* ***Eriocaulon cinereum*** R. Brown, Ashy Pipewort. Pd (SC): drawdown shore of manmade lake; rare, introduced from Australasia. See Kilpatrick & McMillan (2003). [= FNA, GW, K, Z]

Eriocaulon compressum Lamarck. Cp (GA, NC, SC, VA), Pd (NC), Mt (NC, VA): ponds, lakes, other depressions, wetter places in pine flatwoods and pine savannas; common. June-October. NJ south to FL, west to e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Eriocaulon decangulare Linnaeus *var. **decangulare***, Common Ten-angled Pipewort. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC, SC): wet savannas and pine flatwoods, bogs, seasonally flooded ponds; common. June-October. NJ south to FL, west to sw. AR and e. TX; Mexico, Central America. [= FNA, K; < *E. decangulare* – RAB, C, F, G, GW, S, W, Z]

Eriocaulon koernickianum van Heurck & Mueller-Aargau, Dwarf Pipewort. Pd (GA): seepage areas on granite flatrocks; rare (GA Special Concern). W. AR and e. OK south to e. TX; disjunct in c. GA. See Watson et al. (2002) for information on variation within the species. [= FNA, K; = *E. kornickianum* – GW, orthographic variant]

Eriocaulon lineare Small. Cp (GA): seepage bogs; rare. Sw. GA, south peninsular FL and west to s. AL. It has been reported for NC (Kral in FNA 2000), but this is apparently in error. Kral & Sorrie (1998) proposed the conservation of the name *E. lineare* with a conserved type, as the designated type actually represents *E. texense*; this course was accepted by Brummitt (2005). [= FNA, GW, K, S]

Eriocaulon parkeri B.L. Robinson, Estuary Pipewort. Cp (NC, VA): natural lakes, tidal marshes; uncommon. S. Canada south to e. NC. [= C, F, FNA, G, GW, K, Z]

Eriocaulon ravenelii Chapman. Cp (GA, SC): wet pine savannas; rare. July-September. SC south to s. peninsular and Panhandle FL. [= RAB, FNA, GW, K, S, Z]

Eriocaulon texense Körnick, Texas Hatpins. Cp (GA, NC, SC): sandhill seepage bogs, Altamaha Grit outcrops; rare (GA Special Concern). Sc. NC south to Panhandle FL, west to e. TX. [= FNA, GW, K, Z]

Eriocaulon decangulare Linnaeus var. *latifolium* Chapman ex Moldenke, Panhandle Pipewort, is restricted to Panhandle FL and s. AL. It appears to warrant taxonomic status, but needs additional study. [= FNA, K; < *E. decangulare* – GW, S, Z]

Lachnocaulon Kunth 1841 (Bogbuttons)

A genus of 7 species, herbs, of se. North America and Cuba. References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b).

1 Trichomes at the tips of the receptacular bracts translucent, the head therefore showing the brown color of the bractlets..... .....***L. minus***
1 Trichomes at the tips of the receptacular bracts milky white, opaque, the head therefore appearing gray to white, obscuring the brown color of the bractlets.
2 Mature heads 4-7 mm across; seeds obviously longitudinally striate (as seen at 10× magnification).....***L. anceps***
2 Mature heads 3.5-4.0 mm across; seeds not obviously longitudinally striate, the striations obscure and very fine (not visible at 10× magnification) ..... ***L. beyrichianum***

Lachnocaulon anceps (Walter) Morong, Common Bogbuttons. Cp (GA, NC, SC, VA), Pd (GA, NC?), Mt? (GA?): moist to dry sands, moist peats, in pinelands, sometimes locally abundant in open disturbed areas where competition has been removed; common (VA Rare). May-October. S. NJ south to FL, west to se. TX; disjunct in ec. TN. [= RAB, C, F, FNA, G, GW, K, Z; > *L. anceps* – S; > *L. floridanum* – S; > *L. glabrum* Körnick – S]

Lachnocaulon beyrichianum Sporleder ex Körnick, Southern Bogbutton. Cp (GA, NC, SC): upper margins of Coastal Plain doline ponds (sometimes under scrub oaks), flatwoods; rare (GA Special Concern, NC Rare, SC Rare). May-September. Se. NC south to c. peninsular FL. [= RAB, FNA, GW, K, S, Z]

Lachnocaulon minus (Chapman) Small, Brown Bogbutton. Cp (GA, NC, SC): upper margins of Coastal Plain doline ponds, other pineland situations; uncommon (NC Watch List). May-October. E. NC south to c. peninsular FL, west to Panhandle FL and se. AL. [= RAB, FNA, GW, K, Z; > *L. minus* – S; > *L. eciliatum* Small – S]

Lachnocaulon digynum Körnick. Pine savannas, bogs; rare. AL and FL west to TX. [= FNA, GW, K, S, Z] {not keyed at this time}

Lachnocaulon engleri Ruhland. Pondshores, pine savannas; rare. AL and FL. [= FNA, GW, K, S, Z] {not keyed at this time}

Syngonanthus Ruhland 1900 (Yellow Hatpins)

A genus of about 200 species, primarily of tropical America, but some in Africa and Madagascar; ours is the only temperate species. References: Kral in FNA (2000); Kral (1966c)=Z; Stützel in Kubitzki (1998b).

Syngonanthus flavidulus (Michaux) Ruhland, Yellow Hatpins, Bantam-buttons. Cp (GA, NC, SC): pine savannas, pine flatwoods, borders of pineland ponds, and adjacent ditches; uncommon (NC Watch List). May-October. Se. NC south to s. FL, west to s. AL. [= RAB, FNA, GW, K, S, Z]

HAEMODORACEAE R. Brown 1810 (Bloodwort Family)
(also see *MELANTHIACEAE*)

A family of about 14 genera and 100 species, herbs, of semicosmopolitan distribution, but centered in Australia. The Haemodoraceae is primarily a family of the Southern Hemisphere; *Lachnanthes* is the only member native to e. North America. *Lophiola* has often been treated in the Haemodoraceae; recent evidence, however, indicate that it is better placed in the Nartheciaceae (or Liliaceae *sensu lato*); see *Lophiola* (Nartheciaceae) for additional details. References: Robertson (1976)=Z; Simpson in Kubitzki (1998b); Robertson in FNA (2002a).

Lachnanthes Elliott 1816 (Redroot)

A monotypic genus, an herb, of se. North America and the West Indies. References: Simpson in Kubitzki (1998b); Robertson in FNA (2002a); Gandhi (1999)=Y.

Lachnanthes caroliniana (Lamarck) Dandy, Redroot. Cp (GA, NC, SC, VA), Mt (VA): wet savannas, pocosin edges, shores of Coastal Plain depression ponds (and similar ponds in the mountains of Virginia), ditches, wet disturbed ground; common, rare in Mountains (VA Rare). June-early September; September-November. The range is almost strictly on the Coastal Plain, and rather disjunct: s. Nova Scotia, from MA to DE, from se. VA south to FL and west to LA, with inland disjunctions in w. VA and sc. TN (Coffee County); also in Cuba. A very distinctive plant when in flower, with its densely woolly inflorescence and flowers. When not in flower, recognizable by its equitant (iris-like) base and bright red roots. The correct spelling of the specific epithet has been disputed; the original spelling was "*caroliana*," and Gandhi (1999) argues convincingly that it is a correctable typographic error. [= RAB, C, FNA, GW, W, Y; = *Lachnanthes caroliana* – K, Z, an orthographic variant; = *L. tinctoria* (J.F. Gmelin) Elliott – F, G; = *Gyrotheca tinctoria* (J.F. Gmelin) Salisbury – S]

HEMEROCALLIDACEAE R. Brown 1810 (Day-lily Family)

A family of about 13 genera and 50 species, herbs, of temperate, subtropical, and tropical regions. The circumscription of this family is uncertain; it is often treated as monotypic, excluding (for instance) the Phormiaceae. References: Zomlefer (1998, 1999); Clifford, Henderson, & Conran in Kubitzki (1998a).

Hemerocallis Linnaeus 1753 (Day-lily)

A genus of about 15-30 species, temperate, of e. Asia. References: Zomlefer (1998)=Z; Straley & Utech in FNA (2002a).

1 Flowers tawny-orange (or many variants thereof), not fragrant; inner tepal margins wavy..... ***H. fulva***

1 Flowers lemon-yellow, fragrant; inner tepal margins planar.....***H. lilioasphodelus***

* ***Hemerocallis fulva*** (Linnaeus) Linnaeus, Orange Day-lily, Tawny Day-lily. Cp, Pd, Mt (NC, SC, VA), {GA}: commonly cultivated, frequently escaping to forests, streambanks, suburban woodlands, lawns, waste places; common, introduced from Asia. Late May-early July. [= RAB, C, FNA, G, K, W, Z; > *H. fulva* var. *fulva* – F; > *H. fulva* var. *kwanso* Regel – F]
* ***Hemerocallis lilioasphodelus*** Linnaeus, Yellow Day-lily, Lemon Day-lily. Pd (NC): less commonly cultivated, only rarely escaping; rare, introduced from Asia. May-July. [= C, FNA, K, Z; = *H. flava* (Linnaeus) Linnaeus – F, G]

HOSTACEAE B. Mathew 1988 (Hosta Family)

A family of a single genus, of about 25 species, of temperate e. Asia. This family is closely related to the Agavaceae, and its inclusion there may prove warranted. References: Kubitzki in Kubitzki (1998a).

Hosta Trattinick 1812 (Hosta, Plantain-lily)

A genus of about 25-40 herbs, of temperate Asia, widely cultivated (since at least the 8th century), and with numerous cultivars. References: Kubitzki in Kubitzki (1998a); Utech in FNA (2002a). Key based on Utech in FNA (2002a).

1 Flowers long-tubular, to 13 cm long, white, fragrant.....***H. plantaginea***
1 Flowers campanulate to urceolate, 4-5.5 cm long, blue or purplish, not fragrant.
  2 Leaves lanceolate to oblong, 10-17 cm long, 5-7.5 cm wide, with 5-6 lateral veins on each side of the midvein; flowers purplish violet; anthers purple.....***H. lancifolia***
  2 Leaves ovate to cordate, the blade 20-30 cm long, 15-20 cm wide, with 7-9 lateral veins on each side of the midvein; flowers bluish purple; anthers spotted purple.....***H. ventricosa***

* ***Hosta lancifolia*** Engler, Narrowleaf Plantain-lily. {distr.}: widely planted as a shade ornamental, rarely persistent; common in cultivation, rarely persistent, "native" of Japan (probably only of garden origin). [= FNA, K]
* ***Hosta plantaginea*** (Lamarck) Ascherson, Fragrant Plantain-lily. {distr.}: widely planted as a shade ornamental, rarely persistent; common in cultivation, rarely persistent, native of China. [= FNA, K]
* ***Hosta ventricosa*** (Salisbury) Stearn, Blue Plantain-lily. Mt (NC, VA), Pd (VA), {distr.}: widely planted as a shade ornamental, rarely persistent; common in cultivation, rarely persistent, native of China. [= FNA, K]

HYACINTHACEAE Batsch 1786 (Hyacinth Family)
(also see *AGAVACEAE*)

A family of about 67 genera and 900 species, herbs, nearly cosmopolitan. References: Speta in Kubitzki (1998a); Pfosser et al. (2003).

1 Tepals united into a perianth tube longer than the free portion; [subfamily *Hyacinthoideae*, tribe *Hyacintheae*].
  2 Perianth tube <2 × as long as the lobes; corolla spreading and open at the mouth.....***Hyacinthus***
  2 Perianth tube >2 × as long as the lobes; corolla contracted at the mouth.....***Muscari***
1 Tepals free or fused only at the extreme base.
  3 Bracts 2 per flower; tepals fused at the extreme base; tepals blue (less commonly white or pink); [subfamily *Hyacinthoideae*, tribe *Hyacintheae*].....***Hyacinthoides***
  3 Bracts 0-1 per flower; tepals free; tepals white, with a greenish stripe on the outer surface; [subfamily *Ornithogaloideae*].....***Ornithogalum***

Hyacinthoides Medikus 1791 (Bluebell)

A genus of 3-4 species, herbs, of se. Europe and n. Africa. The narrow circumscription of *Scilla* (excluding *Hyacinthoides*) is supported by molecular phylogenetic studies (Pfosser et al. 2003). References: Stace (1997)=Z; McNeill in FNA (2002a); Speta in Kubitzki (1998a). Key based on Stace (1997).

1 Racemes erect; perianth campanulate; anthers blue.....***H. hispanica***
1 Racemes pendant at apex; perianth tubular; anthers cream.....***H. nonscripta***

* ***Hyacinthoides hispanica*** (P. Miller) Rothm., Spanish Bluebell. Pd (NC, VA): persistent after cultivation; rare, introduced from Europe. [= FNA, K, Z; = *Endymion hispanicus* (P. Miller) Chouard]
* ***Hyacinthoides nonscripta*** (Linnaeus) Choard ex Rothm., English Bluebell. Pd (VA): persistent after cultivation; rare, introduced from Europe. [= K, Z; = *Scilla non-scripta* (Linnaeus) Hoffmannsegg & Link – C, G; = *Scilla nonscripta* (Linnaeus)

Hoffmannsegg & Link – F; = *Hyacinthoides non-scripta* – FNA, orthographic variant; = *Endymion nonscripta* (Linnaeus) Garcke]

Hyacinthus Linnaeus 1753 (Hyacinth)

A genus of 3 species, herbs, of w. Asia. References: Stace (1997)=Z; Speta in Kubitzki (1998a).

* ***Hyacinthus orientalis*** Linnaeus, Hyacinth. Pd (VA): persistent after cultivation; rare, introduced from w. Asia. [= K, Z]

Muscari P. Miller 1754 (Grape-hyacinth)

A genus of about 50 species, herbs, of Europe, Mediterranean areas, and w. Asia. References: Stace (1997)=Z; Straley & Utech in FNA (2002a); Speta in Kubitzki (1998a).

1 Raceme 10-20 cm long; pedicels of the terminal flowers > 5 mm long; flowers brown (the lower and fertile) and blue (the upper and sterile); leaves flat, mostly 8-20 mm wide ..... ***M. comosum***
1 Raceme 1-5 cm long in flower (somewhat longer in fruit); pedicels < 5 mm long; flowers all blue to blue-black; leaves flat, channeled, or terete, mostly 1-8 mm wide.
  2 Leaves flat or channeled, 3-8 mm wide ..... ***M. botryoides***
  2 Leaves nearly terete, 1-3 mm wide ..... ***M. neglectum***

* ***Muscari botryoides*** (Linnaeus) P. Miller, Compact Grape-hyacinth. Pd (NC, VA), Mt, Cp (VA): cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas; uncommon, introduced from Europe. March-April; May-June. [= RAB, C, F, FNA, G, K, S, Z]
* ***Muscari comosum*** (Linnaeus) P. Miller, Tassel Grape-hyacinth. Pd (GA, NC, VA), Cp (VA): cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas; rare, introduced from Europe. March-April; May-June. [= C, F, FNA, G, K, Z]
* ***Muscari neglectum*** Gussoni ex Tenore, Grape-hyacinth. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (GA, VA): cultivated as an ornamental, persistent and naturalized in lawns, old fields, suburban woodlands, and disturbed areas; common, introduced from Europe. March-April; May-June. [= FNA, K, Z; = *M. racemosum* (Linnaeus) Lamarck & Augustin de Candolle – RAB, C, F, G, S; *? M. atlanticum* Boissier & Reuter – W]

Ornithogalum Linnaeus 1753 (Star-of-Bethlehem)

A genus of about 50 species, herbs, of Mediterranean s. Europe, n. Africa, east to w. Asia. References: Straley & Utech in FNA (2002a); Speta in Kubitzki (1998a).

1 Lower pedicels < 1 cm long, about as long as the upper pedicels (and shorter than the perianth segments); leaves mostly 8-15 mm wide; scape 2-5 dm tall ..... ***O. nutans***
1 Lowest pedicels 2-6 cm long, longer than the upper pedicels (and longer than the perianth segments); leaves mostly 2-5 mm wide; scape 1-3 dm tall ..... ***O. umbellatum***

* ***Ornithogalum nutans*** Linnaeus, Drooping Star-of-Bethlehem. Pd (NC, VA), Cp, Mt (VA): lawns and suburban woodlands; cultivated and rarely naturalized or persistent, introduced from w. Asia. March-April. [= RAB, C, F, FNA, G, K]
* ***Ornithogalum umbellatum*** Linnaeus, Star-of-Bethlehem, Snowflake, Nap-at-noon. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (GA, NC, VA): lawns, old fields, bottomlands, forests; commonly cultivated and persistent and naturalizing, introduced from Europe. March-May. [= RAB, C, F, FNA, G, K, S, W]

Schoenolirion
(see AGAVACEAE)

HYDROCHARITACEAE A.L. de Jussieu 1789 (Frog's-bit Family)

A family of about 17 genera and 80 species, aquatic herbs, cosmopolitan. The Hydrocharitaceae is here circumscribed traditionally; it should perhaps include *Najas*, as suggested by Haynes, Holm-Nielsen, & Les in Kubitzki (1998b). References: Haynes in FNA (2000), Cook in Kubitzki (1998b).

1 Leaves in a basal rosette, either elongate with parallel sides, or petiolate with a leaf blade.
  2 Leaves differentiated into petiole and blade, the blade ovate to orbicular ..... ***Limnobium***

2 Leaves straplike, elongate, linear, the sides parallel and not differentiated into petiole and blade..... ***Vallisneria***
1 Leaves in whorls along the stem.
3 Leaves in whorls of 2-3 (no whorls with > 4 leaves) ..... ***Elodea***
3 Leaves in whorls of 3-8 (some or most whorls with 4 or more leaves).
4 Leaves mostly 2-3 cm long, finely toothed with slender, weak teeth on the margins and rarely also the midrib beneath; fresh leaves not noticeably rough to the touch; leaf whorls generally crowded on all stems; petals white, 9-11 mm long..... ***Egeria***
4 Leaves mostly 1-2 cm long, toothed with stout, sharp teeth on the margins and also on conical bases along the midrib beneath; fresh leaves noticeably rough to the touch; leaf whorls crowded on terminal portions of stems, remote on older stems; petals translucent, 2-5 mm long ..... ***Hydrilla***

Egeria Planchon 1849 (South American Waterweed)

A genus of 2 species, aquatic herbs, native of tropical America (now subcosmopolitan in tropical and warm temerate regions by naturalization). References: Haynes in FNA (2000), Cook in Kubitzki (1998b).

* ***Egeria densa*** Planchon, Brazilian Waterweed, "Elodea," "Anacharis." Cp, Mt (GA, NC, SC, VA), Pd (GA, VA): ponds and stagnant water of streams or rivers; uncommon, introduced from South America. May-November. This is the "Elodea" or "Anacharis" of the aquarium trade. [= RAB, FNA, GW, K, W; = *Elodea densa* (Planchon) Caspary – F; = *Anacharis densa* (Planchon) Victorin – G; = *Philotria densa* (Planchon) Small & St. John – S]

Elodea Michaux 1803 (Waterweed)

A genus of about 5-12 species, aquatic herbs, native of temperate America. References: Haynes in FNA (2000); Cook in Kubitzki (1998b).

1 Flowers perfect, with 3 stamens..... ***[E. schweinitzii]***
1 Flowers unisexual, the staminate with 9 stamens.
2 Well-developed leaves (1-) avg. 2 (-5) mm wide, mostly 2-5× as long as wide; staminate spathe 4-8 (-15) mm long, the flower at anthesis on an elongated, very slender, flexuous stalk; sepals of pistillate flowers 2-4.5 mm long ..... ***E. canadensis***
2 Well-developed leaves (0.3-) avg. 1.3 (-2) mm wide, mostly 5-10× as long as wide; staminate spathe 2-3 mm long, the flower at anthesis separating from the spathe (and plant) at maturity; sepals of pistillate flowers 1-1.5 mm long ..... ***E. nuttallii***

Elodea canadensis Michaux, Common Waterweed. Cp, Pd, Mt (NC, VA), {SC}: lakes, ponds, stagnant waters of streams; common (rare in NC). July-September. Québec west to Saskatchewan, south to NC, OK, NM, and CA. [= RAB, C, F, FNA, GW, K, W; = *Anacharis canadensis* (Michaux) Planchon – G; < *Philotria canadensis* (Michaux) Britton – S (also see *E. nuttallii*)]

Elodea nuttallii (Planchon) St. John, Nuttall's Waterweed, Free-flowered Waterweed. Cp, Mt (NC, VA), Pd (VA): lakes, ponds, stagnant waters of streams; uncommon. July-September. ME and Québec west to MN and ID, south to NC, TN, OK, and NM. [= RAB, C, F, FNA, GW, K, W; = *Anacharis nuttallii* Planchon – G; >< *Philotria canadensis* – S; > *Philotria linearis* Rydberg – S]

Elodea schweinitzii (Planchon) Caspary, Schweinitz's Waterweed, is known only from eighteenth century collections in e. PA and NY. Haynes in FNA (2000) rejects it as a valid taxon. [= C, G, K]

Hydrilla L.C. Richard 1814 (Hydrilla)

A monotypic genus, an aquatic herb, native to the Old World. References: Haynes in FNA (2000); Cook in Kubitzki (1998b).

* ***Hydrilla verticillata*** (Linnaeus f.) Royle, Hydrilla. Pd (NC, SC, VA), Cp (GA, NC, VA), Mt (VA): ponds, lakes; uncommon (but locally very abundant), introduced from the old World. June-August. This species has become a serious aquatic weed. Reported for SC by Nelson & Kelly (1997). [= C, FNA, GW, K]

Limnobium L.C. Richard 1814 (Frog's-bit)

A genus of 1-2 species, of se. North America and tropical America. References: Haynes in FNA (2000); Cook in Kubitzki (1998b).

Limnobium spongia (Bosc) L.C. Richard ex Steudel, American Frog's-bit. Cp (GA, NC, SC, VA): swamps, marshes, ponds, pools; uncommon. June-September. NJ and MD south to n. FL, west to e. TX, north in the interior in the Mississippi Embayment to s. MO and s. IL; disjunct around the Great Lakes (as in n. IN and w. NY); also in tropical America. Often free-floating, the leaves with prominently large cells below. [= RAB, C, F, FNA, G, GW, K, S]

Vallisneria Linnaeus 1753 (Eelgrass)

A genus of 2-10 species, aquatic herbs, of tropical and warm temperate regions of the Old and New World. References: Haynes in FNA (2000), Cook in Kubitzki (1998b).

Vallisneria americana Michaux, Eelgrass, Water-celery, Tapegrass. Cp (GA, NC, SC, VA), Pd (VA), Mt (GA, VA): lakes, rivers, estuaries, sounds; common. July-October. Nova Scotia and Québec west to ND, south to FL, TX, NM, AZ; and south into tropical America. [= RAB, F, FNA, G, GW, K, S, W; *? V. americana* var. *americana* – C; > *V. neotropicalis* Victorin]

HYPOXIDACEAE R. Brown 1814 (Stargrass Family)

A family of about 9 genera and 100-220 species, herbs, subcosmopolitan (though not well distributed in the northern hemisphere of the Old World, and especially diverse in South Africa). The recognition of Hypoxidaceae at the family level is supported by a variety of authors, on morphologic and molecular grounds (see Judd 2000 for summary). References: Nordal in Kubitzki (1998a); Herndon in FNA (2002a); Judd (2000).

Hypoxis Linnaeus 1759 (Stargrass)

A genus of about 50-150 species, herbs, of tropical and warm temperate regions of the Old and New World, with a center of diversity in South Africa. References: Judd (2000)=Z; Herndon in FNA (in prep.); Nordal in Kubitzki (1998a). Key based on Herndon in FNA (2002a).

1 Leaves glabrous, or with a few trichomes near the base; seeds black.
- 2 Leaves filiform, 0.3-1.0 mm wide, stiff; floral bracts much smaller than pedicel, often < 1 mm; ovaries densely pubescent; seeds with truncated pebbling ..... ***H. juncea***
- 2 Leaves over 2 mm wide, soft and flexible; seeds coarsely muricate.
  - 3 Ovaries longer than broad, cylindric, with scattered trichomes; floral bracts usually exceeding pedicels; tepals equaling or shorter than ovaries ..... ***H. curtissii***
  - 3 Ovaries as broad at long or nearly so, deltate, densely pubescent; pedicels much longer than bracts or flowers; tepals much longer than ovaries ..... ***H. hirsuta***

1 Leaves evenly pubescent, at least near the base; seeds black or brown.
- 4 Pedicels much longer than bracts or flowers; seeds black.
  - 5 Leaves flattened, > 1 mm wide; seeds coarsely muricate ..... ***H. hirsuta***
  - 5 Leaves filiform, 0.3-12.0 mm wide; seeds with truncated pebbling ..... ***H. juncea***
- 4 Pedicels < 2× as long as subtending bracts; seeds black or brown.
  - 6 Anthers greater than 2 mm long; flowers much longer than pedicels; floral bracts exceeding pedicels; seeds with round pebbling, black ..... ***H. rigida***
  - 6 Anthers < 2 mm long; {floral bracts character}; seeds muricate and brown, **or** with rounded pebbling and black-iridescent.
    - 7 Tepals 1.5-2× as long as ovaries; seeds pebbled, black but with iridescent membranous coats ..... ***H. sessilis***
    - 7 Tepals ca. 1 (-1.5)× the length of the ovaries; seeds minutely muricate, dark brown ..... ***H. wrightii***

Hypoxis curtissii Rose in Small, Swamp Stargrass. Cp (GA, NC, SC): swamp forests, alluvial forests, water courses; uncommon. March-June; May-July. E. NC south to FL, west to e. TX. [= FNA, K, Z; = *H. hirsuta* (Linnaeus) Coville var. *leptocarpa* (Engelmann & A. Gray) Fernald – RAB; < *H. hirsuta* – C; = *H. leptocarpa* (Engelmann & A. Gray) Small – GW]

Hypoxis hirsuta (Linnaeus) Coville, Common Stargrass. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of dry to moist forests; common. March-June; May-July. S. ME west to Saskatchewan and ND, south to GA and e. TX. [= FNA, GW, Z; = *H. hirsuta* var. *hirsuta* – RAB; < *H. hirsuta* – C, K]

Hypoxis juncea Sm., Fringed Stargrass. Cp (GA, NC, SC): wet pine savannas; rare. April-May (-later, especially in response to fire); May-June.(-later, especially in response to fire). Se. NC south to FL, west to s. AL. [= RAB, FNA, GW, K, Z]

Hypoxis rigida Chapman, Savanna Stargrass. Cp (GA, NC, SC): wet pine savannas; rare. April (-later, especially in response to fire); May.(-later, especially in response to fire). Se. NC south to FL, west to e. TX. [= RAB, FNA, GW, Z; < *H. hirsuta* – K]

Hypoxis sessilis Linnaeus, Glossy-seed Stargrass. Cp (GA?, NC, SC, VA): wet pine savannas; rare. April (-later, especially in response to fire); May (-later, especially in response to fire). NC south to FL, west to e. TX, s. AR, and se. OK. [= RAB, FNA, GW, K, Z; > *H. longii* Fernald – C; > *H. sessilis* – C]

Hypoxis wrightii (Baker) Brackett, Bristleseed Stargrass. Cp (GA, NC, SC, VA): wet pine savannas; common. March-April (-later, especially in response to fire); April-May (-later, especially in response to fire). Se. VA south to FL, west to TX; disjunct in the West Indies (Cuba, Bahamas, Jamaica, Hispaniola, Puerto Rico). [= FNA, K, Z; = *H. micrantha* Pollard – RAB, C, GW, misapplied]

IRIDACEAE A.L. de Jussieu 1789 (Iris Family)

A family of about 65-82 genera and 1700-1810 species, herbs, of cosmopolitan distribution (most diverse in s. Africa). References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

1 Inflorescence a spike or panicle of spikes; plants from corms; flowers slightly zygomorphic.
- 2 Stem usually branched, the inflorescence appearing paniculate; tepals orange to red.....***Crocosmia***
- 2 Stem unbranched, the inflorescence a spike; tepals any of a wide range of colors (including orange and red)..... .....***Gladiolus***

1 Inflorescence an umbellate 1-sided cyme; plants from rhizomes or bulbs; flowers actinomorphic.
- 3 Leaves planar; plants from rhizomes (or indistinct) or a bulb (in *Iris xiphium*).
  - 4 Style branches broad, petaloid, terminating in paired crests .....***Iris***
  - 4 Style branches not broad or petaloid.
    - 5 Tepals 16-35 mm long, orange or red; seeds 4-6 mm in diameter..... ***Iris domestica***
    - 5 Tepals 6-15 mm long, blue, purple, lavender, pink, magenta, white, or yellowish-white; seeds 0.6-1.3 mm in diameter.....***Sisyrinchium***
- 3 Leaves plicate; plants from bulbs.
  - 6 Tepals unequal, the inner whorl < ½ as long as the outer whorl .....***[Herbertia]***
  - 6 Tepals nearly equal in length.
    - 7 Style recurved, with 3 flat branches that are < 2 mm long .....***[Calydorea]***
    - 7 Style straight, each of the 3 branches further divided into slender lobes
      - 8 Style branches divided for ca. ½ their length; style arms arching over or between the anthers; tepals dark purple .....***[Alophia]***
      - 8 Style branches divided nearly to base; style arms extending horizontally between the anthers; tepals blue, white in the center .....***[Nemastylis]***

Alophia Herbert (Propellor-flower)

A genus of ca. 5 species, of sc. North America, Mexico, Central America, and South America. References: Goldblatt in FNA (2002a).

Alophia drummondii (Graham) R.C. Foster, Propellor-flower. MS west to TX and OK; Mexico; Guyana. [= FNA, K; = *Herbertia drummondii* (Graham) Small]

Belamcanda Adanson 1763 (Blackberry-lily)
(see *Iris*)

Calydorea Herbert 1843 (Ixia)

A genus of about 8 species, of warm temperate and tropical America. The circumscription relative to *Nemastylis* is uncertain. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Calydorea coelestina (Bartram) Goldblatt & Henrich, Bartram's Ixia, is apparently endemic to FL (Chafin 2000). The single GA record is by P.O. Schallert, a notoriously sloppy collector, and should therefore be discounted unless additional information comes to light. The species does occur in FL, near the GA border. [= FNA, K; = *Salpingostylis coelestina* (Bartram) Small – S; = *Nemastylis coelestina* (Bartram) Nuttall; = *Sphenostigma coelestinum* (Bartram) R.C. Foster; = *Ixia coelestina* Bartram]

Crocosmia Planchon 1851 (Montbretia)

A genus of 8-9 species, herbs, native of sub-Saharan Africa. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Dunlop (2004); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

* ***Crocosmia ×crocosmiiflora*** (V. Lemoine) N.E. Brown [*C. aurea* × *pottsii*], Montbretia. Cp (NC, SC): disturbed areas, especially in moist to wet sites, including salt marshes, the parents of the hybrid both native to sub-Saharan Africa. Late June-July. [= FNA, K; = *C.* ×*crocosmiflora* – RAB, orthographic variant]

Crocus Linnaeus 1753 (Crocus)

A genus of about 80 species, herbs, from Mediterranean Europe to w. China. References: Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Various species of *Crocus* are cultivated and are long-persistent at old house sites. {not keyed or otherwise treated}

Gladiolus Linnaeus 1754 (Gladiolus)

A genus of about 255 species, largely of Africa. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a). Key based on FNA.

1 Inner tepals 60-70 mm long ..... ***Gl. ×gandavensis***
1 Inner tepals < 60 mm long.
  2 Tepals white, cream, orange, or red; perianth tube plus dorsal sepal 60-95 mm long..... ***[Gl. dalenii ssp. dalenii]***
  2 Tepals pink, reddish, or light purple, with white markings on the outer 3 tepals.
    3 Anthers 10-13 mm long; capsules oblong, 18-24 mm long; seeds winged ..... ***Gl. communis***
    3 Anthers ca. 15 mm long; capsules globose, 10-12 mm long; seeds not winged..... ***[Gl. italicus]***

* ***Gladiolus communis*** Linnaeus, False Corn-flag. Cp (NC, SC), Pd (GA): cultivated as ornamentals; commonly cultivated, rarely persisting or weakly spreading. Introduced in TN and KY, as well. [= FNA; > *G. papilio* Hooker – RAB, K, misapplied; > *Gladiolus communis* Linnaeus ssp. *byzantinus* (P. Miller) A. Hamilton – K; > *G. byzantinus* P. Miller]
* ***Gladiolus ×gandavensis*** Van Houtte [*G. dalenii* × *oppositiflorus*]. Cp (GA, NC, SC, VA), Pd, Mt (NC): cultivated as ornamentals; commonly cultivated, rarely persisting or weakly spreading. Goldblatt suggests that as many as 5 species are involved in the origin of the large-flowered garden gladiolus. [= RAB, FNA, K; *? G. hortulanus* Bailey]

* *Gladiolus dalenii* Van Geel ssp. *dalenii*. Introduced in AL and LA. [= FNA]
* *Gladiolus italicus* P. Miller. Introduced in TN. [= FNA, K; *? G. segetum* Ker-Gawler]

Herbertia Sweet 1827 (Pleat-leaf Iris)

A genus of about 5 species, herbs, in se. North America and temperate South America. References: Goldblatt in FNA (2002a).

Herbertia lahue (Molina) Goldblatt, Prairie-nymph. Prairies and marshes. AL and FL west to TX; central South America. [= FNA; > *H. lahue* ssp. *caerulea* (Herbert) Goldblatt – K; > *H. caerulea* Herbert – S]

Iris Linnaeus 1753 (Iris, Flag, Blackberry-lily)

A genus of about 225 species, herbs, of Eurasia, n. Africa, and North America. Wilson (2004) suggests that *Belamcanda* is phylogenetically nested within *Iris* and should be included there; Goldblatt & Mabberley (2005) make the appropriate nomenclatural combination. References: Henderson in FNA (2002a); Goldblatt in FNA (2002a); Goldblatt & Mabberley (2005)=Z; Wilson (2004); Goldblatt, Manning, & Rudall in Kubitzki (1998a). Key based on Henderson in FNA (2002a).

Identification notes: the **petals** are usually erect, smaller than the petaloid **sepals** (which are brightly colored, generally reflexed, and marked with a "signal"). The **styles** are also petaloid, arched over the sepals, and 2-cleft at the tip (except in *I. domestica*).

1 Plant from an ovoid bulb; [subgenus *Xiphium*]..... ***[I.. xiphium]***
1 Plant from short to elongate rhizomes.
  2 Style branches not broad, petaloid, or crested; seeds black, shiny, exposed at maturity in a blackberry-like cluster..... ..... ***I. domestica***
  2 Style branches broad, petaloid, terminating in paired crests; seeds tan to brown, in a capsule.
    3 Sepal "signal" (see above) of multicellular hairs (the “beard”), along the midrib of the the claw and the base of the blade; [subgenus *Iris*].
      4 Spathes green (or purplish) and herbaceous, with scarious margins ..... ***I. germanica***
      4 Spathes scarious, silvery-white ..... ***I. pallida***

3 Sepal "signal" consisting of contrasting color, ridges, small unicellular hairs, and/or a cockscomb-like crest; [subgenus *Limniris*].
5 Rhizome branches cord-like, with scale-like leaves, enlarging at the apex to produce vegetative leaves , additional branches, and flowering stems.
6 Stems 30-80 cm tall; leaves 30-60 cm long, 0.2-0.7 cm wide; cordlike portions of rhizomes to 4 dm long; [of wetlands]; [section *Limniris*, series *Prismaticae*] ..... ***I. prismatica***
6 Stems 2-15 cm tall; leaves 10-45 cm long, 0.3-2.5 cm wide; cordlike portions of rhizomes to to 2 dm long; [of dry to mesic uplands].
7 Sepals crested with a 3-ridged, toothed crest; leaves 10-25 mm wide, green, falcate; flowers not or only slightly fragrant; rhizomes surficial (one can "pull" them off the ground by gently tugging on the leaves); [generally of mesic and fertile soils]; [section *Lophiris*] ..... ***I. cristata***
7 Sepals not crested; leaves 3-13 mm wide, blue-green, straight or nearly so; flowers strongly fragrant; rhizomes deeply buried (not easily "pulled"); [generally of dry and acid soils; [section *Limniris*, series *Vernae*].
8 Leaves 5-13 mm wide; rhizomes 1-3 cm between offshoots, thus forming clumps; capsules 1.7-3.2 cm long; [primarily of the Mountains, and upper Piedmont, extending into the Coastal Plain in sw. GA and panhandle FL]..... ***I. verna*** *var.* ***smalliana***
8 Leaves 3-8 mm wide; rhizomes 5-15 cm between offshoots, thus hardly clump-forming; capsules 1.2-1.8 cm long; [of the Coastal Plain and lower Piedmont, from e. GA northward].... ..... ***I. verna*** *var.* ***verna***
5 Rhizome branches like the primary rhizome, not as above.
9 Petals 1-2 cm long; [section *Limniris*; series *Tripetalae*] ..... ***I. tridentata***
9 Petals 2-9.5 cm long.
10 Stems hollow; [section *Limniris*; series *Sibirica*].
11 Spathes herbaceous at flowering time; capsule 3.5-5.5 cm long..... ***I. sanguinea***
11 Spathes scarious at flowering time; capsule 2-3.5 cm long ..... ***I. sibirica***
10 Stems solid.
12 Capsules 3-angled or nearly round in cross-section; [section *Limniris*; series *Laevigatae*].
13 Perianth yellow..... ***I. pseudacorus***
13 Perianths blue-violet (rarely white).
14 Flowers 8-15 cm in diameter; leaves 0.5-1.5 cm wide; [alien, cultivated, rarely escaped] ..... ***I. ensata***
14 Flowers 6-8 cm in diameter; leaves 1-4 cm wide; [native].
15 "Signal" a greenish-yellow, papillate patch, surrounded by an area of heavily veined purple-on-white; [of VA northward] ..... ***I. versicolor***
15 "Signal" a bright yellow, pubescent patch.
16 Plants to 10 dm tall, usually with 1-2 well-developed branches; capsule 7-11 cm long ..... ***I. virginica*** *var.* ***shrevei***
16 Plants to 6 dm tall, little or not at all branched; capsule 4-7 cm long..... ..... ***I. virginica*** *var.* ***virginica***
12 Capsules 6-angled or ridged in cross-section; [section *Limniris*; series *Hexagonae*].
17 Perianths dull copper or orange-brown (or dark yellow) (fading in nature or drying in the herbarium to a bluish or purplish color); petals spreading or declining..... ***I. fulva***
17 Perianths blue-violet (rarely white); petals erect to spreading.
18 Stems declining or semi-erect, sharply zigzag..... ***I. brevicaulis***
18 Stems erect, slightly if at all zigzag.
19 Capsules 2.5-3.5 cm long, hexagonal in cross-section, 3 sides flat, the alternating sides with 2 rounded ridges separated by a shallow groove..... ..... ***I. hexagona***
19 Capsules 6-10 cm long, slightly to strongly hexagonal in cross-section.
20 Capsules with 6 broad rounded lobes, indehiscent..... ***[I. giganticaerulea]***
20 Capsules with 6 sharp, winglike ridges, dehiscent..... ***I. savannarum***

Iris brevicaulis Rafinesque, Short-stem Iris, Lamance Iris. {province} (GA): bogs, seeps, marshes; rare (GA Special Concern). East to AL, GA, TN, KY. [= C, F, FNA, G, GW, K; > *I. foliosa* Mackenzie & Bush – S; > *I. mississippiensis* Small – S]

Iris cristata Aiton, Dwarf Crested Iris. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): April-May; June-July. MD west to IN and MO, south to NC, AL, MS, AR, and e. OK. [= RAB, C, F, FNA, G, K, W; = *Neubeckia cristata* (Aiton) Alefani – S]

* ***Iris domestica*** (Linnaeus) Goldblatt & Mabberley, Blackberry-lily. Pd (GA, NC, SC, VA), Mt (NC, SC, VA), Cp (GA): dry woodlands, forests, edges of granitic flatrocks, suburban areas; rare, introduced from e. Asia. June-August. [= Z; = *Belamcanda chinensis* (Linnaeus) de Candolle – RAB, C, F, FNA, G, K, S, W]

* ***Iris ensata*** Thunberg, Japanese Iris. Mt (NC): roadsides; rare, cultivated and rarely escaped, native of Japan, n. China, and Sakhalin. Also reported from se. PA (Rhodes & Klein 1993). [= K; *I. kaempferi* Siebold ex Lamarck]

*? ***Iris fulva*** Ker-Gawler, Red Flag, Copper Iris. Cp (GA): S. IL, MO, and TN south to GA, AL, and LA (introduced elsewhere). [= C, F, FNA, G, GW, K, S]

* ***Iris germanica*** Linnaeus, German Iris, Fleur-de-Lys. Pd (NC, SC, VA), Cp, Mt (VA), {GA}: roadsides, old homesites, ditches; uncommon, cultivated and rarely persistent or escaped, native of Europe. April-May. [= RAB, C, F, FNA, G; > *I. flavescens* Delile – K; > *I.* ×*germanica* – K]

Iris hexagona Walter, Anglepod Blue Flag. Cp (GA, SC): swamps; rare. May-June. SC south to FL. [= RAB, FNA, GW, S; = *I. hexagona* var. *hexagona* – K; > *I. hexagona* – S; > *I. kimballiae* Small – S; > *I. alabamensis* Small – S]

***** ***Iris pallida*** Lamarck in J. Lamarck et al., Sweet Iris. Cultivated and persistent around buildings in GA and elsewhere (FNA). [= F, FNA, K]

Iris prismatica Pursh ex Ker-Gawler, Slender Blue Iris, Slender Blue Flag. Cp (NC, SC, VA), Pd (VA), Mt (GA, NC): bogs and marshes; rare. May-June; June-July. Nova Scotia south to GA, disjunct in w. NC (Henderson County) and sc. TN (Coffee County). [= RAB, C, FNA, G, GW, K, S, W; > *I. prismatica* var. *prismatica* – F; > *I. prismatica* var. *austrina* Fernald – F]

* ***Iris pseudacorus*** Linnaeus, Water Flag, Yellow Flag. Mt (GA, NC, SC, VA), Pd, Cp (NC, VA): swamps, marshes, streams, ponds; uncommon, cultivated as a water plant, native of Eurasia and Africa. May-June; August-October. [= RAB, C, F, FNA, G, GW, K, S, W]

* ***Iris sanguinea*** Hornemann ex Donn, Japanese Iris. Mt (NC): roadsides; rare, cultivated and rarely escaped, native of Japan, n. China, Korea, Japan, and w. Russia. [= K]

Iris savannarum Small. {GA}. In GA and FL. [= FNA, S; = *I. hexagona* Walter var. *savannarum* (Small) R.C. Foster – K]

* ***Iris sibirica*** Linnaeus, Siberian Iris. Pd (VA): cultivated and escaping or persisting near plantings; rare, introduced from Eurasia (c. and e. Europe west to Lake Baikal). [= FNA, K]

Iris tridentata Pursh. Cp (GA, NC, SC): wet savannas, pine flatwoods, margins of pineland pools; rare (GA Special Concern). Late May-June; August-October. Se. NC south to n. FL. [= RAB, FNA, GW, K; *? I. tripetala* – S, misapplied]

Iris verna Linnaeus *var.* ***smalliana*** Fernald ex M.E. Edward, Upland Dwarf Iris. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (GA): dry, rocky or sandy woodlands and forests; common. April-May; June-early August. Sc. PA and WV south to w. NC, e. TN, n. GA, se. GA, Panhandle FL and AL. [= RAB, F, FNA, K, W; < *I. verna* – C, G; < *Neubeckia verna* (Linnaeus) Alefani – S]

Iris verna Linnaeus *var.* ***verna***, Coastal Plain Dwarf Iris, Sandhill Iris. Cp, Pd (GA, NC, SC, VA): longleaf pine sandhills, dry, rocky forests and woodlands; common. March-May; May-June. MD south to se. SC and e. GA, primarily on the Coastal Plain, but extending into the Piedmont. [= RAB, F, FNA, K; < *I. verna* – C, G; < *Neubeckia verna* (Linnaeus) Alefani – S]

Iris versicolor Linnaeus, Northern Blue Flag, Poison Flag. Mt, Pd, Cp (VA): {habitat}; uncommon. May-July. Reported as occurring as far south as VA in C, F, and W. [= C, FNA, G, K, S?, W]

Iris virginica Linnaeus *var.* ***shrevei*** (Small) E. Anderson. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): marshes, swamps, streams; uncommon. May; July-September. Sw. Québec to MN, south to w. NC, n. AL, e. TN, AR, and e. KS. [= C, F, K; < *I. virginica* – RAB, FNA, W; = *I. shrevei* Small – G, S]

Iris virginica Linnaeus *var.* ***virginica***, Southern Blue Flag. Cp, Pd (GA, NC, SC, VA): marshes, swamps, streams; common. April-May; July-September. Se. VA south to FL, west to e. TX, north in the interior to w. TN; disjunct in sc. TN. [= C, F, K; < *I. virginica* – RAB, FNA, W; = *I. virginica* – G, S]

Iris giganticaerulea Small, Giant Blue Iris, in AL, MS, and LA. [= FNA, K; *I. rivularis* Small – S]

* *Iris xiphium* Linnaeus, introduced in c. TN. {investigate} [= K]

Nemastylis Nuttall 1835 (Celestial-lily)

A genus of about 5 species, herbs, of s. North America and Central America. The circumscription relative to *Calydorea* is uncertain. References: Goldblatt in FNA (2002a); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

Nemastylis geminiflora Nuttall, Prairie Celestial, Prairie Pleatleaf, east to AL. [= FNA, K; *Ixia acuta* Bartram; *Nemastylis acuta* Herbert]

Sisyrinchium Linnaeus 1753 (Blue-eyed-grass, Irisette)

A genus of about 80 species, herbs, of the Americas. *Sisyrinchium* is a very difficult genus, with a number of taxonomic questions remaining in our area. References: Cholewa & Henderson in FNA (2002a)=Z; Hornberger (1991)=Y; Bicknell (1896, 1899a, 1899b); Goldblatt, Manning, & Rudall in Kubitzki (1998a).

1 Corolla urceolate-campanulate, the segments widely flaring; annual; flowers lavender, pink, magenta, white, or yellowish-white; [plants usually occurring in distinctly weedy habitats, such as roadsides and lawns] ..... ***S. rosulatum***

1 Corolla stellate-rotate; perennial; flowers blue, violet, or white; [plants occurring in various habitats].

2 Inflorescences paired (rarely solitary) and sessile (rarely the outer inflorescence with a peduncle to 7 mm long), closely subtended by a leaf-like bract; outer spathe bract connate 0-1 (-1.5) mm.

3 Stems 1.5-3.4 mm wide, flattened, obviously winged; outer spathe bract 14-30 mm long; capsule 2.8-4.0 mm long ..... ***S. albidum***

3 Stems 0.5-1.0 mm wide, wiry, not winged; outer spathe bract 12-15 mm long; capsules 2.0-3.3 mm long..... ..... ***S. capillare***

2 Inflorescences solitary, terminating the stem or branch, not paired; outer spathe bract connate (0.7-) 2-6 mm.

4 Stems mostly simple, unbranched (sometimes some plants in a population slightly branched).

5 Stems (1.5-) 2.0-3.7 mm wide; capsule 4.0-6.8 mm long..... ***S. montanum*** *var.* ***crebrum***

5 Stems 0.5-1.0 (-2.0) mm wide; capsule 3.2-5.5 mm long..... ***S. mucronatum***

4 Stems mostly branched, with 1-5 nodes.

6 Stems with 2-5 nodes, the branching dichotomous; tepals white, recurved at maturity (like a miniature, white *Lilium superbum*); [endemic to low to medium elevation forests in the Blue Ridge Escarpment region of sw. NC and nw. SC] ..... ***S. dichotomum***

6 Stems with 1-3 nodes, the branching uneven; tepals violet to blue (rarely white), not notably recurved at maturity; [widespread].

7 Widest stems (0.5-) 0.8-1.9 mm wide.

8 Leaf bases not persistent as a fibrous tuft; capsules dark brown to black, 2.0-4.1 mm long..... ..... ***S. atlanticum***

8 Leaf bases persistent as a fibrous tuft; capsules light to medium brown, 2.9-4.3 mm long..... ..... ***S. fuscatum***

7 Widest stems 2.3-5.7 mm wide.

9 First internode equal to or shorter than the longest leaves, or if equalling the leaves then the hyaline margin on the inner spathe bract acute to acuminate; upper stem scabrous..... ***[S. xerophyllum]***

9 First internode equalling or longer than the longest leaves, if equalling the leaves then the hyaline margin of the inner spathe bract broadly obtuse or acute at the apex; upper stem generally glabrous.

10 Leaf bases not persistent or not fibrous; outer spathe bract 18-38 mm long, the margins connate 4-6 mm; capsules dark brown to black, 4.0-7.0 mm long..... ***S. angustifolium***

10 Leaf bases persistent as a basal tuft of fibers; outer spathe bract 18-26 mm long, the margins basally connate 2-4 mm; capsules tan, 2.5-4.8 mm long ..... ***S. nashii***

Sisyrinchium albidum Rafinesque. March-May. Cp, Mt (NC, SC, VA), Pd (NC, SC), {GA}: woodlands, savannas?, mesic sandhills, open limestone barrens; uncommon (VA Rare). March-May; May-June. S. NY west to s. WI, south to panhandle FL, and LA. [= C, F, FNA, G, K, Y, Z; < *S. albidum* – RAB, W (also see *S. capillare*); > *S. albidum* – S; > *S. scabrellum* E.P. Bicknell – S]

Sisyrinchium angustifolium P. Miller. March-June. Mt, Pd, Cp (NC, SC, VA), {GA}: woodlands, forests, meadows, sandhill swales; common. March-June; May-July. VT, NH, and s. Ontario west to WI, e. KS, and OH, south to GA, AL, LA, and TX. [= RAB, C, F, FNA, GW, K, W, Y, Z; > *S. angustifolium* – G, S; > *S. graminoides* E.P. Bicknell – G, S]

Sisyrinchium atlanticum E.P. Bicknell, Atlantic Blue-eyed-grass. Cp, Pd, Mt (NC, SC, VA), {GA}: dry, sandy or rocky places; common. March-June; June-August. Nova Scotia and ME west to OH, IN, and MO, south to FL and LA. [= C, F, FNA, G, GW, K, S, W, Y, Z; = *S. mucronatum* var. *atlanticum* (E.P. Bicknell) Ahles – RAB]

Sisyrinchium capillare E.P. Bicknell, Wiry Blue-eyed-grass. Cp (GA, NC, SC, VA): wet pine savannas and flatwoods; uncommon. March-June; May-June. Se. VA south to GA (and FL?), west to AL. [= C, F, FNA, G, GW, K, S, Z; < *S. albidum* – RAB, W]

Sisyrinchium dichotomum E.P. Bicknell, White Irisette, Isothermal Irisette. Mt, Pd (NC, SC): dry to mesic woodlands and forests, usually over mafic rocks (such as amphibolite), at low to moderate elevations (400-1000 m) in the Blue Ridge escarpment; rare (US Endangered, NC Endangered, SC Rare). May-June; June-August. Endemic to Henderson, Polk, and Rutherford counties, NC, and Greenville County, SC. [= FNA, K, W, Z]

Sisyrinchium fuscatum E.P. Bicknell. Cp, Pd (GA, NC, SC, VA): wet pine savannas, marshy areas; common (VA Watch List). Late April-June; June-October. E. VA (or extreme se. PA?) south to FL, west to MS. [= C, FNA, K, Z; > *S. arenicola* E.P. Bicknell – RAB, F, G, GW; > *S. fuscatum* – S; > *S. incrustatum* E.P. Bicknell – S; > *S. rufipes* E.P. Bicknell – S]

Sisyrinchium montanum Greene *var.* ***crebrum*** Fernald. Mt (NC?, VA?): {habitat in our area not known}; rare. May-July. Newfoundland and Ontario south to NY. The status of this taxon in our area is not clear. *S. montanum* var. *crebrum* is reported for VA by F, and *S. montanum* (variety not specified) is reported for NC and VA by C and G. FNA and Z considers var. *crebrum* to range south only to NY, and var. *montanum* south only to OH and PA. Herbarium documentation is needed. [= F, K; < *S. montanum* – G; *? S. angustifolium* – S, misapplied]

Sisyrinchium mucronatum Michaux. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (NC, VA): forests, woodlands, fields; common. April-June; June-July. ME west to Saskatchewan, south to SC, GA, MI, MN. [= C, F, FNA, GW, G, K, S, W, Z; = *S. mucronatum* var. *mucronatum* – RAB]

Sisyrinchium nashii E.P. Bicknell, Nash's Blue-eyed-grass. Cp, Pd (GA, NC, SC), Mt (GA, VA?): woodlands and forests; uncommon. April-June. NC and TN (sw. VA?) south to FL and MS. [= FNA, K, W, Z; > *S. fibrosum* E.P. Bicknell – S]

*? ***Sisyrinchium rosulatum*** E.P. Bicknell, Lawn Blue-eyed-grass. Cp (GA, NC, SC, VA), Pd (GA, SC): lawns, roadsides; uncommon. April-May; May-June. Se. VA south to FL, west to e. TX. Perhaps only adventive in our area. [= RAB, FNA, GW, K, S, Y, Z; > *S. exile* E.P. Bicknell]

Sisyrinchium campestre E.P. Bicknell, Prairie Blue-eyed-grass. MS and MI west to SD and NM. [= FNA, K] {not keyed at this time}

Sisyrinchium corymbosum E.P. Bicknell. Cp (GA): pinelands; rare. Se. GA and ne. FL west to s. AL. See Ward (2005a) for its resurrection. [< *S. atlanticum* Bicknell – FNA, K] {not keyed at this time}

Sisyrinchium langloisii Greene ranges east to AL, GA, and TN. It will key to couplet 8, where difficulties will be encountered. Like *S. atlanticum*, its leaf bases are not persistent in a fibrous tuft, but it differs in having the dark ovary and capsules not contrasting strongly with the much lighter foliage. [= FNA; < *S. langloisii* – K (also see *S. pruinosum*)] {not keyed at this time}

Sisyrinchium miamiense E.P. Bicknell, reported for SC (Kartesz 1999) and GA, AL, MS, and FL (FNA). {investigate} [= FNA, K] {not keyed at this time}

Sisyrinchium pruinosum E.P. Bicknell, ranges east to AL. [= FNA; < *S. langloisii* – K] {not keyed at this time}

Sisyrinchium sagittiferum E.P. Bicknell, ranges east to AL (FNA). [= FNA, K] {not keyed at this time}

Sisyrinchium xerophyllum Greene, Florida Blue-eyed-grass, occurs in FL and allegedly s. GA; it is also alleged to occur in NC (FNA) but this report does not seem plausible. [= FNA, K, S, Z]

JUNCACEAE A.L. de Jussieu 1789 (Rush Family)

A family of about 8 genera and 350-440 species, herbs (and a few shrubs), largely of temperate regions of the Old and New World. References: Brooks & Clemants in FNA (2000); Balslev in Kubitzki (1998b); Drábková et al. (2003).

1 Leaves terete or flat, glabrous (or scabrous); capsule with > 3 seeds; [often in wetlands].....***Juncus***
1 Leaves flat, pubescent; capsule with 3 seeds; [rarely in wetlands] .....***Luzula***

Juncus Linnaeus 1753 (Rush)
(by B.A. Sorrie, B. van Eerden, and W.M. Knapp)

A genus of about 250-300 species, herbs, of cosmopolitan distribution. Drábková et al. (2003) indicate that *Juncus trifidus* may not be part of *Juncus*, and may be as closely related to *Luzula*. References: Brooks & Clemants in FNA (2000); Kirschner et al. (2002b, 2002c)= Y; Clemants (1990); Balslev in Kubitzki (1998b); Zika (2003)=Z; Drábková et al. (2003); F; GW; RAB. The key based, in part, on those references.

subgenus *Juncus*, section *Juncus*: *acutus ssp. leopoldii, roemerianus*
subgenus *Juncus*, section *Graminifolii*: *filipendulus, marginatus, biflorus, longii, repens*
subgenus *Juncus*, section *Iridifolii*: *polycephalus*
subgenus *Juncus*, section *Ozophyllum*: *abortivus, acuminatus, brachycephalus, brevicaudatus, caesariensis, canadensis, megacephalus, militaris, nodosus, pelocarpus, subcaudatus, torreyi, trigonocarpus, validus var. validus*
subgenus *Agathryon*, section *Tenageia*: *bufonius var. bufonius*
subgenus *Agathryon*, section *Steirochloa*: *gerardii, coriaceus, [brachyphyllus], georgianus, secundus, dichotomus, tenuis, anthelatus, interior, dudleyi*
subgenus *Agathryon*, section *Juncotypus*: *gymnocarpus, [filiformis], inflexus, effusus var. solutus, pylaei, balticus*
UNCERTAIN placement (probably not a *Juncus*): *trifidus*

Identification Notes: For identification of most rushes, it is important to collect plants with mature capsules and seeds. Care must also be taken to collect specimens with uninjured heads, especially for the group of rushes in Key D; the long beaks of the capsules are often fragile and easily broken off.

1 Inflorescence appearing lateral; inflorescence bract erect, appearing to be a continuation of the culm.....**Key A**
1 Inflorescence appearing terminal; inflorescence bract not appearing to be a continuation of the culm.
  2 Leaf blades non-septate.....**Key B**
  2 Leaf blades septate (sometimes obscure in dried specimens; if so, rest leaf on hard surface and run fingernail over it lengthwise).
    3 Mature seeds distinctly tailed with elongate appendages at each end (may be obscure in *J. subcaudatus*), seeds 0.7-2.5 mm long; [subgenus *Juncus*, section *Ozophyllum*].....**Key C**
    3 Mature seeds without appendages, < 0.7 mm long.
      4 Flowers solitary (rarely up to 3) along branches of inflorescence; flowers often aborted; inflorescence diffuse, with slender flexuous branches; [subgenus *Juncus*, section *Ozophyllum*].....**Key D**
      4 Flowers in heads (glomerules) of 3 or more; flowers seldom aborted; inflorescence various.
        5 Heads spherical or nearly so, usually 15-60 flowered.....**Key E**
        5 Heads turbinate to hemispherical, 3-15 flowered; [subgenus *Juncus*, section *Ozophyllum*].....**Key F**

KEY A

1 Flowers borne in heads (glomerules) of 2-6; leaves spine-tipped; single bracteole subtending glomerule present at base of pedicel; [subgenus *Juncus*, section *Juncus*] ..... ***J. roemerianus***
1 Flowers borne singly on branches of inflorescence; leaves not spine-tipped; each flower subtended by two bracteoles in addition to bracteole at base of pedicel.
2 At least a few sheaths at base of plant with well developed blades; inflorescence bract channeled on one side; [subgenus *Agathryon*, section *Steirochloa*] ..... ***J. coriaceus***
2 Sheaths at base of plant bladeless; bract not channeled; [subgenus *Agathryon*, section *Juncotypus*].
3 Culms well spaced along creeping rhizomes.
4 Anthers shorter than filaments.
5 Rhizomes 1.5-2 mm diameter; culms 1 mm diameter; inflorescence 3-12 flowered; [boreal, south to ne. WV] ..... ***[J. filiformis]***
5 Rhizomes 2-4 mm diameter; culms 1.5-2.5 mm diameter; inflorescence 8-30+ flowered; [rare montane plant in NC and SC] ..... ***J. gymnocarpus***
4 Anthers longer than filaments ..... ***J. balticus*** *var.* ***littoralis***
3 Culms cespitose or tufted on short branching rhizomes.
6 Perianth much shorter than capsule (about ½ as long); stamens 6; [rare montane plant in NC and SC] .... ***J. gymnocarpus***
6 Perianth > 3/4 length of capsule; stamens 6 or 3.
7 Capsules 3-4 mm long; stamens 6; [rare alien in piedmont and mountains of VA] ..... ***J. inflexus***
7 Capsules 1.5-3.2 mm long; stamens 3; [widespread native].
8 Stems coarsely grooved, with 10-20 ridges just below inflorescence, firm; perianth 2.7-3.6 mm long, sepals slightly exceeding petals and capsule ..... ***J. pylaei***
8 Stems finely grooved, with 25-30 striations just below inflorescence, soft, easily compressed; perianth 1.9-2.8 mm long, sepals equaling petals ..... ***J. effusus*** *ssp.* ***solutus***

KEY B

1 Flowers borne in heads (glomerules) of 2 or more, individual flowers not subtended by two bracteoles (in addition to the bracteole at the base of the pedicel); [subgenus *Juncus*, section *Graminifolii*].
2 Perianth 6-10 mm long; plant aquatic, submersed and sterile or emersed/stranded and fertile; stems weak, creeping, mat-forming ..... ***J. repens***
2 Perianth < 6 mm long; plant of uplands or wetland margins, never submersed; stems erect, never creeping or mat-forming.
3 Rhizomes 5-20 cm long, slender (1-1.5 mm wide), flexuous; inflorescence compact (usually < 5 cm long); heads 2-5 flowered ..... ***J. longii***
3 Rhizomes < 5 cm long (usually < 3 cm), thick (2-4 mm wide) or thin or absent (< 2 mm wide); inflorescence various; heads 2-15 flowered.
4 Heads 2-5 flowered; rhizomes thick (2-4 mm); inflorescence elongate (usually 8-20 cm); seeds narrowly ellipsoid, coarsely ribbed, both ends tailed ..... ***J. biflorus***
4 Heads 5-15 flowered; rhizomes thin or absent (< 2 mm); inflorescence < 8 cm long; seeds plump, finely ribbed, both ends apiculate (but without tails).
5 Perianth straw colored with green midstripe; capsules tan to reddish brown; heads 1-5 (-10) per culm; [calcareous glades inland, east to GA and TN] ..... ***J. filipendulus***
5 Perianth dark brown; capsules brown; heads > 10 per culm; [widespread] ..... ***J. marginatus***
1 Flowers borne singly on branches of inflorescence, individual flowers subtended by two bracteoles (in addition to the bracteole at the base of the pedicel).
6 Plants annual, without coarse roots or persistent leaf bases; [subgenus *Agathryon*, section *Tenageia*] ..... ***J. bufonius***
6 Plants perennial, with coarse roots or persistent leaf bases.
7 Leaves finely serrulate or scabrid; auricles deeply lacerate; [rare and local in high elevation "alpine" situations] .... ***J. trifidus***
7 Leaves entire; auricles not lacerate; [subgenus *Agathryon*, section *Steirochloa*].
8 Auricles 3-6 mm long at summit of leaf sheath.
9 Capsules < 3/4 length of perianth, borne widely spaced along the usually diffuse branches of the inflorescence ..... ***J. anthelatus***
9 Capsules > 3/4 length of perianth, borne congested on branches with internodes about as long as perianth ..... ***J. tenuis***
8 Auricles < 2 mm long or absent.
10 Cauline leaves present in addition to basal leaves; blades flat ..... ***J. gerardii***
10 Cauline leaves absent.
11 Leaf blades terete or channeled ..... ***J. dichotomus***
11 Leaf blades flat.
12 Perianth obtuse apically; capsule chestnut brown or darker; [alien, ranging south to MD] .....

.....***J. compressus***

12 Perianth acute to acuminate; capsule light brown or tan; [native].
13 Inflorescence bract shorter than inflorescence; capsules 3-locular.
14 Perianth usually 2.5-3.5 mm long; flowers secund; capsules globose to ellipsoid.....
.....***J. secundus***
14 Perianth usually 4.0-5.5 mm long; flowers not secund; capsules ellipsoid or narrowly so; restricted to granite flatrocks.....***J. georgianus***
13 Inflorescence bract longer than inflorescence; capsules 1-locular to falsely 3-locular.
15 Auricles yellowish, glossy; perianth spreading in fruit.....***J. dudleyi***
15 Auricles whitish or straw colored, dull; perianth not spreading.
16 Mature capsules pale brown or darker; [of the Coastal Plain].....***J. dichotomus***
16 Mature capsules pale tan or darker; [of prairies and plains, east to KY, se TN] ..
.....***J. interior***

KEY C

1 Culms and leaves scabrid, gray-green or blue-green; seeds 2.0-2.5 mm long.....***J. caesariensis***
1 Culms and leaves smooth, green; seeds 0.7-2.2 mm long.
2 Seeds 1.2-2.2 mm long, seed body < ½ length of seed.
3 Mature capsules 4.0-5.0 mm long, 2 mm longer than perianth, dark reddish purple; heads 3-7 flowered .....
.....***J. trigonocarpus***
3 Mature capsules 3.0-4.0 mm long, < 1.5 mm longer than perianth, light reddish brown to light brown; heads 5-50 flowered.....***J. canadensis***
2 Seeds 0.7-1.2 mm long, seed body > ½ length of seed.
4 Perianth obtuse to subacute, with wide scarious margins.....***J. brachycephalus***
4 Perianth acuminate, with narrow scarious margins.
5 Inflorescence narrow, the branches erect; mature capsules dark brown; heads 2-7 flowered.....
.....***J. brevicaudatus***
5 Inflorescence open, the branches widely spreading; mature capsules dark straw colored; heads 5-20 flowered
.....***J. subcaudatus***

KEY D

1 Rhizomes 2-6 mm thick; perianth acute; culms erect, 3-8.5 dm tall; [southeastern, ranging north to Isle of Wight and City of Suffolk Counties, VA].....***J. abortivus***
1 Rhizomes about 1 mm thick; perianth obtuse; culms ascending to erect, < 5 dm tall; [northeastern, ranging south to Accomack County, VA].....***J. pelocarpus***

KEY E

1 Leaves flattened, narrowly elliptic in cross-section.
2 Leaves with incomplete septae; heads about 10 mm diameter; tips of dehisced capsules united; [subgenus *Juncus*, section *Iridifolii*].....***J. polycephalus***
2 Leaves with complete septae; heads about 12 mm diameter; tips of dehisced capsules split; [subgenus *Juncus*, section *Ozophyllum*].....***J. validus*** *var*. ***validus***
1 Leaves terete, not at all flattened; [subgenus *Juncus*, section *Ozophyllum*].
3 Stamens 6.
4 Plants cespitose, lacking rhizomes.....***J. acuminatus***
4 Plants rhizomatous.
5 Heads 6-20 flowered, 6-9 mm diameter; auricles cartilaginous, 0.5-1.0 mm long.....***J. nodosus***
5 Heads 25-100 flowered, 10-14 mm diameter; auricles membranous, 2.5-4.0 mm long.....***J. torreyi***
3 Stamens 3.
6 Plants cespitose, lacking rhizomes; tepals lanceolate.....***J. acuminatus***
6 Plants rhizomatous; tepals lance-subulate.
7 Mature capsules included, < ½ length of perianth.....***J. brachycarpus***
7 Mature capsules exserted or slightly included.
8 Uppermost stem leaf and/or inflorescence bract > inflorescence; capsule valves separating at apex during dehiscence.....***J. nodosus***
8 Uppermost stem leaf and/or inflorescence bract < inflorescence; capsule valves remaining united.
9 Uppermost cauline leaf blade non-septate, much shorter than its sheath; Outer tepals significantly longer than the inner tepals.....***J. megacephalus***

9 Uppermost cauline leaf blade septate, longer than its sheath; outer tepals and inner tepals of similar length.
10 Heads lobulate; mature capsule 2.0-3.0 mm long.....***J. scirpoides* var. *compositus***
10 Heads spherical, not lobulate; mature capsule 3.0-4.5 mm long.....***J. scirpoides* var. *scirpoides***

KEY F

1 Mature capsules 2 mm or more longer than perianth, 4.0-5.2 mm long.....***J. diffusissimus***
1 Mature capsules < 1.5 mm longer than perianth, or subequal.
2 Stamens 6.
6 Proximal culm leaf overtopping inflorescence; culms well spaced along creeping rhizomes; plants often exceed 8 dm tall; [northeastern, south to DE, MD, disjuncts in ne. NC].....***J. militaris***
6 Proximal culm leaf shorter than inflorescence; plants cespitose; plants < 8 dm tall.
7 Mature capsules slightly shorter than to slightly longer than perianth (< 0.5 mm longer); perianth 2.6-3.9 mm long; inflorescence 4-16 cm long; [widespread]..... ***J. acuminatus***
7 Mature capsules exceeding perianth by about 1 mm (>0.5 mm longer); perianth 1.7-3.0 mm long; inflorescence 2-8 cm long; [northern, in our region montane] .....***J. articulatus***
2 Stamens 3.
3 Mature capsules about 1/3 longer than perianth (roughly 1-1.5 mm longer).....***J. debilis***
3 Mature capsules equaling or barely exceeding perianth.
4 Heads 5-50; capsules 2.8-3.5 mm long ..... ***J. acuminatus***
4 Heads 30-250; capsules 1.9-2.9 mm long.
5 Capsules deep chestnut brown; roots with terminal tubers; inner tepals usually > 2.4 mm long; [plants southeastern] .....***J. elliottii***
5 Capsules straw colored; roots without terminal tubers; inner tepals usually 1.7-2.3 mm long; [plants midwestern, east to nw. FL and se. TN]..... ***J. nodatus***

Juncus abortivus Chapman. Cp (GA, NC, SC, VA): ditches, along pond and stream margins, seepage slopes, disturbed open areas; uncommon. July-October. Se. VA to FL Panhandle. The septae along the narrow leaf blades of *J. abortivus* are often difficult to detect. [= RAB, F, GW, K, S; = *J. pelocarpus* E. Meyer var. *crassicaudex* Engelmann – C, G; < *J. pelocarpus* – FNA, Y]

Juncus acuminatus Michaux. Cp, Pd, Mt (GA, NC, SC, VA): throughout, in damp soils; common. June-August. ME and N.S. to Ont. and MN, south to n. FL, TX and n. Mexico; British Columbia to CA. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Juncus anthelatus (Wiegand) R.E. Brooks. Mt (NC, VA), Pd (NC): moist or wet sites; uncommon. July-September. New Brunswick and ME west to MN, south to GA and AR. [= FNA, Y; < *J. tenuis* Willdenow – RAB, G, GW, K, S, W; < *J. tenuis* var. *tenuis* – C; = *J. tenuis* var. *anthelatus* Wiegand – F]

Juncus articulatus Linnaeus, Jointleaf Rush. Mt (VA), Cp (NC): marshes, wet open ground; rare (NC Watch List). July-September. Nearly cosmopolitan; in North America from Newfoundland to AK, south to e. NC (Cape Hatteras, Dare County) and CA. [= RAB, C, FNA, G, K; > *J. articulatus* var. *articulatus* – F; > *J. articulatus* var. *obtusatus* Engelmann – F; = *J. articulatus* ssp. *articulatus* – Y]

Juncus balticus Willdenow ***var. littoralis*** Engelmann. Mt (VA): open calcareous wetlands; rare. The species is circumboreal; var. *littoralis* is North American: Labrador west to British Columbia, south to NY (Long Island), NJ, PA, w. VA, OH, IN, MO, and KS. [= F, G, K; = *J. arcticus* Willdenow var. *littoralis* (Engelmann) Boivin – C; < *J. arcticus* Willdenow var. *balticus* (Willdenow) Trautvetter – FNA; = *J. balticus* ssp. *littoralis* (Engelmann) Snogerup – Y]

Juncus biflorus Elliott. Cp, Pd, Mt (GA, NC, SC, VA): pine savannas, pine flatwoods, mesic areas in sandhill-pocosin ecotones, roadsides, low fields in the Piedmont; common (uncommon in the Mountains). June-October. MA to MI and MO, south to TX and FL. The characters used to split this species from *J. longii* and *J. marginatus* (rhizome length and thickness, glomerule number, seed size and shape) are somewhat variable, and intermediates between these three taxa are frequent, particularly in se. United States. Due to this intergradation, *J. biflorus* and *J. longii* are sometimes treated as synonyms or varieties of *J. marginatus*, but Knapp (2004) supports their recognition. Since all three taxa in this group, fitting the typical species descriptions, are found in our area, they are here recognized at the species level. It is interesting to note that most of the plants in our area displaying typical taxonomic characters are found in natural, or undisturbed habitats; many of the confusing intermediates appear to occur in disturbed wetlands (roadside ditches, cleared aeas). Further investigation of these disturbed-area populations is necessary. [= RAB, F, K, W; < *J. biflorus* – C, G (also see *J. longii*); < *J. marginatus* – FNA, GW, Y (also see *J. biflorus* and *J. longii*); = *J. aristulatus* Michaux var. *biflorus* (Elliott) Small– S]

Juncus brachycarpus Engelmann, Short-fruited Rush. Pd (GA, NC, SC, VA), Cp (NC, SC, VA), Mt (GA): wet, sandy soil; rare (NC Watch List). June-September. MA to IL, south to SC, wc. GA, and TX. [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus brachycephalus (Engelmann) Buchenau. Mt (GA, VA), Pd, Cp (GA): calcareous wetlands. Nova Scotia west to ND, south to MA, OH, and IL; disjunct southward in VA, n. GA, TN, and CO. [= C, F, FNA, G, K, Y]

Juncus brevicaudatus (Engelmann) Fernald, Short-tailed Rush. Mt (NC, VA): bogs and seeps at high elevations; rare (NC Watch List). July-September. Newfoundland to Manitoba south to MN, PA, and in mountains south to NC. [= RAB, C, F, FNA, G, K, W, Y]

Juncus bufonius Linnaeus *var. **bufonius***, Toad Rush. Cp, Pd (GA, NC, SC, VA), Mt (NC, VA): wet, open ground, roadsides, dried pools, drawdown shores; common (rare in upper Piedmont, Sandhills, and Mountains). June-November. Cosmopolitan. [= C, F, G, K; < *J. bufonius* – RAB, FNA, GW, S, W, Y]

Juncus caesariensis Coville, New Jersey Rush. Cp (VA), Mt (NC): sphagnous seepages in the Coastal Plain of VA, seeps and bogs at low to moderate elevations in the Mountains of NC; rare (US Species of Concern, NC Rare). July-October. Found in 1992 from a seepage bog in Clay County, NC, and in 1993 from a bog in Henderson County, NC, where associated with northern disjuncts. Rare throughout its range, it is known only from several sites in NJ, MD, VA, NC, and Nova Scotia (Newell & Newell 1994). The scabrid leaf blades and large seeds quickly separate this species from the other long-tailed rushes. It should be looked for along seepage slopes and bogs in the fall-line sandhills and the outer Coastal Plain. [= C, F, FNA, G, K, Y]

Juncus canadensis J. Gay ex Laharpe, Canadian Rush. Cp (GA, NC, SC, VA), Pd, Mt (NC, VA): lake, pond and stream margins, swamps, bogs, seepage slopes, wet meadows, ditches; common (rare in Piedmont and Mountains). July-October. Newfoundland to MN, south to c. peninsular FL, TN, and LA. *J. canadensis* is here treated as a single, polymorphic species. Fernald and others have described up to 5 forms and varieties of *J. canadensis*, based on variation in flower and capsule size (from 2.5 mm to nearly 4.0 mm), shape of the glomerules (densely flowered and subglobose to few-flowered and turbinate), and structure and size of the inflorescence (congested to open). Further study is necessary to determine whether any of these taxa should be recognized. [= RAB, C, FNA, G, GW, K, S, W, Y; > *J. canadensis* var. *canadensis* – F; > *J. canadensis* var. *euroauster* Fernald – F]

Juncus coriaceus Mackenzie. Cp, Pd, Mt (GA, NC, SC, VA): stream and pond margins, swamps, flatwoods depressions, roadside ditches; common (rare in Mountains). June-September. S. NJ to n. FL, west to e. TX, north in the interior KY, AR, and OK. [= RAB, C, F, FNA, G, GW, K, W, Y; = *J. setaceus* Rostkovius – S, misapplied]

Juncus debilis A. Gray, Weak Rush. Cp, Pd, Mt (GA, NC, SC, VA): marshy shores, stream and pond margins, along puddles in wet, disturbed clearings, ditches; common (uncommon in Piedmont). May-August. RI to MO, south to n. FL and e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Juncus dichotomus Elliott. Cp, Pd, Mt (GA, NC, SC, VA): often in disturbed, open, wet areas, ditches, wet meadows; common (rare in western Piedmont and Mountains). June-October. MA to c. peninsular FL, west to OK and TX. The character used to separate *J. platyphyllus* (Wiegand) Fernald from *J. dichotomus* (flat leaf blade vs. terete leaf blade) does not appear to be reliable; leaf blades from culms in the same clump may vary from flat to slightly involute to completely terete. [= FNA, GW, W, Y; > *J. dichotomus* – RAB, F; > *J. platyphyllus* (Wiegand) Fernald – RAB, F; = *J. tenuis* var. *dichotomus* (Elliott) A. Wood – C; > *J. dichotomus* var. *dichotomus* – G, K, S; > *J. dichotomus* var. *platyphyllus* Wiegand – G, K, S]

Juncus diffusissimus Buckley, Diffuse Rush, Slim-pod Rush. Cp, Pd, Mt (GA, NC, SC, VA): low, wet open areas, ditches, margins of ponds and streams; uncommon (rare in Piedmont). May-September. Mostly Coastal Plain from se. VA to n. FL, west to e. and nc. TX; also s. IN to MO, KA, OK, TN, and KY. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Juncus dudleyi Wiegand, Dudley's Rush. Mt (NC, VA), Pd (VA), Cp (SC, VA): calcareous seepages and fens, river-scours; rare. Labrador to Nunavut, south at least to FL, TX, and CA. First reported for South Carolina by Hill & Horn (1997) and for NC by Tom Govus (pers. comm., 2005). [= F, FNA, K, S, W, Y; = *J. tenuis* Willdenow var. *dudleyi* (Wiegand) F.J. Hermann – C; < *J. tenuis* – G, GW]

Juncus effusus Linnaeus *ssp. **solutus*** (Fernald & Wiegand) Hämet-Ahti, Common Rush, Soft Rush. Cp, Pd, Mt (GA, NC, SC, VA): moist soil, marshes, margin of streams, ponds, lakes and swamps, low meadows; common. June-September. Newfoundland to MN, south to FL and Mexico. Ssp. *effusus* is European, and also occurs (allegedly introduced) in the ne. United States. [= Y, Z; < *J. effusus* – RAB, FNA, GW, S, W (also see *J. pylaei*); = *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – C; > *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – F, K ; > *J. griscomii* Fernald – F, G; >< *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – G (also see *J. pylaei*); > *J. effusus* var. *compactus* – G, misapplied; > *Juncus effusus* Linnaeus var. *conglomeratus* (Linnaeus) Engelmann – K]

Juncus elliottii Chapman, Elliott's Rush. Cp (GA, NC, SC, VA), Pd (GA, NC): margins of ponds and lakes, depressions in savannas and flatwoods, wet, disturbed clearings, roadside ditches; uncommon (rare in Piedmont). May-September. Coastal Plain, DE to cen. penin. FL, west to se. TX. Capsules of *J. elliottii* are similar in shape to *J. acuminatus*, but the presence of tubiferous roots, shorter perianth (2.0-2.5 mm long vs. 2.5-3.5 mm) and fewer-flowered glomerules (3-8 flowered vs. 5-many flowered) clearly distinguishes *J. elliottii* from *J. acuminatus*. [= RAB, C, F, FNA, G, GW, S, Y; < *J. elliottii* var. *elliottii* – K]

Juncus filipendulus Buckley, Texas Plains Rush. Mt (GA): prairies, limestone barrens; rare (GA Special Concern). KY, TN, and AL west to OK and TX. [= FNA, GW, K, S, Y]

Juncus georgianus Coville. Pd (GA, NC, SC): shallow depressions in granitic outcrops; rare (NC Watch List). June-August. An endemic of the Southeastern Piedmont, restricted to granitic flatrocks of NC, SC, GA, and ec. AL. [= RAB, FNA, K, S, W, Y]

Juncus gerardii Loiseleur, Blackfoot Rush, Blackgrass. Cp, Mt (VA): {habitat}; rare. [= C, FNA, W; > *J. gerardi* var. *gerardi* – F; = *J. gerardi* – G, orthographic variant; > *J. gerardii* var. *gerardii* – K; > *J. gerardii* ssp. *gerardii* -- Y]

Juncus gymnocarpus Coville, Seep Rush. Mt (GA, NC, SC): bogs, seeps, streambanks; rare (GA Special Concern, NC Rare). July-September. Local, mountains of e. PA, w. NC, e. TN, nw. SC and ne. GA, Coastal Plain of se. AL, s. MS (Sorrie & Leonard 1999), and n. cen. Panhandle FL. In our area, *J. gymnocarpus* is scattered in mountain bogs and seeps throughout the mountain region; it reaches its most general occurrence in the escarpment gorge region of Transylvania, Macon, and Jackson counties, NC, where it also occurs along streambanks, especially in the vicinity of waterfalls. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

* ***Juncus inflexus*** Linnaeus. Mt (VA): wet meadows, disturbed wet or moist ground; rare, native of Eurasia. Introduced in VA (Virginia Botanical Associates 2006, Kartesz 1999). [= C, F, FNA, G, K, Y]

Juncus longii Fernald. Cp (GA, NC, VA), Pd (GA, NC, SC), Mt? (NC): usually in very wet, often inundated sites, bogs, ditches, rooting in clay or peat; uncommon (NC Watch List). June-August. MD south through VA, NC, SC to MS (Knapp 2004); more extensive distributions are based on misattribution. [= RAB, F, K; < *J. biflorus* – C, G; < *J. marginatus* – FNA, GW, Y (also see *J. biflorus* and *J. longii*); = *J. aristulatus* Michaux var. *aristulatus* – S]

Juncus marginatus Rostkovius. Cp, Pd, Mt (GA, NC, SC, VA): wet meadows, bogs, generally throughout in wet, sandy or peaty soil; common. June-September. Nova Scotia to Ontario, south to FL and TX. [= RAB, C, G, K, S, W; > *J. marginatus* var. *marginatus* – F; > *J. marginatus* var. *setosus* Coville – F; < *J. marginatus* – FNA, GW, Y (also see *J. biflorus* and *J. longii*); > J. marginatus – G; J. setosus (Coville) Small – G]

Juncus megacephalus M.A. Curtis, Large-headed Rush. Cp (GA, NC, SC, VA): brackish and freshwater marshes, bogs, ditches, wet, open places; uncommon. June-August. Coastal Plain, VA to s. FL, west to se. TX; e. MD (Sorrie, pers. comm.). [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus militaris Bigelow, Bayonet Rush. Cp (NC): lakeshores; rare. Nova Scotia to MD, DE, and ne. PA; inland near the Great Lakes; disjunct at Phelps Lake, NC (Sorrie, pers.comm, 2005). [= C, F, FNA, G, K, Y]

Juncus nodosus Linnaeus. Mt (VA): {habitat}; rare. Newfoundland to British Columbia, south to w. VA, WV, IN, MO, TX, and CA. [= C, F, FNA, G, Y; > *J. nodosus* var. *nodosus* – K] {add to synonymy}

Juncus pelocarpus E. Meyer. Cp (VA): sea-level fens; rare. Labrador west to MN, south to DE, e. VA, n. IN. [= K; = *J. pelocarpus* var. *pelocarpus* – C, G; > *J. pelocarpus* var. *pelocarpus* – F; < *J. pelocarpus* – FNA, Y (also see *J. abortivus*)]

Juncus polycephalus Michaux, Many-headed Rush. Cp (GA, NC, SC): sandy pond margins, ditches, savannas; uncommon. July-September. Coastal plain, NC to s. FL, west to e. TX; TN. [= RAB, F, FNA, GW, K, S, Y]

Juncus pylaei Laharpe, Common Rush. Cp, Pd, Mt? {NC, SC, VA}: moist soil, marshes, margin of streams, ponds, lakes and swamps, low meadows; common {additional checking of herbarium collections needed to determine actual range of this variety in our area; var. *solutus* as well}. June-September. Throughout eastern North America, south to NC. [= C, K, Y, Z; < *J. effusus* – RAB, FNA, GW, S, W; > *J. effusus* var. *costulatus* St. John – F; > *J. effusus* Linnaeus var. *pylaei* (Laharpe) Fernald & Wiegand – F; < *J. effusus* Linnaeus var. *solutus* Fernald & Wiegand – G]

Juncus repens Michaux, Creeping Rush. Cp (GA, NC, SC, VA), Pd, Mt (GA): streams, ponds, lakes, ditches, wet depressions in flatwoods, cypress savannas; common (rare in Piedmont and Mountains). June-October. DE to s. FL, west to TX, north into OK and TN. This species commonly forms dense mats – a useful field character. [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus roemerianus Scheele, Black Needle Rush. Cp (GA, NC, SC, VA): coastal tidal marshes, forming dense stands at and above mean high tide, above the *Spartina alterniflora* zone; common. January-June; May-October. MD to s. FL, west to se. TX. See Eleuterius (1977) for additional information on this species. [= RAB, C, F, FNA, G, GW, K, S, Y]

Juncus scirpoides Lamarck *var. **compositus*** Harper. Cp (GA, NC, SC, VA): roadsides, wet, open, disturbed areas, ?; uncommon. June-October. Coastal Plain: NC, GA, FL, AL, MS, LA, SC, TX, VA. [= S; < *J. scirpoides* – RAB, FNA, GW, K, Y; >< *J. scirpoides* -- K; <*? J. scirpoides* var. *meridionalis* Buchenau – F, application uncertain; > *J. glomeratus* Batson – K, nomen nudum]

Juncus scirpoides Lamarck *var. **scirpoides***. Cp, Pd, Mt (GA, NC, SC, VA): wet, open, disturbed areas, ditches, sandhill pocosin ecotones and seepage bogs, savannas and wet pine flatwoods, wet meadows; common (rare in Mountains). June-October. S. NY to s. FL, mostly Coastal Plain and Piedmont; west to TX; IN to MI, MO, OK. *J. scirpoides* is here tentatively divided into three taxa: [= F, S; < *J. scirpoides* – RAB, C, FNA, G, GW, K, W, Y]

Juncus secundus Beauvois ex Poiret. Pd, Mt (GA, NC, SC, VA), Cp (VA): dry fields, rock outcrops; rare (NC Watch List). June-September. ME to IN, south to e. OK, n. AL, and n. GA. [= RAB, C, F, FNA, G, K, S, W, Y]

Juncus subcaudatus (Engelmann) Coville & Blake, Somewhat-tailed Rush. Mt (GA, NC, SC, VA), Pd, Cp (VA): bogs, mossy woods and other wet places; common. July-October. Nova Scotia to NY, southwest to MO and southeast to GA. *J. subcaudatus* is one of the more difficult rushes to identify. Although it is grouped with *J. canadensis*, *J. brevicaudatus* and the other long-tailed rushes, its seeds lack distinct, long appendages. In general appearance it matches *J. acuminatus* quite well; mature seed size and mature capsule size (*J. subcaudatus* capsules are generally well exserted above the perianth, while *J. acuminatus* capsules are equal to only slightly exserted above the capsule) need to be examined in order not to confuse the two taxa. [= RAB, C, FNA, G, W, Y; > *J. subcaudatus* var. *subcaudatus* – F, K]

Juncus tenuis Willdenow, Path Rush. Cp, Pd, Mt (GA, NC, SC, VA): dry or moist soil along roadsides and paths, fields; common (uncommon in se. Coastal Plain). June-September. Labrador west to AK, south to FL, TX, CA. *J. tenuis* as it is here treated includes *J. tenuis* var. *williamsii* Fernald, which has a more congested inflorescence with arched to recurved inflorescence branches. [= FNA, Y; < *J. tenuis* – RAB, G, GW, K, S, W; < *J. tenuis* var. *tenuis* – C; > *J. tenuis* var. *tenuis* – F; > *J. tenuis* var. *williamsii* Fernald – F]

Juncus torreyi Coville, Torrey's Rush. Mt (GA, VA), Pd (VA), {NC}. June-September. New Brunswick west to British Columbia, south to GA, TX, CA, and n. Mexico. [= FNA, C, F, G, GW, K, S, W, Y]

Juncus trifidus Linnaeus, Highland Rush. Mt (NC, VA): rock crevices at high elevations, on greenstone, mica scist, amphibolite, and hornblende gneiss; rare (NC Endangered). June-September. The species is circumboreal, occurring in arctic-alpine situations in n. Europe and n. North America where it ranges from Newfoundland to Québec, south to s. New England and NY; disjunct in VA (Stony Man, Page County) and NC (Craggy Pinnacle, Craggy Dome, and Craggy Gardens, Buncombe County; Eagle Cliff, Mitchell County; Three Top Mountain, Ashe County), and WV (North Fork Mountain, Pendleton County). As with many circumboreal species of polymorphic nature, there is disagreement over the recognition of infraspecific taxa. Var. *monanthos* (Jacquin) Bluff & Fingerhuth or ssp. *monanthos* (Jacquin) Ascherson & Graebner has often been applied to e. North American *J. trifidus*, but should apply (if considered valid at all) only to *J. trifidus* of limestone areas of Europe. Although Hämet-Ahti (1980) correctly showed that Appalachian *J. trifidus* (from acidic and mafic gneisses and schists) does not belong to

J. monanthos (*J. trifidus* ssp. *monanthos, J. trifidus* var. *monanthos)*, her treatment of Appalachian plants as ssp. *carolinianus* Hämet-Ahti has been controversial. This treatment follows Clemants (1990), who concludes that the primarily vegetative characters used to separate Appalachian plants from the European (blade lengths and relative positions) are too variable to warrant recognition of subspecies or varieties in the taxon. Further study is warranted. [= Y; < *J. trifidus* – FNA, S; > *J. trifidus* var. *monanthos* (Jacquin) Bluff & Fingerhuth – RAB, F, G, W, misapplied; > *J. trifidus* ssp. *carolinianus* Hämet-Ahti – C, K]

Juncus trigonocarpus Steudel. Cp (GA, NC, SC), Pd (GA, NC): seepage slopes, bogs, along stream margins, ditches; common, rare in Piedmont. July-October. Coastal plain, NC to FL Panhandle, west to e. TX. Young *J. trigonocarpus* and *J. canadensis* are often confused; once mature, however, the two can usually be separated by capsule color alone. Although *J. canadensis* capsules redden, they never approach the dark reddish-purple tone of *J. trigonocarpus*. Seed and capsule size are also distinct for the two taxa. [= RAB, FNA, GW, K, S, Y]

Juncus validus Coville *var. **validus***, Vigorous Rush. Cp (GA, NC, SC, VA), Pd (GA, SC), Mt (GA): stream and pond margins, roadside ditches, wet, open, often disturbed ground; uncommon. July-September. NC to n. FL, west to TX, OK and MO. Var. *fascinatus* M.C. Johnston is endemic to TX. [= FNA, K, Y; < *J. validus* – RAB, C, F, G, GW, S, W]

* *Juncus acutus* Linnaeus ssp. *leopoldii* (Parlatore) Snogerup. Cp (GA): {habitat unknown}; rare. Reported for se. GA by Jones & Coile (1988) and Kartesz (1999), but not by FNA. {investigate} [= FNA, K, Y] {not keyed, pending verification}

Juncus brachyphyllus Wiegand. Wet sandy areas. MO and KS, south to TX; MT, ID, and WA south to CA; disjunct in the Coastal Plain of w. TN. [= FNA, C, K, Y]

Juncus compressus Jacquin. Disturbed ground, ditches, in saline or alkaline soils. Nova Scotia to Ontario, south to MD, PA, w. NY, MI, WS, and sporadically distributed westward in high elevations. [= FNA, C, F, G, K] {add to synonymy; not yet keyed}

Juncus filiformis Linnaeus, Thread Rush. Bogs, wet acid areas. Circumboreal, south in North America to e. PA, w. PA, WV, n. MI, and n. MN. [= C, F, FNA, G, K]

Juncus interior Wiegand. Prairies, disturbed sites. OH west to Saskatchewan, south to e. TN, AL, LA, TX, and NM. Also reported for VA and NC (Kartesz 1999); the NC report is based on a misidentified specimen. {investigate} [= FNA, G, S, W, Y; > *J. interior* var. *interior* – K; < *J. tenuis* Willdenow var. *tenuis* – C; < *J. tenuis* – GW]

Juncus nodatus Coville. Shallow water, marshes, sloughs, savannas, bogs. KY west to KS, south to TN, AL, FL, LA, and TX. [= FNA, C, G, GW, K, Y; ? *J. robustus*, preoccupied] {synonymy incomplete}

Luzula Augustin de Candolle 1805 (Wood-rush)

A genus of about 75-115 species, cosmopolitan. References: Coffey Swab in FNA (2000); Kirschner et al. (2002a)=Z; Balslev in Kubitzki (1998b). Key adapted in part from Coffey Swab in FNA (2000), C, and F.

1 Flowers borne singly or in small clusters of (1-) 2-4 (-8); inflorescences branched, unbranched, or dichasial.
- 2 Flowers borne in small clusters of (1-) 2-4 (-8); perianth white to pink; inflorescences dichasial; seeds lacking an appendage (or with a inconspicuous appendage); [alien species, naturalized north of our area]; [subgenus *Luzula*, section *Anthelaea*] ..... ***[L. luzuloides ssp. luzuloides]***
- 2 Flowers borne singly; perianth tan to brown (the margins of the segments often translucent); inflorescences erect or lax, branching or not; seeds with a conspicuous appendage; [native species, widespread in our area]; [subgenus *Pterodes*].
  - 3 Inflorescences simple, with an occasional pedicel branching from the base of a flower; apical appendages of seeds 0.6-1.5 (-2.1) mm long; seed/appendage length ratio 0.8-1.7 ..... ***L. acuminata* var. *acuminata***
  - 3 Inflorescences usually branching, the pedicels commonly paired; apical appendages of seeds 0.4-1.1 mm long; seed/appendage length ratio 1.0-2.8 ..... ***L. acuminata* var. *carolinae***

1 Flowers borne in dense glomerate clusters (glomerules); inflorescences spikelike or umbellate; [subgenus *Luzula*, section *Luzula*].
- 4 Inflorescence branches divergent, at least some widely spreading; glomerules capitate to broadly ovoid, not cylindric.... ..... ***L. echinata***
- 4 Inflorescence branches erect, none widely spreading; glomerules often cylindric (less commonly merely capitate).
  - 6 Seeds 0.9-1.3 mm long; caruncle 0.5-0.7 mm long; plants producing several basal bulblets (white swollen leaf bases) ..... ***L. bulbosa***
  - 6 Seeds 1.1-1.7 mm long; caruncle 0.2-0.5 mm long; plants not producing basal bulblets..... ..... ***L. multiflora* var. *multiflora***

Luzula acuminata Rafinesque *var. **acuminata***. Mt, Pd (NC, SC, VA): moist forests; common. April-August. Newfoundland west to Manitoba, south to SC and AR. [= RAB, C, F, FNA, G, GW, K; = *Juncoides saltuense* (Fernald) Small – S; < *L. acuminata* – W; = *L. acuminata* ssp. *acuminata* – Z]

Luzula acuminata Rafinesque *var. **carolinae*** (S. Watson) Fernald. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; common. April-August. MA, NY, PA, and se. OH south to n. FL and AR. Perhaps better treated at the species level. [= RAB, C, F, FNA, G, GW, K; = *Juncoides carolinae* (S. Watson) Kuntze – S; < *L. acuminata* – W; = *L. acuminata* ssp. *carolinae* (S. Watson) Z. Kaplan – Z]

Luzula bulbosa (Wood) Smyth & Smyth. Pd, Mt (GA, NC, SC, VA), Cp (NC, VA): dry forests and fields; common. March-August. MA, PA, IN, and NE south to n. FL, LA, and c. TX. [= RAB, C, F, FNA, GW, K, Z; = *L. campestris* (Linnaeus) Augustin de Candolle var. *bulbosa* Wood – G; = *Juncoides bulbosum* – S; < *L. multiflora* – W]

Luzula echinata (Small) F.J. Hermann. Mt, Pd, Cp (GA, NC, SC, VA): forests, bogs; common. Se. MA, se. NY PA, WV, and IA south to GA, AL, MS, and e. TX. March-August. [= RAB, C, FNA, GW, K, Z; > *L. echinata* var. *echinata* – F; > *L. echinata* var. *mesochorea* F.J. Hermann – F; = *L. campestris* (Linnaeus) Augustin de Candolle var. *echinata* (Small) Fernald & Wiegand – G; = *Juncoides echinatum* Small – S; < *L. multiflora* – W]

Luzula multiflora (Ehrhart) Lejeune *var. **multiflora***. Mt, Pd, Cp (VA), {NC?, SC?}: forests; common. March-August. Newfoundland and Ontario, south to VA, KY, and MO. [= F; < *L. multiflora* – RAB, C; = *L. campestris* (Linnaeus) Augustin de Candolle var. *multiflora* (Ehrhart) Celak – G; = *L. multiflora* ssp. *multiflora* var. *multiflora* – K; = *L. multiflora* ssp. *multiflora* – FNA, Z; < *L. multiflora* – W]

* *Luzula luzuloides* (Lamarck) Dandy & Wilmott ssp. *luzuloides*, is a native of Europe, naturalized in ne. North America as far south as se. PA (Rhoads & Klein 1993). It may occur in our area. [= FNA, Z; < *L. luzuloides* – C, F, K]

JUNCAGINACEAE L.C. Richard 1808 (Arrowgrass Family)

A family of 3-4 genera and 20 species, of temperate and boreal regions of the Old and New World. References: Haynes & Hellquist in FNA (2000); Thieret (1988); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Triglochin Linnaeus 1753 (Arrowgrass)

A genus of about 12 species, cosmopolitan. References: Haynes & Hellquist in FNA (2000); Thieret (1988)=Z; Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

1 Pistils 6, all fertile; fruits 2-4.5 mm long; central axis between the carpels not winged ..... ***[T. maritima]***
1 Pistils 6, 3 fertile and 3 sterile; fruits **either** 7-8.3 mm **or** 1-2 mm long; central axis between broadly winged.
  2 Fruits elongate, 7-8.3 mm long; tepals 6; [of PA northward] ..... ***[T. palustris]***
  2 Fruits globose, 1-2 mm long; tepals 3; [of DE and MD southward ..... ***T. striata***

Triglochin striata Ruiz & Pavón, Southern Arrowgrass. Cp (GA, NC, SC, VA): brackish to nearly freshwater marshes; uncommon (VA Watch List). May-October. The species has an extensive range, occurring in tropical Central and South America, Africa, and Australia; in North America, it ranges from MD and DE south to FL and west to LA, and also on the west coast in CA and OR. [= F, FNA, G, K; = *T. striatum* – RAB, C, GW, S, Z, orthographic variant]

Triglochin maritima Linnaeus. Brackish coastal habitats and inland bogs. Circumboreal, south in North America to MD, DE, OH, NE, NM, Mexico; also Patagonia. [= F, FNA, G, K; = *T. maritimum* – C, Z, orthographic variant]

Triglochin palustris Linnaeus. Brackish coastal habitats and inland bogs. Circumboreal, south in North America to PA, IN, IA, NE, and NM. [= F, FNA, G, K; = *T. palustre* – C, Z, orthographic variant]

LEMNACEAE A. Gray 1821 (Duckweed Family)
[see ***ARACEAE***]

LILIACEAE A.L. de Jussieu 1789 (Lily Family)
(also see *AGAVACEAE*, *ALLIACEAE, ALSTROEMERIACEAE, AMARYLLIDACEAE, ASPARAGACEAE, COLCHICACEAE, HEMEROCALLIDACEAE, HOSTACEAE, HYACINTHACEAE, HYPOXIDACEAE, MELANTHIACEAE, NARTHECIACEAE, RUSCACEAE, SMILACACEAE, THEMIDACEAE, TOFIELDIACEAE, TRILLIACEAE*)

As here interpreted narrowly, the Liliaceae constitutes about 11 genera and 550 species, of the Northern Hemisphere. There has been much recent investigation and re-interpretation of evidence regarding the upper-level taxonomy of the Liliales, with strong suggestions that the broad Liliaceae recognized by Cronquist (1981) is artificial and polyphyletic. Cronquist (1993) himself concurs, at least to a degree: "we still await a comprehensive reorganization of the lilies into several families more comparable to other recognized families of angiosperms." Dahlgren & Clifford (1982) and Dahlgren, Clifford, & Yeo (1985) synthesized an early phase in the modern revolution of monocot taxonomy. Since then, additional research, especially molecular (Duvall et al. 1993, Chase et al. 1993, Bogler & Simpson 1995, and many others), has strongly validated the general lines (and many details) of Dahlgren's arrangement. The most recent synthesis (Kubitzki 1998a) is followed as the basis for familial and generic taxonomy of the lilies and their relatives (see summary below). References: Angiosperm Phylogeny Group (1998, 2003); Tamura in Kubitzki (1998a).

Our "liliaceous" genera (members of orders placed in the Lilianae) are therefore divided as shown below, largely following Kubitzki (1998a) and some more recent molecular analyses.

ALISMATALES
TOFIELDIACEAE: *Harperocallis, Pleea, Tofieldia, Triantha.*
LILIALES
ALSTROEMERIACEAE: *Alstroemeria.*
COLCHICACEAE: *Colchicum, Uvularia.*
LILIACEAE: *Clintonia, Erythronium, Lilium, Medeola, Prosartes, Streptopus, Tricyrtis, Tulipa.*
MELANTHIACEAE: *Amianthium, Anticlea, Chamaelirium, Helonias, Schoenocaulon, Stenanthium, Veratrum, Toxicoscordion, Xerophyllum, Zigadenus.*
SMILACACEAE: *Smilax.*
TRILLIACEAE: *Trillium.* (or to be included in MELANTHIACEAE)
ASPARAGALES
AGAVACEAE: *Camassia, Manfreda, Schoenolirion, Yucca.* (or to be included in ASPARAGACEAE)
ALLIACEAE: *Allium, Ipheion, Nothoscordum.*
AMARYLLIDACEAE: *Crinum, Galanthus, Hymenocallis, Leucojum, Lycoris, Narcissus, Sternbergia, Zephyranthes.* (or to be included in ALLIACEAE)
ASPARAGACEAE: *Asparagus.*
HEMEROCALLIDACEAE: *Hemerocallis.* (or to be included in XANTHORRHOEACEAE)
HOSTACEAE: *Hosta.* (or to be included in ASPARAGACEAE)
HYACINTHACEAE: *Hyacinthoides, Hyacinthus, Muscari, Ornithogalum.* (or to be included in ASPARAGACEAE)
HYPOXIDACEAE: *Hypoxis.*
IRIDACEAE: *Alophia, Calydorea, Crocus, Crocosmia, Gladiolus, Herbertia, Iris, Nemastylis, Sisyrinchium.*
ORCHIDACEAE: *Aplectrum, Arethusa, Calopogon, Cleistes, Coeloglossum, Corallorhiza, Cypripedium, Epidendrum, Epipactis, Galearis, Goodyera, Habenaria, Hexalectris, Isotria, Liparis, Listera, Malaxis, Platanthera, Pogonia, Ponthieva, Pteroglossaspis, Spiranthes, Tipularia, Triphora, Zeuxine.*
RUSCACEAE: *Convallaria, Liriope, Maianthemum, Nolina, Polygonatum.* (or to be included in ASPARAGACEAE)
THEMIDACEAE: *Dichelostemma*. (or to be included in ASPARAGACEAE)
DIOSCOREALES
BURMANNIACEAE: *Apteria, Burmannia.*
DIOSCOREACEAE: *Dioscorea.*
NARTHECIACEAE: *Aletris, Lophiola, Narthecium.*
PANDANALES
STEMONACEAE: *Croomia*.

1 Leaves basal; flowers on a leafless scape; tepals yellow or white.
  2 Flowers in an umbel at the summit of a leafless scape; fruit a berry; [subfamily *Medeoloideae*] ..... ***Clintonia***
  2 Flowers solitary and scapose; tepals yellow or white; fruit a capsule; [subfamily *Lilioideae*, tribe *Tulipeae*] ..... ***Erythronium***
1 Leaves on a stem; flowers not scapose; tepals orange, red, rose, yellow, or white.
  3 Leaves whorled at at least 1 node.
    4 Leaves occurring in a single whorl, with fertile plants with a second whorl of leaflike bracts subtending the flowers; flowers yellow; [subfamily *Medeoloideae*] ..... ***Medeola***
    4 Leaves occurring at several nodes, these variously whorled and/or alternate; flowers orange, red, or yellow; [subfamily *Lilioideae*, tribe *Lilieae*] ..... ***Lilium***
  3 Leaves alternate at all nodes.
    5 Leafy stem branched; fruit a berry.
      6 Stems brownish, wiry; inflorescence terminal ..... ***Prosartes***
      6 Stems green, rather succulent; inflorescence axillary ..... ***Streptopus***
    5 Leafy stem unbranched; fruit a capsule.
      7 Leaves at 1-6 nodes; flowers cup-shaped, the tepals incurved-erect; [subfamily *Lilioideae*, tribe *Tulipeae*] ..... ***[Tulipa]***
      7 Leaves at 7 or more nodes; flowers with tepals recurved.
        8 Flowers whitish or lavender with darker spots; leaves often dark-spotted ..... [***Tricyrtis]***
        8 Flowers orange, red, or yellow (rarely white); leaves unspotted ..... ***Lilium***

Clintonia Rafinesque 1819

A genus of 5 species, of temperate to subarctic e. Asia and North America. References: Utech in FNA (2002a); Tamura in Kubitzki (1998a).

1 Flowers yellow; berry blue (rarely to whitish-blue); leaf margins glabrous or slightly ciliate; [mostly of high elevations] .....

.....***C. borealis***

1 Flowers white (often marked with purple); berry black; leaf margins copiously retrorsely ciliate, the cilia 2-4 mm long; [plants of middle elevations] ..... ***C. umbellulata***

Clintonia borealis (Aiton) Rafinesque, Bluebead-lily. Mt (GA, NC, VA): spruce-fir forests, northern hardwood forests, less commonly in red oak forests; common (GA Special Concern). Late May-June; July-September. Labrador west to Manitoba, south to NJ, PA, and n. IN, and in the mountains to w. NC, e. TN, and n. GA (Jones & Coile 1988). [= RAB, C, F, FNA, G, K, S, W]

Clintonia umbellulata (Michaux) Morong, Speckled Wood-lily. Mt (GA, NC, SC, VA): red oak and other oak forests, mesic to dry ridges and slopes, less commonly in northern hardwood forests, generally at lower elevations than *C. borealis*, though the two species can co-occur; common. Mid May-June; August-October. An Appalachian endemic: c. NY west to s. OH, south to n. GA (Jones & Coile 1988). *Clintonia alleghaniensis* Harned, differing from *C. umbellulata* in its ultramarine blue berry (vs. black) is known from a number of sites in VA, MD, and WV. It has been variously interpreted as a species, a hybrid of *C. borealis* and *C. umbellulata*, or merely an odd form of *C. umbellulata*; it needs further study. [= RAB, C, F, FNA, G, K, W; = *Xeniatrum umbellulatum* (Michaux) Small – S; > *C. alleghaniensis* Harned]

Erythronium Linnaeus 1753 (Trout Lily)

A genus of about 25 species, north temperate and subarctic, of North America and Eurasia (especially diverse in w. North America). References: Parks & Hardin (1963)=Z; Mathew (1992)=Y; Allen & Robertson in FNA (2002a); Tamura in Kubitzki (1998a).

Identification notes: Stolons are white shoots produced from the bulb. Most run horizontally, either underground or along the ground surface but beneath leaf litter. Flowering individuals often produce no stolons. The stolon characters in the key below are those of non-flowering individuals and refer to horizontal stolons only.

1 Perianth white ..... ***E. albidum***
1 Perianth yellow.
  2 Petals lacking auricles at base; capsule and ovary distinctly indented (umbilicate) at apex (or rarely truncate in *E. umbilicatum* ssp. *monostolum*, or the ovary when young not yet displaying the apical indentation); mature capsules usually reclining on ground, with the apex downward; stolons 0-1 per bulb; anthers usually lavender, brown, cinnamon, or purple (sometimes yellow).
    3 Horizontal stolons 1 per bulb; flecking on perianth segments slight to strong; perianth margins slightly irregular (though not auricled); stigma lobes long; pale spot on adaxial side of perianth segments always present, small to large, usually pale yellow; [at high elevations in the Southern Appalachians].....***E. umbilicatum ssp. monostolum***
    3 Horizontal stolons 0 per bulb; flecking on perianth segments absent to slight; perianth margins entire, smooth; stigma lobes short; pale spot on adaxial side of perianth segments usually present, small to medium, usually white; [of lower to mid elevations, widespread in our area] ..... ***E. umbilicatum ssp. umbilicatum***
  2 Petals with auricles at base; capsule and ovary truncate, rounded, apiculate, or beaked at apex; mature capsules usually held well off ground, the apex oriented horizontally or ascending; stolons usually (1-) 2-5 per bulb; anthers usually yellow (rarely brown or lavender).
    4 Capsule distinctly beaked at the apex; petals with well-developed auricles at the base, these encircling a filament .. ..***[E. rostratum]***
    4 Capsule truncate, rounded, or apiculate at the apex; petals with small auricles at the base, which do not encircle a filament.
      5 Capsule apiculus absent or poorly developed.....***E. americanum ssp. americanum***
      5 Capsule apiculus well developed .....***E. americanum ssp. harperi***

Erythronium albidum Nuttall, White Trout Lily, Blonde Lilian. Mt (GA, VA), Pd (VA): rich, mesic forests, in very nutrient-rich alluvial soils; rare (VA Rare). March-April. S. Ontario west to MN, south to n. VA, nw. GA, KY, sc. TN, MO, and OK. [= C, K, S, W, Y; = *E. albidum* var. *albidum* – F, G]

Erythronium americanum Ker-Gawler *ssp.* ***americanum***, American Trout Lily. Pd (NC, SC, VA), Mt, Cp (NC, VA): moist bottomland or slope forests, especially over mafic rocks; common in VA, much rarer in NC (NC Watch List). February-April; April-May. New Brunswick west to Ontario and MN, south to sc. NC, c. TN, AR, and OK. It is much rarer than *E. umbilicatum* in NC. *E. americanum* is a tetraploid (2n = 48); Parks & Hardin suggest the possibility that it is an allotetraploid involving *E. rostratum* and *E. umbilicatum* as parents. *E. americanum* is larger-flowered, more graceful, and later-blooming than *E. umbilicatum* ssp. *umbilicatum*. [= FNA, GW, K, Y, Z; < *E. americanum* – RAB, F, G, S (also see *E. umbilicatum*); < *E. americanum* – C, W]

Erythronium americanum Ker-Gawler *ssp.* ***harperi*** (W. Wolf) Parks & Hardin, Harper's Trout Lily. Mt (GA): moist forests; rare. Ne. TN and nc. TN south to extreme se. TN, nw. GA, and nc. AL. [= FNA, GW, K, Y, Z; < *E. americanum* – S]

Erythronium umbilicatum Parks & Hardin *ssp.* ***monostolum*** Parks & Hardin, Southern Appalachian Trout Lily. Mt (NC): high elevation coves, slopes, and grassy balds; uncommon. March-May; April-June. Ssp. *monostolum* is endemic to the high mountains of NC and TN. It approaches the VA border and should be sought, especially in the Grayson Highlands area. *E.*

umbilicatum ssp. *monostolum* is a diploid (2n = 24). [= FNA, GW, K, Y, Z; < *E. americanum* – RAB, F, G, S; < *E. umbilicatum* – C, W]

Erythronium umbilicatum Parks & Hardin *ssp.* ***umbilicatum***, Dimpled Trout Lily. Mt, Pd, Cp (GA, NC, SC, VA): moist bottomland or slope forests, or in rather dry upland habitats; common. February-April (May?); April-June. VA and e. WV south through NC, SC, and e. TN to c. GA, e. AL, and panhandle FL. *E. umbilicatum* ssp. *umbilicatum* is a diploid (2n = 24). Mathew (1992) suggests the possibility that an earlier name, *E. nuttallianum* Roemer & Schultes, may apply to this taxon; the two locations mentioned on the type, Pennsylvania and Albany, NY, are outside the known range of the species, however. [= FNA, GW, K, Y, Z; < *E. americanum* – RAB, F, G, S; < *E. umbilicatum* – C, W]

Erythronium rostratum W. Wolf, Beaked Trout Lily. C. TN, MO, and se. KS, south to c. AL, wc. LA, and se. OK. [= FNA, GW, K, Y, Z; < *E. americanum* – S]

Lilium Linnaeus 1753 (Lily)

A genus of about 110 species, of temperate northern hemisphere (especially e. Asia). Many taxonomic problems remain in this genus of showy ornamentals. References: Adams & Dress (1982)=Z; Skinner & Sorrie (2002)=X; Wherry (1946)=Y; Skinner in FNA (2002a); Henry (1946); Tamura in Kubitzki (1998a).

1 Dark bulblets produced in many leaf axils; [escaped exotic] ..... ***L. lancifolium***
1 Dark bulblets never produced; [native (except *L. formosanum*), though some species also cultivated].
  2 Flowers white; leaves narrowly linear; [escaped exotic] ..... ***L. formosanum***
  2 Flowers orange or yellow; leaves lanceolate, oblanceolate, or obovate; [native].
    3 Flowers erect, facing upwards; tepals clawed.
      4 Leaves (at least some of them) whorled or verticillate; [of the Mountains] ..... ***L. philadelphicum*** *var.* ***philadelphicum***
      4 Leaves all alternate; [of the Coastal Plain] ..... ***L. catesbaei***
    3 Flowers nodding or declined, facing downwards or to the side; tepals narrowed to the base, but not clawed.
      5 Leaves smooth on the margins and veins below, or minutely crenulate with scattered to moderately dense translucent papillae (at 10× or more), these rounded and broader than tall (if present).
        6 Leaves oblanceolate to obovate, thick in texture (subcoriaceous); inflorescence an umbel of 1-4 (rarely more) flowers; flowering plants 0.4-1.5 m tall; leaves alternate and whorled, often as many as 1/2 or more of the nodes bearing a single leaf ..... ***L. michauxii***
        6 Leaves lanceolate, thin in texture; inflorescence a raceme of (1-) 3-30 (-70) flowers; flowering plants 1-3 m tall; leaves mostly whorled, only a few of the lowermost and/or uppermost nodes bearing a single leaf ..... ***L. superbum***
      5 Leaves densely papillose-scabrid on the margins and usually also the veins beneath (at 10× or more), the papillae elongate (taller than broad).
        7 Leaves mostly alternate (the majority of nodes with a single leaf), typically with 1-8 whorls mid-stem, the remainder of the leaves alternate; plants with both bulbs and rhizomes; tepals recurved 180-360 degrees from the flower axis; inner tepals (petals) 1.25-1.5× as wide as the outer tepals (sepals); [of sphagnous sandhill seepage bogs of the upper Coastal Plain] ..... ***L. pyrophilum***
        7 Leaves mostly whorled (the majority of nodes with whorls of leaves, typically with 5-15 whorls, sometimes with several alternate leaves at the very bottom and top of the stem; plants with bulbs only; tepals recurved 25-90 degrees from the flower axis; inner tepals (petals) ca. 1× as wide as the outer tepals (sepals); [of various moist to wet habitats of the Mountains, occasionally cultivated and escaped elsewhere].
          8 Anthers 5-15 mm long; filaments strongly outcurved, the anthers borne far apart; tepals strongly recurved, usually > 150 degrees from the axis of the individual flower; [west of the Blue Ridge, in our area in nw. GA and also approaching our area in e. TN]..... ***L. michiganense***
          8 Anthers 4-10 mm long; filaments straight or nearly so, the anthers thus borne close together; tepals slightly to moderately recurved, from 10-120 degrees from the axis of the individual flower; [fairly widespread in the Mountains and Piedmont in our area, westwards and northwards].
            9 Flowers 3-4 cm in diameter; pistil 3-4 cm long; tepals 3-5.5 cm long, deep red, mucronate by extension of the midrib, reflexed < 45 degrees from the flower axis, the terminal third of the tepals generally gently incurved; anthers 4-6 mm long, completely included within the perianth when viewed from the side ..... ***L. grayi***
            9 Flowers 4.5-9 cm in diameter; pistil 4-6 cm long; tepals 6-8 cm long, yellow, orange to brick-red, acuminate, reflexed 60-120 degrees from the flower axis; anthers 5-10 mm long, exserted to fully included within the perianth when viewed from the side.
              10 Perianth yellow (rarely orange to red); mid-cauline leaves 5-10× as long as wide..... ***L. canadense*** *var.* ***canadense***
              10 Perianth orange to red; mid-cauline leaves 2-5× as long as wide ..... ***L. canadense*** *var.* ***editorum***

Lilium canadense Linnaeus *var.* ***canadense***, Yellow Canada Lily. Mt (NC, VA): wet meadows; uncommon (NC Rare). June-July; late July-September. Apparently ranging from New Brunswick to NC, mostly east of or in the Appalachians; the range is obscured by different interpretations of var. *canadense* and var. *editorum*, by spread from cultivation, and by collections of cultivated plants not clearly so indicated. Some of our plants are definitely var. *canadense*. [= F; < *L. canadense* – RAB, C, FNA, G, GW, S; = *L. canadense* ssp. *canadense* – K, W, Z; = *L. canadense* ssp. *typicum* – Y]

Lilium canadense Linnaeus *var.* ***editorum*** Fernald, Red Canada Lily. Mt, Pd (GA, NC, SC, VA): wet meadows, forest openings; uncommon (GA Special Concern, NC Rare, SC Rare). June-July; late July-September. According to Adams & Dress (1982), who emphasize tepal color in distinguishing the infraspecific taxa, ranging from New Brunswick west to s. Ontario, south (mostly in and west of the Appalachians) to n. GA and n. AL. Wherry (1946) and F emphasize leaf shape, and secondarily flower color, restricting var. *editorum* to a range from PA west to s. IN, south to AL. There has been considerable confusion between *L. canadense* var. *editorum* and *L. grayi*, and populations in sw. VA appear to show some intergradation between the two. [= F; < *L. canadense* – RAB, C, FNA, G, GW, S; = *L. canadense* ssp. *editorum* (Fernald) Wherry – K, W, Y, Z]

Lilium catesbaei Walter, Pine Lily, Catesby's Lily, Leopard Lily. Cp (GA, NC, SC, VA): pine savannas, sandhill seeps; uncommon (VA Rare). Mid June-mid September; September-November. Se. NC south to FL and west to LA, on the Coastal Plain. [= GW, S; > *L. catesbaei* var. *catesbaei* – RAB; > *L. catesbaei* var. *longii* Fernald – RAB, C, F, G; > *L. catesbaei* ssp. *catesbaei* – K; > *L. catesbaei* ssp. *longii* (Fernald) Wherry – K, Y; > *L. catesbaei* ssp. *typicum* – Y]

* ***Lilium formosanum*** A. Wallace, Formosa Lily. Cp (NC): escaped from cultivation; rare, introduced from Asia. This species is introduced at various locations in the Southeast, including Florida and Louisiana (Kartesz 1999), and has been documented from Richmond Co. NC (Sorrie, pers. comm.). FNA states that this material may actually represent *L. philippinense* Baker. [= FNA, K]

Lilium grayi S. Watson, Gray's Lily, Roan Lily. Mt (NC, VA): bogs, seepages, grassy balds, moist forests, and wet meadows, at medium to high elevations; rare (US Species of Concern, NC Threatened, VA Rare). June-July; August-September. A Southern Appalachian endemic: sw. VA, nw. NC, and ne. TN. Clearly related to *L. canadense* (especially through the somewhat intermediate *L. canadense* var. *editorum*), *L. grayi* appears to be adapted for pollination by Ruby-throated Hummingbirds (Adams & Dress 1982). See *L. canadense* var. *editorum* for additional comments. The two most important strongholds for this rare lily (each with thousands of individuals) are the Roan Mountain massif (Avery and Mitchell counties, NC and Carter County, TN), where it was first found, and Long Hope Valley (Watauga and Ashe counties, NC). Otherwise, it tends to occur in very small, isolated populations in bogs, wet pastures, and seeps. In addition to the characters in the key, *L. grayi* can be distinguished in sterile condition from the 2 more common species of the Mountains by leaves, which are widest near the midpoint, typically 4-6× as long as wide (vs. distinctly wider towards the apex in *L. michauxii*, and widest near the midpoint but typically 10× or more as long as wide in *L. superbum*). Certainly one of our most beautiful wild plants! [= RAB, C, F, G, K, S, W, Y, Z]

* ***Lilium lancifolium*** Thunberg, Tiger Lily. Pd (NC, VA): disturbed areas, trash heaps; rare, introduced from Asia. The more familiar name, *L. tigrinum*, must be rejected in favor of the older *L. lancifolium* (Ingram 1968). [= C, FNA, K; = *L. tigrinum* Ker-Gawler – F, G]

Lilium michauxii Poiret, Carolina Lily. Mt, Pd, Cp (GA, NC, SC, VA): dry upland forests, ridges, slopes, and ridges; common (uncommon in Coastal Plain). July-August; September-October. S. VA, e. TN, n. AL, c. MS, and e. LA south to s. SC, panhandle FL, s. AL, s. MS, and s. LA. [= C, F, FNA, G, GW, K, W, X, Y, Z; < *L. michauxii* – RAB (also see *L. pyrophilum*); = *L. carolinianum* Michaux – S]

Lilium michiganense Farwell, Michigan Lily. Mt (GA): wet prairies and calcareous flatwoods; rare (GA Special Concern). Ontario and MN south to e. TN, KY, nw. GA, AL, AR, and e. OK. [= C, F, FNA, K; < *L. superbum* – G; = *L. canadense* Linnaeus ssp. *michiganense* (Farwell) Boivin & Cody]

Lilium philadelphicum Linnaeus *var.* ***philadelphicum***, Wood Lily. Mt (GA, NC, VA): grassy balds, moist to wet meadows (especially in thin soils over rock), open woodlands; rare (GA Special Concern, NC Rare, VA Watch List). June-July; August-October. The species ranges from ME west to British Columbia, south to NC, nw. GA (Jones & Coile 1988), KY, IL, IA, NE, and NM. Var. *philadelphicum*, distinguished by the leaves whorled at 3-6 nodes, 10-15 (-25) mm wide, the capsule 2.5-3.5 (-5) cm long, is eastern and mainly Appalachian, ranging from ME and s. Ontario south to NC, GA, and KY. Var. *andinum* (Nuttall) Ker-Gawler, distinguished by the leaves whorled at 1-2 nodes, 3-10 mm wide, the capsule 4-8 cm long, is western, ranging from OH, MN, and British Columbia south to NM. [= C, F, G, K; < *L. philadelphicum* – RAB, FNA, S, W; = *L. philadelphicum* ssp. *philadelphicum* – Y]

Lilium pyrophilum M.W. Skinner & Sorrie, Sandhills Bog Lily. Cp (NC, SC, VA): peaty seepage bogs in the Sandhills and peaty swamp margins in the upper Coastal Plain; rare (US Species of Concern, NC Rare). July. See Skinner & Sorrie (2002) for detailed information on this species. Superficially, this plant is somewhat similar to *L. michauxii*, in its one to several, nodding flowers with recurved tepals, relatively few whorls of leaves, and relatively few leaves per whorl. In addition to the character used in the key, this plant differs from *L. michauxii* in the following ways: flowers not fragrant or only slightly so (vs. flowers strongly fragrant), leaves generally widest near the middle (vs. widest towards the tip), leaves only slightly paler below and lacking a pronounced waxy sheen (vs. leaves strongly bicolored, the lower surface much paler and with a waxy sheen), and habitat in sphagnous, peaty bogs (vs. in xeric to mesic, sandy to loamy soils). [= FNA, X; < *L. michauxii* – RAB (misapplied to these plants); < *L. iridollae* M.G. Henry – K, misapplied]

Lilium superbum Linnaeus, Turk's-cap Lily, Lily-royal. Mt (GA, NC, VA), Pd (GA, NC, VA), Cp (GA, NC, SC, VA): cove forests and moist forests, moist ravines, blackwater stream swamps; common (rare in Piedmont, rare in NC Coastal Plain). July-August; September-October. MA and s. NY south to ne. NC, panhandle FL, and c. MS, southwards primarily in the Appalachians, but extending across the Piedmont to the Coastal Plain of VA and ne. NC, and with a similarly odd extension

south of the southern terminus of the Appalachians into the Coastal Plain of GA, w. FL, AL, and MS. The plants of blackwater swamps of se. VA and ne. NC are very narrow-leaved and yellow-tepaled; this form, atypical in habitat, range, and morphology has been referred to as "*Lilium* species 1" (Weakley 1993). Further study is needed to determine whether it is a distinct taxon (species, or variety of *L. superbum*) or only a form. [= C, F, FNA, GW, K, S, W, X, Y, Z; < *L. superbum* – G (also see *L. michiganense*)]

Lilium iridollae M.G. Henry. Coastal Plain bogs. AL and Panhandle FL. [= FNA, GW; < *L. iridollae* – K (also see *L. pyrophilum*)] {not keyed at this time}

Medeola Linnaeus 1753 (Indian Cucumber-root)

A monotypic genus, an herb of eastern North America. References: Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Identification notes: *Medeola* is sometimes mistaken (when sterile) for *Isotria*; *Medeola* has a wiry stem, floccose-pubescent, *Isotria* a fleshy, glabrous stem.

Medeola virginiana Linnaeus, Indian Cucumber-root. Mt, Pd, Cp (GA, NC, SC, VA): moist forests, usually with acidic soils; common. Mid April-mid June; September-October. Québec and Ontario west to MN, south to GA, panhandle FL and LA. The tuber is white, crisp, tasting cucumber-like, usually about 5 cm long and 5 mm in diameter. Bell (1974) describes patterns of vegetative growth. Flowering plants have a second, smaller whorl of leaves; the flowers are borne on recurved pedicels beneath the top whorl of leaves. In fruit, however, the pedicels are ascending or erect, bringing the fruits above the top whorl. When the berries are ripe, the leaves of the upper whorl become scarlet at the base, presumably acting as an attractant to animals. [= RAB, C, F, FNA, G, GW, K, S, W]

Prosartes D. Don 1839 (Fairybells, Mandarin)

A genus of 6 species, of temperate e. North America, w. North America, and e. Asia. Dahlgren, Clifford, & Yeo (1985) suggest that American species of *Disporum* are generically distinct from Asiatic species and should be segregated in the genus *Prosartes*, a distinction made as long ago as 1839. Asian *Disporum* species lack the distinctly reticulate venation of our plants, have strictly glabrous foliage (vs. pubescent), have spurred tepals (vs. unspurred), blue or black berries (vs. red or straw-colored), tripartite stigma (vs. not), and other differences (Jones 1951). Further study of generic limits by Shinwari et al. (1994) shows that the separation into *Prosartes* of the American species often assigned to *Disporum* is clearly warranted, based on morphological and karyological grounds. *Prosartes* is much more closely related to *Streptopus* than to (Asian) *Disporum*; (Asian) *Disporum* is more closely related to *Uvularia*. References: Johnson (1968)=Z; Shinwari et al. (1994)=Y; Jones (1951); Tamura, Utech, & Kawano (1992); Shinwari et al. (1994)=X; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

1 Fruit glabrous, ellipsoid, weakly triangular in cross-section, the surface smooth and shiny, red when ripe; tepals greenish, unspotted; leaves relatively many, small, and moderately spreading relative to the stem; leaf glabrous on the surface above (except for sparsely pubescent on the midrib and main veins), densely pubescent on the midrib below, sparsely pubescent on the surface below; leaf pubescence weak, often twisted or curled apically (as seen at 10-20× magnification), the leaf therefore very soft to the touch ..... ***P. lanuginosa***

1 Fruit pubescent, strongly 3-lobed (or 1- or 2-lobed by abortion), the surface textured and dull, whitish-tan when ripe; tepals whitish, spotted with purple; leaves relatively few, large, and widely spreading relative to the stem; leaf sparsely pubescent on the surface and veins above and below; leaf pubescence stiff, generally straight and perpendicular to the surface (as seen at 10-20× magnification), the leaf therefore slightly rough to the touch ..... ***P. maculata***

Prosartes lanuginosa (Michaux) D. Don, Yellow Mandarin, Yellow Fairybells. Mt (GA, NC, SC, VA), Pd (VA): deciduous forests, especially coves; common. April-May; August-September. Primarily an Appalachian species: NY and s. Ontario south to n. GA (Jones & Coile 1988) and AL. [= FNA, K, X, Y; = *Disporum lanuginosum* (Michaux) Nicholson – RAB, C, F, G, S, W, Z]

Prosartes maculata (Buckley) A. Gray, Spotted Mandarin, Nodding Mandarin. Mt (GA, NC, VA): nutrient-rich deciduous forests, especially cove forests; rare (NC Watch List, VA Rare). April-May; July-August. AL, n. GA, KY, MI, w. NC, OH, TN, w. VA, and WV; its distribution is rather fragmented, and the species is considered rare or uncommon in every state in its range. The fruits are more reminiscent of *Uvularia* than of *Prosartes lanuginosa*. [= FNA, K, X, Y; = *Disporum maculatum* (Buckley) Britton – RAB, C, F, G, S, W, Z]

Streptopus Michaux 1803 (Twisted-stalk)

A genus of about 7 species, temperate to subarctic in Europe, e. Asia, and North America. References: Utech in FNA (2002a); Fassett (1935)=Z; Tamura in Kubitzki (1998a).

1 Leaf margins and nodes not coarsely ciliate; leaves strongly cordate-clasping; fruit ellipsoid ..... ***S. amplexifolius*** *var.* ***amplexifolius***
1 Leaf margins and nodes coarsely ciliate; leaves sessile to somewhat cordate-clasping (especially the lower leaves of robust individuals); fruit globose ..... ***S. lanceolatus*** *var.* ***lanceolatus***

Streptopus amplexifolius (Linnaeus) Augustin de Candolle *var.* ***amplexifolius***, White Mandarin, Pagoda-bells. Mt (NC, VA): moist forests and seepages at high elevations; rare (NC Rare, VA Rare). Late April-early June; late July-September. The species is circumboreal, the range fragmented. Fassett recognized seven varieties, the plants in our area being var. *americanus*. The species ranges from Greenland and Labrador to MN, south (in the mountains and disjunctly) to NC, and in the west from AK (and Kamchatka) south to NM and AZ, in Japan, and in the Alps in Europe. [= K; < *S. amplexifolius* – RAB, FNA, W; > *S. amplexifolius* var. *americanus* J.A. & J.H. Schultes – C, F, G, Z; < *Tortipes amplexifolius* (Linnaeus) Small – S]

Streptopus lanceolatus (Aiton) Reveal var. ***lanceolatus***, Eastern Rose Mandarin, Eastern Twisted-stalk. Mt (GA, NC, VA): moist forests at high elevations; uncommon (GA Rare). Late April-early June; late July-September. Fassett (1935) recognized four varieties in *S. roseus*. Reveal (1993c) determined that the correct name for the species widely known as *S. roseus* is *S. lanceolatus* (Aiton) Reveal, and he transferred Fassett's varieties. Fassett (and Reveal) considered *S. lanceolatus* var. *lanceolatus* [*S. roseus* var. *perspectus* Fassett] to range from s. Labrador west to MI, south to NJ and PA, and in the mountains to w. NC, e. TN, and ne. GA (Jones & Coile 1988). *S. lanceolatus* var. *longipes* (Fernald) Reveal [*S. roseus* var. *longipes* (Fernald) Fassett] is midwestern, from s. Ontario and nw. PA west to MI, WI, MN, and s. Manitoba. Var. *curvipes* (Vail) Fassett is western, ranging from AK to se. British Columbia and nw. OR. Var. *roseus* was considered to be a Southern Appalachian endemic, differing from var. *perspectus* only in having the pedicel-peduncles entirely glabrous (vs. ciliate with few to many multicellular hairs). The number of hairs on the peduncles varies constantly, and recognition of two varieties in e. North America does not appear warranted; all of our material is then *S. lanceolatus* var. *lanceolatus* [*S. roseus* var. *roseus* (in a broader sense)], which does differ significantly from the more western varieties. [< *S. roseus* – RAB, S, W; > *S. roseus* var. *roseus* – C, F, G, Z; > *S. roseus* var. *perspectus* Fassett – C, F, G, Z; < *S. lanceolatus* – FNA; > *S. lanceolatus* var. *lanceolatus* – K; > *S. lanceolatus* var. *roseus* (Michaux) Reveal – K]

Tricyrtis Wallich 1826 (Toadlily)

A genus of about 18 species, of e. Asia. References: Tamura in Kubitzki (1998a).

* *Tricyrtis hirta* (Thunberg) Hooker, Toadlily, native of e. Asia, is cultivated as an ornamental and may escape or persist, as in se. PA (Rhoads & Klein 1993). [= K]

Tulipa Linnaeus 1753 (Tulip)

A genus of about 150 species, of temperate Eurasia (especially w. and c. Asia). References: Tamura in Kubitzki (1998a); Straley & Utech in FNA (2002a).

* *Tulipa sylvestris* Linnaeus, Tulip, Dutch-lily, is very commonly cultivated and is "occasionally naturalized in moist meadows, fields and roadsides" in se. PA (Rhoads & Klein 1993) and MD (Kartesz 1999). [= FNA, K]

MARANTACEAE Petersen in Engler & Prantl 1888 (Arrowroot Family)

A family of about 31 genera and 550 species, herbs and vines, nearly pantropical (absent from Australia), and rarely extending ino subtropical and warm temperate regions. References: Kennedy in FNA (2000); Andersson in Kubitzki (1998b).

Thalia Linnaeus 1753 (Thalia)

A genus of 6-7 species, in subtropical and tropical America. References: Kennedy in FNA (2000); Andersson in Kubitzki (1998b).

1 Flowers crowded on the rachis, the zigzag internodes 2-3 mm long; leaves pilose at the base on the upper surface; bracts of the inflorecence white-pruinose ..... ***Th. dealbata***
1 Flowers separated on the rachis, thye zigzag internodes 5-10 mm long; leaves glabrous at the base on the upper surface; bracts of the inflorescence green or purple, not pruinose ..... ***[Th. geniculata]***

Thalia dealbata Fraser ex Roscoe, Powdery Thalia, Powdery Alligator-flag. Cp (GA, SC): swamp forests, wet ditches, brackish marshes; rare (GA Rare). May-September; June-October. Ne. SC south to FL, west to TX and OK. [= RAB, FNA, GW, K, S]

Thalia geniculata Linnaeus, Lilies, Bent Thalia, Bent Alligator-flag. Ponds, sloughs, marshes. AL, FL, LA, south through the New World tropics. [= FNA, GW, K, S]

MAYACACEAE Kunth 1840 (Bogmoss Family)

A family of a single genus and 4-10 species, of tropical to warm temperate America and Africa. References: Faden in FNA (2000); Thieret (1975); Stevenson in Kubitzki (1998b).

Mayaca Aublet 1775 (Bogmoss)

A genus of 4-10 species, of tropical to warm temperate America and Africa. References: Thieret (1975)=Z; Faden in FNA (2000); Stevenson in Kubitzki (1998b).

Mayaca fluviatilis Aublet, Bogmoss. Cp (GA, NC, SC): marshes, streams, swamp forests, shores of natural lakes, seepage areas, in saturated soil or variously submersed; common. May-July. Se. NC south to FL, west to se. TX; West Indies; Central America to South America. The two species previously recognized appear to be only different growth forms, induced by different hydrologic conditions. [= FNA, GW, K, Z; > *M. aubletii* Michaux – RAB, S; > *Mayaca fluviatilis* – RAB, S]

MELANTHIACEAE Batsch 1802 (Bunchflower Family)

A family of about 16 genera and 170 species, mostly temperate and northern hemisphere, but extending into South America. Further modifications of the circumscription of the Melanthiaceae (and re-assignments of genera) may be needed; see Zomlefer et al. (2001) and Tamura et al. (2004). References: Dahlgren, Clifford, & Yeo (1985); Zomlefer (1997a, 1999)=Z; Zomlefer (1996, 2003); Tamura in Kubitzki (1998a); Zomlefer et al. (2001).

1 Leaves 3, whorled at the summit of the stem ..... ***[Trillium in TRILLIACEAE]***
1 Leaves many, not whorled at the summit of the stem.
  2 Leaves 1-2 mm wide, linear, stiff, sclerified ..... ***Xerophyllum***
  2 Leaves 3-150 mm wide, linear, obovate, or oblanceolate, not notably stiff.
    3 Flowers pink ..... ***Helonias***
    3 Flowers white, cream, yellowish, or greenish, or brownish.
      4 Inflorescence a panicle.
        5 Inflorescence axes scurfy-pubescent; seeds winged; leaves **either** linear **or** broader, < 14 cm wide ..... ***Veratrum***
        5 Inflorescence axes glabrous; seeds not winged (though sometimes angled); leaves linear, < 2 cm wide.
          6 Leaves strongly keeled, (5-) 10-20 mm wide; plant colonial, from thick, hard, horizontal, short-creeping rhizomes covered with fibrous old leaf bases; inner tepals (petals) 7-17 mm long, distinctly clawed, acute-acuminate at the tip, bearing 2 glands well above the base ..... ***Zigadenus***
          6 Leaves slightly or not at all keeled, 2-12 mm wide; plant solitary, from a bulbous or semibulbous base; inner tepals (petals) 3-6 or 7-12 mm long, clawed or not, bearing either a single (sometimes obscure to essentially invisible) gland near the base or a bilobed gland well above the base.
            7 Inner tepals (petals) 7-12 mm long, clawed, with a single bilobed gland borne well above the base; [of calcareous habitats in the Mountains] ..... ***Anticlea***
            7 Inner tepals 3-10 mm long, not clawed, with a single, unlobed gland borne near the base (this often difficult or impossible to see, consisting only of a greenish line at the very base of the tepal); [of acid habitats of the Mountains, Piedmont, and Coastal Plain] ..... ***Stenanthium***
      4 Inflorescence a spike or raceme.
        8 Leaves obovate, distinctly wider towards the rounded tip, 15-60 cm wide ..... ***Chamaelirium***
        8 Leaves linear, with parallel margins, 2-23 mm wide.
          9 Inflorescence a spike ..... ***Schoenocaulon***
          9 Inflorescence a raceme.
            10 Basal leaves many, 4-23 mm wide; capsule 5-7 mm long, 5-7 mm wide; bulb broadly ovoid ..... ***Amianthium***
            10 Basal leaves 1-3, 2-7 mm wide; capsule 7-9 mm long, 3-4 mm wide; bulb cylindrical ..... ***Stenanthium densum***

Amianthium A. Gray 1837 (Fly-poison)

A monotypic genus, an herb of temperate e. North America. Zomlefer et al. (2001) confirm that *Amianthium* should be treated as a monotypic genus. *Amianthium* has a chromosome number of 2n=32 (Zomlefer & Smith 2002). Like *Zigadenus*, containing

very toxic alkaloids. References: Zomlefer (1997)=Z; Zomlefer & Judd (2002)=Y; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Amianthium muscitoxicum (Walter) A. Gray, Fly-poison. Mt, Pd, Cp (GA, NC, SC, VA): mesic forests, pine savannas, meadows; common. May-July; July-September. S. NY, PA, MO, and OK, south to panhandle FL, MS, and AR. [= FNA, K, Y; = *A. muscaetoxicum* – RAB, C, F, FNA, G, GW, W, orthographic variant; = *Chrosperma muscaetoxicum* (Walter) Kuntze – S; = *Zigadenus muscitoxicus* (Walter) Regel – Z]

Anticlea Kunth 1843 (Death-camas)

A genus of about 15 species, of North America south to Guatemala, and e. Asia. *Anticlea* has a chromosome number of 2n=32 (Zomlefer & Smith 2002). References: Zomlefer & Judd (2002)=Y; Zomlefer et al. (2001); Schwartz in FNA (2002a).

Anticlea glauca Kunth, White Death-camas. Mt (NC, VA): limestone and dolostone woodlands, glades, cliffs, and outcrops; rare (NC Rare, VA Watch List). July-August; September-October. *A. glauca* is the more eastern component of a complex variously treated as two species or a single variable species, with or without recognized varieties or subspecies. *A. elegans* (in the broadest sense) ranges from Québec and NY west to AK, south to n. OH, n. IN, n. IL, MO, IA, NM, AZ, and n. Mexico; disjunct in the mountains of VA and NC. Two taxa have often been recognized, at the specific, subspecific, or varietal level. The more eastern taxon (epithet "*glauca*" – see synonymy below) ranges from New Brunswick west to ND, south to NC, TN, and MO, and is distinguished by glaucous foliage, paniculate inflorescence, and tepals often purplish or brownish basally. The more western taxon (epithet "*elegans*"), occurring east to the MN and MO, has the foliage greener, the inflorescence often only racemose, and the tepals yellow. [< *Anticlea elegans* (Pursh) Rydberg – Y; = *Zigadenus elegans* Pursh ssp. *glaucus* (Nuttall) Hultén – K; = *Z. glaucus* Nuttall – RAB, F, W, Z; = *Z. elegans* var. *glaucus* (Nuttall) Preece – C; < *Z. elegans* – FNA; = *Zygadenus glaucus* – G, orthographic variant; < *Anticlea chlorantha* (Richardson) Rydberg – S, misapplied]

Chamaelirium Willdenow 1808 (Devil's-bit)

A monotypic genus, an herb of temperate e. North America. References: Zomlefer (1997)=Z; Tamura in Kubitzki (1998a); Utech in FNA (2002a).

Chamaelirium luteum (Linnaeus) A. Gray, Devil's-bit. Mt, Pd, Cp (GA, NC, SC, VA): moist slopes, bottomlands, wet savannas; common (rare in Coastal Plain). March-May; September-November. MA west to Ontario, OH, s. IN, and AR, south to FL and LA. The ecological amplitude and morphologic variability of this species is surprising; it needs additional, more careful, study. *Ch. obovale* Small (or other previously unnamed entities) may warrant recognition at some level. [= RAB, C, F, FNA, G, GW, K, W, Z; > *Ch. luteum* – S; > *Ch. obovale* Small – S]

Helonias Linnaeus 1753 (Swamp Pink)

A monotypic genus, an herb of temperate e. North America. Although *Helonias* has traditionally been considered a monotypic genus, Takahashi & Kawano (1989) have suggested that the closely related *Heloniopsis* and *Ypsilandra* (both of e. Asia) may be congeneric. References: Zomlefer (1997)=Z; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Helonias bullata Linnaeus, Swamp Pink. Mt (GA, NC, SC, VA), Cp (VA): bogs, usually under dense shrubs in peaty soils, in the VA Coastal Plain in acidic sandy seepage swamps; rare (US Threatened, GA Threatened, NC Threatened, SC Rare, VA Endangered). April-May; June-July. S. NY and NJ to e. VA on the Coastal Plain, and from w. VA through w. NC to nw. SC and ne. GA (Jones & Coile 1988) in the Blue Ridge Mountains. The flowering scape elongates markedly in fruit, reaching 1 m in height. [= RAB, C, F, FNA, GW, G, K, S, W, Z]

Melanthium Linnaeus 1753 (Bunchflower)
(see *Veratrum*)

Schoenocaulon A. Gray 1837 (Feathershank)

A genus of about 24 species of s. North America, Central America, and n. South America. *Schoenocaulon* has a chromosome number of 2n=16 (Zomlefer & Smith 2002). References: Zomlefer et al. (2006)=Z; Tamura in Kubitzki (1998a); Frame in FNA (2002a).

Schoenocaulon dubium (Michaux) Small, Florida Feathershank. Cp (GA): dry pine savannas, sandhills; rare (GA Special Concern). S. GA and n. peninsular FL south to s. peninsular FL. [= FNA, K, S, Z]

Stenanthium (A. Gray) Kunth 1843 (Featherbells, Featherfleece)

A genus of about 4 species, herbs of e. North America. *Stenanthium*, as redefined by Zomlefer & Judd (2002), has a chromosome number of 2n=20, excludes a w. North American and an e. Asian species previously included, and includes some taxa formerly placed in *Zigadenus* (Zomlefer & Smith 2002). References: Zomlefer & Judd (2002)=Y; Zomlefer (1997)=Z; Wofford (2006); Utech in FNA (2002a); Schwartz in FNA (2002a); Tamura in Kubitzki (1998a). Key adapted in part from F, the taxa and key needing further evaluation and (probably) alteration.

1 Tepals obovate, the tip rounded-obtuse.
  2 Inflorescence a raceme; flowers all bisexual; plants 3-10 dm tall; flowering April-early June; [of the Coastal Plain (in our area)]..... ***S. densum***
  2 Inflorescence a panicle of racemes; lower flowers of the inflorescence branches bisexual and fertile, the upper staminate or superficially perfect but the pistils nonfunctional (not producing fruits); plants 5-20 dm tall; flowering July-August; [of the Mountains of NC and VA and Coastal Plain of GA westward to LA]..... ***S. leimanthoides***
1 Tepals lanceolate, the tip acute-acuminate.
  3 Inflorescence a diffuse panicle up to 3 dm wide, the terminal racemose portion reduced or absent; flowers on mid-portion of lateral branches with pedicels 1.6-4 mm long, spaced 8-15 mm apart; uppermost non-bracteal stem leaf 4-14 cm above ground level; flowering mid September-mid October; [of sandstone rockhouses of the Cumberland Plateau].. .....***[S. diffusum]***
  3 Inflorescence branched but not diffuse, typically up to 1.5 dm wide, the terminal racemose portion present and up to 3 dm long; flowers on mid-portion of lateral branches with pedicels 0.3-1.1 mm long, generally spaced 3-7 mm apart; uppermost non-bracteal stem leaf 22-66 cm above ground level; flowering May-late August; [of various wet to dry habitats, widespread in our area].
    4 Larger leaves to 30 mm wide, thin and membranous-translucent, not strongly ribbed; panicle dense, the branches stiffly ascending, the flowers crowded; perianth 5-10 mm long, greenish; capsules oblong or subcylindric, 9-10 mm long, erect; seeds 5-8 mm long; leaves distributed all along the stem, nearly as dense just below the panicle as at the base; plant to 2.2 m tall and the stem to 2 cm in diameter near its base; [of bogs and wet meadows]..... .....***S. gramineum*** *var.* ***robustum***
    4 Larger leaves to 15 mm wide, firm to coriaceous, strongly ribbed; panicle diffuse, the branches ascending, spreading, or drooping, the flowers scattered; perianth 3-8 (-10) mm long, whitish; capsules ovoid to urceolate, 6-9 mm long, deflexed; seeds 5-5.5 mm long; leaves mainly near the base, rapidly reduced upwards; plant to 1.9 m tall and the stem to 1 cm in diameter near its base; [of dry to moist upland forests].
      5 Perianth 5-10 mm long; plant to 1.9 m tall, the stem 4-10 mm in diameter near the base..... ..... ***S. gramineum*** *var.* ***gramineum***
      5 Perianth 3-4.5 (-5.0) mm long; plant to 1.0 m tall, the stem 1.5-5 mm in diameter near the base..... .....***S. gramineum*** *var.* ***micranthum***

Stenanthium densum (Desrousseaux) Zomlefer & Judd, Crow-poison. Cp (GA, NC, SC, VA): pine savannas, pine flatwoods; common, rare in VA (VA Rare). April-early June; late May-July. Se. VA south to FL and west to se. TX, on the Coastal Plain. See *Z. leimanthoides* for discussion of the taxonomy of the 2 species. *Z. densus* is superficially very similar to *Amianthium muscitoxicum*; *Z. densus* has a conical capsule, 2× or more as long as broad (vs. about 1× as long as broad), a bladeless purple sheath, 3-8 cm long, enclosing the leaves at the base (vs. sheath absent, all leaves with blades), and basal leaves usually 1-3 in number, 3-6 (-10) mm wide (vs. mostly 4 or more in number, mostly 7-10 mm wide). [= Y; = *Zigadenus densus* (Desrousseaux) Fernald – RAB, C, GW, K, Z; < *Zigadenus densus* (Desrousseaux) Fernald – FNA (also including *S. leimanthoides*); = *Zygadenus densus* – G (an orthographic variant); *Tracyanthus angustifolius* (Michaux) Small – S]

Stenanthium gramineum (Ker-Gawler) Morong *var.* ***gramineum***, Common Featherbells. Cp, Pd (GA, NC, VA), Mt (NC): moist forests, grassy balds, to 1700m in elevation; uncommon. July-early September; August-October. PA west to IL and MO, south to ne. NC, panhandle FL, and TX. [= F, K; < *S. gramineum* – RAB, C, FNA, G, S, W, Z]

Stenanthium gramineum (Ker-Gawler) Morong *var.* ***micranthum*** Fernald, Small Featherbells. Mt (GA, NC, SC, VA), Pd (GA, NC, VA): dry upland forests and woodlands; uncommon. July-early September; August-October. W. VA and TN south to panhandle FL and n. AL. [= F, K; < *S. gramineum* – RAB, C, FNA, G, S, W, Z]

Stenanthium gramineum (Ker-Gawler) Morong *var.* ***robustum*** (S. Watson) Fernald, Giant Featherbells, Bog Featherbells. Mt (NC, VA?): wet meadows, bogs; rare (NC Watch List). July-early September; August-October. PA south to w. NC. [= F, K; = *S. robustum* S. Watson – S; < *S. gramineum* – RAB, C, FNA, G, W, Z]

Stenanthium leimanthoides (A. Gray) Zomlefer & Judd, Pinebarrens Death-camas. Mt (NC, VA), Cp (GA): high elevation rock outcrops, shrub balds, seepage areas at high elevations, in the Coastal Plain in sandhill bogs and wet pine savannas; rare (GA Special Concern, NC Rare, VA Rare). July-August; September-October. As currently interpreted, with a peculiar and disjunct range, occurring on the Coastal Plain of se. NY (Long Island), NJ, and DE, in the mountains from WV and VA south through w. NC to (allegedly) AL, and on the Gulf Coastal Plain, from s. GA to LA. Unpublished studies involving (primarily) Gulf Coast populations of *S. leimanthoides* have questioned its distinctness from *S. densum*. Our plants seem very distinct in many ways. Perhaps inflorescence characters do not reliably distinguish the 2 taxa and so-called *S. leimanthoides* of the Gulf Coast is a paniculate form of *Z. densus* (the real distinguishing characters not at present clear). *S. leimanthoides* in the east

follows much the same phytogeographic patterns as *Leiophyllum buxifolium* and *Xerophyllum asphodeloides*; the 3 species occurring together in the Pine Barrens of the s. NJ Coastal Plain and at 1900 m elevation on the summit of Grandfather Mountain, Avery County, NC! [= Y; = *Zigadenus leimanthoides* A. Gray – RAB, C, F, GW, K, W, Z; < *Zigadenus densus* (Desrousseaux) Fernald – FNA; = *Zygadenus leimanthoides* – G (an orthographic variant); = *Oceanoros leimanthoides* (A. Gray) Small – S]

Stenanthium diffusum Wofford, Rockhouse Featherbells. Sandstone rockhouses of the Cumberland Plateau of ne. TN (known from Fentress, Morgan, Pickett, Scott counties, TN; to be sought in adjacent KY).

Veratrum Linnaeus 1753 (White-hellebore)

A genus of about 55 species, herbs of temperate Northern Hemisphere. *Veratrum* is here interpreted broadly, including *Melanthium*, following the molecular phylogeny work of Zomlefer et al. (2003). References: Zomlefer (1997)=Z; McNeal & Shaw in FNA (2002a); Bodkin & Utech in FNA (2002a); Tamura in Kubitzki (1998a); Zomlefer et al. (2003).

1 Leaves all linear, 1-2 (-3) cm wide; tepals greenish white to creamy white (sometimes fading brownish); [section *Fuscoveratrum*] ..... ***V. virginicum***
1 Leaves (at least the basal) oblanceolate to obovate or elliptic, 3-15 cm wide (the upper leaves sometimes linear); tepals yellowish green, green, or maroon.
  2 Leaves strongly plicate, 6-15 cm wide; tepals pubescent, 8-13 mm long, 3-5 mm wide, with a conspicuous pair of glands near the base of the tepal blade (these sometimes more or less fused); filament free from the tepals; [section *Veratrum*] ..... ***V. viride***
  2 Leaves not at all to slightly plicate, 3-14 cm wide; tepals glabrous, 4-9 mm long, 1-3 mm wide (3-5 mm wide in *V. latifolium*), with either conspicuous (*V. latifolium*) or diffuse (*V. parviflorum* and *V. woodii*) glands; filament fused to the basal claw of the tepal; [section *Fuscoveratrum*].
    3 Tepals 3-5 mm wide, the blade of the tepal abruptly narrowed to a claw, the blade nearly as wide as long, with undulate margins, and 2 conspicuous succulent glands; leaves 1-7 cm wide ..... ***V. latifolium***
    3 Tepals 1-3 mm wide, the blade gradually narrowed to the base, the blade much longer than wide, with entire margins, and with diffuse glandular areas; leaves 3-12.5 cm wide.
      4 Tepals pale to olive green, 4-7 mm long; ovaries glabrous; leaves 4.5-14 cm wide; [common, of the Mountains in our area] ..... ***V. parviflorum***
      4 Tepals dark maroon, 6-9 mm long; ovaries densely pubescent; leaves 3-10 cm wide; [rare disjunct in our area] ..... ***V. woodii***

Veratrum latifolium (Desrousseaux) Zomlefer, Crisped Bunchflower. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): moist forests; uncommon (rare in Coastal Plain and Piedmont) (GA Special Concern). July-August; September-October. An Appalachian endemic: CT south to NC and SC. [= Z; = *Melanthium hybridum* Walter – RAB, C, F, G, W, misapplied; = *Melanthium latifolium* Desrousseaux – FNA, K, S]

Veratrum parviflorum Michaux, Mountain Bunchflower. Mt (GA, NC, SC, VA): moist to rather dry forests, up to at least 1700m; common. July-early September; August-October. A Southern Appalachian endemic: WV and KY south to VA, NC, n. GA, and TN. [= RAB, C, G, W, S, Z; = *Melanthium parviflorum* (Michaux) S. Watson – F, FNA, K]

Veratrum virginicum (Linnaeus) Aiton, Bog Bunchflower, Virginia Bunchflower. Cp (GA, NC, SC, VA), Mt, Pd (NC, SC, VA): savannas, bogs, seepage bogs, wet forests; uncommon (SC Rare). June-August; August-October. Widespread in e. North America. This species is superficially quite similar to *Zigadenus glaberrimus*, which, in addition to characters given in the family key, has the stem glabrous (vs. pubescent in *M. virginicum*). [= Z; *Melanthium virginicum* Linnaeus – RAB, C, F, FNA, G, GW, K, W; > *Melanthium dispersum* Small – S; > *Melant\hium virginicum* – S]

Veratrum viride Aiton, White-hellebore, Indian Poke, Green Hellebore, Cornhusk Lily. Mt (GA, NC, VA), Pd (VA): seeps, streambanks, wet boulderfields; common (GA Special Concern). June-August; July-September. Québec and Ontario south in the mountains to NC, TN, and ne. GA. The closely related *V. eschscholtzii* A. Gray, sometimes treated as *V. viride* ssp. *eschscholtzii* (A. Gray) A. & D. Löve or *V. viride* var. *eschscholtzii* (A. Gray) Breitung, is western, ranging from AK to OR. This plant is strongly poisonous; an insecticide was formerly manufactured from the roots. [= RAB, C, F, G, GW, S, W, Z; < *V. viride* – K; = *V. viride* var. *viride* – FNA; *V. viride* ssp. *viride*]

Veratrum woodii J.W. Robbins ex Wood, Ozark Bunchflower, Wood's False-hellebore. Mt (GA, NC), Cp (GA): circumneutral soil of woodlands over mafic rocks (such as amphibolite) or other calcareous substrates; rare (GA Rare, NC Rare). July; September. Primarily Ozarkian, but extending in scattered populations eastwards as far as FL Panhandle (Gadsden and Liberty counties), sw. GA, nw. GA, sc. TN, and sw. NC (Polk County). [= C, F, G, Z; = *Melanthium woodii* (J.W. Robbins ex Wood) Bodkin – FNA, K; > *V. intermedium* Chapman – S]

Xerophyllum Michaux 1803 (Turkeybeard, Beargrass)

A genus of 2 species, rather woody herbs of temperate North America. The other species in the genus is the western beargrass, *X. tenax* (Pursh) Nuttall, widely distributed in the western Cordillera. References: Zomlefer (1997)=Z; Utech in FNA (2002a); Tamura in Kubitzki (1998a).

Xerophyllum asphodeloides (Linnaeus) Nuttall, Turkeybeard, Beargrass, Mountain-asphodel. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): dry ridges and slopes in the mountains, primarily in dry, strongly acidic sites which burn periodically, such as pine/heath woodlands and forests, heath balds, and xeric oak forests, most of the populations in the Blue Ridge Escarpment, often associated with *Pinus rigida* or *P. pungens*, disjunct to similar sites on quartzite monadnocks of the upper Piedmont; uncommon (GA Rare, NC Watch List, SC Rare). May-June; July-August. In two disjunct areas; the Coastal Plain of s. NJ and DE, and the Southern Appalachians from w. VA south to e. TN, w. NC, nw. SC, and ne. GA. Sterile plants resemble tussocks of a bunchgrass, but the leaf bases are white and flattened and are obviously not those of a grass. The leaves remain green throughout the winter. [= RAB, C, F, FNA, G, K, W, Z]

Zigadenus Michaux 1803 (Death-camas)
(also see *Anticlea, Stenanthium*)

As redefined, a monotypic genus of se. North America. A molecular systematics study by Zomlefer et al. (2001) gives strong support to a treatment recognizing *Zigadenus* as monotypic (*Zigadenus glaberrimus*), *Anticlea* (including for our area the former *Zigadenus elegans* ssp. *glaucus*), *Stenanthium* (including for our area *Stenanthium* spp. and the former *Zigadenus densus* and *Z. leimanthoides*). *Zigadenus* (as redefined) has a tentatively reported chromosome number of 2n=52 (Zomlefer & Smith 2002). References: Zomlefer (1997)=Z; Tamura in Kubitzki (1998a); Zomlefer et al. (2001); Schwartz in FNA (2002a).

1 Leaves strongly keeled, (5-) 10-20 mm wide; plant colonial, from thick, hard, horizontal, short-creeping rhizomes covered with fibrous old leaf bases; inner tepals (petals) 7-17 mm long, distinctly clawed, acute-acuminate, bearing 2 glands well above the base ..... ***Zigadenus glaberrimus***
1 Leaves slightly or not at all keeled, 2-12 mm wide; plant solitary, from a bulbous or semibulbous base; inner tepals (petals) 3-6 or 7-12 mm long, clawed or not, bearing either a single (sometimes obscure to essentially invisible) gland near the base or a bilobed gland well above the base.
  2 Inner tepals (petals) 7-12 mm long, clawed, with a single bilobed gland borne well above the base; [of calcareous habitats in the Mountains] ..... *[see **Anticlea elegans**]*
  2 Inner tepals 3-6 mm long, not clawed, with a single, unlobed gland borne near the base (this often difficult or impossible to see, consisting only of a greenish line at the very base of the tepal); [of acid habitats of the Mountains and Coastal Plain].
    3 Inflorescence a raceme; flowers all bisexual; plants 3-10 dm tall; flowering April-early June; [(in our area) of the Coastal Plain] ..... ***[**see **Stenanthium densum]***
    3 Inflorescence a panicle of racemes; lower flowers of the inflorescence branches bisexual and fertile, the upper staminate or superficially perfect but the pistils nonfunctional (not producing fruits); plants 5-20 dm tall; flowering July-August; [(in our area) of the Mountains] ..... ***[**see **Stenanthium leimanthoides]***

Zigadenus glaberrimus Michaux, Large Death-camas, Snakeroot. Cp (GA, NC, SC, VA): sandhill seepage bogs, pine savannas, pocosin edges; common, rare in VA (VA Rare). Late June-early September; August-November. Se. VA south to panhandle FL, west to se. TX, on the Coastal Plain. This species is superficially somewhat similar to *Melanthium virginicum*; *Z. glaberrimus* has the stem and inflorescence axis glabrous (vs. scurfy-pubescent in *M. virginicum*). [= RAB, C, F, FNA, GW, K, Z; = *Zygadenus glaberrimus* – G, S (an orthographic variant)]

NAJADACEAE A.L. de Jussieu 1789 (Naiad Family)

A family of a single genus and about 40 species, nearly cosmopolitan. The Najadaceae should perhaps be merged into the Hydrocharitaceae (Haynes, Holm-Nielsen, & Les 1998b). References: Haynes in FNA (2000); Haynes (1979)=Z; Haynes & Hellquist (1996); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Najas Linnaeus 1753 (Naiad, Bushy-pondweed, Water-nymph)

A genus of about 40 species, nearly cosmopolitan. Probably better included in the Hydrocharitaceae (Angiosperm Phylogeny Group (2003). References: Haynes in FNA (2000); Haynes (1979)=Z; Haynes & Hellquist (1996); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Identification notes: counts of leaf-teeth do not include the broadened, sheathing base of the leaf. Seeds are necessary for the identification of most species.

1 Plants dioecious; lower side of the midvein of the leaves prickly; [subgenus *Najas*] ..... ***[N. marina]***
1 Plants monoecious; lower side of the midvein of the leaves smooth; [subgenus *Caulinia*].
  2 Leaf-teeth multicellular, evident at 10× magnification, 7-15 per side; leaves becoming recurved late in the season; seed-coat pitted, the areoles distinctly wider than long, in ca. 12-18 ladder-like rows ..... ***N. minor***

2 Leaf-teeth unicellular, not evident at 10× magnification, > 20 per side (except 13-17 per side in *N. gracillima*); leaves spreading to ascending; seed-coat smooth or pitted, if present the areoles longer than wide or about as long as wide.
3 Seeds smooth, glossy, obovate, broadest above the middle; anthers 1-locular.....***N. flexilis***
3 Seeds pitted, dull, cylindric, fusiform, or elliptic, broadest at the middle; anthers 1- or 4-locular.
4 Style offset from the apex of the seed; anthers unilocular.....***N. gracillima***
4 Style at the apex of the seed; anthers 4-locular ..... ***N. guadalupensis*** *var.* ***guadalupensis***

Najas flexilis (Willdenow) Rostkovius & Schmidt, Northern Naiad. Cp, Pd, Mt (VA): lakes and rivers; uncommon. July-August. Newfoundland west to Ontario, south to VA, MD, MO, and NE; also in the west from Alberta and Saskatchewan south to OR and UT. [= C, F, FNA, G, K, S, W, Z; = *Naias flexilis* – S, orthographic variant]

Najas gracillima (A. Braun ex Engelmann) Magnus, Slender Naiad, Bushy Naiad. Mt, Cp (NC, SC, VA), Pd (NC, VA): ponds and lakes; uncommon. July-October. Nova Scotia west to MN, south to NC, AL, and MO; disjunct in CA. Haynes (1979) reports that this species cannot tolerate pollution and is apparently declining in abundance. [= RAB, C, F, FNA, G, K, W, Z]

Najas guadalupensis (Sprengel) Magnus *var.* ***guadalupensis***, Common Naiad, Southern Naiad. Cp, Pd, Mt (GA, NC, SC, VA): lakes and rivers; common. July-October. Var. *guadalupensis* ranges from ME west to Alberta and WA, south to n. South America. Haynes (1979) interprets the species as including 3 other varieties – var. *floridana* Haynes & Wentz (in FL, north to AL and GA and to be sought in SC), var. *muenscheri* (Clausen) Haynes (endemic to the Hudson River), and var. *olivacea* (Rosendahl & Butters) Haynes (nearly limited to states bordering the Great Lakes). They differ in characteristics of the leaf and seed (see Haynes 1979). Haynes & Hellquist (1996) treat all infraspecific taxa as subspecies rather than varieties. [= C, Z; < *Najas guadalupensis* – RAB, F, G, GW, W, infraspecific taxa not distinguished; = *Najas guadalupensis* ssp. *guadalupensis* – FNA, K; *Naias guadelupensis* – S, orthographic variant and infraspecific taxa not distinguished]

* ***Najas minor*** Allioni, Spinyleaf Naiad. Pd, Mt, Cp (GA, NC, SC, VA): ponds, lakes, and reservoirs, particularly where eutrophic; uncommon, native of Eurasia. July-October. This species is apparently a rather recent introduction to North America, now widespread in e. North America. Haynes (1979) reports that it is becoming more abundant in e. North America because of its tolerance for polluted, eutrophic waters. [= RAB, C, F, FNA, G, GW, K, W, Z]

Najas filifolia Haynes, Narrowleaf Naiad. Cp (GA): lakes; rare (GA Special Concern). Sw. GA (Jones & Coile 1988) to FL (Haynes in FNA 2000). [= FNA, K, Z; = *Najas ancistrocarpa* A. Braun – GW] {not keyed at this time}

Najas guadalupensis (Sprengel) Magnus *var.* ***floridana*** Haynes & Wentz, in GA and FL. [= Z; = *Najas guadalupensis* ssp. *floridana* Haynes & Wentz) Haynes & C.B. Hellquist – FNA, K; < *Najas guadelupensis* – GW; < *Naias guadelupensis* – S, orthographic variant] {not keyed at this time}

Najas marina Linnaeus, Holly-leaf Naiad, occurs both n. and s. of our area and should be sought. It occurs in brackish or calcareous waters. It is dioecious (vs. monoecious in our 4 species), and has the lower side of the midvein of the leaves prickly (vs. smooth in our 4 species). [= C, F, FNA, G, K; = *Naias marina* – S, orthographic variant]

NARTHECIACEAE E.M. Fries 1846 (Bog-asphodel Family)

As circumscribed here (excluding Tofieldiaceae), a family of about 4 genera and 40 species, of e. Asia, e. North America, n. Europe, and the Guyana Shield of n. South America. Reveal & Zomlefer (1998) place the Nartheciaceae in the monotypic order Nartheciales. References: Zomlefer (1997b, 1999); Reveal & Zomlefer (1998); Tamura in Kubitzki (1998a).

Aletris Linnaeus 1753 (Colic-root, Stargrass)

As circumscribed here (including *Metanarthecium*), a genus of about 30 species, of e. North America and e. Asia. References: Weigant (2002)=X; Ward (1978)=Y; Zomlefer (1997b)=Z; Tamura in Kubitzki (1998a); Sullivan in FNA (2002a).

1 Perianth white to creamy-white (rarely pinkish).
2 Perianth 6-10 mm long, cylindric at anthesis, 2-3× as long as broad, the perianth lobes narrowly deltoid (longer than broad); fruiting perianth markedly constricted above the middle.....***A. farinosa***
2 Perianth 4-6 mm long, campanulate at anthesis, ca. 1× as long as broad, the perianth lobes broadly deltoid (about as long as broad); fruiting perianth somewhat narrowed above the base.....***A. obovata***
1 Perianth golden yellow (often faded in dried specimens).
3 Perianth short-cylindric or campanulate at anthesis, 1-2× as long as broad, the perianth lobes not spreading; [flowering May-July].....***A. aurea***
3 Perianth long-cylindric at anthesis, 2.5-4× as long as broad, the perianth lobes spreading somewhat; [flowering March-May].....***A. lutea***

Aletris aurea Walter, Golden Colic-root. Cp (GA, NC, SC, VA): pine savannas, seepage bogs, pine flatwoods; uncommon (VA Rare). Mid May-July; August. S. MD south to c. peninsular FL, west to e. TX and se. OK. Flowering several weeks later than *A. farinosa* when growing together. [= RAB, C, F, FNA, G, GW, K, S, X, Y, Z]

Aletris farinosa Linnaeus, Northern White Colic-root, Mealy Colic-root, Stargrass. Cp, Mt, Pd (GA, NC, SC, VA): pine savannas, pine flatwoods, seepage bogs, upland woodlands, roadbanks; common. Late April-early June; July-August. S. ME, s. Ontario, and se. MN south to s. GA, FL (Wunderlin 1998), LA, and TX, the only species of the genus not restricted (or nearly so) to the Coastal Plain. [= RAB, C, F, FNA, G, GW, K, S, W, X, Z]

Aletris lutea Small, Yellow Colic-root. Cp (GA): pine savannas; uncommon. E. GA (in immediate proximity to the SC border) south to s. FL, and west to e. LA (Weigant 2002). The report by F of *A. lutea* Small as far north as se. VA is in error. A specimen collected in se. NC has recently been annotated as *A. lutea*, but it appears to be *A. farinosa*. [= FNA, GW, K, S, X, Y, Z]

Aletris obovata Nash ex Small, Southern White Colic-root. Cp (GA, SC): pine savannas; rare (SC Rare). May-early June; August. Se. SC south to c. peninsular FL, west to s. MS. [= RAB, FNA, GW, K, S, X, Y, Z]

Lophiola Ker-Gawler 1814 (Golden Crest)

A monotypic genus, of temperate e. North America. As here interpreted to include *L. americana* and *L. septentrionalis*, *Lophiola* is monotypic, consisting only of *L. aurea*. *Lophiola* is quite unlike any other genus, and its familial position has been problematic. Often treated in the Haemodoraceae (as in RAB, C, G, GW), *Lophiola* is better placed in the Nartheciaceae (or a very broad Liliaceae), as shown by studies of anatomy, pollen ultrastructure, and chemistry, though its placement in that family is also not without problems (Edwards, Churchill, & Weiss 1970, Simpson & Dickison 1981, Simpson 1983, Zavada 1983, Zavadu, Xu, & Edwards 1983, Ambrose 1985). References: Zomlefer (1997b)=Z; Tamura in Kubitzki (1998a); Robertson in FNA (2002a).

Lophiola aurea Ker-Gawler, Golden Crest. Cp (GA, NC): mucky depressions in wet savannas, and in adjacent ditches; rare (GA Special Concern, NC Endangered). Late May-June; August-September. A species of Southeastern Coastal Plain affinities, but with a peculiar, fragmented distribution, occurring primarily on the Gulf Coast from FL and sw. GA west to MS, with disjunct segments of range in se. NC, n. DE and s. NJ, and Nova Scotia. Only a few populations remain in NC. [= C, FNA, K, S, Z; > *L. americana* (Pursh) Wood – RAB, F (the NJ-DE material), G, GW; > *L. septentrionalis* Fernald – F (the Nova Scotian material)]

Narthecium Hudson 1762 (Asphodel)

A genus of about 8 species, many narrow disjuncts, collectively with a very fragmented distribution in the temperate Northern Hemisphere. References: Small (1924)=Z; Zomlefer (1997b)=Y; Utech in FNA (2002a); Tamura in Kubitzki (1998a); Schumacher (1947)=X; Sorrie & Weakley (in prep.)=Q.

1 Tepals 4-6 mm long; capsule 10-14 mm long; pedicels stout, about as long as the subtending bracts; [of Coastal Plain seeps and savannas] ..... ***N. americanum***

1 Tepals 6-9 mm long; capsule 8-10 mm long; pedicels slender, distinctly longer than the subtending bracts; [of Mountain bogs] ..... ***N. montanum***

Narthecium americanum Ker-Gawler, Yellow Asphodel. Cp (SC): wet seepages or savannas; rare (US Species of Concern, NC Endangered, SC Rare). June-July; August-September. S. NJ and DE; disjunct in c. SC. It is still possible that this species will be relocated in our area, perhaps in mucky seepages in the Sandhills. [= C, F, G, Q, X; < *Narthecium americanum* – RAB, FNA, GW, K, W, Y, in part only (also see *N. montanum*); = *Abama americana* (Ker-Gawler) Morong – S, Z]

Narthecium montanum (Small) C.H. Grey, Appalachian Yellow Asphodel. Mt (NC): bogs; rare (apparently extinct). With the drainage of the bogs of East Flat Rock, Henderson County, this species was apparently extirpated. It is still possible that it will be relocated, in bogs in Henderson or Transylvania counties, NC. Small (1924, 1933) considered the NC mountain population a distinct species, based on its longer, more slender pedicels, larger sepals, petals, and stamens, and smaller capsules. Schumacher (1947), in the most thorough worldwide assessment of *Narthecium*, agreed, and Sorrie & Weakley (in prep.) concur, based on an herbarium analysis of the characters of all taxa in the genus. The morphological distinctions (and geographic disjunction) between *N. montanum* and *N. americanum* are as great or greater as those between most species recognized worldwide in the genus. [= Q, X; < *Narthecium americanum* – RAB, FNA, GW, K, W, Y, in part; = *Abama montana* Small – S, Z]

NOLINACEAE Nakai 1943 (Beargrass Family)

(see *RUSCACEAE*)

ORCHIDACEAE A.L. de Jussieu 1789 (Orchid Family)

A family of about 800 genera and 19,000 species, perennial (rarely annual), mycotrophic herbs and vines. Only a small minority of orchid species worldwide are terrestrial rather than epiphytic; only *Epidendrum magnoliae* in our flora shows the common

epiphytic habit. References: Luer (1972) and Luer (1975)=L; Correll (1950)=X; Romero-González, Fernández-Concha, Dressler, Magrath, & Argus in FNA (Williams & Williams (1983); Brown (2003); Homoya (1993); Correll (1937); Pridgeon et al. (1999a, 1999b, 1999c).

Identification notes: Flowering plants are necessary for use of the key to genera.

1 Plant epiphytic, growing on the branches or trunks of trees in swamps ..... ***Epidendrum***
1 Plant terrestrial, growing on soil.
  2 Leaves absent at flowering, or with a solitary leaf with a purplish undersurface withering at about the time of flowering.
    3 Flowers with a spur ..... ***Tipularia***
    3 Flowers without a spur.
      4 Flowers white, the lip, sepals, and petals all predominantly white ..... ***Spiranthes***
      4 Flowers pink, greenish, yellowish, or purplish, the lip sometimes white or marked with white, the sepals and petals colored.
        5 Flower solitary; lip strongly bearded ..... ***Arethusa***
        5 Flowers in spikes or racemes; lip not bearded.
          6 Lip with 2 fleshy ridges near the base; pollinia 4; plants mycoparasitic and never with leaves ..... ***Corallorhiza***
          6 Lip with 3-7 ridges near the base or extending most of the length of the lip; pollinia 4 or 8; plants either mycoparasitic and never with leaves, or with a plicate winter leaf withering shortly before flowering.
            7 Plants with a plicate winter leaf withering shortly before flowering (the withered remnant usually detectable); pollinia 4; veins of the petals and sepals not strikingly different in color than the intervein areas; lip with 3 ridges ..... ***Aplectrum***
            7 Plants never with leaves and saprophytic; pollinia 8; veins of the petals and sepals strikingly different in color than the intervein areas; lip with 5-7 ridges ..... ***Hexalectris***
  2 Leaves present at flowering (*Cleistes* with a foliaceous bract at the summit of the stem).
    8 Leaf solitary.
      9 Leaf basal.
        10 Flower with a spur ..... ***Platanthera***
        10 Flower without a spur.
          11 Flower solitary; leaf plicate ..... ***Arethusa***
          11 Flowers in a raceme or spike.
            12 Flowers relatively large, purple, pink, to rarely white, the lip oriented upwards ..... ***Calopogon***
            12 Flowers relatively small, whitish, the lip oriented downwards ..... ***Spiranthes***
      9 Leaf cauline.
        13 Flower solitary (-4), pink (rarely nearly white); [subfamily *Vanilloideae*; tribe *Pogonieae*].
          14 Sepals brown to purple, linear or narrowly oblanceolate, 3-6.5 cm long, about 5 mm wide; leaf coriaceous ..... ***Cleistes***
          14 Sepals pink (rarely white), elliptic or oblanceolate, 1.3-2.7 cm long, 3-11 mm wide; leaf herbaceous ..... ***Pogonia***
        13 Flowers in spikes or racemes, 5-many, reddish, yellowish, or greenish.
          15 Flower without a spur; petals, sepals, and lip 1-3 mm long ..... ***Malaxis***
          15 Flower with a spur; petals, sepals, and lip 3-25 mm long ..... ***Platanthera***
    8 Leaves 2-many.
      16 Lip inflated, pouch-like or slipper-like, 2-6 cm long ..... ***Cypripedium***
      16 Lip not inflated, or if so, then 0.3-1.1 cm long.
        17 Leaves basal (sometimes with bladeless sheaths upwards on the stem).
          18 Leaves plicate.
            19 Lip oriented upwards; flowers pink to white ..... ***Calopogon***
            19 Lip oriented downwards; flowers greenish, purplish-brown, or yellowish.
              20 Leaves ovate to elliptic, 2-5× as long as wide; plant 1-3 dm tall ..... ***Liparis***
              20 Leaves linear-lanceolate, > 10× as long as wide; plant 3-14 dm tall ..... ***Pteroglossaspis***
          18 Leaves smooth, often creased at the midrib, but not plicate.
            21 Lip with a spur.
              22 Flowers bicolored, the lip white, the sepals and petals pink; leaves 2 ..... ***Galearis***
              22 Flowers not bicolored, the lip, petals, and sepals similarly colored; leaves 2-5.
                23 Lip deeply divided into 3 linear segments; leaves 3-5 ..... ***Habenaria***
                23 Lip entire; leaves 2 ..... ***Platanthera***
            21 Lip without a spur.
              24 Leaf blades more-or-less horizontally oriented, flat against the ground or 1-2 cm above it.
                25 Lip oriented upwards ..... ***Ponthieva***
                25 Lip oriented downwards.
                  26 Leaves variegated with white; lip saccate ..... ***Goodyera***

26 Leaves green, not variegated; lip not saccate ..... ***Spiranthes***
24 Leaf blades ascending.
27 Leaves linear to lanceolate, 2-4 ..... ***Spiranthes***
27 Leaves elliptic to ovate, 2.
28 Lip broadest near its apex ..... ***Liparis***
28 Lip broadest near its base, tapering to the apex ..... ***Malaxis***
17 Leaves cauline.
29 Leaves plicate; lip saccate ..... ***Epipactis***
29 Leaves smooth, often creased at the midrib, but not plicate; lip not saccate.
30 Leaves whorled, terminating the stem ..... ***Isotria***
30 Leaves alternate or opposite, not terminating the stem.
31 Leaves 2, opposite, near the middle of the stem ..... ***Listera***
31 Leaves (2-) 3-many, alternate, variously distributed on the stem.
32 Lip without a spur; leaves 0.8-8.0 cm long.
33 Leaves ovate, 0.8-2.0 cm long ..... ***Triphora***
33 Leaves linear or narrowly lanceolate, 1-8 cm long ..... ***Zeuxine***
32 Lip with a spur; leaves linear, lanceolate, or narrowly elliptic, 5-40 cm long (at least the larger > 5 cm long, except in *Platythelys*, with lanceolate to ovate leaves 1.5-6.5 cm long).
34 Leaves 1.5-6.5 cm long, with inflated tubular sheaths; plants from creeping rhizomes..... ***[Platythelys]***
34 Leaves 5-40 cm long, sessile; plants from fleshy or fusiform roots.
35 Lip divided into 3 linear divisions, the divisions not further divided, fringed, or eroded..... ***Habenaria***
35 Lip not divided into 3 divisions, or divided into 3 divisions but the divisions not linear.
36 Spur saccate, 2-3 mm long, the orifice minute ..... ***Coeloglossum***
36 Spur elongate and slender, 4-50 mm long, the orifice larger..... ..... ***Platanthera***

Aplectrum Torrey 1818 (Puttyroot, Adam-and-Eve)

A genus of 2 species, 1 in e. North America and 1 in Japan (Sheviak & Catling in FNA (2002a). References: Sheviak & Catling in FNA (2002a).

Identification notes: Like *Tipularia*, *Aplectrum* has a single, overwintering leaf, purplish on the underside, and withering prior to the appearance of the flowering stalk; they are readily separable by leaf shape, texture, and veining (see *Tipularia*).

Aplectrum hyemale (Muhlenberg ex Willdenow) Torrey, Puttyroot, Adam-and-Eve. Mt, Pd (GA, NC, SC, VA), Cp (VA): rich, mesic forests; common. May-June. Québec and MN, south to SC, GA, AL, and OK. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Arethusa Linnaeus 1753 (Dragon's-mouth, Bog-rose, Arethusa)

A monotypic genus (Sheviak & Catling in FNA 2002). References: Sheviak & Catling in FNA (2002a).

Identification notes: The combination of the following characters serves to separate *Arethusa* from other, vaguely similar, genera: flowers magenta, solitary and scapose, the lip descending, the other 2 petals and 3 sepals erect or ascending. *Calopogon* has a leafy stem, the inflorescence a raceme, the lip crested but oriented upwards. *Pogonia* has solitary, pale pink flowers, with a descending, bearded lip, but the stem has a well-developed, flat leaf, 1-2.5 cm wide, the flower is subtended by a well-developed, leaf-like, floral bract, and the 2 lower sepals are spreading-descending. *Cleistes* has 3 brown to purplish brown sepals.

Arethusa bulbosa Linnaeus, Dragon's-mouth, Bog-rose, Arethusa. Mt (NC, SC, VA): bogs; rare (NC Endangered, SC Rare, VA Rare). May-June. Widespread in ne. North America, south to NJ and IN and to NC and SC in the mountains, rare south of ME, MI, and MN. The lanceolate, plicate leaf (15-30 cm long, 2-4 mm wide) develops after flowering, the flowering plant thus consisting (aboveground) of the solitary scape only. The lip is crested with fimbriate ridges, marked with yellow and purple. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Calopogon R. Brown 1813 (Grass-pink)

A genus of 5 species (one with two varieties), endemic to e. North America. The only other taxon is *C. tuberosus* var. *simpsonii* (Chapman) Magrath of s. FL. References: Goldman, Magrath, & Catling in FNA (2002a); Trapnell, Hamrick, & Giannasi (2004)=Z. Goldman, van den Berg, & Griffith (2004)=Y. Key adapted from Goldman, Magrath, & Catling in FNA (2002a).

Identification notes: The lip is oriented upwards.

1 Petals wider towards the tip than towards the base; lip usually as wide as or wider than long; flowers strongly fragrant..... ***C. multiflorus***
1 Petals equal or narrower towards the tip than towards the base; lip usually narrower than long; flowers scentless or mildly fragrant.
  2 Leaf appressed to the inflorescence during flowering; flowers < 1 cm apart; flowers not fragrant; flowers of each plant opening simultaneously..... ***C. barbatus***
  2 Leaf not appressed to the inflorescence during flowering; flowers > 1 cm apart; flowers faintly to distinctly fragrant; flowers of each plant opening nearly simultaneously to sequentially.
    3 Lateral sepals 10-15 mm long, falcate, widely spreading..... ***C. pallidus***
    3 Lateral sepals 15-28 mm long, weakly falcate to straight.
      4 Flowers of each plant opening nearly simultaneously; dilated distal portion of middle lip lobe usually much narrower than long, triangular to broadly rounded; stigma typically flat against column surface; corms elongate, forked..... ***C. oklahomensis***
      4 Flowers of each plant opening sequentially; dilated distal portion of middle lip lobe usually much wider than long, typically anvil-shaped; stigma at angle to column surface; corms globose to elongate, not forked ..... ***C. tuberosus* *var.* *tuberosus***

Calopogon barbatus (Walter) Ames, Bearded Grass-pink. Cp (GA, NC, SC): savannas, sandhill seeps; rare (NC Watch List, SC Rare). April-early May. A Southeastern Coastal Plain endemic: se. NC south to c. FL and west to e. LA. [= RAB, FNA, GW, K, L, X, Y, Z; = *Limodorum parviflorum* (Lindley) Nash – S]

Calopogon multiflorus Lindley, Many-flowered Grass-pink. Cp (GA, NC, SC?): pine savannas, pine flatwoods, pitcher plant bogs; rare (GA Special Concern, NC Rare). May-June. A Southeastern Coastal Plain endemic: FL and e. GA to LA, with disjunct populations in Onslow Co., NC. Reported for SC (Charleston-Berkeley Co. line) (P. McMillan 2000). [= FNA, GW, K, L, X, Y, Z; = *Limodorum multiflorum* (Lindley) C. Mohr – S]

Calopogon oklahomensis D.H. Goldman, Oklahoma Grass-pink. Cp (GA, SC): pine savannas; rare. E. SC south to s. GA, west to e. TX, north in the eastern Great Plains to MN. [= FNA, Y, Z]

Calopogon pallidus Chapman, Pale Grass-pink. Cp (GA, NC, SC, VA): savannas, sandhill seeps; uncommon (VA Rare). May-July. A Southeastern Coastal Plain endemic: se. VA south to FL and west to LA. [= RAB, C, F, FNA, G, GW, K, L, X, Y, Z; = *Limodorum pallidum* (Chapman) C. Mohr – S]

Calopogon tuberosus (Linnaeus) Britton, Sterns, & Poggenburg *var.* ***tuberosus***, Common Grass-pink. Cp, Mt, Pd (GA, NC, SC, VA): savannas, sandhill seeps, floating peat mats, in the Piedmont and Mountains in bogs; uncommon, rare in Mountains and Piedmont (VA Watch List). April-July. Widespread in e. North America, also in Cuba and the West Indies; var. *simpsonii* (Chapman) Magrath occurs in FL, Cuba, and the West Indies. [= FNA, K, L, Y, Z; = *C. pulchellus* R. Brown – F, G, RAB, X; < *C. tuberosus* – C, GW, W; = *Limodorum tuberosum* Linnaeus – S]

Cleistes L.C. Richard ex Lindley 1840 (Spreading Pogonia, Rosebud Orchid)

As traditionally circumscribed, a genus of about 55 species, primarily of tropical America. The circumscription of this genus is uncertain (Cameron & Chase 1999; Cameron et al. 1999; Pridgeon et al. 1999c); it appears that North American "*Cleistes*" is not closely related to South American *Cleistes* (which includes the type of the genus), and either a new genus will need to be named to house our two species, or alternatively, *Pogonia*, *Isotria*, and N. American "*Cleistes*" could be combined into *Pogonia* (a generic disposition popular many decades ago). References: Catling & Gregg (1992)=Z; Gregg & Catling in FNA (2002a); Gregg (1991).

1 Column 13-19 mm long; lip 21-33 (-38.5) mm long, the basal 3/4 of the central keel of the lip with 5-7 discontinuous and irregular ridges; sepals (24-) 30-40 (-55) mm long; petals 21-36 mm long; distance between median leaf and floral bract 3-16 cm; fresh flowers with strong vanilla scent (Coastal Plain populations) or odorless (Mountain and upper Piedmont populations) ..... ***C. bifaria***
1 Column 21-29 mm long; lip (26-) 34-56 mm long, the basal 3/4 of the central keel of the lip with 1-3 parallel, continuous low ridges; sepals (31-) 40-56 (-65) mm long; petals 27-53 mm long; distance between median leaf and floral bract 9-20 cm; fresh flower with daffodil-like odor..... ***C. divaricata***

Cleistes bifaria (Fernald) Catling & Gregg, Small Spreading Pogonia. Mt (GA, NC, SC, VA), Cp, Pd (GA, NC, SC): savannas, sandhill seeps, moist to fairly dry meadows, dry ridgetops under pines (where seasonally moist); uncommon (GA Special Concern, VA Rare). May-July. The species ranges in the Mountains and Piedmont from WV south through w. VA, e. KY, w. NC, and e. TN to w. SC, n. GA and n. AL, and in the Coastal Plain from se. NC to c. peninsular FL and west to e. LA (Catling & Gregg 1992). Catling & Gregg (1992) make a convincing case for the recognition of *C. bifaria* and *C. divaricata* as

specifically distinct, based on differences in morphology, range, phenology (in the sympatric portions of their ranges), and floral fragrance. The co-occurrence of the two species at such sites as the Green Swamp, Brunswick County, NC, where phenologically separated, supports their taxonomic status. Where co-occurring, *C. bifaria* flowers on average about 10 days before *C. divaricata*. More recent studies (Smith et al. 2004) suggest the probability that montane and Coastal Plain populations of "*C. bifaria*" represent 2 different species. [= FNA, K, Z; < *C. divaricata* – RAB, C, G, GW, L, S, W, X; = *C. divaricata* var. *bifaria* Fernald – F; = *Pogonia bifaria* (Fernald) P.M. Brown & Wunderlin]

Cleistes divaricata (Linnaeus) Ames, Large Spreading Pogonia. Cp (GA, NC, SC, VA): pine savannas; uncommon (VA Rare). May-mid June. S. NJ to sw. GA and ne. FL, in the Coastal Plain; reports from more inland areas are based on a taxonomic concept of *C. divaricata* including *C. bifaria*. [= FNA, K, Z; < *C. divaricata* – RAB, C, G, GW, K, L, S, W, X (also see *C. bifaria*); = *C. divaricata* var. *divaricata* – F; = *Pogonia divaricata* (Linnaeus) R. Brown]

Coeloglossum Hartman 1820 (Frog Orchid, Long-bracted Orchid)

Usually regarded as a monotypic genus, of north temperate regions of the Old and New World. However, *Coeloglossum* is probably not distinct from *Dactylorhiza* Neck. ex Nevski; *Coeloglossum* is the older name, but *Dactylorhiza* has been accepted for nomenclatural conservation. The taxonomic and nomenclatural outcome is uncertain. References: Sheviak & Catling in FNA (2002a); Bateman, Pridgeon, & Chase (1997)=Z; Pridgeon et al. (1997, 1999b).

Coeloglossum viride (Linnaeus) Hartman *var.* ***virescens*** (Muhlenberg ex Willdenow) Luer, Long-bracted Frog Orchid. Mt (NC, VA): moist woods; uncommon, rare south of VA (NC Rare). April-June. The species is circumboreal; var. *virescens* is e. Asian and North American, in e. North America south in the Appalachians to NC. It is generally more "southern" than the typic var. *viride*, which is more completely circumboreal, widespread in n. Eurasia and far northern North America. [= K, L, W; = *Habenaria viridis* (Linnaeus) R. Brown var. *bracteata* (Muhlenberg ex Willdenow) Reichenbach ex A. Gray – RAB, C, F, G, X; < *Coeloglossum viride* (Linnaeus) Hartman – FNA; = *Coeloglossum bracteatum* (Muhlenberg ex Willdenow) Parlatore – S; < ***Dactylorhiza viridis*** (Linnaeus) R.M. Bateman, Pridgeon, & M.W. Chase – Z]

Corallorhiza Gagnebin 1755 (Coralroot)

A genus of about 15 species, distributed in north temperate regions of the Old and New World. The closest relative of *Corallorhiza* in our flora is *Aplectrum* (Freudenstein 1992). The mycotrophic nature of *Corallorhiza* is well established, but the exact means of the transfer of nutrients from the fungal hyphae to the orchid is not yet understood. References: Freudenstein (1992, 1997, 1999)=Z; Magrath & Freudenstein in FNA (2002a).

1 Lip with two lateral teeth or lobes; lateral sepals spreading to down-curved.
  2 Sepals 1-veined ..... ***[C. trfida]***
  2 Sepals 3-veined.
    3 Middle lobe of lip expanded slightly or not at all distally, the ratio of the width of the dilated part to the base of the mid-lobe < 1.5; floral bracts averaging 0.5-1.0 mm long ..... ***C. maculata** var. **maculata***
    3 Middle lobe of the lip distinctly expanded, the ratio of the width of the dilated part to the base of the midlobe greater than 1.5; floral bracts averaging 1.0-2.8 (-4.5) mm long ..... ***C. maculata** var. **occidentalis***
1 Lip without lateral teeth or lobes (though sometimes erose or minutely toothed near its apex); lateral sepals arching, upcurved, or forward-directed.
  4 Sepals and petals 5-7.5 mm long; dorsal sepal > 4.5 mm long, 3-nerved; flowering April-July.
    5 Lip with prominent, thickened, involute margins; flowering mid to late July ..... ***C. bentleyi***
    5 Lip planar; flowering April-May ..... ***C. wisteriana***
  4 Sepals and petals 3-4.5 mm long; dorsal sepal < 4.5 mm long, 1-nerved; flowering August-October.
    6 Perianth closed or nearly so (cleistogamous); lip 1.7-2.2 mm wide, straight; column lacking or with only poorly developed basal ventral auricles; stigma 0.2-0.5 mm wide ..... ***C. odontorhiza** [cleistogamous form]*
    6 Perianth open (chasmogamous); lip 2.1-3.7 mm wide, bent downwards at a nearly right angle; column with 2 prominent auricles at the base on the ventral surface; stigma 0.7-1.0 mm wide ..... ***C. odontorhiza** [chasmogamous form]*

Corallorhiza bentleyi Freudenstein. Mt (VA): dry-mesic to mesic forests, especially near roadsides; rare. The species was recently named and was known (at the time of publication) from only a single population (Freudenstein 1999). This species is now known from Monroe and Pocahontas counties, WV, and Giles, Alleghany, and Bath counties, VA. It is most closely related to *C. striata* Lindley. [= FNA, Z]

Corallorhiza maculata (Rafinesque) Rafinesque *var.* ***maculata***, Eastern Spotted Coralroot. Mt (GA, NC, VA): moist forests, northern hardwood forests; uncommon (GA Special Concern). July-August. Var. *maculata* is irregularly distributed in much of North America, primarily northern, from Newfoundland Québec, and MN south to PA, OH, and IN, and south in the Appalachians to ne. GA, in the west from British Columbia south to s. CA, s. AZ, and s. NM. Var. *mexicana* (Lindley) Freudenstein *ined*. is restricted to Mexico. [= FNA, Z; < *C. maculata* – RAB, C, F, G, K, L, W, X; < *Corallorrhiza maculata* – S, orthographic variant]

Corallorhiza maculata (Rafinesque) Rafinesque *var.* ***occidentalis*** (Lindley) Ames, Western Spotted Coralroot. Mt (VA): forests; rare (VA Rare). May-July. Var. *occidentalis* (Lindley) Ames has a distribution similar to var. *maculata*, except that in the east it ranges south only to PA, s. Ontario, and WI, with disjunct populations in e. WV (Pocahontas County; Morton et al. 2004) and VA. [= FNA, Z; < *C. maculata* – RAB, C, F, G, K, L, W, X; < *Corallorrhiza maculata* – S, orthographic variant]

Corallorhiza odontorhiza (Willdenow) Poiret, Autumn Coralroot. Mt, Pd, Cp (GA, NC, SC, VA): forests; uncommon. August-October. The cleistogamous form is the more common, and is widespread in e. North America, from ME, NY, s. Ontario, MI, and MN south to SC, c. GA, c. AL, n. MS, c. AR, and e. OK. The chasmogamous form is less common, and is scattered in ne. United States and adjacent Canada, in Ontario, CT, PA, MI, IA, IN, DC, NC, and TN, and in Mexico (Chiapas, Distrito Federal, Guerrero, Hidalgo, Jalisco, México, Michoacán, Morelos, Oaxaca, Puebla, Sonora), Guatemala, and Nicaragua. It may be recognized as a variety; see synonymy. [= RAB, C, F, G, L, W, X; > *C. odontorhiza* var. *pringlei* (Greenman) Freudenstein – FNA, K, Z; > *C. odontorhiza* var. *odontorhiza* – FNA, K, Z; = *Corallorrhiza odontorhiza* – S, orthographic variant; > *C. pringlei* Greenman]

Corallorhiza wisteriana Conrad, Spring Coralroot. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; rare (NC Watch List). April-May. Widespread in e. North America, from NJ, PA, OH, IN, IL, MO, and OK south to FL, and TX, and also in the Rockies from MT and w. SD south to s. Mexico. [= RAB, C, F, FNA, G, K, L, W, X, Z; = *Corallorrhiza wisteriana* – S, orthographic variant]

Corallorhiza trifida Châtelain, Early Coralroot, Pale Coralroot. Boreal forests, bogs, peaty swamps. May. South to DC {specimen at NCU}, MD, WV, PA, NJ (Magrath & Freudenstein in FNA 2002, Kartesz 1999), and, allegedly, to GA (Small 1933). [= FNA, G, K, L, Z; > *C. trifida* var. *verna* (Nuttall) Fernald – C, F; = *Corallorrhiza corallorrhiza* – S]

Cypripedium Linnaeus 1753 (Lady's-slipper)

A genus of about 40-50 species, north temperate in distribution. References: Sheviak (1994)=Z; Case et al. (1998); Wallace & Case (2000)=Y; Sheviak in FNA (2002a); Pridgeon et al. (1999c). Key to yellow-flowered species adapted from Sheviak (1994).

1 Plant scapose, with 2 basal leaves; pouch-like lip of flower with a longitudinal fissure, pink (rarely nearly white); [section *Acaulia*] ..... ***C. acaule***
1 Plant caulescent, with (2) 3-7 leaves alternate on the stem; pouch-like lip of flower with a rounded orifice, yellow or pink (rarely white).
  2 Pouch-like lip of flower pink and white (rarely all white); lateral petals and dorsal sepal white, not twisted, obtuse to acute; [section *Obtusipetala*]..... ***C. reginae***
  2 Pouch-like lip of flower yellow or white; lateral petals and dorsal sepal brown, purplish brown, or yellow, slightly to strongly twisted, acuminate-attenuate; [section *Cypripedium*].
    3 Pouch-like lip of flower white, 1.5-2.5 cm long; orifice margin acute on the apical margin; [of calcareous barrens] ..... ***C. candidum***
    3 Pouch-like lip of flower bright yellow, pale yellow, or rarely white, (2.0-) 2.2-6.3 cm long (if pale yellow or white, then > 4 cm long); orifice margin rounded-octuse on the apical margin; [of various habitats].
      4 Dorsal sepal 3.5-5.0 cm wide; pouch orifice 2.7-4.5 cm long; pouch-like lip 4.5-6.3 cm long, pale yellow or creamy white; plants robust, typically 5-8 dm tall..... ***C. kentuckiense***
      4 Dorsal sepal 1.5-2.9 cm wide; pouch orifice 0.5-1.3 cm long; pouch-like lip (2.0-) 2.2-5.8 cm long, medium to rich yellow; plants not as robust, typically 2-5 (-6) dm tall.
        5 Outer surface of uppermost sheathing bract glabrous or sparsely or inconspicuously pubescent when young; pouch-like lip 15-29 mm long; flower scent intense and sweet..... ***[C. parviflorum var. makasin]***
        5 Outer surface of uppermost sheathing bract densely and conspicuously silvery-pubescent when young, or rarely glabrescent; pouch-like lip 2.0-5.4 cm long; flower scent moderate to faint, rose-like or pungent-musty.
          6 Pouch-like lip 2.2-3.4 cm long; sepals and lateral petals usually densely and minutely spotted with dark reddish brown or purple, thus appearing uniformly dark..... ***C. parviflorum var. parviflorum***
          6 Pouch-like lip (2.0-) 3.0-5.8 cm long; sepals and lateral petals unmarked (greenish-yellow), or more often streaked, blotched, striped or reticulately marked with dark reddish brown or purple (but generally not extensively blotched)..... ***C. parviflorum var. pubescens***

Cypripedium acaule Aiton, Pink Lady's-slipper, Moccasin-flower. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): dry to mesic, acid forests and woodlands, often under pine or other conifers; common. April-July. Newfoundland west to n. Alberta, south to NC, SC, TN, n. IN, and MN. [= RAB, C, F, FNA, G, K, L, W, X; = *Fissipes acaulis* (Aiton) Small – S]

Cypripedium candidum Muhlenberg ex Willdenow, White Lady's-slipper. Mt (VA): calcareous barrens; rare (VA Rare). NY and NJ west to ND, south to w. VA and MO. [= C, F, FNA, G, K, L, X]

Cypripedium kentuckiense C.F. Reed, Kentucky Yellow Lady's-slipper. Cp (GA, VA): sandy ravine bottoms and springhead seeps along small streams; rare (GA Special Concern, VA Rare). First reported for our area by Weldy et al. (1996). *C. kentuckiense* C.F. Reed is similar to *C. parviflorum* var. *pubescens* and, in addition to the site discovered in e. VA, reaches e. TN (Franklin and Scott counties, Cumberland Plateau) and e. KY. Case et al. (1998) studied isozymes of *C. kentuckiense* and

related *Cypripedium spp*.; the recognition of *C. kentuckiense* as a species was supported. [= C, FNA, K, Y, Z; often included in a broad concept of *C. calceolus, C. pubescens*, or *C. calceolus* var. *pubescens* by most earlier authors]

Cypripedium parviflorum Salisbury *var.* ***parviflorum***, Small Yellow Lady's-slipper. Mt (GA, NC, VA): mesic forests, seepy forests over amphibolite, other habitats; rare (NC Watch List). April-June. Rather widespread in North America, south in the east to NC and GA. The exact range, abundance, and habitats of this variety in our area are obscure, because of confusion with the more northern var. *makasin* (Farwell) Sheviak and small-flowered forms of var. *pubescens*. See Sheviak (1994) for a discussion of why North American plants of yellow lady's-slippers are recognized as a species distinct from the European *C. calceolus* Linnaeus. [= FNA, Y, Z; < *C. calceolus* Linnaeus var. *pubescens* – RAB, G, X, in part; = *C. parviflorum* – K, S; = *C. calceolus* var. *parviflorum* (Salisbury) Fernald – C, F, L, W]

Cypripedium parviflorum Salisbury *var.* ***pubescens*** (Willdenow) Knight, Large Yellow Lady's-slipper, Whippoorwill Shoes. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (VA): rich mesic forests; uncommon (NC Watch List, SC Rare). April-June. Widespread in e. North America. [= FNA, Y, Z; < *C. calceolus* Linnaeus var. *pubescens* (Willdenow) Correll – RAB, G, X (also see *C. parviflorum* var. *parviflorum*); = *C. pubescens* Willdenow – K, S; = *C. calceolus* var. *pubescens* (Willdenow) Correll – C, F, L, W]

Cypripedium reginae Walter, Showy Lady's-slipper, Queen Lady's-slipper. Mt (GA?, NC*, VA): over circumneutral to basic rocks, or (allegedly) in mossy wet forests under *Rhododendron*; rare (NC Watch List, VA Rare). May-June. Widespread in ne. North America, south to NC (?), GA, TN, and AR. The native occurrence of this species in NC is questionable; the only definite specimen from the state is from an implausible habitat for the species (highly acid humus under rhododendron). [= RAB, C, F, FNA, G, K, L, S, W, X]

Cypripedium parviflorum Salisbury var. *makasin* (Farwell) Sheviak ranges south to PA and NJ (Kartesz 1999). Var. *makasin* is the northern, small-flowered plant, characteristically of calcareous fens, often confused with var. *parviflorum*. It may reach our area. [= K, Y, Z] {synonymy incomplete}

Epidendrum Linnaeus 1759 (Green-fly Orchid)

A genus of about 1000 species, of tropical (and rarely subtropical) America. References: Hágsater in FNA (2002a); Pridgeon et al. (2005).

Epidendrum magnoliae Muhlenberg, Green-fly Orchid. Cp (GA, NC, SC): epiphytic on limbs of trees, especially *Taxodium*, in blackwater river swamps, usually on relatively horizontal limbs mixed with *Pleopeltis polypodioides*, also rarely in crevices of Altamaha Grit outcrops; uncommon (NC Rare, SC Rare). July-October. The northernmost epiphytic orchid: se. NC south to FL and west to LA; also in ne. Mexico. It is locally rather common, but rarely seen as it occurs in blackwater swamps, on upper limbs of *Taxodium, Nyssa*, and other trees, typically mixed with *Pleopeltis*. See Correll (1936) for additional discussion of this species at its northern limit. Hágsater (2000) indicates that *E. magnoliae* Muhlenberg has nomenclatural priority over *E. conopseum* R. Brown. [= FNA; = *E. conopseum* Aiton f. – RAB, L, X; > *E. conopseum* var. *conopseum* – K; = *Amphiglottis conopsea* (Aiton f.) Small – S]

Epipactis Zinn 1757 (Helleborine)

A genus of about 25 species, of w. North America, Eurasia, and n. Africa (Brown & Argus in FNA 2002). References: Brown & Argus in FNA (2002a).

* ***Epipactis helleborine*** (Linnaeus) Crantz, Broad-leaved Helleborine. Mt (GA, NC, VA): forests; rare, introduced from Europe. June-September. This species has been collected a handful of times in various parts of the mountains, some of the colonies dating back to the early 1960's; it has become common in ne. United States and se. Canada. [= C, F, FNA, K, L, X; = *E. latifolia* (Linnaeus) Allioni – G]

Eulophia R. Brown ex Lindley 1823
(also see *Pteroglossaspis*)

A genus of about 215 species, pantropical (Romero-González in FNA 2002). References: Romero-González in FNA (2002a).

Eulophia alta (Linnaeus) Fawcett & Rendle, Wild Coco. Cp (GA): flatwoods, swamps; rare. S. GA south through the FL peninsula into the West Indies, Mexico, Central America, and South America. [= FNA, GW, K; = *Platypus altus* (Linnaeus) Small – S]

Galearis Rafinesque 1833 (Showy Orchis)

A genus of 3-6 species, of e. North America and e. Asia. References: Sheviak & Catling in FNA (2002a); Pridgeon et al. (1999b).

Galearis spectabilis (Linnaeus) Rafinesque, Showy Orchis. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): rich, deciduous forests, most typically over calcareous or mafic rocks; common (SC Rare). April-July. New Brunswick and Québec west to MN, south to GA and AR. [= FNA, K, L, W; = *Orchis spectabilis* Linnaeus – RAB, C, F, G, X; = *Galeorchis spectabilis* (Linnaeus) Rydberg – S]

Goodyera R. Brown 1813 (Rattlesnake Orchid)

A genus of about 55-100 species, widespread in distribution but primarily Northern Hemisphere. References: Kallunki in FNA (2002a); Pridgeon et al. (1999c).

1 Leaves blue-green, the upper surface variegated with white, the midrib broadly whitened (1-3 mm wide), the remainder of the network of white variegations narrow (< 0.5 mm wide), generally lacking any internal variation in color, the outlines of the variegations smooth; inflorescence cylindric, not secund or one-sided.....***G. pubescens***
1 Leaves dark green, the upper surface variegated with pale green, the midrib only irregularly and narrowly pale green, most of the network of pale green variegations broad (0.5-1 mm wide), with a dark green center line (thus the variegations appearing double), the outlines of the variegations finely and irregularly toothed; inflorescence secund, primarily one-sided, or loosely spiraled.
  2 Lip narrowly saccate (th pouch much longer than deep), with an elongate recurved apex .....***G. repens***
  2 Lip deeply concave (the pouch about as deep as long), with a short spreading or recurved apex.....***[G. tesselata]***

Goodyera pubescens (Willdenow) R. Brown, Downy Rattlesnake-orchid. Mt, Pd, Cp (GA, NC, SC, VA): dry to moist forests and woodlands; common. June-August. New Brunswick west to Ontario and MN, south to panhandle FL, MS, and AR. One of the commonest of orchids in much of its range. [= RAB, C, F, FNA, G, K, L, W, X; = *Peramium pubescens* (Willdenow) MacM. – S]

Goodyera repens (Linnaeus) R. Brown, Lesser Rattlesnake-orchid. Mt (NC, SC, VA): moist forests, usually under conifers and rhododendrons; uncommon (NC Watch List, VA Watch List). June-September. A circumboreal species of northern North America and Eurasia, this species reaching its southern limit in e. North America in NC and SC. [= FNA, K, L, W; > *Goodyera repens* var. *ophioides* Fernald – RAB, C, F, G, X; > *Peramium ophioides* (Fernald) Rydberg – S]

Goodyera tesselata Loddiges, Checkered Rattlesnake-plantain, south to MD, PA, and NJ (Kallunki in FNA 2002, Kartesz 1999). Probably an allopolyploid, derived from *G. oblongifolia* × *repens*. [= FNA, C, F, G, K, L, X]

Habenaria Willdenow 1805 (Longspur Orchid, Habenaria)
(also see *Coeloglossum*, *Platanthera*)

A genus of about 600 species, tropical and subtropical in the Old World and New World. References: Sheviak in FNA (2002a); Pridgeon et al. (1999b).

1 Spur 4-10 cm long; [terrestrial, though in moist habitats].....***H. quinqueseta***
1 Spur 0.4-1.4 cm long; [aquatic or semi-aquatic in marshes and swamps].....***H. repens***

Habenaria quinqueseta (Michaux) A. Eaton, Long-horned Habenaria. Cp (GA, SC): pine flatwoods, pinelands, Altamaha Grit outcrops, rarely in swamps; rare (GA Special Concern, SC Rare). August-October. *H. quinqueseta* (in the narrow sense) ranges from SC south to s. FL, west to se. TX. The related *H. macroceratitis* Willdenow, differing in its spur 12-18 cm long (vs. 4-10 cm) occurs in peninsular FL; also in the West Indies, Mexico, Central America, and n. South America. [= FNA, K; = *H. quinqueseta* var. *quinqueseta* – L; < *H. quinqueseta* – RAB, GW, S, X (including *H. macroceratitis*)]

Habenaria repens Nuttall, Water-spider Orchid, Floating Orchid. Cp (GA, NC, SC, VA?): blackwater swamps, pools, banks of creeks and rivers; rare (NC Watch List, VA Rare). April-November. NC south to FL and west to TX; West Indies, Mexico, Central America, and n. South America. Reported from se. VA. [= RAB, FNA, GW, K, L, S, X]

Hexalectris Rafinesque 1825 (Crested Coralroot)

A genus of about 7 species, mycotrophic, of s. North America. References: Catling & Engel (1993)=Z; Catling (2004)=Y; Goldman, Coleman, Magrath, & Catling in FNA (2002a).

Hexalectris spicata (Walter) Barnhart *var*. ***spicata***, Crested Coralroot, Brunetta. Pd, Mt, Cp (GA, NC, SC, VA): dry forests and woodlands, especially over mafic or calcareous rocks, such as diabase, gabbro, calcareous siltstone, and dolomite (though sometimes in distinctly acid situations); rare (NC Rare, VA Watch List). July-August. Var. *spicata* is widespread in se. North

America, ranging from MD, OH, and MO south to FL, TX, and Mexico. Var. *arizonica* (S. Watson) Catling & Engel, an autopollinating relative, is distributed from e. TX west to AZ, south into Mexico. The yellow and purple flowers borne on a brown stem present a very peculiar color combination. The genus is primarily Mexican. [= FNA, Y, Z; < *H. spicata* – RAB, C, F, G, K, L, S, W, X]

Isotria Rafinesque 1808 (Whorled Pogonia, Five-leaves, Fiveleaf Orchid)

A genus of 2 species, of e. North America. Cameron & Chase (1999) indicate that *Isotria* should perhaps be included in a more broadly circumscribed *Pogonia* (as was often done prior to 1922). References: Mehrhoff & Homoya in FNA (2002a).

Identification notes: Sterile *Isotria* is sometimes confused with *Medeola*. *Medeola* has a wiry-textured stem, with floccose hairiness, at least towards the base. *Isotria* has a fleshier stem lacking hairs.

1 Sepals 12-30 mm long, greenish-brown; lip 10-15 mm long; pedicel of fruit (0-) 5-10 (-15) mm long; plant glaucous, the stem whitish-green ..... ***I. medeoloides***
1 Sepals 35-60 mm long, purple-brown; lip 20-25 mm long; pedicel of fruit (12-) 20-55 mm long; plant scarcely glaucous (if at all), the stem generally purplish ..... ***I. verticillata***

Isotria medeoloides (Pursh) Rafinesque, Small Whorled Pogonia, Little Five-leaves. Mt (GA, NC, SC), Pd (NC, VA), Cp (NC): moist forests, in the mountains and upper Piedmont usually with *Pinus strobus*; rare (US Endangered, GA Threatened, NC Endangered, SC Rare, VA Endangered). May-June. Widespread (but very local) in ne. North America, from s. ME and MI south to c. and e. WV, w. VA, w. NC, e. TN, and n. GA. The reproductive biology of this species was studied by Vitt & Campbell (1997). Van Alstine et al. (1996) discuss the habitats of known occurrences in Virginia. [= RAB, C, F, FNA, G, K, L, W, X; = *I. affinis* (C.F. Austin) Rydberg – S; = *Pogonia affinis* C.F. Austin]

Isotria verticillata (Muhlenberg ex Willdenow) Rafinesque, Large Whorled Pogonia, Larger Five-leaves. Mt, Pd, Cp (GA, NC, SC, VA): moist to dry forests; common (uncommon in GA, SC, NC). April-July. Widespread in e. North America, from ME and MI south to panhandle FL and e. TX. [= RAB, C, F, FNA, G, K, L, S, W, X; = *Pogonia verticillata* (Muhlenberg ex Willdenow) Nuttall]

Liparis L.C. Richard 1817 (Wide-lip Orchid, Twayblade)

A genus of about 250-350 species, cosmopolitan. Regerences: Magrath in FNA (2002a).

1 Lip (8-) 10-12 mm long, pale purple; pedicels 11-18 mm long, equal to or longer than the capsule ..... ***L. liliifolia***
1 Lip 4-5.5 mm long, yellowish-green; pedicels 3-7 mm long, shorter than the capsule ..... ***L. loeselii***

Liparis liliifolia (Linnaeus) L.C. Richard ex Ker-Gawler, Large Twayblade, Mauve Sleekwort, Russet-witch, Brown Wide-lip Orchid. Mt (GA, NC, SC, VA), Pd (GA, NC, VA), Cp (NC, VA): moist forests, floodplains; uncommon (SC Rare). May-July. VT and Ontario west to MN, south to GA and AR; also in China. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Liparis loeselii (Linnaeus) L.C. Richard, Fen Orchid, Loesel's Twayblade, Bog Twayblade, Yellow Wide-lip Orchid. Mt (NC, VA), Cp (NC, VA), Pd (VA): seepages at moderate to high elevations in the mountains, mucky bay swamps (dominated by *Persea palustris* and *Magnolia virginiana*) at about sea level on the Outer Banks, and other moist, seepy habitats, especially over mafic or calcareous rocks; rare (NC Rare, VA Rare). May-July. Nova Scotia and Québec west to Mackenzie and British Columbia, south to ne. NC, sw. NC, AL, AR, KS, NE, and WA. [= RAB, C, F, FNA, G, GW, K, L, S, W, X]

Listera R. Brown 1813 (Twayblade)

A genus of about 25 species, boreal, north temperate, and south temperate (Magrath & Coleman in FNA 2002). References: Magrath & Coleman in FNA (2002a).

1 Lip usually cleft about one-third its length, the two lobes oblong, with rounded apices ..... ***L. smallii***
1 Lip usually cleft about two-thirds its length, the two lobes linear, with acute apices.
  2 Lip 6-10 mm long, lacking prominent teeth near the base (but with 2 vertically-oriented lobes); pedicels and raceme axis glandular-puberulent; sepals and petals 1-2 mm long ..... ***L. australis***
  2 Lip 3-5 mm long, with 2 prominent teeth near the base, these diverging horizontally; pedicels and raceme axis glabrous; sepals and petals 1-5-3 mm long ..... ***L. cordata*** *var*. ***cordata***

Listera australis Lindley, Southern Twayblade. Cp (GA, NC, SC, VA), Pd (GA), Mt (NC): swamps, second terraces in floodplain forests, wet woods under *Rhododendron maximum*; uncommon (GA Special Concern, NC Watch List, SC Rare). March-July. Mainly a Southeastern Coastal Plain species, from NJ south to FL and west to e. TX, but also scattered inland of the

Coastal Plain and north into VT and s. Canada. [= RAB, C, F, FNA, G, GW, K, L, W, X; = *Ophrys australis* (Lindley) House – S]

Listera cordata (Linnaeus) R. Brown *var.* ***cordata***, Heartleaf Twayblade, Lesser Twayblade. Mt (NC): habitat not known; rare (NC Watch List). June-July. A widespread circumboreal species of n. Eurasia and n. North America, south to NC (at least formerly, not seen in this century). Var. *cordata* is widespread in ne. United States and widespread in Canada; var. *nephrophylla* (Rydberg) Hultén is widespread in nw. North America. [= FNA, K, L; < *L. cordata* – RAB, C, F, G, W, X]

Listera smallii Wiegand, Appalachian Twayblade, Small's Twayblade, Kidneyleaf Twayblade. Mt (GA, NC, SC, VA): shaded swamps, wet slopes, nearly always beneath *Rhododendron maximum*; uncommon (GA Special Concern, SC Rare, VA Watch List). June-July. A Southern and Central Appalachian endemic: s. PA south to nw. SC and ne. GA. [= RAB, C, FNA, G, GW, K, L, W, X; = *Ophrys smallii* (Wiegand) House – S]

Listera convallarioides (Swartz) Nuttall was attributed to NC by Correll (1950); this record of this far-northern species is almost certainly an error. {not keyed}

Malaxis Solander ex Swartz 1788 (Adder's-mouth)fYucca

A genus of about 250-300 species, nearly cosmopolitan. References: Catling (1991)=Z; Catling & Magrath in FNA (2002a). Key adapted from Catling (1991).

1 Leaves 2-5; lip oriented upwards, erect, entire, obtuse to acuminate ..... ***M. spicata***
1 Leaf solitary; lip oriented downwards, deflexed, 3-lobed (the central lobe smaller than the 2 lateral lobes).
  2 Lip pointed, acuminate, lacking lateral lobes ..... ***[M. brachypoda]***
  2 Lip bifid, with 2 well-developed lateral lobes on either side of a smaller central lobe.
    3 Pedicels 3-5 (-5.8) mm long (even in plants with inflorescences over 80 mm long); basal lobes of the lip prominent, 0.75-1.1 mm long, usually 1.5-2 (-2.5)× as long as the apical lateral lobes and > 0.6× as long as the length from the base to the tip of the mid-lobe; inflorescences loosely flowered above, the lower flowers withering slowly ..... ***M. bayardii***
    3 Pedicels (4-) 5-10 (-13) mm long (and > 5 mm long in plants with inflorescences > 45 mm long); basal lobes of the lip not prominent, 0.4-1.1 mm long, mostly < 1.5× as long as the apical lateral lobes and < 0.6× as long as the length from the base to the tip of the mid-lobe; inflorescences densely flowered above, the lower flowers soon withering ..... ***M. unifolia***

Malaxis bayardii Fernald, Appalachian Adder's-mouth. Mt (NC, VA), Pd (NC, SC), Cp (SC, VA): dry, open, upland forests, shale barrens; rare (NC Rare, VA Watch List). July-September. S. NY and se. MA south through CT, RI, NJ, PA, and VA to w. and c. NC, mostly in the mountains (but somewhat disjunct on the Coastal Plain of VA). See Catling (1991) for further discussion of the distinction of *M bayardii* from *M. unifolia*. [= F, FNA, K, Z; < *M. unifolia* – RAB, C, G, GW, L, S, W, X, in part]

Malaxis spicata Swartz, Florida Adder's-mouth. Cp (GA, NC, SC, VA): maritime swamp forests, calcareous but mucky swamps in the outer Coastal Plain, spring-fed swamps, wet hammocks; rare (GA Special Concern, NC Rare, VA Rare). July-August. Se. VA south to FL; n. West Indies. [= RAB, C, FNA, G, GW, K, L, S, X; *M. floridana* (Chapman) Kuntze – F]

Malaxis unifolia Michaux, Green Adder's-mouth. Cp, Mt, Pd (GA, NC, SC, VA): bogs, moist forested slopes, in the Sandhills in longleaf-oak-hickory forests; uncommon (rare in Piedmont and Coastal Plain). June-August. Newfoundland and FL west to MN, IA, MO, e. OK, and e. TX; also in Mexico, Cuba, the West Indies, and Central America. [= F, FNA, K, Z; < *M. unifolia* – RAB, C, G, GW, L, S, W, X, in part only (also see *M. bayardii*)]

Malaxis brachypoda (A. Gray) Fernald, White Malaxis, ranges as far south as sc. PA (Rhoads & Klein 1993) and NJ (Kartesz 1999), in moist forests and bogs; it is additionally reported by F to range south to the Mountains of TN, the documentation unknown. [= F, K; = *M. monophyllos* (Linnaeus) Swartz var. *brachypoda* (A. Gray) Morris & Eames – C, FNA, G, L, X; = *M. monophyllos* (Linnaeus) Swartz ssp. *brachypoda* (A. Gray) Á. & D. Löve]

Platanthera L.C. Richard 1817 (Fringed Orchid, Fringeless Orchid)

A genus of about 200 species, largely of the temperate northern hemisphere, extending south into tropical Central America and tropical se. Asia. The recognition of *Gymnadeniopsis* as separate from *Platanthera* is uncertain at this time; originally named by Rydberg, its recognition was acknowledged as possibly warranted by Sheviak in FNA (2002a) and embraced by Brown (2006a). Three of our species would belong to *Gymnadeniopsis*: *P. clavellata*, *P. integra*, and *P. nivea*. References: Sheviak in FNA (2002a); Reddoch & Reddoch (1993); Pridgeon et al. (1999b).

Identification Notes: hybrids are frequent and are not keyed; they are generally intermediate in characters and are found in mixed populations of the two parents. Further information follows the species accounts.

1 Lip entire, finely toothed, or eroded (neither fringed nor deeply divided into 3 lobes).

2 Leaves basal, 1 or 2, orbicular, (5-) 8-25 cm wide, prostrate on the ground, the stem naked or with a few bladeless bracts.
3 Stem bractless ..... ***[P. hookeri]***
3 Stem with bracts.
4 Corolla spur 28-47 mm long; hemipollinarium 4.6-6.8 mm long; seeds (0.72-) 0.76-0.97 mm long ..... ***[P. macrophylla]***
4 Corolla spur 14-28 mm long; hemipollinarium 3.0-4.8 mm long; seeds 0.54-0.72 (-0.79) ..... ***P. orbiculata***
2 Leaves cauline, 1-10 or more, mostly lanceolate, 1-5 cm wide, ascending, the stem with at least 1 (usually several) bladed leaves.
5 Lip 11-15 mm long; spur mostly 40-50 mm long ..... ***P. integrilabia***
5 Lip 2-8 mm long; spur 4-23 mm long.
6 Flowers green, greenish-white, yellowish-green, yellowish-white, or dull-white.
7 Larger stem leaves usually 1, rarely 2, near the middle of the stem; raceme 2-9 cm long, 2-3.5 cm in diameter; lip without a tubercle on the upper surface near the base, also lacking lateral auricles near the base ..... ***P. clavellata***
7 Larger stem leaves usually 2 (-5), near the middle of the stem or towards its base; raceme 5-20 cm long, 1.2-2 cm in diameter; lip with a tubercle on the upper surface near the base, also usually with 2 lateral auricles.
8 Most bracts of the inflorescence shorter than the flowers they subtend (the lowermost few exceeding the flowers); flowers sparsely distributed; lip orbicular, 1-1.5× as long as broad, yellowish-green ..... ***P. flava*** *var.* ***flava***
8 Most bracts of the inflorescence exceeding the flowers they subtend (the uppermost few sometimes shorter than the flowers); flowers densely distributed; lip oblong, 2-3× as long as broad, green ..... ***P. flava*** *var.* ***herbiola***
6 Flowers golden-yellow or bright-white.
9 Flowers golden-yellow; spur 4-8 mm long; lip minutely crenulate, directed downwards ..... ***P. integra***
9 Flowers bright-white; spur 11-23 mm long; lip entire, directed upwards ..... ***P. nivea***

1 Lip either fringed, deeply divided into 3 lobes, or both.
10 Lip not deeply divided into 3 lobes, deeply fringed; flowers white, yellow, orange.
11 Flowers white; spur 15-50 mm long.
12 Spur 15-26 mm long, ca. 1× as long as the ovary; lip descending and thence curved back towards the stem, narrowed at its base to a very short isthmus (between the base and the fringed portion); lip fringing short and relatively coarse; [of Newfoundland west to MI and IL, south to GA] ..... ***P. blephariglottis***
12 Spur 30-50 mm long, ca. 2× as long as the ovary; lip projected forward; lip narrowed to an extended isthmus; lip fringing elongate and delicate; [of e. NC south to c. peninsular FL, west to e. TX] ..... ***P. conspicua***
11 Flowers yellow to orange; spur 5-33 mm long.
13 Spur 20-33 mm long, exceeding the 12-27 mm long ovary; undivided portion of lip 8-12 mm long ..... ***P. ciliaris***
13 Spur 4-17 mm long, equal to or shorter than the ovary; undivided portion of lip 4-6 mm long.
14 Spur 8-17 mm long, about as long as the 10-19 mm long ovary; spur orifice circular ..... ***P. chapmanii***
14 Spur 4-10 mm long, shorter than the 7-13 mm long ovary; spur orifice keyhole-shaped or triangular ..... ***P. cristata***
10 Lip deeply divided into 3 lobes, the lobes deeply fringed, shallowly fringed, eroded, or entire; flowers purple or greenish-white or yellowish-white.
15 Lateral lobes of lip deeply fringed (nearly or entirely to the point of junction with the central lobe of the lip); flowers greenish-white or yellowish-white.
16 Perianth greenish-white; lateral petals linear-spatulate, < 2 mm wide, blunt, entire to inconspicuously crenulate; lateral sepals deflexed ..... ***P. lacera***
16 Perianth white or cream; lateral petals cuneate to broadly obovate, 4-12 mm wide, toothed; lateral sepals divergent ..... ***P. leucophaea***
13 Lateral lobes of lip entire, eroded, or shallowly fringed (generally no > 1/2 way from the apex to the point of junction with the central lobe of the lip); flowers purple (or rarely white in albino forms).
17 Lobes of lip eroded or entire, few (if any) of the segments > 1 mm long ..... ***P. peramoena***
17 Lobes of lip shallowly fringed, most or all of the segments > 1 mm long.
18 Lobes of lip fringed from 1/3 to ½ of the way to the base of the lobes; opening to nectary widely rounded (the pollen sacs spread widely apart); spur 20-26 mm long ..... ***P. grandiflora***
18 Lobes of the lip fringed < 1/3 of the way to the base of the lobes; opening to nectary dumbbell-shaped (the pollen sacs close together); spur 12-20 mm long ..... ***P. psycodes***

Platanthera blephariglottis (Willdenow) Lindley, Small White Fringed Orchid. Cp (GA, NC, SC, VA): seepages, sandhill-pocosin ecotones; uncommon (GA Special Concern). July-September. Newfoundland west to MI and IL, south to GA. Following Brown (2006b), it seems best to recognize the two white-fringed orchids as separate species; they are morphologixcally distinctive, and where they co-occur their blooming time is offset. [= *Platanthera blephariglottis* (Willdenow) Lindley var. *blephariglottis* – FNA, K, L; < *Habenaria blephariglottis* (Willdenow) Hooker var. *blephariglottis* – RAB, X; <

Habenaria blephariglottis var. *blephariglottis* – F (possibly misapplied); < *Habenaria blephariglottis* – GW; *Blephariglottis blephariglottis* (Willdenow) Rydberg – S (possibly misapplied); < *Platanthera blephariglottis* (Willdenow) Lindley – W; = ***Platanthera blephariglottis***]

Platanthera chapmanii (Small) Luer, Chapman's Orange-fringed Orchid. Cp (GA): pine savannas; rare (GA Special Concern). S. GA and n. FL; e. TX. Previously generally confused with the hybrid between *P. ciliaris* × *cristata* (*P.* × *chapmanii*). See Folsom (1984) and Brown (2004). [= FNA, K; = *Blephariglottis chapmanii* Small – S] {synonymy incomplete}

Platanthera ciliaris (Linnaeus) Lindley, Yellow Fringed Orchid. Cp, Mt, Pd (GA, NC, SC, VA): savannas, moist roadbanks, meadows, pastures; common (rare in Piedmont). July-September. Widespread in e. North America, *P. ciliaris* is probably our most common and least habitat-specific *Platanthera*. [= FNA, K, L, W; = *Habenaria ciliaris* (Linnaeus) R. Brown – RAB, C, F, G, GW, X; = *Blephariglottis ciliaris* (Linnaeus) Rydberg – S]

Platanthera clavellata (Michaux) Luer, Small Green Wood Orchid. Mt, Pd, Cp (GA, NC, SC, VA): seepages, bogs, swamps, other wet places; common (uncommon in Piedmont). June-September. Widespread in e. North America. [= FNA, K, L, W; = *Habenaria clavellata* (Michaux) Sprengel – C, G, GW, X; > *Habenaria clavellata* var. *wrightii* Olive – RAB; > *Habenaria clavellata* (Michaux) Sprengel var. *clavellata* – RAB, F; = ***Gymnadeniopsis clavellata*** (Michaux) Rydberg – S]

Platanthera conspicua (Nash) P.M. Brown, Large White Fringed Orchid. Cp (GA, NC, SC): savannas, seepages, sandhill-pocosin ecotones; uncommon (but locally abundant) (GA Special Concern, VA Rare). July-September. NC south to c. peninsular FL, west to TX. Brown (2006b) and Sheviak in FNA (2002a) clarify the taxonomy of this complex; previous studies (such as Hardin 1961) used different characters, and interpreted the white-fringed orchid taxa differently. [= *Platanthera blephariglottis* (Willdenow) Lindley var. *conspicua* (Nash) Luer – FNA, K, L; < *Habenaria blephariglottis* (Willdenow) Hooker var. *blephariglottis* – RAB, X; *Habenaria blephariglottis* var. *conspicua* (Nash) Ames – C, F; < *Habenaria blephariglottis* – GW; *Blephariglottis conspicua* (Nash) Small – S (also see *Platanthera integrilabia*); *Blephariglottis blephariglottis* (Willdenow) Rydberg – S (possibly misapplied)]

Platanthera cristata (Michaux) Lindley, Crested Fringed Orchid, Golden Fringed Orchid. Cp (GA, NC, SC, VA), Mt (NC, SC, VA): savannas, bogs, moist roadsides; uncommon (rare in Mountains). June-September. *P. cristata* is more limited to the Coastal Plain than the related *P. ciliaris*, ranging from s. MA south to FL and west to TX, and also inland in KY, TN, AR, SC, and NC. [= FNA, K, L, W; = *Habenaria cristata* (Michaux) R. Brown – RAB, C, F, G, GW, X; = *Blephariglottis cristata* (Michaux) Rafinesque – S]

Platanthera flava (Linnaeus) Lindley *var.* ***flava***, Southern Rein Orchid, Southern Gypsy-spike. Cp, Pd (GA, NC, SC, VA): shaded wet places, such as swampy forests; uncommon (rare in Piedmont) (VA Watch List). March-September. Var. *flava* has a scattered range in se. and sc. United States, primarily (but not solely) on the Coastal Plain, north to MD and IL; remarkably disjunct in s. Nova Scotia, where it occurs associated with other disjuncts from the Southeastern Coastal Plain. See Homoya (1993) for additional discussion of the two varieties of *P. flava*. [= FNA, K, L; = *Habenaria flava* (Linnaeus) R. Brown var. *flava* – RAB, C, F, G, X; < *Habenaria flava* – GW; > *Perularia scutellata* (Nuttall) Small – S; > *Perularia bidentata* (Elliott) Small – S]

Platanthera flava (Linnaeus) Lindley *var.* ***herbiola*** (R. Brown) Luer, Tubercled Rein Orchid, Northern Gypsy-spike. Mt (GA, NC, VA), Pd (NC): bogs, seepages; rare (GA Special Concern, NC Rare, VA Watch List). May-September. Var. *herbiola* is more northern, widespread in ne. North America, south (in the mountains and upper Piedmont) to NC. See Homoya (1993) for additional discussion of the two varieties of *P. flava*; he suggests that specific status may be warranted. [= FNA, K, L, W; = *Habenaria flava* (Linnaeus) R. Brown var. *herbiola* (R. Brown) Ames & Correll – RAB, C, F, G, X; = *Perularia flava* (Linnaeus) Farwell – S, apparently misapplied]

Platanthera grandiflora (Bigelow) Lindley, Large Purple Fringed Orchid, Plume-royal. Mt (GA, NC, VA): bogs, seepages, moist places at high elevations; rare (NC Rare, VA Rare). June-August. Widespread in ne. North America, south in the mountains to NC and n. GA. [= FNA, K, L, W; = *Habenaria psycodes* (Linnaeus) Sprengel var. *grandiflora* (Bigelow) A. Gray – RAB, C, G, X; = *Habenaria fimbriata* (Aiton) R. Brown – F; = *Blephariglottis grandiflora* (Bigelow) Rydberg – S]

Platanthera integra (Nuttall) A. Gray ex Beck, Golden Fringeless Orchid, Yellow Fringeless Orchid. Cp (GA, NC, SC), Mt, Pd (NC): savannas in the Coastal Plain, bogs in the Mountains and Piedmont; rare (GA Special Concern, NC Threatened, SC Rare). July-September. Essentially endemic to the Southeastern Coastal Plain, ranging from s. NJ south to FL and west to se. TX, with disjunct occurrences in TN (Eastern Highland Rim) and in bogs at low elevations of the Blue Ridge of NC. It is apparently now extirpated in the Mountains and Piedmont of NC. [= FNA, K, L; = *Habenaria integra* (Nuttall) Sprengel – RAB, C, F, G, GW, X; = ***Gymnadeniopsis integra*** (Nuttall) Rydberg – S]

Platanthera integrilabia (Correll) Luer, Monkey-face Orchid, White Fringeless Orchid. Mt (GA, NC, SC, VA?), Pd (GA): bogs, red maple - gum swamps, seeps and streambanks; rare (US Species of Concern, GA Threatened, NC Endangered, SC Rare, VA Rare). July-September. Endemic to KY, e. TN, sw. VA (Lee County, documentation uncertain), w. NC, nw. SC, n. GA, n. AL, and n. MS, primarily in the Cumberland Plateau. See Zettler, Ahuja, & McInnis (1996) for a discussion of pollination. [= FNA, K, L, W; = *Habenaria blephariglottis* (Willdenow) Hooker var. *integrilabia* Correll – RAB, F, X; = *Habenaria correlliana* Cronquist – C; *? Habenaria blephariglottis* var. *holopetala* (Lindley) A. Gray]

Platanthera lacera (Michaux) G. Don, Green Fringed Orchid, Ragged Fringed Orchid, Ragged Orchid. Mt, Pd, Cp (GA, NC, SC, VA): swamps, bogs, seepages; uncommon, rare in Piedmont and Coastal Plain (SC Rare). June-August. Widespread in ne. North America, south to SC, GA, AL, AR, and OK. Var. *terrae-novae* (Fernald) Luer is not distinct, and is based on hybrid swarms involving *P. lacera* and *P. psycodes* (Catling 1997). [= FNA, K, W; = *Habenaria lacera* (Michaux) R. Brown – RAB, C, G, GW, X; > *Habenaria lacera* var. *lacera* – F; = *Blephariglottis lacera* (Michaux) Farwell – S; > *Platanthera lacera* var. *lacera* – L]

Platanthera leucophaea (Nuttall) Lindley, Prairie Fringed Orchid. Mt (VA): damp calcareous meadows; rare (US Threatened, VA Rare). May-July. ME west to NE, south to w. VA, nw. PA, c. OH, c. IN, IL, MO, and OK. [= FNA, K, W; = *Habenaria leucophaea* (Nuttall) A. Gray var. *leucophaea* – C; = *Habenaria leucophaea* (Nuttall) A. Gray – G, X]

Platanthera nivea (Nuttall) Luer, Snowy Orchid, Bog-spike. Cp (GA, NC, SC): wet savannas; rare (GA Special Concern, NC Rare). May-September. Essentially a Southeastern Coastal plain endemic, ***P. nivea*** ranges from s. NJ south to FL and west to TX, disjunct in Coffee County, TN (Eastern Highland Rim). This species is even more irregular than most *Platanthera* in its flowering, whole populations sometimes not flowering for a number of years. The flowers are so white as to seem illuminated from within. This species was once locally abundant in the outer Coastal Plain of the Carolinas and further south; Correll (1950) describes "large colonies of this species which form a blanket of white over the landscape." Also see the picture in B.W. Wells' Natural Gardens of North Carolina. [= FNA, K, L; = *Habenaria nivea* (Nuttall) Sprengel – RAB, C, F, G, GW, X; = ***Gymnadeniopsis nivea*** (Nuttall) Rydberg – S]

Platanthera orbiculata (Pursh) Lindley, Large Round-leaved Orchid, Dinner-plate Orchid. Mt, Pd (NC, VA): moist hardwood forests, especially over amphibolite; uncommon (rare in Piedmont). June-September. Newfoundland and Labrador west to AK, south to PA (and in the mountains to NC and TN), OH, IN, MN, SD, and OR. Reddoch & Reddoch (1993) have shown that ***P. orbiculata*** differs from ***P. macrophylla*** at the species level; see note below for further discussion. Pollination is by night-flying moths, likely noctuids. [= FNA; = *Habenaria orbiculata* (Pursh) Lindley – RAB; = *Habenaria orbiculata* var. *orbiculata* – C, F; < *Habenaria orbiculata* – G, W, X (also see ***P. macrophylla***); = *Platanthera orbiculata* var. *orbiculata* – K, L; = *Lysias orbiculata* (Pursh) Rydberg – S]

Platanthera peramoena (A. Gray) A. Gray, Purple Fringeless Orchid, Purple Spire Orchid, Pride-of-the-peak. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): bogs, seepages, moist forests; rare (GA Special Concern, NC Rare, SC Rare, VA Rare). June-October. NJ, s. PA, OH, c. IL, and se. MO south to nw. SC, n. GA, n. AL, c. MS, and c. AR. See Spooner & Shelly (1983) for a review of information about this species. [= FNA, K, L, W; = *Habenaria peramoena* A. Gray – RAB, C, F, G, GW, X; = *Blephariglottis peramoena* (A. Gray) Rydberg – S]

Platanthera psycodes (Linnaeus) Lindley, Small Purple Fringed Orchid, Butterfly Orchid. Mt (GA, NC, SC, VA): northern hardwood forersts, other moist forests, seepages, bogs; uncommon (GA Special Concern). June-August. Widespread in ne. North America, south in the mountains to n. GA. [= FNA, K, L, W; = *Habenaria psycodes* (Linnaeus) Sprengel var. *psycodes* – RAB, C, G, X; = *Habenaria psycodes* – F, GW; = *Blephariglottis psycodes* (Linnaeus) Rydberg – S]

Platanthera aquilonis Sheviak, south to NJ and PA. [= FNA; ***P. hyperborea*** (Linnaeus) Lindley var. *hyperborea* – K, misapplied; *Habenaria hyperborea* (Linnaeus) R. Brown var. *hyperborea*, misapplied] {not keyed; synonymy incomplete}

Platanthera hookeri (Torrey & A. Gray) Lindley, Hooker's Orchid, ranges south to s. PA, in rich moist forests. [= FNA, K, L; = *Habenaria hookeri* Torrey – C, F, G, X]

Platanthera huronensis (Nuttall) Lindley, south to NJ (Sheviak 2002, Kartesz 1999) and PA (Kartesz 1999). [= FNA, K; = *Habenaria hyperborea* (Linnaeus) R. Brown var. *huronensis* (Nuttall) Farwell] {not keyed; synonymy incomplete}

Platanthera macrophylla (Goldie) P.M. Brown is apparently reported from NC and VA by Luer (1975). I have seen no verification of this distribution, nor is it validated by Reddoch & Reddoch (1993) or Sheviak in FNA (2002). ***P. macrophylla*** does range south to sw. PA and might be expected in montane VA. It generally occurs in coniferous swamps, from Nova Scotia west to n. MI, south to sw. PA and MD (Kartesz 1999). [= FNA, K; = ***P. orbiculata*** var. *macrophylla* (Goldie) Luer – L; = *Habenaria orbiculata* (Pursh) Torrey var. *macrophylla* (Goldie) B. Boivin – C, F; < *Habenaria orbiculata* – G, X (also see ***P. macrophylla***)]

The following hybrids are known from our area (others should be expected):

Platanthera* ×*andrewsii (M. White) Luer [***P. lacera*** × ***psycodes***]. This hybrid is known from several locations in the Mountains. It is distinguished by characteristics intermediate between the two parents, especially the purple to pale lavender flowers, the central lobe of the lip long and narrow and deeply fringed. [= FNA]

Platanthera* ×*bicolor (Rafinesque) Luer [***P. blephariglottis*** × ***ciliaris***]. This hybrid is rather common in the Coastal Plain, and can sometimes be found by the hundreds where both parents are abundant. The flowers from a distance appear a pale, creamy orange; when observed more closely, they prove to be bicolored, the broader portions pale orange, the fringed portions white. [= FNA]

Platanthera* ×*canbyi (Ames) Luer [***P. blephariglottis*** × ***cristata***]. This hybrid is known from a few locations in the Coastal Plain. It is intermediate between the parents. [= FNA]

Platanthera* ×*channellii Folsom [***P. ciliaris*** × ***cristata***]. This hybrid is known from several sites in the Coastal Plain (Charleston County, SC), Piedmont (Iredell County, NC), and Mountains (Henderson County, NC). It can be distinguished by its intermediate morphology, especially the spur 11-15 mm long. Folsom (1984) and Brown (2004) discuss the closely related *P. chapmanii* (Small) Luer, ranging from se. GA to panhandle FL, and in e. TX, which they recognize as a species, based on its occurrence in populations independent of its parents, pollination biology, and subtle morphologic distinction from *P.* ×*channellii*. [= FNA; *P.* ×*chapmanii* – misapplied]

Platythelys Garay (Jug Orchid)

A genus of about 9 species, of the New World tropics and subtropics. References: Ackerman in FNA (2002a).

Platythelys querceticola (Lindley) Garay, Jug Orchid. Wet hammocks and swamps. FL, AL, MS, and LA; Mexico; West Indies; Central America; South America. Known from FL counties (Franklin and Nassau) adjacent to GA. [= FNA, K; = *Erythrodes querceticola* (Lindley) Ames – L, X; = *Physurus querceticola* Lindley – S; ? ***P. latifolia*** (Linnaeus) Garay & Ormerod] {not keyed at this time}

Pogonia Antoine Laurent de Jussieu 1789 (Rose Pogonia, Pogonia)
(also see *Cleistes, Isotria*)

A genus of 3 species, of temperate e. North America and e. Asia. Cameron & Chase (1999) indicate that molecular analyses indicate that there may be merit in the traditional broad circumscription of *Pogonia* to include *Isotria* and N. American taxa of *Cleistes*. References: Catling & Sheviak in FNA (2002a).

Pogonia ophioglossoides (Linnaeus) Ker-Gawler, Rose Pogonia, Snakemouth, Beardflower, Ettercap, Addermouth. Cp (GA, NC, SC, VA), Mt (NC, SC, VA), Pd (GA, NC, SC, VA): savannas, bogs, especially in open peaty or gravelly situations; uncommon (rare in Piedmont and Mountains) (VA Watch List). May-June. Widespread in e. North America. [= RAB, C, FNA, G, GW, K, L, S, W, X; > ***P. ophioglossoides*** var. *ophioglossoides* – F]

Ponthieva R. Brown 1813 (Shadow Witch)

A genus of about 30-53 species, of tropical and warm temperate America. References: Ackerman in FNA (2002a); Pridgeon et al. (1999b).

Ponthieva racemosa (Walter) C. Mohr, Shadow Witch. Cp (GA, NC, SC, VA): bottomlands, floodplains, moist ravines, nearly always over calcareous rock ("marl" or coquina limestone); rare (GA, Special Concern, NC Rare, SC Rare, VA Watch List). September-October. Se. VA south to FL and west to se. TX; disjunct in the Eastern Highland Rim, TN, and south into Central and South America. The basal rosette of leaves, white (suffused with green) flowers in fall, and habitat are distinctive. [= RAB, C, F, FNA, G, GW, K, S, X; ***P. racemosa*** var. *racemosa* – L]

Pteroglossaspis Reichenbach filius 1878 (Wild Coco)

A genus of 7-10 species, of s. North America, Cuba, Colombia, and tropical Africa (Romero-González in FNA 2002). References: Romero-González in FNA (2002a).

Identification notes: The long (to 7 dm), plicate leaves are distinctive among our orchids. Small individuals can be mistaken for *Calopogon* when not in bloom. *Pteroglossaspis* differs, however, in having the stem covered from node to node by a succession of sheaths (vs. the sheaths much shorter) and in having the leaves 2-3 on a separate shoot emerging from the corm before the bloom-stalk (vs. leaf 1, on the bloom-stalk).

Pteroglossaspis ecristata (Fernald) Rolfe, Spiked Medusa, Smooth-lipped Eulophia. Cp (GA, NC, SC): mesic pinelands with blackjack oak, other sandhills and dry-mesic to mesic longleaf pinelands; rare (US Species of Concern, GA Special Concern, NC Endangered, SC Rare). June-September; July-November. Se. NC south to FL, west to LA; West Indies (Cuba). One of the rarest orchids in our region. [= FNA, K; = *Eulophia ecristata* (Fernald) Ames – RAB, L, X; = *Triorchos ecristatus* (Fernald) Small – S]

Spiranthes L.C. Richard 1817 (Ladies'-tresses, Pearl-twist, Spiral Orchid)

A genus of about 30-40 species, mainly north temperate, but with species scattered in other areas. The *Spiranthes* flora of our region is still rather poorly understood. This treatment, already rather different from RAB (1968) will undoubtedly change further. References: Sheviak & Brown in FNA (2002a); Luer (1975); Sheviak (1991); Pridgeon et al. (1999c). Key adapted largely from Sheviak & Brown in FNA (2002a).

Identification notes: flowering plants are necessary for identification of the species.

1 Rachis of inflorescence with all hairs **not** glandular, tapering to a pointed tip; [flowering March-September]..... ***S. vernalis***
1 Rachis of inflorescence **either** glabrous **or** with some or all hairs gland-tipped, capitate or clavate.
  2 Lip bright yellow or orange-yellow, with greenish veins; sepals and petals pure white; [flowering May-July] ..... ***S. lucida***
  2 Lip either white, or lip yellowish and lacking greenish veins; sepals and petals creamy, ivory, yellow, or greenish; [collectively flowering February-December].

3 Lip with conspicuous, terminally widened, greenish (rarely yellowish) diverging veins extending nearly to the tip; [flowering March-July].
4 Flowers white, with green veins; sepals appressed; flowers 6-9 mm long ..... ***S. praecox***
4 Flowers creamy green, with darker green veins; flowers 10-17 mm long ..... ***S. sylvatica***
3 Lip lacking conspicuous, terminally widened, greenish diverging veins (veins not terminally widened); [collectively flowering February-December].
5 Rachis glabrous; flowers gaping from near middle, the tubular portion < 3 mm long; lip pure white; [flowering June-September] ..... ***S. tuberosa***
5 Rachis pubescent or glabrous; flowers gaping only from beyond the middle, the tubular portion > 3 mm long; lip white, creamy, yellow, or centrally green; [collectively flowering February-December].
6 Inflorescence with 3 or 4 flowers per cycle of spiral, the spiral usually tight and obscure, but then with 3 or 4 secondary ranks of flowers evident; [collectively flowering August-December]..... **Key A**
6 Inflorescence with 5 or more flowers per cycle of spiral, the spiral usually open and obvious; [collectively flowering February-December] ..... **Key B**

Key A

1 Petals ca. 6 mm long; lower portion of stem with recurved-spreading leaves..... ***S. ovalis*** *var.* ***erostellata***
1 Petals 7.5 mm long or longer; leaves wholly basal, or lower portion of stem with recurved-spreading blades, or leaves absent at flowering.
2 Lip only slightly or not at all differentiated from the petals; buds often failing to open (but setting seed through agamospermy); column normal, or abnormal or aborted; leaves usually absent at flowering..... ***S. cernua***
2 Lip clearly differentiated from petals; buds opening into normal flowers; column normal; leaves present or absent at flowering.
3 Basal calli relatively short and conic,a wide as high, and usually < 1 mm long; lateral sepals free and spreading, often over the top of the flower; leaves absent at flowering; [of dry calcareous barrens of the Ridge and Valley and westward, in our area in sw. VA] ..... ***S. magnicamporum***
3 Basal calli 1-2 mm long; lateral sepals more or less appressed (very rarely spreading over the top of the flower); leaves present at flowering; [of various dry to wet sites, collectively widespread in our area].
4 Upper margin of the lateral sepals obviously separated from the adjacent margin of the dorsal sepal, the separation abrupt at the base (commonly by about 1 mm); lip strongly curving from the claw (the resulting angle 20-60 degrees), cuneate at the base; perianth creamy, yellowish, or greenish white; [of upland, dry to mesic sites] ..... ***S. ochroleuca***
4 Upper margin of the lateral sepals touching (or nearly so) the adjacent margin of the dorsal sepal, or only gradually separated with distance from the base; lip not strongly curving from the claw (angle < 30 degrees), cordate to truncate at the base; perianth white to creamy or ivory, the center of the lip ivory to pale yellowish or rarely greenish; [primarily of wet sites, such as bogs, fens, marshes, bottonland swamps].
5 Plants to about 50 cm tall, not colonial; leaves comparatively slender, flaccid-membranaceous with thickened midrib, the petioles of the basal leaves < 6 mm wide; leaves wholly basal or the lower sheaths with ascending-spreading blades; perianth usually 8-11 mm long; lip membranaceous to fleshy, < 7 mm long; [widespread in our area] ..... ***S. cernua***
5 Plants to over 100 cm tall, forming clonal colonies via stolons; leaves broad, stiffly aerenchymatous-thickened, the petioles of basal leaves 7 mm or more wide; leaves up the stem, with spreading recurved blades on the lower cauline sheaths, frequently also on the upper, with leaves extending to the inflorescence; perianth 10-15 mm long (sometimes smaller in depauperate plants); lip fleshy, usually over 7 mm long; [of the Coastal Plain] ..... ***S. odorata***

Key B

1 Lateral sepals widely diverging from the base, 8-10 mm long; lip dilated at base, oblong toward tip, yellow centrally; inflorescence secund to twisted usually only a half-turn from bottom to top; [flowering late October-December] ..... ***S. longilabris***
1 Lateral sepals spreading to appressed, not widely diverging, 3.8-10 mm long; lip ovate to oblong-quadrate, lacking a distinct basal dilation, white or creamy centrally; inflorescence usually with several spiral cycles (rarely nearly secund); [flowering February-November].
2 Lip with lacerate-dentate tip; leaves usually linear, > 30× as long as wide, persistent and present at flowering; [flowering May-August] ..... ***S. laciniata***
2 Lip with undulate to crisped tip; leaves lanceolate to ovate or obovate, < 30× as long as wide, either persistent and present at flowering, or withering prior to flowering.
3 Flowers comparatively large and stout, the perianth 5-12 mm long, white to yellowish, the lip often darker centrally but not green or greenish yellow; leaves ascending, relatively slender, not ovate or obovate, present at flowering; rachis conspicuously and densely glandular-pubescent; [flowering August-November].

4 Lip truncate at the tip, 5-7.5 mm long; flowers yellowish, creamy, or ivory, arcuate-nodding for most to all the length of the perianth; [of PA northwards] ..... ***[S. casei var. casei]***

4 Lip acute to rounded at the tip, usually > 7.5 mm long; flowers white to yellowish, arcuate-nodding only at the base of the perianth; [widespread in our area] ..... ***S. cernua***

3 Flowers comparatively small and slender, the perianth usually < 5.5 mm long; leaves strictly basal, spreading and ovate to obovate or oblanceolate; rachis glabrous or densely but minutely glandular-pubescent; [flowering February-September].

5 Rachis densely pubescent; flowers yellowish to pale greenish yellow, the lip yellow centrally; [flowering February-April]; [of s. SC southwards and westwards] ..... ***S. brevilabris***

5 Rachis glabrous or sparsely and minutely pubescent; flowers yellowish to white, the lip yellowish or green centrally; [flowering February-September]; [collectively widespread in our area].

6 Flowers yellowish to pale greenish yellow; lip yellow centrally ..... ***S. floridana***

6 Flowers white, lip green centrally.

7 Leaves oblanceolate, withering at anthesis; lateral sepals spatulate, green at base; flowering February-May ..... ***S. eatonii***

7 Leaves ovate to obovate or elliptic, spreading, present or absent at anthesis; lateral sepals acuminate, white throughout; flowering July-September.

8 Flowers densely arranged on the spike (ratio of spike length in mm: flower number < 2.3); entire plant essentially glabrous; leaves usually absent at anthesis; [flowering earlier, mostly July] ..... ***S. lacera* var. *gracilis***

8 Flowers laxly arranged on spike (ratio of spike length in mm: flower number = or > 2.3); inflorescence capitate-pubescent; leaves usually persisting through anthesis; [flowering later, mostly August-September] ..... ***S. lacera* var. *lacera***

Spiranthes brevilabris Lindley. Cp (GA, SC): pine savannas; rare (GA Rare). Se. SC south to s. GA and n. FL, and west to se. TX, in dry to moist open sites. [= FNA, K; = *S. gracilis* (Bigelow) Beck var. *brevilabris* (Lindley) Correll – GW]

Spiranthes cernua (Linnaeus) L.C. Richard, Nodding Ladies'-tresses. Mt, Pd, Cp (GA, NC, SC, VA): bogs, swamps, ditches, usually in acidic, sphagnous situations; common (uncommon in Piedmont and Coastal Plain). July-November. Widespread in e. North America. [= FNA, G, K, L, W; = *S. cernua* var. *cernua* – RAB, C, F, GW, L, X; < *S. cernua* var. *cernua* – F, X; = *Ibidium cernuum* (Linnaeus) House – S]

Spiranthes eatonii Ames ex P.M. Brown, Eaton's Ladies'-tresses. Cp (GA, NC, SC, VA): dry to moist pine flatwoods; uncommon (GA Rare). February-May. A Southeastern Coastal Plain endemic: se. VA south to FL, west to se. TX. Apparently previously confused with *S. lacera*, *S. floridana*, *S. brevilabris*, and *S. tuberosa*, but distinctive in the combination of spring blooming season, white flowers, and basal, narrowly oblanceolate leaves (Brown 1999). [= FNA, K]

Spiranthes floridana (Wherry) Cory, Florida Ladies'-tresses. Cp (GA, NC, SC): wet savannas, other moist sites; rare (GA Rare, NC Rare). April-May. A Southeastern Coastal Plain endemic: se. NC south to FL and west to TX, a Southeastern Coastal Plain endemic. [= FNA, K; = *S. brevilabris* Lindley var. *floridana* (Wherry) Luer – L; = *S. gracilis* (Bigelow) Beck var. *floridana* (Wherry) Correll – RAB, GW, X; = *Ibidium floridanum* Wherry – S]

Spiranthes lacera (Rafinesque) Rafinesque ***var. gracilis*** (Bigelow) Luer, Southern Slender Ladies'-tresses. Mt, Pd, Cp (GA, NC, SC, VA): fields, meadows, pastures, woodlands; uncommon. August-September. Widespread in se. North America, north to s. NH, MI, WI, and KA. [= C, FNA, K, L, W; = *S. gracilis* (Bigelow) Beck var. *gracilis* – RAB, GW, X; = *S. gracilis* – F; < *S. gracilis* – G (apparently including *S. lacera* var. *lacera*); = *Ibidium gracile* (Bigelow) House – S]

Spiranthes lacera (Rafinesque) Rafinesque ***var. lacera***, Northern Slender Ladies'-tresses. Mt (NC, VA): clearings, openings; rare. July. Nova Scotia and New Brunswick west to Saskatchewan, south to sw. NC, w. VA, TN, and MO. The occurrence of this species in NC is documented by a specimen at DUKE, collected at 5200 feet elevation on Tusquitee bald. [= C, FNA, K, L, W; = *S. lacera* – F (sensu stricto); < *S. gracilis* – G; < *S. gracilis* var. *gracilis* – X]

Spiranthes laciniata (Small) Ames, Lace-lip Ladies'-tresses. Cp (GA, NC, SC), {VA?}: pond cypress depressions and savannas, swamps; rare (NC Rare, SC Rare). May-August. A Southeastern Coastal plain endemic: NJ south to FL and west to se. TX. [= RAB, C, FNA, K, L, X; = *S. ×laciniata* – F, GW; = *Ibidium laciniatum* (Small) House – S]

Spiranthes longilabris Lindley, Giant Spiral Orchid. Cp (GA, NC, SC): wet savannas; rare (GA Rare, NC Threatened, SC Rare). Late October-December. A Southeastern Coastal Plain endemic: se. NC south to FL and west to LA. [= RAB, FNA, GW, K, L, X; = *Ibidium longilabre* (Lindley) House – S]

Spiranthes lucida (H.H. Eaton) Ames, Shining Ladies'-tresses. Mt (NC, VA): sunny seepage over amphibolite or other basic rock; rare (NC Rare, VA Rare). June. Widespread in ne. United States, south to NC, e. TN, sc. TN (Chester et al. 1993), c. AL, MO, and KS. The species was reported for NC by Fernald (1950) and by Small (1933), but was not treated by RAB; its occurrence in NC was verified in 1992 by its discovery in a seepage area in Ashe County. [= C, F, FNA, G, K, L, W, X; *Ibidium plantagineum* (Rafinesque) House – S]

Spiranthes magnicamporum Sheviak, Great Plains Ladies'-tresses. Mt (GA, VA): grassy barrens and glades over limestone; rare (GA Endangered, VA Rare). Primarily in the Great Plains, from ND south to TX, east (often as widely disjunct populations) to sw. Ontario, se. PA, sw. VA (Ludwig 1999), KY, w. TN, and nw. GA. [= C, FNA, K, L; < *S. cernua* – G; < *S. cernua* var. *cernua* – F, X]

Spiranthes ochroleuca (Rydberg) Rydberg, Yellow Nodding Ladies'-tresses. Mt (NC, SC?, VA): meadows and pastures at moderate to high elevations, up to at least 1500m in elevation; rare (NC Rare, VA Rare). September-October. Largely northeastern, extending south in the mountains to NC. See Sheviak & Catling (1980) and Catling (1983a) for further information

on this species. [= FNA, K, L, W; = *S. cernua* var. *ochroleuca* (Rydberg) Ames – C, F, X; = *Ibidium ochroleucum* (Rydberg) House – S]

Spiranthes odorata (Nuttall) Lindley, Fragrant Ladies'-tresses, Marsh Ladies'-tresses. Cp (GA, NC, SC, VA): swamps and marshes; uncommon (VA Rare). September-November. A Southeastern Coastal Plain endemic: se. VA south to FL and west to se. TX. [= F, FNA, G, K, L; = *S. cernua* var. *odorata* (Nuttall) Correll – RAB, C, GW, L, X; = *Ibidium odoratum* (Nuttall) House – S]

Spiranthes ovalis Lindley *var.* ***erostellata*** Catling, Oval Ladies'-tresses. Pd (NC, SC, VA), Cp (GA, NC, SC), Mt (GA, VA): swamp forests, bottomland forests; uncommon (GA Rare). August-November. Var. *erostellata* is fairly widespread in se. North America, ranging from sc. PA, MI, and IL south to panhandle FL, s. MS, and s. LA. Var. *ovalis* is limited to AR, LA, and TX, differing in having a viscidium and rostellum. See Catling (1983b) for further information about this variety and its biology. [= C, FNA, K, W; < *S. ovalis* – RAB, F, G, GW, L, X; < *Ibidium ovale* (Lindley) House – S; ? *S. montana* Rafinesque]

Spiranthes praecox (Walter) S. Watson, Grass-leaved Ladies'-tresses, Giant Ladies'-tresses. Cp (GA, NC, SC, VA), Pd (NC, VA), Mt (GA, VA): savannas, swamps, bogs; uncommon (rare in Piedmont). March-July. A Southeastern Coastal plain endemic: NJ south to FL and west to TX. [< *S. praecox* – RAB, C, F, FNA, G, GW, K, L, W, X (also see *S. sylvatica*); < *Ibidium praecox* (Walter) House – S (also see *S. sylvatica*)]

Spiranthes sylvatica P.M. Brown, Woodland Ladies'-tresses, Pale Green Ladies'-tresses. Cp (GA, NC, SC, VA): live oak hammocks, other woodlands; rare (GA Rare). Late March-early May. VA south to c. peninsular FL, west to e. TX. [< *S. praecox* – RAB, C, F, FNA, G, GW, K, L, X; < *Ibidium praecox* (Walter) House – S]

Spiranthes tuberosa Rafinesque, Little Ladies'-tresses, Little Pearl-twist. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of habitats, especially relatively well-drained woodlands and fields; common. June-September. Widespread in se. North America, north to MA, OH, and MO. [= C, FNA, G, K, L, W; > *S. grayi* Ames – RAB, L, X; > *S. tuberosa* var. *grayi* (Ames) Fernald – F; > *S. tuberosa* var. *tuberosa* – F; *Ibidium beckii* (Lindley) House – S, misapplied]

Spiranthes vernalis Engelmann & A. Gray, Spring Ladies'-tresses. Cp, Pd, Mt (GA, NC, SC, VA): savannas, bogs, marshes, fairly dry fields; common (uncommon in Piedmont, rare in Mountains). March-July (-early September in the mountains). MA to FL and west to TX and SD, also in Mexico and Central America. [= RAB, C, F, FNA, G, GW, K, L, W, X; = *Ibidium vernale* (Engelmann & A. Gray) House – S]

Spiranthes casei Catling & Cruise var. *casei*. Nova Scotia and ME west to WI, south to PA, in moist to dry open sites. [= FNA, K] {add to synonymy}

Spiranthes ovalis Lindley *var.* ***ovalis***, Oval Ladies'-tresses. Cp (GA): [= FNA, K] {not keyed at this time; add to synonymy}

Spiranthes romanzoffiana Chamissso. Bogs, meadows, and other habitats. Nova Scotia and Labrador west to AK, south to PA, IN, NM, AZ, and CA. [= FNA, K] {not keyed; add to synonymy}

Tipularia Nuttall 1818 (Cranefly Orchid)

A genus of 3 species; the other species of the genus are e. Asian (1 in Japan and 1 in the Himalayas) (Catling & Sheviak in FNA 2002). References: Catling & Sheviak in FNA (2002a).

Identification notes: The leaves are present during the winter, withering before the flowering stalk appears, the plant thus occasionally mistaken for one of the saprophytic orchids. The leaves are usually purple underneath, a characteristic shared with *Aplectrum*, but *Tipularia* leaves are ovate, < 10 cm long, and are not notably plicate along the veins (vs. *Aplectrum*, with leaves narrowly elliptic, 10-20 cm long, and notably plicate along the very prominent, white, cartilaginous veins).

Tipularia discolor (Pursh) Nuttall, Cranefly Orchid. Pd, Cp, Mt (GA, NC, SC, VA): in a wide variety of mesic to rather dry forests; common. July-September. Se. MA, s. NY, OH, IN, and s. MI south to FL and TX. Along with *Goodyera pubescens*, *Tipularia* is one of the commonest orchids in NC (indeed in e. North America). [= RAB, C, F, FNA, G, K, L, W, X; = *T. unifolia* (Muhlenberg) Britton, Sterns, & Poggenburg – S]

Triphora Nuttall 1818 (Three Birds Orchid)

A genus of about 25 species, of e. North America, the West Indies, and Central and South America (Medley in FNA 2002). References: Medley in FNA (2002a); Brown & Pike (2006)=Z.

Triphora trianthophora (Swartz) Rydberg *var.* ***trianthophora***, Three Birds Orchid, Nodding Pogonia, Nodding Ettercap. Mt (GA, NC, SC, VA), Cp, Pd (NC, SC, VA): humid forests and swamps, rhododendron thickets, especially on rotten logs or on humus; rare (GA Rare, NC Watch List, SC Rare, VA Rare). July-September. The species is widespread (but scattered) in e. North America, and south into Central America. Var. *trianthophora* occurs Maine and Ontario west WI, south to FL amd e. TX; disjunct in nc. Mexico; var. *mexicana* (S. Watson) Medley occurs from Mexico south to Central America. The recently named var. texensis P.M. Brown & R.B. Pike needs additional evaluation. The flowers are extremely ephemeral, making the species very difficult to locate. [= Z; = *T. trianthophora* ssp. *trianthophora* – FNA; < *T. trianthophora* – RAB, C, F, G, GW, K, L, S, W, X]

Zeuxine Lindley 1826 (Soldier Orchid)

A genus of about 26 species, of tropical and subtropical Old World (introduced elsewhere). References: Ackerman in FNA (2002a).

* ***Zeuxine strateumatica*** (Linnaeus) Lindley, Lawn Orchid, Soldier Orchid. Cp (GA): lawns, rare, introduced from Asia. [= FNA, GW, K, L]

POACEAE (R. Brown) Barnhart 1895 ***or GRAMINEAE*** A.L. de Jussieu 1789 (Grass Family)

A family of about 670 genera and 10,000 species, cosmopolitan. References: Flora of North America Editorial Committee (2003a)=FNA; Hitchcock and Chase (1950)=HC; Blomquist (1948).

[note: only a small portion of the key to genera complete]

Key A – tribe *Andropogoneae*

1 Leaves ovate-lanceolate, 2-10 cm long, 2.5-7× as long as wide; plants weak-stemmed annuals, branching, decumbent, rooting at the lower nodes; [alien weeds].
  2 Leaves cordate-clasping at base; spikelets not paired, unaccompanied by a vestige ..... ***Arthraxon***
  2 Leaves tapering to a broadly cuneate base; spikelets paired (one of the pair sometimes vestigial) ..... ***Microstegium***
1 Leaves lanceolate to linear, either longer or proportionately narrower; plants either perennial or coarse annuals with erect and mostly unbranched culms.
  3 Spikelets embedded in the thickened rachis (the inflorescence thus like an ear of corn), or fitting into grooves in the thickened rachis (the inflorescence thus cylindrical and resembling a rat's tail), or the pistillate inflorescences enclosed in a hard, bead-like, pearly-white, modified bract.
    4 Spikelets unisexual, with male and female spikelets in separate inflorescences or in different parts of the same inflorescence.
      5 Internode narrower than and more-or-less enclosed by the female spikelet ..... ***Coix***
      5 Internode broader than and more-or-less enclosing the female spikelet.
        6 Racemes of mixed sex, female below, male above ..... ***Tripsacum***
        6 Racemes of single sex ..... ***Zea***
    4 Spikelets, or at least one of each pair, bisexual.
      7 Pedicels fused to the internode; [coarse alien grass of disturbed habitats] ..... ***Rottboellia***
      7 Pedicels free from the internodes; [either a native coarse grass of pinelands or prairie-like areas, or a short alien grass of lawns and disturbed areas].
        8 Sessile spikelet smooth or pitted; culms 50-200 cm tall; [native grass of pinelands or prairie-like areas] .. .. ***Coelorachis***
        8 Sessile spikelet with pectinate margins; culms 5-40 cm tall; [alien grass of lawns and disturbed areas] .... ***Eremochloa***
  3 Spikelets not embedded or fitting into grooves in the rachis, the rachis slender (the spikelets visibly separate and often pedicelled).
    9 Pedicelled spikelet similar to the sessile spikelet, both fertile.
      10 Spikelets falling in pairs together with sections of the disarticulating rachis ..... ***Saccharum***
      10 Spikelets falling separately from the persistent rachis.
        11 Panicle contracted, spikelike; glumes membranous ..... ***Imperata***
        11 Panicle loose; glumes cartilaginous or coriaceous ..... ***Miscanthus***
    9 Pedicelled spikelet differing from the sessile in shape and sex (sometimes represented only by a pedicel).
      12 Spikelets awned, the awn 10-20 cm long.
        13 First glume lacking glands; panicle open, the branches 5-8 cm long ..... ***Chrysopogon***
        13 First glume with a row of punctate, concave glands; panicle contracted, spikelike ..... ***Heteropogon***
      12 Spikelets awned or not, if awned the awn < 5 cm long.
        14 Inflorescence a panicle, the branches not subtended by sheaths.
          15 Pedicelled spikelet represented by pedicel only; apex of sheath bearing 2 auricles 1-10 mm long; [native] ..... ***Sorghastrum***
          15 Pedicelled spikelet present, staminate; apex of sheath truncate; [alien] ..... ***Sorghum***
        14 Inflorescence of 1-13 digitate (whorled) racemes borne at the summit of a peduncle, the peduncle subtended by a raceme sheath.
          16 Racemes 1 per peduncle and raceme sheath ..... ***Schizachyrium***
          16 Racemes 2-13 per peduncle and raceme sheath.

17 Pedicels of the pedicelled (reduced or absent) spikelets terete or slightly flattened and grooved on one side only ..... ***Andropogon***
17 Pedicels of the pedicelled (reduced or absent) spikelets strongly flattened and grooved on both sides, the central portion thin or membranous ..... ***Bothriochloa***

Aegilops Linnaeus 1753 (Goat Grass)

References: Tucker (1996)=Z.

1 Spikelets cylindric; glumes with 4 awns; rachis disarticulating at maturity ..... ***Ae. cylindrica***
1 Spikelets nearly ovate; glumes with 1 awn; rachis not disarticulating at maturity ..... ***Ae. neglecta***

* ***Aegilops cylindrica*** Host, Jointed Goat Grass. Mt, Pd (VA): disturbed areas; uncommon, introduced from s. Europe. [= C, F, G, HC, K, Z]
* ***Aegilops neglecta*** Req. ex Bertoloni, Small Goat Grass. Cp (VA): disturbed areas; rare, introduced from s. Europe. Reported from Arlington County, VA. [= Z; *Ae. ovata* Linnaeus – C, G, HC, apparently misapplied; *Ae. geniculata* Roth – K, apparently misapplied]

* *Aegilops triuncialis* Linnaeus. {MD} [= K] {not keyed at this time; synonymy incomplete}

Agropyron Gaertner 1770
(see *Elymus, Elytrigia, Pascopyrum*)

Agrostis Linnaeus 1753 (Bentgrass)
(also see *Lachnagrostis* and *Polypogon*)

A genus of about 220 species, primarily temperate. References: Tucker (1996)=Z.

1 Palea 1/2-3/4 as long as the lemma, 0.6-1.2 mm long; plants introduced, often (though not always) in disturbed habitats; plants flowering (collectively) June-October; [subgenus *Agrostis*].
  2 Ligule mostly 0.5-2 mm long, truncate; panicle branches naked towards the base, diffuse when in fruit, the spikelets well-separated ..... ***A. capillaris***
  2 Ligule mostly 2.5-6 mm long, acute, rounded, or truncate; panicle branches (some of them) with spikelets to near the base, the spikelets usually agglomerated.
    3 Leaves 3-8 mm wide; inflorescence triangular-ovoid, the branches widely spreading at maturity, usually reddish; plant with rhizomes, without stolons ..... ***A. gigantea***
    3 Leaves mostly 1-3 mm wide; inflorescence narrowly ovoid, the branches ascending at maturity, usually tan; plant without rhizomes, with or without stolons.
      4 Stolons well developed; leaves mostly < 5 cm long ..... ***A. stolonifera*** *var.* ***palustris***
      4 Stolons poorly developed or absent; leaves mostly > 7 cm long ..... ***A. stolonifera*** *var.* ***stolonifera***
1 Palea < 2/5 as long as the lemma, 0-0.5 mm long; plants native, typically in more or less natural habitats; plants flowering (collectively) March-November; [subgenus *Vilfa*].
  5 Lemma usually awned (sometimes unawned), the awn inserted near the apex, 4-10 mm long, straight, very delicate and flexuous; annual, flowering April-June ..... ***A. elliottiana***
  5 Lemma awned or not, the awn (when present) inserted either near the middle of the lemma or near the apex, 0-6 mm long, straight or bent, neither delicate nor flexuous; perennial, flowering (collectively) March-November.
    6 Lemma with a 3-6 mm long, geniculate awn inserted near the middle; [of high elevation rock outcrops] ..... ***A. mertensii***
    6 Lemma awnless or with a 0-3 mm long, straight awn inserted near the tip; [of various habitats].
      7 Spikelets 1.2-2 mm long; anthers 0.3-0.6 mm long; plants flowering March-July ..... ***A. hyemalis***
      7 Spikelets (1.8-) 2.2-3.5 (-3.7) mm long; anthers (collectively) 0.3-1.2 mm long; plants flowering June-November.
        8 Leaves mostly involute, 1-2 (-3) mm wide; panicle branches mostly forking well beyond the middle ..... ***A. scabra***
        8 Leaves flat, 2-6 mm wide; panicle branches mostly forking at or below the middle.
          9 Lemma 1.8-3 mm long, minutely but copiously scabrous (at 20× or more); anthers 0.7-1.2 mm long; spikelets (2.3-) 2.7-3.5 (-3.7) mm long, usually clustered near the tips of the branchlets; panicle branches scabrous; culms to 15 dm tall; [of wet savannas and other wet habitats of the Coastal Plain] ..... ***A. altissima***
          9 Lemma 1.4-2 mm long, glabrous; anthers 0.3-0.6 mm long; spikelets (1.8-) 2.2-2.7 (-3.2) mm long, usually not clustered near the tips of the branchlets; panicle branches glabrous to scabrous; culms to 10 dm tall; [of various habitats, nearly throughout our area] ..... ***A. perennans***

Agrostis altissima (Walter) Tuckerman, Coastal Bog Bentgrass. Cp (GA, NC, SC, VA), Mt (VA): wet savannas, sinkhole ponds, edges of swamp forests; rare (NC Watch List, VA Watch List). October-November. MA (?) and NJ south to se. LA, primarily on the Coastal Plain. [= F, HC, Z; < *A. perennans* – RAB, FNA GW, K; = *A. perennans* var. *elata* (Pursh) A. Hitchcock – C, G, S]

* ***Agrostis capillaris*** Linnaeus, Rhode Island Bentgrass, Colonial Bentgrass, Browntop. Mt (NC, SC, VA), Pd, Cp (VA): meadows, roadsides, disturbed areas; uncommon, introduced from Europe (and possibly n. North America). June-August. [= C, FNA, K, Z; = *A. tenuis* Sibthorp – RAB, G, HC, S, W; > *A. tenuis* var. *tenuis* – F]

Agrostis elliottiana J.A. Schultes, Elliott's Bentgrass, Southern Bentgrass. Pd, Cp (GA, NC, SC, VA), Mt (GA, NC, SC): dry soils of barrens, fields, and rock outcrops; uncommon (VA Watch List). April-June. MD west to s. OH, and e. KS, south to panhandle FL and c. TX. [= RAB, C, F, FNA, G, HC, K, S, W, Z]

* ***Agrostis gigantea*** Roth, Redtop, Black Bentgrass. June-October. Mt, Pd (GA), {provinces} (SC, VA). [= C, F, FNA, K, W, Z; < *A. stolonifera* – RAB, GW; = *A. stolonifera* Linnaeus var. *major* (Gaudin) Farwell – G; = *A. alba* – HC, misapplied; >< *A. alba* – S, misapplied]

Agrostis hyemalis (Walter) Britton, Sterns, & Poggenburg, Ticklegrass, Small Bentgrass. Mt, Pd, Cp (GA, NC, SC, VA: roadsides, other disturbed habitats; common. March-July. [= F, FNA, K, Z; < *A. hyemalis* – RAB (also see *A. scabra*); = *A. hyemalis* var. *hyemalis* – C, G; = *A. hiemalis* – GW, HC, orthographic variant; < *A. hiemalis* – S, W, orthographic variant (also see *A. scabra* var. *scabra*]

Agrostis mertensii Trinius, Arctic Bentgrass. Mt (NC, VA): in thin soil of high elevation rocky summits; rare (NC Rare). July-August. Circumboreal, in North America south to ME (Mt. Katahdin), NH (White Mountains), VT, NY (Adirondack Mountains), WV (Spruce Knob), TN (Roan Mountain, Mt. Leconte), NC (Roan Mountain, Big Yellow Mountain, Black Mountains), Québec, British Columbia, CO, UT (?), and AK. [= C, FNA, K, W, Z; > *A. borealis* Hartman – RAB, HC, S; > *A. borealis* Hartman var. *americana* (Scribner) Fernald – F, G]

Agrostis perennans (Walter) Tuckerman, Upland Bent, Autumn Bentgrass. Mt, Pd, Cp (GA, NC, SC, VA): . August-October. * ***Alopecurus pratensis*** Linnaeus, Meadow Foxtail. Mt (NC, VA), Pd (GA): roadsides, fields; rare, native of Eurasia. May-July. Reported for Piedmont of nc. GA (Jones & Coile 1988), for scattered locations in PA (Rhoads & Klein 1993), and for VA, KY, WV, MD, and DE (Kartesz 1999). [= C, F, G, HC, K]

Ammophila Host (Beach-grass)

A genus of 2 species, north temperate. References: Tucker (1996)=Z.

1 Ligule 10-30 mm long ..... ***[A. arenaria]***
1 Ligule 1-3 mm long ..... ***A. breviligulata***

Ammophila breviligulata Fernald, American Beach-grass. Cp (NC, *SC, VA): dunes; common. August-September. Newfoundland south to about Cape Hatteras, Dare County, NC, and on shores around the Great Lakes; planted further south. As a native grass, *Ammophila* ranged south only to NC, where it was rare; it is now commonly planted ("sprigged") in the Carolinas as a sand-binder and is now common south into SC. [= RAB, C, F, G, HC, K, S, Z]

* *Ammophila arenaria* (Linnaeus) Link, European Beach-grass, is introduced in MD and PA (Kartesz 1999). [= C, F, HC, K]

Amphicarpum Kunth (Peanut-grass, Goober-grass)

The genus consists only of the two species treated here, remarkable for their dimorphic spikelets, some of them cleistogamous and subterranean ("goobers"), others aerial and chasmogamous. A series of publications over the past century make *Amphicarpum* one of the best studied "useless" grasses anywhere (Holm 1896; Weatherwax 1934; Gray & Fairbrothers 1971; McNamara & Quinn 1977; Cheplick & Quinn 1982, 1983, 1986, 1987, 1988a, 1988b; Cheplick 1989). References: Wipff in FNA (2003a).

1 Leaf blades hirsute with pustular-based hairs on both surfaces, the margins ciliate (and also slightly cartilaginous-thickened); [of moist to wet, peaty or sandy-peaty soils]..... ***A. amphicarpon***
1 Leaf blades glabrous, the margins cartilaginous-thickened; [of seasonally flooded natural ponds]..... ***A. muhlenbergianum***

Amphicarpum amphicarpon (Pursh) Nash, Pinebarrens Peanut-grass, Pinebarrens Goober-grass. Cp (GA, NC, SC, VA), Pd (VA): wet, peaty, open soils, especially peat-burns in pocosin edges, primarily in the outer Coastal Plain, responding strongly to fire; uncommon, rare in VA (VA Rare). August-October. An Atlantic Coastal Plain endemic, scattered and rather rare, from e. MA to GA. If one carefully excavates young plants in spring or summer, they will generally be found to be connected to the remnants of the previous year's subterranean spikelet. [= FNA; = *Amphicarpum purshii* Kunth – RAB, C, F, G, GW, HC, K; = *Amphicarpon amphicarpon* (Pursh) Nash – S]

Amphicarpum muhlenbergianum (J.A. Schultes) Hitchcock, Florida Peanut-grass, Florida Goober-grass, Blue Maiden-cane. Cp (GA, NC, SC): clay-based Carolina bays in the inner Coastal Plain; rare (NC Rare, SC Rare). August-October. A Southeastern Coastal Plain endemic: FL and s. AL north to se. NC, rare north of s. GA. First found in NC in the late 1980's by M. Boyer. [= RAB, FNA, GW, HC; = *A. muehlenbergianum* – K, orthographic variant; = *Amphicarpon floridanum* Chapman – S]

Andropogon Linnaeus 1753 (Broomsedge, Bluestem)
(also see *Bothriochloa* and *Schizachyrium*)

A genus of about 100-110 species, mainly tropical.

The difference between this treatment and that in RAB may cause some users to react with skepticism, dismay, or alarm, but I am confident that it represents a much truer description of the genus. Campbell's work (1983, et seq.) has greatly clarified the taxonomy of *Andropogon* in e. North America. Great confusion and disagreement were previously the rule in dealing with the *A. virginicus-A. glomeratus* complex. Campbell's careful morphologic work has provided workable technical characters which distinguish the taxa he recognizes.

I have generally followed Campbell (1983, et seq.) in his circumscriptions of taxa. I disagree, however, with his strongly morphologic species concept and the basis for his decisions regarding the rank of the taxa (species, variety, and "variant," an informal, English name for a subvarietal entity). Campbell bases the rank recognition of taxa on their "morphological distance" from one another, as determined by the sum of non-matching characters out of 33 characters analyzed. In general, he regards species as separated by a morphologic distance of 9 or more, varieties by 6 or more, and variants by 3 or more. Such an approach fails to take into account additional evidence of the ecological preferences, geographic distributions, reproductive isolation, evolutionary pathways, and population biology of the taxa.

Evidence presented by Campbell (1983) is useful in determining a more meaningful assignment of taxonomic rank. For instance, he states that "there are ample opportunities for gene flow between taxa because they frequently grow together and flower at the same time of day and (mostly) at the same time of year. I have observed two taxa growing within one to three meters of one another over our hundred times. In only five of these opportunities for hybridization were there plants whose intermediate morphology suggested that they were hybrids. In the rare instances where hybridization does take place, there are few mature hybrid individuals. I have found only twelve putative hybrid individuals in the five localities where hybridization is suspected. The parents outnumber these hybrids by between five and one hundred or more to one." In discussing *A. virginicus* var. *glaucus* (here treated as *A. capillipes*) he states "the drylands variant ... produces generally shorter raceme sheaths, racemes, and spikelets; its flowers are more frequently chasmogamous, and unlike the wetlands variant, it has no hairs below the raceme sheath. In addition, it grows in better-drained soil and has a narrower geographic range ... I have seen these taxa growing within one to three meters of one another at three localities in northwestern Florida. At only one of these was there difficulty in classifying any individual: a single plant on a slope between a bog inhabited by the wetlands variant and a roadside lined with the drylands variant..."

Some additional examples would be Campbell's discussion of several closely related taxa in the *A. glomeratus* complex. "*Andropogon glomeratus* var. *glomeratus* and the robust variant of var. *pumilus* have inflorescences so similar in shape that most previous workers have united them and have overlooked the differences between them. The robust variant is taller, usually with rather smooth sheaths and with shorter, more ciliate, and darker ligules, narrower raceme sheaths, and lower glume keels that are scabrous below the middle. Although both taxa grow in wet sites, the robust variant is weedier, shows a greater tolerance for drier conditions and various soil types, and has a wider geographic range." His discussion of *A. glomeratus* var. *glaucopsis* and var. *hirsutior* is also worth repeating. "Often the two grow together in populations of thousands of individuals. Because they grow together so frequently and are morphologically so alike, the possibility that they are not distinct taxa but merely genetic segregates of one another has been carefully considered. Based on observations of several hundred seedlings grown from seeds from both taxa (growing together in nature), there is no evidence for [mere] genetic segregation. The glaucousness/greenness and pubescence/glabrousness of the stem sheaths are discernible in the seedlings within a few weeks of germination."

Taxa differing in numerous morphologic characters, with different (though overlapping) geographic ranges, with different ecological preferences (often rather narrowly segregated by hydrology), and (when they do occur in proximity to one another) showing little or no sign of introgression or hybridization are probably better treated as biological species. Thus, I have treated a number of Campbell's varieties as species. Several of his "variants" also seem to warrant taxonomic recognition, at varietal or specific rank; in fact, he subsequently elevated several (Campbell 1986). References: Campbell (1983)=Z; Campbell in FNA (2003a). Key adapted in part from Z.

Identification notes: A thorough understanding of the architecture of the inflorescences of *Andropogon* is necessary in order to identify them successfully. The parts will be described, beginning from the apex of a branch of the inflorescence. Spikelets occur in pairs, the sessile spikelet (usually just referred to as the **spikelet**) and the **pedicelled spikelet**, which is usually vestigial or absent (except in *A. gerardii*) and sterile (except in *A. gerardii*, where it is staminate). The first or **lower glume** of the sessile spikelet has two **keels**, and the presence and location of antrorse prickle hairs (scabrousness) is an important character in the *A. glomeratus* complex. The length of the sessile spikelet is an important character; it should be measured exclusive of the **awn**, borne at the apex of the lemma. Awn length is also a useful taxonomic character. The pedicelled spikelet is borne on the **pedicel**, which is attached at the base of the sessile spikelet and typically angles away from it at about a 45 degree angle. The **rachis internode** extends from the base of one sessile spikelet to the next sessile spikelet above, breaking apart (upon dehiscence) just below the next spikelet and remaining attached to the sessile spikelet below. The **dispersal unit** consists of a sessile spikelet sitting in the V shape formed by (on one side) the pedicel and pedicelled spikelet and (on the other side) the rachis

internode. Both the pedicel and the rachis internode are usually pubescent with long hairs, and the color of those hairs and their distribution are useful characters.

While the dispersal units are still attached to one another, the rachis internodes form a continuous and more-or-less straight **rachis**. The dispersal units attached together in an unbranched sequence are termed a **raceme**, whose length is a useful character. Two or more racemes are attached digitately at the summit of the **peduncle** (in *Schizachyrium* only a single raceme is found). The number of racemes attached is an important character. A **raceme sheath** subtends the peduncle, often more or less surrounding the peduncle and the racemes. The length of the peduncle (distance between the points of attachment of the raceme sheath and the racemes) is an important character. The length and width (at its widest point) of the raceme sheath are very useful characters, used throughout the key. The racemes, peduncle and subtending raceme sheath make up an **inflorescence unit**. The overall inflorescence is more-or-less complexly branched; its overall size and shape are very useful in recognizing the various taxa, but variation in such a subjective (and environmentally plastic) character has added to the taxonomic confusion in *Andropogon*. The use of inflorescence shape in the key has been minimized, but is often mentioned in the discussion of each species. The number of inflorescence units per plant varies from species to species, in some species rarely exceeding 10, in others ranging upwards to 500 or 600. The absence or presence of hairs immediately below the raceme sheath is useful in some groups.

There are several important characters of the foliage. *A. capillipes* and *A. glaucopsis* have culm sheaths and leaf blades that are strongly glaucous; this is usually very obvious, but can be tested for by running the finger along the surface of the leaf (a white coating of wax will come off on the finger). The key often calls for the ligule length; measure the longest portion of the undivided portion of the ligule. The ligule often has an erose or ciliate upper margin; measure the length of the ciliations. The length of leaf blade is measured from the ligule to the leaf apex; do not include the leaf sheath, which is often long and (especially late in the year) only loosely sheathing the culm or even divergent it. Whether the culm is antrorsely scabrous or smooth is better determined by touch than by sight. Choose several mid-culm sheaths, run one's finger downwards and upwards along the sheath surface (near the collar is best). If the sheath is antrorsely scabrous one will feel a somewhat greater resistance to moving the finger downwards than upwards.

1 Pedicellate spikelet staminate, as large as the sessile, fertile spikelet; sessile spikelets > 7 mm long; [section *Andropogon*] ....***A. gerardii***

1 Pedicellate spikelet sterile, vestigial or absent; sessile spikelets < 7 mm long; [section *Leptopogon*].

2 Leaves strongly glaucous (often nearly white with a powdery wax that can be rubbed off on the fingers), glabrous.

3 Ligules (0.9-) 1.5 (-2.0) mm long, with ciliations 0-0.2 mm long; leaf blades usually (33-) avg. 40 (-75) cm long; pubescence beneath raceme sheaths moderate to dense; raceme sheaths (2.0-) 2.4-3.6 (-4.4) cm long, (1.3-) 2.0-2.5 (-3.0) mm wide....***A. glaucopsis***

3 Ligules (0.2-) 0.4 (-0.5) mm long, with ciliations 0.3-1.2 mm long; leaf blades (12-) avg. 19 (-38) cm long; pubescence beneath raceme sheaths absent to dense; raceme sheaths (2.1-) 2.9-4.3 (-6.0) cm long, (2.7-) 3.1-3.8 (-5.5) mm wide.

4 Summit of branchlet below attachment of raceme sheath pubescent with hairs 2-4 mm long; raceme sheaths (2.4-) 3.2-4.8 (-6.0) cm long; spikelets (3.0-) 3.5-3.9 (-4.4) mm long; racemes (1.5-) 2.0-3.0 (-4.0) cm long; leaves 2.5-6.5 mm wide, averaging 5 mm; upper floret lemma awn 0.9-2.1 mm long, averaging 1.4 mm ....***A. capillipes* var. *1 ["wetland variant"]***

4 Summit of branchlet below attachment of raceme sheath glabrous; raceme sheaths (2.1-) 2.6-3.8 (-4.9) cm long; spikelets (2.6-) 3.2-3.5 (-3.9) mm long; racemes (1.4-) 1.7-2.4 (-3.2) cm long; leaves 2-5 mm wide, averaging 3.5 mm; upper floret lemma awn 0.6-1.5 mm long, averaging 1.1 mm..... ....***A. capillipes* var. *2 ["dryland variant"}***

2 Leaves green (to somewhat glaucous, but never powdery white), pubescent or glabrous.

5 Upper culm sheaths distinctly broadened and strongly overlapping, often largely hiding the raceme sheaths before senescence (but in some forms with the raceme sheaths strongly exserted); culms mostly < 1 m tall (to 1.4 m tall) . ....***A. elliottii***

5 Upper culm sheaths reduced, not strongly overlapping, not hiding the raceme sheaths after anthesis; culms mostly > 1 m tall (except *A. perangustatus*, *A. tracyi*, and small forms of *A. virginicus*).

6 Many or all peduncles longer than the subtending raceme sheaths at maturity, racemes then fully exserted above the apex of the raceme sheath.

7 Inflorescence branches arching outwards in pronounced curves; racemes (1.2-) 1.5-2.1 (-2.6) cm long; awn (0.2-) avg. 0.7 (-1.1) cm long; spikelets (4.1-) 4.4-4.6 (-5.0) mm long.....***A. brachystachyus***

7 Inflorescence branches erect; racemes (2.2-) 2.6-6 cm long; awn 0.5-2.0 cm long; spikelets (4.3-) 4.9-6.5 (-7.5) mm long.

8 Lower glumes more or less folded; stamen 1; racemes (2.2-) 2.6-4.3 (-5.3) cm long; awn (0.5-) avg. 0.8 (-1.6) cm long; spikelets (4.3-) 4.9-5.4 (-6.1) mm long.....***A. arctatus***

8 Lower glumes flat; stamens 3; racemes 3-6 cm long; awn 1-2 cm long; spikelets (4.5-) 5-6.5 (-7.5) mm long .....***A. ternarius* var. *ternarius***

6 Peduncles all shorter than the subtending raceme sheaths at maturity, at least the bases of the racemes not exserted above the apex of the raceme sheath.

9 Inflorescence units with (2-) 4-7 (-13) racemes; raceme sheaths (4.1-) 5.3-8.0 (-10-1) mm wide; hairs of the rachis internode and pedicel yellow-tawny when dry .....***A. mohrii***

9 Inflorescence units with 2-5 (-7) racemes; raceme sheaths (1.5-) 2.0-4.8 (-6.3) mm wide; hairs of the rachis internode and pedicel gray to whitish when dry.

10 Postflowering peduncles < 10 mm long.

11 Culm sheaths antrorsely scabrous (often hirsute as well); leaf blades usually > 35 cm long.

12 Ligules (0.6-) 0.8 (-1.3) mm long (usually < 1 mm long), with ciliations 0.2-0.9 mm long; raceme sheaths (1.5-) 2.0-2.5 (-3.0) mm wide (usually < 2.5 mm wide); keels of first glume often scabrous below the middle.....***A. tenuispatheus***

12 Ligules (0.7-) 1.2 (-2.2) mm long (usually > 1 mm long), with ciliations 0.0-0.3 mm long; raceme sheaths (2.0-) 2.4-3.4 (-4.7) mm wide (usually > 2.5 mm wide); keels of first glume scabrous only above the middle, smooth below.

13 Inflorescences oblong to obpyramidal; spikelets (3.8-) 4.1-4.4 (-5.0) mm long; anthers usually not marcescent within spikelet; mature peduncles (4 -) 11-35 (-60) mm long (usually some of them > 10 mm long).....***A. glomeratus*** *var.* ***glomeratus***

13 Inflorescences (linear to) oblong; spikelets (3.4-) 3.6-3.8 (-4.6) mm log; anthers usually marcescent within spikelets; peduncles (2-) 3-5 (-8) mm long..... .....***A. glomeratus*** *var.* ***hirsutior***

11 Culm sheaths not scabrous (often hirsute); leaf blades < 35 cm long (except in *A. glomeratus* var. *pumilus*).

14 Leaves glabrous.

15 Ligules (0.8-) 1.1 (-1.5) mm long, with ciliations 0-0.1 mm long; basal leaves often filiform, < 1.5 mm wide, strongly erect .....***A. perangustatus***

15 Ligules (0.2-) 0.5 (-0.8) mm long, with ciliations 0.2-1.3 mm long; basal leaves usually > 2 mm wide, soon arching.

16 Culm internodes green (or glaucous just below the node only); raceme sheaths (2.2-) 2.5-3.8) (-4.5) cm long, (1.7-) 2.4-3.1) (-4.0) mm wide; peduncles (1-) 4-9 (-30) mm long; racemes 2 (-3) per inflorescence unit..... .....***A. virginicus*** *var.* ***decipiens***

16 Culm internodes glaucous; raceme sheaths (2.8-) 3.3-4.7 (-6.7) cm long, (3.0-) 3.2-3.8 (-5.2) mm wide; peduncles (2-) 3-4 (-6) mm long; racemes 2-4 (-7) per inflorescence unit, at least some inflorescence units (especially at culm and branch apices) with 3 or more racemes..... ..... ***A. virginicus*** *var.* ***virginicus*** *['smooth variant']*

14 Leaves pubescent, at least on the margin near the collar.

17 Keels of first glume often scabrous below the middle; leaves usually > 44 cm long... .....***A. tenuispatheus***

17 Keels of first glume scabrous only above middle; leaves usually < 31 cm long.

18 Pubescence of young culm sheaths appressed; spikelets usually > 4 mm long; hairs on rachis internode and sterile pedicel dense, long; callus hairs 1.5-5 mm long.....***A. longiberbis***

18 Pubescence of young culm sheaths spreading; spikelets mostly < 4 mm long; hairs on rachis internode and sterile pedicel rather sparse and short; callus hairs 1-2.5 mm long.

19 Raceme sheaths (2.2-) 2.5-3.8 (-4.5) cm long, (1.7-) 2.4-3.1 (-4.0) mm wide; racemes 2 (3) per inflorescence unit; spikelets (3.0-) 3.3-3.6 (-4.0) mm long.....***A. virginicus*** *var.* ***decipiens***

19 Raceme sheaths (2.3-) 3.4-5.2 (-6.7) cm long, (2.7-) 3.3-4.0 (-5.5) mm wide; racemes 2-5 (-7) per inflorescence unit; spikelets (2.9-) 3.7-3.9 (-4.7) mm long.....***A. virginicus*** *var.* ***virginicus***

10 Postflowering peduncles > 15 mm long.

20 Culm sheaths antrorsely scabrous (often hirsute as well).

21 Ligules (1.0-) 1.2 (-2.0) mm long, with ciliations 0-0.3 mm long; keels of first glume scabrous only above middle.....***A. glomeratus*** *var.* ***glomeratus***

21 Ligules (0.6-) 0.8 (-1.3) mm long, with ciliations 0.2-0.9 mm long; keels of first glume often scabrous below middle .....***A. tenuispatheus***

20 Culm sheaths not scabrous (often hirsute).

22 Culms < 1.2 m tall; leaf blades < 30 cm long and < 3 mm wide; inflorescence units rarely > 20/culm.

23 Raceme sheaths (2.2-) 2.5-3.8 (-4.5) cm long; spikelets (3.0-) 3.3-3.6 (-4.0) mm long; leaf blades (2.5-) 3.6 (-5.5) mm wide .....***A. virginicus*** *var.* ***decipiens***

23 Raceme sheaths (2.6-) 4.1-6.6 (-8.5) cm long; spikelets (3.0-) 3.4-5.1 (-5.5) mm long; leaf blades (0.8-) 1.8 (-3.0) mm wide.

24 Ligules (0.8-) 1.1 (-1.5) mm long, with ciliations 0-0.1 mm long.....

.....***A. perangustatus***

24 Ligules (0.2-) 0.4 (-0.5) mm long, with ciliations (0.1-) 0.2-0.8 mm long.....
.....***A. tracyi***

22 Culms usually > 1.2 m tall; leaf blades often > 30 cm long and > 3 mm wide; inflorescence units usually > 20/culm.

25 Inflorescence branches arching outwards in pronounced curves; awn mostly < 1 cm long; spikelets (4.1-) 4.4-4.6 (-5.0) mm long; anther > 1.7 mm long.....
.....***A. brachystachyus***

25 Inflorescence branches erect; awn mostly >1 cm long; spikelets (3.0-) 3.3-3.8 (-4.5) mm long; anther < 1.5 mm long.

26 Raceme sheaths (1.5-) 2.0-2.5 (-3.0) mm wide; keels of first glume often scabrous below middle; culms to 2.5 m tall; leaves to 109 cm long and 9.5 mm wide .....***A. tenuispatheus***

26 Raceme sheaths (1.7-) 2.4-3.1 (-4.0) mm wide; keels of first glume scabrous only above middle; culms < 1.7 m tall; leaves < 35 cm long and 5.5 mm wide...
.....***A. virginicus*** *var.* ***decipiens***

* ***Andropogon arctatus*** Chapman, Florida Bluestem. Cp (NC): moist disturbed ground; rare, apparently introduced from farther south (NC Watch List). This curious record (the specimen at GH, collected by Randolph and Randolph in 1922 in Pamlico County, NC, annotated as *A. arctatus* by Campbell) is likely a waif. The species is native to pinelands from n. FL west to w. panhandle of FL and adjacent s. AL, south to s. FL. [= FNA, HC, K, S, Z]

Andropogon brachystachyus Chapman, Shortspike Bluestem. Cp (GA, SC): moist to wet pinelands, natural pond margins, bogs, disturbed roadsides; rare (GA Special Concern). Se. SC (McMillan et al. 2002) south to FL, south to s. FL, west to e. FL Panhandle. *A. brachystachyus* is considered by some to range north to NC. [= FNA, K, Z; = *A. brachystachys* – GW, HC, S, orthographic variant]

Andropogon capillipes Nash *var.* ***1***, Wetland White Bluestem. Cp (GA, NC, SC): wet savannas, ditches adjacent to savannas, depressional wetlands; common. September-October. S. NJ south to s. FL and west to e. TX; also in the Bahamas (Sorrie & LeBlond 1997). Campbell (1983) informally describes two "variants" of this species (which he treats at the varietal level, as *A. virginicus* var. *glaucus*). *A. capillipes* is clearly a species distinct from *A. virginicus*; moreover, the substantial morphological and ecological differences between Campbell's two "variants" (which he describes as nearly always sharply distinct, even when growing in close proximity) warrant recognition as good species, or at least as varieties. [< *A. virginicus* – RAB; < *A. virginicus* var. *glaucus* Hackel – F, FNA; < *A. capillipes* – GW, HC, K, S; = *A. virginicus* var. *glaucus* "wetlands variant" – Z; = *A. virginicus* var. *dealbatus* Mohr ex Hackel]

Andropogon capillipes Nash *var.* ***2***, Dryland White Bluestem. Cp (GA, NC, SC): dry to mesic pine flatwoods, sandhills, adjacent roadbanks; uncommon. September-October. Se. NC south to s. FL and west to s. AL. See *A. capillipes var. 1* for discussion of these two taxa. The type of *A. capillipes* (collected by A.H. Curtiss in FL) is of this taxon; Nash (1900) states that it occurs "in dry soil, North Carolina to Florida" and emphasizes that it is "abundantly distinct from *A. virginicus*, to which it is related." [< *A. virginicus* – RAB; < *A. virginicus* var. *glaucus* Hackel – F, FNA; < *A. capillipes* – GW, HC, K, S; = *A. virginicus* var. *glaucus* "drylands variant" – Z]

Andropogon elliottii Chapman. Cp, Pd, Mt (GA, NC, SC, VA): dry to moist forests, woodlands, fields, and disturbed areas; common (uncommon in Mountains). September-October. Widespread in se. United States, from s. NJ west to s. IN, s. IL, s. MO, south to s. FL and TX. Campbell (1983) argued that the name *A. elliottii* should be replaced by *A. gyrans*; Ward (2004c) argues for retention of the traditional *A. elliottii*. [= HC; > *A. elliottii* – RAB, S; > *A. campyloracheus* Nash – RAB, S; = *A. gyrans* Ashe – C, W; = *A. gyrans* var. *gyrans* – FNA, K, Z; > *A. elliottii* var. *elliottii* – F, G; > *A. elliottii* var. *gracilior* Hackel – F, G; > *A. elliottii* var. *projectus* Fernald & Griscom – G]

Andropogon floridanus Scribner, Florida Bluestem. Cp (GA): longleaf pine sandhills; rare. September-October. S. GA west to FL Panhandle, south to s. FL. Reported for e. and s. GA (FNA, Jones & Coile 1988). [= FNA, HC, K, S] {not keyed at this time}

Andropogon gerardii Vitman, Big Bluestem, Turkeyfoot. Cp, Pd, Mt (GA, NC, SC, VA): in a wide variety of habitats, usually rather dry, such as sandhills, glades, cliffs, and rock outcrops, in the Piedmont in woodlands, former prairie-like sites, woodlands, open forests, and river-scour grasslands, in the Mountains in glades, riverside scour areas, and rarely in grassy balds, ascending to at least 1600 m over mafic rocks (on Old Field Bald, Watauga and Ashe counties, NC); common. July-October. Québec west to Saskatchewan, south to FL and AZ. Some favor treating *A. hallii* Hackel as a subspecies of *A. gerardii* (Wipff 1996c). I do not agree, but if that course is followed, then our eastern taxon should be known as *A. gerardii* ssp. *gerardii*. [= RAB, C, FNA, G, GW, HC, K, W; > *A. gerardii* var. *gerardii* – F; = *A. provincialis* Lamarck – S]

Andropogon glaucopsis Elliott, Chalky Bluestem. Cp (GA, NC, SC, VA): wet savannas, pine flatwoods, ditches, wet disturbed sites; uncommon (VA Watch List). September-October. Se. VA south to c. peninsular FL and west to e. TX. The extent of the western Gulf Coastal Plain distribution (to the West Gulf Coastal Plain of w. LA and e. TX) is based on specimens (at BRIT) and sight records (B. Sorrie, pers. comm.). Although sometimes included in the past in either *A. glomeratus* or *A. virginicus*, this species is distinctive and easily recognized in the field (even from a car at 60 m.p.h.) by the combination of blue color, height of well over 1 m (taller than the other glaucous bluestems), and semi-bushy inflorescence. [= GW, K; < *A. virginicus* – RAB; = *A. virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – F, HC; = *A. glomeratus* var. *glaucopsis* (Elliott) A.S. Hitchcock – FNA, Z; < *A. glomeratus* – S]

Andropogon glomeratus (Walter) Britton, Sterns, & Poggenburg *var. **glomeratus***. Cp, Pd, Mt (GA, NC, SC, VA): swamps, wet savannas, pine flatwoods, wet disturbed sites; common. September-October. S. MA south to c. peninsular FL and west to s. MS, primarily on the Coastal Plain, but scattered inland to w. PA, WV, c. KY, c. TN and AR. [= FNA, K, Z; < *A. virginicus* – RAB; = *A. virginicus* var. *abbreviatus* (Hackel) Fernald & Griscom – C, F, G, GW; < *A. glomeratus* – HC, S, W]

Andropogon glomeratus (Walter) Britton, Sterns, & Poggenburg *var. **hirsutior*** (Hackel) C. Mohr. Cp (GA, NC, SC, VA): wet savannas, pine flatwoods, adjacent ditches, other wet disturbed sites; common. September-October. E. MD south to c. peninsular FL west to se. LA. This taxon should be recognized at the specific level, but the appropriate combination has not been made. [= FNA, K, Z; < *A. virginicus* – RAB; *? A. virginicus* var. *glaucopsis* (Elliott) A.S. Hitchcock – G, misapplied; = *A. virginicus* var. *hirsutior* (Hackel) A.S. Hitchcock; < *A. glomeratus* – HC, S]

Andropogon longiberbis Hackel, Longbeard Bluestem. Cp (GA, NC, SC): dry sandy soils of sandhills and dunes; rare (GA Special Concern, NC Watch List). September-October. Se. NC south to s. and w. FL, and in the Bahamas. [= FNA, HC, K, S, Z]

Andropogon mohrii (Hackel) Hackel ex Vasey, Tawny Bluestem, Bog Bluestem. Cp (GA, NC, SC, VA): wet savannas, sphagnous bogs; rare (GA Special Concern, NC Rare, VA Rare). September-October. Se. VA south to n. FL, west to LA. [= RAB, C, F, G, GW, HC, K, S; = *A. liebmannii* Hackel var. *pungensis* (Ashe) C.S. Campbell – FNA, Z]

Andropogon perangustatus Nash, Narrow-leaved Bluestem. Cp (GA, NC, SC, VA): clay-based Carolina bays and boggy wetlands; rare (NC Watch List, VA Watch List). August-October. E. VA south to c. peninsular FL, east to e. TX. Growth form, general appearance, and habitat (dense bluish tussocks with very narrow leaves and long ligules, growing in wet areas such as clay-based Carolina bays) make *A. perangustatus* readily recognizable. [= HC, S; = *A. gyrans* Ashe var. *stenophyllus* (Hackel) C.S. Campbell – FNA, K, Z; = *A. elliottii* Chapman var. *stenophyllus* (Hackel) D.B. Ward]

Andropogon tenuispatheus (Nash) Nash. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): maritime wet grasslands, brackish marsh edges, moist disturbed sites; common (VA Watch List). September-October. Se. VA and c. OK south to s. FL and w. TX, also south into Central America and the Caribbean. [< *A. virginicus* – RAB; = *A. glomeratus* (Walter) Britton, Sterns, & Poggenburg var. *pumilus* Vasey ex Dewey – FNA, K, Z ("robust variant"); < *A. glomeratus* – HC, S]

Andropogon ternarius Michaux *var. **ternarius***, Splitbeard Bluestem. Cp, Pd, Mt (GA, NC, SC, VA): dry to moist soils; common (uncommon in Mountains). September-October. Var. *ternarius* ranges from DE west to KY and s. MO, south to FL and TX. Var. *cabanisii* (Hackel) Fernald & Griscom is endemic in s. and c. peninsular FL. [= FNA, K, Z; < *A. ternarius* – RAB, C, G, W; > *A. ternarius* var. *ternarius* – F; > *A. ternarius* var. *glaucescens* (Scribner) Fernald & Griscom – F; = *A. ternarius* – HC, S]

Andropogon tracyi Nash, Tracy's Bluestem. Cp, Pd (GA, NC, SC): dry sandy or clayey soils of sandhills, disturbed sites; rare (NC Watch List). September-October. E. NC south to s. FL and west to MS. [= FNA, HC, K, S, Z]

Andropogon virginicus Linnaeus *var. **decipiens*** C.S. Campbell, Deceptive Bluestem. Cp (GA, NC, SC, VA): savannas, flatwoods, maritime wet grasslands, disturbed pinelands; uncommon (VA Watch List). September-October. Se. VA south to s. FL and west to w. FL; also in the Bahamas (Sorrie & LeBlond (1997). [= FNA, K, Z (1986); < *A. virginicus* – RAB, S; < *A. virginicus* var. *virginicus* – F, G, HC; = *A. virginicus* var. *virginicus* – Z (1983 – "deceptive variant")]

Andropogon virginicus Linnaeus *var. **virginicus***, Old-field Broomstraw, Broomsedge, "Sedge Grass", "Sage Grass". Cp, Pd, Mt (GA, NC, SC, VA): old fields, roadbanks, disturbed sites; common. September-October. Widespread, from MA west to MI and e. KA, south to FL and e. TX, and in the Caribbean and Central America. Campbell (1983) recognized 3 "variants" within *A. virginicus* var. *virginicus*; the "deceptive variant" he later (1986) described formally as var. *decipiens* (see above). The "old-field variant" is the common "variant" in our area, occurring abundantly throughout the state. It has green stem internodes and the leaves usually pubescent, at least on the margins near the collar. The "smooth variant" is known only from the Coastal Plain and is apparently rare in our area, known from NC and SC (Berkeley and Marion counties; P. McMillan, pers. comm.). It has glaucous stem internodes and glabrous leaves. It is unclear whether the "smooth variant" warrants taxonomic recognition. [= FNA, K, Z ("oldfield variant" and "smooth variant"); < *A. virginicus* – RAB, S, W; < *A. virginicus* var. *virginicus* – C; < *A. virginicus* var. *virginicus* – G, HC (also see var. *decipiens*); >< *A. virginicus* var. *virginicus* – F; > *A. virginicus* var. *tetrastachyus* (Elliott) Hackel – F]

Anthenantia Palisot de Beauvois (Silkyscale)

A genus of 3 species, of se. North America (or 4-5 species of se. North America and tropical America, if *Leptocoryphium* is included in *Anthenantia*). Clayton & Renvoize (1986) state that "*Anthenantia* is the etymologically correct version of three alternative spellings given by Beauvois." References: Wipff in FNA (2003a); Crins (1991)=Z; Kral (2004)=Y; Clayton & Renvoize (1986).

1 Leaves mostly 3-5 mm wide, ascending to erect, not squarrose (lacking a sharp bend outward at the summit of the sheath), medium green, with a very short taper to a blunt or rounded apex, the lower sheaths crowded and keeled (therefore distichous), generally suffused with purple; spikelets usually purple (fading tan); leaf margins scaberulous .....***A. rufa***

1 Leaves mostly 5-10 mm wide, spreading, usually squarrose (with a sharp bend outward at the summit of the sheath), yellowish green, with a long taper to a sharp apex, the lower sheaths not crowded, keeled, or distichous, green; spikelets usually green (fading yellow); leaf margins papillose-ciliate towards the base .....***A. villosa***

Anthenantia rufa (Nuttall) J.A. Schultes, Purple Silkyscale. Cp (GA, NC, SC): wet savannas in the outer Coastal Plain, seepage bogs and moist sandhill-pocosin ecotones in the fall-line sandhills; rare (NC Watch List, SC Rare). September-October.

Se. NC south to n. FL and west to w. LA. *A. rufa* inhabits much wetter habitats than the similar *A. villosa*, and is more typical of the outer Coastal Plain. Plants without culms are reminiscent of the Liliaceae. [= FNA, Y; = *Anthaenantia rufa* – RAB, GW, HC, K, S, Z, orthographic variant]

Anthenantia villosa (Michaux) Palisot de Beauvois, Green Silkyscale. Cp (GA, NC, SC): sandhills, especially in submesic swales; uncommon (rare in the outer Coastal Plain). September-October. Se. NC south to s. FL and west to e. TX. *A. villosa* is found in drier habitats than *A. rufa*, most typically in upland swales in the sandhills. Kral (2004) has segregated a new species, A. texana Kral, of the w. Gulf Coastal plain, previously confused with *A. villosa*. [= Y; < *Anthaenantia villosa* – RAB, HC, K, S, Z, orthographic variant; < *Anthenantia villosa* – FNA]

Anthoxanthum Linnaeus (Vernal Grass)

References: Tucker (1996)=Z.

1 Annual, geniculate; ligules 0.5-2 mm long; glumes glabrous; leaves 1-2 mm wide ..... ***A. aristatum***
1 Perennial, erect; ligules (1-) 2-3 mm long; glumes villous throughout or at least on the keel; leaves 2-5 mm wide ..... ***A. odoratum***

* ***Anthoxanthum aristatum*** Boissier, Annual Vernal Grass. Cp (NC, SC, VA), Pd, Mt (VA): roadsides, disturbed areas; rare, introduced from Europe. April-June. [= RAB, C, G, HC, K, S, Z; = *A. puelii* Lecoq & Lamotte – F]

* ***Anthoxanthum odoratum*** Linnaeus, Sweet Vernal Grass Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): lawns, roadsides, disturbed areas; common, introduced from Europe. April-June. *A. odoratum* is a familiar grass of suburban areas and roadsides, and its pollen is known as a major cause of spring hay fever. From a letter from Charles Darwin to J.D. Hooker, in June 1855: "Have just made out my first grass, hurrah! hurrah! I must confess that fortune favours the bold, for, as good luck would have it, it was the easy *Anthoxanthum odoratum*: nevertheless it is a great discovery; I never expected to make out a grass in all my life, so hurrah! It has done my stomach surprising good..." [= RAB, C, F, G, HC, S, W, Z; = *A. odoratum* ssp. *odoratum* – K]

Apera Adanson

* *Apera spica-venti* (Linnaeus) Palisot de Beauvois, reported for se. PA (Rhoads & Klein 1993), MD, and KY (Kartesz 1999). [= K]

Aristida Linnaeus 1753 (Three-awn Grass)

A genus of about 250-300 species, widespread in the tropics, subtropics, and warm temperate zones. References: Allred in FNA (2003a); Allred (1986)=Z; Allred (1984, 1985); Peet (1993)=Y; Ward (2001)=X; Henrard (1929)=Q; Kesler, Anderson, & Hermann (2003)=V. Key adapted, in part, from Z.

Identification notes: the awns must be dry and relatively mature to assume their characteristic positions (immature awns and moist mature awns are erect and parallel). It is sometimes useful to dry a collection unpressed. Beware, however, that drying followed by dispersal can take place very quickly under the right conditions (such as the dashboard of a hot car)!

1 Plant a perennial, forming dense tussocks, the leaves primarily basal, usually very numerous, mostly > 3 dm long, 0.5-1.5 mm wide, almost always tightly involute; flowering only in the growing season following fire.
  2 Base of blade and collar (and often the upper sheath) with conspicuous tuft or bearding of woolly to villous pubescence (sometimes deciduous on foliage more than a year old); leaves usually glabrous above the basal 2 cm of the blade; [of s. SC south] ..... ***A. beyrichiana***
  2 Base of blade, collar, and upper sheath lacking a conspicuous tuft of woolly to villous pubescence; leaves with 2 lines of villous pubescence on either side of the midrib on the lower surface extending nearly or entirely the length of the blade (sometimes deciduous on foliage more than a year old); [of n. SC and NC] ..... ***A. stricta***
1 Plant an annual or perennial, forming small tufts (or solitary), the leaves primarily cauline, usually few, mostly < 3 dm long (if as long as 3 dm then > 2 mm wide), flat to slightly folded, but not wiry; flowering not strongly triggered by fire.
  3 First glume 3-7 nerved ..... ***A. oligantha***
  3 First glume 1-2-nerved.
    4 Lateral awns < 8 mm long; plant an annual.
      5 Central awn 1-27 mm long, not spirally coiled at its base (above the awn column), either straight, curving, or contorted (when dry); lateral 2 awns 0-18 mm long, contorted at base and more-or-less divergent.
        6 Central awn (8-) 12-27 mm long; lateral awns (1-) 6-18 mm long ..... ***A. longespica* var. *geniculata***
        6 Central awn mostly 1-10 (-14) mm long; lateral awns 0-5 (-8) mm long ..... ***A. longespica* var. *longespica***
      5 Central awn 3-8 mm long, spirally coiled at its base (above the awn column) like a corkscrew, 1/2 to 3 full turns (when dry); lateral 2 awns 0.7-4 mm long, straight, erect.
        7 First glume 1/2 to 2/3 as long as the second glume; lemma 6-11 mm long, glabrous to scaberulous .....

.....***A. curtissii***

7 First glume as long as or nearly as long as the second glume; lemma 3-8 mm long, sparsely appressed-pubescent.....***A. dichotoma***

4 Lateral awns > 8 mm long; plant an annual or perennial.

8 Sheaths lanose or floccose (the hairs kinked and intertwined); nodes of the panicle axis with tufts of lanose or floccose hairs.....***A. lanosa***

8 Sheaths glabrous to pilose (the hairs straight and usually appressed, not intertwined); nodes of the panicle axis glabrous or pilose.

9 Awn column (the connivent awns twisted together) or lemma beak (slender, narrowed, and twisted portion of lemma body below the awns) 7-30 mm long; lemma body (including the beak, if present) separated from the awns (or awn column) by an articulation zone, the awns (or awn column) disarticulating at maturity from the lemma.

10 Panicle spiciform, broadest near the middle, dense, the spikelets overlapping strongly; awns (10-) 20-30 mm long, borne at the summit of a twisted lemma beak 7-30 mm long; culms simple or with very few branches; plants perennial .....***A. spiciformis***

10 Panicle almost corymbiform, broadest above the middle, open, the spikelets overlapping only slightly; awns 30-40 mm long, not including the 8-15 mm long column formed by the twisting together of the 3 awn bases; culms often much-branched; plants annual .....***A. tuberculosa***

9 Awn column or lemma beak absent or < 7 mm long; lemma body not separated from the awns by an articulation zone.

11 Spikelets borne singly at each node of the main axis, the inflorescence thus a spike or raceme ....***A. mohrii***

11 Spikelets 2 or more per node of the main axis at most nodes (a few nodes may have single spikelets), often with side branches present as well, the inflorescence thus a panicle or raceme.

12 First glume 1/3 to 3/4 as long as the second glume; awns 40-100 mm long..... .....***A. purpurea*** *var.* ***longiseta***

12 First glume > 3/4 as long as the second glume; awns 8-40 mm long.

13 Annual .....***A. longespica*** *var.* ***geniculata***

13 Perennial.

14 Central awn 15-40 mm long; first glume prominently 2-keeled, (8-) 9-14 mm long when mature .....***A. palustris***

14 Central awn 8-25 mm long; first glume either 1-keeled and 6-14 mm long, **or** weakly 2-keeled and 5.5-9 (-10) mm long when mature.

15 Central awn about 2× as thick as the lateral awns, divergent to reflexed; first glume 1-keeled or weakly 2-keeled; [plants of moist to wet habitats].

16 Basal internode of the culm 0.3-0.6 mm wide; most nodes of the inflorescence with 1-2 spikelets; all awns spreading, the central spirally twisted basally and often contorted by as much as 180 degrees (best seen in fresh material); central awn 15-20 mm long, lateral awns 11-16 mm long, the ratio of the lateral:central awn length 0.69-0.80; lemma callus beard 0.6-1.0 mm long.....***A. simpliciflora***

16 Basal internode of the culm 0.7-1.2 mm wide; most nodes of the inflorescence with 3 or more spikelets; central awn spreading to slightly deflexed, not spirally twisted basally, the lateral awns ascending to erect (best seen in fresh material); central awn 13-22 mm long, lateral awns 8-15 mm long, the ratio of the lateral:central awn length 0.55-0.69; lemma callus beard 0.2-0.6 mm long.....***A. virgata***

15 Central awn < 1.5× as thick as the lateral awns, erect to divergent; first glume 1-keeled (rarely weakly 2-keeled); [plants of dry habitats].

17 Culms mostly > 10 dm tall and 3-6 mm in diameter near the base; awns 8-15 mm long; panicle branches > 4 cm long; callus ca. 1.0 mm long..... .....***A. condensata***

17 Culms 5-8 (-10) dm tall and 1-4 mm in diameter near the base; awns 12-25 mm long; panicle branches 1-4 cm long; callus 0.4-0.8 mm long.

18 First glume 1-4 mm longer than the second glume (rarely about equal to it); awns 15-25 mm long, straight or slightly contorted at the base; leaf blades 1-3 mm wide, usually curling.....***A. purpurascens***

18 First glume shorter than or about equal to the second glume; awns 12-18 mm long, spirally contorted at the base; leaf blades about 1 mm wide, usually not curling.....***A. tenuispica***

Aristida beyrichiana Trinius & Ruprecht, Southern Wiregrass. Cp (GA, SC): sandhills, savannas, from very dry to seasonally saturated soils; common. September-November. S. SC south to s. FL, west to s. MS. See Peet (1993) for discussion of the taxonomy and ecology of this species; also see comments under *A. stricta*, which also apply here. Ward (2001) proposes

varietal status for *A. stricta* and *A. beyrichiana*. [= K, Y; < *A. stricta* – RAB, FNA, GW, HC, S, V, Z; = *A. stricta* Michaux var. *beyrichiana* (Trinius & Ruprecht) D.B. Ward – X]

Aristida condensata Chapman, Big Three-awn. Cp (GA, NC, SC): dry sandy soils of sandhills; rare (NC Watch List, SC Rare). August-October. Sc. NC south to s. FL, west to s. MS (Sorrie & Leonard 1999). [= RAB, FNA, HC, K, S, Z]

Aristida curtissii (A. Gray ex S. Watson & Coulter) Nash, Curtiss's Three-awn. Cp, Pd (GA, NC, SC, VA): roadsides, disturbed areas, bare eroding soil; uncommon. August-October. ME west to WY, south to FL, AR, OK, and CO, perhaps largely or entirely adventive in our area. See Z for a discussion of the rationale for reducing *A. curtissii* to a variety of *A. dichotoma*. C reduces it to a variety of the more western *A. basiramea* Engelmann ex Vasey. For now, and for simplicity, I prefer to retain the two as species. [= RAB, G, HC, S; = *A. basiramea* Engelmann ex Vasey var. *curtissii* (A. Gray ex S. Watson & Coulter) Shinners – C; = *A. dichotoma* Michaux var. *curtissii* A. Gray – F, FNA, K, W, Z]

Aristida dichotoma Michaux, Fork-tip Three-awn. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, fields, disturbed areas, bare eroding soil; common. August-October. ME west to WI, south to FL and TX. See *A. curtissii* for comments. [= RAB, C, G, HC, S; = *A. dichotoma* var. *dichotoma* – F, FNA, K, W, Z]

Aristida lanosa Muhlenberg ex Elliott, Woollysheath Three-awn. Cp, Pd (GA, NC, SC, VA): dry sandy soils of sandhills and fields; common, rare in Piedmont (VA Watch List). August-October. NJ south to FL, west to TX, north in the interior to MO and OK. [= RAB, C, FNA, G, HC, K, S, Z; > *A. lanosa* var. *lanosa* – F; *A. lanosa* var. *macera* Fernald & Griscom – F]

Aristida longespica Poiret ***var. geniculata*** (Rafinesque) Fernald, Eastern Slim-spike Three-awn. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): disturbed areas; common? August-October. The distribution and habitats of the 2 varieties in our area are poorly known, pending further field and herbarium investigation. [= C, F, FNA, HC, K, Z; < *A. longespica* – RAB, W; > *A. intermedia* Scribner & Ball – F, G, S; > *A. longespica* – G]

Aristida longespica Poiret ***var. longespica***, Eastern Slim-spike Three-awn. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): disturbed areas; uncommon? August-October. The distribution and habitats of the 2 varieties in our area are poorly known, pending further field and herbarium investigation. [= C, F, FNA, HC, K, Z; < *A. longespica* – RAB, G, W; = *A. longespica* – S]

Aristida mohrii Nash, Mohr's Three-awn. Cp (GA, SC): sandhills; rare. August-October. Panhandle FL and sw. GA west to s. AL; apparently disjunct in SC (Chesterfield and Richland counties). [= FNA, HC, K, S, Z]

Aristida oligantha Michaux, Prairie Three-awn. Pd, Cp, Mt (GA, NC, SC, VA): roadsides, fields, disturbed areas; common. August-October. VT west to SD, south to FL and TX, scattered elsewhere as a weed. [= RAB, C, F, FNA, G, HC, K, W, S, Z]

Aristida palustris (Chapman) Vasey, Longleaf Three-awn. Cp (GA, NC, SC): wet pine savannas, limesink depressions; uncommon. August-October. Se. NC south to FL, west to TX; apparently disjunct on the Cumberland Plateau of KY. [= C, FNA, K, S, Z; = *A. affinis* (Schultes) Kunth – RAB, F, G, GW, HC, misapplied]

Aristida purpurascens Poiret, Arrowfeather. Cp, Pd, Mt (GA, NC, SC, VA): dry habitats, especially in dry sandy soils; common. August-October. MA west to WI and KS, south to FL and TX. In the Sandhills occurring in two forms, one green, the other strongly glaucous-blue. [= RAB, C, G, HC, S, W; > *A. purpurascens* var. *purpurascens* – F; > *A. purpurascens* var. *minor* Vasey – F; = *A. purpurascens* var. *purpurascens* – FNA, K, Z]

* ***Aristida purpurea*** Nuttall ***var. longiseta*** (Steudel) Vasey, Red Three-awn. Cp (SC): disturbed areas; rare, adventive from further west. August-October. Also reported from NC, but the collection is from a Soil Conservation Service test nursery, and there is no evidence of naturalization. [= C, FNA, K, Z; > *A. longiseta* var. *robusta* Merrill – F; = *A. longiseta* Steudel – G, HC]

Aristida simpliciflora Chapman, Southern Three-awn, Chapman's Three-awn. Cp (GA, NC): wet pine savannas; rare (GA Special Concern, NC Rare). Sw. GA west through the FL Panhandle and c. AL to s. MS (Sorrie & Leonard 1999), and south into central Peninsular Florida; also in se. NC, where apparently disjunct (it should be searched for in SC). *A. simpliciflora* was believed to be a Gulf Coastal Plain endemic until found by R. LeBlond in 1999 in wet savannas in se. NC (Green Swamp savannas, Brunswick County; Old Dock Savanna, Columbus County; and The Neck Savanna, Pender County). It is reported for sw. GA (Jones & Coile 1988, Kartesz 1999). Harper also reports it for c. GA. [= FNA, HC, K, S, Z]

Aristida spiciformis Elliott, Bottlebrush Three-awn, Spike Three-awn. Cp (GA, NC?, SC): wet pine savannas and seepage areas; rare (NC Watch List). August-October. E. SC (McMillan et al. 2002) south to FL, west to MS. Allred (1986) also reports this species from NC, but the documentation is unknown to me. [= RAB, FNA, GW, HC, K, S, Z]

Aristida stricta Michaux, Carolina Wiregrass, Pineland Three-awn. Cp (NC, SC), Pd (NC): Coastal Plain pinelands of nearly all sorts, ranging from the driest white-sand sandhills to seasonally saturated pine savannas dominated by a mixture of longleaf pine and pond pine, largely or entirely replaced in the wettest savannas by *Sporobolus teretifolius*, *Sporobolus pinetorum*, *Muhlenbergia expansa*, *Ctenium aromaticum*, and *Calamovilfa brevipilis*; also in Piedmont areas adjacent to the Coastal Plain and formerly supporting fire-maintained longleaf pine woodlands; common, rare in Piedmont. September-November. Ne. NC (south of Albemarle Sound and the Roanoke River), south to ne. SC (Lee and Kershaw counties). *A. stricta* was the keystone species of much of the upland Coastal Plain of the Carolinas. Its flammable foliage facilitated the spread of lightning-set fires that maintained the biologically rich pine savanna, sandhill, and pine flatwood ecosystems once widespread in our area. Though still locally common in parts of the Sandhill region and in portions of Brunswick, Pender, Onslow, and Carteret counties, NC, *A. stricta* is much rarer than formerly. The conversion of vast acreages of former pinelands to agriculture, pine tree farms, and developed areas has taken its toll over the years. In the twentieth century, suppression of fire has also led to the destruction of *A. stricta*. More recently, pine-straw raking is leading to the serious decline of A. *stricta* in its few remaining strongholds on public lands. *A. stricta* has little tolerance for ground disturbance. See Peet (1993) for discussion of the taxonomy and ecology of this species. Ward (2001) proposes varietal status for *A. stricta* and *A. beyrichiana*. [= K, Y; < *A. stricta* – RAB, FNA, GW, HC, S, V, Z (also see *A. beyrichiana*); = *A. stricta* var. *stricta* – X]

Aristida tenuispica A.S. Hitchcock, Southern Arrowfeather. Cp (GA, NC, SC): sandy habitats in the Coastal Plain; uncommon? August-October. NC south to FL and west to MS. [= HC, S; = *A. purpurascens* Poiret var. *tenuispica* (A.S. Hitchcock) Allred – FNA, K, Z]

Aristida tuberculosa Nuttall, Seabeach Needlegrass. Cp (GA, NC, SC, VA): sandhills, coastal dunes (in VA), other dry, sandy habitats such as sandy roadsides; common, rare in VA (VA Watch List). August-October. Se. NH south to NJ and disjunct in e. VA in the outer Coastal Plain; from sc. NC south to Panhandle FL and west to s. MS (Sorrie & Leonard 1999), mostly in the inner Coastal Plain; and also near the Great Lakes in sw. MI, n. IN, n. IL, s. WI, se. MN, and e. IA. The curious trimodal distribution is unexplained. [= RAB, C, F, FNA, G, HC, K, S, Z]

Aristida virgata Trinius. Cp (GA, NC, SC, VA), Pd (GA), Mt (NC): moist to wet savannas, mountain bogs (Henderson Co., NC), other moist habitats; common. August-October. S. NJ south to FL, west to TX, primarily on the Coastal Plain. [= RAB, C, F, G, GW, HC, S; = *A. purpurascens* Poiret var. *virgata* (Trinius) Allred – FNA, K, Z]

* ***Aristida adscensionis*** Linnaeus, Sixweeks Three-awn, has been reported as an introduction (from western United States) in SC (FNA, Kartesz 1999). {investigate} [= F, FNA, G, K] {not keyed at this time; synonymy incomplete}

Aristida basiramea Engelmann ex Vasey, Forktip Three-awn. Occurs in VA, SC, etc. (FNA). [= F, FNA, G, K; = *A. basiramea* var. *basiramea* – C] {not keyed at this time; synonymy incomplete}

Aristida gyrans Chapman, Corkscrew Three-awn. Cp (GA): dry pinelands; rare (GA Special Concern). E. GA and w. Panhandle FL, south to s. FL. In Bryan, Long, and Montgomery counties in e. GA (Sorrie 1998b), and in wc. GA (J. Allison, pers. comm.). [= FNA, K, S] {not keyed at this time; synonymy incomplete}

Aristida ramosissima Engelmann ex A. Gray. East to Panhandle FL, c. TN, and e. KY (FNA) and might occur in our area. It is similar to *A. oligantha* and will key to it; it differs in having the central awn of the lemma 9-30 mm long (vs. 30-70 mm long), and the awn of the second glume 3-7 mm long (vs. 7.5-17 mm long). [= C, F, FNA, G, K, S] {not keyed at this time; synonymy incomplete}

Allred (1986) reports the collection of several additional non-native species from our area, including *A. divaricata* Willdenow from sw. United States (from a Soil Conservation Service test nursery in Chapel Hill, NC) and uncertainly identified material of an Australian species (from a wool-combing mill at Jamestown, SC). There is no evidence that either are naturalized.

Arrhenatherum Palisot de Beauvois (False Oatgrass)

References: Tucker (1996)=Z.

1 Base of culm consisting of a series of adjacent (moniliform) corms ca. 1 cm in diameter.....***A. elatius* var. *bulbosum***
1 Base of culm not swollen or cormose .....***A. elatius* var. *elatius***

* ***Arrhenatherum elatius*** (Linnaeus) J. & K. Presl *var.* ***bulbosum*** (Willdenow) Spenner, Tuber Oatgrass, Onion Couch. (VA): habitat in our area not known; abundance not known, introduced from Europe. This variety was apparently cultivated for the edible tubers in Bronze Age Europe (Tucker 1996). Cited for VA in HC. [= C, F, G, HC, K, Z; < *A. elatius* – GW, W; = *A. elatius* var. *tuberosum* Thiel. – S]

* ***Arrhenatherum elatius*** (Linnaeus) J. & K. Presl *var.* ***elatius***, Tall Oatgrass. Pd (GA, NC, VA), Mt, Cp (NC, VA): meadows, fields, roadsides; common, introduced from Europe. May-June. [= C, F, G, HC, K, S, Z; < *A. elatius* – RAB, GW, W]

Arthraxon Palisot de Beauvois (Basket Grass)

References: van Welzen (1981)=Y; Thieret in FNA (2003a); Kiger (1971)=Z.

Identification notes: Sometimes confused (especially before flowering) with *Microstegium*, but *Arthraxon* has distinctly cordate-clasping leaves, which *Microstegium* lacks. Also vegetatively similar to *Oplismenus*.

* ***Arthraxon hispidus*** (Thunberg) Makino *var.* ***hispidus***, Basket Grass. Cp, Pd, Mt (GA, NC, SC, VA): moist ditches, bottomlands, disturbed areas; common, native of se. Asia. September-October. Like *Microstegium*, *Arthraxon* appears to be steadily increasing its abundance in our area. [= FNA, Y; < *A. hispidus* – C, GW, K, Z; > *A. hispidus* var. *cryptatherus* (Hackel) Honda – RAB, F, G, HC, W]

Arundinaria Michaux (Cane)

Both species of *Arundinaria* were much reduced by the foraging of free-range livestock in the eighteenth and early nineteenth centuries and by fire suppression in the late nineteenth century and throughout the twentieth century. "Canebrakes," large areas dominated by cane, were described in many historical accounts and apparently occupied large parts of the landscape of the

Coastal Plain, also occurring in the Piedmont and low Mountains. References: Tucker (1988)=Y; McClure (1973)=Z; McClure (1963); Judziewicz et al. (2000)=X; Triplett, Weakley, & Clark (2006)=Q. The key adapted from Y and Z.

1 Primary branches with 0-1 compressed basal internodes; culm internodes usually sulcate; culm leaves deciduous; culms to 10 m tall; rhizomes lacking air canals ..... ***A. gigantea***
1 Primary branches with 2-5 compressed basal internodes; culm internodes usually terete; culm leaves persistent to tardily deciduous; culms to 4 m tall; rhizomes with or without longitudinal air canals (visible in cross-section as a cylinder of hollow canals 1 mm or less from the outer surface).
  2 Foliage blades chartaceous, deciduous, abaxial surfaces pilose or glabrous, weakly tessellate; primary branches usually < 35 cm long, basal nodes not developing secondary branches; top knot blades 12-22.5 cm long; rhizomes with or without air canals ..... ***A. appalachiana***
  2 Foliage blades coriaceous, persistent, abaxial surfaces densely pubescent or glabrous, strongly tessellate; primary branches usually > 50 cm long, basal nodes developing secondary branches; top knot blades 20-30 cm long; rhizomes with air canals ..... ***A. tecta***

Arundinaria appalachiana,Triplett, Weakley, & L.G. Clark, Hill Cane. Mt, Pd (GA, NC, SC): dry to moist forests on slopes; common. The short plants (often only knee-high, though sometimes head-high) on mountain slopes south of Asheville are autumn-deciduous, whereas both "rivercane" appears to be evergreen. [= Q; < *A. gigantea* (Walter) Walter – RAB, GW; < *A. gigantea* ssp. *tecta* (Walter) McClure – K, X, Z; < *A. tecta* – HC, S, Y; = *A. tecta* var. *decidua* Beadle in L.H. Bailey; apparently and implicitly included in the concept of either *A. tecta* or *A. gigantea* by earlier authors]

Arundinaria gigantea (Walter) Walter, Giant Cane, River Cane. Mt, Pd, Cp (GA, NC, SC, VA): swamps, floodplains; common. April-July. Widespread in se. North America, ranging from s. DE s. OH, south to FL and e. TX. There has been much disagreement over the recognition of one, two, or several taxa of cane in the Southeastern United States. This species reaches heights of 6-7 (-10) m and is supposed to flower only once every 40-50 years. *A. macrosperma* Michaux is controversial, sometimes considered to be a synonym of *A. gigantea* or to represent hybridization or introgression between *A. gigantea* and *A. tecta*. [= F, HC, Q, S, Y; < *A. gigantea* – RAB, C, GW (also see *A. tecta*); = *A. gigantea* ssp. *gigantea* – K, Z; > *A. gigantea* ssp. *gigantea* – X; > *A. gigantea* (Walter) Walter ssp. *macrosperma* (Michaux) McClure – X; > *A. macrosperma* Michaux]

Arundinaria tecta Walter, Switch Cane, Small Cane. Cp, Pd (GA, NC, SC, VA): savannas, pocosins, canebrakes, generally (but not solely) in wetlands; common. April-July. Primarily a Southeastern Coastal Plain endemic: e. VA to FL and s. AL. *A. tecta* is a smaller plant than *A. gigantea* (normally 1-2 m tall, but reaching heights of up to 4 m where fire-suppressed), and flowers more frequently, supposedly every 3-4 years (Tucker 1988), probably actually in response to fire. [= Q; < *A. gigantea* – RAB, C, GW; < *A. tecta* – F, HC, S, Y; < *A. gigantea* ssp. *tecta* (Walter) McClure – K, X, Z]

Arundo Linnaeus (Giant Reed)

A genus of 3 species, widespread in the tropics, subtropics and warm-temperate areas. References: Allred in FNA (2003a).

* ***Arundo donax*** Linnaeus, Giant Reed. Cp, Pd (GA, NC, SC, VA), Mt (NC, VA): disturbed areas; uncommon, introduced from the Old World. September-October. Var. *versicolor*, with leaves transversely striped white and green, is better considered only as a form or cultivar. [= RAB, F, FNA, K, S; > *A. donax* var. *donax* – HC; > *A. donax* var. *versicolor* (P. Miller) Stokes – HC]

Avena Linnaeus 1753 (Oats)

References: Tucker (1996)=Z.

1 Lemmas pubescent with brown hairs; lemmas with long bent awns ..... ***A. fatua***
1 Lemmas glabrous or scabrous; lemmas unawned or with relatively straight awns ..... ***A. sativa***

* ***Avena fatua*** Linnaeus, Wild Oats. (VA). {needs herbarium checks}. [= C, F, G, HC, K]

* ***Avena sativa*** Linnaeus, Oats. Mt (NC, SC, VA), Pd, Cp (GA, NC, SC, VA): fields and disturbed areas; commonly cultivated, uncommonly escaping. May-June. An important crop, but apparently only a weed until transported from the Middle East to the moister central Europe, where cultivated beginning about 3000 BP (Hancock 2004). [= RAB, G, HC, K, S, W, Z; > *A. sativa* var. *orientalis* (Schreber) Alefeld – F; > *A. sativa* var. *sativa* – F]

Axonopus Palisot de Beauvois (Carpet Grass)

A genus of ca. 100 species, primarily tropical and subtropical. Phylogenetic studies suggest that *Axonopus* may be included in *Paspalum*. References: Barkworth in FNA (2003a).

1 Spikelets 4-6 mm long ..... ***A. furcatus***

1 Spikelets 1.5-2.8 mm long.
  2 Spikelets 1.5-2.2 mm long; leaf blades mostly 8-10 mm wide.....***A. compressus***
  2 Spikelets 2.2-2.8 mm long; leaf blades mostly 2-4 (-6) mm wide.....***A. fissifolius***

Axonopus compressus (Swartz) Palisot de Beauvois, Southern Carpet Grass. Cp (GA, SC, VA?): lawns; rare, probably introduced. Reported for VA by HC. Sometimes used as a lawn grass in the deep South. [= FNA, HC, K, S; ***Paspalum***]

Axonopus fissifolius (Raddi) Kuhlm., Common Carpet Grass. Cp, Pd (GA, NC, SC, VA): sandy forests, roadsides, lawns; common. June-October. VA south to FL, west to TX and OK, and extending into tropical America. [= FNA, K; *? A. affinis* Chase – RAB, GW, HC, W; **= *Paspalum fissifolium*** Raddi]

Axonopus furcatus (Flügge) A.S. Hitchcock, Big Carpetgrass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): sandy forests, bottomlands, roadsides, lawns; common. July-October. Se. VA south to FL, west to TX and AR. [= RAB, C, F, FNA, G, GW, HC, K, S; **= *Paspalum furcatum*** Flügge]

Bambusa Schreber (Bamboo)

* *Bambusa oldhamii* Munro is reported for NC (Kartesz 1999). {investigate} [=*Sinocalamus latiflorus* (Munro) McClure – K, misapplied]

* *Bambusa vulgaris* Schrader ex J.C. Wendland, Common Bamboo, is reported for SC (Kartesz 1999). {investigate} [= K]

Bothriochloa Kuntze (Beardgrass, Cane Bluestem)

A genus of ca. 35 species, widespread in tropical and subtropical regions of the Old and new World. References: Allred in FNA (2003a); Vega (2000)=Z; Allred & Gould (1983)=Y. Key adapted from Allred in FNA (2003a).

1 Sessile spikelets 4.5-8.5 mm long..... ***B. barbinodis***
1 Sessile spikelets 3-4.5 mm long.
  2 Pedicellate spikelets about as long as the sessile spikelets.
    3 Rachises longer than the branches.....***[B. bladhii]***
    3 Rachises shorter than the branches.....***B. ischaemum* *var*. *songarica***
  2 Pedicellate spikelets much shorter than the sessile spikelets.
    4 Panicles reddish when mature; hairs below the sessile spikelets sparse and ca. 1/4 as long as the spikelets, not obscuring the spikelets .....***[B. bladhii]***
    4 Panicles silvery-white or tannish when mature, hairs below the sessile spikelets dense and > ½ as long as the spikelets, somewhat obscuring the spikelets .....***B. laguroides* *ssp*. *torreyana***

* ***Bothriochloa barbinodis*** (Lagasca y Segura) Herter, Cane Bluestem, Pinhole Bluestem. Cp, Pd (SC): disturbed areas; rare, introduced from w. United States. [= FNA, K; > *Bothriochloa perforata* (Trinius ex E. Fourn.) Herter – Z; = *Andropogon barbinodis* Lagasca y Segura – HC; > *Bothriochloa barbinodis* (Lagasca y Segura) Herter var. *perforata* (Trinius ex E. Fourn.) Gould; > *Andropogon perforatus* Trinius ex E. Fourn.]

* ***Bothriochloa ischaemum*** (Linnaeus) Keng ***var. songarica*** (Ruprecht ex Fischer & C.A. Meyer) Celarier & Harlan, King Ranch Bluestem. Cp (SC): disturbed places; rare, introduced from western North America. Reported for SC (Kartesz 1999). [= K, Z; < *B. ischaemum* – FNA]

* ***Bothriochloa laguroides*** (Augustin de Candolle) Herter ***ssp. torreyana*** (Steudel) Allred & Gould, Silver Bluestem. Cp (GA, SC), Pd (GA): disturbed areas; rare, introduced from {}. Reported for SC (Kartesz 1999), ne. GA (Jones & Coile 1988; Allred & Gould 1983), e. TN, and c. TN (Chester et al. 1993), in some cases as *B. saccharoides* var. *torreyana*. [= FNA, K, Y, Z; = *B. saccharoides* (Sw.) Rydberg var. *torreyana* (Steudel) Gould]

* *Bothriochloa bladhii* (Retzius) S.T. Blake, Australian Bluestem, is reported from e. TN (according to specimen cited by FNA and Z) and FL. [= FNA, K, Z] {synonymy incomplete}

* *Bothriochloa pertusa* (Linnaeus) A. Camus, Pitted Bluestem. Introduced at scattered sites in e. North America, including FL, LA, MD, and MS (FNA, Kartesz 1999). [= FNA, K, Z] {not keyed at this time; synonymy incomplete}

Bouteloua Lagasca y Segura (Grama)

A genus of about 40 species, of the Western Hemisphere. References: Herrera Arrieta, Peterson, & de la Cerda Lemus (2004)=X; Columbus (1999)=Z; Gould (1979)=Y; Wipff in FNA (2003a); Snow in FNA (2003a). Key based in part on Wipff in FNA (2003a)

1 All spikelets unisexual, plants usually dioecious; [introduced species] .....***B. dactyloides***
1 Lowest floret in each spikelet bisexual, the upper staminate or sterile; [introduced or native species].

2 Panicle branches deciduous; disarticulation occurring at the base of the branch (the branch therefore falling whole); spikelets 2-3 per branch, appressed to the branch; [native species of limestone habitats, also with introduced populations]; [subgenus *Bouteloua*].....***B. curtipendula* var. *curtipendula***

2 Panicle branches persistent; disarticulation occurring above the glumes (the individual florets therefore falling); spikelets >6 per branch, pectinately disposed; [rare introductions]; [subgenus *Chondrosum*].

3 Panicle branches terminating in a spikelet .....***B. gracilis***

3 Panicle branches extending beyond the base of the terminal spikelets..... ***B. hirsuta* var. *hirsuta***

Bouteloua curtipendula (Michaux) Torrey *var.* ***curtipendula***, Side-oats Grama. Mt (GA, VA), Pd (GA): dry rocky slopes and bluffs over limestone or serpentine, limestone glades; uncommon. July-September. S. CT west to MT, south to VA, e. TN, nw. GA, AL, panhandle FL, TX, AZ, and CA; also in Central and South America. The older literature refers to *B. curtipendula* as introduced in SC, but the single specimen documenting its occurrence there appears to be from experimental plantings at Clemson University; there is apparently no evidence of its establishment. *B. curtipendula* occurs on serpentine in the Piedmont of Georgia (Allison, pers. comm.). Var. *caespitosa* Gould & Kapadia is cespitose rather than rhizomatous and occurs in sw. United States. [= C, FNA, K, Y; < *B. curtipendula* – RAB, F, G, HC, S, W]

* ***Bouteloua dactyloides*** (Nuttall) J.T. Columbus, Buffalo Grass. Mt (VA), Pd, Cp (GA): disturbed areas; rare, introduced from w. North America. [= Z; = *Buchloe dactyloides* (Nuttall) Engelmann – C, F, FNA, G, HC, K]

* ***Bouteloua gracilis*** (Willdenow ex Kunth) Lagasca y Segura ex Griffiths, Blue Grama. Cp (SC): disturbed areas; rare, introduced from western North America. Reported for SC (Gould 1979). [= F, FNA, K, Y; > *Bouteloua gracilis* var. *gracilis* – HC]

* ***Bouteloua hirsuta*** Lagasca y Segura *var.* ***hirsuta***, Hairy Grama. Cp (GA, SC): disturbed areas; rare, introduced from western North America. Reported for SC and GA (Kartesz 1999). [= K, Y; < *Bouteloua hirsuta* – F, HC; = *Bouteloua hirsuta* ssp. *hirsuta* – FNA]

Brachiaria

(see *Urochloa*)

Brachyelytrum Palisot de Beauvois (Shorthusk)

The only other species of the genus is *B. japonicum* Hackel, of s. Japan, Korea, and ec. China (Saarela et al. 2003, Tucker 1988). References: Saarela et al. (2003)=Z; Tucker (1988)=Y; Stephenson (1971); Voss (1972); Campbell, Garwood, & Specht (1986). Key based in part on Saarela et al. (2003).

1 Lemmas hirsutulous or minutely scabrous, the longest hairs (0.06-) 0.08-0.14 (-0.2) mm long (not evident at 10×); lemma (0.7-) 0.8-1.2 (-1.4) mm wide; widest leaf blade (8-) 10-14 (-16) mm wide; second glume (0.6-) avg. 1.2 (-3.0) mm long; [plants of the Mountains].....***B. aristosum***

1 Lemmas hirsute with hairs (0.2-) 0.4-0.8 (0.9) mm long (easily seen at 10×); lemma (0.8-) 1.1-1.5 (-1.8) mm wide; widest leaf blade (9-) 11-17 (-20) mm wide; second glume (0.2-) avg. 2.2 (7.0) mm long; [plants widely distributed in our area] ....***B. erectum***

Brachyelytrum aristosum (Michaux) Trelease in Branner & Coville, Northern Shorthusk. Mt (GA, NC, VA): moist forests, mostly at moderate to high elevations, such as northern hardwoods and spruce-fir; rare (GA Special Concern, NC Watch List). July-August. Fairly widespread in ne. North America, south in the mountains to sw. NC and n. GA. In MI, *B. septentrionale* flowers about 10 days before co-occurring *B. erectum*, with strongly synchronized anthesis of each species occurring on a single day (Stephenson 1971)). Reputed intermediates and hybrids between the two taxa are apparently based on the use of ambiguous characters. [= Z; = *Brachyelytrum septentrionale* (Babel) G. Tucker – K, Y; < *B. erectum* – RAB, G, HC, S, W; = *B. erectum* var. *septentrionale* Babel – F; = *B. erectum* var. *glabratum* (Vasey ex Millspaugh) Koyama & Kawano – C]

Brachyelytrum erectum (Schreber ex Sprengel) Palisot de Beauvois, Common Shorthusk. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): mesic forests, in the Mountains at lower elevations than *B. septentrionale)*; common (uncommon in Piedmont, rare in Coastal Plain). June-August. MA, NY, OH, MI, and s. WI south to FL and TX. [= K, Y, Z; < *B. erectum* – RAB, G, HC, S, W (also see *B. septentrionale*); = *B. erectum* var. *erectum* – C, F]

Brachypodium Palisot de Beauvois

* ***Brachypodium sylvaticum*** (Hudson) Palisot de Beauvois *ssp.* ***sylvaticum***, Slender False Brome. Pd (VA): roadsides and yards; rare, introduced from Europe. [= FNA; < *B. sylvaticum* – HC, K]

Briza Linnaeus (Quaking Grass)

References: Tucker (1996)=Z.

* ***Briza maxima*** Linnaeus, Greater Quaking Grass. Cp (GA): disturbed areas; rare, introduced. Reported in e. GA (Jones & Coile 1988). [= K] {not keyed at this time; synonymy incomplete}
* ***Briza minor*** Linnaeus, Lesser Quaking Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): fields, disturbed areas; common, introduced from Europe. April-June. [= RAB, C, F, G, GW, HC, K, S, Z]

* *Briza media* Linnaeus, Perennial Quaking Grass, reported for scattered locations in PA (Rhoads & Klein 1993), MD, DE, and AL (Kartesz 1999). [= K] {not keyed at this time; synonymy incomplete}

Bromus Linnaeus 1753 (Brome-grass)

A genus of about 150 species, north temperate and South American. References: McNeill (1976); Sales (1993, 1994)=Z; Tucker (1996)=Y; Pavlick (1995)=X; McKenzie & Ladd (1995); Pavlick & Anderton in FNA (in prep.).

1 Lemmas compressed and strongly keeled (the whole spikelet thus strongly laterally flattened); first glume 3-9-nerved; [section *Ceratochloa*] ..... ***B. catharticus***
1 Lemmas rounded or weakly keeled (the whole spikelet therefore terete to somewhat laterally flattened); first glume either 3-5-nerved or 1-3-nerved.
  2 First glume 3-5 nerved (at least 3 nerves well-developed).
    3 Lemma awn 2-3 mm long; plant perennial; [native species of dry woodlands]; [section *Pnigma*] ..... ***B. kalmii***
    3 Lemma awn 3-12 mm long (or 0-6 mm long in *B. secalinus*); plant annual; [introduced species of disturbed habitats]; [section *Bromus*].
      4 Panicle compact, the lateral branches erect or ascending, the pedicels < 10 mm long (shorter than the spikelets) ..... ***B. hordeaceus ssp. hordeaceus***
      4 Panicle relatively open, the lateral branches erect, ascending, or spreading, the pedicels > 15 mm long (longer than the spikelets).
        5 Margins of the lemmas involute in fruit, wrapping around the grain, exposing the rachilla.....***B. secalinus***
        5 Margins of the lemmas gaping, overlapping in fruit.
          6 Panicle branches erect or ascending, relatively stiff and straight ..... ***B. racemosus***
          6 Panicle branches spreading (at least the lower), either relatively stiff and straight, or flexuous and lax.
            7 Panicle branches stiff; lemma awns 5-12 mm long, straight.....***B. commutatus***
            7 Panicle branches flexuous and lax; lemma awns 7-15 mm long, flexuous .....***B. japonicus***
  2 First glume 1 (-3) nerved (only 1 nerve well-developed).
    8 Longer lemma awns 10-60 mm long; plants annual; [introduced species of disturbed habitats]; [section *Genea*].
      9 Panicle dense, spikelike.....***B. rubens***
      9 Panicle open, not spikelike.
        10 First glume 13-20 mm long; second glume 20-30 mm long; lemma awns 35-60 mm long..... ***B. rigidus***
        10 First glume 5-14 mm long; second glume 8-17 mm long; lemma awns 10-30 mm long.
          11 First glume 7-14 mm long; second glume 9-17 mm long; lemma awns 18-30 mm long.....***B. sterilis***
          11 First glume 5-7 mm long; second glume 8-11 mm long; lemma awn (7-) 10-17 mm long ..... ***B. tectorum***
    8 Longer lemma awns 1-6 (-8) mm long; plants perennial; [native and introduced species, collectively of disturbed and natural habitats].
      12 Plants with creeping rhizomes, forming clonal colonies; both surfaces of leaves glabrous or glabrescent; [section *Bromopsis*]..... ***B. inermis***
      12 Plants not strongly rhizomatous, the stems solitary or tufted; surfaces of leaf blades usually pubescent (sometimes sparsely so).
        13 Pedicels erect or ascending, mostly shorter than the spikelet; leaves 2-3 mm wide; [introduced, of disturbed habitats]; [section *Bromopsis*] .....***B. erectus***
        13 Pedicels ascending at first, later arching-drooping, mostly longer than the spikelet; leaves 4-15 mm wide; [native, mostly of forests]; [section *Pnigma*].
          14 Lemmas glabrous (or very minutely pubescent) on the back, hairy along the lower margins with long hairs.....***B. ciliatus***
          14 Lemmas uniformly hairy over the entire back-surface (or rarely entirely glabrous).
            15 Culms with 10-20 leaves, often weak and leaning or reclining; junction of sheaths and base of leaf blades with 2 well-developed flanges prolonged into auricles or divergent spurs; second glume primarily 5-nerved; flowering late, with anthesis August-October.....***B. latiglumis***
            15 Culms with 6-10 leaves, erect; junction of sheaths and base of leaf blades lacking flanges or auricles; second glume primarily 3-nerved; flowering earlier, anthesis from May-August.
              16 Underleaf surfaces with a conspicuous satiny sheen (when fresh); summit of sheath opposite the ligule with a conspicuous tuft of hairs..... ***B. nottowayanus***

16 Underleaf surfaces lacking a conspicuous satiny sheen; summit of sheath opposite the ligule lacking a conspicuous tuft of hairs..... ***B. pubescens***

* ***Bromus catharticus*** Vahl, Rescue Grass. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): disturbed areas; common, native of South America. April-June. [= RAB, F, G, HC, K, W, X, Y; *? Bromus willdenowii* Kunth – C; = *Bromus unioloides* Kunth – S]

Bromus ciliatus Linnaeus, Fringed Brome. Mt (NC, VA): seepage areas, edges of fens, moist areas near high elevation creeks, grassy balds, high elevation woodlands, mostly over amphibolite or other mafic rocks; rare (NC Rare, VA Rare). July-August. Widespread in n. North America: Labrador to AK, south in the east to PA, and in the mountains to NC. Known in NC only from Bluff Mountain and Long Hope Valley, Ashe and Watauga counties, and Roan Mountain, Mitchell County. [= RAB, C, G, HC, S, W, X, Y; > *Bromus ciliatus* var. *ciliatus* – F, K; = *Bromopsis ciliata* (Linnaeus) Holub]

* ***Bromus commutatus*** Schrader, Hairy Chess, Meadow Brome. Pd, Mt (GA, NC, SC, VA), Cp (NC, SC, VA): disturbed areas; common, native of Europe. May-June. The relationship and relative distribution of this species and *Bromus racemosus* is poorly known for our area. See *Bromus racemosus* for further comments. [= C, F, HC, K, S, X, Y; < *Bromus commutatus* – RAB (also see *Bromus racemosus*); < *Bromus racemosus* – G, W]

* ***Bromus erectus*** Hudson, Short-branched Brome. Mt, Pd (VA): disturbed areas; rare, native of Europe. [= C, F, G, HC, K, S, X; = *Bromopsis erecta* (Hudson) Fourr.]

* ***Bromus hordeaceus*** Linnaeus *ssp. **hordeaceus***, Soft Chess, Lopgrass. Mt (NC, VA), Pd (VA), Cp (SC, VA): disturbed areas; rare, native of Europe. July. [= K, X; *? Bromus mollis* Linnaeus – RAB, F, G, HC, misapplied; < *Bromus hordeaceus* – C, Y]

* ***Bromus inermis*** Leysser, Smooth Brome, Hungarian Brome. Cp (NC, SC, VA), Mt (NC, VA), Pd (VA): disturbed areas; rare, native of Europe. June-July. [= RAB, C, G, HC, S, W, X, Y; > *Bromus inermis* var. *inermis* – F; > *Bromus inermis* ssp. *inermis* var. *inermis* – K; = *Bromopsis inermis* (Leysser) Holub]

* ***Bromus japonicus*** Thunberg ex Murray, Japanese Chess. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas; common, native of Asia. May-June. [= RAB, C, G, K, S, W, X, Y; > *Bromus japonicus* var. *japonicus* – F, HC; > *Bromus japonicus* var. *porrectus* Hackel – F, HC]

Bromus kalmii A. Gray, Kalm Brome. Mt (VA): shale woodlands and barrens; rare (VA Rare). ME west to SD, south to MD, w. VA, and IA. Distinctive for its few leaves (usually 3-4) clustered near the base, the spikelets large and approximate to one another in a narrow, nodding panicle. [= C, F, G, HC, K, X]

Bromus latiglumis (Shear) A.S. Hitchcock, Riverbank Brome, Auricled Brome, Hairy Woodbrome, Flanged Brome. Mt (NC, VA), Pd (VA): alluvial soils along rivers; rare (NC Watch List). August-October. Widespread in ne. North America, from ME to MT, south to NC and OK. Flowering many weeks later than co-occurring *B. pubescens*. In NC apparently only along large rivers flowing west through the Appalachians into the Mississippi River drainage, notably the New and the French Broad. [= F, G, HC, K, X; < *Bromus purgans* Linnaeus – RAB; = *Bromus altissimus* Pursh – C; < *Bromus latiglumis* – Y (also see *Bromus nottowayanus*)]

Bromus nottowayanus Fernald, Satin Brome, Nottoway River Brome, Virginia Brome. Pd (NC, VA), Cp, Mt (VA): moist forests, especially along small stream bottoms; rare (NC Watch List). June-August. The range of this species is poorly known, owing to confusion between it, *B. pubescens* and *B. latiglumis*. It is apparently known from MD, VA, and NC, west to TN, IL, IN, MO, and AR. McKenzie & Ladd (1995) report on the biology and taxonomy of this species. [= C, F, HC, K, X; < *Bromus purgans* Linnaeus – RAB; < *Bromus latiglumis* – Y; = *Bromopsis nottowayana* (Fernald) Holub]

Bromus pubescens Muhlenberg ex Willdenow, Common Eastern Brome, Canada Brome. Mt, Pd (GA, NC, SC, VA), Cp (GA, VA): mesic forests, generally on rocky slopes, common. May-August. Widespread in e. North America: s. Ontario west to Alberta, south to FL and AZ. [= C, K, W, X, Y; < *Bromus purgans* Linnaeus – RAB, S, misapplied (also see *Bromus latiglumis* and *Bromus nottowayanus*); = *Bromus purgans* Linnaeus – F, G, misapplied; > *Bromus purgans* var. *purgans* – HC; > *Bromus purgans* var. *laeviglumis* (Scribner ex Shear) Swallen – HC; = *Bromus laeviglumis* – S, misapplied (?); = *Bromopsis pubescens* (Muhlenberg ex Willdenow) Holub]

* ***Bromus racemosus*** Linnaeus, Smooth Brome. Pd, Cp, Mt? (NC, SC, VA): disturbed areas, native of Europe. May-June. The relative distribution, abundance, and habitats in our area of this species and *B. commutatus* poorly understood. Additional characters are as follows (from Stace 1997): lemmas 6.5-8 mm long (vs. 8-11 mm long in *B. commutatus*), anthers mostly 1.5-3 mm long (vs. mostly 1-1.5 mm long), spikelets 10-16 mm long (vs. 15-28 mm long), lowest rachilla segment mostly 0.7-1 mm long (vs. mostly 1.3-1.7 mm). [= C, F, HC, K, X; < *Bromus commutatus* – RAB; < *Bromus racemosus* – G, W (also see *Bromus commutatus*)]

* ***Bromus rigidus*** Roth, Ripgut Brome, Ripgut Grass. Cp (NC, SC, VA), Pd (GA, NC): disturbed areas; rare, native of Mediterranean Europe. April. [= RAB, C, F, G, HC, K; *? Bromus diandrus* Roth – Y; *? Bromus diandrus* var. ?? – Z]

* ***Bromus rubens*** Linnaeus, Foxtail Chess, Red Brome. Cp (SC, VA): disturbed areas; rare, introduced from Mediterranean Europe. Specimens in our area come from areas around wool-combing plants, and were likely introduced on wool from w. United States, where this European species is well-established. [= C, G, K, X; *? Bromus madritensis* Linnaeus – F, misapplied; = *Bromus madritensis* ssp. *rubens* (Linnaeus) Husnot]

* ***Bromus secalinus*** Linnaeus, Cheat, Common Chess, Ryebrome. Pd, Cp, Mt (GA, NC, SC, VA): disturbed areas; common, native of Europe. May-June. [= RAB, C, F, G, HC, K, S, W, X, Y]

* ***Bromus sterilis*** Linnaeus, Barren Brome, Poverty Brome, Cheatgrass. Pd (NC, VA), Mt, Cp (VA): disturbed areas; rare, native of southern Europe. May-June. [= RAB, C, F, G, HC, K, S, W, X, Y, Z]

* ***Bromus tectorum*** Linnaeus, Downy Brome, Downy Chess, Downy Cheat, Junegrass, Cheatgrass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): disturbed areas; common, native of Europe. April-June. [= RAB, C, F, G, HC, K, S, W, X, Y; ? *Bromus tectorum* ssp. *tectorum* – Z]

* ***Bromus arvensis*** Linnaeus has been reported as introduced for nc. GA (Jones & Coile 1988) and for VA, MD, PA, and NJ (Kartesz 1999). {investigate} [= C, K] {not keyed at this time}
* *Bromus briziformis* Fischer & C.A. Meyer. Reported as an introduction in ne. North America, south to MD, NJ, PA, DE (Kartesz 1999). [= K; = *B. brizaeformis* – C, orthographic variant] {not keyed at this time}
* ***Bromus carinatus*** Hooker & Arnott. Reported by Jones & Coile (1988) for nc. GA. [= C, K] {not keyed at this time}
* *Bromus madritensis* Linnaeus. Reported introduced in VA and MD (Kartesz 1999). {investigate} [= K] {not keyed at this time}
* *Bromus ramosus* Hudson. Introduced. Reported for DC and MS (Kartesz 1999). [= K] {not keyed at this time}
* *Bromus squarrosus* Linnaeus. Introduced. Reported for KY and NJ (Kartesz 1999). [= K] {not keyed at this time}

Buchloe Engelmann (Buffalo Grass)
(see *Bouteloua*)

Calamagrostis Adanson (Reed-grass)

A genus of about 230 species, north and south temperate. References: Marr, Hebda, & Greene in FNA (in prep.); Tucker (1996)=Z; Greene (1980).

1 Awn sharply bent; callus hairs 1/2 or less the length of the lemma; [subgenus *Ankylatherae*].
  2 Plant densely tufted, delicate, the culms 30-60 cm tall, with 2-3 nodes; leaves 1-2 mm wide, involute; callus hairs about 1 mm long (< ½ the length of the lemma).....***C. cainii***
  2 Plant rhizomatous or loosely tufted, coarse, the culms 60-120 cm tall, with 3-5 nodes; leaves 4-8 mm wide, flat; callus hairs about 2 mm long (< ½ the length of the lemma) .....***C. porteri ssp. porteri***
1 Awn straight; callus hairs 3/4 as long as to equal to the lemma.
  3 Panicle loose, spreading, 3.5-6 cm wide; callus hairs 2-3 mm long (about ¾ the length of the lemma); [subgenus *Calamagrostis*].....***C. canadensis var. canadensis***
  3 Panicle dense, erect, 1.5-4 cm wide; callus hairs 3-4 mm long (about equal to the lemma); [subgenus *Orthatherae*].....
  .....***C. cinnoides***

Calamagrostis cainii A.S. Hitchcock, Cain's Reed-grass. Mt (NC): high elevation rocky summits; rare (US Species of Concern, NC Endangered). July-September. Endemic to a few mountain-tops in the Southern Appalachians, *C. cainii,* once thought to be endemic to Mount LeConte, TN, was discovered at two sites in NC in 1989 and 1990 – Mount Craig, Yancey County, and Craggy Pinnacle, Buncombe County (Wiser 1991). This species is more likely to be mistaken (especially superficially) for an *Agrostis* than for any of the other *Calamagrostis* in our area, but is distinguishable by its larger spikelets (5-6 mm long, rather than 1.3-2 mm) and the presence of a callus beard. [= FNA, HC, K, W, Z]

Calamagrostis canadensis (Michaux) Palisot de Beauvois *var. **canadensis***, Bluejoint, Canada Reed-grass. Mt (GA, NC, VA): wet meadows along streams, high elevation openings, such as grassy balds and cliff bases; uncommon (NC Rare). August. Widespread and common across n. North America, reaching its southern limit in the east in w. NC, e. TN (Chester et al. 1993), and ne. GA (Rabun Bald, Rabun County). [= FNA, G, HC, K; < *C. canadensis* – RAB, C, S, W, Z; > *C. canadensis* var. *robusta* Vasey – F]

Calamagrostis cinnoides (Muhlenberg) W.P.C. Barton, Nuttall's Reed-grass. Mt (GA, NC, SC, VA), Cp, Pd (NC, SC, VA): savannas, bogs, and other wet sites; common. July-October. ME and NY south to n. GA (Jones & Coile 1988), AL, and LA, primarily on the Coastal Plain. The replacement of the familiar *C. cinnoides* is suggested for nomenclatural reasons (Kartesz 1999). [= RAB, C, F, G, GW, HC, S, W, Z; = *C. coarctata* Torrey ex Eaton – K]

Calamagrostis porteri A. Gray *ssp. **porteri***, Porter's Reed-grass. Mt (GA, NC, SC, VA), Pd (VA): dry to dry-mesic forests, forest edges, cliff bases; uncommon, rare in NC (GA Special Concern, NC Rare). NY to AL, in the Appalachians, with disjunct populations s. MO and w. AR; it was first reported from NC by Ware (1973). In addition to the key characters above, it can be distinguished from *C. canadensis* by its having leaf sheaths pubescent at the summit (Matthews & Radford 1985). [= K; = *C. porteri* – C, HC, W; *? C. porteri* – G, Z]

Calamagrostis canadensis (Michaux) Palisot de Beauvois *var. **macouniana*** (Vasey) Stebbins. Reported for VA (FNA). Reported south to NJ and KY only (Kartesz 1999). [= F, FNA, G, HC, K; < *C. canadensis* – C, Z; = *C. macouniana* (Vasey) Vasey] {not keyed at this time}

Calamagrostis porteri A. Gray ssp. *insperata* (Swallen) C.W. Greene, ranges east to KY and TN (Kartesz 1999). [= K; = *C. insperata* Swallen – C, HC] {not keyed at this time}

Calamagrostis stricta (Timm) Koeler ssp. *inexpansa* (A. Gray) C.W. Greene ranges south to n. WV (Preston and Randolph counties). [= K; < *C. stricta* – C; *? C. neglecta* (Ehrhart) Gaertner, Mey., & Scherb. var. *neglecta* – F] {not keyed at this time}

Calamovilfa (A. Gray) Hackel ex Scribner & Southworth (Sandreed)

A genus of 5 species, of e. and c. North America. Reeder & Ellington (1960) studied various anatomic features of *Calamovilfa*, and determined that its closest relative was *Sporobolus*. A molecular phylogenetic study of *Sporobolus* and closely related genera suggests that *Calamovilfa* should be included in *Sporobolus* (Ortiz-Diaz & Culham 2000). References: Thieret (1966)=Z. Key based in part on Thieret in FNA (in prep.).

Identification notes: Superficially somewhat similar to *Sporobolus pinetorum*, *S. floridanus,* and *S. curtissii* (herbarium specimens of the two species have been regularly confused), *Calamovilfa* is distinguished by its leaves tapered to either end and long-acuminate (vs. parallel-margined and abruptly acute in *Sporobolus*) and tendency to form larger, clonal patches (*Sporobolus* forms wiregrass-like bunches or clumps). In flower or fruit, the *Calamovilfa* can be distinguished by characters of the spikelet, by vegetative characters, or by its coarser, generally taller culms, with the panicle branches usually spreading (rather than always ascending in *Sporobolus*). The three have very similar bases, unlike any other grasses in our area – the lower leaf sheaths are indurated and shiny, forming a hard, polished, knotty, and fire-proof covering over the short-creeping rhizome. *Aristida stricta* has a somewhat similar base, but less indurated, less creeping, and with an unpolished appearance. *Calamovilfa brevipilis* also has a cartilaginous, pale yellow annulum surrounding the outer (abaxial) surface of the juncture of the sheath and leaf, a structure not visible in the other species. Positive identification in sterile condition is not difficult.

1 Panicles narrow, the branches appressed-ascending; [of the Coastal Plain of FL]..... ***[C. curtissii]***
1 Panicles broad, the bracnches ascending-spreading; [either of the Coastal Plain of SC northwards, or of the interior].
  2 Spikelets 6-7.4 mm long; glumes acute to acuminate, usually arcuate; lemmas 5.5-7 mm long, usually arcuate; [of river scour areas in the rocky inland parts of the South]..... ***[C. arcuata]***
  2 Spikelets 4-5.8 mm long; glumes acute, straight; lemmas 4-5.4 mm long, straight; [of pineland habitats of the Coastal Plain of South Carolina northwards ..... ***C. brevipilis***

Calamovilfa brevipilis (Torrey) Scribner, Pinebarren Sandreed. Cp (NC, SC, VA), Pd (NC): savanna-pocosin ecotones, sandhill seepage bogs, pocosins; rare (NC Watch List, SC Rare, VA Rare). June-October. A "bimodal endemic", with two areas of distribution: Pine Barrens of NJ and the Coastal Plain (very rarely lower Piedmont) of e. NC, n. SC, and s. VA. Var. *heterolepis* Fernald, no longer considered valid, refers to the NC-SC material; var. *calvipes* Fernald, no longer considered valid, refers to the VA material. Like *Aristida stricta,* this grass is dependent on fire for flowering (it will also sometimes flower in response to mowing or other disturbance). Suppression of the natural fire regime has led to its substantial decline and the severe contraction of its range in the Southeast, since fire exclusion in its seepage or ecotone habitat leads to rapid invasion by shrubs and competitive elimination of *Calamovilfa* and many other herbs. [= RAB, C, FNA, G, GW, K, S, Z; > *C. brevipilis* var. *brevipilis* – F, HC; > *C. brevipilis* var. *heterolepis* Fernald – HC; > *C. brevipilis* var. *calvipes* Fernald – F, HC]

Calamovilfa arcuata K.E. Rogers occurs in Morgan and Cumberland counties, TN, in the Cumberland Plateau, and in AL. [= FNA, K]

Calamovilfa curtissii (Vasey) Scribner of FL is a closely related sibling species of *C. brevipilis*. It occurs in the FL Panhandle and e. peninsular FL. [= FNA, GW, HC, K, S, Z]

Catapodium Link 1827

References: Soreng et al. (2003)=Z.

* *Catapodium rigidum* (Linnaeus) Dony, native to Europe, is known from collections from wool-combing mills in South Carolina; it is probably not established. [= Z; = *Desmazeria rigida* (Linnaeus) Tutin – K; = *Scleropoa rigida* (Linnaeus) Grisebach]

Cenchrus Linnaeus (Burgrass, Sandspur)

A genus of about 16 species, primarily tropical and subtropical. References: Stieber & Wipff in FNA (2003a); Crins (1991)=Z.

{vegetative characters} {VA distribution of *C. tribuloides*}

Identifications note: Spikelets of *Cenchrus* are subtended by an involucre of spines and/or bristles which are (in most of our species) fused into a bur. Bristles are narrow-based and terete. Spines are broad-based, and somewhat flattened (not terete) in cross-section, at least basally.

1 Involucre of bristles only, these not fused into a bur; perennial, to 2 m tall..... ***C. myosuroides***
1 Involucre of spines fused into a coherent bur, sometimes also with bristles; annual or perennials, to 1 m tall.
  2 Spines in a single whorl, subtended by numerous smaller, narrower bristles..... ***C. echinatus***

2 Spines in multiple whorls or irregular in their disposition (if few and in a single whorl, then not subtended by smaller, narrower bristles).
3 Burs (excluding the spines) 9-16 mm long, 4-6 mm wide, the spines 4-8 mm long; spikelets 1 (-2) per bur, concealed; leaf blades 3-14 mm wide ..... ***C. tribuloides***
3 Burs (excluding the spines) 5.5-12 mm long, 2.5-6 mm wide, the spines 2-7 mm long; spikelets 2-4 per bur, exserted at the tip; leaf blades 1-5 (-7) mm wide.
4 Spines slender, 45-75, 3.5-7 mm long; spikelets 6-8 mm long..... ***C. longispinus***
4 Spines stout, 6-10 (-40), 2-5 mm long; spikelets 3.5-6 mm long ..... ***C. spinifex***

Cenchrus echinatus Linnaeus, Southern Sandspur, Bristly Sandspur, Hedgehog Grass. Cp (GA, NC, SC), Pd (GA, SC): fields, roadsides, disturbed areas; common (uncommon in NC). June-October. NC (and DC?) south to FL, west to CA, south into the tropical America. [= RAB, C, HC, K, S, Z]

Cenchrus longispinus (Hackel) Fernald, Northern Sandspur, Common Sandspur. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas, lawns; common (uncommon in Mountains). June-October. ME west to OR, south to FL, TX, and CA. [= RAB, C, F, FNA, K, W, Z; = *C. pauciflorus* Bentham – G, HC, S, misapplied]

* ***Cenchrus myosuroides*** Kunth. Cp (SC): roadsides, disturbed areas; rare, introduced from further south. December. SC south to FL, west to TX, south into the West Indies and other parts of tropical America. [= RAB, FNA, HC, K, S, Z]

Cenchrus spinifex Cavanilles, Coastal Sandspur. Cp (GA, NC, SC, VA), Pd (GA, SC, VA), Mt (VA): fields, roadsides, disturbed areas; common (rare in NC and VA). July-October. VA south to FL, west to AR and KS, south into tropical America. [= FNA, K; > *C. incertus* M.A. Curtis – RAB, C, F, G, HC, S, Z]

Cenchrus tribuloides Linnaeus, Dune Sandspur. Cp (GA, NC, SC, VA), Pd*, Mt* (VA): dunes, sandy fields, sandy woodlands in the outer Coastal Plain; common. August-October. NY (Long Island) south to FL, west to TX, south into tropical America. This is the sandspur so familiar and disliked by beach-goers in our area. [= RAB, C, F, FNA, HC, K, S, W, Z]

Cenchrus brownii Roemer & J.A. Schultes. Reported for NC (Kartesz 1999) and GA (FNA). {investigate} [= FNA, K] {not keyed at this time; add to synonymy}

Cenchrus gracillimus Nash. Reported for sc. GA by Jones & Coile (1988) and FNA. [= FNA, K] {not keyed at this time; add to synonymy}

Chasmanthium Link (Spanglegrass, Spikegrass)

A genus of 5 species endemic to se. North America. References: Sánchez-Ken & Clark in FNA (2003a); Yates (1966a, 1966c)=Z.

1 Panicle branches elongate, pendulous; spikelets (15-) 20-40 mm long, with 6-20 flowers..... ***Ch. latifolium***
1 Panicle branches short, erect or ascending; spikelets 5-18 mm long, with 2-8 (-11) flowers.
2 Fully-developed spikelets 12-18 mm long, 8-12 mm wide.
3 Axils of the spikelets and panicle branches glabrous; empty lemmas 9 (-12); [se. NC south to c. peninsular FL and e. FL panhandle] ..... ***Ch. nitidum***
3 Axils of the spikelets and panicle branches with a tuft of long hairs; empty lemmas 2-4; [w. FL panhandle west to e. LA (Florida parishes)] ..... ***[Ch. ornithorhynchum]***
2 Fully-developed spikelets 4-9 mm long, 3-7 mm wide.
4 Collar (junction of leaf and sheath) glabrous or nearly so; leaves 3-7 mm wide..... ***Ch. laxum***
4 Collar (junction of leaf and sheath) pilose; leaves 6-12 mm wide.
5 Inflorescence with divergent branches; [in outer Coastal Plain calcareous sites from SC southwards] .... ***Ch. sessiliflorum* var. *1***
5 Inflorescence with appressed branches; [more widespread in our area]..... ***Ch. sessiliflorum* var. *sessiliflorum***

Chasmanthium latifolium (Michaux) Yates, River Oats, Fish-on-a-pole. Pd, Mt, Cp (GA, NC, SC, VA): riverbanks, streambanks, bottomland forests, seepages and glades over mafic or calcareous rock, usually in nutrient-rich soils; common (uncommon in Coastal Plain and Mountains). June-October. Widespread in se. North America, north to NJ, OH, IL, and KS. [= C, FNA, GW, K, W, Z; = *Uniola latifolia* Michaux – RAB, F, G, HC, S]

Chasmanthium laxum (Linnaeus) Yates, Slender Spikegrass. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): savanna-pocosin ecotones, sandhill-pocosin ecotones, moist hardwood swamps, other moist habitats; common (rare in Mountains). June-October. Widespread in se. North America, north to s. NY, KY, and OK. See *Ch. sessiliflorum* for comments on the suggestion that these two taxa are only varietally distinct. [= C, FNA, GW, K, W, Z; = *Uniola laxa* (Linnaeus) Britton, Sterns, & Poggenburg – RAB, F, G, HC, S; = *Chasmanthium laxum* var. *laxum*]

Chasmanthium nitidum (Baldwin) Yates, Shiny Spanglegrass. Cp (GA, NC, SC): blackwater swamp forests; rare (NC Rare, SC Rare). September-November. A Southeastern Coastal Plain endemic: se. NC south to c. FL and west to se. AL. [= FNA, GW, K, Z; = *Uniola nitida* Baldwin – RAB, HC, S]

Chasmanthium sessiliflorum (Poiret) Yates *var. **1***, Coastal Hammock Longleaf Spikegrass. Cp (GA, SC): calcareous hammocks; rare. August-October. An additional taxon warrants recognition: it is characterized by divergent panicle branches and occurs in outer Coastal Plain calcareous sites (J. Allison, pers. comm.). [< *Chasmanthium sessiliflorum* (Poiret) Yates – C,

FNA, GW, K, Z; < *Uniola sessiliflora* Poiret – RAB, F, G, HC; < *Uniola longifolia* Scribner – S; < *Chasmanthium laxum* (Linnaeus) Yates var. *sessiliflorum* (Poiret) L. Clark]

Chasmanthium sessiliflorum (Poiret) Yates *var.* ***sessiliflorum***, Longleaf Spikegrass. Cp (GA, NC, SC, VA), Pd (GA, SC): moist hardwood forests, swamps, other moist habitats; rare (NC Watch List, VA Watch List). August-October. Widespread in se. North America, north to se. VA, TN, AR, and OK. This species and *Ch. laxum* are morphologically somewhat similar, but their treatment as varieties of a single species is completely unwarranted. They frequently co-occur (especially on the Gulf Coastal Plain), growing side by side, and show no sign of intergradation. [< *Chasmanthium sessiliflorum* – C, FNA, GW, K, W, Z; < *Uniola sessiliflora* Poiret – RAB, F, G, HC; < *Uniola longifolia* Scribner – S; < *Chasmanthium laxum* (Linnaeus) Yates var. *sessiliflorum* (Poiret) L. Clark]

Chasmanthium ornithorhynchum (Steudel) Yates, Birdbill Spikegrass. S. AL and w. FL panhandle west to e. LA (Florida Parishes). Also reported for NC and SC (FNA 2003a). {investigate} [= FNA, GW, K, Z; = *Uniola ornithorhyncha* Steudel – S]

Chloris Swartz (Finger-grass, Chloris)
(also see *Eustachys*)

Key based partly on C.

1 Inflorescence verticillate, typically the panicle branches in 2-5 verticels; perennial; fertile lemma inconspicuously appressed-pilose; spikelets not imbricate ..... ***Ch. verticillata***
1 Inflorescence digitate, the panicle branches in a single verticel at the apex of the culm; annual; lemma conspicuously long-ciliate; spikelets imbricate ..... ***Ch. virgata***

* ***Chloris verticillata*** Nuttall, Windmill-grass. Mt (VA), {SC}: disturbed areas, bottomland fields; rare, introduced from further west. [= C, F, G, HC, K]
* ***Chloris virgata*** Swartz, Feather Finger-grass, Showy Chloris. Pd (GA, NC, SC, VA), Cp (GA): disturbed areas; rare, introduced from tropical America. [= RAB, C, F, G, HC, K]

* ***Chloris barbata*** Sw. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from {}. [= K] {not keyed}
* ***Chloris canterei*** Arech. *var.* ***grandiflora*** (Roseng. & Izag.) D.E. Anderson. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from Paraguay. [= K; < Ch. cantérai – HC] {not keyed}
* ***Chloris cucullata*** Bisch. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from {}. [= K] {not keyed}
* ***Chloris divaricata*** R. Brown. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from {}. [= K] {not keyed}
* ***Chloris gayana*** Kunth, Rhodes Grass. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from Africa. [= F, HC, K, S] {not keyed}
* ***Chloris pectinata*** Bentham. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from {}. [= K] {not keyed}
* ***Chloris truncata*** R. Brown, Stargrass. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from Australia. [= HC, K] {not keyed}
* ***Chloris ventricosa*** R. Brown. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from Australia. Also reported for VA (Hitchcock & Chase 1950; Kartesz 1999). [= HC, K] {not keyed}

Chrysopogon Trinius (Goldbeard)

A genus of about 26 species, tropical and subtropical, all species except *Ch. pauciflorus* native to the Old World. References: Hall & Thieret in FNA (2003a); Veldkamp (1999).

Chrysopogon pauciflorus (Chapman) Bentham ex Vasey, Florida Goldbeard, Florida Rhaphis. Cp (NC): sandhill; rare (NC Watch List), perhaps only introduced. FL and Cuba; its occurrence in se. NC (at Carolina Beach State Park) is plausible either as a native, disjunct occurrence or as an introduction. [= FNA, HC, K; = *Rhaphis pauciflora* (Chapman) Nash – S]

Cinna Linnaeus 1753 (Woodreed)
(also see *Limnodea*)

A genus of about 4 species, of temperate Eurasia, North America, and South America. References: Brandenburg, Blackwell, & Thieret (1991); Tucker (1996)=Z; Brandenburg & Thieret (2000).

1 Spikelets (3.5-) 4-6 (-7.5) mm long; glumes firm, subherbaceous, rather dull, hyaline only narrowly and marginally, the second glume prominently 3-nerved ..... ***C. arundinacea***
1 Spikelets (2-) 2.5-4 (-5) mm long; glumes (at least the first and sometimes the second as well) glistening, hyaline except the midrib, the second glume 1-nerved (very rarely 3-nerved) ..... ***C. latifolia***

Cinna arundinacea Linnaeus, Common Woodreed, Sweet Woodreed. Cp, Pd, Mt (GA, NC, SC, VA): bottomland forests, rocky bars in rivers, other low, wet habitats; common. August-October. New Brunswick and MN south to south to GA and TX. [= RAB, C, G, GW, K, S, W, Z; > *C. arundinacea* var. *inexpansa* Fernald & Griscom – F, HC]

Cinna latifolia (Treviranus ex Goepp.) Grisebach, Drooping Woodreed, Slender Woodreed. Mt (NC, VA): moist forests at high elevations; rare (NC Watch List, VA Rare). June-August. Circumboreal, occurring in n. Eurasia and n. North America, south in North America to NC, TN, n. IL, MN, UT, NM, and CA. [= RAB, C, F, G, HC, K, W, Z]

Coelorachis Brongniart (Jointgrass)

A genus of about 20 species, widespread in the Old World and New World tropics and subtropics. Generic circumscription has been controversial and uncertain. References: Allen in FNA (2003a); Veldkamp, Koning, & Sosef (1986)=Z.

1 Culms round in cross-section ..... ***C. cylindrica***
1 Culms compressed-keeled in cross-section.
  2 Lower glume with rectangular pits ..... ***C. tesselata***
  2 Lower glume smooth or with transverse ridges.
    3 Lower glume with transverse ridges ..... ***C. rugosa***
    3 Lower glume smooth ..... ***C. tuberculosa***

Coelorachis cylindrica (Michaux) Nash, Carolina Jointgrass. Pd (GA, NC, SC), Cp (GA): open woodlands and roadsides, probably in areas formerly prairie-like and fire-maintained, perhaps now extirpated in our area; rare (NC Rare). June-August. Fairly widespread in se. North America, north to NC and SC (at least formerly), MS, MO, and TX. [= C, FNA, K; = *Manisuris cylindrica* (Michaux) Kuntze – RAB, F, G, GW, HC; = *Manisuris campestris* (Nuttall) A.S. Hitchcock – S; = *Mnesithea cylindrica* (Michaux) Koning & Sosef – Z]

Coelorachis rugosa (Nuttall) Nash, Wrinkled Jointgrass. Cp (GA, NC, SC, VA), Pd (GA): limesink ponds (dolines), depression meadows, clay-based Carolina bays, wet savannas, always in places with a seasonally high water-table; rare (NC Watch List, VA Rare). June-October. A Southeastern Coastal Plain endemic: s. NJ south to FL and west to TX. [= C, FNA, K; = *Manisuris rugosa* (Nuttall) Kuntze – RAB, F, G, GW, HC, S; = *Mnesithea rugosa* (Nuttall) Koning & Sosef – Z]

Coelorachis tesselata (Steudel) Nash, Pitted Jointgrass. Cp (GA): wet savannas and bogs; rare. Southeasatern Coastal Plain endemic: sw. GA and FL west to e. LA. [= FNA, K; = *Manisuris tesselata* (Steudel) Scribner – GW, HC, S; = *Mnesithea tesselata* (Steudel) Koning & Sosef – Z]

Coelorachis tuberculosa (Nash) Nash, Smooth Jointgrass. Cp (GA): pond margins; rare. Southeastern Coastal Plain endemic: sw. GA (Mitchell County) (Sorrie 1998b) west to s. AL, and in the Florida peninsula. [= FNA, K; = *Manisuris tuberculosa* Nash – GW, HC, S; = *Mnesithea tuberculosa* (Nash) Koning & Sosef – Z]

Coix Linnaeus

A genus of about 5 species, native to tropical Asia. References: Thieret in FNA (2003a).

* *Coix lacryma-jobi* Linnaeus, Job's-tears, reported for se. PA by Rhoads & Klein (1993), TN (Thieret in FNA 2003a), and NJ (Kartesz 1999). [= FNA, K]

Cortaderia Stapf (Pampasgrass)

A genus of ca. 20 species, native to South America. References: Allred in FNA (2003a).

* ***Cortaderia selloana*** (J.A. & J.H. Schultes) Ascherson & Graebner, Pampasgrass. Cp (GA, SC), Pd (GA): disturbed areas; rare, introduced from South America. This grass is a popular ornamental, rarely escaping. [= RAB, FNA, HC, K]

Ctenium Panzer (Toothache Grass)

A genus of about 20-22 species, of tropical and subtropical Africa and the Americas. References: Barkworth in FNA (2003a); Longhi-Wagner & Renvoize (2004).

1 Spikelets with numerous glands in rows on the back of the second glume; plant short-rhizomatous (nearly cespitose); [widespread in the Coastal Plain of our area]..... ***Ct. aromaticum***
1 Spikelets with very few or no glands on the back of the second glume; plant rhizomatous (the rhizomes slender and scaly); [restricted to se. GA southwards]..... ***Ct. floridanum***

Ctenium aromaticum (Walter) Wood, Toothache Grass, Orange Grass. Cp (GA, NC, SC, VA): wet savannas, pocosin-savanna ecotones, seepage bogs, sandhill-pocosin ecotones, sandhill seeps; common (VA Rare). June-August (or later in response to late summer fires). Southeastern Coastal Plain endemic: se. VA south to FL and west to LA and e. TX (Singhurst, Keith, & Holmes 2005). The entire plant is aromatic and numbs the mouth, tongue, and lips when chewed, hence the specific epithet and common names. Like many species of the longleaf pine ecosystem, toothache grass generally flowers only following fire (MacRoberts & MacRoberts 1992). Sterile clumps can be recognized by the rather broad, bicolored leaves (bluish on the upper surface, bright green on the lower surface). [= RAB, C, F, FNA, G, GW, HC, K; = *Campulosus aromaticus* (Walter) Trinius – S]

Ctenium floridanum (A.S. Hitchcock) A.S. Hitchcock, Florida Toothache Grass. Cp (GA): dry pinelands, sandhills, upper ecotones of pineland pools; rare (GA Special Concern). June-September. Southeastern Coastal Plain endemic: se. GA to ne. FL. Like *Ct. aromaticum*, generally flowering only following fire. [= FNA, GW, HC, K; = *Campulosus floridanus* A.S. Hitchcock – S]

Cynodon L.C. Richard (Bermuda Grass)

A genus of ca. 9 species, native to the tropical Old World. References: Barkworth in FNA (2003a).

* ***Cynodon dactylon*** (Linnaeus) Persoon *var. **dactylon***, Bermuda Grass, Scutch Grass. Cp, Pd, Mt (GA, NC, SC, VA): lawns, gardens, roadsides, pastures, fields, disturbed areas; common, introduced from Eurasia. May-October. [= FNA; < *C. dactylon* – RAB, C, F, G, HC, K, W; < *Capriola dactylon* (Linnaeus) Kuntze – S]

Cynosurus Linnaeus 1753 (Dog's-tail, Dogtail Grass)

References: Tucker (1996)=Z.

1 Panicle linear-oblong, 1-10 (-14) cm long, 0.4-1 cm wide; leaves 1-3 (-4) mm wide; perennial; fertile lemma 3-4 mm long, plus a 0-1 mm long mucro; [section *Cynosurus*] ..... ***C. cristatus***
1 Panicle ovoid, 1-4 (-8) cm long, 0.7-2 cm wide; leaves (2-) 3-10 mm wide; annual; fertile lemma 4.5-7 mm long, plus a 6-16 mm long awn; [section *Falona*] ..... ***C. echinatus***

* ***Cynosurus cristatus*** Linnaeus, Crested Dog's-tail. Mt (NC), {VA}: lawns, roadsides; rare, introduced from Eurasia. June-July. [= RAB, C, F, G, HC, K, Z]
* ***Cynosurus echinatus*** Linnaeus, Rough Dog's-tail. Cp (NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA): lawns, roadsides; rare, introduced from Eurasia. May-June. [= RAB, C, F, HC, K, Z]

Dactylis Linnaeus 1753 (Orchard Grass)

References: Tucker (1996)=Z.

* ***Dactylis glomerata*** Linnaeus, Orchard Grass, Cock's-foot. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): pastures, fields, woodland edges, roadsides; common (less common in Coastal Plain, especially in NC and SC), introduced from Europe. May-October. In Europe there are various chromosome races, often accorded subspecies or species status. Their status in North America has been little investigated. See various references cited in Tucker (1996) for further information about these taxa in Europe. [= RAB, C, G, HC, S, W; > *D. glomerata* var. *glomerata* – F; > *D. glomerata* var. *detonsa* Fries – F; > *D. glomerata* var. *ciliata* Petermann – F; > *D. glomerata* ssp. *glomerata* – K, Z; > *D. glomerata* ssp. *aschersoniana* (Graebner) Thellung – K; > *D. aschersoniana* Graebner]

Dactyloctenium Willdenow (Crowfoot Grass)

* ***Dactyloctenium aegyptium*** (Linnaeus) Willdenow, Crowfoot Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): lawns, roadsides, disturbed areas; common, introduced from Old World tropics. June-November. [= RAB, C, F, G, HC, K, S]

* *Dactyloctenium radulans* (R. Brown) Palisot de Beauvois is introduced in SC (Kartesz 1999). {investigate} [= K] {not keyed at this time}

Danthonia Augustin de Candolle (Oat-grass)

A genus of about 20 species, of North America, Europe, and the Americas, but the generic limits are unclear. References: Darbyshire in FNA (2003a).

1 Lemma teeth (flanking the awn) 0.8-1.8 mm long, triangular, acuminate; glumes 8-13 mm long..... ***D. spicata***
1 Lemma teeth (flanking the awn) (1.8-) 2.0-4.5 mm long, setaceous; glumes 9-19 mm long.
  2 Lemma awn 4-10 mm long; glumes 9-13 mm long ..... ***D. compressa***
  2 Lemma awn 11-18 mm long; glumes 11-19 mm long.
    3 Sheaths villous; lemmas herbaceous in texture, villous on the back and sides; awn twisted at base several times, forming an awn column 2.5-3 mm long ..... ***D. sericea***
    3 Sheaths glabrous; lemmas membranaceous in texture, villous only on the margins and towards the base; awn twisted at base a single time, forming a loose awn column 0.5-1.5 mm long ..... ***D. epilis***

Danthonia compressa Austin ex Peck, Mountain Oat-grass. Mt, Pd (GA, NC, SC, VA), Cp (VA): grassy balds, thin soils around rock outcrops, woodlands; common (uncommon in upper Piedmont only). June-August. Fairly widespread in e. North America, primarily Appalachian, from s. Canada to SC and TN. [= RAB, C, F, FNA, G, HC, K, S, W]

Danthonia epilis Scribner, Bog Oat-grass. Cp (NC, SC, VA), Mt (GA, NC, VA?), Pd (NC): peaty bogs in the Coastal Plain and Mountains, seeps around rock outcrops in the Piedmont and Mountains, granitic domes; rare (GA Special Concern, NC Watch List, VA Watch List). April-June. The range is apparently bogs in pinelands from NJ to SC, in mountain bogs in NC, VA (?), and GA, in seepage in the Cumberland Plateau and Blue Ridge of TN and AL. This taxon appears to be valid, with a distinct range, habitat, and variety of morphologic characters separating it from *D. sericea*, but further study is needed. Material from the mountains seems to differ from Coastal Plain material. RAB's description of the habitat as "dry woods, rare; pied. of N.C." appears to be in error. Blomquist listed the taxon (as a variety) for bogs in the mountains of sw. NC. It has since been found in bogs in the Sandhills region of NC and in seepage bogs in the adjacent Piedmont. [= F, HC, K, S; = *D. sericea* var. *epilis* (Scribner) Blomquist – RAB, C; < *D. sericea* Nuttall – FNA]

Danthonia sericea Nuttall, Silky Oat-grass. Cp, Pd, Mt (GA, NC, SC, VA): dry woodlands, especially common in sandy soils in the Coastal Plain, dry oak, oak-pine, and pine forests in the Piedmont and low Mountains; common (uncommon in the Mountains). April-June. Primarily a Coastal Plain species northwards, ranging from e. MA south to FL and west to LA. [= F, HC, K, S, W; = *D. sericea* var. *sericea* – RAB, C, G; < *D. sericea* – FNA]

Danthonia spicata (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes, Poverty Oat-grass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): dry woodlands, rock outcrops, shale barrens; common. May-July. Newfoundland and British Columbia south to FL and NM. [= RAB, C, FNA, G, HC, K, S, W; > *D. spicata* var. *longipila* Lamson-Scribner & Merrill – F; > *D. spicata* var. *spicata* – F; < *D. allenii* Austin – F]

Deschampsia Palisot de Beauvois (Hairgrass)

A genus of about 40 species, north and south temperate. References: Tucker (1996)=Z.

1 Awn 2-3 mm long, straight or nearly so, scarcely (or not at all) exserted beyond the tips of the glumes; lemmas smooth; leaf blades flat or folded at the midvein (V-shaped in cross-section); ligule 3-10 (-17) mm long; [section *Deschampsia*]..... ..... ***D. cespitosa*** *ssp.* ***glauca***
1 Awn 4-8 mm long, geniculate, exserted beyond the tips of the glumes; lemmas minutely scabrous; leaf blades involute, appearing filiform (rounded in cross-section); ligule 0.5-3 (-5) mm long; [section *Avenaria*] ..... ***D. flexuosa*** *var.* ***flexuosa***

Deschampsia cespitosa (Linnaeus) Palisot de Beauvois *ssp.* ***glauca*** (Hartman) Hartman, Tufted Hairgrass. Mt (NC, VA): thin soil of rock outcrops or barrens over calcareous, mafic, and ultramafic rocks (such as serpentinized olivine, amphibolite, limestone, and dolostone); rare (NC Rare, VA Rare). June-July. *D. cespitosa* is a complex species, with a complicated polyploid and aneuploid series, variously subdivided (or not) by various taxonomists. As a whole, *D. cespitosa* is circumboreal, ranging south in North America to NJ, sw. NC, WV, IL, MN, and AZ. Ssp. *glauca* is the most widespread American subspecies, and extends the farthest south. Other subspecies occur farther north and in Eurasia. In our area, *D. cespitosa* is at its southern limit and is a rare species limited to barrens and outcrops over mafic or ultramafic rocks. [= K; = *D. caespitosa* var. *glauca* (Hartman) Lindman f. – RAB, F; < *D. cespitosa* – C, Z; < *D. cespitosa* var. *cespitosa* – G; < *D. caespitosa* var. *caespitosa* – HC; = *D. cespitosa* ssp. *cespitosa* var. *glauca* (Hartman) Lindman f.; < *Aira caespitosa* Linnaeus – S; < *D. caespitosa* – W]

Deschampsia flexuosa (Linnaeus) Trinius *var.* ***flexuosa***, Common Hairgrass, Wavy Hairgrass. Mt (GA, NC, SC, VA), Pd, Cp (NC, VA): grassy balds, high elevation rocky summits, rocky or sandy woodlands; common (uncommon in Piedmont and Coastal Plain) (SC Rare). April-August. Circumboreal, ranging south in North America to n. GA, OH, WI, and MN; disjunct in AR and OK, and in Mexico. [= F, K; < *D. flexuosa* – RAB, C, G, HC, W, Z; < *Aira flexuosa* Linnaeus – S]

* ***Deschampsia elongata*** (Hooker) Munro, Slender Hairgrass. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, native of w. North America. [= HC, K] {not keyed}

Desmazeria Dumortier
(see *Catapodium*)

Diarrhena Palisot de Beauvois (Beakgrain)

A genus of about 4 species of perennial grasses of e. North America and e. Asia. References: Brandenburg, Estes, & Collins (1991)=Z. Key from Z.

1 Callous pubescent on all mature lemmas except the first; lemmas widest below the middle and gradually tapering into a cusp at the apex, those of the first floret 7.1-10.8 mm long; mature fruit 1.3-1.8 mm broad, gradually tapering into a broad, blunt beak..... ***D. americana***
1 Callous glabrous on all mature lemmas; lemmas widest near or above the middle and more-or-less abruptly contracted into a cusp at the apex, those of the first floret 4.6-7.5 mm long; mature fruit 1.8-2.5 mm broad, abruptly contracted into a bottlenose-shaped beak ..... ***D. obovata***

Diarrhena americana Palisot de Beauvois, Eastern Beakgrain. Mt (GA, NC, VA): rich moist forests, usually over calcareous rocks; rare (NC Rare, VA Watch List). July-August; August-October. W. VA and WV west to IN, south to TN, sw. NC, and nw. GA (Jones & Coile 1988); disjunct in MO. [= K, Z; = *Diarrhena americana* var. *americana* – C, G; < *Diarrhena americana* – F, HC, W (also see *Diarrhena obovata*); < *Diarina festucoides* Rafinesque – S (also see *Diarrhena obovata*]

Diarrhena obovata (Gleason) Brandenburg, Western Beakgrain. Pd (VA): alluvial forests; rare (VA Rare). July-August; August-October. Sw. PA and IN west to SD, KA, south to w. VA, nc. TN, and ne. TX. First reported for our area by Fleming & Ludwig (1996). The floodplain of the Potomac River (in Fairfax County, VA) has a number of disjuncts of species with more midwestern affinities, including *Diarrhena obovata, Erigenia bulbosa, Valeriana pauciflora,* and *Erythronium albidum* (Fleming & Ludwig 1996). [= K, Z; = *Diarrhena americana* var. *obovata* Gleason – C, G; < *Diarrhena americana* – F, HC, W; < *Diarina festucoides* Rafinesque – S]

Dichanthelium (A.S. Hitchcock & Chase) Gould 1974 (Witch-grass)
(by Richard J. LeBlond)

A genus of 70-100 species, perennials, of temperate and tropical America.

"We admit that our failure to distinguish the several named taxa ... was born of despair!" – Godfrey & Wooten (1979).

"The recognition of only four species and six varieties in this complex [*sabulorum*] to which almost 50 species names have been applied admittedly is somewhat arbitrary and certainly not entirely satisfactory." – Gould & Clark (1978).

Dichanthelium has often been treated as subgenus *Dichanthelium* of *Panicum*. It is most readily (though not consistently) separated from *Panicum* by the following combination of features: plants producing over-wintering rosettes of leaves often shorter and broader than the culm leaves; plants producing simple culms with terminal panicles in spring, the culms branching and producing panicles only on branches in the summer and autumn.

Perhaps the most complex and confusing genus in our region, *Dichanthelium* requires careful collection and close observation of several characters to determine to which taxon a specimen belongs, or at least to which taxa it seems most closely aligned. A taxon that is distinct in one part of its range may be indistinguishable from another taxon elsewhere. This is particularly true of Coastal Plain species adapted to natural (and now human) disturbances. Although hybridization is frequently suspected in *Dichanthelium*, documentation of natural hybrids is rare.

When collecting specimens in the field, mature spikelets are essential. This is determined by examining the usually whitish fertile lemma, which is firm and plump at maturity. Immature spikelets often are longer than mature ones (they shorten as they fatten); only mature spikelet length is used in the various manuals and keys. It is also important to note whether a plant is in its "vernal" or "autumnal" fruiting phase before collecting. "Vernal" plants produce panicles only at the summits of the culms (typically April-June). "Autumnal" plants produce panicles from leafy axillary branches below the summit (typically July-September). The autumnal panicles in most species are much smaller than the vernal panicles (and often hidden by fascicled leaves), but the spikelets are the same. When collecting autumnal plants, it is important to select specimens still possessing their vernal leaf blades and panicles, even though these will likely be senescent. It is also important to collect the whole plant, with the basal rosette intact (whether senescent or of current year's growth). When several plants are growing together, compare the culm, leaf, and spikelet features for differences; *Dichanthelium* taxa are gregarious.

When analyzing the character of the culm internodes and nodes, look at the first elongate internode above the base (the lowest internode is often very short and uncharacteristic). Determining whether a node is bearded is often difficult. A bearded node usually is characterized by pubescence that is longer and of a different orientation or structure than that of the internodes and

sheaths. Nodes with short pubescence generally are not regarded as bearded. Lower nodes are more likely to be bearded than upper nodes. When analyzing sheaths, look at those on the lower half of the culm. Senescent vernal sheaths often lose their pubescence (though in some species hair papillae are evident). All references in the key to sheath glabrousness or pubescence is without regard to the presence or absence of marginal hairs (cilia). A sheath that is glabrous except for marginal cilia is called glabrous. All culm leaves should be analyzed for blade characters; in general, the key relies on the size and character of the vernal blades. A "cordate" blade is one where the basal lobes of the blade extend outward and partially surround the culm when the culm is enclosed by the sheath. As with sheaths, references in the key to blade glabrousness or pubescence is without regard to marginal cilia. The ligule is an important diagnostic character for many *Dichanthelium* taxa; at least three ligules per specimen should be examined before making conclusions about its structure and length. Ligules form a distinct ring from a cartilaginous base at the inner summit of the sheath; in some species the ligule is membranous, but in most it is pubescent. Care must be taken to distinguish the pubescence of the ligule from any pubescence emanating from the inner surface of the blade base, and from marginal cilia. Ligules of senescent vernal leaves frequently lose their integrity. Spikelet shape as well as length should be determined only from mature spikelets. Measure the length from the base of the first glume (usually at an articulation) to the apex of the second glume or sterile lemma (whichever is longer). A micrometer is essential for determining the length of spikelets, first glumes, ligules, and various pilosity features. Sometimes one-tenth of a millimeter is all that separates two *Dichanthelium* taxa.

Certain characters, particularly node bearding, cordate/non-cordate blade bases, and ligule length, can be quite variable, and an effort has been made to account for this variability in the key. Nonetheless, some specimens just won't "fit," and the road not taken may have to be reconsidered.

References: Gould and Clark (1978)=Z; Freckmann (1981)=Y; Lelong (1984)=X; LeBlond (2001)=Q; Davidse and Polh (1992); Hansen & Wunderlin (1988); Hitchcock & Chase (1910); Freckmann & Lelong (2002). The treatment of *Dichanthelium* sect. *Lanuginosa* (=*D. acuminatum* group) is based closely on Y. The contributor must take responsibility for the treatment of sect. *Angustifolia* (including *D. hirstii*), sections *Dichotoma* and *Ensifolia* (the *D. dichotomum* group), and for sect. *Lancearia*. Other treatments are based largely on Z.

1 Plants densely tufted, often cushion-forming; leaves basally disposed, the blades ascending or spreading-ascending, not forming a distinct rosette of basal leaves shorter than the culm leaves; autumnal culms branching basally or from the lower nodes ..... **Key A**
1 Plants less densely or sparsely tufted, not cushion-forming; leaves well-distributed on the culm, usually much longer than the short, often broad and spreading basal rosette leaves; autumnal culms usually branching from the mid and upper nodes.
  2 Spikelets 3.3-5.2 mm long ..... **Key B**
  2 Spikelets 0.8-3.2 mm long.
    3 Spikelets 2.1-3.2 mm long.
      4 Larger culm blades 13-25 mm wide ..... **Key C**
      4 Larger culm blades < 13 mm wide.
        5 Culm nodes (at least the lower) bearded ..... **Key D**
        5 Culm nodes not bearded, the lowermost sometimes puberulent or sparsely hairy ..... **Key E**
    3 Spikelets 0.8-2.0 mm long.
      6 Lower culm internodes variously hairy ..... **Key F**
      6 Lower culm internodes glabrous ..... **Key G**

Key A - Plants densely tufted, often cushion-forming; leaves basally disposed, the blades ascending or spreading-ascending, not forming a distinct rosette of basal leaves shorter than the culm leaves; autumnal culms branching basally or from the lower nodes

1 Spikelets 2.4-4.5 mm long.
  2 Nodes, internodes, and sheaths glabrous; blades 4-13 cm, 5-8 mm, the surfaces smooth, glabrous; spikelets 2.4-2.9 mm long, glabrous; not known to produce axillary (autumnal) inflorescences ..... ***[D. nudicaule]***
  2 Nodes bearded or otherwise pubescent; internodes and sheaths variously pubescent to glabrate; blades 6-35 cm, 2-5 mm, one or both surfaces scabrous and often pubescent; spikelets 1.7-4.5 mm long, glabrous or pubescent; plants produce axillary (autumnal) inflorescences.
    3 Spikelets 2.8-3.8 (-4.5) mm long, the second glume and sterile lemma pointed or beaked and extended beyond the summit of the fertile lemma; first glume 1.2-2 mm long ..... ***D. depauperatum***
    3 Spikelets 1.7-2.8 mm long, the second glume and sterile lemma blunt or broadly pointed, not extending beyond the summit of the fertile lemma; first glume 0.7-1.2 mm long ..... ***D. linearifolium***
1 Spikelets 0.9-2.3 mm long.
  4 Longer blades > 6 cm; if only 6 cm, then sheaths retrorsely long-pilose (*D. laxiflorum*).
    5 Spikelets 1.2-1.5 mm long, glabrous ..... ***[D. dichotomum var. glabrifolium]***
    5 Spikelets 1.7-2.3 (-2.8) mm long, pubescent.

6 Longer blades 10-35 cm long, 2-4 mm wide; sheaths glabrous to variously pilose, but not conspicuously retrorsely long-pilose; nodes variously pubescent to glabrate; spikelets 1.7-2.3 (-2.8) mm long ..... ***D. linearifolium***

6 Longer blades 6-18 cm long, 7-12 mm wide; sheaths conspicuously retrorsely long-pilose; nodes bearded with retrorse or spreading hairs; spikelets 1.9-2.3 mm long ..... ***D. laxiflorum***

4 Longer blades 1.5-6 cm; sheaths glabrous or pubescent, but not retrorsely long-pilose.

7 Blades 1-3 mm wide, glabrous, eciliate or basally ciliate; spikelets 0.9-1.4 mm long.

8 Spikelets pubescent, 1.2-1.4 mm long; blades involute, often falcate, 2.5-6 cm long ..... ***[D. chamaelonche*** *ssp.* ***breve]***

8 Spikelets glabrous, 0.9-1.2 mm long; blades flat, not falcate, 1.5-4 (-5) cm long ..... ***D. chamaelonche*** *ssp.* ***chamaelonche***

7 Blades 3-8 mm wide; spikelets 1.1-2.1 mm long (if < 1.5 mm, then blades either pubescent on one or both surfaces or ciliate to the apex).

9 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous..... ***D. strigosum*** *var.* ***leucoblepharis***

9 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.

10 Blades pilose; spikelets 1.1-1.6 mm long ..... ***D. strigosum*** *var.* ***strigosum***

10 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long ..... ***D. strigosum*** *var.* ***glabrescens***

Key B - Spikelets 3.3-5.2 mm long

1 Nodes (at least lower) densely bearded with retrorse hairs; spikelets 3.7-5.2 mm long.

2 Ligule 2.5-4 mm long; internodes pubescent with long ascending or spreading hairs; blades 8-15 cm long, 10-25 mm wide; first glume 1.8-2.5 mm long..... ***D. ravenelii***

2 Ligule 0.4-0.9 (-1.3) mm long; internodes glabrous to puberulent; blades 7-12 cm long 12-40 mm wide; first glume 1.5-2.2 mm long ..... ***D. boscii***

1 Nodes glabrous, pubescent, or sparsely pilose; spikelets (2.4-) 3.3-4.2 mm long.

3 Ligule 1.6-3 mm long; blades 4-9 mm wide, > 10× as long as wide..... ***D. oligosanthes*** *var.* ***oligosanthes***

3 Ligule 0.3-1.5 mm long; if larger blades < 9 mm wide and mostly 15× or more as long, then ligule 0.5-1 mm long (*D. fusiforme*).

4 Larger blades 2-6 (-8) mm wide, mostly 15× or more as long as wide; spikelets fusiform to elliptic, acute, basally constricted..... ***D. fusiforme***

4 Larger blades 6-35 mm wide, mostly 10× or less as long as wide; spikelets broadly elliptic to obovate, rounded to sub-acute, not basally constricted.

5 Spikelets strongly papillose-hispid with spreading hairs 0.5-1 mm long; blades papillose-hispid ..... ***[D. leibergii]***

5 Spikelets glabrous to pubescent with hairs < 0.5 mm long; blades glabrous, scabrous, or pubsecent.

6 Ligules 1-1.5 mm long; blades 5-10 cm long by 6-15 mm wide, glabrous or pubescent, basally rounded; spikelets glabrous to pubescent ..... ***D. oligosanthes*** *var.* ***scribnerianum***

6 Ligules 0.3-1 mm long; blades 7-35 cm long by 8-35 mm wide, glabrous or scabrous, basally cordate or rounded; spikelets pubescent to glabrate.

7 Sheaths (at least lower) papillose-hispid with spreading hairs; blades 10-28 cm long; spikelets 2.4-3.6 mm long; first glume 1.2-1.8 mm long..... ***D. clandestinum***

7 Sheaths glabrous, pubescent, or sparsely pilose; blades 7-18 cm long; spikelets 2.9-4.1 mm long; first glume 1.5-2.2 mm long.

8 Larger blades 15-32 mm wide, 4-7× as long as wide, basally cordate; sheaths glabrous to sprasely pilose ..... ***D. latifolium***

8 Larger blades 10-20 mm wide, 6-9× as long as wide, basally rounded; sheaths pubescent..... ***[D. xanthophysum]***

Key C - Spikelets 2.1-3.2 mm long, larger leaves 13-25 mm wide

1 Culm nodes, at least the lower, bearded (often retrorsely).

2 Ligule a stramineous to light brown membrane (with or without ciliate or lacerate extensions); peduncle and often internodes scabrous..... ***D. scabriusculum***

2 Ligule entirely of white hairs; peduncle and internodes either smooth or densely hairy (velvety).

3 Lower internodes glabrous, without a viscid band below the nodes; larger blades 7-14 mm wide ..... ***D. dichotomum*** group

3 Lower internodes densely hairy except for a viscid band below the nodes; larger blades 10-20 mm wide..... ***D. scoparium***

1 Culm nodes glabrous or slightly hairy, but not bearded.

4 Second glume and sterile lemma acute to short-acuminate, conspicuously longer than the fertile lemma; spikelets glabrous (occasionally sparsely pubescent in *D. scabriusculum*).
5 Panicle rachis pellucid-punctate; ligule a stramineous to light brown membrane, with or without terminal ciliations; peduncle and often internodes scabrous; first glume 0.3-0.6 (-0.8) mm long, reniform to suborbicular .... ***D. scabriusculum***
5 Panicle rachis not pellucid-punctate; ligule entirely of white hairs; peduncle and internodes smooth; first glume 0.7-1.2 mm long, ovate to lanceolate ..... ***D. yadkinense***
4 Second glume and sterile lemma blunt to subacute, shorter than, equaling, or barely exceeding the fertile lemma; spikelets pubescent (sometimes sparsely so in *D. clandestinum*).
6 Sheaths, at least the lower, papillose-hispid with spreading hairs; blades 10-28 cm long..... ***D. clandestinum***
6 Sheaths glabrous, puberulent, finely pubescent, or sparsely pilose; blades 5-18 cm long.
7 Ligule 0-0.3 mm long; spikelets 2.2-3.2 mm long, 1.1-1.3 mm wide; first glume 0.7-1.4 (-1.8) mm long ..... ***D. commutatum var. commutatum***
7 Ligule 0.4-0.7 mm long; spikelets 2.9-3.9 mm long, 1.6-2.0 mm wide; first glume 1.5-2.2 mm long..... ***D. latifolium***

Key D - Spikelets 2.1-3.2 mm long, larger culm blades < 13 mm wide, at least the lower culm nodes bearded with a usually spreading-ascending collar of dense and/or longish hairs

1 Ligule with a dense ring of short hairs 0.5-1 mm long in front of a usually less dense ring of longer hairs (pseudoligule) 1-5 mm long.
2 Nodes retrorsely bearded; internode and sheath hairs spreading to restrorse; blade surfaces velvety-pubescent or long-pilose.
3 Spikelets 2.5-3.2 mm long; longer hairs of pseudoligule 1-3 mm long; blade surfaces velvety-pubescent; panicle rachis densely pubescent; [of cedar glades and dry limestone soils] ..... ***[D. malacophyllum]***
3 Spikelets 1.8-2.5 mm long; longer hairs of pseudoligule 3-5 mm long; blade surfaces long-pilose; panicle rachis sparsely pilose; [of dry sandy soil of pine and oak woodlands] ..... ***D. villosissimum*** *var.* ***villosissimum***
2 Node beard hairs spreading to ascending; internode and sheath hairs ascending to appressed; blade surfaces glabrate to appressed-pubescent.
4 Spikelets 2.5-3.1 mm long; lower culm blades usually glabrous adaxially except for long hairs at or near the margin (appearing ciliate), appressed-pubescent abaxially ..... ***D. ovale*** *var.* ***ovale***
4 Spikelets 2.1-2.6 mm long; lower culm blades usually sparsely appressed-pubescent on both surfaces, eciliate or ciliate at the base only ..... ***D. ovale*** *var.* ***addisonii***
1 Ligule a single structure, without a pseudoligule.
5 Ligule 2-5 mm long, ciliate ..... ***D. acuminatum* group**
5 Ligule < 2 mm long, ciliate or membranous.
6 Ligule a stramineous to light brown membrane, with or without terminal ciliations; peduncle scabrous but not hairy.
7 Panicle rachis smooth, pellucid-punctate; first glume 0.3-0.6 (-0.8) mm; larger leaves 10-25 cm long, 8-15 mm wide; ligule 0.5-1.3 mm long; lowest elongate culm internode > 2 mm in diameter; lowest nodes usually glabrous or pubescent..... ***D. scabriusculum***
7 Panicle rachis scabrous, not pellucid-punctate; first glume 0.7-1.1 mm long; larger leaves 7-12 cm long, 6-9 mm wide; ligule 0.3-0.6 mm long; lowest elongate culm internode < 1.7 mm in diameter; lowest nodes usually retrorsely bearded ..... ***D. species 9 (= cryptanthum)***
6 Ligule entirely of white hairs; peduncle variously hairy or glabrous, but not scabrous.
8 Culms to 1.5 m tall, with a broad, glabrous, viscid band below the nodes; blades of the lower leaves typically villous or velvety-pubescent..... ***D. scoparium***
8 Culms rarely exceeding 1 m, without a viscid band below the nodes; blades various.
9 Sheaths retrorsely pilose with hairs 2-3 mm long; basal leaves usually numerous, ascending, similar in size and shape to the culm leaves; culms branching only at the base ..... ***D. laxiflorum***
9 Sheaths glabrous or pilose (if pilose, then hairs not both retrorse and 2-3 mm long); basal leaves rosette-forming, usually much smaller than the culm leaves; culms branching at the nodes in age.
10 Culm internodes glabrous to sparsely pilose; culm nodes bearded with long retrorse hairs; blade surfaces glabrous to velvety-pubescent ..... ***D. dichotomum* group**
10 Culm internodes, at least the lower, strigose, pilose, or villous; culm nodes bearded with ascending or spreading hairs; blade surfaces glabrous or variously hairy.
11 Lower nodes bearded with erect-ascending, soft, and long hairs; mid-culm blades usually 20× or more as long as wide.
12 Spikelets 2.9-4.0 mm long, fusiform to elliptic, acute, basally constricted; first glume 1.4-2.6 mm long..... ***D. fusiforme***
12 Spikelets 1.5-3.1 mm long, obovate to elliptic-obovate, obtuse to sub-acute, not basally constricted; first glume 0.6-1.5 mm long.

13 Spikelets 1.5-2.2 mm long; first glume 0.6-0.8 mm long; blades to 8 cm long, usually involute..... ***D. aciculare***
13 Spikelets 2.1-3.1 mm long; first glume 0.8-1.5 mm long; blades to 12 cm long, usually flat except at tip.....***D. angustifolium***
11 Lower and often mid-culm nodes bearded with spreading, stiffish, and short-to-long hairs; mid-culm blades usually 15× or less as long as wide.
14 Blades stiff, often longitudinally ribbed, at least the lower villous or strongly pilose on the abaxial surface, and usually strongly pilose at least basally on the adaxial surface..... ..... ***D. consanguineum***
14 Blades not noticeably stiff nor longitudinally ribbed, pubescent or strigose underneath, glabrous above or with a few long hairs near the base.
15 Spikelets 2.5-3.1 mm long; lower culm blades usually glabrous adaxially except for long hairs at or near the margin (appearing ciliate), appressed-pubescent abaxially ... . ***D. ovale*** *var.* ***ovale***
15 Spikelets 2.1-2.6 mm long; lower culm blades usually sparsely appressed-pubescent on both surfaces, eciliate or ciliate at the base only.....***D. ovale*** *var.* ***addisonii***

Key E - Spikelets 2.1-3.2 mm long, larger culm blades < 13 mm wide, culm nodes not bearded, the lowermost sometimes puberulent or sparsely pilose

1 Ligule 1.6-4 mm long .....***D. oligosanthes*** *var.* ***oligosanthes***
1 Ligule < 1.5 mm long.
2 Blades, at least the lower, cordate or subcordate at the base, mostly 6-12 mm wide.
3 Spikelets obpyriform when viewed dorsally, strongly plano-convex when viewed laterally, usually markedly reddish-purple basally; fertile lemma papillose..... ***D. species 2 (=webberianum)***
3 Spikelets elliptic to elliptic-obovoid when viewed dorsally or laterally, greenish to faintly purple-tinged basally; fertile lemma not papillose.
4 Lowermost internodes crisp-puberulent; larger culm blades 4-8 (-11) cm long, 5-10 (-12) mm wide, broadest near the base, spreading from the culm..... ***D. commutatum var. ashei***
4 Lowermost internodes glabrous to puberulent to sparsely pilose; larger culm blades 6-14 cm long, 6-13 mm wide, broadest at or just below the middle, erect or erect-spreading, narrowed below to a moderately subcordate base ..... ***D. boreale***
2 Blades tapering to the base, 2-12 mm wide.
5 Ligule a stramineous to light brown membrane, with or without terminal ciliations.
6 Panicle rachis smooth, pellucid-punctate; first glume 0.3-0.6 (-0.8) mm long; larger leaves 10-25 cm long, 8-15 mm wide; ligule 0.5-1.3 mm long; lowest elongate culm internode > 2 mm in diameter; lowest nodes usually glabrous or pubescent .....***D. scabriusculum***
6 Panicle rachis scabrous, not pellucid-punctate; first glume 0.7-1.1 mm long; larger leaves 7-12 cm long, 6-9 mm wide; ligule 0.3-0.6 mm long; lowest elongate culm internode < 1.7 mm in diameter; lowest nodes usually retrorsely bearded ..... ***D. species 9 (= cryptanthum)***
5 Ligule of short white hairs or absent.
7 Leaves basally disposed, usually matted or cushion-forming, larger than the mid and upper culm leaves; blade margins uniformly papillose-ciliate; culms branching only at the base, 0.5-3.5 dm tall; internodes glabrous or sparsely pubescent..... ***D. strigosum*** *var.* ***leucoblepharis***
7 Basal leaves rosette-forming, usually much smaller than culm leaves; blade margins glabrous, or ciliate only below the middle (or papillose-ciliate throughout in =*lancearium*, which has densely puberulent internodes); culms branching at the nodes in age, 1.5-7.5 mm tall.
8 Blades of mid-culm leaves typically long and stiff, acuminate, linear or narrowly lanceolate, usually > 10× as long as wide, only 2-5 mm wide when < 8 cm long.
9 Spikelets 2.9-4.0 mm long, fusiform to elliptic, acute, basally constricted; first glume 1.4-2.6 mm long.....***D. species 8 (=fusiforme)***
9 Spikelets 1.5-3.1 mm long, obovate to elliptic-obovate, obtuse to sub-acute, not constricted basally; first glume 0.6-1.5 mm long.
10 Spikelets 1.5-2.2 mm long; first glume 0.6-0.8 mm long; blades to 8 cm long, usually involute ..... ***D. aciculare***
10 Spikelets 2.1-3.1 mm long; first glume 0.8-1.5 mm long; blades to 12 cm long, usually flat except at tip .....***D. angustifolium***
8 Blades of mid-culm leaves lanceolate, thin or firm but not stiff, usually < 10× as long as wide, usually 7 mm or more wide when as much as 8 cm long.
11 Spikelets 2.9-3.8 mm long, broadly elliptic, rounded at the summit, with broad and thick nerves..... .....***D. oligosanthes*** *var.* ***scribnerianum***

11 Spikelets 2.1-2.9 mm long, elliptic or obovate, rounded or pointed at the summit, the nerves often raised, but not broad and thick.
12 Culm internodes and sheaths glabrous or sparsely pilose.
13 Spikelets obpyriform when viewed dorsally, strongly plano-convex when viewed laterally; first glume and base of second glume usually strongly reddish-purple ..... ***D. species 2 (=webberianum)***
13 Spikelets variously shaped but not obpyriform when viewed dorsally, biconvex to elliptic when viewed laterally; first and second glumes various.
14 Culms tending to be stiffly erect; blades erect or erect-spreading, broad, usually but not always tapering from just below the middle to both ends, often yellowish green; plants not or only sparingly branched in age, not developing leafy fascicles of reduced leaves and inflorescences ..... ***D. boreale***
14 Culms not stiffly erect; leaves usually spreading, broad or narrow, dark to bright green; plants often freely branched in age, becoming top-heavy with a mass of fascicled, reduced leaves and inflorescences ..... ***D. dichotomum*** group
12 Culm internodes crisp-puberulent (sparsely so in *D. species 2 (=webberianum)*; sheaths puberulent or glabrous.
15 Spikelets elliptic, sub-acute to pointed, greenish or faintly purple-tinged basally ..... ***D. commutatum var. ashei***
15 Spikelets strongly plano-convex when viewed laterally, obpyriform when viewed dorsally, broadly rounded, usually markedly reddish-purple basally.
16 Fertile lemma and palea papillose; spikelets 2.2-2.6 mm long; lower culm blades 6-12 mm wide, glabrous..... ***D. species 2 (=webberianum)***
16 Fertile lemma and palea smooth (minutely reticulate but not papillose); spikelets (1.8) 1.9-2.2 (-2.3) mm long; lower culm blades 4-8 mm wide, glabrous, glabrate, or puberulent (especially abaxially) ..... ***D. species 3 (=lancearium)***

Key F - Spikelets 0.8-2.0 mm long, lower culm internodes variously hairy

1 Longer hairs of ligule 2-5 mm long.
2 Ligule without a distinct ring of short hairs in front of the long hairs..... ***D. acuminatum* group**
2 Ligule with a distinct ring of short hairs in front of the long hairs.
3 Peduncle, panicle axis, and sheaths puberulent with hairs 0.1 mm long; larger blades 3-6 cm long, 3-5 mm wide; spikelets 1.3-1.7 mm long ..... ***D. meridionale***
3 Peduncle panicle axis hairs > 0.1 mm long; sheaths and internodes densely clothed with straight retrorse (occasionally spreading to spreading-ascending) hairs often > 4 mm long ..... ***D. villosissimum* var. *villosissimum***
1 Longer hairs of ligule < 2 mm long.
4 Culm leaves basally crowded, ascending, usually matted or cushion-forming, larger than the mid and upper culm blades.
5 Sheaths conspicuously retrorsely long-pilose; longer blades 6-18 cm long and 7-12 mm wide; spikelets 1.9-2.3 mm long ..... ***D. laxiflorum***
5 Sheaths variously pubescent or glabrous, but not conspicuously retrorsely long-pilose; longer blades 2-6 cm long and 1-8 mm wide; spikelets 0.9-2.1 mm long.
6 Blades 1-4 mm wide, glabrous, the margins eciliate or basally ciliate; spikelets 0.9-1.5 mm long, glabrous; autumnal form branched from lower and mid nodes as well as from basal nodes.
7 Blades 1.5-4 (-5) cm long; spikelets 0.9-1.2 mm long..... ***D. chamaelonche***
7 Blades 4-12 (-20) cm long, some at least 7 cm long; spikelets 1.2-1.5 mm long ..... ***[D. dichotomum* var. *glabrifolium]***
6 Blades 2-10 mm wide, pubescent or glabrous, the margins coarsely papillose-ciliate throughout; spikelets 1.1-2.1 mm long, glabrous or pubescent; autumnal form branched from basal nodes only.
8 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous..... ***D. strigosum* var. *leucoblepharis***
8 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
9 Blades pilose; spikelets 1.1-1.6 mm long ..... ***D. strigosum* var. *strigosum***
9 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long ..... ***D. strigosum* var. *glabrescens***
4 Culm leaves not basally crowded, the lowest leaves spreading and rosette-forming, usually smaller than the culm leaves.
10 Blades of mid-culm leaves typically long and stiff, acuminate, linear or narrowly lanceolate, often involute, only 2-5 mm wide when < 8 cm long..... ***D. aciculare***
10 Blades of mid-culm leaves lanceolate, thin or firm but not stiff, usually > 5 mm when > 8 cm long.
11 Internodes crisp-puberulent.

12 Ligule 0.7-1.5 mm long; first glume acute; spikelets elliptic when viewed dorsally, biconvex or elliptic when viewed laterally, not strongly nerved ..... ***D. columbianum***
12 Ligule < 0.5 mm long; first glume obtuse to truncate; spikelets obovate when viewed dorsally, plano-convex when viewed laterally, strongly nerved.
13 Spikelets 1.5-1.8 mm long; first glume 0.5-0.8 mm long; lower culm blades 2-5 mm wide ..... ***D. portoricense***
13 Spikelets (1.8-) 1.9-2.2 (-2.3) mm long; first glume 0.8-1.2 mm long; lower culm blades 4-8 mm wide ..... ***D. species 3 (=lancearium)***
11 Internodes variously hairy but not crisp-puberulent.
14 Internodes (sparsely-) moderately to densely pubescent to pilose; ligule 1-5 mm long; blade margins either weakly ciliate, papillose-ciliate basally only, or eciliate, lacking a white-beige cartilagionous edge 0.2 mm wide.
15 Larger mid-culm blades 4-7 cm long, 4-7 mm wide, glabrous to sparsely pubescent adaxially; ligule 1-5 mm long; spikelets 1.1-1.5 mm long ..... ***D. leucothrix***
15 Larger mid-culm blades 3-6 cm long, 3-5 mm wide, long-pilose adaxially; ligule often with a ring of hairs < 1 mm and scattered longer hairs to 4 mm; spikelets 1.3-1.7 mm long..... ***D. meridionale***
14 Internodes sparsely pilose; ligule < 1 mm long; blade margins **either** coarsely papillose-ciliate throughout **or** glabrous with a white-beige cartilaginous edge about 0.2 mm wide.
16 Blades with white-beige cartilaginous margins 0.2 mm wide; spikelets 1.4-1.7 mm long; autumnal form branching from middle and upper nodes ..... ***D. tenue***
16 Blade margins coarsely papillose-ciliate throughout; spikelets 1.1-2.1 mm long; autumnal form branching from the base.
17 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous ..... ***D. strigosum*** *var*. ***leucoblepharis***
17 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
18 Blades pilose; spikelets 1.1-1.6 mm long ..... ***D. strigosum*** *var*. ***strigosum***
18 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long ..... ***D. strigosum*** *var*. ***glabrescens***

Key G - Spikelets 0.8-2.0 mm long, lower culm internodes glabrous

1 Ligule 1-5 mm long.
2 Ligule 1-2 mm long; sheaths sparsely to moderately spreading short-pilose; internodes glabrous; nodes retrorsely bearded; leaves 1-4 cm long, 2-5 mm wide; spikelets 1.2-1.4 mm long ..... ***D. species 10 (=curtifolium)***
2 Ligule (1.5-) 2-5 mm long; sheaths glabrous to variously pubescent; internodes glabrous or pubescent; nodes glabrous, or bearded with ascending, spreading, or tangled hairs; leaves 3-10 cm long, 3-10 mm wide; spikelets 0.8-1.9 mm long. ..... ***D. acuminatum*** **group**
1 Ligule < 1 mm long.
3 Basal leaves rosette-forming, usually much smaller than the culm leaves, not matted or cushion-forming; culms branching at the mid and upper nodes in age.
4 Blades of mid-culm leaves typically long and acuminate, linear or narrowly lanceolate, usually 10-20× as long as wide, only 2-5 mm wide when < 8 cm long.
5 Spikelets papillose-pubescent; blades 1-2 (-3) mm wide; panicle 2-3 cm wide; first glume 0.8-1.0 mm long, acute; culms to 4 dm tall ..... ***D. species 5 (=neuranthum)***
5 Spikelets glabrous; blades 3-8 mm wide; first glume 0.3-1.1 mm long, truncate to acute; culms to 10 dm tall.
6 Leaves 3-8 mm wide; panicle (8-) 20-40 mm wide; first glume 0.6-1.1 mm long, blunt to acute ..... ***D. dichotomum*** **group**
6 Leaves 3-5.5 mm wide; panicle 2-5 mm wide; first glume 0.3-0.4 mm long, truncate to obtuse ..... ***D. hirstii***
4 Blades of mid-culm leaves lanceolate, mostly 10× or less as long as wide, usually 7 mm or more wide when as much as 8 cm long.
7 Spikelets elliptic, oblong, or obovate; lower culm blades 3-12 (-15) mm wide, thin, tapered to the base; plants often freely branching in age, becoming top-heavy with a mass of fascicled, reduced leafy branches and inflorescences ..... ***D. dichotomum*** **group**
7 Spikelets broadly elliptic to suborbicular; lower culm blades 6-30 mm wide, thickish, broad, and cordate to subcordate at the base; plants sparingly branched in age, not becoming top-heavy with fascicled, reduced leafy branches and inflorescences.
8 Spikelets 0.9-1.2 mm long; longer blades 6-8 cm long, erect to erect-ascending ..... ***D. erectifolium***
8 Spikelets 1.2-1.9 mm long; longer blades 8-20 cm long, ascending or the uppermost erect.
9 Mid-culm blades 6-11 (-14) mm wide, the uppermost 3-9 cm long ..... ***D. sphaerocarpon*** *var*. ***sphaerocarpon***
9 Mid-culm blades, at least some, 15-30 mm wide, the uppermost 10-15 cm or more long..... ***D. polyanthes***

3 Basal leaves similar to or larger than the mid and upper culm leaves, often matted or cushion-forming; culms branching at the base (also at mid and upper nodes in *D. chamaelonche* vars. and *D. dichotomum* var. *glabrifolium*).
10 Longer blades > 6 cm; if only 6 cm, then sheaths retrorsely long-pilose (*D. laxiflorum*).
11 Spikelets 1.2-1.5 mm long, glabrous ..... ***[D. dichotomum var. glabrifolium]***
11 Spikelets 1.7-2.3 (-2.8) mm long, pubescent.
12 Longer blades 6-18 cm long by 7-12 mm wide; sheaths conspicuously retrorsely long-pilose; nodes bearded with retrorse or spreading hairs; spikelets 1.9-2.3 mm long ..... ***D. laxiflorum***
12 Longer blades 10-35 cm long by 2-4 mm wide; sheaths glabrous to variously pilose, but not conspicuously retrorsely long-pilose; nodes variously pubescent to glabrate; spikelets 1.7-2.3 (-2.8) mm long ..... ***D. linearifolium***
10 Longer blades 1.5-6 cm; sheaths glabrous or pubescent, but not retrorsely long-pilose.
13 Blades 1-3 mm wide, glabrous, eciliate or basally ciliate; spikelets 0.9-1.4 mm long.
14 Spikelets pubescent, 1.2-1.4 mm long; blades involute, often falcate, 2.5-6 cm long ..... ***[D. chamaelonche ssp. breve]***
14 Spikelets glabrous, 0.9-1.2 mm long; blades flat, not falcate, 1.5-4 (-5) cm long ..... ***D. chamaelonche ssp. chamaelonche***
13 Blades 3-8 mm wide; spikelets 1.1-2.1 mm long (if < 1.5 mm, then blades either pubescent on one or both surfaces or ciliate to the apex).
15 Spikelets pubescent, 1.5-2.1 mm long; blade surfaces glabrous..... ***D. strigosum var. leucoblepharis***
15 Spikelets glabrous, 1.1-1.8 mm long; blade surfaces pubescent or glabrous.
16 Blades pilose; spikelets 1.1-1.6 mm long ..... ***D. strigosum var. strigosum***
16 Blades glabrous, or sparsely pilose only near the adaxial base; spikelets 1.4-1.8 mm long ..... ***D. strigosum var. glabrescens***

Key to the *Dichanthelium acuminatum* group

1 Internodes glabrous.
2 Ligule 1-2 mm long; sheaths sparsely to moderately spreading short-pilose; nodes retrorsely bearded; leaves 1-4 cm long, 2-5 mm wide; spikelets 1.2-1.4 mm long..... ***D. species 10 (=curtifolium)***
2 Ligule (1.5-) 2-5 mm long; sheaths glabrous to variously pubescent, but not spreading short-pilose; nodes glabrous or pubescent, but not bearded; leaves 4-11 cm long, 4-8 mm wide.
3 Panicles 8-12 cm long, ¼-⅓ as wide, bearing 250 or more spikelets; spikelets 1.4-1.6 mm long; ligule (1.5-) 2-3 mm long; larger blades 7-11 cm long, often tinged with purple..... ***D. spretum***
3 Panicles 3-8 cm long, > ½ as wide, bearing < 200 spikelets; spikelets 1.1-1.6 mm long; ligule 2-5 mm long; larger blades 4-10 cm long.
4 Longer hairs of ligule 2-3 mm long; spikelets 1.1-1.5 mm long; blades often tinged with purple, the larger 4-8 cm long..... ***D. longiligulatum***
4 Longer hairs of ligule 3-5 mm long; spikelets 1.4-1.6 mm long; blades often yellowish-green, the larger 5-10 cm long..... ***D. acuminatum var. lindheimeri***
1 Internodes variously pubescent.
5 Peduncle, panicle axis, and/or sheaths of vernal culms puberulent with hairs 0.1 mm long, sometimes also pubescent with longer hairs, but never grayish-villous; larger blades 2-7 cm long, 2-7 mm wide.
6 Spikelets 0.8-1.1 mm long; blades 2-4.5 cm long, 2-5 mm wide; sheaths sparsely puberulent, lacking papillose-based longer hairs..... ***D. wrightianum***
6 Spikelets 1.1-1.7 mm long; mid-culm blades generally 3-7 cm long and 3-7 mm wide; sheaths with some papillose-based hairs 2 mm or more long.
7 Larger mid-culm blades 4-7 cm long, 4-7 mm wide, glabrous to sparsely pubescent adaxially; ligule 1-5 mm long; spikelets 1.1-1.5 mm long ..... ***D. leucothrix***
7 Larger mid-culm blades 3-6 cm long, 3-5 mm wide, long-pilose adaxially; ligule often with a ring of hairs < 1 mm and scattered longer hairs to 4 mm; spikelets 1.3-1.7 mm long ..... ***D. meridionale***
5 Peduncle, panicle axis, and sheaths of vernal culms glabrous, or pilose, or grayish-villous with some shorter hairs 0.2-0.5 mm long, but not puberulent with hairs 0.1 mm long; larger blades 4-12 cm long, 4-12 mm wide.
8 Sheaths and internodes of vernal culms gray-villous with a dense, tangled, or matted mixture of slender hairs 2-4 mm long, variously ascending, spreading, and retrorse, papillose or non-papillose, often with shorter hairs beneath; blades velvety-pubescent on abaxial surface.
9 Culms 15-60 cm tall and < 1.5 mm thick; panicle broadly ovoid, 5-8 cm long and > 1/2 as wide..... ***D. acuminatum var. acuminatum***
9 Culms 40-70 (-80) cm tall, the larger usually > 60 cm long and > 2 mm thick; panicle contracted, 8-11 cm long and < ½ as wide..... ***D. acuminatum var. thurowii***
8 Sheaths and internodes of vernal culms glabrous, or papillose-pilose to hispid with ascending straight hairs 1-3 mm long; blades appressed-pilose to puberulent abaxially, but not velvety.
10 Peduncle, panicle axis, and often middle and upper internodes glabrous; sheaths, at least near mid-length, lacking hairs or papillae; larger blades 4-8 mm wide, glabrous abaxially; spikelets 1.3-1.6 mm long.....

.....***D. acuminatum*** *var.* ***lindheimeri***

10 Peduncle, panicle axis, and internodes pubescent to pilose; sheaths papillose-pilose to hispid, the hairs tending to break off but leaving evident papillae; larger blades 6-10 mm wide, short-pilose to glabrate abaxially; spikelets 1.5-2.0 mm long.....***D. acuminatum*** *var.* ***fasciculatum***

Key to the *Dichanthelium dichotomum* Group

1 Lower cauline nodes glabrous or puberulent, but not bearded.
- 2 Spikelets glabrous.
  - 3 Cauline leaves mostly basally disposed, strongly ascending, much larger than the 2-3 remote middle and upper cauline leaves of fertile culms; spikelets 2.4-2.9 mm long; culms branch from basal and lower nodes, but are not known to produce autumnal inflorescences.....***[D. nudicaule]***
  - 3 Cauline leaves well-distributed along the culm, > 3, gradually reduced upwards and often spreading; spikelets 0.9-2.6 mm long; culms produce autumnal inflorescences from lower, middle, and/or upper nodes, if from lower only, then spikelets only 0.9-1.2 mm long.
    - 4 Fertile lemma and palea densely papillose; culms weak, soon sprawling over other vegetation.....***D. lucidum***
    - 4 Fertile lemma and palea smooth, with few or no papillae; culms stiffer, erect to ascending.
      - 5 Spikelets 0.9-1.5 mm long; vernal blades 1-4 mm wide.
        - 6 Spikelets 0.9-1.2 mm long; blades 1.5-4 (-5) cm long, 1-2.5 (-3) mm wide, mostly 15-20 times as long as wide; autumnal plants cushion-forming .....***D. chamaelonche ssp. chamaelonche***
        - 6 Spikelets 1.2-1.5 mm long; blades 1-12 (-20) cm long; autumnal plants not cushion-forming.
          - 7 Blades 1-3 (-5) cm long, 1.5-3 (-4) mm wide, about 10 times as long as wide; autumnal plants sparsely tufted.....***D. ensifolium***
          - 7 Blades 4-12 (-20) cm long (the longer at least 7 cm), 2-4 mm wide, 20-30 (-50) times as long as wide.....***[D. dichotomum*** *var.* ***glabrifolium]***
      - 5 Spikelets 1.4-2.6 mm long; vernal blades 3-15 mm wide (if spikelets < 1.6 mm long and vernal blades < 5 mm wide, then larger blades > 5 cm long in *D. caerulescens*).
        - 8 Widest vernal cauline blades 7-15 mm wide; upper sheaths often glutinous-warty; spikelets 2.1-2.6 mm long, some or most acute to beaked, second glume and sterile lemma extending 0.3-0.5 mm beyond fertile lemma in at least some spikelets.....***D. yadkinense***
        - 8 Widest vernal cauline blades 3-10 mm wide; upper sheaths not glutinous-warty; spikelets 1.4–2.3 mm long, blunt to subacute, second glume and sterile lemma often equal to or shorter than fertile lemma, or extending < 0.3 mm beyond it.
          - 9 Spikelets 1.4-1.8 mm long; first glume 0.3–0.8 mm long; fertile lemma 1.3-1.5 mm long; mature vernal panicles usually short-exerted with ascending branches; fresh foliage bluish-glaucous.....***D. caerulescens***
          - 9 Spikelets 1.7-2.3 mm long; first glume 0.6-1.1 mm long; fertile lemma 1.6-1.9 mm long; mature vernal panicles exerted with spreading branches; fresh foliage not bluish-glaucous.
            - 10 Vernal cauline blades spreading to deflexed, flexuous; [of wet-mesic to dry woods and thickets] .....***D. dichotomum*** *var.* ***dichotomum***
            - 10 Vernal cauline blades stiffly erect; [of wet pine savannas and open swamps].....***D. dichotomum*** *var.* ***roanokense***
- 2 Spikelets pubescent.
  - 11 Spikelets 1.2-1.7 mm long; fertile lemma and palea smooth; culms erect.
    - 12 Blades involute and often falcate, 3-6 cm long, about 1.5 mm wide when flattened, 20-50× as long as wide; lower internodes often strigose; spikelets 1.2-1.4 mm long; culms 5-20 cm long..... ***[D. chamaelonche*** *ssp.* ***breve]***
    - 12 Blades neither involute (except apically) nor falcate, 1-7 cm long, 1.5-7 mm wide, about 10× as long as wide; lower internodes glabrous or sparsely pilose, but not strigose; spikelets 1.1-1.7 mm long; culms 15-60 cm long.
      - 13 Blades 1-3 (-5) cm long, 1.5-3 (-4) mm wide, the cartilaginous margins typically gray-green to white-beige and about 0.1 mm wide; spikelets 1.2-1.5 mm long; culms to 40 cm long .....***D. ensifolium***
      - 13 Blades 2-7 mm long, 3-6 mm wide, the cartilaginous margins typically white-beige and about 0.2 mm wide; spikelets (1.2-) 1.4-1.7 mm long; culms to 60 cm long .....***D. tenue***
  - 11 Spikelets (1.5-) 1.7-2.7 mm long, if shorter than 1.8 mm then fertile lemma and palea densely papillose; culms soon sprawling.
    - 14 Spikelets (1.5-) 1.7-2.3 mm long, glabrous (rarely pubescent); first glume 0.7-1.1 mm long; fertile lemma and palea densely papillose at 20×.....***D. lucidum***
    - 14 Spikelets 2.2-2.7 mm long, pubescent; first glume 1.0–1.4 mm long; fertile lemma and palea smooth or with a few weak papillae at 20×.....***D. sphagnicola***

1 Lower cauline nodes bearded, the hairs usually retrorse.
- 13 Spikelets glabrous.

14 Spikelets 0.9-1.4 mm long; vernal cauline blades 1.5-4 (-5) cm long and 1-5 mm wide; internodes or sheaths glabrous or pubescent.
15 Spikelets 1.2-1.4 mm long; sheaths spreading-pilose; vernal cauline blades 2-5 mm wide; ligule 1-2 mm long; node beard hairs usually spreading or reflexed; internodes glabrous ..... ***D. sp. 10 (=curtifolium)***
15 Spikelets 0.9-1.2 mm long; sheaths glabrous; vernal cauline blades 1-2 (-3) mm wide; ligule < 1 mm long; node beard hairs erect and often only partially encircling the node; internodes glabrous or puberulent ..... ***D. chamaelonche***
14 Spikelets 1.4-2.3 mm long; vernal cauline blades 5-12 cm long and 3-15 mm wide; internodes and sheaths glabrous.
16 Spikelets 1.8-2.3 mm long; first glume 0.6-1.1 mm long; fertile lemma 0.8–1.0 mm wide; widest vernal blades 3-8 (-10) mm wide ..... ***D. dichotomum*** *var.* ***dichotomum***
16 Spikelets 1.4-1.9 mm long; first glume 0.3-0.6 (-0.7) mm long; fertile lemma 0.6-0.8 mm wide; widest vernal blades 7-15 mm wide ..... ***D. dichotomum*** *var.* ***ramulosum***
13 Spikelets pubescent.
17 Spikelets 1.2-1.4 mm long; sheaths spreading-pilose; vernal cauline blades 1-4 cm long and 2-5 mm wide; ligule 1-2 mm long ..... ***D. sp. 10 (=curtifolium)***
17 Spikelets 1.4-2.8 mm long; sheaths glabrous to appressed-pilose; vernal cauline blades 5-12 cm long and 5-15 mm wide; ligule < 1 mm long.
18 Usually all culm nodes bearded; internodes glabrous, or middle and upper internodes and peduncle sparsely to moderately spreading short-hairy, sometimes also glandular; upper as well as lower vernal sheaths and both surfaces of cauline blades pubescent, often densely so; spikelets (1.5-) 1.8-2.1 mm long; [of dry rocky or sandy basic soil and barrens] ..... ***D. annulum***
18 Often only lower culm nodes bearded; internodes glabrous; at least middle and upper cauline blades glabrous; spikelets 1.4-2.8 mm long; [mostly of wet acid soils and mesic to dry woodlands].
19 Spikelets (2.0-) 2.2-2.8 mm long; first glume 0.5-1.3 mm long; fertile lemma 1.8-2.3 mm long; lowest vernal cauline blades pubescent at least abaxially ..... ***D. mattamuskeetense***
19 Spikelets 1.4-2.2 mm long; first glume 0.3-0.9 mm long; fertile lemma 1.4-1.7 mm long; lowest vernal cauline blades glabrous.
20 Spikelets 1.7-2.2 mm long; first glume 0.6-0.9 mm long; fertile lemma 0.7-1.0 mm wide ..... ***D. dichotomum*** *var.* ***nitidum***
20 Spikelets 1.4-1.9 mm long; first glume 0.3-0.6 (-0.8) mm long; fertile lemma 0.6-0.8 mm wide ..... ***D. dichotomum*** *var.* ***ramulosum***

Dichanthelium aciculare (Desvaux ex Poiret) Gould & Clark, Needle Witch Grass. Cp, Pd (GA, NC, SC, VA): sandy woods and fields; common in Coastal Plain, uncommon in Piedmont. May-October. NJ south to n. Fl, west to TX and OK, also in West Indies and n. South America. Blades typically are strongly involute. Can be confused with autumnal forms of *D. ovale* var. *addisonii*, which has vernal blades 5-10 mm wide. See note at end of descriptions regarding *Panicum chrysopsidifolium*. [= *Panicum aciculare* Desvaux ex Poiret – RAB, F, G; < *P. aciculare* – C; = *D. aciculare ssp. aciculare* – FNA; > *P. aciculare* – HC, S; > *P. bennettense* M.V. Brown – HC, S; < *D. aciculare* – K, Z]

Dichanthelium acuminatum (Swartz) Gould & Clark. *var.* ***acuminatum***, Woolly Witch Grass. Cp, Pd (GA, NC, SC, VA): on dryish sandy or clayey soils of open woods and disturbed areas; common. May-October. MA south to FL, west to TX, also in West Indies, Mexico, Central America, and n. South America. Internodes and sheaths gray-villous with usually non-papillate hairs. Plants tend to be low and "bushy" with several spreading-ascending culms and dense autumnal branching. See note at end of descriptions regarding *Panicum chrysopsidifolium*. [= Y; < *Panicum lanuginosum* Elliott – RAB; > *P. lanuginosum* var. *lanuginosum* – C, F, G; < *P. leucothrix* Nash – C; > *P. auburne* Ashe – F, G, HC, S; < *D. acuminatum* ssp. *acuminatum* – FNA; > *P. lanuginosum* – HC, S; >< *D. acuminatum* var. *acuminatum* – K, Z; >< *D. acuminatum* var. *implicatum* (Scribner) Gould & Clark – K, Z; < *P. acuminatum* Swartz var. *acuminatum* – X]

Dichanthelium acuminatum (Swartz) Gould & Clark *var.* ***fasciculatum*** (Torrey) Freckmann, Slender-stemmed Witch Grass. Mt, Pd, Cp (GA, NC, SC, VA): open or cut-over woods, thickets, fields, meadows, and shores, frequently on disturbed soils; frequent (less common in the Coastal Plain). May-August. Newfoundland south to FL, west to CA, north to s. British Columbia. Typically much less pilose than var. *acuminatum*, the hairs usually papillate. See note at end of descriptions regarding *Panicum glutinoscabrum*. [= Y; < *Panicum lanuginosum* Elliott – RAB; > *P. lanuginosum* var. *fasciculatum* (Torrey) Fernald – C, F, G; > *P. lanuginosum* var. *tennesseense* (Ashe) Gleason – C, G; > *P. lanuginosum* var. *implicatum* (Scribner) Fernald – C, F, G; = *D. acuminatum* ssp. *fasciculatum* (Torrey) Freckmann & Lelong – FNA; > *P. implicatum* Scribner – HC; > *P. huachucae* Ashe var. *huachucae* – HC, S; > *P. huachucae* var. *fasciculatum* (Torrey) Hubb. – HC; > *P. tennesseense* Ashe – HC, S; > *P. huachucae* var. *silvicola* Hitchcock & Chase – S; >< *D. acuminatum* var. *acuminatum* – K, Z; >< *D. acuminatum* var. *implicatum* (Scribner) Gould & Clark – K, Z; > *P. acuminatum* Swartz var. *fasciculatum* (Torrey) Lelong – X; > *P. acuminatum* var. *unciphyllum* (Trinius) Lelong – X]

Dichanthelium acuminatum (Swartz) Gould & Clark *var.* ***lindheimeri*** (Nash) Gould & Clark, Lindheimer's Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): open or cut-over woods, thickets, fields, meadows, and shores, often on wet soils; uncommon in Piedmont, rare in Coastal Plain and Mountains. May-September. Nova Scotia west to Manitoba, south to FL and MO, west to s. CA. Internodes as well as sheaths often nearly glabrous. Panicle axis sometimes sparsely pilose at branch nodes, but otherwise glabrous. [= Y; < *Panicum lanuginosum* Elliott – RAB; >< *P. lanuginosum* var. *lindheimeri* (Nash) Fernald – C, G; > *P. lanuginosum* var. *septentrionale* Fernald – C, F, G; > *P. lanuginosum* var. *lindheimeri* – F; = *D. acuminatum ssp. lindheimeri*

(Nash) Freckmann & Lelong – FNA; < *P. spretum* Schultes – GW; > *P. lindheimeri* Nash – HC, S; < *D. acuminatum* var. *acuminatum* – K, Z; > *D. acuminatum* var. *lindheimeri* – K, Z; > *P. acuminatum* Swartz var. *lindheimeri* (Nash) Lelong – X; *?* *D. lanuginosum* (Elliott) Gould var. *lindheimeri* (Nash) Harvill]

Dichanthelium acuminatum (Swartz) Gould & Clark var. ***thurowii*** (Scribner & J.G. Smith) Gould & Clark, Thurow's Witch Grass. Cp (GA): in dry open woods, woodland edges, dry prairies, brushy pastures; occasional (possibly rare in GA). May?-October? Occasional from GA to AR and e. TX. [= K, Y, Z; < *D. acuminatum* (Swartz) Gould & Clark. ssp. *acuminatum* – FNA; = *Panicum thurowii* Scribner & J.G. Smith – HC, S]

Dichanthelium angustifolium (Elliott) Gould, Narrow-leaved Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): sandy pinelands and fields; common in Coastal Plain and Piedmont, rare in mountains. May-October. NJ south to FL, west to AR and e. TX. Vernal blades typically are flat (often involute distally). Can be confused with *D. consanguineum*, which has spreading-pilose nodes and blades 10-15× as long as wide; *D. angustifolium* blades typically are 20× or more as long as wide. Plants with involute blades to 8 cm long, spikelets 2.1-2.5 mm long, and first glumes 0.7-1.1 mm long are referable to *Panicum arenicoloides*, here included in *D. angustifolium*. They are transitional to *D. aciculare*. [= *Panicum angustifolium* Elliott – RAB, F, G; < *P. aciculare* Desvaux ex Poiret – C; = *D. aciculare* ssp. *angustifolium* (Elliott) Freckmann & Lelong – FNA; > *P. angustifolium* – HC, S; > *P. arenicoloides* Ashe – HC, S; < *D. aciculare* – K, Z]

Dichanthelium annulum (Ashe) LeBlond, Ringed Witch Grass. Pd (GA, NC, VA), Mt (VA): dry sandy or rocky soil of open woods, dry grasslands, and barrens, and glades over serpentine, limestone, calcareous shales, and other high pH dry soils; rare (NC Significantly Rare, VA Rare List). May-October. NJ, IN, and MO south to AL and MS, primarily in the Appalachian Province with very few occurrences in the Coastal Plain. One of the more distinctive taxa within the *D. dichotomum* group by morphology, habitat, and range. Plants from se. MA with all leaves pubescent, glabrous internodes, and spikelets 2.2-2.5 mm long were described as *Panicum annulum* var. *glabrescens*, but belong to *D. mattamuskeetense*. [= Q; < *P. dichotomum* Linnaeus – RAB, C, GW; = *Panicum annulum* Ashe – F, HC, S; = *P. annulum* var. *annulum* – G; < *D. dichotomum* ssp. *mattamuskeetense* (Ashe) Freckmann & Lelong – FNA; < *D. dichotomum* (Linnaeus) Gould – K, Z; < *P. dichotomum* var. *mattamuskeetense* (Ashe) Lelong - X]

Dichanthelium boreale (Nash) Freckmann, Northern Witch Grass. Pd, Mt (GA, NC, VA): open woods and grassy slopes, usually in moist soil; rare (NC Watch List, VA Watch List). April-September. Newfoundland and Ontario south to NC, GA, and AR. Our plants are =*Panicum bicknellii*, regarded as a "putative hybrid" (along with =*P. calliphyllum*) by FNA, which cites WV as the southern limit of *D. boreale*. [= K, Z; > *Panicum bicknellii* Nash – RAB, F, HC, S; > *P. boreale* Nash – C, F, G, HC; > *P. calliphyllum* Ashe – F, HC; > *D. boreale* – FNA; > *P. bicknellii* var. *bicknellii* – G; > *P. bicknellii* var. *calliphyllum* (Ashe) Gleason – G]

Dichanthelium boscii (Poiret) Gould & Clark, Bosc's Witch Grass. Pd, Mt, Cp (GA, NC, SC, VA): shaded mesic to dry woodlands; common. April-September. MA and IL south to n. FL and e. TX. [= FNA, K, Z; = *Panicum boscii* Poiret – RAB, C, G; > *P. boscii* var. *boscii* – F, HC, S; > *P. boscii* var. *molle* (Vasey) Hitchcock & Chase – F, HC, S]

Dichanthelium caerulescens (Hackel ex Hitchcock) Correll, Blue Witch Grass. Cp (NC, VA): marshes, swamps, wet pinelands, maritime grasslands, damp sandy soil; rare (NC Watch List, VA Watch List). June-October. NJ to NC, and from FL to LA, also in the Bahamas and West Indies. Not treated by FNA, where it presumably would have been placed in synonymy with *D. dichotomum* ssp. *roanokense.* [= Q; < *Panicum dichotomum* Linnaeus – RAB, GW; = *P. caerulescens* Hackel ex Hitchcock – F, HC, S; < *D. dichotomum* ssp. *roanokense* – FNA; < *P. roanokense* Ashe – G; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *roanokense* (Ashe) Lelong – X]

Dichanthelium chamaelonche (Trinius) Freckmann & Lelong *ssp.* ***chamaelonche***, Carpet Witch Grass. Cp (GA, NC, SC, VA): moist pine savannas and flatwoods, pineland pondshores; occasional to rare (VA Watch List). April-September. Se. VA south to FL, west to LA, also in Cuba and Belize. Internodes can be glabrous or puberulent, and nodes glabrous, pubescent, or bearded, but the glabrous spikelets 0.9-1.2 mm long are diagnostic. The concept of this taxon in FNA (as ssp. *chamaelonche*) appears to include *D. dichotomum* var. *glabrifolium* (see descriptions of Floridian *D. chamaelonche* ssp. *breve* and *D. dichotomum* var. *glabrifolium* at end of this treatment). [= *Panicum chamaelonche* Trinius – RAB, G, GW, HC, S; < *P. ensifolium* Baldwin – C; < *D. chamaelonche* ssp. *chamaelonche* – FNA; < *D. dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin) Gould & Clark – K, Z; = *P. chamaelonche* var. *chamaelonche* – X]

Dichanthelium clandestinum (Linnaeus) Gould, Deer-tongue Witch Grass. Mt, Pd, Cp (GA, NC, SC, VA): shaded to filtered woodlands, ditches and low areas, and often in moist sandy soil; common (uncommon in Coastal Plain). May-October. Nova Scotia and Québec south to n. FL, west to IA, KA, and TX. [= FNA, K, Z; = *Panicum clandestinum* Linnaeus – RAB, C, F, G, HC, S, X]

Dichanthelium columbianum (Scribner) Freckmann, American Witch Grass. Pd, Cp (GA, NC, SC, VA), Mt (NC, VA): dry to moist thin woods and open ground, usually in sandy soil; uncommon. June-October. S. ME, s. Ontario, and WI south to GA, TN, and IL. [= *Panicum columbianum* Scribner – RAB, C, G; > *P. columbianum* var. *columbianum* – F, HC; > *P. columbianum* var. *oricola* (Hitchcock & Chase) Fernald – F; = *D. acuminatum* ssp. *columbianum* (Scribner) Freckmann & Lelong – FNA; > *P. columbianum* var. *thinium* Hitchcock & Chase – HC; > *P. oricola* Hitchcock & Chase – HC; > *P. tsugetorum* Nash – HC, S; < *D. sabulorum* (Lamarck) Gould & Clark var. *thinium* (Hitchcock & Chase) Gould & Clark – K, Z; > *P. columbianum* – S; < *P. acuminatum* Swartz var. *unciphyllum* (Trinius) Lelong – X]

Dichanthelium commutatum (Schultes) Gould *var.* ***ashei*** (Pearson ex Ashe) Mohlenbrock, Ashe's Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): dry rocky or sandy woods and openings; common. May-October. MA south to FL and MS, west to MI, MO, and OK. [< *Panicum commutatum* – RAB, C; = *P. commutatum* Schultes var. *ashei* (Pearson ex Ashe) Fernald – F, G; = *D. commutatum ssp. ashei* (Pearson ex Ashe) Freckman & Lelong – FNA; = *P. ashei* Pearson ex Ashe – HC, S; < *D. commutatum* – K]

Dichanthelium commutatum (Schultes) Gould *var.* ***commutatum***, Variable Witch Grass. Cp, Mt, Pd (GA, NC, SC, VA): low, shaded, moist woodlands and woodland edges, and dry, thin, often rocky woods and thickets; common. May-October. ME south to FL, west to MI, MO, OK, and TX, also in Mexico. [< *Panicum commutatum* Schultes – RAB, C; > *P. commutatum* var. *commutatum* – F, G; > *P. commutatum* – HC, S; > *P. mutabile* Scribner & Smith ex Nash – F, G, HC, S; > *D. commutatum* ssp. *commutatum* Freckmann & Lelong – FNA; > *D. commutatum ssp. equilaterale* (Scribner) Freckmann & Lelong – FNA; > *D. commutatum ssp. joori* (Vasey) Freckmann & Lelong – FNA; < *D. commutatum* – K; > *P. joorii* Vasey – HC, S; > *P. equilaterale* Scribner – HC, S]

Dichanthelium consanguineum (Kunth) Gould & Clark, Kunth's Witch Grass. Cp, Pd (GA, NC, SC, VA): moist or dry sandy soils of pinelands; common in the Coastal Plain, uncommon in the Piedmont (VA Rare List). April-September. Occasional from se. VA south to FL, west to TX and IN. Often not easily separated from *D. angustifolium* and *D. ovale*. It is distinguished from *D. angustifolium* by spreading-hirsute nodes and leaves 10-15× as long as wide (*D. angustifolium* has beardless nodes, or nodes bearded with erect-ascending soft hairs, and longer leaves 20× or more as long as wide). *D. consanguineum* is distinguished from *D. ovale* by having strongly pilose upper blade surfaces (*D. ovale* upper blade surfaces are glabrous or with a few long hairs basally). The hairs of *D. consanguineum* frequently are strongly papillate. [= FNA, K, Z; = *Panicum consanguineum* Kunth – RAB, C, F, G, HC, S]

Dichanthelium depauperatum (Muhlenberg) Gould, Starved Witch Grass. Pd, Mt, Cp (GA, NC, SC, VA): dry soils of grasslands and open woods, often on disturbed soils of roadsides and ditches; common (rare in Coastal Plain). May-September. Newfoundland and MN south to GA and TX. [= FNA, K, Z; = *Panicum depauperatum* Muhlenberg – RAB, C, HC, S; > *P. depauperatum* var. *depauperatum* – F, G; > *P. depauperatum* var. *psilophyllum* Fernald – F, G]

Dichanthelium dichotomum (Linnaeus) Gould *var.* ***dichotomum***, Forked Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): wet-mesic to dry woods, thickets, and woodland openings; common throughout. May-October. S. Canada and MI south to FL and TX. Plants with bearded nodes and larger leaves are referable to *Panicum dichotomum* var. *barbulatum* (here included) but intermediates abound. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; > *P. dichotomum* var. *dichotomum* – F; *P. dichotomum* var. *barbulatum* (Michaux) Wood – F; = *D. dichotomum* ssp. *dichotomum* – FNA; = *P. dichotomum* – G; > *P. dichotomum* – HC, S; > P. *barbulatum* Michaux – HC, S; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *dichotomum* – X]

Dichanthelium dichotomum (Linnaeus) Gould *var.* ***nitidum*** (Lamarck) LeBlond, Shining Witch Grass. Cp (GA, NC, SC, VA), Pd (NC), Mt (SC, VA): moist sandy or peaty soil of wet pine savannas and pocosin ecotones, wet meadows near the coast, swamps, and marshes; occasional to frequent in Coastal Plain, rare in Piedmont and Mountains. PA and NJ south to FL, west to MO and TX; also the Bahamas (Sorrie & LeBlond 1997) and West Indies, and Mexico to Venezuela. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. nitidum* Lamarck – F, HC, S; = *D. dichotomum* ssp. *nitidum* (Lamarck) Freckmann & Lelong – FNA; = *P. nitidum* var. *nitidum* – G; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *nitidum* (Lamarck) Wood – X]

Dichanthelium dichotomum (Linnaeus) Gould *var.* ***ramulosum*** (Torrey) LeBlond, Branched Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): floodplain forests, swamps, openings, and borders of streams and ponds, and occasionally in dry upland woods; widespread. May-October. MA and MI south to FL and TX. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. microcarpon* Muhlenberg ex Elliott – F, HC, S; = *D. dichotomum* ssp. *microcarpon* (Muhlenberg ex Elliott) Freckmann & Lelong – FNA; = *P. nitidum* Lamarck var. *ramulosum* Torrey – G; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *ramulosum* (Torrey) Lelong – X]

Dichanthelium dichotomum (Linnaeus) Gould *var.* ***roanokense*** (Ashe) LeBlond, Roanoke Witch Grass. Cp (GA, NC, SC, VA): wet pine savannas, swamp openings, and wet peaty meadows; uncommon (NC Watch List). May-September. DE south to FL, west to e. TX; also in Jamaica. See note under *D. caerulescens* regarding FNA treatment. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = *P. roanokense* Ashe – F, HC, S; < *D. dichotomum* ssp. *roanokense* (Ashe) Freckmann & Lelong – FNA; < *P. roanokense* – G; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *roanokense* (Ashe) Lelong – X]

Dichanthelium ensifolium (Baldwin ex Elliott) Gould, Small-leaved Witch Grass. Cp, Pd (GA, NC, SC, VA): wet to mesic peaty, sandy, or mucky soils, often in open pinelands or with sphagnum; common in Coastal Plain, rare in Piedmont and Mountains. May-October. NJ south to FL, west to e. TX and AR. Plants with pubescent spikelets are frequent. [= *D. ensifolium* ssp. *ensifolium* – FNA; < *Panicum ensifolium* Baldwin ex Elliott – RAB, C, G, GW; = *P. ensifolium* – F; > *P. ensifolium* – HC, S; > *P. flavovirens* Nash – HC, S; > *P. vernale* Hitchcock & Chase – HC, S; < *D. dichotomum* (Linnaeus) Gould var. *ensifolium* (Baldwin ex Elliott) Gould & Clark – K, Z; < *P. ensifolium* var. *ensifolium* – X]

Dichanthelium erectifolium (Nash) Gould & Clark, Erect-leaved Witch Grass. Cp (GA, NC, SC): limesink ponds, depression meadows, cypress savannas, pine savannas; rare (NC Watch List). May-August. Se. NC to FL, west to LA; Cuba. [= FNA, K, Z; = *Panicum erectifolium* Nash – RAB, GW, HC, S]

Dichanthelium fusiforme (Hitchcock) Harvill, Spindle-fruited Witch Grass. Cp (GA, NC, SC, VA): dry to moist sand of open pine and pine/oak woods and clearings; rare (NC Significantly Rare, VA Watch List). May-November. Se. VA south to FL, west to MS, also in West Indies, Mexico, Central America, and Venezuela; perhaps most abundant in FL. Autumnal blades often flat. The autumnal form of *D. oligosanthes* var. *oligosanthes* can be very similar to *D. fusiforme* if the vernal blades of the former are missing. They are best separated by ligule length (0.5-1 mm in *fusiforme*, 1.5-3 mm in *oligosanthes*) and the more attenuated ends of the *fusiforme* spikelet. [= *Panicum fusiforme* Hitchcock – RAB, F, G, HC, S; < *P. aciculare* Desvaux ex Poiret – C; = *D. aciculare* ssp. *fusiforme* (Hitchcock) Freckmann & Lelong – FNA; < *D. aciculare* – K, Z]

Dichanthelium hirstii (Swallen) Kartesz, Hirsts' Witch Grass. Cp (GA, NC): pond-cypress savannas and limesink depressions; rare (US Candidate, NC Endangered). June-September. This distinctive species is known from only seven sites: two in NC, one in DE, two in NJ (one not seen since 1992), and two historical populations in GA. Described in 1961 (Swallen 1961), it is treated by some taxonomists as part of the *D. aciculare* group and by others as part of the *D. dichotomum* group; its

affinities appear to lie with the former. See Schuyler (1996) for a discussion of the taxonomic distinctiveness of this species. The occurrence of this species in NC is documented in LeBlond & Sorrie (2001). [= K; < ***P. aciculare*** Desvaux ex Poiret – C; < ***D. dichotomum*** ssp. *roanokense* (Ashe) Freckmann & Lelong – FNA]

Dichanthelium latifolium (Linnaeus) Harvill, Broad-leaved Witch Grass. Mt (GA, NC, SC, VA): open or shady well-drained forests; rare (NC Watch List). Late May-September. ME south to n. GA, west to WI and MS. [= FNA; = *Panicum latifolium* Linnaeus – RAB, C, F, G, HC, S; = ***D. latifolium*** (Linnaeus) Gould & Clark – K, Z, a later combination]

Dichanthelium laxiflorum (Lamarck) Gould, Open-flower Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): open or shaded woodlands, often in moist soil; common. April-September. MD south to FL, west to TX, north to IN, also in Mexico, Central America, and West Indies. [= FNA, K, Z; = *Panicum laxiflorum* Lamarck – RAB, C, F, G; > ***P. laxiflorum*** – HC, S; > ***P. xalapense*** Humboldt, Bonpland, & Kunth var. *xalapense* – HC, S; > ***P. xalapense*** var. *strictirameum* Hitchcock & Chase – HC, S]

Dichanthelium leucothrix (Nash) Freckmann, Roughish Witch Grass. Cp, Pd (GA, NC, SC, VA): wet sandy, peaty, or mucky soil of pinelands; occasional in Coastal Plain, rare in Piedmont (VA Watch List). May-October. S. NJ south to FL, west to TX, also in TN, West Indies and n. South America. A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, ***D. meridionale***, and ***D. wrightianum*** from other members of the ***D. acuminatum*** group. [= K, Y; = *Panicum leucothrix* Nash – RAB, F, G, HC, S; < ***P. leucothrix*** – C; = ***D. acuminatum ssp. leucothrix*** (Nash) Freckmann & Lelong – FNA; < ***P. spretum*** Schultes – GW; = ***P. acuminatum*** Swartz var. *leucothrix* (Nash) Lelong – X; < ***D. acuminatum*** (Swartz) Gould & Clark var. *implicatum* (Scribner) Gould & Clark – Z]

Dichanthelium linearifolium (Scribner) Gould, Low White-haired Witch Grass. Pd, Mt (GA, NC, SC?, VA): dry open woods; rare (NC Watch List). May-October. Se. Canada and MN south to GA and TX. [= FNA, K, Z; = *Panicum linearifolium* Scribner – RAB, C, S; > ***P. linearifolium*** var. *linearifolium* – F, G; > ***P. linearifolium*** var. *werneri* (Scribner) Fernald – F, G; > ***P. linearifolium*** – HC; > ***P. werneri*** Scribner – HC]

Dichanthelium longiligulatum (Nash) Freckmann, Long-ligule Witch Grass. Cp, Pd (GA, NC, SC, VA): limesink ponds, depression meadows, cypress savannas, pine savannas, bogs, swamps; frequent in Coastal Plain, rare in Piedmont. May-September. NJ and PA south to FL, also in TN, e. TX, and Central America. Intermediate forms between this taxon and ***D. spretum*** occur. [= K, Y; = *Panicum longiligulatum* Nash – RAB, HC, S; < ***P. lanuginosum*** Elliott var. *lindheimeri* (Nash) Fernald – C, G; = ***D. acuminatum*** ssp. *longiligulatum* (Nash) Freckmann & Lelong – FNA; < ***P. spretum*** Schultes – GW; = ***P. acuminatum*** Swartz var. *longiligulatum* (Nash) Lelong – X; = ***D. acuminatum*** (Swartz) Gould & Clark var. *longiligulatum* (Nash) Gould & Clark – Z]

Dichanthelium lucidum (Ashe) LeBlond, Bog Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): wet meadows, sphagnous swamps, bogs, wet woods, sphagnous streamhead pocosins, baygalls; frequent (uncommon in Mountains). May-October. MA and MI south to FL and TX. Vernal culms soon recline, producing a tangled mass. The papillose fertile lemma is diagnostic. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; = ***P. lucidum*** Ashe – G, S; > ***P. lucidum*** var. *lucidum* – F, HC; > ***P. lucidum*** var. *opacum* Fernald – F, HC; < ***D. dichotomum*** ssp. *lucidum* (Ashe) Freckmann & Lelong – FNA; < ***D. dichotomum*** var. *dichotomum* – K, Z; < ***P. dichotomum*** var. *lucidum* (Ashe) Lelong – X]

Dichanthelium mattamuskeetense (Ashe) Mohlenbrock, Mattamuskeet Witch Grass. Cp (NC, SC, VA): wet savannas, meadows, borders of pocosin shrub swamps, thickets; occasional in Coastal Plain (VA Watch List). May-October. Se. MA south to ne. SC. Typically a robust plant, often richly tinged with dark purple-maroon. [= Q; < *Panicum dichotomum* Linnaeus – RAB, C, GW; > ***P. mattamuskeetense*** var. *mattamuskeetense* – F; > ***P. mattamuskeetense*** var. *clutei* (Nash) Fernald – F; < ***D. dichotomum*** (Linnaeus) Gould ssp. *mattamuskeetense* (Ashe) Freckmann & Lelong – FNA; > ***P. mattamuskeetense*** Ashe – G, HC, S; > ***P. annulum*** Ashe var. *glabrescens* Gleason – G; > ***P. clutei*** Nash – HC, S; < ***D. dichotomum*** var. *dichotomum* – K, Z; < ***P. dichotomum*** var. *mattamuskeetense* (Ashe) Lelong – X]

Dichanthelium meridionale (Ashe) Freckmann, Matting Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): dry to damp sand of shores and woods; occasional. May-October. Sw. Nova Scotia and MA to MN, south to e. NC, n. GA, and n. AL. A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, ***D. leucothrix***, and ***D. wrightianum*** from other members of the ***D. acuminatum*** group. [= K, Y; < *Panicum lanuginosum* Elliott – RAB; < ***P. leucothrix*** Nash – C; > ***P. meridionale*** var. *meridionale* – F; > ***P. meridionale*** var. *albemarlense* (Ashe) Fernald – F; = ***D. acuminatum*** (Swartz) Gould & Clark ssp. *implicatum* (Scribner ex Nash) Freckmann & Lelong – FNA; = ***P. meridionale*** Ashe – G; > ***P. meridionale*** – HC, S; > ***P. albemarlense*** Ashe – HC, S; < ***P. acuminatum*** Swartz var. *unciphyllum* (Trinius) Lelong – X; < ***D. acuminatum*** var. *implicatum* (Scribner) Gould & Clark – Z]

Dichanthelium oligosanthes (Schultes) Gould ***var. oligosanthes***, Few-flowered Witch Grass. Cp, Pd (GA, NC, SC, VA): sandy fields and open woods; occasional in Coastal Plain, rare in Piedmont (VA Watch List). April-October. MA and MN south to FL and TX. See note under ***D. fusiforme***. [= K, Z; = *Panicum oligosanthes* Schultes – RAB, HC, S; < ***P. oligosanthes*** – C, G; = ***P oligosanthes*** var. *oligosanthes* – F; = ***D. oligosanthes*** ssp. *oligosanthes* – FNA]

Dichanthelium oligosanthes (Schultes) Gould ***var. scribnerianum*** (Nash) Gould, Scribner's Witch Grass. Mt, Pd (GA, VA), Cp (NC, VA): calcareous maritime forests, dry thin woods and openings, dry prairies, usually in basic soil; uncommon in Mountains, rare in Piedmont and Coastal Plain (NC Watch List). April-November. Sw. ME to s. British Columbia, south to se. NC, n. GA, and CA, also in n. Mexico. Throughout the U.S., but infrequent in the southeastern and western states. [= K, Z; < *Panicum oligosanthes* Schultes – RAB, C, G; = ***P. oligosanthes*** var. *scribnerianum* (Nash) Fernald – F; = ***D. oligosanthes*** ssp. *scribnerianum* (Nash) Freckmann & Lelong – FNA; = ***P. scribnerianum*** Nash – HC, S]

Dichanthelium ovale (Elliott) Gould & Clark ***var. addisonii*** (Nash) Gould & Clark, Low Stiff Witch Grass. Cp (GA, NC, SC, VA): dry to damp sandy woods and fields; uncommon (VA Watch List). May-October. MA and MN south to FL and TX, also in n. Mexico. See note under ***D. ovale*** var. *ovale*. [= K, Z; = *Panicum commonsianum* Ashe – RAB, C; > ***P. commonsianum*** var. *commonsianum* – F, G; > ***P. commonsianum*** var. *addisonii* (Nash) Fernald – F, G; > ***P. mundum*** Fernald –

F, G, HC; > *P. villosissimum* var. *pseudopubescens* (Nash) Fernald – F, G; = *D. ovale* ssp. *pseudopubescens* (Nash) Freckmann & Lelong – FNA; > *P. commonsianum* – HC, S; *P. pseudopubescens* Nash – HC, S; *P. addisonii* Nash – HC, S; *P. wilmingtonense* Ashe – HC, S; = *P. ovale* Elliott var. *pseudopubescens* (Nash) Lelong – X]

Dichanthelium ovale (Elliott) Gould & Clark *var.* ***ovale***, Oval-flowered Witch Grass. Cp (GA, NC, SC, VA): dry to damp sandy pinelands; rare (NC Watch List, VA Rare List). May-October. NY to WI, south to FL and e. TX. Infrequent over most of its range except FL. In our region, the *D. ovale* double ligule character is more evident in var. *ovale*, with var. *addisonii* often having only a single ligule about 1 mm long. Also see note under *D. consanguineum*, and note at end of descriptions regarding *Panicum malacon* (placed in synonymy here). [= K, Z; = *Panicum ovale* Elliott – RAB, X; = *D. ovale* ssp. *ovale* – FNA; > *P. ovale* – HC, S; > *P. malacon* Nash – HC, S; = *P. ovale* var. *ovale* – X]

Dichanthelium polyanthes (Schultes) Mohlenbrock, Small-fruited Witch Grass. Pd, Mt, Cp (GA, NC, SC, VA): damp to dry soil of open woods and ditches; common (absent from the outer Coastal Plain south of the Neuse River). June-October. VA to s. IL, south to GA and e. TX. [= FNA; = *Panicum polyanthes* Schultes – RAB, C, F, G, GW, HC, S; = ***D. sphaerocarpon*** (Elliott) Gould var. ***isophyllum*** (Scribner) Gould & Clark – K, Z]

Dichanthelium portoricense (Desvaux ex Hamilton) B.F. Hansen & Wunderlin, Puerto Rican Witch Grass. Cp (GA, NC, SC): moist pine savannas and flatwoods; frequent in North Carolina, uncommon in South Carolina. May-September. NC south to FL, west to TX, also in West Indies. [= *Panicum portoricense* Desvaux ex Hamilton – RAB, HC, S; = *D. portoricense* ssp. *portoricense* – FNA; < *D. sabulorum* (Lamarck) Gould & Clark var. *thinium* (Hitchcock & Chase) Gould & Clark – K, Z; = *P. portoricense* var. *portoricense* – X]

Dichanthelium ravenelii (Scribner & Merrill) Gould, Ravenel's Witch Grass. Cp, Pd (GA, NC, SC, VA): dry sandy or rocky thin woods and openings, sometimes in moist soils; common (VA Watch List). May-October. DE south to FL, west to e. TX, north to IA. [= FNA, K, Z; = *Panicum ravenelii* Scribner & Merrill – RAB, C, F, G, HC, S]

Dichanthelium scabriusculum (Elliott) Gould & Clark, Tall Swamp Witch Grass. Cp, Pd (GA, NC, SC, VA): moist, low, open or shaded woodlands, often along streams or ditches; common in Coastal Plain, uncommon in Piedmont (VA Watch List). May-October. Se. MA south to FL, west to e. TX and AR. [< *Panicum scabriusculum* – RAB, C, GW; > *P. scabriusculum* – F, HC, S; > *P. aculeatum* Hitchcock & Chase – F, G, HC, S; < *D. scabriusculum* – FNA, K, Z; > *P. scabriusculum* var. *scabriusculum* – G]

Dichanthelium scoparium (Lamarck) Gould, Velvet Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): moist sandy soil of woodland openings and ditches; common (uncommon in Mountains). May-October. MA and MI south to FL and TX, also in Mexico and West Indies. The dense, velvety pubescence of the internodes, sheaths, and blades of this taxon, combined with the viscid band below the nodes, are diagnostic. [= FNA, K, Z; = *Panicum scoparium* Lamarck – RAB, C, F, G, GW, HC, S]

Dichanthelium species 2 (=webberianum), Webber's Witch Grass. Cp (GA, NC, SC): moist pine savannas and flatwoods; uncommon. May-August. Disjunct in se. NC and SC from GA and FL. [= *Panicum webberianum* Nash – RAB, HC, S; < *D. portoricense* (Desvaux ex Hamilton) B.F. Hansen & Wunderlin ssp. *patulum* (Scribner & Merrill) Freckmann & Lelong – FNA; < *D. sabulorum* (Lamarck) Gould & Clark var. *patulum* (Scribner & Merrill) Gould & Clark – K, Z; < *P. portoricense* Desvaux ex Hamilton var. *nashianum* (Scribner) Lelong – X]

Dichanthelium species 3 (=lancearium), Nash's Witch Grass. Cp, Pd (GA, NC, SC, VA): moist pine savannas and flatwoods, moist to dry openings in maritime forests, dry pine and oak sandhills; common in Coastal Plain, uncommon in Piedmont (VA Watch List). May-September. Se. VA to FL, west to e. TX, also in West Indies and Central America. This and *D. portoricense* appear to intergrade in our region, and =*lancearium* is treated as part of *D. portoricense* ssp. *patulum* in FNA, whose concept of ssp. *patulum* includes *Panicum webberianum* (*D. species 2* here) and *P. patentifolium*, both of which appear to merit recognition (=*webberianum* as a species and =*patentifolium* as at least a variety). [= *Panicum lancearium* Trinius – RAB, C, G; > *P. lancearium* var. *lancearium* – F; > *P. lancearium* var. *patulum* (Scribner & Merrill) Fernald – F; < *D. portoricense* (Desvaux ex Hamilton) B.F. Hansen & Wunderlin ssp. *patulum* (Scribner & Merrill) Freckmann & Lelong – FNA; > *P. lancearium* – HC, S; > *P. patulum* (Scribner & Merrill) Hitchcock – HC, S; < *D. sabulorum* (Lamarck) Gould & Clark var. *patulum* (Scribner & Merrill) Gould & Clark – K, Z; < *P. portoricense* Desvaux ex Hamilton var. *nashianum* (Scribner) Lelong – X]

Dichanthelium species 5 (=neuranthum), Nerved Witch Grass. Cp (GA, NC): maritime wet grasslands and wet savannas near the coast; rare (GA Special Concern, NC Significantly Rare). May-September. Disjunctly in se. NC, se. SC, GA, FL, s. MS, TX, Bahamas, Cuba, and Belize. Treated as *D. aciculare* ssp. *neuranthum* in FNA, but distinctive morphology and habitat argue for recognition as a species. Can occur with the similar-appearing *D. caerulescens*, from which it differs by having spikelets that are longer (1.8-2.0 mm vs. 1.4-1.8), rounded vs. obtuse to sub-acute, and pubescent vs. glabrous; longer first glumes (0.8-1.0 mm vs. 0.3-0.8); leaves 15× or more as long as wide vs. 10-15×; and a nearly strict panicle. FNA gives a spikelet length of 2-2.8 mm, well beyond the length of spikelets on specimens we have seen throughout the range. As FNA provides no synonymy, it is possible that its concept of *"neuranthum"* includes entities treated separately here, or entities outside the range of this flora. [= *Panicum neuranthum* Grisebach – RAB, HC, S; = *D. aciculare* (Desvaux ex Poiret) Gould & Clark ssp. *neuranthum* (Grisebach) Freckmann & Lelong – FNA; < *D. aciculare* – K, Z]

***Dichanthelium species 9* (=*cryptanthum*)**, Hidden-flowered Witch Grass. Cp (NC, SC): wet meadows and ditches, streamside openings (NC Significantly Rare). May-September. NC (or NJ?) to MS (or TX?) (previous concepts of this taxon and its range are unclear). In the field, this taxon can be mistaken for *D. yadkinense*; it is readily distinguished by its scabrous peduncle and membranous ligules. [= *Panicum cryptanthum* Ashe – F, HC, S; < *P. scabriusculum* Elliott – RAB, C, GW; < *D. scabriusculum* (Elliott) Gould & Clark – FNA, K, Z; = *P. scabriusculum* var. *cryptanthum* (Ashe) Gleason – G]

Dichanthelium species 10 (=curtifolium), Short-leaved Witch Grass. Cp (SC), Mt (NC): bogs, sphagnous streamhead swamps, mountain streams; uncommon in Coastal Plain, rare in Piedmont and Mountains. April-September. Ranging disjunctly in w. NC and e. TN, e. SC, FL, and MS. The combination of characters is quite distinctive for the genus in our region. [=

Panicum curtifolium Nash – RAB, HC, S; = *D. ensifolium* (Baldwin ex Elliott) Gould ssp. *curtifolium* (Nash) Freckmann & Lelong – FNA; < *D. acuminatum* (Swartz) Gould & C.A. Clark var. *implicatum* (Scribn.) Gould & C.A. Clark – K, Z; = *Panicum ensifolium* Baldwin ex Elliott var. *curtifolium* (Nash) Lelong – X]

Dichanthelium sphaerocarpon (Elliott) Gould, Round-fruited Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): moist or dry thin woods, meadows, and ditches, often in dry sandy soil; common. May-October. MA, VT, OH, and KA south to FL and TX, also in Mexico. [= FNA, K, Z; = *Panicum sphaerocarpon* Elliott – RAB, C; > *P. sphaerocarpon* var. *sphaerocarpon* – F, G, HC, S; > *P. sphaerocarpon* var. *inflatum* (Scribner & J.G. Smith) Hitchcock & Chase – F, G, HC, S]

Dichanthelium sphagnicola (Nash) LeBlond, Peaty Witchgrass. Cp (GA): edges of cypress swamps, in sphagnous bogs, moist shady places; poorly known and possibly very rare. May-October. GA (Chatham County) to FL; should be sought in se. SC. Treated in synonymy with *Panicum dichotomum* by RAB, but no specimen is known from the Carolinas. This species is similar to *D. lucidum* in appearance, and differs most readily by its larger pubescent spikelets with smooth fertile lemma and palea. [= Q; < *Panicum dichotomum* Linnaeus – RAB; < *D. dichotomum* (Linnaeus) Gould ssp. *lucidum* (Ashe) Freckmann & Lelong – FNA; = *P. sphagnicola* Nash – HC, S; < *D. dichotomum* var. *dichotomum* – K, Z; < *P. dichotomum* var. *lucidum* (Ashe) Lelong – X]

Dichanthelium spretum (Schultes) Freckmann, Eaton's Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): wet sands and peats of bogs, savannas, meadows, and shores; rare (NC Watch List, VA Watch List). May-September. ME south to n. FL, LA and e. TX. Intermediate forms between this taxon and *D. longiligulatum* occur. [= K, Y; = *Panicum spretum* Schultes – RAB, C, F, G, HC, S; = *D. acuminatum* (Swartz) Gould & Clark ssp. *spretum* (Schultes) Freckmann & Lelong – FNA; < *P. spretum* – GW; = *P. acuminatum* Swartz var. *densiflorum* (Rand & Redfield) Lelong – X; = *D. acuminatum* var. *densiflorum* (Rand & Redfield) Gould & Clark – Z]

Dichanthelium strigosum (Muhlenberg) Freckmann *var. **glabrescens*** (Grisebach) Freckmann, Hairless Witch Grass. Cp (GA): low, open sandy pinelands and hammocks. May-October. S. GA and FL west to LA; also in West Indies, Belize. Included in synonymy with *Panicum strigosum* by RAB, but no specimen from the Carolinas has been found. [= K; = *D. strigosum* ssp. *glabrescens* (Grisebach) Freckmann & Lelong – FNA; < *Panicum strigosum* Muhlenberg – GW; = *P. polycaulon* Nash – HC, S; = *D. leucoblepharis* (Trinius) Gould & Clark var. *glabrescens* (Grisebach) Gould & Clark – Z]

Dichanthelium strigosum (Muhlenberg) Freckmann *var. **leucoblepharis*** (Trinius) Freckmann, Dwarf Witch Grass. Cp, Mt (GA, NC, SC): sandy, acidic soils of pinelands; occasional in Coastal Plain, rare in Mountains. May-October. NC south to FL, west to TX, also in Mexico. [= K; = *Panicum ciliatum* Elliott – RAB, HC, S; = *D. strigosum* ssp. *leucoblepharis* (Trinius) Freckmann & Lelong – FNA; = *P. strigosum* Muhlenberg var. *leucoblepharis* (Trinius) Lelong – X; = *D. leucoblepharis* (Trinius) Gould & Clark var. *leucoblepharis* – Z]

Dichanthelium strigosum (Muhlenberg) Freckmann *var. **strigosum***, Rough-hairy Witch Grass. Cp (GA, NC, SC, VA): in moist soils of pine flatwoods, savannas, and pocosins, also in boggy situations; uncommon (VA Rare List). May-September. Se. VA south to FL, west to TX, also in TN, e. Mexico, Mesoamerica, n. South America, and West Indies. [= K; = *Panicum strigosum* Muhlenberg – RAB, C, F, G, GW, HC, S; = *D. strigosum* ssp. *strigosum* – FNA; = *P. strigosum* var. *strigosum* – X; = *D. leucoblepharis* (Trinius) Gould & Clark var. *pubescens* (Vasey) Gould & Clark – Z]

Dichanthelium tenue (Muhlenberg) Freckmann & Lelong, White-edged Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): wet peaty or sandy soil pineland savannas, flatwoods, bogs, and meadows; common in Coastal Plain, occasional in Piedmont, rare in Mountains. May-October. NJ south to FL, west to TX, also in Mesoamerica and Cuba. This treatment of *D. tenue* includes plants from northern Alabama formerly recognized as *Panicum concinnius*, with spikelets 1.2-1.4 mm long but otherwise possessing the characters of *D. tenue*. [= FNA; = *Panicum tenue* Muhlenberg – RAB, C; > *P. tenue* – F, HC, S; > *P. albomarginatum* Nash – F, HC, S; > *P. trifolium* Nash – F, G, HC, S; < *P. ensifolium* Baldwin – G; > *P. concinnius* Hitchcock & Chase – HC, S; < *D. dichotomum* (Linnaeus) Gould var. *tenue* (Muhlenberg) Gould & Clark – K, Z]

Dichanthelium villosissimum (Nash) Freckmann *var. **villosissimum***, White-haired Witch Grass. Cp, Pd, Mt (GA, NC, SC, VA): dry sandy soil of open woods and prairies; frequent (VA Watch List). April-September. MA south to FL, west to TX, also in Mexico and Mesoamerica. Appearing to be related to *D. ovale* based on such characters as the double ligule. [= K, Y; = *Panicum villosissimum* Nash – RAB, C, HC, S; = *P. villosissimum* var. *villosissimum* – F, G; = *D. ovale* (Elliott) Gould & Clark ssp. *villosissimum* (Nash) Freckmann & Lelong – FNA; = *P. ovale* Elliott var. *villosum* (A. Gray) Lelong – X; < *D. acuminatum* (Swartz) Gould & Clark var. *villosum* (A. Gray) Gould & Clark – Z]

Dichanthelium wrightianum (Scribner) Freckmann, Wright's Witch Grass. Cp (GA, NC, SC, VA): limesink ponds and meadows, cypress savannas, pine savannas, bogs; uncommon (VA Watch List). May-September. MA south to FL, west to TX, also in Cuba and Mesoamerica. A micrometer is needed to measure the very short puberulence (0.1 mm) that distinguishes this taxon, D. *meridionale*, and *D. leucothrix* from other members of the *D. acuminatum* group. [= FNA, K, Y; = *Panicum wrightianum* Scribner – RAB, C, F, G, HC, S; < *P. spretum* Schultes – GW; = *D. acuminatum* (Swartz) Gould & Clark var. *wrightianum* (Scribner) Gould & Clark – Z]

Dichanthelium yadkinense (Ashe) Mohlenbrock, Spotted-sheath Witch Grass. Pd, Cp, Mt (GA, NC, SC, VA): floodplain forests, thickets, bottomlands, and swamps, often on alluvial deposits; frequent in Piedmont, occasional in Coastal Plain, uncommon in Mountains. May-October. NJ and MI south to GA and TX, also in Mexico. Sheaths often with wart-like glands. This taxon resembles *D. species 9 (=cryptanthum)*, from which it differs most readily by its hairy ligule (vs. membranous) and smooth peduncle (vs. antrorsely scabrous). [= Q; < *Panicum dichotomum* Linnaeus – RAB, GW; = *P. yadkinense* Ashe – C, F, G, HC, S; = *D. dichotomum* ssp. *yadkinense* (Ashe) Freckmann & Lelong – FNA; < *D. dichotomum* var. *dichotomum* – K, Z; = *P. dichotomum* var. *yadkinense* (Ashe) Lelong – X]

Dichanthelium chamaelonche (Trinius) Freckmann & Lelong *ssp. breve* (Hitchcock & Chase) Freckmann & Lelong, Short Witch Grass, endemic to c. and s. FL, primarily near the east coast. [= FNA; = *Panicum breve* Hitchcock & Chase – HC, S; = *D.*

dichotomum (Linnaeus) Gould var. *breve* (Hitchcock & Chase) Gould & Clark – K, Z; = *P. chamaelonche* Trinius var. *breve* (Hitchcock & Chase) Lelong – X]

Dichanthelium dichotomum (Linnaeus) Gould *var. glabrifolium* (Nash) Gould & Clark, Smooth-leaved Witch Grass, endemic to peninsular FL, mostly near the west coast. Like *D. chamaelonche* ssp. *breve*, this taxon appears to be more closely related to *D. chamaelonche* than to *D. dichotomum* or *D. ensifolium*. [= K, Z; = *Panicum glabrifolium* Nash – HC, S; < *P. chamaelonche* Trinius var. *chamaelonche* – X]

Dichanthelium leibergii (Vasey) Freckmann, Leiberg's Witch Grass, NY and PA west to Alberta, ND, and KS. [= FNA, K, Z; = *Panicum leibergii* (Vasey) Scribner – C, F, G, HC]

Dichanthelium malacophyllum (Nash) Gould, Soft-leaf Witch Grass, KY and TN west to KS and TX. Primarily a plant of cedar glades and dry calcareous soils. Reported from SC by FNA, but source of record has not been identified. [= FNA, K, Z; = *Panicum malacophyllum* – F, G, HC, S]

Dichanthelium nudicaule (Vasey) B.F. Hansen & Wunderlin, ranges from the FL Panhandle and s. AL west to MS. [= Q; = *Panicum nudicaule* Vasey]

Dichanthelium wilcoxianum (Vasey) Freckmann is shown as occurring in SC and MS on the range map in FNA, but the source of these records is not known for this plant primarily of dry prairies in the Upper Midwest. It is not treated here.

Dichanthelium xanthophysum (A. Gray) Freckmann, Slender Witch Grass, ME south to PA, west to SD; Nova Scotia to Saskatchewan. [= FNA, K, Z; = *Panicum xanthophysum* A. Gray – C, F, G, HC]

Panicum chrysopsidifolium Nash is treated variously by the cited sources. According to Z, who examined an isotype collection and found the ligule to be 2.5 mm long, it belongs to *D. acuminatum* var. *acuminatum*. Plants referred to by HC all have ligules < 1 mm long, and apparently belong to the *D. aciculare* complex. These plants are described as having densely villous nodes, internodes, sheaths, and blades; the blades 5-10 cm long and 3-5 mm wide; and spikelets 1.9-2.2 mm long, obovate, and villous. HC gives a range of se. VA to FL, west to TX, along the Coastal Plain in sandy oak or pine woods. This entity needs further scrutiny.

Panicum glutinoscabrum Fernald is an entity known only locally from "boggy spots" in southeastern Virginia. It is treated as a full species by F, but is placed in synonymy with *Dichanthelium scoparium* (Lamarck) Gould by FNA; with *D. acuminatum* (Swartz) Gould & Clark var. *acuminatum* by Z; with *P. lanuginosum* Elliott var. *fasciculatum* (Torrey) Fernald by C; and with *P. huachucae* Ashe var. *fasciculatum* (Torrey) Hubb. by HC. *Panicum glutinoscabrum* is described as having culms 7-9 dm high; elongate internodes with cinereous puberulence and black, warty, viscid glands; villous nodes; glutinous-warty and scabrous sheaths and blades; ligule 4-5 mm long; minutely puberulent panicle axis; spikelets ellipsoid, subacute, 1.7-1.8 mm long, pubescent; first glume subacute, 0.6-0.7 mm long. Y concedes that "I am not able to render a decision on the poorly known *P. glutinoscabrum* Fernald, but I suggest that it is a hybrid between a member of the *D. acuminatum* complex and *D. scoparium* (Lam.) Gould - the latter contributing the genes for height and viscid sheaths."

Panicum malacon Nash, here placed in synonymy with *Dichanthelium ovale* var. *ovale*, needs additional study. It is distinguished by HC and S as having spikelets 3-3.2 mm long with a first glume situated conspicuously below the second glume and sterile lemma, half or more as long as the spikelet; and leaves 3-5 mm wide, puberulent beneath, and puberulent to glabrous above. The leaf width and puberulence characters are not consistent with descriptions of *D. ovale*, and the placement of *P. malacon* within *D. ovale* by current treatments (including this one) may be in error. The description of *P. malacon* in RAB differs greatly from that of HC and S, and falls well outside the range of *D. ovale* characters. In RAB, *P. malacon* is described as having spikelets 3.5-4 mm long, and leaves 5-14 mm wide. This description may be based on specimens from the Sandhills of SC at NCU identified as *P. malacon* and matching the RAB description. These specimens appear to be misidentified collections of *D. oligosanthes* var. *oligosanthes*.

Digitaria Haller (Crab Grass)

A genus of about 200 species, primarily in the tropics and subtropics. Most of our species occur primarily in disturbed situations; their original distributions and habitats are now obscure. References: Wipff in FNA (2003a); Webster (1987)=Z; Wipff & Hatch (1994)=Y; Wipff (1996b)=X; Webster (1980).

1 Inflorescence an open panicle; spikelets long-pedicellate, borne singly at the ends of long panicle branches; [section *Pennatae*] ..... ***D. cognata* var. *cognata***

1 Inflorescence of 2-several spikelike racemes borne digitately or in close proximity near the summit of the culm; spikelets sessile or short-pedicellate, borne more-or-less closely spaced along the racemes.

2 Rachis of each raceme narrow, trigonous, only slightly (if at all) winged.

3 Spikelets 1.7-2.2 mm long; plants 3-10 dm tall; racemes to 10 cm long; upper sheaths glabrous, lower sheaths glabrous to sparsely pilose ..... ***D. filiformis* var. *filiformis***

3 Spikelets 2.0-2.8 mm long; plants 8-15 dm tall; racemes to 25 cm long; upper sheaths glabrous or pilose, lower sheaths densely pilose ..... ***D. villosa***

2 Rachis of each raceme broad (0.5-1 mm wide), winged, the wings as wide as or wider than the rachis proper.

4 Lower sheaths glabrous; second glume 0.75-1× as long as the first glume; fertile lemma dark brown or black at maturity.

5 Hairs of the spikelet not minutely capitate; second glume ca. 0.75 as long as the first glume; spikelets averaging 1.5 mm long..... ***D. violascens***

5 Hairs of the spikelet minutely capitate; second glume ca. 1× as long as the first glume; spikelets averaging 2.0 mm long ..... ***D. ischaemum***

4 Lower sheaths pilose; second glume 1/3-3/5 (to 4/5 in *D. ciliaris*) as long as the first glume; fertile lemma white, tan, or grayish-brown at maturity.

6 Spikelets 1.5-1.8 mm long, villous with crinkled hairs; pedicels glabrous, terete in cross-section ..... ***D. serotina***

6 Spikelets (1.7-) 2.4-4.1 mm long, glabrous, scabrous, or pubescent with straight hairs; pedicels scabrous, 3-angled in cross-section; [section *Digitaria*].

7 Spikelets (1.7-) 2.5-3.4 mm long, averaging 3.0 mm long or shorter; leaf blades pilose over the upper surface ..... ***D. sanguinalis***

7 Spikelets 2.6-4.1 mm long, averaging 3.1 mm long or longer; leaf blades glabrous except for a few hairs on the upper surface at the base.

8 Lower lemma of the sessile spikelet with 5 equidistant nerves; lowermost inflorescence node glabrous or pubescent with hairs < 0.4 mm long; apex of the first glume rounded to truncate ..... ***D. bicornis***

8 Lower lemma of sessile spikelet with the lateral nerves crowded to the margins; lowermost inflorescence node pubescent with hairs > 0.4 mm long; apex of the first glume acute ..... ***D. ciliaris***

Digitaria bicornis (Lamarck) Roemer & J.A. Schultes. Cp (GA, NC, SC): sandy fields, lawns, roadsides, disturbed places; common. Webster (1980) believed that this species is likely to occur in VA and MD, as well. Whether or not it is introduced is unclear; it is now widely distributed in the tropics and subtropics worldwide. [= FNA, K, Z]

Digitaria ciliaris (Retzius) Köler, Southern Crab Grass. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): sandy fields, roadsides, and disturbed areas; common? August-October. [= C, FNA, K, Z; = *D. sanguinalis* var. *ciliaris* (Retzius) Parlatore – F, HC]

Digitaria cognata (J.A. Schultes) Pilger, Fall Witch Grass. Cp, Pd (GA, NC, SC, VA): sandy fields and roadsides; common (VA Rare). July-October. Wipff & Hatch (1994) discuss the reasons for including *Leptoloma* in *Digitaria*. [= FNA; = *Digitaria cognata* var. *cognata* – K; = *Leptoloma cognatum* (J.A. Schultes) Chase – RAB, C, F, G, HC, S; = *D. cognatum* ssp. *cognatum* – Y]

Digitaria filiformis (Linnaeus) Köler ***var. filiformis***. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common. September-October. Var. *filiformis*, with pubescent spikelets, is widespread in e. North America. Var. *laeviglumis* (Fernald) J. Wipff, with glabrous spikelets, occurs in New England. Var. *dolichophylla* (Henrard) J. Wipff occurs in s. FL, Cuba, and PR. See Wipff (1996) for additional discusion. [= RAB, C, F, FNA, G, X; = *D. filiformis* – HC, K; = *Syntherisma filiformis* (Linnaeus) Nash – S; < *D. filiformis* – W]

* ***Digitaria ischaemum*** (Schreber) Muhlenberg, Smooth Crab Grass. Cp, Pd, Mt (GA, NC, SC, VA): fields, lawns, disturbed areas; common, introduced from Eurasia. July-October. Two varieties have sometimes been recognized. Var. *ischaemum* has racemes (1-) 2-6, 1-9 (-10) cm long, mostly curved and plants mostly to 4 dm tall. Var. *mississippiensis* (Gattinger) Fernald has racemes 5-7, 6-15 cm long, mostly stiff and straight and plants to 10 dm tall. [= C, FNA, K, W; > *D. ischaemum* var. *ischaemum* – F, G, HC; > *D. ischaemum* (Schreber) Muhlenberg var. *mississippiensis* (Gattinger) Fernald – F, G, HC; = *D. ischaemum* var. *ischaemum* – RAB; = *Syntherisma ischaemum* (Schreber) Nash – S]

* ***Digitaria sanguinalis*** (Linnaeus) Scopoli, Northern Crab Grass. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common. July-October. [= RAB, FNA, C, G, K, W, Z; = *D. sanguinalis* var. *sanguinalis* – F, HC; *Syntherisma sanguinalis* (Linnaeus) Dulac – S]

Digitaria serotina (Walter) Michaux, Dwarf Crab Grass. Cp (GA, SC, VA): sandy woodlands; rare (VA Rare). October. [= RAB, C, F, FNA, G, GW, HC, K; = *Syntherisma serotina* Walter – S]

Digitaria villosa (Walter) Persoon. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, SC): sandy fields, roadsides; common (VA Watch List). September-October. [= HC, K; = *D. filiformis* var. *villosa* (Walter) Fernald – RAB, C, F, FNA, G, X; = *Syntherisma villosa* Walter – S]

* ***Digitaria violascens*** Link. Cp (GA, NC, SC), Pd (GA, SC), Mt (GA): sandy fields, roadsides, and woodland borders; common. September-October. [= C, FNA, G, HC, K; = *D. ischaemum* var. *violascens* (Link) Radford – RAB; *? Syntherisma floridana* (A.S. Hitchcock) A.S. Hitchcock – S]

* *Digitaria horizontalis* Willdenow, Jamaican Crabgrass, is reported for SC on the basis of a specimen at NCU (Kartesz 1999). {check specimen} [= FNA, K] {not keyed at this time}

Digitaria insularis (Linnaeus) Mez ex Ekman. AL, FL, MS. [= K] {not keyed at this time}

Dinebra Jacquin (Viper Grass)

References: Barkworth in FNA (2003a).

* *Dinebra retroflexa* (Vahl) Panzer, Viper Grass, native of Africa and s. Asia, has been collected as a waif in Mecklenburg County, NC (Mellichamp, Matthews, & Smithka 1987). [= FNA, K] {not keyed}

Distichlis Rafinesque (Saltgrass)

A genus of about 5 species, of North, Central, and South America, and Australia. References: Barkworth in FNA (2003a).

Identification notes: When sterile, *Distichlis spicata* is easily confused with *Sporobolus virginicus*, with which it sometimes occurs. *Distichlis spicata* is generally a coarser plant, and lacks long hairs around the collar of the sheath; *Sporobolus virginicus* is more delicate, and typically has long hairs on either side of the collar.

Distichlis spicata (Linnaeus) Greene, Saltgrass, Spike Grass. Cp (GA, NC, SC, VA): coastal marshes and shores, especially common in hypersaline flats (where infrequent tidal inundation is followed by evaporation); common. June-October. Two varieties (or subspecies or species) have often been recognized: var. *spicata* ranging along the Atlantic coast from Nova Scotia and Prince Edward Island south to tropical America, and on the Pacific coast of North America, and var. *stricta* (Torrey) Scribner widespread in saline situations in western North America. These do not appear to warrant taxonomic recognition (Barkworth in FNA 2003a). [= RAB, FNA, GW, K, S; > *D. spicata* var. *spicata* – C; > *D. spicata* – F, G, HC; > *D. spicata* ssp. *spicata*]

Echinochloa Palisot de Beauvois (Barnyard-grass, Jungle-rice)

A genus of 4-5- species of the tropics and warm temperate regions. References: Michael in FNA (2003a). Key based in part on C.

1 Panicle elongate, the branches few, distant, unbranched, and short, to 2 (-3) cm long; spikelets awnless; leaves 3-6 (-9) mm wide ..... ***E. colonum***
1 Panicle broader, the branches numerous, approximate, often further branched, short to long, some (at least) exceeding 2 cm long; spikelets awnless or awned; leaves 5-30 mm wide.
  2 Lower sheaths usually papillate-pubescent; fertile lemma 2.5-4× as long as wide ..... ***E. walteri***
  2 Lower sheaths glabrous; fertile lemma 1.5-2.5× as long as wide.
    3 Inflorescence nodding; awns 4-29 mm long..... ***E. cruspavonis* *var.* *cruspavonis***
    3 Inflorescence erect, stiff; awns 0-25 mm long.
      4 Second glume and sterile lemma hairy or scabrous to nearly glabrous, the hairs usually not papillose-based; fertile lemma obtuse or broadly acute, with a thin, membranous (later withering) tip set off from the body by a line of minute hairs.
        5 Panicle fairly open, the branches erect, appressed, or spreading; spikelets green or purple-tinged, awnless or with a well-developed awn (to 25 mm long); leaves 5-15 mm wide; plants mostly 3-7 dm tall ..... ***E. crusgalli* *var.* *crusgalli***
        5 Panicle very crowded, the branches appressed to slightly spreading, the tips often incurved; spikelets purplish-brown, awnless (or with awn to 2 mm long); leaves mostly 15-30 mm wide; plants mostly 7-15 dm tall ..... ***E. frumentacea***
      4 Second glume and sterile lemma usually with stout, papillose-based hairs on the veins; fertile lemma acuminate, abruptly narrowed to a firm, persistent tip.
        6 Spikelets < 3.5 mm long, not including the awn (if present); sterile lemma awnless or with an awn to 6 (-10) mm long ..... ***E. muricata* *var.* *microstachya***
        6 Spikelets > 3.5 mm long, not including the awn (if present); sterile lemma usually awned (rarely awnless), the awn 6-25 mm long ..... ***E. muricata* *var.* *muricata***

* ***Echinochloa colonum*** (Linnaeus) Link, Jungle-rice. Cp, Pd (GA, NC, SC, VA), Mt (GA, SC, NC): fields, ditches, disturbed wet areas; uncommon, introduced from the Old World tropics. July-October. The debate over the appropriate grammatical treatment and therefore spelling of the epithet is discussed in detail in Ward (2005b). [= *E. colonum* – RAB, C, F, G, GW, HC; = *E. colona* -- FNA, K, S, orthographic variant]

* ***Echinochloa crusgalli*** (Linnaeus) Palisot de Beauvois *var.* ***crusgalli***, Barnyard-grass. {GA, NC, SC, VA} July-October. [= C, G; < *E. crusgalli* – RAB, GW (also see *E. muricatum*); = *E. crus-galli* – K, orthographic variant; < *E. crusgalli* – F, FNA; < *E. crus-galli* ssp. *crus-galli* – S (also see *E. muricata*)]

Echinochloa cruspavonis (Kunth) J.A. Schultes *var.* ***cruspavonis***. {AL, MS, FL} July-October. [< *E. crus-pavonis* – HC; = *E. crus-pavonis* var. *crus-pavonis* – FNA, K, orthographic variant]

* ***Echinochloa frumentacea*** Link, Japanese Millet, Billion-dollar Grass, White Panic. Cp (NC), {VA}: disturbed areas; rare, introduced from Asia. July-October. [= F, FNA, K; < *E. crusgalli* – RAB, GW; = *E. crusgalli* (Linnaeus) Palisot de Beauvois var. *frumentacea* (Link) W. Wight – C, G; = *E. crus-galli* ssp. *edulis* A.S. Hitchcock – S]

Echinochloa muricata (Palisot de Beauvois) Fernald *var.* ***microstachya*** Wiegand, Barnyard-grass. {GA, NC, SC, VA} July-October. [= C, FNA, K; < *E. crusgalli* – RAB, GW; = *E. pungens* (Poiret) Rydberg var. *microstachya* (Wiegand) Fernald & Griscom – F; = *E. microstachya* (Wiegand) Rydberg – G; < *E. crus-galli* ssp. *crus-galli* – S]

Echinochloa muricata (Palisot de Beauvois) Fernald *var. **muricata***, Barnyard-grass. Cp (NC): interdune wetlands. July-October. [= C, FNA, K; < *E. crusgalli* – RAB, GW; > *E. pungens* (Poiret) Rydberg var. *pungens* – F; > *E. pungens* var. *ludoviciana* (Wiegand) Fernald & Griscom – F; = *E. muricata* – G; < *E. crus-galli* ssp. *crus-galli* – S]

Echinochloa walteri (Pursh) Heller. Cp (GA, NC, SC, VA), Pd (GA): marshes; common. July-October. MA south to FL, west to TX on the outer Coastal Plain; also inland from OH west to WI, south to MO and AR. [= RAB, C, F, FNA, GW, HC, K, S, W]

Eleusine Gaertner (Yard Grass)

References: Hilu in FNA (2003a). Key based on FNA.

1 Ligule pubescent ..... ***E. coracana ssp. africana***
1 Ligule membranaceous, ciliate to erose ..... ***E. indica***

* ***Eleusine coracana*** (Linnaeus) Gaertner *ssp. **africana*** (Kennedy & O'Byrne) Hilu & de Wet, Finger Millet. Cp (SC): disturbed areas; rare, introduced from Africa. There remains some doubt about the identity of the population discovered. Reported by Werth, Zeng, & Baird (1997). [= FNA, K; = *E. africana* Kennedy & O'Byrne]

* ***Eleusine indica*** (Linnaeus) Gaertner, Yard Grass, Goose Grass. Cp, Pd, Mt (GA, NC, SC, VA): lawns, roadsides, gardens, disturbed areas; common, introduced from Old World. [= RAB, C, F, FNA, G, HC, K, S, W]

* ***Eleusine tristachya*** (Lamarck) Lamarck, is introduced from South America in scattered states in e. United States, including VA, NJ (Hilu 1980) and AL (Small 1933). [= FNA, K, S] {not keyed at this time}

Elionurus Humboldt & Bonpland ex Willdenow (Balsamscale)

A genus of about 15 species, native to tropical and subtropical parts of Africa and the Americas. References: Barkworth in FNA (2003a).

Elionurus tripsacoides Humboldt & Bonpland ex Willdenow, Pan-American Balsamscale. Cp (GA): wet savannas; rare (GA Special Concern). S. GA south to s. FL, west to s. and w. TX, and south through Central America to s. South America. Reported for sw. GA by Jones & Coile (1988), for s. MS and FL (Sorrie & Leonard 1999). [= FNA, K; = *Elyonurus tripsacoides* – GW, HC, S, orthographic variant]

Elymus Linnaeus 1753 (Wild-rye, Rye Grass)
(also see *Thinopyrum*)

A genus of about 150 species, semicosmopolitan in temperate regions. The genus, as now circumscribed, includes all allopolyploid taxa with at least one chromosome complement contributed from *Pseudoroegneria*. North American *Elymus* are allopolyploids of *Pseudoroegneria* and *Hordeum* (Helfgott & Mason-Gamer 2004). Reference: Barkworth & Campbell in FNA (in prep.); Campbell (2000); Church (1967); Tucker (1996)=Z; Barkworth (1997)=X. This treatment largely follows Barkworth & Campbell in FNA (in prep.).

Identification notes: Measurements of the spike include the awns, but measurements of spikelets and its components do not. Rachis internodes should be measured near the middle of the spike. Glume widths are measured at the widest point, or if the widest point is not apparent, at about 5 mm above the glume base.

1 Spikelets solitary at each node (occasionally paired at the lowest nodes); glumes and lemmas awned or unawned; plants cespitose to strongly rhizomatous.
  2 Plants strongly rhizomatous; [common and weedy introduced species]; [section *Elytrigia*] ..... ***E. repens***
  2 Plants cespitose; [rare natives and introductions]; [section *Goulardia*].
    3 Spikelets 20-30 mm long; anthers 3-6 mm long; rachis internodes hirtellous below the spikelets; [very rare introduction, reported for c. GA]..... ***[E. semicostatus]***
    3 Spikelets 8-25 mm long; anthers 0.8-3 mm long; rachis internodes glabrous below the spikelets; [rare natives of glades and barrens].
      4 Lemma awns 15-40 mm long, longer than the body of the lemma..... ***[E. trachycaulus ssp. subsecundus]***
      4 Lemma awns 1-13 mm long, shorter than the body of the lemma..... ***E. trachycaulus ssp. trachycaulus***
1 Spikelets 2-3 (-5) at each node; glumes and lemmas usually awned; plants usually cespitose, occasionally short-rhizomatous.
  5 Both glumes (including their awn) either 0-3 mm long and subulate or 1-20 mm long and differing in length by > 5 mm, 0.1-0.6 mm wide, tapering from the base, with 0-1 distinct veins, persistent; rachis internodes 4-12 mm long, ca. 0.5 mm thick at the narrowest section.

6 Spikelets appressed; lemma awns straight or curving; glumes sometimes absent, but usually 1-20 mm long, 0.1-0.6 mm wide, with a distinct vein; spikes erect or nodding.....***[E. svensonii]***
6 Spikelets widely spreading to horizontal; lemma awns straight (rarely slightly curving); glumes 0-3 mm long, with no distinct veins (rarely 1 glume to 20 mm long, 0.2 mm wide); spikes usually erect.
7 Lemmas pubescent.....***E. hystrix** var. **bigelovianus***
7 Lemmas glabrous to scabrous.....***E. hystrix** var. **hystrix***
5 Both glumes (including the awns) 10-40 mm long, usually differing in length by < 5 mm, 0.2-2.3 mm wide, lanceolate to setaceous, usually widest above the base, with 2-8 veins, persistent or disarticulating; rachis internodes slender (as above) or stout (2-5 mm long and ca. 1 mm thick at the narrowest section).
8 Glume bases flat, thin, and evidently veined, or indurate for < 1 mm, the bodies not exceeding the adjacent (usually 8-15 mm long) lemmas; lemma awns usually curving outward; spikes usually nodding to pendent; internodes (2-) 4-12 mm long.
9 Glumes 0.5-1.6 mm wide; lemma awns 15-40 (-50) mm long; paleas acute; rachis internodes 2-5 (-7) mm long; blades (3-) 4-15 (-20) mm wide, pale green, usually glabrous or scabridulous above.....***E. canadensis** var. **canadensis***
9 Glumes 0.3-0.8 mm wide; lemma awns 15-25 (-35) mm long; paleas narrowly truncate; rachis internodes 5-8 (-12) mm long; blades 8-24 mm wide, dark green, usually thinly pilose above.....***[E. wiegandii]***
8 Glume bases terete, indurate, and lacking evident veins for 0.5-4 mm, the bodies (unless indistinct from the awns) exceeding the adjacent (usually 6-12 mm long) lemmas; lemma awns straight; spikes erect or nodding; internodes 2-5 mm long (to 7 mm in *E. sp. 1*).
10 Glumes persistent, 0.2-1 mm wide, with 2-4 veins, the basal 0.5-2 mm essentially straight; lemmas rarely glabrous; spikelets with 1-3 (-4) florets; spikes nodding, exserted.
11 Blades glabrous to scabrous, pale dull green; spikes 7-25 cm long; internodes usually 3-5 mm long; spikelets with 2-3 (-4) florets; lemmas usually scabrous, 7-14 mm long, 1-5 mm longer than the acute paleas; flowering usually late June to late July.....***E. riparius***
11 Blades villous to pilose, dark glossy green; spikes 4-12 cm long; internodes usually 2-3 mm long; spikelets with 1-2 (-3) florets; lemmas usually villous, 5.5-9 mm long, 0-1.5 mm longer than the obtuse paleas; flowering usually early June to early July.....***E. villosus***
10 Glumes disarticulating with the lowest floret, 0.7-2.3 mm wide, with (2-) 3-5 (-8) veins, the basal 1-4 mm clearly bowed-out; lemmas often glabrous; spikelets with (2-) 3-5 (-6) florets; [*Elymus virginicus* complex].
12 Spikes 2.5-6 cm wide, exserted; lemma awns 15-40 mm long; blades glabrous or villous.
13 Spikes with 9-18 nodes; internodes 4-7 mm long; blades usually lax, dark glossy green under the glaucous bloom; auricles 2-3 mm long, blackish at maturity; flowering usually in mid-May to mid-June.....***E. macgregorii***
13 Spikes with 15-30 nodes; internodes 3-5 mm long; blades lax, or often ascending and involute, pale dull green; auricles 0-2 mm long, brownish at maturity; flowering usually in mid-June to late July.
14 Spikelets (and usually also the foliage) pubescent; spikes usually 6-12 cm long; lemmas 6-10 mm long.....***E. glabriflorus** var. **australis***
14 Spikelets (and usually also the foliage) glabrous to scabrous); spikes usually 9-16 cm long; lemmas 7-13 mm long.....***E. glabriflorus** var. **glabriflorus***
12 Spikes 0.7-2 cm wide (including the awns), exserted or sheathed; lemma awns 1-15(20) mm long; spikelets appressed to slightly spreading; blades usually glabrous to scabridulous.
15 Lemma awns 1-3(5) mm long; blades often ascending, somewhat involute, those higher on the stiffly erect culms broader and more persistent; flowering usually in early July to mid-August.....***[E. curvatus]***
15 Lemma awns 5-15(20) mm long; blades usually spreading or lax, not markedly broader or more persistent towards the culm summit; flowering usually in mid-June to late July.
16 Spikes glaucous, hispidulous to villous-hirsute, often intermediate in exsertion; glumes indurate in the lowest 1-2 mm; ligules and auricles usually absent; flowering usually early July to mid-August.....***E. virginicus** var. **intermedius***
16 Spikes green to glaucous, usually glabrous to scabrous, partly included in the sheath to fully exserted; ligules and auricles often present; flowering usually mid-June to mid-July.
17 Spikes partly sheathed; glumes 1-2.3 mm wide, strongly indurate and bowed-out in the lowest 2-4 mm; plants usually green to yellowish-brown; nodes mostly covered.....***E. virginicus** var. **virginicus***
17 Spikes usually exserted; glumes (0.5-) 0.7-1.5 (-1.8) mm wide, moderately indurate and bowed out in the lowest 1-2 mm; plants usually glaucous, sometimes reddish-brown at maturity; nodes often exposed.
18 Culms usually 3-8 dm tall, with 4-6 nodes; blades 2-9 mm wide, becoming involute; spikes 3.5-11 cm long, strongly glaucous; glumes usually indurate in the lowest 1-2 mm.....***E. virginicus** var. **halophilus***
18 Culms usually 7-10 dm tall, with 6-8 nodes; blades 3-15 mm wide, flat; spikes 4-20 cm long, pale green or glaucous; glumes indurate only in the lowest 1 mm.....***E. virginicus** var. **jejunus***

Elymus canadensis Linnaeus *var.* ***canadensis***, Great Plains Wild-rye, Nodding Wild-rye. Mt, Pd (NC, VA), Cp? (SC?): moist forests; rare (NC Watch List, VA Rare). [= FNA; < *E. canadensis* – RAB, C, F, G, GW, K, W]

Elymus glabriflorus (Vasey) Scribner & Ball *var.* ***australis*** (Scribner & C.R. Ball) J.J.N. Campbell, Southeastern Wild-rye. {Cp, Pd, Mt (GA, NC, SC, VA): } [< *E. glabriflorus* – FNA; < *E. virginicus* – RAB, C, GW, W; < *E. virginicus* var. *glabriflorus* (Vasey) Bush – F, "forma *australis*"; < *E. virginicus* var. *virginicus* – G, K; = *E. virginicus* var. *australis* – S]

Elymus glabriflorus (Vasey) Scribner & Ball *var.* ***glabriflorus***, Southeastern Wild-rye. {Cp, Pd, Mt (GA, NC, SC, VA): } [< *E. glabriflorus* – FNA; < *E. virginicus* – RAB, C, GW, W; < *E. virginicus* var. *glabriflorus* (Vasey) Bush – F, "forma *glabriflorus*"; < *E. virginicus* var. *virginicus* – G, K; = *E. virginicus* var. *glabriflorus* – S]

Elymus hystrix Linnaeus *var.* ***bigelovianus*** (Fernald) Bowden, Northern Bottlebrush Grass. Mt (NC): high elevation forests; rare. [< *Hystrix patula* Moench – RAB, G; < *Elymus hystrix* – C, FNA; = *Hystrix patula* var. *bigeloviana* (Fernald) Deam – F; = *E. hystrix* var. *bigeloviana* – K, orthographic variant; < *Hystrix hystrix* (Linnaeus) Millspaugh – S]

Elymus hystrix Linnaeus *var.* ***hystrix***, Common Bottlebrush Grass. Mt, Pd (GA, NC, SC, VA): moist forests, dry forests especially over more fertile soils; common. [= K; < *Hystrix patula* Moench – RAB, G; < *Elymus hystrix* – C, FNA; = *Hystrix patula* var. *patula* – F; < *Hystrix hystrix* (Linnaeus) Millspaugh – S]

Elymus macgregorii R. Brooks & J.J.N. Campb., Early Wild-rye. Pd (GA, NC, VA), Mt, Cp (NC, VA): rich mesic forests, especially bottomlands; uncommon. ME west to SD, south to Panhandle FL and s. TX. See Campbell (2000). [= FNA; < *E. virginicus* – RAB, C, GW, W; < *E. virginicus* var. *virginicus* – F, G, K, S]

* ***Elymus repens*** (Linnaeus) Gould, Quackgrass, Dog-grass, Witchgrass. Mt, Pd, Cp (NC, VA): roadsides, disturbed areas, pastures; uncommon, probably introduced from Europe (sometimes considered to be partially native along the coast). June-August. [= K, X; = *Elytrigia repens* (Linnaeus) Nevski – C, Z; = *Agropyron repens* (Linnaeus) Palisot de Beauvois – RAB, G, HC, S, W; > *Agropyron repens* var. *repens* – F; > *Agropyron repens* var. *subulatum* (Schreber) Roemer & J.A. Schultes – F]

Elymus riparius Wiegand, Eastern Riverbank Wild-rye. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (SC?, VA): moist forests; uncommon (NC Watch List). [= RAB, C, F, FNA, G, GW, K, S, W]

Elymus trachycaulus (Link) Gould ex Shinners *ssp.* ***trachycaulus***, Slender Wheatgrass. Mt (NC, VA): glades and barrens, over serpentine, etc.; rare (VA Rare). [= K; < *Agropyron trachycaulum* (Link) Malte ex H.F. Lewis – RAB, W; < *Elymus trachycaulus* – C; > *Agropyron trachycaulum* var. *novae-angliae* (Scribner) Fernald – F; > *Agropyron trachycaulum* var. *ciliatum* (Scribner & J.G. Smith) Gleason – G; = *Agropyron trachycaulum* – HC]

Elymus villosus Muhlenberg ex Willdenow, Downy Wild-rye. Mt, Pd, Cp (NC, SC, VA), {GA}: moist forests; uncommon. And reported for PA by Rhoads & Klein (1993). [= RAB, C, F, FNA, G, GW, K, W; = *E. striatus* Willdenow – S]

Elymus virginicus Linnaeus *var.* ***halophilus*** (Bicknell) Wiegand, Salt-marsh Wild-rye. Cp (NC, VA): brackish marshes, maritime forests and hammocks; uncommon (VA Watch List). [= F, FNA, G, K; < *E. virginicus* – RAB, C, GW; < *E. virginicus* var. *virginicus* – S]

Elymus virginicus Linnaeus *var.* ***intermedius*** (Vasey) Bush. [= FNA, G; < *E. virginicus* – RAB, C, GW, W; < *E. virginicus* var. *virginicus* – F, K; < *E. virginicus* var. *hirsutiglumis* (Scribner) A.S. Hitchcock – S]

Elymus virginicus Linnaeus *var.* ***jejunus*** (Ramaley) Bush. [= F, FNA, G; < *E. virginicus* – RAB, C, GW, W; < *E. virginicus* var. *virginicus* – K; < *E. virginicus* var. *virginicus* – S]

Elymus virginicus Linnaeus *var.* ***virginicus***, Common Eastern Wild-rye, Terrell Grass. Mt, Pd, Cp (NC, SC, VA): moist forests; common. [= FNA; < *E. virginicus* – RAB, C, GW, W; < *E. virginicus* var. *virginicus* – F, G, K; < *E. virginicus* var. *virginicus* – S; *? E. striatus* Willdenow – S]

Elymus curvatus Piper, Awnless Wild-rye, east to c. TN and KY. [= FNA; < *E. virginicus* Linnaeus – C; = *E. submuticus* (Hooker) Smyth & Smyth – K; = *E. virginicus* Linnaeus var. *submuticus* Hooker – F, G; < *E. virginicus* var. *virginicus* – S]

* ***Elymus semicostatus*** (Nees ex Steudel) Melderis. Pd (GA): disturbed areas; rare, introduced. Reported for c. GA by Jones & Coile (1988), as *Agropyron semicostatum* Nees ex Steudel. [= FNA, K; = *Agropyrum semicostatum* Nees ex Steudel] {synonymy incomplete}

Elymus svensonii G.L. Church, Svenson's Wild-rye. Nc. KY south to c. TN; disjunct westwards in e. MO, and c. AR. [= FNA, K]

Elymus trachycaulus (Link) Gould ex Shinners ssp. *subsecundus* (Link) A. & D. Löve, Bearded Wheatgrass, in MD, WV, and KY (Kartesz 1999). [= K; *? Agropyron trachycaulum* (Link) Malte ex H.F. Lewis var. *glaucum* (Pease & Moore) Malte – F, G; = *Agropyron subsecundum* (Link) A.S. Hitchcock var. *subsecundum* – HC]

Elymus wiegandii Fernald, Northern Riverbank Wild-rye. South to sc. PA and NJ. [= C, F, FNA, K; < *E. canadensis* – G]

Elytrigia Desvaux (Quackgrass)

(see *Elymus, Pascopyrum*)

Enteropogon Nees

* ***Enteropogon prieurii*** (Kunth) W.D. Clayton. Cp (NC): on ballast at Wilmington, New Hanover County, NC; rare, native of Africa, probably only a waif. Also reported from Mobile, Baldwin County, AL (Hitchock & Chase 1950). [= K; = *Chloris prieurii* Kunth – S]

Eragrostis Wolf 1776 (Lovegrass)

A genus of about 350 species of temperate and tropical areas. References: Peterson in FNA (2003a); Koch (1978); Peterson & Harvey (in prep.)=Z. Key adapted from Peterson & Harvey (in prep.).

1 Plants cespitose or rhizomatous perennials, with innovations near the base, and with or without buds in the basal sheaths.
- 2 Plants with short, knotty, thick rhizomes; florets articulating whole ..... ***E. spectabilis***
- 2 Plants without short or thick rhizomes; florets usually disarticulating.
  - 3 Caryopsis with a deep to shallow groove along the adaxial surface.
    - 4 Caryopsis dorso-ventrally compressed, flattened parallel to the side of the embryo, translucent, light brownish ..... ***E. curvula***
    - 4 Caryopsis laterally compressed, flattened on the side perpendicular to the embryo, or cylindric, opaque (rarely translucent), usually reddish brown.
      - 5 Lateral veins of the lemmas conspicuous, often greenish, the lemmas strongly keeled ..... ***E. trichodes***
      - 5 Lateral veins of the lemmas inconspicuous and hardly evident, the lemmas sometimes weakly keeled.
        - 6 Lemmas 1.2-1.8 mm long; culms 30-70 cm tall ..... ***E. lugens***
        - 6 Lemmas 1.6-3.0 mm long; culms (30-) 40-110 (-120) cm tall.
          - 7 Spikelets 2-6-flowered, greenish with purple tinges; leaf blades 3-8 (-11) mm wide, 25-60 cm long; sheaths often densely papillose-hirsute..... ***E. hirsuta***
          - 7 Spikelets (3-) 5-12-flowered, olive green to lead gray; leaf blades 1-3.8 mm wide, (4-) 10-35 cm long; sheaths never papillose-hirsute ..... ***E. intermedia***
  - 3 Caryopsis not grooved on the adaxial surface.
    - 8 Stamens 3.
      - 9 Spikelets 4-8.2 (-10) mm long..... ***E. curvula***
      - 9 Spikelets 2-4.5 (-5) mm long.
        - 10 Leaf blades 25-60 cm long, 3-8 (-11) mm wide; lemmas 1.6-2.4 mm long; spikelets 1.0-1.7 mm wide..... ***E. hirsuta***
        - 10 Leaf blades (4-) 8-22 cm long, 1-3.5 mm wide; lemmas 1.2-1.8 mm long; spikelets 0.5-1.0 (-1.3) mm wide ..... ***E. lugens***
    - 8 Stamens 2.
      - 11 Panicle 15-45 cm wide, open, diffuse, broadly ovate to obovate in outline, the panicle branches capillary; pedicels 0.5-35 (-50) mm long, longer than or shorter than the spikelets.
        - 12 Spikelets with widely spreading pedicels, the lower pedicels all generally longer than the spikelets; disarticulation of the lemmas only, the paleas persistent..... ***E. elliottii***
        - 12 Spikelets with appressed pedicels, lower pedicels of each branch shorter than the spikelets; disarticulation usually of the whole floret ..... ***E. refracta***
      - 11 Panicle (1-) 2-17 (-20) cm wide, contracted to open, narrowly ovate to oblong in outline;, the panicle branches stiffly spreading; pedicels (0-) 0.3-6 mm long, always shorter than the spikelets.
        - 13 Spikelets 0.7-2.4 mm wide; glumes 0.3-2.2 mm long; lemma 1.5-2.5 mm long, the apex acute (sometimes acuminate)..... ***E. bahiensis***
        - 13 Spikelets 2.4-5 mm wide; glumes 1.4-4 mm long; lemma 2-6 mm long, the apex acuminate to attenuate ..... ***E. secundiflora*** *var.* ***oxylepis***

1 Plants cespitose, geniculate or mat-forming annuals, lacking innovations or buds in the lower sheaths.
- 14 Paleas prominently ciliate-pectinate on the keels, the hairs 0.1-0.8 mm long.
  - 15 Panicles contracted, narrow, spike-like, usually < 1.5 cm wide ..... ***E. ciliaris*** *var.* ***ciliaris***
  - 15 Panicles open, cylindrical to narrowly ovate, usually 1-8 cm wide.
    - 16 Spikelets (1.0-) 1.5-3.5 mm long, 0.9-1.4 mm wide, 4-12-flowered; lemmas 0.7-1.1 mm long, membranous, the apex truncate to obtuse..... ***E. amabilis***
    - 16 Spikelets 5-12 (-18) mm long, 1.4-2.4 mm wide, 12-42-flowered; lemmas (1.3-) 1.5-2.0 mm long, chartaceous, the apex acute ..... ***E. cumingii***
- 14 Paleas smooth to scaberulous on the keels, the hairs (if present) < 0.1 mm long.
  - 17 Plants extensively stoloniferous, creeping and forming flat mats; inflorescences 1-3.5 cm long; culms (2-) 5-12 (-20) cm tall on the erect portions..... ***E. hypnoides***
  - 17 Plants not stoloniferous (sometimes creeping and forming flat mats); inflorescences 3-55 cm long; culms (2-) 6-130 cm tall.
    - 18 Ligules membranous, glabrous..... ***E. japonica***
    - 18 Ligules ciliate, with a row of tiny white hairs.
      - 19 Caryopsis with a deep to shallow groove along the adaxial surface.
        - 20 Spikelets (4-) 5-10 (-11) mm long, 5-11 (-15)-flowered; pedicels ascending, somewhat appressed along the branches.
          - 21 Spikelets ovate to oblong in outline, >1.4 mm wide; lower glume 1.2-2.3 mm long..... ..... ***E. mexicana*** *ssp.* ***mexicana***
          - 21 Spikelets linear to linear-lanceolate, <1.5 mm wide; lower glume 0.7-1.7 mm long.....

..... ***[E. mexicana** ssp. **virescens]***

20 Spikelets (1.4-) 2-5 mm long, 2-6 (-7)-flowered; pedicels erect, spreading along the branches.
22 Panicle 10-45 (-55) cm long, 2/3 or more the height of the plant; pedicels (4-) 5-25 mm long; glandular pits absent below the nodes, branches, and rachis ..... ***E. capillaris***
22 Panicle 4-20 cm long, < ½ the height of the plant; pedicels 1.5-5 mm long; glandular pits often present below the nodes, branches, and rachis..... ***E. frankii***

19 Caryopsis not grooved on the adaxial surface.
23 Plants with glandular pits or bands on the culm below the nodes, on the veins of the sheath, on the margins and veins of the blade, on the rachis, on the inflorescence branches and pedicels, and/or on the midveins of the lemma and palea.
24 Spikelets (1.7-) 2-4 mm long, 3-6-flowered ..... ***E. frankii***
24 Spikelets (2-) 3.5-20 mm long, (3-) 5-40-flowered.
25 Spikelets 0.6-1.3 mm wide; pedicels 1-10 mm long, flexuous and delicate, appressed or spreading ..... ***E. pilosa***
25 Spikelets 1.1-4 mm wide; pedicels 0.2-4 mm long, straight and rigid, mostly spreading.
26 Spikelets 6-20 mm long, 2-4 mm wide, 10-40-flowered; lemmas 2-2.8 mm long, with 1-3 crateriform glands along the keel; disarticulation of the entire florets from the persistent rachilla; anthers yellow..... ***E. cilianensis***
26 Spikelets 4-7 (-11) mm long, 1.1-2.2 mm wide, 7-12 (-20)-flowered; lemmas 1.4-1.8 mm long, rarely with 1-2 crateriform glands along the keel; disarticulation of the lemmas only, the palea and rachilla usually persistent; anthers reddish-brown.
27 Inflorescence with glandular areas of spots or rings on the rachis below the panicle branch bases, the glands often shiny or yellowish; stamens 3; blade margins lacking crateriform glands..... ***E. barrelieri***
27 Inflorescence sometimes with glandular areas of spots or crateriform pits on the rachis below the panicle branch bases, the glands usually dull and greenish-gray to straw-colored; stamens 2; blade margins sometimes with crateriform glands..... ***E. minor***

23 Plants lacking glandular pits or bands on the culm below the nodes, on the veins of the sheath, on the margins and veins of the blade, on the rachis, on the inflorescence branches and pedicels, and/or on the midveins of the lemma and palea.
28 Spikelets (1.6-) 2-4 mm wide, 12-42-flowered; disarticulation of entire florets from a persistent rachilla..... ***[E. unioloides]***
28 Spikelets 0.6-2.5 mm wide, 3-22-flowered; disarticulation of the lemmas only, the paleas usually persistent (or deciduous), the rachilla persistent.
29 Spikelets 3-6-flowered..... ***E. frankii***
29 Spikelets (3-) 5-22-flowered.
30 First glume 0.3-0.6 (-0.8) mm long, <0.5× as long as the lowest lemma; spikelets 0.6-1.3 mm wide; panicle branches usually whorled at the lowest 2 nodes ..... ***E. pilosa***
30 First glume 0.5-1.5 mm long, >0.5× as long as the lowest lemma; spikelets 1.2-2.5 mm wide; panicle branches solitary or paired at the 2 lowest nodes.
31 Pedicels widely spreading..... ***[E. pectinacea** var. **miserrima]***
31 Pedicels appressed or rarely diverging up to 20 degrees from the branches ..... ***E. pectinacea** var. **pectinacea***

* ***Eragrostis amabilis*** (Linnaeus) Wright & Arnott ex Nees, Japanese Lovegrass. Cp (GA, SC), Pd? (GA?): disturbed areas; rare, introduced the Old World. June. [= RAB, FNA, HC, S, Z; *? E. tenella* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes – K]

* ***Eragrostis bahiensis*** (Schrader ex J.A. Schultes) J.A. Schultes, Bahia Lovegrass. Cp (GA, SC): disturbed areas; rare. Reported for SC (Kartesz 1999) and sw. GA (Jones & Coile 1988, GW, Kartesz 1999). [= FNA, GW, HC, K, S, Z]

* ***Eragrostis barrelieri*** Daveau, Mediterranean Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, introduced from Mediterranean Europe. Also reported for e. TN (Chester et al. 1993). [= FNA, HC, K, Z]

Eragrostis capillaris (Linnaeus) Nees, Lacegrass. Mt, Pd, Cp (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (uncommon in Piedmont, rare in Coastal Plain). July-October. ME and WI south to GA and TX. [= RAB, C, F, FNA, G, HC, K, S, W, Z]

* ***Eragrostis cilianensis*** (Allioni) Vignolo ex Janchen, Stinkgrass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): fields, disturbed areas; common, introduced from Europe. July-October. [= RAB, C, FNA, G, HC, K, S, W, Z; *? E. megastachya* (Koel.) Link – F]

Eragrostis ciliaris (Linnaeus) R. Brown *var. **ciliaris***. Cp (GA, SC): sandy shores; rare. S. SC south to TX, Central America, West Indies, South America, Africa, and Asia. [= FNA, HC; < *E. ciliaris* – RAB, G, K, S, Z]

* ***Eragrostis cumingii*** Steudel, Fortyflower Lovegrass, Cuming's Lovegrass. Cp (GA), {NC}. Reported for NC (Kartesz 1999) and sw. GA (Jones & Coile 1988, HC). [= FNA, K, Z; *? E. simplex* Scribner – HC]

* ***Eragrostis curvula*** (Schrader) Nees, Weeping Lovegrass. Cp, Pd, Mt (GA, NC, SC, VA): roadsides; common, introduced from s. Africa. May-June. Very commonly planted as a roadbank stabilizer, *E. curvula* is fire resistant and shows some capability to spread into adjacent natural habitats. [= RAB, C, FNA, HC, K, Z; > *E. curvula* var. *conferta* Stapf]

Eragrostis elliottii S. Watson, Elliott's Lovegrass. Cp (GA, NC, SC): ultisol wet pine savannas, maritime wet grasslands, inland edges of brackish marshes, inland edges of freshwater tidal marshes, calcareously-influenced wet pine savannas; rare. September-October. NC south to FL, west to TX. [= RAB, FNA, GW, HC, K, S, Z]

Eragrostis frankii C.A. Meyer ex Steudel, Lacegrass. Mt (VA), Pd (NC, VA), Cp (VA), {GA}: disturbed areas; uncommon (NC Watch List). September. MA and MN south to FL and AR. [= RAB, C, FNA, G, GW, K, S, W, Z; > *E. frankii* var. *frankii* – F, HC]

Eragrostis hirsuta (Michaux) Nees, Bigtop Lovegrass. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (uncommon in Mountains). July-October. MD south to FL, west to TX, north in the interior to TN, AR, and MO; Central America. [= RAB, C, FNA, K, S, W, Z; > *E. hirsuta* var. *hirsuta* – F, G, HC; > *E. hirsuta* var. *laevivaginata* Fernald – F, G, HC]

Eragrostis hypnoides (Lamarck) Britton, Sterns, & Poggenburg, Creeping Lovegrass, Teal Lovegrass. Cp, Pd (GA, NC, SC, VA), Mt (NC, VA): marshes, shores; uncommon. September. Throughout most of North America, south to South America. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Z]

Eragrostis intermedia A.S. Hitchcock, Plains Lovegrass. Cp, Pd (GA), {NC, SC, VA}. Reported for scattered locations as far east as NC, SC, VA (Kartesz 1999), e. GA (Jones & Coile 1988), e. TN (Chester et al. 1993). [= C, F, FNA, G, HC, K, Z]

*? ***Eragrostis japonica*** (Thunberg) Trinius, Pond Lovegrass. Cp (GA, SC): moist or wet sandy areas; rare. SC and TN south to Central America, South America, and West Indies; old World tropics. Perhaps introduced from the Old World. Reported for SC by HC, G, and Small (1933), sw. GA by Jones & Coile (1988), and for w. TN by Chester et al. (1993). [= FNA, K, Z; *? E. glomerata* (Walter) L.H. Dewey – G, GW, HC, S]

*? ***Eragrostis lugens*** Nees, Mourning Lovegrass. Cp (NC, SC), Pd (GA, NC, SC): marshes, roadsides, low fields; rare, introduced (NC Watch List). June-October. Perhaps only introduced from further south and west. [= RAB, FNA, HC, K, S, W, Z]

* ***Eragrostis mexicana*** (Hornemann) Link *ssp.* ***mexicana***, Mexican Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, introduced from . Reported to be naturalized as far east and north as SC, DE, and MD (Kartesz 1999). [= FNA, K; > *E. neomexicana* Vasey – C, F, G, HC; > *E. mexicana* – C, F, G, HC]

* ***Eragrostis minor*** Host, Little Lovegrass. Pd (GA, NC, SC, VA), Mt (NC, SC, VA), Cp (VA): disturbed areas; uncommon, introduced from Europe. July-September. [= C, FNA, K, Z; *? E. poaeoides* Palisot de Beauvois ex Roemer & J.A. Schultes – RAB, F, G, HC, W; *? E. eragrostis* (Linnaeus) Palisot de Beauvois – S]

Eragrostis pectinacea (Michaux) Nees ex Steudel *var.* ***pectinacea***, Carolina Lovegrass. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common (VA Watch List). ME and WA south to Central America and West Indies. [= FNA, K, Z; < *E. pectinacea* – C, GW, W; = *E. pectinacea* – F, HC, S; > *E. pectinacea* – G; > *E. diffusa* Buckley – G]

* ***Eragrostis pilosa*** (Linnaeus) Palisot de Beauvois *var.* ***pilosa***. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, introduced from tropical regions of the Old and New World. July-October. Var. perplexa (L.H. Harvey) S.D. Koch is also introduced but is not known from our area. [= FNA; = *E. pilosa* – RAB, S, W; > *E. multicaulis* Steudel – F, G, HC; > *E. pilosa* – F, G, HC; < *E. pilosa* – K, Z]

Eragrostis refracta (Muhlenberg) Scribner, Coastal Lovegrass. Cp (GA, NC, SC, VA), Pd (NC, SC, VA): pinelands, savannas, woodlands, marshes; common (uncommon in Piedmont). July-October. DE south to FL, west to TX. [= RAB, C, F, FNA, G, GW, HC, K, S, Z; *? E. virginica* (Zuccarini ex Roemer) Steudel]

* ***Eragrostis secundiflora*** J. Presl *var.* ***oxylepis*** (Torrey) S.D. Koch, Red Lovegrass. Cp (GA, NC, SC, VA): sandy roadsides, coastal dunes, and disturbed areas; rare, introduced from sw. United States. First reported for SC by Nelson & Kelly (1997). [= *E. oxylepis* (Torrey) Torrey – GW, HC; = *E. secundiflora* ssp. *oxylepis* S.D. Koch – FNA, K, Z; < *E. secundiflora* – S]

Eragrostis spectabilis (Pursh) Steudel, Purple Lovegrass, Tumblegrass. Cp, Pd, Mt (GA, NC, SC, VA): sandy fields, roadsides, woodlands; common. August-October. ME west to ND, south to FL and TX. [= RAB, C, FNA, G, GW, HC, K, S, W, Z; > *E. spectabilis* var. *spectabilis* – F; > *E. spectabilis* var. *sparsihirsuta* Farwell – F; *E. pectinacea*, misapplied]

* ***Eragrostis trichodes*** (Nuttall) Wood. Pd (VA): disturbed areas; rare, introduced from w. North America. [= C, FNA, K, Z; > *E. trichodes* var. *trichodes* – F, HC]

* ***Eragrostis elongata*** (Willdenow) Jacquin f., Long Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, introduced from se. Asia and Australia. [= FNA, K] {not keyed at this time}

* ***Eragrostis leptostachya*** (R. Brown) Steudel, Australian Lovegrass, is reported for NC (Kartesz 1999). {investigate} [= FNA, K] {not keyed at this time}

* *Eragrostis mexicana* (Hornemann) Link ssp. *virescens* (J. Presl) S.D. Koch & Sánchez, reported as an introduction on ballast in MD and FL. [= FNA, K; = *E. virescens* J. Presl – HC]

Eragrostis pectinacea (Michaux) Nees ex Steudel var. *miserrima* (Fournier) J. Reeder, from FL and westwards and southwards, may be in our area. [= FNA, K, Z; = *E. tephrosanthos* J.A. Schultes – HC, S; < *E. pectinacea* – GW]

* ***Eragrostis plana*** Nees, South African Lovegrass. Cp (SC): waste areas near wool-combing mills; rare, introduced from South Africa. [= FNA, K] {not keyed at this time}

* ***Eragrostis setifolia*** Nees, Neverfail. Cp (SC): waste areas near wool-combing mills; rare, introduced from Australia. [= FNA, K] {not keyed at this time}

* ***Eragrostis tef*** (Zuccagni) Trotter, Teff. Cp (SC): waste areas near wool-combing mills; rare, introduced from Africa. This is the grain used in making Ethiopian bread. [= FNA, HC, K] {not keyed at this time}
* ***Eragrostis unioloides*** (Retzius) Nees ex Steudel, Chinese Lovegrass. Cp (GA): rare, introduced from Asia. Reported for s. GA (Jones & Coile 1988, FNA, GW, HC). [= FNA, GW, HC, K, S, Z]

Eremochloa Büse (Centipede Grass)

A genus of about 11 species, native of Asia and Australia. References: Thieret in FNA (2003a).

Identification notes: In the autumn, the inflorescences make this grass readily recognizable at a distance: a short, tight lawn grass with a reddish aspect.

* ***Eremochloa ophiuroides*** (Munro) Hackel, Centipede Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): lawns, roadsides, sometimes weedy in more natural sites; common, introduced from se. Asia. Now very commonly planted as a lawn and roadside grass in the Coastal Plain from se. NC southward. Stalter & Lamont (1996) report the VA occurrence of this species. [= RAB, FNA, HC, K]

Erianthus
(see ***Saccharum***)

Eriochloa Kunth (Cup Grass)

A genus of 320-30 species, of the tropical, subtropical, and warm temperate Old World and New World. References: Crins (1991)=Z; Shaw, Webster, & Bern in FNA (2003a); Shaw & Webster (1987)=Y.

1 Lemma of fertile floret with an awn >0.2 mm long; second glume awned; panicle compact, the raceme-like lateral branches close together and ascending-appressed, of irregular lengths; spikelets 8-16 on a typical, primary branch..... ***E. contracta***
1 Lemma of fertile floret lacking an awn; second glume not awned; panicle open, the raceme-like lateral branches remote and divergent, the lowermost longest, the upper gradually reduced in length to the apex (*E. acuminata* var. *acuminata*, *E. michauxii* var. *michauxii*) **or** the panicle compact (*E. villosa*); spikelets 12-40 on a typical, primary branch.
  2 Spikelets 2.0-2.5 mm wide..... ***E. villosa***
  2 Spikelets 1.1-1.8 mm wide.
    3 Annual, 3-12 dm tall; spikelets 1.1-1.4 mm wide..... ***E. acuminata*** *var.* ***acuminata***
    3 Perennial, 5-25 dm tall; spikelets 1.3-1.8 mm wide ..... ***E. michauxii*** *var.* ***michauxii***

* ***Eriochloa acuminata*** (J. Presl) Kunth *var.* ***acuminata***. Cp (GA, SC), Pd (GA): disturbed areas, waste areas near wool-combing mills; rare, presumably introduced from further south. Reported for scattered locations in GA (Jones & Coile 1988, as *E. gracilis*). Reported for NC (Kartesz 1999), but the specimen basis is of cultivated material. [= FNA, K, Y, Z; < *E. acuminata* – C; = *E. gracilis* (Fournier) A.S. Hitchcock var. *gracilis* – HC]
* ***Eriochloa contracta*** A.S. Hitchcock, Prairie Cupgrass. Pd, Mt (VA), Cp (SC): disturbed areas, waste areas around wool-combing mills; rare, introduced from midwestern United States. [= C, F, FNA, G, GW, HC, K, Y, Z]
Eriochloa michauxii (Poiret) A.S. Hitchcock *var.* ***michauxii***, Longleaf Cupgrass. Cp (GA, SC): coastal freshwater and slightly brackish marshes, flatwoods, disturbed areas; rare (GA Special Concern). Se. SC south to FL, west to AL, or possibly LA. Var. *simpsonii* A.S. Hitchcock is endemic to sw. FL. [= FNA, HC, K, Y, Z; < *E. michauxii* – GW, S]
* ***Eriochloa villosa*** (Thunberg) Kunth, Chinese Cupgrass. Mt (VA): disturbed area (open edge of railroad bed); rare, introduced from e. Asia. See Belden et al. (2004) for additional information about the first occurrence in Virginia. [= C, FNA, HC, K, Y]

Eriochloa punctata (Linnaeus) Desvaux ex Hamilton, Louisiana Cupgrass. Cp (GA): marshes, creek banks; rare. MS west to TX, and south into the New World Tropics; reported for e. GA (FNA). [= FNA, HC, K] {not keyed at this time; synonymy incomplete}

Eustachys Desvaux (Finger-grass)

A genus of ca. 12 species, of tropical and warm temperate regions. References: Aulbach in FNA (2003a). McKenzie, Urbatsch, & Aulbach-Smith (1987)=Z. Key based on Z.

1 Lateral nerves of the fertile lemma glabrous; culms stout, 7-15 dm tall; spikes 8-16 (-20), 7-12 cm long ..... ***E. glauca***
1 Lateral nerves of the fertile lemma pubescent; culms slender, 3-10 dm tall; spikes 1-20, 2.5-9 cm long.
  2 Keel of the fertile lemma appressed brownish-ciliate; spikes 1-6; [native].

3 Spikes 5-10 cm long; spikelets >3 mm long ..... ***E. floridana***
3 Spikes 2.5-6 cm long; spikelets <2.5 mm long..... ***E. petraea***
2 Keel of the fertile lemma glabrous; spikes 7-20; [aliens, in disturbed situations].
4 Spikelets >2.4 mm long; sterile floret oblanceolate, acute..... ***E. distichophylla***
4 Spikelets <2.1 mm long; sterile floret widely cuneate, truncate..... ***E. retusa***

* ***Eustachys distichophylla*** (Lagasca y Segura) Nees, Weeping Finger-grass. Cp (GA): disturbed areas; rare, introduced from South America. In GA and FL (Kartesz 1999). [= FNA, K, Z; = *Chloris distichophylla* Lagasca y Segura – HC]

Eustachys floridana Chapman, Florida Finger-grass. Cp (GA): sandhills, pine flatwoods; rare (GA Special Concern). E. GA south to c. peninsular FL, west to w. Panhandle FL and s. AL. [= FNA, K, Z; = *Chloris floridana* (Chapman) Wood – HC, S] {synonymy}

Eustachys glauca Chapman, Saltmarsh Finger-grass. Cp (GA, NC, SC): marshes and marsh edges; rare. June-October. Se. NC south to FL and west to s. AL. [= FNA, K, Z; = *Chloris glauca* (Chapman) Wood – RAB, GW, HC, S]

Eustachys petraea (Swartz) Desvaux, Dune Finger-grass. Cp (GA, NC, SC): dune slacks and sand flats, sometimes in disturbed areas; common (uncommon north of GA). (May-) June-October. NC (Dare County) south to FL and west to TX. [= FNA, K, Z; = *Chloris petraea* Swartz – RAB, GW, HC, S]

* ***Eustachys retusa*** (Lagasca y Segura) Kunth, Argentine Finger-grass. Cp (GA, SC): sandy fields; rare, introduced from Argentina. June. [= FNA, K, Z; *?* *Chloris argentina* (Hackel) Lillo & Parodi – RAB, G, HC]

* ***Eustachys caribaea*** (Sprengel) Herter, Chickenfoot Grass. Cp (GA): disturbed areas; rare, native of South America. [= FNA, K; = *Chloris capensis* – HC, misapplied] {add to synonymy; not keyed at this time}

Eustachys neglecta (Nash) Nash. Native. Pinelands, sandy fields. N. and peninsular FL, se. AL, and e. TX. [= FNA, K; = *Chloris neglecta* Nash – HC, S] {synonymy incomplete; not keyed at this time}

Festuca Linnaeus (Fescue)
(also see *Vulpia*)

A genus of qbout 350 species, nearly cosmopolitan in temperate regions. References: Darbyshire (1993)=X; Aiken & Darbyshire (1990)=Y; Tucker (1996)=Z; Soreng & Terrell (1998). Key based in part on C and Y.

1 Leaves 0.2-3 mm wide, often involute; [subgenus *Festuca*].
2 Plant loosely tufted, often rhizomatous; basal sheaths disintegrating into fibers; spikelets 6-13 mm long ..... ***F. rubra***
2 Plant tufted, lacking rhizomes; basal sheaths persistent, remaining firm and entire; spikelets 3-9 mm long.
3 Lemmas 2.3-4.0 (-4.4) mm long, awnless, or with a minute projection to 0.4 mm long; anther 1.5-2.2 (-2.5) mm long; spikelets 3.0-6.0 (-6.5) mm long ..... ***F. filiformis***
3 Lemmas 3.8-5.5 mm long, with an awn 0.5-2.5 mm long; anther (2.3-) 2.5-3.0 mm long; spikelets 5.5-9.0 mm long ..... ***F. trachyphylla***
1 Leaves 3-12 mm wide, flat.
4 Larger lemmas 5.5-10 mm long; leaf blades auriculate at the base; anthers 2-4 mm long..... ***[see Schedonorus]***
4 Larger lemmas 3.3-5.2 mm long; leaf blades not auriculate at the base; anthers 0.8-1.5 mm long; [subgenus *Subulatae*, section *Obtusae*].
6 Principal lowermost panicle branches with 8-20 spikelets clustered at the end; spikelets broadly ovate, 4-6 mm wide..... ***F. paradoxa***
6 Principal lowermost panicle branches with 2-7 spikelets scattered along the outer half; spikelets narrowly ovate, 2-4 mm wide ..... ***F. subverticillata***

* ***Festuca filiformis*** Pourret, Hair Fescue, Fineleaf Sheep Fescue. Mt, Pd (NC, VA): lawns, disturbed areas; rare, introduced from Eurasia. May-June. [= C, K, Y, Z; *?* *F. capillata* Lamarck – RAB, F, HC; *?* *F. ovina* Linnaeus var. *capillata* (Lamarck) Alefeld – G; *?* *F. tenuifolia* Sibthorp – W]

Festuca paradoxa Desvaux, Cluster Fescue. Cp, Pd, Mt (GA, NC, SC, VA): bottomlands, uplands over mafic rock; common. May-July. PA west to WI and IA, south to SC, c. GA, and e. TX. [= RAB, C, F, G, GW, HC, K, W, Z; *?* *F. shortii* Kunth ex Wood – S, misapplied]

Festuca rubra Linnaeus, Red Fescue. Mt (NC, SC, VA), Pd, Cp (GA, NC, VA): roadsides, fields, disturbed areas, pastures, grassy balds; common. May-July. In our area, this species is considered to be partly native and partly introduced. This species is circumboreal, extending south in North America to GA and MO. Many varieties or subspecies have been described in the *F. rubra* complex; it is uncertain how they might apply in our area. [= RAB, C, G, HC, S, Y, Z; > *F. rubra* var. *rubra* – F; > *F. rubra* var. *commutata* Gaudin – F; *?* *F. rubra* ssp. *rubra* – K]

Festuca subverticillata (Persoon) Alexeev, Nodding Fescue. Mt, Pd, Cp (GA, NC, SC, VA): moist to wet forests, woodlands, and disturbed areas; common. May-June. ME, Québec, and Manitoba south to FL and e. TX. [= C, K, Y, Z; *?* *F. obtusa* Biehler – RAB, F, G, GW, HC, S, W]

* ***Festuca trachyphylla*** (Hackel) Krajina, Hard Fescue. Pd (GA, NC, VA), Mt (NC, VA), Cp (NC, SC, VA): meadows, pastures, disturbed areas; uncommon, introduced from Eurasia. May-June. The nomenclatural debate about the application of the name *F. trachyphylla* is summarized in Darbyshire & Pavlick (1997). [= C, K, Y, Z; < *F. ovina* – RAB, S, W, in the broad

sense (misapplied as to our material); < *F. ovina* var. *ovina* – F, G, HC; < *F. ovina* var. *duriuscula* (Linnaeus) W.D.J. Kock – F, G, HC, misapplied as to our material]

* *Festuca thurberi* Vasey. Introduced in SC. [= K] {not keyed; investigate}
Festuca versuta Beal, Texas Fescue. Native, east to TN. [= K] {not keyed; investigate}

Glyceria R. Brown (Mannagrass)
(also see *Torreyochloa*)

A genus of about 40 species, nearly cosmopolitan. References: Tucker (1996)=Z.

1 Spikelets (10-) 15-40 mm long, linear, subterete, 5-15× as long as wide; [section *Glyceria*].
- 2 Lemma (6-) 7-8.5 (-10) mm long, acute to acuminate; palea longer than the lemma, extending 1.5-3 mm beyond the lemma apex ..... ***G. acutiflora***
- 2 Lemma 2.5-5.3 mm long, obtuse to notched; palea about as long as the lemma (ranging from shorter than the lemma and included, to projecting up to 1 mm beyond the lemma apex).
  - 3 Anthers 0.5-0.8 mm long; lemma mostly 2.5-3.5 mm long..... ***G. arkansana***
  - 3 Anthers 1.0-2.0 mm long; lemma mostly 3.6-5.5 mm long..... ***G. septentrionalis***

1 Spikelets 2.5-8 mm long, ovate to oblong, 1.5-3× as long as wide; [section *Hydropoa*].
- 4 Inflorescence compact (at maturity), the branches stiffly ascending to appressed, the tips never nodding; ligule < 1 mm long.
  - 5 Inflorescence branches elongate, appressed; lower internodes of the inflorescence 2-8 cm long; spikelets with 3-4 flowers, 3.5-4 mm long; lemma 1.9-2.8 mm long; leaves 2-5 mm wide; [of the Mountains, rarely elsewhere] .... ***G. melicaria***
  - 5 Inflorescence branches short, stiffly ascending; lower internodes of the inflorescence 0.8-2.0 (-2.5) cm long; spikelets with 4-7 flowers, 4-8 mm long; lemma 3.0-3.7 mm long; leaves 3-10 mm wide; [of the Coastal Plain, rarely disjunct inland to the Mountains of VA]..... ***G. obtusa***
- 4 Inflorescence lax and diffuse (at maturity), the branches spreading to somewhat ascending, the tips often nodding or drooping; ligule 1-6 mm long.
  - 6 Veins of the lemma visible, but not raised; lemma 2.3-4.0 mm long; ligule 2-6 mm long.
    - 7 Lemma 2.9-4.0 mm long, projecting conspicuously beyond the palea; spikelets 4-8 mm long, with 5-10 flowers..... ***G. canadensis***
    - 7 Lemma 2.3-2.9 mm long, more-or-less equal to the palea; spikelets 3-5 mm long, with (2-) 3-5 (-6) flowers ... . ***G. laxa***
  - 6 Veins of the lemma prominently raised; lemma 1.4-3.0 mm long; ligule 1-4 mm long.
    - 8 Lemma 1.4-2.1 mm long, usually green; first glume 0.5-1.0 mm long; second glume 0.8-1.3 mm long; culms mostly 5-12 dm tall; leaves 2-5 (-8) mm wide ..... ***G. striata* *var. striata***
    - 8 Lemma 2.5-3.0 mm long, purple or green; first glume 1.2-1.9 mm long; second glume 1.5-2.4 mm long; culms mostly 10-20 dm tall; leaves 5-12 mm wide.
      - 9 Glumes obtuse, subequal (the first 1.2-1.9 mm long, the second 1.5-2.4 mm long); spikelets 4-6.5 mm long, (4-) 5-9-flowered; lemmas purplish, contrasting with the pale glumes; ligule 2-4 (-5) mm long; [of various montane wetlands of VA and possibly NC]..... ***G. grandis* *var. grandis***
      - 9 Glumes acute, unequal (the first 1.4-1.6 mm long, the second 1.8-2.1 mm long); spikelets mostly 3-4 mm long, 2-4-flowered; lemmas dark green (or purplish?); ligule 1.5-3 mm long; [of high elevation seepages in the Great Smoky Mountains of NC and TN]..... ***G. nubigena***

Glyceria acutiflora Torrey. Mt (GA, VA): shallow water and wet mucky soils in mountain ponds, wet pastures; rare (GA Special Concern). June-July. ME west to MI, south to DE, VA, nw. GA (Jones & Coile 1988), e. TN, and MO; also in e. Asia. [= C, F, G, GW, HC, K, W, Z; = *Panicularia acutiflora* (Torrey) Kuntze – S]

Glyceria arkansana Fernald, Arkansas Mannagrass. Cp (VA): swamps; rare. May-June. IL south to LA and AR; disjunct in se. VA and w. NY. The appropriate treatment of this taxon needs further investigation. [= F, HC, K, Z; < *G. septentrionalis* – C, G; = *G. septentrionalis* A.S. Hitchcock var. *arkansana* (Fernald) Steyermark & Kučera]

Glyceria canadensis (Michaux) Trinius, Rattlesnake Mannagrass. Mt (NC, VA), Cp (VA): bogs, seepages, and wet meadows; rare. June-July. Newfoundland west to MN, south to NJ, VA, nw. NC, and IL. [= C, F, G, K, Z; = *G. canadensis* var. *canadensis* – HC, W]

Glyceria grandis S. Watson *var. **grandis***, American Mannagrass. Mt (NC?, VA), Cp (VA): wet, mucky soils of open wetlands; rare. Nova Scotia west to AK, south to VA, IA, NM, and OR. Attributed to w. NC by Tucker (1996). [= K; < *G. grandis* – C, F, G, GW, HC, Z; = *Panicularia grandis* (S. Watson) Nash – S; *? G. maxima* (Hartman) Holmberg ssp. *grandis* (S. Watson) Hultén]

Glyceria laxa (Scribner) Scribner, Lax Mannagrass. Mt (NC, VA): bogs; rare. June-July. Prince Edward Island south to NC, mostly Appalachian. Though often described as a hybrid of *G. canadensis* and either *G. striata* var. *striata* and/or *G. grandis* var. *grandis*, *G. laxa* ranges south of the distribution of both *G. canadensis* and *G. grandis* var. *grandis*. It is best

considered as a species, perhaps of hybrid origin. [= F, G, K; = *G. canadensis* (Michaux) Trinius var. *laxa* (Scribner) A.S. Hitchcock – RAB, HC; = *G.* ×*laxa* – C; < *G. canadensis* – GW]

Glyceria melicaria (Michaux) F.T. Hubbard, Northeastern Mannagrass. Mt (GA, NC, VA), Pd (NC): mountain swamp forests and seepages; uncommon (GA Special Concern). June-August. Nova Scotia west to Québec, south to n. GA (Jones & Coile 1988) and KY. [= RAB, C, F, G, GW, HC, K, W, Z; = *Panicularia melicaria* (Michaux) A.S. Hitchcock – S]

Glyceria nubigena W.A. Anderson, Smoky Mountain Mannagrass. Mt (NC): moderate to high elevation seepages in the Great Smoky Mountains, sometimes in areas appearing dry (such as heath balds), nearly endemic to Great Smoky Mountains National Park; rare (US Species of Concern, NC Rare). June-July. Endemic to the Great Smoky Mountains of w. NC and e. TN. *G. nubigena* has nearly the same range as *Rugelia nudicaulis,* but is more restricted to seepage. The distinctions and relationship between this taxon and *G. grandis* need further investigation. [= RAB, HC, K, W, Z]

Glyceria obtusa (Muhlenberg) Trinius, Coastal Mannagrass. Cp (NC, SC, VA), Mt (VA): blackwater swamp forests, wet meadows, freshwater marshes; uncommon. June-September. Nova Scotia south to SC, on or near the Coastal Plain. [= RAB, C, F, G, GW, HC, K, W, Z; = *Panicularia obtusa* (Muhlenberg) Kuntze – S]

Glyceria septentrionalis A.S. Hitchcock, Floating Mannagrass, Eastern Mannagrass. Cp, Pd (GA, NC, SC, VA), Mt (NC, VA): shallow water, wet mucky soils, floodplain sloughs, cypress ponds; uncommon (GA Special Concern). May-June. MA west to MN, south to SC, ne. GA, and TX. [= RAB, F, GW, HC, K, W, Z; < *G. septentrionalis* – C, G (also see *G. arkansana*); = *Panicularia septentrionalis* (A.S. Hitchcock) Bicknell – S]

Glyceria striata (Lamarck) A.S. Hitchcock *var. **striata***, Fowl Mannagrass. Mt, Pd, Cp (GA, NC, SC, VA): wet meadows, seepages, bogs, marshes, swamp forests; common. April-June. Newfoundland west to British Columbia, south to FL and CA. Var. *stricta* (Scribner) Fernald is more northern. [= C, F, G, HC, Z; < *G. striata* – RAB, GW, K, W; = *Panicularia striata* (Lamarck) A.S. Hitchcock – S; = *G. striata* ssp. *striata*]

Gymnopogon Palisot de Beauvois (Beard Grass, Skeleton Grass)

A genus of about 15 species, in temperate and tropical areas of the Americas. References: Smith (1971)=Z.

Identification notes: When sterile, *Gymnopogon* is sometimes confused with *Dichanthelium*. *Gymnopogon* differs in having the sheaths conspicuously overlapping (vs. not overlapping in *Dichanthelium*) and leaves that are definitely cordate-clasping and of stiff texture (only a few *Dichanthelium* have this combination).

1 Awn of the lemma 4.5-12 mm long; inflorescence branches with spikelets distributed from the tip nearly to the base; leaves 5-15 mm wide; [of the Coastal Plain, Piedmont, and Mountains].....***G. ambiguus***
1 Awn of the lemma 0.8-1.6 (-3.5) mm long; inflorescence branches with spikelets distributed from the tip nearly to the base (G. chapmanianus) or to roughly the midpoint, the basal portion naked (or some branches rarely with a few spikelets) (G. brevifolius); leaves 2-8 mm wide; [of the Coastal Plain and lower Piedmont].
  2 Spikelets 1-flowered; first glume 2.3-3.7 mm long.....***G. brevifolius***
  2 Spikelets 2-4-flowered; first glume 3.8-5 mm long .....***G. chapmanianus***

Gymnopogon ambiguus (Michaux) Britton, Sterns, & Poggenburg, Eastern Beard Grass. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): prairies, glades, barrens, dry pinelands and woodlands, dry fields; common (rare in Mountains). August-October. S. NJ west to KY, OH, and MO, south to FL and TX. [= RAB, C, F, G, HC, K, S, W, Z]

Gymnopogon brevifolius Trinius, Pineland Beard Grass. Cp, Pd (GA, NC, SC, VA), Mt (GA): pine savannas, sandhills, dry woodlands, prairies, calcareous glades; common (rare in lower Piedmont) (GA Special Concern, VA Watch List). August-October. S. NJ south to FL, west to LA and AR; disjunct in the Highland Rim of KY and TN. [= RAB, C, F, G, HC, K, S, Z]

Gymnopogon chapmanianus A.S.Hitchcock, Chapman's Beard Grass. Cp (GA): sandhills and other xeric, sandy habitats; rare (GA Special Concern). Se. GA south to FL. [= HC, K, S; > *G. chapmanianus* – Z; *G. floridanus* Swallen – Z]

Hackelochloa Kuntze (Pitscale Grass

* ***Hackelochloa granularis*** (Linnaeus) Kuntze, Pitscale Grass. Cp (GA): disturbed areas; rare, introduced from the Old World. Reported for sw. GA and other Gulf Coast states (Thieret in FNA 2003a, Jones & Coile 1988, Kartesz 1999). [= FNA, HC, K; = *Rytilix granularis* (Linnaeus) Skeels – S; = *Mnesithea granularis* (Linnaeus) Koning & Sosef]

Hainardia W. Greuter (Thintail)

References: Tucker (1996)=Z.

* ***Hainardia cylindrica*** (Willdenow) W. Greuter, Thintail. Cp (SC): waste areas around wool-combing mills; rare, introduced from the Old World. April-June. [= K, Z; = *Lepturus cylindricus* (Willdenow) Trinius – RAB; = *Monerma cylindrica* (Willdenow) Cosson & Durieu – HC]

Heteropogon Persoon (Tanglehead)

A genus of about 10 species, pantropical and extending into subtropical and warm temperate areas. References: Barkworth in FNA (2003a).

* ***Heteropogon melanocarpus*** (Elliott) Elliott ex Bentham, Sweet Tanglehead. Cp (GA, NC, SC): sandy roadsides, disturbed areas; rare, probably naturalized from further south (or even from the Old World). September-October. The species is widespread in the Old World and New World tropics, north in North America to se. NC. [= RAB, FNA, HC, K, S]

Hierochloe R. Brown (Holy Grass, Sweet Grass, Vanilla Grass)

A genus of about 30 species, temperate and boreal in the northern and southern hemispheres. Tucker (1996) and Soreng et al. (2003) propose the inclusion of *Hierochloe* into a more broadly circumscribed *Anthoxanthum*. References: Tucker (1996)=Z; Soreng et al. (2003)=Y.

Hierochloe odorata (Linnaeus) Palisot de Beauvois, Holy Grass, Sweet Grass, Vanilla Grass. Mt (NC, VA): fens, wet calcareous medaows, high elevation pastures and openings; rare (NC Rare). April-May. A circumboreal species and subspecies, widespread in n. Eurasia and n. North America, ranging south in North America to NJ, MD, PA, OH, IN, IL, IA, SD, CO, UT, NM, and CA, with several disjunct occurrences in North Carolina, in Long Hope Valley, Ashe County, the Nantahala River Bogs, Macon County, and Pond Mountain, Ashe County. The report by S ("recorded by Chapman from Statesville, N.C.") can be discounted; the record reflects a collection made in the mountains by Mordecai E. Hyams, a botanist based in Statesville. Belden et al. (2004) document the first occurrence in Virginia. The sweet, vanilla-like odor of this grass is responsible for various folk uses – by Native Americans for making fragrant baskets, in Scandinavia strewn on church floors on festival days. Kartesz (1999) maps the NC occurrence of *Hierochloe* as *H. hirta* ssp. *arctica*; the reasons for this are unknown. {investigate} [= C, F, G, HC; *? H. odorata* ssp. *odorata* – K; *? H. hirta* (Schrank) ssp Borbás ssp. *arctica* (J. Presl) G. Weimarck – K; *Torresia odorata* (Linnaeus) A.S. Hitchcock – S; = *Anthoxanthum nitens* (Weber) Y. Schouten & Veldkamp – Z; *? Anthoxanthum nitens* (Weber) Y. Schouten & Veldkamp spp. *nitens* – Y; > *H. odorata* var. *fragrans* (Willdenow) Richter (the North American plants)]

Holcus Linnaeus (Velvet Grass, Soft Grass)

References: Tucker (1996)=Z.

1 Plant not rhizomatous; upper culm internodes velvety-villous; lemma awn recurved ..... ***H. lanatus***
1 Plant strongly rhizomatous; upper culm internodes glabrous; lemma awn straight ..... ***H. mollis***

* ***Holcus lanatus*** Linnaeus, Velvet Grass, Soft Grass, Yorkshire-fog. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): pastures, disturbed areas, roadsides, hedge-rows; common (rare in SC), introduced from Europe. May-October. [= RAB, C, F, G, HC, K, W, Z; = *Notholcus lanatus* (Linnaeus) Nash – S]
* ***Holcus mollis*** Linnaeus, Creeping Soft Grass. Mt (NC): lawns; rare, introduced from Europe. September. This European species is known from scattered sites in e. North America. The species was documented for our area by Clay (1995). [= C, F, G, HC, K, Z]

Hordeum Linnaeus 1753 (Barley)

A genus of about 40 species, north temperate and in South America. Many recent authors place most of our species (other than *H. vulgare)* in *Critesion* Rafinesque. References: Tucker (1996)=Z; Petersen & Seberg (2003); Blattner (2004).

1 Rachis remaining intact at maturity; leaves 5-12 mm wide, with well-developed auricles; [section *Hordeum*] ..... ***H. vulgare***
1 Rachis disarticulating at maturity; leaves 1-5 mm wide, not auriculate (except in *H. murinum* ssp. *leporinum*).
  2 Perennial; glumes 25-150 mm long; [intersectional hybrid derivative of section *Sibirica* and section *Critesion*] ..... ***H. jubatum***
  2 Annual; glumes 7-22 (-28) mm long.
    3 Leaves auriculate; glumes of the central spikelet (in the triad) with ciliate margins; [section *Hordeum*] ..... ***H. murinum ssp. leporinum***
    3 Leaves not auriculate; glumes of the central spikelet (in the triad) with scabrous margins; [section *Critesion*] ..... ***H. pusillum***

* ***Hordeum jubatum*** Linnaeus, Foxtail Barley, Squirreltail Barley. Mt, Pd (VA), Cp (NC, SC): disturbed areas; rare, apparently introduced in our area, introduced from w. United States. May-August. A tetraploid taxon. [= RAB, C, F, G, HC, W, Z; *? H. jubatum* ssp. *jubatum* – K; = *Critesion jubatum* (Linnaeus) Nevski]

* ***Hordeum murinum*** Linnaeus *ssp.* ***leporinum*** (Link) Arcangeli. Pd (GA, NC, VA), Cp (SC, VA): disturbed areas; rare, introduced from Mediterranean Europe. May. A tetraploid taxon. [= K, Z; = ***H. leporinum*** Link – RAB, C, HC; < *Hordeum murinum* Linnaeus – G, S; = *Critesion murinum* (Linnaeus) Á. Löve ssp. *leporinum* (Link) Á. Löve]

Hordeum pusillum Nuttall, Little Barley. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, ditches, disturbed areas; common. April-June. Se. NY west to MN, south to n. FL, s. TX, and s. AZ. A diploid taxon. [= RAB, C, F, G, HC, K, S, W, Z; = *Critesion pusillum* (Nuttall) Á. Löve]

* ***Hordeum vulgare*** Linnaeus, Barley. Cp, Pd (NC, SC, VA), Mt (VA): cultivated fields, occasionally persistent as a waif; commonly cultivated, rare as a waif, introduced from Eurasia. May-June. A diploid taxon. The original wild form is often treated as ***H. vulgare*** ssp. *spontaneum* and the cultivated, non-shattering derivative as ssp. *vulgare* (Hancock 2004). The wild form was used as a food source since at least 19,000 years ago, and ssp. *vulgare* developed by 8500 years ago. [= RAB, C, F, K, Z; > ***H. aegiceras*** Nees ex Royle – G; > ***H. vulgare*** var. *vulgare* – G, HC; > ***H. vulgare*** var. *trifurcatum* (Schlechtendahl) Alefeld – G, HC; > ***H. vulgare*** ssp. *vulgare*; > ***H. vulgare*** ssp. *spontaneum* (K. Koch) Thellung]

*? ***Hordeum brachyantherum*** Nevski *ssp.* ***brachyantherum*** is reported for se. PA (Rhoads & Klein 1993) and also is apparently known from specimens from GA (Sorrie, pers. comm.). A tetraploid taxon. [= K; *Critesion brachyantherum* (Nevski) Barkworth & D.R. Dewey] {not keyed at this time}

* ***Hordeum depressum*** (Scribner & J.G. Smith) Rydberg. Cp (SC): waste areas around wool-combing mills; rare, introduced from w. North America. A tetraploid taxon. [= HC, K; = *Critesion depressum* (Scribner & J.G. Smith) Á. Löve] {not keyed at this time}

Hystrix Moench
(see *Elymus*)

Imperata Cirillo (Cogongrass, Satintail)

A genus of about 8-9 species, of tropical, subtropical, and warm temperate areas of both hemispheres. References: Gabel in FNA (2003a); Ward (2004c)=Z; Hall (1998)=Y.

* ***Imperata cylindrica*** (Linnaeus) Palisot de Beauvois, Cogongrass, Brazilian Satintail. Cp (GA, SC): grassy roadside; rare, introduced fom the tropics. See Nelson (1993) for first report from SC. An extremely aggressive and dangerous weed, now well-established and rapidly invading fire-maintained Coastal Plain areas (such as longleaf pine and slash pine flatwoods and longleaf pine clayhills) on the Gulf Coastal Plain of FL, AL, and MS. Hall (1998) argues that *I. cylindrica* and *I. brasiliensis* are not distinct. The only character considered to separate them is that *I. brasiliensis* has 1 anther and *I. cylindrica* has 2. Ward (2004c) treats the 2 taxa at varietal level. Both putative taxa are present in the Gulf Coast area of FL, GA, AL, and LA. [= Y; > *I. cylindrica* – FNA, HC, K; > *I. brasiliensis* Trinius – FNA, HC, K, S; > *I. cylindrica* var. *cylindrica* – Z; > *I. cylindrica* var. *mexicana* (Ruprecht) D.B. Ward – Z]

Koeleria Persoon (Junegrass, Koeleria)

A genus of about 60 species, north and south temperate.

Koeleria macrantha (Ledebour) J.A. Schultes, Junegrass, South to DE, MD, PA, KY, and AL (Kartesz 1999). [= K; *K. pyramidata* (Lamarck) Palisot de Beavois – C]

Lachnagrostis Trinius 1820

A genus of about 20 species, of the Southern Hemisphere. References: Soreng et al. (2003); FNA in prep.

* ***Lachnagrostis filiformis*** (G. Forst.) Trinius, Pacific Bentgrass. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of Australia. [= FNA; = *Agrostis avenacea* J.F. Gmelin – K]

Lagurus Linnaeus (Hare's-tail Grass)

A monotypic genus, of the Mediterranean region. References: Tucker (1996)=Z.

* ***Lagurus ovatus*** Linnaeus, Hare's-tail Grass. Cp (NC): on ballast; rare, introduced from Mediterranean Europe. April-June. [= RAB, HC, K, Z]

Leersia Swartz (Cutgrass)

A genus of about 18 species, tropical and warm temperate. References: Tucker (1988)=Z.

1 Lower panicle branches whorled or closely approximate; spikelets 4.0-5.5 mm long, 1.5-2.0 mm broad; stamens 3 ..... ***L. oryzoides***
1 Lower panicle branches alternate (rarely opposite); spikelets 2.2-5.0 mm long, 0.8-4.0 mm broad; stamens 2 or 6.
  2 Spikelets suborbicular-falcate, 3.0-4.0 mm broad, < 2× as long as broad; principal leaf-blades 10-15 mm wide; stamens 2 ..... ***L. lenticularis***
  2 Spikelets narrowly elliptic-falcate, 1.0-2.0 mm broad, > 2× as long as wide; principal leaf-blades usually < 7 mm wide; stamens 2 or 6.
    3 Spikelets 3.8-4.7 mm long, 1.5-2.0 mm broad; panicle branches short, bearing spikelets nearly to their bases; stamens 6..... ***L. hexandra***
    3 Spikelets 2.2-3.5 mm long, 0.8-1.2 mm broad; panicle branches long, filiform, the longer ones bearing spikelets only in their upper half; stamens 2 ..... ***L. virginica***

Leersia hexandra Swartz, Southern Cutgrass. Cp (GA, NC, SC, VA): clay-based Carolina bays, limesink ponds, lakes, pools, usually in places where periodically or seasonally inundated; uncommon (VA Rare). June-August. Pantropical, ranging north in North America to MD, TN, and TX. This species is considered a serious weed in the Old World and New World tropics; in our area, however, it is uncommon and not weedy. [= RAB, C, F, G, GW, HC, K, Z; = *Homalocenchrus hexandrus* (Swartz) Kuntze – S]

Leersia lenticularis Michaux, Catchfly Cutgrass. Cp (GA, NC, SC, VA): floodplain forests and swamps; uncommon. September-October. Se. VA south to n. FL, west to e. TX, north in the interior to IN and MN. [= RAB, C, F, G, GW, HC, K, Z; = *Homalocenchrus lenticularis* (Michaux) Kuntze – S]

Leersia oryzoides (Linnaeus) Swartz, Rice Cutgrass. Cp, Pd, Mt (GA, NC, SC, VA): marshes, riverbanks, pond-shores; common. August-October. Nova Scotia west to British Columbia, south to FL and CA; also in Europe and e. Asia. [= RAB, C, F, G, GW, HC, K, Z; = *Homalocenchrus oryzoides* (Linnaeus) Pollich – S]

Leersia virginica Willdenow, White Grass, White Cutgrass. Cp, Pd, Mt (GA, NC, SC, VA): floodplain forests, swamps, streambanks; common. August-October. Québec west to MN and SD, south to FL and TX. [= RAB, C, G, GW, HC, K, Z; > *L. virginica* var. *virginica* – F; > *L. virginica* var. *ovata* (Poiret) Fernald – F; = *Homalocenchrus virginicus* (Willdenow) Britton – S]

Leptochloa Palisot de Beauvois (Sprangletop, Feathergrass)

A genus of about 30 species, pantropical and extending into warm temperate areas. The circumscription of *Leptochloa* has been controversial; many earlier authors have preferred to separate *Diplachne* as a separate genus. References: Snow in FNA (2003a); Snow (1998); Cronquist (1991).

1 Spikelets 1-2.5 mm long, with 2-4 flowers; sheaths sparsely pilose with long, pustular-based hairs ..... ***L. panicea ssp. brachiata***
1 Spikelets 3.5-10 mm long, with 5-12 flowers; sheaths glabrous (rarely slightly scabrous).
  2 Lemmas 2-3 mm long, the apex obtuse to truncate, with the midrib often extended as a mucro ..... ***L. uninervia***
  2 Lemmas 3-5 mm long, the apex acuminate or awned.
    3 Lemmas acuminate; leaf blades 5-10 mm wide ..... ***L. panicoides***
    3 Lemmas awned; leaf blades 1-3 mm wide.
      4 Low sprawling grasses, < 5 dm tall; lemma awns (1-) 2.5-5 mm long; first glume 2.5-3.5 mm long; second glume 4-7 mm long ..... ***L. fascicularis var. maritima***
      4 Taller grasses, usually 5-10 dm tall; lemma awns 0.5-2.5 mm long; first glume 1.3-3.4 mm long; second glume 2.2-5 mm long.
        5 First glume 2.3-3.4 mm long; second glume 3.4-5.0; lemmas 4-5 mm long, with an awn 0.5-2.5 mm long ..... ***[L. fascicularis var. acuminata]***
        5 First glume 1.3-2 mm long; second glume 2.2-3.5; lemmas 3-4 mm long, with an awn 0.5-1 mm long..... ***L. fascicularis var. fascicularis***

* ***Leptochloa fascicularis*** (Lamarck) A. Gray *var. **fascicularis***, Bearded Sprangletop. Pd (NC): bed of artificial impoundment; rare, adventive from further west. September. Widespread in e. North America, primarily west of the Appalachians (adventive further east), and extending into South America. [= C, G; < *L. fascicularis* – RAB, GW, HC, S; < *L. fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – FNA, K; *Diplachne fascicularis* (Lamarck) Palisot de Beauvois – F]

Leptochloa fascicularis (Lamarck) A. Gray *var. **maritima*** (Bicknell) Gleason, Salt-meadow Grass. Cp (NC, SC, VA): fresh to brackish marshes, overwash flats, other disturbed brackish habitats; rare (NC Rare, VA Watch List). August-October. Along the coast from s. NH south to SC. This taxon appears to warrant status as a species separate from *L. fascicularis*.

Reported (as *L. fascicularis*) for SC by Nelson & Kelly (1997). [= C, G; < *L. fascicularis* – RAB, GW, HC, S; = *Diplachne maritima* Bicknell – F; < *L. fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – FNA, K]

Leptochloa panicea (Retzius) Ohwi *ssp.* ***brachiata*** (Steudel) N. Snow, Red Sprangletop. Pd (GA, NC, SC, VA), Cp (NC, SC, VA): disturbed areas; uncommon (VA Watch List). June-October. Widespread in the Western Hemisphere. The more familiar name, *L. filiformis*, must be replaced for reasons of nomenclatural priority. [= FNA, K; < *L. filiformis* (Lamarck) Palisot de Beauvois – RAB, C, F, G, GW, HC, K, S, W]

* ***Leptochloa panicoides*** (J. Presl) A. Hitchcock & Chase, Amazon Sprangletop. Pd (VA), Cp (GA): drawdown habitats on lake margins; rare, introduced from South America. Belden et al. (2004) discuss the Virginia occurrences along the banks of the Roanoke (Staunton) River at Kerr Reservoir. Also reported for e. GA in the Coastal Plain (Sorrie, pers. comm.). [= C, FNA, G, GW, HC, K; *? Diplachne halei* Nash – F; *? Leptochloa floribunda* Doell – S; = *Diplachne panicoides* (J. Presl) McNeill]

* ***Leptochloa uninervia*** (J. Presl) A. Hitchcock & Chase. Cp (GA, SC, VA), Pd (NC): disturbed areas; rare, adventive from further west. July-August. Widespread in the Western Hemisphere, the native range obscure, but not likely native in our area. Reported for SC by Nelson & Kelly (1997). [= RAB, C, G, GW, HC, K, S; = *L. fusca* (Linnaeus) Kunth ssp. *uninervia* (J. Presl) N. Snow – FNA, K; = *Diplachne uninervia* (J. Presl) Parodi]

* ***Leptochloa decipiens*** (R. Brown) Stapf ex Maiden *ssp.* ***peacockii*** (Maiden & Betche) N. Snow. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= K] {not keyed}

* ***Leptochloa digitata*** (R. Brown) Domin. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= K] {not keyed}

* ***Leptochloa divaricatissima*** S.T. Blake. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= K] {not keyed}

* ***Leptochloa dubia*** (Kunth) Nees. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. Also reported for NC by Kartesz (1999), but the documentation indicates that it was cultivated at a Soil Conservation Service test nursery in Chapel Hill, Orange County. [= FNA, HC, K] {not keyed}

* *Leptochloa fascicularis* (Lamarck) A. Gray var. *acuminata* (Nash) Gleason has been reported as adventive in PA and along highways in WV from halophytic habitats of w. United States (Cusick 1994). [= C, G; *Diplachne acuminata* Nash – F; < *L. fascicularis* – HC; < *L. fusca* (Linnaeus) Kunth ssp. *fascicularis* (Lamarck) N. Snow – FNA, K; *L. acuminata* (Nash) Mohlenbrock] {not keyed}

* ***Leptochloa virgata*** (Linnaeus) Palisot de Beauvois, Tropical Sprangletop. Cp (SC): waif at wool-combing mill; rare, introduced, probably not established. [= FNA, HC, K] {not keyed}

Leptoloma
(see *Digitaria*)

Limnodea L.H. Dewey 1894

References: Brandenburg & Thieret (2000)=Z.

* *Limnodea arkansana* (Nuttall) L.H. Dewey. Cp (SC): waste at wool-combing mill, probably not established; rare, introduced from sc. United States. [= HC, K, S, Z; = *Cinna arkansana* (Nuttall) G. Tucker]

Lolium Linnaeus (Rye-grass, Darnel, Fescue)
(also see *Schedonorus*)

References: Darbyshire (1993)=Y; Aiken & Darbyshire (1990)=X; Tucker (1996)=Z. Key based in part on C and X.

1 Inflorescence paniculate (spikelets borne on branches off the central axis)..... ***[see Schedonorus]***
1 Inflorescence spikelike (spikelets sessile on the central axis); [subgenus *Lolium*].
  2 Glumes (12-) 15-25 mm long, subcoriaceous, equalling or surpassing the uppermost lemma (therefore the length of the spikelet); florets 4-9 per spikelet; annual ..... ***L. temulentum***
  2 Glumes 4-12 mm long, herbaceous, shorter than the lemmas (therefore shorter than the spikelet); florets (2-) 5-22 per spikelet; annual or perennial.
    3 Lemmas (at least the upper) awned, the awns to 15 mm long; florets 11-22 per spikelet; annual or perennial..... ..... ***L. perenne*** *var.* ***aristatum***
    3 Lemmas awnless; florets (2-) 5-10 per spikelet; perennial..... ***L. perenne*** *var.* ***perenne***

* ***Lolium perenne*** Linnaeus *var.* ***aristatum*** Willdenow, Italian Rye-grass. Cp (GA, NC, SC, VA), Pd, Mt (NC, SC, VA): fields, roadsides, pastures, disturbed areas; common, introduced from Eurasia. April-July. [= C, Z; = *L. multiflorum* Lamarck – RAB, F, G, HC, S; = *L. perenne* ssp. *multiflorum* (Lamarck) Husnot – K; < *L. perenne* – W]

* ***Lolium perenne*** Linnaeus *var. **perenne***, English Rye-grass, Perennial Rye-grass. Cp (GA, NC, SC, VA), Pd, Mt (GA, NC, VA): fields, roadsides, pastures, disturbed areas; uncommon, introduced from Eurasia. April-July. [= C, Z; = *L. perenne* – RAB, F, G, HC, S; = *L. perenne* ssp. *perenne* – K; < *L. perenne* – W]

* ***Lolium temulentum*** Linnaeus, Darnel. Pd (GA, NC, VA), Cp (NC, VA), {SC}: fields, roadsides, pastures, disturbed areas; common, introduced from Eurasia. May-June. [= RAB, C, F, HC, S, Z; > *L. temulentum* var. *leptochaetum* A. Braun – G; > *L. temulentum* var. *macrochaeton* A. Braun – G; > *L. temulentum* ssp. *temulentum* – K]

Luziola Antoine Laurent de Jussieu (Southern Water Grass)

A genus of about 12 species, from s. North America south to tropical South America. References: Tucker (1988)=Z; Judziewicz et al. (2000)=Y.

Luziola fluitans (Michaux) Terrell & H. Robinson *var. **fluitans***, Southern Water Grass. Cp (GA, NC, SC), Pd? (GA?): aquatic in water of natural lakes, slow-moving blackwater rivers, and other stagnant waters; rare (NC Watch List). August-October. Var. *fluitans* ranges from ne. NC to c. FL and west to e. TX; var. *oconnerii* (Guzman M.) G. Tucker occurs in the highlands of w. Mexico (Tucker 1988). A very unusual grass, truly aquatic, with flexuous stems and unwettable, floating leaves. In addition to floating leaves (helpful in the field but not in the herbarium!), other useful characters include two secondary blade nerves on either side of the midnerve and virtually as prominent as the midnerve, and which extend onto the sheath where they occur with another 5 or so strong nerves; often with cilia 0.5-1 mm long at the summit of the ventral face of the sheath (an unusual place); and a hyaline ligule about 1 mm long on the same plane as the sheath (i.e., free from the base of diverging blades). [= Y, Z; < *L. fluitans* – K; < *Hydrochloa carolinensis* Palisot de Beauvois – RAB, GW, HC, S]

Luziola bahiensis (Steudel) Hitchcock. Streams and riverbanks. Apparently native, in AL, FL, MS. See Anderson & Hall (1993). [= HC, K] {not keyed}

* *Luziola peruviana* Gmelin, Peruvian Water Grass. Disturbed wet areas. Apparently an introduction, occurring in disturbed situations. See Anderson & Hall (1993). [= HC, K] {not keyed}

Melica Linnaeus (Melic)

A genus of about 80 species, north temperate, s. Africa and s. South America. References: Tucker (1996)=Z.

1 First glume oblong, 6.5-10 mm long, 2-4× as long as wide, acute to obtuse at the apex, about the same length and width as the second glume; inflorescence with (0-) 1-5 branches from the lower nodes only; fertile lemmas 2; leaves 1-6 mm wide; [common species, widespread in our area] ..... ***M. mutica***

1 First glume broadly ovate, 5-8 mm long, 1.5-2× as long as wide, obtuse to rounded at the apex, shorter and broader than the second glume; inflorescence with 2-10 (or more) branches from most nodes; fertile lemmas (2-) 3; leaves 3-12 mm wide; [rare species of the Mountains of NC and VA, northwards and westwards] ..... ***M. nitens***

Melica mutica Walter, Two-flower Melic. Cp, Pd, Mt (GA, NC, SC, VA): forests and woodlands, including coastal fringe and maritime forests; common. April-May. MD west to IN and IL, south to FL and TX. [= RAB, C, F, G, HC, K, S, W, Z]

Melica nitens (Scribner) Nuttall ex Piper, Three-flower Melic. Mt (GA, NC, VA): rocky upland woodlands, barrens, and glades, over calcareous rocks (such as limestone, calcareous shale); rare (NC Rare, VA Rare). May. PA west to s. MN and NE, south to nw. GA and TX. [= RAB, C, F, G, HC, K, W, Z]

Melinis Palisot de Beauvois (Natalgrass)

A genus of ca. 22 species, native to Africa and w. Asia. References: Wipff in FNA (2003a).

* ***Melinis repens*** (Willdenow) Zizka *ssp. **repens***, Rose Natalgrass. Cp, Pd, Mt (GA): disturbed areas, roadsides; rare, introduced from Africa. The report for NC by Kartesz (1999) is an error. [= FNA; < *M. repens* – K; *? Rhynchelytrum roseum* (Nees) Stapf & C.E. Hubbard ex Bews – HC; < *Rhynchelytum repens* (Willdenow) C.E. Hubbard]

Microstegium Nees in Lindley 1836 (Sasa-grass, Japanese-grass)

A genus of about 15 species, of subtropical Asia and Africa. References: Barden (1987); Fairbrothers & Gray (1972); Winter, Schmitt, & Edwards (1982); Koyama (1987); Thieret in FNA (2003a).

* ***Microstegium vimineum*** (Trinius) A. Camus, Flexible Sasa-grass, Japanese-grass. Pd, Mt, Cp (GA, NC, SC, VA): disturbed areas, colonizing moist, rich soil, especially in floodplains; common, native of tropical se. Asia. The following chronological synopsis of flora accounts of *Microstegium* is perhaps instructive: not treated by Small (1933), "local" (Fernald

1950), "rarely introduced and possibly not established" (Gleason & Cronquist 1952), "sporadically naturalized" (Godfrey & Wooten 1979), "a rapidly spreading pernicious invader on moist ground, too common" (Wofford 1989). RAB report it from fewer than 1/3 of the counties of the Carolinas (in 1968); it is now undoubtedly in every county, an abundant weed in most of them. This species has become a very serious pest, now ranking as one of the most destructive introduced plants in our area, forming extensive and dense patches, sprawling over and eliminating nearly all other herbaceous plants. Eradication is very difficult, and considering its obvious colonizing abilities, only temporary. Hunt & Zaremba (1992) document the continuing northern expansion of *Microstegium* into NY and CT. Redman (1995) discusses its habitat preferences in MD and DC. Koyama (1987) reports it as "common as undergrowth of forests" in Japan, part of its native distribution. [= RAB, C, FNA, GW, K, W; = *Eulalia viminea* (Trinius) Kuntze – G; > *Eulalia viminea* var. *viminea* – F; > *Eulalia viminea* var. *variabilis* Kuntze – F; > ***M. vimineum*** var. ***vimineum*** – HC; > ***M. vimineum*** var. ***imberbe*** (Nees) Honda – HC]

Milium Linnaeus (Wood-millet, Millet-grass)

A genus of 3-4 species, north temperate. References: Tucker (1996)=Z; Fernald (1950b)=Y.

Milium effusum Linnaeus *var.* ***cisatlanticum*** Fernald, American Wood-millet, Millet-grass. Mt (NC, VA): forests at high (or rarely moderate) elevations; rare (NC Rare, VA Watch List). June. A circumboreal species, ranging in North America south to w. NC (Swain County), e. TN (Sevier County), w. VA, WV, OH, IN, IL, and MN. The American plants are sometimes segregated as var. *cisatlanticum* Fernald (Fernald 1950b). Though considered "probably accidentally introduced and established" in NC by Radford, Ahles, & Bell (1968), the native occurrence of this northern species is more plausible; the only known occurrence in NC (not recently seen) is in the Great Smoky Mountains National Park. [= K, Y; < ***M. effusum*** – RAB, C, F, G, HC, W, Z]

Miscanthus Andersson (Eulalia)

References: Barkworth in FNA (2003a).

* ***Miscanthus sinensis*** Andersson, Eulalia, Chinese Silver Grass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): roadsides; common, introduced from e. Asia. September-November. This species is becoming aggressively weedy. Forms with leaves cross-variegated or linear-variegated with yellow are cultivated and sometimes escape or persist (in addition to the much more common green-leaved form). [= RAB, C, FNA, G, K, S, W; > ***M. sinensis*** var. *variegatus* Beal – F, HC; > ***M. sinensis*** var. *zebrinus* Beal – F, HC]

Muhlenbergia Schreber 1789 (Muhly)

A genus of about 160 species, of North America south to Andean South America, and e. and se. Asia. *Muhlenbergia* is a large and diverse genus; the various groups seem very different. References: Pohl (1969); Morden & Hatch (1989); Peterson in FNA (2003a).

1 Panicle open and diffuse, > 4 cm broad, the spikelets borne on slender or capillary pedicels longer than the lemmas.
- 2 Plant with rhizomes, the rhizomes prominent, creeping, and covered with imbricate scales; culms and sheaths strongly compressed at base, the leaves distichous; spikelets 1.5-2 mm long ..... ***M. torreyana***
- 2 Plant without rhizomes, tufted with erect culms (a "bunchgrass"); culm and sheaths terete, the leaves not distichous; spikelets 1.5-5 mm long (excluding awns, if present); [subgenus *Podosemum*].
  - 3 Spikelets 1.5-2 mm long, awnless ..... ***[M. uniflora]***
  - 3 Spikelets 2.5-5 mm long (excluding awns), awned or awnless.
    - 4 Lemma awn 0-1.5 (-4) mm long; glumes (1.1-) 2.0-3.3 (-3.6) mm long, acuminate, not awned (rarely the second with a short awn < 0.6 mm long); spikelets usually brown or bronze (when fresh); basal sheaths usually very fibrous ..... ***M. expansa***
    - 4 Lemma awn (2-) 3-33 mm long; glumes (0.3-) 0.7-1.7 (-2.4) mm long, one or both glumes sometimes awned; spikelets usually purple (when fresh); basal sheaths rarely strongly fibrous.
      - 5 Lemma awn (0-) 3-13 (-18) mm long, first glume awnless (or rarely with an awn to 3.2 mm long), second glume awnless (or rarely with an awn up to 5.0 mm long), palea awnless; lemma lacking setaceous teeth flanking the awn; flowering late August-October; [widespread in our area, particularly in rocky, clayey, or sandy glades, barrens, and woodlands with prairie affinities] ..... ***M. capillaris***
      - 5 Lemma awn (8-) 12-26 (-35) mm long, first glume awn (0.5-) 1-7 (-10) mm long, second glume awn (1-) 5-19 (-25) mm long, palea awn-tipped; lemma with two setaceous teeth flanking the awn, the teeth 0.5-2.5 (-4.7) mm long; flowering October-November; [of sandy maritime situations on barrier islands of the outer Coastal Plain] ..... ***M. sericea***

1 Panicle slender, dense, < 2.5 cm broad, the spikelets sessile or on non-capillary pedicels shorter than the lemmas; [subgenus *Muhlenbergia*].

5 Glumes minute, 0-0.5 mm long; plant lacking rhizomes; culms weak, decumbent and cespitosely branching in their lower portions, rooting at the nodes, the upper portions erect and sparsely branched.....***M. schreberi***
5 Glumes well-developed, 1-7 mm long; plant with scaly rhizomes (except for *M. cuspidata*); culms firm (rarely sprawling), few or solitary (rarely forming dense colonies).
6 Glumes 5-7 mm long (tapered to arched or straight awns), about double the length of the lemma (excluding its awn); panicle dense and spike-like, 2-6 cm long and 3-10 mm broad..... ***M. glomerata***
6 Glumes 1.2-3 mm long, shorter than to barely exceeding the lemma; panicle usually slender, arching, generally less dense and not spike-like, often with some elongated (though appressed) branches, 4-50 cm long, 2-15 mm broad.
7 Callus glabrous; plant lacking scaly rhizomes (with slender stolons and a hard, knotty crown); leaves 0.5-2 mm wide; [of calcareous cliffs]..... ***M. cuspidata***
7 Callus bearded (sometimes only slightly so) (glabrous in *M. glabriflora*); plant with scaly rhizomes; leaves (1-) 2-14 mm wide; [collectively of various habitats].
8 Panicle linear, loosely flowered, much exceeding the leaves; culm erect, simple or sparingly branched; glumes relatively broad, the body ovate, 1.2-2.5 mm long, abruptly narrowed to the acuminate tip; ligule obsolete or shorter than the elongate cartilaginous summit of the leaf sheath.
9 Lemmas awnless or awn < 0.5 mm long; spikelets 1.5-2.5 mm long; leaf blades usually (1-) 2-6 mm wide.....***M. sobolifera***
9 Lemma awn 1-11 mm long (rarely awnless); spikelets 3-5 mm long; leaf blades (2) 6-10 (-13) mm wide (often > 8 mm wide) .....***M. tenuiflora***
8 Panicle lanceolate, densely (rarely loosely) flowered, leaves often extending conspicuously into the inflorescence; culm geniculate, freely branched; glumes relatively narrow, the body lanceolate, 2-3 mm long, tapering from base to apex; ligule usually obvious above the short cartilaginous summit of the leaf sheath.
10 Culm glabrous throughout (including below the nodes).
11 Glumes 1.4-2.0 mm long; ligule 0.2-0.5 mm long.....***M. bushii***
11 Glumes 2-4 (-5) mm long; ligule 0.8-1.5 mm long..... ***M. frondosa***
10 Culm pubescent, at least below the nodes.
12 Lemma awn 7-12 mm long; spikelets loosely clustered, on pedicels 2-4 mm long..... .....***M. sylvatica***
12 Lemma awnless or with a short awn tip (rarely to 9 mm long); spikelets densely clustered, on pedicels < 1 mm long.
13 Lemma glabrous below, or with short basal bearding; ligule 0.5-1.5 mm long ....***M. glabrifloris***
13 Lemma pilose basally; ligule 0.5-1 mm long.....***M. mexicana***

Muhlenbergia bushii Pohl, Bush's Muhly. Pd (VA), Mt (GA), {NC}: bottomlands and other moist forests; rare (VA Rare). IN west IA, south to NE and TX; apparently disjunct eastward in scattered localities, including in n. GA (Jones & Coile 1988) and VA. The habitat is variously given in floras as "dry woods" or "moist woods." [= C, FNA, K; = *M. brachyphylla* Bush – F, G, HC]

Muhlenbergia capillaris (Lamarck) Trinius, Hairgrass. Pd, Cp (GA, NC, SC, VA), Mt (GA, NC, VA): in the Piedmont primarily in clayey or thin rocky soils (especially in areas which formerly burned and were prairie-like), open woodlands, in the Coastal Plain in savannas, dry woodlands, and coastal grasslands (where sometimes in close proximity with *M. sericea*), in the mountains around calcareous rock outcrops; uncommon. Late August-October. The species is widespread in e. North America. *M. capillaris* and its relatives, *M. expansa* and *M. sericea*, have been the subject of an herbarium morphological study by Morden & Hatch (1989), who conclude that the three taxa are not sharply separable and should be recognized only at the varietal level. If one considers behavior in the field, ecology, and geography in conjunction with morphologic characters, however, there is little doubt that the three taxa are biological species. Distribution and typical habitat are different for the three species, but *M. capillaris* can be found growing with or in proximity to each of the other two (I have not seen *M. sericea* and *M. expansa* together). In such situations, the two taxa present are readily distinguishable at a glance, and there is no evidence of intermediates or hybrids. [= F, FNA, G, W; < *M. capillaris* – RAB, GW (also see *M. sericea*); = *M. capillaris* var. *capillaris* – C, HC, K, S]

Muhlenbergia cuspidata (Torrey ex Hooker) Rydberg, Plains Muhly. Mt (VA): dolomite and limestone palisade cliffs along the New, Roanoke, and Shenandoah rivers; rare (VA Rare). OH west to MT and Alberta, south to sw. VA, KY, MO, OK, and NM. [= C, F, FNA, G, HC, K]

Muhlenbergia expansa (Poiret) Trinius, Savanna Hairgrass. Cp (GA, NC, SC, VA): pine savannas, pine flatwoods, mesic areas in sandhill-pocosin ecotones; common (VA Rare). September-October. An important part of the grassy component of many longleaf pine savannas, *M. expansa* is a Coastal Plain species, ranging from se. VA south to FL, and west to e. TX (nearly exactly the range of *Pinus palustris*). Its flowering is stimulated by fire, and, lacking fire, it may be found in large populations in solely vegetative condition. It can be distinguished in sterile condition from other savanna bunchgrasses (*Sporobolus teretifolius*, *S. pinetorum*, *S. floridanus, S. curtissii, Aristida stricta*, and *A. beyrichiana*) by the following characteristics: old leaf bases fibrous and curly (rather than hardened and cartilaginous), ligules 1-3 mm long (rather than 0.2 to 0.5 mm long). The open panicle somewhat resembles that of several species of similar habitat which often co-occur with *M. expansa – Sporobolus teretifolius, S. pinetorum*, *S. curtissii, S. floridanus*, and *Calamovilfa brevipilis*, but the panicle of *M. expansa* is capillary,

flexuous, and fragile, tending to break up over the winter (vs. fine-textured but not capillary, the branches rigid and ascending, more likely to persist over the winter in relatively intact condition). The vegetative characters listed above and under *Calamovilfa brevipilis* are also useful. See ***M. capillaris*** for discussion of Morden & Hatch (1989) advocating varietal status for the three taxa in the ***M. capillaris-expansa-sericea*** complex. [= RAB, F, FNA, GW, HC, S; = ***M. capillaris*** var. *trichopodes* (Elliott) Vasey – C, K]

Muhlenbergia frondosa (Poiret) Fernald, Smooth Wirestem Muhly. Mt, Pd (GA, NC, VA), Cp (NC): moist forests and disturbed areas; uncommon (rare in Piedmont and Coastal Plain). September-October. This species is widespread in e. North America, south to ne. GA and west into the Plains. [= RAB, C, F, FNA, G, GW, HC, K, W; = ***M. mexicana*** – S, misapplied]

Muhlenbergia glabriflora Scribner, Clay-pan Muhly. Pd (NC, VA): in clayey soils (such as those derived from diabase); rare (NC Watch List, VA Rare). October-November. VA and NC west to IA, MO, AL, and TX, local and apparently rare in all of that range. In NC, only known from one collection, that from Durham County in 1936, with vague habitat data. F describes the habitat as "dry exsiccated or baked soils, prairies, gravels or rocky slopes," Pohl (1969) as "mostly on low ground, in shade on heavy clay soils." [= C, F, G, HC, K; = ***M. glabrifloris*** – FNA, orthographic variant]

Muhlenbergia glomerata (Willdenow) Trinius, Spiked Muhly. Mt (NC, VA): fens and seeps over mafic (amphibolite) or ultramafic (olivine) rocks; rare (NC Rare, VA Rare). August-October. This species is widespread in n. North America, ranging south in a scattered and disjunct pattern to NC. [= RAB, C, F, FNA, GW, HC, K, W; < ***M. racemosa*** (Michaux) Britton, Sterns, & Poggenburg – G, S]

Muhlenbergia mexicana (Linnaeus) Trinius, Hairy Wirestem Muhly. Mt (NC, VA), Pd (VA): forest edges; rare (NC Watch List). September-October. The epithet is a misnomer; the species is largely northern, occurring nearly throughout the United States and s. Canada. [= RAB, C, F, G, HC, K, W; > ***M. mexicana*** var. *filiformis* (Torrey) Scribner – FNA; > ***M. mexicana*** var. *mexicana* – FNA; = ***M. foliosa*** (Roemer & J.A. Schultes) Trinius – S]

Muhlenbergia schreberi J.F. Gmelin, Nimblewill, Dropseed. Mt, Pd, Cp (GA, NC, SC, VA): bottomland and other moist forests, disturbed areas; common. August-October. This species is widespread in e. United States. [= RAB, C, F, FNA, GW, HC, K, S, W; > ***M. schreberi*** var. *schreberi* – G; > ***M. schreberi*** var. *palustris* (Scribner) Scribner – G; > ***M. palustris*** Scribner]

Muhlenbergia sericea (Michaux) P.M. Peterson, Dune Hairgrass, Sweet Grass. Cp (GA, NC, SC): maritime dry grasslands, maritime wet grasslands, interdune swales, low dunes, sometimes edges of freshwater or brackish marshes, apparently limited to the barrier islands (sometimes in close proximity with ***M. capillaris***); uncommon, though sometimes locally abundant (SC Rare). October-November. This species is a very conspicuous part of the Outer Banks flora in the autumn, especially showy and abundant between Rodanthe (Chicamacomico) and Avon (Kinnakeet), Dare County, NC, and also abundant on Ocracoke Island, Hyde County, NC. The capillary pedicels and awns of its purple inflorescences are so light as to be moved by the slightest breeze. By December or January they fade to tan, but remain showy. This grass is a major component of baskets made in the Low Country of SC by the Gullah, who call it "sweet grass." I agree with Curtis (1843), Blomquist (1948), Pinson & Batson (1971), Gould (1975), and others who consider ***M. sericea*** (as ***M. filipes***) a species distinct from ***M. capillaris***. Its range is from NC (slightly north of Oregon Inlet, Dare County, south of Nags Head) south to FL and west to TX, primarily on barrier islands. In addition to a discussion of its relationship to ***M. capillaris***, Pinson and Batson (1971) and Morden & Hatch (1989) provide descriptions, not elsewhere available. See ***M. capillaris*** for a discussion of a recent paper (Morden & Hatch 1989) advocating varietal status for the three taxa in the ***M. capillaris-expansa-sericea*** complex. [= FNA; < ***M. capillaris*** – RAB, GW; = ***M. capillaris*** var. *filipes* (M.A. Curtis) Chapman ex Beal – HC, K, S; = ***M. filipes*** M.A. Curtis]

Muhlenbergia sobolifera (Muhlenberg ex Willdenow) Trinius, Rock Muhly. Mt (GA, NC, VA), Pd (VA): dry wooded limestone slopes, rock outcrops and rocky forests; uncommon (GA Special Concern, NC Watch List). July-September. This species is widespread in e. United States, south to AL. [= RAB, C, F, FNA, G, HC, K, S, W]

Muhlenbergia sylvatica Torrey ex A. Gray, Woodland Muhly. Mt (GA, NC, SC, VA), Pd (NC, VA), Cp (VA): bottomland and other moist forests, calcareous strembanks; rare (GA SPecial Concern, NC Watch List). September. This species is widespread in e. United States, south to ne. GA. [= RAB, C, FNA, K, W; > ***M. sylvatica*** var. *sylvatica* – F, G, GW, HC; = ***M. umbrosa*** Scribner – S]

Muhlenbergia tenuiflora (Willdenow) Britton, Sterns, & Poggenburg, Slender Muhly. Mt, Pd (GA, NC, VA), Cp (VA), {SC}: moist forests and disturbed areas, up to at least 1400m; uncommon (rare in Piedmont). August-October. This species is widespread in e. United States. Two varieties are sometimes recognized: var. *tenuiflora*, with lemma awn 4-11 mm long and the sheaths and stems retrorsely hirsute, especially around the nodes, and var. *variabilis* (endemic to the Southern Appalachians), with lemma awn 1-4 mm long or absent, and the sheaths and stems glabrous or nearly so. The validity of the varieties needs further assessment. [= RAB, F, FNA, G, HC, K, S, W; > ***M. tenuiflora*** var. *tenuiflora* – C; > ***M. tenuiflora*** var. *variabilis* (Scribner) Pohl – C]

Muhlenbergia torreyana (J.A. Schultes) A.S. Hitchcock, Pinebarren Smokegrass. Cp (GA, NC): moist soils of depression meadows and clay-based Carolina bays, often under or near *Taxodium ascendens*; rare (GA Special Concern, NC Endangered). August-November. NJ to GA in the Coastal Plain, and disjunct in KY and TN; currently known to be extant only in NJ, NC, and TN. It was first discovered in NC in 1987. Although it rarely flowers except following fire, it can be recognized in sterile condition by its forming clonal patches with evenly spaced, upright, blue-green tufts, each tuft a flattened stem with 5-10 ascending-erect, rather stiff, usually conduplicate leaves, the summit of each sheath with a pronounced cartilaginous thickening, easily felt by running the flattened stem from base to apex between thumb and forefinger. [= C, F, FNA, G, HC, K; = *Sporobolus torreyanus* (J.A. Schultes) Nash – S]

Muhlenbergia asperifolia (Nees & Meyen ex Trinius) Parodi, Alkali Muhly, Scratchgrass. Alkaline soils, wetlands, lawns. Reported east and south to MD, PA, and OH (Kartesz 1999). [= C, F, FNA, G, HC, K] {not keyed at this time}

* *Muhlenbergia emersleyi* Vasey, Bull Muhly, is reported as introduced in NC (Kartesz 1999), based on a specimen at the UNC Herbarium. However, the specimen makes clear that it was cultivated at a Soil Conservation Service test nursery; there is no evidence that the species is established in our area. [= FNA, HC, K] {not keyed}

Muhlenbergia uniflora (Muhlenberg) Fernald. Bogs, wet meadows. South to NJ and se. PA (Rhoads & Klein 1993). [= C, FNA, G, HC, K; > ***M. uniflora*** var. ***uniflora*** – F] {not keyed at this time}

Nassella (Trinius) Desvaux

* ***Nassella leucotricha*** (Trinius & Ruprecht) Pohl, Texas Needlegrass. Cp (SC): waste areas near wool-combing mill; rare, introduced from sc. United States and Mexico. [= K; = *Stipa leucotricha* Trinius & Ruprecht – HC]

Neeragrostis Bush

A monotypic genus of warm temperate North America and tropical Central America and n. South America. References: Peterson & Harvey (in prep.)=Z.

Neeragrostis reptans (Michaux) Nicora, is reported for scattered locations as far east as c. TN by Chester et al. (1993), as well as in WV, KY, and possibly GA (Kartesz 1999). [= K, Z; = *Eragrostis reptans* (Michaux) Nees – C, F, G, GW, HC]

Oplismenus Palisot de Beauvois (Woods-grass, Basket-grass)

A genus of about 5 species, widespread in the New World and Old World tropics, subtropics, and warm temperate areas. References: Wipff in FNA (2003a); Crins (1991)=Z; Scholz (1981)=Y; Peterson et al. (1999).

1 Sheath and culm axis glabrous or with a few scattered hairs, the hairs < 1 mm long; lemma (7-) 9-11-veined..... ..... ***O. hirtellus*** *ssp.* ***setarius***

1 Sheath and culm axis noticeably pilose, the hairs 1-3 mm long; lemma 7-veined .... ***[O. hirtellus*** *ssp.* ***undulatifolius]***

Oplismenus hirtellus (Linnaeus) Palisot de Beauvois *ssp.* ***setarius*** (Lamarck) Mez ex Ekman, Woods-grass. Cp (GA, NC, SC), Pd (GA, SC): maritime forests, shell middens, moist forests; uncommon (NC Watch List). August-October. ***O. hirtellus*** is widespread in tropical and subtropicals areas of the New and Old World; ssp. *setarius* ranges from e. NC south to FL, west to AR and TX, and south through the Caribbean and Central America to central South America. Scholz (1981) recognizes many other sspp. This species is undoubtedly native in our area, occurring in undisturbed habitats in natural communities entirely devoid of alien species; the basis of Gould's (1975) assertion that *Oplismenus* is "introduced or adventive in the United States" is unknown. Superficially, *Oplismenus* resembles *Arthraxon*, but has the leaves only slightly cordate at the base (vs. strongly cordate-clasping). Crins (1991) favors treating ***O. setarius*** as a taxonomically unrecognized component within a polymorphic ***O. hirtellus***. [= FNA, K, Y; = ***O. setarius*** (Lamarck) Roemer & J.A. Schultes – RAB, HC, S; < ***O. hirtellus*** (Linnaeus) Palisot de Beauvois – Z]

* *Oplismenus hirtellus* (Linnaeus) Palisot de Beauvois ssp. *undulatifolius* (Ard.) U. Scholz, native to the Eastern Hemisphere, has been reported as an introduction in Baltimore Co., MD (Peterson et al. 1999). It can be expected to spread, and may likely be found in our area. [= FNA, K, Y; < ***O. hirtellus*** (Linnaeus) Palisot de Beauvois – Z]

Oryza Linnaeus (Rice)

A genus of about 20 species, native of tropical and warm temperate portions of the Old World. References: Tucker (1988)=Z; Judziewicz et al. (2000)=Y; Nanda & Sharma (2003=X.

* ***Oryza sativa*** Linnaeus, Rice. Cp (GA, NC, SC): escaped in marshes (probably not truly naturalized); rare, native of Asia. October. Perhaps the single most important food crop in the world, developed as a crop in Asia and cultivated at least since 10,000 years BP (Hancock 2004). Rice was an important crop before the Civil War in SC and extreme se. NC. [= RAB, C, G, GW, HC, K, S, X, Y, Z]

Oryzopsis Michaux (Ricegrass)
(also see *Piptatherum*)

1 Leaves involute when dry, 1-2 mm wide; glumes 3.5-4.8 mm long ..... ***[see Piptatherum canadense]***

1 Leaves flat, 5-15 mm wide; glume 6-9 mm long.

2 Leaves primarily basal or low-cauline, 2-4 (-5) dm long, 4-10 mm wide; inflorescence a raceme or a racemiform panicle; culms prostrate, the upper leaves very reduced, often merely bladeless sheaths ..... ***O. asperifolia***
2 Leaves primarily cauline, 1-2.5 dm long, 8-15 mm wide; inflorescence a panicle; culms erect, the upper leaves well-developed..... ***[see Piptatherum racemosum]***

Oryzopsis asperifolia Michaux, Rough-leaved Ricegrass, Whiteseed Mountain-ricegrass. Mt (VA): high elevation pine-oak/heath barrens and woodlands; rare (VA Rare). Newfoundland west to British Columbia, south to w. VA, WV, n. IN, SD, NM, and UT. This grass forms large cespitose clumps, the leaves evergreen and somewhat bicolored (green on the upper surface, bluish on the lower). [= C, F, G, HC, K]

Panicum Linnaeus 1753 (Panic Grass)
(also see *Dichanthelium*, *Phanopyrum, Setaria, Steinchisma*, and *Urochloa*)
(contributed by Richard J. LeBlond)

{INTRODUCTION: Describe differences between *Panicum*, *Dichanthelium*, *Urochloa* (=*Brachiaria*), and *Paspalidium* (now in *Setaria)*, all of which are treated as *Panicum* in RAB. Describe collection methods and character analysis.}

There has been considerable controversy over the generic limits of *Panicum*. In its broader recent conceptions, it has been considered to include (in our area) taxa sometimes and variously segregated as *Brachiaria, Dichanthelium, Eriochloa, Paspalidium, Phanopyrum, Steinchisma*, and *Urochloa*. All were originally recognized based on morphological characteristics, to which have recently been added anatomical, chemical, and other evidence. Crins (1991) recognizes *Eriochloa*, *Urochloa* (including *Brachiaria*), *Paspalidium*, and *Panicum* as genera, with *Panicum* subdivided into subgenera *Panicum*, *Agrostoides*, *Dichanthelium*, *Phanopyrum*, and *Steinchisma*. We prefer to recognize most of the segregates as genera, pending further analyses, since there is little evidence that these groups are more closely related to one another than they are to other genera recognized in the Paniceae. *Phanopyrum* and *Dichanthelium* are the only segregate groups with C_3 photosynthesis. *Eriochloa* and *Urochloa* (including *Brachiaria*) have C_4 photosynthesis, with PEP-ck decarboxylation. *Panicum* and *Setaria* (*Paspalidium)* have C_4 photosynthesis, with NAD-me or NADP-me decarboxylation. *Steinchisma*, in addition to its unusual expansion of the palea, apparently has a peculiar photosynthetic pathway, described by Crins (1991) as "intermediate between" C_3 and C_4 photosynthesis; "the leaves have Kranz anatomy, but there are fewer organelles than usual in the outer sheath."

We agree with Hansen & Wunderlin (1988) that "*Dichanthelium* is as 'good' a grass genus as many others (e.g. *Brachiaria*, *Sacciolepis*, and many more in other tribes)." Despite arguments to the contrary, there is little doubt that *Dichanthelium* is a natural group. Zuloaga, Ellis, and Morrone (1993) argue against the recognition of *Dichanthelium* as a genus, preferring to treat it as a subgenus under *Panicum*. They state, however, "within *Panicum*, *Dichanthelium* can be distinguished at the subgeneric level by the following set of characters: lax inflorescences; ellipsoid to obovoid spikelets; upper glume and lower lemma usually 7-11 nerved; upper anthecium apiculate or shortly crested, and simple papillae on the lemma and palea. Anatomically, all species are non-Kranz or C_3, with the outer parenchymatous sheath lacking specialized chloroplasts", etc. The argument that *Phanopyrum* also has C_3 photosynthesis does not materially affect the issue of the taxonomic rank at which to recognize the groups.

We also agree with Hansen & Wunderlin (1988) that "the acceptance of *Dichanthelium* provides a more consistent generic classification." It offers conveniences, as well, in our area, where *Dichanthelium* and *Panicum* are readily distinguishable from each other, and the combined genus would be very large, indeed. References: Lelong (1986)=Z; Zuloaga & Morrone (1996)=Y; Freckmann & Lelong in FNA (2003a).

1 Spikelets tuberculate ..... ***P. verrucosum***
1 Spikelets smooth, not tuberculate.
2 First glume 5-7.5 mm long, nearly as long as sterile lemma; fertile lemma 1/3 length of sterile lemma ..... ***[Phanopyrum gymnocarpon]***
2 First glume shorter, or if this long, then at most 3/4 length of sterile lemma; fertile lemma > ½ the length of the sterile lemma.
3 Sterile palea indurate and expanding the spikelet at maturity, as long as sterile lemma; outer surface of the distal palea with compound papillae..... ***[Steinchisma hians]***
3 Sterile palea membranous, not expanding the spikelet at maturity, usually shorter than sterile lemma or absent; outer surface of the distal palea lacking compound papillae.
4 Panicle < 2 cm wide at maturity.
5 Spikelets >4.5 mm long; first glume > 2.4 mm long; ligule 4-6 mm long; [of coastal dunes]; [subgenus *Panicum*, section *Repentia*] ..... ***P. amarum var. amarum***
5 Spikelets < 4 mm long; first glume < 2.1 mm long; ligule < 2 mm long; [not of coastal dunes].
6 Blades involute, 1.5-4 mm wide; culms wiry; [subgenus *Agrostoides*, section *Tenera*]..... ***P. tenerum***
6 Blades flat, the larger 6-20 mm wide; culms stout.

7 Panicles constricted, 0.3-1.6 cm wide; spikelets subsessile to short-pediceled; summit of fertile palea not enclosed by fertile lemma ..... ***P. hemitomon***
7 Panicles > 1 cm wide; spikelets short to long-pediceled; summit of fertile palea enclosed by fertile lemma; [subgenus *Agrostoides*, section *Agrostoidea*].
8 Plants tufted, without rhizomes; culms strongly compressed below; fertile lemma 1.3-1.5 mm long..... ***P. rigidulum* *var*. *condensum***
8 Plants rhizomatous; culms slightly compressed below; fertile lemma 1.8-2.2 mm long.
9 Rhizomes short, usually < 3 cm long; leaves 20-50 cm long, 4-18 mm wide; spikelets 2.5-3.9 mm long, acuminate; first glume with 3-5 green nerves..... ***P. anceps* *var*. *anceps***
9 Rhizomes elongate, often > 4 cm long; leaves 10-30 (-40) cm long, 2-10 mm wide; spikelets 2.2-2.8 mm long, acute to short-acuminate; first glume with 1-3 green nerves..... ***P. anceps* *var*. *rhizomatum***

4 Panicle > 2 cm wide at maturity.
10 Plants from a cluster of fibrous roots, without rhizomes or hard knotty crowns, annual.
11 First glume 1/5 to 1/4 length of spikelet, broadly rounded to truncate; sheaths usually glabrous; nodes glabrous; [subgenus *Panicum*, section *Dichotomiflora*]..... ***P. dichotomiflorum* *var*. *dichotomiflorum***
11 First glume 1/3 to 1/2 length of spikelet, acute to subacute; sheaths villous or hispid; nodes often bearded; [subgenus *Panicum*, section *Panicum*].
12 Spikelets 4.5-6 mm long; panicle branches often nodding or drooping at maturity..... ***P. miliaceum***
12 Spikelets 1.8-3.6 mm long; panicle branches ascending-spreading at maturity.
13 Spikelets long-acuminate, (2.6-)3.0-3.6 mm long; mature panicle slender, usually 2-3 times as long as wide..... ***P. flexile***
13 Spikelets short-pointed to acuminate, 1.8-2.5 (-2.8) mm long; mature panicle usually > ½ as wide to wider than long.
14 Panicle usually equal to or longer than culm; largest blades usually 10-20 mm wide; spikelets acuminate, lanceolate to lance-ovoid..... ***P. capillare***
14 Panicle usually not as long as culm; largest blades usually 10 mm or less wide; spikelets short-pointed, ellipsoid, ovoid, or obovoid.
15 Herbage purple-tinged; blades 2-6 mm wide, ascending; pulvini glabrous to sparsely pilose; spikelets 1.8-2.2 mm long, > 2× as long as wide; mature fertile lemma blackish..... ***P. lithophilum***
15 Herbage yellow-green to green; blades 2-12 mm wide, spreading; pulvini glabrous or pilose; spikelets 1.4-2.4 mm long, < 2× as long as wide; mature fertile lemma straminous.
16 Culm blades 5-12 mm wide; blade of flag (inflorescence bract) usually > ½ as long as panicle; panicle ellipsoid to obovoid; pulvini glabrous; secondary panicle branches and pedicels divergent; spikelets 1.9-2.4 mm long..... ***P. gattingeri***
16 Culm blades 2-6 mm wide; blade of flag usually < ½ as long as panicle; panicle broadly ovoid to deltoid; pulvini pilose; secondary panicle branches and pedicels appressed; spikelets 1.4-2.1 mm long..... ***P. philadelphicum***
10 Plants with rhizomes or hard knotty crowns, perennial.
17 Plants with rhizomes; fertile lemma 1.6-4 mm long.
18 First glume truncate apically..... ***P. repens***
18 First glume acute to obtuse.
19 Culms slightly compressed below; ligules 0.5 mm long or less; spikelets subsessile and subsecund, usually some obliquely bent above the first glume; fertile lemma 1.8-2.2 mm long; [subgenus *Agrostoides*, section *Agrostoidea*].
20 Rhizomes short, usually < 3 cm long; leaves 20-50 cm long, 4-18 mm wide; spikelets 2.5-3.9 mm long, acuminate; first glume with 3-5 green nerves..... ***P. anceps* *var*. *anceps***
20 Rhizomes elongate, often > 4 cm long; leaves 10-30 (-40) cm long, 2-10 mm wide; spikelets 2.2-2.8 mm long, acute to short-acuminate; first glume with 1-3 green nerves..... ***P. anceps* *var*. *rhizomatum***
19 Culms terete; ligules 1-6 mm long; spikelets pediceled and not at all secund, essentially straight; fertile lemma 2-4 mm long; (subgenus *Panicum*, section *Repentia*].
21 Panicle narrow, the branches erect; sheaths longer than internodes; spikelets 4.3-7.7 mm long; fertile lemma 3-4 mm long.
22 Rhizomes usually elongate; culms solitary to loosely tufted, 0.2-1.5 m tall; leaves 0.7-3.6 dm long; panicles 2-6 cm wide, the primary branches usually 1-2

per node, loosely flowered; spikelets 4.7-7.7 mm long; first glumes 2.5-5.5 mm long, 2/3-3/4 as long as the spikelet, 7-9 nerved, the nerves thickened and raised; fertile lemma 1.3-1.8 mm wide ..... ***P. amarum*** *var.* ***amarum***

22 Rhizomes usually short; culms usually tufted, 1-2 (-3) m tall; leaves 2-5 dm long; panicles 3-10 cm wide, the primary branches usually 2 or more per node, densely flowered; spikelets 4.0-5.9 mm llong; first glumes 2-3.5 mm long, ½-2/3 as long as the spikelet, 3-5 (-7) nerved, the nerves thin and wiry; fertile lemma 1.0-1.5 mm wide ..... ***P. amarum*** *var.* ***amarulum***

21 Panicle with divergent to spreading-ascending branches; upper sheaths shorter than internodes; spikelets 2.8-5 mm long; fertile lemma 2-2.6 mm long.

23 Spikelets 2.8-3.5 mm long; first glume 1/2 length of spikelet, blunt to acute ..... ***P. virgatum*** *var.* ***cubense***

23 Spikelets 3.5-5 mm long; first glume 2/3 length of spikelet, acuminate ..... ***P. virgatum*** *var.* ***virgatum***

17 Plants with hard crowns, lacking rhizomes; fertile lemma 1.2-1.6 mm long; [subgenus *Agrostoides*, section *Agrostoidea*].

24 Ligule of white hairs 0.5-3 mm long; culms to 1 m long; cauline blades 2-8 mm wide, usually pilose adaxially near the base; spikelets 2.0-4.0 mm long.

25 Ligules 1-3 mm long; spikelets 2.0-2.7 mm long, 2.5-4× as long as wide, often obliquely set on the pedicels..... ***P. longifolium*** *var.* ***longifolium***

25 Ligules 0.5-1.5 mm long; spikelets 2.4-4.0 mm long, 3.5-5× as long as wide, erect on the pedicels..... ***P. longifolium*** *var.* ***combsii***

24 Ligule a tawny membrane 0.5-1.0 mm long, often erose or lacerate, or with a minute ciliate fringe; culms to 1.8 m long; cauline blades 4-12 mm wide, usually glabrous; spikelets 1.6-2.8 mm long.

26 Spikelets 2.4-2.8 mm long, long-acuminate, usually < 0.7 mm wide; fertile lemma often conspicuously stipitate..... ***P. rigidulum*** *var.* ***elongatum***

26 Spikelets 1.6-2.5 mm long, short-acuminate, usually > 0.7 mm wide; fertile lemma estipitate to short stipitate.

27 Culms to 1 m long; mature panicle ½ to nearly as wide as long, the branches ascending to spreading; spikelets 1.6-2.2 mm long..... ***P. rigidulum*** *var.* ***rigidulum***

27 Culms to 1.8 m long; mature panicle < 1/3 as wide as long, the branches erect; spikelets 2.0-2.5 mm long..... ***P. rigidulum*** *var.* ***condensum***

Panicum amarum Elliott *var.* ***amarulum*** (A.S. Hitchcock & Chase) P.G. Palmer, Southern Seabeach Grass. Cp (GA, NC, SC, VA): coastal dunes and shores, sandflats, and sandhills; rare. July-November. NJ s. to FL and West Indies, w. to TX and Mexico; restricted to the Coastal Plain except for WV. Although well-marked individuals of var. *amarulum* and var. *amarum* are quite distinctive, only the number and structure of first glume nerves appears to be a constant over the range of the two taxa (Palmer 1975). Primarily a coastal plant, var. *amarulum* has been found in the Sandhills of NC (Richmond Co.). Blomquist 1948 says this taxon "does not seem to grow naturally in North Carolina." [= K, Z; = *P. amarulum* A.S. Hitchcock & Chase – RAB, C, F, G, HC, S; = *P. amarum* ssp. *amarulum* (A.S. Hitchcock & Chase) Freckmann & Lelong – FNA; not ***Panicum***]

Panicum amarum Elliott *var.* ***amarum***, Bitter Seabeach Grass. Cp (GA, NC, SC, VA): coastal dunes and shores; common. August-November. CT s. to FL, w. to TX; restricted to the coast. See note under var. *amarulum*. [= K, Z; = *P. amarum* – RAB, C, F, G, HC, S; = *P. amarum* ssp. *amarum* – FNA; not ***Panicum***]

Panicum anceps Michaux *var.* ***anceps***, Beaked Panic Grass. Mt, Pd, Cp (NC, SC, VA), {GA}: moist sandy woods, swamps, sloughs, roadsides, fields, waste places; common. June-October. NJ w. to IL, s. to FL and TX. The sheaths of var. *anceps* are glabrous to pilose, while those of var. *rhizomatum* are often villous; the leaves of var. *rhizomatum* also tend to be hairier. [= RAB, F, G, Z; < *P. anceps* – C, GW, K, W; = *P. anceps* ssp. *anceps* – FNA; = *P. anceps* – HC, S; not ***Panicum***]

Panicum anceps Michaux *var.* ***rhizomatum*** (A.S. Hitchcock & Chase) Fernald, Small Beaked Panic Grass. Cp (GA, NC, SC, VA): moist to dry sandy or loamy pinelands, ditches; common (VA Watch List). July-October. Se. VA and KY s. to FL and TX. See note under var. *anceps*. [= RAB, F, G, Z; < *P. anceps* – C, GW, K; = *P. anceps* ssp. *rhizomatum* (A.S. Hitchcock & Chase) Freckmann & Lelong – FNA; = *P. rhizomatum* A.S. Hitchcock & Chase – HC, S; not ***Panicum***]

Panicum capillare Linnaeus, Old-witch Grass, Tumbleweed, Tickle Grass. Mt, Pd (GA, NC, SC, VA), Cp (VA): open sandy or stony soil, fields, roadsides, waste places, often weedy in cultivated soil; common (rare in SC). August-November. E. to c. Canada, s. to FL and TX; Bermuda. Plants formerly known as *P. capillare* var. *occidentale* Rydberg, ranging from Canada south to NJ, WV, KY, TX, and CA, are distinguished by long-acuminate spikelets 2.5-4 mm long that are mostly subsessile or short-pedicelled. In our region, *P. capillare* has short-acuminate spikelets 1.8-2.8 mm long, mostly on long pedicels. [= RAB, K, S, Z; < *P. capillare* – C, Y (also see *P. gattingeri*); > *P. capillare* var. *capillare* – F, HC, W; = *P. capillare* ssp. *capillare* – FNA; = *P. capillare* var. *agreste* Gattinger – G; ***Panicum*** s.s.]

Panicum dichotomiflorum Michaux *var.* ***dichotomiflorum***, Spreading Panic Grass, Fall Panic Grass. Mt, Pd, Cp (GA, NC, SC, VA): marshy shores, exposed wet soils, alluvial deposits in floodplain forests, spoil banks, ditches; common. July-October. E. Canada w. to SD, s. to FL and TX; also in the Bahamas (Sorrie & LeBlond 1997). *P. dichotomiflorum* var. *puritanorum* ranges along the coast from s. NH to DE, and occurs inland in n. IN. It is distinguished by ovoid to ellipsoid, abruptly short-

tipped spikelets only 1.8-2.2 mm long, culms to 6 dm long, and leaves 1-8 mm wide. In var. *dichotomiflorum*, the oblong-lanceolate, acuminate spikelets are (2.0-) 2.6-3.6 mm long, culms to 2 m long, and leaves 4-20 mm wide. Plants with geniculate bases, enlarged lower nodes and sheaths, and panicles with included peduncles and divergent branches have been recognized as var. *geniculatum* (A. Wood) Fernald. Plants with spikelets similar to those of var. *puritanorum*, but with culm and leaf features of var. *dichotomiflorum*, have been recognized as var. *imperiorum* Fernald, and are known only from se. VA. Recognition of any infraspecific taxa in this morphologically complex species is risky business. [= HC, K; < ***P. dichotomiflorum*** – RAB, C, GW, S, Z; > ***P. dichotomiflorum*** var. ***dichotomiflorum*** – F, G, W; > ***P. dichotomiflorum*** var. ***geniculatum*** – F, G, W; > ***P. dichotomiflorum*** var. ***imperiorum*** – F; ***Panicum*** s.s.]

Panicum flexile (Gattinger) Scribner, Wiry Panic Grass. Pd (GA, NC, SC, VA), Mt (GA, NC,VA): glades and openings over mafic rocks, damp sandy meadows, open woods; rare (NC Rare). July-October. NY, sw. Québec, S. Ontario, and ND south to FL and TX. First reported for SC by Nelson & Kelly (1997). [= RAB, C, F, FNA, G, HC, K, S, W, Y, Z; ***Panicum*** s.s.]

Panicum gattingeri Nash, Gattinger's Panic Grass. Mt, Pd (NC, VA), {GA}: damp or dry, usually calcareous sandy soils of fields, roadsides, shores, and cultivated ground; frequent in Mountains, uncommon in Piedmont (VA Watch List). August-October. NY, sw. Québec, and MN south to NC, TN, GA, AL, and AR. [= RAB, F, HC, K, S; < ***P. capillare*** – C, Y; = ***P. philadelphicum*** Bernhardi ex Trinius ssp. ***gattingeri*** (Nash) Freckmann & Lelong – FNA; = ***P. capillare*** Linnaeus var. ***campestre*** Gattinger – G, W; ***Panicum*** s.s.]

Panicum hemitomon J.A. Schultes, Maidencane. Cp (GA, NC, SC, VA), Mt (VA): lake, pond, and river shores, swamp borders, marshes, ditches, often in shallow water; common (VA Rare). June-July. Coastal Plain from s. NJ south to FL, west to TX; also TN; South America. Often forming dense colonies in the low margin and shallow waters of limesink ponds. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Z; not ***Panicum***]

Panicum lithophilum Swallen, Flatrock Panic Grass. Pd (GA, NC, SC), Mt (NC): soil islands on granitic flatrocks and domes; rare (NC Rare). August-October. Restricted to granite outcrops in NC, SC, and ec. GA. There is some question about the distinctness of this taxon from ***P. philadelphicum***; Zuloaga & Morrone (1996) did not consider it separable from ***P. philadelphicum***. [= RAB, HC, K; = ***P. philadelphicum*** Bernhardi ex Trinius ssp. ***lithophilum*** (Swallen) Freckmann & Lelong – FNA; < ***P. capillare*** Linnaeus var. ***sylvaticum*** Torrey – W; < ***P. philadelphicum*** – Y; ***Panicum*** s.s.]

Panicum longifolium Torrey ***var. combsii*** (Scribner & Ball) Fernald, Combs Panic Grass. Cp (GA, NC, SC, VA): pond shores, depression meadows, cypress savannas, marshes, low woods; uncommon (VA Watch List). July-October. Scattered on the outer Coastal Plain from se. MA, NJ, se. VA, se. NC, e. SC, e. GA, and FL, west to se. LA. First glumes of var. *combsii* typically are longer than 1.5 mm long, while those of var. *longifolium* are shorter than 1.5 mm long. [= RAB, F, G; = ***P. rigidulum*** Bosc ex Nees ssp. *combsii* (Scribner & Ball) Freckmann & Lelong – FNA; = ***P. rigidulum*** Bosc ex Nees var. *combsii* (Scribner & Ball) Lelong – K, Z; < ***P. longifolium*** – C; = ***P. combsii*** Scribner & Ball – HC, S; not ***Panicum***]

Panicum longifolium Torrey ***var. longifolium***, Long-leaved Panic Grass. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): wet sandy or peaty soils of bogs, savannas, pond shores, depression meadows; common (uncommon in Piedmont, rare in Mountains). July-October. Nova Scotia, NH, MA, PA, and IN south to FL, west to TX. See note under var. *combsii*. [= RAB, G; = ***P. rigidulum*** Bosc ex Nees ssp. *pubescens* (Vasey) Freckmann & Lelong – FNA; = ***P. rigidulum*** Bosc ex Nees var. *pubescens* (Vasey) Lelong – K, W, Z; < ***P. longifolium*** – C, GW; = ***P. longifolium*** – HC, S; > ***P. longifolium*** var. ***longifolium*** – F; > ***P. longifolium*** var. *pubescens* (Vasey) Fernald – F; not ***Panicum***]

* ***Panicum miliaceum*** Linnaeus *ssp.* ***miliaceum***, Broomcorn Millet, Proso Millet, Hog Millet. Cp (NC), Mt (VA): planted in wildlife food plots, sometimes persistent or self-sowing; rare, introduced, native of Eurasia. July-October. [= C, FNA, K; < ***P. miliaceum*** – F, G, HC, S, Y; ***Panicum*** s.s.]

Panicum philadelphicum Bernhardi ex Trinius, Woodland Panic Grass. Pd, Mt (GA, NC, SC, VA), Cp (VA): glades, barrens, desiccated pondshores, riversides, or other rocky or dry sandy soil of open woods and roadsides; frequent (rare in SC). Nova Scotia west to WI, south to GA and e. TX. Plants formerly known as ***P. tuckermanii*** Fernald, ranging from se. Canada south to n. VA and OH, are distinguished by included or short-exerted peduncles less than one-third as long as the panicles. [= RAB, C, G, K, S; > ***P. philadelphicum*** – F, HC; > ***P. tuckermanii*** Fernald – F, HC; = ***P. philadelphicum*** Bernhardi ex Trinius ssp. ***philadelphicum*** – FNA; < ***P. capillare*** Linnaeus var. ***sylvaticum*** Torrey – W; < ***P. philadelphicum*** – Y (also see ***P. lithophilum***); ***Panicum*** s.s.]

*? ***Panicum repens*** Linnaeus, Torpedo Grass. Cp (GA, NC, SC): disturbed coastal sands, in area where ship's ballast was deposited; rare, apparently introduced. First reported for NC by Leonard (1971b). [= FNA, GW, HC, K, S; ***Panicum*** s.s.]

Panicum rigidulum Bosc ex Nees ***var. condensum*** (Nash) Mohlenbrock, Dense Panic Grass. Cp (GA, NC, SC, VA): marshes, meadows, low woods, ditches, stream and pond shores, freshwater tidal shores; occasional. September-October. Coastal Plain south from se. MA to FL, west to se. TX and AR; West Indies. Usually readily identified by its tall stature and compact inflorescence, somewhat resembling a large ***P. hemitomon***, with which it occasionally occurs. [= ***P. agrostoides*** Sprengel var. *condensum* (Nash) Fernald – RAB, F; < ***P. rigidulum*** – C, GW; < ***P. rigidulum*** Bosc ex Nees ssp. *rigidulum* – FNA; < ***P. agrostoides*** – G; = ***P. condensum*** Nash - HC, S; < ***P. rigidulum*** var. *rigidulum* – K, Z; not ***Panicum***]

Panicum rigidulum Bosc ex Nees ***var. elongatum*** (Pursh) Lelong, Tall Flat Panic Grass. Pd, Cp, Mt (GA, NC, SC, VA): marshes, low woods, ditches, swamps, shores, meadows; occasional (common in Piedmont). August-October. CT and NY west to IN, south to GA, LA, and ne. TX. [= K, W, Z; = ***P. stipitatum*** Nash – RAB, F, HC, S; = ***P. rigidulum*** Bosc ex Nees ssp. *elongatum* (Pursh) Freckmann & Lelong – FNA; < ***P. rigidulum*** – C, GW; = ***P. agrostoides*** Sprengel var. *elongatum* (Pursh) Scribner – G; not ***Panicum***]

Panicum rigidulum Bosc ex Nees ***var. rigidulum***, Redtop Panic Grass. Cp, Pd (GA, NC, SC, VA): wet sandy or peaty soils low woods, meadows, marshes, shores, swamps, ditches; frequent. July-October. ME and MI south to FL and TX; also in CA and British Columbia; Central America. [= W; = ***P. agrostoides*** Sprengel var. *agrostoides* – RAB, G; < ***P. rigidulum*** Bosc

ex Nees ssp. *rigidulum* – FNA; < ***P. rigidulum*** var. *rigidulum* – K, Z; < ***P. rigidulum*** – C, GW; > ***P. agrostoides*** var. *agrostoides* – F, HC; > ***P. agrostoides*** var. *ramosius* (C. Mohr) Fernald – F, HC; = ***P. agrostoides*** – S; not ***Panicum***]

Panicum tenerum Beyrich ex Trinius, Southeastern Panic Grass. Cp (GA, NC, SC): limesink ponds, depression meadows, cypress savannas, wet pinelands, bogs; rare (GA Special Concern, NC Rare). June-September. Coastal Plain from se. NC to FL, west to e. TX; West Indies. The rhizomes produce lines of closely spaced culms. Though 0.5-1 m tall, the culms are narrow and inconspicuous. [= RAB, FNA, GW, HC, K, S, Z; not ***Panicum***]

Panicum verrucosum Muhlenberg, Warty Panic Grass. Cp, Pd, Mt (GA, NC, SC, VA): wet pinelands, marshes, shores, ditches; common (occasional in Piedmont, rare in Mountains). August-October. MA and PA west to MI and IN, south to FL and se. TX. Spikelets deep green, the warty surface unique among *Panicum* in our region. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Z; not ***Panicum***]

Panicum virgatum Linnaeus *var.* ***cubense*** Grisebach, Blunt Panic Grass. Cp (GA, NC, SC, VA?): wet to dry sandy pinelands; occasional (frequent in the Sandhills). June-October. Coastal Plain from MA to FL, west to MS; also in MI; West Indies. [= F, HC, S; < ***P. virgatum*** – RAB, C, FNA, G, GW, W, Z; < ***P. virgatum*** var. *virgatum* – K]

Panicum virgatum Linnaeus *var.* ***virgatum***, Switchgrass. Cp, Pd, Mt (GA, NC, SC, VA): dry or wet sandy soils of pinelands, fresh and brackish marshes, shores; common (occasional in Mountains). June-October. Sw. Québec and ND south to FL and TX, west to NV; Bermuda; Central and South America. [= F, HC, S; < ***P. virgatum*** – RAB, C, FNA, G, GW, W, Z; < ***P. virgatum*** var. *virgatum* – K; not ***Panicum***]

* ***Panicum antidotale*** Retzius. Cp (SC): Native of India. Reported for NC and SC (FNA, Kartesz 1999). {investigate} [= FNA, HC, K; not ***Panicum***] {not keyed at this time}

* ***Panicum bergii*** Arechav. Cp (GA): disturbed areas; rare, native of South America. Reported for sc. GA (HC) and AL (Kartesz 1999). {investigate} [= FNA, HC, K; ***Panicum*** s.s.] {not keyed at this time}

* ***Panicum bisulcatum*** Thunberg. Cp (GA, SC): disturbed areas; rare, native of Asia. Reported introduction in SC, GA, and PA (Kartesz 1999), and as a ballast plant for se. PA (Philadelphia) (Rhoads & Klein 1993, as ***P. acroanthum*** Steudel). [= FNA, K; *? P. acroanthum* Thunberg] {not keyed at this time}

Panicum brachyanthum Steudel. Cp (GA): {habitat unknown}; rare. Sw. GA west to c. TX. [= FNA, HC, K]

Panicum dichotomiflorum Michaux *var.* ***puritanorum*** Svenson, Puritan Panic Grass. Alleged to be in VA northward (FNA). [= F, G, HC, K; < ***P. dichotomiflorum*** – C; = ***P. dichotomiflorum*** Michaux ssp. *puritanorum* (Svenson) Freckmann & Lelong – FNA]

* *Panicum miliaceum* Linnaeus ssp. *ruderale* (Kitag.) Tzvelev, Panic Millet. [= FNA, K; = ***P. miliaceum*** ssp. *spontaneum* (Kit.) Tzvelev – C; < ***P. miliaceum*** – F, G, HC] {not keyed at this time}

Panicum virgatum Linnaeus var. *spissum* Linder ranges south to PA, MD, and DE (Kartesz 1999). [= F, HC, K; < ***P. virgatum*** – C, FNA, G; not ***Panicum***] {not keyed at this time}

Parapholis C.E. Hubbard (Sickle Grass)

References: Tucker (1996)=Z.

* ***Parapholis incurva*** (Linnaeus) C.E. Hubbard, Sickle Grass, Hard Grass, Thin-tail. Cp (NC, VA): sandy and muddy flats, brackish or salt marshes; rare, introduced from Europe. [= RAB, C, HC, K, Z; = *Pholiurus incurvus* (Linnaeus) Schinzius & Thellung – F, G; *? Lepturus filiformis* (Roth) Trinius]

Pascopyrum A. Löve (Wheatgrass)

* ***Pascopyrum smithii*** (Rydberg) A. Löve, Western Wheatgrass. Mt (GA): disturbed areas; rare. Reported for ne. GA (Rabun County) by Jones & Coile (1988), as *Agropyron smithii* Rydberg. It is also reported for TN and KY (Kartesz 1999). [= K; = *Elytrigia smithii* (Rydberg) Nevski – C; = *Agropyrum smithii* Rydberg – F, G, W]

Paspalidium
(see *Setaria*)

Paspalum Linnaeus 1759 (Paspalum, Crown Grass, Beadgrass)
(by Alan S. Weakley & Richard J. LeBlond)

A genus of 300-400 species, of tropical and warm temperate regions. References: Allen & Hall in FNA (2003a); Banks (1966)=Z; Silveus (1942)=Y. Key based closely on FNA and on Banks (1966).

1 Spikelets solitary, not associated with a rudimentary spikelets or naked pedicels.
  2 Panicles with 1-70 branches, if > 1, the branches arranged racemosely.

3 Panicle branches 7-70, the axes extending beyond the outermost spikelets; panicle branches disarticulating at maturity ..... ***P. fluitans***
3 Panicle branches 1-6, terminating in a spikelet; panicle branches persistent.
4 Upper florets olive to dark brown ..... ***P. scrobiculatum***
4 Upper florets pale to tan.
5 Axes of panicle branches not broadly winged, 0.6-1.3 mm wide.
6 Spikelets orbicular, 2.8-3.2 mm wide ..... ***P. laeve*** *var.* ***circulare***
6 Spikelets slightly longer than broad, 2.0-2.5 mm wide ..... ***P. laeve*** *var.* ***laeve***
5 Axes of panicle branches broadly winged, 1.8-3.3 mm wide.
7 Spikelets 3.2-4.0 mm long; upper lemmas with a few short hairs at their tips..... ***P. acuminatum***
7 Spikelets 1.7-2.1 mm long; upper lemmas glabrous ..... ***P. dissectum***
2 Panicles usually composed of a terminal pair of brancxhes, sometimes with 1 (-5) additional branches below the terminal pair.
8 Upper glumes pubescent on the back or margins.
9 Spikelets 1.3-1.9 mm long; upper glumes pilose along the margins ..... ***[P. conjugatum]***
9 Spikelets 2.4-3.2 mm long; upper glumes sparsely pubescent on the back ..... ***P. distichum***
8 Upper glumes glabrous.
10 Spikelets elliptic, acute or acuminate at the tip ..... ***P. vaginatum***
10 Spikelets ovate to broadly elliptic, obtuse to broadly acute at the tip.
11 Spikelets 1.9-2.3 mm long; leaf blades flat ..... ***[P. minus]***
11 Spikelets 2.5-4.0 mm long; leaf blades flast or longitudinally folded ..... ***P. notatum***
1 Spikelets paired, or at least the second nonfunctional spikelet represented by a naked pedicel.
12 Spikelets 1.0-1.3 mm long ..... ***[P. paniculatum]***
12 Spikelets 1.3-4.1 mm long
13 Margins of upper glumes and lower lemmas pilose.
14 Panicle branches 2-7; spikelets 2.3-4.0 mm long ..... ***P. dilatatum***
14 Panicle branches (4-) 10-30; spikelets 1.8-2.8 mm long ..... ***P. urvillei***
13 Margins of upper glumes and lower lemmas neither ciliate-lacerate, winged, nor pilose (if pubescent, the hairs not pilose).
15 Upper florets olive to dark brown.
16 Panicle branches 10-28 (or more).
17 Plants annual; axes of panicle branches broadly winged, the wings about as wide as the central portion; [common native] ..... ***P. boscianum***
17 Plants perennial; axes of panicle branches narrowly winged, the wings narrower than the central portion; [rare exotics].
18 Axes of panicle branches 0.5-1.2 mm wide; spikelets 1.1-1.8 mm wide ..... ***P. conspersum***
18 Axes of the panicle branches 1.0-1.7 mm wide; spikelets 1.8-2.4 mm wide ..... ***P. virgatum***
16 Panicle branches 1-10 (or to 28 in *P. boscianum*, keyed under both leads).
19 Plants annual.
20 Spikelets 1.3-1.8 mm wide, broadly elliptic to orbicular, glabrous; panicles with 1-10 (-28) branches, the axes 0.7-2.3 mm wide ..... ***P. boscianum***
20 Spikelets 1.7-2.4 mm wide, broadly obovate, shortly pubescent; panicles with 1-5 branches, the axes 0.8-1.3 mm wide ..... ***[P. convexum]***
19 Plants perennial.
21 Plants cespitose, rhizomes poorly developed; culms 10-20 dm tall; panicle branches ascending, divaricate, or reflexed.
22 Leaves 7-18 mm wide..... ***P. conspersum***
22 Leaves 2.5-4 mm wide..... ***P. plicatulum***
21 Plants not cespitose, rhizomatous; culms 1-15 dm tall; panicle branches ascending.
23 Rhizomes long, evident ..... ***P. nicorae***
23 Rhizomes short, indistinct ..... ***P. plicatulum***
15 Upper florets white, stramineous, or golden brown.
24 Lower lemmas with well-developed cross-ribs over the veins; upper glumes absent..... ***P. malacophyllum***
24 Lower lemmas not ribbed over the veins; upper glumes present.
25 Panicles with 15-100 branches.
26 Plants annual; upper glumes and lower lemmas rugose..... ***[P. racemosum]***
26 Plant perennial; upper glumes and lower lemmas smooth.
27 Plant rhizomatous; panicle branch axes 0.9-1.2 mm wide; panicle branches often arcing... ..... ***P. intermedium***
27 Plant cespitose; panicle branch axes 0.3-0.6 mm wide; panicle branches straight.
28 Panicle branches spreading to reflexed (rarely ascending); leaf blades 10-23 mm wide; axes of panicle branches 0.3-0.4 mm wide ..... ***P. coryphaeum***
28 Panicle branches erect to ascending; leaf blades 4.9-6.1 mm wide; axes of panicle branches 0.5-0.6 mm wide ..... ***[P. quadrifarium]***

25 Panicles with 1-15 branches.
29 Spikelets 2.5-4.1 mm long.
30 Spikelet pairs barely if at all imbricate; lower glumes usually present ..... ***P. bifidum***
30 Spikelet pairs imbricate; lower glumes absent or present.
31 Upper glumes pubescent; lower lemmas usually pubescent.
32 Lower glumes present ..... ***[P. langei]***
32 Lower glumes absent ..... ***P. pubiflorum***
31 Upper glumes glabrous; lower lemmas usually glabrous.
33 Upper florets golden brown ..... ***P. floridanum***
33 Upper florets pale to tan.
34 Terminal panicle branches erect..... ***[P. monostachyum]***
34 Terminal panicle branches spreading to ascending.
35 Plants decumbent, rooting at the lower nodes; spikelets obovate to elliptic ..... ***P. pubiflorum***
35 Plants rhizomatous; spikelets orbicular to elliptic.
36 Spikelets 2.9-4.1 mm long; 1.9-3.1 mm wide, suborbicular to elliptic; upper glumes 5-veined; leaf blades flat..... ***P. floridanum***
36 Spikelets 2.1-3.1 mm long, 2.0-2.8 mm wide, orbicular or nearly so; upper glumes 3-veined; leaf blades laterally folded.
37 Lower sheaths villous or hirsute..... ***P. praecox* *var.* *curtisianum***
37 Lower sheaths glabrous or sparsely papillose pubescent..... ***P. praecox* *var.* *praecox***
29 Spikelets 1.3-2.5 mm long.
38 Upper glumes (and usually also the lower lemmas) shortly pubescent.
39 Lower glumes present..... ***[P. langei]***
39 Lower glumes absent.
40 Panicles both terminal and axillary, the axillary panicles partially or completely enclosed by the subtending leaf sheath ..... [see Key to *Paspalum setaceum* complex]
40 Panicles all terminal..... ***[P. caespitosum]***
38 Upper glumes and lower lemmas glabrous.
41 Panicles both terminal and axillary, the axillary panicles partially or completely enclosed by the subtending leaf sheath ..... [see Key to *Paspalum setaceum* complex]
41 Panicles all terminal.
42 Upper panicle branches erect ..... ***[P. monostachyum]***
42 Upper panicle branches spreading to ascending.
43 Upper glumes and lower lemmas 5-veined ..... ***P. caespitosum***
43 Upper glumes and lower lemmas 3-veined.
44 Lower sheaths villous or hirsute..... ***P. praecox* *var.* *curtisianum***
44 Lower sheaths glabrous or sparsely papillose pubescent..... ***P. praecox* *var.* *praecox***

Key to *Paspalum setaceum* complex
(by Richard J. LeBlond)

1 Leaves variously pubescent.
2 Leaves villous to villous-hirsute, 2-10 mm wide; spikelets 1.3-1.9 mm long.
3 Leaves villous, 2-7 mm wide, not especially crowded toward the base, erect to spreading; [widespread] ..... ***P. setaceum* *var.* *setaceum***
3 Leaves villous-hirsute, 3-10 mm wide, crowded toward the base, recurved; [of n. FL south to Cuba]..... ***[P. setaceum* *var.* *villosissimum]***
2 Leaves puberulent, pilose, or hirsute, 3-15 mm wide; spikelets 1.6-2.5 mm long.
4 Leaves puberulent at least distally on the adaxial surface (and often also pilose in var. *stramineum*); spikelets 1.6-2.2 mm long.
5 Plants erect to spreading; leaves puberulent and often pilose to nearly glabrous except for the puberulent distal adaxial surface; spikelets glabrous to pubescent..... ***P. setaceum* *var.* *stramineum***
5 Plants spreading to prostrate; leaves densely puberulent; spikelets pubescent ..... ***P. setaceum* *var.* *psammophilum***
4 Leaves pilose or hirsute but not puberulent; spikelets 1.8-2.5 mm long.
6 Plants mostly erect; leaves pilose; spikelets usually glabrous; sterile lemma midnerve usually present..... ***P. setaceum* *var.* *muhlenbergii***

6 Plants mostly widely spreading; leaves hirsute; spikelets glabrous or pubescent; sterile lemma midnerve present or absent..... ***P. setaceum*** *var.* ***supinum***

1 Leaves glabrous to glabrate (if glabrate, also see var. *stramineum* in couplet 5).

7 Blades crowded toward the base, often recurved, 3-8 mm wide; spikelets 1.4-1.9 mm long, usually glabrous .... ***P. setaceum*** *var.* ***longepedunculatum***

7 Blades not especially crowded toward the base, erect, ascending or spreading, 2-20 mm wide; spikelets 1.6-2.6 mm long, pubescent or glabrous.

8 Blades 3-8 mm wide; spikelets 1.6-1.9 mm long, pubescent, subacute; [of GA and FL southward] .... ***[P. propinquum]***

8 Blades 2-20 mm wide; spikelets 1.7-2.6 mm long (if < 2.0 then larger leaves usually > 7 mm wide), glabrous or pubescent, rounded to blunt; [plants of FL northward and westward].

9 Plants stiffly erect; blades 2-6 mm wide; spikelets 2.0-2.6 mm long; [of GA and FL] .... ***P. setaceum*** *var.* ***rigidifolium***

9 Plants erect to spreading; blades 3-20 mm wide; spikelets 1.7-2.6 mm long; [of NJ to TX]..... ..... ***P. setaceum*** *var.* ***ciliatifolium***

Paspalum acuminatum Raddi, Brook Paspalum, Canoe Grass. Pd (GA): wet areas, often disturbed; rare, possibly only adventive in our area. C. GA and ne. TX south to s. FL and s. TX, south through the New World tropics to s. South America. [= FNA, HC, K]

Paspalum bifidum (Bertoloni) Nash, Pitchfork Paspalum, Pitchfork Crown Grass. Cp (GA, NC, SC, VA), Pd (GA, SC): mesic to wet longleaf pine savannas and mesic swales in sandhills; uncommon (NC Watch List, VA Rare). August-October. Se. VA south to s. FL, west to se. MO, se. OK, and e. TX. [= RAB, C, GW, HC, K, S, Y; > *P. bifidum* var. *bifidum* – F, G; > *P. bifidum* var. *projectum* Fernald – F, G]

Paspalum boscianum Flügge, Bull Paspalum. Cp, Pd (GA, NC, SC, VA), Mt (GA, SC, VA): low fields, ditches; common (VA Watch List). July-October. MD, KY, and TX south through tropical America. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Y]

* ***Paspalum conspersum*** Schrad., Scattered Paspalum. Cp (GA): roadsides, other disturbed areas; rare, introduced from a native range of Mexico to South America. [= FNA] {synonymy incomplete}

* ***Paspalum coryphaeum*** Trinius, Emperor Crown-grass. Pd (NC): disturbed areas; rare, native of South America. [= FNA, K] {synonymy incomplete}

* ***Paspalum dilatatum*** Poiret, Dallis Grass. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, fields, disturbed areas; common, introduced from tropical America. May-October. [= RAB, C, F, FNA, G, GW, HC, K, S, W, Y]

Paspalum dissectum (Linnaeus) Linnaeus, Mudbank Crown Grass, Walter Paspalum. Cp (GA, NC, SC, VA), Pd (NC, SC): mud flats, drawdown zones; rare (NC Rare, VA Rare). September. NJ, IL, and KS south to s. FL and e. TX; Cuba. [= RAB, C, F, FNA, G, GW, HC, K, S, Y]

Paspalum distichum Linnaeus, Joint Paspalum, Knotgrass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): brackish and freshwater marshes; uncommon (VA Rare). June-August. NJ, KS, and WA south to s. FL, s. TX, s. CA and through the New World and Old World tropics. [= RAB, C, F, FNA, G, HC, K, S, W, Y; < *P. distichum* – GW (also see *P. vaginatum*); = *P. paspaloides* (Michaux) Scribner]

Paspalum floridanum Michaux, Florida Paspalum. Cp, Pd, Mt (GA, NC, SC, VA): wet forests, pine savannas; common (rare in Mountains). August-October. NJ, IL, and KS south to s. FL and e. TX. [= RAB, C, FNA, GW, K, W; > *P. floridanum* – G; > *P. difforme* Le Conte – G, HC, S, Y; > *P. floridanum* var. *floridanum* – F, HC, S, Y; > *P. floridanum* var. *glabratum* Engelmann ex Vasey – F, HC, S, Y; > *P. giganteum* Baldwin ex Vasey – HC, S, Y]

Paspalum fluitans (Elliott) Kunth, Water Paspalum, Horsetail Crown Grass. Cp (GA, NC, SC, VA), Pd (NC, VA): mucky soils in swamp forests; uncommon (NC Watch List). October. MD, IL, and KS south to s. FL and s. TX, and south through tropical America to c. South America. [= RAB, C, F, G, HC, K; = *P. repens* P.J. Bergius – FNA, GW, S, Y]

* ***Paspalum intermedium*** Munro ex Morong. Cp (GA): drainage canals; rare, introduced from South America. Escaped in sc. GA (Tift County, where growing along drainage canals in Tifton) (Jones & Coile 1988). [= FNA, HC, K]

Paspalum laeve Michaux *var.* ***circulare*** (Nash) Stone. {GA, NC, VA}: {need additional herbarium work to fully determine range and abundance of varieties} June-August. [= F; < *P. laeve* – RAB, C, FNA, G, GW, K, W; = *P. circulare* Nash – HC, S, Y]

Paspalum laeve Michaux *var.* ***laeve***. Cp, Pd, Mt (GA, NC, SC, VA): forest edges and disturbed areas; common. {need additional herbarium work to fully determine range and abundance of varieties} June-August. Overall distribution of *P. laeve* s.l.: MA, NY, MI, and KS south to s. FL and e. TX. [< *P. laeve* – RAB, C, FNA, G, GW, K, W; > *P. laeve* var. *laeve* – F; > *P. laeve* var. *pilosum* Scribner – F; > *P. laeve* – HC, S, Y; > *P. longipilum* Nash – HC, S, Y]

* ***Paspalum malacophyllum*** Trinius, Ribbed Paspalum. Cp (GA): disturbed areas; rare, introduced from a native range of Mexico to South America. [= FNA, HC]

* ***Paspalum nicorae*** Parodi, Brunswickgrass. Cp (GA): disturbed areas; rare, introduced from Brazil. [= FNA, HC, K]

* ***Paspalum notatum*** Flügge, Bahia Grass. Cp (GA, NC, SC, VA), Pd (GA, SC, VA), Mt (GA): roadsides and disturbed areas; uncommon, introduced from tropical America. June-October. [= FNA, G, GW, Y; > *P. notatum* var. *notatum* – HC, K; > *P. notatum* Flügge var. *saurae* Parodi – RAB, HC, K]

Paspalum plicatulum Michaux, Brownseed Paspalum. Cp (GA, SC): pine savannas, fields; uncommon. May-July. Se. SC south to s. FL, west to s. TX, and south through tropical America to s. South America. [= RAB, FNA, GW, HC, K, S, Y]

Paspalum praecox Walter *var.* ***curtisianum*** (Steudel) Vasey, Curtis's Crown Grass. Cp (GA, NC, SC, VA): pine savannas; rare (NC Watch List, VA Rare). June-October. The variety was named for the Rev. Moses Ashley Curtis (of Hillsborough, NC), not Allen Hiram Curtiss (of Jacksonville, FL); the correct spelling of the epithet is therefore "*curtisianum*." [= RAB, F, G; = *P. praecox* var. *curtissianum* – C, orthographic error; < *P. praecox* – FNA, GW, K; = *P. lentiferum* Lamarck – HC, S, Y]

Paspalum praecox Walter *var.* ***praecox***, Early Crown Grass. Cp (GA, NC, SC): pine savannas; rare (NC Watch List). May-July. [= RAB, C, F, G; < *P. praecox* – FNA, GW, K; = *P. praecox* – HC, S, Y]

Paspalum propinquum Nash. Cp: {habitat}; uncommon. GA and FL. [= HC, S; < *P. setaceum* – K]

Paspalum pubiflorum Ruprecht *var.* ***glabrum*** Vasey, Hairyseed Crown Grass. Mt, Pd (GA, NC, VA), Cp (SC, VA): disturbed areas; uncommon (NC Watch List). September-October. PA west to KS and CO, south to FL and s. TX and Mexico; Cuba. [= C, F, G, HC, S, Y; < *P. pubiflorum* – RAB, FNA, GW, K, W]

* ***Paspalum scrobiculatum*** Linnaeus, Indian Paspalum. Cp (GA): disturbed areas; rare, native of India. [= FNA, HC, K]

Paspalum setaceum Michaux *var.* ***ciliatifolium*** (Michaux) Vasey. Cp, Pd, Mt (GA, NC, SC, VA): dry open areas and woodlands, disturbed areas; common. June-September. S. NJ south to s. FL, west to e. TX, interior to s. WV, se. KY, e. TN, n. AL, n. MS, c. AR, and e. OK. [= FNA, Z; < *P. setaceum* – RAB, GW, K, W; < *P. setaceum* var. *ciliatifolium* – C (also see var. *longepedunculatum*); = *P. ciliatifolium* Michaux var. *ciliatifolium* – F, G; = *P. ciliatifolium* Michaux – HC, S, Y]

Paspalum setaceum Michaux *var.* ***longepedunculatum*** (LeConte) A. Wood. Cp (GA, NC, SC): pine flatwoods and pine savannas; rare. June-September. Se. NC south to s. FL, west to s. MS. [= F, FNA, Z; < *P. setaceum* – RAB, GW, K, W; < *P. setaceum* var. *ciliatifolium* – C; = *P. longepedunculatum* LeConte – G, HC, S, Y]

Paspalum setaceum Michaux *var.* ***muhlenbergii*** (Nash) Fernald. Mt, Pd, Cp (GA, NC, SC, VA): dry or moist soils; common. June-September. NH west to MI, c. IL, s. IA, and c. KS, south to n. FL, s.AL, s. MS, s. LA, and c. TX. [= C, FNA, Z; < *P. setaceum* – RAB, GW, K, W; > *P. setaceum* var. *calvescens* Fernald – F; > *P. ciliatifolium* Michaux var. *muhlenbergii* (Nash) Fernald – F; = *P. ciliatifolium* Michaux var. *muhlenbergii* (Nash) Fernald – G; = *P. pubescens* Muhlenberg ex Willdenow – HC, S, Y]

Paspalum setaceum Michaux *var.* ***psammophilum*** (Nash) D. Banks. Cp? (VA?): maritime grasslands, sandy disturbed areas; rare. June-September. MA south to DC (VA?) in the Coastal Plain. [= C, FNA, Z; < *P. setaceum* – K; = *P. psammophilum* Nash – F, G, HC, Y]

Paspalum setaceum Michaux *var.* ***rigidifolium*** (Nash) D. Banks. Cp (GA, NC?, SC?): sandhills; rare. June-September. Ne. GA, immediately adjacent to SC (and reported for NC by HC) south to s. FL; Cuba. [= FNA, Z; < *P. setaceum* – RAB, GW, K, W; = *P. rigidifolium* Nash – HC, S, Y]

Paspalum setaceum Michaux *var.* ***setaceum***, Thin Paspalum. Cp, Pd, Mt (GA, NC, SC, VA): sandhills, savannas, dry soils; common (uncommon in Piedmont and Mountains). June-September. MA and CT south to s. FL, west to e. TX, inland to w. VA, s. WV, s. MO and AR; Cuba. [= C, FNA, Z; < *P. setaceum* – RAB, GW, K, W; > *P. setaceum* – G, HC, S, Y; > *P. debile* Michaux – F, HC, S, Y; > *P. setaceum* var. *setaceum* – F]

Paspalum setaceum Michaux *var.* ***stramineum*** (Nash) D. Banks, Yellow Sand Paspalum. Cp (GA, NC): dry sandy soils; rare. June-September. MI west to MT, south to LA, and NM; scattered eastwards, especially near the coast, perhaps at least in part as introductions [= C, FNA, Z; < *P. setaceum* – RAB, GW, K, W; = *P. ciliatifolium* Michaux var. *stramineum* (Nash) Fernald – F, G; = *P. stramineum* Nash – HC, Y]

Paspalum setaceum Michaux *var.* ***supinum*** (Bosc ex Poiret) Trinius. Cp (GA, NC, SC, VA?): sandy soils, old fields; uncommon. June-September. E. NC (e. VA?) south to s. FL, west to s. MS. Also reported for the Coastal Plain of Virginia by Tatnall (1946); needing confirmation of the specimen identification. [= F, FNA, Z; < *P. setaceum* – RAB, GW, K, W; = *P. supinum* Bosc ex Poiret – HC, S]

* ***Paspalum urvillei*** Steudel, Vasey Grass. Cp, Pd (GA, NC, SC, VA): roadsides, fields, and disturbed areas; common, introduced from South America. May-July. [= RAB, C, F, FNA, G, GW, HC, K, S, Y]

Paspalum vaginatum Swartz, Sand Knotgrass, Seashore Crown Grass. Cp (GA, NC, SC), Pd (NC): brackish marshes, rarely inland in disturbed places; rare (NC Watch List). July. NC south to s. FL, west to s. TX, southward through the New World tropics; Old World tropics. [= RAB, FNA, HC, K, S, Y; < *P. distichum* – GW]

* ***Paspalum virgatum*** Linnaeus, Talquezal. Cp (GA): disturbed areas; rare, introduced from Mexico, Central America, and South America. [= FNA, K] {synonymy incomplete}

Paspalum caespitosum Flügge. Pinelands, hammocks. S. AL and n. FL south to s. FL; West Indies, Mexico and Central America. [= FNA, GW, HC, K, S]

Paspalum conjugatum Bergius, Sour Paspalum. Ne. FL, FL Panhandle, and s. AL west to e. TX, south in the New World tropics; Old World tropics. [= FNA, HC, K, S] {synonymy incomplete}

* *Paspalum convexum* Flügge, Mexican Paspalum. Disturbed areas. MS, LA, and e. TX, introduced from tropical America. [= FNA, K] {synonymy incomplete}

Paspalum langei (E. Fournier) Nash, Rustyseed Paspalum. N. peninsular FL and Panhandle FL west to se. TX, and south through the New World tropics to South America. [= FNA, K] {synonymy incomplete}

Paspalum minus E. Fournier, Matted Paspalum. Disturbed areas. FL Panhandle and s. AL west to e. TX. [= FNA, K] {synonymy incomplete}

Paspalum monostachyum Vasey, Gulfdune Paspalum. Coastal dunes, wet prairies. AL and FL west to TX. [= FNA, HC, K, S] {synonymy incomplete}

* *Paspalum paniculatum* Linnaeus, Arrocillo. Disturbed areas, native of tropical America. Ec. MS and sw. FL. [= FNA, K] {synonymy incomplete}

* *Paspalum quadrifarium* Lamarck, Tussock Paspalum. Disturbed areas. S. MS. Native of South America. [= FNA] {synonymy incomplete}
* *Paspalum racemosum* Lamarck, Peruvian Paspalum. Disturbed areas. MS and other widely scattered localities in North America, native of n. South America. [= FNA, K] {synonymy incomplete}
Paspalum setaceum var. *villosissimum* (Nash) D. Banks. Sandy pine flatwoods and fields. N. FL (very near GA) south to s. FL; Cuba. [= FNA, Z; < *P. setaceum* – GW, K; < *P. debile* Michaux – HC; = *P. villosissimum* Nash – S]

Pennisetum L.C. Richard ex Persoon

A genus of 80-130 species, perennials and annuals, mainly of the tropics and subtropics. References: Wipff in FNA (2003a). Key adapted from FNA.

1 Primary bristles (immediately subtending each spikelet) scabrous; plants 2-8 m tall ..... ***[P. purpureum]***
1 Primary bristles conspicuously long-ciliate; plants 0.1-3 m tall.
  2 Spikelets 9-12 mm long ..... ***P. villosum***
  2 Spikelets 2.5-7 mm long.
    3 Fascicles not disarticulating from the rachises; fascicles 33-160 per cm of inflorescence; panicles 4-200 cm long; leaves 7-70 mm wide ..... ***P. glaucum***
    3 Fascicles disarticulating from the rachises at maturity; fascicles 8-37 per cm of inflorescence; panicles 2-32 cm long; leaves 2-13 mm wide.
      4 Spikelets 4.5-7 mm long; leaves 2-3.5 mm wide, folded or conduplicate and superficially appearing even narrower; rachis pubescent ..... ***[P. setaceum]***
      4 Spikelets 2.5-5.6 mm long; leaves 2-13 mm wide, flat; rachis scabrous.
        5 Inner bristles fused for < ¼ of their length; many outer bristles exceeding the spikelets; terminal bristles 10.5-23 mm long, noticeably longer than the other bristles in the fascicle ..... ***[P. ciliare]***
        5 Inner bristles fused for ⅓-½ of their length; outer bristles not exceeding the spikelets; terminal bristles 2.9-6.5 mm long, usually not noticeably exceeding the other bristles in the fascicle ..... ***[P. setigerum]***

* ***Pennisetum glaucum*** (Linnaeus) R. Brown, Pearl Millet. (GA, NC, SC, VA). [= RAB, FNA, HC, K; *? Chaetochloa lutescens* (Weigel) Stuntz – S; = *Setaria glauca* (Linnaeus) Palisot de Beauvois]
* ***Pennisetum villosum*** R. Brown ex Fresenius, Feathertop. Reported as an introduction in GA (Kartesz 1999). [= C, FNA, HC, K; *? Cenchrus longisetus* M.C. Johnston]

* *Pennisetum ciliare* (Linnaeus) Link, Buffelgrass. Disturbed areas, native of Africa. Known in our area from ne. FL, s. AL, e. TN, and ec. MS. [= FNA, HC; = *P. ciliare* var. *ciliare* – K; = *Cenchrus ciliaris* Linnaeus]
* *Pennisetum purpureum* Schumacher, Elephant Grass, Napier Grass. Disturbed areas, native of Africa. Naturalized in FL north to the FL-GA border. [= FNA, HC, K]
* *Pennisetum setaceum* (Forskål) Chiovenda, Tender Fountaingrass Reported as an introduction in FL, TN, and KY (Wipff in FNA). [= FNA, HC, K] {synonymy incomplete}
* *Pennisetum setigerum* (Vahl) Wipff. Disturbed areas, native of Africa. Known in our area from ne. FL and ec. MS. [= FNA; = *P. ciliare* (Linnaeus) Link var. *setigerum* (Vahl) Leeke – K; = *Cenchrus setigerus* Vahl]

Phalaris Linnaeus (Canary-grass)

A genus of about 16 species, north temperate and South American. References: Tucker (1996)=Z.

1 Perennial, with scaly rhizomes; inflorescence obviously paniculate, 7-25 cm long, with ascending to appressed branches, the main branches of the inflorescence apparent, the inflorescence outline thus appearing lobed.
  2 Glumes broadly winged; fertile lemmas ovate-lanceolate, densely pubescent ..... ***Ph. aquatica***
  2 Glumes not winged; fertile lemmas narrowly lanceolate, glabrous to sparsely pubescent ..... ***Ph. arundinacea***
1 Annual, without rhizomes; inflorescence densely spikelike or almost capitate, 1-6 cm long, the branches not apparent, the inflorescence outline a single ovoid, ellipsoid, or lanceolate form.
  3 Keels of the glumes broadly winged (the wing ca. 1 mm wide); sterile lemmas 2.5-4.5 mm long ..... ***Ph. canariensis***
  3 Keels of the glume narrowly winged (the wing < 0.5 mm wide); sterile lemmas 1.5-2.5 mm long.
    4 Nerves of the glumes scabrous; panicle cylindric in outline, 6-18 cm long; glumes 3.5-4.0 mm long .... ***Ph. angusta***
    4 Nerves of the glumes not scabrous; panicle narrowly ovate in outline, usually 2-6 cm long; glumes 5-6 mm long ... ***Ph. caroliniana***

* ***Phalaris angusta*** Nees ex Trinius. Cp (GA, SC): waterfowl impoundments, marshes; uncommon, introduced from tropical America. [= GW, HC, K, Z]
* ***Phalaris aquatica*** Linnaeus, Bulbous Canary-grass. Cp (NC, SC, VA): disturbed areas; rare, introduced from Europe. [= K, Z; *? Ph. tuberosa* Linnaeus var. *stenoptera* (Hackel) Hitchcock – HC]

*? ***Phalaris arundinacea*** Linnaeus, Reed Canary-grass, Ribbon Grass. Mt, Pd (NC, VA), Cp (VA): moist forests, moist disturbed areas, bogs; common (rare in Coastal Plain). June. Newfoundland west to AK, south to NC, TN, AR, NM, CA; Mexico; Eurasia. A variegated form, ***Ph. arundinacea*** forma *variegata* (Parn.) Druce, is cultivated for ornament, as Ribbon Grass. [= RAB, C, F, GW, K, S, W, Z; > ***Ph. arundinacea*** var. *arundinacea* – G, HC; > ***Ph. arundinacea*** var. *picta* Linnaeus – G, HC]

* ***Phalaris canariensis*** Linnaeus, Birdseed Grass, Canary-grass. Cp, Pd (GA, NC, SC, VA), Mt (VA): disturbed areas; rare, introduced from Mediterranean Europe. [= RAB, C, F, G, GW, HC, K, S, Z]

Phalaris caroliniana Walter, Maygrass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): ditches, roadsides, disturbed areas; uncommon. May-June. [= RAB, C, F, G, GW, HC, K, S, Z]

* ***Phalaris minor*** Retzius, Lesser Canary Grass. Cp (SC): waste areas near wool-combing mills; rare, introduced from Mediterranean Europe. Also reported for other scattered states in e. North America (Kartesz 1999). [= HC, K] {not keyed at this time; synonymy incomplete}

* *Phalaris paradoxa* Linnaeus, Mediterranean Canary Grass, is reported for MD, NJ, and PA (Kartesz 1999). [= K; > ***Ph. paradoxa*** var. *paradoxa* – HC; > ***Ph. paradoxa*** var. *praemorsa* (Lamarck) Coss. & Durieu – HC] {not keyed at this time; synonymy incomplete}

Phanopyrum (Rafinesque) Nash (Phanopyrum)

Circumscription of this genus is currently in flux. *Phanopyrum* is variously treated as a distinct genus or as a subgenus of *Panicum*. *Panicum verrucosum* perhaps belongs here as well. References: Crins (1991)=Z; Webster (1988)=Y; Freckmann & Lelong in FNA (2003a).

Phanopyrum gymnocarpon (Elliott) Nash, Swamp Phanopyrum, Savanna Phanopyrum. Cp (GA, NC, SC, VA): swamps, seasonally flooded soils of cypress-gum sloughs, tidal (freshwater) cypress-gum swamps, disturbed wet soils, low woods, ditches, muddy banks of streams and lakes, sinks, floodplains, and marshes; uncommon (NC Watch List, VA Rare). August-October. Se. VA south to FL, west to TX and AR. [= K, Y; = *Panicum gymnocarpon* Elliott – RAB, FNA, GW, HC, S, Z]

Phleum Linnaeus (Timothy)

References: Tucker (1996)=Z; Stace (1997)=Y. Key based on Stace (1997).

1 Spikelets 2.0-3.5 mm long, including the 0.2-1.0 (-1.2) mm long awns; panicle 3-6 mm wide; leaves 2-6 mm wide; ligule usually acute ..... ***Phl. pratense*** *ssp.* ***nodosum***
1 Spikelets (3.5-) 4-5.5 mm long, including the (0.8-) 1.0-2.0 mm long awns; panicle 6-10 mm wide; leaves 3-9 mm wide; ligule usually obtuse ..... ***Phl. pratense*** *ssp.* ***pratense***

* ***Phleum pratense*** Linnaeus *ssp.* ***nodosum*** (Linnaeus) Arcangeli, Small Timothy. (NC) {included based on Fernald's report – corroboration and additional information needed} [< ***Ph. pratense*** – RAB, C, G, HC, K, S, W, Z; = ***Ph. pratense*** var. *nodosum* (Linnaeus) Hudson – F; = ***Ph. bertolonii*** Augustin de Candolle – Y]

* ***Phleum pratense*** Linnaeus *ssp.* ***pratense***, Timothy. Mt, Pd, Cp (GA, NC, SC, VA): meadows, pastures, roadsides, disturbed areas; common, introduced from Europe. June-October. The American common name comes from the name of the man who is believed to have introduced it into the United States in 1720, Timothy Hanson; in England, *Phleum* is called "cat's-tail." [< ***Ph. pratense*** – RAB, C, G, HC, K, S, W, Z; = ***Ph. pratense*** var. *pratense* – F; = ***Ph. pratense*** – Y]

* *Phleum subulatum* (Savi) Ascherson & Graebner, Italian Timothy, is reported as introduced in MD and PA (Kartesz 1999). Not keyed. [= K, Y]

Phragmites Adanson (Common Reed)

A genus with one species and 2 or more varieties, nearly worldwide in distribution. References: Allred in FNA (2003a); Saltonstall, Peterson, & Soreng (2004)=Z; Saltonstall (2002). Key based on Z.

Key 1

1 Ligules 1.0-1.7 mm long; lower glumes 3.0-6.5 mm long; upper glumes 5.5-11.0 mm long; lemmas 8.0-13.5 mm long; leaf sheaths caducous with age; culms exposed in the winter smooth and shiny; [native south to WV and NC] .... ***Phr. australis*** *ssp.* ***americanus***
1 Ligules 0.4-0.9 mm long; lower glumes 2.5-5.0 mm long; upper glumes 4.5-7.5 mm long; lemmas 7.5-12.5 mm long; leaf sheaths not caducous with age; culms not exposed in the winter, **either** smooth and shiny **or** ridged and not shiny.

2 Culms smooth and shiny; [native on the Gulf Coast]..... [***Phr. australis*** *var*. ***berlandieri]***
2 Culms ridged and not shiny; [introduced and weedy]..... ***Phr. australis*** *ssp*. ***australis***

Key 2

1 First glume 2.3-4.2 mm long; stems at base of plant in summer and late fall mostly tan-brown or yellow; [alien and weedy].. ..... ***Phr. australis*** *var*. ***australis***
1 First glume 3.5-6.4 mm long; stems at base of plant in summer and late fall reddish-brown or reddish-purple; [native]..... ..... ***Phr. australis*** *var*. ***berlandieri***

* ***Phragmites australis*** (Cavanilles) Trinius ex Steudel *var*. ***australis***, Common Reed. Cp (GA, NC, SC, VA), Pd, Mt (NC, VA): marshes, dredge-spoil deposit islands, ditches; common in outer Coastal Plain (rare elsewhere). September-October. Nearly worldwide in distribution. Fox, Godfrey, & Blomquist (1950) report its first collection in NC (in 1948). In most of our area, reed is of relatively recent introduction, reported from only nine counties in RAB, but now becoming a serious weed in coastal areas, where it aggressively colonizes freshwater and brackish marshes, excluding the native species. [< *Ph. australis* – C, FNA, GW, K; < *Ph. communis* Trinius – RAB, G, HC; = *Ph. communis* var. *communis* – F; < *Ph. phragmites* (Linnaeus) Karsten – S]

Phragmites australis (Cavanilles) Trinius ex Steudel *var*. ***berlandieri*** (Fornier) C.F. Reed, North American Reed. Cp (VA): freshwater marshes; rare. September-October. [< *Ph. australis* – C, FNA, GW, K; < *Ph. communis* Trinius – RAB, G, HC; = *Ph. communis* var. *berlandieri* (Fournier) Fernald – F; < *Ph. phragmites* (Linnaeus) Karsten – S]

Phyllostachys Siebold & Zuccarini (Bamboo)

References: Duncan & Duncan [in prep.]=Z; Judziewicz et al. (2000)=Y. Key adapted from Z.

1 Internodes at the base of principal culms dissimilar in length, the lowermost internode 1-12 cm long, the next 3 internodes distinctly longer, with nodal junctions mostly straight across..... ***Ph. aurea***
1 Internodes at the base of principal culms all similar in length, mostly 4-8 cm, with nodal junctions oblique.
2 Groove on internode (above the branch) yellowish-green, the rest of the culm dull greenish.....***Ph. aureosulcata***
2 Groove on internode (above the branch) the same color as the rest of the culm.
3 Internodes of principal culms densely velvety; outer surface of culm sheaths with abundant erect brown hairs; lowest internode of principal culms ca. 5 cm long; culms pale green atfirst, becoming gray with accumulated waxy powder in age..... ***Ph. heterocycla***
3 Internodes of principal culms glabrous or slightly hairy; outer surface of culm sheaths lacking erect brown hairs; lowest internode of principal culms ca. 8.5-12 cm long; culms various (see below, but not as decribed in first lead).
4 Largest culms to 15 cm in diameter and 25 m tall; upper culm sheaths with auricles; outer surface of culm sheaths usually with a green streak down the middle, flanked by streaks of purple and buff; culms medium to dark glossy green at first (some cultivars golden yellow or yellow streaked), remaining so in age .... ***Ph. bambusoides***
4 Largest culms to 3.2 (-4) cm in diameter and 10 m tall (rarely taller); upper culm sheaths with or without auricles; outer surface of culm sheaths variously streaked, spotted, or mottled with brown or red (but not as above); culms pale green to green at first, usually becoming purple spotted, gray, or yellow in age.
5 Lowest internode of principal culms ca. 8.5 cm long; culm sheaths with auricles, usually sparsely pubescent with erect, pale hairs, usually pinkish-brown at maturity, marked with numerous brown spots near the tip; culms green at first, usually becoming speckled and then more-or-less completely darkened with purplish spots (remaining green in some cultivars)..... ***Ph. nigra***
5 Lowest internode of principal culms ca. 12 cm long; culm sheaths lacking auricles, glabrous, usually green to buff at maturity, striped and marginally bordered with red; culms pale green at first, becoming gray to yellowish in age..... ***Ph. rubromarginata***

* ***Phyllostachys aurea*** Carrière ex A. & C. Rivière, Golden Bamboo, Fishpole Bamboo. Cp, Pd (NC, SC, VA): suburban woodlands; uncommon, native of China and Japan. Not known to flower in our area. This is the usual large bamboo cultivated and naturalizing in our area, forming dense stands, up to 15 m tall. [= RAB, K, Y, Z]
* ***Phyllostachys aureosulcata*** McClure, Yellowgroove Bamboo. Cp (SC), Pd (VA), {GA}: cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= K, Y, Z]
* ***Phyllostachys bambusoides*** Siebold & Zuccarini, Giant Timber Bamboo. Cp, Pd, Mt (NC, SC): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= K, Y, Z]
* ***Phyllostachys heterocycla*** (Carrière) S. Matsum, Moso Bamboo. Cp (SC): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= Y; *? Ph. edulis* (Carrière) Houzeau de Lehaie – K; *? Ph. pubescens* Mazel ex Houzeau de Lehaie – Z]

* ***Phyllostachys nigra*** (Loddiges) Munro, Black Bamboo. Pd (SC), Cp (VA): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China and Japan. [= K, Y, Z]
* ***Phyllostachys rubromarginata*** McClure. Pd (SC): cultivated as an ornamental, persistent or spreading from plantings; rare, native of China. [= K, Y, Z]

* ***Phyllostachys meyeri*** McClure is reported as introduced in NC and SC (Kartesz 1999). {investigate} [= K] {not keyed at this time}

A number of other species are sometimes cultivated in our area, and may be encountered. Bamboos are seriously under-represented in herbaria, since they rarely flower and are impractical to press. All of the species above should be anticipated in other physiographic provinces and states than those listed.

Piptatherum Palisot de Beauvois

1 Leaves involute when dry, 1-2 mm wide; glumes 3.5-4.8 mm long ..... ***[P. canadense]***
1 Leaves flat, 5-15 mm wide; glume 6-9 mm long.
  2 Leaves primarily basal or low-cauline, 2-4 (-5) dm long, 4-10 mm wide; inflorescence a raceme or a racemiform panicle; culms prostrate, the upper leaves very reduced, often merely bladeless sheaths ..... ***[see Oryzopsis asperifolia]***
  2 Leaves primarily cauline, 1-2.5 dm long, 8-15 mm wide; inflorescence a panicle; culms erect, the upper leaves well-developed ..... ***P. racemosum***

Piptatherum racemosum Ricker ex A.S. Hitchcock, Blackseed Ricegrass. Mt (VA): calcareous woodlands and forests; common. Québec and Ontario west to ND, south to w. VA, KY, MO, and NE. [= K; = *Oryzopsis racemosa* (Smith) Ricker ex A.S. Hitchcock – C, F, G, HC, W]

Piptatherum canadense (Poiret) Barkworth ined., Mountain Ricegrass, ranges south to Panther Knob, Pendleton County, WV; it may occur in our primary area as well. [= K; = *Oryzopsis canadensis* (Poiret) Torrey – C, F, G, HC]
* *Piptatherum miliaceum* (Linnaeus) Cosson, Smilo Grass, is reported as an introduction in MD, NJ, and PA (Kartesz 1999). [= K; = *Oryzopsis miliacea* (Linnaeus) Bentham & Hooker – HC; = *Agrostis miliacea* Linnaeus] {not keyed at this time}
Piptatherum pungens (Torrey ex Sprengel) Barkworth ined. ranges south to e. PA (Rhoads & Klein 1993), NJ, and WV (Kartesz 1999). [= K; = *Oryzopsis pungens* (Torrey ex Sprengel) A.S. Hitchcock – C, F, G, HC] {not keyed at this time}

Piptochaetium J. Presl (Needlegrass)

A genus of about 36 species, of temperate North and South America, and montane tropical South America (Cialdella & Giussani 2002). *P. avenacioides* (Nash) Valencia & Costa, endemic to FL, is the only other species in the genus in eastern North America. References: Cialdella & Giussani (2002).

Piptochaetium avenaceum (Linnaeus) Parodi, Eastern Needlegrass, Black Oatgrass. Cp, Pd, Mt (GA, NC, SC, VA): upland woodlands and forests, sometimes abundant or even dominant in xeric woodlands over granitic or mafic rocks in the Piedmont; common (uncommon in the Mountains). April-June. [= C, K; = *Stipa avenacea* Linnaeus – RAB, F, G, HC, S, W]

Pleioblastus Nakai 1925

* ***Pleioblastus simonii*** (Carrière) Nakai. Reported for GA (Kartesz 1999). {investigate} [= *Arundinaria simonii* (Carrière) A.& C. Rivière – K]

Poa Linnaeus 1753 (Bluegrass)

A genus of about 500 species, cosmopolitan. References: Tucker (1996)=Z; Haines (2004)=Y; Soreng (1998).

1 Plants with well-developed rhizomes; perennial.
  2 Upper stems strongly flattened; [section *Tichopoa*] ..... ***P. compressa***
  2 Upper stems terete or nearly so.
    3 Lower nodes of the panicle with 1-3 branches ..... ***P. cuspidata***
    3 Lower nodes of the panicle with 4 or more branches; [section *Poa*] ..... ***P. pratensis***
1 Plants lacking rhizomes; perennial or annual.
  4 Plants dioecious, the florests imperfect; lemmas and glumes scarious and silvery; [rare introduction in our area]; [section *Dioicopoa*] ..... ***P. arachnifera***

4 Plants not dioecious, the florets perfect; lemmas and glumes not notably scarious and silvery; [collectively common and widespread in our area]; [subgenus *Poa*].
5 Lemmas not webbed at the base.
6 Annual; culms decumbent to ascending and 1-3 dm long; inflorescence 2-8 cm long, the ascending branches bearing crowded spikelets above the middle; lemmas 2.4-3.4 mm long; [section *Ochlopoa*] ..... ***P. annua***
6 Perennial; culms erect, 3-6 dm long; inflorescence 6-15 cm long, the widely spreading branches bearing a few spikelets near the end; lemmas 3.2-4.4 mm long; [section *Sylvestres*] ..... ***P. autumnalis***
5 Lemmas webbed at the base.
7 Spikelets (most or all) modified into purplish bulblets; culm bulbous-thickened at ground level; [section *Bolbophorum*] ..... ***P. bulbosa***
7 Spikelets normal; culm not bulbous-thickened.
8 Annual; [section *Homalopoa*] ..... ***P. chapmaniana***
8 Perennial.
9 Marginal veins of the lemma glabrous.
10 Nodes of the panicle mostly with 4-8 branches; lemmas pubescent or scabrous on the keel.
11 Sheaths glabrous; ligule 0.7-2.2 (-3.0) mm long; [section *Sylvestres*] ..... ***P. alsodes***
11 Sheaths scabrous; ligule (2.5-) 3-7 mm long; [section *Pandemos*] ..... ***P. trivialis***
10 Nodes of the panicles mostly with 2 branches; lemmas glabrous on the keel; [section *Sylvestres*].
12 Anthers 0.6-0.9 (-1.0) mm long; lemmas broad-acute, obtuse or truncate at the apex, the keel and lateral margins of the lemma forming an apical angle of 42-82 degrees, firm at the tip, the scarious tip absent or up to 0.25 mm long..... ***P. languida***
12 Anthers 0.9-1.5 mm long; lemmas acute to acuminate at the apex, the keel and lateral margins of the lemma forming an apical angle of 10-47 degrees, pliable at the tip, the scarious tip prominent and 0.25-0.5 mm long..... ***P. saltuensis***
9 Marginal veins of the lemma pubescent, at least basally.
13 Lower nodes of the panicles mostly with (1-) 2-3 branches.
14 Ligule truncate, 0-1 mm long; first glume 1.7-2.2 mm long, second glume 2.0-2.8 mm long; anthers 0.5-0.7 mm long..... ***P. paludigena***
14 Ligule rounded-ovate, 1-2 mm long; first glume 2.5-3.5 mm long, second glume 3.0-3.8 mm long; anthers 1.1-1.4 mm long..... ***P. wolfii***
13 Lower nodes of the panicles mostly with (4-) 5 or more branches.
15 Lemmas 5-veined (intermediate veins well-developed); ligule ca. 1 mm long; [section *Sylvestres*]..... ***P. sylvestris***
15 Lemmas 3-veined (intermediate veins obscure); ligule either (2-) 3-5 mm long or 0.2-1 (-1.5) mm long.
16 Ligule 0.2-1 (-1.5) mm long, truncate; culms 4-8 dm tall; anthers 1.2-1.6 mm long; [section *Stenopoa*] ..... ***P. nemoralis***
16 Ligule (2-) 3-5 mm long, ovate-triangular; culms 5-15 dm tall; anthers 0.8-1.2 mm long; [section *Pandemos*]..... ***P. palustris***

Poa alsodes A. Gray, Woodland Bluegrass. Mt (NC, VA), Pd (NC): rich forests; uncommon. May-June. Nova Scotia west to SD, south to NC and IL; also in w. United States. [= RAB, C, F, G, HC, K, W, Z]

* ***Poa annua*** Linnaeus, Speargrass, Six-weeks Grass, Annual Bluegrass. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common, introduced from Eurasia. April-May. [= RAB, C, F, G, GW, HC, K, W, Z]

* ***Poa arachnifera*** Torrey, Texas Bluegrass. Pd (GA, NC, SC): disturbed areas; rare, introduced from South America and w. United States. April. [= RAB, HC, K]

Poa autumnalis Muhlenberg ex Elliott. Cp, Pd, Mt (GA, NC, SC, VA): moist or dry nutrient-rich forests; common. April-May. NJ west to MI, south to FL and TX. [= RAB, C, F, G, GW, HC, K, W, Z]

* ***Poa bulbosa*** Linnaeus, Bulbous Bluegrass. Cp (NC, VA), Pd (GA, NC, VA): lawns; rare, introduced from Europe. April-May. [= RAB, C, F, G, HC, K, Z]

Poa chapmaniana Scribner. Pd, Cp (GA, NC, SC, VA): low fields, roadsides, disturbed areas; common (VA Watch List). April-May. DE west to IA, south to FL and LA. [= RAB, C, F, G, HC, K, W, Z]

* ***Poa compressa*** Linnaeus, Canada Bluegrass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): fields, roadsides, disturbed areas; common, introduced from Europe. May-August. [= RAB, C, F, G, HC, K, W, Z]

Poa cuspidata Nuttall. Mt, Pd (GA, NC, SC, VA), Cp (GA, NC, VA): moist forests; common. March-April. NJ west to s. IN, south to sw. GA. [= RAB, C, F, G, HC, K, W, Z]

Poa languida Hitchcock, Drooping Bluegrass. Mt (VA): ultramafic outcrop woodlands, barrens, and glades; rare (VA Rare as *P. saltuensis*). April-May. VT and MA west to MN, south to PA, w. VA, KY, and IA. See comments under *P. saltuensis*. [= C, F, G, HC, W; < *P. saltuensis* – K; = *P. saltuensis* Fernald & Wiegand ssp. *languida* (Hitchcock) A. Haines – Y]

* ***Poa nemoralis*** Linnaeus, Wood Bluegrass. Mt (NC, VA), Pd (VA): sandy creek bottoms; rare, introduced from Europe (NC Watch List). [= C, F, G, HC; *? P. nemoralis* ssp. *nemoralis* – K]

Poa paludigena Fernald & Wiegand, Bog Bluegrass. Mt (NC, VA): mountain bogs, especially in deep shade under shrubs; rare (US Species of Concern, NC Endangered, VA Rare). April-May. NY west to MN, south to PA, w. NC, and IL. This

species withers and disintegrates shortly after flowering; its ephemeral habit may be responsible for its being overlooked in our area for many years. [= C, F, G, HC, K]

Poa palustris Linnaeus, Fowl Bluegrass, Fowl Meadow-grass. Mt (NC, SC, VA), Pd (VA): meadows, moist areas; rare (NC Rare, VA Rare). June-July. Circumboreal, south in North America to VA, w. NC, MO, and NM. [= RAB, C, F, G, HC, K, W, Z]

* ***Poa pratensis*** Linnaeus, Kentucky Bluegrass, Junegrass, Speargrass. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): lawns, roadsides, disturbed areas; common, introduced from Europe. April-August. [= RAB, C, F, G, HC, W, Z; *P. pratensis* ssp. *pratensis* – K]

Poa saltuensis Fernald & Wiegand, Old-pasture Bluegrass. Mt (NC, VA): northern hardwood forests, ultramafic outcrop woodlands, barrens, and glades; rare (NC Rare, VA Rare). April-May. Newfoundland west to MN, south to PA, w. VA, and w. NC. The NC occurrences (on serpentinized olivine barrens) reported as *P. languida* are actually *P. saltuensis*. The taxonomic distinctions between *P. saltuensis* and *P. languida* have been controversial; Haines (2004) provides a detailed and valuable discussion. [= C, F, G, HC, W; < *P. languida* – RAB, Z, misidentification; = *P. saltuensis* var. *saltuensis* – F; < *P. saltuensis* – K (also see *P. languida*); = *P. saltuensis* ssp. *saltuensis* – Y]

Poa sylvestris A. Gray, Forest Bluegrass. Mt, Pd, Cp (GA, NC, SC, VA): moist forests; common. April-May. NY west to WI and IA, south to FL and TX. [= RAB, C, F, G, GW, HC, K, W, Z]

* ***Poa trivialis*** Linnaeus, Rough Bluegrass. Mt, Pd (NC, VA), Cp (VA), {GA}: moist forests, disturbed areas, bottomlands; common, introduced from Europe. April-June. [= RAB, C, F, G, GW, HC, K, W, Z]

Poa wolfii Scribner. Mt (NC, VA): moist rich forests; rare (VA Rare). {} OH west to MN, south to n. VA, MO, and e. NE. The NC occurrence is based on material from Great Smoky Mountains National Forest (Haywood County) (K. Langdon, pers. comm.. 2006). [= C, F, G, HC, K, W, Z]

* ***Poa infirma*** Kunth. Introduced in SC (Kartesz 1999), but not attributed to any e. North American area in FNA (in prep.). {investigate} [= K] {not keyed at this time; synonymy incomplete}

Polypogon Desfontaines

References: Tucker (1996)=Z; Barkworth in FNA (in prep.).

1 Inflorescence verticillate, the rachis visible between the verticils; glumes 1.6-2.3 mm long, without awns; spikelets disarticulating near base of pedicel; stoloniferous perennial..... ***P. viridis***

1 Inflorescence dense, cylindrical, and spikelike; glumes 2-3 mm long, with prominent awns 3.5-7 mm long; spikelets disarticulating near apex of pedicel; annual.

2 Glumes deeply lobed, the awn borne between the lobes; glume ciliate-fringed; lemma 0.4-0.7 mm long, awnless ..... ***P. maritimus*** *var.* ***maritimus***

2 Glumes slightly notched at the tip, the awn borne from near the tip; glume not ciliate-margined; lemma 0.7-1.1 mm long, awned ..... ***P. monspeliensis***

* ***Polypogon maritimus*** Willdenow *var.* ***maritimus***, Meditteranean Beardgrass. Cp (GA, SC): brackish marshes; rare, introduced from Meditteranean Europe. *P. maritimus* Willdenow is reported as introduced to GA (Small 1933). [< *P. maritimus* – HC, K, S, Z]

* ***Polypogon monspeliensis*** (Linnaeus) Desfontaines, Rabbitfoot Grass, Beardgrass, Annual Beardgrass. Cp (GA, NC, SC, VA), Pd (GA): brackish marshes, disturbed areas; uncommon, introduced from s. Europe and w. Asia. May-July. [= RAB, C, F, G, GW, HC, K, S, Z]

* ***Polypogon viridis*** (Gouan) Breistr., Water Bent-grass. Cp (SC): introduced on ballast around old ports, probably not persistent; rare, introduced from the Old World. Distinguished from *Agrostis* in having the spikelet falling as a whole, disarticulating below the glumes. [= K, Z; = *Agrostis viridis* Gouan – C; *? Agrostis verticillata* Villars – F; *? Agrostis semiverticillata* (Forskål) C. Christensen – G, HC]

Pseudosasa Makino ex Nakai (Arrow Bamboo)

References: Duncan & Duncan [in prep.]=Z; Judziewicz et al. (2000)=Y. Key adapted from Z.

* ***Pseudosasa japonica*** (Siebold & Zuccarini ex Steudel) Makino ex Nakai, Arrow Bamboo. Cp (VA): cultivated as an ornamental, persistent or spreading from plantings; rare, native of Japan. [= K, Y, Z; = *Sasa japonica* (Siebold & Zuccarini ex Steudel) Makino]

Puccinellia Parlatore (Alkali Grass, Goosegrass)

A genus of about 80 species, north temperate.

1 Lemmas 3.0-4.5 mm long; spikelets 5-11-flowered..... ***[P. maritima]***
1 Lemmas 1.5-2.5 mm long; spikelets 2-6-flowered.
2 Inflorescence diffuse, the lower branches with spikelets restricted to the distal portions; lower inflorescence branches spreading horizontal to deflexed at maturity; lemma 1.5-2.1 mm long, the midnerve not reaching the apex .....***P. distans***
2 Inflorescence compact, the lower branches bearing spikelets nearly to the base; lower inflorescence branches ascending at maturity; lemma 2.0-2.5 mm long, the midnerve reaching the apex, and often excurrent as a mucro..... ***P. fasciculata***

* ***Puccinellia distans*** (Jacquin) Parlatore, European Alkali Grass, Goosegrass. Cp (VA): coastal sands; rare, introduced from Europe. [= *P. distans* – C, G, HC; > *P. distans var. distans* – F; > *P. distans* ssp. *distans* – K]

Puccinellia fasciculata (Torrey) Bicknell, Eastern Alkali Grass, Saltmarsh Goosegrass. Cp (VA): salt or brackish marshes; rare (VA Rare). Nova Scotia south to VA; Europe; and in sw. United States. [= C, F, G, HC, K]

* *Puccinellia maritima* (Hudson) Parlatore, Seaside Alkali Grass, Seaside Speargrass, salt marshes and ballast near ports, is introduced south to se. PA (Philadelphia), NJ (Camden), and DE, especially on ballast. [= C, F, G, HC; > *P. americana* Sorenson – K] {synonymy incomplete}

Reimarochloa A.S. Hitchcock

A genus of about 4 species, of the New World tropics.

Reimarochloa oligostachya (Munro ex Bentham) A.S. Hitchcock. AL, FL; Cuba. [= HC, K]

Rhynchelytrum Nees
(see *Melinis*)

Ripidium Trinius (Ravenna-grass)

References: Hodkinson et al. (2002).

* ***Ripidium ravennae*** (Linnaeus) Trinius, Ravenna-grass, Plume-grass. Cp (GA): cultivated as an ornamental and rarely escaping or persisting; rare, introduced from s. Europe. In sw. GA, TN, and MD (Kartesz 1999) and DC (Steury 2004a). [= *Saccharum ravennae* (Linnaeus) Linnaeus – FNA, K; = *Erianthus ravennae* (Linnaeus) Palisot de Beauvois – F; > *Erianthus ravennae* var. *ravennae* – HC; > *Erianthus ravennae* var. *purpurascens* (Anderss.) Hackel – HC]

Rostraria Trinius

* ***Rostraria cristata*** (Linnaeus) Tzvelev. Cp (SC): waste areas near wool-combing mills; rare, introduced. It also occurs at scattered other sites in eastern United States, such as on ballast in se. PA (Rhoads & Klein 1993), and reported for MD, AL, and FL (Kartesz 1999). Not keyed. [= K; = *Lophochloa cristata* (Linnaeus) Hylander; *? Koeleria phleoides* (Vill.) Persoon – HC]

Rottboellia Linnaeus f. (Itch-grass)

A genus of about 5 species, native to tropical Asia and Africa. References: Wipff in FNA (2003a); Wipff & Rector (1993)=Z.

* ***Rottboellia cochinchinensis*** (Loureiro) Clayton, Itch-grass. Cp (GA, NC): disturbed ground; rare, native of tropical Asia. August-October. This grass, considered a noxious weed, was found in at least 13 GA counties by 1985 (Duncan 1985) and on a farm in Robeson County, NC in 1984. [= FNA, K, Z; = *Rottboellia exaltata* Linnaeus f. – HC; = *Manisuris exaltata* (Linnaeus f.) Kuntze – S]

Saccharum Linnaeus (Plume Grass)
(also see *Ripidium*)

A genus of uncertain circumscription at this time. Clayton & Renvoize (1986) have pointed out that the "traditional division [of *Saccharum*] into awned (*Erianthus*) and awnless species seems wholly artificial;" Hodkinson et al. (2002) develop molecular evidence which suggests that our species are not congeneric with *Saccharum*, however. Further study is needed, but likely our native southeastern species will be merged into *Miscanthidium* Stapf, while the introduced *S. ravennae* will be placed in the genus *Ripidium* Trinius (Hodkinson et al. 2002). Sugarcane (*Saccharum officinarum* Linnaeus, *S. sinense* Roxburgh, *S. barberi* Jeswiet, *S. spontaneum* Linnaeus, and cultivars and hybrids derived from those four species) is cultivated further south, notably in

FL and LA. References: Webster in FNA (2003a); Webster & Shaw (1995)=Z; Gandhi & Dutton (1993); Hodkinson et al. (2002).

1 Lowermost inflorescence node densely hairy; callus hairs (ring of hairs beneath the spikelet) (7-) 9-25 mm long, equal to or longer than the spikelet; stem appressed-pubescent below the inflorescence, on the internodes as well as the nodes.
  2 Lemma awn flattened and spirally twisted at base; callus hairs 9-14 mm long, silvery or tinged with purple; leaves usually glabrous on the upper surface at maturity; [of moist to dry sites, rarely in wetlands].....***S. alopecuroides***
  2 Lemma awn nearly terete, straight or slightly flexuous; callus hairs (7-) 15-20 (-25) mm long, tawny or brown; leaves usually pilose on the upper surface at maturity; [of moist to wet sites, rarely in uplands].....***S. giganteum***
1 Lowermost inflorescence node glabrous; callus hairs (ring of hairs beneath the spikelet) 0-6.5 mm long, shorter than or equal to the spikelet (or absent in *S. brevibarbe*); stem glabrous below the inflorescence, except sometimes on the nodes.
  3 Callus hairs (ring of hairs beneath the spikelet) absent, or of few hairs 0-2 mm long (much shorter than the spikelet); panicle branches closely appressed, the panicle usually 1-3 cm broad; panicle branches glabrous .....***S. baldwinii***
  3 Callus hairs (ring of hairs beneath the spikelet) present, dense, 3-6.5 mm long (from about half as long to nearly as long as the spikelet); panicle branches ascending, the panicle usually 4-10 cm broad; panicle branches pubescent.
    4 Awn of the lemma of the upper floret terete at the base, and not spiraled; spikelets dark brown; spikelet pair dissimilar in size, the lemma of the upper floret 0.7-0.8× as long as the lemma of the lower floret; lemma of the lower floret typically 3-nerved .....***S. coarctatum***
    4 Awn of the lemma of the upper floret flattened at the base, either spiraled or not; spikelets straw-colored or purplish; spikelet pair homomorphic, the upper lemma 0.9-1.0× as long as the lower lemma; lemma of the lower floret not distinctly nerved.
      5 Awn of the lemma of the upper floret not basally spiraled, 10-18 mm long; lemma of the upper floret entire... .....***S. brevibarbe** var**. brevibarbe***
      5 Awn of the lemma of the upper floret basally spiraled, 15-22 mm long; lemma of the upper floret bifid, the tooth on either side of the lemma 2.0-2.5 mm long.....***S. brevibarbe** var**. contortum***

Saccharum alopecuroides (Linnaeus) Nuttall, Silver Plume Grass. Pd, Mt, Cp (GA, NC, SC, VA): fields, roadsides, woodland borders; common (rare in Mountains). October. NJ west to IN, IL, MO, and OK, south to FL and TX. [= FNA; = *Saccharum alopecuroideum* (Linnaeus) Nuttall – Z, orthographic variant; = *Erianthus alopecuroides* (Linnaeus) Elliott – RAB, C, F, G, GW, HC, W; = *Saccharum alopecuroidum* – K, orthographic variant; = *Erianthus divaricatus* (Linnaeus) A.S. Hitchcock – S; **= *Miscanthidium species 1***]

Saccharum baldwinii Sprengel, Narrow Plume Grass. Cp (GA, NC, SC, VA): marshes, clay-based Carolina bays, ditches; common. July-October. E. VA south to FL, west to TX, AR, scattered northward inland to TN and MO. [= FNA, K, Z; = *Erianthus strictus* Elliott – RAB, C, F, G, GW, HC, S; **= *Miscanthidium species 2***]

Saccharum brevibarbe (Michaux) Persoon ***var. brevibarbe***, Short-bearded Plume Grass. Cp (NC): marshes, ditches; rare. September-October. MS, AL, and TN west to TX, AR, and OK; disjunct in e. NC. [= FNA, K, Z; < *Erianthus brevibarbis* Michaux – RAB, C, G, GW, S (also see *S. coarctatum*); = *E. brevibarbis* – F; >< *Erianthus coarctatus* Fernald var. *coarctatus* – HC; >< *Erianthus coarctatus* var. *elliottianus* Fernald – HC; **= *Miscanthidium species 3***]

Saccharum brevibarbe (Michaux) Persoon *var.* ***contortum*** (Elliott) R. Webster, Bent-awn Plume Grass. Cp, Pd, Mt (GA, NC, SC, VA): open woodlands and forests, woodland borders; common, rare in Mountains. Late July-October. DE and MD south to panhandle FL, west to TX and AR, with scattered occurrences north to TN. [= FNA, K, Z; = *Erianthus contortus* Elliott – RAB, C, F, G, GW, HC, S, W; = *Saccharum contortum* (Elliott) Nuttall; = *Erianthus brevibarbis* Michaux var. *contortus* (Elliott) D.B. Ward; **= *Miscanthidium species 4***]

Saccharum coarctatum (Fernald) R.D. Webster, Brown Plume Grass. Cp (GA, NC, SC, VA): marshes, ditches, clay-based Carolina bays, swamps; common (rare in VA). September-October. DE and MD south to FL, west to TX (Brown & Marcus 1998). [= FNA, K, Z; < *Erianthus brevibarbis* Michaux – RAB, C, G, GW, S; >< *Erianthus coarctatus* Fernald – F, HC; >< *Erianthus coarctatus* var. *coarctatus* – HC; >< *Erianthus coarctatus* var. *elliottianus* Fernald – HC; **= *Miscanthidium species 5***]

Saccharum giganteum (Walter) Persoon, Sugarcane Plume Grass, Giant Plume Grass. Cp, Pd, Mt (GA, NC, SC, VA): marshes, ditches; common, rare in Mountains. September-October. NY south to FL, west to se. TX and AR; inland in TN and KY. [= FNA, K, Z; = *Erianthus giganteus* (Walter) Palisot de Beauvois – RAB, C, G, GW, HC, W; > *Erianthus giganteus* var. *giganteus* – F; > *Erianthus giganteus* var. *compactus* (Nash) Fernald – F; = *Erianthus saccharoides* Michaux – S; **= *Miscanthidium species 6***]

Sacciolepis Nash

A genus of about 30 species, primarily in the tropics and subtropics. References: Wipff in FNA (2003a).

1 Annual, cespitose; spikelets 2.5-3.5 mm long; [rare alien] .....***S. indica***
1 Perennial, from creeping stolons; spikelets (3-) 4-5 mm long; [common native] .....***S. striata***

* ***Sacciolepis indica*** (Linnaeus) Chase. Cp (GA, NC, SC): low fields, ditches; rare, introduced from India. October. [= RAB, FNA, GW, HC, K]

Sacciolepis striata (Linnaeus) Nash, American Cupscale. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): marshes, interdune swales, ditches, swamps; common (rare in Piedmont and Mountains). July-October. S. NJ south to FL, west to e. TX and OK, nearly limited to the Coastal Plain, but occasionally inland as in w. NC and TN; also native in the West Indies and n. South America. [= RAB, C, F, FNA, G, GW, HC, K, W]

Schedonorus Palisot de Beauvois

The correct generic placement of the introduced species *Schedonorus arundinaceus* (= *Festuca elatior; = Festuca arundinacea; = Lolium arundinaceum*) and *Sch. pratense* has been disputed. The traditional placement in *Festuca* has been defended by Aiken et al. (1997); Darbyshire (1993) transferred them to *Lolium;* and Soreng & Terrell (1998) place them in the genus *Schedonorus*. NOTE: apparently, the Soreng & Terrell (1998) paper was preceded by another paper which renders Soreng & Terrell's combinations superfluous. References: Darbyshire (1993)=X; Aiken & Darbyshire (1990)=Y; Tucker (1996)=Z; Soreng & Terrell (1998)=V; Darbyshire in FNA (in prep.). Key based in part on C and Y.

1 Auricles ciliate (sometimes only very sparsely so – check several at 10-20× magnification); spikelets with 3-6 (-9) florets; old sheaths pale straw-colored, often remaining intact; internodes of the rachilla antrorsely scabrous ..... ***Sch. arundinaceus***
1 Auricles glabrous; spikelets with (2-) 4-10 (-12) florets; old sheaths brown, decaying to fibers; internodes of the rachilla glabrous (smooth) or nearly so..... ***Sch. pratensis***

* ***Schedonorus arundinaceus*** (Schreber) Dumortier, Tall Fescue, Alta Fescue. Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, pastures, disturbed areas; common, introduced from Eurasia. May-July. [= FNA, V; < *Festuca elatior* Linnaeus – RAB, F, S, W, misapplied; = *Festuca arundinacea* Schreber – HC, Y; = *Festuca elatior* Linnaeus – C; = *Festuca elatior* var. *arundinacea* (Schreber) Wimmer – G; < *Festuca pratensis* Hudson – GW; = *Lolium arundinaceum* (Schreber) Darbyshire – K, X, Z; *? Schedonorus phoenix* (Scopoli) Holub]
* ***Schedonorus pratensis*** (Hudson) Palisot de Beauvois, Meadow Fescue. Mt (VA): fields, roadsides, pastures, disturbed areas; rare, introduced from Eurasia. May-July. [= FNA, V; < *Festuca elatior* Linnaeus – F, S, W, misapplied; = *Festuca pratensis* Hudson – C, Y; = *Festuca elatior* var. *pratensis* (Hudson) A. Gray – G; < *Festuca pratensis* Hudson – GW; = *Festuca elatior* – HC, misapplied; = *Lolium pratense* (Hudson) Darbyshire – K, X, Z]

Schizachne Hackel (False Melic)

A monotypic genus, circumboreal in Asia and North America.

Schizachne purpurascens (Torrey) Swallen, Purple Oatgrass, False Melic. Mt (VA): moist, rocky northern hardwood and spruce forests; rare (VA Rare). Newfoundland west to AK, south to MD, w. VA, WV, KY, IL, NM, and Mexico; also in ne. Asia. May-July. [= F, G, HC, K; > *S. purpurascens* var. *purpurascens* – C]

Schizachyrium Nees (Little Bluestem)

A genus of about 60 species, widespread in tropical, subtropical, and warm temperate regions of the World. References: Wipff (1996a)=Z; Gandhi (1989)=Y; Wipff in FNA (2003a). Key based in part on Wipff in FNA (2003a).

1 Leaf blades 0.5-1.5 mm wide, with a lighter-colored zone in the center of the upper surface; sessile spikelet ca. 4 mm long ..... ***Sch. tenerum***
1 Leaf blades >1.5 mm wide, lacking a distinct lighter zone on the upper surface; sessile spikelet 5-11 mm long.
  2 First glume of sessile spikelet pubescent ..... ***Sch. sanguineum*** *var.* ***hirtiflorum***
  2 First glume of sessile spikelet glabrous.
    3 Plants rhizomatous, with internodes 6 mm long or longer; sessile spikelet 5-7 mm long ..... ***Sch. scoparium*** *var.* ***stoloniferum***
    3 Plants tufted, rhizome internodes absent or < 3 mm long, the stem sometimes decumbent at the base and rooting at the lower nodes (appearing nearly rhizomatous); sessile spikelet 6-10 mm long.
      4 Leaf sheaths broad and strongly keeled, hairs of the raceme internodes ca. 5 mm long; stems decumbent at base, rooting at the lower nodes ..... ***Sch. littorale***
      4 Leaf sheaths rounded or weakly keeled; hairs of the raceme internodes 1-3 (-4) mm long; stems erect, not rooting at the lower nodes.
        5 Pedicellate spikelets of the proximal spikelet units on each rame staminate, 5-10 mm long, with a lemma, the pedicellate spikelets of the distal units usually smaller (1-4 mm long) and sterile; sheaths and blades densely tomentose to glabrate ..... ***[Sch. scoparium*** *var.* ***divergens]***
        5 Most pedicellate spikelets sterile, 1-6 mm long, without a lemma; sheaths and blades usually glabrous, occasionally pubescent ..... ***Sch. scoparium*** *var.* ***scoparium***

Schizachyrium littorale (Nash) Bicknell, Seaside Little Bluestem. Cp (GA, NC, VA): coastal dunes and maritime dry grasslands, often with *Uniola paniculata*, *Panicum amarum*, and other dune plants; common. August-October. E. MA south to NC (or SC?), and inland on the shores of the Great Lakes. In NC, ***Sch. littorale*** is present and abundant on dunes of barrier islands from Shackleford Banks, Carteret County south to Brunswick County, near the SC border, and entirely absent from the Outer Banks (from Cape Lookout, Carteret County, north through Hyde County to Dare County). [= FNA, GW, K; < *Andropogon scoparium* Michaux – RAB; = ***Sch. scoparium*** var. *littorale* (Nash) Gould – C, Z; = *Andropogon scoparius* Michaux var. *littoralis* (Nash) A.S. Hitchcock – F, G; = *Andropogon littoralis* Nash – HC, S; < ***Sch. scoparium*** (Michaux) Nash ssp. *littorale* (Nash) Gandhi & Smeins – Y]

Schizachyrium sanguineum (Retzius) Alston *var.* ***hirtiflorum*** (Nees) Hatch, Hairy Crimson Bluestem. Cp (GA): {habitat}; rare. Sw. GA and FL west to AZ and south through Central America to South America. [= FNA, K; = *Andropogon hirtiflorus* (Nees) Kunth – HC, S; *? Sch. sanguineum* var. *brevipedicellatum* (Beal) Hatch]

Schizachyrium scoparium (Michaux) Nash *var.* ***scoparium***, Common Little Bluestem. Cp, Pd, Mt (GA, NC, SC, VA): in a wide range of moist to dry habitats; common. (June-) August-October. New Brunswick west to Alberta, south to FL and Mexico. One of the most ubiquitous plants in the modern landscape of our area, occurring throughout in the majority of habitats. This species is extremely variable, some of the variability correlated with habitat and geography; the recognition of infraspecific taxa is warranted. [= C, FNA, Z; < *Andropogon scoparius* Michaux – RAB (also see ***Sch. littorale***); = ***Sch. scoparium*** – GW; > *Andropogon scoparius* var. *scoparius* – F, G, HC; > *Andropogon praematurus* Fernald – F, G; > *Andropogon scoparius* var. *polycladus* Scribner & Ball – F; > *Andropogon scoparius* var. *frequens* F.T. Hubbard – F; = ***Sch. scoparium*** ssp. *scoparium* – K, Y; < *Andropogon scoparius* – S, W]

Schizachyrium scoparium (Michaux) Nash *var.* ***stoloniferum*** (Nash) J. Wipff, Creeping Little Bluestem. Cp (GA, SC): fall-line sandhills in the inner Coastal Plain, perhaps in other dry habitats, the habitat and range in our area requiring further study; uncommon? August-October. SC and GA south to FL and west to MS. See Wipff (1996a) for additional discussion. [= FNA, K, Z; = ***Sch. stoloniferum*** Nash – GW; = *Andropogon stolonifer* (Nash) A.S. Hitchcock – HC, S; < ***Sch. scoparium*** ssp. *littorale* (Nash) Gandhi & Smeins – Y]

Schizachyrium tenerum Nees, Slender Bluestem. Cp (GA): longleaf pine savannas; uncommon. GA west to e. TX. [= FNA, K; = *Andropogon tener* (Nees) Kunth – HC, S]

Schizachyrium maritimum (Chapman) Nash. AL, FL west to LA. [= K; = *Andropogon maritimus* Chapman] {not keyed at this time; add to synonymy}

Schizachyrium niveum (Swallen) Gould, Pinescrub Bluestem, is reported for Lowndes Co. in sc. GA (Kral 1973), but the report has been discounted by later authors (Wipff in FNA 2003a). Not keyed. [= FNA, K; = *Andropogon niveus* Swallen – HC, S]

Schizachyrium scoparium (Michaux) Nash var. *divergens* (Hackel) Gould, Pinehill Bluestem. East to c. TN, AL, KY. [= FNA, K; = *Andropogon scoparius* Michaux var. *divergens* Hackel; = *Andropogon divergens* – HC; < *Andropogon scoparius* – S]

Sclerochloa Palisot de Beauvois

References: Tucker (1996)=Z; Brandenburg, Estes, & Thieret (1991).

* ***Sclerochloa dura*** (Linnaeus) Palisot de Beauvois. Mt (VA): disturbed areas; rare, introduced from Mediterranean Europe. A monotypic genus, native to s. Europe. [= C, HC, K, Z]

Secale Linnaeus 1753 (Rye)

References: Tucker (1996)=Z.

* ***Secale cereale*** Linnaeus, Rye. Cp, Pd, Mt (GA, NC, SC, VA): fields; commonly cultivated, rarely persistent or volunteering following cultivation, introduced from Eurasia. May-June. An important crop. The lemmas are awned from 2-6 cm long. [= RAB, C, F, G, HC, K, Z]

Setaria Palisot be Beauvois 1807 (Foxtail Grass)
(also see *Pennisetum*)

A genus of about 110-140 species, of tropicala nd warm temperate regions. References: Webster (1993)=Z; Webster (1995)=Y; Crins (1991)=X; Webster (1988); Rominger in FNA (2003a); Allen in FNA (2003a). Key adapted from FNA.

Setaria corrugata (Elliott) J.A. Schultes. Cp (GA, NC, SC): pinelands, disturbed areas; common. From ne. NC south to s. FL, west to e. TX; Cuba; Dominican Republic. [= RAB, FNA, HC, K, Z; = *Chaetochloa corrugata* (Elliott) Lamson-Scribner – S]

* ***Setaria faberi*** R.A.W. Herrmann, Nodding Foxtail Grass, Giant Foxtail-grass. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas; uncommon, native of China. [= RAB, C, FNA, G, K, W; = *S. faberii* – F, HC, Z, orthographic variant]

Setaria geminata (Forsskål) Veldkamp *var.* ***paludivaga*** (A.S. Hitchcock & Chase) R.D. Webster, Alligator Grass, Paspalidium. Cp (GA, SC): in shallow water; rare. December. S. SC south to FL, west to TX; also in Central and South America. This taxon is sometimes considered an introduction from the Old World, but its occurrence in undisturbed wetlands remote from extensive human activity suggests that it is native. Webster (1995) has merged *Paspalidium* into *Setaria*. [= Y; = *Panicum paludivagum* A.S. Hitchcock & Chase – RAB, HC, S; < *Paspalidium geminatum* – FNA, GW, X; = *Paspalidium geminatum* (Forsskål) Stapf var. *paludivagum* (A.S. Hitchcock & Chase) Gould – K; = *Paspalidium paludivagum* (A.S. Hitchcock & Chase) Parodi]

* ***Setaria italica*** (Linnaeus) Palisot de Beauvois, Foxtail-millet, Italian-millet. Pd (GA, NC, SC, VA), Cp, Mt (VA): disturbed areas, rare, native of Eurasia. Probably derived via cultivation from *S. viridis*, and cultivated as a food crop in China since at least 6000 BP and later in Europe (Hancock 2004). [= RAB, C, F, FNA, G, HC, K, W, Z; = *Chaetochloa italica* (Linnaeus) Lamson-Scribner – S]

Setaria macrosperma (Lamson-Scribner & Merrill) K. Schumann, Coral Bristlegrass. Cp (GA, SC): hammocks and maritime forests, also disturbed areas; rare. SC south to FL; Bahamas, Mexico. [= RAB, FNA, HC, K, Z; = *Chaetochloa macrosperma* Lamson-Scribner & Merrill – S]

Setaria magna Grisebach, Saltmarsh Foxtail-grass, Giant Foxtail-grass. Cp (GA, NC, SC, VA), Pd* (GA*): interdune swales, near-coastal marshes; uncommon. NJ south to s. FL, west to e. TX; disjunct inland in GA, AR, LA, TX, and NM; West Indies, Bermuda, Costa Rica. [= RAB, C, F, FNA, G, HC, K, Z; = *Chaetochloa magna* (Grisebach) Lamson-Scribner – S]

Setaria parviflora (Poiret) Kerguélen, Knotroot Bristlegrass, Perennial Foxtail-grass. Cp, Pd, Mt (GA, NC, SC, VA): marshes, ditches, moist disturbed areas; common. MA to IA south to s. FL and s. TX, south through Mexico to Central America; CA and NV; West Indies. Gandhi & Barkworth (2003) provide a detailed discussion of the reasons for the nomenclatural change. [= FNA, K, Z; = *S. geniculata* Palisot de Beauvois – RAB, C, F, G, HC, W; = *Chaetochloa geniculata* (Palisot de Beauvois) Millspaugh & Chase – S]

* ***Setaria pumila*** (Poiret) Roemer & Schultes *ssp.* ***pumila***, Yellow Foxtail. Mt, Pd, Cp (GA, NC, SC, VA): disturbed areas, lawns, fields; common, native of Europe. [= FNA; = *Setaria glauca* (Linnaeus) Palisot de Beauvois – RAB, C, F, G, W, misapplied; >< *Setaria lutescens* (Weigel) Hubb. – HC, misapplied; >< *S. pumila* ssp. *pallidifusca* – K, treatment apparently garbled; = *Chaetochloa lutescens* (Weigel) Stuntz – S]

* ***Setaria verticillata*** (Linnaeus) Palisot de Beauvois, Hooked Bristlegrass. Mt (VA): disturbed areas; uncommon, introduced from Europe. [= FNA, G, K; = *S. verticillata* var. *verticillata* – C, F, HC; = *Chaetochloa verticillata* (Linnaeus) Lamson-Scribner – S; < *S. verticillata* – Z]

* ***Setaria viridis*** (Linnaeus) Palisot de Beauvois *var.* ***viridis***. Cp, Pd, Mt (GA, NC, SC, VA): fields, disturbed areas; common, introduced from Eurasia. [= C, FNA, K, Z; < *S. viridis* – RAB, HC, W; > *S. viridis* var. *viridis* – F, G; > *S. viridis* var. *weinmannii* (Roemer & J.A. Schultes) Bolbás – F; > *S. viridis* var. *breviseta* (Doell) A.S. Hitchcock – G; = *Chaetochloa viridis* (Linnaeus) Lamson-Scribner – S]

Setaria adhaerans (Forsskål) Chiovenda. Distributed widely throughout the tropics and subtropics, in North America from s. AL west to CA (perhaps only adventive in portions of that distribution). [= FNA, K, Z] {synonymy incomplete}

Setaria geminata (Forsskål) Veldkamp var. *geminata*. AL, FL. [= Y; < *Paspalidium geminatum* – FNA, GW, X; = *Panicum geminatum* Forsskål – HC, S; = *Paspalidium geminatum* (Forsskål) Stapf var. *geminatum* – K]

* *Setaria verticilliformis* Dunart. is reported for NJ, PA, MD, and AL (FNA 2003a, Kartesz 1999). [= FNA, K; = *S. verticillata* (Linnaeus) Palisot de Beauvois var. *ambigua* (Guss.) Parlatore – C, F, HC; = *S. viridis* (Linnaeus) Palisot de Beauvois var. *ambigua* (Guss.) Coss. & Durieu – G; = *Chaetochloa ambigua* Guss. – S; < *S. verticillata* – Z]

* *Setaria viridis* (Linnaeus) Palisot de Beauvois var. *major* (Gaudin) Pospichal, Giant Green Foxtail, is reported as introduced in TN, MD, and PA (Kartesz 1999). [= C, FNA, G, K, Z; < *S. viridis* – RAB, HC]

Sorghastrum Nash (Indiangrass)

A genus of about 18-20 species, of tropical and subtropical America and Africa, rarely extending into temperate areas. References: Hall (1982)=Z; Dávila Aranda & Hatch in FNA (2003a). Key adapted from Z.

1 Awns 10-22 (-30) mm long, once-geniculate; plants rhizomatous; surfaces of the glumes tan to slightly brown basally; ligule 3-10 mm long, prominently auricled..... ***S. nutans***
1 Awns 16-46 mm long, twice-geniculate; plants cespitose; surfaces of the glumes brown; ligule 1-5 mm long, truncate.
  2 Axis of the panicle straight, erect, the branchlets appressed to ascending, the spikelets drooping-secund; spikelets 0.8-1.2 mm wide ..... ***S. secundum***
  2 Axis of the panicle arching, usually strongly so, the branchlets ascending to spreading, the spikelets not drooping-secund; spikelets 1.1-1.8 mm wide.
    3 Axis of the panicle straight, with the branches distributed no more than 180 degrees around the axis (as viewed from above)..... ***[S. apalachicolense]***
    3 Axis of the panicle arching, with the branchlets distributed through 360 degrees around the axis (as viewed from above)..... ***S. elliottii***

Sorghastrum elliottii (C. Mohr) Nash, Slender Indiangrass. Cp, Pd (GA, NC, SC, VA), Mt (GA, NC, SC): woodlands and forests, river-scour areas, including oak-hickory forests and woodlands over mafic rocks; uncommon. September-October. MD south to FL and west to TX, inland to TN, AR, and OK, mainly on the Coastal Plain, but extending inland to other physiographic provinces. [= RAB, C, F, G, HC, K, S, W, Z; < *S. elliottii* – FNA (also see *S. apalachicolense*)]

Sorghastrum nutans (Linnaeus) Nash, Yellow Indiangrass. Mt, Pd, Cp (GA, NC, SC, VA): xeric and mesic woodlands and forests of a wide variety, powerline rights-of-way, roadbanks; common. September-October. ME and Québec west to s. Manitoba, south to FL, TX, UT, AZ, and Mexico. Along with *Andropogon gerardii*, *Schizachyrium scoparium*, and *Panicum virgatum*, *Sorghastrum nutans* is one of the dominant grasses of the tall-grass prairie. It is also common in a variety of open habitats (natural and altered) in the forested landscape of eastern North America. [= RAB, C, F, FNA, G, HC, K, S, W, Z; = *S. avenaceum* (Michaux) Nash]

Sorghastrum secundum (Elliott) Nash, Lopsided Indiangrass. Cp (GA, SC): sandhills; uncommon. September-October. S. SC south to FL and west to s. AL (Sorrie & Leonard 1999). [= RAB, FNA, HC, K, S, Z]

Sorghastrum apalachicolense D.W. Hall, Apalachicola Indiangrass, Open Indiangrass. Flatwoods and sandhills. Panhandle FL west to s. MS (Sorrie & Leonard 1999). It may well occur as well in GA. July-August. [= K, Z; < *S. elliottii* – FNA]

Sorghum Moench (Sorghum, Milo, Johnson Grass)

A genus of about 25 species, of tropical and subtropical Old World (1 species in Mexico). References: Barkworth in FNA (2003a); de Wet (1978)=Z.

1 Rhizomatous perennial; leaves 1-2 cm wide ..... ***S. halepense***
1 Fibrous-rooted annual; leaves (2-) 3-5 cm wide.
  2 Inflorescence dense, compact; plants 0.5-1.3 m tall ..... ***S. bicolor*** *var.* ***bicolor***
  2 Inflorescence open, with spreading branches; plants 1.0-3.0 m tall ..... ***S. bicolor*** *var.* ***drummondii***

* ***Sorghum bicolor*** (Linnaeus) Moench *var.* ***bicolor***, Sorghum, Milo, Broomcorn, Sorgo. Cp, Pd (GA, NC, SC, VA): cultivated, rarely persistent; common in cultivation, rare as an escape. October. [= C; < *Sorghum vulgare* Persoon – RAB; < *Sorgum vulgare* – F, orthographic variant; = *S. vulgare* var. *vulgare* – HC; = *S. bicolor* ssp. *bicolor* – FNA, K; < *Holcus sorghum* Linnaeus – S]

* ***Sorghum bicolor*** (Linnaeus) Moench *var.* ***drummondii*** (Nees ex Steudel) Mohlenbrock, Shattercane. Cp, Pd (GA, NC, SC, VA): cultivated, rarely persistent; common in cultivation, rare as an escape. October. This is the taller variety with open inflorescences, usually sporadically present in sorghum fields. [= C; < *Sorghum vulgare* Persoon – RAB; < *Sorgum vulgare* – F, orthographic variant; = *Sorghum bicolor ssp.* ×*drummondii* (Nees ex Steudel) de Wet – FNA; = *Sorghum vulgare* Persoon var. *drummondii* (Nees ex Steudel) Hackel ex Chiov. – HC; = *Sorghum bicolor* ssp. *drummondii* (Nees ex Steudel) de Wet & Harlan – K; < *Holcus sorghum* Linnaeus – S]

* ***Sorghum halepense*** (Linnaeus) Persoon, Johnson Grass. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, fields, waste places; common, introduced from Eurasia. A serious weed, difficult to eradicate. [= RAB, C, FNA, GW, HC, K, W; = *Sorgum halepense* – F, G, orthographic variant; = *Holcus halepensis* Linnaeus – S]

Spartina Schreber (Cordgrass)

A genus of ca. 15 species, of temperate America, Europe, and Africa. References: Barkworth in FNA (2003a).

1 Leaf blades mostly 5-40 mm wide, flat toward the base, generally somewhat involute toward the tip, or involute after drying; plants 0.3-4.0 m tall.
  2 Glumes with smooth keels; spikelets spaced 3-8 mm apart on each face of the rachis (the rachis triangular in cross-section, with spikelets attached on two faces); [of salt to brackish coastal marshes] ..... ***S. alterniflora***
  2 Glumes with scabrous keels; spikelets spaced 1-3 mm apart on each face of the rachis; [of fresh to brackish coastal marshes, or inland].
    3 Second glume acute, not awned; first glume averaging ca. 1/2 as long as the lemma; spikes (6-) 20-50 (-more) per inflorescence; [of fresh to brackish coastal marshes] ..... ***S. cynosuroides***
    3 Second glume with an awn 3-10 mm long; first glume averaging ca. 7/8 as long as the lemma; spikes (5-) 7-27 per inflorescence; [of fresh marshes, either inland or coastal] ..... ***S. pectinata***
1 Leaf blades mostly 1-4 (-6) mm wide, involute; plants 0.3-1.0 m tall (to 2.0 m tall in the distinctly clumped *S. bakeri*).
  4 Plants forming large clumps with numerous culms and leaves; spikelets 6-9 mm long; spikes usually 9-14 per inflorescence; [of se. SC southward] ..... ***S. bakeri***
  4 Plants with creeping rhizomes, culms arising singly or few together from a point; spikelets 7-13 mm long; spikes usually 1-9 per inflorescence; [widely distributed in coastal parts of our area].
    5 Spikelets 7-10 mm long; second glume acute to obtuse (rarely acuminate); spikes (2-) 4-9 per inflorescence; second highest leaf blade on the stem (1-) avg. 2 (-5) dm long; plants to 15 dm tall; culms to 6 mm in diameter at base ..... ***S. patens*** *var.* ***monogyna***

5 Spikelets 9-13 mm long; second glume acuminate; spikes 1-4 per inflorescence; second highest leaf blade on the stem (0.5-) avg. 1 (-2) dm long; plants to 8 dm tall; culms to 3 mm in diameter at base .....***S. patens* var. *patens***

Spartina alterniflora Loiseleur, Saltmarsh Cordgrass, Smooth Cordgrass. Cp (GA, NC, SC, VA): salt marshes; common. August-October. Newfoundland south to FL, west to TX; e. South America; introduced in n. Europe. *S. alterniflora* is the dominant plant (often essentially a monoculture) of intratidal salt marshes in our area. [= RAB, C, FNA, GW, K; > *S. alterniflora* var. *alterniflora* – F, G, HC, S; > *S. alterniflora* var. *glabra* (Muhlenberg ex Bigelow) Fernald – F, G, HC, S; > *S. alterniflora* var. *pilosa* (Merrill) Fernald – F, G, HC]

Spartina bakeri Merrill, Sand Cordgrass. Cp (GA, SC): brackish marshes, marsh edges, wet coastal hammocks, under *Sabal palmetto*, *Quercus virginiana*, and *Juniperus virginiana* var. *silicicola*; rare. June. Se. SC south to s. FL, west to panhandle FL. Distinctive among our species in its densely clumped growth form. [= FNA, GW, HC, K, S]

Spartina cynosuroides (Linnaeus) Roth, Giant Cordgrass. Cp (GA, NC, SC, VA): brackish and freshwater tidal marshes, especially along margins of tidal creeks; common. June-September. MA south to FL, west to e. TX. [= RAB, C, FNA, G, GW, HC, K, S; > *S. cynosuroides* var. *cynosuroides* – F]

Spartina patens (Aiton) Muhlenberg *var.* ***monogyna*** (M.A. Curtis) Fernald, Large Saltmeadow Cordgrass. Cp (GA, NC, SC, VA): sandy shores, overwash flats; common. June-September. MA south to FL, west to TX. Whether var. *monogyna* is worthy of recognition is a matter of debate; there appear to morphological differences correlated with geography and, according to some authors, habitat, but positive identification to variety is sometimes difficult. [= F, G, HC; < *S. patens* – RAB, C, FNA, GW, K, S]

Spartina patens (Aiton) Muhlenberg *var.* ***patens***, Small Saltmeadow Cordgrass, Salt Hay, Marsh-hay Cordgrass. Cp (NC, VA): dunes, sand flats, upper edges of marshes, maritime wet grasslands; common. June-September. Newfoundland south to NC, and perhaps further. [= F, G, HC; < *S. patens* – RAB, C, FNA, GW, K, S]

Spartina pectinata Link, Prairie Cordgrass, Slough Grass. Mt, Cp (NC, VA): spray cliffs below waterfalls, rocky or sandy flood-scoured riverside grasslands, tidal freshwater (oligohaline) marshes, calcareous oak flatwoods and prairies; rare (GA Rare, NC Rare, VA Rare). July-September. Newfoundland west to WA, south to ne. NC, sw. NC, AR, TX, and NM. [= RAB, C, F, FNA, G, GW, HC, K, W; > *S. pectinata* var. *pectinata* – F; > *S. pectinata* var. *suttiei* (Farwell) Fernald – F; = *S. michauxiana* A.S. Hitchcock – S]

Spartina spartinae (Trinius) Merr. ex A.S. Hitchcock, Gulf Cordgrass. Brackish marshes and inland saline situations. AL and FL west to TX. [= FNA, GW, HC, K, S] {not keyed at this time}

Sphenopholis Scribner (Wedgegrass)

A genus of 5 species, North American. References: Tucker (1996)=Z. Key based in part on C.

1 Spikelets 5-9.5 mm long; second lemma with an awn 3.5-7 mm long.....***S. pensylvanica***
1 Spikelets 1.5-5 mm long; second lemma awnless, or with an awn up to 3.5 mm long.
2 Lower leaf blades mostly (10-) 15-45 cm long, involute, < 2 mm wide .....***S. filiformis***
2 Lower leaf blades mostly less han 10 cm long, flat, 2-8 mm wide.
3 First glume 1/3 to 2/3 as wide as the second glume; second glume strongly scabrous.....***S. nitida***
3 First glume less tha 1/3 as wide as the second glume; second glume smooth to slightly scabrous.
4 First lemma with an awn up to 3.5 mm long ..... ***S. ×pallens***
4 First lemma unawned.
5 Panicle open; second glume 3-6× as long as wide, acute at the tip; lowermost rachilla internode 0.8-1.0 mm long .....***S. intermedia***
5 Panicle densely cylindrical; second glume 2-3× as long as wide, rounded or truncate at the tip; lowermost rachilla internode 0.5-0.7 mm long..... ***S. obtusata***

Sphenopholis filiformis (Chapman) Scribner. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): pine savannas, sandy woodlands; uncommon (VA Rare). April-May. Se. VA south to c. FL, west to e. TX. [= RAB, C, F, K, S, Z]

Sphenopholis intermedia (Rydberg) Rydberg, Slender Wedgegrass. Mt, Pd, Cp (GA, NC, SC, VA): moist nutrient-rich forests; rare. May-June. Newfoundland west to c. AK, south to panhandle FL, c. TX, and AZ. [= RAB, F, K, S; = *S. obtusata* (Michaux) Scribner var. *major* (Torrey) K.S. Erdman – C, Z; < *S. intermedia* – G (also see *S. ×pallens*); < *S. obtusata* – GW, W]

Sphenopholis nitida (Biehler) Scribner. Cp, Pd, Mt (GA, NC, SC, VA): moist forests, bottomlands; common. April-May. MA west to IL, south to FL and TX. [= RAB, C, F, K, W, S, Z; > *S. nitida* var. *glabra* (Nash) Scribner – G; > *S. nitida* var. *nitida* – G]

Sphenopholis obtusata (Michaux) Scribner, Prairie Wedgegrass. Cp, Pd, Mt (GA, NC, SC, VA): forests, roadsides, disturbed areas; common (uncommon in Mountains). April-May. ME west to MN and British Columbia, south to s. FL, TX, c. Mexico, and s. CA. [= RAB, G, K, S; = *S. obtusata* var. *obtusata* – C, Z; > *S. obtusata* var. *obtusata* – F; > *S. obtusata* var. *pubescens* (Lamson-Scribner & Merrill) Lamson-Scribner – F; < *S. obtusata* – GW, W (also see *S. intermedia*)]

Sphenopholis ×pallens (Biehler) Scribner (pro sp.) [*S. obtusata* × *pensylvanica*]. Cp (NC, SC, VA): ditches, wet forests; rare. Not always with its parents. May. [= C, K; = *S. pallens* – RAB, F, S; < *S. intermedia* (Rydberg) Rydberg – G]

Sphenopholis pensylvanica (Linnaeus) A.S. Hitchcock, Swamp-oats. Mt, Pd (GA, NC, SC, VA), Cp (NC, SC, VA): bogs, ditches, wet forests; uncommon. April-June. MA west to OH and se. MO, south to n. FL and LA. [= C, K, Z; = *Trisetum pensylvanicum* (Linnaeus) Palisot de Beauvois ex Roemer & J.A. Schultes – RAB, F, G, S; = *S. pennsylvanica* – GW, orthographic variant]

Sporobolus R. Brown 1810 (Dropseed)

A genus of about 160 species, perennials and annuals, of tropical, subtropical, and warm-temperate parts of the New World and Old World. References: Riggins (1977)=Z; Weakley & Peterson (1998)=Y; Peterson, Hatch, & Weakley in FNA (2003a).

1 Inflorescence an open panicle, > 2 cm broad, the branches ascending to spreading.
- 2 Branches of the panicle verticillate, whorled; spikelets 2.5-4 mm long ..... ***S. junceus***
- 2 Branches of the panicle alternate (some occasionally rather randomly subopposite or opposite, but never regularly whorled); spikelets either 4-6.5 mm long, or 1.5-2.5 (2.7) mm long.
  - 3 Spikelets 1.5-2.5 (-2.7) mm long.
    - 4 Panicle branches bare of spikelets in the lower 1/4 to 1/8 of their length..... ***S. cryptandrus***
    - 4 Panicle branches bearing spikelets to the base ..... ***S. domingensis***
  - 3 Spikelets 4-6.5 mm long.
    - 5 First glume scaberulous, acuminate or awn-like; spikelets dark gray; base of plant relatively fibrous; grain spherical; [of rocky barrens of the Mountains of NC and VA] ..... ***S. heterolepis***
    - 5 First glume glabrous, acute to acuminate; spikelets purplish (fading tan); base of plant smooth and hard, made up of the indurated leaf bases; grain oblong (when present, usually abortive); [of pine savannas and seeps of the Coastal Plain of NC, SC, and southward].
      - 6 Leaves terete or subterete (wiry), oval in cross-section, sometimes irregularly channelled for portions of their lengths (never with any portion above the sheath flat), < 1 mm wide, tending to senesce and turning tan in autumn, the margins generally smooth; culms (including the inflorescence) (2-) 4-7 (-10) dm tall; culms (from base to first inflorescence branch) 1.5-5 dm tall; first glume averaging about 0.7× as long as the second glume (though variable, ranging from 0.5-0.75×)..... ***S. teretifolius***
      - 6 Leaves flat (folded when dry), plane or V-shaped in cross-section, with free margins their entire length, 1.2-2 (-2.7) mm wide, tending to remain green into the winter (at least until December), the margins scabrous (except in *S. curtissii*); culms (including the inflorescence) 3-22 dm tall; culms (from base to first inflorescence branch) (4-) 6-10 dm tall; first glume averaging 0.75-1× as long as the second glume (though variable, collectively ranging from about 0.6-1.2×).
        - 7 First glume averaging 0.95-1.1× as long as the second glume (though variable, ranging from 0.8-1.3×); pedicels mostly 1-3 mm long (a few sometimes as long as 10 mm long), appressed; culms (including the inflorescence) 3-7 dm tall; inflorescence branches stiffly ascending; leaves 0.5-1.5 mm wide (or to 2.0 mm wide when unburned), mostly 1.5-4 dm long (rarely to 5 dm long), smooth on the margins; [of e. SC southward] ..... ***S. curtissii***
        - 7 First glume averaging 0.6-0.9× as long as the second glume (though variable, ranging from 0.6-0.95×); pedicels mostly 4-15 mm long, spreading; culms (including the inflorescence) (3-) 7-16 (-22) dm tall; inflorescence branches initially ascending, later loosely ascending to spreading; leaves 1.2-10.0 mm wide, mostly (3-) 4-8 dm long, upwardly scabrous on the margins; [of e. NC southward].
          - 8 Leaves (2.0-) 3-10 mm wide, pale bluish-green (often with some yellowish leaves as well); first glume averaging 0.75-0.9× as long as the second glume (though variable, ranging from 0.6-0.95×); culms (including the inflorescence) usually 12-22 dm tall; inflorescence usually 3.5-5 dm long; [of se. SC southward] ..... ***S. floridanus***
          - 8 Leaves 1.2-2.0 (-3.0) mm wide, dark green; first glume averaging 0.6-0.8× as long as the second glume (though variable, ranging from 0.6-0.8×); culms (including the inflorescence) usually 6-12 (-18) dm tall; inflorescence usually 2-3.5 dm long; [of e. NC south to e. GA] .... ***S. pinetorum***

1 Inflorescence a contracted, spike-like panicle, < 2 cm broad, the branches appressed.
- 9 Plant a geniculate annual; most inflorescences enclosed by sheaths (or most or all exserted); inflorescence 2-5 cm long.
  - 10 Spikelets (1.3-) 1.6-2.8 mm long; grain falling free of the lemma and palea; lemma glabrous..... ***S. neglectus***
  - 10 Spikelets 2.3-5 mm long; grain falling enclosed in the lemma and palea; lemma strigose (use 10× or more) or glabrous.
    - 11 Lemma and palea shorter than the glumes; palea usually shorter than the lemma; lemma glabrous or strigose with hairs < 0.2 mm long; spikelets 2.3 -3.3 (-3.8) mm long; floret (lemma, palea and enclosed grain) 1.6-3.3 (-3.8)× as long as wide ..... ***S. ozarkanus***
    - 11 Lemma and palea longer than the glumes; palea usually longer than the lemma; lemma strigose with hairs > 0.2 mm long; spikelets 2.8-5 mm long; floret (lemma, palea and enclosed grain) 2.2-5.7 (-7.5)× as long as wide..... ***S. vaginiflorus***
- 9 Plant a rhizomatous or tufted perennial; most inflorescences exserted to partly enclosed; inflorescence 5-15 cm long.

12 Plant creeping extensively by slender rhizomes; leaf blades cauline, distichous, to 12 cm long..... ***S. virginicus***
12 Plant loosely tufted, from short rhizomes; leaf blades basal or cauline, not distichous, 10-100 cm long.
13 Spikelets 1.5-2.2 mm long; first glume 0.5-0.8 mm long; leaves primarily basal ..... ***S. indicus***
13 Spikelets 4-8 mm long; first glume 2-5 mm long; leaves cauline and basal.
14 Lemma pubescent, usually conspicuously shorter than the palea; pericarp loose when moist ..... ***S. clandestinus***
14 Lemma glabrous, about as long as the palea; pericarp gelatinous when moist.
15 Culms (1.4-) 2.0-5.0 mm thick; terminal sheath (1.3-) 1.5-6.0 mm wide; panicles with 12-35 primary branches, crowded, dense..... ***S. compositus* var. *compositus***
15 Culms 1.0-2.0 (-2.5) mm thick; terminal sheath 0.8-2.0 (-2.5) mm wide; panicles with 8-18 primary branches, lax, loosely flowered ..... ***[S. compositus* var. *drummondii]***

Sporobolus clandestinus (Biehler) A.S. Hitchcock, Rough Dropseed. Pd, Cp (GA, NC, SC, VA), Mt (VA): glades, barrens, and thin soil of woodlands, also in dry sands; uncommon. September-October. This species is widespread in e. United States. Wipff & Jones (1995) recommend reducing this taxon to a variety under *S. compositus*, because of its morphologic similarity. While *S. clandestinus* and *S. compositus* are undoubtedly closely related, I prefer to retain the two as species. [= RAB, C, FNA, F, G, HC, K, S, W, Z; = *S. compositus* (Poiret) Merrill var. *clandestinus* (Biehler) J. Wipff & S.D. Jones]

Sporobolus compositus (Poiret) Merrill *var. **compositus***, Tall Dropseed. Pd (NC?, VA), Mt, Cp (VA): diabase glades and barrens, limestone glades and barrens, disturbed areas over diabase or calcareous rocks; rare (NC Watch List, VA Rare). September-November. This species and variety are reported for NC in a recent revision of the *S. asper* group (Riggins 1977); little is known about the occurrence of this species in NC. The general range is centered in the Plains, but extending east into ne. United States. The name *S. compositus* has nomenclatural priority over the more familiar *S. asper* (Kartesz & Gandhi 1995). [= FNA, K; = *S. asper* (Michaux) Kunth var. *asper* – C, G, HC, Z; = *S. asper* – F, S]

* ***Sporobolus cryptandrus*** (Torrey) A. Gray, Sand Dropseed. Cp? (NC?): disturbed areas; rare, probably adventive from c. and w. North America. This species is reported for NC by HC, F, and S. [= C, FNA, G, K, HC, S, X; > *S. cryptandrus* var. *cryptandrus* – F]

Sporobolus curtissii (Vasey ex Beal) Small ex Scribner, Curtiss's Dropseed. Cp (GA, SC): moist, gummy-clay flatwoods; uncommon (rare north of GA). September-November. E. SC south to c. FL. First positively documented for our area in 1993. Earlier attributions of *S. curtissii* to NC and SC were apparently based on misapplication or confusion with *S. teretifolius* and/or *Sporobolus pinetorum*. *S. curtissii* differs from other "bunchgrass" *Sporobolus* of our area in having the spikelets short-pedicelled and appressed against the panicle branches (as opposed to long-pedicelled and spreading in *S. teretifolius* and *Sporobolus pinetorum*). [= FNA, HC, K, S, Y]

*? ***Sporobolus domingensis*** (Trinius) Kunth, Coral Dropseed. Cp (GA): coastal sands?; rare, uncertain whether native or introduced. Se. GA south to s. FL; West Indies, Mexico. The e. GA record (Glynn County) is at Univ. of Georgia (Sorrie, pers. comm.). [= FNA, HC, K, S]

Sporobolus floridanus Chapman, Florida Dropseed. Cp (GA, SC): wet savannas; uncommon (rare north of GA). June-September. Se. SC south to ne. FL, west to Panhandle FL. First positively documented for our area in 1995. Earlier attributions of *S. floridanus* to NC and SC were apparently based on misapplication or confusion with *Sporobolus pinetorum*. [= FNA, K, Y; < *S. floridanus* – GW, HC, S (also see *S. pinetorum*); the inclusion of *S. floridanus* in RAB was based on a misidentification of *S. pinetorum*]

Sporobolus heterolepis (A. Gray) A. Gray, Prairie Dropseed. Mt (GA, NC, VA): barrens and glades over mafic, ultramafic, and calcareous rocks (olivine, serpentine, limestone); rare (NC Endangered, VA Rare). August-September. The primary distribution of *S. heterolepis* is in the Plains, with outliers east to nw. GA (Jones & Coile 1988), c. TN (Estes & Beck 2005), w. NC, w. VA, se. PA, ne. United States, and adjacent Canada in calcareous, mafic, or ultramafic glades, barrens, and prairies. [= RAB, C, F, FNA, G, HC, K, W, Y]

* ***Sporobolus indicus*** (Linnaeus) R. Brown, Smut Grass, Blackseed. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, lawns, disturbed situations; common, introduced from the tropics of Asia. July-October. [= C, FNA, GW, W; > *S. poiretii* (Roemer & J.A. Schultes) A.S. Hitchcock – RAB, F, G, HC; > *S. indicus* – HC; = *S. berteroanus* (Trinius) A.S. Hitchcock & Chase – S; = *S. indicus* var. *indicus* – K]

Sporobolus junceus (Palisot de Beauvois) Kunth, Sandhills Dropseed. Cp (GA, NC, SC), Pd (GA, NC, SC, VA): sandhills, other dry, open areas; common, uncommon in Piedmont (VA Rare). September-October. Se. VA south to FL and west to se. TX. [= RAB, C, F, FNA, G, HC, K, Y; = *S. gracilis* (Trinius) Merrill – S]

Sporobolus neglectus Nash, Barrens Dropseed. Mt (VA): dry rocky barrens and outcrops, over calcareous rocks (such as limestone or dolomite); rare (VA Rare). August-September. ME west to ND, south to NJ, w. VA, TN, LA, and TX; apparently disjunct in WA and AZ. *S. ozarkanus, S. neglectus,* and *S. vaginiflorus* form a still very poorly understood complex. [= C, F, FNA, G, HC, K, S, W]

Sporobolus ozarkanus Fernald, Ozark Dropseed. Pd (NC): diabase glades; rare (NC Rare). September-October. KY west to KS, south to e. TN, AR, and TX; disjunct in c. NC. In Granville County, NC, it is associated (on glades of diabase, a mafic rock) with other taxa with affinities to midwestern glades and prairies: *Oligoneuron rigidum, Oligoneuron album, Baptisia australis var. aberrans, Symphyotrichum depauperatum, Silphium terebinthinaceum, Parthenium auriculatum, Ruellia humilis*, and others. *S. ozarkanus, S. neglectus,* and *S. vaginiflorus* form a still very poorly understood complex. [= C, F, G, HC, K; = *S. vaginiflorus* (Torrey ex A. Gray) Wood var. *ozarkanus* (Fernald) Shinners – FNA, K]

Sporobolus pinetorum Weakley & P.M. Peterson, Carolina Dropseed, Savanna Dropseed. Cp (GA, NC, SC): wet savannas, savanna-pocosin ecotones, sandhill-pocosin ecotones, and extending upslope into mesic flatwoods or loamy or clayey

shelves in the fall-line sandhills; rare (GA Rare, NC Watch List, SC Rare). June-September (and into December in response to growing-season fire). The identity of this taxon has been obscure; it is now clear that it is a previously unrecognized species, endemic to NC, SC, and adjacent e. GA. RAB included it in their concept of *S. teretifolius*, though it does not key well (keying imperfectly to either *S. floridanus* or *S. heterolepis*); in S and HC, it will key to *S. floridanus*, but the leaves are much narrower. Additionally, *S. floridanus* is a taller and coarser plant, the culms often averaging about 1.5 meters in height and 2-3 mm in diameter basally (vs. 1 meter high and 1 mm in diameter for *Sporobolus pinetorum*). In wet savannas of Columbus County, NC, *S. species 1* occurs with true *S. teretifolius* (the two codominant over many hectares!), and the two taxa are manifestly distinct. The leaves of *S. pinetorum* are not terete; after lengthy drought in the field (or dry on an herbarium sheet), the leaves become tightly folded to involute and can appear wiry. Like many Southeastern pineland grasses, *S. pinetorum* flowers only following fire. In vegetative condition it may be distinguished from *Aristida stricta and A. beyrichiana*, with which it often grows, by the leaf pubescence (*S. pinetorum* with scaberulous margins, best felt by running a finger along the margin near the base, from apex toward base, *A. stricta* and *A. beyrichiana* not scaberulous, and with a sparse line of pilose hairs running more or less the length of the leaf in *A. stricta* and sometimes in *A. beyrichiana*) and base (much more indurated and polished in *Sporobolus* than in *Aristida*). [= FNA, K, Y; >< *S. teretifolius* – RAB, misapplied; > *S. floridanus* – RAB, misapplied; < *S. floridanus* Chapman – HC, S]

Sporobolus teretifolius Harper, Wireleaf Dropseed. Cp (GA, NC, SC): wet savannas, pitcherplant bogs; rare (US Species of Concern, GA Rare, NC Threatened). July-September (and later in response to growing-season fire). Very similar vegetatively to *Aristida stricta*, *S. teretifolius* can be distinguished by its tuft of hairs at the base of the otherwise glabrous blade (as opposed to line of pilose hairs the length of the blade in *A. stricta*). This very rare species is known only from se. NC, ne. SC, s. GA, and se. AL (Houston County). Many of the counties reported for this species in RAB actually are based on misidentified specimens of *Sporobolus pinetorum*. In a few very wet savannas of Columbus and Brunswick counties, NC, *S. teretifolius* is dominant or codominant over many hectares. Like many savanna grasses, *S. teretifolius* generally flowers only following fire. [= FNA, HC, K, S, Y; < *S. teretifolius* – RAB (also see *S. pinetorum*)]

Sporobolus vaginiflorus (Torrey ex A. Gray) Wood, Poverty Dropseed. Pd, Mt (GA, NC, SC, VA), Cp (VA): glades, barrens, open disturbed sites; uncommon. September-October. The species occurs nearly throughout e. United States. *S. ozarkanus, S. neglectus,* and *S. vaginiflorus* form a still very poorly understood complex. [= RAB, C, G, HC, W; = *S. vaginiflorus* var. *vaginiflorus* – F, FNA, K; = *S. vaginaeflorus* – S, orthographic variant]

Sporobolus virginicus (Linnaeus) Kunth, Seashore Dropseed, Coastal Dropseed. Cp (GA, NC, SC): salt marshes, tidal mud flats, and low dunes in the outer Coastal Plain; rare (NC Watch List). September-October. This species occurs from se. NC along the coast to TX, in the West Indies and into n. South America (its alleged occurrence in se. VA is apparently incorrect). *Sporobolus virginicus* is similar in aspect and growth form to *Distichlis spicata*, with which it occurs in tidal flats. *Sporobolus virginicus* is more delicate, and typically has long hairs on either side of the collar of the sheath; *Distichlis spicata* is generally a coarser plant, and lacks long hairs around the collar of the sheath. [= RAB, C, F, FNA, G, GW, HC, K, S]

* ***Sporobolus airoides*** (Torrey) Torrey, Alkali Sacaton. Cp (SC): waste areas near wool-combing mills; rare, intoduced from , not known to be established or persistent. [= FNA, HC, K] {not keyed}

Sporobolus compositus (Poiret) Merrill *var.* ***drummondii*** (Trinius) Kartesz & Gandhi, ranges east to the Ridge and Valley province of e. TN (Chester et al. 1993), occurring over limestone, and allegedly to KY and GA (Kartesz 1999). It could very likely occur in sw. VA, as it is in Hawkins County, TN, immediately adjacent to VA (Chester et al. 1993). [= FNA, K; = *S. asper* (Michaux) Kunth var. *drummondii* (Trinius) Vasey – C, Z; = *S. drummondii* (Trinius) Vasey – F, S; = *S. asper* var. *hookeri* (Trinius) Vasey – G, HC, misapplied]

* ***Sporobolus fimbriatus*** (Trinius) Nees. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, intoduced from Africa. [= FNA, HC, K] {not keyed}

* ***Sporobolus flexuosus*** (Thurb. ex Vasey) Rydberg. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, intoduced from sw. United States and n. Mexico. [= FNA, HC, K] {not keyed}

* ***Sporobolus tenuissimus*** (Martius ex Schrank) Kuntze. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, introduced from the tropical Old World and New World. [= FNA, K] {not keyed}

* ***Sporobolus wrightii*** Munro ex Scribner, Giant Sacaton. Cp (SC): waste areas near wool-combing mills; rare, perhaps only a waif, intoduced from sw. United States. [= FNA, HC, K] {not keyed}

Steinchisma Rafinesque 1830 (Gaping Panic Grass)

A genus of about 6 species, perennial herbs, of s. North America, Central America, and South America. See discussion following *Panicum* regarding generic concepts. References: Zuloaga et al. (1998)=Z; Freckmann & Lelong in FNA (2003a).

Steinchisma hians (Elliott) Nash, Gaping Panic Grass. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA): stream, pond, and lake shores, low woods, cypress-gum ponds, floodplains, marshes, ditches, seepage slopes; common in Piedmont, occasional in Coastal Plain. May-October. Se. VA south to FL, west to TX and OK, and south through Mexico and Central America to Colombia; also in s. South America. The large, thickened, pale sterile palea of this species is unique among panicoids of our region; it is one of several characters that has led to the segregation of *Steinchisma* as a genus, or as a subgenus of *Panicum*. The enlargement of the sterile palea causes the spikelet to spread open, or "gape." [= FNA, K, Z; = *Panicum hians* Elliott – RAB, C, F, G, GW, HC, S, W]

Stenotaphrum Trinius (St. Augustine Grass)

A genus of about 7 species, tropical and subtropical. References: Allred in FNA (2003a); Sauer (1972)=Z.

Stenotaphrum secundatum (Walter) Kuntze, St. Augustine Grass, Carpet Grass. Cp (GA, NC, SC): brackish marshes, roadsides, lawns; common. July-October. A pioneer species of beaches and shores, *S. secundatum* was known from the Carolinas prior to 1800. It has been interpreted as native or introduced in our area; its original range is probably now impossible to determine. Sauer (1972) maps it as widespread along the coasts of s. North America, Central America, South America, the West Indies, Africa, Australia, and sw. Pacific Islands. In our area it is certainly now more frequently encountered as a lawn or roadside grass than in anything that could be construed as a natural habitat. The other 6 species in the genus are Asian, or on islands of the sw. Pacific or Indian Oceans. [= RAB, FNA, HC, K, S, Z]

Stipa
(see *Nassella* and *Piptochaetium*)

Thinopyrum (Prat) Á. Löve

References: Tucker (1996)=Z; Barkworth (1997)=Y.

* ***Thinopyrum intermedium*** (Host) Barkworth & D.R. Dewey. Pd (GA): waif in railroad yards; rare, introduced from {}. Tucker (1996) states that the record is as a waif in railroad yards. [= K, Z; = *Elytrigia intermedia* (Host) Nevski; = *Agropyron intermedium* (Host) Palisot de Beauvois] {not keyed at this time; add to synonymy}
* ***Thinopyrum ponticum*** (Podp.) Z.W. Liu & R. R.-C. Wang, Tall Wheatgrass. Cp (SC): waste areas near wool-combing mills; rare, intoduced from {}, not known to be established or persistent. [= K; *? Agropyron elongatum* (Host) Palisot de Beauvois] {not keyed at this time; add to synonymy}

Torreyochloa Church (Pale Mannagrass)

A genus of 4 species, with a classic Tertiary moist temperate disjunct pattern; *Torreyochloa* is distributed in e. North America (our taxa), one species in the Pacific Northwest, and two in e. Asia (Tucker 1996). References: Davis (1991)=Y; Tucker (1996)=Z.

1 Leaf blades 1-3 mm wide; anthers 0.2-0.5 mm long ..... ***[T. pallida** var. **fernaldii]***
1 Leaf blades 4-8 mm wide; anthers ca. 1 mm long..... ***T. pallida** var. **pallida***

Torreyochloa pallida (Torrey) Church *var. **pallida***, Pale Mannagrass. Mt (GA, NC, VA), Cp (NC, VA), Pd (SC): bogs, mucky wetlands such as old beaver-ponds, pools in cypress swamps, drawdown shores of natural ponds; rare (GA Special Concern, NC Rare). June-July. The species as a whole is widespread in e. North America. Var. *pallida* ranges from Nova Scotia west to MN, south to e. VA, se. NC (Columbus County), nw. NC (Avery County), and nw. GA (Jones & Coile 1988). Var. *pauciflora* (J. Presl) J.J. Davis is distributed in w. North America. Intermediates occur between the varieties. [= K, Y, Z; < *Glyceria pallida* (Torrey) Trinius – RAB, GW, HC, W; < *Puccinellia pallida* (Torrey) Clausen – C; = *G. pallida* – F; = *G. pallida* var. *pallida* – G; = *Panicularia pallida* (Torrey) Kuntze – S]

Torreyochloa pallida (Torrey) Church var. *fernaldii* (A.S. Hitchcock) Dore ex Koyama & Koyama ranges from Newfoundland west to MN, south to WV and TN. [= K, Y, Z; < *Glyceria pallida* (Torrey) Trinius – RAB, GW, HC, W; < *Puccinellia pallida* (Torrey) Clausen – C; = *G. fernaldii* (A.S. Hitchcock) St. John – F; = *G. pallida* var. *fernaldii* A.S. Hitchcock – G]

Tragus Haller

* ***Tragus racemosus*** (Linnaeus) Allioni, Texas Bur. Cp (NC): on ballast near old seaports; rare, introduced from the Old World, probably no longer present. [= HC, C, F, G, K]

* *Tragus australianus* S.T. Blake. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, introduced. [= K] {not keyed}
* *Tragus berteronianus* J.A. Schultes. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, introduced. [= K] {not keyed}
* *Tragus heptaneuron* W.D. Clayton. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, introduced. [= K] {not keyed}

Tridens Roemer & J.A. Schultes (Triodia, Redtop, Tridens, Fluffgrass)

A genus of about 14 species, native to the Western Hemisphere. References: Valdés-Reyna in FNA (2003a).

1 Panicle dense and spike-like, > 4× as long as wide, the branches ascending to appressed.
  2 Plants from elongate rhizomes; lemma 4-5 mm long; spikelet 7-9 mm long ..... ***T. carolinianus***
  2 Plants cespitose; lemma 2.5-3 mm long; spikelet 4-6 mm long ..... ***T. strictus***
1 Panicle open and spreading, < 4× as long as wide, the branches well-developed and spreading-ascending to reflexed.
  3 Spikelets 4-5 mm long, 2.5-3.5 mm wide ..... ***T. ambiguus***
  3 Spikelets 6-8 mm long, 1.5-2.2 mm wide.
    4 Primary pulvini densely pubescent, the hairs encircling the base of the panicle branch; secondary pulvini pubescent; spikelets mostly on pedicels 3-20 mm long; main branches of the inflorescence stiffly spreading..... ..... ***T. chapmanii***
    4 Primary pulvini glabrous to sparsely pubescent, tufted only in the axil (the upper surface of the panicle branch); secondary pulvini glabrous; spikelets on pedicels mostly < 3 mm long; main branches of the inflorescence spreading, ascending or drooping..... ***T. flavus***

Tridens ambiguus (Elliott) J.A. Schultes, Pineland Triodia, Flatwoods Fluffgrass. Cp (GA, NC, SC): wet savannas, clay-based Carolina bays; uncommon (rare north of GA) (NC Rare). August-October. S. NC south to FL, west to e. TX. [= RAB, FNA, GW, HC, K; = *Triodia elliottii* Bush – S]

Tridens carolinianus (Steudel) Henrard, Carolina Triodia, Carolina Fluffgrass. Cp (GA, NC, SC): mesic swales in sandhills; rare (GA Rare, NC Rare). August-October. S. NC south to FL, west to LA. [= RAB, FNA, HC, K; = *Triodia drummondii* Scribner & Kearney – S]

Tridens chapmanii (Small) Chase, Chapman's Triodia. Cp (GA, NC, SC, VA): loamy sands of disturbed longleaf pine woodlands, roadsides; rare (NC Watch List). August-October. NJ south to FL, west to TX and OK. [= HC; = *Tridens flavus* (Linnaeus) A.S. Hitchcock var. *chapmanii* (Small) Shinners – RAB, C, FNA, K; = *Triodia chapmanii* (Small) Bush – F, G; < *Triodia flava* (Linnaeus) Smyth – S]

Tridens flavus (Linnaeus) A.S. Hitchcock, Redtop, Tall Redtop, Purpletop Tridens, Greasy Grass. Cp, Pd, Mt (GA, NC, SC, VA): roadsides, disturbed areas, glades; common. July-October. NH west to NE, south to FL and TX. [= HC; = *Tridens flavus* var. *flavus* – RAB, C, FNA, K; = *Triodia flava* (Linnaeus) Smyth – F, G; < *Triodia flava* (Linnaeus) Smyth – S (also see *Tridens chapmanii*); < *Tridens flavus* – W]

Tridens strictus (Nuttall) Nash, Spike Triodia, Longspike Fluffgrass, Longspike Tridens. Cp (GA, NC, SC, VA), Pd (GA, SC, VA): sandhills, moist pine savannas, roadsides; rare (NC Rare, VA Rare). August-October. S. VA south to AL, west to TX, north in the interior to IL and KS. It is possible that this grass is introduced only north and east of GA (thus in our entire area). Rhoads & Klein (1993) report an old specimen from w. PA. [= RAB, FNA, GW, HC, K; = *Triodia stricta* (Nuttall) Bentham ex Vasey – F, G, S]

Triplasis Palisot de Beauvois (Sandgrass)

A genus of 2 species, of eastern and central North America south through Mexico to Costa Rica. References: Hatch in FNA (2003a).

Identification notes: The foliage of both of our species has a sour taste.

1 Lemma awn 4.5-8 mm long; culm internodes appressed pilose or puberulent; perennial..... ***T. americana***
1 Lemma awn 0.5-1.5 mm long; culm internodes glabrous to minutely scaberulous; annual (or rarely perennial) .... ***T. purpurea*** *var.* ***purpurea***

Triplasis americana Palisot de Beauvois, Southern Sandgrass. Cp (GA, NC, SC): open sandy areas; common. August-October. A Southeastern Coastal Plain endemic: NC south to FL, west to e. LA. [= RAB, FNA, HC, K, S]

Triplasis purpurea (Walter) Chapman *var.* ***purpurea***, Purple Sandgrass. Cp (GA, NC, SC, VA): dunes, maritime dry grasslands, open sandy areas; common. September-October. NH south to FL, and west to TX, along the coast; also around the Great Lakes, and in central United States. Var. *caribensis* R.W. Pohl is in the New World tropics. [= FNA; < *T. purpurea* – RAB, C, F, G, HC, K; > *T. intermedia* Nash – S; > *T. purpurea* – S]

Tripsacum Linnaeus (Gamma Grass)

A genus of about 12 species, tropical and subtropical American. References: Barkworth in FNA (2003a); DeWet, Harlan, & Brink (1982)=Z.

Tripsacum dactyloides (Linnaeus) Linnaeus *var.* ***dactyloides***, Gamma Grass. Pd, Mt, Cp (GA, NC, SC, VA): roadsides, moist areas, disturbed areas, moist riverbanks; common. Late May-November. *T. dactyloides* is widespread in e. North America north to MA, MI, IA, and NE, ranging south into tropical Central and South America; var. *dactyloides* is North American. This important species of moist and wetland areas in the Great Plains is generally seen in disturbed habitats in our area; its original habitats in our area (if indeed it was native in the flora area) are poorly understood. [= FNA, Z; < *T. dactyloides* – RAB, C, G, HC, K, S, W; > *T. dactyloides* var. *dactyloides* – F; > *T. dactyloides* var. *occidentale* Cutler & Anderson – F]

Trisetum Persoon (Oat-grass)
(also see *Sphenopholis*)

A genus of about 85 species, north and south temperate. References: Randall & Hilu (1986)=Z; Tucker (1996)=Y.

Trisetum spicatum (Linnaeus) K. Richter, Alpine Oat-grass, Spike Trisetum. Mt (NC, VA): mountain cliffs at high elevations; rare (NC Endangered, VA Rare). June-August. A circumboreal species, widespread and common in arctic and alpine areas, south in e. North America to New England, NY, and, rarely, PA, and disjunct to Hawksbill Mountain, Page County, VA (where extant) and Roan Mountain, Mitchell County, NC (where not seen since the nineteenth century). The species is also known from the West Indies, Mexico, and s. South America. *T. spicatum*, as broadly treated here, following Randall & Hilu (1986), is polymorphic and consists of several ploidies. [= C, HC, K, S, Y, Z; > *T. spicatum* var. *molle* (Michaux) Beal – RAB, F, G; > *T. triflorum* (Bigelow) Löve & Löve ssp. *molle* (Michaux) Löve & Löve – W; > *T. spicatum* var. *maidenii* (Gandoger) Fernald – F]

Triticum Linnaeus 1753 (Wheat)

References: Tucker (1996)=Z; Zohary & Hopf (1994).

* ***Triticum aestivum*** Linnaeus, Bread Wheat. Cp, Pd, Mt (GA, NC, SC, VA): fields; frequently cultivated, rarely persistent or volunteering following cultivation, introduced from Eurasia. May-June. One of the most important crops in the world. The lemmas can either be awnless or with long awns (to 8 cm long). [= RAB, C, F, G, HC, K, Z]

Uniola Linnaeus (Sea Oats)
(also see *Chasmanthium*)

A genus of 2 species. The only other species of the genus ranges from Baja California south along the Pacific Ocean to Ecuador; other species previously treated in *Uniola* have been shown to be only distantly related and are now treated as *Chasmanthium*. References: Yates in FNA (2003a); Yates (1966a, 1966b)=Z.

Uniola paniculata Linnaeus, Sea Oats. Cp (GA, NC, SC, VA): abundant on unforested primary and secondary dunes on barrier islands, and on dry to mesic sand flats and interdune swales; common (VA Watch List). June-November. Se. VA south to FL and west to TX and Mexico; West Indies. This is the most important sand-binding grass on ocean dunes from NC south, playing a critical role in primary succession on dunes. It is against the law in NC to pick or destroy *Uniola paniculata*. [= RAB, C, F, FNA, G, HC, K, S, Z]

Urochloa Palisot de Beauvois (Para-grass, Signal-grass)

A genus of about 100 species, pantropical and subtropical. References: Crins (1991)=Z; Webster (1988)=Y; Wipff & Thompson in FNA (2003a). Key adapted in part from GW.

1 Spikelets suffused with purple, borne in pairs (or threes) in each row..... ***U. mutica***
1 Spikelets green, borne singly in each row.
  2 Upper half of second glume and first lemma with evident transverse veins connecting the longitudinal veins; spikelets 3.5-4.7 mm long.....***U. platyphylla***
  2 Upper half of second glume and first lemma without evident transverse veins, or with very obscure cross-veins; spikelets either 2-4 mm or 5-6 mm long.
    3 Spikelets 2-4 mm long ..... ***U. ramosa***
    3 Spikelets 5-6 mm long .....***U. texana***

* ***Urochloa mutica*** (Forskål) Nguyen, Para-grass. Cp (SC): margin of pond; rare, introduced from Africa. August. [= FNA, K, Z; *? Panicum purpurascens* Raddi – RAB, HC; *? B. purpurascens* (Raddi) Henrard – GW; = *Brachiaria mutica* (Forskål) Stapf]

* ***Urochloa platyphylla*** (Munro ex Wright) R. Webster, Broadleaf Signal-grass. Cp (GA, NC, SC, VA), Pd (GA, SC, NC): disturbed wet or seasonally moist areas; rare, presumably introduced from South America. E. NC south to FL, west to TX, north in the interior to AR, OK, and se. MO; also in MD (Terrell & Reveal 1996). [= FNA, K, Y, Z; = *Brachiaria platyphylla* (Munro ex Wright) Nash – RAB, GW, HC; *? B. extensa* Chase – S]

* ***Urochloa ramosa*** (Linnaeus) Nguyen, Browntop Millet, Dixie Signalgrass. Pd, Cp (GA, NC, SC, VA): disturbed areas; rare, introduced from tropical Africa and Asia. This species has apparently been widely planted for wildlife food and erosion control in southeastern states. [= FNA, K, Z; = *Panicum ramosum* Linnaeus – HC; = *Brachiaria ramosa* (Linnaeus) Stapf]

* ***Urochloa texana*** (Buckley) R. Webster, Texas Millet, Texas Signalgrass. Cp (GA, NC, SC, VA), Pd (GA, SC): disturbed areas, fields, gardens; uncommon, introduced from TX. First reported for South Carolina by Hill & Horn (1997). [= K, Y, Z; = *Panicum texanum* Buckley – RAB, C, HC, S; = *Brachiaria texana* (Buckley) S.T. Blake]

Urochloa fusca (Swartz) B.F. Hansen & Wunderlin *var.* ***reticulata*** (Torrey) B.F. Hansen & Wunderlin, east to GA (Kartesz 1999). [< *Urochloa fusca* – FNA; *? Urochloa fasciculata* (Sw.) R. Webster – K; *? Panicum fasciculatum* Swartz – HC] {not keyed at this time; synonymy incomplete}

* ***Urochloa maxima*** (Jacquin) R. Webster *var.* ***maxima***, Guinea Grass. Introduced in the Gulf states, east to GA (FNA). Native of Africa. [= FNA; < *U. maxima* – K; *? Panicum maximum* Jacquin] {not keyed at this time; synonymy incomplete}

* ***Urochloa plantaginea*** (Link) R. Webster. Cp (GA): Reported for s. GA by Jones & Coile (1988), as *Brachiaria plantaginea*. [= FNA, K, Y, Z; = *Brachiaria plantaginea* (Link) A.S. Hitchcock] {not keyed at this time; synonymy incomplete}

Urochloa reptans (Linnaeus) Stapf. Cp (GA): [= FNA] {not keyed at this time; synonymy incomplete}

Vulpia C. Gmelin (Annual Fescue)

A genus of about 23 species, north and south temperate. References: Tucker (1996)=Z. Key based in part on C.

1 First glume < half as long as the second glume ..... ***V. myuros***
1 First glume > ½ as long as the second.
  2 Lemma pubescent; lowest lemma 2.5-3.5 mm long; grains 1.5-2 mm long ..... ***V. elliottea***
  2 Lemma glabrous or scabrous; lowest lemma 2.7-7 mm long; grains 1.7-3.3 mm long.
    3 First glume 1.7-4.5 mm long; lemma awns 3-12 mm long; spikelets with 4-7 loosely imbricate florets; rachilla internodes mostly 0.9-1.1 mm long ..... ***V. bromoides***
    3 First glume 3.5-5 mm long; lemma awns 0.3-6 (-9) mm long; spikelets with 5-11 (-more) closely imbricate florets; rachilla internodes mostly 0.5-0.7 mm long.
      4 Spikelets 4-5.5 mm long; awn of the lowest lemma 2.5-6 (-9) mm long ..... ***V. octoflora*** *var.* ***glauca***
      4 Spikelets 5.5-10 mm long; awn of the lowest lemma 0.3-3 mm long ..... ***V. octoflora*** *var.* ***octoflora***

* ***Vulpia bromoides*** (Linnaeus) S.F. Gray, European Squirreltail Fescue, Brome Fescue. Cp (VA): sandy disturbed areas; rare, introduced from Eurasia. [= C, K, Z; *Festuca dertonensis* (Allioni) Ascherson & Graebner – G, HC]

Vulpia elliotea (Rafinesque) Fernald, Squirreltail Fescue. Cp (GA, NC, SC, VA), Pd (GA): sandy roadsides, fields, disturbed areas; common. April-May. S. NJ south to FL, west to TX, and north in the interior to MO. [= C, F, K; = *Vulpia sciurea* (Nuttall) Henrard – Z; = *Festuca sciurea* Nuttall – RAB, G, HC, S]

* ***Vulpia myuros*** (Linnaeus) K.C. Gmelin, Rat-tail Fescue. Cp (NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): roadsides, fields, disturbed areas; common, introduced from Eurasia. May-June. [= C, F, K, Z; = *Festuca myuros* Linnaeus – RAB, G, HC, S, W]

Vulpia octoflora (Walter) Rydberg *var.* ***glauca*** (Nuttall) Fernald, Northern Six-weeks Fescue. {Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common.} April-June. S. ME west to British Columbia, south to GA, AR, TX, and CA. [= C, K; < *Festuca octoflora* Walter – RAB, GW, S, W; = *Festuca octoflora* var. *tenella* (Willdenow) Fernald – F, G, HC; < *Vulpia octoflora* – Z]

Vulpia octoflora (Walter) Rydberg *var.* ***octoflora***, Southern Six-weeks Fescue. {Cp, Pd, Mt (GA, NC, SC, VA): fields, roadsides, disturbed areas; common.} April-June. S. NJ south to FL, west to TX, north in the interior to MO and OK. [= C, F, K; < *Festuca octoflora* Walter – RAB, GW, S, W; > *Festuca octoflora* var. *aristulata* Torrey ex L.H. Dewey – G; = *Festuca octoflora* var. *octoflora* – HC; < *Vulpia octoflora* – Z]

Zea Linnaeus (Corn, Maize)

A genus of about 5 species, native of Mexico and Central America. References: Iltis in FNA (2003a).

1 Pistillate spikelets (kernels) borne on a spongy rachis (cob) in rows ..... ***Z. mays*** *spp.* ***mays***
1 Pistillate spikelets embedded in a hardened rachis.
  2 Annual ..... ***[Z. mays*** *ssp.* ***mexicana]***
  2 Perennial from creeping rhizomes ..... ***Z. perennis***

* ***Zea mays*** Linnaeus *ssp. **mays***, Corn, Maize. Cp, Pd, Mt (GA, NC, SC, VA): very commonly cultivated, rarely volunteering in old fields or around trashpiles; common in cultivation, rare as a short-lived escape. June-October. *Zea* is one of the most important cultivated plants in the world, originating in Mexico, probably from *Zea mays* ssp. *parviglumis* Iltis & Doebley. It was initially cultivated in sw. Mexico (before 8000 BP), spreading to the sw. United States before 5000 BP, and to the e. United States by 2000 years BP. At the time of European contact, *Zea mays* ssp. *mays* was an important staple crop from s. Canada south to s, South America (Hancock 2004). [= FNA, K; < *Z. mays* – RAB, F, HC, S]
* ***Zea perennis*** (A.S. Hitchcock) Reeves & Manglesdorf, Mexican Teosinte. Cp (SC): disturbed areas; rare, apparently established at least formerly. *Z. perennis* was considered by HC to be "established on James Island, S.C." [= K; = *Euchlaena perennis* A.S. Hitchcock – HC]

* *Zea mays* (Schrader) Kuntze ssp. *mexicana* (Schrader) H.H. Iltis, Chalco Teosinte, Nobogame Teosinte. Reported for AL and FL (Kartesz 1999). HC state that this taxon is "occasionally cultivated in the Southern States for green forage" and is similar to *Z. perennis*, except in being, like *Z. mays* ssp. *mays*, a coarse annual. It is considered to be an ancestor of *Zea mays*. [= FNA; = *Z. mexicana* (Schrader) Kuntze – K; = *Euchlaena mexicana* Schrader – HC, S]

Zizania Linnaeus (Wild-rice)

A genus of 4 species (and 6 taxa) of northern and eastern North America. References: Terrell et al. (1997)=Y; Tucker (1988)=Z; Judziewicz et al. (2000)=X.

Zizania aquatica Linnaeus *var. **aquatica***, Northern Wild-rice. Cp (GA, NC, SC, VA): freshwater marshes, usually tidal; common (uncommon in NC). May-October. Var. *aquatica* ranges from ME west to WI, south to FL and LA; var. *brevis* Fassett is restricted to the St. Lawrence River in Québec. *Zizania* was formerly an important food for Amerindians; it is now gathered as a specialty grain, commanding high prices. [= C, F, G, HC, K, X, Y, Z; < *Z. aquatica* – RAB, GW, S]

Zizaniopsis Döll & Ascherson (Southern Wild-rice)

A genus of about 5 species, of tropical and subtropical America. References: Tucker (1988)=Z; Judziewicz et al. (2000)=Y.

Identification notes: Superficially similar to *Zizania* in its habitat and large size, *Zizaniopsis* may be distinguished by its very different inflorescence and by its stout horizontal rhizomes (*Zizania* is annual or perennial, but not rhizomatous).

Zizaniopsis miliacea (Michaux) Döll & Ascherson, Southern Wild-rice, Water-millet, Giant Cutgrass. Cp (GA, NC, SC, VA): brackish and freshwater marshes; common. May-July. MD south to FL, west to TX, north in the interior to MO, and disjunct in w. Mexico. The other species of the genus are South American. [= RAB, C, F, G, GW, HC, K, S, Y, Z; = *Zizania miliacea* Michaux]

Zoysia Willdenow (Zoysia)

* *Zoysia japonica* Steudel, Zoysia, is used as a lawn grass. Reported for VA (Kartesz 1999). It is not known to naturalize in our area. [= C, HC, K]
* *Zoysia matrella* (Linnaeus) Merr. var. *matrella*, Zoysia, is used as a lawn grass. Reported for GA (Kartesz 1999). It is not known to naturalize in our area. [= K; = *Z. matrella* – HC]

PONTEDERIACEAE Kunth 1816 (Pickerelweed Family)

A family of about 9 genera and 33 species, primarily of the tropics, but with some temperate representatives. References: Rosatti (1987a); Cook in Kubitzki (1998b); Horn in FNA (2002a).

1 Plant floating (or stranded by dropping water levels), the petioles expanded into air-filled floats; perianth lobes 3-4 cm long. ..... ***Eichhornia***
1 Plant rooted, the petioles not adapted as floats; perianth lobes 0.4-1.0 cm long.
  2 Leaves lanceolate to ovate, 1.5-10× as long as wide, the base cordate, truncate, or cuneate; flowers 2-lipped; corolla blue, marked with yellow; stamens 6 (3 each of 2 different lengths) ..... ***Pontederia***
  2 Leaves either reniform, 0.5-1.5× as long as wide, the base cordate, or narrowly linear, 20-50× as long as wide, the base attenuate; flowers radially symmetrical; corolla white, pale blue, or yellow; stamens 3..... ***Heteranthera***

Eichhornia Kunth 1842 (Water Hyacinth)

A genus of 7-8 species, native of tropical America and Africa, but now introduced widely in warm regions. References: Cook in Kubitzki (1998b); Horn in FNA (2002a).

* ***Eichhornia crassipes*** (Martius) Solms-Laub, Water Hyacinth. Cp (GA, NC, SC, VA), Pd (GA, NC): ponds, ditches, sluggish water; uncommon, introduced from South America. June-September. *E. crassipes* is "generally considered the world's most serious aquatic weed" (Rosatti 1987). Originally native to tropical South America, *E. crassipes* is now a widespread naturalized weed throughout the tropics and subtropics. In the northern part our area, water hyacinth is rare, probably not long persisting. Further south, it can be an aggressive aquatic weed. [= RAB, C, F, FNA, G, GW, K; = *Piaropus crassipes* (Martius) Rafinesque – S]

Heteranthera Ruiz & Pavón 1794 (Mud-plantain)
(also see *Zosterella*)

A genus of 10-12 species, of tropical and temperate America and tropical Africa. References: Cook in Kubitzki (1998b); Horn (1998)=Z; Horn in FNA (2002a). Key based in part on FNA.

1 Leaves narrowly linear, 20-50× as long as wide, the base attenuate; flowers solitary, the corolla yellow; stamens and anthers all alike ..... ***H. dubia***
1 Leaves reniform, 0.5-1.5× as long as wide, the base cordate; flowers 1-several, the corolla white or pale blue; stamens and anthers dimorphic.
  2 Spathe with 2-several flowers; perianth tube 3-12 mm long.
    3 Anthers and filaments with dark purple hairs; internode below the spathe < 1 cm long; spike with (3-) 7-16 flowers, typically elongating well out of the spathe ..... ***H. multiflora***
    3 Anthers and filaments with white hairs; internode below the spathe > 1 cm long; spike with 2-8 flowers, typically mostly included within the spathe ..... ***H. reniformis***
  2 Spathe with solitary flower; perianth tube 11-45 mm long.
    4 Vegetative stems elongating only in water deeper than 5 cm; blades of petiolate leaves oblong to ovate, the base truncate to cuneate; perianth tube 15-45 mm long ..... ***[H. limosa]***
    4 Vegetative stems commonly elongating; blades of petiolate leaves round to oblong, the base cordate to truncate; perianth tube 11-29 mm long ..... ***[H. rotundifolia]***

Heteranthera dubia (Jacquin) MacMillan, Water Stargrass. Mt (NC, VA), Pd (VA), Cp (VA): streams, rivers; uncommon (rare in NC). August-September. Québec west to WA, south to Cuba and Central America, but rare or absent in much of the se. United States. The attribution of this species to SC is in error (as by Kartesz 1999), based on a misidentified specimen (C. Horn, pers. comm.). [= RAB, F, FNA, GW, K, W; = *Zosterella dubia* (Jacquin) Small – C, G, S]

Heteranthera multiflora (Grisebach) Horn. Cp (NC, VA): in shallow, stagnant water in floodplains, or emersed on mud; rare (NC Watch List). June-October. IL west to NE, south to MS; also on the Atlantic Coastal Plain from NJ south through PA to ne. NC; also in South America (Brazil, Paraguay, Argentina, and Venezuela). [= C, FNA, K, Z]

Heteranthera reniformis Ruíz & Pavón. Cp (NC, VA), Pd (GA, NC, SC, VA): in shallow, stagnant water in floodplains, or emersed on mud; uncommon (SC Rare). June-October. CT west to NE, south to FL and TX and into South America. First reported for South Carolina by Hill & Horn (1997). [= RAB, C, F, FNA, G, GW, K, S, W, Z]

Heteranthera limosa (Swartz) Willdenow occurs east to TN, KY, and FL (Kartesz 1999); it is attributed to VA in Small (1933), but the documentation is not known. [= FNA, C, F, G, K, S, Z]

Heteranthera rotundifolia (Kunth) Grisebach. Ponds. Midwestern, as a rare disjunct east to c. KY (Larue County) (Medley 1993). [= FNA, C, K, Z]

Pontederia Linnaeus 1753 (Pickerelweed)

A genus of 3-6 species, from North America to South America. References: Lowden (1973)=Z; Cook in Kubitzki (1998b); Horn in FNA (2002a).

1 Floral tube villous when young, essentially glabrous to sparsely glandular in maturity; leaves primarily ovate to triangular-lanceolate, 2.2-21 cm wide, the base generally cordate or truncate (rarely cuneate)..... ***P. cordata*** *var.* ***cordata***
1 Floral tube persistently pubescent with short glandular hairs; leaves lanceolate, 0.4-8.3 cm wide, the base generally cuneate to truncate ..... ***P. cordata*** *var.* ***lancifolia***

Pontederia cordata Linnaeus *var.* ***cordata***, Heartleaf Pickerelweed. Cp, Pd (GA, NC, SC, VA), Mt (NC): marshes, pond-shores, lake-shores; common, uncommon in Piedmont, rare in Mountains. May-October. Nova Scotia west to MN, south to FL and TX; Belize; s. Brazil, Argentina, Paraguay, and Uruguay. The recognition of infraspecific taxa in *Pontederia cordata* is controversial and requires additional study. *P. cordata* exhibits tristyly, an interesting breeding system. Each plant has one of 3

types of flowers: (a) a short style, 3 medium and 3 long stamens, (b) a medium style, 3 short and 3 long stamens, or (c) a long style, 3 short and 3 medium stamens. [= GW, Z; < *P. cordata* – RAB, C, FNA, K, W; = *P. cordata* – F, G, S]

Pontederia cordata Linnaeus *var.* ***lancifolia*** (Muhlenberg ex Elliott) Torrey, Lanceleaf Pickerelweed. Cp (GA, NC, SC): marshes, pond-shores, lake-shores; rare. May-October. S. MA (alleged to occur as far north as ME, but these reports may be entirely based on misidentifications of var. *cordata*) to s. FL, west to e. TX, mostly on the Coastal Plain, with a few records around the Great Lakes; Cuba; s. Brazil, Argentina, Paraguay, and Uruguay. A third variety of *P. cordata*, var. *ovalis* (Martens in Roemer & Schultes) Solms in Augustin de Candolle, is restricted to South America. [= GW, Z; < *P. cordata* – RAB, C, FNA, K, W; = *P. lanceolata* Nuttall – F, G, S]

Zosterella Small 1913
(see *Heteranthera*)

POTAMOGETONACEAE Dumortier 1829 (Pondweed)

A family of 2-3 genera and about 90 species, aquatic herbs, nearly cosmopolitan. References: Haynes & Hellquist in FNA (2000); Haynes (1978); Les & Haynes (1996); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b); Wiegleb & Kaplan (1998)=Z.

1 Stipules not adnate, or adnate to the blade < ½ the length of the stipule; peduncle stiff, the flowering spike elevated above the water's surface; submersed leaves translucent, flat, flexible; floating leaves present or absent ..... ***Potamogeton***
1 Stipules adnate to the blade for at least 2/3 the length of the stipule; peduncle flexible, the flowering spike submersed; submersed leaves opaque, channeled, stiff; floating leaves absent ..... ***Stuckenia***

Potamogeton Linnaeus 1753 (Pondweed)
(also see *Stuckenia*)

A genus of about 80 species, aquatic herbs, nearly cosmopolitan. References: Haynes & Hellquist in FNA (2000); Haynes & Hellquist (1996); Wiegleb & Kaplan (1998). Treatment adapted from Haynes & Hellquist in FNA (2000).

1 Stipular sheaths of submersed leaves adnate with leaf blade base, the tip usually projecting as a ligule ..... **Key A**
1 Stipular sheaths of submersed leaves free from the leaf blade base, or with only a few adnate, the ligule not obvious.
  2 Submersed leaves broadly linear-oblong to lanceolate to elliptic or nearly orbicular, 10-58 mm wide (occasional stranded forms lack submersed leaves) ..... **Key B**
  2 Submersed leaves linear, thread-like or ribbon-like, 0.1-10 mm wide ..... **Key C**

Key A

1 Leaves stiffish, conspicuously 2-ranked, auriculate-lobed to rounded at the junction with the stipule, with 20-60 fine veins ... . ***P. robbinsii***
1 Leaves lax, not conspicuously 2-ranked, lacking basal lobes, with fewer than 20 veins.
  2 Tips of submersed leaves obtuse to acute; floating leaves rounded at apex.
    3 Tips of submersed leaves acute; fruit 1-2 mm wide, the lateral keel with acute tips, beak minute ..... ***P. diversifolius***
    3 Tips of submersed leaves obtuse; fruit 1.3-2.4 mm wide, the lateral keel with blunt tips, beak lacking .... ***P. spirillus***
  2 Tips of submersed leaves acute to long-tapering; floating leaves acute at apex.
    4 Submersed leaves 0.1-0.6 mm wide, without obvious lacunae; floating leaves 3-7 veined ..... ***P. bicupulatus***
    4 Submersed leaves 0.2-1 (-2) mm wide, with abundant lacunae; floating leaves 9-23 veined..... ***P. tennesseensis***

Key B

1 Leaf margins conspicuously serrate; stem flattened; fruit beak 2-3 mm long; turions commonly formed, hard..... ***P. crispus***
1 Leaf margins entire; stem terete; fruit beak < 1 mm long; turions rarely formed.
  2 Submersed leaves clasping the stem; floating leaves absent.
    3 Rhizomes spotted rusty-red; leaf tips cucullate, splitting when pressed; stipules usually persistent and conspicuous ..... ***[P. praelongus]***
    3 Rhizomes unspotted; leaf tips flat, not splitting when pressed; stipules deciduous or deteriorating into fibers.
      4 Leaves orbicular to ovate, often lanceolate in soft water, 1-6 cm long, with 3-25 delicate veins; stipules deteriorating and deciduous, absent on lower portions of stem ..... ***P. perfoliatus***
      4 Leaves ovate-lanceolate to narrowly lanceolate, 1.6-13 cm long, with 3-35 coarse veins; stipules disintegrating to persistent fibers, even on lower portions of stem..... ***[P. richardsonii]***

2 Submersed leaves petioled or sessile, not clasping the stem; floating leaves absent or present.
5 Submersed leaves 19-49 veined, distinctly arcuate ..... ***P. amplifolius***
5 Submersed leaves with fewer than 29 veins, not arcuate.
6 Stems conspicuously black-spotted; submersed leaves crisped along the margin; floating leaves 15-21 veined ..... ***P. pulcher***
6 Stems inconspicuously spotted or lacking spots; submersed leaves flat along the margin; floating leaves 7-29 veined.
7 Submersed leaves with petioles 1-13 cm long.
8 Larger submersed leaves acute at the apex with a sharp awl-like tip; fruit gray-green to olive-green, with well-developed lateral ridges..... ***P. illinoensis***
8 Larger submersed leaves acute at the apex but lacking a sharp awl-like tip; fruit red to reddish-brown, with muricate lateral ridges ..... ***P. nodosus***
7 Submersed leaves sessile.
9 Stipules blunt; submersed leaves 7 veined; fruit plump, stalked, tawny-olive..... ***[P. alpinus]***
9 Stipules acute; submersed leaves 3-19 veined; fruit laterally compressed, not stalked, reddish-brown, gray-green, or olive-green.
10 Fruit reddish-brown, with obsolete or rounded keel; submersed leaves with (3-) 5-9 veins..... ***P. gramineus***
10 Fruit gray-green or olive-green, with well-developed keel; submersed leaves with 7-19 veins .. ***P. illinoensis***

Key C

1 Fruit with a prominent keel 0.2-1.2 mm broad; floating leaves often present; lacunae prominent in submersed leaves.
2 Submersed leaves 3-13 veined; stipules of submersed leaves not adnate to the leaf base; floating leaves rounded at apex ..... ***P. epihydrus***
2 Submersed leaves 1-3 (-7) veined; stipules of at least some submersed leaves adnate to the leaf base; floating leaves acute at apex..... ***P. tenneseensis***
1 Fruit with a keel < 0.2 mm broad; floating leaves absent or present; lacunae present in some species, but generally not prominent.
3 Floating leaves present, at least in some plants of the population.
4 Floating leaves 0.3-1.6 cm long; peduncle 0.6-1.5 cm long; fruit < 2.5 mm long..... ***[P. vaseyi]***
4 Floating leaves 1.5-12 cm long; peduncle 2.5-3.5 mm long; fruit 2.5-5 mm long.
5 Petiole junction with leaf distinctly pale in color; floating leaves ovate, oblong-ovate, cordate at base, rarely tapering ..... ***P. natans***
5 Petiole junction with leaf lacking pale color; floating leaves elliptical, ovate-elliptical, or oblong-ellliptical.
6 Floating leaves 7-12 mm wide, tapering at both ends; fruit apparently not produced ..... ***[P. floridanus]***
6 Floating leaves 10-20 (-30) mm wide, obtuse, round or tapering at the base; fruit often produced..... ***P. oakesianus***
3 Floating leaves absent from all plants in the population.
7 Rhizomes obvious; peduncle 5-25 cm long; leaves thread-like, 0.1-0.5 mm wide..... ***P. confervoides***
7 Rhizomes absent or not apparent; peduncle 0.3-7 cm long, often curved; leaves usually not thread-like, 0.1-5 mm wide.
8 Nodal glands absent.
9 Leaves 15-35 veined, > 2 mm wide; stem conspicuously flattened; peduncles terminal, usually straight... ***P. zosteriformis***
9 Leaves 3-5 veined, usually < 2 mm wide; stem terete; peduncles usually axillary, recurved.
10 Leaves acute, 3 (-5) veined, 0.3-1.5 (-2.3) mm wide; fruits 1-keeled, 1.4-2.3 (-2.7) mm long..... ***P. foliosus*** *var*. ***foliosus***
10 Leaves usually bristle-tipped, occasionally apiculate to blunt, 3 veined, 1-2.2 (-4) mm wide; fruits 3-keeled, 2.3-4 mm long..... ***P. hillii***
8 Nodal glands present.
11 Stipules fibrous, often whitish.
12 Leaf apex acute or apiculate; leaves 5-7 (-9) veined; turions with inner leaves at a right angle to outer leaves..... ***[P. friesii]***
12 Leaf apex usually bristle-tipped, acute or rarely obtuse to apiculate; leaves 3-5 (-7) veined; turions flattened with inner and outer leaves in same plane ..... ***P. strictifolius***
11 Stipules not fibrous, usually delicate, green, brown, or white.
13 Leaf apex bristle-tipped (rarely apiculate); peduncles recurved, axillary or axillary and terminal, 0.5-6.6 cm long..... ***P. hillii***
13 Leaf apex blunt, acute, or apiculate, but not bristle-tipped; peduncles straight, terminal, 0.5-6.6 cm long.

14 Mature fruit obovate, sides concave, beak mostly forward; peduncle filiform to cylindrical, usually 1-3 per plant; inflorescence usually interrupted; leaves with up to 2 rows of lacunae along midrib, apex acute, rarely apiculate; stipules mostly connate ..... ***P. pusillus* var. *pusillus***

14 Mature fruit mostly widest at middle, or ovate, sides rounded, beak mostly central; peduncle cylindrical, usually > 3 per plant; inflorescence continuous; leaves with 1-5 rows of lacunae along midrib, apex acute to obtuse; stipules mostly convolute ..... ***P. pusillus* var. *tenuissimus***

Potamogeton amplifolius Tuckerman, Bigleaf Pondweed. Cp (NC, VA), Pd (VA), Mt (GA, VA): ponds, lakes, sluggish streams; rare (GA Special Concern, VA Rare). June-September. Newfoundland west to British Columbia, south to e. NC, nw. GA (Jones & Coile 1988), n. AL, OK, and CA. [= RAB, C, F, FNA, G, K, S, W, Z]

Potamogeton bicupulatus Fernald. Mt (VA): quiet waters; rare. July-September. ME west to WI, south to VA and se. TN. [= FNA, F, K, Z; = *P. diversifolius* Rafinesque var. *trichophyllus* Morong – C, GW]

Potamogeton confervoides Reichenbach, Alga Pondweed, Conferva Pondweed, Tuckerman's Pondweed. Cp (NC, SC): acidic blackwater pools and streams; rare (NC Rare). April-September. Newfoundland west to Ontario, south to NJ and PA; disjunct in sc. NC and nc. SC (fall-line sandhills). [= RAB, C, F, FNA, G, K, Z]

* ***Potamogeton crispus*** Linnaeus, Curled Pondweed, Curly Pondweed. Cp, Pd (GA, NC, VA), Mt (NC, VA): uncommon. May-September. ME, MN, s. Saskatchewan and s. British Columbia, south to NC, Panhandle FL, TX, AZ, and CA. [= RAB, C, F, FNA, G, GW, K, W, Z]

Potamogeton diversifolius Rafinesque, Common Snailseed Pondweed. Cp, Pd, Mt (GA, NC, SC, VA): pools, ponds, and lakes; common. June-September. MA and NY west to MN, MT, and OR, south to FL, TX, and CA. [= RAB, FNA, G, K, S, W, Z; = *P. diversifolius* var. *diversifolius* – C, GW; > *P. diversifolius* – F; > *P. capillaceus* Poiret var. *capillaceus* – F; > *P. capillaceus* Poiret var. *atripes* Fernald – F]

Potamogeton epihydrus Rafinesque, Ribbonleaf Pondweed. Mt, Pd (NC, VA), Cp (NC, SC, VA): uncommon. June-September. Newfoundland west to AK, south to GA, s. MS (Sorrie & Leonard 1999), LA, CO, and CA. [= RAB, C, FNA, K, S, W; > *P. epihydrus* var. *epihydrus* – F, G; > *P. epihydrus* var. *nuttallii* (Chamisso & Schlechtendahl) Fernald – F, G; < *P. epihydrus* – Z (also see *P. tennesseensis*)]

Potamogeton foliosus Rafinesque *var. **foliosus***, Leafy Pondweed. Mt (GA, NC, VA), Pd (SC, VA), Cp (NC, SC, VA): uncommon. May-October. Newfoundland west to AK, south to SC, w. FL, TX, and Mexico. Potamogeton robbinsii Oakes, Fern Pondweed. Pd (VA): muddy waters; rare (VA Rare). August-September. Nova Scotia and Prince Edward Island west to Keewatin and AK, south to n. VA, n. IL, s. MN, CO, UT, and CA; disjunct in s. AL. [= C, F, FNA, G, K, Z]

Potamogeton spirillus Tuckerman, Northern Snailseed Pondweed. Cp (VA): quiet waters; rare (VA Rare). July-November. Newfoundland west to Manitoba, south to e. VA, n. OH, n. IA, and se. NE. [= C, F, FNA, G, K, Z]

Potamogeton strictifolius A. Bennett, Straightleaf Pondweed. Mt (VA): calcareous waters; rare (VA Rare). July-September. Newfoundland west to Yukon, south to w. VA, n. IL, WY, and n. UT. [= C, FNA, G, K, W, Z; > ***P. strictifolius*** var. *strictifolius* – F; > ***P. strictifolius*** var. *rutiloides* Fernald – F; > ***P. longiligulatus*** Fernald – F]

Potamogeton tennesseensis Fernald, Tennessee Pondweed. Mt (VA), {NC?}: quiet or flowing water; rare (VA Rare). Late May-September. PA and OH south to w. VA, and se. TN. [= F, FNA, K, W; < ***P. epihydrus*** – Z, in part]

Potamogeton zosteriformis Fernald, Flatstem Pondweed. Cp, Mt (VA): quiet waters; rare (VA Rare). July-September. Newfoundland west to AK, south to n. VA, n. IL, KS, UT, and CA. [= C, F, FNA, G, K, Z]

Potamogeton alpinus Balbis, Red Pondweed, south to e. PA (Rhoads & Klein 1993). [= FNA, G, K, Z; > ***P. alpinus*** var. *tenuifolius* (Rafinesque) Ogden – C, F; > ***P. tenuifolius*** Rafinesque]

Potamogeton floridanus Small, Florida Pondweed, is apparently endemic to blackwater rivers of the Panhandle of FL. Considering the under-collection of *Potamogeton*, it should be sought elsewhere. [= FNA, S; < ***P. natans*** – Z]

Potamogeton friesii Ruprecht, Fries's Pondweed, south to c. PA (Rhoads & Klein 1993). (VA Watch List) [= C, F, FNA, G, K, Z]

Potamogeton obtusifolius Mertens & Koch, south to MD, NJ, and PA. [= C, F, FNA, G, K] {not keyed at this time; synonymy incomplete}

Potamogeton praelongus Wulfen, Whitestem Pondweed, south to MD and nw. PA (Rhoads & Klein 1993). [= C, F, FNA, G, K, Z]

Potamogeton richardsonii (Bennett) Rydberg, Richardson Pondweed, south to DE, MD, and PA. [= C, F, FNA, G, K, Z]

Potamogeton vaseyi J.W. Robbins, Vasey Pondweed, south to se. and sc. PA (Rhoads & Klein 1993). [= C, F, FNA, G, K, Z]

Stuckenia C. Börner 1912 (Sago-pondweed)

A genus of about 10 species, nearly cosmopolitan. This genus should be called *Stuckenia*, which has priority over *Coleogeton*. References: Haynes & Hellquist in FNA (2000); Les & Haynes (1996)=Z; Haynes, Les, & Král (1998)=Y; Wiegleb & Kaplan (1998)=X.

1 Leaves minutely acute (use 10× magnification); achenes usually 3-4.5 mm long, with the style persistent as a very short beak ..... ***S. pectinata***

1 Leaves minutely rounded or retuse (use 10× magnification); achenes usually 2-3 mm long, with the sessile stigma persistent as a bump ..... ***[S. filiformis ssp. alpine]***

Stuckenia pectinata (Linnaeus) C. Börner, Sago-pondweed. Cp (NC, SC, VA), Mt, Pd (VA), {GA}: calcareous or brackish waters of ponds, lakes, estuaries, sounds; uncommon. June-September. The species is irregularly cosmopolitan. [= FNA, K, Y; = *Potamogeton pectinatus* Linnaeus – RAB, C, F, G, GW, S, W, X; = *Coleogeton pectinatus* (Linnaeus) D.H. Les & R.R. Haynes – Z]

Stuckenia filiformis (Persoon) C. Börner ssp. *alpina* (Blytt) R.R. Haynes, D.H. Les, & M. Král, Threadleaf Pondweed, approaches our area in se. and sc. PA. [= FNA, K, Y; = *Potamogeton filiformis* Persoon var. *alpinus* (Blytt) Ascherson & Graebner; > *Potamogeton filiformis* Persoon var. *borealis* (Rafinesque) H. St. John – C, F, G; < *Potamogeton filiformis* – X; = *Coleogeton filiformis* (Persoon) D.H. Les & R.R. Haynes ssp. *alpinus* (Blytt) D.H. Les & R.R. Haynes – Z]

RUPPIACEAE Horaninow ex Hutchinson 1934 (Wigeon-grass Family)

A family of a single genus and 1-10 species. References: Haynes (1978)=Z; Haynes in FNA (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Ruppia Linnaeus (Wigeon-grass)

A genus of 1-10 species, nearly cosmopolitan. References: Haynes (1978)=Z; Haynes in FNA (2000); Haynes, Holm-Nielsen, & Les in Kubitzki (1998b).

Identification notes: Separable from superficially similar species of *Potamogeton* by the stipules adnate their entire length (vs. separate at least at the tip in *Potamogeton*).

Ruppia maritima Linnaeus, Wigeon-grass, Ditch-grass. Cp (GA, NC, SC, VA): brackish estuaries, rivers, marsh pools; common. July-October. Nearly cosmopolitan. [= RAB, C, FNA, GW, K, S, Z; > *R. maritima* var. *maritima* – F, G; > *R. maritima* var. *longipes* Hagström – F; > *R. maritima* var. *rostrata* Agardh – F, G]

RUSCACEAE M. Roemer 1840 (Ruscus Family)

As here circumscribed, a family of about 28 genera and 500 species, of North America, Central America, Europe, and Asia. The Convallariaceae has been supported by molecular studies (Judd 2003, Bogler & Simpson 1995). Molecular studies show that *Nolina* is much more closely related to *Convallaria*, *Polygonatum*, etc. than to the Agavaceae (*Yucca* and *Manfreda* in our flora), with which it has often been associated. References: Bogler & Simpson (1995); Bogler in Kubitzki (1998a); Yeo in Kubitzki (1998a); Conran & Tamura in Kubitzki (1998a); Yamashita & Tamura (2000).

1 Plant with an upright stem with alternate leaves.
  2 Shrub; "leaves" (actually phylloclades) coriaceous, evergreen, glossy; [exotic, rarely naturalized]; [tribe *Rusceae*] ..... ***Danae***
  2 Herb; leaves herbaceous, deciduous, dull or slightly glossy; [native]; [tribe *Polygonatae*].
    3 Inflorescence terminal, a raceme or panicle; tepals separate ..... ***Maianthemum***
    3 Inflorescence of 1-several axillary flowers; tepals fused ..... ***Polygonatum***
1 Plant tufted, the leaves essentially basal (although the sheathing bases form a 'false' stem in *Convallaria*).
  4 Leaves 2-3, narrowly elliptic; tepals fused, white or greenish; [tribe *Convallarieae*] ..... ***Convallaria***
  4 Leaves many, linear; tepals separate (or fused basally), white or violet.
    5 Fruit dehiscent, quickly exposing berry-like seeds with a fleshy seed coat; inflorescence spikelike, to 3 dm tall; [aliens, scarcely naturalized from horticultural plantings]; [tribe *Ophiopogoneae*] ..... ***Liriope***
    5 Fruit indehiscent, dry and capsular; inflorescence a panicle or raceme, to 15 dm tall; [natives, of longleaf pine woodlands of SC, GA, and FL]; [tribe *Nolineae*] ..... ***Nolina***

Convallaria Linnaeus 1753 (Lily-of-the-Valley)

A genus of 3 species, of north temperate n. Eurasia and e. North America. References: Utech in FNA (2002a); Judd (2003)=Z; Conran & Tamura in Kubitzki (1998a).

1 Leaf blades averaging 10-15 cm long, 3-5 cm wide; rhizomes short-creeping, the "individual" plants spaced closely (typically 5-10 cm apart); flowering scape > ½ as long as the leaves; longer bracts of the inflorescence 4-10 mm long; [introduced, persistent around old home sites and other plantings] ..... ***C. majalis***
1 Leaf blades averaging 15-35 cm long, 5-13 cm wide; rhizomes absent or long-creeping, the individual plants spaced widely (usually at least 15 cm apart); flowering scape < ½ as long as the leaves; longer bracts of the inflorescence 8-20 mm long; [native, of forests of the Mountains and upper Piedmont] ..... ***C. majuscula***

* ***Convallaria majalis*** Linnaeus, European Lily-of-the-Valley. Pd, Cp, Mt (NC, VA): persistent after cultivation; rare, introduced from Eurasia. April-May; July-August. [= F, K, W; = *C. majalis* var. *majalis* – RAB, FNA; < *C. majalis* – C, G, S, Z (also see *C. majuscula*)]

Convallaria majuscula Greene, American Lily-of-the-Valley. Mt (GA, NC, SC, VA), Pd (NC, VA): mountain forests, particularly in rocky woodlands or forests on or near ridgetops under northern red oak at about 1000 to 1500 m elevation, sometimes at lower elevations (down to at least 700 m) and under *Quercus montana*; uncommon, rare in Piedmont (SC Rare). April-June; August. Endemic to the Southern Appalachians: WV and VA through NC and TN to ne. GA (Jones & Coile 1988) and nw. SC. Cronquist's (1991) statement that Southern Appalachian plants "may reflect an early escape of a different phase of the species from cultivation" can be discounted; there is no doubt that *C. majuscula* is both native and taxonomically distinct, at a varietal level at least. Utech in FNA (2002a) states that our plants are more closely related to the Asian taxon, variously treated as *C. keiskei* Miquel or *C. majalis* var. *keiskei* (Miquel) Makino, than to the European *C. majalis* s.s. As best as can be determined, Rafinesque's name *Convallaria montana* does not apply to this species. [= K; = *C. majalis* Linnaeus var. *montana* (Rafinesque) Ahles – RAB, FNA, apparently misapplied; < *C. majalis* – C, G, S, Z; = *C. montana* Rafinesque – F, W, apparently misapplied]

Danae Medikus (Alexandrian Laurel, Danaë)

A monotypic genus, a shrub, of sw. Asia.

* ***Danae racemosa*** (Linnaeus) Moench, Alexandrian Laurel. Pd (NC): suburban forests; rare, uncoomon in cultivation, arrely escaping to suburban forests, native of sw. Asia. The "leaves" are actually odd structures called phylloclades, and represent modified stems.

Liriope Loureiro 1790 (Liriope, Lilyturf)

A genus of 8 species, herbs, of e. and se. Asia. References: Conran & Tamura in Kubitzki (1998a); Judd (2003)=Z.

* ***Liriope muscari*** (Dcne.) Bailey, Liriope, Big Blue Lilyturf. Pd (NC), {SC}: planted and persistent; commonly cultivated, rarely persistent. [= K, Z] {not keyed at this time}

* *Liriope spicatum* Loureiro, Creeping Lilyturf. Reported for AL, FL, MD (Kartesz 1999). [= K; *L. spicata* Loureiro – Z, orthographic variant] {not keyed at this time}

Maianthemum G.H. Weber ex Wiggers 1780 (Mayflower, Solomon's-plume)

A genus of about 28 species, herbs, of n. Europe, e. Asia, North America, and Central America. The inclusion of the traditional *Smilacina* in *Maianthemum* will cause considerable consternation; LaFrankie's (1986) reasoning, however, seems very strong, and has been additionally supported by more recent evidence (Conran & Tamura in Kubitzki 1998a). The only consistent difference between the two previously accepted genera is whether the flowers are dimerous (*Maianthemum*) or trimerous (*Smilacina*). LaFrankie cites research that shows that the dimerous flowers of *Maianthemum* (*sensu stricto*) are the result of reduction from trimerous flowers, as indicated by vestigial vascular traces. Consideration of the many close similarities, particularly as compared to similar genera such as *Prosartes*, *Polygonatum*, *Streptopus*, and *Clintonia*, may convince the skeptical (see LaFrankie 1986 and Therman 1956). As an example, the fruits of *M. canadense* and *M. racemosum* are closely similar in form, coloration, and size; much more similar than the fruits of our 2 species of *Prosartes*. References: LaFrankie (1986)=Z; Judd (2003)=Y; LaFrankie in FNA (2002a); Conran & Tamura in Kubitzki (1998a).

1 Flowers in a terminal panicle ..... ***M. racemosum*** *ssp.* ***racemosum***
1 Flowers in a simple raceme.
  2 Perianth segments 4 (flowers 2-merous); leaves (1-) 2 (-3) ..... ***M. canadense***
  2 Perianth segments 6 (flowers 3-merous); leaves 6 or more (or 1-4 in *M. trifolium*).
    3 Leaves 6 or more, pubescent beneath ..... ***M. stellatum***
    3 Leaves 1-4, glabrous beneath ..... ***[M. trifolium]***

Maianthemum canadense Desfontaines, Canada Mayflower, False Lily-of-the-valley. Mt (GA, NC, VA), Pd (VA): moist forests, especially at high elevations; common. Mid May-early July; August-September. Labrador and Newfoundland west to Mackenzie, south to MD, NC, n. GA (Jones & Coile 1988), KY and SD. Two varieties have been described, but their recognition is not strongly supported. Var. *canadense*, with leaves glabrous beneath, the margins entire or minutely crenulate, cross-veins of the leaf well-developed, is widepread in the distribution of the species. Var. *interius* Fernald has the leaves pubescent beneath, the leaf margins distinctly ciliate, and cross-veins obscure; it is not known from our area, but extends east and south as far as MA, NY, and OH. Further study of these varieties is needed. Weller (1970) reports equivocal results on the recognition of varieties, based on a study in n. MI. [= RAB, FNA, K, W, Y, Z; > *Maianthemum canadense* Desfontaines var. *canadense* – C, F, G; = *Unifolium canadense* (Desfontaines) Greene – S]

Maianthemum racemosum (Linnaeus) Link *ssp.* ***racemosum***, Eastern Solomon's-plume, False Solomon's-seal. Mt, Pd, Cp (GA, NC, SC, VA): forests; common. Mid April-June; August-October. The species ranges from Nova Scotia west to British Columbia, south to GA and AZ. A variety of chromosome races are known (2n = 36, 72, 144). The eastern ssp. *racemosum* is tetraploid; ssp. *amplexicaule* (Nuttall) LaFrankie is diploid and more western; these are perhaps more appropriately treated as species. Under the generic name *Smilacina*, two varieties had been described for our area, *Smilacina racemosa* var. *racemosa* and *S. racemosa* var. *cylindrata* Fernald, the former larger in nearly all respects and more northern than the latter, smaller, and more southern form (see F for details). If these varieties are determined to have merit (further research is needed), the appropriate transfer to *Maianthemum* will need to be made. [= FNA, K, Y, Z; < *Smilacina racemosa* (Linnaeus) Desfontaines – RAB, C, G, W; > *S. racemosa* var. *racemosa* – F; > *S. racemosa* var. *cylindrata* Fernald – F; > *Vagnera racemosa* (Linnaeus) Morong – S; > *Vagnera australis* Rydberg – S]

Maianthemum stellatum (Linnaeus) Link, Starry Solomon's-plume. Mt, Pd (VA): alluvial forests; rare (VA Rare). April-June; August-October. Newfoundland west to British Columbia, south to NJ, w. VA, e. TN, IN, MO, and CA. [= FNA, K, Y, Z; = *Smilacina stellata* (Linnaeus) Desfontaines – C, F, G, W]

Maianthemum trifolium (Linnaeus) Sloboda occurs in bogs and moist sphagnous forests, south to sc. PA. [= FNA, K, Z; = *Smilacina trifolia* (Linnaeus) Desfontaines – C, F, G]

Nolina Michaux 1803 (Beargrass)

A genus of about 30 species, rosette shrubs and trees, of s. United States and Mexico. References: Hess in FNA (2002a); Judd (2003)=Z; Bogler in Kubitzki (1998a).

1 Leaves 3-4 (-5) mm wide; fruit 4-4.5 mm long, strongly asymmetrical; [of moist flatwoods of the FL Coastal Plain]..... ..... ***[N. atopocarpa]***
1 Leaves 4-10 mm wide, glaucous; fruit 6.5-8 mm long, symmetrical; [of dry to dry-mesic sandhills of the GA and SC Coastal Plain]..... ***N. georgiana***

Nolina georgiana Michaux, Georgia Beargrass, Sandhills Lily. Cp (GA, SC): sandhills, sometimes locally common on slightly less xeric lower sandhill slopes; rare (SC Rare). Late May-June; late June-August. Nc. SC south to sc. GA. This species has been attributed to FL (Small 1933), but is not included in either Clewell (1985) or Wunderlin (1982, 1998). [= RAB, FNA, K, S, Z]

Nolina atopocarpa Bartlett, Florida Beargrass. Pine flatwoods and savannas. Endemic to panhandle FL (Liberty and Franklin counties) and e. peninsular FL (St. Johns and Brevard counties). [= FNA, K, S, Z]

Polygonatum P. Miller 1754 (Solomon's-seal)

A genus of about 57 species, of temperate Eurasia and North America (most diverse in e. Asia). The *P. biflorum* complex is in need of further study. References: Ownbey (1944)=Z; Judd (2003)=Y; Utech in FNA (2002a); Eigsti (1942); Therman (1950, 1953); Kawano & Iltis (1963); Conran & Tamura in Kubitzki (1998a).

1 Leaves pubescent on the veins beneath; flowers 7-13 mm long..... ***P. pubescens***
1 Leaves glabrous; flowers 12-21 mm long.
  2 Stem slender, 1.5-5 mm in diameter; plants to 9 dm tall; lower axillary peduncles terete or nearly so, with (1-) 2-3 (-5) flowers; lowest peduncle in the axil of the (1st-) 3rd (-5th) axil; larger leaves 5.5-15 cm long, 1.2-6 cm wide; lower leaves clasping to 90 (-180) degrees ..... ***P. biflorum*** *var.* ***biflorum***
  2 Stem robust, 5-13 mm thick below the leaves; plants to 20 dm tall; lower axillary peduncles strongly flattened, with (2-) 3-6 (-15) flowers; lowest peduncle in the axil of the (3rd-) 4th-5th (-8th) leaf; larger leaves 9-25 cm long, 3.5-13 cm wide; lower leaves clasping to 300 degrees ..... ***P. biflorum*** *var.* ***commutatum***

Polygonatum biflorum (Walter) Elliott *var.* ***biflorum***, Small Solomon's-seal. Mt, Pd, Cp (GA, NC, SC, VA): moist to dry forests; common. April-June; August-October. CT, NY, and s. Ontario west to MI, NE, and IN, south to n. FL and s. AL. In addition to the two varieties recognized for our area, *P. biflorum* includes several additional varieties: var. *hebetifolium* R.R. Gates of panhandle FL (Apalachicola River area), var. *melleum* (Farwell) R. Ownbey of MI and Ontario, and var. *necopinum* R. Ownbey from the Black Hills of SD. The complex needs additional study. See var. *commutatum* for discussion of its distinction from var. *biflorum*. [= Z; < *P. biflorum* – RAB, C, FNA, W, Y; = *P. biflorum* – F, G, in the narrow sense; < *P. biflorum* var. *commutatum* (J.A. & J.H. Schultes) Morong – K; < *P. commutatum* (J.A. & J.H. Schultes) A. Dietrich – S]

Polygonatum biflorum (Walter) Elliott *var.* ***commutatum*** (J.A. & J.H. Schultes) Morong, Large Solomon's-seal, King Solomon's-seal. Mt (GA, NC, SC?, VA), Pd (NC, VA): moist forests, roadbanks; common. May-June; September-October. NH west to s. Manitoba, south to SC, GA, LA, and TX. There has been a wide divergence of opinion regarding the merits (and practicality) of distinguishing this taxon from typical *P. biflorum*, and the characters considered most reliable; the two taxa may differ in chromosome number and geographical distribution; they are not, however, always readily distinguished morphologically. I prefer to recognize this taxon as a variety. See references for additional discussion. [< *P. biflorum* – RAB, C, FNA, W, Y; = *P. canaliculatum* (Muhlenberg ex Willdenow) Pursh – F, G, misapplied; < *P. biflorum* var. *commutatum* (J.A. & J.H. Schultes) Morong – K; < *P. commutatum* (J.A. & J.H. Schultes) A. Dietrich – S; = *P. commutatum* – Z]

Polygonatum pubescens (Willdenow) Pursh. Mt (GA, NC, SC?, VA): moist forests, especially cove forests; common. Late April-June; August-October. S. Québec west to s. Manitoba, south to nw. SC, WV, KY, IN, WI, and IA. [= RAB, C, F, FNA, G, K, W, Y, Z; = *P. biflorum* – S, misapplied]

SCHEUCHZERIACEAE F. Rudolphi 1830 (Scheuchzeria Family)

A monotypic family, circumboreal in arctic and cold temperate regions. References: Nienaber in FNA (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Scheuchzeria Linnaeus (Scheuchzeria, Pod-grass)

A monotypic genus, circumboreal in arctic and cold temperate regions. References: Nienaber in FNA (2000); Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Scheuchzeria palustris Linnaeus var. *americana* Fernald, Pod-grass. *Sphagnum* bogs. South to sc. PA (Rhoads & Klein 1993), NJ, and Pocahontas County, WV. [= F; < *Sch. palustris* – C, FNA, G; = *Sch. palustris* ssp. *americana* (Fernald) Hultén – K; = *Sch. americana* (Fernald) G.N. Jones]

SMILACACEAE Ventenat 1799 (Greenbrier Family)

A family of 3-12 genera and about 375 species, widespread in tropical, subtropical, and temperate regions. References: Holmes in FNA (2002a); Judd (1998); Conran in Kubitzki (1998a).

Smilax Linnaeus 1753 (Greenbrier, Carrionflower, Smilax)

A genus of about 300 species, woody vines and herbs, subcosmopolitan in temperate and tropical regions. Our deciduous species are a monophyletic group within *Smilax*, with a classic eastern North American - east Asian disjunction, and are treated as section Nemexia or subgenus Luiste (Wilbur 2004, Fu et al. 2005). *Smilax* berries and shoots provide important food sources for many wildlife species, including black bears (*Ursus americanus*). References: Mangaly (1968)=Z; Judd (1998)=Y; Holmes in FNA (2002a); Wilbur (2004); Fu et al. (2005); Duncan (1967); Godfrey (1988). Key for the woody species based in part on Godfrey (1988).

1 Stem herbaceous, lacking prickles; ovules 2 per carpel; peduncles usually > 4 cm long; [section *Nemexia*].
- 2 Plants erect, 0.2-1.0 m tall, even when well-developed with < 20 leaves [note that immature or depauperate individuals (nonflowering) of *S. pseudochina, S. herbacea, S. lasioneura*, and *S. pulverulenta* often have this aspect]; tendrils absent or rudimentary; peduncles usually few (usually 1-4), the lowest often from bract axils.
  - 3 Leaves glabrous and glaucous beneath, thick in texture, base cordate, tip acute or acuminate; lowest peduncle from a leaf axil (very rarely from bract axils), upper peduncles from leaf axils; leaves 5-7, clustered together near the summit of the stem ..... ***S. biltmoreana***
  - 3 Leaves pubescent and green (or glaucous) beneath, usually thin in texture, base cordate, truncate, or rounded, tip acuminate, acute, or obtuse; lowest peduncles from axils of bracts below the lowest leaves, upper peduncles also often from bracts (the uppermost often from leaf axils); leaves either clustered together near the summit of the stem or well distributed.
    - 4 Leaves relatively many, (7-) 10-13 (-20), often well distributed in the upper half of the stem, notably reduced in size from lower to upper, mostly with the base cordate and the tip acuminate; berry 3-5 seeded ..... ***S. ecirrata***
    - 4 Leaves few, usually 4-8, usually clustered together near the summit of the stem (rarely well distributed), about the same size, mostly with the base ovate (to subcordate), the tip acute to obtuse; berry 2-3 seeded..... ***S. hugeri***
- 2 Plants vine-like, climbing or sprawling, to 3 m tall, when well-developed with > 30 leaves; tendrils present and numerous; peduncles usually many, from leaf axils.
  - 5 Leaf bases hastate, the leaf margins straight or concave in outline; longest fruiting pedicels < 2× as long as the fruit; anthers equaling or longer than the filaments; perianth 1.5-2.5 mm long; leaves glabrous and glaucous beneath..... ***S. pseudochina***
  - 5 Leaf bases cordate, the leaf margins convex in outline; longest fruiting pedicels 2× or more as long as the fruit; anthers shorter than the filaments; perianth 3.5-6 mm long; leaves either puberulent beneath (at least along the veins), or glabrous and glaucous beneath.
    - 6 Leaves glabrous and glaucous on the lower surface; fruit dark blue and glaucous; peduncles 5-8× as long as the subtending petioles..... ***S. herbacea***
    - 6 Leaves puberulent on the lower surface, at least on the veins; fruit dark blue and glaucous or black and not glaucous; peduncles 1-10× as long as the subtending petioles.
      - 7 Leaves bright green and shiny beneath; fruit black, not glaucous; peduncles 1-2 (-3)× as long as the subtending petioles..... ***S. pulverulenta***
      - 7 Leaves pale green and dull below; fruit dark blue, glaucous; peduncles (3-) 5-10× as long as the subtending petioles..... ***S. lasioneura***

1 Stem woody, usually with prickles; ovules 1 per carpel; peduncles usually < 3 cm long; [section *China*].
- 8 Stems and petioles tomentose, lacking prickles; leaves densely tomentose beneath; berries red; plant trailing or ascending, rarely > 0.5 m tall (with determinate growth)..... ***S. pumila***
- 8 Stems and petioles stellate-scurfy or glabrous, generally with prickles; leaves glabrous or papillate beneath; berries red, black, or dark blue; plant climbing, ascending, or trailing, mature plants generally well over 0.5 m tall (with indeterminate growth).
  - 9 Lower surfaces of leaves strongly glaucous..... ***S. glauca***
  - 9 Lower surfaces of leaves green (rarely very slightly glaucous).
    - 10 Prickles of the stem abundant, thin and needle-like, shiny brown or black..... ***S. hispida***
    - 10 Prickles of the stem fewer, broad-based and awl-like or catclaw-like, green, brown, or black.

11 Midvein (as seen on the lower surface) much more pronounced than the principal lateral veins, which are scarcely raised; leaves evergreen, thick, coriaceous ..... ***S. laurifolia***
11 Midvein (as seen ion the lower surface) little if any more pronounced than the principal lateral veins; leaves evergreen or deciduous, thin, subcoriaceous.
12 Leaves mostly lanceolate, the base cuneate, the tip acute to acuminate; berries dull red ..... ***S. smallii***
12 Leaves mostly ovate, oblong, pandurate, or hastate, the base cordate, truncate, rounded, or cuneate, the tip rounded to acute; berries various in color.
13 Margin of the leaf blade prominently thickened with a marginal vein (this appearing as a thickening, a visible vein, or an apparent revolute margin); berries with 1-3 seeds.
14 Inflorescence peduncle (stalk of the umbel) as long as or shorter than the subtending leaf petiole; stems and prickles glabrous; leaves evergreen; berries usually with 2-3 seeds; [generally of xeric or less commonly mesic sands] ..... ***S. auriculata***
14 Inflorescence peduncle (stalk of the umbel) > 1.5×as long as the subtending leaf petiole; stems (especially the lower) and prickles brownish stellate-scurfy; leaves semi-evergreen to evergreen; berries usually with 1 seed; [of a wide variety of habitats] ..... ***S. bona-nox***
13 Margin of the leaf blade thin, sometimes revolute; berries with (1-) 2-4 seeds.
15 Berries blue-black; perianth green; leaves semi-evergreen to evergreen, margins of mature leaves generally not revolute, the margins of the leaves and the petioles often with minute, flattish, toothlike projections; berries with (1-) 2-3 seeds; [of a wide variety of upland and wetland habitats] ..... ***S. rotundifolia***
15 Berries bright red; perianth brownish-yellow; leaves deciduous, margins of mature leaves usually revolute, the margins of the leaves and the petioles lacking minute, flattish, toothlike projections; berries with 2-4 seeds; [of swamp forests, bogs, often where submersed for at least part of the year] ..... ***S. walteri***

Smilax auriculata Walter, Dune Greenbrier. Cp (GA, NC, SC): dunes on barrier islands, dry sandy openings in maritime forests or sandhills near the coast; common. May-July; October-November (and persisting). E. NC (Dare County) south to s. FL and west to LA; Bahama Islands. [= RAB, FNA, GW, K, S, Y]

Smilax biltmoreana (Small) J.B.S. Norton ex Pennell, Biltmore Carrionflower. Mt, Pd (GA, NC, SC), Cp (GA): dry forests (such as dry pine ridges and chestnut oak forests) and moist forests; rare (NC Rare). April-May; August-October. The species is apparently limited to to NC, SC, and GA, primarily in the Blue Ridge Escarpment region, with disjunct occurrences in panhandle FL, s. AL, and sc. KY. [= FNA, K, W, Y, Z; = *Smilax ecirrata* (Engelmann ex Kunth) S. Watson var. *biltmoreana* (Small) Ahles – RAB; < *S. ecirrhata* – G, in part (concept interpreted from stated geographic range); = *Nemexia biltmoreana* Small – S]

Smilax bona-nox Linnaeus, Catbrier, Tramp's-trouble. Cp, Pd, Mt (GA, NC, SC, VA): in a wide variety of upland and wetland habitats; common. Late April-May; September-November. MD and MO south to c. FL and TX, and also in Mexico. [= RAB, C, FNA, G, GW, K, S, W, Y; > *S. bona-nox* var. *hastata* (Willdenow) Alphonse de Candolle – F; > *S. bona-nox* var. *exauriculata* Fernald – F; > *S. bona-nox* var. *hederifolia* (Beyrich) Fernald – F; > *S. bona-nox* var. *bona-nox* – F]

Smilax ecirrata (Engelmann ex Kunth) S. Watson. Mt (VA): forests; rare (VA Rare). Mid May-early June; August-September. N. OH MI, WI, and s. MN south to w. VA, TN, s. IL, MO, and e. OK. [= K, Y, Z; = *S. ecirrhata* – C, F, FNA, orthographic variant; < *S. ecirrhata* – G, broader sense (apparently also including in statement of range *S. hugeri* and/or *S. biltmoreana*); = *Nemexia ecirrhata* (Engelmann ex Kunth) Small – S]

Smilax glauca Walter, Whiteleaf Greenbrier, Wild Sarsaparilla. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of upland and wetland habitats; common. Late April-early June; September-November (and persisting). NJ, c. PA, OH, IN, MO, and KA south to c. FL and TX, and also in Mexico. [= RAB, C, FNA, GW, S, W, Y; > *S. glauca* var. *glauca* – F, G, K; > *S. glauca* var. *leurophylla* Blake – F, G, K]

Smilax herbacea Linnaeus, Common Carrionflower. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (GA, VA): moist deciduous forests; common. May-June; August-October. Centered in the Appalachian Mountains, from Québec and ME west to OH, south to AL, GA, and TN. Young, non-flowering plants closely resemble *S. biltmoreana*. [= F, FNA, K, W, Y, Z; = *S. herbacea* var. *herbacea* – RAB, C, G; = *Nemexia herbacea* (Linnaeus) Small – S]

Smilax hispida Rafinesque, Bristly Greenbrier, Hellfetter. Mt, Pd, Cp (GA, NC, SC, VA): moist to wet forests; common. CT, NY, MN, and NE south to c. FL and TX. Wilbur (2003) discusses the complicated nomenclatural problems involving this plant and concludes that *S. hispida* Raf. is the correct name. [= *Smilax tamnoides* Linnaeus – FNA, GW, K, W, Y, misapplied; = *S. hispida* Muhlenberg – RAB, C, G, S; > *S. tamnoides* var. *hispida* (Muhlenberg) Fernald – F; > *S. tamnoides* var. *tamnoides* – F; > *S. hispida* var. *australis* Small – S; > *S. hispida* var. *hispida* – S]

Smilax hugeri (Small) J.B.S. Norton ex Pennell, Huger's Carrionflower. Mt (GA, NC, SC), Pd (GA, NC, SC), Cp (GA, SC): moist deciduous forests; rare (NC Watch List). March-April; August-October. S. NC and e. TN south through SC, GA, and AL to panhandle FL. [= FNA, K, W, Y, Z; = *S. ecirrata* (Engelmann ex Kunth) S. Watson var. *hugeri* (Small) Ahles – RAB; = *Nemexia hugeri* Small – S]

Smilax lasioneura Hooker, Midwestern Carrionflower. Mt (NC, SC, VA?), Pd (NC), {GA}: moist deciduous forests, bluff forests, pine-oak hickory submesic forests, perhaps only or primarily over mafic rocks; rare (GA Rare, NC Rare). April-May; August-September. Ontario and MT south to w. VA (?), w. NC, n. FL, OK, and CO. Material from VA is ambiguous. [= F, FNA, K; = *S. herbacea* var. *lasioneura* (Hooker) Alphonse de Candolle – C, G; = *Nemexia lasioneuron* (Hooker) Rydberg – S; = *S. lasioneuron* – Y, orthographic variant]

Smilax laurifolia Linnaeus, Blaspheme-vine, Bamboo-vine. Cp, Pd, Mt (GA, NC, SC, VA): pocosins, swamp forests, mountain bogs in sw. NC; common (rare in Piedmont and Mountains). July-August; September-October of the second year (and persisting). Primarily a Southeastern Coastal Plain species: NJ south to s. FL, west to w. TN, AR, and e. TX, and also in the Bahama Islands and Cuba. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Smilax pseudochina Linnaeus, Coastal Carrionflower. Cp (GA, NC, SC, VA): pocosins, swamp forests, edges of pine savannas; uncommon. May; August-October. An Atlantic Coastal Plain endemic: NJ, se. PA, and DE south to e. GA. [= C, FNA, K, Y; = *S. tamnifolia* Michaux – RAB, G; = *S. pseudo-china* – F, W, Z, orthographic variant; > *Nemexia tamnifolia* (Michaux) Small – S; > *Nemexia leptanthera* (Pennell) Small – S]

Smilax pulverulenta Michaux. Mt (GA, NC, SC, VA), Pd, Cp (NC, SC, VA): moist deciduous forests: common. May-June; August-October. Se. NY, se. and sc. PA, IN, MO, and e. KS south to NC, TN, and AR. [= F, FNA, K, W, Y, Z; = *S. herbacea* var. *pulverulenta* (Michaux) A. Gray – RAB, C, G; = *Nemexia pulverulenta* (Michaux) Small – S]

Smilax pumila Walter, Sarsaparilla-vine, Dwarf Smilax. Cp (GA, SC): mesic to dryish hammocks and bluffs, northward primarily in maritime-influenced mainland forest, with *Magnolia grandiflora* and *Tilia americana* var. *caroliniana*; rare (NC Watch List). October-November; January-April (and persisting). Ne. SC (within a few hundred meters of Brunswick County, NC) to FL and west to TX. It occurs on Colkins Neck, along the NC-SC border, in maritime-influenced forests with southern affinities, now largely destroyed by golf-course development. This unusual *Smilax* is sometimes cultivated as an ornamental ground-cover. [= RAB, FNA, K, S, Y]

Smilax rotundifolia Linnaeus, Common Greenbrier, Bullbrier, Horsebrier. Mt, Pd, Cp (GA, NC, SC, VA): in a wide variety of upland and wetland habitats; common. April-May; September-November (and persisting). Nova Scotia and s. Ontario south to n. FL and e. TX. [= RAB, C, F, FNA, G, GW, K, S, W, Y; > *S. rotundifolia* var. *quadrangularis* (Muhlenberg ex Willdenow) Wood]

Smilax smallii Morong, Jackson-brier. Cp (GA, NC, SC, VA), Pd, Mt (GA): bottomland forests; uncommon, rare in VA (VA Rare). June-July; April-June of the next year. Se. VA to c. FL, west to s. AR and e. TX, primarily on the Coastal Plain. [= RAB, FNA, G, GW, K, W, Y; = *S. lanceolata* Linnaeus – S, misapplied]

Smilax walteri Pursh, Coral Greenbrier, Red-berried Swamp Smilax. Cp, Pd (GA, NC, SC, VA): swamp forests, bogs, often where submersed for at least part of the year; common (rare in Piedmont). Late April-May; September-November (and persisting). NJ south to c. FL and west to TN, AR, and TX. [= RAB, C, F, FNA, G, GW, K, S, W, Y]

Smilax leptanthera Pennell. See Pennell (1916) for additional information. Treated as valid and rare by GAHP. [= *Nemexia leptanthera* (Pennell) Small – S; < *S. pseudochina*] {investigate}

SPARGANIACEAE (Bur-reed Family)

(see TYPHACEAE)

STEMONACEAE Engler 1887 (Stemona Family)

A family of 3-4 genera and 30-35 species, herbs and shrubs, of Asia, Australia, and se. North America. References: Whetstone in FNA (2002a); Rogers (1982)=Z; Kubitzki in Kubitzki (1998a).

Croomia Torrey 1840 (Croomia)

A genus of 3 species, 2 in China and Japan and 1 in se. North America. Sometimes segregated into the Croomiaceae. References: Whetstone in FNA (2002a); Rogers (1982)=Z; Kubitzki in Kubitzki (1998a).

Croomia pauciflora (Nuttall) Torrey, Croomia. Cp (GA): moist forests, often with beech and basswood; rare (GA Threatened). April-May. AL (or perhaps LA) to sw. GA, Panhandle FL, and allegedly se. GA (Whetstone in FNA 2002, Jones & Coile 1988). [= FNA, K, S, Z]

THEMIDACEAE Salisbury 1866

A family of 12 genera and about 60 species, herbs, of w. North America south to Guatemala. References: Rahm in Kubitzki (1998a).

Dichelostemma Kunth 1843

A genus of 5 species, of w. United States and Mexico. References: Pires in FNA (2002a); Rahm in Kubitzki (1998a).

* ***Dichelostemma congestum*** (Smith) Kunth, native of the Pacific northwestern North America, is cultivated and apparently escaped in the Piedmont of nc. GA (Jones & Coile 1988). {further investigate} [= FNA, K; = *Brodiaea congesta* Smith]

TOFIELDIACEAE Takhtajan 1994 (False-asphodel Family)

A family of 5 genera and about 30 species, of disjunct distribution in north temperate and subarctic areas, and in the Guayana Shield and northern Andes areas of n. South America. Reveal & Zomlefer (1998) place the Tofieldiaceae in the monotypic order Tofieldiales, only distantly related to the Liliaceae. Tamura in Kubitzki (1998a) treats this group as subfamily Tofieldioideae of the Nartheciaceae. References: Zomlefer (1997c, 1999); Tamura in Kubitzki (1998a).

1 Inflorescence 1-flowered; tepals yellow; seeds yellowish; [endemic to Panhandle FL] ..... ***[Harperocallis flava]***
1 Inflorescence a raceme or thyrse; tepals white to pale cream (fading to yellowish on dried specimens); seeds brown; [collectively widespread].
  2 Bracts of the inflorescence large, spathelike, acuminate-aristate at the tip; tepals 9-17 mm long; stamens (6-) 9 (-12) .... ***Pleea***
  2 Bracts of the inflorescence minute; tepals 2.5-5 mm long; stamens 6.
    3 Inflorescence a raceme (the flower pedicels attached to the scape singly); scape smooth; flowering (late August-) late September-October..... ***Tofieldia***
    3 Inflorecence a thyrse (flower pedicels attached to the scape in groups of 3-7); scape scurfy-scabrous; flowering June-August ..... ***Triantha***

Harperocallis McDaniel (Harper's Beauty)

A monotypic genus, perennial, of southeastern United States. References: McDaniel (1968)=Y; Zomlefer (1997c)=Z; Utech & Anderson in FNA (2002a).

Harperocallis flava McDaniel, Harper's Beauty. Pineland bogs. Endemic to FL Panhandle (Franklin and Liberty counties). [= FNA, K, Y, Z]

Pleea Michaux 1803 (Rush-featherling)

A monotypic genus, of se. North America, sometimes included in *Tofieldia*. References: Zomlefer (1997c)=Z; Tamura in Kubitzki (1998a); Packer in FNA (2002a).

Pleea tenuifolia Michaux, Rush-featherling. Cp (GA?, NC, SC): locally abundant in wet savannas, pocosin margins, usually in peaty soil, locally abundant in a few counties in se. NC, rare inland (very rarely as far as Cumberland County, NC); uncommon (SC Rare). September-October; October-November. A Southeastern Coastal Plain endemic: se. NC and ne. SC south to sw. GA, n. FL and s. AL, but apparently absent from s. SC and ne. GA. When in flower in wet savannas and powerline rights-of-way in Brunswick County, *Pleea* visually dominates areas up to hundreds of hectares. In sterile condition, it is recognizable by its leathery equitant leaves, bright red at their bases. [= RAB, FNA, GW, K, S; = *Tofieldia tenuifolia* (Michaux) Utech – Z]

Tofieldia Hudson 1778 (Bog Asphodel)

A genus of about 7-8 species, of temperate to subarctic North America and Eurasia. There is controversy about the circumscription of *Tofieldia*.relative to the related genera *Pleea* and *Triantha* (here recognized, but sometimes subsumed into *Tofieldia*. Some believe that *Tofieldia*, *Triantha*, and *Pleea* should be treated together in a broadly circumscribed *Tofieldia* (Utech 1978, Zomlefer 1997c); others that all three should be treated separately (Ambrose 1980; Packer 1993; Cruden 1991). Packer in FNA (2002a) has recently recognized *Triantha*, *Pleea*, and *Tofieldia* as separate genera, a conclusion followed here in part because of the ancient, relictual nature of these units. References: Zomlefer (1997c)=Z; Packer (1993); Ambrose (1980); Utech (1978); Hitchcock (1944)=Y; Tamura in Kubitzki (1998a); Packer in FNA (2002a); Cruden (1991).

Identification notes: In sterile condition, *Tofieldia glabra* can be distinguished from *Iris verna* by its minutely upwardly-scabrous margins (*Iris* has smooth margins).

Tofieldia glabra Nuttall, Carolina Bog Asphodel, White Asphodel. Cp (NC, SC): savanna-pocosin ecotones, wet savannas, seepage bogs; rare (US Species of Concern, NC Rare, SC Rare). (Late August-) late September-October; October-November. Endemic to the coastal plain and sandhills of NC and northern SC (the reports from GA are dubious). [= RAB, FNA, GW, K, S, Z]

Triantha (Nuttall) Baker

A genus of ca. 4 species, herbs, of North America and Japan. References: Cruden (1991).

1 Perianth equal to or longer than the capsule; seeds with tails 1/2 or less as long as the body ..... ***Tr. racemosa***
1 Perianth shorter than the capsule; seeds with at least 1 tail equal to or longer than the body ..... ***Tr. glutinosa***

Triantha glutinosa (Michaux) Baker, Sticky Bog Asphodel. Mt (GA, NC, VA), Pd (NC): bogs and seeps, especially over mafic or calcareous rocks; rare (GA Rare, NC Rare, VA Rare). July-August; September-October. Newfoundland west to British Columbia, south to w. NC, ne. GA (Jones & Coile 1988), WV, OH, n. IN, WI, MT, and OR. [= FNA, K, S; = *Tofieldia racemosa* var. *glutinosa* (Michaux) Ahles – RAB; = *Tofieldia glutinosa* (Michaux) Persoon – F, G, W; > *Tofieldia glutinosa* ssp. *glutinosa* – GW, Y, Z; > *Tofieldia glutinosa* var. *glutinosa* – C]

Triantha racemosa (Walter) Small, Coastal Plain Bog Asphodel. Cp (GA, NC, SC, VA), Mt (VA), Pd (GA): savannas, savanna-pocosin ecotones, seepage bogs, sinkhole ponds (dolines) in the mountains of VA; uncommon (VA Rare). June-early August; late September-October. NJ south to nw. FL, west to e. TX; disjunct in c. TN. [= FNA, K, S; = *Tofieldia racemosa* var. *racemosa* – RAB; = *Tofieldia racemosa* (Walter) Britton, Sterns, & Poggenburg – C, F, G, GW, W, Z]

TRILLIACEAE Lindley 1846 (Trillium Family)

References: Farmer & Schilling (2002).

Trillium Linnaeus 1753 (Trillium, Toadshade, Wake-robin)

A genus of about 50 species, of e. North America, w. North America, and e. Asia (especially se. North America). The genus *Trillium* in our area is difficult and complex. *Trillium* is now usually separated from the Liliaceae (along with Eurasian genera such as *Paris)* into the Trilliaceae (Zomlefer 1996, Kato et al. 1995, Kawano & Kato 1995, and others) or less drastically as part of the Melanthiaceae (Chase et al. 2000; Tamura et al. 2004). The traditonal division of the genus into two well-marked subgenera, subgenus *Trillium*, the pedicellate trilliums, and subgenus *Phyllantherum*, the sessile-flowered trilliums, has been partly supported by molecular and morphological phylogenetic studies (Kawano & Kato 1995, Kato et al. 1995). These studies support the monophyly of subgenus *Phyllantherum*, but suggest that subgenus *Trillium* consists of several groups which are only rather distantly related (Kawano & Kato 1995, Kazempour Osaloo et al. 1999; Farmer & Schilling 2002). Most species are slow-growing perennials; seedlings, juveniles, and depauperate or "tired" plants are one-leaved ("monilliums"), recognizable by the similar color, texture and venation of the single leaf to the three leaves of mature plants. In some species, such as *T. pusillum*, individual plants remain in the single-leaf stage for long periods of time, and populations may consist largely of juvenile plants. References: Patrick (1986)=Z; Freeman (1975)=Y; Case & Case 1997=X; Patrick in Wofford (1989); Case in FNA (2002a); Mitchell (1990); Kato et al. (1995); Kawano & Kato (1995); Tamura in Kubitzki (1998a); Zomlefer (1996); Farmer & Schilling (2002). Key adapted from Z, unpublished keys of J.D. Freeman, and other sources.

Identification notes: Teratological forms are frequent in some species, as, for instance, leaves, sepals, and stamens in 2's or 4's, petals sepaloid, or sepals petaloid, and so forth. What are called “leaves” in *Trillium* are actually bracts.

1 Leaves mottled with 2-3 different shades of green (very rarely the mottling not apparent); flower sessile; [subgenus *Phyllantherum*] ..... **Key A**
1 Leaves solid green; flower on a pedicel (the pedicel sometimes very short or essentially absent in some varieties of *T. pusillum*); [subgenus *Trillium*].
  2 Petals relatively thick in texture, straight-margined, maroon or white, rarely yellow or green (if white, turning brown with age); stigmas thicker at base, tapering gradually toward tip, distinct; ovary purple-black, maroon, pink, or white, 6-angled; [*Erectum* group] ..... **Key B**
  2 Petals relatively delicate in texture, wavy-margined, white to deep pink (if white, generally fading to pink with age); stigmas thin, uniform in thickness from base to apex, somewhat fused at the base into a short style; ovary greenish-white to white, 3- or 6-angled or-lobed ..... **Key C**

Key A – trilliums with sessile flowers and mottled leaves (subgenus *Phyllantherum*)

1 Scape more-or-less decumbent in a gentle S-shape, the leaves lying on the ground, or nearly so; flower fragrance putrid; [*T. sessile* group].
  2 Anther dehiscence extrorse (toward the outside of the flower); stamens about 0.25× as long as the petals; upper stem puberulent; petals 4-10 cm long; filaments 2-5 mm long ..... ***T. decumbens***
  2 Anther dehiscence introrse (toward the inside of the flower); stamens about 0.5× as long as the petals; upper stem glabrous; petals 2.5-5.5 cm long; filaments 1-2 mm long ..... ***T. reliquum***
1 Scape erect, straight, the leaves bone well above the ground (the leaf tips sometimes nearly touching the ground); flower fragrance various.

3 Sepals abruptly deflexed between and below the leaves, distinctly descending below the approximately horizontal plane of the leaves; filaments about as long as incurved anthers; [*T. recurvatum* group].
4 Leaves sessile or subsessile, borne in a descending or drooping manner (similar to the sepals); petals usually > 4× as long as wide ..... ***T. lancifolium***
4 Leaves distinctly petiolate, borne in an ascending manner (strongly contrasting in position with the strongly deflexed sepals); petals usually ca. 2× as long as wide ..... ***T. recurvatum***
3 Sepals erect, ascending, or spreading, usually borne at or above the approximately horizontal plane of the leaves; filaments much shorter than the upright anthers.
5 Petals spreading to horizontal, with 1-2 spiral twists (looking something like an airplane propellor); anther dehiscence extrorse (toward the outside of the flower); [*T. sessile* group] ..... ***[T. stamineum]***
5 Petals erect to slightly spreading, not spirally twisted; anther dehiscence introrse (toward the inside of the flower), or latrorse (toward the side).
6 Petals broadly spatulate, clawed, broadly rounded (though sometimes with an apiculus) at the tip; petals pale lemon-yellow (the claws greenish or maroon); flower fragrance clove-like; [of the Savannah River drainage, from sw. NC southeastward along the GA-SC border]; [*T. sessile* group] ..... ***T. discolor***
6 Petals lanceolate, elliptic, obovate, or oblanceolate, but not broadly spatulate and distinctly clawed, generally acute at the tip; petals maroon-red, purplish-brown, yellow, or green; flower fragrance various; [collectively widespread in our area].
7 Stigmas > 1.5× as long as the ovary; stamens about 0.5× as long as the petals; anther connectives prominently prolonged into a beak 1.0-5.0 mm long (beyond the anther sacs); [*T. sessile* group] ..... ***T. sessile***
7 Stigmas as long as the ovary or shorter; stamens < 0.5× as long as the petals; anthers blunt, the connectives extended < 1.0 mm beyond the anther sacs.
8 Ovary ellipsoid; leaves acute, the margins of the outer 1/3 more or less straight; leaf blade mottled with 3 or more shades of green, the palest shade forming a very conspicuous pale green streak along the midvein; [of the Coastal Plain and fall-line area of GA, AL, and FL panhandle]; [*T. sessile* group].
9 Stem 2.5-3× as long as the leaves; petals oblanceolate-obovate, usually 1.5-3× as long as wide ..... ***T. decipiens***
9 Stem 1-2× as long as the leaves; petals narrowly elliptic to oblanceolate-obovate, usually 3-5× as long as wide ..... ***T. underwoodii***
8 Ovary ovoid; leaves acute to acuminate, the margins of the outer 1/3 convex; leaf blade mottled with 2-3 shades of green, paler shades sometimes prominent along the midvein, but not as above; [collectively widespread in our area]; [*T. maculatum* group].
10 Petals < 4× as long as wide, elliptic-oblanceolate to oblanceolate; [of inland provinces, rarely in the Coastal Plain].
11 Flower fragrance fruity-spicy, like green apples or *Calycanthus* (rarely musky); petals maroon, bronze, green, yellow; portions of ovary and stamens purplish during anthesis ..... ***T. cuneatum***
11 Flower fragrance lemon-like; petals greenish-yellow darkening to yellow; ovary and stamens greenish-white during anthesis ..... ***T. luteum***
10 Petals > 4.5× as long as wide, narrowly oblanceolate-spatulate to linera oblnaceolate; [of the Coastal Plain, rarely further inland].
12 Ovary 3-angled at base of stigmas (rarely hexagonal); petals 7-17 mm wide, narrowly spatulate (appearing clawed); outer whorl of stamens broader, anther dehiscence introrse; flower fragrance faintly spicy-fragrant, banana-like; [of AL, n. FL, GA, and e. SC] ..... ***T. maculatum***
12 Ovary 6-angled; petals 3-8 mm wide, linear-oblanceolate, narrowly elliptic, to linear-lanceolate (weakly or not clawed); flower fragrance putrid, like rotting meat; [of MS and LA].
13 Petals 3-5 mm wide; anther dehiscence introrse; anther connective extending 1-1.5 mm beyond the anther sacs ..... ***[T. foetidissimum]***
13 Petals 4-8 mm wide; anther dehiscence latrorse; anther connective scarcely extending beyond the anther sacs ..... ***[T. ludovicianum]***

Key B – trilliums with unmottled leaves and pedicellate flowers, of the *Erectum* Group

1 Pedicel abruptly declined below the leaves; leaves petiolate to subsessile (or even sessile); petals recurved between the sepals.
2 Stamens far exceeding the pistil, filaments as long as the ovary or longer, at least partly maroon, the anther sacs yellow to maroon; ovary small, globose, 3-12 mm long; flower fragrance pungent, rose-like; pedicel long, 3-13 cm long; petals strongly overlapping, usually maroon (rarely white or whitish) ..... ***T. vaseyi***

2 Stamens at most 1.5× longer than the pistil, filaments shorter than the ovary, white, the anther sacs lavender to vivid purple (or albino); ovary large, ovoid, 10-17 mm long; flower fragrance weak, like green apples; pedicel short, 1.5-3 cm long; petals not strongly overlapping, usually white (rarely maroon).
3 Anthers 7.5 mm long or less, about as long as the filaments or shorter; petals narrowly elliptic to obovate, often scarcely larger than the sepals, delicate, occasionally margined in pink or green; [of damp forests south to n. VA] ..... ***T. cernuum***
3 Anthers 7.0 mm long or more, longer than the filaments; petals ovate to elliptic, much broader than the sepals; [of mesic forests north to n. NC] ..... ***T. rugelii***

1 Pedicel inclined, erect or declined (the flower generally borne above the leaves); leaves sessile to subsessile; petals variously disposed, generally spreading in the same plane as the sepals or forming a cup concealing the ovary in side view (then recurved toward the apex).
4 Anthers creamy-white, 2-5× as long as the filaments; ovary white to pink (rarely darker), ovoid (widest near the base); stigmas prominent, nearly as long as the ovary; flower fragrance weakly sweet to musty ..... ***T. flexipes***
4 Anthers creamy-white, yellowish, or purplish, at most 2.2× as long as the filaments; ovary purple-black to maroon (or albino), subglobose; stigmas smaller, < 0.3× as long as the ovary; flower fragrance variable (see below).
5 Petals lanceolate to narrowly ovate or elliptic, spreading from base in the same plane as the sepals, rarely > 2× as broad as the sepals; sepals 0.5-0.8× as long as the pedicel. weakly sulcate-tipped (keeled and upturned near apex); flower fragrance unpleasant, musty..... ***T. erectum***
5 Petals ovate, overlapping in some instances and forming a cup-shaped base, variably recurved apically, > 2× as broad as the sepals; sepals < 0.5 as long as the pedicel, sulcate-tipped; fragrance pleasant, sweet to fungal.
6 Sepals 0.4-0.7× as long as the pedicel; leaves broadly elliptic; stamens 1.2-1.8× pistil height; flowers generally large, petals much longer than the sepals; sepals green; petals usually white (rarely maroon); flower fragrance sweet, like green apples; [of sw. NC and nw. SC in our area]..... ***T. simile***
6 Sepals 0.2-0.4× as long as the pedicel; leaves broadly obovate; stamens 0.9-1.6× pistil height; flowers relatively small, petals only slightly longer than the sepals; sepals suffused with purple; petals usually maroon (rarely white); flower fragrance fungal, like fresh mushrooms; [of sw. VA and nw. NC in our area] ..... ***T. sulcatum***

Key C – trilliums with unmottled leaves and pedicellate flowers, of various affinities

1 Petals white with triangular red blaze (rarely entirely white or pinkish); anther sacs lavender to white, dehiscence extrorse; fruit a red berry; leaves long-acuminate; [of acidic sites in the Mountains, generally strongly associated with either *Pinus, Tsuga, Picea, Rhododendron*, or other heaths] ..... ***T. undulatum***

1 Petals white to deep pink, lacking a red blaze; anther sacs yellow, dehiscence introrse; fruit a white to greenish-white, fleshy, irregularly dehiscent capsule; leaves obtuse to acute (or somewhat acuminate in *T. grandiflorum*); [of less distinctly acidic sites, collectively widespread in our area].
2 Pedicel declined below the leaves (rarely erect); sepals arcuate-recurved; anthers irregularly twisted outward; pollen egg-yolk yellow ..... ***T. catesbaei***
2 Pedicel inclined above leaves to strictly erect; sepals not arcuate-recurved; anthers erect, regular; pollen light yellow.
3 Sepals about as broad as the petals or broader, obtuse; leaves obtuse; anthers purplish-green between anther sacs; pedicel erect through fruiting.
4 Pedicel 1-4 mm long ..... ***T. pusillum*** *var.* ***virginianum***
4 Pedicel 5-30 mm long ..... ***T. pusillum*** *var.* ***pusillum***
3 Sepals narrower than the petals, acute; anthers white to greenish-white between the anther sacs; leaves obtuse, acute, or acuminate; pedicel somewhat angled from the vertical.
5 Ovary obscurely 3-lobed; leaves < 5 cm long, blue-green, obtuse ..... ***T. nivale***
5 Ovary sharply 6-angled (-winged); leaves > 5 cm long, green, acute to acuminate.
6 Petals obovate, tightly rolled at base, abruptly flared near the apex; leaves broadly elliptic, acuminate; style minute, < 1.0 mm long..... ***T. grandiflorum***
6 Petals elliptic, loose, gradually separating; leaves ovate, acute; style conspicuous, > 1.5 mm long..... ***T. persistens***

Trillium catesbaei Elliott, Catesby's Trillium, Bashful Trillium, Rosy Wake-robin. Pd (GA, NC, SC), Mt (GA, NC, SC), Cp (GA, NC): bottomland forests, mesic slopes, cove forests; common (uncommon in Mountains). Late March-early June; July-August. Nc. NC south to sw. GA and se. AL, north in the interior to n. AL and se. TN, centered in the Piedmont from NC to GA, but extending into the Mountains and Coastal Plain. Petals white to pink. [= RAB, FNA, K, S, W, X, Z]

Trillium cernuum Linnaeus, Northern Nodding Trillium. Mt (VA): damp forest with *Fraxinus nigra* and *Ulmus americana*; rare (VA Rare). Late April-May. Newfoundland, Hudson Bay area, and se. Saskatchewan south to n. VA, ne. WV, n. IN, n. IL, n. IA, and SD. Petals white, pink, maroon, or green. [= FNA, K, W, X, Z; < *T. cernuum* – RAB, F, S (apparently also including *T. rugelii*); > *T. cernuum* var. *cernuum* – C, G; >< *T. cernuum* var. *macranthum* A.J. Eames & Wiegand – C, G]

Trillium cuneatum Rafinesque, Sweet Betsy, Purple Toadshade, Large Toadshade, Wedge-petal Trillium, Bloody Butcher. Pd, Mt (GA, NC, SC), Cp (GA): in rich soils of cove forests, moist slopes, and bottomlands, usually over mafic or calcareous rocks; uncommon, but locally abundant. Mid March-April; late May-June. Centered in the Southern Appalachians (but is more

abundant in adjacent physiographic provinces), extending north to the Highland Rim of KY, west to the Interior Low Plateau of TN, south to the Coastal Plain of MS and AL, and east to the Piedmont of GA, SC, and NC. Petals maroon, yellow, green, or various intermediate shades. [= C, FNA, K, W, X, Y, Z; = *T. cuneatum* var. *cuneatum* – RAB; > *T. cuneatum* – F; >< *T. viride* Beck – F, misapplied with respect to NC material; < *T. viride* var. *luteum* (Muhlenberg) Gleason – G, misapplied (also see *T. luteum*); > *T. hugeri* – S; >< *T. underwoodii* – S, misapplied]

Trillium decipiens J.D. Freeman, Chattahoochee Trillium, Deceptive Trillium. Cp (GA): moist forests; uncommon. Late January-early April. W. FL and sc. AL east to ec. GA, and might be expected in SC, near the Fall Line. It is similar to *T. underwoodii*. [= FNA, K, X, Y, Z]

Trillium decumbens Harbison, Decumbent Trillium. Mt, Pd, Cp (GA): moist forests; uncommon (rare in Piedmont and Coastal Plain). Mid-March-April. Se. TN (Chester et al. 1993) south and west to nw. GA and nc. AL, and disjunct in Houston County, in central GA Coastal Plain; it should be sought in extreme sw. NC, an extremely "under-botanized" area. [= FNA, K, S, X, Y, Z]

Trillium discolor Wray ex Hooker, Pale Yellow Trillium, Pale Trillium, Small Yellow Toadshade. Mt (GA, NC, SC), Pd (GA, SC): rich cove forests, restricted to the Savannah River drainage; rare (GA Special Concern, NC Threatened, SC Rare). Late March-early May; June-July. Endemic to the Savannah River drainage of nw. SC, ne. GA, and sw. NC, occurring in the Blue Ridge and Piedmont. In NC it is restricted to a few sites along the Whitewater and Thompson Rivers. Petals pale yellow, with maroon or greenish claws. [= RAB, FNA, K, S, W, X, Y, Z]

Trillium erectum Linnaeus, Red Trillium, Purple Trillium, Stinking Willie, Stinking Benjamin, Wake-robin. Mt (GA, NC, SC, VA): wooded slopes, usually at middle to high elevations; common. April-early June; July-August. New Brunswick, Québec, and MI south to w. NC, nw. SC, n. GA, e. TN, IN, and se. WI. Petals maroon, white, yellow, green, or various intermediate shades. [= C, K, W, X, Z; < *T. erectum* var. *erectum* – RAB (also see *T. sulcatum*); < *T. erectum* – F, G, S (also see *T. sulcatum*); > *T. erectum* var. *erectum* – FNA; > *T. erectum* var. *album* (Michaux) Pursh – FNA]

Trillium flexipes Rafinesque, Bent White Trillium. Mt (GA, NC, VA): moist coves over mafic or calcareous rocks; rare (GA Special Concern, NC Rare, VA Rare). April. E. PA, s. Ontario and s. MN south to w. NC, nw. GA, n. AL, n. MS, mostly west of the Blue Ridge, but scattered in the Blue Ridge of NC, and disjunct east of the Blue Ridge in DE, PA, and MD. Petals white or maroon. [= C, F, FNA, K, W, X, Z; < *T. erectum* var. *vaseyi* – RAB; = *T. gleasoni* Fernald – G; = *T. declinatum* (A. Gray) Gleason – S, misapplied]

Trillium grandiflorum (Michaux) Salisbury, Large-flowered Trillium, White Trillium, Great White Trillium. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): rich coves and mesic slopes, also less typically on ridges over "rich" rock types; common (SC Rare). April-May; July-August. S. Québec, s. Ontario, MI, and MN, south to NJ, c. NC, nw. SC, n. GA, n. AL, s. IL, and IA. Petals white to pink. [= RAB, C, F, FNA, G, K, S, W, X, Z]

Trillium lancifolium Rafinesque, Lanceleaf Trillium, Narrowleaf Trillium. Pd (SC), Mt (GA), Cp (GA): rich forests over marble, limestone, and other calcareous substrates, floodplain forests; rare (GA Special Concern, SC Rare). Late March-April. Nc. SC and se. TN south through w. GA and AL to panhandle FL and se. AL. Petals purple, green, or greenish-purple. [= FNA, K, Y, X, Z; = *T. lanceolatum* (S. Watson) Boykin ex Small – RAB, S]

Trillium luteum (Muhlenberg) Harbison, Yellow Trillium, Yellow Toadshade, Wax Trillium, Lemon-scented Trillium. Mt (GA, NC, VA*): moist coves over mafic or calcareous rocks, restricted to the vicinity of the Great Smokies; uncommon (but locally abundant). Mid March-April; late May-June. Nearly endemic to the Southern Appalachians: w. NC, e. TN, nw. GA, and se. KY, allegedly disjunct in c. AL (planted and naturalized in Frederick County, VA). Petals yellow. [= C, F, FNA, K, W, X, Y, Z; = *T. cuneatum* var. *luteum* (Muhlenberg) Ahles – RAB; < *T. viride* Beck var. *luteum* (Muhlenberg) Gleason – G (also see *T. cuneatum*); < *T. sessile* – S, misapplied]

Trillium maculatum Rafinesque, Mottled Trillium, Spotted Trillium. Cp, Pd (GA, SC): rich forests and floodplains, over calcareous materials such as coquina limestone ("marl") or on shell middens; uncommon. Early February-mid April. S. SC south to n. FL, west to sc. AL. Petals maroon or yellow. [= FNA, K, X, Y, Z; < *T. viride* – RAB, misapplied; < *T. sessile* – S, misapplied]

Trillium nivale Riddell, Snow Trillium, Dwarf White Trillium. Mt (VA): rocky, calcareous forests; rare (VA Rare). Early March-early April. MA, sw. PA, MI, WI, s. MN, and e. SD south to n. VA, KY, s. IN, s. IL, s. MO, and se. NE. Petals white to pink. [= C, F, FNA, G, K, X, Z]

Trillium persistens Duncan, Persistent Trillium. Mt (GA, SC): acidic forests with hemlocks and heaths; rare (US Endangered, GA Endangered, SC Rare). April. Endemic to a short stretch of the Tallulah-Tugaloo river system in nw. SC and ne. GA. Petals white to pink. [= FNA, K, W, X, Z]

Trillium pusillum Michaux *var.* ***monticulum*** Bodkin & Reveal. Mt (VA): dry to dry-mesic forests and woodlands, moist forests along small mountain streams; rare. Endemic to nw. VA, e. WV, w. MD and disjunctly in sw. VA (at The Glades, Grayson County). NC. Var. *monticulum* Bodkin & Reveal has been controversial; see Cabe (1995) and Cabe & Werth (1995) for additional discussion of variation within *T. pusillum* in Virginia and elsewhere. Petals white to pink. [< *T. pusillum* – Z; < *T. pusillum* var. *virginianum* – C, K; < *T. pusillum* var. *pusillum* – FNA; = *T. pusillum* var. *monticola* Bodkin & Reveal – X, orthographic error] {not keyed at this time}

Trillium pusillum Michaux *var.* ***ozarkanum*** (Palmer & Steyermark) Steyermark. Mt (NC): dry to dry-mesic slopes, in NC under *Quercus coccinea* and *Kalmia latifolia*; rare (NC Endangered). KY, TN, w. NC, AR, MO, and s. MS. Petals white to pink. [= K, X; < *T. pusillum* – RAB, G, S, Z; < *T. pusillum* var. *pusillum* – FNA; **= *T. ozarkanum*** Palmer & Steyermark] {not keyed at this time}

Trillium pusillum *var.* ***2***. Mt (GA): {habitat}; rare. Endemic to n. GA. Apparently most closely related to *Trillium texanum*. Petals white to pink. {not keyed at this time}

Trillium pusillum Michaux *var*. ***pusillum***, Carolina Least Trillium, Carolina Dwarf Trillium. Cp (NC, SC), Mt (GA, NC): bottomland forests along small streams in the upper Coastal Plain, ecotones of calcareous savannas and swamp forests in the lower Coastal Plain; rare (US Species of Concern, GA Special Concern, NC Endangered, SC Rare). Late March-May; June-July. Endemic to the outer Coastal Plain of e. NC and e. SC. *T. pusillum* is somewhat reminiscent of a tiny *T. grandiflorum*. The species as a whole has a highly disjunct and fragmented range, involving most of the Southeastern states. In addition to the taxa treated here, the complex includes *T. texanum* Buckley (of e. TX). The *Trillium pusillum* complex is currently undergoing study by Susan Farmer (Univ. of Tennessee); preliminary analysis shows that the published varieties are "good" and that the recognition of additional taxa may be warranted. Petals white to pink. [= X; < *T. pusillum* var. *pusillum* – C, F, FNA, K; < *T. pusillum* – RAB, G, S, Z; **= *T. pusillum*** (sensu stricto)]

Trillium pusillum Michaux *var*. ***virginianum*** Fernald, Virginia Least Trillium, Virginia Dwarf Trillium. Cp (NC, VA), Mt (VA): bottomland forests along small streams in the upper Coastal Plain, swamps and bottomland forests, also mesic beech islands in swamp forests, moist mafic areas in Grayson Co. VA; rare (US Species of Concern, NC Endangered, VA Rare). Late March-May; June-July. Var. *virginianum* occurs in the Coastal Plain of se. VA and ne. NC; disjunct in Grayson County in the Mountains of sw. VA. The Grayson County site is within a kilometer of the Alleghany County, NC border, and the plant may be found to occur in nw. NC. Petals white to pink. [= F, FNA, X ; < *T. pusillum* – RAB, G, S, Z; < *T. pusillum* var. *virginianum* – C, K (also see var. *monticulum*); **= *T. virginianum*** (Fernald) C.F. Reed]

Trillium recurvatum Beck, Prairie Trillium, Prairie Wake-robin. Mt, Pd (NC): rich soils of cove over calcareous rock; rare (NC Rare). W. OH west to s. MI, s. WI, and e. IA, south to c. TN, c. AL, c. MS, n. LA, and e. TX; disjunct in the Cumberland Plateau of e. TN, e. KY, and the Blue Ridge and w. Piedmont of NC. The two known NC occurrences (Catawba and Madison counties) appear to be native. Petals maroon or yellow. [= C, F, FNA, G, K, S, X, Y, Z]

Trillium reliquum J.D. Freeman, Relict Trillium. Pd (GA, SC), Cp (GA): rich forests on bluffs and ravine slopes; rare (US Endangered, GA Endangered, SC Rare). Mid March-late April. Known from two disjunct areas, along the Savannah River in the vicinity of Augusta, on the border of SC (Aiken County) and GA (Richmond counties), and along the Chattahootchee River in sw. GA (Clay and Early counties). [= FNA, K, X, Y, Z]

Trillium rugelii Rendle, Southern Nodding Trillium. Mt, Pd (GA, NC, SC): rich woodlands and forests over mafic or calcareous rocks; rare (NC Watch List, SC Rare). April-early May. W. NC and e. TN south to c. GA, and c. AL. Petals white or maroon. [= FNA, K, W, X, Z; < *T. cernuum* – RAB, F, S; < *T. cernuum* var. *macranthum* A.J. Eames & Wiegand – C, G]

Trillium sessile Linnaeus, Sessile Trillium, Sessile Toadshade, Toad Trillium. Mt (VA), Pd (VA), Cp (NC, VA): rich forests, in NC limited to very rich soils of natural levees and lower slopes along the Roanoke River; uncommon in VA, rare in NC (NC Rare). March-April. Primarily a species of the northern Midwest, *T. sessile* ranges from MD, w. PA, w. NY, s. MI, n. IL and n. MO, south to e. VA, ne. NC, c. TN, n. AL, and n. AR. The easternmost occurrences are disjunct populations east of the Blue Ridge, in MD, VA, and along the Roanoke River in ne. NC. Petals maroon or green. [= C, F, FNA, G, K, W, X, Y, Z]

Trillium simile Gleason, Sweet White Trillium. Mt (GA, NC, SC): very rich soils of slopes and coves over mafic or calcareous rocks, often also in or near seepage; rare (GA Special Concern, NC Rare, SC Rare). Late March-early May; June-July. A Southern Appalachian endemic: Blue Ridge of w. NC, nw. SC, e. TN, and n. GA. Petals white or very rarely maroon. [= FNA, K, S, W, X, Z; < *T. erectum* var. *vaseyi* – RAB]

Trillium sulcatum T. Patrick, Southern Red Trillium, Barksdale Trillium. Mt (GA, NC, VA): coves and moist slopes; uncommon (GA Special Concern). April-May. Primarily a species of the sedimentary rock Appalachians, *T. sulcatum* ranges from s. WV, sw. VA, and e. KY south to nw. NC (where it enters the Blue Ridge), w. TN, nw. GA, and ne. AL. This species seems quite distinctive for its small, generally maroon flowers (with strongly sulcate sepals purplish as well), borne on very long pedicels. Petals maroon or white. [= C, FNA, K, W, X, Z; < *T. erectum* var. *erectum* – RAB; < *T. erectum* – F, G, S]

Trillium underwoodii Small, Underwood's Trillium. Cp (GA): moist forests; uncommon. Late February-mid April. N. FL north to wc. GA and c. and s. AL; it is the only erect trillium with the stems < 2× as long as the leaves. [= FNA, K, S, X, Y, Z]

Trillium undulatum Willdenow, Painted Trillium, Striped Wake-robin. Mt (GA, NC, SC, VA): acidic soils of ridges, slopes, and bog margins, mostly at high elevations and often associated with *Rhododendron, Tsuga, Pinus,* or *Picea*; common (SC Rare). Late April-May; late July-August. New Brunswick, e. Québec, s. Ontario, and MI, south to w. NC, nw. SC, n. GA, e. TN, and ne. OH. Of all our species, this is the species best adapted to acidic soils. Petals white with a red blaze. [= RAB, C, F, FNA, G, K, S, W, X, Z]

Trillium vaseyi Harbison, Sweet Trillium, Vasey Trillium, Sweet Beth. Mt (GA, NC, SC), Pd (GA): cove forests; uncommon. Late April-early June. This species is a Southern Appalachian endemic: w. NC and e. TN south to nw. SC, n. GA, and ne. AL. Perhaps the largest trillium species, with the stems to 7 dm tall. Petals maroon or white. [= FNA, K, S, W, X, Z; < *T. erectum* var. *vaseyi* (Harbison) Ahles – RAB (also see *T. simile* and *T. flexipes*)]

Trillium foetidissimum J.D. Freeman, Stinking Wake-robin. Bluffs, ravines, bottomlands. Late February-early April. MS west to LA. [= FNA, K, X, Y, Z]

Trillium ludovicianum Harbison, Louisiana Wake-robin. Floodplains, streambanks, ravine forests. Early March-April. MS west to LA. Reports of this species for AL are based on specimens of *Trillium species 2*. [= FNA, K, X, Y, Z]

Trillium pusillum var. *1*. AL, TN, KY. Petals white to pink. [< *T. pusillum* var. *pusillum* – C, F, FNA, K; < *T. pusillum* – G, S, Z; = *T. pusillum* var. *alabamicum* – X (nomen nudum)] {not keyed at this time}

Trillium species 1. Pd (SC): rich forests; rare. Under study by L.L. Gaddy. Somewhat similar to *T. lancifolium* and *T. recurvatum*. With clawed, bicolored petals (the claw maroon and the blade green) and green sepals reflexed somewhat (in the same plane as the drooping leaves). [previously misidentified as *T. lancifolium*] {not keyed at this time}

Trillium species 2. Mt (GA): rich forests; rare. Under study by Susan Farmer. {not keyed at this time}

Trillium species 3. Lookout Mountain area, reesembles ***T. ludovicianum***. Under study by Susan Farmer. {not keyed at this time}

Trillium stamineum Harbison, Twisted Trillium. Floodplains, slopes, especially over limestone. Late March-mid May. C. TN (Chester et al. 1993) south to c. AL, and e. MS. [= FNA, K, S, X, Y, Z]

TYPHACEAE A.L. de Jussieu 1789 (Cattail Family)

A family of 2 genera with 16-30 species, wetland herbs, cosmopolitan. References: Kaul in FNA (2000); Smith in FNA (2000); Thieret & Luken (1996); Kubitzki in Kubitzki (1998b).

1 Inflorescences headlike, globular ..... ***Sparganium***
1 Inflorescences spikelike, cylindrical ..... ***Typha***

Sparganium Linnaeus 1753 (Bur-reed)

A genus of about 14 species, wetland and aquatic herbs, primarily circumboreal in arctic and temperate regions, but also in the tropics of Asia, and temperate Australia. References: Kaul in FNA (2000); Thieret (1982)=Z; Beal (1960)=Y; Crow & Hellquist (2000b)=X; Kubitzki in Kubitzki (1998b).

1 Stigmas 2; fruits truncate at apex, obpyramidal, very abruptly beaked, 4-8 mm broad ..... ***S. eurycarpum***
1 Stigmas 1; fruits rounded or acuminate to a beak at the apex, elliptic, fusiform, or obovate, 1-3 (-4) mm broad.
  2 Pistillate heads (primarily those upward) supra-axillary (borne distinctly above the axils of the subtending leaf-like bracts); tepals lacking subapical dark spot ..... ***S. emersum***
  2 Pistillate heads (all) axillary (borne in the axils of the subtending leaf-like bracts) or several on axillary branches which lack leaf-like bracts; tepals with prominent subapical dark spot.
    3 Mature fruits dull, finely pitted, the body 3-5 mm long; fruiting heads 1.5-2.5 cm in diameter; branches of the inflorescence with (0-) 1-3 pistillate heads (in addition to staminate heads); stigma 0.8-1.9 (-2.8 in the Coastal Plain) mm long ..... ***S. americanum***
    3 Mature fruits shiny, smooth, the body 5.5-7 mm long; fruiting heads 2.5-3.5 cm in diameter; branches of the inflorescence with 0 (-1) pistillate heads (in addition to staminate heads); stigma 1.5-3 mm long ..... ***S. androcladum***

Sparganium americanum Nuttall, American Bur-reed. Cp, Mt, Pd (GA, NC, SC, VA): streams, marshes, ponds, pools, often submerged; common (rare in NC and SC Piedmont). May-September. Newfoundland west to MN, south to c. peninsular FL and c. TX. Beal (1960) discusses the interesting variation in *S. americanum*, perhaps worthy of taxonomic recognition. The "Appalachian Race" has stigmas 0.6-0.9 mm long, inflorescence branches 0-3, and relatively narrow leaves; in our area it is montane in distribution, and in general is Appalachian, Ozarkian, and northern. The "Coastal Race" has stigmas 1.5-2.8 mm long, 2-5 inflorescence branches, and relatively wide leaves; in our area it is primarily of the Coastal Plain, disjunct to the mountains of NC and SC south of the Asheville Basin (like many Coastal Plain taxa), and in general is nearly limited to the Coastal Plain, ranging from MA south to FL, west to e. TX, and north in the interior to sc. TN, s. IN, and s. MO. The "Ubiquitous Race" is intermediate, with stigmas 1.0-1.4 m long; it occurs throughout the range of the species. The pattern is suggestive of imperfect evolutionary separation of two taxa. [= RAB, C, F, FNA, G, GW, K, W, X, Y, Z; > *S. americanum* – S; > *S. eurycarpum* – S, misapplied]

Sparganium androcladum (Engelmann) Morong. Cp, Pd (VA): marshes, shores; rare (VA Rare). May-September. ME and Québec west to MN, south to se. VA, e. TN, s. MO, and ne. OK. [= C, F, FNA, G, K, W, X, Y, Z]

Sparganium emersum Rehmann, Greenfruit Bur-reed. Mt (NC, VA): bogs, stream margins; rare (NC Rare, VA Rare). May-September. Newfoundland and c. Québec west to s. Alberta and WA, south to w. NC, IN, IA, CO, and CA. [= FNA, X; > *S. chlorocarpum* Rydberg – RAB, C, F, G, W, Y, Z; > *S. chlorocarpum* var. *acaule* (Beeby) Fernald – F; *? S. angustifolium* Michaux – K, misapplied; > *S. acaule* (Beeby) Rydberg]

Sparganium eurycarpum Engelmann ex A. Gray, Giant Bur-reed. Cp, Pd, Mt (VA): marshes, shores; uncommon (VA Watch List). Nova Scotia west to British Columbia, south to w. VA, IN, OK, and CA. [= C, F, FNA, G, K, W, X; = *S. erectum* Linnaeus ssp. *stoloniferum* (Graebner) C.D.K. Cook & M.S. Nicholls]

Sparganium angustifolium Michaux, Narrow-leaved Bur-reed. South to n. NJ and n. PA; attributed to VA and WV by Kartesz (1999), apparently erroneously. [= C, FNA, K, X] {not keyed; synonymy incomplete}

Typha Linnaeus 1753 (Cattail)

A genus of 8-13 species, wetland herbs, cosmopolitan. References: Smith in FNA (2000); Kubitzki in Kubitzki (1998b).

1 Staminate and pistillate portions of spike normally contiguous; pistillate portion of spike (1.5-) 2.0-3.5 cm in diameter at maturity; leaves (8-) 10-24 mm wide, flat on one side; stigmas lance-ovate, fleshy, persistent; pollen grains in 4's; [in acid to alkaline waters, widespread in our area] ..... ***T. latifolia***
1 Staminate and pistillate portions of spike normally separated by a gap; pistillate portion of spike 0.5-2.2 (-2.5) cm in diameter at maturity; leaves 4-15 mm wide, biconvex (or flat on one side in *T.* ×*glauca*); stigmas linear to lance-linear, not fleshy (or slightly so in *T.* ×*glauca*), either quickly deciduous or persistent; pollen grains single; [in circumneutral to alkaline waters, primarily in tidal situations in the outer Coastal Plain, but scattered inland, especially in VA].
  2 Pith at base of stem yellowish buff; stigmas lance-linear, slightly fleshy; pistillate portion of spike 1.6-2.5 cm in diameter at maturity; pistillate bracteoles usually absent (or present on a few flowers) ..... ***T. ×glauca***
  2 Pith at base of stem white; stigmas linear, not fleshy; pistillate portion of spike 0.5-2.5 cm in diameter at maturity; pistillate bracteoles present on all flowers.
    3 Leaves 4-7 (-11) mm wide, auriculate at the junction of the blade and the sheath; pistillate portion of spike 0.5-2.0 cm in diameter and dark brown at maturity; plants 1-1.5 m tall; pistillate bracteoles rounded to blunt at the tip .... ***T. angustifolia***
    3 Leaves 6-12 (-15) mm wide, most or all not auricled at the junction of the blade and the sheath; pistillate portion of spike (0.8-) 1.3-2.5 cm in diameter and light cinnamon brown at maturity; plants (1-) 2-4 m tall; pistillate bracteoles acute to acuminate at the tip ..... ***T. domingensis***

Typha angustifolia Linnaeus, Narrowleaf Cattail. Cp (GA?, NC, SC, VA), Pd, Mt (VA): brackish to fresh waters of marshes and swamps, usually tidal; common (rare in Piedmont and Mountains). May-July; June-November. Nova Scotia west to ND, south to SC, FL (?), LA, and TX (?); Eurasia. [= C, F, FNA, G, GW, K, W; < *T. angustifolia* – S (also see *T. domingensis*)]

Typha domingensis Persoon, Southern Cattail. Cp (GA, NC, SC, VA): brackish to nearly fresh waters of marshes and swamps, usually tidal; common. June-July; July-November. DE south to s. FL, west to TX; north inland to NE and UT; and south into tropical America; Eurasia; Africa; Oceania. [= C, F, FNA, G, GW, K; < *T. angustifolia* – S]

Typha* ×*glauca Godron (pro sp.), Hybrid Cattail. Cp (GA?, NC, SC, VA), Mt (VA): fresh to brackish waters of lakes, ponds, and rivers; rare. May-July; June-November. Both C and K apply this name to two different hybrids: *T. angustifolia* × *latifolia* and *T. domingensis* × *latifolia*. The name properly applies to *T. angustifolia* × *latifolia* (Smith in FNA 2000). [= C, GW, K; = *T. glauca* Godron – RAB, F]

Typha latifolia Linnaeus, Common Cattail. Mt, Pd, Cp (GA, NC, SC, VA): fresh waters of ponds, lakes, ditches, marshes, including in tidal freshwater marshes; common. May-July; June-November. Newfoundland west to AK, south to FL, TX, CA, and Mexico; Central America; South America; Eurasia. [= C, F, FNA, G, GW, K, S, W]

UVULARIACEAE A. Gray ex Kunth 1843 (Bellwort Family)

[see *CALOCHORTACEAE (Prosartes, Streptopus, Tricyrtis), COLCHICACEAE (Uvularia), LILIACEAE (Clintonia*)]

XYRIDACEAE C. Agardh 1823 (Yellow-eyed Grass Family)

A family of 5 genera and about 325-350 species, nearly cosmopolitan (most diverse in tropical and subtropical regions, and especially South America). References: Kral in FNA (2000); Kral in Kubitzki (1998b).

Xyris Linnaeus 1753 (Yellow-eyed Grass)

A genus of about 300 species, nearly cosmopolitan (most diverse in tropical and subtropical regions, and especially South America). This "technical" genus is known well by only a few botanists, and additional undescribed taxa are possible. References: Kral in FNA (2000); Bridges & Orzell (2003)=X; Kral (1966a)=Z; Kral (1983b, 1999); Kral in Kubitzki (1998b). Key adapted from X, GW, and Z.

Identification notes: In vegetative condition, *Xyris* is often confused with other monocots with equitant leaves, such as *Iris* spp. (Iridaceae), *Lachnanthes caroliniana* (Haemodoraceae), and *Tofieldia* spp. (Tofieldiaceae).

1 Keel of the lateral sepals shortly ciliate-scabrid (or sometimes entire in *X. brevifolia*, and then the bract tips purplish-tinged).
  2 Plants small, usually < 30 cm tall; principal leaves usually < 10 cm long; mature spikes < 1 cm long when mature.
    3 Leaves filiform, with expanded brownish lustrous bases, usually exceeding the sheath of the scape; [plants of s. AL and the FL Panhandle] ..... ***[X. isoetifolia]***
    3 Leaves linear, the bases not expanded, shorter than, equaling, or slightly exceeding the sheath of the scape; [plants collectively more widespread].
      4 Keel of the lateral sepals straight to slightly curved, remotely ciliate or entire; spikes broadly ovoid to subglobose, the bracts loose, bicolored, the outer portions maroon or purplish and often with erose margins ... . ***X. brevifolia***
      4 Keel of the lateral sepals strongly curved, densely ciliate; spikes lance-ovoid to ovoid, the bracts entire, not purple-tinged, and lacking erose borders.

5 Plants perennial; leaves ascending, green with a distinct brown patch at the base; fruiting spikes ovoid, blunt, somewhat 2-edged from the strongly keeled outer bracts ..... ***X. drummondii***

5 Plants annual; leaves flabellate arranged, spreading to recurved against the substrate, usually maroon; fruiting spikes often elongated and acute, not 2-edged..... ***X. flabelliformis***

2 Plants large, usually > 30 cm tall; principal leaves > 10 cm long; mature spikes > 1 cm long when mature.

6 Leaves ascending, twisted, strongly grooved; spikes ovoid, the bracts and lateral sepals with a small tuft of short, reddish-brown hairs; bases of leaves abruptly expanded, pinkish or purplish (dark brown in age), the outermost leaves often scale-like, the plant base therefore appearing bulbous; [of the Mountains, Piedmont, and Coastal Plain]..... ***X. torta***

6 Leaves spreading, not twisted or only slightly so; spikes narrowly ovoid, ellipsoidal, or oblong; bracts and sepals without a small apical tuft of hairs; bases of leaves whitish, tan, pink, purplish, maroon, or dark brown, the outermost leaves not scale-like, the plant base not appearing bulbous; [typically of the Coastal Plain, rarely disjunct inland].

7 Seeds lustrous, translucent, broadly ovoid; spike pale brown or tan, the scales loosely imbricate; plant bases pinkish, purplish, or tan, with dark longitudinal striations on the inner leaf bases; leaves 3-20 mm wide; petal blades obovate, 6-7 mm long, opening in early morning, usually closing by mid-day..... ***X. ambigua***

7 Seeds farinose, dark brown (*X. stricta*) or pale (*X. louisianica*) at maturity, narrowly ellipsoid to ovoid; spike dark brown, the scales tightly imbricate; plant bases maroon, purplish, dark-brown, or reddish-brown; leaves 2-5 mm wide; petal blades triangular-cuneate, 3-5 mm long, opening at mid-day.

8 Seeds pale when mature; plant bases maroon to maroon-brown, solitary or in small clumps; upper end of scape somewhat flattened, but not nearly as broad as the spike; spike narrowly ovoid to ellipsoid, slightly pointed..... ***X. louisianica***

8 Seeds dark brown when mature; plant bases dark maroon to dark brown, desnely cespitose; upper end of the scape conspicuously flattened, almost as broad as the spike; spike oblong-cylindrical, obtuse..... ***X. stricta***

1 Keel of the lateral sepals irregularly lacerate or fimbriate, or if entire then the the bract tips not purplish.

9 Leaves narrowly linear to filiform, 0.5-2.0 (-2.5) mm wide, not twisted (or scarcely so); leaf bases expanded, lustrous, hard, tan to brown, neither bulbous nor deeply set in the substrate; spikes ovoid or ellipsoid, 4-15 mm long.

10 Leaves filiform, terete or elliptic in cross-section, 0.5-1.0 mm wide, without a paler, hardened margin; scape as broad as or broader than the leaf blades; scales smooth-edged to denticulate, not curled away from the head, the head thus appearing smooth; staminodia beardless..... ***X. baldwiniana***

10 Leaves linear, flattened in cross-section, 1-2 (-2.5) mm wide, with a pale, hardened margin; scape usually narrower than the leaf blades; scales ragged-lacerate, the tips curling away from the head, giving it a ragged appearance; staminodia bearded..... ***X. elliottii***

9 Leaves broader, (1.5-) 2.0-25 mm wide, strongly twisted to straight, the leaf bases either not expanded, lustrous, hard, and tan to brown, or, if so, then the base also either bulbous and/or deeply seated in the substrate; spikes narrowly lanceolate, ellipsoid, to broadly ovoid, 4-40 mm long.

11 Keel of the lateral sepals long-fimbriate toward its apex, the fimbriate tip conspicuously exserted from the subtending bract (sometimes eroded and less conspicuous on older spikes).

12 Leaves strongly twisted, 2-5 mm wide; leaf bases hardened, swollen, bulbous, dark lustrous brown; scape ridges smooth; petal blades white or yellow; [of moist to dry pinelands] ..... ***X. caroliniana***

12 Leaves not twisted, 5-25 mm wide; leaf bases soft, not swollen, not bulbous, pale; scape ridges strongly scabrous; petal blades yellow; [of aquatic to very wet peaty, mucky, or sandy ponds, marshes, or other wetlands]..... ***X. fimbriata***

11 Keel of the lateral sepals lacerate, or if very shortly fimbriate, then not conspicuously exserted from the subtending bract.

13 Lateral sepals longer than and exserted from the subtending bracts; scapes 5-15 dm tall.

14 Leaf blades 1-2 (-3) mm wide, 6-30 cm long; spikes 10-16 mm long; seeds 0.4-0.6 mm long; [endemic to Panhandle FL and s. AL]..... ***[X. longisepala]***

14 Leaf blades 5-15 mm wide; (20-) 30-50 (-60) cm long; spikes 10-20 (-25) mm long; seeds (0.6-) 0.7 (-0.8) mm long; [more widespread in our area] ..... ***X. smalliana***

13 Lateral sepals shorter than the subtending bracts, and therefore hidden (except when the spikes open to shed seeds); scapes 1.5-12 dm tall.

15 Scapes flexuous, usually spirally twisted; upper portion of leaf blades conspicuously twisted; plant bases pinkish, purplish, or dark brown, bulbous or deeply set in the substrate.

16 Base of plant deeply set in the substrate, without distinct outer scale leaves; leaf bases not noticeably expanded, the plant base therefore not bulbous; leaves smooth, 2-4 mm wide; petal blades ca. 3 mm long..... ***X. chapmanii***

16 Base of plant shallowly set on the substrate, often with short, black outer scale leaves; leaf bases noticeably expanded, the plant base therefore appearing bulbous; leaves either smooth and 5-10 mm wide, or scabrous and 2-10 mm wide; petal blades ca. 5 mm long.

17 Leaf and scape surfaces prominently papillose or tuberculate-scabrid; petal blades suborbicular, yellow; seeds narrowly ovoid or narrowly ellipsoidal, ca. 1.0 mm long..... ***X. scabrifolia***

17 Leaf and scape surfaces smooth (or scabrous only along margins and ridges); petal blades obovate, white or yellow; seeds ovoid or ellipsoid, 0.5-0.6 mm long.
18 Seeds translucent; leaf margins smooth; [plants of acidic sites of the Coastal Plain] ..... ***X. platylepis***
18 Seeds opaque; leaf margins slightly scabrous; [plants of calcareous seeps and fens of the Ridge and Valley] ***X. tennesseensis***

15 Scapes usually not flexuous, usually not spirally twisted; upper portion of leaf blades not conspicuously twisted; plant bases variously colored, flabellate or equitant and set at ground level.
19 Summit of the scape distinctly flattened and broad relative to the spike; scape ridges 2-3, the 2 most prominent comprising the flattened edge of the scape.
20 The 2 principal scape ridges noticeably and abruptly flattened and winglike below the spike, their combined width (on fresh material) broader than the scape proper; fruiting spikes mostly 8-15 mm long; seeds 0.4-0.6 mm long, translucent, ovoid or ellipsoidal, about 1.5× as long as wide, with lines of very fine papillae, not farinose ***X. difformis***
20 The 2 principal scape ridges not abruptly flattened and winglike below the spike, their combined width < the scape proper, which is itself flattened (narrowly elliptic in cross-section); fruiting spikes mostly (10-) 20-25 mm long; seeds 0.8-1.0 mm long, dark when ripe, fusiform to narrowly elliptic, 2-3× as long as wide, with lines of very fine papillae, these however obscured by a farinose covering ***X. iridifolia***
19 Summit of the scape nearly terete or somewhat flattened, much narrower than the spike; scape ridges several (usually > 3), at least on the mid to lower portion of the scape.
21 Seeds farinose, very dark; surfaces of leaves tuberculate-scabrid, the leaves strongly ascending, linear, generally > 10 cm long; leaves generally dull-colored.
22 Mature spikes ovoid, sharply acute; plants solitary or in small clumps; leaves 10-30 (-50) cm long, 1.5-6.0 mm wide, dark maroon or purplish at the base ***X. floridana***
22 Mature spikes ovoid to ellipsoid, acute to obtuse; plants typically in large dense tufts; leaves 20-50 cm long, 3-12 mm wide, the older ones with dark-brown to gray bases, the younger with tan bases ***X. serotina***
21 Seeds translucent, not farinose; surfaces of leaves smooth (or sparsely tuberculate-scabrid in *X. curtissii*, which also has leaves linear-curvate and generally < 10 cm long); leaves generally a bright yellowish-green above the base.
23 Leaves broadly linear-curvate, spreading, typically < 10 cm long, 2-4.5 mm wide; plants perennial, in tufts (rarely solitary); mature spikes acute, with < 10 flowers; leaf bases pinkish or purplish; old flowers fugacious, not persisting on spikes ***X. curtissii***
23 Leaves linear, ascending, 10-60 cm long, 5-10 mm wide; plants annual, solitary or in small tufts; mature spikes obtuse, many-flowered; leaf bases tan (very rarely pinkish); old flowers often persistent on the spikes, drying blackish ***X. jupicai***

Xyris ambigua Beyrich ex Kunth. Cp (GA, NC, SC, VA), Pd (NC), Mt (VA): wet savannas and flatwoods, pinelands, edges of depression ponds; common. June-August. Se. VA south to FL, west to AL and ec. TX, primarily on the Coastal Plain. [= RAB, C, F, FNA, G, K, W, X; < *X. ambigua* – GW, S, Z (also see *X. louisianica*)]

Xyris baldwiniana J.A. Schultes, Grassleaf Yellow-eyed Grass. Cp (GA, NC, SC), Pd (NC): wet savannas, seepage bogs, sandhill seeps, wet savanna ecotones; rare (NC Watch List). June-July. Se. NC south to n. FL, west to s. AR and ec. TX, primarily on the Coastal Plain. [= RAB, FNA, GW, K, S, X, Z]

Xyris brevifolia Michaux, Shortleaf Yellow-eyed Grass. Cp (GA, NC, SC): wet sands of pinelands, especially seasonally wet, open, white sands of spodosol longleaf pine flatwoods (Leon series soils), margins of Carolina bay sandrims; rare (NC Rare, SC Rare). June-August. Se. NC south to s. FL, west to s. AL and w. FL; West Indies and South America. [= RAB, FNA, GW, K, S, X, Z]

Xyris caroliniana Walter, Pineland Yellow-eyed Grass. Cp (GA, NC, SC, VA): dry to moist pine flatwoods, moist savannas, scrub oak sandhills; common (VA Rare). June-July. Se. VA south to FL, west to se. TX, and disjunct northward in s. NJ. White-petaled populations of *X. caroliniana* occurring in the East Gulf Coastal Plain need additional study. [= RAB, C, FNA, GW, K, X, Z; > *X. flexuosa* Muhlenberg ex Elliott – F, G, S; > *X. pallescens* (C. Mohr) Small – S]

Xyris chapmanii Bridges & Orzell, Chapman's Yellow-eyed Grass. Cp (GA?, NC, SC): sandhill seepage bogs in areas of copious lateral seepage in deep muck soils; rare (NC Rare). Sc. NC south to panhandle FL, west to e. TX. This taxon is abundantly distinct from *X. scabrifolia*. [= X; < *X. scabrifolia* – FNA, K, Z]

Xyris curtissii Malme, Curtiss's Yellow-eyed Grass. Cp (GA, NC, SC, VA), Pd (SC): savannas; rare (NC Watch List, VA Rare). July-August. Se. VA south to n. FL and west to s. AR and ec. TX, primarily on the Coastal Plain; disjunct in s. NJ. [= RAB, G; = *X. difformis* Chapman var. *curtissii* (Malme) Kral – C, FNA, GW, K, X, Z; > *X. bayardii* Fernald – F; > *X. curtissii* – F; ? *X. neglecta* Small – S]

Xyris difformis Chapman. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): savannas, roadside ditches, pond margins, other wet habitats; common (VA Watch List). August-October. New England and s. Canada south to n. FL and ec. TX. [= X; = *X. difformis* Chapman var. *difformis* – C, FNA, GW, K, Y, Z; < *X. difformis* – RAB, F, G, S, W (also see *X. curtissii*)]

Xyris drummondii Malme, Drummond's Yellow-eyed Grass. Cp (GA): wet pine flatwoods, ditches; uncommon. Se. GA south to Panhandle FL, west to s. MS. [= FNA, GW, K, X, Z]

Xyris elliottii Chapman, Elliott's Yellow-eyed Grass. Cp (GA, SC): margins of drawdown zones of clay-based Carolina bays, limesinks and flatwoods swales, wet savannas; uncommon. May-June. E. SC south to the Gulf Coastal Plain. [= RAB, FNA, GW, K, S, X, Z]

Xyris fimbriata Elliott, Giant Yellow-eyed Grass. Cp (GA, NC, SC, VA): in mucky or sandy soils of upland depression ponds, also along sandhill streams, impoundments and in deep muck of sandhills seepage slopes often just below the zone occupied by *Xyris chapmanii*; common (VA Rare). September-October. Se. VA south to c. FL, west (interruptedly) to se. TX; disjunct in s. NJ, DE, and c. TN. [= RAB, C, F, FNA, G, GW, K, S, X, Z]

Xyris flabelliformis Chapman, Savanna Yellow-eyed Grass. Cp (GA, NC, SC): wet sands of pinelands, especially seasonally wet, open, white sands of spodosol longleaf pine flatwoods (Leon series soils), margins of Carolina bay sandrims; rare (NC Rare, SC Rare). May-June. Se. NC south to s. FL, west to se. LA, on the Coastal Plain. [= RAB, FNA, GW, K, S, X, Z]

Xyris floridana (Kral) Bridges & Orzell, Florida Yellow-eyed Grass. Cp (GA, NC, SC): savannas, wet pine flatwoods, ditches; rare (NC Rare, SC Rare). August. Se. NC south to s. FL, west to se. LA. [= X; = *Xyris difformis* Chapman var. *floridana* Kral – FNA, GW, K, Y, Z]

Xyris iridifolia Chapman, Irisleaf Yellow-eyed Grass. Cp (GA, NC, SC, VA): marshes, upland pond margins, blackwater river channels, floodplain pools, other wet habitats; uncommon (NC Watch List, VA Rare). July-September. Se. VA south to n. FL, west to e. TX; disjunct in c. TN. [= RAB, C, GW, S, Z; = *X. laxifolia* Mart. var. *iridifolia* (Chapman) Kral – FNA, K, X]

Xyris jupicai L.C. Richard. Cp (GA, NC, SC, VA), Pd (NC), Mt (VA): ditches, various wet habitats; common. July-September. NJ south to s. FL, west to TN, AR, OK, and TX, and in Latin America. Sometimes weedy and considered by some to be adventive from further south. At least some populations in our area are native and may additionally be worthy of taxonomic recognition as distinct from "true" *X. jupicai* (P. McMillan, pers. comm., 2003). [= RAB, C, FNA, GW, K, W, X, Z; = *F. caroliniana* – F, misapplied; > *X. elata* Chapman – G, S; > *X. communis* Kunth – S; > *X. caroliniana* – G, S, misapplied]

Xyris louisianica Bridges & Orzell. Cp (GA): pine savannas, bogs, ditches and disturbed areas; rare. FL Panhandle and GA west to se. TX. [= K, X; = *X. stricta* Chapman var. *obscura* Kral – FNA; < *X. ambigua* – GW, S, Z]

Xyris platylepis Chapman. Cp (GA, NC, SC, VA): sandhill seeps, savannas, ditches; common (VA Watch List). July-September. Se. VA south to s. FL, west to se. LA; disjunct in sw. LA and se. TX. [= RAB, C, F, FNA, G, GW, K, S, X, Z]

Xyris scabrifolia Harper, Roughleaf Yellow-eyed Grass. Cp (GA, NC, SC): sandhill seepage bogs and wet pine savannas; rare (US Species of Concern, NC Rare). Sc. and se. NC south to panhandle FL, west to s. AL and s. MS; disjunct in sw. LA-se. TX. *X. chapmanii* is a taxon distinct from *X. scabrifolia*. [= GW, S, X; < *X. scabrifolia* – FNA, K, Z (also see *X. chapmanii*)]

Xyris serotina Chapman. Cp (GA, NC, SC): depression meadows, ultisol savannas (Lynchburg/Rains complex or Eulonia/Oketee), ditches; rare (NC Rare, SC Rare). September. Se. NC south to c. FL, west to s. MS, in the Coastal Plain. Reported for our area by Kral (1966b) and relocated by B.A. Sorrie. [= RAB, FNA, GW, K, S, X, Z]

Xyris smalliana Nash, Small's Yellow-eyed Grass. Cp (GA, NC, SC), Mt (SC): pond margins, ditches; uncommon (NC Watch List). July-August. ME south to FL, west to s. MS; disjunct to se. TX. [= RAB, C, FNA, GW, K, S, W, X, Z; > *X. congdonii* Small – F; > *X. smalliana* – F; > *X. smalliana* var. *smalliana* – G; > *X. smalliana* var. *olneyi* (Wood) Gleason – G]

Xyris stricta Chapman. Cp (GA, NC, SC): depression ponds, depression meadows, borrow pits, ultisol savannas and ditches; rare. July-September. SC south to n. FL, west to s. MS and se. LA. Reported for our area by Kral (1966b). P. McMillan (pers. comm.) reports this species from a number of locations in the outer Coastal Plain of NC and SC. [= GW, K, S, X, Z; = *X. stricta* var. *stricta* – FNA]

Xyris tennesseensis Kral, Tennessee Yellow-eyed Grass. Mt (GA): seepy, fenlike areas over limestone; rare (US Endangered, GA Endangered). TN, AL, and nw. GA (Jones & Coile 1988). See Kral (1978b). [= FNA, K]

Xyris torta J.M. Smith, Mountain Yellow-eyed Grass. Mt, Pd (GA, NC, SC, VA), Cp (SC, VA): mountain bogs, marshes, ditches; uncommon (SC Rare). June-August. NH west to WI, south to e. VA, e. NC, w. SC, c. GA, LA, OK, and TX. This is our only species of *Xyris* not strongly associated with the Coastal Plain. [= RAB, C, FNA, GW, K, S, W, Z; > *X. torta* var. *macropoda* Fernald – F, G; > *X. torta* var. *torta* – F, G]

Xyris isoetifolia Kral. Bogs, savannas, and depression pond margins. FL Panhandle and s. AL. [= FNA, GW, K, X, Z]

Xyris longisepala Kral. Depression pond margins. FL Panhandle and s. AL. [= FNA, GW, K, X, Z]

ZANNICHELLIACEAE Dumortier 1829 (Horned Pondweed Family)

A family of 4 genera and about 10-12 species, aquatic herbs, nearly cosmopolitan. Probably better included in the Potamogetonaceae (Angiosperm Phylogeny Group 2003). References: Haynes & Hellquist in FNA (2000); Haynes & Holm-Nielsen (1987)=Z; Haynes, Les, & Holm-Nielsen in Kubitzki (1998b).

Zannichellia Linnaeus 1753 (Horned Pondweed)

A genus of about 5 species, aquatic herbs, nearly cosmopolitan. References: Haynes & Hellquist in FNA (2000); Haynes & Holm-Nielsen (1987)=Z.

Identification notes: *Zannichellia* is sometimes confused with other aquatics, such as *Ruppia* and narrow-leaved *Potamogeton*. *Potamogeton* has at least some leaves alternate; *Zannichellia* and *Ruppia* are opposite-leaved. *Zannichellia* lacks the abruptly

broadened sheath of *Najas*. Also, the seeds are flattened in *Zannichellia*, and toothed down one side; *Najas* has a cylindric or elliptic fruit. *Zannichellia* has longer leaves (3-10 cm long) than *Najas* (< 4 cm long).

Zannichellia palustris Linnaeus, Horned Pondweed. Cp (NC, VA), Mt (VA), {GA}: fresh or brackish water; common. February-October. The species occurs throughout much of the world. [= RAB, C, FNA, G, GW, K, S, W, Z; > *Z. palustris* var. *major* (Hartman) W.D.J. Koch – F; > *Z. palustris* var. *palustris* – F]

ZOSTERACEAE Dumortier 1829 (Eelgrass Family)

A family of 3 genera and about 18 species, nearly cosmopolitan in distribution. References: Haynes in FNA (2000); Kuo & McComb in Kubitzki (1998b).

Zostera Linnaeus 1753 (Eelgrass)

A genus of about 12 species, aquatic herbs, of nearly cosmopolitan distribution. References: Haynes in FNA (2000); Crow & Hellquist (2000)=Y; Kuo & McComb in Kubitzki (1998b); Green & Short=Z.

Zostera marina Linnaeus *var. **stenophylla*** Ascherson & Graebner, Eelgrass. Cp (NC, VA): estuarine waters; common. February-March. The species occurs in Eurasia and North America. Var. *stenophylla* is North American, and ranges south along the Atlantic coast to NC and allegedly to FL (though reports from that state are apparently not substantiated and may be based on misidentification of other aquatics). [= F, G, Y; < *Z. marina* – RAB, C, FNA, K, S, Z]
