wet disturbed areas; common. May-October. Widespread in North America, Eurasia, and Africa. [= RAB, C, GW, K, W; > *L. palustris* var. *americana* (Augustin de Candolle) Fernald & Griscom – F, G; > *L. palustris* var. *nana* Fernald & Griscom – F; = *Isnardia palustris* Linnaeus – S]

*? ***Ludwigia peploides*** (Humboldt, Bompland, & Kunth) Raven *var.* ***glabrescens*** (Kuntze) Shinners. Cp (GA, NC, VA), Mt (VA), Pd (GA, SC, VA): pools, ditches, disturbed places; rare. May-September. PA, VA and NC south and west to FL and AZ, widespread in the West Indies, Central and South America. Doubtfully native in all or part of our area. [= RAB, C; *L. peploides* ssp. *peploides* – GW; *Jussiaea diffusa* Forskl. – S; *Jussiaea grandiflora* Michaux – S; = *Jussiaea repens* Linnaeus var. *glabrescens* Kuntze – F, misapplied; *Jussiaea repens* – G, misapplied; = *L. peploides* ssp. *glabrescens* (Kuntze) Raven – K; < *L. peploides* – W, infraspecific taxa not distinguished]

Ludwigia pilosa Walter, Hairy Seedbox. Cp (GA, NC, SC, VA), Pd (NC, VA): ditches, wet places; common, rare in VA (VA Rare). June-October. Se. VA south to n. FL, west to se. TX, restricted to the Coastal Plain except for disjunct occurrences inland in NC, VA, and n. AL. This species is tetraploid (n= 16). [= K, W, Z; < *L. pilosa* – RAB, C, F, G, GW, S (also see *L. ravenii*)]

Ludwigia polycarpa Short & Peter. Pd (VA): {habitat}; rare (VA Watch List). June-September; July-October. MA, CT, and w. VT west to s. Ontario, MI, WI, MN, and c. NE, south to c. VA, KY, s. IL, s. MO, and e. KS. This species is tetraploid (n = 16). [= C, F, G, GW, K, S, Z]

Ludwigia ravenii Peng, Raven's Seedbox. Cp (NC, SC, VA): savannas, swamps, marshes, wet open places; rare (NC Watch List, VA Rare). June-October. Se. VA south to ne. FL (no known records for GA), restricted to the Coastal Plain. For further information, see Peng (1984, 1988, 1989). This species is tetraploid (n = 16). [= K, Z; < *L. pilosa* – RAB, C, F, G, GW, S (included within concept of *L. pilosa* by most earlier authors)]

Ludwigia repens Forster, Creeping Seedbox. Cp (GA, NC, SC, VA), Pd (GA): ditches, pools, and streams; uncommon (VA Rare). June-September. Se. VA south to s. FL, west to TX and n. Mexico, north in the interior to TN, MO, and OK; also in CA, Bermuda, and the West Indies. Reveal et al. (2003) propose the name *L. repens* for nomenclatural conservation with a conserved type; if this proposal is not accepted, *L. natans* Elliott will become the name of this species. [= RAB, GW, K; *Ludwigia natans* Elliott – F, G; *Isnardia repens* – S]

Ludwigia spathulata Torrey & A. Gray, Southern Water-purslane. Cp (GA, SC), Pd (GA): sinkhole ponds, cypress-gum ponds, depression meadows, boggy shores; rare (GA Special Concern, NC Rare, SC Rare). June-October. SC south to panhandle FL and s. AL. [= RAB, GW, K; *Isnardia spathulata* (Torrey & A. Gray) Small – S]

Ludwigia sphaerocarpa Elliott, Globe-fruited Seedbox. Cp (GA, NC, SC, VA): boggy areas, pools, ditches, river marshes, interdune swales, river and pondshores; rare (NC Watch List, VA Rare). June-September. E. MA south to n. FL, west to e. TX, primarily on the Coastal Plain, spottily distributed in that range, and also disjunct in w. NY, sc. TN, s. IN, and nw. IN and ne. IL. This species is tetraploid (n = 16). Peng (1989) considers it likely that *L. sphaerocarpa* is of allopolyploid origin, one or both of its parents now extinct. [= RAB, C, GW, K, S, Z; > *L. sphaerocarpa* var. *sphaerocarpa* – F, G; > *L. sphaerocarpa* var. *jungens* Fernald & Griscom – F, G]

Ludwigia suffruticosa Walter, Shrubby Seedbox. Cp (GA, NC, SC): periodically to seasonally flooded portions of limesink ponds (dolines) and clay-based Carolina bays; rare north of SC (NC Rare). June-October. Se. NC south to s. peninsular FL, west to panhandle FL and se AL. This species is tetraploid (n = 16). Peng (1989) reports that "with its whitish creamy sepals, which are very showy in the dense flower aggregates, the cross-pollinating *L. suffruticosa* successfully attracts many insects, mostly bumblebees, honeybees, and wasps." [= RAB, GW, K, S, Z; = *L. capitata* Michaux]

Ludwigia virgata Michaux, Savanna Seedbox. Cp (GA, NC, SC, VA): wet savannas; common (VA Rare). June-September. Se. VA south to s. peninsular FL, west to panhandle FL and se. AL. [= RAB, C, F, GW, K, S]

Ludwigia peruviana (Linnaeus) Hara, in s. GA (Jones & Coile 1988). Reported for NC (Kartesz 1999). {investigate} [= K; *Jussiaea peruviana* Linnaeus]

The following natural hybrids are known, not necessarily in our area. Hybrids are generally recognizable from their intermediate morphology and usual association with their two parents. However some hybrids resemble one parent much more than the other, and some hybrids are found in populations independent (and even disjunct) from one or both parents. Allopolyploidy may have had a major role in the evolution of this genus, especially section *Microcarpium*, which has a majority of polyploid species.

L. alata × *pilosa*. Pentaploid, sterile.
L. alata × *suffruticosa*. Pentaploid, sterile.

L. arcuata × *pilosa*.
L. glandulosa × *linearis*. Triploid, sterile.
L. glandulosa × *palustris*. Triploid, sterile.
L. glandulosa × *pilosa*. Tetraploid, fertile.
L. glandulosa × *sphaerocarpa*. Tetraploid, fertile.
L. lanceolata × *pilosa* [= *L.* ×*simulata* Small (pro sp.)]. Tetraploid, fertile.
L. lanceolata × *suffruticosa*. Tetraploid, fertile. Frequent south of our area.
L. linearis × *sphaerocarpa*. Triploid, sterile.
L. microcarpa × *palustris*.
L. pilosa × *ravenii*. Tetraploid, fertile.
L. pilosa × *sphaerocarpa*. Tetraploid, fertile. Frequent.
L. pilosa × *suffruticosa*. Tetraploid, fertile.
L. polycarpa × *sphaerocarpa*. Tetraploid, fertile.

Oenothera Linnaeus 1753 (Evening-primrose)
(also see *Calylophus*)

A genus of about 124 species, herbs, of America (especially temperate regions). This treatment provisional, with further revision likely, especially in the *Oe. fruticosa*-*Oe. tetragona*-*Oe. pilosella* complex. References: Dietrich, Wagner, & Raven (1997)=Z; Dietrich & Wagner (1988)=Y; Munz (1965)=X; Straley (1977)=V. Keys adapted in part from those references.

1 Ovary essentially terete; fruit terete or with 4 rounded ridges; stamens equal in length (except in *Oe. speciosa*).
  2 Flowers white or pink; flower buds nodding; [section *Hartmannia*] ..... ***Oe. speciosa***
  2 Flowers yellow; flower buds erect; [section *Oenothera*]
    3 Fruit linear, nearly isodiametric through its length; seeds borne ascending in the locules, rounded or fusiform, more or less regularly pitted; [section *Oenothera*, subsection *Raimannia*].
      4 Petals acute to rounded at the apex.
        5 Inflorescence dense, with > 2 flowers per spike opening each day; leaves gray-green ..... ***[Oe. clelandii]***
        5 Inflorescence lax, 1-2 flowers per spike opening on each day; leaves green..... ***Oe. curtissii***
      4 Petals truncate to emarginate at the apex.
        6 Nonflowering portion of stems stiff, densely strigillose or sometimes also villous; leaves gray-green, densely strigillose, usually subentire to shallowly dentate (rarely lyrate); [in maritime situations].
          7 Sepals 2.0-3.3 cm long; petals 2.5-4.5 cm long; stigma elevated above the anthers at anthesis; capsule 2.5-5.5 cm long; rosette leaves 5-14 cm long, 1-2 cm wide..... ***Oe. drummondii*** *ssp.* ***drummondii***
          7 Sepals 0.3-1.1 cm long; petals 0.45-1.6 cm long; stigma surrounded by the anthers at anthesis; capsule 1.5-4.5 cm long; rosette leaves 4-8 cm long, 0.7-1.0 cm wide..... ***Oe. humifusa***
        6 Nonflowering portion of stem not stiff, moderately to sparsely strigillose to sometimes densely villous, and also more orless glandular puberulent; leaves green, sparsely to moderately strigillose and usually villous, deeply lobed to dentate (rarely some of them subentire); [in inland disturbed situations].
          8 Petals 2.5-4 cm long; style 4-7.5 cm long; stigma lobes well elevated above the anthers at anthesis.. ..... ***Oe. grandis***
          8 Petals 0.5-2.2 cm long; style 2-5 cm long; stigma lobes surrounded by the anthers at anthesis .... ***Oe. laciniata***
    3 Fruit thickest near the base, tapering to the apex; seeds borne horizontally in the locules, angled-prismatic, not regularly pitted; [section *Oenothera*, subsection *Oenothera*].
      9 Stigma elevated above the anthers at anthesis; petals 2.5-5 cm long.
        10 Cauline leaves 0.4-1.0 cm wide; apex of the inflorescence curved; free sepal tips subterminal, usually spreading; capsules spreading at nearly right angles to the stem, long-attenuate toward apex, usually conspicuously arcuate..... ***Oe. argillicola***
        10 Cauline leaves 1.5-6 cm wide; apex of the inflorescence erect; free sepal tips terminal, erect; capsules erect or slightly spreading, gradually attenuate toward the apex.
          11 Upper stem, ovary, floral tube, and sepals always conspicuously pubescent, usually with at least some red-pustulate hairs; bracts green, persistent; sepals often flushed with red, or red-striped..... ..... ***Oe. glazioviana***
          11 Upper stem, ovary, floral tube, and sepals often apparently glabrous without magnification; pustulate hairs absent, or if present not red (in fresh material); bracts often pale-green and deciduous; sepals yellowish green, or flushed with some red..... ***Oe. grandiflora***
      9 Stigma surrounded by or below the anthers at anthesis; petals 0.7-2.5 (-3) cm long.
        12 Plant appearing exclusively appressed-pubescent (as seen without magnification).
          13 Apex of the inflorescence curved; free sepal tips subterminal in bud, erect to spreadin; dry capsules usually rusty brown ..... ***Oe. oakesiana***

13 Apex of the inflorescence erect; free sepal tips erect in bud; dry capsules gray-green or dull green.
14 Leaves green to pale green; stems, ovary, floral tube, and sepals sparsely appressed-pubescent ..... ***Oe. biennis***
14 Leaves dull green to gray-green; stems, ovary, floral tube, and sepals densely appressed-pubescent ..... ***Oe. villosa*** *ssp.* ***villosa***

12 Plant appearing **either** glabrous **or** with a mixture of long pustular hairs and appressed pubescence (as seen without magnification).
15 Apex of inflorescence curved; free sepal tips subterminal in bud.
16 Plant (at least the lower portions) predominantly strigillose; leaves dull green to gray-green; dry capsules rusty brown ..... ***Oe. oakesiana***
16 Plant predominantly erect-pubescent or appearing glabrous (as seen without magnification); leaves usually bright green; dry capsules usually dark green or black..... ***Oe. parviflora***
15 Apex of inflorescence erect; free sepal tips terminal or subterminal in bud.
17 Inflorescence conspicuously pubescent ..... ***Oe. biennis***
17 Inflorescence glabrous (or appearing so without magnification).
18 Free sepal tips terminal in bud; petals 1.4-2.5 (-3) cm long; bracts caducous, pale green; capsules dull green when dry; petals fading yellowish-white to translucent..... ***Oe. nutans***
18 Free sepal tips subterminal in bud; petals 0.8-1.5 (-2) cm long; bracts persistent, green; capsules usually black or dark green when dry; petals fading pale yellow, usually opaque ..... ***Oe. parviflora***

1 Ovary 4-angled or 4-winged (at least near its tip); fruit sharply 4-angled or 4-winged; stamens of two lengths (except *Oe. triloba* and *Oe. macrocarpa* ssp. *macrocarpa*).
19 Leaves all basal, pinnatifid; [section *Lavauxia*] ..... ***Oe. triloba***
19 Leaves in part cauline, entire or toothed.
20 Petals 50-70 mm long; flowers opening in the evening; wings of the fruit 10-25 mm wide; [section *Megapterium*]. ..... ***[Oe. macrocarpa*** *ssp.* ***macrocarpa]***
20 Petals 3-30 mm long; flowers opening in the day; wings of the fruit <3 mm wide; [section *Kneiffia*]
21 Cauline leaves linear, < 1 mm wide; petals 3-5 (-7) mm long; floral bracts shorter than the subtended ovaries; mature fruits ellipsoid-rhomboid, 4-6 mm long; annual; [section *Kneiffia*, subsection *Peniophyllum*]..... ***Oe. linifolia***
21 Cauline leaves lanceolate to ovate, > 1 mm wide; petals 5-30 mm long; floral bracts longer than the subtended ovaries; mature fruits clavate to oblong-elliptic, 8-20 mm long; perennial; [section *Kneiffia*, subsection *Kneiffia*].
22 Petals 5-10 mm long; inflorescence usually nodding ..... ***Oe. perennis***
22 Petals 15-30 mm long; inflorescence usually erect.
23 Plant conspicuously pilose-hirsute with hairs 1-3 mm long; free sepal tips 1-4 mm long, divergent .. .. ***Oe. pilosella***
23 Plant either with shorter or appressed pubescence, of glandular or nonglandular hairs; free sepal tips 0-2 (-6) mm long, divergent or not.
24 Capsules oblong, widest near the middle, usually abruptly tapered to a stipe 0.1-3 (-7) mm long; hairs of the ovary and capsule predominantly glandular (or the ovary glabrous); leaves subglabrous or sparsely pubescent, more or less dentate.
25 Petals (20-) 25-35 mm long; cauline leaves lanceolate to ovate, 2-7 cm long, 1-3 cm wide, often glaucous beneath..... ***Oe. tetragona*** *var.* ***fraseri***
25 Petals 12-20 (-25) mm long; cauline leaves linear to lanceolate, 2-7 cm long, 0.5-1.0 (-1.5) cm wide ..... ***Oe. tetragona*** *var.* ***tetragona***
24 Capsules clavate, widest above the middle, gradually tapered to a stipe 3-10 mm long; hairs of the ovary and capsule nonglandular (or with a mixture of glandular and nonglandular hairs); leaves generally pubescent, subentire.
26 Petals 15-30 mm long; stems 7-12 dm tall, freely branched, slightly pubescent; cauline leaves lanceolate, 5-12 cm long, 0.5-1.5 cm wide; [of tidal marshes, usually with spongy lower stems and adventitious roots where regularly submerged] ..... ***Oe. riparia***
26 Petals (8-) 15-22 mm long; stems 1-8 dm tall, less branched (unless mowed, grazed, or otherwise damaged), more pubescent; cauline leaves 2-6 (-8) cm long, 0.2-1.0 (-1.2) cm wide.
27 Capsule vestiture a mixture of glandular and nonglandular hairs.
28 Cauline leaves not velutinous, 5-10× as long as wide..... ..... ***Oe. tetragona*** *var.* ***brevistipata***
28 Cauline leaves velutinous, 2-4× as long as wide.
29 Petals 7-12 mm long; leaves lance-oblong, obtuse; [of barrens of TN, KY, and AL]..... ***[Oe. tetragona*** *var.* ***sharpii]***
29 Petals 15-20 mm long; leaves lanceolate, acute; [of the Atlantic Coastal Plain]..... ***Oe. tetragona*** *var.* ***velutina***
27 Capsule vestiture strictly nonglandular.

30 Free sepal tips 1-3 mm long, often arching; calyx strigose ..... ***Oe. fruticosa*** *var*. ***unguiculata***

30 Free sepal tips < 1 mm long; calyx various.

31 Capsule body 6-11 mm long, the pubescence rather coarse ..... ***Oe. fruticosa*** *var*. ***fruticosa***

31 Capsule body 3-5 mm long, the pubescence very fine.

32 Capsule body 3.5-4 mm long, strigose-pilose; [of Coastal Plain bogs] ..... ***Oe. fruticosa*** *var*. ***microcarpa***

32 Capsule body 4-5 mm long; very finely strigillose; [of Piedmont rock outcrops] ..... ***Oe. fruticosa*** *var*. ***subglobosa***

Oenothera argillicola Mackenzie, Shale-barren Evening-primrose. Mt (VA): shale barrens and woodlands; uncommon. Sc. PA south through MD to e. WN and w. VA (south to Montgomery County). [= C, F, G, H, K, W, Z; > *Oe. argillicola* var. *argillicola* – X; > *Oe. argillicola* var. *pubescens* Core & Davis – X]

Oenothera biennis Linnaeus, Common Evening-primrose. Mt, Pd, Cp (GA, NC, SC, VA): fields, pastures, roadsides, disturbed areas; common. June-October. Ranging widely in e. North America and Europe, and scattered in w. North America. [= H, K, W, Z; < *Oe. biennis* – RAB, G, S (also see *Oe. nutans*); = *Oe. biennis* var. *biennis* – C, F; > *Oe. biennis* var. *biennis* – F, in a narrower sense; > *Oe. biennis* var. *pycnocarpa* (Atkinson & Bartlett) Wiegand – F; > *Oe. biennis* ssp. *caeciarum* Munz – X; > *Oe. biennis* ssp. *centralis* Munz – X]

Oenothera curtissii Small. Cp (GA, SC): sandhills, sandy fields; rare. May-September. Se. SC south to n. peninsular FL, west to s. AL. Closely related to *Oe. rhombipetala*, which is restricted to the Great Plains, with scattered occurrences east to AR, IL, and MI. [= K, Y; < *Oenothera rhombipetala* Nuttall ex Torrey & A. Gray – RAB, F, X, misapplied; = *Raimannia curtissii* Rose – S]

****?*** ***Oenothera drummondii*** Hooker *ssp.* ***drummondii,*** Drummond's Evening-primrose. Cp (NC, SC): sandy ocean beaches; rare, perhaps only introduced or adventive from the Gulf Coast. April-October. Ssp. *drummondii* ranges from se. NC south to s. FL, west to se. TX, and south to Tamaulipas and Vera Cruz. Ssp. *thalassiphila* (Brandegee) W. Dietrich & W.L. Wagner is restricted to the southern tip of Baja California. [= Y; < *Oe. drummondii* – RAB, K; < *Raimannia drummondii* (Hooker) Rose ex Sprague & Riley – S; = *Oe. drummondii* var. *drummondii* – X]

Oenothera fruticosa Linnaeus *var*. ***fruticosa***, Southern Sundrops. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, VA): dry forests and woodlands, glades, and rock outcrops; common. April-August. MA west to IN, south to FL and LA. [= F, G, X; < *Oe. fruticosa* – RAB, C; < *Oe. fruticosa* ssp. *fruticosa* – H, K, V, W; > *Oe. fruticosa* var. *linearis* (Michaux) S. Watson – F; > *Oe. fruticosa* var. *humifusa* Allen – F, G, X; > *Kneiffia fruticosa* (Linnaeus) Raimann – S; > *Kneiffia arenicola* Small – S; > *Kneiffia semiglandulosa* Pennell – S]

Oenothera fruticosa Linnaeus *var*. ***microcarpa*** Fernald, Small-fruited Sundrops. Cp (NC, SC, VA): boggy depressions. April-August. E. MD south to e. SC. [= F, X; < *Oe. fruticosa* – RAB, C; < *Oe. fruticosa* ssp. *fruticosa* – H, K, V]

Oenothera fruticosa Linnaeus *var*. ***subglobosa*** (Small) Munz, Flatrock Sundrops. Pd (GA): granite flatrocks and domes; rare. GA to AL. [= X; < *Oe. fruticosa* – RAB, C; < *Oe. fruticosa* ssp. *fruticosa* – H, K, V; = *Kneiffia subglobosa* Small – S]

Oenothera fruticosa Linnaeus *var*. ***unguiculata*** Fernald, Southern Sundrops. Cp (NC, SC, VA): sandhills, moist to wet loamy savannas; uncommon. April-August. Se. VA south to e. SC. [= F, X; < *Oe. fruticosa* – RAB, C; < *Oe. fruticosa* ssp. *fruticosa* – H, K, V]

* ***Oenothera glazioviana*** Micheli in Martius, Garden Evening-primrose. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas; uncommon. This species apparently arose as a garden hybrid, and has been widely cultivated and naturalized nearly worldwide. [= K, Z; = *Oe. erythrosepala* Borbás – X]

Oenothera grandiflora L'Héritier ex Aiton. Cp, Pd, Mt (GA?, NC, SC): disturbed areas; uncommon. June-October. VT west to KY, south to c. peninsular FL and s. MS. [= F, K, X, S, Z]

* ***Oenothera grandis*** (Britton) Smyth. Cp (NC): roadsides; rare, introduced from further west. March-July. The native range of this species is centered in KS, OK, and TX. [= K, X, Y; = *Oe. laciniata* Hill var. *grandiflora* (S. Watson) B.L. Robinson – RAB, F, G]

Oenothera humifusa Nuttall, Seabeach Evening-primrose, Spreading Evening-primrose. Cp (GA, NC, SC, VA): coastal sand dunes; common. Early May-October. S. NJ south to s. FL, west to s. LA, along the coast. [= RAB, C, F, G, H, K, X, Y; = *Raimannia humifusa* (Nuttall) Rose – S]

Oenothera laciniata Hill, Cutleaf Evening-primrose. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas; common. February-October. ME west to ND, south to s. FL and TX; also in CA. [= K, W; = *Oe. laciniata* var. *laciniata* – RAB, C, F, G; = *Raimannia laciniata* (Hill) Rose – S; = *Oe. laciniata* ssp. *laciniata* – X]

Oenothera linifolia Nuttall, Threadleaf Sundrops, Flaxleaf Sundrops. Pd (GA, NC, SC, VA*), Cp (GA, SC), Mt (GA): dry openings and fields; rare (SC Rare, VA Watch List). C. VA west to s. IL and se. KS, south to panhandle FL and se. TX. Occurrences east of the Mississippi River may be mainly or entirely adventive. Belden et al. (2004) discuss the Virginia occurrence. [= RAB, C, F, G, K, W, V, X; = *Peniophyllum linifolium* (Nuttall) Pennell – S]

Oenothera nutans Atkinson & Bartlett. Mt, Pd (GA?, NC, SC?, VA): roadsides, openings, forest edges, pastures; common (NC Watch List, VA Watch List). July-October. ME west to MI, south to n. FL, s. AL, and s. MO. [= K, Z; < *Oe. biennis* – RAB, G, S; = *Oe. biennis* Linnaeus var. *austromontana* (Munz) Cronquist – C; = *Oe. biennis* var. *nutans* (Atkinson & Bartlett) Wiegand – F; = *Oe. austromontana* (Munz) Raven, Dietrich, & Stubbe – H, W; = *Oe. biennis* ssp. *austromontana* Munz – X]

Oenothera oakesiana (A. Gray) Robbins ex S. Watson & Coulter. Cp (NC, VA), Pd, Mt (VA): disturbed areas, roadsides; uncommon (VA Watch List). Nova Scotia west to Manitoba, south to e. NC, sc. VA, PA, n. IN, n. IL, and s. MN. [= G, K, Z; =

Oe. parviflora Linnaeus var. *oakesiana* (A. Gray) Fernald – C, F; = *Oe. parviflora* ssp. *parviflora* var. *oakesiana* (A. Gray) Fernald – X]

Oenothera parviflora Linnaeus, Small-flowered Evening-primrose. Mt, Pd (NC, VA), Cp (NC, SC, VA): fields, disturbed areas; uncommon. May-September. Nova Scotia west to Manitoba, south to NC, TN, KY, and MO. Reported for GA (GANHP). [= RAB, G, K, W, Z; > *Oe. parviflora* var. *parviflora* – C, F; > *Oe. parviflora* var. *angustissima* (R.R. Gates) Wiegand – F; > *Oe. parviflora* ssp. *parviflora* var. *parviflora* – X; > *Oe. parviflora* ssp. *angustissima* (R.R. Gates) Munz – X]

Oenothera perennis Linnaeus, Little Sundrops. Mt (NC, SC, VA), Pd (NC, VA), Cp (VA): bogs, sphagnous seeps; uncommon (rare south of VA) (NC Rare, SC Rare). May-August. Nova Scotia west to Manitoba, south to w. NC, nw. SC, KY, and MO. [= RAB, C, G, K, W, X; > *Oe. perennis* var. *perennis* – F; = *Kneiffia perennis* (Linnaeus) Pennell – S]

Oenothera pilosella Rafinesque, Midwestern Evening-primrose. Mt, Pd, Cp (VA): disturbed areas; rare. NH west to Ontario, south to s. VA, KY, n. AL, c. MS, and c. LA. *Oe. sessilis* (Pennell) Munz, treated by Straley (1977) as *Oe. pilosella* ssp. *sessilis* (Pennell) Straley, seems sufficiently distinct to be recognized as a species; it is restricted to Mississippi River Alluvial Plain. [= F, G, X; = *Oe. pilosella* ssp. *pilosella* – C, K, V; > *Kneiffia pratensis* Small – S; = *Oe. fruticosa* Linnaeus var. *hirsuta* Nuttall ex Torrey & A. Gray]

Oenothera riparia Nuttall, Riverbank Evening-primrose. Cp (NC, SC): tidal marshes; rare (NC Rare). June-July. Se. VA (?) south to se. NC and e. SC. Distinct from *Oe. fruticosa*. Present in the freshwater tidal portions of the Waccamaw, Northeast Cape Fear, Black, Greater Pee Dee, and Cape Fear (?) rivers. [< *Oe. fruticosa* – RAB; < *Oe. fruticosa* ssp. *fruticosa* – K, V; = *Kneiffia riparia* (Nuttall) Small – S; = *Oe. tetragona* Roth ssp. *glauca* (Michaux) Munz var. *riparia* (Nuttall) Munz – X]

* ***Oenothera speciosa*** Nuttall, White Evening-primrose. Cp, Pd, Mt (GA, NC, SC, VA): roadsides and fields, also cultivated as an ornamental; common (rare in Mountains), introduced from further west. May-August. [= RAB, C, F, G, K, W, X; = *Hartmannia speciosa* (Nuttall) Small – S]

Oenothera tetragona Roth ***var. brevistipata*** (Pennell) Munz. Mt, Pd (GA, NC, SC, VA), Cp (VA): dry forests and woodlands, roadsides; common. May-August. SC and KY, south to GA and MS. Should perhaps be considered more closely related to *Oe. fruticosa* (where placed in synonymy by Straley), if it is determined to be valid. [= G; < *Oe. tetragona* – RAB, C; < *Oe. fruticosa* Linnaeus ssp. *fruticosa* – H, K, V, W; = *Kneiffia brevistipata* Pennell – S; = *Oe. tetragona* ssp. *tetragona* var. *brevistipata* – X]

Oenothera tetragona Roth *var.* ***fraseri*** (Pursh) Munz, Appalachian Sundrops. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (VA): dry to moist forests and woodlands, roadsides; common. May-August. NY and PA, south to nw. SC and n. GA. This is the more montane and high elevation variant of *Oe. tetragona*. [= F, G, X; < *Oe. tetragona* – RAB, C; > *Oe. tetragona* var. *hybrida* (Michaux) Fernald – F; > *Oe. tetragona* var. *latifolia* (Rydberg) Fernald – F; < *Oe. fruticosa* Linnaeus ssp. *glauca* (Michaux) Straley – H, K, V, W; > *Kneiffia glauca* (Michaux) Spach – S; > *Kneiffia hybrida* (Michaux) Small – S; > *Kneiffia latifolia* Rydberg – S; = *Oe. tetragona* ssp. *glauca* var. *glauca* – X]

Oenothera tetragona Roth *var.* ***tetragona***, Northern Sundrops. Mt, Pd (NC, SC, VA), Cp (VA): dry forests and woodlands, roadsides; common. May-August. Newfoundland west to MI, south to e. VA and MO. [= F; < *Oe. tetragona* – RAB, C; < *Oe. tetragona* var. *tetragona* – G; < *Oe. fruticosa* Linnaeus ssp. *glauca* (Michaux) Straley – H, K, V, W; = *Kneiffia tetragona* (Roth) Pennell – S; = *Oe. tetragona* ssp. *tetragona* var. *tetragona* – X]

Oenothera tetragona Roth *var.* ***velutina*** (Pennell) Munz. Cp (VA): dry sandy soils. Se. NY (Long Island) south to se. VA. Should perhaps be considered more closely related to *Oe. fruticosa* (where placed in synonymy by Straley), if it is determined to be valid. [= F, G; < *Oe. tetragona* – RAB, C; < *Oe. fruticosa* Linnaeus ssp. *fruticosa* – H, K, V, W; = *Kneiffia velutina* Pennell – S; = *Oe. tetragona* ssp. *tetragona* var. *velutina* – X]

Oenothera triloba Nuttall, Stemless Evening-primrose. Mt (GA, VA): limestone glades, {habitat not known in VA}; rare, perhaps only introduced, though native into eastern KY and TN (GA Watch List). [= C, F, G, H, K, X; = *Lavauxia triloba* (Nuttall) Spach – S]

* ***Oenothera villosa*** Thunberg *ssp.* ***villosa***. Mt, Pd (VA): disturbed areas; uncommon, apparently naturalized in our area from an original distribution in the Great Plains. [= K, Z; *? Oe. strigosa* (Rydberg) Mackenzie & Bush – G; *? Oe. biennis* var. *canescens* Torrey & A. Gray – C, F; *? Oe. strigosa* (Rydberg) Mackenzie & Bush ssp. *canovirens* (Steele) Munz – X]

* *Oenothera clelandii* W. Dietrich, Raven, & W.L. Wagner. Reported for SC (Kartesz 1999). {investigate} Centered in IL and WI, ranging east, probably mostly as introductions, to NJ, WV, KY. [= C, K, Y; < *Oe. rhombipetala*, misapplied]

Oenothera macrocarpa Nuttall ssp. *macrocarpa*, Wingfruit Evening-primrose, occurs as a disjunct in c. TN. [= K; < *Oe. missouriensis* Sims – F; < *Oe. macrocarpa* Nuttall – C, G; = *Oe. missouriensis* Sims var. *missouriensis* – X; *? Megapterium missouriense* (Sims) Spach]

Oenothera tetragona Roth var. *sharpii* Munz. Known from the Eastern Highland Rim of TN, AL, and KY. [< *Oe. tetragona* – RAB, C; < *Oe. tetragona* var. *tetragona* – G; < *Oe. fruticosa* Linnaeus ssp. *fruticosa* – H, K, V, W; = *Oe. tetragona* ssp. *tetragona* var. *sharpii* – X]

Many hybrids are known.

OROBANCHACEAE Ventenat 1799 (Broomrape Family)

A family of about 96 genera and 2060 species, root-parasitic herbs lacking chlorophyll (Orobanchaceae sensu stricto) and chlorophyllose hemi-parasites (formerly placed in the Scrophulariaceae), of temperate and subtropical regions of the Northern Hemisphere (Manen et al. 2004). References: Thieret (1971); Olmstead et al. (2001); Fischer in Kadereit (2004).

tribe Gerardieae: *Agalinis, Aureolaria, Dasistoma, Macranthera, Seymeria*.
tribe Orobancheae: *Epifagus, Orobanche*.
tribe Buchnereae, "subtribe Buchneriinae": *Buchnera, Striga.*
tribe Cymbarieae: *Schwalbea*.
"tribe Castillejeae": *Castilleja*.
tribe Rhinantheae: *Conopholis, Melampyrum, Pedicularis.*

1 Plants lacking chlorophyll (parasitic), variously pink, purple, brown, or white.
  2 Stem paniculately branched; flowers dimorphic, those low in the inflorescences small, pistillate, and fertile, those high in the inflorescence larger, apparently perfect but functionally staminate .....***Epifagus***
  2 Stem simple (rarely few-branched); flowers all alike.
    3 Calyx deeply cleft on the lower side; stamens exserted .....***Conopholis***
    3 Calyx either nearly regular, or deeply cleft above and below into 2 lateral halves; stamens included..... ***Orobanche***
1 Plants with chlorophyll (hemiparasitic), with foliage and stems normally green.
  4.....

Agalinis Rafinesque 1836 (Agalinis, Purple-foxglove)

A genus of about 40 species, hemiparasitic herbs, of tropical and warm temperate regions of America. References: Canne (1979); Hays (1998b); Pennell (1935)=P.

1 Perennial, from horizontal rootstalk bearing slender, scaly rhizomes; corollas 3-4 cm long; [of Carolina bays, cypress savannas, limesink ponds] .....***A. linifolia***
1 Annual, with 1-several fibrous roots from the stem base; corollas < 3 cm long (except sometimes *A. fasciculata* and *A. purpurea*).
  2 Stem retrorse-hispid; leaves lanceolate to ovate, usually lobed at the base; [of mafic glades and woodlands]..... .....***A. auriculata***
  2 Stem ascending scabridulous or glabrous; leaves linear or filiform, entire.
    3 Leaves reduced to scales < 2.5 mm long, plant thus appearing leafless .....***A. aphylla***
    3 Leaves not scale-like, > 8 mm long.
      4 Pedicels less than 1.5× as long as the calyx, mostly 1-5 mm long at anthesis, mostly < 8 mm long in fruit.
        5 Plants fleshy; [of saline or brackish marshes and salt flats].
          6 Pedicels usually longer than or equalling the leaflike bracts; corollas 15-20 mm long; anther cells 1.8-2.3 mm long, usually long-lanose; [of Princess Anne County, VA, southward] ....***A. maritima*** *var.* ***grandiflora***
          6 Pedicels usually less than or equalling the leaflike bracts; corollas 12-17 mm long; anther cells 1.3-1.8 mm long, glabrous or somewhat pubescent; [of the Delmarva Peninsula northward]..... .....***A. maritima*** *var.* ***maritima***
        5 Plants not fleshy; [not inhabiting saline habitats, though some species may be found in freshwater interdune swales].
          7 Stems appearing copiously leafy because of the well-developed fascicles of axillary leaves; [inhabiting dry to moist, often ruderal, habitats] .....***A. fasciculata***
          7 Stems not copiously leafy, the axillary fascicles absent or poorly developed; [inhabitating moist to wet natural habitats].
            8 Branches spreading or ascending; stems more-or-less scabridulous; corollas 18-38 mm long.... .....***A. purpurea***
            8 Branches virgate; stems glabrous; corollas 20-25 mm long .....***A. virgata***
      4 Pedicels > 2.5× as long as the calyx, mostly 5-20 mm long at anthesis, mostly > 10 mm long in fruit.
        9 Living plants dull green, usually suffused with much purplish pigment; leaves > 20 mm long; dried plants dark, sometimes blackish; dried calyx deep purple, the veins obscure (difficult to see even at 10×).
          10 Upper lip of the corolla arched forward over the stamens, greatly reducing the opening of the throat; corolla throat glabrous or glabrate within; [of the Piedmont and Mountains].....***A. tenuifolia***
          10 Upper lip of the corolla erect or reflexed, the throat open; corolla throat densely long-hairy within; [of the Coastal Plain].
            11 Branches widely spreading or laxly ascending; pedicels > 4× as long as the leaflike bracts; anterior filaments 5-5.5 mm long; [of Berkeley and Beaufort counties, SC, southward] ....***A. laxa***
            11 Branches ascending to somewhat spreading; pedicels < 3× as long as the leaflike bracts; anterior filaments 7-9 mm long; [widespread].....***A. setacea***

9 Living plants light green or glaucescent, usually with no purple pigment; leaves < 15 (-20) mm (except *A. decemloba*, with leaves 15-25 mm long); dried plants not dark, but turning pale yellowish green; dried calyx pale yellowish green, the veins distinct and obvious without magnification.
- 12 Corolla throat within lacking 2 yellow lines; leaves widen distally to obtuse tips; stem and branches distinctly rough-scabridulous to the touch ..... ***A. obtusifolia***
- 12 Corolla throat with 2 prominent yellow lines; leaves taper to acute or acuminate tips; stem and branches not (or very slightly) scabridulous.
  - 13 Corolla 10-15 mm long, its lobes emarginate or retuse; [of the Piedmont and Mountains, and rarely the upper Coastal Plain] ..... ***A. decemloba***
  - 13 Corolla 15-20 mm long, its lobes entire to slightly emarginate; [of the Coastal Plain, from e. NC southward] ..... ***A. tenella***

Agalinis aphylla (Nuttall) Rafinesque, Scale-leaf Agalinis. Cp (GA, NC, SC): wet pine savannas; rare (GA Special Concern). September-October; October-November. Se. NC south to n. FL, west to e. LA. [= RAB, GW, K, S; = *Gerardia aphylla* Nuttall – P]

Agalinis auriculata (Michaux) S.F. Blake, Earleaf Foxglove. Pd (SC, VA): glades, barrens, and disturbed clearings over mafic rocks, such as diabase and gabbro; rare (US Species of Concern, SC Rare, VA Rare). August; September. OH west to MN, south to n. AL, AR, and TX; also rarely disjunct east of the Blue Ridge, in NJ, n. VA, and nc. SC. In Lewis County, KY (D. White, pers. comm.). Sometimes treated in the monotypic genus *Tomanthera*. [= C, K; = *Tomanthera auriculata* (Michaux) Rafinesque – G, P, S; = *Gerardia auriculata* Michaux – F]

Agalinis decemloba (Greene) Pennell. Pd (NC, SC, VA), Mt (GA, NC): dry clayey or sandy woodlands; rare (GA Special Concern). [= RAB, S, W; < *A. obtusifolia* – C, K; = *Gerardia decemloba* Greene – F, G, P]

Agalinis fasciculata (Elliott) Rafinesque. Cp (GA, NC, SC, VA), Pd (GA, SC, VA): sandhills, pine savannas, disturbed sandy areas, roadsides; common. S. MD south to s. FL, west to e. TX, northward in the interior to s. IN, s. IL, sw. MO, AR, , e. NE, and nc. TX. [= RAB, C, S, W; = *Gerardia fasciculata* Elliott – F, G; < *A. fasciculata* (Elliott) Rafinesque – GW, K; > *Gerardia fasciculata* ssp. *typica* – P]

Agalinis laxa Pennell. Cp (GA, SC): sandhills; rare. SC south to GA and FL. [= K, S; < *A. divaricata* (Chapman) Pennell – GW; = *Gerardia laxa* (Pennell) Pennell – P]

Agalinis linifolia (Nuttall) Britton. Cp (GA, NC, SC, VA?): Coastal Plain depression ponds, cypress savannas, wet pine savannas; uncommon. August-September; September-October. Se. NC south to s. FL, west to e. LA; disjunct in e. MD and e. DE. [= RAB, C, GW, K, S; = *Gerardia linifolia* Nuttall – F, G, P]

Agalinis maritima (Rafinesque) Rafinesque *var.* ***grandiflora*** (Bentham) Shinners. Cp (GA, NC, SC, VA): tidal marshes; uncommon. July; August. Se. VA south to s. FL, west to s. TX and Tamaulipas; West Indies. [= K, S; < *A. maritima* – RAB, C, GW; = *Gerardia maritima* Rafinesque var. *grandiflora* Bentham – F; < *Gerardia maritima* – G; = *Gerardia maritima* ssp. *grandiflora* (Bentham) Pennell – P]

Agalinis maritima (Rafinesque) Rafinesque *var.* ***maritima***. Cp (NC, VA): tidal marshes; uncommon. July; August. Nova Scotia and s. ME south to se. VA and e. NC. [= K; < *A. maritima* – RAB, C, GW; = *Gerardia maritima* Rafinesque var. *maritima* – F; < *Gerardia maritima* – G; = *Gerardia maritima* ssp. *typica* – P]

Agalinis obtusifolia Rafinesque. Cp (GA, NC, SC, VA), Pd (GA, NC, VA): pine savannas, wet pine flatwoods, sandhill seeps, disturbed areas; uncommon. September-October; October-November. DE south to s. FL, west to e. LA, in the interior north to KY and TN. [= RAB, GW, W; < *A. obtusifolia* – C, K (also see *A. decemloba* and *A. tenella*); = *Gerardia obtusifolia* (Rafinesque) Pennell – F, G, P]

Agalinis plukenetii (Elliott) Rafinesque. Cp, Pd (GA), Mt (SC): sandhills; uncommon. SC south to FL, west to wc. LA, and northward in the interior to extreme se. TN (Polk County) (Chester, Wofford, & Kral 1997). Scattered in GA (e.g., Baldwin and Laurens counties). [= K, S; = *Gerardia plukenetii* Elliott – P]

Agalinis purpurea (Linnaeus) Pennell. Cp, Pd, Mt (GA, NC, SC, VA): woodlands, roadsides, in a wide variety of open habitats; common. August-October; September-November. Nova Scotia west to MN, south to s. FL and e. TX. [= RAB, K, S, W; < *A. purpurea* var. *purpurea* – C; = *Gerardia purpurea* var. *purpurea* – G; = *Gerardia purpurea* Linnaeus – F, P; < *A. purpurea* – GW (also see *A. virgata*)]

Agalinis setacea (J.F. Gmelin) Rafinesque. Cp, Pd, Mt (GA, NC, SC, VA): sandhills; common. September-October; October-November. NY (Long Island) south to AL. [= RAB, C, K, S, W; = *Gerardia setacea* J.F. Gmelin – F, G, P]

Agalinis tenella Pennell. Cp (GA, NC, SC), Pd (SC): sandhills, other dry woodlands; uncommon (NC Rare). S. NC south to n. FL, west to s. AL. [= RAB, S; < *A. obtusifolia* – K; = *Gerardia tenella* (Pennell) Pennell – P]

Agalinis tenuifolia (Vahl) Rafinesque *var.* ***tenuifolia***. Mt, Pd, Cp (GA, NC, SC, VA): wooded slopes, roadsides; common. August-October; September-November. ME, Ontario, MI, and MO, south to GA and LA. [= K, S; < *A. tenuifolia* – RAB, C, W; = *Gerardia tenuifolia* Vahl var. *tenuifolia* – F, G]

Agalinis virgata Rafinesque. Cp (GA, NC, SC): pine savannas; rare. September-October; October-November. NY south to GA. [= RAB, S; < *A. purpurea* var. *purpurea* – C; = *Gerardia racemulosa* Pennell – F, P; = *Gerardia purpurea* Linnaeus var. *racemulosa* (Pennell) Gleason – G; < *A. fasciculata* (Elliott) Rafinesque – K; < *A. purpurea* (Linnaeus) Pennell – GW]

Agalinis acuta Pennell. Coastal sand plains. MA south to Baltimore County, MD. [= C, K; = *Gerardia acuta* Pennell – F, G, P] {not keyed at this time}

Agalinis divaricata (Chapman) Pennell, Pineland Agalinis. Cp (GA): sandhills; rare (GA Special Concern). GA (Decatur County) south to c. peninsular FL, west to MS. [= K, S; = *Gerardia divaricata* (Chapman) Pennell – P] {not keyed at this time}

Agalinis filicaulis (Bentham) Pennell, Spindly Agalinis. Cp (GA): wet pine savannas; rare (GA Special Concern). Ga (Tattnall County) and FL west to w. LA. [= K, S; = *Gerardia filicaulis* (Bentham) Chapman – P] {not keyed at this time}

Agalinis filifolia (Nuttall) Rafinesque, Seminole Agalinis. Cp (GA): dry longleaf pine savannas; rare (GA Special Concern). S. GA (east to Liberty County) south to s. FL, west to sw. AL. [= K, S; = *Gerardia filifolia* Nuttall – P] {not keyed at this time}

Agalinis gattingeri (Small) Small ex Britton. barrens, glades, outcrops, woodlands. Ontario, MN, and NE south to AL, MS, LA, and TX. In c. TN, east to e. TN (Rhea and Scott counties) (Chester, Wofford, & Kral 1997). Reported for NC (Kartesz 1999). {investigate} [= K, S; = *Gerardia gattingeri* Small – G, P]

Agalinis georgiana (C.L. Boynton) Pennell, Crisp and Lowndes counties, GA. [= S; < *A. fasciculata* – K; = *Gerardia georgiana* C.L. Boynton – P]

Agalinis harperi Pennell in Small. Cp (GA): wet pinelands; rare. GA south to FL, west to w. LA. Glynn County, GA and east to McIntosh County, GA as *A. pinetorum*. See Hays (1998a) who has established the nomenclatural priority of *A. harperi*. Reported for SC (Kartesz 1999). {investigate} [> *A. harperi* Pennell in Small – S; > *A. pinetorum* – S; = *A. pinetorum* Pennell – K; *A. delicatula* Pennell; = *Gerardia harperi* (Pennell in Small) Pennell – P] {not keyed at this time}

Agalinis heterophylla (Nuttall) Small ex Britton. GA west to s. MO, AR, e. OK, and e. TX. [= G, K]

Agalinis oligophylla Pennell. Sc. TN (Coffee and Warren counties) (as *A. pseudaphylla*) (Chester, Wofford, & Kral 1997), c. and s. AL, west through s. MS to w. LA. [= K, S; > *Gerardia pseudaphylla* (Pennell) Pennell – P; > *A. pseudaphylla* (Pennell) Shinners; > *A. pseudophylla* (Pennell) Shinners, an orthographic variant]

Agalinis paupercula (A. Gray) Britton var. *paupercula*. South to NJ and PA. Puzzling record for VA in Harvill et al. (1992) is apparently erroneous. {check specimen}. [= K; < *A. purpurea* (Linnaeus) Pennell var. *parviflora* (Bentham) B. Boivin – C; = *Gerardia paupercula* (A. Gray) Britton var. *paupercula* – F; < *Gerardia purpurea* Linnaeus var. *parviflora* Bentham – G; = *Gerardia paupercula* var. *typica* – P]

Agalinis pulchella Pennell, Coffee and Ware counties, GA. {Nomenclatural and typification problems} [= K, S; = *Gerardia pulchella* Pennell – P]

Agalinis skinneriana (A. Wood) Britton. Coffee County, TN (Chester, Wofford, & Kral 1997). [= K; = *Gerardia skinneriana* A. Wood – G, P]

Agalinis tenuifolia (Vahl) Rafinesque *var.* ***leucanthera*** (Rafinesque) Pennell. Cp (GA): savannas; rare (GA Special Concern). [= K]

Agalinis tenuifolia (Vahl) Rafinesque var. *macrophylla* (Bentham) Blake. [= K, S; = *Gerardia tenuifolia* Vahl ssp. *macrophylla* (Bentham) Pennell – P]

Agalinis tenuifolia (Vahl) Rafinesque *var.* ***polyphylla*** (Small) Pennell. Pd (GA): granitic flatrocks; uncommon? Endemic to granite flatrocks in GA. [= K, S; = *Gerardia tenuifolia* Vahl ssp. *polyphylla* (Small) Pennell – P; = *Gerardia polyphylla* Small]

Aureolaria Rafinesque 1836 (Oak-leach, False-foxglove)

A genus of about 10 species, hemiparasitic herbs, of e. North America and Mexico. References: Pennell (1935)=P.

1 Plant pubescent (especially on the calyx, corolla, capsule, and lower stem) with glandular hairs; annual; seeds 0.8-1.0 mm long, not winged.
- 2 Calyx tube hemispherical, glandular-hirsute to glandular-lanate on the outer surface; capsule ovoid; trichomes of the leaves usually glandular, at least in part; leaf lobes usually acute ..... ***Au. pectinata***
- 2 Calyx tube turbinate, glandular-puberulent on the outer surface; capsule ellipsoid; trichomes of the leaves usually nonglandular; leaf lobes usually obtuse.
  - 3 Pubescence of the upper stem entirely non-glandular; calyx lobes 6-10 mm long ..... ***Au. pedicularia*** *var.* ***pedicularia***
  - 3 Pubescence of the upper stem at least in part glandular (sometimes densely glandular); calyx lobes 6-16 mm long.
    - 4 Glandular pubescence of the upper stem dense and long; calyx lobes 8-16 mm long ..... ***Au. pedicularia*** *var.* ***austromontana***
    - 4 Glandular pubescence of the upper stem short, scattered among the nonglandular hairs; calyx lobes 6-10 mm long ..... ***Au. pedicularia*** *var.* ***intercedens***

1 Plant glabrous or pubescent with nonglandular hairs; perennial; seeds 1.3-2.7 mm long, winged.
- 5 Capsule pubescent; inflorescence, pedicels, and/or calyx pubescent with nonglandular hairs; pedicels 1-3 mm at anthesis; flowering May-July ..... ***Au. virginica***
- 5 Capsule glabrous; inflorescence, pedicels, and calyx glabrous (or pubescent with nonglandular hairs in *Au. patula*); pedicels 1-25 mm long at anthesis; flowering August-September.
  - 6 Inflorescence, pedicels, and calyx pubescent (at least sparsely so); pedicels slender, ca. 0.5 m in diameter ..... ***Au. patula***
  - 6 Inflorescence, pedicels and calyx glabrous; pedicels stout, ca. 1 mm in diameter.
    - 7 Lower leaves entire to serrate (or with only a few shallow lobes at the base of the leaf); pedicels 1-8 mm long at anthesis, straight; corolla 3.0-4.0 cm long; capsule 10-15 mm long; stem not glaucous ..... ***Au. laevigata***

7 Lower leaves pinnately lobed, the lobes themselves usually serrate, the sinuses extending over half of the distance to the midrib; pedicels 4-25 mm long at anthesis, upwardly curved; corolla 3.5-6 cm long; capsule 12-20 mm long; stem slightly to strongly glaucous.
8 Calyx lobes 2-5 mm long; corolla 3.5-4.0 cm long ..... ***Au. flava* var. *flava***
8 Calyx lobes 5-14 mm long; corolla 3.5-6.0 cm long ..... ***Au. flava* var. *macrantha***

Aureolaria flava (Linnaeus) Farwell *var.* ***flava***, Eastern Smooth Oak-leach. Pd, Mt, Cp (GA, NC, SC, VA): oak forests and woodlands; common. August-September; September-October. ME west to MN, south to GA, FL, and AL. Var. *reticulata* (Rafinesque) Pennell, of the southeastern Coastal Plain, needs additional study. It is alleged to differ in its lower leaves entire, dentate, or divided < ½ way to the midrib (vs. deeply pinnatifid-divided). [= C, G, K; < *A. flava* – RAB, W; > *Gerardia flava* Linnaeus var. *flava* – F; > *Gerardia flava* var. *reticulata* (Rafinesque) Cory – F; > *A. flava* ssp. *typica* – P; >< *A. flava* ssp. *flava* – S; > *A. flava* ssp. *reticulata* (Rafinesque) Pennell – P, S]

Aureolaria flava (Linnaeus) Farwell *var.* ***macrantha*** Pennell, Midwestern Smooth Oak-leach. Mt (NC): oak forests and woodlands; rare. S. Ontario and MO south to e. WV, e. TN, w. NC (Fernald 1950), n. AL, and e. LA. August-September; September-October. [= C, G, K; < *A. flava* – RAB, W; = *Gerardia flava* Linnaeus var. *macrantha* (Pennell) Fernald – F; = *A. flava* ssp. *macrantha* Pennell – P; < *A. flava* ssp. *flava* – S]

Aureolaria laevigata (Rafinesque) Rafinesque, Appalachian Oak-leach. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): oak forests and woodlands; common (uncommon in Piedmont, rare in Coastal Plain). August-September; September-October. PA west to s. OH, south to SC and GA, primarily a Central and Southern Appalachian endemic, but extending into adjacent provinces, and, rarely, even the Coastal Plain. [= RAB, C, G, K, P, S, W; = *Gerardia laevigata* Rafinesque – F]

Aureolaria patula (Chapman) Pennell, Cumberland Oak-leach. Mt (GA): rich alluvial forests; rare (GA Special Concern). August-October; September-October. C. KY south through TN to nw. GA, and approaching w. NC and sw. VA. [= C, G, K, P, S]

Aureolaria pectinata (Nuttall) Pennell, Southern Oak-leach. Cp, Pd, Mt (GA, NC, SC): turkey oak sandhills, other dry oak forests and woodlands; common (uncommon in Piedmont and Mountains). May-September; September-October. NC south to FL, west to LA, inland north to AR and MO. Related to *A. pedicularia*, but much more southerly in distribution. [= RAB, K; = *A. pedicularia* (Linnaeus) Rafinesque var. *pectinata* (Nuttall) Gleason – C, G; = *Gerardia pectinata* (Nuttall) Bentham – F; > *A. pectinata* ssp. *eurycarpa* (Pennell) Pennell – P, S; > *A. pectinata* ssp. *transcedens* (Pennell) Pennell – P, S; > *A. pectinata* ssp. *typica* – P; > *A. pectinata* ssp. *pectinata* – S; < *A. pedicularia* – W]

Aureolaria pedicularia (Linnaeus) Rafinesque *var.* ***austromontana*** Pennell, Appalachian Annual Oak-leach. Mt (GA, NC, SC, VA), Pd (NC, SC): oak forests and woodlands; common. September-October; November. Sw. VA and se. KY south to nw. SC, ne. GA, and e. TN. The various varieties recognized need additional study; the variation may be too clinal to be practically recognized taxonomically. [= C, G, K; < *A. pedicularia* – RAB; = *Gerardia pedicularia* Linnaeus var. *austromontana* (Pennell) Fernald – F; = *A. pedicularia* ssp. *austromontana* (Pennell) Pennell – P, S; < *A. pedicularia* – W]

Aureolaria pedicularia (Linnaeus) Rafinesque *var.* ***intercedens*** Pennell. Mt (NC?, VA): oak forests and woodlands; rare. September-October; November. MA west to w. NY, south to w. VA and s. WV. [= C, G, K; < *A. pedicularia* – RAB; = *Gerardia pedicularia* Linnaeus var. *intercedens* (Pennell) Fernald – F; = *A. pedicularia* ssp. *intercedens* (Pennell) Pennell – P; < *A. pedicularia* – W]

Aureolaria pedicularia (Linnaeus) Rafinesque *var.* ***pedicularia***, Northern Annual Oak-leach. Pd, Cp (NC, VA), Mt (VA): oak forests and woodlands; common. September-October; November. ME west to NY and e. MN, south to e. NC, WV, and n. IL. [= C, G, K; < *A. pedicularia* – RAB, W; = *Gerardia pedicularia* Linnaeus var. *pedicularia* – F; > *A. pedicularia* ssp. *caesariensis* Pennell – S; > *A. pedicularia* ssp. *carolinensis* Pennell – P, S]

Aureolaria virginica (Linnaeus) Pennell, Downy Oak-leach, Virginia Oak-leach. Cp, Pd, Mt (GA, NC, SC, VA): oak forests and woodlands; common. May-July; August-September. MA west to MI, south to FL and AL. [= RAB, C, G, K, W; = *Gerardia virginica* (Linnaeus) Britton, Sterns, & Poggenburg – F; > *A. virginica* – P, S; > *A. microcarpa* Pennell – P, S]

Buchnera Linnaeus (Bluehearts)

{by Bruce A. Sorrie)

A genus of about 100 species, hemiparasitic herbs, of tropical and warm temperate regions of the Old and New Worlds. The taxonomy of this genus is poorly understood. The plants are root hemi-parasites, apparently not particular about the host species. References: Pennell (1935)=P.

Identification notes: Lower leaves are broadest, mid and upper leaves narrowest, often markedly so; the key refers to lower leaves. Leaf teeth are usually few in number and vary in development, from crenate to 2-3 mm long and sharply pointed. The former condition is normal for *B. floridana*, the latter for *B. americana*. Calyx length is ca. 0.5 mm longer in fruit than in flower. The foliage turns black on drying.

1 Leaves lanceolate to narrowly ovate, tapering to a point; leaf veins (below) consisting of 3 major and 2 minor ones (narrow leaves may only have 3 total veins); leaf teeth usually well developed, rarely absent; calyx (6.0-) 6.5-8.0 mm long; corolla lobes 5.0-7.0 mm long; [primarily of moderate to high pH soils in southern Great Plains, ranging to southern margin of the Great Lakes and eastward to the mid Atlantic seaboard, especially in mafic or calcareous glades and prairies] ..... ***B. americana***

1 Leaves narrowly oblanceolate to lanceolate, rounded at tip; leaf veins (below) consisting of 1 major and 2 minor ones (narrow leaves may only have 1 vein); leaf teeth usually crenate but may be absent; calyx (4.0-) 4.5-5.5 mm long; corolla lobes 4.0-5.0 mm long; [primarily of low pH soils on the southern Atlantic and Gulf Coastal Plain].....***B. floridana***

Buchnera americana Linnaeus, Prairie Bluehearts, American Bluehearts, Plains Bluehearts. Mt, Pd (GA, NC, VA), Cp (GA?, VA): dry (seasonally moist) rocky, gravelly, or clayey soil of limestone glades, glades over mafic rock (such as diabase, gabbro, etc.), wet meadows, sandy roadsides; rare (GA Special Concern, NC Rare, VA Rare). July-September; August-October. NY and s. Ontario west to MI, IL, MO, and s. KS, south to c. NC, GA, and TX. In addition to the key characters given, *B. americana* is overall a larger and more robust plant than *B. floridana*, though both are quite variable in size, depending on the conditions in which they grow. *B. americana* has apparently declined very greatly in our area, probably owing to fire suppression in its habitats. [= RAB, C, F, G, GW, P, S, W; < *B. americana* – K (also see *B. floridana*)]

Buchnera floridana Gandoger, Savanna Bluehearts, Florida Bluehearts. Cp (GA, NC, SC): pine savannas, flatwoods, seepage bogs, sandy roadsides; uncommon. April-October; May-November. Se. VA (?) south to s. FL, west to TX, and in the West Indies. Previous attributions of *B. longifolia* Kunth (including *B. elongata* Small) to southeastern states (notably FL, AL, GA, and MS) are based on misidentifications of material which is actually *B. floridana*. [= RAB, GW, S; >< *B. americana* – K; > *B. longifolia* Sw. – K, by misattribution; = *B. floridana* – P (also see *B. longifolia*); > *B. floridana* – S; > *B. breviflora* Pennell – S, by misattribution; > *B. elongata* Sw. -- S]

Castilleja Mutis ex Linnaeus f. (Indian Paintbrush)

A genus of about 200 species, hemiparasitic herbs, primarily of w. North America, with a few species also in e. North America, Eurasia, Central America, and Andean South America. References: Pennell (1935)=P. Key based on Allison & Stevens (2001).

1 Bracts deeply lobed, red (rarely yellow), mostly > 2 cm long; [widespread in our area]..... ***C. coccinea***
1 Bracts mostly entire, yellow, < 2 cm long; [endemic to c. AL] ..... ***[C. kraliana]***

Castilleja coccinea (Linnaeus) Sprengel, Eastern Indian Paintbrush. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (NC, SC): woodlands, fens, barrens, rock outcrops, meadows, wet pastures, grassy openings, usually over mafic rocks; uncommon, rare in Coastal Plain (GA Special Concern, SC Rare, VA Watch List). April-May; May-June. Widespread in e. North America. [= RAB, C, F, G, GW, K, P, S, W]

Castilleja kraliana J. Allison, Cahaba Paintbrush, is endemic to dolomitic Ketona glades in Bibb Co., c. AL (Allison & Stevens 2001).

Conopholis Wallroth (Squawroot)

A genus of 2 species, parasitic herbs, of e. North America and sw. North America south to Central America. The other species is *C. alpina* Liebmann, ranging from AZ, NM, and TX south to Panama, and divided into two varieties. References: Haynes (1971)=Z; Thieret (1971)=Y.

Conopholis americana (Linnaeus) Wallroth, Squawroot. Mt, Pd, Cp (GA, NC, SC, VA): rich, moist forests, under *Quercus* species; common (rare in Coastal Plain, rare in Piedmont south of VA). March-June. Nova Scotia west to WI and south to c. peninsular FL, AL, and TN. Haynes (1971) discusses the nature of the parasitism. *Conopholis* apparently germinates near an oak root, forms a parasitic connection to the root, resulting in the formation of a gall consisting of both *Quercus* and *Conopholis* tissue. The gall can be up to 25 cm in diameter, and lasts for many years, repeatedly sending up flowering shoots. It is believed that the gall exists underground for some years prior to first flowering. [= RAB, C, F, G, K, S, W, Y, Z]

Dasistoma Rafinesque (Mullein Foxglove)

A monotypic genus, a hemiparasitic herb, endemic to se. North America. The genus is sometimes spelled '*Dasystoma*.' References: Pennell (1935)=P.

Dasistoma macrophylla (Nuttall) Rafinesque, Mullein Foxglove. Pd (SC), Mt (GA, VA): xeric to dry-mesic woodlands and bluffs, over limestone or diabase; rare (GA Special Concern, SC Rare, VA Rare). July-September. WV, OH, s. WI, IA, and NE, south to w. VA, nc. SC, nw. GA, c. AL, MS, LA, and nc. TX. First reported for VA by Wieboldt et al. (1998). [= RAB, C, G, K, P, S; = *Seymeria macrophylla* Nuttall – F, GW; = *Dasystoma macrophylla*, an orthographic variant]

Epifagus Nuttall (Beechdrops)

Epifagus is a monotypic genus, parasitic herb on the roots of *Fagus*, of e. North America. References: Thieret (1971)=Z.

Epifagus virginiana (Linnaeus) W. Barton, Beechdrops. Mt, Pd, Cp (GA, NC, SC, VA): moist to rather dry forests under *Fagus grandifolia*; common. September-November. Nova Scotia west to WI, south to FL and LA. [= RAB, C, F, G, K, W, Z; = *Leptamnium virginianum* (Linnaeus) Rafinesque – S]

Macranthera Nuttall ex Bentham (Flameflower)

A monotypic genus, a hemiparasitic herb, of se. North America. References: Pennell (1935)=P.

Macranthera flammea (Bartram) Pennell, Flameflower, Hummingbird-flower. Cp (GA): pitcherplant bogs; rare (GA Special Concern). July-September. Nearly restricted to the East Gulf Coastal Plain (e. GA west to se. LA), but ranging east to the Atlantic Coastal Plain of e. GA (Bullock County), within a county of the SC border. [= GW, K, P, S]

Melampyrum Linnaeus (Cow-wheat)

A genus of about 35 species, hemiparasitic herbs, of temperate regions of North America and Eurasia. References: Pennell (1935)=P.

1 Lowermost bracteal leaves entire or nearly so, or the uppermost with a few short basal teeth; leaves (2-) 10-30 mm wide, the widest leaves on a plant usually over 10 mm wide; plants usually simple or with 4 (rarely more) branches; internodes of the midstem usually 4-6 cm long ..... ***M. lineare*** *var.* ***latifolium***

1 Lowermost bracteal leaves generally with a few prominent sharp teeth or segments; leaves 2-10 mm wide; plants usually with numerous branches (often 10 or more); internodes of the midstem usually 1-3 cm long.

1 Teeth of the middle and upper bracts shorter than the width of the undivided portion of the bracts; leaves lanceolate, (2-) 5-10 mm wide; [widespread in our area] ..... ***M. lineare*** *var.* ***americanum***

2 Teeth of the middle and upper bracts commonly about as long as the width of the undivided portion of the bracts; leaves linear to lanceolate, 2-6 (-8) mm wide; [of the Coastal Plain] ..... ***M. lineare*** *var.* ***pectinatum***

Melampyrum lineare Desrousseaux *var.* ***americanum*** (Michaux) Beauverd, Common Cow-wheat. Mt (NC, VA), Cp (VA): dry soils; uncommon? May-July; August-September. Québec west to MN, south to VA, NC, and TN. Our 3 varieties are quite distinctive in morphology and have distinctive geographic ranges; they seem worthy of distinction from one another at the varietal level, at least. The fourth variety, var. *lineare*, is more northern, ranging from Labrador west to British Columbia, south to New England, n. MI, and n. MN. It is similar to var. *latifolium* in its entire bracteal leaves, but overall is more like var. *americanum*, differing in the bracteal teeth and in its linear leaves, rarely over 5 mm wide. The distinction between var. *americanum* and var. *lineare* may not be worth making; if combined (as by K), the correct name is var. *lineare*. [= C, F, G; < *M. lineare* – RAB, W; < *M. lineare* var. *lineare* – K; < *M. lineare* var. *typicum* – P; < *M. lineare* – S]

Melampyrum lineare Desrousseaux *var.* ***latifolium*** Barton, Appalachian Cow-wheat. Mt (GA, NC, SC, VA): dry soils in ridgetop woodlands, in thin soils around rock outcrops; common. Late April-July; August-September. MA and NY south to n. GA, mostly in the Appalachians. [= C, F, G, K, P; < *M. lineare* – RAB, W; = *M. latifolium* (Barton) Muhlenberg ex Britton - S]

Melampyrum lineare Desrousseaux *var.* ***pectinatum*** (Pennell) Fernald, Pine-barren Cow-wheat. Cp (VA): dry sandy areas; rare. May-July; August-September. E. MA to se. VA, on the Coastal Plain. [= C, F, G, K, P; < *M. lineare* – RAB, W]

Orobanche Linnaeus (Cancer-root, Broomrape)

A genus of about 150 species, parasitic herbs, of mainly north temperate regions. References: Musselman (1982)=Z; Thieret (1971)=Y; Manen et al. (2004).

1 Flowers solitary on a long pedicel (appearing as a scape, the true stem entirely underground or nearly so); [section *Gymnocaulis*] ..... ***O. uniflora***

1 Flowers several-many, sessile or subsessile in a dense spike.

2 Calyx 5-lobed, the lobes subequal, all well-developed ..... ***O. ludoviciana***

2 Calyx 2-4-lobed, rarely 5-lobed, but then the fifth lobe minute and much smaller than the other lobes; [section *Orobanche*].

3 Calyx divided to the base into 2 lateral halves, these usually 2-lobed, the 4 lobes long-attenuate or caudate ..... ***O. minor***

3 Calyx tubular, with 4 (-5) lobes about the length of the calyx tube ..... ***O. ramosa***

*? ***Orobanche ludoviciana*** Nuttall, Prairie Broomrape. Pd, Mt (VA): pastures, parasitic on composites, often with clovers; rare, uncertain whether native or introduced from farther west (VA Watch List). OH, IN, Saskatchewan, and CA, south to TX and n. Mexico. [= F, G, Z; > *O. ludoviciana* var. *ludoviciana* – C; > *O. ludoviciana* ssp. *ludoviciana* – K]

* ***Orobanche minor*** J.E. Smith, Lesser Broomrape. Cp (GA, NC, VA), Pd, Mt (NC, VA): cultivated fields, parasitic on various hosts, especially *Trifolium*; rare, introduced from Eurasia. [= RAB, C, F, G, K, S, Z]

* ***Orobanche ramosa*** Linnaeus, Branching Broomrape. Mt (NC): habitat in our area not known; rare (known in our area only from a single collection in 1884), introduced from Asia. As discussed by Musselman (1984), the identity is somewhat presumptive, and the precise location uncertain. [= C, F, G, K]

Orobanche uniflora Linnaeus, Cancer-root. Mt, Pd, Cp (GA, NC, SC, VA): sandy streambanks and riverbanks, rich forests; uncommon (SC Rare). April-May. Nearly throughout s. Canada and the United States. [= RAB, F, G, K, W, Z; > *O. uniflora* var. *uniflora* – C; = *Thalesia uniflora* (Linnaeus) Britton – S]

Pedicularis (Wood-betony, Lousewort)

A genus of about 350 species, hemiparasitic herbs, of temperate regions of c. and e. Asia, Europe, w. North America, e. North America, and Andean South America. References: Pennell (1935)=P.

1 Inflorescence 1-4 dm tall; stem leaves alternate; stem pubescent, at least near the inflorescence; flowering April-May ..... ***P. canadensis***

1 Inflorescence 4-10 dm tall; stem leaves opposite; stem glabrous; flowering August-October ..... ***P. lanceolata***

Pedicularis canadensis Linnaeus, Eastern Lousewort, Wood-betony. Mt, Pd, Cp (NC, SC, VA): moist to dry forests and woodlands, streambanks; common (rare in the Coastal Plain). April-May; May-July. ME, Québec, and Manitoba south to FL, TX, and n. Mexico. Var. *dobbsii* Fernald, alleged to differ in having nearly solitary flowering stems and stoloniform basal offsets, needs additional study. [= RAB, C, G, GW, P, S, W; > *P. canadensis* var. *canadensis* – F; > *P. canadensis* var. *dobbsii* Fernald – F; > *P. canadensis* ssp. *canadensis* – K]

Pedicularis lanceolata Michaux, Swamp Lousewort. Mt (NC, VA), Pd, Cp (VA): springheads and swampy areas, over calcareous or mafic rocks; rare (NC Rare, VA Watch List). August-October; September-October. Widespread in ne. North America, south to NC, e. TN, w. TN, and MO. [= RAB, C, F, G, GW, K, P, S, W]

Schwalbea Linnaeus (Chaffseed)

The genus is monotypic, a hemiparasitic herb, of se. North America. References: Pennell (1935)=P.

Schwalbea americana Linnaeus, Chaffseed. Cp (GA, NC, SC, VA): savannas, sandhill-pocosin ecotones (in the uphill portions), mesic loamy-soil slopes or swales in sandhill longleaf pine woodlands; rare (US Endangered, GA Endangered, NC Endangered, SC Rare, VA Rare). May-June; August. Formerly rather widespread in e. North America, primarily in the Coastal Plain, from e. MA, south to FL and west to TX, and disjunct in the Cumberland Mountains of KY and TN. The species is now limited to a few scattered sites in NJ, NC, SC, and FL. It appears to require high fire frequency, especially during the growing season, perhaps related to its establishment ecology. The tiny seeds are hyaline-winged. [= RAB, C, F, G, GW, K, P; > *S. americana* – P; > *S. australis* Pennell – P, S]

Seymeria Pursh (Seymeria)

A genus of about 25 species, herbs, of s. North America (including Mexico). References: Pennell (1935)=P.

1 Corolla glabrous on its outer surface; leaf segments linear, < 0.5 mm wide; stem glabrous or puberulent; seeds wingless (though with ridges) ..... ***S. cassioides***

1 Corolla pubescent externally; leaf segments lanceolate, 1-2 mm wide; stem pubescent; seeds 3-4-winged ..... ***S. pectinata ssp. pectinata***

Seymeria cassioides (J.F. Gmelin) Blake, Senna Seymeria. Cp (GA, NC, SC, VA), Pd (GA, SC): dry to moist pinelands, wet pine savannas, sandhills, other dry woodlands; common, rare in VA (VA Rare). August-October. Se. VA south to c. peninsular FL, west to LA; disjunct in nc. AL and se. TN (Chester, Wofford, & Kral 1997). [= RAB, C, F, G, GW, K, P; = *Afzelia cassioides* J.F. Gmelin – S]

Seymeria pectinata Pursh *ssp.* ***pectinata***, Comb Seymeria. Cp (GA, NC, SC): dry pinelands, sandhills; rare (NC Rare). July-October. Ssp. *pectinata* ranges from se. NC south to c. peninsular FL, west to s. MS, a Southeastern Coastal Plain endemic. Ssp. *peninsularis* (Pennell) Pennell ranges from n. peninsular FL south to s. FL. [= K; < *S. pectinata* – RAB; = *S. pectinata* ssp. *typica* – P; = *Afzelia pectinata* (Pursh) Kuntze ssp. *pectinata* – S]

Striga Loureiro (Witchweed)

A genus of about 40 species, hemiparasitic herbs, of tropical to temperate regions of the Old World.

* ***Striga asiatica*** (Linnaeus) Kuntze, Witchweed. Cp (NC, SC): cultivated fields, parasitic on the roots of corn and other grasses; rare, introduced from the Old World. A serious weed, *Striga* has been the subject of eradication efforts and quarantine policies since its appearance in our area. [= K; = *S. lutea* Loureiro – RAB]

Tomanthera Rafinesque
(see *Agalinis*)

OXALIDACEAE R. Brown 1818 (Wood-sorrel Family)

A family of 5-6 genera and 600-775 species, herbs, shrubs, vines, and small trees, nearly cosmopolitan (especially temperate). References: Cocucci in Kubitzki (2004).

Oxalis Linnaeus 1753 (Wood-sorrel, Oxalis)

A genus of about 500-700 species, herbs, shrubs, and vines. References: Ward (2004)=Z; Eiten (1963)=Y; Lourteig (1979)=X; Robertson (1975)=Q; Cocucci in Kubitzki (2004).

1 Plant acaulescent; leaves basal; flowers white, pink, or purple.
  2 [section *Oxalis*] ..... ***O. montana***
  2 [section *Ionoxalis*].
    3 [naturalized] ..... ***O. rubra***
    3 [native] ..... ***O. violacea***
1 Plant caulescent; leaves alternate; flowers yellow; [section *Corniculatae*].
O. corniculata, O. corymbosa, O. dillenii, O. grandis, O. priceae *ssp.* ***colorea, O. priceae*** *ssp.* ***priceae, [O. priceae*** *ssp.* ***texana], O. stricta***

* ***Oxalis corniculata*** Linnaeus, Creeping Lady's-sorrel. Cp, Pd (NC, SC, VA), Mt (NC, VA?), {GA}: gardens, disturbed areas; uncommon. February-December. [= *O. corniculata* – RAB, C, F, K, Q, Y; = *O. repens* Thunberg – G; > *Xanthoxalis corniculata* (Linnaeus) Small – S; > *Xanthoxalis langloisii* Small – S; > *O. corniculata* var. *corniculata* – Z; > *O. corniculata* var. *atropurpurea* Planchon – Z]

* ***Oxalis corymbosa*** Augustin de Candolle. {GA, SC}. native of South America. See Kartesz (1999). [= Q, Z; = *Oxalis debilis* Kunth var. *corymbosa* (Augustin de Candolle) Lourteig – K]

Oxalis dillenii Jacquin, Southern Yellow Wood-sorrel. Cp, Pd, Mt (GA, NC, SC, VA): [= C, K; > *O. dillenii* – RAB; > *O. florida* var. *florida* – RAB; > *O. florida* Salisbury var. *filipes* (Small) Ahles – RAB; = *O. stricta* Linnaeus – G, misapplied; > *O. dillenii* ssp. *dillenii* – Q, W, Y, Z; > *O. dillenii* Jacquin ssp. *filipes* (Small) Eiten – Q, W, Y, Z; > *O. florida* – F; > *O. filipes* – F; > *Xanthoxalis filipes* (Small) Small – S; > *Xanthoxalis brittoniae* (Small) Small – S]

Oxalis grandis Small, Great Yellow Wood-sorrel. Mt (GA, NC, SC, VA), Pd (NC, VA): rich moist forests; common (rare in Piedmont). May-June. [= RAB, C, F, G, K, Q, W, Y; = *Xanthoxalis grandis* (Small) Small – S]

Oxalis montana Rafinesque, American Wood-sorrel, White Wood-sorrel. Mt (GA, NC, VA): spruce-fir forests, northern hardwood forests, at high elevations; uncommon (GA Special Concern). Closely related to the Eurasian *O. acetosella*, and sometimes treated as merely a geographic phase. [= F, K, S; < *O. acetosella* Linnaeus – RAB, C, G, W; = *O. acetosella* ssp. *montana* (Rafinesque) Hultén ex D. Löve – Q]

Oxalis priceae Small *ssp.* ***colorea*** (Small) Eiten. Pd (GA, NC, SC, VA), Cp (GA, NC, SC): [= K, Q, Y; = *O. recurva* Elliott var. *recurva* – F; < *O. recurva* – G; = *O. florida* Salisbury var. *recurva* (Elliott) Ahles – RAB; = *O. macrantha* (Trelease) Small – C; > *Xanthoxalis colorea* Small – S; > *Xanthoxalis recurva* Elliott) Small – S]

* ***Oxalis rubra*** St. Hilaire. Cp, Pd (GA, NC, SC, VA): native of South America. [= RAB, K, Q; *? Ionoxalis martiana* (Zuccarine) Small – S, misapplied; = *O. articulata* Savigny ssp. *rubra* (St. Hilaire) Lourteig]

Oxalis stricta Linnaeus, Common Yellow Wood-sorrel. Mt, Pd, Cp (GA, NC, SC, VA): May-October. [= RAB, C, K, Q, W, Y, Z; > *O. europaea* Jord. var. *europaea* – F; > *O. europaea* var. *bushii* (Small) Wiegand – F; = *O. europaea* – G; > *Xanthoxalis stricta* (Linnaeus) Small – S; > *Xanthoxalis bushii* Small – S; > *Xanthoxalis rufa* Small – S; > *Xanthoxalis cymosa* (Small) Small – S]

Oxalis violacea Linnaeus, Violet Wood-sorrel. Pd, Mt (GA, NC, SC, VA), Cp (GA?, NC, SC, VA): dry forests; common. MA, VT, MI, SD, and CO south to FL, TX, and AZ. [= RAB, C, G, K, Q, W, Z; > *O. violacea* var. *violacea* – F; > *O. violacea* var. *trichophora* Fassett – F; = *Sassia violacea* (Linnaeus) Holub; = *Ionoxalis violacea* (Linnaeus) Small – S]

Oxalis illinoensis Schwegman, Illinois Wood-sorrel. KY, IN, and IL. [= K]
Oxalis priceae Small ssp. *texana* (Small) Eiten. In GA (GANHP, Kartesz 1999); not in GA (Ward 2004). [= K, Q, Y]

PAEONIACEAE (Berchtold & J. Presl) Rudolphi 1830 (Peony Family)

Paeonia Linnaeus (Peony)

* *Paeonia lactiflora* Pallas, Peony, is "cultivated and occasionally persisting around old home sites" at least as far south as sc. and se. PA (Rhoads & Klein 1993). [= K]

PAPAVERACEAE A.L. de Jussieu 1789 (Poppy Family)

References: Kiger in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowering stem scapose, leaves basal only; petals 8-16, white; [subfamily *Chelidonioideae*] ..... ***Sanguinaria***
1 Flowering stem with leaves at least low on the stem; petals 0-6, purple, red, orange-red, orange, yellow, cream.
  2 Inflorescence a panicle; petals absent; [subfamily *Chelidonioideae*] ..... ***Macleaya***
  2 Inflorescence not a panicle; petals present, 4-6.
    3 Leaves and fruits prickly; [subfamily *Papaveroideae*] ..... ***Argemone***
    3 Leaves and fruits not prickly.
      4 Sepals connate; leaves ternately dissected into linear segments; sap watery; [subfamily *Eschscholzioideae*] .... ***Eschscholzia***
      4 Sepals separate; leaves pinnately lobed; sap yellow, orange, or milky.
        5 Flowers several in a terminal umbel; [subfamily *Chelidonioideae*].
          6 Stigma lobes, placentae, and capsule valves 2; style very short; fruit linear, glabrous... ***Chelidonium***
          6 Stigma lobes, placentae, and capsule valves (2-) 3-4; style ca. 1 cm long; fruit ellipsoid, pubescent . ..... ***Stylophorum***
        5 Flowers solitary, terminal.
          7 Fruit 15-30 cm long, 2-locular (the partitions complete), dehiscent by elongate valves; stigmatic lobes 2; [subfamily *Chelidonioideae*] ..... ***Glaucium***
          7 Fruit 1-8 cm long, 4-20-locular (the partitions incomplete), dehiscent by small valves beneath the stigmatic disc; stigmatic lobes 4-20; [subfamily *Papaveroideae*] ..... ***Papaver***

Argemone Linnaeus 1753 (Prickly-poppy)

A genus of about 32 species, annual and perennial herbs, of North America, West Indies, Central America, South America, and Hawaii. References: Ownbey in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers white to pink; latex white or nearly clear ..... ***A. albiflora*** *ssp.* ***albiflora***
1 Flowers yellow to cream; latex yellow ..... ***A. mexicana***

Argemone albiflora Hornemann *var.* ***albiflora***, Carolina-poppy, White Prickly-poppy. Cp (GA, NC, SC): sandy roadsides and disturbed areas; uncommon. April-May (sporadically later). This species is apparently native to the southeastern United States, presumably including our area. Var. *texana* (G.B. Ownbey) Shinners occurs in TX, AR, and LA. The species' weediness suggests, however, that it may be merely adventive in our area. [= *A. albiflora* ssp. *albiflora* – FNA, K; < *A. albiflora* – RAB, C; < *A. alba* Lestib. f. – G, S, misapplied]

* ***Argemone mexicana*** Linnaeus, Mexican-poppy, Mexican Prickly-poppy. Cp (GA, NC, SC): sandy roadsides and disturbed areas; rare, native of s. FL, West Indies, and maybe Mexico and Central America. April-May (sporadically later). [= RAB, C, FNA, G, K]

Chelidonium Linnaeus 1753 (Greater-celandine)

A monotypic genus, a perennial herb, of temperate Eurasia. References: Kiger in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

* ***Chelidonium majus*** Linnaeus, Greater-celandine, Rock-poppy, Swallow-wort. Mt (GA, NC, VA), Pd, Cp (VA): moist slopes, shaded roadsides, rocky forests; common (rare south of VA), introduced from Eurasia. April-July. First reported for GA (Rabun County) by Stiles & Howel (1998). [= RAB, C, F, FNA, G, S, W; > *Ch. majus* var. *majus* – K]

Eschscholzia Chamisso 1820 (California-poppy)

A genus of about 12 species, annual and perennial herbs, of sw. North America and n. Mexico. References: Clark in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

* ***Eschscholzia californica*** Chamisso *ssp.* ***californica***, California-poppy. Cp (GA, NC, SC), Pd (NC, SC): roadsides, disturbed areas; uncommon, introduced from w. North America. May-August. [= FNA, K; < *Eschscholtzia californica* – RAB, F, orthographic variant]

Glaucium P. Miller 1754 (Horned-poppy)

A genus of about 23 species, annual and perennial herbs, of temperate Europe and w. Asia. References: Kiger in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

* ***Glaucium flavum*** Crantz, Yellow Horned-poppy, Sea-poppy. Cp, Pd (VA): disturbed areas; rare, introduced from Mediterranean Europe. June. [= C, F, FNA, G, K]

Macleaya R. Brown 1826 (Plume-poppy)

A genus of 2 species, perennial herbs, of e. Asia. References: Kiger in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

* ***Macleaya cordata*** (Willdenow) R. Brown, Plume-poppy, Tree-celandine. Pd, Cp (VA), Mt (NC) {SC}: moist streambanks, persistent or escaped from cultivation; rare, introduced from e. Asia. Reported as naturalized in TN by Kral (1981). [= C, F, FNA, G, K] {check Castanea 38: 114-116, 302-304 for SC report}

Papaver Linnaeus 1753 (Poppy)

A genus of about 80 species, annual and perennial herbs, of temperate Northern Hemisphere. References: Kiger & Murray in FNA (1997); Kiger (1975)=Z; Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

1 Upper cauline leaves clasping the stem; [section *Papaver*] ..... ***P. somniferum***
1 Upper cauline leaves not clasping the stem.
  2 Ovaries and capsules sparsely to densely setose-pubescent; [section *Argemonidium*].
    3 Capsules oblong to clavate, sparsely setose with weak hairs ..... ***[P. argemone]***
    3 Capsules obovoid-ellipsoid to subglobose, densely setose with strong hairs ..... ***P. hybridum***
  2 Ovaries and capsules glabrous.
    4 Flowers > 10 cm across; perennial; [section *Macrantha*]..... ***P. orientale***
    4 Flowers < 10 cm across; annual; [section *Rhoeadium*].
      5 Capsule 2-3× as long as broad; stigmatic lobes 5-9..... ***P. dubium***
      5 Capsule 1-1.5× as long as broad; stigmatic lobes 8-15..... ***P. rhoeas***

* ***Papaver dubium*** Linnaeus, Long-headed Poppy. Mt, Pd, Cp (NC, SC, VA): roadsides, fields, disturbed areas; uncommon, introduced from Europe. April-June. [= RAB, C, F, FNA, G, K, S, W, Z]
* ***Papaver hybridum*** Linnaeus, Rough Poppy. Mt (NC) {SC}: disturbed areas; rare, introduced from Eurasia. May-June. [= RAB, FNA, K, Z]
* ***Papaver orientale*** Linnaeus, Oriental Poppy. Cp (VA): rare, introduced from sw. Asia. [= FNA, G, K, Z]
* ***Papaver rhoeas*** Linnaeus, Corn Poppy, Field Poppy, Red Poppy, Shirley Poppy, Common Poppy. Mt (VA), Pd (NC, VA) {SC}: disturbed areas; rare, introduced from Eurasia and n. Africa. May. [= RAB, C, F, FNA, G, K, Z]
* ***Papaver somniferum*** Linnaeus, Opium Poppy, Common Poppy. Pd (NC, VA), Cp, Mt (NC): disturbed areas; rare, introduced from Mediterranean Europe and Asia Minor. May-June. [= RAB, C, F, FNA, G, K, S, Z]

* *Papaver argemone* Linnaeus is reported from PA (Rhoads & Klein 1993, Kiger & Murray in FNA 1997), VA, and MD (Kiger & Murray in FNA 1997). {herbarium verification} [= FNA]

Other species are cultivated and may be found in our area persistent, escaped, as waifs, or as naturalized populations.

Sanguinaria Linnaeus 1753 (Bloodroot)

A monotypic genus, a perennial herb, of e. North America. References: Kiger in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

Sanguinaria canadensis Linnaeus, Bloodroot, Red Puccoon. Mt, Pd, Cp (GA, NC, SC, VA): moist nutrient-rich forests; common (uncommon in Coastal Plain of GA, NC, and SC). March-April; April-May. Nova Scotia west to MN and Manitoba, south to FL and OK. Var. *rotundifolia*, more southern and the primary form in our area, is considered to have leaves less lobed than the more northern var. *canadensis*; leaf shape variability within populations makes it impractical to recognize infraspecific taxa. [= RAB, C, FNA, G, K, S, W; > *S. canadensis* var. *canadensis* – F; > *S. canadensis* var. *rotundifolia* (Greene) Fedde – F]

Stylophorum Nuttall 1818 (Celandine-poppy)

A genus of 2-5 species, perennial herbs, of e. North America and e. Asia. References: Kiger in FNA (1997); Kadereit in Kubitzki, Rohwer, & Bittrich (1993).

Stylophorum diphyllum (Michaux) Nuttall, Celandine-poppy, Woods-poppy. Mt (GA, VA): moist forests over calcareous rocks (such as limestone); rare (GA Rare, VA Rare). March-April. W. PA (where perhaps only introduced) to s. MI and WI, south to sw. VA, e. TN, nw. GA, sc. TN, and AR. [= C, F, FNA, G, K, S, W]

PARNASSIACEAE Gray 1821 (Grass-of-Parnassus Family)

A family of 2 genera and about 16 species, herbs, of largely north temperate and arctic areas. Numerous anomalous features separate *Parnassia* from the Saxifragaceae; affinities with the Droseraceae, Clusiaceae, Celastraceae, and other families have been suggested. Considering the uncertainties of its relationships, *Parnassia* is best treated as a family, the Parnassiaceae, as suggested by numerous workers as early as 1821, and increasingly accepted in recent decades. The very distant relationship of *Parnassia* to the Saxifragaceae (sensu stricto) has been strongly reaffirmed by molecular analyses (Morgan & Soltis 1993, Soltis et al. 2000, Savolainen et al. 2000). References: Simmons in Kubitzki (2004).

1 Plants diminutive, rosettes < 3 cm across; winter annual..... ***Lepuropetalon***
1 Plants larger, rosettes over 8 cm across; perennial from rhizomes..... ***Parnassia***

Lepuropetalon Elliott 1817 (Lepuropetalon)

A monotypic genus, of se. North America, Mexico, c. Chile, and Uruguay. Sometimes treated as part of a broad and polymorphic Saxifragaceae, *Lepuropetalon* has often been associated with *Parnassia* in the Parnassiaceae. Morgan & Soltis (1993) suggest a close relationship of *Lepuropetalon* and *Parnassia*, as well as the "distant relationship between both genera and the Saxifragoideae." The affinities of *Lepuropetalon* with *Parnassia* remain uncertain, however, as emphasized by Gastony & Soltis (1977) in their analysis of chromosomes and partially reiterated by Morgan & Soltis (1993). *Lepuropetalon* is here treated in the Parnassiaceae, as supported by molecular analyses (Soltis et al. 2000, Savolainen et al. 2000); treatment in a monotypic Lepuropetalaceae is perhaps equally warranted. References: Ward & Gholson (1987); Spongberg (1972); Gastony & Soltis (1977); Wilbur (1988b); Simmons in Kubitzki (2004).

Lepuropetalon spathulatum Elliott, Lepuropetalon. Pd (GA, SC), Cp (GA, NC, SC): in moist open areas, such as seepage on granitic flatrocks, ditches, seasonally wet depressions; rare (SC Rare). February-April. Se. NC and SC south to GA, west to e. TX and Mexico; also in Chile and Uruguay. As indicated by Ward & Gholson (1987), *Lepuropetalon* is more common than collections would indicate; the rosettes are 0.5-2 (-3) cm across, the greenish flowers are 2-3 mm across. It has been considered "the smallest terrestrial angiosperm" (Morgan & Soltis 1993). Its apparently greater abundance in the western portion of its range, where largely found by a few botanists "who have made determined efforts to establish its range" (Ward & Gholson), and in habitats such as granitic flatrocks, which have overall received close scrutiny, may be more a reflection of its diminutive size and early season of occurrence than of its real distribution and abundance. The recent increase in collections, mostly in disturbed or human-maintained habitats, also suggests a possible increase in abundance (and range?) from its original state. It should be more vigorously sought in our area. The presence of lines of red glandular dots on the leaves and sepals is a helpful diagnostic character. [= RAB, GW, K, S; *Pyxidanthera spatulata* Muhlenberg, nomen nudum, not validly published]

Parnassia Linnaeus 1753 (Grass-of-Parnassus, Parnassia)

A genus of 15-70 species, herbs, primarily of arctic and north temperate areas. Our species (especially *P. caroliniana*) are among the most southerly of the genus in distribution. *Parnassia* (all species) are among the most beautiful of our native plants. From a distance the white flowers are attractive but not extraordinary; when observed closely, though, the delicate tracery of the green veins on the waxy white petals is astonishing. References: Gastony & Soltis (1977); Spongberg (1972); GW; Simmons in Kubitzki (2004).

Identification notes: Note that the five staminodia are (in our species) deeply three-lobed to the base, thus appearing as 15.

1 Leaf blades reniform, as wide or wider than long, the base strongly cordate; staminodia shorter than the stamens [note that the stamens elongate after the staminodia; thus at a certain early stage the stamens of *P. asarifolia* may be shorter than the staminodia; check several flowers] ..... ***P. asarifolia***
1 Leaf blades ovate, longer than wide, the base rounded, broadly cuneate, truncate, or cordate; staminodia longer than the stamens (*P. caroliniana* and *P. grandifolia*) or shorter than the stamens (*P. glauca*).
2 Staminodia shorter than the stamens; [of NJ, PA, and OH northward] ..... ***[P. glauca]***
2 Staminodia longer than the stamens; [of NJ (?), VA, WV, MO southward].
3 Main parallel veins of each petal (9-) 11-17 (counted at a point halfway between the base and the apex and ignoring short laterals), usually not dilated toward the apex of the petal; outer- or basal-most main vein branching pseudo-dichotomously several times; rhizome horizontal, long-creeping, the leaves scattered or loosely clustered, tending to form clonal patches to several m in diameter; ovary white; [of Coastal Plain pinelands] .... ***P. caroliniana***
3 Main parallel veins of each petal 5-9 (counted at a point halfway between the base and the apex and ignoring short laterals), often strongly dilated toward the apex of the petal; outer- or basal-most main vein with numerous short laterals on the outer side, extending to the petal margin with few or no branchings; rhizome erect, short, the leaves strongly clustered, not forming large clonal patches; ovary green, sometimes white toward the base; [primarily of the Mountains, rarely also disjunct in the Coastal Plain] ..... ***P. grandifolia***

Parnassia asarifolia Ventenat, Kidney-leaved Grass-of-Parnassus, Appalachian Grass-of-Parnassus, Brook Parnassia. Mt (GA, NC, SC, VA), Pd (GA, VA), Cp (VA): bogs, sphagnous seeps, brookbanks, generally in more acidic habitats than *P. grandifolia*, up to elevations over 6,000 feet; uncommon, rare in VA Piedmont and Coastal Plain (SC Rare). (July-) August-October. VA, WV, and AR south to GA and TX, primarily in the Appalachian and Ozarkian highlands. [= RAB, C, F, G, GW, K, S, W]

Parnassia caroliniana Michaux, Carolina Grass-of-Parnassus, Savanna Parnassia, Eyebright. Cp (NC, SC): wet longleaf pine, pond pine, or pond cypress savannas (especially but not strictly where shallowly underlain by coquina limestone), sandhill seepage bogs; rare (US Species of Concern, NC Endangered, SC Rare). September-November (-December). Se. and sc. NC south through SC to the Panhandle of FL, the distribution (at least now) fragmented and disjunctive. In NC, locally common in three small areas, centered around Maple Hill (Pender and Onslow counties), Old Dock (Columbus and Brunswick counties), and the Green Swamp (Brunswick County). Following Michaux's discovery of the species it was apparently not reported again in the Carolinas until found by H.A. Rankin near Hallsboro. His comments, quoted in Alexander (1934) are interesting. "What if our savannas are sometimes steaming, it is the condition necessary for the development for many wonderful plants which find here their most congenial surroundings. But Grass-of-Parnassus does not star the meadows during the steaming season, instead, by local tradition, the 'Eyebright,' its local name, times its first flowers to come just two weeks before frost ... As a matter of fact, I saw the first flowers this year on October 12th and our first frost came the morning of the 25th. Its chosen habitat is the wet savannas and hundreds of acres may be seen liberally dotted with its white stars, but it finds its best development in the lower places, and here it often almost covers the ground. Today, November 1st, it is in its prime and is the most conspicuous flower on many acres and in one little depression less than two feet in diameter I counted seventy-two flowers and buds." With the extensive destruction of our wet savannas (by conversion to pine tree farms, agriculture, and developed areas) and fire suppression, very few such places now remain. [= RAB, GW, K, S]

Parnassia grandifolia Augustin de Candolle, Bigleaf Grass-of-Parnassus, Limeseep Parnassia, Undine. Mt (GA, NC, SC, VA), Cp (NC): fens, gravelly seepages, primarily or solely over calcareous, mafic, or ultramafic rocks, in the outer Coastal Plain in seepage over marl on nearly vertical river bluffs on the Cape Fear River; rare (GA Special Concern, NC Rare, SC Rare, VA Rare). September-October. NJ (?), VA, WV, and s. MO south to n. GA, Panhandle FL, s. MS (Sorrie & Leonard 1999), AR, and e. TX, primarily in the Appalachian and Ozarkian highlands. The discovery of populations of this species in Brunswick and Columbus counties, NC, was remarkable. In the Panhandle of FL and the West Gulf Coastal Plain of LA and TX it also occurs in wet savannas and pitcherplant bogs (MacRoberts, MacRoberts, & Jackson 2004), in FL sometimes in close proximity to *P. caroliniana*; *Parnassia* in Coastal Plain savannas should not necessarily be assumed to be *P. caroliniana*. [= RAB, C, F, G, GW, K, S, W]

Parnassia glauca Rafinesque, American Grass-of-Parnassus. South to NJ, s. PA (Rhoads & Klein 1993), OH, IN, IA, and SD (Kartesz 1999). [= C, F, G, K]

PASSIFLORACEAE A.L. de Jussieu ex Kunth 1817 (Passionflower Family)

A family of about 17 genera and 575 species, vines, shrubs, and trees, of tropical and warm temperate regions, especially America.

Passiflora Linnaeus (Passionflower)

A genus of about 430-520 species, vines, shrubs, and trees, of tropical and warm temperate America and Asia. References: Ulmer & MacDougal (2004)=Z.

1 Leaves entire, herbaceous in texture; petioles without 2 glands near the junction of the petiole and the blade; berry 0.8-1.5 cm long; [subgenus *Decaloba*; supersection *Decaloba*] .....***P. lutea* var. *lutea***
1 Leaves serrulate, thick and subcoriaceous in texture; petioles with 2 glands near the junction of the petiole and the blade; berry 2-7 cm long.
2 Petals blue (to nearly white), 30-40 mm long; berry 4-7 cm long; calyx subtended by 3 bracts; [native, widespread and common in our area]; [subgenus *Passiflora*; supersection *Passiflora*] ..... ***P. incarnata***
2 Petals white to yellowish, 6-8 mm long; berry 2-3 cm long; calyx not subtended by bracts; [introduced, very rare in our area]; [subgenus *Decaloba*; supersection *Bryonioides*].....***P. morifolia***

Passiflora incarnata Linnaeus, Maypops. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, fencerows, thickets, fields; common. May-July (-later); July-October. N. VA and sw. PA west to OK, south to FL and TX. Certainly one of our most interesting and beautiful flowers. [= RAB, C, F, G, K, S, W, Z]

Passiflora lutea Linnaeus *var. **lutea***, Yellow Passionflower. Cp, Pd, Mt (GA, NC, SC, VA): woodlands, forests, thickets, maritime forests; common. June-September; August-October. Var. *lutea* ranges from PA, WV, and TN south to FL and AL. Var. *glabriflora*, differing in the calyx, petioles, and stems glabrous (vs. pilose in var. *lutea*) is more western, ranging from OH west to OK, south to AL and TX. [= C, F, G; < *P. lutea* – RAB, K, S, W, Z]

* ***Passiflora morifolia*** Masters. Pd (SC): thickets; rare, introduced from South America. May-July; July-October. [= RAB, K, Z; *? P. warmingii* Masters – S]

* *Passiflora gracilis* Jacquin ex Link is reported for SC (Kartesz 1999). {investigate – not in SC Plant Atlas} [= K] {not keyed at this time}

PAULOWNIACEAE Nakai 1949 (Paulownia Family)

There has been disagreement over whether *Paulownia* is best placed in Scrophulariaceae, Bignoniaceae, or its own family, Paulowniaceae; superficially it closely resembles *Catalpa* of the Bignoniaceae. Armstrong (1985) concluded that *Paulownia*'s affinities lie with the Scrophulariaceae, based on floral anatomy, embryo morphology, and seed morphology. A molecular study by Spangler & Olmstead (1999) conclude that *Paulownia* is best retained in its own family. Manning (2000) concurs with its removal from Bignoniaceae. Molecular evidence supports that it is sister to the reconstituted Orobanchaceae. References: Spangler & Olmstead (1999); Manning (2000).

Paulownia Siebold & Zuccarini (Princess-tree)

A genus of 6 species, trees, of e. Asia. References: Armstrong (1985).

* ***Paulownia tomentosa*** (Thunberg) Siebold & Zuccarini ex Steudel, Princess Tree, Empress Tree, Paulownia. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, disturbed areas, roadcuts, forests; common, introduced from China. April-May; September-October. *Paulownia* is becoming something of a nuisance, showing an ability to invade pristine woodlands. The very soft wood is highly prized in Asia. The leaves of stump sprouts can reach very large sizes (at least to 80 cm long and wide). The woody capsules are persistent, and the densely tomentose, tan flower buds are conspicuous through the winter. [= RAB, C, F, G, K, S, W]

PENTHORACEAE Rydberg ex Britton 1901 (Ditch-stonecrop Family)

A family of one genus and 2 species, herbs, of e. North Americaand e. Asia. *Penthorum* has been variously placed in the Crassulaceae, Saxifragaceae, or in the Penthoraceae. Haskins & Hayden (1987) concluded that *Penthorum* was best treated in a monogeneric Penthoraceae, a conclusion based on extensive anatomical evidence. Among those who do not favor a monotypic family, there is nearly evenly divided opinion between the Crassulaceae and Saxifragaceae; this in itself perhaps supports segregation in the Penthoraceae. Molecular evidence supports the recognition of the Penthoraceae, and suggests closer affinities with the Haloragaceae than with either the Crassulaceae or the Saxifragaceae (Morgan & Soltis 1993).

Penthorum Linnaeus (Ditch-stonecrop, Penthorum)

A genus of 2 species, herbs, of e. North America and e. and se. Asia. The only other species in the genus is *P. chinense* Pursh, of e. Russia, China, Korea, and Japan. References: Haskins & Hayden (1987)=Z.

Penthorum sedoides Linnaeus, Ditch-stonecrop, American Penthorum. Pd, Cp, Mt (GA, NC, SC, VA): shores, drawdown areas, moist forests, moist disturbed areas, ditches; common. June-October. Widespread in e. North America. [= RAB, C, F, G, GW, K, S, W, Z]

PHRYMACEAE Schauer 1847 (Lopseed Family)

As radically circumscribed, a family of about 20 genera and 240 species, herbs, cosmopolitan. See Tank et al. (2006). References: Lee et al. (1996)=Z; Tank, Beardsley, Kelchner, & Olmstead (2006); Thieret (1972); Wagstaff & Olmstead (1997); Fischer in Kadereit (2004); Cantino in Kadereit (2004).

Glossostigma Wight & Arnott

A genus of 7-8 species of aquatics, native to Australia, East Africa, India, and New Zealand. References: Les, Capers, & Tippery (2006)=Z.

* *Glossostigma cleistanthum* W.R. Barker. Aquatic in oligotrophic lakes and reservoirs. Introduced, naturalized, and invasive in NJ, PA, CT, and RI (Les, Capers, & Tippery 2006). Native of Australia. [= Z]

Mazus Loureiro

A genus of 10-15 species, herbs, of Asia to Australia.

1 Plant stoloniferous, perennial; corolla ca. 15 mm long ..... ***M. miquelii***
1 Plant not stoloniferous, annual; corolla 7-10 mm long ..... ***M. pumilus***

* ***Mazus miquelii*** Makino. Pd (NC): lawns; rare, introduced from e. Asia. April-June. [= C, K; = *M. miguelii* – RAB, misspelling; *? M. reptans* N.E. Brown]
* ***Mazus pumilus*** (Burmann f.) Steenis. Cp, Pd (GA, NC, SC, VA): lawns; rare, introduced from e. Asia. December-June. [= C, K; *? M. japonicus* (Thunberg) Kuntze – RAB, F, G, P]

Mimulus Linnaeus (Monkey-flower)

A genus of about 150 species, herbs and shrubs, of w. North America, s. Africa, Asia, and e. North America. *Mimulus* reaches its greatest diversity in w. North America. References: Grant (1924)=Z.

1 Corolla yellow; stem viscid glandular-pubescent; plant usually 2-4 dm tall ..... ***M. moschatus***
1 Corolla blue; stem glabrous; plant usually 3-15 dm tall; [section *Mimulus*].
  2 Leaves petiolate (the upper sessile or nearly so); pedicels 2-15 mm long; stem with 4 winged angles..... ***M. alatus***
  2 Leaves sessile; pedicels 20-45 mm long; stem with 4 rounded angles ..... ***M. ringens* *var*. *ringens***

Mimulus alatus Aiton, Winged Monkey-flower. Cp, Pd (GA, NC, SC, VA), Mt (GA, VA): marshes, bottomlands, ditches; common. July-November. MA and CT west to s. MI and s. IA, south to panhandle FL and TX. [= RAB, C, F, G, GW, K, P, S, W, Z]

Mimulus moschatus Douglas ex Lindley, Muskflower, Musky Monkey-flower. Mt (NC, VA): streambanks, brookbanks, saturated soil of springs; rare (NC Watch List, VA Rare). July; August. Newfoundland and Québec west to MI, south to w. VA, WV, NC, and MI, and in w. North America. The native/naturalized status of *M. moschatus* in e. North America is controversial. Some at least of our populations appear to be native, not occurring in situations where likely to have been introduced. [= RAB, C, F, G, P, W; > *M. moschatus* var. *moschatus* – K]

Mimulus ringens Linnaeus *var*. ***ringens***, Allegheny Monkey-flower. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): marshes, bogs, wet meadows, bottomlands; common. June-September. Nova Scotia and Québec west to Saskatchewan, south to c. GA, LA, OK, and CO. [= G, K; < *M. ringens* – RAB, C, GW, S, W; > *M. ringens* var. *minthodes* (Greene) A.L. Grant – F, Z; > *M. ringens* var. *ringens* – F, Z; = *M. ringens* var. *typica* – P]

Phryma Linnaeus 1753 (Lopseed)

A genus of 1-2 species, herbs, of e. North America and Asia. The disjunct populations have been variously treated as species, varieties, or races. References: Lee et al. (1996)=Z; Thieret (1972); Wagstaff & Olmstead (1997); Cantino in Kadereit (2004).

Phryma leptostachya Linnaeus *var*. ***leptostachya***, American Lopseed. Mt, Pd, Cp (GA, NC, SC, VA): bottomland forests, nutrient-rich slopes, in the Coastal Plain primarily in places underlain by coquina limestone ("marl") and essentially absent from the more acidic portions of the NC Coastal Plain; common (uncommon in Coastal Plain). June-August; August-October. The species is interpreted as occurring disjunctly in e. North America and e. Asia. Var. *leptostachya* ranges from Québec west to

Manitoba, south to FL and TX; var. *asiatica* Hara occurs in e. Asia. The fruits "lopped down" against the stem are unmistakable. [= Z; < ***Ph. leptostachya*** – RAB, C, G, K, S, W; > ***Ph. leptostachya*** var. ***leptostachya*** – F; > ***Ph. leptostachya*** var. ***confertifolia*** Fernald – F]

Torenia Linnaeus (Bluewings)

A genus of about 40 species of the Old World tropics.

* *Torenia fournieri* Linden ex E. Fournier, Bluewings, Wishbone-flower. Reported for Jackson County, NC, as a "sporadic waif growing in plant beds from overwintering seeds" (Pittillo & Brown 1988). Reported for other southeastern states (Florida, Louisiana) by Kartesz (1999). [= K]

PHYLLANTHACEAE Martinov 1820 (Leaf-flower Family)

References: Webster (1994); Chase et al. (2002).

1 Woody shrub; stamens 5-6.....***[Leptopus]***
1 Annual herb; stamens 3.....***Phyllanthus***

Leptopus Dcne. (Maidenbush)

Generic boundaries uncertain at this time (Wurdack et al. 2004). References: Wurdack et al. (2004).

Leptopus phyllanthoides (Nuttall) G.L. Webster, Maidenbush. Disjunct in AL from a main distribution in the Ozarks (AR, MO, OK) and TX. [= K; *Andrachne phyllanthoides* (Nuttall) Coulter – F, G]

Phyllanthus Linnaeus (Leaf-flower)

A genus of about 1200-1300 species, trees, shrubs, and herbs, of tropical, subtropical and warm temperate regions of the Old and New Worlds. Heterogeneous and perhaps to be divided. References: Rossignol, Rossignol, & Haicour (1987)=Z; Webster (1970)=Y; Govaerts, Frodin, & Radcliffe-Smith (2000)=X.

1 Plant with leaves uniformly distributed on the stem and branches, alternate and distichous; flowers produced on ultimate and penultimate orders of branches, the ultimate branches not deciduous; [subgenus *Isocladus*].....***Ph. caroliniensis*** *ssp.* ***caroliniensis***
1 Plant lacking leaves on the main stem, the penultimate order of branches with scales borne in spiral phyllotaxy, the ultimate order of branches deciduous, bearing normal leaves alternately and distichously; flowers produced only on the ultimate, deciduous branches.
  2 Stamens 5, filaments free; fruiting pedicels capillary, 3-7 mm long; seeds densely papillose; [subgenus *Kirganelia*].....***Ph. tenellus***
  2 Stamens 3, filaments connate into a column 0.1-0.15 mm long; fruiting pedicels thick, 0.5 mm long; seeds with 12-15 transverse ridges and sometimes 1-3 pits; [subgenus *Phyllanthus*].....***Ph. urinaria*** *ssp.* ***urinaria***

Phyllanthus caroliniensis Walter *ssp.* ***caroliniensis***, Carolina Leaf-flower. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, moist woodlands, forests, and fields, often in seasonally wet, muddy places; common (rare in VA Mountains). July-November. PA and IL south to FL and TX, and south to Argentina and Paraguay, the original range not clear, likely introduced in part of the area. Ssp. *saxicola* (Small) G.L. Webster (sometimes treated as a species) is restricted to s. FL, the Bahamas, and Greater Antilles. [= K, X, Y; < ***Ph. caroliniensis*** – RAB, F, G, W; = ***Ph. caroliniensis*** var. ***caroliniensis*** – C; < ***Ph. carolinensis*** – GW, orthographic error; = ***Ph. caroliniensis*** – S]

* ***Phyllanthus tenellus*** Roxburgh, Mascarene Island Leaf-flower. Pd (GA, NC), Cp (GA, NC, SC): disturbed areas, in and around greenhouses; rare, native to the Mascarene Islands. This species appeared in FL in the 1920's, s. GA in the 1940's, SC in the 1950's, NC in the 1960's, and TN in the 1970's (Kral 1981). [= GW, K, Y; *? Ph. amarus* – RAB, misapplied (misidentified); > *Ph. tenellus* var. *tenellus* – X]

* ***Phyllanthus urinaria*** Linnaeus *ssp.* ***urinaria***, Chamber Bitter. Cp (GA, NC, SC, VA): gardens and roadsides, apparently preferring nitrogen-rich soils; rare, introduced from tropical Southeast Asia, now scattered in the tropics and subtropics of both hemispheres. March-November. This species appeared in the 1940's to 1960's in FL, GA, AL, LA, TX, and NC, and in the 1970's in TN (Kral (1981). [= X, Z; < ***Ph. urinaria*** – GW, K, Y]

* *Phyllanthus fraternus* G.L. Webster, introduced in SC (Kartesz 1999). {investigate} [= K, X]

Several other species have been previously but erroneously reported for our area. *Phyllanthus amarus* Schumacher, Gale-of-wind, Carry-me-seed, reported by RAB for NC and SC, was misidentified and actually represents ***Ph. tenellus*** (Webster 1970); see above. Reports of ***Ph. niruri*** Linnaeus from NC and SC also proved to be ***Ph. tenellus*** (Webster 1970). *Phyllanthus pentaphyllus* Wright, Fivepetal Leaf-flower, unlikely to be correctly labeled from Darlington County, SC (as also indicated by RAB), is likewise here excluded.

PHYTOLACCACEAE R. Brown 1818 (Pokeweed Family)

A family of about 18 genera and 70 species, herbs, shrubs, vines, and trees, of tropical and warm temperate regions, especially America. References: Nienaber & Thieret in FNA (2003b); Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

Phytolacca Linnaeus 1753 (Pokeweed)

A genus of about 25 species, herbs, shrubs, and trees, of tropical and warm temperate regions. References: Caulkins & Wyatt (1990)=Z; Hardin (1964a)=Y; Rogers (1985)=X; Nienaber & Thieret in FNA (2003b); Rohwer in Kubitzki, Rohwer, & Bittrich (1993).

1 Fruiting pedicels (6-) 7-12 (-15) mm long; raceme (not including the peduncle) 10-20 (-25) cm long, divergent or drooping in flower and fruit (or erect in flower); [widespread in our area]..... ***Ph. americana***
1 Fruiting pedicels (2-) 4-6 (-7) mm long; raceme (not including the peduncle) (3-) 6-9 (-13) cm long, erect (rarely divergent) in flower and fruit; [restricted in our area to maritime habitats] ..... ***Ph. rigida***

Phytolacca americana Linnaeus, Common Pokeweed. Pd, Mt, Cp (GA, NC, SC, VA): in a wide variety of natural and disturbed habitats, usually associated with exposed mineral soil; common. May-frost. An abundant "native weed" occurring throughout e. North America, ***P. americana*** is widely dispersed by birds and quickly colonizes exposed mineral soil even in undisturbed forests, such as on tree-fall tip-up mounds or flood scours. It is most abundant, however, as a weed of urban, suburban, and agricultural disturbances. The berries and mature stems are poisonous; the young stems have been used as a potherb and the purple berries as a source of ink. [= C, F, G, S, W, X, Y; < ***Ph. americana*** – RAB, GW (also see ***Ph. rigida***); = ***Ph. americana*** var. ***americana*** – FNA, K, Z]

Phytolacca rigida Small, Maritime Pokeweed. Cp (GA, NC, SC, VA): dune slacks, dune slopes, edges of tidal marshes, disturbed areas on barrier islands, xeric sandhills near the coast; rare (NC Watch List). May-frost. DE (reportedly), se. VA south to FL and west to TX in the Southeastern Coastal Plain. In the northern parts of our area, in NC and VA, ***P. rigida*** is rather rare, limited to the vicinity of the coast, and less weedy than ***P. americana***. Caulkins and Wyatt (1990) reduce ***Ph. rigida*** to a variety of ***Ph. americana***, but it seems distinct at the species level, at least in our area. [= S, X, Y; < ***Ph. americana*** – RAB, GW; = ***Ph. americana*** var. ***rigida*** (Small) Caulkins & Wyatt – FNA, K, Z]

PIPERACEAE C.A. Agardh 1824 (Pepper Family)

A family of about 5-8 genera and 3000 species, shrubs, herbs, trees, and vines, of tropical and subtropical areas. References: Tebbs in Kubitzki, Rohwer, & Bittrich (1993).

Peperomia Ruiz & Pavón 1794 (Peperomia)

A genus of about 1000 species, of tropical and subtropical regions, especially America. References: Boufford in FNA (1997); Boufford (1982)=Z; Tebbs in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves opposite or whorled; stems pubescent ..... ***[P. humilis]***
1 Leaves alternate; stems glabrous..... ***P. pellucida***

* ***Peperomia pellucida*** (Linnaeus) Kunth. Cp (GA): disturbed areas; rare, introduced. ***P. pellucida*** has been collected escaped from cultivation in FL, LA, and GA (in the vicinity of Savannah). Boufford (1982) describes the species as showing "weedy tendencies" in the southeastern United States, where "first collected in 1957," and states that "it will be interesting to see if this plant will continue to expand its range". [= FNA, K, Z]

Peperomia humilis A. Dietrich. Coast of FL, north to vicinity of Jacksonville, FL. [= FNA, K, Z; > *Micropiper humilis* (Vahl) Small – S; > *Micropiper leptostachyon* (Nuttall) Small – S]

PITTOSPORACEAE R. Brown 1814 (Pittosporum Family)

A family of about 9-11 genera and 150-200 species, trees, shrubs, and vines, of tropical and warm temperate Old World. References: Judd (1996).

Pittosporum Banks ex Solander (Pittosporum)

A genus of about 100-150 species, trees and shrubs, of tropical and warm temperate Old World. References: Judd (1996)=Z.

* ***Pittosporum tobira*** (Thunberg) Aiton f., Japanese Pittosporum, Australian Laurel. Cp (GA?, NC, SC?): frequently planted on barrier islands, at least persisting and apparently naturalizing; rare, introduced from Japan and China. Various cultivars are seen, including ones with variegated leaves. This species is one of the more common landscaping plants used on developed barrier islands. The revolute, obovate leaves are characteristic. [= K, Z]

PLANTAGINACEAE A.L. de Jussieu 1789 (Plantain Family)

As newly and radically recircumscribed, a family of about 120 genera. References: Albach, Meudt, & Oxelman (2005); Olmstead et al. (2001); Schwarzbach in Kadereit (2004); Fischer in Kadereit (2004).

"subfamily Antirrhinoideae"
"tribe Cheloneae": *Chelone, Collinsia, Penstemon*.
"tribe Antirrhineae": *Antirrhinum, Chaenorrhinum, Cymbalaria, Kickxia, Linaria, Misopates, Nuttallanthus*.
"subfamily Gratioloideae":
"tribe Gratioleae":
"subtribe Gratiolinae": *Amphianthus, Bacopa, Gratiola, Mecardonia, Scoparia, Sophronanthe*.
"subtribe Dopatriinae": *Limnophila*.
"tribe Limoselleae": *Limosella*.
"tribe Stemodieae": *Leucospora*.
"subfamily Digitalidoideae":
"tribe Digitalideae": *Digitalis.*
"tribe Veroniceae":
"subtribe Veroniciinae": *Veronica, Veronicastrum*.
tribe Plantaginae: *Plantago.*
tribe Callitricheae: *Callitriche*

Amphianthus Torrey (Pool-sprite)

A monotypic genus, an herb, endemic to se. North America. Apparently actually a modified *Gratiola* and to be transferred there (D. Estes, pers. comm., 2006). References: Hilton & Boyd (1996); Patrick, Allison, & Krakow (1995).

Identification notes: *Amphianthus* somewhat resembles *Callitriche*, but has floating leaves in single pairs rather than in a whorl.

Amphianthus pusillus Torrey, Pool-sprite, Snorkelwort. Pd (GA, SC): vernal pools on granitic flatrocks; rare (US Threatened, GA Threatened, SC Rare). April. Endemic to granitic flatrocks of ec. AL, nc. GA (17 counties), and sc. SC. Hilton & Boyd (1996) discuss the ecology and population ecology of this remarkable plant in detail. [= RAB, GW, K, P, S; **= *Gratiola species 1***]

Antirrhinum Linnaeus (Snapdragon)
(also see *Misopates*)

A genus of about 20 species, herbs, of Mediterranean Europe. References: Sutton (1988)=Z.

1 Corolla 25-40 mm long; calyx lobes ovate; leaves to 15 mm wide.....***A. majus***
1 Corolla 10-13 mm long; calyx lobes linear; leaves to 5 mm wide .....***[A. orontium]***

* ***Antirrhinum majus*** Linnaeus, Common Snapdragon. Mt, Pd (VA): cultivated, rarely persistent or naturalized; rare, introduced from Mediterranean Europe. July. [= C, G, K, P, Z]

* *Antirrhinum orontium* Linnaeus, Lesser Snapdragon, is introduced at least far south as se. PA (Rhoads & Klein 1993) and KY (Pennell 1935). [= C, K, P, Z]

Bacopa Aublet (Water-hyssop)

A genus of about 50 species, herbs (mostly aquatic or at least wetland), of tropical, subtropical, and warm temperate regions of the Old and New Worlds. References: Schuyler (1989)=Z; Fernald (1942).

1 Leaves obovate to oblanceolate, cuneate at the base, 1-veined (or with 1-2 additional obscure veins), 3-8 mm wide; stems glabrous; fresh plants not aromatic ..... ***B. monnieri***
1 Leaves mostly orbicular to ovate (or sometimes obovate in the very rare *B. repens*), rounded to clasping at the base, 3-9-veined; stems pubescent or puberulent, at least when young (check at growing tips) or glabrous (in tidal forms of *B. innominata*); fresh plants aromatic or not.
  2 Fresh plants strongly aromatic when bruised; corolla pale to bright blue, 9-13 mm long; calyx subtended by 2 subulate bractlets; stamens 4 ..... ***B. caroliniana***
  2 Fresh plants not aromatic when bruised; corolla predominantly white (in some species slightly pink or marked with yellow), 2-10 mm long; calyx not subtended by bractlets; stamens 2 or 4.
    3 Corolla 4-10 mm long, white with a yellow throat; capsule ca. 5 mm long ..... ***B. rotundifolia***
    3 Corolla 2-5 mm long, white or pink, without a yellow throat; capsule 2-3 mm long.
      4 Leaves strongly clasping, mostly ovate; stamens 2 (or very rarely 4); [native] ..... ***B. innominata***
      4 Leaves only slightly clasping, mostly obovate; stamens 4; [a very rare introduction] ..... ***B. repens***

Bacopa caroliniana (Walter) B.L. Robinson, Blue Water-hyssop, Sweet Water-hyssop, Carolina Water-hyssop. Cp (GA, NC, SC, VA), Pd (GA, SC): wet shores, tidal muds; common, rare north of SC (NC Watch List, VA Rare). May-September. Se. VA south to s. FL, west to e. TX; disjunct in KY. The strongly fragrant stems and leaves are unique. [= RAB, C, F, G, GW, K, W; = *Hydrotrida caroliniana* (Walter) Small – P, S]

Bacopa innominata (Gómez Maza) Alain, Tropical Water-hyssop. Cp (GA, NC, SC, VA): freshwater tidal muds, shallow water; rare (NC Rare, SC Rare, VA Endangered). June-September. MD south to c. peninsular FL, and in the West Indies and Central America. *B. stragula* Fernald has been considered a rare endemic of tidal areas in VA and MD, differing from *B. innominata* in its glabrous stems (vs. pubescent), smaller flowers (the corolla < 3 mm long vs. > 3 mm long), and shorter, glabrous pedicels 3-6 mm long (vs. pubescent and to 8 mm long). Schuyler (1989) concluded that *B. stragula* is an intertidal form of *B. innominata*, the morphologic differences induced by the flooding regime. Additional work, perhaps involving growth under experimental conditions or chemical or molecular studies, is needed to corroborate Schuyler's conclusion. See Schuyler (1989), F, and Fernald (1942) for further discussion. [= C, GW, K, Z; > *B. cyclophylla* Fernald – RAB; > *B. stragula* Fernald – F, G; ? *Herpestis rotundifolia* Gaertner f. – P, S; ? *Macuillamia obovata* Rafinesque – P]

Bacopa monnieri (Linnaeus) Wettstein, Monnier's Water-hyssop. Cp (GA, NC, SC, VA): freshwater tidal marshes, muddy shores, streams and pools; uncommon (VA Watch List). E. VA south to s. FL, west to c. TX, and in the West Indies and the New World subtropics and tropics. [= RAB, C, F, G, GW, K; = *Bramia monnieri* (Linnaeus) Drake – P, S]

* ***Bacopa repens*** (Swartz) Wettstein, South American Water-hyssop. Cp (SC): freshwater pools; rare, presumably introduced from its native range in the New World tropics. [= RAB, GW, K; = *Macuillamia repens* (Swartz) Pennell – P, S]

Bacopa rotundifolia (Michaux) Wettstein, Midwestern Water-hyssop. Cp (NC, VA): tidal muds, shallow water of large natural lake; rare (NC Watch List, VA Rare). June-September. IN and IA west to ND and MT, south to AL and AZ; disjunct in e. MD, e. VA, and ne. NC, where apparently native (though C considers introduced). Known in NC only from Lake Mattamuskeet, Hyde County, where not seen since 1929. *B. simulans* Fernald has been considered a rare endemic of tidal areas in VA and MD. It is alleged to differ from *B. rotundifolia* in its glabrous to glabrescent stems (vs. pubescent), more succulent condition, smaller leaves (the larger 1-2 cm long and 0.6-1.5 cm wide vs. 2-3.5 cm long and 1.5-2.7 cm wide), smaller flowers (corolla 3-4 mm long vs. 6-10 mm long). Schuyler (1989) concluded that *B. simulans* is an intertidal form of *B. rotundifolia*, the morphologic differences the result of differences in inundation. Additional work, perhaps involving growth under experimental conditions or chemical or molecular studies, is needed to corroborate Schuyler's conclusion. See Schuyler (1989), F, and Fernald (1942) for further discussion. [= C, GW, K, Z; > *B. rotundifolia* – F, G; > *B. simulans* Fernald – F, G; = *Macuillamia rotundifolia* (Michaux) Rafinesque – P, S]

Callitriche Linnaeus 1753 (Water-starwort)

A genus of 20-50 species, annual and perennial herbs of aquatic, wetland, and upland habitats, nearly cosmopolitan. This genus should be included in a greatly expanded Plantaginaceae. References: Angiosperm Phylogeny Group (2003); Crow & Hellquist (2000)=Z; Fassett (1951)=Y; Erbar & Leins in Kadereit (2004). Key based on Z.

1 Flowers and young fruits with 2 inflated bracteoles at the base; leaves dimorphic (with floating rosettes of spatulate leaves and submersed linear leaves) or monomorphic.
  2 Fruit margin distinctly winged, the wing nearly 0.1 mm wide, extending the entire distance from the summit to the base of the fruit; fruit globose ..... ***C. stagnalis***
  2 Fruit margin either not winged or with a wing < 0.05 mm wide, narrowing towards the base of the fruit before ending above the base; fruit ellipsoidal, obovoid, or nearly heart-shaped.
    3 Fruit as wide as long, obovoid or nearly heart-shaped ..... ***C. heterophylla*** *var.* ***heterophylla***
    3 Fruit longer than wide by > 0.2 mm, ellipsoidal ..... ***C. verna***

1 Flowers and young fruits lacking bracts at their base; leaves monomorphic, obovate-spatulate, rounded at the tip.
  4 Mericarps bent at an angle and thickened on one side at the base; [of SC southward] ..... ***C. peploides***
  4 Mericarps not bent at an angle nor thickened at the base; [collectively widespread].
    5 Fruit on pedicels 0.5-7 mm long; margin of fruit curled over on itself, appearing thickened; fruit developing underground ..... ***C. nuttallii***
    5 Fruit on pedicels 0.1-0.6 mm long; margin of fruit narrow, thin; fruit developing aboveground ..... ***C. terrestris***

Callitriche heterophylla Pursh *var.* ***heterophylla***. Cp, Pd, Mt (GA, NC, SC, VA): pools, slow-moving streams, ditches; common (uncommon in Piedmont and Mountains). March-October. Greenland west to AK, south to FL, TX, CA, and Mexico. The other variety, var. *bolanderi* (Hegelmann) Fassett, with larger fruits, co-occurs with var. *heterophylla* in nw. North America and is of uncertain taxonomic status, having been treated as species, subspecies, variety, and lumped. [< *C. heterophylla* – RAB, C, G, GW, S, W, Z; > *C. heterophylla* – F; > *C. anceps* Fernald – F, Y; = *C. heterophylla* ssp. *heterophylla* – K; > *C. heterophylla* var. *heterophylla* – Y]

Callitriche nuttallii Torrey. Cp, Pd (NC): low fields; rare. NC, c. TN, and OK south to FL, AL, and TX. [= GW, Y, Z; = *C. pedunculosa* Nuttall – K]

Callitriche peploides Nuttall. Cp (GA, SC): low fields, ditches; rare. April-June. SC south to FL, west to TX; disjunct inland in TN, AR; e. Mexico south to Costa Rica. [= RAB, GW, K, S; > *C. peploides* var. *peploides* – Y]

* ***Callitriche stagnalis*** Scopoli. Pd, Mt (VA): ponds, stagnant water, wet soil; uncommon, native of Europe, or possibly also native in some areas. See Philbrick, Aakjar, & Stuckey (1998) for additional discussion of the spread of this species in North America. [= C, F, G, K, Y, Z]

Callitriche terrestris Rafinesque emend. Torrey. Cp, Pd, Mt (GA, NC, SC, VA): ditches, low fields, wet paths; rare. April-June. MA to KS, south to FL, TX, and Mexico. [= C, GW, K, S, W, Z; = *C. deflexa* A. Braun – RAB, Y; > *C. deflexa* var. *austinii* (Engelmann) Hegelmann – F, G]

Callitriche verna Linnaeus. Cp, Pd, Mt (VA): ponds, lakes, stagnant streams, wet soil; rare. Circumboreal, in North America south to n. VA, WV, IL, TX, and CA; South America. The nomenclatural debate between *C. palustris* and *C. verna* is difficult to resolve. [= G, W, Y, Z; = *C. palustris* – C, F, K, S]

Chaenorrhinum (Augustin de Candolle ex Duby) Reichenbach
(Dwarf Snapdragon, Lesser Toadflax)

A genus of about 21 species, herbs, of Mediterranean Europe. References: Sutton (1988)=Z.

* ***Chaenorrhinum minus*** (Linnaeus) Lange *ssp.* ***minus***, Dwarf Snapdragon, Lesser Toadflax. Mt, Cp (VA), Pd (GA, NC, VA): disturbed areas; common, rare south of VA, introduced from Eurasia. June-November. [= Z; *? Chaenorrhinum minus* – C, F, G, K, P, W]

Chelone Linnaeus (Turtlehead)

A genus of about 4 species, perennial herbs, of e. North America. References: Nelson, Elisens, & Benesh (1998).

Identification notes: The four fertile stamens are inserted on either side of the corolla near its base and are flattened and conspicuously pilose. The single staminodium (the color of which is used in the key) is much shorter (often only a few mm long), and is inserted uppermost on the corolla near its base.

1 Leaves sessile; flowers distinctly 4-ranked; staminodium purple; corolla purple ..... ***Ch. cuthbertii***
1 Leaves with petioles 0.5-1.5 cm long (or subsessile in *Ch. glabra*); flowers less distinctly 4-ranked; staminodium white or green; corolla purple or white.
  2 Petioles 1.5-4 cm long; leaf blade rounded at the base; leaf blades averaging ca. 2× as long as wide, 4-8 cm wide; staminodium white; corolla purple ..... ***Ch. lyonii***
  2 Petioles 0.1-1.5 cm long; leaf blade cuneate at the base; staminodium white or green; leaf blades averaging 3× (or more) as long as wide, 1-6 cm wide; corolla purple or white.
    3 Corolla white (or tinged with purple near the summit); staminodium green ..... ***Ch. glabra***
    3 Corolla purple throughout; staminodium white ..... ***Ch. obliqua***

Chelone cuthbertii Small, Cuthbert Turtlehead. Mt (GA, NC, SC, VA), Pd (NC), Cp (NC, VA): bogs, sphagnous swamps, seeps; uncommon (GA Special Concern). Late July-September; September-October. This species has a curious, disjunct distribution: Mountains and rarely upper Piedmont of w. NC and n. GA, and Coastal Plain of se. VA and e. NC. The species is diploid (Nelson, Elisens, & Benish 1998). [= RAB, C, F, G, GW, F, K, P, S, W]

Chelone glabra Linnaeus, White Turtlehead. Mt, Pd, Cp (GA, NC, SC, VA): streambanks, seeps, swamp forests; common. August-October; September-November. Newfoundland and MN south to GA and AL. The named varieties are intergrading and the characters used to distinguish them do not correlate well. The species is diploid (Nelson, Elisens, & Benish 1998). [= RAB, C, GW, K, W; > *Ch. glabra* var. *dilatata* Fernald & Wiegand – F, P; > *Ch. glabra* var. *elatior* Rafinesque – F, G, P, S; > *Ch.*

glabra var. *elongata* – F, G, P, S; > *Ch. glabra* var. *ochroleuca* Pennell & Wherry – F, G, P, S; > *Ch. glabra* var. *glabra* – F, G, S; > *Ch. glabra* var. *chlorantha* (Pennell & Wherry) Pennell – P; > *Ch. glabra* var. *typica* – P; > *Ch. chlorantha* Pennell & Wherry – S; > *Ch. montana* (Rafinesque) Pennell & Wherry var. *montana* – S; > *Ch. montana* var. *elatior* (Rafinesque) Small – S]

Chelone lyonii Pursh, Appalachian Turtlehead. Mt, Pd (NC, SC): cove forests, spruce-fir forests, balds, streambanks; uncommon. July-September; October. W. NC and e. TN south to nw. SC. The species is diploid (Nelson, Elisens, & Benish 1998). [= RAB, C, GW, K, W; = *Ch. lyoni* – F, G, P, S, orthographic variant]

Chelone obliqua Linnaeus, Purple Turtlehead. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): streambanks, swamp forests; uncommon. October; November. MD and MN south to AL, w. TN, and MO. A tetraploid race is restricted to the southern Blue Ridge; plants in the remainder of the distribution are hexaploid (Nelson, Elisens, & Benish 1998). [= RAB, C, GW, F, G, S, W; > *Ch. obliqua* var. *obliqua* – K; > *Ch. obliqua* var. *typica* – P; > *Ch. obliqua* var. *erwiniae* Pennell & Wherry – K, P]

Collinsia Nuttall (Blue-eyed Mary)

A genus of about 20 species, herbs, of North America (especially diverse in w. North America).

Collinsia verna Nuttall, Eastern Blue-eyed Mary. Mt (VA): nutrient-rich, moist bottomlands and forested slopes; rare (VA Rare). April-May. NY west to s. WI, south to w. VA, nc. TN (Chester, Wofford, & Kral 1997), KY, and AR. [= C, F, G, K, P, S, W]

Cymbalaria Hill (Kenilworth-ivy)

A genus of about 9 species, herbs, of Europe west to c. Asia. References: Sutton (1988)=Z.

* ***Cymbalaria muralis*** P.G. Gaertner, B. Meyer, & Scherbius *ssp.* ***muralis***, Kenilworth-ivy. Mt (NC, VA), Pd (VA): naturalized on walls and rock outcrops near plantings; rare, native of Eurasia. May-August. The other two subspecies, both villous throughout (vs. glabrous or with a few scattered hairs in ssp. *muralis*) are Mediterranean and are not known to be naturalized in North America. Reported for NC (Henderson County) by Pittillo & Brown (1988) as "derived from potted plants that have become established beneath the overhang of a porch for over a decade," and reported again more recently as spreading from plantings in Alleghany County, NC (Poindexter 2006). [= Z; < *C. muralis* – C, F, G, K, P; = *C. cymbalaria* (Linnaeus) Wetts.; = *Linaria cymbalaria* (Linnaeus) P. Miller]

Digitalis Linnaeus (Foxglove)

A genus of about 19 species, herbs, of Europe west to central Asia. Famous as the source of the drug digitalis, a cardiac glycoside.

1 Corolla 2-3 cm long, the lower median lobe much longer than the others ..... ***D. lanata***
1 Corolla 4-5.5 cm long, the lower median lobe only slightly longer than the others ..... ***[D. purpurea]***

* ***Digitalis lanata*** Ehrhart, Grecian Foxglove, Hairy Foxglove. Pd (SC): naturalized along roadside; rare, introduced from Mediterranean Europe. May-June. Reported for South Carolina by Hill & Horn (1997). [= C, F, G, K, P]

* *Digitalis purpurea* Linnaeus, Digitalis, Common Foxglove, is introduced and established at scattered locations as far south as PA (Rhoads & Klein 1993). [= C, P; > *D. purpurea* var. *purpurea* – K; > *D. purpurea* var. *alba* – K]

Gratiola Linnaeus 1753 (Hedge-hyssop)

A genus of about 20 species, herbs, of temperate regions (and tropical mountains) of the Old and New Worlds. Under study currently by Dwayne Estes.

1 Flowers and fruits sessile or subsessile, the pedicels < 1 mm long; perennial.
  2 Leaves linear-subulate; corolla 2-3× as long as the calyx ..... ***[see Sophronanthe hispida]***
  2 Leaves ovate; corolla 1-1.5 × as long as the calyx ..... ***[see Sophronanthe pilosa]***
1 Flowers and fruits on definite pedicels; annual or perennial.
  3 Leaves cuneate at the base; annual.
    4 Pedicels stout, erect, 1-5 (-12) mm long; [section *X*] ..... ***G. virginiana***
    4 Pedicels slender, spreading, 10-45 mm long; [section *Y*].
      5 Corolla 15-20 mm long; leaves oval or oblanceolate ..... ***G. floridana***
      5 Corolla 8-12 mm long; leaves elliptic, rhombic-lanceolate, or lanceolate ..... ***G. neglecta***

3 Leaves clasping or subclasping-rounded at the base; perennial; [section *Gratiola*].
6 Calyx subtended by 0 (-1) bractlet; corolla lobes white; corolla tube greenish yellow, conspicuously veined ..... ***G. ramosa***
6 Calyx subtended by 2 bractlets; corolla lobes white or yellow-orange; corolla tube greenish yellow and conspicuously veined, or orange and not conspicuously veined.
7 Corolla lobes and tube yellow-orange (very rarely white), not conspicuously veined; sepals and flower stalks sparsely or not at all glandular-puberulent ..... ***G. aurea***
7 Corolla lobes white to lavender, corolla tube greenish yellow, usually conspicuously veined; sepals and flower stalks densely glandular-puberulent.
8 Leaves triangular to lanceolate, margins entire, or with a few teeth toward the tip; corolla veined with brown lines; sepals linear-lanceolate ..... ***G. brevifolia***
8 Leaves oblong-ovate to ovate (or linear-lanceolate in submersed forms), finely dentate; corolla veined with purple lines; sepals lanceolate to oblong-lanceolate ..... ***G. viscidula***

Gratiola aurea Pursh, Yellow Hedge-hyssop, Golden-pert. Cp (GA, NC, SC): blackwater river banks, pondcypress savannas in Carolina bays; uncommon. May-September. Newfoundland and Québec south in the Coastal Plain to panhandle FL; disjunct around the Great Lakes and inland in NY, Ontario, IL, and ND. [= RAB, C, F, G, GW, K, S; > *G. lutea* Rafinesque var. *typica* – P; > *G. lutea* var. *obtusa* (Pennell) Pennell – P]

Gratiola brevifolia Rafinesque. Cp (GA): wet places; uncommon. E. GA, south and west to c. peninsular FL, e. panhandle FL, and se. AL; c. AR, se. OK, se. LA, and e. TX; c. TN; s. DE (Knapp & Estes 2006). Previous reports from SC are based on misidentifications (Knapp & Estes 2006). [= GW, K, P, S]

Gratiola floridana Nuttall. Mt, Pd, Cp (GA): {habitats}; uncommon. Ne. GA and se. TN (in counties adjacent to NC) (Chester, Wofford, & Kral 1997), south to e. GA (in counties adjacent to SC) (Jones & Coile 1988), panhandle FL, AL, and MS. [= GW, K, P, S]

Gratiola neglecta Torrey, Mud-hyssop. Cp (NC, SC, VA), Pd, Mt (GA, NC, SC, VA): ditches, wet areas, bottomlands; common. May-July. Québec and ME west to British Columbia, south to GA, TX, and AZ. [= RAB, C, G, GW, K, P, S, W; > *G. neglecta* var. *neglecta* – F]

Gratiola ramosa Walter. Cp (GA, NC, SC): wet pine savannas, marshes, pond margins; ditches; common. May-June. Se. NC south to s. FL, west to sw. LA; disjunct (at least historically) in e. MD. [= RAB, C, F, G, GW, K, P, S]

Gratiola virginiana Linnaeus. Cp, Pd (GA, NC, SC, VA), Mt (GA): sluggish streams, bogs, wet areas; common. March-May. NJ west to OH and IA and KS, south to c. peninsular FL and e. TX. Var. *aestuariorum* Pennell, of s. NJ south to e. VA, is alleged to differ in being shorter, with more rounded leaves, short pedicels (< 2 mm long), a shorter calyx and corolla, and a smaller capsule; it is likely merely a stunted aquatic form, but needs additional study (see F and P for additional details). [= RAB, C, G, GW, S, W; > *G. virginiana* var. *virginiana* – F, K, P; > *G. virginiana* var. *aestuariorum* Pennell – F, K, P]

Gratiola viscidula Pennell. Cp, Pd (NC, SC, VA), Mt (GA, NC, SC): bogs, wet areas, ditches, margins of Coastal Plain ponds; common (uncommon in Mountains). June-November. DE, MD and e. VA, south to c. SC and ne. GA; disjunct in s. OH, WV, e. TN, MO, and n. FL. Spooner (1984) studied infraspecific taxa recognized in *G. viscidula* and determined that they did not warrant recognition. [= RAB, C, F, GW, K, S, W; > *G. viscidula* var. *viscidula* – G; > *G. viscidula* var. *shortii* Pennell – G, P; > *G. viscidula* var. *typica* – P]

Gratiola species 2. Endemic to granite flatrocks of GA (and othyer states?). Under study by Dwayne Estes. {not keyed at this time}

Gratiola species 3. Endemic to TN cedar glades. Under study by Dwayne Estes. {not keyed at this time}

Kickxia Dumortier (Fluellen, Cancerwort)

A genus of about 47 species, herbs, of Mediterranean Europe west to c. Asia. References: Sutton (1988)=Z.

1 Leaves round-ovate, rounded to cordate at the base; pedicels villous throughout their length; [ballast waif] ..... ***K. spuria***
1 Leaves triangular-ovate or hastate, truncate at the base; pedicels glabrous through much of their length **or** villous; [more widespread alien].
2 Stems densely villous; stems robust (usually 1.5-3.5 mm thick), often much-branched; pedicels 5-12 (-20) mm long, 0.25-0.35 mm in diameter, often villous their entire lengths ..... ***K. elatine ssp. crinita***
2 Stems sparsely villous; stems slender (to 1.5 mm thick), sparingly (if at all) branched, pedicels mostly (8-) 15-25 (-30) mm long, 0.1-0.2 mm in diameter, glabrous except for immediately below the calyx ..... ***K. elatine ssp. elatine***

* ***Kickxia elatine*** (Linnaeus) Dumortier *ssp.* ***crinita*** (Mabille) W. Greuter, Sharp-leaved Fluellen. Pd (NC, VA), Cp (VA), {GA?}: disturbed areas; uncommon, introduced from Eurasia. May-November. [= Z; < *K. elatine* – RAB, C, F, G, K, P, S]

* ***Kickxia elatine*** (Linnaeus) Dumortier *ssp.* ***elatine***, Sharp-leaved Fluellen. Pd (NC, SC, VA), Mt (NC, VA), Cp (VA), {GA?}: disturbed areas; uncommon, introduced from Eurasia. May-November. [= Z; < *K. elatine* – RAB, C, F, G, K, P, S]

* ***Kickxia spuria*** (Linnaeus) Dumortier, Round-leaved Fluellen, Female Fluellen. Cp (NC): ballast near old port (Wilmington); rare, perhaps onlya waif, introduced from s. Europe. July. [= RAB, C, F, G, K, P, S; > *K. spuria* ssp. *spuria* – Z]

Leucospora Nuttall (Leucospora)

A genus of 2 species, herbs, of e. North America and Coahuila, Mexico. *Leucospora* may not be distinct from *Stemodia*.

* ***Leucospora multifida*** (Michaux) Nuttall, Leucospora, Narrowleaf Paleseed. Cp (NC), {GA, VA}: moist to wet, sandy margins of an artificial depressional wetland; rare (NC Watch List). S. Ontario west to IA and KS, south to nw. GA, AL, LA, and e. TX; scattered occurrences further east (as in e. NC, FL, KY, TN, and se. PA) probably represent recent introductions. [= C, G, GW, K, P, S; = *Conobea multifida* (Michaux) Bentham – F; = *Stemodia multifida* (Michaux) Sprengel]

Limnophila R. Brown

A genus of about 37 species, of tropical regions of the Old World.

* ***Limnophila sessiliflora*** (Vahl) Blume. Cp (GA): {habitat}; rare. Reported as introduced in sw. GA (Jones & Coile 1988). [= K]

Limosella Linnaeus (Mudwort, Awl-leaf)

A genus of about 11 species, aquatic herbs, of cosmopolitan distribution.

Limosella australis R. Brown, Mudwort, Awl-leaf. Cp (NC, VA): fresh or slightly brackish tidal flats; rare (NC Rare, VA Rare). June. Newfoundland and Québec south along the Atlantic Coast to se. VA and extreme ne. NC. This plant is very inconspicuous, though locally abundant. [= K; *? L. subulata* Ives – RAB, C, F, G, GW, P]

Linaria P. Miller (Yellow-toadflax)
(also see *Nuttallanthus*)

A genus of about 150 species, of temperate regions of Eurasia. References: Sutton (1988)=Z.

* ***Linaria vulgaris*** P. Miller, Butter-and-eggs, Yellow Toadflax, Wild-snapdragon. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (NC, VA): fields, pastures, roadsides, disturbed areas; common (uncommon in Piedmont of NC, rare in Coastal Plain of NC), introduced from Europe. [= RAB, C, F, G, K, P, W, Z; = *Linaria linaria* (Linnaeus) Karsten – S]

* *Linaria maroccana* Hooker f., Moroccan Toadflax. Introduced in VA and WV. [= K] {investigate; not keyed at this time; synonymy incomplete}

Mecardonia Ruiz & Pavón (Mecardonia)

A genus of about 10 species, of tropical, subtropical, and warm temperate regions of America.

1 Peduncles > 10 mm long; sepals < 2 mm wide ..... ***M. acuminata*** *var.* ***acuminata***
1 Peduncles < 10 mm long; sepals > 2 mm wide ..... ***[M. acuminata*** *var.* ***microphylla]***

Mecardonia acuminata (Walter) Small *var.* ***acuminata***, Mecardonia. Cp, Pd (GA, NC, SC, VA), Mt (GA): marshes, ditches, bottomland forests, wet disturbed areas; common. July-September; August-October. DE and MD south to s. FL, west to e. TX, north in the interior to KY, TN, and MO. The long, ascending pedicels are distinctive. The plant blackens on drying. [= K, S; < *M. acuminata* – RAB, C, G, GW; < *Bacopa acuminata* (Walter) B.L. Robinson – F; = *Pagesia acuminata* (Walter) Pennell ssp. *typica* – P]

Mecardonia acuminata (Walter) Small *var.* ***microphylla*** (Rafinesque) Pennell. Cp (GA): margins of Coastal Plain ponds; rare (GA Special Concern). Sc. GA south to panhandle FL and west to e. LA. [= K, S; < *M. acuminata* – GW; = *Pagesia acuminata* (Walter) Pennell ssp. *microphylla* (Rafinesque) Pennell – P]

Misopates Rafinesque (Weasel's-snout)

A genus of about 8 species, herbs, of Mediterranean Europe and n. Africa west to c. Asia.

* ***Misopates orontium*** (Linnaeus) Rafinesque, Weasel's-snout, Lesser Snapdragon. Pd (VA): cultivated, persistent or possibly naturalized; rare, introduced from Eurasia. [= K; = *Antirrhinum orontium* Linnaeus – C, G]

Nuttallanthus D.A. Sutton (American-toadflax)

A genus of 4 species, herbs, of North and South America. Sutton (1988) separates these three species, along with *N. subandinus* (Diels) D.A. Sutton, of Bolivia, Chile, Ecuador, Peru, and Uruguay, from *Linaria* on the basis of "the corolla with the abaxial lip greatly exceeding the adaxial lip; the palate weakly developed and scarcely occluding the tube; the spur very slender or absent and the prismatic seeds with 4-7 longitudinal ridges." *Nuttalanthus* is American; *Linaria* is Eurasian. References: Sutton (1988)=Z. Key based on Z.

1 Infructescence axis zigzag; fruiting pedicels densely glandular pubescent, 5-13 mm long, 2× or more as long as the calyx..... .....***N. floridanus***
1 Infructescence axis straight or nearly so; fruiting pedicels glabrous or with a few scattered glandular hairs, 2-6 (-9) mm long, < 1× as long as the calyx.
2 Corolla 8-11 (-13) mm long (measured from the tip of the spur to the apex of the adaxial lip), the abaxial lip 2-6 mm long; seeds longitudinally ridged, the intervening faces smooth or with sparse low tubercles.....***N. canadensis***
2 Corolla 14-22 mm long (measured from the tip of the spur to the apex of the adaxial lip), the abaxial lip 6-11 mm long; seeds densely tuberculate, not longitudinally ridged.....***N. texanus***

Nuttallanthus canadensis (Linnaeus) D.A. Sutton, Common Toadflax. Cp, Pd, Mt (GA, NC, SC, VA): in a wide variety of natural and disturbed habitats, especially common and weedy in disturbed sites such as roadsides and fields, also common and apparently native in thin soil of rock outcrops; common. March-May. Sutton (1988) comments that there is substantial variation in this species not taxonomically explained. [= K, Z; < *Linaria canadensis* (Linnaeus) Dumortier – RAB, W (also see *N. texanus*); = *Linaria canadensis* var. *canadensis* – C, F, G, S; = *Linaria canadensis* (Linnaeus) Dumortier – P]

Nuttallanthus floridanus (Chapman) D.A. Sutton, Florida Toadflax. Cp (GA): dry, sandy places; uncommon. E. GA south to FL and west to MS. [= K, Z; = *Linaria floridana* Chapman – P, S]

* ***Nuttallanthus texanus*** (Scheele) D.A. Sutton, Texas Toadflax. Cp (GA, NC, SC, VA), Pd (NC, SC): disturbed soils of roadsides and fields; uncommon, introduced from further southwest. March-May. Ranging as a native species in sc. and sw. North America and in temperate South America; introduced elsewhere (as in our area). [= K, Z; < *Linaria canadensis* (Linnaeus) Dumortier – RAB, W; = *Linaria canadensis* var. *texana* (Scheele) Pennell – C, F, G, S; = *Linaria texana* Scheele – P]

Penstemon Mitchell 1769 (Beard-tongue, Penstemon)

A genus of about 250 species, perennila herbs and shrubs, of w. North America, e. North America, and (a single species) ne. Asia. References: Clements, Baskin, & Baskin (1998)=Z. Key based in part on Z.

1 Cauline leaves bipinnatifid; basal leaves sessile; [section *Dissecti*]..... ***P. dissectus***
1 Cauline leaves entire or toothed; basal leaves petioled.
2 Inflorescence with many nodes; anther cells dehiscing by short proximal slits; [section *Multiflori*].....***P. multiflorus***
2 Inflorescence with<10 nodes; anther cells dehiscing their entire length.
3 Corolla glandular-pubescent within; [section *Tubiflori*] ..... ***[P. tubiflorus]***
3 Corolla pubescent with non-glandular hairs within; [section *Graciles*].
4 Throat of corolla more-or-less closed by a palate formed by the upward arch of the corolla lip.
5 Buds yellow-purple; corolla violet-purple with white lobes (fading white when dried); leaves essentially glabrous.....***P. hirsutus***
5 Buds yellow; corolla creamy white; leaves pubescent..... ***[P. tenuiflorus]***
4 Throat of corolla open.
6 Corolla differentiated (above the calyx) into a basal tube and a dilated or inflated throat, with little ridging of the floor; anterior lobes of the corolla essentially equalling the posterior lobes.
7 Corolla white, lined with purple.
8 Stems pubescent; inflorescence glabrous or slightly glandular-pubescent ..... ***[P. alluviorum]***
8 Stems glabrous; inflorescence glandular-pubescent .....***P. digitalis***
7 Corolla purple to violet.
9 Sepals long-attenuate, to 12 mm long; leaves finely serrate; corolla 20-35 mm long..... ..... ***P. calycosus***
9 Sepals < 8 mm long; leaves obscurely serrate; corolla lobes strongly deflexed; corolla 15-22 mm long.....***P. laevigatus***
6 Corolla only gradually and slightly dilated upward, the floor strongly ridged; anterior lobes of the corolla projecting beyond the posterior lobes.
10 Peduncles strongly ascending, the inflorescence therefore narrow; corolla reddish-purple..... .....***P. australis***
10 Peduncles spreading, the inflorescence therefore relatively broad; corolla white to violet or purple.
11 Leaves velvety pubescent; corolla white with fine purple lines.....***P. pallidus***

11 Leaves pubescent, but not velvety; corolla violet or purple.
12 Basal leaves truncate or cordate at base; lower bracts of inflorescence foliose, slightly smaller than the cauline leaves ..... ***P. smallii***
12 Basal leaves cuneate at base; lower bracts of inflorescence reduced, much smaller than the cauline leaves.
13 Cauline leaf blades wide, ovate-lanceolate to ovate..... ***P. canescens***
13 Cauline leaf blades narrow, acute to acuminate..... ***P. laxiflorus***

Penstemon australis Small, Southern Beardtongue, Sandhill Beardtongue. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA, SC): sandhills, dry sandy roadsides; common. May-July; July-August. Se. VA south to FL, west to AL, primarily on the Coastal Plain, but not uncommon westward into the Piedmont and lower Mountains, and extending in the interior into c. TN. [= K, P, S, Z; < *P. australis* – RAB, C, F, G, W]

Penstemon calycosus Small. Mt (GA, NC, SC, VA): limestone ledges, other woodlands; rare (GA Special Concern). May-July. OH and s. MI and IL south to w. VA, GA, and AL. [= F, G, GW, K, P, S, W, Z; < *P. laevigatus* – C]

Penstemon canescens (Britton) Britton, Appalachian Beardtongue. Mt, Pd (GA, NC, SC, VA), Cp (VA): woodlands, glades, forest edges, roadsides; common. May-July. PA and s. IN south to nc. GA, n. AL, and c. TN. [= RAB, C, K, W, Z; > *P. canescens* – F, G, S; > *P. canescens* var. *typicus* – P; > *P. canescens* var. *brittonorum* (Pennell) Pennell – P; > *P. brittonorum* Pennell – S; > *P. brevisepalus* Pennell – F, G, P, S]

*? ***Penstemon digitalis*** Nuttall ex Sims, Tall White Beardtongue. Mt (NC, SC, VA), Pd, Cp (VA): alluvial forests, moist fields, disturbed areas; common. May-June; July-August. Nova Scotia and ME west to MN and SD, south to e. VA, w. SC, AL, and TX. [= RAB, C, F, G, GW, K, P, S, W, Z]

Penstemon dissectus Elliott, Georgia Beardtongue, Grit Beardtongue. Cp (GA): Altamaha Grit outcrops, sandhills; rare (GA Rare). Endemic to Altamaha Grit outcrops and other sandy areas from e. GA south and west to sw. GA. This species is unmistakable because of its bipinnatifid leaves. [= K, P, S, Z]

Penstemon hirsutus (Linnaeus) Willdenow, Northeastern Beardtongue. Pd, Mt (VA): dry woodlands, forests, and fields; uncommon. May-July. Québec and ME west to MI and WI, south to VA and KY. [= C, F, G, K, P, S, W, Z]

Penstemon laevigatus Aiton, Eastern Beardtongue. Cp, Pd, Mt (GA, NC, SC, VA): low meadows, bottomlands, forest edges; common. May-June; July-August. ME west to MI, south to s. GA, MS, and AR. [= RAB, F, G, GW, K, P, W, Z; < *P. laevigatus* – C (also see *P. calycosus*); *P. pentstemon* (Linnaeus) MacM. – S]

Penstemon laxiflorus Pennell. {GA}: {habitat}. C. GA and n. AL west to c. OK and c. TX. [= K, P, Z; < *P. australis* – S; = *P. australis* Small ssp. *laxiflorus* (Pennell) Bennett]

Penstemon multiflorus Chapman ex Bentham. Cp (GA): {habitat}; uncommon. S. and e. GA south to FL. [= K, P, S, Z]

Penstemon pallidus Small, Eastern White Beardtongue. Cp (GA, NC, VA), Pd, Mt (GA, VA): limestone and shale barrens, other dry, disturbed areas; uncommon (GA Special Concern). May-June. ME west to MN, south to NC, GA, and AR. [= RAB, C, F, G, K, P, S, W, Z]

Penstemon smallii A. Heller, Blue Ridge Beardtongue. Mt (GA, NC, SC): woodlands, cliffs, glades, roadbanks; common (GA Special Concern). May-June; July. A Southern Appalachian endemic, distributed from nw. NC and ne. TN south to nw. SC, n. GA, and n. AL. [= RAB, K, P, S, W, Z]

Penstemon alluviorum Pennell, Lowland Beardtongue. East to AL, TN, KY. [= C, F, G, K, P, S, Z]

Penstemon tenuiflorus Pennell, Plateau Beardtongue, Limestone Beardtongue, Kentucky Beardtongue. Endemic to the Interior Low Plateau of wc. KY, c. TN, n. AL, extending slightly into the Coastal Plain to the west, and disjunct in the Black Belt of AL and MS. [= C, F, G, K, P, S, Z]

Penstemon tubiflorus Nuttall, Tube Beardtongue. A more western species, reaching its eastern limit in w. TN (Chester, Woffor, & Kral 1997). It is also known from adventive sites further east, as in e. PA (Rhoads & Klein 1993). [= S; = *P. tubaeflorus* – C, F, G, P, Z, orthographic variant; > *P. tubiflorus* var. *achoreus* Fernald – K; > *P. tubiflorus* var. *tubiflorus* – K]

Plantago Linnaeus 1753 (Plantain)

A genus of about 270 species, herbs and rarely shrubs, of cosmopolitan distribution. Harper (1944) discusses at length the interesting issue of the native distributions of the many weedy species of *Plantago*. The native or introduced status of many of our species is uncertain or controversial. References: Rosatti (1984)=Z; Bassett (1966)=Y; Bassett (1967)=X; Schwarzbach in Kadereit (2004).

1 Leaves cauline, opposite; spikes on peduncles from the leaf axils; [section *Psyllium*]..... ***P. psyllium***
1 Leaves basal; spikes on scapes from the base of the plant.
2 Leaves ovate to broadly lanceolate or broadly oblanceolate, distinctly broadened upward from a petiolar base, the leaves > 1 cm wide (some species keyed both ways).
3 Leaf venation pinnate, some major veins departing from the midvein well above the leaf base; perennial from thick, fleshy rootstock, typically 3-8 cm wide near its summit, with a cavity below (like an inverted bowl), and with 3-10 fleshy roots 3-15 mm thick descending or spreading from the bowl rim; capsule 2-4-seeded; scapes hollow and terete; [aquatic or semi-aquatic]; [section *Palaeopsyllium*]..... ***P. cordata***

3 Leaf venation parallel, with all of the major veins separating at the base of the leaf; **either** perennial from thin, fibrous roots or an erect caudex, **or** annual from a small taproot; capsule 2-30-seeded; scapes either solid and terete, solid and angled, or hollow and terete; [terrestrial].
4 Leaves broadly ovate-elliptic, the blades 1-3× as long as wide, distinctly petiolate; scapes solid and terete; [section *Plantago*].
5 Fruit 2.5-4 mm long, dehiscent near the middle, the terminal portion about as long as the basal; sepals broadly ovate, ca. 1.5× as long as wide, mostly obtuse; petioles usually green and pubescent at the base . ..... ***P. major***
5 Fruit 4-6 mm long, dehiscent below the middle, the terminal portion about 2× as long as the basal; sepals narrowly elliptic, 2-4× as long as wide, mostly acute; petioles usually purple and glabrous at the base ..... ***P. rugelii***
4 Leaves mostly broadly oblanceolate, broadly lanceolate,or spatulate, (3-) 4-10× as long as wide, attenuate to the only somewhat petiolar base; scapes solid and 5-angled, or hollow (to solid) and terete.
6 Bracts and calyx pubescent, at least on the keels; ephemeral annual, flowering late March-June, and then senescing; [section *Virginica*]
7 Mature seeds 2.5-3 mm long, reddish, nearly flat oin both sides; sepals with an excurrent midrib; leaves typically toothed; [rare adventive in western part of our area] ..... ***P. rhodosperma***
7 Mature seeds tan or brown, 1.5-2 mm long, concave on one side, convex on the other; sepals obtuse to rounded; leaves entire; [common in our area] ..... ***P. virginica***
6 Bracts and calyx glabrous; perennial, flowering April-November.
8 Spikes very densely flowered, the rachis hidden; scape 5-angled; [widespread weedy alien]; [section *Lancifolia*]..... ***P. lanceolata***
8 Spikes loosely flowered, the rachis visible its entire length; scape terete; [rare native of Coastal Plain pinelands and adjacent fire-plow lines and ditches]; [section *Palaeopsyllium*].... ***P. sparsiflora***

2 Leaves lanceolate or linear, slightly if at all broadened upward, the base not petiolar, the leaves typically < 1 cm wide.
9 Summer and winter leaves dimorphic, the winter leaves lanceolate (typically submersed), the summer leaves ovate or cordate (emersed except in floods); plant perennial from thick, fleshy rootstock, typically 3-8 cm wide near its summit, with a cavity below (like an inverted bowl), and with 3-10 fleshy roots 3-15 mm thick descending or spreading from the bowl rim; [aquatic or semi-aquatic]; [section *Palaeopsyllium*] ..... ***P. cordata***
9 Summer and winter leaves not dimorphic, all leaves lanceolate or linear; plant either perennial from thin, fibrous roots, or annual from a small taproot; [terrestrial].
10 Leaves fleshy; corolla tube pubescent on its outer surface; [of sea beaches] ..... ***P. maritima*** *var.* ***juncoides***
10 Leaves herbaceous (though often rather thick and leathery); corolla tube glabrous on its outer surface; [of various habitats, not as above].
11 Bracts of the inflorescence and sepals conspicuously pubescent; annual (rarely biennial), with a taproot; stamens 4.
12 Leaves oblanceolate; [section *Virginica*]..... ***P. virginica***
12 Leaves linear; [section *Gnaphaloides*].
13 Bracts of the lower flowers in the spikes conspicuously exserted, at least 2 × as long as the subtended flower.
14 Leaves glabrous or puberulent above; longer bracts 8-30 mm long; seeds 2.2-3.0 mm long..... ***P. aristata***
14 Leaves silky-pubescent above; longer bracts mostly < 5 mm long; seeds 1.3-1.9 mm long ..... ***P. patagonica***
13 Bracts of the lower flowers in the spikes not conspicuously exserted, < 2× as long as the subtended flower.
15 Bracts 1-2× as long as the the calyx; seeds 1.3-1.9 mm long..... ***P. patagonica***
15 Bracts 0.5-1× as long as the calyx; seeds 2.7-3 mm long ..... ***P. wrightiana***
11 Bracts of the inflorescence glabrous or inconspicuously ciliate-margined; stamens 2 or 4; [annual or perennial].
16 Annual; flowers with 2 stamens; capsule 4-25-seeded; leaves linear, 0.5-5 mm wide; [section *Micropsyllium*].
17 Capsule mostly 10-25-seeded; seeds 0.5-0.8 mm long..... ***P. heterophylla***
17 Capsule 4-seeded; seeds 0.75-1.8 mm long..... ***P. pusilla***
16 Perennial; flowers with 4 stamens; capsule 1-2-seeded; leaves lanceolate (or broader), 7-50 mm wide.
18 Spikes very densely flowered, the rachis hidden; scape 5-angled; [widespread weedy alien]; [section *Lancifolia*]..... ***P. lanceolata***
18 Spikes loosely flowered, the rachis visible its entire length; scape terete; [rare native of Coastal Plain pinelands and adjacent fire-plow lines and ditches]; [section *Palaeopsyllium*] .... ***P. sparsiflora***

* ***Plantago aristata*** Michaux, Buckhorn Plantain. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas, especially dry, barren, exposed soil, such as clay soils denuded by bull-dozing; common, introduced from farther west. Late April-July. [= RAB, C, F, G, K, S, W, Z]

Plantago cordata Lamarck, King-root, Heartleaf Plantain. Pd (NC), Mt (GA, VA), Cp (VA): aquatic or semi-aquatic in streambeds with outcrops of slate, aquatic in tidal estuaries; rare (NC Endangered, VA Rare). March-April; May-June. NY and s. Ontario west to WI, south to w. VA, c. NC, nw. GA, AL, sc. TN, and MO, very scattered and rare in every state in which it occurs, except MO. Characteristically, *P. cordata* is a very robust plant, the inflorescences often 1 meter in height, and the glabrous leaves with ovate blades to 30 cm long and 20 cm wide, on ascending petioles up to 40 cm long and 2 cm wide; Winter leaves are 3-10 cm long, ca. 1 cm wide, and remotely toothed. Spring leaves show a gradual transition from the winter form to the summer form. *P. cordata* is not known to be extant in VA, where it formerly occurred in the estuary of the Potomac River and in Smyth County in sw. VA. In NC, *P. cordata* is apparently limited to 2 slate-bottomed streams in s. Davidson County, where it is locally abundant. A recent study of morphological and genetic variability in the species found the 2 NC populations to "represent sites of primary [conservation] concern with unique genetic composition" (Mymudes & Les 1993). [= RAB, C, F, G, GW, K, S, W, X, Z]

Plantago heterophylla Nuttall, Many-seeded Plantain. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): fields, roadsides, disturbed areas; common (VA Watch List). March-May. Se. VA and MO south to FL and TX; adventive at scattered sites further north (at least as far north as NY). [= RAB, C, F, G, K, S, W, Y, Z; = *P. hybrida* W. Bart. – GW]

* ***Plantago lanceolata*** Linnaeus, English Plantain, Rib-grass. Cp, Pd, Mt (GA, NC, SC, VA): lawns, roadsides, disturbed areas; common, introduced from Europe. April-November. [= RAB, C, K, S, W, Z; > *P. lanceolata* var. *lanceolata* – F, G; > *P. lanceolata* var. *sphaerostachya* Mertens & Koch – F, G; > *P. lanceolata* var. *angustifolia* Poiret – G]

*? ***Plantago major*** Linnaeus, Common Plantain, Whiteman's-foot. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, VA): lawns, roadsides, disturbed areas; uncommon, introduced from Europe, possibly also native in ne. North America, possibly as far south as the northern part of our area. June-November. Very variable, and possibly worthy of some of the infraspecific subdivisions suggested by various authors. The Coastal Plain populations associated with the Chesapeake Bay in VA may represent a native, estuarine genotype. [= RAB, C, GW, K, S, W, Z; > *P. major* var. *major* – F; > *P. major* var. *scopulorum* Fries & Broberg – F; > *P. major* ssp. *pleiosperma* Pilger var. *paludosa* Béguinot – G; > *P. major* ssp. *pleiosperma* Pilger var. *scopulorum* Fries & Broberg – G; > *P. major* var. *intermedia* (Augustin de Candolle) Pilger]

Plantago maritima Linnaeus *var.* ***juncoides*** (Lamarck) A. Gray, Seaside Plantain. Cp (VA): salt marshes; rare (VA Rare). Var. *juncoides* apparently ranges from Greenland and ne. Canada south to e. VA. Other varieties occur in nw. North America and n. Eurasia, the species as a whole is an interruptedly circumboreal plant of ocean shores, also disjunct inland in saline areas. [= K; = *P. maritima* ssp. *juncoides* (Lamarck) Hultén – C; > *P. juncoides* Lamarck var. *decipiens* (Barnéoud) Fernald – F; < *P. maritima* – G]

* ***Plantago patagonica*** Jacquin, Woolly Plantain. Pd (GA, SC), Cp (GA): roadsides; rare. United States and s. South America. May-June. [= K, Z; > *P. purshii* Roemer & Schultes – RAB, F; > *P. patagonica* var. *patagonica* – C, G; > *P. patagonica* var. *gnaphaloides* (Nuttall) A. Gray – C, G]

* ***Plantago psyllium*** Linnaeus, Leafy-stemmed Plantain. Cp, Mt (NC, VA): disturbed areas; rare, inroduced from Europe. June-November. [= C, K, Z; = *P. psillium* – RAB, orthographic variant; > *P. indica* Linnaeus – F, G; *? P. arenaria* Waldstein & Kitaibel]

* ***Plantago pusilla*** Nuttall, Little Plantain. Cp (NC), Pd (VA) {GA, SC}: roadsides, disturbed areas; uncommon, probably introduced from sc. United States (the original range uncertain). March-May. Belden et al. (2004) discuss the Virginia occurrence, on Fort Pickett Military Reservation, Nottoway County. [= C, K, S, Y, Z; > *P. pusilla* var. *pusilla* – F, G; > *P. pusilla* var. *major* Engelmann – F, G; = *P. elongata* Pursh – GW]

* ***Plantago rhodosperma*** Decaisne, Redseed Plantain, reported as ranging east to KY, TN, and GA (Kartesz 1999), probably as adventive from further west. The reports for GA and TN require confirmation. [= C, F, G, K]

Plantago rugelii Decaisne, American Plantain, Broad-leaved Plantain. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, lawns, disturbed areas; common. June-November. Widespread in e. and c. North America, the original distribution obscure. [= RAB, C, F, G, GW, S, W, Z; > *P. rugelii* var. *rugelii* – K; > *P. rugelii* var. *asperula* Farwell – K]

Plantago sparsiflora Michaux, Pineland Plantain. Cp (GA, NC, SC): wet savannas over calcareous substrates (coquina limestone), now usually found in moister human-created microhabitats adjacent to these sites, such as fire-plow lines, shallow ditches along roadsides, or mowed powerline rights-of-way; rare (US Species of Concern, GA Special Concern, NC Endangered, SC Rare). April-October. Se. NC south to ne. FL, restricted to the Coastal Plain. Harper (1944), with his usual keen understanding of the ecology of southeastern plants, has provided the most succinct and accurate description of the habitat of this plant: "flattish pine-barrens where there is evidently some calcareous material not far from the surface." [= RAB, GW, K, S, X, Z]

Plantago virginica Linnaeus, Virginia Plantain. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, lawns, disturbed areas; common. Late March-June. MA and NY west to SD, south to FL and TX. [= RAB, C, G, K, S, W, Z; > *P. virginica* var. *virginica* – F; > *P. virginica* var. *viridescens* Fernald – F]

Plantago wrightiana Decaisne, Wright's Plantain. Cp (GA, NC, SC), Pd (GA, NC, SC, VA): roadsides, lawns, disturbed areas; common (uncommon in NC). Late April-July. VA, NC, OK, and AZ south to GA, AL, MS, TX, and Mexico, the original distribution unclear. [= K, Z; = *P. hookeriana* Fischer & C.A. Meyer var. *nuda* (A. Gray) Poe – RAB, W]

Scoparia Linnaeus (Goat-weed, Sweet-broom)

A genus of about 20 species, herbs, of tropical and subtropical America.

1 Corolla white; sepals 4, ovate; stem 3-8 dm tall; annual ..... ***S. dulcis***
1 Corolla yellow; sepals 5, lanceolate; stem 1-1.5 d tall; perennial ..... ***S. montevidensis*** *var.* ***glandulifera***

Scoparia dulcis Linnaeus, Goat-weed, Sweet-broom. Cp (GA, SC): disturbed places; uncommon, rather weedy and the original distribution unclear. May-October. [= RAB, GW, K, P, S]

* ***Scoparia montevidensis*** (Sprengel) R.E. Fries *var.* ***glandulifera*** (Fritsch) R.E. Fries. Cp (NC): on ballast; rare, introduced from South America, probably no longer present. [= K, P]

Sophronanthe Bentham

The two taxa included here are not part of *Gratiola*; it remains to be determined whether *Tragiola* Small & Pennell should be recognized as distinct from *Sophronanthe* (Estes, pers. comm. 2004).

1 Leaves linear-subulate; corolla 2-3× as long as the calyx ..... ***S. hispida***
1 Leaves ovate; corolla 1-1.5 × as long as the calyx ..... ***S. pilosa***

Sophronanthe hispida Bentham ex Lindley. Cp (GA): dry pinelands; uncommon. E. GA (within a few counties of SC) south to s. FL, and west to MS. [= P, S; = *Gratiola hispida* (Bentham ex Lindley) Pollard – GW, K]

Sophronanthe pilosa (Michaux) Small. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): marshes, wet areas, wet pine savannas; common (rare in Mountains). June-September. NJ south to s. FL, west to e. TX, northward in the interior to KY, TN, AR, and e. OK. [= *Gratiola pilosa* Michaux= RAB, C, F, G, GW, K, W; > *Tragiola pilosa* (Michaux) Small & Pennell var. *typica* – P; **= *Tragiola pilosa*** (Michaux) Small & Pennell – S]

Veronica Linnaeus 1753 (Speedwell)

A genus of about 180 species, herbs, nearly cosmopolitan (at least now), most diverse in Europe. The genus appears to be paraphyletic as currently circumscribed (Albach & Chase 2001). References: Walters & Webb (1972)=Z; Crow & Hellquist (2000)=Y. Key partly based on C.

1 Flowers in axillary racemes; upper bracteal leaves opposite throughout.
  2 Leaves and stems pubescent; [plants of mesic to dry habitats]; [section *Veronica*].
    3 Leaves cuneate at the base; leaves widest at the middle or beyond; pedicels shorter than the subtending bracts ..... ***V. officinalis***
    3 Leaves cordate, truncate or rounded at the base; leaves widest towards the base; pedicels equalling or longer than the subtending bracts.
      4 Stem pubescence generally distributed; calyx shorter than the capsule; style 6-8 mm long; stems erect ..... ***[V. austriaca*** *ssp.* ***teucrium]***
      4 Stem pubescence restricted to 2 lines; calyx longer than the capsule; style 3-5 mm long; stems creeping or ascending ..... ***V. chamaedrys***
  2 Leaves and stems glabrous, or with fine glandular hairs in the inflorescence only; [plants of wetlands].
    5 Leaves (even the upper) short-petiolate; [section *Beccabunga*].
      6 Leaves broadest towards the base, acute at the tip; style 2.5-3.5 mm long ..... ***V. americana***
      6 Leaves broadest near or above the middle, rounded at the tip; style 1.8-2.2 mm long ..... ***V. beccabunga***
    5 Leaves (at least the middle and upper) sessile.
      7 Capsule flattened, conspicuously notched at the style and therefore appearing 2-lobed, wider than long; seeds 1.2-1.8 mm long; leaves (3-) 4-20× as long as wide; < 1 cm wide, tapering to the base and not clasping; [section *Veronica*] ..... ***V. scutellata***
      7 Capsule turgid, slightly or not notched at the style, about as long as wide; seeds <0.5 mm long; leaves 1.5-5 (-8)× as long as wide, mostly > 1 cm wide, clasping at the base; [section *Beccabunga*].
        8 Racemes 20-65-flowered; pedicels 4-8 mm long; capsule ovoid to globose, not notched or barely so ..... ***V. anagallis-aquatica***
        8 Racemes 5-25 (-35)-flowered; pedicels 3-6 mm long; capsule broadly obcordate, distinctly though slightly notched at the style ..... ***[V. catenata]***
1 Flowers in terminal racemes or solitary and axillary, subtended by normally-sized leaves; upper bracteal leaves often alternate.
  9 Bracts abruptly smaller than the foliage leaves, the flowers thus in well-developed terminal racemes or spikes; perennials from rhizomes.
    10 Stems 3-10 dm tall; flowers in a crowded terminal spike; larger leaves > 4 cm long, sharply serrate; [section *Pseudolysimachium*] ..... ***[V. longifolia]***

10 Stems 1-3 dm tall; flowers in loose racemes; larger leaves < 2.5 cm long, entire to weakly toothed; [section *Veronicastrum*].
11 Flowers bright blue; pedicels with some longer gland-tipped hairs; flowers usually < 12 per raceme..... ***[V. serpyllifolia var. humifusa]***
11 Flowers pale blue with darker blue lines; pedicels puberulent; flowers usually > 12 per raceme ..... ***V. serpyllifolia var. serpyllifolia***

9 Bracts gradually reduced in size upwards, all of the flowers or at least those lower on the stem axillary in the axils of well-developed foliage leaves; annuals (except *V. filiformis*); [section *Pocilla*].
12 Pedicels 0-2 mm long; flowers in the axils of bracts, all or at least the upper of which are very different than foliage leaves.
13 Leaves 3-10× as long as wide, toothed or entire; flowers white or very pale, ca. 2 mm across; stems usually glabrous (except *V. peregrina* var. *xalapensis*).
14 Stem glabrous; sepals and fruit glabrous..... ***V. peregrina var. peregrina***
14 Stem pubescent with short, gland-tipped hairs; sepals and fruit glabrous or pubescent with short, gland-tipped hairs..... ***V. peregrina var. xalapensis***
13 Leaves 1-2× as long as wide, palmately lobed or toothed; flowers blue, 2-4 mm across; stems pubescent.
15 Upper leaves and lower bracts trilobed, the lobes cut > ½ way to base..... ***V. triphyllos***
15 Leaves unlobed (though crenate-serrate).
16 Style 0.4-1.0 mm long ..... ***V. arvensis***
16 Style ca. 1.5 mm long..... ***V. dillenii***
12 Pedicels 5-40 mm long; flowers in the axils of leaves similar in shape and size to foliage leaves (though the upper are sometimes somewhat smaller).
17 Perennial, the stems rooting at the nodes the length of the stem; pedicels > 2× as long as the the leaves..... ***[V. filiformis]***
17 Annual, the stems not rooting at the nodes (or at most only at the base of the plant); pedicels < 2× as long as the the leaves.
18 Calyx lobes cordate at the base; leaves with 3-7 teeth or shallow lobes..... ***V. hederifolia***
18 Calyx lobes cuneate to rounded at the base; leaves with usually > 7 small teeth or crenations.
19 Lobes of the capsule with apices diverging at ca. 90 degrees; corolla > 8 mm wide..... ***V. persica***
19 Lobes of the capsule wuth apices parallel or diverging at an acute angle; corolla < 8 mm wide.
20 Capsule with all hairs straight and gland-tipped; corolla white to pale blue or violet ..... ***V. agrestis***
20 Capsule with a mixture of short, arching, non-glandular hairs and longer, straight, gland-tipped hairs; corolla bright blue..... ***V. polita***

* ***Veronica agrestis*** Linnaeus, Field Speedwell. Pd (GA, NC), Mt (GA), {VA}: lawns and disturbed areas; rare, native of Eurasia. [= C, F, G, K, P, Z; < *V. agrestis* – RAB, G]

Veronica americana Schweinitz ex Bentham, American Speedwell, Brooklime. Mt (NC, VA), Pd (VA), {SC}: bogs, marshes, streamsides; uncommon (rare south of VA). May-June; July. Newfoundland west to AK, south to NC, TN, TX, and CA; ne. Asia. [= RAB, C, F, G, K, P, S, W, Y]

Veronica anagallis-aquatica Linnaeus, Water Speedwell. Mt (NC, VA), Cp (NC, VA), Pd (VA): bogs, marshes, streamsides, ditches; uncommon (rare south of VA). May-June; July. Circumboreal, south in North America to FL, TX, and CA; some occurrenmces probably represnt introductions of European material. Some authors interpret V. anagallis-aquatica as being non-native in North America. [= C, F, G, P, Y; < *V. anagallis-aquatica* – RAB, C, K, W, Z]

* ***Veronica arvensis*** Linnaeus, Corn Speedwell, Wall Speedwell. Mt, Pd, Cp (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, native of Eurasia. March-June. [= RAB, C, F, G, K, P, S, W, Z]

* ***Veronica beccabunga*** Linnaeus, European Brooklime. Mt (VA?): wet places; rare, native of Europe. South to MD, WV, and perhaps VA. [= C, F, G, K, P, Y, Z]

* ***Veronica chamaedrys*** Linnaeus, Germander Speedwell. Mt (NC), Pd (VA): golf course, lawns; rare, native of Eurasia. [= RAB, C, F, G, K, P; *V. chamaedrys* ssp. *chamaedrys* – Z]

* ***Veronica dillenii*** Crantz. Mt (VA): {habitat}; rare, native of Europe. [= C, G, K, P, Z; < *V. verna* Linnaeus – F]

* ***Veronica hederifolia*** Linnaeus, Ivyleaf Speedwell. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (NC, VA): lawns, fields, disturbed areas; common, native of Europe. March-May. [= K, W; *V. hederaefolia* – RAB, C, F, G, P, S, orthographic variant; *V. hederifolia* ssp. *hederifolia* –Z]

* ***Veronica officinalis*** Linnaeus, Common Speedwell, Gypsyweed, Heath Speedwell. Mt (GA, NC, VA), Pd (NC, VA), Cp (NC, SC, VA): May-August. [= RAB, C, G, P, S, W, Z; *V. officinalis* var. *officinalis* – F, K; *V. officinalis* var. *tournefortii* (Vill.) Reichenbach – F, K]

Veronica peregrina Linnaeus *var. **peregrina***, Common Purslane Speedwell. Mt, Pd, Cp (GA, NC, SC, VA): fields, roadsides, disturbed areas; common. April-May. Nova Scotia and ND south to FL and TX; AK south to OR (perhaps only as an introduction?); South America. [= C, F, G, S; *V. peregrina* ssp. *peregrina* – K; < *V. peregrina* – RAB, W, Z; *V. peregrina* var. *typica* – P]

* ***Veronica peregrina*** Linnaeus *var. **xalapensis*** (Kunth) Pennell, Western Purslane Speedwell. Cp (GA), {NC?, SC?}: fields, lawns, disturbed places; rare, probably introduced in our area on ballast. April-May. Québec and AK south to MA, KY, TX, and south to Guatemala. [= C, F, G, P, S; = *V. peregrina* ssp. *xalapensis* (Kunth) Pennell – K; < *V. peregrina* – RAB, W, Z]

* ***Veronica persica*** Poiret, Bird's-eye Speedwell. Cp (NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, VA): lawns, fields, roadsides, disturbed areas; common, native of Eurasia. March-June. [= RAB, C, F, G, K, P, S, W, Z]

* ***Veronica polita*** Fries. Pd (NC, VA), Mt, Cp (VA): lawns, waste areas; rare, native of Eurasia. March-April. This species is introduced in c. TN (Chester, Wofford, & Kral 1997), WV, and s. PA (Rhoads & Klein 1993), FL (Pennell 1935), NC, and VA (Kartesz 1999). It is similar to *V. agrestis* and has been much confused with it. [= C, F, K, S, Z; < *V. agrestis* – RAB, G; *V. didyma* Tenore – P, misapplied]

Veronica scutellata Linnaeus, Narrowleaf Speedwell. Mt (VA), {NC?}: marshes; rare. May-September. Circumboreal, south in North America to VA, NC?, TN, and CA. In ne. TN (Chester, Wofford, & Kral 1997). [= C, G, K, P, W, Y, Z; *V. scutellata* var. *scutellata* – F]

* ***Veronica serpyllifolia*** Linnaeus *var.* ***serpyllifolia***, Thymeleaf Speedwell. Mt, Pd, Cp (GA, NC, SC, VA): meadows, lawns, roadsides, other disturbed areas; common (rare in Coastal Plain), native of Eurasia. April-June. [= C, G; *V. serpyllifolia* ssp. *serpyllifolia* – K, Z; < *V. serpyllifolia* – RAB, F, S, W; = *V. serpyllifolia* – P]

* ***Veronica triphyllos*** Linnaeus. Pd (NC, SC): cultivated fields; rare, native of Eurasia. April. [= RAB, K, P]

* *Veronica austriaca* Linnaeus ssp. *teucrium* (Linnaeus) D.A. Webb, native of Eurasia, is naturalized at scattered locations in PA (Rhoads & Klein 1993) and MD (Kartesz 1999). [= K, Z; = *V. teucrium* Linnaeus – C; *V. latifolia* Linnaeus – F, G, P, nomen ambiguum, perhaps misapplied]

Veronica catenata Pennell. Streams and wetlands. Circumboreal, the southern limits obscure because of taxonomic confusion, misidentifications, and misattributions. [= C, Y; < *V. anagallis-aquatica* Linnaeus – K, W, Z; > *V. comosa* Richter – F; > *V. salina* Schur – G; > *V. connata* Rafinesque var. *typica* – P; > *V. glandifera* Pennell – P, S; > *V. catenata* Pennell – P, Z]

* *Veronica filiformis* J.E. Smith, Creeping Speedwell. In WV, MD, and scattered in PA (Rhoads & Klein 1993). [= C, F, G, K, P, Z]

* *Veronica longifolia* Linnaeus, Garden Speedwell, Longleaf Speedwell. In WV, scattered in PA (Rhoads & Klein 1993), KY, and in MD (F). native of Europe. [= C, F, G, K, P, Z]

*? *Veronica serpyllifolia* Linnaeus var. *humifusa* (Dickson) Vahl, may range south to MD (Pennell 1935, Kartesz 1999). It is native in n. North America. April-June. [= C, G; < *V. serpyllifolia* – F; *V. serpyllifolia* ssp. *humifusa* (Dickson) Syme – K, Z; = *V. humifusa* Dickson – P]

Veronicastrum Heister ex Fabricius (Culver's-root)

A genus of 2 species, herbs, of e. North America and e. Asia.

Veronicastrum virginicum (Linnaeus) Farwell, Culver's-root. Mt (GA, NC, VA), Pd (GA, NC, SC, VA): streambanks, bogs, wet meadows, dryish soils in areas with prairie affinities; uncommon (NC Watch List, SC Rare). July-August. VT west to Manitoba, south to nc. and nw. GA, w. FL Panhandle, and LA. Populations seem to be of somewhat sporadic or irregular appearance from year to year. [= RAB, C, F, G, GW, K, P, S, W]

PLATANACEAE Dumortier 1829 (Plane-tree Family)

A family of a single genus and about 7 species (and several addional infrataxa), trees, of North America south to Central America and w. Asia to se. Asia. Probably with a close relationship to the Proteaceae, and perhaps best included there (Angiosperm Phylogeny Group 1998, 2003). References: Kaul in FNA (1997); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Platanus Linnaeus 1753 (Plane-tree, Sycamore)

A genus of about 7 species (and several additional infrataxa), trees, of North America south to Central America and w. Asia to se. Asia. References: Kaul in FNA (1997); Nixon & Poole (2003)=Z; Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: The exposed white inner bark on the middle and upper trunks make *Platanus* recognizable at long distances, especially in winter.

Platanus occidentalis Linnaeus *var.* ***occidentalis***, Sycamore, Plane-tree. Pd, Mt, Cp (GA, NC, SC, VA): riverbanks and alluvial forests, streambanks, sometimes weedy on rocky roadcuts; common (in the Mountains present only along the larger rivers, except in the Ridge and Valley of VA, uncommon in the Coastal Plain except along brownwater rivers). April-May; September-November. Var. *occidentalis* ranges from s. ME west to s. Ontario, MI, and MN, south to w. FL and TX; var. *palmeri* (Kuntze) Nixon & Poole ex Geerinck occurs from central TX south into Coahuila. One of the largest trees in e. North America, and probably the largest that is widespread in the Piedmont of our area. [= Z; < *P. occidentalis* – RAB, C, FNA, G, GW, K, S, W; > *P. occidentalis* var. *occidentalis* – F; > *P. occidentalis* var. *glabrata* (Fernald) Sargent – F]

PLUMBAGINACEAE A.L. de Jussieu 1789 (Leadwort Family)

A family of about 24-27 genera and 650-775 species, shrubs, vines, and herbs, of cosmopolitan distribution. Lledó et al. (1998) and other authors suggest that the portion of the Plumbaginaceae often recognized as tribe Staticeae or subfamily Staticoideae (which includes *Limonium*) would be better treated as a distinct family. References: Morin in FNA (2005); Lledó et al. (1998); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Limonium P. Miller (Sea-lavender)

A genus of about 350 species, dwarf shrubs, perennial, and annual herbs, of cosmopolitan distribution. References: Luteyn (1976)=Z; Smith in FNA (2005); Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Limonium carolinianum (Walter) Britton, Carolina Sea-lavender. Cp (GA, NC, SC, VA): tidal marshes, especially in hypersaline flats; common. August-October. Along the coast from Labrador south to FL, west to TX and ne. Mexico. Various treatments recognize from 1 to 4 taxa in our area. The most recent monographer, Luteyn (1976), recognizes only a polymorphic *L. carolinianum* – a treatment followed by most flora authors since. Godfrey & Wooten (1981) follow Luteyn's treatment, but state "we are not at all confident that Luteyn's treatment is a reasonable one." [= C, FNA, GW, K, Z; > *L. carolinianum* var. *carolinianum* – RAB, G; > *L. carolinianum* var. *obtusilobum* (Blake) Ahles – RAB; > *L. nashii* Small var. *nashii* – RAB, G; > *L. nashii* Small var. *angustatum* (A. Gray) Ahles – RAB; > *L. carolinianum* – F, S; > *L. nashii* Small – F, S; > *L. carolinianum* var. *angustatum* (A. Gray) Blake – G; > *L. angustatum* (A. Gray) Small – S; > *L. obtusilobum* Blake – S]

PODOSTEMACEAE Richard ex C. Agardh 1822 (Riverweed Family)

A family of about 47 genera and 280 species, aquatic herbs, of tropical, subtropical, and rarely temperate regions of the New World and Old World. References: Graham & Wood (1975).

Podostemum Michaux (Riverweed)

A genus of about 18 species, reduced aquatic herbs, of tropical to temperate America. References: Graham & Wood (1975)=Z; Philbrick & Crow (1983).

Identification notes: *Podostemum* is a curious plant, seeming more like an alga than a vascular plant in color, texture, mode of attachment to substrate (by a fleshy disk), and irregular thalloid branching.

Podostemum ceratophyllum Michaux, Threadfoot, Riverweed. Mt, Pd, Cp (GA, NC, SC, VA): attached to rocks and dams in rapidly or slowly flowing water; common (rare in Coastal Plain). May-July. Nova Scotia, ME, and Québec south to sw. GA, s. AL, s. MS, se. LA (Florida parishes), AR, and w. TN; disjunct in the Ozark-Ouachita Highlands of w. AR and se. OK; Dominican Republic; Honduras. [= RAB, C, F, G, K, W, Z; = *Podostemon ceratophyllum* - GW, orthographic variant; > *Podostemon ceratophyllum* – S, orthographic variant; > *Podostemon abrotanoides* Nuttall – S]

POLEMONIACEAE A.L. de Jussieu 1789 (Jacob's-ladder Family)

A family of 18 genera and 350-380 species, herbs, vines, and shrubs (rarely trees), mainly of temperate North America, but extending into tropical America and also in Eurasia. References: Wilson (1960a); Grant (1997); Grant (1998); Prather, Ferguson, & Jansen (2000); Wilken in Kubitzki (2004).

1 Leaves simple; [tribe *Polemoniae*].....***Phlox***
1 Leaves compound.
  2 Leaf segments linear, ca. 1 mm wide; corolla red or yellow; [tribe *Gilieae*] .....***Ipomopsis***
  2 Leaf segments ovate or elliptic, 5-16 mm wide; corolla blue; [tribe *Polemoniae*]..... ***Polemonium***

Ipomopsis Michaux 1803 (Standing-cypress)

A genus of about 30 species, herbs, mainly of w. North America (1 species in se. North America, 1 in w. South America). References: Grant (1956)=Z; Wilken in Kubitzki (2004).

Ipomopsis rubra (Linnaeus) Wherry, Standing-cypress. Cp (GA, NC, SC), Pd (GA*?, NC*), Mt* (NC*): sandhills, sand rims of Carolina bays, roadbanks, disturbed areas; rare (NC Watch List, SC Rare). June-August; August-September. Sc. NC south to FL, west to TX and OK, spread from cultivation in other areas to the north (including sites in the Piedmont and

Mountains of GA and NC). Another example of the affinities of the Sandhill flora to that of the dry sw. United States. [= RAB, K, W, Z; = *Gilia rubra* (Linnaeus) A.A. Heller – C, F, G, S]

Phlox Linnaeus 1753 (Phlox)

A genus of about 70 species, herbs (to subshrubs), of temperate North America (with 1 species in ne. Asia). This treatment is probably no closer to the truth than the diversity of previous ones; some will even consider it a regression, in its (provisional) acceptance of many of Wherry's infraspecific taxa. He studied the genus more carefully than anyone since, and it seems premature to reduce to synonymy without further critical study many of the entities which he recognized. As Wherry (1955) wrote "when it becomes realized how difficult from one another some of them are, the writer will no doubt be classed as a 'splitter;' then workers who revel in drawing up tables of 'synonymy' are going to have a field day. It is deemed of importance, however, to record the presence in nature of all material which may be of value in future studies by cytogenetic, serologic, or other specialized techniques. When multiple taxa get relegated to 'synonymy' under a few comprehensive ones, their very existence is likely to be overlooked." References: Wherry (1955)=Z; Ferguson, Krämer, & Jansen (1999); Wilken in Kubitzki (2004). Key based on C and Z.

1 Stems woody or suffrutescent, trailing or decumbent; leaves to 25 mm long, to 3 (-5) mm wide, generally with short-shoots or fascicles of leaves in the axils of leaves of the sterile shoots.
- 2 United portion of the style 1.5-4 mm long, the cleft portion 0.5-2 mm long.
  - 3 Fertile shoots (10-) 15-30 cm tall; upper leaves oblong-lanceolate, up to 12-25 mm long, 1.5-3 mm wide on sterile shoots, 2.5-5 mm wide on fertile shoots; pubescence of the inflorescence mostly with conspicuously glandular tips ..... ***Ph. nivalis*** *var.* ***hentzii***
  - 3 Fertile shoots (3-) 8-12 (-15) cm tall; upper leaves linear-lanceolate, up to 8-12 mm long, 0.5-1.5 mm wide on sterile shoots, 1.5-3 mm wide on fertile shoots; pubescence of the inflorescence mostly with finely glandular tips ..... ***Ph. nivalis*** *var.* ***nivalis***
- 2 United portion of the style 5-12 mm long, the cleft portion ca. 1 mm long.
  - 4 Inflorescence glandless (rarely glandular); corolla tube ca. 10.5 mm long; petal notch generally ca. 1.0 mm deep (range 0-3.0 mm); [of high elevations]..... ***Ph. subulata*** *var.* ***subulata***
  - 4 Inflorescence glandular (rarely glandless); corolla tube ca. 10.5-12 mm long; petal notch generally ca. 1.5 mm deep (range 0.5-3.0 mm); [of low to high elevations].
    - 5 Corolla tube ca. 12 mm long; petal blades ca. 8.5 mm long, ca. 6 mm wide; flowers mostly purple (to pale lavender); [mostly of moderate to high elevation calcareous or mafic rocks] ..... ***Ph. subulata*** *var.* ***australis***
    - 5 Corolla tube ca. 10.5 mm long; petal blades ca. 7.5 mm long, ca. 5 mm wide; flowers mostly pale lavender; [mostly of low elevation acidic gneisses and shales] ..... ***Ph. subulata*** *var.* ***brittonii***

1 Stems herbaceous, erect or decumbent; leaves (at least the larger) > 25 mm long and/or > 5 mm wide, generally lacking axillary of leaves.
- 6 Style short, 1-4 mm long, the united portion 1-1.5 (-2)× as long as the cleft portion; stamens shorter than the corolla tube (thus included).
  - 7 Upper leaves alternate; annual; corolla red, white, or variegated; [alien, mostly naturalized in dry sandy soils of roadsides, fields, and disturbed areas]..... ***Ph. drummondii***
  - 7 Upper leaves opposite or subopposite; perennial; corolla blue, lavender, or pink; [native, mostly of forests, woodlands, or roadbanks].
    - 8 Sterile shoots rooting at the nodes; leaves broad-elliptic, ca. 2-3× as long as wide; sepals acuminate to very slightly awned, the awn 0-0.5 mm long; corolla tube glabrous.
      - 9 Petal blade notched, the sinus usually 0.5-3 mm deep ..... ***Ph. divaricata*** *var.* ***divaricata***
      - 9 Petal blade entire ..... ***Ph. divaricata*** *var.* ***laphamii***
    - 8 Sterile shoots not rooting at the nodes; leaves lanceolate to linear, ca. 4-10× as long as wide; sepals awned, the awn 0.5-3.0 mm long; corolla glabrous, pilose, or glandular-pubescent.
      - 10 Cymes open, the lowest branches elongate, > 1 cm long; corolla usually glandular-pubescent or pilose (rarely glabrous); pedicels 1-8 (-12) mm long..... ***Ph. pilosa*** *ssp.* ***pilosa***
      - 10 Cymes compact, the lowest branches short, < 0.5 cm long; corolla glabrous; pedicels 1-6 mm long.
        - 11 Leaves and bracts oblong-elliptic to lanceolate, acute to obtuse (rarely acuminate), the larger 20-40 (-50) mm long, 4-8 (-12) mm wide, ca. 5× as long as wide; bracts below the inflorescence hiding the calyces ..... ***Ph. amoena***
        - 11 Leaves and bracts linear to lanceolate, acuminate, the larger 35-45 mm long, 3-5 mm wide, ca. 10× as long as wide; bracts below the inflorescence not hiding the calyces..... ***Ph. lighthipei***
- 6 Style long, (12-) 14-26 mm long, the united portion 3-30× as long as the cleft portion; stamens equalling or exceeding the corolla tube (thus in part exserted).
  - 12 Plants forming colonies by rhizomes, stolons, and/or prostrate sterile shoots with evergreen to semi-evergreen leaves; flowering shoots 1-4 (-5) dm tall.
    - 13 Plants with rhizomes and stolons tipped with clustered, evergreen, linear to lanceolate leaves 3-12 cm long, 5-10 (-12) mm wide ..... ***Ph. buckleyi***

13 Plants with prostrate sterile shoots with scattered, semi-evergreen, spatulate to obovate leaves 1.5-4.5 cm long, 5-16 mm wide ..... ***Ph. stolonifera***

12 Plants not colony-forming by rhizomes or stolons; flowering shoots (3-) 5-20 dm tall.

14 Leaf margin ciliate-serrulate; lateral veins of the leaves readily apparent, these joining to form a connecting vein parallel to the leaf margin.

15 Bracts of the inflorescence pubescent with glandular hairs; corolla tube glabrous; leaves opposite; nodes usually 8-15; leaves usually 2-3× as long as wide..... ***Ph. amplifolia***

15 Bracts of the inflorescence pubescent with non-glandular hairs; corolla tube pubescent (rarely glabrous); leaves subopposite (at least near the inflorescence); nodes usually 15-40; leaves usually 3-4× as long as wide..... ***Ph. paniculata***

14 Leaf margin smooth or slightly rough; lateral veins of the leaves not readily apparent, not forming a connecting vein parallel to the leaf margin.

16 Flowering shoots arising from decumbent stems; nodes below the inflorescence 3-5 ..... ***Ph. latifolia***

16 Flowering shoots arising from rhizomes; nodes below the inflorescence 7 or more.

17 Cymes several, the lower on rather short and uniform peduncles, thus the inflorescence as a whole subcylindric in outline.

18 Nodes 7-15, well-spaced; upper leaves oblong to ovate, cordate at the base; flowering early summer..... ***Ph. maculata*** *var.* ***maculata***

18 Nodes 16-35, crowded; upper leaves lanceolate to ovate-oblong; truncate to subcordate at the base; flowering late summer..... ***Ph. maculata*** *var.* ***pyramidalis***

17 Cymes solitary or several, if several then the lower on long peduncles, thus the inflorescence as a whole broadly rounded or even flat-topped.

19 Calyx subcampanulate, the sepals narrow with a well-developed midrib, the junction-membranes firm, broad and flat (to slightly plicate-keeled).

20 Main leaves ca. 12× as long as wide; sepals 7-9 mm long; ultimate cymules 5-7-flowered ..... ***Ph. glaberrima*** *var.* ***glaberrima***

20 Main leaves ca. 6× as long as wide; sepals 8-12 mm long; ultimate cymules 3-flowered ..... ***Ph. glaberrima*** *var.* ***triflora***

19 Calyx subcylindric, the sepals fairly broad, with a rather weak midrib, the junction-membranes thin, narrow, becoming markedly plicate-keeled.

21 Largest leaves low on the stem, the leaves markedly reduced upward in size and also widely spaced ..... ***Ph. carolina*** *ssp.* ***angusta***

21 Largest leaves well above the midpoint of the stem, the leaves neither markedly reduced upward in size nor markedly more widely spaced.

22 Plant (5-) 7.5-20 tall, with (12-) 15-25 nodes below the inflorescence..... ***Ph. carolina*** *ssp.* ***alta***

22 Plant 4-10 dm tall, with 6-12 (-15) nodes below the inflorescence..... ***Ph. carolina*** *ssp.* ***carolina***

Phlox amoena Sims, Hairy Phlox, Chalice Phlox. Mt, Pd (GA, NC, SC), Cp (GA, SC): dry woodlands and forests, roadbanks, sandhills; common. April-June; June-July. W. NC west to s. KY, south to n. FL and MS. [= C, F, G, S, W; = *Ph. amoena* ssp. *amoena* – K, Z; < *Ph. amoena* – RAB, in part only (also see *Ph. lighthipei*)]

Phlox amplifolia Britton, Broadleaf Phlox. Mt (GA, NC, VA): moist forests, particularly over mafic rocks; rare (GA Special Concern, NC Watch List, VA Rare). July-August. W. VA west to s. IN and se. MO, south to w. NC, AL, and n. AR. [= RAB, C, F, G, K, S, W, Z]

Phlox buckleyi Wherry, Swordleaf Phlox, Shale-barren Phlox. Mt (VA): shale woodlands and woodland edges, shaley roadbanks; rare (VA Rare). May-June. Endemic to w. VA and e. WV. [= C, F, G, K, W, Z]

Phlox carolina Linnaeus *ssp.* ***alta*** Wherry, Giant Phlox. Mt (GA, NC, SC), Pd (GA, NC): forests, woodlands, woodland borders; common? May-July. C. NC and se. TN south to c. GA. [= K, Z; < *Ph. carolina* – RAB, G, S, W]

Phlox carolina Linnaeus *ssp.* ***angusta*** Wherry, Narrowleaf Phlox. Cp (SC), Pd, Mt (NC, SC) {GA}: woodlands and woodland borders: uncommon? May-October. Sw. NC and e. SC south to panhandle FL, west to e. TX, north in the interior to w. TN, s. IL and s. MO. [= K, Z; < *Ph. carolina* – RAB, G, S, W]

Phlox carolina Linnaeus *ssp.* ***carolina***, Thick-leaf Phlox. Mt, Pd, Cp (NC, SC, VA) {GA}: woodlands, woodland borders, barrens, and forests; common. May-July. W. NC and s. MO south to panhandle FL and s. MS. [= K, Z; < *Ph. carolina* – RAB, G, S, W]

Phlox divaricata Linnaeus *var.* ***divaricata***, Eastern Blue Phlox, Timber Phlox. Mt (GA, NC, VA), Pd, Cp (GA, VA): moist deciduous forests in circumneutral soils; uncommon (rare in VA Coastal Plain). April-May. VT and Québec west to MI, south to NC, GA, and TN. [= C, F, G; = *Ph. divaricata* ssp. *divaricata* – K, Z; < *Ph. divaricata* – RAB, S, W]

Phlox divaricata Linnaeus *var.* ***laphamii*** A.W. Wood, Western Blue Phlox. Cp (GA, NC, VA?), Pd, Mt (GA): moist deciduous forests in circumneutral soils; rare. April. WI west to MN, south to GA and TX, and apparently with scattered populations eastward, as along the Roanoke River in NC. [= C, F, G; = *Ph. divaricata* ssp. *laphamii* (A.W. Wood) Wherry – K, Z; < *Ph. divaricata* – RAB, S, W]

* ***Phlox drummondii*** Hooker, Annual Phlox, Drummond Phlox. Cp (GA, NC, SC, VA), Pd (NC): dry sandy soils of roadsides, fields, disturbed areas; common, introduced from TX. April-July. Wherry recognized 3 subspecies in *Ph.*

drummondii, all endemic to TX; it does not seem meaningful to try to distinguish infraspecific taxa in our area, since our plants are the progeny of various cultivars derived from hybrids and selections of the wild taxa. [= RAB, F, G, S; > ***Ph. drummondii*** spp. *drummondii* – K, Z]

Phlox glaberrima Linnaeus *var.* ***glaberrima***, Piedmont Smooth Phlox. Pd (NC, SC, VA), Mt (NC, Cp (SC): wet forests and woodlands, especially bottomlands; uncommon. April-June; June-July. Sc. VA south to c. SC and w. NC, apparently endemic to our area. [= ***Ph. glaberrima*** ssp. *glaberrima* – RAB, K, Z; < ***Ph. glaberrima*** – C, F, G, S, W]

Phlox glaberrima Linnaeus *var.* ***triflora*** (Michaux) Reveal & Broome, Appalachian Smooth Phlox. Mt (GA, NC, SC, VA), Pd (GA, NC, SC), Cp? (GA?): wet woodlands and forests, especially bottomlands; uncommon. April-June; June-July. MD west to s. OH and s. IN, south to c, NC, c. GA, and n. AL. [= ***Ph. glaberrima*** ssp. *triflora* (Michaux) Wherry – RAB, K, Z; < ***Ph. glaberrima*** – C, F, G, S, W]

Phlox latifolia Michaux, Mountain Phlox, Appalachian Phlox. Mt, Pd (NC, SC, VA): moist forests, woodlands, woodland borders, and barrens; uncommon. May-June; July. PA to NC and ne. TN in the Appalachians; disjunct in OH and IN. [= K; *? **Ph. ovata*** Linnaeus – RAB, C, F, G, S, W, Z, misapplied]

Phlox lighthipei Small, Lighthipe's Phlox. Cp (GA, SC): dry to moist sandy soils; rare? April-May; June-July. S. SC south to n. FL. [= S; = ***Ph. amoena*** ssp. *lighthipei* (Small) Wherry – K, Z; < ***Ph. amoena*** – RAB]

Phlox maculata Linnaeus *var.* ***maculata***, Northern Meadow Phlox. Mt, Pd (NC, SC, VA), {GA}: moist forests and openings; uncommon? June-July. S. Québec west to MN, south to c. NC, KY, and IA. [= F, G; = ***Ph. maculata*** ssp. *maculata* – K, Z; < ***Ph. maculata*** – S]

Phlox maculata Linnaeus *var.* ***pyramidalis*** (J.E. Smith) Wherry. Leafy Meadow Phlox. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): moist forests and openings; uncommon. July-September. PA, OH, s. IN, and se. MO, south to NC, n. GA, and TN. [= ***Ph. maculata*** ssp. *pyramidalis* (J.E. Smith) Wherry – RAB, K, Z; =*? **Ph. maculata*** var. *purpurea* Fernald – F; < ***Ph. maculata*** – S]

Phlox nivalis Loddiges ex Sweet *var.* ***hentzii*** (Nuttall) Wherry, Trailing Phlox. Pd, Cp (GA, NC, SC, VA): rock outcrops, thin soils of rocky woodlands, roadbanks; common, rare in VA (VA Rare). March-May. Sc. VA west to n. AL, south to c. peninsular FL and s. AL. [= RAB; < ***Ph. nivalis*** – C, F, S, W; < ***Ph. hentzii*** – G (also see var. *nivalis*); = ***Ph. nivalis*** ssp. *hentzii* (Nuttall) Wherry – K, Z]

Phlox nivalis Loddiges ex Sweet *var.* ***nivalis***, Pineland Phlox. Cp, Pd (GA, NC, SC), Mt (NC): sandhills, other dry woodlands, roadbanks; common. March-May. Nc. NC south to panhandle FL. A third taxon, ***Ph. nivalis*** ssp. *texensis* Lundell is endemic in e. TX. [= RAB; < ***Ph. nivalis*** – C, F, S, W (also see var. *hentzii*); < ***Ph. hentzii*** – G; = ***Ph. nivalis*** ssp. *nivalis* – K, Z]

Phlox paniculata Linnaeus, Garden Phlox. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (NC, VA): streambanks, moist forests, woodlands, and woodland borders; common (rare in Coastal Plain and Piedmont south of VA). July-August; September. S. NY west to IL and MO, south to e. NC, w. SC, n. GA, n. MS, and AR. [= RAB, C, F, G, K, S, W, Z]

Phlox pilosa Linnaeus *ssp.* ***pilosa***, Downy Phlox. Cp (NC, SC, VA), Pd (NC, VA), Mt (VA): dry to mesic woodlands and forests, roadbanks; uncommon, rare in VA (VA Rare). April-May; May-June. Ssp. *pilosa* ranges from CT west to WI, IA, and KS, south to c. peninsular FL and TX. Several other subspecies are more southern or western. [= K, Z; = ***Ph. pilosa*** var. *pilosa* – C, F, G; < ***Ph. pilosa*** – RAB, S, W]

Phlox stolonifera Sims, Creeping Phlox. Mt, Pd (GA, NC, SC, VA): moist forests; uncommon, rare in Piedmont. April-May; May-June. PA and s. OH south to w. NC, n. GA, and e. TN, essentially a Southern and Central Appalachian endemic. This species is sometimes locally abundant, as in parts of Great Smoky Mountains National Park. [= RAB, C, F, G, K, S, W, Z]

Phlox subulata Linnaeus *var.* ***australis*** Wherry, Southern Moss Phlox, Southern Mountain-pink. Mt (NC, VA), Pd (VA): dry and exposed rock outcrops, rocky flood-scoured riversides; uncommon, rare south of VA (NC Rare). April-May. W. VA and e. WV south to w. NC and e. TN; also in OH, w. WV, and n. KY. The varieties of ***Ph. subulata*** seem morphologically confluent; they need more study. [< ***Ph. subulata*** var. *australis* – G (also see var. *brittonii*); < ***Ph. subulata*** – RAB, W; < ***Ph. subulata*** var. *setacea* (Linnaeus) Brand – C; < ***Ph. subulata*** var. *brittonii* – F; = ***Ph. subulata*** ssp. *australis* (Wherry) Wherry – K, Z; = ***Ph. subulata*** – S]

Phlox subulata Linnaeus *var.* ***brittonii*** (Small) Wherry, Alleghany Moss Phlox, Alleghany Mountain-pink. Mt (VA): dry woodlands and rock outcrops, over a wide variety of rocks, including in and around shale barrens; uncommon? April-May. Sc. PA south through w. MD to w. VA and e. WV. [< ***Ph. subulata*** var. *setacea* – C; < ***Ph. subulata*** var. *brittonii* – F (also see ***Ph. subulata*** var. *australis*); < ***Ph. subulata*** var. *australis* – G; = ***Ph. subulata*** ssp. *brittonii* (Small) Wherry – K, Z; = ***Ph. brittonii*** Small – S]

Phlox subulata Linnaeus *var.* ***subulata***, Northern Moss Phlox. Mt (NC): rock outcrops of circumneutral rocks; rare (NC Rare). May. NY west to MI, south to MD and WV, and rarely to w. NC. [= F; < ***Ph. subulata*** var. *subulata* – C (also see var. *brittonii*); = ***Ph. subulata*** var. *ciliata* Wherry – G; = ***Ph. subulata*** ssp. *subulata* – K, Z]

Phlox bifida Beck var. *bifida*. In TN and KY according to Kartesz (1999) but not according to Wherry {investigate}. [= *Phlox bifida* Beck ssp. *bifida* – K, Z] {not keyed at this time; synonymy incomplete}

Phlox bifida Beck var. *stellaria* (A. Gray) Wherry. In c. TN (Chester, Wofford, & Kral 1997). [= *Phlox bifida* Beck ssp. *stellaria* (A. Gray) Wherry – K, Z] {not keyed at this time; synonymy incomplete}

Phlox carolina Linnaeus *ssp.* ***turritella*** Wherry. In SC (Kartesz 1999) {?} and GA and southwestward to FL, AL, MS, and e. LA. [= K, Z] {not keyed at this time}

Phlox floridana Bentham. Cp (GA): sandhills; common? Sw. GA and se. AL south to FL Panhandle and w. peninsula. [= K, S, Z]

Phlox glaberrima Linnaeus var. *interior* Wherry. East to KY, TN, AL, and perhaps GA (Kartesz 1999). {investigate} [= *Phlox glaberrima* Linnaeus ssp. *interior* (Wherry) Wherry – K, Z; < ***Ph. glaberrima*** – C, F, G, S] {not keyed at this time}

Phlox pilosa Linnaeus ssp. *deamii* Levin. Endemic to IN, KY, and TN. [= K; < *Ph. pilosa* ssp. *pulcherrima* – Z] {not keyed at this time; add to synonymy}

Phlox pilosa Linnaeus ***ssp. detonsa*** (A. Gray) Wherry. Cp, Pd (GA): Nw. GA south to c. peninsular FL, west on the Coastal Plain to e. TX. [= K, Z] {not keyed at this time; add to synonymy}

Phlox pilosa Linnaeus ssp. *ozarkana* (Wherry) Wherry. East to TN (Kartesz 1999), or to GA (Wherry). {investigate} [= K, Z] {not keyed at this time; add to synonymy}

Phlox pulchra Wherry, Alabama Phlox. Endemic to c. AL. [= K, Z]

Polemonium Linnaeus 1753 (Jacob's-ladder)

A genus of about 25 species, of temperate regions of North America and Eurasia. References: Davidson (1950); Wilken in Kubitzki (2004).

1 Stamens exserted 5-7 mm from the corolla; flowers in a compact panicle, the pedicels usually shorter than the calyx; flowering in July ..... ***[P. vanbruntiae]***
1 Stamens included in the corolla; flowers in a diffuse, corymbiform panicle, the pedicels usually longer than the calyx; flowering in April-May.
  2 Inflorescence minutely puberulent; corolla 12-16 mm long..... ***P. reptans*** *var.* ***reptans***
  2 Inflorescence densely glandular-villous; corolla 8-12 (-13) mm long..... ***[P. reptans*** *var.* ***villosum]***

Polemonium reptans Linnaeus *var.* ***reptans***, Spreading Jacob's-ladder. Mt (GA, NC, VA), Pd (NC, VA), Cp (VA): moist, nutrient-rich forests, such as bottomlands and rich slopes; uncommon, rare south of VA (NC Watch List). April-May; June. NY west to MN, south to VA, nc. NC, nw. GA, AL, and e. OK. [= C, K; < *P. reptans* – RAB, F, G, S, W]

Polemonium reptans Linnaeus var. *villosum* E.L. Braun occurs in the Appalachian Plateau and vicinity, in s. OH and e. KY. [= C, K; < *P. reptans* – F, G]

Polemonium vanbruntiae Britton occurs in calcareous fens and swamps from ME, VT, and n. NY south to se. PA, sw. PA, and e. WV. [= K; = *P. van-bruntiae* – C, F, G, orthographic variant]

POLYGALACEAE R. Brown 1814 (Milkwort Family)

A family of ca. 17 genera and 1000 species, trees, shrubs, woody vines, and herbs, nearly cosmopolitan. References: Miller (1971b).

Polygala Linnaeus (Milkwort)

A genus of about 500 species, trees, shrubs, and herbs, nearly cosmopolitan in distribution. References: Smith & Ward (1976)=Z.

Identification notes: *Polygala* has a distinctive flower structure which can be confusing. The corolla consists of **3 fused petals**, partly fused into a tubular form, and also fused with the stamens. The lower petal is called the **keel**; it is usually boatlike, and also lacerate, fringed, or lobed at its tip. The calyx is 5-lobed, the lobes usually of 3 distinct sizes. The two lateral sepals are called **wings**; they are generally large and petaloid (colored like petals). The upper sepal is usually the next largest; the two lower sepals are usually the smallest.

1 Fresh flowers orange, yellow, greenish-yellow, or greenish white (if greenish white, then the inflorescence a terminal many-brached cyme); [subgenus *Polygala*, series *Decurrentes*].
  2 Inflorescence a dense pom-pom-like raceme, terminating leafy branches.
    3 Lobes of lower petal (keel) < 0.7 mm long; fresh flowers bright orange or bright lemon-yellow; bracts of the inflorescence 1-3.5 mm long; plants to 40 cm tall..... ***P. lutea***
    3 Lobes of lower petal (keel) > 1.5 mm long; fresh flowers lemon-yellow to greenish yellow; bracts of the inflorescence 4.5-6.5 mm long; plants to 15 cm tall..... ***P. nana***
  2 Inflorescence a terminal, many-branched cyme, the many individual branches loosely to densely flowered.
    4 Fresh flowers cream-white to greenish-white; [of GA southward] ..... ***P. balduinii var. balduinii***
    4 Fresh flowers bright yellow; [collectively widespread in the Coastal Plain of our area].
      5 Plants 4.5-12 dm tall, the stem solitary; basal leaves 3.5-14 cm long, linear-lanceolate, about 15-20× as long as wide, persistent as a basal rosette; stem leaves linear-subulate, sharp-tipped, much reduced from the basal leaves, becoming bractlike upward; seeds glabrous, 0.7-0.9 mm long..... ***P. cymosa***
      5 Plants 1-4 dm tall, the stems 1-several from the base; basal leaves 3-7 cm long, spatulate, about 10× as long as wide, usually not persistent after flowering; stem leaves narrowly spatulate to linear, blunt-tipped, only slightly reduced from the basal leaves; seeds pubescent, 0.5-0.7 mm long..... ***P. ramosa***

1 Fresh flowers pink, purple, white, or green (if green or white, then the inflorescence a simple raceme, not a many-branched cyme).
- 6 Leaves few, clustered near the tip of the stem; wings 13-20 mm long; stamens 6; [of moist soils of forests in the Mountains]; [subgenus *Chamaebuxus*] ..... ***P. paucifolia***
- 6 Leaves many, evenly distributed along the stem, or not at least stronglt clustered near the tip; wings < 10 mm long; stamens 8; [collectively of a wide variety of habitats, but generally not as above, either in more open, drier, or non-montane habitats].
  - 7 Leaves whorled, at least at the principal lower nodes; annual, from a slender taproot; [subgenus *Polygala*].
    - 8 Racemes 3-6 mm in diameter, pointed in outline.
      - 9 Racemes 2-5 cm long, becoming interrupted below through persistence of the fruits on the axis; wings equalling the fruit ..... ***P. ambigua***
      - 9 Racemes 0.5-1.5 cm long, the fruits falling promptly, thus the inflorescence compact and truncate below; wings shorter than the fruit.
        - 10 Seeds finely pubescent; pedicels ¼-⅓ as long as the fruit; raceme peduncles 0.5-4 cm long..... ..... ***P. verticillata*** *var.* ***isocycla***
        - 10 Seeds hirsute; pedicels ⅓-½ as long as the fruit; raceme peduncles 2-7 cm long..... ..... ***P. verticillata*** *var.* ***verticillata***
    - 8 Racemes 8-15 mm in diameter, rounded in outline (somewhat rounded in *P. hookeri*).
      - 11 Racemes loosely flowered, with ca. 10 flowers per cm of length; raceme 7-12 mm in diameter, the tip pointed in outline (obconical apically); full raceme (including the portion with dropped fruits) to 6 cm long ..... ***P. hookeri***
      - 11 Racemes densely flowered, with ca. 20 flowers per cm of length; raceme 7–20 mm in diameter, the tip rounded to truncate in outline; full raceme (including the portion with dropped fruits) to 4.5 cm long.
        - 12 Bracts of the inflorescence ca. 1 mm long; wings 1.5-2.5 mm wide, acute or short-mucronate at the tip; raceme peduncle (0.8-) 3-5 cm long..... ***P. brevifolia***
        - 12 Bracts of the inflorescence 1.5-3 mm long; wings 3-4 mm wide, acuminate, the tips cuspidate; raceme peduncle 0-0.8 (-4.0) cm long.
          - 13 Larger leaves (2-) 3-7 mm wide; raceme peduncles 0-0.5 cm long; racemes 7-15 mm in diameter..... ***P. cruciata*** *var.* ***aquilonia***
          - 13 Larger leaves 1.5-3 (-4) mm wide; raceme peduncles 0-4 cm long; racemes 12-20 mm in diameter..... ***P. cruciata*** *var.* ***cruciata***
  - 7 Leaves all alternate; **either** annual, from a slender taproot, the stems solitary, **or** biennial to perennial, from a taproot, the stems solitary to several, **or** perennial, from a thick rhizome, the stems several.
    - 14 Leaves glaucous, somewhat succulent, linear; corolla 7-10 mm long, > 2× as long as the wings; [subgenus *Polygala*]..... ***P. incarnata***
    - 14 Leaves green, herbaceous, usually broader than linear; corolla < 5 mm long, roughly equal to or shorter than the wings.
      - 15 Annual, the stems solitary; [subgenus *Polygala*].
        - 16 Corolla about 0.5× as long as the wings..... ***P. sanguinea***
        - 16 Corolla about 1× as long as the wings.
          - 17 Inflorescence bracts dropping from the axis promptly following flowering..... ***P. mariana***
          - 17 Inflorescence bracts persistent.
            - 18 Wings 3-5 mm long; pedicels 1.5-2.5 mm long; racemes 8-13 mm in diameter..... ..... ***P. curtissii***
            - 18 Wings 2-2.5 mm long; pedicels 0.5-1.5 mm long; racemes 5-6 mm in diameter..... ..... ***P. nuttallii***
      - 15 Perennial or biennial, usually several stems arising together from a rhizome or taproot.
        - 19 Wings white, 2-3 mm long; flowers sessile or subsessile; plants from a thick crown; [subgenus *Polygala*].
          - 20 Larger leaves mostly 15-35 mm wide; capsules 3.5-4.2 mm long; seeds 3.0-3.5 mm long..... ..... ***P. senega*** *var.* ***latifolia***
          - 20 Larger leaves mostly 2-15 mm wide; capsules 2.5-3.5 mm long; seeds ca. 2.5 mm long..... ..... ***P. senega*** *var.* ***senega***
        - 19 Wings pink, 4-7 mm long; flowers pedicelled; plants from a taproot.
          - 21 Corolla keel entire at the tip; wings 5-7 mm long, reniform-orbicular; plants lacking cleistogamous flowers; [subgenus *Hebeclada*]..... ***P. grandiflora*** *var.* ***grandiflora***
          - 21 Corolla keel fringed at the tip; wings 4-6 mm long, elliptic; plants producing cleistogamous flowers in loose subterranean or surficial racemes; [subgenus *Polygala*].
            - 22 Flowers mostly 1-4 mm apart; racemes elongating to 2-12 cm long; pedicels 0.5-2.0 mm long; [more northern in distribution] ..... ***P. polygama*** *var.* ***obtusata***
            - 22 Flowers mostly 4-6 mm apart; racemes elongating to 8-15 cm long; pedicels 1.5-3.5 mm long; [more southern in distribution] ..... ***P. polygama*** *var.* ***polygama***

Polygala ambigua Nuttall, Loose Milkwort. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): fields, woodlands, openings; uncommon. June-September. ME west to MI, south to GA, AL, and OK. Through most of its range ***P. ambigua*** has wings 1.3-1.7 mm long; plants from se. VA south to SC and from the Ozarks have wings 2.0-2.6 mm long. These plants have been named as a variety of *P. verticillata*, var. *dolichoptera* Fernald. They may warrant taxonomic recognition, but need additional study, including resolution of our Coastal Plain plants and those of the Ozarks. [= C, G, K, S; = ***P. verticillata*** Linnaeus var. ***ambigua*** (Nuttall) Wood – RAB; > ***P. verticillata*** var. ***ambigua*** – F; > ***P. verticillata*** var. ***dolichoptera*** Fernald – F; < ***P. verticillata*** – W]

Polygala balduinii Nuttall *var. **balduinii***, White Milkwort, Baldwin's Milkwort. Cp (GA): wet pine savannas; rare (GA Special Concern). E. GA south to s. FL, west to s. MS; e. TX; Cuba. Var. *carteri* (Small) R.R. Smith & D.B. Ward occurs in s. FL. [= GW, Z; < *Polygala balduinii* – K; = *Pilostaxis baldwinii* (Nuttall) Small – S, orthographic variant; = *Pylostachya balduinii* (Nuttall) Small]

Polygala brevifolia Nuttall, Shortleaf Milkwort, Little-leaf Milkwort. Cp (GA, NC, SC, VA): pine savannas, pocosin margins; rare (VA Rare). June-October. NJ south to FL, west to s. MS. [= RAB, C, F, G, GW, K, S]

Polygala cruciata Linnaeus *var. **aquilonia*** Fernald & Schubert, Northern Drumheads. Cp?, Mt (NC, SC, VA): damp or wet soil in openings; uncommon. June-October. ME west to MN, south to e. VA, w. NC, n. AL, and TN. [= F, K; < ***P. cruciata*** – RAB, C, G, GW, S, W]

Polygala cruciata Linnaeus *var. **cruciata***, Southern Drumheads. Cp (GA, NC, SC, VA): pine savannas, bogs, pocosins; common. June-October. Se. VA south to FL, west to TX, inland north to KY. [= F, K; < ***P. cruciata*** – RAB, C, G, GW, W; > ***P. ramosior*** (Nash) Small – S]

Polygala curtissii A. Gray, Appalachian Milkwort. Mt, Pd, Cp (GA, NC, SC, VA): old fields, thickets, openings; common. June-October. DE and se. PA (Rhoads & Klein 1993) west to OH, south to SC, GA, and MS. [= RAB, C, F, G, K, S, W]

Polygala cymosa Walter, Tall Pinebarren Milkwort. Cp (GA, NC, SC): pond-cypress savannas, Coastal Plain depression ponds, clay-based Carolina bays, other sites with seasonally flooded hydrology; common. May-July. E. NC south to s. peninsular FL, west to s. MS; disjunct in s. DE. [= RAB, C, F, G, GW, K, Z; = *Pilostaxis cymosa* (Walter) Small – S; = *Pylostachya cymosa* (Walter) Small]

Polygala grandiflora Walter *var. **grandiflora***, Showy Milkwort. Cp (GA, NC, SC): sandhills, dry sandy soils of roadsides and fields; uncommon (NC Rare). May-July. S. NC south to FL, west to s. MS. [= K; < ***P. grandiflora*** – RAB; *Asemeia grandiflora* (Walter) Small – S]

Polygala hookeri Torrey & A. Gray, Hooker's Milkwort. Cp (NC, SC): pine savannas; rare (NC Rare). June-August. Sw. GA and adjacent panhandle FL, west to s. MS; disjunct in se. NC and ne. SC. [= RAB, GW, K, S]

Polygala incarnata Linnaeus, Pink Milkwort, Procession Flower. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, VA): pine savannas, woodlands, fields; common (rare in Mountains). June-July. NY (Long Island) and se. PA (Rhoads & Klein 1993) west to MI, WI, and IA, south to FL and TX. [= RAB, C, F, G, GW, K, W; = *Galypola incarnata* (Linnaeus) Nieuwland – S]

Polygala lutea Linnaeus, Orange Milkwort, Red-hot-poker. Cp (GA, NC, SC, VA), Pd (NC): wet savannas, ditches, bogs, other wet areas; common (rare in Piedmont). April-October. NY (Long Island), se. PA (Rhoads & Klein 1993), and NJ south to s. peninsular FL, west to e. LA. [= RAB, C, F, G, GW, K, Z; = *Pilostaxis lutea* (Linnaeus) Small – S; = *Pylostachya lutea* (Linnaeus) Small]

Polygala mariana P. Miller, Maryland Milkwort. Cp (GA, NC, SC, VA), Pd (VA): bogs, pine savannas, other open wet habitats; common (rare in Piedmont). June-October. S. NJ south to FL, west to TX; disjunct inland in sw. TN (Chester, Wofford, & Kral 1997). [= RAB, C, G, GW, K; > ***P. mariana*** – F, S; > ***P. harperi*** Small – F, S]

Polygala nana (Michaux) Augustin de Candolle, Dwarf Milkwort, Candyroot. Cp, Pd (GA, SC), Mt (GA, NC): longleaf pine flatwoods, other open moist areas; rare (NC Watch List, SC Rare). E. GA south to s. peninsular FL, west to e. TX, with scattered populations inland to n. SC, w. NC, nw. GA, n. AL, c. TN (Chester, Wofford, & Kral 1997), and ne. MS. This species is primarily a Coastal plain species of the deeper south; ***P. nana*** may be introduced in parts of our area. [= RAB, GW, K, Z; = *Pilostaxis nana* (Michaux) Rafinesque – S; = *Pylostachya nana* (Michaux) Rafinesque]

Polygala nuttallii Torrey & A. Gray, Nuttall's Milkwort. Cp (GA, NC, SC, VA), Pd (GA, NC), Mt (VA): pocosins, pine savannas, also in depression ponds (in Augusta and Rockingham counties, VA); uncommon (rare in Mountains). June-August. MA south to e. FL Panhandle; disjunct inland in w. VA, c. TN (Chester, Wofford, & Kral 1997), sc. KY, and allegedly c. AR. [= RAB, C, F, G, K, S, W]

Polygala paucifolia Willdenow, Gaywings, Fringed Polygala, Flowering Wintergreen, Bird-on-the-wing. Mt (GA, NC, SC, VA), Pd (GA): moist forests at moderate to high elevations; common (SC Rare). April-June; June-September. New Brunswick and Québec west to Saskatchewan, south to CT, NY, WI, and in the Appalachians south to w. NC, nw. SC, n. GA, and e. TN. [= RAB, C, F, G, K, W; = *Triclisperma paucifolia* (Willdenow) Nieuwland – S]

Polygala polygama Walter *var. **obtusata*** Chodat, Northern Bitter Milkwort. Mt, Pd (VA): woodlands and woodland borders; uncommon. May-July; June-July. ME west to MI and MN, south to NJ, w. VA, OH, c. IN, c. IL, and IA. [= C, F, G; < ***P. polygama*** – RAB, K, S, W]

Polygala polygama Walter *var. **polygama***, Southern Bitter Milkwort, Racemed Milkwort. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): sandhills, woodlands, woodland borders; common. May-July; June-July. Se. VA, sw. NC, and AR, south to FL and TX. [= C, F, G; < ***P. polygama*** – RAB, K, S, W]

Polygala ramosa Elliott, Short Pinebarren Milkwort, Low Pinebarren Milkwort. Cp (GA, NC, SC, VA), Mt (NC): wet savannas, pocosin margins, bogs; common (VA Rare). June-September. S. NJ south to s. peninsular FL, west to e. TX; disjunct inland (as in Henderson County, NC). [= RAB, C, F, G, GW, K, Z; = *Pilostaxis ramosa* (Elliott) Small – S; = *Pylostachya ramosa* (Elliott) Small]

Polygala sanguinea Linnaeus, Blood Milkwort, Field Milkwort. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (GA?, NC, VA): woodlands, openings, woodland borders; uncommon. June-August. Nova Scotia and MN, south to nw. SC, n. GA, and LA. [= RAB, C, F, G, GW, K, W; *? P. viridescens* Linnaeus – S]

Polygala senega Linnaeus *var.* ***latifolia*** Torrey & A. Gray, Seneca Snakeroot. {Mt (GA, NC, SC, VA), Pd (NC, SC, VA): woodlands and openings, especially over calcareous or mafic rocks; uncommon (NC Watch List)}. May-June. DE, PA, and MN, south to NC, TN, and MO. Trauth-Nare & Naczi (1998) studied the two varieties of ***P. senega*** and concluded that the taxa should be recognized at the specific level. The relative distributions, habitats, and phenology of the two taxa need assessment for our area. [= F, G; < *P. senega* – RAB, C, K, S, W]

Polygala senega Linnaeus *var.* ***senega***, Seneca Snakeroot. {Mt (GA, NC, SC, VA), Pd (NC, SC, VA): woodlands and openings, especially over calcareous or mafic rocks; uncommon (NC Watch List)}. April-May. Québec west to Alberta, south to n. GA, TN, AR, and SD. The relative distributions, habitats, and phenology of the two taxa need assessment for our area. [= F, G; < *P. senega* – RAB, C, K, S, W]

Polygala verticillata Linnaeus *var.* ***isocycla*** Fernald, Whorled Milkwort. {Mt, Pd, Cp (NC, SC, VA): dry woodlands, woodland borders, openings, fields; uncommon. June-September. The validity and relative distributions, habitats, phenology of the two varieties need additional assessment in the herbarium and the field.} VT west to Manitoba, south to FL and TX. [= C, F, G, K; < *P. verticillata* var. *verticillata* – RAB; = *P. verticillata* – S, apparently misapplied; < *P. verticillata* – W]

Polygala verticillata Linnaeus *var.* ***verticillata***, Whorled Milkwort. {Mt, Pd, Cp (NC, SC, VA): dry woodlands, woodland borders, openings, fields; uncommon. June-September. The validity and relative distributions, habitats, phenology of the two varieties need additional assessment in the herbarium and the field.} ME west to MI, south to w. VA, w. NC, and TN. [= C, F, G, K; < *P. verticillata* var. *verticillata* – RAB; = *P. pretzii* Pennell – S; < *P. verticillata* – W]

Polygala boykinii Nuttall *var.* ***boykinii***, Boykin's Milkwort. Cp (GA): In sc. TN (Chester, Wofford, & Kral 1997) and sw. GA (Jones & Coile 1988). Var. *sparsiflora* Wheelock occurs in s. FL. [= K; = *P. boykinii* – S] {not keyed at this time; synonymy incomplete}

Polygala chapmanii Torrey & A. Gray. Cp (GA): pine savannas, seepage bogs. Panhandle FL and sw. GA west to s. MS. [= GW, K, S] {not keyed at this time; synonymy incomplete}

Polygala crenata C.W. James. FL Panhandle and AL west to TX; reported for GA (Sorrie, pers. comm.). [= K] {not keyed at this time; synonymy incomplete}

Polygala leptostachys Shuttleworth ex A. Gray, Georgia Milkwort. Cp (GA): sandhills; rare (GA Special Concern). In sw. GA (Jones & Coile 1988). In s. MS (Sorrie & Leonard 1999). [= K, S] {not keyed at this time; synonymy incomplete}

Polygala setacea Michaux, Coastal Plain Milkwort. Cp (GA): widespread in the outer Coastal Plain of GA (Jones & Coile 1988), and also reported by Small (1933) as occurring north to NC. [= GW, K, S] {not keyed at this time; synonymy incomplete}

POLYGONACEAE A.L. de Jussieu 1789 (Smartweed Family)

A family of about 43-48 genera and 1100-1200 species, trees, shrubs, vines, and herbs, cosmopolitan, but especially north temperate. Recent changes in the circumscription of various genera (including *Polygonum, Persicaria, Fallopia*, etc.) have received strong support from molecular phylogenetic studies (Lamb Frye & Kron 2003). References: Freeman & Reveal in FNA (2005); Horton (1972)=Z; Mitchell & Dean (1978)=Y; Ronse Decraene & Akeroyd (1988); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993); Lamb Frye & Kron (2003).

1 Woody vine, climbing by tendrils; [subfamily *Polygonoideae*, tribe *Coccolobeae*] ..... ***Brunnichia***
1 Herb (sometimes very robust and rather woody), herbaceous vine, or (*Fallopia baldschuanica*) a somewhat woody vine lacking tendrils.
  2 Stem leaves (in our species) whorled; flowers in involucrate heads; ocreae absent; stamens 9; leaves densely white-tomentose on the lower surface; [of xeric situations of shale barrens and sandhills]; [subfamily *Eriogonoideae*, tribe *Eriogoneae*] ..... ***Eriogonum***
  2 Stem leaves alternate; flowers in various inflorescences (not involucrate); ocreae present; stamens (3-) 5-8 (-9); leaves glabrous or variously pubescent, but not densely white-tomentose; [of various habitats, including xeric ones]; [subfamily *Polygonoideae*].
    3 Tepals 6, in 2 series of 3 each; plants with leaves basally disposed, the largest basal (these withering in some species later in the season); [tribe *Rumiceae*].
      4 Fruit 3-winged; basal leaves very large, 20-40 cm wide; inner and outer tepals similar; [plant cultivated, rarely persistent or escaped] ..... ***Rheum***
      4 Fruit 3-angled; basal leaves small to medium in size, 0.5-15 cm wide; inner tepals wider than the outer tepals; [plants common, mostly weedy] ..... ***Rumex***
    3 Tepals mostly 5 in a single whorl; plants with leaves along the stem, lacking well-developed basal leaves.
      5 Flowers in small clusters or very reduced racemes of 1-5 flowers, borne in the axils of normally sized or reduced leaves; plants erect or sprawling herbs with stems < 1 m long, from taproots; leaves jointed at base; [tribe *Polygoneae*] ..... ***Polygonum***
      5 Flowers in diffuse axillary panicles, or in terminal or long-peduncled axillary racemes, corymbs, or heads; plants various, either erect or sprawling herbs, or erect, robust, and suffrutescent herbs, or climbing

herbaceous or suffrutescent vines, or suffrutescent bushy herbs; leaves not jointed at base (except *Polygonella*).

6 Leaves cuneate at the base, either linear, spatular, or oblanceolate, mostly < 4 cm long and < 5 mm wide; pedicels jointed at the base; [tribe *Polygoneae*] ..... ***Polygonella***

6 Leaves cuneate, cordate, or hastate at the base, either lanceolate or ovate, mostly > 5 cm long and > 8 mm wide; pedicels not jointed at the base.

7 Inflorescence corymbiform, terminal; achenes strongly exserted at maturity; tepals almost free, horizontally spreading, white, 3-4 mm long; [erect annual, uncommonly cultivated and rarely persistent or escaped]; [tribe *Persicarieae*] ..... ***Fagopyrum***

7 Inflorescence paniculate, racemiform, or headlike, terminal and axillary; achenes enclosed in the perianth at maturity; tepals fused for much of their length, ascending, pink, green, or white.

8 Outer tepals neither keeled nor winged at maturity; inflorescence of spikelike racemes, heads, or sparse, interrupted racemes; [tribe *Persicarieae*] ..... ***Persicaria***

8 Outer tepals keeled or winged at maturity; inflorescence a compound panicle of racemes; [tribe *Polygoneae*].

9 Plants climbing or sprawling, herbaceous to somewhat woody, the stems slender; perianth usually not enlarging in fruit; stigma capitate or peltate ..... ***Fallopia***

9 Plants erect, robust (1-4 m tall), woody, the stems generally over 1 cm in diameter, hollow; perianth enlarging in fruit; stigma fimbriate ..... ***Reynoutria***

Antigonon Endlicher 1837 (Love-chain, Coralvine)

A genus of about 6 species, vines, of tropical America. References: Freeman in FNA (2005).

* ***Antigonon leptopus*** Hooker & Arnott, Love-chain, Queen's-jewels, Confederate-vine. Cp (GA, SC): cultivated and persisting; commonly cultivated, rarely persisting or escaping, native of tropical America. [= FNA, K] {not keyed at this time}

Brunnichia Banks ex Gaertner 1788 (Buckwheat-vine)

A genus of 3-4 species, vines, of. e. North America and w. Africa. References: Holmes in FNA (2005); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

Brunnichia ovata (Walter) Shinners, Buckwheat-vine, Eardrop-vine, Ladies'-eardrops, Redvine. Cp (GA, SC, VA*): floodplain forests, swamp forests; rare. June-July; August-September. Ne. SC south to n. FL, west to e. TX, and north in the interior to w. TN, w. KY, s. IL, and se. MO. Introduced in se. VA. [= FNA, GW, K; = *B. cirrhosa* Gaertner – RAB, C, F, G, S]

Eriogonum Michaux 1803 (Wild-buckwheat)

A genus of about 250 species, herbs and shrubs, of w. North America (a few in se. North America). Like *Astragalus*, it is represented in e. North America by a few species restricted to unusually dry habitats. References: Reveal in FNA (2005); Reveal (1989, 2004)=Z; Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

1 Basal leaves absent; cauline leaves alternate; [of limestone glades and barrens of KY, TN, and n. AL]; [subgenus *Eriogonum*] ..... ***[E. harperi]***

1 Basal leaves well-developed; cauline leaves whorled; [of other habitats and areas (see below)].

2 Tepals bright yellow; plants 3-5 dm tall; [of shale barrens of VA and WV]; [subgenus *Oligogonum*] ..... ***E. allenii***

2 Tepals white to pink; plants 4-12 dm tall; [of sandhills of s. NC (at least formerly), SC, and southward]; [subgenus *Eriogonum*] ..... ***E. tomentosum***

Eriogonum allenii S. Watson, Shale-barren Wild-buckwheat. Mt (VA): open and sunny situations in shale barrens (and rarely sandstone); rare (VA Watch List). July-August. Endemic to shale barrens of w. VA and e. WV. [= C, FNA, K, W, Z; = *E. alleni* – F, G, orthographic variant]

Eriogonum tomentosum Michaux, Sandhill Wild-buckwheat, Southern Wild-buckwheat, Dog-tongue. Cp (GA, NC, SC): sandhills, usually in white sand, primarily in the fall-line Sandhills and on riverine dunes in the middle and upper Coastal Plain; uncommon (NC Rare). Late July-September; September-November. S. NC (at least formerly) south to FL, west to s. AL. There seems no reason to doubt the label data of an 1890's Biltmore Herbarium collection from Bladen County, NC (Pittillo, Horton, & Herman 1972), as *E. tomentosum* is fairly common not far away in SC; the species has apparently not been seen in NC since. [= RAB, FNA, K, S, Z]

Eriogonum harperi Goodman, Harper's Wild-buckwheat. Limestone glades and barrens of sc. KY, nc. TN, and n. AL; rare. [*E. longifolium* Nuttall var. *harperi* (Goodman) Reveal – C, FNA, K, Z]

Fagopyrum P. Miller 1754 (Buckwheat)

A genus of about 8-16 species, perennial and annual herbs, of e. Asia and Africa. References: Hinds & Freeman in FNA (2005); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

* ***Fagopyrum esculentum*** Moench, Buckwheat. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): fields, disturbed areas, railroad rights-of-way, escaped from cultivation; rare, introduced from Eurasia. June-November. The latin and common name refer to the similarity of the seeds to beechnuts. [= RAB, C, FNA, G, K, W; = *F. sagittatum* Gilibert – F]

* *Fagopyrum tataricum* (Linnaeus) Gaertner, Tartary Buckwheat. Introduced at scattered locations in n. North America, south to WV (FNA). [= FNA, K] {not keyed at this time; add to synonymy}

Fallopia Adanson 1763 (Climbing Buckwheat)
(also see *Reynoutria*)

A genus of about 9-10 species, woody and herbaceous vines, of temperate regions of the Northern Hemisphere. If accepted (as here) as a genus distinct from *Polygonum*, this group takes the name *Fallopia* Adanson (1763), which has priority over *Tiniaria* (1832) and *Bilderdykia* (1827). *Reynoutria* is sometimes included. References: Ronse Decraene & Akeroyd (1988)=X; Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

1 Plant woody; inflorescences freely branched, strongly paniculate; [sometimes cultivated, apparently naturalizing] ..... ***F. baldschuanica***
1 Plant herbaceous; inflorescences less-branched, usually a reduced panicle with only a few racemose branches; [collectively common and in various natural and disturbed habitats].
  2 Ocreae reflexed bristly at the base; perianth white; achene glossy black; [of high elevation openings and woodlands] .... ***F. cilinodis***
  2 Ocreae smooth; perianth greenish to yellowish; achene glossy or dull black; [mostly of lower elevations].
    3 Achene dull black; outer sepals keeled, not expanding into obvious wings in fruit, the fruit therefore 3.5-4.5 mm long (measured from the pedicel joint to the tip); [weedy annual] ..... ***F. convolvulus*** *var.* ***convolvulus***
    3 Achene glossy black; outer sepals expanding into obvious wings in fruit, the fruit therefore 7-15 mm long (measured from the pedicel joint to the tip); [native perennial].
      4 Perianth 7-10 mm long at maturity (measured from the pedicel joint to the tip); achenes 2-3.5 mm long ..... ***F. scandens*** *var.* ***1***
      4 Perianth 10-15 mm long at maturity (measured from the pedicel joint to the tip); achenes 3.5-6 mm long ..... ***F. scandens*** *var.* ***scandens***

* ***Fallopia baldschuanica*** (Regel) Holub, Silver-lace-vine, China Fleece-vine. Cp, Pd (SC, VA), Mt (NC): disturbed areas, roadsides; rare, introduced from Asia. [= FNA; > *Fallopia aubertii* (Henry) Holub – X; > *Polygonum aubertii* Henry – C, F, K]

Fallopia cilinodis (Michaux) Holub, Fringed Climbing Buckwheat, Fringed Black Bindweed. Mt (GA, NC, VA): around rock outcrops, in openings, glades, and open woodlands at high elevations; uncommon (VA Watch List). June-September. [= FNA; = *Polygonum cilinode* Michaux – RAB, C, K, W, Y, Z; > *Polygonum cilinode* var. *cilinode* – F; > *Polygonum cilinode* var. *laevigatum* Fernald – F; = *Bilderdykia cilinodis* (Michaux) Greene – S; = *Tiniaria cilinodis* (Michaux) Small]

* ***Fallopia convolvulus*** (Linnaeus) Á. Löve, Bindweed, Climbing Buckwheat, Black Bindweed, Nimble-will. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas; common, introduced from Eurasia. May-September. Norton – F]

* ***Persicaria perfoliata*** (Linnaeus) H. Gross, Mile-a-minute-vine, Asiatic Tearthumb, Devil's-tail Tearthumb. Pd (VA): roadsides, banks, powerline rights-of-way; introduced and spreading rapidly in n. VA, MD, PA, DC, and WV. Adler (1999) reports it as occurring in PA, MD, VA, WV, DE, OH, NJ, and DC. [= FNA; = *Polygonum perfoliatum* Linnaeus – C, F, K, X; = *Ampelygonum perfoliatum* (Linnaeus) Roberty & Vautier]

Persicaria punctata (Elliott) Small, Dotted Smartweed. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, bottomlands, marshes; common. July-November. [= FNA; > *Persicaria punctata* (Elliott) Small var. *punctata* – S; = *Polygonum punctatum* – RAB, GW, W; > *Polygonum punctatum* Elliott var. *punctatum* – C, F, G, K, Y; > *Persicaria punctata* (Elliott) Small var. *leptostachya* (Meisner) Small – S; > *Polygonum punctatum* Elliott var. *leptostachyum* (Meisner) Small – F; > *Polygonum punctatum* var. *parvum* Marie-Victorin & Rousseau – F; > *Polygonum punctatum* Elliott var. *confertiflorum* (Meisner) Fassett – C, G, K, Y; < *Polygonum punctatum* – Z (also see *Persicaria robustior*)]

Persicaria robustior (Small) E.P. Bicknell, Water Smartweed. (VA). [= FNA; *Polygonum robustius* (Small) Fernald – C, F, G, K, Y; < *Polygonum punctatum* – Z]

Persicaria sagittata (L.) Gross ex Nakai, Arrowleaf Tearthumb, Arrowvine, Scratch-grass. Cp, Pd, Mt (GA, NC, SC, VA): marshes, bogs, beaver impondments, wet thickets; common. May-December. Newfoundland west to Manitoba, south to Panhandle FL and e. TX; China, Manchuria, India, Siberia, Korea, and Japan. [= FNA; = *Polygonum sagittatum* Linnaeus – RAB, C, G, GW, K, W, Y, Z; > *Polygonum sagittatum* var. *gracilentum* Fernald – F; > *Polygonum sagittatum* var. *sagittatum* – F; = *Tracaulon sagittatum* (Linnaeus) Small – S; = *Truellum sagittatum* (Linnaeus) Soják]

Persicaria setacea (Baldwin) Small, Swamp Smartweed. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, bottomland forests; common (rare in Piedmont). July-November. [= FNA, S; = *Polygonum setaceum* Baldwin – RAB, GW, W, Y, Z; > *Polygonum setaceum* var. *interjectum* Fernald – F, K; > *Polygonum setaceum* var. *tonsum* Fernald – F, K; > *Polygonum setaceum* var. *setaceum* – F, K; = *Polygonum hydropiperoides* Michaux var. *setaceum* (Baldwin) Gleason – C, G]

Persicaria virginiana (Linnaeus) Gaertner, Jumpseed. Mt, Pd, Cp (GA, NC, SC, VA): floodplains, moist forests; common. Section *Tovara* consists of 3 species of e. North America and e. Asia; if recognized as genus, the correct name for this species is *Antenoron virginianum*. [= FNA; = *Tovara virginiana* (Linnaeus) Rafinesque – RAB, S; > *Tovara virginiana* var. *glaberrima* Fernald – F; > *Tovara virginiana* var. *virginiana* – F; = *Polygonum virginianum* Linnaeus – C, GW, K, W, Y; > *Polygonum virginianum* var. *virginianum* – G; > *Polygonum virginianum* var. *glaberrimum* (Fernald) Steyermark – G; = *Antenoron virginianum* (Linnaeus) Roberty & Vautier – Z]

* *Persicaria chinensis* (Linnaeus) H. Gross, Chinese Knotweed. Introduced in MD and NJ; native of Asia. [= FNA; *Polygonum chinense* Linnaeus – K] {not keyed at this time; add to synonymy}

Polygonella Michaux 1803 (Jointweed)

A genus of about 9 species, annual, perennial, and suffruticose herbs, of warm temperate e. North America. Ronse De Craene, Hong, & Smets (2004) suggest that *Polygonella* should be merged into *Polygonum*, as section *Duravia*, subsection *Polygonella*. References: Freeman in FNA (2005); Nesom & Bates (1984)=Z; Wunderlin (1981)=Y; Horton (1961)=X; Ronse De Craene, Hong, & Smets (2004); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

1 Ocreae ciliate; inner perianth segments fimbriate; [subgenus *Thysanella*] .....***P. fimbriata***
1 Ocreae not ciliate; inner perianth segments not fimbriate; [subgenus *Polygonella*].
  2 Style and stigma (0.4-) 0.5-0.8 (-1.0) mm long at anthesis; inner sepals (1.7-) 1.9-2.5 (-2.9) mm long in flower, (3.1-) 3.3-4.7 (-6.0) mm long in fruit; perennial; leaves very numerous, (4.0-) 5.2-12.0 (-19.0) mm long, 0.5-0.9 (-1.2) mm wide, nearly as thick as wide.....***P. americana***
  2 Style and stigma 0-0.1 (-0.2) mm long at anthesis; inner sepals (0.6-) 0.7-1.8 (-2.3) mm long at anthesis, (1.6-) 1.7-2.8 (-3.6) mm in fruit; annual or perennial; leaves (2.5-) 4.4-39.0 (-65.0) mm long, (0.3-) 0.6-5.0 (-8.0) mm wide, wider than thick.

3 Annual, simple to much-branched from above the base; leaves lacking hyaline margins, mostly deciduous before fruiting; ocreae obtuse; achenes 1.0-1.4 mm wide.
4 Leaves (0.4-) 0.6-1.0 (-1.2) mm wide; flowers exserted from the ocreolae on pedicels (0.9-) 1.3-1.7 (-2.1) mm long at anthesis; [of the outer Coastal Plain of ne. NC and e.VA northward] ..... ***P. articulata***
4 Leaves (0.8-) 1.0-5.0 (-8.0) mm wide; flowers barely exserted from the ocreolae on pedicels ca. 0.1 mm long at anthesis; [of the outer Coastal Plain of se. SC southward] ..... ***P. gracilis***
3 Perennial, much-branched from near the distinctly woody base; leaves with hyaline margins toward the tip, persistent through fruiting; ocreae obtuse, acute, acuminate, or aristate; achenes (0.7-) 0.8-1.0 (-1.2) mm wide.
5 Tips of the ocreae and ocreolae long-acuminate, (0.7-) 1.0-1.5 mm long; leaves mostly oblanceolate, 4-13 mm long, 0.5-1.2 (-2.1) mm wide ..... ***P. polygama*** *var.* ***croomii***
5 Tips of the ocreae and ocreolae obtuse to acute, 0-0.5 mm long; leaves mostly spatulate, 7-30 mm long, 1.9-6.0 mm wide..... ***P. polygama*** *var.* ***polygama***

Polygonella americana (Fischer & Meyer) Small. Cp (GA, NC, SC), Pd (GA): sandhills, other dry habitats; uncommon (NC Watch List). June-September; August-November. Sc. NC south to s. GA west to TX and NM, north in the interior to ec. TN (Chester, Wofford, & Kral 1997), se. MO, and AR, perhaps adventive toward the northern part of the range. [= RAB, F, FNA, G, K, S, X]

Polygonella articulata (Linnaeus) Meisner, Northern Wireweed. Cp (GA?, NC, VA): sandhills, dunes, and other dry, sandy habitats; rare (NC Rare, VA Watch List). September-October; October-November. ME and s. Québec west to MN, south on the Coastal Plain to VA and ne. NC, otherwise south to se. PA, NY, s. Ontario, MI, n. IN, n. IL, and e. IA. *P. articulata* is the only northern member of an otherwise southern and predominantly Coastal Plain genus. Cited for GA in Jones & Coile (1988); the record seems curious. [= RAB, C, F, FNA, G, K, X; = *Delopyrum articulatum* (Linnaeus) Small – S; **= *Polygonum articulatum*** Linnaeus]

Polygonella fimbriata (Elliott) Horton, Sandhill Jointweed. Cp (GA): sandhills; uncommon. E. GA (not far from SC) south to panhandle FL. It differs from all our other species in having the inner sepals fimbriate. The related *P. robusta* (Small) Nesom & Bates of FL has sometimes been treated as a variety of *P. fimbriata*. [= FNA, K; = *Thysanella fimbriata* (Elliott) A. Gray – S; = *Polygonella fimbriata* var. *fimbriata* – X; **= *Polygonum fimbriatum*** Elliott]

Polygonella gracilis (Nuttall) Meisner, Wireweed. Cp (GA, NC, SC): sandhills; uncommon (NC Watch List). Late August-October; October-November. Sc. NC south to s. FL, west to s. MS, perhaps adventive toward the northern part of the range. [= RAB, FNA, K, X; = *Delopyrum gracile* (Nuttall) Small – S; **= *Polygonum gracile*** Nuttall]

Polygonella polygama (Ventenat) Engelmann & A. Gray *var.* ***croomii*** (Chapman) Fernald, Carolina October-flower. Cp (GA, NC, SC, VA): sandhills, primarily in the fall-line Sandhills and middle Coastal Plain; uncommon. August-October; October-November. Var. *croomii* ranges from se. and sc. NC south to SC and GA. Var. *croomii* occurs mainly in the fall-line Sandhills, scattered as well in the middle Coastal Plain (Robeson and Bladen counties, NC, Dillon and Darlington counties, SC) and rarely the outer Coastal Plain (New Hanover County, NC). In addition to our 2 varieties, var. *brachystachya* (Meisner) Wunderlin is endemic to peninsular FL; it resembles var. *croomii* in its narrow leaves, but has the ocrea and ocreola tips short and acute (more like var. *polygama*). I agree with Nesom & Bates (1984) that "intermediates occur ... that will have to be arbitrarily identified, but without recognition of the varieties an interesting pattern of variation is obscured." It may even prove that the taxa are valid biological species, and that confusion is only caused by herbarium identifications. [= FNA, Y, Z; < *P. polygama* – RAB, K, X, infraspecific taxa not distinguished; = *P. croomii* Chapman – S]

Polygonella polygama (Ventenat) Engelmann & A. Gray *var.* ***polygama***, Common October-flower. Cp (NC, SC, VA?): sandhills, primarily in the outer Coastal Plain north of SC; common (VA Rare). August-October; October-November. Var. *polygama* ranges from se. VA (?) south to s. FL, west to se. TX (perhaps absent in GA). In our area, var. *polygama* occurs in the outer Coastal Plain of VA and NC, extending into the middle Coastal Plain and fall-line Sandhills in SC (Richland, Lexington, and Aiken counties, SC). [= FNA, Y, Z; < *P. polygama* – RAB, C, F, G, K, X, infraspecific taxa not distinguished; = *P. polygama* – S; **= *Polygonum polygamum*** Ventenat]

Polygonella macrophylla Small. Sand pine scrub, coastal dunes. S. AL and Panhandle FL. [= FNA, K, S] {not keyed at this time; add to synonymy}

Polygonum Linnaeus 1753 (Knotweed)

(also see *Fallopia, Persicaria, Reynoutria*)

A genus of about 20 species, herbs, of temperate regions of the Northern Hemisphere. References: Costea, Tardif, & Hinds in FNA (2005); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993); Costea & Tardif (2003a)=X.

* ***Polygonum argyrocoleon*** Steudel ex Kunze. Cp (NC): disturbed areas; rare, introduced from western North America. May-August? Reported for NC by Burk (1961). [= RAB, K, Z]

* ***Polygonum aviculare*** Linnaeus *ssp.* ***aviculare***, Knotweed. Mt, Pd, Cp (NC, SC, VA), {GA}: disturbed areas; common. March-November. [= FNA, X; *P. aviculare* – RAB, C, K, S, W, Y; *Polygonum aviculare* var. *aviculare* – F, in part; *P. aviculare* var. *vegetum* Ledebour – F; *P. monspeliense* Persoon; < *P. aviculare* – G, Z, in the broad sense]

Polygonum aviculare Linnaeus *ssp.* ***buxiforme*** (Small) Costea & Tardif, Small's Knotweed. (SC, VA). [= FNA, X; = *Polygonum buxiforme* Small – C, K, S, Y; *P. aviculare* Linnaeus var. *littorale* (Link) Mertens – F; < *P. aviculare* – G, in part; *P. littorale* Link]

* ***Polygonum aviculare*** Linnaeus *ssp.* ***neglectum*** (Besser) Arcangeli, Needle-leaf Knotweed. Cp (VA): fields, disturbed areas; rare, introduced. Also documented from scattered locations in s. PA (Rhoads & Klein 1993); DE, NJ, and MD (Kartesz 1999); and WV (as *P. aviculare* ssp. *rurivagum*) (Costea & Tardif 2003). [= FNA; *P. bellardii* Allioni – K; *Polygonum aviculare* var. *aviculare* – F, in part; < *P. aviculare* – G, in part; *Polygonum aviculare* Linnaeus var. *rurivagum* (Jord. ex Boreau) Berher; *Polygonum aviculare* Linnaeus var. *angustissimum* Meisner]

Polygonum erectum Linnaeus, Erect Knotweed. Mt, Pd (NC, SC, VA), Cp (VA), {GA}: disturbed areas, open places; rare (NC Watch List). June-October; July-October. [= RAB, C, F, FNA, K, S, W, Y, Z]

Polygonum glaucum Nuttall, Seabeach Knotweed. Cp (GA, NC, SC, VA): ocean beaches, sound-side sandy shores, dune bases; rare (GA Special Concern, NC Rare, VA Rare). May-October; June-November. [= RAB, C, F, FNA, K, S, Y, Z]

Polygonum ramosissimum Michaux *var.* ***prolificum*** Small, Longfruit Knotweed, Bushy Knotweed, Prolific Knotweed. Cp (NC?, VA): {habitat}; rare (VA Watch List). Also reported for NC (Kartesz 1999). [= K, Y; = *P. prolificum* (Small) B.L.Robinson – C, G; > *P. prolificum* – F; > *P. exsertum* Small – F; < *P. ramosissimum* – Z; = *P. ramosissimum* ssp. *prolificum* (Small) Costea & Tardif – FNA, X]

Polygonum ramosissimum Michaux *var.* ***ramosissimum*** is reported for SC (Kartesz 1999). {investigate} [= K, Y; = *P. ramosissimum* Michaux ssp. *ramosissimum* – FNA, X; = *P. ramosissimum* – C, F, G] {not keyed at this time; synonymy incomplete}

Polygonum tenue Michaux, Glade Knotweed, Slender Knotweed. Pd (GA, NC, SC, VA), Mt (GA, NC, VA), Cp (VA): glades, barrens, and thin, rocky soils, over various rock types (including granite, diabase, amphibolite, greenstone, and metagabbro); uncommon, rare in NC (NC Watch List). July-September; August-October. [= RAB, C, FNA, S, W, Y, Z; > *Polygonum tenue* var. *protrusum* Fernald – F, K; > *Polygonum tenue* var. *tenue* – F, K]

Polygonum achoreum Blake, south to WV (Kartesz 1999). [= C, F, FNA, G, K] {not keyed at this time}

Reynoutria Houttuyn 1777

A genus of about 15 species, perennial herbs, of temperate e. Asia. Ronse Decraene & Akeroyd (1988) treat this group as *Fallopia* section *Reynoutria* (Houttuyn) Ronse Decraene. This treatment may prove to be better than the recognition of *Reynoutria* as a genus; either course is compatible with molecular phylogeny (Lamb Frye & Kron 2003). References: Freeman & Hinds in FNA (2005); Ronse Decraene & Akeroyd (1988)=X; Brandbyge in Kubitzki, Rohwer, & Bittrich (1993); Zika & Jacobson (2003). Key based on Zika & Jacobson (2003).

1 Veins of leaf underside with multicellular hairs (as seen at 20× magnification; mid-stem leaves with deeply cordate bases; inflorescence much shorter than the subtending mid-branch leaf ..... ***R. sachalinensis***

1 Veins of leaf underside with simple hairs, or merely minutely bumpy-scabrous; mid-stem leaves with truncate to slightly cordate or very broadly V-shaped bases; inflorescence shorter or longer than the subtending mid-stem leaf.

  2 Veins of leaf underside with scattered simple, stout-based hairs; mid-branch leaf bases usually slightly cordate; well-developed stem leaves usually > 20 cm long ..... ***R.* ×*bohemica***

  2 Veins of leaf underside minutely scabrous with scattered bumps; mid-branch leaves truncate (to very broadly V-shaped); well-developed stem leaves <18 cm long ..... ***R. japonica***

* ***Reynoutria* ×*bohemica*** J. Chrtek & A. Chrtková [***Reynoutria japonica*** × ***sachalinensis***], Bohemian Knotweed, Hybrid Japanese Knotweed. Mt (NC), Pd (VA): disturbed areas, sandbars; rare, introduced from e. Asia. [= *Polygonum* ×*bohemica* (J. Chrtek & A. Chrtková) P.F. Zika & A.L. Jacobson – Z; = ***Fallopia* ×*bohemica*** (J. Chrtek & A. Chrtková) J.P. Bailey – FNA]

* ***Reynoutria japonica*** Houttuyn, Japanese Knotweed, Japanese Bamboo, Japanese Buckwheat. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA); roadsides, disturbed areas, river banks and sandbars, often forming dense thickets; uncommon, introduced from e. Asia. May-September; August-October. [= *Polygonum cuspidatum* Siebold & Zuccarini – RAB, C, F, K, W, Y, Z; = ***Fallopia japonica*** (Houttuyn) Ronse Decraene *var.* ***japonica*** – FNA; = *Pleuropterus zuccarinii* Small – S; = *Fallopia japonica* (Houttuyn) Ronse Decraene – X]

* ***Reynoutria sachalinensis*** (F. Schmidt ex Maximowicz) Nakai, Giant Knotweed, Sachaline. Pd, Cp (VA), Mt (NC): disturbed areas, roadsides; rare, introduced from e. Asia. July-August; August-October. [= *Polygonum sachalinense* F. Schmidt ex Maximowicz – RAB, C, F, K, W, Y, Z; = ***Fallopia sachalinensis*** (F. Schmidt ex Maximowicz) Ronse Decraene – FNA, X]

Rheum Linnaeus 1753 (Rhubarb)

A genus of about 30-60 species, perennial herbs, of temperate and subtropical Asia and Europe. References: Freeman in FNA (2005); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

* ***Rheum rhabarbarum*** Linnaeus, Rhubarb, Pie-plant. Mt (NC, VA): uncommonly cultivated (primarily in gardens in the cooler portions of our area), rarely persistent or escaped; rare, introduced from Europe (though originally native of Asia). July-September. [= K; = *Rh. rhabarbicum* – C, misspelled; = *Rh. rhaponticum* – G, misapplied]

Rumex Linnaeus 1753 (Dock)

A genus of about 200 species, perennial and annual herbs (and a few shrubs), of cosmopolitan distribution. References: Mosyakin in FNA (2005); Brandbyge in Kubitzki, Rohwer, & Bittrich (1993).

subgenus *Acetosella*: acetosella
subgenus *Acetosa*: acetosa, hastatulus
subgenus *Rumex*: the rest

* ***Rumex acetosella*** Linnaeus, Red Dock, Sheep Sorrel, Sourgrass. Mt, Pd, Cp (GA, NC, SC, VA). [= RAB, C, FNA, G, GW, K, W; > *R. acetosella* var. *acetosella* – F; > *R. acetosella* var. *pyrenaeus* (Pouret) Timbal-Lagrave – F; = *Acetosella acetosella* (Linnaeus) Small – S; > *Acetosella vulgaris* (Koch) Fourreau ssp. *pyrenaica* (Pourret ex Lapeyrouse) Á. Löve]

Rumex altissimus A. Wood, Pale Dock, Tall Dock, Peachleaf Dock. Mt, Pd (GA, NC, SC, VA), Cp (NC): roadsides, disturbed areas; uncommon. ME and MN south to FL, TX, AZ, and n. Mexico. [= RAB, C, F, FNA, G, GW, K, S, W]

Rumex brittanica Linnaeus, Great Water Dock, native species south to VA, PA, NJ, KY (FNA). [= FNA; > *R. orbiculatus* A. Gray – C, F, G, W; > *R. orbiculatus* var. *orbiculatus* – K]

* ***Rumex brownii*** Campderá, Brown's Dock. Cp (SC), Pd (NC): disturbed areas, floodplains, wool-combing waif; rare, introduced from Australia. [= FNA; = *R. brownei* – K, orthographic variant]

* ***Rumex conglomeratus*** Murray, Clustered Dock. Cp, Pd (GA, NC, SC), Mt (GA), {VA}: [= RAB, C, F, FNA, G, GW, K, S]

* ***Rumex crispus*** Linnaeus *ssp. **crispus***, Curly Dock. Mt, Pd, Cp (GA, NC, SC, VA): common. [= FNA, K; < *R. crispus* – RAB, C, F, G, GW, S, W]

Rumex fascicularis Small. Cp (NC?): swamps and marshes; rare (if present). Peninsular FL, and perhaps north to se. NC. [= FNA, S; < *R. verticillatus* Linnaeus – F, G; = *R. verticillatus* ssp. *fascicularis* (Small) Á. Löve]

Rumex floridanus Meisner, Florida Dock. Cp (GA, NC, SC): swamps and marshes; uncommon. NJ south to FL, west to LA. Orangeburg Co. SC (fide Steve Leonard). [= FNA, G, S; < *R. verticillatus* – RAB, C, F, GW; = *R. verticillatus* Linnaus ssp. *floridanus* (Meisner) Á. Löve; > *R. chrysocarpus* Moris – GW, K, misapplied]

Rumex hastatulus Baldwin, Wild Dock. Cp, Pd (GA, NC, SC, VA), Mt (GA, SC). [= RAB, C, F, FNA, G, GW, K, S, W; *Acetosa hastatula* (Baldwin) Á. Löve]

* ***Rumex obtusifolius*** Linnaeus, Bitter Dock. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): common, introduced. [= RAB, C, F, FNA, G, GW, K, S, W]

* ***Rumex patientia*** Linnaeus, Patience Dock, Monk's-rhubarb. Mt, Pd (NC, VA): rare, introduced. [= RAB, C, F, FNA, G, K]

* ***Rumex pulcher*** Linnaeus, Fiddle Dock. Cp, Pd (GA, NC, SC), Mt (SC), {VA}: introduced from Eurasia. [= RAB, C, F, FNA, G, GW, K, S, W]

* ***Rumex stenophyllus*** Ledebour, Narrowleaf Dock. Cp (SC), introduced from Eurasia. [= FNA, K]

Rumex verticillatus Linnaeus, Swamp Dock. Cp (GA, NC, SC, VA), Pd (NC): tidal freshwater marshes and swamps; common (rare in Piedmont). [= FNA, S; < *R. verticillatus* – RAB, C, F, G, GW, K, W, in part]

* *Rumex acetosa* Linnaeus, Green Sorrel, introduced and naturalized as a weed at least far south as se. PA (Rhoads & Klein 1993). [= C, F, FNA, G; = *R. acetosa* ssp. *acetosa* – K; = *Acetosa pratensis* Miller]

* *Rumex cuneifolius* Campderá. A rare introduction from South America in AL, FL. [= FNA, S; *R. frutescens* Thouars – K, misapplied]

*? *Rumex fueginus* Philippi, American Golden Dock. (NC?). MD, DE, PA. [= FNA; < *R. maritimus* Linnaeus – G, K; = *R. maritimus* var. *fueginus* (Philippi) Dusen – F; *R. maritimus* var. *persicarioides* (Linnaeus) R.S. Mitchell – C, misapplied; *R. persicarioides* Linnaeus – S, misapplied]

* *Rumex paraguayensis* Parodi, Paraguayan Dock. {distribution}. See Brown & Marcus (1998). [= FNA, GW, K]

* *Rumex sanguineus* Linnaeus, Bloody Dock, Red-veined Dock, is introduced at least as far south as se. PA (Rhoads & Klein 1993), MD, NJ, and AL (Kartesz 1999). [= C, FNA, G, K, S]

Rumex triangulivalvis (Danser) Rechinger f. South to WV, DE, PA, KY. [= FNA; < *Rumex salicifolius* Weinmann var. *mexicanus* (Meisner) C.L. Hitchcock – K; = *R. salicifolius* var. *triangulivalvis* (Danser) C.L. Hitchcock – C; < *R. mexicanus* Meisner – F, G]

PORTULACACEAE A.L. de Jussieu 1789 (Purslane Family)

A family of about 29 genera and 450-500 species, trees, vines, shrubs, and herbs, primarily of the Southern Hemisphere, but also occurring in North America and e. Asia. References: Packer in FNA (2003b); Carolin in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers sessile or subsessile; capsule circumscissile..... ***Portulaca***
1 Flowers pedicelled; capsule opening longitudinally.
  2 Flowers borne on a scape, with cymose branching
    3 Leaves linear, terete, 1-2 mm wide; plants to 5 dm tall; [native] ..... ***Phemeranthus***
    3 Leaves obovate or elliptic, 20 mm or more wide; plants to 8 dm tall; [alien, persistent or escaped] ..... ***Talinum***
  2 Flowers solitary or in racemes.
    4 Stems with 2 opposite cauline leaves; petals 6-14 mm long .....***Claytonia***
    4 Stems with > 2 leaves, opposite or alternate; petals 1-6 mm long.....***Montia***

Claytonia Linnaeus 1753 (Spring-beauty)

A genus of about 30 species, perennial herbs, of North America and e. Asia. References: Miller & Chambers (2006)=Y; Miller in FNA (2003b); Davis (1966)=Z; Lewis & Suda (1968); Lewis, Oliver, & Suda (1967); Carolin in Kubitzki, Rohwer, & Bittrich (1993).

1 Cauline leaves 3-6 (-11) cm long (including the evident petiole), the blade narrowly diamond-shaped, 2.5-6 (-8)× as long as wide; leaves 10-15 (-30) mm wide.....***C. caroliniana***
1 Cauline leaves (5-) 7-20 cm long (including the poorly differentiated petiole), the blade > 8× as long as wide; leaves 1-10 (-20) cm wide.
  2 Broadest leaves on a plant 1-2 (-4) mm wide.....***C. virginica*** *var.* ***acutiflora***
  2 Broadest leaves on a plant 5-10 (-20) mm wide.
    3 Flowers yellow; [known from NJ, MD, and PA] ..... ***[C. virginica*** *var.* ***hammondiae]***
    3 Flowers white to pink; [widespread in our area] .....***C. virginica*** *var.* ***virginica***

Claytonia caroliniana Michaux, Carolina Spring-beauty. Mt (GA, NC, VA): moist forests, especially northern hardwood forests and cove forests at moderate to high elevations; common. March-May. Nova Scotia west to MN, south to w. NC, e. TN, and n. GA. [= RAB, C, F, FNA, G, S, W, Y, Z; > *C. caroliniana* var. *caroliniana* – K; > *C. caroliniana* Michaux var. *lewisii* McNeill – K]

Claytonia virginica Linnaeus ***var. acutiflora*** Augustin de Candolle, Southern Spring-beauty. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; common. (January-) February-April. VA west to IL, south to sw. GA and TX. This variety has chromosome numbers of n=6, n=7, and polyploid and polyploid/aneuploid derivatives of those numbers. [= C, K; < *C. virginica* – RAB, F, FNA, G, W, Y; = *C. virginica* – S; = *C. virginica* var. *simsii* (Sweet) R.J. Davis – Z; = *C. simsii* Sweet]

Claytonia virginica Linnaeus ***var. virginica***, Eastern Spring-beauty. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): moist forests. (January-) February-April. Nova Scotia west to MN, south to GA and TX. This variety has chromosome numbers of n=8 and polyploid and polyploid/aneuploid derivatives of that number. [= C, K, Z; < *C. virginica* – RAB, F, FNA, G, W, Y; = *C. media* (Augustin de Candolle) Link – S]

Claytonia virginica Linnaeus var. *hammondiae* (Kalmbacher) J.J. Doyle, W.H. Lewis, and D.B. Snyder, Yellow Spring-beauty, is known from NJ, MD, and PA. This yellow-flowered spring-beauty is apparently not a mere flower color form, and should be recognized as a taxon. Further study is warranted. [= K; < *C. virginica* var. *virginica* – C; < *C. virginica* – F, G, FNA, Y]

Montia Linnaeus 1753 (Blinks, Montia)

A genus of about 10 species, annual herbs, of nearly cosmopolitan distribution in temperate regions. References: Miller in FNA (2003b); Carolin in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves opposite.....***M. fontana***
1 Leaves alternate .....***M. linearis***

* ***Montia fontana*** Linnaeus, Water Blinks. Cp (VA): wet places; rare, introduced from northern North America and Eurasia. [= FNA; > *M. fontana* var. *fontana* – C; > *M. fontana* ssp. *fontana* – K]

* ***Montia linearis*** (Douglas ex Hooker) Greene, Narrow-leaved Montia. Pd (NC), Cp (VA): lawns, disturbed areas; rare, introduced from western North America. Also in c. TN (Chester, Wofford, & Kral 1997). [= FNA, K]

Phemeranthus Rafinesque 1814 (Rock-pink, Fameflower)

A genus of about 20 species, herbs and dwarf shrubs, of America. Our North American "Talinums" are not closely related to the broad-leaved type of *Talinum* and are transferred to *Phemeranthus* (Kiger 2001). Adaptation of our native species of *Phemeranthus* to different rock substrates is discussed by Ware & Pinion (1990). References: Kiger in FNA (2003b); Wilson

(1932)=X; Ware (1967)=Y; Kiger (2001)=Z; Murdy & Carter (2001)=Q; Carter & Murdy (1985); Rose & Standley (1911); Carolin in Kubitzki, Rohwer, & Bittrich (1993); Hershkovitz & Zimmer (2000).

1 Leaves obovate or elliptic, 20 mm or more wide; [an introduction, persistent or escaped] ..... ***[***see ***Talinum]***
1 Leaves linear, terete, 1-2 mm wide; [native].
2 Stamens 4-8; flowers open in late afternoon ..... ***[Ph. parviflorus]***
2 Stamens 12-80; flowers variously open from early or late afternoon.
3 Style 2-3.5 mm long, shorter than or about the same length as the stamens; stamens 12-30; flowers open from (3-) 3:30 to 7 p.m. E.D.S.T. ..... ***Ph. teretifolius***
3 Style 3.8-7 mm long; stamens 25-80; flowers open from about 1 to 7 p.m. E.D.S.T.
4 Stigma distinctly 3-lobed; mature seeds covered with a dull gray coating; [of calcareous rock outcrops]..... ..... ***[Ph. calcaricus]***
4 Stigma subcapitate; mature seeds brown-black and lustrous; [of noncalcareous rocks].
5 Stamens (40-) 50-80 (-90); [of granite and sandstone from SC southward] ..... ***Ph. mengesii***
5 Stamens 25-42; [of mafic and ultramafic rocks, known from nc. NC and sc. VA] ..... ***Ph. species 1***

Phemeranthus mengesii (W. Wolf) Kiger, Large-flowered Rock-pink. Pd (GA, SC), Cp (GA): in shallow soil over felsic rocks (granite) or sandstone (in GA and AL), or Altamaha Grit (GA), where periodically wet by seepage; rare (locally common in GA). June-September. C. SC south to c. GA (where it extends into the Coastal Plain on outcrops of Altamaha Grit), west to n. AL and sc. TN. *Ph. mengesii* and *Ph. parviflorus* Nuttall of the midwestern United States (and disjunct as far east as AL) are apparently the parents of the allotetraploid *Ph. teretifolius*. Diploid and tetraploid populations are known of this taxon; further investigation is needed to determine if the tetraploids are allotetraploids or autotetraploids. [< *Phemeranthus mengesii* – FNA, Z (also see *Ph. species 1*); = *Talinum mengesii* W. Wolf – Q, S, X, Y; < *Talinum mengesii* – K (also see *Ph. species 1*)]

Phemeranthus species 1. Pd (NC, VA): in periodic seepage on mafic or ultramafic rocks; rare (NC Proposed Endangered). (June?) July-September. This taxon was discovered at a diabase glade in Granville County, NC and ultramafic barrens in Franklin County, VA, floristically rich in other species of disjunct and relict distribution. Further investigations are needed to confirm its chromosome complement and relationship to *Ph. teretifolius* of nearby granite flatrocks, and to the more southerly *Ph. mengesii*. It is possible that it is only an unusual form of *Ph. mengesii*. [< *Talinum mengesii* – K; < *Phemeranthus mengesii* – FNA, Z]

Phemeranthus teretifolius (Pursh) Rafinesque, Appalachian Rock-pink. Mt, Pd (GA, NC, SC, VA), Cp (GA): in shallow soil over felsic or mafic rocks (granite, gneiss, schist, granite, diabase, greenstone, metabasalt, sandstone, Altamaha grit), especially where periodically wet by seepage (often in mats of the moss *Grimmia*); common. June-September. DE, se. PA, and WV, south to se. TN, GA (where it extends into the Coastal Plain on outcrops of Altamaha Grit), and AL, in the Appalachians and adjacent provinces. *Ph. teretifolius* is an allotetraploid, probably derived from hybridization followed by polyploidization of the diploids *Ph. mengesii* and *Ph. parviflorus*. [= FNA, Z; = *Talinum teretifolium* Pursh – RAB, C, F, G, K, Q, S, W, X, Y]

Phemeranthus calcaricus (S. Ware) Kiger, Cedar-glade Rock-pink, occurs on calcareous glades, from c. TN south to n. AL. A tetraploid species, probably derived from *Ph. calycinus* Engelmann. [= FNA, Z; = *Talinum calcaricum* S. Ware – K, Q, Y]

Phemeranthus parviflorus (Nuttall) Kiger, Small-flowered Rock-pink, more western, occurs as an eastern disjunct in n. AL. A diploid species. [= FNA, Z; = *Talinum parviflorum* Nuttall – C, F, G, K, Q, X; > *Talinum parviflorum* – Y; > *Talinum appalachianum* W. Wolf – Y]

Portulaca Linnaeus 1753 (Purslane, Portulaca)

A genus of about 40 species, annual and perennial herbs, nearly cosmopolitan, but especially in tropical, subtropical, and warm temperate regions. *Portulaca* flowers open only for a few hours each on sunny days (Matthews & Levins 1985). References: Matthews in FNA (2003b); Matthews & Levins (1985)=Z; Matthews, Faircloth, & Allison (1991); Matthews & Levins (1986); Matthews, Ketron, & Zane (1992a, 1992b, 1993); Matthews & Ketron (1991); Carolin in Kubitzki, Rohwer, & Bittrich (1993). Key based closely on Matthews in FNA (2003b).

1 Plants in flower.
2 Petals yellow, orange, copper, bronze, or white.
3 Flowers > 25 mm across (single petals > 15 mm long).
4 Leaves terete; capsule not encircled by an expanded, membranaceous wing..... ***P. grandiflora***
4 Leaves flat; capsule encircled by an expanded, membranaceous wing ..... ***P. umbraticola***
3 Flowers < 20 mm across (single petals < 12 mm long).
5 Leaf blades terete or hemispheric in cross-section, linear, usually < 2 mm wide; [rare waif]..... ***P. halimoides***
5 Leaf blades flattened in cross-section, obovate or spathulate, > 2.5 mm wide; [collectively common].
6 Capsule encircled by an expanded membranaceous wing; [native to granitic and sandstone outcrops in SC and GA] ..... ***P. coronata***
6 Capsule not encircled by an expanded membranaceous wing; [exotic weed, usually seen in disturbed soils] ..... ***P. oleracea***
2 Petals pink to purple.

7 Flowers > 25 mm across (single petals > 15 mm long) ..... ***P. grandiflora***
7 Flowers < 20 mm across (single petals < 12 mm long).
8 Leaves flattened in cross-section, > 2.5 mm wide, obovate to spatulate ..... ***P. amilis***
8 Leaves terete to hemispherical in cross-section, usually < 2 mm wide, linear to lanceolate.
9 Petals deeply bilobed; stamens > 40; [of sandstone (Altamaha Grit) outcrops in s. GA] ..... ***P. biloba***
9 Petals not bilobed; stamens usually < 30; [collectively widespread and of various habitats].
10 Petals dark pink to purple; seeds < 0.6 mm wide, round ..... ***P. pilosa***
10 Petals medium to pale pink; seeds > 0.6 mm wide, elongate ..... ***P. smallii***

1 Plants in fruit.
11 Capsule encircled by an expanded membranaceous wing.
10 [Native in our area, in thin soil on granitic and sandstone outcrops in SC and GA] ..... ***P. coronata***
10 [Introduced cultivar, persistent to weakly spreading from plantings] ..... ***P. umbraticola***
9 Capsule not encircled by an expanded membranaceous wing.
11 Leaves flattened in cross-section, > 2.5 mm wide, obovate to spatulate.
12 Trichomes at nodes conspicuous; seeds round, < 0.6 mm wide ..... ***P. amilis***
12 Trichomes at nodes inconspicuous; seeds elongate, > 0.6 mm long ..... ***P. oleracea***
11 Leaves terete to hemispherical in cross-section, usually < 2 mm wide, linear to lanceolate.
13 Nodes and inflorescences with inconspicuous trichomes ..... ***P. biloba***
13 Nodes and inflorescences with conspicuous trichomes
14 Seeds > 0.65 mm wide.
15 Longest leaves mostly > 20 mm long; capsules mostly > 4 mm in diameter; [introduced, usually in obviously disturbed sites] ..... ***P. grandiflora***
15 Longest leaves mostly < 17 mm long; capsules mostly < 3.5 mm in diameter; [native, on granitic or diabase flatrocks] ..... ***P. smallii***
14 Seeds < 0.65 mm wide
16 Capsules 1.1-2.0 mm in diameter; seeds 0.3-0.5 mm in diameter ..... ***P. halimoides***
16 Capsules 1.5-5 mm in diameter; seeds (0.4-) 0.5-0.6 mm in diameter ..... ***P. pilosa***

* ***Portulaca amilis*** Spegaz., Broadleaf Pink Purslane. Cp (GA, NC, SC, VA), Pd (NC, SC): sandy fields, and other dry, sandy, disturbed habitats; rare, introduced from South America. May-September. Matthews & Levins (1985) describe the spread of this alien species in North America, apparently from an introduction in North Carolina (the earliest North American collection in 1932 in Robeson County, NC). [= FNA, K, Z]

Portulaca biloba Urban, Grit Purslane. Cp (GA): outcrops of Altamaha Grit; rare (GA Special Concern). This species has been collected repeatedly on outcrops of the Altamaha Grit in s. GA (Matthews, Faircloth, & Allison 1991); it also occurs in Cuba. Matthews, Faircloth, & Allison (1991) hypothesize introduction to the United States by hurricane. [= FNA, K]

Portulaca coronata Small, Flatrock Portulaca. Pd (GA, SC), Cp (GA): on or around granitic flatrocks, usually under *Juniperus virginiana*, and on Altamaha Grit outcrops; rare (GA Special Concern, SC Rare). June-September. SC south to GA, endemic to granitic and sandstone outcrops in the Piedmont and rarely Altamaha grit (sandstone outcrops in the upper Coastal Plain. Matthews & Levins (1985) includes this taxon in *P. umbraticola*. Later, Matthews & Ketron (1991) and Matthews, Ketron, & Zane (1992) treated our southeastern material as *P. umbraticola* ssp. *coronata*. While the distinctive nature of the capsule unifies the southeastern "*coronata*," southwestern "*lanceolata*," and Central and South and Central American "*umbraticola*," the difference in chromosome number and flower color, associated with disjunctly allopatric distributions renders specific recognition equally plausible. [= RAB, S; < *P. umbraticola* Kunth – Z; = *P. umbraticola* Kunth ssp. *coronata* (Small) J.F. Matthews & Ketron – FNA, K]

* ***Portulaca grandiflora*** Hooker, Rose-moss. Cp (NC, SC, VA), Pd (NC, SC), {GA): in sandy soil or around granitic flatrocks; rare, native of Argentina. [= RAB, C, FNA, G, K, S, Z]

* ***Portulaca halimoides*** Linnaeus. Cp (VA): waste area along railroad; rare, probably only a waif, native of sw. North America. Reported by Reed (1964). [= FNA, K; > *P. parvula* A. Gray]

* ***Portulaca oleracea*** Linnaeus, Common Purslane, Garden Purslane, Pussley. Mt, Pd, Cp (GA, NC, SC, VA): gardens, disturbed areas, cracks in sidewalks; common, originally native (apparently) of Asia, probably introduced to North America from Europe. May-October. The various subspecies recognized may or may not be taxonomically significant; a decision awaits an analysis of variation worldwide, or, at least, in the native range of the species. In North America, *P. oleracea* is a widespread, sometimes noxious weed, probably representing numerous introductions of various genotypes, treated as multiple subspecies by some authors. In North America, these genotypes appear to have intermixed; in our area (at least), the recognition of infraspecific taxa has been considered unwarranted, difficult, and unmeaningful (see Matthews, Ketron, & Zane 1993); see Danin & Anderson (1986) for a contrasting opinion. During the Great Depression, *P. oleracea* was eaten extensively in the Valley of Virginia as a potherb. [= RAB, C, F, FNA, G, K, S, W, Z]

Portulaca pilosa Linnaeus, Kiss-me-quick. Cp (GA, NC, SC), Pd (NC, SC): disturbed sandy soils; uncommon. June-October. NC south to FL, west to NM, north in the interior to c. TN, AR, and OK, and in Central America; the native range perhaps obscure. See Matthews, Ketron, & Zane (1992a) for a further discussion of this species. [= RAB, FNA, K, S, Z]

Portulaca smallii P. Wilson, Small's Portulaca. Pd (GA, NC, SC, VA): in thin soils on granitic and diabase flatrocks, sometimes locally spreading to adjacent fields, mowed areas, or other disturbed areas; rare (NC Threatened, SC Rare, VA Rare). June-October. Sc. VA south to c. GA. Generally considered an endemic limited to granitic flatrocks, *P. smallii* also occurs on a

diabase flatrock, growing with an interesting mixture of granite flatrock and limestone cedar glade species (LeGrand 1987, Schafale & Weakley 1990). [= RAB, FNA, K, S, Z]

* ***Portulaca umbraticola*** Kunth. Pd, Cp (GA?, NC, SC): disturbed areas, spreading weakly or persistent following cultivation; rare, native of South America and the West Indies. See ***P. coronata*** for further discussion. [< ***P. umbraticola*** Kunth – Z; = ***P. umbraticola*** Kunth ssp. ***umbraticola*** – K]

Talinum Adanson 1763 (Jewels-of-Opar)
(also see *Phemeranthus*)

A genus of about 15 species, herbs, and dwarf shrubs, mainly of Africa but with 2 species of the New World tropics). References: Kiger in FNA (2003b); Wilson (1932)=X; Carolin in Kubitzki, Rohwer, & Bittrich (1993).

* ***Talinum paniculatum*** (Jacquin) Gaertner, Jewels-of-Opar. Pd (GA, NC, SC), Cp (GA): fairly commonly cultivated, locally escaped to disturbed areas and garden edges; rare, introduced from the West Indies. June-September. [= FNA, S, X; ***T. paniculatum*** var. ***paniculatum*** – K]

PRIMULACEAE Ventenat 1799 (Primrose Family)
(also see *MYRSINACEAE* and *SAMOLACEAE*)

As reconstituted, a family of 12-13 genera and about 600 species, herbs, primarily north temperate. Källersjö, Bergqvist, & Anderberg (2000) and Martins, Oberprieler, & Hellwig (2003) suggest that the traditional Primulaceae is polyphyletic, and recommend the transfer of several genera to other families, including *Lysimachia*, *Anagallis*, *Centunculus, Trientalis*, and *Glaux* to Myrsinaceae and *Samolus* to Theophrastaceae. *Dodecatheon* and *Hottonia* remain in Primulaceae s.s. References: Channell & Wood (1959); Källersjö, Bergqvist, & Anderberg (2000); Martins, Oberprieler & Hellwig (2003); Anderberg in Kubitzki (2004).

1 Aquatic; leaves pectinate (deeply pinnatifid into linear segments) ..... ***Hottonia***
1 Terrestrial (though sometimes in wetlands or submersed for short periods of time); leaves entire or shallowly toothed.
  2 Leaves strictly in a basal rosette or basally disposed (with a basal rosette and smaller stem leaves).
    3 Inflorescence an umbel; leaves strictly basal ..... ***Dodecatheon***
    3 Inflorescence a raceme or a panicle of racemes; larger leaves basal and smaller leaves on the stem..... ***[see Samolus** in SAMOLACEAE]*
  2 Leaves all or chiefly cauline ..... ***[see Anagallis, Centunculus, Lysimachia, Trientalis** in MYRSINACEAE]*

Dodecatheon Linnaeus 1753 (Shooting star)

A genus of 13-15 species, herbs, of North America and ne. Asia. Mast et al. (2004) show that *Dodecatheon* is nested within *Primula*, and is closely related to (and derived from) *Primula* subgenus *Auriculastrum*, apparently via a relatively simple alteration of the corolla for buzz-pollination. References: Fassett (1944)=Z; Mast et al. (2004).

1 Wall of the capsule thin and flexible; corolla lobes rose-purple ..... ***[D. amethystinum]***
1 Wall of the capsule thick and stiff; corolla lobes white to medium pink.
  2 Leaves cordate, subcordate, or abruptly narrowed to the petiole ..... ***[D. meadia** var. **frenchii]***
  2 Leaves long-cuneate at the base, gradually narrowed to the petiole.
    3 Flowers 1-14 per plant; calyx lobes (2.5-) 3.5-4.0 (-5.0) mm long on expanding flowers, becoming 4-5 mm long on fruits; anthers 4-7 mm long; fruit 7-10 mm long..... ***D. meadia** var. **brachycarpum***
    3 Flowers 4-125 per plant; calyx lobes (3-) 4-5 (-8) mm long on expanding flowers, becoming (4-) 5.5-7 (-9) mm long on fruits; anthers 6.5-10 mm long; fruit 10-17 mm long..... ***D. meadia** var. **meadia***

Dodecatheon meadia Linnaeus ***var. brachycarpum*** (Small) Fassett, Ozark Eastern Shooting Star. Mt (VA): dolomite woodlands and glades; rare (VA Watch List). Late April-May; late May-June. Chiefly Ozarkian: MO and OK, and AR south to n. AL and TX; rarely disjunct as far east as w. and sw. VA. [= C, F, G; < ***D. meadia*** – RAB, W; = ***D. meadia*** ssp. *brachycarpum* (Small) R. Knuth – K; = ***D. brachycarpa*** Small – S; < ***Primula meadia*** (Linnaeus) A. R. Mast & Reveal]

Dodecatheon meadia Linnaeus ***var. meadia***, Common Eastern Shooting Star. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (SC): rich forests, woodlands, and rock outcrops (primarily calcareous or mafic), especially with nutrient-rich seepage; uncommon, rare in NC (NC Rare, VA Watch List). Late March-early June; late May-June. MD and PA west to s. WI, se. MN, IA, and OK, south to n. GA, n. FL (Gadsden County), AL, and TX. [= C, F, G; < ***D. meadia*** – RAB, W; = ***D. meadia*** ssp. ***meadia*** – K; > ***D. meadia*** – S; > ***D. hugeri*** Small – S; > ***D. meadia*** var. ***genuinum*** – Z; > ***D. meadia*** var. ***obesum*** Fassett – Z; < ***Primula meadia*** (Linnaeus) A. R. Mast & Reveal]

Dodecatheon amethystinum (Fassett) Fassett, Jeweled Shooting Star. MN and WI south to IL and MO, apparently disjunct eastward in PA. The eastern distribution of *D. amethystinum* is alternatively considered by some to represent eastern populations of *D. radicatum* Greene, or merely depauperate plants of *D. meadia*. [= F, K, Z; < *D. radicatum* Greene var. *radicatum* – C; < *D. radicatum* – G; = ***Primula fassettii*** A. R. Mast & Reveal]

Dodecatheon meadia Linnaeus var. *frenchii* Vasey , French's Shooting-star. IN, IL, and MO south to AL and AR. [= C, F, G, Z; = *D. frenchii* (Vasey) Rydberg – K; = ***Primula frenchii*** (Vasey) A. R. Mast & Reveal]

Hottonia Linnaeus 1753 (Water-violet)

A genus of 2 species, aquatic herbs, of North America and Eurasia. References: Anderberg in Kubitzki (2004).

Hottonia inflata Elliott, Featherfoil, Water-violet. Cp (NC, SC, VA), Pd (GA, NC): slow-moving or stagnant waters of swamps, millponds, beaverponds, sag ponds, oxbows, rivers, probably dispersed by waterfowl, primarily in the Coastal Plain, very rarely in the Piedmont; rare (GA Special Concern, NC Watch List). April-May; May-June. ME south to FL, west to TX, inland up the Missisippi Embayment to IL, and at other scattered locations inland (as WV, and especially around the Great Lakes). The species shows large population fluctuations, and may be essentially ephemeral at many locations. Townsend (1995) documents its first SC record. [= RAB, C, F, G, GW, K, S]

PUNICACEAE
(see LYTHRACEAE)

RANUNCULACEAE A.L. de Jussieu 1789 (Buttercup Family)
(also see *HYDRASTIDACEAE*)

A family of about 62 genera and 2450 species, herbs, shrubs, and vines, primarily of temperate and boreal regions. References: Whittemore & Parfitt in FNA (1997); Keener (1977); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

1 Shrub or vine; leaves compound (or sometimes some to most of them simple in *Clematis*).
  2 Leaves opposite, distributed along the usually branched, clambering stem; sepals 4, white to blue or purplish, 10-50 mm long; wood not yellow; [subfamily *Ranunculoideae*, tribe *Anemoneae*] ..... ***Clematis***
  2 Leaves alternate, clustered together at the top of the usually unbranched, erect stem; sepals 5, maroon, 2-5 mm long; wood yellow; [subfamily *Isopyroideae*, tribe *Coptideae*] ..... ***Xanthorhiza***
1 Herb; leaves compound or simple.
  3 Leaves simple, sometimes deeply cleft or lobed into rounded or elongate segments.
    4 Plants in flower ..... **Key A**
    4 Plants in fruit ..... **Key B**
  3 Leaves compound, the leaflets either linear or more-or-less petiolulate.
    4 Plants in flower ..... **Key C**
    4 Plants in fruit ..... **Key D**

Key A

1 Flowers bilaterally symmetrical, the upper sepal hooded or spurred; [subfamily *Helleboroideae*, tribe *Delphinieae*].
  2 Upper sepal hooded or helmet-shaped; petals hidden by the sepals; perianth blue or creamy white; stems weak, clambering, reclining, vining, or ascending in a curve ..... ***Aconitum***
  2 Upper sepal spurred; petals at least partly exserted from the sepals; perianth blue, pink, white, or greenish; stems strong, erect, normally straight
    3 Annual; pistil 1; petals 2, connate; leaf lobes < 1.5 mm wide ..... ***Consolida***
    3 Perennial; pistil 3 (-5); petals 4, separate; leaf lobes > 2 mm wide ..... ***Delphinium***
1 Flowers radially symmetrical, no perianth parts spurred or hooded (except the 5 sepals spurred in *Myosurus*).
  3 Petals present, white or yellow, larger and more conspicuous than the sepals; sepals present, green; [in other words, **with** a second, green, less conspicuous perianth whorl below the largest and colored perianth whorl; note that some *Anemone* have a calyx-like involucre of 3 bracts subtending each flower]; [subfamily *Ranunculoideae*, tribe *Ranunculeae*].
    4 Basal leaves linear to linear-spatulate, mostly 4-8 cm long, 1-3 mm wide; receptacle elongate, 1-6 cm long (superficially resembling a *Plantago* inflorescence) ..... ***Myosurus***
    4 Basal leaves various, but not as above; receptacle globose to sub-cylindric, mostly < 1 cm long
      5 Sepals 3 (-4); petals 7-12; achenes pubescent, beakless; leaves simple, cordate, unlobed; [introduced garden plants] ..... ***Ficaria***

5 Sepals (3-) 5 (-6); petals typically 5-9 (10 in some "doubled" forms); achenes smooth or variously ornamented with spines, papillae, or tubercles, sometimes also pubescent; leaves various, usually not at once simple, cordate, and unlobed; [native or introduced] ..... ***Ranunculus***

3 Petals absent (or modified into relatively inconspicuous nectaries or staminodia); sepals present and petaloid (white, yellow, yellow-green, cream, or blue).

6 Sepals 3-5 mm long, caducous; stamens white and showy; [subfamily *Ranunculoideae*, tribe *Ranunculeae*] ..... ***Trautvetteria***

6 Sepals 6-40 mm long, not caducous; stamens not notably white and showy.

7 Leaves opposite, distributed along the stem; style plumose; [subfamily *Ranunculoideae*, tribe *Anemoneae*] ..... ***Clematis***

7 Leaves all basal, or with a few alternate or whorled involucrate leaves on the stem; style not plumose.

8 Sepals white, bluish, or blue; basal leaves 3-5 (-7)-lobed; [subfamily *Ranunculoideae*, tribe *Anemoneae*] ..... ***Anemone***

8 Sepals yellow, green, or whitish (sometimes marked with purple); basal leaves unlobed, or palmately cleft into 5-11 (-many) segments; [subfamily *Helleboroideae*, tribe *Helleboreae*].

9 Leaves cordate-reniform, unlobed; sepals bright yellow; petals absent; [native, of bogs and marshes] ..... ***Caltha***

9 Leaves palmately or pedately lobed or divided; sepals green, greenish, dull yellow, or whitish; petals modified into tubular nectaries; [introduced, rarely persistent or escaped from cultivation].

10 Sepals 5-8, much longer than wide, yellow; cauline leaves absent, except for the involucre which immediately subtends the flower ..... ***Eranthis***

10 Sepals 5, nearly as wide as long, green or maroon; cauline leaves present..... ***Helleborus***

Key B

1 Fruit a follicle, each carpel with 2 or more ovules; [subfamily *Helleboroideae*].

2 Leaves cordate-reniform, toothed, not lobed or divided; [tribe *Helleboreae*] ..... ***Caltha***

2 Leaves variously palmately or pedately lobed or divided.

3 Carpels 1-3; plants 3-30 dm tall; [native, except *Consolida*]; [tribe *Delphinieae*].

4 Stems weak, clambering, reclining, or vining ..... ***Aconitum***

4 Stems strong, erect

5 Annual; leaf lobes < 1.5 mm wide; [exotic] ..... ***Consolida***

5 Perennial; leaf lobes > 2 mm wide; [native] ..... ***Delphinium***

3 Carpels 3-6; plants 1-5 dm tall; [introduced, rarely persistent or escaping]; [tribe *Helleboreae*].

6 Cauline leaves absent, except for the involucre which immediately subtends the fruit..... ***Eranthis***

6 Cauline leaves present..... ***Helleborus***

1 Fruit an achene (or dehiscent utricle in *Trautvetteria*), each carpel with 1 ovule; [subfamily *Ranunculoideae*].

7 Leaves opposite, distributed along the stem; style plumose; [tribe *Anemoneae*] ..... ***Clematis***

7 Leaves all basal, or with a few alternate or whorled involucrate leaves on the stem; style not plumose.

8 Basal leaves linear to linear-spatulate, mostly 4-8 cm long, 1-3 mm wide; receptacle elongate, 1-6 cm long (superficially resembling a *Plantago* inflorescence); [tribe *Ranunculeae*]..... ***Myosurus***

8 Basal leaves various, but not as above, generally long-petiolate, with an expanded, cordate, 3-lobed, or palmately-lobed blade; receptacle globose to sub-cylindric, mostly < 1 cm long.

9 Fruit a dehiscent utricle; cauline leaves alternate; [tribe *Ranunculeae*]..... ***Trautvetteria***

9 Fruit an achene; cauline leaves opposite or whorled (or alternate in *Ranunculus*).

10 Cauline leaves opposite or whorled, or reduced to 3 sepal-like involucral bracts immediately subtending the flower; sepals absent (but in *"Hepatica"* mimicked by the bracts); [tribe *Anemoneae*]..... ***Anemone***

10 Cauline leaves alternate; sepals present; [tribe *Ranunculeae*]

11 Achenes pubescent, beakless; leaves simple, cordate, unlobed; [introduced garden plants] ..... ***Ficaria***

11 Achenes smooth or variously ornamented with spines, papillae, or tubercles, sometimes also pubescent; leaves various, usually not at once simple, cordate, and unlobed; [native or introduced].. ..... ***Ranunculus***

Key C

1 Leaflets linear, < 1.5 mm wide.

2 Flowers bilaterally symmetrical..... ***Consolida***

2 Flowers radially symmetrical.

3 Aquatic; [native] ..... ***Ranunculus***

3 Terrestrial; [alien].

4 Flower lacking involucre; pistils simple..... ***[Adonis]***

4 Flower closely subtended by a finely dissected involucre; pistils compound..... ***Nigella***
1 Leaflets broader, rounded, lobed, or toothed.
5 Leaves all cauline, opposite; stems somewhat woody at base..... ***Clematis***
5 Leaves basal and cauline, the cauline alternate (or with opposite or whorled involucral bracts).
6 Petals present, conspicuous
7 Flowers dangling; petals red, orange with yellow, or blue, spurred ..... ***Aquilegia***
7 Flowers not dangling; petals yellow, not spurred..... ***Ranunculus***
6 Petals absent or inconspicuous (soon deciduous or altered into a nectary-bearing clavate structure); sepals sometimes petaloid and conspicuous.
8 Sepals petaloid, conspicuous, white (or tinged with pink or green).
9 Involucre absent, all leaves on the stem alternate; petaloid sepals 5-10, white ..... ***Enemion***
9 Involucre of opposite or whorled, leaflike bracts present; peatloid sepals (4-) 5-20 (-30), white, cream, rose, or green.
10 Basal leaves with 3-5 leaflets, these toothed or incised; petaloid sepals white, cream, rose, or green. ..... ***Anemone***
10 Basal leaves with > 5 leaflets; these with 0-3 rounded lobes at the tip; petaloid sepals white to pale pink..... ***Anemonella***
8 Sepals absent, or inconspicuous in comparison to the stamens or pistils.
11 Leaflets 3; flower solitary..... ***Coptis***
11 Leaflets many; flowers many, in a panicle or raceme.
12 Infloredcence a raceme..... ***Actaea***
12 Inflorescence a panicle ..... ***Thalictrum***

Key D

1 Fruit a follicle or capsular (or fleshy and berrylike in some *Actaea*).
2 Mature leaves > 4 dm wide..... ***Actaea***
2 Mature leaves < 3 dm wide.
3 Leaflets linear; [aliens].
4 Flowers in a raceme, not subtended by an involucre; fruit follicular, each with a 1-2 mm long beak..... ***Consolida***
4 Flower solitary, subtended by a finely divided involucre; fruit a spherical capsule-like structure composed of 5 or 10 partially connate follicles, each follicle terminated by a linear beak 13-20 mm long ..... ***Nigella***
3 Leaflets broad, rounded; [mostly natives].
5 Follicles borne on stipes, forming an umbel-like cluster; rhizomes yellow or orange..... ***Coptis***
5 Follicles sessile; rhizomes brown or tan.
6 Follicles 15-31 mm long, with beaks 7-18 mm long ..... ***Aquilegia***
6 Follicles 3.5-6.5 mm long, with beaks 1.5-3 mm long ..... ***Enemion***
1 Fruit an achene.
7 Leaves divided into numerous linear segments, all of which are < 1 mm wide.
8 Plant terrestrial ..... ***[Adonis]***
8 Plant aquatic (if leaves divided into numerous linear segments)..... ***Ranunculus***
7 Leaf segments rounded or cleft, > 1 mm wide.
9 Leaves cauline, opposite ..... ***Clematis***
9 Leaves basal and/or cauline, cauline leaves (if present) alternate (leaflike involucral bracts sometimes present and opposite or whorled).
10 Leaflike involucral bracts present, opposite or whorled.
11 Achenes not ribbed or veined on lateral surfaces; leaf texture moderate to distinctly thick and leathery.... ..... ***Anemone***
11 Achenes conspicuously ribbed or veined on lateral surfaces; leaf texture thin, delicate ..... ***Anemonella***
10 Leaflike involucral bracts not present.
12 Leaflets 3-many, if many the leaflets typically with teeth, or sharp lobes..... ***Ranunculus***
12 Leaflets many, unlobed or typically with 3-9 rounded lobes..... ***Thalictrum***

Aconitum Linnaeus 1753 (Monkshood, Aconite)

A genus of about 300 species, herbs, of Eurasia, n. Africa, and North America. References: Brink & Woods in FNA (1997); Hardin (1964b)=Z; Tamura in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers white, creamy white, or yellowish; basal leaves numerous, large, usually 10-20 cm across, on long, stout petioles; roots fascicled; [section *Lycoctonum*] ..... ***A. reclinatum***

1 Flowers pale to medium blue (rarely white); basal leaves fewer, smaller, rarely over 10 cm across, on shorter and wirier petioles; root thickened, tuberous ..... ***A. uncinatum***

Aconitum reclinatum A. Gray, White Monkshood, Trailing Wolfsbane, White Aconite. Mt (NC, VA): rich cove forests, particularly along brookbanks, in seepages, and in periglacial boulderfields with seepage, primarily over mafic rocks (such as amphibolite, metagabbro, or greenstone), rarely over sandstone or granitic rocks; rare (NC Rare, VA Watch List). June-September. A Southern and Central Appalachian endemic: sw. PA, w. VA and e. WV south to w. NC and ne. TN. It is more restricted in distribution and habitat than *A. uncinatum*, but the two species sometimes occur together, even intertwined! [= RAB, C, F, FNA, G, K, S, W, Z; *A. vaccarum* Rydberg]

Aconitum uncinatum Linnaeus, Eastern Blue Monkshood, Appalachian Blue Monkshood. Mt (GA, NC, SC, VA), Pd, Cp (GA, NC, VA): seepages, cove forests, other moist forests; uncommon (rare in Coastal Plain) (SC Rare). August-September. C. MD and sw. PA south to e. VA, e. NC, wc. GA, and c. TN. Two varieties or subspecies have sometimes been recognized, but characters seem ambiguous, poorly correlated with one another, and geographically incoherent. [= RAB, FNA, S, W; > *A. uncinatum* var. *muticum* Alphonse de Candolle – C; > *A. uncinatum* var. *uncinatum* – C, F; > *A. uncinatum* var. *acutidens* Fernald – F; > *A. uncinatum* Linnaeus ssp. *muticum* (Augustin de Candolle) Hardin = K, Z; > *A. uncinatum* ssp. *uncinatum* – K, Z]

Actaea Linnaeus 1753 (Baneberry)

A genus of about 28 species, perennial herbs, of temperate regions of the Northern Hemisphere. Compton, Culham, & Jury (1998) support the inclusion of *Cimicifuga* in *Actaea*, based on analyses of morphology and DNA sequences. References: Ford in FNA (1997); Compton, Culham, & Jury (1998)=Z; Tamura in Kubitzki, Rohwer, & Bittrich (1993); Park & Lee 1996). References: Ramsey in FNA (1997); Compton, Culham, & Jury (1998)=Z; Ramsey (1987, 1988); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: In rich coves, *Actaea* occurs with and is sometimes mistaken for (especially when in vegetative condition) various other genera, including *Astilbe* (Saxifragaceae), *Aruncus* (Rosaceae), *Caulophyllum* (Berberidaceae), *Angelica* and *Ligusticum* (Apiaceae), *Aralia* (Araliaceae) and others. The curious evolutionary convergence of leaf morphology (to a 2-3-ternately compound form) of a large number of unrelated genera of Appalachian cove forests is interesting.

1 Plant with leaves only present.
- 2 Terminal leaflet deeply cordate, mostly > 12 cm wide, with 7-9 major veins arising palmately from the base; principal leaves with 3-9 (-17) leaflets[[section *Oligocarpae*] ..... ***A. rubifolia***
- 2 Terminal leaflet broadly cuneate, rounded, truncate, or subcordate, mostly < 12 cm wide, with 3 major veins arising from the base; principal leaves with (15-) 20-70 leaflets.
  - 3 Petiole of basal leaves with a deep, broad groove (ca. 1 mm wide and 1 mm deep), persistent on fully expanded leaves; roots with vascular tissue in lunate bundles arranged in a circle; flowering July-September; [section *Podocarpae*] ..... ***A. podocarpa***
  - 3 Petiole of basal leaves terete, not grooved (or with a shallow, narrow groove early, obscure or absent on fully expanded leaves); roots with vascular tissue in a central (3-) 4 (-5)-armed cross or star; flowering April-August; [section *Actaea*] ..... ***A. pachypoda, A. racemosa,*** *or* ***[A. rubra]***

1 Plant in flower or fruit.
- 4 Carpels 3-8, on a short stipe elongating to 5-8 mm long; flowering July-September; roots with vascular tissue in lunate bundles arranged in a circle; [section Podocarpae] ..... ***A. podocarpa***
- 4 Carpels 1 (-3), sessile; flowering April-October; roots with vascular tissue in a central (3-) 4 (-5)-armed cross or star.
  - 5 Fruit fleshy, indehiscent; flowering April-May; [section *Actaea*].
    - 6 Fruiting pedicels thick, 1-2 mm in diameter; fruit white (rarely red) ..... ***A. pachypoda***
    - 6 Fruiting pedicels slender, 0.4-0.7 mm in diameter; fruit red (rarely white) ..... ***[A. rubra]***
  - 5 Fruit dry, follicular, dehiscent; flowering May-October.
    - 7 Staminodes present; principal leaves with (15-) 20-70 leaflets; follicles 6-9 mm long; terminal leaflet broadly cuneate, rounded, truncate, or subcordate, with 3 major veins arising from the base; flowering May-August; [section *Actaea*] ..... ***A. racemosa***
    - 7 Staminodes absent; principal leaves with 3-9 (-17) leaflets; follicles 12-17 mm long; terminal leaflet deeply cordate, with 7-9 major veins arising palmately from the base; flowering August-October; [section *Oligocarpae*] ..... ***A. rubifolia***

Actaea pachypoda Elliott, White Baneberry, Dolls'-eyes, White Cohosh. Mt, Pd (GA, NC, SC, VA), Cp (VA): rich cove forests and slopes; common (rare in Piedmont and Coastal Plain). April-May; August-October. Québec and MN south to c. GA, LA, and OK. [= RAB, F, FNA, K, W, Z; = *A. alba* (Linnaeus) P. Miller – C, G, S, probably misapplied; > *A. pachypoda* f. *pachypoda* – Z; > *A. pachypoda* f. *rubrocarpa* (Killip ex House) Fernald – Z]

Actaea podocarpa Augustin de Candolle, Mountain Black-cohosh, Late Black-cohosh. Mt (GA, NC, SC, VA): rich cove forests and slopes, at moderate to high elevations; uncommon (SC Rare). July-September. Endemic to the Southern and Central Appalachians: s. PA to w. NC, ne. GA, and e. TN. Most closely related to *Actaea laciniata* (S. Watson) J. Compton of OR and WA. [= K, Z; **= *Cimicifuga americana*** Michaux – RAB, C, F, FNA, G, S, W]

Actaea racemosa Linnaeus, Common Black-cohosh, Early Black-cohosh. Mt, Pd (GA, NC, SC, VA), Cp (NC, VA): rich cove forests, other mesic and moderately to very fertile forests; common (uncommon in SC, rare in Coastal Plain of NC). May-August. Primarily Appalachian: w. MA south to SC and c. GA, but extending e. into the Coastal Plain and west to OH, IN, and MO. Var. *dissecta* appears to be a sporadically occurring form, apparently always occurring in small numbers associated with typic material; McCoy (2004) reports its collection in NC. [= ***Cimicifuga racemosa*** (Linnaeus) Nuttall – RAB, C, F, FNA, S, W; >< *C. racemosa* var. *cordifolia* (Pursh) Gray – F, misapplied in part; > *C. racemosa* var. *racemosa* – F; < *C. racemosa* – G (also see *C. rubifolia*); > *Actaea racemosa* Linnaeus var. *racemosa* – K, Z; > *Actaea racemosa* Linnaeus var. *dissecta* (A. Gray) J. Compton – K, Z]

Actaea rubifolia (Kearney) Kartesz, Appalachian Black-cohosh. Mt (VA): rich cove forests over calcareous rocks (limestone or dolostone); rare (US Species of Concern, VA Rare). August-October. Sw. VA south to e. TN; disjunct in s. IL, w. KY, and nw. TN. This species is alleged by C (1991) to occur in NC, but this is probably an error, based on confusion with *Cimicifuga cordifolia* Pursh, now considered a form of *Actaea racemosa*. For this reason, the name *Actaea cordifolia* used by Compton, Culham, & Jury (1998) does not apply to this taxon. *Actaea rubifolia* is related to *Actaea elata* (Nuttall) Prantl of nw. North America. [= K; **= *Cimicifuga rubifolia*** Kearney – C, FNA, S, W; >< *C. racemosa* var. *cordifolia* (Pursh) A. Gray – F, misapplied in part; < *C. racemosa* – G; = *Actaea cordifolia* Augustin de Candolle – Z, misapplied]

Actaea rubra (Aiton) Willdenow, Red Baneberry. South to c. PA (Rhoads & Klein 1993) and n. NJ. [= C, F, FNA, G, Z; ? *A. rubra* ssp. *rubra* – K]

Adonis Linnaeus 1753 (Adonis)

A genus of about 26 species, annual and perennial herbs, of Eurasia. References: Tamura in Kubitzki, Rohwer, & Bittrich (1993).

* *Adonis annua* Linnaeus, Autumn Adonis, Bird's-eye, is naturalized in n. AL and sc. TN (Parfitt in FNA 1997). [= C, FNA, G, K]

Anemone Linnaeus 1753 (Anemone)

A genus of about 140-200 species (depending on circumscription), perennial herbs (rarely shrubs), of Eurasia, North America, Central America, South America, and Africa. Hoot, Reznicek, & Palmer (1994) discuss the phylogeny of *Anemone*, and also suggest that *Hepatica* be included within it. References: Dutton, Keener, & Ford in FNA (1997); Keener, Dix, & Dutton (1996); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Steyermark & Steyermark (1960)=Z; Ziman et al. (2004)=Y.

1 Basal leaves lobed but not fully divided into 3 or more leaflets; [subgenus *Anemonidium*].
  2 Leaves lobed, and also toothed and variously cleft; leaves not variegated; [section *Anemonidium*].....***A. canadensis***
  2 Leaves lobed, the margins of the lobes entire; leaves often prominently variegated; [section *Hepatica*].
    3 Leaves 3 (-7) lobed, the lobes acute, the primary sinuses deep, over halfway to the petiole (the middle lobe 70-90% of the total length of the leaf blade); involucral bracts acute .....***A. acutiloba***
    3 Leaves 3-lobed, the lobes broadly rounded, the primary sinuses less deep, about halfway to the petiole (the middle lobe 50-70% of the total length of the leaf blade); involucral bracts obtuse .....***A. americana***
1 Basal leaves compound, fully divided into 3 or more leaflets.
  4 Stem branched, 4-11 dm tall, bearing 2 or more flowers; involucral bracts petiolate; [subgenus *Anemone*; section *Anemone*; group *Multifida*].
    5 Base of involucral bracts usually truncate to subtruncate, sometimes reniform or cordate, terminal leaflets deep green, margins proximally concave- to straight-sided, distally incised, thinly pubescent; anthers typically < 0.8-1.2 (-1.5) mm long; heads of achenes more or less ovoid-cylindric, 8-10 (-11) mm in diameter.....***[A. virginiana** var. **alba]***
    5 Base of involucral bracts cordate or reniform, rarely subtruncate, terminal leaflets light green, margins proximally mostly straight- to convex-sided, variously lobed or serrate, variously pubescent; anthers typically > (0.9-) 1.1-1.5 (-1.7) mm long; heads of achenes ovoid to ovoid-cylindric, (9-) 10-12 (-14) mm in diameter .....***A. virginiana** var. **virginiana***
  4 Stem unbranched, 0.5-4 dm tall, bearing 1 flower.
    6 Sepals (5-) 8-20, cream-white, violet, blue, pink, or green; involucral leaves sessile; [subgenus *Anemone*; section *Anemone*; group *Coronaria*].
      7 Stem densely pubescent above and below the involucre; involucre above the midpoint of the stem at anthesis; plant from a globose, vertically oriented bulb; involucral leaflets linear, (1.5-) 3-6 cm long, 1-4 (-6) mm wide; achene bodies > 2.7-3.5 mm long.....***A. berlandieri***
      7 Stem densely pubescent above the involucre, glabrous to very sparsely pubescent beneath the involucre; involucre at or below the midpoint of the stem at anthesis; plant with horizontal rhizomes; involucral leaflets oblanceolate, 1-2.5 cm long; achene bodies < 1.5-2.5 (-3.0) mm long.....***A. caroliniana***

6 Sepals 5 (-8), white; involucral leaves petiolate, the leaflets ovate, obovate, elliptic, lanceolate, or oblanceolate 2-8 cm long, 8-30 mm wide; [subgenus *Anemonanthea*, section *Anemonanthea*, series *Quinquefoliae*].
8 Ovaries and achenes with hairs 0.1-0.2 mm long; terminal leaflet broadest at or below the middle (lanceolate or ovate), serrate to below the middle; sepals 15 mm or more long ..... ***A. lancifolia***
8 Ovaries and achenes with hairs 0.5-1.0 mm long; terminal leaflet broadest at or above the middle (elliptic, oblanceolate, or obovate), serrate only above the middle; sepals < 15 mm long.
9 Achene bodies 2.5-3.0 mm long; lateral leaflets of radical leaves toothed only (rarely lobed); terminal leaflet usually broadest at the middle; styles 0.5-1 mm long; sepals about 8 mm long .... ***A. quinquefolia* *var*. *minima***
9 Achene bodies 3.0-4.5 mm long; lateral leaflets of radical leaves lobed or cleft (sometimes only toothed); terminal leaflet usually broadest above the middle; styles 1-2 mm long; sepals 6-15 mm long... ..... ***A. quinquefolia* *var*. *quinquefolia***

Anemone acutiloba (Augustin de Candolle) G. Lawson, Sharp-lobed Hepatica, Sharp-lobed Liverleaf. Mt (GA, NC, SC, VA), Pd (GA?, NC): moist forests, especially over calcareous or mafic rocks; uncommon (SC Rare). March-April. Widespread in e. North America. See comments under *A. americana* about the taxonomy of the two taxa of "Hepatica." [= FNA; = *Hepatica acutiloba* Augustin de Candolle – RAB, C, F, G, W; = *Hepatica nobilis* P. Miller var. *acuta* (Pursh) Steyermark – K, Z; = *Hepatica acuta* (Pursh) Britton – S]

Anemone americana (Augustin de Candolle) H. Hara, Round-lobed Hepatica, Round-lobed Liverleaf. Pd, Mt, Cp (GA, NC, SC, VA): moist forests; common (uncommon in Coastal Plain of NC and GA, rare in Coastal Plain of SC). February-April. Widespread in e. North America. The two taxa of "Hepatica" seem entirely distinct in our area; they are described as hybridizing freely or merging indistinguishably in other parts of their ranges. They are also both closely related to the European *H. nobilis* P. Miller. Steyermark & Steyermark (1960) chose to treat the three entities as varieties of *H. nobilis*; I prefer to retain them at the specific level. [= FNA; = *Hepatica americana* (Augustin de Candolle) Ker-Gawler – RAB, C, F, G, W; = *Hepatica nobilis* P. Miller var. *obtusa* (Pursh) Steyermark – K, Z; < *Hepatica hepatica* (Linnaeus) Karsten – S]

Anemone berlandieri Pritzel, Eastern Prairie Anemone, Tenpetal Anemone. Pd (GA, NC, SC, VA): thin, circumneutral soils around rock outcrops; rare (GA Special Concern, NC Rare, SC Rare, VA Rare). March-April. *A. berlandieri* and *A. caroliniana* have been much confused in floras; see Joseph & Heimburger (1966) for clarification. *A. berlandieri* is primarily a species of midwestern prairies, occurring in from KS, OK, and TX east to AR, MS, and AL; disjunct in c. GA, c. NC, and sc. VA. It reaches its northeastern limit (and only VA occurrence) at calcareous mudstone cliffs on the Banister River in Pittsylvania County, VA; it is scattered in the Piedmont of NC on a variety of rock types, including mafic meta-argillite and plagioclase-rich granite. [= FNA, K; < *A. caroliniana* Walter – RAB, C, F, G, S, W; *?* *A. heterophylla* Nuttall ex Torrey & Gray; < *A. decapetala* Arduino, misapplied (a South American species)]

Anemone canadensis Linnaeus, Canada Anemone. Mt, Pd (VA): moist forests; rare (VA Rare). May-August. Québec west to Alberta, south to MD, w. VA, s. WV, e. TN (Chester, Wofford, & Kral 1997), KY, MO, and NM. [= C, F, FNA, G, K, W]

Anemone caroliniana Walter, Prairie Anemone, Carolina Anemone. Pd (GA, NC, SC): clayey soils of post oak and blackjack oak woodlands (Iredell soils), wet meadows; rare (GA Special Concern, NC Rare, SC Rare). Ranging primarily in the Midwest, north in the Southeast to disjunct locations in c. and sc. GA, c. SC, c. TN (Chester, Wofford, & Kral 1997), and sc. NC. [= FNA, K; < *A. caroliniana* Walter – RAB, C, F, G, S, W (also see *A. berlandieri*)]

Anemone lancifolia Pursh, Lanceleaf Anemone. Pd, Mt, Cp (NC, SC, VA): rich, moist soils on slopes or in bottomlands; common (uncommon in NC and SC Mountains, rare in VA Piedmont, rare in Coastal Plain). March-May. Appalachian: s. PA south to GA (?), in and near the Appalachians. It is a somewhat larger plant than the closely related *A. quinquefolia*. [= RAB, C, F, FNA, G, K, S, W; = *A. quinquefolia* var. *lancifolia* (Pursh) Fosberg]

Anemone quinquefolia Linnaeus *var*. ***minima*** (Augustin de Candolle) Frodin ex Dutton & Keener, Tiny Anemone. Mt (NC, VA), Pd (VA): acidic forests, especially under *Alnus serrulata* along small streams; rare (NC Watch List, VA Watch List). March-May. A Southern Appalachian endemic: VA and WV south to NC and TN. See Dutton & Keener (1994). [= FNA, K; = *A. minima* Augustin de Candolle – C, F, G, W]

Anemone quinquefolia Linnaeus *var*. ***quinquefolia***, Wood Anemone. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (NC, VA): rich, moist forests, grassy balds, often abundant at high elevations; common (rare in upper Piedmont and outer Coastal Plain of NC and VA). March-May. The species is widespread in ne. North America, south to MD, IN, IL, and IA, and south in the mountains to nc. GA. [= FNA; = *A. quinquefolia* – RAB, S, W; > *A. quinquefolia* var. *quinquefolia* – C, F, K; > *A. quinquefolia* var. *bifolia* Farwell – C, G, K; > *A. quinquefolia* var. *interior* Fernald – F, G]

Anemone virginiana Linnaeus *var*. ***virginiana***, Tall Anemone, Thimbleweed. Mt, Pd, Cp (GA, NC, SC, VA): rich forests and woodlands, especially prevalent on circumneutral soils; common (uncommon in Coastal Plain, especially south of VA). May-July. The species is widespread in e. North America. Two other varieties are more northern; see discussion of var. *alba* below. [= C, FNA, K; < *A. virginiana* – RAB, W; = *A. virginiana* – F, G, S; > *A. virginiana* – S; > *A. riparia* Fernald – S, misapplied]

* *Anemone blanda* Schott & Kotschy is reported by Harvill et al. (1992) from Madison County, VA and for Fauquier County, VA by Shetler & Orli (). It is not known whether this species is established in our area. {make sure this is not a misidentified specimen of *A. berlandieri* – see FNA p. 140} [= FNA, K] {not keyed at this time}

Anemone virginiana Linnaeus var. *alba* (Oakes) A. Wood ranges south to se. NY and NJ (Kartesz 1999) and has been reported for our area. Keener, Dix, & Dutton (1996) discuss the intergrading varieties of *A. virginiana*. This variety might be

expected in n. VA, especially in river scour situations. [= C, FNA; = *A. virginiana* var. *riparia* (Fernald) Boivin – K; = *A. riparia* Fernald – F, G]

Anemonella Spach (Rue-anemone, Windflower)

A monotypic genus, a perennial herb, of temperate e. North America. *Anemonella* is often united with *Thalictrum* (as section *Anemonella*); this may prove to be the more appropriate treatment. References: Park & Festerling in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: *Anemonella thalictroides* is superficially similar to *Enemion biternatum*, but can be distinguished by the following characters: fruit an achene (vs. fruit a follicle), petaloid sepals 5-10 (vs. 5).

Anemonella thalictroides (Linnaeus) Spach, Rue-anemone, Windflower. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; common (rare in Coastal Plain). March-May. The species is widespread in e. North America. [= C, F, G; = *Thalictrum thalictroides* (Linnaeus) Eames & Boivin – RAB, FNA, K, W; = *Syndesmon thalictroides* (Linnaeus) Hoffmannsegg ex Britton – S]

Aquilegia Linnaeus 1753 (Columbine)

A genus of about 80 species, perennial herbs, of the Northern Hemisphere. References: Whittemore in FNA (1997); Munz (1946)=Z; Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: When in leaf, easily mistaken for *Thalictrum*, *Anemonella*, or *Enemion*; look for old fruits.

1 Flowers red and yellow ..... ***A. canadensis***
1 Flowers blue or purple ..... ***A. vulgaris***

Aquilegia canadensis Linnaeus, Canada Columbine, Eastern Columbine. Mt, Pd, Cp (GA, NC, SC, VA): forests, woodlands, rock outcrops, especially (though by no means entirely) on calcareous or mafic substrates; common (rare in Coastal Plain of GA, NC, and SC, where restricted to coquina limestone outcrops, Indian shell middens, and other calcareous sites). March-May. Widespread in e. North America, one of our most familiar wildflowers. Disjunct populations in the deep South, on limestone in sw. GA and FL Panhandle, have been described as *A. australis* or *A. canadensis* var. *australis*; they need additional study. [= RAB, C, FNA, G, K, S, W; > *A. canadensis* var. *canadensis* – F, Z; > *A. canadensis* var. *coccinea* (Small) Munz – F, Z; > *A. canadensis* – S; > *A. australis* Small – S; > *A. coccinea* Small – S; > *A. canadensis* var. *australis* (Small) Munz – Z]

* ***Aquilegia vulgaris*** Linnaeus, European Columbine. Pd, Mt (NC), {GA}: disturbed areas; rare, introduced from Europe. Many varieties have been named; there seems little utility in trying to apply these names to the cultivated plants rarely persistent in our area. [= RAB, C, FNA, G, K; > *A. vulgaris* varieties – Z]

Caltha Linnaeus 1753 (Marsh Marigold, Cowslip)

A genus of about 12 species, perennial herbs, of the Northern and Southern Hemispheres (sometimes further divided). References: Ford in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Caltha palustris Linnaeus *var. palustris*, Marsh Marigold, Cowslip. Mt (NC, VA), Pd, Cp (VA): bogs, wet meadows, seepage swamps, brookbanks; uncommon, rare south of VA (NC Rare). April-June. *Caltha palustris* is circumboreal, widespread in n. Eurasia and n. North America, south in e. North America to w. NC, ne. TN, WV, IN, IL, and IA. *Caltha palustris* is polymorphic; one or more additional varieties (some of them sometimes recognized as separate species) are more northern. Eastern North American material is apparently uniformly 2n=32 (Keener 1977). [= G, GW, K; < *C. palustris* – RAB, C, F, FNA, S, W; *C. palustris* var. *flabellifolia* (Pursh) Torrey & A. Gray]

Cimicifuga Wernischeck 1763 (Black-cohosh)
(see *Actaea*)

Clematis Linnaeus 1753 (Clematis, Virgin's-bower)

A genus of about 295 species, shrubs, vines, and suffruticose herbs, of Eurasia, North America, South America, Africa, Madagascar, and Oceania. W.A. Weber (1995) proposes generic status (as *Coriflora* W.A. Weber) for the leatherflowers, here treated as *Clematis*, subgenus *Viorna*. References: Pringle in FNA (1997); Moreno & Essig in FNA (1997); Essig (1990); Keener (1975); Keener (1967); Pringle (1971)=Z; Tamura in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers numerous, in compound cymose-paniculate inflorescences; sepals white; filaments glabrous; [subgenus *Clematis*].
2 Flowers perfect, with 5-10 carpels; anthers 1.5-3 mm long; leaf margins entire (rarely cleft); leaflets (3-) 5 (-7); [alien, in disturbed areas] ..... ***C. terniflora***
2 Flowers mostly polygamo-dioecious, the pistillate with 18-60 carpels; anthers 0.5-1 mm long; leaf margins coarsely toothed; leaflets 3 (*C. virginiana*) or 5-7 (*C. catesbyana*); [native, though sometimes weedy].
3 Leaves 3-foliolate; pistillate flowers with 40-60 carpels ..... ***C. virginiana***
3 Leaves (3-) 5-7-foliolate; pistillate flowers with 18-35 carpels ..... ***C. catesbyana***
1 Flowers solitary or in groups of 3's; sepals usually at least partly bluish, purplish or red; filaments pubescent.
4 Leaves (most or all of them) simple, sessile or subsessile; plant an erect herb to 7 dm tall; [subgenus *Viorna*].
5 Leaves glaucous and glabrous beneath, the uppermost commonly pinnate and tendril-bearing ..... ***C. addisonii***
5 Leaves green and usually pubescent beneath, the uppermost usually simple and entire, neither pinnate nor tendril-bearing (though occasionally lobed).
6 Leaves of flowering material soft-pubescent beneath, the largest 3-9 cm wide, with stomates on the lower surface only; leaves of fruiting material usually light green with the secondary and tertiary veins forming prominent reticulations on the upper surface.
7 Stems and leaves usually densely sericeous-woolly; sepal backs densely sericeous; mature styles white to pale yellow, sharply recurved and flexuous; [of shale barrens and calcareous woodlands of w. VA] ..... ***C. coactilis***
7 Stems and leaves villous; sepal backs moderately sericeous-pilose; mature styles yellowish-white to deep tawny, loosely spreading-recurved; [of various woodlands, fairly widespread in our area] ..... ***C. ochroleuca***
6 Leaves of flowering material glabrous to sparsely pilose beneath, the largest 2-5 cm wide (or 3.5-11 cm wide in *C. fremontii*), with stomates on both surfaces; leaves of fruiting material often dark green, either with the secondary and tertiary veins forming prominent reticulations on the upper surface (*C. fremontii*) or the upper with the secondary and tertiary veins not forming prominent reticulations on the upper surface (*C. albicoma* and *C. viticaulis*).
8 Sepal tips acuminate; achene bodies cobwebby-tomentose toward the tip; [of prairies of nw. GA] ..... ***C. fremontii***
8 Sepals tips obtuse to acute; achene bodies pilose throughout; [of shale barrens of w. VA and WV].
9 Sepal backs villous; pubescence on the summit of the achene and the base of the style spreading or reflexed; mature styles white to pale yellow, sharply recurved and flexuous ..... ***C. albicoma***
9 Sepal backs finely puberulent; pubescence on the summit of the achene and the base of the style closely appressed-ascending; mature styles tawny to deep reddish-brown, loosely spreading-recurved ..... ***C. viticaulis***
4 Leaves (most of them) compound, petiolate; plant a trailing or climbing vine, to many meters long (or erect or ascending in *C. addisonii* and *C. socialis*).
10 Sepals thin in texture, 3-5 cm long, soft-villous, neither apically recurved nor with broad, strongly crisped margins; leaves 3-foliolate; [subgenus *Atragene*] ..... ***C. occidentalis** var. **occidentalis***
10 Sepals thick in texture, 1-5 cm long, short-sericeous, apically recurved; leaves 1-11-foliolate; [subgenus *Viorna*].
11 Lower surface of leaves glaucous and glabrous (rarely with a few scattered hairs).
12 Plant an erect or ascending herb; lower leaves simple, upper leaves simple to 2-6-foliolate; [of dry limestone glades, endemic to VA] ..... ***C. addisonii***
12 Plant a climbing vine; all leaves generally compound, often 6-10-foliolate; [of various habitats, ranging from NC south].
13 Leaf blade thin in texture; secondary and tertiary veins not prominently reticulate ..... ***C. glaucophylla***
13 Leaf blade leathery in texture; secondary and tertiary veins prominently reticulate; [in the Ridge and Valley of eastern TN and westward] ..... ***[C. versicolor]***
11 Lower surface of leaves not glaucous, pubescent (rarely nearly glabrous).
14 Plants erect, to 2-3 (-5) dm tall, forming clonal patches by underground rhizomes; leaflets linear-lanceolate, averaging ca. 10× as long as wide ..... ***C. socialis***
14 Plants viny, sprawling or climbing, the stems usually over 1 m long, not rhizomatous-clonal; leaflets generally broader.
15 Leaves coriaceous, the secondary and tertiary veins forming prominent reticulations on the upper surface.
16 Leaf blade coarsely reticulate-veined, the ultimate closed areoles often > 2 mm long in the longer dimension, the tertiary and quaternary veins not prominently raised; achene beak sparsely pubescent to silky, with ascending or appressed hairs ..... ***[C. pitcheri var. pitcheri]***
16 Leaf blade finely reticulate-veined, the ultimate closed areoles mostly < 2 mm long in the longest dimension, the tertiary and quaternary veins often pominently raised; achene beak plumose, with spreading hairs ..... ***C. reticulata***
15 Leaves membranous, the secondary and tertiary veins forming faint, indistinct reticulations on the upper surface.

17 Sepals 2.5-5 cm long, the tips widely spreading, the upper margins thin, crisped, to 6 mm wide; peduncles usually without bracts ..... ***C. crispa***

17 Sepals 1.5-3 cm long, the tips either abruptly and shortly recurved (*C. viorna*) or spreading to short-reflexed (*C. morefieldii*), the upper margins not thin or crisped, to 2.5 mm wide; peduncles usually with bracts.

18 Stems with cobwebby pubescence; bracts near the base of the peduncle; sepals densely silky-pubescent on the outer surface, pinkish-green; [limestone habitats of n. AL and se. TN ..... ***[C. morefieldii]***

18 Stems glabrous to sparsely pilose; bracts well above the base of the peduncle; sepals sparsely pubescent on the outer surface, pale lavender to purple; [widespread in our area] ..... ***C. viorna***

Clematis addisonii Britton, Addison's Leatherflower. Mt (VA): dry to mesic calcareous barrens, woodlands, and forests, over dolostone (Elbrook Formation); rare (VA Rare). April-June. Endemic to w. VA (Botetourt, Montgomery, Roanoke, and Rockbridge counties). [= C, F, FNA, G, K, W; = *Viorna addisonii* (Britton) Small – S; = *Coriflora addisonii* (Britton) W.A. Weber]

Clematis albicoma Wherry, White-haired Leatherflower. Mt (VA): shale barrens; uncommon. May-June. Endemic to w. VA (Alleghany, Augusta, Bath, Botetourt, Highland, and Rockbridge counties), and e. WV. [= C, FNA, G, K, W; = *C. albicoma* var. *albicoma* – F; = *Coriflora albicoma* (Wherry) W.A. Weber]

Clematis catesbyana Pursh, Coastal Virgin's-bower, Satin-curls. Cp (GA, NC, SC), Mt (NC, VA): dunes and interdune swales with abundant shell hash, calcareous woodlands and thickets; rare (NC Watch List, VA Rare). July-September. Se. VA south to FL and west to LA, and inland especially in calcareous parts of c. TN and n. AR and s. MO, as well as in the Ridge and Valley of VA and disjunct at Linville Caverns, McDowell County, NC, where on dolomite in a geologic window in the Blue Ridge. [= C, FNA, GW, K; < *C. ligusticifolia* Nuttall – RAB, misapplied; > *C. catesbyana* – S; > *C. micrantha* Small – S]

Clematis coactilis (Fernald) Keener, Virginia White-haired Leatherflower. Mt (VA): shale barrens, shaly woodlands, dry calcareous barrens and woodlands; rare (VA Rare). May-June. Endemic to w. VA (Botetourt, Craig, Giles, Montgomery, Pulaski, Roanoke, and Wythe counties). [= C, FNA, K, W; = *C. albicoma* Wherry var. *coactilis* Fernald – F; = *Coriflora species 1*]

Clematis crispa Linnaeus, Marsh Clematis, Southern Leatherflower, Blue Jasmine. Cp, Pd (GA, NC, SC, VA), Mt (GA): marshes, swamps, disturbed wet or moist areas; common (rare in VA, rare in Piedmont) (VA Watch List). April-August. Widespread in Southeastern United States, FL to TX, north to se. VA and s. IL. [= RAB, C, F, FNA, G, GW, K, W; = *Viorna crispa* (Linnaeus) Small – S; = *Coriflora crispa* (Linnaeus) W.A. Weber]

Clematis fremontii S. Watson. Mt (GA): prairies; rare. MO, KS, and NE; disjunct in nw. GA. See Anonymous (2003) for additional information. [= FNA, K; = *Coriflora fremontii* (S. Watson) W.A. Weber]

Clematis glaucophylla Small, White-leaved Leatherflower. Mt (GA, VA?), Pd, Cp (GA): habitat in our area poorly known, the species not recently seen here, probably in dry woodlands or openings over calcareous rocks, according to RAB in "rich woods"; rare (VA Rare). May-September. Widespread in Southeastern United States, from se. TN and OK, south to FL and LA, but apparently rare and poorly known. Previous attributions of this species for NC, SC, KY, and (perhaps) VA appear to be based on misidentifications. [= RAB, C, F, FNA, G, GW, K; = *Viorna glaucophylla* (Small) Small – S; = *Coriflora glaucophylla* (Small) W.A. Weber]

Clematis occidentalis (Hornemann) Augustin de Candolle *var. **occidentalis***, Purple Clematis, Mountain Clematis. Mt (NC, VA): rocky slopes over mafic rocks (greenstone, amphibolite), known positively in NC only from Bluff Mountain, Ashe County; rare (NC Rare, VA Watch List). May-June. Var. *occidentalis* is widespread in ne. North America, from New Brunswick west to w. Ontario, south to NJ, DE, OH, nw. IL, and ne. IA, and in the mountains to w. VA and w. NC. Two other varieties occur in the Rocky Mountains. Fernald's var. *cacuminis,* published under *C. verticillaris,* described plants from the mountains of VA and NC; it is apparently merely a form based on material in early flower (Pringle 1971). [= FNA, K; < *C. verticillaris* Augustin de Candolle – RAB, G; < *C. occidentalis* – C, W; > *C. verticillaris* var. *verticillaris* – F; > *C. verticillaris* Augustin de Candolle var. *cacuminis* Fernald – F; < *Atragene americana* Sims – S]

Clematis ochroleuca Aiton, Curlyheads. Pd (GA, NC, SC, VA), Mt (GA, NC, VA), Cp (NC, SC, VA): dry woodlands and woodland borders, generally over mafic or calcareous rocks, such as diabase, gabbro, or calcareous siltstone; uncommon (rare in Mountains and Coastal Plain). April-June. Primarily Piedmont: NY south to ec. GA. [= RAB, C, F, FNA, G, K, W; = *Viorna ochroleuca* (Aiton) Small – S; = *Coriflora ochroleuca* (Aiton) W.A. Weber]

Clematis reticulata Walter. Cp (GA, SC), Pd (GA), Mt? (GA?): dry, sandy woodlands, such as longleaf pine sandhills and dry hammocks; uncommon. May-August. Se. SC south to FL, west to TX, and north in the interior to TN and AR. [= RAB, FNA, K; = *Viorna reticulata* (Walter) Small – S; = *Coriflora reticulata* (Walter) W.A. Weber]

Clematis socialis Kral, Alabama Leatherflower. Mt (GA): bottomlands; rare (US Endangered, GA Endangered). Nw. GA (Floyd Co.) and ne. AL (St. Clair and Cherokee counties). Timmerman-Erskine & Boyd (1999) report on reproductive ecology of this endangered species. [= FNA, K]

* ***Clematis terniflora*** Augustin de Candolle, Sweet Autumn Clematis, Yam-leaved Clematis. Mt (NC, VA), Pd, Cp (GA, NC, SC, VA): disturbed areas; uncommon, introduced from e. Asia (Japan, China, Korea). July-September. [= C, FNA, GW, K, W; *? C. dioscoreifolia* Léveillé & Vaniot – RAB; > *C. dioscoreifolia* Léveillé & Vaniot var. *robusta* Carrière & Rehder – F; *? C. paniculata* Thunberg – S; *? C. maximowicziana* Franchet & Savatier]

Clematis viorna Linnaeus, Northern Leatherflower, Vase-vine. Mt, Pd, Cp (GA, NC, SC, VA): mesic forests, woodlands, thickets, especially over mafic rocks; common (rare in Coastal Plain south of VA). May-September. Widespread in

Southeastern United States, north to PA, IL, and MO. [= RAB, C, F, FNA, G, K, W; > *Viorna viorna* (Linnaeus) Small – S; > *Viorna beadlei* Small – S; > *Viorna flaccida* (Small) Small – S; > *Coriflora viorna* (Linnaeus) W.A. Weber; > *Coriflora beadlei* (Small) W.A. Weber]

Clematis virginiana Linnaeus, Virgin's-bower. Mt, Pd, Cp (GA, NC, SC, VA): moist forests, thickets, and openings; common (rare in Coastal Plain south of VA). July-September. Widespread in e. North America. Vegetatively, this species can be distinguished from *C. viorna* and *C. crispa* (the other common and widespread species in our area) by its leaves with three relatively symmetrical leaflets (vs. leaves with 3-many irregular leaflets). [= RAB, C, F, FNA, GW, K, S, W; *? C. virginiana* var. *virginiana* – G]

Clematis viticaulis Steele, Millboro Leatherflower. Mt (VA): shale barrens and shaly woodlands; rare (US Species of Concern, VA Rare). May-June. Endemic to w. VA (Augusta, Bath, and Rockbridge counties). [= C, F, FNA, G, K, W; = *Coriflora viticaulis* (Steele) W.A. Weber]

Clematis morefieldii Kral, Morefield's Leatherflower. Limestone habitats. Endemic to nc. AL and se. TN. See Estes & Fleming (2006) for additional information. [= FNA, K; = *Coriflora morefieldii* (Kral) W.A. Weber]

Clematis pitcheri Torrey & A. Gray var. *pitcheri,* Bellflower Leatherflower, ranges east to nc. TN (Chester, Wofford, & Kral 1997) and KY (Kartesz 1999). [= FNA, K; < *Viorna pitcheri* (Torrey & A. Gray) Britton – S]

Clematis versicolor Small ex Rydberg, Pale Leatherflower. Sc. KY, c. TN, nc. AL; Ozarks and Ouachitas of s. MO, n. and c. AR, and e. OK. [= FNA, K; *Viorna versicolor* (Small ex Rydberg) Small – S; = *Coriflora versicolor* (Small ex Rydberg) W.A. Weber]

* *Clematis viticella* Linnaeus, native to Europe, has been reported for TN (Pringle in FNA 1997). [= FNA, K; *Viticella viticella* (Linnaeus) Small] {not keyed at this time}

Other species of *Clematis*, of Asian or European origin, are cultivated as ornamentals.

Consolida (Augustin de Candolle) S.F. Gray 1821 (Annual Larkspur)

A genus of about 43 species, annual herbs, of Eurasia. References: Warnock in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

1 Lower bracts of the inflorescence with 5 or more lobes; inflorescence an elongate or compound raceme; pistil densely pubescent; follicle 12-25 mm long..... ***C. ajacis***
1 Lower bracts of the inflorescence unlobed or the lowermost with 3 lobes; inflorescence a corymbiform raceme; pistil glabrous; follicle 8-17 mm long..... ***C. regalis***

* ***Consolida ajacis*** (Linnaeus) Schur, Rocket Larkspur. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): roadsides, fields, waste places, disturbed ground; common, introduced from Europe. [= FNA, K; = *Delphinium ajacis* Linnaeus – RAB, F, G, S; = *Delphinium ambiguum* Linnaeus – C; = *Consolida ambigua* (Linnaeus) P.W. Ball & Heywood in Heywood & P.W. Ball – W]

* ***Consolida regalis*** S.F. Gray, Rocket Larkspur, Forking Larkspur. Cp (NC): disturbed areas; rare, introduced from Europe. Also known from DC and to be expected in VA. [= FNA, K; = *Delphinium consolida* Linnaeus – C, G, S]

* *Consolida pubescens* (de Candolle) Soó is naturalized in s. TN (Warnock in FNA 1997). [= FNA, K] {not keyed at this time}

Coptis Salisbury 1807 (Goldthread)

A genus of about 15 species, perennial herbs, of boreal to temperate e. Asia and North America. References: Ford in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Coptis trifolia (Linnaeus) Salisbury *var. **groenlandica*** (Oeder) Fassett, Goldthread, Goldenroot. Mt (NC): bogs; rare (NC Rare). May-June. The species ranges from Greenland west to AK, south to NJ, nw. NC, n. IN, IA, and British Columbia; and in e. Asia. Var. *groenlandica* is the variety in e. North America, northeast to Greenland, and in southern parts of nw. North America; var. *trifolia* is Alaskan and e. Asian. Whether the varieties are worth recognition is somewhat questionable. *Coptis* had been reported for NC by many floras (for instance, C, F, G, and S), but the documentation was unknown; its presence in NC has now been confirmed. The species is distinctive, with neatly trifoliolate leaves, small white flowers on scapes, and yellow roots. [= C; = *C. groenlandica* (Oeder) Fernald – F; = *C. trifolia* ssp. *groenlandica* (Oeder) Hultén – G; < *C. trifolia* – FNA, K, S]

Delphinium Linnaeus 1753 (Larkspur)
(also see *Consolida*)

A genus of about 320 species, herbs, of Eurasia, Africa, and North America. References: Warnock in FNA (1997); Kral (1976)=Z; Warnock 1995; Tamura in Kubitzki, Rohwer, & Bittrich (1993).

1 Follicles divergent; raceme 0.5-2 (-3) dm long; flowering plants 2-9 (-13) dm tall; flowering March-May; [section *Diedropetala*; subsection *Grumosa*].
  2 Stems (4.5-) 6-9 (-13) dm tall; flowers (sepals) deep blue; lower stem pubescent; [in sunny or semi-sunny situations, apparently endemic to n. AL] ..... ***D. alabamicum***
  2 Stems 2-6 dm tall; flowers (sepals) deep bluish purple, pink, or white; lower stem glabrous or nearly so; [usually in deep shade, widespread in our area]..... ***D. tricorne***
1 Follicles erect; raceme > 3 dm long; flowering plants 5-20 dm tall; flowering May-September.
  3 Seeds wing-margined, the surfaces smooth; stem below the inflorescence glabrous; flowering plants 8-20 dm tall; flowering July-September; [section *Diedropetala*; subsection *Exaltata*] ..... ***D. exaltatum***
  3 Seeds with prominent transverse ridges; stem below the inflorescence pubescent; flowering plants 2-10 (-15) dm tall; flowering May-July; [section *Diedropetala*; subsection *Virescens*].
    4 Basal leaves usually present at anthesis; flowers (sepals) white; stems 2-4 (-7) dm tall; ultimate segments of midcauline leaves 5-12 in number, 2-4 mm wide..... ***D. carolinianum ssp. calciphilum***
    4 Basal leaves absent at anthesis; flowers (sepals) blue to purple (rarely white); stems (3-) 6-10 (-15) dm tall; ultimate segments of midcauline leaves 12-25 in number, 0.5-1.5 mm wide..... ***D. carolinianum ssp. carolinianum***

Delphinium alabamicum Kral, Alabama Larkspur. Mt (GA): limestone prairies and glades; rare. Endemic to c. and n. AL and nw. GA. [= FNA, K]

Delphinium carolinianum Walter ***ssp. calciphilum*** M.J. Warnock, Glade Larkspur. Mt (GA): limestone glades; rare (GA Special Concern). KY south through e. and c. TN to ne. AL and nw. GA. [= FNA, K; < ***D. virescens*** Nuttall – C, G; < ***D. carolinianum*** var. ***carolinianum*** – F; < ***D. carolinianum*** – S; < ***D. virescens*** var. ***virescens*** – Z; < ***D. carolinianum*** Walter ssp. ***virescens*** (Nuttall) R.E. Brooks]

Delphinium carolinianum Walter ***ssp. carolinianum***, Prairie Larkspur, Carolina Larkspur, Blue Larkspur. Pd, Cp (GA, SC): rocky woodlands, granite outcrops, Altamaha Grit outcrops, blackland prairies, moist sandy woodlands associated with longleaf pine; rare (GA Watch List, SC Rare). May-July. IL west to MO, south to LA and TX, with disjunct occurrences eastward in SC, GA, TN, and MS. The flowers are a pale to medium blue. This species has been reported for NC (by C) and "north to Va." (by F and S). I know of no documentation for its past or present occurrence in NC or VA, but its presence in those states is plausible. [= FNA, K; = ***D. carolinianum*** Walter – C, G, Z; < ***D. carolinianum*** var. ***carolinianum*** – F; < ***D. carolinianum*** – S]

Delphinium exaltatum Aiton, Tall Larkspur. Mt (NC, VA), Pd (NC): dry to moist soils over calcareous (such as dolostone, especially Elbrook Formation) or mafic rocks (such as amphibolite, metagabbro, greenstone, and diabase), usually in the open (as grassy balds) or on forest edges in partial sun; rare (US Species of Concern, NC Endangered, VA Watch List). July (low elevations) - September (high elevations). Sw. PA and OH southwest to MO and e. TN, and south to the Mountains of VA and the Mountains and Piedmont of NC. The flowers are a pale to medium blue. [= RAB, C, F, FNA, G, K, S, W, Z]

Delphinium tricorne Michaux, Dwarf Larkspur. Mt (GA, NC, {SC}, VA), Pd, Cp (NC, VA): rich, moist forests, especially over mafic or calcareous rocks, less commonly (as along the Roanoke River in ne. NC) on very fertile alluvial deposits; uncommon (rare in Piedmont and Coastal Plain) (GA Special Concern). March-May. Sw. PA and MN south to NC, nw. GA, AL, and OK. The flowers are variable in color, usually a deep bluish violet, but ranging through pink to pure white. [= RAB, C, F, FNA, G, K, S, W, Z]

Enemion Rafinesque 1820 (Isopyrum)

A genus of about 6 species, perennial herbs, of temperate North America and e. Asia. The issue of the separation of the genus *Enemion* from *Isopyrum* remains controversial; I here follow Keener (1977). References: Ford in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Keener (1977).

Identification notes: *Enemion* is superficially similar to the much more common *Anemonella thalictroides*, with which it sometimes grows, but can be distinguished by the following characters: fruit a follicle (vs. fruit an achene), petaloid sepals 5 (vs. 5-10, usually some at least of the flowers on a plant with 6 or more).

Enemion biternatum Rafinesque, Isopyrum, False Rue-anemone. Pd (NC, SC, VA), Cp (NC): rich forests, either on natural levees with very nutrient rich sediments or on slopes with underlying mafic rocks; rare (NC Rare, VA Rare, SC Rare). March-April; May. Fairly widespread in e. North America, primarily west of the Appalachians, from w. NY, s. Ontario and MN south to TN and AR; disjunct in the Piedmont and Coastal Plain of VA, NC, and SC and the Coastal Plain of FL. [= FNA, K; = *Isopyrum biternatum* (Rafinesque) Torrey & Gray – RAB, C, F, G, S]

Eranthis Salisbury 1808 (Winter-aconite)

A genus of about 8 species, perennial herbs, of Europe and Asia. References: Parfitt in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

* ***Eranthis hyemalis*** (Linnaeus) Salisbury, Winter-aconite. Cp (VA), Pd (NC): cultivated in gardens, rarely persisting or escaped; rare, native of Eurasia. January-March. [= F, FNA, G, K]

Ficaria Schaeffer 1760 (Lesser Celandine)

Best treated as a genus separate from *Ranunculus*, based on morphology and molecular phylogenetics; *Myosurus* is more closely related to *Ranunculus* than is *Ficaria* (Paun et al. 2005). References: Paun et al. (2005).

* ***Ficaria verna*** Hudson, Lesser Celandine, Pilewort. Pd (NC, VA), Cp (VA): disturbed rich forests and bottomlands, mesic suburban forests, lawns, naturalized locally from horticultural plantings; rare, introduced from Europe. First reported for NC by Krings et al. (2005). [= *Ranunculus ficaria* Linnaeus – C, F, FNA, G, Y; > *R. ficaria* var. *bulbifera* Marsden-Jones – K]

Helleborus Linnaeus 1753 (Hellebore, Christmas-rose)

A genus of about 21 species, perennial herbs, of Europe and Asia. References: Ford in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

* ***Helleborus viridis*** Aiton, Green Hellebore, Christmas-rose. Mt (VA), Pd (NC): cultivated in gardens, seeding down, rarely escaped or persistent; rare, introduced from Europe. December-May. This plant has fallen somewhat out of horticultural favor. [= C, F, FNA, G, K, S]

Hepatica
(see *Anemone*)

Isopyrum
(see *Enemion*)

Myosurus Linnaeus 1753 (Mousetail)

A genus of about 15 species, annual scapose herbs, nearly cosmopolitan (lacking in e. Asia and tropical regions), with a center of diversity in w. North America. References: Whittemore in FNA (1997); Campbell (1952)=Z; Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Myosurus minimus Linnaeus, Mousetail. Pd (NC, SC, VA), Cp (NC, VA), {GA}: usually in disturbed areas, such as fields in floodplains; uncommon. March-May. The species is circumboreal and also found in various places in the Southern Hemisphere. Widely distributed in North America, Eurasia, and the Southern Hemisphere. A number of subspecies have been described; if these are recognized, our material is the typic ssp. *minimus*. The pre-Columbian occurrence of *Myosurus* in our area is uncertain; it may well be an alien. [= RAB, C, F, FNA, G, GW, K, S; > *M. minimus* ssp. *minimus* – Z]

Nigella Linnaeus 1753 (Fennel-flower)

A genus of about 20 species, annual herbs, of Europe, n. Africa, and Asia. References: Ford in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

* ***Nigella damascena*** Linnaeus, Love-in-a-mist, Fennel-flower. Mt (VA): cultivated in gardens, rarely persistent or escaping; rare, native of s. Europe. [= C, F, FNA, G, K]

Ranunculus Linnaeus 1753 (Buttercup, Crowfoot, Spearwort)
(also see *Ficaria*)

A genus of about 600 species, perennial and annual herbs, nearly cosmopolitan (most diverse in temperate and boreal regions of the Northern Hemisphere). The seven subgenera are distinctive and have often been recognized at the generic level; three are represented in our area. Distributions given in many works (including Harvill et al. 1992) for the *R. hispidus* complex are apparently garbled by differences in taxonomic concepts. I am here following Duncan's (1980) taxonomic entities, though recognizing some of his varieties as species. References: Whittemore in FNA (1997); Duncan (1980)=Z; Keener (1976)=Y; Keener & Hoot (1987)=X; Paun et al. (2005); Tamura in Kubitzki, Rohwer, & Bittrich (1993). Keys adapted, in part, from C, GW, X, Y, and Z.

Identification notes: Mature or relatively mature achenes are necessary for the identification of some species. Shape and pubescence of the receptacle is also a frequently used taxonomic character, best judged by stripping off the achenes.

1 Petals dull, white; achenes roughly transverse-ridged; plants aquatic, the leaves finely dissected to merely shallowly lobed; [native, occurring in circumneutral waters]; [subgenus *Batrachium*] ..... **Key A**
1 Petals shiny, yellow (sometimes fading or bleaching to whitish); achenes usually not transverse-ridged (though often variously ornamented); plants aquatic or terrestrial, the leaves various; [native or introduced, occurring in various habitats]; [subgenus *Ranunculus*].
  2 Cauline leaves all simple, mostly lanceolate, either entire, denticulate, or serrate, but not lobed or deeply divided; [native, occurring in marshes or other wetlands]; [section *Flammula*] ..... **Key B**
  2 Cauline leaves (at least most them) lobed, divided, or compound; [native or introduced, occurring in various habitats].
    3 Basal leaves not divided, mostly cordate, reniform, or ovate (and merely toothed), distinctly unlike the deeply divided cauline leaves; achenes turgid, ovoid, 1-2.5 mm long, without pronounced marginal rims; petals 1.5-3 mm long; [native, occurring in mesic to dry forests and woodlands, and also (especially *R. abortivus*) weedy]; [section *Epirotes*] ..... **Key C**
    3 Basal leaves mostly deeply parted or compound, the cauline leaves generally similar but smaller and often less divided; achenes various, 1-5 mm long, with or without pronounced marginal rims; petals 2-15 mm long; [native or introduced, occurring in various habitats].
      4 Achenes markedly spiny, papillose, or tuberculate (the protuberances few and small in *R. sardous*, keyed both here and below); [introduced, usually weedy and in disturbed habitats]; [section *Echinella*] ..... **Key D**
      4 Achenes smooth (rarely pubescent or papillose); [native or introduced, occurring in various habitats].
        5 Achenes turgid, 1-1.5 (-2) mm long, the marginal rims scarcely or not at all evident, the achenes corky-thickened at their bases for dispersal by floating; [of mucky marshes or ditches, or aquatic in pools]; [section *Hecatonia*] ..... **Key E**
        5 Achenes moderately turgid or flattened, 1.5-3.8 mm long, with a pronounced (at 10× or more) marginal rim appearing as a differentiated border or flange, more-or-less flattened, and separated from the central bulge of the achene by a concavity or even a groove, the achenes not corky-thickened at their bases; [of mostly terrestrial or in bottomland forests]; [section *Ranunculus*] ..... **Key F**

Key A – subgenus *Batrachium* (White Water Crowfoots)

1 Leaves floating, shallowly lobed; receptacles glabrous ..... ***R. hederaceus***
1 Leaves submersed (or stranded by falling water levels), dissected into filiform segments; receptacles hispid.
  2 Leaves firm (not collapsing when removed from water); free petioles much shorter than the dilated stipular base; leaves usually much shorter than the internode above; achene beaks 0.7-1.5 mm long ..... ***R. longirostris***
  2 Leaves flaccid (collapsing when removed from water); free petioles about as long as the dilated stipular base; leaves usually about as long as the internode above; achene beaks 0.1-0.3 (-0.5) mm long ..... ***R. trichophyllus*** *var*. ***trichophyllus***

Key B – subgenus *Ranunculus*, section *Flammula* (simple-leaved buttercups) (Spearworts)

1 Petals 1-3 (-5), 1-2 mm long, about as long as the sepals; annual ..... ***R. pusillus***
1 Petals (4-) 5-9, distinctly longer than the sepals; annual or perennial.
  2 Cauline leaves 6-14 cm long; sepals 4-7 mm long; achene beak 1.0-1.3 mm long ..... ***R. ambigens***
  2 Cauline leaves 1-6 cm long; sepals 1.5-3 mm long; achene beak 0.1-0.3 mm long ..... ***R. laxicaulis***

Key C – subgenus *Ranunculus*, section *Epirotes*

1 Achene beaks (0.6-) 0.7-1.0 mm long; petals < ½ as long as the sepals; sepals hirsute ..... ***R. allegheniensis***
1 Achene beaks 0.1-0.3 mm long; petals > ½ as long as the sepals; sepals glabrous to sparsely long-villous.
  2 Leaves and stems glabrous or nearly so (or the upper stem puberulent); basal leaves 1-6 (-10) cm wide, reniform to cordate at the base; roots usually all filiform ..... ***R. abortivus***
  2 Leaves and stems villous, at least toward the base; basal leaves 1-2.5 cm wide, truncate to cuneate (rarely cordate) at the base; roots sometimes in part fusiform-thickened ..... ***R. micranthus***

Key D – subgenus *Ranunculus*, section *Echinella*

1 Flowers sessile, opposite the petioles; sepals 3; petals 3 ..... ***R. platensis***
1 Flowers pedunculate, axillary; sepals usually 5; petals usually 5.

2 Petals 1-2 (-3) mm long; receptacles glabrous ..... ***R. parviflorus***
2 Petals (3-) 4-12 mm long; receptacles pubescent.
3 Achenes bodies 1.5-3 mm long, 30-60 per head; achene beak ca. 0.5 mm long; achene with conical protuberances or short spines, to 0.16 mm long; achene beak 0.1-0.5 mm long.
4 Achene with a few conical protuberances; petals 5-12 mm long; plant sparsely to densely hirsute; achenes 30-40 per head ..... ***R. sardous***
4 Achene with numerous short spines; petals (3-) 4-5 mm long; plant with a few, widely scattered, long hairs; achenes 40-60 per head ..... ***R. trilobus***
3 Achenes 3-5 mm long, 4-20 per head; achene beak 1.5-3.0 mm long; achene conspicuously spiny, the longer spines mostly 0.30-0.85 mm long.
5 Achenes 4-9 per head, in a single whorl; achene margins spiny, as also the faces; beak of the achene 2.5-3 mm long ..... ***R. arvensis***
5 Achenes 10-20 per head, in several whorls; achene margins smooth, the spines restricted to the faces; beak of the achene 1.5-2.5 mm long ..... ***R. muricatus***

Key E – subgenus *Ranunculus*, section *Hecatonia*

1 Petals 6-14 mm long; achene body 1.3-2.5 mm long, the beak 0.7-1.5 mm long; plants with submersed leaves dissected into numerous linear segments; [aquatic] ..... ***R. flabellaris***
1 Petals 2-4 (-5) mm long; achene body 0.8-1.2 mm long, the beak 0-0.1 mm long; plants without distinctive, dissected submersed leaves; [terrestrial or semi-aquatic] ..... ***R. sceleratus*** *var*. ***sceleratus***

Key F – subgenus *Ranunculus*, section *Ranunculus*

1 Petals 2-6 mm long, about as long as the sepals; achene beak strongly hooked, 0.5-1.2 mm long ..... ***R. recurvatus*** *var*. ***recurvatus***
1 Petals 5-15 mm long, (1.3-) 1.5× or more as long as the sepals; achene beak straight, flexuous, slightly curved, or hooked, 0.2-3.0 mm long.
2 Achene beaks recurved or hooked, the stigmatic surface elongate, along the upper (curved) side of the style (beak) (visible at 10×); [introduced, usually weedy in disturbed habitats].
3 Stems repent, rooting at the nodes. ..... ***R. repens***
3 Stems erect, not rooting at the nodes.
4 Petals 5-8 mm long; plant a soft-based annual; achene face usually with at least a few conical protuberances (if examined carefully at 10× or more) ..... ***R. sardous*** **[of section *Echinella*]**
4 Petals 8-16 mm long; plant a cormose or hard-based perennial; achene face truly smooth.
5 Sepals spreading; stems not cormose-thickened at the base; larger leaves appearing (3-) 5-parted, all of the segments sessile; plant to 12 dm tall ..... ***R. acris***
5 Sepals tightly reflexed; stems cormose-thickened at the base; larger leaves pinnately 3-5-parted, the terminal segment long-stalked; plant to 6 dm tall ..... ***R. bulbosus***
2 Achene beaks straight or slightly curved, flexuous, the stigmatic surface limited to the tip of the style (beak); [native, normally in more-or-less natural habitats].
6 Larger leaves mostly pinnately 3-7-foliolate, the terminal leaflet larger than the lateral leaflets, the leaflets (especially the terminal) often further cleft or lobed, the blade usually longer than wide in outline, the segments often rather narrow; naked receptacle conical, tapering gradually to the apex (the region of staminal attachment as thick as the region of gynoecial attachment, which tapers through all or nearly all of its length, best seen by stripping off the achenes); rhizome regenerating totally each growing season, producing both fibrous and (at the end of the growing season) tuberous roots (1.3-4.9 mm in diameter); [rare in our area, in calcareous, mafic, or ultramafic sites with prairie affinities] ..... ***R. fascicularis***
6 Larger leaves mostly palmately 3-foliolate, the terminal leaflet about the same size as the lateral leaflets, the leaflets sometimes further cleft or lobed, the blade usually as wide as long or wider; naked receptacle clavate or ellipsoid (the region of staminal attachment distinctly narrower than the region of gynoecial attachment, thus forming a waist, from which the gynoecial region expands and then tapers to the apex); rhizome regenerated partially each growing season, producing uniform, fibrous roots (up to 3.0 mm in diameter); leaves usually simple and ovate, or trifoliate with ovate leaflets; [collectively widespread in our area].
7 Achenes wide-margined (wider portions of the margin 1/4 to 2/3 as wide as the achene body); plants colonial, sending out stolons (by the time of fruiting) which root at the nodes, forming new plants; sepals reflexed at full anthesis ..... ***R. carolinianus***
7 Achenes narrow-margined (wider portions of the margin 1/8 or less as wide as the achene body); plants usually erect or repent by the time of fruiting (if repent sometimes forming adventitious roots at the nodes, but not generally developing new plants); sepals spreading at full anthesis (sometimes reflexed later).
8 Plants repent; aerial shoots 50-80 (-91) cm long at time of fruiting; [generally of swamps and marshes] ..... ***R. caricetorum***

8 Plants erect; aerial shoots 14-45 (-60) cm long at time of fruiting; [generally of upland habitats]..... ..... ***R. hispidus***

Ranunculus abortivus Linnaeus, Kidneyleaf Buttercup. Mt, Pd, Cp (GA, NC, SC, VA): low fields, disturbed areas, bottomlands, lawns, roadsides; common (uncommon in Coastal Plain south of VA). (February-) March-June. Labrador to AK, south to FL, TX, and CO. A common weed in shady and sunny places. [= RAB, FNA, GW, K, S, W, Y; > ***R. abortivus*** var. *abortivus* – C, F, G; > ***R. abortivus*** var. *indivisus* Fernald – F]

* ***Ranunculus acris*** Linnaeus, Tall Buttercup, Bitter Buttercup. Mt, Pd (GA, NC, VA), Cp (NC, SC, VA): pastures, fields, roadsides, disturbed areas; common (uncommon in Piedmont, rare in Coastal Plain), introduced from Europe. May-August. [= RAB, C, F, FNA, G, GW, S, W, Y; > ***R. acris*** var. *acris* – K]

Ranunculus allegheniensis Britton, Allegheny Buttercup, Mountain Crowfoot. Mt (NC, VA, SC?), Pd (VA): cove forests, rich forested slopes; uncommon (rare in Piedmont). April-June. MA west to OH, south to w. NC and ne. TN, an Appalachian endemic. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Ranunculus ambigens S. Watson, Water-plantain Crowfoot, Water-plantain Spearwort. Cp, Pd (NC, VA), Mt (VA): marshes; rare (NC Rare, VA Watch List). April-June. ME west to MN, south to VA, NC, ne. TN, w. TN, and LA. [= RAB, C, F, FNA, G, GW, K, W, Y; = ***R. obtusiusculus*** Rafinesque – S]

* ***Ranunculus arvensis*** Linnaeus, Corn Crowfoot, Hungerweed. Pd (GA, NC, SC), Mt (NC): fields, disturbed areas; rare, introduced from Europe. April-June. [= C, FNA, G, GW, K, X, Y; > ***R. arvensis*** var. *arvensis* – RAB; > ***R. arvensis*** var. *tuberculatus* (Augustin de Candolle) Koch – RAB]

* ***Ranunculus bulbosus*** Linnaeus, Bulbous Buttercup. Cp (NC, SC, VA), Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (rare in SC), introduced from Europe. April-June. [= RAB, C, FNA, GW, K, S, W, Y; > ***R. bulbosus*** var. *bulbosus* – F; > ***R. bulbosus*** var. *dissectus* Barbey – F; > ***R. bulbosus*** var. *valdepubens* (Jordan) Briquet – F]

Ranunculus caricetorum Greene, Northern Swamp Buttercup, Marsh Buttercup. Pd, Cp, Mt (VA): swampy forests and marshes; rare. April-August. New Brunswick west to s. Manitoba, south to NJ, n. VA, s. OH, and s. MO; reports of this species further south are probably in error. This species is octoploid (n = 32); the remainder of the ***R. hispidus*** complex is tetraploid. [= ***R. hispidus*** Michaux var. *caricetorum* (Greene) T. Duncan – C, FNA, K, Z; = ***R. septentrionalis*** Poiret – GW, W, Y, misapplied; > ***R. septentrionalis*** var. *caricetorum* (Greene) Fernald – F, G; > ***R. septentrionalis*** var. *pterocarpus* Linnaeus Benson – G; > ***R. septentrionalis*** var. *septentrionalis* – F, G]

Ranunculus carolinianus Augustin de Candolle. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, wet woodlands, open marshy wetlands; uncommon. April-August. NY west to s. Ontario, WI, and MN, south to n. peninsular FL, LA, and e. TX. This species is tetraploid (n = 16). [= RAB, F, G, GW, W, Y; = ***R. hispidus*** Michaux var. *nitidus* (Chapman) T. Duncan – C, FNA, K, Z; > ***R. palmatus*** Elliott – S; > ***R. septentrionalis*** – S]

Ranunculus fascicularis Muhlenberg ex Bigelow, Thick-root Buttercup, Early Buttercup. Pd (GA, NC, SC, VA), Mt (GA, NC, VA), Cp (GA): wet flats with prairie affinities (with *Camassia scilloides*), rocky barrens and glades over mafic rocks (such as gabbro or diabase), ultramafic outcrop barrens (over olivine), limestone barrens; rare (NC Watch List, SC Rare). March-June. MA and NY west to s. Ontario, MN, and se. Manitoba, south to c. NC, nc. SC, sw. GA, and e. TX; occurrences which are both south of New England and east of the Appalachians are scattered and disjunct. This species is tetraploid (n = 16). [= C, FNA, GW, K, S, W, Y, Z; > ***R. fascicularis*** var. *fascicularis* – F, G]

Ranunculus flabellaris Rafinesque, Yellow Water Crowfoot. Cp (NC, VA): pools in floodplains of small stream swamps, other stagnant or slowly moving waters; rare (NC Rare, VA Watch List). March-May. ME west to British Columbia, south to ne. NC, KY, IN, IL, LA, OK, UT, and CA. [= RAB, C, F, FNA, G, GW, K, Y; = ***R. delphiniifolius*** Torrey ex Eaton – S]

Ranunculus hederaceus Linnaeus, Ivy-leaved Water Crowfoot. Longstalked Crowfoot. Cp (NC, SC, VA), Mt (VA): coastal brackish marshes, other circumneutral marshes; rare (NC Rare, VA Rare). April-June. Se. PA south to SC on the Coastal Plain; disjunct in Newfoundland; also in Europe. [= RAB, C, F, FNA, G, GW, K, Y]

Ranunculus hispidus Michaux, Hispid Buttercup, Hairy Buttercup. Mt, Pd (GA, NC, SC, VA), Cp (GA, VA): rich moist forests, creekbanks, mesic to dry woodlands and forests, bottomlands; common. March-June. MA and VT west to s. Ontario, n. IL, and se. KS, south to c. NC, s. GA, s. AL, AR, and ne. OK. This species is tetraploid (n = 16). [= RAB, GW, S, W, Y; = ***R. hispidus*** var. *hispidus* – C, FNA, K, Z; > ***R. hispidus*** var. *hispidus* – F, G; > ***R. hispidus*** var. *falsus* Fernald – F; > ***R. hispidus*** var. *marilandicus* (Poiret) L. Benson – G; > ***R. hispidus*** var. *eurylobus* L. Benson – F, G]

Ranunculus laxicaulis (Torrey & A. Gray) Darby, Coastal Plain Spearwort. Cp (GA, NC, SC, VA), Pd (GA): marshes; rare (NC Watch List, VA Rare). April-June. DE south to sw. GA, west to TX, inland in the interior to w. TN, s. IN, s. IL, MO, and KS, almost entirely on the southeastern Coastal Plain. *R. subcordatus* E.O. Beal, allegedly endemic to NC, is conspecific with ***R. laxicaulis***. [= RAB, F, FNA, G, K, W; *? R. texensis* Engelmann – C; > ***R. laxicaulis*** – GW, Y; > ***R. subcordatus*** E.O. Beal – GW, Y; *? R. oblongifolius* Elliott – S, misapplied]

Ranunculus longirostris Godron, White Water Crowfoot. Mt, Pd (VA): submerged in streams; rare (VA Rare). Sw. Québec west to Saskatchewan, ID, and OR, south to DE, VA, KY, nc. TN, AL, AR, TX, NM, and AZ. [= C, F, GW, K, Y; < ***R. aquatilis*** Linnaeus var. *diffusus* – FNA; *? R. circinatus* Sibthorp – G; *? Batrachium trichophyllum* – S, misapplied]

Ranunculus micranthus Nuttall, Small-flowered Buttercup, Rock Buttercup. Pd (NC, VA), Mt, Cp (VA), {GA?}: rich forests; uncommon (rare south of VA) (NC Rare). April-June. MA west to SD, south to e. VA, c. NC, sc. TN, WV, OH, and OK. [= RAB, C, FNA, G, GW, K, S, W, Y; > ***R. micranthus*** var. *micranthus* – F; > ***R. micranthus*** var. *delitescens* (Greene) Fernald – F]

* ***Ranunculus muricatus*** Linnaeus. Pd (GA, SC), Cp (SC): ditches and marshes; rare, introduced from Europe. April-June. [= RAB, FNA, GW, K, S, X, Y]

* ***Ranunculus parviflorus*** Linnaeus, Small-flowered Buttercup, Stickseed Crowfoot. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas; common (rare in Mountains), introduced from Europe. February-July. [= RAB, C, F, FNA, G, GW, K, S, W, X, Y]

* ***Ranunculus platensis*** Sprengel. Pd (NC), Cp (GA): lawns, ditches; rare, introduced from South America. [= FNA, GW, K, X, Y]

Ranunculus pusillus Poiret, Low Spearwort. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, VA): marshes, ditches, other wet habitats; common (uncommon in Mountains). April-June. S. NY south to FL, west to TX, north in the interior to OH, IN, and MO. [= RAB, C, F, FNA, G, GW, S, W, Y; > *R. pusillus* var. *pusillus* – K]

Ranunculus recurvatus Poiret *var.* ***recurvatus***, Hooked Buttercup, Hooked Crowfoot. Mt, Pd, Cp (GA, NC, SC, VA): bottomland forests, cove forests, swamps, mesic slope forests; common. April-June. ME and Québec west to MN, south to sw. GA, MS, and OK. Var. *tropicus* (Grisebach) Fawcett & Rendle occurs in Puerto Rico {and elsewhere?}. [= FNA, K; < *R. recurvatus* – RAB, C, G, GW, S, W, Y; > *R. recurvatus* var. *recurvatus* – F; > *R. recurvatus* var. *adpressipilis* Weatherby – F]

* ***Ranunculus repens*** Linnaeus, Creeping Buttercup, Meg-many-feet. Mt, Pd (NC, VA), Cp (NC, SC, VA): low meadows, disturbed areas; uncommon, introduced from Europe. [= RAB, FNA, G, GW, K, S, W, Y; > *R. repens* var. *repens* – C, F; > *R. repens* var. *degeneratus* Schur – C; > *R. repens* var. *glabratus* Augustin de Candolle – C, F; > *R. repens* var. *pleniflorus* Fernald – F]

* ***Ranunculus sardous*** Crantz, Sardinian Buttercup, Hairy Buttercup. Cp, Pd (GA, NC, SC, VA), Mt (GA, VA): low fields, disturbed areas; uncommon, introduced from Europe. April-July. [= RAB, C, F, FNA, G, GW, K, X, Y]

Ranunculus sceleratus Linnaeus *var.* ***sceleratus***, Cursed Buttercup, Celery-leaf Crowfoot. Cp (GA, NC, SC, VA), Pd (NC, VA), Mt (VA): marshes, ditches, and stream margins; common (uncommon south of VA). June-September. The species is circumboreal, ranging south in North America (partly introduced, at least southward) to n. FL, LA, TX, and CA. Var. *sceleratus* is widespread and the only variety in e. North America; var. *multifidus* occurs in w. North America. The epithet is often misspelled "*scleratus*." [= C, F, FNA, G, K; < *R. sceleratus* – RAB, GW, S, W, Y]

Ranunculus trichophyllus Chaix *var.* ***trichophyllus***, White Water Crowfoot. Cp, Mt, Pd (VA), {NC?}: submerged in water of acidic streams; rare (NC Rare, VA Rare). *R. trichophyllus* is circumboreal, ranging south in North America to NJ, VA, nc. TN, PA, MN, SD, NM, AZ, and CA. Var. *trichophyllus* ranges south to the southern limit of the species. This taxon was reported as far south as NC by G and S; the documentation is unknown and the species was not treated by RAB. The more northern var. *calvescens* W. Drew, with the receptacle glabrous or with a few scattered hairs (vs. hirsute with tufted hairs), ranges south to PA and MI. [= C, F, K; < *R. aquatilis* Linnaeus var. *diffusus* Withering – FNA; < *R. trichophyllus* – Y; *R. aquatilis* Linnaeus var. *capillaceus* (Thuill.) Augustin de Candolle – G; *Batrachium flaccidum* (Persoon) Ruprecht – S]

* ***Ranunculus trilobus*** Desfontaines. Cp (SC): fields, roadsides, ditches; rare, introduced from sw. Europe. [= FNA, K, X, Y]

Ranunculus harveyi (A. Gray) Britton var. *harveyi*, east to e. TN and AL. [= FNA, K] {synonymy incomplete}

Ranunculus macounii d'Urv., occurs in WV (Kartesz 1999). {investigate} [= K] {not keyed at this time; synonymy incomplete}

Ranunculus pensylvanicus Linnaeus f., Bristly Buttercup, ranges south to s. PA (Rhoads & Klein 1993), DE, DC, and MD (Whittemore in FNA 1997). [= FNA, K] {synonymy incomplete}

Thalictrum Linnaeus 1753 (Meadow-rue)
(also see *Anemonella*)

A genus of about 330 species, perennial herbs, of Eurasia, North America, South America, and Africa. References: Park & Festerling in FNA (1997); Park (1992)=Z; Tamura in Kubitzki, Rohwer, & Bittrich (1993).

1 Flowers perfect; fruit scimitar-shaped; [section *Physocarpum*].
- 2 Achene concave or straight on the upper surface, 4-5.5 mm long, borne on a stipe 1.5-3 mm long; inflorescence branches stiff and diverge at acute angles; [fairly widespread in our area, on a wide variety of moist substrates, especially in the Mountains] ..... ***Th. clavatum***
- 2 Achene straight on the upper surface, 2.5-4 mm long, borne on a stipe 2.5-4 mm long; inflorescence branches flexuous and divergent; [of sandstone rockhouses of Cumberland Plateau of AL, TN, and KY]..... ***[Th. mirabile]***

1 Flowers unisexual (rarely a few bisexual); fruits not scimitar-shaped.
- 3 Leaflets of the stem leaves linear to narrowly lanceolate, oblanceolate or elliptic, (3-) 5-10 (-25)× as long as wide; [section *Leucocoma*] ..... ***Th. cooleyi***
- 3 Leaflets of the stem leaves ovate, obovate, or suborbicular, 0.7-3 (-5)× as long as wide.
  - 4 Most of the leaflets with (3-) 4-6 (-9) lobes or teeth; [section *Heterogamia*].
    - 5 Cauline leaf subtending the lowest flowering branch sessile; plant flowering May-July; achenes borne on a 0.7-2.5 mm long stipe..... ***Th. coriaceum***
    - 5 Cauline leaf subtending the lowest flowering branch with a petiole 3-7 cm long; plant flowering March-April; achenes nearly sessile, the stipe nonexistent or <0.3 mm long.
      - 6 Largest leaflets < 15 mm wide; stems 10-40 cm tall, reclining ..... ***Th. debile***
      - 6 Largest leaflets > 15 mm long; stems 30-80 cm tall, erect ..... ***Th. dioicum***
  - 4 Most of the leaflets with 1-3 (-5) lobes or teeth; [section *Leucocoma*].

7 Leaflet undersurfaces, peduncles, and achenes with stipitate glands or papillae.
8 Anthers 0.5-1.2 mm long; stigmas 0.6-2.2 mm long ..... ***Th. pubescens* var. *hepaticum***
8 Anthers 1.5-2.8 mm long; stigmas (1.5-) 2.0-3.5 mm long ..... ***Th. revolutum***
7 Leaflet undersurfaces, peduncles, and achenes glabrous or pubescent, lacking both stipitate glands and papillae.
9 Leaflet undersurfaces, peduncles, and achenes finely pubescent..... ***Th. pubescens* var. *pubescens***
9 Leaflet undersurfaces, peduncles, and achenes glabrous.
10 Leaflets entire to 3-lobed, averaging about 10 mm wide, the broadest usually < 20 mm wide; filaments (2-) 3-4.5 (-6.5) mm long (averaging 3.6 mm)..... ***Th. macrostylum***
10 Leaflets 3-lobed (rarely entire), averaging 15-23 mm wide, the broadest usually 15-60 mm wide; filaments (2-) 4-5 (-8) mm long (averaging 4-5 mm).
12 Anthers 0.5-1.2 mm long; stigmas 0.6-2.2 mm long ..... ***Th. pubescens* var. *hepaticum***
12 Anthers 1.5-2.8 mm long; stigmas (1.5-) 2.0-3.3 mm long..... ***Th. revolutum***

Thalictrum clavatum Augustin de Candolle, Lady-rue, Mountain Meadowrue. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp? (VA?): seepages, moist forests, spray cliffs at waterfalls, brookbanks; common, rare in Piedmont (rare in Coastal Plain, if record is valid). May-July. A Southern Appalachian endemic: VA, WV, e. KY south through w. NC and e. TN to nw. SC and n. GA. [= RAB, C, F, FNA, G, GW, K, S, W]

Thalictrum cooleyi Ahles, Cooley's Meadowrue, Savanna Meadowrue. Cp (GA, NC): ecotones between calcareous savannas and adjacent swamp forests, shallowly underlain by coquina limestone ("marl"), generally within a few meters of *Taxodium ascendens* and *Liriodendron tulipifera*; rare (US Endangered, GA Endangered, NC Endangered). Late June-early July; August-October. The species is endemic to two small areas, centered around Maple Hill (Pender and Onslow counties, NC) and Old Dock (Columbus and Brunswick counties, NC), with a small disjunct population in Panhandle FL (Walton County), and a small number of ambiguous populations in sw. GA (Dougherty and Worth counties); the GA populations are assigned here for now but may well represent a new taxon. It is associated with a number of other narrow endemic species. The leaflets of basal leaves (winter rosettes) are much broader, resembling the leaflets of other *Thalictrum* species in length/width ratio. Leaves produced from May on have the very narrow leaves typical of the species. Park (1992) found that *Th. cooleyi* has the highest chromosome number in the genus, 2n = 210, a ploidy level of 30x compared to the base chromosome level of 7 in *Thalictrum*. [= RAB, FNA, GW, K, Z]

Thalictrum coriaceum (Britton) Small, Appalachian Meadowrue, Maid of the Mist. Mt (GA, NC, SC, VA), Pd (VA): rich forests; uncommon, rare in Piedmont (GA Rare). May-July. A Southern and Central Appalachian endemic: MD, VA, and WV south through w. KY and e. TN to w. NC and ne. GA. The roots are bright yellow. A preliminary study concluded that *Th. steeleanum* B. Boivin is not distinct from *Th. coriaceum* (Park 1988); further study is needed. *Th. steeleanum* is alleged to differ in the following ways (and others): plant with long, cordlike rhizomes (vs. stout caudex), terminal leaflets mostly wider than long (vs. mostly longer than wide), achenes curved, 4-6 mm long (vs. less curved, 2.5-4 mm long). Park found these characters (and others) to be variable and to occur together within populations. It ranges from s. PA south through MD, e. WV, w. VA to nw. NC. [= RAB, FNA, K; > *Th. coriaceum* – C, F, G, W, in a narrower sense; > *Th. steeleanum* B. Boivin – C, F, G, W; > *Th. coriaceum* – S; > *Th. caulophylloides* Small – S]

Thalictrum debile Buckley, Trailing Meadowrue. Mt (GA): moist to wet forests over limestone; rare (GA Threatened). Nw. GA west to e. MS. [= FNA, GW, K, S]

Thalictrum dioicum Linnaeus, Early Meadowrue. Mt, Pd (GA, NC, SC, VA), Cp (VA): seepages, moist forests; common, rare in Coastal Plain. ME, Québec, and MN south to SC, c. GA, AL, and MO. [= RAB, C, F, FNA, G, GW, K, S, W]

Thalictrum macrostylum Small & Heller, Small-leaved Meadowrue. Cp, Pd, Mt (GA, NC, SC, VA): moist places, perhaps associated with circumneutral soils, moist to dry ultramafic outcrop barrens (over olivine), tidal freshwater marshes; rare (GA Rare [*Th. subrotundum*], NC Watch List, VA Rare). May-August. Se. VA south and west through NC, SC, sc. GA, FL, and AL to MS. [= C, F, FNA, G, GW, K, S, Z; > *Th. macrostylum* – RAB; > *Th. subrotundum* B. Boivin – RAB]

Thalictrum pubescens Pursh *var.* ***hepaticum*** (Greene) Keener, Appalachian Tall Meadowrue. Mt (GA, NC): seepage areas; rare (NC Watch List). May-July. PA south to n. GA and se. TN, strictly or primarily in the Appalachians. Plants tentatively placed here have been problematic. Keener (1981) reduced *Th. hepaticum* Greene to a variety of *Th. pubescens*, and discussed their distinction. Park (1992) contends that these plants are, indeed, glandular puberulent, and should therefore be reduced to synonymy under *Th. revolutum*, stating "these are not given varietal status [under *Th. revolutum*] since this morphological variation in anthers is not correlated with a continuous geographic range. As indicated above, I have located specimens from Georgia, North Carolina, Tennessee, and Pennsylvania which fit the description." As mapped by Keener (1981) *Th. pubescens* var. *hepaticum* (Greene) Keener appears as an endemic to the Southern Appalachians; if extended to Pennsylvania, the distribution is still very restricted (and in a phytogeographically plausible manner) compared to either *Th. revolutum* or *Th. pubescens*. This entity appears to be closer to *Th. pubescens* in leaflet shape, sepal length, anther length, and stigma length, and to *Th. revolutum* in leaflet and petiolule vestiture. More study is needed; the taxon is here provisionally accepted in order to draw attention to the problem. [= W; < *Th. polygamum* Muhlenberg ex Sprengel – RAB, F, G, S, nomen nudum; < *Th. pubescens* – C, GW, K; < *Th. revolutum* – FNA]

Thalictrum pubescens Pursh *var.* ***pubescens***, Common Tall Meadowrue, Late Meadowrue, King-of-the-meadow. Mt, Pd (NC, VA), Cp (NC, SC, VA), {GA}: bogs, marshes, wet forests; common, rare in Piedmont and Coastal Plain south of VA. May-July. Labrador, Newfoundland, and Ontario south to GA, SC and MS. [= W; < *Th. polygamum* Muhlenberg ex Sprengel – RAB, F, G, S, nomen nudum; < *Th. pubescens* – C, GW, K, Z; < *Th. pubescens* – FNA]

Thalictrum revolutum DC, Skunk Meadowrue. Mt, Pd (GA, NC, SC, VA), Cp (GA, NC, VA): mesic to dry forests, woodlands, and barrens, over hornblende, greenstone, dolostone, and serpentinized olivine; common, rare in Coastal Plain south of VA. May-July. Québec and Ontario south to n. FL, LA, and TX, and scattered southwest to CO, NV, and AZ. The species is normally stipitate-glandular or papillose, but can be glabrous, as accounted for in the key. [= RAB, C, F, G, GW, K, S, W; < *Th. revolutum* – FNA]

Thalictrum dasycarpum Fischer & Avé-Lallemant, Purple Meadowrue. Québec and Yukon south to PA, KY, TN, AL, MS, LA, TX, NM, AZ, and WA. It has been reported for scattered localities in VA (Harvill et al. 1992). Park (1992) and FNA do not document the occurrence of *Th. dasycarpum* in our area; substantiation is needed. [= FNA, K] {not keyed at this time; synonymy incomplete}

Thalictrum mirabile Small is a delicate relative of *Th. clavatum*, occurring on wet sandstone cliffs primarily in the Cumberland Plateau (and especially associated with sandstone rockhouses), from KY south through TN to n. AL and nw. GA (and additionally cited in FNA as occurring in w. NC). The inflorescence appears sparser because of the shorter and narrower achenes borne on longer stipes. [= FNA, GW, K, S]

Trautvetteria Fischer & C.A. Meyer 1835 (Tassel-rue)

A monotypic genus, a perennial herb, disjunctly distributed in temperate to boreal e. North America, w. North America, and Japan (or sometimes treated as 2-3 species). *Trautvetteria* is very closely related to some parts of *Ranunculus* (Johansson 1998). References: Parfitt in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993); Johansson (1998).

Trautvetteria caroliniensis (Walter) Vail *var. **caroliniensis***, Tassel-rue, False Bugbane. Mt, Pd (GA, NC, SC, VA), Cp (GA, NC, SC): streambanks, seepages, grassy balds, moist forests, swamp forests, very rarely in calcareous longleaf pine savanna ecotones; common, uncommon in Piedmont, rare in Coastal Plain (SC Rare). Late May-July. The genus is monotypic, the single species distributed disjunctly as follows: sw. PA and KY to GA, AL, and Panhandle FL, primarily in the Southern and Central Appalachians, disjunct on calcareous sites in AR (Sundell et al. 1999), IN, IL, and MO [var. *caroliniensis*], in w. North America from s. British Columbia south to CA, AZ, and NM [var. *borealis* (H. Hara) T. Shimizu], and in Japan [var. *japonica* (Siebold & Zuccarini) T. Shimizu]. The varieties are poorly differentiated morphologically and may not warrant recognition. The discovery of this species in the edge of a calcareous savanna (Camp Branch Savanna, Brunswick County, NC) in the outer Coastal Plain was surprising; the small population has since been destroyed by intensive silvicultural practices. [= K; < *T. caroliniensis* – RAB, C, F, FNA, G, GW, S, W]

Xanthorhiza Marshall 1785 (Yellowroot)

A monotypic genus, a shrub, of temperate e. North America. References: Parfitt in FNA (1997); Tamura in Kubitzki, Rohwer, & Bittrich (1993).

Identification notes: An unmistakable plant, the stems usually about knee-high and unbranched, the rhizomes with a bright yellow, bitter-tasting alkaloid.

Xanthorhiza simplicissima Marshall, Yellowroot, Brook-feather. Mt, Pd, Cp (GA, NC, SC, VA): streambanks and riverbanks; common (uncommon in Coastal Plain, and essentially absent from VA north of the James River). March-May; May-June. NY and se. PA (where only naturalized, according to Rhoads & Klein 1993), south to SC, sw. GA, w. FL, and AL. [= RAB, C, F, FNA, G, GW, K, W; = *Xanthorrhiza simplicissima* – S, orthographic variant]

RESEDACEAE DC. ex Gray 1821 (Mignonette Family)

A family of about 6 genera and 75-80 species, herbs and shrubs, of the northern hemisphere. References: Kubitzki in Kubitzki & Bayer (2003).

Reseda Linnaeus 1754 (Mignonette)

A genus of about 55-60 species, herbs, of Europe, Mediterranean region, and c. Asia.

1 Upper and middle leaves deeply pinnately lobed.
  2 Carpels 4; petals white; seeds tuberculate ..... ***[R. alba]***
  2 Carpels 3; petals yellowish; seeds smooth ..... ***[R. lutea]***
1 Upper and middle leaves entire or finely toothed (sometimes with 1-2 lateral lobes).
  3 Sepals and petals 4; seeds smooth; fruits < 7 mm long, crowded, erect to ascending ..... ***[R. luteola]***
  3 Sepals and petals 6; seeds rugose; fruits > 7 mm long, well-spaced, pendent.

4 Capsules 7-11 mm long; sepals (in fruit) < 5mm long ..... ***R. odorata***
4 Capsules (well-developed) 11-15 mm long; sepals (in fruit > 5 mm long) ..... ***[R. phyteuma]***

* ***Reseda odorata*** Linnaeus, Garden Mignonette. Cp (SC), Pd (NC): gardens, garden borders, and disturbed areas; rare, doubtfully established, introduced from Mediterranean Europe. Reported for scattered locations in eastern North America (Kartesz 1999). [= C, G, K]

* *Reseda alba* Linnaeus, White Mignonette, is introduced from the Mediterranean region to ne. United States, south to DE and se. PA (Rhoads & Klein 1993). [= C, F, G, K]
* *Reseda lutea* Linnaeus, Yellow Mignonette, Wild Mignonette, is introduced from Europe to the ne. United States, south to DE, se. PA, and sc PA (Rhoads & Klein 1993). [= C, F, G, K]
* *Reseda luteola* Linnaeus, Weld, Dyer's Rocket, Yellow-weed, formerly cultivated as a die plant, is reported from se. and sc. PA (Rhoads & Klein 1993). [= C, F, G, K]
* *Reseda phyteuma* Linnaeus, Corn Mignonette, introduced from Europe, is reported from se. PA (Rhoads & Klein 1993). [= K]

RHAMNACEAE A.L. de Jussieu 1789 (Buckthorn Family)

A family of about 50-52 genera and 900-925 species, mostly trees, shrubs, and lianas, cosmopolitan in distribution. References: Bricicky (1964a)=Z; Richardson et al. (2000a, 2000b); Medan & Schirarend in Kubitzki (2004).

1 Plant a vine; [tribe *Rhamneae*] ..... ***Berchemia***
1 Plant a shrub or small tree.
  2 Leaves with 3 prominent veins from near the base.
    3 Plants not spiny; fruit dry, capsular; [native]; [tribal placement uncertain] ..... ***Ceanothus***
    3 Plants armed with stipular spines; fruit pulpy; [alien, cultivated and escaped]; [tribe *Paliureae*] ..... ***Ziziphus***
  2 Leaves with prominently pinnate venation, the lowermost lateral veins no more prominent than others.
    4 Leaves opposite, 2-4 cm long; [of shell middens and shell hammocks in the outer Coastal Plain of NC and SC]; [tribe *Rhamneae*] ..... ***Sageretia***
    4 Leaves alternate (or opposite in *Frangula* and some *Rhamnus*), 3-15 cm long; [of various habitats in the Piedmont and Mountains (rarely Coastal Plain) of VA, NC, and SC].
      5 Inflorescence repeatedly branched dichotomously; peduncles fleshy and reddish in fruit; nectariferous disc pubescent; [tribe *Paliureae*] ..... ***Hovenia***
      5 Inflorescence not repeatedly branched dichotomously; peduncles not fleshy; nectariferous disc glabrous; [tribe *Rhamneae*].
        6 Winter buds naked, pubescent; flowers perfect, sepals, stamens, and petals 5; style undivided; leaves with 8-10 lateral veins on either side of the midvein ..... ***Frangula***
        6 Winter buds with bud scales; flowers functionally unisexual, sepals and stamens 4 or 5 (the stamens rudimentary in the pistillate flowers), petals 0 or 4 (never 5); style divided 1/3 to 2/3 its length into 2, 4 or 5 segments; leaves with (2-) 3-9 lateral veins on either side of the midvein ..... ***Rhamnus***

Berchemia Necker 1825 (Supplejack)

A genus of about 12 species, vines, of tropical to warm temperate Asia, Africa and se. North America. *B. scandens* is the only New World species. References: Bricicky (1964a)=Z; Medan & Schirarend in Kubitzki (2004).

Identification notes: The young stems are shining and reddish, the bark on older stems is medium gray and smooth (though often marred by sap wells drilled by Yellow-bellied Sapsuckers). Larger stems can reach 10 cm in diameter. The smooth bark and neatly pinnately-veined leaves are distinctive.

Berchemia scandens (Hill) K. Koch, Supplejack, American Rattan. Cp (GA, NC, SC, VA), Pd (GA, NC), Mt (GA): swamp forests, bottomlands, streambanks, in mesic to even xeric uplands over calcareous rock or sediment; common (rare in Piedmont). April-May; August-October. Se. VA south to s. FL, west to TX, north in the interior to nc. TN, w. TN, s. IL, and s. MO. *Berchemia* climbs high into the crowns of swamp trees. [= RAB, C, F, G, GW, K, S, Z]

Ceanothus Linnaeus 1753 (Redroot, New Jersey Tea)

A genus of ca. 55 species, shrubs, mostly in California. References: Fross & Wilken (2006)=X; Coile (1988)=Y; Bricicky (1964a)=Z; Medan & Schirarend in Kubitzki (2004).

1 Leaves 0.2-1.0 cm long, obovate ..... ***C. microphyllus***

1 Leaves 2-10 cm long, elliptic to ovate.
  2 Inflorescences terminating leafy terminal shoots; leaves mostly obtuse to acute..... ***C. herbaceus***
  2 Inflorescences terminating leafless axillary shoots (these sometimes with leafy bracts distinctly smaller than normal leaves); leaves mostly acute to acuminate.
    3 Leaves (3-) 4-10 cm long, mostly 2.5-6 cm wide; [of various habitats of the Piedmont, Mountains, and rarely Coastal Plain] ..... ***C. americanus* *var.* *americanus***
    3 Leaves 2-4 (-6) cm long, mostly 1-2 cm wide; [primarily of sandy habitats of the Coastal Plain and rarely Piedmont]..... ***C. americanus* *var.* *intermedius***

Ceanothus americanus Linnaeus *var.* ***americanus***, Common New Jersey Tea. Mt, Pd (GA, NC, SC, VA), Cp (NC, VA): woodland borders, dry woodlands, glady openings, dry ridge forests and woodlands (pine or oak) in the Mountains; common. May-June; June-July. ME west to s. Manitoba, south to FL and TX. [= C, F, G, X, Y, Z; < *C. americanus* – RAB, K, S, W; = *C. americanus* – S]

Ceanothus americanus Linnaeus *var.* ***intermedius*** (Pursh) Torrey & A. Gray, Southern New Jersey Tea. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): sandhills, dry sandy woodlands and forests, rocky openings around granitic or quartzitic rocks in the Piedmont; common. May-June; June-July. NJ (or possibly MA) south to FL, west to LA, mostly on the Coastal Plain, but disjunct inland to sandy soils around outcrops of siliceous rocks. The recognition of infraspecific taxa in the variable *C. americanus* is uncertain; var. *intermedius* may either represent ecological forms, or the variation may be too clinal to make taxonomic recognition rewarding. However, material from our area (and beyond) sorts relatively easily, with some intermediates from the Piedmont; varietal status seems provisionally appropriate. [= C, F, G, X, Y, Z; < *C. americanus* – RAB, K, S, W; = *C. intermedius* Pursh – S]

Ceanothus herbaceus Rafinesque, Prairie Redroot. Pd (VA?): flood-scoured rocky riverbanks; rare. April-May. Primarily midwestern: MI west to MT, south to nw. IN, AR, TX, and Mexico; disjunct eastward in Québec, NH, VT, NY, MD, WV, DC, and n. VA (? - Arlington County). Rafinesque described *C. herbaceus* from "near the falls of the Potowmack, between the rocks." The holotype not extant, Coile (1988) chose a neotype, collected by Sheldon in 1881 from "Arlington County, Virginia, Chain Bridge, rocky river bottoms, Potomac River." However, Bartgis, Fleming, & Wiegand (1997) indicate that *C. herbaceus* in the Washington, D.C. area can only be ascribed with certainty to DC and MD. [= K, X, Y, Z; = *C. ovatus* Desfontaines – F, S, misapplied; = *C. pubescens* (Torrey & A. Gray ex S. Watson) Rydberg ex Small – S]

Ceanothus microphyllus Michaux. Cp (GA): sandhills; common. E. GA, FL, and s. AL, approaching to within a few kilometers of SC (in Screven and Chatham counties, GA), and should be sought in se. SC (except that its outlandish appearance makes it difficult to overlook!). *C.* ×*serpyllifolius* Nuttall (pro sp.) is apparently a hybrid of *C. americanus* var. *intermedius* and *C. microphyllus* (Coile 1988); it is known from scattered sites in FL and GA. [= K, S, X, Y, Z]

Frangula P. Miller 1754 (Buckthorn)

The distinctions between *Frangula* and *Rhamnus* are many and meaningful; their separation at the generic level seems warranted based on morphological and molecular analyses (Richardson et al. 2000a; Bolmgren & Oxelman 2004). References: Brizicky (1964a)=Z; Medan & Schirarend in Kubitzki (2004).

1 Leaves entire; leaves ca. 2× as long as wide..... ***F. alnus***
1 Leaves serrulate; leaves ca. 3× as long as wide ..... ***F. caroliniana***

* ***Frangula alnus*** P. Miller, European Alder-Buckthorn. Mt (NC), Pd (VA): forested area along Blue Ridge Parkway; rare, introduced from Europe. This species is a seriously invasive weed in ne. United States, south to (at least) NJ, s. PA (Rhoads & Klein 1993), KY, and se. TN (Marion County) (Chester, Wofford, & Kral 1997, Kral 1981), and w. NC. [= K; = *Rhamnus frangula* Linnaeus – C, F, G]

Frangula caroliniana (Walter) A. Gray, Carolina Buckthorn. Mt (GA, NC, SC, VA), Pd (GA, NC, SC), Cp (GA, SC): dry to moist barrens, woodlands, and forests, Coastal Plain limestone bluffs and shell middens, especially over mafic or calcareous rocks; rare (NC Watch List). May-June. Sw. VA west to s. OH and s. MO, south to FL and TX. [= K; = *Rhamnus caroliniana* Walter – RAB, S, W; > *Rhamnus caroliniana* Walter var. *caroliniana* – C, F, G, Z]

Hovenia Thunberg 1781 (Raisin-tree)

A genus of 7 species, trees, of e. Asia. References: Brizicky (1964a)=Z; Medan & Schirarend in Kubitzki (2004).

* ***Hovenia dulcis*** Thunberg, Japanese Raisin-tree. Pd (NC): escaped from cultivation to suburban woodlands; rare, introduced from China. Goldman (1998) presents a discussion of this species' introduction into North America, with a color photograph. [= RAB, K, Z]

Rhamnus Linnaeus 1753 (Buckthorn)
(also see *Frangula*)

The recognition of *Frangula* as separate from *Rhamnus* is supported by molecular phylogeny (Bolmgren & Oxelman 2004). References: Brizicky (1964a)=Z; Bolmgren & Oxelman (2004); Medan & Schirarend in Kubitzki (2004).

1 Leaves mostly opposite or subopposite (or some alternate), mostly with (2-) 3-6 lateral veins on either side of the midrib; plant a large shrub or small tree, to 10 m tall; fruit with 4 stones; [aliens, mostly of moist (but not boggy) soils].
  2 Leaves mostly 1-2× as long as wide, with (2-) 3 (-4) lateral veins on either side of the midrib; style divided ½ its length into 4 segments ..... ***[Rh. cathartica]***
  2 Leaves mostly 2-3× as long as wide, with 4-6 lateral veins on either side of the midrib; style divided ⅔ its length into 2 segments ..... ***Rh. davurica***
1 Leaves alternate, mostly with (4-) 6-9 lateral veins on either side of the midrib; plant a shrub to 2 m tall; fruit with 2-3 stones; [natives].
  3 Sepals and stamens 5; petals 0; fruit with 3 stones; [of mafic or calcareous peaty wetlands and seeps] ..... ***Rh. alnifolia***
  3 Sepals and stamens 4; petals 4; fruit with 2 stones; [of dry to moist calcareous woodlands and thickets].
    4 Young leaves and young branches glabrous or with scattered hairs; mature leves glabrous below .... ***Rh. lanceolata*** *var.* ***glabrata***
    4 Young leaves and young branches pubescent; mature leaves soft pubescent below .... ***Rh. lanceolata*** *var.* ***lanceolata***

Rhamnus alnifolia L'Héritier, Alder-leaved Buckthorn, American Alder-Buckthorn. Mt (VA): mafic or calcareous (dolomitic) seeps, usually with *Parnassia grandifolia*; rare (VA Rare). May-July. Newfoundland west to British Columbia, south to NJ, PA, w. VA, ne. TN (Chester, Wofford, & Kral 1997), OH, n. IN, n. IL, IA, and CA. [= C, F, G, K, W, Z]

* ***Rhamnus davurica*** Pallas, Dahurian Buckthorn. Pd (NC, VA): suburban woodlands, rarely naturalized; rare, introduced from e. Asia. Also reported from suburban areas near Louisville, KY, and Knoxville, TN (D. Estes, pers. comm..). [> *Rhamnus davurica* ssp. *??* – K; = ***Rh. citrifolia*** (Weston) W. Hess & Stearn – C]

Rhamnus lanceolata Pursh *var.* ***glabrata*** Gleason, Western Lance-leaved Buckthorn. Mt (VA): dry habitats over calcareous rocks; rare (VA Rare). April-May. Var. *glabrata* Gleason ranges from OH west to SD, south to w. VA (Ludwig 1999), KY, c. TN, AR, and KS. [= C, F, G, Z; = ***Rh. lanceolata*** ssp. *glabrata* (Gleason) Kartesz & Gandhi – K; < ***Rh. lanceolata*** – S, W]

Rhamnus lanceolata Pursh *var.* ***lanceolata***, Eastern Lance-leaved Buckthorn. Mt (VA): dry to moist thickets over calcareous rocks; rare (VA Watch List). April-May. Var. *lanceolata* ranges from PA south to AL, mostly in the Appalachians. [= C, F, G, Z; = ***Rh. lanceolata*** ssp. *lanceolata* – K; < ***Rh. lanceolata*** – S, W]

* *Rhamnus cathartica* Linnaeus, Common Buckthorn. Reported for VA by Harvill et al. (1991), but the report is actually based on specimens of ***Rh. davurica*** (Virginia Botanical Associates 2005). {check sspp.} [= C, F, G, K, Z]

Sageretia Brongniart 1827 (Small-flowered Buckthorn)

A genus of about 35 species, shrubs and trees, of tropical to warm temperate areas of Africa, Asia, and America. References: Nesom (1993c)=Y; Brizicky (1964a)=Z; Medan & Schirarend in Kubitzki (2004).

Identification notes: *S. minutiflora* can appear superficially a bit like *Ilex vomitoria*, with which it typically grows; it can be distinguished from *Ilex vomitoria* by its opposite leaves.

Sageretia minutiflora (Michaux) C. Mohr, Small-flowered Buckthorn. Cp (GA, NC, SC): shell middens and shell hammocks; rare (GA Threatened, NC Rare, SC Rare). September; November. Se. NC south to s. FL, west to s. MS. ***S. minutiflora*** is apparently most closely related to ***S. elegans*** (Kunth) Brongniart, which ranges from s. Mexico south to s. South America. [= RAB, K, S, Y, Z]

Ziziphus P. Miller 1754 (Jujube)

A genus of 85-100 species, shrubs and trees, of tropical and warm temperate areas. References: Brizicky (1964a)=Z; Medan & Schirarend in Kubitzki (2004).

* ***Ziziphus zizyphus*** (Linnaeus) Karsten, Chinese Jujube, Common Jujube. Pd (GA): {habitat}; rare, introduced, native of from Eurasia. Reported from ec. GA (Jones & Coile 1988). Cultivated at least as far north as NC. [= K; = *Zizyphus zizyphus* (Linnaeus) Karsten – S, orthographic variant; = ***Z. jujuba*** P. Miller – Z]

RHIZOPHORACEAE R. Brown 1814 (Red Mangrove Family)

A family of about 15 genera and 120 species, of tropical areas of the Old and New World.

Rhizophora Linnaeus (Red Mangrove)

A genus of 8-9 species, trees and shrubs, of tropical shores.

Rhizophora mangle Linnaeus, Red Mangrove. Cp (GA, NC, SC): beaches; rare. The distinctive floating seedlings of *Rhizophora* occasionally wash up as jetsam on beaches of GA, NC, and SC, particularly following hurricanes. Photographic evidence has been supplied from Bear Island, Onslow County, NC, 11 June 1996 (Dave Owen, pers. comm. and photograph). These propagules may sprout and grow for some time, forming a young sapling with leaves, but do not survive because of frost. Not truly a part of our flora, but repeatedly introduced naturally. [= GW, K, S]

ROSACEAE A.L. de Jussieu 1789 (Rose Family)
(also see *CHRYSOBALANACEAE*)

A family of about 85-95 genera and 2000-3000 species, trees, shrubs, and herbs, nearly cosmopolitan, but mainly boreal and temperate. References: Eriksson et al. (2003); Kalkman in Kubitzki (2004).

Agrimonia Linnaeus (Agrimony)

A genus of about 10-15 species, herbs, mainly north temperate. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

1 Inflorescence axis glandular-pubescent (sometimes also with non-glandular hairs).
  2 Larger leaves with 11-15 (-23) primary leaflets (not counting the secondary leaflets); stamens 5-7 ..... ***A. parviflora***
  2 Larger leaves with 3-9 primary leaflets (not counting the secondary leaflets); stamens 10-15.
    3 Hypanthium 3-5 mm wide in fruit; nutlet 3-3.3 mm in diameter; inflorescence usually with copious long, spreading, non-glandular hairs ..... ***A. gryposepala***
    3 Hypanthium 2-2.5 mm wide in fruit; nutlet 2-2.4 mm in diameter; inflorescence usually with minute glandular hairs only (or sparsely pubescent with long non-glandular hairs] ..... ***A. rostellata***
1 Inflorescence axis pubescent with non-glandular hairs.
  4 Larger leaves with 3-5 (-7) primary leaflets (not counting the secondary leaflets) ..... ***A. microcarpa***
  4 Larger leaves with 5-13 primary leaflets (not counting the secondary leaflets).
    5 Terminal leaflets 1-2.5 (-3) cm long; [of pinelands of the Coastal Plain] ..... ***A. incisa***
    5 Terminal leaflets 2.5-9 cm long; [of various habitats].
      6 Larger leaves with 7-13 lanceolate-elliptic leaflets; outer bristles of the fruit spreading ..... ***A. bicknellii***
      6 Larger leaves with 5-7 (-9) obovate-elliptic leaflets; outer bristles of the fruit ascending ..... ***A. pubescens***

Agrimonia bicknellii (Kearney) Rydberg. Cp (GA, NC, SC, VA), Pd (NC, SC, VA): moist forests and woodlands; uncommon? July-September; August-October. MA west to MI, south to NC, GA, and TN. Closely related to, and perhaps not separable from, *A. pubescens*. [= K, S, Z; < *A. pubescens* Wallroth var. *pubescens* – RAB; < *A. pubescens* – C, F, G]

Agrimonia gryposepala Wallroth, Common Agrimony. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): mesic forests, thickets, marshes, bogs, wet meadows, wet forests; common (GA Special Concern). July-August; July-October. ME and Ontario west to MT, south to NJ, w. NC, e. TN, IN, and KS; also in CA and NM. [= RAB, C, F, G, K, S, W, Z]

Agrimonia incisa Torrey & A. Gray, Pineland Agrimony. Cp (GA, NC?, SC): pinelands, disturbed areas associated with pinelands; rare (US Species of Concern, NC Watch List). July-early September. E. SC south to FL and west to MS (also reported from NC, but no specimen has been seen). [= RAB, C, K, S, Z]

Agrimonia microcarpa Wallroth, Low Agrimony. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): dry to moist forests and woodlands; uncommon. July-September; August-October. NJ south to FL, west to e. TX. [= C, F, G, K, S, W, Z; = *A. pubescens* Wallroth var. *microcarpa* (Wallroth) Ahles – RAB; > *A. microcarpa* – S; > *A. platycarpa* Wallroth – S]

Agrimonia parviflora Aiton, Southern Agrimony. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): marshes, bottomland forests, wet pastures; common. July-September; July-October. CT west to s. MI and SD, south to FL, TX, the West Indies and Mexico. [= RAB, C, F, G, K, S, W, Z]

Agrimonia pubescens Wallroth, Downy Agrimony. Mt (GA, NC, SC, VA), Pd, Cp (GA, NC, VA): dry to moist forests and woodlands; common. July-September; August-October. ME west to MI and SD, south to NC, GA, and OK. [= K, S, W, Z; < *A. pubescens* var. *pubescens* – RAB; < *A. pubescens* – C, F, G (also see *A. bicknellii*)]

Agrimonia rostellata Wallroth, Woodland Agrimony. Mt, Pd, Cp (GA, NC, SC, VA): moist to wet forests and woodlands; common. July-August; July-October. CT west to IN and KS, south to SC, GA, LA, and OK. [= RAB, C, F, G, K, S, W, Z]

* ***Agrimonia eupatoria*** Linnaeus, Medicinal Agrimony. Mt (NC): fields and disturbed areas; rare, apparently naturalized, introduced from Eurasia. July-September. Introduced at scattered localities in ne. North America. [= C, F, G, K, Z] {not keyed at this time}

Agrimonia striata Michaux, Roadside Agrimony. Pd (GA): {habitat unknown}; rare. South to se. PA (Rhoads & Klein 1993), MD, DE, WV, KY, Piedmont GA (Jones & Coile 1988), and AL. It will key to *A. bicknellii* in the above key, but differs in having the leaves conspicuously glandular and sparsely pubescent beneath (vs. densely velvety pubescent and not conspicuously glandular), the fruiting hypanthium 4-5 mm long (vs. 2.5-3 mm long). [= C, F, G, K] {not keyed at this time}

Alchemilla Linnaeus
(see *Aphanes*)

Amelanchier Medikus 1789 (Serviceberry, Sarvis, Shadbush, Juneberry, "May Cherry", "Currant")

A genus of about 20-40 species, shrubs and trees, north temperate. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

Amelanchier arborea (Michaux f.) Fernald. [= C, F, G, W; > *A. arborea* var. *arborea* – RAB, K, Z; > *A. arborea* var. *alabamensis* (Britton) G.N. Jones – K, Z; > *A. arborea* var. *austromontana* (W.W. Ashe) Ahles – RAB, K, Z; > *A. canadensis* – S, misapplied; > *A. alabamensis* Britton – S]

Amelanchier canadensis (Linnaeus) Medikus, Eastern Serviceberry. (GA, NC, SC, VA). [= RAB, C, G, GW, K, W; > *A. canadensis* var. *canadensis* – F, Z; > *A. canadensis* var. *subintegra* Fernald – F, Z; = *A. oblongifolia* (Torrey & A. Gray) Roemer – S]

Amelanchier laevis Wiegand, Smooth Serviceberry. (GA, NC, SC, VA). [= C, G, K, W, S, Z; = *A. arborea* var. *laevis* – RAB; > *A. laevis* var. *laevis* – F]

Amelanchier nantucketensis Bicknell, Nantucket Serviceberry. Pd (VA): rocky areas; rare. In Potomac River Gorge, VA and MD (Chris Frye, pers. comm.), but may actually be a new species. See Dibble & Campbell (1995). [= F, K; *? A. canadensis* × *spicata* – C]

Amelanchier obovalis (Michaux) Ashe, Coastal Plain Serviceberry. (GA, NC, SC, VA). [= RAB, C, F, G, GW, K, Z]

Amelanchier sanguinea (Pursh) Augustin de Candolle *var.* ***sanguinea***, Roundleaf Serviceberry, New England Serviceberry. (GA, NC, VA). [= K; < *A. sanguinea* – RAB, F, S, W, Z; *A. sanguinea* var. *sanguinea* – C, G (also see *A. humilis*)]

Amelanchier stolonifera Wiegand, Dwarf Serviceberry. (GA, NC, SC, VA). [= F, K, S, W, Z; < *A. spicata* (Lamarck) K. Koch – C, G, misapplied as to North American material]

Amelanchier bartramiana (Tausch) M.J. Roemer. South to WV and PA. [= C, F, G, K] {synonymy incomplete}

Amelanchier humilis Wiegand. South to montane MD, NJ, and PA. [= K; < *A. sanguinea* var. *sanguinea* – C, G; > *A. humilis* var. *humilis* – F] {synonymy incomplete}

Aphanes Linnaeus (Parsley-piert)

A genus of about 20 species, herbs, of tropical and temperate Old World. *Aphanes* has usually been accepted by Europeans as distinct from *Alchemilla*, but Kalkman (in Kubitzki 2004) retains it (with some doubt) in *Alchemilla*, as a subgenus and Eriksson et al. (2003) include it in *Alchemilla* based on molecular evidence. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004); Eriksson et al. (2003).

* ***Aphanes microcarpa*** (Boissier & Reuter) Rothmaler, Parsley-piert. Pd (GA, NC, SC, VA), Cp, Mt (NC, SC, VA): lawns, fields, pastures, roadsides; common (uncommon in Piedmont of VA and Mountains of NC and VA), introduced from Europe. Late April-May. This plant is inconspicuous and often overlooked. [= C, K; = *Alchemilla microcarpa* Boissier & Reuter – RAB, F, G, W, Z; > *Aphanes australis* Rydberg – S]

* *Aphanes arvensis* Linnaeus is reported for SC and TN by Kartesz (1999), but the only documentation consists of generalized range maps published in Hultén & Fries (1986). Rejected as a component of our region's flora without additional documentation. [= C, K; = *Alchemilla arvensis* (Linnaeus) Scopoli – F, G] {not keyed}

Argentina Hill
(see *Potentilla*)

Aronia Medicus 1789 (Chokeberry)

A genus of about 65 species, of e. Asia and e. North America (south into Central America). *Aronia* has sometimes been treated as a component of *Sorbus* or *Pyrus*. More recently, Robertson et al. (1991) have included *Aronia* in *Photinia*. Kalkman in Kubitzki (2004) agrees that *Aronia* and *Photinia* should be combined, but points out that *Aronia* is the older name and therefore must be used for the combined genus. References: Hardin (1973)=Y; Robertson (1974)=Z; Robertson et al. 1991=X; Kalkman in Kubitzki (2004).

Identification notes: All our species of *Aronia* can be distinguished from other shrubs in our flora by the presence of several dark (usually purplish-black) trichomes on the upper surface of the midrib, mostly toward the base of the leaf.

1 Lower surfaces of leaves, twigs, and inflorescence rachis glabrous; fruit black ..... ***A. melanocarpa***
1 Lower surfaces of leaves, twigs, and inflorescence rachis pubescent; fruit bright red or dark purple.
  2 Fruit bright red; leaves densely pubescent beneath ..... ***A. arbutifolia***
  2 Fruit dark purple; leaves sparsely pubescent beneath ..... ***A. prunifolia***

Aronia arbutifolia (Linnaeus) Persoon, Red Chokeberry. Cp, Mt, Pd (GA, NC, SC, VA): bogs, pocosins, wet savannas, other wet habitats; common. March-May; September-November. Widespread in the Coastal Plain from Newfoundland south to

FL and west to TX, extending inland in the south to WV and KY. [= C, G, GW, S, W; = *Sorbus arbutifolia* (Linnaeus) Heynhold var. *arbutifolia* – RAB; = *Pyrus arbutifolia* (Linnaeus) Linnaeus f. – F, Z; = *Photinia pyrifolia* (Lamarck) K. Robertson & J.B. Phipps – K, X]

Aronia melanocarpa (Michaux) Elliott, Black Chokeberry. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): balds, forests, and openings and exposed rock outcrops at high elevations, bogs in the Mountains; uncommon (rare in Piedmont). May-June; August-September. Widespread in ne. North America, extending south to n. GA, n. AL, and MO. [= C, G, GW, S; = *Sorbus melanocarpa* (Michaux) Heynhold – RAB; = *Pyrus melanocarpa* (Michaux) Willdenow – F, Z; < *A. melanocarpa* – W (also see *A. prunifolia*); = *Photinia melanocarpa* (Michaux) J.B. Phipps – K, X]

Aronia prunifolia (Marshall) Rehder, Purple Chokeberry. Pd, Mt (NC, VA), Cp (VA): balds, bogs, seepages, swamp forests; uncommon, rare south of VA (NC Watch List). April-May; September-October. Widespread but local in ne. North America, south to NC, FL?, and OH. While apparently originating as a hybrid between our other two species, *A. prunifolia* exists in populations independent of the two parent species, apparently reproducing successfully. It seems best to treat a now independent lineage such as this as a separate taxon. [= C, G, GW; = *Sorbus arbutifolia* var. *atropurpurea* (Britton) Schneider – RAB; = *Pyrus floribunda* Lindley – F, Z; = *Aronia atropurpurea* Britton – S; < *A. melanocarpa* – W; = *Photinia floribunda* (Lindley) J.B. Phipps – K, X]

Aruncus Linnaeus 1758 (Goat's-beard)

A genus of 1-2 species, perennial herbs, of temperate North America and Europe. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

Identification notes: *Aruncus dioicus* can be distinguished from the superficially closely similar *Astilbe biternata* by the following characteristics: trichomes of foliage not glandular (vs. glandular in *Astilbe*), stamens 20 (vs. 10), carpels 3-4 (vs. 2), seeds < 1.5-2 mm long (vs. ca. 4 mm long), terminal leaflets usually unlobed (vs. terminal leaflets usually trilobed).

1 Follicles 2.5-3.5 mm long ..... ***[A. sylvester]***
1 Follicles 1.5-2 mm long.
  2 Follicles semi-ovoid, strongly convex on the back, about 1/2 as thick (measured radially) as long; leaves somewhat lustrous, the lower surface glabrous to sparsely pubescent ..... ***A. dioicus** var. **dioicus***
  2 Follicles nearly cylindric, about 1/3 as thick (measured radially) as long; leaves dull, the lower surface pubescent..... ..... ***A. dioicus** var. **pubescens***

Aruncus dioicus (Walter) Fernald *var. **dioicus***, Eastern Goat's-beard. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (VA): moist, nutrient-rich forests and woodland borders; common. May-June; June-September. NY (?) and PA west to IN, south to NC, SC, GA, and AL. [= C, F, K, Z; < *A. dioicus* – RAB, W; = *A. allegheniensis* Rydberg – S]

Aruncus dioicus (Walter) Fernald *var. **pubescens*** (Rydberg) Fernald, Midwestern Goat's-beard. Mt (VA): moist, nutrient-rich forests and woodland borders?; rare? May-June; June-September. W. VA, KY, and IL west to IA, south to TN, AR, and OK. The validity of this variety and its attribution to our area (by G, K, and S) need further evaluation. Robertson (1974) states that the "two varieties intergrade completely, and it is questionable whether they should be maintained." [= C, F, K, Z; < *A. dioicus* – W; = *A. pubescens* Rydberg – S]

* *Aruncus sylvester* Kosteletzky ex Maximowicz is attributed to our area by Small (1933). This European species is occasionally cultivated in e. North America. [= C, G; = *A. dioicus* var. *vulgaris* (Maximowicz) Hara – K; = *A. aruncus* (Linnaeus) Karsten – S]

Chaenomeles Lindley 1821 (Flowering Quince)

A genus of 3-4 species, shrubs, of montane, temperate e. Asia. References: Kalkman in Kubitzki (2004).

* ***Chaenomeles speciosa*** (Sweet) Nakai, Flowering Quince. Pd (NC), Cp (VA): frequently persisting and rarely spreading from horticultural plantings to suburban woodlands; rare, native of China. January-April. The "fruiting" or Common Quince, *Cydonia oblonga* P. Miller, native of the Caucasus, is widely cultivated in Europe and formerly in e. North America. It has fallen out of favor, and is now rarely cultivated in our area. [= C, K]

Crataegus Linnaeus 1753 (Hawthorn, Haw, Thornapple)
(contributed by R. Lance)

A genus of 100-500 species, shrubs and small trees, north temperate and Central America, most in e. North America. References: Lance (in prep.)=X; Phipps (1988)=Z; Beadle in Small (1913)=Q; Phipps, O'Kennon, & Lance (2003)= V ; Phipps (1998)=Y; Lance (1995); Kalkman in Kubitzki (2004).

Identification notes: all references to leaves and petioles pertain to foliage on short shoots (floreal shoots), unless otherwise specified.

1 Leaf bases cordate, truncate, rounded, or very abruptly contracted from a rounded base ..... **Key A**
1 Leaf base acute to cuneate.
  2 Leaves conspicuously glandular on petiole and teeth, especially when young; twigs and branchlets geniculate..... **Key B**
  2 Leaves eglandular, or if glandular then twigs relatively straight, not conspicuously geniculate..... **Key C**

Key A – hawthorns with leaf bases cordate, truncate, rounded, or very abruptly contracted from a rounded base

1 Primary lateral veins of lobed leaves run to sinuses of lobes, as well as to points of lobes.
  2 Leaves thin, dull, hairy at least on petiole, deeply laciniate; fruit oblong ..... ***C. marshallii***
  2 Leaves subcoriaceous, glossy, glabrous, often 3-lobed; fruit globose..... ***C. phaenopyrum***
1 Primary lateral veins of lobed leaves run only to lobe points.
  3 Leaves small, most < 3 cm; petioles mostly < 1 cm long, conspicuously glandular and twigs geniculate.
    4 Leaves broadly obovate on floreal shoots, 1.5-3 cm long, tomentose, serrations acute; terminal shoot leaves suborbicular, truncate at base..... ***C. dispar***
    4 Leaves often suborbicular, < 2 cm long, glabrate to pubescent, serrations blunt ..... ***C. lepida***
  3 Leaves and petioles longer, glandular or not, but twigs not geniculate.
    5 Leaf blades on terminal shoots often > 9 cm long.
      6 Petiole eglandular, pubescent or tomentose; leaf veins distinct on adaxial surface, slightly sunken..... ***C. mollis***
      6 Petiole glandular, sparsely hairy or glabrous; leaf veins not as conspicuous
        7 Leaf blades longer than wide; calyx lobes evenly serrate..... ***C. coccinea***
        7 Leaf blades often as wide as long; calyx lobes deeply and irregularly serrate..... ***C. dilatata***
    5 Leaf blades on terminal shoots rarely > 8 cm long.
      8 Leaf shape predominately deltoid, base truncate or very abruptly contracted into petiole.
        9 Lobe tips acuminate, often reflexed; young leaves scabrate adaxially; leaves thin.
          10 Stamens 5 to 10 ..... ***C. macrosperma***
          10 Stamens 15 to 20 ..... ***C. schuettei***
        9 Lobe tips acute or obtuse, not reflexed; young leaves hairy or glabrous; leaves firm.
          11 Fruit calyx sessile; leaves may bear hairs when young; stamens usually 10 ..... ***C. iracunda***
          11 Fruit calyx elevated; leaves glabrous; stamens usually 20..... ***C. pruinosa***
      8 Leaf shape predominately ovate or broadly ovate, base rounded or abruptly narrowed
        12 Leaves pubescent throughout; petioles conspicuously glandular; terminal shoot leaves very shallowly lobed..... ***C. triflora***
        12 Leaves sparsely pubescent abaxially, or glabrous; petioles slightly glandular or eglandular; terminal shoot leaves distinctly lobed.
          13 Petioles eglandular; fruit calyx sessile.
            14 Leaves thin, dull yellow-green; hairs scattered along veins of abaxial side, esp. when young; fruit 10-15mm diameter..... ***C. aemula***
            14 Leaves firm, glossy or bright green, with hair tufts in abaxial main vein axils; fruit usually < 10 mm diameter..... ***C. viridis***
          13 Petioles glandular; fruit calyx elevated.
            15 Stamens 5 to 10.
              16 Anthers white or yellow; sepals glandular or toothed beyond middle ..... ***C. boyntonii***
              16 Anthers purple; sepals wholly glandular-serrate..... ***C. buckleyi***
            15 Stamens 15 to 20.
              17 Leaves mostly unlobed on floreal shoots, shallowly lobed (1/4 – 1/3 to midrib) on terminal shoots..... ***C. mendosa***
              17 Leaves shallowly lobed on floreal shoots, lobed 1/3-1/2 to midrib on terminal shoots ..... ***C. pulcherrima***

Key B – hawthorns with acute to cuneate leaf bases; leaves conspicuously glandular on petiole and teeth; and twigs and branchlets geniculate

1 Leaves mostly widely elliptic or broadly obovate, base acute to short-cuneate.
  2 Leaves sharply-toothed and shallowly lobed.
    3 Leaves sparsely hairy to glabrous ..... ***C. alleghaniensis***
    3 Leaves tomentose..... ***C. dispar***
  2 Leaves with short, blunt teeth, mostly unlobed.

4 Leaves < 2 cm long; twigs very slender; thorns mostly < 2 cm ..... ***C. lepida***
4 Leaves > 2 cm long; twigs stiff; thorns > 2 cm.
5 Fruit yellow ..... ***C. flava***
5 Fruit red.
6 Branches mostly ascending and crooked ..... ***C. aprica***
6 Branches recurved or drooping ..... ***C. visenda***

1 Leaves mostly obovate or spatulate, base cuneate to attenuate.
7 Leaves and pedicels glabrous; branches slender, strongly weeping ..... ***C. lacrimata***
7 Leaves and pedicels variously hairy, at least when young; branches drooping or recurved.
8 Leaves obscurely toothed to entire on margin, especially lower half of blade ..... ***C. lassa***
8 Leaves toothed along most of margin.
9 Leaf base attenuate or long-cuneate; apex 3-lobed or with 3 distinct points.
10 Fruit small, usually < 8mm, often with calyx elevated ..... ***C. anisophylla***
10 Fruit usually 10 mm or more, calyx sessile ..... ***C. senta***
9 Leaf base cuneate; apex short-pointed; rarely lobed on floral shoots.
11 Leaf teeth acute; twigs moderately slender, branchlets rigid ..... ***C. alabamensis***
11 Leaf teeth blunt, glandular; twigs slender, branchlets flexuose ..... ***C. munda***

Key C – Leaves eglandular, or if glandular then twigs relatively straight, not conspicuously geniculate

1 Leaves spatulate or oblanceolate, < 13 mm wide; petiole winged to base; pyrenes < 4 mm long ..... ***C. spathulata***
1 Leaves not as above, or pyrenes > 4 mm long.
2 Leaves with hair tufts in abaxial main vein axils; [typically of wet or floodplain habitats].
3 Inflorescence simple, 1 to 5-flowered; fruit > 1 cm diameter, mature in late spring ..... ***C. aestivalis***
3 Inflorescence compound, 5 to 20-flowered; fruit usually < 1 cm, mature in autumn.
4 Petiole 5-12 mm long; terminal shoot leaves rarely lobed ..... ***C. crus-galli***
4 Petiole > 15 mm long; terminal shoot leaves rarely unlobed ..... ***C. viridis***
2 Leaves glabrous or with hairs scattered, not in tufts; [typically of upland habitats].
5 Pyrenes of fruit channeled or pitted on inner side.
6 Leaves thin, dull yellow-green, usually pubescent at least abaxially; pedicels tomentose ..... ***C. calpodendron***
6 Leaves firm, dark green or lustrous, glabrous or slightly hairy abaxially, veins conspicuously impressed and reticulate adaxially; pedicels glabrous or pubescent ..... ***C. succulenta***
5 Pyrenes of fruit plane on inner side.
7 Leaves mostly < 3 cm long; calyx lobes foliaceous, deeply toothed; spines slender ..... ***C. uniflora***
7 Leaves commonly > 3 cm long and not with above combination of characters.
8 Thorns short (< 2 cm), or spinose spur shoots present; fruit black; leaves with reticulate veins adaxially; main lateral veins run to sinuses and lobe tips in lobed leaves ..... ***C. brachyacantha***
8 Thorns usually > 2 cm long; fruit not black; leaves not as above.
9 Petioles eglandular.
10 Leaves widely obovate, with rounded lobes and blunt teeth; calyx lobes broadly triangular ..... ***C. margaretta***
10 Leaves not widely obovate; lobes acute or lacking; calyx lobes elongate.
11 Leaves mostly ovate or broadly elliptic.
12 Petiole and leaf underside glabrous or sparsely hairy ..... ***C. aemula***
12 Petiole and leaf underside pubescent to tomentose ..... ***C. mollis***
11 Leaves mostly obovate or oblong-elliptic.
13 Leaf veins impressed adaxially, prominent abaxially; leaves dull green.
14 Leaves pubescent abaxially; branches dark gray; fruit usually <12 mm; calyx and fruit stem hairy ..... ***C. collina***
14 Leaves sparsely hairy to glabrous abaxially after maturity; branches ashy gray; fruit 12-22 mm; calyx and fruit stem glabrous ..... ***C. punctata***
13 Leaf veins obscure; leaves lustrous.
15 Leaves, petioles, pedicels hairy ..... ***C. berberifolia***
15 Leaves, petioles, pedicels glabrous ..... ***C. crus-galli***
9 Petioles glandular (3 or more glands visible).
16 Leaves distinctly hairy or pubescent abaxially.
17 Leaves lobed 1/3- 2/3 to midrib on terminal shoots; fruit calyx elevated ..... ***C. intricata***
17 Leaves shallowly lobed to unlobed on terminal shoots; fruit calyx sessile.
18 Leaves thin; inflorescence simple, 3 to 5-flowered; stamens usually 30 or more ..... ***C. triflora***
18 Leaves firm; inflorescence compound, > 5-flowered; stamens 20 or fewer.
19 Leaves shallowly lobed on terminal shoots, usually > 5cm wide.....

..... ***C. harbisonii***

19 Leaves unlobed, most < 5 cm wide.

20 Leaf veins slightly impressed adaxially; fruit calyx deeply glandular-serrate; petiole conspicuously glandular ..... ***C. ashei***

20 Leaf veins distinctly impressed adaxially; fruit calyx remotely serrate to entire; petiole sparsely glandular ..... ***C. collina***

16 Leaves sparsely hairy to glabrous.

21 Stamens 5-10 ..... ***C. intricata***

21 Stamens 15-20.

22 Leaves shallowly lobed on terminal shoots (1/4-1/3 to midrib), usually unlobed on floreal shoots..... ***C. mendosa***

22 Leaves shallowly to moderately lobed on all shoots.

23 Leaves mostly ovate-lanceolate ..... ***C. sargentii***

23 Leaves ovate or widely ovate.

24 Twigs short; petiole often winged ½ its length; fruit often 10 mm or more in diameter ..... ***C. pallens***

24 Twigs elongate; petiole winged 1/3 or less of length; fruit usually < 10 mm in diameter ..... ***C. pulcherrima***

Crataegus aemula Beadle, Rome Hawthorn. Cp, Pd (GA): upland hardwood and pine-hardwood forests, over sandstone, circumneutral clay soils, and calcareous substrates; uncommon (but may be locally abundant). April; September. Nw. GA and ne. AL. Related to *C. iracunda*, but foliage of *C. aemula* differs in having frequent rounded bases, thin texture, yellow-green coloration. Fruits are lustrous light red, 12-18 mm diameter. *C. aemula* has been shown to be triploid, possibly apomictic; producing a high percentage of fertile seed with little seedling variation. [= K, Q, X; < *C. macrosperma* – S]

Crataegus aestivalis (Walter)Torrey & A. Gray, Mayhaw, Eastern Mayhaw. Cp (GA, NC, SC): swamp forests, generally where flooded for much of the year, often flowering and fruiting while standing in water, often associated with *Taxodium distichum, Nyssa aquatica, Nyssa biflora*, and *Planera aquatica*; uncommon (though locally abundant). March-April; June-July. Se. NC south to n. FL and se. AL. The historic record of *C. aestivalis* in VA appears to be based on a single specimen collected 22 July 1934 by M.L. Fernald & B. Long, in Princess Anne County, which is actually *C. crus-galli*. Related species *C. rufula* Sargent and *C. opaca* Hooker & Arnott occur in the deeper south in similar habitats, *C. rufula* restricted to w. FL, sw. GA, and se. AL, and *C. opaca* ranging from s. MS west to e. TX and s. AR. See Phipps (1988) for extensive additional discussion of *C. aestivalis* and relatives. The fruits of all three species are traditionally gathered for preserves, pies, and jelly. [= RAB, K, X, Z; < *C. aestivalis* – S]

Crataegus alabamensis Beadle, Alabama Hawthorn. Pd, Cp (GA, NC, SC): sandhills, upland pine and pine-oak forests, rocky woodlands, especially xeric or subxeric habitats with sandy or well-drained clay soils; uncommon. April; August-September. C. and e. NC south to n. FL, west to n. AL and s. MS. Often reaching treelike proportions (4-8 m tall, trunk 10-30 cm diameter). Some local forms may produce palatable fruit to 22 mm in diameter. [= X; < *C. flava* Aiton – RAB, K, S; > *C. teres* Beadle – Q; > *C. attrita* Beadle – Q; > *C. clara* Beadle – Q; > *C. ravenelii* Sargent – Q; > *C. cuthbertii* Ashe]

Crataegus alleghaniensis Beadle. Mt, Pd (GA, NC, SC, GA), Cp (GA, SC); upland pine and pine-oak forests, disturbed woodlands, rocky bluffs and slopes; uncommon. April; August-September. W. and sc. NC to c. SC, c. GA, west to c. AL and ne. MS. A variable species, displaying characteristics which suggest intermediacy between the complex of taxa involved in *C. intricata* Lange and *C. aprica* Beadle. [= X; < *C. flava* Aiton – RAB, W; > *C. alleghaniensis* – Q; > *C. ignava* Beadle – K, Q; > *C. extraria* Beadle – K, Q; > *C. impar* Beadle – K, Q; > *C. cullasagensis* Ashe – Q]

Crataegus anisophylla Beadle. Cp (GA): upland pine forests, pine-oak scrub, sandhills, disturbed woodlands, roadsides, abandoned fields; uncommon. Late March-April; late August-September. Se GA to c. peninsular FL, west to s. AL. This is a poorly understood taxon among the group of hawthorns often categorized under *C. flava* Aiton in many earlier floral treatments. Related to *C. lassa* Beadle. [= X; > *C. anisophylla* – Q; > *C. viaria* Beadle – Q; > *C. cirrata* Beadle – Q; > *C. versuta* Beadle – K, Q; > *C. resima* Beadle – K, Q < *C. flava* – S]

Crataegus aprica Beadle, Sunny Hawthorn. Mt, Pd, Cp (GA, NC, SC) {VA?}: upland pine forests, pine-oak forests, mixed hardwood forests over rocky or sandy substrates, abandoned fields, roadsides; common. Late March-April; September. NC south to s. GA and n. FL, west to c. & n. MS and e. TN. Related to *C. flava* Aiton, and perhaps one of the parents of it (see discussion of *C. flava*). [= W, X; < *C. flava* Aiton – RAB; > *C. aprica* – Q; > *C. sororia* Beadle – Q; > *C. annosa* Beadle – K, Q]

Crataegus berberifolia Torrey & Gray, Barberry Hawthorn. Pd, Cp (GA, NC, SC): mixed hardwood and pine forests of uplands, usually in subxeric to xeric habitats in NC, SC, GA, especially over basic to calcareous soils; common. Distributed primarily from Piedmont of NC south to Piedmont and upper Coastal Plain of SC, Piedmont and upper Coastal Plain of GA, and west across AL, MS, LA, to e. TX; north to s. AR, TN. April-May; August-October. Related to *C. crus-galli*, and differing primarily from that species by the consistent pubescence or stiff hairs on foliage, twigs, floral and fruit parts. [= C, K, X; > *C. berberifolia* – Q, S; > *C. mohri* – Q; > *C. engelmannii* Sargent; > *C. torva* Beadle; > *C. mohrii* Beadle – S]

Crataegus boyntonii Beadle, Boynton Hawthorn. Mt, Pd (GA, NC, SC, VA}: upland forest understories, pastures, rock outcrops, shrubby thickets; uncommon. W. VA south to c. GA, west to n. MS, n. to IL, KY, and WV. April-May; September-October. Related to *C. intricata* Lange, from which *C. boyntonii* differs chiefly in having an abundance of broadly ovate to deltoid leaves 5-8 cm long and 3-5 cm wide, more robust thorns, and more treelike habit (4-6 m tall, less prone to develop root

suckering and multiple stems). [= Q, X; < *C. flabellata* – RAB; = *C. boyntoni* – F, G, orthographic variant; < *C. intricata* Lange – C, K]

Crataegus brachyacantha Sargent & Engelmann, Blueberry Hawthorn. Cp (GA): open pinelands; rare (GA Special Concern). April; September. In sw. GA, one historic record, disjunct from a main range further west (primarily LA and e. TX). The only eastern hawthorn bearing black fruit, appearing blue due to an exterior waxy bloom. [= K, Q, S, Y, X]

Crataegus buckleyi Beadle. Buckley Hawthorn. Mt, Pd (GA, NC, SC): upland pine and hardwood forests, rock outcrops; uncommon. April-May; August-October. W. NC, w. SC, n. GA west to n. AL, north to e. TN (and perhaps WV and VA). Related to *C. boyntonii*, and perhaps only a variety of it; *C. buckleyi* differs chiefly in having purple anthers, more glandular-serrate calyx lobes, russet fruit, and smaller leaves (3-6 cm long x 2-4 cm wide) than *C. boyntonii*. [= Q, X; < *C. flabellata* – RAB; < *C. intricata* Lange – C, K]

Crataegus calpodendron (Ehrhart) Medikus, Pear Hawthorn. Mt (VA, NC), Pd (GA, NC, SC): mixed hardwood forests, open slopes, wooded ravines, streamsides, especially over basic or calcareous rocks; uncommon. From a generally northern range, the southern limits extend down the Appalachian region and adjacent Piedmont of VA to n. GA, c. AL, n. MS, and TN w. to AR. May-early June; September-October. Usually found as a solitary specimen, or in small local populations. One of the latest hawthorns in our area to flower; fruit production appears scant in its southern range. [= RAB, C, K, S, W, X; > *C. calpodendron* var. *calpodendron* – F, G; > *C. calpodendron* var. *microcarpa* (Chapman) Palmer – F, G; > *C. calpodendron* var. *globosa* (Sargent) Palmer – F, G; > *C. chapmanii* Beadle – Q]

Crataegus coccinea Linnaeus, Scarlet Hawthorn. Mt, Pd (NC, VA): deciduous forest understories, pastures, upland thickets; rare. May; October. Distributed southward along the Appalachian Plateau from a predominately northern range. The combination of large, pubescent leaves (9-12 cm long) on terminal shoots, evenly toothed calyx lobes, and 5-10 stamens per flower are distinctive. *C. coccinea* may attain treelike proportions, to 10 m tall. [= RAB, C, X; > *C. pennsylvanica* W.W. Ashe – F, G; > *C. pedicellata* Sargent – K, W]

Crataegus collina Chapman, Chapman's Hill-thorn. Mt (VA, NC), Pd (GA, NC, SC): hillside forests and young woodlands, especially over calcareous rocks; uncommon. March-April; August-October. Sw. VA west to KS, south to c. GA, s. AL, c. MS, AR and OK Closely allied to *C. punctata* Jacquin, but more widespread in range and habitat tolerance across the Southeast. Occupies sub-xeric uplands in Appalachian Region, tolerant of lowland floodplains in GA, AL, TN. One of the earliest hawthorns to flower in spring. Foliage may be conspicuously pubescent in some local populations. [= S, W, X; > *C. collina* var. *collina* – F, G; > *C. collina* var. *collicola* (W.W. Ashe) – F, G; > *C. rigens* Beadle – K, Q; > *C. collina* – Q; > *C. ingens* Beadle – Q; > *C. amnicola* Beadle – Q; < *C. punctata* Jacquin – RAB, C]

Crataegus crus-galli Linnaeus, Cockspur Hawthorn. Mt, Pd, Cp (GA, NC, SC, VA): pastures, thickets, disturbed woodlands and forests, fencerows; common. April-May; September-October. *C. crus-galli* sometimes forms extensive local colonies. Numerous variants occur, differing mostly in size and shape of leaves. [= C, W, X; < *C. crus-galli* Linnaeus – RAB; > *C. crus-galli* – K; > *C. macra* Beadle; > *C. regalis* Beadle var. *regalis* – F; > *C. algens* Beadle; > *C. arborea* Beadle – K; > *C. limnophylla* Sargent – K; > *C. crus-galli* var. *crus-galli* – F, G; > *C. crus-galli* var. *pyracanthifolia* (Aiton) Sargent – F, G; > *C. crus-galli* var. *exigua* (Sargent) Eggleston – G; > *C. crus-galli* var. *macra* (Beadle) Palmer – F, G; > *C. pyracanthoides* Beadle var. *arborea* (Beadle) Palmer – G; *? C. crus-galli* – S]

Crataegus dispar Beadle, Aiken Hawthorn. Cp (GA, SC), Pd (SC): upland pine or pine-oak forests, usually of sub-xeric to xeric conditions, in well-drained clay or sandy soils; uncommon. Late March-April; September. Endemic to GA and SC; lower Piedmont and adjacent upper Coastal Plain of sc. SC, historically also in e. GA. A distinctive species with its deeply cut and serrated, tomentose leaves, often pale bluish-green in color. At the time of this publication, *C. dispar* does not appear to be common in the vicinity of Aiken, SC. [= K, Q, X]

Crataegus flava Aiton, Yellow Hawthorn. Cp (SC, GA): dry woodlands; rare. A problematic taxon, originally described from a plant under cultivation in Europe, and assumed native from central SC s. to n. FL; few naturally-occurring plants have been located in the Southeastern US which match closely the type specimen. The related *C. aprica* Beadle is most similar, and may be involved in contributing to a possible hybrid origin of *C. flava*. Unfortunately, the name *C. flava* Aiton and the ambiguous taxon which it historically represents has been widely misapplied for more than a century. [= Q, X; < *C. flava* Aiton – RAB, K, S; > *C. elliptica* Aiton]

Crataegus intricata Lange, Entangled Hawthorn. Mt, Pd (GA, NC, SC, VA): pastures, wooded hills, rock outcrops, thickets; common. Late April-May; August-October. Widespread range from northern states s. to c. SC, c. GA, c. AL, n. MS, west to AR and OK. Broadly defined, a variable species incorporating many minor forms, here considered in synonomy. Some of these variants include yellowish-fruited types such as *C. fortunata* Sargent (of NC and WV), *C. straminea* Beadle (of AL and TN), pubescent types such as *C. biltmoreana* Beadle (of VA, NC, GA, AL, and TN), *C. communis* Beadle (of NC, GA, AL, and TN), *C. craytonii* Beadle (of NC), and types which bear very shallowly lobed leaves such as *C. padifolia* Beadle (of AL and TN) and *C. rubella* Beadle (of NC, SC, GA, AL, TN, and VA). *C. intricata* frequently exhibits a shrubby habit, and may form colonies by root sprouts. [= C, K, S, W, X; < *C. flabellata* – RAB; > *C. intricata* var. *intricata* – F, G; > *C. intricata* var. *straminea* (Beadle) Palmer – F, G; > *C. biltmoreana* Beadle – F, G, Q; > *C. communis* Beadle – Q; > *C. craytonii* Beadle – Q; > *C. fortunata* Sargent – F; > *C. padifolia* Beadle var. *padifolia* – F, G; > *C. padifolia* var. *incarnata* Sargent – F, G; > *C. rubella* Beadle – F, G, Q; > *C. straminea* Beadle – Q]

Crataegus iracunda Beadle, Red Hawthorn. Cp, Pd (GA, NC, SC, VA): swamps, bottomlands, moist slopes; wooded hills; uncommon (though locally abundant). April-May; September-October. Southern range limits appear to extend south to c. SC, GA, AL (and possibly MS). A difficult species to distinguish vegetatively, appearing most closely allied to *C. macrosperma* Ashe. The typically scabrous young leaves, 10 pink to purplish stamens, and firm-textured fruit with sessile calyx can vary among some local populations of *C. iracunda* to the extent that it may be confused with *C. schuettei*, *C. pruinosa*, or *C. boyntonii*. [= K, X; < *C. flabellata* (Bosc) K. Koch – RAB, C; > *C. iracunda* var. *iracunda* – F, G; > *C. iracunda* var. *silvicola*

(Beadle) Palmer – F, G; > *C. iracunda* – Q; > *C. silvicola* Beadle – Q; > *C. drymophila* Sargent; > *C. populnea* Ashe – F, G; > *C. riparia* Ashe; > *C. sectilis* Ashe; > *C. shallotte* Ashe]

Crataegus lassa Beadle, Sandhill Hawthorn. Cp, Pd (GA, NC, SC): pine forests, oak-pine scrub, upland scrublands, xeric woodlands, especially in deep sand and soils of rapid drainage; common. Here *C. lassa* is broadly defined to include a wide range of minor species, most described by Beadle. Late March-April; August-September. *C. lassa* is most often shrubby in habit (2-4 m tall), with a rounded or open crown reaching close to the ground, commonly with multiple stems. [= X; < *C. flava* Aiton – RAB; >< *C. flava* – K; > *C. lassa* – Q; > *C. lanata* Beadle – Q; > *C. laxa* Beadle; > *C. frugalis* Beadle – Q; > *C. integra* Beadle – Q; > *C. dolosa* Beadle – Q; > *C. inops* Beadle – Q; > *C. meridiana* Beadle – Q; > *C. colonica* Beadle – Q; > *C. insidiosa* Beadle – K, Q; > *C. pulla* Beadle – Q; > *C. egens* Beadle – Q; > *C. pearsonii* Ashe – K, Q; > *C. michauxii* Persoon – Q, S]

Crataegus lepida Beadle. Cp (GA): xeric, sandy soils of open pinelands, wiregrass-dominated roadsides and forest edges, oak-pine scrub; uncommon. Late March-April; August-September. S. GA south to c. peninsular FL. Allied to *C. munda*, *C. lepida* is distinctive in bearing a preponderance of oval to orbicular, 1-2 cm leaves. [= X; > *C. lepida* – Q; > *C. condigna* Beadle – K, Q]

Crataegus macrosperma Ashe, Fanleaf Hawthorn. Mt, Pd, Cp (GA, NC, SC, VA): mesic or subxeric hardwood forests, wooded slopes, rock outcrops, pastures, thickets, mountain balds and rocky summits; common. April-early May; September-October. VA south to c. GA, west to n. LA, w. KY, and WV. *C. macrosperma* is often confused with *C. pruinosa* (Wendl.) K. Koch and *C. iracunda* Beadle, due to similar leaf shape, but *C. macrosperma* appears consistent in its adaxially scabrous young leaves, 5-10 stamens, and soft-textured mature fruit. The pyrenes are not unusually large (5-8 mm), despite the name. [= K, W, X; < *C. flabellata* (Bosc) K. Koch – RAB; > *C. flabellata* – C; > *C. macrosperma* var. *macrosperma* – F, G; > *C. macrosperma* var. *roanensis* (W.W. Ashe) Palmer – F, G; > *C. macrosperma* – Q; > *C. brainerdii* – C, misapplied to material in our area; > *C. roanensis* Ashe – Q; < *C. macrosperma* – S]

Crataegus margaretta Ashe. Mt (VA): mesic hardwood forests, streamside thickets, pastures; rare. April-May; September-October. WV {TN, w. VA} west to MO, IO, north to WI and MI. *C. margarettiae* is related to the wide-ranging *C. chrysocarpa* Ashe, but is distinctive in its widely obovate to nearly orbicular leaves, rounded or obtuse lobes, cuneate base, and petioles often as long as the blade. [= Q, S, X; > *C. margaretta* var. *margaretta* – F, G; > *C. margaretta* var. *brownii* (Britton) Sargent – F; > *C. margaretta* var. *brownei* – G (orthographic variant); < *C. chrysocarpa* Ashe – C; > *C. chrysocarpa* – K; = *C. margarettiae* – K, orthographic variant]

Crataegus marshallii Eggleston, Parsley Hawthorn, Parsley Haw. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): swamp forests (especially over calcareous soils), alluvial forests, dry and mesic upland slopes (especially over mafic or calcareous rocks). April-early May; September-October. Se. VA south to c. peninsular FL, west to e. TX, and north in the interior to sc. TN, n. AL, n. MS, w. TN, s. IL, se. MO, nc. AR, and se. OK (Phipps 1998); common. *C. marshallii* is distinctive and immediately recognizable among *Crataegus*, by its deeply lobed leaves, small flowers, and small fruits (4-6 mm long by about 3 mm wide, with only 1-3 pyrenes). [= RAB, C, F, G, K, S, W, X, Y; = *C. apiifolia* (Marshall) Michaux – Q]

Crataegus mendosa Beadle. Cp, Pd (GA), {SC}: mesic hardwood forests, mixed pine-hardwood forests, upland wooded hills over calcareous substrates and well-drained clays; uncommon. Lower Piedmont and upper Coastal Plain of sc. SC, wc. GA, ne. and c. AL, and c. and s. MS. April; September. Allied to *C. pulcherrrima* Ashe, and perhaps only a variety of it, *C. mendosa* is distributed well northward and eastward beyond the bulk of the range of *C. pulcherrima*. Related *C. venusta* Beadle and *C. austrina* Beadle occur in central AL. [= K, Q, S, X]

Crataegus mollis Scheele, Downy Hawthorn. Mt (VA), Pd (GA): mesic forests, alluvial forests, wooded uplands over basic or calcareous soils; rare in our area. Late March-April; September-October. The unusual occurrence of this species in the Mountains of VA is atypical of the majority of the range, which is north and west of VA and AL; ME to ND, s to s.TX, e. to nw. GA. *C. mollis* shows wide variabiliy in size and shape of leaves and fruit, but the tomentose young petioles and pubescent leaf undersides are consistent. The fruits of some local genotypes can reach 24 mm diameter, among the largest of the genus in the U.S. *C. mollis* often reaches treelike dimensions, to 10 m tall and trunk diameters to 30 cm. [= C, S, X; > *C. mollis* var. *mollis* – F, G; > *C. mollis* – K, Q; > *C. cibaria* Beadle – Q; > *C. gravida* Beadle – Q; > *C. cibilis* Ashe; > *C. meridionalis* Sargent – K; *?*> *C. albicans* W.W. Ashe – S]

Crataegus munda Beadle. Mt, Pd, Cp (GA, NC, SC): xeric or subxeric forests, scrublands, disturbed woodlands; uncommon. Late March-April; September-October. NC south to n. FL, west to s. and c. AL. *C. munda* as here considered includes in synonomy several shrubby taxa with small (1-3 cm), predominately spatulate leaves, slender geniculate twigs, and inflorescences of 1 to 3 (-5) flowers. [= X; < *C. flava* Aiton – RAB, W; > *C. munda* – K, Q; > *C. geniculata* Ashe – Q; > *C. yadkinensis* Ashe – Q; > *C. pexa* Beadle – Q; > *C. invicta* Beadle – K, Q; > *C. floridana* Sargent – S]

Crataegus pallens Beadle. Mt (NC): subxeric forests, slopes, rock outcrops, especially over mafic or calcareous substrates; rare. Late April-May; September-October. W. NC, e. TN, ne. AL, and perhaps n. GA. *C. pallens* is allied to *C. intricata* Lange, as well as exhibiting characters affiliated with *C. pulcherrima* Ashe. The oblong-ovate leaves with 2 to 3 pairs of straight-sided lobes, 15-20 stamens, yellowish oval fruit, dark furrowed bark, and somewhat twiggy crown atop these multi-stemmed shrubs is here considered diagnostic. A closely related taxon, *C. pinetorum* Beadle (Pineland Hawthorn), of ne. AL and uncertain distribution beyond, exhibits subglobose reddish fruit on pedicels 1-2 cm. [= Q, X; < *C. flabellata* – RAB; < *C. intricata* Lange – K, S]

Crataegus phaenopyrum (Linnaeus f.) Medikus, Washington Hawthorn. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): upland forests, floodplain forests, pastures, thickets, disturbed areas; uncommon (though locally abundant). May-early June; September-October. One of our most distinctive hawthorns, and commonly cultivated across the eastern U.S. Native range presumed to be PA s. to n. FL, w. to IL, MO, MS; naturalized populations originating from widespread cultivation may be

involved in parts of this range, and expansions elsewhere. [= RAB, C, G, K, W, X; > *C. youngii* Sargent – F; > *C. phaenopyrum* – F, S; > *C. populifolia* – S]

Crataegus pruinosa (Wendl.) K. Koch, Frosted Hawthorn. Mt, Pd (NC, SC, GA, VA), Cp (NC, SC, GA): upland forests, pastures, rock outcrops, mountain summits and balds, floodplain forests; uncommon (though locally abundant). April-May; September-October. Broadly defined, a variable species with many closely related taxa here considered synonymous. This species may occur as a lone shrub or tree, or become colonial in regularly disturbed areas. The presence of a waxy bloom on the mature fruit (pruinose) is not a dependable trait, and fruits can vary from green to bright red, glaucous or not. Foliage and floral parts are usually entirely glabrous on plants in our area. [= C, S, W, X; < *C. flabellata* – RAB; > *C. pruinosa* var. *pruinosa* – F, G; > *C. pruinosa* var. *delawarensis* (Sargent) Palmer – F, G; > *C. rugosa* – F, G; > *C. pruinosa* – K; > *C. arcana* Beadle – K, Q; > *C. rustica* Beadle – Q; > *C. vicinalis* Beadle – Q; > *C. gattingeri* Ashe – F; > *C. gattingeri* var. *gattingeri* – G; > *C. gattingeri* var. *rigida* Palmer – G; > *C. georgiana* Sargent – Q]

Crataegus pulcherrima Ashe, Beautiful Hawthorn. Cp (GA): upland hardwood forests and hardwood-pine mixtures, ravines, mesic slopes, especially over iron-rich soils and rolling terrain with soils high in clay or loam content; uncommon (though locally abundant). Se. GA, c. panhandle FL, west to LA (and perhaps e. TX), north to c. MS and n. AL. April; September-October. Defined broadly, *C. pulcherrima* includes many closely related species described by Beadle, most not clearly distinct and here considered synonymous. Some may deserve varietal status following further study. Foliage of *C. pulcherrima* display a consistency of evenly-lobed leaves with straight, parallel primary veins and obscure secondary venation. The inflorescences are compound, with 20 stamens per flower; fruits are usually small (5-10mm diameter), with dense flesh; bark of main trunk brown, furrowed. [= X; > *C. pulcherrima* – K, Q; > *C. macilenta* Beadle – Q; > *C. lenis* Beadle – Q; > *C. ancisa* Beadle – K, Q; > *C. opima* Beadle – Q; > *C. inanis* Beadle – K, Q; > *C. illustris* Beadle – Q; > *C. incilis* Beadle – Q; < *C. intricata* Lange – S]

Crataegus punctata Jacquin, Dotted Hawthorn. Mt. (VA, NC): high elevation forests, balds, rock outcrops; uncommon (though locally abundant). The majority of range is north of our area, with southern limits along the higher Appalachian elevations of NC, TN, (perhaps n. GA), and west to KY, MO, and IL. May; September-October. *C. punctata* is considered here distinct from *C. collina*, which has a wider Southeastern range and habitat tolerance. *C. punctata*, often in company with *C. macrosperma*, comprises the majority of hawthorn forests, "orchards," and thickets seen in the high elevations of the North Carolina Blue Ridge, in openings and disturbed *Picea rubens* and *Abies fraseri* forests. [= K, Q, W, X; < *C. punctata* – RAB, C; > *C. punctata* var. *punctata* – F, G; > *C. punctata* var. *aurea* Aiton – F, G; > *C. punctata* var. *canescens* Britton – F, G; > *C. punctata* var. *pausiaca* (W.W. Ashe) Palmer – F, G; *? C. punctata* – S]

Crataegus sargentii Beadle, Sargent's Hawthorn. Pd (GA): mesic upland forests over calcareous or circumneutral substrates; rare. W. GA, c. and n. AL (and perhaps se. TN). April; September. *C. sargentii* displays intermediate characteristics between the range of variation seen in *C. intricata* and that of *C. pulcherrima*. It is also on the northern range limits of the latter group. Although this might suggest hybrid origin, the genetics of *C. sargentii* has not been carefully investigated. Fruit production is usually scant in *C. sargentii*, and seed viability appears to be very low. [= K, X; > *C. sargentii* – Q; > *C. eximia* Beadle – Q; > *C. gilva* Beadle – Q; < *C. intricata* Lange – S]

Crataegus schuettei W.W. Ashe, Schuette's Hawthorn. Mt (VA, NC): mesic hardwood forests; uncommon (though may be locally abundant). April-May; September-October. *C. schuettei* occupies a range predominately north of our area, in NH, NY, WI, n. IL, n. WV; known to extend s. to w. NC (and perhaps also to e. TN and n. GA), but the extent of distribution is poorly understood. Closely related to *C. macrosperma*. Foliage of juvenile shoots of *C. schuettei* in w. NC often are laciniate, with deep, acute sinuses nearly reaching the midrib. [= K, X; < *C. flabellata* (Bosc) K. Koch – RAB, C; > *C. basilica* Beadle – F, G, Q, W]

Crataegus senta Beadle. Mt (NC), Cp (SC) {GA?}: upland hills, disturbed forests, pastures; uncommon. W. NC and c. SC (perhaps south to GA and n. FL). April-May; September. *C. senta* appears to be one of the most northerly distributed hawthorns allied closely to the group to which *C. alabamensis* Beadle, *C. lassa* Beadle, and *C. lacrimata* Small belong. The drooping branches, red fruit, and small, sharply 3-lobed or 3-pointed, obovate leaves are distinctive. [= Q, X; < *C. flava* Aiton – RAB, K, S, W; > *C. pentasperma* Ashe]

Crataegus spathulata Michaux, Littlehip Hawthorn. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): bottomland forests, extending upslope to drier sites especially on mafic or calcareous substrates; uncommon in NC, common southward. April-May; September-October. E. NC south to panhandle FL, west to e. TX, north in the interior to w. NC, c. TN, s. MO, and e. OK (Phipps 1988). This species is distinctive for its small spatulate leaves (tending to be trilobed) and thin, flaking bark (multicolored green, brown, and brownish gray). [= RAB, C, F, G, K, Q, S, W, X, Y]

Crataegus succulenta Schrader ex Link, Fleshy Hawthorn. Mt (NC, VA): high elevation rocky summits, mesic forests, high pastures, especially over basic soil or mafic substrates; rare. May; October. Widespread across the northern U.S. states, extending s. along the Appalachians to WV, w. VA, w. NC, and s. in the interior to MO. An attractive species, with bright red fruit, obovate to orbicular leaves with reticulate venation, widely spreading branches, and numerous long thorns (5-9 cm long). [= RAB, C, K, S, W, X; > *C. succulenta* var. *succulenta* – F, G; > *C. succulenta* var. *neofluvialis* (Ashe) Palmer – F, G; > *C. neofluvialis* Ashe – Q; > *C. vernans* Ashe]

Crataegus triflora Chapman, Threeflower Hawthorn. Mt, Pd, Cp (GA): wooded ravines and slopes under mesic forests, limestone outcrops, flatwoods, prairies; rare. April-May; September-October. Nw. and wc. GA, west to AL, MS, LA; (possibly in TN?). Usually a multi-stemmed shrub 1-3 m tall, but occasionally to 6 m. *C. triflora* produces some of the largest flowers in the genus (to 3 cm diameter), though frequently only 3 flowers borne per inflorescence; occasional vigorous plants may bear 3-6 flowers per inflorescence. The orange-red, soft fruit is palatable and may reach 22 mm diameter. [= K, W, X; > *C. triflora* – Q; > *C. austromontana* Beadle – Q]

Crataegus uniflora Muenchhausen, Oneflower Hawthorn. Mt, Pd, Cp (GA, NC, SC, VA): upland forests, disturbed lands, roadsides, rock outcrops, often in xeric or sub-xeric conditions; common. April-May; September-October. PA and NJ south to n. FL, w. to e. TX, OK, and MO. Normally a shrubby species, 0.5-2 m in height, though local forms may reach 4 m, particularly in n. FL. Among minor variations in foliage, consistent are the slender thorns (2-7 cm long) and foliaceous calyx lobes persistent on the fruit. [= RAB, C, F, G, K, S, W, X; > *C. uniflora* – Q; > *C. gregalis* Beadle – Q; > *C. arenicola* Ashe; > *C. raleighensis* Ashe – Q]

Crataegus viridis Linnaeus, Green Hawthorn. Pd, Cp (GA, NC, SC), Mt (SC, VA): swamps, bottomland forests, alluvial woodlands, wet flatwoods, and uplands where soils are often basic to calcareous; common. Late March-late April; September-November. DE w. to n. MO, south to central peninsular FL and central TX One of our largest hawthorn species, frequently reaching treelike proportions (5-10 m tall, trunk 10-40 cm diameter). The orange-red fruits often persist on the bare branches into winter, sometimes until the following spring. Bark of the trunk is usually mottled with patterns of gray, reddish-brown, and greenish-gray coloration, due to the dehiscing layers of scales and plates. [= RAB, C, S, W, X; > *C. viridis* var. *viridis* – F, G, K; > *C. viridis* var. *ovata* (Sargent) Palmer – F, G; > *C. viridis* var. *lanceolata* (Sargent) Palmer – F, G; > *C. viridis* – Q; > *C. interior* Beadle – Q; > *C. vulsa* Beadle – K, Q; > *C. penita* Beadle – K, Q]

Crataegus visenda Beadle. Pd, Cp (GA, NC, SC): upland pine and pine-oak forests, disturbed lands, wooded hills with clay or sandy soils, often in xeric or sub-xeric conditions; uncommon. April; late August-September. Central & upper Coastal Plain of NC south to n. FL, west to s. & e. MS, n. AL, and nw. GA. *C. visenda* is related closely to *C. aprica* Beadle, but the foliage tends to have a higher percentage of nearly orbicular blades and branches are more recurved or drooping. Often attaining the dimensions of a small tree (4-8 m tall and with a trunk 7-20 cm diameter). [= X; < *C. flava* Aiton – RAB, S; >< *C. flava* – K; > *C. visenda* – Q; > *C. tristis* Beadle – K, Q; > *C. segnis* Beadle – Q; > *C. arrogans* Beadle – K, Q; > *C. sodalis* Beadle – Q]

Crataegus ashei Beadle, Ashe Hawthorn. Cp (AL): prairies, hardwood forests, pine-hardwood flats, especially over calcareous clay soils; rare. C. and s. AL west to c. and s. MS and e. LA (s. TN?). April; September. Related to *C. triflora* Chapman and *C. harbisonii* Beadle. [= Q, X; < *C. harbisonii* Beadle – K]

Crataegus austrina Beadle. C. AL. [= Q, X]

Crataegus dilatata Sargent, Broadleaf Hawthorn. Reported from a single county in WV, otherwise bulk of range is in PA & areas northward. May; October. Related to *C. coccinioides*, which is occasionally cultivated but restricted in natural range to the lower Midwest. [= C, X]

Crataegus harbisonii Beadle, Harbison Hawthorn. Rare, endemic to c. and w. TN and currently known only from Davidson Co, TN: hardwood forests understories, over limestone; very rare. Late April-May; Sept.-Oct. Related species *C. ashei* Beadle has a more southern distribution in AL, MS, and LA. *C. harbisonii* appears to be extirpated from nearly all of its former range, even though once described as common in the Nashville area. [= Q, S, X; < *C. harbisonii* Beadle – K]

Crataegus lacrimata Small, Weeping Hawthorn. Xeric, sandy soils , in scrublands and in association with sparse stands of *Pinus clausa* or *Pinus palustris*. Endemic to the western FL panhandle; perhaps in adjacent sandhill scrub of AL. Late March-April; August-September. The combination of conspicuously slender weeping branches, small spatulate leaves, glabrous character, and treelike habit in *C. lacrimata* is unique among a large group of related hawthorns which occupy sandy habitats in the Coastal Plain. [= Q, X]

* ***Crataegus monogyna*** Jacquin, English Hawthorn. Reported for VA in W. [= C, F, G, K] {not keyed at this time}

Crataegus opaca Hooker & Arnott. AL. [= K, X]

Crataegus pinetorum Beadle. In AL and TN. [= K, Q, X]

Crataegus rufula Sargent. Cp (GA): flatwoods ponds, river swamps; uncommon. [= K, Z; > *C. maloides* Sargent – S] {not keyed at this time; synonymy incomplete}

Crataegus venusta Beadle. C. AL. [= Q, X; < *C. sargentii* Beadle – K]

Cydonia P. Miller 1754 (Quince)

A monotypic genus, a shrub, probably native of the Caucasus. References: Kalkman in Kubitzki (2004)=Z.

* *Cydonia oblonga* P. Miller, Edible Quince, is reported for MD (Kartesz 1999). [= K, Z; = *Pyrus cydonia* Linnaeus]

Dalibarda Linnaeus (Dewdrop, Robin-runaway, Star-violet)

The genus is monotypic, but should perhaps be included in *Rubus* (Alice & Campbell 1999). References: Robertson (1974)=Z; Alice & Campbell (1999).

Dalibarda repens Linnaeus, Dewdrop, Robin-runaway, Star-violet. Mt (NC, VA): bog margins and mountain swamp forests, often along spring seeps, mostly in dense shade beneath *Rhododendron maximum*; rare (NC Endangered, VA Rare). June-September. Newfoundland west to MI and MN, south to NJ and OH, and disjunct to WV, sw. VA, and w. NC. [= RAB, C, G, GW, K, S, W; **= *Rubus dalibarda*** Linnaeus; = *Rubus repens* (Linnaeus) Kuntze]

Dasiphora Rafinesque (Shrubby-cinquefoil)

Molecular phylogenetic studies indicate that this genus is more closely related to *Alchemilla*, *Aphanes*, *Drymocallis, Fragaria*, *Sibbaldiopsis*, and other genera outside our area than to *Potentilla* (Eriksson et al. 2003). References: Robertson (1974)=Z; Eriksson et al. (2003); Kalkman in Kubitzki (2004).

Dasiphora fruticosa (Linnaeus) Rydberg ssp. *floribunda* (Pursh) Kartesz, Shrubby-cinquefoil, Golden-hardhack. This species is widepread in the western and northern parts of North America, south to NJ, PA, OH, IN, and IL. It was reported for western NC (near Ducktown, in Turtletown, Cherokee County, N.C.") by Gattinger (1901), but additional documentation is lacking. [= K; < *Potentilla fruticosa* Linnaeus – C, G, Z; > *Potentilla fruticosa* var. *fruticosa* – F; = *Pentaphylloides floribunda* (Pursh) A. Löve]

Drymocallis Fourrier ex Rydberg 1908

A genus of about 30 species, best segregated from *Potentilla*. Molecular phylogenetic studies indicate that this genus is more closely related to *Alchemilla*, *Aphanes*, *Dasiphora, Fragaria*, *Sibbaldiopsis*, and other genera outside our area than to *Potentilla* (Eriksson et al. 2003). References: Eriksson, Donoghue, & Hibbs (1998); Eriksson et al. (2003); Kalkman in Kubitzki (2004).

Drymocallis arguta (Pursh) Rydberg, Tall Potentilla. Mt (VA): greenstone barrens; rare (VA Rare). Québec west to Mackenzie, south to w. VA, IN, MO, and AZ. Reported for e. TN by Gattinger (1901); the documentation unknown. [= *Potentilla arguta* Pursh – F, G; > ***P. arguta*** var. *arguta* – C; > ***P. arguta*** ssp. *arguta* – K]

Duchesnea J.E. Smith 1811 (Indian Strawberry)

(see *Potentilla*)

Exochorda Lindley 1858 (Pearlbush)

A genus of about 4 species, shrubs, of e. Asia. References: Kalkman in Kubitzki (2004).

* ***Exochorda racemosa*** (Lindley) Rehder, Pearlbush. Pd (GA, NC, SC, VA): disturbed areas, woodland borders; rare, introduced from China. First reported for South Carolina by Hill & Horn (1997). [= C, G, K]

Filipendula P. Miller 1754 (Queen-of-the-Prairie)

A genus of about 15 species, herbs, north temperate in e. and nw. North America, Europe, and Asia. References: Schanzer (1994)=Y; Robertson (1974)=Z.

1 Lateral leaflets lobed and toothed; flowers pink; fruit straight; rootstock with long subterranean runners; [native plant of wetlands, also sometimes cultivated]; [section *Albicoma*] ..... ***F. rubra***
1 Lateral leaflets merely coarsely toothed; flowers white; fruit twisted; rootstock short, without runners; [introduced species, sometimes escaped, at least north of our area]; [section *Filipendula*] ..... ***[F. ulmaria]***

Filipendula rubra (Hill) B.L. Robinson, Queen-of-the-Prairie. Mt (GA, NC, VA), Pd (VA): bogs, wet meadows, over mafic or calcareous rocks; rare (NC Endangered, VA Rare). June-July; July-September. PA west to n. IL and MN, south to WV, w. VA, w. NC, n. GA, KY, and IA. The closest relatives are the other two members of section *Albicoma*: ***F. palmata*** (Pall.) Maximowicz and ***F. angustifolia*** (Turczaninow) Maximowicz, both of ne. Asia. [= RAB, C, F, G, GW, K, S, W, Y, Z]

* *Filipendula ulmaria* (Linnaeus) Maximowicz, Meadowsweet, Queen-of-the-Meadow, is cultivated and sometimes escaped or persistent. It is reported for KY, WV, PA, and NJ (Kartesz 1999). [= Y; > ***F. ulmaria*** var. *ulmaria* – C, F, G; > ***F. ulmaria*** ssp. *ulmaria* – K]

Fragaria Linnaeus (Strawberry)

A genus of about 10 species, herbs, of temperate Eurasia, North America, and South America. References: Kalkman in Kubitzki (2004).

1 Fruit (at least the larger on a plant) usually > 1.5 cm thick; petals 10-15 mm long; leaves evergreen; [cultivated, rarely persistent] ..... ***F. ×ananassa***
1 Fruit 1-1.5 cm thick; petals 3-10 mm long; leaves deciduous (at least tardily so); [native].

2 Achenes set in pits on the mature receptacle; calyx lobes appressed to the developing fruit (after petal drop); petals (5-) 7-10 mm long; principal lateral veins diverging from the midrib of the leaflet at an angle of ca. 30 degrees; terminal tooth of leaflets > ½ as wide as the adjacent teeth, as long as or surpassing them in length ..... ***F. virginiana***

2 Achenes superficial on the mature receptacle; calyx lobes spreading to reflexed from the developing fruit (after petal drop); petals 3-7 mm long; principal lateral veins diverging from the midrib of the leaflet at an angle of ca. 45 degrees; terminal tooth of leaflets < ½ as wide as the adjacent teeth, and surpassed by them in length.

4 Long hairs of the petioles and peduncles ascending to appressed ..... ***F. vesca*** *var.* ***americana***

4 Long hairs of the petioles and peduncles spreading to retrorse ..... ***[F. vesca*** *var.* ***vesca]***

* ***Fragaria*** ×***ananassa*** Thuillier (pro sp.) [*chiloensis* × *virginiana*], Garden Strawberry, Cultivated Strawberry. Cp, Pd, Mt (GA, NC, SC, VA): gardens, persistent on garden edges; commonly cultivated, rarely persistent or weakly escaped. An octoploid hybrid of the two octoploid species, *F. chiloensis* and *F. virginiana*. [= RAB, F; = *F.* ×*ananassa* var. *ananassa* – K; < *F.* ×*ananassa* – RAB, F; = *F. ananassa* – C; = *F. chiloensis* Duchesne var. *ananassa* – G]

Fragaria vesca Linnaeus *var.* ***americana*** Porter. (NC, VA). [= C, F, G; < *F. vesca* – RAB; = *F. vesca* ssp. *americana* (Porter) Staudt – K, W; = *F. americana* (Porter) Britton – S]

Fragaria virginiana P. Miller, Wild Strawberry. Mt, Pd, Cp (GA, NC, SC, VA): grasslands, roadsides, pastures; common. [= RAB, C, W; > *F. virginiana* var. *virginiana* – F, G; > *F. virginiana* var. *illinoensis* (Prince) Gray – F, G; > *F. virginiana* var. *australis* Rydberg – G; > *F. virginiana* ssp. *virginiana* -- K; > *F. virginiana* ssp. *grayana* (Vilmorein ex J. Gay) Staudt – K; > *F. virginiana* – S; > *F. australis* (Rydberg) Rydberg – S; > *F. grayana* Vilmorin ex J. Gay – S]

Fragaria vesca Linnaeus var. *vesca*. East and south to PA, WV, and KY. [= C, F, G; = *F. vesca* ssp. *vesca* – K]

Geum Linnaeus 1753 (Avens)

Many researchers have advocated breaking *Geum* into varying numbers of segregate genera; even the most conservative divisions place *G. radiatum* in a genus separate from our other species (such as *Parageum*; see synonymy) and some would place *G. vernum* in *Stylipus*. Molecular studies (Smedmark 2006; Smedmark & Eriksson 2002) make a strong case for a broad circumscription of *Geum*, including *Waldsteinia*, as many of the segregates are complexly and reticulately inter-related. References: Robertson (1974)=Z, Bolle (1933)=Y; Král (1966)=X; Smedmark (2006); Smedmark & Eriksson (2002); Kalkman in Kubitzki (2004).

1 Style straight or slightly sinuous, neither jointed nor tightly twisted, the tip straight; basal leaves with a cordate or reniform terminal lobe 7-15 cm wide and 1-several lateral lobes generally < 1 cm long (rarely to 2 cm long); cauline leaves much reduced, flabellate, with clasping base and rounded apex; leaves thick, subcoriaceous, the upper surface dark green and glossy; petals 13-20 mm long, bright yellow; [of crevices and ledges on high elevation cliffs (less commonly grassy balds)]; [subgenus *Micracomastylis*; genus *Parageum*] ..... ***G. radiatum***

1 Style with a tight kink or twist, the straight portion above the kink more-or-less deciduous, leaving a hook; basal leaves variable, trifoliate, pinnatifid, simple or with a large terminal lobe (to 8 cm wide) and much smaller lateral lobes; cauline leaves trifoliate to simple, mostly sessile or petiolate base, with acute or acuminate apex; leaves herbaceous, the upper surface medium green, not notably glossy; petals 1-10 mm long, white, cream, pale yellow, bright yellow, or lavender; [of mesic to boggy forests, or less commonly, grassy balds (*G. geniculatum*)].

2 Calyx lobes 2-4 mm long, lacking bractlets between the lobes; head of achenes elevated above the calyx on a 1-2 mm stipe; flowering April-May; fruiting May-June; [subgenus or genus *Stylipus*] ..... ***G. vernum***

2 Calyx lobes 4-10 mm long, with bractlets between the lobes; head of achenes more-or-less sessile; flowering May-August; fruiting late May-September; [subgenus or genus *Geum*].

3 Portion of the style above the kink 3-7 mm long; calyx campanulate, cup-like in flower and fruit (sometimes becoming slightly and irregularly reflexed late in fruit), the sepals 5-10 mm long, green or purple-darkened; petals yellow or often with a substantial suffusion of rose, lavender, or purple; lower portion of style with long, gland-tipped hairs

4 Portion of the style above the kink 4-7 mm long; sepals 5-10 mm long, green or purple-darkened; [of nw. NC and adjacent TN] ..... ***G. geniculatum***

4 Portion of the style above the kink 3-4 mm long; sepals 9-15 mm long, purple; [of ne. WV northward] ..... ***[G. rivale]***

3 Portion of the style above the kink 1-2 mm long; calyx reflexed soon after anthesis, the sepals 3-9 mm long, green; petals white, cream, or yellow; lower portion of style glabrous or with long, eglandular hairs.

5 Larger stipules > 10 mm wide, coarsely toothed or even lobed; mid-cauline leaves very coarsely toothed, with 1-5 teeth per cm of margin ..... ***G. virginianum***

5 Larger stipules 2-10 (-12) mm wide, entire to toothed; mid-cauline leaves less coarsely toothed, with 3-7 teeth per cm of margin.

6 Plant in flower.

7 Petals bright yellow, 5-9 mm long ..... ***G. aleppicum***

7 Petals white or cream (often drying pale yellow), 2-7 (-7.5) mm long.

8 Petals (3-) 4-7 (-7.5) mm long; pedicels puberulent (sometimes also slightly hirsute); [of moist to dry forests]..... ***G. canadense***
8 Petals (2-) 2.5-4 (-5.5) mm long; pedicels densely hirsute with spreading or slightly reflexed hairs, and also puberulent; [of wetlands].
9 Young achenes glabrous..... ***G. laciniatum*** *var.* ***laciniatum***
9 Young achenes sparsely to densely pubescent with long stiff trichomes..... ..... ***G. laciniatum*** *var.* ***trichocarpum***

6 Plant in fruit.
9 Pedicel predominantly puberulent, also sometimes with scattered long hairs; cauline leaves mostly 3-foliolate or simple; receptacle densely hispid with yellowish, stiff hairs (best seen by removing a several achenes to expose the receptacle surface); [widespread and common in our area, primarily occurring in moist to wet forests] ..... ***G. canadense***
9 Pedicel moderately to densely hirsute with long, spreading to reflexed hairs 1-2.5 mm long, and also puberulent; cauline leaves mostly pinnately compound, the leaflets mostly elongate and often also laciniately divided; receptacle glabrous or sparsely to densely hispid; [rare in our area, occurring in the Mountains of NC and the Mountains, Piedmont, and Coastal Plain of VA, primarily in bogs and boggy meadows].
11 Hairs on the achene extending upward onto the lower portion of the style; pedicel sparsely hirsute with spreading hairs; receptacle densely hispid ..... ***G. aleppicum***
11 Hairs on the achene absent **or** at least not extending upward onto the lower portion of the style; pedicel densely hirsute with spreading to reflexed hairs; receptacle glabrous to sparsely hispid.
12 Achenes glabrous..... ***G. laciniatum*** *var.* ***laciniatum***
12 Achenes sparsely to densely pubescent with long stiff trichomes .... ***G. laciniatum*** *var.* ***trichocarpum***

Geum aleppicum Jacquin, Yellow Avens. Mt (NC, VA), Pd (VA): bogs and boggy meadows; rare (NC Rare, VA Rare). June-July; July-August. Circumboreal, in North America south to NJ, w. NC, ne. TN (Chester, Wofford, & Kral 1997), IN, IL, IA, and NM. The report for GA (Jones & Coile 1988) is in error. American plants are sometimes separated from Eurasian ones as var. *strictum* (Aiton) Fernald. [= RAB, GW, K, W, Y, Z; > *G. aleppicum* var. *strictum* (Aiton) Fernald – C, F, G]

Geum canadense Jacquin. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): moist slope forests, bottomland forests, swamp forests; common. May-July; July-November. Nova Scotia west to ND, south to c. GA and TX. Some authors have recognized a number of varieties in *G. canadense* (see synonymy); some (at least) of these may warrant recognition. [= RAB, C, G, GW, S, W, Z; > *G. canadense* var. *canadense* – F, K, Y; > *G. canadense* var. *brevipes* Fernald – F, Y; > *G. canadense* var. *camporum* (Rydberg) Fernald & Weatherby – F, Y; > *G. canadense* var. *grimesii* Fernald & Weatherby – F, Y]

Geum geniculatum Michaux, Bent Avens. Mt (NC): seeps, seepy boulderfield forests, grassy balds, cliff bases, banks of cool streams up to about 5 m wide, at high to moderate elevations on Grandfather Mountain (Avery, Watauga, and Caldwell counties, NC), the Roan Mountain massif (Avery and Mitchell counties, NC and Carter County TN), and Rich Mountain (Watauga County, NC); rare, though locally fairly common (US Species of Concern, NC Threatened). July-August; August-September. *G. geniculatum* is apparently restricted to the few highest peaks in nw. NC and ne. TN: the Roan Mountain massif (Roan High Knob, Roan High Bluff, Round Bald, Jane Bald, Grassy Ridge, Little Hump Mountain, Big Yellow Mountain, and Big Hump Mountain), Grandfather Mountain, and Rich Mountain. It may be found on a few other peaks, such as Snake Mountain. The distribution of this species is peculiar. While limited to the several highest and coldest mountains in the Southern Appalachians, it extends downslope on Roan Mountain and Grandfather Mountain nearly to their bases, in situations that are apparently repeated on many other Southern Appalachian peaks. Perhaps *G. geniculatum* was more widespread in the Southern Appalachians in the cooler, moister conditions of the post-Pleistocene, but became restricted to the few coldest peaks during the warmer, drier conditions of the Hypsithermal Interval (7000-2000 B.C.). Following climatic cooling, it was able to disperse downslope from its several refugia, but has not dispersed successfully to other peaks. *G. geniculatum* is most closely related to the circumboreal *G. rivale*, with which it shares such characteristics as purplish, non-reflexed sepals, a relatively long terminal style segment, upper pedicel with long glandular hairs, and basal style segment with long glandular hairs. [= RAB, K, S, W, Y, Z]

Geum laciniatum Murray *var.* ***laciniatum.*** (VA): {info from VAHP}. This variety ranges south to VA, MD, KY, and TN. It resembles *G. laciniatum* var. *trichocarpum* but has the achenes glabrous (vs. sparsely to densely pubescent with long stiff trichomes). [= F, G, K, Z; < *G. laciniatum* – C, W, Y]

Geum laciniatum Murray *var.* ***trichocarpum*** Fernald, Rough Avens. Mt (NC, SC, VA), Pd, Cp (VA): bogs and boggy meadows, usually calcareous or basic; rare (NC Rare, VA Rare). June-July; July-August. *G. laciniatum* ranges from Nova Scotia west to MN, south to w. NC, ne. TN, MO, and KS. Var. *trichocarpum* ranges from Nova Scotia west to MN, south to w. NC, IL, MO, and KS. Var. *laciniatum*, differing in its glabrous achenes, appraches our area and should be sought; it is generally more northern and more restricted in distribution, ranging from Nova Scotia west to s. Ontario, south to MD, WV, TN, OH, and IN. [= F, G, K, Z; < *G. laciniatum* – RAB, C, GW, W, Y]

Geum radiatum Michaux, Spreading Avens, Cliff Avens. Mt (NC): high elevation rocky summits, in thin soil at tops of cliffs and on ledges (where not trampled), in pockets of soil on nearly vertical portions of cliffs, in open grassy balds, around *Rhododendron catawbiense* in grassy balds, or in grassy areas at bases of cliffs (where succession by shrubs is prevented by accumulation of seepage ice and by stone fall); rare (US Endangered, NC Endangered). June-August; July-September. Ranging

from Ashe County, NC (Phoenix Mountain) south and west to Sevier County, TN (Mount Leconte) and Transylvania County, NC (the Devil's Courthouse), restricted to "pseudo-alpine" rock outcrops and grassy meadows near the summits of the higher peaks of the Southern Blue Ridge, notably Bluff Mountain, Three Top Mountain, Phoenix Mountain, and The Peak (Ashe County, NC), Grandfather Mountain (Watauga and Avery counties, NC), Grassy Ridge (Avery County, NC), Roan High Bluff (Mitchell County, NC), Mount Craig in the Black Mountains (Yancey County, NC), Craggy Pinnacle, Craggy Dome, and Craggy Gardens (Buncombe County), the Devil's Courthouse (Transylvania County, NC), and Mount Leconte (Sevier County, TN). *G. radiatum* is closely related to three other taxa, these siblings also restricted in range and endemic to mountainous areas, collectively showing a relictual distribution: *G. peckii* Pursh (of alpine meadows and moist, rocky slopes of Nova Scotia and the higher peaks of NH and ME), *G. calthifolium* Menzies ex Smith var. *calthifolium* (of wet snow-melt meadows of w. British Columbia, w. Yukon, s. AK, and the Aleutians), and *G. calthifolium* var. *nipponicum* (of wet snow-melt meadows of s. Kamchatka and Japan). It is illegal to collect *G. radiatum* without federal and state permits, and there is no justification (scientific or otherwise) for additional collections from known sites. This is one of the few plant species that has been seriously depleted by collection by scientists (several hundred herbarium sheets from Roan Mountain alone!), though recreational over-use of its habitats, and possibly also pollution and break-up of adjoining spruce-fir forests, are the more critical threats to its continued existence. [= RAB, K, W, Z; = *Sieversia radiata* (Michaux) Greene – S; **= *Parageum radiatum*** (Michaux) H. Hara – X; = *Acomastylis radiata* (Michaux) Bolle – Y]

Geum vernum (Rafinesque) Torrey & A. Gray, Spring Avens. Mt, Pd (NC, VA): seepages, swamps, roadsides, disturbed areas; uncommon, probably both native and introduced in our area, the native occurrences now being supplemented by its spread along roads from further west. April-May; May-June. [= RAB, C, F, G, GW, K, W, Y, Z; = *Stylypus vernus* Rafinesque – S]

Geum virginianum Linnaeus, Cream Avens. Mt, Pd (NC, SC, VA), Cp (NC, VA): bottomland forests, moist slope forests, swamp forests, and extending upslope to mesic or even dry sites, especially over mafic rocks; common. June-August; July-November. MA and NY west to IN, south to SC and TN. [= RAB, C, F, G, GW, K, W, Y, Z; > *G. virginianum* – S; > *G. hirsutum* Muhlenberg ex Link – S]

Geum rivale Linnaeus, Water Avens, Purple Avens, is a circumboreal plant of calcareous bogs, swamps, seepages, and wet meadows that ranges south to WV (Pocahontas, Preston, Randolph, and Tucker counties). It is most closely related (in our area) to *G. geniculatum*. [= C, F, G, K, Y]

Gillenia Moench 1802 (Indian-physic, Bowman's-root)

A genus of 2 species, herbs, of e. North America. There has been nomenclatural debate about whether the name *Gillenia* must be rejected because it is a later homonym of *Gillena*; the resolution appears to be that *Gillenia* can be used, and as it is older than the name *Porteranthus*, should be used (see Robertson 1974; Brummitt 1988; Parkinson 1988). References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

1 Stipules ovate, 10-20 mm long; leaves trifoliate, the leaflets of the lower leaves laciniate-toothed to divided ..... ***G. stipulata***
1 Stipules linear, 6-8 mm long; leaflets of the lower leaves; leaves trifoliate, the leaflets of the lower leaves merely toothed, like the upper leaves ..... ***G. trifoliata***

Gillenia stipulata (Muhlenberg ex Willdenow) Nuttall, Midwestern Indian-physic. Pd (GA, NC, VA), Mt (GA): dry to mesic woodlands and forests, especially over circumneutral soils derived from diabase (in NC) or greenstone (in VA); rare (NC Rare, VA Rare). May-June; July-October. NY to KS, south to nw. GA and TX, and disjunct east of the Blue Ridge in sc. VA, c. NC, and c. GA. [= RAB, F, G; = *Porteranthus stipulatus* (Muhlenberg ex Willdenow) Britton – C, K, S, W, Z]

Gillenia trifoliata (Linnaeus) Moench, Mountain Indian-physic. Mt, Pd (GA, NC, SC, VA), Cp (VA): moist forests, roadbanks, forest edges; common. April-June; August-October. Ontario west to MI, south to SC, AL, nc. GA, and MO. [= RAB, F, G; = *Porteranthus trifoliatus* (Linnaeus) Britton – C, K, S, W, Z]

Kerria Augustin de Candolle 1818 (Kerria)

A monotypic genus, a shrub, of China and Japan. References: Kalkman in Kubitzki (2004).

* ***Kerria japonica*** (Linnaeus) Augustin de Candolle, Kerria, Japanese-rose. Pd (NC, SC, VA), Cp (VA): woodland borders, suburban woodlands; rare, introduced from China. April-May. Single and "doubled" forms are cultivated. [= C, F, G, K]

Malus P. Miller (Apple, Crabapple)

A genus of 30-50 species, trees and shrubs, north temperate. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

1 Twigs not thorny; leaves involute or convolute in bud; leaves unlobed; [cultivated and persistent or escaping]; [subgenus *Malus*].
  2 Leaves glabrous or nearly so; fruits small, < 3 cm in diameter ("crabapples") ..... ***M. prunifolia***

2 Leaves densely pubescent in bud, permanently pubescent beneath; fruits large, > 5 cm in diameter ("apples") .... ***M. pumila***

1 Twigs thorny; leaves folded in bud; leaves often lobed; [native, sometimes weedy]; [subgenus *Chloromeles*].

3 Leaves permenantly pubescent beneath; pedicels and hypanthium pubescent; [western, disjunct east to KY and MS] .... ***[M. ioensis]***

3 Leaves glabrous or nearly so; pedicels and hypanthium glabrous or wiith scattered long hairs; [widespread in our area].

4 Leaves elliptic to elliptic-lanceolate, 2.5-8 cm long, 1-4 cm wide, mostly > 2× as long as wide, subacute to obtuse at the tip ..... ***M. angustifolia***

4 Leaves ovate to ovate lanceolate, 4-10 cm long, 2-7 cm wide, mostly < 2× as long as wide, acute to acuminate at the tip ..... ***M. coronaria***

Malus angustifolia (Aiton) Michaux, Wild Crab Apple. Cp, Pd, Mt (GA, NC, SC, VA): forests, woodlands, fence-rows; common, uncommon in Piedmont and Mountains. April-May; August-September. NJ, PA, OH, and MO, south to FL and TX. [= RAB, S, W; = *Pyrus angustifolia* Aiton – C, G, Z; > *Pyrus angustifolia* var. *angustifolia* – F; > *Pyrus angustifolia* var. *spinosa* (Rehder) L.H. Bailey – F; > *M. angustifolia* var. *angustifolia* – K; > *M. angustifolia* var. *puberula* Rehder – K]

Malus coronaria (Linnaeus) P. Miller, Wild Crab Apple. Mt, Pd (GA, NC, SC, VA), Cp (GA, NC, SC): forests, woodlands, fencerows; common. May; September-October. NY, Ontario and WI south to GA and LA. [= RAB, K, W; = *Pyrus coronaria* Linnaeus – C, Z; > *Pyrus coronaria* Linnaeus var. *coronaria* – F; > *Pyrus coronaria* Linnaeus var. *elongata* Rehder – F; > *Pyrus coronaria* Linnaeus var. *dasycalyx* (Rehder) Fernald – F; > *Pyrus coronaria* Linnaeus var. *lancifolia* (Rehder) Fernald – F; = *Pyrus lancifolia* Bailey – G; > *Malus bracteata* Bailey – S; > *Malus coronaria* (Linnaeus) P. Miller – S; > *Malus lancifolia* Rehder – S; > *Malus coronaria* (Linnaeus) P. Miller var. *dasycalyx* Rehder]

* ***Malus prunifolia*** (Willdenow) Burkhardt, Chinese Apple, Crab-apple. Pd (VA), {SC}. [= K; = *Pyrus prunifolia* Willdenow]

* ***Malus pumila*** P. Miller, Common Apple. Mt, Pd, Cp (NC, SC, VA): commonly cultivated throughout, especially in the Mountains and Piedmont, and long persistent. April-May; July-October. [= RAB, K, W; = *Pyrus malus* Linnaeus – C, F, G, Z; = *Malus malus* (Linnaeus) Britton – S; = *Malus domestica* Burkhart]

Malus ioensis (Wood) Britton var. *ioensis*, Prairie Crabapple. Forests, woodlands, fence-rows. East to KY and MS. [= K; < *Pyrus ioensis* (Wood) Bailey – C, F, G] {not keyed at this time; synonymy incomplete}

Neviusia A. Gray 1858 (Snow-wreath)

A genus of 2 species, shrubs, of e. North America and California. References: Kalkman in Kubitzki (2004).

Neviusia alabamensis A. Gray, Alabama Snow-wreath. Mt (GA): limestone woodlands, where there is seasonal moisture; rare (GA Threatened). Sc. TN (Chester, Wofford, & Kral 1997), nw. GA (Jones & Coile 1988), and n. AL. [= K, S]

Photinia Lindley (Photinia, Redtip)
(also see *Aronia*)

A genus of about 35 species, trees and shrubs, of Asia and Central America. Perhaps should be combined into *Aronia* (see discussion under that genus). References: Kalkman in Kubitzki (2004).

* *Photinia villosa* (Thunberg) Augustin de Candolle, Redtip, Photinia, is cultivated as an ornamental landscaping plant and persists after cultivation. [= K; ***Aronia***]

Physocarpus (Cambess.) Rafinesque 1838 (Ninebark)

A genus of 3-5 species, shrubs, of North America and ne. Asia. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

1 Follicles stellate-pubescent ..... ***Ph. opulifolius*** *var.* ***intermedius***

1 Follicles glabrous ..... ***Ph. opulifolius*** *var.* ***opulifolius***

Physocarpus opulifolius (Linnaeus) Maximowicz *var.* ***intermedius*** (Rydberg) B.L. Robinson, Midwestern Ninebark. Pd (SC, NC?): {habitat and distribution needing additional investigation}. W. NY west to MN and CO, south to SC, FL, AL, and AR. It is unclear whether the southern species recognized by Small (1933) are best allied with his taxon. Additional study is needed. [= C, F, G, K, Z; < *Ph. opulifolius* – RAB, W; > *Opulaster alabamensis* Rydberg – S; > *Opulaster stellatus* Rydberg – S; = *Opulaster intermedius* Rydberg]

Physocarpus opulifolius (Linnaeus) Maximowicz *var.* ***opulifolius***, Eastern Ninebark. Mt, Pd (NC, SC), {GA, VA}: stream banks, riverside thickets, rock outcrops, cliffs, especially over mafic or calcareous rocks; common. May-July. Québec west to

WI, south to SC, TN, and n. IL. [= C, F, G, K, Z; < *Ph. opulifolius* – RAB, W; > *Opulaster opulifolius* (Linnaeus) Kuntze – S; > *Opulaster australis* Rydberg – S]

Porteranthus
(see *Gillenia*)

Potentilla Linnaeus 1753 (Cinquefoil, Five-fingers, Potentilla)
(also see *Drymocallis* and *Sibbaldiopsis*)

A genus of 400-500 species, depending on the controversial circumscription. References: Robertson (1974)=Z; Eriksson, Donoghue, & Hibbs (1998); Eriksson et al. (2003); Kalkman in Kubitzki (2004).

1 Flowers solitary, on naked, axillary pedicels; leaves palmately 3-5-foliolate.
- 2 Leaves 3-foliolate; fruit strawberry-like, fleshy and red, consisting of an expanded fleshy receptacle bearing superficial achenes ..... ***P. indica***
- 2 Leaves primarily 5-foliolate on a plant (some poorly developed leaves may be 3-foliolate); fruit a head of achenes, dry.
  - 3 Lowest flower from the axil of the second well-developed leaf..... ***P. simplex***
  - 3 Lowest flower from the axil of the first well-developed cauline leaf, or from the axil of a lower and poorly-developed leaf.
    - 4 Middle leaflet of larger leaves 1.5-4 cm long; plants silky-pilose, the pubescence appressed or loosely ascending..... ***P. canadensis*** *var.* ***canadensis***
    - 4 Middle leaflet of larger leaves 3-6 cm long; plants long-villous, the pubescence loosely spreading to reflexed ..... ***P. canadensis*** *var.* ***villosissima***

1 Flowers in terminal cymes; leaves palmately 3-9-foliolate.
- 5 Leaves 3-foliolate.
  - 6 Petals and sepals subequal; stamens (15-) 20; achenes usually ridged..... ***P. norvegica***
  - 6 Petals much shorter than the sepals; stamens 5-10 (-15); achenes smooth..... ***P. rivalis*** *var.* ***millegrana***
- 5 Leaves 5-9-foliolate.
  - 7 Leaves (5-) 7-9-foliolate; petals 8-18 mm long, pale (sulphur) yellow, creamy-white, or white.
    - 8 Leaves pinnately compound; petals 12-18 mm long, creamy-white or white..... ***[see Drymocallis]***
    - 8 Leaves palmately compound; petals 8-15 mm long, pale (sulphur) yellow..... ***P. recta***
  - 7 Leaves 5 (-7)-foliolate; petals 3-7 mm long, medium yellow.
    - 9 Leaves pubescent beneath, the surface not concealed ..... ***P. intermedia***
    - 9 Leaves densely tomentose beneath, the surface concealed.
      - 10 Pubescence of the stem and veins of the leaf undersurface tomentose only; leaves revolute ..... ***P. argentea***
      - 10 Pubescence of the stem and veins of the leaf undersurface tomentose and also with long, spreading hairs; leaves not revolute..... ***P. inclinata***

* ***Potentilla argentea*** Linnaeus, Silvery Five-fingers, Hoary Five-fingers. Mt, Pd, Cp (NC, VA): disturbed areas; rare, naturalized from Europe. May-July. [= RAB, C, F, G, W; *P. argentea* var. *argentea* – K]

Potentilla canadensis Linnaeus *var.* ***canadensis***, Running Five-fingers. Mt, Pd, Cp (GA, NC, SC, VA): woodlands, forests, fields, lawns, disturbed areas; common. March-May; April-June. The relative distributions and habitats of the two varieties obscure. [= F, G, K; < *P. canadensis* – RAB, C, W; = *P. pumila* Poiret – S]

Potentilla canadensis Linnaeus *var.* ***villosissima*** Fernald, Hairy Five-fingers. Pd (NC): woodlands, forests, fields, lawns, disturbed areas; uncommon. March-May; April-June. The relative distributions and habitats of the two varieties obscure. [= F, G, K; < *P. canadensis* – RAB, C, W; = *P. caroliniana* Poiret – S]

* ***Potentilla inclinata*** Villars. Cp (NC): disturbed areas; rare, naturalized from Europe. May-June. [= C, K; ? *P. canescens* Bess. – RAB, F, G]

* ***Potentilla indica*** (Andrews) T. Wolf, Indian-strawberry. Cp, Pd, Mt (GA, NC, SC, VA): disturbed areas, lawns, gardens; common, naturalized from Asia. February-frost. *Duchesnea* is apparently not closely related to *Fragaria*, and is best combined with *Potentilla*, which does have other species with accrescent fruits (Eriksson, Donoghue, & Hibbs 1998). The strawberry-like fruit is not sweet; it can also be distinguished from *Fragaria* by its whitish interior flesh. The leaves are more coarsely toothed than *Fragaria*. [= *Duchesnea indica* (Andrews) Focke – RAB, C, F, G, K, S, W]

* ***Potentilla intermedia*** Linnaeus. Mt (NC, VA), Pd, Cp (VA): disturbed areas; rare, naturalized from Europe. May-July. [= RAB, C, F, G, K]

Potentilla norvegica Linnaeus, Strawberry-weed. Mt (GA, NC, VA), Cp (NC, VA), Pd (GA, NC, SC, VA): pastures, fields, disturbed areas, especially where moist; common (uncommon in Piedmont and Coastal Plain). Late May-frost; June-frost. This species is apparently a complex circumboreal species complex, with both native and introduced elements now present in NC. [= RAB, C, G, W; > *P. norvegica* var. *norvegica* – F; > *P. norvegica* ssp. *monspeliensis* (Linnaeus) Ascherson & Graebner – K; > *P. monspeliensis* Linnaeus – S]

* ***Potentilla recta*** Linnaeus, Sulphur Five-fingers. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas; common, naturalized from Europe. April-July; May-August. [= RAB, C, F, G, K, W]

* ***Potentilla rivalis*** Nuttall, Brook Five-fingers. Mt, Pd, Cp (VA): habitat not known; rare, adventive from further west. [= C, G, K; > *P. millegrana* Engelmann ex Lehmann – F; > *P. rivalis* var. *millegrana* (Engelmann ex Lehmann) S. Watson]

Potentilla simplex Michaux, Old-field Five-fingers. Cp, Mt, Pd (GA, NC, SC, VA): woodlands, fields, disturbed areas; common. April-June; April-July. Newfoundland and MN south to AL and TX. [= RAB, C, G, K, W; > *P. simplex* var. *simplex* – F; > *P. simplex* var. *argyrisma* Fernald – F; > *P. simplex* var. *calvescens* Fernald – F; > *P. simplex* – S; > *P. canadensis* – S, misapplied]

* *Potentilla anserina* Linnaeus, Silverweed, occurs as an introduction south to e. TN (Chester, Wofford, & Kral 1997), se. PA (Rhoads & Klein 1993), and NJ (Kartesz 1999). [= C, F; *Argentina anserina* (Linnaeus) Rydberg – K] {not keyed at this time; synonymy incomplete}

* ***Potentilla reptans*** Linnaeus, Creeping Five-fingers, native of Eurasia, is reported for VA (Cronquist 1991, Kartesz 1999) and occurs as well in se. PA (Rhoads & Klein 1993). [= C, F, K] {not keyed at this time; synonymy incomplete}

Prunus Linnaeus 1753 (Plum, Cherry, Sloe, Peach, Apricot)

A genus of about 200 species, trees and shrubs, nearly cosmopolitan. References: Robertson (1974)=Z; McVaugh (1951)= Y; Catling, McKay-Kuja, & Mitrow (1999)=X; Shaw & Small (2004); Kalkman in Kubitzki (2004).

1 Flowers in elongate racemes of (12-) 20-many flowers.
- 2 Leaves evergreen, entire or serrate with few or rather many (but widely spaced) prominent teeth; petioles lacking 2 glands near junction with leaf blade; [native in maritime situations from e. NC southward, but cultivated and escaped inland); [**laurel cherries**, subgenus *Laurocerasus*] ..... ***P. caroliniana***
- 2 Leaves deciduous, regularly and rather finely toothed; petioles with 2 glands near the junction with the leaf blade; [collectively widespread, native and alien]; [**black cherries**, subgenus *Padus*] ..... **Key A**

1 Flowers solitary, in fascicles, in umbellate or corymbose inflorescences, or in short racemes (*P. mahaleb*) of 1-12 flowers.
- 3 Flowers and fruit sessile or on a pedicel < 2 mm long
  - 4 Fruit scarlet-red, 1 cm in diameter; twigs densely tomentose; fruit and ovary glabrous or somewhat pubescent (but not velvety); leaves < 5 (-7) cm long; petals white (pink in bud), < 13 mm long; [subgenus *Lithocerasus*, section *Armeniacocerasus*]..... ***[P. tomentosa]***
  - 4 Fruit yellow, peach, or orange-colored, > 2 cm in diameter; twigs glabrous; fruit and ovary velvety pubescent; leaves > 5 cm long; petals white or pink, > 11 mm long.
    - 5 Leaves 8-15 cm long, > 4× as long as wide, falcate; fruit peach-colored, > 5 cm in diameter; [**peach**; subgenus *Amygdalus*] ..... ***P. persica***
    - 5 Leaves 5-10 cm long, 1-1.5× as long as wide, not falcate; fruit yellow to orange, 3-5 cm in diameter; [**apricots**; subgenus *Prunus*, section *Armeniaca*]
      - 6 Twigs reddish-brown; fruits 3-5 cm in diameter ..... ***P. armeniaca***
      - 6 Twigs bright green; fruits 2-3 cm in diameter, the flesh sour and/or bitter ..... ***P. mume***
- 3 Flowers and fruit pedicellate, the pedicel > 4 mm long; fruit glabrous, ovary glabrous or pubescent initially.
  - 7 Stones globose, not 2-edged; sepals hairy or not; inflorescences subtended by leafy bracts arising from the same bud as the flowers (except *P. pensylvanica*, *P. susquehanae*, and *P. pumila* var. *depressa*); **cherries** ..... **Key B**
  - 7 Stones somewhat to strongly flattened, 2-edged; sepals hairy on the upper surface (except *P. domestica, P. insititia,* and *P. cerasifera*); inflorescences without leafy bracts arising from the same bud as the flower; **plums.....** ..... **Key C**

KEY A -- BLACK-CHERRIES, subgenus *Padus*

1 Petals 6-10 mm long; hypanthium pubescent within; stone sculptured; [alien, rarely naturalizing] ..... ***[P. padus]***

1 Petals 4-7 mm long; hypanthium glabrous within; stone smooth; [native].
- 2 Leaf teeth triangular, pointing outwards; leaves dull above; sepals conspicuously glandular-eroded on the margin, not persistent on the fruit; colonial, thicket-forming shrub from rhizomes; [montane in our area]..... ..... ***P. virginiana* var. *virginiana***
- 2 Leaf teeth curved, appressed; leaves shiny above; sepals entire or slightly glandular-eroded on the margin, persistent on the fruit; small to large tree, not clonal; [collectively widespread].
  - 3 Leaves mostly 1.5-2× as long as wide, often blunt-tipped (except in shoot leaves); lower leaf surface rather uniformly pubescent, the midrib lacking conspicuous tufts or fringes; branchlets reddish hairy ..... ***P. alabamensis***
  - 3 Leaves mostly 2-2.5× as long as wide, slightly acuminate; lower leaf surface glabrous except for tufts or fringes along the midrib; branchlets glabrous ..... ***P. serotina* var. *serotina***

Key B – CHERRIES, subgenera *Cerasus* and *Lithocerasus*

1 Plants shrubs, to 1.5 (-3) m tall; [subgenus *Lithocerasus*; section *Microcerasus*].
  2 Inflorescences of 1-2 flowers; [exotic, persistent from cultivation] ..... ***P. glandulosa***
  2 Inflorescences of 2-4 flowers; [native].
    3 Youngest twigs glabrous; leaf blades (1.6-) 3-4× as long as wide; plants decumbent; stones fusiform, (5.5-) 7.3-9.5 (-10.2) mm long; [plants of calcareous shores and gravel bars] ..... ***[P. pumila** var. **depressa]***
    3 Youngest twigs minutely pubescent; leaf blades mostly 1.7-2.5× as long as wide; plants erect, stones mostly orbicular, (5.3-) 5.8-7.8 (-9.2) mm long; [plants of acid sandy or rocky upland sites] ..... ***P. susquehanae***
1 Plants trees, well over 3 m tall when mature; [subgenus *Cerasus*].
  4 Leaf serrations single to double, the tips of the serrations acuminate to attenuate.
    5 Leaf serrations attenuate; tree with upright form; [section *Sargentiella*] ..... ***P. serrulata***
    5 Leaf serrations acuminate; tree usually with weeping form; [section *Microcalymma*] ..... ***P. subhirtella***
  4 Leaf serrations small and obscure or well-developed but rounded to acute.
    6 Petals 4-7.5 mm long; fruit < 1 cm in diameter; [section *Phyllomahaleb*].
      7 Inflorescence with a central axis, thus nearly or actually racemose; fruit blackish; leaves 1-1.5× as long as wide; [exotic tree] ..... ***P. mahaleb***
      7 Inflorescence umbellate to corymbose, the central axis absent or poorly developed; fruit red; leaves 2-5× as long as wide; [native tree] ..... ***P. pensylvanica***
    6 Petals 9-15 mm long; fruit 1.3-2.5 cm in diameter; [section *Eucerasus*].
      8 Leaves 7-15 cm long, persistently hairy beneath, at least along the midrib and veins; pair of petiolar glands on the petiole near the blade; fruit sweet when ripe ..... ***P. avium***
      8 Leaves 4-8 cm long, glabrous beneath once fully-expanded; pair of petiolar glands on the base of the leaf blade; fruit sour when ripe ..... ***P. cerasus***

KEY C – PLUMS, subgenus *Prunus*

1 Flowers 1-2 (-3) per inflorescence; stone somewhat sculptured; [exotic]; [section *Prunus*].
  2 Leaves 4-6 cm long; fruits 2-3 cm long, yellow to red when ripe; inflorescence of a solitary flower ..... ***[P. cerasifera]***
  2 Leaves 5-10 cm long; fruits 3-7 cm long, blue-black, yellow, or greenish when ripe; inflorescence of (1-) 2-3 flowers.
    3 Fruit 5-7 cm long; single-trunked small to medium tree, usually thornless ..... ***P. domestica***
    3 Fruit 3-4 cm long; thicket-forming shrub to small tree, often thorny ..... ***P. insititia***
1 Flowers (3-) 4-5 per inflorescence; stone nearly smooth; [native]; [section *Prunocerasus*].
  4 Leaf teeth gland-tipped (or with a scar where the gland has fallen); sepals with marginal glands (except *P. angustifolia*); fruit yellow to red when ripe.
    5 Leaves 3-6 cm long, often folded longitudinally; sepals lacking marginal glands ..... ***P. angustifolia** var. **angustifolia***
    5 Leaves 5-13 cm long, not folded; sepals with marginal glands.
      6 Leaves < 2× as long as wide; petals 10-15 mm long; [of w. VA northward] ..... ***P. nigra***
      6 Leaves > 2× as long as wide; petals 4-7 mm long; [of mw. United States, eastward into KY, TN, MS, and present as an introduction still farther eastward in NC, SC, VA, and GA].
        7 Leaf teeth triangular, ascending, the gland terminal; flowers opening with the leaves ..... ***P. hortulana***
        7 Leaf teeth depressed, the gland near the sinus; flowers opening before the leaves ..... ***P. munsoniana***
  4 Leaf teeth glandless; sepals without marginal glands; fruit yellow, red, purple-red, purple, or black when ripe
    8 Petals 10-15 mm long; leaves 6-10 cm long, acuminate; fruit 2-2.5 cm long, red or yellow.
      9 Leaves narrowly to broadly cuneate at the base; petiole usually lacking glands near its junction with the leaf blade; sepals glabrous on the lower side ..... ***P. americana***
      9 Leaves broadly rounded at the base; petiole usually with glands near its junction with the leaf blade; sepals pubescent on the lower side ..... ***P. mexicana***
    8 Petals 4-9 mm long; leaves 4-8 cm long, obtuse, acute, or slightly acuminate; fruit 1.0-1.5 cm long, dark purple, black (rarely yellow or red) ..... ***P. alleghaniensis var. alleghaniensis, P. maritima var. maritima, P. injucunda, P. umbellata***

Prunus alabamensis C. Mohr, Alabama Black Cherry. Cp (GA, SC), Pd (GA), Mt (GA): sandhills, other xeric sandy or rocky forests and woodlands, often associated with *Pinus palustris* (even in the Piedmont and Mountains); uncommon (rare north of GA). April-May; July-August. C. SC, nw. GA, n. AL south to Panhandle FL and s. AL; the NC record is based on a misidentified specimen. [= K; = *Prunus serotina* Ehrhart var. *alabamensis* (C. Mohr) Little – RAB; > *Padus alabamensis* (C. Mohr) Small – S; > *Padus cuthbertii* Small – S; > *Padus australis* Beadle – S; = *Prunus serotina* ssp. *hirsuta* (Elliott) McVaugh – Y, Z]

Prunus alleghaniensis Porter ***var. alleghaniensis***, Allegheny Plum, Allegheny Sloe. Mt (NC, VA), Pd (VA): dry rocky woodlands, shale barrens; rare. MA and NY south to w. VA, w. NC, and e. TN. Var. *davisii* (W. Wight) Sargent is endemic to MI. [= K; < *Prunus alleghaniensis* – C, F, G, W]

Prunus americana Marshall, Wild Plum. Mt, Pd, Cp (GA, NC, SC, VA): upland forests, bottomland forests, fencerows; common. March-April; July-August. ME to Saskatchewan, south to FL, LA, OK, NM, and AZ. [= C, K, S, W, Z; = *Prunus americana* var. *americana* – RAB, F, G]

Prunus angustifolia Marshall *var.* ***angustifolia***, Chickasaw Plum. Cp, Pd (GA, NC, SC, VA), Mt (GA, VA): roadsides, fencerows, abandoned fields, especially sandy; common. March-April; May-early July. NJ, PA, IN, IL, MO, NE, and CO, south to FL, TX, and NM. [= F, K; < *Prunus angustifolia* – RAB, C, G, S, W, Z]

* ***Prunus armeniaca*** Linnaeus, Apricot. Cp (VA): persistent around old home sites; rare, native of n. China. [= C, K]

* ***Prunus avium*** Linnaeus, Sweet Cherry, Mazzard Cherry, Bing Cherry. Pd (NC, VA), Mt, Cp (VA), {NC, SC}: common. [= RAB, C, F, G, K, S, W, Z]

Prunus caroliniana (P. Miller) Aiton, Carolina Laurel Cherry. Cp (GA, NC, SC), Pd, Mt (GA): native in maritime forests and sandy hammocks near the coast, escaped from cultivation to fencerows and suburban forests and thickets in more inland areas; uncommon. March-April; September-October. Se. NC south to FL, west to TX, near the coast. [= RAB, K, Z; = *Laurocerasus caroliniana* (P. Miller) M. Roemer – S]

* ***Prunus cerasus*** Linnaeus, Sour Cherry, Pie Cherry. Mt (NC, VA), Pd, Cp (VA), {GA}: disturbed areas; fencerows, suburban forests; commonly cultivated, rarely persistent or escaped. April-May; June. [= RAB, C, F, G, K, S, W, Z]

* ***Prunus domestica*** Linnaeus, European Plum. Pd (VA): suburban forests; rare, native of Europe. Introduced at scattered locations; reported for Manassas National Battlefield Park (Virginia Botanical Associates 2005); also reported for MD, PA, NJ. [= *Prunus domestica* ssp. *domestica* – C; = *Prunus domestica* var. *domestica* – K]

* ***Prunus glandulosa*** Thunberg, Dwarf Flowering Almond. Cp (NC): persisting at abandoned homesites; rare, introduced from c. and n. China and Japan. [= K]

***** ***Prunus hortulana*** Bailey, Wild-goose Plum. Mt, Pd, Cp (VA): disturbed areas; rare, presumably introduced only, native from s. OH, n. IN, n. IL, se. IA, and e. KS south to n. KY, n. AR, and ne. OK. [= C, F, G, K, S, Z]

Prunus injucunda Small, Hog Plum, Flatwood Plum. Cp, Pd (GA, NC, SC): upland rocky or sandy forests and woodlands; uncommon. March-April; August-September. S. NC south to GA and AL. [= S; = *Prunus umbellata* Elliott var. *injuncunda* (Small) Sargent – K; < *Prunus umbellata* – RAB, Z]

* ***Prunus insititia*** Linnaeus, Damson, Bullace. Pd (VA): rare, introduced from Europe. [= F, G, Z; = *Prunus domestica* ssp. *institia* (Linnaeus) C.K. Schneider – C; = *Prunus domestica* Linnaeus var. *insititia* (Linnaeus) Fiori & Paoletti – K]

* ***Prunus mahaleb*** Linnaeus, Mahaleb Cherry, Perfumed Cherry, St. Lucie Cherry. Mt, Pd (NC, VA): roadsides, old homesites; rare, introduced from Europe. April-May; July. [= RAB, C, F, G, K, W, Z]

*? ***Prunus maritima*** Marshall *var.* ***maritima***, Beach Plum. Cp (VA): disturbed dune-like area on shore of Chesapeake Bay, and ocean dunes from e. MD northward; rare. Native from New Brunswick south to e. MD, along the coast; somewhat disjunct in e. VA in an ambiguously native occurrence. [= K; < *Prunus maritima* – C; = *Prunus maritima* – F, G]

Prunus mexicana S. Watson, Big-tree Plum, Mexican Plum. Pd (GA, NC, SC), Cp (GA, SC): streamsides, upland forests, fencerows; rare (GA Special Concern). NC, OH, WI, IA, and SD, south to GA, AL, MS, LA, and TX. [= C, G, K, S, Z; = *Prunus americana* Marshall var. *lanata* – F]

* ***Prunus mume*** Siebold & Zuccarini, Japanese Apricot. Pd (NC): suburban forests; rare, native of s. Japan. April-March. Documented as naturalizing in Battle Park, University of North Carolina, Chapel Hill, where apparently spread from cultivation and reproducing as early as 1939.

*? ***Prunus munsoniana*** W. Wight & Hedrick, Munson Plum. Pd (GA, NC, VA), Mt (VA): roadsides; rare. OH, IL, MO, and KS, south to MS and TX; disjunct (introduced?) in GA, NC, VA, and NJ. [= C, F, G, K, S, Z]

Prunus nigra Aiton, Canada Plum. Mt, Pd (VA): old fields, hedgerows, forest edges; uncommon. May; June. Newfoundland west to Manitoba, south to NY, OH, IN, IL, and IA; apparently disjunct in VA. [= C, F, G, K]

Prunus pensylvanica Linnaeus f., Fire Cherry, Pin Cherry. Mt (GA, NC, VA): high elevation forests, thickets at high elevations resulting from fire or logging; common (GA Special Concern). April-May; August-September. Newfoundland west to British Columbia, south to w. NC, n. GA, e. TN, IN, IL, IA, SD, and CO. [= RAB, C, F, G, W, Z; > *Prunus pensylvanica* var. *pensylvanica* – K; = *Prunus pennsylvanica* – S (an orthographic variant)]

* ***Prunus persica*** (Linnaeus) Batsch, Peach. Cp, Pd (GA, NC, SC, VA), Mt (VA): roadsides, trash-heaps, disturbed thickets; commonly cultivated, commonly escaped or persistent, native of China. March-April; June-July. [= RAB, C, F, G, K, W, Z; = *Amygdalus persica* Linnaeus – S]

Prunus serotina Ehrhart *var.* ***serotina***, Black Cherry. Mt, Pd, Cp (GA, NC, SC, VA): rich coves, bottomlands, northern hardwood forests, and in a wide variety of lower elevation habitats from dry to mesic, and weedy in fencerows; common. April-May; July-August. Nova Scotia west to ND, south to FL and e. TX. Several other varieties occur in sc. and sw. North America, from c. TX westwards. In the Piedmont and Coastal Plain, *P. serotina* is generally a small, scrubby tree of fencerows and an understory tree in forests and woodlands, but in the Mountains reaching large sizes and full canopy stature. [= K; < *P. serotina* var. *serotina* – RAB; < *Prunus serotina* – C, F, G, W; < *Padus virginiana* – S, misapplied; = *Prunus serotina* ssp. *serotina* – Y, Z]

* ***Prunus serrulata*** Thunberg, Japanese Flowering Cherry. Pd (NC): suburban forests; rare, introduced from Japan. [= K]

* ***Prunus subhirtella*** Miquel, Higan Cherry, Weeping Higan Cherry, Winter-flowering Cherry. Pd (VA): floodplain forests in suburban areas; rare, introduced from e. Asia, commonly planted, rarely escaped, but locally invasive. [= K; > *P. subhirtella* var. *pendula* (Maximowicz)]

Prunus susquehanae Willdenow, Appalachian Dwarf-cherry, Appalachian Sand Cherry, Susquehanna Cherry. Pd, Mt (NC, VA): open rocky or sandy sites; rare. Sw. ME and sw. Québec west to Manitoba, south to nc. and sw. NC, sc. TN (the Barrens region of the Eastern Highland Rim), and IL. Catling (1997) supports species status, based on the greater distinctions of this

entity from the other three in the complex. [= F, X; = *Prunus pumila* Linnaeus var. *susquehanae* (Willdenow) H. Jaeger – RAB, K; = *Prunus pumila* var. *cuneata* (Rafinesque) L.H. Bailey – C, G; = *Prunus cuneata* Rafinesque – S; < *Prunus pumila* – W, Z]

Prunus umbellata Elliott, Hog Plum, Flatwood Plum. Cp, Pd (GA, NC, SC): upland, usually xeric, sandy or rocky forests and woodlands; common. March-April; August-September. S. NC, TN, and AR south to FL and TX. Fox, Godfrey, & Blomquist (1952) report *Prunus mitis* for s. NC (Cleveland County). [= *Prunus umbellata* Elliott var. *umbellata* – K; < *Prunus umbellata* – RAB, Z; > *Prunus umbellata* – S; > *Prunus mitis* Beadle – S]

Prunus virginiana Linnaeus *var. **virginiana***, Choke Cherry. Mt (GA, NC, VA): forming clonal thickets in oak and northern hardwood forests; common, rare southward (GA Special Concern). Late April-June; July-August. Newfoundland and Labrador west to Manitoba, south to w. NC, n. GA, AR, and OK. Other varieties occur in w. North America. [= K, Z; < *Prunus virginiana* – RAB, C, F, G, W; = *Padus nana* (Du Roi) Roemer – S]

* *Prunus cerasifera* Ehrhart, Cherry-plum. Introduced at scattered locations; reported for TN, PA, NJ (Kartesz 1999). [= F, K]

* *Prunus padus* Linnaeus, European Bird Cherry, is cultivated and rarely escaped at least as far south as se. PA (Rhoads & Klein 1993) and DE (Kartesz 1999). [= C, K]

Prunus pumila Linnaeus var. *depressa* (Pursh) Gleason, Prostrate Dwarf-cherry, Northern Sand Cherry. Sandy or gravelly shores and islands. South to s. PA (Rhoads & Klein 1993). [= C, G, K, X; *Prunus depressa* Pursh – F]

* *Prunus tomentosa* Thunberg, Nanking Cherry, Korean Cherry. Disturbed areas, suburban forests and woodlands. Naturalized at least as far south as MD and PA; native of Asia. April. [= K]

Pyracantha M.J. Roemer 1847 (Firethorn, Pyracantha)

A genus of about 3 species, shrubs, of s. Europe east to e. Asia. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

1 Leaf margin entire; leaves oblanceolate, obtuse to mucronate-notched at the tip ..... ***P. koidzumii***
1 Leaf margin crenate-serrate; leaves acute to obtuse at the tip.
  2 Young shoots gray-pubescent ..... ***P. coccinea***
  2 Young shoots rusty-pubescent ..... ***[P. fortuneana]***

* ***Pyracantha coccinea*** M.J. Roemer, Scarlet Firethorn. Cp (GA, NC, SC, VA), Pd, Cp (GA, NC, SC): planted, persistent around old homesites, and rarely escaped to woodlands; rare, introduced from se. Europe and Asia Minor. [= K, Z; = *Cotoneaster pyracantha* (Linnaeus) Spach – F, S; = *Crataegus pyracantha* Linnaeus]

* ***Pyracantha koidzumii*** (Hayata) Rehder, Formosan Firethorn. Pd (SC): planted, rarely escaped to woodlands, rare, native of Taiwan. [= K, Z]

* *Pyracantha fortuneana* (Maximowicz) Li, Chinese Firethorn. Planted, rarely escaped or persistent, native of China. AL and FL. May-July; October-December. [= K; = *P. crenatiserrata* (Hance) Rehder]

Pyrus Linnaeus (Pear)
(also see *Aronia*, *Malus*, and *Sorbus*)

A genus of 10-20 species, trees and shrubs, of Eurasia and n. Africa. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

1 Fruit pyriform; flowers 2.5-3 cm across; leaves crenate; styles 5 ..... ***P. communis***
1 Fruit subglobose; flowers either 2-2.5 cm or 3-3.5 cm across; leaves serrate; styles 2 or 5 (rarely 3 or 4).
  2 Fruit ca. 1 cm in diameter; styles 2 (-3) ..... ***P. calleryana***
  2 Fruit 3-10 cm in diameter; styles (4-) 5 ..... ***P. pyrifolia***

* ***Pyrus calleryana*** Decaisne, Bradford Pear, Callery Pear. Cp, Pd, Mt (GA, NC, SC, VA): planted and persistent; commonly cultivated, becoming an aggressive naturalizer, introduced from China. March-April. Its abundant naturalization in MD and n. VA suggests that this species has the potential to become a serious pest (see Nesom 2000c, Vincent 2005). [= K]

* ***Pyrus communis*** Linnaeus, Common Pear. Mt, Pd, Cp (GA, NC, SC, VA): planted, persistent around oldhouses and in orchards; uncommon, introduced from Europe. April; August-October. [= RAB, C, F, G, K, S, Z]

* ***Pyrus pyrifolia*** (Burmann f.) Nakai, Oriental Pear, Japanese Pear, Chinese Pear. Cp, Pd (VA): planted, persistent around old houses and in orchards; uncommon, introduced from Asia. April; August-October. [= F, K, Z]

Rhodotypos Siebold & Zuccarini 1841 (Jetbead)

A monotypic genus, a shrub, of Japan and China. References: Kalkman in Kubitzki (2004).

Identification notes: Distinguished by its opposite leaves and black, beadlke fruits.

* ***Rhodotypos scandens*** (Thunberg) Makino, Jetbead. Pd (NC, SC, VA): suburban woodlands, disturbed areas, roadsides, old house sites; rare, well established locally, native of e. Asia. Late March-May. [= C, F, G, K; *? Rh. tetrapetalus* (Siebold) Makino]

Rosa Linnaeus 1753 (Rose)

A genus of more than 100 species, shrubs or woody vines; mainly of north temperate regions. Many cultivars cannot be readily identified to species. References: Robertson (1974)=Z; Kalkman in Kubitzki (2004).

*? ***Rosa arkansana*** Porter *var. **suffulta*** (Greene) Cockerell, Prairie Rose. Mt (NC): {habitat}; rare. Reported from North Carolina portion of the Great Smoky Mountains National Park. [= F, K; < *R. arkansana* – C]

Rosa blanda Aiton *var. **blanda***, Smooth Rose, Meadow Rose. Pd (VA): {habitat}; rare. Also south to s. PA (Rhoads & Klein 1993), MD, and WV (Kartesz 1999). [= K; < *R. blanda* – C, F, G]

* ***Rosa bracteata*** J.C. Wendland, McCartney Rose, Chickasaw Rose. Pd (GA, NC, SC, VA): disturbed areas, suburban borders; rare, persistent after cultivation, introduced. May-November; July-November. [= RAB, C, F, G, K, S, Z]

* ***Rosa canina*** Linnaeus, Dog Rose. Mt (NC, VA), Pd, Cp (VA): pastures; rare, introduced. May-June; September-October. [= RAB, C, F, G, K, S, W, Z]

Rosa carolina Linnaeus, Carolina Rose. Mt, Pd, Cp (GA, NC, SC, VA): upland forests, woodlands, pastures, roadsides; common. May-June; August-October. New Brunswick and Ontario south to FL and TX. [= RAB, C, G, W, Z; > *R. carolina* var. *carolina* – F, K; > *R. carolina* var. *grandiflora* (Baker) Rehder – F; > *R. carolina* var. *villosa* (Best) Rehder – F; > *R. carolina* – S; > *R. lyoni* Pursh – S; > *R. serrulata* Rafinesque – S]

* ***Rosa cinnamomea*** Linnaeus, Cinnamon Rose. {VA} Reported for VA (Kartesz 1999). {investigate} [= F, G, K, Z; *? R. majalis* Herrm. – C]

* ***Rosa damascena*** P. Miller, Damask Rose. Mt (NC): disturbed areas; rare, persistent after cultivation, introduced. May-June; September-October. [= RAB; *R. ×damascena* P. Miller (pro sp.) – K]

* ***Rosa gallica*** Linnaeus, French Rose. Mt (NC, VA), Pd (SC, VA): disturbed areas; rare, introduced. May-June; September-October. [= RAB, C, F, G, K, Z]

* ***Rosa laevigata*** Michaux, Cherokee Rose. Cp (GA, NC, SC): roadsides, moist forests; common (rare in NC), native of China. Late March-April; September-October. [= RAB, K, S, Z]

* ***Rosa micrantha*** Borrer ex J.E. Smith, Eglantine Rose. Mt, Pd (NC, SC, VA), Cp (NC, VA): pastures, streambanks, thickets; uncommon, introduced. May-June; September-October. [= RAB, C, F, G, K, S, W, Z]

* ***Rosa multiflora*** Thunberg ex Murray, Multiflora Rose. Mt, Pd, Cp (GA, NC, SC, VA): pastures, thickets, bottomlands, upland forests, bogs; common, native of Asia, aggressively invasive. May-June; September-October. [= RAB, C, F, G, K, S, W, Z]

Rosa palustris Marshall, Swamp Rose. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, bogs, streamsides; common. May-July; September-October. New Brunswick and Ontario south to FL, MS, and AR. [= RAB, C, F, G, GW, K, W, Z; > *R. palustris* – S; > *R. floridana* Rydberg – S]

* ***Rosa rubiginosa*** Linnaeus, Eglantine Rose, Sweetbriar Rose. Mt (GA, NC, VA), Cp (SC), Pd (GA, VA): pastures, disturbed areas; rare, introduced. Late May-June; September-October. Brummitt (2005) rejected the name *R. eglanteria* for *R. rubiginosa* [= S; = *R. eglanteria* Linnaeus – RAB, C, F, G, K, W, Z]

* ***Rosa rubrifolia*** Villars, Red-leaf Rose. {SC} Reported for SC (Kartesz 1999). [= K]

* ***Rosa rugosa*** Thunberg, Japanese Rose, Rugosa Rose. Cp, Pd (VA): cultivated and occasionally escaped; rare, introduced from Asia. [= C, F, G, K, Z]

Rosa setigera Michaux, Prairie Rose. Mt (GA, NC, VA), Cp (NC, SC), Pd (GA): stream banks, pastures; rare, nativity uncertain. May-June; September-October. [= RAB, C, S, W; > *R. setigera* var. *setigera* – F, G, K, Z; > *R. setigera* var. *tomentosa* Torrey & A. Gray – F, G, K, Z]

* ***Rosa spinosissima*** Linnaeus, Scotch Rose. Mt (VA): cultivated and rarely escaped; rare, introduced. [= F, G, K; > *R. pimpinellifolia* Linnaeus – C]

* ***Rosa tomentosa*** J.E. Smith. {NC} [= C, F, K, S]

Rosa virginiana P. Miller, Virginia Rose. Mt, Pd, Cp (VA), {GA, NC}: moist to dry forests and woodlands; uncommon (rare south of VA). May-June; August-October. Newfoundland and Ontario south to GA, AL, and MO. C. TN (Chester, Wofford, & Kral 1997), e. and c. KY (Clark et al. 2005). [= C, F, G, S, W, Z; > *R. virginiana* var. *virginiana* – K]

* ***Rosa wichuraiana*** Crépin, Memorial Rose, Dorothy Perkins Rose. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (VA): roadbanks, railroad embankments, disturbed areas; uncommon, introduced. May-June; September-October. See Duncan (1985) for documentation for GA. [= C, F, G, K, W, Z; *R. wichuriana* – RAB, orthographic variant]

* ***Rosa xanthina*** Lindley, Yellow Rose. Reported for SC (Kartesz 1999). {investigate} [= K]

Rosa acicularis Lindley ssp. *sayi* (Schweinitz) W.H. Lewis, Prickly Rose. South and east to WV (Cronquist 1991, Kartesz 1999). [= K; = *R. acicularis* var. *bourgeauiana* (Crépin) Crépin – C, F; < *R. acicularis* – G]

* *Rosa dumetorum* Thuill. Introduced in KY. [= K]

* *Rosa moschata* J. Herrmann, Musk Rose. Introduced in AL. [= K, S]

Rosa obtusiuscula Rydberg. Endemic to Tennessee? [= K, S]

Rubus Linnaeus 1753 (Blackberry, Raspberry, Dewberry, Wineberry, Bramble)

A genus of about 250 species (if treated conservatively) or 2000-3000 microspecies, shrubs (and a few herbs), almost cosmopolitan in temperate areas. References: Robertson (1974)=Z; Alice & Campbell (1999); Widrlechner (1998); Kalkman in Kubitzki (2004).

Identification Notes: All of our species of *Rubus* except *R. odoratus* have biennial stems. The first year the stems remain sterile and are termed **primocanes**. The second year, these stems produce lateral branches with flowers and are termed **floricanes**. Primocane and floricane leaves differ.

1 Leaves palmately lobed; petals deep pink; [subgenus *Anoplobatus* – **flowering raspberries**] ..... ***R. odoratus***
1 Leaves 3-9-foliolate (reduced simple leaves may also be present in the inflorescence); petals white or pale pink (rarely red).
  2 Fruit separating from the receptacle, the receptacle remaining on the pedicel; stems either strongly white-glaucous (*R. occidentalis*), or densely beset with slender-based prickles and bristles (*R. idaeus*), or densely pubescent with 3-5 mm long glandular hairs (*R. phoenicolasius*), or if not as above then the leaves pinnately 5-9-foliolate (*R. illecebrosus*); [subgenus *Idaeobatus* – **raspberries**].
    3 Floricane leaves pinnately 5-9-foliolate ..... ***R. illecebrosus***
    3 Floricane leaves 1-3-foliolate.
      4 Inflorescence paniculiform, many-flowered; berries sticky, purplish-red, lacking a glaucous bloom..... ..... ***R. phoenicolasius***
      4 Inflorescence corymbiform, few-flowered; berries not sticky, black or red (rarely purplish or yellow), with a glaucous bloom.
        5 Fruit black (rarely yellow); pedicels with stout curved prickles; stems (at least the primocanes) strongly white-glaucous ..... ***R. occidentalis***
        5 Fruit red (rarely purple or yellow); pedicels with narrow straight bristles and sometimes also glandular hairs; stems green.
          6 Inflorescence without glandular hairs or gland-tipped bristles; [alien, cultivated, sometimes escaped or persistent]..... ***R. idaeus*** *var.* ***idaeus***
          6 Inflorescence with glandular hairs and gland-tipped bristles; [native in Mountains of NC and VA] .. ..***R. idaeus*** *var.* ***strigosus***
  2 Fruit retaining the receptacle; stems or leaves not as described above, except if beset with slender-based prickles and bristles then also < 1 m tall; [subgenus *Rubus* – **blackberries and dewberries**].
    7 Canes very coarse, scrambling, often 2-3 m long, heavily armed; inflorescence cymose-paniculate; branches and pedicels of the floricanes armed with strong, flattened prickles (or nearly straight in *R. bifrons*); [alien, generally in disturbed habitats]; [**alien blackberries**].
      8 Leaves compound, the leaflets additionally laciniately divided; leaves green beneath .....***R. laciniatus***
      8 Leaves compound, the leaflets toothed; leaves grayish-tomentose beneath.
        9 Prickles nearly straight; stems glabrescent; petals pale pink to red.....***R. bifrons***
        9 Prickles recurved; stems canescent above; petals white to pale pink .....***R. discolor***
    7 Canes delicate to coarse, arching or trailing, 0-4 m long, unarmed to strongly armed; inflorescence racemiform; branches and pedicels of the floricanes generally unarmed; [native, though often in disturbed habitats].
      10 Primocanes prostrate, creeping, or low-arching, rooting at the tip or also at the nodes; [**dewberries**].
        11 Stems primarily armed with narrow-based prickles or even narrower bristles, with or without stout-based prickles as well.
          12 Inflorescence racemiform; bristles of the stem nonglandular (very small glandular hairs may be present).....***R. hispidus***
          12 Inflorescence reduced, normally to a single flower per branch of the floricane ..... ***R. trivialis***
        11 Stems armed with stout-based, usually recurved prickles, bristles lacking.
          13 Inflorescence racemiform, all of the several flowers subtended by stipules only (or the lowermost subtended by a leaf)..... ***R. recurvicaulis***
          13 Inflorescence with all of the 1-several flowers subtended by simple or trifoliolate leaves.
            14 Trifoliolate leaves of the floricanes with the terminal leaflet oblanceolate to obovate, the base cuneate, the tip obtuse or very shortly acuminate.....***R. enslenii***
            14 Trifoliolate leaves of the floricanes with the terminal leaflet ovate, the base broadly rounded to subcordate, the tip sharply acute to long acuminate ..... ***R. flagellaris***
      10 Primocanes erect, ascending, or high-arching, not rooting; [**native blackberries**].
        15 Canes armed primarily with bristles or slender-based prickles .....***R. setosus***
        15 Canes armed with heavy, stout-based, often recurved, prickles (or the canes essentially unarmed, the broad-based prickles few or almost absent).
          16 Pubescence of the inflorescence rachis and pedicels predominantly gland-tipped; glandular hairs often present also on the young primocanes and the branches of the floricanes.....***R. allegheniensis***

16 Pubescence of the inflorescence rachis and pedicels nonglandular (or with a very few gland-tipped hairs intermixed); glandular hairs absent elsewhere.
17 Leaflets oblanceolate to obovate, definitely wider beyond the middle, generally obtuse or rounded at the tip; leaves densely white- or gray-tomentose beneath; [primarily of the Coastal Plain] ..... ***R. cuneifolius***
17 Leaflets lanceolate to ovate, widest below or near the middle, generally acute or acuminate at the tip; leaves glabrous to pubescent beneath, but the pubescence not notably tight and white or gray; [collectively widespread].
18 Leaves of the primocanes with the terminal leaflet cuneate at the base, mostly 1.8-2.5× as long as wide ..... ***R. argutus***
18 Leaves of the primocanes with the terminal leaflet rounded to cordate at the base, mostly 1.1-2.0× as long as wide.
19 Leaves glabrous (or very nearly so) beneath; canes with few and weak prickles ..... ***R. canadensis***
19 Leaves softly pubescent beneath; canes with many and strong prickles ..... ***R. pensilvanicus***

Rubus allegheniensis Porter, Allegheny Blackberry. Mt (GA, NC, VA), Pd (NC, VA): forests, woodlands, grassy balds; common. May-June; July. Nova Scotia west to MN, south to w. NC, n. GA, and e. TN. [= RAB, C, G, W; > *R. allegheniensis* var. *allegheniensis* – F, K; > *R. allegheniensis* var. *gravesii* Fernald – F, K; > *R. alumnus* Bailey – F, K; > *R. reravus* Bailey – F; *? R. nigrobaccus* Bailey – S]

Rubus argutus Link, Southern Blackberry. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, thickets, clearcuts, disturbed areas, pastures; common. April-May; late May-July. MA west to MO, south to FL and TX. The most common "highbush" blackberry in most of our area. [= C, G, GW; > *R. argutus* – RAB, K, S; > *R. betulifolius* Small – RAB, S; > *R. argutus* – F; > *R. blakei* Bailey – F; > *R. fatuus* Bailey – F; > *R. immanis* Bailey – K; > *R. jugosus* Bailey – F; > *R. louisianus* Berger – F; < *R. argutus* – W (also see *R. pensilvanicus*)]

* ***Rubus bifrons*** Vest ex Trattinick. Cp, Pd, Mt (NC, SC, VA), {GA}: disturbed areas, roadsides, thickets; common, introduced from Europe. May-June; late June-July. [= RAB, C, F, G, K, W]

Rubus canadensis Linnaeus, Smooth Blackberry, Thornless Blackberry. Mt (GA, NC, SC, VA): forests, woodlands, grassy balds, especially common at high elevations; common. June-July; July-August. Newfoundland west to MN, south (primarily in the Appalachians) to w. NC, e. TN, and n. GA. [= RAB, C, G, S, W; > *R. canadensis* – F, K]

Rubus cuneifolius Pursh, Sand Blackberry. Cp, Pd (GA, NC, SC, VA), Mt (VA): woodlands, forests, disturbed areas; common (rare in Mountains). Late April-early June; June-July. CT and NY (Long Island) south to FL and AL, primarily on the Coastal Plain. [= RAB, C, G, GW, S, W; > *R. cuneifolius* var. *cuneifolius* – F; > *R. cuneifolius* var. *subellipticus* Fernald – F; > *R. cuneifolius* – K; > *R. longii* Fernald – F, K; > *R. probabilis* Bailey – K; > *R. sejunctus* Bailey – F]

* ***Rubus discolor*** Weihe & Nees, Himalaya-berry. Cp, Pd (NC?, SC?, VA): disturbed areas, thickets; uncommon, introduced from Europe. [= C, K; = *R. procerus* P.J. Mueller – F; *? R. linkianus* Seringe – S, misapplied?]

Rubus enslenii Trattinick, Southern Dewberry. {Cp, Pd, Mt (NC, SC, VA), {GA}: roadsides, disturbed areas; uncommon? {phenology} S. ME west to s. WI, south to GA and LA.} [= C, G, S; < *R. flagellaris* – RAB, W; > *R. enslenii* – F; > *R. akermani* Fernald – F; > *R. cathartium* Fernald – F; > *R. celer* Bailey – F, K; > *R. clarus* Bailey – F, K; > *R. cordifrons* Bailey – F; > *R. deamii* – K; > *R. decor* Bailey – F; > *R. felix* Fernald – F; > *R. flagellaris* – K; > *R. hypolasius* Fernald – F; > *R. imperiorum* Fernald – F; > *R. iniens* Bailey – F, K; > *R. leviculus* Bailey – F, K; > *R. longipes* Fernald – F; > *R. nefrens* Bailey – F, K; > *R. obvius* Bailey – F, K; > *R. particularis* Bailey – F, K; > *R. pernagaeus* Fernald – F, K; > *R. rosagnetis* Bailey – F; > *R. scambens* Bailey – F, K; > *R. sewardianus* – F, K; > *R. subinnoxius* Fernald – F; > *R. tetricus* Bailey – F; > *R. whartoniae* Bailey – F, K]

Rubus flagellaris Willdenow, Northern Dewberry. Cp, Pd, Mt (NC, SC, VA), {GA}: old fields, woodlands, roadsides, disturbed areas; common. April-May; May-July. Québec west to MN, south to GA and AR. [= C, G; < *R. flagellaris* – RAB, W (also see *R. enslenii*); > *R. flagellaris* – F, K, S; > *R. baileyanus* Britton – F, K, S; > *R. depavitus* Bailey – F, K; > *R. injunctus* Bailey – F; > *R. invisus* (Bailey) Britton – F, K, S; > *R. jaysmithii* – F, K; > *R. kentuckiensis* Bailey – F; > *R. plexus* Fernald – F, K; > *R. redundans* Bailey – F; > *R. roribaccus* (Bailey) Rydberg – F, K; > *R. temerarius* Bailey – F, K]

Rubus hispidus Linnaeus, Swamp Dewberry. Cp (NC, SC, VA), Mt, Pd (NC, VA): bogs, moist woodlands and forests, disturbed moist areas; common. May-June; June-July. Nova Scotia and Québec west to WI, south to n. SC and MO. [= RAB, C, G, GW, S, W; > *R. ambigens* Fernald – F; > *R. davisiorum* Bailey – F; > *R. hispidus* – K; > *R. hispidus* var. *hispidus* – F; > *R. hispidus* var. *obovalis* (Michaux) Fernald – F; > *R. huttonii* Bailey – F; > *R. paganus* Bailey – K; > *R. porteri* Bailey – F, K; > *R. tardatus* Blanchard – F, K; > *R. vagulus* Bailey – F; > *R. vegrandis* Bailey – F; > *R. vigil* Bailey – F; > *R. zaplutus* Bailey – F]

* ***Rubus idaeus*** Linnaeus *var.* ***idaeus***, Cultivated Red Raspberry. Mt (NC, VA): disturbed areas; rare (commonly cultivated in the cooler portions of our area, rarely escaped or persistent), introduced from Eurasia. June-August; July-September. [= C, F; = *R. idaeus* – G; = *R. idaeus* ssp. *idaeus* – K]

Rubus idaeus Linnaeus *var.* ***strigosus*** (Michaux) Maximowicz, Red Raspberry. Mt (NC, VA): high elevation forests and thickets, adelgid-killed spruce-fir forests; rare. June-August; July-September. The species is circumboreal; var. *strigosus* ranges from Newfoundland west to AK, south to PA, IN, IA, and AZ; disjunct further south in nw. VA and ne. WV, and in w. NC and e. TN. [= C; > *R. idaeus* Linnaeus var. *canadensis* (Richardson) House – RAB, F; > *R. idaeus* var. *strigosus* – F; = *R. strigosus*

Michaux – G; = *R. idaeus* ssp. *strigosus* (Michaux) Focke – K; > *R. carolinianus* Rydberg – S; > *R. idaeus* ssp. *sachalinensis* (Levl.) Focke – W; > *R. idaeus* ssp. *melanolasius* Focke var. *canadensis* – Z]

* ***Rubus illecebrosus*** Focke, Strawberry-raspberry. Mt (NC), {VA?}: disturbed areas; rare, introduced from Japan. [= RAB, C, F, G, K]

* ***Rubus laciniatus*** Willdenow, Cut-leaved Blackberry, Evergreen Blackberry. Mt, Pd (NC, SC, VA): disturbed areas, thickets; rare, introduced from Europe. May-June; June-July. [= RAB, C, F, K, W]

Rubus occidentalis Linnaeus, Black Raspberry, Blackcap. Mt, Pd, Cp (NC, SC, VA), {GA}: roadsides, woodlands, thickets, disturbed areas; common (increasingly rare southward in our area; much more common in VA than in NC, and rare in n. SC). Late April-early June; June-July. Québec to e. CO, south to n. GA and AR. [= RAB, C, F, G, K, S, W, Z]

Rubus odoratus Linnaeus, Flowering Raspberry. Mt (GA, NC, VA): moist roadsides, thickets, and forests; common. June-August; July-October. Nova Scotia west to MI, south to w. NC, n. GA, and e. TN. [= RAB, C, G, W, Z; > *Rubus odoratus* var. *odoratus* – F, K; > *Rubus odoratus* var. *columbianus* Millspaugh – F, K; = *Rubacer odoratum* (Linnaeus) Rydberg – S]

Rubus pensilvanicus Poiret, Pennsylvania Blackberry. Cp, Pd, Mt (NC?, VA), {SC?}: roadsides, thickets, woodlands; common. April-May; late May-July. ME west to MN, south to VA (NC?, SC?), IN, and MO. [> *R. pensilvanicus* – C, F, K; > *R. barbarus* Bailey – F; > *R. condensiflorus* Bailey – F; > *R. congruus* Bailey – F; > *R. cupressorum* Fernald – F; > *R. defectionis* Fernald – F, K; > *R. dissitiflorus* Fernald – F; > *R. floricomus* Blanchard – F, K; > *R. floridus* Tratt. – F, S; > *R. frondosus* Bigelow – F, K; > *R. laudatus* Berger – K; > *R. libratus* Bailey – F; > *R. orarius* Blanchard – C; > *R. pauxillus* Bailey – F, K; > *R. pergratus* Blanchard – K; > *R. praepes* Bailey – F; > *R. recurvans* Blanchard – F, K; > *R. rosarius* Bailey – K; > *R. subsolanus* Bailey – F; > *R. pensilvanicus* – G; > *R. ostryifolius* Rydberg – G]

* ***Rubus phoenicolasius*** Maximowicz, Wineberry. Mt, Pd (NC, SC, VA), Cp (VA), {GA}: roadsides, thickets; common, introduced from e. Asia. May-June; June-July. [= RAB, C, F, G, K, S, W]

Rubus recurvicaulis Blanchard. Mt (NC?, VA): {moist areas; uncommon? {phenology} Nova Scotia west to MN, south to MD, NC?, and IN. [= C; > *R. boyntoni* Ashe – F, orthographic variant; > *R. boyntonii* Ashe – K; *R. cordifrons* Bailey – F; *R. grimesii* Bailey – F, K; > *R. recurvicaulis* – F; > *R. arundelanus* Blanchard – G]

Rubus setosus Bigelow, Bristly Blackberry. (VA): {habitat not known}; rare? {phenology} Québec west to WI, south to VA and IL. [= C, G; > *R. angustifoliatus* Bailey – F; > *R. benneri* Bailey – F; > *R. elegantulus* Blanchard – K; > *R. nocivus* Bailey – F; > *R. racemiger* Bailey – F, K; > *R. semisetosus* Blanchard – F, K; > *R. setosus* – F, K]

Rubus trivialis Michaux, Southern Dewberry, Coastal Plain Dewberry. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): roadsides, old fields, thickets, disturbed areas; common (rare in Mountains). March-April; late April-May. E. MD south to FL, west to TX, north in the interior to MO. [= RAB, C, F, G, GW, K, W; > *R. trivialis* – S; > *R. lucidus* Rydberg – S]

Rubus pubescens Rafinesque, Dwarf Blackberry, ranges south to WV and s. PA (Rhoads & Klein 1993). [= C; > *R. pubescens* var. *pubescens* – F, K]

Sanguisorba Linnaeus 1753 (Burnet)

A genus of 15 or more species, herbs, of Eurasia, n. Africa, and North America. References: Robertson (1974)=Z; Nordborg (1966, 1967)=Y; Kalkman in Kubitzki (2004).

1 Leaflets pinnatifid (each leaflet incised nearly to the midvein); [subgenus *Poteridium*] .....***S. annua***
1 Leaflets toothed (the incisions not nearly to the midvein).
  2 Leaflets 3-10 cm long; inflorescence 6-30 cm long, spike-like; stamens 4 per flower, the filaments 8-10 mm long; sepals white (sometimes fading greenish); [native]; [subgenus *Sanguisorba*, section *Sanguisorba*] ..... ***S. canadensis***
  2 Leaflets 0.8-2 cm long; inflorescence 1-2 cm long, globose; stamens 15-20 per flower, the filaments 3-4 mm long; sepals green to pinkish-purple; [cultivated, occasionally escaped]; [subgenus *Poterium*, section *Poterium*] ....***S. minor*** *ssp.* ***muricata***

* ***Sanguisorba annua*** (Nuttall ex Hooker) Torrey & A. Gray, Prairie Burnet. Cp (SC): roadsides; rare, introduced from sc. United States. April-May. [= RAB, G, K, Z; = ***Poteridium annuum*** (Nuttall ex Hooker) Spach]

Sanguisorba canadensis Linnaeus, Canada Burnet, American Burnet, White Burnet. Mt (GA, NC, SC, VA): fens, seepage over mafic or ultramafic rocks (such as amphibolite, greenstone, serpentinite), spray zones around waterfalls; rare (GA Threatened, NC Rare, VA Rare). Late July-September. Newfoundland and Labrador west to Manitoba, south to NJ, PA, OH, and IN; disjunct southward in KY, nc. VA, and from sw. VA south to sw. NC, ne. TN, and ne. GA. First reported for SC by Hill & Horn (1997) and Hill (1999). [= RAB, C, F, G, GW, K, S, W, Z]

* ***Sanguisorba minor*** Scopoli *ssp.* ***muricata*** (Spach) Nordborg, Salad Burnet, Garden Burnet, Fodder Burnet. Mt (NC, VA), Pd (VA): cultivated as an herb and salad green, escaped to moist, disturbed areas; rare, introduced from Europe. June-July. [= K, Y, Z; < *S. minor* – RAB, C, F, G; < *Poterium sanguisorba* Linnaeus – S; = ***Poterium sanguisorba*** Linnaeus ssp. ***muricatum*** (Spach) Rouy; = *Poterium polygamum* Waldstein & Kitaibel]

Sibbaldiopsis Rydberg 1901 (Mountain-cinquefoil)

A genus of several species, subshrubs, of northern North America and ne. Asia; most closely related to *Sibbaldia*. Molecular phylogenetic studies indicate that this genus is more closely related to *Alchemilla*, *Aphanes*, *Dasiphora, Drymocallis, Fragaria*, and other genera outside our area than to *Potentilla* (Eriksson et al. 2003). References: Eriksson, Donoghue, & Hibbs (1998); Eriksson et al. (2003); Kalkman in Kubitzki (2004).

Sibbaldiopsis tridentata (Aiton) Rydberg, Mountain-cinquefoil, Three-toothed Cinquefoil, Mountain White Potentilla, Wine-leaf Cinquefoil. Mt (GA, NC, VA): grassy balds, crevices of rock outcrops at high (rarely moderate) elevations, high elevation glades; rare, though sometimes locally abundant (GA Endangered, NC Watch List, VA Rare). June-August; July-September. Greenland and Newfoundland west to Northwest Territories, south to ND, IA, WI, MI, s. Ontario, and Nova Scotia, and in the mountains to w. VA, ne. TN, and ne. GA (at progressively higher elevations southward). Showy in flower, and also in leaf from late summer on, when the leaves tend to turn a rich burgundy red. Though appearing herbaceous, *S. tridentata* is really an evergreen sub-shrub. [= K, S; = *Potentilla tridentata* Aiton – RAB, C, F, G, W]

Sorbaria (Seringe) A. Braun 1860

A genus of 4 species, shrubs, of c. and e. Asia. References: Kalkman in Kubitzki (2004)

* *Sorbaria sorbifolia* (Linnaeus) A. Braun, False Spiraea, an Asian shrub, is cultivated and naturalized at least as far south as s. PA (Rhoads & Klein 1993) and WV. [= C, F, G, K]

Sorbus Linnaeus (Mountain-ash, Rowan)
(also see *Aronia*)

A genus of about 250 species, trees and shrubs, of mainly temperate Northern Hemisphere. References: Jones (1939)=Z; Aldasoro et al. (2004).

1 Branches and lower leaf surfaces glabrous (or inconspicuously and sparsely pubescent); winter buds glutinous; [native tree]. ..... ***S. americana***
1 Branches and lower leaf surfaces densely white-villous; winter buds white-villous; [introduced tree] ..... ***[S. aucuparia]***

Sorbus americana Marshall, Mountain-ash, American Rowan. Mt (GA, NC, VA), Pd (NC, SC): high elevation forests, balds, and high elevation rock outcrops, often with *Picea, Abies*, and/or *Betula alleghaniensis*; common (rare in Piedmont) (GA Rare). June-July; September-October (persisting well into winter). Newfoundland west to MN, south to PA, w. NC, e. TN, ne. GA, and n. IL. This small-to-medium tree is showy in most seasons; in the summer its creamy-white corymbs are attractive, the leaves turn a bright orange-red in fall, and the red berries persist well into winter. [= RAB, C, G, K, S, W, Z; = *Pyrus americana* (Marshall) Augustin de Candolle – F]

* *Sorbus aucuparia* Linnaeus, Rowan, European Mountain-ash, occurs as a planted tree and escape (sometimes appearing naturalized), south to s. PA (Rhoads & Klein 1993), MD, DE, WV (Kartesz 1999), and DC (Jones 1939). Also reported for SC by Kartesz (1999), supposedly based on Jones (1939), but Jones (1939) does not mention SC in his account of *S. aucuparia*. [= C, G, K, Z; = *Pyrus aucuparia* (Linnaeus) Gaertner – F]

Spiraea Linnaeus 1753 (Spiraea, Meadowsweet, Hardhack)

A genus of about 80 species, shrubs, of north temperate areas (especially Asia). References: Robertson (1974)=Z; Rehder (1940); Uttal (1974); Kalkman in Kubitzki (2004).

1 Inflorescence a simple umbel; flowers white; [section *Chamaedryon*]; [introduced].
  2 Umbels sessile, 3-6-flowered; leaves 2-5 cm long, ovate, finely serrulate..... ***S. prunifolia***
  2 Umbels peduncled, many-flowered; leaves 1.5-3.5 cm long, obovate, coarsely serrate..... ***S. ×vanhouttei***
1 Inflorescence a compound corymb or panicle; flowers white, pink, or red; [native or introduced].
  3 Inflorescence a corymb, flat-topped or rounded, broader than long; [section *Calospyra*].
    4 Leaves rounded, obtuse, or acute at the apex; petals white (rarely pink); [native].
      5 Follicle 2-3 mm long; leaves 1-2× as long as wide, rounded or obtuse at apex, rounded at base; plants 3-8 (-10) dm tall; [of dry or moist forested slopes, or thin soil on rock outcrops, rarely of streambanks] .... ***S. corymbosa***
      5 Follicle 1-2 mm long; leaves 2-4× as long as wide, acute at apex, cuneate at base; plants 4-25 dm tall; [of rocky riverbanks] ..... ***S. virginiana***
    4 Leaves long-acuminate at the apex; petals pink (rarely white or red); [introduced].
      6 Leaves pubescent on the veins beneath; flowers usually pink (rarely white); shrub to 15 dm tall .... ***S. japonica*** *var.* ***fortunei***

6 Leaves glabrous; flowers usually white (rarely pink); shrub to 8 dm tall.....***S. ×bumalda***

3 Inflorescence a panicle, longer than broad; [section *Spiraea*].

7 Lower leaf surface densely tomentose with white, tawny, or rusty tomentum which obscures the surface.

8 Follicles pubescent; [native, common in boggy wetlands].....***S. tomentosa***

8 Follicles glabrous; [introduced, rare].....***S. ×billiardii***

7 Lower leaf surface glabrous or with a few scattered hairs that do not obscure the surface.

9 Leaves lanceolate to oblong-lanceolate, widest at or below the middle; flowers pink; [introduced, rarely escaped or persisting].....***S. salicifolia***

9 Leaves oblanceolate to obovate or oblong, widest above or at the middle; flowers white (rarely slightly pink); [native, of bogs, stream-banks, swampy areas, or moist to dry rocky areas].

10 Leaves 3-5 (-8)× as long as wide, finely and sharply toothed; inflorescence, hypanthium, and sepals pubescent; sepals usually obtuse; twigs yellow-brown to brown .....***S. alba***

10 Leaves 2-3× as long as wide, coarsely and bluntly toothed; inflorescence, hypanthium, and sepals usually glabrous or nearly so; sepals usually acute; twigs red-brown to purple-brown.....***S. latifolia***

Spiraea alba Du Roi, Narrowleaf Meadowsweet. Mt (NC, VA), Pd (VA): bogs, boggy streambanks, seepages; uncommon (NC Watch List). June-September; August-October. Ranging from Québec west to Alberta, south to NC, IN, and MO. There is considerable disagreement over whether *S. alba* and *S. latifolia* represent two species with some introgression in areas of overlap, two varieties, or a variable or clinal species. [= F, G, S, W, Z; = *S. alba* var. *alba* – RAB, C, GW, K]

* ***Spiraea ×billiardii*** Herincq [*S. douglassii* ×*salicifolia*]. Mt (VA): cultivated, escaped or persisting; rare, introduced from cultivation, one parent from w. North America, one from Eurasia. [= K]

* ***Spiraea ×bumalda*** Burven [*S. albiflora* ×*japonica*]. Pd (VA): cultivated, escaped or persisting; rare, introduced from cultivation, both parents from Asia. [= K]

Spiraea corymbosa Rafinesque, Dwarf Spiraea, Rock Spiraea. Mt, Pd (NC, VA), {GA?}: rocky forests and woodlands, granitic domes, dry slopes of Piedmont monadnocks, rocky slopes in partial sun; common, rare in NC (NC Rare). June-August; August-October. A Southern and Central Appalachian endemic: sc. PA and w. MD south through w. VA, e. WV, to nw. NC, and perhaps also to e. TN (?), to n. AL(?), apparently fairly common only in w. VA. The species is limited to only a few counties each of NC and WV (Franklin 2004, Strausbaugh & Core 1978), and is not listed for TN in Chester, Wofford, & Kral (1997). Although Mohr (1901) listed the species for AL, it is not listed as a part of the state's woody flora by Clark (1971). *S. corymbosa* is closely related to *S. lucida* Douglas ex Greene [= *S. betulifolia* var. *lucida* (Douglas ex Greene) C.L. Hitchcock] of the Rocky Mountains, *S. betulifolia* [= *S. betulifolia* var. *betulifolia*] of ne. Asia (Japan, e. Siberia, ne. China, Sakhalin, and the Kurile Islands, and *S. aemiliana* Schneider [= *S. betulifolia* var. *aemiliana* (Schneider) Koidz.]. The group is often treated as 4 varieties or subspecies of *S. betulifolia*, but the morphological differences and strongly disjunct distribution seem to warrant treatment as a relictual complex of related species. See Uttal (1974), Greene (1892), and others listed in Robertson (1974) for additional discussion and a range of conclusions. [= F, S; < *S. betulifolia* – RAB; = *S. betulifolia* Pallas var. *corymbosa* (Rafinesque) Maximowicz – C, G, K, W, Z; = *S. betulifolia* ssp. *corymbosa* (Rafinesque) Taylor & MacBryde]

* ***Spiraea japonica*** Linnaeus f. ***var. fortunei*** (Planchon) Rehder, Japanese Spiraea. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): roadsides, woodland borders, old home-sites; uncommon, introduced from Japan and China. June-July; July-August. [= K; < *S. japonica* – RAB, C, F, G, W, Z]

Spiraea latifolia (Aiton) Burkhart, Broadleaf Meadowsweet. Mt (NC, VA), Pd, Cp (VA): bogs, seeps, and rock outcrops (glades) over amphibolite, greenstone, olivine, and granite; uncommon (GA Rare, NC Watch List). June-September; August-October. Newfoundland west to MI, south to w. NC. [= G, S, W, Z; = *S. alba* var. *latifolia* (Aiton) Dippel – RAB, C, GW, K; > *S. latifolia* var. *latifolia* – F; > *S. latifolia* var. *septentrionalis* Fernald – F]

* ***Spiraea prunifolia*** Siebold & Zuccarini, Bridal-wreath Spiraea. Mt, Pd (VA), Cp (NC, VA): cultivated, escaped or persisting; uncommon, introduced from China, Korea, and Taiwan. [= C, G, K]

* ***Spiraea salicifolia*** Linnaeus, Willowleaf Spiraea. Mt (NC, VA): cultivated, escaped or persisting; rare, introduced from Eurasia. [= C, K]

Spiraea tomentosa Linnaeus, Hardhack, Steeplebush. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): bogs, wet meadows; common (rare in Piedmont) (GA Rare). July-September; September-October. Nova Scotia west to MN, south to SC, ne. GA, c. TN, and AR. [= RAB, GW, K, S, W; > *S. tomentosa* var. *rosea* (Rafinesque) Fernald – C, F, G, Z; > *S. tomentosa* var. *tomentosa* – C, F, G, Z; *? S. subcanescens* Rydberg]

* ***Spiraea ×vanhouttei*** (C. Briot) Carrière [*S. cantoniensis* × *trilobata*], Bridal-wreath Spiraea. Pd (NC): cultivated, escaped or persisting; rare, introduced from cultivation, the two parents both from Asia. [= K, Z; = *C. vanhouttei* – C, G]

Spiraea virginiana Britton, Virginia Spiraea, Appalachian Spiraea. Mt (GA, NC, VA): riverbanks, riverside shrub thickets, where occasionally flood-scoured; rare (US Threatened, GA Threatened, NC Endangered, VA Endangered). June-July; August-September. A Southern Appalachian endemic: sw. PA, WV, and sw. VA south through w. NC and e. TN to nw. GA. Ogle (1991a, 1991b) presents an excellent discussion of the taxonomy, history, and biology of this interesting species. [= RAB, C, F, G, K, S, W, Z; > *S. virginiana* var. *serrulata* Rehder]

* ***Spiraea cantoniensis*** Loureiro. Cp (NC): roadsides; rare, introduced from Asia. *S. cantoniensis* has been collected twice on Fort Bragg, NC, by Phil Crutchfield (specimen at Fort Bragg) (Sorrie, pers. comm.). Also reported for other scattered states in e. North America (AL, AR, LA, NY (Kartesz 1999). [= K] {not keyed at this time; synonymy incomplete}

* ***Spiraea thunbergii*** Siebold ex Blume. Cp (NC): roadsides; rare, introduced from Asia. *S. thunbergii* has been collected from roadside at Fort Bragg, NC, by Phil Crutchfield (specimen at Fort Bragg) (Sorrie, pers. comm.). [= C, K] {not keyed at this time; synonymy incomplete}

Stephanandra Siebold & Zuccarini 1843 (Lace Shrub)

A genus of about 3 species, shrubs, of e. Asia. Oh & Potter (2005) present strong evidence for the inclusion of *Stephanandra* in *Neillia*; the combination for our species has not yet been made. References: Oh & Potter (2005); Kalkman in Kubitzki (2004).

* ***Stephanandra incisa*** (Thunberg) Zabel, Lace Shrub. Pd (VA): suburban woodlands; rare, establishing from horticultural plantings, native of Japan and Korea. [= K; ***Neillia*** sp.]

Waldsteinia Willdenow 1799 (Barren Strawberry)

A genus of about 5 species, perennial herbs, of North America, southern Europe, and Korea. Evolutionarily embedded in *Geum* and probably best submerged into it. References: Douglass (1980); Robertson (1974)=Z; Bolle (1933)=Y; Smedmark (2006); Smedmark & Eriksson (2002); Kalkman in Kubitzki (2004).

1 Leaves trilobed (the sinuses cleft 1/4 to 3/4 the way to the midrib); leaves rather densely pubescent with stiff hairs, these distributed on the veins and on the intervein surfaces ..... ***W. lobata***
1 Leaves trifoliolate (fully divided); leaves sparsely pubescent with stiff hairs, these distributed mostly or strictly on the veins, the intervein surfaces glabrous to very sparsely pubescent.
  2 Calyx lobes 2-7.5 mm long; petals 5-10 mm long, 3-6 mm wide ..... ***W. fragarioides*** *var.* ***fragarioides***
  2 Calyx lobes 3-4.5 mm long; petals 2.5-4 mm long, 1-1.5 mm wide ..... ***W. fragarioides*** *var.* ***parviflora***

Waldsteinia fragarioides (Michaux) Trattinick *var.* ***fragarioides***, Northern Barren Strawberry. Pd (GA?, NC, VA?): forests, streambanks; rare (NC Watch List). Late March-May; May-June. New Brunswick west to MN, south to NC, GA, TN, IN, and MO. [= C, F; < *W. fragarioides* – RAB, W, Y; = *W. fragarioides* ssp. *fragarioides* – K, Z; = *W. fragarioides* – G, S; < ***Geum fragarioides*** (Michaux) Smedmark]

Waldsteinia fragarioides (Michaux) Trattinick *var.* ***parviflora*** (Small) Fernald, Southern Barren Strawberry. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC): forests, streambanks; uncommon (rare in Coastal Plain and Mountains). (January-) March-May; May-June. PA south to GA, AL, and TN. [= C, F; = *Waldsteinia fragarioides* ssp. *doniana* (Trattinick) Teppner – K, Z; < *W. fragarioides* – RAB, W, Y; = *W. parviflora* Small – G; = *W. doniana* Trattinick – S; < ***Geum fragarioides*** (Michaux) Smedmark]

Waldsteinia lobata (Baldwin ex Elliott) Torrey & A. Gray, Lobed Barren Strawberry. Mt (GA, NC, SC), Pd (GA, SC): forests, streambanks; rare (GA Threatened, NC Rare, SC Rare). March-May; May-June. Sw. NC south to nw. SC and n. and c. GA. Some populations appear to be morphologically intermediate between *W. lobata* and *W. fragarioides* ssp. *doniana*; further study is needed. [= K, S, Y, Z; = ***Geum lobatum*** (Baldwin ex Elliott) Smedmark]

RUBIACEAE A.L. de Jussieu 1789 (Madder Family)

A family of about 630-650 genera and 10,200-13,000 species, trees, shrubs, vines, and rarely herbs, cosmopolitan, but especially diverse in tropical and subtropical areas. References: Rogers (1987, 2005).

1 Trees, shrubs, or woody vines.
  2 Woody vine; corolla lilac; [alien] ..... ***Paederia***
  2 Shrub or tree; corolla white, green, or maroon; [native].
    3 Inflorescence spherical; [widespread in our area] ..... ***Cephalanthus***
    3 Inflorescence cymose or thyrsoid; [in the Coastal Plain, from s. SC southward].
      4 Inflorescence cymose; some calyx lobes expanded into pink or reddish “flags”; [of s. SC southward] ..... ***Pinckneya***
      4 Inflorescences thyrsoid; calyx lobes inconspicuous; [of ne. FL southward] ..... ***[Psychotria]***
1 Herbs.
  5 Leaves whorled.
    6 Flowers congested into involucrate heads; corolla pink ..... ***Sherardia***
    6 Flowers in branched inflorescences lacking an involucre; corolla white, greenish, yellow, or brown.
      7 Flowers in 2-flowered reduced cymes; flowers yellow ..... ***Cruciata***
      7 Flowers > 2 per cyme; flowers white, green, brown, or yellow.
        8 Corolla tube much longer than the corolla lobes ..... ***[Asperula]***
        8 Corolla tube shorter than the corolla lobes ..... ***Galium***
  5 Leaves opposite

9 Flowers paired, the ovaries connate and developing into a single fleshy red fruit; leaves roundish.....***Mitchella***
9 Flowers single or in inflorescences with multiple flowers, the fruits **either** dry **or** fleshy and yellowish or black.
10 Carpels with few to many seeds.
11 Corolla 5-lobed.....***Pentodon***
11 Corolla 4-lobed.
12 Capsule longer than the calyx tube flowers blue, pink, or white .....***Houstonia***
12 Capsule not longer than the calyx tube; flowers white .....***Oldenlandia***
10 Carpels 1-seeded.
13 Flowers in dense, terminal, involucrate heads; flowers 4- or-6-lobed; styles 3 .....***Richardia***
13 Flowers in axillary or terminal clusters, or single in axils, not involucrate; flowers 4-lobed; styles 2.
14 Flowers usually solitary in leaf axils; fruit separating into 2 parts .....***Diodia***
14 Flowers in terminal and axillary clusters; fruits not separating into 2 parts.
15 Carpels opening transversely.....***Mitracarpus***
15 Carpels opening longitudinally.....***Spermacoce***

Asperula Linnaeus (Woodruff)

A genus of 90-200 species, mostly European.

* *Asperula arvensis* Linnaeus, Woodruff. South to se. PA as an introduction (Rhoads & Klein 1993). [= C, G, K]

Borreria
(see *Spermacoce*)

Cephalanthus Linnaeus (Buttonbush)

A genus of about 6 species, of tropical and temperate America. References: Rogers (1987)=Z; Ridsdale (1976)=Y.

Cephalanthus occidentalis Linnaeus, Buttonbush. Cp, Pd, Mt (GA, NC, SC, VA): streambanks, riverbanks, depressional wetlands, lakes, often in standing water; common. June-July. Widespread in North America, and south into Mexico, Guatemala, and Honduras. [= RAB, K, W, S, Y, Z; > *C. occidentalis* var. *occidentalis* – C, F, G; > *C. occidentalis* var. *pubescens* – C, F, G; = *C. occidentalis* var. *occidentalis* – GW (including var. *pubescens*)]

Cruciata P. Miller (Crosswort)

A genus of about 10 species, herbs, of Europe and western Asia. References: Rogers (2005)=Z

* ***Cruciata pedemontana*** (Bellardi) Ehrend, Piedmont Crosswort. Mt (GA, NC, VA), Pd (GA, VA), Cp (VA), {SC}: lawns, grassy roadsides; uncommon, native of s. Europe. April-June. The Piedmont referred to in the name is the "original" Piedmont of southern Europe. In GA Mountains and Piedmont (T. Govus, pers. comm. 2005). [= K, Z; = *Galium pedemontanum* (Bellardi) Allioni – RAB, C, F, W]

Diodia Linnaeus

A genus of about 30 species, of tropical and warm temperate America and Africa. Bacigalupo & Cabral (1999) suggest that *Diodella* Small should be recognized as distinct from *Diodia*. References: Bacigalupo & Cabral (1999)=Z; Rogers (2005).

1 Sepals 4 and similar in size; style entire; [of dry habitats].....***D. teres***
1 Sepals 2 (or 4, and then markedly dimorphic); style cleft; [of moist to wet habitats].....***D. virginiana***

Diodia teres Walter, Poorjoe. Cp, Pd, Mt (GA, NC, SC, VA): dunes, sandy roadsides, glades, other dry habitats; common. June-December. MA, NY and WI, south to FL, TX, and CA, south through Mexico and Central America. [= RAB, C, GW, W; > *Diodia teres* var. *hirsutior* Fernald & Griscom – F, K; > *Diodia teres* var. *hystricina* Fernald & Griscom – F, G, K; > *Diodia teres* var. *oblongifolia* Fernald – F, K; > *Diodia teres* var. *teres* – F, G, K; = *Diodella teres* (Walter) Small – Z]

Diodia virginiana Linnaeus. Cp, Pd, Mt (GA, NC, SC, VA): pondshores, ditches, other moist to wet habitats; common. June-December. CT, PA, IL, and KS south to FL and TX. [= RAB, C, G, GW, W; > *D. virginiana* var. *attenuata* Fernald – F, K; > *D. virginiana* var. *latifolia* Torrey & A. Gray – K; > *D. virginiana* var. *virginiana* – F, K; > *Diodia virginiana* – S; > *Diodia tetragona* Walter – S; > *Diodia hirsuta* Pursh – S; > *Diodia harperi* Small – S]

Galium Linnaeus 1753 (Bedstraw, Cleavers, Woodruff)
(also see *Cruciata*)

A genus of ca. 300 species, herbs, cosmopolitan. References: Puff (1976, 1977)=Z; Rogers (2005); Dempster (1978, 1981).

1 Leaves mostly in whorls of 4 (rarely a few in whorls of 5-6) at the primary nodes ..... **Key A**
1 Leaves mostly in whorls of 5-8 or more at the primary nodes.
  2 Leaves mostly 6 per node (ranging from 4-8) at the primary nodes ..... **Key B**
  2 Leaves mostly 8 or more per node at the primary nodes ..... **Key C**

Key A – Bedstraws with leaves mostly in whorls of 4 (rarely a few in whorls of 5-6)

1 Flowers yellow; plant an annual, 0.5-3 dm tall ..... ***[Cruciata pedemontana]***
1 Flowers white, creamy, greenish-purple, maroon, or purple; plant a perennial, 1-8 dm tall.
  2 Flowers solitary, sessile or subsessile in the leaf axils; leaves 4-10 mm long ..... ***G. virgatumXXX***
  2 Flowers on pedicels, usually in complex inflorescences; leaves >10 mm long.
    3 Larger leaves 6-25 mm wide, mostly 1.5-4× as long as wide; fruits uncinate-hispid (except smooth in *G. latifolium*); flowers greenish or purplish.
      4 Larger leaves 4-8 cm long, 1-2 cm wide, widest below the middle, tapering to a long-acuminate apex, averaging about 3-4× as long as wide.
        5 Fruits uncinate-hispid; flowers yellowish, turning maroon ..... ***G. lanceolatum***
        5 Fruits smooth; flowers purple ..... ***G. latifolium***
      4 Larger leaves 1-5 cm long, 0.6-2.5 cm wide, widest at about the middle, tapering to an obtuse (or broadly acute) apex, averaging about 2× as long as wide.
        6 Flowers (some of them) sessile or subsessile along the inflorescence branches; leaves 1.5-5 cm long, the larger usually > 2.5 cm long, not punctate.
          7 Lower leaf surface glabrous or sparsely short-hispid on the veins; larger leaves 1.5-2.5 (-4.0) cm long and 0.7-1.4 (-1.8) cm wide; [more southern] ..... ***G. circaezans*** *var.* ***circaezans***
          7 Lower leaf surface appressed-pilose, long-hirsute on the veins; larger leaves 2-5 cm long, 1-2.5 cm wide; [more northern] ..... ***G. circaezans*** *var.* ***hypomalacum***
        6 Flowers all distinctly pedicelled; leaves 1-2.5 cm long, glandular-punctate beneath.
          8 Stem glabrous ..... ***G. orizabense*** *ssp.* ***laevicaule***
          8 Stem pubescent.
            9 Stem and leaves pubescent with spreading, straight hairs; [more northern] ..... ***G. pilosum*** *var.* ***pilosum***
            9 Stem and leaves pubescent with short, upwardly incurved hairs; [more southern] ..... ***G. pilosum*** *var.* ***puncticulosum***
    3 Larger leaves 1-6 mm wide, mostly 4-20× as long as wide; fruits smooth or pubescent (if pubescent, the hairs not hooked at the end, though they may curve through their length), either fleshy or dry; flowers white or creamy.
      10 Fruits fleshy, blue-black; leaves firm, more-or-less evergreen, glandular-punctate beneath.
        11 Leaves elliptic, 7-18 mm long, 3-6 mm wide, 2-3.5× as long as wide ..... ***G. hispidulum***
        11 Leaves linear, 15-25 mm long, 2-4 mm wide, 5-10× as long as wide ..... ***G. uniflorum***
      10 Fruits dry, black; leaves herbaceous, deciduous, not glandular-punctate beneath.
        12 Stems erect or nearly so; leaves 15-45 mm long, 2-6 mm wide ..... ***G. boreale***
        12 Stems sprawling, matted; leaves 6-30 mm long, 0.5-5 (-6) mm wide.
          13 Corollas 4-lobed, the lobes longer than wide.
            14 Leaves (8-) 10-20 (-25) mm long, (0.5-) 0.8-2 mm wide, margin usually smooth, with strongly down-rolled margins; corolla (1.8-) 2-2.5 (-3) mm across; pedicels filiform; stems 15-50 (-60) cm long, delicate ..... ***G. obtusum*** *var.* ***filifolium***
            14 Leaves (10-) 15-25 (-30) mm long, (2-) 3-5 (-6) mm wide, margin scabrous, not down-rolled; corolla (2-) 2.5-3.5 (-4) mm across; pedicels thicker; stems (15-) 25-60 (-80) cm long, firm ..... ***G. obtusum*** *var.* ***obtusum***
          13 Corollas 3-(4)-lobed, the lobes about as wide as long, or wider than long.
            15 Flowers and fruits borne on arcuate pedicels, (5-) 7-15 (-20) mm long and densely retrorsely scabrous ..... ***[G. trifidum*** *var.* ***trifidum]***
            15 Flowers and fruits borne on straight pedicels, these (2-) 2.5-8 (-12) mm long and smooth.
              16 Fruiting pedicels (4-) 5-8 (-12) mm long; pairs of fruits (3-) 3.5-5 mm across at maturity; leaves 2-3 (-4) mm wide ..... ***G. tinctorium*** *var.* ***floridanum***
              16 Fruiting pedicels (2-) 2.5-5 (-6) mm long; pairs of fruits 2-3 mm across at maturity; leaves (1.5-) 2-2.5 (-2.8) mm wide ..... ***G. tinctorium*** *var.* ***tinctorium***

Key B – Bedstraws with leaves mostly 6 per node (ranging from 4-8)

1 Flowers in terminal heads, subtended by an involucre of leaves fused at the base; stem rough-hairy, but not retrorse-scabrid . ..... ***[Sherardia arvensis]***
1 Flowers in axillary or terminal diffuse inflorescences, not subtended by an involucre; stems either smooth, retrorse-scabrid, or pubescent.
2 Fruits and ovaries uncinate-hispid; leaves 15-50 mm long, 7-10 mm wide ..... ***G. triflorum***
2 Fruits and ovaries glabrous or papillose; leaves 5-25 mm long, 1-6 mm wide.
3 Largest leaves < 10 mm long; fruits 0.7-1 mm across; annual ..... ***G. divaricatum***
3 Largest leaves > 10 mm long; fruits 1-2.5 mm across; perennial.
4 Corolla 1.5-2.5 mm across, 3-lobed; [collectively widespread in our area].
5 Fruiting pedicels (4-) 5-8 (-12) mm long; pairs of fruits (3-) 3.5-5 mm across at maturity; leaves 2-3 (-4) mm wide..... ***G. tinctorium** var**. floridanum***
5 Fruiting pedicels (2-) 2.5-5 (-6) mm long; pairs of fruits (2-) 2.5-3 mm across at maturity; leaves (1.5-) 2-2.5 (-2.8) mm wide..... ***G. tinctorium** var**. tinctorium***
4 Corolla 2.5-4.5 mm across, 4-lobed; [mostly of the Mountains in our area, extending into the Piedmont or even Coastal Plain in n. VA and northward].
6 Leaf margins retrorsely ciliate-scabrid; leaves 3-5× as long as wide; [plants of bogs and moist thickets] .. .. ***G. asprellum***
6 Leaf margins antrorsely ciliate-scabrid; leaves 4-8× as long as wide; [plants of dry forests and woodlands].
7 Leaves sharply acute or cuspidate; corolla 2.5-3 mm across ..... ***G. concinnum***
7 Leaves rounded, obtuse, or barely acute; corolla ca. 4 mm across ..... ***[G. palustre]***

Key C – Bedstraws with leaves mostly 8 or more per node (ranging from 5-12)

1 Leaves 8-12 per whorl (many whorls with > 8 leaves); flowers bright yellow, in a large showy terminal compound inflorescence; fruits glabrous; perennial.
2 Flowers golden-yellow, fragrant; inflorescence dense, usually not interrupted ..... ***G. verum***
2 Flowers lemon-yellow, odorless; inflorescence interrupted..... ***[G. wirtgenii]***
1 Leaves (5-) 8 (-10) per whorl (few if any whorls with > 8 leaves); flowers white or greenish, in a terminal compound inflorescence or in small axillary inflorescences; fruits glabrous, papillose, or uncinate-hispid; annual or perennial.
3 Stems retrorsely scabrous; annual.
4 Fruits and ovaries uncinate-hispid; flowers and fruits mainly in clusters of 2-5 ..... ***G. aparine***
4 Fruits and ovaries sharply papillose; flowers and fruits mainly in clusters of 3 ..... ***G. tricornutum***
3 Stems glabrous or pubescent, but not scabrous; perennial.
5 Fruits and ovaries uncinate-hispid; nodes bearded, the stem otherwise glabrous..... ***G. odoratum***
5 Fruits and ovaries glabrous; nodes not bearded, the stem either glabrous or pubescent toward the base of the plant.
6 Corolla 3-5 mm across, the pedicels usually shorter than the width of the corolla; inflorescence branches ascending, mostly at < 45 degrees..... ***G. mollugo** var**. erectum***
6 Corolla 2-3 mm across, the pedicels usually longer than the width of the corolla; inflorescence branches spreading, mostly at > 45 degrees ..... ***G. mollugo** var**. mollugo***

Galium aparine Linnaeus, Cleavers. Mt, Pd, Cp (GA, NC, SC, VA): meadows, thickets, disturbed areas, forests; common. April-May. Nearly cosmopolitan, from n. North America south through Central and South America. Apparently represented in North America (including our area) by both native and introduced genotypes. [= RAB, F, G, GW, K, S, W; > *G. aparine* var. *aparine* – C; > *G. aparine* var. *echinospermum* (Wallroth) Farwell – C]

Galium asprellum Michaux, Rough Bedstraw. Mt (NC, VA), Pd, Cp (VA): bogs, streambanks, wet meadows; uncommon. July-September. Newfoundland west to MN, south to n. VA, w. NC, ne. TN (Chester, Wofford, & Kral 1997), and MO. The report for sc. TN is an error (D. Estes, pers. comm. 2005). [= RAB, C, F, G, GW, K, S, W]

Galium boreale Linnaeus, Northern Bedstraw. Mt (VA): woodlands and fields; uncommon (VA Watch List). May-August. Circumboreal, south in North America to DE, sw. VA, KY, MO, and CA. [= C, K, W; > *G. boreale* var. *intermedium* Augustin de Candolle – F, G]

Galium circaezans Michaux ***var. circaezans***, Southern Forest Bedstraw. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; common. April-June. NY, KY, and MI, south to FL and TX. The varieties need additional study. [= C, F, G, K; < *G. circaezans* – RAB, S, W]

Galium circaezans Michaux ***var. hypomalacum*** Fernald, Northern Forest Bedstraw. Mt (NC, VA), Pd (VA), {GA?, SC?}: moist forests; common? April-June. Québec west to MN and NE, south to VA, w. NC, KY, MO, and TX (?). The varieties need additional study. [= C, F, G, K; < *G. circaezans* – RAB, S, W]

Galium concinnum Torrey & A. Gray, Shining Bedstraw. Mt, Pd (VA): dry woodlands; uncommon. June-August. NJ west to MN and NE, south to sw. VA, e. TN, nc. TN, and AR. [= C, F, G, K, W]

* ***Galium divaricatum*** Purret ex Lamarck. Pd (NC, VA), Cp, Mt (VA): pastures, disturbed areas; uncommon, native of Europe. June-July. [= K; *? G. parisiense* Linnaeus – RAB, C, F, G, S, W]

Galium hispidulum Michaux. Cp (GA, NC, SC, VA), Mt (NC): maritime forests, sandhills, dry sandy forests; common, rare in Mountains, rare in VA (VA Watch List). June-August; August-September. S. NJ south to FL, west to LA, primarily on the Coastal Plain. [= RAB, C, F, G, K, W; = *G. bermudense* Linnaeus – S, misapplied]

Galium lanceolatum Torrey, Wild-licorice. Mt (NC, SC, VA), Pd (VA), Cp (VA): moist hardwood forests; uncommon (rare in Coastal Plain and Piedmont). June-July. Québec west to MN, south to w. NC and e. TN. [= RAB, C, F, G, K, S, W]

Galium latifolium Michaux, Wideleaf Bedstraw. Mt (GA, NC, SC, VA), Pd (NC, VA): moist hardwood forests; common (uncommon in Piedmont). May-July. C. PA and KY south to n. GA and n. AL, a Southern and Central Appalachian endemic. The closely related *G. arkansanum* A. Gray is the Ozarkian sibling of the Appalachian *G. latifolium*. Var. *hispidum*, named from VA, needs additional study. [= RAB, C, K, S, W; > *G. latifolium* var. *latifolium* – F, G; > *G. latifolium* var. *hispidum* Small – F, G]

* ***Galium mollugo*** Linnaeus *var.* ***erectum*** (Hudson) Domin. Mt?, Pd?, Cp? (NC?, VA?): moist roadsides, disturbed areas; ??, native of Europe. May-June. The varieties need additional study. [= C, G; < *G. mollugo* – RAB, K, W; = *G. erectum* Hudson – F; *? G. album* P. Miller]

* ***Galium mollugo*** Linnaeus *var.* ***mollugo***. Mt (NC, VA), Pd?, Cp? (VA?), {GA}: moist roadsides, disturbed areas; uncommon, native of Europe. May-June. The varieties need additional study. [= C, G; < *G. mollugo* – RAB, K, W; = *G. mollugo* – F]

Galium obtusum Bigelow *var.* ***filifolium*** (Wiegand) Fernald, Carolina Bedstraw. Cp (GA, NC, SC, VA), Pd (GA?, NC, SC, VA), Mt (VA): marshes, swamps, creekbanks, alluvial forests; common. April-May. S. NJ south to c. GA, primarily on the Coastal Plain. [= RAB, C, F, W; < *G. obtusum* – GW; = *G. obtusum* ssp. *filifolium* (Wiegand) Puff – K, Z; = *G. filifolium* (Wiegand) Small – S]

Galium obtusum Bigelow *var.* ***obtusum***, Bluntleaf Bedstraw. Cp, Pd, Mt (GA, NC, SC, VA): marshes, swamps; common. April-May. Nova Scotia west to SD, south to FL and TX. "Ssp. *australe* Puff", cited in Kartesz (1999) and allegedly endemic to GA, was never published and is not now considered a useful entity by its putative author (Puff, pers. comm. 2004). [= RAB, C, F, W; < *G. obtusum* – GW; > *G. obtusum* var. *obtusum* – G; > *G. obtusum* var. *ramosum* Gleason – G; > *G. obtusum* ssp. *obtusum* – K, Z; > *G. obtusum* "ssp. *australe*" – K, Z, not validly published; = *G. tinctorium* – S, misapplied]

* ***Galium odoratum*** (Linnaeus) Scopoli, Sweet Woodruff, Waldmeister. Mt, Pd (NC, VA): commonly cultivated, rarely escaped or persistent, native of Europe. May. Used fresh as a flavoring for May-wine. [= C, K; = *Asperula odorata* Linnaeus – F, G]

Galium orizabense Hemsley *ssp.* ***laevicaule*** (Weatherby & Blake) Dempster. Cp (GA, NC, SC, VA): forests; uncommon? (VA Watch List) May-August. Se. VA south to FL, west to se. TX; West Indies. The typic subspecies, ssp. *orizabense*, is distributed from Tamaulipas south through Mexico, Central America, to northern South America (Dempster 1981). [= K; < *G. pilosum* – RAB, S; = *G. pilosum* Aiton var. *laevicaule* Weatherby & Blake – F]

Galium pilosum Aiton *var.* ***pilosum***. Mt, Pd, Cp (NC, SC?, VA), {GA}: forests, woodland borders, clearings; common. May-August. S. NH west to MI, south to NC, TN, MO, and TX. The varieties need additional study. [= C, F, G, K; < *G. pilosum* – RAB, S, W]

Galium pilosum Aiton *var.* ***puncticulosum*** (Michaux) Torrey & A. Gray. Cp (GA, NC, SC, VA), Pd?: forests, woodland borders, clearings; common. May-August. S. NJ south to FL, west to MS. The varieties need additional study. [= C, F, G, K; < *G. pilosum* – RAB, S, W]

Galium tinctorium (Linnaeus) Scopoli *var.* ***floridanum*** Wiegand, Florida Three-lobed Bedstraw. Cp (GA, NC, SC, VA), Mt (NC, SC, VA), Pd (NC, SC): swamps, marshes, and ditches; common (VA Watch List). April-June. MA south to FL, west to e. TX, mostly on the Coastal Plain, but extending inland to w. VA, w. NC, se. KY, s. IL, and se. MO. See Puff (1976) for additional information. [= F; < *G. tinctorium* – RAB, C, K, W; = *G. obtusum* var. *floridanum* (Wiegand) Fernald – G; < *G. claytonii* Michaux – S; = *G. tinctorium* ssp. *floridanum* (Wiegand) Puff – Z]

Galium tinctorium (Linnaeus) Scopoli *var.* ***tinctorium***, Southern Three-lobed Bedstraw. Mt (GA, NC, SC, VA), Pd, Cp? (NC, SC, VA): swamps, marshes, and ditches; common. April-June. Newfoundland west to MN and NE, south to SC, n. GA, KY, and ne. MO. See Puff (1976) for additional information. [= F, G, GW; < *G. tinctorium* – RAB, C, K, W; < *G. claytonii* Michaux – S; = *G. tinctorium* ssp. *tinctorium* – Z]

* ***Galium tricornutum*** Dandy, Small Bedstraw. Pd (GA, SC): disturbed areas; rare, introduced. This species has been reported from Cherokee and Greenwood counties, SC, nearby GA, and se. PA (Rhoads & Klein 1993). [= K; < *G. tricorne* Stokes – F]

Galium triflorum Michaux, Sweet-scented Bedstraw. Mt, Pd, Cp (GA, NC, SC, VA): woodlands, roadsides, disturbed areas; common. July-August. Circumboreal, south in North America to FL and Mexico (Veracruz). [= RAB, K, S, W; > *G. triflorum* var. *triflorum* – C, F, G; > *G. triflorum* var. *asprelliforme* Fernald – C, F, G]

Galium uniflorum Michaux. Cp, Pd (GA, NC, SC, VA): moist slope forests and alluvial forests; uncommon. April-September. Ranging from se. VA south to FL, west to TX. [= RAB, C, F, G, K, S]

* ***Galium verum*** Linnaeus, Yellow Bedstraw, Our Lady's Bedstraw. Mt (NC, VA), Pd (VA): meadows, pastures, roadsides; uncommon (rare in NC), native of Europe. June-July. [= C, F, G, K; < *G. verum* – RAB, W (also see *G. wirtgenii*)]

Galium virgatum Nuttall, Ozark Bedstraw. Cp (GA, *SC): (in GA) open blackland prairies, (in SC) waif around wool-combing mill; rare. Native from TN, c. GA (Houston County), and AL west to KS, OK, and TX. [= C, F, G, K; > *G. virgatum* var. *leiocarpum* Torrey & A. Gray – S; > *G. virgatum* var. *virgatum* – S]

Galium palustre Linnaeus, Marsh Bedstraw, Ditch Bedstraw, ranges south to NJ, s. PA (Rhoads & Klein 1993), MD, and WV (Kartesz 1999). [= C, F, G, K]

Galium trifidum Linnaeus var. *trifidum*, Northern Three-lobed Bedstraw. Moist places, bogs, and swamps, circumboreal, south in North America to MD, DE, PA, and NJ. [= C, F, G; = *G. trifidum* ssp. *trifidum* – K, Z]

* *Galium wirtgenii* F.W. Schultz, Yellow Bedstraw. Not definitely known from our area, but likely to be present. [= C, F, G, K; < *G. verum* – W]

Hedyotis Linnaeus (Bluet)

(see *Houstonia, Oldenlandia, Stenaria*)

Houstonia Linnaeus 1753 (Bluet)

(also see *Stenaria*)

The generic limits of *Houstonia, Hedyotis, Oldenlandia*, and *Stenaria* remain unclear. I do not agree with Terrell's (1991) sinking of the varieties of *H. longifolia* and reduction of *H. tenuifolia* to a variety of *H. longifolia*. References: Terrell (1959)=Z; Terrell (1991)=Y; Terrell (1996)=X; Rogers (1987)=Q; Ward (2004c)=V; Church & Taylor (2005); Church (2003); Turner (1995b)=U; Terrell (2001)=V; Rogers (2005). Key adapted in part from the references.

Identification notes: In the key below, all leaf measurements and length/width ratios are based on median cauline leaves.

1 Flowers solitary on terminal (rarely axillary) pedicels (2-) 6-50 (-70) mm long; corolla salverform; leaves 2-15 mm long; [subgenus *Houstonia*].
- 2 Stems prostrate and creeping; [section *Houstonia*].
  - 3 Corolla white (rarely pale lavender); capsule (2.3-) 3.0-6.3 mm across; leaves 2-13 mm wise; pedicels usually single, 2-25 mm long; flowers chasmogamous and cleistogamous (these borne underground); [of the outer Coastal Plain] ..... ***H. procumbens***
  - 3 Corolla blue (rarely white); capsule 2.5-5.0 mm across; leaves 0.5-7 mm wide; pedicels single or paired, to 60 mm long; flowers all chasmogamous and aerial; [of the Mountains] ..... ***H. serpyllifolia***
- 2 Stems erect or spreading.
  - 4 Stems 1-4 (-7) cm tall; leaves mostly oblanceolate, 0.3-3.0 mm wide; corolla 5-12 mm long, white to pale pink; seeds with a hilar ridge in an elliptical depression; [section *Mullera*] ..... ***[H. rosea]***
  - 4 Stems 1-26 cm tall; leaves elliptic, ovate or spatulate, 0.3-9.0 mm wide (at least some on a plant generally > 3 mm wide); corolla 2-21 mm long, purple, pale blue, pink, or white; seeds subglobose with a ventral cavity; [section *Houstonia*].
    - 5 Plants perennial, with a well-developed, persistent basal rosette; corolla 5.8-16 (-21) mm long, the tube (2-) 4-11 (-12) mm long ..... ***H. caerulea***
    - 5 Plants annual, with at most a few short-lived basal leaves; corolla 2-10 (-12) mm long, the tube 0.8-5.5 mm long.
      - 6 Calyx lobes 1/5 as long as to slightly longer than the corolla tube; corollas purple or violet (rarely white), 3.5-10 (-12.5) mm long, the tube 2.0-5.5 mm long ..... ***H. micrantha***
      - 6 Calyx lobes slightly shorter than to slightly longer than the corolla tube; corollas white, 2.0-5.5 mm long, the tube 0.8–2.5 mm long ..... ***H. pusilla***

1 Flowers several to many, in terminal cymes; corolla funnelform; leaves (8-) 10-60 mm long; [subgenus *Chamisme*, section *Amphiotis*].
- 7 Capsule obovoid-cylindric, longer than wide, the free calyx lobes distinctly shorter than the capsule; stipules of mid-cauline leaves ciliate or fringed, and also often bristle-tipped; leaves 1-3 mm wide; [plants of calcareous glades and barrens] ..... ***H. nigricans*** *var.* ***nigricans***
- 7 Capsule as long as wide or wider, depressed globose, the free calyx lobes about as long as the capsule; stipules of mid-cauline leaves not cilate, fringed, or bristle-tipped; leaves 0.5-34 mm wide; [plants of various habitats, including calcareous glades and barrens]
  - 8 Basal leaves persistent in a rosette until and past flowering; leaves distinctly ciliate ..... ***H. canadensis***
  - 8 Basal leaves absent at the onset of flowering; leaves smooth-margined or ciliate.
    - 9 Leaves ovate or lanceolate, 1-6× as long as wide, 4-34 mm wide, widest toward the base or at the middle; calyx lobes 1-7 mm long.
      - 10 Calyx lobes 4-7 mm long; leaves mostly lanceolate (varying from narrowly lanceolate to broadly ovate), 1.7-3.3 cm long, 0.4-1.0 cm wide, 3.3-6× as long as wide ..... ***H. purpurea*** *var.* ***calycosa***
      - 10 Calyx lobes 1-4 mm long; leaves mostly ovate (varying from broadly ovate to ovate-lanceolate), 0.8-6.3 cm long, 0.6-3.4 cm wide, 1-3.2× as long as wide.
        - 11 Corollas light purple to white, (4-) 5-8 (-10) mm long; leaves (10-) 25-50 (-60) mm long, (6-) 12-30 (-34) mm wide; stems sparsely to densely pubescent; median internodes 2-9 cm long; leaves with pubescence ciliate on the leaf margin, on the midrib, and scattered on the surface; [of various habitats, widely distributed] ..... ***H. purpurea*** *var.* ***purpurea***
        - 11 Corollas deep purple, 8-12 mm long; leaves 8-20 (-30) mm long, 3-8 (-13) mm wide; stems glabrous (or slightly short-pubescent on the lower nodes only); median internodes 0.5-4 cm long;

leaves entirely glabrous or with pubescence ciliate on the leaf margin, on the midrib, but lacking from the leaf surface; [of high elevation rocky summits and adjacent grassy balds in w. NC and e. TN] ..... ***H. montana***

9 Leaves linear to narrowly elliptic, 4-20× as long as wide, 0.5-6 mm wide, widest at the middle or near the apex or nearly equally wide for most of their lengths; calyx lobes 0.5-3 mm long.

12 Leaves 1.3-4.7 cm long, 0.5-4.0 mm wide (mostly < 2.5 mm wide), 7-20× as long as wide; inflorescence very diffuse and open, to 20 cm long, the branches ascending, spreading, or deflexed, slender and often ultimately filiform, with 1-4 remote nodes bearing reduced leaves, the pedicels to 14 mm long; internodes mostly 4-9; mature capsules mostly 1.5-2.5 mm long and wide; stem densely cinereous-puberulent, especially at the nodes ..... ***H. tenuifolia***

12 Leaves 1.6-4.0 cm long, 1.5-6.0 mm wide (mostly > 2.5 mm wide), 4-11× as long as wide; inflorescence rather open to rather compact, < 12 cm long, the branches ascending or spreading, slender, pedicels to 8 mm long; internodes mostly 7-11; mature capsules mostly 1.8-3.0 mm long and wide; stem densely cinereous-puberulent, glabrate, or glabrous.

13 Stems glabrous or glabrate (sometimes puberulent on the nodes only); internodes 7-10, the median internodes (1.1-) 2.0-4.5 (-6.0) cm long; [of seasonally wet soil mats on moderate to high elevation granitic domes in sw. NC, nw. SC, and ne. GA] ..... ***H. longifolia*** *var.* ***glabra***

13 Stems densely cinereous-puberulent; internodes (6-) 7-11 (-13), the median internodes (1.0-) 1.5-3.5 (-4.4) cm long; [of dry sandy, shaley, gravelly, or rocky soil, widely distributed] .... ***H. longifolia*** *var.* ***compacta***

Houstonia caerulea Linnaeus, Quaker Ladies, Innocence, Common Bluet. Mt, Pd, Cp (GA, NC, SC, VA): forests, woodlands, openings, lawns, a wide variety of disturbed sites; common. April-May; May-June. This species is widespread in e. North America. The flowers of this species and *H. serpyllifolia* are very similar; *H. caerulea* is a somewhat duller blue. [= RAB, G, K, S, W, X, Y; = *Houstonia caerulea* var. *caerulea* – F; = *Hedyotis caerulea* (Linnaeus) Hooker – C, GW; < *Hedyotis caerulea* – Q]

Houstonia canadensis Willdenow ex Roemer & J.A. Schultes, Canada Bluet. Mt (GA, VA): dry limestone barrens, locally abundant in shallow soils over limestone; rare (VA Rare). April-June. Ranging from ME and s. Ontario west to MN, south to sw. VA, se. and c. TN, nw. GA, and AR. Terrell (1959) determined that *Houstonia setiscaphia* (allegedly a narrow endemic of sw. VA) fell within the range of variation of southern populations of *H. canadensis*. Further study is perhaps warranted. [= G, K, W, X, Y, Z; = *Hedyotis canadensis* (Willdenow ex Roemer & J.A. Schultes) Fosberg – C, Q; > *Houstonia canadensis* – F; > *Houstonia setiscaphia* L.G. Carr – F; > *Houstonia canadensis* var. *setiscaphia* (L.G. Carr) C.F. Reed]

Houstonia longifolia Gaertner *var.* ***compacta*** Terrell, Eastern Longleaf Bluet. Mt (GA, NC, VA), Pd, Cp (GA, NC, SC, VA): dry rock outcrops and adjacent open woodlands, dry sandy woodlands, dry roadbanks, glades and barrens; uncommon. Early June-August; September-October. Var. *compacta* is centered in the central Appalachians of VA, WV, e. KY, and se. OH, with extensions north to VT, west into n. IL, and south in the Piedmont and adjacent Coastal Plain to SC and GA. The typic variety is more northern, apparently reaching its southern limit in IN, not reaching our area. [= Z; < *Houstonia longifolia* – RAB, C, F, G, S, W; < *Hedyotis longifolia* (Gaertner) Hooker – C, Q; < *Houstonia longifolia* var. *longifolia* – Y; = *Houstonia longifolia*, "Appalachian Group" – X; < *Houstonia longifolia* – K (also see *H. tenuifolia*)]

Houstonia longifolia Gaertner *var.* ***glabra*** Terrell, Granite Dome Bluet. Mt (GA, NC, SC): seasonally and periodically wet soils of shallow soil mats and crevices of granitic domes; rare (NC Watch List). June-August; September-October. Var. *glabra* is endemic to the granitic dome district centered around Highlands, NC, occurring in sw. NC, nw. SC, and ne. GA. Terrell (1959) says "the lower internodes [are often] so smooth they appear to have been polished," and gives an altitudinal range of 850-1750m. Although the morphological differences between var. *glabra* and var. *compacta* are not great, the combination of distinctive morphology correlated with a distinctive habitat and a disjunct range seem to warrant recognition at the varietal level. [= Z; < *Houstonia longifolia* – RAB, S, W; < *Hedyotis longifolia* (Gaertner) Hooker – C, Q; < *Houstonia longifolia* var. *longifolia* – Y; = *Houstonia longifolia*, "Glabra Group" – X; < *Houstonia longifolia* – K (also see *H. tenuifolia*)]

Houstonia micrantha (Shinners) Terrell. Cp, Pd (GA): granitic flatrocks, February-April. E. and c. GA west to sw. TN, nw. AR, south to s. MS, s. LA, and e. TX. [= K, X; = *Hedyotis australis* W.H. Lewis & D.M. Moore – Q; = *Houstonia pusilla* – S, misapplied]

Houstonia montana Small, Roan Mountain Bluet. Mt (NC): in crevices of rock outcrops at the summits of high elevation peaks of the Southern Blue Ridge, also in thin, frost-heaved, gravelly soils of grassy balds near summit outcrops, from 1250-1950m in elevation; rare (US Endangered, NC Endangered). June-July; July-August. This species is endemic to the high Blue Ridge of nw. NC and ne. TN, most notably occurring on Roan Mountain, Grandfather Mountain, Bluff Mountain, and Three Top Mountain. It was first noted by Asa Gray in 1841, who described it as "a remarkable dwarfish form." There has been debate over whether it is not indeed merely a weather-induced form, but it sometimes occurs in close proximity to *H. purpurea*, with no sign of intergradation. In addition to the characters given above in the key, *H. montana* also differs from *H. purpurea* in having larger calyx lobes, corolla, capsules, and seeds. See Terrell (1959), Yelton (1974), and Terrell (1978) for further discussion. [= S, W; < *Houstonia purpurea* – RAB; = *Houstonia purpurea* Linnaeus var. *montana* (Small) Terrell – K, X, Y, Z; < *Hedyotis purpurea* – Q; = *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray var. *montana* (Small) Fosberg]

Houstonia nigricans (Lamarck) Fernald *var.* ***nigricans***, Diamond-flower. Mt (VA), Cp (GA): limestone barrens dominated by *Andropogon gerardii*, blackland prairies; rare (VA Rare). This species has been variously placed in *Houstonia*, *Hedyotis*, and *Stenaria*. Based primarily on seed characters and chromosome numbers, Terrell (2001) has concluded that this taxon is not congeneric with the Sri Lankan type of the genus *Hedyotis*, and is also not a *Houstonia*, so has published the new

genus *Stenaria* for *Hedyotis nigricans* and its close relatives. Church (2003) considers *Stenaria* congeneric with *Houstonia*, based on molecular phylogeny. The resolution of generic limits in this group is still unresolved. As interpreted by Terrell (1991, 2001) and Turner (1995b), *Houstonia nigricans* is a polymorphic species, with *Houstonia nigricans* var. *nigricans* as a widespread "matrix variety," and other, much more local varieties warranting recognition. Var. *nigricans* ranges from sw. VA (Ludwig 1999), s. MI, IA, NE, and e. CO, south to s. FL, TX, e. NM, and along the Sierra Madre Oriental to Hidalgo, Mexico. Turner (1995b) reports *Houstonia nigricans* var. *nigricans* (as *Hedyotis nigricans* var. *nigricans*) from Pickens County, SC; the documentation is not known to me, and suitable habitats there are unlikely. [= *Stenaria nigricans* (Lamarck) Terrell var. *nigricans* – V; = *Hedyotis nigricans* (Lamarck) Fosberg var. *nigricans* – K, U, Y; < *Hedyotis nigricans* – C, Q; < *Houstonia nigricans* (Lamarck) Fernald – F, G; > *Houstonia angustifolia* Michaux – S; > *Houstonia filifolia* (Chapman) Small – S]

Houstonia procumbens (Walter ex J.F. Gmelin) Standley, Creeping Bluet. Cp (GA, SC): beach dunes, moist to wet sandy pinelands; common. October-April. Ranging from se. SC south to s. FL, west to se. LA. Gaddy & Rayner (1980) note that this plant is fairly common on SC barrier islands, but flowers in the winter and is easily overlooked in other seasons (when botanists are more likely to be afield). See Wilbur (1968) and Ward (2004c) for differing opinions about the merits of the taxonomic recognition of the glabrous and pubescent plants. [= RAB, K, S, X, Y; = *Hedyotis procumbens* (Walter ex J.F. Gmelin) Fosberg – Q; = *Houstonia rotundifolia* Michaux; > *Houstonia procumbens* var. *procumbens* – V; > *Houstonia procumbens* var. *hirsuta* (W.H. Lewis) D. B. Ward – V]

Houstonia purpurea Linnaeus *var.* ***calycosa*** Shuttleworth ex A. Gray, Midwestern Summer Bluet. Mt (GA, NC): dry woodlands, banks, rock outcrops, shallow soils around mafic and calcareous rock outcrops; rare (NC Watch List). May-July; July-August. The distribution and ecology of var. *calycosa* in our area are poorly known; it apparently occupies drier and typically more circumneutral sites than var. *purpurea*. Var. *calycosa* ranges from s. ME and w. NY west to s. OH, and sw. MO, south to w. NC, n. GA, AL, MS, AR, and e. OK. [= G, K, X, Y, Z; < *Houstonia purpurea* – RAB, W; < *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray – C, Q; = *Houstonia lanceolata* (Poiret) Britton – F, S; = *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray var. *calycosa* (Shuttleworth ex A. Gray) Fosberg]

Houstonia purpurea Linnaeus *var.* ***purpurea***, Summer Bluet. Mt, Pd, Cp (GA, NC, SC, VA): moist and dry woodlands and forests, roadbanks, thinner soils around rock outcrops, a variety of disturbed sites; common, rare in Coastal Plain. May-July; July-August. Var. *purpurea* ranges from MD and s. PA west to s. OH, s. IL, and sw. MO south to SC, sw. GA, MS, s. LA, e. TX, and e. OK. Plants growing in high elevation and exposed sites are sometimes dwarfed, and in that respect only, superficially resemble *H. montana*. [= G, K, X, Y, Z; < *Houstonia purpurea* – RAB, W; = *Houstonia purpurea* – F, S; < *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray – C, Q; *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray var. *purpurea*]

Houstonia pusilla Schoepf, Tiny Bluet. Pd, Cp (GA, NC, SC, VA), Mt (GA, NC): woodlands, lawns, and other disturbed sites; common. March-April. MD south to FL, west to TX, and inland from IL west to NE, south to TN and TX. [= RAB, G, K, S, W, X, Y; = *Houstonia patens* Elliott – F; = *Hedyotis crassifolia* Rafinesque – C, GW; < *Hedyotis caerulea* (Linnaeus) Hooker – Q; = *Houstonia minima* L.C. Beck – S]

Houstonia serpyllifolia Michaux, Appalachian Bluet, Thyme-leaf Bluet. Mt (GA, NC, SC, VA): streambanks, grassy balds, moist forests, seepy rock outcrops, spray cliffs, and moist disturbed areas; common (VA Watch List). (March-) May-June. A Southern and Central Appalachian endemic: PA south to nw. SC and ne. GA. The flowers are very similar to, but usually a brighter blue than, the more widespread *H. caerulea*. [= RAB, F, G, K, S, W, X, Y; = *Hedyotis michauxii* Fosberg – C, GW, Q]

Houstonia tenuifolia Nuttall, Diffuse-branched Bluet. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): usually in dry woodlands, often rocky (especially mafic rocks) or sandy; uncommon (rare in Coastal Plain). May-July; July-October. This species is centered in the Southern Appalachians and the Ozarks, extending into provinces adjacent to both areas of concentration, ranging overall from PA west to MO and OK, south to SC, GA, and TX. [= RAB, F, G, S, W, Z; = *Hedyotis nuttalliana* Fosberg – C; < *Hedyotis longifolia* (Gaertner) Hooker – Q; = *Houstonia longifolia* var. *tenuifolia* (Nuttall) Wood; = *Houstonia longifolia*, "Tenuifolia Group" – X; < *Houstonia longifolia* – K]

Houstonia rosea (Rafinesque) Terrell. AL west to TX. [= K; = *Hedyotis rosea* Rafinesque] {synonymy incomplete}

Mitchella Linnaeus (Partridge-berry)

The only other species in the genus is e. Asian. References: Rogers (2005)=Z.

Mitchella repens Linnaeus, Partidge-berry. Mt, Pd, Cp (GA, NC, SC, VA): deciduous and coniferous forests, stream-banks, heath balds, maritime forests, on rotten logs; common. May-June; June-July. Nova Scotia west to MN, south to peninsular FL and TX; disjunct in Guatemala. Plants in maritime forests are more robust than others and often have an ascending habit, the stems sometimes 20-30 cm tall. [= RAB, C, F, G, GW, K, S, W, Z]

Mitracarpus Zuccarini (Girdle-pod)

A genus of about 30 species, of tropical America. References:

* ***Mitracarpus hirtus*** (Linnaeus) Augustin de Candolle, Girdle-pod. Cp (GA): disturbed areas; rare, native of tropical America. In sw. GA (Jones & Coile 1988) and FL. [= K; *? M. villosus* (Sw.) Chamisso & Schlechtendahl ex Augustin de Candolle]

Oldenlandia Linnaeus (Oldenlandia)

A genus of about 100 species, pantropical, but circumscription is controversial and uncertain. References: Terrell & Robinson (2006)=X; Terrell (1991)=Z; Rogers (1987)=Y; GW; Rogers (2005).

1 Creeping, mat-forming perennial, rooting at nodes; leaves 1.5-5.2 mm long; flowers solitary on slender axillary pedicels; seeds 4-14 per capsule ..... ***[O. salzmannii]***
1 Erect, spreading, decumbent, or prostrate annual or perennial, not rooting at nodes; leaves 3-40 mm long; flowers usually > 1, in axillary clusters or pedunculate umbels; seeds > 50 per capsule.
  2 Flowers (1) 2-5 in pedunculate axillary umbels, the filiform peduncle 5-10 mm long, the filiform pedicels 3-5 mm long ..... ***O. corymbosa***
  2 Flowers 1-10 in sessile or subsessile axillary clusters.
    3 Stem glabrous or nearly so; leaves mostly linear or linear-oblanceolate, 1-3 mm wide, generally 5-10× as long as wide; flowers solitary or (rarely) in 2-3-flowered clusters; plant a perennial..... ***O. boscii***
    3 Stem pilose or villous; leaves mostly ovate or broadly lanceolate, 4-10 mm wide, generally 2-3× as long as wide; flowers in compact clusters of 3-10, rarely solitary; plant an annual ..... ***O. uniflora***

Oldenlandia boscii (Augustin de Candolle) Chapman, Bosc's Bluet. Cp (GA, NC, SC, VA), Mt (GA): clay-based Carolina bays, rivershore and millpond drawdown shores, sagponds, other seasonally saturated habitats; rare (GA Special Concern, NC Rare, VA Rare). August-September. A Southeastern Coastal Plain endemic, ranging from se. VA south to FL and west to TX. Similar in vegetative condition to *Polypremum procumbens*. [= RAB, G, K, S, X, Z; = *Hedyotis boscii* Augustin de Candolle – C, F, GW, Y]

* ***Oldenlandia corymbosa*** Linnaeus, Diamond-flower. Cp (GA, NC, SC), Pd (NC): moist lawns, gardens; rare, native of South America. July-October. Reported for NC by Nesom (2000e). [= RAB, K, S, X, Z; = *Hedyotis corymbosa* (Linnaeus) Lamarck – GW, Y]

Oldenlandia uniflora Linnaeus, Oldenlandia. Cp, Pd (GA, NC, SC, VA): pondshores, muddy drawdown shores, moist to wet ecotones of Coastal Plain streamheads, other moist to wet places; uncommon (rare in Piedmont). August-October. Mostly a species of the Southeastern Coastal Plain, ranging from Long Island, NY south to FL and west to TX, north in the interior to MO. [= RAB, G, K, S, X, Z; = *Hedyotis uniflora* (Linnaeus) Lamarck – C, F, GW, Y]

* *Oldenlandia salzmannii* (de Candolle) Bentham & Hooker ex B.D. Jackson. Roadside ditches, marshes. Native of South America, introduced in s. AL and Panhandle FL. [= K, X]

Paederia Linnaeus (Skunk-vine)

A genus of about 30 species, woody vines, of the Tropics. References: Rogers (2005)=Z; Diamond (1999).

* ***Paederia foetida*** Linnaeus, Skunk-vine. Cp (SC), Pd (NC): disturbed areas, rarely spreading from plantings; rare, native of se. Asia. Diamond (1999) reports its naturalization in Randolph Co., NC. [= RAB, K, S, Z]

Pentodon Hochstetter in Krauss 1844

A genus of 2 species, herbs, of tropical and warm temperate America and Africa. References: Terrell (1991)=Z; Rogers (1987)=Y; Rogers (2005).

* ***Pentodon pentandrus*** (K. Schumach. & Thonn.) Vatke. Cp (GA, SC): pond edges, wet meadows, moist ground; rare, apparently native of Africa (GA Special Concern). July-September. In North America, ranging from e. SC south to FL, west to se. TX. [= GW, K, Y, Z; *? P. halei* (Torrey & A. Gray) A. Gray – S; *? Oldenlandia halei* (Torrey & A. Gray) Chapman]

Pinckneya Michaux (Pinckneya, Fever-tree)

Pinckneya is a monotypic genus, showy when in flower because of the development of 1 of the 5 calyx lobes of some of the flowers of the inflorescence into a large (to 7 cm by 5 cm), petaloid (pink or cream) appendage. References: Godfrey (1988); Rogers (1987)=Z.

Pinckneya bracteata (Bartram) Rafinesque, Pinckneya, Fever-tree. Cp (GA, SC): margins of acidic, peaty (blackwater) swamps; rare (SC Rare). May-June (-July); September. Se. SC south to n. (panhandle) FL. [= GW, K, Z; = *P. pubens* Michaux – RAB, S]

Psychotria Linnaeus 1759 (Wild Coffee)

A genus of about 2000 species, mostly shrubs, tropical and subtropical. References: Rogers (2005)=Z.

Psychotria nervosa Swartz, Wild Coffee. Hammocks. Ne. FL (Duval County) south to s. FL, West Indies, Central America, and South America. [= K, S, Z]

Richardia Linnaeus (Richardia)

A genus of about 15 species, of subtropical and tropical America, and introduced in the Old World. References: Lewis & Oliver (1974)=Z; Krings (2002). Key based on Krings (2002).

1 Stems hirsute, generally densely and evenly so from tip to base; adaxial leaf surface evenly strigose; mericarps conspicuously and densely hispidulous to strigose, the adaxial face broad, with a pronounced median keel; perennial from a woody rhizome (or annual) ..... ***R. brasiliensis***
1 Stems hirsute or villous near the tips, but progressively more sparsely so to glabrate toward the base; adaxial leaf surface glabrous to strigillose near the margins only, the median portion of the leaf blade glabrous; mericarps papillose to tuberculate, the adaxial surface closed to a narrow groove; annual ..... ***R. scabra***

* ***Richardia brasiliensis*** Gomes. Cp, Pd (GA, NC, SC, VA): roadsides, fields, vacant lots, urban areas, disturbed areas; common, native of South America. May-November. [=RAB, C, F, K, S, Z]
* ***Richardia scabra*** Linnaeus. Cp, Pd (GA, NC, SC, VA): roadsides, fields, vacant lots, urban areas, disturbed areas; common, native of South America. June -December. Lewis & Oliver (1974) consider this species to be native from our area south through Central America into northern South America, based on the semi-contiguous distribution, but occurrences in our region seem to be in altered habitats. [= RAB, C, F, G, K, S, Z]

Sherardia Linnaeus (Field-madder)

A monotypic genus, an herb, native of Europe and w. Asia. References: Rogers (2005)=Z.

Identification notes: Habitally similar to *Galium*, but differing in its involucrate inflorescence and the more tubular, pink to purple flowers.

* ***Sherardia arvensis*** Linnaeus, Field-madder. Pd (GA, NC, SC, VA), Cp, Mt (NC, SC, VA): lawns, disturbed areas; uncommon, native of Europe. February-August. [= RAB, C, F, G, K, S, W, Z]

Spermacoce Linnaeus (Buttonweed)

A genus of ca. 50 species, herbs, of tropical and warm-temperate Old and New World. References: Rogers (2005).

1 Calyx with 2 long lobes, the other 2 absent or vestigial ..... ***[S. densiflora]***
1 Calyx with 4 lobes of nearly equal length.
  2 Calyx lobes with a conspicuous white margin ..... ***[S. prostrata]***
  2 Calyx lobes green throughout.
    3 Fruit pubescent ..... ***S. assurgens***
    3 Fruit glabrous ..... ***S. glabra***

Spermacoce assurgens Ruiz & Pavón. Cp (GA): wet sites; rare. July-September. In sw. GA (Jones & Coile 1988), AL, and FL; also in the New World tropics? [> *S. assurgens* – K; *Borreria laevis* (Lamarck) Grisebach – GW, S, misapplied; *Borreria brachysepala*, misapplied] {synonymy incomplete; not keyed at this time}
Spermacoce glabra Michaux, Smooth Buttonweed. Mt (VA), Cp (GA, SC*, VA*): rocky riversides in the mountains, disturbed areas in the Coastal Plain; rare (GA Rare). Perhaps only introduced in at least some parts of our area; see Wieboldt et al. (1998) for discussion. [= RAB, C, F, G, GW, K, S]

* *Spermacoce densiflora* (DC.) Alain. Disturbed areas. Panhandle FL, native of the Neotropics. [= K; = *Borreria densiflora* DC.]
Spermacoce prostrata Aublet. Wet pine flatwoods, floodplain forests. FL, AL, MS, south through the New World tropics. July-September. [= K; = *Borreria ocimoides* (Burmann f.) de Candolle – S, misapplied]
Spermacoce tenuior Linnaeus, reported from sw. GA (Kartesz 1999). {ID needs checking} [= K; *? S. riparia* Chamisso & Schlechtendahl] {not keyed at this time}

RUTACEAE A.L. de Jussieu 1789 (Citrus Family)

A family of about 156 genera and 1800 species, trees, shrubs, vines, and rarely herbs, cosmopolitan.

1 Leaves simple; [subfamily *Aurantioideae*] ..... ***Citrus***
1 Leaves pinnately or palmately compound.
  2 Leaves 2-pinnatifid; suffrutescent herb or shrub to 1.5 m tall; [subfamily *Rutoideae*, tribe *Ruteae*] ..... ***Ruta graveolens***
  2 Leaves palmately 3-foliolate or 1-pinnate (5-19-foliolate); shrub or tree, usually over 1.5 m tall (potentially to 20 m in *Zanthoxylum*).
    3 Leaves pinnately 5-19-foliolate; [subgenus *Rutoideae*, tribe *Zanthoxyleae*] ..... ***Zanthoxylum***
    3 Leaves palmately 3-foliolate.
      4 Branches conspicuously armed with stout spines; [subfamily *Aurantioideae*] ..... ***Citrus***
      4 Branches not armed with spines; [subfamily *Toddalioideae*] ..... ***Ptelea***

Citrus Linnaeus

A genus of about 17 species, trees, of s. and se. Asia. The circumscription is uncertain, but Freitas de Araújo, Paganucci de Queiroz, & Machado (2003) favor a broad circumscription (followed here), including *Poncirus*, based on DNA analyses. References: Mabberley (1997b)=Z; Freitas de Araújo, Paganucci de Queiroz, & Machado (2003)=Y.

Identification notes: *Citrus* has simple to trifoliolate, evergreen, coriaceous, acuminate, and glossy green leaves, and the familiar spherical fruits.

1 Leaves unifoliolate; fruit glabrous, > 8 cm in diameter ..... ***C. ×aurantium***
1 Leaves trifoliolate; fruit densely pubescent, < 6 cm in diameter..... ***C. trifoliata***

* ***Citrus ×aurantium*** Linnaeus (pro sp.), Sour Orange. Cp (GA): cultivated horticulturally, sometimes persistent; rare. Reported from several counties in s. and e. GA (Jones & Coile 1988). [= Z; = *C. aurantium* – K (as species)]

* ***Citrus trifoliata*** Linnaeus, Trifoliate Orange. Pd (GA, NC, SC, VA), Cp (GA, SC, VA): woodlands, thickets, and streambanks, especially in suburban areas; rare, native of China. March-April; September-October. Planted in our area as an ornamental, also used in warmer climates as a grafting stock for citrus, *C. trifoliata* is a small tree or shrub that seems to be made up almost entirely of thorns. The fruits closely resemble an orange, but are small (ca. 4 cm in diameter), densely pubescent, and sour. *Citrus trifoliata* is often considered a separate genus, *Poncirus*, but differs very little from *Citrus* morphologically and has been shown to be phylogenetically nested within Citrus. [= Y; = *Poncirus trifoliata* (Linnaeus) Rafinesque – RAB, F, G, K, S]

* *Citrus ×limon* (Linnaeus) Burmann f., Lemon, *C. ×paradisi* Macfadyen in Hooker (pro sp.), Grapefruit, and *C. sinensis* (Linnaeus) Osbeck, Orange, have been grown on the Outer Banks of North Carolina in Buxton, Dare County, NC (Brown 1959). They are apparently not naturalized, being killed outright or severely damaged by occasional colder winters. {not keyed}

Poncirus Rafinesque (Trifoliate Orange)
(see *Citrus*)

Ptelea Linnaeus (Hop-tree, Wafer-ash, Stinking Ash)

A genus of about 11 species, of North America (south into Mexico). References: Bailey (1962)=Z.

1 Twigs densely pubescent; leaflets densely soft-pubescent beneath..... ***P. trifoliata* var. *mollis***
1 Twigs glabrous or glabrescent; leaflets usually glabrous or glabrate..... ***P. trifoliata* var. *trifoliata***

Ptelea trifoliata Linnaeus ***var. mollis*** Torrey & A. Gray, Hairy Hop-tree. Cp (GA, NC, SC), Pd (GA, NC, SC), Mt (GA, NC, SC, VA): rocky bluffs, especially calcareous or mafic, open woodlands, calcareous Coastal Plain river bluffs, granitic domes; uncommon. The relative distribution and habitats of the two varieties in our area need further study. April-June; June-August. MD, w. NC, n. GA, n. AL, and c. TX south to e. GA, panhandle FL, and s. TX. Our varieties are both placed by Bailey (1962) as quadrinomials in the eastern ssp. *trifoliata*. [= F; < *P. trifoliata* – RAB; = *P. trifoliata* ssp. *trifoliata* var. *mollis* Torrey & A. Gray – C, K, Z; < *P. trifoliata* var. *trifoliata* – G; >< *P. trifoliata* – S, in part]

Ptelea trifoliata Linnaeus ***var. trifoliata***, Smooth Hop-tree. Mt (GA, NC, VA), Pd (GA, SC, VA), Cp (GA, VA): rocky bluffs, especially calcareous or mafic, open woodlands, calcareous Coastal Plain river bluffs, granitic domes; uncommon. April-June; June-August. NJ, w. NY, MI, s. WI, and NE south to c. peninsular FL, c. AL, c. MS, e. TX. The relative distribution and habitats of the two varieties in our area need further study. Bailey discusses some odd forms, corresponding in part to Small's

species, which she does not recognize taxonomically; further study is warranted. [= F; < *P. trifoliata* – RAB; = *P. trifoliata* ssp. *trifoliata* var. *trifoliata* – C, K, Z; < *P. trifoliata* var. *trifoliata* – G; > *P. trifoliata* – S, in part; > *P. serrata* Small – S; > *P. microcarpa* Small – S; > *P. baldwinii* Torrey & A. Gray – S]

Ruta Linnaeus (Rue)

A genus of about 7 species, of the Old World.

* ***Ruta graveolens*** Linnaeus, Rue. Pd (NC), Mt (VA): cultivated in gardens as a medicinal herb, persistent and rarely escaping, sometimes locally abundant in pastures over limestone; rare, native of Eurasia. May-August; June-September. This plant causes dermatitis in some people, apparently by removing the skin's sun-resistance. *Ruta* has a disagreeable smell, and has toxic properties. [= RAB, C, F, G, K, S]

Zanthoxylum Linnaeus (Prickly-ash, Toothache Tree)

A genus of about 250 species, of America, Africa, Asia, and Australia. References: Porter (1976)=Z.

1 Leaves thin in texture, pubescent; flowers in small axillary clusters ..... ***Z. americanum***
1 Leaves coriaceous in texture, glabrous and waxy; flowers in large terminal compound cymes ..... ***Z. clava-herculis***

Zanthoxylum americanum P. Miller, Prickly-ash, Toothache Tree, Northern Prickly-ash. Mt (VA), Pd (GA, VA), Cp (GA, SC): woodlands and forests over calcareous or mafic rocks, often forming extensive colonies near outcrops; rare (NC Watch List, VA Watch List). March-April; July-August. S. Québec west to e. ND, south to e. SC, c. GA, Panhandle FL, e. TN, c. TN, and OK. Sometimes planted. There is only a single known site in SC. [= RAB, C, K, W, S, Z; = *Xanthoxylum americanum* – F, orthographic variant]

Zanthoxylum clava-herculis Linnaeus, Toothache Tree, Hercules'-club, Sea-ash, Southern Prickly-ash, Pepper-bark, Tickle-tongue. Cp (GA, NC, SC, VA): maritime forests, dunes, shell middens, shell hammocks, maritime scrub, inland (in GA) in hammock forests; uncommon (VA Watch List). April-May; July-September. A Southeastern Coastal Plain endemic: se. VA south to FL and west to TX, AR, and OK. The compound leaves are armed with stout prickles along the rachis. The twigs are also spiny. On the larger branches and trunks, the spines become elevated on conical, pyramidal, or cylindrical corky bases up to 5 cm long and 4 cm in diameter, giving the trunk a very peculiar appearance. Many of the common names come from the numbing effect on the mouth of chewing the leaf or twig, the flavor, smell, and effect being very similar to *Ctenium aromaticum*, Toothache Grass. In our area it is restricted to the outer Coastal Plain, nearly entirely on the barrier islands. Although normally a small tree, it can reach considerable size, up to about 60 cm DBH. In the 5 km immediately north of Buxton, Dare County, NC one can see several hundred individuals growing on open, *Uniola*-dominated dunes. Because of salt-pruning, the trees often have 5 times as wide a spread as they are tall. Some trees have a basal diameter of 30-40 cm, a short trunk less than a meter tall, a total height of 2-3 m, and a spread of 10 m. [= RAB, C, G, K, S, Z; = *Xanthoxylum clava-herculis* – F, orthographic variant]

SALICACEAE de Mirbel 1815 (Willow Family)

A family of 2 genera and about 435 species, trees, shrubs, and subshrubs, nearly cosmopolitan.

1 Leaf blades 0.8-2 (-3)× as long as wide; stamens 5-80; buds covered by several, overlapping scales; flowering catkins arching or drooping ..... ***Populus***
1 Leaf blades (2-) 3-30× as long as wide; stamens 1-9; buds covered by a single scale; flowering catkins usually erect or ascending ..... ***Salix***

Populus Linnaeus 1753 (Poplar, Aspen, Cottonwood)

A genus of about 35 species, trees, largely north temperate. References: Eckenwalder (1977)=Z; Eckenwalder (1984)=Y; Eckenwalder (1996); Hamzeh & Dayanandan (2004).

1 Winter buds viscid (sticky and shiny as if recently varnished); stamens (15-) 20-80.
  2 Petiole terete or dorsally flattened (in the plane of the leaf blade), and often also channeled above; leaf blades dark green above, glaucous white beneath; leaf margin not translucent, finely serrate with teeth < 1 mm deep; [section *Tacamahaca*].
    3 Petioles 7-10 cm long; leaves ovate, broader below the midpoint; leaf base rounded to subcordate; twigs terete or slightly angled in cross-section ..... ***P. balsamifera***
    3 Petioles < 2 cm long; leaves obovate, broader past the midpoint; leaf base cuneate to rounded; twigs strongly angled in cross-section ..... ***P. simonii***

2 Petiole laterally flattened (90 degrees to the plane of the leaf blade), especially near the junction with the blade; leaf blades light green above, often paler beneath but not distinctly whitened; leaf margin translucent, finely to coarsely serrate with teeth > 1 mm deep.
4 First-year branches reddish-brown; leaves noticeably paler beneath; flattened portion of petiole < 2× as deep as wide; early leaves with > 20 teeth per side, the largest < 2.5 mm deep; [probable intersectional hybrid of section *Aegeiros* and section *Tacamahaca*] ..... ***P.* ×*jackii***
4 First-year branches yellow- to orange- brown; leaves nearly the same color above and below; flattened portion of petiole > 2× as deep as wide; early leaves usually with < 20 teeth per side, the largest < 2.5 mm deep; [section *Aegeiros*].
5 Stigmas 3-4; stamens (30-) 40-80; [native tree, common] ..... ***P. deltoides* ssp. *deltoides***
5 Stigmas 2-3; stamens (15-) 20-30; [alien trees, rare out of cultivation].
6 Floral disk 2-4 mm wide; stigmas 2-3; ovules and seeds 6-14 (-20) per placenta ..... ***P.* ×*canadensis***
6 Floral disk 1-2 mm wide; stigmas 2; ovules and seeds 4-8 per placenta ..... ***P. nigra***

1 Winter buds not viscid; stamens 5-20.
7 Stamens 12-20; scales of the catkins deeply fimbriate; petioles terete; [section *Leucoides*] ..... ***P. heterophylla***
7 Stamens 5-12; scales of the catkins dentate or with only 3-7 linear-trianglar lobes; petioles strongly flattened laterally (90 degrees to the plane of the leaf blade), especially near the junction with the blade; [section *Populus*].
8 Petioles strongly flattened laterally; leaves glabrous when mature (pubescent when young in *P. grandidentata*); [native trees].
9 Leaf margins coarsely crenate- or undulate-toothed, with fewer than 12 (-15) teeth per side, the sinuses of the larger teeth 1.5-6 mm deep; leaves puberulent beneath when young (glabrate in age); buds gray-pubescent..... ..... ***P. grandidentata***
9 Leaf margins finely crenulate-serrulate, with 15-35 (-70) teeth per side, the sinuses 0.5-1.0 mm deep; leaves glabrous; buds glossy brown ..... ***P. tremuloides***
8 Petioles terete or nearly so; leaves densely pubescent (*P. alba*) or glabrescent (*P.* ×*canescens*); [exotic trees].
10 Leaves of vigorous shoots palmately 3-7-lobed (and also toothed); leaves densely white-tomentose beneath when young and mature ..... ***P. alba***
10 Leaves of vigorous shoots merely toothed; leaves glabrescent when mature ..... ***P.* ×*canescens***

* ***Populus alba*** Linnaeus, Silver Poplar, White Poplar. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas, suburban woodlands; uncommon, native of Europe. March-April. [= RAB, C, F, G, K, S, W]

* ***Populus* ×*canadensis*** Moench (pro sp.) [*P. deltoides* × *nigra*], Hybrid Black Poplar. Pd (GA) {NC, VA}: disturbed areas; rare. Reported for a county in c. GA (Jones & Coile 1988) and for NC and VA (Kartesz 1999). [= C, K]

* ***Populus* ×*canescens*** (Aiton) Sm. (pro sp.) [*P. alba* × *tremula*], Gray Poplar. Mt (GA, NC), Pd (GA, NC), Cp (NC), {SC, VA}: roadsides, disturbed areas; uncommon, native of Europe. March-April. Occurs at scattered locations in TN, n. GA (Jones & Coile 1988), se. PA (Rhoads & Klein 1993), and NC, SC, and VA (Kartesz 1999). See Poindexter (2006). [= C, K; = *P. canescens* (Aiton) Sm. – F, G]

Populus deltoides Bartram ex Marshall *var.* ***deltoides***, Eastern Cottonwood. Pd, Cp (GA, NC, SC, VA), Mt (GA, VA): riverbanks, bottomland forests (not found along blackwater streams); common. March-April. Var. *deltoides* ranges from Québec west to MN, south to FL and TX. Var. *occidentalis* Rydberg [ssp. *monilifera* (Aiton) Eckenwalder] is more western, primarily of the Great Plains. [= C, GW; < *P. deltoides* – RAB, G, W; > *P. deltoides* var. *deltoides* F; > *P. deltoides* var. *missouriensis* (A. Henry) A. Henry – F; = *P. deltoides* ssp. *deltoides* – K, Z; = *P. balsamifera* Linnaeus – S, misapplied]

Populus grandidentata Michaux, Bigtooth Aspen. Mt (NC, VA), Pd, Cp (VA): dry, rocky, upland forests; common, rare south of VA (NC Watch List). April-May. Nova Scotia west to MN, south to w. NC, sc. TN, and n. MO. [= RAB, C, F, G, K, S, W]

Populus heterophylla Linnaeus, Swamp Cottonwood. Cp (GA, NC, SC, VA), Pd (NC, VA): blackwater and brownwater swamp forests; common (rare in Piedmont). March-April. CT west to MI, south to n. FL and LA, scattered and irregular in distribution, absent from the Appalachians. [= RAB, C, G, GW, K, S]

* ***Populus* ×*jackii*** Sargent [probably *P. balsamifera* × *deltoides*], Balm-of-Gilead. Mt (NC, VA): bottomlands, riverbanks, streambanks; rare or locally abundant, spread from cultivation. April. This cultivar is of uncertain origin, considered by some to be a hybrid *P. balsamifera* × *deltoides*, by others to be an atypical pistillate clone of *P. balsamifera* Linnaeus. The cultivar '*gileadensis*' is distinguished from the typical form by the petioles densely and stiffly pubescent (vs. petioles glabrous). *P.* ×*jackii* is locally abundant along the New River in Watauga, Ashe, and Alleghany counties, NC and downstream into VA. [= C, K, Y; = *P. candicans* Aiton – RAB, G, S, misapplied; > *P.* ×*gileadensis* Rouleau – F, W]

* ***Populus nigra*** Linnaeus, Black Poplar, Lombardy Poplar. Pd (GA, VA), Cp (GA): disturbed suburban areas; rare, native of s. Europe. Cultivated in many forms, including the columnar "Lombardy Poplar;" short-lived and only weakly spreading to disturbed areas in the vicinity of plantings. [= C, F, G, K; > *P. italica* (Du Roi) Moench – S]

* ***Populus simonii*** Carrière, Chinese Poplar, Simon's Poplar. Mt (NC): riverbanks; rare, native of China. Naturalized in the Mountains of NC.

Populus tremuloides Michaux, Quaking Aspen. Mt (NC, VA), Pd (VA): heath balds, rocky woodlands, exposed rock oucrops, and clearings; rare (VA Rare). April-May. Labrador west to AK, south to NJ, VA, w. NC, WV, MO, and (in the Rockies) to TX and Mexico. [= C, G, K, S, W; > *P. tremuloides* var. *tremuloides* – F]

Populus balsamifera Linnaeus, Balsam Poplar, Hackmatack, ranges south to s. PA (Rhoads & Klein 1993), e. and c. KY (Clark et al. 2005), and to VA (according to Kartesz 1999). Also reported for n. GA (Jones & Coile 1988) and provisionally for SC (Kartesz 1999). I have been unable to locate herbarium specimens documenting its occurrence in our primary area. {further investigate}. [= C, G; = *P. balsamifera* ssp. *balsamifera* – K; > *P. balsamifera* var. *balsamifera* – F; > *P. balsamifera* var. *magnifica* Victorin – F; > *P. balsamifera* var. *subcordata* Hylander; > *P. balsamifera* var. *michauxii* (Dode) Henry]

Populus ×*smithii* Boivin [*P. grandidentata* × *tremuloides*]. South to MD and WV. [= C, K] {not keyed at this time}

Salix Linnaeus 1753 (Willow)

A genus of about 400 species, trees, shrubs, and subshrubs, mostly north temperate and boreal. References: Argus (1986)=Z; Dorn (1995)=Y; Argus (1997). Key adapted from Z.

1 Leaves mostly alternate, but some opposite or subopposite; [subgenus *Vetrix*, section *Helix*] ..... ***S. purpurea***
1 Leaves all alternate.
  2 Bud apex sharp-pointed; bud scale margin free and overlapping; leaf blades 2.5-16× as long as wide; [subgenus *Salix*].
    3 Leaf blades (4-) 7-10 (-16)× as long as wide; leaf undersurface glaucous or not; [section *Humboldtianae*].
      4 Leaves glaucous beneath; pistils borne on stipes averaging 2 mm long (range 1-5 mm); stipules usually prominent and persistent, to 15 mm long; leaf blades (4-) avg. 7.5 (-13)× as long as wide ..... ***S. caroliniana***
      4 Leaves not (or thinly) glaucous beneath; pistils borne on stipes averaging 1 mm long (range 0.5-1.5 mm); stipules usually small and caducous, to 12 mm long; leaf blades (4-) avg. 9 (-16)× as long as wide ..... ***S. nigra***
    3 Leaf blades 2.5–5 (-6)× as long as wide; leaf undersurface glaucous.
      5 Leaf apex acuminate to caudate; branchlets yellow; [midwestern species east to w. KY]; [section *Humboldtianae*] ..... ***[S. amygdaloides]***
      5 Leaf apex acute; branchlets reddish brown or green; [rare plant of sphagnous seepage of GA and FL]; [section *Floridanae*] ..... ***S. floridana***
  2 Bud apex blunt; bud scale margin fused; leaf blades 2-30× as long as wide.
    6 Leaves green or pale green beneath.
      7 Leaves linear, (7-) 11-19 (-30)× as long as wide; leaf margin distinctly glandular-denticulate; stomates present on the upper leaf surface; pistils pubescent to glabrescent; stamens 2, the staminate floral bracts tawny, the aments on leafy branches; [subgenus *Longifoliae*, section *Longifoliae*] ..... ***S. exigua*** *var.* ***sericans***
      7 Leaves lanceolate or elliptic-lanceolate, 2-6× as long as wide; leaf margin serrate; stomates usually absent on the upper leaf surface; pistils glabrous; stamens 3, or if 2 (*S. eriocephala*), the staminate floral bracts dark brown, the aments sessile with a few leafy bracts.
        8 Stipules not glandular on their margins; pistillate floral bracts present after flowering; petioles not glandular; stamens 2; [subgenus *Vetrix*, section *Cordatae*] ..... ***S. eriocephala*** *var.* ***eriocephala***
        8 Stipules glandular on their margins (stipules caducous and often absent in *S. pentandra*); pistillate floral bracts deciduous after flowering; petioles glandular near the junction with the blade; stamens 3-9; subgenus *Salix*, section *Salicaster*].
          9 Stipules persistent and prominently glandular; young leaves and twigs with reddish-brown hairs, glabrescent or glabrous later; leaves long-acuminate; capsules 5-7 mm long ..... ***S. lucida***
          9 Stipules caducous, inconspicuously glandular; young leaves and twigs glabrous; leaves short-acuminate; capsules 8-9 mm long ..... ***S. pentandra***
    6 Leaves glaucous beneath.
      10 Leaf margin serrulate or serrate.
        11 Shrubs to 6 m tall; leaves lacking stomates on the upper surface; [native to our area]; [subgenus *Vetrix*].
          12 Stipules prominent, 5-15 mm long; branches flexible; mature leaves glabrous or glabrescent beneath; staminate aments borne on short, leafy branches; [section *Cordatae*] ..... ***S. eriocephala*** *var.* ***eriocephala***
          12 Stipules absent or of small glands (rarely to 4 mm long on vigorous shoots); branches brittle; mature leaves short-sericeous beneath; staminate aments sessile, sometimes with a few leafy bracts; [section *Griseae*] ..... ***S. sericea***
        11 Trees; leaves with stomates on the upper surface; [introduced in our area]; [subgenus *Salix*].
          13 Leaf margin coarsely and irregularly serrate; leaves glabrous beneath; leaf blade 4-7 (-10)× as long as wide; petioles (7-) 10-20 mm long, glabrous; [section *Salix*] ..... ***S. fragilis***
          13 Leaf margin minutely and uniformly serrulate; leaves long-sericeous or glabrate beneath; leaf blade 5-13× as long as wide; petioles 3-12 mm long, tomentose or sericeous.
            14 Leaves glabrate beneath; branches normally pendulous; leaves very narrowly lanceolate, with length/width ratio of 6.5-13; petioles 7-12 mm long; petioles 7-12 mm long, tomentose; flowering branchlets ca. 0.3 cm long; [section *Subalbae*] ..... ***S. babylonica***
            14 Leaves long-sericeous beneath; branches ascending (rarely pendulous); leaves narrowly lanceolate, with length/width ratio of 5-6.5; petioles 3-6 mm long; petioles 3-6 mm long, sericeous; flowering branchlets 1-1.5 cm long; [section *Salix*] ..... ***S. alba***

10 Leaf margin entire or crenate (to slightly and irregularly serrate); [subgenus *Vetrix*, section *Cinerella*].
15 Leaves glabrate (sparsely pubescent when young), not revolute ..... ***S. discolor***
15 Leaves permanently pubescent, at least on the lower surface (densely villous or tomentose when young), revolute.
16 Leaf margin entire and undulate; pistillate aments 1-3.5 cm long; pistils borne on stipes mostly < 2 mm long; staminate aments 0.5-2 cm long; shrubs, < 2 m tall.
17 Leaves stipulate; leaf blades (5-) avg. 7 (-13) cm long, (12-) avg. 17 (-35) mm wide; staminate aments 1-2 cm long; pistillate aments 2-3.5 cm long..... ***S. humilis***
17 Leaves exstipulate; leaf blades (2.5-) avg. 4 (-5) cm long, (5-) avg. 7 (-10) mm wide; staminate aments 0.5-1.1 cm long; pistillate aments 1-2 cm long..... ***S. occidentalis***
16 Leaf margin crenate or irregularly serrate (rarely nearly entire); pistillate aments 3-8 cm long; pistils borne on stipes mostly > 2 mm long; staminate aments 2-5 cm long; shrubs to small trees, mostly 3-15 m tall.
18 Trees or tall shrubs, to 15 m tall; decorticated wood of 1-4 year old branches smooth or with a few ridges usually < 5 mm long ..... ***S. caprea***
18 Shrubs, 3-7 (12) m tall; decorticated wood of 1-4 year old branches with numerous ridges, many of them longer than 2 cm.
19 Leaves tomentose beneath with a mixture of white and rusty hairs..... ***S. atrocinerea***
19 Leaves tomentose beneath with white or gray hairs ..... ***S. cinerea***

* ***Salix alba*** Linnaeus, European White Willow. Mt (GA, NC, VA), Pd (GA, NC, VA), Cp (VA): disturbed areas; rare, native of Eurasia. March-April. [= RAB, C, F, G, K, S, W, Z]

* ***Salix atrocinerea*** Brotero, Common Sallow, Olive-leaf Willow, Large Gray Willow. Mt (NC): disturbed areas; rare, native of western Europe. April. Also reported as naturalized in KY (Clark et al. 2005) and PA (Kartesz 1999). [= K; = *S. cinerea* Linnaeus ssp. *oleifolia* (Smith) Macreight – Z; < *S. cinerea* – RAB, C, F, G]

* ***Salix babylonica*** Linnaeus, Weeping Willow. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas; common, native of Asia. March-April. [= RAB, C, F, G, K, S, W, Z; > *S.* ×*pendulina* Wenderoth (*fragilis* × *?sepulcralis*) – K; > *S.* ×*sepulcralis* Simonkai (*alba* × *?pendulina*) – K]

* ***Salix caprea*** Linnaeus, Goat Willow, Great Sallow. Mt (NC, VA), Pd (VA): disturbed areas; rare, native of Eurasia. April. [= C, F, G, K, Z]

Salix caroliniana Michaux, Carolina Willow, Coastal Plain Willow. Cp, Pd, Mt (GA, NC, SC, VA): riverbanks, sandbars, other wet sites; common (uncomomon to rare in Piedmont and Mountains). March-April. Widespread in the Southeast, *S. caroliniana* has a somewhat peculiar range, with three main centers of distribution, the Coastal Plain from VA south to FL, the Interior Low Plateau of TN, KY, and n. AL, and the Ozark-Ouachita Highlands of AR and MO. [= RAB, C, F, G, GW, K, Z; = *S. longipes* Andersson – S]

* ***Salix cinerea*** Linnaeus, Gray Willow. Mt (NC, SC, VA), Pd (GA, NC, SC, VA), Cp (NC): disturbed areas; rare, native of Eurasia. April. [= K; = *S. cinerea* ssp. *cinerea* – Z; < *S. cinerea* – RAB, C, F, G (circumscription uncertain but apparently including *S. atrocinerea*)]

Salix discolor Muhlenberg, Pussy Willow. Mt (VA), Pd (NC): calcareous wetlands, disturbed areas; rare, apparently native in VA, introduced only in NC (VA Rare). April. Newfoundland and Alberta south to DE, w. VA, KY, MO, SD, and MT. [= C, K, S, Z; > *S. discolor* var. *discolor* – F, G]

Salix eriocephala Michaux *var.* ***eriocephala***, Heart-leaved Willow. Mt, Pd, Cp (GA, VA): seepage areas, ditches, alluvial areas; common. April-May. Newfoundland and Québec west to Yukon and British Columbia, south to e., c., and w. VA, n. KY, w. TN, n. AR, ne. KS, and CA; disjunct in AL and adjacent w. GA, s. GA, and panhandle FL. Var. *eriocephala* is the more eastern of six varieties, and ranges from Newfoundland west to ND, south to w. FL and s. KS (Dorn 1995). [< *S. eriocephala* – C, K, W, Z; > *S. rigida* Muhlenberg var. *rigida* – F, G; > *S. rigida* var. *angustata* (Pursh) Fernald – F; > *S. rigida* var. *vestita* (Andersson) Ball – G; = *S. cordata* Muhlenberg – S, misapplied; = *S. eriocephala* ssp. *eriocephala* var. *eriocephala* – Y]

Salix exigua Nuttall *var.* ***sericans*** (Nees) Nesom, Sandbar Willow. Mt, Pd, Cp (VA): sandbars, riverbanks, creekbanks; rare (VA Rare). March-mid May and June-August. *S. exigua* occurs throughout North America except most of the Southeast, south to DE, w. VA, e. TN, MS, LA, TX, and Mexico; var. *sericans* is the more eastern variety of the complex (Nesom 2002). [< *Salix exigua* – W, Z; > *S. exigua* ssp. *interior* (Rowlee) Cronquist var. *angustissima* (Andersson) Reveal & Broome – C; > *S. interior* Rowlee var. *interior* – F, G; = *S. interior* Rowlee – GW, K, S]

Salix floridana Chapman, Florida Willow. Cp (GA): sphagnous seepages; rare (GA Endangered). March-April. C. GA south to c. peninsular and Panhandle FL. [= GW, K, S, Z]

* ***Salix fragilis*** Linnaeus, Crack Willow, Brittle Willow. Pd (VA): low areas; rare, native to Asia Minor, introduced to Europe and thence to here. [= C, F, G, K, S, Z]

Salix humilis Marshall, Upland Willow, Prairie Willow. Mt, Pd (GA, NC, VA), Cp (GA, NC, SC, VA): upland areas, often in open or semi-open sites, in barrens, fens, and grassy balds over mafic rocks (such as amphibolite) up to at least 1800m elevation, also in powerline rights-of-way, woodland borders, and other miscellaneous habitats; uncommon. March-May. This species is widespread in e. North America. [= C, G, S; < *S. humilis* – RAB, GW (also see *S. occidentalis*); = *S. humilis* var. *humilis* – K, W, Z; > *S. humilis* var. *humilis* – F; > *S. humilis* var. *hyporhysa* Fernald – F]

* ***Salix lucida*** Muhlenberg, Shining Willow. Mt (VA): low areas; rare (VA Watch List). May. Doubtfully indigenous to the one known population in Roanoke County, VA. [= C, W, Z; > *S. lucida* var. *lucida* – F, G; = *S. lucida* ssp. *lucida* – K]

Salix nigra Marshall, Black Willow. Pd, Mt, Cp (GA, NC, SC, VA): riverbanks, sandbars, other moist areas; common. March-April. *S. nigra* occurs nearly throughout e. North America. [= RAB, F, G, GW, K, S, W, Z; *S. nigra* var. *nigra* – C]

Salix occidentalis Walter, Dwarf Upland Willow, Sage Willow. Mt, Pd (GA, NC, VA), Cp (GA, NC, SC, VA): upland areas, often over mafic (amphibolite) or ultramafic (olivine) rocks; uncommon. March-May. This species is less widespread than the related *S. humilis*, with a distribution centered in the central Appalachians. [= C; < *S. humilis* – RAB, GW; = *S. humilis* var. *microphylla* (Andersson) Fernald – F, W, Z; = *S. tristis* Aiton – G, S; = *S. humilis* var. *tristis* (Aiton) Griggs – K]

* ***Salix pentandra*** Linnaeus, Bay Willow. Pd, Mt (NC, VA): disturbed areas; rare (perhaps not established), native of Eurasia. April. [= C, F, G, K, Z]

* ***Salix purpurea*** Linnaeus, Basket Willow, Purple Willow, Purple Osier. Mt (NC, VA), Pd (GA, VA): disturbed areas; rare, native of Europe. April. [= RAB, C, F, G, K, S, Z]

Salix sericea Marshall, Silky Willow. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): bogs, peaty swamps, banks of small streams; uncommon. March-April. *S. sericea* is a northeastern species, ranging south to w. NC, ne. GA, e. TN, sc. TN, AL, and AR. [= RAB, C, F, G, GW, K, S, W, Z]

Salix amygdaloides Andersson, Peachleaf Willow. East to w. KY. [= C, F, G, K, Z] {add to synonymy}

Salix bebbiana Sargent, Long-beaked Willow, Gray Willow, is widespread and rather common in PA (Rhoads & Klein 1993) and also occurs in MD (Argus 1986). [= C, K, Z; > *S. bebbiana* var. *bebbiana* – F] {subgenus *Salix*, section *Fulvae*}

Salix cordata Michaux, south to MD, PA (Kartesz 1999). {investigate} [= C, K; > S. cordata var. cordata – F] {not keyed at this time}

* ***Salix elaeagnos*** Scopoli is reported for SC (Kartesz 1999). [= K] {subgenus *Vetrix*, section *Canae*} {not keyed}

* ***Salix matsudana*** Koidzumi, Corkscrew Willow, is reported for VA (Fairfax and Fauquier counties). [= K] {not keyed}

SAMOLACEAE Rafinesque 1820 (Water-pimpernel Family)

A monogeneric family of 10-15 species, herbs and subshrubs, cosmopolitan. *Samolus* was previously generally treated as an aberrant component of Primulaceae. The traditional families Primulaceae, Myrsinaceae, and Theophrastaceae have been repartitioned by Källersjö, Bergqvist, & Anderberg (2000) in order to create monophyletic groups, with *Samolus* placed in Theophrastaceae. However, *Samolus* remains aberrant in Theophrastaceae and is basal; it is probably best placed in its own family, Samolaceae (Ståhl in Kubitzki 2004). References: Källersjö, Bergqvist, and Anderberg (2000); Ståhl in Kubitzki (2004).

Samolus Linnaeus (Water-pimpernel)

A genus of about 10-15 species, herbs and subshrubs, nearly cosmopolitan. References: Ståhl in Kubitzki (2004).

1 Pedicels ebracteate; corolla 3-7.5 mm long, the flowers 5-7 mm across; leaves all below the inflorescence; calyx lobes equaling or longer than tube; staminodes absent ..... ***[S. ebracteatus]***
1 Pedicels with a minute bract near the middle; corolla 1.2-3 mm long, the flowers 2-3 mm across; leaves extending into the inflorescence; calyx lobes equaling or shorter than tube; staminodes present ..... ***S. floribundus***

Samolus floribundus Humboldt, Bonpland, & Kunth, Water-pimpernel, Brookweed. Cp, Pd (GA, NC, SC, VA), Mt (GA, VA): stream banks, brackish marshes, pools in floodplains, interdune ponds; common. April-October. New Brunswick west to British Columbia, south to Central America; also in c. and s. South America. Sometimes treated as a subspecies of the European *S. valerandi*; the American plant is sufficiently distinct to warrant specific status. *S. floribundus* has priority over *S. parviflorus* by a month. [= C, G, S; = *S. parviflorus* Rafinesque – RAB, F, GW, W; = *S. valerandi* Linnaeus ssp. *parviflorus* (Rafinesque) Hultén – K]

Samolus ebracteatus Humboldt, Bonpland, & Kunth, Limewater Brookweed. Brackish marshes, swmaps over calcareous substrate. Peninsular FL, coastal Panhandle FL, s. LA, and TX, south into Mexico; West Indies. [= GW; > *S. ebracteatus* ssp. *ebracteatus* – K; > *S. ebracteatus* ssp. *alyssoides* – K]

SANTALACEAE R. Brown 1820 (Sandalwood Family)

A family of about 34 genera and 540 species, trees, shrubs, and herbs, primarily of tropical and warm temperate regions of the Old World and New World. All members of the family are hemiparasitic, attaching to the roots of other plants. Viscaceae are closely related and should perhaps be included (Angiosperm Phylogeny Group 2003). References: Nickrent & Malécot (2001).

1 Leaves alternate; monoecious herb or shrub.
  2 Herb, < 2 (-3) dm tall; leaves 1-4 cm long; inflorescence a terminal panicle of cymes; [tribe *Comandreae*] ..... ***Comandra***
  2 Shrub, > 4 dm tall; leaves 5-15 cm long; inflorescence a terminal raceme; [tribe *Pyrularieae*] ..... ***Pyrularia***
1 Leaves opposite; dioecious shrub.

3 Staminate flowers in terminal umbel-like dichasia; pistillate flowers solitary, terminal; clumped shrub to 4 m tall; [tribe *Thesiae*]..... ***Buckleya***
3 Staminate flowers in axillary umbels; pistillate flowers solitary, axillary; rhizomatous shrub to 1 m tall; [tribe *Santaleae*] ..... ***Nestronia***

Buckleya Torrey (Piratebush)

A genus of 4 species, shrubs, of temperate e. North America and e. Asia – the 3 other species are *B. lanceolata* (Siebold & Zuccarini) Miquel of Japan, and *B. henryi* Diels and *B. graebneriana* Diels of China. References: Carvell & Eshbaugh 1982=Z; Massey et al. (1983).

Buckleya distichophylla (Nuttall) Torrey, Piratebush. Mt (NC, VA): dry or rocky bluffs and slopes; rare (US Species of Concern, NC Endangered, VA Endangered). April-May; June-October. A Southern Appalachian endemic: sw. VA south through ne. TN to sw. NC, in the western edge of the Blue Ridge and to the west in the Ridge and Valley. It is apparently parasitic on a variety of hosts – not limited to *Tsuga*, as has sometimes been reported. The branches are often mistaken for a compound leaf. [= RAB, C, F, G, K, S, W, Z]

Comandra Nuttall (Bastard-toadflax)

A genus of 2 species (the only other species European).

Comandra umbellata (Linnaeus) Nuttall *var. **umbellata***, Eastern Bastard-toadflax. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): dry forests and woodlands, woodland borders; common. April-early June; July. Ssp. *umbellata* ranges from ME to MI, south to n. GA and AL; other subspecies are western. [= C; < *C. umbellata* – RAB, W; = *C. umbellata* ssp. *umbellata* – K; *? C. umbellata* – S; > *C. umbellata* – F, G; > *C. richardsiana* – F, G]

Nestronia Rafinesque (Nestronia)

A monotypic genus, a shrub, endemic to se. United States. References: Libby & Bloom (1998).

Identification notes: In its clonal, usually knee-high growth, *Nestronia* has something of the aspect of an opposite-leaved lowbush blueberry.

Nestronia umbellula Rafinesque, Nestronia, Conjurer's-nut, Leechbrush. Pd (GA, NC, SC, VA), Cp (GA, NC, SC): relatively mesic sites in sandhills in the upper Coastal Plain, mesic to dry Piedmont oak forests; rare (GA Threatened, NC Watch List, SC Rare, VA Endangered). April-May; July. Sc. VA south and west to sc. GA, se. AL, nc. AL, and sc. TN; disjunct in sc. KY. See Libby & Bloom (1998) for an interesting discussion and county distribution map. It sometimes forms colonies (presumably clones) several hectares in size. [= RAB, C, F, G, K, S, W]

Pyrularia Michaux (Buffalo-nut)

A genus of 4 species, shrubs, of e. North America and e. Asia (the other 3 species are of e. Asia).

Pyrularia pubera Michaux, Buffalo-nut, Oil-nut. Mt, Pd (GA, NC, SC, VA): moist forests; common. April-May; July-October. A Southern and Central Appalachian endemic, *Pyrularia* ranges from sw. PA (Rhoads & Klein 1993), e. WV, and w. VA south and west to e. KY, w. NC, e. TN, and n. and wc. GA. The oil in the fruits is very poisonous. [= RAB, C, F, G, K, S, W]

SAPINDACEAE A.L. de Jussieu 1789 (Soapberry Family)

A family of about 133 genera and 1465 species, trees, shrubs, vines, and herbs, primarily of tropical (rarely temperate) regions of the Old World and New World. Evidence increasingly suggests that the inclusion of the Hippocastanaceae and Aceraceae in the Sapindaceae is warranted.

1 Leaves simple (lobed and/or toothed) ..... ***Acer***
1 Leaves compound.
2 Leaves palmately compound..... ***Aesculus***
2 Leaves pinnately or biternately compound.
3 Vine; leaves biternately compound ..... ***Cardiospermum***

3 Tree or shrub; leaves pinnately compound.
4 Leaflets entire; fruit drupe-like; [native, of coastal hammocks of se. SC southward] ..... ***Sapindus***
4 Leaflets coarsely toothed; fruit a samara or inflated "pod;" [native or alien, collectively widespread].
5 Fruit a samara; [native or alien]..... ***Acer***
5 Fruit inflated; [alien ornamental, rarely escaped]..... ***Koelreuteria***

Acer Linnaeus 1753 (Maple)

A genus of about 111 species, primarily north temperate. References: Murray (1970)=Z; van Gelderen, de Jong, and Oterdoom 1994).

Section *Parviflora*, Series Caudata: spicatum
Section Palmata, Series Palmata: palmatum
Section Negundo, Series Negundo: negundo
Section Rubra: drummondii, rubrum, saccharinum
Section Macrantha: pensylvanicum
Section Platanoidea: platanoides, [campestre]
Section Acer, Series Acer: [pseudoplatanus]
Section Acer, Series Saccharodendron:
Section Ginnala: ginnala

1 Leaves compound, divided into 3-7 (-9) leaflets; [section *Negundo*].
2 Twigs glabrous..... ***A. negundo*** *var*. ***negundo***
2 Twigs puberulent ..... ***A. negundo*** *var*. ***texanum***
1 Leaves simple, generally shallowly to deeply 3-5 (-7) lobed.
3 Leaves finely to coarsely toothed, the toothing often regular, the teeth 8-50 per principal lobe; sinuses between the principal leaf lobes generally sharp, forming a definite angle (or if rounded, then the sinus much deeper than broad).
4 Leaves deeply lobed, the two sinuses on either side of the central lobe deep and narrow, approaching the midrib, the terminal lobe thus narrower at its base than at its middle; leaves silvery white beneath; flowers **either** with petals (*A. palmatum*) **or** without petals (*A. saccharinum*).
5 Leaves green beneath (or purplish in many forms); main leaf lobes 5-9, these main lobes merely toothed or variously further divided; small exotic tree, commonly planted and weakly naturalizing]; [section *Palmata*] ... . ***A. palmatum***
5 Leaves silvery white beneath; main leaf lobes 3-5, these main lobes with coarse teeth and smaller lateral lobes; large native tree (also extensively planted); [section *Rubra*] ..... ***A. saccharinum***
4 Leaves shallowly lobed, the two sinuses on either side of the central lobe broadly wedge-shaped, not approaching the midrib, the terminal lobe thus broadest at its base and progressively (though often irregularly) narrowing toward the tip; leaves green, pale-green, greenish-white, or strongly glaucous-whitened beneath; flowers with petals.
6 Winter buds stalked, with 2-4 valvate scales; inflorescence an elongate drooping raceme or erect panicle; petals green to bright yellow, 2-10 mm long; fruits maturing in midsummer to autumn; leaves green beneath; shrub, small tree, or medium tree (to 35 cm DBH).
7 Bark with narrow white stripes on a green background (best seen on stems 3-10 cm in diameter); leaf blades 12-20 (-30) cm long and wide, finely serrate (5-10 teeth per cm), pubescent beneath with yellow to orange hairs 0.1-0.3 mm long (as seen at 10× magnification); inflorescence a drooping raceme; [section *Macrantha*] ..... ***A. pensylvanicum***
7 Bark brownish, never conspicuously striped; leaf blades 8-12 (-14) cm long and wide, coarsely serrate (2-3 teeth per cm), pubescent beneath with whitish hairs 0.3-1.0 mm long (as seen at 10× magnification); inflorescence an erect panicle; [section *Parviflora*] ..... ***A. spicatum***
6 Winter buds sessile, with 4-10 imbricate scales; inflorescence **either** a drooping panicle (*A. pseudoplatanus*) **or** a sessile or subsessile cluster or fascicle; fruits maturing **either** in midsummer to autumn (*A. pseudoplatanus*) **or** spring; leaves slightly to strongly glaucous-whitened beneath; medium to large tree (to 100 cm DBH).
8 Inflorescence a drooping panicle, flowering in May-June, fruiting August-September (and persisting overwinter); petals yellowish-green; leaf blades 8-17 cm long; [section *Acer*, series *Acer*]..... ..... ***[A. pseudoplatanus]***
8 Inflorescence a sessile or subsessile cluster or fascicle, flowering in January-March, fruiting April-July (and dropping); petals red (rarely yellowish), 1-3 mm long; leaf blades < 10 cm long; [section *Rubra*].
9 Mature leaves densely felty-pubescent beneath; mature samaras 2.7-5 cm long..... ***A. drummondii***
9 Mature leaves glabrous (or nearly so) beneath; mature samaras 1.5-3 cm long.
10 Leaves (3-) 5 (-9)-lobed, the central lobe 4-8 cm long, the 2 upper lateral lobes 2-5 cm long; leaf base generally cordate (rarely rounded); leaves 7-18 cm wide; [widespread, in nearly all habitats, except peaty wetlands of the Coastal Plain] ..... ***A. rubrum*** *var*. ***rubrum***

10 Leaves unlobed or 3 (-5)-lobed, the central lobe 1-5 cm long, the lateral lobes (if present) 0.5-2 (-3) cm long; leaf base broadly cuneate to rounded or subcordate; leaves 2-10 cm wide; [primarily of wetlands, especially in the Coastal Plain].....***A. rubrum*** *var.* ***trilobum***

3 Leaves not toothed, or often with a few rounded, coarse, and irregular teeth on the principal lobes, these teeth 0-5 per principal lobe; sinuses between the principal leaf lobes generally broadly rounded, the sinus broader than deep.

11 Petioles and young twigs exuding milky sap when broken; inflorescence peduncled, the flowers on ascending, moderately stout pedicels; [section *Platanoidea*].

12 Leaves 3-5-lobed, 5-10 cm wide .....***[A. campestre]***

12 Leaves 5-7-lobed, 10-18 cm wide .....***A. platanoides***

11 Petioles and young twigs exuding clear sap when broken; inflorescence sessile, the flowers on drooping, filiform pedicels; [section *Acer*, series *Saccharodendron*].

13 Leaves pale, grayish, silvery-gray, or strongly heavily glaucous beneath, glabrous, pubescent on the veins, or pubescent across the surface; leaf sinuses on either side of the terminal lobe deep, the two sides of each sinus forming an angle of < 70 degrees (the terminal lobe typically with parallel margins, or even narrower toward the base than toward the tip); leaves usually planar, but sometimes with drooping lobe tips, especially in *A. barbatum*, and especially in sun-exposed individuals.

14 Leaves small, (3.5-) avg. 8 (-11) cm broad; leaf undersurface usually pubescent; fruits 20-25 mm long; medium to large trees; bark gray, smooth and beech-like, becoming irregularly furrowed or plated in large individuals; [primarily of the Coastal Plain and Piedmont, extending into the Mountains in GA]..... .....***A. floridanum***

14 Leaves large, (8-) avg. 15 (-20) cm broad; leaf undersurface glabrous or pubescent only on the veins; fruits 25-30 mm long; large trees; bark grayish-brown, with loose-edged plates; [primarily of the Mountains and upper Piedmont] .....***A. saccharum***

13 Leaves green beneath, moderately to densely pubescent across the surface; leaf sinuses on either side of the terminal lobe shallow, the two sides of each sinus forming an angle of > 90 degrees (the terminal lobe typically broadly triangular); leaves sometimes planar, more usually with drooping lobe tips.

15 Leaves small, (3-) avg. 6 (-11) cm broad; small trees, often multi-trunked and crooked; bark whitish (in part because of dense growth of crustose lichens), becoming cracked and blackened on larger stems; [primarily of the Piedmont, extending into the lower Mountains in w. SC and n. GA].....***A. leucoderme***

15 Leaves large, (8-) avg. 15 (-20) cm broad; large trees, single-trunked; bark dark brown or blackish, becoming furrowed in large individuals; [primarily of the Mountains and westward].....***A. nigrum***

Acer drummondii Hooker & Arnott ex Nuttall, Swamp Red Maple, Drummond Red Maple. Cp (GA, NC, SC, VA): swamps and floodplains; uncommon. January-March; April-June. *A. drummondii* is mostly southern, ranging north to NJ (?), IN, and MO. It reaches its greatest abundance in the basin of the Mississippi River. Because this taxon is more distinctive than the other taxa in the *A. rubrum* complex, it is often (as here) given specific status. [< *A. rubrum* – RAB, C, GW; = *A. rubrum* Linnaeus var. *drummondii* (Hooker & Arnott ex Nuttall) Sargent – F, G, K; = *Rufacer drummondii* (Hooker & Arnott ex Nuttall) Small – S; = *A. rubrum* ssp. *drummondii* (Nuttall) Murray – Z]

Acer floridanum (Chapman) Pax, Southern Sugar Maple, Florida Maple. Pd, Cp (GA, NC, SC, VA), Mt (GA): bottomland forests, mesic slopes, especially common over mafic or calcareous rocks, but not at all limited to such situations; common, rare in Mountains. April-May; June-October. S. VA, w. TN, w. KY (Clark et al. 2005), se. MO, and e. OK south to FL and TX. It is widely planted in southern cities and towns as a street tree. Ward (2004b) discusses the reasons for accepting *A. floridanum* as the correct name for this species. The Michauxian name *A. barbatum* is associated with specimens that are demonstrably *A. saccharum*. [= *A. saccharum* ssp. *floridanum* (Chapman) Desmarais – RAB, Z; = *Acer barbatum* Michaux – C, K; > *A. barbatum* var. *barbatum* – F, G; > *A. barbatum* var. *longii* (Fernald) Fernald – F, G; = *Saccharodendron floridanum* (Chapman) Nieuwland – S]

Acer leucoderme Small, Chalk Maple. Pd, Mt (GA, NC, SC), Cp (GA): rocky slopes and bluffs, particularly over mafic or calcareous rock; uncommon (rare in Mountains and Coastal Plain). March-April; May-September. A species of se. North America, primarily of the Piedmont from NC to AL, less commonly in the Ridge and Valley of se. TN (Chester, Wofford, & Kral 1997), low Blue Ridge of w. NC and adjacent TN and GA, Coastal Plain of GA, AL, MS, LA, and se. TX, and in sw. AR and se. OK. The leaves, at least those on lower and inner branches, tend to dry a tawny color and remain on the tree until spring, reminiscent of beech. [= K, W; = *A. saccharum* ssp.*leucoderme* (Small) Desmarais – RAB, Z; = *Saccharodendron leucoderme* (Small) Nieuwland – S]

Acer negundo Linnaeus var. ***negundo***, Eastern Box Elder, Ash-leaved Maple. Pd, Cp, Mt (GA, NC, SC, VA): riverbanks, swamps, bottomlands; common (uncommon in Coastal Plain and Mountains). March-April; May-October. The species, broadly treated, ranges nearly across North America, including well into the arid west along rivers. Var. *negundo* is the typical eastern variety, occurring throughout e. North America. *A. negundo* often grows on the banks of rivers, leaning out over the water at a 45 degree angle. The leaves can resemble poison ivy (*Toxicodendron radicans*), which has alternate leaves. The coarse toothing (approaching lobing) distinguishes it from any of our ashes (*Fraxinus*). [= C; < *A. negundo* – RAB, GW, W; > *A. negundo* var. *negundo* – F, G, K, Z; > *A. negundo* Linnaeus var. *violaceum* (Kirchner) Jaeger – F, G, K, Z; < *Negundo negundo* (Linnaeus) Karsten – S; < *Negundo aceroides* (Linnaeus) Moench]

Acer negundo Linnaeus var. ***texanum*** Pax, Texas Box Elder. Mt (NC): riverbanks and bottomlands: rare. April; June-October. The status of this variety in our area is poorly known at present. Var. *texanum* is primarily southcentral in distribution

(Texan and Ozarkian), but apparently scattered as far east as w. NC and s. OH. [= C, F, G, K, Z; < *A. negundo* – RAB, GW, W; < *Negundo negundo* (Linnaeus) Karsten – S; < *Negundo aceroides* (Linnaeus) Moench]

Acer nigrum Michaux f., Black Maple. Mt (GA, NC, VA): riverbanks, streambanks, cove forests, river slope forests; uncommon in VA, rare in GA and NC (NC Watch List). May-June; June-September. Fairly widespread in nc. North America, *A. nigrum* ranges primarily west of the Appalachians. [= C, F, G, K, W; = *A. saccharum* Marshall ssp. *nigrum* (Michaux f.) Desmarais – RAB, Z; = *Saccharodendron nigrum* (Michaux f.) Small – S; *A. saccharum* Marshall var. *viride* (Scmidt) E. Murray]

* ***Acer palmatum*** Thunberg, Japanese Maple. Pd (NC, VA): suburban woodlands; rare, native of e. Asia. April; August-September. Frequently planted in its numerous cultivars. Infraspecific taxa are recognized in its native area. It is reported as escaped in the DC area (Shetler & Orli 2000). [= K, Z]

Acer pensylvanicum Linnaeus, Striped Maple. Mt (GA, NC, SC, VA), Pd (VA): dry to mesic forests; common, rare in Piedmont (SC Rare). May; June-September. Primarily a broad Appalachian species, but extending into the Great Lakes region, south to PA and OH, and, in the mountains, to w. NC, e. TN, ne. GA, and nw. SC. The prominently striped bark of this common, mid-elevation understory tree is unmistakable. [= RAB, C, F, G, K, S, W, Z]

* ***Acer platanoides*** Linnaeus, Norway Maple. Mt, Pd, Cp (VA): suburban woodlands, disturbed forests, hedgerows; uncommon, native of Europe. March-April. In much of the ne. United States, *A. platanoides* has become a noxious weed tree. A commonly planted cultivar has purple foliage. [= C, F, G, K, W, Z]

Acer rubrum Linnaeus var. ***rubrum***, Eastern Red Maple. Mt, Pd, Cp (GA, NC, SC, VA): upland deciduous forests, up to at least 1500m elevation, moist bottomlands and slopes; common. January-March; April-July. This variety is the most widespread and common in NC; indeed it is one of the most ubiquitous and common trees in the state. It is probably more abundant than formerly, because of its weedy abilities. Overall, it ranges throughout e. North America. Whether the varieties of *A. rubrum* are worthy of recognition is a matter of disagreement; I choose here to try to distinguish them. [= F, K, Z; < *A. rubrum* – RAB, C, GW, W; < *A. rubrum* var. *rubrum* – G (also see var. *trilobum)*; = *Rufacer rubrum* (Linnaeus) Small – S]

Acer rubrum Linnaeus var. ***trilobum*** Torrey & A. Gray ex K. Koch, Carolina Red Maple. Cp (GA, NC, SC, VA): wetlands, especially peaty, acid sites; common. January-March; April-June. Primarily a Southeastern Coastal Plain variety, the range of var. *trilobum* is unclear, possibly extending well inland and northward (see F). This variety has greatly increased in abundance in the Coastal Plain of our area because of fire suppression and mechanical disturbance of peaty wetlands. Former large pocosin tracts, such as the Dismal Swamp, are now largely dominated by this tree. [= F, K, Z; < *A. rubrum* – RAB, C, GW; < *A. rubrum* var. *rubrum* – G; = *Rufacer carolinianum* (Walter) Small – S]

Acer saccharinum Linnaeus, Silver Maple, Soft Maple. Mt, Pd, Cp (GA, NC, SC, VA): bottomlands, riverbanks, and disturbed areas; uncommon (locally common). February-April; April-July. Widespread in ne. North America, south to AL and MS west of the Appalachians, east of the Appalachians and south of VA, rare and mostly introduced. This is an abundant tree along major rivers in the Piedmont of VA. In our area (particularly from c. NC south), the species is more common as a street tree or an escape from cultivation than as a native tree. On the Coastal Plain of NC and SC, *A. saccharinum* is largely confined to the banks and levees of large brownwater rivers, such as the Roanoke and Congaree. The silvery undersides of the leaves are obvious in windy conditions. [= RAB, C, F, G, GW, K, W, Z; = *Argentacer saccharinum* (Linnaeus) Small – S]

Acer saccharum Marshall, Sugar Maple, Hard Maple, Sugar Tree. Mt (GA, NC, VA), Pd (*GA, *NC, *SC, VA): cove forests, other rich forests, especially over mafic and calcareous rocks, on calcareous soils common and typical in dry-mesic forests and dry woodlands as well, less typically extending to high elevation northern hardwood forests where sometimes in acidic situations (as in Highlands County, VA); common (rare in Piedmont, where perhaps only introduced south of VA). April-June; June-September. Two varieties are sometimes recognized. Var. *saccharum* is widespread in ne. and nc. North America. Var. *schneckii* Rehder, with petioles and lower leaf surfaces densely pubescent, is alleged to occur in s. PA (Rhoads & Klein 1993), IN, IL, and MO; it is probably only a form. *A. saccharum* is the primary source of maple sugar and maple syrup; formerly, commercial sugaring was done in w. NC and w. VA. Large individuals of this species are the favorite substrate of a number of lichens, including *Lobaria pulmonaria*. The brown, platy bark is often similar to that of *Aesculus flava*. For its bright orange fall color, *A. saccharum* is one of our most prized ornamental trees. In NC, it is most common northward and on mafic rocks, thus reaching perhaps its best development in the amphibolite peaks of Ashe, Watauga, Avery, and Mitchell counties; it is more general in VA. [= C; > *A. saccharum* var. *saccharum* – F, G, K, Z; = *A. saccharum* ssp. *saccharum* – RAB, W; = *Saccharodendron barbatum* (Michaux) Nieuwland – S]

Acer spicatum Lamarck, Mountain Maple. Mt (GA, NC, VA): high elevation forests (northern hardwoods or spruce-fir), generally above 1500 m in NC, above 1000m in VA, especially common in periglacial boulderfields; uncommon (GA Special Concern). May-July; August-October. Widespread in ne. North America, south to PA and OH, and in the mountains to w. NC, e. TN, ne. GA, and ne. AL. The foliage is quite similar to that of *A. rubrum* var. *rubrum*, with which it can occur; in addition to the key characters, *A spicatum* can be distinguished from *A. rubrum* by its leaves which have a strongly rugose texture, the secondary and tertiary veins impressed on the upper surface, distinctly raised on the lower (vs. not rugose, the secondary and tertiary veins only slightly impressed on the upper surface, and slightly raised on the lower). *A. spicatum* is also sometimes confused with *A. pensylvanicum*, but these two species are readily distinguished by their leaves (see key). [= RAB, C, F, G, K, S, W, Z]

* *Acer campestre* Linnaeus, Hedge Maple, native of Europe and w. Asia, is reported to be "occasionally spreading from cultivation to moist, rocky, disturbed woods" in sc. and se. PA (Rhoads & Klein 1993). Infraspecific taxa are often recognized in its native area. [= C, F, G, K, Z]

* *Acer ginnala* Maximowicz, Amur Maple, native of e. Asia, is reported as "cultivated and escaped" in s. PA (Rhoads & Klein 1993). Infraspecific taxa are often recognized in its native area. [subgenus *Acer*, section *Ginnala*] [= F, K, Z] {not keyed at this time}

* *Acer pseudoplatanus* Linnaeus, Sycamore Maple, native of Europe, is planted in our area as a street and yard tree, especially in the mountains. It may be naturalized in our area; northward it is a noxious weed tree. [= C, G, K, Z; = *Acer pseudo-platanus* – F, orthographic variant]

The hybrid *Acer* ×*freemanii* E. Murray [*A. rubrum* × *saccharinum*] has been collected at scattered locations in our area.

Aesculus Linnaeus (Buckeye)

A genus of about 13 species, trees and shrubs, of temperate North America, e. Asia, and se. Europe. References: Hardin (1957a, 1957b)=Z.

1 Petals usually 5, white with a reddish mark near the cordate base of the petal blade; buds glutinous (sticky); fruit spiny; leaflets 7 (-9) per leaf; [alien, uncommonly planted, rarely naturalized]; [section *Aesculus*] ..... ***Ae. hippocastanum***
1 Petals 4 (or 4-5 in *Ae. parviflora*), cream-colored, yellow, red; or white (and then lacking a red blaze); buds not glutinous; fruit smooth (or with some prickles in *Ae. glabra* var. *glabra*); leaflets 5 (-7) per leaf; [native].
  2 Petals white, unmarked with red; stamens exserted, 2-4× as long as the petals; inflorescence 2-5 dm long; [section *Macrothyrsus*] ..... ***Ae. parviflora***
  2 Petals cream-colored, yellow, or red; stamens included or exserted, 1-2× as long as the petals; inflorescence 1-2.5 dm long; [section *Pavia*].
    3 Stamens about 2× as long as the petals, well-exserted beyond the corolla; petals only slightly unequal in size; fruit spiny with short prickles (rarely essentially smooth) ..... ***Ae. glabra* var. *glabra***
    3 Stamens about 1× as long as the petals, included or barely exserted beyond the corolla; petals markedly unequal in size; fruit smooth.
      4 Petal margins stipitate-glandular; petals scarlet; fruits 3-6 cm in diameter ..... ***Ae. pavia* var. *pavia***
      4 Petal margins villous, not glandular; petals yellow; fruits 2-8 cm in diameter.
        5 Calyx and pedicels stipitate-glandular; large tree; petiolules 2-3 (-4) mm long; fruits 5-8 cm in diameter. ..... ***Ae. flava***
        5 Calyx and pedicels puberulent; shrub to small tree; petiolules 3-12 mm long; fruits 2-4 cm in diameter ... . ***Ae. sylvatica***

Aesculus flava Solander, Yellow Buckeye. Mt, Pd (GA, NC, SC, VA): moist forests, up to nearly 2000m, especially prominent in seepy cove forests, in the Piedmont only in "montane" habitats; common (rare in Piedmont). Late April-mid June; August-September. A broad Southern Appalachian endemic: sw. PA, s. OH, s. IN, and s. IL south through KY, WV, sw. VA, and TN to n. AL, n. GA, nw. SC, and w. NC. *A. flava* is one of the largest, most massive, and commonest trees in Southern Appalachian coves, recognizable in winter by the bark of large plate-like slabs, thick twigs, and massive form. Meyer & Hardin (1987) discuss the nomenclatural issues relating to the names "*A. flava*" and "*A. octandra*." [= C, K, W; = *A. octandra* Marshall – RAB, F, G, Z; < *A. octandra* – S (also see *A. sylvatica*)]

Aesculus glabra Willdenow *var.* ***glabra***, Ohio Buckeye. Mt (GA): mesic forests over limestone; rare (GA Special Concern). Largely midwestern, but ranges east to sw. PA, e. TN, and nw. GA (Jones & Coile 1988); it is also sometimes introduced eastward of that distribution. It occurs in TN counties adjacent to both VA and NC. [= C, F, G, K, Z; < *Ae. glabra* – S]

* ***Aesculus hippocastanum*** Linnaeus, Horsechestnut. Mt (NC), Pd (NC, SC): urban and suburban areas, perhaps not definitely naturalized, but fairly often planted as a street tree and escaping as seedlings in the vicinity of plantings; rare, native of se. Europe. [= C, F, G, K, Z]

Aesculus parviflora Walter, Bottlebrush Buckeye. Cp (GA), Pd (GA, SC): mesic forests on bluffs and in ravines (the SC occurrence is on Fall Line river bluffs, with shaley, subcalcareous soils); rare (GA Special Concern, SC Rare). Wc. GA west to nc. AL, south to sw. GA and sw. AL; disjunct in wc. SC (Aiken County). See Wyatt (1985) for a discussion of the interesting, relictual occurrence in SC. Occasionally planted outside its native range. [= K, S, Z]

Aesculus pavia Linnaeus *var.* ***pavia***, Red Buckeye. Cp, Pd (GA, NC, SC), Mt (GA): swamp forests, usually stagnant, usually blackwater (not receiving significant alluvium), and especially over marl (coquina limestone); uncommon (rare in Piedmont). April-early May; July-August. Var. *pavia* ranges from se. NC south to n. FL and west to e. TX, extending north in the Missisippi Embayment to se. MO and s. IL, and in scattered occurrences off the Coastal Plain, as in sc. TN. Var. *flavescens* (Sargent) Correll occurs in the Edwards Plateau of c. TX. Fernald reports this species from VA and WV, but there is likely taxonomic or nomenclatural confusion. [= K, Z; < *A. pavia* – RAB, C, G, S, W; >< *A. pavia* – F; >< *A. discolor* Pursh – F]

Aesculus sylvatica Bartram, Painted Buckeye. Pd (GA, NC, SC, VA), Cp (GA, NC, VA), Mt (GA, NC, SC): in the Piedmont in mesic, nutrient-rich forests, on bottomlands, lower slopes, and in ravines, in the Coastal Plain primarily on floodplains of brownwater (alluvium-carrying) rivers (most notably the Roanoke River in NC), in the Mountains only at low elevations; common. April-mid May; July-August. Primarily a Southeastern Piedmont endemic, occurring primarily in the Piedmont from sc. VA south through c. NC, c. SC, and nc. GA to nc. AL, with an extension north into e. TN. [= RAB, C, F, K, W, Z; = *A. neglecta* Lindley – G, misapplied; < *A. octandra* – S (also see *A. flava*); > *Ae. georgiana* Sargent]

The following hybrids are known from our area: *Aesculus* ×*neglecta* Lindley [*flava* × *sylvatica*] and *Aesculus* ×*mutabilis* (Spach) Scheele [*pavia* × *sylvatica*]. They can be recognized by their intermediate morphology.

Cardiospermum Linnaeus (Balloon Vine)

A genus of about 14 species, vines, of tropical regions (especially America).

* ***Cardiospermum halicacabum*** Linnaeus, Balloon Vine, Heartseed. Mt (GA), Pd (SC): disturbed areas; rare, introduced from tropical America. August-September. [= RAB, F, G, K, S; = *C. halicababum* – C, orthographic error]

Koelreuteria Laxmann (Golden Rain Tree)

A genus of 3 species, trees, of temperate China and Taiwan. References: Meyer (1976)=Z. Key based on Meyer (1976).

1 Leaves pinnate (rarely bipinnate in part), the leaflets coarsely crenate to lobulate; capsule valves ovate, ca. 2 × as long as wide; capsules greenish to tawny when young, aging to dark brown..... ***K. paniculata***
1 Leaves bipinnate, the leaflets entire to shallowly serrate; capsule valves orbicular, 0.9-1.4 × as long as wide; capsules rose-purple when young, aging to tawny-brown.
  2 Leaflets weakly oblique, acute to short-acuminate, entire to uniformly serrate; petals 4 (-5).....***[K. bipinnata]***
  2 Leaflets strongly oblique, long acuminate to caudate, entire to irregularly crenate-serrate; petals (4-) 5 .....***[K. henryi]***

* ***Koelreuteria paniculata*** Laxmann, Golden Rain Tree. Pd (NC, VA): disturbed areas, roadsides; rare, introduced from n. China (frequently cultivated as an ornamental tree, rarely escaped). June; September. [= RAB, C, F, G, K]

* *Koelreuteria bipinnata* Franchet, Bougainvillea Golden Rain Tree. Becoming popular horticulturally, and producing abundant seedlings near the planted specimens; potentially invasive. Native of s. China. [= Z]
* *Koelreuteria henryi* Dümmer, Flamegold. This taxon appears to be distinct morphologically and geographically from *K. elegans*, and warrants recognition at the species level. Becoming popular horticulturally, and producing abundant seedlings near the planted specimens; potentially invasive. Native of Taiwan. [*Koelreuteria elegans* (Seem.) A.C. Smith ssp. *formosana* (Hayata) F.G. Meyer – K, Z]

Sapindus Linnaeus (Soapberry)

A genus of about 13 species, trees, of tropical and warm temperate regions of the Old and New World.

Sapindus marginatus Willdenow, Florida Soapberry. Cp (GA, SC?): coastal marsh hammocks, shell middens; rare (GA Special Concern). May-June. Se. SC (?) and e. GA south to c. peninsular FL (Lee and Brevard counties). Small (1933) reports this species from SC, but there is doubt whether this species was actually ever documented to occur in SC; there are no recent records. Although sometimes combined (as by K) with the tropical *Sapindus saponaria*, I follow most recent Florida authors (Clewell 1985, Tomlinson 1986, Godfrey 1988, Nelson 1994, Nelson 1996) in maintaining it as distinct. *S. marginatus* is a species of n. FL, e. GA, and possibly SC and has wingless rachises, acuminate leaflets, and globose fruits; *S. saponaria* is a species of s. FL and tropical America and has winged rachises, rounded leaflet tips, and ovoid to globose fruits. [= RAB, S; < *S. saponaria* Linnaeus var. *saponaria* – K]

SAPOTACEAE A.L. de Jussieu 1789 (Sapodilla Family)

A family of about 53-54 genera and 1100-1250 species, trees and shrubs, primarily tropical (rarely temperate), of Old World and New World. References: Pennington in Kubitzki (2004); Govaerts, Frodin, & Pennington (2001).

Sideroxylon Linnaeus 1754 (Bumelia, Buckthorn, Bully)

As defined broadly by Pennington (1991), *Sideroxylon* includes about 75 species, widely distributed in the New World and Old World Tropics (our species are the northern tip of a "tropical iceberg"). Pennington found that no consistent set of characters could be used to separate *Bumelia* from other New World genera (such as *Mastichodendron* and *Dipholis*), and that the New World segregate genera were also not separable from several Old World genera. The Linnaean *Sideroxylon* has nomenclatural priority. Four of the five taxa in or approaching our area were originally named in *Sideroxylon*. References: Clark (1945)=V; Cronquist (1945)=Q; Pennington (1991)=Z; Godfrey (1988)=Y; Govaerts, Frodin & Pennington (2001)=X; Allison (2006)=U. Key adapted from Y.

1 First-year twigs persistently pubescent; leaves pubescent beneath with appressed to tomentose hairs, ranging in color (depending partly on age) from silvery through coppery to dark brown;.
  2 Mature leaves densely pubescent beneath, the hairs sericeous, matted and shiny; leaves 2-5 (-7) cm long, 0.5-2 (-3) cm wide ..... ***S. tenax***
  2 Mature leaves pubescent beneath, the hairs woolly-tomentose, neither matted nor shiny; leaves 1-10 cm long, 0.5-4 cm wide.
    3 Low shrub, 0.1-0.3 (-1) m tall, clonal from subterranean stems; berries (8-) 10-13 mm long..... ***[S. rufohirtum]***
    3 Shrub or small tree, to 12 m tall, sometimes multistemmed but not extensively clonal; berries 6-8 mm long.
      4 Leaf pubescence persistently tawny or red..... ***S. lanuginosum ssp. lanuginosum***
      4 Leaf pubescence slightly tawny when leaves are first emerging, later becoming gray or white..... ..... ***[S. lanuginosum ssp. oblongifolium]***

1 First-year twigs pubescent when young, soon becoming glabrous or nearly so; leaves glabrous, glabrate, or sparsely pubescent beneath with appressed blond hairs or cottony white hairs (or densely appressed metallic-silvery pubescent in *S. alachuense*);.
  5 Low shrub, 0.1-0.5 (-1) m tall, clonal from subterranean stems; leaves 1-4 (-5.2) cm long; [endemic to xeric sands in GA] ..... ***S. macrocarpum***
  5 Shrub or small tree, to 20 m tall, sometimes multistemmed but not extensively clonal; leaves 1-12 (-15) cm long; [collectively widespread].
    6 Lower leaf surface with dense, metallic-silvery, appressed pubescencestems of shoots of the season pale gray or silvery..... ***S. alachuense***
    6 Lower leaf surface glabrous or glabrescent, green.
      7 Upper surfaces of the mature leaf blades faintly and coarsely reticulate-veined (at 20× or greater magnification), the veins of the reticulum not at all raised, usually somewhat impressed, and, although pale, not bony-cartilaginous..... ***S. thornei***
      7 Upper surfaces of the mature leaf blades notably finely reticulate-veined (at 20× or greater magnification), the veins of the reticulum usually raised above the enclosed islets, and bony-cartilaginous in contrast to the green islets.
        8 Larger leaf blades 8-12 (-15) cm long; large shrub or small tree, the stem usually solitary; berries 10-15 mm long, 10-12 mm in diameter; [of NC, SC, and VA and southward] ..... ***S. lycioides***
        8 Larger leaf blades 2-5 (-7) cm long; small to large shrub, usually multi-stemmed; berries 5-8 mm long, ca. 5 mm in diameter; [of SC and southward] ..... ***S. reclinatum ssp. reclinatum***

Sideroxylon alachuense L.C. Anderson, Alachua Bully, Silver Buckthorn. Cp (GA): sandy hammocks, shell middens; rare (GA Special Concern). [= K; = *Bumelia anomala* (Sargent) R.B. Clark – V, Y; = *S. alachense* – X, misspelled; = *B. lanuginosa* (Michaux) Persoon var. *anomala* Sargent]

Sideroxylon lanuginosum Michaux ***ssp. lanuginosum***, Eastern Gum Bumelia, Eastern Gum Bully. Cp, Pd (GA): mesic to floodplain forests; common. E. GA south to nc. FL, west to LA. Other subspecies are more western. Reported for SC by Kartesz (1999). {investigate} [= X; > *S. lanuginosum* ssp. *lanuginosum* – K; > *S. lanuginosum* ssp. *albicans* (Sargent) Kartesz & Gandhi – K; = *Bumelia lanuginosa* ssp. *typica* Q; < *Bumelia lanuginosa* (Michaux) Persoon – S; > *B. lanuginosa* var. *lanuginosa* – V; > *B. rufa* Rafinesque – V; = *B. lanuginosa* ssp. *lanuginosa* – Y; < *S. lanuginosum* – Z]

Sideroxylon lycioides Linnaeus, Buckthorn Bumelia, Buckthorn Bully. Cp (GA, NC, SC, VA), Pd (GA, NC), Mt (GA): maritime forests, maritime scrub, river bluffs, swamp margins, usually in circumneutral soil (over shell hash, coquina limestone, marl, or limestone), in the Piedmont and Mountains in rich, mesic forests over mafic or calcareous rocks; uncommon (NC Watch List, VA Watch List). June-July; September-October. Se. VA south to panhandle FL, west to se. TX, north in the interior to s. IL and se. MO, mostly on the Coastal Plain, but extending (in our area in NC and SC) to the upper Piedmont and north in the interior (primarily on limestone) to KY and TN. This species is extremely variable in leaf shape; though described in most works as up to 10-12 cm long and up to 4 cm wide, the leaves can be to 15 cm long and 8 cm wide. The leaf apex can be acuminate, acute, rounded, or notched. [= K, X, Z; = *Bumelia lycioides* (Linnaeus) Persoon – RAB, C, G, GW, S, Y; > *B. lycioides* var. *lycioides* – F, V; > *B. lycioides* var. *virginiana* Fernald – F, V; > *B. lycioides* var. *ellipsoidalis* R.B. Clark – V; > *B. smallii* R.B. Clark – F]

Sideroxylon macrocarpum (Nuttall) J.R. Allison, Big-fruited Buckthorn, Ohoopee Bumelia, Ohoopee Bully. Cp (GA): longleaf pine sandhills; rare (GA Special Concern). Endemic to sc. GA (Appling, Candler, Emanuel, Evans, Jeff Davis, Laurens, Long, Montgomery, Pierce, Tattnall, Toombs, Treutlen, and Wheeler counties). [= *Sideroxylon macrocarpum* (Nuttall) J.R. Allison – U; < *B. reclinata* (Michaux) Ventenat var. *reclinata* – Q, Y; < *B. reclinata* – V; = *Bumelia macrocarpa* Nuttall]

Sideroxylon reclinatum Michaux ***ssp. reclinatum***, Smooth Bumelia, Florida Bully. Cp (GA, SC): floodplain forests and river margins; rare. Ssp. *reclinatum* ranges from s. SC and se. GA south to c. peninsular FL. Ssp. *austrofloridense* (Whetstone) Kartesz & Gandhi [= K; *Bumelia reclinata* (Michaux) Ventenat var. *austrofloridensis* Whetstone] occurs in peninsular FL. [= K, X; > *Bumelia reclinata* – S; > *B. microcarpa* Small – S; < *B. reclinata* (Michaux) Ventenat var. *reclinata* – Q, Y; < *B. reclinata* – V; < *S. reclinatum* – Z]

Sideroxylon tenax Linnaeus, Tough Buckthorn, Tough Bumelia, Tough Bully. Cp (GA, NC, SC): maritime scrub, maritime forests, also inland; rare (NC Rare). May-June; September-October. Se. NC south to c. peninsular FL. [= K, X, Z; = *Bumelia tenax* (Linnaeus) Willdenow – RAB, Q, V, Y; > *B. tenax* – S; > *B. lacuum* Small – S]

Sideroxylon thornei (Cronquist) Pennington, Thorne's Bumelia, Swamp Bumelia. Cp (GA): bottomlands and limesink depressions, particularly over calcareous substrates; rare (GA Endangered). May-June; August-early October. Ne. GA south to FL and west to AL. The validity of this species has been supported by Anderson (1996). [= K, X, Z; = *Bumelia thornei* Cronquist – Y]

Sideroxylon lanuginosum Michaux ssp. *oblongifolium* (Nuttall) T.D. Pennington, Western Gum Bumelia, Western Gum Bully. AL and KY west to KS, OK, and TX. [= K, X; = *Bumelia lanuginosa* (Michaux) Persoon var. *oblongifolia* (Nuttall) R.B. Clark – C, F, G, V; = *Bumelia lanuginosa* ssp. *oblongifolia* (Nuttall) Cronquist var. *oblongifolia* (Nuttall) R.B. Clark – Q; < *S. lanuginosum* – Z]

Sideroxylon rufohirtum Herring & Judd, Red-haired Bully. Hammocks. N. FL. [= *S. reclinatum* Michaux ssp. *rufotomentosum* (Small) Kartesz & Gandhi – K, X; = *Bumelia rufotomentosa* Small – V, S, Y; = *B. reclinata* (Michaux) Ventenat var. *rufotomentosa* (Small) Cronquist – Q]

SARRACENIACEAE Dumortier 1829 (Pitcherplant Family)

A family of 3 genera and about 17 species, perennial insectivorous herbs, of e. North America (*Sarracenia*), w. North America (*Darlingtonia*), and ne. South America (*Heliamphora*). References: Kubitzki in Kubitzki (2004).

Sarracenia Linnaeus 1753 (Pitcherplant)

A genus of about 11 species, perennial insectivorous herbs, of e. North America. References: McDaniel (1971)=U; Wood (1960)=Z; Schnell & Determann (1997)=Y; Schnell (2002b)=X; Bell (1949)=Q; Case & Case (1976)=V; Schnell (1979, 1981, 1993, 1998, 2002a); Bell (1952); Bell & Case (1956); Reveal (1993); Cheek (1994, 2001); Godt & Hamrick (1999); Naczi et al. (1999); Romanowski (2002); Catalani (2004).

1 Pitchers mostly decumbent; lateral wing of the pitcher very prominent; petals maroon to pink; [section *Sarracenia*].
- 2 Pitchers prominently marked with white on the hood; hood of the pitcher globose; orifice formed by the fusion of the hood margins..... ***S. psittacina***
- 2 Pitchers not marked with white on the hood; hood of the pitcher expanded and erect; orifice not involving the hood margins.
  - 3 Petals pale pink; lip of pitcher 2.6-7.5 mm thick at thickest point; scape 16.3-35.1 cm high; style arm 2.6-4.1 cm long; [of the Gulf Coastal Plain, from sw. GA westward] ..... ***S. rosea***
  - 3 Petals red to deep maroon; lip of pitcher 0.7-3.1 mm thick at thickest point; scape 22-79 cm high; style arm 1.7-2.9 (-3.8) cm long; [of e. GA northward]
    - 4 Pitchers > 3× as long as broad; pitchers glabrous on the outer surface; petals dark maroon (occasionally red); rhizomes generally vertical, and with relatively many pitchers per crown (often 6-10); [of e. VA northward] ..... ***S. purpurea*** *var.* ***purpurea***
    - 4 Pitchers < 3× as long as broad; pitchers bristly-pubescent on the outer surface; petals bright red; rhizomes generally horizontal, and with relatively few pitchers per crown (often 4-5); [of the Coastal Plain of se. VA southward, and in the Mountains and Piedmont of NC and SC].
      - 5 Hood lobes closely incurved, touching each other or nearly so, obscuring the hood opening; hairs lining the hood averaging 0.8-1.0 mm long; [of the Mountains of sw. NC, nw. SC, and ne. GA] ..... ***S. purpurea*** *var.* ***montana***
      - 5 Hood lobes not closely incurved and touching; hairs lining the inner surface of the hood (1.0-) 1.5-3.0 mm long; [of the Atlantic Coastal Plain of VA, NC, and SC south to e. GA]..... ***S. purpurea*** *var.* ***venosa***

1 Pitchers erect; lateral wing of the pitcher generally not prominent; petals maroon, red, or yellow; [section *Erectae*].
- 6 Pitchers with white (or whitish and translucent) patches toward the summit of the pitcher and behind the orifice and/or on the hood.
  - 7 Areas of white tissue all around the summit of the pitcher and throughout the hood, the areas of bright white tissue surrounded by a conspicuous network of reddish venation; hood erect or ascending; petals maroon..... ***S. leucophylla***
  - 7 Areas of whitish, translucent tissue toward the summit of the pitcher and on the lower portion of the hood, behind the orifice, the areas of translucent white tissue not enclosed within a conspicuous network of reddish venation; hood arching horizontally over the orifice; petals pale lemon yellow
    - 8 Pitchers and scapes < 35 cm tall; petiolar base of pitchers short, abruptly widened into the pitcher; [of pine savannas]; [widespread from se. NC southward] ..... ***S. minor*** *var.* ***minor***
    - 8 Pitchers and scapes 40-100 cm tall; petiolar base of pitchers elongate, gradually widened into the pitcher; [of floating peat mats and otrher very wet sites; [endemic to the Okeefenokee Swamp, se. GA]..... ***S. minor*** *var.* ***okeefenokeensis***
- 6 Pitchers without white or translucent patches toward the summit of the pitcher.
  - 9 Petals yellow; pitcher hood 4-10 (-14) cm wide.

10 Phyllodia (nonpitcher leaves) many per plant and forming a rosette, 5-18 cm long, strongly curved, usually curving 45-90 degrees; scapes taller than the pitchers; [inland, from sw. NC and e. TN south and west to n. and wc. GA and c. AL] ..... ***S. oreophila***

10 Phyllodia (nonpitcher leaves) rare, only a few per plant (if present at all), 12-30 cm long, straight to slightly curved; scapes shorter than the pitchers; [of the Coastal Plain and rarely Piedmont, from se. VA southward to n. FL and west to e. TX].

11 Narrowed base of the hood not purple-spotted, its sides revolute but not rolled backwards and nearly touching; blade of the hood ovate, slightly cordate basally; [of the Coastal Plain, from s. AL west to e. TX] ..... ***[S. alata]***

11 Narrowed base of the hood usually purple-spotted, its sides strongly rolled backwards (away from the orifice) such that they nearly touch; blade of the hood broadly reniform to orbicular-reniform, broadly cordate basally; [of the Coastal Plain and rarely Piedmont, from se. VA southward to n. FL and west to se. MS] ..... ***S. flava***

9 Petals maroon; pitcher hood < 4 cm wide (except *S. alabamensis* ssp. *alabamensis*, which can be up to 8.8 cm wide).

12 Orifice wing loosely rolled, with a pronounced "spout" over the wing; summer pitchers ca. 10× as long as the width of the pitcher mouth; orifice yellow-green; [of the Coastal Plain of c. and s. AL and s. MS]

13 Pitcher background color yellow, the upper pitcher weakly or not veined on the outer surface; [of s. AL and s. MS] ..... ***[S. alabamensis ssp. alabamensis]***

13 Pitchers background color tan, the upper pitcher strongly reticulately veined on the outer surface; [of c. AL (Autauga, Elmore, and Chilton counties] ..... ***[S. alabamensis ssp. wherryi]***

12 Orifice rim tightly rolled, with a very slight "spout" over the wing; summer pitchers narrow and elongate, ca. 20× as long as the width of the pitcher mouth; [of the Coastal Plain of NC, SC, GA, and Panhandle FL, and the Mountains of sw. NC and nw. SC].

14 Pitchers (25-) avg. 40-50 (-75) cm tall; scapes about the same height as the pitchers; hood ascending, leaving the orifice exposed, 1.5-6.5 cm long, 2.0-5.4 cm wide; orifice 2.8-4.2 cm wide; [of the Mountains of NC and SC] ..... ***S. jonesii***

14 Pitchers (7-) avg. 15-60 cm tall (-55) cm tall; scapes 1.5-2× the height of the leaves (pitchers); hood horizontal, held closely over the orifice, 0.7-4.5 cm long, 0.7-3.9 cm wide; orifice 1.5-3.5 cm wide; [of the Coastal Plain of NC, SC, and GA]

15 Pitchers (7-) 15-43 cm tall; orifice 1.5-2.3 cm wide; [se. and sc. NC south through SC to sc. GA] ..... ***S. rubra ssp. rubra***

15 Pitchers 47-61 cm tall; orifice 2.4-3.5 cm wide; [sw. GA west to FL Panhandle] ..... ***S. rubra ssp. gulfensis***

Sarracenia flava Linnaeus, Yellow Pitcherplant, Trumpets. Cp, Pd (GA, NC, SC, VA): savannas, seepage bogs, pocosins; common, rare in Piedmont and rare in VA (VA Rare). March-April; May-June. Se. VA south to n. FL and west to s. AL and se. MS. In the centers of peat domes and large peat-filled Carolina bays, *S. flava* is sometimes very abundant, occasionally the dominant plant over areas exceeding several square kilometers. [= RAB, C, F, G, GW, K, Q, U, W, Z; < *S. flava* – S (also see *S. oreophila*); > *S. flava* var. *flava* – X; > *S. flava* var. *atropurpurea* (Bull) Bell – X; > *S. flava* var. *maxima* Bull ex Masters – X; > *S. flava* var. *ornata* Bull ex Masters – X; > *S. flava* var. *cuprea* Schnell – X; > *S. flava* var. *rugelii* (Shuttleworth ex de Candolle) Masters – X; > *S. flava* var. *rubricorpora* Schnell – X]

Sarracenia jonesii Wherry, Mountain Sweet Pitcherplant. Mt (NC, SC): bogs; rare (US Endangered, NC Endangered, SC Rare). May; July. Endemic to a small area in sw. NC and nw. SC. There has been a great deal of disagreement over the taxonomic treatment of this taxon, a montane sibling of *S. rubra*. See Wherry (1929), Bell (1949), McDaniel (1971), Wherry (1972), Case and Case (1976), Schnell (1977), Massey et al. (1983), and McDaniel (1986) for further discussion. [= V, W; < *S. rubra* – RAB, GW, Q, U, Z; = *S. rubra* ssp. *jonesii* (Wherry) Wherry – K, X]

Sarracenia leucophylla Rafinesque, Whitetop Pitcherplant, Crimson Pitcherplant. Cp (GA, *NC): wet pine savannas; rare (GA Endangered). Sw. GA, w. FL, s. AL, and se. MS, a Gulf Coastal Plain endemic; introduced in eastern NC. The NC population (on Croatan National Forest, Carteret Co.) was apparently introduced in the 1980s; it is not known whether this species will spread in NC, but it is persisting and has been independently "discovered" several times. [= GW, K, U, X, Z; = *S. drummondii* Croom – Q, S]

Sarracenia minor Walter *var. **minor***, Hooded Pitcherplant. Cp (GA, NC, SC): wet savannas; uncommon, rare in NC (NC Watch List). April-May; June-July. Se. NC south through SC and GA to c. peninsular and e. panhandle FL. [< RAB, GW, K, Q, S, U, X, Z]

Sarracenia minor Walter *var. **okeefenokeensis*** Schnell, Okeefenokee Hooded Pitcherplant. Cp (GA): on floating vegetation mats, ditches, and other very wet sites; rare (endemic to Okeefenokee Swamp, se. GA). See Schnell (2002a) for additional information. [< GW, K, Q, S, U, X, Z]

Sarracenia oreophila (Kearney) Wherry, Green Pitcherplant. Mt (GA, NC): seepage bogs; rare (US Endangered, GA Endangered, NC Endangered). April-May; June-July. A montane-piedmontane sibling of *S. flava*, known from sw. NC, se. TN (where presumed extirpated from the state), n. GA, and c. and ne. AL (Govus 1987, Wherry 1933, Schnell 1980b, Dennis 1980, Catalani 2004). [= GW, K, Q, U, W, X, Z; < *S. flava* – S]

Sarracenia psittacina Michaux, Parrot Pitcherplant. Cp (GA): savannas; uncommon (GA Threatened). This distinctive species is distributed primarily in the East Gulf Coastal Plain, but ranges east to the Atlantic Coastal Plain of e. GA (Bullock County), in close proximity to the SC border. [= GW, K, Q, S, U, X, Z]

Sarracenia purpurea Linnaeus *var.* ***montana*** Schnell & Determann, Southern Appalachian Purple Pitcherplant. Mt (GA, NC, SC), Pd (NC, SC): mountain bogs, seepage bogs; rare (GA Endangered). May; July. Var. *montana* is restricted to a few dozen populations in sw. NC (south of Asheville), nw. SC, and ne. GA (Rabun County). These montane populations (in sw. NC, nw. SC, and ne. GA) show some consistent differences and appear to warrant taxonomic distinction (Schnell & Determann 1997); further study is warranted. For those tolerant of quadrinomial taxonomy, plants in our area can be called *S. purpurea* ssp. *venosa* (Rafinesque) Fernald var. *montana* Schnell & Determann. Allozyme studies by Godt and Hamrick (1999) show striking genetic differences between var. *montana*, var. *purpurea*, var. *venosa* and the Gulf Coast var. *burkii*, supporting their taxonomic recognition. In fact, the genetic differentiation is greater than that between taxa in the *S. rubra* complex. [< *S. purpurea* – RAB, GW, Q, S, W, Z; < *S. purpurea* var. *purpurea* – Reveal (1993); = *S. purpurea* ssp. *venosa* (Rafinesque) Fernald var. *montana* Schnell & Determann – K, Y]

Sarracenia purpurea Linnaeus *var.* ***purpurea***, Northern Purple Pitcherplant. Cp (VA): bogs; rare (VA Rare). April-May; June-July. The species as a whole is widespread in e. North America, the only *Sarracenia* to extend north of se. VA. Var. *purpurea* is northeastern, extending south to ne. VA, MD, DE, and NJ. A nomenclatural battle about the application of the typic variety has been resolved, with var. *purpurea* applying to the northern variety (Reveal 1993, Cheek 1994, Kartesz & Gandhi 1995, Cheek 2001). [= C, F, G, Z; < *S. purpurea* – RAB, GW, Q, S, U, W; = *S. purpurea* ssp. *gibbosa* (Rafinesque) Wherry – K; = *S. purpurea* var. *terrae-novae* de la Pylaie – Reveal (1993); = *S. purpurea* ssp. *purpurea* – X]

Sarracenia purpurea Linnaeus *var.* ***venosa*** (Rafinesque) Fernald, Southern Purple Pitcherplant. Cp (NC, SC, VA), Pd? (NC?): wet savannas, sandhill seepage bogs; common (VA Rare). April-May; June-July. Var. *venosa* is restricted to the Atlantic Coastal Plain of the southeastern United States, ranging from se. VA south to se. SC; perhaps disjunct in e. LA. See MacRoberts & MacRoberts (2004) for a detailed discussion about old LA collections of *S. purpurea* or *S. rosea*. For those tolerant of quadrinomial taxonomy, plants in our area may be considered *S. purpurea* ssp. *venosa* (Rafinesque) Fernald var. *venosa*. It is notable, though, that the findings of Godt and Hamrick (1999) and Ellison et al. (2004) do not support the greater relationship of the southern taxa to one another and their divergence from the northern taxon, and thus do not support the quadrinomial taxonomy. [= C, F, G, Z; < *S. purpurea* – RAB, GW, Q, S, U, W; = *S. purpurea* Linnaeus ssp. *purpurea* var. *purpurea* – K; = *S. purpurea* var. *purpurea* – Reveal (1993); = *S. purpurea* ssp. *venosa* (Rafinesque) Fernald var. *venosa* – X, Y]

Sarracenia rosea Naczi, F.W. Case, & R.B. Case, Rose Pitcherplant. Cp (GA): wet pine savannas and seepage bogs; rare (GA Endangered). Sw. GA west to s. MS and (?) e. LA. Schnell (1993) distinguished the distinctive East Gulf Coastal Plain population (with short peduncles, white stigmas, and pale pink petals) as *S. purpurea* ssp. *venosa* var. *burkii* Schnell; Naczi et al. (1999) elevated this to species rank, as *S. rosea*. See Naczi et al. (1999) and Schnell (1993) for more detailed information and color photographs. Naczi et al.'s (1999) treatment of this taxon at specific rank is supported by the greater genetic distance found by Godt and Hamrick (1999) and morphologic and genetic analyses (Ellison et al. 2004). See MacRoberts & MacRoberts (2004) for a detailed discussion about old LA collections of *S. purpurea* or *S. rosea*. [< *S. purpurea* – GW, Q, S, U, Z; = *S. purpurea* Linnaeus ssp. *purpurea* var. *burkii* Schnell – K; < *S. purpurea* var. *purpurea* – Reveal (1993); = *S. purpurea* ssp. *venosa* (Rafinesque) Fernald var. *burkii* Schnell – X, Y]

Sarracenia rubra Walter *ssp.* ***gulfensis*** Schnell, Gulf Pitcherplant. Cp (GA): seepage bogs and savannas; rare. April-May. Sw. GA to Panhandle FL. Schnell (2002b) considers the populations of the "*rubra* complex" in Taylor County, GA (the western Coastal Plain of GA, near the AL line) to be best assigned to "*gulfensis*." [= K, X; < *S. rubra* – GW, S, U, V, Z]

Sarracenia rubra Walter *ssp.* ***rubra***, Sweet Pitcherplant, Redflower Pitcherplant. Cp (GA, NC, SC): sandhill seepage bogs, pocosins, wet savannas; uncommon (GA Endangered, SC Rare). April-May; June-July. Se. and sc. NC south to sc. GA. The *S. rubra* complex consists of five geographically isolated entities, variously treated as species, subspecies, or geographic races (see *S. jonesii* for some of the pertinent references). [= K, X; < *S. rubra* – RAB, GW, Q, S, U, V, Z (also see *S. jonesii* and/or *S. species 2*)]

Sarracenia alabamensis F.W. and R.B. Case ssp. *alabamensis*, Alabama Pitcherplant. Seepage bogs. Endemic to c. AL. See Case (2005). [= V; *S. rubra* Walter ssp. *alabamensis* (F.W. & R.B. Case) Schnell – K, X; < *S. rubra* – GW, S, U, Z]

Sarracenia alabamensis F.W. & R.B. Case ssp. *wherryi* F.W. & R.B. Case, Wherry's Pitcherplant. Seepage bogs and savannas. FL Panhandle, s. AL, s. MS. April-May. See Case (2005). [= V; = *S. rubra* Walter ssp. *wherryi* (F.W. & R.B. Case) Schnell – K, X; < *S. rubra* – GW, S, U, Z]

Sarracenia alata Wood, Pale Pitcherplant. Savannas, seepage bogs in the Coastal Plain. S. AL west to e. TX. [= GW, K, U, X, Z; = *S. sledgei* Macfarlane – Q, S]

Hybrids between the various species of pitcher-plants are relatively frequent; see Bell (1952) and Bell & Case (1956) for further discussion. They are usually rather easy to determine, since they show intermediacy in characters, and usually are found in close proximity to both parents. *S.* ×*catesbaei* is by far the most frequent of the hybrids. The following hybrids are known to occur in our area:

Sarracenia flava* × *leucophylla [*S.* ×*moorei* Masters]. Known from GA. [= K, X]
Sarracenia flava* × *minor [*S.* ×*harperi* Bell]. Known from GA and SC (Charleston and Hampton counties). [= K, X]
Sarracenia flava* × *purpurea [*S.* ×*catesbaei* Elliott]. Known from NC (Brunswick, Carteret, Harnett, Iredell, Montgomery, and Pender counties), SC (Chesterfield County), and VA (Greensville County). [= K, X]
Sarracenia flava* × *rubra [*S.* ×*popei* hort. ex Masters]. Known from NC (Moore County). [= K, X]

Sarracenia minor × ***psittacina*** [*S.* ×*formosa* Veitch ex Masters]. Known from GA. [= K, X]
Sarracenia minor × ***purpurea*** [S. ×*swaniana* (W. Robinson) Bell]. Known from NC (Brunswick and Bladen counties). [= K, X]
Sarracenia minor × ***rubra*** [*S.* ×*rehderi* Bell]. Known from NC (Brunswick County). [= K, X]
Sarracenia psittacina × ***rubra*** [*S.* ×*gilpinii* Bell & Case]. [= K]
Sarracenia purpurea × ***rubra*** [*S.* ×*chelsonii* Veitch ex Masters]. Known from NC (Scotland County). [= K, X]
Sarracenia jonesii × ***purpurea.*** Known from NC (Henderson County).

SAURURACEAE E. Meyer 1827 (Lizard's-tail Family)

A family of 4 genera and 6 species, perennial herbs, of temperate e. and se. Asia (*Saururus, Gymnotheca, Houttuynia*), w. North America (*Anemopsis*), and e. North America (*Saururus*). One other member of the family occurs in North America: *Anemopsis californica* Hooker & Arnott, primarily of the sw. United States. References: Buddell & Thieret in FNA (1997); Wood (1971); Cheng-Yih & Kubitzki in Kubitzki, Rohwer, & Bittrich (1993); Meng et al. (2003).

Saururus Linnaeus 1753 (Lizard's-tail, Water-dragon)

A genus of 2 species, perennial herbs, our species in temperate e. North America, the other in e. Asia. References: Cheng-Yih & Kubitzki in Kubitzki, Rohwer, & Bittrich (1993).

Saururus cernuus Linnaeus, Lizard's-tail, Water-dragon. Cp, Pd, Mt (GA, NC, SC, VA): swamps, ditches, overwash pools in stream floodplains, usually where in water seasonally or periodically; common (rare in Mountains). May-July; August-September. CT, s. Québec, s. Ontario, and MI south to s. FL and e. TX. In swamps of the Coastal Plain, *Saururus* often is dominant in large patches. The elongate inflorescence, drooping at the tip, is distinctive, attractive, and the (rather fanciful) inspiration for the genus name, the specific epithet, and the common names. Thien et al. (1994) studied the reproductive biology of *Saururus cernuus*, and found that pollination was both by wind and by insects. [= RAB, C, F, FNA, G, GW, K, S, W]

SAXIFRAGACEAE A.L. de Jussieu 1789 (Saxifrage Family)
(also see *GROSSULARIACEAE*, *HYDRANGEACEAE, ITEACEAE, PARNASSIACEAE,* and *PENTHORACEAE*)

If narrowly circumscribed (as here), a family of about 30 genera and 650 species, herbs, nearly cosmopolitan, but especially diverse in warm temperate and cold temperate regions of North America and Eurasia. The circumscription of a much narrower Saxifragacaeae is clearly warranted, based on a wide variety of data, and recently strongly corroborated by molecular data (Morgan & Soltis 1993). References: Spongberg (1972); Morgan & Soltis (1993).

1 Leaves compound ..... ***Astilbe***
1 Leaves simple (sometimes cleft or lobed).
  2 Stem creeping, the leaves all cauline, opposite; leaves short-petioled or sessile, < 2 cm long..... ***Chrysosplenium***
  2 Stem erect, the leaves mostly or entirely basal, alternate (stem leaves opposite in *Mitella*); leaves long-petioled, > 4 cm long (except short-petioled or sessile and sometimes < 4 cm long in *Saxifraga*).
    3 Basal leaves short-petioled or sessile, the petioles 0-1× as long as the blade; basal leaves cuneate or rounded at the base; leaf venation predominately pinnate ..... ***Saxifraga***
    3 Basal leaves long-petioled, the petioles (1-) 2-5× as long as the blade; basal leaves cordate at the base; leaf venation predominantly palmate.
      4 Stem leaves opposite; petals fimbriate; inflorescence a raceme; flowers on pedicels 1.5-3 mm long..... ***Mitella***
      4 Stem leaves absent or alternate; petals not fimbriate; inflorescence a panicle or raceme; flowers mostly on pedicels > 3 mm long.
        5 Inflorescence racemose; stamens 10..... ***Tiarella***
        5 Inflorescence paniculate; stamens 5.
          6 Seeds winged, 1.3-1.5 mm long; leaves cleft < ½ way to base; hypanthium fused to the pistils only at their bases; stems normally with several petiolate leaves much like the basal leaves (though typically somewhat smaller)..... ***Sullivantia***
          6 Seeds papillose, echinate, smooth, or slightly ridged, 0.4-0.7 mm long; leaves cleft > ½ way to base (in *Boykinia*) or < ½ way (in *Heuchera*); hypanthium fused to the lower half or more of the pistils; stems with (in *Boykinia*) or without (in *Heuchera*) several petiolate leaves.
            7 Stems normally with several petiolate leaves much like the basal leaves (though typically somewhat smaller); ovary with 2 locules; leaves cleft > ½ way to base..... ***Boykinia***
            7 Stems with only very reduced sessile bracts unlike the basal leaves; ovary with 1 locule; leaves cleft < ½ way to base ..... ***Heuchera***

Astilbe Buchenau-Hamilton ex D. Don (False Goat's-beard)

A genus of 14 species, perennial herbs, of e. Asia and e. North America.

Identification notes: Superficially, *Astilbe* is quite similar to *Aruncus* (Rosaceae). *Astilbe* may be distinguished by the following characteristics: pubescence of the stem and lower leaf surface glandular, plants monoecious, carpels 2 per flower, stamens 10 per flower (vs. *Aruncus*: pubescence nonglandular, plants dioecious, carpels 3-4 per flower, stamens 15-20 per flower).

1 Leaves serrate, the teeth sharp; fruit conic-lanceolate, tapering gradually, 4-5 mm long ..... ***A. biternata***
1 Leaves crenate, the teeth rounded (but with a prominent mucronate tip); fruit ovoid, abruptly contracted to the tip, 3 mm long ..... ***A. crenatiloba***

Astilbe biternata (Ventenat) Britton, Appalachian False Goat's-beard. Mt (GA, NC, SC, VA): cove forests, seepage slopes; common. May-June; July-August. VA, sw. WV, and KY south to n. GA. [= C, F, G, K, S, W; < *A. biternata* – RAB (also see *A. crenatiloba*)]

Astilbe crenatiloba (Britton) Small, Roan Mountain False Goat's-beard. Mt (NC): mountain forests; rare (believed extinct) (US Species of Concern, NC Rare). July?; September. This species has apparently not seen since the original collections by N.L Britton on the NC and TN flanks of Roan Mountain; the habitat, flowering and fruiting dates, and other characteristics of this species are therefore poorly known. The morphologic characters are striking. [= K, S, W; < *A. biternata* – RAB]

Boykinia Nuttall (Boykinia)

A genus of 9-12 species, herbs, of e. Asia, e. North America, and w. North America, a classic relictual distribution. The other species are distributed primarily in the Pacific Northwest or Rocky Mountains, with several endemics in Japan and an endemic in the unglaciated portions of Alaska and e. Siberia.

Identification notes: Sometimes mistaken in vegetative condition for *Trautvetteria*, which is a coarser plant, often occupying similar habitats.

Boykinia aconitifolia Nuttall, Brook-saxifrage, Aconite-saxifrage, Eastern Boykinia. Mt (GA, NC, SC, VA): streambanks, riverbanks, in crevices in spray cliffs around waterfalls, seepages; uncommon (SC Rare). June-July. A Southern Appalachian endemic: sw. VA and s. WV, south through w. NC, e. TN, and nw. SC, to n. GA and ne. AL. [= RAB, C, F, G, GW, K, W; = *Therophon aconitifolium* (Nuttall) Millspaugh – S]

Chrysosplenium Linnaeus (Golden-saxifrage)

A genus of about 60 species, herbs, of Europe, ne. Asia, n. North America, n. Africa, and temperate South America.

Chrysosplenium americanum Schweinitz ex Hooker, Golden-saxifrage, Water-mat, Water-carpet. Mt (GA, NC, SC, VA), Pd, Cp (VA): in shallow seepage in shade; uncommon (GA Special Concern). March-June. Québec west to Saskatchewan, south to e. VA, w. NC, n. GA, e. TN, and IN. [= RAB, C, F, G, GW, K, S, W]

Heuchera Linnaeus 1753 (Alumroot)

A genus of about 55 (or fewer) species, perennial herbs, of North America. Soltis (1985) found that speciation in *Heuchera* "apparently occurs with little divergence at genes coding for isozymes." Vegetatively, *Heuchera* resembles *Tiarella* and *Mitella*. References: Wells (1984)=Z; Rosendahl, Butters, & Lakela (1936)=Y; Wells (1979). The keys adapted from Wells (1984).

1 Calyx glandular-villous, white or pink, often with green-tipped lobes, 1.3-3.3 mm long, 1.1-2.9 mm in diameter; free hypanthium 0.1-0.4 mm long; petals linear or oblanceolate, 2-3× as long as the calyx lobes, glabrous; plants flowering (June-) July-October.
  2 Leaves with widely to narrowly triangular lobes and triangular teeth; petals linear, often coiled; seeds echinate; internodes of flora branches 0.3-2.9 mm long.
    3 Leaves deeply and sharply lobed, the terminal lobe wider than long; bracts of the inflorescence oblong to spatulate, at least the lower ones toothed; [of the Interior Low Plateau] ..... ***[H. villosa var. macrorhiza]***
    3 Leaves deeply and sharply lobed, the terminal lobe longer than wide; bracts of the inflorescence linear, rarely toothed; [primarily of Ridge and Valley, Blue Ridge, and upper Piedmont] ..... ***H. villosa var. villosa***
  2 Leaves with rounded lobes and rounded teeth; petals oblanceolate, reflexed; seeds smooth; internodes of floral branches 2.5-11.2 mm long.

4 Petioles and peduncles more-or-less villous, the hairs 0.7-2.5 mm long; leaf blades slightly to fairly densely villous above and below, at least on the veins; [of ec. TN, KY, s. WV, sw. VA, w. NC, n. GA, n. AL, s. MO, s. IL, and s. IN]..... ***H. parviflora***

4 Petioles and peduncles densely glandular-puberulent, the hairs < 0.6 mm long; leaf blades densely puberulent above and below; [of c. KY westward] ..... ***[H. puberula]***

1 Calyx glandular-puberulent, greenish, 2.9-13.2 mm long, 2.4-7.5 mm in diameter; free hypanthium 0.6-7.0 mm long; petals rhombic-spatulate, slightly shorter to slightly longer than the calyx lobes, glandular-puberulent on the abaxial (lower) surface; plants flowering April-June.

5 Free hypanthium < 2 mm long; calyx weakly zygomorphic; calyx urceolate, subglobose, or campanulate.

6 At the onset of anthesis stamens exserted 0.2-1.5 mm beyond the calyx and styles included or exserted up to 1.1 mm beyond the calyx; calyx subglobose..... ***H. caroliniana***

6 At the onset of anthesis the stamens exserted 3 mm or more beyond the calyx and styles exserted 2.6 mm or more beyond the calyx; calyx urceolate or campanulate.

7 Free hypanthium < 1.5 mm long; petals greenish, white, creamy, or pink, the margins entire or bearing short teeth..... ***H. americana***

7 Free hypanthium 1.5-1.9 mm long; petals purple, the margins fimbriate..... ***H. hispida***

5 Free hypanthium > 2 mm long; calyx weakly to strongly zygomorphic; calyx subglobose, campanulate, or tubular.

8 Stigmas included within the calyx (the calyx lobes extending 1.3-5.3 mm beyond the stigma tips); calyx tubular; calyx lobes and petals inflexed, closing the mouth of the flower..... ***H. longiflora***

8 Stigmas barely included within the calyx (the calyx lobes extending up to 0.6 mm beyond the stigma tips) to moderately exserted beyond it; calyx subglobose or campanulate; calyx lobes and petals erect or spreading, not closing the mouth of the flower.

9 Calyx 2.8-4.5 mm long, subglobose; [of the Piedmont of sc. VA southward to SC] ..... ***H. caroliniana***

9 Calyx 5.5-13.2 mm long, narrowly campanulate; [primarily of the Mountains and upper Piedmont of VA and nc. NC].

10 Flowers large, with white, exserted petals; [of high elevations (usually over 1000 m) on strongly acidic substrates, such as quartzitic sandstones, in w. VA and adjacent e. WV] ..... ***H. alba***

10 Flowers smaller, with greenish or purplish-green petals; [of lower elevations on circumneutral or subacidic substrates]..... ***H. pubescens***

Heuchera alba Rydberg. Mt (VA): quartzitic outcrops at high elevations; rare. Further study of *H. alba* Rydberg is needed; its recognition as distinct from *H. pubescens* is probably warranted (Bartgis, pers. comm.). It apparently differs from *H. pubescens* in its large flowers with white, exserted petals (vs. greenish or purplish-green petals), and occurs at higher elevations (usually over 1000 m) on acidic substrates, such as quartzitic sandstones (vs. at lower elevations on circumneutral or subacidic substrates). [= K; < *H. pubescens* – C, F, S, W, Z; < *H. pubescens* var. *brachyandra* Rosendahl, Butters, & Lakela – F, G, Y]

Heuchera americana Linnaeus, American Alumroot. Mt, Pd (GA, NC, SC, VA), Cp (GA, NC, VA): rocky forests, rock outcrops, particularly where soils are subacidic to circumneutral; common (uncommon in Coastal Plain). April-June. CT and NY west to s. Ontario, n. IN, s. IL, and sc. MO south to c. GA, c. AL, n. MS, and n. LA, and the most widespread in our area, *H. americana* is the only *Heuchera* in the Coastal Plain, though *H. caroliniana* reaches the lower Piedmont. Within the range of *H. caroliniana*, *H. americana* is absent. [= C; > *H. americana* var. *americana* – F, G, K, Z; < *H. americana* – RAB, W; > *H. americana* var. *heteradenia* Fernald – F; > *H. americana* var. *interior* Rosendahl, Butters, & Lakela – F, Y; > *H. americana* var. *subtruncata* Fernald – F; > *H. americana* var. *brevipetala* Rosendahl, Butters, & Lakela – G, Y; > *H. calycosa* Small – S; > *H. curtisii* – S; > *H. lancipetala* Rydberg – S; > *H. americana* var. *typica* – Y; > *H. americana* var. *calycosa* (Small) Rosendahl, Butters, & Lakela – Y]

Heuchera caroliniana (Rosendahl, Butters, & Lakela) E. Wells, Carolina Alumroot. Pd (NC, SC, VA): rocky forests, rock outcrops, particularly where soils are subacidic to circumneutral, replacing *H. americana* in much of the upper Piedmont; uncommon (NC Watch List). April-June. Endemic to the Piedmont of sc. VA, NC, and nc. SC; first found in VA (Henry County) by T.F. Wieboldt in 2002 (Belden et al. 2004). [= K, Z; = *H. americana* Linnaeus var. *caroliniana* Rosendahl, Butters, & Lakela – Y; < *H. americana* – RAB, S, in part]

Heuchera hispida Pursh, Purple Alumroot. Mt (VA), Pd (NC, VA): calcareous rocky forests, rock outcrops, particularly where soils are subacidic to circumneutral; rare (NC Watch List, VA Watch List). April-June. S. PA south through MD, WV, and VA to nw. NC. This species is intermediate between *H. americana* and *H. pubescens*; it is almost certainly of hybrid origin. The treatment of this hybrid derivative of *H. americana* and *H. pubescens* as *H. americana* var. *hispida* (a variety of one parent) seems undesirable. Since it partly replaces its parents within its range, occurs in populations away from one or both parent, and is not strictly intermediate, it seems best to accord it species status. [= F, G, S, Y; < *H. americana* – RAB, W; = *H.* ×*hispida* Pursh – C; = *H. americana* var. *hispida* (Pursh) E. Wells – K, Z]

Heuchera longiflora Rydberg, Long-flowered Alumroot. Mt (NC, VA): rich shaded forests and woodlands over calcareous rocks such as limestone, dolostone, or calcite-cemented shales, siltstones, or sandstones, in circumneutral soils; rare (NC Watch List). May-June. This species is nearly limited to sedimentary rocks, occurring in e. and c. KY, s. OH, sw. WV, sw. VA, ne. TN, w. NC, and c. AL (?). In NC, it occurs primarily in the sedimentary window around Hot Springs, and is possibly limited to Madison, Buncombe, and Haywood counties. Wells (1984) calls it "most distinctive", "characterized by a unique combination of floral characters: long, tubular calyx, deeply included styles, inflexed calyx lobes and petals that close the mouth of the flower obliquely, and horizontal orientation of the flowers." [= C, F, G, K, W, Z ; = *H. pubescens* – RAB, misapplied; >

H. longiflora Rydberg var. *aceroides* (Rydberg) Rosendahl, Butters, & Lakela – Y; > *H. longiflora* – S; > *H. aceroides* Rydberg – S; > *H. scabra* Rydberg – S; > *H. longiflora* var. *typica* – Y]

Heuchera parviflora Bartling, Cave Alumroot. Mt (GA, NC, SC, VA), Pd (NC): shaded cliff bases, usually under overhangs, on grotto floors, behind waterfalls where humidity is high but not in the spray zone, nearly always in deeply shaded situations where little or no direct sunlight falls; rare (NC Watch List, SC Rare, VA Watch List). July-September. An uncommon species throughout its range (ec. TN, KY, s. WV, sw. VA, w. NC, n. GA, n. AL, s. MO, s. IL, and s. IN), *H. parviflora* is probably most common in the gorge and waterfall country of sw. NC and in the Cumberland Plateau of TN and KY. In deeply shaded sites, it is often the only vascular plant present. The closely related species *H. puberula* Mackenzie & Bush [*H. parviflora* var. *puberula* (Mackenzie & Bush) E. Wells] occurs in s. MO and nc. AR, with scattered disjunct sites as far east as c. KY, c. TN, and s. IN. [= RAB, S, W; = *H. parviflora* var. *parviflora* – C, K, Z; > *H. parviflora* var. *parviflora* – F, G; > *H. parviflora* var. *rugelii* (Shuttleworth) Rosendahl, Butters, & Lakela – F, G, Y; > *H. parviflora* var. *typica* – Y]

Heuchera pubescens Pursh, Marbled Alumroot. Mt (SC?, VA), Pd (NC, VA): rocky forests, rock outcrops, particularly where soils are subacidic or circumneutral; uncommon (NC Watch List). May-June. Primarily a species of the Ridge and Valley Province of PA, MD, WV, and VA, *H. pubescens* ranges south to only a few locations in the upper Piedmont of NC. See discussion under *H. alba*. The report in RAB of the occurrence of *H. pubescens* in Madison County is apparently erroneous; Wells (1984) shows *H. pubescens* reaching its southern limit just south of the VA border, and not occurring at all in KY, TN, or the mountains of NC. She found the bract characters used in the key in RAB to be unreliable. Reported by Hill & Horn (1997) for South Carolina {report needs verification}. [= K; < *H. pubescens* – C, S, W, Z (also see *H. alba*); >< *H. pubescens* var. *brachyandra* Rosendahl, Butters, & Lakela – F, G, Y; > *H. pubescens* var. *pubescens* – F; > *H. pubescens* var. *typica* – Y]

Heuchera villosa Michaux ***var. villosa***, Crag-jangle, Rock Alumroot. Mt, Pd (GA, NC, SC, VA): in crevices of rock outcrops, or in thin soil over boulders, a characteristic component of the flora of high elevation cliffs and summits (to at least 1920m), not particular about the rock type, occurring on a wide range of rock types in our area, including felsic gneisses and schists, mafic gneisses, granites, quartzites, and others, probably the most acidophilic of our species of *Heuchera*; common (rare in upper Piedmont). Late June-October. W. VA and s. WV south through w. NC and e. TN to nw. SC, n. GA, ne. AL (primarily a Southern Blue Ridge endemic). In the Ozarks of AR it is replaced by the related *H. arkansana* Rydberg [*H. villosa* var. *arkansana* (Rydberg) E.B. Smith] with shorter and narrower inflorescence, shorter pedicels, and larger flowers. [= G; < *H. villosa* – RAB, W; < *H. villosa* var. *villosa* – C, K, Z; > *H. villosa* var. *villosa* – F; = *H. villosa* – S; > *H. villosa* var. *typica* – Y; >< *H. villosa* var. *intermedia* Rosendahl, Butters, & Lakela – F, Y]

Heuchera puberula Mackenzie & Bush, east to c. KY (Medley 1993) and c. TN (?). [= F, G, Y; = *H. parviflora* Bartling var. *puberula* (Mackenzie & Bush) E. Wells – K, Z]

* *Heuchera sanguinea* Engelmann var. *sanguinea*, Coral Bells. Cultivated as an ornamental "wildflower;" native of w. North America. [= K; < *H. sanguinea* – G; = *H. sanguinea* var. *typica* – Y] {not keyed}

Heuchera villosa Michaux var. *macrorhiza* (Small) Rosendahl, Butters, & Lakela, Giant Alumroot. S. WV, s. OH, and s. IN south through c. KY and c. TN to n. AL and ne. MS. This taxon has usually been disregarded in recent years, but is recognized by Chester et al. (1997). In its purest form, this plant seems to be very distinct from typical *H. villosa*, and actually may be more closely related to *H. arkansana*. The existence of intermediates and intergrades with *H. villosa* var. *villosa* muddies the taxonomic waters, however, and the overall best treatment seems to be at the varietal level. Some intermediates occur in the primary area, as in w. VA. [= G; > *H. villosa* var. *macrorhiza* – F, Y; = *H. macrorhiza* Small – S; >< *H. villosa* var. *intermedia* Rosendahl, Butters, & Lakela – F, Y]

Mitella Linnaeus (Miterwort)

A genus of about 20 species, herbs, of cold temperate e. North America, w. North America, and e. Asia.

Mitella diphylla Linnaeus, Two-leaved Miterwort. Mt (GA, NC, SC, VA), Pd, Cp (VA): moist rich forests, especially in the Mountains, and especially rocky; common (uncommon in Piedmont, rare in Coastal Plain) (SC Rare). April-June. Québec west to MN, south to e. VA, w. NC, nw. SC, ne. GA, nw. GA, and MO. The fringed petals will reward a close look. [= RAB, C, F, G, GW, K, S, W]

Saxifraga Linnaeus (Saxifrage)

As currently circumscribed, a large and heterogeneous genus of about 440 species, mostly perennial herbs, of north temperate areas. As shown by molecular data, *Saxifraga* as currently defined is polyphyletic, and all of our species will be transferred to *Micranthes* (Soltis 1995, Soltis et al. 1996, Mort & Soltis 1999). Soltis et al. (1996) demonstrate that *Micranthes* is closely allied with *Heuchera, Mitella,* and *Tiarella*, less closely related to *Astilbe, Boykinia, Sullivantia,* and *Chrysosplenium*, and least closely related to the bulk of *Saxifraga*. Four of our seven species are Southern Appalachian or Southern Appalachian/Central Appalachian endemics.

1 Larger leaf blades oblanceolate, 4-10× as long as wide.
  2 Leaf margin entire to crenate; petals greenish-white, lacking yellowish spots..... ***S. pensylvanica***
  2 Leaf margin coarsely serrate; petals white, either 3 or 5 of them with yellowish spots.

3 Leaves mostly with 4-8 teeth per side; pubescence of the leaves and scapes mostly gland-tipped; corolla bilaterally symmetrical, the 3 upper petals distinctly clawed (the petal blade with a cordate or truncate base) and with 2 yellow spots, the 2 lower petals smaller, cuneate, and not spotted; filaments filiform; [mostly of rock outcrops and seepages, often exposed, but sometimes shaded] ..... ***S. michauxii***

3 Leaves with mostly 12-40 teeth per side; pubescence of the leaves and scapes mostly nonglandular; corolla radially symmetrical; filaments strongly clavate; [mostly of shaded seepages and brook-banks] ..... ***S. micranthidifolia***

1 Larger leaf blades ovate or obovate, 1-3 (-4)× as long as wide.

4 Leaf margins entire or with obscure teeth mostly < 1 mm long; leaves to 5 (-9) cm long and 2.5 cm wide; filaments 1-1.5 mm long; ovary partly inferior, the hypanthium partly adnate to the ovary; petals spatulate and cuneate, but not clawed; [widespread in our area].

5 Inflorescence remaining compact with age; inflorescence axis sparsely short-hairy, the hairs not glandular (or with a very few glandular hairs interspersed; pedicels glabrous or nearly so; petals 2-3.5 mm long; [of granite outcrops in GA, otherwise in sc. US] ..... ***S. texana***

5 Inflorescence branching with age, some branches often lower than the midpoint of the plant's height; inflorescence axis glandular-hairy; pedicels glandular-hairy; petals 3.5-6 mm long; [widespread in our area] ..... ***S. virginiensis***

4 Leaf margins with coarse teeth mostly 2-10 mm long; leaves to 15 cm long and 8 cm wide; filaments 2.5-3.5 mm long; ovary superior, the hypanthium free from the ovary; petals (either 3 or 5 of them) moderately to strongly clawed; [of the Mountains and upper Piedmont].

6 Leaves not petiolate, cuneate to the base, gradually increasing in width from the base to the widest point; corolla bilaterally symmetrical, the 3 upper petals distinctly clawed and with yellow spots, the 2 lower smaller, cuneate, and not spotted ..... ***S. michauxii***

6 Leaves petiolate, the blade rather abruptly contracted to the petiole; corolla radially symmetrical, all the petals alike.

7 Sepals erect, later spreading; filaments filiform (use 10×); body of fruit (excluding the beak) 2.5-5 mm long; petals not spotted, or each with 2 obscure yellow spots ..... ***S. careyana***

7 Sepals spreading, later reflexed; filaments slightly clavate (use 10×); body of fruit (excluding the beak) 4-5 mm long; petals each with 2 yellow spots ..... ***S. caroliniana***

Saxifraga careyana A. Gray, Carey Saxifrage. Mt (GA, NC, VA): moist rock outcrops and cliffs, often under overhangs, often in moist soil at the base of a vertical or overhanging rock outcrop; rare (GA Special Concern, NC Watch List, SC Rare, VA Rare). May-June. A Southern Appalachian endemic: sw. VA south to e. TN, w. NC, and nw. SC. There remains a great deal of doubt regarding the taxonomic relationship between *S. careyana* and *S. caroliniana*. Many of the characters appear to be poorly correlated, and most specimens have been annotated at one time or another, by one investigator or another, as both species. The synonymization of *Micranthes tennesseensis* Small under *S. careyana* seems questionable, since the capsule size (seemingly one of the more stable characters in this complex) suggests *S. caroliniana*. I here retain the two taxa more to draw continued attention to them than out of conviction that the two are entirely satisfactory taxa (at least as currently defined). [= RAB, C, F, G, GW, K, W; = ***Micranthes careyana*** (A. Gray) Small – S]

Saxifraga caroliniana A. Gray, Carolina Saxifrage. Mt (NC, VA): moist rock outcrops and cliffs, often under overhangs, often in moist soil at the base of a vertical or overhanging rock outcrop; rare (US Species of Concern, NC Rare, VA Rare). May-June. A Southern Appalachian endemic: WV south to w. NC and ne. TN. See *S. careyana* for discussion of the two taxa. [= RAB, C, F, G, K, W; = ***Micranthes caroliniana*** (A. Gray) Small – S; > *Micranthes tennesseensis* Small – S]

Saxifraga michauxii Britton, Cliff Saxifrage. Mt (GA, NC, SC, VA), Pd (NC, VA): in crevices in exposed rock outcrops at high elevations, other rock outcrops (moist to rather dry), periglacial boulderfields, rocky seeps; common (rare in VA Piedmont). June-August. A Southern Appalachian endemic: nw. VA, WV, and KY south to e. TN, w. NC, sw. SC, and ne. GA. The orange anthers are an attractive contrast to the white petals (the three upper with two yellow spots each). [= RAB, C, F, G, GW, K, W; = *Hydatica petiolaris* (Rafinesque) Small – S; = ***Micranthes petiolaris*** (Rafinesque) Brouillet & Gornall in prep.]

Saxifraga micranthidifolia (Haworth) Steudel, Branch-lettuce. Mt (GA, NC, SC, VA), Pd (NC, VA): wet soils of seepages, in the beds of high elevation brooks, brookbanks; rocky seepages; common (rare in VA Piedmont). May-June. A Southern and Central Appalachian endemic: e. PA and WV, south to e. TN, w. NC, nw. SC, and ne. GA. This plant is gathered in considerable quantities as a spring green in the mountains of our area, and can sometimes be seen for sale in local grocery stores. The common name refers to the plant's habitat; "branches" are mountain streams. [= RAB, C, F, G, GW, K, W; = ***Micranthes micranthidifolia*** (Haworth) Small – S]

Saxifraga pensylvanica Linnaeus, Swamp Saxifrage. Mt, Pd (NC, VA), Cp (VA): mountain bogs, mucky seeps; uncommon, rare in NC (NC Rare). April-June. ME west to MN, south to e. VA, c. and w. NC, and MO. [= RAB, C, F, K, W; > *S. pensylvanica* ssp. *pensylvanica* – G; = ***Micranthes pensylvanica*** (Linnaeus) Haworth]

Saxifraga texana Buckley, Texas Saxifrage. Pd (GA): granite outcrops; rare (GA Special Concern). Found in 1980 by Jim Allison on a small granite outcrop in McDuffie County, GA. It is uncertain whether its occurrence in GA represents a natural disjunction or a freak introduction (J. Allison, pers. comm.). [= F, G, K; = ***Micranthes texana*** (Buckley) Small – S]

Saxifraga virginiensis Michaux, Early Saxifrage. Mt, Pd, Cp (GA, NC, SC, VA): rock outcrops, moist alluvial and slope forests, streambanks, riverbanks; common (rare in Coastal Plain). March-May. New Brunswick west to Manitoba, south to c. GA, LA, and AR. [= RAB, C, F, G, GW, W; > *S. virginiensis* var. *virginiensis* – K; = ***Micranthes virginiensis*** (Michaux) Small – S]

Sullivantia Torrey & A. Gray ex A. Gray (Sullivantia)

A genus of 4 species, perennial herbs, of c. North America. References: Soltis (1980)=Z.

Sullivantia sullivantii (Torrey & A. Gray) Britton, Sullivantia. Mt (VA): moist limestone cliffs; rare (VA Rare). June-August. *S. sullivantii* has a very scattered, relictual distribution, known from w. VA (Russell County), e. KY, ne. TN (Claiborne County), s. OH, IL, sw. WI, ne. IA, se. MN, and MO. [= C, F, G, K, Z]

Tiarella Linnaeus (Foamflower)

A genus of about 5 species, perennial herbs, of temperate North America and e. Asia. References: Lakela (1937)=Y; Spongberg (1972)=Z; Wherry (1940, 1949)=X; Fernald (1943)=V.

1 Plant with stolons; capsules 8-12 mm long, subacuminate; lower fruiting pedicels 7-13 mm long; [of the Mountains] .... ***T. cordifolia***

1 Plant without stolons; capsules 6-10 mm long, round-tipped; lower fruiting pedicels 6-10 mm long; [of the Mountains, Piedmont, and (less commonly) Coastal Plain]..... ***T. wherryi***

Tiarella cordifolia Linnaeus. Mt (GA, NC, SC, VA): moist forests, cove forests, rock outcrops; common. April-June. Nova Scotia west to Ontario and WI, south to w. NC, nw. SC, n. GA, and MO. [= F, V, Z; = *T. cordifolia* var. *cordifolia* – RAB, C, G, K; < *T. cordifolia* – S, W (also see *T. wherryi*); *? T. macrophylla* Small – S (type a combination of *Heuchera* and *Tiarella*); = *T. cordifolia* var. *typica* – Y]

Tiarella wherryi Lakela. Pd, Mt, Cp (GA, NC, SC, VA), Cp (VA): moist forests, cove forests, rock outcrops; common. April-June. VA and KY south to sw. GA, AL, and MS. Whether or not to recognize several taxa within what is here treated as *T. wherryi*, and at what level, has been controversial; see Lakela (1937), Wherry (1940, 1949), Fernald (1943), and Spongberg (1972) for discussion. [= F, V, Z; = *T. cordifolia* Linnaeus var. *collina* Wherry – RAB, C, G, K; < *T. cordifolia* – S, W; > *T. cordifolia* var. *collina* – X; > *T. wherryi* – X, Y; > *T. cordifolia* var. *austrina* – K, X, Y]

SCHISANDRACEAE Blume 1830 (Star-vine Family)

A family of 2 genera and about 40-50 species, woody vines, of e. Asia and e. North America (only our single species). References: Saunders (2001); Keng in Kubitzki, Rohwer, & Bittrich (1993).

Schisandra Michaux 1803 (Star-vine)

A genus of about 25 species, woody vines, of e. Asia (about 24 species) and e. North America (1 species). References: Vincent in FNA (1997); Godfrey (1988)=Z; Saunders (2001)=Y; Stone (1968); Keng in Kubitzki, Rohwer, & Bittrich (1993).

Schisandra glabra (Brickell) Rehder, Star-vine, Climbing-magnolia, Magnolia-vine. Cp (GA, NC, SC), Pd (GA, NC), Mt (GA): rich slopes adjacent to bottomland forests, mesic "islands" surrounded by bottomlands; rare (GA Threatened, NC Threatened). May-June; July-August. Ne. NC (Martin County), sc. NC (Gaston County), n. GA, w. TN, sc. KY, and e. AR south south to the FL panhandle and LA; Mexico (Sierra Madre Oriental, Hidalgo). [= RAB, K, Y, Z; = *Schizandra coccinea* Michaux – S (orthographic variant); = *S. coccinea* Michaux – W]

SCROPHULARIACEAE A.L. de Jussieu 1789 (Snapdragon Family)
(also see *OROBANCHACEAE, PAULOWNIACEAE, PHRYMACEAE, and PLANTAGINACEAE*)

There is increasing evidence that the Scrophulariaceae as traditionally constituted includes two main and quite distinct groups (Olmstead & Reeves 1995; Young, Steiner, & dePamphilis 1999; Albach, Meudt, & Oxelman 2005). Based on molecular analysis, Young, Steiner, & dePamphilis (1999) suggest that Scrophulariaceae, Antirrhinanthaceae, and Orobanchaceae be restructured to include the current members of Orobanchaceae, Scrophulariaceae, and Callitrichaceae. Beardsley & Olmstead (2002) suggest that *Mimulus* and *Mazus* be included with *Phryma* in a redefined Phrymaceae. References: Pennell (1935)=P; Olmstead & Reeves (1995); Young, Steiner, & dePamphilis (1999); Olmstead et al. (2001); Beardsley & Olmstead (2002).

Disposition of the traditional Scrophulariaceae (including Antirrhinanthaceae), Orobanchaceae, Plantaginaceae, Callitrichaceae, Buddlejaceae, Phrymaceae:

Scrophulariaceae s.s.: *Buddleja, Scrophularia, Verbascum.*

Orobanchaceae: *Agalinis, Aureolaria, Buchnera, Castilleja, Conopholis, Dasistoma, Epifagus, Macranthera, Melampyrum, Orobanche, Pedicularis, Schwalbea, Seymeria, Striga.*
Plantaginaceae (Veronicaceae): *Amphianthus, Antirrhinum, Bacopa, Callitriche, Chaenorrhinum, Chelone, Collinsia, Cymbalaria, Digitalis, Gratiola, Kickxia, Leucospora, Limnophila, Limosella, Linaria, Mecardonia, Misopates, Nuttallanthus, Penstemon, Plantago, Scoparia, Veronica, Veronicastrum.*
Phrymaceae: *Glossostigma, Mazus, Mimulus, Phryma.*
Linderniaceae: *Lindernia, Micranthemum*

Buddleja Linnaeus 1753 (Butterfly-bush)

A genus of about 90 species, trees and shrubs, of subtropical and tropical America, Asia, and Africa. The two species listed (and others) are grown for ornament and for their attractiveness as nectaring sites for butterflies. References: Rogers (1986)=Z; Oxelman, Kornhall, & Norman in Kadereit (2004).

1 Leaves serrate or crenate; corolla, calyx, pedicels, and inflorescence rachis pubescent (not granular-farinose).....***B. davidii***
1 Leaves entire or remotely dentate; corolla, calyx, pedicels, and inflorescence rachis granular-farinose .....***B. lindleyana***

* ***Buddleja davidii*** Franchet, Summer-lilac, Orange-eye Butterfly-bush. Mt (GA, NC, VA), Pd (SC): planted, rarely escaped to disturbed places, such as thickets or streambanks (Wise Co., VA); rare, native of China. June-October. [= RAB, C, F, G, K, Z]
* ***Buddleja lindleyana*** Fortune ex Lindley. Pd (GA, NC, SC), Mt, Cp (NC, SC): rarely escaped to disturbed areas; rare, native of China. June-October. [= RAB, K, Z; = *Adenoplea lindleyana* (Fortune ex Lindley) Small – S]

EXCLUDED: *B. alternifolia* Maximowicz is reported as introduced in NC by Kartesz (1999), but the alleged documentation is not present. *B. officinalis* Maximowicz is reported as introduced in GA by Kartesz (1999), but the alleged documentation is not available.

Scrophularia Linnaeus (Figwort)

A genus of about 200 species, of temperate and tropical regions of the Old and New Worlds. Though our 2 species are only subtly distinct morphologically, they are clearly distinct. References: Pennell (1935)=P; Fischer in Kadereit (2004).

1 Sterile filament (hidden under the upper corolla lip) yellowish-green, often wider than long; leaf serrations coarse, often > 3 mm long; flowering May-early July; capsule 6-10 mm long ..... ***S. lanceolata***
1 Sterile filament dark purple or brownish, often longer than wide; leaf serrations fairly fine, < 3 mm long; flowering mid July-October; capsule 4-7 mm long ..... ***S. marilandica***

Scrophularia lanceolata Pursh, American Figwort. Mt, Pd, Cp (VA): woodlands and forests; common (rare in Piedmont and Coastal Plain). May-early July. Québec and Nova Scotia west to British Columbia, south to VA, MO, NM, and n. CA. [= C, F, G, K, P, W]
Scrophularia marilandica Linnaeus, Eastern Figwort. Mt, Pd, Cp (GA, NC, SC, VA): moist to dry, nutrient-rich woodlands and forests, especially over mafic or calcareous rocks; common (rare in Piedmont and Coastal Plain south of VA). July-October. Québec west to MN, south to SC, ne. GA, sw. GA, and LA. [= RAB, C, F, G, K, P, S, W]

Verbascum Linnaeus (Mullein)

A genus of about 360 species, herbs (annual, biennial, and perennial) and shrubs, of Eurasia and ne. Africa. References: Pennell (1935)=P; Fischer in Kadereit (2004).

1 Leaves green and glabrous on both sides, or sparsely pubescent with glandular hairs; hairs of the calyx and upper stem simple and glandular.
  2 Flowers 1 per node throughout the inflorescence; pedicels longer than the calyx; glandular hairs usually restricted to the upper part of the plant ..... ***V. blattaria***
  2 Flowers usually > 1 per node in the lower parts of the inflorecence; pedicels shorter than the calyx; glandular hairs extending down the stem to the base..... ***V. virgatum***
1 Leaves densely tomentose at least on the lower surface, and often the upper as well; hairs of the calyx and upper stem branched, not glandular (except in *V. sinuatum*).
  3 Inflorescence generally simple (sometimes with 1-several small branches), dense and spike-like (at least initially); leaves moderately to densely tomentose above; upper 3 filaments bearing white hairs.
    4 Leaves sessile to auriculate-clasping, slightly or not at all decurrent on the stem; stigma patulate, decurrent on the style; corolla white or yellow ..... ***V. phlomoides***

4 Leaves sessile, decurrent down the stem to the next leaf; stigma capitate; corolla yellow..... ***V. thapsus***
3 Inflorescence freely branched, paniculate; leaves green and nearly glabrous above; all 5 filaments bearing either white or violet hairs.
5 Basal leaves not lobed; inflorescence lacking glandular hairs; filaments bearing white hairs..... ***V. lychnitis***
5 Basal leaves lobed; inflorecence with glandular hairs; filaments bearing violet hairs..... ***[V. sinuatum]***

* ***Verbascum blattaria*** Linnaeus, Moth Mullein. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, native of Eurasia. May-June; June-July. [= RAB, C, F, G, K, P, S, W]
* ***Verbascum lychnitis*** Linnaeus, White Mullein. Cp, Pd (VA): disturbed areas, fields; rare, native of Eurasia. [= RAB, C, F, G, K, P, S]
* ***Verbascum phlomoides*** Linnaeus, Clasping Mullein, Orange Mullein. Mt, Pd, Cp (NC, VA): disturbed areas, roadsides; rare, native of Europe. May-June; July. [= RAB, C, F, G, K, P, W]
* ***Verbascum thapsus*** Linnaeus, Woolly Mullein, Common Mullein, Flannel-plant, Velvet-plant. Mt, Pd, Cp (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, native of Europe. June-September; July-October. [= RAB, C, F, G, K, P, S, W]
* ***Verbascum virgatum*** Stokes, Twiggy Mullein. Cp (NC, SC): sandhills, sandy disturbed areas, roadsides; rare, native of Europe. April-May; June. [= RAB, C, F, G, K, P, S]

* *Verbascum sinuatum* Linnaeus, Wavyleaf Mullein, is introduced at scattered locations in MD, PA, NJ, and NY, on ballast and in disturbed areas. July-August. [= G, K]

SIMAROUBACEAE DC. 1811 (Quassia Family)

A family of about 13 genera and 111 species, trees and shrubs of primarily tropical areas of the New World and Old World. The Leitneriaceae has been traditionally considered to be a monotypic family, endemic to se. North America; a variety of recent studies have suggested its inclusion in the Simaroubaceae (Angiosperm Phylogeny Group 1998, 2003; Bogle in FNA (1997). References: Angiosperm Phylogeny Group (1998, 2003).

1 Leaves compound; [species alien, aggressively naturalizing in upland sites] ..... ***Ailanthus***
1 Leaves simple; [species native, in wetland sites] ..... ***Leitneria***

Ailanthus Desfais (Tree-of-Heaven)

A genus of 5 species, trees, native to Asia and Australia. References: Hu (1979).

* ***Ailanthus altissima*** (P. Miller) Swingle, Tree-of-Heaven, Copal Tree, Stink-tree. Pd, Mt, Cp (GA, NC, SC, VA): roadsides, forests, disturbed areas, including cities, especially in moist, fertile soils; common, native of e. Asia. Late May-early June; July-October. In our area, this tree is now an aggressive and noxious weed, colonizing even undisturbed forests and outcompeting the native vegetation. As serious a weed as it is here, it is (at the time of this writing, at least), much worse to the north, now the dominant tree in fencerows, woodlots, and forests in the urbanized, suburbanized, and even rural Northeast. It can be recognized vegetatively by its large pinnately compound leaves, very stout twigs (over 1 cm thick), and the characteristic and unpleasant odor of the crushed foliage. [= RAB, C, F, G, K, S, W]

Leitneria Chapman (Corkwood)

A monotypic genus, endemic to se. North America. References: Bogle in FNA (1997); Channell & Wood (1962).

Leitneria floridana Chapman, Corkwood. Cp (GA): swamps and cabbage palm / sawgrass marshes; rare (GA Special Concern). February-March. This species occurs in scattered sites from the Coastal Plain of sw. GA west to e. TX, and north in the Mississippi Embayment to AR and MO. [= FNA, GW, K, S]

SOLANACEAE A.L. Jussieu 1789 (Nightshade Family)

A family of about 94 genera and nearly 3000 species, shrubs, trees, vines, and herbs, nearly cosmopolitan but especillay diverse in South America. References: Hunziker (2001).

Subfamily Cestroideae, Tribe Cestreae: *Cestrum*
Subfamily Cestroideae, Tribe Nicotianeae: *Calibrachoa, Nicotiana, Nierembergia, Petunia*
Subfamily Solanoideae, Tribe Solaneae: *Capsicum, Physalis, Salpichroa, Solanum*
Subfamily Solanoideae, tribe Datureae: *Datura*

Subfamily Solanoideae, tribe Lycieae: *Lycium*
Subfamily Solanoideae, tribe Nicandreae: *Nicandra*

Bouchetia Dunal (Bouchetia)

A genus of about 3-4 species, tropical American.

Bouchetia erecta Augustin de Candolle. MS and TX. [= K] {synonymy incomplete}

Calibrachoa Llave & Lexarza (Seaside Petunia)

References: Hunziker (2001)=Z.

* ***Calibrachoa parviflora*** (Antoine Laurent de Jussieu) D'Arcy, Wild Petunia, Seaside Petunia. Cp (NC, VA): upper edges of salt marshes, waste areas, garbage dumps; rare, naturalized from tropical America. Tatnall (1946) documents its occurrence in Virginia: "upper edge of salt marsh, Wachapreague," Accomack Co. (Fernald & Long 4169, 26 July 1934). [= K; = *Petunia parviflora* Antoine Laurent de Jussieu – RAB, C, F, G, S, Z]

Capsicum Linnaeus (Red Pepper, Chile)

A genus of about 10 species, herbs and shrubs, of tropical America. References: D'Arcy & Eshbaugh (1974)=Z; Heiser & Pickersgill (1975). Key based on Z.

1 Flowers usually only one per node after the first flowering node, rarely more; corolla pure white (rarely bluish or violet) .... ***C. annuum***
1 Flowers 2 or more per node above the first flowering node; corolla greenish-white ..... ***C. frutescens***

* ***Capsicum annuum*** Linnaeus, Red Pepper, Chile. Pd, Cp (GA?, NC, SC, VA): naturalized or persistent from gardens; commonly cultivated, rare as a naturalized species. June-frost. A very influential food crop introduced from the New World to the Old World, now important in various (especially tropical or subtropical) cuisines, including Hunan, Szechuan, Indian, various African, Mexican, and others. [= RAB, S, Z; = *C. annuum* var. *annuum* – K]
* ***Capsicum frutescens*** Linnaeus, Tabasco Pepper. Cp (GA): persistent from gardens; rarely cultivated, rare as a waif. Reported in e. GA (Duncan 1985; Jones & Coile 1988). [= *C. annuum* Linnaeus var. *frutescens* (Linnaeus) Kuntze; = *Capsicum annuum* Linnaeus var. *glabriusculum* (Dunal) Heiser & Pickersgill – K]

Cestrum Linnaeus (Night-flowering Jessamine)

A genus of 150-200 shrubs (rarely trees or vines), of Tropical America. References: Hunziker (2001)=Z.

* ***Cestrum nocturnum*** Linnaeus, Night-flowering Jessamine. Cp (GA): cultivated, weakly (if at all) established; rare, introduced from West Indies. See Small (1933). [= K, Z; *? C. parqui* – S, misapplied]

Datura Linnaeus (Jimsonweed)

{needs thorough rework, based on herbarium material and clarification of nomenclature}

A genus of about 10 species, of s. North America (probably originally native to sw. United States and Mexico). Several species of *Datura* are known to have been in our area at the time of first settlement by Europeans. They may have been weeds in Indian fields, or grown for their hallucinogenic properties. The common name "Jimsonweed" is a corruption of "Jamestown Weed." References:

1 Calyx 3-5 cm long, the tube strongly angled, the angles even narrowly winged; corolla 7-10 cm long; capsule erect, dehiscent by 4 valves ..... ***D. stramonium***
1 Calyx 5-15 cm long, the tube terete or slightly angled; corolla 12-20 cm long; capsule inclined or nodding, irregularly dehiscent.
  2 Corolla with 10 teeth, lavender; spines of capsule few, very stout-based ..... ***D. metel***
  2 Corolla with 5 or 10 teeth, white or pale lavender; spines of capsule many, hispid (the base only slightly thickened).
    3 Corolla with 10 teeth; leaves soft-pubescent..... ***D. inoxia***
    3 Corolla with 5 teeth; leaves glaucescent ..... ***D. wrightii***

* ***Datura inoxia*** J.S. Miller. Cp, Pd (NC, SC, VA?): disturbed areas, rare, introduced from Mexico; September-October. This species may not be distinct from *D. wrightii*. [It is currently not known which records in our area apply to which taxon] [= K; = *D. innoxia* – F, S, orthographic variant; *D. meteloides* – G, misapplied]

* ***Datura metel*** Linnaeus (NC): location and habitat in our area not known; rare, presumably introduced, allegedly native of tropical Africa and Asia. July-August. [= RAB, C, K, S]

* ***Datura stramonium*** Linnaeus, Jimsonweed. Cp, Pd, Mt (GA, NC, SC, VA): fields, pastures, disturbed areas, especially common in severely over-grazed pastures; common, presumably introduced from further south and west. July-September; August-October. The plant is dangerously poisonous. [= RAB, C, K, S, W; > *D. stramonium* var. *stramonium* – F; > *D. stramonium* var. *tatula* (Linnaeus) Torrey – F; > *D. tatula* Linnaeus]

* ***Datura wrightii*** Regel, Indian-apple. Pd (NC, SC, VA?), Cp (VA): disturbed areas; rare, introduced from Mexico. July-September; September-October. [= K; *? D. meteloides* Dunal – RAB, S, misapplied; *? D. metel* – G, misapplied]

* ***Datura quercifolia*** Kunth is reported for sw. GA by Jones & Coile (1988). [= K] {not keyed at this time}

Lycium Linnaeus (Matrimony-vine)

A genus of about 100 species, shrubs, of warm temperate and tropical areas of the Old World and New Word (especially America).

1 Leaves succulent, oblanceolate, 1-5 mm wide; [native, in maritime situations] ..... ***L. carolinianum***
1 Leaves herbaceous, elliptic, ovate, or broadly oblanceolate, 8-30 mm wide; [introduced, persistent or naturalized, usually around old home sites] .
  2 Corolla lobes shorter than the corolla tube; leaves gray-green, 2-5 cm long..... ***L. barbarum***
  2 Corolla lobes longer than the corolla tube; leaves bright green, 3-8 cm long ..... ***L. chinense***

* ***Lycium barbarum*** Linnaeus, Common Matrimony-vine. Cp (NC, SC, VA), Pd, Mt (GA, NC, VA): old home sites, disturbed areas, along railroad tracks; introduced from s. Europe. May-November; August-December. [= K; *? L. halimifolium* P. Miller – RAB, F, G, S, W; < *L. barbarum* – C (also see *L. chinense*)]

Lycium carolinianum Walter, Christmas-berry, Carolina Matrimony-vine. Cp (GA, SC): shell middens, shell mounds, shelly sand dunes, brackish marshes, maritime sand spits; rare (GA Special Concern). September-October. Se. SC and e. GA south to FL, west to e. TX; also in the West Indies. Apparently not recently seen in SC; its occurrence in that state is based on Walter's flora. [= RAB, GW, S; > *L. carolinianum* var. *carolinianum* – K]

* ***Lycium chinense*** P. Miller, Chinese Matrimony-vine. Mt (NC, VA), Pd, Cp (VA): old home sites; rare, introduced from China. May-November; August-December. [= RAB, F, G, K; < *L. barbarum* – C]

Lycopersicon P. Miller (Tomato)
(see *Solanum*)

Nicandra Adanson (Apple-of-Peru)

A monotypic genus, an annual herb native of Peru.

* ***Nicandra physalodes*** (Linnaeus) Gaertner, Apple-of-Peru. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): disturbed places, such as cultivated fields; uncommon, native of Peru. July-September; August-October. [= RAB, C, F, G, K, W; = *Physalodes physalodes* (Linnaeus) Britton – S]

Nicotiana Linnaeus (Tobacco)

A genus of about 67 species, of America, Australia, and s. Pacific areas. Fernald (1950) describes the genus as "rank, acrid-narcotic American herbs." References: Goodspeed (1954)=Z; Knapp, Chase, & Clarkson (2004).

1 Plant a shrub or small tree, 3-10 m tall; stems glabrous and glaucous; [section *Paniculatae*] ..... ***N. glauca***
1 Plant an herb, 0.5-3 m tall; stems densely viscid-puberulent (or sparsely so to merely tuberculate in *N. longiflora*).
  2 Corolla tube 1.2-1.7 cm long, greenish yellow, with limb 3-6 mm wide; leaves distinctly petiolate; [section *Rusticae*].... ..... ***N. rustica***
  2 Corolla tube 3.0-12.0 cm long, cream, white, yellow, or pink, with limb 10-25 mm wide; leaves auriculate clasping.
    3 Larger leaves on a plant 3.5-8 dm long; corolla tube 3.0-5.5 cm long, 4-7× as long as the average diameter, the limb 10-15 mm wide, pink or reddish (rarely white); [section *Nicotiana*] ..... ***N. tabacum***

3 Larger leaves on a plant 1-3 dm long; corolla tube 4.0-12.0 cm long, 10-20× as long as the average diameter, the limb 15-25 mm wide, white or lavender; [section *Alatae*].
4 Rosette of a few leaves, not persisting; cauline leaves clasping and decurrent on the stem ..... ***N. alata***
4 Rosette persisting; cauline leaves clasping but not decurrent on the stem.....***[N. longiflora]***

* ***Nicotiana alata*** Link & Otto, Jasmine Tobacco. Cp (GA): cultivated in gardens; rarely persistent, native of South America. See Jones & Coile (1988). [= K, Z]
* ***Nicotiana glauca*** Graham, Tree Tobacco. Cp (GA): cultivated in gardens, rarely persistent or spreading; rare, native of South America. Apparently present at Fort Pulaski National Monument, Chatham County, GA (Jones & Coile 1988; W. Duncan pers.comm. 2004). [= K, S, Z]
* ***Nicotiana rustica*** Linnaeus, Indian Tobacco, Wild Tobacco. Cp, Pd, Mt (GA?, NC, SC, VA): formerly commonly cultivated by native Americans in all parts of our area, persistent following cultivation, now apparently extinct in our area; rare, originally native of Peru. This was the tobacco cultivated by American Indians at the time of contact by Europeans, and was the first tobacco taken to Europe and cultivated there. [= RAB, C, F, K, S; > *N. rustica* var. *rustica* – Z]
* ***Nicotiana tabacum*** Linnaeus, Cultivated Tobacco. Pd, Cp, Mt (GA, NC, SC, VA): persistent after cultivation; commonly cultivated, rarely naturalized, native of tropical America. June-frost; September-October. This is the tobacco currently cultivated in our area for the manufacture of cigarettes, cigars, and other smoking and chewing tobacco products. Two different strains are cultivated. Burley tobacco, with acute to acuminate leaves, grown mostly in the Mountains and upper Piedmont, is air-cured in open barns, and used mostly for cigar and pipe tobacco. Flue-cured tobacco, with obtuse or broadly acute leaves, is grown mostly in the Coastal Plain and lower Piedmont, cured in closed, cubical barns with forced heat, and used mostly for cigarettes. [= RAB, C, F, K, S]

* *Nicotiana longiflora* Cavanilles, Long-flower Tobacco. Also cultivated and may be found as a waif or persistent. Native of South America. [= K, S, Z]

Nierembergia Ruiz & Pavón (Cupflower)

A genus of about 23 species, of Mexico, Central America, and South America.

* ***Nierembergia frutescens*** Durieu, Tall Cupflower, is reported from sw. GA (Jones & Coile 1988). [= K]

Petunia Antoine Laurent de Jussieu (Petunia)
(also see *Calibrachoa*)

* ***Petunia ×hybrida*** Vilmorin [*P. axillaris* × *integrifolia*], Petunia. Cp, Pd (GA, NC, SC, VA): disturbed areas, garden edges; common in cultivation, uncommonly spread from cultivation, native of Argentina. May-November. Individual plants may closely resemble either parent, but this taxon in our area is best considered as a variable hybrid taxon. [= *P.* ×*atkinsiana* D. Don ex Loudon – RAB; > *P. axillaris* (Lamarck) Britton, Sterns, & Poggenburg – C, F, G, K, S; > *P. violacea* Antoine Laurent de Jussieu – F, S, misapplied; > *P. integrifolia* (Hooker) Schinz. & Thellung – C, G, K; > *P.* ×*atkinsiana* D. Don ex Loudon – K]

Physalis Linnaeus 1753 (Ground-cherry)
(by Milo Pyne)

A genus of about 80 species, nearly cosmopolitan, but especially diverse in America. Many of the species of *Physalis* in our area occur primarily in disturbed habitats. The pre-Columbian ranges of these species are unclear; they may have been introduced to e. North America by native Americans. Of the species treated here, only a few are definitely introduced.

1 Plants obviously covered with dense, stellate hairs, especially the young growth, flowering calyces, and pedicels ....***Ph. walteri***
1 Plants glabrous to variously pubescent, the pubescence not stellate.
2 Leaves glabrous or essentially so.
3 Perennials from rhizomes, frequently with remnant of last year's stem attached to crown; corolla with 5 dark maculations in the throat.
4 Hairs on the pedicels and young stems retrorse or retrorse-spreading; fruiting calyx 5-angled, indented at base .....***Ph. virginiana*** *var.* ***virginiana***
4 Hairs on the pedicels and young stems antrorse; fruiting calyx subterete, with 10 ribs, not indented at base..... ..... ***Ph. longifolia*** *var.* ***subglabrata***
3 Annuals from taproots; corolla with or without 5 dark maculations in the throat.
5 Upper part of the stem with long, spreading hairs; corolla with 5 dark maculations in the throat.

6 Leaf margins strongly dentate with 7-10 (or more) teeth per side; fruiting pedicels 12 mm or more long; mature fruiting calyx 2.5-4 cm (or more) long, the lobes long-acuminate to attenuate; corolla pubescent internally ..... ***Ph. cordata***

6 Leaf margins entire, or dentate with 1-8 teeth per side; fruiting pedicels < 10 mm long; mature fruiting calyx 2.5 cm or less long, the lobes triangular-acuminate; corolla glabrous internally.

7 Leaves mostly toothed nearly to the base with 5-8 teeth per side; leaf blade thick in texture, not translucent; fruiting calyces 2-3.5 cm long, 1.2-3 cm wide, the lobes triangular to narrowly lanceolate, the apex narrowly acute to acuminate, (3.5-) 4.5-6.5 mm long ..... ***Ph. pubescens*** *var.* ***pubescens***

7 Leaves entire or with few teeth, usually 1-4 teeth per side; leaf blade thin in texture, flaccid and translucent; fruiting calyces 1.2-2.5 cm long, 1-1.5 cm wide, the lobes ovate to deltoid, the apex acute, 3-3.5 mm long ..... ***Ph. pubescens*** *var.* ***integrifolia***

5 Upper part of the stem glabrous or glabrate (when young, sometimes with minute, deflexed hairs in lines); corolla with or without 5 dark maculations in the throat.

8 Corolla 4-10 mm long entirely yellow, without 5 dark maculations in the throat; anthers 1-2.3 mm long; berry 8-11 mm in diameter ..... ***Ph. angulata*** *var.* ***angulata***

8 Corolla 7-15 mm long, yellow and with 5 dark maculations in the throat; anthers 2.5-4 mm long; berry to 40 mm in diameter ..... ***Ph. philadelphica***

2 Leaves variously pubescent, the hairs copious and villous to sparse and appressed.

9 Flowering calyces 6 mm or less long; annuals from taproots.

10 Stems, young growth, and major veins of the leaves covered with villous pubescence intermixed with sessile glands; leaves gray-green, prominently and coarsely dentate to the base, with well-defined reticulate venation, especially visible on the lower surface, frequently drying orange or with orange spots; anthers yellow, perhaps with a bluish tinge; body of mature calyx about as long as broad, abruptly acuminate at apex; berry tawny orange when mature ..... ***Ph. grisea***

10 Stems, young growth, and major veins of leaves with fine, non-villous pubescence; leaves green, obscurely dentate, often in the upper half only, or entire, without well-defined reticulate venation, drying green or brownish; anthers blue or violet; body of mature calyx longer than broad, long-acuminate at the apex; berry green when mature.

11 Leaves mostly toothed nearly to the base with 5-8 teeth per side; leaf blade thick in texture, not translucent; fruiting calyces 2-3.5 cm long, 1.2-3 cm wide, the lobes triangular to narrowly lanceolate, the apex narrowly acute to acuminate, (3.5-) 4.5-6.5 mm long ..... ***Ph. pubescens*** *var.* ***pubescens***

11 Leaves entire or with few teeth, usually 1-4 teeth per side; leaf blade thin in texture, flaccid and translucent; fruiting calyces 1.2-2.5 cm long, 1-1.5 cm wide, the lobes ovate to deltoid, the apex acute, 3-3.5 mm long ..... ***Ph. pubescens*** *var.* ***integrifolia***

9 Flowering calyces 6 mm or more long; perennials from rhizomes.

12 Pubescence viscid, generally composed of glandular trichomes mixed with fine, short hairs and long, multicellular hairs; leaf blades broadly ovate to suborbicular, the base rounded, truncate, or cordate (occasionally widely cuneate) ..... ***Ph. heterophylla***

12 Pubescence seldom if at all glandular-viscid, composed of trichomes of varying lengths, from dense, spreading, and long-villous to sparse, strigose, and appressed; leaf blades narrowly ovate to broadly lanceolate, the base cuneate (rarely truncate).

13 Pedicels and flowering calyces pubescent with minute, appressed, antrorse hairs; hairs on the calyx primarily confined to 10 narrow longitudinal strips consisting of simple, appressed hairs 0.5 mm or less long ..... ***Ph. longifolia*** *var.* ***subglabrata***

13 Pedicels and flowering calyces densely pubescent with divergent and appressed hairs mixed (or only with appressed retrorse hairs); hairs on the calyx scattered more or less evenly over the surface, not confined to 10 longitudinal strips.

14 Pedicels with both divergent and antrorse hairs; principle leaf blades 5-8 cm long; filaments 0.5 as wide as the anthers; spots at the base of the corolla inconspicuous or absent; berry > 14 mm in diameter when mature ..... ***Ph. lanceolata***

14 Pedicels with short, appressed, retrorse hairs, or with short retrorse and longer divergent hairs intermixed; principle leaf blades 3-6 cm long; filaments as wide or wider than the anthers; spots at base of the corolla prominent; berry < 12 mm in diameter when mature ..... ***Ph. virginiana*** *var.* ***virginiana***

Physalis angulata Linnaeus var. ***angulata***, Smooth Ground-cherry. Cp, Pd (GA, NC, SC, VA), Mt (GA): disturbed areas, open woodlands, agricultural fields; common (VA Watch List). August-October. Var. *angulata* is widely distributed in Tropical America, north to se. VA and MO, and scattered as an adventive further north. Var. *pendula* (Rydberg) Waterfall is (in North America) more western, east to nw. TN and, allegedly, to SC. It can be distinguished from var. *angulata* by the following characters: principle cauline leaf blades generally > 2.75× as long as wide (vs. < 2.5× as long as wide), flowering pedicels 1.5-2.5 cm long, elongating to 3.0-4.0 cm long in fruit (vs. flowering and fruiting pedicels 0.5-1.0 cm long), pedicels and calyx covered at anthesis with fine, even, antrorse hairs, especially at the base of the calyx (vs. pedicels and calyx essentially glabrous at anthesis except for hairs on the margins of the calyx lobes). [< *Ph. angulata* – RAB, C, K, S; = *Ph. angulata* – F, G]

Physalis cordata P. Miller, Toothleaf Ground-cherry. Cp (NC), {GA, SC}: disturbed areas; rare. July-October. This species is scattered in the Southeastern United States, and is more widespread in Mexico, Central America, and West Indies. [= K; = *Ph. pubescens* var. *glabra* (Michaux) Waterfall – RAB; = *Ph. barbadensis* var. *glabra* (Michaux) Fernald – F]

Physalis grisea (Waterfall) M. Martínez, Gray Ground-cherry, Strawberry-tomato, Dwarf Cape-gooseberry. Mt, Pd (GA, NC, VA), Cp? (GA?), {SC}: wooded slopes, disturbed areas; uncommon. July-September; August-October. The species is mainly distributed in ne. United States, south (mainly) to NC, TN, and MO, and scattered further south. The fruits are edible, sweet, and tasty. Martínez (1993) discusses the nomenclature of this species, showing that the *P. pruinosa* Linnaeus is properly applied to a Mexican and Central American species. [= K; = *Ph. pubescens* var. *grisea* Waterfall – RAB, C; < *P. pruinosa* Linnaeus – F, G, S, W, misapplied]

Physalis heterophylla Nees, Clammy Ground-cherry. Pd, Mt, Cp (GA, NC, SC, VA): disturbed areas, dry rocky woodlands; common (uncommon in Mountains, rare in Coastal Plain). May-July; July-September. Widespread in e. and c. United States and adjacent Canada. [= RAB, C, S, W; > *Ph. heterophylla* var. *heterophylla* – F, G; > *Ph. heterophylla* var. *ambigua* (A. Gray) Rydberg – F, G; > *Ph. heterophylla* var. *clavipes* Fernald – F; > *Ph. heterophylla* var. *nyctaginea* (Dunal) Rydberg – F; > *P. heterophylla* var. *heterophylla* – K; > *Ph. heterophylla* – S; > *Ph. ambigua* (A. Gray) Britton – S; > *Ph. nyctaginea* Dunal – S]

Physalis lanceolata Michaux, Sandhills Ground-cherry. Cp (GA, NC, SC): sandhills; rare (NC Rare). June-July; July-September. Endemic to sandhill habitats of (primarily) sc. and (rarely) se. NC (northern limit in Lee, Wayne, and New Hanover counties), south through SC to just over the Savannah River in Richmond County, GA. Many earlier floras included midwestern material in the concept of this species; it is, however, limited to the Carolinas and Georgia. [= RAB; < *Ph. lanceolata* – F, G, S (also see *Ph. hispida* (Waterfall) Cronquist)]

Physalis longifolia Nuttall *var.* ***subglabrata*** (Mackenzie & Bush) Cronquist, Longleaf Ground-cherry. Mt, Pd (NC, VA), {GA, SC}: open woodlands, gardens and disturbed areas; uncommon. June-August; August-October. The species is widespread in e. and c. United States; var. *subglabrata* is more eastern, var. *longifolia* more western. [= C, G, K, W; = *Ph. virginiana* P. Miller var. *subglabrata* (Mackenzie & Bush) Waterfall – RAB; = *Ph. subglabrata* Mackenzie & Bush – F, S]

* ***Physalis philadelphica*** Lamarck, Tomatillo. Pd (NC): naturalized after cultivation; rare, native of Mexico and Central America. June-August; July-October. See Kartesz & Gandhi (1994) for a discussion of this group. It is the large-flowered plant (and therefore *Ph. philadelphica* in the narrow sense) that is weakly naturalized after cultivation in c. NC. [= C; < *Ph. ixocarpa* Brotero ex Hornemann – F, G, misapplied; > *Ph. philadelphica* var. *immaculata* Waterfall – K]

Physalis pubescens Linnaeus *var.* ***integrifolia*** (Dunal) Waterfall, Thinleaf Downy Ground-cherry. The distribution, abundance, and habitats of the two varieties are poorly known. July-September; August-October. Widespread in the American tropics, north to PA and IA. [= C, K; < *Ph. pubescens* var. *pubescens* – RAB; = *Ph. pubescens* – F; > *Ph. pubescens* – G, S; > *Ph. turbinata* Medikus – G, S; < *Ph. pubescens* – W; *Ph. pruinosa* Linnaeus, misapplied]

Physalis pubescens Linnaeus *var.* ***pubescens***, Thickleaf Downy Ground-cherry. The distribution, abundance, and habitats of the two varieties are poorly known. July-September; August-October. Widespread in the American tropics, north to VA. [= C, K; < *Ph. pubescens* var. *pubescens* – RAB; > *Ph. barbadensis* Jacquin var. *barbadensis* – F; > *Ph. barbadensis* Jacquin – G, S; > *Ph. pubescens* – S; > *Ph. barbadensis* Jacquin – S; < *Ph. pubescens* – W]

Physalis virginiana P. Miller *var.* ***virginiana***, Virginia Ground-cherry. Pd, Mt, Cp (GA, NC, SC, VA): woodlands and disturbed areas; common. April-May; June-July. This complex species is widespread in e. and c. North America. Var. *virginiana* is the most eastern of a number of varieties, some of the others being var. *campaniforma* Waterfall, var. *polyphylla* (Greene) Waterfall, and var. *texana* (Rydberg) Waterfall. The validity and true affinities of some of these varieties is, at present, uncertain; var. *texana* may be actually affiliated with *Ph. longifolia*. [= RAB, K; < *Ph. virginiana* – C, F, G, W; > *Ph. virginiana* – S; > *Ph. intermedia* Rydberg – S; > *Ph. monticola* C. Mohr – S]

Physalis walteri Nuttall, Dune Ground-cherry. Cp (GA, NC, SC, VA): dunes of sea-beaches, openings in maritime forests; uncommon (VA Rare List). May-September. This species ranges from se. VA south to s. FL and west to s. MS. See Sullivan (1985) for further information on this species and its relatives. It is largely replaced on the Gulf Coast by the related *Ph. angustifolia*, with which it locally intergrades in peninsular FL. *Ph. viscosa* Linnaeus is South American. [= C, K; < *Ph. viscosa* Linnaeus ssp. *maritima* (M.A. Curtis) Waterfall – RAB; < *Ph. maritima* M.A. Curtis – F; < *Ph. viscosa* – G, S]

* *Physalis acutifolia* (Miers emend Sandwith) Sandwith, native to AZ and vicinity, was collected once in NC (in 1936), from a nursery in Mecklenburg County, NC. It is probably not established. It is most similar to *Ph. angulata*, but differs in its white to cream-colored corollas, with yellow basal spots, and the presence of 5 hairy pads, alternating with the stamens near the base of the corolla limb. [= K]

* *Physalis alkekengi* Linnaeus, Chinese-lantern Plant, native of Japan, Korea, and n. China, is commonly cultivated as an ornamental and occasionally naturalized in e. North America, as at scattered locations in TN (Chester, Wofford, & Kral 1997). It is perennial, readily recognized by its mature calyces red-orange and up to 5 cm long. [= K]

Physalis arenicola Kearney, Sandhill Ground-cherry, reported from nc. GA by Jones & Coile (1988) and for "cypress-heads and scrub thickets" by GANHP (GA Special Concern). [= K; > *Ph. arenicola* var. *ciliosa* (Rydberg) Waterfall] {not keyed at this time; synonymy incomplete}

* *Physalis cinerascens* (Dunal) A.S. Hitchcock var. *cinerascens*, native to OK, TX, and Mexico, occurs locally in the Southeastern United States in weedy situations; it has been found once in our area, in a disturbed habitat in SC. It is probably not established. It resembles *Ph. walteri* in having stellate pubescence, but differs in having leaves ovate to suborbicular, with margins sinuate, dentate, or entire (vs. leaves obovate, with margins entire), anthers at least 1.5× as long as the filaments (vs. anthers equal to or shorter than the filaments), and fruiting pedicels mostly at least 1.5× as long as the calyces (vs. fruiting pedicels equal to or shorter than the fruiting calyces). [= K] {not keyed at this time and full treatment}

Physalis longifolia Nuttall *var.* ***longifolia*** occurs east to PA, WV, KY, TN, and GA (Kartesz 1999). [= K]

Physalis missouriensis Mackenzie & Bush, reported from nc. GA in Jones & Coile (1988); record not repeated in Kartesz (1999). [= K; *Ph. pubescens* Linnaeus var. *missouriensis* (Mackenzie & Bush) Waterfall] {investigate; not keyed at this time; synonymy incomplete}

* *Physalis peruviana* Linnaeus, Cape Gooseberry or Po'ha, is also cultivated. Native to South America, it is now cultivated for its edible fruit in various tropical and temperate areas, and is known to rarely persist in e. North America. [= K]

Physalis viscosa Linnaeus. AL, MS. [= K]

Salpichroa Miers

A genus of about 17 species, herbs and shrubs, native of South America. References: Hunziker (2001)=Z.

* ***Salpichroa origanifolia*** (Lamarck) Baillon. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): gardens, roadsides, disturbed areas; rare, introduced from n. South America. May-November. [= RAB, K, Z; = *Perizoma rhomboidea* (Gillies & Hooker) Small – S; = *Salpichroa rhomboidea* (Gillies & Hooker) Miers]

Solanum Linnaeus 1753 (Nightshade, Tomato, Potato, Horse-nettle)

(by Milo Pyne and Alan S. Weakley)

A genus of about 1700 species, trees, shrubs, vines, and herbs, of tropical and temperate regions of the Old and New World. References: Schilling (1981)=Z; Bohs & Olmstead (1997); Olmstead & Palmer (1997).

1 Anthers opening by longitudinal slits, connivent into a slender cone with sterile tip; berry fleshy, seeds pubescent; plant glandular "clammy"-pubescent; [cultivated plant, also appearing as a waif, escape, or discard, e.g. on sewage sludge] .... ***S. lycopersicum***

1 Anthers opening by terminal pores, separate or connivent; berry dry to juicy, not fleshy, seeds glabrous; plant not clammy-pubescent; [plants native, exotic, or cultivated escapes, some are weeds of cultivation].

2 Stems and leaves not prickly or spiny.

3 Leaves irregularly pinnatifid or auriculate-lobed.

4 Woody climbing or twining vine; leaves auriculate-lobed ..... ***S. dulcamara***

4 Herb, not twining; leaves irregularly pinnatifid.

5 Fetid annual, plant more or less prostrate; leaves sessile or short-petiolate, lateral leaflets lanceolate, not alternating with smaller ones..... ***[S. triflorum]***

5 Tuberiferous perennial, plant more or less erect; leaves distinctly petiolate, lateral leaflets ovate, alternating with smaller ones..... ***S. tuberosum***

3 Leaves not appearing compound or auriculate-lobed.

6 Foliage densely pubescent to puberulent with spreading hairs, especially on undersurface.

7 Trichomes stellate; ripe berry yellow; corolla lavender..... ***S. elaeagnifolium***

7 Trichomes simple; ripe berry black or green to yellow; corolla white.

8 Berry black when ripe; leaves lance-elliptic, 1-2.5 cm wide, style usually protruding beyond anthers by > 1 mm; plants strictly coastal, on dunes and similar habitats..... ***S. pseudogracile***

8 Berry green to yellow when ripe; leaves ovate, 2.5-6 cm wide, style not protruding; plants widespread, weedy ..... ***S. sarrachoides***

6 Foliage glabrous, glabrescent or very sparsely pubescent (with appressed hairs).

9 Berry dull red, ca. 1 cm wide at maturity, uncommon horticultural escape ..... ***S. pseudocapsicum***

9 Berry black (rarely green, never red), up to 0.5 cm wide at maturity, ruderal weeds.

10 Inflorescence subracemose, corymbose or umbellate, pedicels and peduncles becoming stout; anthers 1.8-2.6 [2.2-2.9] mm long; berry dull; seed 1.7-2.2 mm long [1.8 mm wide or wider]; sclerotic granules (concretions of stone cells) typically absent ..... ***S. nigrum***

10 Inflorescence umbellate, pedicels and peduncles remaining slender; anthers 1.4-2 mm long; berry glossy; seed 1.2-1.8 mm long; sclerotic granules typically present but occasionally absent

11 Calyx lobes strongly reflexed in mature fruit; sclerotic granules in fruit five or less if present, occasionally absent; flowers 2-14 per inflorescence, usually > 7 in largest inflorescences; fruiting pedicels erect (may be deflexed with age or in winter), to 8 mm long; fruit shiny, black ..... ***S. americanum***

11 Calyx lobes adherent or spreading in mature fruit, occasionally somewhat reflexed; sclerotic granules usually 7-12 per fruit, often visible through skin of dried berry; flowers usually < 6 per inflorescence, fruiting pedicels deflexed, to 13 mm long; fruit dull or shiny black, or rarely green..... ***S. ptychanthum***

2 Stems, and often leaves, prickly and/or spiny.

12 Berry enveloped at least until near maturity by prickly calyx; leaves regularly and strongly pinnately parted or very deeply divided (sinus depth greater than 1/2 distance from leaf margin to midvein).

13 Corolla yellow, anthers dissimilar, the lowest larger and longer; calyx tightly enveloping the fruit, seeds coarsely undulate-rugose ..... ***S. rostratum***
13 Corolla violet to (rarely) white, anthers all similar; calyx loosely enveloping the fruit, seeds minutely reticulate-pitted ..... ***S. sisymbriifolium***
12 Berry not enveloped by prickly calyx; the leaves not pinnately parted or divided (except in S. sisymbriifolium), or only weakly so (sinus depth < ½ the distance from leaf margin to midvein).
14 Berry 2 cm or more in diameter; lower leaf surface not stellate-pubescent.
15 Ripe berry orange-red to reddish, leaves deeply lobed (sinus depth up to 1/2 distance from leaf margin to midvein) ..... ***S. capsicoides***
15 Ripe berry yellow, immature berry green with white mottles, leaves shallowly lobed (sinus depth typically < 1/3 distance from leaf margin to midvein) ..... ***S. viarum***
14 Berry < 2 cm in diameter; lower leaf-surface stellate-pubescent.
16 Leaves linear-lanceolate, 1-3 cm wide, trichome clusters 0.5 mm broad, with 12 or more rays ..... ***S. elaeagnifolium***
16 Leaves ovate to elliptic, 2-8 cm wide, often lobed or cleft, trichome clusters 1 mm broad, with 5-10 rays.
17 Stellate trichomes of lower leaf surface stipitate, the 6-8 rays essentially equal; corolla 3-4 cm wide, calyx 8-12 mm long ..... ***S. dimidiatum***
17 Stellate trichomes of lower leaf surface sessile, 2-5 rays, the central one elongate; corolla 2-3 cm wide, calyx 5-7 mm long.
18 Leaves entire, margins at most sinuate; plants up to 2 dm in stature; prickles few, absent, and/or confined to midveins; corollas white; [rare plants of Bibb and Chilton counties, AL]..... ***[S. pumilum]***
18 Leaves not entire, lobed, cleft, pinnately parted, or divided; plants 3-10 dm in stature; prickles more abundant and generally distributed; corollas purple, rarely white; [plants more widely distributed, weedy or ruderal].
19 Leaves pinnately parted or divided, the segments often pinnately lobed; calyx enveloping fruit when ripe, berry red; plant annual..... ***S. sisymbriifolium***
19 Leaves irregularly lobed or cleft, the lobes or segments entire; calyx not enveloping fruit when ripe; berry yellowish orange, never red; plant perennial.
20 Leaves lobed to near the middle ..... ***S. carolinense*** *var.* ***floridanum***
20 Leaves lobed < ½ way to the middle ..... ***S. carolinense*** *var.* ***carolinense***

Solanum americanum P. Miller, north to e. GA (SC). [= K; < *S. americanum* – RAB, F; < *S. nigrum* – C, G, S]

* ***Solanum capsicoides*** Allioni. Cp (SC), Pd (NC): disturbed areas; rare, introduced. [= K; *S. aculeatissimum* – RAB, S, misapplied]

Solanum carolinense Linnaeus *var.* ***carolinense***, Horse-nettle, Ball-nettle. Cp, Pd, Mt (GA, NC, SC, VA): [= K; < *S. carolinense* – RAB, C, F, G, W; = *S. carolinense* – S]

Solanum carolinense Linnaeus *var.* ***floridanum*** (Shuttleworth ex Dunal) Chapman. Cp (GA): sandhills; rare. GA and FL (Kartesz 1999). [= K; < *S. carolinense* – RAB; = *S. floridanum* Shuttleworth ex Dunal – S]

* ***Solanum dimidiatum*** Rafinesque. Cp (SC), {GA}: disturbed areas; rare, introduced from w. North America. April-June. [= C, K; = *S. torreyi* A. Gray – RAB, F, G; = *S. perplexum* Small – S]

* ***Solanum dulcamara*** Linnaeus, Bittersweet, Nightshade. Mt (NC, VA), Pd, Cp (VA), {GA}: introduced from Europe. [= RAB, C, W; > *S. dulcamara* var. *dulcamara* – F, K]

* ***Solanum elaeagnifolium*** Cavanilles, Silverleaf Nightshade, White Horse-nettle. Cp (GA, NC, SC), Pd (NC). Mt (GA): disturbed areas; rare, introduced from sc. North America. June-September. [= C, F, G, K; = *S. eleagnifolium* – RAB, S, orthographic error]

* ***Solanum lycopersicum*** Linnaeus, Tomato. Cp, Pd, Mt (GA, NC, SC, VA): persistent and weakly naturalized around gardens, especially where compost or sewage sludge is spread; commonly cultivated, rare as a naturalized species. June-frost. The species is native to the Andes Mountains of nw. South America. *S. lycopersicum* is one of the most important and influential of edible species introduced from the New World to the Old World. There appears to be little reason to separate *Lycopersicon* from *Solanum*. [= *Lycopersicon esculentum* – RAB, C, F, G; > *Solanum lycopersicum* Linnaeus var. *cerasiforme* (Dunal) Spooner, J. Anderson, & R.K. Jansen – K; > *Solanum lycopersicum* var. *lycopersicum* – K; = *Lycopersicon lycopersicon* (Linnaeus) Karsten – S; > *Lycopersicon esculentum* var. *cerasiforme* (Dunal) Alefani]

* ***Solanum pseudocapsicum*** Linnaeus, Jerusalem-cherry. Cp, Mt (GA), Pd (NC), {SC}: rarely cultivated, perhaps not established, introduced from Mediterranean Europe. [= K; = *S. pseudo-capsicum* – F, orthographic variant]

Solanum pseudogracile Heiser, Dune Nightshade. Cp (GA, NC, SC): ocean dunes, usually with *Uniola paniculata*; uncommon. May-October. E. NC south to FL, west to LA. [= K, Z; = *S. gracile* – RAB, S, misapplied]

Solanum ptychanthum Dunal, American Black Nightshade. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas; common. June-December. [= K, W, Z; < *S. americanum* P. Miller – RAB, F, misapplied; < *S. nigrum* – C, G, S; = *S. ptycanthum*, orthographic variant]

Solanum pumilum Dunal. {GA} . Known from dolomitic Ketona glades in Bibb County, c. AL (Allison & Stevens 2001) and historically in GA (GAHP). [= *Solanum carolinense* Linnaeus var. *hirsutum* (Nuttall) A. Gray – K]

* ***Solanum rostratum*** Dunal, Buffalo-bur, Kansas-thistle. Cp (GA, NC, SC, VA), Mt, Pd, (GA, NC, VA): disturbed areas; uncommon, introduced from w. North America. [= RAB, C, F, G, K, W; = *Androcera rostrata* (Dunal) Rydberg – S; *? S. cornutum* Lamarck, misapplied]

* ***Solanum sarrachoides*** Sendtner, Hairy Nightshade. Cp, Pd (NC, VA): disturbed areas; introduced from South America. Works by Edmonds and associates have established that *S. sarrachoides* and *S. physalifolium* Rusby are two distinct species, but both are presently known from North America. Mistaken interpretations of Cronquist's 1991 treatment of *Solanum* (e.g. by Kartesz 1999) have given rise to the incorrect belief that only *S. physalifolium* is found in North America. True *S. physalifolium* is present in the western United States, *S. sarrachoides* in the Southeast. [= RAB, C, Z; < *S. physalifolium* Rusby – K; = *S. sarachoides* – F, orthographic error]

* ***Solanum sisymbriifolium*** Lamarck, Sticky Nightshade. Cp (GA, NC, SC), {VA}: disturbed areas; uncommon, introduced from South America. July-September; September-October. [= RAB, C, F, G, K, S]

* ***Solanum tuberosum*** Linnaeus, Potato, Irish Potato, White Potato. Cp, Pd, Mt (GA, NC, SC, VA): commonly cultivated, rarely escaped or spontaneous from thrown-out tubers, introduced from Andean South America. June-August. [= RAB, C, F, G, K]

* ***Solanum viarum*** Dunal, Tropical Soda Apple. Cp (GA, NC, SC): pastures; rare, introduced from South America (s. Brazil, Paraguay, and n. Argentina). This species has only recently appeared in our area, but has been publicized as a severe, extremely aggressive, and rapidly spreading weed further south (Wunderlin et al. 1993, Mullahey et al. 1993, Mullahey 1996). [= K]

* *Solanum capsicastrum* Link ex Schauer. Reported for NC and SC (Kartesz 1999), but apparently erroneously. [= K]

* *Solanum citrullifolium* A. Braun var. *citrullifolium*. Introduced in scattered states, including DE and FL (Kartesz 1999). [= K; < *S. citrullifolium* – C, F, G]

* *Solanum melongena* Linnaeus, Eggplant, is planted in gardens but does not persist. [= F, G, K, S]

* *Solanum nigrescens* Mart. & Gal. Reported from NC, SC, GA, etc. (Kartesz 1999), but actual status unclear. [= K] {not keyed}

* *Solanum nigrum* Linnaeus ssp. *nigrum*, European Black Nightshade. Disturbed areas; rare, introduced from Eurasia. May-November. [= K, Z; = *S. nigrum* – RAB; < *S. nigrum* – C, F, G, S]

* Solanum torvum Swartz. In AL.

* *Solanum triflorum* Nuttall. Introduced in c. TN. [= C, F, G, K]

SPHENOCLEACEAE von Martius ex DC. 1839 (Chickenspike Family)

A family of one genus and 2 species, annual herbs, of tropical regions, native of the Old World. References: Rosatti (1986)=Z.

Sphenoclea Gaertner (Chickenspike)

A genus of 2 species, annual herbs, native of the Old World.

* ***Sphenoclea zeylanica*** Gaertner, Chickenspike. Cp (SC), Pd (GA, NC): rice plantations, reservoirs, other disturbed wetlands; rare, native of Old World tropics. August-October. [= K, S, Z; = *S. zeylandica* – RAB, GW, orthographic error (presumably from a mistaken notion that the epithet refers to New Zealand rather than Ceylon)]

STAPHYLEACEAE (DC.) Lindley 1829 (Bladdernut Family)

A family of 5 genera and about 27 species, trees and shrubs, of temperate Northern Hemisphere, especially e. Asia. References: Spongberg (1971)=Z.

Staphylea Linnaeus (Bladdernut)

A genus of 11 species, trees and shrubs, of temperate Eurasia and e. North America.

Identification notes: The opposite, trifoliolate leaves with serrulate margins are diagnostic.

Staphylea trifolia Linnaeus, Bladdernut. Pd, Mt, Cp (GA, NC, SC, VA): nutrient-rich bottomland forests, extending upslope over calcareous or mafic rocks; common. April; September-October. Québec west to MN, south to sw. GA, Panhandle FL, n. AL, n. MS, and OK. [= RAB, C, F, G, GW, K, S, W, Z]

STERCULIACEAE (Chocolate Family)

(see *MALVACEAE*)

STYRACACEAE Dumortier 1829 (Storax Family)

A family of about 11 genera and 160 species, trees and shrubs, of warm temperate and tropical regions of America, Mediterranean, se. Asia, Malesia. References: Fritsch in Kubitzki (2004).

1 Corolla lobes 4; fruit elongate, winged, 2.5-5 cm long; petioles 15-25 mm long ..... ***Halesia***
1 Corolla lobes 5; fruit globose, not winged, 0.5-0.9 cm in diameter; petioles 2-10 mm long..... ***Styrax***

Halesia Ellis ex Linnaeus (Silverbell, Snowdrop Tree)

A genus of about 5 species, trees and shrubs, of e. North America and e. Asia. The genus was named to honor Stephen Hales; it therefore seems more appropriate to pronounce the genus with three syllables (the accent on the first) than the commonly heard four, which thoroughly distorts the honoree's name. The number of taxa in our area and their appropriate taxonomic level are in dispute; recent analyses vary from from 2-5, with specific or varietal status. References: Fritsch & Lucas (2000)=X; Reveal & Seldin (1976)=Y; Sargent (1921); Godfrey (1988)=Z.

1 Petals united only basally, the lobes longer than the tube; fruits broadly 2-winged; leaves broadly obovate to suborbicular, 1-2× as long as wide.
  2 Corolla 10-15 mm long ..... ***H. diptera*** *var.* ***diptera***
  2 Corolla 20-30 mm long ..... ***H. diptera*** *var.* ***magniflora***
1 Petals united for most of their length, the tube longer than the lobes; fruits narrowly or broadly 4-winged; leaves elliptic-oblong, ca. 2× as long as wide.
  3 Corolla 7-10 (-12) mm long, the style strongly exserted (1/3 to 1/2 the length of the corolla tube beyond its mouth), the anthers at the mouth of the corolla tube or slightly exserted; fruit obovate in outline, broadest toward the tip, strongly narrowed to the base, narrowly winged..... ***H. carolina***
  3 Corolla (12-) 15-30 mm long, the style included or slightly exserted, the anthers within the mouth of the corolla tube; fruit ellipsoid to slightly obovate in outline, broadest near the middle, broadly winged.
    4 Corolla (18-) 20-30 mm long, the style included, the anthers well inside the mouth of the corolla tube; large tree, to 40 m tall ..... ***H. tetraptera*** *var.* ***monticola***
    4 Corolla (12-) 15-20 mm long, the style slightly exserted, the anthers just within the mouth of the corolla tube; shrub to small tree, rarely exceeding 10 m in height ..... ***H. tetraptera*** *var.* ***tetraptera***

Halesia carolina Linnaeus, Little Silverbell. Pd (GA, SC): sandy alluvial forests; rare (SC Rare List). March-April; September-October. S. SC south to panhandle FL, west to s. MS. [= K, Y, Z; = *H. parviflora* Michaux – RAB, GW, S; < *H. carolina* – X]

Halesia diptera Ellis *var.* ***diptera***, Common Two-wing Silverbell. Cp (GA, SC): bottomland forests, forested edges of brackish marshes; rare (SC Rare List). April-May; August-September. Var. *diptera* ranges from s. SC south to panhandle FL, west to n. AL, sw. AR, and e. TX. [= Y, Z; < *H. diptera* – RAB, GW, K, S]

Halesia diptera Ellis *var.* ***magniflora*** Godfrey. Cp (GA): dry to moist hammocks; rare. Endemic to sw. GA and panhandle FL. [= Y, Z; < *H. diptera* – GW, K, S]

Halesia tetraptera Ellis *var.* ***monticola*** (Rehder) Reveal & Seldin, Mountain Silverbell. Mt (NC, VA?): cove forests, moist ridges, mostly above 1000m in elevation; common (VA Watch List). April-May; August-September. Apparently limited to the higher mountains of the Southern Appalachians of NC, TN, and VA (?), but the range obscure, perhaps limited to the area south of Linville Gorge, notably the Great Smoky Mountains. [= K, Y; < *H. carolina* – RAB, F, G, W; < *H. tetraptera* – C; = *H. monticola* (Rehder) Sargent – S; < *H. carolina* – X]

Halesia tetraptera Ellis *var.* ***tetraptera***, Common Silverbell. Mt (GA, NC, SC, VA), Pd, Cp (GA, NC, SC): moist slopes, coves, creek-banks, bottomlands; common (uncommon in lower Piedmont and Coastal Plain). March-May; August-September. W. VA, WV, s OH and s IL, south to FL and e. TX (and cultivated elsewhere). [= K, Y; < *H. carolina* – RAB, F, G, W; < *H. tetraptera* – C; = *H. carolina* Linnaeus – S; < *H. carolina* – X]

Styrax Linnaeus (Snowbell, Storax)

A genus of about 120-130 species, trees and shrubs, of s. Europe, Malesia, se. Asia, se. North America, and tropical America. References: Gonsoulin (1974)=Z. The differences of opinion about the correct grammatical gender (covering all 3 possibilities!) are ignored in the synonymy, all endings standardized to the masculine "*-us*."

1 Leaves generally broadly obovate, sometimes broadly ovate, 5-14 cm long, 4-10 cm wide, the apices acute to short-acuminate, densely and finely pubescent beneath, giving the underside of the leaf a pale color; inflorescence usually of 5-20 flowers ..... ***S. grandifolius***
1 Leaves narrowly elliptic to ovate or obovate, usually 2-8 cm long, 1-4 cm wide, the apices short- to long-acuminate, glabrous or sparsely pubescent beneath (to densely pubescent and then giving the underside of the leaf a rusty color in var. *pulverulentus*); inflorescence usually of 1-7 flowers.

2 Leaves oblong-elliptic, glabrous or sparsely pubescent on the undersurfaces and petioles, the margins usually distantly toothed toward the apices); pedicels 10-14 mm long; calyces essentially glabrous; new growth glabrous to sparsely pubescent .....***S. americanus* var. *americanus***

2 Leaves elliptic to ovate to oblanceolate or obovate, sparsely to densely scurfy-hairy on the undersurfaces and petioles, margins entire to serrate; pedicels 4-6 mm long; calyces and pedicels densely scurfy-hairy; new growth densely matted pubescent .....***S. americanus* var. *pulverulentus***

Styrax americanus Lamarck *var.* ***americanus***, American Snowbell, American Storax. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA, VA): swamp forests, pocosin edges, other moist to wet habitats; uncommon (rare in Piedmont, rare in VA) (VA Watch List). April-June; July-September. Var. *americanus* ranges from ne. WV, OH, s. IN, s. IL, s. MO, south to s. FL and e. TX. See discussion below on var. *pulverulentus* and the presence in our area of transitional plants. [= C, F, Z; < *S. americanus* – RAB, G, GW, K, W; = *Styrax americanus* – S]

Styrax americanus Lamarck *var.* ***pulverulentus*** (Michaux) Perkins ex Rehder, Downy American Snowbell. Cp (GA, SC): wet pine flatwoods; rare. April-May; July-September. "Good" var. *pulverulentus* ranges from SC south to s. FL and west to e. TX and se. MO; some plants in NC and SC are transitional between the two varieties and will not be easily assigned. [= C, F, Z; < *S. americanus* – RAB, G, GW, K, W; = *S. pulverulentus* Michaux – S]

Styrax grandifolius Aiton, Bigleaf Snowbell, Bigleaf Storax. Pd, Cp, Mt (GA, NC, SC, VA): upland forests, bluffs; uncommon (rare in Mountains) (VA Watch List). April-May; August-September. Se. VA south to s. FL, west to e. TX, north to se. MO. [= RAB, C, F, K, S, W, Z]

SYMPLOCACEAE Desfontaines 1820 (Sweetleaf Family)

A family of 1 genus and about 250-300 species, trees and shrubs, of tropical and warm temperate America and Asia. References: Nooteboom in Kubitzki (2004).

Symplocos Jacquin (Sweetleaf)

A genus of about 300 species, trees and shrubs, of tropical and warm temperate America and Asia. Wang et al. (2004) found that the affinities of *S. tinctoria* are with South American species of subgenus *Epigenia*, rather than with east Asian species of subgenus *Hopea*, section *Palaeosymplocos*. References: Wang et al. (2004); Nooteboom in Kubitzki (2004).

Identification notes: The foliage of *S. tinctoria* has a sweet taste, and an odor and taste similar to green apples. Sometimes the leaves are glossy and appear subcoriaceous, somewhat resembling *Kalmia latifolia*.

1 Leaf margins sharply and finely glandular-dentate; inflorescence a terminal panicle; drupes blue (white); [alien, rarely cultivated and escaped]; [subgenus *Hopea*, section *Palura*] ..... ***[S. paniculata]***

1 Leaf margins entire to coarselt serrate-crenate; inflorescence an axillary fascicle; drupes green; [native, common in parts of our area]; [subgenus *Epigenia*] ..... ***S. tinctoria***

Symplocos tinctoria (Linnaeus) L'Heritier de Brutelle, Sweetleaf, Horsesugar. Cp (GA, NC, SC, VA), Mt, Pd (GA, NC, SC): moist bottomland forests, pocosin edges, mesic forests, ridgetop forests; common (rare in Piedmont). March-May; August-September. DE south to n. FL and west to e. TX and se. OK. The range in our area is discontinuous and interesting, the species rather abundant in the Coastal Plain throughout our area, and in the Mountains of NC and SC (absent from the VA mountains!), but present in the Piedmont only near its borders with the other provinces and in scattered sites in the central Piedmont. The leaves have a subcoriaceous and rather evergreen appearance, but are (in our area) only semi-evergreen. As the name implies, the leaves are somewhat sweet, but the sweetness seems variable from plant to plant, season to season, and taster to taster. Whether sweet or not, the taste is distinctive and is helpful (once learned) in distinguishing this rather nondescript shrub or small tree. Where protected from fire, *S. tinctoria* can reach considerable size, up to 20 cm in diameter and 10 m tall, with longitudinally striped bark. [= RAB, C, GW, K, S, W; > *S. tinctoria* var. *tinctoria* – F, G; > *S. tinctoria* var. *pygmaea* Fernald – F, G (probably based on fire sprouts)]

* *Symplocos paniculata* (Thunberg) Miq., Sapphire-berry, Asiatic Sweetleaf, native of e. Asia, has been reported as spreading from plantings in the District of Columbia (Whittemore 2003).

TAMARICACEAE Link 1821 (Tamarisk Family)

A family of about 4 genera and 78 species, shrubs and trees, of Eurasia and Africa (especially from the Mediterranean to c. Asia). References: Crins (1989b); Gaskin in Kubitzki & Bayer (2003); Gaskin et al. (2004).

Tamarix Linnaeus (Tamarisk, Salt-cedar)

A genus of about 54 species, trees and shrubs, native of Eurasia and Africa. References: Baum (1978)=Z; Crins (1989b)=Y.

Identification notes: An important character is the staminal disk; three terms are used. In **hololophic** disks, the lobe between each stamen is obvious and separate from the stamens on either side, and each is usually 2-lobed. In **paralophic** disks, each lobe is deeply bipartite, and each half-lobe is fused to the base of the adjacent stamen, but is still somewhat distinct from it. In **synlophic** disks, the lobes are also deeply bipartite, but each half-lobe is fused confluently with the stamen base, giving the appearance that the filament has swollen base.

1 Flowers 4-merous; [section *Oligadenia*].
- 2 Petals 1.5-2.5 mm long; bracts subtending the pedicels diaphanous; young growth completely glabrous; [section *Oligadenia*; series *Arbusculae*] ..... ***T. parviflora***
- 2 Petals 3.5-5 mm long; bracts subtending the pedicels herbaceous; young growth (especially the bracts and the raceme axis) papillose; [section *Oligadenia*; series *Anisandrae*] ..... ***T. tetragyna***

1 Flowers 5-merous.
- 3 Racemes 5-10 mm wide; [section *Oligadenia*].
  - 4 Bracts of the raceme linear to linear oblong, about equalling the pedicel; disk hololophic; young growth glabrous; [section *Oligadenia*; series *Laxae*] ..... ***T. chinensis***
  - 4 Bracts of the raceme lanceloate to ovate, exceeding the pedicel; disk synlophic, paralophic, or hololophic; young growth glabrous or papillose; [section *Oligadenia*; series *Anisandrae*].
    - 5 Young growth glabrous (except sometimes papillose on the raceme axis); disk synlophic; flowers with 5 antesepalous stamens and 0 antepetalous stamens ..... ***T. africana***
    - 5 Young growth papillose; disk hololophic to paralophic; flowers with 4-5 antesepalous stamens and 0-4 antepetalous stamens ..... ***T. tetragyna***
- 3 Racemes 3-5 mm wide; [section *Tamarix*].
  - 6 Young growth papillose; disk synlophic; [section *Tamarix*; series *Canariensis*] ..... ***T. canariensis***
  - 6 Young growth glabrous; disk synlophic or hololophic; [section *Tamarix*; section *Gallicae*].
    - 7 Petals caducous; disk synlophic ..... ***T. gallica***
    - 7 Petals persistent; disk hololophic ..... ***T. ramosissima***

* ***Tamarix africana*** Poiret, African Tamarisk. Cp (SC): brackish marshes, coastal sands; rare, native of sw. Mediterranean Europe, ne. Africa, and the Canary Islands. [= K, Y; > *T. africana* var. *africana* – Z]

* ***Tamarix canariensis*** Willdenow, Canary Island Tamarisk. Cp (GA, NC, SC): brackish marshes, coastal hammocks, coastal sands; uncommon, native of sw. Europe, ne. Africa, and the Canary Islands. [= K, Y, Z; < *T. gallica* Linnaeus – RAB, S]

* ***Tamarix chinensis*** Loureiro, Chinese Tamarisk. Cp (NC): coastal sands; rare, native of China, Korea, and Japan. [= C, K, Y, Z; = *T. pentandra* Pallas – G, an illegitimate name]

* ***Tamarix gallica*** Linnaeus, French Tamarisk. Cp (GA, NC): brackish marshes; rare, native of the w. Mediterranean region of Europe. April-July. Most reports of this taxon from the Southeast represent misidentifications or a very broad interpretation of the species. [= F, G, K, Y, Z; < *T. gallica* – RAB, S]

* ***Tamarix parviflora*** Augustin de Candolle, Small-flower Tamarisk. Cp (NC, VA): coastal sands; rare, native of ne. Europe (Italy, Greece, Cyprus, Turkey). [= C, G, K, Y, Z; < *T. gallica* Linnaeus – RAB, S]

* ***Tamarix ramosissima*** Ledebour, Salt-cedar. Cp (GA, NC, SC, VA): brackish marshes, coastal hammocks, dunes and coastal sands; common, native of w. to e. Asia. [= K, Y, Z; < *T. gallica* Linnaeus – RAB, S]

* ***Tamarix tetragyna*** C. Ehrenberg. Cp (GA): coastal sands; rare, introduced from the Middle East. Established on Cumberland Island, Camden County, GA (Crins 1989b). [= K, Y, Z]

* *Tamarix aralensis* Bunge, Russian Tamarisk. Reported for NC (Kartesz 1999), but the specimen on which the report is based is of a plant in cultivation as an ornamental. Not keyed. [= K, Y, Z]

TETRACHONDRACEAE Wettstein 1924 (Tetrachondra Family)

A family of 2 genera, *Polypremum* and *Tetrachondra* (Oxelman et al. 1999), and 3 species, perennial herbs, of s. North America south to South America, and New Zealand. References: Oxelman et al. (1999); Wagstaff in Kadereit (2004).

Polypremum Linnaeus (Polypremum)

The genus is monotypic; its assignment to family controversial, problematic, and unresolved. A recent molecular analysis strongly suggests that its closest relationship is with *Tetrachondra* (Oxelman et al. 1999). References: Rogers (1986)=Z; Wagstaff in Kadereit (2004).

Polypremum procumbens Linnaeus, Polypremum, Rustweed, Juniperleaf. Cp, Pd, Mt (GA, NC, SC, VA): fields, disturbed areas; common, rare in Mountains. Late May-September; August-October. Se. NY, NJ, and MO south to FL and TX, and south into tropical America. [= RAB, C, F, G, GW, K, S, W, Z]

THEACEAE D. Don 1825 (Tea Family)

With a more circumscribed definition (excluding Ternstroemiaceae), a family of about 8 genera and 195-460 species, trees and shrubs, of primarily tropical and subtropical regions of the Old and New Worlds. References: Prince & Parks (2001); Stevens, Dressler, & Weitzman in Kubitzki (2004).

1 Leaves deciduous, medium green above, herbaceous in texture.
  2 Leaves broader toward the tip, 2-2.5× as long as wide; [tribe *Gordonieae*].....***Franklinia***
  2 Leaves broadest near or below the middle, 1-1.8× as long as wide); [tribe *Stewartieae*].....***Stewartia***
1 Leaves evergreen, dark green above, coriaceous in texture.
  3 Leaves ovate to elliptic (broadest at or below the middle), 1-3× as long as wide, slightly to strongly acuminate, 5-10 (-15) cm long; [introduced shrub, planted in upland soils]; [tribe *Theeae*].....***Camellia***
  3 Leaves oblanceolate to narrowly elliptic (broadest at or above the middle), 2.5-4× as long as wide, acute to obtuse (rarely slightly acuminate), 8-30 cm long; [small to large tree, native in acidic Coastal Plain wetlands]; [tribe *Gordonieae*].....***Gordonia***

Camellia Linnaeus 1753 (Camellia, Tea)

A genus of about 100-300 species, shrubs and trees, of se. Asia. References: Stevens, Dressler, & Weitzman in Kubitzki (2004).

1 Sepals deciduous; flowers sessile; leaves mostly ovate, acuminate, > 4 cm wide.....***C. japonica***
1 Sepals persistent; flowers on pedicels; leaves mostly elliptic, only slightly acuminate, < 4 cm wide.....***C. sinensis***

* ***Camellia japonica*** Linnaeus, Camellia. Cp (GA, NC, SC): frequently cultivated, sometimes persistent around old home sites (especially in the Coastal Plain of NC and SC); rare, native of China and Japan. [= K]
* ***Camellia sinensis*** (Linnaeus) Kuntze, Tea. Cp (SC): cultivated in plantations and as a horticultural novelty, rarely escaped; rare, native to China. [= K; = *Thea sinensis* Linnaeus]

* *Camellia sasanqua* Thunberg, Sasanqua Camellia, is reported as introduced in NC, SC, GA, and FL (Kartesz 1999). [= K] {not keyed at this time}

Franklinia Bartram ex Marshall 1785 (Franklinia)

A monotypic genus, apparently endemic to e. GA (now presumably extinct in the wild). *Franklinia* is actually most closely related to the Asian genus *Schima* (Prince & Parks 2001); its closest relative in North America is *Gordonia*, from which it differs in its deciduous leaves (vs. evergreen) and globose fruits (vs. pointed). References: Bozeman & Rogers (1986); Stevens, Dressler, & Weitzman in Kubitzki (2004).

Franklinia alatamaha Bartram ex Marshall, Franklinia. Cp (GA): habitat speculative, probably dry sandy ridges, near the mouth of the Altamaha River; rare (believed to be extinct in the wild) (GA Special Concern). It was native to the Coastal Plain of GA, where it was found by William Bartram near the mouth of the Altamaha River. It has not been seen in the wild since 1790 and is now believed to be extinct in the wild. It is sometimes cultivated in our area. Bozeman & Rogers (1986) discuss the history of this tree. [= K, S; = *Gordonia alatamaha* (Bartram ex Marshall) Sargent]

Gordonia Ellis 1771 (Loblolly Bay, Gordonia)

As recircumscribed, a genus of 2 species, trees, of se. North America and Central America (*Gordonia brandegeei* H. Keng). The other 20-70 species, trees and shrubs, of se. Asia, previously assigned to *Gordonia* are actually in a different tribe and should be reassigned to *Polyspora* (Yang et al. 2004). References: Yang et al. (2004); Stevens, Dressler, & Weitzman in Kubitzki (2004).

Identification notes: *Gordonia* is one of the "bay trees" so typical of acid Coastal Plain wetlands of our area – the other two being Sweet Bay (*Magnolia virginiana* of the Magnoliaceae) and Swamp Red Bay (*Persea palustris* of the Lauraceae). *Gordonia* can be distinguished from the other two species by its smooth leaves, serrate toward the tip, odorless when crushed (vs. pubescent leaves, entire-margined, aromatic when crushed). *Gordonia* is also distinctive in its narrow, conical crown, resembling *Liriodendron* or *Chamaecyparis*, and its medium-gray, deeply furrowed bark. Most individuals of *Gordonia* have at least a few orange-red leaves visible, at any season.

Gordonia lasianthus (Linnaeus) Ellis, Loblolly Bay, Gordonia. Cp (GA, NC, SC): pocosins, acidic, organic-rich swamp forests, wet pine savannas, bay forests; common. July-September; September-October. Ne. NC south to s. peninsular FL, west to s. MS (Sorrie & Leonard 1999), a Southeastern Coastal Plain endemic. Peat-filled Carolina bays and large peat dome pocosins typically have *Gordonia* as an important tree, surpassed in abundance and importance only by *Pinus serotina*. On deep peats, *Gordonia* individuals are stunted and rarely reach sizes larger than pocosin shrubs. [= RAB, GW, K, S]

Stewartia Linnaeus 1753 (Stewartia, Wild Camellia)

A genus of about 10 species, trees and shrubs, of temperate e. Asia and e. North America. Both our species of *Stewartia* are very attractive shrubs. The other species of the genus are Asian. Li et al. (2002) demonstrate that our 2 species form a clade together, separate from and basal to the Asian species; Prince (2002) shows a different tree topology. References: Spongberg (1974)=Z; Li et al. (2002); Prince (2002); Stevens, Dressler, & Weitzman in Kubitzki (2004).

Identification notes: The leaves are borne in horizontal planes, reminiscent of *Cornus florida* and *Cornus alternifolia*. The leaves of both species are obscurely serrate or crenate, and also conspicuously and copiously ciliate-margined.

1 Style 1, with a 5-lobed stigma; seeds 5-7 mm long, shiny, plump, angled; fruits lobed, the lobes rounded; leaves mostly 4-10 cm long; petioles narrowly winged, not enclosing and concealing the terminal and lateral buds; calyx subtended by 2 persistent bracts, each 2-4 mm long ..... ***S. malacodendron***

1 Styles 5, separate; seeds 8-10 mm long, dull, flat, thin (to slightly winged); fruits lobed, the lobes angled; leaves mostly 7-15 cm long; petioles widely winged, enclosing and concealing the terminal and lateral buds; calyx subtended by 1 persistent bract, 11-14 mm long ..... ***S. ovata***

Stewartia malacodendron Linnaeus, Silky Camellia, Virginia Stewartia. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): mesic forests, especially on beech-dominated bluffs or "islands" in Coastal Plain swamps; uncommon, rare in Piedmont and Mountains (GA Rare, VA Rare List). May-June; September-October. Primarily Coastal Plain, se. VA south to FL, west to se. TX, but extending inland to the Piedmont of GA, NC, and SC and the Mountains of NC. [= RAB, K, W, Z; = *Stewartia malachodendron* – C, F, G (orthographic variant); = *Stuartia malachodendron* – S (orthographic variant)]

Stewartia ovata (Cavanilles) Weatherby, Mountain Camellia, Mountain Stewartia. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (VA): mesic forests, especially acidic bluffs, often in openings in rhododendron thickets ("hells"), in the Coastal Plain of VA restricted to ravines; rare (SC Rare List, NC Watch List, VA Rare List). Late June-July; August-September. Primarily Appalachian: e. KY, sc. VA, e. VA south to c. NC, w. SC, e. and c. TN to n. GA and n. AL, avoiding, however, the higher mountains, and extending into the Coastal Plain in e. VA. The species is most abundant in the Cumberland Plateau of KY and TN. [= RAB, C, F, G, K, W, Z; = *Malachodendron pentagynum* (L'Héritier) Small – S]

THYMELAEACEAE A.L de Jussieu 1789 (Mezereum Family)

A family of about 45-53 genera and 500-800 species, mostly trees and shrubs, of cosmopolitan distribution, but especially diverse in Africa (Van der Bank, Fay, & Chase 2002). References: Van der Bank, Fay, & Chase (2002); Herber in Kubitzki & Bayer (2003).

Dirca Linnaeus 1753 (Leatherwood, Leatherbark)

A genus of 3 species, shrubs, of North America (including Mexico). Our species is most closely related to *D. mexicana* Nesom & Mayfield, of the Sierra Madre Oriental, Tamaulipas, Mexico; the other species is *D. occidentalis* A. Gray of California (Schrader & Graves 2004). *Dirca* is in subfamily Thymelaeoideae (Van der Bank, Fay, & Chase 2002). References: Nevling (1962)=Z.

Dirca palustris Linnaeus, Leatherwood, Leatherbark, Wicopee, Rope-bark. Pd (GA, NC, SC, VA), Mt (GA, NC, VA), Cp (GA, VA): very rich forests, on slopes or bottomlands, limited to calcareous or mafic rocks such as limestone, calcareous siltstone, calcareous shale, gabbro, or amphibolite, in marl ravine bottoms in the Coastal Plain of VA; uncommon, rare south of VA and in VA Coastal Plain (NC Watch List, SC Rare List). March-April; June-July. Widespread in e. North America, from Nova Scotia and s. Québec, south to FL, AL, and OK. The curiously flexible twigs and swollen nodes are distinctive. The tan-brown bark is extraordinarily tough and was used by the native Americans for cordage; the common names refer to this property. [= RAB, C, F, G, K, S, W, Z]

Edgeworthia Meisner 1841 (Paperbush)

A genus of 3 species, shrubs, of e. Asia.

* *Edgeworthia papyrifera* Siebold & Zuccarini, Paperbush, is reported for Rabun County, GA by Jones & Coile (1988). [= K] {not keyed at this time}

TILIACEAE (Basswood Family)
(see MALVACEAE)

TROPAEOLACEAE A.L de Jussieu ex DC. 1824 (Nasturtium Family)

A family of 1-3 genera and about 90 species, herbs, of Central and South America. References: Sparre & Andersson (1991)=Z; Bayer & Appel in Kubitzki & Bayer (2003).

Tropaeolum Linnaeus 1753 (Nasturtium)

A genus of about 85-90 species, herbs, of tropical Central America and South America (s. Mexico to Peru). References: Sparre & Andersson (1991)=Z.

* *Tropaeolum majus* Linnaeus, Nasturtium, is cultivated and rarely persistent or present around refuse areas, as in se. PA (Rhoads & Klein 1993). *T. majus* is considered by Sparre & Andersson (1991) to be a taxon of hybrid origin, not known from wild populations. It is probably not truly established in our area. [= K, Z]

TURNERACEAE Kunth ex DC. 1828 (Turnera Family)

A family of about 10 genera and 100 species, shrubs, herbs, and trees, of tropical and subtropical Africa and America.

Piriqueta Aublet

A genus of about 21 species, of tropical and subtropical America and Africa. References: Arbo (1990, 1995)=Z; Maskas & Cruzan (2000).

Piriqueta caroliniana (Walter) Urban *var.* ***caroliniana***. Cp (GA, SC): longleaf pine sandhills, sandy soils of roadsides, woodland edges, and disturbed areas; uncommon. May-September. SC south to n. FL; Cuba and Hispaniola; and in Central and n. South America. Arbo (1990; 1995) treats *P. caroliniana* as a subspecies of *P. cistoides*, but the morphological distinctions seem strong and the two taxa have widely overlapping distributions in the Neotropics. Maskas & Cruzan (2000) discuss variation and evolutionary taxa in this complex in the southeastern United States and the Bahamas. [= *P. caroliniana* -- RAB; < *P. cistoides* (Linnaeus) Grisebach ssp. *caroliniana* (Walter) M.M. Arbo – K, Z; = *P. caroliniana* – S]

Piriqueta cistoides (Linnaeus) Grisebach is reported for GA (Kartesz 1999) with untraceable documentation. {not keyed; rejected pending better documentation} [= *P. cistoides* ssp. *cistoides* – K, Z]

ULMACEAE de Mirbel 1815 (Elm Family)
[also see *CANNABACEAE*]

As here circumscribed (excluding the Celtidaceae), a family of 6-7 genera and about 35 species, of temperate, subtropical, and boreal Northern Hemisphere, rarely extending into the Southern Hemisphere). Zavada & Kim (1996) discuss compelling reasons to recognize the *Celtis* from the Ulmaceae. The distinctiveness of the Celtidaceae from the Cannabaceae and Moraceae is more questionable. References: Sherman-Broyles, Barker, & Schulz in FNA (1997); Zavada & Kim (1996); Todzia in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves strongly 3-veined from the base, the venation otherwise pinnate; fruit a drupe with thin flesh ..... ***[Celtis** – see CANNABACEAE**]***
1 Leaf venation pinnate throughout, the venation strictly pinnate; fruit dry, a samara (flat and winged) or nutlike (with numerous fleshy protuberances).
  2 Fruit nutlike (with numerous fleshy protuberances); primary lateral veins mostly forking before reaching the margin; [small trees of swamp forests of the Coastal Plain from se. NC and SC southward] ..... ***Planera***
  2 Fruit a samara (flat and winged); primary lateral veins mostly parallel and unforked to the leaf margin; [small to large trees, widespread in our area]..... ***Ulmus***

Planera J.F. Gmelin 1791 (Planer-tree, Water-elm)

A monotypic genus, a tree, of temperate se. North America. References: Barker in FNA (1997); Todzia in Kubitzki, Rohwer, & Bittrich (1993).

Planera aquatica (Walter) J.F. Gmelin, Planer-tree, Water-elm. Cp (GA, NC, SC): river swamps where flooded (often to depths of 1-2 m) in the winter; common (uncommon in NC and limited to the Waccamaw River and the Lumber River). Se. NC south to n. FL, west to e. TX, and north in the Mississippi Embayment to w. TN, w. KY, s. IL, and se. MO. [= RAB, C, F, FNA, G, GW, K, S]

Ulmus Linnaeus 1753 (Elm)

A genus of about 25-30 species, trees (rarely shrubs), of temperate and boreal regions of the Northern Hemisphere (most diverse in c. and n. Asia). References: Sherman-Broyles in FNA (1997); Wiegrefe, Sytsma, & Guries (1994); Kurz & Godfrey (1962)=Z; Todzia in Kubitzki, Rohwer, & Bittrich (1993). Key adapted in part from FNA.

1 Leaf blades mostly < 7 cm long, the base symmetrical to somewhat oblique.
- 2 Samaras ciliate-margined; twigs often cork-winged; upper surfaces of leaves glabrous to scabrous; [native trees, sometimes weedy].
  - 3 Leaf apex acute; flowers appearing in the late winter to late spring; calyx lobes 5; upper surfaces of leaves glabrous to somewhat scabrous; [widespread in our area; [subgenus *Oreoptelea*, section *Chaetoptelea*] ..... ***U. alata***
  - 3 Leaf apex obtuse; flowers appearing in the late summer to fall; calyx lobes 6-9; upper surfaces of leaves harshly scabrous; [of w. TN, w. MS westward, and in FL]; [subgenus *Oreoptelea*, section *Trichoptelea*] ..... ***[U. crassifolia]***
- 2 Samaras with glabrous margins; twigs never cork-winged; upper surfaces of leaves glabrous; [introduced trees, planted and sometimes naturalized or persistent]; [subgenus *Ulmus*, section *Microptelea*].
  - 4 Flowers appearing in the late summer to fall; leaf base generally oblique; leaves 1.5-2.5 cm wide, 5 or more of the lateral veins forked per side ..... ***U. parvifolia***
  - 4 Flowers appearing in the late winter to late spring; leaf base generally symmetrical; leaves 2-3.5 cm wide, 3 or fewer of the lateral veins forked per side ..... ***U. pumila***

1 Leaf blades mostly > 7 cm long, the base moderately to strongly oblique (rarely nearly symmetrical).
- 5 Leaf uppersurface slightly to very strongly scabrous; leaf undersurface tomentose or villous, with tufts of hairs in the vein axils; flowers and fruits sessile or subsessile (on pedicels 0-2 mm long), not pendulous, in dense fascicles; [subgenus *Ulmus*, section *Ulmus*].
  - 6 Leaves with ciliate margins; samara pubescent on the body with reddish hairs; bud scales red, the margins red-tomentose; [native tree] ..... ***U. rubra***
  - 6 Leaves without ciliate margins; samara glabrous except along the margin of the notched apex **or** on the central vein of the wing; bud scales brown, margins pale-cilate; [introduced tree, planted and sometimes naturalized or persistent]
    - 7 Leaf base strongly oblique, the lower side overlapping the petiole; branchlets not corky; samara glabrous except on the central vein of the wing ..... ***[U. glabra]***
    - 7 Leaf base oblique but not overlapping the petiole; branchlets with corky wings; samara glabrous except along the margin of the notched apex ..... ***U. procera***
- 5 Leaf uppersurface glabrous (or slightly to moderately scabrous on stump sprouts or seedlings); leaf undersurface glabrous to tomentose, with or without tufts of hairs in the vein axils; flowers and fruits pedicellate (on pedicels 5-20 mm long), pendulous, in fascicles or racemes.
  - 8 Leaf undersurfaces glabrous or slightly pubescent, but always with tufts of hairs in the vein axils; branches never with corky wings; inflorescence a fascicle; [trees widespread in our area]; [subgenus *Oreoptelea*, section *Blepharocarpus*].
    - 9 Leaf bases strongly oblique; larger leaves 10-15 cm long; primary leaf teeth acuminate, often curved inward; [tree widespread in our area] ..... ***U. americana*** *var.* ***americana***
    - 9 Leaf bases moderately oblique (rarely nearly symmetrical); larger leaves 7-10 cm long; primary leaf teeth acute, not curved; [tree restricted to moist calcareous sites in the Coastal Plain of se. NC southward] ..... ***U. americana*** *var.* ***floridana***
  - 8 Leaf undersurfaces moderately white or yellowish soft-pubescent, lacking prominant tufts of hairs in the vein axils (differing from the general pubescence of the surface); branches often developing corky wings; inflorescence a raceme or racemose cyme; [trees of calcareous areas immediately west of our area]; [subgenus *Oreoptelea*, section *Trichoptelea*].
    - 10 Leaves 7-8 (-14) cm long, lanceolate to ovate, the undersurface with yellowish-gold pubescence; buds and young twigs glabrous; calyx lobes 5-6; seeds thickened ..... ***U. serotina***
    - 10 Leaves 9-11 (-16) cm long, obovate, the undersurface with whitish pubescence; buds and young twigs pubescent; calyx lobes 7-8; seeds inflated ..... ***[U. thomasii]***

Ulmus alata Michaux, Winged Elm. Cp, Pd, Mt (GA, NC, SC, VA): rock outcrops, dry and mesic forests and woodlands, bottomlands, old fields, disturbed areas, common (rare in the Mountains). February-March; March-April. N. VA west to MO, south to c. peninsular FL and c. TX. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Ulmus americana Linnaeus *var.* ***americana***, American Elm, White Elm. Cp, Pd, Mt (GA, NC, SC, VA): swamps, bottomland forests, moist slopes, especially on relatively or strongly nutrient-rich substrates; common (rare in Mountains of NC and SC). February-March; March-April. Nova Scotia, New Brunswick, and Québec west to se. Saskatchewan, south to n. FL and c. TX. An ascomycetous fungus, *Ceratocystis ulmi*, is the cause of the Dutch Elm disease. In our area, the effects of the disease appear to have been mild or nonexistent, especially in natural areas. [= Z; < *U. americana* – RAB, C, F, FNA, G, GW, K, W; = *U. americana* – S]

Ulmus americana Linnaeus *var.* ***floridana***, Florida Elm. Cp (GA, NC, SC): shell middens, other calcareous forests; uncommon. January-March; February-April. Se. NC (north at least to Carteret County) south to c. peninsular FL, west to panhandle FL. [= Z; < *U. americana* – RAB, C, F, FNA, G, GW, K, W; = *U. floridana* Chapman – S]

* ***Ulmus parvifolia*** Jacquin, Chinese Elm, Lacebark Elm. Cp, Mt (VA), Pd (NC, VA): disturbed areas; rare, introduced from China and Japan. August-October; September-November. [= FNA, K]

* ***Ulmus procera*** Salisbury, English Elm, English Cork Elm. Cp (NC, VA), Pd, Mt (VA): disturbed areas; rare, introduced from Europe. [= C, FNA, K; *U. minor* P. Miller, misapplied]

* ***Ulmus pumila*** Linnaeus, Siberian Elm, Dwarf Elm. Cp (NC, VA), Pd, Mt (VA): disturbed areas; rare, introduced from Asia. [= C, F, FNA, K]

Ulmus rubra Muhlenberg, Slippery Elm, Red Elm. Mt, Pd, Cp (GA, NC, SC, VA): moist to fairly dry calcareous forests, rich bottomlands, rich cove forests in the low Mountains; common (rare in Coastal Plain of GA, NC, and SC). February-March; March-April. ME, Québec, and Ontario west to MN and ND, south to panhandle FL and c. TX. [= RAB, C, FNA, G, K, W, Z; = *U. fulva* Michaux – S]

Ulmus serotina Sargent, September Elm. Mt (GA): mesic limestone forests; rare (GA Rare). KY, s. IL, and e. OK south to e. TN, nw. GA, AL, and MS. It was collected on the French Broad River by Rugel in 1842, and has been attributed to NC by Mohr. [= C, FNA, F, G, K, S]

Ulmus crassifolia Nuttall, Cedar Elm. Bottomlands, mesic forests. W. TN, s. MO, and OK south to MS, LA, and TX; disjunct in e. Panhandle FL. [= FNA, K, S, Z]

* *Ulmus glabra* Hudson, Wych Elm, Scotch Elm. Introduced from Europe in ne. United States; reported from VA and DC (Sherman-Broyles in FNA 1997), but may only be cultivated. [= FNA, C, F, K]

Ulmus thomasii Sargent, Cork Elm, Rock Elm. Rocky or rich slopes, especially over limestone. Québec to MN and NE, south to NJ, MD, PA, WV, KY, TN, AR, and KS. [= C, FNA, K; = *U. thomasi* – F, G, orthographic variant]

URTICACEAE A.L. de Jussieu 1789 (Nettle Family)

A family of about 45 genera and 1000 species, herbs, shrubs, vines, and trees, of cosmopolitan distribution in tropical, subtropical, and temperate regions. References: Boufford in FNA (1997); Friis in Kubitzki, Rohwer, & Bittrich (1993); Miller (1971a).

1 Leaves alternate.
- 2 Flowers in axillary spikes; woody herb to 4 m tall; [tribe *Boehmerieae*] ..... ***Boehmeria nivea***
- 2 Flowers in terminal panicles, axillary panicles, or axillary fascicles; herb to 1.5 m tall.
  - 3 Leaves 4-13 cm wide, with stinging trichomes; [tribe *Urticeae*] ..... ***Laportea***
  - 3 Leaves 0.8-2 cm wide, lacking stinging trichomes; [tribe *Parietarieae*] ..... ***Parietaria***

1 Leaves opposite.
- 4 Plant with stinging trichomes, these having a distinct bulbous or cylindrical base, and a stiff, translucent apex; [tribe *Urticeae*] ..... ***Urtica***
- 4 Plant without stinging trichomes (or these minute and not apparent), the non-stinging hairs (if present) soft and flexible, lacking a bulbous or cylindrical base.
  - 5 Flowers in axillary spikes; foliage dull, yellow-green; [tribe *Boehmerieae*] ..... ***Boehmeria cylindrica***
  - 5 Flowers in axillary panicles or fascicles; foliage shiny, bright green; [tribe *Lecantheae*] ..... ***Pilea***

Boehmeria Jacquin 1760 (False-nettle)

A genus of about 80 species, trees, shrubs, and perennial herbs, of warm temperate, subtropical, and tropical regions of the Old World and New World. References: Friis in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves opposite; monoecious herb to 1.5 m tall; [subgenus *Duretia*] ..... ***B. cylindrica***
1 Leaves alternate; dioecious herb to 4 m tall; [subgenus *Tilocnide*] ..... ***B. nivea***

Boehmeria cylindrica (Linnaeus) Swartz, False-nettle. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, bottomlands, bogs, marshes, other wetlands; common. July-August; September-October. Québec and MN south to FL and NM. [= RAB, C, FNA,

G, GW, K, W; > *B. cylindrica* var. *cylindrica* – F; > *B. cylindrica* var. *drummondiana* (Weddell) Weddell – F; > *B. cylindrica* – S; > *B. drummondiana* Weddell – S]

* ***Boehmeria nivea*** (Linnaeus) Gaudichaud-Beaupré, Ramie. Cp (SC), {VA}: waste ground; rare, introduced from Asia. This plant is cultivated for the fiber of its stems, which is extracted and used for fabric in a manner reminiscent of linen (from *Linum usitatissimum*). [= RAB, FNA, K; = *Ramium niveum* (Linnaeus) Small – S]

Laportea Gaudichaud-Beaupré 1830 (Wood-nettle)

A genus of about 21 species, shrubs, perennial herbs, and annual herbs, of tropical and warm temperate e. Asia and temperate e. North America. References: Friis in Kubitzki, Rohwer, & Bittrich (1993).

Laportea canadensis (Linnaeus) Weddell, Wood-nettle. Mt, Pd, Cp (GA, NC, SC, VA): moist, nutrient-rich forests, especially abundant in cove forests in the Mountains and bottomlands in the Piedmont; common (rare in Coastal Plain). Late June-August; late July-October. Nova Scotia and se. Manitoba south to panhandle FL and OK. By mid-summer, *Laportea* often becomes the aspect dominant in rich, moist cove forests of the mountains (especially those with extensive seepage), visually replacing the diverse spring flora. The stinging hairs can penetrate pants made of light-weight or loosely woven fabrics. [= RAB, C, F, FNA, G, GW, K, W; *? Urticastrum divaricatum* (Linnaeus) Kuntze – S]

Parietaria Linnaeus 1753 (Pellitory)

A genus of about 20 species, annual and perennial herbs, of nearly cosmpolitan distribution. References: Hinton (1968)=Z; Friis in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves softly pubescent; [alien weed]; [subgenus *Parietaria*]..... ***P. judaica***
1 Leaves glabrescent; [native, sometimes weedy in calcareous or coastal areas]; [subgenus *Freirea*].
  2 Main lateral veins diverging from the midvein above the usually narrowly cuneate leaf base; larger leaves 2-5× as long as wide ..... ***P. pensylvanica* *var*. *pensylvanica***
  2 Main lateral veins diverging from the midvein at the usually truncate, rounded, or broadly cuneate leaf base; larger leaves 1-2× as long as wide.
    3 Achene with a flanged stipe, the minute apiculate tip located symmetrically at the pole of the achene, the achene 0.8-1.0 mm long ..... ***P. floridana***
    3 Achene without a flanged stipe, the minute apiculate tip located asymmetrically, the achene usually 1.2 (-1.4) mm long ..... ***P. praetermissa***

*? ***Parietaria floridana*** Nuttall, Florida Pellitory. Cp (GA, NC, SC): coastal shores, sometimes weedy in calcareous situations; rare, perhaps only introduced in our area (NC Watch List). March-frost; April-frost. DE south to FL and west to TX, on the outer Coastal Plain. This species has smaller leaves than *P. praetermissa*. [= FNA, GW, K, Z; *P. nummularia* Small – C, F, S]

* ***Parietaria judaica*** Linnaeus, Pellitory-of-the-wall. Cp (VA): disturbed urban areas; rare, introduced from Europe. [= FNA, K; *P. diffusa* Mertens & Koch]

Parietaria pensylvanica Muhlenberg ex Willdenow *var*. ***pensylvanica***, Pennsylvania Pellitory, Rock Pellitory. Mt (GA, NC, VA), Pd, Cp (NC, VA): in circumneutral soils, such as in thin soils at the bases of calcareous or subcalcareous cliffs or on calcareous shale barrens; uncommon, rare in VA Coastal Plain and NC (GA Special Concern, NC Watch List). April-October; May-October. ME west to British Columbia, south to e. NC, w. NC, AL, TX, NV, and Mexico (though scattered and irregular in much of that area). Var. *pensylvanica* is eastern and northern; var. *obtusa* (Rydberg ex Small) Shinners is southwestern. [< *P. pensylvanica* – C, FNA, G, GW, K, RAB, S, W, infraspecific taxa not recognized; = *P. pensylvanica* – F (sensu stricto)]

Parietaria praetermissa Hinton, Coastal Pellitory. Cp (GA, NC, SC): shell middens, coastal hammocks; rare (NC Watch List). March-frost; April-frost. E. NC south to FL and west to LA. [= FNA, GW, K, Z; *P. floridana* Nuttall – RAB, C, F, S, misapplied]

Pilea Lindley 1821 (Clearweed)

A genus of about 250 species, annual and perennial herbs, nearly cosmpolitan in tropical and warm temperate regions of the Old World and the New World. References: Friis in Kubitzki, Rohwer, & Bittrich (1993).

1 Leaves 0.5-1.0 (-1.8) cm long ..... ***P. microphylla***
1 Leaves 4-10 cm long.
  2 Achene 1-1.5× as long as broad, tuberculate, dark brown or black, the margins slightly paler..... ***P. fontana***
  2 Achene 1.5-2× as long as broad, smooth, green or light brown, with slightly raised dark to black lines and mottlings ..... ***P. pumila***

Pilea fontana (Lunell) Rydberg, Blackfruit Clearweed, Lesser Clearweed. Cp, Mt, Pd (NC, SC, VA): swamp forests, freshwater marshes, calcareous wetlands; uncommon (SC Rare List). August-September; September-November. E. Canada west to MN and ND, south to FL, IN, and NE. Only reliably distinguishable from ***P. pumila*** using fruits, ***P. fontana*** is, however, somewhat less shiny and transparent-translucent. [= RAB, C, F, FNA, G, GW, K, W; < *Adicea pumila* (Linnaeus) Rafinesque – S]

* ***Pilea microphylla*** (Linnaeus) Liebmann, Rockweed, Artillery Weed. Cp (GA, SC): old rock and brick walls, urban areas; rare. January-December. Although listed by RAB for the Carolinas as "a weed in and around greenhouses, not established as part of our flora," this species is well-established and weedy in Charleston, SC and Savannah, GA. It is presumably adventive from further south. [= RAB, FNA, K, S]

Pilea pumila (Linnaeus) A. Gray, Greenfruit Clearweed, Coolwort, Richweed. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): swamp forests, bottomlands, freshwater marshes; common. August-September; September-November. Québec west to MN, south to FL, LA, and OK. [= RAB, C, FNA, G, GW, W; > ***P. pumila*** var. *pumila* – F, K; > ***P. pumila*** var. *deamii* (Lunell) Fernald – F, K; < *Adicea pumila* (Linnaeus) Rafinesque – S (including in concept ***P. fontana***)]

Urtica Linnaeus 1753 (Stinging Nettle)

A genus of about 80 species, annual and perennial herbs, nearly cosmpolitan, but primarily in temperate regions of the Northern Hemisphere. References: Woodland (1982)=Z; Woodland, Bassett, Crompton, & Forget (1982); Friis in Kubitzki, Rohwer, & Bittrich (1993).

1 Tap-rooted annual; stipules 1-3 mm long, spreading or deflexed; inflorescences usually shorter than the subtending leaf petiole, each panicle consisting of a mixture of pistillate and staminate flowers.
  2 Flower clusters subglobose; mature achenes ovate, 1-1.5 mm long, < 1 mm wide; leaf teeth generally blunt, the sides of the tooth convex ..... ***U. chamaedryoides***
  2 Flower clusters elongate; mature achenes triangular, 1.5-2.5 mm long, 1-1.5 mm wide; leaf teeth generally sharp, the sides of the tooth straight ..... ***U. urens***
1 Rhizomatous perennial; stipules 5-15 mm long, erect; inflorescences usually surpassing the subtending leaf petiole, each panicle of either pistillate or staminate flowers.
  3 Plants dioecious (male and female flowers always on separate plants); stems usually weak, sprawling, branching; stems strongly hispid with stinging hairs; leaf blades strongly hispid with stinging hairs on both surfaces; leaf teeth commonly 5-6 mm long ..... ***U. dioica***
  3 Plants mostly monoecious (with male and female flowers in separate inflorescences on the same plant), rarely an entire plant male or female; stems upright, erect, less branched; stems glabrous to puberulent or strigose, lacking (or nearly so) stinging hairs; leaf blades glabrous or glabrescent above (lacking stinging hairs), glabrous to puberulent below (with some stinging hairs); leaf teeth commonly 2-3.5 mm long ..... ***U. gracilis***

Urtica chamaedryoides Pursh, Dwarf Stinging Nettle. Cp (GA, NC, SC), Pd (NC, SC): rich moist soil, usually on floodplains; rare (NC Rare). November-May; May-July. WV, KY, se. MO and OK south to FL, TX, and Mexico; very rare east of the Blue Ridge. Notable locations in our area include Stevens Creek (Richmond County, SC), and various sites on very rich levees of the Roanoke River (NC). Gaddy & Rayner (1980) report the common winter flowering of this species in our area. [= RAB, C, F, FNA, G, K, S, Z]

* ***Urtica dioica*** Linnaeus, European Stinging Nettle, Great Nettle. Mt , Cp (GA, NC, VA), Pd (NC, VA): disturbed areas, primarily in calcareous soils; uncommon, introduced from Europe. May-July; July-September. See *U. gracilis* for discussion of the two taxa. [= F, S; < *U. dioica* – RAB, W (also see *U. gracilis*); = *U. dioica* var. *dioica* – C, G; = *U. dioica* ssp. *dioica* – FNA, K, Z]

Urtica gracilis Aiton, American Stinging Nettle. Mt (NC?, VA), Pd (VA): bottomland forests and edges, particularly over limestone; rare (NC Watch List). May-July; July-September. Labrador and Nova Scotia west to AK, south to sw. VA, w. NC (?), s. OH, s. IL, s. MO, n. TX, s. NM, and se. AZ. The native stinging nettle of e. and c. North America is best treated as specifically distinct from *U. dioica* of Europe. Woodland (1982) and Woodland, Bassett, Crompton, & Forget (1982) showed that *U. gracilis* differs from *U. dioica* in a variety of morphologic characters (see key), chromosome number (2n = 26 for *U. gracilis*, 2n = 52 for *U. dioica*), breeding system (monoecy vs. dioecy), and distribution (North American vs. Eurasian); furthermore, the two taxa could not be crossed. Woodland (1982) chose subspecific status, apparently to emphasize the close relationship of the two (and a third taxa in w. North America). The combination of morphological distinctiveness, allopatry, major differences in species biology, and incompatability seem adequate to warrant separation as species, however. Until herbaria can be checked, it is uncertain whether *U. gracilis* occurs in NC. F (as *U. procera*), G (as *U. dioica* var. *procera* and S include NC in the range; Woodland (1982), however, showed the range as extending only south to VA. [= S; < *U. dioica* – RAB, W; = *U. dioica* Linnaeus var. *procera* (Muhlenberg ex Willdenow) Weddell – C, G; > *U. gracilis* Aiton – F; > *U. procera* Muhlenberg – F; = *U. dioica* Linnaeus ssp. *gracilis* (Aiton) Selander – FNA, K, Z]

* ***Urtica urens*** Linnaeus, Burning Nettle, Dog-nettle, Small Nettle. Cp (SC), Mt (VA), {GA}: disturbed areas; rare, introduced from Eurasia. April-May; May-July. [= RAB, C, F, FNA, G, K, S, Z]

VALERIANACEAE Batsch 1802 (Valerian Family)

A family of about 10 genera and 300-350 species, herbs (rarely shrubs), nearly cosmopolitan in distribution. References: Bell (2004); Ferguson (1965).

1 Stem leaves pinnately compound..... ***Valeriana***
1 Stem leaves simple..... ***Valerianella***

Valeriana Linnaeus (Valerian)

A genus of about 200 species, herbs and shrubs, of temperate North America and Eurasia, s. Africa, and Andean South America.

1 Corolla tube 3-4 mm long..... ***[V. officinalis]***
1 Corolla tube 12-16 mm long..... ***V. pauciflora***

Valeriana pauciflora Michaux, Pink Valerian, Long-tube Valerian. Pd (VA): very nutrient-rich alluvium in floodplain forests; rare. May; June. MD, se. PA, and sw. PA, west to s. IL, south to n. VA, sc. TN, KY, and MO. [= C, F, G, K, W]

* *Valeriana officinalis* Linnaeus, Garden-heliotrope, is a European species sometimes cultivated in our area; it may escape or persist. May-August. [= C, F, G, K]

Valerianella P. Miller (Corn-salad)

A genus of about 50 species, herbs, of temperate North America, Eurasia, and n. Africa. References: Ware (1983)=Z.

Identification notes: *Valerianella* species exhibit an interesting set of fruit polymorphisms; the fruit forms in a single species are often strikingly different, and these forms were traditionally regarded as separate taxa. Ware (1983) demonstrated that they were under simple genetic control, and that different fruit forms were found in the same population. Thus, some taxa previously considered distinct are best considered mere fruit types. The fruit consists of three locules, one of which is fertile and dorsal to or more-or-less flanked by the two sterile locules. The sterile locules may be elongate, forming (between them) a groove, or they may be expanded laterally well beyond the width of the fertile locule into flattened or bulbous wings. In *V. locusta*, there is additionally a corky mass on the side of the fertile locule opposite the two sterile locules.

1 Fruit greatly thickened by a corky mass on the back of the fertile locule; corolla pale blue (or white) ..... ***V. locusta***
1 Fruit lacking a corky mass on the back of the fertile locule; corolla white.
  2 Corolla 1.5-2 mm long, the corolla lobes 0.4-0.8 mm long..... ***V. radiata***
  2 Corolla 3-5 mm long, the corolla lobes 1-2 mm long ..... ***V. umbilicata***

* ***Valerianella locusta*** (Linnaeus) Lat., European Corn-salad. Pd (GA, NC, SC, VA), Cp (NC, VA), Mt (GA, NC, VA): roadsides, moist forests, bottomlands, disturbed areas; common, introduced from Europe. April-May. [= RAB, C, K, S, Z; = *V. olitoria* (Linnaeus) Pollich – F, G]

Valerianella radiata (Linnaeus) Dufresne. Cp, Pd, Mt (GA, NC, SC, VA): moist forests, bottomlands, disturbed areas; common. April-May. VA, s. IL, and KS, south to FL and TX. [= RAB, C, K, S, Z; > *V. radiata* var. *fernaldii* Dyal – F, G; > *V. radiata* var. *radiata* – F, G]

Valerianella umbilicata (Sullivant) Wood. Pd, Mt (NC, VA), Cp (VA), {SC?}: moist forests, bottomlands, disturbed areas; rare. S. NY west to IL, south to NC and sc. TN (Chester, Wofford, & Kral 1997). Ware (1983) raises the question of whether *V. woodsiana* is a distinct taxon; further study is needed. [= RAB, C; > *V. umbilicata* – F, G, K, S, Z; > *V. patellaria* (Sullivant ex A. Gray) Wood – F, S; *V. intermedia* Dyal – F; = *V. radiata* var. *intermedia* (Dyal) Gleason – G; > *V. woodsiana* (Torrey & A. Gray) Walpers – K, S, Z]

Valerianella chenopodiifolia (Pursh) Augustin de Candolle ranges south to s. PA, MD, and WV (Kartesz 1999) and might be expected in the northern part of our area. [= K; = *V. chenopodifolia* – C, F, G, orthographic variant] {not keyed at this time; synonymy incomplete}

* ***Valerianella dentata*** (Linnaeus) Pollich is reported as naturalized in central TN by Kral (1981) and Chester et al. (1997), in nc. GA (Jones & Coile 1988), and in AL (Kartesz 1999). [= K] {not keyed at this time; synonymy incomplete}

VERBENACEAE J. St.-Hilaire 1805 (Verbena Family)
(also see *LAMIACEAE* and *PHRYMACEAE*)

As recently reworked, a family of about 34-41 genera and 950-1200 species, trees, shrubs, vines, and herbs, widespread in tropical, subtropical, and warm temperate regions of the Old World and New World. References: Atkins in Kadereit (2004).

tribe Verbeneae: *Glandularia, Stylodon, Verbena*.
tribe Lantaneae: *Aloysia, Lantana, Phyla.*

Aloysia Palau 1784 (Bee-brush)

A genus of about 30 species, shrubs, of tropical and subtropical America. References: Atkins in Kadereit (2004).

* *Aloysia triphylla* (L'Héritier) Britton, Lemon Bee-brush, is allegedly introduced in Iredell County, in the Piedmont of NC (Moldenke 1980); the documentation is unknown. [= K]

Glandularia J.F. Gmelin 1796 (Vervain)

A genus of about 100 species, herbs, of s. North America, Central America, and South America. References: Umber (1979)=Z; Atkins in Kadereit (2004).

1 Leaves finely dissected, the divisions 1 mm or less wide, the margins strongly revolute.
  2 Bracts as long as or longer than the calyx; leaf segments 1-4 mm wide ..... ***G. bipinnatifida*** *var*. ***bipinnatifida***
  2 Bracts much shorter than the calyx; leaf segments 0.5-1.5 mm wide..... ***G. pulchella***
1 Leaves coarsely dissected or lobed, the divisions > 1 mm wide, the margins slightly or not at all revolute.
  3 Calyx lobes > 3 mm long ..... ***G. canadensis***
  3 Calyx lobes < 3 mm long ..... ***G.*** ×***hybrida***

Glandularia bipinnatifida (Nuttall) Nuttall *var*. ***bipinnatifida***, Dakota Vervain. Cp, Mt (GA): dry prairies on clay soils; rare (GA Special Concern). KY, MO, SD, and CO south to c. GA, AL, AZ and s. Mexico; elsewhere in e. North America as waifs. [= K; = *Verbena bipinnatifida* Nuttall – C] {not keyed at this time; synonymy incomplete}

Glandularia canadensis (Linnaeus) Nuttall, Rose Vervain, Rose Verbena, Creeping Vervain. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): roadsides, sandhills, other dry (especially sandy) soils; uncommon. March-May. PA, IL, and CO, south to FL and TX, and introduced elsewhere. [= K, S, Z; = *Verbena canadensis* Linnaeus – RAB, C, F, G]

* ***Glandularia*** ×***hybrida*** (Grönland & Rümpler) Nesom & Pruski, Garden Vervain. Cp (SC): cultivated in gardens; uncommonly cultivated, rarely escaped or persistent. March-July. Nesom & Pruski (1992) have provided the transfer to *Glandularia* of this common garden plant. [= *Verbena* ×*hybrida* Grönland & Rümpler – RAB, G, K; = *Verbena hybrida* – C]

* ***Glandularia pulchella*** (Sweet) Troncoso, Moss Vervain, South American Vervain. Cp (GA, NC, SC), Pd (GA, SC): pastures, roadsides, other disturbed areas; common, introduced from South America. March-November. [= K, Z; *Verbena tenuisecta* Briquet – RAB, C; *G. tenuisecta* (Briquet) Small – S]

Lantana Linnaeus 1753 (Lantana)

A genus of about 150 species, shrubs and subshrubs, of tropical and subtropical America and Africa. References: Sanders (1987)=Z; Sanders (2006)=Y; Atkins in Kadereit (2004).

1 Heads with an involucre; flowers pink or purple ..... ***L. montevidensis***
1 Heads with bracts, but not an involucre; flowers orange, yellow, or multicolored.
  2 Stems lacking prickles ..... ***L. depressa*** *var*. ***floridana***
  2 Stems with scattered retrorse prickles.
    3 Calyx lobes acute, as long as or longer than the calyx tube ..... ***L. camara***
    3 Calyx lobes obtuse, shorter than the calyx tube ..... ***L. urticoides***

* ***Lantana camara*** Linnaeus, Common Lantana, Hedgeflower. Cp (GA, NC, SC): disturbed areas, especially near the coast; rare, introduced. [= RAB, K, S, Z]

*? ***Lantana depressa*** Small *var*. ***floridana*** (Moldenke) R. Sanders, Florida Lantana. Cp (SC): edges of brackish marshes, dunes; rare, apparently introduced from FL. Native from ne. FL south to se. FL. [= K, Z; < *L. ovatifolia* Britton – RAB, S, misapplied; < *L. depressa* Small – S]

* ***Lantana montevidensis*** (Sprengel) Briquet, Trailing Shrub-verbena, Polecat-geranium. Cp (GA): disturbed areas; rare, introduced. Scattered locations in s. and e. GA (Jones & Coile 1988). [= K; = *L. sellowiana* Link & Otto – S]

* ***Lantana urticoides*** Hayek, West Indian Lantana. Cp (NC, SC): disturbed and brackish areas; rare, native of West Indies. May-December. [= K; < *L. horrida* Kunth – RAB, misapplied]

Phyla Loureiro 1790 (Frogfruit, "Fogfruit")

A genus of about 11-15 species, herbs, of tropical, subtropical, and warm temperate regions of the Old and New Worlds. References: Atkins in Kadereit (2004).

1 Leaves 2-6 cm long, lanceolate, widest at or below the middle, acute at the tip; leaf teeth (5-) 7-11 per leaf side ..... ***Ph. lanceolata***
1 Leaves 1-4 cm long, obovate, widest above the middle, obtuse to rounded at the tip; leaf teeth (3-) 5 (-7) per leaf side ..... ***Ph. nodiflora***

Phyla lanceolata (Michaux) Greene, Marsh Frogfruit, Northern Frogfruit. Cp (GA, NC, SC, VA), Pd, Mt (VA): brackish marshes, other marshes, ditches; common (GA Special Concern). June-November. Ontario west to SD, south to ne. FL, AL, MS, LA, CA, and n. Mexico; primarily in the outer Coastal Plain in the Carolinas, but extending inland in VA. [= C, G, GW, K, S, W; = *Lippia lanceolata* Michaux – RAB; > *L. lanceolata* var. *lanceolata* – F; > *Lippia lanceolata* var. *recognita* Fernald & Griscom – F]

Phyla nodiflora (Linnaeus) Greene, Creeping Frogfruit, Capeweed, Turkey-tangle, Matgrass. Cp (GA, NC, SC, VA): sandy soils of roadsides, lawns, ditches, disturbed areas; common (VA Rare List). May-November. Pantropical, in North America from se. VA south to s. FL and west to CA, north in the interior to AR, se. MO, and southward into the tropics. This species is very weedy, and is a familiar component of road margins and lawns in the southeastern Coastal Plain. [= C, G, GW, K, S; = *Lippia nodiflora* (Linnaeus) Michaux – RAB, F]

Stylodon Rafinesque 1825 (Carolina-vervain)

A monotypic genus, an herb, of se. North America. References: Atkins in Kadereit (2004).

Stylodon carneus (Medikus) Moldenke, Carolina-vervain. Cp (GA, NC, SC, VA?): sandy woodlands, sandhills; uncommon. April-July. E. NC (se. VA?) south to c. peninsular FL, west to e. TX. [= K; = *Verbena carnea* Medikus – RAB, F; = *Stylodon carolinensis* (Walter) Small – S]

Verbena Linnaeus 1753 (Verbena, Vervain)
(also see *Glandularia* and *Stylodon*)

A genus of about 200-250 species, herbs, of tropical, subtropical, and warm temperate regions of the New World and (rarely) Old World. References: Barber (1982)=Z; Atkins in Kadereit (2004).

* ***Verbena bonariensis*** Linnaeus. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): roadsides, disturbed areas, old fields; common, introduced from South America. May-October. [= RAB, C, G, GW, S; > *V. bonariensis* var. *bonariensis* – K; > *V. bonariensis* var. *conglomerata* Briq. – K]

*? ***Verbena bracteata*** Lagasca & Rodriguez, Prostrate Vervain. Cp (GA, NC, SC, VA), Pd (GA, NC), Mt (NC): disturbed areas, waste areas near wool-combing mills; rare. June-October. The original distribution uncertain, now distributed from ME west to British Columbia, south to FL and Mexico. [= RAB, C, F, G, K, Z; =*? V. bracteosa* Michaux – S]

* ***Verbena brasiliensis*** Vellozo, Brazilian Vervain. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC): roadsides, disturbed areas, old fields; common, introduced from South America. May-October. [= RAB, C, F, G, GW, K, S]

* ***Verbena halei*** Small, Texas Vervain. Cp (GA, NC, SC): roadsides, pastures; rare, presumably introduced from farther west. April-June. NC, MO, and AZ south to FL, TX, and Mexico. [= RAB, K, S; = *V. officinalis* ssp. *halei* (Small) Barber – Z]

Verbena hastata Linnaeus, Common Vervain, Blue Vervain, Simpler's-joy. Cp, Pd, Mt (NC, VA), {GA, SC}: marshes, bogs, low fields; common (rare south of VA). June-October. The hybrid with *V. urticifolia*, *Verbena* ×*engelmannii* Moldenke, is known from our area. [= RAB, C, F, G, GW, S, W, Z; > *V. hastata* var. *hastata* – K; > *V. hastata* var. *scabra* Moldenke – K]

* ***Verbena officinalis*** Linnaeus, European Vervain, Juno's Tears, Herb-of-the-cross. Cp (GA, NC, SC, VA), Mt (NC, VA), Pd (VA): disturbed areas; rare, introduced from Europe. June-October. [= RAB, C, F, G, S; > *V. officinalis* var. *officinalis* – K; > *V. officinalis* var. *prostrata* Gren. & Godr. – K; = *V. officinalis* ssp. *officinalis* – Z]

* ***Verbena rigida*** Sprengel. Cp (GA, NC, SC, VA), Pd (GA): roadsides, disturbed areas; common (uncommon north of SC), introduced from South America. Late March-July. [= K, S]

*? ***Verbena riparia*** Rafinesque ex Small & Heller, Riverbank Vervain. Mt (NC, VA), Pd (NC): riverbanks; rare. June-July. This species is enigmatic; there are only a few collections, and the taxonomic status of the taxon is unclear. It may represent unusual forms of *V. officinalis*. [= RAB, C, F, G, K, S, W]

Verbena scabra Vahl, Rough Vervain, Harsh Vervain. Cp (GA, NC, SC, VA), Pd (GA, VA), Mt (VA): brackish marshes, shell deposits, other wet habitats; common. May-October. VA and WV south to FL, west to TX and CA, south into tropical America; mainly coastal in our area but with scattered inland records. [= RAB, C, F, G, GW, K, S]

Verbena simplex Lehmann, Narrowleaf Vervain. Pd (GA, NC, SC, VA), Mt (GA, VA), Cp (VA): glades, woodlands, forests, and roadsides, over mafic or calcareous rocks; common. May-September. NH west to MN and NE, south to Panhandle FL (Jackson County) and TX. [= RAB, C, F, G, K, W, Z; *? V. angustifolia* Michaux – S]

* ***Verbena stricta*** Ventenat, Hoary Vervain. Cp* (NC*, VA*), Pd (GA): pastures and roadsides; rare, introduced from c. United States. June-September. Perhaps native as far east as prairie-like sites in TN, AL, and (?) GA. [= RAB, C, F, G, K, S, W, Z]

Verbena urticifolia Linnaeus *var.* ***leiocarpa*** Perry & Fernald, Velvetleaf Vervain. {Cp, Pd, Mt (NC, SC, VA): } May-November. CT, MI, and ND, south to SC, TN, AR, and TX. [= C, F, G, K; < *V. urticifolia* – RAB, GW, W, Z; < *V. urticaefolia* – S, orthographic variant]

Verbena urticifolia Linnaeus *var.* ***urticifolia***, White Vervain. {GA, NC, SC, VA}: mesic to dry-mesic forests, marshes, disturbed areas; common. May-November. New Brunswick west to Saskatchewan, south to FL and TX. The hybrid with *V. hastata*, *Verbena* ×*engelmannii* Moldenke, is known from our area. [= C, F, G, K; < *V. urticifolia* – RAB, GW, W, Z; < *V. urticaefolia* – S, orthographic variant]

Verbena canescens Kunth. AL. [= K]

Verbena carolina Linnaeus. AL and MS. [= K]

Verbena litoralis Kunth. Cp (GA): scattered sites in e. and s. GA (Jones & Coile 1988). [= K; = *V. littoralis* – S, orthographic variant] {synonymy incomplete}

Verbena xutha Lehmann, Gulf Vervain. AL west to TX. [= K, S]

VIOLACEAE Batsch 1802 (Violet Family)

A family of about 20 genera and 900 species, herbs, shrubs, and vines, cosmopolitan in distribution. References: McKinney & Russell (2002)=X.

1 Plants caulescent, 4-10 dm tall, the leaves narrowly cuneate to a petiole 0-20 mm long, also long acuminate; petals green; fruit 15-20 mm long ..... ***Hybanthus***
1 Plants acaulescent or caulescent, 0-5 dm tall, if caulescent, the leaves not at the same time cuneate, short-petiolate, and acuminate; petals white, yellow, violet, or blue, the lowermost spurred; fruit < 13 mm long ..... ***Viola***

Hybanthus Jacquin (Green-violet)

A genus of about 70-150 species, shrubs and herbs, of tropical and warm temperate regions of the Old and New Worlds. References: McKinney & Russell (2002)=X; Wofford et al. (2004).

1 Leaves 9-17 cm long, entire (or with a few obscure teeth); capsule 15-20 mm long; seeds ca. 4 mm long; [native, of nutrient-rich forests] ..... ***H. concolor***
1 Leaves 0.6-3 cm long, finely crenate; capsule 3-4 mm long; seeds ca. 1.5 mm long; [alien, of weedy areas] ..... ***H. parviflorus***

Hybanthus concolor (T.F. Forster) Sprengel, Green-violet. Pd, Mt (GA, NC, SC, VA), Cp (GA, VA): very nutrient-rich and mesic forests; uncommon. Cleistogamous flowers: April-early May; late May-June. Chasmogamous flowers: Late May-June; August-October. VT and s. Ontario west to MI and KS, south to SC, GA, and AR. [= RAB, C, F, G, K, W, X; = *Cubelium concolor* (T.F. Forster) Rafinesque – S]

* ***Hybanthus parviflorus*** (Mutis ex Linnaeus f.) Baill. Cp (GA): disturbed area; rare, introduced from South America. April. First collected in North America in New Jersey in the 19th century; and again in 1998 by Tom Govus at Fort Pulaski National Monument (Chatham County, GA). It is unclear whether this is a recent introduction or an old weed introduced via ship's ballast (Wofford et al. 2004).

Viola Linnaeus 1753 (Violet, Johnny-jump-up, Pansy)
(by B.A. Sorrie and A.S. Weakley)

A genus of about 525-600 species, herbs (rarely subshrubs), of temperate regions of the Old and New Worlds. References: Ballard (1992)=Z; Gil-ad (1998)=Y; McKinney & Russell (2002)=X; Haines (2001)=V; McKinney (1992); Ballard & Wujek (1994); Russell (1955); Ballard, Sytsma, & Kowal (1999). Key adapted, in part, from Ballard (1992) and Ballard & Wujek (1994).

1 Plant caulescent (producing aerial stems bearing leaves and flowers).
  2 Corolla yellow, or white with a yellow center (sometimes drying lavender); stipules entire or erose ..... **Key A**
  2 Corolla wholly cream-colored, or cream with a yellow center, or blue-violet, or multicolored (blue or violet with orange or yellow) ..... **Key B**
1 Plant acaulescent (with leaf petioles and flower stalks arising separately from the base of the plant).
  3 Corolla yellow; leaves borne more-or-less flat on the ground ..... **Key C**
  3 Corolla white, blue-violet, or blue-and-white variegated.
    4 Plant producing stolons; corolla white (or blue in *V. appalachiensis*, *V. walteri*, and *V. odorata*) ..... **Key D**

4 Plant not producing stolons; corolla blue-violet ..... **Key E**

Key A – Caulescent Violets with yellow or white flowers

1 Corolla white with a yellow center (sometimes drying lavender); stipules long-triangular, attenuate ..... ***V. canadensis* var. *canadensis***
1 Corolla solid yellow; stipules ovate to narrowly ovate.
2 Leaves 3-lobed ..... ***V. tripartita* var. *tripartita***
2 Leaves cordate or hastate.
3 Leaves at least as broad as long.
4 Stems 2-several; basal leaves 4 or more; foliage glabrous to glabrate ..... ***V. pubescens* var. *scabriuscula***
4 Stems 1; basal leaves 0-2; foliage densely pubescent ..... ***V. pubescens* var. *pubescens***
3 Leaves distinctly longer than broad.
5 Leaf blade hastate; base of leaf strongly cordate ..... ***V. hastata***
5 Leaf blade narrowly ovate; base of leaf blade rounded to broadly cuneate ..... ***V. tripartita* var. *glaberrima***

Key B – Caulescent Violets with blue, cream, or multicolored flowers

1 Stipules foliaceous, deeply lobed; leaves cuneate at base; [of weedy habitats].
2 Corolla pale blue with a cream center; petals 2× as long as the sepals ..... ***V. bicolor***
2 Corolla either cream with a yellow center or multicolored; petals < 2× as long as the sepals.
3 Corolla cream with a yellow center; petals shorter than the sepals or longer by up to 2 mm ..... ***V. arvensis***
3 Corolla multicolored (cream to orange with a yellow center, the upper petals at least partly dark blue); petals longer than the sepals by 2 mm or more ..... ***V. tricolor***
1 Stipules herbaceous, fringed along the margin; leaves truncate or cordate at the base; [section *Viola*].
4 Above-ground stems absent (surficial stolons present; style terminating in a slender hook ca. 1 mm long; capsules hirtellous; [introduced, cultivated, rarely persistent or spreading] ..... ***V. odorata***
4 Above-ground stems present, ascending or prostrate (and stolon-loke rhizomes present in *V. appalachiensis* and *V. walteri*); style straight or terminating in a bent or recurved hook 0-0.5 mm long; capsules glabrous; [native].
5 Stems immediately becoming prostrate at time of flowering; stems persistent through winter, rooting at the nodes, and generating the following year's plants at their tips (plants thus mat-forming).
6 Leaf blades with scattered hairs near the margin only; petioles, peduncles and stems glabrous; stipules shallowly lacerate, with marginal processes < 1/4 as long as the stipule ..... ***V. appalachiensis***
6 Leaf blades moderately to densely puberulent over the entire surface; petioles, peduncles and stems moderately to densely puberulent; stipules deeply laciniate with marginal processes > 1/2 as long as the stipule ..... ***V. walteri***
5 Stems ascending to erect at time of flowering and fruiting; stems deciduous at end of growing season, not rooting at nodes (plants thus solitary).
7 Lateral sepals glabrous within; corolla lavender, with a purple-black eyespot surrounding the throat; spur 7-20 mm long ..... ***V. rostrata***
7 Lateral sepals bearded within; corolla uniformly creamy-white or blue (rarely white), lacking a contrasting eyespot around the throat; spur 3-6 mm long.
8 Sepal margins eciliate; flowers lavender to violet (rarely white in albino forms); spur mostly > 5 mm long ..... ***V. labradorica***
8 Sepal margins distinctly ciliate; flowers creamy-white; spur mostly < 5 mm long ..... ***V. striata***

Key C – Acaulescent Violets with yellow flowers

One species in our area ..... ***V. rotundifolia***

Key D – Acaulescent Violets with stolons and white or blue flowers

1 Flowers generally blue (white or blue-and-white variegated in *V. odorata*, which has the style terminating in a conic hook).
2 Above-ground stems absent (surficial stolons present); style terminating in a slender hook ca. 1 mm long; capsules hirtellous; [introduced, cultivated, rarely persistent or spreading] ..... ***V. odorata***
2 Above-ground stems generally present, ascending or prostrate (and stolon-like rhizomes present); style straight or terminating in a bent or recurved hook 0-0.5 mm long; capsules glabrous; [native].
3 Leaf blades with scattered hairs near the margin only; petioles, peduncles and stems glabrous; stipules shallowly lacerate with marginal processes < 1/4 as long as the stipule ..... ***V. appalachiensis***

3 Leaf blades moderately to densely puberulent over the entire surface; petioles, peduncles and stems moderately to densely puberulent; stipules deeply laciniate with marginal processes > 1/2 as long as the stipule ..... ***V. walteri***

1 Flowers white (and the style broad at the tip, in most species resembling a scoop).
4 Leaf blades > 1.5× as long as broad.
5 Leaf blades lance-ovate, broadly cuneate to subcordate at the base ..... ***V. primulifolia***
5 Leaf blades linear to lanceolate, narrowly cuneate at the base.
6 Leaf blades lanceolate, < 8× as long as wide; plant glabrous ..... ***V. lanceolata*** *var*. ***lanceolata***
6 Leaf blades linear or narrowly lanceolate, > 10× as long as wide; plant glabrous to pubescent..... ..... ***V. lanceolata*** *var*. ***vittata***
4 Leaf blades < 1.5× as long as broad.
7 Leaf blades completely glabrous (petioles may be villous); [of wet, acidic seepage or streamsides] .... ***V. macloskeyi*** *var*. ***pallens***
7 Leaf blades pubescent, at least on the upper surface of the basal lobes.
8 Lateral petals glabrous within; petioles and peduncles usually reddish-tinged; leaf apex acute; basal lobes of the leaf often overlapping; pubescence of the upper leaf surface often restricted to the basal lobes; [of mesic, often nutrient-rich forests]..... ***V. blanda***
8 Lateral petals bearded within; petioles and reduncles green; leaf apex obtuse to rounded; basal lobes of the leaf not overlapping; pubescence of the upper leaf surface usually widespread; [of mesic to wet situations]..... ..... ***V. incognita***

Key E – Acaulescent Violets without stolons, with blue-violet flowers

1 Leaf blades deeply divided throughout, or lobed basally, or deeply toothed basally (the earliest 1-2 leaves may be simply cordate); [some species keyed both here and below].
2 Leaf blades deeply divided throughout into linear or lanceolate segments (or with several narrow lateral segments and a broadly lanceolate central segment), the leaf blade (in outline) about as broad as long.
3 Lateral petals glabrous within; stamens orange, conspicuously exserted; [of dry habitats]..... ***V. pedata***
3 Lateral sepals bearded; stamens not orange and conspicuously exserted; [of moist to wet habitats, or dryish, basic sites].
4 Petioles and leaf blades (the lower leaf surface at least) moderately to densely pubescent; [of mesic to fairly dry, woodlands, over circumneutral to basic soils] ..... ***V. palmata*** *var*. ***subsinuata***
4 Petioles and leaves glabrous or glabrate with marginal ciliate hairs; [of moist to wet habitats].
5 Leaf segments 9-11, with a narrow central lobe 1-2× as wide as the lateral lobes; peduncle equal to or shorter than the leaves; sepal auricles much longer than wide; [of ecotones at upper edges of alluvial or levee forests] ..... ***V. brittoniana*** *var*. ***brittoniana***
5 Leaf segments 5-7, with a broadly lanceolate central lobe 3-5× as wide as the lateral lobes; peduncle normally much longer than the leaves; sepal auricles wider than long or equal; [of mesic pine savannas and pocosin ecotones] ..... ***V. septemloba***
2 Leaf blades lobed or deeply toothed only toward the base.
6 Leaf blade outline oblong-lanceolate to ovate-triangular, much longer than wide.
7 Petioles distinctly shorter than the leaf blades; leaf blades densely pubescent, the apex blunt, the basal teeth undeveloped or with a few coarse teeth on mature leaves; [of dry sandy clearings and banks] .... ***V. fimbriatula***
7 Petioles equal to or longer than the leaf blades; leaf blades glabrate, the apex acute, the basal teeth well-developed, very coarse to lobe-like; [of mesic sandy soil of fields, meadows, and pine savannas] .... ***V. sagittata***
6 Leaf blade outline ovate to subrotund, about as wide as long.
8 Plant moderately to densely pubescent, at least on petioles and undersurfaces of leaves; mature leaves trilobed; [of mesic to dryish woodlands, in circumneutral or basic soils] ..... ***V. palmata*** *var*. ***palmata***
8 Plant glabrous or glabrate (hairs on leaf margins or on upper surface of the lobes); mature leaves either trilobed or 5-7-lobed; [of moist to wet habitats].
9 Mature leaves trilobed, with 1 (-2) reniform or obovate lobes on each side; spurred petal glabrous; [of streamsides, floodplains, levee forests] ..... ***V. esculenta***
9 Mature leaves deeply lobed with 2-3 lanceolate lobes on ech side; spurred petal bearded; [of moist to wet pine savannas and pocosin ecotones]..... ***V. septemloba***

1 Leaf blades merely serrate along the margin, ovate to subrotund in outline, cordate to truncate at the base.
10 Leaf blades mostly longer than broad, narrowly ovate to long-triangular, tapering to an acute or even short-acuminate apex.
11 Foliage moderately to densely pubescent; leaves distinctly longer than wide; [of dry to mesic clearings and banks] ..... ***V. fimbriatula***
11 Foliage glabrous or glabrate; [plants of various habitats].
12 Lateral petals bearded with clavate hairs; spurred petal glabrous within; [of swamps and sphagnous streamsides]..... ***V. cucullata***

12 Lateral petals with hairs of essentially uniform width; spurred petal bearded within; [of various habitats].
13 Basal teeth no larger than the others; leaf bases cordate; [of mesic forests, streamsides, and seeps] ..... ***V. affinis***
13 Basal teeth longer than the others; leaf bases truncate to subcordate (ignore earliest 1-2 leaves).
14 Leaf outline broadly triangular, not much longer than wide; teeth on lower half of leaf numerous, pectinate ..... ***V. brittoniana var. pectinata***
14 Leaf outline narrowly triangular-ovate, much longer than wide; basal teeth few, very coarse ..... ***V. sagittata***

10 Leaf blades about as wide as long or wider, ovate to suborbicular, the apex obtuse to acute.
15 Lateral petals bearded with clavate hairs; foliage glabrous or glabrate.
16 Petals light blue or light violet-blue, with a dark eye and dark veins; sepals 8-12 mm long; all plants in population with unlobed leaves; [primarily of the Mountains] ..... ***V. cucullata***
16 Petals violet-blue, with a white eye and dark veins; sepals 6-7 (-8) mm long; at least some plants in population with trilobed leaves; [primarily of the Coastal Plain] ..... ***V. esculenta***
15 Lateral petals bearded with hairs of uniform width; foliage distinctly pubescent, glabrate, or glabrous.
17 Leaf blades glabrous or glabrate, or with hairs confined to just the basal lobes; petioles glabrous or glabrate.
18 Leaf blades with obvious area of hairs confined to upper surface of the basal lobes; spurred petal bearded; all plants in population with unlobed leaves ..... ***V. affinis***
18 Leaf blades glabrous or glabrate, not as above; spurred petal glabrous or glabrate; all plants in population with unlobed leaves, or some leaves trilobed.
19 Blades green beneath; spurred petal glabrous; at least some plants in population with trilobed leaves ..... ***V. esculenta***
19 Blades red-dotted or red-tinged beneath; spurred petal glabrous or glabrate; all plants in population with unlobed leaves ..... ***V. sororia***
17 Leaf blades moderately to densely pubescent on one or both surfaces, or on the petioles.
20 Leaf blades equally pubescent on both surfaces, or glabrate on both surfaces.
21 Leaf blades large, the apex acute, held high above the ground on long, ascending petioles, deciduous; peduncles shorter than to equalling the petioles ..... ***V. sororia***
21 Leaf blades small, blunt or rounded, essentially flat on the ground, evergreen or tardily deciduous; peduncles much longer than the petioles ..... ***V. villosa***
20 Leaf blades much more pubescent on one surface than the other.
22 Leaf blades densely pubescent above, sparsely so below and on the petiole; leaf apex blunt to rounded; leaf blade often purple-tinged below ..... ***V. hirsutula***
22 Leaf blades much more pubescent beneath and on petiole, glabrate above; leaf apex acute; leaf blade green beneath ..... ***V. septentrionalis***

Viola affinis Le Conte, Thinleaf Violet, LeConte's Violet. Pd, Cp, Mt (GA, NC, SC, VA): swamp forests, wet bottomlands; common. March-May. VT and MA west to WI, south to c. peninsular FL and e. TX. [= RAB, F, G, GW, K, S, V, W, Y; < *V. sororia* – C]

Viola appalachiensis L.K. Henry, Appalachian Violet. Mt (NC): serpentine barrens, rich cove forests (especially old road beds through coves); rare (NC Rare). April-May. PA and WV south to sw. NC. [= K, Z; = *V. walteri* House var. *appalachiensis* (L.K. Henry) L.E. McKinney – X]

***** ***Viola arvensis*** Murray, European Field-pansy. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): roadsides, fields; common, introduced from Europe. March-July. [= RAB, C, F, G, K, S, W, X]

Viola bicolor Pursh, Wild Pansy. Mt, Pd, Cp (GA, NC, SC, VA): pastures, roadsides, lawns, other disturbed habitats; common. March-May. MA and NY west to SD and CO, south to FL, TX, and AZ. [= K, X; = *V. rafinesquii* Greene – RAB, C, G, S, W; = *V. kitaibeliana* J.A. Schultes var. *rafinesquii* Fernald – F; = *V. rafinesquei*, orthographic variant]

Viola blanda Willdenow, Sweet White Violet. (GA, NC, SC, VA} [= F, G, S; < *V. blanda* – RAB, C, W, X (also see *V. incognita*); = *V. blanda* var. *blanda* – K, V]

Viola brittoniana Pollard *var.* ***brittoniana***. Cp (NC, SC, VA): low ground, including brackish areas; uncommon (NC Watch List, VA Watch List). April-May. ME to SC, along the coast. [= RAB, G, K; < *V. palmata* var. *palmata* – C; = *V. brittoniana* – F; < *V. pedatifida* G. Don ssp. *brittoniana* (Pollard) McKinney – X; < *V. brittoniana* – V, Y]

Viola brittoniana Pollard *var.* ***pectinata*** (Bicknell) Alexander. Cp (NC, VA): low ground; rare. April-May. MA to NC, along the coast. [= RAB, G, K; < *V. palmata* var. *palmata* – C; = *V. pectinata* Bicknell – F; < *V. pedatifida* G. Don ssp. *brittoniana* (Pollard) McKinney – X; < *V. brittoniana* – V, Y]

Viola canadensis Linnaeus *var.* ***canadensis***, Tall White Violet. Mt (GA, NC, SC, VA), Pd (NC, VA): rich cove forests, other rich mesic situations, such as floodplains; common. April-July. Newfoundland to Ontario, south to GA, AL, TN, and AR. Other varieties are more western. [= RAB, C, K, V; >< *V. canadensis* var. *rugulosa* (Greene) C.L. Hitchcock – RAB, C, misapplied as to plants in our area; = *V. canadensis* – F, G, S; >< *V. rugulosa* Greene – G, misapplied as to our plants; < *V. canadensis* – W, X]

Viola cucullata Aiton, Blue Marsh Violet, Bog Violet. Mt (GA, NC, SC, VA): bogs, seeps, margins of spring branches; common. April-June. Newfoundland to MN, south to w. NC, n. GA, TN, and e. AR. Records from the Piedmont and Coastal Plain of SC and GA are presumably misidentifications. [= RAB, C, G, GW, K, S, V, W, X, Y; > *V. cucullata* var. *cucullata* – F; > *V. obliqua* Hill]

Viola esculenta Elliott. {GA, NC, SC, VA} (VA Rare List). [= F, G, GW, S; < *V. septemloba* – RAB; < *V. palmata* var. *palmata* – C; = *V.* ×*esculenta* Elliott (pro sp.) (*septemloba* × *triloba*) – K]

Viola fimbriatula Smith. {NC, VA} In e. TN (Chester, Wofford, & Kral 1997). [= RAB, F, G, S, W, Y; < *V. sagittata* Aiton – C; = *V. sagittata* Aiton var. *ovata* (Nuttall) Torrey & A. Gray – K, V, X*; V. sagittata* var. *fimbriatula* Sm.]

Viola hastata Michaux, Spearleaf Violet, Silverleaf Violet, Halberd-leaf Violet. Mt, Pd (GA, NC, SC, VA): acidic coves, dry-mesic oak forests; common. Late March-May. PA and OH south to Ga and AL. [= RAB, C, F, G, K, S, W, X]

Viola hirsutula Brainerd. {GA, NC, SC, VA} [= RAB, F, G, K, S, W, V, X; < *V. villosa* Walter – C]

Viola incognita Brainerd. Mt (NC, SC?, VA): rare (VA Watch List). April-June. [= S; < *V. blanda* – RAB, C, X; > *V. incognita* var. *incognita* – F, G; > *V. incognita* var. *forbesii* Brainerd – F, G; = *V. blanda* Willdenow var. *palustriformis* A. Gray – K, V]

Viola labradorica Schrank, American Dog-violet. Mt (GA, NC, SC, VA), Cp (VA): moist alluvial woodlands and forests, seepage slopes, marl ravines; uncommon. Late March-May. Labrador west to AK, south to e. VA, nw. SC, AL, and OH. Ballard concluded that *V. conspersa* was not distinct from *V. labradorica*. [= K, V, X, Z; > *V. conspersa* Reichenbach – RAB, C, F, G, GW, S, W]

Viola lanceolata Linnaeus *var.* ***lanceolata***, Lanceleaf Violet. {NC, SC, VA}: [= C, F, V; < *V. lanceolata* – RAB, W, X; = *V. lanceolata* ssp. *lanceolata* – GW, K; = *V. lanceolata* – G, S]

Viola lanceolata Linnaeus *var.* ***vittata*** (Greene) Weatherby & Griscom, Strap-leaf Violet. {GA, NC, SC, VA}: [= C, F, V; < *V. lanceolata* – RAB, W, X; = *V. lanceolata* ssp. *vittata* (Greene) Russell – GW, K; = *V. vittata* Greene – G, S]

Viola macloskeyi F. Lloyd *var.* ***pallens*** (Banks ex Augustin de Candolle) C.L. Hitchcock, Wild White Violet. Mt (GA, NC, SC, VA), Pd (NC, VA): brookbanks, seepages; uncommon. Perhaps better recognized at the specific level, as *V. pallens*, which seems distinct from the narrowly distributed *V. macloskeyi*, of CA, OR and e. NV. Ballard et al. (2001) suggest that Hispaniolan *V. domingensis* Urban is conspecific with *V. macloskeyi sensu lato*. [= RAB, C; = *V. pallens* (Banks ex Augustin de Candolle) Brainerd – F, G, GW, S; > *V. pallens* var. *pallens* – G; > *V. pallens* var. *subreptans* Rousseaux – G; = *V. macloskeyi* ssp. *pallens* (Banks ex Augustin de Candolle) M.S. Baker – K, V, W; < *V. macloskeyi* F. Lloyd – X]

* ***Viola odorata*** Linnaeus, Sweet Violet, English Violet. Pd (NC, VA?), {GA}: gardens, lawns, disturbed places, persistent or weakly spreading from horticultural use; rare, introduced from Europe. [= C, F, G, K, S, V, Z]

Viola palmata Linnaeus *var.* ***palmata***, Wood Violet. [> *V. palmata* var. *palmata* – RAB; > *V. palmata* var. *triloba* (Schweinitz) Gingins ex Augustin de Candolle – RAB; < *V. palmata* var. *palmata* – C; > *V. triloba* Schweinitz var. *triloba* – F, G, K; > *V. stoneana* – F, G; >< *V. palmata* – F, G, S, V, W, X, in the narrow sense; > *V. chalcosperma* Brainerd – F, S; < *V* ×*palmata* Linnaeus (pro sp.) – K; *? V. triloba* Schweinitz – S, W]

Viola palmata Linnaeus *var.* ***subsinuata*** Greene. (VA Watch List). [< *V. palmata* var. *palmata* – C; *? V. triloba* Schweinitz var. *dilatata* (Elliott) Brainerd – F, G, K; = *V. subsinuata* Greene – V, X]

Viola pedata Linnaeus, Bird's-foot Violet. Mt, Pd, Cp (GA, NC, SC, VA): dry rocky or sandy forests, woodlands, glades, and roadbanks; common (uncommon in the outer Coastal Plain south of VA). March-May; May-June. Var. *ranunculifolia* is accepted by some recent authors; it needs additional study. [= RAB, C, K, S, V, W; > *V. pedata* var. *pedata* – F, G; > *V. pedata* var. *lineariloba* Augustin de Candolle – F, G; > *V. pedata* var. *pedata* – X; > *V. pedata* var. *ranunculifolia* (Jussieu ex Poiret) Ging. ex Augustin de Candolle – X]

Viola primulifolia Linnaeus, Primrose-leaf Violet. Cp, Pd, Mt (GA, NC, SC, VA): bogs, wet savannas, pocosins, moist organic soils along small streams; common. March-May. Newfoundland to Ontario, south to FL, and west to TX and se. OK. [= RAB, C, GW, S, V, W, X; > *V. primulifolia* var. *primulifolia* – F, G; > *V. primulifolia* var. *acuta* (Bigelow) Torrey & A. Gray – F; > *V. primulifolia* var. *villosa* Eaton – F, G; = *V* ×*primulifolia* Linnaeus (pro sp.) (*lanceolata* × *macloskeyi*) – K]

Viola pubescens Aiton *var.* ***pubescens***, Hairy Yellow Forest Violet. Pd, Mt (NC, VA): {GA, NC, SC, VA} March-May. [= K, V, X; = *V. eriocarpa* (Nuttall) Schweinitz var. *eriocarpa* – RAB; < *V. pubescens* – C, GW, W; > *V. pubescens* var. *pubescens* – F; > *V. pubescens* var. *peckii* House – F; = *V. pubescens* – G, S; *V. eriocarpon* (Nuttall) Schweinitz var. *eriocarpon*]

Viola pubescens Aiton *var.* ***scabriuscula*** Schweinitz ex Torrey, Smooth Yellow Forest Violet. {GA, NC, SC, VA} March-May. [= K, V, X; = *V. eriocarpa* (Nuttall) Schweinitz var. *leiocarpa* Fernald & Wiegand – RAB; < *V. pubescens* – C, GW, W, in part; > *V. pensylvanica* Michaux var. *pensylvanica* – F; > *V. pensylvanica* var. *leiocarpa* (Fernald & Wiegand) Fernald – F; = *V. eriocarpa* – G, S; = *V. eriocarpon* (Nuttall) Schweinitz var. *leiocarpon* Fernald & Wiegand; *V. pubescens* Aiton var. *leiocarpon* (Fernald & Wiegand) Seymour]

Viola rostrata Pursh, Long-spurred Violet. Mt (GA, NC, SC, VA), Pd (VA): mesic forests, often under *Tsuga*; common. April-May. NH and Québec west to WI, south to GA and AL. [= RAB, F, G, K, S, V, W, X, Z]

Viola rotundifolia Michaux, Round-leaf Yellow Violet, Early Yellow Violet. Mt (GA, NC, SC, VA): rich coves; common. March-April. ME to s. Ontario, south to w. NC, n. GA, and e. TN. [= RAB, C, F, G, K, S, V, W, X]

Viola sagittata Aiton, Arrowhead Violet. {GA, NC, SC, VA} [= RAB, F, S, W, Y; > *V. emarginata* (Nuttall) Le Conte var. *emarginata* – RAB, F, G; > *V. emarginata* var. *acutiloba* Brainerd – RAB, F, G; < *V. sagittata* – C (also see *V. fimbriatula*); > *V. sagittata* var. *sagittata* – G, K, V, X; *? V. emarginata* – S]

Viola septemloba Le Conte. Cp (GA, NC, SC): sandy pinelands; rare. Late March-early May. [= F, G, GW, K, S, W, Y; < *V. septemloba* – RAB (also see *V. esculenta*); < *V. palmata* var. *palmata* – C; *? V. septemloba* ssp. *septemloba* – X]

Viola septentrionalis Greene. {NC, VA}: (VA Watch List). NC (McMillan pers. comm.). e. TN (Chester, Wofford, & Kral 1997). [= G, K, W, Y; < *V. sororia* – C, V; *? V. septentrionalis* var. *septentrionalis* – F; < *V. sororia* var. *sororia* – X]

Viola sororia Willdenow, Dooryard Violet, Confederate Violet, Common Blue Violet. Mt, Pd, CP (NC, SC), {GA, VA} [= W, Y; > *V. palmata* var. *sororia* (Willdenow) Pollard – RAB; > *V. papilionacea* Pursh – RAB, F, S; < *V. sororia* – C, V (also see *V. affinis, V. septentrionalis*); > *V. sororia* – F, G, K, S; > *V. langloisii* Greene – F, K, S; > *V. latiuscula* Greene – F; > *V.*

papilionacea var. *papilionacea* – G; > ***V. papilionacea*** var. *priceana* (Pollard) Alexander – G; > ***V. priceana*** Pollard – S; *? V. sororia* var. *sororia* – X]

Viola striata Aiton, Creamy Violet. Mt, Pd (GA, NC, SC, VA), Cp (VA): mesic forests and woodlands, disturbed areas; common. March-June. MA west to WI, south to GA, AR, and e. OK. [= RAB, C, F, G, GW, K, S, V, W, X, Z]

* ***Viola tricolor*** Linnaeus, Pansy, Johnny-jump-up. Cp, Pd, Mt (GA, NC, SC, VA): lawns, garden borders, railroad rights-of-way; commonly cultivated, uncommonly persistent and weakly spreading, introduced. March-June (and sporadically later). [= RAB, C, F, G, K, V]

Viola tripartita Elliott *var.* ***glaberrima*** (Augustin de Candolle) Harper. Cp (GA): {NC, SC, VA} [= RAB, G, S, W; < ***V. tripartita*** – C, F, K, X]

Viola tripartita Elliott *var.* ***tripartita***, Three-parted Violet. {GA, NC, SC, VA} [= RAB, G, S, W; < ***V. tripartita*** – C, F, K, X]

Viola villosa Walter, Southern Woolly Violet. Cp (GA, NC, SC), Pd (GA, SC): pocosin ecotones, other sites with moist soils; uncommon (NC Watch List, VA Watch List). Late February-early April. Reported for VA by Kartesz (1999), on the basis of Massey (1961); report requiring additional documentation. [= RAB, F, G, K, S, X, Y; < ***V. villosa*** – C (also see ***V. hirsutula***)]

Viola walteri House, Walter's Violet. Mt (GA, NC, SC, VA), Pd (GA, NC, SC), Cp (GA, SC): nutrient-rich woodlands and forests, especially over mafic or calcareous rocks; uncommon (rare in Coastal Plain) (NC Watch List, VA Rare List). March-May. W. VA west to s. OH and AR, south to FL and TX. [= RAB, F, G, K, S, W, Z; = ***V. walteri*** var. *walteri* – X]

Viola egglestonii Brainerd. Mt (GA): calcareous barrens; rare. In c. and se. TN (Chester, Wofford, & Kral 1997), nw. GA (Jones & Coile 1988), IN, KY, and AL (Kartesz 1999). [= K, Y; < ***V. palmata*** var. *pedatifida* – C; = ***V. egglestoni*** – F, G, orthographic variant; = ***V. septemloba*** LeConte ssp. *egglestonii* (Brainerd) L.E. McKinney – X]

Viola missouriensis Greene. Throughout TN (probably in NC and VA), in KY (Kartesz 1999), and scattered in PA (Rhoads & Klein 1993). [= K, Y; < ***V. sororia*** Willdenow – C; = ***V. sororia*** var. *missouriensis* (Greene) L.E. McKinney – X] {add to synonymy}

Viola nephrophylla Greene, Northern Bog Violet, south to PA and WV (Kartesz 1999). [= C, K, V] {add to synonymy; not keyed at this time}

Viola pedatifida G. Don, Crowfoot Violet. Mt (VA): shale barrens; rare. April-May. Ontario west to Alberta, south to OH, IN, AR, OK, NM, and AZ; disjunct in w. VA. [= F, G, K; ***V. palmata*** Linnaeus var. *pedatifida* (G. Don) Cronquist – C; = ***V. pedatifida*** G. Don ssp. *pedatifida* – X] {add to synonymy; not keyed at this time}

VISCACEAE Batsch 1802 (Mistletoe Family)

A family of about 7 genera and 385 species, epiphytic hemiparasites, of cosmopolitan distribution. The recognition of the Viscaceae as distinct from Loranthaceae appears well warranted (see Kuijt 1982); however, the Viscaceae should perhaps be combined into the Santalaceae (Angiosperm Phylogeny Group 2003). References: Kuijt (1982)=Z.

Phoradendron Nuttall (Mistletoe)

A genus of about 235 species, epiphytic hemiparasites, of tropical and rarely temperate America. References: Kuijt (2003)=Y; Kuijt (1982)=Z.

Phoradendron serotinum (Rafinesque) M.C. Johnston *ssp.* ***serotinum***, American Mistletoe, Christmas Mistletoe. Cp, Pd, Mt (GA, NC, SC, VA): parasitic on various species of trees, especially abundant in swamp forests (perhaps because they are less frequently cut and have older, more mature hardwoods); common (uncommon in Piedmont and Mountains). October-November (-March); November-January (-May). Kuijt (2003) interprets this as a species with four subspecies; ssp. *serotinum* is the eastern component, ranging from NJ west to s. OH, s. IN, and s. MO, south to s. FL and s. TX. The other three subspecies are distributed in sw. United States and n. Mexico. *Phoradendron* is, of course, the mistletoe familiar (at least traditionally) in e. United States as a Christmas decoration. Z comments that "the superficial likeness of *Phoradendron serotinum* to the European *Viscum album* has made the transfer of the latter's folklore to North America easy;" *Viscum album* was a sacred plant of Celtic and druidical pre-Christian European societies. The white berries of ***Ph. leucarpum*** are extremely poisonous. Their sticky flesh promotes the dispersal of the seeds by birds from tree to tree. The nomenclatural argument about which Rafinesquian epithet to adopt is arcane; the basionym "*leucarpum*" has nomenclatural precedence by 3 years, but the combination in *Phoradendron* can be considered a later homonym of *Phoradendron leucocarpum* Patschovsky. I here follow Kuijt (2003) in his decision to reject "*leucarpum*." [= Y; = *Phoradendron leucarpum* (Rafinesque) Reveal & M.C. Johnston – K; < ***Ph. serotinum*** (Rafinesque) M.C. Johnston – RAB, C, W, Z; < ***Ph. flavescens*** (Pursh) Nuttall – F, G, S]

VITACEAE A.L. de Jussieu 1789 (Grape Family)

A family of about 14 genera and 850 species, vines (rarely small trees or herbs), of tropical, subtropical, and temperate regions of the Old and New Worlds. References: Soejima & Wen (2006).

1 Branches and leaves distinctly fleshy, the leaves > 1 mm thick when fresh; leaves 3-foliolate ..... ***Cissus***
1 Branches and leaves herbaceous; leaves simple, 3-, 5-, or many-foliolate.
2 Leaves simple, sometimes shallowly or deeply 3-5 (-7)-lobed.
3 Tendrils not twining, terminating in adhesive disks ..... ***Parthenocissus***
3 Tendrils twining, lacking adhesive disks.
4 Petals separate at their tips, falling individually; pith continuous through the node ..... ***Ampelopsis***
4 Petals connate at their tips, falling together; pith interrupted by a diaphragm at each node (except continuous in *V. rotundifolia*) ..... ***Vitis***
2 Leaves compound with (3-) 5-numerous leaflets.
5 Leaves bipinnate to tripinnate ..... ***Ampelopsis arborea***
6 Leaflets 2-6 cm long; [common native species of mesic to wet habitats] ..... ***A. arborea***
6 Leaflets 5-12 cm long (at least the larger > 8 cm long); [introduced species, rarely escaped] ..... ***[A. megalophylla]***
5 Leaves 3-5 (-7)-foliolate.
7 Leaves pedately 5-foliolate (the lateral 2 leaflets on either side borne on a common stalk) ..... ***Cayratia***
7 Leaves palmately 3-5 (-7)-foliolate.
8 Leaflets pinnately lobed; tendrils twining, lacking adhesive tips; berries yellow to orange when ripe ..... ***Ampelopsis aconitifolia***
8 Leaflets toothed or entire; tendrils not twining, usually terminating in adhesive tips; berries dark blue when ripe ..... ***Parthenocissus***

Ampelopsis Michaux (Peppervine)

A genus of about 25 species, vines, of temperate and subtropical America and Asia. Perhaps to be split based on molecular phylogenetics, with section *Leeaceifoliae* (*A. arborea* and *A. megalophylla*) elevated to a new genus (Soejima & Wen 2006). References: Soejima & Wen (2006).

1 Leaves bipinaate to tripinnate, with > 11 leaflets; [native and alien species]; [section *Leeaceifoliae*].
2 Leaflets 2-6 cm long; [common native species of mesic to wet habitats] ..... ***A. arborea***
2 Leaflets 5-12 cm long (at least the larger > 8 cm long); [introduced species, rarely escaped] ..... ***[A. megalophylla]***
1 Leaves simple and palmately veined (grape-like), or palmately 5-foliolate (the leaflets additionally pinnately lobed); [alien species]; [section *Ampelopsis*].
3 Leaves palmately 5-foliolate, the leaflets additionally pinnately lobed ..... ***A. aconitifolia***
3 Leaves simple, grape-like, to 12 cm long and 9 cm wide.
4 Leaves 3 (-5) lobed; young twigs pubescent ..... ***A. brevipedunculata***
4 Leaves not lobed; young twigs glabrous ..... ***A. cordata***

* ***Ampelopsis aconitifolia*** Bunge. Pd (NC): planted as an ornamental, rarely escaping to suburban woodlands; rare, introduced from n. China. [= K]

Ampelopsis arborea (Linnaeus) Koehne, Peppervine. Cp, Pd (GA, NC, SC, VA), Mt (NC): swamp forests, marshes, wet thickets, moist to wet maritime forests; common (rare in Piedmont and Mountains). June-October. Se. VA (and MD?) south to s. FL, west to TX and n. Mexico, north in the interior to s. IL. [= RAB, C, F, G, GW, K, S, W]

* ***Ampelopsis brevipedunculata*** (Maximowicz) Trautvetter, Porcelain-berry. Pd, Cp (NC, VA), Mt (VA): thickets and disturbed areas; rare, introduced from ne. Asia. June-July; September. [= RAB, C, F, K; < *A. heterophylla* (Thunberg) Siebold & Zuccarini – S; = *A. heterophylla* (Thunberg) Siebold & Zuccarini var. *brevipedunculata* (Maximowicz) C.L. Li]

*? ***Ampelopsis cordata*** Michaux, Raccoon-grape, False-grape. Mt, Cp, Pd (GA, VA): moist forests, bottomlands, and thickets, particularly where disturbed; rare (perhaps introduced only in all or part of our area). May-July. E. VA south to panhandle FL, west to TX, north in the interior to s. OH, s. IN, s. IL, MO, and NE; also introduced at scattered sites inland. [= RAB, C, F, G, GW, K, S, W]

* *Ampelopsis megalophylla* Diels & Gilg, Bigleaf Peppervine. Planted in the Southeast; has potential to naturalize. Reports of its occurrence as naturalized in MS are based on *Cayratia* (S.W. Leonard, pers. comm.. 2006). Native of China.

Cayratia A.L. de Jussieu 1818 (Bushkiller)

A genus of ca. 50 species, of the Old World tropics and subtropics. References: Krings & Richardson (2006).

* ***Cayratia japonica*** (Thunberg) Gagnepain, Bushkiller, Sorrel Vine. Pd (NC): suburban woodlands; rare, native of temperate and subtropical se. Asia. Reported for NC from a single but aggressive restablished population in Forsyth County (Krings & Richardson 2006). Also reported as naturalized in MS, LA, and TX. [= K]

Cissus Linnaeus

A genus of about 200 species, of tropical and warm temperate areas.

Cissus trifoliata (Linnaeus) Linnaeus, Marine-ivy. Cp (GA, *SC): dredge spoil; rare, probably introduced from further south. Se. SC (Jasper County) south through GA, FL, and west along the Gulf Coast to TX, AR, and Mexico. [= K, S; > *C. incisa* (Nuttall) Des Moulins – GW, S]

Parthenocissus Planchon (Virginia-creeper, Woodbine)

A genus of about 10 species, vines, of temperate Asia and North America.

1 Leaves 3-lobed to 3-foliolate; [introduced ornamental, rarely escaped] ..... ***P. tricuspidata***
1 Leaves (3-) 5 (-7)-foliolate (only a few leaves on a plant 3-foliolate); [native].
  2 Inflorescence with a well-developed (zigzag) central axis, the dichotomous branches very unequal, the inflorescence therefore paniculiform; tendrils usually with numerous adhesive disks (though young shoots may not have the disks yet formed); leaves usually dull above; leaflets sessile or with petiolules < 10 mm long; [widespread in our area] ..... ***P. quinquefolia***
  2 Inflorescence without a well-developed central axis, the dichotomous branches relatively equal, the inflorescence therefore corymbiform, as wide or wider than long; tendrils usually lacking adhesive disks (though sometimes swollen at the tip); leaves usually glossy above; leaflets with petiolules 5-20 (-30) mm long; [in our area only in e. VA] ..... ***P. vitacea***

Parthenocissus quinquefolia (Linnaeus) Planchon, Virginia-creeper. Cp, Pd, Mt (GA, NC, SC, VA): swamp forests, bottomlands, maritime forests and thickets, rock outcrops, mesic forests; common. May-July; July-August. ME west to IA, and NE, south to FL and TX. [= RAB, C, F, G, K, W; > *P. quinquefolia* – S; > *P. hirsuta* (Pursh) Graebner – S]

* ***Parthenocissus tricuspidata*** (Siebold & Zuccarini) Planchon, Boston-ivy. Pd (NC): frequently grown for ornament, rarely persisting or escaped; rare, introduced from Japan and China. [= C, F, G, K]

Parthenocissus vitacea (Knerr) A. Hitchcock. Cp (VA): rich alluvial forests, roadsides and dumps; rare. Québec west to Manitoba, WY, and CA, south to e. VA, OH, MO, TX, and AZ. [= C, G, K; = *P. inserta* (Kerner) Fritsch – F, probably misapplied]

Vitis Linnaeus 1753 (Grape)

A genus of about 65 species, vines, of temperate regions of Eurasia and North America. Rossetti et al. (2002) conducted a molecular phylogenetic study of Vitaceae and suggest that recognition of *Muscadinia* as a genus may be warranted; Soejima & Wen (2006) conclude that *Vitis* s.l. is monophyletic, the muscadines apparently basal to the rest of the genera. References: Moore (1991)=Z; Ward (2006b)=Y. Key adapted with little modification from Moore (1991).

1 Tendrils simple; bark adherent (on all but the largest stems), with prominent lenticels; pith continuous through nodes; leaves relatively small and coarsely toothed, never deeply lobed; [subgenus *Muscadinia*].
  2 Mature fruits < 10 mm in diameter; infructescences with 12-30 berries; leaf blades 4-8 cm long; [of s. GA southward] ..... ***V. rotundifolia*** *var.* ***munsoniana***
  2 Mature fruits > 12 mm in diameter; infructescences with 2-8 (-12) berries; leaf blades usually > 6 cm long; [widespread in our area] ..... ***V. rotundifolia*** *var.* ***rotundifolia***
1 Tendrils bifid to trifid; bark shedding, the lenticels inconspicuous; pith interrupted by diaphragms at nodes; leaves relatively large and finely toothed, often deeply lobed; [subgenus *Vitis*].
  3 Mature leaves glaucous beneath (the glaucescence sometimes rather obscured by pubescence); nodes often glaucous; [series *Aestivales*].
    4 Mature 3-4 seeded berries > 9 mm in diameter; mature leaves slightly to strongly arachnoid-pubescent beneath; nodes usually not glaucous; nodal diaphragms usually > 2 mm in diameter ..... ***V. aestivalis*** *var.* ***aestivalis***
    4 Mature 3-4 seeded berries < 9 mm in diameter; mature leaves glabrous to glabrate beneath; nodes usually glaucous; nodal diaphragms usually < 2 mm in diameter ..... ***V. aestivalis*** *var.* ***bicolor***
  3 Mature leaves not glaucous beneath; nodes not glaucous.
    5 Tendrils or inflorescences present at 3 or more consecutive nodes; leaves densely pubescent beneath; [series *Labruscae*] ..... ***V. labrusca***
    5 Tendrils or inflorescences present at only 2 consecutive nodes; leaves glabrous or moderately pubescent beneath.
      6 Leaves reniform, glabrous beneath at maturity; tendrils absent, present only opposite the uppermost nodes, or sometimes extending down the stem; [section *Ripariae*] ..... ***V. rupestris***
      6 Leaves cordate to cordate-ovate, glabrous to pubescent beneath at maturity; tendrils present opposite most nodes.

7 Nodal diaphragms < 1 mm wide, usually < 0.5 mm wide; growing shoot tips enveloped by enlarging, unfolded leaves; [section *Ripariae*].....***V. riparia***
7 Nodal diaphragms > 1 mm wide; growing shoot tips not enveloped by enlarging, unfolded leaves.
8 Branchlets of the season more or less terete, glabrous or arachnoid-pubescent; mature 3-4 seeded berries usually > 8 mm in diameter; nodes usually not banded with red pigmentation; [series *Cordifoliae*].
9 Nodal diaphragms > 2.5 mm wide; leaves strongly 3-lobed, the tips usually long-acuminate; branchlets of the season with a red or purplish cast.....***V. palmata***
9 Nodal diaphragms < 2.5 mm wide; leaves unlobed or shallowly lobed, the tips acute to short-acuminate; branchlets of the season gray, green, or brown (sometimes purple only on one side) ..... ***V. vulpina***
8 Branchlets of the season angled, arachnoid-pubescent and/or hirtellous-pubescent (or nearly glabrous); mature 3-4 seeded berries < 8 mm in diameter; nodes frequently banded with red pigmentation; [series *Cinerescentes*].
10 Branchlets of the season sparsely to densely hirtellous pubescent, often with arachnoid pubescence as well; leaf undersurfaces usually more-or-less uniformly hirtellous on the veins; [west of our area, approaching it in w. KY, w. TN, and sc. AL] .....***[V. cinerea** var**. cinerea]***
10 Branchlets of the season lacking evident hirtellous trichomes (if present, obscured by the arachnoid pubescence; leaf undersurfaces lacking hirtellous pubescence, or only very sparsely so; [collectively widespread in our area].
11 Branchlets glabrate to only slightly arachnoid-pubescent; nodes usually banded with red pigmentation; leaves glabrous to very slightly arachnoid-pubescent beneath; [mostly of the Piedmont and Mountains].....***V. cinerea** var**. baileyana***
11 Branchlets slightly to densely arachnoid-pubescent; nodes usually not banded with red pigmentation; leaves slightly to densely arachnoid-pubescent beneath; [mostly of the Coastal Plain]..... ***V. cinerea** var**. floridana***

Vitis aestivalis Michaux *var***. *aestivalis***, Summer Grape. Cp, Pd, Mt (GA, NC, SC, VA): forests and woodlands, mostly upland; common. May-June; September-October. MA west to MO and IA, south to FL and e. TX. [= RAB, C, F, G, K, Y, Z; = *V. aestivalis* – S; < *V. aestivalis* – GW, W]

Vitis aestivalis Michaux *var***. *bicolor*** Deam, Silverleaf Grape. Mt (GA, NC, SC, VA): forests and woodlands, mostly upland; common. May-June; September-October. Ontario and MN south to n. GA and n. AL. [= Z; = *V. aestivalis* var. *argentifolia* (Munson) Fernald – RAB, C, F, G, K; = *V. bicolor* Le Conte – S; < *V. aestivalis* – GW, W]

Vitis cinerea (Engelmann in A. Gray) Engelmann ex Millardet *var***. *baileyana*** (Munson) Comeaux, Possum Grape. Mt, Pd, Cp (GA, NC, SC, VA): forests and woodlands, mostly bottomlands; common (rare in Coastal Plain). Late May-June; September-October. S. PA, s. OH, and se. IN south to c. SC, c. GA, and AL. [= K, Z; = *V. baileyana* – RAB, C, F, G, S; < *V. vulpina* – GW; < *V. cinerea* – W]

Vitis cinerea (Engelmann in A. Gray) Engelmann ex Millardet *var***. *floridana*** Munson, Florida Grape. Cp (GA, NC, SC, VA), Pd? (NC?, SC?, VA?): floodplain and other moist forests; common (rare in Piedmont). Late May-June; August-October. Se. VA south to FL, west to s. MS. [= RAB, C, F, G, K, Z; = *V. simpsonii* Munson – S, Y; < *V. cinerea* – GW, W]

Vitis labrusca Linnaeus, Fox Grape. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): forests and woodlands, wet, moist, and dry; common (uncommon in Mountains). May-June; September-October. ME west to s. MI, south to n. GA, n. AL, and n. MS. [= RAB, C, GW, K, S, W, Z; > *V. labrusca* var. *labrusca* – F, G; > *V. labrusca* var. *subedentata* Fernald – F, G]

Vitis palmata Vahl, Red Grape, Cat Grape, Catbird Grape. Cp (GA): floodplain forests, riverbanks; rare (GA Special Concern). Mid June-late June; late July-October. IN, c. TN (Chester, Wofford, & Kral 1997), sc. GA (Jones & Coile 1988), and FL Panhandle west to MO and TX. [= C, F, G, GW, K, S, Y, Z]

Vitis riparia Michaux, Riverbank Grape. Mt, Pd, Cp (NC?, VA): forests and woodlands, mostly moist to wet; uncommon. April-June; August-September. New Brunswick west to se. Saskatchewan, south to VA, NC, c. and w. TN, n. MS, LA, and e. TX, and in the Pacific Northwest. [= RAB, C, G, GW, K, Z, W; > *V. riparia* var. *riparia* – F]

Vitis rotundifolia Michaux *var***. *munsoniana*** (Simpson ex Munson) M.O. Moore, Munson Grape, Bullace Grape. Cp (GA): floodplain forests, banks of blackwater rivers; rare. Late April-May; late July-September. Sc. GA, s. AL, and FL. [= K, Y, Z; **= *Muscadinia munsoniana*** (Simpson ex Munson) Small – S; = *Vitis munsoniana* Simpson ex Munson]

Vitis rotundifolia Michaux *var***. *rotundifolia***, Muscadine, Scuppernong. Cp, Pd, Mt (GA, NC, SC, VA): forests, swamps, dunes; common (uncommon in Mountains). May-June; August-October. DE west to KY and MO, south to FL and TX. Cultivars of this species are popular in the Southeastern United States for eating grapes and for a distinctive wine. [= K, Y, Z; = *V. rotundifolia* – RAB, C, F, GW, W; **= *Muscadinia rotundifolia*** (Michaux) Small – S]

Vitis rupestris Scheele. Mt, Pd (VA): along streams and in riverbank scour areas, especially in calcareous areas; uncommon (VA Rare List). April-May; August-September. MD, WV, sw. PA west to MO, south to VA, c. TN, and n. AR. [= C, F, K, W, S, Z]

Vitis vulpina Linnaeus, Frost Grape, Winter Grape, Chicken Grape. Pd, Mt, Cp (GA, NC, SC, VA): forests and woodlands, primarily upland, but also in bottomlands; common. May; July-September. Se. NY west to MO and e. KS, south to FL and nc. TX. [= RAB, C, F, G, K, W, Y, Z; < *V. vulpina* – GW; > *V. vulpina* – S; > *V. cordifolia* Michaux – S]

Vitis cinerea (Engelmann in A. Gray) Engelmann ex Millardet var. *cinerea*, Graybark Grape, Pigeon Grape, may occur in our primary area, but is primarily more western, ranging from VA (?), w. KY, wc. TN, IN, and WI, south to sc. AL and TX. [= RAB, C, F, G, K, Z; = *V. cinerea* – S; < *V. cinerea* – GW, W]

* *Vitis* ×*labruscana* Bailey [*aestivalis* × *labrusca*] is the commonly cultivated Concord Grape (and related cultivars). It is sometimes persistent after cultivation. [= K; = *V. labruscana* Bailey – F] {not keyed}

* *Vitis vinifera* Linnaeus, the European Wine Grape, has been increasingly cultivated in our area, especially in VA, now one of the leading wine-producing states in the United States. The climate of our area is too humid to be ideal for this species, and special measures are needed to reliably produce good crops of "vinifera" grapes. [= K] {not keyed at this time}

ZYGOPHYLLACEAE R. Brown 1814 (Creosote-bush Family)

A family of about 27 genera and 285 species, trees, shrubs, and (rarely) herbs, of tropical and subtropical regions of the Old and New Worlds.

1 Fruit with tubercles, at maturity separating into 10 mericarps ..... ***Kallstroemia***
1 Fruit with spines, at maturity separating into 5 mericarps ..... ***Tribulus***

Kallstroemia Scopoli

A genus of about 17 species, of tropical and subtropical America. References: Porter 1969)=Z

*? ***Kallstroemia maxima*** (Linnaeus) Hooker & Arnott, Greater Caltrop. Cp (GA, SC): disturbed areas, dunes; rare, native status uncertain. SC south to FL; West Indies; Mexico (Sinaloa and Tamaulipas) south throuigh Central America to northern South America (Venezuela, Colombia). Early collections from Charleston (Stephen Elliott) and Savannah suggest the likelihood of introduction via ballast. [= RAB, K, S, Z]

Tribulus Linnaeus

A genus of about 25 species, of tropical and subtropical regions.

1 Petals 8-22 mm long; peduncle >2 cm long; perennial ..... ***T. cistoides***
1 Petals 3-5 mm long; peduncle <1 cm long; annual ..... ***T. terrestris***

* ***Tribulus cistoides*** Linnaeus, Jamaican Fever-plant. Cp (GA): disturbed areas; rare, native of Africa. Introduced in GA, FL, LA, and TX (Kartesz 1999). [= K, S]

* ***Tribulus terrestris*** Linnaeus, Puncture-weed, Caltrop, Devil's-thorn. Cp (GA, NC, SC): dunes, sandy roadsides, ballast; rare, introduced from Mediterranean Europe. June-December. [= RAB, C, F, G, K, S]

MONOCOTYLEDONS

ACORACEAE Martinov 1820 (Calamus Family)

The family consists only of *Acorus*. Although traditionally treated as part of the Araceae, a wide variety of morphological, anatomical, and embryological evidence supports the segregation of the Acoraceae (Grayum 1987), a segregation additionally supported by molecular studies (Duvall et al. 1993, Chase et al. 1993). The spathe in *Acorus* is not morphologically equivalent to the spathe of the Araceae. References: Thompson in FNA (2000); Bogner & Mayo in Kubitzki (1998b).

Acorus Linnaeus 1753 (Calamus, Sweetflag)

A genus of 2-4 species, widespread in north temperate and subtropical regions. References: Thompson in FNA (2000); Grayum 1987.

1 Midvein of the leaves not well-developed, about equally as prominent as the lateral veins; mature fruits produced ..... ***A. americanus***
1 Midvein of the leaves well-developed, distinctly more prominent than the lateral veins; mature fruits not produced..... ***A. calamus***

Acorus americanus (Rafinesque) Rafinesque, American Calamus, Sweetflag. Cp (VA?), Mt (GA): marshes, wet meadows, other wet areas, limey seeps; rare (GA Special Concern). May-June. Widespread in ne. North America. This species is apparently a fertile diploid. Because this species has not generally been recognized in floras, its distribution is poorly known; additional distributional records should be expected and sought. [= FNA, K; < *A. calamus* Linnaeus – RAB, C, F, G, GW; < *A. americanus* – W]

* ***Acorus calamus*** Linnaeus, European Calamus, Sweetflag. Cp, Mt (GA, NC, SC, VA), Pd (NC, SC, VA): marshes, wet meadows, other wet areas; uncommon, introduced from Eurasia, now widespread in e. North America. May-June. The aromatic rhizome and leaves have been used medicinally and candied as a confection. Populations of *A. calamus* in our area are apparently sterile triploids introduced from Europe, though diploid and tetraploid populations of *A. calamus* are known from Asia. [= FNA, K; < *A. calamus* Linnaeus – RAB, C, F, G, GW (also see *A. americanus*); < *A. americanus* – W]

AGAVACEAE Endlicher 1841 (Agave Family)

A family of about 11 genera and 315 species, herbs and rosette shrubs, of temperate and tropical America. The placement of *Camassia*, *Schoenolirion*, and *Hastingsia*, sometimes grouped as Hyacinthaceae subfamily Chlorogaloideae, is uncertain; they are probably better placed in the Agavaceae, a position supported by molecular, serological, and biogeographic evidence. References: Verhoek & Hess in FNA (2002a); Bogler & Simpson (1995, 1996); Verhoek in Kubitzki (1998a).

1 Plants with erect woody stems; leaves cauline..... ***Yucca***
1 Plants acaulescent; leaves in basal rosettes.
  2 Margins of leaves fraying into coarse, whitish, curly fibers; tepals about 4 cm long; leaves stiff and > 15 mm wide..... ***Yucca***
  2 Margins of leaves entire, not fraying; tepals < 2 cm long; leaves stiff and wiry (and < 5 mm wide), herbaceous, or fleshy.
    3 Leaves oblong-acute, 2-9 cm wide, 2-10× as long as wide, fleshy..... ***Manfreda***
    3 Leaves linear, 0.3-1.8 cm wide, 20-100× as long as wide, herbaceous or wiry.
      4 Leaves narrowly linear, 3-5 mm wide, wiry and grasslike; inflorescence a diffuse panicle; perianth segments 2-4 mm long, white ..... ***[Nolina – see RUSCACEAE]***
      4 Leaves linear, 2-18 mm wide, herbaceous; inflorescence a raceme; perianth segments 13-18 mm long, blue or nearly white.
        5 Perianth segments 13-18 mm long, blue or nearly white..... ***Camassia***
        5 Perianth segments 5-7 mm long, white, cream, or yellow..... ***Schoenolirion***

Camassia Lindley 1832 (Wild Hyacinth, Quamash Lily, Camas Lily)

A genus of 6 species, of North America. The family placement of *Camassia* is uncertain; there is some increasing evidence that the affinities of *Camassia* are with the Agavaceae, rather than the Hyacinthaceae (Fay & Chase 1996, Bogler & Simpson 1996, Speta in Kubitzki 1998a). References: Ranker & Hogan in FNA (2002a); Speta in Kubitzki (1998a).

Camassia scilloides (Rafinesque) Cory, Wild Hyacinth, Quamash Lily, Eastern Camas Lily. Mt (GA, VA), Cp (NC), Pd (SC): moist forests, over circumneutral soils, in VA on limestone, in NC on slopes and natural levees along the Roanoke River, in SC over gabbro; rare (NC Threatened, SC Rare, VA Rare). April-May. W. PA and s. Ontario west to s. WI and e. KS, south to nw. GA (Jones & Coile 1988) and TX, nearly entirely west of the Blue Ridge, with only a few disjunct occurrences in the Piedmont and Coastal Plain. [= RAB, C, F, FNA, G, K, W; = *Quamasia hyacintha* (Rafinesque) Britton – S]

Manfreda Salisbury 1866 (False-aloe)

A genus of about 26 species, primarily in sw. United States, Mexico, and Central America. References: Verhoek in FNA (2002a); Speta in Kubitzki (1998a).

Manfreda virginica (Linnaeus) Salisbury ex Rose, Rattlesnake-master, Eastern False-aloe. Pd (GA, NC, SC), Cp (GA, NC, SC), Mt (GA, NC, SC, VA): granite flatrocks, diabase glades, xeric woodlands over mafic or calcareous rocks, sandhill woodlands; uncommon (VA Rare). Late May-mid July; August-October. E. SC, c. NC, sw. VA, WV, s. OH, s. IN, s. IL, and MO south to n. FL and TX. [= FNA, K, W; = *Agave virginica* Linnaeus – RAB, C, F; > ***M. tigrina*** (Engelmann) Small – S; > ***M. virginica*** – S; = *Polianthes virginica* (Linnaeus) Shinners]

Nolina
(see *RUSCACEAE*)

Schoenolirion Torrey ex Durand (Sunnybell)

A genus of 3 species, herbs, of s. North America. References: Sherman in FNA (2002a).

1 Inflorescence with 1-6 branches; leaves without fleshy bases, withering to a persistent fibrous crown ..... ***Sch. albiflorum***
1 Inflorescence rarely branched; leaves with fleshy bases, not fibrous.
  2 Perianth white ..... ***[Sch. wrightii]***
  2 Perianth golden-yellow ..... ***Sch. croceum***

Schoenolirion albiflorum (Rafinesque) R.R. Gates, White Sunnybell. Cp (GA): wet pinelands, cypress depressions, and *Hypericum* depressions; rare (GA Special Concern). E. GA south to FL and west to AL. [= FNA, K; = ***Sch. elliottii*** Feay ex A. Gray – GW; = *Oxytria albiflora* (Rafinesque) Pollard – S]

Schoenolirion croceum (Michaux) Wood, Yellow Sunnybell. Pd (GA, SC), Cp (GA, NC?), Mt (GA): seepages on granite flatrocks, wet seepages in sandhills (allegedly); rare (NC Watch List, SC Rare). April-May; May-June. SC (and allegedly NC) south to n. FL, west to se. TX; and in c. TN on limestone glades (Chester et al. 1993). The occurrence in NC in "wet pinelands" in Richmond County referred to in RAB has not been relocated or further documented. [= RAB, FNA, GW, K; = *Oxytria crocea* (Michaux) Rafinesque – S]

Schenolirion wrightii Sherman, Texas Sunnybell, occurs east to AL. [= FNA, K; = *Oxytria texana* (Scheele) Pollard – S]

Yucca Linnaeus 1753 (Yucca, Adam's-needle)

A genus of about 40 species, of sw. North America, n. Mexico, se. United States, and the West Indies. References: Hess & Robbins in FNA (2002a); Speta in Kubitzki (1998a); Ward (2004c)=Z; Ward (2006a).

1 Leaf margins fraying into filamentous threads; plant acaulescent (or essentially so); fruit erect.
  2 Inflorescence branches glabrous; tepals 5-7 cm long; leaves 2-6 cm wide, stiff, the apex acute-acuminate to obtuse, often concave upward at the apex ..... ***Y. filamentosa***
  2 Inflorescence branches scurfy-pubescent; tepals 3-5 cm long; leaves 1.5-4 cm wide, pliable, the apex attenuate-acuminate, not notably concave ..... ***Y. flaccida***
1 Leaf margins not fraying, minutely notched-serrulate or entire, and hyaline; plant with a trunk; fruit pendulous (erect in *Y. recurvifolia*).
  3 Leaf margins minutely notched-serrulate, particularly toward the base; seeds 2.5 mm thick, marginless ..... ***Y. aloifolia***
  3 Leaf margins entire, smooth, hyaline-brown or hyaline-tellow; seeds ca. 1 mm thick, margined.
    4 Leaf blades rigid, straight; fruits pendent, 5.5-8 cm long; [of NC south to FL] ..... ***Y. gloriosa***
    4 Leaf blades recurved, flexible; fruits generally erect, 2.5-4.5 cm long; [of GA westward]..... ***Y. recurvifolia***

Yucca aloifolia Linnaeus, Spanish Dagger. Cp (GA, NC, SC): dunes; uncommon. June-early July; October-December. Ne. NC (Dare County) south to FL and west to LA. [= RAB, FNA, K, S]

Yucca filamentosa Linnaeus, Curlyleaf Yucca, Spoonleaf Yucca. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): woodlands, forests, dunes, roadsides, disturbed areas; common. Late April-early June; September-October. MD or s. NJ south to GA, west to MS; escaped from cultivation over a broader area of e. United States. [= FNA, F, S, W, Z; = *Y. filamentosa* var. *filamentosa* – RAB; < *Y. filamentosa* – C, G, K (also see *Y. flaccida*); = *Y. concava* Haworth – S]

Yucca flaccida Haworth, Weakleaf Yucca. Cp, Pd, Mt (GA, NC, SC, VA*): woodlands, roadsides, disturbed areas; rare (NC Watch List). Late April-early June; September-October. C. NC and TN south to FL and AL. Whether or not this taxon is valid (and if so, as a variety or as a species) has been unclear; further research is needed. The occurrence of this species in VA is apparently the result of cultivation and persistence. [= FNA, S, W; = *Y. filamentosa* var. *smalliana* (Fernald) Ahles – RAB; < *Y. filamentosa* – C, G, K, in part; = *Y. smalliana* Fernald – F; > *Y. flaccida* var. *flaccida* – Z; > *Y. flaccida* var. *smalliana* (Fernald) D.B. Ward – Z]

Yucca gloriosa Linnaeus, Mound-lily Yucca, Spanish Bayonet. Cp (GA, NC, SC): dunes, shell middens; uncommon, rare in NC (NC Rare). (April), October; November-December. E. NC (Dare County) south to ne. FL, west to LA (Kartesz 1999). [= RAB, K, S; = *Y. gloriosa* var. *gloriosa* – FNA]

Yucca recurvifolia Salisbury, Curve-leaf Yucca. Cp (GA): dunes, dry sandy soils; rare. GA west to LA (?). [= S; = *Y. gloriosa* Linnaeus var. *recurvifolia* (Salisbury) Engelmann – FNA]

ALISMATACEAE Ventenat 1799 (Water-plantain Family)

A family of about 12 genera and 80 species, herbs, subcosmopolitan in distribution. References: Haynes & Hellquist in FNA (2000); Rogers (1983); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

1 Pistils in a single whorl, borne on a flat receptacle; stamens 6; inflorescence compound, many of the primary nodes bearing whorled branches which in turn bear whorled branches or whorled flowers ..... ***Alisma***
1 Pistils spiraled in several to many whorls, borne on a globose receptacle; stamens 6-many; inflorescence racemose (or in some species of both *Echinodorus* and *Sagittaria* somewhat compound, with the lowermost node or two bearing branches which in turn bear whorled flowers).
  2 Achenes turgid, with ribs or ridges; flower whorls subtended by 3 bracts and additional bracteoles ..... ***Echinodorus***
  2 Achenes flattened, with winged margins and often also with irregular corky ornamentations on the faces; flower whorls subtended by 3 bracts, with no additional bracteoles ..... ***Sagittaria***

Alisma Linnaeus 1753 (Water-plantain)

A genus of about 9 species, herbs, subcosmopolitan in distribution. References: Haynes & Hellquist in FNA (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

1 Leaf blades 2.7-5× as long as wide (or even narrower on submerged leaves), tapering at the base; petals pink, 2.3-3.7 mm long; achene with a dorsal ridge flanked by two dorsal grooves ..... ***A. gramineum***
1 Leaf blades 1.3-2.5 (2.7)× as long as wide, rounded to subcordate at the base; petals white, **either** 1.8-2.5 mm **or** 3.8-4.5 mm long; achene with a single dorsal groove.
  2 Petals 1.8-2.5 mm long, 1.4-2.0 mm wide ..... ***A. subcordatum***
  2 Petals 3.8-4.5 mm long, 3.0-3.9 mm wide ..... ***[A. triviale]***

Alisma gramineum Lejeune, Grassleaf Water-plantain. Cp (VA): in seasonally flooded areas in impoundments; rare (VA Watch List). June-August. This species is circumboreal, ranging in North America south to e. VA, NY, WI, MO, NM, and CA. The occurrence of this species in our area may be the result of dispersal by waterfowl; first reported for our area by Wieboldt et al. (1998). [= C, F, FNA, K; < *A. plantago-aquatica* Linnaeus var. *americanum* J.A. Schultes – G]

Alisma subcordatum Rafinesque, Southern Water-plantain. Mt, Pd (GA, NC, SC, VA), Cp (NC, VA): marshes, ponds, stream edges; uncommon. April-November. MA west to ND, south to FL and TX. [= RAB, C, F, FNA, G, GW, K, S, W; = *A. plantago-aquatica* Linnaeus ssp. *subcordatum* (Rafinesque) Hultén; *A. plantago-aquatica* var. *parviflorum* (Pursh) Torrey]

Alisma triviale Pursh, Northern Water-plantain, ranges south to s. PA and KY (and according to Fernald to MD and WV). [= C, F, FNA, K; < *A. plantago-aquatica* Linnaeus var. *americanum* J.A. Schultes – G]

Echinodorus L.C. Richard ex Engelmann 1848 (Burhead)

A genus of about 27 species, herbs, primarily of the American tropics and subtropics. References: Haynes & Hellquist in FNA (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

1 Leaf blades 1-3 cm long, 0.2-2 cm wide; achenes 10-20 per head; stamens 6 or 9; petals 1-3 mm long; scapes 5-10 cm tall, erect; [subgenus *Helanthium*] ..... ***E. tenellus***

1 Leaf blades 5-20 cm long, 3-15 cm wide; achenes 40 or more per head; stamens ca. 21; petals 6-12 mm long, scapes 20-120 cm tall, erect or arching/reclining; [subgenus *Echinodorus*].
2 Scapes arching and rooting down at maturity; veins of the sepals papillose-roughened.....***E. cordifolius** ssp. **cordifolius***
2 Scapes rigidly erect at maturity; veins of the sepals smooth.
3 Stamens 9-15; plants to 70 cm tall .....***E. berteroi***
3 Stamens 21; plants to 200 cm tall.....***[E. floridanus]***

Echinodorus berteroi (Sprengel) Fassett, Tall Burhead. Cp (GA): {habitats}; rare. OH, IL, and ND south to w. FL, sw. GA, and TX. [= FNA, K; > *E. berteroi* var. *lanceolatus* (Engelmann ex S. Watson & Coulter) Fassett – C; = *E. cordifolius* – S, misapplied; *? E. rostratus* (Nuttall) Engelmann – GW] {synonymy}

Echinodorus cordifolius (Linnaeus) Grisebach *ssp.* ***cordifolius***, Creeping Burhead. Cp (GA, NC, SC, VA): swamps, ditches, wet thickets, especially on base-rich substrates, such as over calcareous or mafic rocks; common. June-November. MD south to FL, west to TX, south into tropical America, and north in the interior (primarily in the Mississippi Embayment) to s. IL. [= FNA; < *E. cordifolius* – RAB, F, G, GW, K; = *E. cordifolius* var. *cordifolius* – C; = *E. radicans* (Nuttall) Engelmann – S]

Echinodorus tenellus (Martius) Buchenau, Mud-babies, Dwarf Burhead. Cp (GA, NC, SC, VA), Mt (GA, VA): on drawdown zones of Coastal Plain ponds, pineland ponds, blackwater riverbanks, or ponds in the Mountains with Coastal Plain affinities (Augusta County, VA); rare (GA Special Concern, NC Rare, VA Rare). MA west to MN, south to c. peninsular FL and e. TX, but widely scattered and disjunct in that range. See Belden et al. (2004) for a discussion of the species in Virginia. [= FNA, G, K; > *E. parvulus* Engelmann – G, GW; > *E. tenellus* (Martius) Buchenau var. *parvulus* (Engelmann) Fassett – C; > *Helanthium parvulum* (Engelmann) Britton – S]

Echinodorus floridanus R.R. Haynes & J.R. Burkhalter, Florida Burhead, is a recently named endemic, known only from Escambia County, FL. [= FNA, K]

Sagittaria Linnaeus 1753 (Arrowhead)

A genus of about 25 species, herbs, primarily of the Americas. References: Haynes & Hellquist in FNA (2000); Bogin (1955)=Z; Wooten (1973)=Y; Beal, Wooten, & Kaul (1982)=X; Preston & Adams (1961); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Identification notes: Portions of this key (and treatment) are provisional. The taxonomy and best characters to use in the linear-leaved species is particularly problematic.

1 Leaf blades sagittate or cordate (at least some of the leaves on a plant with sagittate or cordate basal lobes; some species are keyed both here and below).
2 Leaf blades stellate-pubescent; [subgenus *Sagittaria*] .....***S. latifolia** var. **pubescens***
2 Leaf blades glabrous.
3 Sepals appressed in fruit; lower flowers perfect, the stamens either functional or not; stamen filaments roughened with minute scales (except glabrous in *S. spatulata*); [subgenus *Lophotocarpus*].
4 Leaves primarily phyllodial, lanceolate or spatulate (sagittate leaves rare in the population and few on a given plant); flowers in 1-2 (-3) whorls; stamen filaments glabrous (use 10×); [native, of tidal marshes] .... ***S. spatulata***
4 Leaves primarily sagittate (phyllodial leaves rare in the population and few on a given plant); flowers in 3-12 whorls; stamen filaments roughened with minute scales (use 10×); [**either** introduced aliens, sometimes in tidal marshes, **or** native, found in inland alkaline sites].
5 Petals white, immaculate; stamens of pistillate flowers functional; [of inland sites, native or introduced at a given locality].....***S. calycina***
5 Petals white, with a purple spot at the base; stamens of pistillate flowers generally nonfunctional; [exotic, introduced around coastal ports]..... ***S. montevidensis***
3 Sepals reflexed or at least widely spreading in fruit; lower flowers pistillate; stamens glabrous (except roughened with minute scales in *S. rigida*); [subgenus *Sagittaria*].
6 Leaves cordate basally, floating; stalks of the pistillate flowers stout, reflexed in fruit; stamens mostly fewer than 15.....***S. filiformis***
6 Leaves sagittate basally, emersed; stalks of the pitillate not notably stout, ascending in fruit; stamens 15 or more.
7 Beak of the achene lateral (at a right angle to the long axis of the achene); bracts of the inflorescence 2-14 mm long, boat-shaped, obtuse or broadly acute.
8 Lowermost (pistillate) flowers on long pedicels (at least 20 mm), the pedicels of the lowermost flowers longer than those in whorls above; inflorescence normally not bent; stamen filaments glabrous..... ***S. latifolia** var. **latifolia***
8 Lowermost (pistillate) flowers sessile or on short pedicels (to 5 mm or rarely 10 mm long), the pedicels of the lowermost flowers notably shorter than those in whorls above; inflorescence

normally bent at the lowest whorl of flowers; stamen filaments minutely roughened with minute scales ..... ***S. rigida***

7 Beak of the achene terminal (extending along the long axis of the achene; bracts of the inflorescence 5-40 mm long, either blunt or acuminate, not boat-shaped.

9 Bracts of the inflorescence thick and herbaceous, 5-25 mm long, rounded at the tip; flowers in 2-4 whorls; achenes with facial resin-ducts; [of acidic, blackwater habitats of the Coastal Plain] ..... ***S. engelmanniana***

9 Bracts of the inflorescence papery and tan, 7-40 mm long, acuminate at the tip; flowers in 5-12 whorls; achenes without resin-ducts; [primarily of other habitats, commectively widespread].

10 Petiole sharply 5-wing-angled in cross-section; inflorescence unbranched; fruiting heads 1.0-1.5 cm in diameter, globular ..... ***S. australis***

10 Petiole corrugated but not wing-angled in cross-section; inflorescence often branched at the base; fruiting heads (1.2-) 1.7-2.2 cm in diameter, often globular-depressed ..... ***S. brevirostra***

1 Leaf blades linear or lanceolate, or modified as linear, bladeless phyllodia, these often of spongy texture.

11 Stalks of the pistillate flowers reflexed in fruit, often stout; stamen filaments glabrous (except roughened with minute scales in *S. platyphylla* and *S. calycina*).

12 Sepals appressed in fruit; lower flowers perfect, the stamens either functional or not; [subgenus *Lophotocarpus*].

13 Leaves generally primarily sagittate (phyllodial leaves generally rare in the population); flowers in 3-12 whorls; stamen filaments roughened with minute scales (use 10× magnification); [of inland alkaline sites] ..... ***S. calycina***

13 Leaves primarily phyllodial, lanceolate or spatulate (sagittate leaves rare in the population and few on a given plant); flowers in 1-2 (-3) whorls; stamen filaments glabrous (use 10× magnification); [of tidal marshes] ..... ***S. spatulata***

12 Sepals reflexed or at least widely spreading in fruit; lower flowers pistillate; [subgenus *Sagittaria*].

14 Plant generally with erect, emersed leaves with well-developed blades with firm texture, the blades lanceolate, elliptic, or ovate, 2-8 cm wide; stamen filaments roughened with minute scales ..... ***S. platyphylla***

14 Plant with all leaves phyllodial, if expanded at the summit, the expanded blade of weak texture, floating.

15 Leaves 2-10 (-30) cm long, 3-8 mm wide (sometimes with dilated tip to 20 mm wide); [of tidal, fresh to brackish waters] ..... ***S. subulata***

15 Leaves 30-300 (or more) cm long, **either** 1-3 **or** 7-14 mm wide; [of nontidal waters].

16 Leaves very variable from population to population, in swiftly flowing black water typically about 100 cm long and 1-3 mm wide, in more stagnant water (or when emersed by dropping water levels, typically with lax petioles and floating blades, the blades lanceolate, or elliptic, the base cuneate, rounded, or cordate; [of blackwater streams and ponds, MA south to FL, west to s. AL] ..... ***S. filiformis***

16 Leaves 100-300 (or more) cm long, 7-14 mm wide; [of springs and spring-runs, endemic to FL] ..... ***[S. kurziana]***

11 Stalks of the pistillate flowers ascending or spreading in fruit, not notably stout; stamen filaments roughened with minute scales (except glabrous in *S. engelmanniana*).

16 Stamen filaments linear, less thick than the anther, changing little in diameter from near base to near summit.

17 Bracts of the inflorescence firm in texture, smooth; stamen filaments glabrous; [of inland acidic wetlands] ..... ***S. engelmanniana***

17 Bracts of the inflorescence either papillose or longitudinally striate-ribbed; stamen filaments roughened with minute scales; [of estuarine areas and associated nontidal wetlands].

18 Bracts and sepals striate-ribbed; stamen filaments 2-5 mm long; [rare, from e. SC southward] ..... ***S. lancifolia** var. **lancifolia***

18 Bracts and sepals papillose; stamen filaments 1.5-3.5 mm long; [common, throughout our coastal area] .. ***S. lancifolia** var. **media***

16 Stamen filaments **either** distinctly dilated toward the base (often broadly conic) **or** thickened throughout, the filament (at least basally) as thick or thicker than the anther.

19 Lowermost (pistillate) flowers sessile or on short pedicels (to 5 mm or rarely 10 mm long); inflorescence normally bent at the lowest whorl of flowers ..... ***S. rigida***

19 Lowermost (pistillate) flowers on longer pedicels; inflorescence normally not bent.

20 Leaves all phyllodia, the phyllodia terete or nearly so; [of DE and NJ northward] ..... ***[S. teres]***

20 Leaves with blades and petioles, or if all phyllodia, the phyllodia flattened or triangular in cross-section; [collectively widespread].

21 Plants with corms and/or stolons, lacking coarse rhizomes.

22 Blades of emersed leaves lanceolate, narrowly spatulate; [of Mountain and upper Piedmont bogs, swamp forests, and adjacent ditches] ..... ***S. fasciculata***

22 Blades of emersed leaves linear (< 3 mm wide); [of Coastal Plain depression wetlands] ..... ***S. isoetiformis***

21 Plants with coarse rhizomes, lacking corms and stolons.

23 Abaxial wing of fruit scalloped or toothed; [plants of n. AL] ..... ***S. secundifolia***

23 Abaxial wing of fruit entire; [plants collectively widespread].

24 Larger phyllodes 0.8-2.5 cm wide, the apices blunt (rarely acute); longer pistillate pedicels 2-5 (-6.5) cm long; median resin duct of mature achene linear, about as wide as the posterior duct (or ducts absent) ..... ***S. weatherbiana***

24 Larger phyllodes to 1 cm wide (except sometimes wider in *S. chapmanii*), the apices avute; longer pistillate pedicels 1-4 cm long; median resin duct of mature achene club-shaped and 2× the diameter of the posterior duct.

25 Inflorescence branched at the base (in at least some plants of a population); bracts of the inflorescence only slightly connate, the free tips narrowly triangular, 6-15 mm long ..... ***S. chapmanii***

25 Inflorescence unbranched at the base; bracts of the inflorescence slightly to almost fully connate ..... ***S. graminea***

1 Leaves bladeless.

2 Achenes 1.5-2.0 (-2.5) mm long; achene faces with 3 or more keels and 2 or more resin ducts; inflorescence bracts connate for > 50% of length ..... ***S. isoetiformis***

2 Achenes (2.2-) 2.4-3.0 mm long; achene faces with 2-3 keels and 1-2 resin ducts; inflorescence bracts connate for < 40% of length ..... ***S. macrocarpa***

1 Leaves with distal blades.

3 Pistillate pedicels thickened and recurved in fruit ..... ***S. platyphylla***

3 Pistillate pedicels not thickened, not recurved.

4 Plants with thick rhizomes; achene faces with markedly raised keels, forming a deep bowl ..... ***S. graminea*** *ssp.* ***graminea***

4 Plants with slender rhizomes or none; achene faces with slightly raised keels.

5 Leaf blades at least 5 mm wide and anthers about 0.6-0.7 mm long ..... ***S. fasciculata***

5 Leaf blades < 4.5 mm wide and anthers about 0.9-1.1 mm long.

6 Achenes (2.2-) 2.4-3.0 mm long, beaks 0.5-0.9 mm long ..... ***S. macrocarpa***

6 Achenes 1.4-2.0 (-2.5) mm long, beaks 0.2-0.6 mm long.

7 Achene faces with markedly raised keels, forming a deep bowl; leaf blades at least 3.0 mm wide ..... ***S. graminea*** *ssp.* ***graminea***

7 Achene faces with slightly raised keels; leaf blades < 2.3 mm wide ..... ***S. isoetiformis***

Sagittaria australis (J.G. Smith) Small. Cp (NC, SC, VA), Pd, Mt (GA, NC, SC, VA): marshes, swamps, margins of ponds and lakes; common. June-October. NY west to s. IN and se. MO, south to SC and MS. [= C, F, FNA, K, W, X; > *S. australis* – S; = *S. longirostra* – RAB, S, misapplied; = *S. engelmanniana* J.G. Smith ssp. *longirostra* – G, GW, Z, misapplied]

Sagittaria brevirostra Mackenzie & Bush, Midwestern Arrowhead. Mt (VA): {habitat}; rare. June-October. OH west to ND, south to w. VA, e. TN, AL, and TX. [= C, F, FNA, K, W, X; *S. engelmanniana* J.G. Smith ssp. *brevirostra* (Mackenzie & Bush) Bogin – G, Z]

Sagittaria calycina Engelmann. Pd* (NC*, SC*), Mt (VA): ponds; rare (VA Rare). May-September. N. OH and MI west to SD and CO, south to sw. VA, c. TN, LA, TX, and Mexico; disjunct in CA. Presumably only introduced in North Carolina and South Carolina. First reported for South Carolina by Hill & Horn (1997). [= RAB, C, W; = *Lophotocarpus calycinus* (Engelmann) J.G. Smith – F; = *S. montevidensis* Chamisso & Schlechtendahl ssp. *calycina* (Engelmann) Bogin – FNA, G, GW, Z; > *S. calycina* var. *calycina* – K]

Sagittaria chapmanii (J.G. Smith) C. Mohr, Chapman's Arrowhead. Cp (GA, NC, SC): limesink (doline) ponds with drawdown hydrology, mucky ditches; rare (NC Rare). May-September. Se. NC south to s. FL, west to s. AL. First reported for SC by Nelson & Kely (1997). Analyses of allozyme variation in the *S. graminea* complex revealed great differentiation between *S. graminea*, *S. chapmanii*, and *S. platyphylla*; *S. graminea* and *S. platyphylla* appeared to be more closely related to one another than either was to *S. chapmanii* (Hauber & Legé 1999). Therefore, it seems best to treat these three taxa at equal rank and at the species level. [= S; = *S. graminea* Michaux ssp. *chapmanii* (J.G. Smith) R.R. Haynes & C.B. Hellquist – FNA; = *S. graminea* Michaux var. *chapmanii* J.G. Smith – GW, K, Y; = *S. graminea* Michaux var. *chapmani* J.G. Smith – Z, orthographic variant]

Sagittaria engelmanniana J.G. Smith. Cp (GA, NC, SC, VA), Pd (GA?, NC, VA): blackwater streambanks, sphagnum bogs, pocosins, beaver ponds; rare (NC Watch List, VA Rare). June-October. MA and NY south to n. FL and s. MS, primarily on the Coastal Plain. [= RAB, C, F, FNA, K, W, X; = *S. engelmanniana* ssp. *engelmanniana* – G, GW, Z]

Sagittaria fasciculata E.O. Beal, Bunched Arrowhead. Mt (GA, NC, SC), Pd (SC): bogs, ditches adjacent to drained bogs, wooded seepage areas; rare (US Endangered, NC Endangered). May-July. Endemic to a several-county area in sw. NC and nw. SC, where most of its former habitat has been drained. [= RAB, FNA, GW, K, W, Y; = *S. macrocarpa* J.G. Smith – S, misapplied; < *S. graminea* Michaux var. *macrocarpa* (J.G. Smith) Bogin – Z, mostly misapplied]

Sagittaria filiformis J.G. Smith. Cp (GA, NC, SC, VA?): swiftly flowing water of blackwater rivers and streams, blackwater lake shores; rare (NC Rare). May-September. As conceived here, probably ranging from MA south to FL and s. AL. The forms growing in swiftly flowing black water are remarkable and unlikely to be recognized as a *Sagittaria* unless in flower, with linear leaves over 100 cm long and only 1-3 mm wide, with 5-7 parallel ribbed veins, resembling *S. kurziana* Glück of spring-fed streams of FL. The proper taxonomic treatment and associated nomenclature to apply to these plants remains unclear (see synonymy). [= FNA, K; = *S. subulata* (Linnaeus) Buchenau var. *gracillima* (S. Watson) J.G. Smith – RAB, F, G, Z; = *S. stagnorum* Small – GW; < *S. subulata* – C, in part; > *S. filiformis* – S; > *S. lorata* (Chapman) Small – S; > *S. stagnorum* – S]

Sagittaria graminea Michaux. Cp (GA, NC, SC, VA), Pd (VA), Mt (GA, VA): marshes, ponds, tidal areas; uncommon (rare in the Piedmont and Mountains). May-November. Newfoundland and Labrador west to MN and SD, south to s. FL and c. TX; West Indies. [= *S. graminea* Michaux var. *graminea* – RAB, C, G, GW, K, Y; > *S. graminea* – F; > *S. eatonii* J.G. Smith – F; = *S. graminea* ssp. *graminea* – FNA; > *S. graminea* – S; > *S. cycloptera* (J. G. Smith) C. Mohr – S; < *S. graminea* – W; < *S. graminea* var. *graminea* – Z (also see *S. isoetiformis*)]

Sagittaria isoetiformis J.G. Smith. Cp (GA, NC, SC): clay-based Carolina bays, other seasonally flooded depressions; rare (NC Rare). June-September. Se. NC south to c. peninsular FL, west to s. MS (Sorrie & Leonard 1999). See Godfrey & Adams (1964) for additional discussion of this species. [= FNA, GW, K, S, Y; < *S. teres* – RAB, S, misapplied; < *S. graminea* Michaux var. *graminea* – Z, in part]

Sagittaria lancifolia Linnaeus *var.* ***lancifolia***. Cp (GA, SC): marshes, swamps; rare. May-June. E. SC south to s. FL, west to FL Panhandle; West Indies; n. South America. [= C; = *S. lancifolia* – RAB; = *S. lancifolia* ssp. *lancifolia* – FNA, GW, K, Z; > *S. angustifolia* Lindley – S; > *S. lancifolia* – S, in a narrow sense]

Sagittaria lancifolia Linnaeus *var.* ***media*** Micheli. Cp (GA, NC, SC, VA): freshwater to brackish tidal marshes, ditches; common. June-October. S. DE south to n. FL, west to TX; scattered in Central America. If recognized as a species, this taxon is *S. falcata*. [= C; = *S. falcata* Pursh – RAB, F, G, S; = *S. lancifolia* ssp. *media* (Micheli) Bogin – FNA, GW, K, Z]

Sagittaria latifolia Willdenow *var.* ***latifolia***. July-October. Cp, Pd, Mt (GA, NC, SC, VA): marshes, swamps, farm ponds, ditches, bogs; common. June-September. Nova Scotia west to British Columbia, south to tropical America (rare in the Appalachian region). In addition to the pubescence difference, var. *latifolia* and var. *pubescens* can be separated by the presence (var. *latifolia*) or absence (var. *pubescens*) of resin-ducts on the achene-faces. [= C, G, GW, W, Z; > *S. latifolia* var. *latifolia* – RAB, F, in a narrower sense; > *S. latifolia* var. *obtusa* (Engelmann) Wiegand – RAB, F; > *S. planipes* Fernald – F; < *S. latifolia* – FNA, K; > *S. latifolia* – S, in the narrow sense; > *S. ornithorhyncha* Small – S]

Sagittaria latifolia Willdenow *var.* ***pubescens*** (Muhlenberg ex Nuttall) J.G. Smith. Mt, Pd, Cp (GA, NC, SC, VA): bogs, marshes; common. July-October. C. PA, OH, and TN, south to n. FL and e. TX, primarily in the Appalachians. [= RAB, C, F, G, GW, W, Z; < *S. latifolia* – FNA, K; = *S. pubescens* Muhlenberg ex Nuttall – S]

* ***Sagittaria montevidensis*** Chamisso & Schlechtendahl. Cp (GA, NC, SC): disturbed areas, marshes; rare, introduced from South America. July. Most of the collections from the southeastern United States are old collections around major seaports, suggesting that this plant was introduced on the ballast of sailing ships. [= RAB, K, S; = *S. montevidensis* ssp. *montevidensis* – FNA, GW, Z]

Sagittaria platyphylla (Engelmann) J.G. Smith. Cp (GA, SC, VA), Pd (NC): marshes, ditches, farm ponds; rare (GA Special Concern, NC Watch List, VA Watch List), perhaps introduced from the s. Midwest. June. The distribution of this species is primarily in the Mississippi drainage; occurrences east of the Appalachians may be introduced, either by humans or by waterfowl. First reported for VA by Wieboldt et al. (1998). Known from numerous counties in sc. GA (Jones & Coile 1988). [= F, FNA, K, Y; = *S. graminea* Michaux var. *platyphylla* Engelmann – RAB, G, Z; > *S. platyphylla* – S; > *S. mohrii* J.G. Smith – S]

Sagittaria rigida Pursh, Sessile-fruited Arrowhead. Mt (VA): mountain ponds, wet meadows; rare (VA Rare). July-October. ME and MN, south to w. VA, nc. TN, MO, and NE. [= C, F, FNA, G, K, S, W, Y, Z]

Sagittaria secundifolia Kral, Little River Water-plantain. Mt (GA): crevices in sandstone bedrock in streambeds; rare (US Threatened, GA Threatened). Nw. GA and nc. AL. See Kral (1982) and Threlkeld & Soehren (2003) for additional information. [= FNA, K]

Sagittaria spatulata (J.G. Smith) Buchenau. Cp (NC, VA): tidal marshes; uncommon (NC Watch List, VA Rare). May-September. New Brunswick south to e. NC along the coast. [= C, G; > *Lophotocarpus spongiosus* (Engelmann) J.G. Smith – F; > *S. calycina* var. *spongiosa* Engelmann – K; > *S. montevidensis* Chamisso & Schlechtendahl ssp. *spongiosa* (Engelmann) Bogin – FNA, Z]

Sagittaria subulata (Linnaeus) Buchenau. Cp (GA, NC, SC, VA): tidal marshes and mud flats; uncommon. May-September. MA and NY south to FL and AL. [= FNA, GW, K, S; = *S. subulata* var. *subulata* – RAB, G, Z; < *S. subulata* – C, in part (also see *S. stagnorum*); > *S. subulata* var. *subulata* – F; > *S. subulata* var. *natans* (Michaux) J.G. Smith – F]

Sagittaria weatherbiana Fernald. Cp (GA, NC, SC, VA): fresh to brackish marshes, streambanks, pineland pools; uncommon. April-June. Se. VA south to n. FL. Isozyme studies by Hauber & Legé (1999) provide evidence that this taxon should be given species status; its genetic identity with var. *graminea* is low, and comparable to the difference between *S. graminea* (in the narrow sense) and *S. platyphylla*. [= F; = *S. graminea* Michaux var. *weatherbiana* (Fernald) Bogin – RAB, C, G, GW, K, Y, Z; = *S. graminea* Michaux ssp. *weatherbiana* (Fernald) R.R. Haynes & C.B. Hellquist – FNA]

Sagittaria kurziana Glück, Spring-tape. Spring-runs. Panhandle and northern peninsula of FL. [= GW, K, S; = *S. subulata* (Linnaeus) Buchenau var. *kurziana* (Glück) Bogin -- Z]

Sagittaria macrocarpa J.G. Smith. Cp (NC, SC): beaverponds, old millponds; rare. Apparently endemic to the Coastal Plain of the Carolinas. [< *S. graminea* Michaux var. *macrocarpa* (J.G. Smith) Bogin – Z, misapplied] {not keyed at this time}

Sagittaria teres S. Watson. Ponds. MA south to DE and NJ. [= C, F, FNA, G, K; = *S. graminea* Michaux var. *teres* (S. Watson) Bogin – Z]

ALLIACEAE J. Agardh 1858 (Onion Family)

References: Fay & Chase (1996); Rahn in Kubitzki (1998a).

1 Inflorescence a solitary flower; flowers blue, lavender, or white; fresh plant with an onion odor; [subfamily *Gillesioideae*] ... .***Tristagma***
1 Inflorescence an umbel; flowers white, greenish white, cream, pink, or magenta-purple; fresh plant with or without an onion odor.
2 Tepals 2-9 mm long; ovary 3-celled, each with 1-2 ovules; fresh plant with an onion odor; [subfamily *Allioideae*] ....***Allium***
2 Tepals 10-15 mm long; ovary 3-celled, each with 6-10 ovules; fresh plant usually without an onion odor; [subfamily *Gillesioideae*]....***Nothoscordum***

Allium Linnaeus 1753 (Onion, Garlic, Leek, Ramps, Chives)
(also see *Nothoscordum*)

A genus of 500-700 species, herbs, of Eurasia, n. Africa, and North America (especially diverse in c. Asia). References: Mathew (1996)=Z; Rahn in Kubitzki (1998a); McNeal & Jacobsen in FNA (2002a).

1 Leaves appearing before the flowers and withering before anthesis; leaves lanceolate to elliptic (the margins not parallel for most of the length), mostly > 2 cm wide; [subgenus *Rhizirideum*].
2 Leaves (1.5-) 2-4 (-4.5) cm wide, without a distinct petiolar base, the basal portion white; flowers (6-) 10-18 (-25) per umbel (fruits often fewer by abortion); spathe bracts 1-2 cm long; fruiting pedicels (8-) 10-15 (-18) mm long..... ....***A. burdickii***
2 Leaves (3-) 5-8 (-9) cm wide, with a distinct petiolar base, the petioles usually red or pink; flowers (15-) 30-55 (-63) per umbel (fruits often fewer by abortion); spathe bracts 2-3 cm long; fruiting pedicels (10-) 15-25 (-30) mm long..... ....***A. tricoccum***
1 Leaves present at flowering; leaves linear (the margins parallel for most of the length), mostly < 2 cm wide.
3 Leaves cylindric (round or channeled-indented in cross section), hollow.
4 Stem stout, usually > 10 mm in diameter; peduncles with a distinct swollen portion .....***A. cepa***
4 Stem slender, < 5 mm in diameter; peduncles without a distinct swollen portion; [subgenus *Allium*].....***A. vineale***
3 Leaves variously flattened or keeled (flat or V-shaped in cross section), not hollow.
5 Stem leafy for half its length; leaves 1.5-4.5 cm wide; [subgenus *Allium*].
6 Inflorescence of flowers only.....***A. ampeloprasum***
6 Inflorescence of flowers and bulblets.....***A. sativum***
5 Stem scapose, leafy only at its base; leaves < 1.4 cm wide; [subgenus *Amerallium*].
7 Inflorescence erect, the peduncle not bent.
8 Ovary or capsule crested with projections about 1 mm long; perianth segments acuminate.
9 Spathe bracts usually 5-nerved; ovary crests contorted, ascending; tepals reflexed; leaves 3-10 mm wide.....***A. cuthbertii***
9 Spathe bracts 1-nerved; ovary crests plane, flattened, spreading; tepals spreading; leaves 1-2 mm wide.....***A. speculae***
8 Ovary or capsule not crested with projections; perianth segments acute.
10 Inflorescence partly or entirely of bulblets.....***A. canadense*** *var.* ***canadense***
10 Inflorescence entirely of normal flowers.....***A. canadense*** *var.* ***mobilense***
7 Inflorescence nodding, the peduncle bent 30-150 degrees in its uppermost several cm (at least in bud – in *A. stellatum* becoming erect in flower or fruit).
11 Flowers stellate, the tepals spreading; scape nodding in bud, becoming erect in flower or fruit; bulb ovoid .....***[A. stellatum]***
11 Flowers urceolate, campanulate, to nearly rotate, the tepals strongly to slightly incurved; scape nodding in bud, flower, and fruit; bulb elongate.
12 Perianth urceolate, deep magenta-purple; sepals obtuse; [plants of moderate to high elevations in the Mountains]..... ***A. allegheniense***
12 Perianth campanulate to nearly rotate, pink, pale pink, or nearly white; sepals acute (obtuse in *A. oxyphilum*); [of moderate to low elevations in the Mountains, Piedmont, and Coastal Plain].
13 Plants flowering late August-early October; petals 6-9 mm long, pale pink to nearly white; leaves moderately to strongly keeled in cross section (the angle between the two lower flat faces generally 90-135 degrees), 4-12 mm wide; [of calcareous wet savannas of the outer Coastal Plain] ..... ***A. species 1***
13 Plants flowering June-early August; petals 5-6.5 mm long, pink to pale pink (white to greenish white in *A. oxyphilum*); leaves rounded to moderately keeled in cross section (if keeled, the angle between the two lower flat faces generally 120-165 degrees), 2-8 mm wide; [of the Piedmont and Mountains].
14 Pedicels relatively stout, 1.6-3 cm long; petals pink or pale pink (sometimes nearly white); plants flowering June to early August; [widespread in our area, on moderately to strongly calcareous substrates] .....***A. cernuum***

14 Pedicels relatively slender, 2-4 cm long; petals greenish white to white; plants flowering August; [of barrens developed over strongly acid shales in e. WV] .....***[A. oxyphilum]***

Allium allegheniense Small, Allegheny Onion. Mt (NC, VA): in thin soils around outcrops, generally of mafic rocks (such as amphibolite or hornblende gneiss) or calcareous rocks, primarily at moderate to fairly high elevations (1000-1600m); uncommon (VA Watch List). July-early September; August-October. Known from w. NC, w. VA, and e. WV, possibly more widespread. Although not recognized by most recent authors, *A. allegheniense* seems distinctive enough in morphology, distribution, and range to warrant taxonomic recognition. [= K, S; < *A. cernuum* – RAB, C, F, FNA, G, W]

* ***Allium ampeloprasum*** Linnaeus, Wild Leek. Cp, Pd, Mt (NC, SC, VA), {GA}: roadsides and other disturbed areas; rare, introduced from Eurasia. Late May-early July; July-August. [= RAB, C, F, FNA, G, W, Z; > *A. ampeloprasum* var. *ampeloprasum* – K; > *A. ampeloprasum* var. *atroviolaceum* (Boiss.) Regel – K]

Allium burdickii (Hanes) A.G. Jones, Narrow-leaf Ramps, White Ramps. Mt (NC?, VA): northern hardwood forests, primarily at higher elevations than *A. tricoccum*, perhaps also in cove forests and rich mountain slopes; rare (VA Watch List). June; August. Only recently determined to be a separate taxon, *A. burdickii* is apparently rare in the Southern Appalachians. It blooms about a month earlier than *A. tricoccum*. See Jones (1979) for more details and discussion. Largely sympatric with *A. tricoccum*, it is somewhat more northern and midwestern, ranging from ME west to ND and south to NJ, and in the Mountains to (?) w. VA. All material ascribed to *A. burdickii* in w. NC and e. TN appears to be *A. tricoccum*. [= K, W; = *A. tricoccum* var. *burdickii* Hanes – C, FNA; < *A. tricoccum* – F, G]

Allium canadense Linnaeus *var. **canadense***, Wild Onion. Pd, Cp, Mt (NC, SC, VA), {GA}: bottomland forests, pastures, roadsides; common. Mid April-May; late May-June. Though native, often appearing weedy. New Brunswick west to ND, south to FL and TX. [= RAB, C, FNA, K; = *A. canadense* – F, G, S, W]

Allium canadense Linnaeus *var. **mobilense*** (Regel) Ownbey. Cp, Pd (SC), {GA, NC}: dry woodlands; rare. Mid April-May; Late May-June. S. SC south to FL, west to TX. This taxon is perhaps better treated as a distinct species. [= RAB, FNA, K; > *A. microscordion* Small – S; = *A. mutabile* Michaux – F; > *A. arenicola* Small – S; *A. canadense* ssp. *mobilense* (Regel) Traub & Ownbey]

* ***Allium cepa*** Linnaeus, Garden Onion. Cp, Pd, Mt (NC, SC): persisting from gardens, or appearing around compost or trash piles; rare as an escape (commonly grown), native to Eurasia. May-June; July. [= RAB, C, FNA, G; > *A. cepa* var. *cepa* – K]

Allium cernuum Roth, Nodding Onion. Pd, Mt (GA, NC, SC, VA): generally in open woodlands or around outcrops of shale, mafic, or calcareous rocks, in the mountains at low elevations; uncommon (SC Rare). June-early August; August-October. NY, MI, MN, and British Columbia, south to GA and AZ. See discussion of *A. oxyphilum* at end of genus. [= S; < *A. cernuum* – RAB, C, F, FNA, G, W (also see *A. allegheniense* and/or *A. oxyphilum*); > *A. cernuum* var. *cernuum* – K]

Allium cuthbertii Small, Cuthbert's Onion. Pd (GA, NC, SC), Cp (GA, SC): in thin soils around rock outcrops, receiving nutrient-rich seepage and occurring with many strict calciphiles; rare (NC Rare). May-June; June-July. The bright emerald green ovary of the fresh flowers is striking and distinctive. Two morphological forms occur in our area, probably warranting taxonomic recognition. Typical *A. cuthbertii* occurs on xeric Coastal Plain sands from c. SC south through GA and AL to FL; the perianth is white and the plants 1.5-3.5 dm tall. In NC, a peculiar form of *A. cuthbertii* is apparently limited to a series of unusual granitic domes in the Brushy Mountains of Alexander and Wilkes counties; these plants are more robust (4-8 dm tall), and the perianth is always pink. [= RAB, FNA, K, S, W]

* ***Allium sativum*** Linnaeus, Garlic. Cp, Pd (SC): gardens, trash heaps, fields; commonly cultivated, rarely occurring as a waif or persistent in gardens. [= C, F, FNA, G, K, Z]

Allium species 1, Savanna Onion. Cp (NC): wet savannas over coquina limestone (marl); rare (NC Rare). Late August-early October; late September-November. This remarkable Coastal Plain relative of *A. cernuum* was first discovered in 1981 by Steve Leonard in Pender County; it has since been found in similar sites in Onslow and Brunswick counties, always associated with other endemic species of primarily montane genera, such as *Thalictrum cooleyi* and *Parnassia caroliniana*. It appears to warrant taxonomic status.

Allium speculae Ownbey & Aase, Flatrock Onion. Pd (GA): seepy edges of vegetation mats on Lithonia granitic gneiss (and on sandstone in ne. AL); rare (GA Threatened). May-June; mid June-mid July. Endemic to wc. GA and ne. AL. See Patrick, Allison & Krakow (1995) for additional information. [= FNA, K]

Allium tricoccum Aiton, Ramps, Red Ramps, Wild Leek, Rampscallions. Mt (GA, NC, VA): cove forests and mesic slope forests; common. June-July: August-September. See *A. burdickii* for a discussion of the two species of ramps. Nova Scotia and ND south to n. GA, n. AL, and MO. [= RAB, K, W; < *A. tricoccum* – F, G (also see *A. burdickii*); = *A. tricocum* var. *tricoccum* – C, FNA; = *Validallium tricoccum* (Aiton) Small – S]

* ***Allium vineale*** Linnaeus, Field Garlic. Pd, Cp, Mt (GA, NC, SC, VA): lawns, pastures, other disturbed places; common, introduced from Eurasia. Late May-June; June-August. This is the common weed, often known as "onion grass". [= RAB, C, F, FNA, G, S, W; > *A. vineale* ssp. *vineale* – K; > *A. vineale* var. *vineale* – Z; > *A. vineale* var. *capsuliferum* Koch – Z; > *A. vineale* var. *compactum* (Thuill.) Coss. – Z]

Allium oxyphilum Wherry occurs on shale barrens in WV (Greenbrier, Mercer, Monroe, and Summers counties). Although there has been much discussion of its taxonomic status, it is apparently distinct from *A. cernuum*. It should be expected in VA, although the outcrops of suitable shales are quite limited (Bartgis, pers. comm.; Wieboldt, pers. comm.). [= K; < *A. cernuum* – C, F, FNA, G, W]

Allium stellatum Nuttall ex Ker-Gawler occurs east to c. TN. [= C, F, FNA, G, K]

Other members of the genus are widely cultivated for food, spice, or ornament; some may escape or persist. Some of the more familiar are *A. porrum* Linnaeus (Leek), *A. oleraceum* Linnaeus (Field Garlic), and *A. schoenoprasum* Linnaeus (Chives), introduced from Eurasia.

Brodiaea
(see *Dichelostemma* in *THEMIDACEAE*)

Dichelostemma Kunth
(see *THEMIDACEAE*)

Ipheion
(see *Tristagma*)

Nothoscordum Kunth 1843 (Grace Garlic, False Garlic)

A genus of about 25 species, herbs, of the Americas (primarily South America). References: Rahn in Kubitzki (1998a)=Z; Jacobsen & McNeal in FNA (2002a).

1 Leaves 1-4 mm wide; flowers 17 or fewer per umbel; flowers fragrant ..... ***N. bivalve***
1 Leaves 4-12 mm wide; flowers 15 or more per umbel; flowers not fragrant ..... ***N. gracile***

Nothoscordum bivalve (Linnaeus) Britton, Grace Garlic, False Garlic. Cp, Pd (GA, NC, SC, VA), Mt (GA): around granite flatrocks, in glades and barrens of various kinds, in open woodlands, and also weedy in fields and along roadsides; common (VA Rare). Mid March-mid May, and again in September-October; May-June, and again in October-November. Se. VA west to s. OH and KS, south to FL, TX, and South America. An onion-like plant, but generally lacking the odor of onion. [= C, F, G, K, S, W, Z; = *Allium bivalve* (Linnaeus) Kuntze – RAB]

* ***Nothoscordum gracile*** (Aiton) Stearn. Cp (GA, SC): disturbed areas; rare, introduced from South America. [= FNA, K; = *Nothoscordum borbonicum* Kunth – Z, misapplied?; = *Allium inodorum* Aiton – RAB; = *N. fragrans* (Ventenat) Kunth – S]

Tristagma Poepp. (Star-of-Bethlehem)

A genus of 3 species, herbs, of South America. References: Rahn in Kubitzki (1998a).

* ***Tristagma uniflorum*** (Graham) Traub, Star-of-Bethlehem. Cp (GA, NC, SC, VA), Pd (NC, SC, VA): commonly cultivated, escaping to lawns, suburban woodlands, bottomlands, disturbed places; rare, introduced from South America. March-April. Reported for South Carolina by Hill & Horn (1997). [= K; = *Ipheion uniflorum* (Graham) Rafinesque – RAB]

ALSTROEMERIACEAE Dumortier 1829 (Peruvian-lily Family)

Alstroemeria

* ***Alstroemeria pulchella*** Linnaeus f., Peruvian-lily. Cp (GA): disturbed areas, roadsides near plantings; rare, native of Brazil. Naturalized in GA, FL, AL, MS, LA, and TX (Holmes in FNA 2002; Singhurst, Keith, & Holmes 2005). [= FNA]

AMARYLLIDACEAE J. St. Hilaire 1805 (Amaryllis Family)
(also see *AGAVACEAE* and *HYPOXIDACEAE*)

A family of about 59 genera and 850 species, nearly cosmopolitan (especially diverse in the tropics). References: Dahlgren, Clifford, & Yeo (1985); Müller-Doblies & Müller-Doblies (1996); Meerow & Snijman in Kubitzki (1998a).

1 Corona present (a fused tubular or flattened petaloid structure in the center of the flower, above the tepals).
  2 Filaments fused with the corona; corona very membranous in texture, distinctly thinner than the tepals; flowers white; [native, of riverine or tidal shores and marshes]; [tribe *Hymenocallideae*, subtribe *Hymenocallidinae*] ..... ***Hymenocallis***
  2 Filaments not fused with the corona; corona membranous in texture, but similar to the tepals (in texture, though sometimes of a different color); flowers usually at least partly yellow or orange (sometimes purely white); [alien, naturalized in primarily upland and disturbed habitats]; [tribe *Narcisseae*, subtribe *Narcissinae*] ..... ***Narcissus***

1 Corona absent.
  3 Flowers red; stamens about 2× as long as the tepals; [tribe *Lycoridae*] ..... ***Lycoris***
  3 Flowers white, yellow, or white-pink; stamens shorter than or about as long as the tepals.
    4 Flowers yellow; [tribe *Narcisseae*, subtribe *Narcissinae*] ..... ***Sternbergia***
    4 Flowers white or white-pink.
      5 Tepals 3-10 cm long, white or sometimes white-pink.
        6 Tepals spreading, separate, the perianth rotate; inflorescence a several-flowered umbel terminating the stem; [tribe *Amaryllideae*, subtribe *Crininae*] ..... ***Crinum***
        6 Tepals ascending, overlapping, the perianth tubular; inflorescence of a single flower; [tribe *Hippeastreae*, subtribe *Zephyranthinae*] ..... ***Zephyranthes***
      5 Tepals 0.4-2.5 cm long, white, with small green or yellow spots; [tribe *Narcisseae*, subtribe *Galanthinae*].
        7 Inner 3 tepals distinctly shorter and blunter than the outer 3 tepals ..... ***Galanthus***
        7 Inner 3 tepals and outer 3 tepals of similar size and shape ..... ***Leucojum***

Crinum Linnaeus 1753 (Swamp Lily, String Lily)

A genus of about 65 species, pantropical, extending locally into warm temperate regions. References: Holmes in FNA (2002a); Meerow & Snijman in Kubitzki (1998a).

Identification notes: *Crinum* can be distinguished vegetatively from *Hymenocallis* by its spiral (vs. distichous) leaf arrangement and leaf margins finely toothed (vs. entire).

1 Flowers sessile; umbels 2-7-floweredl sepals and petals shorter than the tube ..... ***C. americanum***
1 Flowers pedicellate; umbels 8-13-flowered; sepals and petals longer than the tube ..... ***C. bulbispermum***

Crinum americanum Linnaeus, Swamp Lily, String Lily. Cp (GA, NC, SC): swamp forests; rare (NC Rare). June-October. Se. NC south to s. FL and west to TX. [= GW, K, S; *C. americanum* var. *americanum* – FNA]

* ***Crinum bulbispermum*** (Burman f.) Milne-Redhead & Schweickerdt. Cp (GA?, NC, SC): commonly cultivated, occasional in waste areas; rare, introduced. June-July. [= FNA, K; *C. longifolium* (Linnaeus) Thunberg – S]

Galanthus Linnaeus 1753 (Snowdrop)

A genus of about 17 species, of Europe and w. Asia. See Bishop, Davis, & Grimshaw (2001) for detailed information on the genus, especially on cultivars. References: Stace (1997)=Z; Straley & Utech in FNA (2002a); Bishop, Davis, & Grimshaw (2001); Meerow & Snijman in Kubitzki (1998a).

1 Leaves inrolled as they unfold, at least one leaf > 1 cm wide at flowering; inner tepals with green blotch at base and apex; [series *Latifolii*] ..... ***[G. elwesii]***
1 Leaves flat as they unfold, all leaves <1 cm wide at flowering; inner tepals with green blotch at apex only; [series *Galanthus*] ..... ***G. nivalis***

* ***Galanthus nivalis*** Linnaeus, Snowdrop. Pd (NC, VA): persistent after cultivation; rare, introduced from a native range in southern and central Europe. February-March. [= F, FNA, K, Z]

* *Galanthus elwesii* Hooker f., Giant Snowdrop, Greater Snowdrop, is reported as cultivated and rarely naturalized in PA (Rhoads & Klein 1993). It is native of the eastern Meditteranean. [= FNA, Z; = *G. elewesii* – K, orthographic error]

Hymenocallis Salisbury 1812 (Spider-lily)

A genus of about 50 species, from s. North America and the West Indies south to ne. South America. The appropriate systematics and nomenclature of *Hymenocallis* in se. United States are still unstable and uncertain. Recent publications by Smith and co-workers (e.g. Smith & Garland 1996, 2003; Smith & Flory 1990; Smith & Flory in FNA (2002a) have greatly improved our understanding of southeastern United States *Hymenocallis*. References: Smith & Garland (2003)=Z; Meerow & Snijman in Kubitzki (1998a); Smith & Flory in FNA (2002a). Key adapted from on Smith & Flory in FNA (2002a).

Identification notes: *Hymenocallis* can be distinguished vegetatively from *Crinum* by its distichous (vs. spiral) leaf arrangement and leaf margins entire (vs. finely toothed).

1 Staminal cup >4.5 cm long; [of rocky river shoals of the Piedmont] ..... ***H. coronaria***
1 Staminal cup <4.5 cm long; [of the Coastal Plain, Piedmont floodplains, and the GA Ridge and Valley].
  2 Leaves oblanceolate, distinctly wider toward the tip.

3 Leaves coriaceous, not glaucous; scape bracts 3-4 (-6) cm long, the tip acute; bulbs rhizomatous; [of wet habitats]. ..... ***H. choctawensis***

3 Leaves not coriaceous, distinctly glaucous; scape bracts 4-7 cm long, the tip long-acuminate; bulbs rhizomatous; [of moist but not mucky habitats]..... ***H. occidentalis* *var.* *occidentalis***

2 Leaves liguliform, not wider toward the tip, the margins parallel throughout.

4 Staminal cups rotate at full anthesis; leaves chiefly arching low, often appearing prostrate; [of s. GA south into FL] ..... ***H. duvalensis***

4 Staminal cups funnelform at full anthesis but gradually spreading in time; leaves suberect to erect; [of se. NC south to FL].

5 Perianth segments (6-) 7-11.5 cm long; leaves 3-7 dm long ..... ***H. crassifolia***

5 Perianth segments 5.0-6.5 cm long; leaves 1.5-2.5 dm long ..... ***H. pygmaea***

Hymenocallis choctawensis Traub, Florida Panhandle Spiderlily, Choctaw Spiderlily. Cp (GA): floodplains; rare (GA Watch List). GA (floodplain of the Ochlockonee River) and FL west to LA. [= FNA, K, Z; < *Hymenocallis sp. ?* – GW]

Hymenocallis coronaria (LeConte) Kunth, Shoals Spiderlily, Cahaba Lily. Pd (GA, SC): rocky river shoals, usually with *Justicia americana* and *Podostemum ceratophyllum*; rare (GA Endangered). Mid May-July; July-September. SC south and west to AL. Notable stands of this spectacular plant occur at Landsford Canal State Park (on the Catawba River south of Rock Hill, SC), on the Saluda River (SC), on the Savannah River below I-20 (GA-SC border), and on the Cahaba River (Bibb County, AL). [= FNA, Z; *? H. occidentalis* (Le Conte) Kunth – RAB, S, misapplied; < *Hymenocallis sp. ?* – GW; *? H. caroliniana* (Linnaeus) Herbert – K, misapplied]

Hymenocallis crassifolia Herbert. Cp (GA, NC, SC): tidal marshes, margins of tidal guts, banks of blackwater rivers; common. May-June; June-July. Se. NC south to n. FL. [= RAB, FNA, S, Z; < *Hymenocallis sp. ?* – GW; *? H. floridana* (Rafinesque) Morton – K, misapplied]

Hymenocallis duvalensis Traub, Dixie Spiderlily, Duval Spiderlily. Cp (GA): blackwater floodplain (Suwanee River); rare (GA Watch List). S. GA (floodplain of the Suwanee River) south to n. FL. [= FNA, K, Z; < *Hymenocallis sp. ?* – GW]

Hymenocallis occidentalis (LeConte) Kunth *var. occidentalis*, Hammock Spiderlily, Woodland Spiderlily. Cp (GA, SC), Pd (GA, NC), Mt (GA, NC?): mesic soils of slopes and floodplain forests, gabbro glades and other calcareous upland flats; uncommon. NC west to AR and LA. Var. *eulae* (Shinn ers) G.L. Smith & Flory is endemic in the West Gulf Coastal Plain. [= FNA, Z; < *Hymenocallis sp. ?* – GW; < *H. occidentalis* – S; *H. caroliniana* (Linnaeus) Herbert – K, misapplied]

Hymenocallis pygmaea Traub, Pygmy Spiderlily, Waccamaw Spiderlily. Cp (NC, SC): banks of blackwater rivers; rare. May-June; June-July. Se. NC south to ne. SC, perhaps endemic to the Waccamaw River drainage. Needing further study, but strikingly different in appearance from *H. crassifolia*. [= FNA, Z; < *Hymenocallis sp. ?* – GW; < *H. palmeri* S. Watson – K, misapplied]

Leucojum Linnaeus 1753 (Snowflake)

A genus of about 10 species, of Europe, n. Africa, and w. Asia. References: Straley & Utech in FNA (2002a); Meerow & Snijman in Kubitzki (1998a).

* ***Leucojum aestivum*** Linnaeus, Snowflake. Cp (NC, SC, VA), Pd (VA): persistent after cultivation; rare, introduced from Europe. March-April. Reported naturalized in NC by Leonard (1971b). [= RAB, C, F, FNA, G; > *L. aestivum* ssp. *aestivum* – K]

Lycoris Herbert 1819 (Magic Lily)

A genus of about 20 species, primarily e. Asian. References: Meerow & Snijman in Kubitzki (1998a).

* ***Lycoris radiata*** (L'Héritier) Herbert, Magic Lily, Surprise Lily, Hurricane Lily. Pd, Cp (NC, SC), Mt (NC): frequently cultivated, sometimes persistent for long periods of time, especially in lawns around older homes; rare, introduced from e. Asia. September-October. Leaves and flowers are not present at the same time. Reported as "established as waifs over past decade in lawn" in Jackson County, NC by Pittillo & Brown (1988). [= RAB, K]

Narcissus Linnaeus 1753 (Daffodil, Jonquil, Narcissus, Buttercup)

A genus of about 40-60 species, of Europe, n. Africa, and w. Asia. References: Stace (1997)=Z; Jefferson-Brown (1991)=Y; Straley & Utech in FNA (2002a); Hanks (2002); Jefferson-Brown (1969); Meerow & Snijman in Kubitzki (1998a).

Identification notes: The familiar flower consists of 6 tepals spreading in more or less a plane, and a fused, tubular, corona. The hypanthial tube is below the perianth lobes.

1 Perianth lobes 10-15 mm long; corona 3-5 mm long; leaves and stems cylindrical, hollow; umbel (or spathe, or stem) with 3-10 flowers ..... ***N. jonquilla***
1 Perianth lobes 20-50 mm long; corona 5-50 mm long; leaves and stems flattened, solid; umbel (or spathe, or stem) with 1-4 flowers.
  2 Hypanthial tube (below the tepals) parallel-sided (though sometimes suddenly expanded at its apex); corona < 10 mm long, usually wider than high; corona < 0.5× as long as the perianth lobes; corona rarely undulate; umbel (or spathe, or stem) with 1-10 flowers.
    3 Corona of a single color, all white or yellow; umbel (or spathe, or stem) with (1-) 2 (-3) flowers ..... ***N. ×medioluteus***
    3 Corona rim red, contrasting with the white or yellow corona; umbel (or spathe, or stem) with 1 flower ..... ***N. poeticus***
  2 Hypanthial tube (below the tepals) distinctly widening toward its apex; corona usually > 10 mm long, usually as long as wide or longer than wide; corona > 0.5× as long as the perianth lobes; corona margin undulate; umbel (or spathe, or stem) with 1 flower.
    4 Tepals linear to lanceolate, < 5 mm wide ..... ***N. bulbocodium***
    4 Tepals ovate, triangular-ovate, or suborbicular, > 10 mm wide.
      5 Corona 10-25 mm long, distinctly shorter than the perianth lobes ..... ***N. ×incomparabilis***
      5 Corona 30-50 mm long, about as long as the perianth lobes ..... ***N. pseudonarcissus***

* ***Narcissus bulbocodium*** Linnaeus, Hoop-petticoat Daffodil. Cp (NC): grassy roadsides, established; rare (introduced from Eurasia). March. [= Y, Z]
* ***Narcissus ×incomparabilis*** P. Miller (pro sp.) [*poeticus* × *pseudonarcissus*], Nonesuch Daffodil. Cp, Pd (GA, NC, SC, VA): cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas; common, introduced from Europe. March-April. [= C, K, Z; = *N. incomparabilis* – RAB, F, G]
* ***Narcissus jonquilla*** Linnaeus, Jonquil. Cp (GA, NC, SC): cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas; uncommon, introduced from Europe. March-April. [= RAB, C, F, FNA, G, K, Z]
* ***Narcissus ×medioluteus*** P. Miller (pro sp.) [*poeticus* × *tazetta*], Primrose-peerless. Cp, Pd, Mt (NC, SC, VA): cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas; common, introduced from Europe. March-May. [= K, Z; = *N. tazetta* × *poeticus* – RAB]
* ***Narcissus poeticus*** Linnaeus, Poet's Narcissus, Pheasant's-eye Daffodil. Cp, Pd, Mt (GA, NC, SC, VA): cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas; common, introduced from Europe. March-May. [= RAB, C, F, FNA, G, K, Z]
* ***Narcissus pseudonarcissus*** Linnaeus, Daffodil, Buttercup. Cp, Pd, Mt (GA, NC, SC, VA): cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas; common, introduced from Europe. February-April. [= RAB, C, FNA, K, Z; = *N. pseudo-narcissus* – F, G, orthographic variant]

Other taxa are under cultivation and may be expected as persistent or escaped in our area. Manuals of cultivated plants and the extensive horticultural literature on *Narcissus* (such as the references listed above) should be consulted by those interested in more information on members of this genus.

Sternbergia Waldst. & Kit. 1805 (Winter Daffodil)

A genus of about 8 species, of Meditteranean Europe, n. Africa, and w. Asia. References: Meerow & Snijman in Kubitzki (1998a).

* ***Sternbergia lutea*** (Linnaeus) Ker-Gawler ex Sprengel, Winter Daffodil. Cp (VA): cultivated as an ornamental, persistent and naturalized in lawns, roadsides, woodland borders, and disturbed areas; rare, introduced from Europe. This species has yellow, *Crocus*-like flowers, in the autumn. [= K]

Zephyranthes Herbert 1821 (Atamasco-lily, Zephyr-lily, Rain-lily)

A genus of about 50 species, from s. North America and the West Indies south to s. South America. References: Flagg, Smith, & Flory in FNA (2002a); Meerow & Snijman in Kubitzki (1998a).

1 Flowers (from base of ovary to apex of perianth) 3-5 cm long; stamens 1.5-2.5 cm long; stigma 1, 3-lobed; [introduced species, escaped from cultivation] ..... ***Z. candida***
1 Flowers 6-10 cm long; stamens 4.5-8 cm long; stigmas 3; [native species, sometimes also cultivated].
  2 Style and stigma as long as or shorter than the anthers; perianth segments erect-ascending at full anthesis, mostly 3-6 cm long ..... ***Z. simpsonii***
  2 Style and stigmas extending beyond the anthers; perianth segments spreading at full anthesis, mostly 5-8 cm long.

3 Mature leaves concave, 3-8 mm wide; perianth tube usually <2.3 cm long; filaments > 1.5× as long as the perianth tube ..... ***Z. atamasca***
3 Mature leaves grooved, 1-4 mm wide; perianth tube usually >2.3 cm long; filaments < 1.5× as long as the perianth tube ..... ***Z. treatiae***

Zephyranthes atamasca (Linnaeus) Herbert, Common Atamasco-lily. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC): bottomland forests and adjacent road shoulders, wet meadows; common (rare in VA Piedmont, rare in Mountains). Late March-April; May-June. Se. and sc. VA south to n. FL, west to s. MS. [= FNA; = *Z. atamasco* – RAB, C, F, G, GW, orthographic variant; = *Zephyranthes atamasca* var. *atamasca* – K; = *Atamosco atamasco* (Linnaeus) Greene – S, orthographic variant]

* ***Zephyranthes candida*** (Lindley) Herbert. Cp (GA, NC, SC): cultivated, persistent or spreading from cultivation; rare, introduced from South America. Late September-October. [= RAB, FNA, K; = *Atamosco candida* (Lindley) Small – S]

Zephyranthes simpsonii Chapman, Florida Atamasco-lily. Cp (GA, NC, SC): dry to dry-mesic sandy soils (usually with admixture of shell hash) of coastal fringe sandhills or mainland maritime forests, usually associated with *Quercus hemispherica*, on barrier islands or within about 10 km of the ocean (NC, SC), pine flatwoods (GA); rare (GA Special Concern, NC Rare). April-May; May-June. Se. NC (Brunswick and Columbus counties) and ne. SC (Horry and Georgetown counties); s. GA, c. and s. peninsular FL. The disjunct populations in NC and SC may differ from *Z. simpsonii* (sensu stricto) of s. GA and c. and s. peninsular FL, and need additional study. [= RAB, FNA, GW, K; = *Atamosco simpsonii* (Chapman) Greene – S]

Zephyranthes treatiae S. Watson. Cp (GA): wet savannas; uncommon. January-April. S. GA (Jones & Coile 1998) south into FL. [= FNA, GW; = *Z. atamasca* (Linnaeus) Herbert var. *treatiae* (S. Watson) Meerow – K; = *Atamasco treatiae* (S. Watson) Greene – S]

ARACEAE A.L de Jussieu 1789 (Arum Family)

(also see *ACORACEAE*)

A family of about 100-110 genera and about 4000 species, herbs and reduced aquatic herbs, cosmopolitan, but mostly tropical and subtropical. The Lemnaceae is phylogenetically embedded in the Araceae, and is here included in it as subfamily Lemnoideae (Angiosperm Phylogeny Group 1998, 2003; Keating 2004). References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b); Keating (2004); Serviss, McDaniel, & Bryson (2000); Landolt in FNA (2000); Landolt (1980); Landolt (1986); Landolt in Kubitzki (1998b); Les & Crawford (1999); Bown (2000).

1 Plant a floating aquatic (or stranded), the individual leaves <2 cm long; [subfamily *Lemnoideae*].
2 Fronds rootless; fronds without nerves; reproductive pouch 1, terminal.
3 Fronds thick, globoid, < 2 mm long ..... ***Wolffia***
3 Fronds flat, elongate and curved, 4-14 mm long ..... ***Wolffiella***
2 Fronds with roots; fronds with 1 or more nerves; reproductive pouches 2, lateral.
4 Roots 1 per frond; fronds with 1-5 (-7) nerves ..... ***Lemna***
4 Roots (1-) 2-21 per frond; fronds with (3-) 5-21 nerves.
5 Roots (1-) 2-7 (-12) per frond; fronds with (3-) 5-7 nerves; fronds 1.5-3× as long as wide; all of the roots perforating the scalelike leaflet ..... ***Landoltia***
5 Roots 7-21 per frond; fronds with 7-16 (-21) nerves; fronds 1-1.5× as long as wide; only some of the roots perforating the scalelike leaflet (borne on the underside) ..... ***Spirodela***
1 Plant terrestrial, rooted in wetlands, or a floating aquatic (if a floating aquatic – *Pistia* – the individual leaves > 2 cm long).
6 Plant a floating aquatic, with gray-green, velvety, cabbage-like leaves; [subfamily *Aroideae*, tribe *Pistieae*] ..... ***Pistia***
6 Plant rooted (even when growing in water), the leaves various, but not as above.
7 Leaves compound; [subfamily *Aroideae*, tribe *Arisaemateae*].
8 Bulblets lacking on the petiole; spadix free from the spathe; [native, common in our area] ..... ***Arisaema***
8 Bulblets present at base and summit of the petiole; spadix fused to the spadix; [alien, rare] ..... ***[Pinellia]***
7 Leaves simple.
9 Leaves peltate and cordate-hastate; [subfamily *Aroideae*, tribe *Colocasieae*] ..... ***Colocasia***
9 Leaves not peltate, either cuneate, rounded, cordate, or hastate.
10 Spathe absent or obscure; leaf blade 2.5-4× as long as wide, cuneate at the base, lanceolate or narrowly elliptic; leaf venation parallel; [subfamily *Orontioideae*, tribe *Orontieae*] ..... ***Orontium***
10 Spathe present, surrounding the spadix, at least at its base; leaf blade 1-2.5× as long as wide, either hastate at the base (*Arum*, *Peltandra*, and *Xanthosoma*), or rounded (*Symplocarpus*), or cordate (*Calla*), broadly ovate in outline.
11 Spathe white; leaves cordate; plants from elongate rhizomes; [subfamily *Calloideae*] ..... ***[Calla]***
11 Spathe green or white; leaves hastate or rounded at base; plants from fibrous roots, a short thick rhizome, tuber, or a corm.
12 Leaves ovate, rounded or subcordate at the base; spathe purple, or purple flecked with white; [subfamily *Orontioideae*, tribe *Symplocarpeae*] ..... ***Symplocarpus***
12 Leaves hastate at the base (somewhat arrowhead-shaped); spathe green or white; [subfamily *Aroideae*].

13 Larger leaf blades > 5 dm long; longer petioles 10-20 dm long; [subfamily *Aroideae*, tribe *Caladieae*] ..... ***[Xanthosoma]***
13 Larger leaf blades < 5 dm long; longer petioles < 7 dm long.
14 Plant from a horizontal tuber; leaves variegated; [alien, of moist soils]; [subfamily *Aroideae*, tribe *Areae*] ..... ***Arum***
14 Plant from fibrous roots; leaves not variegated; [native, of wetlands]; [subfamily *Aroideae*, tribe *Peltandreae*]..... ***Peltandra***

Arisaema Martius 1831 (Jack-in-the-pulpit, Indian-turnip)

A genus of about 150-170 species, of Asia, e. North America, e. Africa, and Arabia. Some of the taxa here recognized as subspecies of *A. triphyllum* might better be considered as species with relatively subtle morphological distinctions. They are broadly sympatric, and sometimes occur together in mixed populations with little sign of introgression or hybridization. Ssp. *triphyllum* is tetraploid and does not produce fertile seed when crossed with the other (diploid) subspecies (Treiber 1980). References: Thompson in FNA (2000); Huttleston (1981)=Z; Treiber (1980)=Y; Huttleston (1949)=X; Gusman & Gusman (2002)=Q; Renner, Zhang, & Murata (2004); Mayo, Bogner, & Boyce in Kubitzki (1998b). Key based on the references.

1 Leaf with (5-) 7-15 leaflets, arranged pedately on a semicircular axis; spadix 9-20 cm long, attenuate, long-exserted from the spathe; [section *Tortuosa*]..... ***A. dracontium***
1 Leaf with 3-5 leaflets, arranged palmately; spadix 3.5-8 cm long, clavate or cylindrical and blunt, included in the spathe; [section *Pedatisecta*].
2 Leaves glaucous beneath at maturity; spathe flange 2-9 mm broad; spathe hood green, or green with purple stripes; sterile spadix (appendix) clavate or cylindrical.
3 Lateral leaflets (of primary leaf if more than one) 2-parted or 2-lobed (rarely unlobed); sterile spadix 1-3 mm in diameter, cylindrical, curved outward; spathe hood green ..... ***A. triphyllum ssp. quinatum***
3 Lateral leaflets (of primary leaf if more than one) undivided (rarely lobed); sterile spadix 4-10 mm in diameter, clavate, straight; spathe hood green, or green striped with purple..... ***A. triphyllum ssp. triphyllum***
2 Leaves green beneath at maturity (very rarely glaucous); spathe flange 1-3 mm broad; spathe hood green with white stripes, green with purple stripes, solid green, or solid purple; sterile spadix (appendix) cylindrical.
4 Spathe tube not fluted (rarely weakly fluted); spathe hood solid green or solid purple..... ***A. triphyllum ssp. pusillum***
4 Spathe tube strongly fluted; spathe hood green with white or purple stripes ..... ***A. triphyllum ssp. stewardsonii***

Arisaema dracontium (Linnaeus) Schott, Green Dragon. Pd, Mt, Cp (GA, NC, SC, VA): bottomlands and floodplains; uncommon (rare in Mountains and Coastal Plain). May; July. S. Québec, MI, and WI, south to FL and e. TX. [= RAB, C, F, FNA, G, GW, K, Q, W; = *Muricauda dracontium* (Linnaeus) Small – S]

Arisaema triphyllum (Linnaeus) Schott *ssp.* ***pusillum*** (Peck) Huttleston, Small Jack-in-the-pulpit. Cp, Pd, Mt (GA, NC, SC, VA): swamps and moist forests; common. March-May. CT, NY, and IN, south to FL and LA. Widespread in e. North America. This taxon is diploid (2n=28). [= K, X, Z; < *A. triphyllum* – RAB, F, FNA, GW, W; = *A. triphyllum* var. *pusillum* Peck – C, G; > *A. pusillum* (Peck) Nash – S; > *A. acuminatum* Small – S; < *A. triphyllum* ssp. *pusillum* – Q, Y (also see ssp. *quinatum*)]

Arisaema triphyllum (Linnaeus) Schott *ssp.* ***quinatum*** (Nuttall) Huttleston, Southern Jack-in-the-pulpit. Mt, Pd (GA, NC, SC), Cp (GA): mesic forests; uncommon. March-April. Sc. NC, sw. NC, se. TN south to panhandle FL and e. TX. This taxon is of uncertain validity; Treiber lumps it with ssp. *pusillum*, while Huttleston recognizes it as a full species (Huttleston 1949) or as a ssp. (Huttleston (1981). This taxon is diploid (2n=28). [= K, Z; < *A. triphyllum* – RAB, FNA, W; = *A. quinatum* (Nuttall) Schott – GW, S, X; < *A. triphyllum* ssp. *pusillum* – Q, Y; ? *A. polymorphum* Buckley]

Arisaema triphyllum (Linnaeus) Schott *ssp.* ***stewardsonii*** (Britton) Huttleston, Bog Jack-in-the-pulpit. Mt (NC, VA): bogs and peaty swamps; rare (NC Rare). April-May. Nova Scotia west to MN, south to w. NC, e. TN, and n. IN (Treiber 1980). This subspecies is the most northern, and also has the most distinctive habitat, being restricted to distinctly wet, peaty sites. This taxon is diploid (2n=28). [= K, Q, X, Y, Z; < *A. triphyllum* – RAB, FNA, GW, W; = *A. triphyllum* var. *stewardsonii* (Britton) G.T. Stevens – C, G; = *A. stewardsonii* Britton – F]

Arisaema triphyllum (Linnaeus) Schott *ssp.* ***triphyllum***, Common Jack-in-the-pulpit. Cp, Pd, Mt (GA, NC, SC, VA): mesic forests; common. March-April. New Brunswick west to se. Manitoba, south to FL, LA, and e. TX (Treiber 1980). This taxon is tetraploid (2n=56). [= K, Q, X, Y, Z; < *A. triphyllum* – RAB, FNA, GW, W; = *A. triphyllum* var. *triphyllum* – C; > *A. triphyllum* – F; > *A. atrorubens* (Aiton) Blume – F; = *A. triphyllum* – S]

Arum Linnaeus 1753 (Arum)

A genus of about 26 species, of temperate Eurasia. References: Thompson in FNA (2000); Boyce (1993)= Z; Mayo, Bogner, & Boyce in Kubitzki (1998b).

* ***Arum italicum*** Linnaeus *ssp.* ***italicum***, Arum. Pd (NC): suburban woodlands; rare, introduced from Europe and n. Africa, weakly naturalizing from horticultural use. It has a large (> 10 cm long) white spathe. [= Z; < *A. italicum* – FNA]

Calla Linnaeus 1753 (Calla)

A monotypic genus, of circumboreal distribution. References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b).

Calla palustris Linnaeus, Wild Calla, Water-arum, is a circumpolar species of seepage swamps, ranging south in North America to sw. PA, w. MD, n. IL, c. MN, and British Columbia. [= C, F, FNA, G, K]

Colocasia Schott 1832 (Elephant's-ear, Taro, Dasheen)

A genus of about 8 species, of tropical Asia. References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b); Serviss, McDaniel, & Bryson (2000)=Z.

* ***Colocasia esculenta*** (Linnaeus) Schott, Elephant's-ear, Taro, Dasheen. Cp (GA, NC, SC): naturalized in ditches or shores; rare, native of the Tropics. Frequently planted for its "tropical" appearance, becoming naturalized, for instance at Lake Waccamaw, Columbus County, NC, where it grows scattered along much of the shoreline, spread by fragments of rhizome. In our area, it is generally infertile. In the Tropics, *Colocasia* is a food crop cultivated for its rhizomes and shoots. The rhizomes are the source of "poi," a starchy staple of the Hawaiian Islands. See Serviss, McDaniel, & Bryson (2000) for a discussion of various varieties cultivated in the southeastern United States, their identification, and their weediness. [= FNA, GW, K; > *C. antiquorum* Schott – S; > *C. esculenta* var. *antiquorum* (Schott) Hubb. & Rehder – Z; > *C. esculenta* var. *esculenta* – Z]

Landoltia D.H. Les & D.J. Crawford

A monotypic genus, now cosmopolitan. References: Landolt in FNA (2000); Landolt (1980)=Z; Landolt (1986)=Y; Landolt in Kubitzki (1998b); Les & Crawford (1999)=X.

* ***Landoltia punctata*** (G.F.W. Meyer) D.H. Les & D.J. Crawford. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; uncommon, introduced from the Southern Hemisphere. Widespread worldwide. An introduced aquarium plant. Les & Crawford (1999) make a good case for recognition of this species in the monotypic genus *Landoltia*, very possibly more closely related to *Lemna* than to *Spirodela*. [= FNA, X; = *Spirodela punctata* (G.F.W. Meyer) C.H. Thompson – C, GW, K, Y, Z; = *Spirodela oligorrhiza* (Kurz) Hegelmann – RAB, F, G; = *Lemna punctata* G.F.W. Meyer]

Lemna Linnaeus 1753 (Duckweed)

A genus of 13 species, cosmopolitan. References: Landolt (1980)=Z; Landolt (1986)=Y; Landolt in Kubitzki (1998b); Landolt in FNA (2000). Key adapted closely from Landolt (1980, 1986) and Landolt in FNA (2000).

1 Margin of fronds denticulate in the distal portion; fronds narrowed basally to an elongated, persistent, green stalk, the fronds therefore cohering in long, often branched chains of 3-50 fronds; fronds submerged (except when flowering or fruiting); [section *Hydrophylla*] ..... ***L. trisulca***

1 Margin of fronds entire; fronds rounded basally, with a very small white stipe soon decaying, the fronds therefore cohering in simple clusters of 2-5; fronds normally floating.

2 Fronds with (0-) 1 nerve; anthocyanin absent in fronds (fronds green); [section *Uninerves*].

3 Fronds 1-2× as long as wide; nerve indistinct to fairly prominent, reaching at most 2/3 of the distance from node to apex (nerve about as long as or shorter than the aerenchymatous portion of the frond); fruit 0.6-1.0 mm long ..... ***L. minuta***

3 Fronds 1.3-3× as long as wide; nerve mostly prominent, reaching at least 3/4 of the distance from node to apex (nerve longer than the aerenchymatous portion of the frond); fruit 1.0-1.35 mm long ..... ***L. valdiviana***

2 Fronds with 3-5 (-7) nerves; anthocyanin absent or present in fronds (fronds green or red).

4 Root sheath winged at the base; root tip sharply pointed; roots not longer than 3 cm long; anthocyanin absent in fronds; [section *Alatae*].

5 Seeds with 8-26 prominent ribs, brownish, falling from the fruit when ripe; fronds with only 1 papilla above the node, which is smaller than the papule at the apex; wing of the root sheath 1-2.5× as long as wide..... ***L. aequinoctialis***

5 Seeds with 35-70 obscure ribs, whitish, remaining in the fruit when ripe; fronds very often with 2-3 papilla above the node, which are larger than the papule at the apex; wing of the root sheath 2-3× as long as wide.....

.....***L. perpusilla***

4 Root sheath not winged at the base; root tip mostly rounded; roots often longer than 3 cm long; anthocyanin present or absent in fronds; [section *Lemna*].

6 Plants forming small, olive-brown rootless turions, 0.8-1.6 mm in diameter, which sink to the bottom.....
.....***[L. turionifera]***

6 Plants without distinct turions.

7 Fronds not reddish on the lower surface (or if so only slightly so and much less so than on the upper surface); greatest spacing of veins near the middle of the frond or towards its base .....***L. minor***

7 Fronds often reddish on the lower surface (and more intensely so than on the upper surface); greatest spacing between the veins near the middle of the frond or towards its tip.

8 Fronds often gibbous; fronds with very distinct papillae above the node and near the apex on the upper surface, but not between the node and the apex; seeds with 10-16 distinct ribs .....***L. obscura***

8 Fronds flat; fronds with mostly distinct papillae on the midline on the upper surface; seeds with 3-60 indistinct ribs.....***[L. turionifera]***

Lemna aequinoctialis Welwitsch. Cp (GA, NC, SC, VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; common, rare in VA. Widespread worldwide, except in n. North America and n. Eurasia. [= FNA, K, Y, Z]

Lemna minor Linnaeus. Cp (GA, NC, VA), Pd (NC): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; common. Widespread in the Northern Hemisphere; scattered in the Southern Hemisphere, where perhaps in part introduced. [= FNA, K, Y, Z; < *L. minor* – RAB, C, F, G, W (also see *L. obscura*)]

Lemna minuta Kunth. Cp, Mt (GA): quiet waters; rare. Widespread in North America, Central America, and South America; more local in Europe and Japan. [= C, FNA, K; = *L. valdiviana* Philippi var. *abbreviata* Hegelmann – F; = *L. minuscula* Herter – Y, Z]

Lemna obscura (Austin) Daubs. Cp (GA, NC, SC, VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; common. NY west to MN and NE, south to FL, TX, Mexico, and the Bahamas. [= FNA, K, Y, Z; < *L. minor* – RAB, C, F]

Lemna perpusilla Torrey. Cp (NC), Pd (NC, VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; uncommon, rare in NC. Québec west to MN, south to NC, TN, and TX. [= RAB, C, F, FNA, G, K, W, Y, Z]

Lemna trisulca Linnaeus. Mt (VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; rare. Widespread in the Northern Hemisphere; scattered in the Southern Hemisphere. [= C, F, FNA, G, K, W, Y, Z]

Lemna valdiviana Philippi. Cp (GA, NC, SC, VA), Mt (GA, VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; common. Widespread in North America, Central America, and South America. [= RAB, C, FNA, G, K, W, Y, Z; = *L. valdiviana* var. *valdiviana* – F]

Lemna turionifera Landolt, south and east to c. PA (Rhoads & Klein 1993), WV, and n. AL (FNA). [= FNA, K; < *L. minor* Linnaeus -- C]

Orontium Linnaeus 1753 (Golden Club)

A monotypic genus, an aquatic herb, of e. North America. References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b).

Orontium aquaticum Linnaeus, Golden Club, Bog Torches, Never-wet. Cp, Mt, Pd (GA, NC, SC, VA): generally in peaty and stagnant water, such as beaver ponds, blackwater streams, swamps, pools in low pocosins, streambeds in the Piedmont, bogs and swamps in the mountains; common (rare in Piedmont and Mountains). March-April. MA and c. NY south to FL and west to LA, north in the inland to w. NC, KY, and WV, primarily but by no means strictly Coastal Plain. Fresh leaves are unwettable, silvery-glistening when forced under water. [= RAB, C, F, FNA, G, GW, K, S, W]

Peltandra Rafinesque 1819 (Arrow-arum)

A genus of 2 species, endemic to e. North America. References: Thompson in FNA (2000); Blackwell & Blackwell (1974)=Z; Mayo, Bogner, & Boyce in Kubitzki (1998b).

Identification notes: *Peltandra* is often confused in vegetative condition with *Pontederia* and *Sagittaria*, superficially similar emergent aquatics with hastate or sagittate leaves. *Peltandra* leaves have pinnate venation, a prominent midvein, a prominent vein running parallel to the leaf margin, and the hastate lobes with rounded to acute apices. *Pontederia* leaves have parallel venation, lack a prominent midvein and a prominent vein parallel to the leaf margin, and have hastate lobes with broadly rounded apices. The leaves of sagittate species of *Sagittaria* have parallel venation, a prominent midrib, a vein at 90 degrees to the midrib at the junction of the main blade and each of the hastate lobes that forks, with at least one fork directed apically and at least one fork directed into the basal lobe, lack a prominent vein parallel to the margin, and have hastate-sagittate lobes with acuminate apices.

1 Spathe green at base, bright white above (the white portion not merely a margin), flared open and therefore only loosely surrounding the spadix, succulent below, the white portion thin and herbaceous, the margins generally nearly entire and plane; fruits red; distal portion of leaf blade lacking broad, coarse veins similar to the midvein (all the veins alike and fine) .. .. ***P. sagittifolia***

1 Spathe green (rarely with a narrow cream-colored or whitish margin up to 1.7 cm wide), tightly surrounding the spadix, thick and succulent throughout, the margins crisped; fruits green to dark purplish-green; distal portion of leaf blade often with several broad, coarse veins similar to the midvein, the remainder of the veins fine (sometimes the distal portion of the leaf with fine veins only) ..... ***P. virginica***

Peltandra sagittifolia (Michaux) Morong, Spoonflower, White Arrow-arum. Cp (GA, NC, SC): pocosins of the outer Coastal Plain, sphagnous swamps; rare (GA Special Concern, NC Rare, SC Rare). July-August. A Southeastern Coastal Plain endemic: e. NC south to c. peninsular FL and west to se. LA. The reduction of *P. sagittifolia* to a subspecies of *P. virginica* (Blackwell & Blackwell 1974) was based on confusion of true *P. sagittifolia* with forms of *P. virginica*. The two species are distinct. [= FNA, GW, K; = *P. sagittaefolia* (Michaux) Morong – RAB (an orthographic variant); *P. glauca* (Elliott) Feay – S; = *P. virginica* ssp. *luteospadix* (Fernald) Blackwell & Blackwell – Z]

Peltandra virginica (Linnaeus) Schott, Green Arrow-arum, Tuckahoe. Cp, Pd, Mt (GA, NC, SC, VA): marshes, bogs, beaver ponds, pocosins, other stagnant, aquatic situations; common (rare in Mountains). May-June. ME, s. Québec, and n. MI south to s. FL and e. TX. [= RAB, C, FNA, G, GW, K, S, W; > *P. virginica* – F; > *P. luteospadix* Fernald – F; > *P. virginica* ssp. *virginica* – Z]

Pinellia Tenore 1839 (Pinellia)

A genus of about 6 species, herbs, of temperate e. Asia. References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b).

* *Pinellia ternata* (Thunberg) Makino ex Breitenbach, Pinellia, is introduced from Japan and rarely naturalized, at least in the northern portion of our area, as in DC, se. PA, NJ, and s. NY. It is likely naturalized in our primary area, at least in n. VA. [= C, F, FNA, G, K]

Pistia Linnaeus 1753 (Water Lettuce)

A genus of probably a single species, widespread in the tropics of both hemispheres. References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b).

* ***Pistia stratiotes*** Linnaeus, Water Lettuce. Cp (GA?, SC), Pd (NC): stagnant or slow-moving waters of rivers, sometimes cultivated in ponds, where it persists for a while (presumably eventually eliminated by cold winters); rare, introduced from farther south. This floating aquatic, pantropically distributed, appeared in the Waccamaw River of SC (downstream from NC) in 1990 and 1991, apparently successfully overwintering (Nelson 1993). Further south it is a noxious water-weed. Its occurrence as a naturalized component of GA's flora is undocumented; it is at least present as a cultivated plant in water gardens and presumable escapes. The orginal distribution is unclear. [= FNA, GW, K, S]

Spirodela Schleiden 1839
(also see *Landoltia*)

A genus of 2 species (with *Landoltia* removed), cosmopolitan. References: Landolt in FNA (2000); Landolt (1980)=Z; Landolt (1986)=Y; Landolt in Kubitzki (1998b); Les & Crawford (1999)=X.

1 Roots 7-21 per frond; fronds with 7-16 (-21) nerves; fronds 1-1.5× as long as wide; only some of the roots perforating the scalelike leaflet (borne on the underside)..... ***S. polyrrhiza***

1 Roots (1-) 2-7 (-12) per frond; fronds with (3-) 5-7 nerves; fronds 1.5-3× as long as wide; all of the roots perforating the scalelike leaflet ..... ***[Landoltia punctata]***

Spirodela polyrrhiza (Linnaeus) Schleiden, Greater Duckweed, Minnow-fole. Cp (GA, NC, SC, VA), Pd (GA, VA), Mt (VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; common. Widespread worldwide. [= RAB, FNA, K, X, Y, Z; = *S. polyrhiza* – C, F, G, GW, S, W, orthographic variant]

Symplocarpus R.A. Salisbury ex Nuttall 1818 (Skunk Cabbage)

A genus of 3 species, of north temperate e. North America and ne. Asia. References: Thompson in FNA (2000); Mayo, Bogner, & Boyce in Kubitzki (1998b).

Symplocarpus foetidus (Linnaeus) Salisbury ex W.P.C. Barton, Skunk Cabbage. Mt, Pd, Cp (NC, VA): seepage-fed bogs and nonalluvial swamps; common in VA across the state, uncommon in NC (rare in Piedmont and Coastal Plain of NC). January-March; July-September. Nova Scotia and s. Québec west to MN, south to n. NC, ne. TN, s. OH, and IL. [= RAB, C, F, FNA, G, GW, K, W; = *Spathyema foetida* (Linnaeus) Rafinesque – S; = *Dracontium foetidum* Linnaeus]

Wolffia Horkel ex Schleiden 1844 (Watermeal, Mud-mary)

A genus of 11 species, cosmopolitan. References: Landolt in FNA (2000); Landolt (1980)=Z; Landolt (1986)=Y; Landolt in Kubitzki (1998b).

1 Fronds globoid to ovoid, 1-1.5× as deep as wide; thallus not brownish punctate above ..... ***W. columbiana***
1 Fronds nutshell-like, 0.5-1.0× as deep as wide; thallus punctate above with brownish pigment cells (most visible on dead fronds).
  2 Frond 1.3-2× as long as wide, the upper side slightly convex, with an upward point apically ..... ***[W. borealis]***
  2 Frond 1-1.5× as long as wide, the upper side with a prominent papilla centrally ..... ***W. brasiliensis***

Wolffia brasiliensis Weddell. Cp (VA), Pd (VA), Mt (VA): still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; uncommon, rare in Piedmont and Mountains. Widespread in e. North America, Central America, and South America. [= FNA, K, W, Y, Z; = *W. papulifera* C. Thompson – RAB, C, F, G, GW; < *Bruneria punctata* (Grisebach) Nieuwland – S]

Wolffia columbiana Karsten. Cp (NC, VA) Mt (VA), {also GA and SC according to FNA}: still to slowly moving waters of ponds, lakes, beaver ponds, and swamps; uncommon. Widespread in North America, Central America, and South America. [= RAB, C, F, FNA, G, GW, K, Y, Z; = *Bruneria columbiana* (Karsten) Nieuwland – S]

Wolffia borealis (Engelmann) Landolt. Still to slowly moving waters of ponds, lakes, beaver ponds, and swamps. Québec west to British Columbia, south to PA, KY, TN, MO, and CA. [= FNA, K, Y, Z; = *W. punctata* Grisebach – C, F, G, GW, misapplied; < *Bruneria punctata* (Grisebach) Nieuwland – S, misapplied]

Wolffiella Hegelmann 1895

A genus of 10 species, cosmopolitan. References: Landolt in FNA (2000); Landolt (1980)=Z; Landolt (1986)=Y; Landolt in Kubitzki (1998b).

1 Fronds (4-) 6-15 (-20) × as long as wide; angle of pouch 25-50 degrees ..... ***W. gladiata***
1 Fronds 1.5-8× as long as wide; angle of pouch 45-90 degrees ..... ***[W. oblonga]***

Wolffiella gladiata (Hegelmaier) Hegelmaier, Mud-midgets. Cp (GA, NC, SC, VA): ponds, ditches, beaver-ponds millponds; common. April-June. MA and n. IL (s. WI?) south to FL and TX; Mexico. [= FNA, K, Y, Z; > *Wolffiella floridana* (Donnell-Smith) C. Thompson – RAB, C, F, G, GW, S; > *W. gladiata* – GW]

Wolfiella oblonga (Philippi) Hegelmaier. FL, MS, LA, TX south to Mexico, Central America, South America; West Indies. [= FNA, GW, K]

Xanthosoma Schott 1832

A genus of about 60 species, herbs, of tropical Central and South America. References: Mayo, Bogner, & Boyce in Kubitzki (1998b); Serviss, McDaniel, & Bryson (2000)=Z.

* *Xanthosoma sagittifolium* (Linnaeus) Schott, Elephant-ear. Cultivated in the Southeast, more frequently to the south, but sometimes in our area. It can be seen in ditches adjacent to ornamental plantings; it is uncertain whether it can be considered naturalized in our area. It is superficially similar to *Colocasia*, differing in its non-peltate leaves. [= K, Z; = *Xanthosma sagittifolium* – GW, orthographic error]

ARECACEAE Schultz 1832 *or* ***PALMAE*** de Jussieu 1789 (Palm Family)

A family of about 190 genera and 2000 species, trees and shrubs, of tropical and subtropical regions of both hemispheres. Cold-hardy palms in other genera are sometimes planted in coastal GA, SC, and NC, particularly near the coast. References: Zona in FNA (2000); Dransfield & Uhl in Kubitzki (1998b).

1 Leaves pinnate (with a well-developed central axis, the leaf blade much longer than wide); [introduced species]; [subfamily *Arecoideae*, tribe *Cocoeae*]
  2 Petiole with spines; leaflets 44-80 per leaf side, glaucous; fruit 1.8-3.5 cm long.....***[Butia]***
  2 Petiole unarmed; leaflets 75-100 per leaf side, green; fruit 20-30 cm long.....***[Cocos]***
1 Leaves palmate or costapalmate (lacking a central axis or with a shortcentral axis, the leaf blade about as long as wide; [native species]; [subfamily *Coryphoideae*, tribe *Corypheae*].
  3 Petioles armed with sharp recurved teeth; [subtribe *Livistoninae*].....***Serenoa***
  3 Petioles smooth, unarmed (leaf sheaths with long needle-like spines in *Rhapidophyllum*).
    4 Petioles and lower leaf surfaces green and glabrous; leaf sheaths without spines; [subtribe *Sabalinae*].....***Sabal***
    4 Petioles and lower leaf surfaces more or less silvery pubescent; leaf sheaths bearing long (10-50 cm) needle-like spines; [subtribe *Thrinacinae*].....***Rhapidophyllum***

Butia (Beccari) Beccari 1916 (Butia)

A genus of about 8 species, trees, native of subtropical regions of South America. References: Dransfield & Uhl in Kubitzki (1998b).

* *Butia capitata* (Martius) Beccari, Brazilian Butia, South American Jelly Palm, Pindo Palm. Widely planted in the outer Coastal Plain of se. NC, e. SC, and e. GA; native of s. Brazil and Uruguay. It persists and can appear naturalized in apparently semi-natural situations.

Cocos Linnaeus (Coconut Palm)

A monotypic genus, the single species now pantropical. References: Zona in FNA (2000).

* *Cocos nucifera* Linnaeus, Coconut Palm. Rarely reaches our shores as propagules (coconuts), but is not established; native region unknown, but probably tropical islands of thye western Pacific (now pantropical). Photographic evidence has been supplied from Bear Island, Onslow County, NC, 11 June 1996 (Dave Owen, pers. comm. and photograph). [= FNA, K, S]

Rhapidophyllum H. Wendl. & Drude ex Drude 1876 (Needle Palm)

A monotypic genus, a shrub of se. North America (Henderson, Galeano, & Bernal 1995). The closest relative to *Rhapidophyllum* is apparently *Trachycarpus* of the Himalayan region of se. Asia (Zona in FNA 2000). References: Zona in FNA (2000); Clancy & Sullivan (1990); Dransfield & Uhl in Kubitzki (1998b); Zona (1997)=Z.

Rhapidophyllum hystrix (Pursh) H. Wendl. & Drude ex Drude, Needle Palm. Cp (GA, SC): moist to wet soils of small blackwater stream swamps, especially where underlain with coquina limestone ("marl"), hydric hammocks and rich, wetland-upland transitions; rare (SC Rare). Se. SC (Beaufort and Jasper counties) south to c. peninsular FL, and west to s. MS. becoming somewhat popular as a hardy palm that can be grown in the Southeast, north of its natural range. [= FNA, GW, K, S, Z]

Sabal Adanson 1763 (Palmetto)

Sabal has 16 species, primarily distributed around the Caribbean Sea. The other species of se. United States are *S. etonia* Swingle ex Nash, of scrub habitats in peninsular FL, *S. miamiensis* Zona, endemic of s. FL pine rocklands, and *S. mexicana* Martius, of the s. TX coast (Henderson, Galeano, & Bernal 1995). References: Zona in FNA (2000); Zona (1997)=Z; Dransfield & Uhl in Kubitzki (1998b).

1 Shrub, with subterranean, rhizomatous "trunk" (very rarely emerging as much as 1 meter from the ground); blade with midrib not decurved, typically appearing 1-2 cm long and oblique on the upper surface, 4-7 (-12) cm long on the lower surface; leaf with the deepest partition generally the terminal one, thus parting the leaf into 2 halves; segments with margins lacking filamentose fibrils..... ***S. minor***
1 Tree, with erect trunk (though young plants appear as trunkless shrubs, similar in habit to *S. minor*); blade with midrib 5-50 cm long, decurved; leaf lacking a deep terminal partition dividing the leaf into 2 halves; margins of leaf segments with filamentose fibrils ..... ***S. palmetto***

Sabal minor (Jacquin) Persoon, Dwarf Palmetto. Cp (GA, NC, SC), Pd (GA): swamps, maritime forests, low moist woods, especially in calcareous soils developed from shell limestone (marl); common. May-July; September-November. Ne. NC south to c. peninsular FL, west to e. TX, c. TX and s. AR; disjunct in Nuevo León (Goldman 1999). This palm reaches its northern limit at Monkey Island, Currituck County, NC (L. Musselman, J. Boggan, pers. comm., 2006). No other New World palm has a native range extending so far north. [= RAB, FNA, GW, K, S, Z]

Sabal palmetto (Walter) Loddiges ex J.A. & J.H. Schultes, Cabbage Palmetto. Cp (GA, NC, SC): maritime forests, marsh edges, and other near-coastal communities; common, rare in NC (NC Rare). July; October-November. This palm is the state tree of South Carolina and is common and conspicuous (both as a native tree and in plantings) along the South Carolina coast; it currently reaches its northern limit as a native species in Brunswick County, NC, where it is a conspicuous part of the forest on Smith Island complex (Bald Head Island, Middle Island, Bluff Island). It is planted elsewhere (and further north) on the coast. Periodic disturbance by hurricanes helps maintain populations of *Sabal palmetto*, which survives winds and flooding that topple or kill *Quercus virginiana*. Curtis (1883) reports that "Cape Hatteras is, or was, the northern limit of this Palm... It is to be deeply regretted, however, that a reckless indifference to the future, which has been charged as a characteristic of Americans, is likely to efface, at no very distant time, every vestige of this interesting ornament of our coast. The inner portion of the young plant is very tender and palatable, somewhat resembling the Artichoke and Cabbage in taste (hence its name of *Cabbage Tree*), and is often taken for pickling, and the stock is ruined by the process. Thus for a pound or two of pickles, no better either than many other kinds, the growth of half a century is destroyed in a moment, and posterity left to the wretched inheritance of vain mourning for the loss of the greatest beauty of our maritime forest." [= RAB, FNA, GW, K, S, Z]

Serenoa Hooker f. 1828 (Saw Palmetto)

Serenoa is monotypic shrub (Henderson, Galeano, & Bernal 1995). *Serenoa* is most closely related to *Acoelorraphe*, of the West Indies, including s. FL (Zona in FNA 2000). References: Zona in FNA (2000); Zona (1997)=Z; Dransfield & Uhl in Kubitzki (1998b).

Serenoa repens (Bartram) Small, Saw Palmetto. Cp (GA, SC): pine flatwoods and maritime forests; common (rare though locally dominant in SC). May-July; October-November. Se. SC (in maritime forests in Charleston and Colleton counties, and in spodosolic flatwoods in Beaufort and Jasper counties) south to s. FL and west to e. LA. *Serenoa* forms extensive clonal patches, connected by underground rhizomes, and is a dominant plant in many parts of FL and other Gulf Coast states, for instance in pine flatwoods or coastal scrub. [= RAB, FNA, GW, K, S]

ASPARAGACEAE A.L. de Jussieu 1789 (Asparagus Family)

A family of a single genus and 170-300 species, widespread in Europe, Africa, Asia, and Australia (introduced elsewhere). References: Dahlgren, Clifford, & Yeo (1985); Kubitzki & Rudall in Kubitzki (1998a).

Asparagus Linnaeus (Asparagus)

A genus of 170-300 species, widespread in Europe, Africa, Asia, and Australia (introduced elsewhere). The "Asparagus Fern" grown as a house plant is another species of *Asparagus*, *A. setaceus* (Kunth) Jessop, native to S. Africa. References: Kubitzki & Rudall in Kubitzki (1998a); Straley & Utech in FNA (2002a).

* ***Asparagus officinalis*** Linnaeus, Asparagus, Sparrowgrass, Garden Asparagus. Mt, Pd, Cp (GA, NC, SC, VA): commonly cultivated, commonly escaped to fencerows, roadsides, disturbed areas; common, native of Eurasia. April-May (or later); July-October. [= RAB, C, F, FNA, G, K, S, W]

BROMELIACEAE A.L. de Jussieu 1789 (Bromeliad or Pineapple Family)

A family of about 56 genera and 2600 species, herbs, shrubs, and trees, of the New World tropics and subtropics (very rarely warm temperate). References: Luther & Brown in FNA (2000); Smith & Till in Kubitzki (1998b).

Tillandsia Linnaeus 1753 (Spanish-moss)

A genus of about 540 species, herbs, of s. North America south to s. South America. References: Luther & Brown in FNA (2000); Smith & Till in Kubitzki (1998b). Key based in part on FNA.

1 Leaves distichous; inflorescence 1-2 (-3) flowered.
  2 Plants in dense, more or less spherical clusters; inflorescence scapose, exserted from the cluster; corolla violet ..... ***T. recurvata***
  2 Plants in elongate, pendulous festoons; inflorescence sessile; corolla yellowish green ..... ***T. usneoides***
1 Leaves spiral in a rosette; inflorescence > 3-flowered.
  3 Leaves narrowly linear, 1-5 mm wide.
    4 Leaves densely and coarsely lepidote, appearing gray; floral bracts rose; corolla violet ..... ***T. bartramii***
    4 Leaves finely lepidote, appearing green or reddish; floral bracts green or reddish; corolla lavender..... ***T. setacea***

3 Leaves broader, 10-35 mm wide.
5 Scape 10-35 cm long; floral bracts imbricate, covering all of the rachis, or nearly all..... ***T. fasciculata*** *var*. ***densispica***
5 Scape 20-50 cm long; floral bracts widely spaced, leaving much of the rachis exposed at anthesis..... ***[T. utriculata]***

Tillandsia bartramii Elliott, Bartram's Air-plant. Cp (GA): on tree branches in bayswamps, tidal swamp forests, and mesic hardwood bluffs; rare (GA Rare). E. GA south through Florida; disjunct in Tamaulipas. In five counties in e. GA, as far north as Liberty County (Jones & Coile 1988), and reported for SC as extirpated (Kartesz 1999). [= FNA, K; *? T. myriophylla* Small – S]

Tillandsia fasciculata Sw. *var*. ***densispica*** Mez, Quill-leaf Airplant. Cp (GA): branches of trees, especially evergreen oaks; rare (GA Rare). Se. GA south through FL, and in the West Indies, Mexico, and Central America. [= FNA, K; < *T. fasciculata* – S]

Tillandsia recurvata (Linnaeus) Linnaeus, Ball-moss, Bunch-moss. Cp (GA, SC*): on tree branches in maritime forests; rare (GA Threatened). Se. GA (Duncan 1985) south to s. FL; LA to AZ and south through Mexico, Central America , and South America; West Indies. Introduced in e. SC (Beaufort, Jasper, Charleston, Georgetown counties) via landscaping plants (P. McMillan, pers. comm. 2005). Outside of our area, this species also occurs on rock cliffs and is frequent on powerlines. [= FNA, K; = *Diaphoranthema recurvata* (Linnaeus) Beer – S]

Tillandsia setacea Sw., Wild-pine, Pine-needle Airplant. Cp (GA): in tree branches, especially on hardwoods, in mesic bluff forests; rare (GA Rare). Se. GA south to s. FL; West Indies; Mexico and Central America. [= FNA, K; *T. tenuifolia* Linnaeus – S, misapplied]

Tillandsia usneoides (Linnaeus) Linnaeus, Spanish-moss. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): branches of trees, especially in swamps, but elsewhere where air humidity is high enough, often even in dry forests (near Wilmington, NC *Tillandsia* is abundant on *Quercus laevis* in an extensive dry sandhill area which receives frequent fog from the Cape Fear, Brunswick, and Northeast Cape Fear rivers); common, very rare in lower Piedmont (VA Rare). April-June. S. MD (historically), se. VA south to s. FL, west to TX and Mexico, extending south to South America. *T. usneoides* is the only member of a very large genus to occur north of s. GA. The epithet *'usneoides'* refers to its resemblance to the common lichen *Usnea*. [= RAB, C, F, FNA, G, K; = *Dendropogon usneoides* (Linnaeus) Rafinesque – S]

Tillandsia utriculata Linnaeus, Giant Wild-pine, is reported for GA by Kartesz (1999), but not by Luther & Brown in FNA (2000). FL (and GA?); West Indies, Mexico, Central America, South America. [= FNA, K, S]

BURMANNIACEAE Blume 1827 (Burmannia Family)

A family of about 13-15 genera and 130 species, pantropical and warm-temperate. References: Wood (1983a)=Z; Lewis in FNA (2002a); Maas-van de Kamer in Kubitzki (1998a).

1 Floral tube terete; ovary 1-locular..... ***Apteria***
1 Floral tube 3-angled or 3-winged; ovary 3-locular..... ***Burmannia***

Apteria Nuttall (Nodding Nixie)

A monotypic genus, the single species distributed from s. North America south to c. South America. References: Lewis in FNA (2002a); Maas-van de Kamer in Kubitzki (1998a).

Apteria aphylla (Nuttall) Barnhart ex Small, Nodding Nixie. Cp (GA): acid swamps; rare. E. GA (Glynn County) west to e. TX, south to c. South America, and in the West Indies. [= FNA, GW, K, S]

Burmannia Linnaeus (Burmannia)

A genus of about 63 species, autotrophic or mycotrophic herbs, pantropical (to warm temperate). References: Lewis in FNA (2002a); Maas-van de Kamer in Kubitzki (1998a).

Identification notes: Both species of *Burmannia* are very small and easy to overlook; they occasionally occur together.

1 Floral tube 3-winged, violet; flowers in a spicate cyme (solitary in depauperate individuals)..... ***B. biflora***
1 Floral tube obtusely 3-angled, greenish to creamy white; flowers in a capitate cluster (solitary in depauperate individuals) .... ***B. capitata***

Burmannia biflora Linnaeus, Violet Burmannia. Cp (GA, NC, SC, VA), Pd (SC): savannas, bogs, shores of Coastal Plain depression ponds; uncommon (SC Rare, VA Rare). August-November. Se. VA south to FL, west to e. TX. [= RAB, C, F, FNA, G, GW, K, S]

Burmannia capitata (J.F. Gmelin) von Martius, White Burmannia. Cp (GA, NC, SC), Pd (GA, SC): savannas, bogs, shores of Coastal Plain depression ponds; uncommon. July-November. E. NC south to FL, west to TX and se. OK; West Indies, Central America, and South America. [= RAB, FNA, GW, K, S]

CALOCHORTACEAE
(see *LILIACEAE*)

CANNACEAE A.L. de Jussieu 1789 (Canna Family)

A family of a single genus, herbs, of tropical and warm temperate America. References: Kress & Prince in FNA (2000); Kubitzki in Kubitzki (1998b).

Canna Linnaeus 1753 (Canna)

A genus of about 10-25 species, of tropical and warm temperate America. References: Kress & Prince in FNA (2000); Kubitzki in Kubitzki (1998b).

Identification notes: The petals are generally sepaloid (sometimes brightly colored); the showy, colored portions of the flower are the staminodes.

1 Flowers not tubular at the base (or with a short tube to 2 cm long); petals erect; [alien, cultivated and persistent]..... .....***C. ×generalis***
1 Flowers tubular at the base; petals reflexed; [native or cultivated].
  2 Flowers yellow; capsule 5-6 cm long, ellipsoid (longer than broad); leaves glaucous; [native] .....***C. flaccida***
  2 Flowers red, orange, or mixed red-and-yellow; capsule 1.5-3 cm long, globose or subglobose (about as long as broad); leaves green; [alien, cultivated and persistent].....***C. indica***

Canna flaccida Salisbury, Golden Canna, Yellow Canna. Cp (GA, SC): wet pine savannas, marshes, ditches; uncommon. May-early July; July-August. E. SC south to FL, west to TX, and south into Central America. [= RAB, FNA, K, S]
* ***Canna ×generalis*** L.H. Bailey (pro sp.) [= *C. glauca* × *indica*], Common Garden Canna. Cp, Pd (GA, NC, SC): cultivated and persisting; rare. June-September; August-October. [= RAB, FNA, K]
* ***Canna indica*** Linnaeus, Indian-shot, Platanillo. Cp, Pd (GA, NC, SC): cultivated and persisting; rare. June-September; August-October. [= FNA, GW, K, S]

COLCHICACEAE Augustin de Candolle 1805 (Meadow Saffron Family)

As here circumscribed, a family of 19 genera and about 225 species, nearly cosmopolitan. The circumscription is uncertain and likely to change. References: Dahlgren, Clifford, & Yeo (1985); Nordenstam in Kubitzki (1998a).

1 Plant acaulescent, from a tunicated bulb.....***Colchicum***
1 Plant with leafy stem, from a rhizome .....***Uvularia***

Colchicum Linnaeus 1753 (Meadow Saffron)

A genus of about 90 species, of s. Europe, n. Africa, and w. and c. Asia. References: Nordenstam in Kubitzki (1998a).

* ***Colchicum autumnale*** Linnaeus, Meadow Saffron, Autumn-crocus. Pd (NC): planted as an ornamental, at least long-persistent; rare, introduced from s. Europe. September-October. [= C, F, G, K]

Uvularia Linnaeus 1753 (Bellwort, Merrybells)

A genus of about 5 species, of temperate eastern North America. References: Wilbur (1963)=Z; Uttal (1991)=Y; Utech & Kawano in FNA (2002a); Nordenstam in Kubitzki (1998a).

1 Leaves perfoliate, the margins scarious but smooth; [section *Uvularia*].
  2 Tepals glabrous within; leaves puberulent beneath (or rarely glabrate); leaves below the fork (0-) 1 (-2) ....***U. grandiflora***
  2 Tepals conspicuously granular-papillose within; leaves glabrous and often glaucous beneath; leaves below the fork 2-4.

.....***U. perfoliata***

1 Leaves sessile, the margins scarious and minutely papillose-denticulate; [section *Oakesiella*].
  3 Undivided portion of the style 0.5-1× as long as the style branches; upper stem and lower leaf surfaces puberulent to glabrous, light green; rhizome very short, with clustered, thickened roots.
    4 Leaves cuneate at base, thin in texture, faintly reticulate on the undersurface, glabrous (rarely puberulent becoming glabrate); stems usually glabrous; [of the Coastal Plain and Piedmont] ..... ***U. puberula* var. *nitida***
    4 Leaves broadly rounded to somewhat clasping at base, firm in texture, obviously reticulate on the undersurface, puberulent (sometimes becoming glabrate); stems usually minutely puberulent in lines; [of the Mountains and Piedmont] ..... ***U. puberula* var. *puberula***
  3 Undivided portion of the style 3-5× as long as the style branches; upper stem and lower leaf surfaces glabrous, usually also glaucous; rhizome elongate, with scattered, fibrous roots.
    5 Pedicel bearing a sessile, leaf-like bract 5-17 mm below the flower; capsule sessile at base, conspicuously beaked at apex ..... ***U. floridana***
    5 Pedicel bractless; capsule on a stalk 2-4 (-6) mm long, not beaked ..... ***U. sessilifolia***

Uvularia floridana Chapman, Florida Bellwort. Cp (GA, SC): alluvial forests, moist ravines; uncommon. Mid March-early April. C. SC south to ne. and panhandle FL, west to c. MS, apparently rare and local throughout its range. [= RAB, FNA, GW, K, Z; = *Oakesiella floridana* (Chapman) Small – S]

Uvularia grandiflora J.E. Smith, Large-flowered Bellwort. Mt (GA, NC, VA), Pd (NC, VA): cove forests and other moist, rich, forested sites; common. Mid April-mid May; July-August. S. Québec west to ND, south to w. NC, w. SC, n. GA, c. AL, MS, c. AR, and e. OK. [= RAB, C, F, FNA, G, K, S, W, Z]

Uvularia perfoliata Linnaeus, Perfoliate Bellwort. Mt, Pd, Cp (GA, NC, SC, VA): moist to fairly dry hardwood forests; common. April-early May; June-August. S. NH, s. Ontario, and c. OH, south to panhandle FL and LA. [= RAB, C, F, FNA, G, K, S, W, Z]

Uvularia puberula Michaux ***var. nitida*** (Britton) Fernald, Coastal Bellwort. Cp (GA, NC, SC, VA): dry to moist upland, acidic forests; uncommon. Late March-late April; August-October. Var. *nitida* ranges from Long Island NY south to GA in the Coastal Plain and Sandhills. Var. *nitida* is reported to intergrade with var. *puberula* in c. NC; elsewhere, the 2 varieties appear to be geographically allopatric and more-or-less morphologically distinguishable. While Wilbur (1963) chose not to recognize varieties, Uttal (1991) supports varietal recognition. [= C, Y; < *U. pudica* (Walter) Fernald – RAB, nomen dubium; = *U. pudica* var. *nitida* (Britton) Fernald – F, G; < *U. puberula* – FNA, K, W, Z; < *Oakesiella puberula* (Michaux) Small – S]

Uvularia puberula Michaux ***var. puberula***, Appalachian Bellwort. Mt, Pd (GA, NC, SC, VA): dry to moist upland, acidic forests, up to at least 1500m; common. Early April-Early May; August-October. Var. *puberula* ranges from s. PA to GA in the Mountains and (more rarely) Piedmont. [= C, Y; < *U. pudica* (Walter) Fernald – RAB, nomen dubium; = *U. pudica* var. *pudica* – F, G; < *U. puberula* – FNA, K, W, Z; < *Oakesiella puberula* (Michaux) Small – S]

Uvularia sessilifolia Linnaeus, Straw-lily, Wild-oats. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): moist hardwood forests, on slopes and mainly in bottomlands; common. Late March-early May; August-October. Nova Scotia west to ND, south to panhandle FL and n. LA. [= RAB, C, F, FNA, K, W, Z; = *Oakesiella sessilifolia* (Linnaeus) S. Watson – S]

COMMELINACEAE R. Brown 1810 (Spiderwort Family)

A family of about 41 genera and 650 species, herbs, of tropical and warm temperate regions of both hemispheres. References: Faden in FNA (2000); Faden in Kubitzki (1998b); Tucker (1989).

1 Spathes paired, terminating the stem, resembling foliage leaves in size, shape, texture, and coloration; [tribe *Tradescantieae*] ..... ***Tradescantia***

1 Spathes single (or paired in *Callisia*), either terminal or axillary, differing from the foliage leaves (in *Commelina* folded, heart-shaped when spread, and usually pale-green, in *Cuthbertia* and *Murdannia* scale-like, scarious, and inconspicuous, sometimes hidden by foliage leaves in *Murdannia*).
  2 Spathe folded, heart-shaped when unfolded, usually pale-green, closely subtending and surrounding the flower pedicels; petals unequal, the 2 upper petals larger and usually more deeply colored than the lower petal (which is sometimes absent); [tribe *Commelineae*] ..... ***Commelina***
  2 Spathe scale-like, scarious, and inconspicuous, not closely subtending and surrounding the flower pedicels; petals equal, in size and coloration.
    3 Leaves linear, > 20× as long as wide; petals bright pink (rarely white); [tribe *Tradescantieae*] ..... ***Cuthbertia***
    3 Leaves lanceolate, < 20× as long as wide; petals white, pink, purplish, or bluish.
      4 Fertile stamens 3, alternating with 3 staminodia; petals pink to purplish or bluish; [tribe *Commelineae*] ..... ***Murdannia***
      4 Fertile stamens 0-6, all fertile; petals white; [tribe *Tradescantieae*] ..... ***Callisia***

Callisia Loefling
(also see *Cuthbertia*)

A genus of ca. 15-18 species, of tropical America. References: Faden in FNA (2000); Tucker (1989)=Z.

1 Inflorescences pedunculate; flowers on pedicels; capsule with 3 locules ..... ***C. cordifolia***
1 Inflorescences sessile; flowers sessile or nearly so; capsule with 2 locules ..... ***[C. repens]***

* ***Callisia cordifolia*** (Swartz) E.S. Anderson & Woodson. Mt (GA): disturbed area?; rare, presumably introduced from the native range in peninsular FL, Mexico, the West Indies, and n. South America. Reported for nw. GA (Faden in FNA 2000). [= FNA, K; ? *Tradescantella floridana* (S. Watson) Small – S; = *Tradescantia cordifolia* Swartz]

* *Callisia repens* (Jacquin) Linnaeus. Disturbed areas. Native of tropical America. [= FNA, K]

Commelina Linnaeus 1753 (Dayflower)

A genus of about 170 species, herbs, cosmopolitan. References: Faden in FNA (2000); Tucker (1989)=Z; Faden (1993)=Y; Brashier (1966)=X; Faden in Kubitzki (1998b). The key is adapted in part from X, Y, and Z.

1 Spathes with margins free to the base; [introduced species, usually in weedy habitats].
  2 Spathes generally whitish or pale green toward the peduncle, with contrasting dark green veins; middle petal white or paler than the others; capsules with 2 locules (the third aborting); seeds rugose foveate-reticulate.
    3 Larger petals light blue; sterile anthers entirely yellow..... ***C. communis*** *var.* ***communis***
    3 Larger petals intense violet blue; sterile anthers with brownish-purple spot..... ***C. communis*** *var.* ***ludens***
  2 Spathes lacking contrasting veins; middle petal about the same color as the others; capsules with 3 locules; seeds reticulate or smooth to faintly alveolate.
    4 Spathes not at all to slightly falcate (the lower margin straight or very nearly so); upper cyme usually vestigial (rarely well-developed and 1-flowered); seeds smooth to faintly alveolate; peduncles of the spathes with hairs to 0.5 mm long ..... ***C. caroliniana***
    4 Spathes usually distinctly falcate (the lower margin curved); upper cyme in larger spathes usually well-developed and 1-several-flowered; seeds deeply reticulate; peduncles of the spathes with hairs to 0.1 mm long ..... ***C. diffusa***
1 Spathes with margins fused basally; [native species, usually in natural habitats, **or** introduced and weedy].
  5 Flowers peach-colored ..... ***[C. gambiae]***
  5 Flowers white and/or bluish.
    6 Leaf sheaths ciliate with coarse reddish-brown hairs, the sheath not auriculate; middle petal blue, lilac, or lavender; [mostly of moist soils].
      7 Annual from fibrous roots, the stem decumbent; leaf blades broadly elliptic-ovate, 2-9 cm long; leaf margin and upper surface pubescent; [alien, weedy] ..... ***C. benghalensis***
      7 Perennial from horizontal rhizomes, often forming clonal patches of erect stems; leaf blades lance-oblong, 6-20 cm long; leaf margin and upper surface scabrous; [native, mostly of moist floodplain forests] ..... ***C. virginica***
    6 Leaf sheaths ciliate with white hairs, the sheath prolonged upward into auricles; middle petal white; plant perennial from thickened, fibrous roots, not forming clonal patches; [mostly of dry, sandy or rocky soil].
      8 Larger leaves 4-10 (-13) cm long, 0.4-1.4 cm wide; spathes 1-2 (-2.5) cm long; [primarily of the Coastal Plain, especially on sandhills and dunes] ..... ***C. erecta*** *var.* ***angustifolia***
      8 Larger leaves (6-) 10-15 cm long, (1.1-) 1.5-3.5 cm wide; spathes (2.0) 2.5-3.6 cm long; [primarily of the Piedmont and Mountains] ..... ***C. erecta*** *var.* ***erecta***

* ***Commelina benghalensis*** Linnaeus, Tropical Spiderwort, Bengal Dayflower. Cp (GA, NC, SC): fields; common, introduced from tropical Asia and becoming a serious weed. This annual, pantropical weed is well established in FL and s. GA (Faden 1993). Spot infestations have been reported in NC (Wayne County) and SC (Edgefield County) as well. "This annual species can be recognized by: its funnelform spathes that are often clustered; relatively broad leaves that frequently have red hairs at the summit of the sheath; and cleistogamous flowers that are borne at the base of the plant and are usually subterranean (in addition to normal, aerial, chasmogamous flowers)" (Faden 1993). [= FNA, K, Y]

* ***Commelina caroliniana*** Walter, Indian Dayflower. Cp (GA, NC, SC): moist disturbed areas; rare, apparently introduced from India and Bangladesh. June-October. Faden (1989, 1993) discusses in detail the taxonomy and history of this species. It was apparently introduced to our area early, probably as a weed in rice. [= RAB, C, FNA, G, K, S, Y; < *C. diffusa* – GW, X, Z, in part; > *C. hasskarlii* C. B. Clarke (the earliest name applied to the species in India)]

* ***Commelina communis*** Linnaeus *var.* ***communis***, Common Dayflower. Cp, Pd, Mt (GA, NC, SC, VA): gardens, bottomlands, disturbed ground; common, introduced from the Old World. May-October. [= F, G, K, Z; < *C. communis* – RAB, C, FNA, GW, S, W, X, Y]

* ***Commelina communis*** Linnaeus *var.* ***ludens*** (Miquel) C.B. Clarke, Bright-blue Dayflower. {NC, VA} introduced. The distribution of this taxon in our area is poorly known. May-October? Not recognized by many recent authors (see synonymy). [= F, G, K, Z; < *C. communis* – RAB, C, FNA, GW, S, W, X, Y]

* ***Commelina diffusa*** Burmann f., Creeping Dayflower. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, fields, disturbed ground; uncommon, introduced from the Old World. June-October. [= RAB, C, F, G, W; < *C. diffusa* – GW, X, Z, in part only (also see *C. caroliniana*); *C. longicaulis* Jacquin – S; *C. diffusa* var. *diffusa* – FNA, K, Y]

Commelina erecta Linnaeus *var.* ***angustifolia*** (Michaux) Fernald, Sand Dayflower. Cp (GA, NC, SC), Pd (GA, VA), Mt (VA): dunes and dry sand flats on barrier islands, sandhills, other dry sandy sites, shale barrens, other dry rocky sites; common. June-October. E. NC south to s. FL, west to TX, and north and west in the interior to IA, nw. NE, CO, and NM. Contrary to the specific epithet, *C. erecta* var. *angustifolia* is a trailing plant, the stems sometimes as long as 1.3 m. The taxonomy and distribution of the two varieties here recognized need further study. [= C, F, FNA, G, K, X; < *C. erecta* – RAB, W, Y, Z; > *C. angustifolia* Michaux – S; > *C. crispa* Wooton – S]

Commelina erecta Linnaeus *var.* ***erecta***, Erect Dayflower. Cp, Pd, Mt (GA, NC, SC, VA): dry openings and woodlands, especially in thin soil around rock outcrops; common (uncommon in Mountains). June-October. PA west to MO and e. KS, south to FL and TX. [= C, F, FNA, G, K, X; < *C. erecta* – RAB, W, Y, Z; = *C. erecta* – S]

Commelina virginica Linnaeus, Virginia Dayflower. Cp, Pd, Mt (GA, NC, SC, VA): bottomlands, swamp forests, other moist to wet forests and forest edges; common (rare in the upper Piedmont and Mountains). July-October. Our most robust species of *Commelina.* NJ west to KS and OK, south to FL and TX. [= RAB, C, F, FNA, G, GW, K, S, W, X, Y, Z]

* *Commelina gambiae* C.B. Clarke, a West African species first collected in North America in 1976 (Manatee County, FL), is immediately distinguishable from our species by its peach-colored flowers and fused spathes. Faden (1993) reports that it "appears to be spreading rapidly," but whether it can spread northward from peninsular FL is questionable. [= FNA; = *Commelina nigritana* Bentham var. *gambiae* (C.B. Clarke) Brenan – K, Y]

Cuthbertia Small 1903 (Roseling)

A genus of 3 species, herbs, of se. North America. There seems ample reason for recognizing *Cuthbertia* as distinct from *Tradescantia*, based on the single spathes (vs. paired), glabrous filaments (vs. hairy), differently shaped anther connectives, etc. Hunt (1983, 1986) has treated *Cuthbertia* as a section of *Callisia* Loefling, a decision followed with little additional comment or discussion by Tucker (1989). While this course may be warranted, the authors advocating it have presented little evidence to support it. Hunt (1986), in discussing a number of small tropical genera which he also reduces to sections of *Callisia*, states "this leaves two alternatives: to recognize numerous (perhaps 10) genera of 1-2 species, or to experiment with an amplification and sectionalization of *Callisia*, which I find the lesser of the two evils." He mentions that "the succulent habit ... is a principal unifying feature of the enlarged genus as a whole, reflecting the concentration of its species in tropical seasonal habitats, often on rocks." *Cuthbertia* is endemic to se. North America (a separate and more northerly distribution than the remainder of a broad *Callisia*), is only slightly succulent, occurs primarily in sandy habitats, and has a different base chromosome number (x=6) than some components of a broad *Callisia*. Until and unless a more compelling case is presented for the inclusion of *Cuthbertia* in *Callisia*, I prefer a more conservative and traditional maintenance of *Cuthbertia*, which is also more in line with the philosophy on the circumscription of genera. References: Faden in FNA (2000); Tucker (1989)=Z; Giles (1942); Giles (1943); Lakela (1972); Faden in Kubitzki (1998b).

1 Leaves loosely spreading, the leaf blades 4-15 mm wide (as wide as or wider than the sheaths) ..... ***C. rosea***
1 Leaves erect or ascending, the leaf blades 1-5 mm wide (narrower than the sheaths)
  2 Plants cespitose; roots glabrous to sparsely puberulent; inflorescence bracts scarious and small or to 14 mm long and green; petals 8-10 mm long; [of se. VA south to c. FL peninsula] ..... ***C. graminea***
  2 Plants not cespitose; roots persistently densely woolly; inflorescence bracts 1-3 (-5) mm long, scarious; petals 9-13 mm long; [of the FL peninsula, disjunct in Gulf County in the FL panhandle] ..... ***[C. ornata]***

Cuthbertia graminea Small. Cp (GA, NC, SC, VA): sandhills; common (VA Rare). May-July. *Cuthbertia graminea* includes 3 morphologically distinguishable cytological races, occupying different (but partially overlapping) ranges (Giles 1942, Giles 1943, Tucker 1989). The predominant race is tetraploid, occupying the outer Coastal Plain of VA, NC, and SC, middle Coastal Plain of NC and SC, fall-line sandhills of SC, and south into FL. The diploid race is endemic to the fall-line sandhills of sc. NC and nc. SC, a distribution similar to those of *Pyxidanthera barbulata* var. *brevifolia*, *Liatris cokeri*, and *Lycopus cokeri*. Rare hexaploids have been found at scattered sites in SC and FL. The tetraploid race averages about 25 % larger than the diploid in most vegetative and floral characters, and is reported to exhibit a greater ecological amplitude (Giles 1942, 1943). [= S; = *Tradescantia rosea* Ventenat var. *graminea* (Small) E.S. Anderson & Woodson – RAB, C, F, G; = *Callisia graminea* (Small) G. Tucker – FNA, K, Z]

Cuthbertia rosea (Ventenat) Small. Cp (GA, SC), Pd (GA, NC, SC): sandhills, other dry woodlands; common (NC Watch List). May-July. [= S; = *Tradescantia rosea* Ventenat var. *rosea* – RAB; = *Callisia rosea* (Ventenat) D.R. Hunt – FNA, K, Z]

Cuthbertia ornata Small, Florida Roseling. Sandhills, scrub, dunes. FL peninsula; disjunct in Gulf County in the FL panhandle. [= S; = *Callisia ornata* (Small) G. Tucker – FNA, K, Z; = *Tradescantia rosea* Ventenat var. *ornata* (Small) E.S. Anderson & Woodson]

Murdannia Royle 1839 (Murdannia)

A genus of about 50 species, herbs, of tropical and warm temperate regions. References: Faden in FNA (2000); Tucker (1989)=Z; Faden in Kubitzki (1998b).

1 Flowers solitary or in 2-4-flowered racemes borne in the upper leaf axils; capsules 8-10 mm long; seeds ca. 3 mm long; pedicels much longer than the capsule ..... ***M. keisak***
1 Flowers in stalked cymose racemes borne terminally or the uppermost leaf axil; capsules 4-5 mm long; seeds 1.0-1.5 mm long; pedicels about as long as the capsule ..... ***M. nudiflora***

* ***Murdannia keisak*** (Hasskarl) Handel-Mazzetti. Cp, Pd, Mt (GA, NC, SC, VA): stream banks, canals, ditches, marshes, swamp forests, wet disturbed places; common (primarily in the Coastal Plain, uncommon in the Piedmont, rare in the Mountains), introduced from Asia, now widespread in the se. United States. September-October. [= C, FNA, G, GW, K, W, Z; = *Aneilema keisak* Hasskarl – RAB, F]

* ***Murdannia nudiflora*** (Linnaeus) Brenan. Cp (GA, NC, SC), Pd? (GA?): moist sands, ditches, wet disturbed places; rare, introduced from Asia, now widespread in the tropics and subtropics of both hemispheres. May-October. This species apparently arrived in the se. United States earlier than *M. keisak* (S, for instance, treats this species and not *M. keisak*), but is distinctly less common. [= FNA, GW, K, Z; = *Aneilema nudiflorum* (Linnaeus) Sweet – RAB, S]

Tradescantia Linnaeus 1753 (Spiderwort)
(also see *Callisia* and *Cuthbertia*)

A genus of about 70 species, herbs, of the New World. References: Faden in FNA (2000); Anderson & Woodson (1935)=Y; Tucker (1989)=Z; Faden in Kubitzki (1998b).

1 Plant sprawling, rooting at the nodes; leaves 2.5-5 cm long, < 4× as long as wide; [exotic] ..... ***T. fluminensis***
1 Plant erect or ascending, not rooting at the nodes; leaves > 4 cm long, > 5× as long as wide; [native].
  2 Leaf blades of the upper stem constricted at their bases to a narrower subpetiolar sheath, the opened sheath narrower than the leaf blade; leaf blades 6-27 cm long, 1.0-5.0 cm wide, mostly < 10× as long as wide; stomates much more abundant on the lower leaf surface than on the upper, giving the lower surface a much paler color.
    3 Pedicels 2.0-3.2 cm long; sepals 9-16 mm long ..... ***T. ernestiana***
    3 Pedicels 1.0-1.7 cm long; sepals 4-10 mm long ..... ***T. subaspera***
  2 Leaf blades of the upper stem not constricted to a subpetiolar sheath, the opened sheath about as wide or wider than the leaf blade; leaf blades 11-45 cm long, 0.4-2.0 (-4.5) cm wide, mostly > 10× as long as wide; stomates slightly more abundant on the lower leaf surface than on the upper, or about equally distributed on the two surfaces, the lower surface slightly to not at all paler than the upper.
    4 Sepals, pedicels, and ovary pubescent with glandular hairs or a mixture of glandular and eglandular hairs; leaves slightly to densely puberulent or pubescent.
      5 Leaves dull green, densely pilose (rarely glabrate); sepals, pedicels, and ovary pubescent with a mixture of glandular and eglandular hairs; pedicels 2.0-3.5 cm long ..... ***T. hirsuticaulis***
      5 Leaves glaucous to subglaucous, puberulent; sepals, pedicels, and ovary puberulent with glandular hairs only; pedicels 1.2-2.5 cm long ..... ***T. roseolens***
    4 Sepals, pedicels, and ovary glabrous or pubescent with eglandular hairs only (use 10× magnification); leaves glabrous or pilose at the junction of the blade and the sheath (or pilose throughout in *T. hirsutiflora*).
      6 Pedicels pubescent; sepals eglandular-villous; leaves green; sepals green, inflated-turgid (*T. virginiana*) or not (*T. hirsutiflora*).
        7 Stems usually hirsute or pilose throughout; roots 1.0-1.5 (-2.0) mm thick; sepals not inflated ..... ***T. hirsutiflora***
        7 Stems glabrous, or sparsely puberulent on the upper stem only; roots (1.5-) 2.0-4.0 mm thick; sepals usually inflated ..... ***T. virginiana***
      6 Pedicels glabrous; sepals glabrous or the tip with a tuft of eglandular hairs; leaves glaucous or green; sepals glaucous (or rarely also suffused with purple), not inflated-turgid.
        8 Plants distinctly glaucous; leaves 5-45 cm long, arcing, at an acute angle to the stem..... ***T. ohiensis***
        8 Plants green or slightly glaucous; leaves 4-11 cm long, straight, at nearly right angles to the stem..... ***[T. paludosa]***

Tradescantia ernestiana E.S. Anderson & Woodson. Mt (GA): {habitat}; rare. Primarily Ozarkian (AR, MO, OK, disjunct east to nw. GA and ne. AL, and west to n. TX (Faden in FNA 2000). [= FNA, K, Y, Z; < *T. pilosa* J.G.C. Lemaire – S]

* ***Tradescantia fluminensis*** Vellozo, Wandering Jew. Cp (GA): disturbed areas; rare, introduced and naturalized from GA south and west. [= FNA, K, Z]

Tradescantia hirsuticaulis Small, Hairy Spiderwort. Mt (NC, SC), Pd (GA, SC), Cp (GA): dry rocky woodlands, and rock outcrops (especially granitic flatrocks and domes); rare (NC Watch List). April-June. W. NC and w. SC southwest to n. GA and n. AL; disjunct in AR and e. OK (its core range). There is some question about the validity of this species. [= RAB, FNA, K, W, Y, Z]

Tradescantia hirsutiflora Bush. Cp (GA, SC): sandhills; rare. C. SC (Richlands County), s. and e. GA and FL panhandle, west to TX. Reported for SC (Richland Co.) (P. McMillan 2003). [= FNA, K, Y, Z; >< *T. hirsuticaulis* – S, misapplied]

Tradescantia ohiensis Rafinesque, Smooth Spiderwort. Mt, Pd, Cp (GA, NC, SC, VA): woodlands and forests, alluvial bottoms, disturbed areas; common. April-July. MA west to MN, south to FL and TX, some of that range the result of naturalization from cultivation. [= RAB, C, F, FNA, G, K, W, Z; *? T. reflexa* Rafinesque – S; *? T. canaliculata* Rafinesque – Y]

Tradescantia roseolens Small, Sandhill Spiderwort. Cp, Pd (GA, SC): dry sandy woodlands; rare (GA Rare). May-June. SC south through GA to c. peninsular FL. [= RAB, FNA, K, Y, Z; = *T. longifolia* Small – S]

Tradescantia subaspera Ker-Gawler, Wide-leaved Spiderwort. Mt (GA, NC, SC, VA), Pd (GA, NC, SC), Cp (GA): dry to mesic woodlands and forests; common (VA Watch List). June-July. Nc. NC, w. VA, WV, OH, IN, IL, and MO, south to NC, SC, sw. GA, Panhandle FL, and AL. Two questionable varieties are sometimes recognized. Var. *subaspera* may be distinguished by the stem conspicuously zigzag above, except on depauperate or juvenile plants (vs. the stems straight or only slightly zigzag), uppermost lateral cymes sessile or short-pedunculate (vs. pedunculate throughout), uppermost internodes very reduced, crowding the upper leaves (vs. internodes less reduced), leaves much broader than the sheath (vs. only slightly broader), and its generally greater size than var. *montana*. *T. subaspera* var. *montana* ranges from sw. VA and c. WV south to nw. SC, n. GA, and se. TN, with disjunct occurrences in c. AL and panhandle FL. Var. *subaspera* ranges from WV west to n. IL, south to se. TN, ne. AR, and s. MO, with disjunct occurrences in NC. [= RAB, FNA, W; > *Tradescantia subaspera* Ker-Gawler var. *montana* (Shuttleworth ex Britton) E.S. Anderson & Woodson – C, F, G, K, Y, Z; > *T. subaspera* var. *subaspera* – C, F, G, K, Y, Z; < *T. pilosa* J.G.C. Lemaire – S]

Tradescantia virginiana Linnaeus, Virginia Spiderwort. Pd (GA, NC, SC, VA), Mt (GA, VA), Cp (VA): nutrient-rich forests and woodlands; common (rare south of VA) (NC Rare, SC Rare). April-July. ME west to MI and WI, south to n. GA, MO, and AR. [= RAB, C, F, FNA, G, K, S, W, Y, Z; *? T. brevicaulis* Rafinesque – S]

Tradescantia paludosa E.S. Anderson & Woodson. Swamps and bottomlands. Coastal Plain of AL and FL (?) west to TX and AR. March-May. [= FNA, K, Y, Z; = *T. ohiensis* Rafinesque var. *paludosa* (E.S. Anderson & Woodson) D.T. MacRoberts]

CONVALLARIACEAE

[see *RUSCACEAE*]

CYMODOCEACEAE N. Taylor 1909 (Manatee-grass Family)

A family of about 5 genera and 16 species, estuarine aquatics, of tropical and subtropical (rarely temperate) waters. References: Kuo & McComb in Kubitzki (1998b); Haynes in FNA (2000); Green & Short (2003).

1 Leaves flat above the sheath; leaf tips 3-toothed; female plants with flowers with 1 pistil..... ***Halodule***
1 Leaves terete or subterete above the sheath; leaf tips acicular; female plants with flowers with 1-2 pistils ..... ***[Syringodium]***

Halodule Endlicher 1841 (Shoal-grass)

A genus of about 6 species, of tropical and subtropical regions of both hemispheres. References: Haynes in FNA (2000); McRoy & Helfferich (1977); Kuo & McComb in Kubitzki (1998b); Green & Short (2003)=Z.

Halodule wrightii Ascherson, Shoal-grass. Cp (NC, SC?): submerged in estuarine waters up to about 2 m deep, especially in Core and Pamlico sounds (North Carolina); common. E. NC (reported with unknown documentation from SC, not known from GA); FL west to TX, and south along shores of the Gulf of México and Caribbean; also on the Pacific coast of Panama and Nicaragua. Haynes in FNA (2000) concludes that *H. beaudettei* is not taxonomically distinct from *H. wrightii* (the older name). Seagrasses (an informal group including *Halodule wrightii, Zostera marina*, and *Ruppia maritima* in our area) are very important components of estuarine ecosystems, providing a large proportion of the primary productivity in such systems and providing shelter and nursery grounds for fish, shrimp, and other invertebrates. An estimated 80,000 hectares of seagrass beds are found in Pamlico and Core sounds, NC, most of that area having *Halodule* as the co-dominant or dominant species (Ferguson, Rivera, & Wood 1989). There is concern about the destruction of seagrass beds by pollution, dredging of waterways, and mechanical disturbance by fishing boats (Koch & Orth 2003; Green & Short 2003). [= FNA, S, Z; > *H. beaudettei* (den Hartog) den Hartog – RAB, GW, K]

Syringodium F.T. Kützing in R.F. Hohenacker 1860 (Manatee-grass)

A genus of 2 species, seagrasses, of the Caribbean and Indo-West Pacific. References: Haynes in FNA (2000); Kuo & McComb in Kubitzki (1998b); Green & Short (2003)=Z.

Syringodium filiforme F.T. Kützing in R.F. Hohenacker, Manatee-grass, occurs in FL, westward along the Gulf Coast, and in the West Indies; it is occasionally cast ashore in Georgia and the Carolinas following hurricanes, but there is no evidence that

it grows in our area. It is the only other member of the family in e. North America. [= FNA, Z; = *Cymodocea filiformis* (F.T. Kützing in R.F. Hohenacker) Correll – GW, K; = *Cymodocea manatorum* Ascherson – S]

CYPERACEAE (Sedge Family)

A family of about 100 genera and 5000 species, mostly herbs, cosmopolitan. References: Ball, Reznicek, & Murray in FNA (2002b); Tucker (1987); Goetghebeur in Kubitzki (1998b).

1 Achene enclosed in a perigynium (a sac-like structure); [subfamily *Caricoideae*, tribe *Cariceae*].
  2 Leaf blades 0.5-25 (-52) mm wide, with a midrib, herbaceous, the apex acute; leaf margin various (smooth or scabrous, but not as described below)..... ***Carex***
  2 Leaf blades 20-60 mm wide, without a midrib (with 40-100 parallel nerves all of equal prominence), leathery, the apex obtuse; leaf margin scarious, minutely crisped-ruffled (feeling scaberulous to the touch) ..... ***Cymophyllus***
1 Achene not enclosed in a perigynium.
  3 Scales distichously imbricate; spikelets aggregated into spikes or heads; [subfamily *Cyperoideae*].
    4 Inflorescence axillary; leaves predominantly cauline, conspicuously 3-ranked; perianth bristles subtending the achene 6-9; [tribe *Dulichieae*]..... ***Dulichium***
    4 Inflorescence terminal, more-or-less scapose (though immediately subtended by leafy bracts); leaves predominantly basal, not 3-ranked; perianth bristles absent; [tribe *Cypereae*].
      5 Inflorescences branched; spikelets 1-many-flowered; rachilla elongate; scales broadly rounded ..... ***Cyperus***
      5 Inflorescences unbranched (the spikelets sessile); spikelets 1-2-flowered; rachilla not or only slightly elongate; scales conspicuously keeled..... ***Kyllinga***
  3 Scales spirally imbricate; spikelets not usually aggregated.
    6 Achene (when ripe) bony and white; style base persistent on the summit of the achene, forming a differently-textured or differently-colored tubercle; spikelets all imperfect, the pistillate ones 1-flowered, the staminate ones several-flowered; [subfamily *Sclerioideae*, tribe *Sclerieae*]..... ***Scleria***
    6 Achene mostly brown, black, or tan; style base persistent as a differentiated tubercle (*Bulbostylis, Eleocharis, Rhynchospora*) or not (*Cladium, Eriophorum, Fuirena, Hemicarpha, Isolepis, Lipocarpha, Schoenoplectus, Scirpus, Trichophorum*); spikelets mostly or all perfect; [subfamily *Cyperoideae*].
      7 Style base persistent as a differentiated tubercle (this small and inconspicuous in *Bulbostylis* and some spp. of *Rhynchospora*).
        8 Leaves consisting of bladeless sheaths; spikelet 1 per stem, terminal (very rarely proliferating and with > 1 spikelet); [tribe *Eleocharideae*] ..... ***Eleocharis***
        8 Leaves with well-developed blades; spikelets few to many per stem, usually subtended by foliaceous bracts.
          9 Perianth bristles absent; spikelets several-many-flowered; leaves capillary; [tribe *Abildgaardieae*] ..... ***Bulbostylis***
          9 Perianth bristles present (rarely absent in species without capillary leaves); spikelets 1-2-flowered (several-many-flowered in some species without capillary leaves); leaves capillary to broad; [tribe *Schoeneae*] ..... ***Rhynchospora***
      7 Style base not persistent as a differentiated tubercle.
        10 Achene not subtended by bristles or scales (in addition to the scales of the spikelets).
          11 Involucral bracts 1-3, the lowest erect, appearing like a continuation of the culm, the inflorescence therefore appearing lateral.
            12 Achenes 0.5-0.7 mm long, 1.8-3× as long as wide, minutely papillose in longitudinal lines; [tribe *Cypereae*]..... ***Lipocarpha***
            12 Achenes 1.2-1.5 mm long, 1-1.4× as long as wide, minutely pitted or transversely rugose.
              13 Achenes minutely pitted in longitudinal lines; [tribe *Cypereae*]..... ***Isolepis***
              13 Achenes transversely rugose; [tribe *Fuireneae*] ..... ***Schoenoplectus erectus***
          11 Involucral bracts 2-several, spreading, the inflorescence therefore appearing terminal.
            13 Plants diminutive, to 5 dm tall; leaves 3-15 cm long, to 1 mm wide; [tribe *Abildgaardieae*]..... ***Bulbostylis***
            13 Plants moderate to very robust, 7-30 dm tall; leaves 30-150 cm long, 1.5-15 mm wide.
              14 Flowers 1-2 per spikelet; [tribe *Schoeneae*]..... ***Cladium***
              14 Flowers several-many per spikelet.
                15 Style fimbriate; leaves 0.5-5 mm wide; [tribe *Abildgaardieae*]..... ***Fimbristylis***
                15 Style smooth; leaves (2-) 5-18 mm wide; [tribe *Scirpeae*]..... ***Scirpus georgianus***
        10 Achene subtended by either bristles, 3 stalked paddle-like scales, or 1-2 broad-based scales (in addition to the scales of the spikelets).
          16 Achene subtended by stalked paddle-like scales or broad-based scales.
            17 Achene subtended by a perianth of 3 stalked paddle-like scales; plants 2-7 dm tall; [tribe *Fuireneae*] ..... ***Fuirena***

17 Achene lacking a perianth, but subtended by 1-2 broad-based scales; plants 0.5-3 dm tall; [tribe *Cypereae*]..... ***Lipocarpha***

16 Achene subtended by bristles.

18 Bristles 10-many, > 5× as long as the achene, white to tawny, straight; [tribe *Scirpeae*]..... ***Eriophorum***

18 Bristles 1-6, usually < 4× as long as the achene, brown, straight or conspicuously twisted (twisted if > 3× as long as the achene).

19 Involucral bracts lacking, or consisting only of the slightly modified basal scales of the solitary and terminal spikelet; [of hillsides, upland forests, or cliffs; never (in our area) in marshes, bogs, or streambeds]; [tribe *Scirpeae*] ..... ***Trichophorum***

19 Involucral bracts present, consisting either of a single, erect bract appearing as a continuation of the culm (the inflorescence thus appearing lateral) or of 2 or more spreading, foliaceous bracts (the inflorescence thus appearing terminal); [of marshes, bogs, streambeds, ditches, or (rarely) terrestrial or on rock outcrops].

20 Main involucral bract 1 (rarely 2), erect, appearing as a continuation of the culm (the inflorescence thus appearing lateral, though in some species the longer inflorescence branches may overtop the bract); [tribe *Fuireneae*]..... ***Schoenoplectus***

20 Main involucral bracts 2-8, spreading and foliaceous (the inflorescence thus appearing terminal).

21 Spikelets 10-40 mm long, 6-12 mm in diameter, 3-50 per culm; [tribe *Fuireneae*] ..... ***Bolboschoenus***

21 Spikelets 2.5-19 mm long, 2-4 mm in diameter, usually > 50 per culm; [tribe *Scirpeae*]..... ***Scirpus***

Bolboschoenus Palla 1905 (Bulrush)

A genus of about 10-16 species, herbs, cosmopolitan. The distinction of this genus from *Schoenoplectus* is uncertain and controversial; it is generally accepted in the Old World, and generally not in the New World. References: Smith in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Ventral summit of leaf sheaths truncate or concave, the nerves destined for the leaf margins diverging gradually ..... ***B. maritimus*** *ssp.* ***paludosus***

1 Ventral summit of leaf sheaths convex, the nerves destined for the leaf margins diverging abruptly, making a nearly right-angle bend.

2 Bristles mostly equalling to surpassing the distinctly trigonous achene..... ***B. fluviatilis***

2 Bristles shorter than to equalling the lenticular or plano-convex achene.

3 Inflorescence relatively open, with (10-) 15-50 spikelets; bristles persistent..... ***B. novae-angliae***

3 Inflorescence relatively congested, mostly with 5-20 spikelets; bristles more or less caducous..... ***B. robustus***

Bolboschoenus fluviatilis (Torrey) J. Soják, River Bulrush. Cp, Mt (VA): tidal and river marshes; rare (VA Rare). June-early July; July-August. New Brunswick west to Saskatchewan, British Columbia (Vancouver Island) and WA, south to VA, OH, IN, KS, AZ, and CA; disjunct in s. AL. [= FNA; = *Scirpus fluviatilis* (Torrey) A. Gray – C, F, G; = *Schoenoplectus fluviatilis* (Torrey) M.T. Strong – K, Z]

Bolboschoenus maritimus (Linnaeus) Palla *ssp.* ***paludosus*** (A. Nelson) T. Koyama, Alkali Bulrush, Salt-marsh Bulrush. Cp (VA): marshes; rare (VA Watch List). Interruptedly circumboreal, south in North America to VA, NY, MN, MO, OK, TX, and Mexico. [= FNA; > *Scirpus maritimus* var. *maritimus* – C; < *Scirpus maritimus* var. *fernaldii* (Bicknell) Beetle – F (also see *Bolboschoenus novae-angliae*); = *Scirpus maritimus* var. *fernaldii* (Bicknell) Beetle – G; < *Scirpus maritimus* Linnaeus; < *Schoenoplectus maritimus* (Linnaeus) Lye – K]

Bolboschoenus novae-angliae (Britton) S.G. Smith, Salt-marsh Bulrush. Cp (NC, VA): fresh to brackish tidal marshes, ditches; rare (VA Watch List). Late June-July; July-September. ME to GA. Proabbaly a hybrid derivative of *Bolboschoenus fluviatilis* and *B. robustus*, but its distinctiveness and ecological behavior suggest that it should be treated as a species; see Schuyler (1975) and Cronquist (1991) for additional discussion. [= FNA; = *Scirpus cylindricus* (Torrey) Britton – C, K, Beal (1977), illegitimate name; < *Scirpus maritimus* var. *fernaldii* (Bicknell) Beetle – F; = *Scirpus robustus* Pursh var. *novae-angliae* (Britton) Beetle – G; = *Schoenoplectus novae-angliae* (Britton) M.T. Strong – K, Z]

Bolboschoenus robustus (Pursh) J. Soják, Salt-marsh Bulrush. Cp (GA, NC, SC, VA), Mt (VA): brackish marshes; common (rare in Mountains). Late May-June (-September); late June-September. Along the coasts, from Nova Scotia to FL, west to TX, and into tropical America; also in CA. [= FNA; = *Scirpus robustus* Pursh – RAB, C, F, GW, S, W; = *Scirpus robustus* var. *robustus* – G; = *Schoenoplectus robustus* (Pursh) M.T. Strong – K, Z]

Bulbostylis Kunth (Hairsedge)

A genus of about 100 species, herbs, of tropical and warm temperate areas, concentrated especially in tropical Africa and tropical South America. References: Kral (1971)=Z; Kral in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Spikelets sessile, the inflorescence therefore a capitate cluster (sometimes a few spikelets pedicellate, but the pedicels not generally longer than the spikelets, the inflorescence still appearing glomerate).
  2 Inflorescence bracts widened abruptly at its base, the widened portion prominently fimbriate-pectinate; perennial, culms 10-50 cm tall; achene 1-1.3 mm long, white or yellowish, the apex retuse (the three lobes projecting beyond and surrounding the tubercle) ..... ***B. warei***
  2 Inflorescence bracts not widened abruptly at its base, the membranous margins smooth or ciliate; annual, culms 5-35 cm tall; achene 0.5-1.2 mm long, pale brown or gray, the apex rounded or truncate (the three lobes not exceeding the tubercle).
    3 Inflorescence bracts numerous and conspicuous, several much exceeding the cluster of spikelets; achenes 0.8-1.2 mm long, transversely rugose; spikelet scales usually greenish or pale brown, dull, puberulent ..... ***B. stenophylla***
    3 Inflorescence bracts few and inconspicuous, none or sometimes one exceeding the cluster of spikelets (and then only slightly); achenes 0.5-0.6 mm long, finely reticulate; spikelet scales usually reddish-brown, lustrous, smooth or nearly so..... ***B. barbata***
1 Spikelets mostly on slender pedicels, the inflorescence therefore open and umbel-like.
  4 Achenes finely transversely rugose, tan or brown (when ripe); spikelet scales 1.5-2.0 mm long, with truncate apices..... ..... ***B. capillaris***
  4 Achenes very finely papillose and waxy, gray or dark greenish-brown (when ripe); spikelet scales 0.7-1.8 mm long, with obtuse to rounded apices.
    5 Annual, to 1-2 (-3) dm tall; inflorescence a simple (rarely compound) umbel of few (3-9) lance-ovoid spikelets; longest involucral bract seldom exceeding the inflorescence; leaf margins usually hispidulous ..... ***B. ciliatifolia***
    5 Perennial, to 1.5-4 dm tall; inflorescence a compound (rarely simple) umbel of many (8-30) oblong or lance-linear spikelets; longest involucral bract commonly exceeding the inflorescence; leaf margins usually distinctly tuberculate-scabrid..... ***B. coarctata***

* ***Bulbostylis barbata*** (Rottbøll) C.B. Clarke, Old World Hairsedge. Cp (GA, NC, SC), Pd (GA, NC, SC, VA): sandy fields; common, introduced from the Old World tropics (rare and apparently not established in VA). July-October. [= RAB, FNA, GW, K, W, Z; = *Stenophyllus barbatus* (Rottbøll) Britton – S]

Bulbostylis capillaris (Linnaeus) Kunth ex C.B. Clarke, Common Hairsedge. Mt, Pd, Cp (GA, NC, SC, VA): thin soils on rock outcrops, especially granite domes and granite flatrocks (but also on mafic rocks, such as diabase), sandy soils, fields; common. July-October. ME to MN, south to FL and TX, and west to AZ and CA, also in Mexico, Central America, the West Indies, and s. Asia. This species frequently has a mixture of long and very short culms, the short culms only a few cm long and thus nearly hidden amongst the leaves. [= RAB, C, FNA, G, GW, W, Z; > *B. capillaris* var. *crebra* Fernald – F; > *B. capillaris* var. *isopoda* Fernald – F; = *B. capillaris* ssp. *capillaris* – K; = *Stenophyllus capillaris* (Linnaeus) Britton – S]

Bulbostylis ciliatifolia (Elliott) Fernald, Savanna Hairsedge. Cp (GA, NC, SC, VA): moist to wet sands of savannas, roadsides, disturbed areas; common (VA Watch List). July-October. Se. VA south to s. FL and west to s. AL. Kral (1971) describes this plant as occurring in generally wetter habitats and being much weedier than *B. coarctata*. The sympatry of this taxon and *B. coarctata* suggests that they are best recognized as species. [= F, G; = *Bulbostylis ciliatifolia* (Elliott) Fernald *var. ciliatifolia* – C, FNA, GW, K, Z; < *B. ciliatifolia* – RAB (also see *B. coarctata*); = *Stenophyllus ciliatifolius* (Elliott) C. Mohr – S]

Bulbostylis coarctata (Elliott) Fernald, Elliott's Hairsedge. Cp (GA, NC, SC, VA): sandhills, usually associated with longleaf pine and wiregrass; uncommon (VA Watch List). July-October. Se. VA south to s. FL and west to e. TX, north in the interior to sw. TN. [= F, G; = *Bulbostylis ciliatifolia* (Elliott) Fernald *var. coarctata* (Elliott) Kral – C, FNA, GW, K, W, Z; < *B. ciliatifolia* – RAB; = *Stenophyllus coarctatus* (Elliott) Britton – S]

Bulbostylis stenophylla (Elliott) C.B. Clarke. Cp (GA, NC, SC): sandhills, dry savannas, and disturbed sandy areas; uncommon. July-October. Se. NC south to s. FL, west to w. FL, and in Cuba. [= RAB, FNA, GW, K, Z; = *Stenophyllus stenophyllus* (Elliott) Britton – S]

Bulbostylis warei (Torrey) C.B. Clarke, Ware's Hairsedge. Cp (GA, NC, SC): sandhills; rare (NC Rare). July-October. Se. NC south to s. FL and west to s. AL. [= RAB, FNA, GW, K, Z; = *Stenophyllus warei* (Torrey) Britton – S]

Carex Linnaeus 1753 (Sedge)

(by Alan S. Weakley, with assistance from Bruce A. Sorrie and Thomas F. Wieboldt)

A genus of about 2000 (or more) species, herbs, cosmopolitan, especially temperate and boreal. References: Mackenzie (1931-1935)=M; Ball & Reznicek in FNA (2002b); Goetghebeur in Kubitzki (1998b); Frye & Lea (2001). Key to sections adapted closely from FNA.

Key to the keys to the sections of *Carex*

1 Spike 1 per culm, all flowers attached to the main stem in a terminal spike..... **Key A**

1 Spikes 2 or more per culm (some flowers in lateral spikes)
  2 All flowers staminate ..... **Key B**
  2 At least some flowers pistillate.
    3 Stigmas 2; achenes flat or biconvex in cross-section (lenticular) ..... **Key C**
    3 Stigmas (2-) 3 (-4); achenes trigonous or terete in cross-section.
      4 Body of perigynium pubescent, scabrous, hispid, or papillose (if papillose, the papillae longer than wide) ..... **Key D**
      4 Body of perigynium glabrous or papillose (if papillose the papillae shorter than wide).
        5 Bracts sheathless or with sheath < 4 mm long (rarely longer, and then the sheath shorter than the diameter of the stem) ..... **Key E**
        5 Bracts (at least the lower) with sheath > 4 mm long (and longer than the diameter of the stem) ..... **Key F** {not complete at this time}

Key A

1 Spike entirely staminate
  2 Culms distinctly red or purple at the base ..... ***C. picta*** in **Section 41: *Pictae***
  2 Culms yellow to brown or black, without red or purple coloration.
    3 Culms shorter than the leaves; widest leaf blades > 2 mm wide ..... **Section 44: *Phyllostachyae***
    3 Culms longer than the leaves; widest leaf blades < 2 mm wide ..... ***C. exilis*** in **Section 11: *Stellulatae***
1 Spike pistillate or with both pistillate and stamainate flowers.
  4 Stigmas 2; achenes lenticular ..... ***C. exilis*** in **Section 11: *Stellulatae***
  4 Stigmas 3; achenes trigonous.
    5 Perigynia pubescent near the tip ..... ***C. picta*** in **Section 41: *Pictae***
    5 Perigynia glabrous.
      6 Spikes gynecandrous; beak of perigynium with apical teeth > 0.3 mm long ..... ***C. squarrosa*** in **Section 34: *Squarrosae***
      6 Spikes androgynous or entirely pistillate; beak of perigynium with apex entire, emarginate, or with teeth < 0.2 mm long.
        7 Lower pistillate scales > 10 mm long ..... **Section 44: *Phyllostachyae***
        7 Lower pistillate scales < 10 mm long.
          8 Perigynium beak > 2 mm long, as long as or longer than the perigynium body ..... **Section 44: *Phyllostachyae***
          8 Perigynium beak < 2 mm long, or if more, thentapering to the perigynium body and shorter than the body.
            9 Perigynia > 4× as long as wide ..... ***C. pauciflora*** of **Section 38: *Leucoglochin***
            9 Perigynia < 4× as long as wide.
              10 Perigynia with veins on the faces, distinct at least over the achene ..... **Section 46: *Leptocephalae***
              10 Perigynia with 2 marginal veins, otherwise veinless or with faint veins at the base only ..... ***C. geyeri*** in **Section 45: *Firmiculmes***

Key B

1 Widest leaves 4-8 mm wide; inflorescences more-or-less capitate (occasionally with the lowermost 1 or 2 spikes separated ..... ***C. kobomugi*** in **Section 8: *Macrocephalae***
1 Widest leaves 1-4 mm wide; inflorescences ovoid to cylindric ..... **Section 10: *Divisae***

Key C

1 Perigynia pubescent, not papillose ..... **Section 39: *Acrocystis***
1 Perigynia glabrous, papillose or not.
  2 Lateral spikes usually pedunculate; lowermost inflorescence bracts sometimes with sheath; peduncles with prophyll at base.
    3 Pistillate scales (at least the lower) long-awned ..... **Section 13: *Phacocystis***
    3 Pistillate scales obtuse to acuminate or cuspidate.
      4 Perigynia smooth; style persistent on the achene ..... **Section 30: *Vesicariae***
      4 Perigynia often papillose over most of the surface; style deciduous ..... **Section 13: *Phacocystis***
  2 Lateral spikes sessile; bracts sheathless; peduncles without (or rarely with) a prophyll
    5 Perigynia papillose (visible at 20× magnification).
      6 Terminal spike staminate, androgynous, or gynecandrous (if gynecandrous, the staminate flowers more numerous than the pistillate); lateral spikes at least 2 × as long as wide ..... **Section 13: *Phacocystis***

6 Terminal spike staminate or gynecandrous (if gynecandrous, the pistillate flowers more numerous than the pistillate); lateral spikes not much longer than wide ..... **Section 9: *Glareosae***

5 Perigynia smooth.

7 Terminal spike androgynous (rarely entirely staminate or entirely pistillate); lateral spikes androgynous, staminate, or pistillate.

8 Sheath fronts of lower cauline leaves transversely rugose.

9 Perigynia mostly > 2× as long as wide, widest near the base ..... **Section 1: *Vulpinae***

9 Perigynia mostly < 2× as long as wide, widest near middle.

10 Inflorescence usually branched, at least at the base, usually with > 15 spikes; pistillate scales usually yellow or brown, sometimes with hyaline margins, 3-veined ..... **Section 3: *Multiflorae***

10 Inflorescence unbranched or with 1 or 2 short branches at the base, with < 15 spikes; pistillate scales greenish hyaline, 1-veined..... **Section 4: *Phaestoglochin***

7 Terminal spike gynecandrous; lateral spikes gynecandrous or pistillate.

11 Margins of perigynia flat, at least in the upper ½, flat portion (measured at the tip of the achene and base of beak) > (0.1-) 0.2 mm wider

12 Achenes rounded at apex (style dehiscing at the surface of the achene); style conspicuously enlarged at the base ..... **Section 10: *Deweyanae***

12 Achenes with short apiculus formed by the persistent base of the style; style not conspicuously enlarged at base ..... **Section 12: *Ovales***

11 Margins of perigynia rounded, or with flat portion < 0.1 mm wide.

13 Margins of perigynia rounded or with a very narrow rounded edge; achenes nearly filling the perigynium bodies ..... **Section 9: *Glareosae***

13 Margins of perigynia sharply edged or narrowly winged; achenes distinctly smaller than the perigynium bodies.

14 Inflorescences in fruit 1-1.5× as long as wide ..... **Section 12: *Ovales***

14 Inflorescences in fruit 1.5-2 (or more)× as long as wide.

15 Lowermost perigynia in each spike spreading ..... **Section 11: *Stellulatae***

15 Lowermost perigynia in each spike ascending or erect.

16 Perigynium serrulate on the margins of the upper body and lower beak ..... **Section 10: *Deweyanae***

16 Perigynium entire on the margins of the upper body and the lower beak ..... **Section 12: *Ovales***

11 Sheath fronts of lower cauline leaves smooth (or very weakly and indistinctly transversely rugose).

17 Fronts of leaf sheaths dotted red, brown, or yellow.

18 Perigynia widest near the base; culms usually > 1 mm wide..... **Section 1: *Vulpinae***

18 Perigynia widest near the middle; culms usually < 1 mm wide.

19 Plants densely cespitose, with short rhizomes; pistillate scales acute to acuminate..... **Section 2: *Heleoglochin***

19 Plants loosely cespitose, sometimes with long rhizomes; pistillate scales (at least the upper) obtuse. ..... **Section 3: *Multiflorae***

17 Fronts of leaf sheaths not dotted red, brown, or yellow.

20 Upper leaves of culms with front of sheaths green-veined, not differentiated from thye rest of the sheath..... **Section 5: *Holarrhenae***

20 Upper leaves of culms with front of sheaths with at least a narrow hyaline or whitish-hyaline band extending at least ½ the length of the sheath.

21 Perigynia with flat, winglike margins > 0.1 mm wide; plants long-rhizomatous, not cespitose, sometimes forming large colonies..... **Section 7: *Ammoglochin***

21 Perigynia without a flat margin, or with a flat margin < 0.1 mm wide; plants short-rhizomatous or inconspicuously rhizomatous, cespitose or not, sometimes forming large colonies.

22 Plants colonial from long rhizomes ..... **Section *Divisae***

22 Plants cespitose.

23 Spikes not consistently androgynous, the terminal either entirely staminate or pistillate, the lateral spikes irregularly pistillate, or staminate, or mixed ..... **Section 11: *Stellulatae***

23 Spikes consistently androgynous, occasionally some of the lateral spikes entirely pistillate.

24 Perigynium widest near the base, tapering from base to beak..... **Section 1: *Vulpinae***

24 Perigynium widest above the base, often abruptly beaked..... **Section 4: *Phaestoglochin***

Key D

1 Pistillate spikes all from the base of the plant ..... **Section 39: *Acrocystis***
1 Pistillate spikes all or in part borne on the elongate, aboveground stem.
2 Bracts of the lowermost non-basal spike with well-developed sheath > 4 mm long.
3 Beak of perigynium with distinct teeth > 0.6 mm long ..... **Section 29: *Carex***
3 Beak of perigynium entire, notched, or with indistinct teeth < 0.6 mm long.
4 Bracts of the lowermost non-basal spike bladeless, or with a blade < 2 mm long.
5 Perigynia 2.0-2.9 mm long; leaf blades 0.9-3.3 mm wide ..... ***C. richardsonii*** in **Section 40: *Clandestinae***
5 Perigynia 4-5 mm long; leaf blades 4-8 mm wide ..... ***C. baltzellii*** in **Section 41: *Pictae***
4 Bracts of the lowermost non-basal spike with blade > 3 mm long (and often much longer).
6 Achene tip with persistent, enlarged, circular style base ..... ***C. caryophyllea*** in **Section 42: *Mitratae***
6 Achene tip with at most a short apiculus.
7 Leaves pubescent or pilose ..... **Section 23: *Hymenochlaenae***
7 Leaves usually glabrous.
8 Bases of plants brown ..... ***C. tenax*** in **Section 26: *Hallerianae***
8 Bases of plants distinctly red or purple.
9 Lowermost pistillate scales awned; leaves somewhat septate-nodulose; plants usually long-rhizomatous and forming large clonal colonies ..... **Section 28: *Paludosae***
9 Lowermost pistillate scales obtuse to acuminate; leaves not septate-nodulose; plants cespitose, short-rhizomatous ..... **Section 23: *Hymenochlaenae***
2 Bracts of the lowermost non-basal spike sheathless or with sheath < 4 mm long.
10 Perigynia > 10 mm long.
11 Pistillate spoikes globose, about as long as wide; staminate spikes usually 1 ..... **Section 31: *Lupulinae***
11 Pistillate spikes cylindric, much longer than wide; staminate spikes 1-8 ..... **Section 29: *Carex***
10 Perigynia < 10 mm long.
12 Perigynium beak with 2 teeth > 0.6 mm long ..... **Section 29: *Carex***
12 Perigynium beak entire or with teeth < 0.6 mm long.
13 Terminal spike gynecandrous or pistillate ..... **Section 24: *Porocystis***
13 Terminal spike staminate (or rarely androgynous).
14 Leaf sheaths (and usually the blades as well) pubescent.
15 Pistillate scales sometimes pubescent; pistillate spikes with 40-200 perigynia ..... **Section 28: *Paludosae***
15 Pistillate scales glabrous; pistillate spikes with < 40 (-50) perigynia.
16 Perigynia usually < 3.2 mm long, the apex rounded and beakless, or abruptly beaked ..... **Section 24: *Porocystis***
16 Perigynia > 3.5 mm long, the tip tapering or abruptly beaked.
17 Longer peduncles of pistillate spikes > 1 cm longl perigynia > 3 × as long as wide, tapering gradually to the base ..... **Section 23: *Hymenochlaenae***
17 Longer peduncles of pistillate spikes 0-1 cm long; perigynia < 3 × as long as wide, abruptly contracted to a short stipe at the base.
18 Perigynia distinctly 20-30-veined; beak < 0.5 mm long ..... **Section 26: *Hallerianae***
18 Perigynia veinless except for 2 marginal veins; beak > 0.7 mm long ..... **Section 27: *Hirtifoliae***
14 Leaf sheaths and blades glabrous.
19 Achene tip with persistent, enlarged, circular style base ..... ***C. caryophyllea*** in **Section 42: *Mitratae***
19 Achene tip with at most a short apiculus.
20 Leaf blades scabrous on the upper surface; beak of perigynium recurved ..... ***C. scabrata*** in **Section 25: *Anomalae***
20 Leaf blades glabrous on the upper surface, often with rough margins or tip; beak of perigynium straight.
21 Fronts of sheaths of lower leaves ladder-fibrillose; leaves and sheaths septate-nodulose (sometimes obscurely so) ..... **Section 28: *Paludosae***
21 Fronts of leaf sheaths not ladder-fibrillose, sometimes breaking into longitudinal fibers; leaves and sheaths not septate-nodulose.
22 Perigynia strongly 12-30-veined
23 Leaf blades, at least towards the tip, M-shaped in cross-section when young, the upper surface usually with 2 marginal veins more prominent than the midvein; staminate spikes 1-4 ..... **Section 28: *Paludosae***
23 Leaf blades V-shaped in cross-section when young, the upper surface lacking 2 marginal veins more prominent than the midrib; staminate spike 1 ..... **Section 39: *Acrocystis***
22 Perigynia 0-12-veined.

24 Plants with at least some pistillate spikes basal; culms much shorter than the leaves ..... **Section 39: *Acrocystis***
24 Plants with most pistillate spikes on obvious elongated stems; culms shorter than or longer than the leaves.
25 Upper leaves bladeless or with blades < 1 cm long and also shorther than the sheaths ..... **Section 40: *Clandestinae***
25 Upper leaves with blades > 2 cm long, longer than the sheaths ..... **Section 39: *Acrocystis***

[26a] Section 1: *Vulpinae*

A section of ca. 15 species, of North America, temperate Eurasia, Africa, and Australia. References: Jones & Reznicek (1995); Standley in FNA (2002b). Key 2 adapted from Jones & Reznicek (1995).

Key 1a

1 Leaf sheath fronts yellow, thickened, and not fragile at the top; leaf blades papillose adaxially (at 25× magnification)..... ***C. laevivaginata***
1 Leaf sheath fronts green or whitish, thin, and fragile at the top; leaf blades not papillose adaxially.
2 Leaf sheath fronts smooth.
3 Larger perigynia 6-8 mm long; leaves to 12 mm wide..... ***C. crus-corvi***
3 Larger perigynia 3-5 mm long; leaves to 7 mm wide.
4 Perigynia smoothly rounded at base, not distended; perigynium veins 3-5 abaxially, 0 adaxially..... ***[C. alopecoidea]***
4 Perigynia cordate at base, distended; perigynium veins 10-12 abaxially, 7 adaxially..... ***C. oklahomensis***
2 Leaf sheath fronts rugose.
5 Perigynia broadly rounded at base, not distended; perigynium veins 3-5 abaxially, 0 adaxially ..... ***C. conjuncta***
5 Perigynia cordate or truncate at base, distended; perigynium veins 15 abaxially, 7 adaxially.
6 Perigynia (5-) avg. 5.4 (-6) mm long, the beak > 3 mm long; larger leaves mostly 8-17 mm wide; perigynium scales cuspidate to short-awned; [mostly of the Coastal Plain and lower Piedmont] ..... ***C. stipata* var. *maxima***
6 Perigynia (4-) avg. 4.7 (-5) mm long, the beak < 2.5 mm long; larger leaves mostly 4-10 mm wide; perigynium scales acuminate to cuspidate; [widespread in our area]..... ***C. stipata* var. *stipata***

Key 1b

1 Beak of the perigynium shorter than the body.
2 Perigynia somewhat abruptly contracted into a beak ca. 0.5 × as long as the perigynium body; ventral surface of the perigynium with several incomplete veins basally; culms sharply triangular and narrowly winged, somewhat spongy and easily crushed; dorsal leaf sheaths green; ventral leaf sheaths with scattered red dots, and transversely rugose; [normally of shaded locations]..... ***C. conjuncta***
2 Perigynia tapering into a beak, much shorter than the perigynium body; ventral surface of the perigynium with several inconspicuous complete veins; culms inconspicuously triangular to roundish, not winged, neither spongy nor easily crushed; dorsal leaf sheaths dark blue-green with conspicuous white dots; ventral leaf sheaths without scattered red dots, not transversely rugose; [nomally of sunny locations] ..... ***C. oklahomensis***
1 Beak of the perigynium as long as, or longer than, the body.
3 Ventral leaf sheath margins with orange-red dots; achene ovate-lanceolate; perigynium wall adhering to achene ..... ***C. crus-corvi***
3 Ventral leaf sheath margins without orange-red dots; achene broadly ovate to ovate-orbicular; perigynium wall not adhering to the achene (or only slightly so).
4 Ventral leaf sheaths not transversely rugose, more or less concave at the apex and not prolonged upward past the base of the blade, thickened, not friable..... ***C. laevivaginata***
4 Ventral leaf sheaths transversely rugose, more or less convex at the apex and prolonged upward past the base of the blade, friable.
5 Perigynia (5-) avg. 5.4 (-6) mm long, the beak > 3 mm long; larger leaves mostly 8-17 mm wide; perigynium scales cuspidate to short-awned; [mostly of the Coastal Plain and lower Piedmont] ..... ***C. stipata* var. *maxima***
5 Perigynia (4-) avg. 4.7 (-5) mm long, the beak < 2.5 mm long; larger leaves mostly 4-10 mm wide; perigynium scales acuminate to cuspidate; [widespread in our area]..... ***C. stipata* var. *stipata***

Carex conjuncta Boott, Soft Fox Sedge. Cp, Pd, Mt (VA): mesic forests; rare (VA Rare). May-July. NY, NJ, MN, and SD, south to VA, sc. TN, and AR. [= C, F, FNA, G, K, M, W]

Carex crus-corvi Shuttleworth ex Kunze, Crowfoot Sedge, Ravenfoot Sedge. Cp (GA, NC, SC, VA): swamp forests, especially over calcareous substrates; rare (VA Rare). May-June. Se. VA south to FL, west to TX, north in the interior to IN, s.

Ontario, MI, and MN. [= RAB, C, FNA, G, GW, K, M, S; > *C. crus-corvi* var. crus-*corvi* – F; > *C. bayardii* Fernald – F; > *C. crus-corvi* var. *virginiana* Fernald]

Carex laevivaginata (Kükenthal) Mackenzie. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): marshes, swamp forests, alluvial forests; common. May-June. MA, MI, and MN, south to n. FL, AL, and MO. [= RAB, C, F, FNA, G, GW, K, M, W; = *C. laevi-vaginata* – S, orthographic variant]

*? ***Carex oklahomensis*** Mackenzie, Oklahoma Sedge. Mt (NC, VA): seepage; rare (probably adventive from farther west) (NC Watch List, VA Rare). Se. MO west to KS, south to MS, AR, and ne. TX; disjunct (and probably adventive) in w. NC (Graham County) and w. VA (Giles County). First reported for VA by Wieboldt et al. (1998). [= F, FNA, K, M; < *C. stipata* – S; = *C. stipata* Muhlenberg ex Willdenow var. *oklahomensis* (Mackenzie) Gleason]

Carex stipata Muhlenberg ex Willdenow *var.* ***maxima*** Chapman. Cp (GA, NC, SC, VA), Pd (NC, SC, VA): marshes, ditches, alluvial forests; common. May-June. NJ south to FL, west to TX, north in the interior to s. MO, s. IN, and w. KY, primarily on the Coastal Plain. The validity of this variety needs additional study. [= RAB, C, F, FNA, G, K; < *C. stipata* – GW, W; = *C. uberior* (C. Mohr) Mackenzie – M, S]

Carex stipata Muhlenberg ex Willdenow *var.* ***stipata***. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): marshes, ditches, alluvial forests; common. May-June. Newfoundland west to AK, south to SC, TN, KS, NM, and Mexico. [= RAB, C, F, FNA, G, K; < *C. stipata* – GW, W; = *C. stipata* – M; < *C. stipata* – S]

Carex alopecoidea Tuckerman. Seasonally saturated situations, typically over calcareous substrates. Nova Scotia west to Saskatchewan, south to DC, MD, WV, KY, TN, and IA (Standley in FNA 2002b). [= FNA, K] {synonymy incomplete; not keyed at this time}

[26b] Section 2: *Heleoglochin (Paniculatae)*

A section of 11-12 species, of temperate North America, Eurasia, n. Africa, and Australasia. References: Cochrane in FNA (2002b).

1 Inflorescence 7-15 cm long, the basal 3-9 branches well-separated from one another; perigynia broadly obovoid, 1.3-1.5× as long as wide; sheaths concave at the mouth; leaves 3-8 mm wide; [of swamps of the Coastal Plain and lower Piedmont] ..... ***C. decomposita***

1 Inflorescence 2-8 cm long, the basal 1-5 branches indistinct to slightly separated; perigynia ovoid to lance-ovoid, ca. 2× as long as wide; sheaths prolonged beyond the blade; leaves 1-3 mm wide; [of Mountain wetlands in VA (and TN?) and northward].

2 Inner band of leaf sheath whitish (and red-dotted); basal branches of inflorescence overlapping; perigynia not concealed by the scales ..... ***[C. diandra]***

2 Inner band of leaf sheath strongly copper-colored (and also red-dotted); basal branches of inflorescence often weakly separated; perigynia nearly or completely concealed by the scales..... ***C. prairea***

Carex decomposita Muhlenberg, Cypress-knee Sedge, Epiphytic Sedge. Cp (GA, NC, SC, VA), Pd (VA): blackwater swamp forests, often growing on cypress knees, cypress bases, or fallen logs (often at or near water level); rare (GA Special Concern, NC Rare, VA Rare). NY west to MI, south to sw. GA (Jones & Coile 1988), FL, and TX. See Gaddy & Rayner (1980). [= RAB, C, F, FNA, G, GW, K, M, S]

Carex prairea Dewey ex Wood, Prairie Sedge. Mt (VA): calcareous wetlands; rare (VA Rare). Québec west to Yukon, south to NJ, w. VA, OH, NE, MT, and British Columbia. [= C, F, FNA, G, K, M]

Carex diandra Schrank. Swamps, bogs, especially over limestone. Circumboreal, south in North America to w. MD, PA, TN, OH, IL, CO, CA; reported from TN on the basis of a destroyed specimen. [= C, F, FNA, G, K, M]

[26c] Section 3 – section *Multiflorae*

A section of 7 species, of North America (including Mexico). References: Standley in FNA (2002b). Key based on FNA.

1 Perigynia red-dotted..... ***C. triangularis***

1 Perigynia not red-dotted.

2 Perigynia golden yellow or yellowish-brown at maturity ..... ***C. annectens***

2 Perigynia dull yellow-green or pale brown at maturity.

3 Leaves longer than the flowering stem; perigynia 2.0-3.2 mm long, 1.3-1.8 mm wide, the beak 1/3-1/2 the length of the body ..... ***C. vulpinoidea***

3 Leaves shorter than the flowering stem; perigynia 3.2-4.0 mm long, 2.0-2.6 mm wide, the beak ca. 1/3 as long as the body.

4 Awn of pistillate scales 1-3 mm long; adaxial surface of perigynia with 3-5 nerves; [native, of wet pine savannas of se. SC, GA southward..... ***C. fissa* *var.* *aristata***

4 Awn of pistillate scales 0.5-1.5 mm long; adaxial surface of perigynia lacking nerves; [introduced in our area from sc. United States, of disturbed sites] ..... ***C. fissa* var. *fissa***

Carex annectens (Bicknell) Bicknell, Yellowfruit Sedge. Cp (GA, NC, SC, VA), Pd, Mt (NC, SC, VA): marshes, bottomland forests; common. July-August. S. ME west to MN, south to FL and TX. See Cusick (1996). [= RAB, FNA, K, S, W; = *C. vulpinoidea* var. *ambigua* – C; > *C. annectens* var. *annectens* – F, G; > *C. annectens* (Bicknell) Bicknell var. *xanthocarpa* (Kükenthal) Wiegand – F, G; < *C. vulpinoidea* – GW; > *C. annectens* – M; > *C. brachyglossa* Mackenzie – M]

Carex fissa Mackenzie ***var. aristata*** Hermann. Cp (GA, SC): wet savannas; rare (GA Special Concern). Extreme se. SC (Jasper Co.), se. GA (Clinch County) (Sorrie 1998b) and s. MS (Bryson et al. 1996) south into n. and c. peninsular FL. The SC distribution is documented by a voucher (Crins 9848 & D. Brunton) at MICH. Probably a species distinct from *C. fissa*. [= FNA, GW, K; < *C. fissa* – M]

* ***Carex fissa*** Mackenzie ***var. fissa***. Cp (VA): introduced at old railroad stockyard, well-established; rare, introduced from sc. United States (MO and KS south to TX). [= FNA, K; < *C. fissa* – M]

Carex triangularis Böckler. Cp (SC), {GA}: moist forests, ditches, other wet sites; rare. April-June. SC and GA west to KS and TX. [= RAB, F, FNA, G, K, M, S; < *C. vulpinoidea* var. *vulpinoidea* – C; < *C. vulpinoidea* – GW]

Carex vulpinoidea Michaux. Mt, Pd, Cp (GA, NC, SC, VA): wet sites; common. Labrador west to British Columbia, south to FL, TX, Sonora, and CA. [= RAB, F, FNA, G, M, S, W; < *C. vulpinoidea* var. *vulpinoidea* – C, K; < *C. vulpinoidea* – GW (also see *C. annectens* and *C. triangularis*)]

[26d] Section 4 – section *Phaestoglochin (Bracteosae)*

A section of ca. 27 species, mainly of temperate North America. References: Ball in FNA (2002b); Webber & Ball (1984). Key adapted from FNA, C, M, and Webber & Ball (1984).

1 Sheaths loose, membranaceous, and fragile on the ventral side, septate-nodulose and usually mottled or striped with green and white on the dorsal side.
- 2 Bodies of pistillate scales 1.5-2.5 mm long, 1.1-1.8 mm wide, mostly < ½ as long as the perigynia, apex obtuse to acuminate to shortly awned.
  - 3 Basal intermodes of the inflorescence usually < 1 cm long, and usually < 2× as long as the spikes; bodies of perigynia with wing < 0.1 mm wide ..... ***[C. cephaloidea]***
  - 3 Basal internodes of the inflorescence usually >2 cm long, at least 2× as long as the spikes; bodies of perigynia with wing 0.1-0.2 mm wide ..... ***C. sparganioides***
- 2 Bodies of pistillate scales 2.2-4.4 mm long, 1.2-2.4 mm wide, mostly > ½ as long as the perigynia, apex acuminate to awned.
  - 4 Fronts of leaf sheaths yellow or brownish, thick, firm, the back often white-spotted ..... ***C. aggregata***
  - 4 Fronts of leaf sheaths white, hyaline, fragile, the backs not white-spotted.
    - 5 Perigynia 4-5 mm long, 2× as long as wide; perigynia nerveless or very obscurely nerved on the dorsal face... ..... ***C. gravida* var. *gravida***
    - 5 Perigynia 3-4.5 mm long, 1.3-1.5× as long as wide; perigynia strongly few-nerved on the dorsal face .... ***C. gravida* var. *lunelliana***

1 Sheaths tight on the ventral side, neither septate-nodulose nor mottled with green and white on the dorsal side.
- 6 Perigynia corky-thickened in the lower 1/3 to 1/2 (and not > 4.0 mm long); perigynia spreading or reflexed at maturity; perigynia (2-) 3-12 (-20) per spike; leaves 0.5-3 mm wide.
  - 7 Beak of perigynium smooth; pistillate scales acuminate, early deciduous.
    - 8 Average perigynium width ≥ 1.3 mm; average spongy portion of the perigynium ≥ 1.1 mm long; perigynium base distinctly nerved, bulging on the ventral surface, making the perigynium biconvex in cross-section; perigynium 2-2.5× as long as wide; perigynium gradually narrowed to a short beak; leaves 1-3 mm wide .... ***C. retroflexa***
    - 8 Average perigynium width < 1.3 mm; average spongy portion of the perigynium < 1.1 mm long; perigynium base nerveless, flattened on the ventral surface, making the perigynium planoconvex in cross-section; perigynium ca. 3× as long as wide; perigynium narrowed to a conspicuous beak; leaves 0.75-1.5 mm wide..... ..... ***C. texensis***
  - 7 Beak of perigynium serrulate; pistillate scales obtuse, persistent.
    - 9 Plants with creeping rhizomes, the culms arising scattered along the rhizome; perigynia 4-5× as long as wide. ..... ***C. socialis***
    - 9 Plants densely cespitose, the culms arising from the center of clump; perigynia 2-3× as long as wide.
      - 10 Widest leaves 0.9-1.7 mm wide; base of fertile culm 0.7-1.4 mm wide.
        - 11 Base of perigynium cuneate to rounded; distance from base of perigynium to base of achene 0.1-0.5 mm; [primarily of the Mountains in our area] ..... ***C. appalachica***
        - 11 Base of perigynium rounded to truncate; distance from base of perigynium to base of achene 0.5-0.9 mm; [widespread in our area] ..... ***C. radiata***
      - 10 Widest leaves 1.7-3.0 mm wide; base of fertile culm 1.4-2.2 mm wide.

12 Stigmas 0.03-0.06 mm thick, straight to slightly twisted; widest leaves < 2.0 mm wide; perigynia 3-7 (-8) per spike ..... ***C. radiata***
12 Stigmas 0.07-0.10 mm thick, mostly coiled; widest leaves > 1.7 mm wide; perigynia (6-) 7-14 (-20) per spike ..... ***C. rosea***

6 Perigynia not conspicuously corky-thickened at base (except corky-thickened in the rare alien, *C. spicata*, which has perigynia 4.0-5.5 mm long); perigynia ascending to spreading at maturity; perigynia (3-) 8-40 per spike; leaves 1-5 mm wide.
13 Inflorescence ovoid in outline, the spikes densely aggregated, nearly indistinguishable except by the projecting setaceous bracts which subtend each spike.
14 Perigynia 1.3-1.7× as long as wide, widest near the broadly rounded, truncate, or even subcordate base .... ***C. leavenworthii***
14 Perigynia 1.6-2.5× as long as wide, widest just below the middle, the base broadly cuneate to rounded.
15 Pistillate scales (excluding the awns) shorter than the perigynium body; culms not greatly exceeding the leaves..... ***C. cephalophora***
15 Pistillate scales (excluding the awns) as long as or exceeding the perigynium body; culms much exceeding the leaves..... ***C. mesochorea***
13 Inflorescence spicate-racemose, the individual spikes readily distinguishable (often separated by an exposed internode of the axis).
16 Pistillate scales brown or reddish-purple; [alien, sparsely naturalized in our area].
17 Roots and basal sheaths brown to black; perigynia not corky-thickened at base; ligule blunt, wider than long ..... ***C. divulsa***
17 Roots and basal sheaths purplish-tinted; perigynia corky-thickened at base; ligule acute, longer than wide..... ***C. spicata***
16 Pistillate scales green, hyaline, or pale tan; [native in our area (except *C. austrina* and *C. muricata* ssp. *lamprocarpa*), common and widespread in our area].
18 Spikes with 5-10 perigynia; pistillate scales brown with green-veined center .... ***[C. muricata** ssp. **lamprocarpa]***
18 Spikes with 8-20 perigynia; pistillate scales scarious-white (rarely brown) with green-veined center.
19 Perigynia ascending, nerveless on the ventral surface; scales awned, the awns 1.5-4 mm long; lowest inflorescence bract elongate, the free portion 1-5 cm long..... ***C. austrina***
19 Perigynia spreading, either nerved or nerveless on the upper (ventral) surface; scales acuminate or with an awn to 1.5 (-2.0) mm long; lowest inflorescence bract short, delicate, the free portion 0.5-2 cm long.
20 Perigynia 3.0-3.5 mm long, nerveless on the upper (ventral) face..... ..... ***C. muehlenbergii** var. **enervis***
20 Perigynia 3.5-4.0 mm long, nerved on both faces ..... ***C. muehlenbergii** var. **muehlenbergii***

Carex aggregata Mackenzie. Mt (NC, VA), Pd (VA): rich forests and woodlands; uncommon. May-June. NY, Ontario, MN, and SD, south to NC, AL, and OK. Other useful characters include: culms relatively smooth; pistillate scales sharp-pointed, the tip reaching to about the base of the perynium; and perigynia nerveless. [= F, FNA, K, M; = *C. sparganioides* Muhlenberg ex Willdenow var. *aggregata* (Mackenzie) Gleason – C, G]

Carex appalachica J. Webber & P.W. Ball, Appalachian Sedge. Mt (GA, NC, SC, VA): dry to mesic forests, rock outcrops; uncommon (GA Special Concern). May-June. ME and Ontario south to w. SC, n. GA, and e. TN. First reported for South Carolina by Hill & Horn (1997). [= C, FNA, K; < *C. rosea* – RAB, G, W; = *C. radiata* – F, M, S, misapplied]

* ***Carex austrina*** Mackenzie. Pd (NC), Cp (VA): roadsides, apparently introduced with hay used for erosion control; rare, introduced from sc. United States. May. Native from KY, IA, and NE south to AL and TX. First reported for our area by Bryson et al. (1996). [= F, FNA, K, M; = *C. muhlenbergii* var. *australis* Olney – C, G; < *C. muhlenbergii* – S; = *C. muhlenbergii* var. *austrina* Small]

Carex cephalophora Muhlenberg ex Willdenow. Cp, Pd, Mt (GA), {NC, SC, VA}: ME west to MN, south to FL and TX. [= F, FNA, K, M, S; < *C. cephalophora* – RAB, W (also see *C. mesochorea*); = *C. cephalophora* var. *cephalophora* – C, G]

* ***Carex divulsa*** Stokes. Reported for Washington, DC; its occurrence in our area is uncertain. [= C, F; *? C. divulsa* ssp. *divulsa* – FNA, K; *? C. virens* – G, M, misapplied]

* ***Carex gravida*** Bailey *var. **gravida***. Pd (VA): fields; uncommon. Ontario west to Saskatchewan, south to TN, MS, AR, OK, and CO, rarely introduced eastward. [= C, F, G, K; < *C. gravida* – FNA; = *C. gravida* – M]

* ***Carex gravida*** Bailey *var. **lunelliana*** (Mackenzie) F.J. Hermann. Pd (GA, NC), {SC, VA}: disturbed areas; rare (VA Watch List). IN, SD, and CO south to AR, TX, and NM; introduced eastward in MD south to GA. Reported as new to MD (Calvert County) (Steury 1999). [= RAB, C, F, G, K; < *C. gravida* – FNA; = *C. lunelliana* Mackenzie – M]

Carex leavenworthii Dewey. Cp (VA), Pd (GA, NC, SC, VA), Mt (GA, NC, VA): dry forests; uncommon. May-June. NY, Ontario, and NE south to FL and TX. [= RAB, C, F, FNA, G, K, M, S, W]

Carex mesochorea Mackenzie. Pd, Cp (SC, VA), {GA, NC}: dry forests and woodlands; rare (VA Watch List). MA, Ontario, and NE south to GA, AL, and TX. First reported for South Carolina by Hill & Horn (1997). [= F, FNA, K, M, S; < *C. cephalophora* – RAB, W; = *C. cephalophora* Muhlenberg ex Willdenow var. *mesochorea* (Mackenzie) Gleason – C, G]

Carex muehlenbergii Schkuhr ex Willdenow *var.* ***enervis*** W. Boott. {GA, NC, SC, VA}. (VA Watch List). NH west to MN and NE, south to GA, AL, MS, and TX. [= K; < *C. muhlenbergii* – RAB, W; < *C. muhlenbergii* var. *muhlenbergii* – C; = *C. muhlenbergii* var. *enervis* – F, G, orthographic variant; = *C. plana* Mackenzie – M, S]

Carex muehlenbergii Schkuhr ex Willdenow *var.* ***muehlenbergii***. {GA, NC, SC, VA}. ME, Ontario, and MN south to FL and TX. [= K; < *C. muhlenbergii* – RAB, W; < *C. muhlenbergii* var. *muhlenbergii* – C (also see var. *enervis*); = *C. muhlenbergii* var. *muhlenbergii* – F, G, orthographic variant; = *C. muhlenbergii* – M; < *C. muhlenbergii* – S (also see *C. austrina*)]

Carex radiata (Wahlenberg) Small. Cp, Pd, Mt (NC, SC, VA), {GA}: mesic to wet-mesic forests; common. May-June. Nova Scotia west to Manitoba, south to SC, AL, LA, and OK. [= C, FNA, K; < *C. rosea* – RAB, G, W; = *C. rosea* – F, M, S, misapplied]

Carex retroflexa Muhlenberg ex Willdenow. {GA, NC, SC, VA}: dry to mesic forests; uncommon. ME, MI and IA, south to FL and TX. See Downer & Hyatt (2003). [= F, FNA, K, M, S; < *C. retroflexa* – RAB, W (also see *C. texensis*); = *C. retroflexa* var. *retroflexa* – C, G]

Carex rosea Schkuhr ex Willdenow, Rosy Sedge. Pd (GA), {GA, NC, SC, VA}: dry to dry-mesic hardwood forests; uncommon (GA Special Concern). May-June. Nova Scotia west to Manitoba, south to FL and TX. [= C, FNA, K; < *C. rosea* – RAB, G, W (also see *C. appalachica* and *C. radiata*); = *C. convoluta* Mackenzie – F, M, S; *? C. flaccidula* Steudel]

Carex socialis Mohlenbrock & Schwegman. Cp (GA, NC, SC): blackwater and brownwater swamp forests and bottomlands; rare (GA Special Concern). Se. and sc. NC south to e. GA, west to e. TX, and north in the interior to s. IN, s. IL, and se. MO. [= C, FNA, K]

Carex sparganioides Muhlenberg ex Willdenow. Pd (GA), {NC, SC, VA}: rich forests; uncommon. May-June. ME, Ontario, MN, and SD south to GA, AR, and KS. Records entangled with *C. aggregata*. [= RAB, F, FNA, K, M, W; = *C. sparganioides* var. *sparganioides* – C, G]

Carex texensis (Torrey) Bailey. {GA, NC, SC, VA}: dry to mesic forests;uncommon. NY, OH, and KS south to FL and TX. See Downer & Hyatt (2003). [= F, FNA, K, M, S; < *C. retroflexa* Muhlenberg ex Willdenow – RAB; = *C. retroflexa* var. *texensis* (Torrey) Fernald – C, G]

Carex cephaloidea (Dewey) Dewey. Basic forests. New Brunswick, Ontario, and MN south to MD, OH, IN, IL, and IA. [= F, FNA, K, M; *C. sparganioides* Muhlenbergia ex Willdenow var. *cephaloidea* (Dewey) Carey – C, G]

* *Carex muricata* Linnaeus ssp. *lamprocarpa* Čelakovský. A European alien, with known occurrences south to e. PA (Rhoads & Klein 1993). [= FNA; < *C. muricata* – C, K]

* *Carex spicata* Hudson. (VA?). VA reports said to erroneous in FNA. [= C, F, FNA, G, K, M]

[26h] Section 5 – section *Holarrhenae (Intermediae)*

A section of 2 species, of temperate Northern Hemisphere. References: Reznicek & Catling in FNA (2002b).

One species ..... ***[C. sartwellii]***

Carex sartwellii Dewey. Wetlands. Québec west to British Columbia, MD, PA, OH, IN, IL, MO, CO, and ID. [= FNA, C, F, G, M; > *C. sartwellii* var. *sartwellii* – K]

[26i] Section 6 – section *Divisae*

A section of 14 species, subcosmopolitan. References: Reznicek & Catling in FNA (2002b).

1 Beak of the perigynium 1/5 to 1/3 as long as the body; spikes 2-7; [alien, naturalized primarily in brackish to salty coastal habitats] ..... ***C. divisa***

1 Beak of the perigynium 1/3 to 1/2 as long as the body; spikes 5-15; [alien, naturalized primarily inland along highways treated with salt]..... ***C. praegracilis***

* ***Carex divisa*** Hudson, Divided Sedge. Cp (NC, VA): brackish marshes; rare, introduced from the Old World. May-June. [= RAB, C, F, FNA, G, K]

* ***Carex praegracilis*** W. Boott, Freeway Sedge. Mt (VA): median of interstate highway; rare, introduced from w. North America. May-June. This species is apparently spreading through ne. North America as the result of the winter salting of highways. [= C, F, FNA, G, K, M]

[26j] Section 7 – section *Ammoglochin (Arenariae)*

A section of 14 species, of temperate Northern Hemishere. References: Reznicek in FNA (2002b).

One species ..... ***C. arenaria***

* ***Carex arenaria*** Linnaeus, Sand Sedge. Cp (NC, VA): moist to dry sandy hammocks; rare, probably introduced from Europe. May-June. Fernald (1950) considers this plant native in se. VA, and populations of it in Carolina Beach State Park, New Hanover County, NC, certainly appear native. In North America, known from MD south to se. NC; also on ballast in OR (Mackenzie 1931-1935). [= RAB, C, F, FNA, G, K, M]

Carex siccata Dewey, Bronze Sedge. Dry upland habitats. ME and Mackenzie south to NJ, OH, IL, MN, and AZ. [= C, FNA, G, M; < *C. siccata* – K (also see *C. foenea*); = *C. foenea* Willdenow – F, misapplied] {not keyed at this time}

[26k] Section 8 – section *Macrocephalae*

A section of 2 species, of maritime e. Asia and nw. North America. References: Mastrogiuseppe in FNA (2002b).

One species ..... ***C. kobomugi***

* ***Carex kobomugi*** Ohwi, Sea Isle Sedge, Japanese Sedge. Cp (NC, VA): sand dunes; uncommon, introduced from Japan. March-July. *C. kobomugi* is distinctive in its short stout culms, and its terminal, headlike, dioecious inflorescences. This species is planted as a stabilizer of coastal dunes. [= C, F, FNA, G, K]

[26m] Section 9 – section *Glareosae (Heleonastes)*

A section of 20-25 species, circumboreal, but extending in montane areas to South America, New Zealand, and Australia. References: Toivonen in FNA (2002b).

1 Spikes (1-) 2 (-3); perigynia 1-5 per spike, 2.5-4 mm long.
  2 Leaves 0.2-0.5 mm wide; spikes 1-2; perigynia 1-3 per spike; perigynia 2.5-3.3 mm long; [south to PA and NJ]..... ***[C. trisperma** var**. billingsii]***
  2 Leaves 1-2 mm wide; spikes 1-3; perigynia 1-6 per spike; perigynia 3.3-4.0 mm long; [south to w. NC] ..... ***C. trisperma** var**. trisperma***
1 Spikes 4-9; perigynia 5-30 per spike; 1.7-2.5 mm long.
  3 Perigynia (10-) 15-30 per spike; perigynium without ventral nerves (or the nerves very obscure); spike at maturity somewhat bristly appearing in silhouette because of the perigynium beaks ..... ***C. brunnescens** var**. sphaerostachya***
  3 Perigynia 5-10 (-15) per spike; perigynium ventrally nerved; spike at maturity nearly smooth in silhouette (the perigynium beaks strongly appressed)
    4 Culms 15-60 cm tall; inflorescence 3-5 (-7) cm long, all but the lowest spikes approximate, the lowest spikes 0.5-2.5 cm apart..... ***C. canescens** var**. canescens***
    4 Culms 30-90 cm tall; inflorescences 6-12 (-15) cm long, the lower and middle spikes well-spaced, the lowest spikes 2-5 cm apart ..... ***C. canescens** var**. disjuncta***

Carex brunnescens (Persoon) Poiret *var***. *sphaerostachya*** (Tuckerman) Kükenthal, Brown Sedge. Mt (GA, NC, SC, VA): grassy balds, bogs, moist forests at moderate to high elevations; common (GA Special Concern, VA Watch List). June-July. The species is circumboreal, in North America ranging south to NJ, OH, MI, and MN, south to w. NC, nw. SC, e. TN, and n. GA. Var. *sphaerostachya* is apparently the only infraspecific taxon (of four) to reach our area. See Gaddy (1981) for the report of this species in SC. [= F; < *C. brunnescens* – RAB, C, G, M, S, W; = *C. brunnescens* ssp. *sphaerostachya* (Tuckerman) Kalela – FNA, K]

Carex canescens Linnaeus *var***. *canescens***, Silvery Sedge. Mt (VA): {habitat}; rare. Greenland and AK south to VA, IL, NM, and CA; South America, Eurasia; Australia. [= F, G; < *C. canescens* – C, M; = *C. canescens* ssp. *canescens* – FNA, K]

Carex canescens Linnaeus *var***. *disjuncta*** Fernald, Silvery Sedge. Cp (NC, SC, VA), Mt (VA): bogs, swamps, often in disturbed areas; rare (NC Rare, VA Watch List). June. Newfoundland west to MN, south to VA, NC, SC, OH, and IN. [= RAB, F, G; < *C. canescens* – C, M; = *C. canescens* ssp. *disjuncta* (Fernald) Toivonen – FNA, K]

Carex trisperma Dewey *var***. *trisperma***, Three-seeded Sedge. Mt (NC, VA): bogs and swamps at high elevations, usually growing in living *Sphagnum*, in shaded situations under shrubs or trees in montane wetlands; rare (NC Rare, VA Watch List). June. Labrador west to Saskatchewan, south to NJ, MD, OH, n. IN, IL, and MN; and in the mountains to w. NC and WV. [= C, F, FNA, G, K, M; < *C. trisperma* – RAB, W]

Carex brunnescens (Persoon) Poiret *var***. *brunnescens***. Reported for our area by FNA. {Resolve.} [= F; < *C. brunnescens* – RAB, C, G, M, S, W; = *C. brunnescens* ssp. *brunnescens* – FNA, K] {not keyed at this time}

Carex trisperma Dewey var. *billingsii* O.W. Knight. Wet, boggy areas. Newfoundland and Ontario south to NJ, PA, and MI. The validity and distinction of this variety from var. *trisperma* need additional study. [= C, F, FNA, G, K, M]

[26n] Section 10 – section *Deweyanae*

A section of 8 species, of North America and e. Asia. References: Naczi (1990); Naczi in FNA (2002b).

1 Perigynia 1.3-1.6 mm wide, 3-4× as long as wide ..... ***[C. deweyana** var. **deweyana]***
1 Perigynia 0.8-1.2 mm wide, 4-5× as long as wide.
2 Widest leaf (1.3-) 1.5-2.9 (-3.1) mm wide; culms (0.5-) 0.6-1.0 (-1.1) mm thick at mid-height; plant densely to loosely cespitose, the rhizome internodes 0.2-20 mm long; [of swamp forests and other wetlands, widespread in our area] ..... ***C. bromoides** ssp. **bromoides***
2 Widest leaf 2.8-4.4 mm wide; culms 1.0-1.6 mm thick at mid-height; plants densely cespitose, the rhizome internodes 0.2-1.0 (-8.5) mm long; [of seeps and bogs in the Blue Ridge and Blue Ridge Escarpment region] ..... ***C. bromoides** ssp. **montana***

Carex bromoides Willdenow *ssp.* ***bromoides***, Common Brome Sedge. Cp (GA, NC, SC, VA), Mt, Pd (NC, SC, VA): swamp forests, bogs, seeps, other wetlands; uncommon. May-July. Ssp. *bromoides* ranges from New Brunswick west to e. MN, south to n. FL and e. TX, and disjunct in Mexico. Naczi (1999b) reports a chromosome number of n = 32-34. [= FNA, K; < *C. bromoides* – RAB, C, F, G, GW, M, S, W]

Carex bromoides Willdenow *ssp.* ***montana*** Naczi, Blue Ridge Brome Sedge. Mt (NC, SC, VA): mountain bogs in the Blue Ridge, seepages in the Blue Ridge Escarpment; rare (NC Watch List). June-July. Ssp. *montana* is known only from sw. VA, w. NC, and nw. SC. This taxon needs further study in order to better understand its habitats and distribution. Naczi (1999b) provided additional evidence for its recognition, in the form of different chromosome numbers (n=30-31 for ssp. *montana* and n= 32-34 for ssp. *bromoides*). [= FNA, K; < *C. bromoides* – RAB, C, F, G, GW, M, S, W]

Carex deweyana Schweinitz var. *deweyana*. Rich forests and openings. Newfoundland and Labrador west to AK, south to ec. PA, OH, IL, CO, and WA. Naczi (1999b) reports a chromosome number of n = 27. [= C, F, G, FNA, K, M]

[26o] Section 11 – section *Stellulatae*

A section of ca. 15 species, semicosmopolitan (except Africa). References: Reznicek & Ball (1980); Reznicek in FNA (2002b). Key based on Reznicek & Ball (1980).

1 Spikes usually solitary; leaves involute; anthers 2.0-3.6 mm long; [rare disjuncts in Coastal Plain bogs] ..... ***C. exilis***
1 Spikes 2-8; leaves flat or folded; anthers 0.6-2.2 (-2.4) mm long.
2 Perigynium beak smooth-margined (use at least 10× magnification) ..... ***C. seorsa***
2 Perigynium beak serrulate on margin (use at least 10× magnification).
3 Widest leaves 2.8-5.0 mm wide.
4 Lower perigynia of spikes mostly 1.1-1.6× as long as wide; perigynia mostly 2.1-3.0 mm wide .... ***C. atlantica***
4 Lower perigynia of spikes (1.5-) 1.7-3× as long as wide; perigynia mostly 1.2-2.0 mm wide ..... ***C. ruthii***
3 Widest leaves 0.8-2.7 mm wide.
5 Terminal spikes entirely staminate; anthers (1.0-) 1.2-2.2 (-2.4) mm long ..... ***C. sterilis***
5 Terminal spikes partly or entirely pistillate; anthers 0.6-2.2 (-2.4) m long.
6 Terminal spikes without a distinct narrowed base of staminate scales, the staminate portion < 1 mm long ..... ***C. sterilis***
6 Terminal spikes with a distinct narrowed base of staminate scales 1.0-16.5 mm long.
7 Lower perigynia 2.0-3.0 mm wide ..... ***C. atlantica***
7 Lower perigynia 0.9-2.0 mm wide.
8 Lower perigynia mostly 2.8-4.8 mm long; lower perigynia (1.7-) 1.8-3.6× as long as wide; perigynia beaks 0.95-2.0 mm long, mostly 0.45-0.85× as long as the perigynium body ..... ***C. echinata** ssp. **echinata***
8 Lower perigynia mostly 1.9-3.0 mm long; lower perigynia 1.0-2.0 (-2.2)× as long as wide; perigynia beaks 0.4-0.95 mm long, mostly 0.2-0.5× as long as the perigynium body.
9 Perigynia mostly nerveless over the achene on the adaxial surface; beak of perigynia conspicuously setulose-serrulate; perigynia often more-or-less convexly tapered from widest point to the beak, thus forming a weak shoulder; [of calcareous sites, in our area restricted to the Mountains of VA] ..... ***C. interior***
9 Perigynia mostly 1-10-nerved over the achene on the adaxial surface; beak of perigynia more sparsely serrulate, with definite spaces between the often single teeth; perigynia more-or-less cuneate or concavely tapered from widest point to the beak, not forming a shoulder; [of a variety of situations, not generally calcareous].
10 Widest leaves 1.6-2.7 mm wide; infructescence mostly 18-45 mm long; [widespread in our area] ..... ***C. atlantica***
10 Widest leaves 0.6-1.6 mm wide; infructescence mostly 8-20 mm long; [primarily of the Coastal Plain in our area, widely scattered elsewhere] ..... ***C. howei***

Carex atlantica Bailey. Cp, Pd, Mt (GA, NC, SC, VA): bogs and seepages; uncommon. May-June. Nova Scotia west to MI and nw. IN, south to n. FL and e. TX. Reznicek & Ball (1980) found the distinction of *C. incomperta* from *C. atlantica* to be untenable. Intermediates between *C. atlantica* and *C. howei* (often treated as *C. atlantica* ssp. *capillacea*) occur in portions of their ranges, especially in the southern Coastal Plain. In most other areas they are sharply distinct, and sometimes grow together (as in the mountains of our area and further north) with no evidence of intergradation or hybridization. I prefer to treat them at the species level. [= GW; > *C. atlantica* – RAB, F, G, M, S, W; = *C. atlantica* var. *atlantica* – C; > *C. incomperta* Bicknell – RAB, F, G, M, S, W; = *C. atlantica* ssp. *atlantica* – FNA, K]

Carex echinata Murray *ssp. **echinata***, Star Sedge. Mt (NC, VA): bogs; uncommon (NC Watch List). May-June. Ssp. *echinata* is circumboreal, ranging in North America from Newfoundland west to Saskatchewan, south to DE, PA, IN, IA, and ND, and in the mountains to w. NC and e. TN; also in w. North America from AK (Aleutians) and British Columbia south to CO, UT, and s. CA. Ssp. *phyllomanica* (Boott) Reznicek occurs along the western coast of North America from s. AK south to n. CA. [= FNA, K; > *C. muricata* Linnaeus var. *angustata* (Carey) Carey ex Gleason – RAB, G, misapplied; = *C. echinata* var. *echinata* – C; > *C. muricata* var. *cephalantha* (Bailey) Wiegand & Eames – G; = *C. angustior* Mackenzie – M, S; > *C. angustior* – F; > *C. cephalantha* (Bailey) Bicknell – F; < *C. muricata* – W]

Carex exilis Dewey, Coastal Sedge. Cp (NC): peaty seepage bogs; rare (NC Threatened). May-June. Newfoundland and Labrador west to Ontario and n. MN, south to NJ, DE, MD, NY, and n. MI; disjunct southward in sc. NC, se. MS, and sw. AL. The southern occurrences are remarkably disjunct from the Canadian, northern Coastal Plain, and Great Lakes distribution. [= RAB, C, F, FNA, G, K, M]

Carex howei Mackenzie, Howe's Sedge. Cp (GA, NC, SC, VA), Pd, Mt (NC, VA): bogs and seepages; uncommon. May-June. Nova Scotia west to MI and nw. IN, south to c. peninsular FL and e. TX, predominantly (but by no means strictly) on the Coastal Plain. See *C. atlantica* for discussion of the relationship between the two taxa. [= RAB, F, G, GW, M, S, W; = *C. atlantica* var. *capillacea* (Bailey) Cronquist – C; = *C. atlantica* Bailey ssp. *capillacea* (Bailey) Reznicek – FNA, K]

Carex interior Bailey, Inland Sedge. Mt (VA): calcareous seepage areas; rare (VA Rare). May-June. Newfoundland and Labrador west to s. AK, south to w. VA, n. AR, n. AZ, and n. CA; disjunct in Mexico (Chihuahua). [= C, F, FNA, G, K, M, W]

Carex ruthii Mackenzie, Ruth's Sedge. Mt (GA, NC, SC, VA): seepage areas, in forest or open areas; uncommon (NC Watch List, VA Watch List). May-June. A Southern Appalachian endemic: sw. VA south through w. NC and e. TN to nw. SC and n. GA. [= C, F, FNA, K, M, S; = *C. muricata* Linnaeus var. *ruthii* (Mackenzie) Gleason – RAB, G; < *C. muricata* – W]

Carex seorsa Howe. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (VA): acidic swamp forests; common (GA Special Concern). May-June. MA south to GA in the Coastal Plain, scattered inland westward to NY, OH, MI, IN, AR, and TN. [= RAB, C, FNA, G, GW, K, M, S, W]

Carex sterilis Willdenow, Sterile Sedge. Mt (VA): mafic fens; rare (VA Rare). Newfoundland west to Saskatchewan, south to sw. VA (Grayson County), ne. TN, IL, and MO. Outside of our area, *C. sterilis* is primarily a species of calcareous fens or seepages. First reported for VA by Wieboldt et al. (1998). [= C, F, FNA, G, K, M]

Carex wiegandii Mackenzie, south to c. PA (Rhoads & Klein 1993). [= C, F, FNA, G, K, M] {not keyed at this time}

[26q] Section 12 – section *Ovales*

A section of ca. 85 species, largely North American, but also occurring in Central and South America and Eurasia. References: Mastrogiuseppe et al. in FNA (2002b); Rothrock, Reznicek, & Ganion (1997). Key closely adapted from FNA.

1 Pistillate scales uniformly as long as or longer than the mature perigynia, usually concealing the beaks (though not necessarily the bodies), apex obtuse to acuminate, not awned.
  2 Perigynium beak cylindric, unwinged, lacking serrations for ca. 0.4 mm below the apex ..... ***C. ovalis***
  2 Perigynium beak flattened, ciliate-serrulate all the way to the apex.
    3 Principal leaves stiff, more-or-less glaucous, often bearing auricles at the base, the summit of the sheaths truncate, prolonged 1-4 mm beyond the collar; flat margins of perigynia 0.5-0.8 mm wide; achenes 1.0-1.2 mm wide; [of maritime dunes and shores] ..... ***C. silicea***
    3 Principal leaves pliable, green, almost always without auricles, the summit of the sheaths U-shaped, only slightly prolonged beyond the collar; flat margins of perigynia 0.2-0.6 mm wide; achenes 1.0-1.7 mm wide; [of inland, non-maritime habitats].
      4 Perigynia ascending to spreading, strongly and evenly veined on the adaxial face, finely granular-papillose; spikes (3-) 7-15, the uppermost usually densely aggregated ..... ***C. argyrantha***
      4 Perigynia erect-ascending, often veinless on the adaxial face or with a few veins of unequal strength, smooth; spikes 3-7 (-11), the uppermost often more-or-less separated ..... ***[C. foenea]***

1 Pistillate scales (excluding the awns, if present) shorter than the perigynia at least in the middle portions of the spikes, the apical portion of the pistillate scales narrower than the perigynia braks and not completely covering them, the apex awned in some species.
  5 Pistillate scales in middle or lower portions of spikes with apex acuminate with subulate or awned tip.
    6 Perigynia 2.6-4.0 × as long as wide, the bodies lanceolate, 1.2-2.0 mm wide ..... ***C. scoparia** var. **scoparia***
    6 Perigynia < 2.5 × as long as wide, the bodies lance-ovate, ovate, broadly elliptic, orbiculate, or obovate, 1.8-3.9 mm wide.
      7 Perigynium body obovate, often with conspicuous “shoulders;” leaves 2.5-6 mm at widest ..... ***C. alata***

7 Perigynium body elliptic, suborbiculate, or weakly obovate; leaves 1-3 (-4.2) mm at widest.
8 Perigynium body cuneately tapered to the base, the body of the perigynium more-or-less diamond-shaped; inflorescences dense, stiffly erect, with 3-5 spikes..... ***C. suberecta***
8 Perigynium body convexly tapered to the base (the base rounded), the body of the perigynium ovate, elliptic, orbiculate, or weakly obovate; inflorescences dense and erect or open and nodding, with 3-11 spikes.
9 Scales with white-hyaline or pale yellowish margins; perigynia greenish to straw-colored or pale brown, (2.3-) 2.5-4.0 (-4.2) mm long, often indistinctly 0-4 (-6) veined on the outer side..... ..... ***C. festucacea***
9 Scales with reddish-brown margins; perigynia reddish-brown, (3.8-) 4.0-5.5 mm long, conspicuously veined on the outer side with 5 or more veins.
10 Beaks ascending, < ½ the length of the lance-ovate to weakly obovate perigynium body; lateral spikes with acute staminate bases mostly < 2 mm long; [of tidal marshes] .... ***C. hormathodes***
10 Beaks widely spreading, > ½ the length of the suborbicular perigynium body; lateral spikes with tapered staminate bases 2-6 mm long; [of freshwater wetlands] ..... ***C. straminea***

5 Pistillate scales with apex obtuse, acute, or acuminate (but not subulate or awned).
11 Perigynia < 2 mm wide.
12 Perigynia thin, often not winged to the base; leaf sheaths somewhat expanded towards the apex, bearing narrow wings continuous with the midvein and the edges of the leaf blade; leaves 3-7.5 mm wide; vegetative shoots tall, conspicuous, with numerous leaves spaced along the upper half of the culm.
13 Lower perigynia of each spike spreading or recurved (at an angle of > 80 degrees); spikes globose; pistillate scales hidden, 1.6-2.3 mm long ..... ***C. cristatella***
13 Lower perigynia of each spike appressed-ascending to somewhat spreading (at a 30-75 degree angle); spikes subglobose to ovate-oblong; pistillate scales evident, 2.0-3.0 mm long.
14 Inflorescences usually flexible, nodding at the tip, the lower spikes usually separated; perigynia usually 15-40, spreading at a 40-75 degree angle to the spike axis; leaf sheaths firm or friable at the summit..... ***C. projecta***
14 Inflorescences straight and stiff, the lower spikes overlapping; perigynia usually > 40, appressed-ascending at a 30-40 degree angle to the spike axis; leaf sheaths firm at the summit.
15 Perigynia 3.0-4.0 mm long, 2.2-2.8 (-3) × as long as wide..... ..... ***C. tribuloides*** *var.* ***sangamonensis***
15 Perigynia (3.3-) 3.6-5.4 mm long, 3-5 × as long as wide..... ***C. tribuloides*** *var.* ***tribuloides***
12 Perigynia thick, winged to the base; leaf sheaths with more-or-less rounded edges, not distinctly expanded towards the apex; leaves 1-4.5 mm wide (except in *C. normalis*); vegetative shoots usually inconspicuous, with relatively few leaves clustered at the tip.
16 Perigynia (2.5-) 2.6-4 × as long as wide, the body lanceolate, distance from beak tip to top of achene 2.2-5 mm ..... ***C. scoparia*** *var.* ***scoparia***
16 Perigynia < 2.5 × as long as wide, the body obovate, orbiculate, or ovate; distance from beak tip to top of achene 0.8-2.2 mm.
17 Perigynium body obovate, widest toward the tip (excluding the beak).
18 Perigynium beak spreading, slender; pistillate scales acute; styles sinuous at base..... ..... ***C. albolutescens***
18 Perigynium beak appressed-ascending, triangular; pistillate scales obtuse; styles straight..... ..... ***C. longii***
17 Perigynium body ovate, elliptic, or orbiculate, widest towards the base or near the middle (excluding the beak).
19 Inflorescences on tallest culms compact, 1.5-3 × as long as wide, erect, the spikes overlapping, the lowest internode of the inflorescence 1-6 (-7.5) mm, ½ to 1/5 (-¼) the length of the inflorescence
20 Achenes 0.6-0.9 mm wide; perigynia veinless or 1-3 veined on the inner face, these faint or basal only; inflorescences < 3.0 cm long..... ***C. bebbii***
20 Achenes 0.9-1.3 mm wide; perigynia often 3-veined on the inner face; inflorescences 12-60 mm long.
21 Perigynia broadly elliptic or nearly orbiculate, the wing margin 0.4-0.8 mm wide, 0-6 veined on the inner face..... ***C. molesta***
21 Perigynia ovate to broadly ovate, the wing margin 0.25-0.45 mm wide, 4-7 veined on the inner face ..... ***C. normalis***
19 Inflorescences on tallest culms elongate, more-or-less open towards the base, (2.5-) 3.0-5.1 × as long as wide, often arching or nodding at the tip; spikes more-or-less separate; lowermost internode (5-) 7-19 mm long, mostly 1/5-⅓ (-½) the length of the inflorescence.
22 Perigynium orbiculate, widest at mid-body ..... ***C. festucacea***
22 Perigynium narrowly to broadly ovate, widest below mid-body.

23 Sheaths smooth, often whitish-mottled; perigynium beak spreading, exceeding the pistillate scales by 0.7-1.6 mm; beak and shoulders of perigynia greenish to yellowish or greenish brown at maturity..... ***C. normalis***

23 Sheaths, at least some, papillose near the collar (at magnification of 30 ×), not prominently whitish-mottled; perigynium beak appressed or ascending in spikes, exceeding the pistillate scales by 0.0-0.8 mm; beak and shoulders of perigynia straw-colored to reddish-brown at maturity..... ***C. tenera*** *var*. ***tenera***

11 Perigynia > 2 mm wide.

24 Spikes 12-28 mm long, with tapered base and acute tip; perigynium body lanceolate, 6-9 mm long; vegetative culms conspicuous ..... [***C. muskingumensis]***

24 Spikes **either** shorter than 12 mm **or** longer and with either rounded bases or tips or both; perigynium body ovate, elliptic, orbicular, or obovate, or lanceolate (if lanceolate, then shorter than 6 mm long); vegetative culms conspicuous or not.

25 Perigynium bodies obovate, widest towards the tip; leaf sheaths green-veined adaxially nearly to the summit, or with a narrow Y-shaped hyaline area.

26 Achenes 1.3-1.8 mm wide..... ***C. opaca***

26 Achenes 0.75-1.2 (-1.3) mm wide.

27 Inflorescences erect, 1-4.5 cm long; spikes slightly separated to congested..... ***C. albolutescens***

27 Inflorescences arching or nodding, 2.3-8.4 cm long; spikes widely separated ..... ***C. silicea***

25 Perigynium bodies lanceolate, ovate, elliptic, orbicular, or reniform, widest at the middle or towards the base; leaf sheaths various, some with prominent hyaline band near the apex adaxially.

28 Plants colonial,from creeping rhizomes; vegetative culms numerous, conspicuous, strongly 3-ranked, with 15-35 leaves when fully-developed; achenes 1.6-2 × as long as wide; larger spikes with 5-25 (-30) perigynia..... ***[C. hyalina]***

28 Plants clumping; vegetative culms few, inconspicuous, usually with fewer than 15 leaves, not strikingly 3-ranked; achenes 1-1.6 (-1.7) × as long as wide; larger spikes with 15-80 perigynia.

29 Perigynia finely granular-papillose (as seen with 30× magnification), the body reniform to orbiculate, 0.6-0.9 ×as long as wide, 3.5-4.5 (-4.9) mm wide; lowermost pistillate scale obtuse-rounded..... ***C. reniformis***

29 Perigynia smooth, the body broadly ovate, elliptic, orbicular, or slightly obovate, (0.7-) 0.9-1.7 × as long as wide, 1.5-6.1 mm wide; lowermost pistillate scales obtuse to acuminate-awned.

30 Leaf sheaths green-veined adaxially neral to the summit; inflorescences dense to somewhat open, erect, the lowermost internode usually < 8 (-12) mm long

31 Perigynia with acute bases, 2.0-2.8 mm wide; beak appressed, > 2/5 × the length of the body; broadest leaves 1.5-2.5 mm wide; [of sw. VA northward]..... ***C. suberecta***

31 Perigynia with rounded bases, 3.0-4.4 mm wide; beak spreading, ca. ⅓ × the length of the body; broadest leaves 2-5 mm wide; [of FL]..... ***C. vexans***

30 Leaf sheaths with white-hyaline area adaxially; inflorescences open or dense.

32 Perigynium body narrowly to broadly ovate, greenish; pistillate scales with green midstripe, hyaline or pale margins (rarely brown tinged); leaves 2.5-6.5 mm wide, the sheaths green mottled, with mouth truncate, and prolonged to 2 mm distal to base of the leaf blades..... ***C. normalis***

32 Perigynium body broadly ovate, broadly elliptic, or orbiculate, yellowish to tan brown; pistillate scales greenish or dark brown; leaves 1.5-4 (-5) mm wide, the sheaths usually evenly colored, with mouth concave.

33 Leaf sheaths finely papillose (at magnification of 30-40 ×), especially near the leaf base.

34 Perigynia strongly and evenly 4-8-veined over the achene adaxially, (4.5-) 5.1-5.5 mm long; pistillate scales usually (1.0-) 1.4-2.3 mm shorter than the perigynia; anthers (2.4-) 2.8-4.2 mm long..... ***C. bicknellii***

34 Perigynia veinless or faintly and irregularly 0-4 (-6)-veined over the achene adaxially, 2.5-4.2 mm long; pistillate scales 0.2-1.3 mm shorter than the perigynia; anthers 1.0-2.1 mm long..... ***C. festucacea***

33 Leaf sheaths smooth.

35 Spikes on larger culms (3-) 5-7 (-11), tapered at the base, the terminal spike with a conspicuous staminate base; inflorescences typically open, 2.5-4.5 (-6.5) cm long, the lowermost internode (3-) 4-13 (-23) mm long; perigynium body (0.7-) 0.9-1.3 × as long as wide.

36 Achenes 1.2-1.8 mm long, 1.0-1.3 mm wide; perigynia 2.5-4.2 mm long, 1.5-2.3 (-2.5) mm wide, mostly 2-4 (-6)-veined adaxially ..... ***C. festucacea***

36 Achenes (1.6-) 1.7-2.2 mm long, (1.2-) 1.4-1.8 mm wide; perigynia 3.2-5.5 mm long, 2.5-3.6 mm wide, veinless or faintly 1-5 (-7)-veined adaxially.

37 Perigynia 3.2-4.8 (-5.2) mm long; beak 0.8-1.5 mm long; pistillate scales 3.3-4.0 (-4.3) mm long, acute; achenes 1.0-1.3 (1.4) × as long as wide ..... ***C. brevior***

37 Perigynia (5.6-) 6.0-7.1 mm long; beak (1.2-) 1.5-2.1 (-2.3) mm long; pistillate scales (3.6-) 3.9-5.0 mm long, obtuse to acute .... ***C. opaca***

35 Spikes on larger culms 2-4 (-5), rounded at the base, the terminal spike usually lacking a conspicuous staminate base; inflorescences compact, 1.2-3.0 (-3.6) cm long, the lowermost internode 1.5-7 (-13) mm long; perigynium body (0.7-) 0.9-1.6 × as long as wide.

38 Achenes of larger perigynia ellipsoid to narrowly oblong, 0.9-1.3 mm wide, 1.3-1.6 × as long as wide; perigynia (25-) 30-80 per spike, squarrose-spreading at maturity, 1.8-3.0 mm wide ..... ***C. molesta***

38 Achenes of larger perigynia broadly oblong to nearly orbicular, 1.35-1.8 mm wide, 1-1.3 × as long as wide; perigynia (10-) 15-40 (-45) per spike, appressed-ascending at maturity, (2.1-) 2.5-3.4 (-3.5) mm wide.

39 Perigynia veinless or faintly and irregularly 1-5-veined over the achene adaxially, more-or-less orbicular, the bodies (2-) 2.3-3.2 mm long, (0.7-) 0.9-1.1 (-1.3) × as long as wide; pistillate scales mostly acute, about as long as to 0.7 (-0.9) mm shorter than the subtended perigynium (flattened and measured separately)..... ..... ***C. brevior***

39 Perigynia strongly 4-6-veined over the achene adaxially, broadly ovate to broadly elliptic, (or rarely nearly orbicular), the bodies (2.7-) 3-4 mm long, (0.9-) 1.0-1.6 × as long as wide; pistillate scales mostly obtuse, 0.7-1.7 mm shorter than the subtended perigynium (flattened and measured separately)..... ..... ***C. molestiformis***

Carex alata Torrey. Cp (GA, NC, SC, VA), Pd (NC, VA): bottomland forests, marshes; common, rare in lower Piedmont only. May-June. NH, MI, and MO south to FL and TX. [= RAB, C, F, FNA, G, GW, K, W; < *C. alata* – S (also *C. vexans*)]

Carex albolutescens Schweinitz. Cp, Pd, Mt (GA, VA), {NC, SC}: low fields, bottomlands. May-June. MA, NY, WI, and MO, south to FL and TX. [= C, F, FNA, K; < *C. albolutescens* – RAB, G, GW, W (also see *C. longii*); *C. straminea* misapplied]

Carex argyrantha Tuckerman, Silvery-flowered Sedge, Hay Sedge. Mt (NC, VA), Pd? (VA?): wet meadows or dry soils; common (NC Rare). New Brunswick west to Ontario, south to w. NC, e. TN (Unicoi County), and OH. June-August. [= RAB, C, F, G, K, W; *C. aenea*, misapplied]

Carex bebbii Olney ex Fernald. Mt (VA): calcareous wetlands; rare. Newfoundland, Labrador and AK south to NJ, nw. VA (Big Meadows, VA; Townsend, pers. comm. 2004), OH, IN, IL, NE, CO, and OR. [= C, F, FNA, G, K]

Carex bicknellii Britton. Pd (SC): prairie-like openings and barrens over gabbro; rare. ME west to Saskatchewan, south to DE, OH, MO, OK, and NM; disjunct in nc. SC. First reported for South Carolina by Hill & Horn (1997). [= FNA; = *C. bicknellii* var. *bicknellii* – K; < *C. bicknellii* – C, F, G, M (also see *C. opaca*)]

Carex brevior (Dewey) Mackenzie ex Lunell. Mt, Pd? (VA): dry forests and margins; uncommon. May-June. MW west to British Columbia, south to GA, c. TN, MS, TX, Tamaulipas, and AZ. [= F, FNA, G, K, W; < *C. festucacea* – RAB, GW; < *C. brevior* – C (also see *C. molesta* and *C. molestiformis*); < *C. festucacea* Schkuhr ex Willdenow var. *brevior* (Dewey) Fernald]

Carex cristatella Britton, Crested Sedge. Mt (NC, VA), Pd (VA): grassy balds, bogs, wet meadows; rare (NC Rare, VA Rare). May-June. VT west to Saskatchewan, south to NC, KY, MO, and KS. See Fox, Godfrey, & Blomquist (1952) for the first report from NC. [= RAB, C, F, FNA, G, K, W]

Carex festucacea Schkuhr ex Willdenow, Fescue Sedge. Cp (GA, NC, SC, VA), Pd, Mt (NC, SC, VA): bottomland forests; uncommon (NC Watch LIst). May-June. VT west to MN, south to GA, AL, MS, LA, and TX. [= C, F, FNA, K; < *C. festucacea* – RAB, GW, W; < *C. festucacea* – G (also see *C. straminea*)]

Carex hormathodes Fernald. Cp (NC, VA): freshwater and slightly brackish tidal marshes; rare (NC Rare). Newfoundland south to ne. NC, along the coast. [= F, FNA, K, M; = *C. straminea* Willdenow ex Schkuhr var. *invisa* W. Boott – C, G]

Carex longii Mackenzie, Long's Sedge. Cp (GA), {NC, SC, VA}: low fields, bottomlands. May-June. Nova Scotia west to WI, south to FL and TX. [= C, F, FNA, K; < *C. albolutescens* – RAB, G, GW, W]

Carex molesta Mackenzie ex Bright, Troublesome Sedge. Mt (VA): calcareous soils; rare (VA Watch List). NH west to ND, south to VA, AL, MS, and OK. [= F, FNA, G, K; < *C. brevior* (Dewey) Mackenzie ex Lunell – C]

Carex normalis Mackenzie. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): mesic forests; May-June. ME, Québec, and Ontario south to GA and AR. [= RAB, C, F, FNA, G, GW, K, W]

* ***Carex opaca*** (F.J. Hermann) P.E. Rothrock & Reznicek. Cp (VA): introduced at old railroad livestock yard, well-established; rare, introduced from sc. United States. Native range in prairies, IL and KS south to MS, AR, and OK. [= FNA; = *C. bicknellii* Britton var. *opaca* F.J. Hermann – K; < *C. bicknellii* – M]

* ***Carex ovalis*** Goodenough. Mt (NC): grassy balds, disturbed areas; rare, introduced from Eurasia. Known to range in North America from Newfoundland and NY south to w. NC and ne. TN. The records reported in RAB and elsewhere of *C.*

aenea are actually misidentified material of this species (A.A. Reznicek, pers. comm. 2005). [= FNA, K; = *C. aenea* – RAB, misapplied (based on misidentified material); < *C. leporina* Linnaeus – C, F, G, misapplied; *? C. tracyi* Mackenzie]

Carex projecta Mackenzie. Mt, Pd, Cp (NC, SC, VA), {GA?}: moist forests; rare (NC Rare). May-June. Newfoundland, Labrador, and Saskatchewan south to NC, IN, IL, and IA. [= RAB, C, F, FNA, G, K, M]

Carex reniformis (Bailey) Small, Kidney Sedge. Cp (GA, NC, SC, VA), Pd (NC): floodplain forests, marshes, ditches, other wet areas; rare (GA Special Concern, NC Rare). VA, IL, and OK south to FL and TX. [= RAB, C, F, FNA, G, GW, K, S]

Carex scoparia Sckuhr ex Willdenow *var. **scoparia***. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (NC, VA): bogs, swamp forests, marshes, seepy ledges, ditches; common (GA Special Concern). May-June. Newfoundland west to British Columbia, south to GA, MS, and CA. [= F, FNA, K; < *C. scoparia* – RAB, C, G, GW, W]

Carex silicea Olney, Seabeach Sedge. Cp (VA): beaches and shores; rare (VA Rare). Newfoundland south to VA, along the coast. [= C, F, FNA, G, K]

Carex straminea Willdenow ex Schkuhr, Straw Sedge. Pd (VA), {NC}: wetlands; rare (VA Rare). MA west to WI, south to NC, KY, and MO. [= F, FNA, K; = *C. straminea* var. *straminea* – C, G; *? C. richii* (Fernald) Mackenzie – M]

Carex suberecta (Olney) Britton, Prairie Straw Sedge. Mt (VA): calcareous wetlands; uncommon (VA Watch List). Ontario and MN south to VA, WV, OH, IN, IL, AR, and TX. [= C, F, FNA, G, K]

Carex tenera Dewey *var. **tenera***, Slender Sedge. Pd (NC, VA), Mt (GA, VA), Cp (VA), {SC}: low forests; rare (NC Watch List, VA Rare). Nova Scotia west to British Columbia, south to VA, NC, n. GA, ne. TN, MO, KS, WY, and OR. [= F, FNA; < *C. tenera* – RAB, C, G, K]

Carex tribuloides Wahlenberg *var. **sangamonensis*** Clokey. {GA, NC, SC, VA}: bottomland forests. May-June. OH, IL, and KS, south to SC, AL, LA, and TX. [= FNA, G, K; < *C. tribuloides* – RAB, C, F, GW, W]

Carex tribuloides Wahlenberg *var. **tribuloides***. {GA, NC, SC, VA}. bottomland forests. May-June. New Brunswick west to MN and NE, south to FL, GA, TN, MO, and KS. [= FNA, G, K; < *C. tribuloides* – RAB, C, F, GW, W]

Carex foenea Willdenow, Hay Sedge. Labrador and Newfoundland west to Yukon, south to CT, NY, PA, MI, and ID. [= C, FNA; > *C. aenea* Fernald – F, M; < *C. siccata* – G, K, misapplied; > *C. foenea* – M]

Carex hyalina Boott. Bottomland forests. TN, AR, and OK, south to MS, LA, and TX. [= FNA, K, M] {not keyed at this time; synonymy incomplete}

Carex molestiformis Reznicek & P.E. Rothrock. Mt (VA): {habitat}. Known distribution is w. VA, KY, TN, MO, AR, and OK. [= FNA, K; < *C. brevior* (Dewey) Mackenzie ex Lunell – C] {not keyed at this time; synonymy incomplete}

Carex muskingumensis Schweinitz. Floodplain forests. Ontario and MN south to KY, TN, AR, and OK. [= C, F, FNA, G, K, M]

Carex vexans F.J. Hermann, Florida Hammock Sedge. Peninsular FL and eastern Panhandle FL. [= FNA, K; < *C. alata* – S]

[26r] Section 13 – section *Phacocystis* (*Cryptocarpae* and *Acutae*)

A section of 70-90 species, cosmopolitan. References: Standley, Cayouette, & Bruederle in FNA (2002b); Standley (1983); Bruederle & Fairbrothers (1986); Bruederle, Fairbrothers, & Hanks (1989). Key based in part on C.

1 Lowest spike erect or ascending.
- 2 Lower sheaths scabrous, reddish-brown, the sheath fronts (ventral faces) with prominent veins forming a persistent network; lower sheaths usually bladeless ..... ***C. stricta***
- 2 Lower sheaths glabrous, the sheath fronts (ventral faces) not forming a persistent network; lower sheaths usually with leaf blades.
  - 3 Perigynia evidently nerved on both faces ..... ***C. emoryi***
  - 3 Perigynia not nerved, or very faintly nerved.
    - 4 Longest bracts overtopping the spikes; perigynia flattened, elliptic to obovate; pistillate scales acute to obtuse, generally shorter than the perigynia ..... ***C. aquatilis***
    - 4 Longest bracts shorter than the spikes; perigynia inflated, obovate; pistillate scales acuminate, longer than the perigynia ..... ***[C. haydenii]***

1 Lowest spike pendent.
- 5 Pistillate scales awnless, the sides black or deep purple-brown ..... ***C. torta***
- 5 Pistillate scales awned, the sides medium brown.
  - 6 Sheath backs glabrous [prickles 0-1 (-5) per mm^2 of sheath surface 5 cm from base]; perigynia somewhat inflated, obovoid, rounded above to an abrupt beak; lowest bract of the infructescence 1.7-6.2 dm long.
    - 7 Perigynia strongly obovoid, 3-4.5 mm long, 2-3 mm wide; achene symmetrical..... ***C. crinita* *var. brevicrinis***
    - 7 Perigynia ellipsoid to slightly obovoid, 2-3 (-3.5) mm long, 1-2 mm wide; achene usually shortened on one side, therefore asymmetrical ..... ***C. crinita* *var. crinita***
  - 6 Sheath backs scabrous [prickles (1-) 5-54 per mm^2 of sheath surface 5 cm from base]; perigynia flattened, elliptic to ovoid, tapering from near or below the middle to a minute beak; lowest bract of the infructescence 0.7-3.5 dm long.

8 Perigynia smooth to slightly papillate toward the apex, the papillae mostly < 10 µm long; lower pistillate scales usually acute or acuminate, tapering into the awn; sheaths strongly scabrous; [mainly distributed in our area in the Mountains] ..... ***C. gynandra***

8 Perigynia densely granular-papillate throughout, the papillae mostly > 13 µm long; lower pistillate scales usually truncate or retuse, abruptly awned; sheaths finely scabrous; [mainly distributed in our area in the Coastal Plain and Piedmont] ..... ***C. mitchelliana***

Carex aquatilis Wahlenberg, Aquatic Sedge. Mt (NC, VA): mountaintop pond, with *Dulichium arundinaceum, Vaccinium macrocarpon, Juncus canadensis*, and *Utricularia sp*., mafic fen at high elevation; rare (VA Rare). Newfoundland west to ND, south to NJ, s. PA, OH, IN, IA, and NE; disjunct in w. VA (Augusta County) and nw. NC (Ashe County). First reported for VA by Wieboldt et al. (1998). [= G; > *Carex aquatilis* Wahlenberg var. *substricta* Kükenthal – C, FNA; > *C. aquatilis* var. *altior* (Rydberg) Fernald – F; *?*> *C. aquatilis* var. *aquatilis* – K; > *C. substricta* (Kükenthal) Mackenzie – M]

Carex crinita Lamarck *var.* ***brevicrinis*** Fernald. Cp, Pd (NC, SC, VA), {GA}: swamps, wet forests; common (VA Watch List). May-June. MA south to FL, west to TX, north in the interior to KY and MO. [= C, F, FNA, K; < *C. crinita* Lamarck var. *crinita* – RAB, G, GW; < *C. crinita* – M, S; < *C. crinita* – W (also see *C. gynandra* and *C. mitchelliana*)]

Carex crinita Lamarck *var.* ***crinita***. Pd, Cp (NC, SC, VA), Mt (NC), {GA}: swamps, wet forests, bogs; common (rare in Mountains) May-June. Newfoundland west to MN and Alberta, south to GA, TN, and AR. [= C, F, FNA, K; < *C. crinita* Lamarck var. *crinita* – RAB, G, GW; < *C. crinita* – M, S; < *C. crinita* – W (also see *C. gynandra* and *C. mitchelliana*)]

Carex emoryi Dewey in Torrey. Mt (VA): {habitat}; rare. May-June. NY and ND south to w. VA, s. IL, n. AR, and TX. [= C, F, FNA, K, M; = *C. stricta* Lamarck var. *elongata* (Böckeler) Gleason – G]

Carex gynandra Schweinitz. Mt (GA, NC, SC, VA), Pd (NC, VA): mountain bogs, swamp forests, seepages; common. May-June. Newfoundland west to MN, south to WI, n. VA, w. NC, n. GA, e. TN, OH, and WI. This is the most montane and northern element of the *C. crinita* complex, and the usual one encountered in the Mountains of our area. [= C, FNA, K, M, S; = *C. crinita* Lamarck var. *gynandra* (Schweinitz) Schweinitz & Torrey – RAB, F, G, GW; < *C. crinita* – W]

Carex mitchelliana M.A. Curtis, Mitchell's Sedge. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC, SC): swampy woodlands and forests; rare. May-June. Se. MA west to PA and KY, south to panhandle FL, n. AL, and sc. TN. This species has a scattered distribution throughout its range, and is apparently rare. Bruederle, Fairbrothers, & Hanks (1989) and Bruederle (1999) provide additional information about this species. Allozyme studies suggest that *C. mitchelliana* is less closely related to *C. gynandra*, *C. crinita* var. *crinita*, and *C. crinita* var. *brevicrinis* than they are to one another. [= C, F, FNA, K, M, S; = *C. crinita* Lamarck var. *mitchelliana* (M.A. Curtis) Gleason – RAB, G, GW; < *C. crinita* – W]

Carex stricta Lamarck. Mt (GA, NC, VA), Pd, Cp (NC, VA), {SC?}: bogs, sedge meadows, depression ponds, old beaver ponds; common. May-June. Québec and Nova Scotia west to Manitoba, south to n. NC and TX. [= RAB, C, FNA, GW, K, W; > *C. stricta* var. *stricta* – F; > *C. stricta* var. *strictior* (Dewey) Carey – F; = *C. stricta* var. *stricta* – G; > *C. stricta* – M, S; > *C. strictior* Dewey – M, S]

Carex torta F. Boott, Streambed Sedge, Twisted Sedge. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): rocky streambeds, often dominant in patches in mountain streams; common (GA Special Concern). April-May. Nova Scotia west to Ontario, south to sc. NC, SC, nc. GA (Jones & Coile 1988), AL, TN, and OH. See Gaddy (1981) for the first report of this species in SC. [= RAB, C, F, FNA, G, K, M, S, W]

Carex haydenii Dewey. Wet meadows, wet prairies. Newfoundland and Québec west to SD, south to s. PA, MD (C. Frye, pers. Comm. 2000), IL, and IA. [= C, F, FNA, G, K, M]

[26s] Section 14 – section *Racemosae (Atratae)*

A section of ca. 60 species, of North America and Eurasia. References: Murray in FNA (2002b).

One species ..... ***C. buxbaumii***

Carex buxbaumii Wahlenberg, Brown Bog Sedge, Buxbaum's Sedge. Mt (GA, NC, SC, VA), Cp (VA), Pd (VA): bogs, fens, and seepages (especially over calcareous or mafic rocks); rare (GA Special Concern, NC Rare, VA Rare). June-July. Circumboreal, in North America ranging from Newfoundland west to s. and w. AK, south to se. VA, w. NC, nw. SC, n. GA (Jones & Coile 1988), c. TN, KY, n. AR, CO, UT, and CA. Reported for South Carolina by Hill & Horn (1997) and Hill (1999). [= RAB, C, F, FNA, G, K, M, S, W]

[26u] Section 15 – section *Limosae (including Scitae)*

A section of 6 species, in cool temperate parts of North America, Eurasia, and s. South America. References: Ball in FNA (2002b).

1 Pistillate scales 2.0-3.8 mm wide, wider than the perigynia ..... ***[C. limosa]***

1 Pistillate scales 1.2-2.0 mm wide, narrower than the perigynia.

2 Terminal spikes 20-50 mm long; pistillate scales usually shorter than the perigynia, obtuse to acute at the tip .....

..... ***C. barrattii***

2 Terminal spikes 7-20 mm long; pistillate scales usually longer than the perigynia, acute to acuminate and often short-awned (up to 3 mm long) ..... ***[C. magellanica** ssp. **irrigua]***

Carex barrattii Schweinitz & Torrey, Barratt's Sedge. Cp (NC, VA), Mt (GA, NC, SC, VA): peaty bogs and marshes; rare (NC Endangered, VA Rare). April-May. CT south to NC (at least formerly), on the Coastal Plain, and disjunct inland in places with many Coastal Plain affinities, as in w. VA (Augusta County), sw. NC (Henderson County, where now extirpated), nw. SC, sc. TN (Coffee County), n. GA, and n. AL. This species flowers and fruits rarely. Reported for South Carolina by Hill & Horn (1997) and Horn (1999). [= RAB, C, F, FNA, G, K, M, S, W]

Carex limosa Linnaeus. Bogs, wet meadows. Circumboreal, south in North America to se. PA (Rhoads & Klein 1993), NJ, DE, OH, IN, NE, UT, and CA. [= C, FNA, K, M]

Carex paupercula Michaux. Bogs, fens, marshes. Circumboreal, south in North America to NJ, PA, OH, MN, CO, UT, and OR. Closely related to and sometimes teated as a subspecies of the s. South American *C. magellanica*. [= C, G, M; > *C. paupercula* var. *irrigua* (Wahlenberg) Fernald – F; > *C. paupercula* var. *pallens* Fernald – F; = *C. magellanica* Lamarck ssp. *irrigua* (Wahlenberg) Hultén – FNA, K]

[26w] Section 16 – section *Rhynchocystis*

A section of 5 species, of Europe, w. Asia, and Europe. References: Reznicek in FNA (2002b).

One species ..... ***C. pendula***

* ***Carex pendula*** Hudson, Pendulous Sedge. Cp (VA): disturbed areas; rare, native of Europe. Introduced in VA (FNA, Kartesz 1999). [= FNA, K]

[26x] Section 17 – section *Glaucescentes (Pendulinae)*

A section of 3 species, of se. North America. References: Standley in FNA (2002b).

1 Awn of the pistillate scale tapering gradually into the scale; perigynium 2-ribbed, and also distinctly and evenly nerved between the ribs; [of swamps and marshes] ..... ***C. joorii***

1 Awn of the pistillate scale emerging from a retuse notch in the apex of the scale; perigynium 2-ribbed, obscurely nerved between the ribs; [generally of acid seepages, pocosins, and blackwater situations, often associated with *Pinus serotina*].

2 Lowest pistillate spike drooping, on a peduncle 1-4 cm long; perigynia reddish-glaucous, lacking nerves; achenes slightly longer than wide ..... ***C. glaucescens***

2 Lowest pistillate spike erect, sessile or with a peduncle up to 1 cm long; perigynia white-glaucous, rather distinctly 6-8 nerved; achenes as wide as long ..... ***C. verrucosa***

Carex glaucescens Elliott, Blue Sedge, Southern Sedge. Cp (GA, NC, SC, VA), Mt (GA): blackwater swamps, pocosins, wet pine savannas, seepage bogs, other acid and peaty situations; common. July-September. E. MD south to c. peninsular FL, west to e. TX; disjunct in nw. GA (Jones & Coile 1988) and c. TN. [= RAB, C, F, FNA, G, GW, K, M, S]

Carex joorii Bailey, Joor's Sedge, Hummock Sedge, Cypress-swamp Sedge. Cp (GA, NC, SC, VA), Pd (GA, NC, VA): swamps, upland depression swamps in the Piedmont, sphagnous wetlands; common, rare in the Piedmont. June-October. E. MD south to panhandle FL, west to e. TX, north in the interior to TN, MO, and OK. [= RAB, C, F, FNA, G, GW, K, M, S]

Carex verrucosa Muhlenberg. Cp (GA, NC, SC): pocosins, wet pinelands, pond cypress wetlands; uncommon. July-September. Se. NC south to s. to FL, west to w. LA. [= RAB, FNA, GW, K, M, S; = *C. glaucescens* Elliott var. *androgyna* M.A. Curtis]

[26aa] Section 18 – section *Paniceae*

A section of 14 species, of temperate parts of North America and Eurasia, and montane Central America and South America. References: Rothrock & Reznicek in FNA (2002b).

1 Perigynia with a distinct beak, 1.0-2.2 mm long.

2 Basal leaves with well-developed blades; basal sheaths brown; perigynia glabrous; [of moist, usually calcareous habitats of the Coastal Plain] ..... ***C. chapmanii***

2 Basal leaves reduced to bladeless sheaths; basal sheaths strongly purple; [of dry, acidic habitats of the Mountains] ..... ***C. polymorpha***

1 Perigynia beakless, or with an indistinct beak < 0.5 mm long.

3 Basal sheaths with well-developed blades; basal sheaths brown to strongly purple.

4 Pistillate spike 5-7 mm in diameter, with ca. 6 vertical rows of perigynia; perigynia 3.3-4.2 mm long, 2.0-2.5 mm wide; leaves 3-7 mm wide, blue green ..... ***C. meadii***
4 Pistillate spike 3-4 mm in diameter, with ca. 2-3 vertical rows of perigynia; perigynia 2.5-3.5 mm long, 1.5-2.0 mm wide; leaves 2-4.5 mm wide, pale green ..... ***C. tetanica***
3 Basal sheaths bladeless, or with blades to 3 cm long; basal sheaths strongly purple.
5 Culms to 10 dm tall, (2-) 3-5 mm in diameter near base; larger leaves ca. 5 mm wide; plants forming large clumps; [plants of shallow soils on sloping rock outcrops] ..... ***C. biltmoreana***
5 Culms to 5 dm tall, ca. 1-2 mm in diameter near the base; larger leaves ca. 2-4 mm wide; plants forming small, spaced clumps, interconnected by long-creeping rhizomes; [plants of mountain slopes in more-or-less deep soils] .. .. ***C. woodii***

Carex biltmoreana Mackenzie, Biltmore Sedge. Mt (GA, NC, SC): in thin soils on medium to high elevation granitic domes and other sloping rock outcrops, often dominant in thin-soil herbaceous mats, but also occurring in adjacent woodlands under open to nearly closed canopy of *Quercus* spp., *Fraxinus americana, Carya glabra*, and *Juniperus virginiana var. virginiana*; rare (GA Threatened, NC Rare, SC Rare). May-June. Endemic to sw. NC, nw. SC, and ne. GA (Rabun and Towns counties). This distinctive endemic sedge may be recognized by its robust size (culms to a meter tall, to 5 mm in diameter at the base), habit (large clumps on sloping rock outcrops), and restricted habitat (in periodic seepage on exfoliation domes). Once considered very rare, *C. biltmoreana* proves to be limited to a narrow range and distinctive habitat, but regularly present and even locally dominant on the 50-100 granitic domes within 100 km of Brevard, NC. It often occurs with other endemic species, such as *Houstonia longifolia var. glabra, Krigia montana, Pycnanthemum montanum,* and *Packera millefolia*. An excellent illustration appears in Massey et al. (1983). [= RAB, FNA, K, M, S, W]

Carex chapmanii Steudel, Chapman's Sedge. Cp (GA, NC, SC, VA?): edges of calcareous pine savannas, calcareous slopes and bottomlands; rare (US Species of Concern, NC Rare, SC Rare). April-May. Se. NC south to FL, on the Coastal Plain; allegedly disjunct in nc. TN (Chester et al. 1993). The affinities of this species are questionable; it is usually placed in section *Paniceae*, but may actually belong to *Laxiflorae*. [= RAB, FNA, K, S; = *C. chapmannii* – M, orthographic variant; = *C. styloflexa* Buckley var. *fusiformis* (Chapman ex Dewey) Wiegand]

Carex meadii Dewey, Mead's Sedge. Pd (NC, VA), Mt (VA): on low, moist clayey soils over mafic rocks (such as diabase) or calcareous rocks; rare (NC Rare, VA Watch List). May-June. NJ west to MI and Saskatchewan, south to nc. NC, GA, AR, sw. LA, and TX. The species forms large clonal patches with a distinctive bluish cast at the time of flowering and fruiting. Naczi (1999b) reports a chromosome number of n = 28. [= RAB, C, F, FNA, G, K, M, S, W]

Carex polymorpha Muhlenberg, Variable Sedge. Mt (VA): dry, acidic ridgetop forests; rare (US Species of Concern, VA Endangered). May-June. ME south to MD, VA, and WV. Standley, Dudley, & Bruederle (1991) studied genetic variability in this species. [= C, F, FNA, G, K, M, W]

Carex tetanica Schkuhr, Rigid Sedge. Mt, Cp (NC, VA), Pd (NC): moist forests; rare (NC Rare, VA Watch List). May-June. MA west to MN, NE, and Alberta, south to NJ, VA, and NC. [= RAB, C, F, FNA, K, M; = *C. tetanica* var. *tetanica* – G]

Carex woodii Dewey, Wood's Sedge. Mt (GA, NC, SC, VA): moist slopes and cove forests over mafic rocks (such as amphibolite), ultramafic rocks (such as olivine), or felsic rocks; uncommon (GA Special Concern, NC Rare, SC Rare). May-June. NY west to Manitoba, south to NC, nw. SC, n. GA, and MO. This species forms clonal patches reminiscent of *C. pensylvanica*, but has perigynia glabrous and filled by the achene at maturity; the foliage also has a paler green cast. It has probably been much overlooked in the past. Naczi (1999b) reports chromosome numbers of n = 22, 26. [= RAB, C, F, FNA, K, M, W; = *C. tetanica* var. *woodii* (Dewey) Wood – G]

[26bb] Section 19 – section *Laxiflorae*

A section of ca. 16 species, of North America and Central America. References: Bryson & Naczi in FNA (2002b); Naczi, Kral, & Bryson (2001). Key based in part on Naczi, Kral, & Bryson (2001).

1 Perigynium with 1 distinct and 5-6 much less distinct nerves per face, narrowly cuneate basally; perigynium beak short and usually abruptly bent; foliage dark green; bracts surpassing the staminate spike..... ***C. leptonervia***
1 Perigynium with 6-many distinct nerves per face (the central one slightly more distinct); perigynium beak various; foliage various; bracts various.
2 Perigynium with a short, bent beak, usually abruptly bent to one side.
3 Spikes loosely flowered, most perigynia not overlapping.
4 Bracts very broad, 8-20 mm wide; basal leaves very wide, up to 40 mm wide; plant glaucescent; basal sheaths purple or brown ..... ***C. albursina***
4 Bracts narrow, 2.5-6 mm wide; basal leaves narrow, 3-8 mm wide; plant green; basal sheaths purple, often weathering to brown..... ***C. ormostachya***
3 Spikes densely flowered, the perigynia overlapping.
5 Basal sheaths brown; uppermost bract overtopping the staminate spike; staminate spike sessile or short-stalked ..... ***C. blanda***
5 Basal sheaths purple when fresh, weathering to brown; uppermost bract rarely overtopping the staminate spike; staminate spike usually long-stalked..... ***C. gracilescens***

2 Perigynium tapering to a straight or slightly curved beak (or a long, curved beak in *C. radfordii*) (note: some beaks may curve in pressing).
6 Perigynium beaks long (to 1.5 mm long) and excurved; basal sheaths green, white, and brownish striped; [endemic to the escarpment gorge area near the SC-NC-GA tricorner]..... ***C. radfordii***
6 Perigynium beaks straight or slightly curved; basal sheaths either purple, wine-red, or brownish, not prominently green-and-white striped; [collectively widespread in our area].
7 Basal sheaths purple or wine-red (may weather to brown in *C. gracilescens*).
8 Spikes densely flowered, the perigynia overlapping ..... ***C. gracilescens***
8 Spikes loosely flowered, the spikelets not overlapping.
9 Mature leaf blades of sterile shoots 4-5 (-6) mm wide, green; culms green, chalky red at base (best seen in fresh material); pistillate spikes (3-) 5-7 (-8) flowered; staminate spike on a peduncle 0-1 cm long..... ***C. manhartii***
9 Mature leaf blades of sterile shoots (6-) 7-10 mm wide, glaucous; culms glaucous, bright red at base (best seen in fresh material); pistillate spikes (4-) 7-11 (-15) flowered; staminate spike on a peduncle 2-3 (-6) cm long ..... ***C. purpurifera***
7 Basal sheaths brown, not purple or wine-red.
10 Mature perigynia obovoid.
11 Spikes overlapping, densely flowered; staminate spike more-or-less obscured; plant green..... ***C. crebriflora***
11 Spikes scattered, loosely flowered; staminate spike prominently exserted; plant usually glaucescent ..... ***C. laxiflora***
10 Mature perigynia fusiform.
12 Spikes overlapping, the staminate more-or-less obscured and overtopped by the uppermost bract .... ***C. crebriflora***
12 Spikes scattered, the staminate prominent and exceeding the uppermost bract.
13 Spikes densely flowered; perigynium beaks curved; lowest spike exserted on a long, arching, peduncle ..... ***C. styloflexa***
13 Spikes loosely flowered; perigynium beaks straight; lowest spike on a short, erect or ascending, peduncle..... ***C. striatula***

Carex albursina Sheldon, White Bear Sedge. Mt (GA, NC, SC, VA), Pd (VA): nutrient-rich cove forests, over mafic or calcareous rocks; rare (GA Special Concern, NC Watch List). April-June. VT and s. Québec west to MN, south to SC (P. McMillan pers. comm. 2003, specimen at CLEMS), nw. GA, and AR. Naczi (1999b) reports a chromosome number of n = 22. [= RAB, C, F, FNA, K, M, S, W; = *C. laxiflora* var. *latifolia* Boott – G]

Carex blanda Dewey. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): cove forests, bottomlands, and other mesic, nutrient-rich forests; common. April-June. ME and s. Québec west to ND, south to c. GA (Jones & Coile 1988), panhandle FL, and TX. Naczi (1999b) reports chromosome numbers of n = 15-18. [= RAB, C, F, FNA, K, M, S, W; = *C. laxiflora* var. *blanda* (Dewey) Boott – G]

Carex crebriflora Wiegand. Mt, Pd, Cp (GA, NC, SC, VA): bottomland and other nutrient-rich forests: uncommon. April-June. VA south to FL, west to TX. [= RAB, C, F, FNA, G, K, M, S, W]

Carex gracilescens Steudel. Pd, Mt (NC, SC, VA), Cp (GA?, VA): nutrient-rich forests; rare (SC Rare). May-June. VT and s. Québec west to WI, south to SC, AL, LA, and e. TX. The report for sw. GA in Jones & Coile (1988) needs verification. Naczi (1999b) reports a chromosome number of n = 17, 19, 20. [= RAB, F, FNA, K, M, S, W; < *C. gracilescens* – C (also see *C. ormostachya*); = *C. laxiflora* var. *gracillima* (Boott) Boott ex B.L. Robinson & Fernald – G]

Carex laxiflora Lamarck. Mt, Pd, Cp (GA, NC, SC, VA): bottomland and other nutrient-rich forests; common. May-June. Varieties have been recognized; their appropriate disposition is uncertain. Var. *laxiflora* ranges from ME and s. Québec west to WI and IN, south to NC, TN, and AL; allegedly also in s. Mexico. Var. *serrulata* F.J. Hermann has been reported for our area by Hill & Horn (1997). Its range is stated by F to be NY and PA to MI, IN, and TN. It differs in being distinctly scabrous (vs. smooth to scaberulous), and in having the bract sheaths with serrulate angles (vs. entire or erose angles). [= RAB, C, FNA, M, W; > *C. laxiflora* var. *serrulata* F.J. Hermann – F, K; > *C. laxiflora* var. *laxiflora* – F, K; < *C. laxiflora* var. *laxiflora* – G; *? C. heterosperma* Wahlenberg – S]

Carex leptonervia (Fernald) Fernald. Mt (NC, VA): nutrient-rich forests, such as rich, seepy northern hardwoods forests; rare (NC Rare, VA Watch List). May-June. Newfoundland west to MN, south to NJ, PA, IN, and WI, and in the Appalachians south to NC. [= RAB, C, F, FNA, G, K, M, S, W]

Carex manhartii Bryson, Blue Ridge Purple Sedge, Manhart's Sedge. Mt (GA, NC, SC, VA): cove forests and montane oak-hickory forests, mostly at medium to fairly high elevations, especially over mafic rocks (such as amphibolite) and calcareous rocks (such as marble), but occurring on more acidic substrates as well; uncommon (GA Threatened, NC Rare, SC Rare). April-May. Endemic to w. NC, sw. VA, nw. SC, ne. GA, and se. TN, in the Blue Ridge Mountains. Once considered very rare, this species is now known to be locally common in portions of sw. NC and adjacent ne. GA. For more information on the Virginia occurrence, see Belden et al. (2004). [= FNA, K, W; < *C. purpurifera* Mackenzie – RAB, M, S]

Carex ormostachya Wiegand, Necklace Spike Sedge. Mt (VA): northern hardwood forest; rare (VA Rare). S. Canada south to ME, MA, PA, w. VA (Augusta County), n. OH, MI, and WI. [= F, FNA, K, M; < *C. gracilescens* – C; = *C. laxiflora* var. *ormostachya* (Wiegand) Gleason – G]

Carex purpurifera Mackenzie, Limestone Purple Sedge. Mt (GA, NC, VA): moist, rich cove forests, at low elevations, over calcareous or mafic rocks; rare (GA Threatened, VA Rare). May-June. W. VA and KY south to n. GA and n. AL, mostly west of the Blue Ridge Mountains, but with scattered disjunct populations on calcareous or mafic sites in the Blue Ridge. Naczi (1999b) reports a chromosome number of n = 17-19. [= C, FNA, K, W; < *C. purpurifera* – RAB, M, S (also see *C. manhartii*); = *C. laxiflora* var. *purpurifera* (Mackenzie) Gleason – G]

Carex radfordii Gaddy, Radford's Sedge. Mt (GA, NC, SC): very nutrient-rich, moist cove forests in the Blue Ridge Escarpment region, over calcareous or mafic rocks; rare (GA Special Concern, NC Rare). May-June. Endemic to the Blue Ridge Escarpment of sw. NC, nw. SC, and ne. GA. See Gaddy (1995) for additional information. Naczi (1999b) reports a different chromosome number for *C. radfordii* (n = 23) than for the related *C. purpurifera* (n = 17, 18, 19). [= FNA, K]

Carex striatula Michaux. Mt, Pd (NC, SC, VA), Cp (GA, NC, SC, VA): bottomland and other nutrient-rich forests; common. May-June. Se. NY and PA west to TN, south to FL and TX. The distinction of this species as separate from *C. laxiflora* is problematic and requires additional study. Naczi (1999b) reports chromosome numbers of n = 18, 20. [= RAB, C, F, FNA, K, M, W; = *C. laxiflora* var. *angustifolia* Dewey – G; *? C. laxiflora* – S, misapplied]

Carex styloflexa Buckley. Mt, Pd, Cp (GA, NC, SC, VA): bogs, wet forests; common. May-June. CT west to s. OH, south to FL and se. TX. [= RAB, C, F, FNA, G, K, M, S, W]

Carex kraliana Naczi & Bryson, Kral's Sedge. Pd (NC, SC, VA), Mt, Cp (SC, VA), {GA}: mesic forests, slightly acidic to circumneutral: common. MD, OH, and IN south to FL and TX. See Naczi, Bryson, & Cochrane (2002). [= FNA] {not keyed at this time; synonymy incomplete}

[26cc] Section 20 – section *Granulares*

A section of ca. 6 species, of temperate North America south through Mexico to Central America. References: Cochrane & Naczi in FNA (2002b).

1 Staminate peduncle elongate, overtopping the uppermost pistillate spike ..... ***C. crawei***
1 Staminate peduncle none, or shorter than the uppermost pistillate spike ..... ***C. granularis***

Carex crawei Dewey, Crawe's Sedge. Mt (VA): dry calcareous barrens; rare (VA Rare). Québec west to British Columbia, south to NJ, w. VA, c. TN, AL, and AR. First reported for VA by Ludwig (1999). Naczi (1999b) reports a chromosome number of n = 30. [= C, F, FNA, G, K, M, S]

Carex gholsonii Naczi & Cochrane, Gholson's Sedge. Cp (GA, NC, SC): moist calcareous forests, especially marl flats and bottomlands over coquina; rare. E. NC south to FL, west to AL. See Naczi, Bryson, & Cochrane (2002). [= FNA] {not keyed at this time}

Carex granularis Muhlenberg ex Willdenow. Mt (VA), Cp (GA, NC, SC, VA), Pd (NC, VA): moist, nutrient-rich forests, especially bottomlands, mostly over calcareous rocks (limestone, dolostone, coquina limestone) or mafic rocks (diabase); common, rare south of VA (NC Watch List). May-June. ME and Québec west to Saskatchewan, south to FL, OK, and ne. TX. Here interpreted to include *C. haleana* Olney. Naczi (1999b) found little correlation between the morphological and cytological variability of *C. granularis*, and also little correlation of that variability with geography; he concluded that there was little support for recognition of infraspecific taxa. *C. haleana* Olney [= *C. granularis* var. *haleana* (Olney) Porter] is alleged to differ primarily in its more slender perigynia (1.0-1.5 mm wide vs. 1.5-2.5 mm). See F and M for more information; further study is needed. [= RAB, C, FNA, G, GW, K, S, W; > *C. granularis* var. *granularis* – F; > *C. granularis* var. *haleana* (Olney) Porter – F; > *C. granularis* – M; > *C. haleana* Olney – M]

Carex microdonta Torrey & Hooker. Calcareous prairies, limestone glades. AL and FL west to MO, KS, OK, TX, NM, and AZ. [= FNA, K] {not keyed at this time}

[26dd] Section 21 – section *Careyanae*

A section of 8 species, of tempearte e. North America. References: Bryson & Naczi in FNA (2002b).

1 Basal sheaths purplish, sometimes mixed with brown.
  2 Widest leaf blade 3-6 mm wide; peduncles of lateral spikes usually drooping ..... ***C. austrocaroliniana***
  2 Widest leaf blade 10-25 mm wide; peduncles of lateral spikes usually erect or spreading.
    3 Bracts of middle and basal portions of culms with blades 2.1-9.2 cm long; perigynia 5.0-6.6 mm long; longest (per plant) lateral spike with 4-9 perigynia ..... ***C. careyana***
    3 Bracts of middle and basal portions of culms bladeless, or with blades 0.1-1.9 cm long; perigynia 3.7-4.9 mm long; longest (per plant) lateral spike with 9-13 perigynia ..... ***C. plantaginea***
1 Basal sheaths brownish, lacking any purple coloration.
  4 Widest leaf blade 11-25 mm wide; leaf blades of vegetative shoots 3.8-9.0 × as wide as bract leaves; bract blades from middle and basal portions of the culms 2.0-6.2 cm long; foliage glaucous ..... ***C. platyphylla***

4 Widest leaf blade 2-14 mm wide; leaf blades of vegetative shoots 1.0-3.5 × as wide as bract leaves; bract blades from middle and basal portions of the culms 4.5-24 cm long; foliage green or glaucous.
5 Basalmost scale of each lateral spike sterile (lacking a perigynium) or subtending a staminate flower.
6 Foliage usually bright green; longest (per plant) terminal spike 0.6-2.0 (-2.3) cm long; widest leaf blade 5.3-8.3 mm wide.....***C. laxiculmis* var. *copulata***
6 Foliage usually glaucous; longest (per plant) terminal spike (1.0-) 1.2-2.5 cm long; widest leaf blade 6.4-11.8 mm wide.....***C. laxiculmis* var. *laxiculmis***
5 Basalmost scale of each lateral spike subtending a perigynium.
7 Terminal spikes (1.0-) 1.2-2.7 mm wide; staminate scales acute, those from the the middle region of the staminate spike 3.6-5.5 mm long; vegetative shoots shorter than or slightly taller than the culms, the tallest vegetative shoot 0.5-1.3 (-1.8) × as tall as the tallest culm.
8 Terminal spike usually surpassing the bract blade of the distalmost lateral spike; longest (per plant) peduncle of terminal spike (6.3-) 8.1-15.9 cm long; widest leaf blade 2.0-2.9 (-3.5) mm wide; each perigynium face 7-10-nerved ..... ***C. digitalis* var. *macropoda***
8 Terminal spike usually surpassed by the bract blade of the distalmost lateral spike; longest (per plant) peduncle of terminal spike 0.9-7.2 (-11.4) cm long; widest leaf blade 2.7-4.5 (-5.3) mm wide; each perigynium face (8-) 11-15-nerved.
9 Perigynia 2.5-3.3 mm long, the apex barely excurved.....***C. digitalis* var. *digitalis***
9 Perigynia 3.2-4.2 mm long, the apex noticeably excurved..... ***C. digitalis* var. *floridana***
7 Terminal spikes 0.6-1.4 (-1.6) mm wide; staminate scales obtuse, those from the the middle region of the staminate spike 2.6-3.6 (-3.8) mm long; vegetative shoots much taller than the culms, the tallest vegetative shoot (1.4-) 1.7-3.7 (-4.9) × as tall as the tallest culm.
10 Perigynia 3.9-4.5 mm long; leaves strongly glaucous .....***C. magnifolia***
10 Perigynia 2.9-3.8 mm long; leaves green.
11 Perigynia spirally imbricate; longer lateral spikes with (6-) 8-13 perigynia; peduncles of proximal spikes usually erect, the longest (per plant) peduncle (7.0-) 15-42 (-49) mm long; bract blade of distalmost lateral spike 5.6-17 (-26) × as long as wide; loosely or densely cespitose; [primarily of the Coastal Plain in our area, though extending rarely into the Piedmont and Mountains] ....***C. abscondita***
11 Perigynia distichously imbricate; longer lateral spikes with 4-8 (-9) perigynia; peduncles of proximal spikes usually drooping or nodding, the longest (per plant) peduncle (28-) 44-84 (-91) mm long; bract blade of distalmost lateral spike (12-) 17-51 × as long as wide; densely cespitose; [primarily of the Mountains and Piedmont] .....***C. cumberlandensis***

Carex abscondita Mackenzie. Cp (GA, NC, SC, VA): rich bottomlands and other forests; common. April-June. MA south to n. FL, west to LA. See *C. magnifolia* for discussion of the two taxa. Naczi (1999b) reports a chromosome number of n = 24. [< *C. abscondita* – RAB, K (also see *C. cumberlandensis* and *C. magnifolia*); < *C. abscondita* – C, G, M, S, W (also see *C. cumberlandensis*);< *C. abscondita* – FNA (also see *C. magnifolia*); >< *C. abscondita* var. *abscondita* – F; > *C. abscondita* var. *rostellata* Fernald – F]

Carex austrocaroliniana Bailey, South Carolina Sedge. Mt (GA, NC, SC): nutrient-rich, moist coves in the sw. mountains of NC and adjacent SC, often with some seepage; uncommon (SC Rare). April-May. Endemic to the southern end of the Southern Appalachians, in Blue Ridge of sw. NC, ne. SC, n. GA, and e. TN, extending west to the Cumberland Plateau of TN. Naczi (1999b) reports a chromosome number of n = 28-30. [= FNA, K, W; = *C. austro-caroliniana* – RAB, M, S, orthographic variant]

Carex careyana Torrey ex Dewey, Carey's Sedge. Mt (GA, NC, VA), Pd (VA): nutrient-rich moist forests, mostly over calcareous rocks; rare (GA Special Concern, NC Rare, VA Watch List). May-June. NY west to MI and IA, south to sw. NC, AL and MO. Naczi (1999b) reports a chromosome number of n = 34. [= C, F, FNA, G, K, M, W]

Carex cumberlandensis Naczi, Kral, & Bryson, Cumberland Sedge. Mt, Pd (GA, NC, SC, VA), Cp (GA): rich, mesic, deciduous or mixed forests; common. May; June. Sw. PA, s. OH, s. IL south to c. NC, c. SC, c. GA, sc. AL, e. MS, and w. TN; disjunct in nw. AR. [= FNA; < *C. abscondita* – RAB, C, G, K, M, S, W; < *C. abscondita* var. *abscondita* – F]

Carex digitalis Willdenow *var. **digitalis***. Infraspecific taxa need separating: {Mt, Pd, Cp (GA, NC, SC, VA): rich forests; common.} April-June. ME west to WI, south to FL and e. TX. Naczi (1999b) reports a chromosome number of n = 24. [= FNA, K; < *C. digitalis* – RAB, C, F, G, M, S, W]

Carex digitalis Willdenow *var. **floridana*** (L.H. Bailey) Naczi & Bryson. Cp (GA, NC, SC, VA): rich forests; common. April-June. MD south to FL, west to TX. Naczi (1999b) reports a chromosome number of n = 24. [= FNA; = *C. digitalis* var. *asymmetrica* Fernald – F, K; < *C. digitalis* – RAB, C, G, M, S, W]

Carex digitalis Willdenow *var. **macropoda*** Fernald. Infraspecific taxa need separating: {Mt, Pd, Cp (GA, NC, SC, VA): rich forests; common.} April-June. PA and IL south to FL and TX. Naczi (1999b) reports a chromosome number of n = 24. [= F, FNA, K; < *C. digitalis* – RAB, C, F, G, M, S, W]

Carex laxiculmis Schweinitz *var. **copulata*** (Bailey) Fernald. Mt, Pd (VA), {NC}: mesic forests; uncommon. April-June. VA, Ontario, and WI south to NC, AL, and AR. Var. *copulata* (Bailey) Fernald, has sometimes been considered the hybrid *C. digitalis* × *laxiculmis*; current evidence suggests that it is not a hybrid but is not consistently separable from *C. laxiculmis* (Manhart 1984). Naczi (1999b) reports chromosome numbers for the two varieties, n= 22, 23, 25 for var. *laxiculmis*, and n = 23-

24 for var. *copulata*; normal pairing further suggests that var. *copulata* is not a hybrid. [= FNA, K; < *C. laxiculmis* – RAB, G, K, S, W; = *C.* ×*copulata* (Bailey) Mackenzie – F, M]

Carex laxiculmis Schweinitz *var. **laxiculmis***. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): rich slope or alluvial forests; common. April-June. S. ME west to s. WI and s. IA, south to NC, nw. GA (Jones & Coile 1988), n. AL, and MO. [= FNA, K; < *C. laxiculmis* – RAB, G, S, W; = *C. laxiculmis* – F, M]

Carex magnifolia Mackenzie. Cp (GA, NC, SC), Mt (NC): bogs, acid swamps; uncommon? (rare in Mountains). April-May. E. NC south to FL, and disjunct in mountain bogs with Coastal Plain affinities, as in Henderson County, NC. *C. magnifolia* differs morphologically from *C. abscondita* in its larger perigynia, longer leaves, and much more strongly glaucous leaves; it has a more southern distribution and occurs in wetter, boggier habitats. Manhart (1984) found that it differed chemically from *C. abscondita*. Further study is needed to verify its taxonomic status. [= M, S; < *C. abscondita* – RAB, FNA, K]

Carex plantaginea Lamarck, Plantainleaf Sedge. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): rich cove forests, mostly over mafic or calcareous rocks, montane alluvial forests; uncommon (SC Rare, VA Watch List). April-May. New Brunswick west to MN, south to MD, NJ, VA, NC, ne. GA (Jones & Coile 1988), e. TN, c. TN, KY, and s. IN. [= RAB, C, F, FNA, G, K, M, S, W]

Carex platyphylla Carey, Broadleaf Sedge. Mt (GA, NC, VA), Pd (NC, VA), Cp (VA): rich cove forests, mostly over mafic or calcareous rock; uncommon (GA Special Concern). April-June. ME and s. Québec west to WI, south to NC, e. TN, and MO. Naczi (1999b) reports a chromosome number of n = 35. [= RAB, C, F, FNA, G, K, M, S, W]

[26ee] Section 22 – section *Griseae (Oligocarpae)*

A section of ca. 21 species, of North America (including Mexico). References: Naczi & Bryson in FNA (2002b); Naczi, Bryson, & Cochrane (2002); Naczi (1989, 1993, 1997). Key based on Naczi (1997), in part.

1 Perigynia tapering toward the base, obtusely trigonous in cross-section, usually pubescent proximally, the apex constricted to a distinct beak (nearly beakless in *C. planispicata*), the perigynia closely enveloping the achene at maturity.
- 2 Leaf-sheaths hispidulous; perigynia broadest well above the middle; basal sheaths brownish.
  - 3 Leaves glaucescent, usually papillate abaxially; pistillate scale margins entire; perigynia 3.7-5.1 mm long, 1.5-1.8 mm wide; [of the Cumberland Plateau of n. AL] ..... ***[C. brysonii]***
  - 3 Leaves deep green, abaxially smooth or sparsely scabrous on midrib; pistillate scale margins denticulate; perigynia 4.5-6.2 mm long, 1.9-2.3 mm wide; [of ne. United States, south in our area to w. NC and w. VA] ..... ***C. hitchcockiana***
- 2 Leaf-sheaths glabrous; perigynia broadest near the middle; basal sheaths purple, greenish-white, or light tan.
  - 4 Basal sheaths greenish-white or light tan; old leaf bases persistent as brownish fibrils; perigynium beak obscure, essentially absent..... ***C. impressinervia***
  - 4 Basal sheaths purple; old leaf bases not persistent as fibrils; perigynium beak absent to well-developed, 0-1.0 mm long.
    - 5 Perigynia 1.6-2.6× as long as wide; widest leaf 1.8-4.0 mm wide; achene beak 0.05-0.3 (-0.5) mm long; longest pistillate spikes with 4-8 (-10) perigynia ..... ***C. oligocarpa***
    - 5 Perigynia (2.4-) 2.5-3.3× as long as wide; widest leaf (3.0-) 3.5-6.5 mm wide; achene beak (0.3-) 0.4-0.7 mm long; longest pistillate spikes with (5-) 7-14 perigynia ..... ***C. planispicata***

1 Perigynia convex-rounded basally, more-or-less terete in cross-section, glabrous, the apex tapered but not constricted, beakless or the beak obscure, the perigynia loosely enveloping the achene at maturity.
- 6 Widest leaf (5.1-) 6.2-11.1 (-13.5) mm wide; foliage glaucous; pistillate scales awnless or short-awned, the awns 0-0.9 (-1.9) mm long.
  - 7 Perigynia (4.0-) 4.2-5.5 (-6.0) mm long, (2.0-) 2.1-2.7× as long as the achene bodies, spreading to ascending; achene stipes (0.2-) 0.3-0.5 (-0.6) mm long; pistillate spikes (5.0-) 5.9-8.0 (-9.6) mm wide; achene beaks vertical to slightly bent, usually bent 0-30º from the vertical..... ***C. flaccosperma***
  - 7 Perigynia 3.2-4.5 (-4.7) mm long, 1.6-2.0× as long as the achene bodies, usually ascending; achene stipes 0.05-0.3 (-0.5) mm long; pistillate spikes (3.3-) 4.2-6.1 (-7.3) mm wide; achene beaks slightly bent to recurved, usually bent 30-90º from the vertical.
    - 8 Perigynia 3.2-4.0 (-4.1) mm long, (1.5-) 1.8-2.3 (-2.5)× as long as wide; longest pistillate spike with (14-) 19-45 (-65) flowers, densely flowered, with the ratio [mm of spike length/number of flowers] = (0.56-) 0.67-1.1 (1.3); longest peduncle of staminate spike 0.5-15 (-31) mm long ..... ***C. glaucodea***
    - 8 Perigynia (3.7-) 3.9-4.5 (-4.7) mm long, (1.9-) 2.1-2.6 (-2.8)× as long as wide; longest pistillate spike with 11-25 (-28) flowers, rather loosely flowered, with the ratio [mm of spike length/number of flowers] = (0.97-) 1.0-1.3 (1.6); longest peduncle of staminate spike (1.5-) 7.5-37 (-62) mm long ..... ***C. pigra***
- 6 Widest leaf 2.0-6.8 (-9.1) mm wide; foliage green; pistillate scales relatively long-awned, the awns (0.2-) 1.1-8.3 (-13.7) mm long.
  - 9 Axis of inflorescence and pistillate spike peduncles scabrous; perigynia 2.5-4 mm long..... ***C. conoidea***
  - 9 Axis of inflorescence and pistillate spike peduncles smooth; perigynia 3-6 mm long.
    - 10 Plants densely to loosely cespitose; culm purple-red coloration extending (3.5-) 4.0-7.3 cm up from the base; widest leaves 2.4-4.0 (-5.3) mm wide; achene stipe 0.6-0.8 (-0.9) mm long..... ***C. godfreyi***

10 Plants densely cespitose; culm purple-red coloration extending 0-3.6 (-3.9) cm up from the base; widest leaves 3.3-6.8 (-9.1) mm wide; achene stipe (0.2-) 0.3-0.6 mm long.
11 Perigynia 1.5-1.9 (-2.2) mm wide, (2.2-) 2.5-3.1× as long as wide ..... ***C. amphibola***
11 Perigynia (1.7-) 1.8-2.6 mm wide, 1.8-2.4 (-2.6)× as long as wide.
12 Widest leaves 3.3-5.6 (-8.0) mm wide; achene stipe (0.3-) 0.4-0.6 mm long ..... ***C. corrugata***
12 Widest leaves (4.8-) 5.0-6.8 (-9.1) mm wide; achene stipe (0.2-) 0.3-0.4 (0.5) mm long..... ***C. grisea***

Carex amphibola Steudel. {GA, NC, SC, VA}. {distribution and abundance in our area needing additional herbarium investigation} May-June. MA, s. Ontario, MI, IL, MO, and OK, south to GA, AL, MS, LA, and TX. [= RAB, FNA, G, M, S; = *C. amphibola* var. *amphibola* – F, K; < *C. amphibola* – GW]

Carex conoidea Schkuhr ex Willdenow, Field Sedge. Mt (NC, VA): seepage and fen over mafic rocks (amphibolite); rare (NC Threatened, VA Rare). May-June. Newfoundland west to MN, south to nw. NC (Ashe Co.) and MO. The only known location in NC was found by a party led by Asa Gray in 1841. [= RAB, C, F, FNA, G, K, M, S]

Carex corrugata Fernald. Cp (NC, SC, VA), {GA}: wet calcareous forests (NC Rare). {distribution and abundance needing additional herbarium investigation}. May-June. Se. VA and KY south to TN and AL. See Hill (1992). [= F, FNA, K; < *C. grisea* – RAB, G, M, S; < *C. amphibola* – GW; *? C. amphibola* Steudel var. *turgida* Fernald]

Carex flaccosperma Dewey. Cp, Pd, Mt (GA), {NC, SC, VA} {distribution and abundance needing additional herbarium investigation} May-June. Se. VA south to FL, west to TX, north in the interior to s. MO. [= FNA, G, K, M, S; < *C. flaccosperma* – RAB, C, GW (also see *C. glaucodea* and/or *C. pigra*); = *C. flaccosperma* var. *flaccosperma* – F]

Carex glaucodea Tuckerman ex Olney. (NC, VA): {distribution and abundance needing additional herbarium investigation} May-June. MA and Ontario west to s. IN and MO, south to NC, sc. TN, and AR. [= FNA, K; < *C. flaccosperma* – RAB, C, GW; < *C. flaccosperma* Dewey var. *glaucodea* (Tuckerman ex Olney) Kükenthal – F; < *C. glaucodea* – G, M, S]

Carex godfreyi Naczi, Godfrey's Sedge. Cp (GA, NC, SC): calcareous swamps and bottomlands; rare. May-June. Se. NC south to c. peninsular FL and west to Panhandle FL and sw. GA and s. AL. See Naczi (1993) for additional information. [= FNA, K; < *C. grisea* – RAB, M, S; < *C. amphibola* – GW]

Carex grisea Wahlenberg. (VA). {distribution and abundance in our area needing additional herbarium investigation} May-June. New Brunswick west to MN and SD, south to VA, TN, MS, LA, and TX. [= FNA, K; < *C. grisea* – RAB, G, M, S (also see *C. corrugata* and/or *C. godfreyi*); < *C. amphibola* – C, GW; *? C. amphibola* var. *turgida*]

Carex hitchcockiana Dewey. Mt (NC, VA): rich moist forests, especially over limestone, other calcareous, or mafic rocks; uncommon (NC Rare, VA Watch List). June-July. MA west to MN, south to NC, sc. TN, and AR. [= C, F, FNA, G, K, M, W]

Carex impressinervia Bryson, Kral, & Manhart. Pd (NC): moist forests; rare (US Species of Concern, NC Rare). April-May. Sc. NC south to AL and west to MS, apparently very rare and widely scattered. See Bryson, Kral, & Manhart (1987) for additional information on this species. [= FNA, K]

Carex oligocarpa Schkuhr ex Willdenow, Few-fruited Sedge. Mt (GA, NC, SC, VA), Pd (VA), Cp (GA, VA): rich forests, over calcareous or mafic rocks; common (rare in GA, NC, and SC) (GA Special Concern). May-June. MA west to MN, south to FL and TX. *C. oligocarpa* sensu stricto in SC (McMillan pers. comm., specimen at CLEMS). [= RAB, C, F, FNA, G, K, M, S, W]

Carex pigra Naczi, Lazy Sedge. Cp (NC, SC, VA), Pd (NC, SC), {GA}: moist forests; uncommon. May-June. Se. VA west to se. and sc. TN, south to n. FL, s. AL, and ne. MS. See Naczi (1997) for additional information. [= FNA, K; < *C. flaccosperma* – RAB, G, GW; < *C. flaccosperma* Dewey var. *glaucodea* (Tuckerman ex Olney) Kükenthal – F; < *C. glaucodea* – S]

Carex planispicata Naczi. Pd, Cp (GA, NC, SC, VA): rich to fairly acid mesic forests, on slopes and floodplains; common. C. NJ west to s. IN, se. MO, and se. OK, south to c. GA, s. MS, and se. TX. See Naczi (1999a) for additional information. [= FNA; = *C. grisea* Wahlenberg var. *rigida* L.H. Bailey; = *C. amphibola* var. *rigida* (L.H. Bailey) Fernald – F, K]

Carex acidicola Naczi (section *Griseae*). Mesic forests. GA and AL (Naczi, Bryson, & Cochrane 2002). [= FNA] {not keyed at this time}

Carex brysonii (section *Griseae)*. Mesic forests. Endemic to the Cumberland Plateau of n. AL. See Naczi (1993) for additional information. [= FNA, K]

Carex bulbostylis Mackenzie. MS west to TX and OK; disjunct in TN. Reports for GA in Jones & Coile (1988) are probably based on misidentifications. [= FNA, K; = *Carex amphibola* Steudel var. *globosa* (Bailey) Bailey]

Carex calcifugens Naczi. Cp (GA, NC, SC): rich bluff forests, evergreen maritime forests; rare. Se. NC south to FL. See Naczi, Bryson, & Cochrane (2002). [= FNA] {not keyed at this time; synonymy incomplete}

Carex ouachitana Kral, Manhart, & Bryson. Dry to dry-mesic slope and ridge forests. Disjunct in nc. TN and KY from the Ouachita Mountain of AR and OK. [= FNA, K] {not keyed at this time; synonymy incomplete}

Carex thornei Naczi (section *Griseae*). Cp (GA): mesic deciduous forests, often in the upper floodplain. Endemic to the drainage of the Apalachicola/Chattahoochee and Flint in s. GA and s. AL south to nw. FL. See Naczi, Bryson, & Cochrane (2002). [= FNA]

[26ff] Section 23a – section *Hymenochlaenae (the "Longirostres" group)*

1 Perigynia several-nerved, the beak much shorter than the body; basal sheath not conspicuously fibrous ..... ***C. cherokeensis***
1 Perigynia 2-ribbed (otherwise nearly nerveless), the beak about as long as the body; basal sheath conspicuously fibrous.....

.....***[C. sprengelii]***

Carex cherokeensis Schweinitz, Cherokee Sedge. Cp (GA, NC, SC), Pd (GA, SC), Mt (GA, NC, SC, VA*?): moist, rich, calcareous forests; rare (NC Rare). May-June. Se. NC, nw. SC, sw. NC, nc. TN, se. MO, and OK, south to Panhandle FL and west to e. TX and se. OK; disjunct in the Mountains of VA, where perhaps introduced (Belden et al. 2004). This species is much more common in the sc. United States than in our area. [= RAB, FNA, G, K, M, S, W]

Carex sprengelii Dewey ex Sprengel, Sprengel's Sedge, Long-beaked Sedge, south to NJ, e. PA (Rhoads & Klein 1993), and DE (FNA). [= C, FNA, K, M]

[26ff] Section 23b – section *Hymenochlaenae (the "Gracillimae" group)*

A section of 50-60 species, semicosmopolitan. References: Waterway in FNA (2002b).

1 Lowest pistillate bract auriculate but not sheathing; terminal spike normally staminate (rarely with a few perigynia terminally); leaf blades 1-2 mm wide; basal sheaths purplish or red; [of cliffs and rock outcrops at moderate to high elevations in the Mountains].....***C. misera***
1 Lowest pistillate bract sheathing (the sheath short in *C. prasina*); terminal spike normally gynecandrous, rarely merely staminate (often merely staminate in *C. prasina*); leaf blades 1.5-7 mm wide; basal sheaths purplish or red (brownish or greenish in *C. prasina*); [of various habitats, only rarely as above].
  2 Perigynia strongly trigonous, the lateral ribs at the angles, broadest below the middle; basal sheaths brownish or greenish; leaf sheaths glabrous on the hyaline ventral portion..... ***C. prasina***
  2 Perigynia terete to obscurely trigonous, the lateral ribs not at the angles, broadest near the middle; basal sheaths purplish or red; leaf sheaths pubescent on the hyaline ventral portion (glabrous in *C. gracillima*).
    3 Perigynia densely white-hirsute; achenes brown with dark red spots .....***C. roanensis***
    3 Perigynia glabrous; achenes without dark red spots.
      4 Leaf sheaths glabrous on the hyaline ventral portion; larger leaves 3-9 mm wide .....***C. gracillima***
      4 Leaf sheaths pubescent on the hyaline ventral portion; larger leaves 1.5-6 mm wide.
        5 Perigynia 2.5-3.0 mm long, 0.9-1.2 mm wide; perigynium beaks absent or very short, the orifice entire; leaf blades1.5-2.5 mm wide.....***C. aestivalis***
        5 Perigynia 3.0-4.6 mm long, 1.4-2.0 mm wide; perigynium beaks very short to short, the orifice bidentate; leaf blades 2-6 mm wide.
          6 Perigynia 3.0-4.0 mm long, 1.5-1.75 mm wide; leaves 2-4 mm wide .....***C. aestivaliformis***
          6 Perigynia 3.5-6 mm long, 1.75-2.0 mm wide; leaves 3-8 mm wide.
            7 Upper pistillate scales awned; perigynia 4.5-6 mm long; leaves 4-8 mm wide ..... ***C. davisii***
            7 Upper pistillate scales acuminate; perigynia 3.5-4.6 mm long; leaves 3-5 mm wide ....***C. oxylepis***

Carex aestivaliformis Mackenzie. Mt (GA, VA): wet meadows (VA), upland submesic forests (GA); rare (GA Special Concern). Considered by some to be a hybrid, but with little known documentation or evidence for or against its alleged hybrid status; further study is needed. [= C, G, M; = *C.* ×*aestivaliformis* – F, FNA, K]

Carex aestivalis M.A. Curtis ex A. Gray, Summer Sedge. Mt (GA, NC, SC, VA): dry-mesic to mesic forests; common. May-June. VT south to GA and AL, in or near the Appalachians. [= RAB, C, F, FNA, G, K, M, S, W]

Carex davisii Schweinitz & Torrey, Davis's Sedge. Pd (VA): rich forests; rare. VT, Ontario, and MN south to VA (Fairfax County) (Steury 2004b), e. WV, nc. TN (Chester et al. 1993), AR, and TX. First reported for VA by Steury (2004b). [= C, F, FNA, G, K, M]

Carex gracillima Schweinitz, Graceful Sedge. Mt (GA, NC, SC, VA): moist forests; common. April-June. Newfoundland west to Manitoba, south to GA, AL, and AR. [= RAB, C, FNA, G, K, M, W; > *C. gracillima* var. *gracillima* – F]

Carex misera Buckley, Wretched Sedge. Mt (GA, NC): moderate to high elevation cliffs and rock outcrops; rare (GA Threatened). June. A Southern Blue Ridge endemic: nw. NC and w. TN south to ne. GA (Rabun County). Schell & Waterway (1992) discuss interesting geographic patterns of allozyme diversity in this narrowly endemic species. [= RAB, FNA, K, M, S, W; = *C. juncea*, apparently misapplied]

Carex oxylepis Torrey & Hooker. Cp, Pd (GA, NC, SC, VA): bottomlands, calcareous forests; common. May-June. VA, KY, IL, MO, and OK south to FL and TX. Var. *oxylepis* widespread in TN; var. *pubescens* restricted in TN to c. TN. [= RAB, C, F, FNA, G, GW, M, S, W; > *C. oxylepis* var. *oxylepis* – K; > *C. oxylepis* var. *pubescens* J.K. Underwood – K]

Carex prasina Wahlenberg. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): rich forests, especially in seepage; common. May-June. ME, Ontario, and WI south to GA, MS, and AR; in nearly all TN counties adjacent to NC and VA. [= RAB, C, F, FNA, G, GW, K, M, S, W]

Carex roanensis F.J. Hermann, Roan Mountain Sedge. Mt (GA, NC, VA): cove forests, moderate toi high elevation oak forests, northern hardwood forests; rare (GA Special Concern, VA Watch List). May-June. Sw. PA, w. VA, and e. WV south through e. KY, e. TN, w. NC to se. TN and nw. GA (Smith et al. 2006). See Smith et al. (2006) and Hermann (1947) for additional information; closely related to *C. virescens*. First reported for VA by Wieboldt et al. (1998). [= FNA, K, W]

[26ff] Section 23c – section *Hymenochlaenae (the "Sylvaticae" group)*

1 Achene sessile in the base of the perigynium; perigynia 3.2-6 mm long; sterile shoots with leaves 5-10 mm wide; [**either** alien and rarely naturalized in our area, **or** native and rare].
  2 Perigynia 3.2-4.8 mm long, abruptly narrowed to a short stipe; [native, of northern hardwoods forests in the Mountains of NC and VA]..... ***C. arctata***
  2 Perigynia 5-6 mm long, sessile; [alien, rarely naturalized in our area] .....***C. sylvatica***
1 Achene on a stipe 0.5-1.5 mm long; perigynia (4.5-) 5.6-8.0 (-10) mm long; sterile shoots with leaves 2-8 mm wide; [native, collectively common and widespread in our area].
  3 Internodes between the perigynia mostly 1.0-1.5 mm; sheaths of the pistillate bracts puberulent at the mouth.
    4 Perigynia glabrous, (5.2-) avg. 6.2 (-7.7) mm long .....***C. oblita***
    4 Perigynia puberulent, (6.4-) avg. 7.2 (-8.1) mm long..... ***C. venusta***
  3 Internodes between the perigynia mostly 2.0-4.0 (-6.0) mm; sheaths of the pistillate bracts glabrous at the mouth.
    5 Perigynia puberulent, (5-) avg. 7 (-9) mm long; pistillate scales usually with the midrib excurrent as a short awn.... .....***C. allegheniensis***
    5 Perigynia glabrous, (4.5-) avg. 5.6-7 (-10) mm long; pistillate scales usually with the midrib terminating below the apex, not excurrent.
      6 Perigynia (6-) 7.0 (-10) mm long, broadest below the middle, tapering with straight or slightly convex sides to a conspicuous beak with a hyaline tip; [of swamps, bogs, and other moist to wet habitats, nearly throughout our area]..... ***C. debilis***
      6 Perigynia (4.5-) 5.6 (-7) mm long, broadest near the middle, tapering with concave sides to a short beak lacking a hyaline tip; [of dry to moist upland forests and openings in the Mountains] .....***C. flexuosa***

Carex allegheniensis Mackenzie. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): swamps, bogs, streamhead pocosins, other moist to wet habitats, boggy pools in floodplains; uncommon. May-June. PA south to n. GA, mostly in the Appalachian Mountains. [= M, S; = *C. debilis* Michaux var. *pubera* A. Gray – RAB, C, G; < *C. debilis* var. *rudgei* L.H. Bailey – FNA; > *C. debilis* var. *pubera* – F, K; > *C. debilis* var. *intercursa* Fernald – F, K; < *C. debilis* – GW, W]

Carex arctata W. Boott, Black Sedge, Drooping Woodland Sedge. Mt (NC, VA): northern hardwood and spruce forests, bog edges; rare (VA Rare). Newfoundland west to MN, south to PA, w. VA, nw. NC, and OH. First reported for our area (in Highland County, VA) by Fleming & Ludwig (1996). [= C, F, FNA, G, K, M]

Carex debilis Michaux. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): swamps, bogs, other moist to wet habitats; common. May-August. MA west to s. IN, south to FL and TX. For other taxa often treated as varieties of *C. debilis*, see *C. allegheniensis* and *C. flexuosa*. [= M, S; = *C. debilis* var. *debilis* – RAB, C, F, FNA, G, K; < *C. debilis* – GW, W (also see *C. allegheniensis* and *C. flexuosa*)]

Carex flexuosa Muhlenberg ex Willdenow. Mt (NC, SC, VA): dry to moist upland forests, openings, granitic domes, rock outcrops; common. May-July. Newfoundland west to MN, south to VA and MO, and in the Appalachian Mountains to w. NC and e. TN. [= M, S; = *C. debilis* var. *rudgei* Bailey – RAB, C, F, G, K; < *C. debilis* var. *rudgei* L.H. Bailey – FNA; < *C. debilis* – GW, W]

Carex oblita Steudel. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC, SC): swamps and other wet habitats; common? (GA Special Concern, VA Watch List). NJ south to sc. GA, west to e. LA, mostly on the Coastal Plain, but extending much less commonly inland to the Piedmont and Mountains. [= M, S; = *C. venusta* Dewey var. *minor* Böckler – C, F, G, K; < *C. venusta* – RAB, FNA, GW, W]

* ***Carex sylvatica*** Hudson. Mt, Pd (NC): pastures, lawns; rare, native of Europe. [= C, F, FNA, G, K, M]

Carex venusta Dewey. Cp (GA, NC, SC, VA): swamps, peat bogs, mossy wetlands, and other wet habitats; common? (GA Special Concern, VA Watch List). Se. VA south to panhandle FL, on the Coastal Plain. [= M, S; = *C. venusta* var. *venusta* – C, F, G, K; < *C. venusta* – RAB, FNA, GW, W (also see *C. oblita*)]

Carex castanea Wahlenberg, Chestnut Sedge. Calcareous sites. Newfoundland west to Manitoba, south to NY, WI, MI, and MN. The alleged disjunct occurrence in TN cited in FNA is in error. [= C, F, FNA, G, K, M] {not keyed}

[26ii] Section 24 – section *Porocystis (Virescentes)*

A section of 10 species, of temperate North America, Central America, and South America. References: Ball in FNA (2002b).

1 Terminal spike staminate (rarely gynecandrous, with fewer than 25% of the flowers pistillate)..... ***C. pallescens***
1 Terminal spike gynecandrous (and with > 30% of the flowers pistillate).
  2 Perigynia densely pubescent; larger lateral spikes 2-4 mm wide; ligules longer than wide.
    3 Terminal spikes 5-15 (-20) mm long; anthers 0.7-1.3 (-1.6) mm long..... ***C. swanii***
    3 Terminal spikes (18-) 20-35 mm long; anthers (1.0-) 1.6-2.0 (-2.8) mm long .....***C. virescens***
  2 Perigynia glabrous, minutely papillose, or with few scattered hairs; larger lateral spikes (3.5-) 4-8 mm wide; ligules as wide as long.

4 Perigynia pubescent, minutely papillose, 2.5-4.0 mm long; pistillate scales attenuate, at least some with awns 0.5-2.0 mm long ..... ***C. bushii***
4 Perigynia glabrous or sparsely pilose, non-papillose, 2.0-3.5 mm long; pistillate scales awnless, or awn to 0.5 (-1.0) mm long.
5 Mature perigynia with a minute beak about 0.1-0.2 mm long, the body terete, subterete, or subtriangular in cross-section, spreading at > 45 degrees from the rachis..... ***C. caroliniana***
5 Mature perigynia beakless, triangular in cross-section, appressed-ascending at < 45 degrees from the rachis.
6 Leaf blades glabrous or nearly so, especially on the lower surface; sheaths glabrous to sparsely pubescent, sometimes densely pubescent at the summit; [primarily of the Coastal Plain and Piedmont] ... . ***C. complanata***
6 Leaf blades soft-pubescent; sheaths soft-pubescent; [primarily of the Mountains and Piedmont] .... ***C. hirsutella***

Carex bushii Mackenzie. Pd (GA, NC, VA), Mt (NC, VA): meadows; uncommon (VA Watch List). May-June. MA and s. NY west to MO and KS, south to NC, GA (Jones & Coile 1988), MS, and TX; disjunct in MI. [= RAB, C, F, FNA, G, K, M, S, W; *? C. caroliniana* Schweinitz var. *cuspidata* (Dewey) Shinners]

Carex caroliniana Schweinitz, Carolina Sedge. Cp, Pd, Mt (GA, NC, SC, VA): forests; common. May-June. NJ, PA, MO, and OK south to SC, e. GA, and TX; apparently disjunct in Panhandle FL and adjacent sw. GA. [= RAB, C, F, FNA, G, GW, K, M, S, W]

Carex complanata Torrey & Hooker. Cp, Pd (GA, NC, SC, VA), Mt (GA): forests; common. May-June. NJ and s. PA south to FL, west to TX and MO; apparently disjunct in AZ. [= F, FNA, K, M, S; = *C. complanata* var. *complanata* – C, G; < *C. complanata* – RAB, GW, W (also see *C. hirsutella*)]

Carex hirsutella Mackenzie. Mt, Pd, Cp? (NC, SC, VA) {GA}: forests; common. May-June. ME, s. Ontario, and IA, south to GA and ne. TX. [= F, FNA, K, M, S; = *C. complanata* Torrey & Hooker var. *hirsuta* (Bailey) Gleason – C, G; < *C. complanata* – RAB, GW, W]

Carex pallescens Linnaeus, Pale Sedge. Mt (NC, VA): grassy balds at high elevations, other grassy openings; rare (VA Rare). June-July. Circumboreal (in ne. North America and n. Eurasia); in North America ranging from Newfoundland, Québec, and MN, south to w. NC, e. TN, and MI. *C. pallescens* is reported to occur on Big Bald, Unicoi County, TN, immediately adjacent to the NC line (Churchill et al. 1992). [= C, FNA, G, K, M, W; > *C. pallescens* var. *neogaea* Fernald – F]

Carex swanii (Fernald) Mackenzie. Mt (GA, NC, SC, VA), Cp (NC, VA), Pd (VA): nutrient-rich forests, woodlands, and openings; common. May-June. Nova Scotia, s. MI, s. WI, south to nw. SC and ne. AR. [= RAB, C, F, FNA, G, K, M, S, W; = *C. virescens* Muhlenberg ex Willdenow var. *swanii* Fernald]

Carex virescens Muhlenberg ex Willdenow. Mt (GA, NC, SC, VA), Pd, Cp (VA): nutrient-rich forests, woodlands, and openings; common. May-June. S. ME, NY, and s. MI, south to e. VA, w. NC, nw. SC, and MO. [= RAB, C, F, FNA, G, K, M, S, W]

[26kk] Section 25 – section *Anomalae*

A section of ca. 20 species, of North America, e. Asia, and Australia. References: Cochrane in FNA (2002b).

One species ..... ***C. scabrata***

Carex scabrata Schweinitz. Mt (GA, NC, SC, VA), Pd (VA): seepage slopes, brook-banks, often in shade; common (GA Special Concern). May-July. Nova Scotia west to MI, south to NJ, n. GA, OH, and MO. [= RAB, C, F, FNA, G, GW, K, M, S, W]

[26ll] Section 26 – section *Hallerianae*

A section of 5 or more species, s. North America to Central America, s. Europe, sw. Asia, and n. Africa. References: Ball in FNA (2002b); Jones & Jones (1993). Key adapted from Jones & Jones (1993).

1 Perigynia densely white-villous apically, glabrous basally; achene body 2.0-2.7 mm long, long-stipitate..... ***C. dasycarpa***
1 Perigynia puberulent throughout; achene body 3.0-3.3 mm long, sessile ..... ***C. tenax***

Carex dasycarpa Muhlenberg, Velvet Sedge. Cp (GA, SC): maritime forests, other sandy forests; rare (GA Rare). May-June. E. SC south to FL, west to MS. Gaddy & Rayner (1980) report this species from a number of barrier islands in Beaufort and Charleston counties, SC; it has since been found in Georgetown County, SC, as well. [= RAB, FNA, K, M, S]

Carex tenax Chapman. Cp (GA, NC, SC), Pd (GA): sandhills; rare. May-June. Sc. NC south to FL, west to MS; also in sw. LA and se. TX. [= RAB, FNA, K, M; *? C. validior* Mackenzie – S]

[26nn] Section 27 – section *Hirtifoliae*

A monotypic section, of e. North America. References: Ball in FNA (2002b); Jones & Jones (1993).

One species ..... ***C. hirtifolia***

Carex hirtifolia Mackenzie. Mt (VA): nutrient-rich, though often rather dry, forests and woodlands; uncommon (VA Watch List). May-June. New Brunswick west to MN, south to MD, sw. VA, c. TN, KY, MO, and e. KS. [= C, F, FNA, G, K, M, W]

[26oo] Section 28 – section *Paludosae*

A section of about 35 species, mostly of temperate Asia and North America. References: Reznicek & Catling in FNA (2002b); Reznicek (1993).

Identification notes: All species of this section in our area form large clonal colonies by rhizomes.

1 Perigynium body pubescent.
- 2 Culms central, with the withered remains of the previous year's leaves at the base; basal sheaths of of fertile culms not at all or only slightly reddened; [of the Coastal Plain] ..... ***C. striata* var. *striata***
- 2 Culms lateral, with bladeless sheaths at the base; basal sheaths strongly reddened; [collectively widespread in our area].
  - 3 Beak of the perigynium soft, translucent, the teeth obscure; peduncle of staminate spike 0.2-2 cm long; [of the Piedmont and Coastal Plain in our area] ..... ***C. vestita***
  - 3 Beak of the perigynium stiff, opaque, the teeth well-developed; peduncle of staminate spike (0.8-) 2-9 cm long; [of the Mountains in our area].
    - 4 Leaves folded along the midrib, appearing 0.7-2.0 (-2.2) mm wide; culms obtusely trigonous, usually smooth; base of pistillate bracts often auriculate, forming a V-shaped mouth; middle staminate scales narrowly acute.. ..... ***C. lasiocarpa* var. *americana***
    - 4 Leaves more-or-less flat or M-shaped, (1.8-) 2.2-4.5 (-6) mm wide; culms acutely trigonous, often scabrous on the angles; base of pistillate bract with a short, truncated process at mouth; middle staminate scales obtuse and short-awned, or acute..... ***C. pellita***

1 Perigynium body glabrous.
- 5 Widest leaves 1.5-5 (-6) mm wide; culms 8-90 cm tall; inflorescences 2.5-35 (45) cm long.
  - 6 Inflorescence rachis with rounded, smooth angles; lowermost pistillate spikes usually strongly overlapping; [introduced, in coastal sands] ..... ***C. pumila***
  - 6 Inflorescence rachis with sharp, scabrous angles; lowermost pistillate spikes overlapping not at all or slightly; [native, in acidic Coastal Plain wetlands]..... ***C. striata* var. *brevis***
- 5 Widest leaves (4-) 5.5-15 (-21) mm wide; culms 40-135 cm tall; inflorescences 15-60 cm long.
  - 7 Perigynia 3.0-4.5 mm long; [exotic species] ..... ***[C. acutiformis]***
  - 7 Perigynia 4.8-7.8 mm long; [native species].
    - 8 Longest ligules 2-10 (-12) mm long, < 2 × as long as wide; culms central, with the withered remains of the previous year's leaves at the base; perigynia obscurely 10-15-veined; [of the Coastal Plain]..... ***C. hyalinolepis***
    - 8 Longest ligules 13-40 (-56) mm long, much longer than wide; culms lateral, with bladeless sheaths at the base; perigynia usually strongly 14-28-veined; [of the Mountains in our area] ..... ***C. lacustris***

Carex hyalinolepis Steudel. Cp (GA, NC, SC, VA): marshes, swamp forests; uncommon (NC Watch List). May-June. NJ south to FL, west to TX, north in the interior to KS; disjunct around the Great Lakes in MI, IN, and s. Ontario. [= RAB, C, F, FNA, K, M, S; = *C. lacustris* Willdenow var. *laxiflora* Dewey – G; = *C. hyalinolepsis* – GW, misspelling]

Carex lacustris Willdenow, Lakeshore Sedge. Cp, Mt (VA): marshes, swamp forests; rare (VA Rare). Québec west to Saskatchewan, south to e. VA, w. VA, and NE. [= C, F, FNA, K, M; = *C. lacustris* var. *lacustris* – G]

Carex lasiocarpa Ehrhart *var.* ***americana*** Fernald, Slender Sedge. Mt (NC, VA): in shallow water of alkaline spring seep, on hummocks in acidic basin marsh, and in high elevation fen over amphibolite; rare (VA Rare). A circumboreal species, ranging south in North America to NJ, WV, MD (C. Frye, pers. comm. 2000), VA, nw. NC, IA, and WA. First reported for VA by Wieboldt et al. (1998). Found for the first time in NC in the valley of Long Hope Creek (Ashe County, NC), in July 1999 by A.S. Weakley and P.D. McMillan. [= C, F, G, K; = *C. lasiocarpa* ssp. *americana* (Fernald) Hultén – FNA; < *C. lasiocarpa* – M, W]

Carex pellita Muhlenberg. Mt (VA): wet meadows; uncommon. New Brunswick west to British Columbia, south to w. VA, w. TN, AR, and CA. McClintock & Waterway (1994) discuss the distinctiveness of *C. pellita* and *C. lasiocarpa*, as well as the misapplication of the name *C. lanuginosa* to the species now properly called *C. pellita*. [= C, FNA, K; = *C. lanuginosa* Michaux – F, M, misapplied; = *C. lasiocarpa* Ehrhart var. *latifolia* (Böckler) Gilly]

* ***Carex pumila*** Thunberg. Cp (NC): open disturbed sand flats; rare, introduced from Asia. May. See Reznicek (1993) for additional information. [= FNA, K; >< *C. hirta* – RAB, misidentification]

Carex striata Michaux *var.* ***brevis*** Bailey. Cp (NC, SC, VA): pocosins, limesink ponds, small depression ponds, clay-based Carolina bays, acid peaty swamps, wet savannas (dominated by *Pinus serotina* and/or *Taxodium ascendens*); common, rare in

VA (VA Watch List). May-June. E. MA south to SC. See Reznicek & Catling (1986) for discussion of the nomenclatural change. [= C, FNA, K; < *C. walteriana* – RAB, GW, M, S; = *C. walteriana* Bailey var. *brevis* (Bailey) Bailey – F, G]

Carex striata Michaux *var. **striata***, Pocosin Sedge. Cp (GA, SC): pocosins, limesink ponds, small depression ponds, clay-based Carolina bays, acid peaty swamps, wet savannas (dominated by *Pinus serotina* and/or *Taxodium ascendens*); uncommon. May-June. SC south to n. FL and e. panhandle FL. [= C, FNA, K; < *C. walteriana* Bailey – RAB, GW, M, S; = *C. walteriana* var. *walteriana* – F, G]

Carex vestita Willdenow. Pd (NC, VA), Cp (VA): low forests; rare (NC Watch List, VA Rare). April-May. S. ME south to se. VA and nc. NC. [= RAB, C, F, FNA, G, K, M]

Carex acutiformis Ehrhart. Introduced in MD, native of Eurasia (FNA, Kartesz 1999). [= FNA, K]

[26pp] Section 29 – section *Carex*

A section of about 10 species, of temperate North America and Eurasia. References: Reznicek & Catling in FNA (2002b).

1 Perigynia glabrous; leaf blades finely papillose on the lower surface (and also usually long-pubescent); vegetative culms hollow, spongy (flattened when pressed) ..... ***C. atherodes***
1 Perigynia pubescent; leaf blades glabrous or pubescent abaxially, but not papillose; vegetative culms hard.
  2 Leaf blades pubescent; [rare introduction] ..... ***C. hirta***
  2 Leaf blades glabrous; [native] ..... ***C. trichocarpa***

Carex atherodes Sprengel, Awned Sedge. Mt (VA): marl fens; rare (VA Rare). Circumboreal, south in North America to NY, n. VA, WV, MO, CO, UT, and OR. [= C, F, FNA, G, K, M]

* ***Carex hirta*** Linnaeus. Cp (VA): dry sandy areas; rare, introduced from Europe. The report of *C. hirta* for NC (Burk 1961, RAB) is based on a misidentification of *C. pumila* (Reznicek 1993). [= C, F, FNA, G, K, M]

Carex trichocarpa Muhlenberg ex Willdenow. Mt (NC, VA), Pd (VA): wet meadows, marshes; uncommon (NC Watch List). May-July. Québec west to MN, south to DE, nw. NC, WV, IN, and MO. [= RAB, C, F, FNA, G, K, M, W]

[26qq] Section 30 – section *Vesicariae* [including 52 - *Pseudocypereae*]

A section of ca. 45 species, semicosmopolitan. Following Reznicek & Ford in FNA (2002b), this section is circumscribed to include the traditionally recognized section *Pseudocypereae*. References: Reznicek & Ford in FNA (2002b). Key adapted from Reznicek & Ford in FNA (2002b).

1 Pistillate scales with a prominent, scabrous awn (the body of the scale often ciliate as well).
  2 Plants extensively colonial from elongate, creeping rhizomes; staminate scales acute to acuminate, essentially smooth-margined except at the very tip; perigynia 7-11-nerved ..... ***C. schweinitzii***
  2 Plants densely to loosely cespitose, the rhizomes connecting individual culms in a clump < 10 cm long; staminate scales (at least some of them) witha distinct, scabrous awn; perigynia 6-25-nerved.
    3 Perigynia 6-12-nerved, the nerves separate nearly to the beak apex; perigynium bodies broadly ellipsoid to more or less globose, (1.8-) 2.0-4.2 mm wide; achenes rough-papillate.
      4 Spikes 9-14 (-15) mm thick; widest leaves 2.4-4.0 (-5) mm wide; spikes usually 2.5-3.5× as long as wide; perigynia 4.8-6.6 (-7.6) mm long, the beaks usually 0.7-1.3× as long as the body ..... ***C. baileyi***
      4 Spikes (12-) 15-22 mm thick; widest leaves (4.0-) 4.5-13 mm wide; spikes usually < 2.5× as long as wide **if** < 15 mm thick; perigynia (6-) 6.5 (-10.8) mm long, the beaks 0.6-0.9× as long as the body ..... ***C. lurida***
    3 Perigynia 12-25-nerved, the nerves (except for 2 prominent laterals) confluent at or below the middle of the beak; perigynium bodies ellipsoid to lance-ovoid, 1.1-2.2 mm wide; achenes smooth.
      5 Mature perigynia spreading or ascending when mature; perigynia round in cross-section; teeth of the perigynium beak 0.3-0.9 mm long, straight ..... ***C. hystericina***
      5 Mature perigynia reflexed when mature; perigynia obscurely trigonous; teeth of the perigynium beak 0.7-2.3 mm long, divergent to straight.
        6 Spikes 12-18 mm in diameter; teeth of the pergynium beak strongly outcurved, the longest 1.3-2.1 (-2.8) mm long ..... ***C. comosa***
        6 Spikes 9-12 mm in diameter; teeth of the perigynium beak straight or slightly outcurved, the longest 0.7-1.2 (-1.4) mm long ..... ***[C. pseudocyperus]***
1 Pistillate scales smooth-margined, obtuse to acuminate, awnless (rarely the lowermost scales awned in *C. utriculata*).
  7 Leaves filiform-involute, wiry, (0.5-) 1-3 (-3.2) mm wide; stems round or obtusely trigonous in cross-section, smooth; [rare, in high elevation bogs in the Mountains] ..... ***C. oligosperma***
  7 Leaves flat, U-, V-, or W-shaped in cross-section, the widest 1.5-12 (-15) mm wide; stems round to trigonous, often scabrous-angled; [collectively widespread].
    8 Achenes asymmetrical, deeply indented or invaginated on one face; widest perigynia (4.0-) 4.5-7 mm wide; beaks 2.4-4.8 mm long, smooth ..... ***[C. tuckermanii]***

8 Achenes symmetrical; widest perigynia (2-) 2.5-3.5 (-4.5) mm wide; beaks 1-4.2 (-4.8) mm long, scabrous or smooth.
9 Perigynium beaks finely scabrous (at least near the tip and on the teeth), 2.4-4.2 (-4.8) mm long; widest leaves 1.8-4.3 (-5) November 5, 2004mm wide ..... ***C. bullata***
9 Perigynium beaks smooth, 1-4.5 mm long; widest leaves 1.5-15 mm wide.
10 Pistillate spikes globose or short ovoid, ca. 3-20-flowered; [plants of the Coastal Plain from e. NC southward]..... ***C. elliottii***
10 Pistillate spikes cylindric, ca. 20-150-flowered; [plants collectively of the Mountains, from nw. NC northward].
11 Bract of lowest pistillate spike (excepting isolated spikes from long-sheathing bracts on the lower part of the stem) (2.5-) 3-9× as long as the inflorescence; staminate spike often 1, slightly (if at all) elevated above the summit of the crowded pistillate spikes; perigynia reflexed ..... ***[C. retrorsa]***
11 Bract of lowest pistillate spike (excepting isolated spikes from long-sheathing bracts on the lower part of the stem) 0.5-2.5× as long as the inflorescence; staminate spikes 2-4 (-5), well elevated above the summit of the crowded pistillate spikes; perigynia spreading or ascending.
12 Plant colonial from long-creeping rhizomes; widest leaves (4.5-) 5-12 (-15) mm wide; ligules about as long as wide; basal sheaths usually spongy-thickened and only slightly or not red-tinged..... ***C. utriculata***
12 Plant cespitose; widest leaves 1.8-6.5 mm wide; ligules longer than wide; basal sheaths not spongy-thickened and often tinged with reddish-purple ..... ***C. vesicaria***

Carex baileyi Britton, Bailey's Sedge. Mt (NC, VA): bogs; uncommon (NC Watch List). June-July. NH south to KY, NC, and TN, primarily Appalachian. [= RAB, C, F, FNA, G, K, M, S; *C. lurida* Wahlenberg var. *gracilis* (Boott) Bailey]

Carex bullata Schkuhr ex Willdenow. Cp (GA, NC, SC, VA), Mt (GA, NC, VA), Pd (NC): bogs; uncommon. May-June. Nova Scotia south to GA, primarily on the Coastal Plain, but with scattered occurrences inland (as in AR and the Eastern Highland Rim of sc. TN). [= RAB, C, F, FNA, GW, K, M, S; > *C. bullata* var. *bullata* – G; > *C. bullata* var. *greenii* (Böckler) Fernald – G]

Carex comosa Boott, Bottlebrush Sedge, Bristly Sedge. Cp (GA, NC, SC, VA), Pd (NC, VA), Mt (GA, VA): swamps, marshes; common. April-June. Québec west to MN, south to FL and LA; also in w. North America. [= RAB, C, F, FNA, G, GW, K, M, S, W]

Carex elliottii Schweinitz & Torrey, Elliott's Sedge. Cp (GA, NC, SC): bogs; uncommon (NC Watch List). May-June. NC south to c. pen. FL and west to s. AL. [= RAB, FNA, GW, K, M, S]

Carex hystericina Muhlenberg ex Willdenow, Porcupine Sedge. Mt (GA, VA), Pd (GA): calcareous marshes and wet meadows; common (GA Special Concern). June-July. New Brunswick west to British Columbia, south to w. VA, sc. TN, w. TX, and n. CA. [= C, FNA, G, K; = *C. hystricina* – F, M, W, orthographic variant]

Carex lurida Wahlenberg. Mt, Pd, Cp (GA, NC, SC, VA): bogs, marshes, ditches; common. June-September. Nova Scotia west to MN, south to FL and Mexico. [= RAB, C, F, FNA, G, GW, K, M, S]

Carex oligosperma Michaux. Mt (NC): bogs and seeps at high elevations; rare (NC Endangered). Newfoundland west to Mackenzie, south to CT, c. PA, n. IN, WI, and MN; disjunct in ne. OH, WV (Hardy County) and NC (Ashe, Avery, Mitchell, and Watauga counties). [= C, F, FNA, G, M; > *C. oligosperma* var. *oligosperma* – K]

Carex schweinitzii Dewey ex Schweinitz, Schweinitz's Sedge. Mt (VA): bogs; rare (VA Rare). June. VT west to n. MI, south to NJ (and MO?); disjunct in Newfoundland. The distribution of this species is local and fragmented. The alleged occurrences of *C. schweinitzii* in w. NC are based on misidentification of *C. utriculata*. [= C, F, FNA, G, K, M, S]

Carex utriculata Boott, Beaked Sedge. Mt (NC, VA): wet meadows; rare (VA Rare). Boreal American, ranging south to DE, w. VA, nw. and sw. NC, ne. TN (Johnson County), IN, NE, NM, and CA. Recently verified for NC. [= C, FNA, K; = *C. rostrata* Stokes var. *utriculata* (Boott) Bailey – F, G; < *C. rostrata* – M, misapplied as to our material; = *C. schweinitzii* – RAB, by misidentification]

Carex vesicaria Linnaeus, Inflated Sedge. Mt (NC, VA): bogs, rare (VA Rare). Circumboreal, ranging south in North America to DE, w. VA, nw. NC, KY, IN, MO, NM, and CA. [= FNA, G; > *C. vesicaria* var. *vesicaria* – C, F, K; > *C. vesicaria* var. *monile* (Tuckerman) Fernald – F, K; *? C. vesicaria* – M; > *C. monile* Tuckerman]

Carex pseudocyperus Linnaeus. Swamps, bogs, wet meadows. Newfoundland to Saskatchewan, south to NJ, PA, OH, and MN. [= C, FNA, K; = *Carex pseudo-cyperus* – F, G, M, orthographic variant]

Carex retrorsa Schweinitz. Swampy forests and wet meadows. New Brunswick and British Columbia, south to DE, MD, sc. PA, IL, UT. [= C, F, FNA, G, K, M]

Carex tuckermanii F. Boott. Calcareous swampy forests and wet meadows. New Brunswick and MN south to WV, sc. PA, NJ, MD, and IL. [= C, F, FNA, K; = *C. tuckermani* – G, M, orthographic variant]

[26rr] Section 31 – section *Lupulinae*

A section of 6 species, of e. North America. References: Reznicek & Ball (1974); Reznicek in FNA (2002b); Uttal (1971). Key adapted in part from Reznicek & Ball (1974) and Reznicek in FNA (2002b).

1 Sheath of uppermost leaf absent or <1.5 (-2.5) cm long; beak of perigynia 1.5-4.2 mm long; achenes with elliptic or obovate sides.
  2 Perigynia rhombic-ovoid, cuneate to the base, 8-35 per spike, radiating in all directions and therefore forming a globular spike ..... ***C. grayi***
  2 Perigynia lanceoloid to ovoid, convex to the base, 1-12 (-20) per spike, ascending to spreading (the lowest sometimes slightly reflexed) and therefore forming an ovoid to obovoid spike.
    3 Perigynia 3-5 mm wide at the widest point; achenes broadest above the middle, with a pronounced shoulder rounding abruptly to the tip; style of mature achene with a half to full coil in its lower portion; [of high elevations in our area, generally in spruce-fir or northern hardwoods forests] ..... ***C. intumescens* var. *fernaldii***
    3 Perigynia 5-8 mm wide at the widest point; achenes broadest at the middle, smoothly rounded to the tip; style of mature achene straight or arcuate; [widespread in our area] ..... ***C. intumescens* var. *intumescens***
1 Sheath of uppermost leaf usually >1.7 cm long; beak of perigynia 4.5-10 mm long; achenes with rhombic or nearly triangular sides.
  4 Achenes distinctly wider than long, widest above the middle; perigynia stiffly spreading at right angles to the rachis ..... ***C. gigantea***
  4 Achenes as wide as long or longer, widest near the middle; perigynia ascending.
    5 Angles of the achenes pointed, often even knobbed, with nipple-like points; achenes (2.2-) 2.4-3.4 mm wide, often nearly as wide as long ..... ***C. lupuliformis***
    5 Angles of the achenes smoothly curved, not pointed or knobbed; achenes 1.7-2.6 (-2.8) mm wide, distinctly longer than wide.
      6 Staminate peduncle (3-) 6-18 cm long, usually exceeding the uppermost spike by 2-12 cm; plants loosely colonial by long slender rhizomes ..... ***C. louisianica***
      6 Staminate peduncle 0.5-6 (-7) cm long, shorter than to exceeding the uppermost pistillate spike by < 2 cm; plants solitary or loosely cespitose in small clumps connected by stout, short rhizomes ..... ***C. lupulina***

Carex gigantea Rudge, Giant Sedge. Cp (GA, NC, SC, VA), Pd (GA, NC), Mt (GA): swamps, bottomland forests, cypress depressions; common (rare in Piedmont). June. DE south to s. FL, west to e. TX, north in the interior to nw. GA (Jones & Coile 1988), IN and OK. [= RAB, C, F, FNA, G, GW, K, M, S]

Carex grayi Carey, Asa Gray's Sedge. Cp, Pd (NC, SC, VA), Mt (GA, VA): bottomland forests; common (rare in Mountains) (GA Special Concern). May-June. Sw. Québec west to WI and IA, south to nw. GA and OK; apparently disjunct in Panhandle FL. [= RAB, C, FNA, K, W; = *C. grayii* – G, GW, M, orthographic variant; > *C. grayii* var. *grayii* – F; > *C. grayii* var. *hispidula* A. Gray – F; = *C. asa-grayi* Bailey – S]

Carex intumescens Rudge *var. **fernaldii*** Bailey. Mt (NC, VA): spruce-fir forests, northern hardwood forests, grassy balds; common. June-July. Newfoundland west to Manitoba, south to NY, n. PA, MI, MN, and, at higher elevations in the Appalachians, to w. VA, w. NC, and e. TN. See Uttal (1971) and Reznicek & Ball (1974) for different views on the validity of this variety. [= F; < *C. intumescens* – RAB, C, FNA, G, GW, K, M, S, W]

Carex intumescens Rudge *var. **intumescens***. Cp, Pd, Mt (GA, NC, SC, VA): bogs, wet forests; common. May-July. Nova Scotia west to WI, south to c. peninsular FL and e. TX. [= F; < *C. intumescens* – RAB, C, FNA, G, GW, K, M, S, W]

Carex louisianica Bailey. Cp (GA, NC, SC, VA), Pd (GA, NC): calcareous forests; common (rare in Piedmont). May-July. S. NJ south to c. peninsular FL, w. to TX, north in the interior to KY, IN, and MO; disjunct in ne. OH. [= RAB, C, F, FNA, G, GW, K, M, S, W]

Carex lupuliformis Sartwell ex Dewey, False Hop Sedge. Cp, Pd (NC, SC, VA), {GA}: wet forests, especially around ponds; rare (NC Rare, VA Rare). June-July. VT and Québec west to se. WI, south to c. peninsular FL and e. TX. [= RAB, C, F, FNA, G, K, M; < *C. lupulina* – GW]

Carex lupulina Muhlenberg ex Willdenow, Hop Sedge. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, VA): bottomland forests; common (rare in Mountains). June-September. Nova Scotia west to MN, south to c. peninsular FL and e. TX. [= RAB, C, FNA, G, K, M, S, W; < *C. lupulina* – GW (also see *C. lupuliformis*); > *C. lupulina* var. *lupulina* – F; > *C. lupulina* var. *pedunculata* A. Gray – F]

[26ss] Section 32 – section *Rostrales (Folliculatae)*

A section of 5 species, of e. North America and e. and se. Asia. References: Reznicek in FNA (2002b). Key based on FNA.

1 Perigynia 6.4-10.7 mm long, 2.6-3.9× as long as wide ..... ***C. turgescens***
1 Perigynia (8.3-) 10.5-15.6 mm long, 4-7× as long as wide.
  2 Widest leaf blades 1.6-3.5 (-4.2) mm wide; bract sheaths concave at the apex; [of MD northward] ..... ***[C. michauxiana]***
  2 Widest leaf blades (3.5-) 5-18 mm wide; bract sheaths truncate to convex at the apex; [collectively widespread in our area].
    3 Pistillate scales usually awned (rarely merely cuspidate); pistillate scales (including the awn, if present) 0.5-1.2× as long as the perigynia; widest leaves of vegetative shoots 8-18 (-21) mm wide; pistillate spikes normally not staminate at apex (rarely with a few staminate flowers); [primarily of the Mountains and Piedmont] ..... ***C. folliculata***

3 Pistillate scales acute or long-acuminate (rarely short-awned); pistillate scales (including the awn, if present) 0.3-0.6× as long as the perigynia; larger leaves mostly 4-12 mm wide; pistillate spikes normally staminate at apex; [primarily of the Coastal Plain] ..... ***C. lonchocarpa***

Carex folliculata Linnaeus. Mt (GA, NC, SC, VA), Pd, Cp? (NC): bogs, boggy forests, high elevation forests (spruce-fir); uncommon (GA Special Concern). May-July. Newfoundland west to WI, south to NC, e. TN, and sc. TN. [= FNA, K, M, S, W; = *C. folliculata* var. *folliculata* – RAB, C, F, G; < *C. folliculata* – GW (also see *C. lonchocarpa*)]

Carex lonchocarpa Willdenow. Cp (GA, NC, SC, VA): pocosin margins, small blackwater stream swamps; common. May-July. S. MD south to FL, west to LA. Recognition of *C. lonchocarpa* at the species level is supported by its distinctive achene micromorphology (Wujek & Menapace 1986). [= FNA, K, M; = *C. folliculata* Linnaeus var. *australis* Bailey – RAB, C, F, G; < *C. folliculata* – GW; = *C. smalliana* Mackenzie – S]

Carex turgescens Torrey, Pinebarren Sedge. Cp (GA, NC, SC): sandhill seepage bogs, streamhead pocosins, pocosin-sandhill ecotones, canebrakes, in highly acidic, sandy-peaty soils; rare (NC Watch List). May-June. Sc. NC south to Panhandle FL, west to se. LA, a Southeastern Coastal Plain endemic. [= RAB, FNA, GW, K, M, S]

Carex michauxiana Böckeler, Michaux's Sedge. Bogs, seeps, usually in *Sphagnum*. Labrador and Manitoba south to MD, MI, and MN. Closely related to an e. Asian species. [= C, F, FNA, G, K, M] {not keyed at this time; add to synonymy}

[26tt] Section 33 – section *Collinsiae*

A monotypic section, of e. North America. References: Standley in FNA (2002b).

One species ..... ***C. collinsii***

Carex collinsii Nuttall, Collins's Sedge. Cp (GA, NC, SC, VA), Mt (NC): white cedar (*Chamaecyparis*) bogs and pocosins in the Coastal Plain, bogs in the southwest mountains of NC (where associated with other Coastal Plain disjuncts); uncommon (GA Special Concern, NC Watch List, SC Rare, VA Watch List). June-July. RI to wc. GA on the Coastal Plain, disjunct in the mountains of nw. NJ, PA, sw. NC, and possibly TN (Chester et al. 1993). *C. collinsii* is a very distinctive species; the slender perigynia teeth are reflexed 180 degrees (thus appressed back against the perigynium). [= RAB, C, F, FNA, G, K, M, S, W; = *C. collinsiae* – GW, orthographic error]

[26uu] Section 34 – section *Squarrosae*

A section of 4 species, of e. and c. North America and temperate South America. References: Ford in FNA (2002b). Key based on FNA.

1 Terminal spike usually entirely staminate; pistillate scales with an awn equaling or surpassing the perigynium; achenes 1.2-2.1 mm long.
  2 Pistillate scales 0.4-0.9 (-1.1) mm wide, the body wide and translucent; staminate scales 0.9-1.6 mm wide, tightly imbricate in the spike; plants colonial, long-rhizomatous ..... ***C. aureolensis***
  2 Pistillate scales 0.1-0.4 mm wide, the body narrow and indistinct; staminate scales 0.3-0.8 mm wide, irregularly imbricate with spreading tips; plant cespitose, short-rhizomatous ..... ***C. frankii***
1 Terminal spike gynecandrous, mainly pistillate; pistillate scales awnless, or with a short awn not surpassing the perigynium; achenes 2.0-3.0 mm long.
  3 Achene 1.9-2.5× as long as wide; style persistent, strongly kinked at the base; spikes 1-2 (-3) per stem ..... ***C. squarrosa***
  3 Achene 1.2-1.9× as long as wide; style deciduous, straight or slightly curved; spikes (1-) 2-4 (-6) per stem .... ***C. typhina***

Carex aureolensis Steudel. {separate from *C. frankii*} {Pd, Mt, Cp (NC, SC, VA): bottomland forests; common. May-July.} VA, KY, IL, and NE south to FL, TX, NM, Coahuila, and Nuevo León; South America. [= FNA; < *C. frankii* – RAB, C, F, G, GW, K, M, S, W]

Carex frankii Kunth. {Pd, Mt, Cp (GA, NC, SC, VA)}: bottomland forests; common. May-July. } W. NY and s. Ontario west to MI and se. NE, south to GA, AR, and OK. [= FNA; < *C. frankii* – RAB, C, F, G, GW, K, M, S, W (also see *C. aureolensis*)]

Carex squarrosa Linnaeus. Pd (GA, NC, SC, VA), Cp (NC, VA), Mt (VA): bottomland forests; common. June-July. CT west to se. ME and NE, south to NC, n. SC, and AR. [= RAB, C, F, FNA, G, GW, K, M, S, W]

Carex typhina Michaux. Cp (GA, NC, SC, VA), Pd, Mt (NC, SC, VA): bottomland forests; common (uncommon in Mountains). June-July. ME and Québec west to WI and se. MN, south to GA and LA. [= RAB, C, F, FNA, G, GW, K, M, S, W]

[26vv] Section 35 – section *Shortianae*

A monotypic section, of e. North America. References: Cochrane in FNA (2002b).

One species ..... ***C. shortiana***

Carex shortiana Dewey, Short's Sedge. Mt (VA): calcareous bottomlands and meadows; rare (VA Watch List). May-June. PA, s. Ontario, IL, and IA, south to w. VA, e. TN, AR, and OK. [= C, F, FNA, G, K, M, W]

[26ww] Section 36 – section *Spirostachyae (Extensae)*

A section of ca. 15 species, of Eurasia. References: Crins & Reznicek in FNA (2002b).

1 Leaves of flowering stems flat, the widest 3.3-5.0 mm wide ..... ***[C. distans]***
1 Leaves of flowering stems channeled or involute, the widest 1.0-3.5 (-4.3) mm wide ..... ***C. extensa***

* ***Carex extensa*** Goodenough, Long-bracted Sedge. Cp (VA): salt marshes, introduced around seaports; rare, introduced from Europe. [= C, F, FNA, G, K, M]

* *Carex distans* Linnaeus. Disturbed areas. Introduced in MD and PA; native of Eurasia. [= FNA, K]

[26xx] Section 37 – section *Ceratocystis*

A section of 7 species, in temperate North America, Eurasia, and Australia. References: Crins in FNA (2002b).

1 Pistillate scales coppery brown; terminal (staminate) spike 6-24 mm long; pistillate spikes 2-5 per culm; culms 1-8 dm tall; [of calcareous seepages in the Mountains of VA and northward] ..... ***C. flava***
1 Pistillate scales yellowish green; terminal (staminate) spike (9-) 17-39 mm long; pistillate spikes 1-2 (-3) per culm; culms 5-12.5 dm tall; [of calcareous savannas of the Coastal Plain of NC] ..... ***C. lutea***

Carex flava Linnaeus, Yellow Sedge. Mt (VA): calcareous seeps; rare (VA Rare). June. Circumboreal, ranging south in North America to NJ, PA, IN, ID, and British Columbia; disjunct in sw. VA (Giles County). First reported for VA by Wieboldt et al. (1998). [= C, K; > *C. flava* var. *flava* – F, G; > *C. flava* var. *laxior* (Kükenthal) Gleason – G]

Carex lutea LeBlond, Golden Sedge. Cp (NC): wet savannas shallowly underlain by coquina limestone, with open camopy of *Taxodium ascendens, Pinus palustris*, and *Liriodendron tulipifera*; rare (US Species of Concern, NC Rare). May. Endemic to Pender and Onslow counties, NC, where associated with other narrow endemics, such as *Thalictrum cooleyi* and *Allium species 1*, and other rare species, such as *Plantago sparsiflora*, *Parnassia caroliniana*, *Rhynchospora thornei*, and others. See LeBlond et al. (1994) for additional information. [= FNA, K]

[26aaa] Section 38 – section *Leucoglochin (Orthocerates)*

A section of 5-6 species, of arctic, boreal, and alpine North America, Eurasia, and South America. References: Cochrane in FNA (2002b).

One species ..... ***[C. pauciflora]***

Carex pauciflora Lightfoot, Few-flowered Sedge. Bogs. Circumboreal, south in North America to NY, WV (Grant, Randolph, and Tucker counties), WI, MN, and WA. [= C, F, FNA, G, K, M]

[26bbb] Section 39 – section *Acrocystis (Montanae)*

A section of ca. 35 species, subcosmopolitan in temperate and boreal regions. References: Crins & Rettig in FNA (2002b); Rettig (1988); Cusick (1992); Rettig & Crins (1996). Key based in part on Rettig (1988), C, and M.

NOTE TO USERS: This key does not accomodate two to four new species in our area; they are under study, and will likely be added in the near future. Most will key toward *C. deflexa*.

1 Spikes borne above the middle of the culm, but also with some of the pistillate spikes borne on short or elongate peduncles from the base of the culm.
  2 Terminal staminate spike 2-5 mm long, closely associated with one or more pistillate spikes, the lowest of these subtended by a foliaceous bract mostly surpassing the staminate spike ..... ***C. deflexa***
  2 Terminal staminate spike 5-15 mm long, alone or associated with a pistillate spike, the subtending bract not surpassing the staminate spike.

3 Perigynia subcoriaceous, 3.5-4.5 mm long, the body glabrous or very sparsely short-pubescent; leaf blades thick, stiff, deep green, spreading at maturity, 2-4.5 mm wide; plants loosely cespitose with short-ascending stolons; achenes brownish at maturity, shining, pitted ..... ***C. tonsa***

3 Perigynia membranaceous, 2.5-4.25 mm long, the body short-pubescent; leaf blades thinnish, not stiff, light green, erect or ascending at maturity, 1.5-3 mm wide; plants densely cespitose; achenes, brownish-black or black, at maturity, either minutely pitted or obscurely and irregularly pitted.

4 Perigynia (3.0-) 3.2-4.2 mm long, 1.2-1.5 mm wide, the beak 1.2-1.6 (-2.0) mm long, from about a half to nearly as long as the body; achenes oblong-obovoid, the outer covering dull grayish-black, appearing minutely roughened, the achenes at maturity black, very obscurely and irregularly pitted ..... ***C. rugosperma***

4 Perigynia 2.2-2.9 (-3.2) mm long, 1-1.3 mm wide, the beak 0.4-0.9 mm long, < ½ the length of the body; achenes orbicular-obovoid, the outer covering pitted, the achenes at complete maturity brownish-black, very closely and minutely pitted ..... ***C. umbellata***

1 Spikes all borne close together above the middle of the culm, the terminal one staminate, the lateral ones pistillate (rarely a few spikes borne near the base).

5 Body of the perigynium (excluding the beak and the contracted base) subglobose or spherical, about as wide as long.

6 Plants cespitose; leaves 1.8-4.7 mm wide.

7 Perigynium tooth (0.1-) 0.2-0.5 mm long; pistillate scales 3.4-4.8 mm long, (1.4-) 1.6-1.8 mm wide, conspicuously exceeding the perigynia; plants densely cespitose, the culms erect, arching at the tips; [of nw. SC, sw. NC, and adjacent GA] ..... ***C. communis var. amplisquama***

7 Perigynium tooth 0.1-0.2 (-0.3) mm long; pistillate scales 2.5-4.1 mm long, (1.2-) 1.4-1.6 (-2.0) mm wide, about as long as the perigynia; plants loosely cespitose, the culms prostrate; [widely distributed] ..... ***C. communis var. communis***

6 Plants with long rhizomes, forming clonal patches; leaves 1.0-3.0 mm wide.

8 Beak of perigynium (0.2-) 0.6-1.0 (-1.2) mm long; perigynium body 2.2-3.4 mm long, 1.0-1.8 mm wide; culm smooth; [widely distributed in our area] ..... ***C. pensylvanica***

8 Beak of perigynium (1.0-) 1.2-1.6 (-2.6) mm long; perigynium body 3.1-4.6 mm long, 1.0-1.3 (-1.5) mm wide; culm scabrous, at least near the summit; [(in our area) of the Mountains of sw. VA, w. NC, and nw. SC].

9 Beak of the perigynium averaging 1.5 mm long, the orifice oblique; leaves mostly 1.1-1.3 mm wide; perigynium pubescent only on the summit, at the base of the beak; male spikes <15 mm long; culms scabrous throughout; leaves more-or-less smooth on the lower surface.... ***C. lucorum*** *var.* ***austrolucorum***

9 Beak of the perigynium averaging 1.3 mm long, the beak split more-or-less equally; leaves mostly 1.5-2.8 mm wide; perigynium pubescent over the body; male spikes > 15 mm long; culms scabrous only near the summit; leaves scabrous on the lower surface ..... ***[C. lucorum*** *var.* ***lucorum]***

5 Body of the perigynium (excluding the beak and the contracted base) ellipsoid to obovoid, distinctly longer than wide or thick, often also wider than thick, and slightly trigonous.

10 Plants with long rhizomes, forming clonal patches; [collectively of the Coastal Plain and, less commonly, Piedmont).

11 Achene body (1.4-) 1.5-1.7 (-2.0) mm long, biconvex, trigonous, or both; fertile culms 7-17 cm tall, usually much shorter than the leaves; basal sheaths usually very fibrillose; pistillate scales (2.7-) 3.0-3.7 (-4.2) mm long ..... ***C. floridana***

11 Achene body (1.1-) 1.2-1.3 (-1.4) mm long, trigonous; fertile culms 20-43 cm tall, equalling or exceeding the leaves; basal sheaths usually not fibrillose; pistillate scales (2.3-) 2.6-3.0 (-3.4) mm long ..... ***C. physorhyncha***

10 Plants cespitose; [collectively widespread in our area].

12 Lowermost 2 pistillate spikes separated by > 7 mm ..... ***[C. novae-angliae]***

12 Lowermost 2 pistillate spikes overlapping, separated by < 5 mm.

13 Achene body (1.3-) 1.4-1.6 (-1.7) mm long; fertile culms mostly 10-20 cm tall; pistillate scales (2.9-) 3.1-3.4 mm long ..... ***C. nigromarginata***

13 Achene body (0.9-) 1.2-1.3 (-1.5) mm long; fertile culms mostly 17-35 cm tall; pistillate scales (2.0-) 2.5-3.1 (-3.2) mm long.

14 Scales of the median portion of the staminate spike with a weak to moderately prominent midrib usually not extending to the tip, and minute teeth rarely present on the midrib (visible at 15× or greater); perigynium teeth mostly 0.2-0.3 mm long; staminate spike 8.4-11.1 mm long; culms erect to ascending, equalling or exceeding the leaves, the inflorescence typically conspicuous; pistillate scales with green midrib, hyaline margins, and usually reddish-tinged; [mostly of loamy or clayey soils of the Piedmont and Mountains] ..... ***C. albicans***

14 Scales of the median portion of the staminate spike either with a strong, prominent midrib extending to the tip (or even aristate), and with minute teeth usually present on the midrib (visible at 15× or greater); perigynium teeth mostly 0.15-0.25 mm long; staminate spike 5.0-8.5 mm long; culms lax or weakly ascending, often shorter than, curving under, and more-or-less hidden by the leaves; pistillate scales with green midrib, hyaline margins, and only rarely reddish-tinged; [mostly of acid, sandy soils of the Coastal Plain] ..... ***C. emmonsii***

Carex albicans Willdenow ex Sprengel. Mt, Pd, Cp (NC, SC, VA), {GA}: dry woodlands and forests; common. April-May. ME west to IL, and OK, south to DE, NC, SC, n. GA (Jones & Coile 1988), TN, and MO. [= *C. artitecta* Mackenzie – RAB, M, W; = *C. albicans* var. *albicans* – C, FNA, K; > *C. artitecta* var. *artitecta* – F; > *C. artitecta* var. *subtilirostris* F.J. Hermann – F; = *C. nigro-marginata* Schweinitz var. *muhlenbergii* (A. Gray) Gleason – G; < *C. varia* Muhlenberg ex Willdenow – S]

Carex communis Bailey *var.* ***amplisquama*** (F.J. Hermann) J. Rettig. Mt (GA, NC, SC): dry, open woodlands; rare (NC Rare, SC Rare). July-August. Endemic to n. GA, nw. SC, and sw. NC (Rabun, Towns, White, Union, Lumpkin, Fannin, Murray, and Gilmer counties, GA, Oconee and Greenville counties, SC, and Polk County, NC) (Rettig 1988, Hill & Horn 1997, Gaddy, pers. comm.). Following Rettig's (1988) determination that *C. amplisquama* is better treated as a variety of *C. communis*, the combination was made by Rettig & Crins (1996). The two taxa differ in achene micromorphology, flavonoid chemistry, and minor morphological characters (Rettig 1988). [= FNA, K; = *C. amplisquama* F.J. Hermann – W]

Carex communis Bailey *var.* ***communis***. Mt (GA, NC, SC, VA), Pd (GA): dry woodlands and forests; common. May-June. Prince Edward Island west to MN, south to n. SC, c. GA (Jones & Coile 1988), and AR. [= FNA, K; = *C. communis* – RAB, C, F, G, M, S, W]

Carex deflexa Hornemann. Mt (NC): seepage at high elevations; rare (NC Rare). Greenland west to AK, south to MA, n. NY, n. MI, and n. MN; apparently disjunct in the high mountains of w. NC. [= C, F, G, K, M; > *C. deflexa* var. *deflexa* – FNA]

Carex emmonsii Dewey ex Torrey, Emmons's Sedge. Cp (NC, SC, VA), Pd (GA, NC, SC, VA): dry, sandy woodlands; rare (NC Watch List). April-May. Nova Scotia west to WI, south to PA, NC, SC, and TN. [= RAB, F, W; = *C. albicans* Willdenow ex Sprengel var. *emmonsii* (Dewey ex Torrey) J. Rettig – C, FNA, K; = *C. nigro-marginata* Schweinitz var. *minor* (Boott) Gleason – G; < *C. varia* Muhlenberg ex Willdenow – S; = *C. albicans* – M, misapplied]

Carex floridana Schweinitz, Florida Sedge. Cp (GA, NC, SC, VA), Pd (NC): dry, sandy woodlands; rare (GA Special Concern, NC Watch List, VA Watch List). March-May. E. NC south to FL, west to TX. [= FNA, K, M, S; = *C. nigromarginata* Schweinitz var. *floridana* (Schweinitz) Kükenthal – RAB, F]

Carex lucorum Willdenow ex Link *var.* ***austrolucorum*** J. Rettig, Appalachian Woodland Sedge. Mt (GA, NC, SC, VA): xeric to mesic wooded slopes, usually in oak forests and northern hardwood forests; uncommon (GA Special Concern, NC Watch List, VA Rare). *C. lucorum* var. *austrolucorum* is endemic to the Southern Appalachians, ranging from sw. VA south through w. NC and e. TN to nw. SC and ne. GA. It has been reported from further north, in sc. WV (Boone County) (Cusick 1996). Var. *lucorum* differs in having the leaves broader (mostly 1.5-2.8 mm wide vs. mostly 1.1-1.3 mm), the beak averaging shorter (1.3 mm vs. 1.5 mm), chromosome number n = 20 (vs. n = 13), and various details of flavonoid chemistry and achene micromorphology (see Rettig 1988 for details). While the two taxa can be difficult to tell apart on morphological grounds, they are clearly separate taxa. *C. lucorum* var. *austrolucorum* was first reported for South Carolina by Hill & Horn (1997). [= FNA, K; < *C. pensylvanica* Lamarck var. *distans* Peck – RAB, F, G (the name misapplied as to our plants); < *C. lucorum* – C, M, S; < *C. pensylvanica* – W]

Carex nigromarginata Schweinitz. Pd, Mt, Cp (GA, NC, SC, VA): dry woodlands and forests; common. March-May. DE and NJ west to WI, south to SC, GA, and TX. [= C, FNA, K, M, W; = *C. nigromarginata* var. *nigromarginata* – RAB, F; = *C. nigro-marginata* var. *nigro-marginata* – G, orthographic variant; = *C. nigro-marginata* – S, orthographic variant]

Carex pensylvanica Lamarck. Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (VA): dry to moist woodlands and forests, grassy balds, shale barrens, rock outcrops; common. April-June. ME west to s, Manitoba and ND, south to SC, n. GA, TN, and AR. [= FNA, K; = *C. pensylvanica* var. *pensylvanica* – RAB, C, F, G; = *C. pennsylvanica* – M, S, orthographic variant; < *C. pensylvanica* – W (also see *C. lucorum* var. *austrolucorum*)]

Carex physorhyncha Liebmann ex Steudel, Bellow's-beak Sedge. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA): dry woodlands; rare (NC Watch List). Se. VA south to FL, west to AR, OK, TX, and Mexico. [= RAB, F, M, S, W; = *C. albicans* Willdenow ex Sprengel var. *australis* (Bailey) J. Rettig – FNA, K]

Carex rugosperma Mackenzie. Mt (SC, VA): distribution and habitats in our area obscure. Prince Edward Island west to MN, south to MD, VA, IN, IL, and MO. See *C. umbellata* for discussion. Reported for South Carolina by Hill & Horn (1997). [= G, M; < *C. umbellata* – RAB, C, W; = *C. umbellata* – F, misapplied; = *C. tonsa* (Fernald) Bicknell var. *rugosperma* (Mackenzie) Crins – FNA, K]

Carex tonsa (Fernald) Bicknell. Mt (GA), {SC, VA} {Distribution and habitats in our area obscure}; common. Québec west to Alberta, south to VA, IN, and WI. See *C. umbellata* for discussion. [= F, G, K, M; < *C. umbellata* – RAB, C, W; = *C. tonsa* var. *tonsa* – FNA, K]

Carex umbellata Schkuhr ex Willdenow. Pd, Mt (GA), {NC, SC, VA}. Distribution and habitats in our area obscure. Newfoundland west to Saskatchewan, south to VA, TN, IL, and MN. It seems very possible that southern members of the *C. umbellata* complex may not correspond to any of the taxa "distinguished" in the northeastern United States. *C. tonsa, C. rugosperma,* and *C. umbellata* are circumscribed by various authors in different ways. This group needs critical study. [= FNA, G, K, M; < *C. umbellata* – RAB, C, W (also see *C. rugosperma* and *C. tonsa*); = *C. abdita* Bicknell – F]

Carex lucorum Willdenow ex Link var. *lucorum*, Northern Woodland Sedge. New Brunswick west to MN, south to MD (Cecil County; C. Frye, pers. comm. based on specimen at DOV) and PA. [= FNA, K; < *C. pensylvanica* Lamarck var. *distans* Peck – F, G; < *C. lucorum* – C, M, S; < *C. pensylvanica* – W]

Carex novae-angliae Schweinitz. South to e. PA and WV (Kartesz 1999), occurring in moist forests. It will key most closely to *C. nigromarginata*, from which it differs in having the lowest pistillate spike remote from the next lowest and not overlapping it. [= C, F, G, K, M; < *C. novae-angliae* – FNA]

Carex species 1, Canebrake Sedge. Cp (GA, NC, SC, VA): canebrakes and acid swamps; uncommon. [< *C. novae-angliae* Schweinitz – FNA] {not keyed at this time}

Carex species 2. Mt (NC, VA): ultramafic seepages; rare. {not keyed at this time}

[26ccc] Section 40 – *Clandestinae (Digitatae)*

A section of ca. 20 species, circumboreal. References: Crins in FNA (2002b).

1 Pistillate scales short-awned ..... ***C. pedunculata***
1 Pistillate scales acute..... ***[C. richardsonii]***

Carex pedunculata Muhlenberg ex Willdenow *var. **pedunculata***, Longstalk Sedge. Mt (GA, NC, SC, VA): nutrient-rich dry to mesic forests, usually over calcareous or mafic rocks; rare (GA Special Concern, NC Rare, VA Watch List). April. Var. *pedunculata* ranges from Newfoundland, Saskatchewan, and ND, south to NJ, w. VA, sw. NC, nw. GA (Dade County) (Jones & Coile 1988), n. AL, c. IN, c. IL, and n. IA. Var. *erythrobasis* (Léveillé & Vaniot) Koyama occurs in Korea. It may well prove that these two widely disjunct taxa should be recognized at the species level. [= FNA; < *C. pedunculata* – C, F, G, K, M, W]

Carex richardsonii R. Brown. Pd? (VA?): dry, rocky forests; rare if present. VT west to Alberta, south to DC, OH, IN, IA, and SD. This species ranges south to DC (according to C); it is likely to be present in our area, in n. VA. [= C, F, FNA, G, K, M]

[26ddd] Section 41 – section *Pictae*

A section of 2 species, of e. North America. References: Ball in FNA (2002b).

1 Plants monoecious, with 3-8 spikes per stem; leaf blades 4-8 mm wide, glaucous on the upper surface; [of the East Gulf Coastal Plain, east to sw. GA and panhandle FL] ..... ***C. baltzellii***
1 Plants dioecious, with a single unisexual spike per stem; leaf blades 2-4.5 mm wide, green on the upper surface; [of areas west of area, east to c. TN and nc. GA] ..... ***C. picta***

Carex baltzellii Chapman, Baltzell's Sedge. Cp (GA): steepheads, beech-magnolia slopes, and mesic to dry-mesic hammocks; rare (GA Endangered). Sw. GA west to Panhandle FL. [= FNA, K, M, S]

Carex picta Steudel, Painted Sedge. Mt (GA): mesic forests; uncommon. S. IN south through KY and c. TN to nc. GA (Jones & Coile 1988), c. AL, and LA. Reported (erroneously?) for VA (Kartesz 1999). Locally abundant and forming "doughnut clumps", sometimes aggregated to form a coarse turf. [= C, F, FNA, G, K, M, S]

[26fff] Section 42 – section *Mitratae (Praecoces)*

A section of ca. 20 species, of Europe, e. Asia, and Australia. References: Standley in FNA (2002b).

One species ..... ***C. caryophyllea***

* ***Carex caryophyllea*** Latourette, Spring Sedge. Cp? (VA?): disturbed areas; rare, introduced from Eurasia. This species may not actually be known to occur in our area; it has been reported as naturalized south to DC and is likely to be in VA. [= C, F, FNA, G, K, M]

[26ggg] Section 43 – section *Albae*

A section of 4 species, north temperate. References: Ball in FNA (2002b).

One species ..... ***C. eburnea***

Carex eburnea Boott, Bristle-leaf Sedge. Mt (GA, NC, SC, VA): calcareous cliffs, bluffs, and outcrops; common, rare south of VA (GA Special Concern, NC Rare). May. Newfoundland west to AK, south to w. VA, w. NC, nw. SC, c. AL, n. AR, NE, s. Alberta, and s. British Columbia; early reports of this species from TX are referrable to a recently described species, *C. mckittrickensis* P.W. Ball. Locally abundant on limestone bluffs, easily recognized vegetatively by its wiry stems and leaves (ca. 0.5 mm wide). [= RAB, C, F, FNA, G, K, M, S, W]

[26kkk] Section 44 – section *Phyllostachyae*

A section of ca. 10 species, of North America. References: Crins, Naczi, Reznicek, & Ford in FNA (2002b); Naczi, Reznicek, & Ford (1998); Ford et al. (1998); Naczi & Ford (2001); Ford & Naczi (2001). Key adapted in part from Naczi, Reznicek, & Ford (1998), Catling, Reznicek, & Crins (1993), and Naczi & Ford (2001).

1 Lowest pistillate scales 2.4-4.5 mm wide, much wider than the the perigynia, appressed against and essentially concealing them; staminate flowers 2-4 per spike; [northern species, south to PA] ..... ***[C. backii]***
1 Lowest pistillate scales 1.2-2.5 (-3) mm wide, < 1.5× as wide as the perigynia, spreading and not concealing them; staminate flowers 5-25 per spike.
2 Achenes subglobose, 1-1.5× as long as wide; staminate scales more or less truncate.
3 Tallest culm 3.2-9.1 cm high, 15-32% of plant height; terminal spike with 4-8 perigynia; wider leaves with hyaline margins 0.05-0.2 mm wide; hyaline margins of distal pistillate scales 0.05-0.3 mm wide; perigynium beak 30-38% (-43%) of perigynium length; [of calcareous glades in w. VA and north and west of our area] ..... ***C. juniperorum***
3 Tallest culm 9.0-41 cm high, 39-86% of plant height; terminal spike with 1-4 perigynia; wider leaves with green margins; hyaline margins of distal pistillate scales 0.3-0.7 mm wide; perigynium beak 34-53% of perigynium length; [of rich forests or rocky calcareous glades and woodlands].
4 Longest (per plant) staminate portion of terminal spike (4.9-) 5.8-13.5 mm long; proximalmost staminate scale in terminal spike 1.1-1.8 (-2.1) mm long, 13-26 (-35)% of length of staminate portion of terminal spike; perigynium beaks (1.9-) 2.3-3.9 mm long, 39-53% of perigynium length; shoot bases lacking red-purple; [of rich mesic forests widespread in our area, especially VA] ..... ***C. jamesii***
4 Longest (per plant) staminate portion of terminal spike 3.4-5.6 (-6.2) mm long; proximalmost staminate scale in terminal spike (1.9-) 2.1-3.3 mm long, (35-) 44-77% of length of staminate portion of terminal spike; perigynium beaks 1.4-2.3 (-2.5) mm long, 34-44% of perigynium length; shoot bases tinged with reddish-purple; [of c. TN and c. KY and westward] ..... ***[C. timida]***
2 Achenes ellipsoid, 1.5-2.0× as long as wide; staminate scales obtuse to acute.
5 Tallest culm 0.18-0.38× as tall as plant; perigynia (7.0-) 7.5-10.8 mm long; perigynium beaks (3.6-) 4.1-6.4 mm long; culms erect; peduncles usually erect to spreading ..... ***C. superata***
5 Tallest culm 0.41-0.87× as tall as plant; perigynia 4.5-8.0 mm long; perigynium beaks 1.7-4.3 mm long; culms erect to spreading; peduncles usually widely spreading to nodding.
6 Longest staminate portion of terminal spikes 12.7-25.6 mm long; perigynia 5.8-8.0 mm long; perigynium beaks 2.5-4.3 mm long; achenes (2.4-) 2.6-3.4 mm long ..... ***C. basiantha***
6 Longest staminate portion of terminal spikes 4.9-5.7 (-6.5) mm long; perigynia 4.5-5.7 (-6.5) mm long; perigynium beaks 1.7-2.6 (-2.8) mm long; achenes 1.8-2.6 mm long ..... ***C. willdenowii***

Carex basiantha Steudel, Southern Willdenow's Sedge. Cp (NC, SC): mesic forests, bottomlands, and lower slopes, over calcareous or mafic rocks; rare. April-June. Se. NC south to n. FL, west to e. TX, and north to nw. GA, c. TN, and c. AR. [= FNA, K; < *C. willdenowii* Schkuhr ex Willdenow – RAB; < *C. willdenovii* – S (also see *C. superata* and *C. willdenowii*) and orthographic variant; *? C. willdenowii* var. *pauciflora* Olney ex L.H. Bailey in J.M. Coulter; < *C. willdenowii* Schkuhr ex Willdenow var. *megarrhyncha* Hermann, misapplied]

Carex jamesii Schweinitz, James's Sedge. Pd (NC, SC, VA), Mt, Cp (VA), {GA}: nutrient-rich bottomlands and mesic slopes over calcareous or mafic rocks; uncommon. May-June. MD and NY west to MI, MN, and e. NE, south to c. SC, GA, and LA. Naczi (1999b) reports chromosome numbers of n = 33, 35. [= FNA; < *C. jamesii* – RAB, C, F, G, K, M, W]

Carex juniperorum Catling, Reznicek, & Crins. Mt (VA): calcareous glades and barrens; rare. This species was recently described, and is so far known only from alvars in s. Ontario, calcareous glades and barrens in s. OH and ne. KY, and has recently been found in Montgomery Co., VA (Belden et al. 2004). [= FNA, K]

Carex superata Naczi, Reznicek, & B.A. Ford. Mt (VA), Pd (SC), {GA}: rich forests; uncommon. April-June. Nc. SC, sw. VA, sc. KY, and ne. MS, south to Panhandle FL and s. AL. Reported for sw. VA (as *C. willdenowii* var. *megarrhyncha*) by Wieboldt et al. (1998). [= FNA, K; < *C. willdenowii* – RAB, F; < *C. willdenovii* – C, G, M, S (also see *C. basiantha* and *C. willdenowii*) and orthographic variant; < *C. willdenowii* Schkuhr ex Willdenow var. *megarrhyncha* Hermann]

Carex willdenowii Schkuhr ex Willdenow. Pd (NC, SC, VA), Mt, Cp (NC, VA): dry-mesic upland oak forests; common. May-June. MA, VT, NY, s. Ontario, and c. IN, south to nc. SC, n. AL, and s. IL; disjunct in c. AR. Naczi (1999b) reports chromosome numbers of n = 31, 39. [= FNA, K; < *C. willdenowii* – RAB, F, W (also see *C. basiantha* and *C. superata*); < *C. willdenovii* – C, G, M, S (also see *C. basiantha* and *C. superata*) and orthographic variant]

Carex backii Boott. Dry forests and woodlands. South to ne. PA and NJ. [= C, F, FNA, G, K, M]

Carex timida Naczi & B.A. Ford. Calcareous, dry to mesic woodlands and forests. East to AL, TN, and KY. Related to *C. jamesii* and *C. juniperorum*, from which it was separated by Naczi & Ford (2001). [= FNA; < *C. jamesii* – C, F, G, K, M]

[26lll] Section 45 – section *Firmiculmes*

A section of 3 species, of western North America. References: Crins in FNA (2002b).

One species ..... ***[C. geyeri]***

*? *Carex geyeri* Boott, Elk Sedge (section *Firmiculmes*), occurs as a disjunct (introduced?) from w. North America in Centre County, PA (Rhoads & Klein 1993). [= C, FNA, K, M]

[26mmm] Section 46 – section *Leptocephalae (Polytrichoidae)*

A monotypic section, of North America and the West Indies. References: Cochrane in FNA (2002b).

1 Perigynia 3.4-4.9 (-5.4) mm long; pistillate scales whitish ..... ***C. leptalea* var. *harperi***
1 Perigynia 2.5-3.5 mm long; pistillate scales pale brown, with green midrib..... ***C. leptalea* var. *leptalea***

Carex leptalea Wahlenberg ***var. harperi*** (Fernald) Weatherby & Griscom. Cp, Pd (GA, NC, SC, VA), Mt? (NC, SC, VA): bogs, seeps, blackwater bottomlands, usually in saturated conditions with *Sphagnum spp*.; common. May-June. NJ south to Fl, west to TX, inland in the interior to IN and MO. Var. *harperi* is considered to differ from the typic variety in its larger perigynia, larger spikes, more aristate pistillate scales, and more southern range; it needs additional study. [= F, G; < *C. leptalea* – RAB, C, GW, M, S, W; *C. leptalea* ssp. *harperi* (Fernald) W. Stone – FNA, K; = *C. harperi* Fernald]

Carex leptalea Wahlenberg ***var. leptalea***. Mt, Pd (NC, VA): bogs, seeps, usually in saturated conditions with *Sphagnum spp*.; common. May-June. Labrador west to AK, south to NC, TN, MO, SD, NM, and CA. [= F, G; < *C. leptalea* – RAB, C, GW, M, S, W; = *C. leptalea* ssp. *leptalea* – FNA, K]

Cladium P. Browne (Sawgrass, Twig-rush)

A genus of 3-4 species, herbs, subcosmopolitan. References: Bridges, Orzell, & Burkhalter (1993); Tucker in FNA (2002b); Goetghebeur in Kubitzki (1998b). Key based closely on Bridges, Orzell, & Burkhalter (1993).

1 Plants 1-3 m tall, coarse, from short rhizomes, forming dense tussocks; leaves 3-15 dm long, 5-12 mm wide, stiff and flat (or broadly V-shaped), the margins and midrib (beneath) harshly serrate (saw-toothed); inflorescence a narrow panicle 3-9 dm long, the branches bearing several fascicles of spikelets; achene base broadly rounded to truncate; [of tidal freshwater to brackish marshes or outer coastal plain calcareous savannas] ..... ***C. jamaicense***
1 Plants 0.4-1 m tall, relatively delicate, from creeping rhizomes, forming loosely tufted colonies; leaves 1-3 dm long, 1-3 mm wide, flat to channeled (terete apically), margins only slightly scabrous; inflorescence 0.5-3 dm long, of 2-4 umbelliform cymes, the branches rigidly ascending and bearing simple glomerules of spikelets; achene base squarely truncate to slightly flaring; [of Coastal Plain acidic seepages and tidal freshwater to slightly brackish marshes, Mountain fens or bogs] .... ***C. mariscoides***

Cladium jamaicense Crantz, Sawgrass. Cp (GA, NC, SC, VA): in circumneutral to alkaline situations, including brackish marshes, and rarely somewhat inland in savannas underlain by coquina limestone; common (VA Rare). July-October. Se. VA south to s. FL, west to e. TX, and in the West Indies. This is, of course, the famous sawgrass which dominates many square miles in the Everglades of s. FL (where underlain by oolite). The leaves can cut flesh or clothing. *C. jamaicense* is sometimes treated as one component (ssp. *jamaicense*) of a multi-continental *C. mariscus* complex. [= RAB, C, F, FNA, G, GW; = *C. mariscus* (Linnaeus) Pohl ssp. *jamaicense* (Crantz) Kükenthal – K; = *Mariscus jamaicensis* (Crantz) Britton – S]

Cladium mariscoides (Muhlenberg) Torrey, Twig-rush, Fen-sedge, Smooth Sawgrass. Cp (GA, NC, SC, VA), Mt (NC, VA): in strongly acidic to circumneutral situations, including acidic seepage at the margins of brackish marshes, in wet flats under *Pinus serotina* and *Taxodium ascendens* (Gaddy & Rayner 1980), in mucky seepage bogs in the fall-line sandhills, in peaty fens and bogs in the Mountains (especially over mafic or ultramafic rocks, such as amphibolite); uncommon (NC Rare, SC Rare). July-September. Newfoundland west to Saskatchewan Widespread and rather common north of the glacial boundary, with scattered and disjunct occurrences southward in VA, NC, SC, GA, panhandle FL, n. KY (Clark et al. 2005), s. AL, se. MS (Sorrie & Leonard 1999), and e. TX. Bridges, Orzell, & Burkhalter (1993) discuss in detail the phytogeography of this plant, particularly in reference to its southern occurrences, which are curiously fragmented and disjunct. [= RAB, C, F, FNA, G, K, W; = *Mariscus mariscoides* (Muhlenberg) Kuntze – S]

Cymophyllus Mackenzie ex Britton (Fraser's Sedge)

A monotypic genus, endemic to the Appalachians. *Cymophyllus* is a peculiar plant, often considered a relict species most closely (but not very) related to *Carex*, but recent molecular evidence suggests that it may be best re-merged into *Carex*. References: Reznicek in FNA (2002b); Goetghebeur in Kubitzki (1998b).

Identification notes: The foliage slightly resembles some of the broader-leaved species of *Carex* (such as *C. platyphylla* or *C. plantaginea*) or genera of the Liliaceae. Immediately distinctive, however, are the minutely undulate-scaberulous leaf margins.

Cymophyllus fraserianus (Ker-Gawler) Kartesz & Gandhi, Fraser's Sedge, Lily-leaf Sedge. Mt (GA, NC, SC, VA): cove forests, mostly rather acidic and associated with *Rhododendron maximum*, at moderate elevations; uncommon (GA Threatened,

NC Watch List, VA Watch List). May-June. A Southern and Central Appalachian endemic: w. MD and s. PA south through w. VA and WV to w. NC, e. TN, nw. SC, and n. GA (Jones & Coile 1988). Kartesz & Gandhi (1991) have shown that the Ker-Gawler's epithet *fraserianus* has priority over Andrews's *fraseri*. [= FNA, K; = *Cymophyllus fraseri* (Andrews) Mackenzie – RAB, C, F, G, S, W; = *Carex fraseriana* Ker-Gawler; = *Carex fraseri* Andrews]

Cyperus Linnaeus 1753 (Umbrella Sedge)
(also see *Kyllinga*)

A genus of about 500-550 species, herbs, of tropical and warm temperate areas. References: Goetghebeur in Kubitzki (1998b); Tucker, Marcks, & Carter in FNA (2002b).

This treatment is adapted from Tucker, Marcks, & Carter in FNA (2002b) and other sources. It needs substantial customization and revision prior to publication. Key lead 4 in the main key is problematic.

1 Inflorescences unbranched (the spikelets sessile); spikelets 1-2-flowered; rachilla not or only slightly elongate; scales conspicuously keeled; lowest 2 scales of spikelet greatly reduced ..... *[see **Kyllinga**]*
1 Inflorescences branched (the spikes pedunculate); spikelets 1-many-flowered; rachilla elongate; scales generally broadly rounded; lowest 2 scales of spikelet not greatly reduced.
  2 Stigmas 2; achenes lenticular.
    3 Achenes dorsiventrally flattened, borne with a flattened face toward the rachillas; [subgenus *Juncellus*]..... **Key A**
    3 Achenes laterally flattened, borne with an edge toward the rachilla; [subgenus *Pycreus*] ..... **Key B**
  2 Stigmas 3; achenes trigonous.
    4 Spikelets borne in digitate clusters (rarely singly), or in umbellate or glomerulate heads; [subgenus *Pycnostachys*]. ..... **Key C**
    4 Spikelets borne in spikes on a conspicuous rachis.
      5 Rachilla articulate at the base of each scale, the mature spike therefore disarticulating into segments consisting of a scale, an achene, and a cartilaginously thickened section of the rachilla (and its wings); [subgenus *Diclidium*] ..... **Key D**
      5 Rachilla continuous, or articulate only at the base; [subgenus *Cyperus*]..... **Key E**

Key A – subgenus *Juncellus* – stigmas 2; achenes lenticular; achenes dorsiventrally flattened, borne with a flattened face toward the rachillas

1 Plants 1-3 (-6) dm tall; leaf blades 0-7 cm long ..... ***C. laevigatus***
1 Plants to 10 dm tall; leaf blades 20-40 cm long ..... ***[C. serotinus]***

Key B – subgenus *Pycreus* – stigmas 2; achenes lenticular; achenes laterally flattened, borne with an edge toward the rachilla

1 Scales with excurved awn 0.3-0.5 mm long; stamens 1-2; achenes ca. 0.6 mm long ..... ***C. pumilus***
1 Scales entire or minutely mucronate; stamens 2-3; achenes (0.7-) 1.0-1.6 mm long.
  2 Achenes oblong with a truncate apex, subcylindric, only slightly compressed laterally.
    3 Scales 2.7-3.6 mm long, 1.6-1.8 mm wide; achenes 1.2-1.6 mm long, 0.6-0.9 mm wide ..... ***C. filicinus***
    3 Scales 1.5-2.4 mm long, 1.0-1.4 mm wide; achenes 0.8-1.2 mm long, 0.4-0.6 mm wide ..... ***C. polystachyos***
  2 Achenes ovoid, obovoid, or ellipsoid, with a rounded or subacute apex, biconvex or strongly laterally flattened.
    4 Scales membranous, ovate, loosely imbricate, each barely overlapping the next scale on the same side of the rachilla, the spikelets thus appearing serrate-margined to the unaided eye; annual, 30-75 cm tall..... ***C. flavicomus***
    4 Scales firm, oblong, closely imbricate, thus the spikelets appearing smooth-margined to the unaided eye; perennial or annual, 5-75 cm tall.
      5 Achene reticulations rectangular, elongate; achenes broadly obovoid, black; stamens 3 ..... ***C. flavescens***
      5 Achene reticulations isodiametric or square; achenes ellipsoid or obovoid, brown or black; stamens 2-3.
        6 Scales yellow or yellowish brown; culms 15-75 cm tall ..... ***C. lanceolatus***
        6 Scales brown or clear; culms 3-25 (-30) cm tall.
          7 Plants perennial from slender rhizomes..... ***C. sanguinolentus***
          7 Plants annual from fibrous roots.
            8 Scales 1.9-2.7 mm long, 1.8-2.3 mm wide; styles 0.6-1.0 mm long; stigmas 1.0-1.5 mm long... ..... ***C. bipartitus***
            8 Scales 2.5-3.0 mm long, 1.6-1.9 mm wide; styles 0.3-0.5 mm long; stigmas 2.2-3.1 mm long... ..... ***C. diandrus***

Key C – subgenus *Pycnostachys* – stigmas 3; achenes trigonous; spikelets borne in digitate clusters (rarely singly), or in umbellate or glomerulate heads

1 Scales folded in half their entire length (conduplicate).
  2 Perennial.
    3 Achenes with a granular or papillose surface; leaves often bladeless; bracts 2 (-3) ..... ***C. haspan***
    3 Achenes with a smooth surface; leaves with blades; bracts 3-5.
      4 Plants with tubers and stolons; spikelets commonly proliferous ..... ***C. dentatus***
      4 Plants with stolons only; spikelets not proliferous ..... ***C. lecontei***
  2 Annual.
    5 Scales cuspidate, with a cusp 0.6-1.2 mm long ..... ***C. cuspidatus***
    5 Scales blunt or slightly mucronate.
      6 Spikelets 30-20 per head; styles ca. 0.1 mm long..... ***C. difformis***
      6 Spikelets 3-12 per head; styles 0.3-0.4 mm long..... ***C. fuscus***
1 Scales 2-keeled in the lower third to half (bicarinate).
  7 Leaves bladeless; inflorescence bracts ca. 20, borne horizontally; stamens 3..... ***[C. involucratus]***
  7 Leaves with leaf blades; inflorescence bracts 2-10, borne variously; stamens 1 (-2).
    8 Stems sharply 3-angled, the faces concave, the angles harshly scabrous; leaf blades and inflorescence bracts with conspicuous cross-veins ..... ***C. virens***
    8 Stems rounded, obscurely 3-faced, or 3-angled, the faces flat or convex, smooth or slightly scabrous; leaf blades and involucral bracts lacking conspicuous cross-veins.
      9 Stems slightly scabrous, the prickles pointing downward (retrorse) ..... ***C. surinamensis***
      9 Stems smooth or if rough, the prickles pointing upward (antrorse) or outward (extrorse).
        10 Achene bases swollen, spongey ..... ***C. distinctus***
        10 Achene bases not swollen and spongey.
          11 Achenes narrowly ellipsoid to linear, about 3-6× as long as wide.
            12 Achenes ellipsoid to narrowly ellipsoid, 0.9-1.1 mm long, 0.3-0.4 mm wide, about 3× as long as wide; style 0.2-0.4 mm long; stigmas 0.4-0.6 mm long ..... ***C. entrerianus***
            12 Achenes linear, 1.2-1.4 mm long, 0.2 (-0.3) mm wide, about 5-6× as long as wide; style 0.5-0.8 mm long; stigmas 0.6-1.0 mm long ..... ***C. pseudovegetus***
          11 Achenes broadly ellipsoid, about 2-2.5× as long as wide (the stipe or cuneate base typically conspicuous).
            13 Annual; longest inflorescence bract erect or strongly ascending; anther ca. 0.5 mm long..... ***C. acuminatus***
            13 Perennial; longest inflorescence bract horizontal or slightly ascending (< 30 degrees); anther 0.8-1.2 mm long.
              14 Scales declined 3-45 degrees from the rachilla; achenes with a stipe..... ***C. eragrostis***
              14 Scales declined (45-) 60-90 degrees from the rachilla; achenes cuneate at the base..... ***C. ochraceus***

Key D – subgenus *Diclidium* – stigmas 3; achenes trigonous; spikelets borne in spikes on a conspicuous rachis; rachilla articulate at the base of each scale, the mature spike therefore disarticulating into segments consisting of a scale, an achene, and a section of the rachilla (including its wings)

One species in our area ..... ***C. odoratus***

Key E – subgenus *Cyperus* – stigmas 3; achenes trigonous; spikelets borne in spikes on a conspicuous rachis; rachilla continuous, or articulate only at the base

1 Upper scales of the spikelet with a straight or excurved mucronate or cuspidate apex 0.4-1.2 mm long.
  2 Plant a rhizomatous perennial, culms single ..... ***[C. schweinitzii]***
  2 Plant an annual, culms several, cespitose.
    3 Achenes 0.2-0.6 mm wide; stamen 1; culms 2-16 cm tall.
      4 Achenes 0.5-0.6 mm wide, < 2× as long as wide, cuneate to the base; scales 1.0-2.0 mm wide, 9-13-nerved; filaments ca. 2.5 mm long; anthers 0.4-0.8 mm long ..... ***C. granitophilus***
      4 Achenes (0.2-) 0.3-0.4 (-0.5) mm wide, > 2× as long as wide, with a minute stipe at the base; scales 0.5-1.0 mm wide, (5-) 7-9 (-11)-nerved; filaments ca. 1.5 mm long; anthers 0.3-0.4 mm long ..... ***C. squarrosus***
    3 Achenes 0.5-1.1 mm wide; stamens 3; culms (2-) 6-50 cm tall.
      5 Achenes obovoid, truncate at the apex; leaves flat to V-shaped; live plants not viscous to the touch..... ***C. compressus***

5 Achenes elipsoid, with a beak 0.5-1.2 mm long; leaves involute; live plants viscous to the touch ..... ***C. oxylepis***

1 Upper scales blunt, or with a mucro <0.3 mm long.
6 Spikelets linear, 1.2-1.6 mm wide; scales not overlapping, the tip of each scale just reaching or falling short of the base of the next scale on the same side of the rachilla ..... ***C. distans***
6 Spikelets oblong-ovate to linear-oblong, (1.5-) 1.0-3.0 (-4.0) mm wide; scales overlapping, the tip of each scale reaching to at least the base of the next scale on the same side of the rachilla.
7 Spikelets strongly compressed, >2×as wide as thick (in cross-section); scales spreading or appressed.
8 Scales obovate-orbiculate, notched at the tip; styles < 0.1 mm long.
9 Rachilla wingless; scales scarcely mucronate ..... ***C. iria***
9 Rachilla narrowly winged; scales distinctly mucronate..... ***[C. amuricus]***
8 Scales elliptic to oblong or ovate, acute to obtuse, not notched at the tip; styles 0.3-1.3 mm long.
10 Rachilla with hyaline, whitish, or straw-colored wings 0.2-0.5 mm wide.
11 Culms terete (at least toward the base), nodose-septate; inflorescence bracts 2 (-4), all erect; leaf blades generally absent..... ***C. articulatus***
11 Culms trigonous, not nodose-septate; inflorescence bracts 3-7, horizontal, ascending, or reflexed; leaf blades present.
12 Scales persistent; rachilla persistent; elongate stolons up to 15 cm long present, bearing tubers.
13 Scales purplish red to reddish brown, with green midveins; base of culm indurate; stolons wiry, springy when dried ..... ***C. rotundus***
13 Scales yellowish brown to brown; base of culm soft; stolons spongy, flexible when dried.
14 Style and stigma combined < 4.2 mm long..... ***C. esculentus*** *var.* ***leptostachyus***
14 Style and stigma combined > 4.2 mm long..... ***[C. esculentus*** *var.* ***macrostachyus]***
12 Scales deciduous; rachilla deciduous; rhizomes up to 5 cm long present, not bearing tubers.
15 Scales 3.2-4.5 (-6) mm long; anthers 0.3-0.5 mm long; stigmas 3-4 mm long; achenes narrowly oblong..... ***C. strigosus***
15 Scales 1.5-2.5 (-3.1) mm long; anthers 0.7-1.8 mm long; stigmas 1-2 (-3) mm long.
16 Achenes coarsely punctate..... ***C. planifolius***
16 Achenes smooth..... ***C. grayi***
10 Rachilla wingless, or with wings 0-0.2 mm wide.
17 Longest inflorescence bract erect or strongly ascending ..... ***[C. schweinitzii]***
17 Longest inflorescence bract horizontal, weakly ascending, or reflexed.
18 Longest inflorescence bract weakly ascending.
19 Rachis (to which the spikelets are attached) glabrous; achenes 1.5-2.0 mm long; spikes subglobose to broadly ovoid; [of upland sites, of NC northward] ..... ***C. houghtonii***
19 Rachis hispidulous; achenes 1.0-1.2 mm long; spikes loosely oblong-ovoid; [of wetland sites, of SC southward]..... ***C. pilosus***
18 Longest inflorescence bract horizontal to reflexed.
20 Anthers 0.8-1.0 mm long ..... ***C. filiculmis***
20 Anthers 0.3-0.6 mm long.
21 Scales 2.5-3.8 mm long, usually fitting loosely over the mature achene, the margins spreading or loosely clasping it; spikelet with 5-22 scales..... ***C. lupulinus*** *ssp.* ***lupulinus***
21 Scales 1.8-2.5 mm long, usually fitting tightly over the achene, the margins tightly clasping it; spikelets with 3-7 scales..... ***C. lupulinus*** *ssp.* ***macilentus***
7 Spikelets subterete or quadrangular, 1-1.5×as wide as thick (in cross-section); scales appressed.
22 Scales deciduous; rachillas persistent; rachilla wings deciduous, but remaining firmly attached at the base even after the achenes fall; spikelets with (6-) 12-20 (-40) scales..... ***C. erythrorhizos***
22 Scales persistent; rachillas **either** deciduous (the mature spikelets generaly falling as a single unit from the rachis) **or** persistent; rachilla wings persistent; spikelets with 2-8 scales.
23 Spikelets reflexed (some of the uppermost spreading to ascending).
24 Culms glabrous; leaves and inflorescence bracts nearly glabrous ..... ***C. hystricinus***
24 Culms (at least the upper portion) scaberulous or puberulent; leaves and inflorescence bracts puberulent on the upper surface.
25 Inflorescence rays scaberulous; leaves and inflorescence bracts pubescent on the upper and lower surfaces; culm obtusely trigonous to nearly terete..... ***C. plukenetii***
25 Inflorescence rays smooth (or with a very few hairs); leaves and inflorescence bracts pubescent on the upper surface and on the midvein only on the lower surface; culm sharply 3-angled ..... ***C. retrofractus***
23 Spikelets ascending to spreading (some of the lowermost reflexed).
26 Spikes cylindrical, 2-5× as long as wide.
27 Spikelets ellipsoid, 2-3×as long as wide; spikelets with 1-2 (-3) fertile scales ..... ***[C. aggregatus]***
27 Spikelets lanceolate to linear, 4-10×as long as wide; spikelets with 3-8 fertile scales.

28 Scales greenish to light brown, the tips overlapping the lower 1/4 to 1/3 of the next scale. ..... ***C. strigosus***
28 Scales reddish brown or tawny, the tips barely reaching the base of the next scale..... ..... ***C. thyrsiflorus***
26 Spikes ovoid, globose, or obovoid, 1-2× as long as wide.
29 Scales >4 mm long; achenes >2 mm long.
30 Spikes tightly globose..... ***C. echinatus***
30 Spikes ellipsoid to obovoid.
31 Spikelets subquadrangular, the terminal scale elongate, forming a subulate tip to the spikelet; leaves and inflorescence bracts 3-6 mm wide, smooth..... ***C. hystricinus***
31 Spikelets subterete, the terminal scale not elongate, the spikelet therefore acute; leaves and inflorescence bracts mostly >10 mm wide, scabrous on the upper surfaces.
32 Spikes dense, with 50-90 spikelets, each with 3-6 (-7) fertile scales; achenes conspicuously falcate-curved, 3-4× as long as wide ..... ***C. lancastriensis***
32 Spikes loose, of 13-75 spikelets, each with 4-8 (-11) fertile scales; achenes straight, 5-6× as long as wide ..... ***C. refractus***
29 Scales <4 mm long; achenes <2 mm long.
33 Spikes with parallel sides, mostly > 25 mm long; spikelets quadrate.
34 Spikelets narrowly ellipsoid, 1.5-2.0 mm wide..... ***C. tetragonus***
34 Spikelets linear, 0.5-1.0 mm wide ..... ***C. thyrsiflorus***
33 Spikes with curved (convex) sides, mostly < 20 mm long; spikelets somewhat compressed.
35 Scales ascending; achenes oblong-fusiform, gradually narrowed to both ends..... ..... ***C. ovatus***
35 Scales appressed; achenes elongate, abruptly constricted at the tip.
36 Spikes loose, globose to hemispheric; spikelets angular in cross-section, with 3-8 fertile scales; scales yellow-greenish ..... ***C. croceus***
36 Spikes tight, globose, oblong, or oblong-cylindric; spikelets subterete in cross-section, with 1-3 (-4) fertile scales; scales straw-colored or brown on the sides.
37 Spikes globose; spikelets (3.5-) 4.0-7.0 mm long; scales membranous, straw-colored, 3.5-4.5 mm long; achenes 1.7-2.3 mm long .... ***C. echinatus***
37 Spikes oblong to oblong-cylindrical; spikelets 2.2-4.0 (-4.5) mm long; scales firm, brown or straw-colored, 1.8-2.6 mm long; achenes 1.2-2.0 mm long ..... ***C. retrorsus***

Cyperus acuminatus Torrey & Hooker ex Torrey. Mt (NC, VA), {GA}: wetlands, especially over limestone; rare (VA Rare). IL west to ND, south to w. LA, TX, and n. Mexico; disjunct from WA to s. CA; disjunct eastward at scattered localities in VA, NC, TN, KY, and OH (where probably native , and NY and NH (where probably introduced). [= C, F, FNA, G, GW, K, W]

Cyperus articulatus Linnaeus. Cp (GA, SC): marshes, especially tidal; rare. July-September. Se. SC south to s. FL west to e. TX, and south into tropical America. [= RAB, FNA, GW, K, S]

Cyperus bipartitus Torrey. Cp, Pd (NC, VA), Mt (GA, NC, VA), {SC}: low fields, ditches, marshes; uncommon. July-September. ME and Québec west to MN and WA, south to GA, LA, TX, NM, AZ, and CA. [= C, FNA, GW, K, W; *? C. rivularis* Kunth – RAB, F, G, S]

Cyperus compressus Linnaeus. Cp, Pd (GA, NC, SC, VA): sandy fields, disturbed areas; common (uncommon in Piedmont). July-September. Pantropical and warm temperate, north in North America to s. NY, s. OH, s. IL, and e. TX. [= RAB, C, F, FNA, G, GW, K, S, W]

Cyperus croceus Vahl. Cp (GA, NC, SC, VA), Pd (GA), Mt (VA): savannas, pine flatwoods, disturbed areas; common. July-October. NJ and MO south through the New World tropics. {problems in circumscription; check specimens} [= C, FNA; = *C. globulosus* Aublet – F, G, GW, W, misapplied; > *C. croceus* – K; > *C. globosus* – S?; > *C. multiflorus* (Britton) Small – S; > *C. globosus* – RAB; > *C. retrorsus* Chapman var. *robustus* (Böckler) Kükenthal – RAB, K; > *C. plankii* Britton – S?]

Cyperus cuspidatus Kunth. Cp (GA, SC): sandy fields, disturbed areas; rare. July. S. SC south to FL, west to AL; and in New World tropics. [= RAB, FNA, GW, K, S]

Cyperus dentatus Torrey, Toothed Flatsedge. Cp (NC, SC), Mt (VA): low sandy areas; rare (NC Rare, VA Rare). July-October. Nova Scotia and Québec south to e. SC; disjunct inland in WV, s. TN, and nw. IN. [= RAB, C, F, FNA, G, GW, K, S, W]

Cyperus diandrus Torrey. Cp, Pd (VA), Mt (GA, VA): {habitat}; rare (VA Rare). ME west to ND, south to VA, c. TN, n. AL, IL, MO, and IA. [= C, F, FNA, G, GW, K, S, W]

* ***Cyperus difformis*** Linnaeus, Smallflower Umbrella Sedge. Cp (GA, NC, SC, VA): disturbed areas; rare, introduced from Old World tropics. See Bryson et al. (1996). [= C, F, FNA, G, GW, K]

* ***Cyperus distans*** Linnaeus f. Cp (NC): marshes; rare, probably introduced from tropical America (NC Watch List). July-September. [= RAB, FNA, K, S]

Cyperus distinctus Steudel. Cp (GA, SC): marshes; rare (SC Rare). July-September. E. SC south to s. FL, west to e. LA. [= RAB, FNA, GW, K]

Cyperus echinatus (Linnaeus) Wood. Pd, Cp (GA, NC, SC, VA), Mt (GA, VA): sandy woodlands, forests, and fields; common. July-September. CT and NY west to s. OH, IL, and se. KS, south to n. FL, TX, and ne. Mexico. [= C, FNA, K; = *C. ovularis* (Michaux) Torrey – RAB, G, GW, S, W; > *C. ovularis* var. *ovularis* – F; > *C. ovularis* var. *sphaericus* Böckler – F]

Cyperus entrerianus Böckler. Cp (GA): {habitat}; rare. E. GA south to FL and west to e. TX. [= FNA, K]

* ***Cyperus eragrostis*** Lamarck. Cp (SC): disturbed wetlands; rare, introduced from tropical America. See Bryson et al. (1996), Brown & Marcus (1998). [= FNA, K]

Cyperus erythrorhizos Muhlenberg, Redroot Flatsedge. Cp, Pd (GA, NC, SC, VA), Mt (VA): marshes, ditches; uncommon. July-September. MA west to ND and WA, south to n. FL, LA, TX, AZ, and CA. [= RAB, C, F, FNA, G, GW, K, W; > *C. erythrorhizos* – S; > *C. halei* Torrey ex Britton – S]

Cyperus esculentus Linnaeus *var. **leptostachyus*** Böckler, Yellow Nutsedge, Yellow Nutgrass, Wild Chufa, Earth-almond. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common. July-October. The species is pantropical and warm temperate. [= FNA; > *C. esculentus* var. *leptostachyus* – K; > *C. esculentus* var. *sativus* Böckler– K; < *C. esculentus* – RAB, C, F, G, GW, W; > *C. esculentus* – S; > *C. lutescens* Torrey & Hooker – S]

Cyperus esculentus Linnaeus *var. **macrostachyus*** Böckler, Yellow Nutsedge, Yellow Nutgrass, Wild Chufa, Earth-almond. {GA, NC, SC} July-October. The species is pantropical and warm temperate. [= FNA; < *C. esculentus* var. *esculentus* – K; < *C. esculentus* – RAB, C, F, G, GW, S, W; < *C. lutescens* Torrey & Hooker – S]

Cyperus filicinus Vahl. Cp (GA, NC, SC, VA): brackish marshes; common. July-September. ME to s. FL, west to LA; West Indies. [= RAB, C, F, FNA, G, K, S; = *C. polystachyos* Rottböll var. *filicinus* (Vahl) C.B. Clarke; < *C. polystachyos* – GW]

Cyperus filiculmis Vahl. Cp (GA, NC, SC, VA), Pd? (NC, SC, VA): sandy or rocky woodlands, forests, and fields; common. July-October. Se. MD south to s. peninsular FL, west to e. TX. [= FNA, RAB; < *C. lupulinus* ssp. *lupulinus* – K (also see *C. lupulinus*]

Cyperus flavescens Linnaeus. Mt, Pd, Cp (GA, NC, SC, VA): low fields, ditches, marshes; common. July-September. Pantropical and warm temperate, north in North America to MA, MI, MO, and KS. [= RAB, C, FNA, G, GW, K, S, W; > *C. flavescens* var. *poiformis* (Pursh) Fernald – F]

Cyperus flavicomus Michaux. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): ditches, marshes; common (GA Special Concern). July-October. Se. VA and KY south through the New World tropics. [= C, FNA, K, W; = *C. albomarginatus* (Martius & Schrader ex Nees) Steudel – RAB, F, G, GW; *? C. sabulosus* (Martius & Schrader ex Nees) Steudel – S]

* ***Cyperus fuscus*** Linnaeus, Black Galingale, Brown Galingale. Cp (VA): {habitat}; rare, introduced from Eurasia. See McKenzie et al. (1998). [= C, F, FNA, G, K]

Cyperus granitophilus McVaugh, Granite Flatsedge. Pd (GA, NC, SC, VA), Cp, Mt (GA): granitic flatrocks, rarely on diabase flatrocks and Altamaha Grit glades; rare (NC Rare, VA Rare). Sc. VA south to ec. AL in the Piedmont; disjunct in se. and c. TN on sandstone and limestone and in sc. GA on Altamaha Grit. [= FNA, GW, K; included in concept of *C. squarrosus* by some earlier authors]

Cyperus grayi Torrey. Cp (GA, NC, SC, VA), Pd (NC, VA): dry soils; uncommon. July-September. NH south to GA. [= RAB, C, FNA, K, W; *C. grayii* – G, orthographic variant; > *C. grayii* – F; > *C. filiculmis* var. *oblitus* Fernald & Griscom – F?]

Cyperus haspan Linnaeus. Cp (GA, NC, SC, VA), Pd (GA): marshes, low fields, ditches; common (VA Watch List). July-September. Pantropical in distribution, north in North America to se. VA. [= RAB, C, FNA, G, GW, K, S; > *C. haspan* var. *americanus* Böckler – F]

Cyperus houghtonii Torrey, Houghton's Flatsedge. Pd (NC), Mt (VA): dry upland sites; rare (NC Rare, VA Rare). July. MA, VT, and Québec west to MN, south to w. VA, WV, nc. NC, and nw. IN. [= RAB, C, F, FNA, G, K, W]

Cyperus hystricinus Fernald. Cp, Pd (GA, NC, SC, VA), Mt? (GA, NC, SC): dry woodlands and forests; rare. July-September. NJ south to n. FL, west to e. TX, mostly on the Coastal Plain. {check specimens of this and relatives – discrepancy between mapped and stated ranges} [= C, FNA, K, S; < *C. retrofractus* – RAB, W, misapplied; = *C. retrofractus* (Linnaeus) Torrey var. *hystricinus* (Fernald) Kükenthal – F, G]

* ***Cyperus iria*** Linnaeus. Cp, Pd (GA, NC, SC, VA): marshes, ditches, disturbed wet areas; common, introduced from Old World. July-October. [= RAB, C, F, FNA, G, GW, K, S]

* ***Cyperus laevigatus*** Linnaeus. Cp (NC): brackish marshes; rare, introduced from sw. North America nad New World tropics. [= RAB, FNA, K, S; *? C. careyi* Britton – S]

Cyperus lancastriensis Porter ex A. Gray. Pd (GA, NC, SC, VA), Cp, Mt (NC, SC, VA): dry woodlands, forests, and fields; common. July-September. NJ west to WV, OH, and MO, south to GA and AR. [= RAB, C, F, FNA, G, K, S, W]

Cyperus lanceolatus Poiret. Cp (GA): wet places; rare. Se. GA and ne. FL west to LA and c. TX (?). [= FNA, GW, K; *? C. densus* Link – S]

Cyperus lecontei Torrey ex Steudel. Cp (GA, NC, SC?): limesink ponds, low pinelands; rare (NC Rare). July-September. Se. NC south to s. FL, west to LA. Sorrie (1998b) reports it for e. GA (Glynn County). [= RAB, FNA, GW, K, S]

Cyperus lupulinus (Sprengel) Marcks *ssp. **lupulinus***. Cp (GA, NC, SC, VA), Mt, Pd (NC, SC, VA): {additional herbarium check} MA and VT west to MN, south to NC, n. SC, TX; disjunct in ID, WA, and OR. [= FNA, K; < *C. filiculmis* Vahl – RAB, W; < *C. lupulinus* – C; = *C. filiculmis* Vahl var. *filiculmis* – F, G; >< *C. filiculmis* – S; > *C. martindalei* Britton – S]

Cyperus lupulinus (Sprengel) Marcks *ssp. **macilentus*** (Fernald) Marcks. Mt (GA, NC, VA), Cp (VA), {SC}: rare (GA Special Concern). {additional herbarium check} ME, Québec, and MN south to w. VA, w. NC, nw. GA, and MO. [= FNA, K; < *C. filiculmis* Vahl – RAB, S, W; = *C. filiculmis* Vahl var. *macilentus* Fernald – F, G; < *C. lupulinus* – C]

Cyperus ochraceus Vahl. Cp (GA): wet areas; rare. Se. GA (Jones & Coile 1988), FL, LA, TX, West Indies, Central America. [= FNA, GW, K, S]

Cyperus odoratus Linnaeus. Cp (GA, NC, SC, VA), Pd (GA, NC, VA), Mt (VA): low fields, marshes, ditches; uncommon. July-September. Pantropical, north in North America to MA, se. ME, Ontario, MN, KS, NM, AZ, and CA. [= C, FNA, K, W; > *C. odoratus* – RAB, F, G, GW; > *C. engelmannii* Steudel – RAB, F, G, GW, S; > *C. ferruginescens* Böckler – RAB, F; > *C. ferax* L.C. Richard – S; > *C. longispicatus* J.B.S. Norton – S; > *C. speciosus* Vahl – S]

Cyperus ovatus Baldwin. Cp (GA, NC, SC): sandy beaches, maritime forests, and pinelands; rare. July-October. Se. NC south to s. FL, west to s. AL. [= FNA, K; *? C. retrorsus* Chapman var. *cylindricus* (Elliott) Fernald & Griscom; > *C. retrorsus* var. *deeringianus* (Britton ex Small) Fernald ex Griscom – RAB; < *C. retrorsus* – C, G, GW, W; > *C. deeringianus* Britton ex Small – S]

* ***Cyperus oxylepis*** Nees ex Steudel. Cp (GA, SC) {habitat}; rare, introduced from South America. See Bryson et al. (1996). [= FNA, GW, K]

* ***Cyperus pilosus*** Vahl. Cp (SC): rice fields; rare, introduced from e. Asia. [= FNA, K]

Cyperus planifolius L.C. Richard. Cp (GA): brackish marshes; rare. Se. GA (Jones & Coile 1988) south to s. FL; West Indies; Central and South America. [= FNA, GW, K; *? C. brunneus* Swartz – S]

Cyperus plukenetii Fernald. Cp (GA, NC, SC, VA), Pd (NC, SC): sandhills, sandy woodlands, and dry, disturbed areas; common (rare in Piedmont) (VA Rare). July-October. NJ, KY, MO, and se. OK, south to c. peninsular FL and e. TX. [= RAB, C, F, FNA, K, W; = *C. retrofractus* var. *retrofractus* – G, misapplied; = *C. retrofractus* – S, misapplied]

Cyperus polystachyos Rottböll. Cp, Pd (GA, NC, SC, VA): low fields, ditches, and marshes; common. July-October. Pantropical and warm temperate, north in North America to ME, MA, KY, MO, and OK. [= FNA, GW; > *C. polystachyos* Rottböll var. *texensis* (Torrey) Fernald – RAB, C, F, G, K, W; *C. polystachyos* var. *paniculatus* (Rottböll) C.B. Clarke; > *C. microdontus* Torrey – S; > *C. odoratus* – S, misapplied; > *C. paniculatus* Rottböll – S]

Cyperus pseudovegetus Steudel. Cp, Pd (GA, NC, SC, VA), Mt (GA, VA): marshes, ditches, depressions; common. July-October. NJ and MA, west to s. IL, s. MO, and OK, south to FL and TX. [= RAB, C, FNA, G, GW, K, S, W; = *C. virens* – F, misapplied]

* ***Cyperus pumilus*** Linnaeus. Cp (GA): disturbed wet areas; rare, iIntroduced from the Old World, occurring in n. FL and se. GA. [= FNA, GW, K]

Cyperus refractus Engelmann ex Böckler. Pd (GA, NC, SC, VA), Mt, Cp (NC, SC, VA): dry sandy or rocky woodlands and forests; rare (VA Watch List). July-September. NJ west to OH and MO, south to SC, GA, AL, and AR. [= RAB, C, F, FNA, G, K, S, W]

Cyperus retrofractus (Linnaeus) Torrey. Pd, Cp, Mt (GA, NC, SC, VA): dry sandy or rocky woodlands and fields; common. July-September. NJ west to s. OH, and se. MO, south to GA. AL, and AR. [= C, FNA, K; = *C. dipsaciformis* Fernald – RAB, F, S, W; = *C. retrofractus* (Linnaeus) Torrey var. *dipsaciformis* (Fernald) Kükenthal – G]

Cyperus retrorsus Chapman. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC): dry woodlands, forests, and rock outcrops; common. July-October. S. NY south to FL, west to TX, mostly on the Coastal Plain, but north in the interior to KY and se. OK. [= C, G, GW, W; = *C. retrorsus* Chapman var. *retrorsus* – RAB, K; > *C. retrorsus* var. *retrorsus* – F; > *C. retrorsus* var. *nashii* (Britton) Fernald – F; > *C. retrorsus* – S; > *C. nashii* Britton –- S; > *C. torreyi* Britton – S]

*? ***Cyperus rotundus*** Linnaeus, Purple Nutsedge, Nutgrass, Cocograss. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (SC): gardens, fields, disturbed areas; common. June-October. Pantropical and warm temperate in distribution (though extending less far north than *C. esculentus*). [= RAB, C, F, FNA, G, GW, K, S]

* ***Cyperus sanguinolentus*** Vahl. Cp (GA): ditches, disturbed wet areas; rare, introduced from Asia, known in North America from e. GA west to LA. See Carter & Bryson (2000) for detailed information. [= FNA; > *Cyperus louisianensis* Thieret – K]

Cyperus squarrosus Linnaeus. Pd (GA, NC, SC, VA), Mt (VA), Cp (GA): moist depressions and seepages on granitic and other rocks, drawdown riverbanks, moist disturbed sites; rare (NC Watch List). July-September. Nearly cosmopolitan in distribution, in Old World and New World. Similar to the closely related *C. granitophilus*. [= C, FNA, K; > *C. aristatus* Rottböll – RAB, G, GW, W; > *C. inflexus* Muhlenberg – F, S]

Cyperus strigosus Linnaeus, False Nutsedge. Mt, Pd, Cp (GA, NC, SC, VA): marshes, ditches, wet disturbed areas; common. July-October. Québec west to SD, south to FL and TX; also in w. North America. [= RAB, C, FNA, GW, K, W; > *C. strigosus* var. *strigosus* – F, G; > *C. strigosus* var. *robustior* Britton – F; > *C. strigosus* var. *stenolepis* (Torrey) Kükenthal – G; > *C. strigosus* – S; > *C. praelongatus* Steudel – S; > *C. stenolepis* Torrey – S]

Cyperus surinamensis Rottböll. Cp (GA, SC): "disturbed clay-sand beds" (RAB); rare. September-October. Se. SC south to s. FL, west to KS, OK, TX, and south into Mexico and tropical America. [= RAB, FNA, GW, K, S]

Cyperus tetragonus Elliott, Four-angled Flatsedge. Cp (GA, NC, SC): maritime forests and dunes; rare (NC Rare, SC Rare). July-September. E. NC south to FL; also reported for AZ and NM. [= RAB, FNA, K, S]

Cyperus thyrsiflorus Junghuhn. Cp (GA): swamps and streambanks; rare (GA Special Concern). Se. GA and FL peninsula west to se. TX. [= FNA, K; = *C. hermaphroditus* (Jacquin) Standley – S, misapplied]

Cyperus virens Michaux. Cp (GA, NC), Pd (GA, NC?): marshes and ditches; rare. July-September. Se. NC south to c. peninsular FL, west to TX; West Indies, Mexico to Argentina. [= RAB, FNA, GW, K, S]

* *Cyperus aggregatus* (Willdenow) Endlicher, native of tropical America, has been collected as a waif in NJ, PA, AL, and FL. [= FNA, K; *? C. cayennensis* (Lamarck) Britton – S; *? C. flavus* (Vahl) Nees]

* *Cyperus amuricus* Maximowicz, native of e. Asia, is naturalized in DE, PA, NJ, and NY. [= FNA, G, K; *? C. microiria* Steudel – F]

* *Cyperus involucratus* Rottböll, introduced from Africa, naturalized north at least to FL. [= FNA, K; *? C. alternifolius* Linnaeus, misapplied]

Cyperus retroflexus Buckley. AL west to NM, south to Mexico. [= FNA, K] {not keyed at this time}

Cyperus schweinitzii Torrey occurs in sandy soils from VT, MA, MN, and Albert, south to NJ, e. PA, n. KY, OH, MO, TX, NM, UT, and Mexico. It occurs in se. PA (Rhoads & Klein 1993) and NJ. [= FNA, K]

* *Cyperus serotinus* Rottböll, naturalized in s. NJ, DE, and PA (Kartesz 1999). [= FNA, K]

Dulichium Persoon (Threeway Sedge)

A monotypic genus, an herb, North American (known as fossils from Europe). References: Goetghebeur in Kubitzki (1998b); Mastrogiuseppe in FNA (2002b).

Identification notes: The combination of the distichous *Cyperus*-like spikelets and numerous, distinctly 3-ranked, cauline leaves makes *Dulichium* distinctive.

Dulichium arundinaceum (Linnaeus) Britton *var.* ***arundinaceum***, Threeway Sedge. Cp, Pd, Mt (GA, NC, SC, VA): streambanks, marshes, bogs, ditches; common. July-September. Var. *arundinaceum* ranges from Newfoundland west to MN, south to FL and TX; also from MT and British Columbia south to CA. A second variety, var. *boreale* Lepage, is endemic in Québec. [= FNA; < *D. arundinaceum* – RAB, C, F, G, GW, K, S, W]

Eleocharis R. Brown 1810 (Spikerush)

by Bruce A. Sorrie and Alan S. Weakley

A genus of about 120-200 species, herbs, cosmopolitan. A molecular study supported the monophyly of subgenus *Limnochloa* (Roalson & Friar 2000). References: Smith et al. in FNA (2002b); Socorro González-Elizondo & Peterson (1997); Roalson & Friar (2000); Goetghebeur in Kubitzki (1998b).

Identification notes: "Scale" refers to the flower scales. "Sheath" refers to leaf sheaths. "Bristle" refers to perianth bristles.

1 Culms producing vegetative proliferations rather than normal fertile spikelets ..... **Key A**
1 Culms producing at least some fertile spikelets (vegetative proliferations may or may not also be present).
  2 Spike 1-2 (-2.5)× as thick as the culm immediately below the spike, gradually expanded from the culm, the base of the spike narrowly cuneate; spike (3-) 4-8× as long as wide; [subgenus *Limnochloa*] ..... **Key B**
  2 Spike > 2× as thick as the culm immediately below the spike, abruptly expanded from the culm, the base of the spike broadly cuneate, rounded, or truncate; spike 1-3 (-4)× as long as wide.
    3 Achenes with several distinct longitudinal ribs or low ridges, the intervening spaces with abundant, very narrow, horizontally elongate cells ..... **Key C**
    3 Achenes without longitudinal ribs, the surface smooth, granular, or honeycomb-like (*E. tortilis* and *E. tuberculosa* have indistinct ribs, but intervening cells are honeycomb-like, not thin horizontally; *E. tricostata* has 3 keel-like ribs, but achene surface appears granular).
      4 Achenes lenticular or biconvex; styles 2-branched ..... **Key D**
      4 Achenes trigonous or nearly terete; styles 3-branched ..... **Key E**

Key A – spikerushes proliferating vegetatively, with no fertile spikelets present

{key provisional and needing additional testing}

1 Each culm producing secondary or tertiary whorls.
  2 Base of whorl abruptly widened from culm, forming a distinct shoulder; whorl divisions many per whorl (commonly 20 or more); whorl divisions usually 0.2 mm or less wide, finely capillary (often < 0.1 mm, but same may apperoach 0.3 mm); surface texture of divisions obviously beaded (under dissecting microscope) ..... ***E. confervoides***
  2 Base of whorl gradually widened from culm, vase-shaped, not forming a istinct shoulder; whorl divisions fewer per whorl (commonly 15 or less); whorl divisions usually 0.3 mm or more wide (0.5 mm or more, but the finest secondary or tertiary divisions as slender as 0.15 mm); surface texture of divisions not beaded (under dissecting microscope) ..... ***E. vivipara***
1 Each culm producing a single whorl of proliferations.
  3 Upper portion of sheath firm, the edge closely red-dotted; sheath tip < 1 mm long ..... ***E. vivipara***
  3 Upper portion of sheath thin and scarious, the edge not differently colored; sheath tip 1-2 mm long; plants usually more filiform and capillary than *E. vivipara*.
    4 Spikelet proliferations distichous; lowest scale much shorter than the others ..... ***E. baldwinii***
    4 Spikelet proliferations polystichous or spirally disposed; lowest scale longer than others .....

.....***E. brittonii*** or ***E. microcarpa***

Key B – spikerushes with the spike about as thick as the culm (subgenus *Limnochloa*)

1 Culm transversely nodose-septate (appearing jointed), about 5-9.5 mm in diameter.
  2 Achene with longitudinal rows of enlarged linear cells separated by obscure longitudinal lines; perianth bristles narrow and weak, rudimentary to equaling achene; [widespread in our area].....***E. equisetoides***
  2 Achene with longitudinal rows of enlarged rectangular cells separated by distinct longitudinal lines; perianth bristles broad and stout, exceeding achene; [of Panhandle FL].....***[E. interstincta]***
1 Culm not transversely nodose-septate, 1-5.5 mm in diameter.
  3 Spike 3-5 mm in diameter, to 5 cm long, rounded to obtuse at the tip, densely flowered, the flowers (scales) 50-100 per spike, arranged in obvious spiral rows; culm 2-5 mm in diameter; [of estuarine and riverine marshes, or brackish interdune swale ponds on barrier islands].
    4 Culms 3-5 mm in diameter, live culms terete when fresh; tubercle base confluent with the summit of the achene.....***E. cellulosa***
    4 Culms 2-4 mm in diameter, sharply 3-4-angled when fresh; tubercle base distinctly constricted, forming a "waist".....***E. quadrangulata***
  3 Spike 1-2 mm in diamater, to 2.5 cm long, sharply pointed at the tip, loosely flowered, the flowers (scales) 10-25, few enough that the spiral arrangement is not readily apparent; culm 0.5-1.5 (-2) mm in diameter; [of limesink (doline) ponds and Carolina bay lakes of the mainland].
    5 Achene body 0.8-1.5 mm long; scales mostly ca. 3.5 mm long; culms terete when fresh.....***E. elongata***
    5 Achene body 1.5-2.5 mm long; scales mostly ca. 5 mm long; culms 3-angled when fresh .....***E. robbinsii***

Key C – spikerushes with achenes with several distinct longitudinal ribs with very narrow horizontal cells between

1 Culms about 0.5 mm thick, firm, not wrinkling in drying; spikes 3-6 mm long; [widespread].....***E. acicularis***
1 Culms 0.6-1.0 mm thick, becoming wrinkled in drying; spikes 2-4 mm long; [of the Coastal Plain, known from Virginia Beach in 1934].....***E. radicans***

Key D – spikerushes with achenes lenticular or biconvex and styles 2-branched

1 Apex of sheath thin, membranous, hyaline, often with a torn edge.
  2 Achenes reddish to purplish-black to black, (0.3-) 0.5-0.6 mm wide; bristles shorter than to equaling the tubercle .....***E. flavescens*** *var.* ***flavescens***
  2 Achenes olive-green to brown to black, (0.4-) 0.7 (-0.8) mm wide; bristles exceeding the tubercle .....***E. olivacea*** *var.* ***olivacea***
1 Apex of sheath firm, somewhat thickened, opaque, with a definite edge.
  3 Rhizomatous perennials growing from thick horizontal rhizomes.
    4 Basal (sterile) scales 2-3, the lowest not encircling the base of the spike; [of the Mountains, rarely the Piedmont].....***E. palustris***
    4 Basal (sterile) scale solitary and spathiform, encircling the base of the spike; [of either the Mountains, upper Piedmont, or outer Coastal Plain].
      5 Achenes prominently reticulate-pitted; [of the outer Coastal Plain]..... ***E. fallax {ambigens* phase*}***
      5 Achenes smooth to faintly reticulate; [of the Mountains, rarely Piedmont, or outer Coastal Plain].
        6 Culms slender to filiform; scales obtuse, 30-40 per spike; [of basic soils, of the Mountains and rarely Piedmont] .....***E. erythropoda***
        6 Culms thicker, somewhat inflated; scales acute, 5-30 per spike; [of brackish habitats of the outer Coastal Plain] .....***E. halophila***
  3 Tufted or cespitose annuals without thick horizontal rhizomes.
    7 Tubercle nearly or actually as broad as the achene, and appearing confluent with it, broader than high.
      8 Tubercle flat-deltoid, 1/4 as high as the the achene; bristles shorter than the achene body; [plants of clay soils only].....***E. engelmannii***
      8 Tubercle short-conic, 1/3-1/2 as high as the achene; bristles much exceeding the tubercle; [plants of a variety of soils].....***E. obtusa***
    7 Tubercle < 2/3 as broad as the achene, conic, taller than broad.
      9 Achene body pale brown, about 1 mm long.....***[E. ovata]***
      9 Achene body black, 0.5-1.0 mm long.
        10 Spikes lance-ovoid to subcylindric; achene body -.5-0.6 mm long .....***E. atropurpurea***
        10 Spikes ovoid to subglobose; achene body 0.7-1.0 mm long.....***E. geniculata***

Key E – spikerushes with achenes trigonous or nearly terete and styles 3-branched

1 Achenes roughly and coarsely honeycomb-reticulate; plants usually forming dense, broad tussocks.
2 Tubercle much narrower than the achene; culms 'lazy', often reclining, distinctly 3-angled, twisted ..... ***E. tortilis***
2 Tubercle as broad or broader than the achene; culms ascending to erect, subterete, not twisted ..... ***E. tuberculosa***
1 Achenes smooth to finely honeycomb-reticulate.
3 Tubercle confluent with the achene summit, not constricted at the base.
4 Achenes bicolored, body black, tubercle whitish, depressed; [plant of freshwater ponds and Carolina bays] ..... ***E. melanocarpa***
4 Achenes unicolored, body and tubercle light brown or olive brown; [plants of brackish to saline marshes].
5 Plants diminutive, culms slender, rounded, 1-7 cm long, not arching and rooting ..... ***E. parvula***
5 Plants robust, culms broad, flattened, 20-80 (or more) long, at least some arching and rooting at tips..... ***E. rostellata***
3 Tubercle not confluent with the achene summit, constricted at the base.
6 Achenes with prominenet keel-like angles or ribs..... ***E. tricostata***
6 Achenes with rounded angles.
7 Scales 2-ranked; spikes usually 2-4-flowered ..... ***E. baldwinii***
7 Scales spirally imbricate; spikes many-flowered.
8 Achenes white or very pale gray.
9 Bristles present.
10 Tubercle depressed-deltoid; scales rounded, appressed..... ***E. brittonii***
10 Tubercle conic or deltoid; scales acute to attenuate, the tips free ..... ***E. microcarpa***
9 Bristles none.
11 Sheath base pinkish to straw-colored; spikes lane-ovate to oblong, 1.5-5 mm long..... ***E. brittonii***
11 Sheath base purple-red; spikes ovoid, 2-3 mm long; [plant very rare, Santee Canal, SC, late 1800's] ..... ***E. nigrescens***
8 Achenes yellowish, brown, or olive.
12 Horizontal rhizomes absent.
13 Achene body 1.2-1.5 mm long; tubercle slender-conic with narrow base; [of basic soils inland] ..... ***E. intermedia***
13 Achene body 0.6-0.8 mm long; tubercle braod-conic with wide base; [of the Coastal Plain] ..... ***E. vivipara***
12 Horizontal rhizomes present.
14 Achenes not honeycomb-reticulate.
15 Bristles present; culms rounded; [of coastal, brackish soils] ..... ***E. albida***
15 Bristles absent; culms strongly flattened; [of inland basic soils] ..... ***E. compressa***
14 Achenes honeycomb-reticulate.
16 Achenes 1.2-1.7 mm long, at maturity normally with bristles ..... ***E. fallax {fallax* phase*}***
16 Achenes 0.7-1.2 mm long, with or without bristles.
17 Mature achenes with bristles; achenes yellow or brown; culms 0.6-1.0 mm thick; [rare, on outer Coastal Plain of NC and SC] ..... ***E. montevidensis***
17 Mature achenes without bristles (present when immature, but drop off); achenes olive (yellow in *E. elliptica*); culms slender-wiry, 0.2-0.4 mm wide (0.4-0.8 in *E. tenuis* var. *pseudoptera*); [collectively widespread].
18 Culms 6-8-angled; mature achenes yellow to orange, with prominent transverse bands..... ***E. elliptica***
18 Culms 4 (-5) angled; mature achenes olive, without transverse bands.
19 Culms 0.4-0.8 mm wide, prominently wing-angled; tubercle depressed ..... ***E. tenuis* var. *pseodoptera***
19 Culms 0.2-0.4 mm wide, angles not wing-like; tubercle broadly conic or depressed.
20 Tubercle broadly conic, about 1/4-1/5 as high as the achene body ..... ***E. tenuis* var. *tenuis***
20 Tubercle depressed, about 1/8 as high as the achene body..... ***E. tenuis* var. *verrucosa***

Eleocharis acicularis (Linnaeus) Roemer & J.A. Schultes. Cp, Pd (GA, NC, SC, VA), Mt (NC, VA): marshes, ditches; uncommon. July-September. Greenland, Newfoundland, Nunavut, and AK south to GA, TX, CA; Mexico, Central America, n. South America, Eurasia. [= RAB, C, FNA, G, GW, K, S; > *E. acicularis* var. *acicularis* – F]

Eleocharis albida Torrey, White Spikerush. Cp (GA, NC, SC, VA): brackish pools; uncommon (GA Special Concern, VA Watch List). July-September. MD south to FL, west to TX and Mexico. [= RAB, C, F, FNA, G, GW, K, S]

Eleocharis atropurpurea (Retz.) J. & K. Presl. Cp (GA, NC, SC, VA*): clay-based Carolina bays, other pineland ponds, disturbed wetlands; rare (GA Special Concern, NC Watch List). Widely scattered in North America; Mexico, West Indies, Central America, South America, Asia, Africa. Reported for South Carolina by Hill & Horn (1997). [= C, F, FNA, G, GW, K, S]

Eleocharis baldwinii (Torrey) Chapman, Baldwin Spikerush. Cp (GA, NC, SC, VA), Pd (GA): bogs, pools, acid shores; uncommon (VA Rare). July-September. VA south to FL, west to AR and TX. [= RAB, C, FNA, GW, K; > *E. capillacea* Kunth – S, misapplied; > *E. prolifera* Torrey – S; > *E. baldwinii* – S]

Eleocharis brittonii Svenson ex Small. Cp (GA, NC, SC): bogs, pine savannas; common. NC south to FL, west to TX, north in the interior to TN and MO. [= F, FNA, K, S; < *E. microcarpa* Torrey – RAB, C, G, GW]

Eleocharis cellulosa Torrey. Cp (GA, NC, SC): fresh to brackish interdune swale ponds on barrier islands; rare (NC Rare). July-September. E. NC south to s. FL, west to TX and Mexico; also in the West Indies, Bermuda, and Central America (Nicaragua). See Gaddy & Rayner (1980) for the report of this species in SC. [= RAB, FNA, GW, K, S]

Eleocharis compressa Sullivant *var. **compressa***, Flattened Spikerush. Mt (GA, VA), Pd (VA): limestone glades and barrens; rare (GA Special Concern, VA Rare). Québec, MN, SD, and CO south to VA, nw. GA, AL, MS, AR, and KS. Var. *acutisquamata* (Buckley) S.G. Smith is midwestern. See Brown & Marcus (1998). In nw. GA (Jones & Coile 1988). [= F, FNA; < *E. compressa* – C, G, GW, K; *E. elliptica* – Harvill, misapplied]

Eleocharis confervoides (Poiret) G. Tucker. Cp (GA): submersed in lakes and ponds; rare. GA and FL; West Indies; Central and South America; Asia; Africa; n. Australia. This taxon, often segregated into the monotypic genus *Websteria*, is widely distributed in tropical and subtropical regions of both hemispheres. Its retention in *Eleocharis* is supported by a molecular phylogenetic study (Roalson & Friar 2000). [= *Websteria confervoides* (Poiret) S. Hooper – FNA, GW, K; = *Websteria submersa* (C. Wright) Britton – S; = *Scirpus confervoides* Poiret]

Eleocharis elongata Chapman. Cp (GA, NC): quiet waters of limesink (doline) ponds; rare (NC Rare). July-August. Se. NC south to FL, west to s. AL, s. MS, and TX (Sorrie & Leonard 1999); Jamaica, Mexico, Central America, South America. [= FNA, GW, K, S]

Eleocharis engelmannii Steudel, Engelmann Spikerush. Cp (NC, SC, VA), Pd (GA, NC, VA), Mt (VA): freshwater shores, marshes, disturbed wet places; (NC Watch List). July-September. MA, Ontario, and British Clumbia south to GA, TX, and CA. [= RAB, F, FNA, G, K, S]

Eleocharis equisetoides (Elliott) Torrey, Horsetail Spikerush. Cp (GA, NC, SC, VA): quiet waters of limesink (doline) ponds, natural lakes, borrow pits, ditches, artificial millponds; uncommon (NC Watch List, VA Rare). June-September. MA south to c. peninsular FL, west to se. TX; also near the Great Lakes from NY west to MI and MO. [= RAB, C, F, FNA, G, GW, K; < *E. equisetoides* – S]

Eleocharis erythropoda Steudel, Bald Spikerush. Mt (GA, NC, VA), Cp (NC, VA), Pd (VA): streambanks, marshes; rare (GA Special Concern, NC Watch List). July-September. Nova Scotia and AK south to NC, MS, TX, AZ, and OR. [= RAB, FNA, GW, K; < *E. palustris* – C; > *E. calva* Torrey – F, G, S, invalid name]

Eleocharis fallax Weatherby. Cp (GA, NC, SC, VA): fresh to brackish tidal marshes; rare (GA Special Concern). July-September. MA south to FL, west to TX. [= RAB, C, GW, K; > *E. fallax* – F, FNA, G; > *E. ambigens* Fernald – F, FNA, G]

Eleocharis flavescens (Poiret) Urban *var. **flavescens***. Cp (GA, NC?, SC?, VA): Coastal Plain ponds, pools; rare. June-September. VA (?) south to FL, west to TX; also scattered in the Rocky Mountain states; West Indies; South America. [= K; < *E. flavescens* var. *flavescens* – C, FNA, G; < *E. flavescens* – RAB, F, GW]

Eleocharis geniculata (Linnaeus) Roemer & J.A. Schultes. Cp (SC), (GA?, NC): marshes; rare. July. Widespread but scattered across much of the United States; West Indies, Central America, South America, Asia, Africa. [= FNA, F, G, GW, K; > *E. caribaea* (Rottböll) S.F.Blake – RAB, C, S]

Eleocharis halophila (Fernald & Brackett) Fernald. Cp (NC, VA): brackish marshes; rare (NC Threatened, VA Rare). July. Newfoundland to NC, along the coast. [= RAB, F, G, K; < *E. palustris* – C; < *E. uniglumis* (Link) Schultes – FNA; = *E. uniglumis* var. *halophila* Fernald & Brackett]

Eleocharis intermedia J.A. Schultes, Matted Spikerush. Mt (VA): muddy calcareous seepage areas; rare (VA Rare). Nova Scotia west to MN, south to VA, TN, and IL. The fruiting culms are of widely different lengths, the lowermost sprawling and much shorter than the longer. [= C, F, FNA, G, K]

Eleocharis melanocarpa Torrey, Black-fruited Spikerush. Cp (GA, NC, SC, VA), Mt (VA): Coastal Plain ponds, cypress meadows, sinkhole ponds in the Shenandoah Valley; uncommon (NC Watch List, VA Rare). July-September. MA south to FL, west to s. MS; disjunct in e. TX, s. MI, and n. IN (Sorrie & Leonard 1999). [= RAB, C, F, FNA, G, GW, K, S]

Eleocharis microcarpa Torrey *var. **filiculmis*** Torrey. Cp (NC, SC, VA): bogs, wet pine savannas; common. June-September. MA and MI south to FL west to TX. [= F, FNA; < *E. microcarpa* – RAB, C, G, GW, K; = *E. torreyana* Boeckeler – S]

Eleocharis microcarpa Torrey *var. **microcarpa***. Cp (SC): wet pine savannas, Coastal Plain bogs; rare. June-September. SC south to FL, west to LA; West Indies. [= F, FNA; < *E. microcarpa* – RAB, C, G, GW, K; = *E. microcarpa* – S S]

Eleocharis montevidensis Kunth, Sand Spikerush. Cp (GA, NC, SC): maritime wet grasslands; rare (GA Special Concern, NC Rare). July-September. E. NC south to FL, west to TX and CA; Mexico, South America. Reported for SC by Nelson & Kelly (1997). [= RAB, FNA, GW, K]

Eleocharis nigrescens (Nees) Steudel. Cp (SC): pond margins, flatwoods; rare. SC to FL; West Indies, Mexico; South America; Africa. [= FNA, GW, K; *? E. setifolia* (A. Richard) Raynal; < *E. microcarpa* – RAB; *? E. carolina* Small – S]

Eleocharis obtusa (Willdenow) J.A. Schultes. Cp, Pd, Mt (GA, NC, SC, VA): ditches, marshes, disturbed wet areas; common. June-October. Nova Scotia west to British Columbia, south to FL, TX, and CA. [= FNA, G, GW, K, S; < *E. ovata* – RAB, C; > *E. obtusa* var. *obtusa* – F; > *E. obtusa* var. *ellipsoidalis* Fernald – F; > *E. obtusa* var. *jejuna* Fernald – F]

Eleocharis olivacea Torrey *var*. ***olivacea***. Cp (GA, NC, SC, VA): Coastal Plain ponds, pools; uncommon. June-September. Nova Scotia west to MN, south to FL and TX. [= K; < *E. flavescens* – RAB; < *E. flavescens* (Poiret) Urban var. *olivacea* (Torrey) Gleason – C, FNA, G; < *E. olivacea* – F, GW, S; ? *E. flaccida* (Reichenbach) Urban – S]

Eleocharis palustris (Linnaeus) Roemer & J.A. Schultes, Small's Spikerush. Mt (NC), Pd, Cp (VA), {SC}: marshes; rare (NC Watch List, VA Watch List). July. Labrador west to AK, south to FL, TX, CA, and Mexico; Eurasia. As discussed by Smith et al. in FNA (2002b), variable in geographically correlated ways and probably warranting recognition of varieties or segregate species. *E. smallii* is sometimes separated as the eastern North American member of the north temperate *E. palustris* complex. [= FNA, G, K; < *E. palustris* – RAB, C; > *E. smallii* Britton – F; > *E. palustris* var. *palustris* – F; > *E. palustris* var. *major* Sonder – F]

Eleocharis parvula (Roemer & J.A. Schultes) Link ex Bluff, Nees, & Schauer, Little-spike Spikerush. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (VA): tidal brackish and freshwater marshes, shallow waters of managed impoundments; rare (NC Watch List). July-September. Nova Scotia, Newfoundland, and MI south to FL and LA; British Columbia south to CA; Mexico, Central America, South America, Eurasia, Africa. [= RAB, FNA, G, GW, K; = *E. parvula* var. *parvula* – C, F]

Eleocharis quadrangulata (Michaux) Roemer & J.A. Schultes. Cp, Mt, Pd (GA, NC, SC, VA): pools, marshes; uncommon. June-September. MA west to Ontario and MI, south to n. FL and TX. [= RAB, C, FNA, GW, K, S; > *E. quadrangulata* var. *quadrangulata* – F, G; > *E. quadrangulata* var. *crassior* Fernald – F, G]

Eleocharis radicans (A. Dietrich) Kunth, Rooting Spikerush. Cp (VA): {habitat}; rare (VA Rare). Widely scattered in North America; n. Mexico, West Indies, Central America, South America. [= C, F, FNA, G, GW, K]

Eleocharis robbinsii Oakes, Robbins Spikerush. Cp (GA, NC, SC, VA), Mt (VA): quiet waters of limesink (doline) ponds, natural lakes; rare (NC Rare, VA Rare). July-August. Nova Scotia and New Brunswick west to Ontario, south to s. MS (Sorrie & Leonard 1999); also near the Great Lakes, from NY west to IN, WI, and MN. [= RAB, C, F, FNA, G, GW, K, S]

Eleocharis rostellata (Torrey) Torrey, Beaked Spikerush. Cp (NC, VA), {GA?, SC}: brackish and freshwater tidal marshes; rare (NC Rare, VA Watch List). July-September. ME, Ontario, and British Columbia south to FL, TX, CA and Mexico; West Indies. [= RAB, C, F, FNA, G, GW, K]

Eleocharis tenuis (Willdenow) J.A. Schultes *var*. ***pseudoptera*** (Weatherby ex Svenson) Svenson. {NC, VA}: bogs; rare. June-September. Nova Scotia, Québec and IN south to NC, GA, and LA. [= C, F, FNA, G, K; < *E. tenuis* – RAB; = *E. elliptica* Kunth var. *pseudoptera* (Weatherby ex Svenson) L. Harms; < *E. capitata* (Linnaeus) R. Brown – S]

Eleocharis tenuis (Willdenow) J.A. Schultes *var*. ***tenuis***. {GA, NC, SC, VA}: bogs; uncommon. June-September. Nova Scotia and Québec south to SC and LA. [= C, F, FNA, G, K; < *E. tenuis* – RAB; < *E. capitata* (Linnaeus) R. Brown – S]

Eleocharis tenuis (Willdenow) J.A. Schultes *var*. ***verrucosa*** (Svenson) Svenson. Cp, Pd (GA, SC, VA): bogs; uncommon, rare in Piedmont (GA Special Concern, VA Watch List). June-September. PA, WI, and SD south to GA, LA, TX. [= C, F, FNA, G, K; = *E. verrucosa* (Svenson) E. Harms – GW; < *E. capitata* (Linnaeus) R. Brown – S]

Eleocharis tortilis (Link) J.A. Schultes, Twisted Spikerush. Cp (GA, NC, SC, VA): wet pine savannas, Coastal Plain seepage bogs, seeps, pocosin ecotones; common. July-September. NJ south to FL, west to TX, inland to TN and AR. [= RAB, C, F, FNA, G, GW, K]

Eleocharis tricostata Torrey, Three-angle Spikerush. Cp (GA, NC, SC, VA), Pd (NC): wet pine savannas, bogs; uncommon (NC Watch List, VA Rare). July-September. MA, NY, and MI south to FL and AL. [= RAB, C, F, FNA, G, GW, K, S]

Eleocharis tuberculosa (Michaux) Roemer & J.A. Schultes. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC, VA): bogs, savannas, ditches; common (rare in Piedmont and Mountains). June-September. Nova Scotia south to FL, west to TX. [= RAB, C, F, FNA, G, GW, K; > *E. simplex* (Elliott) A. Dietrich – S; > *E. tuberculosa* – S]

Eleocharis vivipara Link, Viviparous Spikerush. Cp (GA, NC, SC, VA): Coastal Plain ponds; rare (NC Watch List, VA Rare). July-September. NC south to FL, west to LA. [= RAB, C, F, FNA, GW, K, S; > *E. vivipara* – S; > *E. curtisii* Small]

Eleocharis aestuum Hines ex A. Haines. Freshwater tidal rivers. ME south to DE, PA, and NJ. [= FNA]

Eleocharis bicolor Chapman. GA west to LA; West Indies; Nicaragua. [= FNA, K, S]

Eleocharis bifida S.G. Smith, Cedar Glade Spikerush. Mt (GA): seasonally wet seepage in limestone cedar glades; rare. KY south through TN to nw. GA and n. AL. [= FNA; < *E. compressa* of many earlier authors] {not keyed at this time; synonymy incomplete}

Eleocharis elliptica Kunth. Calcareous prairies, fens, shores. Labrador west to British Columbia, south to PA, NJ, WV, TN, IA, and ID. [= F, FNA, K; = *E. tenuis* (Willdenow) J.A. Schultes var. *borealis* (Svenson) Gleason – C, G]

Eleocharis interstincta (Vahl) Roemer & J.A. Schultes. ponds. AL and FL west interruptedly to OK and TX; Mexico, Central America, e. South America. [= FNA, GW, K; < *E. equisetoides* – S]

Eleocharis lanceolata Fernald. MO and KS south to LA and TX; disjunct in nc. TN. [= FNA, K]

Eleocharis macrostachya Britton. Québec to AK south to AL, MS, TX, CA, and Mexico; South America. [= FNA, K] {not keyed at this time; add to synonymy}

Eleocharis minima Kunth. {GA}. MD, FL, TX; West Indies, Central America, South America, Asia, Australia (FNA). Reported from specimens from sc. GA (Sorrie, pers. comm.). [= FNA, K; *E. uncialis* Chapman – S]

Eleocharis montana (Kunth) Roemer & J.A. Schultes. Cp (GA): {habitat}; rare. Sw. GA west to TX, south to Mexico, Central America, and South America; West Indies. [= FNA, K; > *E. nodulosa* (Roth) Schultes – S; > *E. montana* var. *nodulosa* (Roth) Svenson] {not keyed at this time}

Eleocharis ovata (Roth) Roemer & J.A. Schultes. {VA} Labrador, Ontario, and MN south to NJ, MD, DE, PA, VA, KY, MO, and OK; scattered in w. United States. Reported for VA in FNA; documentation needing verification. [= F, FNA, G, K; < *E. ovata* – C] {keyed}

Eleocharis wolfii (A. Gray) A. Gray ex Britton. Pd (GA): shallow ephemeral pools on granitic flatrocks; rare (GA Special Concern). OH, WI, MN, and ND south to GA, AL, TN, LA, and TX. [= F, FNA, G, K]

subgenus *Eleocharis*

Eriophorum Linnaeus (Cottongrass, Cottonsedge, Bogwool)

A genus of about 20 species, herbs, primarily north temperate, boreal, and arctic. References: Ball & Wujek in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Foliaceous bracts (subtending the head of spikelets) 2 or 3, spreading, the inflorescence therefore appearing terminal.
2 Blade of the uppermost leaf on the stem much shorter than its sheath ..... ***[E. gracile]***
2 Blade of the uppermost leaf on the stem as long as the sheath or longer ..... ***[E. tenellum]***
1 Foliaceous bract (subtending the head of spikelets) solitary, erect, appearing as a continuation of the culm and the inflorescence therefore appearing lateral.
3 Scales (subtending the flower) prominently 3-7-nerved ..... ***E. virginicum***
3 Scales (subtending the flower) 1-nerved ..... ***[E. viridicarinatum]***

Eriophorum virginicum Linnaeus, Tawny Cottongrass. Cp, Mt (GA, NC, SC, VA), Pd (NC, SC, VA): peaty sites, limited in habitat throughout the region, occurring in the Mountains in bogs and fens, in the Piedmont (formerly) in bogs, in the fall-line sandhills in burned-out pocosins, in the Coastal Plain in pocosins, acidic seeps, and peat-burn pools; rare (GA Special Concern, NC Watch List, VA Watch List). July-September. Labrador and Newfoundland west to Ontario and MN, south to se. NC, sw. NC, e. KY; disjunct in se. GA at Okefenokee Swamp. Very variable in size, from 5-15 dm tall, with heads ranging from 1-6 cm in diameter, the larger plants primarily in the Coastal Plain and the smaller in the Mountains. [= RAB, C, F, FNA, G, GW, K, S, W]

Eriophorum angustifolium Honckeny ssp. *scabriusculum* Hultén is erroneously attributed to NC and TN by Kartesz (1999). [= K] {not keyed; synonymy incomplete}

Eriophorum gracile W.D.J. Koch ex Roth, Slender Cottongrass, south to s. PA (Rhoads & Klein 1993), NJ, w. MD (C. Frye, pers comm. 2000), and DE (Kartesz 1999). [= C, FNA; *E. gracile* var. *gracile* – K] {synonymy incomplete}

Eriophorum tenellum Nuttall, Conifer Cottongrass, south to se. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999). [= C, FNA, K] {synonymy incomplete}

Eriophorum vaginatum Linnaeus, south to PA and NJ (Ball & Wujek in FNA 2002b). [= FNA; > *Eriophorum vaginatum* Linnaeus var. *spissum* (Fernald) Boivin – K] {not keyed at this time; synonymy incomplete}

Eriophorum viridicarinatum (Engelmann) Fernald, Darkscale Cottongrass, is seemingly indicated for our area by S; no documentation for this distribution is known. It does range south to e. and w. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999). [= C, FNA, K] {synonymy incomplete}

Fimbristylis Vahl 1806 (Fimbry)

A genus of about 250-300 species, herbs, primarily warm temperate and tropical. References: Kral (1971)=Z; Kral in FNA (2002b); GW; Goetghebeur in Kubitzki (1998b). Key largely adapted from Z.

1 Style branches 3; achene trigonous or terete; plant an annual.
  2 Achene trigonous; spikelets linear-oblong to lanceolate, 3-7 mm long; ligule present, as a line of short, pale hairs ..... ***F. autumnalis***
  2 Achene terete; spikelets subglobose to ovoid, 2-4 mm long; ligule absent ..... ***F. littoralis***
1 Style branches 2; achene lenticular or terete; plant an annual or perennial.
  3 Plants diminutive annuals, the culms 1-6 (-15) cm tall.
    4 Achene cylindrical, 2-4× as long as wide, curved like a tiny banana; inflorescence bracts 1-2 cm long ..... ***F. perpusilla***
    4 Achene obovate, 1-1.5× as long as wide, not curved; inflorescence bracts 4-10 cm long..... ***F. vahlii***
  3 Plants small to large annuals or perennials, the culms (6-) 15-150 cm tall.
    5 Plant a medium-sized to robust perennial, the culms generally 5-15 dm tall, either cespitose, with a hardened base, and deeply set in the substrate, or rhizomatous, the rhizomes either slender or thick
      6 Plant cespitose, lacking rhizomes; bases of leaves hard, leathery, dark brown, deeply set in the substrate, the base of the plant generally 5-15 cm below the ground surface; achene (1.3-) 1.5-2 mm long ..... ***F. castanea***
      6 Plant rhizomatous, the rhizomes either thick and knotty or slender and scaly (rarely with both); bases of leaves often somewhat thickened, hardened, and brownish, the base of the plant not especially deeply set; achene 0.8-1.2 (-1.3) mm long.
        7 Plant a robust perennial to 15 (-20) dm tall, with elongate, slender, scaly, pale-to-reddish rhizomes (excavate carefully); leaves usually flat or keeled, 2-5 mm wide; stem usually flattened and scabrous-edged above; ligule a line of short, pale hairs..... ***F. caroliniana***
        7 Plant a medium-sized perennial to 10 dm tall, rhizomatous, the rhizomes short, thick, and knotty (rarely also with slender rhizomes); leaves usually involute, ca. 1 mm wide; stem usually terete or oval in cross-section, smooth; ligule absent or poorly developed..... ***F. puberula*** *var.* ***puberula***
    5 Plant a small to medium-sized annual or perennial, the culms to 8 dm tall, neither rhizomatous (except *F. brevivaginata*) nor with a hardened base deeply set in the substrate.
      8 Spikelets pale, usually solitary (-3) on the scape (and thus appearing somewhat like an *Eleocharis*)..... ***F. schoenoides***
      8 Spikelets dark, usually in a complex inflorescence.
        9 Face (one side) of the achene with 15 or more longitudinal rows of rounded pits, the achene margin noticeably paler ..... ***F. tomentosa***
        9 Face (one side) of the achene with 13 or fewer longitudinal rows of rectangular pits, the achene margin not noticeably paler.
          10 Plant a perennial; leaves spreading, 2-5 mm wide; achenes lacking warts.
            11 Plant bulbous at base, and also with scale-covered short rhizomes; spikelet scales glabrous or puberulent; [plant a rare native of rock outcrops in GA and AL] ..... ***F. brevivaginata***
            11 Plant neither bulbous nor rhizomatous; spikelet scales glabrous; [plant weedy, probably introduced in North America]..... ***F. dichotoma***
          10 Plant an annual; leaves spreading or ascending, 1-4 mm wide; achenes with or without warts.
            12 Achenes with a few low warts on the edges; primary rays of umbel stiffly spreading (even deflexed), the inflorescence therefore often as broad as long or broader; leaves relatively hard, broad (averaging 2 mm wide), and spreading subdistichously ..... ***F. decipiens***
            12 Achenes lacking warts or with warts scattered over the entire surface; primary rays of umbel spreading or ascending, the inflorescence generally longer than broad; leaves relatively soft ..... ***F. annua***

*? ***Fimbristylis annua*** (Allioni) Roemer & J.A. Schultes. Pd, Cp (GA, NC, SC, VA), Mt (NC, SC, VA): wet, disturbed areas, thin soils of rock outcrops; common, variously interpreted as entirely alien or partly native. July-September. Ranging north to VA and MO. [= C, FNA, G, GW, K, W, Z; < *F. dichotoma* – RAB; *? F. baldwiniana* (J.A. Schultes) Torrey – F, S]

Fimbristylis autumnalis (Linnaeus) Roemer & J.A. Schultes. Cp, Pd, Mt (GA, NC, SC, VA): moist to wet disturbed areas; common. August-October. Throughout e. North America, from ME west to MN and SD and south to s. FL and TX; also widespread in the Old World and New World tropics. [= RAB, C, FNA, G, GW, K, W, Z; > *F. autumnalis* var. *autumnalis* – F; > *F. autumnalis* var. *mucronulata* (Michaux) Fernald – F; > *F. autumnalis* – S; > *F. geminata* (Nees) Kunth – S]

Fimbristylis brevivaginata Kral, Flatrock Fimbry. Pd (GA): pools and seepage over granite; rare (GA Special Concern). Also in the Cumberland Plateau of AL, on sandstone (Kral 1992). See Kral (1992) for details. [= FNA, K]

Fimbristylis caroliniana (Lamarck) Fernald. Cp (GA, NC, SC, VA): brackish or alkaline sands of marsh edges and dune swales, less typically in savannas or pine flatwoods; common (VA Watch List). July-September. NJ south to s. FL and west and south to TX and the Yucatan Peninsula. This species often grows in proximity to *F. castanea*, which, however, occupies the brackish marsh itself. [= C, F, FNA, G, GW, K, Z; < *F. spadicea* (Linnaeus) Vahl – RAB; *? F. harperi* Britton ex Small – S]

Fimbristylis castanea (Michaux) Vahl. Cp (GA, NC, SC, VA): brackish marshes and dune swales; common. July-September. NY (Long Island) south to s. TX and adjacent Mexico, and on the Yucatan peninsula and in the West Indies. Replaced southward (as in the West Indies and Central America by the closely related *F. spadicea* (Linnaeus) Vahl. [= C, F, FNA, G, GW, K, S, Z; < *F. spadicea* (Linnaeus) Vahl – RAB]

*? ***Fimbristylis decipiens*** Kral. Cp (GA, NC), Pd (GA): wet, disturbed areas; rare, possibly introduced. July-September. E. NC south to n. FL and west to e. TX. [= FNA, GW, K, Z]

* ***Fimbristylis dichotoma*** (Linnaeus) Vahl. Cp (GA, NC, SC, VA), Pd (GA): wet, disturbed areas; rare, presumably introduced. July-September. Ranging north to VA. [= FNA, GW, K, Z; < *F. dichotoma* – RAB (also see *F. annua* and *F. tomentosa*); *? F. diphylla* (Retzius) Vahl – S]

* ***Fimbristylis littoralis*** Gaudichaud. Cp, Pd (GA, NC, SC), Mt (NC, SC): disturbed wet ground; common, introduced from Asia. July-September. Kral (1971) suggests that it may have been introduced into se. United States early, in association with rice. In North America, now ranging from Central America and the West Indies north to NC, KY, and AR. The name F. miliacea has been rejected as a nomen ambiguum (Brummitt 2005). [= K; = *F. miliacea* (Linnaeus) Vahl – RAB, C, FNA, GW, S, W, Z, misapplied?]

Fimbristylis perpusilla Harper ex Small & Britton, Harper's Fimbry. Cp (GA, NC, SC, VA): drawdown zones of natural depression ponds or exposed banks of blackwater rivers; rare (GA Endangered, NC Rare, SC Rare, VA Endangered). July-September. The "range" consists of geographically scattered and "irregularly apparent" populations, usually on the drawdown zones of natural ponds or rivers, in the Coastal Plain from DE and e. MD south through e. VA, se. NC, and ne. SC, to sw. GA, and disjunct in the Cumberland Plateau of se. TN, where associated with other Coastal Plain species (Wofford & Jones 1988). See Leonard (1981a, 1981b, 1987) for the first reports of the species in SC and NC. The species characteristically occurs on dry to moist banks exposed in summer by falling water levels, often with other diminutive annuals, such as *Hemicarpha micrantha*, *Oldenlandia uniflora*, *Juncus repens*, *Lindernia dubia*, *Eleocharis baldwinii*, and *Eragrostis hypnoides*. At known locations it does not appear every year; presumably it is present in a seedbank which germinates only under favorable hydrologic (and other?) conditions. [= C, FNA, GW, K, S, Z]

Fimbristylis puberula (Michaux) Vahl *var. **puberula***. Cp (GA, NC, SC, VA), Pd, Mt (NC, SC, VA): savannas, pine flatwoods, bogs, wet meadows or prairie-like areas; common (VA Rare). July-September. Var. *puberula* ranges from Long Island, NY south to s. FL and west to TX, KS, and NE; var. *interior* (Britton) Kral ranges from NE south to TX and west to NM and AZ. [= C, FNA, K, Z; < *F. spadicea* (Linnaeus) Vahl – RAB, W; *? F. drummondii* (Torrey & Hooker) Böckler – F; > *F. puberula* – GW, S; > *F. anomala* Böckler – S]

* ***Fimbristylis schoenoides*** (Retzius) Vahl, an Asian introduction. Cp (GA, NC): disturbed wetlands; uncommon, introduced from Asia. Reported for sw. GA (Jones & Coile 1988) and also occurs in se. GA (B. Sorrie, pers. comm.). Also recently reported for Ocracoke Island, Hyde County (R. LeBlond, pers. comm., 2005). [= FNA, GW, K]

* ***Fimbristylis tomentosa*** Vahl. Cp (GA, NC, SC), Mt, Pd (NC, SC): wet, disturbed areas; uncommon, presumably introduced. July-September. Ranging north to NC, e. TN, and AR. [= FNA, GW, K, Z; < *F. dichotoma* – RAB]

Fimbristylis vahlii (Lamarck) Link. Cp (GA, SC?): on exposed silty or clayey sediments; rare (SC Rare). July. Primarily from MO south to MS and e. TX, but with scattered outliers as far away as NJ, SC (?), IL, and KS; also in western United States, Mexico, Central America. Note that the basis of the SC record is uncertain, and may be based on a misidentification of *F. perpusilla*. [= RAB, C, F, FNA, G, GW, K, S, Z]

Fuirena Rottbøll (Umbrella-sedge)

A genus of about 30 species, herbs, primarily in Africa and America, in tropical and warm temperate regions. References: Kral (1978a)=Z; Kral in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Sheaths of leaves glabrous, the largest leaf blades 0-2 (-5) cm long; plant strongly rhizomatous, the culms usually about 10 cm apart.
  2 Blades of culm leaves <5 cm long; spikelets mostly lance-ovoid, sessile in terminal clusters and also often with additional sessile or peduncled clusters lower on the culm; involucrral bract longer than the spikelets ..... ***F. longa***
  2 Blades of culm leaves very short (< 0.5 cm long); spikelets mostly ovoid, sessile in terminal clusters; subtending involucral bract shorter than the spikelets ..... ***F. scirpoidea***
1 Sheaths of leaves sparsely to densely hirsute, the largest leaf blades 10-15 cm long; plant more-or-less cespitose, annual or perennial, if perennial the rhizomes short and cormlike, the culms usually arising together.
  3 Perianth bristles no longer than the achene stipe (not nearly reaching halfway up the achene body), without barbs (sometimes very finely toothed, the teeth ascending); blades of the perianth scales with a blunt or short-apiculate apex .. .. ***F. breviseta***
  3 Perianth bristles longer than the achene stipe, reaching the middle of or exceeding the achene body, strongly and retrorsely barbed; blades of the perianth scales with an acuminate to awned apex.
    4 Perianth bristles reaching 1/2 to 3/4 the length of the achene body; anthers about 1.0 mm long; blades of the perianth scales mostly acuminate; perennial ..... ***F. squarrosa***
    4 Perianth bristles as long as or exceeding the achene body; anthers about 0.5 mm long; blades of the perianth scales mostly awned; annual ..... ***F. pumila***

Fuirena breviseta (Coville) Coville in Harper, Short-bristled Umbrella-sedge. July-October. Cp (GA, NC, SC, VA): savannas, ditches, other wet habitats; common (VA Rare). A Southeastern Coastal Plain endemic: se. VA south to s. FL and west to e. TX, primarily in the outer Coastal Plain. [= C, F, FNA, G, GW, K, S, Z; < *F. squarrosa* – RAB]

Fuirena longa Chapman, Chapman's Umbrella-sedge. Cp (GA): pond margins; rare, possibly introduced (GA Special Concern). Panhandle FL and sw. GA west to e. TX. Possibly a hybrid derivative of *F. breviseta* and *F. scirpoidea*. [= FNA, GW, K, S, Z]

Fuirena pumila (Torrey) Sprengel, Dwarf Umbrella-sedge. Cp (GA, NC, SC, VA): savannas, ditches, other wet habitats; common. July-October. Primarily a species of the Southeastern Coastal Plain, ranging from se. MA south to s. FL and west to TX, and also disjunct in the lowlands around the Great Lakes (as in n. IN and s. MI). [= RAB, C, F, FNA, G, GW, K, Z; = *F. squarrosa* – S, misapplied]

Fuirena scirpoidea Michaux, Southern Umbrella-sedge. Cp (GA, NC?): natural lakes, pineland depression ponds, wet savannas; rare (GA Special Concern, NC Watch List). July-October. A Southeastern Coastal Plain endemic: se. GA (Jones & Coile 1988) and FL, west to se. TX, also in Cuba and apparently disjunct (or introduced?) in ne. NC and s. IL. Kral's (1978a) report of this species from ne. NC, where disjunct from the main body of the range in the deep South, needs further investigation. [= C, FNA, G, GW, K, S, Z]

Fuirena squarrosa Michaux, Hairy Umbrella-sedge. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): savannas, seepages, ditches, bogs, other wet habitats; common. July-October. NY (Long Island) south to n. FL, west to c. TX, inland to w. NC, w. TN, KY, s. AR, and se. OK, mainly on the Coastal Plain, but less strictly limited to it than our other species. [= C, F, FNA, G, GW, K, W, Z; < *F. squarrosa* – RAB (also see *F. breviseta*); = *F. hispida* Elliott – S]

Hemicarpha Nees & Arnott
(see *Lipocarpha*)

Isolepis R. Brown (Club-rush)

A genus of about 60 species, herbs, subcosmopolitan in distribution. Since *Isolepis* is more closely related to *Cyperus* than to *Scirpus*, in which it has often been included, its separation from *Scirpus* is clearly warranted. The generic delimitation of *Isolepis* in relation to *Ficinia* and *Scirpoides* is uncertain. References: Smith in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Achenes 1.0-1.5 mm long; scales in middle of spikelet 1.8-2.0 mm long, with a short awn..... ***I. carinata***
1 Achenes 0.7-0.9 mm long; scales in middle of spikelet 1.0-1.2 mm long, mucronate ..... ***I. pseudosetacea***

Isolepis carinata Hooker & Arnott ex Torrey. Pd (GA, NC, SC), Cp (NC, VA): moist soils adjacent to granitic flatrocks, moist sandy sites, low fields; rare (VA Watch List). May-June. C. NC, TN, and se. KS south to panhandle FL and c. TX; also in CA. [= FNA, K; = *Scirpus koilolepis* (Steudel) Gleason – RAB, C, F, G, GW; = *Sc. carinatus* (Hooker & Arnott ex Torrey) A. Gray – S (not *S. carinatus* Sm.); = *I. koilolepis* Steudel]

Isolepis pseudosetacea (Daveau) Gandoger. Cp? (GA): moist soils; rare. E. GA west to sw. MO, AR, and c. TX. This species often grows intermixed with ***I. carinata*** and may be more widespread in our area. [= FNA; *? Isolepis molesta* (M.C. Johnston) S.G. Smith – K; *? Scirpus molestus* M.C. Johnston]

Kyllinga Rottbøll (Greenhead Sedge)

A genus of about 60 species, pantropical to warm temperate, especially in Africa. References: Delahoussaye & Thieret (1967)=Z; Tucker (1987)=Y; Tucker (1984)=X; Tucker in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Plant a rhizomatous perennial, mat-forming, the culms arising singly along the rhizome; anthers 0.8-1.1 mm long.
  2 Achene 1.0-1.2 (-1.3) mm long; scale keel denticulate or smooth; stamen 2 (rarely 1); longest inflorescence bract erect. ..... ***K. brevifolia***
  2 Achene 1.5-1.8 mm long; scale keel smooth; stamens 2-3; longest inflorescence bract horizontal to slightly reflexed .... ***K. gracillima***
1 Plant a cespitose annual or perennial, the culms arising clumped; anthers 0.2-0.5 mm long.
  3 Mature achene purple black, with stipe and apiculus contrastingly light in color; achene obovate, 0.7-0.8 (-0.9) mm wide; scale keel denticulate or smooth..... ***K. odorata***
  3 Mature achene uniformly tan or light brown, not bicolored; achene oblong, 0.4-0.6 (-0.7) mm wide; scale keel denticulate (very rarely smooth) ..... ***K. pumila***

Kyllinga brevifolia Rottbøll, Perennial Greenhead Sedge. Pd (GA, NC, SC, VA?): moist soils of fields, ditches, lawns; rare. June-September. Pantropical, north in North America to n. NC, se. OK, and CA. Likely to occur in s. VA. [= FNA, K, S, X, Y; = *Cyperus brevifolius* – RAB, GW, Z; < *Cyperus brevifolius* (Rottbøll) Endlicher & Hasskarl – F, G]

*? ***Kyllinga gracillima*** Miquel, Asiatic Greenhead Sedge. Cp (GA, NC, SC, VA), Pd (NC), Mt (NC, VA): river sand bars, tidal marshes, tidal shores, moist soils of pastures and ditches; rare. See Bryson et al. (1996). *K. gracillima* Miquel (1866) appears to be the oldest valid combination in the genus *Kyllinga*, predating *K. brevifolioides* (Thieret & Delahoussaye) Tucker (1987). Some authors consider this taxon to be introduced from e. Asia; others consider it possibly native. Its distribution in North America is still somewhat obscure (because of confusion with *C. brevifolia*), but it is currently known from scattered locations in NC, SC, VA, CT, PA, MD, TN, AL, GA, NJ, DE, AR, MS, and KY. Reported for South Carolina by Hill & Horn (1997), as *K. brevifolioides*. [= FNA, K; > *Cyperus brevifolioides* Thieret & Delahoussaye – RAB, C, GW, W, Z; < *C. brevifolius* (Rottbøll) Endlicher & Hasskarl – F; > *K. brevifolioides* (Thieret & Delahoussaye) Tucker – Y]

Kyllinga odorata Vahl, Whitehead Sedge. Cp (GA, NC, SC): moist soils of fields, ditches, lawns, shores of ponds and rivers, sand and gravel bars; common. July-September. Pantropical, north in North America to ne. NC and se. AR. Likely to occur in se. VA. [= K, S, X, Y; = *Cyperus sesquiflorus* (Torrey) Mattfeld & Kükenthal ex Kükenthal – RAB, C, GW, Z]

Kyllinga pumila Michaux, Annual Greenhead Sedge. Cp, Pd, Mt (GA, NC, SC, VA): moist soils of fields, ditches, lawns, shores of ponds and rivers; common. July-October. Pantropical, north in North America to e. PA, MO, and e. KS. [= K, S, X, Y; = *Cyperus tenuifolius* (Steudel) Dandy – RAB, C, F, G, GW, W, Z]

Lipocarpha R. Brown

A genus of about 35 species, herbs, pantropical and extending into warm temperate regions. Several recent authors have advocated submerging *Hemicarpha* in *Lipocarpha*, including Tucker (1987). References: Tucker (1987)=Z; Tucker in FNA (2002b); Goetghebeur in Kubitzki (1998b).

1 Spikes 2.5-12 mm long; anther 0.5 mm long; stigmas 3 ..... ***L. maculata***
1 Spikes 2-5 (-8) mm long; anther 0.1-0.25 mm long; stigmas 2.
  2 Scales about as long as the achene, with long awns ..... ***L. aristulata***
  2 Scales reduced, shorter than the achene, awnless ..... ***L. micrantha***

*? ***Lipocarpha aristulata*** (Coville) G. Tucker. Cp (SC): moist ground; rare. Se. SC south to FL, west to the mw. and w. United States; the eastern occurrences may be adventive. [= FNA, K, Z; = *Hemicarpha aristulata* (Coville) Smyth – F, GW; = *H. micrantha* var. *aristulata* Coville – C, G]

Lipocarpha maculata (Michaux) Torrey, American Lipocarpha. Cp (GA, NC, SC, VA): ditches, moist exposed soil; uncommon (VA Rare). July-September. Se. VA south to s. FL, west to AL. [= RAB, C, F, FNA, G, GW, K, S, Z]

Lipocarpha micrantha (Vahl) G. Tucker. Cp (NC, SC, VA), Pd (SC, VA), {GA}: riverbank draw-down zones, other moist sandy areas; rare (SC Rare, NC Rare, VA Rare). July-August. ME west to Ontario and MN, south to s. FL and TX; south into tropical America. [= FNA, K, Z; = *Hemicarpha micrantha* (Vahl) Pax – RAB, F, GW, S; = *H. micrantha* var. *micrantha* – C; = *H. micrantha* var. *minor* (Schrader) Friedland – G]

Oxycaryum Nees

A monotypic genus of tropical and subtropical America and Africa. References: Bruhl in FNA (2002b).

* ***Oxycaryum cubense*** (Poeppig & Kunth) Lye, Cuban Bulrush. Cp (GA): swamps, marshes, ponds, ditches; uncommon, aggressively weedy, probably adventive from the New World tropics. See Bryson et al. (1996). [= FNA, K; = *Scirpus cubensis* Poeppig & Kunth – GW, S] {not keyed at this time}

Rhynchospora Vahl 1805 (Beaksedge, Beakrush)
(by Richard J. LeBlond)

A genus of about 250 species, subcosmopolitan, but concentrated in tropical and warm temperate America. See Thomas (1984) for the reasons for the inclusion of *Dichromena* in *Rhynchospora*. References: Gale (1944)=Z; Kral in FNA (2002b); Kral (1996, 1999); Goetghebeur in Kubitzki (1998b). Distributions given for tropical America are largely derived from Thomas (1992).

Identification notes: measurements and descriptions of the achene are of the achene body only, *not* including the tubercle, unless otherwise indicated.

Key to groups

1 Tubercles 3-23 mm long ..... **Key A**
1 Tubercles < 3 mm long.
  2 Inflorescence bracts several, foliaceous, basally bright white, reflexed to horizontally spreading ..... **Key B**
  2 Inflorescence bracts 0-several, capillary to foliaceous, green throughout (straminous in age), variously oriented.
    3 Bristles present, plumose (at least proximally) ..... **Key C**
    3 Bristles absent, or present and smooth or minutely barbed.
      4 Bristles present, retrorsely barbed (at least distally), or antrorsely barbed and straplike (flattened) ..... **Key D**
      4 Bristles absent, or present and smooth, or antrorsely barbed and filiform.
        5 Achene surface smooth, minutely pitted, or finely striate (not ridged, rugose, or reticulate) ..... **Key E**
        5 Achene surface transversely ridged, rugose, or honeycombed-reticulate (sometimes faintly so) ..... **Key F**

Key A - beaksedges with tubercles 3-23 mm long

1 Spikelets in 1-4 globose clusters; tubercle 3-5 mm long; leaf blades 2-8 mm wide ..... ***Rh. tracyi***
1 Spikelets in > 4 paniculate or corymbose clusters; tubercle 10-23 mm long; leaf blades 6-20 mm wide.
2 Longest bristles shorter than the achene.
3 Achene 5-6 mm long, 2.8-3.3 mm wide ..... ***Rh. corniculata*** var. ***corniculata***
3 Achene 4.4-5.3 mm long, 2.4-2.8 mm wide ..... ***Rh. corniculata*** var. ***interior***
2 Longest bristles longer than or equaling the achene.
4 Plants cespitose; primary clusters with 10-50 (rarely 7 or fewer) densely clustered spikelets; achene (4.5-) 5-6 mm long.
5 Achene 3.0-3.8 mm wide; tubercle base 1.8-2.4 mm wide; [primarily of fresh tidal marshes] .... ***Rh. macrostachya*** var. ***colpophila***
5 Achene 2.6-3.1 mm wide; tubercle base 1.0-1.8 mm wide; [primarily of non-tidal wetlands] .... ***Rh. macrostachya*** var. ***macrostachya***
4 Plants rhizomatous; primary clusters with 1-6 loosely clustered spikelets; achene (3.5-) 4.0-4.8 mm long.
6 Bristles 2-8 mm long, the central bristle longest on one face, shortest or absent on the other..... ***Rh. careyana***
6 Bristles 7-12 mm long, essentially of equal length..... ***Rh. inundata***

Key B - beaksedges with basally-white bracts (White-bracted Sedges)

1 Inflorescence bracts 3-6 (-7); basal bract (1.4-) 2-5 mm wide, the white portion (2.5-) 9-25 mm long, tapering gradually into the green portion; rhizomes slender, straight, (0.6-) 0.7-1.7 (-2.1) mm in diameter; achene 1.0-1.2 mm wide; tubercle broadly truncate on achene ..... ***Rh. colorata***
1 Inflorescence bracts (5-) 6-10; basal bract 5-12 mm wide, the white portion 22-55 mm long, tapering abruptly into the green portion; rhizomes often bent and swollen at the nodes, 1.4-3.8 mm in diameter; achene 1.2-1.5 mm wide; tubercle decurrent on achene ..... ***Rh. latifolia***

Key C - beaksedges with plumose bristles

1 Spikelets 2-4 mm long, borne several to many in clusters, none of the spikelets on slender stalks; achene 1.4-1.8 mm long, 0.9-1.4 mm wide ..... ***Rh. plumosa***
1 Spikelets (4-) 5-8 mm long, borne singly or a few together in loose clusters, some or all spikelets on slender stalks; achene 1.7-2.6 mm long, 1.2-2.0 mm wide.
2 Achene obovoid, 1.7-2.0 mm long, 1.2-1.5 mm wide, the tubercle seated on its summit without a constriction or basal flange; longer bristles < ½ as long as achene ..... ***Rh. breviseta***
2 Achene broadly elliptic, 1.9-2.6 mm long, 1.5-2.0 mm wide, its summit constricted below a collar-like flange at the base of the tubercle; longer bristles three-fourths to exceeding length of achene ..... ***Rh. oligantha***

Key D - beaksedges with bristles retrorsely barbed (at least distally) or antrorsely barbed and straplike (flattened)

1 Bristles 8-25, retrorsely barbed distally, antrorsely barbed proximally; spikelets white, turning tan with age.
2 Spikelets with 2-3 florets; bristles 8-12; achene 1.6-2.1 mm long, 0.9-1.3 mm wide ..... ***Rh. alba***
2 Spikelets with 1 floret; bristles 16-25; achene 2.0-2.4 mm long, 1.3-1.5 mm wide ..... ***Rh. macra***
1 Bristles 6 or fewer, either retrorsely or (rarely) antrorsely barbed their entire length; spikelets variously brown, rufous, or tan (or very rarely white).
3 Spikelets 1-fruited, the solitary achene terminating the axis; clusters 1-7, globose to turbinate.
4 Clusters globose to turbinate; achene (measured from base of bristles) 1.3-1.8 mm long, 0.65-0.95 mm wide; tubercle 0.7-1.6 mm long.
5 Clusters turbinate to hemispheric (rarely subglobose), the lowest spikelets usually spreading-ascending to spreading; larger leaves < 2 mm wide; achene 1.6-1.8 mm long; tubercle 1.0-1.6 mm long .... ***Rh. chalarocephala***
5 Clusters globose to subhemispheric, the lowest spikelets usually reflexed; larger leaves > 2 mm wide; achene 1.3-1.6 mm long; tubercle 0.7-1.2 mm long ..... ***Rh. microcephala***
4 Clusters globose to hemispherical; achene (measured from base of bristles) 1.8-2.6 mm long, 1.1-1.8 mm wide; tubercle 1.4-2.4 mm long.
6 Achene 1.1-1.2 mm wide, 1.8 mm long ..... ***Rh. cephalantha*** var. ***attenuata***
6 Achene 1.2-1.8 mm wide, 2.1-2.6 mm long.
7 Spikelet clusters 1-3 (-4), subglobose to loosely hemispherical, the lateral clusters mostly subterminal .... ***Rh. cephalantha*** var. ***cephalantha***

7 Spikelet clusters 4-7, densely subglobose, the lowest clusters remote ..... ***Rh. cephalantha*** var. ***pleiocephala***

3 Spikelets 1-5 fruited (if 1-fruited, then the axis terminated by a sterile floret); clusters 2-many, ovoid to turbinate (rarely globose).

8 Clusters numerous, usually 20 or more; tubercle 1.3-1.8 mm long; achene 1.1-1.4 mm wide, 1.5-2.0 mm long, the summit narrowly truncate, the faces umbonate, the margin thickened and wire-like; leaves 2.5-7 mm wide..... ***Rh. glomerata*** var. ***glomerata***

8 Clusters 2-8; tubercle 0.4-1.2 mm long; achene 0.6-1.2 mm wide, 1.1-2.0 mm long, the summit more rounded than truncate, the faces lenticular, a wire-like margin narrow or not evident; leaves 0.2-3.5 mm wide.

9 Achene 0.6-0.8 mm wide, 1.1-1.3 mm long; tubercle 0.4-0.6 mm long; bristles more-or-less equaling the achene ..... ***[Rh. knieskernii]***

9 Achene 0.8-1.2 mm wide, 1.3-2.0 mm long; tubercle 0.8-1.6 mm long; bristles more-or-less equaling the tubercle.

10 Inflorescence typically with 1 terminal and 1 lateral cluster, the clusters ovoid, with 1-10 spikelets each; achene 1.8-2.0 mm long, 0.8-1.0 mm wide, 2-3 × as long as wide; leaves 0.2-0.4 mm wide..... ***Rh. capillacea***

10 Inflorescence with 1-6 lateral clusters, the clusters turbinate with usually > 10 spikelets; achene 1.3-1.8 mm long, 0.9-1.2 mm wide, 1.5-2 × as long as wide; leaves 1.5-3.5 mm wide.

11 Scales chestnut brown, the inner with a mucro 0.1-0.2 mm long; longer bristles 0.4 mm shorter than to 0.3 mm longer than the tubercle; achene and tubercle 2.4-2.8 mm long; tubercle 0.9-1.2 mm long; [widespread in our area]..... ***Rh. capitellata***

11 Scales tan, the inner without a mucro, or mucro < 0.05 mm long; longer bristles exceeding tubercle by 0.3-1.0 mm; achene and tubercle 2.0-2.4 mm long; tubercle 0.5-1.1 mm long; [of the Coastal Plain] ..... ***Rh. leptocarpa***

Key E - beaksedges with bristles smooth, or antrorsely barbed and filiform, or absent, the achene surface smooth, minutely pitted, or finely striate

1 Bristles 12 ..... ***Rh. baldwinii***

1 Bristles 6 or fewer.

2 Leaves with a short taper at the tip, blunt to acute, but not long-acuminate; achene surface minutely pitted near the margin.

3 Basal leaves 4-6 mm wide, ciliate, rosulate; scales acuminate, the midrib ciliate; bristles 6, < ½ the length of the achene ..... ***Rh. ciliaris***

3 Largest basal leaves 2.5-3 mm wide, eciliate, not rosulate; scales aristate, the midrib eciliate; bristles 3-4, 1 or more equaling or exceeding the tubercle..... ***Rh. solitaria***

2 Leaves long-acuminate at the tip; achene surface smooth or finely striate.

4 Scales white to pale tan; bristles absent or 1-3 rudimentary.

5 Base of plant not bulb-like, not enclosed in bladeless sheaths; achene 1.0-1.2 mm long, 0.8-1.0 mm wide..... ***Rh. chapmanii***

5 Base of plant blub-like, enclosed in bladeless sheaths; achene 1.4-1.8 mm long, 1.2-1.5 mm wide..... ***Rh. pallida***

4 Scales tan, rufous, or brown; bristles present (if rudimentary, then 4-6).

6 Achene 0.6-1.1 mm wide, pyriform, obovoid, or narrowly elliptic, pale to dark brown but not blackish; tubercle margin setose (bearing bristle-like projections).

7 Achene narrowly elliptic or narrowly obovoid, 1.2-1.5 mm long by 0.6-0.7 mm wide, twice as long as wide; tubercle 0.8-1.2 mm long..... ***[Rh. curtissii]***

7 Achene broadly elliptic to obovoid or pyriform, < 2× as long as wide; tubercle 0.4-1.5 mm long.

8 Leaves 2-4 (-5) mm wide; stipe subtending achene 0.5-1.0 mm long ..... ***Rh. crinipes***

8 Leaves 0.2-1.5 (-2) mm wide; stipe subtending achene < 0.4 mm long.

9 Leaves to 1.5 (-2) mm wide; achene 1.0-1.7 mm long, 0.9-1.1 mm wide; tubercle 0.5-1.5 mm long.

10 Culms solitary to loosely cespitose by slender rhizomes; terminal internode straight; clusters turbinate to ovoid; achene 1.0-1.3 mm long, uniformly medium to dark brown; tubercle 0.7-1.5 mm long; bristles usually of two lengths, some equaling the tubercle, and some equaling or shorter than the achene ..... ***[Rh. fusca]***

10 Culms solitary to cespitose, without slender rhizomes; terminal internode often arched; clusters corymbose to hemispheric; achene 1.3-1.7 mm long, pale to reddish-brown, often translucent centrally, with a distinctly thickened wire-like margin; tubercle 0.5-1.0 mm long; all bristles more-or-less equaling the tubercle ..... ***Rh. harperi***

9 Leaves filiform, < 1 mm wide; achene 0.8-1.3 mm long, 0.6-0.9 mm wide; tubercle 0.4-0.8 mm long.

11 Culms without rhizomes; spikelets 2.5-4 mm long; achene translucent centrally; tubercle 0.4-0.6 mm long ..... ***Rh. filifolia***
11 Culms with delicate rhizomes; spikelets 5-7 mm long; achene uniformly opaque; tubercle 0.6-0.8 mm long ..... ***Rh. pleiantha***

6 Achene > 1 mm wide (except 0.8 mm wide in *Rh. fernaldii* with a blackish surface), suborbicular or broadly ellipsoid; tubercle margin smooth or roughened but not setose.
12 Achene 0.8 mm wide, 0.9-1.0 mm long, blackish ..... ***Rh. fernaldii***
12 Achene 1.1-1.7 mm wide, 1.3-2.0 mm long, brown to dark brown.
13 Tubercle 1.0-2.6 mm long, long-attenuate to subulate..... ***Rh. gracilenta***
13 Tubercle 0.2-0.8 mm long, triangular to triangular-attenuate or with a strap-like beak.
14 Bristles rudimentary to ½ as along as achene body.
15 Larger leaves 2-4 mm wide; mature culms to 13 dm long; floral fascicles (1-) 2-4; tubercle 0.4-0.7 mm long..... ***Rh. fascicularis var. fascicularis***
15 Larger leaves to 1 mm wide; mature culms to 4.5 dm long; floral fascicles 1 (-2); tubercle 0.2-0.5 mm long ..... ***Rh. debilis***
14 Bristles > ½ as long to exceeding achene body.
16 Basal leaves filiform to (rarely)1.3 mm wide, the longer approaching length of culm; tubercle narrowed above the base into a strap-like beak..... ***Rh. wrightiana***
16 Basal leaves 1.3-4 mm wide, all much shorter than the culm; tubercle triangular to triangular-attenuate.
17 Longer bristles equaling to exceeding the achene body; achene body elliptic, 1.1-1.3 mm wide; tubercle triangular-attenuate; larger basal leaves 1.3-2.5 mm wide .... ***Rh. fascicularis*** *var*. ***distans***
17 Longer bristles < ½ as long to rarely exceeding achene body; achene suborbicular, 1.2-1.5 mm wide; tubercle triangular; larger basal leaves 2-4 mm wide..... ..... ***Rh. fascicularis*** *var*. ***fascicularis***

Key F – beaksedges with bristles smooth, or antrorsely barbed and filiform, or absent, the achene surface transversely ridged, rugose, or honeycombed-reticulate

1 Bristles absent (or apparently so at 10×); achene 0.5-0.7 mm wide; tubercle 0.1-0.2 mm long, skull-cap like.
2 Achene including tubercle 1.0-1.2 mm long, the achene surface evidently reticulate and obscurely transversely ridged, the body ellipsoid; bristles present, white, barely visible at 20×, the longest shorter than the achene body ..... ***Rh. thornei***
2 Achene including tubercle 0.6-0.9 mm long, the body obovoid; bristles absent.
3 Achene surface smooth, faintly reticulate, not transversely ridged..... ***Rh. divergens***
3 Achene surface rough, distinctly transversely ridge..... ***Rh. pusilla***
1 Bristles present or absent; if absent, then the achene > 1 mm long or > 0.7 mm wide, and tubercle triangular to subulate.
4 Culms and leaves filiform.
5 Achene including tubercle 1.0-1.2 mm long; tubercle minute, skullcap-like ..... ***Rh. thornei***
5 Achene including tubercle 1.5-2.9 mm long; tubercle triangular to triangular-acuminate.
6 Tubercle 0.3-0.7 mm long; bristles shorter than the achene..... ***Rh. rariflora***
6 Tubercle 0.8-1.4 mm long; bristles subequaling to exceeding the tubercle..... ***Rh. stenophylla***
4 Culms stouter; leaves wider, not filiform.
7 Achene faces flat or concave; when one face is concave, the opposite face is sometimes slightly convex (slightly biconvex *Rh. decurrens* and *Rh. microcarpa* are keyed here for convenience).
8 Achene at least twice as long as wide, elliptic-oblong; tubercle subulate, 0.8-1.2 mm long..... ***Rh. inexpansa***
8 Achene < twice as long as wide, obovate; tubercle triangular, 0.2-0.9 mm long.
9 Longer bristles exceeding the achene body.
10 Achene ±2.2 mm long, ±1.8 mm wide; tubercle ±0.9 mm long ..... ***Rh. punctata***
10 Achene 0.8-1.2 mm long, 0.7-1.2 mm wide; tubercle 0.2-0.5 mm long.
11 Larger leaves (3-) 4-6 mm wide; bristles exceeding tubercle; achene faces flattened .... ***Rh. elliottii***
11 Larger leaves 1-3 (-4) mm wide, bristles half as long as achene to equaling tubercle; achene faces slightly convex ..... ***Rh. microcarpa***
9 Longer bristles shorter than to equaling achene body, or absent.
12 Larger leaves 4-5 mm wide; achene 1.4-1.6 mm wide; tubercle 0.6-0.8 mm long, abruptly rising from a flaring basal collar..... ***Rh. compressa***
12 Larger leaves 1-3 (-4) mm wide; achene 0.7-1.3 mm wide; tubercle 0.15-0.5 mm long, without a flaring basal collar.
13 Bristles rudimentary or absent..... ***Rh. perplexa***
13 Bristles one-half as long to equaling achene.
14 Achene 1.3-1.8 mm long, 0.9-1.2 mm wide, the faces flat with 10-12 transverse ridges.....

.....***Rh. torreyana***

14 Achene 0.8-1.4 mm long, 0.7-1.2 mm wide, the faces slightly biconvex with 6-12 transverse ridges.

15 Clusters elongate; achene 1.0-1.4 mm long, 0.8-1.0 mm wide, narrowly obovate to elliptic, averaging 8-12 transverse ridges; most tubercle bases convexly seated on the achene summit and somewhat decurrent along the achene margins, the tubercle surface often whitish-waxy..... ***Rh. decurrens***

15 Clusters usually compact; achene 0.8-1.2 mm long, 0.7-1.2 mm wide, suborbicular to elliptic, averaging 6-7 transverse ridges; most tubercle bases flat across the achene summit, not decurrent, the tubercle surface usually dark, not waxy ....***Rh. microcarpa***

7 Achenes biconvex or tumid.

16 Achene dark reddish-brown to black, 1.4-4.2 mm long, 1.2-3.6 mm wide, the summit with a thickened bony to crustaceous rim surrounding the base of the tubercle.

17 Achene lenticular and transversely ridge, ±1.4 mm long, ±1.2 mm wide..... ***Rh. culixa***

17 Achene tumid, lightly pitted or cancellate in a honeycomb pattern, 1.5-4.2 mm long, 1.4-3.6 mm wide.

18 Leaves 4-8 mm wide; achene 3.0-4.2 mm long, 3.0-3.6 mm wide .....***Rh. megalocarpa***

18 Leaves 2-4 mm wide; achene < 2.7 mm long and < 2.5 mm wide.

19 Achene 2.0-2.7 mm long, 2.0-2.5 mm wide ..... ***Rh. grayi***

19 Achene 1.5-1.8 mm long, 1.4-1.7 mm wide ..... ***Rh. harveyi***

16 Achene amber, reddish-brown, or black, 0.7-1.8 mm long, 0.7-1.5 mm wide, the summit without a textured rim surrounding the base of the tubercle (if the base of the tubercle is rim-like, then it is distinguished from the summit of the achene by a constriction or articulation).

20 Bristles absent; achene 0.7-1.0 mm long.

21 Scales broadly ovate, obtuse to sub-acute; achene strongly transversely ridged; tubercle depressed, broader than long; style not persistent.....***Rh. nitens***

21 Scales lance-ovate, acute; achene weakly transversely ridged; tubercle triangular-lanceolate, as long as broad or longer; style usually persistent..... ***Rh. scirpoides***

20 Bristles present (occasionally detached in *Rh. decurrens* and *Rh. miliacea* with achenes 1.0-1.4 mm long).

22 Bristles not exceeding the achene body.

23 Cluster branches stiff; bristles 3/4 or less as long as the achene; achene tumid above, somewhat compressed below, 1.0-1.8 mm long, 1.0-1.6 mm wide; tubercle conical-attenuate, the edges somewhat concave.

24 Larger leaves 3-4.5 mm wide; achene 1.3-1.8 mm long, 1.3-1.6 mm wide ....***Rh. recognita***

24 Larger leaves 1.5-2.5 mm wide; achene 1.0-1.4 mm long and wide.

25 Longer bristles 1/3-1/2 the length of the achene; achene surface alveoli longitudinally narrow (typically 0.02-0.05 mm wide between the longitudinal walls), the latitudinal walls raised into horizontal ridges; tubercle base 0.6-0.7 mm wide..... ..... ***Rh. globularis*** *var*. ***globularis***

25 Longer bristles 2/3-3/4 the length of the achene; achene surface alveoli nearly as wide as long (typically 0.05-0.1 mm wide between the longitudinal walls), the latitudinal walls obscurely or not at all raised into horizontal ridges; tubercle base 0.7-0.9 mm wide.....***Rh. globularis*** *var*. ***pinetorum***

23 Cluster branches flexuous; bristles one-half as long to equaling the achene (or longer in *Rh. microcarpa*); achene slightly biconvex, 0.8-1.4 mm long, 0.7-1.0 (-1.2) mm wide.

26 Clusters elongate; achene narrowly obovate to elliptic, averaging 8-12 transversed ridges; most tubercle bases convexly seated on the achene summit and somewhat decurrent along the achene margins, the tubercle surface often whitish-waxy..... ***Rh. decurrens***

26 Clusters usually compact; achene suborbicular to elliptic, averaging 6-7 transverse ridges; most tubercle bases flat across the achene summit, not decurrent, the tubercle surface usually dark, not waxy.....***Rh. microcarpa***

22 Bristles equaling or longer than the tubercle.

27 Primary branches of the inflorescence spreading at right angles from the culm, each spikelet or small cluster on slender spreading or reflexed stalks.....***Rh. miliacea***

27 Primary branches of the inflorescence ascending.

28 Spikelets 6-9 mm long.....***Rh. odorata***

28 Spikelets < 5 mm long.

29 Tubercle 0.2-0.5 mm long, the edges smooth.

30 Spikelets 3.5-4 mm long; bristles exceeding the tubercle; achene 1.3-1.5 mm long, 1.2-1.3 mm wide.....***Rh. saxicola***

30 Spikelets 2.5-3 mm long; longer bristles about equaling the tubercle; achene 0.8-1.2 mm long, 0.7-1.2 mm wide.

31 Inflorescence occupying the upper 1/4-1/2 of the culm, the lowest 2-4 nodes barren.....***Rh. microcarpa***
31 Inflorescence occupying 2/3-3/4 of the length of the culm, the lowest lateral panicle at the first or second node above the base.....***Rh. sulcata***
29 Tubercle 0.4-0.8 mm long, the edges setose or uneven with waxy or crusty irregular protuberances.
32 Achene obovate to suborbicular, 1.2-1.6 mm wide, latitudinal alveoli walls strongly raised into transverse ridges.....***Rh. caduca***
32 Achene slenderly obovoid, 0.8-1.0 mm wide, latitudinal alveoli walls weakly or not at all raised into transverse ridges.....***Rh. mixta***

Rhynchospora alba (Linnaeus) Vahl, Northern White Beaksedge. Cp (GA, NC, SC, VA), Mt (GA, NC, VA): mountain bogs and fens, peaty situations in the Coastal Plain, such as low pocosins in peat domes or large Carolina bays, and floating peat mats in limesink (doline) ponds and bay lakes, possibly also in seepage bogs with abundant *Sphagnum*, generally occurring in the most open, harshest, and peatiest areas; rare (GA Special Concern, NC Rare, VA Rare). July-October. Widespread in northern North America, south to se. NC, nw. NC, ne. GA, ne. TN, MN, ID, and CA; disjunct in se. GA (Charlton Co., at the Okefenokee Swamp) (Williges & Loftin 1995), s. AL (Escambia Co.; specimen at CLEMS), and the mountains of Puerto Rico. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Rhynchospora baldwinii A. Gray, Baldwin's Beaksedge. Cp (GA, NC, SC): wet savannas, seepages; uncommon (rare in Sandhills). July-August. Se. NC south to c. FL and west to LA. [= RAB, C, FNA, K, S, GW, Z]

Rhynchospora breviseta (Gale) Channell, Short-bristle Beaksedge. Cp (NC, SC): wet savannas; rare (NC Rare). July-September. Se. NC south to c. FL and west to s. MS; West Indies. This species will colonize disturbances (roadsides, powerline corridors), but not aggressively. The leaf tips of ***Rh. breviseta*** are acute and minutely serrulate, while those of the closely related ***Rh. oligantha*** are blunt and smooth; these characters are, however, often difficult to determine. [= RAB, FNA, GW, K; = ***Rh. oligantha*** A. Gray var. ***breviseta*** Gale – Z]

Rhynchospora caduca Elliott, Angle-stem Beaksedge. Cp (GA, NC, SC, VA), Pd (NC, SC): savannas, hardwood swamps, other wet areas; uncommon (VA Watch List). July-September. E. and c. VA south to s. FL and west to TX, OK, and AR, north in the interior to sc. TN. This species is found at a few sites in the mountains of GA. See notes under ***Rh. miliacea***. [= RAB, C, F, FNA, G, GW, K, W, Z; > ***Rh. caduca*** – S; > ***Rh. patula*** A. Gray – S]

Rhynchospora capillacea Torrey. Mt (VA): calcareous wetlands; rare (VA Rare). Newfoundland west to Saskatchewan, south to w. VA, ne. TN, and n. AR. [= C, F, FNA, G, K, Z]

Rhynchospora capitellata (Michaux) Vahl, Brownish Beaksedge. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): bogs and fens, seepages, and wet rock outcrops in the Mountains and upper Piedmont, also in wet habitats in the Coastal Plain of ne. NC and e. VA; common (rare in Piedmont and Coastal Plain). July-September. Widespread in e. North America, south to nc. GA. The only common beaksedge in the Mountains of our area. A somewhat similar species, ***Rh. knieskernii***, occurs north of our area, but should be looked for here; they are discussed at the end of this genus. Sorrie (2000) has clarified the relationships and distinctions of this taxon with ***Rh. leptocarpa***. [= C, F, G, S, W; < ***Rh. capitellata*** – RAB, FNA, GW, K, Z (also see ***Rh. leptocarpa***)]

Rhynchospora careyana Fernald, Carey's Horned Beaksedge. Cp (GA, NC, SC): limesink (doline) depression ponds and in intermittently flooded depression meadows; rare (NC Watch List). July-September. Apparently ranging from se. NC south to FL, but the range poorly known because of confusion with ***Rh. inundata***, from which it is perhaps not specifically distinct. [= FNA, K, S; < ***Rh. inundata*** – RAB; < ***Rh. corniculata*** – GW (listed in synonymy under ***Rh. corniculata*** in GW, but would actually key to ***Rh. inundata)***]

Rhynchospora cephalantha A. Gray ***var. attenuata*** Gale, Small Bunched Beaksedge. Cp (GA?, NC, SC, VA): savannas, sandhill seeps, openings in streamhead pocosins; rare (NC Watch List, VA Rare). July-October. The range of this variety is poorly known; is reported by Z from NC, SC, AL, and MS. Recent collections from MD and VA extend the range. See discussion in Sorrie et al. (1997). [= Z; < ***Rh. cephalantha*** – RAB, C, GW, K; < ***Rh. axillaris*** – S]

Rhynchospora cephalantha A. Gray ***var. cephalantha***, Common Bunched Beaksedge. Cp (GA, NC, SC, VA): savannas; common (VA Rare). July-October. S. NJ south to FL and west to LA. Often weedy, this species occurs commonly along wet roadsides, powerline corridors, and the like. [= F, G, Z; < ***Rh. cephalantha*** – RAB, C, FNA, GW, K; < ***Rh. axillaris*** – S]

Rhynchospora cephalantha A. Gray ***var. pleiocephala*** Fernald & Gale, Many-headed Bunched Beaksedge. Cp (GA, NC, SC, VA): savannas; uncommon (VA Rare). July-October. Se. VA south to FL and west to LA. [= F, G, Z; < ***Rh. cephalantha*** – RAB, C, FNA, GW, K; < ***Rh. axillaris*** – S]

Rhynchospora chalarocephala Fernald & Gale, Loose-head Beaksedge. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (GA, NC, SC, VA): savannas, limesink ponds, and swamps, often weedy and occurring in abundance on wet roadsides and in powerline corridors; common (rare in Piedmont). July-September. S. NJ south to c. FL and west to LA; disjunct in nw. GA (Jones & Coile 1988) and sc. TN (Coffee County). [= RAB, C, F, FNA, G, GW, K, W, Z]

Rhynchospora chapmanii M.A. Curtis, Chapman's Beaksedge. Cp (GA, NC, SC): savannas, seepage bogs, sandy margins of limesink (doline) ponds, and other wet, acid habitats; uncommon. July-September. Se. NC south to c. FL and west to e. LA; Belize, Nicaragua. [= RAB, FNA, GW, K, S, Z]

Rhynchospora ciliaris (Michaux) C. Mohr, Fringed Beaksedge. Cp (GA, NC, SC): savannas, sandhill seeps; uncommon. July-September. Se. NC south to s. FL and west to LA. [= RAB, FNA, GW, K, S, Z]

Rhynchospora colorata (Linnaeus) H. Pfeiffer, Narrowleaf Whitetop Sedge. Cp (NC, SC, VA): wet savannas, ditches, dune swales; uncommon (VA Rare). May-September. Primarily a Southeastern Coastal Plain endemic: se. VA south to FL and

west to TX; Mexico (Tabasco, Chiapas, Yucatán), West Indies, Belize, Guatemala, Costa Rica, Venezuela. [= C, FNA, K; = *Dichromena colorata* (Linnaeus) H. Pfeiffer – RAB, F, G, GW, S]

Rhynchospora compressa Carey ex Chapman. Cp (GA, SC): savannas; rare. S. SC south to FL, west to e. LA. This species was reported for SC (Kartesz 1999), based on the South Carolina Plant Atlas (http://cricket.biol.sc.edu/herb/); McMillan (pers. comm.) states that the record is in error, based on a misidentified specimen. The species occurs in sc. GA (Jones & Coile 1988) and has since been found in SC by McMillan (2003). [= FNA, GW, K, S, Z]

Rhynchospora corniculata (Lamarck) A. Gray *var.* ***corniculata***, Short-bristle Horned Beaksedge. Cp, Pd (GA, NC, SC, VA): pondcypress savannas in Carolina bays, swamp forests, other wetlands; uncommon. July-September. Var. *corniculata* ranges from DE south to FL and west to LA, extending north into KY and MO, also in the West Indies. Var. *interior*, possibly not worth recognition, is distinguished by a shorter and narrower achene, the summit barely broader than the base of the tubercle, and occurs in the Mississippi drainage. [= C, F, G; < *Rh. corniculata* (Lamarck) A. Gray – RAB, FNA, GW, K, S]

Rhynchospora crinipes Gale, Alabama Beaksedge. Cp (GA, NC): sand-clay bars in bed of small blackwater river in the Sandhills (NC) and Coastal Plain (GA); rare (US Species of Concern, GA Special Concern, NC Endangered). July-September. This very rare species is related to *Rh. filifolia*, but is a coarser plant, readily distinguishable by characters of the achene, culm, and leaves. Anderson (1988) discusses its systematics, habitat, and rarity. It has been reported only from a few locations in s. AL, w. FL, sc. GA, and sc. NC. Sorrie et al. (1997) report its occurrence in NC. [= FNA, GW, K, Z]

Rhynchospora culixa Gale, Georgia Beaksedge. Cp (GA): pine savannas, flatwoods; rare (GA Special Concern). GA and FL. [= K, Z; = *Rh. harveyi* W. Boott var. *culixa* (Gale) Kral – FNA]

Rhynchospora debilis Gale, Savanna Beaksedge. Cp (GA, NC, SC, VA), Mt (GA): savannas, sandhill seeps; uncommon (VA Rare). July-September. Se. VA south to n. FL and west to se. TX (Brown & Marcus 1998). Like a small version of *Rh. fascicularis*, often with several ascending, cespitose culms, each terminated by a single glomerule. [= RAB, C, F, FNA, GW, K, Z]

Rhynchospora decurrens Chapman, Swamp-forest Beaksedge. Cp (GA, NC, SC): swamp forests and river marshes, especially along blackwater rivers; rare (GA Special Concern, NC Rare). July-August. Se. NC south to s. FL and west to s. MS (Sorrie & Leonard 1999). [= RAB, FNA, GW, K, S, Z]

Rhynchospora divergens Chapman ex M.A. Curtis, White-seeded Beaksedge. Cp (GA, NC, SC): wet savannas, especially in exposed sands; rare (NC Rare). May-September. Se. NC south to s. FL and west to se. TX; Bahamas, Mexico (Chiapas), Belize. *Rh. divergens*, *Rh. pusilla*, and *Rh. thornei* are all small, grass-like plants, very similar in appearance to one another. [= RAB, FNA, GW, K, S]

Rhynchospora elliottii A. Dietrich, Elliott's Beaksedge. Cp (GA, NC, SC): savannas, ditches, other wet habitats, often weedy; rare (NC Watch List). July-September. Se. NC south to nw. FL and west to e. TX. The achenes are typically flat or concave on one face, and flat or slightly convex on the other. See note under *Rh. microcarpa*. [= FNA, GW, K; = *Rh. schoenoides* (Elliott) Wood – RAB, S, Z]

Rhynchospora fascicularis (Michaux) Vahl *var.* ***distans*** (Michaux) Chapman. Cp (GA, NC, SC, VA): savannas and limesink ponds; rare (VA Rare). June-September. Se. VA south to s. FL and west to s. MS (Sorrie & Leonard 1999); West Indies. Appearing to merge with *Rh. wrightiana* on the outer Coastal Plain of NC. [= F, K, Z; < *Rh. fascicularis* – RAB, FNA, G, GW; = *Rh. distans* (Michaux) Vahl – S]

Rhynchospora fascicularis (Michaux) Vahl *var.* ***fascicularis***, Fascicled Beaksedge. Cp (GA, NC, SC, VA): savannas, limesink ponds, ditches; common in the outer Coastal Plain, less common in the fall-line sandhills (VA Rare). June-September. Se. VA south to s. FL and west to se. TX; West Indies. [= F, K, Z; < *Rh. fascicularis* – RAB, FNA, G, GW; = *Rh. fascicularis* – S]

Rhynchospora fernaldii Gale, Fernald's Beaksedge. Cp (GA): pine flatwoods; uncommon. S. GA south to c. peninsular FL, west to s. MS. [= FNA, GW, K, Z]

Rhynchospora filifolia A. Gray, Threadleaf Beaksedge. Cp (GA, NC, SC, VA): sandy shores of limesink (doline) depressions, especially at the lower margin, savannas; uncommon, rare in the fall-line sandhills (VA Rare). July-September. S. NJ south to c. FL and west to e. TX; Cuba, Mexico (Tabasco), Belize, Nicaragua. [= RAB, C, F, FNA, G, K, S, Z; < *Rh. filifolia* – GW (also see *Rh. harperi*)]

Rhynchospora globularis (Chapman) Small *var.* ***globularis***, Globe Beaksedge. Cp, Pd (GA, NC, SC, VA): sandy or peaty depressions, wet ditches, powerline corridors, savannas; uncommon, rare in Piedmont. June-September. Var. *globularis* apparently ranges from DE south to s. FL and west to c. TX and OK; north in the interior to nc. TN; also allegedly in n. CA. Both var. *globularis* and var. *pinetorum* tend to produce shorter plants with smaller glomerules than *Rh. recognita*. Occasional achenes of var. *globularis* exhibit the wide alveoli of var. *pinetorum* near the base or summit, with little or no horizontal ridging, but centrally have narrow alveoli with pronounced horizontal ridges. The opposite condition occasionally occurs in var. *pinetorum* achenes, with narrow alveoli and horizontal ridging basally or at the summit, but wide alveoli and little or no ridging centrally. [= C, F, FNA, G, K, Z; < *Rh. globularis* – RAB, W; < *Rh. globularis* var. *globularis* – GW (also see *Rh. recognita*); = *Rh. globularis* – S]

Rhynchospora globularis (Chapman) Small *var.* ***pinetorum*** (Small) Gale, Small's Beakrush. Cp (NC, SC): wet calcareous savannas, maritime wet grasslands; rare (NC Rare). June-September. Var. *pinetorum* ranges from FL west to MS (Sorrie & Leonard 1999) and LA, apparently disjunct to se. NC and ne. SC, and also in the West Indies. See note under var. *globularis*. [= FNA, GW, K, Z; = *Rh. pinetorum* Small – S]

Rhynchospora glomerata (Linnaeus) Vahl *var.* ***glomerata***, Clustered Beaksedge. Cp, Pd, Mt (GA, NC, SC, VA): savannas, bogs, other wet habitats; common (uncommon in Sandhills, rare in Mountains). July-September. Var. *glomerata* ranges from s. NJ south to n. FL and west to e. TX, and inland in KY, TN, AR, and KS. Var. *angusta* Gale occurs in AR, LA, and e. TX. [= Z; < *Rh. glomerata* – RAB, C, F, FNA, G, GW, K, S, W]

Rhynchospora gracilenta A. Gray, Slender Beaksedge. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): savannas, bogs; uncommon (rare in Piedmont and Mountains). July-September. NJ south to n FL and west to e. TX, north in the inland to nc. TN and AR; Cuba, Mexico (Chiapas), Belize, Nicaragua. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Rhynchospora grayi Kunth, Gray's Beaksedge. Cp (GA, NC, SC, VA): sandhills and other dry, sandy sites; uncommon (VA Rare). June-September. VA south to FL, west to TX. [= RAB, C, F, FNA, G, K, S, Z]

Rhynchospora harperi Small, Harper's Beaksedge. Cp (GA, NC, SC): peaty limesink depression ponds (dolines), from standing water to the upper margins of the pond-shore; rare (GA Special Concern, NC Rare). July-September. Se. NC south to FL and west to s. AL and s. MS (Sorrie & Leonard 1999); disjunct in DE and MD; disjunct in Belize. See Nelson (1993) for first SC record, and LeBlond (1997) for additional information on the species, especially its distribution. [= FNA, K, S, Z; < *Rh. filifolia* – GW]

Rhynchospora harveyi W. Boott, Harvey's Beaksedge. Cp (GA, NC, SC, VA), Mt (GA, NC), Pd (NC): savannas in the Coastal Plain, seepage bogs in the Sandhills, bogs in the Mountains and Piedmont; rare (VA Rare). July-August. Se. VA south to n. FL and west to TX and OK, and north in the interior to nc. TN and MO. [= RAB, C, F, G, GW, K, S, W, Z; = *Rh. harveyi* var. *harveyi* – FNA]

Rhynchospora inexpansa (Michaux) Vahl, Nodding Beaksedge. Cp (GA, NC, SC, VA), Pd (GA): wet savannas, streamhead pocosins where frequently burned, usually in peaty situations, often weedy, colonizing disturbances; common. July-September. Se. VA south to n. FL and west to e. TX and AR; West Indies. [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora inundata (Oakes) Fernald, Narrow-fruit Horned Beaksedge. Cp (NC, SC?), {GA, VA}: in water of limesink dolines and clay-based Carolina bays. usually found in shallow water or at the lower margins of pond-shores, typically producing large colonies; rare (NC Watch List, SC Rare, VA Rare). July-September. Apparently ranging from e. MA south to s. FL and west to LA (the range, however, obscured by confusion with *Rh. careyana*). The relation of this species to *Rh. careyana* and to more northern entities of *Rh. inundata* remain unresolved. [= C, F, FNA, G, GW, K, S; < *Rh. inundata* – RAB (also see *Rh. careyana*)]

Rhynchospora latifolia (Baldwin ex Elliott) Thomas, Broadleaf Whitetop Sedge. Cp (GA, NC, SC): wet savannas; uncommon. May-September. A Southeastern Coastal Plain endemic: se. NC south to FL and west to se. TX; disjunct in sc. TN (Coffee County). [= FNA, K; = *Dichromena latifolia* Baldwin ex Elliott – RAB, S, GW]

Rhynchospora leptocarpa (Chapman ex Britton) Small. Cp (GA, NC, SC): seepage bogs, pocosins, especially in openings; uncommon. E. NC south to Panhandle FL, west to se. LA, in the Coastal Plain. It appears that *Rh. leptocarpa* is a valid species, a southeastern Coastal Plain relative of the more northern and montane *Rh. capitellata* (Sorrie 2000). Its occurrence in NC is reported by Sorrie et al. (1997). [= S; < *Rh. capitellata* – RAB, FNA, GW, K, Z]

Rhynchospora macra (C.B. Clarke) Small, Southern White Beaksedge. Cp (GA, NC, SC): *Sphagnum* bogs in frequently-burned streamhead pocosins, and in sandhill seepage bogs; rare (GA Special Concern, NC Endangered, SC Rare). July-September. Sc. NC south to n. FL and west to se. TX; Nicaragua, Puerto Rico. *Rh. macra* is a robust southern relative of *Rh. alba*. Like *Rh. alba* and *Rh. pallida*, it has scales which are at first bright white, "fading" in age to a medium tan or light brown. These three species are thus superficially most distinctive (from other *Rhynchospora*) in June, July, and August. The occurrence of this species in NC and SC is discussed by Sorrie et al. (1997). [= FNA, GW, K, S, Z]

Rhynchospora macrostachya Torrey ex A. Gray *var.* ***colpophila*** Fernald & Gale, Virginia Horned Beaksedge. Cp (NC, VA): tidal freshwater marshes; uncommon (NC Watch List). July-September. Endemic to e. MD, e. VA, and ne. NC. [= F; < *Rh. macrostachya* – RAB, C, FNA, G, GW, K, S]

Rhynchospora macrostachya Torrey ex A. Gray *var.* ***macrostachya***, Tall Horned Beaksedge. Cp (GA, NC, SC, VA), Mt (GA): marshes, swamps, upland depression ponds, other wetlands; uncommon (VA Watch List). July-September. E. MA south to FL and west to e. TX, north in the interior to sc. TN, s. MI, MO, and KS; disjunct (historically) in s. ME. This (and var. *colpophila*) are most readily distinguished from *Rh. corniculata*. *Rh. inundata*, and *Rh. careyana* by the large glomerules composed of numerous spikelets. [= F; < *Rh. macrostachya* – RAB, C, FNA, G, GW, K, S]

Rhynchospora megalocarpa A. Gray, Sandhill Beaksedge. Cp (GA, NC, SC): xeric sandhills; uncommon. June-August. Se. NC south to FL, west to MS. [= RAB, FNA, K, Z; = *Rh. dodecandra* Baldwin ex A. Gray – S]

Rhynchospora microcarpa Baldwin ex A. Gray, Southern Beaksedge. Cp (GA, NC, SC), Pd (NC, SC): swamp forests, clay-based Carolina bays; rare (GA Special Concern, NC Watch List). July-August. E. NC south to s. FL and west to TX; West Indies (Cuba, Puerto Rico), Bahamas, Belize. This species is easily confused with *Rh. elliottii* and *Rh. perplexa*. *Rh. elliottii* is distinguished by leaves 4-6 mm wide, bristles longer than the tubercle, flattish achene faces, and a tubercle that is longer than broad. *Rh. microcarpa* and *Rh. perplexa* have leaves 1-3 mm wide and tubercles as broad as long or broader. In *Rh. microcarpa*, the achene is biconvex and the bristles are half as long as the achene to equaling the tubercle. In *Rh. perplexa*, the achene faces are flattish and the bristles are absent or rudimentary (< ½ as long as the achene). [= RAB, F, FNA, GW, S, Z; < *Rh. microcarpa* – K (also see *Rh. sulcata*)]

Rhynchospora microcephala (Britton) Britton ex Small, Small-headed Beaksedge. Cp (GA, NC, SC, VA), Mt (GA): savannas, sandhill-pocosin ecotones; common. July-October. S. NJ south to c. FL and west to MS; Cuba. [= RAB, C, F, FNA, G, GW, K, S, Z; = *Rh. cephalantha* A. Gray var. *microcephala* (Britton) Kükenthal]

Rhynchospora miliacea (Lamarck) A. Gray, Millet Beaksedge. Cp (GA, NC, SC, VA): swamp forests, including maritime swamp forests; rare (VA Rare). July-August. Se. VA south to s. FL and west to LA; West Indies. The inflorescence branches of *Rh. mixta* and (less commonly) *Rh. caduca* can spread at right angles from the culm, superficially resembling *Rh. miliacea*. The three can be separated by tubercle length: the tubercle of *Rh. miliacea* is 0.2-0.4 mm long, while those of *Rh. mixta* and *Rh. caduca* are 0.4-0.9 mm long. [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora mixta Britton, Mingled Beaksedge. Cp (GA, NC, SC): swamp forests, marshes; uncommon. June-August. Ne. NC south to c. FL and west to TX. See notes under *Rh. miliacea*. [= RAB, FNA, GW, K, S, Z; > *Rh. mixta* – S; > *Rh. prolifera* Small – S]

Rhynchospora nitens (Vahl) A. Gray, Short-beak Beaksedge. Cp (GA, NC, SC, VA): wet savannas, limesink (doline) ponds, ditches, disturbed wet areas, often weedy; rare (NC Watch List, VA Rare). July-August. Primarily a Coastal Plain endemic: MA south to FL and west to se. TX; lowlands around the Great Lakes; West Indies, Belize, Nicaragua. [= C, FNA, K; = *Psilocarya nitens* (Vahl) Wood – RAB, F, G, GW, S]

Rhynchospora odorata C. Wright ex Grisebach, Fragrant Beaksedge. Cp (GA, NC, SC): maritime swamp forests and maritime wet grasslands; rare (NC Rare). June-August. E. NC south to s. Florida; West Indies and Bahamas. First reported for SC by Nelson & Kelly (1997). [= RAB, F, FNA, GW, K, Z; = *Rh. stipitata* Chapman – S]

Rhynchospora oligantha A. Gray, Feather-bristle Beaksedge. Cp (GA, NC, SC, VA): wet savannas, sandhill-pocosin ecotones, sandhill seepage bogs, sea-level fens, usually in rather peaty, acid places; rare (GA Special Concern, NC Rare, SC Rare, VA Rare). July-August. S. NJ south to n. FL and west to se. TX; Belize, Nicaragua. The leaf tips of *Rh. oligantha* are blunt and smooth, while those of the closely related *Rh. breviseta* are acute and minutely serrulate; these characters are, often difficult to determine, however. Considered to be absent between NC and NJ prior to its discovery in e. VA (Fleming & Ludwig 1996). [= RAB, C, F, FNA, G, GW, K; < *Rh. oligantha* – S (presumably including *Rh. breviseta*): = *Rh. oligantha* var. *oligantha* – Z]

Rhynchospora pallida M.A. Curtis, Pale Beaksedge. Cp (NC, SC, VA): savanna-pocosin and sandhill-pocosin ecotones, peaty seepage bogs, usually growing in or near *Sphagnum*; rare (NC Watch List, SC Rare, VA Rare). July-September. Long Island, NY south through NJ to nc. SC, primarily in NJ and NC. Like *Rh. alba* and *Rh. macra*, it has scales which are at first bright white, "fading" in age to a medium tan or light brown. These three species are thus superficially most distinctive (from other *Rhynchospora*) in June, July, and August. The bristle characters separate the three species easily. See Nelson (1993) for first SC record. [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora perplexa Britton *var. **perplexa***, Pineland Beaksedge. Cp (GA, NC, SC), Mt (GA), {VA}: savannas, sandhill seepage bogs; uncommon (VA Rare). July-September. E. NC south to s. FL, west to TX, and north in the interior to ec. TN; West Indies. Also see note under *Rh. microcarpa*. [= F; < *Rh. perplexa* – RAB, C, FNA, G, GW, K, S, Z]

Rhynchospora perplexa Britton *var. **virginiana*** Fernald, Virginia Pineland Beaksedge. Cp (VA): savannas; rare (VA Rare). July-September. Var. *virginiana* Fernald, alleged to be endemic to se. VA, should be sought in NC. It is alleged to differ in several characters, including larger spikelets (2.5-3.0 mm long vs. 2.0-2.5), the achene tubercles broadly rounded at the tip (rather than deltoid and acute). Also see note under *Rh. microcarpa*. [= F; < *Rh. perplexa* – RAB, C, FNA, G, GW, K, S, Z]

Rhynchospora pleiantha (Kükenthal) Gale, Coastal Beaksedge. Cp (GA, NC, SC): sandy margins of limesink depression ponds (dolines), typically in shallow water or at the lower margins of pond-shores; rare (GA Special Concern, NC Rare). July-September. Se. NC south to c. and nw. FL and west to se. AL; also in Cuba. [= RAB, FNA, GW, K, Z; *Rh. fusca* – S, misapplied]

Rhynchospora plumosa Elliott, Plumed Beaksedge. Cp (GA, NC, SC): savannas, sandhill-pocosin ecotones, especially where the sandy surface dries out in summer (on Spodosols such as the Leon soil series); common. July-August. NC south to FL and west to se. TX; West Indies (Cuba), Belize, Honduras, Nicaragua. *Rh. pineticola* C.B. Clarke, from dry sandy pinelands of northern FL, is very similar to *Rh. plumosa*, differing in having leaves 2-3 mm wide and achenes 2.0-2.2 mm long. [= RAB, S; < *Rh. plumosa* – FNA, GW, K, Z]

Rhynchospora punctata Elliott, Pineland Beaksedge. Cp (GA): wet savannas, pitcherplant bogs; rare (GA Special Concern). S. GA south to ne. FL. [= FNA, GW, K, S, Z]

Rhynchospora pusilla Chapman ex M.A. Curtis, Dwarf Beaksedge. Cp (GA, NC, SC), Pd (GA): wet savannas, especially in exposed wet sands of disturbed ground, such as roadsides; uncommon. June-September. E. NC south to s. FL and west to e. TX; West Indies, Mexico (Tabasco, Chiapas), Belize, Guatemala, Nicaragua. *Rh. pusilla, Rh. divergens,* and *Rh. thornei* are all small, grass-like plants, very similar in appearance to one another. [= FNA, GW, K; = *Rh. intermixta* C. Wright – RAB, S]

Rhynchospora rariflora (Michaux) Elliott, Few-flower Beaksedge. Cp, Pd (GA, NC, SC, VA): wet savannas, seepage bogs in the Sandhills, bogs in the Piedmont; common, rare in Piedmont (VA Watch List). July-September. S. NJ south to s. FL and west to e. TX; inland in ec. TN; West Indies, Belize, Honduras, Nicaragua. Resembling *Rh. breviseta* and *Rh. oligantha*, but the spikelets conspicuously smaller. A plant tentatively considered distinct from *Rh. rariflora* has been found in wet savannas and pocosin ecotones in Carteret County, NC; it differs most notably in its distinctly larger achenes and longer tubercles and bristles. It can be distinguished from *Rh. rariflora* as follows: achene 1.36-1.8 mm long, 1.4-1.5 mm wide; tubercle 0.6-1.0 mm long; bristles 2/3-4/5 as long as the achene body (vs. 1.3-1.5 (-1.7) mm long, 1.1-1.4 mm wide; tubercle 0.3-0.6 (-0.7) mm long; bristles 1/3-1/2 (-2/3) as long as the achene body). [= RAB, C, F, FNA, G, GW, K, S, Z]

Rhynchospora recognita (Gale) Kral, Cymose Beakrush. Cp, Pd, Mt (GA, NC, SC, VA): wet to dry low grounds, diabase glades, ditches, powerline corridors, savannas, moist seepage on rock outcrops, other wet areas; common. June-September. NJ south to FL, west to TX, north in the interior to nc. TN and around the Great Lakes; CA; West Indies; and Central America. As explained by Kral (1999), this taxon appears to warrant specific status. [= FNA, K; = *Rh. globularis* (Chapman) Small var. *recognita* Gale – C, F, G, Z; < *Rh. globularis* – RAB, W; < *Rh. globularis* var. *globularis* – GW; *Rh. cymosa* Elliott – S, misapplied]

Rhynchospora saxicola Small. Pd (GA, SC), Cp (GA): seepages on granitic outcrops and Altamaha Grit glades; rare. W. SC south into the Piedmont and rarely Coastal Plain of c. GA and ne. and ec. AL (Kral 1999). [= S; = *Rh. globularis* (Chapman) Small var. *saxicola* (Small) Kükenthal – FNA, K]

Rhynchospora scirpoides (Torrey) A. Gray, Long-beak Beaksedge. Cp (GA, NC, SC, VA): limesink ponds, usually at the lower margins of pond-shores, wet savannas, beaver ponds, and other wetlands with "drawdown" hydrology; rare (GA Special

Concern, NC Rare, VA Rare). July-September. Se. MA south to the panhandle of FL and s. MS (Sorrie & Leonard 1999), and disjunct in the lowlands around the Great Lakes. [= C, FNA, K; = *Psilocarya scirpoides* Torrey – RAB, GW, S; > *Psilocarya scirpoides* var. *grimesii* Fernald & Griscom – F, G]

Rhynchospora solitaria Harper, Autumn Beaksedge. Cp (GA, SC): wet, sandy/peaty depressions; rare (GA Special Concern). Known from a few sites in the Gulf Coastal Plain of GA (Colquitt, Irwin, Tift, and Turner counties) (Sorrie 1998b) and SC (Berkeley County) (McMillan, pers.comm. and specimen at NCU). It resembles a delicate ***Rh. ciliaris***; its distinctiveness is well described in Bridges & Orzell (1992). It should be sought in seepage bogs in the fall-line sandhills and in wet savannas of the outer Coastal Plain. [= FNA, GW, K, S, Z]

Rhynchospora stenophylla Chapman, Coastal Bog Beaksedge. Cp (GA, NC, SC, VA): peaty seepage bogs, streamhead pocosins, savanna-pocosin ecotones, usually growing in *Sphagnum*, especially where frequently burned; rare (GA Special Concern, NC Watch List, SC Rare). July-September. Se. NC south to nw. FL and west to s. MS; disjunct in se. VA (Southampton Co.) (Belden et al. 2004). Reported for GA by Sorrie (1998b). [= RAB, FNA, GW, K, S, Z]

Rhynchospora sulcata Gale, Grooved Beaksedge. Cp (GA, SC): limesink ponds (dolines); rare. June-July. Se. SC south to GA (Jones & Coile 1988) and FL. Perhaps not distinct from ***Rh. microcarpa***. [= RAB, GW, Z; < ***Rh. microcarpa*** Baldwin ex A. Gray – K]

Rhynchospora thornei Kral, Thorne's Beaksedge. Cp (GA, NC, SC), Mt (GA): in open sands in savannas underlain by marl, and nearby roadsides, moist limestone barrens and prairies (GA); rare (GA Special Concern, NC Endangered). Known from about 35 locations, in Cp of NC, SC, GA, FL, and AL; also in Ridge and Valley region of AL and GA, and Black Belt region of AL. ***Rh. thornei***, ***Rh. divergens***, and ***Rh. pusilla*** are all small, grass-like plants, very similar in appearance to one another, and they frequently co-occur. Recently discovered in SC (Georgetown Co.) by McMillan (2003). [= FNA, K]

Rhynchospora torreyana A. Gray, Torrey's Beaksedge. Cp (GA, NC, SC, VA): savannas, seepage bogs, often weedy; common, uncommon in VA, rare in GA (GA Special Concern). July-September. Se. MA south to GA. [= RAB, C, F, G, GW, K, S, Z]

Rhynchospora tracyi Britton, Tracy's Beaksedge. Cp (GA, NC, SC): cypress savannas and graminoid-dominated depressions, in small, clay-based Carolina bays or shallow limesink ponds (dolines), typically in shallow water or at the lower margins of pond-shores; rare (NC Rare, SC Rare). June-September. A Southeastern Coastal Plain endemic: s. NC south to FL, west to s. MS (Sorrie & Leonard 1999); disjunct in sw. LA; West Indies, Belize. [= RAB, FNA, K, GW, S]

Rhynchospora wrightiana Böckler, Wright's Beaksedge. Cp (GA, NC, SC, VA): wet savannas; rare (NC Watch List, VA Rare). July-September. Se. VA south to c. FL and west to s. AL; West Indies. Appearing to merge with ***Rh. fascicularis*** var. *distans* on the outer Coastal Plain of NC. Leaves are most frequently filiform and < 1 mm wide; rarely flat and to 1.3 mm wide. [= RAB, FNA, GW, K, Z; < ***Rh. wrightiana*** – S (also see ***Rh. brachychaeta***)]

Rhynchospora brachychaeta C. Wright. Cp (SC): cypress ponds, other depressions; rare. AL, FL, MS, and SC. Reported for SC by P. McMillan (pers. comm.). Kral in FNA considers this species possibly adventive. [= FNA, K, Z; < ***Rh. wrightiana*** – S]

Rhynchospora curtissii Britton has been reported from SC by Kral (1996) and for NC and SC by Kartesz (1999), but specimens so annotated are misidentified. An East Gulf Coastal Plain endemic, in Panhandle FL, AL, and s. MS (Sorrie & Leonard 1999). [= FNA, GW, K, S, Z]

Rhynchospora fusca (Linnaeus) Aiton f., circumboreal, ranges south in North America to NJ, e. PA (Rhoads & Klein 1993), MD, DE, and WV (FNA, Kartesz 1999). [= C, F, FNA, G, K, Z]

Rhynchospora knieskernii Carey. Pinelands. Endemic in NJ and DE. It has been reported, in error, from SC. [= C, F, FNA, G, K, Z]

Rhynchospora semiplumosa A. Gray, in Coastal Plain of GA. [= S; < ***Rh. plumosa*** – FNA, GW, K, Z] {needs evaluation}

Rhynchospora species 1. Mt (GA): Coosa Valley prairies; rare. Research by Jim Allison. {not keyed at this time}

Schoenoplectus (Reichenbach) Palla 1888 (Bulrush)
(also see *Bolboschoenus*)

A genus of about 50 species, herbs, cosmopolitan in distribution. Micromorphologic and anatomic studies have confirmed earlier opinions based on morphology that *Schoenoplectus* is not closely related to *Scirpus* (Strong 1994, Smith 1995, Schuyler, pers. comm.). Most investigators now also favor the separation of *Bolboschoenus* from *Schoenoplectus* (Pignotti & Mariotti 2004). References: Strong (1994)=Z; Smith (1995)=Y; Smith in FNA (2002b); Goetghebeur in Kubitzki (1998b); Pignotti & Mariotti (2004).

1 Main involucral bracts 2-8, spreading and foliaceous (the inflorescence thus appearing terminal); rhizomes bearing ovoid tubers; bristles persistent on the achene; achenes 2.5-5 mm long (including body and apiculus)..... **[*Bolboschoenus*]**

1 Main involucral bract 1 (rarely with an additional 1-2 lateral bracts), erect and terete or triangular, appearing as a continuation of the culm (the inflorescence thus appearing lateral, though in some species the longer inflorescence branches may overtop the bract); rhizomes not bearing tubers; bristles falling from the achene; achenes 1.0-4.5 mm long (including body and apiculus).

2 Spikelets on stalks of varying lengths, at least some clearly not sessile.

3 Culms distinctly triangular in cross-section, more sharply so above than below, nearly terete near the base; [section *Malacogeton*]..... ***Sch. etuberculatus***

3 Culms terete throughout, or obscurely triangular above; [section *Schoenoplectus*].
4 Spikelets appearing dull gray-brown, the scales copiously covered with red-brown dots (as seen at 10×) 6-15 mm long; lower and middle scales (3.0-) 3.5-4.0 mm long; culms firm, not easily compressed..... .....***Sch. acutus** var**. acutus***
4 Spikelets appearing reddish-brown, the scales not obviously dotted (as seen at 10×), 6-11 mm long; lower and middle scales (2.0-) 2.5-3.0 (-3.5) mm long; culms soft, easily compressed.
5 Perianth bristles plumose; spikelets acute; culms obscurely triangular near the inflorescence..... .....***Sch. californicus***
5 Perianth bristles retrorsely barbed; spikelets obtuse; culms terete throughout their length .... ***Sch. tabernaemontani***
2 Spikelets all sessile, in a cluster at one point (rarely with 1 or 2 short branches to 5 mm long).
6 Spikelet solitary; leaves numerous; plant usually aquatic, the culms and leaves flaccid, supported by the water; [section *Malacogeton*]..... ***Sch. subterminalis***
6 Spikelets (1-) 2-several; leaves 1-4; usually of wet places, but the culms stiff and erect, not floating.
7 Rhizomatous perennial; culms triangular in cross-section, usually 5-20 dm tall.
8 Leaves elongate, > ½ as long as the culms; achenes trigonous; styles 3-branched; [section *Malacogeton*] ..... ***Sch. torreyi***
8 Leaves short, < ½ as long as the culms; achenes plano-convex; styles 2 (-3) branched; [*Schoenoplectus pungens* complex of section *Schoenoplectus*].
9 Main involucral bract 1-2.5 (-6) cm long, with no other reduced, scale-like bracts present; mature culms 4-10 mm wide; sides of the culm strongly concave, wing-angled; [strictly of brackish situations in the outer Coastal Plain] ..... ***Sch. americanus***
9 Main involucral bract (1-) 3-18 cm long, with 1-2 additional, reduced, scale-like bracts present (resembling enlarged scales but lacking a flower); mature culms 1-6 mm wide; sides of the culm flat, slightly concave, or slightly convex; [of inland fresh and salty situations, widespread in our area]..... ***Sch. pungens** var**. pungens***
7 Cespitose annual or perennial; culms terete, 1-6 dm tall.
10 Perianth bristles absent; achenes 1.2-1.6 mm long, transversely rugose; [section *Supini*].
11 Achenes biconvex to obscurely trigonous, the faces convex.....***Sch. erectus** ssp**. raynalii***
11 Achenes biconvex, with a planar or concave area on the adaxial surface.....***Sch. hallii***
10 Perianth bristles 5-6; achenes 1.5-2.0 mm long, smooth, finely pitted, or finely papillose; [section *Actaeogeton*].
12 Achenes 1.75-2.0 mm long, unequally biconvex (rounded on both faces, but less so on one than the other), rounded-obovate, broadly cuneate at the base, rounded at the apex.....***Sch. purshianus***
12 Achenes 1.5-1.8 mm long, planoconvex (nearly flat on 1 face), obovate, cuneate at the base, subtruncate at the apex .....***Sch. smithii***

Schoenoplectus acutus (Muhlenberg ex Bigelow) Á. Löve & D. Löve *var***. *acutus***, Hardstem Bulrush, Great Bulrush. Cp (NC), Mt (VA), Pd (VA): marshes; rare (NC Rare, VA Rare). June-early August; August-October. The species is widespread in temperate North America; var. *acutus* is restricted to e. North America. [= FNA, K, Y; = *Scirpus acutus* Muhlenberg ex Willdenow – RAB, C, F, G, GW, W; *? Schoenoplectus lacustris* Linnaeus ssp. *glaucus* (Smith) Hartman]

Schoenoplectus americanus (Persoon) Volk ex Schinzius & R. Keller, Olney Threesquare. Cp (GA, NC, SC, VA): tidal freshwater to brackish marshes; rare (NC Watch List). Late May-June; June-September. Nova Scotia west to WA, south to South America. Schuyler (1974) discusses the need to replace the name *S. olneyi* (as traditionally applied) with *S. americanus*, traditionally applied to what must now be called *S. pungens*. Because of this nomenclatural change, the interpretation of much some information and records is now uncertain. [= FNA, K, Z; = *Scirpus americanus* Persoon – C; = *Scirpus olneyi* – RAB, F, G, GW, S]

Schoenoplectus californicus (C.A. Meyer) J. Soják, Giant Bulrush, Southern Bulrush, Tule. Cp (GA, NC, SC): marshes; rare. SC south to FL, west to TX, and extending s. into the New World tropics; on the west coast, from CA southward. [= FNA, K; = *Scirpus californicus* (C.A. Meyer) Steudel – GW, S]

Schoenoplectus erectus (Poiret) Palla ex J. Raynal *ssp***. *raynalii*** (Schuyler) K. Lye. Cp (GA, SC): sandy or peaty, seasonally wet soils (such as on pond shores); rare (GA Special Concern, SC Rare). September-October. Apparently ranging from SC south to n. FL, c. peninsular FL and sw. GA; also in the tropics of both hemispheres. [= FNA, K; < *Scirpus hallii* A. Gray – RAB, misapplied; *? Scirpus erismaniae* Schuyler – GW; < *Scirpus erectus* Poiret]

Schoenoplectus etuberculatus (Steudel) J. Soják, Swamp Bulrush, Canby's Bulrush. Cp (GA, NC, SC, VA): beaver ponds, on peat in small depression ponds, in flowing blackwater streams; rare (GA Special Concern, NC Rare, VA Rare). July-August; August-September. DE south to n. FL and west to e. TX (the distribution rather discontinuous); substantially disjunct in s. MO and RI. [= FNA, K, Z; = *Scirpus etuberculatus* (Steudel) Kuntze – RAB, C, F, G, GW, S]

Schoenoplectus hallii (A. Gray) S.G. Smith, Sharpscale Bulrush. Cp (GA): pond shores in peaty sands ; rare (GA Special Concern). It has also been reported for our area by RAB, and is apparently included in our area by C, as *Scirpus supinus* Linnaeus var. *hallii* (A. Gray) A. Gray, and by others; at least some of these reports are misidentifications of the similar *Sch. erectus*. It is reported for sw. GA by Jones & Coile (1988) and Smith in FNA (2002b). It is very similar to *Sch. erectus*, differing in having the spikelet scales yellow brown (vs. reddish brown) and achenes concave on the ventral surface (vs. bulging on the ventral surface). [= FNA, K; = *Scirpus supinus* Linnaeus var. *hallii* (A. Gray) A. Gray – C; = *Scirpus hallii* A. Gray]

Schoenoplectus pungens (Vahl) Palla *var. **pungens***, Common Threesquare, Chairmaker's Rush, Swordgrass. Cp (NC, SC, VA), Pd (NC, VA), Mt (VA), {GA}: marshes, rocky river beds; common. Mid May-June; June-September. The species is circumboreal, ranging in North America from Newfoundland west to AK, south to South America; var. *pungens* is widespread. This taxon has traditionally had the name *Scirpus americanus* applied to it; this name, however, is properly applied to the traditional *Scirpus olneyi*. *Scirpus pungens* (or *Schoenoplectus pungens*) becomes the correct name for this plant (Schuyler 1974). [= FNA, K, Y; < *Scirpus americanus* – RAB, F, G, GW, S, W, misapplied; = *Scirpus pungens* Vahl var. *pungens* – C; < *Schoenoplectus pungens* – Z]

Schoenoplectus purshianus (Fernald) M.T. Strong, Bluntscale Bulrush. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (NC, VA): marshes; common. Late June-August; July-October. ME west to MN, south to nc. GA (Jones & Coile 1988), AL, MS, TN, and KY. [= FNA, K, Z; = *Scirpus purshianus* Fernald – RAB, C, F, GW, W; *? Scirpus smithii* var. *williamsii* (Fernald) Beetle – G; *? Scirpus debilis* Pursh – S, misapplied; *? Scirpus juncoides* Roxburg var. *digynus* (Böckler) T. Koyama; *? Scirpus juncoides* var. *williamsii* (Fernald) T. Koyama]

Schoenoplectus smithii (A. Gray) J. Soják, Smith's Bulrush, Bluntscale Bulrush. Cp (VA): gravelly intertidal beach; rare (VA Rare). July; Late July-August. Québec west to MN, south to NJ, DE, ne. VA, PA, n. OH, and IL. Reported from mountains of sw. VA. The varieties recognized by Smith in FNA (2002b) are of uncertain value; all three are in or approach our area. Var. *smithii* (south to DE, NJ, and PA) has perianth bristles absent or rudimentary. Var. *levisetus* (with a historic occurrence in VA) has 1-4 perianth bristles, much shorter than to equalling the achene, the bristles smooth or sparsely retrorsely barbed. Var. *setosus* (with records from NC, DE, and MD) has 4-6 perianth bristles, as long as or longer than the achene, and densely retrorsely barbed. [= K, Z; = *Scirpus smithii* A. Gray – C, F; *? Scirpus smithii* var. *smithii* – G; > *Schoenoplectus smithii* var. *smithii* – FNA; > *Schoenoplectus smithii* var. *setosus* (Fernald) S.G. Smith – FNA; > *Schoenoplectus smithii* var. *levisetus* (Fernald) S.G. Smith – FNA]

Schoenoplectus subterminalis (Torrey) J. Soják, Swaying Rush, Water Bulrush. Cp (GA?, NC, SC, VA), Mt (VA): beaver ponds, bogs, in highly acid water; rare (NC Rare, SC Rare, VA Rare). May-June; June-August. Newfoundland west to s. AK, south to se. NC, nc. SC, GA, panhandle FL, MO, UT (?), and n. CA (the distribution discontinuous, especially southward). [= FNA, K, Z; = *Scirpus subterminalis* Torrey – RAB, C, F, G, GW, S, W]

Schoenoplectus tabernaemontani (C.C. Gmelin) Palla, Softstem Bulrush, Great Bulrush. Cp (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Pd (NC, SC, VA): marshes, sedge maedows, streambeds, riverbeds, calcareous fens; common. June-September. Newfoundland west to AK, south to South America; also in Europe. [= FNA, K, Y; *? Scirpus validus* Vahl – RAB, C, F, G, GW, S; > *Scirpus validus* var. *validus* – F; *Scirpus validus* var. *creber* Fernald – F; = *Scirpus tabernaemontani* K.C. Gmelin – W; *? Schoenoplectus validus* (Vahl) A. & D. Löve – Z; *? Schoenoplectus lacustris* Linnaeus ssp. *validus* (Vahl) T. Koyama var. *validus*; = *Scirpus lacustris* Linnaeus var. *tabernaemontani* (C.C. Gmelin) Döll]

Schoenoplectus torreyi (Olney) Palla, Torrey's Bulrush, Torrey's Threesquare. Mt (VA): sinkhole ponds; rare (VA Rare). New Brunswick west to Manitoba, south to NJ, PA, WV, w. VA, MO, and NE. Known in VA only from natural ponds in Augusta and Rockingham counties. [= FNA, K, Z; = *Scirpus torreyi* Olney – C, F, G, W]

Schoenoplectus deltarum (Schuyler) J. Soják, Delta Bulrush. Brackish marshes and other wetlands, AL and FL west to KS and TX. [= FNA, K; = *Scirpus deltarum* Schuyler] {not keyed at this time}

* *Schoenoplectus mucronatus* (Linnaeus) Palla, Rough-seed Bulrush. Weed (native of Eurasia) in rice fields and other disturbed situations, known from old collections in PA, NJ, NY and more recently from KY and TN. [= FNA, K; = *Scirpus mucronatus* Linnaeus] {not keyed at this time}

The hybrid *Schoenoplectus etuberculatus* × *subterminalis* has been collected in Hoke Co, NC and Lexington County, SC. It has sterile, malformed achenes.

Scirpus Linnaeus 1753 (Bulrush)

(also see *Bolboschoenus, Isolepis*, *Oxycaryum, Schoenoplectus*, and *Trichophorum*)

A genus of about 20 species, herbs, of circumboreal distribution, also with species in Australia, Malaysia, and South America. The complex of species including *Sc. atrovirens*, *Sc. georgianus*, *Sc. hattorianus*, *Sc. flaccidifolius* are difficult to identify, and some have doubted their validity. Although further work on this group is needed, they do generally appear to behave as biological species despite their morphological similarity. Schuyler (1967) writes that "the remaining species in the key differ in minute characteristics and often the most satisfactory means of identification is by carefully comparing specimens of them. Despite the close morphological similarity of these species, their characteristics are reasonably constant even in areas where they coexist and occasionally hybridize." References: Whittemore & Schuyler in FNA (2002b); Schuyler (1967)=Z; Strong (1994)=Y; Goetghebeur in Kubitzki (1998b). Key adapted from C, GW, and Z.

1 Bristles smooth, without teeth along the margins, strongly contorted and greatly exceeding the achenes when extended.
  2 Scales usually with inconspicuous midribs; mature bristles exceeding the scales and giving the inflorescence a woolly appearance; achenes 0.6-0.9 mm long, yellowish-gray to nearly white .....***Sc. cyperinus***
  2 Scales usually with prominent green midribs; mature bristles mostly contained within the scales; achenes1.0-1.3 mm long, brown to purplish-brown when mature.

3 Perianth bristles (extended) shorter than, equal to, or slightly exceeding the achene; mature culms lax, the inflorescences lopping over to (or nearly to) the ground, with 2-3 lateral inflorescences in addition to the terminal one; rays of the inflorescence scabrous, ascending to divergent, with axillary bulblets..... ***Sc. lineatus***

3 Perianth bristles (extended) exceeding the achene by 2-3×; mature culms rigid, nearly upright, with 0-2 lateral inflorescences in addition to the terminal one; rays of the inflorescence glabrous, ascending, lacking axillary bulblets.....***Sc. pendulus***

1 Bristles with retrorse or antrorse teeth along the margins, strongly contorted to nearly straight, shorter than to greatly exceeding the achenes when extended (or bristles absent or nearly so in *Sc. georgianus*).

4 Spikelets all solitary with distinct pedicels; mature scales with broad green midribs; achenes with protruding angles and concave sides ..... ***Sc. divaricatus***

4 Spikelets all or mostly in glomerules with the pedicels scarcely developed; mature scales with midribs not usually green; achenes less sharply trigonous, the sides convex, flat, or slightly concave.

5 Culms with 10-20 leaves; spikelets broadly ovate; scales reddish-brown and, excluding the tips, about as wide as long .....***Sc. polyphyllus***

5 Culms with 2-10 leaves; spikelets broadly ovate to narrowly ovate; scales brown or black and, excluding the tips, mostly longer than wide.

6 Bristle teeth thick-walled and sharp-pointed, densely arranged almost to the base of the bristle.

7 Plants cespitose with short, brownish rhizomes; leaf sheaths green throughout; scales broadest above the middle; achenes with well-developed receptacles and firmly attached bristles.....***Sc. ancistrochaetus***

7 Plants spreading with long, reddish rhizomes having conspicuous nodes and internodes; lower leaf sheaths red-tinged near their bases; scales usually broadest below the middle; achenes with poorly-developed receptacles from which the bristles readily detach..... ***Sc. expansus***

6 Bristle teeth thin-walled and with rounded tips, mostly restricted to the upper 2/3 of the bristle (or bristles absent or nearly so in *Sc. georgianus*).

8 Bristles 0-3, shorter than the achenes; teeth, if present, concentrated near the tips of the bristles..... ..... ***Sc. georgianus***

8 Bristles usually 5-6, shorter than to slightly longer than the achenes; teeth extending basally from the tips of all or at least some of the bristles.

9 Mature culms lax and reclining with the inflorescences lopping over to (or nearly to) the ground; glomerules usually with < 15 spikelets; lower scales of spikelets slightly mucronate, blackish..... ..... ***Sc. flaccidifolius***

9 Mature culms upright or nearly so; glomerules frequently with > 15 spikelets; lower scales of spikelets mucronate, blackish or brownish.

10 Lower leaf blades and sheaths usually nodose-septate; spikelets ovate or narrowly ovate; scales mostly brownish; longer bristles frequently exceeding the achenes; achenes 1.0-1.3 mm long.....***Sc. atrovirens***

10 Lower leaf blades and sheaths nearly smooth; spikelets broadly ovate or ovate; scales mostly blackish; longer bristles usually shorter than or about equalling the achenes; achenes 0.8-1.1 mm long.....***Sc. hattorianus***

Scirpus ancistrochaetus Schuyler, Northeastern Bulrush. Mt (VA): mountain ponds; rare (US Endangered, VA Endangered). July-September. VT, MA, and NY south to PA, e. WV, and w. VA. See Bartgis (1992) and Schuyler (1962) for additional information on this species. [= FNA, K, Z; < *Sc. atrovirens* var. *atrovirens* – C]

Scirpus atrovirens Willdenow, Black Bulrush. Pd, Mt, Cp (GA?, NC, SC, VA): marshes; common. July-September. Newfoundland west to MN, south to GA and TX; disjunct in AZ. [= FNA, K, Z; < *Scirpus atrovirens* – RAB, GW, S, W; < *Sc. atrovirens* var. *atrovirens* – C, F, G]

Scirpus cyperinus (Linnaeus) Kunth, Woolgrass Bulrush. Cp, Mt, Pd (GA, NC, SC, VA): marshes, disturbed wet ground; common. July-September. Newfoundland west to British Columbia, south to FL, e. TX, and OR. The varieties may be worthy of recognition. [= RAB, FNA, GW, K, W; < *Scirpus cyperinus* – C; > *Scirpus cyperinus* var. *cyperinus* – F; > *Scirpus cyperinus* var. *pelius* Fernald – F; > *Scirpus rubricosus* Fernald – F; > *Scirpus cyperinus* – G, S; > *Scirpus eriophorum* Michaux – G, S]

Scirpus divaricatus Elliott. Cp (GA, NC, SC, VA): swamp forests; common, uncommon in VA (VA Watch List). July-September. Se. VA south to n. FL, west to e. TX, s. TN, and s. MO. [= RAB, C, F, FNA, G, GW, K, S, Z]

Scirpus expansus Fernald, Woodland Bulrush. Mt (NC, SC, VA), Pd (GA, NC, SC, VA), Cp (VA): bogs, marshes, streambeds; common (GA Special Concern). July-September. ME west to MI, south to ne. GA and OH. [= RAB, C, F, FNA, G, GW, K, W, Z; < *Scirpus sylvaticus* Linnaeus – S, misapplied]

Scirpus flaccidifolius (Fernald) Schuyler, Reclining Bulrush. Cp (NC, VA): bottomlands; rare (US Species of Concern, NC Rare, VA Rare). July-September. Endemic to se. VA and ne. NC. A recent status survey (Ludwig 1993) found the following characters to be most useful in distinguishing *Sc. flaccidifolius* from *Sc. georgianus* growing in the same region: bristles 1.2-1.4 mm long (vs. absent or mostly < 0.2, rarely to 1.0 mm long in *Sc. georgianus*), spikelets 1.5-2.1 mm wide (vs. 1.1-2.2 mm wide), spikelets 3-9 (-12) per glomerule (vs. 4-23), and inflorescence rays 5.5-17.9 cm long (vs. 3.5-13.5 cm long). Bristle length was the only character which consistently separated the 2 species; other characters showed overlapping values of possibly statistical value. [= FNA, K, Z; < *Scirpus atrovirens* var. *atrovirens* – C; = *Scirpus atrovirens* Willdenow var. *flaccidifolius* Fernald – F]

Scirpus georgianus Harper, Georgia Bulrush. Mt, Pd (GA, NC, SC, VA): marshes, wet areas, ditches; common. July-September. Prince Edward Island west to NE, south to GA and e. TX. [= FNA, K, S, Z; < *Scirpus atrovirens* – RAB, GW, W; < *Scirpus atrovirens* var. *atrovirens* – C; = *Scirpus atrovirens* Willdenow var. *georgianus* (Harper) Fernald – F, G]

Scirpus hattorianus Makino, Northern Bulrush. Mt (NC, VA): seepages, ditches, marshes, mostly at moderate to high elevations; uncommon (VA Watch List). July-September. Newfoundland to w. Ontario and WI, south to MD, NC, OH, and IN. [= FNA, K, Z; < *Scirpus atrovirens* – RAB, GW, W; < *Scirpus atrovirens* var. *atrovirens* – C, F, G]

Scirpus lineatus Michaux. Cp (GA, NC, SC, VA): swamp forests over coquina limestone ("marl"); rare (NC Rare, VA Watch List). May-July. Se. VA south to c. FL, west to LA. [= C, FNA, GW, K, Z; = *Scirpus fontinalis* Harper – RAB, F, S; > *Scirpus fontinalis* var. *virginiana* Fernald – G]

Scirpus pendulus Muhlenberg. Mt (GA, VA), Pd, Cp (NC, SC, VA): wet ground over limestone, diabase, or other circumneutral rocks; rare (NC Rare). June-July. ME west to MN, SD, and CO, south to NC, ne. FL, NM, and n. Mexico. [= C, FNA, GW, K, W, Z; = *Sc. lineatus* – RAB, F, G, S, misapplied]

Scirpus polyphyllus Vahl. Mt, Pd (GA, NC, SC, VA), Cp (VA): marshes, mountain bogs; common. July-September. MA and VT west to IL and s. MO, south to nc. GA (Jones & Coile 1988) and AL. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Scirpus atrocinctus Fernald ranges south to WV (Grant, Hampshire, Harrison, Pendleton, Pocahontas, Randolph, and Tucker counties). It is a northern relative of *Sc. cyperinus*, by some not considered distinct. It differs in having spikelets mostly solitary with distinct pedicels (vs. solitary with distinct pedicels or in glomerules with pedicels scarcely developed), scales usually blackish (vs. reddish-brown to brownish, or rarely blackish), and flowering and maturing achenes roughly a month earlier than nearby *Sc. cyperinus*. [= FNA, K; < *Scirpus cyperinus* (Linnaeus) Kunth – C] {synonymy incomplete; not keyed at this time}

Scirpus longii Fernald has been reported as occurring in e. NC by Radford, Ahles, & Bell (1968) and Fernald (1950). This report is in error. It does range south to NJ (Kartesz 1999). [= FNA, C, F, K] {synonymy incomplete; not keyed at this time}

Scirpus microcarpus J. & K. Presl ranges south to WV (Monongalia, Pocahontas, Randolph, and Tucker counties). It should key straightforwardly to key lead 21, differing however from all later species in the key in having the styles mostly 2-parted (vs. 3-parted) and the achenes 2-angled (vs. 3-angled). [= FNA, C, K] {synonymy incomplete; not keyed at this time}

Scirpus pallidus (Britton) Fernald ranges south to se. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999). [= FNA, K; = *Scirpus atrovirens* Willdenow var. *pallidus* Britton – C] {synonymy incomplete; not keyed at this time}

Scirpus pedicellatus Fernald, south to NJ, PA, OH, and KY (Kartesz 1999). [= FNA, K; < *Scirpus cyperinus* (Linnaeus) Kunth – C] {synonymy incomplete; not keyed at this time}

Scleria P.J. Bergius 1765 (Nutrush)

(by Richard J. LeBlond)

A genus of about 250 species, herbs, pantropical, and locally extending into warm temperate regions. This treatment attempts to recognize the stablest and most distinctive *Scleria* entities. Intermediate and otherwise difficult-to-classify specimens are occasionally encountered within some species groups, suggesting hybridization or incomplete speciation. This is particularly true within the *S. ciliata/pauciflora* group (here boldly treated as four species and two varieties). This complex genus likely will continue to challenge and exasperate those who study it. References: Kessler (1987)=Z; Fairey (1967)=Y; Reznicek, Fairey, & Whittemore in FNA (2002b); Core (1936); Goetghebeur in Kubitzki (1998b).

Identification notes: *Scleria* superficially resembles *Rhynchospora* in the field, but mature specimens are readily recognized by the terete white, gray, or black bony achenes. Hardened achenes are necessary for reliable identification to species. In the key, achene length includes hypogynium when present. The scale character applies only to the ultimate bracteate structure clasping the achene.

1 Base of achene without hypogynium (a circular, angular, lobed, or tuberculate disk differing in texture and structure from the achene body), the achene base constricted, pitted, and/or ribbed, but appearing as a continuation of the achene body.
  2 Achene body papillose-verrucose, often characterized by raised and undulating transverse ridges; spikelets verticillate in (2-)3-5(-9) sessile clusters ..... ***Scl. verticillata***
  2 Achene body smooth or longitudinally ribbed; spikelets in a single cluster.
    3 Triangular base of achene with a pair of pits on each of the three sides; achene 2-3 mm long ..... ***Scl. georgiana***
    3 Triangular base of achene lacking pits in the three concave sides; achene 3-4 mm long ..... ***Scl. baldwinii***
1 Base of achene with hypogynium.
  4 Achene body smooth (often longitudinally ribbed); hypogynium with 0, 8, or 9 tubercles.
    5 Hypogynium with 8 or 9 minutely papillate tubercles ..... ***Scl. oligantha***
    5 Minutely papillate portion of hypogynium continuous, not divided into separate tubercles.
      6 Achene 1-2 mm long; culm 1-2 mm wide at base; leaves 1-3 mm wide ..... ***Scl. minor***
      6 Achene 2-4 mm long; culm 2.5-6 mm wide at base; leaves 5-9 mm wide.
        7 Plants cespitose to short-rhizomatous; sheaths brown or straminous to reddish, glabrous to glabrate on the ventral surface except for a pubescent and often thickened summit; achenes 2.0-3.3 mm long, 1.12-1.38 × as long as wide (averaging 1.24); of wet to mesic habitats ..... ***Scl. triglomerata***

7 Plants long-rhizomatous to cespitose; sheaths purple to reddish, the ventral surface uniformly pubescent; achenes 2.8-4.0 mm long, 1.35-1.54 × as long as wide (averaging 1.45); mostly of dry to dry-mesic habitats ..... ***Scl. nitida***

4 Achene reticulate or papillose, rarely smooth (most often from apparent abortion or abnormal development); hypogynium with 3 tongue-shaped lobes, or 3 or 6 tubercles.

8 Hypogynium of 3 tongue-shaped lobes appressed to the underside of the achene (appearing nearly bract-like); achene reticulate, the pits generally squarish or rectangular and arranged regularly in rows, rarely smooth (apparently by abortion or abnormal development).

9 Achene pubescent (occasionally becoming glabrate); lower lateral inflorescences on long, filiform, usually drooping peduncles; bract of the uppermost lateral inflorescence usually reaching from 1/3-3/4 the length of the terminal internode; terminal internode 6-30 cm long ..... ***Scl. muehlenbergii***

9 Achene glabrous; lower lateral inflorescences sessile or on short-erect peduncles; bract of the uppermost lateral panicle usually reaching 3/4 the length of to exceeding the terminal internode; terminal internode 3-8 cm long..... ***Scl. reticularis***

8 Hypogynium with 3 or 6 tubercles; achene papillose, sometimes reticulate (if so, the pits generally variable in shape and not forming regular rows), or rarely smooth.

10 Achenes 1.5-2 mm long, the hypogynium with 6 paired but distinctly separate tubercles.

11 Culms, leaves, and bracts glabrous or sparsely hirtellous, but not copiously villous-ciliate ..... ***Scl. pauciflora*** *var*. ***pauciflora***

11 Culms, leaves, and bracts copiously villous-cilliate with spreading hairs 0.5-1 mm long..... ***Scl. pauciflora*** *var*. ***caroliniana***

10 Achenes 2.0-3.6 mm long, the hypogynium with 3 tubercles, these often 2-lobed, the lobes united (becoming separate in *S.* species 1 with achenes smoothish and > 2.5 mm long).

12 Achenes 2-2.5(-3) mm long, 1.5-2.0(-2.3) mm wide; larger leaves 1-3.5 mm wide; culms, sheaths, blades, and bracts glabrous to moderately pubescent or ciliate.

13 Culms, sheaths, blades, and bracts glabrous; plants of sandy soils (e.g., spodosols)..... ***Scl. ciliata*** *var*. ***glabra***

13 Culms and/or sheaths hairy; blades and bracts ciliate; plants of loamy sands (e.g., ultisols)..... ***Scl. ciliata*** *var*. ***ciliata***

12 Achenes 2.6-3.3(-3.6) mm long, 2.0-2.6 mm wide; larger leaves 3-7 mm wide; culms, sheaths, blades, and bracts moderately to densely pubescent and/or ciliate; plants usually of loamy soils (e.g., ultisols and alfisols).

14 Herbage pubescent between as well as along primary sheath and adaxial leaf surface nerves and culm angles; most pistillate scales pubescent with appressed hairs 0.1 (-0.2) mm long, the keel similarly pubescent or ciliate with hairs (0.1-)0.2 mm long; achene body distinctly papillose, 2.0-2.4 (-2.5) mm wide, averaging 2.2 mm, the length:width ratio 1.2-1.5 (-1.7); hypogynium with 3 usually lobed tubercles ..... ***Scl. elliottii***

14 Herbage pubescence restricted to primary sheath and leaf surface nerves and culm angles; pistillate scales glabrous, the keel ciliate with glutinous hairs, the longer 0.5-1.0 mm; achene body smoothish, uneven with low, broad non-papillose rises, (2.3-) 2.4-2.6 mm wide, averaging 2.5 mm, the length:width ratio 1.1-1.25; hypogynium with 3 deeply lobed tubercles, or 6 paired but separate tubercles ..... ***Scl. species 1***

Scleria baldwinii (Torrey) Steudel, Baldwin's Nutrush. Cp (GA, NC, SC): wet savannas, under *Pinus serotina, P. palustris*, and/or *Taxodium ascendens*; rare (NC Rare, SC Rare). June-July. Se. NC south to FL and west to se. TX; also in Cuba and the Bahamas (Sorrie & LeBlond 1997). *S. baldwinii* is a more robust plant, with larger achenes, than *S. georgiana*. [= RAB, FNA, K, GW]

Scleria ciliata Michaux var. ***ciliata***, Hairy Nutrush. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC): wet to dry sandy thickets and flatwoods, typically on sandy soil; frequent, rare in the mountains, rare in VA (VA Rare). May-August. VA south to FL, west to MO and TX, and in the West Indies, Mexico, and Central America. [= FNA, S, Y; < *S. ciliata* – RAB, C, F, G, GW, W; < *S. ciliata* var. *ciliata* – K]

Scleria ciliata Michaux var. ***glabra*** (Chapman) Fairey, Smooth Nutrush. Cp (GA, NC, SC, VA?): savannas and flatwoods; frequent in the outer Coastal Plain of NC and SC. NC (VA?) south to FL, west to TX. *S. ciliata* var. *curtissii* (Britton) Kessler (=*S. pauciflora* Muhl. ex Willd. var. *curtissii* (Britton) Fairey) is currently of uncertain taxonomic standing. It is distinguished by its reticulate, non-papillose achenes, but such a condition has been observed in achenes with the hypogynium lobing of both *S. ciliata* and *S. pauciflora* (as suggested by the synonymy), and may only represent a form or condition. [= FNA, Y, K; > *S. brittonii* Core ex Small – S; < *S. ciliata* – RAB, C, F, G, GW, W; > *S. ciliata* var. *glabra* – K; > *S. ciliata* var *curtissii* (Britton) Kessler – Z; > *S. pauciflora* Muhl. ex Willd. var. *curtissii* (Britton) Fairey – K]

Scleria elliottii Chapman, Broad-leaved Hairy Nutrush. Cp (GA, NC, SC, VA): savannas, flatwoods, pine-oak woodlands, meadows, bogs, and clay-based Carolina bays, typically on loamy sands; occasional. May-September. VA south to FL, west to TX, MO, OK. The descriptions of *S. elliottii* in S and of *S. ciliata* Michaux var. *elliottii* (Chapman) Fernald in F do not include the entity here treated as *S. elliottii* var. 1. [= S; = *S. ciliata* Michaux var. *elliottii* (Chapman) Fernald – F, FNA, Y; < *S. ciliata* var. *ciliata* – K; < *S. ciliata* – RAB, C, G, GW, W]

Scleria georgiana Core, Georgia Nutrush. Cp (GA, NC, SC): pine savannas, cypress savannas, depression meadows, mostly on the outer coastal plain; rare (NC Rare). June-August. NC south to s. FL, west to TX; and in the West Indies, Central and South America. See note under *S. baldwinii*. [= RAB, FNA, GW, K; = *S. gracilis* Elliott – S (name preoccupied)]

Scleria minor W. Stone, Slender Nutrush. Cp, Mt (NC, SC, VA): wet savannas and peaty seepages in the Coastal Plain and Sandhills, bogs in the Mountains; rare (NC Watch List, VA Rare). June-August. NJ south to FL, west to se. TX. [= RAB, C, F, FNA, G, K, W; < *S. triglomerata* – GW, S]

Scleria muehlenbergii Steudel, Pitted Nutrush. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): open wet sand, pine savannas and flatwoods, depression meadows, cypress savannas, limesink ponds, bogs; common. June-September. NY (Long Island), NJ, and NC south to FL, west to TX, north in the interior to MO and IN; also in the West Indies, Bahamas (Sorrie & LeBlond 1997), Mexico, and Central America. *S. muehlenbergii* is adapted to a variety of freshwater wetland habitats, while *S. reticularis* is primarily restricted to the drawdown zones of limesink (doline) ponds and clay-based Carolina bays. Also see notes under *S. reticularis*. In normal specimens, the achene reticulation ridges are sharp-edged and steeply sloped (compare *S. reticularis*). The achene pubescence is often tawny, and achenes appearing superficially glabrous often have a tawny residue under magnification. [= FNA, K; < *S. reticularis* Michaux – RAB, C, GW, W; = *S. muhlenbergii* – F, orthographic variant; = *S. reticularis* var. *pubescens* Britton – G; = *S. setacea* Poiret – S]

Scleria nitida Willdenow, Shining Nutrush. Cp, Mt, Pd (NC, SC, VA) {GA?} (complete distribution by province by state has yet to be determined): dry sandy or rocky soil of pine/scrub oak woodlands, ridgetop forests at lower elevations in the Mountains such as pine/oak heaths, and heath balds. May-October. MA, VA, and KY south to FL, west to LA and MO (also see note under *S. triglomerata*). *S. flaccida* Steudel, here synonymized because of achene and sheath characters, is a poorly known entity with pendulous capillary axillary peduncles and swamp habitat as in *S. oligantha*, but with an unlobed hypogynium; F gives a range of se. VA to FL and LA. [= G; < *S. triglomerata* Michaux – RAB, C, FNA, GW, K, S, W; > *S. flaccida* Steudel – F; > *S. nitida* – F]

Scleria oligantha Michaux, Few-flowered Nutrush. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): dry to moist forests and woodlands, swamp forests; common. June-September. NJ and MO south to FL and TX, also in Puerto Rico, Mexico, and Central America. The long, filiform, arching lateral peduncles are distinctive. [= RAB, C, F, FNA, G, GW, K, S, W]

Scleria pauciflora Muhlenberg ex Willdenow ***var. caroliniana*** A. Wood, Carolina Nutrush. Cp (GA, NC, SC, VA?): savannas; uncommon. June-September. NH west to MI, south to n. FL, TN, and MO. [= F, FNA, G, K; < *S. pauciflora* – RAB, C, GW, S, W]

Scleria pauciflora Muhlenberg ex Willdenow *var.* ***pauciflora***, Papillose Nutrush. Cp, Pd, Mt (GA, NC, SC, VA): wet to dry pine flatwoods, pine savannas, depression meadows; common. June-September. NJ west to KS, south to FL and TX, also in Cuba. Typification of *S. pauciflora* is controversial and unresolved at this time (Fairey & Whittemore 1999). [= F, FNA, G, K; < *S. pauciflora* – RAB, C, GW, S, W]

Scleria reticularis Michaux, Netted Nutrush. Cp (GA, NC, SC): limesink ponds, clay-based Carolina bays; rare (NC Rare). June-September. MA south to FL, west to TX, north to IN, MI, and WI. Reports from Mexico are based on *S. muehlenbergii*. See notes under *S. muehlenbergii*. In normal specimens, the achene reticulation ridges are soft-edged and obliquely sloped. Occasional stipitate-capitate fungal growth on the achene has been mistaken for pubescence (a condition perhaps restricted to herbarium specimens), apparently contributing to the unwarranted agglomeration of this distinctive taxon and *S. muehlenbergii*. There is conbtroversy about typification of the name *Scleria reticularis* (Camelbeke, Reznicek, & Goetghebeur 2003). [= F, FNA, K, S; < *S. reticularis* – RAB, C, GW, W (also see *S. muehlenbergii)*; = *S. reticularis* var. *reticularis* – G]

Scleria species 1, Smooth-seeded Hairy Nutrush. Cp, Pd (NC): wet savannas shallowly underlain by coquina limestone in the Coastal Plain, and apparently in diabase glades and barrens in the Piedmont. May-September. Currently known only from Granville, Onslow, and Pender counties, NC. On the Coastal Plain, it is associated with other narrow endemics such as *Thalictrum cooleyi, Allium sp. 1*, and *Carex lutea.*

Scleria triglomerata Michaux, Tall Nutrush. Cp, Mt?, Pd (GA, NC, SC, VA): wet to mesic flatwoods, savannas, and hardwood forests; frequent. May-September. VT and Ontario west to MN, south to FL and TX. *S. triglomerata* sensu lato also occurs in Puerto Rico and Mexico, and may include *S. nitida*. [= F, G; < *S. triglomerata* – RAB, C, FNA, GW, K, S, W]

Scleria verticillata Muhlenberg ex Willdenow, Savanna Nutrush. Cp (GA, NC, SC, VA), Mt (VA): wet calcareous savannas of the outer coastal plain, freshwater marshes and maritime wet grasslands on barrier islands influenced by salt spray and shell deposits, wet calcareous or mafic fens or seepages in the mountains, calcareous grasslands; rare (NC Rare, VA Rare). July-September. MA and Ontario west to MN, south to FL and TX, also in the West Indies, Mexico, Central and South America. This species is a distinct calciphile, with only scattered occurrences in or near our area. The roots are strongly fragrant. [= RAB, C, F, FNA, G, GW, K, S]

Scleria distans Poiret in J. Lamarck et al. Cp (GA): pine flatwoods, bogs, savannas; rare. GA and FL west to se. TX; tropical America. Known from scattered counties in the Coastal Plain of GA (Jones & Coile 1988). [= FNA; *? S. hirtella* Sw. – GW, K, S, Y, Z, misapplied] {not keyed at this time}

Trichophorum Persoon (Deergrass)

A genus of about 10 species, herbs, primarily circumboreal, but with disjunct occurrence in montane tropical Asia and montane tropical South America. *Trichophorum* has long been recognized as distinct from *Scirpus* by many authors (especially in Europe and Asia). Molecular and other studies have clearly confirmed that these species are more closely allied to *Eriophorum* than to *Scirpus*, and their removal from *Scirpus* creates a more natural classification (Strong 1994). *Trichophorum* resembles

Eriophorum in most morphologic characters, and shares with it a generally boreal and north temperate distribution. *Trichophorum alpinum* (Linnaeus) Persoon demonstrates previous confusion over the affinities of the group; it has been variously treated (by those who do not recognize *Trichophorum*) as *Eriophorum alpinum* Linnaeus or *Scirpus hudsonianus* (Michaux) Fernald. References: Crins in FNA (2002b); Strong (1994)=Z; Goetghebeur in Kubitzki (1998b).

1 Culms terete or nearly so, smooth; [(in our area) of moderate to high elevation cliffs] ..... ***Tr. caespitosum ssp. caespitosum***
1 Culms sharply triangular in cross-section, the angles scabrous; [plants of low to moderate elevation forests, woodlands, and bluffs] ..... ***Tr. planifolium***

Trichophorum caespitosum (Linnaeus) Schur *ssp.* ***caespitosum***, Deergrass, Deerhair Bulrush. Mt (GA, NC, SC): cliffs receiving fog/cloud deposition and seepage, mostly at high elevations, over amphibolite, granite, gneiss, or schist, notably at Grandfather Mountain, Roan Mountain, Whiteside Mountain, and Chimney Rock; rare (GA Special Concern, NC Rare). July-September. A circumboreal tundra species, south in North America to the mountains of New England and fens in NY, and to n. IL, MN, montane UT, and OR, common in wet tundra and on alpine summits, disjunct (from NY) to about a dozen sites in the Southern Appalachians of w. NC, e. TN, sw. SC, and ne. GA (Jones & Coile 1988). The disjunct southern occurrences are certainly relicts of a more widespread distribution during the Pleistocene. Reported for South Carolina by Hill & Horn (1997) and Hill (1999). [< *Trichophorum caespitosum* – K; > *Scirpus cespitosus* var. *callosus* Bigelow – RAB, F, G; < *Scirpus cespitosus* Linnaeus – C, W; < *Trichophorum cespitosum* – FNA, orthographic variant; < *Scirpus caespitosus* – S; *? Baeothryon cespitosum* (Linnaeus) A. Dietrich]

Trichophorum planifolium (Sprengel) Palla. Pd, Mt (VA): woodlands, bluffs, forests; uncommon. ME west to Ontario, south to sc. VA, e. WV, KY, OH, and se. MO. See Crins (1989a) for an interesting discussion of this species. [= FNA, K, Z; = *Scirpus verecundus* Fernald – C, F, G, W; = *Scirpus clintonii* – S, misapplied]

Websteria S.H. Wright
(see *Eleocharis*)

DIOSCOREACEAE R. Brown 1810 (Yam Family)

A family of about 3-20 genera and 600-880 species, of tropical and warm temperate regions. References: Raz in FNA (2002a); Huber in Kubitzki (1998a).

Dioscorea Linnaeus 1753 (Yam)

A genus of about 575-850 species, vines, of tropical and warm temperate regions of the Old World and New World. Huber in Kubitzki (1998a) advocates the division of the large and unwieldy *Dioscorea* into separate genera. *Dioscorea* (broadly defined) has a wide variety of economic uses, especially in the tropics, where it is most diverse. Various species are cultivated for their edible tubers (yams, not to be mistaken for sweet potatoes, *Ipomoea batatas*, often referred to colloquially as "yams" in the southern United States), especially in Africa. Oral contraceptives were developed from extracts of *Dioscorea*. Many other uses are described in Al-Shehbaz & Schubert (1989). References: Raz in FNA (2002a); Al-Shehbaz & Schubert (1989)=Y; Ward (1977c)=Z; Huber in Kubitzki (1998a).

1 Leaves halberd-shaped or sagittate, the sides with a concave portion (*D. polystachya*) or continuously convex (*D. alata*); aerial tubers often present in the leaf axils; perennial from large, vertically-oriented tubers; [non-native species, usually in disturbed areas, especially in bottomlands]; [section *Enantiophyllum*].
  2 Stems broadly winged; leaf margins sagittate, the sides continuously convex ..... ***D. alata***
  2 Stems terete, not winged; leaf margins halberd-shaped, the sides with a concave portion ..... ***D. polystachya***
1 Leaves cordate-ovate, the sides of the leaves continuously convex; aerial tubers never present; perennial from rhizomes < 1.5 cm in diameter; [native species, usually of forests and woodlands]; [section *Macropoda*].
  3 Staminate inflorescences usually of 1 large and 1-2 smaller secondary panicles in each axil (of upper stem leaves); filaments inwardly curved, ca. 0.4 mm long; anther lobes connate; tepals oblong; [of SC south] ..... ***D. floridana***
  3 Staminate inflorescence a single panicle in each axil (of median or upper leaves); filaments straight, ca. 0.2 mm long; anther lobes separate; tepals ovate; [widespread in our area].
    4 Lower leaves in whorls of 4-7, upper leaves alternate; stem terete in cross-section; rhizomes 10-15 mm in diameter, often contorted and much-branched ..... ***D. quaternata***
    4 All leaves alternate (rarely the lowermost approximate, with short internodes, and appearing nearly whorled); stem polygonal in cross-section, with 8-14 narrowly-winged ribs; rhizomes 5-10 mm in diameter, usually relatively straight and little-branched ..... ***D. villosa***

* ***Dioscorea alata*** Linnaeus, White Yam, Great Yam. Cp (GA): disturbed areas, in moist soils; rare, introduced from se. Asia. [= FNA, K, Y, Z]

Dioscorea floridana Bartlett, Florida Wild Yam. Cp (GA, SC): mesic to dry forests, swampy forests; uncommon. June-July; August-November. SC south to n. FL, on the Coastal plain. *D. floridana* is "the most distinctive of North American species" (Al-Shehbaz & Schubert 1989). [= FNA, K, S, Y, Z; = *D. villosa* Linnaeus var. *floridana* (Bartlett) Ahles – RAB]

* ***Dioscorea polystachya*** Turczaninow, Cinnamon Vine, Chinese Yam. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): thickets, disturbed areas, bottomland forests; uncommon, native of China. June-August. [= FNA; = *D. batatas* Decaisne – RAB, C, F, G, W, Z; = *D. oppositifolia* Linnaeus – K, Y, misapplied]

Dioscorea quaternata J.F. Gmelin, Whorled Wild Yam. Mt, Pd (GA, NC, SC, VA): moist forests; common. April-June; September-October. This species has been shown to be quite distinct from *D. villosa*. It has a more northern and montane range than *D. villosa*, ranging from NJ, NY, s. Ontario, WI, MN, and IA south to n. FL and LA, centered, and most abundant, in the Appalachians. The status of *D. glauca* requires further investigation (see Ward 1977c). [= C, F, G, K, S, Y, Z; < *D. villosa* var. *villosa* – RAB; *D. glauca* Muhlenberg ex Bartlett – S; < *D. villosa* – FNA, W]

Dioscorea villosa Linnaeus, Common Wild Yam. Cp, Pd, Mt? (GA, NC, SC, VA): moist forests and woodlands; uncommon. April-June; September-November. MA and RI south to n. FL, primarily in the Coastal Plain. Various specific and infraspecific taxa are here combined. Ward (1977c) states that "a recent study at Duke University by Shu-fun Au, unfinished due to the death of its author, tentatively recognized *D. hirticaulis* and *D. floridana* but combined all other entities without distinction under *D. villosa*." Further study is needed. Al-Shehbaz & Schubert (1989) indicate that the lectotype of *D. villosa* has pubescent stems; nomenclatural changes are apparently needed, if varietal status of the 2 varieties here recognized proves warranted. [= Y; > *D. villosa* var. *villosa* – C; >< *D. villosa* var. *villosa*– RAB (also see *D. quaternata*); < *D. villosa* – FNA, K; > *Dioscorea villosa* Linnaeus var. *hirticaulis* (Bartlett) Ahles – RAB, C; > *D. hirticaulis* Bartlett – F, G, S, Z ; > *D. villosa* – F, G, S, W, Z]

ERIOCAULACEAE Palisot de Beauvois 1828 (Pipewort Family)

A family of about 10 genera and 1100 species, of tropical and warm temperate regions (few in cold temperate regions), especially America, and most diverse in n. South America. References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b).

1 Scape glabrous, 10-110 cm tall at maturity; roots thickened, septate (not requiring magnification), unbranched; leaves with obvious air spaces; petals 2, fused below; stamens (3-) usually 4 (-6), the anthers black at maturity ..... ***Eriocaulon***

1 Scape pubescent (in our species, or very rarely nearly glabrous), 6-40 cm tall at maturity; leaves lacking obvious air spaces; roots fibrous or spongy, not septate; petals 3 or absent; stamens 2-3, the anthers yellow at maturity.

2 Scape pubescent with eglandular hairs; roots fibrous, branched, dark; heads white, gray, or brown; leaves bright green, tapering gradually through most of their lengths, herbaceous in texture ..... ***Lachnocaulon***

2 Scape pubescent with glandular hairs (or a mixture of glandular and eglandular hairs); roots spongy, unbranched, pale; heads yellowish-tan or gray; leaves bluish green, narrowly linear to the abruptly flared base, stiff in texture ..... ***Syngonanthus***

Eriocaulon Linnaeus 1753 (Pipewort)

A genus of about 400 species, of tropical and warm temperate regions (few in cold temperate areas). References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b). Key based on Kral in FNA (2000).

1 Receptacle and/or base of flowers copiously hairy; some or most of perianth parts with chalk white hairs; heads overall appearing white, 5-20 mm in diameter when in full flower or fruit.

2 Heads hard (little compressed by a plant press and feeling hard and knotty when squeezed between finger and thumb); leaves dark green, the tip acute to obtuse; scape sheaths shorter than most leaves; involucral bracts straw-colored, the apex acute; receptacular bracteoles pale, the apex narrowly acuminate; pistillate flower petals adaxially glabrescent; terminal cells of club-shaped hairs of the perianth whitened, the basal cells often uncongested and transparent.

3 Leaves to 1 cm wide, with acute to rounded tip; heads 7-15 mm in diameter; [widespread in our area] ..... ***E. decangulare*** *var.* ***decangulare***

3 Leaves to 2 cm wide, with rounded tip; heads 13-20 mm in diameter; [of the East Gulf Coastal Plain, known from Panhandle FL and s. AL] ..... ***[E. decangulare*** *var.* ***latifolia]***

2 Heads soft (much flattened by a plant press, and easily compressed when fresh between finger and thumb); leaves pale green, the tip attenuate-subulate; scape sheaths longer than most leaves; involucral bracts gray or dark, the apex rounded or obtuse; receptacular bracteoles gray to dark gray, the apex acute; pistillate flower petals adaxially villous; all cells of club-shaped hairs on perianth white.

4 Mature heads 10-20 mm in diameter; leaves 5-30 cm long; petals of staminate flowers conspicuously unequal; [plants primarily of seasonally flooded ponds] ..... ***E. compressum***

4 Mature heads 5-10 mm in diameter; leaves (1-) 2-5 (-7) cm long; petals of staminate flower nearly equal ..... ***E. texense***

1 Receptacle and/or base of flowers glabrous or sparingly hairy; receptacular bracteoles and/or perianth parts glabrous or hairy, the hairs club-shaped, clear or white; heads dark gray or white, 3-4 mm (*E. koernickianum*, *E. parkeri*, and *E. ravenelii*), or 4-10 mm (*E. aquaticum* and *E. lineare*) in diameter when in full flower or fruit.

5 Stamens 6; pistil 3-carpellate ..... ***E. cinereum***

5 Stamens 4; pistil 2-carpellate.
6 Heads 4-10 mm in diameter when in full flower or fruit; outer involucral bracts usually reflexed, obscured by bracteoles and flowers.
7 Inner involucral bracts, receptacular bracts, and sepals darkened, usually gray to nearly black; young heads dark; seeds very faintly reticulate, not papillate; [of ne. North America]..... ***E. aquaticum***
7 All bracts of staminate and pistillate flowers straw-colored or pale with grayish midzone, sepals of pistillate flowers basally pale, darkening toward the tip to grayish, gray-green, or gray-brown; heads (young and mature) pale; seeds faintly rectangular-reticulate, often papillate in lines; [of the se. Coastal Plain]..... ..... ***E. lineare***
6 Heads 3-4 mm in diameter when in full flower or fruit; outer involucral bracts neither reflexed nor obscured by bracteoles and flowers.
8 Bracts straw-colored, greenish, or light gray to gray, dull, the margins often erose or lacerate, the apex blunt to obtuse; [of tidal waters and large natural lakes of the outer Coastal Plain]..... ***E. parkeri***
8 Bracts dark, gray to blackish, very shiny, the margins all nearly entire, the apex acute; [of moist acidic sites].
9 Bracts orbicular or broadly oblong, the apex rounded or apiculate; bract margins and apex hairy; perianth hairy; seed not pale-reticulate..... ***E. koernickianum***
9 Bracts narrowly ovate to oblong or spatulate, the apex acute; bracts and perianth parts (except sometimes the petals) glabrous; seed conspicuously pale-reticulate ..... ***E. ravenelii***

Eriocaulon aquaticum (Hill) Druce, Seven-angled Pipewort. Cp (NC, VA), Mt (VA): ponds, lakes; uncommon. July-October. New Brunswick and Newfoundland west to Ontario and MN, south to e. NC, VA, AL, and IN; also Great Britain and Ireland. The name *E. septangulare* is invalid. *E. aquaticum* is the correct name if the species is interpreted to include both northern European and northeastern North American plants. If North American plants are distinct from European, the correct name is *E. pellucidum*. [= C, FNA, K; > *E. pellucidum* Michaux – RAB; = *E. septangulare* Withering – F, G, GW, W, Z, invalid name]
