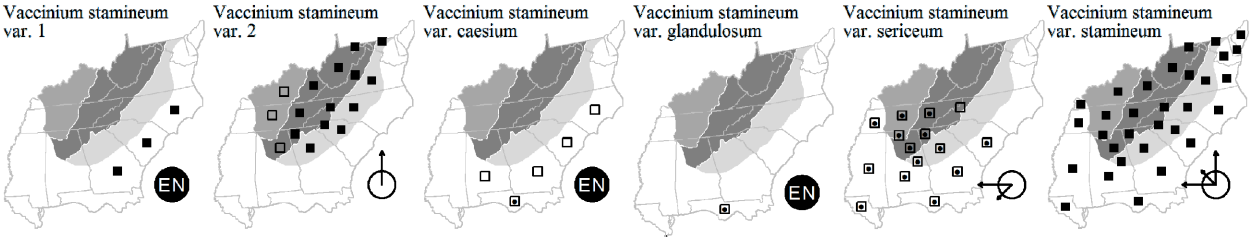
Vaccinium stamineum Linnaeus *var.* ***stamineum***, Common Deerberry. Xeric to submesic woodlands, forests, and rock outcrops (unlike most *Vaccinium*, often on mafic, ultramafic, or calcareous rocks). April-June; August-October. MA, NY, s. ON, and MO south to Panhandle FL and TX. [= Q; < *V. stamineum* var. *stamineum* – RAB; < *Vaccinium stamineum* – C, FNA, K, L, W, Y, Z; > *V. stamineum* var. *stamineum* – F, WV; > *V. stamineum* var. *interius* (Ashe) Palmer & Steyermark – F, WV; > *V. stamineum* var. *neglectum* (Small) Deam – F, WV; > *Vaccinium neglectum* (Small) Fernald – G; > *Polycodium stamineum* (Linnaeus) Greene – S, V; >< *Polycodium candicans* Small – S; > *Polycodium neglectum* Small – S, V]



Vaccinium tenellum Aiton, Southern Blueberry, Small Cluster Blueberry. Sandhills, pine flatwoods, other xeric woodlands. Late March-early May; June-July. Though abundant in the Carolinas, *V. tenellum* is rather restricted, occurring as a common species from se. VA to c. GA, with a range extension (where it is scattered and rare) south and west to n. FL, s. AL, and se. MS. [= RAB, C, F, FNA, G, K, L, X, Y, Z; = *Cyanococcus tenellus* (Aiton) Small – S]

Vaccinium virgatum Aiton, Swamp Blueberry, Rabbiteye Blueberry. Pocosins and *Chamaecyparis* swamps, also in various drier habitats, including turkey oak sandhills. March-April; May-June. A Southeastern Coastal Plain species, *V. virgatum* occurs from se. NC south to FL and west to e. TX. [= GW, K; = *V. amoenum* Aiton – RAB; = *Cyanococcus amoenus* (Aiton) Small – S; < *V. corymbosum* – L, WH, Z; > *V. virgatum* – X; > *V. amoenum* – X; > *V. ashei* Reade – X]

29. Gaylussacia Kunth 1819 (Huckleberry)

A genus of ca. 50 species, shrubs, of North and South America (centered in South America). The sections and subsections follow Sleumer (1967a). A study of the phylogeny of the genus *Gaylussacia* provided some evidence for the treatment of *Gaylussacia brachycera* as a monotypic genus or within *Vaccinium*; additional study is needed. References: Sorrie, Weakley, & Tucker in FNA (2009); Sleumer (1967a)=Z; Camp (1935)=Y; Godfrey (1988)=X; Duncan & Brittain (1966)=V; Sorrie & Weakley (2007a)=U; Gajdeczka et al. (2010)= Q; Fernald (1911); Stevens et al. in Kubitzki (2004).

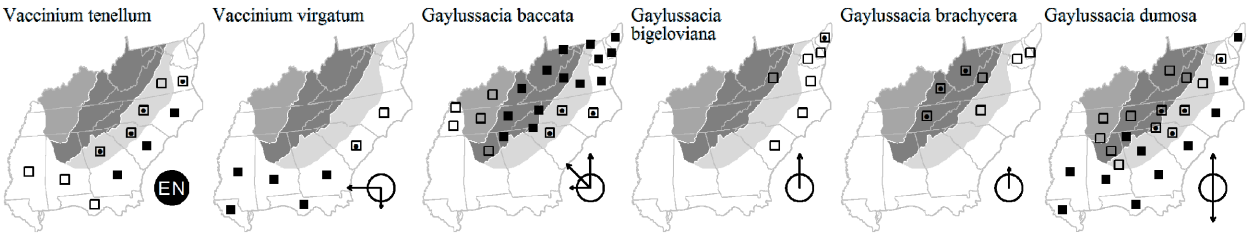
1 Leaves 0.7-2.2 cm long, serrulate, leathery, evergreen, lacking punctate glands; [section *Vitis-idaea*] ..... ***G. brachycera***
1 Leaves 1.5-10 cm long, entire (or minutely glandular-crenate), membranaceous to subcoriaceous, deciduous, with punctate glands.
2 Leaves subcoriaceous, upper surface shining, dark green, 1.5-4 cm long; bracts of the inflorescence equal to or longer than the pedicels (5-12 mm long), persistent; sepals, pedicels, bracts, and leaves stipitate-glandular and pubescent; [section *Gaylussacia*].
3 Plant < 3 dm high.
4 Corollas averaging 7.0 mm long; anthers averaging 3.7 mm long; glandular hairs on hypanthium dense, 0.3-0.5 mm long; plants usually 4-10 dm high, rarely less than 3 dm; plants of wet boggy habitats; [northeastern, south to DE, disjunct to NC and SC] ..... ***G. bigeloviana***
4 Corollas averaging 5.8 mm long; anthers averaging 3.0 mm long; glandular hairs on hypanthium moderately dense to relatively sparse, 0.2-0.3 mm long; plants occasionally up to 4 dm high; [plants of xeric to moist habitats; southeastern range, north to VA and scattered inland to n. AL, n. GA, c. TN, w. SC, w. NC, and s. WV]..... ***G. dumosa***
3 Plant 4-10 (-15 dm) tall.
5 Sessile glands on upper leaf surface absent; glandular hairs on hypanthium 1.0-1.5 mm long; [East Gulf Coastal Plain endemic, sw. GA, n. FL, s. AL, s. MS, and se. LA]..... ***G. mosieri***
5 Sessile glands on upper leaf surface numerous; glandular hairs on hypanthium 0.3-0.5 mm long; ranging from SC northward.
6 Corollas averaging 7.0 mm long; anthers averaging 3.7 mm long; plants of peat bogs, raised bogs, peat-based pocosins, and Atlantic white cedar-red maple swamps; [from NL (Newfoundland) to DE, and as a rare disjunct in the Coastal Plain of NC and SC] ..... ***G. bigeloviana***
6 Corollas averaging 6.0 mm long; anthers averaging 2.9 mm long; plants of montane bogs, seepage over rock, and possibly drier forests; [rare endemic of southern Appalachians of w. NC] ..... ***G. orocola***
2 Leaves membranaceous to subcoriaceous, upper surface dull, yellow-green to medium-green, 2-10 cm long; bracts of the inflorescence shorter than the pedicels, early deciduous; sepals, pedicels, bracts, and leaves with sessile glands, pubescent or not pubescent; [section *Decamerium*].
7 Leaves glandular on both surfaces; racemes 0.5-1.5 cm long; [section *Decamerium*, subsection *Baccatae*] ..... ***G. baccata***
7 Leaves glandular on the lower surface only; racemes 1-5 cm long.
8 Leaves membranaceous, medium-green, with acuminate apices; [section *Decamerium*, subsection *Ursinae*] ..... ***G. ursina***
8 Leaves subcoriaceous, yellow-green to glaucous, with obtuse to emarginate apices; [section *Decamerium*, subsection *Frondosae*].
9 Young twigs glabrous; leaves glabrous or pubescent beneath, often glaucous; shrub to 20 dm tall; [widespread in our area] ..... ***G. frondosa***
9 Young twigs densely pubescent with short, curled hairs; leaves sparsely to densely pubescent beneath, glaucous or not; shrub to 10 dm tall; [of se. NC and southward in the Coastal Plain].
10 Larger leaves mostly 2-4 cm long and 1-2 cm wide; lower leaf surface usually strongly glaucous, sparsely pubescent, with the longest nonglandular hairs < 0.27 mm long; floral tube and calyx glaucous; shrub 2-6 (-10) dm tall ..... ***G. nana***
10 Larger leaves mostly 3-6 cm long and 2-3.5 cm wide; lower leaf surface not glaucous, sparsely to densely pubescent, with the longest nonglandular hairs 0.46-0.64 mm long; floral tube and calyx not glaucous; shrub to 10 dm tall ..... ***G. tomentosa***

Gaylussacia baccata (Wangenheim) K. Koch, Black Huckleberry, Crackleberry. Xeric, acidic forests and woodlands, rock outcrops, to 1600m elevation. April-June; July-August. NL (Newfoundland) and QC west to ON and MB, south to ne. NC, nw. SC, n. GA, AL, and MO; in GA, NC, and SC it is primarily montane in distribution, but in VA it occurs throughout the state. [= C, F, FNA, G, K, L, Q, RAB, V, W, WV, Y, Z; = *Decachaena baccata* (Wangenheim) Small – S]

Gaylussacia bigeloviana (Fernald) Sorrie & Weakley, Northern Dwarf Huckleberry. Peat dome pocosins (in NC and VA), sandhill seepage bogs (SC), *Chamaecyparis* bogs (DE), generally growing in peat, forms transitional to var. *dumosa* in wet pinelands and disturbed pocosins. April-June; June-October. Var. *bigeloviana* ranges from NL (Newfoundland) south to NJ, with forms transitional to var. *dumosa* as far south as se. VA, and disjunct in Carteret, Dare, and Pender counties, NC (in low pocosins of large peat domes with *Chamaedaphne* and *Zenobia*), in a Sandhill seepage bog in Lexington County, SC. [= FNA, Q, U; = *G. dumosa* (Andrews) Torrey var. *bigeloviana* Fernald – C, F, G, Y; < *G. dumosa* – GW, K, L, RAB, W, X, Z]

Gaylussacia brachycera (Michaux) A. Gray, Box Huckleberry. Dry, acidic ridgetops and upper slopes, locally forming large clones. May-June. Sc. PA and DE south to e. KY and ec. TN, primarily on the Cumberland and Alleghany Plateaus; also disjunct on a steep, xeric, west-facing bluff in Durham Co. NC, where evidently native. Treatment of this species in a monotypic genus may be warranted, but the genus name *Buxella* (as used by Small) is unavailable, as it had already been used prior to Small in a different application (Wilbur & Bloodworth 2004). [= C, F, FNA, G, K, L, Q, W, WV, Y, Z; = *Buxella brachycera* (Michaux) Small – S (but *Buxella* is preoccupied); = *Vaccinium brachycerum* Michaux; note that the report in RAB is based on a misidentification]

Gaylussacia dumosa (Andrews) Torrey & A. Gray, Southern Dwarf Huckleberry. Xeric to mesic, acidic forests and woodlands. March-June; June-October. This variety is one of the most common shrubs of the Southeastern Coastal Plain, with an overall range from NJ south to FL and west to e. LA, primarily in the Coastal Plain, less commonly inland (as in sc. TN and se. WV). [= FNA, Q, U; = *G. dumosa* (Andrews) Torrey var. *dumosa* –C, F, G, Y; < *G. dumosa* – GW, K, L, RAB, V, W, WH, WV, X, Z; = *Lasiococcus dumosus* (Andrews) Small – S]



Gaylussacia frondosa (Linnaeus) Torrey & A. Gray ex Torrey, Dangleberry. Mesic, acidic woodlands, especially in sandhill-pocosin and savanna-pocosin ecotones, also in xeric chestnut oak forests in the lower Piedmont. Late March-May; June-August. Primarily a Southeastern Coastal Plain species: s. NH south to s. SC, less commonly inland to w. NY, c. and w. PA, w. VA, and w. SC. [= C, F, FNA, G, K, L, Q, W, V; = *G. frondosa* var. *frondosa* – GW, RAB, X, Y, Z; = *Decachaena frondosa* (Linnaeus) Torrey & Gray – S]

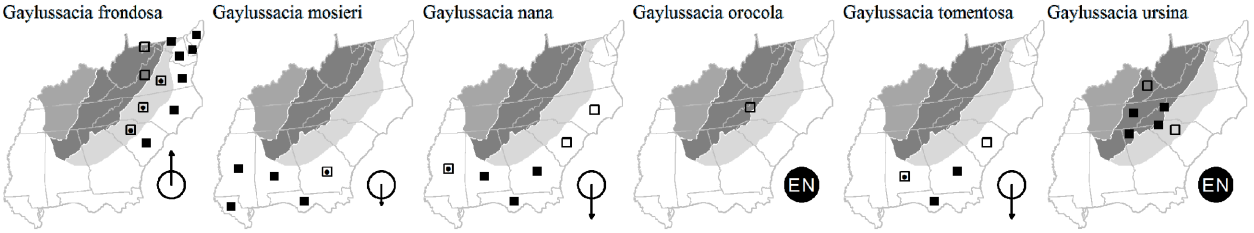
Gaylussacia mosieri Small, Mosier's Huckleberry, Hirsute Huckleberry. Savannas and seepages. S. GA and Panhandle FL and west to e. LA. Material from Lexington County, SC originally identified as this taxon has been reassigned to *G. bigeloviana*. [= FNA, GW, K, L, Q, U, V, X, Y, Z; = *Lasiococcus mosieri* (Small) Small – S]

Gaylussacia nana (A. Gray) Small, Dwarf Dangleberry. Xeric sandhills. Se. SC (Beaufort County) south to n. and c. FL peninsula, FL Panhandle, and west to e. LA (Florida prishes); disjunct in se. NC (New Hanover County) (Sorrie & LeBlond 2008). This species is disjunct at several sites in xeric sandhills of se. NC (on the Carolina Beach peninsula and the 421 Sandhills nw. of Wilmington). *G. nana* has a diploid chromosome complement (n=12), compared to tetraploid for *G. tomentosa* (n=12) (Luteyn et al. 1996). [= FNA, K, L, Q, V, Y; = *G. frondosa* (Linnaeus) Torrey & A. Gray ex Torrey var. *nana* A. Gray – GW, X, Y; = *Decachaena nana* (A. Gray) Small – S; < *G. frondosa* (Linnaeus) Torrey & A. Gray ex Torrey var. *tomentosa* A. Gray – WH]

Gaylussacia orocola (Small) Camp, Blue Ridge Bog Huckleberry. Bogs, seepages over granite. Endemic to the sw. NC mountains. The montane plants named *Lasiococcus orocola* by Small are probably most closely allied to northern *G. bigeloviana*, and occur with other notable northern disjuncts, such as *Myrica gale* and *Chamaedaphne calyculata* (often associated with var. *G. bigeloviana* in northern peat bogs); they differ in several respects, however, and are here given taxonomic standing (Sorrie & Weakley 2007a). [= FNA, Q, U, Y, Z; < *G. dumosa* – RAB, GW, K, L, W, X; = *Lasiococcus orocola* (Small) Small – S]

Gaylussacia tomentosa (A. Gray) Pursh ex Small, Hairy Dangleberry. Pine flatwoods, sandhills, xeric coastal fringe sandhills. March-May; June-August. Se. SC (spodosolic flatwoods in Beaufort County) south to c. peninsular FL, west to s. GA and sw. AL. As discussed by Godfrey (1988) and Duncan & Brittain (1966), probably better treated as a species than as a variety of *G. frondosa*. *G. tomentosa* has a tetraploid chromosome complement (n=24), compared to diploid for *G. nana* and *G. frondosa* (n=12) (Luteyn et al. 1996). [= FNA, K, L, Q, V, Y; = *G. frondosa* (Linnaeus) Torrey & A. Gray ex Torrey var. *tomentosa* A. Gray – GW, RAB, X, Z; = *Decachaena tomentosa* (Pursh ex Small) Small – S; < *G. frondosa* (Linnaeus) Torrey & A. Gray ex Torrey var. *tomentosa* A. Gray – WH]

Gaylussacia ursina (M.A. Curtis) Torrey & A. Gray ex A. Gray, Bear Huckleberry, Mountain Huckleberry. Mesic to xeric forests, frequently dominant, but limited to areas southwest of the Asheville Basin; common. May-June; July-September. A narrow Southern Appalachian endemic: sw. NC, nw. SC, ne. GA, and se. TN; disjunct at Cumberland Gap National Historic Park, Bell County, KY. On mountain slopes and summits in that area it is often the dominant shrub, forming large clonal patches. [= FNA, K, L, Q, RAB, V, W, Y, Z; = *Decachaena ursina* (M.A. Curtis) Small – S]



349. GARRYACEAE Lindley 1834 (Garrya Family) [in GARRYALES]

Garryaceae is here circumscribed to include *Aucuba* (Bremer et al. 2002). References: Bremer et al. (2002)

Aucuba Thunberg (Aucuba, Japanese-laurel)

* ***Aucuba japonica*** Thunberg, Aucuba, Japanese-laurel, Spotted-laurel. Pd (NC): commonly planted throughout our area, rarely escaping and naturalizing in suburban woodlands; rare, native of Japan and se. Asia. The most frequently planted cultivars have the dark green leaves prominently speckled with yellow. [= K]

350. RUBIACEAE A.L. de Jussieu 1789 (Madder Family) [in GENTIANALES]

A family of about 630-650 genera and 10,200-13,000 species, trees, shrubs, vines, and rarely herbs, cosmopolitan, but especially diverse in tropical and subtropical areas. References: Rogers (1987, 2005).

1 Trees, shrubs, or woody vines.
2 Woody vine; corolla lilac; [alien]; [subfamily *Rubioideae*; tribe *Paederieae*] ... ***Paederia***
2 Shrub or tree; corolla white, green, or maroon; [native].
3 Inflorescence spherical; [widespread in our area]; [subfamily *Cinchonoideae*; tribe *Naucleeae*] ... ***Cephalanthus***
3 Inflorescence cymose or thyrsoid; [in the Coastal Plain, from s. SC southward].
4 Inflorescence cymose; some calyx lobes expanded into pink or reddish "flags"; leaves deciduous; domatia not present; [of s. SC southward] ... ***Pinckneya***
4 Inflorescences thyrsoid; calyx lobes inconspicuous; leaves evergreen; domatia present in secondary vein axils; [of ne. FL southward]
5 Lateral veins 3-6 on either side of the midvein; fruit white; flowers yellowish, > 6 mm long; [subfamily *Cinchonoideae*; tribe *Chiococceae*] ... ***Chiococca***
5 Lateral veins 8-14 on either side of the midvein; fruit red; flowers white, <5 mm long; [subfamily *Rubioideae*; tribe Psychotrieae]. ... ***Psychotria***
1 Herbs (or creeping subshrubs in *Mitchella*).
6 Leaves whorled; [subfamily *Rubioideae*; tribe *Rubieae*] ... ***Galium***
6 Leaves opposite
10 Flowers paired, the ovaries connate and developing into a single fleshy red fruit; leaves roundish; [subfamily *Rubioideae*; tribe *Mitchelleae*] ... ***Mitchella***
10 Flowers single or in inflorescences with multiple flowers, the fruits **either** dry **or** fleshy and yellowish or black; leaves various; [subfamily *Rubioideae*; tribe *Spermacoceae*].
11 Carpels with few to many seeds.
12 Corolla 5-lobed ... ***Pentodon***
12 Corolla 4-lobed.
13 Capsule longer than the calyx tube flowers blue, pink, or white ... ***Houstonia***
13 Capsule not longer than the calyx tube; flowers white ... ***Oldenlandia***
11 Carpels 1-seeded.
14 Flowers in dense, terminal, involucrate heads; flowers 4- or-6-lobed; styles 3 ... ***Richardia***
14 Flowers in axillary or terminal clusters, or single in axils, not involucrate; flowers 4-lobed; styles 2.
15 Flowers usually solitary in leaf axils; fruit separating into 2 parts ... ***Diodia***
15 Flowers in terminal and axillary clusters; fruits not separating into 2 parts.
16 Carpels opening transversely ... ***Mitracarpus***
16 Carpels opening longitudinally ... ***Spermacoce***

Cephalanthus Linnaeus (Buttonbush)

A genus of about 6 species, of tropical and temperate America. References: Rogers (1987)=Z; Ridsdale (1976)=Y.

Cephalanthus occidentalis Linnaeus, Buttonbush. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): streambanks, riverbanks, depressional wetlands, lakes, often in standing water; common. June-July. Widespread

in North America, and south into Mexico, Guatemala, and Honduras. [= RAB, K, W, S, Y, Z; > *C. occidentalis* var. *occidentalis* – C, F, G; > *C. occidentalis* var. *pubescens* – C, F, G; = *C. occidentalis* var. *occidentalis* – GW (including var. *pubescens*)]

Chiococca P. Browne 1759

A genus of about 30 species, of FL and the West Indies south to s. South America. References: Rogers (2005).

Chiococca alba (Linnaeus) A.S. Hitchcock, Snowberry, Milkberry. Cp (FL): coastal hammocks, shell middens; rare. N. FL (St. Johns and Dixie counties) south to s. FL. [= K, S, WH]

Diodia Linnaeus

A genus of about 30 species, of tropical and warm temperate America and Africa. Bacigalupo & Cabral (1999) suggest that *Diodella* Small should be recognized as distinct from *Diodia*. References: Bacigalupo & Cabral (1999)=Z; Rogers (2005).

1 Sepals 4 and similar in size; style entire; [of dry habitats] ..... ***D. teres***
1 Sepals 2 (or 4, and then markedly dimorphic); style cleft; [of moist to wet habitats] ..... ***D. virginiana***

Diodia teres Walter, Poorjoe. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dunes, sandy roadsides, glades, other dry habitats; common. June-December. MA, NY and WI, south to FL, TX, and CA, south through Mexico and Central America. [= RAB, C, GW, W, WV; > *Diodia teres* var. *hirsutior* Fernald & Griscom – F, K; > *Diodia teres* var. *hystricina* Fernald & Griscom – F, G, K; > *Diodia teres* var. *oblongifolia* Fernald – F, K; > *Diodia teres* var. *teres* – F, G, K; = ***Diodella teres*** (Walter) Small – Z]

Diodia virginiana Linnaeus. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): pondshores, ditches, other moist to wet habitats; common. June-December. CT, PA, IL, and KS south to FL and TX. [= RAB, C, G, GW, W, WV; > *D. virginiana* var. *attenuata* Fernald – F, K; > *D. virginiana* var. *latifolia* Torrey & A. Gray – K; > *D. virginiana* var. *virginiana* – F, K; > *D. virginiana* – S; > *D. tetragona* Walter – S; > *D. hirsuta* Pursh – S; > *D. harperi* Small – S]

Galium Linnaeus 1753 (Bedstraw, Cleavers, Woodruff)

A genus of ca. 500 species, herbs, cosmopolitan. Here circumscribed to include *Asperula*, *Cruciata*, and *Sherardia*, following an analysis by Soza & Olmstead (2010) that shows the genera *Galium*, *Cruciata*, and *Sherardia* each to be paraphyletic relative to one another, if circumscribed as traditionally. Other solutions are possible, including the dispersal of *Galium* into two or more genera. Interestingly, the number of leaves per whorl appears to be a more fundamental character than those (such as tubular corollas) used to separate genera in the past. References: Soza & Olmstead (2010); Puff (1976, 1977)=Z; Lipscomb & Nesom (2007)=Y; Rogers (2005); Dempster (1978, 1981).

1 Leaves mostly in whorls of 4 (rarely a few in whorls of 5-6) at the primary nodes ..... **Key A**
1 Leaves mostly in whorls of 5-8 or more at the primary nodes.
  2 Leaves mostly 6 per node (ranging from 5-8) at the primary nodes ..... **Key B**
  2 Leaves mostly 8 or more per node at the primary nodes ..... **Key C**

Key A – Bedstraws with leaves mostly in whorls of 4 (rarely a few in whorls of 5-6)

1 Flowers yellow; plant an annual, 0.5-3 dm tall ..... ***G. pedemontanum***
1 Flowers white, creamy, greenish-purple, maroon, or purple; plant a perennial, 1-8 dm tall.
  2 Flowers solitary, sessile or subsessile in the leaf axils; leaves 4-10 mm long ..... ***G. virgatum***
  2 Flowers on pedicels, usually in complex inflorescences; leaves >10 mm long.
    3 Larger leaves 6-25 mm wide, mostly 1.5-4× as long as wide; fruits uncinate-hispid (except smooth in *G. latifolium*); flowers greenish or purplish.
      4 Larger leaves 4-8 cm long, 1-2 cm wide, widest below the middle, tapering to a long-acuminate apex, averaging about 3-4× as long as wide.
        5 Fruits uncinate-hispid; flowers yellowish, turning maroon ..... ***G. lanceolatum***
        5 Fruits smooth; flowers purple ..... ***G. latifolium***
      4 Larger leaves 1-5 cm long, 0.6-2.5 cm wide, widest at about the middle, tapering to an obtuse (or broadly acute) apex, averaging about 2× as long as wide.
        6 Flowers (some of them) sessile or subsessile along the inflorescence branches; leaves 1.5-5 cm long, the larger usually > 2.5 cm long, not punctate.
          7 Lower leaf surface glabrous or sparsely short-hispid on the veins; larger leaves 1.5-2.5 (-4.0) cm long and 0.7-1.4 (-1.8) cm wide; [more southern] ..... ***G. circaezans* *var. circaezans***
          7 Lower leaf surface appressed-pilose, long-hirsute on the veins; larger leaves 2-5 cm long, 1-2.5 cm wide; [more northern] ..... ***G. circaezans* *var. hypomalacum***

6 Flowers all distinctly pedicelled; leaves 1-2.5 cm long, glandular-punctate beneath.
8 Stem glabrous ..... ***G. orizabense*** *ssp.* ***laevicaule***
8 Stem pubescent.
9 Stem and leaves pubescent with spreading, straight hairs; [more northern] ..... ***G. pilosum*** *var.* ***pilosum***
9 Stem and leaves pubescent with short, upwardly incurved hairs; [more southern] ..... ***G. pilosum*** *var.* ***puncticulosum***
3 Larger leaves 1-6 mm wide, mostly 4-20× as long as wide; fruits smooth or pubescent (if pubescent, the hairs not hooked at the end, though they may curve through their length), either fleshy or dry; flowers white or creamy.
10 Fruits fleshy, blue-black; leaves firm, more-or-less evergreen, glandular-punctate beneath.
11 Leaves elliptic, 7-18 mm long, 3-6 mm wide, 2-3.5× as long as wide ..... ***G. hispidulum***
11 Leaves linear, 15-25 mm long, 2-4 mm wide, 5-10× as long as wide ..... ***G. uniflorum***
10 Fruits dry, black; leaves herbaceous, deciduous, not glandular-punctate beneath.
12 Stems erect or nearly so; leaves 15-45 mm long, 2-6 mm wide..... ***G. boreale***
12 Stems sprawling, matted; leaves 6-30 mm long, 0.5-5 (-6) mm wide.
13 Corollas 4-lobed, the lobes longer than wide.
14 Leaves (8-) 10-20 (-25) mm long, (0.5-) 0.8-2 mm wide, margin usually smooth, with strongly down-rolled margins; corolla (1.8-) 2-2.5 (-3) mm across; pedicels filiform; stems 15-50 (-60) cm long, delicate..... ***G. obtusum*** *var.* ***filifolium***
14 Leaves (10-) 15-25 (-30) mm long, (2-) 3-5 (-6) mm wide, margin scabrous, not down-rolled; corolla (2-) 2.5-3.5 (-4) mm across; pedicels thicker; stems (15-) 25-60 (-80) cm long, firm ..... ***G. obtusum*** *var.* ***obtusum***
13 Corollas 3-(4)-lobed, the lobes about as wide as long, or wider than long.
15 Flowers and fruits borne on arcuate pedicels, (5-) 7-15 (-20) mm long and densely retrorsely scabrous..... ***[G. trifidum*** *var.* ***trifidum]***
15 Flowers and fruits borne on straight pedicels, these (2-) 2.5-8 (-12) mm long and smooth.
16 Fruiting pedicels (4-) 5-8 (-12) mm long; pairs of fruits (3-) 3.5-5 mm across at maturity; leaves 2-3 (-4) mm wide..... ***G. tinctorium*** *var.* ***floridanum***
16 Fruiting pedicels (2-) 2.5-5 (-6) mm long; pairs of fruits 2-3 mm across at maturity; leaves (1.5-) 2-2.5 (-2.8) mm wide..... ***G. tinctorium*** *var.* ***tinctorium***

Key B – Bedstraws with leaves mostly 6 per node (ranging from 4-8)

1 Flowers in terminal heads, subtended by an involucre of leaves fused at the base; stem rough-hairy, but not retrorse-scabrid; [clade IV] ..... ***G. sherardia***
1 Flowers in axillary or terminal diffuse inflorescences, not subtended by an involucre; stems either smooth, retrorse-scabrid, or pubescent.
2 Largest leaves < 10 mm long; fruits 0.7-1 mm across; annual; [alien]; [clade III].
3 Inflorescence relatively diffuse, branches divaricate; ultimate fruits (2-) 3–6 (-7) nodes beyond primary stem axis (with largest leaves); first inflorescence internode (beyond primary stem axis) 15-50 mm long; fruit surface glabrous (without hairs)..... ***G. divaricatum***
3 Inflorescence relatively strict, branches ascending; ultimate fruits 2-3 (-4) nodes beyond primary stem axis (with largest leaves); first inflorescence internode (beyond primary stem axis) 3-12 (-20) mm long; fruit surface glabrous or bristly-hispid.
4 Fruit surface without hairs, smooth to shallowly papillate ..... ***G. anglicum***
4 Fruit surface bristly-hispid with uncinate-tipped hairs, distinctly papillate ..... ***G. parisiense***
2 Largest leaves > 10 mm long; fruits 1-2.5 mm across; perennial; [native].
5 Fruits and ovaries uncinate-hispid; leaves 15-50 mm long, 7-10 mm wide; [clade III] ..... ***G. triflorum***
5 Fruits and ovaries glabrous or papillose; leaves 5-25 mm long, 1-6 mm wide.
6 Corolla 1.5-2.5 mm across, 3-lobed; [collectively widespread in our area]; [clade V].
7 Fruiting pedicels (4-) 5-8 (-12) mm long; pairs of fruits (3-) 3.5-5 mm across at maturity; leaves 2-3 (-4) mm wide..... ***G. tinctorium*** *var.* ***floridanum***
7 Fruiting pedicels (2-) 2.5-5 (-6) mm long; pairs of fruits (2-) 2.5-3 mm across at maturity; leaves (1.5-) 2-2.5 (-2.8) mm wide ..... ***G. tinctorium*** *var.* ***tinctorium***
6 Corolla 2.5-4.5 mm across, 4-lobed; [mostly of the Mountains in our area, extending into the Piedmont or even Coastal Plain in n. VA and northward].
8 Leaf margins retrorsely ciliate-scabrid; leaves 3-5× as long as wide; [plants of bogs and moist thickets]..... ***G. asprellum***
8 Leaf margins antrorsely ciliate-scabrid; leaves 4-8× as long as wide; [plants of dry forests and woodlands].
9 Leaves sharply acute or cuspidate; corolla 2.5-3 mm across..... ***G. concinnum***
9 Leaves rounded, obtuse, or barely acute; corolla ca. 4 mm across..... ***G. palustre***

Key C – Bedstraws with leaves mostly 8 or more per node (ranging from 5-12)

1 Leaves 8-12 per whorl (many whorls with > 8 leaves); flowers bright yellow, in a large showy terminal compound inflorescence; fruits glabrous; perennial.
2 Flowers golden-yellow, fragrant; inflorescence dense, usually not interrupted..... ***G. verum***
2 Flowers lemon-yellow, odorless; inflorescence interrupted ..... ***[G. wirtgenii]***
1 Leaves (5-) 8 (-10) per whorl (few if any whorls with > 8 leaves); flowers white or greenish, in a terminal compound inflorescence or in small axillary inflorescences; fruits glabrous, papillose, or uncinate-hispid; annual or perennial.
3 Stems retrorsely scabrous; annual.
4 Fruits and ovaries uncinate-hispid; flowers and fruits mainly in clusters of 2-5 ..... ***G. aparine***
4 Fruits and ovaries sharply papillose; flowers and fruits mainly in clusters of 3 ..... ***G. tricornutum***
3 Stems glabrous or pubescent, but not scabrous; perennial.
5 Fruits and ovaries uncinate-hispid; nodes bearded, the stem otherwise glabrous..... ***G. odoratum***
5 Fruits and ovaries glabrous; nodes not bearded, the stem either glabrous or pubescent toward the base of the plant.

6 Corolla 3-5 mm across, the pedicels usually shorter than the width of the corolla; inflorescence branches ascending, mostly at < 45 degrees ..... ***G. mollugo*** *var.* ***erectum***

6 Corolla 2-3 mm across, the pedicels usually longer than the width of the corolla; inflorescence branches spreading, mostly at > 45 degrees ..... ***G. mollugo*** *var.* ***mollugo***

* ***Galium anglicum*** Hudson. Pastures, disturbed areas; native of w. Europe. June-July. [= Y; < *G. parisiense* Linnaeus – RAB, F, G, S, W, WV; < *G. parisiense* var. *leiocarpum* Tausch – C; < *G. divaricatum* – K; = *G. parisiense* ssp. *anglicum* (Hudson) Arcangeli]

Galium aparine Linnaeus, Cleavers. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): meadows, thickets, disturbed areas, forests; common. April-June. Nearly cosmopolitan, from n. North America south through Central and South America. Apparently represented in North America (including our area) by both native and introduced genotypes. [= RAB, F, G, GW, K, S, W, WV; > *G. aparine* var. *aparine* – C; > *G. aparine* var. *echinospermum* (Wallroth) Farwell – C]

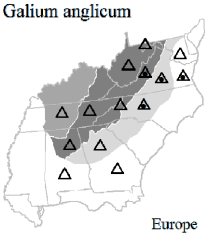
Galium asprellum Michaux, Rough Bedstraw. Mt (NC, VA, WV), Pd (DE, VA), Cp (VA): bogs, streambanks, wet meadows; uncommon (rare in DE). June-September. NL (Newfoundland) west to MN, south to n. VA, w. NC, ne. TN (Chester, Wofford, & Kral 1997), and MO. The report for sc. TN is an error (D. Estes, pers. comm. 2005). [= RAB, C, F, G, GW, K, S, W, WV]

Galium boreale Linnaeus, Northern Bedstraw. Mt (VA, WV), Pd (DE): rocky areas, woodlands, and fields; uncommon (rare in DE and WV). May-August. Circumboreal, south in North America to DE, sw. VA, KY, MO, and CA. [= C, K, W; > *G. boreale* var. *intermedium* A.P. de Candolle – F, G]

Galium circaezans Michaux *var.* ***circaezans***, Southern Forest Bedstraw. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): moist forests; common. April-July. NY, KY, and MI, south to FL and TX. The varieties need additional study. [= C, F, G, K, WV; < *G. circaezans* – RAB, S, W]

Galium circaezans Michaux *var.* ***hypomalacum*** Fernald, Northern Forest Bedstraw. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE), {GA?, SC?}: moist forests; common. April-July. QC west to MN and NE, south to VA, w. NC, KY, MO, and TX (?). The varieties need additional study. [= C, F, G, K, WV; < *G. circaezans* – RAB, S, W]

Galium anglicum



Europe

Galium concinnum Torrey & A. Gray, Shining Bedstraw. Mt (VA, WV), Pd (VA): dry woodlands; uncommon. June-August. NJ west to MN and NE, south to sw. VA, e. TN, nc. TN, and AR. [= C, F, G, K, W, WV]

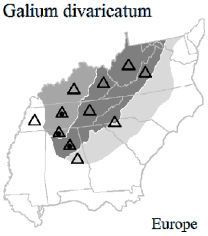
* ***Galium divaricatum*** Pourret ex Lamarck. Disturbed areas; native of s. Europe. June-July. [= Y; < *G. parisiense* var. *leiocarpum* Tausch – C; < *G. parisiense* Linnaeus – F, G, S; < *G. divaricatum* – K; = *G. parisiense* var. *divaricatum* (Pourret ex Lamarck) Koch; = *G. anglicum* var. *divaricatum* (Pourret ex Lamarck) Reichenbach; = *G. parisiense* ssp. *divaricatum* (Pourret ex Lamarck) Rouy] {add to synonymy}

Galium hispidulum Michaux. Cp (DE, GA, NC, SC, VA), Mt (NC): maritime forests, sandhills, dry sandy forests; common (rare in Mountains, rare in DE and VA). June-August; August-September. S. NJ south to FL, west to LA, primarily on the Coastal Plain. [= RAB, C, F, G, K, W; = *G. bermudense* Linnaeus – S, misapplied]

Galium lanceolatum Torrey, Wild-licorice. Mt (NC, SC, VA, WV), Pd (DE, VA), Cp (VA): moist hardwood forests; uncommon (rare in VA Coastal Plain, rare in Piedmont). June-July. QC west to MN, south to w. NC and e. TN. [= RAB, C, F, G, K, S, W, WV]

Galium latifolium Michaux, Wideleaf Bedstraw. Mt (GA, NC, SC, VA, WV), Pd (NC, VA): moist hardwood forests; common (uncommon in Piedmont). May-August. C. PA and KY south to n. GA and n. AL, a Southern and Central Appalachian endemic. The closely related *G. arkansanum* A. Gray is the Ozarkian sibling of the Appalachian *G. latifolium*. Var. *hispidum*, named from VA, needs additional study. [= RAB, C, K, S, W; > *G. latifolium* var. *latifolium* – F, G; > *G. latifolium* var. *hispidum* Small – F, G]

Galium divaricatum



Europe

* ***Galium mollugo*** Linnaeus *var.* ***erectum*** (Hudson) Domin. Mt?, Pd?, Cp? (DE?, NC?, VA?) {WV?}: moist roadsides, disturbed areas; {abundance}, native of Europe. May-June. The varieties need additional study. [= C, G; < *G. mollugo* – RAB, K, W, WV; = *G. erectum* Hudson – F; *? G. album* P. Miller]

* ***Galium mollugo*** Linnaeus *var.* ***mollugo***. Mt (NC, VA), Pd?, Cp? (VA?), {DE, GA, WV}: moist roadsides, disturbed areas; uncommon, native of Europe. May-June. The varieties need additional study. [= C, G; < *G. mollugo* – RAB, K, W, WV; = *G. mollugo* – F]

Galium obtusum Bigelow *var.* ***filifolium*** (Wiegand) Fernald, Carolina Bedstraw. Cp (DE, GA, NC, SC, VA), Pd (GA?, NC, SC, VA), Mt (VA): marshes, swamps, creekbanks, alluvial forests; common (uncommon in DE). April-May. S. NJ south to c. GA, primarily on the Coastal Plain. [= RAB, C, F, W; < *G. obtusum* – GW; = *G. obtusum* ssp. *filifolium* (Wiegand) Puff – K, Z; = *G. filifolium* (Wiegand) Small – S]

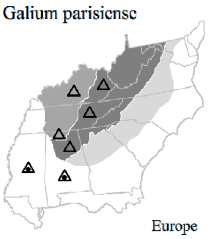
Galium obtusum Bigelow *var.* ***obtusum***, Bluntleaf Bedstraw. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): marshes, swamps; common. April-May. NS west to SD, south to FL and TX. "Ssp. *australe* Puff", cited in Kartesz (1999) and allegedly endemic to GA, was never published and is not now considered a useful entity by its putative author (Puff, pers. comm. 2004). [= RAB, C, F, W; < *G. obtusum* – GW, WV; > *G. obtusum* var. *obtusum* – G; > *G. obtusum* var. *ramosum* Gleason – G; > *G. obtusum* ssp. *obtusum* – K, Z; > *G. obtusum* "ssp. *australe*" – K, Z, not validly published; = *G. tinctorium* – S, misapplied]

* ***Galium odoratum*** (Linnaeus) Scopoli, Sweet Woodruff, Waldmeister. Mt (NC, VA), Pd (DE, NC, VA): commonly cultivated, rarely escaped or persistent, native of Europe. May. Used fresh as a flavoring for May-wine. [= C, K; = *Asperula odorata* Linnaeus – F, G]

Galium orizabense Hemsley *ssp.* ***laevicaule*** (Weatherby & Blake) Dempster, Smoothstem Bedstraw. Cp (GA, NC, SC, VA): forests; uncommon? (VA Watch List) May-August. Se. VA south to FL, west to se. TX; West Indies. The typic subspecies, ssp. *orizabense*, is distributed from Tamaulipas south through Mexico, Central America, to northern South America (Dempster 1981). [= K; < *G. pilosum* – RAB, S; = *G. pilosum* Aiton var. *laevicaule* Weatherby & Blake – F]

Galium palustre Linnaeus, Marsh Bedstraw, Ditch Bedstraw. Mt (WV): marshes, wet soil; rare. June-August. NL (Labrador) and ON south to MD, s. PA (Rhoads & Klein 1993), MD, WV, OH, IN, and IL; also in Europe and nw. North America. [= C, F, G, K]

* ***Galium parisiense*** Linnaeus. Disturbed areas; native of s., w., and c. Europe. June-July. [= K, Y; = *G. parisiense* ssp. *parisiense*] {add to synonymy}



* ***Galium pedemontanum*** (Bellardi) Allioni, Piedmont Crosswort. Mt (GA, NC, VA, WV), Pd (GA, VA), Cp (VA), {SC}: lawns, grassy roadsides, pastures; uncommon, native of s. Europe. April-June. The Piedmont referred to in the name is the "original" Piedmont of southern Europe. In GA Mountains and Piedmont (T. Govus, pers. comm. 2005). [= RAB, C, F, W, WV= ***Cruciata pedemontana*** (Bellardi) Ehrend – K, Z]

Galium pilosum Aiton *var.* ***pilosum***. Mt (NC, SC?, VA, WV), Pd (DE, NC, SC?, VA), Cp (DE, NC, SC?, VA), {GA}: forests, woodland borders, clearings; common. May-August. S. NH west to MI, south to NC, TN, MO, and TX. The varieties need additional study. [= C, F, G, K; < *G. pilosum* – RAB, S, W, WV]

Galium pilosum Aiton *var.* ***puncticulosum*** (Michaux) Torrey & A. Gray. Cp (DE, GA, NC, SC, VA), Pd (DE), Mt (WV): forests, woodland borders, clearings; common (rare in WV). May-August. S. NJ south to FL, west to MS. The varieties need additional study. [= C, F, G, K; < *G. pilosum* – RAB, S, W, WV]

* ***Galium sherardia*** E.H.L. Krause, Field-madder. Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA), Mt (NC, SC, VA, WV): lawns, disturbed areas; uncommon (rare in FL), native of Europe. February-August. Differing in its involucrate inflorescence and the more tubular, pink to purple flowers, and usually treated as a monotypic genus, *Sherardia*. Soza & Olmstead (2010) show *Sherardia* to be deeply embedded within a paraphyletic *Galium*. [= ***Sherardia arvensis*** Linnaeus – RAB, C, F, G, K, S, W, WH, WV]

Galium tinctorium (Linnaeus) Scopoli *var.* ***floridanum*** Wiegand, Florida Three-lobed Bedstraw. Cp (GA, NC, SC, VA), Mt (NC, SC, VA), Pd (NC, SC): swamps, marshes, and ditches; common (VA Watch List). April-June. MA south to FL, west to e. TX, mostly on the Coastal Plain, but extending inland to w. VA, w. NC, se. KY, s. IL, and se. MO. See Puff (1976) for additional information. [= F; < *G. tinctorium* – RAB, C, K, W; = *G. obtusum* var. *floridanum* (Wiegand) Fernald – G; < *G. claytonii* Michaux – S; = *G. tinctorium* ssp. *floridanum* (Wiegand) Puff – Z]

Galium tinctorium (Linnaeus) Scopoli *var.* ***tinctorium***, Southern Three-lobed Bedstraw. Mt (GA, NC, SC, VA), , WVPd (DE, NC, SC, VA), Cp (DE, NC?, SC?, VA?): swamps, marshes, and ditches; common. April-June. NL (Newfoundland) west to MN and NE, south to SC, n. GA, KY, and ne. MO. See Puff (1976) for additional information. [= F, G, GW; < *G. tinctorium* – RAB, C, K, W, WV; < *G. claytonii* Michaux – S; = *G. tinctorium* ssp. *tinctorium* – Z]

* ***Galium tricornutum*** Dandy, Small Bedstraw. Pd (GA, SC): disturbed areas; rare, introduced. This species has been reported from Cherokee and Greenwood counties, SC, nearby GA, and se. PA (Rhoads & Klein 1993). [= K; < *G. tricorne* Stokes – F]

Galium triflorum Michaux, Sweet-scented Bedstraw. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): woodlands, roadsides, disturbed areas; common (rare in DE Coastal Plain). July-August. Circumboreal,

south in North America to FL and Mexico (Veracruz). [= RAB, K, S, W; > *G. triflorum* var. *triflorum* – C, F, G, WV; > *G. triflorum* var. *asprelliforme* Fernald – C, F, G, WV]

Galium uniflorum Michaux. Cp, Pd (GA, NC, SC, VA): moist slope forests and alluvial forests; uncommon. April-September. Se. VA south to FL, west to TX. [= RAB, C, F, G, K, S]

* ***Galium verum*** Linnaeus, Yellow Bedstraw, Our Lady's Bedstraw. Mt (NC, VA, WV), Pd (DE, VA): meadows, pastures, roadsides; uncommon (rare in DE and NC), native of Europe. May-September. [= C, F, G, K1; = *G. verum* var. *verum* – K2; < *G. verum* – RAB, W, WH (also see *G. wirtgenii*)]

Galium virgatum Nuttall, Ozark Bedstraw. Cp (GA, SC*): (in GA) open blackland prairies, (in SC) waif around wool-combing mill; rare. Native from TN, c. GA (Houston County), and AL west to KS, OK, and TX. [= C, F, G, K; > *G. virgatum* var. *leiocarpum* Torrey & A. Gray – S; > *G. virgatum* var. *virgatum* – S]

* ***Galium arvense*** (Linnaeus) F. Hermann, Blue Woodruff. Pd (DE), Mt (WV): disturbed areas, rare, native of Europe. Naturalized south to WV, MD, DE (USDA NRCS 2007), and se. PA (Rhoads & Klein 1993). [= ***Asperula arvensis*** Linnaeus C, G, K, WV] {not yet keyed}

Galium trifidum Linnaeus var. *trifidum*, Northern Three-lobed Bedstraw. Moist places, bogs, and swamps. Circumboreal, south in North America to MD, DE, PA, and NJ. [= C, F, G; = *G. trifidum* ssp. *trifidum* – K, Z]

* *Galium wirtgenii* F.W. Schultz, Yellow Bedstraw. Not definitely known from our area, but likely to be present. [= C, F, G, K1; = G. verum var. wirtgenii (F.W. Schultz) Oborny – K2; < *G. verum* – W]

Houstonia Linnaeus 1753 (Bluet)

The generic limits of *Houstonia, Hedyotis, Oldenlandia*, and *Stenaria* remain unclear. References: Terrell (1959)=Z; Terrell (1991)=Y; Terrell (1996)=X; Rogers (1987)=Q; Ward (2004c)=V; Church & Taylor (2005); Church (2003); Turner (1995b)=U; Terrell (2001)=M; Rogers (2005); Terrell (2007). Key adapted in part from the references.

Identification notes: In the key below, all leaf measurements and length/width ratios are based on median cauline leaves.

1 Flowers solitary on terminal (rarely axillary) pedicels (2-) 6-50 (-70) mm long; corolla salverform; leaves 2-15 mm long; [subgenus *Houstonia*].
  2 Stems prostrate and creeping.
    3 Corolla white (rarely pale lavender); capsule (2.3-) 3.0-6.3 mm across; leaves 2-13 mm wise; pedicels usually single, 2-25 mm long; flowers chasmogamous and cleistogamous (the cleistogamous borne underground); [of the outer Coastal Plain]; [section *Mullera*] ..... ***H. procumbens***
    3 Corolla blue (rarely white); capsule 2.5-5.0 mm across; leaves 0.5-7 mm wide; pedicels single or paired, to 60 mm long; flowers all chasmogamous and aerial; [of the Mountains]; [section *Houstonia*] ..... ***H. serpyllifolia***
  2 Stems erect or spreading.
    4 Stems 1-4 (-7) cm tall; leaves mostly oblanceolate, 0.3-3.0 mm wide; corolla 5-12 mm long, white to pale pink; seeds with a hilar ridge in an elliptical depression; [section *Mullera*]..... ***H. rosea***
    4 Stems 1-26 cm tall; leaves elliptic, ovate or spatulate, 0.3-9.0 mm wide (at least some on a plant generally > 3 mm wide); corolla 2-21 mm long, purple, pale blue, pink, or white; seeds subglobose with a ventral cavity; [section *Houstonia*].
      5 Plants perennial, with a well-developed, persistent basal rosette; corolla 5.8-16 (-21) mm long, the tube (2-) 4-11 (-12) mm long ..... ***H. caerulea***
      5 Plants annual, with at most a few short-lived basal leaves; corolla 2-10 (-12) mm long, the tube 0.8-5.5 mm long.
        6 Calyx lobes slightly shorter than to slightly longer than the corolla tube; corollas white, 2.0-5.5 mm long, the tube 0.8-2.5 mm long..... ***H. micrantha***
        6 Calyx lobes 1/5 as long as to slightly longer than the corolla tube; corollas purple or violet (rarely white), 3.5-10 (-12.5) mm long, the tube 2.0-5.5 mm long ..... ***H. pusilla***
1 Flowers several to many, in terminal cymes; corolla funnelform; leaves (8-) 10-60 mm long; [subgenus *Chamisme*, section *Amphiotis*].
  7 Capsule obovoid-cylindric, longer than wide, the free calyx lobes distinctly shorter than the capsule; stipules of mid-cauline leaves ciliate or fringed, and also often bristle-tipped; leaves 1-3 mm wide; [of calcareous glades and barrens] ..... ***H. nigricans*** *var.* ***nigricans***
  7 Capsule as long as wide or wider, depressed globose, the free calyx lobes about as long as the capsule; stipules of mid-cauline leaves not cilate, fringed, or bristle-tipped; leaves 0.5-34 mm wide; [of various habitats, including calcareous glades and barrens]
    8 Basal leaves persistent in a rosette until and past flowering; leaves distinctly ciliate ..... ***H. canadensis***
    8 Basal leaves absent at the onset of flowering; leaves smooth-margined or ciliate.
      9 Leaves ovate or lanceolate, 1-6× as long as wide, 4-34 mm wide, widest toward the base or at the middle; calyx lobes 1-7 mm long.
        10 Calyx lobes 4-7 mm long; leaves mostly lanceolate (varying from narrowly lanceolate to broadly ovate), 17-33 mm long, 4-10 mm wide, 3.3-6× as long as wide ..... ***H. purpurea*** *var.* ***calycosa***
        10 Calyx lobes 1-4 mm long; leaves mostly ovate (varying from broadly ovate to ovate-lanceolate), 8-63 mm long, 6-34 mm wide, 1-3.2× as long as wide.
          11 Corollas light purple to white, (4-) 5-8 (-10) mm long; leaves (10-) 25-50 (-60) mm long, (6-) 12-30 (-34) mm wide; stems sparsely to densely pubescent; median internodes 2-9 cm long; leaves with pubescence ciliate on the leaf margin, on the midrib, and scattered on the surface; [of various habitats, widely distributed]..... ***H. purpurea*** *var.* ***purpurea***
          11 Corollas deep purple, 8-12 mm long; leaves 8-20 (-30) mm long, 3-8 (-13) mm wide; stems glabrous (or slightly short-pubescent on the lower nodes only); median internodes 0.5-4 cm long; leaves entirely glabrous or with pubescence ciliate on the leaf margin, on the midrib, but lacking from the leaf surface; [of high elevation rocky summits and adjacent grassy balds in w. NC and e. TN]..... ***H. montana***
      9 Leaves linear to narrowly elliptic, 4-20× as long as wide, 0.5-6 mm wide, widest at the middle or near the apex or nearly equally wide for most of their lengths; calyx lobes 0.5-3 mm long.

12 Leaves 1.3-4.7 cm long, 0.5-4.0 mm wide (mostly < 2.5 mm wide), 7-20× as long as wide; inflorescence very diffuse and open, to 20 cm long, the branches ascending, spreading, or deflexed, slender and often ultimately filiform, with 1-4 remote nodes bearing reduced leaves, the pedicels to 14 mm long; internodes mostly 4-9; mature capsules mostly 1.5-2.5 mm long and wide; stem densely cinereous-puberulent, especially at the nodes ..... ***H. tenuifolia***

12 Leaves 1.6-4.0 cm long, 1.5-6.0 mm wide (mostly > 2.5 mm wide), 4-11× as long as wide; inflorescence rather open to rather compact, < 12 cm long, the branches ascending or spreading, slender, pedicels to 8 mm long; internodes mostly 7-11; mature capsules mostly 1.8-3.0 mm long and wide; stem densely cinereous-puberulent, glabrate, or glabrous.

13 Stems glabrous or glabrate (sometimes puberulent on the nodes only); internodes 7-10, the median internodes (1.1-) 2.0-4.5 (-6.0) cm long; [of seasonally wet soil mats on moderate to high elevation granitic domes in sw. NC, nw. SC, and ne. GA]..... ..... ***H. longifolia*** *var.* ***glabra***

13 Stems densely cinereous-puberulent; internodes (6-) 7-11 (-13), the median internodes (1.0-) 1.5-3.5 (-4.4) cm long; [of dry sandy, shaley, gravelly, or rocky soil, widely distributed] ..... ***H. longifolia*** *var.* ***compacta***

Houstonia caerulea Linnaeus, Quaker Ladies, Innocence, Common Bluet. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): forests, woodlands, openings, lawns, a wide variety of disturbed sites; common. April-July; May-August. This species is widespread in e. North America. The flowers of this species and *H. serpyllifolia* are very similar; *H. caerulea* is a somewhat duller blue. [= RAB, G, K, S, W, WV, X, Y; = *Houstonia caerulea* var. *caerulea* – F; = *Hedyotis caerulea* (Linnaeus) Hooker – C, GW; < *Hedyotis caerulea* – Q]

Houstonia canadensis Willdenow ex Roemer & J.A. Schultes, Canada Bluet. Mt (GA, VA, WV): dry limestone barrens, locally abundant in shallow soils over limestone; rare (VA Rare). April-August. ME and s. ON west to MN, south to sw. VA, se. and c. TN, nw. GA, and AR. Terrell (1959) determined that *Houstonia setiscaphia* (allegedly a narrow endemic of sw. VA) fell within the range of variation of southern populations of *H. canadensis*. Further study is perhaps warranted. [= G, K, W, WV, X, Y, Z; = *Hedyotis canadensis* (Willdenow ex Roemer & J.A. Schultes) Fosberg – C, Q; > *Houstonia canadensis* – F; > *Houstonia setiscaphia* L.G. Carr – F; > *Houstonia canadensis* var. *setiscaphia* (L.G. Carr) C.F. Reed]

Houstonia longifolia Gaertner *var.* ***compacta*** Terrell, Eastern Longleaf Bluet. Mt (GA, NC, VA, WV), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): dry rock outcrops and adjacent open woodlands, dry sandy woodlands, dry roadbanks, glades and barrens; uncommon. Early June-August; September-October. Var. *compacta* is centered in the central Appalachians of VA, WV, e. KY, and se. OH, with extensions north to VT, west into n. IL, and south in the Piedmont and adjacent Coastal Plain to SC, GA, and Panhandle FL). The typic variety is more northern, apparently reaching its southern limit in IN, not reaching our area. [= WV, Z; < *Houstonia longifolia* – RAB, C, F, G, S, W; < *Hedyotis longifolia* (Gaertner) Hooker – C, Q, WH; < *Houstonia longifolia* var. *longifolia* – Y; = *Houstonia longifolia*, "Appalachian Group" – X; < *Houstonia longifolia* – K (also see *H. tenuifolia*)]

Houstonia longifolia Gaertner *var.* ***glabra*** Terrell, Granite Dome Bluet. Mt (GA, NC, SC): seasonally and periodically wet soils of shallow soil mats and crevices of granitic domes; rare. June-August; September-October. Var. *glabra* is endemic to the granitic dome district centered around Highlands, NC, occurring in sw. NC, nw. SC, and ne. GA. Terrell (1959) says "the lower internodes [are often] so smooth they appear to have been polished," and gives an altitudinal range of 850-1750 m. Although the morphological differences between var. *glabra* and var. *compacta* are not great, the combination of distinctive morphology correlated with a distinctive habitat and a disjunct range seem to warrant recognition at the varietal level. [= Z; < *Houstonia longifolia* – RAB, S, W; < *Hedyotis longifolia* (Gaertner) Hooker – C, Q; < *Houstonia longifolia* var. *longifolia* – Y; = *Houstonia longifolia*, "Glabra Group" – X; < *Houstonia longifolia* – K (also see *H. tenuifolia*)]

Houstonia micrantha (Shinners) Terrell. Cp (FL, GA), Pd (GA): dunes, sandy soils, granitic flatrocks; uncommon (rare in FL and GA). February-April. E. and c. GA west to sw. TN, nw. AR, south to w. FL Panhandle, s. MS, s. LA, and e. TX. [= K, X; = *Hedyotis australis* W.H. Lewis & D.M. Moore – Q; = *Houstonia pusilla* – S, misapplied]

Houstonia montana Small, Roan Mountain Bluet. Mt (NC): in crevices of rock outcrops at the summits of high elevation peaks of the Southern Blue Ridge, also in thin, frost-heaved, gravelly soils of grassy balds near summit outcrops, from 1250-1950 m in elevation; rare. June-July; July-August. This species is endemic to the high Blue Ridge of nw. NC and ne. TN, most notably occurring on Roan Mountain, Grandfather Mountain, Bluff Mountain, and Three Top Mountain. It was first noted by Asa Gray in 1841, who described it as "a remarkable dwarfish form." There has been debate over whether it is not indeed merely a weather-induced form, but recent studies show that it is distinct. In addition to the characters given above in the key, *H. montana* also differs from *H. purpurea* in having larger calyx lobes, corolla, capsules, and seeds. See Terrell (1959), Yelton (1974), and Terrell (1978) for further discussion. [= S, W; < *Houstonia purpurea* – RAB; = *Houstonia purpurea* Linnaeus var. *montana* (Small) Terrell – K, X, Y, Z; < *Hedyotis purpurea* – Q; = *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray var. *montana* (Small) Fosberg]

Houstonia nigricans (Lamarck) Fernald *var.* ***nigricans***, Diamond-flower. Mt (VA), Cp (GA): limestone barrens dominated by *Andropogon gerardii*, blackland prairies; rare. Sw. VA (Ludwig 1999), s. MI, IA, NE, and e. CO, south to s. FL, TX, e. NM, and along the Sierra Madre Oriental to Hidalgo, Mexico. This species has been variously placed in *Houstonia*, *Hedyotis*, and *Stenaria*. Based primarily on seed characters and chromosome numbers, Terrell (2001) has concluded that this taxon is not congeneric with the Sri Lankan type of the genus *Hedyotis*, and is also not a *Houstonia*, so has published the new genus *Stenaria* for *Hedyotis nigricans* and its close relatives. Church (2003) considers *Stenaria* congeneric with *Houstonia*, based on molecular phylogeny. The resolution of generic limits in this group is still unresolved. As interpreted by Terrell (1991, 2001) and Turner (1995b), *Houstonia nigricans* is a polymorphic species, with *Houstonia nigricans* var. *nigricans* as a widespread "matrix variety," and other, much more local varieties warranting recognition. Turner (1995b) reports *Houstonia nigricans* var. *nigricans* (as *Hedyotis nigricans* var. *nigricans*) from Pickens County, SC; the documentation is not known to me, and suitable habitats there are unlikely. [= *Hedyotis nigricans* (Lamarck) Fosberg var. *nigricans* – K, U, Y; = *Stenaria nigricans* (Lamarck) Terrell var. *nigricans* – M; < *Hedyotis nigricans* – C, Q; < *Houstonia nigricans* (Lamarck) Fernald – F, G; > *Houstonia angustifolia* Michaux – S; > *Houstonia filifolia* (Chapman) Small – S; < *Stenaria nigricans* (Lamarck) Terrell var. *nigricans* – WH]

Houstonia procumbens (Walter ex J.F. Gmelin) Standley, Creeping Bluet, Fairy-footprints, Roundleaf Bluet. Cp (FL, GA, SC): beach dunes, moist to wet sandy pinelands; common. October-April. Se. SC south to s. FL, west to se. LA. Gaddy &

Rayner (1980) note that this plant is fairly common on SC barrier islands, but flowers in the winter and is easily overlooked in other seasons (when botanists are more likely to be afield). See Wilbur (1968) and Ward (2004c) for differing opinions about the merits of the taxonomic recognition of the glabrous and pubescent plants. [= RAB, K, S, WH, X, Y; = *Hedyotis procumbens* (Walter ex J.F. Gmelin) Fosberg – Q; = *Houstonia rotundifolia* Michaux; > *Houstonia procumbens* var. *procumbens* – V; > *Houstonia procumbens* var. *hirsuta* (W.H. Lewis) D. B. Ward – V]

Houstonia purpurea Linnaeus *var.* ***calycosa*** Shuttleworth ex A. Gray, Midwestern Summer Bluet. Mt (GA, NC, WV): dry woodlands, banks, rock outcrops, shallow soils around mafic and calcareous rock outcrops; rare. May-July; July-August. The distribution and ecology of var. *calycosa* in our area are poorly known; it apparently occupies drier and typically more circumneutral sites than var. *purpurea*. Var. *calycosa* ranges from s. ME and w. NY west to s. OH, and sw. MO, south to w. NC, n. GA, AL, MS, AR, and e. OK. [= G, K, WV, X, Y, Z; < *Houstonia purpurea* – RAB, W; < *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray – C, Q; = *Houstonia lanceolata* (Poiret) Britton – F, S; = *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray var. *calycosa* (Shuttleworth ex A. Gray) Fosberg]

Houstonia purpurea Linnaeus *var.* ***purpurea***, Summer Bluet. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): moist and dry woodlands and forests, roadbanks, thinner soils around rock outcrops, a variety of disturbed sites; common (rare in Coastal Plain, rare in DE Piedmont). May-July; July-August. Var. *purpurea* ranges from DE, MD, and s. PA west to s. OH, s. IL, and sw. MO south to SC, sw. GA, Panhandle FL, MS, s. LA, e. TX, and e. OK. Plants growing in high elevation and exposed sites are sometimes dwarfed, and in that respect only, superficially resemble *H. montana*. [= G, K, WV, X, Y, Z; < *Houstonia purpurea* – RAB, W, WH; = *Houstonia purpurea* – F, S; < *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray – C, Q; = *Hedyotis purpurea* (Linnaeus) Torrey & A. Gray var. *purpurea*]

Houstonia pusilla Schoepf, Tiny Bluet. Pd (GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA), Mt (GA, NC): woodlands, lawns, cemeteries, and other disturbed sites; common (uncommon in FL, rare in DE). March-April. MD south to Panhandle FL, west to TX, and inland from IL west to NE, south to TN and TX. [= RAB, G, K, S, W, WH, X, Y; = *Houstonia patens* Elliott – F; = *Hedyotis crassifolia* Rafinesque – C, GW; < *Hedyotis caerulea* (Linnaeus) Hooker – Q; = *Houstonia minima* L.C. Beck – S]

Houstonia rosea (Rafinesque) Terrell, Rose Bluet. {habitats}. AL west to TX and OK. [= K; = *Hedyotis rosea* Rafinesque] {synonymy incomplete}

Houstonia serpyllifolia Michaux, Appalachian Bluet, Thyme-leaf Bluet. Mt (GA, NC, SC, VA, WV): streambanks, grassy balds, moist forests, seepy rock outcrops, spray cliffs, and moist disturbed areas; common (uncommon in GA, VA, and WV). (March-) May-June. A Southern and Central Appalachian endemic: PA south to nw. SC and ne. GA. The flowers are very similar to, but usually a brighter blue than, the more widespread *H. caerulea*. [= RAB, F, G, K, S, W, WV, X, Y; = *Hedyotis michauxii* Fosberg – C, GW, Q]

Houstonia tenuifolia Nuttall, Diffuse-branched Bluet. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (NC, SC, VA): usually in dry woodlands, often rocky (especially mafic rocks) or sandy; uncommon (rare in Coastal Plain). May-July; July-October. This species is centered in the Southern Appalachians and the Ozarks, extending into provinces adjacent to both areas of concentration, ranging overall from PA west to MO and OK, south to SC, GA, and TX. [= RAB, F, G, S, W, WV, Z; = *Hedyotis nuttalliana* Fosberg – C; < *Hedyotis longifolia* (Gaertner) Hooker – Q; = *Houstonia longifolia* var. *tenuifolia* (Nuttall) Wood; = *Houstonia longifolia*, "Tenuifolia Group" – X; < *Houstonia longifolia* – K]

Mitchella Linnaeus (Partridge-berry)

A genus of 2 species, perennials, ours and 1 in e. Asia. References: Rogers (2005)=Z.

Mitchella repens Linnaeus, Partidge-berry. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): deciduous and coniferous forests, stream-banks, heath balds, maritime forests, on rotten logs; common. May-June; June-July. NS west to MN, south to c. peninsular FL and TX; disjunct in Guatemala. Plants in maritime forests are more robust than others and often have an ascending habit, the stems sometimes 20-30 cm tall. [= RAB, C, F, G, GW, K, S, W, WH, ZWV,]

Mitracarpus Zuccarini (Girdle-pod)

A genus of about 30 species, of tropical America. References: Rogers (2005).

* ***Mitracarpus hirtus*** (Linnaeus) A.P. de Candolle, Girdle-pod. Cp (FL, GA, LA): disturbed areas; uncommon (rare in GA and LA), native of tropical America. Reported for GA Coastal Plain (Charlton County) (Carter, Baker, & Morris 2009). [= K, WH; *? M. villosus* (Swartz) Chamisso & Schlechtendahl ex A.P. de Candolle]

Oldenlandia Linnaeus (Oldenlandia)

A genus of about 100 species, pantropical, but circumscription is controversial and uncertain. References: Terrell & Robinson (2006)=X; Terrell (1991)=Z; Rogers (1987)=Y; GW; Rogers (2005).

1 Creeping, mat-forming perennial, rooting at nodes; leaves 1.5-5.2 mm long; flowers solitary on slender axillary pedicels; seeds 4-14 per capsule ..... ***O. salzmannii***

1 Erect, spreading, decumbent, or prostrate annual or perennial, not rooting at nodes; leaves 3-40 mm long; flowers usually > 1, in axillary clusters or pedunculate umbels; seeds > 50 per capsule.
2 Flowers (1) 2-5 in pedunculate axillary umbels, the filiform peduncle 5-10 mm long, the filiform pedicels 3-5 mm long ..... ***O. corymbosa***
2 Flowers 1-10 in sessile or subsessile axillary clusters.
3 Stem glabrous or nearly so; leaves mostly linear or linear-oblanceolate, 1-3 mm wide, generally 5-10× as long as wide; flowers solitary or (rarely) in 2-3-flowered clusters; plant a perennial ..... ***O. boscii***
3 Stem pilose or villous (rarely glabrous); leaves mostly ovate or broadly lanceolate, 4-10 mm wide, generally 2-3× as long as wide; flowers in compact clusters of 3-10, rarely solitary; plant an annual ..... ***O. uniflora***

Oldenlandia boscii (A.P. de Candolle) Chapman, Bosc's Bluet. Cp (FL, GA, NC, SC, VA), Mt (GA): clay-based Carolina bays, rivershore and millpond drawdown shores, sagponds, other seasonally saturated habitats; uncommon (rare in GA, NC, SC, and VA). August-September. A Southeastern Coastal Plain endemic, ranging from se. VA south to FL and west to TX. Similar in vegetative condition to *Polypremum procumbens*. [= RAB, G, K, S, WH, X, Z; = *Hedyotis boscii* A.P. de Candolle – C, F, GW, Y]

* ***Oldenlandia corymbosa*** Linnaeus, Diamond-flower. Cp (FL, GA, NC, SC), Pd (NC): moist lawns, gardens; common (rare in GA, NC, SC), native of South America. July-October. Reported for NC by Nesom (2000e). [= RAB, K, S, WH, X, Z; = *Hedyotis corymbosa* (Linnaeus) Lamarck – GW, Y]

* ***Oldenlandia salzmannii*** (de Candolle) Bentham & Hooker ex B.D. Jackson. Cp (FL): roadside ditches, marshes; rare, native of South America. Introduced in s. AL and w. Panhandle FL. [= K, WH, X]

Oldenlandia uniflora Linnaeus, Oldenlandia. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): pondshores, muddy drawdown shores, moist to wet ecotones of Coastal Plain streamheads, other moist to wet places; common (uncommon north of FL, rare in Piedmont). August-October. Mostly a species of the Southeastern Coastal Plain: NY (Long Island) south to s. FL and west to TX, north in the interior to MO. [= RAB, G, K, S, WH, X, Z; = *Hedyotis uniflora* (Linnaeus) Lamarck – C, F, GW, Y]

Paederia Linnaeus (Skunk-vine)

A genus of about 30 species, woody vines, of the Tropics. References: Rogers (2005)=Z; Diamond (1999).

* ***Paederia foetida*** Linnaeus, Skunk-vine. Cp (FL, GA, LA, SC), Pd (NC): disturbed areas, rarely spreading from plantings; uncommon (rare in LA, NC, and SC), native of se. Asia. Diamond (1999) reports its naturalization in Randolph County, NC; Carter, Baker, & Morris (2009) report its naturalization in several counties in the GA Coastal Plain. [= RAB, K, S, WH, Z]

Pentodon Hochstetter in Krauss 1844

A genus of 2 species, herbs, of tropical and warm temperate America and Africa. References: Terrell (1991)=Z; Rogers (1987)=Y; Rogers (2005).

* ***Pentodon pentandrus*** (K. Schumacher & Thonning) Vatke. Cp (FL, GA, SC): pond edges, wet meadows, moist ground; uncommon (rare in GA and SC), apparently native of Africa (GA Special Concern). July-September. In North America, ranging from e. SC south to s. FL, west to se. TX. [= GW, K, WH, Y, Z; *? P. halei* (Torrey & A. Gray) A. Gray – S; *? Oldenlandia halei* (Torrey & A. Gray) Chapman]

Pinckneya Michaux (Pinckneya, Fever-tree)

A monotypic genus, a small tree of the se. United States. References: Godfrey (1988); Rogers (1987)=Z.

Identification notes: *Pinckneya* is showy when in flower because of the development of 1 of the 5 calyx lobes of some of the flowers of the inflorescence into a large (to 7 cm by 5 cm), petaloid (pink or cream) appendage.

Pinckneya bracteata (Bartram) Rafinesque, Pinckneya, Fever-tree. Cp (FL, GA, SC): margins of acidic, peaty (blackwater) swamps; uncommon (rare in GA and SC). May-June (-July); September. Se. SC south to ne. FL and Panhandle FL. [= GW, K, WH, Z; = *P. pubens* Michaux – RAB, S]

Psychotria Linnaeus 1759 (Wild Coffee)

A genus of about 2000 species, mostly shrubs, tropical and subtropical. References: Rogers (2005)=Z.

Psychotria nervosa Swartz, Wild Coffee. Cp (FL): hammocks; rare. Ne. FL (Duval County) south to s. FL, West Indies, Central America, and South America. [= K, S, WH, Z]

Richardia Linnaeus (Richardia)

A genus of about 15 species, of subtropical and tropical America, and introduced in the Old World. References: Lewis & Oliver (1974)=Z; Krings (2002). Key based in part on Krings (2002).

1 Mericarps smooth; corolla 4-lobed; [section *Asterophyton*]..... ***R. humistrata***
1 Mericarps **either** conspicuously and densely hispidulous to strigose **or** papillose to tuberculate; corolla 6-lobed; [section *Richardia*].
2 Stems hirsute, generally densely and evenly so from tip to base; adaxial leaf surface evenly strigose; mericarps conspicuously and densely hispidulous to strigose, the adaxial face broad, with a pronounced median keel; perennial from a woody rhizome (or annual) ..... ***R. brasiliensis***
2 Stems hirsute or villous near the tips, but progressively more sparsely so to glabrate toward the base; adaxial leaf surface glabrous to strigillose near the margins only, the median portion of the leaf blade glabrous; mericarps papillose to tuberculate, the adaxial surface closed to a narrow groove; annual.
3 Corolla (8-) 12-20 (-25) mm long, pink to lilac; mericarp papillae blunt and rounded; [FL peninsula only]..... ***[R. grandiflora]***
3 Corolla (2.5-) 5-7 (-10-5) mm long, white (sometimes with the lobes pale pink or lilac); mericarp papillae acute; [widespread]..... ***R. scabra***

* ***Richardia brasiliensis*** Gomes. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): roadsides, fields, vacant lots, urban areas, disturbed areas; common, native of South America. May-November. [=RAB, C, F, K, S, WH, Z]

* ***Richardia humistrata*** (Chamisso & Schlechtendahl) J.A. & J.H. Schultes. Cp (FL) {AL, MS}: disturbed areas, savannas, pine flatwoods; rare, native of South America. Also collected in 1886 as a ballast waif in Camden County, NJ; first noted on the Gulf Coast only in 1941, but perhaps early introduced there on ballast as well, such as at Pensacola. [= K, WH, Z]

* ***Richardia scabra*** Linnaeus. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): roadsides, fields, vacant lots, urban areas, disturbed areas; common, native of South America. June -December. Lewis & Oliver (1974) consider this species to be native from our area south through Central America into northern South America, based on the semi-contiguous distribution, but occurrences in our region seem to be in altered habitats. [= RAB, C, F, G, K, S, WH, Z]

Richardia grandiflora (Chamisso & Schlechtendahl) J.A. & J.H. Schultes, Largeflower Richardia. Cp (FL): disturbed areas; rare, native of South America (mainly Brazil). Reported for Alachua County, immediately south of our area (Kunzer et al. 2009), and "rapidly spreading." [= K, WH, Z]

Spermacoce Linnaeus (Buttonweed)

A genus of about 50 species, herbs, of tropical and warm-temperate Old and New World. References: Rogers (2005).

1 Calyx with 2 long lobes, the other 2 absent or vestigial..... ***S. densiflora***
1 Calyx with 4 lobes of nearly equal length.
2 Calyx lobes with a conspicuous white margin ..... ***S. prostrata***
2 Calyx lobes green throughout.
3 Fruit pubescent ..... ***S. assurgens***
3 Fruit glabrous ..... ***S. glabra***

Spermacoce assurgens Ruiz & Pavón. Cp (FL, GA): wet hammocks, bottomland forests, marshes; uncommon (rare in GA). July-September. In sw. GA (Jones & Coile 1988), AL, and FL; also in the New World tropics? [> *S. assurgens* – K; ? *Borreria laevis* (Lamarck) Grisebach – GW, S, misapplied; ? *Spermacoce remota* Lamarck – WH; *Borreria brachysepala*, misapplied] {add to synonymy}

* ***Spermacoce densiflora*** (deCandolle) Alain. Cp (FL): disturbed areas; rare, native of the Neotropics. [= K, WH; = *Borreria densiflora* deCandolle] {add to synonymy}

Spermacoce glabra Michaux, Smooth Buttonweed. Mt (VA, WV), Cp (FL, GA, SC*, VA*): rocky riversides in the mountains, disturbed areas in the Coastal Plain; rare (GA Rare). Perhaps only introduced in at least some parts of our area; see Wieboldt et al. (1998) for discussion. [= RAB, C, F, G, GW, K, S, WH]

Spermacoce prostrata Aublet. Cp (FL): wet pine flatwoods, floodplain forests; uncommon. FL, AL, MS, south through the New World tropics. July-September. [= K, WH; = *Borreria ocimoides* (Burmann f.) de Candolle – S, misapplied] {add to synonymy}

Spermacoce tenuior Linnaeus, reported from sw. GA (Kartesz 1999). {ID needs checking} [= K; *? S. riparia* Chamisso & Schlechtendahl] {not yet keyed; add to synonymy}

351. GENTIANACEAE A.L. de Jussieu 1789 (Gentian Family) [in GENTIANALES]

A family of about 87 genera and over 1600 species, herbs, shrubs, and trees, cosmopolitan (Struwe & Albert 2002). References: Wood & Weaver (1982); Struwe & Albert (2002). [also see *MENYANTHACEAE*]

1 Leaves all scale-like, 1-3 (-5) mm long, appressed to the stem; [tribe *Gentianeae*, subtribe *Swertiinae*]..... ***Bartonia***
1 Leaves larger, spreading or ascending.
2 Stem leaves whorled; plants robust, 1-3 m tall; [tribe *Gentianeae*, subtribe *Swertiinae*] ..... ***Frasera***

2 Stem leaves opposite; plants generally < 1 m tall.
3 Calyx lobes 2; stem leaves obovate, widest near the rounded tip), 0.5-1.5 cm long, crowded near the tip of the stem, basal rosette never present; [of nutrient-rich, mesic forests]; [tribe *Gentianeae*, subtribe *Swertiinae*]..... ***Obolaria***
3 Calyx lobes 4-5; stem leaves lanceolate, ovate, elliptic or narrowly elliptic (widest near the middle or toward the base, the tip acute or acuminate), mostly > 1.5 cm long, distributed fairly evenly along the stem, basal rosettes sometimes present; [of various more-or-less open habitats (except some species of *Gentiana*, which can occur in nutrient-rich, mesic forests)].
4 Corolla lobes 5-14, much longer than the corolla tube, pink or white; [tribe *Chironieae*, subtribe *Chironiinae*]..... ***Sabatia***
4 Corolla lobes 4-5, shorter than the corolla tube, blue, lavender, pink or white.
5 Corolla tube < 2 mm wide; [tribe *Chironieae*, subtribe *Chironiinae*]..... ***Centaurium***
5 Corolla tube > 3 mm wide.
6 Corolla lobes alternating with corolla appendages (appearing as plaits or lobes, these often toothed, notched, or lacerate, sometimes as long as or longer than the true corolla lobes); main stem leaves cuneate at the base; perennial; [tribe *Gentianeae*, subtribe *Gentianinae*] ..... ***Gentiana***
6 Corolla lobes not alternating with corolla appendages; main stem leaves rounded to cordate at the base; biennial or annual; [tribe *Gentianeae*, subtribe *Swertiinae*].
7 Corolla lobes 4, finely fringed; main stem leaves rounded at base, with lateral veins obscure; biennial ..... ***Gentianopsis***
7 Corolla lobes 5, entire, not fringed; main stem leaves cordate (the cordate bases often overlapping the opposite leaf), with 2-3 well-developed lateral veins (prominently visible on the lower surface); annual ..... ***Gentianella***

Bartonia Muhlenberg ex Willdenow (Bartonia)

A genus of 3 species, herbs, of e. North America. The genus has coralloid mycorrhizae and lacks root hairs, and is thus presumably partially mycotrophic. References: Mathews et al. (2009)=Y; Gillett (1959)=Z.

1 Corolla lobes white, 4-9 mm long, spreading, spatulate to obovate, rounded at the apex; flowering in early spring (rarely to early summer) ..... ***B. verna***
1 Corolla lobes green to creamy white, 2-3 (-5.2) mm long, ascending or erect, oblong to ovate or lance-ovate, acuminate or rounded-mucronate at the apex; flowering in summer or fall (July-October).
2 Mid-cauline scale leaves alternate; corolla lobes acuminate at the apex, their margins entire; anthers 0.3-0.5 mm long ..... ***B. paniculata*** *ssp.* ***paniculata***
2 Mid-cauline scale leaves opposite; corolla lobes rounded at the apex, abruptly narrowed to a mucro, their margins erose (uncommonly entire); anthers 0.5-1.1 mm long..... ***B. virginica***

Bartonia paniculata (Michaux) Muhlenberg *ssp.* ***paniculata***, Screwstem Bartonia. Swamps, bogs, pocosins, pocosin ecotones, sphagnous seepages, sinkhole ponds. August-October; September-October. Ssp. *paniculata* ranges from MA south to c. peninsular FL and west to e. TX, chiefly on the Coastal Plain, but with scattered occurrences inland (to c. VA, w. NC, KY, and AR). Ssp. *iodandra* (B.L. Robinson) J. Gillett is more northern, ranging from NL (Newfoundland) south to MA. Ssp. *texana* (Correll) K. Mathews, Dunne, E. York, & Struwe is endemic to the West Gulf Coastal Plain of w. LA and e. TX, where it is more-or-less sympatric with ssp. *paniculata* (Mathews et al. 2009). [= K, Y, Z; < *B. paniculata* – RAB, GW, WH; = *B. paniculata* – G; = *B. paniculata* var. *paniculata* – C, F; = *B. lanceolata* Small – S]

Bartonia verna (Michaux) Rafinesque ex Barton, Spring Bartonia, White Bartonia. Wet pine savannas, shores of Coastal Plain depression ponds, other moist sands. (November-) February-April (-June); April-June. VA (one site known from City of Virginia Beach) (Belden et al. 2004) and se. NC (Carteret County) south to s. FL, west to se. TX. Wood & Weaver's (1982) speculation that *B. verna* is an outlier relative to the other species appears not to be true, with the true division being between *B. verna*/*virginica* on one hand and *B. paniculata* and its infrataxa on the other (Mathews et al. 2009). [= RAB, GW, K, S, WH, Y, Z]

Bartonia virginica (Linnaeus) Britton, Sterns, & Poggenburg, Virginia Bartonia. Bogs, swamps, savannas, pocosin ecotones, pocosins. July-October; September-October. NS and QC west to WI, south to n. FL and LA. [= RAB, C, F, G, GW, K, S, WH, Y, Z]

Centaurium Hill (Centaury)

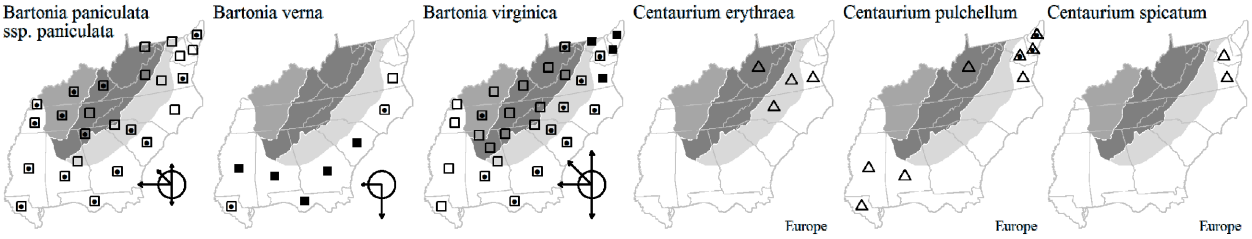
A genus of about 20 species, herbs, mainly north temperate.

1 Flowers pedicellate, the pedicels 3-5 mm long..... ***C. pulchellum***
1 Flowers sessile or nearly so (sometimes appearing stalked but with bracteal leaves immediately below the calyx).
2 Inflorescence a corymbiform cyme (about as broad as long, the central axis poorly developed)..... ***C. erythraea***
2 Inflorescence a spikelike cyme (distinctly elongate, the central axis straight)..... ***C. spicatum***

* ***Centaurium erythraea*** Rafn, Common Centaury, Forking Centaury. Lawns, disturbed areas; native of Europe and w. Asia. July-September. [= C, K; = *C. minus* – RAB, later homonym; = *C. umbellatum* – F, G, later homonym]

* ***Centaurium pulchellum*** (Swartz) Druce, Lesser Centaury, Branching Centaury. Disturbed areas; native of Europe. June-September. [= C, F, G, K, S]

* ***Centaurium spicatum*** (Linnaeus) Fritsch, Spiked Centaury. Disturbed areas; native of s. Europe. July-August. [= C, F, G, K]



Eustoma Salisbury ex G. Don (Prairie-gentian)

A genus of 3 species, annual to perennial herbs, of se., c., and sw. North America south to Mexico and Belize and in the West Indies. References: Shinners (1957)=Z; Wood & Weaver (1982)=Y.

Eustoma exaltatum (Linnaeus) Salisbury ex G. Don, Prairie-gentian. Cp (FL): alkaline prairies, saline coastal areas; rare. AL and peninsular FL west to TX, south to Mexico and Belize; West Indies. June-November. [= GW, S, WH, Y, Z; = *Eu. exaltatum* ssp. *exaltatum* – K] {not yet keyed in generic key}

Frasera Walter (Columbo)

A genus of 15 species, herbs, primarily of w. North America. References: Threadgill & Baskin (1978)=Z; Horn (1997).

Frasera caroliniensis Walter, American Columbo. Mt (GA, NC), Pd (GA, SC): rich forests over mafic rocks, upper slopes of cove forests, floodplain forests; rare. Late May-June; September-October. W. NY, nw. PA, and s. ON west to IL, MI, MO, and e. OK, south to w. SC, n. GA, and LA, primarily west of the Blue Ridge. Horn (1997) studied the ecology of this species in the Piedmont of SC. [= C, K, S, W, Z; = *Swertia caroliniensis* (Walter) Kuntze – RAB, F, G]

Gentiana Linnaeus 1753 (Gentian)

A genus of about 350-400 species, herbs, primarily temperate and arctic. Even following the removal of *Gentianopsis* and *Gentianella, Gentiana* is a large and apparently heterogeneous group, perhaps not monophyletic. No satisfactory comprehensive treatment is available, however. All of the species treated here as *Gentiana* are in the distinctive group often treated as section, subgenus, or genus *Pneumonanthe*. References: Pringle (1967)=Z; Halda (1996)=Y; Ho & Liu (2001)=X; Pringle & Weakley (2009)=Q; Ho & Liu (1990); Yuan, Küpfer, & Doyle (1996); Pringle (1977). Key adapted from Z.

Identification Notes: In some species it may be somewhat difficult to interpret the corolla lobes and the corolla appendages. The filaments are alternate to the corolla lobes, and are therefore attached to the lower portion of the corolla appendages.

1 Flower solitary (rarely 2 or 3); corolla spotted within; leaves twisted, oblanceolate to oblinear; [subgenus *Pneumonanthe*, series *Angustifoliae*].
  2 Calyx lobes widest at base, the sides then parallel upwards for a distance; corolla exterior intensely indigo blue; [of s. NJ and adjacent DE, and from se. VA south through e. NC to nc. SC]..... ***G. autumnalis***
  2 Clayx lobes widest above the base, narrowing upwards and downwards from that point; corolla exterior dull purplish-green; [of FL Panhandle]..... ***G. pennelliana***
1 Flowers clustered; corolla not spotted within; leaves planar, mostly lanceolate, elliptic, or ovate (rarely linear); subgenus *Pneumonanthe*, series *Pneumonanthe*].
  3 Calyx lobes keeled, the keel decurrent on the calyx tube, the margins of the lobes entire (as seen at 10×); corolla greenish-white or yellowish-white; leaves ovate to lanceolate, acuminate..... ***G. alba***
  3 Calyx lobes not keeled, the margins of the lobes conspicuously ciliate (as seen at 10×, except entire to minutely denticulate in *G. linearis* and *G. villosa*); corolla white, greenish-white, or variously blue; leaves various.
    4 Corolla greenish-white (sometimes somewhat purplish); seeds wingless; lower leaves spatulate to obovate..... ***G. villosa***
    4 Corolla blue, purplish, pale blue, or nearly white; seeds winged; lower leaves linear, lanceolate, elliptic, or ovate.
      5 Margins of leaves and calyx lobes entire to minutely denticulate; corolla appendages obliquely triangular, broader than high (sometimes with a minute deflexed segment) ..... ***G. linearis***
      5 Margins of leaves and calyx lobes conspicuously ciliate (as seen at 10×); corolla appendages with 2 teeth, as long as broad or longer (sometimes with a deflexed segment, if so, the deflexed segment about as long as the erect one).
        6 Anthers separate at anthesis; outer surfaces of petals suffused with green; calyx lobes linear-subulate, about as long as the tube; corolla lobes 6-14 mm long, about 2× as long as the the free portions of the corolla appendages ..... ***G. puberulenta***
        6 Anthers connate at anthesis; outer surfaces of petals not suffused with green; calyx lobes various; corolla lobes usually shorter.
          7 Calyx lobes linear-subulate, broadest at the base, 4× or more as long as broad, shorter than the densely puberulent calyx tube; stems densely puberulent; corolla appendages very unevenly bifid, the narrower segment often deflexed into the corolla tube .... ***G. decora***
          7 Calyx lobes lanceolate, oblanceolate, ovate, or orbicular, 1-5× as long as broad, longer or shorter than the glabrous or puberulent calyx tube; stems glabrous or puberulent; corolla appendages subequally bifid, both segments erect.

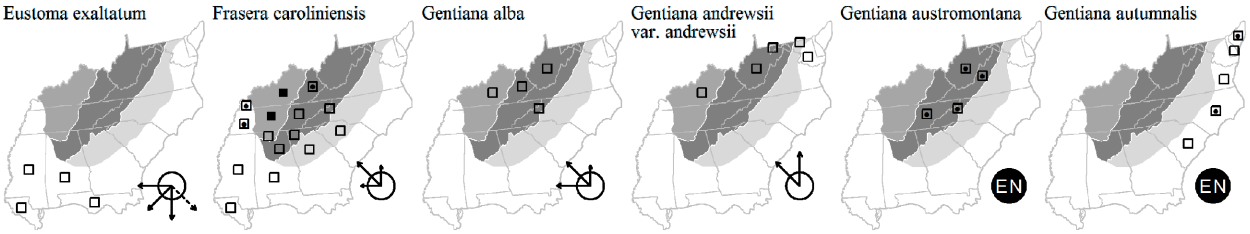
8 Corollas open to loosely closed; involucral and upper leaves obtuse to acute (rarely acuminate); calyx lobes lanceolate.
9 Leaves ovate, widest near the base, bright green; calyx lobes longer than the calyx tube; corolla lobes spreading, usually 2-4 mm longer than the appendages ..... ***G. catesbaei***
9 Leaves linear to elliptic, widest near the middle, dark green; calyx lobes shorter than or about equal to the calyx tube; corolla lobes usually incurved, rarely exceeding the appendages by > 2 mm ..... ***G. saponaria***
8 Corollas tightly closed; involucral and upper leaves acuminate; calyx lobes ovate-orbicular.
10 Corolla lobes reduced to a minute mucro or triangular tooth, much exceeded by the corolla appendages ..... ***G. andrewsii*** *var.* ***andrewsii***
10 Corolla lobes about as long as the corolla appendages.
11 Calyx tubes densely puberulent; calyx lobes lanceolate, erect or ascending; stems puberulent; filaments 7-12 mm long; corolla lobes 1.5-3 mm, often triangular, about 0.5-0.6× as wide as the corolla appendages ..... ***G. austromontana***
11 Calyx tubes glabrous; calyx lobes widely elliptic, ovate, obovate, orbicular, or rhombic, spreading widely; stems glabrous; filaments 10-15 mm long; corolla lobes **either** 0.7-2.0 mm long **or** 2.5-5.0 mm long, usually rounded, about as wide as the corolla appendages.
12 Calyx lobes widely obovate to orbicular, 2-10 mm; corolla lobes 0.7-2.0 mm; [more widespread] ..... ***G. clausa***
12 Calyx lobes obovate, elliptic, ovate, orbicular, or rhombic, (3-) 5-25 (-35) mm; corolla lobes 2.5-5.0 mm; [Mountains of NC, south of Asheville] ..... ***G. latidens***

Gentiana alba Muhlenberg ex Nuttall, Pale Gentian. Moist meadows. August-October. MI west to MN, south to n. AR; with scattered disjunctions eastward to PA, OH, WV, KY, and w. NC. *G. alba* has nomenclatural over *G. flavida* as the older name; there is controversy, however, over whether it was validly published and applies clearly to the species at hand (see Wilbur 1988c for discussion). [= RAB, K, W, WV, X, Y, Z; = *Gentiana flavida* A. Gray – C, F, G; = *Dasystephana flavida* (A. Gray) Britton – S; = *Pneumonanthe flavida* (A. Gray) Greene]

Gentiana andrewsii Grisebach *var.* ***andrewsii***, Prairie Closed Gentian. Meadows, seeps, forest edges. NH, s. QC, MN, and s. MB, south to s. MD, WV, MO and WY; earlier reports of it as far south as GA or NC (as by F and G) are apparently based on misidentifications. An additional variety, var. *dakotica* A. Nelson, occurs from MB and SK south in the Great Plains to MO and IL. [= C, K, X, Y, Z; < *G. andrewsii* – F, G, WV; < *Dasystephana andrewsii* (Grisebach) Small – S; = *Pneumonanthe andrewsii* (Grisebach) W.A. Weber var. *andrewsii*]

Gentiana austromontana J.S. Pringle & Sharp, Blue Ridge Gentian. Mountain forests and grassy balds, especially at medium to high elevations, but descending to ca. 600 m (2200 feet). August-October. A Southern Appalachian endemic: s. WV and sw. VA south to w. NC and ne. TN. The flowers of *G. austromontana* are usually a deeper and more intense blue-violet than the similar *G. clausa* and *G. decora*. See Pringle & Sharp (1964) for additional discussion. [= C, K, Q, W, WV, X, Y, Z; < *G. clausa* Rafinesque – RAB, F, G, GW; < *Dasystephana decora* (Pollard) Small – S]

Gentiana autumnalis Linnaeus, Pinebarren Gentian. Savannas, pine flatwoods, sandhills, in a variety of sites varying from moist to very xeric, nearly always associated with *Pinus palustris* and/or *Aristida stricta* (in se. VA, NC, and SC). Late September-mid January (rarely at other times of the year, such as spring, in response to fire). This species is a "bimodal endemic," occurring in s. NJ and adjacent DE (at least formerly), and from se. VA south through e. NC to nc. SC. The related *G. pennelliana* Fernald (sometimes reduced to a subspecies of *G. autumnalis*) is endemic to the FL Panhandle; other siblings, *G. bicuspidata* (G. Don) Briq., *G. hooperi* Pringle, and *G. longicollis* Nesom, occur in Mexico. *G. autumnalis* is often overlooked, since it is very inconspicuous except when in flower, it usually flowers at a season when few botanists are about, and sterile plants greatly outnumber fertile ones. Vegetatively it is extremely distinctive once learned; the leaves are glossy, dark-green, opposite, oblanceolate to "oblinear," and twisted and curved in a manner reminiscent of an airplane propellor. [= RAB, C, F, GW, K, X, Z; = *Gentiana porphyrio* J.F. Gmelin – G; = *Dasystephana porphyrio* (J.F. Gmelin) Small – S; = *Gentiana autumnalis* ssp. *autumnalis* – Y; = *Pneumonanthe porphyrio* (Linnaeus) Greene]



Gentiana catesbaei Walter, Coastal Plain Gentian. Pocosins, moist savanna edges, edges of moist hardwood forests, bluff seepages. Late September-November. S. NJ south to ne. FL and e. Panhandle FL, on the Coastal Plain. [= RAB, C, G, GW, K, WH, X, Y, Z; > *G. catesbaei* var. *catesbaei* – F; > *G. catesbaei* var. *nummulariifolia* Fernald – F; > *Dasystephana latifolia* (Chapman) Small – S; > *D. parvifolia* (Chapman) Small – S; = *Pneumonanthe catesbaei* (Walter) F.W. Schmidt]

Gentiana clausa Rafinesque, Meadow Closed Gentian, Meadow Bottle Gentian. Forests. September-October. Mostly Appalachian: ME south to w. NC and ne. TN, extending east and west to adjacent physiographic provinces. [= – C, Q, WV; < *G. clausa* – C, K, W, X, Y, Z (also see *G. latidens*); < *G. clausa* – RAB, F, G, GW (also see *G. austromontana* and *G. latidens*); < *Dasystephana decora* (Pollard) Small – S; < *Pneumonanthe clausa* (Rafinesque) Greene]

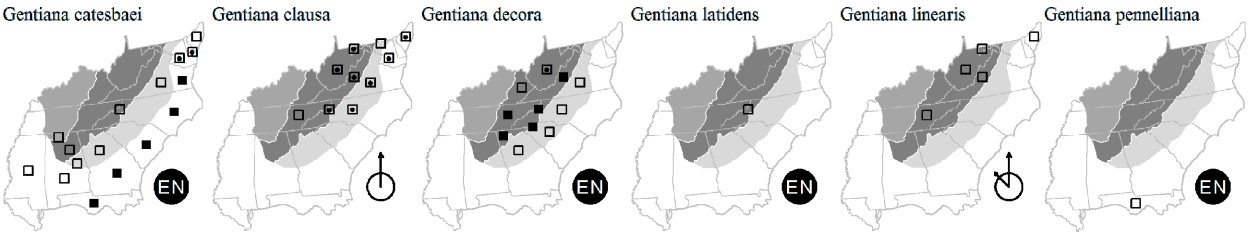
Gentiana decora Pollard, Appalachian Gentian. Forests. September-October. A Southern Appalachian endemic: c. WV south through w. VA to w. NC, e. TN, nw. SC, ne. GA. [= RAB, C, F, G, K, W, WV, X, Y, Z; < *Dasystephana decora* (Pollard) Small – S; = *Pneumonanthe decora* (Pollard) Greene]

Gentiana latidens (House) J.S. Pringle & Weakley, Balsam Mountain Gentian. Moist, often seeping, more or less open sites on rocky slopes. September-October. Restricted to the higher mountains sof NC south of Asheville, NC (Haywood,

Jackson, Macon, and Transylvania counties). [= Q; < *G. clausa* – RAB, GW, K, W, X, Y, Z; < *Dasystephana decora* (Pollard) Small – S; < *Pneumonanthe clausa* (Rafinesque) Greene; = *G. saponaria* var. *latidens* House]

Gentiana linearis Frölich, Narrowleaf Gentian. Openings in spruce-fir forests, bogs, at high elevations. September-October. Mainly occurring in ne. United States and e. Canada, west to Lake Superior, and south (scattered) in the Appalachians to sw. VA (in openings in spruce-fir forest near summit of Whitetop Mountain) and e. TN (Chester, Wofford, & Kral 1997). On Mount LeConte (Sevier County, TN), *G. linearis* occurs in thin soils around high elevation outcrops of Anakeesta Slate. See Pringle (1977) for extensive discussion of actual and putative southern occurrences of this species. [= C, F, G, K, W, WV, X, Y, Z; = *Pneumonanthe linearis* (Frölich) Greene]

Gentiana pennelliana Fernald, Wiregrass Gentian. Pine flatwoods. December-March. Endemic to Panhandle FL. [= GW, WH; = *Dasystephana tenuifolia* (Rafinesque) Pennell – S] {add to synonymy X, Y, Z}



Gentiana puberulenta J.S. Pringle, Prairie Gentian. {habitats}. W. NY west to ND, south to KY, sc. TN (Coffee County) (Chester, Wofford, & Kral 1997), LA, n. AR, and KS. Reports for WV are unconfirmed (Harmon, Ford-Werntz, & Grafton 2006). [= C, K, X, Y, Z; = *G. puberula* – F, G, misapplied; = *Dasystephana puberula* (Michaux) Small – S, misapplied]

Gentiana saponaria Linnaeus, Soapwort Gentian. Bogs, marshes, wet hardwood forests, other moist to wet habitats. Late September-November. NY west to n. IL, south to Panhandle FL and e. TX. A peculiar form with very narrow leaves has been found at several localities in Ashe and Watauga counties, NC and in the South Mountains, NC; it may warrant taxonomic recognition after further study. [= RAB, C, GW, K, W, WH, X, Y, Z; > *G. saponaria* – F, G, WV; > *G. cherokeensis* (W.P. Lemmon) Fernald – F, G; = *G. saponaria* var. *saponaria* – K; = *Dasystephana saponaria* (Linnaeus) Small – S; = *Pneumonanthe saponaria* (Linnaeus) F.W. Schmidt]

Gentiana villosa Linnaeus, Striped Gentian. Upland forests, sandhill/pocosin ecotones. Late August-November. Se. PA west to n. KY and w. TN, south to Panhandle FL and e. LA. [= RAB, C, F, G, K, W, WH, X, Y, Z; = *Dasystephana villosa* (Linnaeus) Small – S; = *Pneumonanthe villosa* (Linnaeus) F.W. Schmidt]

Gentianella Moench (Agueweed)

A genus of about 125-250 species, herbs, temperate. The separation of *Gentianella* from *Gentiana* appears to be well warranted; some characters suggest that *Gentianella* is more closely allied to *Swertia*, *Halenia*, and *Lomatogonium* than to *Gentiana* (Wood & Weaver 1982). A molecular analysis has confirmed this (Yuan & Küpfer 1995). References: Gillett (1957)=Z. Key based on Gillett (1957).

1 Calyx 8-10 mm long; calyx tube 3.0-3.5 mm long; calyx lobes 5-6 mm long, elliptic-lanceolate to oblanceolate with thickened margins, and with broadly flattened, frequently nerve-like keels; corolla ca. 20 mm long..... ***G. quinquefolia*** *var.* ***occidentalis***
1 Calyx 4-5 mm long; calyx tube 1.5-2.0 mm long; calyx lobes 2.0-2.5 mm long, narrowly triangular with hyaline margins and very prominent keels; corolla 16-18 mm long..... ***G. quinquefolia*** *var.* ***quinquefolia***

Gentianella quinquefolia (Linnaeus) Small *var.* ***occidentalis*** A. Gray, Western Agueweed. Calcareous barrens, dry and dry-mesic limestone woodlands. Late August-October. Var. *occidentalis* A. Gray is more western, from OH and s. ON west to MN, east and south to w. VA, sc. KY, AR, and se. KS. [= C, G; < *Gentiana quinquefolia* Linnaeus – RAB, GW, W; = *Gentiana quinquefolia* var. *occidentalis* (A. Gray) Hitchcock – F; = *Gentianella quinquefolia* ssp. *occidentalis* (A. Gray) J. Gillett – K, Z; = *Gentianella occidentalis* (A. Gray) Small – S]

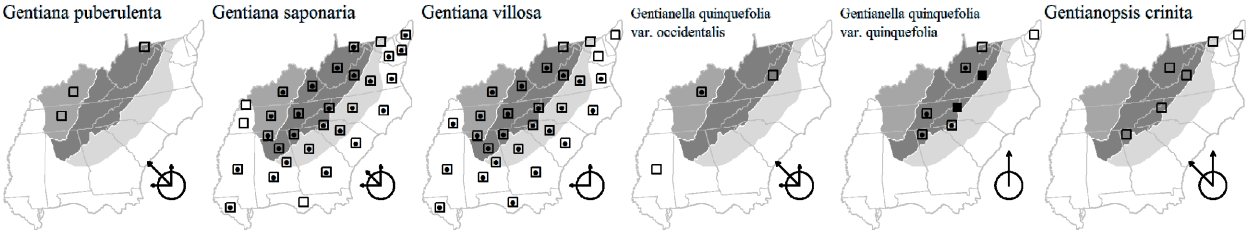
Gentianella quinquefolia (Linnaeus) Small *var.* ***quinquefolia***, Eastern Agueweed. Forests, grassy balds. Late August-October. Var. *quinquefolia* is primarily Appalachian, from ME west to w. NY and s. ON, south to n. GA and sc. TN. [= C, G; < *Gentiana quinquefolia* Linnaeus – RAB, GW, W, WV; = *Gentiana quinquefolia* var. *quinquefolia* – F; = *Gentianella quinquefolia* ssp. *quinquefolia* – K, Z; = *Gentianella quinquefolia* – S]

Gentianopsis Ma 1951 (Fringed-gentian)

A genus of about 20 species, herbs, of north temperate Asia and North America. The reasons for the recognition of *Gentianopsis* are enumerated by Ma (1951), Iltis (1965), and Wood & Weaver (1982). References: Gillett (1957)=Z; Iltis (1965); Ma (1951).

Gentianopsis crinita (Frölich) Ma, Eastern Fringed-gentian. Sunny or semi-shaded seepage areas over calcareous, mafic, or ultramafic rocks (such as limestone, amphibolite, or serpentinized olivine). September-October. ME, s. ON, and ND south to NJ, n. DE, IN, and IA (mostly north of the glacial maximum) and from PA south to nw. NC and ne. GA in the unglaciated

Appalachians. Certainly one of the most beautiful of our native plants. [= C, K; = *Gentiana crinita* Frölich – RAB, F, G, GW, W, WV; = *Anthopogon crinitum* (Frölich) Rafinesque – S; = *Gentianella crinita* (Frölich) G. Don ssp. *crinita* – Z]



Obolaria Linnaeus (Pennywort)

A monotypic genus, herb, of e. North America. References: Gillett (1959)=Z.

Obolaria virginica Linnaeus, Pennywort. Nutrient-rich, moist forests, mesic hammocks. March-May; May-June. NJ west to OH, s. IN, and s. IL, south to Panhandle FL and se. LA (reported from TX). The small purplish-green plants are inconspicuous, often nearly hidden under fallen leaves. *Obolaria* has well-developed mycorrhizae and may be substantially mycotrophic. [= RAB, C, F, G, K, S, W, WH, WV, Z]

Sabatia Adanson 1763 (Sabatia, Rose-gentian, Rose-pink, Marsh-pink, Sea-pink)
(contributed by B.A. Sorrie and A.S. Weakley)

A genus of about 20 species, of North America and the West Indies. References: Wilbur (1955)=Z.

1 Flowers with (7-) 8-12 (-14) corolla lobes.
  2 Pedicels < 5 mm long; calyx subtended by linear bracts that usually exceed the corolla lobes; terminal flowers in capitate clusters (less commonly single).
    3 Basal leaves similar in shape and size to the stem leaves; cauline leaves (25-) 35-50 (-65) mm long, (7-) 10-20 (-25) mm wide, 2-4× as long as wide; corolla lobes pale rose or white; [of mountain slopes, restricted in our area to sw. NC and nw. GA] ..... ***S. capitata***
    3 Basal leaves much broader and shorter than the stem leaves; cauline leaves (15-) 40-80 (-100) mm long, 1-3 mm wide, 20-60× as long as wide; corolla lobes medium rose to deep rose; [of bogs and savannas, of the Coastal Plain]..... ***S. gentianoides***
  2 Pedicels > 10 mm long; calyx not subtended by long bracts; terminal flower single.
    4 Upper stem leaves about as wide as the diameter of the stem, or narrower; calyx lobes terete or semi-terete; stems 6-12 dm tall; [of *Taxodium ascendens-Nyssa biflora* depressions and wet pine flatwoods in se. SC] ..... ***S. bartramii***
    4 Upper stem leaves much wider than the diameter of the stem; calyx lobes flat, linear to narrowly oblanceolate; stems 3-12 dm tall; [of various habitats, primarily along the shores of blackwater rivers or ponds, or in tidal marshes].
      5 Primary branches opposite; terminal flower short-stalked (much shorter than the first internode of the adjacent branch); stems 5-12 dm tall; [of drawdown blackwater riverbanks and similar situations]..... ***S. kennedyana***
      5 Primary branches usually alternate; terminal flower long-stalked (usually longer than the first internode of the adjacent branch); stems 3-7 dm tall; [of brackish marshes or openings along blackwater streams].
        6 Surficial stolons usually absent or poorly developed; internodes commonly much longer than leaves; [of tidal brackish or freshwater marshes]..... ***S. dodecandra***
        6 Surficial stolons usually present and well-developed, elongate; internodes shorter than to equaling the leaves; [of openings of blackwater streams]..... ***S. foliosa***
1 Flowers with 5-6 (-7) corolla lobes.
  7 Upper branches of main stem alternate.
    8 Calyx tube strongly winged; corolla lobes pink (rarely white); [w. KY, MS, and e. LA westward, and very rarely introduced further east].
      9 Leaves thick, succulent; leaf base broadly cuneate, nut at all clasping; [se. LA westwards]..... ***S. arenicola***
      9 Leaves thin; leaf base truncate to rounded, and clasping the stem; [w. KY, MS, and e. LA westward, and very rarely introduced further east] ..... ***S. campestris***
    8 Calyx tube not winged; corolla lobes pink or white; [more widespread, primarily Coastal Plain].
      10 Calyx lobes foliaceous, 5-8 mm wide, oblong to oblanceolate, mostly exceeding the corolla lobes ..... ***S. calycina***
      10 Calyx lobes linear-setaceous, 0.5-2 mm wide, if equaling the corolla lobes then very narrow and not foliaceous.
        11 Calyx lobes (3-) 4-7 (-8) mm long; corolla lobes white ..... ***S. brevifolia***
        11 Calyx lobes (4-) 6-17 (-23) mm long; corolla lobes pink (rarely white in individual plants).
          12 Plants perennial, often with several stems from a caudex; calyx lobes > 3/4× as long as the corolla lobes, and sometimes exceeding them; [of saturated soils from Coastal Plain savannas to Mountain bogs]..... ***S. campanulata***
          12 Plants annual, solitary; calyx lobes up to 3/4× as long as the corolla lobes
            13 Corolla lobes (18-) 20-25 mm long; leaves succulent (usually drying rugose and green) ..... ***S. grandiflora***
            13 Corolla lobes 10-15 mm long; leaves thin (usually drying flat and darkening)..... ***S. stellaris***
  7 Upper branches of main stem opposite.
    14 Corolla lobes pink (rarely white); pedicels at least in part > 5 mm long.
      15 Lower half of stem winged; leaves ovate, clasping, < 2× as long as wide; [widespread in our area]..... ***S. angularis***

15 Lower half of stem not winged; leaves elliptic to lanceolate, more or less tapered to the base, mostly > 3× as long as wide; [of the Coastal Plain or very rarely Piedmont] ..... ***S. brachiata***

14 Corolla lobes white or creamy white; pedicels (above the uppermost bracts or branches) ca. 1-2 (-5) mm long.

16 Lower portion of stem quadrangular, narrowly winged; plants annual or biennial, with 1 (-several) stems arising from a taproot..... ***S. quadrangula***

16 Lower portion of stem terete, not winged (though the upper stem is quadrangular or angled in *S. difformis*); plants perennial, with several stems arising from a short rhizome; [section *Eusabatia*, subsection *Difformes*].

17 Leaves and upper stem not glaucous; stem terete below, becoming quadrangular or quadrangular-angled above; corolla lobes (5-) 7-15 (-21) mm long; [widespread in our area]..... ***S. difformis***

17 Leaves and upper stem glaucous; stem terete throughout; corolla lobes (4-) 5-7 (-8) mm long; [of GA southward and westward].

18 Calyx-lobes erect, (0.1-) 0.2-1.5 (-2.0) mm long, as long as or shorter than the calyx-tube; [of sw. GA and n. FL westward to e. LA]..... ***S. macrophylla*** *var.* ***macrophylla***

18 Calyx lobes strongly recurved, (1.0-) 1.5-3 mm long, longer than the calyx-tube; [of e. and sc. GA south to ne. FL] ..... ***S. macrophylla*** *var.* ***recurvans***

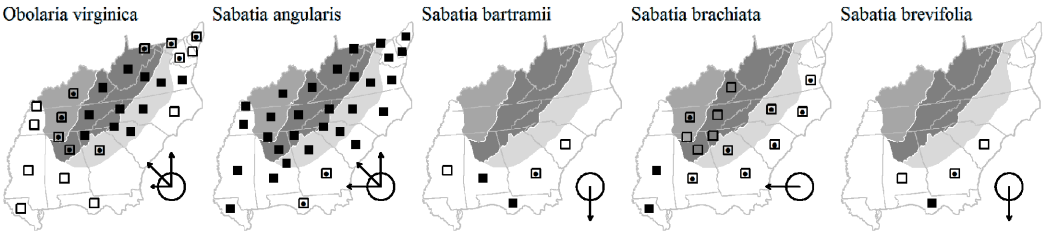
Sabatia angularis (Linnaeus) Pursh, Bitter-bloom, Common Marsh-pink. Forests, woodlands, marshes, fields, calcareous hammocks (in FL). July-August; September-October. NY west to s. MI, IL, and e. KS, south to Panhandle FL and e. TX. [= RAB, C, F, GW, K, W, WH, WV, Z; = *Sabbatia angularis* –S]

Sabatia arenicola Greenman, Sand Rose-gentian. Interdune depressions, wet savannas, saline flats. April-July. Se. LA west through TX to ne. MX. [= GW, K, Z]

Sabatia bartramii Wilbur, Bartram's Rose-gentian. Margins of *Taxodium ascendens-Nyssa* depressions, wet pine flatwoods. June-August; August-October. Ne. SC south to s. FL, west to s. AL and se. MS. [= GW, K, WH, Z; = *S. dodecandra* var. *coriacea* (Elliott) Ahles – RAB; = *Sabbatia decandra* (Walter) R.M. Harper – S]

Sabatia brachiata Elliott, Narrowleaf Rose-pink. Mesic pinelands, sandhills, pine savannas, pine flatwoods. Late May-July; August-September. Se. VA south to s. GA, west to LA, north in the interior to c. TN and se. MO. [= RAB, C, F, GW, K, W, Z; = *Sabbatia brachiata* – S]

Sabatia brevifolia Rafinesque. Pine savannas. September-October; October-November. E. SC south to peninsular FL, west to s. AL. [= RAB, GW, K, WH, Z; = *Sabbatia elliottii* Steudel – S]



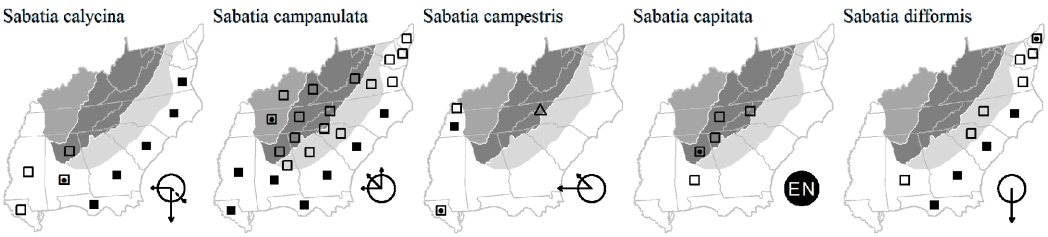
Sabatia calycina (Lamarck) Heller, Coastal Rose-pink. Swamp forests, river banks. June-October; July-October. Se. VA south to s. FL, west to se. TX; e. Cuba and Hispaniola. [= RAB, C, F, GW, K, WH, Z; = *Sabbatia calycina* – S]

Sabatia campanulata (Linnaeus) Torrey, Slender Marsh-pink. Pine savannas, bogs. June-August; September-October. MA south to ne. FL, oanhandle FL, west to LA and AR; scattered inland as in w. VA, w. NC, c. TN, and KY. [= RAB, C, GW, K, W, WH, Z; > *S. campanulata* var. *campanulata* – F; > *S. campanulata* var. *gracilis* (Michaux) Fernald – F; < *Sabbatia campanulata* – S]

* ***Sabatia campestris*** Nuttall, Western Marsh-pink, Prairie Rose-gentian, Prairie Sabatia. Roadsides and woodland edges; native of c. United States. July-August; September-October. [= RAB, C, F, GW, K, Z]

Sabatia capitata (Rafinesque) Blake, Cumberland Rose-gentian. Sloping woodlands and meadows, over sandstone or shale. July-August; September-October. Sw. NC and se. TN south to nw. GA and c. AL. Apparently present in NC, at least formerly, based on a specimen collected "from Cherokee", probably Cherokee County, NC, a remarkably poorly botanized area. [= K, Z; = *Lapithea capitata* (Rafinesque) Small – S]

Sabatia difformis (Linnaeus) Druce, Lanceleaf Rose-gentian, White Sabatia. Pine savannas, bogs, pocosins. May-September; September-December. S. NJ south to c. peninsular FL, west to s. AL. [= RAB, C, F, GW, K, WH, Z; = *Sabbatia difformis* – S]



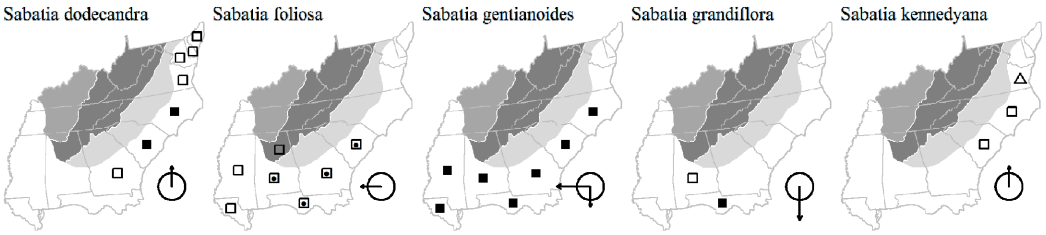
Sabatia dodecandra (Linnaeus) Britton, Sterns, & Poggenburg, Perennial Sea-pink, Large Marsh Rose-pink. Tidal brackish and freshwater marshes. June-August; August-October. CT south to e. SC and e. GA (Sorrie 1998b). [= F; < *S. dodecandra* var. *dodecandra* – RAB (also see *S. foliosa*); = *S. dodecandra* var. *dodecandra* – C, GW, K, Z; = *Sabbatia dodecandra* – S]

Sabatia foliosa Fernald. Openings along blackwater rivers, cypress ponds. June-August; August-October. E. SC south to ne. FL and Panhandle FL, west to se. TX. [< *S. dodecandra* var. *dodecandra* – RAB; = *S. dodecandra* (Linnaeus) Britton, Sterns, & Poggenburg var. *foliosa* (Fernald) Wilbur – GW, K, Z; > *Sabbatia foliosa* – S; > *Sabbatia harperi* Small – S; = *S. dodecandra* – WH]

Sabatia gentianoides Elliott. Pine savannas, bogs. July-August; September-October. NC south to ne. FL and Panhandle FL, west to se. TX. [= RAB, GW, K, WH, Z; = *Lapithea gentianoides* (Elliott) Grisebach – S]

Sabatia grandiflora (Gray) Small, Largeflower Rose-gentian. Cp (FL): wet flatwoods, marshes, cypress-gum depressions, limesink ponds, borrow pits; common. Ne. FL, Panhandle FL, s. AL, south to s. FL. [= GW, K, WH, Z; = *Sabbatia grandiflora* – S]

Sabatia kennedyana Fernald, Plymouth Gentian. Seasonally exposed drawdown banks of the Waccamaw River, in adjacent ditches and disturbed flats (in se. NC and ne. SC), and very rarely on shores of beaver ponds (in e. VA, by introduction). June-August; August-October. This species has a strange, disjunct range, likely related to Pleistocene refugia on the (now) Continental shelf, present in s. NS; e. MA and RI; se. NC and ne. SC. The record of the species in e. VA (Caroline County) reported by Fleming & Ludwig (1996) has now been determined to be a deliberate introduction. Studies underway suggest that the Carolina plants may differ varietally from those in New England (Sorrie, pers. comm.). [= C, F, GW, K, Z; = *S. dodecandra* var. *kennedyana* (Fernald) Ahles – RAB]

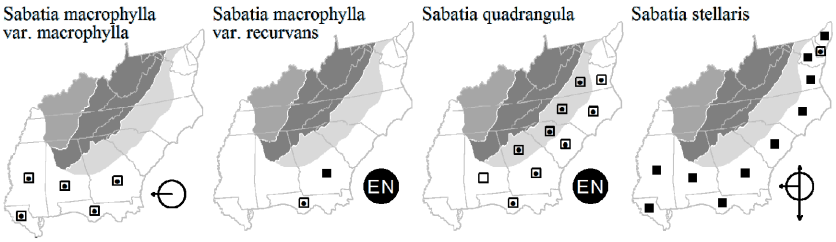


Sabatia macrophylla Hooker *var.* ***macrophylla***, Large-leaf Rose-gentian. Wet savannas. Sw. GA west to e. LA. [= K, Z; < *S. macrophylla* – GW, WH; = *Sabbatia macrophylla* Hooker – S]

Sabatia macrophylla Hooker *var.* ***recurvans*** (Small) Wilbur, Small's Rose-gentian. Wet savannas. E. and c. GA south to ne. FL; it may occur in se. SC. [= K, Z; < *S. macrophylla* – GW, WH; = *Sabbatia recurvans* Small – S]

Sabatia quadrangula Wilbur, Four-angle Sabatia. Sandhills, moist forests, pocosin ecotones. June-September; August-November. E. VA south to n. peninsular FL, west to s. AL. [= RAB, C, GW, K, WH, Z; = *S. paniculata* Michaux – F, misapplied; = *Sabbatia paniculata* – S]

Sabatia stellaris Pursh, Annual Sea-pink. Brackish marshes. July-October; August-November. S. MA south to s. FL, west to LA; Bahama Islands, Cuba, c. Mexico. [= RAB, C, F, GW, K, WH, Z; < *Sabbatia campanulata* – S]



352. LOGANIACEAE R. Brown ex Martius 1827 (Logania Family) [in GENTIANALES]

As here rather narrowly interpreted, Loganiaceae consists of 12 genera and about 420 species, herbs and subshrubs, of tropical, subtropical, and warm temperate areas of the Old and New Worlds. Other genera in our area which have traditionally been considered components of the Loganiaceae now are clearly better placed in the small families Tetrachondraceae *(Polypremum*), Gelsemiaceae (*Gelsemium*), and Scrophulariaceae (*Buddleja*), more closely related to other families (such as Rubiaceae) than to Loganiaceae sensu stricto (Struwe, Albert, & Bremer 1994). The affinities of *Spigelia* appear to be with a small group of tropical and subtropical genera, the largest of which is *Strychnos*. Struwe, Albert, & Bremer (1994) treated this group as the family Strychnaceae, based on a cladistic analysis of data. A later, more thorough analysis suggested that Strychnaceae is best recombined with Loganiaceae (Backlund, Oxelman, & Bremer 2000). References: Rogers (1986). [also see *GELSEMIACEAE*, *SCROPHULARIACEAE*, and *TETRACHONDRACEAE*]

1 Woody vine ..... ***Gelsemium*** *[see GELSEMIACEAE]*
1 Herb.
  2 Corolla funnelform, 0.1-0.2 cm long, white ..... ***Mitreola***
  2 Corolla tubular, 3-6 cm long, red and yellow ..... ***Spigelia***

Mitreola Linnaeus 1758 (Miterwort)

A genus of about 6 species, herbs, tropical, subtropical, and warm temperate. References: Nelson (1980)=Y; Rogers (1986)=Z.

1 Leaves 2-8 cm long petiolate or sessile and tapering to a cuneate base ..... ***M. petiolata***
1 Leaves 1-4 cm long, sessile, the base rounded.
2 Mature seed reticulate; mature capsule smooth to slightly and finely tuberculate; larger leaves ca. 4× as long as wide ..... ***M. angustifolia***
2 Mature seed smooth; mature capsule markedly papillose-warty; larger leaves 1.5-2× as long as wide ..... ***M. sessilifolia***

Mitreola angustifolia (Torrey & A. Gray) J.B. Nelson, Narrow-leaved Miterwort. Clay-based Carolina bays, other Coastal Plain depressional wetlands. June-August. Se. SC south to n. FL, and west to s. AL and se. MS (Sorrie & Leonard 1999). [= GW, WH, Y; < *M. sessilifolia* – K, Z; = *Cynoctonum angustifolium* (Torrey & A. Gray) Small – S]

Mitreola petiolata (J.F. Gmelin) Torrey & A. Gray, Caribbean Miterwort. Swamps, marshes, ditches, other wet habitats. July-September; September-November. Se. VA south to FL and west to AR and c. TX, north in the interior to nw. GA and c. and se. TN; Mexico, the West Indies, and n. South America. [= GW, K, WH, Y; = *Cynoctonum mitreola* (Linnaeus) Britton – RAB, C, F, G, S]

Mitreola sessilifolia (J.F. Gmelin) G. Don, Small-leaved Miterwort. Wet savannas, pocosins, ditches, margins of limesink depressions (dolines). Late June-August; September-October. Se. VA south to FL, west to e. TX, and in the Bahama Islands. [= GW, WH, Y; = *Cynoctonum sessilifolium* J.F. Gmelin – RAB, C, F, G, S; < *M. sessilifolia* – K, Z (also see *M. angustifolia*)]

Spigelia Linnaeus 1753 (Pinkroot)

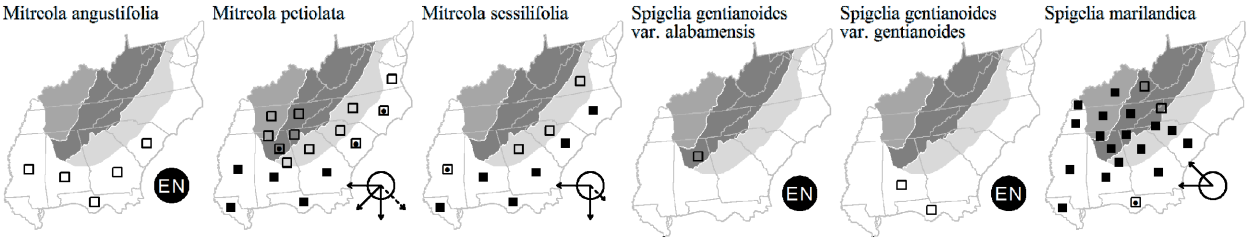
A genus of about 50 species, herbs, of tropical and warm temperate America. References: Gould (1996)=Z; Rogers (1986)=Y.

1 Corolla scarlet on the outer surface, yellow on the inner surface ..... ***S. marilandica***
1 Corolla light pink to white on the outer and inner surfaces.
2 Corolla 36-50 mm long; pistil 24-27 mm long; sepals 8-11 mm long; inflorescence with 2-4 flowers; [of dolomitic glades in Bibb Co. AL] ..... ***S. gentianoides*** *var.* ***alabamensis***
2 Corolla 25-30 mm long; pistil 17-19 mm long; sepals 4-6 mm long; inflorescence with 3-8 flowers; [of pine savannas of Panhandle FL] ..... ***S. gentianoides*** *var.* ***gentianoides***

Spigelia gentianoides Chapman ex Alphonse de Candolle *var.* ***alabamensis*** K. Gould. Dolostone glades. Endemic to Bibb County, AL (Gould 1996, Allison & Stevens 2001). [= K, Z]

Spigelia gentianoides Chapman ex Alphonse de Candolle *var.* ***gentianoides***. Pine savannas. Endemic to FL Panhandle (Calhoun, Jackson, and Washington counties). [= K, Z; = *S. gentianoides* – S, Y (var. *alabamensis* not discovered at the time); < *S. gentianoides* – WH]

Spigelia marilandica (Linnaeus) Linnaeus, Pinkroot, Wormgrass. Woodlands and forests, usually on circumneutral soils. May-June; late June-July. SC, sw. NC (Cherokee Co. and Macon Co.), and TN west to s. IN and OK, south to Panhandle FL and TX; some floras allege its occurrence north to VA, MD, NJ, and PA. *S. marilandica* will likely be found in sw. VA. [= RAB, C, F, G, K, S, W, WH]



353. GELSEMIACEAE (G. Don) Struwe & V. Albert 1995 (Jessamine Family) [in GENTIANALES]

A family of 2 genera and about 10 species, shrubs and vines, of tropical and warm temperate America, Africa, and Asia. There is persuasive evidence that *Gelsemium* and *Mostuea* Didr., traditionally treated as part of a heterogeneous Loganiaceae, should be accorded family status as Gelsemiaceae (Backlund, Oxelman, & Bremer 2000; Struwe, Albert, & Bremer 1994; Sennblad & Bremer 1996). The Gelsemiaceae form a clade most closely related to the Apocynaceae (Backlund, Oxelman, & Bremer 2000). References: Backlund, Oxelman, & Bremer (2000); Struwe, Albert, & Bremer (1994); Sennblad & Bremer (1996); Rogers (1986).

Gelsemium Antoine Laurent de Jussieu (Yellow Jessamine)

A genus of 3 species, vines, our 2 species in se. North America (and also Central America) and 1 species in e. Asia. References: Wyatt et al. (1993); Duncan & Dejong (1964); Godfrey (1988); Rogers (1986)=Z; GW.

1 Sepals acuminate apically, persistent on the fruit; capsule elliptical, 1.0-1.6 cm long, 6-8 mm broad, the tapering tip bearing a definite beak about 3 mm long; seeds wingless; flowers odorless (rarely fragrant), usually golden-yellow ..... ***G. rankinii***

1 Sepals obtuse to broadly acute, not persistent on the fruit; capsule oblong, 1.5-2.5 cm long, 8-12 mm broad, very abruptly narrowed to a beak 1.5-2 mm long; seeds with a prominent membranous wing sharply differentiated from the body of the seed; flowers fragrant, usually lemon-yellow ..... ***G. sempervirens***

Gelsemium rankinii Small, Swamp Jessamine. Swamps of blackwater rivers, restricted in NC to the se. corner of the state, most notably the swamps of the Waccamaw and Black rivers. March-April; September-October. Se. NC south through SC and GA to the FL Panhandle, and west to e. LA. See Wyatt et al. (1993) and Duncan & Dejong (1964) for extensive discussions of morphology, habitat, pollination, genetics, distribution, and evolutionary relationships of our 2 species of *Gelsemium*. [= RAB, GW, K, S, WH, Z]

Gelsemium sempervirens (Linnaeus) St. Hilaire, Carolina Jessamine. In a wide range of habitats, from swamp forests to dry uplands and thickets, also commonly planted as an ornamental. March-early May; September-November. VA, se. TN, and AR south to c. peninsular FL and e. TX; disjunct in Guatemala and Mexico (Chiapas, Oaxaca, Puebla, and Veracruz). Jessamine climbs to the tops of trees. [= RAB, F, G, GW, K, S, W, WH, Z]

354. APOCYNACEAE A.L. de Jussieu 1789 (Dogbane Family) [in GENTIANALES]

As here circumscribed including the Asclepiadaceae, a family of about 480 genera and about 4800 species, lianas, shrubs, herbs, and trees, widespread in tropical and temperate areas. There appears to be overwhelming evidence favoring the combination of the Asclepiadaceae into the Apocynaceae; see, for instance, Rosatti (1989), Sennblad & Bremer (1996), and many others. References: Rosatti (1989); Liede (1997a).

1 Plant a twining herbaceous or woody vine.
- 2 Leaves ovate, cordate at the base, < 2.5× as long as wide.
  - 3 Plants in flower.
    - 4 Petals white; gynostegial corona nearly as long to longer than the corolla lobes ..... ***Cynanchum laeve***
    - 4 Petals brown, yellow, yellow-green, cream, or maroon (white in *Matelea baldwyniana*); gynostegial corona < half the length of the corolla lobes.
      - 5 Corolla lobes glabrous on the outer surface, very stiff in texture; dorsal anther appendages laminar; carpels smooth and angled ..... ***Gonolobus***
      - 5 Corolla lobes glandular-puberulent on the outer surface, herbaceous in texture; dorsal anther appendages absent; carpels muricate. ***Matelea***
  - 3 Plants in fruit.
    - 6 Follicles muricate ***Matelea***
    - 6 Follicles smooth and angled.
      - 7 Leaves deeply cordate, tapering steadily to an acuminate apex ***Cynanchum laeve***
      - 7 Leaves cordate, broadly rounded, tapering abruptly to an acute, obtuse, or apiculate apex ***Gonolobus***
- 2 Leaves ovate, lanceolate, or linear, not cordate at the base, > 1.5× as long as wide
  - 8 Leaves linear, the margins parallel
    - 9 Leaves petiolate; calyx lobes deltoid, obtuse, ca. 1 mm long; leaves petiolate, not reflexed, often caducous; follicle 1-3 mm in diameter; [of se. SC and south] ***Cynanchum scoparium***
    - 9 Leaves sessile; calyx lobes lanceolate, acute, (1.3-) 1.5-2.5 mm long; leaves sessile, reflexed, persistent; follicle 6-7 mm in diameter; [of ne. NC and south] ***Seutera angustifolia***
  - 8 Leaves ovate to lanceolate.
    - 10 Flowers brownish-purple, with a corona of narrow segments; fruit 10-15 cm long, > 5 mm in diameter; leaves obtuse to acute at the tip (rarely slightly acuminate) ***[Periploca]***
    - 10 Flowers white to creamy yellow, lacking a corona; fruit 10-25 cm long, 1-2 mm in diameter; leaves acuminate at the tip ..... ***Trachelospermum***

1 Plant an erect or trailing herb or shrub.
- 11 Plant a woody shrub.
  - 12 Plant rhizomatous, suffrutescent, < 4 dm tall; leaves narrowly to broadly ovate; flowers blue, lavender, or white ***Vinca***
  - 12 Plant erect, > 4 dm tall; leaves either lanceolate or elliptic; flowers yellow, white, pink, or red.
    - 13 Flowers yellow; shrub 4-12 dm tall, with only a few wand-like branches; [very rare waif in our area] ***Angadenia***
    - 13 Flowers white, pink, or red; shrub 10-40 dm tall, much branched from the base; [commonly cultivated in our area (and sometimes persistent), particularly near the coast] ***Nerium***
- 11 Plant an herb.
  - 14 Flowers with conspicuous corona; follicles not paired; seeds with coma present ***Asclepias***
  - 14 Flowers lacking corona; follicles paired (occasionally single by abortion); seeds with coma absent (*Catharanthus, Amsonia*) or present (*Apocynum*).
    - 15 Leaves alternate (rarely a few on a plant subopposite) ***Amsonia***
    - 15 Leaves opposite.
      - 16 Flower < 8 mm across; paired follicles pendent, 10-22 cm long; seeds with coma; mature plants normally > 7 dm tall ... ***Apocynum***
      - 16 Flower > 20 mm across; paired follicles erect, 1.5-2.5 cm long; seeds lacking coma; mature plants 2-6 dm tall ..... ***Catharanthus***

Amsonia Walter 1788 (Blue-stars)

A genus of about 20 species, herbs, of temperate North America and Japan. References: Woodson (1928)=Z.

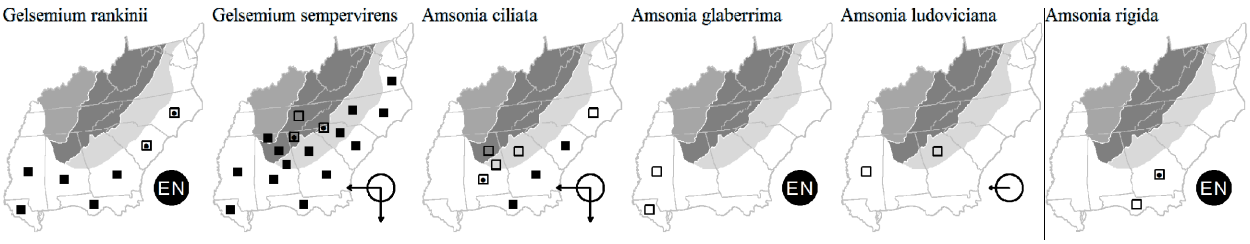
1 Corolla glabrous on the outer surface; stem pubescent (*A. ciliata*) or glabrous (*A. rigida*); [of the Coastal Plain from se. and sc. NC southward].
2 Leaves linear to lanceolate, the lower leaves 4-30× as long as wide, the upper leaves 1mm or less wide; [of dry, sandy habitats, such as sandhills] ..... ***A. ciliata***
2 Leaves elliptic, the lower and upper mostly 3-5× as long as wide, all leaves > 5 mm wide; [of seasonally flooded depression wetlands and moist pinelands] ..... ***A. rigida***
1 Corolla pubescent on the outer surface; stem glabrous; [more widespread in our area].
3 Follicles pubescent ..... ***A. ludoviciana***
3 Follicles glabrous.
4 Leaf blades ovate to oblong-lanceolate, 1-6 cm wide; inflorescence dense, many-flowered; leaves glabrous, glaucous beneath ..... ***A. tabernaemontana*** *var.* ***tabernaemontana***
4 Leaf blades lanceolate to linear-lanceolate, 1-3 cm wide; inflorescence loose, few-flowered; leaves pubescent (glabrate in age) ..... ***A. tabernaemontana*** *var.* ***gattingeri***

Amsonia ciliata Walter, Sandhills Bluestar. Sandhills. April; September-October. Two varieties have been traditionally recognized since the monograph of Woodson (1928), var. *ciliata* (leaves strongly heteromorphic, the lower leaves lanceolate, 4-10 mm wide (mostly 4-15× as long as wide), the upper about 1 mm wide; inflorescence barely held above the foliage) and var. *tenuifolia* (leaves slightly or not at all heteromorphic, the lower leaves linear, 1-3 mm wide (mostly 15-30× as long as wide), the upper < 1 mm wide; inflorescence usually held well above the foliage). They do not seem to be clearly separable morphologically, and their distributions are very largely overlapping, suggesting that they are merely forms. Se. NC south to c. peninsular FL, west to c. and s. AL; disjunct in Ozark-Ouachita highlands of sc. MO, w. AR, and se. OK. [= RAB, WH; > *A. ciliata* Walter var. *ciliata* – K, S, Z; > *A. ciliata* Walter var. *tenuifolia* (Rafinesque) Woodson – K; > *A. ciliata* var. *filifolia* Wood – F, G, S; > *A. ciliata* var. *tenuifolium* – Z, misspelling]

Amsonia glaberrima Woodson. {habitat}. MS, LA. [= Z; < *A. tabernaemontana* var. *tabernaemontana* – K; < A. amsonia – S]

Amsonia ludoviciana Vail, Louisiana Bluestar. Open woodlands around outcrops of Lithonia granitic gneiss, {other habitats}. So far as is known, endemic to LA, MS and GA; not native or naturalized in SC, contrary to Kartesz (1999). [= GW, K, S, Z]

Amsonia rigida Shuttleworth ex Small, Stiff Bluestar, Pond Bluestar. Seasonally flooded depression wetlands and moist pinelands. S. GA to n. peninsular FL, west to s. MS. [= GW, K, S, Z; < *A. tabernaemontana* – WH]



Amsonia tabernaemontana Walter *var.* ***gattingeri*** Woodson. Mt (GA): rich forests, rocky forests, riverside scours; rare. IL, MO, and se. KS south to ne. TX, and apparently disjunct in the Interior Low Plateau of sc. KY, c. TN (Chester, Wofford, & Kral 1997), and in n. GA. [= F, K, Z; < *A. tabernaemontana* – C, GW, W; < *A. salicifolia* Pursh – S]

Amsonia tabernaemontana Walter *var.* ***tabernaemontana***, Wideleaf Blue-stars. Mt (GA, NC, SC), Pd (DE*, GA, NC, SC, VA), Cp (GA, NC, SC, VA): floodplain forests, moist, rich slope forests; common (uncommon in DE and VA, uncommon in Mountains). April; August-September. Se. VA west to s. IL, MO, and KA, south to GA, LA, e. OK, and TX. The varieties *tabernaemontana* and *salicifolia*, while strikingly different in their extreme expressions, have nearly the same distribution and do intergrade; they are probably not worthy of recognition. [= C, G, W; > *A. tabernaemontana* var. *tabernaemontana* – RAB, G, K, Z; > *A. tabernaemontana* var. *salicifolia* (Pursh) Woodson – RAB, G, K, Z; < *A. tabernaemontana* – C, GW, W; < *A. amsonia* (Linnaeus) Britton – S; < *A. salicifolia* Pursh – S (also see var. *gattingeri*)]

Angadenia Miers 1878 (Pineland Allamanda)

A genus of 2 species, of Florida and the West Indies.

* ***Angadenia berteroi*** (Alphonse de Candolle) Miers, Pineland Golden-trumpet, Pineland Allamanda, Lice-root. Cp (NC): disturbed, acid, peaty soil; rare, native of s. FL, the Bahamas, Cuba, and Hispaniola. The only record in our area is from an agricultural experiment station near Wenona, Washington County, NC (Hayes 1946), where presumably introduced via cattle; the species has probably not persisted in our area. [= K; > *Rhabdadenia corallicola* Small – S]

Apocynum Linnaeus 1753 (Dogbane, Indian-hemp)

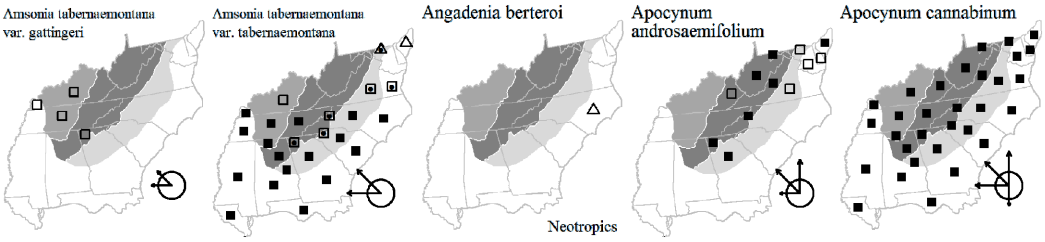
A genus of about 12 species, herbs, of temperate e. and c. Asia and North America. References: Woodson (1930)=Z.

1 Corolla 5-10 mm long, pink or white with pink veins, the lobes spreading or recurved.
2 Leaves drooping; corolla ca. 3× as long as the calyx lobes ..... ***A. androsaemifolium***

2 Leaves spreading; corolla ca. 2× as long as the calyx lobes ..... ***A. ×floribundum***
1 Corolla 3-6 mm long, white, greenish, or yellowish, the lobes erect or slightly outcurved.
3 Leaves of the main stem with petioles 5-10 mm long; leaf base cuneate to rounded; [widespread in our area] ..... ***A. cannabinum***
3 Leaves of the main stem sessile or on petioles to 3 mm long; leaf base rounded or cordate; [of VA and WV northward] ..... ***A. sibiricum***

Apocynum androsaemifolium Linnaeus, Spreading Dogbane. Mt (GA, NC, VA, WV), Pd (DE, GA, VA), Cp (DE): forests, woodlands, roadsides, pastures; common (rare in DE). June-August; September-October. NL (Newfoundland) to BC south to w. NC, c. GA, TX, and AZ. [= RAB, C, F, K, S, W; > *A. androsaemifolium* var. *androsaemifolium* – G, Z; > *A. androsaemifolium* var. *glabrum* Macoun – G; > *A. androsaemifolium* var. *incanum* A. deCandolle – Z]

Apocynum cannabinum Linnaeus, Hemp Dogbane, Indian-hemp. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): forests, woodlands, roadsides, pastures; common. May-July; September-October. QC, MB, and WA south to FL, TX, CA. [= RAB, C, S, W; > *A. cannabinum* var. *cannabinum* – F, G; > *A. cannabinum* var. *pubescens* (Mitchell) Woodson – F, G, Z; > *A. cannabinum* var. *nemorale* (G.S. Miller) Fernald – F; > *A. cannabinum* var. *glaberrimum* A. de Candolle – G, Z; > *A. cannabinum* var. *greeneanum* (Béguinot & Belosersky) Woodson – Z; < *A. cannabinum* – K]



Apocynum ×floribundum Greene (pro sp.) [***A. androsaemifolium* × *cannabinum***]. Forests, woodlands, roadsides, pastures. June-July; September-October. Sometimes occurring in populations seemingly lacking one or both parents. [= C, K; = *A. medium* Greene – RAB, F, S, W; > *A. medium* var. *medium* – Z]

Apocynum sibiricum Jacquin. Forests, woodlands, riverside scour areas, roadsides, pastures. July-September; September-October. NL (Newfoundland) and BC south to e. VA, w. VA, WV, and MO. *A. sibiricum* var. *cordigerum* has been found in Kent County, MD (Steury, Tyndall, & Cooley 1996). [= C, W; > *A. sibiricum* var. *sibiricum* – F, G; > *A. sibiricum* var. *cordigerum* (Greene) Fernald – F, G; < *A. cannabinum* – K; > *A. hypericifolium* Aiton var. *hypericifolium* – Z; > *A. hypericifolium* Aiton var. *cordigerum* (Greene) Béguinot & Belosersky – Z]

Asclepias Linnaeus 1753 (Milkweed)

A genus of about 100 species, herbs, temperate and tropical, of North and Central America. References: Woodson (1954)=Z; Turner (2009b)=Y; Farmer & Bell (1985)=X.

1 Sap clear; leaves alternate; corolla orange to yellow ..... **Key A**
1 Sap milky (the milkiness often difficult to show in *A. verticillata*, which has numerous, whorled, linear leaves); leaves opposite, subopposite, or whorled; flowers orange, red, white, cream, green, pink, or purple.
2 Leaves linear, > 10× as long as wide ..... **Key B**
2 Leaves lanceolate, ovate, or elliptic, < 1-5 (-10)× as long as wide.
3 Leaves sessile, subsessile, or with petioles to 3 mm long ..... **Key C**
3 Leaves with petioles (3-) 5-20 mm long.
4 Plants in flower ..... **Key D**
4 Plants in fruit (or sterile) ..... **Key E**

Key A – milkweeds with clear sap and alternate leaves

1 Leaves cuneate at the base; leaves usually obovate to oblanceolate (widest beyond the middle); [s. NH west to OH, south to Panhandle FL and e. TX widespread eastward] ..... ***A. tuberosa* var. *tuberosa***
1 Leaves cordate to hastate at the base; leaves usually lanceolate, ovate, or elliptic (widest at or below the middle).
2 Leaf margins flat; leaves widest towards the base; [PA, WV, KY, TN, MS westward] ..... ***A. tuberosa* var. *interior***
2 Leaf margins usually crisped; leaves widest near the middle; [of se. Coastal Plain, se. VA south to s. FL, west to s. MS] ..... ***A. tuberosa* var. *rolfsii***

Key B – milkweeds with milky sap, with linear leaves opposite, subopposite, or whorled

1 Leaves **either** mostly in whorls of 3-6 (sometimes some nodes with merely opposite leaves), **or** subopposite (the leaves more-or-less paired but separated by 0.5-3 mm); corolla whitish or greenish, usually suffused with rose-purple (especially at the tips of the corolla lobes).
2 Leaves mostly in whorls of 3-6 (sometimes some nodes with merely opposite leaves); leaves 1.5-7 cm long, 1-2 mm wide; seeds ca. 5 mm long, the coma ca. 2.5 cm long; milky sap often difficult to show ..... ***A. verticillata***
2 Leaves subopposite (the leaves more-or-less paired but separated by 0.5-3 mm); leaves (3-) 5-18 cm long, (1-) 2-10 mm wide; seeds ca. 7-11 mm long, the coma 3-5 cm long; milky sap obvious and profuse.

3 Umbel 1, terminal; corona 5-7 mm in diameter; horns present, about as long as the hood; hoods ca. 2-4 mm long, surpassing the anther heads; [dry pinelands of the Coastal Plain]..... ***A. michauxii***
3 Umbels 1-4, terminal and from upper nodes; corona 2-3 mm in diameter; horns absent; hoods ca. 2 mm long, surpassed by the anther heads; [**either** wet pinelands of the Coastal Plain **or** dry glades or woodlands].
4 Pedicels with spreading hairs; umbels 2-10, each with up to 30-100 flowers; leaves minutely scabrous; [dry glades or woodlands, known from the Mountains of nw. GA, e. TN, w. WV westward]..... ***A. hirtella***
4 Pedicels with incurved hairs; umbels 1-6, each with 10-30 flowers; leaves glabrous or nearly so; [wet pinelands of the Coastal Plain]. ..... ***A. longifolia***

1 Leaves opposite; corolla as above, or creamy yellow, purple, or orange-red.
5 Leaves 2.5-4.5 cm long, puberulent beneath, sessile; corolla lobes erect, creamy yellow to dull or greenish white, 7-10 mm long; plant 1-4 dm tall; [dryish pinelands of the Coastal Plain] ..... ***A. pedicellata***
5 Leaves 5-20 cm long, glabrous or glabrate beneath (rarely puberulent), sessile to petiolate; corolla lobes reflexed, either orange-red or usually with at least some purple (rarely merely whitish or greenish), 3-7 mm long (except 8-11 mm long in the orange-red *A. lanceolata*); plant 1-15 dm tall; [collectively of various habitats].
6 Leaves with petioles 1-10 mm long; leaves 5-15 mm wide; plants 5-15 dm tall.
7 Petiole 4-10 mm long; corolla pink (rarely white), the lobes 3-5.5 mm long; hoods 1-2 mm long; horns longer than the hoods; [mostly of the Mountains and Piedmont]..... ***A. incarnata*** *var.* ***incarnata***
7 Petiole 1-3 mm long; corolla orange-red, the lobes 8-11 mm long; hoods 5-6 mm long; horns slightly shorter than the hoods; [of the Coastal Plain]..... ***A. lanceolata***
6 Leaves with petioles 0-1 mm long; leaves 1-7 mm wide; plants 1-7 dm tall.
8 Leaves 1-2 mm wide; each hood with 2 erect, acuminate, marginal teeth on the inner side (adjoining the anther heads) ..... ***A. cinerea***
8 Leaves 3-7 mm wide; each hood truncate, lacking prominent marginal teeth.
9 Umbel 1, terminal; corona 5-7 mm in diameter; horns present, about as long as the hood; hoods ca. 2-4 mm long, surpassing the anther heads; [dry pinelands]..... ***A. michauxii***
9 Umbels 1-4, terminal and from upper nodes; corona 2-3 mm in diameter; horns absent; hoods ca. 2 mm long, surpassed by the anther heads; [**either** of wet pinelands of the Coastal Plain **or** dry glades or woodlands].
10 Pedicels with spreading hairs; umbels 2-10, each with up to 30-100 flowers; leaves minutely scabrous; [dry glades or woodlands, east to nw. GA, TN, and WV] ..... ***A. hirtella***
10 Pedicels with incurved hairs; umbels 1-6, each with 10-30 flowers; leaves glabrous or nearly so; [wet pinelands of the Coastal Plain]..... ***A. longifolia***

Key C – milkweeds with milky sap, with sessile, nonlinear leaves

1 Leaves 2-5 cm long, 0.3-1.0 cm wide; corolla lobes erect, creamy yellow to greenish white, 7-10 mm long; plant 1-4 dm tall; [of dryish pinelands of the Coastal Plain of NC and SC]..... ***A. pedicellata***
1 Leaves 3-30 cm long, 0.5-11 cm wide (not simultaneously < 5 cm long and < 1 cm wide); corolla lobes reflexed, either orange-red, purple, pink, or green, 5-15 mm long; plant 2-10 dm tall; [collectively of various habitats, including dryish pinelands of the Coastal Plain].
2 Leaves cordate-clasping at base, 3-10 cm wide, 1-2× as long as wide; stem and leaves glabrous and usually also glaucous.
3 Plant erect, the stems 4-10 dm long, the leaves perpendicular to the stem thus in a plane parallel to the ground; corolla lobes 7-11 mm long; inflorescence solitary, terminal (rarely a second from an upper node); corona 5-8 mm across; [widespread]..... ***A. amplexicaulis***
3 Plant prostrate or decumbent, the stems 2-7 dm long, the leaves perpendicular to the stem and thus perpendicular to the ground as well; corolla lobes 5-6.5 mm long; inflorescences 2-6 from upper nodes; corona 3-5 mm across; [of dry pinelands of the Coastal Plain]..... ..... ***A. humistrata***
2 Leaves cuneate to rounded at base, 1-6 cm wide, (1-) 1.5-6× as long as wide; stem and leaves pubescent to glabrate.
4 Corolla lobes 12-15 mm long, greenish-yellow; flowers 3-6 (-8) per umbel..... ***A. connivens***
4 Corolla lobes 6-9 mm long, reddish-purple or pale green; flowers > 7 per umbel.
5 Leaves lanceolate, acuminate at the apex; corolla reddish purple, the lobes 7-9 mm long; [of Coastal Plain wetlands]..... ***A. rubra***
5 Leaves orbicular to oblong, rounded at the apex; corolla pale green, the lobes 6-7 mm long; [of dry habitats primarily in the Piedmont and Mountains (rarely in the Coastal Plain)] ..... ***A. viridiflora***

Key D – milkweeds with milky sap, with petiolate, nonlinear leaves, in flower

1 Corolla greenish, either pale green or yellowish green.
2 Leaves subopposite; corolla lobes 13-15 mm long ..... ***A. viridis***
2 Leaves opposite; corolla lobes 6-10 mm long.
3 Corona 2-3 mm across; corolla lobes pale green, 6-7 mm long; [of various provinces, primarily of the Piedmont] ..... ***A. viridiflora***
3 Corona 5-9 mm across; corolla lobes yellowish green, 9-10 mm long; [strictly of the Coastal Plain, of NC and SC, and southward].
4 Hoods ca. 6 mm long, about 2× as long as the anther heads; stem and leaves densely tomentulose..... ***A. obovata***
4 Hoods ca. 4 mm long, scarcely exceeding the anther heads; stem and leaves softly puberulent..... ***A. tomentosa***
1 Corolla pink, purple, or white.
5 Hoods about as long as the anther heads; horns 1.5-2× as long as the hood, exserted well beyond the hood.
6 Hood opening truncate, the hood therefore beaker-shaped; corolla lobes 8-12 mm long; [primarily of mesic forests of the Mountains] .... ***A. exaltata***
6 Hood opening very oblique, the hood therefore scoop-shaped; corolla lobes 2.5-6 mm long; [primarily of wetlands of various provinces].
7 Plants 3-5 dm tall; corolla lobes usually white (rarely slightly pink); leaves glabrous beneath; [of the Coastal Plain of SC] .... ***A. perennis***
7 Plants 5-15 dm tall; corolla lobes rose to purple (rarely white); leaves pubescent to glabrate beneath; [collectively widespread].

8 Stems and leaves sparsely pubescent to glabrescent; leaves narrow, the base obtuse to truncate, the apex long-acuminate; plants usually much branched.....***A. incarnata*** *var.* ***incarnata***
8 Stems and leaves moderately to densely pubescent; leaves broader, the base rounded to subcordate, the apex acute to short-acuminate; plants usually relatively strict.....***A. incarnata*** *var.* ***pulchra***
5 Hoods distinctly longer than the anther heads; horns 0.5-1× as long as the hood, not conspicuously exserted beyond the hood.
9 Lower leaf surface pubescent over the surface.
10 Hood margin irregular but not with a sharp tooth; corolla purplish-rose; plants 4-10 dm tall.....***A. purpurascens***
10 Hood margin with a single, ascending, triangular tooth; corolla rose or greenish-white; plants (5-) 8-20 dm tall .....***A. syriaca***
9 Lower leaf surface glabrous to sparsely pubescent along the midvein only.
11 Hood opening very oblique, the hood therefore scoop-shaped, and also with 2 prominent lateral teeth; corolla pink to greenish (rarely white); plants 2-5 dm tall.....***A. quadrifolia***
11 Hood opening truncate and constricted, and lacking prominent teeth; corolla white (often pink at the "waist"); plants 3-12 dm tall .....
.....***A. variegata***

Key E – milkweeds with milky sap, with petiolate, nonlinear leaves, in fruit (or sterile)

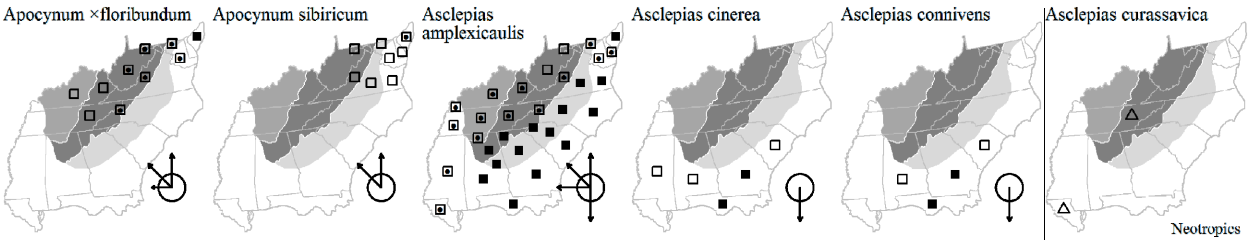
1 Leaves subopposite.....***A. viridis***
1 Leaves opposite (or apparently whorled in *A. quadrifolia*).
2 Follicle pendant; seeds without a coma; [of swamp forests of SC and southward] .....***A. perennis***
2 Follicle erect; seeds with a coma; [collectively widespread].
3 Leaf-bearing nodes 3-4, the upper and lower opposite, the middle with a whorl of 4 leaves .....***A. quadrifolia***
3 Leaf-bearing nodes 3-many, all opposite.
4 Follicle slightly to strongly muricate.....***A. syriaca***
4 Follicle smooth.
5 Lower leaf surface glabrous, or pubescent on the midrib only .....***A. exaltata***
5 Lower leaf surface pubescent.
6 Leaves lanceolate, 4-10× as long as wide.
7 Leaves coriaceous, 3-10 cm long, 1.5-4.5 cm wide; corolla pale green; [of dry upland situations] .....***A. viridiflora***
7 Leaves herbaceous, 6-15 cm long, 2-7 cm wide; corolla rose; [of moist to wetland situations].
8 Stems and leaves sparsely pubescent to glabrescent; leaves narrow, the base obtuse to truncate, the apex long-acuminate; plants usually much branched .....***A. incarnata*** *var.* ***incarnata***
8 Stems and leaves moderately to densely pubescent; leaves broader, the base rounded to subcordate, the apex acute to short-acuminate; plants usually relatively strict.....***A. incarnata*** *var.* ***pulchra***
6 Leaves ovate to elliptic, 1.5-4× as long as wide.
9 Stem moderately to densely pubescent; plants 1.5-5 (-7) dm tall; [of xeric pinelands of the Coastal Plain of NC, SC, and southward].
10 Stem and leaves densely tomentulose; leaves mucronate.....***A. obovata***
10 Stem and leaves softly puberulent; leaves apiculate.....***A. tomentosa***
9 Stem glabrous to pubescent in lines only; plants 2-12 dm tall; [collectively of various habitats throughout our area].
11 Lower leaf surface densely puberulent; [primarily of moist to wet habitats].....***A. purpurascens***
11 Lower leaf surface slightly pubescent; [primarily of moist to dry habitats].
12 Leaves 4-9 cm wide, acuminate at the apex .....***A. variegata***
12 Leaves 1-6 cm wide, mostly obtuse at the apex .....***A. viridiflora***

Asclepias amplexicaulis J.E. Smith, Clasping Milkweed. Sandhills, other dry woodlands of various types. May-July; June-August. NH and NY west to MN, IA, and KS, south to c. peninsular. FL, west to e. TX. The flowers have a fragrance or cloves and roses. [= RAB, C, F, G, K, S, W, WH, Z]

Asclepias cinerea Walter, Carolina Milkweed. Pine savannas. June-July; August-September. Se. SC south to n. peninsular FL, west to Panhandle FL. [= RAB, K, S, WH, Z]

Asclepias connivens Baldwin, Largeflower Milkweed. Wet pine flatwoods. July-August. Se. SC (McMillan et al. 2002) south to s. FL, west to Santa Rosa County, FL. [= GW, K, WH, Z; = *Anantherix connivens* (Baldwin) Feay – S]

* ***Asclepias curassavica*** Linnaeus, Scarlet Milkweed. Disturbed areas; native of tropical America, cultivated as an ornamental and sometimes slightly persistent. Kartesz (1999) reports it for TN. [= K, WH, Z] {not yet keyed}



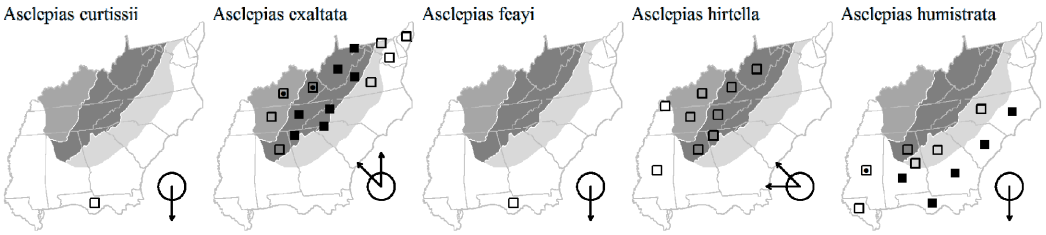
Asclepias curtissii A. Gray, Curtiss's Milkweed. Scrub. Endemic to FL, from Clay County south to s. peninsular FL. [= K, WH, Z; = *Oxypteryx curtissii* (A. Gray) Small – S] {not yet keyed}

Asclepias exaltata Linnaeus, Tall Milkweed. Moist forests, slopes, and forest margins. June-July; August-September. ME and s. ON west to MN and IA, south to n. GA, n. AL (Schotz 2009). e. and c. TN (Chester, Wofford, & Kral 1997), KY, and IL. [= RAB, C, F, G, K, S, W, Z]

Asclepias feayi Chapman ex A. Gray, Feay's Milkweed. Sandhills, scrubby pine flatwoods. Endemic to FL, from Clay County south to s. peninsular FL. [= K, WH, Z; = *Asclepiodella feayi* (Chapman ex A. Gray) Small – S] {not yet keyed}

Asclepias hirtella (Pennell) Woodson, Barrens Milkweed. Limestone glades, prairies. MI, WI, and MN south to w. WV (Mason County), KY, e. TN (Bradley County) (Chester, Wofford, & Kral 1997), nw. GA (Jones & Coile 1988), AR, w. LA, and e. TX. This species of midwestern prairies and barrens that closely resembles *A. longifolia*. The two taxa have sometimes been treated as distinct only at the rank of subspecies (see synonymy) or as "very distinct varieties" (Turner 2009). [= C, F, K, Z; = *Acerates hirtella* Pennell – S; = *Asclepias longifolia* Michaux ssp. *hirtella* (Pennell) J. Farmer & C.R. Bell – X; = *Asclepias longifolia* var. *hirtella* (Pennell) B.L. Turner – Y]

Asclepias humistrata Walter, Fleshy Milkweed. Sandhills. May-June; June-July. E. NC south to s. FL, west to e. LA. [= RAB, K, S, WH, Z]



Asclepias incarnata Linnaeus *var.* ***incarnata***, Western Swamp Milkweed. Swamps, marshes, especially over limestone or calcareous shale. July-September; August-October. ME and s. QC west to MB, south to VA, s. TN (Chester, Wofford, & Kral 1997), AR, TX, and CO; disjunct from n. FL south to s. FL; disjunct in TX, NM, and UT. The distribution is peculiar. [= C, F, G, GW; = *Asclepias incarnata* ssp. *incarnata* – RAB, K, W, Z; = *Asclepias incarnata* – S; < *Asclepias incarnata* – WH]

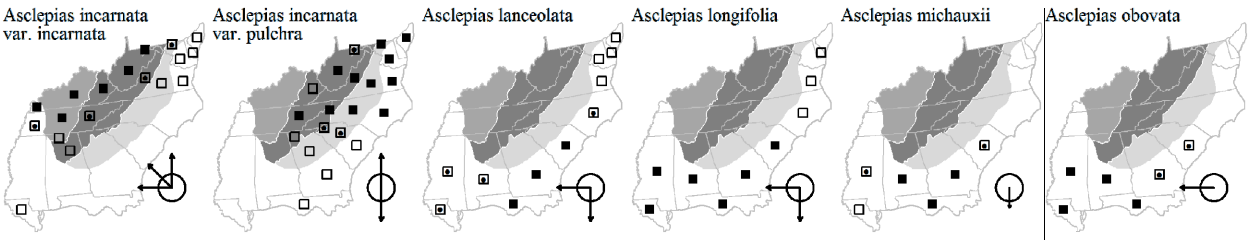
Asclepias incarnata Linnaeus *var.* ***pulchra*** (Ehrhart ex Willdenow) Persoon, Eastern Swamp Milkweed. Marshes, bogs, swamps. July-September; August-October. NS and ME south to e. NC, w. SC, GA, and e. TN (Chester, Wofford, & Kral 1997). [= C, F, G, GW; = *Asclepias incarnata* ssp. *pulchra* (Ehrhart ex Willdenow) Woodson – RAB, K, W, Z; = *Asclepias pulchra* Ehrhart ex Willdenow – S]

Asclepias lanceolata Walter, Few-flower Milkweed. Swamps, fresh to slightly brackish marshes, wet pine savannas. June-August; August-September. NJ south to s. FL, west to e. TX. [= RAB, C, GW, K, S, WH, Z; > *Asclepias lanceolata* var. *lanceolata* – F, G; > *Asclepias lanceolata* var. *paupercula* (Michaux) Fernald – F, G]

Asclepias longifolia Michaux, Longleaf Milkweed, Savanna Milkweed. Wet pine savannas. May-June; June-July. DE (formerly) south to s. FL, west to e. TX. *A. longifolia* and *A. hirtella* are closely related; the two taxa have sometimes been treated as distinct only at the rank of subspecies (see synonymy) or as "very distinct varieties" (Turner 2009). [= RAB, C, F, GW, K, WH, Z; = *Acerates longifolia* (Michaux) Elliott – G; ? *Acerates floridana* (Lamarck) A.S. Hitchcock – S; = *Asclepias longifolia* var. *longifolia* – Y; = *Asclepias longifolia* ssp. *longifolia* – X]

Asclepias michauxii Decaisne, Michaux's Milkweed. Pine savannas. May. S. SC south to peninsular FL, west to e. LA. [= RAB, K, S, WH, Z]

Asclepias obovata Elliott, Pineland Milkweed. Sandhills. June-September. Se. SC south to Panhandle FL, west to AR and TX. [= RAB, K, S, WH, Z]



Asclepias pedicellata Walter, Stalked Milkweed, Savanna Milkweed. Dry pine savannas. July-August. Se. NC south to s. FL and Panhandle FL. This species generally occurs in small populations of widely scattered individuals; populations of more than 50 individuals are rare. [= RAB, GW, K, WH, Z; = *Podostigma pedicellata* (Walter) Vail – S]

Asclepias perennis Walter, Smoothseed Milkweed, Swampforest Milkweed. Swamp forests. June-August; August-September. E. SC south to c. peninsular FL, west to e. TX, north in the interior to s. IN and s. IL. [= RAB, C, F, G, GW, K, S, WH, Z]

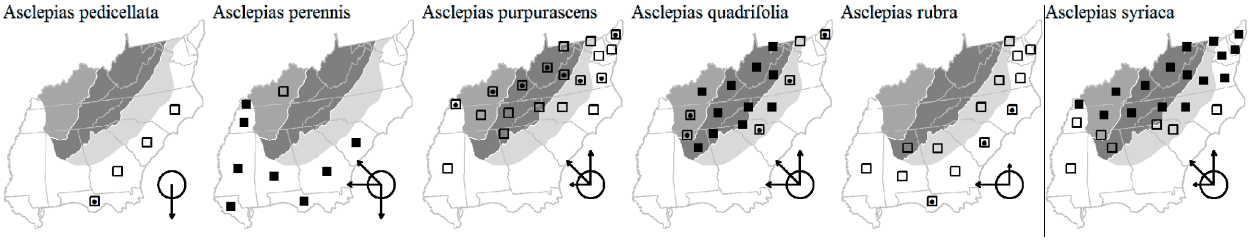
Asclepias purpurascens Linnaeus, Purple Milkweed. Openings in moist bottomlands and swamp forests, perhaps mostly on soils derived from mafic or calcareous rocks. June. NH and s. ON west to WI, IA, and KS, south to NC, nw. TN (Chester, Wofford, & Kral 1997), KY, AR, and OK. [= RAB, C, F, G, K, S, W, Z]

Asclepias quadrifolia Jacquin, Fourleaf Milkweed. Moist to dryish forests and forest margins, most common on mafic and calcareous substrates; common (rare in DE). May-June; August-September. NH and NY west to IN, south to NC, n. GA, n. AL, and c. TN; also from w. IL west to MO, south to AR and OK. [= RAB, C, F, G, K, S, W, Z]

Asclepias rubra Linnaeus, Purple Savanna Milkweed, "Red Milkweed." Pocosin ecotones, wet pine savannas, sandhill seeps, seepage swamps. June-July; July-September. Se. NY (Long Island), se. PA, and NJ south to wc. GA and w. Panhandle FL, west to e. TX. *A. laurifolia* is alleged to differ in sessile, cordate-clasping leaf bases (vs. petioled and rounded), and other

characters (see Small 1933); it may warrant recognition and needs additional study. [= RAB, C, F, G, GW, K, WH, Z; > *A. rubra* – S; > *A. laurifolia* Michaux – S; > *A. rubra* var. *rubra*; > *A. rubra* var. *laurifolia* (Michaux) Harper]

Asclepias syriaca Linnaeus, Common Milkweed. Pastures, roadsides, disturbed areas. June-August; July-September. NB and ME west to s. MB and ND, south to SC, GA, c. TN (Chester, Wofford, & Kral 1997), AR, OK, and KS. This species is apparently expanding its range southward; see Wyatt et al. (1993) and Wyatt (1996) for discussion. [= RAB, C, K, S, W, Z; > *Asclepias syriaca* var. *syriaca* – F, G]



Asclepias tomentosa Elliott, Sandhills Milkweed. Sandhills. June; July. Sc. NC south to s. FL, west to c. TX. [= RAB, K, Z; ? *Asclepias aceratoides* M.A. Curtis – S]

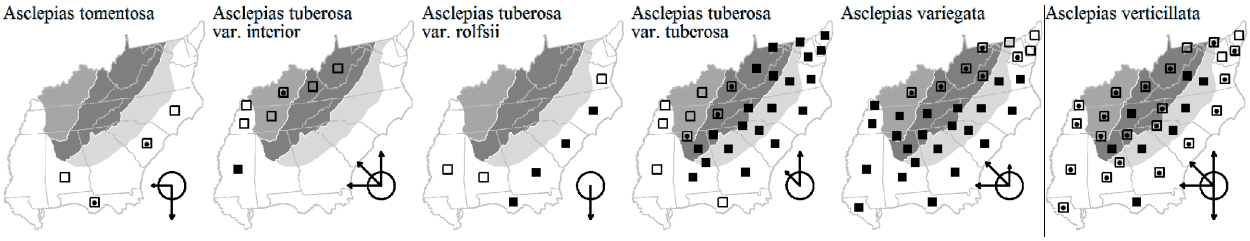
Asclepias tuberosa Linnaeus *var.* ***interior*** (Woodson) Shinners, Midwestern Butterfly-weed. Dry forests, roadbanks. QC, ON, MN, SD, CO, UT, and CA south to PA, WV, KY, TN, and MS (Kartesz 1999). [= C; < *A. tuberosa* – F, S; = *A. tuberosa* Linnaeus ssp. *interior* Woodson – G, K, Z]

Asclepias tuberosa Linnaeus *var.* ***rolfsii*** (Britton ex Vail) Shinners, Sandhills Butterfly-weed. Sandhills. May-August; August-September. Se. VA south to s. FL, west to s. MS. The flowers are typically lighter in color than those of var. *tuberosa*, yellow or yellowish-orange rather than deep orange to reddish. The first occurrence in Virginia is discussed by Belden et al. (2004). [= *Asclepias tuberosa* ssp. *rolfsii* (Britton ex Vail) Woodson – RAB, K, Z; = *Asclepias rolfsii* Britton ex Vail – S; < *Asclepias tuberosa* – WH]

Asclepias tuberosa Linnaeus *var.* ***tuberosa***, Common Butterfly-weed. Woodland margins, roadsides, pastures. May-August; August-September. S. NH west to OH, south to Panhandle FL and e. TX. [= C; = *Asclepias tuberosa* ssp. *tuberosa* – RAB, G, K, Z; < *Asclepias tuberosa* – F, S, W, WH; >< *Asclepias tuberosa* – S; > *Asclepias decumbens* Linnaeus - S]

Asclepias variegata Linnaeus, White Milkweed. Upland forests and woodlands. May-June; July-September. CT west to OH, s. IN, s. IL, se. MO, and se. OK, south to Panhandle FL, LA, and e. TX. [= RAB, C, F, G, K, W, WH, Z; = *Biventraria variegata* (Linnaeus) Small – S]

Asclepias verticillata Linnaeus, Whorled Milkweed. Barrens, thin soils of rock outcrops (especially mafic rocks), thin woodlands, sandhills. June-September; September-October. E. MA west to ND and MB, south to s. FL, TX, NM, and AZ. [= RAB, C, F, G, K, S, W, Z]



Asclepias viridiflora Rafinesque, Green Milkweed. Open woodlands, woodland edges, barrens, glades, especially over mafic or calcareous rocks, and also in disturbed areas. June-August; August-September. CT west to s. ON, MB, ND, and MT, south to NC, SC, GA, Panhandle FL, AL, LA, TX, n. Mexico, NM, and AZ. [= RAB, C, K, W, WH, Z; > *Asclepias viridiflora* var. *viridiflora* – F; > *Asclepias viridiflora* var. *lanceolata* (Ives) Torrey – F; = *Acerates viridiflora* (Rafinesque) Pursh ex Eaton – G, S]

Asclepias viridis Walter, Green Antelope-horn. Prairies, dry woodlands, calcareous hammocks. S. SC south to s. FL, west to TX; and from OH, w. WV, and KY west to NE, south to se. TN, c. TN (Chester, Wofford, & Kral 1997), nw. GA, c. AL, c. MS, AR, TX, and OK. [= K, WH, Z; = *Asclepiodora viridis* (Walter) A. Gray – S]

Asclepias viridula Chapman, Southern Milkweed. Wet longleaf pine savannas and flatwoods, seepage slopes, pitcherplant bogs. April-July. GA and AL south to ne. FL and Panhandle FL. See Chafin (2000) for additional information. [= GW, K, S, Z] {not yet keyed}

Catharanthus G. Don 1836 (Rosy-periwinkle)

A genus of about 8 species, herbs, 7 endemic to Madagascar and 1 endemic to India. References: van Bergen (1996)=Z; Snoeijer (1996).

* ***Catharanthus roseus*** (Linnaeus) G. Don, Rosy-periwinkle, Madagascar Periwinkle, Cayenne Jasmine. Disturbed areas, persistent after cultivation or as a waif or "throwout" after cultivation; native of Madagascar, now a pantropical weed. May-October. *C. roseus* is the source of a powerful anti-leukemia drug. [= K, S, WH, Z; = *Vinca rosea* Linnaeus – RAB]

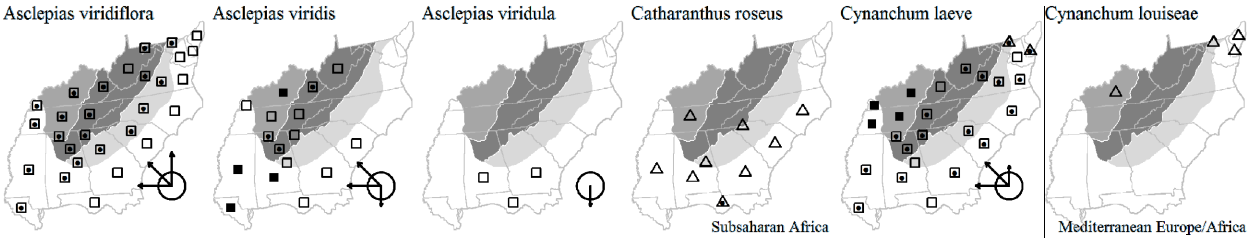
Cynanchum Linnaeus 1753 (Swallow-wort)

A genus of about 400 species, vines and lianas, primarily of tropical and warm temperate portions of the New World and Old World. *Ampelamus* was retained as a genus by Liede (1997a), but later results suggest that it is not distinct from some other portions of *Cynanchum* (Liede & Täuber 2002). However, *Cynanchum* itself is strongly polyphyletic and will be broken up; further taxonomic and nomenclatural changes are likely. *C. laeve* will probably remain in *Cynanchum* s.s. (which is primarily Old World in distribution), while *C. scoparium* will likely shift to *Orthosia*. References: Liede (1997b); Liede & Meve (1997); Liede (1997a); Krings (2001)=Z; Liede & Täuber (2002).

1 Leaves oblong or ovate.
  2 Leaves broadly cordate, deeply cordate at base; corona of 5 erect, petaloid segments, each divided into 2 slender lobes..... ***C. laeve***
  2 Leaves oblong or vate, rounded or subcordate at base; corona a fleshy, lobed cup ..... ***C. louiseae***
1 Leaves linear.
  3 Calyx lobes lanceolate, acute, (1.3-) 1.5-2.5 mm long; leaves sessile, reflexed, persistent; follicle 6-7 mm in diameter; [of ne. NC and south]..... ***[see Seutera angustifolia]***
  3 Calyx lobes deltoid, obtuse, ca. 1 mm long; leaves petiolate, not reflexed, often caducous; follicle 1-3 mm in diameter; [of se. SC and south]..... ***C. scoparium***

Cynanchum laeve (Michaux) Persoon, Sandvine, Honeyvine, Bluevine. Bottomlands and disturbed areas. July-September; August-October. Se. PA and KS south to sw. GA, Panhandle FL, and c. TX. [= RAB, GW, K, W, WV; = *Ampelamus laevis* (Michaux) Krings – WH, Z; = *Ampelamus albidus* (Nuttall) Britton – C, F, G; = *Gonolobus laevis* Michaux – S]

* ***Cynanchum louiseae*** J.T.Kartesz & Gandhi, Black Swallow-wort. Disturbed areas; native of Mediterranean Europe. Reported for many states in ne. United States, south to MD, KY, TN. [= K; = *Vincetoxicum nigrum* (Linnaeus) Moench – C; = *Cynanchum nigrum* (Linnaeus) Persoon – F, G]



Cynanchum scoparium Nuttall, Leafless Swallow-wort. Coastal hammocks. Se. SC south to s. FL, west to s. MS. Liede (1997b) indicates that this species will likely be transferred to *Orthosia* Decaisne in de Candolle, a large group primarily of the Caribbean, Central America and n. South America, but she refrains from the new combination pending further studies. [= RAB, K, WH; = *Amphistelma scoparia* (Nuttall) Small – S; ***Orthosia sp.***]

Gonolobus Michaux 1803 (Anglepod)

A genus of about 100 species, vines, primarily tropical. Liede (1997a), Lipow & Wyatt (1998), and others recognize *Gonolobus* as separate from *Matelea*. References: Krings (in prep.)=U; Rosatti (1989)=Z; Lipow & Wyatt (1998)=Y; Drapalik (1969)=X; Krings & Xiang (2005)=V; Reveal & Barrie (1992); Krings & Xiang (2004).

1 Upper surface of corolla lobes uniformly colored, olive green on anthesis, glabrous; laminar dorsal anther appendage yellow, apex rounded or truncate; [of c. KY, e. TN, nw. AL westward] ..... ***[G. suberosus*** *var.* ***granulatus]***
1 Upper surface of corolla lobes multi-colored, generally dark maroon to brownish near the base and green to yellowish near the tips on anthesis (or uniformly yellowish-green to neon green in rare mutants), pubescent or glabrous; laminar dorsal anther appendage darkly purplish or maroonish tinted, apex bilobed to emarginate; [of se. VA south to c. peninsular FL, west to s. MS and inland to nw. GA]..... ..... ***G. suberosus*** *var.* ***suberosus***

Gonolobus suberosus (Linnaeus) R. Brown *var.* ***granulatus*** (Scheele) Krings & Q.-Y. Xiang, Western Anglepod. C. KY, e. TN, nw. AL, and MS west to c. OK and c. TX. [= U, V; > *Gonolobus suberosus* (Linnaeus) R. Brown – Y; < *Matelea gonocarpos* (Walter) Shinners – K; >< *Vincetoxicum gonocarpos* Walter – S; >< *Vincetoxicum suberosum* (Linnaeus) Britton – S; >< *Matelea gonocarpa* – X; >< *Gonolobus gonocarpus* – Z]

Gonolobus suberosus (Linnaeus) R. Brown *var.* ***suberosus***, Eastern Anglepod. Mesic to wet forests and thickets. June-August; September-November. Se. VA south to s. peninsular FL, west to s. MS, inland to nw. GA and c. KY. Rosatti (1989) and Drapalik (1969) have expressed considerable doubt about whether two species should be recognized; their view, supporting the recognition of a single species in our area, is followed here for now. However, studies by Krings & Xiang (2004, 2005) suggest that 2 entities should be circumscribed at the varietal level. Drapalik (1969) considered the basionym "*suberosa*" as not applicable to *Matelea* of North America; Reveal & Barrie (1992) lectotypified the name, resulting in it applying to our material. It has priority over "*gonocarpus*." [= U, V; > *Matelea gonocarpa* (Walter) Shinners – RAB, C, W; > *Matelea suberosa* (Linnaeus) Shinners – RAB, C, W; > *Gonolobus gonocarpus* (Walter) Perry – F, G; > *Gonolobus suberosus* (Linnaeus) R. Brown – F, Y; < *Matelea gonocarpos* (Walter) Shinners – K, WH; < *Vincetoxicum gonocarpos* Walter – S; > *Vincetoxicum suberosum* (Linnaeus) Britton – S; = *Matelea gonocarpa* – X; = *Gonolobus gonocarpus* – Z]

Matelea Aublet 1775 (Spinypod)

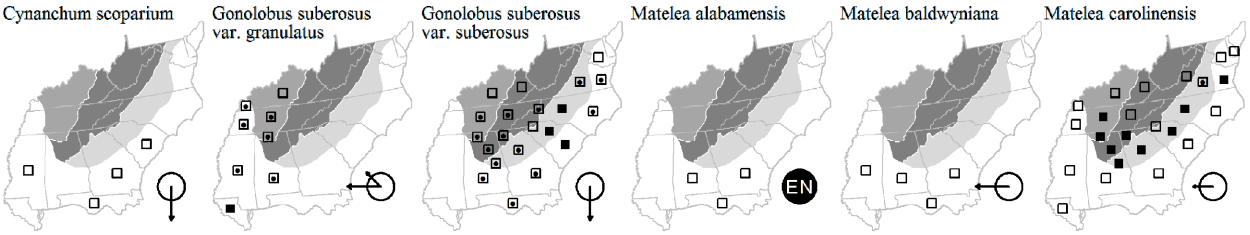
A genus of about 180 species, vines, primarily tropical and restricted to the New World. References: Drapalik (1969)=Z.

1 Plant a prostrate herb, usually not twining, with stems 0.2-0.6 (-1.1 m) long at maturity; leaf blades 2-4 (-6) cm long; cymes sessile; flowers (2-) 3-4 (-5) per inflorescence; upper (inner) surface of the petals pubescent; [of xeric sandhills, from e. GA southward] ..... ***M. pubiflora***
1 Plant a twining herbaceous vine, with stems 1-2 m long at maturity; leaf blades 7-27 cm long; cymes borne on peduncles; flowers (2-) 9-19 (-53) per inflorescence, except *M. alabamensis*, with (1-) 4-5) (-12) flowers per inflorescence; upper (inner) surface of the petals glabrous; [of various habitats, but more mesic, collectively widespread in our area].
2 Inflorescence with 1-12 flowers, averaging 4-5; corolla light green, reticulated with darker green; corona disc-shaped, lacking 5 pairs of appendages; [of mesic slopes of s. GA southward and westward] ..... ***M. alabamensis***
2 Inflorescence with 2-53 flowers, averaging 9-19; corolla white, yellow, rose, or maroon (or greenish and reticulate in *M. flavidula*); corona cup-shaped, with 5 pairs of upright appendages alternating with 5 corona lobes; [collectively widespread].
3 [endemic to FL] ..... ***M. floridana***
3 [collectively widespread].
4 Corolla lobes in a horizontal plane or slightly reflexed; flower buds ovoid, < 1.5× as long as wide; corolla lobes 1.5-2.6× as long as wide.
5 Corolla dark maroon (rarely maroon-yellow or yellow), not reticulate with darker veins; paired corona appendages always higher than the alternating corona lobes ..... ***M. carolinensis***
5 Corolla green, green-yellow, or yellow (rarely rosy or olive-maroon), reticulate with darker green veins; paired corona appendages about as high as the alternating corona lobes ..... ***M. flavidula***
4 Corolla lobes ascending; flower buds conical, > 2× as long as wide; corolla lobes 2.4-6.2× as long as wide.
6 Corolla white (or fading or drying cream); corona 2.2-2.7 mm in diameter, cream or creamy-yellow; [of sw. GA westward] ..... ***M. baldwyniana***
6 Corolla rose or maroon (rarely cream); corona 2.6-4.0 mm in diameter, rose to dark maroon (rarely green, cream, or orange); [primarily of the Mountains and Piedmont].
7 Corolla lobes 2.4-3.6 (-4.0)× as long as wide, the widest part above the sinus; corolla dark maroon ..... ***M. decipiens***
7 Corolla lobes (3.2-) 4.0-6.2× as long as wide, the widest part at the sinus; corolla rose to light maroon (rarely dark maroon, green, or cream) ..... ***M. obliqua***

Matelea alabamensis (Vail) Woodson, Alabama Milkvine, Alabama Spinypod. Open forests on river bluffs, mesic margins of sandridges. April-June. Sw. and apparently se. GA, Panhandle FL, and s. AL. [= K, WH, Z; = *Cyclodon alabamense* (Vail) Small – S]

Matelea baldwyniana (Sweet) Woodson, White Spinypod. Dry to mesic bluffs over calcareous rocks. Panhandle FL and sw. GA west to MO, AR, and OK. Drapalik (1969) discusses the probability that the name *M. baldwyniana* is based on material of *M. flavidula*. [= K, WH, Z; = *Odontostephana baldwiniana* (Sweet) Alexander – S]

Matelea carolinensis (Jacquin) Woodson, Carolina Spinypod. Moist to dry, nutrient-rich forests. April-June; July-October. DE, MD, KY, and s. MO south to GA and MS. [= RAB, C, K, W; = *Gonolobus carolinensis* (Jacquin) R. Brown ex J.A. Schultes – F, G; = *Odontostephana carolinensis* (Jacquin) Alexander – S]



Matelea decipiens (Alexander) Woodson, Deceptive Spinypod. Woodlands and thickets, generally over mafic (in the Piedmont) or calcareous rocks (in the Coastal Plain). April-June; August-October. VA south to nc. GA, AL, and e. TX, north in the interior to s. IL and MO. [= RAB, C, K; = *Gonolobus decipiens* (Alexander) Perry – F, G; = *Odontostephana decipiens* Alexander – S]

Matelea flavidula (Chapman) Woodson, Yellow Spinypod. Moist, nutrient-rich forests. May-June; August-October. E. NC (?) and e. SC south to Panhandle FL, apparently rare throughout its range. [= RAB, K, WH, Z; = *Odontostephana flavidula* (Chapman) Alexander – S]

Matelea floridana (Vail) Woodson, Florida Milkvine. Hammocks. Ne. FL and e. Panhandle FL south to s. FL. [= K, WH, Z; = *Odontostephana floridana* (Vail) Alexander – S]

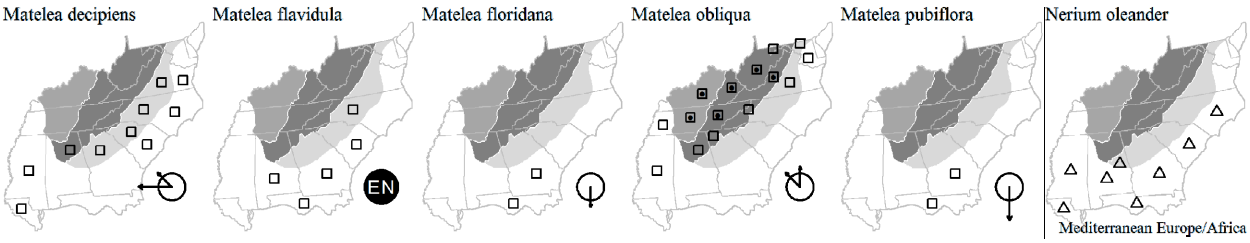
Matelea obliqua (Jacquin) Woodson, Northern Spinypod, Limerock Milkvine. In forests, woodlands, or thickets over calcareous rocks. June-July; August-November. PA west to OH, IN, and MO, south to w. NC, nw. GA (Jones & Coile 1988), and TN. [= RAB, C, K, W; = *Gonolobus obliquus* (Jacquin) R. Brown ex J.A. Schultes – G; > *G. obliquus* – F; > *G. shortii* A. Gray – F; > *Odontostephana obliqua* (Jacquin) Alexander – S; > *O. shortii* (A. Gray) Alexander – S; = *Matelea caroliniensis* – WV, misapplied]

Matelea pubiflora (Decaisne) Woodson, Trailing Milkvine. Sand ridges, sandhills. Late May-early August; mid-June-late September. E. GA (Jones & Coile 1988) south to ne. FL (Wunderlin 1998). [= K, WH, Z; = *Edisonia pubiflora* (Decaisne) Small – S]

Nerium Linnaeus 1753 (Oleander)

A monotypic genus, a shrub, of Mediterranean Europe.

* ***Nerium oleander*** Linnaeus, Oleander. Frequently cultivated, especially on barrier islands (because of its salt resistance), sometimes persistent; native of Mediterranean Europe. [= K, S, WH]



Periploca Linnaeus 1753 (Silkvine)

* ***Periploca graeca*** Linnaeus, Silkvine. Disturbed areas; native of Mediterranean Europe. July-August. Sometimes cultivated and escaped or persistent; it is reported for various states in e. North America, as in Knox County, TN (Chester, Wofford, & Kral 1997). [= RAB, C, K]

Seutera Reichenbach 1828 (Swallow-wort)

A genus of 2-3 species (as newly circumscribed by Fishbein & Stevens 2005), of tropical and subtropical se. United States, West Indies, and Baja California. Liede & Meve (2003) follow a broader circumscription, including *Seutera* in *Funastrum*, but Fishbein & Stevens (2005) argue that *Seutera* is discordant as a component of *Funastrum*. References: Fishbein & Stevens (2005)=Y; Liede & Meve (2003)=Z; Liede & Meve (1997).

Seutera angustifolia (Persoon) Fishbein & W.D. Stevens, Swallow-wort. Coastal hammocks, edges of marshes, generally or always on barrier islands. June-July; July-October. E. NC (Dare County) south to s. FL, west to TX; Bahamas and West Indies. See Krings (2005) for a discussion of typification. [= Y; = *Cynanchum angustifolium* Persoon – GW, K, WH; = *C. palustre* (Pursh) Heller – RAB; = *Lyonia palustris* (Pursh) Small – S; = *Funastrum angustifolium* (Persoon) Liede & Meve – Z]

Trachelospermum Lemaire 1851 (Climbing Dogbane)

A genus of about 20 species, vines, of se. Asia (India to Japan), except the single species of se. United States.

Identification notes: *Trachelospermum difforme* is sometimes mistaken at a glance for *Gelsemium* (both woody vines with opposite lanceolate leaves), but in the field the milky sap of *Trachelospermum* provides an immediate identifying characteristic.

1 Corolla lobes 3-4 mm long, acute, reflexed, pale yellow; leaves subcoriaceous; [native, common] ..... ***T. difforme***
1 Corolla lobes 8-12 mm long, rounded, spreading, white; leaves coriaceous; [alien, commonly planted, rarely persistent or spreading] ..... ***T. jasminoides***

Trachelospermum difforme (Walter) A. Gray, Climbing Dogbane. Bottomlands, swamp forests, marshes. May-July; July-September. DE south to n. peninsular FL, west to e. TX, north in the interior to MO and IN. See Krings (2003) for a discussion of nomenclature. [= RAB, C, F, G, GW, K, S, WH]

* ***Trachelospermum jasminoides*** (Lindley) Lemaire, Confederate Jasmine, Star Jasmine. Disturbed areas; native of se. Asia. April-May. Cultivated and sometimes persistent or spreading. Also reported for e. LA and to be expected along the Gulf coast in AL and MS. [= K, WH]

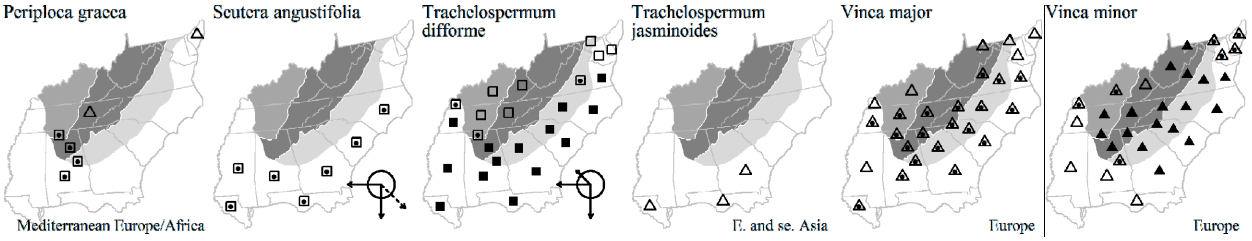
Vinca Linnaeus 1753 (Vinca, Periwinkle)

A genus of 7 species of Europe, n. Africa, and c. Asia.

1 Leaves ovate, broadest near the base, cordate or subcordate-rounded at the base, 2-4 cm wide, thin in texture and deciduous to semi-evergreen; leaf margins ciliate; flowers 3-5 cm across..... ***V. major***
1 Leaves lanceolate or elliptic, broadest near the middle, rounded to cuneate at the base, 1-1.5 cm wide, thick in texture and evergreen; leaf margins not ciliate; flowers 2-3 cm across..... ***V. minor***

* ***Vinca major*** Linnaeus, Greater Periwinkle. Disturbed areas, suburban woodlands, around old house sites, persistent and spreading from cultivation; native of Europe. Late February-May; June-July. [= RAB, C, F, G, K, S, W]

* ***Vinca minor*** Linnaeus, Common Periwinkle, Myrtle. Disturbed areas, around old house sites and especially old cemeteries, persistent and spreading from cultivation; native of Europe. April-May; June-July. [= RAB, C, F, G, K, S, W, WH, WV]



356. BORAGINACEAE A.L. de Jussieu 1789 (Borage Family) [order assignment uncertain]

A family of about 155 genera and ca. 3200 species, herbs, shrubs, and trees, nearly cosmopolitan (Al-Shehbaz 1991). References: Ferguson 1998; Diane, Förther, & Hilger 2002; Hilger & Diane 2003); Al-Shehbaz (1991)=Z throughout the family; Wilson (1960a); Constance (1963). Key to genera based on RAB, C, and Z. [including *HELIOTROPIACEAE* and *HYDROPHYLLACEAE*]

1 Leaves dissected, lobed, or toothed (sometimes the basalmost leaves simple); style fused for a portion of its length, 2-cleft toward the tip; ovary with 1 locule; [subfamily *Hydrophylloideae*].
2 Flowers solitary opposite the leaves on the upper portion of the stem (sometimes also terminal in a lax, (1-) 2-6-flowered cyme).
3 Leaves opposite below, alternate above; petals 5-8 mm long; leaves elliptical in outline, pinnatifid into 7-13 lanceolate segments; calyx lobes to 10 mm long in fruit; capsule 4-seeded ..... ***16. Ellisia***
3 Leaves all alternate; petals 2-4 mm long; leaves broadly triangular in outline, divided into 3-5 obovate segments; calyx lobes 1-3 mm long; capsule 1-2 (-3)-seeded ..... ***17. Nemophila***
2 Flowers all terminal in 3-many-flowered cymes.
4 Inflorescence repeatedly branched subdichotomously; larger leaf blades > 8 cm wide; stamens well exserted from the corolla (3 mm or more beyond the corolla); plants perennial from fibrous roots ..... ***18. Hydrophyllum***
4 Inflorescence with a strong central axis (some secondary branching in *P. bipinnatifida*, but not as above); larger leaf blades < 5 cm wide (except *P. bipinnatifida*); stamens slightly exserted from the corolla (< 3 mm beyond the corolla) (except well-exserted in *P. bipinnatifida*, included in *P. covillei*); plants annual (biennial in *P. bipinnatifida*) from a taproot..... ***19. Phacelia***
1 Leaves entire, simple; style various.
5 Styles 2, distinct to the summit of the ovary
6 Flowers in axillary cymes; capsule subglobose; leaves 2-12 cm long ..... ***[see Hydrolea in HYDROLEACEAE]***
6 Flowers solitary or paired in the leaf axils; capsule cylindrical; leaves 0.8-1.5 (-3.5) cm long; [subgenus *Hydrophylloideae*] .... ***15. Nama***
5 Styles absent (the stigma sessile and terminal), single, or with 2 branches.
7 Ovary slightly 2-4-lobed, or not at all lobed; style terminal or reduced to a sessile terminal stigma; [subfamily *Heliotropioideae*] ..... ***21. Heliotropium***
7 Ovary deeply 4-parted; style gynobasic; [subfamily *Boraginoideae*].
8 Mericarps with glochidiate prickles (like grappling hooks), these visible early in development.
9 Mericarps spreading or divergent, attached to the gynobase on the upper third of the mericarp; [tribe *Cynoglosseae*] ..... ***1. Cynoglossum***
9 Mericarps erect, attached to the gynobase near the middle of the mericarp; [tribe *Eritrichieae*]
10 Fruiting pedicels deflexed; plant perennial or biennial ..... ***2. Hackelia***
10 Fruiting pedicels erect-ascending; plant annual ..... ***3. Lappula***
9 Mericarps smooth, rugose, or pitted, lacking glochidiate prickles.
11 Corolla rotate, lacking a well-developed tube, blue; [tribe *Boragineae*] ..... ***6. Borago***
11 Corolla with a well-developed tube at least 3 mm long, of various colors (including blue).
12 Corolla lobes distinctly unequal, pink to blue.
13 Stamens equal in length, entirely included within the corolla tube..... ***5. Anchusa***
13 Stamens unequal in length, the longer conspicuously exserted ..... ***8. Echium***
12 Corolla lobes equal, of various colors (including pink to blue).
14 Plant a scrambling climber with retrorsely prickly-hispid stems ..... ***20. Asperugo***
14 Plant not climbing.
15 Mericarps attached laterally to a pyramidal gynobase.
16 Corolla yellow, the tube 4-5 mm long; corolla throat lacking appendages..... ***4. Amsinckia***
16 Corolla white (with a yellow eye), or pink to blue, the tube 6-20 mm long; corolla throat with appendages.
17 Corolla pink to blue (rarely white), 18-25 mm long; leaves elliptic or ovate; [plant a native, of moist, nutrient-rich habitats, and sometimes grown as an ornamental]..... ***10. Mertensia***
17 Corolla white with a yellow eye; leaves linear; [plant a rare alien, of disturbed habitats] ..... ***13. Plagiobothrys***
15 Mericarps attached basally to a flat or broadly convex gynobase.
18 Mericarps laterally compressed, with an evident raised margin ..... ***11. Myosotis***
18 Mericarps neither laterally compressed nor with an evident thickened margin.
19 Mericarps with a prominent, toothed, basal rim ..... ***14. Symphytum***
19 Mericarps lacking a prominent, toothed, basal rim.
20 Corolla lobes erect or slightly spreading, acute to acuminate; style exserted..... ***12. Onosmodium***
20 Corolla lobes spreading, rounded; style included.

21 Corolla whitish or bluish white; plant annual from a slender taproot; leaves without evident lateral veins; mericarps brown, dull, wrinkled and pitted; [plant a weedy alien] ..... ***7. Buglossoides***
21 Corolla bright yellow-orange, or greenish-white; plant perennial from a thickened, woody rhizome; mericarps white, shining, smooth or pitted; [plant a native] ..... ***9. Lithospermum***

1. Cynoglossum Linnaeus (Comfrey)

A genus of about 75 species, herbs, of temperate regions. References: Al-Shehbaz (1991)=Z; Haines (2010)=Y.

1 Flowering stem with leaves above the first inflorescence branch; corolla reddish-purple; [plant a biennial alien, weedy] ..... ***C. officinale***
1 Flowering stem leafless above the first branch; corolla blue or white; [plant a perennial native, not weedy].
2 Nutlets 3.5-5 mm; calyx at anthesis 2-2.5 mm long; corolla 6-8 mm wide, the lobes oblong and not overlapping..... ***[C. virginianum*** *var.* ***boreale]***
2 Nutlets 5.5-9 mm; calyx at anthesis (3.0-) 3.5-4.5 mm long; corolla (8-) 10-12 mm wide, the lobes broadly rounded and more or less overlapping ..... ***C. virginianum*** *var.* ***virginianum***

* ***Cynoglossum officinale*** Linnaeus, Garden Comfrey, Hound's-tongue. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE): disturbed areas, roadsides, pastures, calcareous shale barrens; common (uncommon in DE and WV, rare in NC), native of Eurasia. May-July. [= RAB, C, F, G, K, S, W, WV, Z]

Cynoglossum virginianum Linnaeus *var.* ***virginianum***, Wild Comfrey. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): moist deciduous forests; common (uncommon in DE Piedmont, rare in Coastal Plain). April-June. Var. *virginianum* ranges from CT west to OK, south to FL and LA. [= C, K; < *C. virginianum* – RAB, W, WV; = *C. virginianum* – F, G, Z; = *C. virginicum* – S, orthographic error; = *C. virginianum* ssp. *virginianum* – Y]

Cynoglossum virginianum Linnaeus var. *boreale* (Fernald) Cooperrider, Northern Hound's-tongue, ranges from NB west to BC, south to CT, NY, c. PA, n. OH, MI, and MN. Cooperrider (1995) prefers varietal status for this taxon, stating that in OH there are numerous intermediates, while Voss (1996) and Rhoads & Klein (1993) maintain *C. boreale* at the species level. [= C, K; = *C. boreale* – F, G, Z; = *C. virginianum* ssp. *boreale* (Fernald) A. Haines – Y]

2. Hackelia Opiz (Stickseed)

A genus of ca. 45 species, of north temperate regions, Central America, and South America, especially diverse in w. North America. References: Al-Shehbaz (1991)=Z.

Hackelia virginiana (Linnaeus) I.M. Johnston, Virginia Stickseed. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, VA): rich forests and woodlands; common (rare in GA, NC, and SC). June-September. S. QC west to ND, south to ne. GA (Jones & Coile 1988), LA, and TX. [= RAB, C, F, G, K, W, WV, Z; = *Lappula virginiana* (Linnaeus) Greene – S]

3. Lappula Moench (Sheepbur)

A genus of about 40 species, of Eurasia, w. North America. References: Al-Shehbaz (1991)=Z.

1 Nutlets with 1 row of marginal prickles..... ***L. occidentalis*** *var.* ***occidentalis***
1 Nutlets with 2-3 rows of marginal prickles..... ***L. squarrosa***

* ***Lappula occidentalis*** (S. Watson) Greene *var.* ***occidentalis***. Cp (SC): waste areas near wool-combing mill; rare, perhaps only a waif, native of w. North America. April-June. [= K; = *L. redowskii* var. *redowskii* – C, Z; = *L. redowskii* (Hornemann) Greene var. *occidentalis* (S. Watson) Rydberg – F, G]

* ***Lappula squarrosa*** (Retzius) Dumortier. Mt (WV): disturbed areas; rare, native of Europe. May-September. Introduced south to MD, WV, KY, and TN. [= C, Z; = *L. echinata* Gilibert – F, G, WV; = *L. lappula* (Linnaeus) Karst. – S]

4. Amsinckia Lehmann (Fiddleneck)

A genus of about 15 species, herbs, of western North America and western South America. References: Al-Shehbaz (1991)=Z.

* ***Amsinckia menziesii*** (Lehmann) A. Nelson & Macbride. Pd (NC), Cp (SC): disturbed areas, waste areas near wool-combing mill; rare, native of w. United States. May-September. [= Z; >< *A. hispida* (Ruiz & Pavón) I.M. Johnston – RAB, misidentification; > *A. menziesii* var. *menziesii* – K; >< *A. parviflora* Heller – S, misidentification; >< *Amsinckia lycopsoides* Lehmann, misidentification]

5. Anchusa Linnaeus (Bugloss, Alkanet)

A genus of about 35 species, herbs, of Europe, n. Africa, and w. Asia. References: Al-Shehbaz (1991)=Z.

* ***Anchusa arvensis*** (Linnaeus) M. Bieberstein, Small Bugloss, Alkanet. Pd (NC, VA), Mt (WV): disturbed areas, rare, native of Europe. [= C, K; = *Lycopsis arvensis* Linnaeus – F, G, S]

6. Borago Linnaeus (Borage)

A genus of 3 species, herbs, of Mediterranean Europe and Asia. References: Al-Shehbaz (1991)=Z.

* ***Borago officinalis*** Linnaeus, Borage. Pd (VA), Mt (WV): disturbed areas; rare, native of s. Europe. [= C, F, G, K, Z]

7. Buglossoides Moench (Corn-gromwell)

A genus of about 7 species, herbs or shrubs, of temperate Eurasia. References: Al-Shehbaz (1991)=Z.

* ***Buglossoides arvensis*** (Linnaeus) I.M. Johnston *ssp.* ***arvensis***, Corn-gromwell. Mt (NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): roadsides, dry disturbed areas, sandy fields; common (uncommon in DE Piedmont, rare in DE Coastal Plain), native of Eurasia. March-June. Other subspecies are not known to be naturalized in our area. [= Z; < *B. arvensis* – K; < *Lithospermum arvense* Linnaeus – RAB, C, F, G, S, W]

8. Echium Linnaeus (Viper's-bugloss, Blueweed)

A genus of about 60 species, herbs, widespread in the Old World. The common name is pronounced "bew-gloss," not "bug-loss," as it refers to an ox's tongue rather than to the departure of insects. References: Al-Shehbaz (1991)=Z.

1 Hairs of the stem pustular-based ..... ***[E. pustulatum]***
1 Hairs of the stem not pustular-based ..... ***E. vulgare***

* ***Echium vulgare*** Linnaeus, Viper's-bugloss, Blueweed. Mt (NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, GA, VA): roadsides, dry pastures, disturbed areas; common (uncommon in DE Piedmont, rare in DE Coastal Plain), native of Mediterranean Europe. June-September. Reported for Cook County, GA (Carter, Baker, & Morris 2009). [= RAB, C, K, W, WV; = *E. vulgare* var. *vulgare* – F, G; < *E. vulgare* – Z (also see *E. pustulatum*)]

* ***Echium pustulatum*** Sibthorp & Smith, Blue-devil, is reported by F for "N.J. to W.Va.," and by G and K as south to VA. It differs in having pustular-based hairs on the foliage. [= K; = *E. vulgare* var. *pustulatum* (Sibthorp & Smith) Coincy – F, G; < *E. vulgare* – Z]

9. Lithospermum Linnaeus (Gromwell, Puccoon, Stoneseed)

A genus of about 45 species, herbs (mostly perennials), nearly cosmopolitan. References: Cusick (1985)=Y; Al-Shehbaz (1991)=Z.

1 Corolla white or yellowish-white, the tube 4-8 mm long.
  2 Plant with basal rosette; lower cauline leaves about equal in size to the upper cauline leaves; leaves acute to obtuse ..... ***L. tuberosum***
  2 Plant lacking basal rosette; lower cauline leaves smaller than the upper cauline leaves; leaves acuminate or acute.
    3 Upper stem internodes mostly 3-6 cm long; leaves mostly >2 cm wide, acuminate ..... ***L. latifolium***
    3 Upper stem internodes mostly 1-2 cm long; leaves mostly <2 cm wide, acute ..... ***[L. officinale]***
1 Corolla yellow-orange, the tube 7-30 mm long.
  4 Corolla tube 13-30 mm long; corolla lobes denticulate oto lacerate; nutlets pitted ..... ***L. incisum***
  4 Corolla tube 7-14 mm long; corolla lobes entire; nutlets smooth.
    5 Plant with dense, soft, appressed pubescence, the hairs usually without pustular bases; calyx lobes 6-8 mm long at maturity; nutlets 2-3 mm long; [mostly of rocky or clayey circumneutral soils of the Piedmont and Mountains] ..... ***L. canescens***
    5 Plant with scattered, stiff, spreading pubescence, the hairs with or without pustular bases; calyx lobes 10-15 mm long at maturity; nutlets 3.5-4.5 mm long; [variously of sandy acidic soils of the Coastal Plain or inland].
      6 Pubescence with slender bases; mature calyx lobes flat; plants with 15-25 well-developed leaves below the inflorescence; [of sandy Coastal Plain habitats from se. VA southward] ..... ***L. caroliniense***
      6 Pubescence with pustular bases; mature calyx lobes strongly keeled; plants with (30-) 35-45 well-developed leaves below the inflorescence; [inland, known from west and north of our area] ..... ***[L. croceum]***

Lithospermum canescens (Michaux) Lehmann, Hoary Puccoon, Indian-paint. Pd (NC, SC, VA), Mt (GA, VA, WV), Cp? (VA): dry woodlands and glades over calcareous rocks (such as limestone, dolostone) or mafic rocks (such as diabase); uncommon (rare in NC). April-May. ON west to SK, south to c. NC, nw. GA, AL, and TX. [= RAB, C, F, G, K, W, WV, Y, Z; = *Batschia canescens* Michaux – S]

Lithospermum caroliniense (Walter ex J.F. Gmelin) MacMillan, Coastal Plain Puccoon. Cp (FL, GA, SC, VA): sandhills, dry sandy soils; common (rare north of s. SC). April-June. A Southeastern Coastal Plain endemic: se. SC south to Panhandle FL, and west to TX. The disjunction from SC to se. VA, skipping over large amounts of apparently suitable sandhill habitat in

NC, is surprising. The sibling taxa *L. caroliniense* and *L. croceum* have been variously treated as distinct species, subspecies, or varieties, or as mere forms (see synonymy). They appear to be as clearly separable as *L. caroliniense* is from *L. canescens*; I regard them as allopatric species. [= F; < *L. caroliniense* – RAB, G, WH, Z; = *L. caroliniense* var. *caroliniense* – C, K; = *Batschia caroliniensis* Walter ex J.F. Gmelin – S; = *L. carolinense* ssp. *carolinense* – Y]

Lithospermum incisum Lehmann, Narrowleaf Gromwell. Cp (FL): disturbed areas; rare. April-July. S. ON west to BC, south to IN, LA, TX, and CA; disjunct from FL Panhandle south to c. peninsular FL. [= C, F, G, K, WH; = *Batschia linearifolia* (Goldie) Small – S]

Lithospermum latifolium Michaux, American Gromwell, Broadleaf Gromwell. Mt (GA, VA, WV): dry to moist woodlands over calcareous rocks; uncommon (rare in GA and VA). May-June. NY west to MN, south to nw. GA, s. TN and MO. [= C, F, G, K, S, W, WV, Y, Z]

Lithospermum tuberosum Rugel ex A.P. de Candolle, Southern Stoneseed. Mt (GA, VA, WV), Pd (GA, SC), Cp (FL, GA): nutrient-rich forests, especially over calcareous rocks; rare. March-June. Sw. VA, s. WV, KY, and TN, south to n. peninsular FL, FL Panhandle, and LA. [= RAB, C, F, G, K, S, WH, Z]

Lithospermum croceum Fernald. ON west to MT, south to w. PA, n. OH, AR, OK, and CO. Reports by Kartesz (1999) for WV, KY, and TN have not been verified. [= F; = *L. caroliniense* (Walter ex J.F. Gmelin) MacMillan var. *croceum* (Fernald) Cronquist – C, K; < *L. caroliniense* – G, Z; = *L. caroliniense* ssp. *croceum* A.W. Cusick – Y]

* *Lithospermum officinale* Linnaeus, European Gromwell. Native of Europe and occuring at scattered localities in ne. North America, south to PA and NJ (Kartesz 1999). [= C, F, G, K, Y, Z]

10. Mertensia Roth (Bluebell)

A genus of about 45 species, north temperate. References: Al-Shehbaz (1991)=Z.

Mertensia virginica (Linnaeus) Persoon ex Link, Virginia Bluebells, Virginia Cowslip. Mt (GA, NC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): nutrient-rich, moist, alluvial soils of floodplain forests and thickets; common (rare in DE, rare south of VA). March-June. NY west to WI, and IA, south to n. NC, nw. GA, AL, and n. AR. Pringle (2004) discusses the nomenclatural reasons for retaining the name *M. virginica*. [= RAB, C, F, G, K, S, W, WV, Z; = *M. pulmonarioides* Roth]

11. Myosotis Linnaeus (Forget-me-not, Scorpion-grass)

A genus of about 100 species, temperate and montane tropical. References: Al-Shehbaz (1991)=Z. Key based closely on RAB and C.

1 Calyx strigose, the hairs neither spreading nor uncinate; [mostly of moist to wet habitats].
  2 Corolla limb 2-5 mm wide; mericarps distinctly surpassing the style ..... ***M. laxa ssp. laxa***
  2 Corolla limb 5-10 mm wide; mericarps not surpassing the style ..... ***M. scorpioides***
1 Calyx with some loose or spreading, uncinate hairs; [of various habitats, mostly dry].
  3 Corolla limb 5-8 mm wide; perennial ..... ***M. sylvatica***
  3 Corolla limb 1-4 mm wide; annual or biennial.
    4 Calyx lobes unequal, 3 lobes shorter than the other 2; corolla white; [native, of dry or moist habitats].
      5 Fruiting pedicels divergent; fruiting calyx deciduous, 3-10 mm long; inflorescence internodes usually longer than 10 mm; mericarps 1.4-2.2 mm long ..... ***M. macrosperma***
      5 Fruiting pedicels more-or-less erect; fruiting calyx persistent, 3-5.5 mm long; inflorescence internodes usually shorter than 10 mm; mericarps 1.2-1.5 mm long ..... ***M. verna***
    4 Calyx lobes equal, all 5 the same size; corolla blue (occasionally yellow or white); [alien, mostly of dry disturbed habitats].
      6 Fruiting pedicels equaling or generally longer than the calyx ..... ***M. arvensis***
      6 Fruiting pedicels distinctly shorter than the calyx.
        7 Plants floriferous from about the middle upward; style surpassing the mericarps ..... ***M. discolor***
        7 Plants floriferous nearly to the base; style shorter than the mericarps ..... ***M. stricta***

* ***Myosotis arvensis*** (Linnaeus) Hill, Field Forget-me-not, Field Scorpion-grass. Pd (DE, NC, SC, VA), Cp (VA), Mt (NC, WV): roadsides, fields, disturbed areas; uncommon (rare south of DE), native of Eurasia. May-August. [= RAB, C, F, G, K, S, W, WV, Z]

* ***Myosotis discolor*** Persoon, Yellow-and-blue Scorpion-grass, Changing Forget-me-not. Pd (DE, GA, NC, SC, VA), Cp (VA): fields, disturbed areas, roadsides; uncommon, native of Europe. May-August. [= RAB, C, GW, K, Z; *? M. versicolor* (Persoon) Sm. – F, G]

Myosotis laxa Lehmann *ssp.* ***laxa***, Smaller Forget-me-not, Tufted Forget-me-not. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE, NC, VA): marshes, streambanks; common (uncommon in DE). May-October. The species is circumboreal, represented nearly throughout North America by ssp. *laxa*. The other subspecies are Eurasian. [= Z; < *M. laxa* – RAB, C, F, G, GW, K, S, W, WV]

Myosotis macrosperma Engelmann, Bigseed Forget-me-not. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), {DE}: bottomland forests and alluvial fields, probably associated with nutrient-rich soils; uncommon. April-May. MD west to MO, south to FL and TX. [= RAB, C, F, G, GW, K, S, W, WV, Z]

* ***Myosotis scorpioides*** Linnaeus, Water Scorpion-grass. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE, VA): wet meadows, streambanks; common (uncommon in DE Piedmont, rare in DE Coastal Plain), native of Europe. May-August. [= RAB, C, F, G, GW, K, W, WV, Z; *? M. palustris* (Linnaeus) Hill – S]

* ***Myosotis stricta*** Link ex Roemer & J.A. Schultes, Blue Scorpion-grass. Pd (NC, VA), Cp (DE, VA), Mt (NC, WV): disturbed areas; uncommon (rare in DE and WV), native of Eurasia. April-June. [= F, K, Z; *? M. micrantha* Pallas – RAB, C, G, apparently misapplied]

* ***Myosotis sylvatica*** Ehrhart ex Hoffman, Garden Forget-me-not. Pd (NC): gardens, rarely persistent or found as a waif; rare, native of Eurasia. April-September. [= RAB, C, F, G, K, Z]

Myosotis verna Nuttall, Early Forget-me-not. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dry woodlands, roadsides, disturbed areas, dry fields; common (rare in DE). March-July. ME west to SD, south to GA and TX; also from ID and BC south to OR. [= RAB, C, F, G, K, W, WV, Z; = *M. virginica* – S, misapplied]

12. Onosmodium Linnaeus (Marbleseed, False-gromwell)

A genus of about 7 species (or fewer species and the same number of taxa in some interpretations), perennial herbs, of North America. Recent studies strongly suggest that *Onosmodium* is better included in a broadened *Lithospermum* (Cohen & Davis 2009; Weigend et al. 2009). References: Cohen & Davis (2009); Cochrane (1976)=X; Turner (1995a)=Y; Al-Shehbaz (1991)=Z. Key based in part on X and Y.

1 Corolla lobes yellow to orange; nutlet 2.0-2.8 mm long; corolla lobes **either** 2.5-4× as long as wide and acuminate (*O. virginianum*) **or** 1.5-2× as long as wide, acute (*O. decipiens*).
  2 Stem hairs 2.5-5.0 mm long; corolla lobes 1.5-2× as long as wide, acute; tips of the anthers reaching the base of the corolla sinuses; [endemic to Ketona dolomite glades, Bibb County, c. AL] ..... ***O. decipiens***
  2 Stem hairs < 2.0 mm long; corolla lobes 2.5-4× as long as wide and acuminate; tips of the anthers below the corolla sinuses; [widespread in our area] ..... ***O. virginianum***
1 Corolla lobes dull greenish-white; nutlet 2.5-3.0 mm long; corolla lobes 1.5-2× as long as wide, acute.
  3 Leaf vestiture solely of dense appressed hairs on both surfaces (the plant appearing ashy-white) ..... ***[O. molle]***
  3 Leaf vestiture at least in part of spreading or ascending hairs.
    4 Stems mostly glabrous below the inflorescence branches ..... ***[O. subsetosum]***
    4 Stems persistently and obviously pubescent below the inflorescence branches.
      5 Upper leaf surface with hairs of two lengths, these spreading; corolla 6-10 mm long; nutlets flared at the base, forming a collar; longest stem hairs near midstem > 2.3 mm long ..... ***O. hispidissimum***
      5 Upper leaf surface with hairs of similar length, these appressed to ascending; corolla 11-20 mm long; nutlets tapered to the base, lacking a collar; longest stem hairs near midstem < 2.2 mm long ..... ***O. occidentale***

Onosmodium decipiens J. Allison, Deceptive Marbleseed. Dolomitic Ketona glades. April-early May; June-August. Endemic to c. AL (Bibb County) (Allison & Stevens 2001). [= ***Lithospermum species 3***]

Onosmodium hispidissimum Mackenzie, Eastern Prairie Marbleseed, Shaggy Marbleseed. Mt (VA, WV): calcareous woodlands, barrens, and glades, and nearby in disturbed areas, such as older pasture edges; rare. May-July. W. NY and ON west to MN, south to sc. PA (Rhoads & Klein 1993), w. VA, e. TN (Chester, Wofford, & Kral 1997), LA, and TX. This species was attributed to NC by F and S; the documentation of these reports is not known. [= G, S, W, WV; = *O. molle* Michaux var. *hispidissimum* (Mackenzie) Cronquist – C; > *O. hispidissimum* var. *hispidissimum* – F; > *O. hispidissimum* var. *macrospermum* Mackenzie & Bush – F; = *O. molle* Michaux ssp. *hispidissimum* (Mackenzie) Boivin – K, X, Z; = *O. bejariense* Alphonse de Candolle ssp. *hispidissimum* (Mackenzie) B.L. Turner – Y; = ***Lithospermum species 1***]

Onosmodium molle Michaux. Limestone barrens. C. KY, c. TN (Chester, Wofford, & Kral 1997), nw. AL, and disjunct in the Ozarkian Highlands of MO. *O. molle* has been attributed to Durham County, NC (RAB); Baskin *et al.* (1983) determined that this report was based on a misidentification of a specimen of *O. virginianum*. [= F, G, Y; = *O. molle* var. *molle* – C; = *O. molle* ssp. *molle* – K, X, Z; < *O. molle* – S; = ***Lithospermum species 4***]

Onosmodium occidentale Mackenzie. Mt (GA): open woodlands over limestone; rare. Ranges east to e. TN (Chester, Wofford, & Kral 1997) and nw. GA (Jones & Coile 1988). [= F, G; = *O. molle* Michaux var. *occidentale* (Mackenzie) I.M. Johnston – C; = *O. molle* Michaux ssp. *occidentale* (Mackenzie) T.S. Cochrane – K, X, Z; < *O. molle* – S; = *O. bejariense* Alphonse de Candolle var. *occidentale* (Mackenzie) B.L. Turner – Y; = ***Lithospermum species 2***]

Onosmodium subsetosum Mackenzie & Bush. Calcareous glades. MO south to AR and OK; disjunct in c. TN (Chester, Wofford, & Kral 1997). [= F, G; = *O. molle* Michaux ssp. *subsetosum* (Mackenzie & Bush) T.S. Cochrane – K, X, Z; < *O. molle* – S; = *O. bejariense* Alphonse de Candolle var. *subsetosum* (Mackenzie & Bush) B.L. Turner – Y; = ***Lithospermum species 5***]

Onosmodium virginianum (Linnaeus) Alphonse de Candolle, Virginia Marbleseed. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA): sandhill woodlands, shell middens in the outer Coastal Plain, woodlands and barrens over diabase and other mafic rocks in the Piedmont and low Mountains, barrens, glades, or woodlands over calcareous rocks in the Mountains; uncommon (rare in DE, NC, and VA). April-September. LA to FL, north to NY and MA, primarily on the Coastal Plain; the species has become very rare north of NC. It is peculiarly distributed in our area, occurring on highly acidic sands in the fall-line sandhills, but seemingly restricted to circumneutral soils derived from mafic rocks (Piedmont), calcareous rocks (Mountains), or calcareous shell (Coastal Plain) in the rest of our area. The unifying ecological factor determining its distribution may be an open, woodland condition maintained by fire. The species seems characteristically to occur in very small populations, consisting often of fewer than five plants. [= RAB, C, F, G, K, S, W, Y, Z; = ***Lithospermum virginianum*** Linnaeus]

13. Plagiobothrys Fischer & C.A. Meyer (Popcorn-flower)

A genus of about 70 species, of w. North America, w. South America, e. Asia, and Australia. References: Al-Shehbaz (1991)=Z; Chambers (1989)=Y.

* ***Plagiobothrys figuratus*** (Piper) I.M. Johnston ex M.E. Peck *ssp.* ***figuratus***, Popcorn-flower. Pd (NC): fields and roadsides; rare, native of nw. North America. April-May. [= K, Y; = *P. hirtus* (Greene) I.M. Johnston var. *figuratus* (Piper) I.M. Johnston – RAB, Z; < *P. hirtus* – F, G]

14. Symphytum Linnaeus (Comfrey)

A genus of ca. 25 species, herbs, of Europe. References: Al-Shehbaz (1991)=Z.

1 Upper leaves not decurrent, or decurrent < 1 cm below the leaf attachment; pubescence of stem in part of strong, recurved prickles (resembling miniature rose thorns) ..... ***[S. asperum]***
1 Upper leaves decurrent on the stem; pubescence of the stem not of prickles ..... ***S. officinale***

* ***Symphytum officinale*** Linnaeus, Common Comfrey. Mt (GA, VA, WV), Pd (DE, VA), Cp (DE): disturbed areas; uncommon, native of Europe. *Symphytum* is a traditional "medicinal herb," but recent evidence suggests that it can cause dangerous (even fatal) liver damage. [= C, F, G, K, S, WV, Z]

* *Symphytum asperum* Lepechin, Prickly Comfrey, another Eurasian species, is reported by F as occurring south to MD. It may occur in our area. [= C, F, G, K, Z]

15. Nama Linnaeus 1753 (Fiddleleaf)

A genus of about 45 species, herbs, of sw. North America, tropical America, and Hawaii. [also see *Hydrolea* in *HYDROLEACEAE*]

* ***Nama jamaicense*** Linnaeus, Jamaica Weed. Cp (FL, SC): lawns; rare, native of tropical America (including s. FL and TX). May. [= K; = *N. jamaicensis* – RAB, WH, orthographic variant; = *Marilaunidium jamaicense* (Linnaeus) Kuntze – S]

16. Ellisia Linnaeus 1763 (Waterpod)

Ellisia is considered to be a monotypic genus, an herb of c. and e. North America, but generic limits in the Hydrophyllaceae are badly in need of critical reassessment. References: Constance (1940)=Z.

Ellisia nyctelea (Linnaeus) Linnaeus, Waterpod, Aunt Lucy. Pd (VA), Mt (VA, WV): moist shaded forests, especially bottomlands; uncommon (rare in WV). April-July. IN and MI west to AB, south to AR and OK; disjunct in e. North America from s. NY and NJ south to sc. VA. Likely to occur in nc. NC. [= C, F, G, GW, K, W, WV, Z; = *Nyctelea nyctelea* (Linnaeus) Britton – S]

17. Nemophila Nuttall 1822 (Baby Blue-eyes)

A genus of 11 species, herbs, of North America (mostly w. North America). References: Constance (1941).

Identification notes: *Nemophila* is superficially similar to *Phacelia covillei* and *P. ranunculacea*, with which it often co-occurs. They can be distinguished with the following key.

1 Flowers solitary, on pedicels opposite the leaves, the pedicels mostly > 12 mm long; corolla white (sometimes aging to pale lavender), 2.5-3.5 mm long; fruits ovoid, longer than thick, turning purple at maturity, exceeding the 2-4 mm long calyx lobes ..... ***Nemophila aphylla***
1 Flowers borne in 2-6-flowered terminal cymes, the pedicels mostly < 12 mm long; corolla pale blue or lavender, 4-5 mm long; fruits depressed globular and weakly 4-lobed, the apex depressed, remaining green at maturity, shorter than the calyx, the lobes of which expand to 5-8 mm long.
  2 Pubescence of the middle stem (from 2nd to 5th node from the base) consisting of appressed to ascending, stiff, pointed hairs, sometimes also with a few gland-tipped hairs < 2 mm long; terminal leaflet of leaves directly subtending an inflorescence with acute to cuneate bases; [of rivers in the Atlantic drainage, very rarely disjunct west of the Appalachians] ..... ***Phacelia covillei***
  2 Pubescence of the middle stem spreading or even retrorse, most of the hairs weak and twisted, and many of them glandular-tipped and > 2 mm long; terminal leaflet of leaves directly subtending an inflorescence with obtuse to rounded or truncate bases; [of rivers in the Mississippi drainage] ..... ***[Phacelia ranunculacea]***

Nemophila aphylla (Linnaeus) Brummitt. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): moist, nutrient-rich floodplain forests; uncommon, though often locally abundant (rare in FL). March-April. MD south to Panhandle FL and west to

TX, north in the interior to e. TN, w. KY, and se. MO. [= GW, K; = *N. microcalyx* (Nuttall) Fischer & Meyer – RAB, F, G, S; = *N. triloba* (Rafinesque) Thieret – C]

18. Hydrophyllum Linnaeus 1753 (Waterleaf)

A genus of 8 species, herbs, of e. and w. North America. References: Constance (1942)=Z; Beckmann (1979)=Y; Alexander (1941)=X.

1 Principal cauline leaves palmately lobed, maple-like, differing from the pinnately divided basal leaves.
  2 Sepals with small reflexed appendages exserted at each sinus of the calyx; plant biennial from a taproot; stamens exserted 1-3 mm beyond the corolla; leaf lobing relatively shallow and irregular ..... ***H. appendiculatum***
  2 Sepals with appendages absent or rudimentary; plant perennial from fibrous roots; stamens exserted 3-6 mm beyond the corolla; leaf lobing relatively deep and regular ..... ***H. canadense***
1 Principal cauline leaves pinnately divided, similar to the basal leaves.
  3 Inflorescence and upper stem densely hirsute with spreading hairs 1-2 mm long; leaves pinnatifid with (7-) 9-13 segments, these toothed but not lobed ..... ***H. macrophyllum***
  3 Inflorescence and upper stem glabrate to strigose with appressed to ascending hairs < 0.5 mm long; leaves with 5-7 (-9) segments, some of them sometimes deeply 2-lobed.
    4 Corolla deep purple to maroon; lower stem glabrous to slightly (rarely moderately) pubescent with retrorse hairs; [of low to high elevations in the Mountains] ..... ***H. virginianum*** *var.* ***atranthum***
    4 Corolla white to lavender or pale purple; lower stem slightly to densely pubescent with retrorse to spreading hairs; [of low elevations of the Piedmont, Mountains, and Coastal Plain] ..... ***H. virginianum*** *var.* ***virginianum***

Hydrophyllum appendiculatum Michaux, Biennial Waterleaf. Mt (WV): rich forests; rare. May-June. S. ON and MN, south to sw. PA, a. and sc. WV, e. TN, n. AL (Jackson Co.), MO, and e. KS. It was attributed to NC by Small (1933) on unknown grounds. [= C, F, G, K, WV, Y, Z; = *Decemium appendiculatum* (Michaux) Small – S]

Hydrophyllum canadense Linnaeus, Mapleleaf Waterleaf, Canada Waterleaf, Broadleaf Waterleaf. Mt (GA, NC, SC, VA, WV), Pd (NC, VA), Cp (VA): cove forests, rocky streambanks, other moist and nutrient-rich forests; common (rare in VA Coastal Plain, rare in NC Piedmont, rare in SC Mountains). May-August; August-September. VT and s. ON west to MI and WI, south to n. GA, AL, AR, and MO. [= RAB, C, F, G, K, S, W, WV, Y, Z]

Hydrophyllum macrophyllum Nuttall, Hairy Waterleaf. Mt (GA, NC, VA, WV): cove forests and other moist rocky forests, especially over calcareous or mafic rocks; uncommon (rare in GA, NC, and VA). May-June; July-August. WV west to OH, and IL, south to sw. VA, w. NC, n. GA, and n. AL; reports from AR are erroneous, and are based on material of *Hydrophyllum brownei* Kral & Bates (Peck 2003). The w. North American *H. occidentale* (S. Watson) A. Gray is rather closely related. [= RAB, C, F, G, K, S, W, WV, Y, Z]

Hydrophyllum virginianum Linnaeus *var.* ***atranthum*** (E.J. Alexander) Constance, Appalachian Waterleaf. Mt (NC, VA): cove forests and other moist rocky forests; common (uncommon in WV). May-June; July-August. N. WV south through w. and sw. VA and e. KY to w. NC and e. TN. Since its naming as a species (Alexander 1941) and subsequent reduction to a variety (Constance 1942) there has been little consensus about this taxon, some regarding it as merely a color form. Alexander lists numerous characters additional to that of flower color; they need further investigation. "*H. atranthum* differs from *H. virginianum* in the dark-violet flowers, the brown hairs on the appendages, brown filaments, corolla-lobes longer than the tube, stamens shorter [11.5 mm] and more slender, and the more numerous leaf-lobes. *H. virginianum* has flowers white to pale lavender or pinkish, white hairs on the appendages, white filaments, corolla-lobes and tube equal in length, filaments longer (13.5 mm) and stouter, and 5-7 leaf-segments." Beckmann (1979) did not accept the variety, stating that "this pigment combination appears sporadically in other sectors of the species range." Based on herbarium material, I have seen darker than usual flowers that are found outside of the Southern Appalachians; they do not, however, approach in darkness the flowers of Southern Appalachian material, and the somewhat darker-flowered plants outside the Southern Appalachians do not share the stem pubescence character stated in the key above. The general correlation of flower color and lower stem pubescence and the tight geographical range of var. *atranthum* incline me to accept it provisionally as a variety. It is not, however, limited to high elevations, as stated or implied by some authors. The two varieties provisionally accepted here need more careful study, including either statistical studies of morphology, or electrophoretic or molecular studies. [= C, F, G, WV, Z; < *H. virginianum* – RAB, K, W, Y; < *H. virginicum* – S, orthographic error; = *H. atranthum* E.J. Alexander – X]

Hydrophyllum virginianum Linnaeus *var.* ***virginianum***, Eastern Waterleaf, Virginia Waterleaf. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): cove forests, moist rocky forests, alluvial forests; common (rare in DE Coastal Plain). April-June; July-August. NH and QC west to ND, south to e. VA, c. NC, KY, s. IN, s. IL, nc. AR, and ne. OK. As discussed by Beckmann (1979) and Constance (1941), *H. virginianum* is a closely related vicariant of *H. tenuipes* Heller of BC south to CA. See *Phacelia bipinnatifida* for additional suggestions on distinguishing it from this species. [= C, F, G, WV, Z; < *H. virginianum* – RAB, K, W, Y; < *H. virginicum* – S, orthographic error; = *H. virginianum* – X]

19. Phacelia A.L. de Jussieu 1789 (Phacelia)

A genus of about 100-150 species, of North America and South America, concentrated in w. North America. References: Constance (1949)=Z; Levy (1991)=Y; Sewell & Vincent (2006)=X; Murdy (1966); Gillett (1968, 1964).

Identification notes: 1. *Phacelia bipinnatifida* and *Hydrophyllum virginianum* are sometimes confused. *P. bipinnatifida* has the larger and more basal leaves distinctly bipinnatifid, the lower pinnae often stalked (vs. pinnatifid, the basal or terminal pinnae sometimes 2-lobed, all the pinnae more-or-less sessile), pubescence of the upper stem and inflorescence in part glandular (pubescence nonglandular), and seeds 4 per capsule, black (vs. 2 per capsule, light brown). **2.** *Phacelia covillei* and *P. ranunculacea* are superficially similar to and sometimes confused with *Nemophylla aphylla*, which see for discussion.

1 Corolla lobes fimbriate; seeds 4 per capsule.
  2 Corolla white (rarely slightly lavender); pubescence of the stem spreading; lobes of cauline leaves mostly obtuse; seeds 3.0-3.5 mm long... ***P. fimbriata***
  2 Corolla lavender to blue; pubescence of the stem appressed; lobes of cauline leaves mostly acute; seeds 1.5-3.0 mm long..... ***P. purshii***
1 Corolla lobes entire; seeds 4-15 per capsule.
  3 Stamens 1.5-2 mm long; style 1.5-2 mm long; corolla tubular; seeds globose-ovoid, nearly spherical, 4 per capsule.
    4 Pubescence of the middle stem (from 2nd to 5th node from the base) consisting of appressed to ascending, stiff, pointed hairs, sometimes also with a few gland-tipped hairs < 2 mm long; terminal leaflet of leaves directly subtending an inflorescence with acute to cuneate bases; [of rivers in the Atlantic drainage, very rarely disjunct west of the Appalachians]..... ***P. covillei***
    4 Pubescence of the middle stem spreading or even retrorse, most of the hairs weak and twisted, and many of them glandular-tipped and > 2 mm long; terminal leaflet of leaves directly subtending an inflorescence with obtuse to rounded or truncate bases; [of rivers in the Mississippi drainage]..... ***[P. ranunculacea]***
  3 Stamens 3-10 mm long; style 3-15 mm long; corolla rotate to broadly campanulate; seeds ovoid-angled, 4-15 per capsule.
    5 Corolla 10-15 mm across, blue; plant 10-60 cm tall; seeds 2.5-4 mm long, black; ultimate segments of the leaf 15-45 mm long, 10-25 mm wide; pedicels recurved in fruit; [of moist forests of the Mountains and (very rarely) Piedmont] ..... ***P. bipinnatifida***
    5 Corolla 5-11 mm across, white to blue; plant 5-40 cm tall; seeds 1.5-2.2 mm long, brown; ultimate segments of the leaf 5-15 mm long, 5-9 mm wide; pedicels ascending to spreading in fruit; [of alluvial forests, granitic flatrocks, and other habitats, of the Piedmont, Coastal Plain, and Mountains].
      6 Sepals 4-8 mm long, linear or oblanceolate; marginal bristles of sepals spreading, 1.0-1.5 mm long; plants mostly erect ..... ***P. maculata***
      6 Sepals 2-4 mm long, narrowly ovate; marginal bristles of sepals appressed, 0.3-1.0 mm long; plants mostly decumbent, branched from the base.
        7 Sepals 2.6-4.0 mm long; petals 4-6 mm long; marginal bristles of sepals 0.6-0.9 mm long; basal leaves with 1-3 pairs of lateral leaflets. the terminal leaflet larger and usually 3-lobed; cauline leaves with 1-3 pairs of rather broad lobes; [of various habitats (including granitic flatrocks and domes) in SC, NC, and VA]..... ***P. dubia** var. **dubia***
        7 Sepals 2.0-3.0 mm long; petals 3.5-5 mm long; marginal bristles of sepals 0.4-0.7 mm long; basal leaves with 4-5 pairs of lateral leaflets, the terminal leaflet about the same size and unlobed; cauline leaves with 2-4 pairs of narrow lobes; [of granitic flatrocks and domes of the Piedmont of SC and southwestward] ..... ***P. dubia** var. **georgiana***

Phacelia bipinnatifida Michaux, Fernleaf Phacelia, Forest Phacelia. Mt (GA, NC, SC, VA, WV): cove forests, especially where rocky; common (uncommon in VA and WV, rare in SC). April-May; June. W. VA west to s. OH, n. IN, n. IL, and c. MO, south to w. NC, nw. SC, n. GA, c. AL, and n. AR. *P. bipinnatifida* var. *plummeri* (= *P. brevistyla*) is "based on a variation with sparser pubescence, larger and less divided leaf segments, smaller flowers, and sub-included stamens and style. These variations are not concomitant, and the distribution of forms showing a complete or partial combination of them is sporadic" (Constance 1949). The matter deserves additional study. [= RAB, C, G, K, W, Z; > *P. bipinnatifida* var. *bipinnatifida* – F; > *P. bipinnatifida* var. *plummeri* Wood – F; > *P. brevistyla* Buckley – S; > *P. bipinnatifida* – S]

Phacelia covillei S. Watson ex A. Gray, Eastern Buttercup Phacelia. Pd (NC, VA), Mt? (WV?): rich soils of floodplains, and contiguous terraces and slopes; rare. April; May. Ranging in three disjunct areas – c. NC and sc. VA (in the drainages of the Cape Fear, Tar, and Roanoke rivers), DC, n. VA, and sc. MD (in the drainage of the Potomac River), and disjunct in Texas County, MO. Most recent authors have included this taxon within the closely similar *P. ranunculacea*; as thus broadly defined, *P. ranunculacea* was considered to occur in three peculiarly disjunct areas; one centered around St. Louis, MO (w. KY, w. TN, e. MO, ne. AR, se. MO, s. IL, and s. IN), one near Washington, DC (DC, n. VA, and sc. MD), and a third in c. NC and sc. VA. Sewell & Vincent (2006) have clarified the status of *P. covillei* and *P. ranunculacea*. Chuang & Constance (1977) felt that *P. covillei* and *P. ranunculacea* (sensu stricto) have numerous characteristics that rendered their inclusion in *Phacelia* uncomfortable (also see discussion in Constance 1949 and Gillett 1968), but Sewell & Vincent (2006) countered this idea. See *Nemophila aphylla* for suggestions on distinguishing these two superficially similar species. [= K, X; < *P. ranunculacea* (Nuttall) Constance – RAB, C, F, G, Z]

Phacelia dubia (Linnaeus) Trelease *var.* ***dubia***, Appalachian Phacelia. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (DE, NC, SC, VA): floodplain forests, rocky forests, fields, roadsides, granitic flatrocks; common (rare in DE). April-May; June. Var. *dubia* ranges from NY and PA west to WV, south to nc. SC, sw. NC, and se. TN. The *Phacelia dubia* complex has been under detailed biosystematic study by Foster Levy and associates (Levy 1991a, 199b, 1997; Levy et al. 1996; Levy & Malone 2001; Levy & Neal 2001; Taylor & Levy 2002; del Castillo 1994, 1998). Male sterile cytotypic variants are common in some populations but formal taxonomic recognition ius not warranted (Levy 1991a, 1991b; del Castillo 1994, 1998). Additionally, an incipient variety, informally termed "imitator", occurs in c. SC (Levy 1991a; Levy & Malone 2001). These populations are morphologically variable, some more similar to var. *georgiana*, others more similar to var. *dubia*; see Levy (1991a) for further discussion. They may warrant taxonomic recognition, as they are allopatric from each of the 3 named varieties, and show degrees of sterility when bred with each of the three, but morphologic differences have not evolved (Levy & Malone 2001). [= K, Y; < *P. dubia* – RAB, C, F, S, W, WV; > *P. dubia* var. *dubia* – G; > *P. dubia* var. *fallax* (Fernald) Gleason – G; > *P. dubia* var. *dubia* – Z (also including var. *interior*)]

Phacelia dubia (Linnaeus) Trelease *var.* ***georgiana*** McVaugh, Georgia Phacelia. Pd (GA): granitic flatrocks; rare. April-May; June. Var. *georgiana* ranges from GA west to ec. AL, in the Piedmont. It has sometimes been attributed to SC, and Levy

found plants in SC which morphologically resemble var. *georgiana*, but he concluded that this "imitator" genotype was largely sterile when bred with var. *georgiana*. See var. *dubia* for additional discussion. [= K, Y, Z; < *P. dubia* – RAB, C, F, S, W; *? P. dubia* var. *dubia* – G]

Phacelia fimbriata Michaux, Fringed Phacelia, Blue Ridge Phacelia. Mt (GA, NC, VA): moist forests on slopes and floodplains, at low to high elevations, perhaps mainly over circumneutral soils; uncommon, but locally abundant (rare in GA and VA). April-May. Sw. VA south to w. NC, e. TN, and n. GA (Jones & Coile 1988), a Southern Appalachian endemic. [= RAB, C, F, G, K, S, W, Z]

Phacelia maculata Wood, Flatrock Phacelia. Pd (GA, NC, SC): bottomlands, granitic flatrocks; uncommon (rare in NC). April; May. Sc. NC south to GA and west to ec. AL. [= RAB, K, W, Y, Z; *? P. hirsuta* – S, misapplied]

Phacelia purshii Buckley, Miami-mist. Mt (GA, NC, SC, VA, WV), Pd (VA): moist forests on floodplains and slopes; uncommon (rare in GA, NC, SC, and VA). May-June. S. PA west to s. ON, OH and MO, south to nw. SC, nw. GA, and c. AL. Plants "with smaller flowers, shorter pedicels, and smaller capsules and seeds" are the basis of *P. boykinii* and *P. bicknellii* (Constance 1949). A study of the matter was initiated and specimens annotated as "*P. purshii* ssp. *boykinii*," but the research was not completed and the name was never published; further study is warranted. [= RAB, C, F, G, K, W, WV, Z; > *P. purshii* – S; > *P. boykinii* (A. Gray) Small – S; > *P. bicknellii* Small – S]

Phacelia dubia (Linnaeus) Trelease var. *interior* Fernald, endemic in c. TN. [= K; < *P. dubia* – C, F, G, S; < *P. dubia* var. *dubia* – Z] {not yet keyed}

Phacelia ranunculacea (Nuttall) Constance, Western Buttercup Phacelia. In the Mississippi and Ohio river drainages, centered around St. Louis, MO (w. KY, w. TN, e. MO, ne. AR, se. MO, s. IL, and s. IN). See Sewell & Vincent (2006). [= K, X; < *P. ranunculacea* – RAB, C, F, G, Z]

Phacelia strictiflora (Engelmann & Gray) Gray var. *robbinsii* Constance. East to AL. [= K, Z] {not yet keyed}

20. Asperugo Linnaeus (Madwort, Catchweed)

A monotypic genus, an annual scrambling herb, of Eurasia.

* ***Asperugo procumbens*** Linnaeus, Madwort, Catchweed. Cp (DE), Pd (DE): disturbed areas; rare, native of Eurasia. [= C, F, G, K] {not yet keyed}

21. Heliotropium Linnaeus (Heliotrope, Turnsole)

A genus of ca. 250 species, widespread in tropical and temperate regions. Either treated as part of a broadly defined Boraginaceae, or else better placed in the family Heliotropiaceae, as it is apparently more closely related to Hydrophyllaceae than to Boraginaceae. Currently under study and additional taxonomic changes may be forthcoming (Hilger & Diane 2003). References: Al-Shehbaz (1991)=Z; Hilger & Diane (2003).

1 Flowers solitary at the ends of short branches; [of limestone habitats from nw. GA westward]; [section *Orthostachys*, subsection *Bracteata*]... ..... ***H. tenellum***
1 Flowers in secund, helicoid cymes.
  2 Leaves glabrous, succulent, < 7 mm wide; [of saline coastal situations]; [section *Halmyrophila*] .....***H. curassavicum* *var.* *curassavicum***
  2 Leaves pubescent, not succulent, > 10 mm wide; [of a variety of mostly disturbed, inland situations].
    3 Mericarps separating at maturity; fruit 4-lobed prior to maturation; leaves petiolate, ca. 2× as long as wide; [section *Heliotropium*]..... ..... ***H. europaeum***
    3 Mericarps cohering in pairs at maturity; fruit 2-lobed prior to maturation; leaves petiolate or sessile to subsessile, ca. 2-5× as long as wide.
      4 Fruit tuberculate, 4-seeded; leaves sessile to subsessile, ca. 4-5× as long as wide; corolla throat and tube densely villous within; [section *Heliophytum*].....***H. amplexicaule***
      4 Fruit longitudinally ribbed, 2-seeded; leaves petiolate, ca. 2× as long as wide; corolla throat and tube glabrous within; [section *Tiaridium*] ..... ***H. indicum***

* ***Heliotropium amplexicaule*** M. Vahl, Wild Heliotrope. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): disturbed areas, roadsides, fields; uncommon (rare north of SC), native of South America. April-September. [= RAB, C, F, G, K, Z]

Heliotropium curassavicum Linnaeus *var.* ***curassavicum***, Seaside Heliotrope. Cp (DE, FL, GA, NC, SC, VA): edges of brackish and salt marshes, estuarine shores; rare. June-September. Var. *curassavicum* ranges from DE (and farther north as an introduction) south to the New World tropics. Considered by some authors to be introduced and naturalized in our area. Other varieties occur inland in the mw. and w. United States. [= C, K, Z; < *H. curassavicum* – RAB, GW; = *H. curassavicum* – F, G; = *Heliotropium curassavicum* ssp. *curassavicum*]

* ***Heliotropium europaeum*** Linnaeus, European Heliotrope. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, NC, VA), Mt (WV): roadsides, disturbed areas; rare, native of s. Europe. June-September. [= RAB, C, F, G, K, Z]

* ***Heliotropium indicum*** Linnaeus, Turnsole. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (WV): roadsides, woodland borders, swamps, ditches; uncommon (rare in WV), native of South America. July-November. [= RAB, C, F, G, GW, K, WV, Z; = *Tiaridium indicum* (Linnaeus) Lehmann – S]

Heliotropium tenellum (Nuttall) Torrey, Delicate Heliotrope. Mt (GA, WV): limestone glades and barrens; rare. WV, KY, IN, IL, IA, and KS south to nw. GA, AL, MS, LA, and TX. [= C, F, G, K, Z; = *Lithococca tenella* (Nuttall) Small – S]

Heliotropium polyphyllum Lehmann, Pineland Heliotrope. Cp (FL): pine flatwoods, pond margins; common. FL. [= K] {add synonymy; not yet keyed}

357. CONVOLVULACEAE A.L. de Jussieu 1789 (Morning Glory Family) [in SOLANALES]

A family of about 56 genera and 1600 species, nearly cosmopolitan, especially in tropical and subtropical areas. Tribes follow the classification of Stefanović, Austin, & Olmstead (2003). References: Wilson (1960b); Austin (1979), Stefanović, Krueger, & Olmstead (2002); Stefanović, Austin, & Olmstead (2003). [including *CUSCUTACEAE*]

1 Plant parasitic; stems orange; [tribe *Cuscuteae*) ..... ***Cuscuta***
1 Plant photosynthetic; stems green.
2 Corolla 0.1-0.2 cm long; capsule deeply 2-lobed; leaves orbicular-reniform, 1-3 cm long and wide, not fleshy; [tribe *Dichondreae*] ..... ***Dichondra***
2 Corolla 1-10 cm long; capsule entire; leaves various, but not as above (most similar vegetatively are *Calystegia soldanella, Ipomoea pes-caprae* var. *emarginata,* and *I. imperati,* all beach plants with fleshy, emarginate, and usually larger leaves).
3 Styles 2, free nearly to the ovary or fused most of their length (at least the terminal 1-2 mm free); corolla 1-2.5 cm long; leaves cuneate or rounded at the base, and narrowly ovate, lanceolate, or linear; [tribe *Cresseae*].
4 Styles free, each 2-cleft, the stigmas therefore 4, linear-filiform ..... ***Evolvulus***
4 Styles free or fused at the base, the stigmas 2, globose-peltate ..... ***Stylisma***
3 Styles 1 (sometimes with 2 stigmas, or a bilobed stigma); stigmas capitate, elongate, flattened, or filiform; corolla > 2.5 cm long (except *Jacquemontia*, *Convolvulus*, and a few *Ipomoea* spp.); leaves cordate, sagittate, or truncate at the base, and (mostly) ovate in outline.
5 Flowers in a dense head with numerous interspersed bracts; [tribe *Jacquemontieae*] ..... ***Jacquemontia***
5 Flowers solitary or in an open, few-flowered inflorescence.
6 Calyx concealed by 2 large bracts; [tribe *Convolvuleae*] ..... ***Calystegia***
6 Calyx not concealed by bracts.
7 Stigmas 2, elongate; leaves 2-4 cm long, truncate or weakly hastate at base; corolla white or pink; [tribe *Convolvuleae*] ..... ***Convolvulus***
7 Stigma 1, capitate (sometimes lobed); leaves 3-15 cm long, mostly strongly hastate or cordate at base; corolla white, pink, lavender, blue, orange, or red.
8 Anthers straight after dehiscence; fruits valvate-dehiscent; [tribe *Ipomoeeae*] ..... ***Ipomoea***
8 Anthers twisted after dehiscence; fruits longitudinally or irregularly dehiscent; [tribe *Merremieae*] ..... ***Merremia***

Calystegia R. Brown 1810 (Bindweed)

A genus of about 25 species, vines, cosmopolitan. Stefanović, Krueger, & Olmstead (2002) conclude (based on molecular phylogeny) that *Calystegia* should be combined with *Convolvulus*. References: Wilson (1960b)=Z; Lewis & Oliver (1965); Brummitt (1965, 1980); Austin, Diggs, & Lipscomb (1997)=Y.

1 Leaves about as wide as long, rounded at the tip ..... ***C. soldanella***
1 Leaves longer than wide, abtuse , acute, or acuminate at the tip.
2 Flowers double, the corolla deeply divided into many parts (garden escape occasionally naturalised) ..... ***C. pubescens***
2 Flowers not double, corolla entire
3 Leaves densely white-tomentose beneath ..... ***C. catesbeiana*** *ssp.* ***sericata***
3 Leaves not densely white-tomentose beneath
4 Stems mostly less than 1.5 m, erect at least in the lower part, but sometimes twining towards the apex, flowers mostly borne in lower leaf axils.
5 Stems twining in the upper part; mostly 0.8-1.4 m high; leaves overtopping stem apex less than 1 cm long ..... ***C. catesbeiana*** *ssp.* ***catesbeiana***
5 Stems not twining, up to 0.6 m high; leaves overtopping the stem apex 1.5-6 cm long.
6 Stem and leaves glabrous to pubescent; leaves more or less flat at maturity, with basal lobes 0-5 mm long ..... ***C. spithamaea*** *ssp.* ***spithamaea***
6 Stem and leaves tomentose; leaves tending to be folded along midrib at maturity, with basal lobes 1-11mm long ..... ***C. spithamaea*** *ssp.* ***stans***
4 Stems strongly twining, up to4 m or more long; flowers borne along middle and upper stems
7 Corolla pink.
8 Bracteoles forming a continuous spiral series with sepals, the flower appearing to have 3 bracteoles when seen from side; leaves with almost closed sinus, the lobes posteriorly truncate ..... ***C. sepium*** *ssp.* ***erratica***
8 Bracteoles clearly distinct from sepals, obviously only 2; leaves with a wide or v-shaped sinus.
9 Leaves with basal lobes rounded or with a single angle, or if with 2 angles then not speading; plant glabrous or commonly pubescent to tomentose onstem and ..... ***C. sepium*** *ssp.* ***americana***
9 Leaves with lobes with 2 angles, spreading; plant glabrous ..... ***C. sepium*** *ssp.* ***appalachiana***
7 Corolla white.
10 Bracteoles saccate at base, obtuse to truncate at apex, strongly overlapping each other; leaf sinus with more or less parallel sides; often with 2 peduncles in the same leaf axil ..... ***C. silvatica*** *ssp.* ***fraterniflora***
10 Bracteoles flat to weakly saccate at base, more or less acute, not or scarcely overlapping each other; leaf sinus not parallel sided; peduncles solitary in leaf axils.

11 Leaves with spreading basal lobes, each lobe more or less 2-angled, sinus broadly rounded; plant glabrous ..... ***C. sepium*** *ssp.* ***angulata***

11 Leaves with posteriorly directed lobes, the blade often conspicuously narrowly triangular to linear; stems and leaves often strongly pubescent..... ***C. sepium*** *ssp.* ***limnophila***

Calystegia catesbeiana Pursh, Catesby's Bindweed. Mt (WV), Cp (VA), {GA, NC, SC): longleaf pine savannas, marsh edges, openings in dry to dry-mesic montane forests; {abundance} (rare in GA, VA, and WV). [= K; < *Calystegia spithamaea* – C; < *Convolvulus spithamaeus* Linnaeus var. *pubescens* (Gray) Fernald – F; = *Calystegia sericata* (House) Bell – RAB, W; **= *Convolvulus sericatus*** House – S, Z]

Calystegia sepium (Linnaeus) R. Brown *ssp.* ***sepium***. Mt (WV), {DE, GA, NC, SC, VA}: {habitats}; common in WV. [= K; < *Calystegia sepium* – RAB, C, GW, W; < *Convolvulus sepium* Linnaeus var. *sepium* – F, WV, Z; > *Convolvulus sepium* var. *sepium* – G; > *Convolvulus sepium* var. *communis* R. Tryon – G; < *Convolvulus sepium* – S]

Calystegia silvatica Grisebach *ssp.* ***fraterniflora*** (Mackenzie & Bush) Brummitt. Mt (VA, WV), Pd (VA), Cp (VA), {GA, NC, SC}: {habitats}; uncommon in VA, rare in WV. Ssp. *silvatica* and ssp. *disjuncta* are European. [= K, Y; < *Calystegia sepium* – C; = *Convolvulus sepium* Linnaeus var. *fraterniflorus* Mackenzie & Bush – F, G, WV, Z; = *Calystegia sepium* (Linnaeus) R. Brown var. *fraterniflora* (Mackenzie & Bush) Shinners]

* ***Calystegia soldanella*** (Linnaeus) R. Brown ex Roemer & J.A. Schultes. Cp (NC, VA): beaches, dunes; rare, native of {}. [= RAB, K; **= *Convolvulus soldanella*** Linnaeus]

Calystegia spithamaea (Linnaeus) Pursh *ssp.* ***spithamaea***, Low Bindweed. Pd (DE, VA), Mt (VA, WV): dry limestone areas; uncommon in VA and WV. [= K; < *Calystegia spithamaea* – RAB, C, W; = *Calystegia spithamaea* var. *spithamaea*; = *Convolvulus spithamaeus* var. *spithamaeus* – F; > ***Convolvulus spithamaeus*** Linnaeus – G, S; < *Convolvulus spithamaeus* – Z]

Calystegia spithamaea (Linnaeus) Pursh *ssp.* ***stans*** (Michaux) Brummitt, Shale Bindweed. Mt (GA, NC, SC, VA, WV): shale barrens and woodlands, less typically on limestone; uncommon. [> *Calystegia spithamaea* (Linnaeus) Pursh ssp. *purshiana* (Wherry) Brummitt – K; > *Calystegia spithamaea* ssp. *stans* (Michaux) Brummitt – K; < *Calystegia spithamaea* – RAB, C, W; > *Calystegia spithamaea* var. *pubescens*; > *Convolvulus spithamaeus* Linnaeus var. *pubescens* (A. Gray) Fernald – F; > *Convolvulus purshianus* Wherry – G; > *Convolvulus spithamaeus* – G; < *Convolvulus spithamaeus* – Z]

Calystegia macounii (Greene) Brummitt. Reported for NC and VA; Brummitt says this species does not occur east of the Mississippi River. Rejected pending convincing documentation. [= K, Y; **=** *Convolvulus macounii* Greene] {not keyed}

Convolvulus Linnaeus 1753 (Field-bindweed)

A genus of about 100 species, vines, cosmopolitan, especially in temperate areas. [also see *Calystegia*]

* ***Convolvulus arvensis*** Linnaeus, Field-bindweed, Creeping Jenny. Mt (NC, SC, VA), Pd (DE, GA, NC, VA), Cp (DE, FL, NC, VA): fields, roadsides, disturbed areas; common (uncommon in GA, NC, SC, and WV, uncommon in Coastal Plain of VA, rare in FL), native of Europe. June-November. [= RAB, C, F, G, K, W, WH, WV; = *Strophocaulos arvensis* (Linnaeus) Small – S]

Cuscuta Linnaeus 1753 (Dodder)

A genus of about 100 species, parasitic, achlorophyllose herbs, nearly cosmopolitan. Variously treated as a monogeneric family, or as a component of the Convolvulaceae; Neyland (2001) and Stefanović, Krueger, & Olmstead (2002) provide molecular evidence for the treatment of *Cuscuta* as a derived member of Convolvulaceae. References: Yuncker (1921); Yuncker (1965)=Z; Musselman (1986)=Y; Gandhi, Thomas, & Hatch (1987)=X; Costea, Nesom, & Stefanović (2006a, 2006b, 2006c)=V; Neyland (2001); Stefanović, Krueger, & Olmstead (2002). Key based on Yuncker (1965).

Identification notes: corolla measurements are from the base to the sinuses of the corolla. The **infrastaminal scales** are transparent structures at the base of the stamens.

1 Styles more-or-less united; capsule circumscissile; [subgenus *Monogynella*]

2 Stigmas flattened-depressed; flowers 2.5-4 mm long ..... ***C. cassytoides***
2 Stigmas oval or conical; flowers ca. 2 mm long ..... ***C. japonica***
1 Styles separate and distinct from the base; capsule not circumscissile (except the rare aliens *C. epilinum* and *C. epithymum*).
3 Stigmas elongated, terete or conical; capsule circumscissile; [subgenus *Cuscuta*].
4 Style about equaling the ovary, included in the corolla; fruit 2.0-2.5 mm long..... ***C. epilinum***
4 Style (including the stigma) much longer than the ovary, exserted from the corolla; fruit ca. 1.5 mm long ..... ***C. epithymum***
3 Stigmas capitate, about as wide as long; capsule not circumscissile, either indehiscent or rupturing irregularly; [subgenus *Grammica*].
5 Each flower subtended by 1-10 imbricate bracts; sepals distinct nearly to the base.
6 Bract apex reflexed or spreading..... ***[C. glomerata]***
6 Bract apex erect.
7 Pedicels absent, the flowers in compact clusters sessile on the stem..... ***C. compacta***
7 Pedicels 0.5-3 mm long, the flowers in loose panicles..... ***[C. cuspidata]***
5 Flowers not bracteate; sepals various.
8 Perianth surface granular; fresh flowers fleshy; corolla lobes acute, tips typically curved inwards.
9 Corolla tubular; calyx > ½ as long as the corolla; flowers 4 (-5)-merous; infrastaminal scales reduced, merely bifid or shallowly toothed..... ***C. coryli***
9 Corolla campanulate; calyx ca. ½ as long as the corolla; flowers 5-merous; infrastaminal scales profusely fringed ..... ***C. indecora***
8 Perianth surface not granular; fresh flowers not especially fleshy; corolla lobes various.
10 Stylopodium (a thickened ridge at the base of the style) present; flowers 5-merous.
11 Ovary blunt to pointed, but not beaked; corolla 2.2-3.5 mm long, 2-3 mm wide; seeds ca. 1.5 mm long; [widespread] ..... ***C. gronovii***
11 Ovary with a long, beak-like projection at the top; corolla 4-6 mm long, 4-6 mm wide; seeds 2-3 mm long; [of the Mountains] ..... ***C. rostrata***
10 Stylopodium absent; flowers 3-4-merous or 5-merous.
12 Flowers subsessile, therefore in globular inflorescences.
13 Flowers 5-merous..... ***C. obtusiflora*** *var.* ***glandulosa***
13 Flowers mostly 3-4-merous.
14 Corolla lobes rounded or obtuse..... ***C. cephalanthi***
14 Corolla lobes acute ..... ***C. polygonorum***
12 Flowers on pedicels slightly shorter than to longer than the flowers, therefore in loose inflorescences.
15 Flowers mostly longer than wide..... ***[C. suaveolens]***
15 Flowers mostly as wide as long.
16 Flowers 1.5-3.0 mm long, at least some exceeding 2.5 mm long; calyx lobes not overlapping at the base in older flowers, and therefore the flowers not pronouncedly 5-angled ..... ***C. campestris***
16 Flowers 0.9-2.5 mm long; calyx lobes strongly overlapping and forming definite angles at the sinuses, thus the flower strongly 4-5-angled.
17 Flowers 4-merous; flowers 0.9-1.4 mm long; stems very slender; [on granite and sandstone outcrops] ..... ***C. harperi***
17 Flowers 5-merous; flowers 1.5-2.5 mm long; stems not especially slender; [widespread]..... ***C. pentagona***

Cuscuta campestris Yuncker, Field Dodder. Cp, Pd (GA, NC, SC, VA), Mt (NC, SC, VA): roadsides and old fields, often on Fabaceae; common. June-November. Nearly cosmopolitan because of its common association with cultivated legumes, its original distribution unclear. [= RAB, F, GW, V, W, Y, Z; < *C. pentagona* Engelmann – C, G; < *C. pentagona* var. *pentagona* – K, X; = *Grammica campestris* (Yuncker) Hadac & Chrtek]

* ***Cuscuta cassytoides*** Nees ex Engelmann, African Dodder. Cp (NC): on *Quercus phellos*; rare, native of s. Africa. June. [= RAB, K, Z]

Cuscuta cephalanthi Engelmann, Buttonbush Dodder. Cp (GA, VA), Pd (NC, SC), Mt (NC, VA): primarily on woody hosts; rare. August-September. NB west to BC, south to GA, TX, CA, and Mexico. See Nelson (1993) for the first SC record. [= C, F, G, GW, K, S, X, Z; = *C. cephalanthii* – RAB, Y, orthographic error; = *Grammica cephalanthii* (Engelmann) Hadac & Chrtek]

Cuscuta compacta Antoine Laurent de Jussieu ex Choisy, Compact Dodder. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA): wet habitats, on herbaceous and especially on woody hosts; common. August-November. VT, QC, and NE south to s. FL and TX. [= RAB, C, F, G, GW, S, WH, X; > *C. compacta* var. *compacta* – K, W, Y, Z; > *C. compacta* var. *efimbriata* Yuncker – K, Y, Z]

Cuscuta coryli Engelmann, Hazel Dodder. Cp (DE, NC, SC), Mt (NC, VA, WV), Pd (VA): on a wide variety of woody and herbaceous hosts; rare. July-November. MA, NY, and SK south to SC, AL, TX, and AZ. [= C, F, G, GW, K, S, V, WV, X, Z; = *C. corylii* – RAB, W, orthographic variant; = *Grammica coryli* (Engelmann) Hadac & Chrtek]

* ***Cuscuta epilinum*** Weihe, Flax Dodder. Cp (DE), Pd (DE): primarily on *Linum*, rare, native of Europe. South to DE, MD, and PA (Kartesz 1999). [= C, F.G, K, Z]

* ***Cuscuta epithymum*** Linnaeus, Clover Dodder. Mt (WV): primarily on *Trifolium*; rare, , native of Europe. june-October. Also known from scattered localities in PA (Rhoads & Klein 1993)l reported for VA by Kartesz (1999), based on Massey (1961). [= C, F, G, K, WV, Z]

Cuscuta gronovii Willdenow ex J.A. Schultes, Common Dodder. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): on a very wide variety of herbaceous and woody plants; common. August-October. QC west to BC, south to s. FL and AZ. [= RAB, C, F, G, GW, S, W, WH, WV, Y; > *C. gronovii* var. *gronovii* – K, V, X, Z; > *C. gronovii* var. *latiflora* Engelmann – K, V, Z; = *Grammica gronovii* (Willdenow ex J.A. Schultes) Hadac & Chrtek]

Cuscuta harperi Small, Harper's Dodder. Cp (GA), Pd (GA): outcrops of granite (Piedmont) and Altamaha grit (Coastal Plain), typically on plants such as *Liatris microcephala, Bigelowia nuttallii, Hypericum gentianoides*, and *Croton willdenowii*; rare. September-November. C. and wc. GA west to nw. AL. [= K, S, V, Z]

Cuscuta indecora Choisy, Bigseed Alfalfa Dodder. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, VA), Mt (VA, WV): salt marshes (on *Iva frutescens*), roadsides, disturbed areas; rare. July-August. NJ, MN, and ID, south to s. FL, TX, CA, Mexico, Central America, and South America. See Nelson (1993) for the first SC record. Silberhorn (1998) describes an occurrence of this species in VA. [= C, GW, S, WH, WV, X, Y; > *C. indecora* var. *indecora* – F, K, V, Z; > *C. indecora* var. *neuropetala* (Engelmann) A.S. Hitchcock – F, K, Z; = *Grammica indecora* (Choisy) W.A. Weber]

* ***Cuscuta japonica*** Choisy, Japanese Dodder. Mt (SC), Cp (FL): disturbed area; rare, native of e. Asia. Apparently eradicated in Pickens County, SC. [= K, WH, Z]

Cuscuta obtusiflora Kunth *var.* ***glandulosa*** Engelmann, Glandular Dodder. Cp (FL, GA): on herbs in calcareous glades and other habitats; rare. GA and OK south to FL, TX, Mexico; West Indies. See Anderson (2007) for FL Panhandle record. [= G, GW, K, V, WH, X; = *C. glandulosa* Small – S]

Cuscuta pentagona Engelmann. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (NC, SC, VA, WV): on a wide variety of hosts; common. May-November. Throughout the United States and s. Canada. [= RAB, C, G, GW, S, V, W, WH, Y, Z; >< *C. pentagona* var. *pentagona* – K, X; = *Grammica pentagona* (Engelmann) W.A. Weber; > *C. campestris* Yuncker – F, WV; > *C. pentagona* – F, WV]

Cuscuta polygonorum Engelmann, Smartweed Dodder. Cp (DE), Pd (DE, VA), Mt (VA, WV): on *Polygonum* and other hosts; rare. NY and ON west to ND, south to FL and TX. [= C, F, G, K, S, W, V, X, Y, Z]

Cuscuta rostrata Shuttleworth, Appalachian Dodder, Beaked Dodder. Mt (GA, NC, SC, VA, WV): high elevation hardwood forests and thickets; common (uncommon in WV, rare in GA). July-September. A Southern Appalachian endemic: WV and MD south through w. VA, e. KY, e. TN, w. NC to n. GA. [= RAB, C, F, G, K, S, W, WV, Y, Z; = *Grammica rostrata* (Shuttleworth) Hadac & Chrtek]

Cuscuta cuspidata Engelmann. IN, ND, and UT south to KY, MS, TX, and NM. [= C, F, K, X, Z]

Cuscuta glomerata Choisy. OH, MI, MN, and ND south to KY, TN, MS, and TX. [= C, F, G, GW, K, S, X, Z]

* *Cuscuta suaveolens* Seringe, Fringed Dodder. Scattered sites in eastern North America, including AL, MD, and OH. [= C, G, K, Z]

Dichondra J.R. Forster & G. Forster 1775 (Ponyfoot, Dichondra)

A genus of about 9 species, of tropical subtropical and warm temperate areas. References: Tharp & Johnston (1961)=Z.

1 Calyx lobes > 2× as long as wide, exceeding the fruit; pedicels straight or nearly so ..... ***D. carolinensis***
1 Calyx lobes < 2× as long as wide, shorter than the fruit; pedicel strongly recurved just below the calyx ..... ***D. micrantha***

Dichondra carolinensis Michaux, Carolina Ponyfoot. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt*, (VA*, WV*): lawns, roadsides, moist pinelands; common (uncommon in VA, rare in Mountains of VA and WV). March-May. Se. VA south to s. FL, west to AR and TX; also in Bermuda and reported for the Bahamas; sometimes adventive beyond that range. This plant is rarely seen in a "natural" habitat, but is often seen in lawns and other mowed grassy areas. [= RAB, C, GW, K, S, WH, Z; = *D. repens* J.R. Forster var. *carolinensis* (Michaux) Choisy – F, G]

* ***Dichondra micrantha*** Urban, Kidneyweed, Small-flowered Ponyfoot. Cp (FL, GA): disturbed areas; rare, native of Australia and New Zealand. Reported for Camden County, GA (Carter, Baker, & Morris 2009). [= K, WH, Z]

Evolvulus Linnaeus 1762 (Dwarf Morning-glory)

A genus of about 90-100 species, almost all of tropical, subtropical, and warm temperate America. References: Ward (1968); Wilson (1960b)=Z.

1 Leaves densely pilose on both surfaces with spreading to loosely appressed hairs; internodes short, generally < 1 cm long; [calcareous glades and barrens of c. TN] ..... ***[E. nuttallianus]***
1 Leaves densely pilose with appressed (sericeous) hairs below, the upper surface glabrous or loosely pubescent; internodes long, many over 1.5 cm long; [wet flatwoods, seepages, bogs, Altamaha Grit outcrops in the the Coastal Plain] ..... ***E. sericeus*** *var.* ***sericeus***

Evolvulus sericeus Swartz *var.* ***sericeus***, Silky Dwarf Morning-glory. Cp (FL, GA): wet flatwoods, seepages, bogs, Altamaha Grit outcrops; uncommon (rare in GA). Coastal Plain of ec. GA (Appling, Jeff Davis, and Coffee counties) (Bridges & Orzell 1989; Patrick, Allison, & Krakow 1995) south to s. FL; AR and LA west to AZ, south into Mexico; West Indies. [= K; < *E. sericeus* – S, WH, Z]

Evolvulus nuttallianus J.A. Schultes, Shaggy Dwarf Morning-glory, in c. TN (Chester, Wofford, & Kral 1997), disjunct from the Great Plains. [= F, K, Z; = *E. nuttalianus* – C, orthographic variant; = *E. pilosus* Nuttall – G]

Ipomoea Linnaeus 1753 (Morning-glory)

A genus of about 650 species, herbs, vines, and shrubs, of tropical, subtropical, and warm temperate areas. References: Austin (1984)=Z; Austin & Huáman (1996)=Y; Austin & Bianchini (1998). Key adapted closely from Z.

1 Erect woody shrub with hollow stems to 2 m tall; [subgenus *Eriospermum*, section *Eriospermum,* series *Jalapae*] .....***I. carnea ssp. fistulosa***
1 Trailing or twining vine.
2 Corolla salverform, the long narrow tube cylindrical (with sides more-or-less parallel) for most of its length, the limb abruptly flaring at the summit of the tube.
3 Corolla 2-4 cm long, scarlet, orange or yellow; flowers open from early morning to late morning or late afternoon; [subgenus *Quamoclit,* section *Mina*].
4 Leaf blade pinnately divided into 11-31 (or more) linear segments .....***I. quamoclit***
4 Leaf blade entire, or angled or lobed into 3-7 lanceolate or ovate segments.
5 Calyx (5-) 6-8 (-9) mm long; fruit reflexed .....***I. coccinea***
5 Calyx 4-4.5 mm long; fruits erect .....***I. hederifolia***
3 Corolla 3-14 cm long, lavender to white; flowers open from evening until early morning.
6 Leaves tomentose beneath; corolla mostly white on the outer surface, lavender to purple on the inner surface, thus bicolored in-and-out; [of outer Coastal Plain hammocks and shell middens in se. NC and SC]; [subgenus *Eriospermum*, section *Eriospermum,* series *Jalapae*].....***I. macrorhiza***
6 Leaves glabrous beneath; corolla either white on both surfaces or lavender on both surfaces, not bicolored in-and-out; [weedy, of disturbed habitats]; [subgenus *Quamoclit*, section *Calonyction*]
7 Corolla 10-14 cm long, white .....***I. alba***
7 Corolla 3-7 cm long, violet or lavender.....***I. muricata***
2 Corolla funnelform to campanulate, the short to long tube expanding from below the middle, the limb gradually to abruptly flaring at the summit of the tube.
8 Pedicels and peduncles with spreading, ascending, or reflexed trichomes; gynoecium 3-parted; [subgenus *Ipomoea,* section *Pharbitis*].
9 Sepals soft-pilose on the outer surface with slender trichomes .....***I. indica** var. **acuminata***
9 Sepals hispid-pilose on the outer surface, with swollen-based trichomes.
10 Sepals with slightly narrowed green tips shorter than to slightly longer than the body of the sepal; [series *Pharbitis*].....***I. purpurea***
10 Sepals with very narrow elongate green tips much longer than the body of the sepal; [series *Heterophyllae*].
11 Sepals abruptly narrowed, the long subacute tips strongly spreading or curved.....***I. hederacea***
11 Sepals gradually narrowed, the long acute tips suberect, straight, scarcely spreading .....***[I. nil]***
8 Pedicels and peduncles glabrous or with short, appressed trichomes; gynoecium 2-parted; [subgenus *Eriospermum*].
12 Stems trailing, rooting at the nodes; leaf apex emarginate, truncate, or obtuse; [of beaches from se. NC southward]; [subgenus *Eriospermum*, section *Erpipomoea*].
13 Corolla white with a yellowish or purple eye; larger leaves 3-7-lobed.....***I. imperati***
13 Corolla lavender; larger leaves not lobed (though notched at the apex) .....***I. pes-caprae** var. **emarginata***
12 Stems erect or twining, not rooting at the nodes (except sometimes in *I. batatas*); leaf apex acute to acuminate; [collectively of various habitats, not beaches, widespread]; [subgenus *Eriospermum*, section *Eriospermum*].
14 Leaves palmately dissected.
15 Axillary buds developing stipule-like leaves .....***I. cairica***
15 Axillary buds not developing leaves .....***I. wrightii***
14 Leaves entire or pinnately lobed.
16 Leaf base sagittate; [series *Jalapae*].....***I. sagittata***
16 Leaf base cuneate to cordate.
17 Corolla 1.5-2.5 cm long, white or lavender
18 Corolla white; anthers purple; sepals lanceolate; [series *Batatas*].....***I. lacunosa***
18 Corolla lavender; anthers white; sepals oblong .....***I. triloba***
17 Corolla 3-8 cm long, at least partly pink to lavender (sometimes entirely white in *I. batatas*).
19 Sepals ovate to oblong-elliptic; corolla usually white on the limb, the throat purple; anthers 5-7 mm long; [series *Jalapae*] .....***I. pandurata***
19 Sepals oblong-ovate to oblong-lanceolate; corolla usually pink to lavender on the limb, the throat lavender to purple; anthers 1.5-3.2 mm long; [series *Batatas*].
20 Sepals unequal in length, oblong-ovate, with acute to caudate apices; leaves mostly 10-15 cm wide .....***I. batatas***
20 Sepals more-or-less equal in length, oblong-lanceolate, with acuminate apices; leaves 2-5 cm wide.....
.....***I. cordatotriloba** var. **cordatotriloba***

Ipomoea alba Linnaeus, Moonflowers, Tropical Morning-glory. Cp (FL): hammocks, marsh edges; rare. Ne. FL south to s. FL. [= WH; ? *Calonyction aculeatum* (Linnaeus) House]

* ***Ipomoea batatas*** (Linnaeus) Lamarck, Sweet Potato. Cp (FL, GA?, NC, SC, VA?): persistent in fields after cultivation, disturbed areas; rare, apparently native of tropical America. [= RAB, K, S, Y, Z]

* ***Ipomoea cairica*** (Linnaeus) Sweet. Cp (FL): disturbed areas; rare, native of Africa. AL, FL. [= K, S, WH] {synonymy incomplete}

* ***Ipomoea carnea*** Jacquin *ssp.* ***fistulosa*** (Martius ex Choisy) D. Austin, Bush Morning-glory. Cp (GA, SC): persistent from cultivation in suburban gardens, sandy soils of barrier island; rare, native of w. Brazil and e. Bolivia. [= K, Y, Z; = *I. fistulosa* Martius ex Choisy – RAB, S]

Ipomoea coccinea Linnaeus, Scarlet Creeper, Red Morning-glory. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV*): fields, roadsides, thickets, streambanks; common (uncommon in Mountains of VA and WV). August-December. Native distribution uncertain, but apparently native to se. United States. [= RAB, C, F, GW, K, W, WV, Y, Z; = *Quamoclit coccinea* (Linnaeus) Moench – G, S]

Ipomoea cordatotriloba Dennstedt *var.* ***cordatotriloba***, Coastal Morning-glory, Tie-vine. Cp (FL, GA, NC, SC): dunes, sandy areas on barrier islands, other sandy habitats; common (uncommon north of FL). September-October. Se. NC south to s. FL, west to e. TX and AR. The correct nomenclature is discussed by Manitz (1983). [= K; *? I. trichocarpa* Elliott – RAB, GW, S, Z; *? I. trifida* – S, misapplied; < *I. cordatotriloba* – WH; *? I. cordatotriloba* – Y]

Ipomoea hederacea Jacquin, Ivyleaf Morning-glory. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): fields, disturbed areas; common. July-December. Native distribution obscure, apparently native to temperate North America, including our area. [= C, GW, K, W, WH, WV, Y, Z; > *I. hederacea* var. *hederacea* – RAB, F, G; > *I. hederacea* var. *integriuscula* A. Gray – RAB, F, G; > *Pharbitis hederacea* (Linnaeus) Choisy – S; > *Pharbitis barbigera* (Sweet) G. Don – S]

* ***Ipomoea hederifolia*** Linnaeus, Scarlet Creeper. Cp (FL, GA): disturbed areas; uncommon. {Distribution in our area uncertain, native of tropical America – Kartesz (1999) says GA only} [= GW, K, WH, Y, Z; = *I. coccinea* Linnaeus var. *hederifolia* (Linnaeus) A. Gray]

Ipomoea imperati (Vahl) Grisebach, Beach Morning-glory. Cp (FL, GA, NC, SC): beaches, dune blowouts, fore-dunes; common (rare in NC and SC). August-October. Se. NC south to s. FL, west to TX, and extensively distributed in the tropics. [= K, WH, Y; = *I. stolonifera* (Cirillo) J.F. Gmelin – RAB, GW, S, Z]

Ipomoea indica (Burmann) Merr. *var.* ***acuminata*** (Vahl) Fosberg. Cp (FL): hammocks, coastal areas, disturbed areas; uncommon. Also AL, MS, LA. [= K, WH; ? *Pharbitis cathartica* (Poiret) Choisy – S] {add to synonymy}

Ipomoea lacunosa Linnaeus, White Morning-glory, Whitestar. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA): riverbanks, fields, roadsides, disturbed areas; common (rare in Mountain sof VA and WV). July-December. NJ west to OH, IL, and KS, south to FL and e. TX. [= RAB, C, F, G, GW, K, S, W, WH, WV, Y, Z]

Ipomoea macrorhiza Michaux, Indian-midden Morning-glory, Manroot. Cp (FL, GA, NC, SC): hammocks, shell middens, dry sands, disturbed maritime areas; uncommon (rare north of FL). June-July. Se. NC south to s. FL, west to s. AL. [= RAB, K, S, WH, Y, Z]

* ***Ipomoea muricata*** (Linnaeus) Jacquin, Lilacbell, Purple Moonflower. Cp (FL, GA, NC, SC): fields, disturbed areas; rare, native (apparently) of Mexico. Austin & Jansson (1988) discuss the species' spread in se. United States, apparently as a contaminent in soybean seeds. Staples et al. (2005) reinstate the name *I. muricata*. [= WH; = *Ipomoea turbinata* Lagasca y Segura – K, Y, Z]

Ipomoea pandurata (Linnaeus) G.F.W. Meyer, Wild Sweet Potato, Manroot, Man-of-the-earth. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): disturbed areas; common. May-September; July-October. CT, NY, and s. ON west to OH, s. MI, and KS, south to c. peninsular FL and e. TX. [= RAB, C, F, G, GW, K, S, W, WH, WV, Y, Z; > *I. pandurata* var. *pandurata* – G; > *I. pandurata* var. *rubescens* Choisy – G]

Ipomoea pes-caprae (Linnaeus) R. Brown *var.* ***emarginata*** Hallier f., Railroad Vine, Goat's-foot, Bay Hops, Bay Winders. Cp (FL, GA, NC, SC): ocean beaches; uncommon (rare north of FL). E. NC (Carteret County), SC (Beaufort, Horry, Charleston, Colleton, and Georgetown counties), south to FL, west to TX, and widespread on tropical shores of the the New World and Old World. The records in the Carolinas may reflect the periodic arrival of sea-borne seeds. [< *I. pes-caprae* – GW, S, Z; *? I. pes-caprae* ssp. *brasiliensis* (Linnaeus) van Ooststroom – K, WH, Y]

* ***Ipomoea purpurea*** (Linnaeus) Roth, Common Morning-glory. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): fields, disturbed areas; common (rare in FL), native of tropical America. July-September. [= RAB, C, F, G, GW, K, W, WH, WV, Y, Z; = *Pharbitis purpurea* (Linnaeus) Voigt – S]

* ***Ipomoea quamoclit*** Linnaeus, Cypress-vine. Cp (FL, GA, NC, SC, VA), Pd (NC, SC, VA): fields, hedgerows, disturbed areas; common (rare in VA), native of tropical America. September-December. [= RAB, C, F, GW, K, WH, Y, Z; = *Quamoclit vulgaris* Choisy – G; = *Quamoclit quamoclit* (Linnaeus) Britton – S]

Ipomoea sagittata Poiret. Cp (FL, GA, NC, SC): edges of brackish marshes, moist thickets on barrier islands, hammocks; common. July-September. E. NC south to s. FL, west to TX; also in the West Indies. [= RAB, GW, K, S, WH, Y, Z]

* ***Ipomoea triloba*** Linnaeus, Little-bell. Cp (FL): hammocks, sand dunes; uncommon. N. FL south to s. FL; West Indies; New World and Old World tropics. [= S, WH] {add to synonymy}

* ***Ipomoea wrightii*** A. Gray. Cp (FL, GA): disturbed areas; rare, native of India. Reported as likely naturalized in central TN, "spreading northward from the Gulf Coastal Plain" (Kral 1981). It also is known from GA (Kartesz 1999). [= K, WH; ? *I. heptaphylla* Voigt – S] {synonymy incomplete}

* *Ipomoea* ×*multifida* (Rafinesque) Shinners [*I. coccinea* × *quamoclit*], Cardinal Climber, is cultivated and may escape. [= K] {not keyed}

* *Ipomoea nil* (Linnaeus) Roth occurs in scattered states, such as MD and MS, as a rare introduction from tropical America (Kartesz 1999). [= K, Y, Z; = *Pharbitis nil* (Linnaeus) Choisy – S]

* *Ipomoea tricolor* Cavanilles is reported for several locations in se. PA (Rhoads & Klein 1993). [= K] {not yet keyed; synonymy incomplete}

Jacquemontia Choisy 1834 (Jacquemontia)

A genus of about 90 species, tropical, subtropical, and warm temperate areas, especially America. References: Wilson (1960b)=Z.

* ***Jacquemontia tamnifolia*** (Linnaeus) Grisebach, Jacquemontia. Cp (FL, GA, NC, SC, VA), Pd (GA, SC): fields, roadsides, other disturbed areas; common (uncommon in CA, NC, SC, rare in VA). August-September. Se. VA south to FL, west to AR and TX; also widespread in West Indies, Central America, and South America, its original range difficult to determine. In our area, it is probably adventive. Fox, Godfrey, & Blomquist (1952) report the first collections of the species in NC, in 1938 and 1950, from obviously disturbed situations. [= RAB, C, F, G, GW, K, WH, Z; = *Thyella tamnifolia* (Linnaeus) Rafinesque – S]

Merremia Dennstedt ex Endlicher 1838

References: Wilson (1960b)=Z.

* ***Merremia dissecta*** (Jacquin) Hallier f., Noyau Vine. Cp (FL, GA): disturbed areas; common (rare in GA), native of South America. Ranges as far north as e. and sw. GA. [= K, WH, Z; =? *Ipomoea sinuata* Ortega; = *Operculina dissecta* (Jacquin) House]

Stylisma Rafinesque 1825 (Dawnflower)

A genus of about 6 species (and about 8 taxa), vining to trailing herbs, endemic to se. North America. References: Myint (1966)=Z; Shinners (1962d)=Y; Wilson (1960b)=X.

1 Corolla < 2× as long as the calyx; leaves < 2 cm long; [of FL] ..... ***S. abdita***
1 Corolla > 2× as long as the calyx; leaves (at least the larger on a plant) > 2 cm long; [collectively widespread].
2 Corolla pink or purple; filaments glabrous, or nearly so; leaves densely and conspicuously silvery-sericeous; [of seasonally wet habitats] ..... ***S. aquatica***
2 Corolla white; filaments villous, at least near the base; leaves puberulent or pubescent, but not consopicuously silky-sericeous; [of dry habitats].
3 Larger leaves (7-) 12-30 mm wide; peduncles with (1-) 3-7 (-12) flowers; stems with a tendency to twine, at least near growing tip.
4 Sepals glabrous; [widespread in the Coastal Plain and Piedmont of our area] ..... ***S. humistrata***
4 Sepals densely villous; [of s. GA southward and westward] ..... ***S. villosa***
3 Larger leaves 2-10 mm wide; peduncles with 1 (-5) flowers; stems without a tendency to twine.
5 Bracteoles (2-) 10-20 mm long; stylar branches usually fused more than 5/6 of the total length (occasionally fused less than ½ of length), the free portion of the stylar branches usually less than 3 mm long; sepals villous, 4-6 (-7) mm long, ovate-elliptic with obtuse to acute apices; leaves 1-3 mm wide.
6 Stylar branches 1-1.5 mm long, usually unequal in length, the longer nearly 2× as long as the shorter; sepals mostly acute; [of MS westward] ..... ***[S. pickeringii*** *var.* ***pattersonii]***
6 Stylar branches 2-3 mm long, nearly equal, the longer 1.0-1.3× as long as the shorter; sepals mostly obtuse; [of NC south and west to AL; disjunct in NJ] ..... ***S. pickeringii*** *var.* ***pickeringii***
5 Bracteoles 1-3 (-5) mm long; stylar branches free nearly to base, the free portion more than 5 mm long; sepals villous or glabrous, 6-9 mm long, ovate-lanceolate with acuminate apices; leaves 2-10 mm wide.
7 Sepals glabrous (-glabrate), though the margins ciliate; leaves 2-3 (-5) mm wide, mostly 7-15 × as long as wide ..... ***S. patens*** *var.* ***angustifolia***
7 Sepals moderately to densely villous; leaves 3-10 mm wide, mostly 4-6 × as long as wide ..... ***S. patens*** *var.* ***patens***

Stylisma abdita Myint. Cp (FL): scrub; rare. Ne. FL (Clay County) south to s. FL. [= K, WH, Z; = *Bonamia abdita* (Myint) R.W. Long]

Stylisma aquatica (Walter) Rafinesque, Water Dawnflower. Cp (AL, FL, GA, LA, MS, NC, SC): clay-based Carolina bays and wet savannas; uncommon (rare in NC and SC). June-July. Se. NC south to c. and w. FL Panhandle, west to se. AR and e. TX. *S. aquatica*, as the epithet implies, occurs in wetter habitats than our other species. [= GW, K, S, WH, Z; = *Bonamia aquatica* (Walter) A. Gray – RAB, Y; = *Breweria michauxii* Fernald & Schubert – F; = *Bonamia michauxii* (Fernald & Schubert) K.A. Wilson – X]

Stylisma humistrata (Walter) Chapman, Southern Dawnflower. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): sandhills and other dry woodlands, especially on dryish stream terraces; common (uncommon in FL and rare in VA). June-August. Se. VA south to Panhandle FL, west to AR and e. TX, north in the interior to n. AL and w. TN. [= C, K, S, WH, Z; = *Bonamia humistrata* (Walter) A. Gray – RAB, X, Y; = *Breweria humistrata* (Walter) A. Gray – F, G]

Stylisma patens (Desrousseaux) Myint *var.* ***angustifolia*** (Nash) Shinners, Narrowleaf Dawnflower. Cp (FL, GA, NC, SC): sandhills; uncommon (rare in NC and SC). May-August. SE. NC south to c. peninsular FL, west to w. Panhandle FL. [= *Stylisma patens* (Desrousseaux) Myint ssp. *angustifolia* (Nash) Myint – K, Z; = *Bonamia patens* (Desrousseaux) Shinners var. *angustifolia* (Nash) Shinners – RAB, Y; = *S. angustifolia* (Nash) House – S; < *S. patens* – WH; = *Bonamia angustifolia* (Nash) K.A. Wilson – X]

Stylisma patens (Desrousseaux) Myint *var.* ***patens***, Common Dawnflower. Cp (GA, NC, SC): sandhills and other relatively dry sandy areas; common. June-August. Overall, the most common and widespread taxon of the genus in our area, regularly encountered in its habitat. E. NC south to n. FL, and west to s. MS. [= *Stylisma patens* (Desrousseaux) Myint ssp. *patens* – K, Z; = *Bonamia patens* (Desrousseaux) Shinners var. *patens* – RAB, Y; = *S. trichosanthes* (Michaux) House – S, misapplied; < *S. patens* – WH; = *Bonamia aquatica* (Walter) A. Gray – X, misapplied]

Stylisma pickeringii (Torrey ex M.A. Curtis) A. Gray *var.* ***pickeringii***, Pickering's Dawnflower. Cp (AL, GA, MS, NC, NJ, SC): sandhills, usually in the driest, most barren, deep-sand areas, occasionally colonizing dry, disturbed areas in sandhills, such as sandy roadbanks, known from the Fall-line Sandhills, aeolian rims of Carolina bays, and sandhills on relict riverine dunes along Coastal Plain rivers; rare. June-August (-September); July-September. Var. *pickeringii* ranges from s. NC south through SC, GA, AL, and e. MS, with a disjunct area in the Pine Barrens of s. NJ, sometimes treated as a separate variety "*caesariensis"* (see synonymy). This rare species is easily recognizable by its growth form, with numerous stems arching from a central point, then trailing radially away, forming a mound 1-2 meters in diameter. The narrowly linear leaves are borne vertically. Fernald and Schubert (1949) named four varieties in this widely but disjunctly distributed species; Myint (1966) reduced this to two varieties, one eastern and one western. [= C, K, Z; < *Bonamia pickeringii* (Torrey ex M.A. Curtis) A. Gray – RAB, X, Y; > *Breweria pickeringii* (Torrey ex M.A. Curtis) A. Gray var. *pickeringii* – F; > *Breweria pickeringii* var. *caesariensis* Fernald & Schubert – F; < *Breweria pickeringii* – G; < *Stylisma pickeringii* (Torrey ex M.A. Curtis) A. Gray – S]

Stylisma villosa (Nash) House, Hairy Dawnflower. Cp (FL, GA): sandhills, scrub; uncommon (rare in GA). Late April-July. S. GA south to s. FL, west to e. TX. [= K, S, WH, Z; = *Bonamia villosa* (Nash) K.A. Wilson – X, Y; = *Breweria villosa* Nash]

Stylisma pickeringii (Torrey ex M.A. Curtis) A. Gray var. *pattersonii* (Fernald & Schubert) Myint. Cp (MS): sandhills; rare. IL and IA south through KS and OK to w. LA and e. TX; disjunct east of the Mississippi River in w. MS (the material somewhat ambiguous as to varietal affinity). [= K, Z; < *Bonamia pickeringii* (Torrey ex M.A. Curtis) A. Gray – X, Y; < *Stylisma pickeringii* (Torrey ex M.A. Curtis) A. Gray – S]

358. SOLANACEAE A.L. Jussieu 1789 (Nightshade Family) [in SOLANALES]

A family of about 94 genera and nearly 3000 species, shrubs, trees, vines, and herbs, nearly cosmopolitan but especially diverse in South America. References: Hunziker (2001).

Subfamily Browallioideae: *Cestrum*
Subfamily Nicotanioideae: *Calibrachoa, Nicotiana, Nierembergia, Petunia*
Subfamily Solanoideae, tribe Solaneae: *Alkekengi, Capsicum, Physalis, Salpichroa, Solanum*
Subfamily Solanoideae, tribe Datureae: *Datura*
Subfamily Solanoideae, tribe Lycieae: *Lycium*
Subfamily Solanoideae, tribe Nicandreae: *Nicandra*
Subfamily Solanoideae, tribe Hyoscyameae: *Hyoscyamus*

2 Fruiting calyx bright red (fresh or dry); corolla white; [cultivated and weakly naturalized near gardens]..... ***Alkekengi***
2 Fruiting calyx green, yellow, or orange, drying brown or tan; corolla yellow, often marked with 5 large spots in the throat; [collectively widespread] ..... ***Physalis***

Alkekengi P. Miller 1754 (Chinese-lantern Plant)

A monotypic genus, a perennial herb, native of e. Asia. I here separate *Alkekengi* from *Physalis* as generically distinct, on the presumption that the re-typification of *Physalis* proposed by Whitson (2011) will be accepted. References: Mione et al. (1994); Whitson & Manos (2005); Whitson (2011).

* ***Alkekengi officinarum*** Moench, Chinese-lantern Plant. Pd (DE), Mt (WV), {VA?}: disturbed suburban areas; uncommon (rare in VA), native of Japan, Korea, and n. China. Commonly cultivated as an ornamental and occasionally naturalized in e. North America, as at scattered locations in TN (Chester, Wofford, & Kral 1997). It is perennial, readily recognized by its mature calyces red-orange and up to 5 cm long. [= *Physalis alkekengi* Linnaeus – C, F, G, K, WV, Z]

Bouchetia Augustin de Candolle ex Dunal 1852 (Bouchetia)

A genus of about 3-4 species, tropical American.

Bouchetia erecta A.P. de Candolle. {MS}. Reported for MS and TX. [= K; = *Salpiglossis erecta* (A.P. de Candolle) D'Arcy] {synonymy incomplete}

Calibrachoa Cervantes 1825 (Seaside Petunia)

References: Hunziker (2001)=Z.

* ***Calibrachoa parviflora*** (Antoine Laurent de Jussieu) D'Arcy, Wild Petunia, Seaside Petunia. Cp (AL, FL, LA, MS, NC, VA): upper edges of salt marshes, waste areas, garbage dumps; rare, native of tropical America. Tatnall (1946) documents its occurrence in Virginia: "upper edge of salt marsh, Wachapreague," Accomack County (Fernald & Long 4169, 26 July 1934). [= K; = *Petunia parviflora* Antoine Laurent de Jussieu – RAB, C, F, G, S, Z]

Capsicum Linnaeus 1753 (Red Pepper, Chile)

A genus of about 25 species, herbs and shrubs, of tropical America. References: D'Arcy & Eshbaugh (1974)=Z; Bosland & Votava (2000)=Y; De (2003)=X; Andrews (1995)=V; Heiser & Pickersgill (1975). Key based on V and Z.

1 Flowers usually only one per node after the first flowering node (rarely more); corolla bright to milky white (rarely bluish or violet) ..... ***C. annuum***
1 Flowers 2-5 per node above the first flowering node; corolla greenish-white
2 Pedicel of mature fruit with constriction (waist) at junction with calyx; pedicels declining or erect at anthesis; corolla lobes planar; [habanero, scotch bonnet] ..... ***[C. chinense]***
2 Pedicel of mature fruit broadening evenly into the calyx, without constriction; pedicels erect at anthesis, the flower itself nodding; corolla lobes usually slightly revolute; [tabasco] ..... ***C. frutescens***

* ***Capsicum annuum*** Linnaeus, Bell Pepper, Chile, Pimiento, Paprika, Chile Piquin, Ancho, Cayenne, Pepperoncini, Jalapeño, Serrano, Chiltepin, and others. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA): naturalized or persistent from gardens; commonly cultivated, rare as a naturalized species, native of Mexico (but early spread through Central America by native Americans, and since nearly worldwide in distribution at least in cultivation). June-frost. A very influential food crop introduced from the New World to the Old World, now important in various (especially tropical or subtropical) cuisines, including Hunan, Szechuan, Indian, Thai, various African, Mexican, and others. The great majority of our cultivated forms are of this species. The wild form, var. *glabriusculum*, was certainly present at one time in the Southeast and may still be represented in our area as reverted forms; it probably cannot be reliably distinguished from cultivars of *C. annuum*, and the two are not here distinguished taxonomically. [= RAB, S; > *C. annuum* var. *annuum* – K, V, X, Y, Z; > *Capsicum annuum* Linnaeus var. *glabriusculum* (Dunal) Heiser & Pickersgill – K, V, X; > *C. annuum* var. *aviculare* (Dierbach) D'Arcy & Eshbaugh – Y, Z]

* ***Capsicum frutescens*** Linnaeus, Tabasco. Cp (GA): persistent from gardens; uncommonly cultivated, rare as a waif, native of Andean South America. Reported in e. GA (Duncan 1985; Jones & Coile 1988). [= V, X, Y; = *C. annuum* Linnaeus var. *frutescens* (Linnaeus) Kuntze]

* *Capsicum chinense* Jacquin, Habanero, Scotch Bonnet. Rarely cultivated, not (yet) reported as persistent or escaped. Native of Andean South America. [= V, X, Y, Z]

Cestrum Linnaeus 1753 (Night-flowering Jessamine)

A genus of 150-200 shrubs (rarely trees or vines), of Tropical America. References: Hunziker (2001)=Z.

* ***Cestrum nocturnum*** Linnaeus, Night-flowering Jessamine. Cp (GA, LA): cultivated, weakly (if at all) established; rare, native of West Indies. See Small (1933). [= K, Z; *? C. parqui* – S, misapplied]

Datura Linnaeus 1753 (Jimsonweed)

A genus of about 10 species, of s. North America (probably originally native to sw. United States and Mexico). Several species of *Datura* are known to have been in our area at the time of first settlement by Europeans. They may have been weeds in Indian fields, or grown for their hallucinogenic properties. The common name "Jimsonweed" is a corruption of "Jamestown Weed." References: Avery, Satina, & Rietsema (1959)=Z. {needs thorough rework, based on herbarium material and clarification of nomenclature}

1 Calyx 3-5 cm long, the tube strongly angled, the angles even narrowly winged; corolla 7-10 cm long; capsule erect, dehiscent by 4 valves; [section *Datura*]..... ***D. stramonium***
1 Calyx 5-15 cm long, the tube terete or slightly angled; corolla 12-25 cm long; capsule inclined or nodding, irregularly dehiscent; [section *Dutra*].
  2 Corolla with 10 teeth, lavender; spines of capsule few, very stout-based ..... ***D. metel***
  2 Corolla with 5 or 10 teeth, white or pale lavender; spines of capsule many, hispid (the base only slightly thickened).
    3 Corolla with 10 teeth; leaves soft-pubescent ..... ***D. inoxia***
    3 Corolla with 5 teeth; leaves glaucescent..... ***D. wrightii***

* ***Datura inoxia*** J.S. Miller, Indian-apple. Cp (NC, SC), Pd (NC, SC), Mt (WV), {VA?}: disturbed areas; rare, native of Mexico. September-October. This species may not be distinct from *D. wrightii*. {It is currently not known with confidence which records in our area apply to which taxon} [= K, Z; = *D. innoxia* – F, S, WV, orthographic variant; ? *D. meteloides* – G, misapplied]

* ***Datura metel*** Linnaeus (NC): location and habitat in our area not known; rare, presumably introduced, allegedly native of tropical Africa and Asia. July-August. [= RAB, C, K, S, Z]

* ***Datura stramonium*** Linnaeus, Jimsonweed. Cp (AL, DE, FL, GA, LA, MS, NC, SC, VA), Pd (AL, DE, GA, NC, SC, VA), Mt (AL, GA, NC, SC, VA, WV): fields, pastures, disturbed areas, especially common in severely over-grazed pastures; common, presumably introduced from further south and west (Mexico or Central America). July-September; August-October. The plant is dangerously poisonous. [= RAB, C, K, S, W, WV, Z; > *D. stramonium* var. *stramonium* – F; > *D. stramonium* var. *tatula* (Linnaeus) Torrey – F; > *D. tatula* Linnaeus]

* ***Datura wrightii*** Regel, Indian-apple. Cp (AL, FL, VA), Pd (NC, SC), Mt (AL, WV): disturbed areas; rare, native of Mexico. July-September; September-October. [= K; *? D. meteloides* Dunal – RAB, S, Z, misapplied; *? D. metel* – G, misapplied; ? *D. innoxia* – WV, misapplied]

* ***Datura quercifolia*** Kunth is reported for sw. GA by Jones & Coile (1988). [= K] {not yet keyed}

Hyoscyamus Linnaeus 1753 (Henbane)

A genus of about 23 species, herbs, of Eurasia and n. Africa.

* ***Hyoscyamus niger*** Linnaeus, Black Henbane. Pd (DE): disturbed areas; rare, native of Europe. May-September. [= C, F, G, K]

Lycium Linnaeus 1753 (Matrimony-vine, Wolfberry, Goji Berry)

A genus of about 100 species, shrubs, of warm temperate and tropical areas of the Old World and New Word (especially America).

1 Leaves succulent, oblanceolate, 1-5 mm wide; [native, in maritime situations]..... ***L. carolinianum***
1 Leaves herbaceous, elliptic, ovate, or broadly oblanceolate, 8-30 mm wide; [introduced, persistent or naturalized, usually around old home sites].
2 Corolla lobes shorter than the corolla tube; leaves gray-green, 2-5 cm long..... ***L. barbarum***
2 Corolla lobes longer than the corolla tube; leaves bright green, 3-8 cm long ..... ***L. chinense***

* ***Lycium barbarum*** Linnaeus, Common Matrimony-vine, Wolfberry, Goji Berry. Cp (NC, SC, VA), Pd (DE, GA, NC, VA), Mt (GA, NC, VA, WV): old home sites, disturbed areas, along railroad tracks; rare, native of s. Europe. May-November; August-December. [= K; *? L. halimifolium* P. Miller – RAB, F, G, S, W, WV; < *L. barbarum* – C (also see *L. chinense*)]

Lycium carolinianum Walter, Christmas-berry, Carolina Matrimony-vine. Cp (FL, GA, SC): shell middens, shell mounds, shelly sand dunes, brackish marshes, maritime sand spits; uncommon (rare in GA and SC). September-October. Se. SC and e. GA south to FL, west to e. TX; also in the West Indies. Apparently not recently seen in SC; its occurrence in that state is based on Walter's flora. [= RAB, GW, S, WH; > *L. carolinianum* var. *carolinianum* – K]

* ***Lycium chinense*** P. Miller, Chinese Matrimony-vine, Wolfberry, Goji Berry. Mt (NC, VA), Cp (VA): old home sites; rare, native of China. May-November; August-December. [= RAB, F, G, K; < *L. barbarum* – C]

Nicandra Adanson 1763 (Apple-of-Peru)

A monotypic genus, an annual herb native of Peru.

* ***Nicandra physalodes*** (Linnaeus) Gaertner, Apple-of-Peru. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (DE, NC, SC, VA): disturbed places, such as cultivated fields; uncommon, native of Peru. July-September; August-October. [= RAB, C, F, G, K, W, WV; = *Physalodes physalodes* (Linnaeus) Britton – S]

Nicotiana Linnaeus 1753 (Tobacco)

A genus of about 67 species, of America, Australia, and s. Pacific areas. Fernald (1950) describes the genus as "rank, acrid-narcotic American herbs." References: Goodspeed (1954)=Z; Knapp, Chase, & Clarkson (2004).

1 Plant a shrub or small tree, 3-10 m tall; stems glabrous and glaucous; [section *Paniculatae*]..... ***N. glauca***
1 Plant an herb, 0.5-3 m tall; stems densely viscid-puberulent (or sparsely so to merely tuberculate in *N. longiflora*).
2 Corolla tube 1.2-1.7 cm long, greenish yellow, with limb 3-6 mm wide; leaves distinctly petiolate; [section *Rusticae*]..... ***N. rustica***
2 Corolla tube 3.0-12.0 cm long, cream, white, yellow, or pink, with limb 10-25 mm wide; leaves auriculate clasping.
3 Larger leaves on a plant 3.5-8 dm long; corolla tube 3.0-5.5 cm long, 4-7× as long as the average diameter, the limb 10-15 mm wide, pink or reddish (rarely white); [section *Nicotiana*] ..... ***N. tabacum***
3 Larger leaves on a plant 1-3 dm long; corolla tube 4.0-12.0 cm long, 10-20× as long as the average diameter, the limb 15-25 mm wide, white or lavender; [section *Alatae*].
4 Rosette of a few leaves, not persisting; cauline leaves clasping and decurrent on the stem ..... ***N. alata***
4 Rosette persisting; cauline leaves clasping but not decurrent on the stem ..... ***N. longiflora***

* ***Nicotiana alata*** Link & Otto, Jasmine Tobacco. Cp (GA): cultivated in gardens; rarely persistent, native of South America. See Jones & Coile (1988). [= K, Z]

* ***Nicotiana glauca*** Graham, Tree Tobacco. Cp (GA): cultivated in gardens, rarely persistent or spreading; rare, native of South America. Apparently present at Fort Pulaski National Monument, Chatham County, GA (Jones & Coile 1988; W. Duncan pers.comm. 2004). [= K, S, Z]

* ***Nicotiana longiflora*** Cavanilles, Long-flower Tobacco. Pd (DE): disturbed areas, rare, native of South America. Cultivated and may be found as a waif or persistent. [= K, S, Z]

* ***Nicotiana rustica*** Linnaeus, Indian Tobacco, Wild Tobacco. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): formerly commonly cultivated by native Americans in all parts of our area, persistent following cultivation, now apparently extinct in our area; rare, originally native of Peru. This was the tobacco cultivated by American Indians at the time of contact by Europeans, and was the first tobacco taken to Europe and cultivated there. [= RAB, C, F, K, S; > *N. rustica* var. *rustica* – Z]

* ***Nicotiana tabacum*** Linnaeus, Cultivated Tobacco. Pd (GA, NC, SC, VA), Cp (GA, NC, SC, VA), Mt (GA, NC, SC, VA): persistent after cultivation; commonly cultivated, rarely naturalized, native of tropical America. June-frost; September-October. This is the tobacco currently cultivated in our area for the manufacture of cigarettes, cigars, and other smoking and chewing tobacco products. Two different strains are cultivated. Burley tobacco, with acute to acuminate leaves, grown mostly in the

Mountains and upper Piedmont, is air-cured in open barns, and used mostly for cigar and pipe tobacco. Flue-cured tobacco, with obtuse or broadly acute leaves, is grown mostly in the Coastal Plain and lower Piedmont, cured in closed, cubical barns with forced heat, and used mostly for cigarettes. [= RAB, C, F, K, S]

Nierembergia Ruiz & Pavón 1794 (Cupflower)

A genus of about 23 species, of Mexico, Central America, and South America.

* ***Nierembergia frutescens*** Durieu, Tall Cupflower, is reported from sw. GA (Jones & Coile 1988). [= K]

Petunia Antoine Laurent de Jussieu 1803 (Petunia)

[also see *Calibrachoa*]

* ***Petunia ×hybrida*** Vilmorin [*P. axillaris* × *integrifolia*], Petunia. Cp (FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (WV): disturbed areas, garden edges, common in cultivation; rare, native of Argentina. May-November. Individual plants may closely resemble either parent, but this taxon in our area is best considered as a variable hybrid taxon. [= WH; = *P. ×atkinsiana* D. Don ex Loudon – RAB; > *P. axillaris* (Lamarck) Britton, Sterns, & Poggenburg – C, F, G, K, S; > *P. violacea* Antoine Laurent de Jussieu – F, S, misapplied; > *P. integrifolia* (Hooker) Schinz. & Thellung – C, G, K; > *P. ×atkinsiana* D. Don ex Loudon – K]

Physalis Linnaeus 1753 (Ground-cherry)
(contributed by Milo Pyne)

A genus of about 80 species, nearly cosmopolitan, but especially diverse in America. Many of the species of *Physalis* in our area occur primarily in disturbed habitats; their pre-Columbian ranges are unclear and they may have been introduced to e. North America by native Americans. Of the species treated here, only a few are definitely introduced. References: Sullivan (2004)=Z; Waterfall =Y (1958, 1967); Sullivan (1985)=X; Ward (2008a)=V; Mione et al. (1994); Whitson & Manos (2005); Whitson (2011). Key based in part on Sullivan (2004).

1 Flowers 2 or more per leaf axil; berries with spherical seed-like bodies intermixed with the flattened, reniform seeds; [of the Gulf Coastal Plain] ..... ***P. carpenteri***
1 Flowers 1 per leaf axil; berries with flattened, reniform seeds only; [collectively widespread].
  2 Berry 20-40 mm in diameter, green or yellow-green when ripe (tomatillo); anthers strongly coiled after dehiscence, blue; corolla throat with bluish tinge; [cultivated and weakly naturalized near gardens] ..... ***P. philadelphica***
  2 Berry to 20 mm in diameter, orange, yellow, or green when ripe; anthers not coiled after dehiscence, yellow, blue, or purple; corolla throat purple, brown, green, or ochre; [collectively widespread].
    3 Plants pubescent with stellate hairs, these in some taxa abundantly covering the leaves, or if leaves glabrous, the stellate hairs visible on the tips and margins of the sepals; plants perennial, from deeply buried rhizomes.
      4 Leaves linear, 10-20× as long as wide, glabrous; plants erect; [of FL Panhandle westwards] ..... ***P. angustifolia***
      4 Leaves ovate, elliptic, obovate or spatulate, 2-10× as long as wide, stellate pubescent, especially on the young growth, flowering calyces, and pedicels (or glabrous south of our area); [of FL Panhandle, peninsula, and Atlantic coast from VA southwards] ..... ***P. walteri***
    3 Plants glabrous, or pubescent with simple hairs; plants annual or perennial.
      5 Leaves glabrous or essentially so.
        6 Perennials from rhizomes, frequently with remnant of last year's stem attached to crown; corolla with 5 dark maculations in the throat.
          7 Hairs on the pedicels and young stems retrorse or retrorse-spreading; fruiting calyx 5-angled, indented at base ..... ***P. virginiana*** *var.* ***virginiana***
          7 Hairs on the pedicels and young stems antrorse; fruiting calyx subterete, with 10 ribs, not indented at base ..... ***P. longifolia*** *var.* ***subglabrata***
        6 Annuals from taproots; corolla with or without 5 dark maculations in the throat.
          8 Upper part of the stem glabrous or glabrate (when young, sometimes with minute, deflexed hairs in lines); corolla with or without 5 dark maculations in the throat.
            9 Corolla 7-15 mm long, yellow and with 5 dark maculations in the throat; anthers 2.5-4 mm long; berry to 40 mm in diameter ..... ***P. philadelphica***
            9 Corolla 4-10 mm long entirely yellow, without 5 dark maculations in the throat; anthers 1-2.3 mm long; berry 8-11 mm in diameter.
              10 Principal cauline leaf blades generally < 2.5× as long as wide; flowering and fruiting pedicels 0.5-1.0 cm long; pedicels and calyx essentially glabrous at anthesis except for hairs on the margins of the calyx lobes ..... ***P. angulata*** *var.* ***angulata***
              10 Principal cauline leaf blades generally > 2.75× as long as wide; flowering pedicels 1.5-2.5 cm long, elongating to 3.0-4.0 cm long in fruit; pedicels and calyx covered at anthesis with fine, even, antrorse hairs, especially at the base of the calyx ..... ***[P. angulata*** *var.* ***pendula]***
          8 Upper part of the stem with long, spreading hairs; corolla with 5 dark maculations in the throat.

11 Leaf margins strongly dentate with 7-10 (or more) teeth per side; fruiting pedicels 12 mm or more long; mature fruiting calyx 2.5-4 cm (or more) long, the lobes long-acuminate to attenuate; corolla pubescent internally ..... ***P. cordata***
11 Leaf margins entire, or dentate with 1-8 teeth per side; fruiting pedicels < 10 mm long; mature fruiting calyx 2.5 cm or less long, the lobes triangular-acuminate; corolla glabrous internally.
12 Leaves entire or with few teeth, usually 1-4 teeth per side; leaf blade thin in texture, flaccid and translucent; fruiting calyces 1.2-2.5 cm long, 1-1.5 cm wide, the lobes ovate to deltoid, the apex acute, 3-3.5 mm long ..... ***P. pubescens*** *var.* ***integrifolia***
12 Leaves mostly toothed nearly to the base with 5-8 teeth per side; leaf blade thick in texture, not translucent; fruiting calyces 2-3.5 cm long, 1.2-3 cm wide, the lobes triangular to narrowly lanceolate, the apex narrowly acute to acuminate, (3.5-) 4.5-6.5 mm long ..... ***P. pubescens*** *var.* ***pubescens***

5 Leaves variously pubescent, the hairs copious and villous to sparse and appressed.
13 Flowering calyces 6 mm or less long; annuals from taproots.
14 Stems, young growth, and major veins of the leaves covered with villous pubescence intermixed with sessile glands; leaves gray-green, prominently and coarsely dentate to the base, with well-defined reticulate venation, especially visible on the lower surface, frequently drying orange or with orange spots; anthers yellow, perhaps with a bluish tinge; body of mature calyx about as long as broad, abruptly acuminate at apex; berry tawny orange when mature ..... ***P. grisea***
14 Stems, young growth, and major veins of leaves with fine, non-villous pubescence; leaves green, obscurely dentate, often in the upper half only, or entire, without well-defined reticulate venation, drying green or brownish; anthers blue or violet; body of mature calyx longer than broad, long-acuminate at the apex; berry green when mature.
15 Leaves entire or with few teeth, usually 1-4 teeth per side; leaf blade thin in texture, flaccid and translucent; fruiting calyces 1.2-2.5 cm long, 1-1.5 cm wide, the lobes ovate to deltoid, the apex acute, 3-3.5 mm long..... ***P. pubescens*** *var.* ***integrifolia***
15 Leaves mostly toothed nearly to the base with 5-8 teeth per side; leaf blade thick in texture, not translucent; fruiting calyces 2-3.5 cm long, 1.2-3 cm wide, the lobes triangular to narrowly lanceolate, the apex narrowly acute to acuminate, (3.5-) 4.5-6.5 mm long..... ***P. pubescens*** *var.* ***pubescens***
13 Flowering calyces 6 mm or more long; perennials from rhizomes.
16 Pubescence viscid, generally composed of glandular trichomes mixed with fine, short hairs and long, multicellular hairs; leaf blades broadly ovate to suborbicular, the base rounded, truncate, or cordate (occasionally widely cuneate)..... ***P. heterophylla***
16 Pubescence seldom if at all glandular-viscid, composed of trichomes of varying lengths, from dense, spreading, and long-villous to sparse, strigose, and appressed; leaf blades narrowly ovate to broadly lanceolate, the base cuneate (rarely truncate).
17 Pedicels and flowering calyces pubescent with minute, appressed, antrorse hairs; hairs on the calyx primarily confined to 10 narrow longitudinal strips consisting of simple, appressed hairs 0.5 mm or less long ..... ***P. longifolia*** *var.* ***subglabrata***
17 Pedicels and flowering calyces densely pubescent with divergent and appressed hairs mixed (or only with appressed retrorse hairs); hairs on the calyx scattered more or less evenly over the surface, not confined to 10 longitudinal strips.
18 Pedicels with both divergent and antrorse hairs; principle leaf blades 5-8 cm long; filaments 0.5 as wide as the anthers; spots at the base of the corolla inconspicuous or absent; berry > 14 mm in diameter when mature ..... ***P. lanceolata***
18 Pedicels with short, appressed, retrorse hairs, or with short retrorse and longer divergent hairs intermixed; principle leaf blades 3-6 cm long; filaments as wide or wider than the anthers; spots at base of the corolla prominent; berry < 12 mm in diameter when mature ..... ***P. virginiana*** *var.* ***virginiana***

Physalis angulata Linnaeus var. ***angulata***, Smooth Ground-cherry. Cp (DE*, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA): disturbed areas, open woodlands, agricultural fields; common (uncommon in VA, rare in DE). August-October. Var. *angulata* is widely distributed in tropical America, north to se. VA and MO, and scattered as an adventive further north. Var. *pendula* (Rydberg) Waterfall is (in North America) more western, east to nw. TN and, allegedly, to SC. It can be distinguished from var. *angulata* by the following characters: principle cauline leaf blades generally > 2.75× as long as wide (vs. < 2.5× as long as wide), flowering pedicels 1.5-2.5 cm long, elongating to 3.0-4.0 cm long in fruit (vs. flowering and fruiting pedicels 0.5-1.0 cm long), pedicels and calyx covered at anthesis with fine, even, antrorse hairs, especially at the base of the calyx (vs. pedicels and calyx essentially glabrous at anthesis except for hairs on the margins of the calyx lobes). [< *P. angulata* – RAB, C, K, S, WH, Z; = *P. angulata* – F, G]

Physalis angustifolia Nuttall, Coastal Ground-cherry. Cp (AL, FL, LA, MS): maritime dunes and coastal sands; uncommon. January-December. Gulf Coast shorelines from S. FL west to s. LA. Reports of *P. viscosa* from the Southeast are based on either *P. angustifolia* or *P. walteri*. [= K, V, WH, Z] {add to synonymy}

Physalis carpenteri Riddell ex Rydberg, Carpenter's Ground-cherry. Cp (AL, FL, LA, MS): sandhills, dry hammocks, dry sandy soils; rare. N. peninsular FL and Panhandle FL west to e. LA. [= K, V, WH, Z] {add to synonymy}

Physalis cordata P. Miller, Toothleaf Ground-cherry. Cp (FL, NC), {GA, SC}: disturbed areas; rare. July-October. This species is scattered in the Southeastern United States, south to s. FL, and is more widespread in Mexico, Central America, and West Indies. [= K, WH, V, Z; = *P. pubescens* var. *glabra* (Michaux) Waterfall – RAB; = *P. barbadensis* var. *glabra* (Michaux) Fernald – F]

Physalis grisea (Waterfall) M. Martínez, Gray Ground-cherry, Strawberry-tomato, Dwarf Cape-gooseberry. Mt (GA, NC, VA), Pd (GA, NC, VA), Cp? (GA?), {SC}: wooded slopes, disturbed areas; uncommon. July-September; August-October. The species is mainly distributed in ne. United States, south (mainly) to NC, TN, and MO, and scattered further south. The fruits are edible, sweet, and tasty. Martínez (1993) discusses the nomenclature of this species, showing that the *P. pruinosa* Linnaeus is properly applied to a Mexican and Central American species. [= K, V, Z; = *P. pubescens* var. *grisea* Waterfall – RAB, C; < *P. pruinosa* Linnaeus – F, G, S, W, misapplied]

Physalis heterophylla Nees, Clammy Ground-cherry. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): disturbed areas, dry rocky woodlands, hammocks; common (uncommon in Mountains, rare in Coastal Plain of FL, GA, NC, and SC). May-July; July-September. Widespread in e. and c. United States and adjacent Canada, south to ne. FL and Panhandle FL. [= RAB, C, S, W, WH, Z; > *P. heterophylla* var. *heterophylla* – F, G; > *P. heterophylla* var. *ambigua* (A. Gray) Rydberg – F, G; > *P. heterophylla* var. *clavipes* Fernald – F; > *P. heterophylla* var. *nyctaginea* (Dunal) Rydberg – F; > *P. heterophylla* var. *heterophylla* – K; > *P. heterophylla* – S; > *P. ambigua* (A. Gray) Britton – S; > *P. nyctaginea* Dunal – S]

Physalis lanceolata Michaux, Sandhills Ground-cherry. Cp (GA, NC, SC): sandhills; rare. June-July; July-September. Endemic to sandhill habitats of (primarily) sc. and (rarely) se. NC (northern limit in Lee, Wayne, and New Hanover counties), south through SC to just over the Savannah River in Richmond County, GA. Many earlier floras included midwestern material in the concept of this species; it is, however, limited to the Carolinas and Georgia. See Hinton (1970) for discussion of its taxonomic status. [= RAB, Z; < *P. lanceolata* – F, G, S (also see *P. hispida* (Waterfall) Cronquist)]

Physalis longifolia Nuttall *var.* ***subglabrata*** (Mackenzie & Bush) Cronquist, Longleaf Ground-cherry. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE, FL), {GA, SC}: open woodlands, gardens and disturbed areas; common (uncommon in GA, NC, SC, VA). June-August; August-October. The species is widespread in e. and c. United States; var. *subglabrata* is more eastern, south to Panhandle FL, var. *longifolia* more western. [= C, G, K, W, Z; = *P. virginiana* P. Miller var. *subglabrata* (Mackenzie & Bush) Waterfall – RAB; = *P. subglabrata* Mackenzie & Bush – F, S, WV; < *P. longifolia* – WH]

* ***Physalis philadelphica*** Lamarck, Tomatillo. Cp (DE), Pd (DE, NC), Mt (VA, WV): naturalized after cultivation; uncommon (rare in NC and VA), native of Mexico and Central America. June-August; July-October. See Kartesz & Gandhi (1994) for a discussion of this group. It is the large-flowered plant (and therefore *P. philadelphica* in the narrow sense) that is weakly naturalized after cultivation in our area. [= C, Z; < *P. ixocarpa* Brotero ex Hornemann – F, G, misapplied; > *P. philadelphica* var. *immaculata* Waterfall – K]

Physalis pubescens Linnaeus *var.* ***integrifolia*** (Dunal) Waterfall, Thinleaf Downy Ground-cherry. Cp (DE), Pd (DE), Mt (WV), {FL?, GA?, NC?, SC?, VA?}: disturbed areas; common (rare in WV). The distribution, abundance, and habitats of the two varieties are poorly known. July-September; August-October. Widespread in the American tropics, north to PA and IA. [= C, K; < *P. pubescens* var. *pubescens* – RAB; = *P. pubescens* – F; > *P. pubescens* – G, S; > *P. turbinata* Medikus – G, S; = *P. integrifolia* (Dunal) D.B. Ward – V; < *P. pubescens* – W, WH, Z; < *P. pruinosa* Linnaeus, misapplied]

Physalis pubescens Linnaeus *var.* ***pubescens***, Thickleaf Downy Ground-cherry. Mt (WV), {VA}: disturbed areas; rare in WV. The distribution, abundance, and habitats of the two varieties are poorly known. July-September; August-October. Widespread in the American tropics, north to VA. [= C, K; < *P. pubescens* var. *pubescens* – RAB; > *P. barbadensis* Jacquin var. *barbadensis* – F; > *P. barbadensis* Jacquin – G, S; > *P. pubescens* – S; > *P. barbadensis* Jacquin – S; < *P. pubescens* – W, WH, Z]

Physalis virginiana P. Miller *var.* ***virginiana***, Virginia Ground-cherry. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): woodlands and disturbed areas; common (rare in FL and WV). April-May; June-July. This complex species is widespread in e. and c. North America. Var. *virginiana* is the most eastern of a number of varieties, some of the others being var. *campaniforma* Waterfall, var. *polyphylla* (Greene) Waterfall, and var. *texana* (Rydberg) Waterfall. The validity and true affinities of some of these varieties is, at present, uncertain; var. *texana* may be actually affiliated with *P. longifolia*. [= RAB, K; < *P. virginiana* – C, F, G, V, W, Z; > *P. virginiana* – S; > *P. intermedia* Rydberg – S; > *P. monticola* C. Mohr – S]

Physalis walteri Nuttall, Dune Ground-cherry. Cp (FL, GA, NC, SC, VA): dunes of sea-beaches, openings in maritime forests, sandhills (southwards), and rarely inland as a waif in disturbed areas; common (uncommon in GA, NC, SC, rare in VA). May-September. This species ranges from se. VA south to s. FL and west to s. MS. See Sullivan (1985) for further information on this species and its relatives. It is largely replaced on the Gulf Coast by the related *P. angustifolia*, with which it locally intergrades in peninsular FL. *P. viscosa* Linnaeus is South American. [= C, K, WH, Z; < *P. viscosa* Linnaeus ssp. *maritima* (M.A. Curtis) Waterfall – RAB; < *P. maritima* M.A. Curtis – F; < *P. viscosa* – G, S; > *P. walteri* var. *walteri* – V; > *P. walteri* var. *glabra* (Waterfall) D.B. Ward – V]

* *Physalis acutifolia* (Miers emend Sandwith) Sandwith, native to AZ and vicinity, was collected once in NC (in 1936), from a nursery in Mecklenburg County, NC, and in MS (Sullivan 2004). It may not be established. It is most similar to *P. angulata*, but differs in its white to cream-colored corollas, with yellow basal spots, and the presence of 5 hairy pads, alternating with the stamens near the base of the corolla limb. [= K, Z]

Physalis angulata Linnaeus *var.* ***pendula*** (Rydberg) Waterfall. *P. angulata* var. *pendula* (Rydberg) Waterfall is (in North America) more western, east to nw. TN and, allegedly, to SC. [< *P. angulata* – RAB, C, K, S, WH, Z; = *P. pendula* Rydberg – F, G]

Physalis arenicola Kearney, Sandhill Ground-cherry. Cp (FL, GA): sandhills, flatwoods; common (rare in GA). GA south to s. FL. Reported from nc. GA by Jones & Coile (1988) and for "cypress-heads and scrub thickets" by GANHP. [= K, WH, Z; > *P. arenicola* var. *arenicola* – V; > *P. arenicola* var. *ciliosa* (Rydberg) Waterfall – V] {not yet keyed; synonymy incomplete}

* *Physalis cinerascens* (Dunal) A.S. Hitchcock var. *cinerascens*, native to OK, TX, and Mexico, occurs locally in the Southeastern United States in weedy situations; it has been found once in our area, in a disturbed habitat in SC. It is probably not established. It resembles *P. walteri* in having stellate pubescence, but differs in having leaves ovate to suborbicular, with margins sinuate, dentate, or entire (vs. leaves obovate, with margins entire), anthers at least 1.5× as long as the filaments (vs. anthers equal to or shorter than the filaments), and fruiting pedicels mostly at least 1.5× as long as the calyces (vs. fruiting pedicels equal to or shorter than the fruiting calyces). [= K, Z] {not yet keyed; full treatment}

Physalis longifolia Nuttall *var.* ***longifolia***. East to PA, WV, KY, TN, and GA (Kartesz 1999). [= K, Z]

Physalis missouriensis Mackenzie & Bush. Reported from nc. GA in Jones & Coile (1988); record not repeated in Kartesz (1999). [= K, Z; *P. pubescens* Linnaeus var. *missouriensis* (Mackenzie & Bush) Waterfall] {investigate; not yet keyed; synonymy incomplete}

* *Physalis peruviana* Linnaeus, Cape Gooseberry or Po'ha, is also cultivated. Native to South America, it is now cultivated for its edible fruit in various tropical and temperate areas, and is known to rarely persist in e. North America. [= K]

Physalis viscosa Linnaeus. Reports in the Southeast are based on a broad interpretation of *P. viscosa* to include southeastern taxa *P. angustifolia* and *P. walteri*. Rejected.

Salpichroa Miers 1845

A genus of about 17 species, herbs and shrubs, native of South America. References: Hunziker (2001)=Z.

* ***Salpichroa origanifolia*** (Lamarck) Baillon. Cp (GA, NC, SC, VA), Pd (GA, NC, SC): gardens, roadsides, disturbed areas; rare, native of n. South America. May-November. [= RAB, K, Z; = *Perizoma rhomboidea* (Gillies & Hooker) Small – S; = *Salpichroa rhomboidea* (Gillies & Hooker) Miers]

Solanum Linnaeus 1753 (Nightshade, Tomato, Potato, Horse-nettle)
(contributed by Milo Pyne and Alan S. Weakley)

A genus of about 1700 species, trees, shrubs, vines, and herbs, of tropical and temperate regions of the Old and New World. References: Schilling (1981)=Z; Bohs & Olmstead (1997); Olmstead & Palmer (1997). [including *Lycopersicum*]

1 Anthers opening by longitudinal slits, connivent into a slender cone with sterile tip; berry fleshy, seeds pubescent; plant glandular "clammy"-pubescent; [cultivated plant, also appearing as a waif, escape, or discard, e.g. on sewage sludge] ..... ***S. lycopersicum***
1 Anthers opening by terminal pores, separate or connivent; berry dry to juicy, not fleshy, seeds glabrous; plant not clammy-pubescent; [plants native, exotic, or cultivated escapes, some are weeds of cultivation].
2 Stems and leaves not prickly or spiny.
3 Leaves irregularly pinnatifid or auriculate-lobed.
4 Woody climbing or twining vine; leaves auriculate-lobed ..... ***S. dulcamara***
4 Herb, not twining; leaves irregularly pinnatifid.
5 Fetid annual, plant more or less prostrate; leaves sessile or short-petiolate, lateral leaflets lanceolate, not alternating with smaller ones ..... ***[S. triflorum]***
5 Tuberiferous perennial, plant more or less erect; leaves distinctly petiolate, lateral leaflets ovate, alternating with smaller ones ..... ***S. tuberosum***
3 Leaves not appearing compound or auriculate-lobed.
6 Foliage densely pubescent to puberulent with spreading hairs, especially on undersurface.
7 Trichomes stellate; ripe berry yellow; corolla lavender ..... ***S. elaeagnifolium***
7 Trichomes simple; ripe berry black or green to yellow; corolla white.
8 Berry black when ripe; leaves lance-elliptic, 1-2.5 cm wide, style usually protruding beyond anthers by > 1 mm; plants strictly coastal, on dunes and similar habitats ..... ***S. pseudogracile***
8 Berry green to yellow when ripe; leaves ovate, 2.5-6 cm wide, style not protruding; plants widespread, weedy ... ***S. sarrachoides***
6 Foliage glabrous, glabrescent or very sparsely pubescent (with appressed hairs).
9 Berry dull red, ca. 1 cm wide at maturity, uncommon horticultural escape ..... ***S. pseudocapsicum***
9 Berry black (rarely green, never red), up to 0.5 cm wide at maturity, ruderal weeds.
10 Inflorescence subracemose, corymbose or umbellate, pedicels and peduncles becoming stout; anthers 1.8-2.6 [2.2-2.9] mm long; berry dull; seed 1.7-2.2 mm long [1.8 mm wide or wider]; sclerotic granules (concretions of stone cells) typically absent .. .. ***S. nigrum***
10 Inflorescence umbellate, pedicels and peduncles remaining slender; anthers 1.4-2 mm long; berry glossy; seed 1.2-1.8 mm long; sclerotic granules typically present but occasionally absent
11 Calyx lobes strongly reflexed in mature fruit; sclerotic granules in fruit five or less if present, occasionally absent; flowers 2-14 per inflorescence, usually > 7 in largest inflorescences; fruiting pedicels erect (may be deflexed with age or in winter), to 8 mm long; fruit shiny, black ..... ***S. americanum***
11 Calyx lobes adherent or spreading in mature fruit, occasionally somewhat reflexed; sclerotic granules usually 7-12 per fruit, often visible through skin of dried berry; flowers usually < 6 per inflorescence, fruiting pedicels deflexed, to 13 mm long; fruit dull or shiny black, or rarely green ..... ***S. ptychanthum***
2 Stems, and often leaves, prickly and/or spiny.
12 Berry enveloped at least until near maturity by prickly calyx; leaves regularly and strongly pinnately parted or very deeply divided (sinus depth greater than 1/2 distance from leaf margin to midvein).
13 Corolla yellow, anthers dissimilar, the lowest larger and longer; calyx tightly enveloping the fruit, seeds coarsely undulate-rugose ..... ***S. rostratum***
13 Corolla violet to (rarely) white, anthers all similar; calyx loosely enveloping the fruit, seeds minutely reticulate-pitted ..... ***S. sisymbriifolium***
12 Berry not enveloped by prickly calyx; the leaves not pinnately parted or divided (except in *S. sisymbriifolium*), or only weakly so (sinus depth < ½ the distance from leaf margin to midvein).
14 Berry > 2 cm in diameter; lower leaf surface not stellate-pubescent.
15 Ripe berry orange-red to reddish, leaves deeply lobed (sinus depth up to 1/2 distance from leaf margin to midvein) ..... ***S. capsicoides***
15 Ripe berry yellow, immature berry green with white mottles, leaves shallowly lobed (sinus depth typically < 1/3 distance from leaf margin to midvein) ..... ***S. viarum***
14 Berry < 2 cm in diameter; lower leaf-surface stellate-pubescent.
16 Leaves linear-lanceolate, 1-3 cm wide, trichome clusters 0.5 mm broad, with 12 or more rays..... ***S. elaeagnifolium***
16 Leaves ovate to elliptic, 2-8 cm wide, often lobed or cleft, trichome clusters 1 mm broad, with 5-10 rays.
17 Stellate trichomes of lower leaf surface stipitate, the 6-8 rays essentially equal; corolla 3-4 cm wide, calyx 8-12 mm long ..... ***S. dimidiatum***
17 Stellate trichomes of lower leaf surface sessile, 2-5 rays, the central one elongate; corolla 2-3 cm wide, calyx 5-7 mm long.
18 Leaves entire, margins at most sinuate; plants up to 2 dm in stature; prickles few, absent, and/or confined to midveins; corollas white; [rare plants of Bibb and Chilton counties, AL] ..... ***[S. pumilum]***
18 Leaves not entire, lobed, cleft, pinnately parted, or divided; plants 3-10 dm in stature; prickles more abundant and generally distributed; corollas purple, rarely white; [plants more widely distributed, weedy or ruderal].
19 Leaves pinnately parted or divided, the segments often pinnately lobed; calyx enveloping fruit when ripe, berry red; plant annual ..... ***S. sisymbriifolium***

19 Leaves irregularly lobed or cleft, the lobes or segments entire; calyx not enveloping fruit when ripe; berry yellowish orange, never red; plant perennial.
20 Leaves lobed to near the middle ..... ***S. carolinense*** *var.* ***floridanum***
20 Leaves lobed < ½ way to the middle ..... ***S. carolinense*** *var.* ***carolinense***

Solanum americanum P. Miller. Cp (FL, GA), {}: hammocks, disturbed areas; common. North to e. GA (SC). South to s. FL. [= K, WH; < *S. americanum* – RAB, F; < *S. nigrum* – C, G, S]

Solanum capsicoides Allioni, Soda Apple. Cp (FL, SC), Pd* (NC*): disturbed areas; uncommon (rare in NC and SC). [= K, WH; = *S. aculeatissimum* – RAB, S, misapplied]

Solanum carolinense Linnaeus *var.* ***carolinense***, Horse-nettle, Ball-nettle. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): fields, gardens, disturbed areas; common (uncommon in DE). [= K, WH; < *S. carolinense* – RAB, C, F, G, W, WV; = *S. carolinense* – S]

Solanum carolinense Linnaeus *var.* ***floridanum*** (Shuttleworth ex Dunal) Chapman. Cp (FL, GA): sandhills, dry hammocks, maritime forests, disturbed areas; uncommon (rare in GA). S. GA to n. peninsular FL. [= K, WH; < *S. carolinense* – RAB; = *S. floridanum* Shuttleworth ex Dunal – S]

* ***Solanum dimidiatum*** Rafinesque. Cp (FL, SC), {GA}: disturbed areas; rare, native of w. North America. April-June. [= C, K, WH; = *S. torreyi* A. Gray – RAB, F, G; = *S. perplexum* Small – S]

* ***Solanum dulcamara*** Linnaeus, Bittersweet, Nightshade. Mt (NC, VA, WV), Pd (DE, VA), Cp (FL, VA), {GA}: disturbed areas; common (rare in FL, GA, NC, and VA), native of Europe. [= RAB, C, W, WH, WV; > *S. dulcamara* var. *dulcamara* – F, K]

* ***Solanum elaeagnifolium*** Cavanilles, Silverleaf Nightshade, White Horse-nettle. Cp (FL, GA, NC, SC), Pd (NC). Mt (GA): disturbed areas; rare, native of sc. North America. June-September. [= C, F, G, K, WH; = *S. eleagnifolium* – RAB, S, orthographic error]

* ***Solanum lycopersicum*** Linnaeus, Tomato. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): persistent and weakly naturalized around gardens, especially where compost or sewage sludge is spread; commonly cultivated, rare as a naturalized species. June-frost. The species is native to the Andes Mountains of nw. South America. *S. lycopersicum* is one of the most important and influential of edible species native of the New World introduced to the Old World, along with two other Solanaceae, the potato (*Solanum tuberosum*) and the chili (*Capsicum annuum*). There appears to be little reason to separate *Lycopersicon* from *Solanum*. [= *Lycopersicon esculentum* – RAB, C, F, G; > *Solanum lycopersicum* Linnaeus var. *cerasiforme* (Dunal) Spooner, J. An derson, & R.K. Jansen – K; > *Solanum lycopersicum* var. *lycopersicum* – K; = *Lycopersicon lycopersicon* (Linnaeus) Karsten – S; > *Lycopersicon esculentum* var. *cerasiforme* (Dunal) Alefani]

* ***Solanum pseudocapsicum*** Linnaeus, Jerusalem-cherry. Cp, Mt (GA), Pd (NC), {SC}: rarely cultivated, perhaps not established, native of Mediterranean Europe. [= K; = *S. pseudo-capsicum* – F, orthographic variant]

Solanum pseudogracile Heiser, Dune Nightshade. Cp (GA, NC, SC): ocean dunes, usually with *Uniola paniculata*, maritime forests; uncommon. May-October. E. NC south to FL, west to LA. [= K, Z; = *S. gracile* – RAB, S, misapplied]

Solanum ptychanthum Dunal, American Black Nightshade. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (GA, NC, SC, VA): disturbed areas; common. June-December. [= K, W, Z; < *S. americanum* P. Miller – RAB, F, WV, misapplied; < *S. nigrum* – C, G, S; = *S. ptycanthum*, orthographic variant]

Solanum pumilum Dunal. {GA} . Known from dolomitic Ketona glades in Bibb County, c. AL (Allison & Stevens 2001) and historically in GA (GAHP). [= *Solanum carolinense* Linnaeus var. *hirsutum* (Nuttall) A. Gray – K]

* ***Solanum rostratum*** Dunal, Buffalo-bur, Kansas-thistle. Cp (GA, NC, SC, VA), Mt (GA, NC, VA, WV), Pd (DE, GA, NC, VA): disturbed areas; uncommon (rare in DE and WV), native of w. North America. [= RAB, C, F, G, K, W; = *Androcera rostrata* (Dunal) Rydberg – S; *? S. cornutum* Lamarck, misapplied]

* ***Solanum sarrachoides*** Sendtner, Hairy Nightshade. Cp (NC, VA), Pd (DE, NC, VA): disturbed areas; uncommon, native of South America. Works by Edmonds and associates have established that *S. sarrachoides* and *S. physalifolium* Rusby are two distinct species, but both are presently known from North America. Mistaken interpretations of Cronquist's 1991 treatment of *Solanum* (e.g. by Kartesz 1999) have given rise to the incorrect belief that only *S. physalifolium* is found in North America. True *S. physalifolium* is present in the western United States, *S. sarrachoides* in the Southeast. [= RAB, C, Z; < *S. physalifolium* Rusby – K; = *S. sarachoides* – F, orthographic error]

* ***Solanum sisymbriifolium*** Lamarck, Sticky Nightshade. Cp (GA, NC, SC), Pd (DE), {VA}: disturbed areas; uncommon (rare in DE), native of South America. July-September; September-October. [= RAB, C, F, G, K, S]

* ***Solanum tuberosum*** Linnaeus, Potato, Irish Potato, White Potato. Cp (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): commonly cultivated, rarely escaped or spontaneous from thrown-out tubers, native of Andean South America. June-August. [= RAB, C, F, G, K]

* ***Solanum viarum*** Dunal, Tropical Soda Apple. Cp (GA, NC, SC): pastures; rare, native of South America (s. Brazil, Paraguay, and n. Argentina). This species has only recently appeared in our area, but has been publicized as a severe, extremely aggressive, and rapidly spreading weed further south (Wunderlin et al. 1993, Mullahey et al. 1993, Mullahey 1996). [= K]

* *Solanum capsicastrum* Link ex Schauer. Reported for NC and SC (Kartesz 1999), but apparently erroneously. [= K]

* ***Solanum citrullifolium*** A. Braun *var.* ***citrullifolium***, Watermelon Nightshade. Pd (DE): disturbed areas; rare, native of {}. Introduced in scattered states, including DE (Kartesz 1999) and Alachua County, FL (Wunderlin & Hansen 2008). [= K; < *S. citrullifolium* – C, F, G, WH] {not yet keyed}

* *Solanum melongena* Linnaeus, Eggplant, Aubergine. Planted in gardens but does not persist. [= F, G, K, S]

* ***Solanum nigrescens*** Mart. & Gal. Cp (FL): disturbed areas; uncommon. Reported from NC, SC, GA, FL, etc. (Kartesz 1999), but actual status unclear. [= K; ***S. chenopodioides*** Lamarck – WH] {not yet keyed}

* ***Solanum nigrum*** Linnaeus *ssp.* ***nigrum***, European Black Nightshade. Cp (DE), Pd (DE), {FL, GA, NC, SC, VA}: disturbed areas; common (rare elsewhere?), native of Eurasia. May-November. [= K, Z; = *S. nigrum* – RAB; < *S. nigrum* – C, F, G, S]

* *Solanum torvum* Swartz, Turkey-berry. Introduced in AL. [= K]
* *Solanum triflorum* Nuttall. Introduced in c. TN. [= C, F, G, K]

360. SPHENOCLEACEAE von Martius ex A.P. de Candolle 1839 (Chickenspike Family) [in SOLANALES]

A family of one genus and 2 species, annual herbs, of tropical regions, native of the Old World. References: Rosatti (1986)=Z.

Sphenoclea Gaertner (Chickenspike)

A genus of 2 species, annual herbs, native of the Old World.

* ***Sphenoclea zeylanica*** Gaertner, Chickenspike. Cp (FL, SC), Pd (GA, NC): rice plantations, reservoirs, other disturbed wetlands; rare, native of Old World tropics. August-October. [= K, S, WH, Z; = *S. zeylandica* – RAB, GW, orthographic error (presumably from a mistaken notion that the epithet refers to New Zealand rather than Ceylon)]

361. HYDROLEACEAE Berchtold & J. Presl 1820 (Hydrolea Family) [in SOLANALES]

A family of one genus and about 12 species, herbs and shrubs of water bodies and wetlands, primarily tropical. The Hydroleaceae is not closely related to Hydrophyllaceae; recent molecular data confirm the view prevailing through most of the 19th century that *Hydrolea* should be placed in its own family. References: Ferguson (1998); Hilger & Diane (2003); Angiosperm Phylogeny Group (1998, 2003, 2009).

Hydrolea Linnaeus 1762

A genus of about 11 species, aquatic and wetland herbs, of tropical and subtropical regions.

1 Flowers in axillary cymes; leaves 3-14 cm long, 1.5-4 cm wide; axillary spines present in the axils of some leaves; corolla 7-8 mm long.
  2 Calyx and stem sparsely pubescent with spreading hairs 2-3 mm long ..... ***H. quadrivalvis***
  2 Calyx and stem glabrous, or minutely puberulent or with sessile glands ..... ***H. uniflora***
1 Flowers in terminal cymes or corymbs; leaves 2-6 cm long, 0.6-2.5 cm wide; axillary spines present or absent; corolla 10-15 mm long.
  3 Leaves elliptic to lanceolate, 2-3 cm long, 0.6-1.0 cm wide; axillary spines absent or rudimentary ..... ***H. corymbosa***
  3 Leaves ovate to ovate-lanceolate, 3-6 cm long, 1.5-2.5 cm wide; axillary spines preset, well-developed, to 1.5 cm long ..... ***H. ovata***

Hydrolea corymbosa J. Macbride ex Elliott, Skyflower. Cp (FL, GA, SC): pond cypress savannas, depression meadows; uncommon (rare north of FL). Ne. SC south to sw. GA and s. FL. See Nelson (1993). The author is sometimes stated as J.F. Macbride, but this is an error. [= RAB, GW, K, WH; = *Nama corymbosum* (Macbride ex Elliott) Kuntze – S]

Hydrolea ovata Nuttall ex Choisy, Ovate False-fiddleleaf. Cp (FL, GA): swamps, ponds, ditches; rare. June-August. C. GA and Panhandle FL west to TX, north in the interior to sc. TN and MO. [= C, F, G, GW, K, WH; = *Nama ovatum* (Nuttall ex Choisy) Britton – S]

Hydrolea quadrivalvis Walter, Waterpod. Cp (FL, GA, NC, SC, VA), Pd (NC, VA): swamp forests, backwater sloughs, marshes, ditches; common (VA Watch List). June-September. Se. VA south to c. peninsular FL, west to LA. [= RAB, C, F, G, GW, K, WH; = *Nama quadrivalve* (Walter) Kuntze – S]

Hydrolea uniflora Rafinesque. Swamp forests, sloughs, marshes. June-September. Mainly in the Mississippi River Alluvial Plain, west to e. TX and east to AL, TN, and KY. [= C, F, G, GW, K; = *Nama affine* (A. Gray) Kuntze – S; = *Hydrolea affinis* A. Gray]

364. OLEACEAE Hoffmansegg & Link 1813 (Olive Family) [in LAMIALES]

A family of about 25 genera and 600-615 species, trees and shrubs, nearly cosmopolitan, but centered in Asia. References: Hardin (1974)=Z; Green in Kadereit (2004).

1 Leaves compound.
  2 Leaves pinnately compound with > 5 leaflets; petals absent; fruit a samara; small to large tree; [tribe *Oleeae*, subtribe *Fraxininae*] ..... ***Fraxinus***
  2 Leaves trifoliolate; petals 6-10, yellow, conspicuous; fruit a deeply 2-lobed dryish berry; [tribe *Jasmineae*] ..... ***Jasminum***
1 Leaves simple.
  3 Flowers bright yellow, showy; fruit a many-seeded capsule; [tribe *Forsythieae*] ..... ***Forsythia***
  3 Flowers white, lilac, or purplish; fruit a drupe or 4-seeded capsule.
    4 Leaves cordate or truncate at the base; fruit a 4-seeded capsule; corolla lobes shorter than the tube; flowers lilac or white, in terminal panicles; [tribe *Oleeae*, subtribe *Ligustrinae*] ..... ***Syringa***
    4 Leaves cuneate to rounded at the base; fruit a drupe; corolla lobes either shorter or longer than the tube; flowers white or greenish-white, in terminal or lateral panicles or fascicles.
      5 Corolla absent; calyx minute or lacking; flowers in axillary fascicles; [tribe *Oleeae*, subtribe *Oleinae*] ..... ***Forestiera***

5 Corolla present (often conspicuous and showy); calyx present; flowers in lateral or terminal panicles or in terminal subumbellate clusters.
6 Corolla lobes 5-12; flowers in terminal subumbellate clusters; [tribe *Jasmineae*] ..... ***Jasminum***
6 Corolla lobes 4; flowers in lateral or terminal panicles
7 Corolla lobes elongate, much longer than the corolla tube; [tribe *Oleeae*, subtribe *Oleinae*] ..... ***Chionanthus***
7 Corolla lobes short, no longer than the corolla tube.
8 Inflorescence a many-flowered terminal panicle; leaves generally ovate, elliptic or lanceolate (widest below or at the middle); [tribe *Oleeae*, subtribe *Ligustrinae*] ..... ***Ligustrum***
8 Inflorescence a few-flowered axillary panicle; leaves generally oblanceolate or obovate (widest above the middle); [tribe *Oleeae*, subtribe *Oleinae*] ..... ***Osmanthus***

Chionanthus Linnaeus 1753 (Fringe-tree, Old Man's Beard)

A genus of controversial circumscription, either of only 3 species, limited to se. North America and e. Asia, or (if including *Linociera*) of about 60, primarily tropical. *C. pygmaeus* Small is endemic to scrub in peninsular FL. References: Hardin (1974)=Z.

Chionanthus virginicus Linnaeus, Fringe-tree, Old Man's Beard. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): dry, mesic, or wet forests and woodlands, granitic flatrocks and domes, glades and barrens over various rocks (including granite, greenstone, etc.), swamp forests in the Coastal Plain, rarely pocosins; common (rare in DE Piedmont). April-May; July-September. NJ, s. PA, s. OH, and MO south to c. peninsular FL and e. TX. *C. virginicus* in our area shows a diversity of morphology and correlated habitat that suggests the possible presence of two taxa. Swamp- and pocosin-inhabiting populations in the outer Coastal Plain have leaves 4-8× as long as wide and seem very different than Piedmont dry woodland populations with leaves 1-2× as long as wide; further and more careful study is needed. *C. virginicus* is a traditional southern yard plant, often used as a "specimen plant," very showy in spring, particularly when grown to its full size. [= RAB, C, F, G, GW, K, S, W, WH, Z]

Forestiera Poiret 1812 (Forestiera)

A genus of about 15-20 species, shrubs, of sw. and se. North America, Central America, and the West Indies. References: Anderson (1985)=Y; Godfrey (1988)=X; Hardin (1974)=Z; Johnston (1957)=Q; Green in Kadereit (2004).

1 Leaves (6-) 7-8 (-9) cm long, long-acuminate or acuminate (rarely acute) at the apex, the tip sharply pointed; [of swamp forests, sloughs, and ponds] ..... ***F. acuminata***
1 Leaves 1.5-7 (-8) cm long, obtuse at the apex, or if short-acuminate the ultimate tip blunt; [of shell middens and calcareous bluffs].
2 Leaves evergreen, glabrous above, glabrous and punctate below; leaf margins entire ..... ***F. segregata*** *var.* ***segregata***
2 Leaves deciduous, at least sparsely pubescent on the midrib above, pubescent and non-punctate below.
3 First-year twigs pubescent, the pubescence evenly distributed (not in 2 lines); petioles moderately pubescent; flowering in early spring from buds on twigs of the previous season; leaves 5-7 (-8) cm long ..... ***F. godfreyi***
3 First-year twigs pubescent, the pubescence in 2 lines on either side of the twig; petioles glabrous (or with a very few hairs; flowering in mid-late summer, the flowers in leaf axils; leaves mostly 2-5 cm long ..... ***F. ligustrina***

Forestiera acuminata (Michaux) Poiret, Swamp-privet. Cp (FL, GA, SC): swamp forests, especially over calcareous substrates; uncommon. March; May-June. SC south to n. FL, west to TX, north in the interior to KY, e. and c. TN, IN, IL, MO, and KS. [= RAB, C, F, G, GW, K, S, Q, WH, X, Y, Z]

Forestiera godfreyi L.C. Anderson, Godfrey's Forestiera. Cp (FL, GA, SC): shell middens, maritime forests over shell substrate; rare. Mid January-February; April-May. Se. SC (Beaufort and Charleston counties) to e. GA and n. peninsular and e. Panhandle FL. [= K, WH, X, Y; < *F. pubescens* Nuttall – S, in part (apparently)]

Forestiera ligustrina (Michaux) Poiret, Southern-privet. Cp (FL, GA, SC), Pd (GA, SC): upland forests and slopes along streams, mostly on shell middens or calcareous rocks; uncommon (rare in SC). E. SC south to n. peninsular FL, west to se. TX, north in the interior to c. TN and KY. [= K, S, Q, X, Z]

Forestiera segregata (Jacquin) Krug & Urban *var.* ***segregata***, Florida-privet. Cp (FL, GA, SC): calcareous scrub, shell middens, maritime forests and thickets; rare. Se. SC south to s. FL, and in the West Indies. Var. *pinetorum* (Small) M.C. Johnston is restricted to s. FL. [= K, Q, Z; > *F. porulosa* (Michaux) Poiret – S; > *F. globularis* Small – S; < *F. segregata* – WH, X]

Forsythia Vahl 1804 (Forsythia, Golden-bells)

A genus of about 7-9 species, shrubs, of e. Asia and se. Europe. References: Hardin (1974)=Z; Green in Kadereit (2004).

1 Mature branches hollow or irregularly pith-filled between the nodes; leaves oblong-ovate, toothed or 3-parted; branches arching when well-developed ..... ***F. suspensa***
1 Mature branches cross-septate (chambered) between the nodes; leaves oblong-lanceolate, toothed; branches upright ..... ***F. viridissima***

* ***Forsythia suspensa*** (Thunberg) Vahl, Weeping Forsythia. Pd (GA, NC, VA), Mt (VA, WV): waste places, vacant lots, suburban woodlands; commonly planted and persistent, rarely escaped (native of China). [= C, G, K, Z]

* ***Forsythia viridissima*** Lindley, Greenstem Forsythia. Pd (GA, NC, VA), Cp (VA), Mt (VA, WV): waste places, vacant lots, suburban woodlands; commonly planted and persistent, rarely escaped (native of China). [= C, G, K, W, Z]

Fraxinus Linnaeus 1753 (Ash)

A genus of about 43-65 species, trees, mostly north temperate (Asia, North America, Europe). The sectional classification follows Wallander (2008). References: Nesom (2010i)=X; Hardin & Beckmann (1982)=Z; Miller (1955)=Y; Wallander (2008); Green in Kadereit (2004).

1 Young twigs 4-angled or narrowly 4-winged; [trees of calcareous woodlands west of ne. WV, sw. VA, e. TN, nw. GA, and c. AL]; [section *Dipetalae*] ..... ***F. quadrangulata***
1 Young twigs terete (rounded in cross-section); [trees of various habitats, collectively widespread in our area].
2 Lateral leaflets sessile; calyx absent; seed cavity of samara flattened in cross-section; [of VA and KY northwards]; [section *Fraxinus*] ..... ***F. nigra***
2 Lateral leaflets with petiolules (1-) 3-20 mm long; calyx present, persisting as a minute cup at the base of the fruits; seed cavity of samara round in cross-section (except flattened in *F. caroliniana*); [collectively widespread in our area]; [section *Melioides*].
3 Leaves minutely honeycombed-reticulate beneath (best seen at magnification of 40× or more), and sometimes also pubescent, more-or-less strongly whitened; wing of the samara decurrent only onto the upper 1/3 (or less) of the samara body ..... ***F. americana***
3 Leaves glabrous to pubescent beneath (and sometimes with papillae and small scales visible at 40×, but never minutely honeycombed-reticulate), green; wing of the samara decurrent onto 1/2 (or more) of the samara body.
4 Petiolules of the lowermost leaflets 1-9 mm long, all but 1-2 mm narrowly winged; samara mostly < 7 mm wide; calyx 0.5-1.5 mm long ..... ***F. pennsylvanica***
4 Petiolules of the lowermost leaflets 3-20 mm long, not winged (except *F. caroliniana*); samara mostly > 7 mm wide; calyx 1-6 mm long.
5 Body of samara flattened, winged the full length of the samara body; calyx 1 mm long; leaf scars slightly notched; small tree, often multi-trunked ..... ***F. caroliniana***
5 Body of samara terete or subterete, winged about 1/2 the length of the samara body; calyx 2.5-6 mm long; leaf scars deeply notched; medium to large tree, typically single-trunked ..... ***F. profunda***

New provisional key

1 Leaves minutely honeycombed-reticulate beneath (best seen at magnification of 40× or more), more-or-less strongly whitened (and otherwise variously glabrous or pubescent).
2 Petiole bases and leaf scars V- to U- or crescent-shaped with a deeply concave or notched apex; samaras (19-) 25-32 (-38) mm long, samara wings 3-5 (-6) mm wide, samara bodies (5-) 6-11 mm long, 1.5-2.5 mm wide; twigs, petioles, petiolules, and rachises glabrous ..... ***F. americana***
2 Petiole bases and leaf scars oblong-obovate to widely obovate with a nearly truncate apex; samaras (32-) 33-54 mm long, samara wings (4.5-) 5-8 mm wide, samara bodies (7-) 10-15 mm long, 2-4 mm wide; twigs, petioles, petiolules, and rachises glabrous or hirtellous to hirtellous-puberulent to tomentulose.
3 Twigs, petioles, petiolules, and rachises sparsely to densely hirtellous to hirtellous-puberulent or tomentulose; samaras 33-54 mm long, samara wings 6-8 mm wide, samara bodies (7-) 11-15 mm long, 2-4 mm wide ..... ***F. biltmoreana***
3 Twigs, petioles, petiolules, and rachises glabrous; samaras (32-) 36-44 mm long, samara wings (4.5-) 5-7 mm wide, samara bodies (9-) 10-13 mm long, 2-3.5 mm wide ..... ***F. smallii***
1 Leaves not minutely-honeycombed-reticulate beneath (sometimes with papillae and small scales visible at 40×, but these not forming a developed netlike pattern), pale green (and otherwise variously glabrous or pubescent).
4 Youngest twigs 4-angled to narrowly 4-winged; petiole bases raised on a distinct pedestal; lateral leaflets sessile to subsessile.
5 Samara bodies strongly flattened and often nearly indistinct from wings, wings 5-8 mm wide; buds black to blackish brown; leaf scars shallowly hemispheric, apex truncate; flowers bisexual and unisexual ..... ***[F. excelsior]***
5 Samara bodies flattened but clearly distinct from wings, wings 8-10 mm wide; buds gray to reddish brown; leaf scars crescent-shaped, apex concave; flowers bisexual ..... ***F. quadrangulata***
4 Youngest twigs terete; petiole bases flush with stem; lateral leaflets sessile to subsessile or petiolulate.
6 Multi-trunked shrubs or small trees; samara wings 2-3, arising from the base or proximal ¼ of body, (8-) 10-20 mm wide ..... ***F. caroliniana***
6 Trees; samara wings 2, arising from near the base to near apex of body, (5.5-) 6-10 (-12) mm or 4-7 mm wide.
7 Lateral leaflets sessile; samara bodies strongly flattened and often nearly indistinct from wings; buds black to blackish brown, corky-ridged ..... ***F. nigra***
7 Lateral leaflets petiolulate; samara bodies distinct from wings; buds brownish, not corky-ridged.
8 Leaflets mostly (6-) 7.5-11 (-12) cm × 2.5-5(-6) cm, bases obtuse to acute or abruptly attenuate; samaras 20-45 (-60) mm, wings arising abruptly from distal ¼-1/5 (-½) of body, 4-7 mm wide ..... ***F. pennsylvanica***
8 Leaflets (7-) 9-15 (-25) cm × (2.5-) 3.5-7 (-11) cm, bases often rounded, less commonly obtuse to acute or acuminate; samaras (35-) 40-70 (-75) mm, wings gradually expanded from near the base of the body to proximal ½, (5.5-) 6-10 (-12) mm wide ..... ***F. profunda***

Fraxinus americana Linnaeus, White Ash, American Ash. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): mesic slopes, rich cove forests, dryish calcareous or mafic glades and woodlands (with *Juniperus*

virginiana var. *virginiana* and *Carya glabra*); common (rare in Coastal Plain of DE, NC, SC, and GA). April-May; August-October. NS west to MN, south to n. peninsular FL and TX. A valuable timber tree. The division into 2 or more taxa is very likely warranted. [= C, K, W, WH, Z; > *F. americana* Linnaeus var. *americana* – RAB, F, G, WV; > *F. americana* Linnaeus var. *biltmoreana* (Beadle) J. Wright ex Fernald – RAB, F, G, WV; > *F. americana* var. *microcarpa* A. Gray – F; > *F. americana* – S, Y; > *F. biltmoreana* Beadle – S, Y]

Fraxinus berlandierana DC., Mexican Ash. This species, native of sc. OK south to s. TX, has been reported as naturalized in s. MS and e. LA (Kartesz 2010), but these records are discounted as being based on cultivated individuals (Nesom 2010h). {excluded; not keyed or mapped}

Fraxinus caroliniana P. Miller, Water Ash, Pop Ash, Carolina Ash. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): deeply to shallowly flooded swamps; common (rare in Piedmont). May; July-October. Se. VA south to s. FL, west to TX, primarily on the Coastal Plain. A small tree, sometimes very abundant (and nearly the only subcanopy species) as the understory in *Taxodium-Nyssa* swamps. [= RAB, C, G, GW, K, WH, Y, Z; > *F. caroliniana* var. *caroliniana* – F; > *F. caroliniana* var. *oblanceolata* (M.A. Curtis) Fernald & Schubert – F; > *F. caroliniana* var. *cubensis* (Grisebach) Lingelsheim – F, misapplied; > *F. caroliniana* – S; > *F. pauciflora* Nuttall – S]

Fraxinus cubensis Grisebach, Cuban Water Ash, approaches our area from the south (it is extensively distributed in peninsular FL), but is not know from the Flora area. {excluded; not keyed or mapped}

Fraxinus nigra Marshall, Black Ash. Mt (VA, WV), Pd (DE, VA), Cp (DE): seepage swamps and mountain streambanks; rare. April-May; August-October. NL (Newfoundland) and QC west to MB, south to DE, VA, IN, and IA. [= C, F, G, K, W, WV, Y, Z]

Fraxinus pennsylvanica Marshall, Green Ash, Red Ash. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): bottomlands and swamps, especially along brownwater rivers and streams; common. April-May; August-October. NS west to AB, south to FL and TX. Variation in this species (see synonymy) needs further study. [= C, GW, K, W, Z; > *F. pennsylvanica* var. *subintegerrima* (Vahl) Fernald – RAB, F, G, WV; > *F. pennsylvanica* var. *pennsylvanica* – RAB, F, G, WV; > *F. pennsylvanica* var. *austinii* Fernald – F; > *F. darlingtonii* Britton – S; > *F. pennsylvanica* – S; > *F. smallii* Britton – S; < *F. pennsylvanica* – WH; *? F. pennsylvanica* ssp. *pennsylvanica* – Y]

Fraxinus profunda (Bush) Bush, Pumpkin Ash. Cp (DE, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC): swamps, especially along blackwater rivers and streams and in freshwater tidal wetlands (as along the James, Pamunkey, Mattaponi, and Rappahannock rivers in e. VA), also in brownwater bottomlands; common (rare in Piedmont and Mountains). April-May; August-October. S. NJ south to n. FL, west to LA, mostly on the Coastal Plain, north in the interior to w. NC, sc. TN, e. AR, se. MO, s. IL, IN, OH, sc. MI, ne. PA, and w. NY. This species has a peculiar distribution; see McCormac, Bissell, & Stine (1995) and Nesom (2010) for additional discussion. The nomenclature has been controversial, but is now resolved. There is also some question as to its taxonomic recognition; it may be an allopolyploid derivative of *F. pennsylvanica*, perhaps from multiple origins. [= C, GW, K, W, Z; = *F. tomentosa* Michaux f. – RAB, F, G, Y; > *F. profunda* – S; > *F. michauxii* Britton – S; < *F. pennsylvanica* – WH]

Fraxinus quadrangulata Michaux, Blue Ash. Mt (GA, VA, WV): mesic to dry calcareous woodlands and forests; rare. April; July-October. S. ON west to s. MI and e. KS, south to sw. VA, e. TN, nw. GA, n. AL, and OK. [= C, F, G, K, S, WV, Y, Z]

Fraxinus biltmoreana Beadle, Biltmore Ash, Biltmore White Ash. {add data}

* *Fraxinus excelsior* Linnaeus, European Ash. Naturalized in ne. US, south to KY and s. NJ.

Fraxinus pauciflora Nuttall, Swamp White Ash. Cp (FL, GA): deep swamps; uncommon. {not yet keyed}

Fraxinus smallii Britton, Small's White Ash. {add data}

Jasminum Linnaeus 1753 (Winter Jasmine)

A genus of about 200 species, shrubs and woody vines, of tropical (and rarely temperate) Eurasia. References: Green in Kadereit (2004)

1 Leaves simple; flowers white ..... ***J. multiflorum***
1 Leaves trifoliolate; flowers yellow.
2 Leaflets 2.5-7 cm long; flowers 3.5-5 cm across ..... ***J. mesnyi***
2 Leaflets 1-3 cm long; flowers ca. 2.5 cm across ..... ***[J. nudiflorum]***

* ***Jasminum mesnyi*** Hance, Japanese Jasmine, Primrose Jasmine. Cp (FL, GA?): cultivated and sometimes persistent or spreading from plantings; rare, native of w. China. Reported for GA (Kartesz 1999) and Panhandle FL (Kunzer et al. 2009). [= K, WH]

* ***Jasminum multiflorum*** (Burmann f.) Andrews, Star Jasmine. Cp (FL): cultivated and sometimes persistent or spreading; rare, native of India and Pakistan. Naturalized at least as far north as Jacksonville, Duval County, FL (Wunderlin & Hansen 2004). [= K, WH]

* *Jasminum nudiflorum* Lindley, Winter Jasmine, native of China, is commonly planted and often persists. It has green stems and yellow flowers. Reported for GA (K). [= K]

Ligustrum Linnaeus 1753 (Privet)

[contributed by Guy L. Nesom and Alan S. Weakley]

A genus of about 40 species, shrubs and trees, of the Old World. References: Nesom (2009a)=Y; Hardin (1974)=Z; Green in Kadereit (2004). The key is based on Nesom (2009a) and Hardin (1974).

1 Leaves (3-) 4-13 (-15) cm long.
  2 Leaves mostly (3-) 4-8 (-9) cm long, primary lateral veins 3-5 pairs, apex acute to abruptly acuminate, abaxial midvein covered by epidermis; flowers short-pedicellate on pedicels 0.5-2 mm; corolla tube hardly exserted from calyx, ca. equal lobe length ..... ***L. japonicum***
  2 Leaves (4.5-) 6-13 (-15) cm, primary lateral veins (5-) 6-8 pairs, apex usually long-acuminate, abaxial midvein not covered by epidermis; flowers subsessile on pedicels 0-0.5 mm; corolla tube distinctly exserted from calyx, ca. 2× longer than lobes ..... ***L. lucidum***
1 Leaves 1.5–6 (-6.5) cm long.
  3 Branchlets glabrous and usually glossy..... ***L. ovalifolium***
  3 Branchlets minutely hirtellous, hirsute-hirtellous, or hirsutulous, dull.
    4 Leaf blades hirsutulous abaxially, rarely only along the nerves, sparsely hirsute-strigose adaxially, sometimes mostly near the margins, primary lateral veins (5-) 6-8 pairs, apices sharply acute (to slightly acuminate, or rarely obtuse)..... ***[L tschonoskii]***
    4 Leaf blades glabrous on both surfaces or sometimes sparsely hairy along the abaxial midvein, primary lateral veins (2-) 3-6 pairs, apices obtuse to acute (in *L. vulgare*) or obtuse to rounded.
      5 Leaf blades narrowly oblong-elliptic to oblanceolate-elliptic, oblanceolate or narrowly obovate, usually broadest slightly above the middle; inflorescence usually narrowly cylindric, flowers sessile to subsessile in verticil-like clusters..... ***L. quihoui***
      5 Leaf blades variously shaped; inflorescence broadly cylindric to pyramidal, flowers sessile to pedicellate in broadly cylindric to pyramidal panicles of cymes.
        6 Corolla tube < 1.2× as long as the lobes.
          7 Leaves ovate-elliptic to oblong-ovate, elliptic-lanceolate, or suborbicular, primary lateral veins (3-) 4-5 pairs, apex obtuse to rounded or retuse, abaxial midvein usually sparsely hirsutulous to puberulent; inflorescence diffuse and open panicles terminal and on essentially leafless, lateral branches interspersed with leafy ones; branchlets hirtellous to loosely substrigose with straight hairs of uneven length; corolla tube slightly shorter than lobes, often barely exserted from the calyx tube; pedicels glabrous..... ***L. sinense***
          7 Leaves elliptic-lanceolate to elliptic-ovate, primary lateral veins 4-6 pairs, apex obtuse to acute, abaxial midvein usually glabrous or with a few scattered hairs; inflorescence mostly a compact, terminal panicle; branchlets evenly and minutely hirtellous to hirsutulous with relatively even-length hairs; corolla tube equal the lobes or slightly shorter, distinctly exserted from the calyx tube; pedicels hirtellous ..... ***L. vulgare***
        6 Corolla tube 1.5-3× longer than the lobes.
          8 Leaf blades usually sparsely villous abaxially; calyx and pedicels sparsely to densely hirtellous (rarely nearly glabrous); corolla tube 2-3× as long as the lobes..... ***L. obtusifolium*** *var.* ***obtusifolium***
          8 Leaf blades usually glabrous abaxially; calyx and pedicels glabrous to very sparsely hirtellous; corolla tube 1.5-2× as long as the lobes ..... ***L. obtusifolium*** *var.* ***suave***

* ***Ligustrum japonicum*** Thunberg, Japanese Privet. Cp (FL, GA, NC, SC, VA), Pd (NC, VA): disturbed places; rare, native of Japan and Korea. April-June. [= RAB, K, WH, Y, Z]

* ***Ligustrum lucidum*** Aiton f., Glossy Privet, Broadleaf Privet. Pd (NC), Cp (FL, NC): disturbed places; rare, native of China, Japan, and Korea. This species is superficially similar to *L. japonicum*; the lateral leaf veins are translucent in this species. [= K, S, WH, Y, Z]

* ***Ligustrum obtusifolium*** Siebold & Zuccarini *var.* ***obtusifolium***. Cp (NC, VA), Pd (NC, VA), Mt (VA, WV), {SC}: disturbed places; uncommon (rare in WV), native of Japan. [= Y; = *L. obtusifolium* – C, F, G, K, Z]

* ***Ligustrum obtusifolium*** Siebold & Zuccarini *var.* ***suave*** (Kitagawa) H. Hara, Amur Privet. Cp, Pd (NC, VA), Mt (VA), {SC}: disturbed places; uncommon, native of Japan. [= Y; = *L. amurense* Carrière – RAB, C, F, G, K, Z; = *Ligustrum obtusifolium* Siebold & Zuccarini var. *amurense* (Carrière) Mansfeld]

* ***Ligustrum ovalifolium*** Hasskarl, California Privet. Cp (FL, NC, VA), Pd (NC, VA), Mt (WV): disturbed places; rare, native of Japan. April-July. [= RAB, C, F, G, K, S, WH, Y, Z]

* ***Ligustrum quihoui*** Carrière, Waxy-leaf Privet. Cp (FL, NC, VA): disturbed places; rare, native of China. May-July. [= K, WH, Y, Z]

* ***Ligustrum sinense*** Loureiro, Chinese Privet. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): moist forests, especially alluvial bottomlands; common, native of China. This species is one of the most noxious of our weeds, choking out native vegetation in hundreds of square kilometers of land in our area. The rapidity with which it has engulfed southern wetlands is hinted at by Small's (1933) mention of it only as "an escape in southern Louisiana." [= RAB, C, G, GW, K, S, W, WH, Y, Z]

* ***Ligustrum vulgare*** Linnaeus, Common Privet. Mt (WV), Pd (NC, VA), Cp (NC, VA): disturbed places; common (rare in NC and VA), native of Europe and n. Africa. (May-) June-July. [= C, F, G, K, S, WV, Y, Z]

Ligustrum tschonoskii Decaisne. Pd (DC): suburban forests; rare, native of Japan. Known in the flora area "only from the woods along the bank of Rock Creek in Rock Creek Park" (Nesom 2009a; Shetler and Orli 2000). Two varieties within *L. tschonoskii* were recognized by Noshiro (1985), distinguished by slight and overlapping size differences. Var. *tschonoskii* is restricted in native range to Japan; var. *kiyozumianum* (Nakai) Ohwi occurs in Japan and Korea. [= Y]

Osmanthus Loureiro 1790 (Wild Olive, Devilwood)

A genus of about 15-32 species, shrubs and trees, of se. Asia (most species) and se. North America. References: Hardin (1974)=Z; Green in Kadereit (2004).

1 Leaf margins entire; leaves usually >7 cm long; [native tree of Coastal Plain forests] ..... ***O. americanus***
1 Leaf margins spiny-toothed; leaves < 10 cm long; [horticulturally planted, rarely naturalizing] ..... ***O. ×fortunei***

Osmanthus americanus (Linnaeus) Bentham & Hooker f. ex A. Gray, Wild Olive, Devilwood. Cp (FL, GA, NC, SC, VA): maritime forests and (in FL, GA, SC, and extreme s. NC) dry, sandy forests well inland, and reported for wet habitats as well further south; uncommon (rare in VA). April-May; August-October. Se. VA south to c. peninsular FL, west to LA; also in Mexico. *O. megacarpus* Small, sometimes treated as a variety, *O. americanus* var. *megacarpus* (Small) P.S. Greene, is endemic to pine scrub in peninsular FL and differs primarily in having a larger fruit. The very hard, tough, and "unsplittable" wood is the inspiration for the common name "Devilwood." *O. americanus* is a conspicuous element of maritime forests in most of our area, readily recognizable by the flattened twigs characteristic of the family, and the opposite (or typically, actually subopposite), glossy, oblanceolate to obovate, evergreen leaves. [= RAB, F, G, GW, WH; = *O. americanus* var. *americanus* – C, K, Z; = *Amarolea americana* (Linnaeus) Small – S]

* ***Osmanthus ×fortunei*** Carrière [= *O. fragrans* × *heterophyllus*], Fortune's Sweet Olive. Pd (NC): suburban woodlands, escaped from horticultural plantings; rare, hybrid originating in Japan of two species native to Japan.

* ***Osmanthus heterophyllus*** D. Don, Holly Osmanthus. Pd (NC): suburban woodlands; rare, native of Japan. Naturalizing in Guilford County, NC (W. Cook, pers. comm. 2010). {not yet keyed}

Syringa Linnaeus 1753 (Lilac)

A genus of about 20-23 species, shrubs, from s. Europe to se. Asia. References: Hardin (1974)=Z; Green in Kadereit (2004).

* ***Syringa vulgaris*** Linnaeus, Lilac. Mt (NC, VA, WV): commonly planted, persistent and naturalizing around old farms; rare, native of se. Europe. [= C, F, G, K, Z]

365. TETRACHONDRACEAE Wettstein 1924 (Tetrachondra Family) [in LAMIALES]

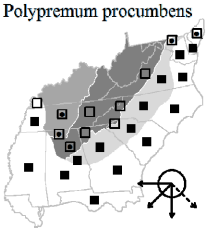
A family of 2 genera, *Polypremum* and *Tetrachondra* (Oxelman et al. 1999), and 3 species, perennial herbs, of s. North America south to South America, and New Zealand. The assignment of *Polypremum* to family has been controversial, with placement formerly in Loganiaceae or Buddleiaceae. A recent molecular analysis strongly suggests that its closest relationship is with *Tetrachondra* (Oxelman et al. 1999), and the treatment followed here reflects the current genral consensus. References: Oxelman et al. (1999); Wagstaff in Kadereit (2004).

Polypremum Linnaeus 1753 (Polypremum)

The genus is monotypic, an herb, or warm temperate, subtropical and tropical America. References: Rogers (1986)=Z; Wagstaff in Kadereit (2004).

Polypremum procumbens Linnaeus, Polypremum, Rustweed, Juniperleaf. Cp (DE, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): fields, disturbed areas; common, rare in Mountains. Late May-September; August-October. Se. NY, NJ, and MO south to FL and TX, and south into Central America, South Amerie West Indies. [= RAB, C, F, G, GW, K, S, W, Z]

Polypremum procumbens



368. PLANTAGINACEAE A.L. de Jussieu 1789 (Plantain Family) [in LAMIALES]

As newly and radically recircumscribed, a family of about 120 genera and 1800 species. References: Albach, Meudt, & Oxelman (2005); Olmstead et al. (2001); Schwarzbach in Kadereit (2004); Fischer in Kadereit (2004).

1 Leaves alternate, at least those on the upper stem; calyx 5-merous; stamens 4.
  2 Corolla lacking a spur or pouch at the base.
    3 Stem erect; flowers > 10 mm long; [tribe *Digitaleae*] ..... ***Digitalis***
    3 Stems prostrate; flowers < 5 mm long; [tribe *Limoselleae*] ..... ***Limosella***
  2 Corolla with a distinct spur or broad pouch protruding between the 2 lower calyx lobes; [tribe *Antirrhineae*].
    4 Corolla with a broad pouch at the base.

5 Calyx lobes about equal, all shorter than the the corolla tube; corolla 25-40 mm long; leaves to 15 mm wide.....***Antirrhinum***
5 Calyx lobes distinctly unequal, all longer than the corolla tube; corolla 10-13 mm long; leaves to 5 mm wide .....***Misopates***
4 Corolla with a slender spur at the base.
6 Flowers in terminal racemes.
7 Corolla yellow; capsule 9-12 mm long.....***Linaria***
7 Corolla blue; capsule 2-3 mm long.....***Nuttallanthus***
6 Flowers solitary in leaf axils.
8 Stems erect; leaves linear.....***Chaenorrhinum***
8 Stems prostrate; leaves orbicular, ovate, or triangular.
9 Leaves orbicular in outline, palmately lobed and veined; stems rooting at nodes .....***Cymbalaria***
9 Leaves ovate or triangular, pinnately veined; stems not rooting .....***Kickxia***
1 Leaves either strictly basal, or opposite or whorled throughout; calyx 0-, 4-, or 5-merous; stamens 1, 2, or 4.
10 Leaves strongly basally disposed, usually all the leaves basal; petals 4, scarious and translucent in texture; inflorescence a spike; [tribe *Plantagineae*].....***Plantago***
10 Leaves cauline, either opposite or whorled; petal 0, or 4, or 5; inflorescence various.
11 Leaves whorled.
12 Aquatic; leaves 5-30 mm long, lanceolate, toothed to deeply dissected into linear segments; [tribe *Gratioleae*] .....***Limnophila***
12 Terrestrial; leaves 40-15 cm long, lanceolate or elliptic, toothed; [tribe *Veroniceae*] .....***Veronicastrum***
11 Leaves opposite.
13 Petals 0; sepals 0, stamens 1; leaves both < 2 cm long and entire; [tribe *Callitricheae*] .....***Callitriche***
13 Petals 4 or 5; sepals 4 or 5; stamens 2 or 4; leaves > 2 cm long, or serrate, or both.
14 Calyx and corolla 4-merous.
15 Leaves punctate; stamens 4; [tribe *Gratioleae*].....***Scoparia***
15 Leaves not punctate; stamens 2; [tribe *Veroniceae*] .....***Veronica***
14 Calyx and corolla 5-merous.
16 Plants erect, moderately robust, usually > 4 dm tall, larger leaves > 5 cm long; inflorescences terminal (the bracts subtending flowers strongly reduced in size in comparison to main leaves of the stem); [tribe *Cheloneae*].
17 Inflorescence compact, the inflorescence axis generally hidden by the closely packed and overlapping flowers; each flower subtended by large overlapping bracts.....***Chelone***
17 Inflorescence more diffuse, the inflorescence axis readily visible between the flowers; flowers lacking extra subtending bracts .....***Penstemon***
16 Plants creeping, decumbent or erect, small, usually < 4 dm tall (except *Mecardonia*, to 5 dm tall), larger leaves < 5 cm long; inflorescences axillary (all or most of the flowers axillary to more-or-less normaly sized leaves).
18 Stamens 2; [section *Gratioleae*].
19 Capsule flattened, wider than long, notched; leaves dimorphic, with narrow submersed leaves on the lower stems, and broad floating leaves just subtending the aerial inflorescences; [of vernal pools on granite outcrops in Piedmont SC, GA, and AL].....***Gratiola amphiantha***
19 Capsule turgid, longer than wide; levaes monomorphic; [collectively of many habitats and widespread].
20 Flowers and fruits on definite pedicels; annual or perennial; leaves not papillose.....***Gratiola***
20 Flowers and fruits sessile or subsessile, the pedicels < 1 mm long; perennial; leaves papillose on the surfaces and margins.....***Sophronanthe***
18 Stamens 4.
21 Sepals evidently connate into a tube about as long as the lobes; [section *Cheloneae*] .....***Collinsia***
21 Sepals distinct or very nearly so.
22 Leaves deeply pinnatifid; [tribe *Stemodieae*].....***Leucospora***
22 Leaves entire or toothed; [tribe *Gratioleae*].
23 Corolla nearly radially symmetrical; corolla lobes about as long as the corolla tube; leaves palmately veined, with parallel veins diverging from the base, margins entire to crenulate; of aquatic to moist habitats, often somewhat succulent.....***Bacopa***
23 Corolla distinctly bilabiate; corolla lobes shorter than the corolla lobe; leaves pinnately veined, with a single main-vein and lateral veins diverging along it, margins serrate; of moist habitats, not succulent.....***Mecardonia***

Antirrhinum Linnaeus 1753 (Snapdragon)

A genus of about 20 species, herbs, of Mediterranean Europe. References: Sutton (1988)=Z; Pennell (1935)=P. [also see *Misopates*]

* ***Antirrhinum majus*** Linnaeus, Common Snapdragon. Mt (VA, WV), Pd (VA): cultivated, rarely persistent or naturalized; rare, native of Mediterranean Europe. July. [= C, G, K, P, WV, Z]

Bacopa Aublet 1775 (Water-hyssop)

A genus of about 50 species, herbs (mostly aquatic or at least wetland), of tropical, subtropical, and warm temperate regions of the Old and New Worlds. References: Schuyler (1989)=Z; Fernald (1942); Pennell (1935)=P.

1 Leaves obovate to oblanceolate, cuneate at the base, 1-veined (or with 1-2 additional obscure veins), 3-8 mm wide; stems glabrous; fresh plants not aromatic .....***B. monnieri***

1 Leaves mostly orbicular to ovate (or sometimes obovate in the very rare *B. repens*), rounded to clasping at the base, 3-9-veined; stems pubescent or puberulent, at least when young (check at growing tips) or glabrous (in tidal forms of *B. innominata*); fresh plants aromatic or not.
2 Fresh plants strongly aromatic when bruised; corolla pale to bright blue, 9-13 mm long; calyx subtended by 2 subulate bractlets; stamens 4 ..... ***B. caroliniana***
2 Fresh plants not aromatic when bruised; corolla predominantly white (in some species slightly pink or marked with yellow), 2-10 mm long; calyx not subtended by bractlets; stamens 2 or 4.
3 Corolla 4-10 mm long, white with a yellow throat; capsule ca. 5 mm long ..... ***B. rotundifolia***
3 Corolla 2-5 mm long, white or pink, without a yellow throat; capsule 2-3 mm long.
4 Leaves strongly clasping, mostly ovate; stamens 2 (or very rarely 4); [native] ..... ***B. innominata***
4 Leaves only slightly clasping, mostly obovate; stamens 4; [a very rare introduction] ..... ***B. repens***

Bacopa caroliniana (Walter) B.L. Robinson, Blue Water-hyssop, Sweet Water-hyssop, Carolina Water-hyssop, Lemon Bacopa. Cp (FL, GA, NC, SC, VA), Pd (GA, SC): wet shores, tidal muds, marshes; common (rare in NC and VA). May-September. Se. VA south to s. FL, west to e. TX; disjunct in KY. The strongly fragrant stems and leaves are unique. [= RAB, C, F, G, GW, K, W, WH; = *Hydrotrida caroliniana* (Walter) Small – P, S]

Bacopa innominata (Gómez Maza) Alain, Tropical Water-hyssop. Cp (FL, GA, NC, SC, VA): freshwater tidal muds, marshes, shallow water; uncommon (rare in GA, NC, SC, and VA). June-September. MD south to s. FL, and in the West Indies and Central America. *B. stragula* Fernald has been considered a rare endemic of tidal areas in VA and MD, differing from *B. innominata* in its glabrous stems (vs. pubescent), smaller flowers (the corolla < 3 mm long vs. > 3 mm long), and shorter, glabrous pedicels 3-6 mm long (vs. pubescent and to 8 mm long). Schuyler (1989) concluded that *B. stragula* is an intertidal form of *B. innominata*, the morphologic differences induced by the flooding regime. Additional work, perhaps involving growth under experimental conditions or chemical or molecular studies, is needed to corroborate Schuyler's conclusion. See Schuyler (1989), F, and Fernald (1942) for further discussion. [= C, GW, K, WH, Z; > *B. cyclophylla* Fernald – RAB; > *B. stragula* Fernald – F, G; *? Herpestis rotundifolia* Gaertner f. – P, S; *? Macuillamia obovata* Rafinesque – P]

Bacopa monnieri (Linnaeus) Wettstein, Monnier's Water-hyssop. Cp (FL, GA, NC, SC, VA): freshwater tidal marshes, muddy shores, streams and pools; common (uncommon in GA, NC, SC, and VA). E. VA south to s. FL, west to c. TX, and in the West Indies and the New World subtropics and tropics. [= RAB, C, F, G, GW, K, WH; = *Bramia monnieri* (Linnaeus) Drake – P, S]

* ***Bacopa repens*** (Swartz) Wettstein, South American Water-hyssop. Cp (SC): freshwater pools; rare, presumably native of the New World tropics. [= RAB, GW, K; = *Macuillamia repens* (Swartz) Pennell – P, S]

Bacopa rotundifolia (Michaux) Wettstein, Midwestern Water-hyssop. Cp (NC, VA): tidal muds, shallow water of large natural lake; rare. June-September. IN and IA west to ND and MT, south to AL and AZ; disjunct in e. MD, e. VA, and ne. NC, where apparently native (though C considers introduced). Known in NC only from Lake Mattamuskeet, Hyde County, where not seen since 1929. *B. simulans* Fernald has been considered a rare endemic of tidal areas in VA and MD. It is alleged to differ from *B. rotundifolia* in its glabrous to glabrescent stems (vs. pubescent), more succulent condition, smaller leaves (the larger 1-2 cm long and 0.6-1.5 cm wide vs. 2-3.5 cm long and 1.5-2.7 cm wide), smaller flowers (corolla 3-4 mm long vs. 6-10 mm long). Schuyler (1989) concluded that *B. simulans* is an intertidal form of *B. rotundifolia*, the morphologic differences the result of differences in inundation. Additional work, perhaps involving growth under experimental conditions or chemical or molecular studies, is needed to corroborate Schuyler's conclusion. See Schuyler (1989), F, and Fernald (1942) for further discussion. [= C, GW, K, Z; > *B. rotundifolia* – F, G; > *B. simulans* Fernald – F, G; = *Macuillamia rotundifolia* (Michaux) Rafinesque – P, S]

Callitriche Linnaeus 1753 (Water-starwort)

A genus of 20-50 species, annual and perennial herbs of aquatic, wetland, and upland habitats, nearly cosmopolitan. This genus should be included in a greatly expanded Plantaginaceae. References: Angiosperm Phylogeny Group (2003, 2009); Crow & Hellquist (2000)=Z; Fassett (1951)=Y; Erbar & Leins in Kadereit (2004). Key based on Z.

1 Flowers and young fruits with 2 inflated bracteoles at the base; leaves dimorphic (with floating rosettes of spatulate leaves and submersed linear leaves) or monomorphic.
2 Fruit margin distinctly winged, the wing nearly 0.1 mm wide, extending the entire distance from the summit to the base of the fruit; fruit globose ..... ***C. stagnalis***
2 Fruit margin either not winged or with a wing < 0.05 mm wide, narrowing towards the base of the fruit before ending above the base; fruit ellipsoidal, obovoid, or nearly heart-shaped.
3 Fruit as wide as long, obovoid or nearly heart-shaped ..... ***C. heterophylla*** *var.* ***heterophylla***
3 Fruit longer than wide by > 0.2 mm, ellipsoidal ..... ***C. palustris***
1 Flowers and young fruits lacking bracts at their base; leaves monomorphic, obovate-spatulate, rounded at the tip.
4 Mericarps bent at an angle and thickened on one side at the base; [of SC southward] ..... ***C. peploides***
4 Mericarps not bent at an angle nor thickened at the base; [collectively widespread].
5 Fruit on pedicels 0.5-7 mm long; margin of fruit curled over on itself, appearing thickened; fruit developing underground ..... ***C. pedunculosa***
5 Fruit on pedicels 0.1-0.6 mm long; margin of fruit narrow, thin; fruit developing aboveground ..... ***C. terrestris***

Callitriche heterophylla Pursh *var.* ***heterophylla***, Common Water-starwort. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): pools, slow-moving streams, ditches; common (uncommon in GA, NC, SC, and VA Piedmont, uncommon in Mountains). March-October. Greenland west to AK, south to c. peninsular FL, TX, CA, and Mexico. The other variety, var. *bolanderi* (Hegelmann) Fassett, with larger fruits, co-occurs with var. *heterophylla* in nw. North America

and is of uncertain taxonomic status, having been treated as species, subspecies, variety, and lumped. [< *C. heterophylla* – RAB, C, G, GW, S, W, WH, Z; > *C. heterophylla* – F; > *C. anceps* Fernald – F, Y; = *C. heterophylla* ssp. *heterophylla* – K; > *C. heterophylla* var. *heterophylla* – Y]

Callitriche palustris Linnaeus, Swamp Water-starwort. Cp (DE, VA), Pd (DE, VA), Mt (VA, WV): ponds, lakes, stagnant streams, wet soil; rare. Circumboreal, in North America south to VA, WV, IL, TX, and CA; South America. The nomenclatural debate between *C. palustris* and *C. verna* is difficult to resolve. [= C, F, K, S; = *C. verna* Linnaeus – G, W, Y, Z]

Callitriche pedunculosa Nuttall. Cp (FL, GA, NC), Pd (NC): low fields, pond shores; rare. NC, c. TN, and OK south to c. peninsular FL, AL, and TX. [= K, WH; = *C. nuttallii* Torrey – GW, Y, Z]

Callitriche peploides Nuttall. Cp (FL, GA, SC): low fields, ditches; rare. April-June. SC south to s. FL, west to TX; disjunct inland in TN, AR; e. Mexico south to Costa Rica. [= RAB, GW, K, S, WH; > *C. peploides* var. *peploides* – Y]

* ***Callitriche stagnalis*** Scopoli. Pd (DE, VA), Mt (VA), Cp (VA): ponds, stagnant water, wet soil; rare, native of Europe, or possibly also native in some areas. See Philbrick, Aakjar, & Stuckey (1998) for additional discussion of the spread of this species in North America. [= C, F, G, K, Y, Z]

Callitriche terrestris Rafinesque emend. Torrey, Terrestrial Water-starwort. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): streambanks, ditches, low fields, wet paths; uncommon. April-June. MA to KS, south to GA, TX, and Mexico. [= C, GW, K, S, W, Z; = *C. deflexa* A. Braun – RAB, Y; > *C. deflexa* var. *austinii* (Engelmann) Hegelmann – F, G]

Chaenorrhinum (A.P. de Candolle ex Duby) Reichenbach 1828
(Dwarf Snapdragon, Lesser Toadflax)

A genus of about 21 species, herbs, of Mediterranean Europe. References: Sutton (1988)=Z; Pennell (1935)=P.

* ***Chaenorrhinum minus*** (Linnaeus) Lange *ssp.* ***minus***, Dwarf Snapdragon, Small Toadflax, Lesser Toadflax. Mt (VA, WV), Cp (VA), Pd (DE, GA, NC, VA): disturbed areas; common (rare in DE, GA, and NC), native of Eurasia. June-November. [= Z; ? *Chaenorrhinum minus* – C, F, G, K, P, W]

Chelone Linnaeus 1753 (Turtlehead)

A genus of about 4 species, perennial herbs, of e. North America. References: Nelson, Elisens, & Benesh (1998); Pennell (1935)=P.

Identification notes: The four fertile stamens are inserted on either side of the corolla near its base and are flattened and conspicuously pilose. The single staminodium (the color of which is used in the key) is much shorter (often only a few mm long), and is inserted uppermost on the corolla near its base.

1 Leaves sessile; flowers distinctly 4-ranked; staminodium purple; corolla purple ..... ***C. cuthbertii***
1 Leaves with petioles 0.5-1.5 cm long (or subsessile in *C. glabra*); flowers less distinctly 4-ranked; staminodium white or green; corolla purple or white.
  2 Petioles 1.5-4 cm long; leaf blade rounded at the base; leaf blades averaging ca. 2× as long as wide, 4-8 cm wide; staminodium white; corolla purple ..... ***C. lyonii***
  2 Petioles 0.1-1.5 cm long; leaf blade cuneate at the base; staminodium white or green; leaf blades averaging 3× (or more) as long as wide, 1-6 cm wide; corolla purple or white.
    3 Corolla white (or tinged with purple near the summit); staminodium green ..... ***C. glabra***
    3 Corolla purple throughout; staminodium white ..... ***C. obliqua***

Chelone cuthbertii Small, Cuthbert Turtlehead. Mt (GA, NC, SC, VA), Pd (NC), Cp (NC, VA): bogs, sphagnous swamps, seeps; uncommon (rare in GA, rare in Piedmont). Late July-September; September-October. This species has a curious, disjunct distribution: Mountains and rarely upper Piedmont of w. NC and n. GA, and Coastal Plain of se. VA and e. NC. The species is diploid (Nelson, Elisens, & Benish 1998). [= RAB, C, F, G, GW, F, K, P, S, W]

Chelone glabra Linnaeus, White Turtlehead. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): streambanks, seeps, swamp forests; common. August-October; September-November. NL (Newfoundland) and MN south to GA and AL. The named varieties are intergrading and the characters used to distinguish them do not correlate well. The species is diploid (Nelson, Elisens, & Benish 1998). [= RAB, C, GW, K, W; > *C. glabra* var. *dilatata* Fernald & Wiegand – F, P; > *C. glabra* var. *elatior* Rafinesque – F, G, P, S; > *C. glabra* var. *elongata* – F, G, P, S; > *C. glabra* var. *ochroleuca* Pennell & Wherry – F, G, P, S; > *C. glabra* var. *glabra* – F, G, S; > *C. glabra* var. *chlorantha* (Pennell & Wherry) Pennell – P; > *C. glabra* var. *typica* – P; > *C. chlorantha* Pennell & Wherry – S; > *C. montana* (Rafinesque) Pennell & Wherry var. *montana* – S; > *C. montana* var. *elatior* (Rafinesque) Small – S]

Chelone lyonii Pursh, Appalachian Turtlehead. Mt (NC, SC, WV*), Pd (NC, SC): cove forests, spruce-fir forests, balds, streambanks; uncommon. July-September; October. W. NC and e. TN south to nw. SC. The species is diploid (Nelson, Elisens, & Benish 1998). [= RAB, C, GW, K, W; = *C. lyoni* – F, G, P, S, orthographic variant]

Chelone obliqua Linnaeus, Purple Turtlehead. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA, NC, SC): streambanks, swamp forests; uncommon. October; November. MD and MN south to AL, w. TN, and MO. A tetraploid race is restricted to the southern Blue Ridge; plants in the remainder of the distribution are hexaploid (Nelson, Elisens, & Benish 1998). [= RAB, C, GW, F, G, S, W; > *C. obliqua* var. *obliqua* – K; > *C. obliqua* var. *typica* – P; > *C. obliqua* var. *erwiniae* Pennell & Wherry – K, P]

Collinsia Nuttall 1817 (Blue-eyed Mary)

A genus of about 20 species, herbs, of North America (especially diverse in w. North America). References: Pennell (1935)=P

Collinsia verna Nuttall, Eastern Blue-eyed Mary. Mt (VA, WV): nutrient-rich, moist bottomlands and forested slopes; uncommon (rare in VA). April-June. NY west to s. WI, south to w. VA, WV, nc. TN (Chester, Wofford, & Kral 1997), KY, and AR. [= C, F, G, K, P, S, W, WV]

Cymbalaria Hill 1756 (Kenilworth-ivy)

A genus of about 9 species, herbs, of Europe west to c. Asia. References: Sutton (1988)=Z; Pennell (1935)=P.

* ***Cymbalaria muralis*** P.G. Gaertner, B. Meyer, & Scherbius *ssp.* ***muralis***, Kenilworth-ivy. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE, VA): naturalized on walls and rock outcrops near plantings, roadsides, disturbed areas; uncommon (rare in NC and VA), native of Eurasia. May-August. The other two subspecies, both villous throughout (vs. glabrous or with a few scattered hairs in ssp. *muralis*) are Mediterranean and are not known to be naturalized in North America. Reported for NC (Henderson County) by Pittillo & Brown (1988) as "derived from potted plants that have become established beneath the overhang of a porch for over a decade," and reported again more recently as spreading from plantings in Alleghany County, NC (Poindexter 2006) and Buncombe County, NC (C.A. McCormick, pers.comm. 2009). Reported by Pennell (1935) as being "in herbaria" from DC, KY, MD, SC, TN, WV, and other states beyond our area. [= Z; < *C. muralis* – C, F, G, K, P, WV; = *C. cymbalaria* (Linnaeus) Wettstein;= *Linaria cymbalaria* (Linnaeus) P. Miller]

Digitalis Linnaeus 1753 (Foxglove)

A genus of about 19 species, herbs, of Europe west to central Asia. Famous as the source of the drug digitalis, a cardiac glycoside. References: Pennell (1935)=P.

1 Corolla 1.3-1.8 cm long, pale yellow to white; plant nearly glabrous ..... ***[D. lutea]***
1 Corolla 2-5.5 cm long, white, yellow, or purple; plant conspicuously pubescent on the stem and/or leaves.
  2 Corolla 2-3 cm long, white to pale yellow, the lower median lobe much longer than the others ..... ***D. lanata***
  2 Corolla 4-5.5 cm long, purple or white, the lower median lobe only slightly longer than the others ..... ***D. purpurea***

* ***Digitalis lanata*** Ehrhart, Grecian Foxglove, Hairy Foxglove. Pd (SC), Mt (VA): naturalized along roadside; rare, native of Mediterranean Europe. May-June. Reported for South Carolina by Hill & Horn (1997). [= C, F, G, K, P]

* ***Digitalis purpurea*** Linnaeus, Digitalis, Common Foxglove, Purple Foxglove, Lady's-glove. Mt (NC, WV), Cp (VA): disturbed areas, bog margins; uncommon (rare in NC and VA), native of Europe. June-August. Introduced and established at scattered locations in ne. North America, as far south as PA (Rhoads & Klein 1993). [= C, P, WV; > *D. purpurea* var. *purpurea* – K; > *D. purpurea* var. *alba* – K]

* *Digitalis lutea* Linnaeus, Straw Foxglove. Naturalized south to MD, PA, and OH. [= C, G, K]

Gratiola Linnaeus 1753 (Hedge-hyssop)

A genus of about 20 species, herbs, of temperate regions (and tropical mountains) of the Old and New Worlds. References: Estes & Small (2007)=Z; Estes & Small (2008)=Y; Pennell (1935)=P. Key based in part on Estes & Small (2007). [including *Amphianthus*]

Identification notes: *Gratiola amphiantha* somewhat resembles *Callitriche*, but has floating leaves in single pairs rather than in a whorl.

1 Capsule flattened, wider than long, notched; leaves dimorphic, with narrow submersed leaves on the lower stems, and broad floating leaves just subtending the aerial inflorescences; [of vernal pools on granite outcrops in Piedmont SC, GA, and AL] ..... ***G. amphiantha***
1 Capsule turgid, longer than wide; leaves monomorphic; [collectively of many habitats and widespread].
  2 Flowers and fruits sessile or subsessile, the pedicels < 1 mm long; perennial.
    3 Leaves linear-subulate; corolla 2-3× as long as the calyx ..... ***[see Sophronanthe hispida]***
    3 Leaves ovate; corolla 1-1.5 × as long as the calyx ..... ***[see Sophronanthe pilosa]***
  2 Flowers and fruits on definite pedicels; annual or perennial.
    4 Leaves clasping or subclasping-rounded at the base; perennial; [section *Gratiola*].
      5 Calyx subtended by 0 (-1) bractlet; corolla lobes white; corolla tube greenish yellow, conspicuously veined ..... ***G. ramosa***
      5 Calyx subtended by 2 bractlets; corolla lobes white or yellow-orange; corolla tube greenish yellow and conspicuously veined, or orange and not conspicuously veined.
        6 Corolla lobes and tube yellow-orange (very rarely white), not conspicuously veined; sepals and flower stalks sparsely or not at all glandular-puberulent ..... ***G. aurea***
        6 Corolla lobes white to lavender, corolla tube greenish yellow, usually conspicuously veined; sepals and flower stalks densely glandular-puberulent.

7 Leaves triangular to lanceolate, margins entire, or with a few teeth toward the tip; corolla veined with brown lines; sepals linear-lanceolate ..... ***G. brevifolia***
7 Leaves oblong-ovate to ovate (or linear-lanceolate in submersed forms), finely dentate; corolla veined with purple lines; sepals lanceolate to oblong-lanceolate ..... ***G. viscidula***
4 Leaves cuneate at the base; annual; [section *Nibora*].
8 Pedicels stout, erect, 1-5 (-12) mm long ..... ***G. virginiana***
8 Pedicels slender, spreading, 10-45 mm long.
9 Corolla 13-25 mm long; leaves oval or oblanceolate ..... ***G. floridana***
9 Corolla 5-14 mm long; leaves elliptic, rhombic-lanceolate, or lanceolate
10 Mid-stem leaves (6-) 7-13 (-18) mm long; proximal fruiting pedicels (5-) 7-17 (-22) mm long, (0.9-) 1-2 (-2.3) × as long as the subtending bracteal leaves; bracteoles shorter than to barely exceeding the sepals; [of granite outcrops in the GA Piedmont] ..... ***G. graniticola***
10 Mid-stem leaves (11-) 20-41 -66) mm long; proximal fruiting pedicels (8-) 13-25 (-37) mm long, (0.3-) 0.5-1 (-1.6) × as long as the subtending bracteal leaves; bracteoles slightly to conspicuously longer than the sepals; [collectively of more habitats and more widespread].
11 Leaves narrowly elliptic or rhombic to oblanceolate, not conspicuously falcate, (2.7-) 5-11 (-18) mm wide, (2.5-) 3.5-5 (-6)× as long as wide; leaf margins with (1-) 3-5 (-7) teeth per side; primary veins 3-5 (-7); mid-stem moderately to densely glandular pubescent (rarely glabrate); seeds (0.18-) 0.22-0.26 (-0.29) mm thick; [widespread] ..... ***G. neglecta***
11 Leaves linear, linear-lanceolate, to elliptic-lanceolate, often falcate, (1-) 2.5-4 (-4.5) mm wide, (5.5-) 6-9.5 (-11)× as long as wide; leaf margins with 0-2 (-3) teeth per side; primary veins 1 (-3); mid-stem glabrous; seeds (0.19-) 0.26-0.32 (-0.37) mm thick; [limestone cedar glades of n. AL and c. TN] ..... ***G. quartermaniae***

Gratiola amphiantha D. Estes & R.L. Small, Pool-sprite, Snorkelwort. Pd (GA, SC): vernal pools on granitic flatrocks; rare. April. Endemic to granitic flatrocks of ec. AL, nc. GA (17 counties), and sc. SC. Hilton & Boyd (1996) and Patrick, Allison, & Krakow (1995) discuss the ecology and population ecology of this remarkable plant in detail. [= Y; = *Amphianthus pusillus* Torrey – RAB, GW, K, P, S]

Gratiola aurea Pursh, Yellow Hedge-hyssop, Golden-pert. Cp (DE, FL, GA, NC, SC): blackwater river banks, pondcypress savannas in Carolina bays, other acidic wetlands; uncommon (rare in FL). May-September. NL (Newfoundland) and QC south in the Coastal Plain to Panhandle FL; disjunct around the Great Lakes and inland in NY, ON, IL, and ND. [= RAB, C, F, G, GW, K, S, WH; > *G. lutea* Rafinesque var. *typica* – P; > *G. lutea* var. *obtusa* (Pennell) Pennell – P]

Gratiola brevifolia Rafinesque. Cp (DE, FL, GA): wet places; uncommon (rare in DE and FL). E. GA, south and west to c. peninsular FL, e. Panhandle FL, and se. AL; c. AR, se. OK, se. LA, and e. TX; c. TN; s. DE (Knapp & Estes 2006). Previous reports from SC are based on misidentifications (Knapp & Estes 2006). [= GW, K, P, S, WH]

Gratiola floridana Nuttall. Cp (FL, GA), Mt (GA), Pd (GA): stream banks, spring runs, blackwater swamps; uncommon. Ne. GA and se. TN (in counties adjacent to NC) (Chester, Wofford, & Kral 1997), south to e. GA (in counties adjacent to SC) (Jones & Coile 1988), ne. FL, Panhandle FL, AL, and MS. [= GW, K, P, S, WH]

Gratiola graniticola D. Estes, Granite Hedge-hyssop. Pd (GA, SC): granitic flatrocks; rare. April-May. Endemic to granitic flatrocks of GA and SC (Estes & Small 2007, 2008; Brunton 2009). [= Z; < *G. neglecta* – RAB, GW, K, P, S]

Gratiola neglecta Torrey, Mud-hyssop. Cp (DE, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): ditches, wet areas, bottomlands; common. March-October. QC and ME west to BC, south to c. GA, e. TX, AZ, and CA. [= Z; < *G. neglecta* - RAB, C, G, GW, K, P, S, W, WV; < *G. neglecta* var. *neglecta* – F]

Gratiola quartermaniae D. Estes, Limestone Hedge-hyssop, Quarterman's Hedge-hyssop. Ip (TN): limestone glades; rare. April-early June. C. TN south to n. AL; c. TX (Edwards Plateau); s. ON; ne. IL. [= Z; < *G. neglecta* – C, G, GW, K, P, S, W; < *G. neglecta* var. *neglecta* – F]

Gratiola ramosa Walter. Cp (FL, GA, NC, SC, VA): wet pine savannas, marshes, pond margins; ditches; common (rare in VA). May-June. Se. NC south to s. FL, west to sw. LA; disjunct in se. VA (Greensville County) and (at least historically) in e. MD. [= RAB, C, F, G, GW, K, P, S, WH]

Gratiola virginiana Linnaeus, Virginia Hedge-hyssop. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, WV): sluggish streams, bogs, wet areas; common (uncommon in WV). March-May. NJ west to OH and IA and KS, south to c. peninsular FL and e. TX. Var. *aestuariorum* Pennell, of s. NJ south to e. VA, is alleged to differ in being shorter, with more rounded leaves, short pedicels (< 2 mm long), a shorter calyx and corolla, and a smaller capsule; it is likely merely a stunted aquatic form, but needs additional study (see F and P for additional details). [= RAB, C, G, GW, S, W, WH, WV; > *G. virginiana* var. *virginiana* – F, K, P; > *G. virginiana* var. *aestuariorum* Pennell – F, K, P]

Gratiola viscidula Pennell, Viscid Hedge-hyssop. Cp (DE, FL, NC, SC, VA), Pd (NC, SC, VA), Mt (GA, NC, SC): bogs, wet areas, ditches, margins of Coastal Plain ponds; common (uncommon in Mountains, rare in DE and FL, rare in VA Piedmont). June-November. DE, MD and e. VA, south to c. SC and ne. GA; disjunct in s. OH, WV, e. TN, MO, and ne. FL. Spooner (1984) studied infraspecific taxa recognized in *G. viscidula* and determined that they did not warrant recognition. [= RAB, C, F, GW, K, S, W, WH; > *G. viscidula* var. *viscidula* – G; > *G. viscidula* var. *shortii* Pennell – G, P; > *G. viscidula* var. *typica* – P]

Kickxia Dumortier 1827 (Fluellen, Cancerwort)

A genus of about 47 species, herbs, of Mediterranean Europe west to c. Asia. References: Sutton (1988)=Z; Pennell (1935)=P.

1 Leaves round-ovate, rounded to cordate at the base; pedicels villous throughout their length; [ballast waif] ..... ***K. spuria***
1 Leaves triangular-ovate or hastate, truncate at the base; pedicels glabrous through much of their length **or** villous; [more widespread alien].

2 Stems densely villous; stems robust (usually 1.5-3.5 mm thick), often much-branched; pedicels 5-12 (-20) mm long, 0.25-0.35 mm in diameter, often villous their entire lengths ..... ***K. elatine ssp. crinita***
2 Stems sparsely villous; stems slender (to 1.5 mm thick), sparingly (if at all) branched, pedicels mostly (8-) 15-25 (-30) mm long, 0.1-0.2 mm in diameter, glabrous except for immediately below the calyx ..... ***K. elatine*** *ssp.* ***elatine***

* ***Kickxia elatine*** (Linnaeus) Dumortier *ssp.* ***crinita*** (Mabille) W. Greuter, Sharp-leaved Fluellen. Pd (NC, VA), Cp (VA), {GA?}: disturbed areas; uncommon, native of Eurasia. May-November. [= Z; < *K. elatine* – RAB, C, F, G, K, P, S]
* ***Kickxia elatine*** (Linnaeus) Dumortier *ssp.* ***elatine***, Sharp-leaved Fluellen. Pd (NC, SC, VA), Mt (NC, VA, WV), Cp (VA), {GA?}: disturbed areas; uncommon, native of Eurasia. May-November. [= Z; < *K. elatine* – RAB, C, F, G, K, P, S, WV]
* ***Kickxia spuria*** (Linnaeus) Dumortier, Round-leaved Fluellen, Female Fluellen. Cp (FL, NC): ballast near old port (Wilmington, New Hanover County, NC), other disturbed sites; rare, perhaps onlya waif, native of s. Europe. July. [= RAB, C, F, G, K, P, S, WH; > *K. spuria* ssp. *spuria* – Z]

Leucospora Nuttall 1834 (Leucospora)

A genus of 2 species, herbs, of e. North America and Coahuila, Mexico. *Leucospora* may not be distinct from *Stemodia*. References: Pennell (1935)=P.

Leucospora multifida (Michaux) Nuttall, Leucospora, Narrowleaf Paleseed. Cp* (FL*, NC*), Pd (VA*), Mt (GA, WV): moist to wet, sandy margins of artificial ponds, drawdown areas on riverbanks, drawdown depressional wetlands, other seasonally ponded disturbed areas; rare, probably introduced in most of our area from c. United States. S. ON west to IA and KS, south to nw. GA, AL, LA, and e. TX; scattered occurrences further east (as in e. NC, FL, KY, TN, VA, and se. PA) may be recent introductions. [= C, G, GW, K, P, S; = *Conobea multifida* (Michaux) Bentham – F, WH; = *Stemodia multifida* (Michaux) Sprengel]

Limnophila R. Brown 1810 (Marshweed)

A genus of about 37 species, of tropical regions of the Old World.

* ***Limnophila sessiliflora*** (Vahl) Blume, Asian Marshweed. Cp (FL, GA): ponds, ditches, lakes; rare, native of Old World tropics. Reported as introduced in sw. GA (Jones & Coile 1988). [= GW, K, WH]

Limosella Linnaeus 1753 (Mudwort, Awl-leaf)

A genus of about 11 species, aquatic herbs, of cosmopolitan distribution. References: Pennell (1935)=P.

Limosella australis R. Brown, Mudwort, Awl-leaf. Cp (DE, NC, VA): fresh or slightly brackish tidal flats; rare. June. NL (Newfoundland) and QC south along the Atlantic Coast to se. VA and extreme ne. NC. This plant is very inconspicuous, though locally abundant. [= K; ? *L. subulata* Ives – RAB, C, F, G, GW, P]

Linaria P. Miller 1754 (Yellow-toadflax)

A genus of about 150 species, of temperate regions of Eurasia. References: Sutton (1988)=Z; Pennell (1935)=P. [also see *Nuttallanthus*]

* ***Linaria vulgaris*** P. Miller, Butter-and-eggs, Yellow Toadflax, Wild-snapdragon. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, VA), Cp (DE, GA, NC, VA): fields, pastures, roadsides, disturbed areas; common (uncommon in Piedmont of GA and NC, rare in Coastal Plain of GA and NC), native of Europe. Reported for Coastal Plain of GA (Taylor County) by Carter, Baker, & Morris 2009). [= RAB, C, F, G, K, P, W, WV, Z; = *Linaria linaria* (Linnaeus) Karsten – S]

* ***Linaria maroccana*** Hooker f., Moroccan Toadflax. Mt (WV), Pd (VA): disturbed areas; rare, native of n. Africa. Introduced in VA (perhaps just a waif) and WV. [= K] {investigate; not yet keyed; synonymy incomplete}

Mecardonia Ruiz & Pavón 1794 (Mecardonia, Axil-flower)

A genus of about 10 species, of tropical, subtropical, and warm temperate regions of America. References: Pennell (1935)=P.

1 Corolla yellow; outer sepals broadly lanceolate to ovate, overlapping the shorter, much narrower inner sepals ..... ***M. procumbens***
1 Corolla white, with purple veins; sepals lanceolate nearly equal in length.
2 Peduncles > 10 mm long; sepals < 2 mm wide ..... ***M. acuminata*** *var.* ***acuminata***
2 Peduncles < 10 mm long; sepals > 2 mm wide ..... ***[M. acuminata*** *var.* ***microphylla]***

Mecardonia acuminata (Walter) Small *var.* ***acuminata***, Mecardonia, Common Axil-flower. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA): marshes, ditches, bottomland forests, wet disturbed areas; common (uncommon in DE, uncommon in Piedmont of VA). July-September; August-October. DE and MD south to n. peninsular FL, west to e. TX, north in the interior to KY, TN, and MO. The long, ascending pedicels are distinctive. The plant blackens on drying. [= K, S; < *M. acuminata* – RAB, C, G, GW; < *Bacopa acuminata* (Walter) B.L. Robinson – F; = *Pagesia acuminata* (Walter) Pennell ssp. *typica* – P; = *M. acuminata* ssp. *acuminata* – WH]

Mecardonia acuminata (Walter) Small *var.* ***microphylla*** (Rafinesque) Pennell, Pond Axil-flower. Cp (FL, GA): margins of Coastal Plain ponds; rare. Sc. GA south to Panhandle FL and west to e. LA. [= K, S; < *M. acuminata* – GW; = *Pagesia acuminata* (Walter) Pennell ssp. *microphylla* (Rafinesque) Pennell – P; = *M. acuminata* var. *microphyla* – WH (misspelling)]

Mecardonia procumbens (Miller) Small, Baby Jump-up. Cp (AL, FL, LA): ponds, streams, ditches; rare. June-September. [= K, WH; ? *M. vandelliodes* (Kunth) Pennell – GW, misspelled; = *Pagesia procumbens* (Miller) Pennell – P; > *M. procumbens* – S; > *M. tenuis* Small – S; ? *M. vandellioides* (Kunth) Pennell]

Misopates Rafinesque 1840 (Weasel's-snout)

A genus of about 8 species, herbs, of Mediterranean Europe and n. Africa west to c. Asia. References: Sutton (1988)=Z; Pennell (1935)=P.

* ***Misopates orontium*** (Linnaeus) Rafinesque, Weasel's-snout, Lesser Snapdragon. Pd (VA), Cp (FL): disturbed sites; rare, cultivated, persistent or possibly naturalized, native of Eurasia. Introduced at least far south as se. PA (Rhoads & Klein 1993), KY (Pennell 1935), and FL Panhandle (Hansen & Wunderlin 2008). [= K, WH; = *Antirrhinum orontium* Linnaeus – C, G, P, Z]

Nuttallanthus D.A. Sutton 1988 (American-toadflax)

A genus of 4 species, herbs, of North and South America. Sutton (1988) separates these three species, along with *N. subandinus* (Diels) D.A. Sutton, of Bolivia, Chile, Ecuador, Peru, and Uruguay, from *Linaria* on the basis of "the corolla with the abaxial lip greatly exceeding the adaxial lip; the palate weakly developed and scarcely occluding the tube; the spur very slender or absent and the prismatic seeds with 4-7 longitudinal ridges." *Nuttallanthus* is American; *Linaria* is Eurasian. References: Sutton (1988)=Z; Pennell (1935)=P. Key based on Z.

1 Infructescence axis zigzag; fruiting pedicels densely glandular pubescent, 5-13 mm long, 2× or more as long as the calyx ..... ***N. floridanus***
1 Infructescence axis straight or nearly so; fruiting pedicels glabrous or with a few scattered glandular hairs, 2-6 (-9) mm long, < 1× as long as the calyx.
  2 Corolla 8-11 (-13) mm long (measured from the tip of the spur to the apex of the adaxial lip), the abaxial lip 2-6 mm long; seeds longitudinally ridged, the intervening faces smooth or with sparse low tubercles ..... ***N. canadensis***
  2 Corolla 14-22 mm long (measured from the tip of the spur to the apex of the adaxial lip), the abaxial lip 6-11 mm long; seeds densely tuberculate, not longitudinally ridged ..... ***N. texanus***

Nuttallanthus canadensis (Linnaeus) D.A. Sutton, Common Toadflax. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): in a wide variety of natural and disturbed habitats, especially common and weedy in disturbed sites such as roadsides and fields, also common and apparently native in thin soil of rock outcrops; common (rare in WV, rare in Mountains of VA). March-May. NS west to ND, south to s. FL and TX; also adventive on the west coast, from WA to CA. Sutton (1988) comments that there is substantial variation in this species not taxonomically explained. [= K, Z; < *Linaria canadensis* (Linnaeus) Dumortier – RAB, W (also see *N. texanus*); = *Linaria canadensis* var. *canadensis* – C, F, G, S; = *Linaria canadensis* (Linnaeus) Dumortier – P, WH, WV]

Nuttallanthus floridanus (Chapman) D.A. Sutton, Florida Toadflax. Cp (FL, GA): sandhills, scrub, dunes, other dry, sandy places; uncommon. E. GA south to s. FL and west to s. MS. [= K, Z; = *Linaria floridana* Chapman – P, S, WH]

Nuttallanthus texanus (Scheele) D.A. Sutton, Texas Toadflax. Cp (FL, GA, NC*?, SC*, VA*?), Pd (NC*, SC): granite flatrocks, dry sandy soils, tdisturbed soils of roadsides and fields; uncommon, native of sc. United States, not clear how far east the original range extended. March-May. Ranging as a native species in sc. and sw. North America and in temperate South America; introduced elsewhere (as in most of our area, the exact limits unclear). [= K, Z; < *Linaria canadensis* (Linnaeus) Dumortier – RAB, W; = *Linaria canadensis* var. *texana* (Scheele) Pennell – C, F, G, S; = *Linaria texana* Scheele – P, WH]

Penstemon Mitchell 1769 (Beard-tongue, Penstemon)

A genus of about 250 species, perennial herbs and shrubs, of w. North America, e. North America, and (a single species) ne. Asia. References: Clements, Baskin, & Baskin (1998)=Z; Pennell (1935)=P. Key based in part on Z.

1 Cauline leaves bipinnatifid; basal leaves sessile; [endemic to GA]; [section *Dissecti*] ..... ***P. dissectus***
1 Cauline leaves entire or toothed; basal leaves petioled; [collectively widespread].
  2 Inflorescence with many nodes; anther cells dehiscing by short proximal slits; [s. GA south to s. FL]; [section *Multiflori*] ..... ***P. multiflorus***
  2 Inflorescence with <10 nodes; anther cells dehiscing their entire length; [collectively widespread].
    3 Corolla glandular-pubescent within; [section *Tubiflori*] ..... ***[P. tubiflorus]***
    3 Corolla pubescent with non-glandular hairs within; [section *Graciles*].

4 Lower lobes of the corolla essentially equaling the upper lobes; corolla throat with little ridging on its floor; sterile filament slightly to moderately bearded.
5 Anthers with short, stiff hairs; corolla white, lined with purple.
6 Stems pubescent; inflorescence glabrous or slightly glandular-pubescent; corolla 16-23 mm long ..... ***[P. alluviorum]***
6 Stems glabrous, shiny and slightly glaucous; inflorescence glandular-pubescent; corolla 23-30 mm long ..... ***P. digitalis***
5 Anthers glabrous; corolla purple to violet.
7 Sepals long-attenuate, to 12 mm long; leaves finely serrate; corolla 20-35 mm long ..... ***P. calycosus***
7 Sepals < 8 mm long; leaves obscurely serrate; corolla lobes strongly deflexed; corolla 15-22 mm long ..... ***P. laevigatus***
4 Lower lobes of the corolla projecting beyond the upper lobes; corolla throat strongly ridged on its floor; sterile filament densely bearded (only moderately bearded in *P. pallidus*).
8 Throat of corolla more-or-less closed by a palate formed by the upward arch of the corolla lip (opened only by the weight of the landing pollinator).
9 Buds yellow-purple; corolla violet-purple with white lobes (fading white when dried); leaves essentially glabrous ..... ***P. hirsutus***
9 Buds yellow; corolla creamy white; leaves pubescent ..... ***[P. tenuiflorus]***
8 Throat of corolla open.
10 Peduncles strongly ascending, the inflorescence therefore narrow; corolla reddish-purple ..... ***P. australis***
10 Peduncles spreading, the inflorescence therefore relatively broad; corolla white to violet or purple.
11 Leaves velvety pubescent; corolla white with fine purple lines ..... ***P. pallidus***
11 Leaves pubescent, but not velvety; corolla violet or purple.
12 Basal leaves truncate or cordate at base; lower bracts of inflorescence foliose, slightly smaller than the cauline leaves ..... ***P. smallii***
12 Basal leaves cuneate at base; lower bracts of inflorescence reduced, much smaller than the cauline leaves.
13 Cauline leaf blades wide, ovate-lanceolate to ovate ..... ***P. canescens***
13 Cauline leaf blades narrow, acute to acuminate ..... ***P. laxiflorus***

Penstemon australis Small, Southern Beardtongue, Sandhill Beardtongue. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, SC): sandhills, flatwoods, dry hammocks, dry sandy roadsides; common (rare in Piedmont of VA). May-July; July-August. Se. VA south to c. peninsular FL, west to s. and wc. AL, primarily on the Coastal Plain, but not uncommon westward into the Piedmont and lower Mountains, and extending in the interior into c. TN. [= K, P, S, Z; < *P. australis* – RAB, C, F, G, W, WH]

Penstemon calycosus Small. Mt (GA, NC, SC, VA): limestone ledges, other woodlands; rare. May-July. OH and s. MI and IL south to w. VA, GA, and AL. [= F, G, GW, K, P, S, W, Z; < *P. laevigatus* – C]

Penstemon canescens (Britton) Britton, Appalachian Beardtongue. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (VA): woodlands, glades, forest edges, roadsides; common (uncommon in Coastal Plain of VA). May-July. PA and s. IN south to nc. GA, n. AL, and c. TN. [= RAB, C, K, W, Z; > *P. canescens* – F, G, S, WV; > *P. canescens* var. *typicus* – P; > *P. canescens* var. *brittonorum* (Pennell) Pennell – P; > *P. brittonorum* Pennell – S; > *P. brevisepalus* Pennell – F, G, P, S, WV]

*? ***Penstemon digitalis*** Nuttall ex Sims, Tall White Beardtongue. Mt (NC, SC, VA, WV), Pd (DE, VA), Cp (DE, VA): alluvial forests, moist fields, disturbed areas; common (rare in Coastal Plain of VA). May-June; July-August. NS and ME west to MN and SD, south to e. VA, w. SC, AL, and TX. [= RAB, C, F, G, GW, K, P, S, W, WV, Z]

Penstemon dissectus Elliott, Georgia Beardtongue, Grit Beardtongue. Cp (GA): Altamaha Grit outcrops, sandhills; rare. Endemic to Altamaha Grit outcrops and other sandy areas from e. GA south and west to sw. GA. This species is unmistakable because of its bipinnatifid leaves. [= K, P, S, Z]

Penstemon hirsutus (Linnaeus) Willdenow, Northeastern Beardtongue. Pd (DE, VA), Mt (VA, WV): dry woodlands, forests, and fields; uncommon (rare in DE). May-July. QC and ME west to MI and WI, south to n. VA and KY. [= C, F, G, K, P, S, W, WV, Z]

Penstemon laevigatus Aiton, Eastern Beardtongue. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): low meadows, bottomlands, forest edges, hammocks; common (rare in DE and FL). May-June; July-August. ME west to MI, south to s. GA, Panhandle FL, MS, and AR. [= RAB, F, G, GW, K, P, W, WH, WV, Z; < *P. laevigatus* – C (also see *P. calycosus*); = *P. pentstemon* (Linnaeus) MacMillan – S]

Penstemon laxiflorus Pennell. Cp (FL, GA): dry sandy areas; rare. C. GA, FL Panhandle, and n. AL west to c. OK and c. TX. [= K, P, S, Z; < *P. australis* – WH; = *P. australis* Small ssp. *laxiflorus* (Pennell) Bennett]

Penstemon multiflorus Chapman ex Bentham. Cp (FL, GA): sandhills, dry flatwoods; uncommon. S. and e. GA south to s. FL. [= K, P, S, WH, Z]

Penstemon pallidus Small, Eastern White Beardtongue. Cp (GA, NC, VA), Pd (GA, VA), Mt (GA, VA, WV): limestone and shale barrens, other dry, disturbed areas; uncommon (rare in GA). May-June. ME west to MN, south to NC, GA, and AR. [= RAB, C, F, G, K, P, S, W, Z]

Penstemon smallii A. Heller, Blue Ridge Beardtongue. Mt (GA, NC, SC): woodlands, cliffs, glades, roadbanks; common. May-June; July. A Southern Appalachian endemic, distributed from nw. NC and ne. TN south to nw. SC, n. GA, and n. AL. [= RAB, K, P, S, W, Z]

Penstemon alluviorum Pennell, Lowland Beardtongue. East to AL, TN, KY. [= C, F, G, K, P, S, Z]

Penstemon species 1. Of e. AL, with very small corollas and sharply dentate teeth. Under study by Dwayne Estes.

Penstemon tenuiflorus Pennell, Plateau Beardtongue, Limestone Beardtongue, Kentucky Beardtongue. Endemic to the Interior Low Plateau of wc. KY, c. TN, n. AL, extending slightly into the Coastal Plain to the west, and disjunct in the Black Belt of AL and MS. [= C, F, G, K, P, S, Z]

Penstemon tubiflorus Nuttall, Tube Beardtongue. A more western species, reaching its eastern limit in w. TN (Chester, Woffor, & Kral 1997). It is also known from adventive sites further east, as in e. PA (Rhoads & Klein 1993). [= S; = *P. tubaeflorus* – C, G, P, Z, orthographic

variant; > *P. tubaeflorus* var. *achoreus* Fernald – F; > *P. tubaeflorus* var. *tubaeflorus* – F; > *P. tubiflorus* var. *achoreus* Fernald – K; > *P. tubiflorus* var. *tubiflorus* – K]

Plantago Linnaeus 1753 (Plantain)

A genus of about 270 species, herbs and rarely shrubs, of cosmopolitan distribution. Harper (1944) discusses at length the interesting issue of the native distributions of the many weedy species of *Plantago*. The native or introduced status of many of our species is uncertain or controversial. References: Rosatti (1984)=Z; Bassett (1966)=Y; Bassett (1967)=X; Schwarzbach in Kadereit (2004).

1 Leaves cauline, opposite; spikes on peduncles from the leaf axils; [section *Psyllium*] ..... ***P. psyllium***
1 Leaves basal; spikes on scapes from the base of the plant.
2 Leaves ovate to broadly lanceolate or broadly oblanceolate, distinctly broadened upward from a petiolar base, the leaves > 1 cm wide (some species keyed both ways).
3 Leaf venation pinnate, some major veins departing from the midvein well above the leaf base; perennial from thick, fleshy rootstock, typically 3-8 cm wide near its summit, with a cavity below (like an inverted bowl), and with 3-10 fleshy roots 3-15 mm thick descending or spreading from the bowl rim; capsule 2-4-seeded; scapes hollow and terete; [aquatic or semi-aquatic]; [section *Palaeopsyllium*] ..... ***P. cordata***
3 Leaf venation parallel, with all of the major veins separating at the base of the leaf; **either** perennial from thin, fibrous roots or an erect caudex, **or** annual from a small taproot; capsule 2-30-seeded; scapes either solid and terete, solid and angled, or hollow and terete; [terrestrial].
4 Leaves broadly ovate-elliptic, the blades 1-3× as long as wide, distinctly petiolate; scapes solid and terete; [section *Plantago*].
5 Fruit 2.5-4 mm long, dehiscent near the middle, the terminal portion about as long as the basal; sepals broadly ovate, ca. 1.5× as long as wide, mostly obtuse; petioles usually green and pubescent at the base ..... ***P. major***
5 Fruit 4-6 mm long, dehiscent below the middle, the terminal portion about 2× as long as the basal; sepals narrowly elliptic, 2-4× as long as wide, mostly acute; petioles usually purple and glabrous at the base ..... ***P. rugelii***
4 Leaves mostly broadly oblanceolate, broadly lanceolate,or spatulate, (3-) 4-10× as long as wide, attenuate to the only somewhat petiolar base; scapes solid and 5-angled, or hollow (to solid) and terete.
6 Bracts and calyx pubescent, at least on the keels; ephemeral annual, flowering late March-June, and then senescing; [section *Virginica*]
7 Mature seeds 2.5-3 mm long, reddish, nearly flat oin both sides; sepals with an excurrent midrib; leaves typically toothed; [rare adventive in western part of our area] ..... ***P. rhodosperma***
7 Mature seeds tan or brown, 1.5-2 mm long, concave on one side, convex on the other; sepals obtuse to rounded; leaves entire; [common in our area] ..... ***P. virginica***
6 Bracts and calyx glabrous; perennial, flowering April-November.
8 Spikes very densely flowered, the rachis hidden; scape 5-angled; [widespread weedy alien]; [section *Lancifolia*]... ***P. lanceolata***
8 Spikes loosely flowered, the rachis visible its entire length; scape terete; [rare native of Coastal Plain pinelands and adjacent fire-plow lines and ditches]; [section *Palaeopsyllium*] ..... ***P. sparsiflora***
2 Leaves lanceolate or linear, slightly if at all broadened upward, the base not petiolar, the leaves typically < 1 cm wide.
9 Summer and winter leaves dimorphic, the winter leaves lanceolate (typically submersed), the summer leaves ovate or cordate (emersed except in floods); plant perennial from thick, fleshy rootstock, typically 3-8 cm wide near its summit, with a cavity below (like an inverted bowl), and with 3-10 fleshy roots 3-15 mm thick descending or spreading from the bowl rim; [aquatic or semi-aquatic]; [section *Palaeopsyllium*] ..... ***P. cordata***
9 Summer and winter leaves not dimorphic, all leaves lanceolate or linear; plant either perennial from thin, fibrous roots, or annual from a small taproot; [terrestrial].
10 Leaves fleshy; corolla tube pubescent on its outer surface; [of sea beaches] ..... ***P. maritima*** *var.* ***juncoides***
10 Leaves herbaceous (though often rather thick and leathery); corolla tube glabrous on its outer surface; [of various habitats, not as above].
11 Bracts of the inflorescence and sepals conspicuously pubescent; annual (rarely biennial), with a taproot; stamens 4.
12 Leaves oblanceolate; [section *Virginica*] ..... ***P. virginica***
12 Leaves linear; [section *Gnaphaloides*].
13 Bracts of the lower flowers in the spikes conspicuously exserted, at least 2 × as long as the subtended flower.
14 Leaves glabrous or puberulent above; longer bracts 8-30 mm long; seeds 2.2-3.0 mm long ..... ***P. aristata***
14 Leaves silky-pubescent above; longer bracts mostly < 5 mm long; seeds 1.3-1.9 mm long ..... ***P. patagonica***
13 Bracts of the lower flowers in the spikes not conspicuously exserted, < 2× as long as the subtended flower.
15 Bracts 1-2× as long as the the calyx; seeds 1.3-1.9 mm long ..... ***P. patagonica***
15 Bracts 0.5-1× as long as the calyx; seeds 2.7-3 mm long ..... ***P. wrightiana***
11 Bracts of the inflorescence glabrous or inconspicuously ciliate-margined; stamens 2 or 4; [annual or perennial].
16 Annual; flowers with 2 stamens; capsule 4-25-seeded; leaves linear, 0.5-5 mm wide; [section *Micropsyllium*].
17 Capsule mostly 10-25-seeded; seeds 0.5-0.8 mm long ..... ***P. heterophylla***
17 Capsule 4-seeded; seeds 0.75-1.8 mm long ..... ***P. pusilla***
16 Perennial; flowers with 4 stamens; capsule 1-2-seeded; leaves lanceolate (or broader), 7-50 mm wide.
18 Spikes very densely flowered, the rachis hidden; scape 5-angled; [widespread weedy alien]; [section *Lancifolia*] ..... ***P. lanceolata***
18 Spikes loosely flowered, the rachis visible its entire length; scape terete; [rare native of Coastal Plain pinelands and adjacent fire-plow lines, ditches, and mowed roadsides]; [section *Palaeopsyllium*] ..... ***P. sparsiflora***

* ***Plantago aristata*** Michaux, Buckhorn Plantain. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): disturbed areas, especially dry, barren, exposed soil, such as clay soils denuded by bull-dozing; common (uncommon

in DE), introduced from farther west (though the original distribution is unclear, and the species is sometimes considered native in at least portions of our area). Late April-July. [= RAB, C, F, G, K, S, W, WH, WV, Z]

Plantago cordata Lamarck, King-root, Heartleaf Plantain. Pd (NC), Mt (GA, VA), Cp (VA): aquatic or semi-aquatic in streambeds with outcrops of slate, aquatic in tidal estuaries; rare. March-April; May-June. NY and s. ON west to WI, south to w. VA, c. NC, nw. GA, AL, sc. TN, and MO, very scattered and rare in every state in which it occurs, except MO. Characteristically, *P. cordata* is a very robust plant, the inflorescences often 1 meter in height, and the glabrous leaves with ovate blades to 30 cm long and 20 cm wide, on ascending petioles up to 40 cm long and 2 cm wide; Winter leaves are 3-10 cm long, ca. 1 cm wide, and remotely toothed. Spring leaves show a gradual transition from the winter form to the summer form. *P. cordata* is not known to be extant in VA, where it formerly occurred in the estuary of the Potomac River and in Smyth County in sw. VA. In NC, *P. cordata* is apparently limited to 2 slate-bottomed streams in s. Davidson County, where it is locally abundant. A recent study of morphological and genetic variability in the species found the 2 NC populations to "represent sites of primary [conservation] concern with unique genetic composition" (Mymudes & Les 1993). [= RAB, C, F, G, GW, K, S, W, X, Z]

Plantago heterophylla Nuttall, Many-seeded Plantain. Cp (DE*, FL, GA, NC, SC, VA), Pd (GA, NC, SC): fields, roadsides, disturbed areas; common (rare in DE and VA). March-May. Se. VA and MO south to Panhandle FL and TX; adventive at scattered sites further north (at least as far north as NY). [= RAB, C, F, G, K, S, W, WH, Y, Z; = *P. hybrida* W. Bart. – GW]

* ***Plantago lanceolata*** Linnaeus, English Plantain, Rib-grass. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): lawns, roadsides, disturbed areas; common, native of Europe. April-November. [= RAB, C, K, S, W, WH, WV, Z; > *P. lanceolata* var. *lanceolata* – F, G; > *P. lanceolata* var. *sphaerostachya* Mertens & Koch – F, G; > *P. lanceolata* var. *angustifolia* Poiret – G]

*? ***Plantago major*** Linnaeus, Common Plantain, Whiteman's-foot. Cp (DE, FL*, GA, NC, SC, VA), Pd (DE, GA, NC, VA), Mt (GA, NC, VA, WV): lawns, roadsides, disturbed areas; common (uncommon in FL, GA, NC, SC, VA, and WV), native of Europe, possibly also native in ne. North America, possibly as far south as the northern part of our area. June-November. Very variable, and possibly worthy of some of the infraspecific subdivisions suggested by various authors. The Coastal Plain populations associated with the Chesapeake Bay in VA may represent a native, estuarine genotype. [= RAB, C, GW, K, S, W, WH, WV, Z; > *P. major* var. *major* – F; > *P. major* var. *scopulorum* Fries & Broberg – F; > *P. major* ssp. *pleiosperma* Pilger var. *paludosa* Béguinot – G; > *P. major* ssp. *pleiosperma* Pilger var. *scopulorum* Fries & Broberg – G; > *P. major* var. *intermedia* (A.P. de Candolle) Pilger]

Plantago maritima Linnaeus *var.* ***juncoides*** (Lamarck) A. Gray, Seaside Plantain. Cp (VA): salt marshes; rare. Var. *juncoides* apparently ranges from Greenland and ne. Canada south to e. VA. Other varieties occur in nw. North America and n. Eurasia, the species as a whole is an interruptedly circumboreal plant of ocean shores, also disjunct inland in saline areas. [= K; = *P. maritima* ssp. *juncoides* (Lamarck) Hultén – C; > *P. juncoides* Lamarck var. *decipiens* (Barnéoud) Fernald – F; < *P. maritima* – G]

* ***Plantago patagonica*** Jacquin, Woolly Plantain. Pd (GA, SC), Cp (GA, VA), Mt (WV): roadsides; rare. United States and s. South America. May-June. [= K, Z; > *P. purshii* Roemer & Schultes – RAB, F; > *P. patagonica* var. *patagonica* – C, G; > *P. patagonica* var. *gnaphaloides* (Nuttall) A. Gray – C, G]

* ***Plantago psyllium*** Linnaeus, Leafy-stemmed Plantain. Cp (DE, NC, VA), Mt (NC, VA, WV): disturbed areas; rare, introduced from Europe. June-November. [= C, K, Z; = *P. psillium* – RAB, orthographic variant; > *P. indica* Linnaeus – F, G; *? P. arenaria* Waldstein & Kitaibel]

* ***Plantago pusilla*** Nuttall, Little Plantain. Cp (DE, FL, NC), Pd (DE, VA) {GA, SC}: roadsides, disturbed areas; common (uncommon in FL, GA, NC, SC, VA), probably native of sc. United States (the original range uncertain). March-May. Belden et al. (2004) discuss the Virginia occurrence, on Fort Pickett Military Reservation, Nottoway County. [= C, K, S, WH, Y, Z; > *P. pusilla* var. *pusilla* – F, G; > *P. pusilla* var. *major* Engelmann – F, G; = *P. elongata* Pursh – GW]

* ***Plantago rhodosperma*** Decaisne, Redseed Plantain, reported as ranging east to KY, TN, and GA (Kartesz 1999), probably as adventive from further west. The reports for GA and TN require confirmation. [= C, F, G, K]

Plantago rugelii Decaisne, American Plantain, Broad-leaved Plantain, Blackseed Plantain. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadsides, lawns, disturbed areas; common. June-November. Widespread in e. and c. North America, the original distribution obscure. [= RAB, C, F, G, GW, S, W, WH, WV, Z; > *P. rugelii* var. *rugelii* – K; > *P. rugelii* var. *asperula* Farwell – K]

Plantago sparsiflora Michaux, Pineland Plantain. Cp (FL, GA, NC, SC): wet savannas over calcareous substrates (coquina limestone), now usually found in moister human-created microhabitats adjacent to these sites, such as fire-plow lines, shallow ditches along roadsides, or mowed powerline rights-of-way; rare. April-October. Se. NC south to ne. FL, restricted to the Coastal Plain. Harper (1944), with his usual keen understanding of the ecology of southeastern plants, has provided the most succinct and accurate description of the habitat of this plant: "flattish pine-barrens where there is evidently some calcareous material not far from the surface." Reports of this species for VA are in error. [= RAB, GW, K, S, WH, X, Z]

Plantago virginica Linnaeus, Virginia Plantain. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadsides, lawns, disturbed areas; common. Late March-June. MA and NY west to SD, south to s. FL and TX. [= RAB, C, G, K, S, W, WH, WV, Z; > *P. virginica* var. *virginica* – F; > *P. virginica* var. *viridescens* Fernald – F]

Plantago wrightiana Decaisne, Wright's Plantain. Cp (FL, GA, NC, SC), Pd (GA, NC, SC, VA): roadsides, lawns, disturbed areas; common (uncommon in NC). Late April-July. VA, NC, OK, and AZ south to c. peninsular FL, MS, TX, and Mexico, the original distribution unclear. [= K, WH, Z; = *P. hookeriana* Fischer & C.A. Meyer var. *nuda* (A. Gray) Poe – RAB, W]

* ***Plantago floccosa*** Decaisne. Cp (FL): disturbed areas; rare, native of {}. Panhandle FL. [= WH] {not yet keyed; add to synonymy}

Scoparia Linnaeus 1753 (Goat-weed, Sweet-broom)

A genus of about 20 species, herbs, of tropical and subtropical America. References: Pennell (1935)=P.

1 Corolla white; sepals 4, ovate; stem 3-8 dm tall; annual ..... ***S. dulcis***
1 Corolla yellow; sepals 5, lanceolate; stem 1-1.5 d tall; perennial ..... ***S. montevidensis*** *var.* ***glandulifera***

Scoparia dulcis Linnaeus, Goat-weed, Sweet-broom, Licorice-weed. Cp (FL, GA, SC): marshes, wet hammocks, flatwoods, disturbed places; common (uncommon in GA and SC), rather weedy and the original distribution unclear. May-October (or all year southwards). [= RAB, GW, K, P, S, WH]

* ***Scoparia montevidensis*** (Sprengel) R.E. Fries *var.* ***glandulifera*** (Fritsch) R.E. Fries. Cp (FL, NC): on ballast, other disturbed areas; rare, native of South America. [= K, P, WH]

Sophronanthe Bentham 1836

A genus of 2 species, herbs, of southeastern North America. The two taxa included here are not part of *Gratiola*. References: Pennell (1935)=P.

1 Leaves linear-subulate; corolla 2-3× as long as the calyx ..... ***S. hispida***
1 Leaves ovate; corolla 1-1.5 × as long as the calyx ..... ***S. pilosa***

Sophronanthe hispida Bentham ex Lindley, Pineland Hedge-hyssop. Cp (FL, GA): dry pinelands, dunes; common (uncommon in GA). E. GA (within a few counties of SC) south to s. FL, and west to MS. [= P, S; = *Gratiola hispida* (Bentham ex Lindley) Pollard – GW, K, WH]

Sophronanthe pilosa (Michaux) Small, Shaggy Hedge-hyssop. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): marshes, wet areas, wet pine savannas; common (rare in Mountains). June-September. NJ south to s. FL, west to e. TX, northward in the interior to KY, TN, AR, and e. OK. [= *Gratiola pilosa* Michaux= RAB, C, F, G, GW, K, W, WH; > *Tragiola pilosa* (Michaux) Small & Pennell var. *typica* – P; = *Tragiola pilosa* (Michaux) Small & Pennell – S]

Veronica Linnaeus 1753 (Speedwell)

A genus of about 180 species, herbs, nearly cosmopolitan (at least now), most diverse in Europe. The genus appears to be paraphyletic as currently circumscribed (Albach & Chase 2001). References: Walters & Webb (1972)=Z; Crow & Hellquist (2000)=Y; Pennell (1935)=P. Key partly based on C.

1 Flowers in axillary racemes; upper bracteal leaves opposite throughout.
  2 Leaves and stems pubescent; [plants of mesic to dry habitats]; [section *Veronica*].
    3 Leaves cuneate at the base; leaves widest at the middle or beyond; pedicels shorter than the subtending bracts ..... ***V. officinalis***
    3 Leaves cordate, truncate or rounded at the base; leaves widest towards the base; pedicels equaling or longer than the subtending bracts.
      4 Stem pubescence generally distributed; calyx shorter than the capsule; style 6-8 mm long; stems erect .... ***[V. austriaca*** *ssp.* ***teucrium]***
      4 Stem pubescence restricted to 2 lines; calyx longer than the capsule; style 3-5 mm long; stems creeping or ascending ..... ***V. chamaedrys***
  2 Leaves and stems glabrous, or with fine glandular hairs in the inflorescence only; [plants of wetlands].
    5 Leaves (even the upper) short-petiolate; [section *Beccabunga*].
      6 Leaves broadest towards the base, acute at the tip; style 2.5-3.5 mm long ..... ***V. americana***
      6 Leaves broadest near or above the middle, rounded at the tip; style 1.8-2.2 mm long ..... ***V. beccabunga***
    5 Leaves (at least the middle and upper) sessile.
      7 Capsule flattened, conspicuously notched at the style and therefore appearing 2-lobed, wider than long; seeds 1.2-1.8 mm long; leaves (3-) 4-20× as long as wide; < 1 cm wide, tapering to the base and not clasping; [section *Veronica*]..... ***V. scutellata***
      7 Capsule turgid, slightly or not notched at the style, about as long as wide; seeds <0.5 mm long; leaves 1.5-5 (-8)× as long as wide, mostly > 1 cm wide, clasping at the base; [section *Beccabunga*].
        8 Racemes 20-65-flowered; pedicels 4-8 mm long; capsule ovoid to globose, not notched or barely so..... ***V. anagallis-aquatica***
        8 Racemes 5-25 (-35)-flowered; pedicels 3-6 mm long; capsule broadly obcordate, distinctly though slightly notched at the style..... ***[V. catenata]***
1 Flowers in terminal racemes or solitary and axillary, subtended by normally-sized leaves; upper bracteal leaves often alternate.
  9 Bracts abruptly smaller than the foliage leaves, the flowers thus in well-developed terminal racemes or spikes; perennials from rhizomes.
    10 Stems 3-10 dm tall; flowers in a crowded terminal spike; larger leaves > 4 cm long, sharply serrate; [section *Pseudolysimachium*] ..... ***V. longifolia***
    10 Stems 1-3 dm tall; flowers in loose racemes; larger leaves < 2.5 cm long, entire to weakly toothed; [section *Veronicastrum*].
      11 Flowers bright blue; pedicels with some longer gland-tipped hairs; flowers usually < 12 per raceme ... ***[V. serpyllifolia*** *var.* ***humifusa]***
      11 Flowers pale blue with darker blue lines; pedicels puberulent; flowers usually > 12 per raceme ..... ***V. serpyllifolia*** *var.* ***serpyllifolia***
  9 Bracts gradually reduced in size upwards, all of the flowers or at least those lower on the stem axillary in the axils of well-developed foliage leaves; annuals (except *V. filiformis*); [section *Pocilla*].
    12 Pedicels 0-2 mm long; flowers in the axils of bracts, all or at least the upper of which are very different than foliage leaves.
      13 Leaves 3-10× as long as wide, toothed or entire; flowers white or very pale, ca. 2 mm across; stems usually glabrous (except *V. peregrina* var. *xalapensis*).
        14 Stem glabrous; sepals and fruit glabrous ..... ***V. peregrina*** *var.* ***peregrina***
        14 Stem pubescent with short, gland-tipped hairs; sepals and fruit glabrous or pubescent with short, gland-tipped hairs ..... ***V. peregrina*** *var.* ***xalapensis***

13 Leaves 1-2× as long as wide, palmately lobed or toothed; flowers blue, 2-4 mm across; stems pubescent.
15 Upper leaves and lower bracts trilobed, the lobes cut > ½ way to base ..... ***V. triphyllos***
15 Leaves unlobed (though crenate-serrate).
16 Style 0.4-1.0 mm long ..... ***V. arvensis***
16 Style ca. 1.5 mm long ..... ***V. dillenii***
12 Pedicels 5-40 mm long; flowers in the axils of leaves similar in shape and size to foliage leaves (though the upper are sometimes somewhat smaller).
17 Perennial, the stems rooting at the nodes the length of the stem; pedicels > 2× as long as the the leaves ..... ***V. filiformis***
17 Annual, the stems not rooting at the nodes (or at most only at the base of the plant); pedicels < 2× as long as the the leaves.
18 Calyx lobes cordate at the base; leaves with 3-7 teeth or shallow lobes ..... ***V. hederifolia***
18 Calyx lobes cuneate to rounded at the base; leaves with usually > 7 small teeth or crenations.
19 Lobes of the capsule with apices diverging at ca. 90 degrees; corolla > 8 mm wide ..... ***V. persica***
19 Lobes of the capsule with apices parallel or diverging at an acute angle; corolla < 8 mm wide.
20 Capsule with all hairs straight and gland-tipped; corolla white to pale blue or violet ..... ***V. agrestis***
20 Capsule with a mixture of short, arching, non-glandular hairs and longer, straight, gland-tipped hairs; corolla bright blue ..... ***V. polita***

* ***Veronica agrestis*** Linnaeus, Field Speedwell. Pd (DE, GA, NC), Cp (DE, FL), Mt (GA), {VA, WV}: lawns and disturbed areas; common (rare in FL, GA, NC, and VA), native of Eurasia. [= C, F, G, K, P, WH, Z; < *V. agrestis* – RAB, G; < *V. polita* – WV]

Veronica americana Schweinitz ex Bentham, American Speedwell, Brooklime. Mt (NC, VA, WV), Pd (DE, VA), {SC}: bogs, marshes, streamsides; uncommon (rare in DE, NC, and SC). May-June; July. NL (Newfoundland) west to AK, south to NC, TN, TX, and CA; ne. Asia. [= RAB, C, F, G, K, P, S, W, WV, Y]

Veronica anagallis-aquatica Linnaeus, Water Speedwell. Mt (NC, VA, WV), Cp (DE, NC, VA), Pd (DE, VA): bogs, marshes, streamsides, ditches; uncommon (rare in NC). May-June; July. Circumboreal, south in North America to c. peninsular FL, TX, and CA; some occurrences probably represent introductions of European material. Some authors interpret *V. anagallis-aquatica* as being non-native in North America. [= C, F, G, P, WH, WV, Y; < *V. anagallis-aquatica* – RAB, C, K, W, Z]

* ***Veronica arvensis*** Linnaeus, Corn Speedwell, Wall Speedwell. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): fields, roadsides, disturbed areas; common, native of Eurasia. March-June. [= RAB, C, F, G, K, P, S, W, WH, WV, Z]

* ***Veronica beccabunga*** Linnaeus, European Brooklime. Mt (VA?, WV): wet places; rare, native of Europe. South to MD, WV, and perhaps VA. [= C, F, G, K, P, WV, Y, Z]

* ***Veronica chamaedrys*** Linnaeus, Germander Speedwell. Mt (NC, WV), Pd (VA): golf courses, lawns; rare, native of Eurasia. May. [= RAB, C, F, G, K, P, WV; ? *V. chamaedrys* ssp. *chamaedrys* – Z]

* ***Veronica dillenii*** Crantz, Dillenius's Speedwell. Mt (VA): disturbed areas; rare, native of Europe. [= C, G, K, P, Z; < *V. verna* Linnaeus – F]

* ***Veronica filiformis*** J.E. Smith, Creeping Speedwell. Mt (WV): lawns, disturbed areas; rare, native of Eurasia. May-August. In WV, MD, and scattered in PA (Rhoads & Klein 1993). [= C, F, G, K, P, WV, Z]

* ***Veronica hederifolia*** Linnaeus, Ivyleaf Speedwell. Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, SC, VA), Mt (NC, VA, WV): lawns, fields, disturbed areas; common (rare in FL and WV, uncommon in Mountains of VA), native of Europe. March-May. [= K, W; = *V. hederaefolia* – RAB, C, F, G, P, S, WV, orthographic variant; ? *V. hederifolia* ssp. *hederifolia* –Z]

* ***Veronica longifolia*** Linnaeus, Garden Speedwell, Longleaf Speedwell. Mt (WV): disturbed areas; rare, native of Europe. In WV, scattered in PA (Rhoads & Klein 1993), KY, and in MD (F). [= C, F, G, K, P, WV, Z]

*? ***Veronica officinalis*** Linnaeus, Common Speedwell, Gypsyweed, Heath Speedwell. Mt (GA, NC, VA, WV), Pd (DE, NC, VA), Cp (DE, NC, SC, VA): fields and forests; common, often interpreted as being of mixed native and alien background. May-August. [= RAB, C, G, P, S, W, WV, Z; > *V. officinalis* var. *officinalis* – F, K; > *V. officinalis* var. *tournefortii* (Vill.) Reichenbach – F, K]

Veronica peregrina Linnaeus *var.* ***peregrina***, Common Purslane Speedwell. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): fields, roadsides, disturbed areas; common. April-May. NS and ND south to FL and TX; AK south to OR (perhaps only as an introduction?); South America. [= C, F, G, S, WV; = *V. peregrina* ssp. *peregrina* – K; < *V. peregrina* – RAB, W, Z; = *V. peregrina* var. *typica* – P; ? *V. peregrina* – WH]

* ***Veronica peregrina*** Linnaeus *var.* ***xalapensis*** (Kunth) Pennell, Western Purslane Speedwell. Cp (GA), {NC?, SC?}: fields, lawns, disturbed places; rare, probably introduced in our area on ballast. April-May. QC and AK south to MA, KY, TX, and south to Guatemala. [= C, F, G, P, S; = *V. peregrina* ssp. *xalapensis* (Kunth) Pennell – K; < *V. peregrina* – RAB, W, Z]

* ***Veronica persica*** Poiret, Bird's-eye Speedwell. Cp (DE, FL, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, VA, WV): lawns, fields, roadsides, disturbed areas; common (uncommon in WV, rare in FL), native of Eurasia. March-June. [= RAB, C, F, G, K, P, S, W, WV, Z]

* ***Veronica polita*** Fries. Pd (DE, NC, VA), Mt (VA), Cp (FL, VA), {WV}: lawns, waste areas; rare, native of Eurasia. March-April. This species is introduced in c. TN (Chester, Wofford, & Kral 1997), WV, and s. PA (Rhoads & Klein 1993), FL (Pennell 1935; Kunzer et al. 2009), NC, and VA (Kartesz 1999). It is similar to *V. agrestis* and has been much confused with it. [= C, F, K, S, WH, Z; < *V. agrestis* – RAB, G; ? *V. didyma* Tenore – P, misapplied; < *V. polita* – WV]

Veronica scutellata Linnaeus, Narrowleaf Speedwell. Mt (VA, WV), {NC?}: marshes, swamps; rare. May-September. Circumboreal, south in North America to w. VA, NC?, TN, and CA. In ne. TN (Chester, Wofford, & Kral 1997). [= C, G, K, P, W, WV, Y, Z; ? *V. scutellata* var. *scutellata* – F]

* ***Veronica serpyllifolia*** Linnaeus *var.* ***serpyllifolia***, Thymeleaf Speedwell. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): meadows, lawns, roadsides, other disturbed areas; common (rare in Coastal Plain of GA, NC, and SC), native of Eurasia. April-June. [= C, G; = *V. serpyllifolia* ssp. *serpyllifolia* – K, Z; < *V. serpyllifolia* – RAB, F, S, W, WV; = *V. serpyllifolia* – P]

* ***Veronica triphyllos*** Linnaeus. Pd (NC, SC): cultivated fields; rare, native of Eurasia. April. [= RAB, K, P]

* *Veronica austriaca* Linnaeus ssp. *teucrium* (Linnaeus) D.A. Webb. Native of Eurasia, is naturalized at scattered locations in PA (Rhoads & Klein 1993) and MD (Kartesz 1999). [= K, Z; = *V. teucrium* Linnaeus – C; = *V. latifolia* Linnaeus – F, G, P, nomen ambiguum, perhaps misapplied]

Veronica catenata Pennell. Streams and wetlands. Circumboreal, the southern limits obscure because of taxonomic confusion, misidentifications, and misattributions. [= C, Y; < *V. anagallis-aquatica* Linnaeus – K, W, Z; > *V. comosa* Richter – F; > *V. salina* Schur – G; > *V. connata* Rafinesque var. *typica* – P; > *V. glandifera* Pennell – P, S; > *V. catenata* Pennell – P, Z]

*? *Veronica serpyllifolia* Linnaeus var. *humifusa* (Dickson) Vahl. May range south to MD (Pennell 1935, Kartesz 1999). It is native in n. North America. April-June. [= C, G; < *V. serpyllifolia* – F; = *V. serpyllifolia* ssp. *humifusa* (Dickson) Syme – K, Z; = *V. humifusa* Dickson – P]

Veronicastrum Heister ex Fabricius 1759 (Culver's-root)

A genus of 2 species, herbs, of e. North America and e. Asia. References: Pennell (1935)=P.

Veronicastrum virginicum (Linnaeus) Farwell, Culver's-root. Mt (GA, NC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, VA): streambanks, bogs, wet meadows, dryish soils in areas with prairie affinities; uncommon (rare in Coastal Plain). July-August. VT west to MB, south to nc. and nw. GA, w. FL Panhandle (Escambia County), and LA. Populations seem to be of somewhat sporadic or irregular appearance from year to year. [= RAB, C, F, G, GW, K, P, S, W, WH, WV]

369. SCROPHULARIACEAE A.L. de Jussieu 1789 (Snapdragon Family) [in LAMIALES]

There is increasing evidence that the Scrophulariaceae as traditionally constituted includes two main and quite distinct groups (Olmstead & Reeves 1995; Young, Steiner, & dePamphilis 1999; Albach, Meudt, & Oxelman 2005). Based on molecular analysis, Young, Steiner, & dePamphilis (1999) suggest that Scrophulariaceae, Antirrhinanthaceae, and Orobanchaceae be restructured to include the current members of Orobanchaceae, Scrophulariaceae, and Callitrichaceae. Beardsley & Olmstead (2002) suggest that *Mimulus* and *Mazus* be included with *Phryma* in a redefined Phrymaceae. Additional changes have been suggested, as summarized blow. References: Pennell (1935)=P; Olmstead & Reeves (1995); Young, Steiner, & dePamphilis (1999); Olmstead et al. (2001); Beardsley & Olmstead (2002). [also see *OROBANCHACEAE, PAULOWNIACEAE, PHRYMACEAE,* and *PLANTAGINACEAE*]

Disposition of the traditional Scrophulariaceae (including Antirrhinanthaceae), Orobanchaceae, Plantaginaceae, Buddlejaceae, Phrymaceae:
Linderniaceae: *Lindernia, Hemianthus, Micranthemum, Torenia*
Orobanchaceae: *Agalinis, Aureolaria, Buchnera, Castilleja, Conopholis, Dasistoma, Epifagus, Macranthera, Melampyrum, Orobanche, Pedicularis, Schwalbea, Seymeria, Striga.*
Plantaginaceae (Veronicaceae): *Amphianthus, Antirrhinum, Bacopa, Callitriche, Chaenorrhinum, Chelone, Collinsia, Cymbalaria, Digitalis, Gratiola, Kickxia, Leucospora, Limnophila, Limosella, Linaria, Mecardonia, Misopates, Nuttallanthus, Penstemon, Plantago, Scoparia, Veronica, Veronicastrum.*
Phrymaceae: *Glossostigma, Mazus, Mimulus, Phryma.*
Scrophulariaceae s.s.: *Buddleja, Scrophularia, Verbascum.*

1 Plant a shrub; inflorescence a terminal thyrse ..... ***Buddleja***
1 Plant an herb; inflorescence a raceme, a spike, or a diffuse panicle.
  2 Corolla cylindric, purplish; fertile stamens 4 ..... ***Scrophularia***
  2 Corolla rotate, yellowish; fertile stamens 5 ..... ***Verbascum***

Buddleja Linnaeus 1753 (Butterfly-bush)

A genus of about 90 species, trees and shrubs, of subtropical and tropical America, Asia, and Africa. The two species listed (and others) are grown for ornament and for their attractiveness as nectaring sites for butterflies. References: Rogers (1986)=Z; Oxelman, Kornhall, & Norman in Kadereit (2004).

1 Leaves serrate or crenate; corolla, calyx, pedicels, and inflorescence rachis pubescent (not granular-farinose) ..... ***B. davidii***
1 Leaves entire or remotely dentate; corolla, calyx, pedicels, and inflorescence rachis granular-farinose ..... ***B. lindleyana***

* *Buddleja alternifolia* Maximowicz. Reported as introduced in NC by Kartesz (1999), but the alleged documentation is not present. *B. officinalis* Maximowicz is reported as introduced in GA by Kartesz (1999), but the alleged documentation is not available. {not keyed; not mapped; rejected as a component of our flora}

* ***Buddleja davidii*** Franchet, Summer-lilac, Orange-eye Butterfly-bush. Mt (GA, NC, VA, WV), Pd (DE, SC): planted, rarely escaped to disturbed places, such as thickets or streambanks (Wise Co., VA); rare, native of China. June-October. [= RAB, C, F, G, K, Z]

* ***Buddleja lindleyana*** Fortune ex Lindley. Pd (GA, NC, SC), Mt, Cp (NC, SC): rarely escaped to disturbed areas; rare, native of China. June-October. [= RAB, K, Z; = *Adenoplea lindleyana* (Fortune ex Lindley) Small – S]

Scrophularia Linnaeus 1753 (Figwort)

A genus of about 200 species, of temperate and tropical regions of the Old and New Worlds. Though our 2 species are only subtly distinct morphologically, they are clearly distinct. References: Pennell (1935)=P; Fischer in Kadereit (2004).

1 Sterile filament (hidden under the upper corolla lip) yellowish-green, often wider than long; leaf serrations coarse, often > 3 mm long; flowering May-early July; capsule 6-10 mm long ..... ***S. lanceolata***
1 Sterile filament dark purple or brownish, often longer than wide; leaf serrations fairly fine, < 3 mm long; flowering mid July-October; capsule 4-7 mm long ..... ***S. marilandica***

Scrophularia lanceolata Pursh, American Figwort. Mt (VA, WV), Pd (VA), Cp (DE, VA): woodlands and forests; common (rare in Piedmont and Coastal Plain). May-early July. QC and NS west to BC, south to VA, MO, NM, and n. CA. [= C, F, G, K, P, W, WV]

Scrophularia marilandica Linnaeus, Eastern Figwort. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): moist to dry, nutrient-rich woodlands and forests, especially over mafic or calcareous rocks; common (rare in GA, NC, and SC Piedmont, uncommon in DE Coastal Plain, rare in GA, NC, and SC Coastal Plain). July-October. QC west to MN, south to SC, ne. GA, sw. GA, and LA. [= RAB, C, F, G, K, P, S, W, WV]

Verbascum Linnaeus 1753 (Mullein)

A genus of about 360 species, herbs (annual, biennial, and perennial) and shrubs, of Eurasia and ne. Africa. References: Pennell (1935)=P; Fischer in Kadereit (2004).

1 Leaves green and glabrous on both sides, or sparsely pubescent with glandular hairs; hairs of the calyx and upper stem simple and glandular.
  2 Flowers 1 per node throughout the inflorescence; pedicels longer than the calyx; glandular hairs usually restricted to the upper part of the plant ..... ***V. blattaria***
  2 Flowers usually > 1 per node in the lower parts of the inflorecence; pedicels shorter than the calyx; glandular hairs extending down the stem to the base ..... ***V. virgatum***
1 Leaves densely tomentose at least on the lower surface, and often the upper as well; hairs of the calyx and upper stem branched, not glandular (except in *V. sinuatum*).
  3 Inflorescence generally simple (sometimes with 1-several small branches), dense and spike-like (at least initially); leaves moderately to densely tomentose above; upper 3 filaments bearing white hairs.
    4 Leaves sessile to auriculate-clasping, slightly or not at all decurrent on the stem; stigma patulate, decurrent on the style; corolla white or yellow ..... ***V. phlomoides***
    4 Leaves sessile, decurrent down the stem to the next leaf; stigma capitate; corolla yellow ..... ***V. thapsus***
  3 Inflorescence freely branched, paniculate; leaves green and nearly glabrous above; all 5 filaments bearing either white or violet hairs.
    5 Basal leaves not lobed; inflorescence lacking glandular hairs; filaments bearing white hairs ..... ***V. lychnitis***
    5 Basal leaves lobed; inflorecence with glandular hairs; filaments bearing violet hairs ..... ***[V. sinuatum]***

* ***Verbascum blattaria*** Linnaeus, Moth Mullein. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): fields, roadsides, disturbed areas; common (rare in FL), native of Eurasia. May-June; June-July. [= RAB, C, F, G, K, P, S, W, WH, WV]

* ***Verbascum lychnitis*** Linnaeus, White Mullein. Cp (VA), Pd (DE, VA): disturbed areas, fields; rare, native of Eurasia. [= RAB, C, F, G, K, P, S]

* ***Verbascum phlomoides*** Linnaeus, Clasping Mullein, Orange Mullein. Mt (NC, VA, WV), Pd (NC, VA), Cp (DE, NC, VA): disturbed areas, roadsides; rare, native of Europe. May-June; July. [= RAB, C, F, G, K, P, W, WV]

* ***Verbascum thapsus*** Linnaeus, Woolly Mullein, Common Mullein, Flannel-plant, Velvet-plant. Mt (DE, GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): fields, roadsides, disturbed areas; common (uncommon in FL), native of Europe. June-September; July-October. [= RAB, C, F, G, K, P, S, W, WH, WV]

* ***Verbascum virgatum*** Stokes, Twiggy Mullein. Cp (FL, NC, SC): sandhills, sandy disturbed areas, roadsides; uncommon (rare in NC and SC), native of Europe. April-May; June. [= RAB, C, F, G, K, P, S, WH]

* *Verbascum sinuatum* Linnaeus, Wavyleaf Mullein, is introduced at scattered locations in MD, PA, NJ, and NY, on ballast and in disturbed areas. July-August. [= G, K]

371. LINDERNIACEAE Borsch, K. Müller, & Eb. Fischer 2005 (False-pimpernel Family) [in LAMIALES]

A family of about 13 genera and 195 species, herbs, pantropical and warm temperate. References: Tank et al. (2006); Pennell (1935)=P; Fischer in Kadereit (2004).

1 Calyx conspicuously 5-winged ..... ***Torenia***
1 Calyx not winged.
  2 Flowers > 4 mm long ..... ***Lindernia***
  2 Flowers < 2 mm long.
    3 Leaves elliptic, cuneate at the base; calyx lobes even, all of the sinuses reaching nearly to the base of the calyx ..... ***Hemianthus***

3 Leaves orbicular, rounded at the base; calyx lobes uneven, 3 of the sinuses extending about halfway to the base of the calyx, the lowermost sinus extending to the base..... ***Micranthemum***

Hemianthus Nuttall 1817

A genus of 3-4 species, annual herbs, of se. North America and Central America. The recognition of *Hemianthus* as separate from *Micranthemum* is uncertain and needs additional study. References: Pennell (1935)=P; Fischer in Kadereit (2004).

1 Calyx lobes acute, ⅓ to ½ as long as the calyx tube; flowers opening, chasmogamous..... ***H. glomeratus***
1 Calyx lobes obtuse, < ¼ as long as the calyx tube; flowers not opening, cleistogamous ..... ***H. micranthemoides***

Hemianthus glomeratus (Chapman) Pennell. Lake margins, ponds. January-December. Panhandle FL (Gadsden County) south to s. FL. [= P; = *Micranthemum glomeratum* (Chapman) Shinners WH]

Hemianthus micranthemoides Nuttall, Nuttall's Micranthemum. Muddy, freshwater intertidal shores, possibly extinct. NY (Hudson River) south to VA (Chesapeake Bay, Potomac River, James River). [= C, G, P; = *Micranthemum micranthemoides* (Nuttall) Wettstein F, K]

Lindernia Allioni 1755 (False-pimpernel)

A genus of about 80-100 species, of warm temperate and subtropical regions of the Old and New Worlds. References: Cooperrider & McCready (1975)=Z; Qualls (1984)=Y; Lewis (2000)=X; Pennell (1935)=P; Fischer in Kadereit (2004).

1 Fertile stamens 4; calyx lobes connate at anthesis for > ½ their length, later separating; [section *Torenioides*]..... ***L. crustacea***
1 Fertile stamens 2 (with 2 staminodia without anthers, or with rudimentary anthers); calyx lobes separate, or connate at base for < ¼ the length of the calyx.
2 Capsule lanceoloid, > 8× as long as its diameter; calyx lobes connate at base < ¼ the length of the calyx; [section *Bonnaya*] ..... ***L. antipoda***
2 Capsule ovoid to ellipsoid, < 5× as long as its iameter; calyx lobes distinct to the base at anthesis and after; [section *Brachycarpae*].
3 Pedicels shorter than or about as long as the subtending leaves ..... ***L. dubia*** *var.* ***dubia***
3 Pedicels longer than the subtending leaves (or bracteal leaves in some species).
4 Leaves nearly orbicular; stems creeping ..... ***L. grandiflora***
4 Leaves distinctly longer than wide; stems erect (sometimes decumbent at the base and rooting if knocked down by water).
5 Leaves not glandular punctate; seeds 2-3× as long as wide ..... ***L. dubia*** *var.* ***anagallidea***
5 Leaves glandular punctate; seeds ca. 1× as long as wide.
6 Leaves primarily in a basal rosette, leaves of the stem strongly reduced upward to bracts; capsule (1.8-) 3.4-7 mm long; [primarily of seepage of flatrocks] ..... ***L. monticola*** *("monticola" form)*
6 Leaves primarily on the stem, not conspicuously reduced upward; capsule 1.4-3.4 mm long; [of stream or river banks]..... ***L. monticola*** *("saxicola" form)*

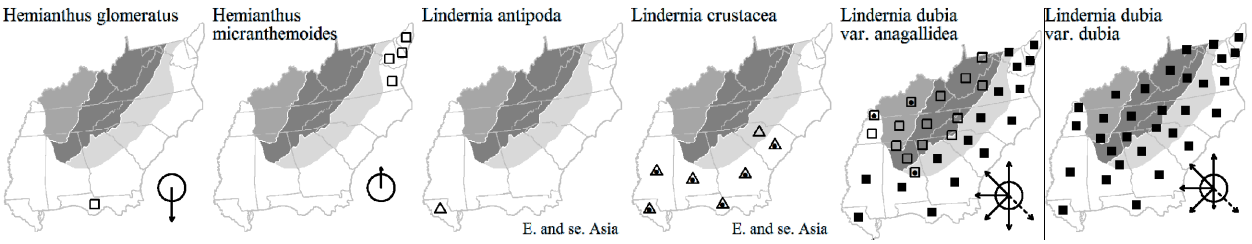
* ***Lindernia antipoda*** (Linnaeus) Alston. Disturbed areas; native of se. Asia, Polynesia, and n. Australia. [= K, Y]

* ***Lindernia crustacea*** (Linnaeus) F. Mueller. Lawns; native of Malaysia. September. [= RAB, GW, K, P, WH, X, Y]

* *Lindernia diffusa* (Linnaeus) Wettstein. Reported for SC by Kartesz (1999) on the basis of specimens at NCU, but the specimens so labelled are actually *L. dubia*. {rejected; not keyed or mapped}

Lindernia dubia (Linnaeus) Pennell *var.* ***anagallidea*** (Michaux) Cooperrider. Wet sandy or muddy areas. June-September. Nearly throughout North America, Central America, and South America. The extensive and essentially coincident ranges of the two varieties of *L. dubia* suggests that they may be merely forms, as suggested by Voss (1996). [= C, K, WH, X, Y, Z; = *L. anagallidea* (Michaux) Pennell – RAB, F, G, GW, P, WV; = *Ilysanthes inequalis* (Walter) Pennell – S; < *L. dubia* – W]

Lindernia dubia (Linnaeus) Pennell *var.* ***dubia***. Wet sandy or muddy areas. May-November. Nearly throughout North America, Central America, and South America. [= C, WH, X, Y, Z; = *L. dubia* (Linnaeus) Pennell – RAB, GW, WV; > *L. dubia* var. *dubia* – F, G, K; > *L. dubia* var. *riparia* (Rafinesque) Fernald – F, G; > *L. dubia* var. *inundata* Pennell – F, G, K; > *L. dubia* var. *major* (Pursh) Pennell – P; > *L. dubia* var. *typica* – P; = *Ilysanthes dubia* (Linnaeus) Barnhart – S; < *L. dubia* – W]



Lindernia grandiflora Nuttall. Depressional wetlands. S. GA south to s. FL. [= GW, K, P, WH, X, Y; = *Ilysanthes grandiflora* (Nuttall) Bentham – S]

Lindernia monticola Muhlenberg ex Nuttall, Flatrock Pimpernel, Riverbank Pimpernel. In seasonal seepage on granitic flatrocks, and on river-scoured siliceous rocks. April-June (-September). Nc. and sw. NC south to ne. FL and ec. AL. *L. saxicola* appears to be merely a form of *L. monticola*, the leafy stems the result of the basal leaves being covered by silt deposited by floodwaters (Qualls 1984; Lewis 2000); this needs additional study. [= K, WH, X; > *L. monticola* – RAB, GW, P, W, Y; > *L.*

saxicola M.A. Curtis – RAB, P, W, Y; > *Ilysanthes monticola* (Muhlenberg ex Nuttall) Rafinesque – S; > *Ilysanthes saxicola* (M.A. Curtis) Chapman – S]

* *Lindernia procumbens* (Krock.) Borb. One record as a waif in Arlington County, VA. {rejected; not keyed or mapped}

Micranthemum Michaux 1803

A family of 14-17 species, annual herbs, of s. North America, Central America, and South America. The recognition of *Hemianthus* as separate from *Micranthemum* is uncertain and needs additional study. References: Pennell (1935)=P; Fischer in Kadereit (2004).

Micranthemum umbrosum (J.F. Gmelin) Blake, Shade Mudflower. Shallow pools, stagnant streams, wet depressions in swamp forests. May-October. Se. VA south to FL, west to TX, and south into tropical America (Mexico, Central America, West Indies, e. South America). [= RAB, C, F, G, GW, K, P, WH; = *Globifera umbrosa* J.F. Gmelin – S]

Torenia Linnaeus 1753 (Blue-wings)

A genus of about 40 species of the Old World tropics. References: Fischer in Kadereit (2004)

* ***Torenia fournieri*** Linden ex E. Fournier, Bluewings, Wishbone-flower. Disturbed areas, flowerbeds; native of China. Also reported for Mountains of NC (Pittillo & Brown 1988), but it appears that it was a short-lived waif there. Likely to be found sporadically, especially southwards. [= K, WH]

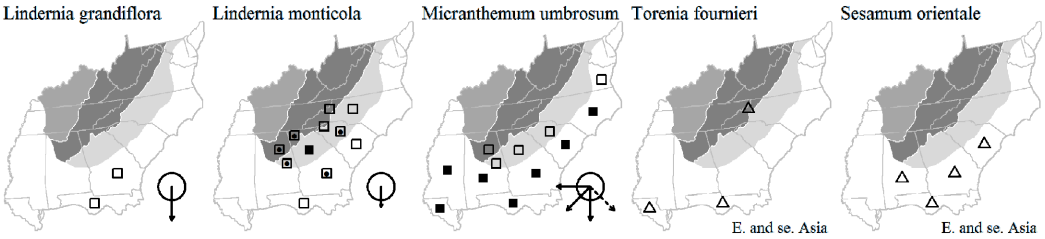
372. PEDALIACEAE R. Brown 1810 (Sesame Family) [in LAMIALES]

A family of about 13 genera and 70 species, herbs, shrubs, and trees, of the Old World tropics.

Sesamum Linnaeus 1753 (Sesame)

A genus of about 19 species, of the old World tropics.

* ***Sesamum orientale*** Linnaeus, Sesame. Disturbed areas; native of the East Indies. January-December. Also reported for AL. [= K, WH; = *S. indicum* Linnaeus – S]



373. LAMIACEAE Lindley 1836 ***or LABIATAE*** A.L. de Jussieu 1789 (Mint Family) [in LAMIALES]

A family of about 230-250 genera and 6700-7170 species, herbs, shrubs, vines, and trees, cosmopolitan. The placement in the Lamiaceae of several genera traditionally placed in Verbenaceae (e.g. *Clerodendrum*) is strongly supported by several lines of evidence. References: Harley et al. in Kadereit (2004).

incertae sedis: *Callicarpa*.
subfamily Viticoideae: *Vitex*.
subfamily Ajugoideae: *Ajuga, Clerodendrum, Teucrium, Trichostema*.
subfamily Scutellarioideae: *Scutellaria*.
subfamily Lamioideae:
  tribe Synandreae: *Synandra, Macbridea, Physostegia*
  tribe Stachydeae: *Galeopsis, Stachys, Sideritis*
  tribe Leonuridae: *Leonurus*
  tribe Marrubieae: *Marrubium*
  tribe Lammieae: *Lamium*
subfamily Nepetoideae:
  tribe Elsholtzieae: *Collinsonia, Elsholtzia, Mosla, Perilla*.
  tribe Mentheae:
    subtribe Salviinae: *Rosmarinus, Salvia*.

subtribe Menthinae: *Blephilia, Clinopodium, Conradina, Cunila, Dicerandra, Hedeoma, Stachydeoma, Hyssopus, Lycopus, Mentha, Monarda, Origanum, Piloblephis, Prunella, Pycnanthemum, Thymus*.
subtribe Nepetinae: *Agastache, Dracocephalum, Glechoma, Meehania, Nepeta*.
incertae sedis: *Melissa*.
tribe Ocimeae:
subtribe Hyptidinae: *Hyptis*.
subtribe Ociminae: *Ocimum*.

1. Callicarpa Linnaeus 1753 (Beautyberry)

A genus of about 140 species, small trees, shrubs, and lianas, mainly tropical and subtropical. References: Moldenke (1980)=Z; Harley et al. in Kadereit (2004).

1 Leaves 7-23 cm long, stellate-scurfy beneath; peduncles 1-5 mm long ..... ***C. americana***
1 Leaves 2-6.5 (-7) cm long, glabrous or nearly so beneath (except on the midrib); peduncles 10-20 mm long.
2 Inflorescence supra-axillary, diverging from the twig 1-4 mm above the leaf axil ..... ***C. dichotoma***
2 Inflorescence axillary, borne directly in the axil of the leaf ..... ***C. japonica***

Callicarpa americana Linnaeus, Beautyberry, American Beautyberry, French-mulberry. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA, NC, SC): hammocks, other forests (especially with sandy or rocky soils), maritime forests (the main habitat northwards), disturbed areas; common (rare in Mountains). June-July; August-October (persisting into the winter). MD and AR south to s. FL, TX, Mexico; West Indies. [= RAB, C, F, G, K, S, W, WH]

* ***Callicarpa dichotoma*** (Loureiro) K. Koch, Chinese Beautyberry. Pd (NC, VA), Cp (DE, NC, VA), Mt (NC), {SC}: roadsides, powerline rights-of-way, woodland edges, suburban woodlands, bogs; uncommon (rare in DE and VA), native of Asia. September-November. This species is beginning to spread more rapidly in the Southeast. [= RAB, C, K]

* ***Callicarpa japonica*** Thunberg, Japanese Beautyberry. Pd (NC): suburban woodlands; rare, native of e. Asia. Reported for Durham County, NC by Moldenke (1980); corroborated by specimens from Orange County, NC (Giencke, prs. comm., 2005). [= K, Z]

2. Vitex Linnaeus 1753 (Chaste Tree)

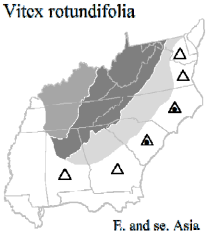
A genus of about 250 species, trees and shrubs, tropical to temperate. References: Chen & Gilbert (1994)=Z; Harley et al. in Kadereit (2004).

1 Leaves palmately 5-7-foliolate; leaflets lanceolate; plant an upright small tree ..... ***V. agnus-castus***
1 Leaves unifoliolate (or palmately 3-foliolate); leaflets orbicular or obovate; plant a sprawling and spreading shrub/vine ..... ***V. rotundifolia***

* ***Vitex agnus-castus*** Linnaeus, Chaste Tree. Cp (FL, GA, NC, VA), Pd (GA, NC, VA), Mt (VA): pastures, woodland edges, suburban woodlands; rare, native of Mediterranean Europe. June-July. [= RAB, C, G, S, WH; > *V. agnus-castus* var. *agnus-castus* – K; > *V. agnus-castus* var. *caerulea* Rehder – K]

* *Vitex negundo* Linnaeus, Chinese Chaste-tree. Reported for FL, MS, LA, KY. June-July; August-November. [= WH; > *V. negundo* var. *intermedia* (S.J. Pei) Moldenke – K; > *V. negundo* var. *negundo* – K, Z; > *V. negundo* var. *heterophylla* (Franchet) Rehder – K, Z; *V. negundo* var. *cannabifolia* (Siebold & Zuccarini) Handel-Mazzetti – Z] {not keyed; rejected as not definitively naturalized in Flora area}

* ***Vitex rotundifolia*** Linnaeus f., Beach Vitex, Roundleaf Chaste-tree. Coastal dunes, planted for ornament and stabilization and now spreading aggressively as an invasive species; native of e. Asia, se. Asia, and nearby islands. See Cousins et al. (2010) and Roecker & Socha (2004) for additional information. The runners are reported to reach 10 m in length. [= K, Z; < *V. trifolia* Linnaeus ssp. *littoralis* Steenis]



3. Ajuga Linnaeus 1753 (Bugle, Bugleweed)

A genus of about 40-50 species, herbs, of the temperate Old World. References: Harley et al. in Kadereit (2004)

1 Leaves deeply cleft into narrow segments; corolla yellow; annual ..... ***A. chamaepitys***
1 Leaves entire to shallowly lobed; corolla blue (to white or pink); perennial.
2 Plants not stoloniferous; stems hairy all around ..... ***A. genevensis***
2 Plants stoloniferous; stems hairy in lines ..... ***A. reptans***

* ***Ajuga chamaepitys*** (Linnaeus) Schreber, Yellow Bugle, Ground-pine Bugle. Cp (VA): disturbed areas; rare, native of Europe. May-September. [= C, F, G, K]
* ***Ajuga genevensis*** Linnaeus, Standing Bugle. Mt (WV): disturbed areas; rare, native of Europe. Cultivated and rarely escaped in ne. North America, reported as naturalized as far south as PA (Rhoads & Klein 1993), MD (Kartesz 1999), and WV (Harmon, Ford-Werntz, & Grafton 2006), where considered "not confirmed as naturalized." [= C, F, G, K, WV]
* ***Ajuga reptans*** Linnaeus, Carpet Bugle. Pd (DE, NC, VA), Mt (NC, VA, WV), Cp (DE, FL, VA): lawns and roadsides; uncommon (rare in DE Coastal Plain, rare in FL, NC, and VA), native of Europe. March-June. [= RAB, C, F, G, K, WH]

4. Teucrium Linnaeus 1753 (Germander)

A genus of about 100-250 species, herbs and shrubs, nearly cosmopolitan in distribution. References: Harley et al. in Kadereit (2004).

* ***Teucrium botrys*** Linnaeus, Cutleaf Germander. Mt (WV): disturbed areas; rare, native of Europe. July-September. [= C, K] {add to synonymy}
Teucrium canadense Linnaeus *var.* ***canadense***. Mt (WV), Cp (DE), {GA, NC, SC, VA}: rich bottomlands; common. Mainly coastal, NS south to FL, west to TX and OK. [= C, F, G, K; < *T. canadense* – RAB, GW, W; = *T. littorale* Bicknell – S]
Teucrium canadense Linnaeus *var.* ***hypoleucum*** Grisebach. {GA, NC, SC}. E. NC south to FL, west to TX. [= K; < *T. canadense* – RAB, GW, W; = *T. nashii* Kearney – S]
Teucrium canadense Linnaeus *var.* ***occidentale*** (A. Gray) McClintock & Epling. Mt (VA, WV*). Reported for VA (Kartesz 1999). {investigate} Occurs at least as far south and east as PA (Rhoads & Klein 1993) and ne.WV. [= C, G, K; > *T. occidentale* A. Gray var. *occidentale* – F; > *T. occidentale* A. Gray var. *boreale* (Bicknell) Fernald – F, WV]
Teucrium canadense Linnaeus *var.* ***virginicum*** (Linnaeus) Eaton. Pd (DE), {AL, GA, MS, NC, SC, VA}: {habitat}; common. NY, QC, and MN south to GA, AL, MS, and TX. [= C, F, G, K; < *T. canadense* – RAB, GW, W; = *T. canadense* – S]
Teucrium cubense Jacquin *var.* ***cubense***. AL. [= K] {synonymy incomplete}

5. Clerodendrum Linnaeus 1753 (Glory-bower)

A genus of about 400-500 species, trees and shrubs, mostly tropical and warm temperate, African and Asian (after removal of the "Pantropical Coastal" clade into *Volkameria* (Yuan et al. 2010). References: Yuan et al. (2010); Steane et al. (1999); Hsiao & Lin (1995); Steane, de Kok, & Olmstead (2004); Harley et al. in Kadereit (2004).

1 Corolla tube > 8 cm long ..... ***C. indicum***
1 Corolla tube < 3 cm long.
  2 Calyx 5-8 mm long ..... ***C. bungei***
  2 Calyx > 10 mm long.
    3 Corolla double ..... ***C. chinense***
    3 Corolla single ..... ***C. trichotomum*** *var.* ***ferrugineum***

* ***Clerodendrum bungei*** Steudel, Rose Glory-bower. Cp (FL, GA), Pd (GA, SC): roadsides and suburban woodlands; rare, native of e. Asia. August-September. First reported from South Carolina by Hill & Horn (1997); also reported for our area by W. Duncan (pers. comm.). [= K, WH]
* ***Clerodendrum chinense*** (Osbeck) Mabberley, Stickbush. Cp (FL): disturbed areas; rare, native of Asia. Cultivated and naturalized in FL, including the Panhandle (Escambia County) (Wunderlin & Hansen 2004). [= K, WH; *? Clerodendrum japonicum* (Thunberg) Sweet var. *pleniflorum* (Schauer) Maheshwari]
* *Clerodendrum japonicum* (Thunberg) Sweet. Also cultivated and is reported to be naturalized in MD (Staff of the Bailey Hortorium 1976). [= K] {not yet keyed]
* ***Clerodendrum indicum*** (Linnaeus) Kuntze, Tubeflower, Turk's-turban. Cp (FL, GA, SC): disturbed areas, roadsides; rare, native of the Malaysian Archipelago. August-October; November-December. [= K, WH; = *Clerodendron indicum* – RAB, orthographic variant]
* ***Clerodendrum trichotomum*** Thunberg *var.* ***ferrugineum*** Nakai, Harlequin Glory-bower. Pd (NC), Mt (NC), Cp (FL), {GA}: roadsides, streambanks; rare, cultivated and strongly naturalized, native of e. Asia. [= K; < *Clerodendrum trichotomum* – WH]

6. Trichostema Linnaeus 1753 (Blue Curls)

A genus of about 18 species, shrubs, annual and perennial herbs, of temperate North America (especially diverse in w. North America, with a second center of diversity in se. North America). Morphology, pollen, and phytogeography suggest the plausible recognition of *Trichostema* section *Orthopodium* (which includes this species and several from w. North America) as *Isanthus*, a genus distinct from section *Trichostema* (which includes all other eastern North American species). References: Weakley (in prep.)=Z; Lewis (1945)=Y; Harley et al. in Kadereit (2004).

1 Calyx lobes essentially equal; stamens straight, < 10 mm long; leaves acute to slightly acuminate, the two main lateral veins reconnecting to the midvein; [section *Orthopodium*] ..... ***T. brachiatum***
1 Calyx strongly bilabiate; stamens strongly arched, 12-20 mm long; leaves obtuse, the two main lateral veins not reconnecting to the midvein; [section *Trichostema*].
2 Plants annual; larger leaves 3-7 cm long (including the petiole); plants with long internodes near the base, near-basal branches absent, the best-developed branches from the mid or upper stem; hairs on the upper stem long (0.5-2.0 mm long) or short (0.1-0.4 mm long); [collectively widespread, in a wide variety of habitats, primarily inland, though occasionally occurring as a weed in coastal areas].
3 Leaves 2.5-4× as long as wide; longer hairs of the upper stem (0.3-) 0.5-2.0 mm long..... ***T. dichotomum***
3 Leaves 5-15× as long as wide; longer hairs of the upper stem 0.1-0.3 (-0.4) mm long..... ***T. setaceum***
2 Plants perennial; larger leaves 1-4 cm long (including the petiole); plants with short internodes near the base, near-basal branches well-developed, these often branching again; hairs on the upper stem short (0.1-0.4 mm long); [of the Coastal Plain].
4 Corolla deep blue (almost black in bud); flowers stems typically virgate, not branched above the base; hairs of the stem not longer at each node; [of peninsular FL, inland as well as on sand ridges near the coasts] ..... ***T. suffrutescens***
4 Corolla pastel blue or pink; stems typically rebranching above the base, the plant more-or-less bushy; hairs of the stem longer at the node (in a line between the 2 petioles); [of NC south to s. FL and west to s. MS; restricted to barrier islands, coastal peninsulas, and other maritime situations within 10 km of the ocean]
5 Anthers lemon yellow; leaves ovate-rhombic, 1-1.5× as long as wide; corolla lavender (definitely with a pinkish tint); bark on older stems dark, tight; plants 1-4 dm tall, forming a tight, compact, hemispheric bush; [of maritime dunes, grasslands, and forest openings from 10 km north of Cape Hatteras (Dare County, NC) south to near Cape Romain (Georgetown County, SC] ..... ***T. species 1***
5 Anthers blue; leaves spatulate, the petiole relatively well-developed, 1.5-3× as long as wide; corolla bluish (lacking a well-developed pinkish tint); bark on older stems yellow to tan, somewhat papery; plants 3-7 dm tall, often gangly and irregularly shaped; [of maritime dunes, grasslands, and coastal scrub from e. GA around the FL peninsula west to s. MS]..... ***T. species 2***

Trichostema brachiatum Linnaeus, Glade Blue Curls, False Pennyroyal. Mt (GA, NC, VA, WV), Pd (NC, SC, VA): shale barrens, outcrops of calcareous or mafic rock, diabase barrens, calcareous dry prairies, disturbed rocky areas; uncommon (rare in NC). August-September. VT and s. ON west to MN and NE, south to c. NC, nw. GA, AL, TX, and AZ. [= W, Y; = *Isanthus brachiatus* (Linnaeus) Britton, Sterns, & Poggenburg – C, F, K, S, WV; > *Isanthus brachiatus* var. *brachiatus* – G]

Trichostema dichotomum Linnaeus, Common Blue Curls. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dry woodlands, disturbed areas, thin soils around rock outcrops; common. August-November. ME, ON, QC, MI, and IA, south to FL and TX. [= RAB, C, K, S, W, WV, Z; > *T. dichotomum* var. *dichotomum* – F; >< *T. dichotomum* var. *puberulum* Fernald & Griscom – F; = *T. dichotomum* var. *dichotomum* – G; < *T. dichotomum* – WH]

Trichostema setaceum Houttuyn, Narrowleaf Blue Curls. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): thin soils around rock outcrops, especially granite flatrocks, dry sandy soils of the Coastal Plain; uncommon (rare in DE, NC, VA, and WV). August-November. CT west to OH, south to FL and TX, primarily on the Coastal Plain. [= RAB, C, F, K, W, WH, Y, Z; = *T. dichotomum* var. *lineare* (Walter) Pursh – G; = *T. lineare* Walter – S]

Trichostema species 1, Dune Blue Curls, Carolina Blue Curls. Cp (NC, SC): dunes on barrier islands, vegetated with perennial grasses (especially *Uniola paniculata*), openings in maritime scrub; rare. August-November. Endemic to barrier islands from slightly north of Cape Hatteras, Dare County, NC south to North Island, Georgetown County, SC, north of Cape Romain. When growing together, the flowering period of *T. species 1* is about 2-3 weeks later than that of *T. dichotomum*. Despite a considerable overlap of blooming period, only one hybrid has been seen, and that in common-garden cultivation in the Piedmont. [= Z]

Trichostema species 2, Florida Blue Curls. Cp (AL, FL, GA, MS): maritime dunes, grasslands, and coastal scrub; uncommon. August-November. E. GA around the FL peninsula west to s. MS; Bahamas. [= Z; >< *T. dichotomum* var. *puberulum* Fernald & Griscom – F; < *T. dichotomum* – WH; < *T. dichotomum* – Y ("pubescence type B"); < *T. suffrutescens* – Y]

Trichostema suffrutescens Kearney, Scrub Blue Curls. Cp (FL): scrub, sandhills; rare. August-November. Ne. FL (Clay County) south to s. peninsular FL. [= S, Z; < *T. dichotomum* – WH; < *T. suffrutescens* – Y]

7. Scutellaria Linnaeus 1753 (Skullcap)
(contributed by Bruce A. Sorrie and Alan S. Weakley)

A genus of about 350-360 species, herbs and shrubs, almost cosmopolitan. References: Pittman (1988)=Z; Collins (1976)=Y; Epling (1942)=X; Leonard (1892); Harley et al. in Kadereit (2004).

Identification notes: Recognizable by the "tractor seat"-shaped protuberance on the upper calyx. *Note: in key break 22b, corollas of *S. alabamensis* may reach 22 mm long; its calyces are both stipitate glandular and punctate glandular, thus differing from *S. arenicola* and *S. mellichampii*. In key break 22a, corollas of *S. mellichampii* may be as short as 21 mm; its calyces are punctate glandular only, unlike *S. incana* var. *australis* which has both punctate glands and stipitate glands on calyces.

1 Flowers axillary, bracts resembling stem leaves; stem leaves sessile **or** petioles < 4 mm.
2 Corollas 12-32 mm long ..... ***Sc. galericulata***
2 Corollas 5-10 mm long.
3 Lower leaves hastate; plants glabrous..... ***Sc. racemosa***
3 Lower leaves ovate or deltoid-ovate; plants puberulent or pubescent.
4 Stems glabrate, the pubescence ascending, curled or appressed, eglandular.
5 Median leaves 10-15 mm long; corolla 6.5-9 mm long..... ***Sc. leonardii***
5 Median leaves 20-40 mm long; corolla 8-10 mm long..... ***Sc. nervosa***
4 Stems obviously hairy, pubescence spreading, glandular or not (or both).

6 Lower leaf surface with glandular hairs only; leaf veins tending to anastomose along leaf margins ..... ***Sc. australis***
6 Lower leaf surface with glandular hairs or eglandular; leaf veins usually unbranched along margins ..... ***Sc. parvula***
1 Flowers in racemes, bracts much reduced (not leaf-like); stem leaf petioles > 4 mm.
7 Corolla tube glabrous within or sparsely hairy, lacking a sharply defined ring of hairs at bend of tube (non-annulate).
8 Racemes secund.
9 Corollas ca. 6 mm long; racemes terminal and axillary ..... ***Sc. lateriflora***
9 Corollas ca. 10 mm long; racemes terminal or terminating axillary branches ..... ***Sc. saxatilis***
8 Racemes not secund, flowers on more than one side of axis.
10 Stems and petioles with ascending hairs; at least some racemes from axillary branches; mid to upper leaves truncate basally ..... ***Sc. saxatilis***
10 Stems and petioles with spreading or retrorse hairs; racemes terminal or in panicles; mid to upper leaves strongly cordate.
11 Margins of lower lip cleft and erose; lower lip with large lateral auricles (flabelliform) ..... ***[Sc. ovata*** *ssp.* ***bracteata]***
11 Margins of lip entire; lip undulate or weakly auriculate.
12 Lower lip entirely white with a few blue spots; leaf surface smooth with sparse glandular hairs ..... ***Sc. ovata*** *ssp.* ***ovata***
12 Lower lip blue with two longitudinal white bands; leaf surface rugose, usually densely glandular hairy (but may be eglandular).
13 [Ridge and Valley (especially shale barrens) of VA, WV, MD] ..... ***Sc. ovata*** *ssp.* ***rugosa*** *var.* ***rugosa***
13 [Blue Ridge (moist talus slopes) of NC, TN] ..... ***Sc. ovata*** *ssp.* ***rugosa*** *var.* ***1***
7 Corolla tube with sharply defined ring of hairs (annulus) at bend of tube.
14 At least some upper leaves entire.
15 Leaves with stipitate glands ..... ***Sc. multiglandulosa***
15 Leaves without stipitate glands.
16 Corolla glabrous, lower lip with immaculate white central band; leaf bases long-attenuate ..... ***Sc. glabriuscula***
16 Corolla short pilose, lower lip with blue spots or lines on white central band; leaf bases cuneate to deltoid.
17 Lowest pedicels of main axis of inflorescence >4 mm, or if less, then subtending bracts < 13 mm ..... ***Sc. arenicola***
17 Lowest pedicels < 4 mm, or if more, then bracts >13 mm ..... ***Sc. integrifolia***
14 All leaves serrate or crenate.
18 Second internode below base of inflorescence stipitate glandular.
19 Corollas 24-33 mm long **and** upper surfaces of leaves punctate glandular ..... ***Sc. pseudoserrata***
19 Corollas 14-23 mm long, or if longer, then upper surfaces of leaves eglandular.
20 Corollas 25-36 mm long; bracts elliptic to oblanceolate, apices acute ..... ***Sc. montana***
20 Corollas 14-23 mm; bracts obovate to broadly oblanceolate, apices obtuse.
21 Bases of upper leaves cuneate to rounded; corollas 14-18 (-21) mm ..... ***Sc. elliptica*** *var.* ***hirsuta***
21 Bases of upper leaves cordate to rounded; corollas 18-23 mm ..... ***Sc. ocmulgee***
18 Second internode below base of inflorescence eglandular.
22 Corollas > 21 mm long*.
28 Stems glabrous or glabrate below inflorescence; calyces eglandular; [Mountains and Piedmont] ..... ***Sc. serrata***
28 Stems canescent below inflorescence; calyces stipitate glandular or punctate glandular; [mainly Coastal Plain].
29 Lower lip with 20+ blue spots; calyces stipitate glandular; [peninsular FL and s. GA] ..... ***Sc. arenicola***
29 Lower lip lacking blue spots; calyces punctate glandular; [s. SC to se. GA; disjunct to c. AL] ..... ***Sc. mellichampii***
22 Corollas < 21 mm long*.
23 Calyces densely to sparsely canescent, eglandular or with punctate glands (stipitate glands may also be present).
24 Leaves softly villous beneath; calyces and bracts eglandular ..... ***Sc. incana*** *var.* ***incana***
24 Leaves glabrate, with appressed hairs on veins.
25 Stems canescent; calyces and bracts densely punctate glandular ..... ***Sc. incana*** *var.* ***1***
25 Stems glabrate (rarely puberulent); calyces and bracts eglandular ..... ***Sc. incana*** *var.* ***punctata***
23 Calyces pilose with spreading stipitate glandular hairs.
26 Bracts with stipitate glands; leaves eglandular ..... ***Sc. elliptica*** *var.* ***elliptica***
26 Bracts without stipitate glands; leaves densely punctate glandular.
27 Corollas 19-22 mm long; [Mountains of AL] ..... ***[Sc. alabamensis]***
27 Corollas 11-16 mm long; [Coastal Plain of SC and GA] ..... ***Sc. altamaha***

Scutellaria altamaha Small, Altamaha Skullcap. Cp (GA, SC), Pd (GA, SC): sandy or rocky, dry forests; rare (GA Special Concern). Nc. SC to ec. GA and se. GA. [= K, S, Y; < *S. mellichampii* Small – RAB]

Scutellaria arenicola Small, Sandhill Skullcap. Cp (FL, GA): sandy scrub; rare. GA and ne. FL south to s. FL. [= K, S, WH, Y]

Scutellaria australis (Fassett) Epling, Southern Skullcap. Pd (GA, NC, SC, VA), Mt (WV), Cp (FL, GA): bottomland forests; rare. VA, s. WV, KY, IN, IL, MO, and KS, south to Panhandle FL, LA, and e. TX. [= G, WV, X; < *S. parvula* – RAB, S, WH; = *S. parvula* Michaux var. *australis* Fassett – F, K]

Scutellaria elliptica Muhlenberg ex Sprengel *var.* ***elliptica***. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): mesic to dry forests; common (rare in FL). Late May-June; June-July. NY, KY and MO, south to s. GA, Panhandle FL, LA, and e. TX. [= C, F, G, K, W, WV, Y; < *S. elliptica* – RAB, WH; < *S. ovalifolia* – S; = *S. ovalifolia* ssp. *mollis* Epling – X]

Scutellaria elliptica Muhlenberg ex Sprengel *var.* ***hirsuta*** (Short & Peter) Fernald. Mt (GA, NC, VA, WV), Pd (VA): mesic to dry forests; uncommon. Late May-June; June-July. PA and MI south to w. VA, w. NC, nw. GA, s. AL, and e. TX. [= C, F, G, K, W, WV, Y; < *S. elliptica* – RAB; < *S. ovalifolia* – S; = *S. ovalifolia* ssp. *hirsuta* (Short & Peter) Epling – X]

Scutellaria galericulata Linnaeus, Hooded Skullcap. Mt (NC, VA, WV), Cp (DE): spring-fed seepage, freshwater tidal marshes; rare. Circumboreal, south in North America to DE, MD, VA, ne. WV, w. NC, IN, MO, and CA. The NC occurrence is based on a single specimen from the 19th century. Reported recently from MD (Steury, Tyndall, & Cooley 1996). [= C, G, K, X; > *S. epilobiifolia* A. Hamilton – F, S, WV]

Scutellaria glabriuscula Fernald, Georgia Skullcap. Cp (AL, FL, GA, MS): sandhills; rare. Sw. GA and w. FL Panhandle west through s. AL to s. MS. [= K, S, WH, Y]

Scutellaria incana Biehler *var. **1***. Cp (FL, GA, NC): dry sandy open woods or woodland margins; rare. July-August. Gulf Coastal Plain of sw. GA, nw. FL, s. AL, and c. MS; disjunct to Brunswick County, NC. [= *S. altamaha* Small ssp. *australis* Epling; < *S. incana* – WH; = *S. incana* var. *australis* (Epling) Collins comb. nov. ined.]

Scutellaria incana Biehler *var. **incana***. Pd (NC, VA), Cp (NC, VA), Mt (WV): dry to mesic forests and woodlands; uncommon. NY, OH, IN, and IL, south to e. VA, c. NC, KY, w. TN, MS, and AR. [= C, F, G, K, WV, Y; < *S. incana* – RAB, S; = *S. incana* – X]

Scutellaria incana Biehler *var. **punctata*** (Chapman) C. Mohr. Mt (GA, NC, SC, VA): dry to mesic forests and woodlands; common (rare in WV). A southern Appalachian endemic: sw. VA and WV south through w. NC, nw. SC, e. TN to n. GA and ne. AL. [= C, F, G, K, W, WV, Y; < *S. incana* – RAB, S; ? *S. punctata* (Chapman) Leonard – X]

Scutellaria integrifolia Linnaeus. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): wet pine savannas, seeps in forests, bottomlands, other moist sites; common (uncommon in VA Mountains). May-July; July-August. MA south to c. peninsular FL, west to TX, northward in the interior to OH, KY, and TN. [= C, G, GW, K, S, W, WH, Y; > *S. integrifolia* var. *hispida* Bentham – RAB, F; > *S. integrifolia* var. *integrifolia* – RAB, F]

Scutellaria lateriflora Linnaeus, Mad Dog Skullcap. Cp (DE, FL, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): alluvial forests, bogs, seeps, marshes; common (rare in FL). July-November. NL (Newfoundland) west to BC, south to GA, Panhandle FL, and CA. [= RAB, C, F, G, GW, S, W, WH, WV; > *S. lateriflora* var. *lateriflora* – K]

Scutellaria leonardii Epling, Shale-barren Skullcap, Glade Skullcap. Mt (GA, VA, WV), Pd (NC, VA), Cp (DE, VA): limestone glades, diabase barrens, shale barrens and woodlands, dry sandy soils; rare. April-May; May-June. MA west to MI and ND, south to se. VA, nc. NC, AR, and OK. [= C, G, W, WV, X; < *S. parvula* – RAB; > *S. nervosa* Pursh var. *ambigua* (Nuttall) Fernald – F; = *S. parvula* Michaux var. *missouriensis* (Torrey) Goodman & Lawson – K; = *S. ambigua* Nuttall – S; > *S. parvula* Michaux var. *leonardii* (Epling) Fernald – F]

Scutellaria mellichampii Small, Mellichamp's Skullcap. Cp (GA, SC): sandy deciduous forests on river bluffs; rare (GA Special Concern). June; July. Se. SC south to e. GA; seemingly disjunct in c. AL. [= S, X, Y; < *S. mellichampii* – RAB; = *S. incana* Biehler var. *australis* (Epling) Collins, comb. nov. – K, misapplied]

Scutellaria montana Chapman, Large-flowered Skullcap. Mt (GA): mesic hardwood (or hardwood-shortleaf pine) forests; rare. Se. TN south to nw. GA. [= K, S, Y; = *S. serrata* Andrzedowski var. *montana* (Chapman) Penland – F]

Scutellaria multiglandulosa (Kearney) Small ex R.M. Harper. Cp (FL, GA, SC), Pd (GA, SC): sandhills, dry sandy bluff forests; rare. SC (Abbeville and Anderson counties) to e. GA, south to e. Panhandle FL and c. peninsular FL. [= K, S, WH, Y; = *S. integrifolia* Linnaeus var. *multiglandulosa* Kearney – F]

Scutellaria nervosa Pursh, Bottomland Skullcap, Veined Skullcap. Pd (DE, NC, SC, VA), Cp (NC, VA), Mt (VA, WV), {GA}: alluvial forests, mesic forests; common (uncommon in VA Mountains and Piedmont, rare in DE, GA, NC, and SC, rare in VA Coastal Plain). May-June; June-July. NY, MI, and IA, south to GA, AL, and LA. [= RAB, K, S, W, WV; > *S. nervosa* var. *nervosa* – C, F, G; > *S. nervosa* var. *calvifolia* Fernald – C, F, G]

Scutellaria ocmulgee Small, Ocmulgee Skullcap. Cp (GA): bluff forests and other mesic hardwood forests; rare (GA Threatened). Endemic to e. GA. [= K, S, Y]

Scutellaria ovata Hill *ssp. **bracteata*** (Bentham) Epling. Mt (GA), Cp (FL): dry forests and woodlands, hammocks; rare. MO south through AR and OK to c. TX; disjunct eastward in s. MS, c. and n. AL, w. Panhandle FL, and nw. GA. [= K, W, WH, X; < *S. ovata* var. *ovata* – C, F, G; = *S. ovata* var. *bracteata* Bentham; > *Scutellaria ovata* Hill ssp. *cuthbertii* (Alexander) Epling – K, X; > *S. cuthbertii* Alexander – S; = *S. ovata* ssp. *bracteata* (Bentham) Epling var. *bracteata* – Z] {synonymy incomplete}

Scutellaria ovata Hill *ssp. **ovata** var. **ovata***. Mt (VA, WV), Cp (VA): {GA, NC, SC}. {overall distribution}. [= Z; > *S. ovata* ssp. *ovata* – K; < *S. ovata* – RAB, S; >< *S. ovata* var. *ovata* – C, F, G; > *S. ovata* var. *calcarea* (Epling) Gleason – C, G; > *S. ovata* var. *versicolor* (Nuttall) Fernald – C, G, WV; = *S. ovata* ssp. *ovata* – W; > *S. ovata* ssp. *calcarea* Epling – X; > *S. ovata* ssp. *versicolor* (Nuttall) Epling – X; > *Scutellaria ovata* Hill *ssp. venosa* Epling – K, X]

Scutellaria ovata Hill *ssp. **rugosa*** (Wood) Epling *var. **rugosa***. Mt (VA, WV): shale barrens, other dry woodlands; uncommon. {overall distribution} [= *S. ovata* var. *rugosa* – F; > *S. ovata* ssp. *rugosa* – K, W, X; > *Scutellaria ovata* Hill ssp. *pseudoarguta* Epling – K, X; < *S. ovata* – RAB, S; = *S. ovata* ssp. *rugosa* (Wood) Epling var. *rugosa* – Z; > *Scutellaria ovata* Hill *ssp. virginiana* Epling – K, X; > *S. ovata* var. *rugosa* – WV; > *S. ovata* var. *pseudoarguta* (Epling) Core – WV; > *S. ovata* var. *virginiana* (Epling) Core – WV]

Scutellaria ovata Hill *ssp. **rugosa*** (Wood) Epling *var. **1***, Appalachian Skullcap. Mt (GA, NC): moist boulderfields at high elevations; rare. Endemic to the high Blue Ridge of w. NC and e. TN. [= *Scutellaria arguta* Buckley – C, G, K, S, W, X; = *S. saxatilis* Riddell var. *pilosior* Bentham – F; = "*S. ovata* Hill ssp. *rugosa* (Wood) Epling var. *arguta* (Buckley) Pittman" – Z (not published)]

Scutellaria parvula Michaux, Dwarf Skullcap. Pd (SC, VA). ME west to MN, south to GA and TX. In c. TN and scattered locations in e. TN (Chester, Wofford, & Kral 1997). [= G, W, X; = *S. parvula* var. *parvula* – C, F, K; < *S. parvula* – RAB, S]

Scutellaria pseudoserrata Epling. Mt (GA), Pd (GA), {NC?, SC}: rich, rocky forests; rare. Also in e. TN (Chester, Wofford, & Kral 1997), nc. and c. GA (Jones & Coile 1988). Cultivated in Highlands, Macon Co., NC. [= K, W, X, Y]

* ***Scutellaria racemosa*** Persoon, South American Skullcap. Cp (FL, GA, SC), Pd (NC): disturbed areas; uncommon (rare in GA, NC, and SC), native of South America. Reported from FL, AL, GA, and SC by Kral (1981). Krings & Neal (2001a, 2001b) report it for Chatham Co., NC and discuss its occurrence in se. United States. [= GW, K, WH]

Scutellaria saxatilis Riddell, Rock Skullcap. Mt (GA, NC, SC, VA, WV), Pd (DE, VA): rocky forests; uncommon (rare in GA, NC, SC, and WV, rare in Piedmont). June-August. DE to OH and IN, south to SC and TN. [= RAB, C, G, K, S, W, WV, X, Z; = *S. saxatilis* var. *saxatilis* – F]

Scutellaria serrata Andrzedowski, Showy Skullcap, Serrate Skullcap. Mt (NC, VA, WV), Pd (NC, VA), {GA, SC?}: rich forests; uncommon. Mid May-late June. NY, OH, and KY south to GA and AL. [= RAB, C, G, K, S, W, WV, X, Y; = *S. serrata* var. *serrata* – F]

Scutellaria alabamensis Alexander. AL (Epling 1942, Kartesz 1999). [= K, S, X, Y]

Scutellaria drummondii Bentham *var.* ***drummondii***, Drummond's Skullcap. Cp (FL*, GA): blackland prairies, dry disturbed areas; rare. GA west to LA, south into Mexico. First reported for GA by Lee Echols in 2005 (pers. comm.). [= K; < *S. drummondii* – WH] {not yet keyed}

Scutellaria floridana Chapman, Florida Skullcap. Cp (FL): pine flatwoods; rare. Endemic to FL Panhandle. [= K, S, WH] {not yet keyed}

8. Synandra Nuttall 1818 (Synandra)

A monotypic genus, an herb, of e. North America. References: Cantino (1985); Harley et al. in Kadereit (2004).

Synandra hispidula (Michaux) Baillon, Synandra, Gyandotte Beauty. Mt (NC, VA, WV): moist, rich forests; rare. Late April-May; May-June. A broad Appalachian endemic: s. OH west to s. IL, south to sw. VA, w. NC, and n. AL. [= RAB, C, F, G, K, S, W, WV]

9. Macbridea Elliott in Nuttall 1818 (Birds-in-a-nest, Macbridea)

A genus of 2 species, herbs, of se. North America. References: Harley et al. in Kadereit (2004).

1 Corolla white (faintly marked with purple in the throat); leaf tips obtuse to rounded; [FL Panhandle] ..... ***M. alba***
1 Corolla lavender or pink; leaf tips acute; [se. NC south to s. GA] ..... ***M. caroliniana***

Macbridea alba Chapman, White Birds-in-a-nest, White Macbridea. Cp (FL): wet pine savannas, pitcherplant bogs; rare. Endemic to Panhandle FL. [= GW, K, S, WH]

Macbridea caroliniana (Walter) Blake, Carolina Birds-in-a-nest, Carolina Macbridea. Cp (GA, NC, SC): swamp forests, especially in sphagnous seepage areas away from direct flooding, savanna edges, ditches; rare). July-November. Se. NC to s. GA; reported but undocumented from n. FL, AL, and MS. Apparently rare throughout its range. [= RAB, GW, K; = *M. pulchra* Elliott – S]

10. Physostegia Bentham 1829 (Obedient-plant)

A genus of about 12 species, perennial herbs, of North America. References: Cantino (1982)=Z; Harley et al. in Kadereit (2004). Key adapted from Z and GW.

1 Leaves, 1 or more of them, conspicuously or inconspicuously clasping the stem.
  2 Perennating buds borne directly on the primary rhizome or at the ends of short, vertical secondary rhizomes (horizontal secondary rhizomes lacking), the plant thus forming clumps
    3 Most or all of the larger leaves sharply serrate; larger leaves usually < 2.5 cm wide and > 5× as long as wide ..... ***Ph angustifolia***
    3 Most or all of the larger leaves bluntly serrate to entire; larger leaves usually > 3 cm wide or < 5× as long as wide ..... ***P. purpurea***
  2 Perennating buds borne at the ends of elongate, horizontal, secondary rhizomes, the plant thus forming clonal patches.
    4 Flowers 22-35 mm long; larger stem leaves acute to attenuate at the tip; axis of raceme with at least some of the hairs 0.13-0.25 mm long; larger stem leaves mostly sharply serrate ..... ***P. angustifolia***
    4 Flowers smaller, **or** most of the leaves obtuse at the tip, **or** hairs of the raceme axis < 0.13 mm long; larger stem leaves bluntly toothed to entire.
      5 Flowering calyx tube (1-) 2-4 mm long; flowers < 20 mm long ..... ***P. intermedia***
      5 Flowering calyx tube 3-7 (-8) mm long; flowers usually > 20 mm long.
        6 Uppermost pair of leaves below the terminal raceme usually considerably larger than the floral bracts, the next pair of leaves down the stem (1.5-) 2.0-12.8 cm long and 0.3-2× as long as the internode above; principal stem leaves usually widest at or below the middle of the blade ..... ***P. leptophylla***
        6 Uppermost pair of leaves below the terminal raceme often no larger than the floral bracts, the next pair of leaves down the stem 0.4-3.2 cm long, generally 0.1-0.3× as long as the internode above; principal stem leaves usually widest at or above the middle of the blade ..... ***P. purpurea***
1 Leaves petiolate or sessile, none of them clasping the stem.
  7 All or most of the largest leaves sharply serrate; apex of the leaves acute to attenuate.
    8 Axis of raceme with at least some of the hairs 0.13-0.25 mm long; nutlets 2-3 mm long; flowering April to early July (or later if burned) ..... ***P. angustifolia***
    8 Axis of raceme with hairs < 0.1 mm long; nutlets usually 3-4 mm long; flowering July-October.
      9 Perennating buds usually borne directly on the primary rhizome or at the ends of short, vertical secondary rhizomes (horizontal secondary rhizomes usually lacking), the plant thus forming clumps; nonglandular trichomes of the raceme axis < 0.1 (-0.13) mm long; sterile floral bracts usually present below lowest flowers; flowers (16-) 18-37 mm long ..... ***P. virginiana*** *ssp.* ***praemorsa***
      9 Perennating buds usually borne at the ends of elongate, horizontal, secondary rhizomes, the plant thus forming clonal patches; nonglandular trichomes of the raceme axis frequently 0.15 (0.20) mm long; sterile floral bracts usually not present below lowest flowers; flowers (13-) 14-28 mm long ..... ***P. virginiana*** *ssp.* ***virginiana***
  7 Half or more of the larger leaves bluntly toothed to entire; apex of the leaves obtuse, or acute to attenuate.
    10 Calyx and rachis of the inflorescence bearing stalked glands (visible at 10× magnification or greater); nutlets 1.7-2.0 mm long, usually warty over the surface ..... ***P. godfreyi***

10 Calyx and rachis lacking stalked glands; nutlets 2.0-3.6 mm long, smooth.
11 Uppermost pair of leaves below the terminal raceme often no larger than the floral bracts, the next pair of leaves down the stem 0.4-3.2 cm long, generally 0.1-0.3× as long as the internode above ..... ***P. purpurea***
11 Uppermost pair of leaves below the terminal raceme usually considerably larger than the floral bracts, the next pair of leaves down the stem (1.5-) 2.0-12.8 cm long and 0.3-2× as long as the internode above.
12 Leaves (some of them) present at or after anthesis usually petiolate, the petioles often > 2 cm long, the petiolate leaves typically the lowest and among the largest leaves present ..... ***P. leptophylla***
12 Leaves present at or after anthesis usually sessile (rarely a few petiolate, but these with petioles < 2 cm long and the petiolate leaves usually not among the largest leaves present) ..... ***P. virginiana*** *ssp.* ***virginiana***

Physostegia angustifolia Fernald, Narrowleaf Obedient-plant. Cp (GA): calcareous openings; rare. Sw. GA and AL west to KS and TX. [= GW, K, Z]

Physostegia godfreyi Cantino, Apalachicola Dragonhead. Cp (FL): wet savannas and flatwoods, adjacent ditches; rare. Endemic to Panhandle FL. [= GW, K, WH, Z]

Physostegia intermedia (Nuttall) Engelmann & A. Gray. Swamps; moist forests, ditches. IL, KY, AR, and LA west to OK and TX. Also mapped as widespread in Coastal Plain of GA (Jones & Coile 1988); {investigate}. [= C, GW, K, Z; = *Dracocephalum intermedium* Nuttall]

Physostegia leptophylla Small, Tidal Marsh Obedient-plant, Swamp Obedient-plant. Cp (FL, GA, NC, SC, VA): bottomland hardwood forests, swamps, tidal freshwater or slightly brackish (oligohaline) marshes, rarely wet savannas (GA); uncommon. Late May-early August; June-September. Se. VA south to sc. peninsular FL, west to sw. GA and Panhandle FL. *P. leptophylla* is a tetraploid; Cantino (1982) suggests that this species may be an allotetraploid, perhaps originating from *P. purpurea* × *virginiana*. [= C, GW, K, WH, Z; < *Dracocephalum purpureum* (Walter) McClintock ex Gleason – RAB, G; > *P. denticulata* (Aiton) Britton – F, misapplied; > *P. aboriginorum* Fernald – F; > *Dracocephalum leptophyllum* Small – S; > *Dracocephalum veroniciformis* Small – S]

Physostegia purpurea (Walter) Blake, Savanna Obedient-plant. Cp (FL, GA, NC, SC): wet savannas, savanna-swamp ecotones, ditches adjacent to former pinelands; common (uncommon in GA, NC, and SC). Late May-early August; June-September. Ec. NC south to s. FL, west to sw. GA and Panhandle FL. Cantino (1982) discusses clinal variation within *P. purpurea*. [= GW, K, WH, Z; < *Dracocephalum purpureum* (Walter) McClintock ex Gleason – RAB (also see *P. leptophylla*); = *P. obovata* (Elliott) Godfrey ex Weatherby – F; = *Dracocephalum denticulatum* Aiton – S]

Physostegia virginiana (Linnaeus) Bentham *ssp.* ***praemorsa*** (Shinners) Cantino, Southern Obedient-plant. Mt (NC, SC, VA), Pd (NC, SC, VA), Cp (FL, NC, SC, VA), {GA}: woodlands, glades, seepages, especially over calcareous or mafic rock; common. July-October. OH west to n. IL, south to c. NC, n. FL, TX, NM, and Mexico. [= K, W, Z; < *Dracocephalum virginianum* Linnaeus – RAB, G, S; = *P. virginiana* var. *arenaria* Shimek – C; >< *P. virginiana* var. *virginiana* – F; >< *P. virginiana* var. *speciosa* – F; < *P. virginiana* – GW, WH]

Physostegia virginiana (Linnaeus) Bentham *ssp.* ***virginiana***, Northern Obedient-plant. Mt (NC, SC, VA, WV), Pd (NC, SC, VA), Cp (NC, SC, VA), {DE}: streambanks, seepages, marshes, grassy balds (native occurrences usually over mafic or calcareous rocks), other open or semi-open moist to wet habitats, disturbed areas, ditches; rare as a native, more common as an escape from cultivation. July-October. Native from QC west to MB, south to e. VA, nc. TN, and ne. KS; escaped elsewhere (as in most of our area). Cantino (1982) discusses ambiguous plants from a zone of intergradation between the 2 subspecies in sw. NC, n. GA, ne. AL, e. TN, and sc. KY. Moreover, garden escapes show some intermediacy between the 2 subspecies, and Cantino (1982) suggests that cultivars are likely inter-subspecific hybrids, stating "because the genetic background of modern cultivars is unknown, they cannot be reasonably placed in either subspecies and should not be identified below the species level." [= K, Z; < *Dracocephalum virginianum* Linnaeus – RAB, G, S; = *P. virginiana* var. *virginiana* – C; >< *P. virginiana* var. *virginiana* – F; >< *P. virginiana* var. *speciosa* (Sweet) A. Gray – F; > *P. virginiana* var. *granulosa* (Fassett) Fernald – F; < *P. virginiana* – GW; > *Dracocepalum virginianum* var. *virginianum* – WV; > *Dracocephalum virginianum* var. *granulosum* (Fassett) Core – WV]

11. Galeopsis Linnaeus 1753 (Hemp-nettle)

A genus of about 10 species, herbs, of Eurasia. References: Stace (2010)=Z; Harley et al. in Kadereit (2004). Key adapted from Stace (2010).

1 Stem with soft, appressed hairs; stem not swollen at the nodes ..... ***G. ladanum*** *var.* ***ladanum***
1 Stem with rigid, bristly hairs; stem swollen at the nodes.
2 Terminal lobe of lower lip of corolla clearly emarginate and also convex (the sides revolute); corolla 13-16 mm long ..... ***G. bifida***
2 Terminal lobe of the lower lip of the corolla entire to very slightly emarginate, essentially planar, not revolute; corolla 13-20 (-25) mm long ..... ***G. tetrahit***

* ***Galeopsis bifida*** Boenninghausen, Bifid Hemp-nettle. Mt (NC, VA, WV): streamsides, pastures, roadsides; rare, native of Eurasia. June-frost. [= K, Z; < *G. tetrahit* – RAB, S; = *G. tetrahit* Linnaeus var. *bifida* (Boenninghausen) Lejeune & Courtois – C, F, G, WH]

* ***Galeopsis ladanum*** Linnaeus *var.* ***ladanum***, Red Hemp-nettle. Disturbed areas; native of Eurasia. June-September. Naturalized in ne. North America, south at least to se. PA (Rhoads & Klein 1993) and s. NJ. [= F, K; > *G. ladanum* Linnaeus var. *angustifolia* (Ehrhart ex Hoffmann) Wallroth – C, G, misapplied]

* ***Galeopsis tetrahit*** Linnaeus, Common Hemp-nettle. Disturbed areas; native of Eurasia. June-September. Naturalized in ne. North America and may occur in our area. [= Z; = *G. tetrahit* var. *tetrahit* – C, F, G; > *G. tetrahit* var. *tetrahit* – K]

12. Stachys Linnaeus 1753 (Hedge-nettle)

(contributed by John B. Nelson, Gary P. Fleming, Derick B. Poindexter)

A genus of about 300 species, herbs and shrubs, mainly temperate, nearly cosmopolitan (except Australia and New Zealand). References: Nelson (1981)=Z; Nelson & Fairey (1979); Mulligan & Munro (1989); Pringle (2002); Harley et al. in Kadereit (2004). Key adapted from various manuscript keys of the contributors.

1 Herbage softly and densely white-woolly; [rare escapes from cultivation].
  2 Perennial; leaf blades heavily lanate, narrowed to the base, the dentations (if any) concealed by the felt; calyx lobes concealed by tomentum ..... ***S. byzantina***
  2 Biennial; leaf blades silky-pilose or tomentose, rounded to cordate at the base, obviously dentate; calyx lobes projecting beyond the pubescence ..... ***S. germanica***
1 Herbage variously pubescent or glabrous, but never white-woolly.
  3 Annuals from fibrous roots, typically freely branching from the base or from lower nodes; leaf blades 1-5 cm long, with rounded or obtuse apices (except acute to acuminate in *S. annua*); [aliens].
    4 Leaves cuneate at base, acute to acumiate at tip; corolla 10-16 mm long (well exceeding the calyx), white to yellow..... ***S. annua***
    4 Leaves cordate or truncate at base, rounded or obtuse at tip; corolla 4-9 mm long (barely or not exceeding the calyx), white to pink.
      5 Calyx 7-9 mm long; corolla 7-9 mm long ..... ***S. arvensis***
      5 Calyx 3-5 mm long; corolla 4-6 mm long ..... ***S. agraria***
  3 Perennials from rhizomes, not branching in the lower portion (unless damaged); leaf blades often > 5 cm long, with acute apices; [natives, except *S. floridana* and *S. palustris*].
    6 Petioles well developed and obvious, at least some of those of the principal stem leaves at least one-fifth as long as the blades or longer.
      7 Calyx strongly glandular with atomiferous glands or gland-tipped hairs, or both.
        8 Calyx lobes narrowly lanceolate, about as long as the calyx tube; leaf blades lance-ovate to lanceolate, < 3 cm wide; stem angles glabrate to short retrorse pubescent; root tips with moniliform tubers; [adventive weed of the Coastal Plain]..... ***S. floridana***
        8 Calyx lobes deltoid to deltoid-lanceolate, shorter than the calyx tube; leaf blades broadly cordate-ovate, usually > 3 cm wide; stem angles hispid; roots without tubers; [native species of rich mountain forests].
          9 Calyx lobes deltoid; leaves broadly rounded with a cordate base and crenulate margins..... ***S. cordata***
          9 Calyx lobes deltoid-lanceolate; leaves various.
            10 Leaves ovate to elliptic with long acuminate apex and truncate base, margins strongly dentate..... ***S. clingmanii***
            10 Leaves elliptic-oblong with an acute apex and a rounded to slightly cordate base, margins serrate to crenate..... ***S. nuttallii***
      7 Calyx sparsely glandular or eglandular.
        11 Leaves ovate to broadly ovate, deeply cordate at base..... ***S. cordata***
        11 Leaves oblong, lanceolate, elliptic, or ovate-elliptic, not cordate or only slightly so.
          12 Calyx hispidulous to strongly hispid with long, stiff, deflexed hairs; stem moderately to densely pubescent on the angles with hairs to 3 mm; leaves usually pubescent above (some forms glabrate); petioles rarely 1-2 cm long ..... ***S. hispida***
          12 Calyx glabrous to moderately pubescent with short, soft hairs; stem glabrous to moderately pubescent on the angles; leaves sparsely pubescent or glabrate; petioles well developed (1 to 3 cm long), especially in shade forms.
            13 Leaf blades wider, ovate-oblong to elliptic; calyx lobes deltoid-acuminate to an apiculate tip, ½ to 2/3 as long as the calyx tube; bracts of the inflorescence usually conspicuous and only gradually reduced upward; plants generally more pubescent ..... ***S. subcordata***
            13 Leaf blades oblanceolate, oblong, or narrowly elliptic; calyx lobes lanceolate, usually recurved-spreading in fruit, about as long as the calyx tube; bracts of the inflorescence inconspicuous, rapidly reduced upward; plants generally glabrate..... ***S. tenuifolia***
    6 Petioles poorly developed, less than one-fifth as long as the blade or absent.
      14 Stem below the inflorescence pubescent on the sides, as well as the angles.
        15 Calyx lobes deltoid, no more than half as long as the calyx tube; leaf blades pubescent but never velvety.
          16 Calyx lobes strongly deltoid; stem and abaxial leaf surface densely atomiferous glandular and with few eglandular hairs..... ***S. eplingii***
          16 Calyx lobes deltoid-lanceolate; stem and abaxial leaf surface moderately glandular and with frequent soft eglandular hairs ..... ***S. nuttallii***
        15 Calyx lobes lanceolate, more than half as long as the tube; leaf blades velvety-pubescent.
          17 Stem hairs spreading; leaf blades strongly velvety-pubescent; corolla pink..... ***S. arenicola***
          17 Stem hairs strongly reflexed; leaf blades slightly velvety-pubescent; corolla purple ..... ***S. palustris***
      14 Stem below the inflorescence glabrous on the sides (rarely with a few remote hairs and/or glands) or atomiferous-glandular only.
        18 Leaves linear-lanceolate to lanceolate or lance-elliptic, often widest below the middle, 3-15(-20) mm wide; leaf margins entire to crenuate or finely serrate.
          19 Leaf blades very narrow, 3-6(-10) mm wide, the margins entire to obscurely crenulate; herbage glabrous to moderately pubescent ..... ***S. hyssopifolia***
          19 Leaf blades broader, 5-15(-19) mm wide, the margins crenulate to finely serrate; herbage hispidulous to strongly pubescent..... ***S. aspera***
        18 Leaves ovate-oblong to elliptic, usually widest near the middle, (1.6-)2.0-5.0(-6.0) cm wide; leaf margins crenate to sharply serrate.
          20 Stem (including the sides) and usually the leaves with minute but copious atomiferous glands..... ***S. eplingii***
          20 Leaves and stem eglandular or with a few scattered glands.
            21 Mature calyx lobes triangular deltoid and abruptly apiculate, less than half as long as the calyx tube.
              22 Leaf margins serrulate or serrate; stem nodes not bearded (sometimes obscurely fine-hairy); stem angles with scattered, pustulate, short deflexed hairs; [high-elevation montane habitats] ..... ***S. latidens***
              22 Leaf margins crenulate or crenate; stem nodes bearded; lower stem angles copiously pubescent with 3-celled spreading hairs; [low-elevation Piedmont and Coastal Plain habitats] ..... ***S. species 1***

21 Mature calyx lobes lanceolate or deltoid-acuminate to an apiculate tip, more than half as long as the calyx tube.
23 Calyx sparsely to moderately pubescent with short, soft hairs; stem angles moderately pubescent to nearly glabrous; leaves sparsely pubescent or glabrate; principal leaves on petioles 1 to 3 cm long; bracts of the inflorescence usually conspicuous and only gradually reduced upward, the cilia ± incurved-ascending.....***S. subcordata***
23 Calyx hispidulous to strongly hispid with long, stiff hairs; stem angles moderately to densely pubescent; leaves usually pubescent above (some forms glabrate); principal leaves usually subsessile, with very short petioles; bracts of the inflorescence usually inconspicuous and rapidly reduced upward; if conspicuous, bracts ciliate with long, stiffly spreading hairs.
24 Calyx erect at maturity, sparsely short glandular to eglandular; stem faces usually with a few atomiferous glands only.....***S. hispida***
24 Calyx flaring at maturity, conspicuously glandular with long stipitate trichomes and shorter sessile and subsessile glandular hairs; stem faces with occasional glandular and/or eglandular trichomes.....***S. species 3***

Stachys agraria Chamisso & Schlechtendahl, Mouse's-ear, Shade Betony. Cp (FL, SC): calcareous hammocks; rare. SC south to s. FL, west to TX. [= *Stachys crenata* Rafinesque – K, WH] {add synonymy}

* ***Stachys annua*** (Linnaeus) Linnaeus, Annual Woundwort, Annual Hedge-nettle. Cp (VA): disturbed areas; rare, probably only a waif (Virginia Botanical Associates 2009). [= C, F, G, K]

Stachys arenicola Britton, Woundwort. Mt (VA, WV), Pd (VA), Cp (SC): marl fens, roadsides, banks of waterfowl impoundments; rare, possibly adventive in part from further west, but at least some populations native. NS and QC west to AK, south to VA, KY, AR, OK, NM, AZ, and CA. [< *S. palustris* Linnaeus var. *pilosa* (Nuttall) Fernald – C, F, G; < *S. palustris* Linnaeus ssp. *pilosa* (Nuttall) Epling; = *S. pilosa* var. *arenicola* (Britton) Mulligan & Monroe – K; < *S. palustris* – WV]

* ***Stachys arvensis*** (Linnaeus) Linnaeus, Staggerweed. Cp? (VA?): disturbed areas; rare, native of {}. Reported for VA by C, G, and K; documentation uncertain (Virginia Botanical Associates 2009). [= C, F, G, K]

Stachys aspera Michaux, Rough-leaved Hedge-nettle. Cp (DE, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA, WV): moist or wet sandy soil of savannas, marshes, or swamp forests, sinkhole ponds in the Great Valley; uncommon (rare in DE and VA). June-August; August-September. NJ and NY west to IL and IA, south to GA, MS, and MO. [= C, G, K, WV; = *S. hyssopifolia* Michaux var. *ambigua* A. Gray – RAB, F, GW, Z; = *S. ambigua* (A. Gray) Britton – S; *? S. grayana* House]

* ***Stachys byzantina*** K. Koch ex Scheele, Lamb's-ear. Pd (VA), Mt (NC): roadsides; rare, doubtfully established. Reported for Prince Edward County, VA (Virginia Botanical Associates 2010). [= C, K; = *S. olympica* Poiret – F, G]

Stachys clingmanii Small, Clingman's Hedge-nettle. Mt (NC), Cp? (VA?), {SC?}: cove forests, especially periglacial boulderfields, mostly at high elevations (and see comments below); rare. June-August; September-October. A narrow Southern Appalachian endemic, known only from sw. NC and se. TN. Some plants similar to and perhaps referable to this species occur in Surry County VA (calcareous bushy thickets and ravines) and in IN. [= C, F, G, K, S, W, Z; < *S. clingmanii* – RAB]

Stachys cordata Riddell, Heart-leaved Hedge-nettle. Mt (GA, NC, VA), Pd (NC, VA): moist forests, especially alluvial bottomlands or over calcareous rocks; uncommon (rare in GA). June-August; September-October. NY west to IL, south to SC, GA, AL, and AR. Primarily montane, but extending east to Stokes County, NC, and Campbell County, VA. See Pringle (2002) for a discussion of nomenclature. [= S; < *S. nuttallii* Shuttleworth ex Bentham – K, W, Z; > *S. cordata* – C; = *S. riddellii* House – F, G; > *S. salvioides* Small – S]

Stachys eplingii J. Nelson, Epling's Hedge-nettle. Mt (GA, NC, SC, VA, WV), Pd (VA): mesic forests, bogs, wet meadows over calcareous or mafic substrates; rare. June-August; August-September. W. VA and WV south to e. TN, w. NC, and w. SC. This species has a scattered and sporadic range in the southern and central Appalachians; material in the Interior Highlands previously included in *S. eplingii* has been separated as *S. iltisii* J. Nelson (Nelson 2008). See Nelson & Fairey (1979) for a discussion of the nomenclatural change. [< C, GW, K, W, Z; < *S. nuttallii* – RAB, F, G, S, WV, misapplied]

* ***Stachys floridana*** Shuttleworth ex Bentham, Florida Betony, Rattlesnake-weed. Cp (FL, GA*?, NC*, SC*?, VA*), Pd* (GA, NC, SC, VA): disturbed sites, roadsides; uncommon (rare in VA), probably not native northwards, native of Florida. April-July; May-August. Native from n. FL and Panhandle FL south to s. FL. The common name "Rattlesnake-weed" refers to the moniliform rhizomes. [= RAB, GW, K, S, WH, Z]

* ***Stachys germanica*** Linnaeus. Mt (VA, WV): disturbed areas, roadsides; rare, doubtfully established, native of {}. Reported for VA, TN, FL (Kartesz 1999). [= C, F, G, K, WV]

Stachys hispida Pursh, Hispid Hedge-nettle. Mt (NC, VA), Pd (DE, VA), Cp (DE, VA), ?? (GA): wet meadows and mesic forests; common (uncommon in NC and VA, rare in GA). {distribution} A highly variable taxon. [= C, G; = *S. tenuifolia* Willdenow var. *hispida* (Pursh) Fernald – F; < *S. tenuifolia* var. *tenuifolia* – K, Z]

Stachys hyssopifolia Michaux *var.* ***hyssopifolia***, Hyssop-leaved Hedge-nettle. Cp (DE, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA): moist soils of savannas, marshes, seasonally flooded sinkhole ponds, roadside ditches; uncommon (rare in VA). June-August; August-September. {distribution} [= RAB, F, GW, Z; = *S. hyssopifolia* – C, G, K, S, W; *? S. atlantica* Britton]

Stachys latidens Small ex Britton, Broad-toothed Hedge-nettle. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA): mesic forests in coves and on mountain slopes, mountain pastures and forest edges; common (rare in GA, SC, and WV). June-August; September-October. A Southern Appalachian endemic: w. VA and WV south to GA, AL, and TN. [= RAB, C, F, G, S, WV; = *S. tenuifolia* Willdenow var. *latidens* (Small ex Britton) J. Nelson – K, W, Z; < *S. tenuifolia* – GW]

Stachys nuttallii Shuttleworth ex Bentham, Nuttall's Hedge-Nettle. Mt (GA, NC, VA, WV), Pd (NC, VA): moist forests, especially alluvial bottomlands or over calcareous rocks; uncommon (rare in GA and NC). June-August; September-October. {distribution} Primarily montane, but extending east to Stokes County, North Carolina. See Pringle (2002) for a discussion of nomenclature. [= S; = *S. nuttallii* Shuttleworth ex Bentham – K, W, Z; < *S. clingmanii* – RAB; = *S. riddellii* House – F, G; > *S. salvioides* Small – S]

* ***Stachys palustris*** Linnaeus. Cp (DE): disturbed areas; uncommon. {distribution} South to MD, PA, NJ. [= K; > *S. palustris* var. *palustris* – C, F, G]

Stachys species 1, Yadkin Hedge-nettle. Pd (NC, VA): in sandy alluvium along forest edges in river floodplains; rare. Known from Brunswick, Charlotte, Halifax, Pittsylvania, and Surry counties, VA, and Montgomery County, NC. Under study by Gary Fleming, John Nelson, and Johnny Townsend. [= *S. matthewsii* G.P. Fleming, J. Nelson, and J.F. Townsend, in press]

Stachys species 3. Mt (NC, VA): bogs, rare. Ashe County NC and Grayson County, VA. Under study by Derick Poindexter and John Nelson.

Stachys subcordata Rydberg. Mt (VA): moist forests over calcareous or mafic rocks; common. Wc. VA south to ne. TN. [= C, G]

Stachys tenuifolia Willdenow, Smooth Hedge-nettle. Mt (NC, WV), Pd (DE, VA), Cp (DE, FL, NC, SC, VA): wooded alluvial river bottoms, swamp forests, and roadsides; uncommon (rare in DE, NC, SC, and WV). June-August; September-October. {distribution} [= RAB, C, G, K, S; > *S. tenuifolia* var. *tenuifolia* – F, Z; > *S. tenuifolia* var. *perlonga* Fernald – F, WH, Z; > *S. tenuifolia* var. *platyphylla* Fernald – F; < *S. tenuifolia* – GW; = *S. tenuifolia* var. *tenuifollia* – W]

Stachys hyssopifolia Michaux *var.* ***lythroides*** (Small) J. Nelson. Cp (FL, GA): floodplain forests; rare. E. Panhandle of FL and adjacent GA. [= WH, Z; < *S. hyssopifolia* – K; = *S. lythroides* Small – S] {not yet keyed}

* ***Stachys officinalis*** (Linnaeus) Trevis, Common European Hedge-nettle. Mt (NC): persisting and spreading clonally from cultivation; rare, native of Europe. [= K] {not yet keyed}

Stachys species 2. Cp (SC): {habitat}; rare. Santee River, SC. Under study by John Nelson. {not yet keyed}

13. Sideritis Linnaeus 1753

A genus of about 140-150 species, herbs and shrubs, of temperate Eurasia. References: Harley et al. in Kadereit (2004).

* ***Sideritis romana*** Linnaeus, Ironwort. Introduced and naturalized as far south as PA (Rhoads & Klein 1991, Cronquist 1991) and WV (Cronquist 1991). [= C, K] {synonymy incomplete}

14. Leonurus Linnaeus 1753 (Motherwort)

A genus of 25 species, herbs, of temperate Eurasia. Though *L. marrubiastrum* and *L. sibiricus* are documented in our area only from VA, they are also documented from south of our area; they likely will be found to occur in all four states. [also see *Chaiturus*]

1 Calyx strongly 5-angled, the lower 2 lobes deflexed; upper corolla lip white-villous; leaves lacerately toothed and the larger shallowly lobed . ..... ***L. cardiaca***
1 Calyx slightly 5-angled, no lobes notably deflexed; upper corolla lip with densely and finely puberulent; leaves **either** entire to few-toothed (but not lobed) **or** deeply 3-parted, the 3 divisions further lacerately toothed or lobed.
  2 Leaves entire to few-toothed (but not lobed) ..... ***[see Chaiturus marrubiastrum]***
  2 Leaves deeply 3-parted, the 3 divisions further lacerately toothed or lobed ..... ***L. sibiricus***

* ***Leonurus cardiaca*** Linnaeus, Motherwort, Lion's-tail. Pd (DE, SC, VA), Mt (GA, VA, WV), Cp (DE, VA), {NC}: roadsides, pastures, disturbed areas; common (rare in DE), native of c. Asia. May-August; July-October. Nelson (1993) reports the occurrence of this species in SC. [= RAB, C, F, G, S, W, WV; *? L. cardiaca* ssp. *cardiaca* – K]

* ***Leonurus sibiricus*** Linnaeus, Siberian Motherwort. Cp (DE, FL, VA), Mt (WV): disturbed areas; rare, native of Asia. May-September. [= C, F, G, K, S; ? *L. japonicus* Houttuyn – WH] {for FL, Wunderlin & Hansen have *L. japonicus* and state that *L. sibiricus* is misapplied – investigate}

15. Marrubium Linnaeus 1753 (Horehound)

A genus of about 30-40 species, herbs, of Mediterranean Europe and Asia. References: Harley et al. in Kadereit (2004).

* ***Marrubium vulgare*** Linnaeus, Horehound. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE): fencerows, disturbed places; uncommon, native of Eurasia. Used for cough-syrups in folk medicine. [= RAB, C, F, G, K, S, W, WV]

16. Lamium Linnaeus 1753 (Dead-nettle, Henbit)

A genus of about 17-40 species, herbs, of n. Africa and Eurasia. References: Mennema (1989)=Z; Harley et al. in Kadereit (2004).

1 Corolla yellow; anthers glabrous; bracts present, reflexed..... ***L. galeobdolon***
1 Corolla blue or white; anthers with tufts of hairs; bracts absent or present (if present not reflexed).
  2 Perennial, with rhizomes or stolons; corolla 18-35 mm long, the tube curved; leaves all petioled; [section *Lamiotypus*].
    3 Corolla white; leaves not blotched with white; lower corolla lip with 2-3 teeth on each side; pollen light yellow..... ***L. album ssp. album***

3 Corolla pinkish-purple (rarely white); leaves usually marked with white; lower corolla lip with 1 tooth on each side; pollen orange..... ***L. maculatum***

2 Annual, lacking rhizomes or stolons; corolla 10-18 (-20) mm long, the tube straight; leaves all petioled **or** upper leaves sessile and clasping.

4 Leaves subtending flower clusters sessile; [section *Amplexicaule*] ..... ***L. amplexicaule*** *var.* ***amplexicaule***

4 Leaves all petiolate; [section *Lamium*].

5 Leaves subtending whorls deeply serrate, with many teeth > 2 mm long; nutlets (2.5-) 2.7-3.0 (-3.3) mm long ..... ***L. dissectum***

5 Leaves subtending whorls crenate-serrate, with teeth < 2 mm long; nutlets (2.0-) 2.2-2.5 (-2.8) mm long ..... ***L. purpureum***

* ***Lamium album*** Linnaeus *ssp.* ***album***, White Dead-nettle, Snowflake. Disturbed areas; native of Eurasia. April-September. Reported from our area (VA) by many earlier manuals; not documented in Harvill et al. (1992). [= Z; < *L. album* – C, F, G, K]

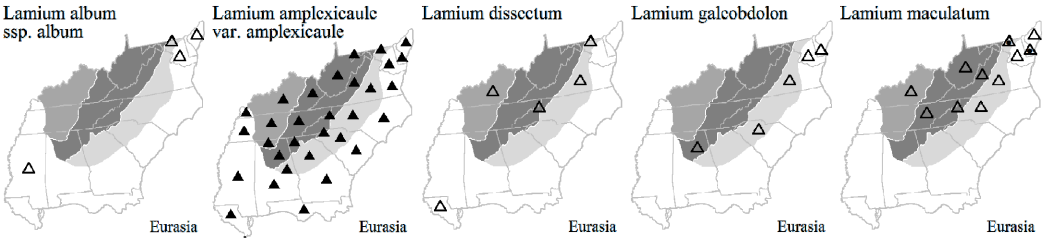
* ***Lamium amplexicaule*** Linnaeus *var.* ***amplexicaule***, Henbit, Henbit Dead-nettle. Lawns, fields, roadsides, disturbed areas, gardens, pastures; native of Eurasia and n. Africa. January-December. [= Z; < *L. amplexicaule* – RAB, C, F, G, K, S, W, WH, WV]

* ***Lamium dissectum*** Withering, Cutleaf Dead-nettle. Lawns, fields, roadsides, disturbed areas; native of Eurasia. April-May. This taxon is apparently an allopolyploid derivative (2n=36), resulting from hybridization of *L. purpureum* and another species, perhaps *L. amplexicaule*. Because of its allopolyploid status, this taxon should not be treated as a variety of *L. purpureum*. It is, however, possible that some individuals identified here may be sterile hybrids (2n=18). [= *L. hybridum* Villars – RAB, C, F, G, misapplied; = *L. purpureum* Linnaeus var. *incisum* (Willdenow) Persoon – K, Z]

* ***Lamium galeobdolon*** (Linnaeus) Linnaeus, Yellow Archangel. Disturbed areas; native of Europe and e. Asia. Several subspecies are recognized in Europe. [= *Lamiastrum galeobdolon* (Linnaeus) Ehrendorfer & Polatschek – FNA, K; = *Lamium galeobdolon* (Linnaeus) Linnaeus – Z; = *Galeobdolon luteum* Hudson]

* ***Lamium maculatum*** Linnaeus, Spotted Dead-nettle. Lawns, fields, roadsides, disturbed areas; native of Eurasia. April-September. [= RAB, C, F, G, K, S, WV, Z]

* ***Lamium purpureum*** Linnaeus, Red Dead-nettle, Purple Dead-nettle. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, VA): lawns, fields, roadsides, disturbed areas, pastures; common (uncommon in DE, rare in FL, rare in GA Coastal Plain), native of Eurasia. March-October. Only recently documented in the Coastal Plain of GA and in FL (Carter, Baker, & Morris 2009; Wunderlin & Hansen 2008). [= RAB, C, F, G, S, W, WV; = *L. purpureum* var. *purpureum* – K, Z]



17. Collinsonia Linnaeus 1753 (Horsebalm, Richweed, Stoneroot)

A genus of about 4 species, perennial herbs, of e. North America. References: Peirson, Cantino, & Ballard (2006)=Y; Shinners (1962b)=Z; Harley et al. in Kadereit (2004). Key adapted from Y and Z.

1 Inflorescence an unbranched thyrse, the lower nodes with (3-) 6 flowers per node; floral bracts absent; pedicels flattened at base; leaves (2-) 4 (-6), the 4 upper (or only) leaves subverticillate; flowers light pink to lavender; flowering April-June; [subgenus *Micheliella*] .... ***C. verticillata***

1 Inflorescence a panicle (rarely unbranched), the flowers 2 per node; floral bracts present, minute to large; pedicels not enlarged basally; leaves 6 or more, opposite; flowers cream to yellow; flowering July-September; [subgenus *Collinsonia*].

2 Fertile stamens 4; fresh plants with anise scent; [GA southward and westward] ..... ***C. anisata***

2 Fertile stamens 2; fresh plants with lemon scent; [collectively widespread in our area].

3 Blades of the larger stem leaves 4.0-10.5 cm long, with 5-15 teeth on each margin, glabrous or hispidulous on the main veins beneath; plant from a small, rounded tuber-like crown, to 6 cm long and 5 cm in diameter ..... ***C. tuberosa***

3 Blades of the larger stem leaves 8-25 cm long, with 11-42 teeth on each margin, glabrous or variously pubescent beneath; plant from an elongate, woody, rhizome-like crown, to 15 cm long.

4 Calyx 2-5 mm long; calyx teeth lance-subulate to narrowly lanceolate; flowers 8-13 mm long ..... ***C. canadensis***

4 Calyx 4.5-7 mm long; calyx teeth broadly lanceolate; flowers 12-17 mm long ..... ***C. punctata***

Collinsonia anisata Sims, Southern Horsebalm, Anise Horsebalm. Pd (GA), Cp (FL, GA): rich forests; uncommon. Late July-September; September-October. C. GA south and west to Panhandle FL and west to s. MS, on the Piedmont and Coastal Plain. This species is apparently distinct, but Shinners's concept of it included hybrids with *C. canadensis* and aberrant *C. canadensis* (Peirson, Cantino, & Ballard 2006). [= Y; < *Collinsonia serotina* Walter – K, W, WH, Z; < *C. canadensis* var. *punctata* (Elliott) A. Gray –F, misapplied; < *C. punctata* Elliott – S; *? Micheliella anisata* (Sims) Briquet – S]

Collinsonia canadensis Linnaeus, Richweed, Northern Horsebalm. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): cove forests, rich forests, especially over calcareous or mafic substrates; common (rare in VA Coastal Plain). Late July-September; September-October. QC, MI, and WI, south to Panhandle FL and LA. [= RAB, C, F, G, K, S, W, WV, Z; < *C. canadensis* – Y (also see *C. tuberosa*)]

Collinsonia punctata Elliott, Florida Horsebalm. Cp (FL, GA, SC): rich woods; rare. Late August-mid October; September-October. S. SC (Barnwell County) to e. LA, on the Coastal Plain. [= Y; < *Collinsonia serotina* – K, WH, Z]

Collinsonia species 1. Pd (GA). Under study by Steve Bowling. {not yet keyed}

Collinsonia tuberosa Michaux, Stoneroot. Pd (GA, NC, SC), Mt (GA): rich forests, over calcareous or mafic substrates; rare (NC Watch List). Late July-September; September-October. C. NC west to c. TN, south to n. GA and MS (or LA?). Peirson, Cantino, & Ballard (2006) conclude that *C. tuberosa* should be merged into *C. canadensis*, a conclusion not followed here. [= RAB, K, S, W, Z; < *C. canadensis* – Y; = *C. canadensis* Linnaeus var. *tuberosa* (Michaux) A. Wood]

Collinsonia verticillata Baldwin, Whorled Horsebalm. Pd (GA, NC, SC, VA), Mt (GA): rich forests, ranging from moist (cove) forests to rather dry oak forests over mafic or calcareous rocks; rare. Late April-early June; June-July. Sc. VA west to e. TN, south to w. NC, nw. SC, c. GA, and MS; disjunct in s. OH. The range is strangely scattered and fragmented. [= RAB, C, G, K, W, Y, Z; = *Micheliella verticillata* (Baldwin) Briquet – F, S]

18. Elsholtzia Willdenow 1790

A genus of about 35-40 species, herbs, of temperate e. hemisphere. References: Harley et al. in Kadereit (2004).

* ***Elsholtzia ciliata*** (Thunberg) Hylander. Mt (NC, WV): disturbed areas; rare, native of Asia. First reported for NC by Leonard (1971b). [= C, F, G, K, WV]

19. Mosla (Bentham) Buchanan-Hamilton ex Maximowicz 1875 (Mosla)

A genus of about 10-22 species, of e. Asia. References: Harley et al. in Kadereit (2004).

* ***Mosla dianthera*** (Buchanan-Hamilton ex Roxburgh) Maximowicz, Mosla. Mt (GA, NC), Pd (VA): disturbed areas; rare, native of e. Asia. August-September. This species is becoming a noxious weed west of our area (in KY and TN); it should be expected to become more widespread in our area. [= RAB, F, G, K; = *Orthodon dianthera* (Buchanan-Hamilton) Handel-Mazzetti – C]

20. Perilla Linnaeus 1764 (Perilla, Beefsteak-plant)

A genus of about 1-6 species, herbs, of s. and e. Asia. References: Harley et al. in Kadereit (2004).

* ***Perilla frutescens*** (Linnaeus) Britton, Perilla, Beefsteak-plant. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): moist disturbed areas; common (uncommon in DE Coastal Plain, rare in FL), native of India. August-October; October-December. Two varieties are sometimes recognized. Var. *crispa* (Bentham) Deane (leaves purple above and below; leaf margins laciniate-dentate and also crisped) and var. *frutescens* (leaves purple below; leaf margins dentate, not crisped). These probably represent cultivars more than taxonomically distinct entities. [= RAB, C, G, S, W, WH; > *P. frutescens* var. *frutescens* – F, K, WV; > *P. frutescens* (Linnaeus) Britton var. *crispa* (Bentham) Deane – F, K, WV]

Agastache Clayton ex Gronovius 1762 (Giant-hyssop)

A genus of about 22 species, herbs, of c. and e. Asia, and North America to Mexico. References: Vogelmann (1985); Lint & Epling (1945); Harley et al. in Kadereit (2004).

1 Leaves densely white tomentose below; corolla blue; [cultivated as an ornamental and rarely naturalized] ..... ***A. foeniculum***
1 Leaves glabrous to villous beneath, appearing green; corolla yellow, greenish-yellow, or pinkish; [native].
  2 Corolla yellow or greenish-yellow; calyx lobes obtuse or subacute, 1-1.5 mm long at anthesis; calyx lobes and bracts green; midstem internodes glabrous or minutely pubescent; lower surface of the leaf pubescent on the veins and surface..... ***A. nepetoides***
  2 Corolla pinkish; calyx lobes acute or acuminate, 2-2.5 mm long at anthesis; calyx lobes and bracts with white or pink margins; midstem internodes at least sparsely long-pubescent; lower surface of the leaf pubescent mainly on the veins ..... ***A. scrophulariifolia***

* ***Agastache foeniculum*** (Pursh) Kuntze, Lavender Giant-hyssop. Pd (DE, NC): disturbed areas, spread from cultivatiuon; rare, native of w. North America. Cultivated as an ornamental and naturalized in scattered locations in PA (Rhoads & Klein 1993), KY (Kartesz 1999), and elsewhere. [= C, F, G, K]

Agastache nepetoides (Linnaeus) Kuntze, Yellow Giant-hyssop. Pd (DE, NC, SC, VA), Cp (DE, NC, VA), Mt (GA, NC, VA, WV): woodlands and forests, generally over calcareous or mafic rocks; uncommon (rare in DE, rare in Coastal Plain of NC and VA). July-September; September-October. VT west to MN, south to nw. GA and OK. In our area, this species occurs mostly in the Piedmont. [= RAB, C, F, G, K, S, W]

Agastache scrophulariifolia (Willdenow) Kuntze, Purple Giant-hyssop. Mt (GA, NC, VA, WV), Pd (DE, NC, VA): rich woodlands and forests, bottomlands; uncommon (rare in GA and DE). July-September; September-October. VT west to MN, south to NC, e. TN, n. GA, and e. KS. [= K; = *A. scrophulariaefolia* – RAB, C, G, S, W, an orthographic variant; > *A. scrophulariaefolia* var. *scrophulariaefolia* – F; > *A. scrophulariaefolia* var. *mollis* (Fernald) Heller – F]

Blephilia Rafinesque 1819 (Woodmint, Pagoda-plant)

A genus of 3 species, herbs, of e. North America. References: Simmers & Kral (1992)=Z; Harley et al. in Kadereit (2004).

1 Stem glabrate below the middle; leaf lower surface glabrous or with a few unicellular hairs on the midvein; [of moist forests over limestone in n. AL] ..... ***B. subnuda***
1 Stem strongly pubescent below the middle; leaf lower surface distinctly pubescent, at least on the larger nerves; [of various moist to dry forests, woodlands, and meadows, collectively widespread in our area].
2 Lobes of the lower lip of the calyx linear, approaching the sinuses of the upper lip; outer bracteoles acute; leaves with rounded to acutish tips (rather *Prunella*-like); petioles 1-7 (-12) mm long; stem canescent, rarely with intermixed long trichomes; [primarily in the Piedmont] ..... ***B. ciliata***
2 Lobes of the lower lip of the calyx deltoid, not reaching the sinuses of the upper lip; outer bracteoles long-acuminate; leaves with acuminate to acute tips (rather *Monarda*-like); petioles 9-42 mm long; stem densely to sparsely pubescent with long, spreading trichomes; [primarily in the Mountains]..... ***B. hirsuta***

Blephilia ciliata (Linnaeus) Bentham. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (NC, SC, VA): woodlands, meadows, forests, usually in circumneutral soils (over diabase, limestone, etc.); uncommon (rare in DE, rare in Coastal Plain of VA). May-early July; August-October. MA and WI south to c. GA and AR. [= RAB, C, F, G, K, S, W, Z]

Blephilia hirsuta (Pursh) Bentham. Mt (NC, VA, WV), Pd (DE, NC, VA), {GA}: rocky or alluvial forests, montane forests up to at least 5000 feet elevation; common (uncommon in Mountains of VA, rare in DE and Piedmont of VA). Late June-October; August-November. QC and MN south to NC, AL, AR, and e. TX. [= RAB, C, G, S, W, Z; > *B. hirsuta* var. *hirsuta* – F, K]

Blephilia subnuda R.W. Simmers & Kral. Moist calcareous forests. Endemic (so far as is known) to the Cumberland Plateau of nc. AL (Jackson and Madison counties). [= K, Z]

Chaiturus Willdenow 1787 (Horehound Motherwort)

A monotypic genus, an herb, of Europe and n. Asia.

* ***Chaiturus marrubiastrum*** (Linnaeus) Reichenbach, Horehound Motherwort. Mt (VA, WV), Pd (DE, VA): disturbed areas; rare, native of Europe and n. Asia. June-September. [= K; = *Leonurus marrubiastrum* Linnaeus – C, F, G, S]

Clinopodium Linnaeus 1753 (Calamint)

A genus of about {??} 20 species (as here circumscribed), herbs and shrubs, of temperate and subtropical areas of the w. and e. hemispheres. References: Cantino & Wagstaff (1998)=Y; Shinners (1962a)=Z; Shinners (1962f)=X. Key adapted in part from Z.

1 Flowers 1 per leaf axil ..... ***C. brownei***
1 Flowers > 1 per leaf axil.
2 Plant a shrubby perennial, not flowering the first year; [of sandy or rocky habitats of the Coastal Plain and Piedmont, from s. NC southward].
3 Corolla bright scarlet, 27-50 mm long; calyx 8-18 mm long ..... ***C. coccineum***
3 Corolla light lavender or pink with darker spots, 10-20 mm long; calyx 5.0-7.5 mm long.
4 Leaves ovate or elliptic, sharply serrate, not revolute; leaves distinctly petioled; leaf surfaces glabrous ..... ***C. georgianum***
4 Leaves linear to linear-elliptic, entire, strongly revolute; leaves subsessile; leaf surfaces minutely and densely pubescent..... ***C. ashei***
2 Plant an herbaceous to suffrutescent perennial, often flowering the first year; [of various habitats, collectively widely distributed in our area].
5 Stem glabrous or pubescent at the nodes only; leaves of flowering stems linear to oblanceolate; [native, of limestone glades, barrens, and bluffs].
6 Plant stoloniferous, bearing leafy stolons with ovate leaves; leaves of the flowering stems 1-2 cm long, 1-5 mm wide, entire..... ***C. arkansanum***
6 Plant not bearing leafy stolons; leaves of the flowering stems oblanceolate, 2.5-5 cm long, 5-17 mm wide, with several teeth on each side ..... ***C. glabellum***
5 Stem pubescent; leaves of flowering stems elliptic to ovate; [alien or native, generally of disturbed or weedy situations].
7 Axillary flower clusters in peduncled, contracted cymes.
8 Calyx 6.0-10.2 mm long, the hairs inside the throat barely or not exserted; blades of larger stem leaves 2-5 cm long ..... ***C. ascendens***
8 Calyx 2.8-6.0 mm long, the hairs inside the throat exserted, prominent; blades of the larger stem leaves 0.8-2.4 cm long..... ***C. calamintha***
7 Axillary flower clusters sessile, dense.
9 Corolla 4-5 mm long; calyx 2.5-5.5 mm long ..... ***C. gracile***
9 Corolla 7-22 mm long; calyx 4.5-10 mm long.
10 Whorls with 8 or fewer flowers; calyx 4.5-7 mm long; corolla 7-10 mm long..... ***C. acinos***
10 Whorls with > 8 flowers; calyx 7-10 mm long; corolla 12-22 mm long ..... ***C. vulgare***

* ***Clinopodium acinos*** (Linnaeus) Kuntze, Mother-of-thyme, Basil-thyme. Mt (VA, WV): cultivated, rarely escaped or persisting; rare, native of Europe. [= *Satureja acinos* (Linnaeus) Scheele – C, F, G; = *Acinos arvensis* (Lamarck) Dandy – K]

Clinopodium arkansanum (Nuttall) House, Arkansas Calamint. Mt (VA): dry limestone glades; rare (VA Rare). ON west to MN, south to w. NY, nw. PA, w. VA, WV, IL, c. TN, and s. WI; also in MO, OK, AR, and TX. There appears to be confusion about the identities and distributions of this taxon and *C. glabellum*. [= K, Y; = *Satureja glabella* (Michaux) Briquet var. *angustifolia* (Torrey) Svenson – C, G; = *Satureja arkansana* (Nuttall) Briquet – F; < *Calamintha arkansana* (Nuttall) Shinners – GW (also see *Clinopodium glabellum*); = *Calamintha arkansana* (Nuttall) Shinners – Z; < *Clinopodium glabellum* (Michaux) Kuntze – S]

* ***Clinopodium ascendens*** (Jordan) Sampaio, Common Calamint. Cp (VA): rich calcareous slope; rare, native of Europe. August. [= *Calamintha sylvatica* Bromfield ssp. *ascendens* (Jordan) P.W. Ball – K; *? Calamintha officinalis* – Z]

Clinopodium ashei (Weatherby) Small, Ashe's Calamint, Ashe's Savory, Ohoopee Dunes Wild Basil. Cp (GA): xeric sandhills; rare. Peninsular FL (south of our area); disjunct in e. GA (Candler and Tatnall counties). [= K, S, Y; = *Calamintha ashei* (Weatherby) Shinners – WH, Z; = *Satureja ashei* Weatherby]

Clinopodium brownei (Swartz) Kuntze, Browne's Savory. Cp (FL, GA, SC): floodplain forests, pondshores; uncommon (rare in GA and SC). In sw. GA (Jones & Coile 1988). Reported for SC (Beaufort County, SC) (Daniel Payne, pers.comm. 2006, specimen at CLEMS). [= K; > *Micromeria pilosiuscula* (A. Gray) Small – S; > *Micromeria brownei* (Swartz) Bentham var. *pilosiuscula* A. Gray – GW, WH, X]

* ***Clinopodium calamintha*** (Linnaeus) Stace, Lesser Calamint, Basil-thyme. Mt (NC, VA), Pd (NC, VA), Ip (KY), Cp (NC, VA), {GA}: disturbed areas; common (uncommon in NC), native of Europe. July-October. [> *Satureja calamintha* (Linnaeus) Scheele var. *nepeta* (Linnaeus) Briquet – RAB, F, G, W; = *Satureja calamintha* (Linnaeus) Scheele – C; > *Satureja calamintha* var. *calamintha* – F; > *Satureja calamintha* var. *nepetoides* (Jordan) Briquet – F, G; > *Satureja calamintha* var. *glandulosa* (Riquien) Briquet – F; > *Calamintha nepeta* (Linnaeus) Savi ssp. *nepeta* – K; > *Calamintha nepeta* ssp. *glandulosa* (Riquien) P.W. Ball – K; = *Clinopodium nepeta* (Linnaeus) Kuntze – S; > *Calamintha officinalis* Moench – Z; > *Calamintha nepeta* (Linnaeus) Savi – Z]

Clinopodium coccineum (Nuttall ex Hooker) Kuntze, Scarlet Calamint, Scarlet Wild Basil, Red Mint Shrub. Cp (FL, GA): sandhills and flatwoods; uncommon. E. GA south to c. peninsular FL, west to s. MS. [= K, S, Y; = *Calamintha coccinea* (Nuttall ex Hooker) Bentham – WH, Z; = *Satureja coccinea* (Nuttall ex Hooker) Bertolini]

Clinopodium georgianum R.M. Harper, Georgia Calamint. Cp (FL, GA, NC, SC), Pd (GA, NC, SC): longleaf pine sandhills, dry rocky or sandy woodlands; uncommon (rare in FL and NC). July-September. S. NC south to Panhandle FL and west to LA. [= K, S, Y; = *Satureja georgiana* (R.M. Harper) Ahles – RAB; = *Calamintha georgiana* (R.M. Harper) Shinners – WH, Z]

Clinopodium glabellum (Michaux) Kuntze. Ip (KY): dry-mesic to mesic shaley forests, limestone barrens; uncommon. Nc. KY, c. TN, south to c. AL; MO and AR. Reports of this for VA (Kartesz 1999) are apparently based on confusion with *Clinopodium arkansanum*. [= Y; = *Satureja glabella* (Michaux) Briquet var. *glabella* – C; = *Clinopodium glabellum* (Michaux) Kuntze – K; < *Calamintha arkansana* (Nuttall) Shinners – GW; < *Clinopodium glabellum* (Michaux) Kuntze – S; = *Calamintha glabella* (Michaux) Bentham]

* ***Clinopodium gracile*** (Bentham) Kuntze, Slender Wild Basil. Cp (AL, FL, LA, MS): disturbed areas, bottomland forests; rare, native of Asia. June-August; August-October. Introduced in s. AL, FL, LA (Kartesz 1999; Woods, Diamond, & Searcy 2003) and MS (S.W. Leonard, pers. comm. 2005). [= K, WH] {add to synonymy}

Clinopodium vulgare Linnaeus, Wild Basil. Mt (KY, NC, VA, WV), Pd (DE, NC, VA), Cp (DE, NC, VA), Ip (KY): pastures, roadbanks, forests, thin soils around rock outcrops; common (uncommon in DE Piedmont, rare in DE Coastal Plain). July-September. NL (Newfoundland) to MB, south to NC, sc. TN, and KS, scattered in the west, widespread in Europe. Plants in our area may reflect both native and introduced genotypes. [= K, S, Y, Z; = *Satureja vulgaris* (Linnaeus) Fritsch – RAB, C, F, G, W; > *Satureja vulgaris* var. *vulgaris* – F; > *Satureja vulgaris* var. *diminuta* (Simon) Fernald & Wiegand – F; > *Satureja vulgaris* var. *neogaea* Fernald – F; > *Clinopodium vulgare* var. *neogaea* (Fernald) C.F. Reed]

Clinopodium dentatum (Chapman) Kuntze, Florida Calamint, Toothed Savory. Cp (FL, GA): sandhills and xeric steepheads; rare. Endemic to sw. GA and Panhandle FL. [= K, S; = *Satureja dentata* (Chapman) Briquet; = *Calamintha dentata* Chapman – WH] {not yet keyed; add to synonymy}

Clinopodium species 1, Indian Grave Mountain Wild Basil. It occurs in montane longleaf pine/chestnut oak/Georgia oak woodlands on Hollis quartzite along the main Pine Mountain ridge. Under study by Jim Allison. {not yet keyed}

Conradina A. Gray 1870 (Conradina, Rosemary)

A genus of 6 species, shrubs and suffrutescent herbs, of temperate se. North America. References: Edwards et al. (2009)=Y; Shinners (1962g)=Z; Harley et al. in Kadereit (2004). Key based in part on Y.

1 Leaves oblanceolate, slightly revolute, the leaf undersurface mostly visible and showing 1-4 raised lateral veins; [Putnam County, FL, adjacent to the coverage area].
  2 Calyx 8.5-11 mm long, the upper lobe 3.6-4.4 mm long; cyme 1-5-flowered; unicellular hairs of the lower leaf surface thin-walled, collapsing and flattened in drying; [ec. Putnam County, FL] ..... ***C. cygniflora***
  2 Calyx 7-8.5 mm long, the upper lobe 1.8-3.5 mm long; cyme 3-7-flowered; unicellular hairs of the lower leaf surface thick-walled, terete to conical, unchanged in drying; [nw. Putnam County, FL] ..... ***C. etonia***
1 Leaves either linear and strongly revolute such that essentially only the midvein is visible on the undersurface (*C. canescens*) or linear to narrowly oblanceolate, slightly to strongly revolute, some leaf surface sometimes showing on the leaf undersurface, but lacking raised lateral veins (*C. glabra* and *C. verticillata*); [collectively more widespread].
  3 Leaves densely gray-pubescent above and below; midrib on lower leaf surface densely gray-pubescent to gray-pilose..... ***C. canescens***
  3 Leaves green above, glabrous or inconspicuously short-pubescent; midrib on lower leaf surface glabrous or glabrate, contrasting with the more densely pubescent lower leaf surface.
    4 Plants upright to 8 dm tall; calyx tube glabrous or minutely and inconspicuously puberulent; [Coastal Plain of Panhandle FL and s. AL] ..... ***C. glabra***

4 Plants decumbent, rooting at the nodes; calyx tube densely short-pubescent and also pilose with longer glandular hairs; [Cumberland Plateau of KY and TN]..... ***C. verticillata***

Conradina canescens A. Gray, Gray Rosemary. Cp (AL, FL, MS): sandhills, scrub, flatwoods; uncommon. January-May. Panhandle FL and s. AL west to s. MS. [= K, WH, Y, Z; > *C. canescens* – S; > *C. puberula* Small – S]

Conradina cygniflora C.E. Edwards, Judd, Ionta, & Herring, Swan-flowered Rosemary. Cp (FL): sand pine scrub and sandhills; rare. September-October. Endemic to ec. Putnam County, FL. [= Y; < *C. etonia* – WH]

Conradina etonia Kral & McCartney, Etoniah Rosemary. Cp (FL): sand pine scrub and sandhills; rare. Endemic to nw. Putnam County, FL. [= Y; < *C. etonia* – WH]

Conradina glabra Shinners, Apalachicola Rosemary. Cp (AL, FL): sandhills; rare. Panhandle FL and s. AL. [= K, WH, Y, Z]

Conradina verticillata Jennison, Cumberland Rosemary. Mt (KY, TN): flood-scoured cobble bars of large rivers; rare. Endemic to the Cumberland Plateau area of ne. TN and se. KY. It has an odor similar to rosemary, and showy purplish flowers. [= K, Y, Z; = *C. montana* Small – S]

Cunila D. Royen ex Linnaeus 1759 (Stone-mint, American-dittany, Wild-oregano)

A genus of about 15 species, herbs, from e. North America to South America. References: Harley et al. in Kadereit (2004).

Cunila origanoides (Linnaeus) Britton, Stone-mint, American-dittany, Wild-oregano. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, NC, VA): dry rocky slopes, other dry slopes; common (rare in DE and NC Coastal Plain, rare in DE Piedmont). S. NY and PA west to MO, south to c. SC, n. GA, OK, and ne. TX (Singhurst & Holmes 2004). [= RAB, C, F, G, K, W, WV; = *Mappia origanoides* (Linnaeus) House – S]

Dicerandra Bentham 1830 (Dicerandra)

A genus of 9 species, herbs, endemic to se. North America. References: Huck (1987)=Z; Huck (1984)=Y; Ward (2009d)=X; Huck & Chambers (1997); Harley et al. in Kadereit (2004).

1 Corolla tubular, straight or slightly curved; superior lobe cucullate (hoodlike); stamens and style arching under the hooded upper lobe of the corolla, included or slightly exserted beyond its apex; filaments inserted at 2 levels within the corolla; odor of fresh plant cinnamon-like, spicy; [section *Lecontea*].
  2 Corolla tube ca. 18 mm long, the orifice ca. 2 mm wide; leaves (15-) avg. 25 (-45) mm long, linear, the margins entire; [s. SC south through much of the Coastal Plain of GA]..... ***D. odoratissima***
  2 Corolla tube >20 mm long, the orifice ca. 4 mm wide; leaves (19-) avg. 40 (-55) mm long, narrowly oblong, the margins often dentate; [endemic to McIntosh County, GA]..... ***D. radfordiana***
1 Corolla funnel-shaped, the tube geniculate; superior corolla lobe a lobed, flaring standard; stamens and style exserted, the stamens either widely flaring to the sides or declined along the lower lobe of the corolla; filaments inserted at the same level within the corolla; odor of fresh plant minty; [section *Dicerandra*].
  3 Cymes epedunculate; flowers nearly sessile in compact verticils; pollen white to pale yellow; anther spurs obtuse to barely acute, with domes of minute hairs..... ***D. densiflora***
  3 Cymes on peduncles 3-6 mm long; flowers on pedicels (3-) avg. 5 (-9) mm long; pollen bright yellow; anther spurs acuminate, glabrous.
    4 Leaves linear; cymes 3-flowered; corolla white to pale purple; anthers vivid yellow; [widespread in the Coastal Plain of GA south to ne. FL and s. AL]..... ***D. linearifolia*** *var.* ***linearifolia***
    4 Leaves narrowly rhombic; cymes 5-7-flowered; corolla purplish red to vivid purple; anthers strongly reddish brown; [extreme s. GA south into e. Panhandle FL and ne. FL]..... ***D. linearifolia*** *var.* ***robustior***

Dicerandra densiflora Bentham, Florida Balm. Cp (FL): longleaf pine sandhills; rare. October-early November. Reported for GA by Small (1933), but this report is apparently in error; Huck (1987) regards it as endemic to n. peninsular FL. This taxon is tetraploid. [= K, S, WH, X, Y, Z]

Dicerandra linearifolia (Elliott) Bentham *var.* ***linearifolia***. Cp (AL, FL, GA): sandhills and flatwoods; uncommon. Mid September-late November. W. and ec. Coastal Plain of GA south to ne. FL and s. AL. This taxon is hexaploid. [= K, WH, X, Y, Z; < *D. linearifolia* – S]

Dicerandra linearifolia (Elliott) Bentham *var.* ***robustior*** R.B. Huck. Cp (FL, GA): sandhills and flatwoods; uncommon. Late September-late November. Sc. Coastal Plain of GA (Brooks, Echols, Lowndes counties) (Huck 1987) south to e. Panhandle FL and ne. FL. This taxon is tetraploid. [= K, WH, X, Y, Z; < *D. linearifolia* – S]

Dicerandra odoratissima R.M. Harper. Cp (GA, SC): sandhills; uncommon (SC Rare). Late August-early October. S. SC south to se. GA. This taxon is tetraploid. [= RAB, K, S, Y, Z]

Dicerandra radfordiana R.B. Huck, Radford's Dicerandra. Cp (GA): dry flatwoods and sandhills; rare (GA Special Concern). September-October. Endemic to e. GA (McIntosh County). This species was postulated to be a polyploid derivative of *D. odoratissima* by Huck (1984, 1987); later study has shown that this is not the case (Huck & Chambers 1997). Both taxa are tetraploid. [= K, Y, Z]

Dracocephalum Linnaeus 1753 (Dragon's-head)

A genus of about 45-70 species, herbs, of Eurasia and North America. References: Harley et al. in Kadereit (2004). [also see *Physostegia*]

* ***Dracocephalum parviflorum*** Nuttall, Dragon's-head. Pd (DE, NC), WV (Mt): cultivated ground; rare, native west of the Appalachians. May-July; July-September. [= C, F, G, K, WV; = *Moldavica parviflora* (Nuttall) Britton – RAB]

Glechoma Linnaeus 1753 (Gill-over-the-ground)

A genus of about 4-10 species, herbs, of temperate Eurasia. References: Harley et al. in Kadereit (2004).

* ***Glechoma hederacea*** Linnaeus, Gill-over-the-ground, Ground-ivy. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, SC, VA): lawns, gardens, disturbed areas; common (rare in FL, rare in DE Coastal Plain), native of Eurasia. Late March-June; May-July. [= C, K, WH; = *Glecoma hederacea* – RAB, S, W, misspelled; > *G. hederacea* var. *hederacea* – F, WV; > *G. hederacea* var. *micrantha* Moricand – F, WV; > *Glecoma hederacea* var. *parviflora* (Bentham) House – G]

Hedeoma Persoon 1807 (American Pennyroyal)

A genus of about 38-42 species, herbs, of North America, Central America, and South America. References: Irving (1980)=Z; Harley et al. in Kadereit (2004).

1 Leaves elliptic, 4-11 mm wide, slightly to strongly crenate; nutlets subspherical, 0.7-1.0 mm long, 0.6-0.9 mm wide, the surface smoothish, mottled, not glaucous; [subgenus *Hedeoma*] ..... ***H. pulegioides***
1 Leaves linear to narrowly elliptic, 1-4 mm wide, entire; nutlets narrowly ovoid, 1.0-1.3 mm long, 0.4-0.6 mm wide, the surface areolate and strongly glaucous; [subgenus *Saturejoides*].
  2 Calyx teeth convergent, closing the orifice at maturity; bracteoles subtending the individual flower pedicels 1-2 mm long, about ½ as long as the pedicel; leaves (5.0-) avg. 7.7 (-11.0) mm long, (1.2-) avg. 2.2 (-4.0) mm wide, 3-5× as long as wide ..... ***[H. drummondii]***
  2 Calyx teeth spreading (the upper) to slightly convergent (th lower), not closing the orifice at maturity; bracteoles subtending the individual flower pedicels (1.5-) 2.5-6 mm long, generally as long as or longer than the pedicel; leaves (11.0-) avg. 16.4 (-21.0) mm long, (1.0-) avg. 2.2 (-3.0) mm wide, > 5× as long as wide ..... ***H. hispida***

*? ***Hedeoma hispida*** Pursh, Rough Pennyroyal. Pd (GA, SC, VA), Mt (GA, WV*), Cp (FL, GA): disturbed areas, pastures, granitic flatrocks; rare, apparently adventive from further south and west. Irving (1980) shows *H. hispida* east to e. Panhandle FL, c. AL, nc. TN, and s. OH; it may be recently arrived further east or previously overlooked. First reported for SC by Hill & Horn (1997). [= C, F, G, K, WV, Z; = *H. hispidum* – WH (orthographic variant)]

Hedeoma pulegioides (Linnaeus) Persoon, American Pennyroyal. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, SC, VA): dry soils of woodlands, roadbanks, woods-roads, especially common in shaly parts of the VA and WV mountains; common (uncommon in NC and SC). Late July-October. NS, s. QC, s. ON, MI, WI, and IA south to c. SC, c. GA, and AR. The fragrant oil is apparently very similar to that of the European Pennyroyal, *Mentha pulegium* Linnaeus. The oil is a powerful insect repellent and insecticide, often used on pets to repel fleas. It is also poisonous to humans, however, at least in substantial quantities. It is sometimes used as a tea; native Americans are reputed to have used it as an abortion inducer. This plant should be used with great caution, if at all. [= RAB, C, F, G, K, S, W, WV, Z]

Hedeoma drummondii Bentham. Cp (AL, MS): black belt prairies; rare. MN and MT south to TX and CA; disjunct eastwards to AR, MS, and AL, where it occurs in black belt prairies. [= K, Z]

Hyptis Jacquin 1786 (Cluster Bushmint)

A genus of about 280-300 species, herbs and shrubs, of warm temperate, subtropical, and tropical America. References: Harley et al. in Kadereit (2004).

1 Flowers borne in large, globose heads, 1.5-2.5 cm across, borne on peduncles 2-6 cm long; leaves lanceolate, narrowed to a narrowly cuneate, subpetiolar base ..... ***H. alata***
1 Flowers borne in irregular verticillate spikes, sessile to pedunculate on peduncles 1-2 mm long; leaves **either** ovate to deltate, narrowed to a broadly cuneate to truncate base and well-developed petiole (4-6 cm long on larger leaves), **or** lanceolate and narrowed to a cuneate, subpetiolar base.
  2 Stem scabrous on the angles; corolla blue-purple; leaves ovate to deltate ..... ***H. mutabilis***
  2 Stem glabrous or pubescent; corolla white; leaves lanceolate ..... ***H. verticillata***

Hyptis alata (Rafinesque) Shinners, Musky Mint, Cluster Bushmint. Cp (FL, GA, NC, SC): wet pine savannas, margins of swamp forests, wet powerline rights-of-way, ditches; common. Late June-September. Ne. NC south to s. FL, west to se. TX; West Indies. [= RAB, GW, K, WH; = *H. radiata* Willdenow – S]

* ***Hyptis mutabilis*** (A. Richard) Briquet, Tropical Bushmint. Cp (FL, GA, SC, VA); moist disturbed areas; common (uncommon in GA, rare in SC and VA), native of South America. [= GW, K, S, WH]

* ***Hyptis verticillata*** Jacquin, John Charles. Cp (FL): hammocks, disturbed areas; rare, native of tropical America. [= K, S, WH]

Hyssopus Linnaeus 1753 (Hyssop)

A genus of 2-5 species, herbs, of s. Europe to c. Asia. References: Harley et al. in Kadereit (2004).

* ***Hyssopus officinalis*** Linnaeus, Hyssop. {NC} Reported for NC (see G and S); documentation not known. Native of Eurasia. July-October. [= RAB, C, F, G, K, S]

Leonotis (Persoon) R. Brown 1810 (Lion's-ears)

A genus of about 9 species, herbs, shrubs, and small trees, of sub-Saharan Africa. References: Iwarsson & Harvey (2003)=Z.

* ***Leonotis nepetifolia*** (Linnaeus) Aiton f. *var.* ***nepetifolia***, Lion's-ears, Lightning-rod-plant. Cp (FL, GA, NC, SC), Pd (GA, NC, SC): pastures, disturbed areas; uncommon, native of s. Africa. Late August-October. [= Z; < *L. nepetifolia* – K, WH; < *L. nepetaefolia* – RAB, S, orthographic variant]

Lycopus Linnaeus 1753 (Bugleweed, Water-horehound)

A genus of about 10-14 species, herbs, of temperate Eurasia, North America, and Australia. References: Sorrie (1997)=Z; Harley et al. in Kadereit (2004). Key adapted from Sorrie.

1 Calyx lobes acute at the apex, shorter than or equaling the nutlets.
  2 Plant without tubers; leaf base tapered to a long, winged petiole; corolla lobes 4, erect; leaf teeth (6-) avg. 8.6 (-11) per side ... ***L. virginicus***
  2 Plant usually with tubers; leaf base subsessile or tapered to a short, winged petiole; corolla lobes 4 or 5, all or some spreading; leaf teeth (2-) avg. 5.0 (-7) per side.
    3 Corolla lobes 4, one erect and three spreading; nutlet tubercles well-developed, deeply toothed; leaf teeth (2-) avg. 4.5 (-6) per side; [fall-line sandhills of NC and SC] ... ***L. cokeri***
    3 Corolla lobes 5, spreading; nutlet tubercles weakly developed, undulate; leaf teeth (4-) avg. 5.4 (-7) per side; [Mountains, upper Piedmont, and VA Coastal Plain] ... ***L. uniflorus***
1 Calyx lobes acuminate to subulate-tipped, much exceeding the nutlets.
  4 Nutlet tubercles not developed or only weakly so.
    5 Calyx 2.0-3.3 mm long; stems and branches glabrous to sparsely pubescent with hairs < 0.5 mm long; leaf teeth sharply acute to short-acuminate ... ***L. americanus***
    5 Calyx 3.0-4.5 mm long; stems and branches densely to sparsely pubescent with hairs 0.5-1.6 mm long; leaf teeth blunt to acute ... ***L. europaeus***
  4 Nutlet tubercles well developed.
    6 Leaves evidently petiolate, the petioles narrowly winged ... ***L. rubellus***
    6 Leaves sessile or subsessile.
      7 Leaves ovate to lanceolate, usually rounded at the base, scarcely reduced upward on the stem ... ***L. amplectens***
      7 Leaves lanceolate to linear, cuneate at the base, upper leaves conspicuously narrower (and often also shorter) than the lower leaves ... ***L. angustifolius***

Lycopus americanus Muhlenberg ex W. Barton, American Bugleweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, NC, VA), Mt (GA, VA, WV): marshes, bottomlands; common (rare in FL and GA). June-November. NL (Newfoundland) west to BC, south to FL Panhandle and CA. See comment under *L. europaeus* about hybridization between *L. americanus* and *L. europaeus*. [= RAB, C, GW, K, S, W, WH, WV, Z; > *L. americanus* var. *americanus* – F, G; > *L. americanus* var. *longii* Benner – F, G; > *L. americanus* var. *scabrifolius* Fernald – F]

Lycopus amplectens Rafinesque, Clasping Water-horehound. Cp (DE, FL, GA, NC, SC), Mt? (NC?), {VA}: clay-based Carolina bays, other moist habitats; uncommon (rare in DE). June-November. MA south to ne. FL; disjunct inland around the Great Lakes and (allegedly) in w. NC. [= RAB, C, GW, K, W, WH, Z; > *L. amplectens* var. *amplectens* – F, G; > *L. amplectens* var. *pubens* (Britton) Fernald – F, G; > *L. pubens* Britton – S; > *L. sessilifolius* A. Gray – S]

Lycopus angustifolius Elliott, Narrowleaf Bugleweed, Southern Bog Water-horehound. Cp (FL, GA, NC, SC, VA): bogs, marshes; uncommon. June-November. Se. VA south to FL, west to e. TX, north in the interior to s. TN and s. MO. [= C, Z; = *L. rubellus* Moench var. *angustifolius* (Elliott) Ahles – RAB, GW; = *L. rubellus* Moench var. *lanceolatus* Benner – F; < *L. rubellus* – G, K, W, WH]

Lycopus cokeri Ahles ex Sorrie, Coker's Bugleweed, Carolina Bugleweed. Cp (NC, SC): sandhill pocosins, boggy streamheads, seepage bogs; uncommon. July-November. Endemic to the fall-line sandhill region of sc. NC and SC. See Sorrie (1997) for a detailed discussion of this species. [= RAB, K, Z; < *L. uniflorus* Michaux – GW]

* ***Lycopus europaeus*** Linnaeus, Gypsywort, European Bugleweed. Cp (DE, NC, VA), Pd (DE), Mt (WV): marshes, ditches; common (uncommon in NC and VA, rare in WV), native of Europe. June-November. In the Great Lakes and St. Lawrence River regions, hybrid swarms involving *L. americanus* and *L. europaeus* are numerous (Webber & Ball 1980). However, to date there is no evidence that these species have hybridized within the Flora region. [= RAB, C, G, K, S, Z; > *L. europaeus* var. *europaeus* – F; > *L. europaeus* var. *mollis* (Kern.) Briq. – F]

Lycopus rubellus Moench, Stalked Bugleweed. Cp (DE, FL, GA, NC, SC, VA), Pd (NC, SC, VA), Mt (GA, VA, WV*): marshes, swamp forests, bottomlands; common (rare in WV, rare in VA Mountains). June-November. ME west to MI, south to FL and TX. [= C, S, Z; = *L. rubellus* var. *rubellus* – RAB, GW; < *L. rubellus* – G, K, W, WH (also see *L. angustifolius*); > *L. rubellus* – S; > *L. velutinus* Rydberg – S]

Lycopus uniflorus Michaux, Northern Bugleweed. Mt (NC, SC, VA, WV), Pd (DE, NC, VA), Cp (DE): bogs, seeps, wet forests; common. July-October. NL (Newfoundland) west to AK, south to w. NC, AR, and CA. [= RAB, C, F, G, S, W, WV, Z; < *L. uniflorus* – GW (also see *L. cokeri*); > *L. uniflorus* var. *uniflorus* – K]

Lycopus virginicus Linnaeus, Virginia Bugleweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): swamps, bottomlands, other wet habitats; common. July-November. MA west to PA, s. IN, MO, and OK, south to n. peninsular FL, Panhandle FL, and e. TX. [= RAB, C, F, G, GW, K, S, W, WH, WV, Z]

Meehania Britton 1894 (Meehania)

A genus of 2-6 species, herbs, ours in temperate e. North America, and the other species in e. Asia. References: Harley et al. in Kadereit (2004).

Meehania cordata (Nuttall) Britton, Meehania. Mt (NC, VA, WV): moist, rocky, forested slopes; common (uncommon in VA, rare in NC). Late May-July; June-July. A Central and Southern Appalachian endemic: sw. PA and OH south to sw. VA, nw. NC, and ne. TN. [= RAB, C, F, G, K, S, W, WV]

Melissa Linnaeus 1753 (Balm)

A genus of 3-4 species, herbs, from Europe to Iran and c. Asia. References: Harley et al. in Kadereit (2004).

* ***Melissa officinalis*** Linnaeus, Lemon Balm, Common Balm. Mt (NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (VA): disturbed areas; uncommon (rare in NC, SC, and VA), native of w. Asia. [= RAB, C, F, G, K, S, W]

Mentha Linnaeus 1753 (Mint)

A genus of about 20-25 species, herbs, of temperate Eurasia and n. North America. References: Stace (2010)=Z; Tucker & Naczi (2007)=Y; Denslow & Poindexter (2009); Harley et al. in Kadereit (2004). Key largely adapted from C, Y, and Z.

Identification notes: The distribution, habitats, phenology, and abundance of all *Mentha* species need substantial additional herbarium investigation.

1 Flowers in axillary verticils subtended by ordinary foliage leaves, and separated by internodes of ordinary length.
- 2 Calyx glabrous throughout, or pubescent toward the tips only; calyx 2-3.5 mm long; plants usually sterile; fresh plant usually with spearmint odor or flavor ..... ***M. ×gracilis***
- 2 Calyx pubescent throughout its length; calyx 1.5-2.5 mm long; plants usually fertile; fresh plant usually with a rather unpleasant odor of flavor.
  - 3 Leaves subtending the inflorescence mostly broadly rounded at the base; leaves of the inflorescence relatively narrow; [alien] ..... ***M. arvensis ssp. arvensis***
  - 3 Leaves subtending the inflorescence mostly cuneate at the base; leaves of the inflorescence relatively broad; [native, though often in weedy situations] ..... ***M. canadensis***

1 Flowers in terminal spikes or heads, the subtending leaves absent or distinctly smaller than the foliage leaves.
- 4 Inflorescence a terminal globose to ovoid head of 1-3 verticils.
  - 5 Pedicels, calyx, and leaves pubescent; plants usually fertile ..... ***M. aquatica*** *var.* ***aquatica***
  - 5 Pedicels and clayx glabrous, leaves glabrous or nearly so; plants usually sterile ..... ***M. aquatica*** *var.* ***citrata***
- 4 Inflorescence a spike of several to many verticils.
  - 6 Bracteal leaves much longer than the flowers, resembling the foliage leaves, but smaller or narrower ..... ***M. ×gracilis***
  - 6 Bracteal leaves linear to laneolate, little surpassing the flowers.
    - 7 Calyx tube glabrous; leaves glabrous, or with scattered hairs on the lower surface.
      - 8 Petioles of the main leaves 4-15 mm long; spikes stout; plants sterile; fresh plant with peppermint odor or flavor ..... ***M. ×piperita*** *var.* ***piperita***
      - 8 Petioles of the main leaves 0-3 mm long; spikes slender; plants fertile; fresh plant with spearmint odor or flavor ..... ***M. spicata*** *var.* ***spicata***
    - 7 Calyx tube pubescent; leaves moderately to densely hairy on the lower surface.
      - 9 Leaves lanceolate to oblong-lanceolate, > 3× as long as wide.
        - 10 Hairs of the leaf undersurface unbranched; leaves widest near the middle, slightly rugose; fertile anthers 0.28-0.38 mm long; fresh plant with musty flavor or odor ..... ***M. longifolia*** *ssp.* ***longifolia***
        - 10 Hairs of the leaf undersurface dendritic; leaves oblong lanceolate, widest towards the base, conspicuously rugose; fertile anthers 0.38-0.52 mm long; fresh plant with spearmint odor or flavor ..... ***M. spicata*** *var.* ***spicata***
      - 9 Leaves oblong to ovate, 1-3× as long as wide.

11 Leaves generally 1-2× as long as wide, ovate-orbicular, broadly rounded to subcordate at the base, obtuse at the apex; leaf serrations rounded and often turned downward (thus appearing crenate); leaf surface strongly rugose, with scattered dendritic hairs below; fresh plant with sickly or sweet flavor or odor ..... ***M. suaveolens***

11 Leaves generally 1-3× as long as wide, ovate to oblong, broadly cuneate to rounded at the base, acute at the apex; leaf serrations sharp; leaf surface moderately rugose; fresh plant with spearment odor.

12 Leaves generally oblong, with nearly parallel sides and a broadly rounded base; flowers consistently with 4 fertile anthers .... ***M. ×rotundifolia***

12 Leaves generally ovate, infrequently oblong; flowers typically with all or mostly sterile anthers ..... ***M. ×villosa***

* ***Mentha aquatica*** Linnaeus *var.* ***aquatica***, Water Mint, Lemon Mint. Cp (DE), Mt (WV), {NC, VA}: disturbed areas; uncommon, native of Europe. [= Y; = *M. aquatica* – C, F, G, S, Z; < *M. aquatica* – K (also see *Mentha aquatica* var. *citrata*)]

Monarda Linnaeus 1753 (Bergamot)

A genus of about 12-20 species, herbs, of North America. Many of our species are cultivated, especially *M. didyma* in various selected forms. Additional studies are needed on a number of taxonomic problems in *Monarda*. Most of the varieties recognized above have been considered valid by a succession of workers; they do seem to describe morphologically distinguishable (if not entirely discrete) entities which make phytogeographic sense. References: McClintock & Epling (1942)=Z; Scora (1967)=Y; Fosberg & Artz (1953)=X; Gill (1977); Prather & Keith (2003); Harley et al. in Kadereit (2004).

1 Flowers in 2-6 glomerules, terminal and at 2-5 successive nodes down the stem; stamens included; leaves lanceolate to narrowly elliptic, usually broadest near the middle and tapered to a cuneate base, (2.5-) 3-8× as long as wide.

2 Calyx lobes attenuated into a spinose awn 2-7 mm long; corolla white to pink; inner bracts subtending the flowers 4-9 mm wide, abruptly acuminate into a spinose bristle ..... ***M. citriodora* var. *citriodora***

2 Calyx lobes narrowly to broadly triangular, acute or long-acuminate but not awned; corolla yellow, spotted with purple; inner bracts 8-14 mm wide, acuminate.

3 Lower leaf surface moderately to densely silvery-tomentose; stem densely villous with spreading or downwardly-curved coarse hairs, lacking coarse, horizontal bristles and short downwardly-curved hairs..... ***M. punctata* var. *villicaulis***

3 Lower leaf surface pubescent mainly on the midvein and other main veins, appearing green; stem pubescent with short downwardly-curved hairs, also with coarse, horizontal bristles and/or upwardly-curved hairs.

4 Stem with many coarse horizontal bristles, also pubescent with short, downwardly-curved hairs; leaves (40-) 50-70 (-95) mm long, 10-28 mm wide (at least some over 15 mm wide), averaging ca. 3× as long as wide ..... ***M. punctata* var. *arkansana***

4 Stem with few or no coarse horizontal bristles, also pubescent with a mixture of upwardly-curved and downwardly-curved hairs; leaves (25-) 35-55 (80) mm long, 5-17 mm wide (the widest very rarely over 15 mm wide), averaging ca. 4× as long as wide .... ***M. punctata* var. *punctata***

1 Flowers in 1 (-2) glomerule, terminal (rarely also 1 at the next node down the stem); stamens exserted; leaves ovate to ovate-lanceolate, broadest near the rounded, truncate, or subcordate base, 1.5-3 (-4)× as long as wide.
5 Corolla 30-45 mm long, scarlet-red, (3-) 4-8 mm broad at the expanded portion of the throat; [primarily of mountain seepages, streambanks, and boggy places] ..... ***M. didyma***
5 Corolla 14-33 (-36) mm long, white, lavender, or purple, 1-3 (-4) mm broad at the expanded portion of the throat; [of various habitats, usually dryish to mesic].
6 Leaves deltoid-ovate to ovate, 2-6 cm wide, usually ca. 2× as long as wide; orifice of the calyx glabrous to slightly hirsute with a few long hairs; upper lip of the corolla 5-8 mm long and not bearded (*M. clinopodia*) or 13-16 mm long and slightly bearded (*M. media*) near its apex; outer surface of the corolla glabrous to evenly pubescent with short curled hairs.
7 Corolla white, greenish, or pale pink, the lower lip purple-spotted; outer bracts subtending the inflorescence green or pale (rarely with a purplish midvein); upper lip of the corolla 5-8 mm long, not bearded..... ***M. clinopodia***
7 Corolla deep purple, the lower lip usually not spotted; outer bracts subtending the inflorescence purple to red; upper lip of the corolla 13-16 mm long and slightly bearded near its apex..... ***M. media***
6 Leaves narrowly-deltoid, ovate-lanceolate to lanceolate, 1-4 cm wide, usually ca. 3× as long as wide; orifice of the calyx densely hirsute with numerous erect, stiff, white hairs; upper lip of the corolla prominently bearded near its apex; outer surface of the corolla evenly pubescent with short curled hairs.
8 Corolla deep purple; middle lobe of the lower corolla lip 4-6 mm long; outer bracts subtending the inflorescence reddish ..... ***M. fistulosa*** *var.* ***rubra***
8 Corolla lavender, rose, or nearly white; middle lobe of the lower corolla lip 2-4 mm long; outer bracts subtending the inflorescence green (rarely the midvein only reddish).
9 Plants 10-30 cm tall; leaves subcoriaceous, glabrous, dark green, shiny; calyx 5-8 mm long, the lobes conspicuously pustulate-glandular; [of limestone glades and barrens]..... ***M. fistulosa*** *var.* ***brevis***
9 Plants 30-130 cm tall; leaves herbaceous, pubescent, light to medium green, not shiny; calyx 7-11 mm long, the lobes not pustulate-glandular; [of various habitats].
10 Pubescence of the petioles and lower leaf surface hirsute or villous, the trichomes spreading, 1-3 mm long ..... ***M. fistulosa*** *var.* ***fistulosa***
10 Pubescence of the petioles and lower leaf surface canescent, the trichomes appressed (sometimes also with an admixture of longer, spreading trichomes) ..... ***M. fistulosa*** *var.* ***mollis***

* ***Monarda citriodora*** Cervantes ex Lagasca y Segura *var.* ***citriodora***, Lemon Bergamot. Cp (FL, GA, SC): disturbed places: rare, native of sc. United States (centered in TX). June-July; July-August. [= Y; < *M. citriodora* – RAB, F, G, WH; = *M. citriodora* ssp. *citriodora* var. *citriodora* – K; *? M. dispersa* – S; = *M. citriodora* ssp. *citriodora* – Z]

Monarda clinopodia Linnaeus, Basil Bergamot. Mt (NC, SC, VA), Pd (DE, NC, SC, VA): mesic, forested slopes; common (uncommon in VA Piedmont, rare in DE). Late May-September; July-October. NJ, w. NY, and IL, south to n. GA and c. AL (some of the range perhaps accountable to cultivation). There appear to be a number of chemical races in *M. clinopodia* which may warrant taxonomic status. [= RAB, C, F, G, K, S, W, Y, Z; = *M. fistulosa* Linnaeus var. *clinopodia* (Linnaeus) Cooperrider]

Monarda didyma Linnaeus, Bee-balm, Oswego Tea. Mt (NC, SC, VA, WV), Pd (DE*, NC, VA), Cp* (NC*): seepage slopes, periglacial boulderfields with abundant seepage, streambanks, boggy places, usually in strong to moderately filtered sunlight; common (rare in Piedmont, rare in Coastal Plain, rare in SC). July-September; September-October. ME west to MI, south to PA and OH, and in the Appalachians south to sw. NC, se. TN, and ne. GA (part of the northern range is likely only by introduction). McClintock & Epling (1942) describe 2 forms of *M. didyma*: the "broad-leaved form," with leaves averaging 9.2 cm long and 5.2 cm wide and corollas averaging 35 mm long, ranging south to sc. PA and ne. WV, and the "narrow-leaved form," with leaves averaging 11.8 cm long and 4.4 cm wide and corollas averaging 39 mm long, occurring throughout the range of the species. Further study seems warranted. [= C, F, G, K, S, W, WV, Y, Z; < *M. didyma* – RAB (also see *M. media*)]

Monarda fistulosa Linnaeus *var.* ***brevis*** Fosberg & Artz, Smoke Hole Bergamot, Cedar Glade Bergamot. Mt (VA, WV): limestone outcrops, cliffs, barrens, and glades, and on limestone talus; rare. June-August; July-October. Apparently endemic to w. VA (Giles County) and e. WV. This variety is seemingly very distinct (Kimball et al. 2002). It had been collected only a very few times prior to the work of Bartgis (1993), who found it to be a characteristic plant of limestone barrens and woodlands in localized areas in the Ridge and Valley Province of WV. It flowers about a month earlier than *M. fistulosa* in the vicinity (Bartgis, pers. comm.). [= WV, X, Y; = *M. fistulosa* ssp. *brevis* (Fosberg & Artz) Scora, comb. nov. ined. – K; < *M. fistulosa* – W]

Monarda fistulosa Linnaeus *var.* ***fistulosa***, Appalachian Bergamot. Mt (NC, VA, WV), Pd (DE, NC, VA): moist wooded slopes, roadsides, woodland edges, old fields; common (rare in DE). June-September; August-October. CT south to sw. NC, nearly or entirely limited to the Appalachians. I have interpreted var. *fistulosa* and var. *mollis* somewhat differently than some previous workers. A more coherent geographic pattern is achieved by limiting var. *fistulosa* to plants with spreading hairs only. [= F, WV, X, Y; < *M. fistulosa* – RAB, W; = *M. fistulosa* ssp. *fistulosa* var. *fistulosa* – K; < *M. fistulosa* var. *fistulosa* – C, G, Z (also see var. *mollis*); = *M. fistulosa* – S]

Monarda fistulosa Linnaeus *var.* ***mollis*** (Linnaeus) Bentham, Eastern Bergamot. Mt (NC, SC, WV), Pd (DE, NC, SC), {GA, VA}: moist wooded slopes; common (rare in DE and WV). June-September; August-October. See comments under var. *fistulosa*. ME west to MN, south to GA, AL, and se. TX. [= F, WV, X, Y; < *M. fistulosa* – RAB, W; < *M. fistulosa* var. *fistulosa* – C, G, Z; = *M. fistulosa* ssp. *fistulosa* var. *mollis* (Linnaeus) Bentham – K; > *M. mollis* Linnaeus – S; > *M. scabra* Beck – S]

Monarda fistulosa Linnaeus *var.* ***rubra*** A. Gray, Purple Bergamot. Mt (NC, VA), {GA}: moist slope forests; rare (NC Watch List). ME to NJ, and from nw. NC to n. GA, in the Appalachians. Perhaps native only in the Southern Appalachians. A problematic taxon; see *M. media* for comments. [= X, Y, Z; < *M. fistulosa* – RAB, W; = *M. fistulosa* ssp. *fistulosa* var. *rubra* A. Gray - K; < *M. media* – C, F, S]

Monarda media Willdenow, Purple Bee-balm. Mt (GA, NC, VA, WV): grassy balds, moist slopes, mostly at high elevations; rare. July-September; September-October. VT west to IN, south to w. MD; disjunct in w. NC and sw. TN, part of the range perhaps the result of cultivation. *M. media* is a problematic taxon, especially in combination with *M. fistulosa* var. *rubra*.

Many have suggested that *M. media* is the result of hybridization or introgression of *M. didyma* with either *M. fistulosa* or *M. clinopodia*, or both (see Scora 1967). Scora (1967) implies that *M. media* consists of hybrids, backcrosses, and "introgressive elements" involving all three pairwise combinations, and the three-way combination, but that *M. fistulosa* var. *rubra* is not of hybrid origin. Needed are studies of *M. media*, *M. fistulosa* var. *rubra*, and their possible parents which go beyond the herbarium and determine the genetics, origin, and population structure of these taxa. It seems best for the moment to recognize (or to attempt to!) *M. media* and *M. fistulosa* var. *rubra* in order to foster additional observation and study, hopefully leading to a more definite understanding of their taxonomic status(es). [= G, K, Z; < *M. didyma* – RAB; < *M. media* – C, F, S, WV (also see *M. fistulosa* var. *rubra*); = *M.* ×*media* Willdenow (pro sp.) – W, Y]

Monarda punctata Linnaeus *var.* ***arkansana*** (McClintock & Epling) Shinners, Arkansas Horse-mint. Mt (NC), Pd (GA): dryish forests over mafic rock; rare. McClintock & Epling (1942) map and discuss this taxon as endemic to AR and immediately adjacent TX, but mention that "a specimen collected near Columbus, Polk County, North Carolina (Townsend, 1897) is scarcely different from subsp. *arkansana*." Scora (1967) treats var. *arkansana* as similarly endemic, though he cites (but does not map) a specimen from Cherokee County, GA and annotated (following the publication of his paper) a later collection from Polk County, NC as var. *arkansana*. The Polk County, NC material is manifestly var. *arkansana* and might be considered merely aberrant or a chance introduction, were it not for its repeated collection and the phytogeographic interest of the Blue Ridge Escarpment of Polk County, which harbors numerous Ozarkian and other Midwestern disjuncts, such as *Veratrum woodii.* [= Y; < *M. punctata* – RAB, S, W; = *M. punctata* ssp. *punctata* var. *arkansana* (McClintock & Epling) Shinners – K; = *M. punctata* ssp. *arkansana* McClintock & Epling – Z]

Monarda punctata Linnaeus *var.* ***punctata***, Eastern Horse-mint. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): maritime forests, dunes, roadsides, rocky or sandy woodlands; common (uncommon in Piedmont and GA, NC, and SC Mountains, rare in VA Mountains). Late July-September; September-October. NJ to s. FL, west to TX, mainly on the Coastal Plain, but extending inland southward. [= C, F, Y; < *M. punctata* – RAB, S, W, WH; = *M. punctata* ssp. *punctata* – G, Z; = *M. punctata* ssp. *punctata* var. *punctata* – K]

Monarda punctata Linnaeus *var.* ***villicaulis*** (Pennell) Palmer & Steyermark, Hairy-stem Horse-mint. Cp (NC): disturbed areas, rare, perhaps only adventive in our area. August; October. NY west to MN, south to TN, AR, and OK. [= C, F, Y; < *M. punctata* – RAB, S, W; = *M. punctata* ssp. *villicaulis* Pennell – G, Z; = *M. punctata* ssp. *punctata* var. *villicaulis* (Pennell) Palmer & Steyermark – K]

Monarda bradburiana Beck. East to c. TN (Chester, Wofford, & Kral 1997), KY, and AL. [= G, K; < *M. russeliana* – C, F] {not yet keyed; synonymy incomplete}

Monarda russeliana Nuttall ex Sims, White Beebalm. East to AL and KY. [= G, K; = *M. virgata* Rafinesque – C; < *M. russeliana* – F (also see *M. bradburiana*)] {not yet keyed; synonymy incomplete}

Nepeta Linnaeus 1753 (Catnip, Catmint)

A genus of about 250 species, herbs, of Eurasia and n. Africa. References: Harley et al. in Kadereit (2004).

* ***Nepeta cataria*** Linnaeus, Catnip, Catmint. Mt (GA, NC, VA, WV), Pd (DE, NC, VA), Cp (DE, NC, SC, VA): fencerows, barnyards, disturbed areas; common (uncommon in DE, GA, NC, and SC, uncommon in VA Piedmont, rare in VA Coastal Plain), native of Eurasia. [= RAB, C, F, G, K, S, W, WV]

Ocimum Linnaeus 1753 (Basil)

A genus of about 65 species, herbs and shrubs, of warm temperate and tropical areas. References: Harley et al. in Kadereit (2004).

* ***Ocimum basilicum*** Linnaeus, Basil. Cp (FL, GA, NC, SC), Pd (GA, NC, SC): commonly cultivated in gardens, rarely persistent for short times around gardens or as a waif on trash-heaps, probably not persistent; commonly cultivated, rarely persistent, native of tropical Asia and tropical Africa. [= C, G, K, S, WH]

Origanum Linnaeus 1753 (Oregano, Marjoram)

A genus of about 36-40 species, herbs and dwarf shrubs, of Eurasia. References: Harley et al. in Kadereit (2004).

* ***Origanum vulgare*** Linnaeus, Wild Marjoram. Mt (NC, VA), Pd (DE), Cp (DE): commonly cultivated in gardens, persistent around gardens or as a waif; rare, native of Eurasia. July-September. [= RAB, C, G, K, S]

Piloblephis Rafinesque 1838 (Florida Pennyroyal)

A monotypic genus, a shrub, of se. North America. References: Harley et al. in Kadereit (2004).

Piloblephis rigida (Bartram ex Bentham) Rafinesque, Florida Pennyroyal. Cp (GA): xeric oak scrub, with *Quercus myrtifolia*; rare. S. GA; c. to s. peninsular FL. [= K, WH; = *Pycnothymus rigidus* (Bartram ex Bentham) Small – S; = *Satureja rigida* Bartram ex Bentham]

Prunella Linnaeus 1753 (Self-heal, Heal-all)

A genus of about 4-7 species, herbs, of n. temperate areas. References: Harley et al. in Kadereit (2004).

1 Upper leaves pinnatifid; flowers creamy yellow or white (rarely pale blue) ..... ***P. laciniata***
1 Upper leaves entire to obscurely toothed; flowers blue-violet (rarely pink or whitish).
2 Principal or median cauline leaves lanceolate to oblong, (2-) avg. 3 (-5)× as long as wide; leaf cuneate at the base..... ***P. vulgaris*** *var.* ***lanceolata***
2 Principal or median cauline leaves ovate to ovate-oblong, (1.5-) avg. 2 (-2.5)× as long as wide; leaf broadly rounded at the base..... ***P. vulgaris*** *var.* ***vulgaris***

* ***Prunella laciniata*** (Linnaeus) Linnaeus, Cutleaf Self-heal. Mt (NC!, VA), {GA}: disturbed areas; rare, native of Eurasia. [= RAB, C, G, K, S]

Prunella vulgaris Linnaeus *var.* ***lanceolata*** (W. Barton) Fernald, American Self-heal. Pd (DE), Cp (DE), {Mt, Pd, Cp (FL, GA, NC, SC, VA, WV): disturbed areas, pastures, roadsides, bottomland forests; other forests and woodlands; common. April-December. Additional herbarium work is needed to determine the relative ranges, distributions, habitats, and abundances of the two varieties. NL (Newfoundland) west to AK, south to NC, SC?, TN, MO, KS, NM, AZ, and CA. [= C, F, G; < *P. vulgaris* – RAB, S, W; = *P. vulgaris* ssp. *lanceolata* (W. Barton) Hultén – K]

* ***Prunella vulgaris*** Linnaeus *var.* ***vulgaris***, Eurasian Self-heal. Pd (DE), {Mt, Pd, Cp (FL, GA, NC, SC, VA, WV): disturbed areas, pastures, roadsides, bottomland forests; other forests and woodlands; uncommon in DE, native of Eurasia. April-December. Additional herbarium work is needed to determine the relative ranges, distributions, habitats, and abundances of the two varieties, var. *vulgaris* and var. *lanceolata*. The possible additional recognition of var. *hispida* also needs assessment. Var. *hispida* Bentham, considered to have been originally e. Asian, is alleged to be widespread in se. United States. It differs from *P. vulgaris* var. *vulgaris* in having the "stems, petioles, and often the lower surfaces of leaves densely villous-hispid" (vs. "only sparingly and not conspicuously pilose" – F). [< *P. vulgaris* – RAB, S, W, WH; > *P. vulgaris* var. *vulgaris* – C, F, G; > *P. vulgaris* var. *hispida* Bentham – C, F, G; = *P. vulgaris* ssp. *vulgaris* – K]

Pycnanthemum Michaux 1803 (Mountain-mint, Wild-basil)

A genus of 20-25 species, herbs, of temperate North America. *Pycnanthemum* remains a complicated and difficult group, with speciation apparently having proceeded by allopolyploidy, autoploidy, and aneuploidy. Numerous aberrant forms and (probably) sterile hybrids complicate identification and understanding. References: Chambers (1993); Grant & Epling (1943)=Z; Chambers & Hamer (1992)=Y; Harley et al. in Kadereit (2004).

1 Leaves 1-15 mm wide (to 30 mm wide in *P. setosum*), mostly > 3× as long as wide (except in *P. nudum*); calyx lobes not tipped with a tuft of long, jointed bristles (except *P. clinopodioides*).
2 Longer calyx lobes 1.5-5 mm long, attenuate-aristate, stiff, whitened; [Coastal Plain pinelands, rarely in Mountain bogs with Coastal Plain affinities].
3 Principal stem leaves 5-15 mm wide ..... ***P. flexuosum***
3 Principal stem leaves 10-30 mm wide ..... ***P. setosum***
2 Longer calyx lobes 0.5-1.6 mm long, deltoid to narrowly triangular, not notably stiff (except in *P. tenuifolium*) or whitened; [widespread in our area, but mainly of the Piedmont and Mountains].
4 Leaves 10-15 mm wide (or more often even wider, to 25 mm wide, in *P. clinopodioides*); longer calyx lobes 0.7-1.6 mm long, tipped with a few long (1-3 mm) jointed bristles (*P. clinopodioides*) or not tipped (*P. nudum*).
5 Leaves 3-5× as long as wide, herbaceous; stems and leaves pubescent; [NC northward] ..... ***P. clinopodioides***
5 Leaves 1-2.5× as long as wide, coriaceous; stems and leaves glabrous; [se. SC southward] ..... ***P. nudum***
4 Leaves 1-12 (-15) mm wide; longer calyx lobes 0.5-1.5 mm long, variously pubescent but not tipped with a tuft of long jointed bristles.
6 Leaves glabrous on the lower and upper surface, with 2-3 pairs of lateral veins; stems glabrous on the faces and angles (rarely with a few small upwardly-curled hairs on the angles).
7 Leaves 5-15 mm wide, 1-2.5× as long as wide; calyx lobes and inner bracts of the inflorescence herbaceous ..... ***P. nudum***
7 Leaves 1-4 (-5.5) mm wide, 8-15× as long as wide; calyx lobes and inner bracts of the inflorescence semi-spinose, their tips subulate, thickened, and stiff..... ***P. tenuifolium***
6 Leaves pubescent at least on the lower surface along the midrib and main veins; leaves with 4-5 pairs of lateral veins; stems glabrous or pubescent on the faces, pubescent on the angles.
8 Stems pubescent on the angles only (or distinctly less pubescent on the faces); leaves 3-10 mm wide ..... ***P. virginianum***
8 Stems pubescent on the faces and angles, the hairs distributed more-or-less evenly; leaves 8-12 (-15) mm wide.
9 Longer calyx teeth 1.0-1.5 mm long, lanceolate and attenuate; bracts of the inflorescence and leaves glabrous or very sparsely pubescent on the upper surface..... ***P. torreyi***
9 Longer calyx teeth 0.5-1.0 mm long, narrowly deltoid; bracts of the inflorescence (and usually also the leaves) canescent on the upper surface..... ***P. verticillatum*** *var.* ***verticillatum***
1 Leaves broad, 15-40 mm wide, mostly 1.5-3× as long as wide; calyx lobes usually tipped with a tuft of long, jointed bristles (except *P. curvipes, P. muticum, P. setosum*).

10 Bracts of the inflorescence glabrous (or very sparsely pubescent) on the upper surface, the margins long-ciliate; calyx lobes and upper part (at least) of the tube with long spreading hairs (independent of the apical tufts) ..... ***P. montanum***
10 Bracts of the inflorescence puberulent on the upper surface, the margins not ciliate; calyx lobes and tube variously glabrous or puberulent (independent of the apical tufts).
11 Calyx lobes not tipped with a tuft of long, jointed bristles.
12 Calyx lobes 1.5-3 mm long, attenuated into a subulate tip; [Coastal Plain] ..... ***P. setosum***
12 Calyx lobes 0.5-1.2 mm long, triangular to narrowly triangular, acute to acuminate, but not subulate; [collectively widespread in our area].
13 Petioles 5-15 mm long; inflorescence corymbose, loose, the branches apparent; [dry rocky woodlands, in sw. NC, w. SC, and southward] ..... ***P. curvipes***
13 Petioles 0-3 mm long; inflorescence capitate, tight, the branches within the clusters not apparent; [moist habitats, widespread in our area] ..... ***P. muticum***
11 Calyx lobes usually tipped with a tuft of long, jointed bristles.
14 Calyx not distinctly bilabiate, all of the calyx lobes about the same length, the sinuses about the same depth.
15 Longer calyx lobes 1-2 mm long; [Mountains] ..... ***P. beadlei***
15 Longer calyx lobes 2.5-3 mm long; [Coastal Plain] ..... ***P. monotrichum***
14 Calyx distinctly bilabiate, the lower 2 lobes 1.5-2.5× longer than the upper 3 lobes, and separated from each other and the upper 3 lobes by deeper sinuses.
16 Leaves lanceolate, (10-) 15-25 mm wide, > 3× as long as wide ..... ***P. clinopodioides***
16 Leaves ovate, 13-50 mm wide, < 3× as long as wide.
17 Leaves of the lower and middle stem with lower surfaces glabrate, glandular-punctate, similar in color to the dark green upper surface; calyx 5-7 mm long ..... ***P. beadlei***
17 Leaves of the lower and middle stems with lower surface canescent, distinctly paler than the dark green upper surface; calyx 3-6.5 mm long.
18 Calyx lobes broadly triangular, their apices obtuse, acute, or somewhat acuminate; calyx tube > 2× as long as the longest (lower) calyx lobes.
19 Pubescence of the stem of dense, very small downwardly-curved hairs, usually mixed with scattered longer and spreading hairs ..... ***P. incanum*** *var.* ***incanum***
19 Pubescence of the stem of sparse, coarse, downwardly-curved hairs ..... ***P. incanum*** *var.* ***puberulum***
18 Calyx lobes narrowly triangular, their apices acuminate to attenuate; calyx tube 1-2× as long as the longest (lower) calyx lobes.
20 Mericarps 0.5-1.3 mm long, with a smooth surface, glabrous or with a few short hairs at the tip ..... ***P. loomisii***
20 Mericarps 1.2-1.5 mm long, with a rugose or pitted surface, densely pubescent at the tip.
21 Stems and lower leaf surfaces canescent, the short hairs often intermixed with longer, spreading ones ..... ***P. pycnanthemoides*** *var.* ***pycnanthemoides***
21 Stems and lower leaf surfaces with coarse, spreading hairs only ..... ***P. pycnanthemoides*** *var.* ***viridifolium***

Pycnanthemum beadlei (Small) Fernald, Beadle's Mountain-mint. Mt (GA, NC, SC, VA), Pd (NC): forests, woodland borders; uncommon (rare in GA and VA). August-September. A Southern Appalachian endemic: sw. VA and ne. TN south to sw. NC, nw. SC, and n. GA. A tetraploid species (n = 38), probably an allotetraploid derived from *P. montanum* × *muticum*. [= C, K, W, Y, Z; < *P. incanum* – RAB; = *Koellia beadlei* Small – S]

Pycnanthemum clinopodioides Torrey & A. Gray. Cp (NC, VA), Pd (DE, NC, VA), Mt (WV): forests, woodland borders; rare. July-September. MA south to NC, mostly on the Coastal Plain. A tetraploid species (n = 38). Probably an allotetraploid hybrid. [= C, F, K, Y, WV, Z; < *P. verticillatum* – RAB; = *Koellia clinopodioides* (Torrey & Gray) Kuntze – S]

Pycnanthemum curvipes (Greene) E. Grant & Epling, Tennessee Mountain-mint, Stone Mountain Mountain-mint. Mt (GA, NC), Pd (GA): dry rocky woodlands and rock outcrops (granite or mafic); rare. June-August. Sw. NC and se. TN south nc. GA and n. AL; disjunct in nc. TN (Chester, Wofford, & Kral 1997). A diploid species (n= 20). [= K, Y, Z; = *Koellia curvipes* Greene – S]

Pycnanthemum flexuosum (Walter) Britton, Sterns, & Poggenburg, Savanna Mountain-mint. Cp (FL, GA, NC, SC, VA), Mt (NC): moist to wet pine savannas, pocosin margins, mountain bogs, seepage areas on low elevation granite domes; common (rare in Mountains). June-September; September-October. Se. VA south to ne. FL, west to Panhandle FL and s. MS (Sorrie & LeBlond 2008) on the Coastal Plain; disjunct inland in bogs and rock outcrops of sw. NC with Coastal Plain affinities and in sc. TN. A diploid species (n = 18). Sometimes mistaken in vegetative condition for *Eupatorium leucolepis*, *P. flexuosum* can be distinguished by its square stem and aromatic odor. *Koellia hugeri* Small, alleged to differ details of the calyx, was established for the plants of bogs of the Blue Ridge; it apparently is not morphologically segregated from other variation within the species (Grant & Epling 1943). [= RAB, C, F, K, W, Y; = *P. hyssopifolium* Bentham – G, GW, Z; > *Koellia hyssopifolia* (Bentham) Britton – S; > *Koellia hugeri* Small – S]

Pycnanthemum incanum (Linnaeus) Michaux *var.* ***incanum***. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE): forests and woodland borders; common (uncommon in NC, rare in DE). Late June-August; September-October. VT west to s. OH and s. IL, south to nc. NC, w. NC, and nc. TN. A tetraploid species (n = 38). [= F, K; < *P. incanum* – RAB (also see *P. beadlei*, *P. loomisii*, *P. pycnanthemoides*); < *P. incanum* – C, G, W, Y; > *Koellia incana* (Linnaeus) Kuntze – S; > *Koellia dubia* (Gray) Small – S; = *P. incanum* – WV, Z; = *P. incanum* (Linnaeus) Michaux ssp. *incanum*]

Pycnanthemum incanum (Linnaeus) Michaux *var.* ***puberulum*** (E. Grant & Epling) Fernald. Mt (GA, NC, SC, WV), Pd (NC): forests and woodland borders; rare. Late June-August; September-October. WV and NC south to FL and AL. A tetraploid species (n = 38). [= F, K; < *P. incanum* – RAB (also see *P. beadlei*, *P. loomisii*, *P. pycnanthemoides*); < *P. incanum* – C, G, W, Y; < *Koellia incana* (Linnaeus) Kuntze – S; = *P. puberulum* E. Grant & Epling – WV, Z]

Pycnanthemum loomisii Nuttall, Loomis's Mountain-mint. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (GA, NC, VA): forests and woodland borders; rare. Late June-August; September-October. VA west to IL, south to n. FL. A diploid

species (n = 19). [= C, K, WV, Y, Z; < *P. incanum* – RAB; = *P. incanum* var. *loomisii* (Nuttall) Fernald – F; < *P. pycnanthemoides* var. *pycnanthemoides* – G]

Pycnanthemum monotrichum Fernald. Cp (VA): sandy woodlands; rare. Allegedly endemic to se. VA. Perhaps only a hybrid or else likely more widespread and merely overlooked. [= F, G, K]

Pycnanthemum montanum Michaux, Appalachian Mountain-mint. Mt (GA, NC, SC, VA, WV): balds, woodlands, forests, and forest edges; uncommon (rare in VA and WV). June-August; September-October. W. VA and WV south through w. NC and e. TN to nw. SC and n. GA, a Southern Appalachian endemic. A diploid species (n = 20). [= RAB, C, F, G, K, Y, Z; = *Koellia montana* (Michaux) Kuntze – S]

Pycnanthemum muticum (Michaux) Persoon. Mt (GA, NC, SC, VA, WV), Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), {GA}: bogs, wet meadows, moist to wet forests; common (uncommon in Piedmont, uncommon in DE Coastal Plain, rare in WV). June-August; September-October. MA west to MI and MO, south to FL and LA. A diploid, tetraploid, and hexaploid (?) species (n = 20, 40, ca. 54). [= RAB, C, F, G, GW, K, Y; = *Koellia mutica* (Michaux) Kuntze – S]

Pycnanthemum nudum Nuttall, Smooth Mountain-mint. Cp (FL, GA, SC): wet pine flatwoods; uncommon (rare in GA and SC). Se. SC south to n. peninsular FL, Panhandle FL, and se. AL. Small (1933) attributes this species to NC; the documentation is unknown (and doubtful). This is a diploid species (n = 20). [= GW, K, WH, Z; = *Koellia nuda* (Nuttall) Kuntze – S]

Pycnanthemum pycnanthemoides (Leavenworth) Fernald *var.* ***pycnanthemoides***. Mt (GA, NC, SC, VA), Pd (NC, SC, VA): forests and woodland borders; common. July-August. VA and IL south to w. SC and n. GA. A tetraploid species (n = 36). [= F, K; < *P. incanum* – RAB; < *P. pycnanthemoides* – C, Y; < *P. pycnanthemoides* var. *pycnanthemoides* – G (also see *P. loomisii*); < *Koellia pycnanthemoides* (Leavenworth) Kuntze – S; > *P. tullia* Bentham – Z]

Pycnanthemum pycnanthemoides (Leavenworth) Fernald *var.* ***viridifolium*** Fernald. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, NC, VA): forests and woodland borders; uncommon (rare in FL). July-August. VA and WV south to ec. GA, AL, and Panhandle FL. A tetraploid species (n = 36). The recognition of this variety is doubtful. [= F, G, K; < *P. incanum* – RAB; < *P. pycnanthemoides* – C, WH, Y; > *Koellia pycnanthemoides* (Leavenworth) Kuntze – S; > *Koellia dubia* (A. Gray) Small – S; = *P. viridifolium* (Fernald) E. Grant & Epling – Z]

Pycnanthemum setosum Nuttall. Cp (DE, FL, GA, NC, SC, VA): dry pinelands; uncommon (rare in NC and VA). Mid June-August; August-October. NJ south to ne. FL and Panhandle FL, on the Coastal Plain; not known from MS (Sorrie & LeBlond 2008). See Wieboldt et al. (1998) for discussion of the taxonomy and rarity of this species. A tetraploid species (n = 38), probably an allotetraploid derived from *P. flexuosum* × *muticum*. [= RAB, C, GW, K, WH, Y; > *P. setosum* – F, G; > *P. umbratile* Fernald – F, G; = *Koellia aristata* (Michaux) Kuntze – S; = *P. aristatum* Michaux – Z]

Pycnanthemum tenuifolium Schrader. Mt (GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): bogs, wet meadows, moist to wet forests; common (rare in FL). June-August; September-October. ME west to MN, KS, and OK, south to FL and TX. A diploid and tetraploid species (n = 20 and 40). [= RAB, C, F, GW, K, W, WH, Y; = *P. flexuosum* – G, Z, misapplied; = *Koellia flexuosa* – S, misapplied]

Pycnanthemum torreyi Bentham, Torrey's Mountain-mint. Mt (NC, SC?, VA), Pd (DE, VA), Cp (DE, VA), {GA?}: dry rocky woodlands, over mafic, ultramafic, or calcareous rocks, dry powerline rights-of-way; rare. NH west to IL, south to NC (and SC?). A tetraploid and hexaploid species (n = 40 and ca. 60). The epithet spelling 'torrei' is a correctable error under the Vienna code. [= C, G, Y, Z; < *P. verticillatum* – RAB; = *P. torrei* – K, orthographic variant; > *P. torrei* var. *torrei* – F; > *P. torrei* var. *leptodon* (Gray) Boomhour – F; = *Koellia leptodon* (Gray) Small – S]

Pycnanthemum verticillatum (Michaux) Persoon *var.* ***verticillatum***. Mt (NC, SC, VA), Pd (DE, NC, VA), Cp (DE, VA): upland rocky woodlands; common (uncommon in DE). July-September. Var. *verticillatum* ranges from VT west to MI, south to NC and KY. A tetraploid species (n = 38-39). [= C, K; < *P. verticillatum* – RAB (also see *P. clinopodioides*, *P. torrei*); = *P. verticillatum* – F, G, Y, Z; > *Koellia verticillata* (Michaux) Kuntze – S; > *Koellia leptodon* (A. Gray) Small – S; < *P. verticillatum* – W]

Pycnanthemum virginianum (Linnaeus) T. Durand & B.D. Jackson ex B.L. Robinson & Fernald, Virginia Mountain-mint. Mt (GA, NC, VA), Pd (DE, NC, VA), Cp (DE, VA?, NC?): wet meadows and marshes over calcareous or mafic rocks; common (uncommon in VA Mountains, rare in VA Piedmont and VA Coastal Plain, rare in GA and NC). June-September; September-October. ME west to ND, south to NC, nw. GA, n. AL, and OK. A tetraploid species (n = 40). [= RAB, C, F, G, GW, K, W, Y, Z; = *Koellia virginiana* (Linnaeus) MacMillan – S]

Pycnanthemum albescens Torrey & A. Gray, White-leaved Mountain-mint. Cp (FL), Pd (GA): bluff forests, hammocks, other open, mesic forests; common (rare in GA). Reported for NC by Small, as *Koellia albescens*. It is known from nc. GA (Jones & Coile 1988). [= C, F, G, K, WH; = *Koellia albescens* (Torrey & A. Gray) Kuntze – S] {not yet keyed; synonymy incomplete}

Pycnanthemum floridanum E. Grant & Epling. Cp (FL, GA): sandhills; rare. Se. GA south to n. peninsular FL and e. Panhandle FL. [= K, WH] {not yet keyed; synonymy incomplete}

Pycnanthemum verticillatum (Michaux) Persoon *var.* ***pilosum*** (Nuttall) Cooperrider. Mt (WV): {GA}. Var. *pilosum* (Nuttall) Cooperrider ranges from s. ON west to MI and IA, south to TN, AR, and OK. It differs in having the stems thickly (vs. thinly pubescent), the lower surface of the leaves evenly pubescent (vs. pubescence chiefly restricted to the midrib). In c. TN, and reported from a single county in e. TN (Chester, Wofford, & Kral 1997), in se. PA (Rhoads & Klein 1993), and WV (Kartesz 1999). [= C, K; = *P. pilosum* Nuttall – F, G; = *Koellia pilosa* (Nuttall) Britton – S] {not yet keyed; synonymy incomplete}

Rosmarinus Linnaeus 1753 (Rosemary)

A genus of 2-3 species, herb/shrubs, of Mediterranean Europe. Closely related to *Salvia* (Walker et al. 2004), and probably to be combined there. References: Harley et al. in Kadereit (2004).

* ***Rosmarinus officinalis*** Linnaeus, Rosemary. Cp (NC, SC), Pd (NC, SC): gardens; commonly cultivated, rarely persistent or established, native of Mediterranean Europe. October-April. [= K]

Salvia Linnaeus 1753 (Sage, Clary)

A genus of about 900 species, shrubs and herbs, almost cosmopolitan. Walker et al. (2004) have determined that *Salvia* as traditionally circumscribed is polyphyletic. References: Epling (1938)=Z; Walker et al. (2004).

1 Leaves predominantly basal.
  2 Veins of the 3 upper calyx lobes parallel, the lobes themselves minute and widely-spaced (> 1 mm between the 2 lateral teeth), separated by flattish sinuses; basal leaves lobed; [native, though weedy, common throughout our area] ..... ***S. lyrata***
  2 Veins of the 3 upper calyx lobes converging, the lobes themselves minute and spaced within a distance of 1 mm; basal leaves lobed or toothed; cauline leaves toothed (rarely lobed); [alien weeds, rarely naturalized in our area].
    3 Upper corolla-lip strongly arched; leaves serrate ..... ***S. pratensis***
    3 Upper corolla-lip straight; leaves lobed ..... ***S. verbenacea***
1 Leaves predominantly cauline, not lobed.
  4 Leaves rhombic-ovate, the base cordate, subcordate, truncate, or broadly cuneate.
    5 Petiole not clearly differentiated from the leaf blade (leaf tissue decurrent on the petiole for most or all its length); corolla blue ..... ***S. urticifolia***
    5 Petiole clearly differentiated from the leaf blade; corolla blue, white, or scarlet.
      6 Corolla scarlet; larger leaves 3-6.5 cm long ..... ***S. coccinea***
      6 Corolla blue or whitish; leaves 5-20 cm long
        7 Upper calyx lip > ½× as long as the calyx tube; flowers 4-12 per node; leaves (8-) 12-20 cm long ..... ***S. sclarea***
        7 Upper calyx lip < 1/3× as long as the calyx tube; flowers 12-30 per node; leaves 5-10 cm long ..... ***S. verticillata***
  4 Leaves lanceolate, linear, or narrowly elliptic, the base cuneate to attenuate.
    8 Leaves canescent, gray; [introduced, rarely persistent from cultivation in gardens] ..... ***S. officinalis***
    8 Leaves puberulent, green; [native, of dry woodlands from sc. NC southward and westward].
      9 Flowers 2 (-4) per node; corolla 81-12 mm long ..... ***S. reflexa***
      9 Flowers 6-10 flowers per node; corolla > 13 mm long
        10 Stem usually with sparse, antrorse or somewhat spreading pubescence; calyx with antrorse hairs limited to major veins; flowers of mature inflorescences spaced out, most internodes elongate and ranging up to 25 (-34) mm; [Atlantic and Gulf Coastal Plain and adjacent piedmont, from south-central NC to central FL to southeast LA] ..... ***S. azurea*** *var.* ***azurea***
        10 Stem usually with dense, retrorse pubescence; calyx with dense antrorse pubescence; flowers of mature inflorescences densely arranged, internodes between flowers very short, only the lowermost 1-3 internodes elongate and ranging up to 12 (-17) mm; [inland and prairie sites, ranging from IL, IA, NE, and e. CO south to nw. GA, n. AL, ne. MS, LA, and se. and c. TX] ..... ***S. azurea*** *var.* ***grandiflora***

Salvia azurea Michaux ex Lamarck *var.* ***azurea***, Azure Sage. Cp (FL, GA, NC, SC), Pd (GA, NC, SC), Mt (GA): sandhills, hammocks, other sandy or rocky woodlands; common (rare in NC). Late August-October; October-November. S. NC south to Panhandle FL, west to TX. [= K; < *S. azurea* – RAB, S, WH]

Salvia azurea Michaux ex Lamarck *var.* ***grandiflora*** Bentham. Mt (GA): prairies, woodlands over calcareous or mafic rocks; rare. August-October; October-November. IL, IA, NE, and eastern CO south to nw. AL, ne. MS, LA, se. TX, and c. TX. [= F, K; = *S. pitcheri* Torrey ex Bentham – C, G; < *S. azurea* – S; = *S. azurea* ssp. *pitcheri* (Torrey ex Bentham) Epling]

Salvia coccinea P.J. Buc'hoz ex Etlinger, Scarlet Sage, Blood Sage. Cp (FL, GA, SC*?), Pd (GA*?): hammocks, disturbed areas; uncommon (rare in GA and SC), in the more northern part of its distribution (such as SC) perhaps only introduced from farther south and west. May-November. [= RAB, G, K, S, WH]

Salvia lyrata Linnaeus, Lyreleaf Sage. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): hammocks, lawns, roadsides, woodlands; common. April-May; May-July. CT west to MO, south to FL and TX. A common and familiar native weed. [= RAB, C, F, G, K, S, W, WH, WV]

* ***Salvia officinalis*** Linnaeus, Garden Sage. Cp (VA, WV), Pd (VA): cultivated as a garden herb, rarely persistent; rare, native of Europe. [= C, F, G, K, WV]

* ***Salvia pratensis*** Linnaeus, Meadow Sage, Meadow Clary. Cp (VA): fields and disturbed areas; rare, native of Europe. [= C, F, G, K]

* ***Salvia reflexa*** Hornemann, Lanceleaf Sage, Mintweed. Mt (WV): dry sandy soil, disturbed areas; rare, native of c. North America. In c. TN (Chester, Wofford, & Kral 1997). The apparent ascription by C of *S. reflexa* Hornemann to "N.C." is a typographic error for "N.D." This species is, however, sometimes adventive as far east as WV. [= C, F, G, K, Z] {not yet keyed}

* ***Salvia sclarea*** Linnaeus, Clary. Mt (NC?, VA): cultivated as a garden herb, rarely persistent; rare, native of Europe. [= C, G, K, S]

Salvia urticifolia Linnaeus, Nettle-leaf Sage. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Cp (FL, GA, VA): woodlands and glades, usually over mafic or calcareous rocks; uncommon (rare in Coastal Plain). April-June; May-July. PA west to w. KY, south to SC, c. GA, Panhandle FL, and AL. Quite showy when in flower. [= RAB, C, F, G, K, S, W, WH, Z]

* ***Salvia verbenacea*** Linnaeus, Wild Clary. Mt (VA), {GA, NC?}: fields and disturbed areas; rare, native of Europe. [= C, G, K, S]

* ***Salvia verticillata*** Linnaeus, Whorled Clary. Mt (WV): disturbed areas; rare, native of Europe. Introduced as far south as scattered locations in PA (Rhoads & Klein 1993), MD, and WV (Kartesz 1999). [= C, F, G, K, WV]

Salvia chapmanii A. Gray. AL and FL. Uncertain taxonomic status, often included in *S. urticifolia*. [= K, S] {not yet keyed; synonymy incomplete}

Satureja Linnaeus 1753 (Savory)

A genus of ca. 38 species, herbs, of Mediterranean Europe west to c. Asia.

* ***Satureja hortensis*** Linnaeus, Summer Savory. Pd (DE), Mt (WV): disturbed areas; uncommon, native of Mediterranean Europe and sw. Asia. July-September. [= C, K]

Stachydeoma Small 1903

Stachydeoma graveolens (Chapman ex A. Gray) Small. Cp (FL): sandhills, pine flatwoods; rare. Endemic to Panhandle FL. [= K, S; = *Hedeoma graveolens* Chapman ex A. Gray – WH]

Thymus Linnaeus (Thyme)

A genus of about 220-350 species, herbs and shrubs, of temperate Eurasia. References: Harley et al. in Kadereit (2004).

* ***Thymus praecox*** Opiz *ssp.* ***arcticus*** (Dur.) Jalas, Mother-of-Thyme. Pd (DE, NC), Mt (GA, WV): commonly cultivated and sometimes escaped or persisting; uncommon (rare in DE and GA), native of Eurasia. July-September. [= K; ? *T. serpyllum* Linnaeus – RAB, C, F, G, WV, misapplied]

* ***Thymus pulegioides*** Linnaeus, Lemon Thyme. Pd (VA), Cp (VA): disturbed areas; rare, native of Eurasia. [= K]

374. PHRYMACEAE Schauer 1847 (Lopseed Family) [in LAMIALES]

As radically circumscribed, a family of about 20 genera and 240 species, herbs, cosmopolitan. See Tank et al. (2006). References: Lee et al. (1996)=Z; Tank, Beardsley, Kelchner, & Olmstead (2006); Thieret (1972); Wagstaff & Olmstead (1997); Fischer in Kadereit (2004); Cantino in Kadereit (2004).

1 Plant a rhizomatous aquatic; leaves spatulate, entire, 10-20 mm long and 0.3-2 mm wide (reminiscent of *Limosella* or *Lilaeopsis*)..... ***Glossostigma***
1 Plant terrestrial (though sometimes in wetlands) with an aerial; leaves ovate, elliptic, or obovate, > 20 mm long and > 2 mm wide.
  2 Inflorescence of a solitary, terminal flower; bracteal leaves alternate..... ***Mazus***
  2 Inflorescence **either** of axillary flowers **or** of terminal and axillary spikes; bracteal leaves or bracts opposite.
    3 Inflorescence of axillary flowers; flowers 17-30 mm long ..... ***Mimulus***
    3 Inflorescence of terminal and axillary spikes; flowers 6-8 mm long ..... ***Phryma***

Glossostigma Wight & Arnott 1836

A genus of 7-8 species of aquatics, native to Australia, East Africa, India, and New Zealand. References: Les, Capers, & Tippery (2006)=Z; Les & Capers in FNA (in prep.).

* ***Glossostigma cleistanthum*** W.R. Barker. Cp (DE): aquatic in oligotrophic lakes and reservoirs; rare, native of Australia. Introduced, naturalized, and invasive in NJ, PA, CT, and RI (Les, Capers, & Tippery 2006). [= Z]

Mazus Loureiro 1790

A genus of 10-15 species, herbs, of Asia to Australia. References: Pennell (1935)=P.

1 Plant stoloniferous, perennial; corolla ca. 15 mm long ..... ***M. miquelii***
1 Plant not stoloniferous, annual; corolla 7-10 mm long..... ***M. pumilus***

* ***Mazus miquelii*** Makino. Pd (NC, VA), Mt (WV): lawns; rare, native of e. Asia. April-June. [= C, K; = *M. miguelii* – RAB, misspelling; ? *M. reptans* N.E. Brown]

* ***Mazus pumilus*** (Burmann f.) Steenis. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (WV): lawns; uncommon (rare in DE and WV), native of e. Asia. December-June. [= C, K; ? *M. japonicus* (Thunberg) Kuntze – RAB, F, G, P, WV]

Mimulus Linnaeus 1753 (Monkey-flower)

A genus of about 150 species, herbs and shrubs, of w. North America, s. Africa, Asia, and e. North America. *Mimulus* reaches its greatest diversity in w. North America. References: Grant (1924)=Y; Pennell (1935)=P.

1 Corolla yellow; stem viscid glandular-pubescent; plant usually 2-4 dm tall ..... ***M. moschatus***
1 Corolla blue; stem glabrous; plant usually 3-15 dm tall; [section *Mimulus*].
2 Leaves petiolate (the upper sessile or nearly so); pedicels 2-15 mm long; stem with 4 winged angles ..... ***M. alatus***
2 Leaves sessile; pedicels 20-45 mm long; stem with 4 rounded angles ..... ***M. ringens*** *var.* ***ringens***

Mimulus alatus Aiton, Winged Monkey-flower. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, VA, WV): marshes, bottomlands, ditches; common (uncommon in FL and WV). July-November. MA and CT west to s. MI and s. IA, south to Panhandle FL and TX. [= RAB, C, F, G, GW, K, P, S, W, WV, Y]

Mimulus moschatus Douglas ex Lindley, Muskflower, Musky Monkey-flower. Mt (NC, VA, WV): streambanks, brookbanks, saturated soil of cold springs; rare. July; August. NL (Newfoundland) and QC west to MI, south to w. VA, WV, NC, and MI, and in w. North America. The native/naturalized status of *M. moschatus* in e. North America is controversial. Some at least of our populations appear to be native, not occurring in situations where likely to have been introduced. [= RAB, C, F, G, P, W, WV; > *M. moschatus* var. *moschatus* – K]

Mimulus ringens Linnaeus *var.* ***ringens***, Allegheny Monkey-flower. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, SC, VA): marshes, bogs, wet meadows, bottomlands; common. June-September. NS and QC west to SK, south to c. GA, LA, OK, and CO. [= G, K; < *M. ringens* – RAB, C, GW, S, W, WV; > *M. ringens* var. *minthodes* (Greene) A.L. Grant – F, Y; > *M. ringens* var. *ringens* – F, Y; = *M. ringens* var. *typica* – P]

Phryma Linnaeus 1753 (Lopseed)

A genus of 1-2 species, herbs, of e. North America and Asia. The disjunct populations have been variously treated as species, varieties, or races. References: Lee et al. (1996)=Z; Thieret (1972); Wagstaff & Olmstead (1997); Cantino in Kadereit (2004).

Phryma leptostachya Linnaeus *var.* ***leptostachya***, American Lopseed. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): bottomland forests, nutrient-rich slopes, mesic hammocks, in the Coastal Plain primarily in places underlain by coquina limestone ("marl") and essentially absent from the more acidic portions of the Coastal Plain; common (uncommon in Coastal Plain). June-August; August-October. The species is interpreted as occurring disjunctly in e. North America and e. Asia. Var. *leptostachya* ranges from QC west to MB, south to ne. FL, Panhandle FL, and TX; var. *asiatica* Hara occurs in e. Asia. The fruits "lopped down" against the stem are unmistakable. [= Z; < *P. leptostachya* – RAB, C, G, K, S, W, WH, WV; > *P. leptostachya* var. *leptostachya* – F; > *P. leptostachya* var. *confertifolia* Fernald – F]

375. PAULOWNIACEAE Nakai 1949 (Paulownia Family) [in LAMIALES]

A monogeneric family, trees, of e. Asia. There has been disagreement over whether *Paulownia* is best placed in Scrophulariaceae, Bignoniaceae, or its own family, Paulowniaceae; superficially it closely resembles *Catalpa* of the Bignoniaceae. Armstrong (1985) concluded that *Paulownia*'s affinities lie with the Scrophulariaceae, based on floral anatomy, embryo morphology, and seed morphology. A molecular study by Spangler & Olmstead (1999) conclude that *Paulownia* is best retained in its own family. Manning (2000) concurs with its removal from Bignoniaceae. Molecular evidence supports that it is sister to the reconstituted Orobanchaceae. References: Spangler & Olmstead (1999); Manning (2000).

Paulownia Siebold & Zuccarini 1835 (Princess-tree)

A genus of 6 species, trees, of e. Asia. References: Armstrong (1985).

* ***Paulownia tomentosa*** (Thunberg) Siebold & Zuccarini ex Steudel, Princess Tree, Empress Tree, Paulownia. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadsides, disturbed areas, roadcuts, forests; common (uncommon in DE Coastal Plain, rare in FL), native of China. April-June; September-October. *Paulownia* is becoming a nuisance, showing an ability to invade pristine woodlands. The very soft wood is highly prized in Asia. The leaves of stump sprouts can reach very large sizes (at least to 80 cm long and wide). The woody capsules are persistent, and the densely tomentose, tan flower buds are conspicuous through the winter. [= RAB, C, F, G, K, S, W, WH, WV]

376. OROBANCHACEAE Ventenat 1799 (Broomrape Family) [in LAMIALES]

A family of about 96 genera and 2060 species, root-parasitic herbs lacking chlorophyll (Orobanchaceae sensu stricto) and chlorophyllose hemi-parasites (formerly placed in the Scrophulariaceae), of temperate and subtropical regions of the Northern Hemisphere (Manen et al. 2004). References: Thieret (1971); Olmstead et al. (2001); Fischer in Kadereit (2004).

1 Plants lacking chlorophyll (parasitic), variously pink, purple, brown, tan, orange, or white.

2 Stem paniculately branched; flowers dimorphic, those low in the inflorescences small, pistillate, and fertile, those high in the inflorescence larger, apparently perfect but functionally staminate; [tribe *Orobancheae*]..... ***6. Epifagus***
2 Stem simple (rarely few-branched); flowers all alike.
3 Calyx deeply cleft on the lower side; stamens exserted; [tribe *Rhinantheae*]..... ***14. Conopholis***
3 Calyx either nearly regular, or deeply cleft above and below into 2 lateral halves; stamens included; [tribe *Orobancheae*] ..... ***7. Orobanche***

1 Plants with chlorophyll (hemiparasitic), with foliage and stems normally green.
4 Stem leaves alternate.
5 Leaves pinnately lobed; [tribe *Rhinantheae*] ..... ***12. Pedicularis***
5 Leaves entire or 3-5-lobed at the tip.
6 Bracts subtending flowers orange, red, or yellow; calyx 4-lobed; capsule loculicidal; pedicel lacking bracteoles; seeds broad, wingless; [tribe *Castillejeae*] ..... ***11. Castilleja***
6 Bracts subtending flowers green; calyx 5-lobed; capsule septicidal and tardily also loculicidal; pedicel with 2 bracteoles; seeds narrow, winged; [tribe *Cymbarieae*] ..... ***10. Schwalbea***
4 Stem leaves (at least the lower) opposite.
7 Corolla salverform; [tribe *Buchnereae*].
8 Plant strict, unbranched unless damaged; flowers in a terminal spike; corolla purple; [native, sometimes weedy] ..... ***8. Buchnera***
8 Plant strongly branched; flowers solitary and axillary; corolla red or orange; [alien, in agricultural fields] ..... ***9. Striga***
7 Corolla various, but not salverform.
9 Calyx 4-lobed or essentially unlobed; corolla strongly bilabiate, the upper lip consisting of 2 petals almost wholly connate and strongly cucullate (hooded); corolla white or yellow; [tribe *Rhinantheae*].
10 Lower lip of corolla with raised yellow, densely pubescent palate; stem leaves entire (bracteal leaves in and near the inflorescence sometimes pectinately fringed; annual, 1-4 dm tall..... ***13. Melampyrum***
10 Lower lip of corolla without raised palate; stem leaves pinnately lobed, the lobes themselves crenate; perennial, 3-8 dm tall ..... ***12. Pedicularis***
9 Calyx 5-lobed; corolla 5-lobed, the lobes relatively similar in size and shape, spreading; corolla yellow, orange, red, or pink; [tribe *Gerardieae*].
11 Corolla pink; leaves linear and thread-like (except lanceolate in *A. auriculata*)..... ***1. Agalinis***
11 Corolla yellow or orange; leaves **either** lanceolate or broader, at least the basal pinnately or bipinnately lobed or toothed, **or** pinnately or bipinnately divided into linear segments.
12 Leaves pinnately or bipinnately divided into linear segments up to 2 mm wide; corolla rotate, the tube shorter than the lobes ..... ***2. Seymeria***
12 Leaves not lobed or divided, or the segments broader; corolla tubular, campanulate, or funnelform, the tube much longer than the lobes.
13 Corolla orange, tubular, the tube narrow and straight, > 5× as long as the diameter..... ***3. Macranthera***
13 Corolla yellow, campanualte or funnelform, the tube conical, < 4× as long as the diameter.
14 Anthers pubescent; lower leaves< 12 cm long..... ***4. Aureolaria***
14 Anthers glabrous; lower leaves 20-40 cm long..... ***5. Dasistoma***

1. Agalinis Rafinesque 1836 (Agalinis, Purple-foxglove)

A genus of about 40 species, hemiparasitic herbs, of tropical and warm temperate regions of America. References: Canne (1979); Hays (1998b); Pennell (1935)=P.

1 Perennial, from horizontal rootstalk bearing slender, scaly rhizomes; corollas 3-4 cm long; [of Carolina bays, cypress savannas, limesink ponds] ..... ***A. linifolia***
1 Annual, with 1-several fibrous roots from the stem base; corollas < 3 cm long (except sometimes *A. fasciculata* and *A. purpurea*).
2 Stem retrorse-hispid; leaves lanceolate to ovate, usually lobed at the base; [of mafic glades and woodlands]..... ***A. auriculata***
2 Stem ascending scabridulous or glabrous; leaves linear or filiform, entire.
3 Leaves reduced to scales < 2.5 mm long, plant thus appearing leafless ..... ***A. aphylla***
3 Leaves not scale-like, > 8 mm long.
4 Pedicels less than 1.5× as long as the calyx, mostly 1-5 mm long at anthesis, mostly < 8 mm long in fruit.
5 Plants fleshy; [of saline or brackish marshes and salt flats].
6 Pedicels usually longer than or equaling the leaflike bracts; corollas 15-20 mm long; anther cells 1.8-2.3 mm long, usually long-lanose; [of Princess Anne County, VA, southward]..... ***A. maritima*** *var.* ***grandiflora***
6 Pedicels usually less than or equaling the leaflike bracts; corollas 12-17 mm long; anther cells 1.3-1.8 mm long, glabrous or somewhat pubescent; [of the Delmarva Peninsula northward]..... ***A. maritima*** *var.* ***maritima***
5 Plants not fleshy; [not inhabiting saline habitats, though some species may be found in freshwater interdune swales].
7 Stems appearing copiously leafy because of the well-developed fascicles of axillary leaves; [inhabiting dry to moist, often ruderal, habitats] ..... ***A. fasciculata***
7 Stems not copiously leafy, the axillary fascicles absent or poorly developed; [inhabitating moist to wet natural habitats].
8 Corolla (10-) 15-20 mm long; calyx lobes from 0.4-1.9× as long as the calyx tube; pollen sacs 1.4-2.0 mm long ..... ***A. paupercula*** *var.* ***paupercula***
8 Corolla 18-38 mm long; calyx lobes 0.2-0.5× as long as the calyx tube; pollen-sacs 2.5-3.5 mm long.
9 Branches spreading or ascending; stems more-or-less scabridulous; corollas 18-38 mm long ..... ***A. purpurea***
9 Branches virgate; stems glabrous; corollas 20-25 mm long ..... ***A. virgata***
4 Pedicels > 2.5× as long as the calyx, mostly 5-20 mm long at anthesis, mostly > 10 mm long in fruit.
10 Living plants dull green, usually suffused with much purplish pigment; leaves > 20 mm long; dried plants dark, sometimes blackish; dried calyx deep purple, the veins obscure (difficult to see even at 10×).

11 Upper lip of the corolla arched forward over the stamens, greatly reducing the opening of the throat; corolla throat glabrous or glabrate within; [of the Piedmont and Mountains] ..... ***A. tenuifolia***
11 Upper lip of the corolla erect or reflexed, the throat open; corolla throat densely long-hairy within; [of the Coastal Plain].
12 Branches widely spreading or laxly ascending; pedicels > 4× as long as the leaflike bracts; anterior filaments 5-5.5 mm long; [of Berkeley and Beaufort counties, SC, southward] ..... ***A. laxa***
12 Branches ascending to somewhat spreading; pedicels < 3× as long as the leaflike bracts; anterior filaments 7-9 mm long; [widespread] ..... ***A. setacea***
10 Living plants light green or glaucescent, usually with no purple pigment; leaves < 15 (-20) mm (except *A. decemloba*, with leaves 15-25 mm long); dried plants not dark, but turning pale yellowish green; dried calyx pale yellowish green, the veins distinct and obvious without magnification.
13 Corolla throat within lacking 2 yellow lines; leaves widen distally to obtuse tips; stem and branches distinctly rough-scabridulous to the touch ..... ***A. obtusifolia***
13 Corolla throat with 2 prominent yellow lines; leaves taper to acute or acuminate tips; stem and branches not (or very slightly) scabridulous.
14 Corolla 10-15 mm long, its lobes emarginate or retuse; [of the Piedmont and Mountains, and rarely the upper Coastal Plain]. ..... ***A. decemloba***
14 Corolla 15-20 mm long, its lobes entire to slightly emarginate; [of the Coastal Plain, from e. NC southward] ..... ***A. tenella***

Agalinis aphylla (Nuttall) Rafinesque, Scale-leaf Agalinis. Cp (FL, GA, NC, SC): wet pine savannas; uncommon (rare in GA, NC, SC). September-October; October-November. Se. NC south to ne. FL and Panhandle FL, west to e. LA. [= RAB, GW, K, S, WH; = *Gerardia aphylla* Nuttall – P]

Agalinis auriculata (Michaux) S.F. Blake, Earleaf Foxglove. Pd (SC, VA), Cp (AL), PD (WV): glades, barrens, blackbelt prairies, and disturbed clearings over mafic rocks (such as diabase and gabbro) or calcareous rocks; rare. August-October; September-November. KY and OH west to MN, south to n. AL, wc. AL (Schotz 2009), AR, and TX; also rarely disjunct east of the Blue Ridge, in NJ, n. VA, and nc. SC. In Lewis County, KY (D. White, pers. comm.). Sometimes treated in the genus *Tomanthera*. [= C, K; = *Tomanthera auriculata* (Michaux) Rafinesque – G, P, S; = *Gerardia auriculata* Michaux – F]

Agalinis decemloba (Greene) Pennell. Pd (NC, SC, VA), Mt (GA, NC): dry clayey or sandy woodlands; rare. [= RAB, S, W; < *A. obtusifolia* – C, K; = *Gerardia decemloba* Greene – F, G, P]

Agalinis fasciculata (Elliott) Rafinesque. Cp (FL, GA, NC, SC, VA), Pd (GA, SC, VA): sandhills, pine savannas, disturbed sandy areas, roadsides; common (uncommon in VA). S. MD south to s. FL, west to e. TX, northward in the interior to s. IN, s. IL, sw. MO, AR, , e. NE, and nc. TX. [= RAB, C, S, W, WH; = *Gerardia fasciculata* Elliott – F, G; < *A. fasciculata* (Elliott) Rafinesque – GW, K; > *Gerardia fasciculata* ssp. *typica* – P; > *Gerardia fasciculata* ssp. *peninsularis* (Pennell) Pennell – P]

Agalinis laxa Pennell. Cp (FL, GA, SC): sandhills; rare. SC south to GA and c. peninsular FL. [= K, S, WH; < *A. divaricata* (Chapman) Pennell – GW; = *Gerardia laxa* (Pennell) Pennell – P]

Agalinis linifolia (Nuttall) Britton. Cp (DE, FL, GA, NC, SC): Coastal Plain depression ponds, cypress savannas, wet pine savannas; common (uncommon in GA, NC, and SC, rare in DE). August-September; September-October. Se. NC south to s. FL, west to e. LA; disjunct in e. DE (reports for MD are in error). [= RAB, C, GW, K, S; = *Gerardia linifolia* Nuttall – F, G, P]

Agalinis maritima (Rafinesque) Rafinesque *var.* ***grandiflora*** (Bentham) Shinners. Cp (FL, GA, NC, SC, VA): tidal marshes; uncommon (rare in VA). July; August. Se. VA south to s. FL, west to s. TX and Tamaulipas; West Indies; Yucatan. [= K, S; < *A. maritima* – RAB, C, GW, WH; = *Gerardia maritima* Rafinesque var. *grandiflora* Bentham – F; < *Gerardia maritima* – G; = *Gerardia maritima* ssp. *grandiflora* (Bentham) Pennell – P]

Agalinis maritima (Rafinesque) Rafinesque *var.* ***maritima***. Cp (DE, NC, VA): tidal marshes; uncommon (rare in DE). July; August. NS and s. ME south to se. VA and e. NC. [= K; < *A. maritima* – RAB, C, GW; = *Gerardia maritima* Rafinesque var. *maritima* – F; < *Gerardia maritima* – G; = *Gerardia maritima* ssp. *typica* – P]

Agalinis obtusifolia Rafinesque. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, VA), Mt (VA): pine savannas, wet pine flatwoods, sandhill seeps, disturbed areas; uncommon (rare in DE, rare in VA Mountains). September-October; October-November. DE south to s. FL, west to e. LA, in the interior north to KY and TN. [= RAB, GW, W; < *A. obtusifolia* – C, K, WH (also see *A. decemloba* and *A. tenella*); = *Gerardia obtusifolia* (Rafinesque) Pennell – F, G, P]

Agalinis paupercula (A. Gray) Britton *var.* ***paupercula***. Mt (VA): calcareous fens; rare. NS west to MB, south to NJ, PA, OH, IN, IL, and IA; disjunct in sw. VA (Washington County). [= K; < *A. purpurea* (Linnaeus) Pennell var. *parviflora* (Bentham) B. Boivin – C; = *Gerardia paupercula* (A. Gray) Britton var. *paupercula* – F; < *Gerardia purpurea* Linnaeus var. *parviflora* Bentham – G; = *Gerardia paupercula* var. *typica* – P] {not yet keyed}

Agalinis plukenetii (Elliott) Rafinesque. Cp (FL, GA), Pd (GA), Mt (SC): sandhills, other dry forests; uncommon. SC south to c. peninsular FL, west to wc. LA, and northward in the interior to extreme se. TN (Polk County) (Chester, Wofford, & Kral 1997). Scattered in GA (e.g., Baldwin and Laurens counties). [= K, S; = *Gerardia plukenetii* Elliott – P]

Agalinis purpurea (Linnaeus) Pennell. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): woodlands, roadsides, in a wide variety of open habitats; common (uncommon in WV, uncommon in VA Mountains). August-October; September-November. NS west to MN, south to s. FL and e. TX. [= RAB, K, S, W, WH; < *A. purpurea* var. *purpurea* – C; = *Gerardia purpurea* var. *purpurea* – G; = *Gerardia purpurea* Linnaeus – F, P; < *A. purpurea* – GW (also see *A. virgata*)]

Agalinis setacea (J.F. Gmelin) Rafinesque. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): sandhills, other dry forests and openings; common (rare in DE and FL, rare in VA Piedmont). September-October; October-November. NY (Long Island) south to ne. FL, c. peninsular FL, and AL. [= RAB, C, K, S, W, WH; > *Gerardia setacea* J.F. Gmelin – F, G, P; > *G. stenophylla* (Pennell) Pennell – P; > *A. stenophylla* Pennell]

Agalinis tenella Pennell. Cp (FL, GA, NC, SC, VA), Pd (SC): sandhills, other dry woodlands; uncommon (rare in NC and VA). S. NC south to n. FL, west to s. AL; disjunct in Amelia County, VA. [= RAB, S; < *A. obtusifolia* – K, WH; = *Gerardia tenella* (Pennell) Pennell – P]

Agalinis tenuifolia (Vahl) Rafinesque *var.* ***tenuifolia***. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): wooded slopes, roadsides; common (uncommon in WV, rare in DE). August-October; September-November. ME, ON, MI, and MO, south to GA and LA. [= K, S; < *A. tenuifolia* – RAB, C, W; = *Gerardia tenuifolia* Vahl var. *tenuifolia* – F, G]

Agalinis virgata Rafinesque. Cp (GA, NC, SC): pine savannas; rare. September-October; October-November. NY south to GA. [= RAB, S; < *A. purpurea* var. *purpurea* – C; = *Gerardia racemulosa* Pennell – F, P; = *Gerardia purpurea* Linnaeus var. *racemulosa* (Pennell) Gleason – G; < *A. fasciculata* (Elliott) Rafinesque – K; < *A. purpurea* (Linnaeus) Pennell – GW]

Agalinis acuta Pennell, Sandplain Agalinis. Cp (MD): coastal sand plains; rare. MA south to Baltimore County, MD. [= C, K; = *Gerardia acuta* Pennell –F, G, P] {not yet keyed}

Agalinis divaricata (Chapman) Pennell, Pineland Agalinis. Cp (FL, GA): sandhills; common (rare in GA). GA (Decatur County) south to c. peninsular FL, west to MS (Sorrie & LeBlond 2008). [= K, S, WH; = *Gerardia divaricata* (Chapman) Pennell – P] {not yet keyed}

Agalinis filicaulis (Bentham) Pennell, Spindly Agalinis. Cp (FL, GA): wet pine savannas, prairies; rare. E. GA (Tattnall County) south to c. peninsular FL and Panhandle FL, west to w. LA. [= K, S, WH; = *Gerardia filicaulis* (Bentham) Chapman – P] {not yet keyed}

Agalinis filifolia (Nuttall) Rafinesque, Seminole Agalinis. Cp (FL, GA): dry longleaf pine savannas, scrub; uncommon (rare in GA). S. GA (east to Liberty County) south to s. FL, west to sw. AL (Baldwin County) (Sorrie & LeBlond 2008). [= K, S, WH; = *Gerardia filifolia* Nuttall – P] {not yet keyed}

Agalinis flexicaulis Hays. Cp (FL): wet pinelands; rare. Endemic to ne. FL (Bradford County, to be expected in adjacent counties). See Hays (2010) for detailed information. {not yet keyed}

Agalinis gattingeri (Small) Small ex Britton. Barrens, glades, outcrops, woodlands. ON, MN, and NE south to AL, MS, LA, and TX. In c. TN, east to e. TN (Rhea and Scott counties) (Chester, Wofford, & Kral 1997). Reported for NC (Kartesz 1999). {investigate} [= K, S; = *Gerardia gattingeri* Small – G, P]

Agalinis georgiana (C.L. Boynton) Pennell. Cp (FL, GA): mesic to wet pine savannas, bogs; rare. S. GA (Crisp, Dooly, Lowndes, Thomas, and Worth counties) south to w. Panhandle FL (Carter, Baker & Morris 2009). [= S, WH; < *A. fasciculata* – K; = *Gerardia georgiana* C.L. Boynton – P]

Agalinis harperi Pennell in Small. Cp (FL, GA, SC?): wet pinelands, interdune swales; uncommon (rare in GA). GA south to s. FL, west to w. LA. Glynn County, GA and east to McIntosh County, GA as *A. pinetorum*. See Hays (1998a) who has established the nomenclatural priority of *A. harperi*. Reported for SC (Kartesz 1999); {investigate}. [= WH; > *A. harperi* Pennell in Small – S; > *A. pinetorum* – S; = *A. pinetorum* Pennell – K; > *A. delicatula* Pennell; = *Gerardia harperi* (Pennell in Small) Pennell – P] {not yet keyed}

Agalinis heterophylla (Nuttall) Small ex Britton. GA west to s. MO, AR, e. OK, and e. TX. [= G, K]

Agalinis oligophylla Pennell. Sc. TN (Coffee and Warren counties) (as *A. pseudaphylla*) (Chester, Wofford, & Kral 1997), c. and s. AL, west through s. MS to w. LA. [= K, S; > *Gerardia pseudaphylla* (Pennell) Pennell – P; > *A. pseudaphylla* (Pennell) Shinners; > *A. pseudophylla* (Pennell) Shinners, an orthographic variant]

Agalinis pulchella Pennell. Cp (FL, GA): pine savannas and sandhills; rare. Reported for Coffee and Ware counties, GA. {Nomenclatural and typification problems} [= K, S, WH; = *Gerardia pulchella* Pennell – P] {not yet keyed; synonymy incomplete}

Agalinis skinneriana (A. Wood) Britton. Coffee County, TN (Chester, Wofford, & Kral 1997). [= K; = *Gerardia skinneriana* A. Wood – G, P] {not yet keyed; synonymy incomplete}

Agalinis tenuifolia (Vahl) Rafinesque *var.* ***leucanthera*** (Rafinesque) Pennell. Cp (FL, GA): savannas; rare (GA Special Concern). [= K, S; < *A. tenuifolia* – WH] {not yet keyed; synonymy incomplete}

Agalinis tenuifolia (Vahl) Rafinesque var. *macrophylla* (Bentham) Blake. [= K, S; = *Gerardia tenuifolia* Vahl ssp. *macrophylla* (Bentham) Pennell – P] {not yet keyed; synonymy incomplete}

Agalinis tenuifolia (Vahl) Rafinesque *var.* ***polyphylla*** (Small) Pennell. Pd (GA): granitic flatrocks; uncommon? Endemic to granite flatrocks in GA. [= K, S; = *Gerardia tenuifolia* Vahl ssp. *polyphylla* (Small) Pennell – P; = *Gerardia polyphylla* Small] {not yet keyed; synonymy incomplete}

2. Seymeria Pursh 1814 (Seymeria)

A genus of about 25 species, herbs, of s. North America (including Mexico). References: Pennell (1935)=P.

1 Corolla glabrous on its outer surface; leaf segments linear, < 0.5 mm wide; stem glabrous or puberulent; seeds wingless (though with ridges) ..... ***S. cassioides***

1 Corolla pubescent externally; leaf segments lanceolate, 1-2 mm wide; stem pubescent; seeds 3-4-winged ..... ***S. pectinata*** *ssp.* ***pectinata***

Seymeria cassioides (J.F. Gmelin) Blake, Senna Seymeria. Dry to moist pinelands, wet pine savannas, sandhills, other dry woodlands. August-October. Se. VA south to c. peninsular FL, west to LA; disjunct in nc. AL and se. TN (Chester, Wofford, & Kral 1997). [= RAB, C, F, G, GW, K, P, WH; = *Afzelia cassioides* J.F. Gmelin – S]

Seymeria pectinata Pursh *ssp.* ***pectinata***, Comb Seymeria. Dry pinelands, sandhills. July-October. Ssp. *pectinata* ranges from se. NC south to c. peninsular FL, west to s. MS, a Southeastern Coastal Plain endemic. Ssp. *peninsularis* (Pennell) Pennell ranges from n. peninsular FL south to s. FL. [= K; < *S. pectinata* – RAB, WH; = *S. pectinata* ssp. *typica* – P; = *Afzelia pectinata* (Pursh) Kuntze ssp. *pectinata* – S]

3. Macranthera Nuttall ex Bentham 1836 (Flameflower)

A monotypic genus, a hemiparasitic herb, of se. North America. References: Pennell (1935)=P.

Macranthera flammea (Bartram) Pennell, Flameflower, Hummingbird-flower. Pitcherplant bogs, bayheads. July-September. Nearly restricted to the East Gulf Coastal Plain (e. GA and FL Panhandle west to se. LA), but ranging east to the Atlantic Coastal Plain of e. GA (Bullock County), within a county of the SC border. [= GW, K, P, S, WH]

4. Aureolaria Rafinesque 1836 (Oak-leach, False-foxglove)

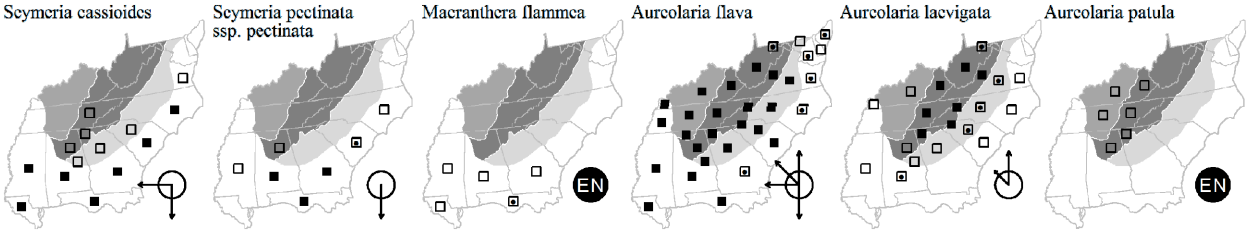
A genus of about 10 species, hemiparasitic herbs, of e. North America and Mexico. References: Pennell (1935)=P.

1 Plant pubescent (especially on the calyx, corolla, capsule, and lower stem) with glandular hairs; annual; seeds 0.8-1.0 mm long, not winged.
  2 Calyx tube hemispherical, glandular-hirsute to glandular-lanate on the outer surface; capsule ovoid; trichomes of the leaves usually glandular, at least in part; leaf lobes usually acute ..... ***A. pectinata***
  2 Calyx tube turbinate, glandular-puberulent on the outer surface; capsule ellipsoid; trichomes of the leaves usually nonglandular; leaf lobes usually obtuse ..... ***A. pedicularia***
1 Plant glabrous or pubescent with nonglandular hairs; perennial; seeds 1.3-2.7 mm long, winged.
  3 Capsule pubescent; inflorescence, pedicels, and/or calyx pubescent with nonglandular hairs; pedicels 1-3 mm at anthesis; flowering May-July ..... ***A. virginica***
  3 Capsule glabrous; inflorescence, pedicels, and calyx glabrous (or pubescent with nonglandular hairs in *Au. patula*); pedicels 1-25 mm long at anthesis; flowering August-September.
    4 Inflorescence, pedicels, and calyx pubescent (at least sparsely so); pedicels slender, ca. 0.5 m in diameter ..... ***A. patula***
    4 Inflorescence, pedicels and calyx glabrous; pedicels stout, ca. 1 mm in diameter.
      5 Lower leaves entire to serrate (or with only a few shallow lobes at the base of the leaf); pedicels 1-8 mm long at anthesis, straight; corolla 3.0-4.0 cm long; capsule 10-15 mm long; stem not glaucous ..... ***A. laevigata***
      5 Lower leaves pinnately lobed, the lobes themselves usually serrate, the sinuses extending over half of the distance to the midrib; pedicels 4-25 mm long at anthesis, upwardly curved; corolla 3.5-6 cm long; capsule 12-20 mm long; stem slightly to strongly glaucous ..... ***A. flava***

Aureolaria flava (Linnaeus) Farwell, Smooth Oak-leach. Oak forests and woodlands. August-September; September-October. ME west to MN, south to GA, c. peninsular FL, AL, and e. LA. The various named varieties or subspecies need additional study; the variation seems to be too clinal to be practically recognized taxonomically. [= RAB, W, WH; > *A. flava* var. *flava* – C, G, K; > *Gerardia flava* Linnaeus var. *flava* – F; > *Gerardia flava* var. *reticulata* (Rafinesque) Cory – F; > *A. flava* ssp. *typica* – P; >< *A. flava* ssp. *flava* – S; > *A. flava* ssp. *reticulata* (Rafinesque) Pennell – P, S; *A. flava* (Linnaeus) Farwell var. *macrantha* Pennell – C, G, = *Gerardia flava* Linnaeus var. *macrantha* (Pennell) Fernald – F; = *A. flava* ssp. *macrantha* Pennell – P; > *A. flava* ssp. *flava* – S]

Aureolaria laevigata (Rafinesque) Rafinesque, Appalachian Oak-leach. Oak forests and woodlands. August-September; September-October. PA west to s. OH, south to SC and GA, primarily a Central and Southern Appalachian endemic, but extending into adjacent provinces, and, rarely, even the Coastal Plain. [= RAB, C, G, K, P, S, W; = *Gerardia laevigata* Rafinesque – F]

Aureolaria patula (Chapman) Pennell, Cumberland Oak-leach. Rich alluvial forests. August-October; September-October. C. KY south through TN to nw. GA, and approaching w. NC and sw. VA. [= C, G, K, P, S]



Aureolaria pectinata (Nuttall) Pennell, Southern Oak-leach. Turkey oak sandhills, other dry oak forests and woodlands. May-September; September-October. NC south to s. FL, west to LA, inland north to AR and MO. Related to *A. pedicularia*, but much more southerly in distribution. [= RAB, K; = *A. pedicularia* (Linnaeus) Rafinesque var. *pectinata* (Nuttall) Gleason – C, G, WH; = *Gerardia pectinata* (Nuttall) Bentham – F; > *A. pectinata* ssp. *eurycarpa* (Pennell) Pennell – P, S; > *A. pectinata* ssp. *transcedens* (Pennell) Pennell – P, S; > *A. pectinata* ssp. *typica* – P; > *A. pectinata* ssp. *pectinata* – S; < *A. pedicularia* – W]

Aureolaria pedicularia (Linnaeus) Rafinesque, Annual Oak-leach. Oak forests and woodlands. September-October; November. ME west to NY and e. MN, south to nw. SC, ne. GA, e. TN, and n. IL. The various named varieties or subspecies need additional study; the variation seems to be too clinal to be practically recognized taxonomically. [= RAB, W; > *A. pedicularia* var. *pedicularia* – C, G, K; = *Gerardia pedicularia* Linnaeus var. *pedicularia* – F; > *A. pedicularia* ssp. *caesariensis* Pennell – S; > *A. pedicularia* ssp. *carolinensis* Pennell – P, S; > *A. pedicularia* (Linnaeus) Rafinesque var. *austromontana* Pennell – C, G, K; > *Gerardia pedicularia* Linnaeus var. *austromontana* (Pennell) Fernald – F; > *A. pedicularia* ssp. *austromontana* (Pennell) Pennell – P, S; > *A. pedicularia* (Linnaeus) Rafinesque var. *intercedens* – Pennell – C, G, K; > *Gerardia pedicularia* Linnaeus var. *intercedens* (Pennell) Fernald – F; > *A. pedicularia* ssp. *intercedens* (Pennell) Pennell – P]

Aureolaria virginica (Linnaeus) Pennell, Downy Oak-leach, Virginia Oak-leach. Oak forests and woodlands. May-July; August-September. MA west to MI, south to ne. FL, Panhandle FL, and AL. [= RAB, C, G, K, W, WH; = *Gerardia virginica* (Linnaeus) Britton, Sterns, & Poggenburg – F; > *A. virginica* – P, S; > *A. microcarpa* Pennell – P, S]

5. Dasistoma Rafinesque 1819 (Mullein Foxglove)

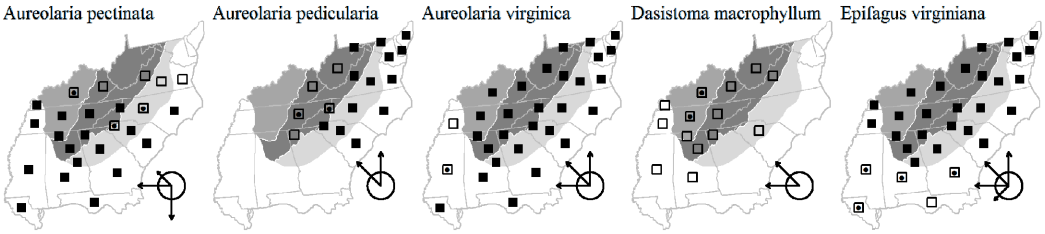
A monotypic genus, a hemiparasitic herb, endemic to se. North America. The genus is sometimes spelled '*Dasystoma*.' References: Pennell (1935)=P.

Dasistoma macrophyllum (Nuttall) Rafinesque, Mullein Foxglove. Xeric to dry-mesic woodlands and bluffs, riverbanks, over limestone or diabase. July-September. WV, OH, s. WI, IA, and NE, south to sw. VA (Lee County), nc. SC, nw. GA, c. AL, MS, LA, and nc. TX. First reported for VA by Wieboldt et al. (1998). [= *Dasistoma macrophylla* – RAB, C, G, K, P, S, orthographic variant; = *Seymeria macrophylla* Nuttall – F, GW, WV; = *Dasystoma macrophylla*, orthographic variant]

6. Epifagus Nuttall 1818 (Beechdrops)

A monotypic genus, an herb parasitic on the roots of *Fagus*, of e. North America. References: Thieret (1971)=Z.

Epifagus virginiana (Linnaeus) W. Barton, Beechdrops. Moist to rather dry forests under *Fagus grandifolia*. September-November. NS west to WI, south to ne. FL, Panhandle FL, and LA; disjunct in the mountains of e. Mexico (Tamaulipas). [= RAB, C, F, G, K, W, WH, WV, Z; = *Leptamnium virginianum* (Linnaeus) Rafinesque – S]



7. Orobanche Linnaeus 1753 (Cancer-root, Broomrape)

A genus of about 150 species, parasitic herbs, of mainly north temperate regions. References: Musselman (1982)=Z; Thieret (1971)=Y; Collins, Colwell, & Yatskievych 2009)=X; Manen et al. (2004).

1 Flowers solitary on a long pedicel (appearing as a scape, the true stem entirely underground or nearly so); [section *Gymnocaulis*] ..... ***O. uniflora***

1 Flowers several-many, sessile or subsessile in a dense spike.

2 Calyx 5-lobed, the lobes subequal, all well-developed; [section *Nothaphyllon*]

3 Corolla 14-20 mm long, slightly curved, the lobes 4-8 mm long and rounded-obtuse; inflorescence a dense raceme, the flowers in a dense and often irregular spiral; flowering April-August; [of uplands, usually parasitizing perennial composites such as *Artemisia*, *Heterotheca*, and *Grindelia*] ..... ***[O. ludoviciana]***

3 Corolla 15-22 mm long, strongly curved, the lobes 4-5 mm long and triangular-acute; inflorescence an open raceme, the flowers in a loose and regular spiral; flowering August-October; [of bottomlands, usually parasitizing annual composites such as *Ambrosia* and *Xanthium*] ..... ***O. riparia***

2 Calyx 2-4-lobed, rarely 5-lobed, but then the fifth lobe minute and much smaller than the other lobes; [section *Orobanche*].

4 Calyx divided to the base into 2 lateral halves, these usually 2-lobed, the 4 lobes long-attenuate or caudate..... ***O. minor***

4 Calyx tubular, with 4 (-5) lobes about the length of the calyx tube ..... ***O. ramosa***

Orobanche ludoviciana Nuttall, Prairie Broomrape. Pastures, upland areas, and glades, parasitic on perennial composites such as *Grindelia*, *Artemisia*, and *Heterotheca*. April-August. SK and BC south to MO, w. TX, AZ, and n. Mexico. [= X; < *O. ludoviciana* – F, G, Z; < *O. ludoviciana* var. *ludoviciana* – C; < *O. ludoviciana* ssp. *ludoviciana* – K] {excluded; not keyed or mapped}

* ***Orobanche minor*** J.E. Smith, Hellroot, Lesser Broomrape. Cultivated fields, parasitic on various hosts, especially *Trifolium*, *Nicotiana tabacum*, and *Solanum lycopersicum*; native of Eurasia. [= RAB, C, F, G, K, S, WH, WV, Z]

* ***Orobanche ramosa*** Linnaeus, Branching Broomrape. Disturbed areas; native of Asia. As discussed by Musselman (1984), the identity of the sole NC record (collected in 1884) is somewhat presumptive, and the precise location uncertain. An infestation of this serious weed was discovered in 2007 at a car wash in urban Norfolk, VA (Musselman & Bolin 2008). [= C, F, G, K]

Orobanche riparia L.T. Collins, Riparian Broomrape. Bottomlands, parasitic on annual composites such as *Ambrosia trifida*, *Xanthium strumarium*, and *Ambrosia artemisiifolia*. August-October. VA, s. WV, and DC (James, Potomac, Shenandoah, and New rivers); OH, IN, IL, MO, TN (Mississippi and Ohio rivers and their tributaries); NE and CO south to w. TX and NM. See Collins, Colwell, & Yatskievych (2009) for detailed discussion. [= X; < *O. ludoviciana* var. *ludoviciana* – C; < *O. ludoviciana* – F, G, WV, Z; < *O. ludoviciana* ssp. *ludoviciana* – K]

Orobanche uniflora Linnaeus, Cancer-root. Sandy streambanks and riverbanks, rich forests. April-May. Nearly throughout s. Canada and the United States. [= RAB, F, G, K, W, WH, Z; > *O. uniflora* var. *uniflora* – C; = *Thalesia uniflora* (Linnaeus) Britton – S]

8. Buchnera Linnaeus 1753 (Bluehearts)
(contributed by Bruce A. Sorrie)

A genus of about 100 species, hemiparasitic herbs, of tropical and warm temperate regions of the Old and New Worlds. The taxonomy of this genus is poorly understood. The plants are root hemi-parasites, apparently not particular about the host species. References: Sorrie & Weakley (in prep.)=Z; Pennell (1935)=P.

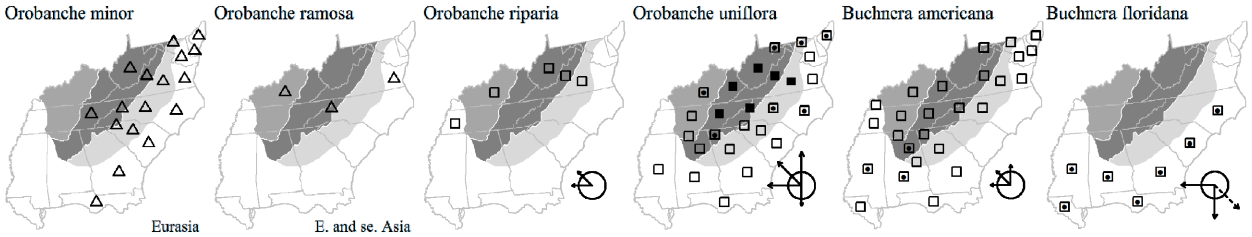
Identification notes: Lower leaves are broadest, mid and upper leaves narrowest, often markedly so; the key refers to lower leaves. Leaf teeth are usually few in number and vary in development, from crenate to 2-3 mm long and sharply pointed. The former condition is normal for *B. floridana*, the latter for *B. americana*. Calyx length is ca. 0.5 mm longer in fruit than in flower. The foliage turns black on drying.

1 Leaves lanceolate to narrowly ovate, tapering to a point; veins of lower stem leaves consisting of 3 major and 2 minor ones (narrow leaves may only have 3 total veins); leaf teeth usually well developed, rarely absent, usually 2-3 mm long; calyx (6.0-) 6.5-8.0 mm long; corolla lobes 5.0-7.0 mm long; [primarily of moderate to high pH soils in southern Great Plains, ranging to southern margin of the Great Lakes and eastward to the mid Atlantic seaboard, especially in mafic or calcareous glades and prairies, sometimes in more acid sites].....***B. americana***

1 Leaves narrowly oblanceolate to lanceolate, rounded at tip; veins of lower stem leaves consisting of 1 major and 2 minor ones (narrow leaves may only have 1 vein); leaf teeth usually crenate but may be absent, < 2 mm long; calyx (4.0-) 4.5-5.5 mm long; corolla lobes 4.0-5.0 mm long; [primarily of low pH soils on the southern Atlantic and Gulf Coastal Plain, sometimes in calcareous sites (especially outside of our area)].....***B. floridana***

Buchnera americana Linnaeus, Prairie Bluehearts, American Bluehearts, Plains Bluehearts. Dry (seasonally moist) rocky, gravelly, or clayey soil of limestone glades, glades over mafic rock (such as diabase, gabbro, etc.), wet meadows, sandy roadsides. July-September; August-October. NY and s. ON west to MI, IL, MO, and s. KS, south to c. NC, GA, Panhandle FL, and TX. In addition to the key characters given, *B. americana* is overall a larger and more robust plant than *B. floridana*, though both are quite variable in size, depending on the conditions in which they grow. *B. americana* has apparently declined very greatly in our area, probably owing to fire suppression in its habitats. [= RAB, C, F, G, GW, P, S, W, Z; < *B. americana* – K, WH (also see *B. floridana*)]

Buchnera floridana Gandoger, Savanna Bluehearts, Florida Bluehearts. Pine savannas, flatwoods, seepage bogs, sandy roadsides. April-October; May-November. Se. NC south to s. FL, west to TX, and in the West Indies. Previous attributions of *B. longifolia* Kunth (including *B. elongata* Small) to southeastern states (notably FL, AL, GA, and MS) are based on misidentifications of material which is actually *B. floridana*. [= RAB, GW, S, Z; >< *B. americana* – K; > *B. longifolia* Sw. – K, by misattribution; > *B. floridana* – S; > *B. breviflora* Pennell – S, by misattribution; > *B. elongata* Sw. – S; < *B. americana* – WH]



9. Striga Loureiro 1790 (Witchweed)

A genus of about 40 species, hemiparasitic herbs, of tropical to temperate regions of the Old World.

* ***Striga asiatica*** (Linnaeus) Kuntze, Witchweed. Cultivated fields, parasitic on the roots of corn and other grasses; native of the Old World. A serious weed, *Striga* has been the subject of eradication efforts and quarantine policies since its appearance in our area. [= K; = *S. lutea* Loureiro – RAB]

10. Schwalbea Linnaeus 1753 (Chaffseed)

The genus is monotypic, a hemiparasitic herb, of se. North America. References: Pennell (1935)=P.

Schwalbea americana Linnaeus, Chaffseed. Savannas, sandhill-pocosin ecotones (in the uphill portions), mesic loamy-soil slopes or swales in sandhill longleaf pine woodlands, fire-maintained interior woodlands and barrens. May-June; August. Formerly rather widespread in e. North America, primarily in the Coastal Plain, from e. MA, south to c. peninsular FL and west to TX, and disjunct in the Cumberland Mountains of KY and TN. The species is now limited to a few scattered sites in NJ, NC, SC, GA, FL, AL, and LA. It appears to require high fire frequency, especially during the growing season, perhaps related to its establishment ecology. The tiny seeds are hyaline-winged. [= RAB, C, F, G, GW, K, WH; > *S. americana* – P; > *S. australis* Pennell – P, S; > *S. americana* var. *australis* (Pennell) Reveal & C.R. Broome]

11. Castilleja Mutis ex Linnaeus f. 1782 (Indian Paintbrush)

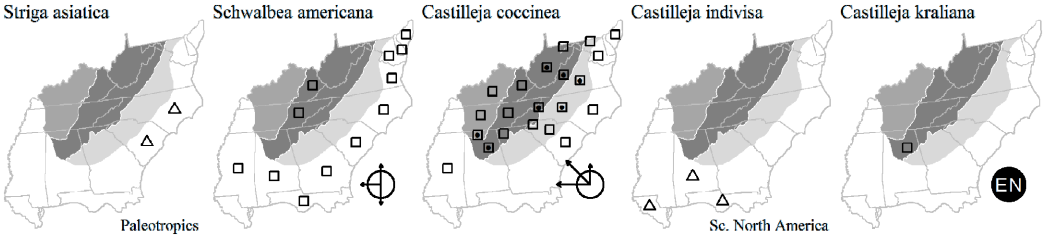
A genus of about 200 species, hemiparasitic herbs, primarily of w. North America, with a few species also in e. North America, Eurasia, Central America, and Andean South America. References: Pennell (1935)=P.

1 Inflorescence bracts mostly entire, yellow, < 2 cm long; [endemic to c. AL] ..... ***C. kraliana***
1 Inflorescence bracts either deeply lobed or entire, red (rarely yellow), mostly > 2 cm long; [collectively widespread in our area].
2 Lower corolla lip 2-3.5 mm long, thin, yellowish or orangish; inflorescence bracts deeply lobed; basal rosettes of leaves usually well-developed ..... ***C. coccinea***
2 Lower corolla lip <2 mm long, thickened, greenish; bracts simple; basal rostettes absent..... ***C. indivisa***

Castilleja coccinea (Linnaeus) Sprengel, Eastern Indian-paintbrush. Woodlands, fens, barrens, rock outcrops, meadows, wet pastures, grassy openings, usually over mafic rocks. April-May; May-June. ME, NY, and MN south to SC, n. GA, n. AL, c. MS, w. LA, and OK. [= RAB, C, F, G, GW, K, P, S, W]

* ***Castilleja indivisa*** Engelmann, Texas Indian-paintbrush. Dry, disturbed areas; introduced from sc. North America (AR and OK south to w. LA and TX). March-April. [= K, P, WH]

Castilleja kraliana J. Allison, Cahaba Paintbrush. Dolomitic Ketona glades. Endemic to dolomitic Ketona glades in Bibb County, c. AL (Allison & Stevens 2001).



12. Pedicularis Linnaeus 1753 (Wood-betony, Lousewort)

A genus of about 350 species, hemiparasitic herbs, of temperate regions of c. and e. Asia, Europe, w. North America, e. North America, and Andean South America. References: Pennell (1935)=P.

1 Inflorescence 1-4 dm tall; stem leaves alternate; stem pubescent, at least near the inflorescence; flowering April-May ..... ***P. canadensis***
1 Inflorescence 4-10 dm tall; stem leaves opposite; stem glabrous; flowering August-October..... ***P. lanceolata***

Pedicularis canadensis Linnaeus, Eastern Lousewort, Wood-betony. Moist to dry forests and woodlands, streambanks. April-May; May-July. ME, QC, and MB south to ne. FL, FL Panhandle, TX, and n. Mexico. Var. *dobbsii* Fernald, alleged to differ in having nearly solitary flowering stems and stoloniform basal offsets, needs additional study. [= RAB, C, G, GW, P, S, W, WH, WV; > *P. canadensis* var. *canadensis* – F; > *P. canadensis* var. *dobbsii* Fernald – F; > *P. canadensis* ssp. *canadensis* – K]

Pedicularis lanceolata Michaux, Swamp Lousewort. Springheads and swampy areas, over calcareous, mafic, or ultramafic rocks. August-October; September-October. MA and NY west to MN and ND, south to e. VA, w. NC, e. TN, ne. GA, w. TN, n. AR, and NE. [= RAB, C, F, G, GW, K, P, S, W, WV]

13. Melampyrum Linnaeus 1753 (Cow-wheat)

A genus of about 35 species, hemiparasitic herbs, of temperate regions of North America and Eurasia. References: Pennell (1935)=P.

1 Lowermost bracteal leaves entire or nearly so, or the uppermost with a few short basal teeth; leaves (2-) 10-30 mm wide, the widest leaves on a plant usually over 10 mm wide; plants usually simple or with 4 (rarely more) branches; internodes of the midstem usually 4-6 cm long ..... ***M. lineare*** *var.* ***latifolium***
1 Lowermost bracteal leaves generally with a few prominent sharp teeth or segments; leaves 2-10 mm wide; plants usually with numerous branches (often 10 or more); internodes of the midstem usually 1-3 cm long.
2 Teeth of the middle and upper bracts shorter than the width of the undivided portion of the bracts; leaves lanceolate, (2-) 5-10 mm wide; [widespread in our area] ..... ***M. lineare*** *var.* ***americanum***
2 Teeth of the middle and upper bracts commonly about as long as the width of the undivided portion of the bracts; leaves linear to lanceolate, 2-6 (-8) mm wide; [of the Coastal Plain] ..... ***M. lineare*** *var.* ***pectinatum***

Melampyrum lineare Desrousseaux *var.* ***americanum*** (Michaux) Beauverd, Common Cow-wheat. Dry soils. May-July; August-September. QC west to MN, south to VA, NC, and TN. Our three varieties are quite distinctive in morphology and have distinctive geographic ranges; they seem worthy of distinction from one another at the varietal level, at least. The fourth variety, var. *lineare*, is more northern, ranging from NL (Labrador) west to BC, south to New England, n. MI, and n. MN. It is similar to var. *latifolium* in its entire bracteal leaves, but overall is more like var. *americanum*, differing in the bracteal teeth and in its linear leaves, rarely over 5 mm wide. The distinction between var. *americanum* and var. *lineare* may not be worth making; if combined (as by K), the correct name is var. *lineare*. [= C, F, G; < *M. lineare* – RAB, W; < *M. lineare* var. *lineare* – K, WV; < *M. lineare* var. *typicum* – P; < *M. lineare* – S]

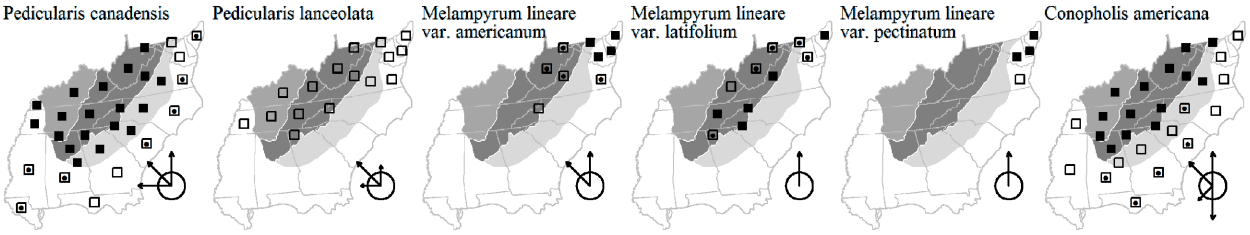
Melampyrum lineare Desrousseaux *var.* ***latifolium*** Barton, Appalachian Cow-wheat. Dry soils in ridgetop woodlands, in thin soils around rock outcrops. Late April-July; August-September. MA and NY south to n. GA, mostly in the Appalachians. [= C, F, G, K, P, WV; < *M. lineare* – RAB, W; = *M. latifolium* (Barton) Muhlenberg ex Britton - S]

Melampyrum lineare Desrousseaux *var.* ***pectinatum*** (Pennell) Fernald, Pine-barren Cow-wheat. Dry sandy areas. May-July; August-September. E. MA to se. VA, on the Coastal Plain. [= C, F, G, K, P; < *M. lineare* – RAB, W]

14. Conopholis Wallroth 1825 (Squawroot, Bearcorn)

A genus of 3 species, herbs parasitic on *Quercus*, of e. North America and sw. North America south to Central America. Rodrigues, Colwell, & Stefanović (2011) determined that a division of the genus into 3 species best reflects genetic differentiation, the other 2 being *C. alpina* Liebmann, ranging from AZ, NM, and TX south to s. Mexico, and *C. panamensis* Woodson of Costa Rica and Panama. References: Rodrigues, Colwell, & Stefanović (2011)=X; Haynes (1971)=Z; Thieret (1971)=Y.

Conopholis americana (Linnaeus) Wallroth, Squawroot, Bearcorn. Rich, moist forests, under *Quercus* species. March-June. NS west to WI and south to c. peninsular FL, AL, and TNl; disjunct in e. Mexico (Chiapas, Oaxaca, and Puebla). Haynes (1971) discusses the nature of the parasitism. *Conopholis* apparently germinates near an oak root, forms a parasitic connection to the root, resulting in the formation of a gall consisting of both *Quercus* and *Conopholis* tissue. The gall can be up to 25 cm in diameter, and lasts for many years, repeatedly sending up flowering shoots. It is believed that the gall exists underground for some years prior to first flowering. [= RAB, C, F, G, K, S, W, WH, WV, X, Y, Z]



377. LENTIBULARIACEAE Richard 1808 (Bladderwort Family) [in LAMIALES]

A family of 3 genera and about 270-320 species, insectivorous herbs, cosmopolitan. References: Fischer et al. in Kadereit (2004).

1 Leaves ovate or elliptic, in a basal rosette; carnivory via the viscid-slimy upper leave surfaces; flowers solitary on bractless peduncles ..... ***Pinguicula***
1 Leaves or leaf segments linear, borne along a subterranean or submersed stem; carnivory via specialized bladder-like traps; flowers in (1-) many-flowered racemes, each flower pedicel subtended by a bract ..... ***Utricularia***

Pinguicula Linnaeus 1753 (Butterwort)

A genus of about 46-80 species, herbs, of America, Mediterranean Europe, and circumboreal America and Eurasia. References: Schnell (2002b)=Z; Godfrey & Stripling (1961); Wood & Godfrey (1957); Schnell (1980a); Fischer et al. in Kadereit (2004). Key based in part on GW.

1 Expanded corolla < 1.5 cm across; palate not exserted from the throat of the corolla; rosettes usually 2-4 cm in diameter; flowers usually white to pale violet (rarely medium violet); seeds 0.4 mm long ..... ***P. pumila***
1 Expanded corolla > 1.8 cm across; palate markedly exserted from the throat of the corolla; rosettes usually 5-10 (-15) cm across; corolla yellow, violet, or white; seeds (0.4-) 0.5-0.8 mm long.
  2 Corolla yellow ..... ***P. lutea***
  2 Corolla lavender-blue or white.
    3 Hairs on the lower portion of the scape elongated, pointed, multicellular, nonglandular, transitioning upward to 1-celled glandular hairs; expanded portion of corolla markedly "veiny" (darker along the veins); [of se. NC southward to s. peninsular FL and e. Panhandle FL] ..... ***P. caerulea***
    3 Hairs throughout scape glandular; expanded portion of corolla not "veiny;" [collectively of sw. GA and FL Panhandle westward to s. MS].
      4 Fresh leaves dull red or reddish green; corolla lobes ca. 2× as long than broad, the lobes notched almost ½ their length.... ***P. planifolia***
      4 Fresh leaves bright yellow-green; corolla lobes ca. 1× as long than broad, the lobes notched about 1/4 their length
        5 Corolla tube violet, with darker violet veins; hairs of the inner corolla tube white ..... ***P. ionantha***
        5 Corolla tube yellow, with reddish-brown veins; hairs of the inner corolla tube yellow ..... ***P. primuliflora***

Pinguicula caerulea Walter, Blue Butterwort. Pine savannas and wet pine flatwoods, mostly in the outer Coastal Plain, rarely extending inland to seepages and sandhill-pocosin ecotones in the fall-line Sandhills of NC and SC. April-May. Se. NC

(Carteret and Johnston counties) south to s. peninsular FL, west to e. Panhandle FL. Schnell (1980a) discusses populations with white corollas. [= RAB, GW, K, S, WH, Z; *Pinguicula elatior* Michaux]

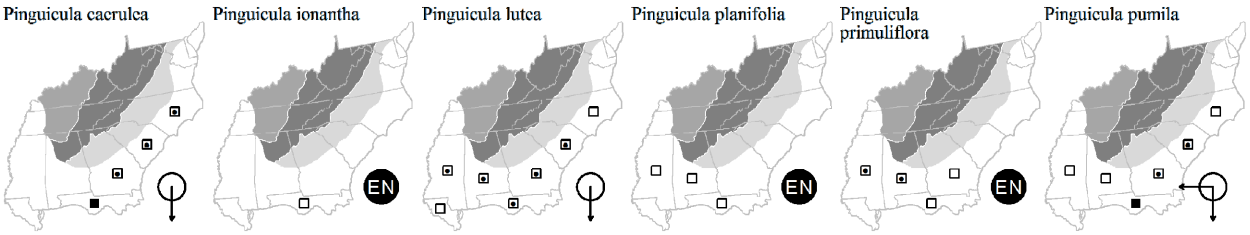
Pinguicula ionantha Godfrey, Panhandle Butterwort. Pond margins, bogs, flatwoods. Endemic to FL Panhandle. [= GW, K, WH, Z]

Pinguicula lutea Walter, Yellow Butterwort. Pine savannas and wet pine flatwoods, mostly in the outer Coastal Plain, rarely extending inland to seepages and sandhill-pocosin ecotones in the fall-line Sandhills of SC. Late March-May. Se. NC (Pender and New Hanover counties) south to s. FL, west to e. LA. [= RAB, GW, K, S, WH, Z]

Pinguicula planifolia Chapman, Chapman's Butterwort. Pond margins, bogs, flatwoods. S. AL, Panhandle of FL, and s. MS. [= GW, K, S, WH, Z]

Pinguicula primuliflora Wood & Godfrey, Clearwater Butterwort. Clearwater streams and seeps. Sw. GA, s. AL, Panhandle FL, and s. MS. [= GW, K, WH, Z]

Pinguicula pumila Michaux, Small Butterwort. Pine savannas and wet pine flatwoods. April-May. Se. NC (Carteret and Pender counties) south to s. FL, west to se. TX; and in the Bahamas. [= RAB, GW, K, S, WH, Z]



Utricularia Linnaeus 1753 (Bladderwort)

Utricularia, as monographed by Taylor (1989), consists of 214 species in 35 sections, with a nearly cosmopolitan distribution. In our area, 14 or 15 species in 5 sections are known to occur. References: Taylor (1989)=Z; Schnell (2002b)=Y; Müller & Borsch (2005); Fischer et al. in Kadereit (2004). Key based in part on Z and GW.

1 Flowers white or cream-white, 1-3 mm long; inflorescence peduncles very reduced, the pedicels appearing to arise directly from the stolons; traps 0.3-0.8 mm long; plants floating unattached in water (sometimes deposited land by dropping water, but then the principal branch systems stranded on the soil surface); capsules ca. 1 mm long, fusiform, indehiscent, with 1 seed; seeds essentially smooth, unornamented; leaves absent; [section *Utricularia*] ..... ***U. olivacea***

1 Flowers yellow, pink, or purple (sometimes fading whitish), (2-) 5-20 mm long; inflorescence peduncles well-developed, the inflorescence clearly a raceme; traps 0.2-5.0 mm long (< 0.7 mm long only in the terrestrial species (see key lead 2); plants attached (with principal branch systems within the soil), or floating unattached in water (sometimes deposited on land by dropping water, but then the principal branch systems stranded on the soil surface); capsules 1-8 mm long, globose, subglobose, or ovoid, with many seeds; seeds reticulate, papillose, echinate, multi-angled, or winged (rarely more-or-less smooth); leaves present (sometimes absent in the terrestrial species).

2 Plants attached (with principal branch systems within the soil); leaves absent or simple, linear, grass-like aerial leaves; bladders 0.2-1.1 mm long, most or all on a plant usually < 1.0 mm long; seeds reticulate-alveolate (also angled in *U. resupinata*), 0.20-0.25 mm long.

3 Flowers pink; inflorescence 1 (-2)-flowered; bract at base of the pedicel tubular, attached circumferentially around the stem; aerial leaves (when present) terete, septate; [very rare in our area]; [section *Lecticula*] ..... ***U. resupinata***

3 Flowers yellow (sometimes fading whitish); inflorescence (1-) 2-15-flowered; bract at base of the pedicel peltate or ovate, attached on one side of the stem; aerial leaves (when present) flattened, not septate; [collectively common in our area].

4 Bracts subtending the pedicels peltate (attached near their middles), unattached at either end; pair of bracteoles absent; spur of the corolla oriented forward, more-or-less appressed to the lower lip; aerial leaves (when present) with subacute to obtuse apex; [section *Setiscapella*] ..... ***U. subulata***

4 Bracts subtending the pedicels ovate (attached at their bases), free only at their upper end; pair of bracteoles associated with each bract present, linear to lanceolate; spur of the corolla oriented downward or backward, at approximately a right angle to the lower lip; aerial leaves (when present) with acute apex; [section *Stomoisia*].

5 Corolla 1.5-2.0 cm long; spur 8-12 mm long; raceme usually short, the (1-) 2-6 flowers crowded together, all of them chasmogamous ..... ***U. cornuta***

5 Corolla 0.25-1.5 cm long; spur 5-7 (-9) mm long; raceme usually elongate, the (1-) 2-15 flowers well-spaced, often the lower (sometimes all) cleistogamous and much smaller than the chasmogamous flowers ..... ***U. juncea***

2 Plants floating unattached in water (sometimes deposited on land by dropping water, but then the principal branch systems stranded on the soil surface); leaves present and dissected into linear segments; bladders 0.7-5.0 mm long, most or all on a plant > 1.0 mm long; seeds papillose, reticulate, ridged, angled, or winged, 0.5-2.0 mm long.

6 Flowers purple; leaves divided into verticillate segments with terminal traps; [section *Vesiculina*] ..... ***U. purpurea***

6 Flowers yellow; leaves divided into alternate segments with lateral traps; [section *Utricularia*].

7 Peduncle with whorl of inflated leaf-like organs (floats).

8 Floats 4-7, not fused basally to one another, fusiform, tapering gradually to base and apex from a widest point near the middle; leaves with the 2 primary divisions unequal; bracts of the scape longer than broad, entire; flowers (6-) 9-14 (-17) per scape; apex of corolla spur bifid ..... ***U. inflata***

8 Floats (5-) 6-8 (-10), fused basally to one another, cylindrical, more-or-less parallel-sided through most of their length, tapering abruptly to base and apex; leaves with the 2 primary divisions equal; bracts of the scape broader than long, the apex slightly to strongly 3-lobed; flowers (1-) 3-4 (-7) per scape; apex of corolla spur usually entire (rarely bifid) ..... ***U. radiata***

7 Peduncle without whorl of inflated leaf-like organs (floats).

9 Main axes distinctly flattened in cross-section, up to 10 mm wide ..... ***U. foliosa***

9 Main axes round in cross-section.
10 Lower lip of corolla 3-lobed; seeds disk-shaped, not angular or winged; inflorescences of 2 types, the chasmogamous on erect peduncles 5-25 cm long bearing 2-8 flowers, the cleistogamous without a peduncle, the solitary pedicels borne directly on the stolons, 0.5-2 cm long, deflexed..... ***U. geminiscapa***
10 Lower lip of corolla entire or slightly irregular, not 3-lobed; seeds angular or winged; inflorescences of 1 type (erect, chasmogamous).
11 Upper corolla lip smaller than the lower, entire; capsule circumscissilely dehiscent; seeds 0.7-1.0 mm long, 4-6-angled; corolla without stipitate glands on its external surface.
12 Leaves of one kind only, divided into numerous capillary segments bearing lateral traps; bracts scarcely auriculate; plant distinctly aquatic, floating in water and only rarely stranded; [of the Coastal Plain] ..... ***U. macrorhiza***
12 Leaves of 2 or 3 kinds, some divided into capillary or narrowly linear segments and bearing few or no traps, others divided into fewer capillary segments and bearing more-or-less numerous traps; bracts distinctly auriculate; plants typically in boggy situations, in shallow water or frequently stranded; [**either** of the Mountains at high elevations **or** of various physiographic provinces northward].
13 Broadest leaf segments with 9-20 lateral setae (use 10× magnification); spur of corolla cylindrical, distinctly longer than wide, the apex distinctly curved forward..... ***[U. intermedia]***
13 Broadest leaf segments lacking lateral setae; spur of corolla shortly saccate to broadly conical, wider than long, the apex not curved forward ..... ***U. minor***
11 Upper corolla lip larger than the lower, obscurely 3-lobed; capsule laterally 2-valved or indehiscent; seeds 0.8-2.5 mm long, lenticular, with an irregular, lobed, or continuous wing; corolla (or at least the spur) with a few to many short stipitate glands (sometimes patchily distributed).
14 Vegetative shoots uniform, all bearing rather sparsely divided leaf segments bearing traps, seeds 0.8-1.1 mm long, with a continuous, circumferential wing, slightly to irregularly lobed.
15 Lower corolla lip 8-10 mm long, about equaling or slightly shorter than the conical, 5-9 mm long spur; leaves usually forked twice..... ***U. biflora***
15 Lower corolla lip 5-6 mm long, exceeding the blunt, 3.5-4.5 mm long spur; leaves usually forked once ..... ***U. gibba***
14 Vegetative shoots of 2 kinds, some bearing leafy segments and few or no traps, others bearing reduced segments and more-or-less numerous traps; seeds 1.0-2.5 mm long, with an irregularly deeply lobed or partial wing.
16 Plant anchored in mud up to 100 cm below water surface; green leafy shoots up to 40 cm long and 5 cm wide; peduncle flexuous, to 100 cm long, only the uppermost ca. 10 cm emergent ..... ***U. floridana***
16 Plant in shallow water or stranded; green leafy shoots usually not > 10 cm long and 2 cm wide; peduncle erect, straight, to 30 cm long, the uppermost 10-25 cm emergent..... ***U. striata***

Utricularia biflora Lamarck, Longspur Creeping Bladderwort. Ponds, lakes, and diches. June-October. This species may not be distinct from *U. gibba* (which see for discussion). E. MA south to FL, west to TX and OK, primarily on the Coastal Plain; also apparently widespread in the New World and Old World tropics. [= RAB, C, F, G, GW, W; = *U. pumila* Walter – S, apparently misapplied; < *U. gibba* – K, WH, Y, Z]

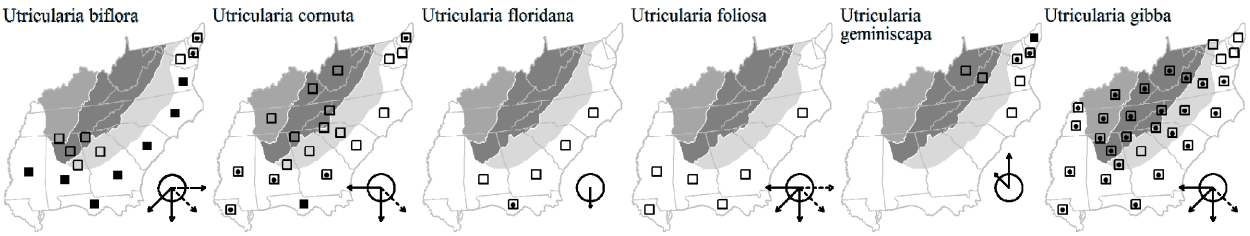
Utricularia cornuta Michaux, Horned Bladderwort. Shores of limesink ponds (dolines), bogs, mountain bogs. May-September. NL (Newfoundland) and QC west to n. ON, AB, and MN, south to s. FL and e. TX; also in the Bahamas and Cuba. Taylor (1989) states that where sympatric with *U. juncea*, *U. cornuta* flowers much earlier. [= RAB, C, F, G, GW, K, W, WH, WV, Y, Z; = *Stomoisia cornuta* (Michaux) Rafinesque – S]

Utricularia floridana Nash, Florida Bladderwort. In deep water of natural Carolina bay lakes, other natural lakes, and limesink ponds (dolines). July-August. Se. NC south to c. peninsular FL, west to Panhandle FL and sw. GA. [= GW, K, S, WH, Y, Z]

Utricularia foliosa Linnaeus, Flatstem Bladderwort. In deep water of natural lakes and ponds. Se. NC south to s. FL, west to TX (Brown & Marcus 1998); West Indies, South America, Africa. This species is reported for NC by Taylor (1989). See GW for a detailed description of this species. [= GW, K, S, WH, Y, Z]

Utricularia geminiscapa Benjamin, Two-flowered Bladderwort, Hidden-fruited Bladderwort. Beaver ponds, mucky seepages. NL (Newfoundland) and QC west to n. MI and n. WI, south to PA and sc. NC. [= C, F, G, K, W, WV, Y, Z]

Utricularia gibba Linnaeus, Shortspur Creeping Bladderwort. Ponds, lakes, and diches. May-September. QC west to WI, south to FL and LA; also apparently widespread in the West Indies and Central America and apparently the Old World tropics. Taylor (1989) includes *U. biflora* in *U. gibba*. Other authors have expressed doubts about the distinction, including RAB ("doubtfully distinct"). Taylor suggests that "further research is clearly indicated, but to be at all meaningful, it must be conducted on a worldwide basis." I have here, for the moment, retained the 2 traditionally recognized species, though intermediates will be encountered. [= RAB, C, F, G, S, W, WV; < *U. gibba* – K, Y, Z (also see *U. biflora*)]



Utricularia inflata Walter, Swollen Bladderwort, Inflated Bladderwort. Ponds, lakes, ditches. May-November. NJ south to s. FL, west to e. TX; disjunct in WA (probably introduced). Also disjunct in an artificial pond in Henderson County, NC (Carl Sandburg Home National Historic Site). [= C, G, GW, K, S, WH, Y, Z; = *U. inflata* var. *inflata* – RAB, F]

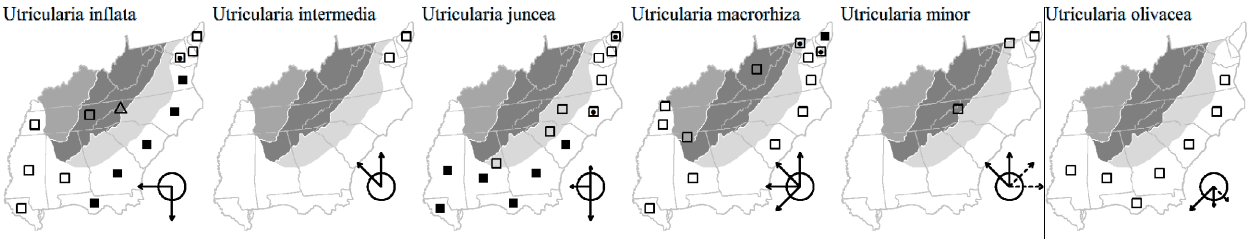
Utricularia intermedia Hayne, Northern Bladderwort. {habitats} South to se. PA (Rhoads & Klein 1993), DE (?), and MD (Kartesz 1999). The report from sc. GA (Jones & Coile 1988) is in error. [= C, F, G, K, Y, Z]

Utricularia juncea M. Vahl, Southern Bladderwort. Shores of limesink ponds (dolines), borrow pits, wet sands. July-September. NY (Long Island) and NJ south to s. FL, west to e. TX and se. AR; also in the West Indies, Central America and South America. [= RAB, C, F, G, GW, K, WH, Y, Z; > *Stomoisia juncea* (M. Vahl) Barnhart – S; > *Stomoisia virgatula* Barnhart – S]

Utricularia macrorhiza Le Conte, Greater Bladderwort. Pools and ponds. May-September. NL (Newfoundland) west to AK, south to NC, SC, TX, CA, and Mexico; also in e. Asia. See Taylor (1989) for a discussion of the differences between this species and *U. vulgaris* of Europe and w. Asia, with which it has often been combined or associated as a variety. [= K, S, Y, Z; < *U. vulgaris* Linnaeus – RAB, C, F, G, WV, misapplied to American plants]

Utricularia minor Linnaeus, Lesser Bladderwort, Small Bladderwort. Fens and bogs, in the Southern Blue Ridge at about 1400 meters elevation. Circumboreal, south in North America to NJ, DE, PA, IN, IL, IA, NE, CO, UT, NV, and CA; disjunct in w. NC. [= C, F, G, K, W, Y, Z]

Utricularia olivacea Wright ex Grisebach, Dwarf Bladderwort, Minute Bladderwort. In floating mats (often algal) in water of limesink ponds (dolines), artificial lakes or beaver ponds. September-October. NJ south to FL, west to s. AL and s. MS (Sorrie & Leonard 1999), in the Coastal Plain; also in the West Indies (Cuba), Central America, and South America. [= RAB, GW, K, WH, Y, Z; = *Biovularia olivacea* (Wright ex Grisebach) Kam. – S]



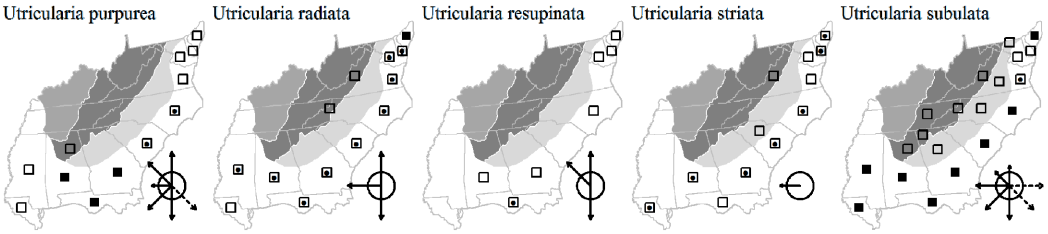
Utricularia purpurea Walter, Purple Bladderwort. In water of ponds, ditches, other slow-moving water. May-September. NS and QC west to MN, south to NY, n. IN, s. MI, and WI, and on the Coastal Plain south to s. FL, west to se. TX; also in Mexico, the West Indies, and Central America. [= RAB, C, F, G, GW, K, WH, Y, Z; = *Vesiculina purpurea* (Walter) Rafinesque – S]

Utricularia radiata Small, Floating Bladderwort, Small Swollen Bladderwort. Ponds, depression ponds, lakes, and ditches. May-November. NS south to s. FL, west to TX; disjunct in w. VA, w. TN, nw. IN; reports of this species in Cuba and South America are apparently in error. [= C, G, GW, K, S, W, WH, Y, Z; = *U. inflata* var. *minor* Chapman – RAB, F]

Utricularia resupinata B.D. Greene ex Bigelow, Northeastern Bladderwort, Resupinate Bladderwort. Wet pine flatwoods, pond margins, shores of natural lakes. NS west to nw. WI, south (irregular and scattered in part) to FL and sw. GA; also in the Bahamas (Sorrie & LeBlond 1997). Although "the curious gap in the North American range" [NC, SC, and VA] (Taylor 1989) is no longer strictly a gap, *U. resupinata* does appear to have a strangely bimodal range, with a center of distribution in ne. United States and se. Canada and a second extending from se. United States south into the West Indies and Central America. [= C, F, G, GW, K, WH, Y, Z; = *Lecticula resupinata* (B.D. Greene) Barnhart – S]

Utricularia striata Le Conte ex Torrey, Fibrous Bladderwort. Ponds, lakes, and ditches. May-November. Se. MA south to n. FL, west to e. TX and e. OK. [= K, WH, Y, Z; = *U. fibrosa* Walter – RAB, C, F, G, GW, S, of uncertain application and likely misapplied]

Utricularia subulata Linnaeus, Slender Bladderwort, Zigzag Bladderwort. Moist sands or peats of various kinds of acidic wetlands, including wet pine savannas and flatwoods, shores of limesink ponds (dolines), borrow pits, ditches. March-July (-later). In North America primarily in the Coastal Plain, from NS and e. MA south to s. FL, west to TX, north in the interior to TN and AR; also in the West Indies, Central America, South America, Africa, and Asia. Taylor (1989) terms this "the most widespread of *Utricularia* species." [= RAB, C, F, G, GW, K, W, WH, Y, Z; > *Setiscapella subulata* (Linnaeus) Barnhart – S; > *Setiscapella cleistogama* (A. Gray) Barnhart – S]



378. ACANTHACEAE Durande 1762 (Acanthus Family) [in LAMIALES]

A family of about 230 genera and about 3450 species, herbs, shrubs, vines, and trees, largely tropical. References: Wasshausen (1998); Long (1970); McDade & Moody (1999).

1 Plant a tree, with opposite leathery leaves; [of FL, s. MS, s. LA southward] ..... ***Avicennia***
1 Plant an herb, with various leaf arrangements.
2 Leaves in a basal rosette (sometimes with smaller leaves on a scape).

3 Leaves glabrate, to 22 cm long and 8 cm wide; corolla 0.8-1.3 cm long; capsule 8-10 mm long; stamens 2; [of moist to wet swamps] ..... ***Elytraria***
3 Leaves pubescent, to 10 cm long and 3 cm wide; corolla 1.8-4 cm long; capsule 9-18 mm long; stamens 4; [of dry upland pinelands].
4 Leaves 2-10 cm long, 1-3 cm wide; corolla 3-4 cm long; calyx lobes 15-30 mm long; capsule 12-18 mm long ..... ***Ruellia ciliosa***
4 Leaves 1.5-2.5 cm long, 0.7-0.8 cm wide; corolla ca. 2 cm long; calyx lobes 6-9 mm long; capsule ca. 10 mm long..... ***Stenandrium***
2 Leaves cauline.
5 Fertile stamens 4; corolla not distinctly 2-lipped, the corolla lobes of nearly equal size (except distinctly 2-lipped in *Hygrophila*).
6 Corolla distinctly 2-lipped ..... ***Hygrophila***
6 Corolla not distinctly 2-lipped, the corolla lobes of nearly equal size.
7 Plant an herbaceous vine; leaves cordate-hastate at the base; flowers yellow to orange, usually with a dark purple "eye" ..... ***Thunbergia***
7 Plant an herb; leaves cuneate to rounded at the base; flowers white to various shades of blue or pink.
8 Calyx lobes linear-aristate; anther sacs awned or pointed at the base ..... ***Dyschoriste***
8 Calyx lobes lanceolate or linear; anther sacs blunt ..... ***Ruellia***
5 Fertile stamens 2; corolla distinctly 2-lipped (except salverform in *Pseuderanthemum* and with with 4 nearly equal lobes in *Yeatesia*).
9 Corolla salverform, 5-lobed..... ***Pseuderanthemum***
9 Corolla distinctly 2-lipped or 4-lobed.
10 Bracts and bractlets inconspicuous, 2-5 mm long, linear or triangular; stem subterete or obscurely 4-angled ..... ***Justicia***
10 Bracts and/or bractlets subtending the flowers conspicuous, 5-15 mm long, obovate; stem terete or 6-angled.
11 Stem six-angled in cross-section; corolla conspicuously 2-lipped ..... ***Dicliptera***
11 Stem terete in cross-section; corolla 4-lobed, the lobes nearly equal ..... ***Yeatesia***

Andrographis Wallich (False Water-willow)

A genus of about 20 species of tropical Asia.

* *Andrographis echioides* (Linnaeus) Nees, native of India, is reported for chrome ore piles near Newport News, VA, by Reed (1961); it is likely not established in our area. [= K] {not keyed; not mapped; rejected as a component of our flora}

Avicennia Linnaeus (Black Mangrove)

A genus of 4-7 species, tropical. Of variable family placement, having been variously placed in the Acanthaceae, Verbenaceae, or Avicenniaceae.

Avicennia germinans (Linnaeus) Linnaeus, Black Mangrove. Brackish and salt marshes and swamps. Scattered on the Gulf Coast in FL peninsula (Dixie county southward on the west coast, St. Johns County southwards on the east coast), Panhandle FL (Franklin and Taylor counties), s. MS, s. LA, and se. TX, southwards into the West Indies and Tropical America. [= GW, K, WH; = *A. nitida* Jacquin – S]

Dicliptera Antoine Laurent de Jussieu (Dicliptera, Foldwing)

A genus of about 150 species, largely tropical, but extending into warm temperate regions. References: Wasshausen (1998)=Y; Long (1970)=Z.

1 Corolla tan to purplish-pink, 15-20 mm long, the tube straight or nearly so ..... ***D. brachiata***
1 Corolla scarlet red, 20-25 mm long, the tube curved..... ***D. sexangularis***

Dicliptera brachiata (Pursh) Sprengel, Dicliptera, Branched Foldwing. Bottomland forests. August-October. Se. VA south to c. peninsular FL, west to TX, and north in the interior to c. TN, s. IN, s. IL, MO, and se. KS. [= RAB, C, F, GW, K, WH, Y; = *Diapedium brachiatum* (Pursh) Kuntze – S; > *Dicliptera brachiata* var. *brachiata* – Z]

Dicliptera sexangularis (Linnaeus) de Jussieu, Six-angle Foldwing. Disturbed areas, hammocks. [= K, WH, Y; = *Diapedium assurgens* (Linnaeus) Kuntze – S; > *Dicliptera assurgens* (Linnaeus) de Jussieu var. *vahliana* (Nees) M. Gómez – Z]

Dyschoriste Nees (Twinflower, Snakeherb, Dyschoriste)

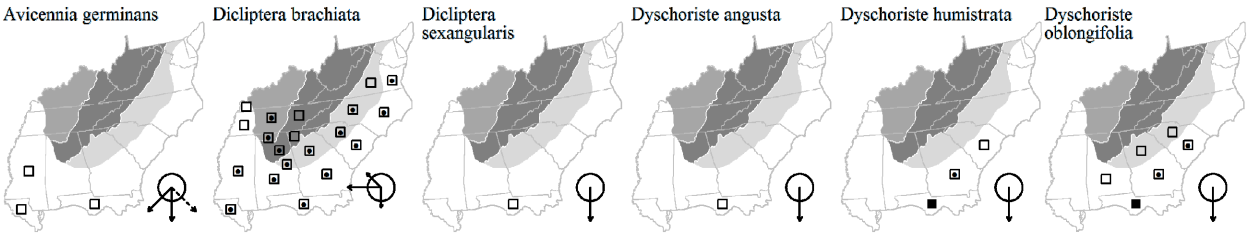
A genus of about 65 species, of tropical and warm temperate regions. References: Wasshausen (1998)=Y; Long (1970)=Z.

1 Corolla 25-27 mm long (including the 5-10 mm lobes); capsule 10-14 mm long; [of pinelands] ..... ***D. oblongifolia***
1 Corolla 10-15 mm long (including the 3-5 mm lobes); capsule 7-10 mm long
2 Leaves linear to linear-elliptic; [of moist pinelands]..... ***D. angusta***
2 Leaves elliptic to elliptic-ovate; [of floodplain forests] ..... ***D. humistrata***

Dyschoriste angusta (A. Gray) Small, Pineland Twinflower. Moist pinelands. N. FL south to s. peninsular FL. Reported for FL Panhandle (Wakulla County) by Kunzer et al. (2009). [= K, S, WH] {add GW, Y, Z to synonymy; improve key}

Dyschoriste humistrata (Michaux) Kuntze, Swamp Twinflower, Swamp Dyschoriste. Bottomland forests, especially on soils over limestone. April-May. SC to c. peninsular FL, west to e. Panhandle FL. [= RAB, GW, K, S, WH, Y, Z]

Dyschoriste oblongifolia (Michaux) Kuntze, Blue Twinflower, Pineland Dyschoriste. Pine savannas, flatwoods, and sandhills. April-May. SC to s. FL, west to se. AL and e. Panhandle FL. The basis of Small's (1933) attribution of this species to VA is unknown. [= RAB, K, S, WH, Y; > *Dyschoriste oblongifolia* var. *oblongifolia* – Z]



Elytraria Michaux (Elytraria)

A genus of about 17 species, of tropical and warm temperate regions of the Western and Eastern Hemispheres. The placement of this genus in the Acanthaceae is uncertain (McDade & Moody 1999, McDade et al. 2000). References: Long (1970)=Z; Ward (2004d)=Y.

Elytraria caroliniensis (J.F. Gmelin) Persoon *var.* ***caroliniensis***, Carolina Elytraria. Swamp forests over coquina limestone ("marl"). June-August. Var. *caroliniensis* ranges from se. SC south to c. peninsular FL, west to Panhandle FL and sw. GA. Var. *angustifolia* (Fernald) Blake is restricted to s. FL. Ward (2004d) also recognizes *E. caroliniensis* var. *vahliana* (Nees in A.P. de Candolle) D.B. Ward, in ne. and Panhandle FL, south to c. peninsular FL. [= K, Z; < *E. caroliniensis* – RAB, WH; = *E. carolinensis* var. *carolinensis* – GW, misspelling; = *Tubiflora carolinensis* J.F. Gmelin – S, misspelling; > *E. carolinensis* var. *carolinensis* – Y; > *E. caroliniensis* var. *vahliana* (Nees in A.P. de Candolle) D.B. Ward – Y]

Hygrophila R. Brown

A genus of about 25 species, of tropical regions. References: Wasshausen (1998)=Y; Les & Wunderlin (1981)=Z. Key based on Y.

1 Leaf blades 5-12 cm long; calyx segments ca. 5 mm long, glabrous; flowers borne in axillary clusters ..... ***H. lacustris***
1 Leaf blades 1-3.5 cm long; calyx segments ca. 2 mm long, pubescent; flowers borne in terminal and axillary spikes ..... ***H. polysperma***

Hygrophila lacustris (Schlectendahl & Chamisso) Nees, Gulf Swampweed. Shallow water of swamps and shores. Sw. GA south to c. FL Peninsula, west to e. TX; West Indies. [= GW, K, S, Y, Z; = *Hygrophila costata* Nees et al. – WH; = *Ruellia lacustris* Schlectendahl & Chamisso]

* ***Hygrophila polysperma*** (Roxburgh) T. Anderson, East Indian Swampweed. Lakes, rivers, canals; established in AL and FL, doubtfully established in VA, native of the East Indies. Grown for the aquarium trade, and sporadically introduced to bodies of water, apparently well-established in FL (Les & Wunderlin 1981). [= GW (footnote), K, WH, Y, Z]

Justicia Linnaeus (Water-willow)

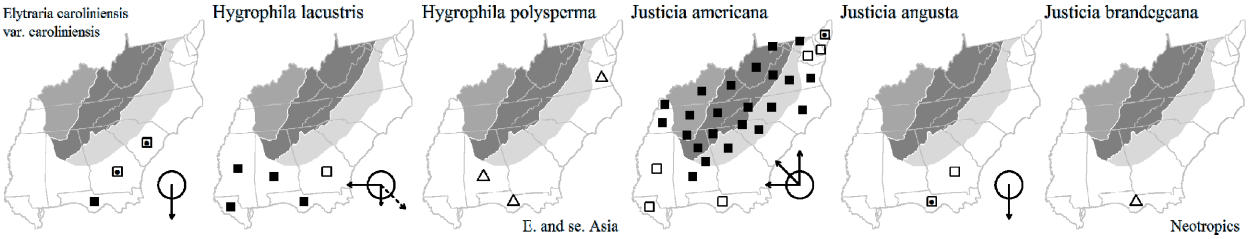
A genus of about 600 species, herbs and shrubs of the tropics and warm temperate North America. References: Wasshausen (1998)=Y; Long (1970)=Z. Key based in part on Y.

1 Bracts of the inflorescence foliaceous and overlapping ..... ***J. brandegeana***
1 Bracts of the inflorescence small, neither foliaceous nor overlapping.
  2 Spike densely flowered; seeds verrucose; primary leaves averaging 6-8× as long as wide; [of the Piedmont, Mountains, and Coastal Plain]. ..... ***J. americana***
  2 Spike loosely flowered; seeds smooth or minutely muricate (with very fine, sharp projections); primary leaves **either** ca. 2-6× as long as wide **or** > 8× as long as wide; [of the Coastal Plain].
    3 Corolla purple, 18-30 mm long; leaves averaging > 8× as long as wide; cystoliths parallel to the midvein of the leaf; [of s. GA south into FL].
      4 Upper leaf blades 4-7 cm long, not channeled, tough but not fleshy; calyx segments 5-7 mm long, < 1 mm wide ..... ***J. angusta***
      4 Upper leaf blades 8-13.5 cm long, channeled, fleshy; calyx segments 11-15 mm long, ca. 1 mm wide..... ***J. crassifolia***
    3 Corolla pale lavender to white, 8-13 mm long; leaves averaging 2-6× as long as wide; cystoliths parallel to the secondary veins of the leaf; [of the Coastal Plain throughout our area].
      5 Spikes lax, the flowers usually borne singly, secund; seeds smooth; leaves averaging ca. 5× as long as wide ..... ***J. ovata*** *var.* ***lanceolata***
      5 Spikes somewhat congested, the flowers borne in opposite pairs; seeds minutely muricate (with very fine, sharp projections); leaves averaging ca. 3× as long as wide ..... ***J. ovata*** *var.* ***ovata***

Justicia americana (Linnaeus) Vahl, American Water-willow. River and stream beds, in shallow water, often rooted in rocky shallows. June-October. W. QC west to MI and NE, south to sw. GA, Panhandle FL, and s. TX. [= RAB, C, GW, K, W, WH, WV, Y, Z; > *J. americana* var. *americana* – F, G; > *J. americana* var. *subcoriacea* Fernald – F, G; > *J. mortuifluminis* Fernald – F; = *Dianthera americana* Linnaeus – S]

Justicia angusta (Chapman) Small, Pineland Water-willow, Narrowleaf Water-willow. Pond-cypress depressions, roadside ditches, savannas. Se. GA (Camden and Charlton counties) (Sorrie 1998b; Carter, Baker, & Morris 2009) south to s. FL. [= K, WH, Y; < *J. ovata* – GW; < *J. crassifolia* (Chapman) Chapman ex Small – S; = *J. ovata* (Walter) Lindau var. *angusta* (Chapman) R.W. Long – Z]

Justicia brandegeana Wasshausen, Shrimp-plant. Disturbed areas; native of Mexico. January-December. [= K2, WH]



Justicia crassifolia (Chapman) Chapman ex Small. Flatwoods, cypress ponds. S. GA to the FL Panhandle. [= GW, K, WH, Y; < *J. crassifolia* – S]

Justicia ovata (Walter) Lindau *var.* ***lanceolata*** (Chapman) R.W. Long. Swamps, marshes. May. Se. GA west to TX, north in the Mississippi Embayment to s. IL, s. IN, w. KY. Needs additional study; may warrant specific status. [= K, WH, Y, Z; < *J. ovata* – GW; = *J. lanceolata* (Chapman) Small – S]

Justicia ovata (Walter) Lindau *var.* ***ovata***, Coastal Plain Water-willow, Loose-flower Water-willow. Swamps, marshes. May-July. S. VA south to c. peninsular FL, Panhandle FL, and se. AL. [= C, K, WH, Y, Z; < *J. ovata* – RAB, F, GW; *? J. humilis* Michaux var. *humilis* – G; = *J. ovata* (Walter) Lindau – S]

Pseuderanthemum Radlk.

A genus of about 60 species, mostly shrubs, of tropical regions.

* ***Pseuderanthemum variabile*** (R. Brown) Radlkofer, Night-and-Afternoon. Disturbed areas, also in potted plants and greenhouses; native of the Old World. Reported as a greenhouse weed from SC (Nelson & Kelly 1997), but not included as a regular member of the flora of SC because "it is unlikely that it could persist anywhere in South Carolina outside a greenhouse environment" (Nelson & Kelly 1997). [= K, Y; ? *Ps. fasciculatum* (Oerst.) Leonard – WH]

Ruellia Linnaeus (Wild-petunia)

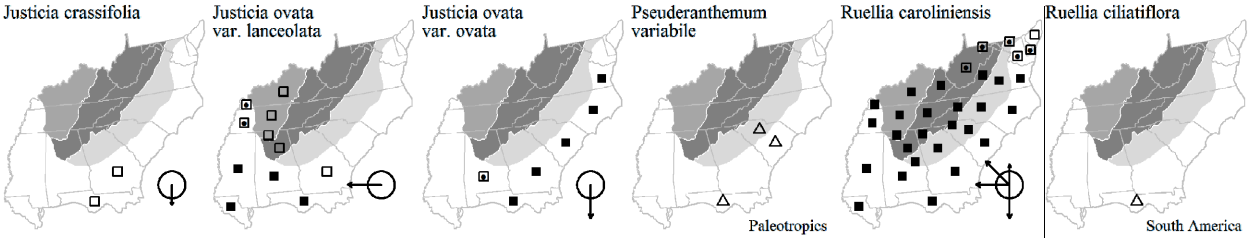
A genus of about ca. 300 species, of the tropics and temperate North America (E. Tripp, pers. comm., 2009). References: Ward (2007c)=X; Wasshausen (1998)=Y; Long (1970)=Z; Ezcurra & Daniel (2007)=Q; Fernald (1945)=V.

1 Principal leaves linear-lanceolate, > 10× as long as wide (8-27 cm long, 0.7-2 cm wide); [alien, cultivated and naturalized] ..... ***R. simplex***
1 Principal leaves elliptic, ovate or broadly lanceolate, 2-5 × as long as wide (2-16 cm long, 0.5-7 cm broad); [native].
  2 Calyx lobes narrowly linear-lanceolate, flattened to the tip, 1-4 mm wide ..... ***R. strepens***
  2 Calyx lobes linear, filiform or setaceous at least apically, < 1.2 mm wide at their widest point (usually the base), hairlike at the tip.
    3 Corolla 6-10 cm long, opening at night and withering by mid-morning, white to pale lavender; calyx lobes 2.5-4.5 cm long; [of Coastal Plain seepage bogs and wet pine flatwoods] ..... ***R. noctiflora***
    3 Corolla 3-7 cm long, opening during the day, lavender to lavender-blue (rarely white in *R. humilis*); calyx lobes 1-3 cm long; [of various habitats].
      4 Flowers borne on peduncles 0.2-7 cm long, from the axils of lower and median nodes, not from the terminal node or terminal cluster.
        5 Stem divergently branched (rarely simple); calyx glabrous or glabrate, with many partially imbedded cystoliths; calyx lobes 0.5-1 mm wide, tapering from the base to a very slender tip; [of dry to wet pine woodlands of the Coastal Plain] ..... ***R. pinetorum***
        5 Stem simple (rarely with a few ascending branches); calyx pubescent, without cystoliths; calyx lobes 0.7-1.2 mm wide, widest near the middle and tapering to the apex; [of dry woodlands, forests, and glades of the Piedmont and Mountains] ..... ***R. purshiana***
      4 Flowers sessile or subsessile, in the axils of median and upper nodes, and usually also from the terminal node or cluster.
        6 Leaves sessile or subsessile; flower-bearing nodes usually 4-8; stem typically branched at base; stigma lobe 1 ..... ***R. humilis***
        6 Leaves petioled; flower-bearing nodes usually 1-3; stem typically simple below (unless damaged), sometimes branched upward; stigma lobes (1-) 2.
          7 Plant with all leaves caulescent; leaves ovate, lanceolate, elliptic, or oblong; [widespread in our area] ..... ***R. caroliniensis***
          7 Plant with a rosette of purplish basal leaves, flat on the ground; leaves spatulate to obovate; [restricted to dry pinelands in the Coastal Plain] ..... ***R. ciliosa*** *var.* ***ciliosa***

Ruellia caroliniensis (J.F. Gmelin) Steudel, Carolina Wild-petunia, Common Wild-petunia. Dry to moist forests and woodlands. (May-) June-September. NJ, s. OH, s. IN, s. IL, and OK, south to s. FL and e. TX. [= RAB, C, G, WH, X; > *R.*

caroliniensis var. *caroliniensis* – F; > *R. caroliniensis* var. *typica* – V; > *R. caroliniensis* var. *cheloniformis* Fernald – F, V; > *R. caroliniensis* var. *dentata* (Nees) Fernald – F, V, WV; > *R. caroliniensis* var. *membranacea* Fernald – F, V, WV; > *R. caroliniensis* var. *nanella* Fernald – F, V; > *R. caroliniensis* var. *salicina* Fernald – F, V; > *R. caroliniensis* var. *semicalva* Fernald – F, V; = *R. caroliniensis* ssp. *caroliniensis* var. *caroliniensis* – K, Y, Z; ? *R. parviflora* (Nees) Britton – S; < *R. caroliniensis* – W (also see *R. ciliosa*)]

* ***Ruellia ciliatiflora*** Hooker, Hairyflower Wild-petunia. Disturbed areas; native of South America. [= K2, WH] {not yet keyed; add to synonymy}



Ruellia ciliosa Pursh *var.* ***ciliosa***, Sandhills Wild-petunia. Sandhills, particularly in loamy, submesic swales. May-September. Sc. NC south to c. peninsular FL, west to se. LA. Although treated as only subspecifically distinct from *R. caroliniensis* by many recent authors, there seem ample differences in morphology, distribution, and habitat to warrant specific distinction. Var. *cinerascens* Fernald of the FL Panhandle needs additional assessment. [< *R. ciliosa* – RAB, S, WH, X; = *R. caroliniensis* (J.F. Gmelin) Steudel ssp. *ciliosa* (Pursh) R.W. Long var. *cinerascens* (Fernald) Kartesz & Gandhi – K; = *R. caroliniensis* ssp. *ciliosa* var. *ciliosa* – Y, Z; < *R. caroliniensis* – W; > *R. ciliosa* var. *cinerascens* Fernald – V; > *R. ciliosa* var. *typica* – V]

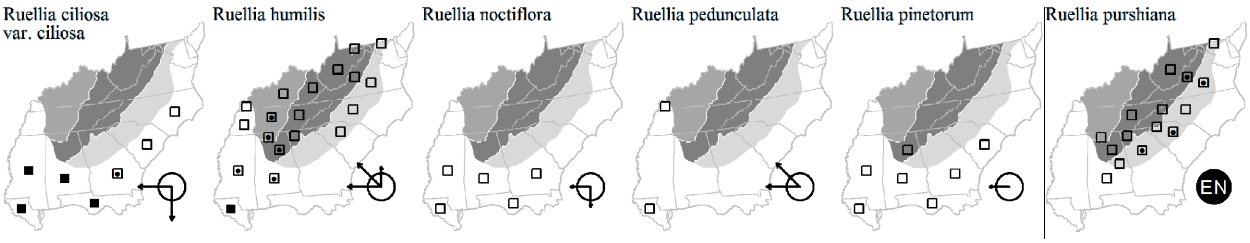
Ruellia humilis Nuttall, Low Wild-petunia, Hairy Wild-petunia. Calcareous or mafic glades and woodlands. May-September. S. PA west to se. MN and e. NE, south to c. NC, c. AL, s. MS, s. LA, and c. and s. TX. Piedmont plants of NC are uniformly white-flowered. [= RAB, K, W, WV, Y, Z; > *R. humilis* var. *calvescens* Fernald – C, F, G, V; > *R. humilis* var. *frondosa* Fernald – F, G, V; > *R. humilis* var. *humilis* – C, F, G; > *R. humilis* var. *typica* – V; > *R. humilis* var. *longiflora* A. Gray – V; > *R. humilis* var. *frondosa* Fernald – V; > *R. humilis* var. *expansa* Fernald – F]

Ruellia noctiflora (Nees) A. Gray, Night-flowering Wild-petunia. Wet pinelands and savannas. (May-) June-July (-August). E. GA (in counties immediately adjacent to SC) south to ne. FL; Panhandle FL west to se. LA. [= GW, K, S, WH,X, Y, Z]

Ruellia pedunculata Torrey ex A. Gray, Stalked Wild-petunia. Dry woodlands and forests. IL and MO south to w. LA and e. TX, apparently not in our area. [= F; < *R. pedunculata* – C, G; = *R. pedunculata* ssp. *pedunculata* – K, Y, Z] {not yet keyed}

Ruellia pinetorum Fernald, Pineland Wild-petunia. Dry to wet pinelands. May-September. SC south to Panhandle FL, west to e. TX. Although treated as only subspecifically distinct from *R. pedunculata* by many recent authors, there seem ample differences in morphology, distribution, and habitat to warrant specific distinction. First reported for GA by Sorrie (1998b). [= RAB, F, X; = *R. pedunculata* Torrey ex A. Gray ssp. *pinetorum* (Fernald) R.W. Long – K, WH, Y, Z]

Ruellia purshiana Fernald, Pursh's Wild-petunia. Dry woodlands and forests, especially over mafic or calcareous rocks. May-(June). MD south to c. GA and c. AL, in and adjacent to the Appalachians. [= RAB, F, K, W, WV, Y, Z; < *R. pedunculata* Torrey ex A. Gray – C, G]



* ***Ruellia simplex*** C. Wright in Sauvalle, Mexican Bluebell. Commonly cultivated, especially in maritime situations along the south Atlantic and Gulf coasts, disturbed areas; native of e. Mexico. May-September. [= Q; = *R. brittoniana* Leonard – RAB, GW, X, Z = *R. coerulea* Morong – Y; = *R. tweediana* Grisebach – WH; = *R. caerulea* – K, orthographic variant; = *R. malacosperma* Greenman – S]

Ruellia strepens Linnaeus, Limestone Wild-petunia. Calcareous forests. May-September. NJ west to OH and IA, south to se. and sc. NC, e. SC, AL, and TX. [= RAB, C, F, G, K, S, W, WV, Y, Z]

Stenandrium Nees

A genus of about 25 species, of tropical to warm temperate New World. References: Wasshausen (1998)=Y; Long (1970)=Z.

Stenandrium dulce (Cavanilles) Nees *var.* ***dulce***, Sweet Shaggytuft. Pine savannas. GA to FL. Var. *dulce* ranges from GA south to FL; var. *floridanum* A. Gray is restricted to s. peninsular FL. [= K, Y; < *Gerardia floridana* (A. Gray) Small – S; < *S. dulce* – WH; < *S. dulce* var. *floridanum* A. Gray – Z]

Thunbergia Retzius (Clock-vine)

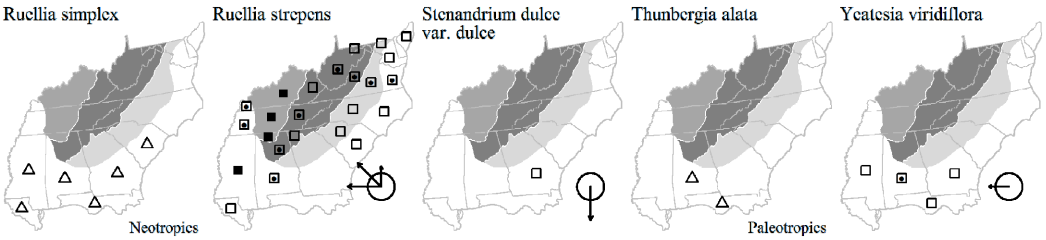
A genus of 100-200 species, of the Old World tropics. References: Wasshausen (1998)=Y; Long (1970)=Z.

* ***Thunbergia alata*** Bojer ex Sims, Black-eyed-Susan Vine. Disturbed areas; native of Africa. [= K, S, WH, Y, Z]

Yeatesia Small (Bractspike)

A genus of 3-4 species, of warm temperate to tropical areas, se. United States to ne. Mexico. References: Wasshausen (1998)=Y; Long (1970)=Z.

Yeatesia viridiflora (Nees) Small, Yellow bract-spike. Rich bottomlands. Sw. GA (Jones & Coile 1988) and Panhandle FL west to TX (Kartesz 1999). See Sorrie & LeBlond (2008) for additional distributional information. [= K, S, WH, Y; = *Dicliptera viridiflora* (Nees) R.W. Long – Z; *Dicliptera halei* Riddell]



379. BIGNONIACEAE A.L. de Jussieu 1789 (Bignonia Family) [in LAMIALES]

A family of about 110 genera and 800 species, trees, shrubs, and lianas, mainly tropical and especially of South America. The monophyly of the Bignoniaceae (excluding *Paulownia*) was confirmed by Spangler & Olmstead (1999). References: Manning (2000)=Z; Spangler & Olmstead (1999); Fischer, Theisen, & Lohmann in Kubitzki (2004).

1 Leaves simple, cordate; plant a tree; corolla white (marked internally with other colors); [tribe *Tecomeae*]..... ***1. Catalpa***
1 Leaves pinnately compound; plant a vine; corolla reddish or yellowish.
  2 Leaves 7-15-foliolate, with a leaflet in the terminal position; [tribe *Tecomeae*]..... ***2. Campsis***
  2 Leaves 2-foliolate, with a 3-branched tendril in the terminal position; [tribe *Bignonieae*].
    3 Tendrils not hooked, claw-like..... ***3. Bignonia***
    3 Tendrils hooked, claw-like..... ***4. Macfadyena***

1. Catalpa Scopoli 1777 (Catalpa)

A genus of about 10 species, trees, of e. North America (2 species), e. Asia (4 species), and the West Indies (4 species). References: Manning (2000)=Z; Paclt (1952)=Y; Li (2008); Fischer, Theisen, & Lohmann in Kubitzki (2004).

1 Flowers creamy yellow, striped inside with deeper yellow and spotted with dark violet; leaves usually lobed; seeds elliptical, 2.5-3 mm long, 8-10 mm wide..... ***C. ovata***
1 Flowers white or pale rose, striped inside with yellow and spotted with purple; leaves rarely lobed; seeds elongate, 4-10 mm long, 20-35 mm wide.
  2 Corolla 2-4 cm wide, the lower corolla lobe densely spotted with purple, entire; pod 6-10 mm thick, each valve 9-15 mm wide when flattened; seeds with 2 elongated wings, each wing narrowing to an acutish end, the hairs at the end appressed to one another in 2 planes, thus forming a pointed tail; fresh foliage with a fetid odor..... ***C. bignonioides***
  2 Corolla 4-6 cm wide, the lower corolla lobe sparsely spotted with purple, notched; pod 10-15 mm thick, each valve 13-18 mm wide when flattened; seeds with 2 elongated wings, each wing narrowing only slightly to a rounded or oblique end, the hairs at the end appressed to one another only in one plane, thus forming a flattish fringe; fresh foliage essentially odorless ..... ***C. speciosa***

Catalpa bignonioides Walter, Southern Catalpa. Bottomlands and streambanks (as a native), escaped or persistent after cultivation. June; October. S. GA, ne. FL, n. peninsular FL, and Panhandle FL west to s. MS (or LA?), on the Coastal Plain, early naturalized in a more widespread area, and now extending north to CT and MI. [= RAB, C, F, G, GW, K, W, WH, Z; = *C. catalpa* (Linnaeus) Karsten – S]

* ***Catalpa ovata*** G. Don, Chinese Catalpa. Suburban woodlands; native of China. Introduced in WV, MD, DC, PA, and other northeastern states (Manning 2000; Kartesz 1999), and beginning to be considered invasive. [= C, F, G, K, Z; > *C. ovata* var. *ovata* – Y; > *C. ovata* var. *flavescens* Bean – Y]

Catalpa speciosa (Warder) Warder ex Engelmann, Northern Catalpa. Bottomlands and river banks (as a native), also escaped or persistent after cultivation, and sometimes thoroughly naturalized. May-June; July-August. Native in the upper Mississippi River Embayment of s. IN and s. IL, south to w. TN and e. AR; early naturalized in a more widespread area. [= RAB, C, F, G, K, S, W, Z]

2. Campsis Loureiro 1790 (Trumpet-creeper)

The only other species in the genus is the e. Asian *C. grandiflora* (Thunberg) K. Schumann. Wen & Jansen (1995) estimated the age since divergence to be 24.4 million years, based on molecular divergence. References: Manning (2000)=Z; Wen & Jansen (1995); Fischer, Theisen, & Lohmann in Kubitzki (2004).

Campsis radicans (Linnaeus) Seemann ex Bureau, Trumpet-creeper. Bottomland forests, swamp forests, fencerows, old fields, forests, thickets, disturbed areas. June-July; September-October. NJ west to IA, south to s. FL and c. TX. In the pre-Columbian landscape this plant was primarily limited to swamps and bottomlands; it has done well as a weedy colonizer of abandoned farmland, fencerows, and thickets (where particularly conspicuous on fenceposts and old tobacco barns). In swamps of the Coastal Plain it is a common liana, often with its foliage in the canopy 30-40 m above the ground, and with stems to 15 cm in diameter. Even when the foliage cannot be seen, *Campsis* is immediately recognizable by its shreddy tan or yellow bark (unlike any of our other high-climbing vines). [= RAB, C, F, G, GW, K, W, WH, Z; = *Bignonia radicans* Linnaeus – S]

3. Bignonia Linnaeus 1753 (Cross-vine)

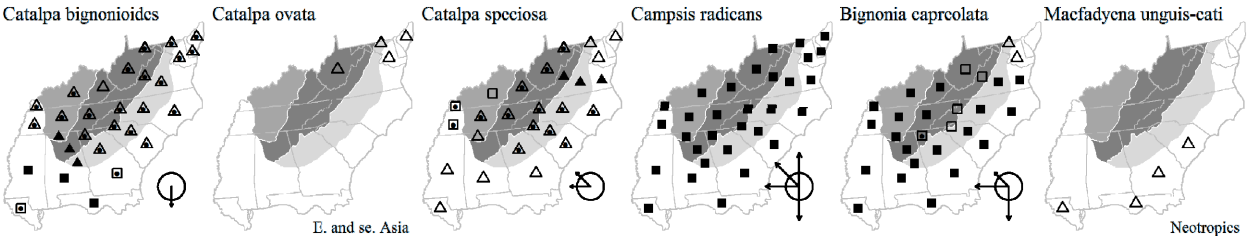
A monotypic genus, a woody vine, of Southeastern North America. References: Manning (2000)=Z; Fischer, Theisen, & Lohmann in Kubitzki (2004).

Bignonia capreolata Linnaeus, Cross-vine. Swamp forests, bottomlands, forests, woodlands. April-May; July-August. MD west to s. OH and s. MO, south to c. peninsular FL and e. TX. This species is absent from most of the Mountains in our area (also scarce in the Piedmont of Virginia and upper Piedmont of NC), reappearing at lower elevations on the west side of the Blue Ridge. Though primarily a species of swamp and bottomland forests, *Bignonia* often occurs as well in mesic or even dry forests, where it generally remains stunted (most individuals with only a few leaves) and does not flower or fruit. [= C, F, GW, K, W, WH, Z; = *Anisostichus capreolata* (Linnaeus) Bureau – RAB, G; = *Anisostichus crucigera* (Linnaeus) Bureau – S]

4. Macfadyena Alphonse de Candolle 1845 (Claw-vine)

A genus of 3-4 species, woody vines, of Mexico and the West Indies south through Central America to northern South America. References: Manning (2000)=Z; Fischer, Theisen, & Lohmann in Kubitzki (2004).

* ***Macfadyena unguis-cati*** (Linnaeus) A.H. Gentry, Claw-vine, Cat's-claw-vine. Cultivated and naturalized; native of tropical America. This vine is introduced and naturalized in s. and e. GA (Jones & Coile 1988) and is locally commonly naturalized in Charleston. [= K, WH, Z; = *Bignonia unguis-cati* Linnaeus]



382. VERBENACEAE J. St.-Hilaire 1805 (Verbena Family) [in LAMIALES]

As recently reworked, a family of about 34-41 genera and 950-1200 species, trees, shrubs, vines, and herbs, widespread in tropical, subtropical, and warm temperate regions of the Old World and New World. References: Atkins in Kadereit (2004). [also see *LAMIACEAE* and *PHRYMACEAE*]

1 Shrubs; fruits fleshy; [tribe *Lantaneae*] ..... ***Lantana***
1 Herbs; fruits dry.
  2 Mericarps 2; corolla 4-lobed, evidently zygomorphic (bilabiate); [tribe *Lantaneae*] ..... ***Phyla***
  2 Mericarps 4; corolla 5-lobed, actinomorphic or only weakly irregular; [tribe *Verbeneae*].
    3 Mericarps not separating at maturity; [sandy woodlands of the Coastal Plain] ..... ***Stylodon***
    3 Mericarps separating at maturity; [collectively widespread].
      4 Styles > 6 mm long; calyx 8-10 mm long, longer than the fruit; corolla salverform ..... ***Glandularia***
      4 Styles < 3 mm long; calyx 2-4 mm long, often shorter than the fruit; corolla funnelform ..... ***Verbena***

Aloysia Palau 1784 (Bee-brush)

A genus of about 30 species, shrubs, of tropical and subtropical America. References: Atkins in Kadereit (2004).

* *Aloysia triphylla* (L'Héritier) Britton, Lemon Bee-brush, is allegedly introduced in Iredell County, in the Piedmont of NC (Moldenke 1980); the documentation is unknown and the record rejected. [= K] {not keyed; not mapped}

Glandularia J.F. Gmelin 1796 (Vervain)

A genus of about 100 species, herbs, of s. North America, Central America, and South America. References: Umber (1979)=Z; Atkins in Kadereit (2004).

1 Leaves finely dissected, the divisions 1 mm or less wide, the margins strongly revolute.
  2 Bracts as long as or longer than the calyx; leaf segments 1-4 mm wide ..... ***G. bipinnatifida*** *var.* ***bipinnatifida***
  2 Bracts much shorter than the calyx; leaf segments 0.5-1.5 mm wide ..... ***G. pulchella***
1 Leaves coarsely dissected or lobed, the divisions > 1 mm wide, the margins slightly or not at all revolute.
  3 Calyx lobes > 3 mm long ..... ***G. canadensis***
  3 Calyx lobes < 3 mm long ..... ***G. ×hybrida***

Glandularia bipinnatifida (Nuttall) Nuttall *var.* ***bipinnatifida***, Dakota Vervain. Cp (GA), Mt (GA): dry prairies on clay soils; rare. KY, MO, SD, and CO south to c. GA, AL, AZ and s. Mexico; elsewhere in e. North America as waifs. [= K; = *Verbena bipinnatifida* Nuttall – C] {synonymy incomplete}

Glandularia canadensis (Linnaeus) Nuttall, Rose Vervain, Rose Verbena, Creeping Vervain. Cp (GA, NC, SC, VA), Pd (GA, NC, SC), Mt* (WV*): roadsides, sandhills, other dry (especially sandy) soils; uncommon. March-May. PA, IL, and CO, south to FL and TX, and introduced elsewhere. [= K, S, Z; = *Verbena canadensis* Linnaeus – RAB, C, F, G]

* ***Glandularia ×hybrida*** (Grönland & Rümpler) Nesom & Pruski, Garden Vervain. Cp (SC): cultivated in gardens; uncommonly cultivated, rarely escaped or persistent. March-July. Nesom & Pruski (1992) have provided the transfer to *Glandularia* of this common garden plant. [= *Verbena ×hybrida* Grönland & Rümpler – RAB, G, K; = *Verbena hybrida* – C]

* ***Glandularia pulchella*** (Sweet) Troncoso, Moss Vervain, South American Vervain. Cp (GA, NC, SC), Pd (GA, SC): pastures, roadsides, other disturbed areas; common, native of South America. March-November. [= K, Z; = *Verbena tenuisecta* Briquet – RAB, C; = *G. tenuisecta* (Briquet) Small – S]

Lantana Linnaeus 1753 (Lantana)

A genus of about 150 species, shrubs and subshrubs, of tropical and subtropical America and Africa. References: Sanders (1987)=Z; Sanders (2006)=Y; Atkins in Kadereit (2004).

1 Heads with an involucre; flowers pink or purple ..... ***L. montevidensis***
1 Heads with bracts, but not an involucre; flowers orange, yellow, or multicolored.
  2 Stems lacking prickles ..... ***L. depressa*** *var.* ***floridana***
  2 Stems with scattered retrorse prickles.
    3 Calyx lobes acute, as long as or longer than the calyx tube ..... ***L. camara***
    3 Calyx lobes obtuse, shorter than the calyx tube ..... ***L. urticoides***

* ***Lantana camara*** Linnaeus, Common Lantana, Hedgeflower. Cp (FL, GA, NC, SC): disturbed areas, especially near the coast; rare, native of the West Indies. [= RAB, K, S, Z]

Lantana depressa Small *var.* ***floridana*** (Moldenke) R. Sanders, Florida Lantana. Cp (FL, SC*?): edges of brackish marshes, dunes; rare, the SC occurrence apparently introduced from FL. Native from ne. FL south to se. FL. [= K, Z; < *L. ovatifolia* Britton – RAB, S, misapplied; < *L. depressa* Small – S]

* ***Lantana montevidensis*** (Sprengel) Briquet, Trailing Shrub-verbena, Polecat-geranium. Cp (FL, GA): disturbed areas; rare, native of South America. Scattered locations in s. and e. GA (Jones & Coile 1988). [= K; = *L. sellowiana* Link & Otto – S]

* ***Lantana urticoides*** Hayek, West Indian Lantana. Cp (NC, SC): disturbed and brackish areas; rare, native of West Indies. May-December. [= K; < *L. horrida* Kunth – RAB, misapplied]

Phyla Loureiro 1790 (Frogfruit)

A genus of about 11-15 species, herbs, of tropical, subtropical, and warm temperate regions of the Old and New Worlds. References: Atkins in Kadereit (2004).

1 Leaves 2-6 cm long, lanceolate, widest at or below the middle, acute at the tip; leaf teeth (5-) 7-11 per leaf side ..... ***P. lanceolata***
1 Leaves 1-4 cm long, obovate, widest above the middle, obtuse to rounded at the tip; leaf teeth (3-) 5 (-7) per leaf side ..... ***P. nodiflora***

Phyla lanceolata (Michaux) Greene, Marsh Frogfruit, Northern Frogfruit. Cp (DE, FL, GA, NC, SC, VA), Pd (VA), Mt (VA, WV): brackish marshes, other marshes, ditches; common (rare in DE, FL, GA, and WV). June-November. ON west to SD, south to Panhandle FL, AL, MS, LA, CA, and n. Mexico; primarily in the outer Coastal Plain in the Carolinas, but extending inland in VA. [= C, G, GW, K, S, W, WH; = *Lippia lanceolata* Michaux – RAB, WV; > *L. lanceolata* var. *lanceolata* – F; > *Lippia lanceolata* var. *recognita* Fernald & Griscom – F]

Phyla nodiflora (Linnaeus) Greene, Creeping Frogfruit, Capeweed, Turkey-tangle, Matgrass. Cp (FL, GA, NC, SC, VA): sandy soils of roadsides, lawns, ditches, disturbed areas; common (rare in VA). May-November. Pantropical, in North America from se. VA south to s. FL and west to CA, north in the interior to AR, se. MO, and southward into the tropics. This species is very weedy, and is a familiar component of road margins and lawns in the southeastern Coastal Plain. [= C, G, GW, K, S, WH; = *Lippia nodiflora* (Linnaeus) Michaux – RAB, F]

Verbena Linnaeus 1753 (Verbena, Vervain)

A genus of about 70 species, herbs, of tropical, subtropical, and warm temperate regions of the New World and (rarely) Old World. Infrageneric taxonomy follows Neson (2010b). References: Nesom (2010b)=X; Nesom (2010c)=V; Nesom (2010d)=U; Barber (1982)=Z; O'Leary, Múlgara, & Morrone (2007)=Y; Atkins in Kadereit (2004). Key based in part on V. [also see *Glandularia* and *Stylodon*]

1 Spikes short and stout, the flowers or fruits overlapping and completely obscuring all of the rachis (except in *V. montevidensis*, the fruits spaced towards the base of the spike).
- 2 Plant procumbent or decumbent; leaves pinnately lobed or dissected; [section *Verbena*, series *Bracteatae*] ... ***V. bracteata***
- 2 Plant erect; leaves coarsely serrate.
  - 3 Leaves basally attenuate to short-petiolate.
    - 4 Central spikes sessile to subsessile, spikes compact, 3-5 mm wide, fruits remaining densely overlapping at maturity; [section *Verbenaca*, series *Pachystachyae*] ... ***V. brasiliensis***
    - 4 Central spikes pedunculate, spikes loose, 2-3 mm wide, with fruits becoming remote at least in the proximal portion at maturity' section *Verbenaca*, series *Litorales*] ... ***[V. montevidensis]***
  - 3 Leaves basally clasping to subclasping; [section *Verbenaca*, series *Pachystachyae*].
    - 5 Corolla tube > 10 mm long ... ***V. rigida***
    - 5 Corolla tube 2.5-6 (-7) mm long.
      - 6 Corolla tube 4-6 (-7) mm, 1.5-2 mm longer than the calyx; distal stems, peduncles, and calyces stipitate-glandular; spikes 8-30 mm in fruit; floral bracts 2.1-2.8 mm; nutlets 1.5-1.9 mm; basal and midstem leaves oblong-lanceolate to oblong-oblanceolate ... ***V. bonariensis***
      - 6 Corolla tube 2.5-4 mm, 0-0.5 mm longer than the calyx; stems, peduncles, and calyces eglandular; spikes 6-55 mm in fruit; floral bracts 3-4 mm; nutlets 1-1.2 (-1.4) mm; basal and midstem leaves ovate to ovate-lanceolate, oblong-elliptic, or obovate ... ***V. incompta***

1 Spikes elongate, the flowers or fruits well-spaced and not obscuring the rachis.
- 7 Leaves mostly lobed or dissected.
  - 8 Plants much branched at base, stems decumbent to ascending; leaves 1-5 cm long; [section *Verbena*, series *Tricesimae*] ... ***[V. canescens]***
  - 8 Plants little branched, stems erect; leaves 3-12 cm long.
    - 9 Bractlets about as long as the calyx; [AL westward]; [section *Verbena*, series *Candelabrae*] ... ***[V. xutha]***
    - 9 Bractlets about ½ as ong as the calyx; [collectively widespread].
      - 10 Basal and lower cauline leaves persistent, relatively thick, large and spatulate, margins revolute, cauline leaves quickly reduced in size distally and becoming linear-entire; rachis and calyces eglandular; [section *Verbena*, series *Haleae*] ... ***V. halei***
      - 10 Basal leaves usually deciduous, relatively thin, margins not revolute, cauline leaves relatively even-sized upwards or largest near midstem; rachis and calyces stipitate-glandular, sometimes sparsely so; [section *Verbena*, series *Verbena*] ... ***V. officinalis***
- 7 Leaves not lobed or dissected, or some of the leaves lower on the stem 3-lobed.
  - 11 Stem leaves sessile or subsessile, cuneate to base.
    - 12 Leaves linear to narrowly oblancolate, < 1.5 cm wide, > 6× as long as wide; [section *Verbena*, series *Simplices*] ... ***V. simplex***
    - 12 Leaves ovate, 2-4 cm wide, < 4× as long as wide
      - 13 Mericarps tightly adhering in fruit, appearing as one; calyx lobes curved inward in fruit; corolla pink to pinkish lavender; [section *Verbena*, series *Connaticarpae*] ... ***V. carnea***
      - 13 Mericarps separate in fruit; calyx lobes erect to divergent in fruit; corolla blue to violet; [section *Verbena*, series *Candelabrae*] ... ***V. stricta***
  - 11 Stem leaves with well-developed petioles.
    - 14 Flowers and fruits distinctly overlapping in the upper part of the spikes; [section *Verbena*, series *Candelabrae*] ... ***V. hastata***
    - 14 Flowers and fruits well-spaced throughout the inflorescence; [section *Verbena*, series *Leptostachyae*].
      - 15 Upper leaf surfaces densely scabrous or hispidulous to hispid or hispid-hirsute; calyx lobes triangular, connivent; corollas mostly pinkish to bluish, lavender, or purple; nutlet outer surfaces deeply ridged and grooved, often with prominent cross-ridges, commisural faces consistently densely silver-white minutely papillate-bullate; fibrous-rooted ... ***V. scabra***
      - 15 Upper leaf surfaces hirsutulous to hirsute or strigose-hirsute; calyx lobes deltate-subulate, not connivent or subconnivent; corollas white, rarely pinkish; nutlet outer surfaces smooth to longitudinally ridged, sometimes with cross-ridges distally, commisural faces smooth or rarely with slight development of minutely bullate ornamentation; taprooted ... ***V. urticifolia***

* ***Verbena bonariensis*** Linnaeus. Cp (GA, NC, SC): roadsides, disturbed areas, old fields; common, native of South America. May-October. [= V, X; < *V. bonariensis* – RAB, C, G, GW, S, WH (also see *V. incompta*) ; = *V. bonariensis* var. *conglomerata* Briquet – K]

* ***Verbena bracteata*** Lagasca & Rodriguez, Prostrate Vervain, Big-bracted Vervain. Cp (FL, GA, NC, SC, VA), Pd (GA, NC), Mt (NC, WV): disturbed areas, waste areas near wool-combing mills; rare. June-October. The original distribution uncertain, now distributed from ME west to BC, south to FL and Mexico, but apparently native of mw. and w. North America. [= RAB, C, F, G, K, WH, WV, X, Z; = *V. bracteosa* Michaux – S]

* ***Verbena brasiliensis*** da Conceição Vellozo, Brazilian Vervain. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC): roadsides, disturbed areas, old fields; common (uncommon in Piedmont), native of South America. May-October. [= RAB, C, F, G, GW, K, S, WH, V, X; = *V. litoralis* Kunth var. *brevibracteata* (Kuntze) N. O'Leary – Y]

Verbena carnea Medikus, Carolina-vervain. Cp (FL, GA, NC, SC, VA?): sandy woodlands, sandhills; uncommon. April-July. E. NC (se. VA?) south to c. peninsular FL, west to e. TX. Sometimes placed in a monotypic genus, *Stylodon* Rafinesque, but apparently evolved from within *Verbena*. See discussion in Nesom (2010b, 2010e). [= RAB, F; = *Stylodon carneus* (Medikus) Moldenke – K; = *Stylodon carolinensis* (Walter) Small – S; = *Stylodon carneum* – WH, orthographic variant; = *Verbena caroliniana* Michaux]

Verbena halei Small, Texas Vervain. Cp (FL, GA, NC*, SC*): dry hammocks, roadsides, pastures; common (rare in NC and SC, where presumably introduced). April-June. C. GA south to c. peninsular FL, TX, AZ, and Mexico; scattered as an introduction further north, as in NC and SC. [= RAB, K, S, X; = *V. officinalis* ssp. *halei* (Small) S.C. Barber – WH, Z]

Verbena hastata Linnaeus, Common Vervain, Blue Vervain, Simpler's-joy. Cp (DE, NC, VA), Pd (DE, NC, VA), Mt (NC, VA, WV): marshes, bogs, low fields; common (rare in NC). June-October. NS west to BC, south to NC, n. AL, AR, OK, n. TX, NM, AZ, CA; scattered occurrences further south appear to be introductions. The hybrid with *V. urticifolia*, *Verbena* ×*engelmannii* Moldenke, is known from our area. [= RAB, C, F, G, GW, S, W, WV, X, Z; > *V. hastata* var. *hastata* – K; > *V. hastata* var. *scabra* Moldenke – K]

* ***Verbena incompta*** P.W. Michael. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (NC): roadsides, disturbed areas, old fields; common, native of South America. May-October. [= V, X; < *V. bonariensis* Linnaeus – RAB, C, F, G, GW, K, S, WH; = *V. litoralis* Kunth var. *brevibracteata* (Kuntze) N. O'Leary – Y= *V. bonariensis* var. *bonariensis* – K, Y]

* ***Verbena officinalis*** Linnaeus, European Vervain, Juno's Tears, Herb-of-the-cross. Cp (DE, FL, GA, NC, SC, VA), Mt (NC, VA), Pd (DE, VA): disturbed areas; common (rare in FL, GA, NC, SC, and VA), native of Europe. June-October. The enigmatic *V. riparia* is represented by a few collections, and the taxonomic status of the taxon is unclear; it probably represents an unusual form of *V. officinalis*. [= X; > *V. officinalis* – RAB, C, F, G, S; > *V. riparia* Rafinesque ex Small & Heller – RAB, C. F, G, K, S, W; > *V. officinalis* var. *officinalis* – K, WH; > *V. officinalis* var. *prostrata* Grenier & Godron – K; = *V. officinalis* ssp. *officinalis* – Z]

* ***Verbena rigida*** Sprengel. Cp (FL, GA, NC, SC, VA), Pd (GA): roadsides, disturbed areas; common (uncommon in NC, rare in VA), native of South America. Late March-July. [= K, S, WH, X, Y]

Verbena scabra Vahl, Rough Vervain, Harsh Vervain. Cp (FL, GA, NC, SC, VA), Pd (GA, VA), Mt (VA, WV*): brackish marshes, shell deposits, other wet habitats; common (uncommon in NC, rare in VA and WV). May-October. VA and WV south to s. FL, west to TX and CA, south into tropical America; mainly coastal in our area but with scattered inland records (probably adventive). [= RAB, C, F, G, GW, K, S, U, WH, WV, X]

Verbena simplex Lehmann, Narrowleaf Vervain. Pd (DE, GA, NC, SC, VA), Mt (GA, VA, WV), Cp (DE, FL, VA): glades, woodlands, forests, and roadsides, over mafic or calcareous rocks; common (uncommon in WV). May-September. NH west to MN and NE, south to Panhandle FL (Jackson County) and TX. [= RAB, C, F, G, K, W, WH, X, Z; ? *V. angustifolia* Michaux – S]

* ***Verbena stricta*** Ventenat, Hoary Vervain. Cp* (DE*, NC*, VA*), Pd (DE*, GA), Mt* (WV*): pastures and roadsides; uncommon (rare in GA, NC, and VA), native of c. United States. June-September. Perhaps native as far east as prairie-like sites in TN, AL, and (?) GA. [= RAB, C, F, G, K, S, W, WV, X, Z]

Verbena urticifolia Linnaeus, White Vervain, Velvetleaf Vervain. Cp (NC, SC, VA), Pd (NC, SC, VA), Mt (NC, SC, VA, WV): {habitats}; common. May-November. NB west to SK, south to Panhandle FL and TX. Two varieties have been distinguished by many authors (see synonymy), but the characters used are poorly correlated and the distributional ranges largely overlapping. The hybrid with *V. hastata*, *Verbena* ×*engelmannii* Moldenke, is known from our area. [= RAB, GW, W, X, U, Z; > *V. urticifolia* var. *leiocarpa* Perry & Fernald – C, F, G, K, WV; > *V. urticifolia* var. *urticifolia* – C, F, G, K, WV; = *V. urticaefolia* – S, orthographic variant]

* *Verbena canescens* Kunth, Gray Vervain. Cp (AL): disturbed areas; rare, native of TX. Reported for s. AL. [= K, X]
* *Verbena montevidensis* Sprengel. Cp (AL, LA): disturbed areas; rare. June-July (-September). [= K, V, X]
Verbena xutha Lehmann, Gulf Vervain. Cp (AL, LA, MS): {habitat}; rare. AL west to TX. [= K, S, X]

384. MARTYNIACEAE Stapf 1895 (Martynia Family) [in LAMIALES]

A family of 5 genera and about 16 species, herbs, tropical and subtropical. Bretting & Nilsson (1988) present evidence for maintaining the Martyniaceae as distinct from the Pedaliaceae. References: Ihlenfeldt in Kadereit (2004).

Proboscidea Schmidel 1763 (Unicorn-plant)

A genus of about 9 species, herbs, of warm temperate to subtropical America. References: Thieret (1977)=Y; Bretting & Nilsson (1988)=Z; Ihlenfeldt in Kadereit (2004).

* ***Proboscidea louisianica*** (Miller) Thellung, Unicorn-plant, Devil's-claw, Cow Catcher. Disturbed areas; native of the Great Plains. The curious fruits are unmistakable. [= RAB, F, GW, WV, Y; = *P. louisiana* – C, G, orthographic variant; = *Martynia louisiana* Miller – S; > *P. louisianica* ssp. *louisianica* – K, Z]

389. AQUIFOLIACEAE Bartling 1830 (Holly Family) [in AQUIFOLIALES]

A monogeneric family of about 500 species, nearly cosmopolitan.

Ilex Linnaeus 1753 (Holly, Winterberry, Gallberry)

A genus of 400-500 species, mostly trees and shrubs, cosmopolitan and widespread in tropical and temperate areas, especially Asia and America. The genus *Nemopanthus* is clearly best subsumed into *Ilex*. References: Godfrey (1988)=Y; Krakow (1989)=Z; Powell et al. (2000)=X; Wunderlin & Poppleton (1977).

Identification notes: Some of our species can be superficially similar to various shrubs and trees of the Rosaceae, in their alternate toothed leaves borne on spur shoots.

1 Leaves coriaceous, evergreen.
- 2 Leaves with a well-developed apical spine (and usually also marginal spines) 2-6 mm long.
  - 3 Flowers in 1-few-flowered axillary cymes, on growth of the same year; [native trees of a wide variety of habitats]
    - 4 Leaves dark green above, 1.5-5.0 cm long, 1.0-2.5 cm wide; [of FL]..... ***I. opaca*** *var.* ***arenicola***
    - 4 Leaves somewhat yellowish green above, 3-12 cm long, 2.0-5.5 cm wide; [widespread in our area] ..... ***I. opaca*** *var.* ***opaca***
  - 3 Flowers in axillary clusters, on branches of the previous year; [alien shrub, rarely naturalized, especially in suburban areas] .... ***I. cornuta***
- 2 Leaves with margins either entire, crenate, serrate, or with marginal spinose prickles < 1 mm long (the apex sometimes mucronate, but not stiff and spinose).
  - 5 Leaves crenate from base to apex, 0.5-4.5 cm long; calyx and corolla 4-lobed.
    - 6 Fruits black; [alien shrub, rarely naturalized, especially in suburban areas] ..... ***I. crenata***
    - 6 Fruits red or yellow; [native shrub of the Coastal Plain, sometimes planted and naturalized elsewhere] ..... ***I. vomitoria***
  - 5 Leaves entire, crenate (if so, only beyond the midpoint), serrate, or with marginal spinose prickles, 2-10 cm long; calyx and corolla 4-lobed or 5-9-lobed; fruits red, yellow, or black.
    - 7 Fruits black; calyx and corolla 5-9-lobed; leaves crenate near the tip or with a few marginal spinose prickles, or entire, with dark punctate dots beneath.
      - 8 Leaves 1.5-3× as long as wide, with a few, irregularly spaced, marginal spinose prickles (or commonly entire), generally about 2-3 cm wide ..... ***I. coriacea***
      - 8 Leaves 3-4× as long as wide, crenate in the apical 1/2 to 1/3 (or rarely entire), generally about 1 cm wide (almost never > 2 cm wide) ..... ***I. glabra***
    - 7 Fruits red or yellow; calyx and corolla 4-lobed; leaves entire (or with spinose serrations), lacking dark punctate dots beneath.
      - 9 Leaves oblanceolate, oblong, or elliptic, 3-12 cm long, (8-) 15-40 mm wide, 2-4× as long as wide; petioles (3-) 5-15 mm long; leaf apex acute, obtuse, or rounded; branchlets strongly ascending, most of them forming an angle of < 45 degrees to the branch..... ..... ***I. cassine***
      - 9 Leaves lanceolate to narrowly oblong, 2-4 cm long, 3-8 mm wide, 3-7× as long as wide; petioles 1-3 (-5) mm long; leaf apex acute to acuminate; branchlets ascending to spreading, most of them forming angles greater than 45 degrees to the branch, and often at right angles ..... ***I. myrtifolia***

1 Leaves membranous, deciduous.
- 10 Leaves entire, or nearly so; [of moist to wet sites, from WV northward] ..... ***I. mucronata***
- 10 Leaves toothed; [collectively widespread in our area].
  - 11 Leaves oblanceolate or obovate, broadest above the middle, 8-30 (-45) mm wide, narrowly cuneate basally, mostly 2-3× as long as wide.
    - 12 Pedicels of fruits and pistillate flowers 2-6 mm long; pedicels of staminate flowers (2-) 4-8 (-16) mm long; leaves mostly gray green, often revolute, especially toward the base; pubescence of the lower leaf surface tomentose, primarily on or near the midrib; leaf margins rarely ciliate.
      - 13 Leaves 2-4.8 cm long, 0.6-1.5 cm wide; fruits 4-5 mm in diameter; sepals usually ciliate; [plant apparently endemic to the Suwanee River drainage of sc. GA and e. Panhandle FL] ..... ***I. decidua*** *var.* ***curtissii***
      - 13 Leaves 4.5-8.5 (-10) cm long, 1.5-3 cm wide; fruits (4-) 5-8 (-9) mm in diameter; sepals not ciliate; [plant widespread in our area, in the Coastal Plain, Piedmont, and rarely Mountains of our area]..... ***I. decidua*** *var.* ***decidua***
    - 12 Pedicels of fruits and pistillate flowers (5.5-) 10-30 mm long; pedicels of staminate flowers (10-) 15-25 mm long; leaves rarely revolute; pubescence of the lower leaf surface strigose, distributed on the surface; leaf margins often ciliate.
      - 14 Upper leaf surface with trichomes throughout; sepals ciliate; leaf blades entire to shallowly crenate ..... ***I. cuthbertii***
      - 14 Upper leaf surface glabrous, or with trichomes confined to the veins or their vicinity; sepals eciliate; leaf blades crenate to distinctly serrate ..... ***I. longipes***
  - 11 Leaves elliptic or ovate, broadest near the middle, (10-) 20-55 mm wide, rounded to broadly cuneate basally, mostly 1-2.5× as long as wide.
    - 15 Veins on undersurface of leaf blades reticulate, defining areoles; fruit surface dull; fruiting pedicels 6-14 mm long (averaging about 10 mm); [of blackwater floodplains and clay-based Carolina bays of the Coastal Plain]..... ***I. amelanchier***
    - 15 Veins on undersurface of leaf blades obscure, not defining areoles; fruit surface shiny; fruiting pedicels either (8-) 10-30 mm long or 2-9 mm long (averaging either < 6 mm or > 15 mm long); [collectively of various habitats, widespread in our area].
      - 16 Fruiting pedicels (8-) 10-30 mm long; fruit (7-) 8-12 mm in diameter, bright cherry-red; [of bogs and very moist forests of the Mountains]..... ***I. collina***
      - 16 Fruiting pedicels 2-9 mm long; fruit 5-9 (-12) mm in diameter, red to orange; [collectively of various habitats, widespread in our area].
        - 17 Nutlets (5-) 6-8 per fruit, smooth on the (curved) back; staminate flower clusters on peduncles 2-6 mm long; pistillate flowers with entire corolla lobes; flowers mostly in axils of leaves on normal shoots.
          - 18 Sepals glabrous (in flower or fruit), acute; leaves lighter green, slightly if at all rugose ..... ***I. laevigata***
          - 18 Sepals ciliate (in flower or fruit), obtuse; leaves darker green, often moderately rugose..... ***I. verticillata***

17 Nutlets 4-5 per fruit, with striate ridges on the (curved) back; staminate flower clusters sessile or very short-peduncled (0-2 mm long); pistillate flowers with ciliate corolla lobes; flowers mostly in axils of leaves on lateral short-shoots.
19 Leaves 2-9 (-10.5) cm long, elliptic to broadly ovate, often nearly round, the apex abruptly to gradually acuminate, the marginal teeth usually inconspicuous; petioles of mature leaves usually < 1 cm long; fruits 5-9 mm in diameter; plant a shrub to 6 m tall; [of the Coastal Plain, Piedmont, and Mountains] ..... ***I. ambigua***
19 Leaves 6-16 cm long (the largest, at least, > 8 cm long), narrowly to broadly ovate, the apex long acuminate to attenuate, the marginal teeth rather coarse; petioles of mature leaves usually > 1 cm long; fruits 9-12 mm in diameter; plant shrub or small tree to 10 m tall; [of the Mountains and upper Piedmont]..... ***I. montana***

Auxiliary Key to Deciduous *Ilex* of Moist to Wet Habitats of the Mountains

[Note: trichotomous lead]

1 Fruits bright cherry-red, broader than long, (7-) 8-12 mm in diameter, borne on stalks 9-20 mm long, primarily in the axils of leaves on spur shoots; bark of 2-3 year old twigs usually light tan; calyx (persistent on fruit) 4 (-5) lobed; nutlets 4 (-5) per fruit, with bony white longitudinal striations on the back, the furrows between the striations very shallow if developed at all; petiole with a deeply U- to V-shaped channel on its upper side (made by the decurrent leaf edges), with dark ascending trichomes in the channel; leaves variable, but mostly 3-6 cm wide and about 1.5× as long as wide, usually abruptly short-acuminate; [plant of bogs, seepages, streambanks, and (rarely) moist forests, mostly at high elevations] ..... ***I. collina***
1 Fruits duller red, longer than broad, 5-8 mm in diameter, borne on stalks 1-6 mm long, primarily in the axils of leaves on spur shoots; bark of 2-3 year old twigs usually brown, gray, or purplish; calyx (persistent on fruit) 4-6 lobed; nutlets 4-6 per fruit, with longitudinal ridges, the furrows between the ridges about as deep as the distance between the ridges; petiole with U-shaped channel on its upper side, with white appressed trichomes in the channel; leaves variable, but mostly 3-7 cm wide and about 2× as long, usually long-acuminate; [plant of moist forests and (rarely) bog edges] ..... ***I. montana***
1 Fruits duller red, longer than broad, 5-7 mm in diameter, borne on stalks 1-6 mm long, primarily in the axils of leaves on normal shoots with elongate internodes; bark of 2-3 year old twigs usually brown, gray, or purplish; calyx (persistent on fruit) (4-) 5-6 lobed; nutlets (4-) 5-6 per fruit, smooth and unmarked on the back; petiole nearly terete in cross-section (or very shallowly channeled on the upper surface); leaves variable, but mostly 2-3.5 (-5) cm wide and about 2× as long, usually merely acute; [plant of bogs and other wetlands] ..... ***I. verticillata***

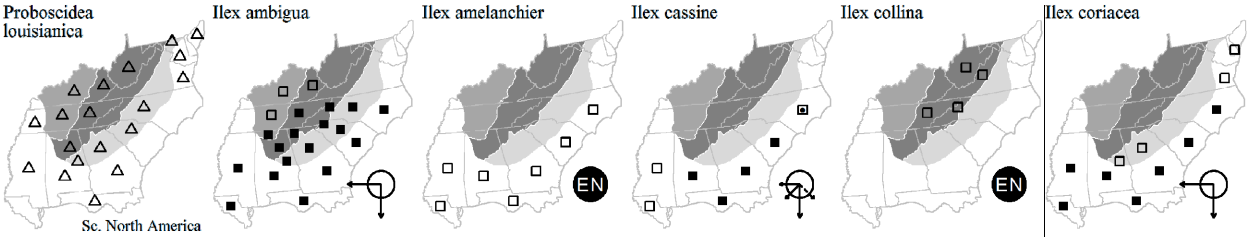
Ilex ambigua (Michaux) Torrey, Carolina Holly. Sandy upland forests, dry slope forests, rarely in pocosin ecotones in the fall-line sandhills region. April-June; August-September. Ne. NC, se. TN, n. AR, and se. OK south to c. peninsular FL, s. MS, and se. TX; disjunct in the Sierra Madre Oriental and Chiapas, Mexico. The various taxa that have been distinguished in this complex may have some merit, though a detailed study by Krakow (1989) did not show a clear basis for their recognition. *I. buswellii* Small, strictly of xeric habitats of the Coastal Plain from se. NC southward, has the larger leaves 2-3.5 (-4) cm long and 0.7-1.7 (-2.5) cm wide. *I. ambigua* (*sensu stricto*) is distributed in the Coastal Plain, Piedmont and low Mountains, and has leaves 3-9 (-10.5) cm long and 1.7-6 cm wide. *I. beadlei* of the low Mountains and Piedmont has leaves 7-9 (-10.5) cm long and 2-6 cm wide. [= K, Z; = *I. ambigua* var. *ambigua* – RAB, W, Y; > *I. montana* var. *mollis* (A. Gray) Britton – C, F; > *I. montana* var. *beadlei* (W.W. Ashe) Fernald – G; > *I. ambigua* – S; > *I. beadlei* W.W. Ashe – S; > *I. buswellii* Small – S; > *I. ambigua* (Michaux) Torrey var. *monticola* (A. Gray) Wunderlin & Poppleton – Y, misapplied; > *I. beadlei* var. *laevis* W.W. Ashe; > *I. caroliniana* Trelease ex Small; > *I. mollis* A. Gray]

Ilex amelanchier M.A.Curtis ex Chapman, Sarvis Holly. Banks of blackwater creeks and rivers, clay-based Carolina bays. April-May; October-November. A Southeastern Coastal Plain endemic: se. NC south to the FL Panhandle and west to se. LA (reports from se. VA appear to be based on confusion of material). The fruits are sometimes persistent until the following spring; the species is perhaps most conspicuous in the winter, when the dull red fruits can be easily seen. [= RAB, C, F, G, GW, K, S, Y, Z]

Ilex cassine Linnaeus, Dahoon, Cassena. Blackwater stream swamps, pocosins, nearly always in very acid peaty or sandy sites. May-June; October-November. Primarily a Southeastern Coastal Plain endemic: se. NC south to s. FL and west to se. TX; also in Cuba and Mexico. *I. cassine* is variable in leaf shape, sometimes approaching *I. myrtifolia*. Some populations in our area show intergradation with or poor differentiation from *I. myrtifolia*, lending some credibility to their treatment as varieties. [= GW, S, Y; = *I. cassine* var. *cassine* – RAB; > *I. cassine* var. *cassine* – K]

Ilex collina Alexander, Long-stalked Holly, Cherry Holly. In peats of bogs and seepages, on banks of cold, high elevation streams (less commonly on moist, rocky slopes in northern hardwood forests or mixed spruce-hardwood forests) at moderate to high elevations (1100-1800m). May-June; (August-) September-October. A Southern Appalachian endemic: e. and c. WV, sw. VA, w. NC, and e. TN (Sevier County) (Boetsch & Nielsen 2003). The affinities of this species are with *Ilex montana* and *I. verticillata*, not with *Ilex* (*Nemopanthus*) *mucronata* (Baas 1984). See Clark (1974) and Boetsch & Nielsen (2003) for additional information about this species. *I. collina* often occurs with or in close proximity to the similar *I. montana* and *I. verticillata*; the long fruiting pedicels will separate fruiting plants readily. [= K, WV; = *Nemopanthus collinus* (Alexander) R.C. Clark – C, W; < *I. longipes* – F, G]

Ilex coriacea (Pursh) Chapman, Big Gallberry, Sweet Gallberry. Pocosins, more restricted to wet, peaty sites than *I. glabra*. April-May; September-October. A Southeastern Coastal Plain endemic: se. VA south to c. peninsular FL and west to e. TX. [= RAB, C, F, G, GW, K, S, Y]



* ***Ilex cornuta*** Lindley, Chinese Holly, Burford Holly. Escaped into forests in suburban areas; native of China. Escaped from suburban plantings in AL, NC, and KY (Clark et al. 2005). [= K]

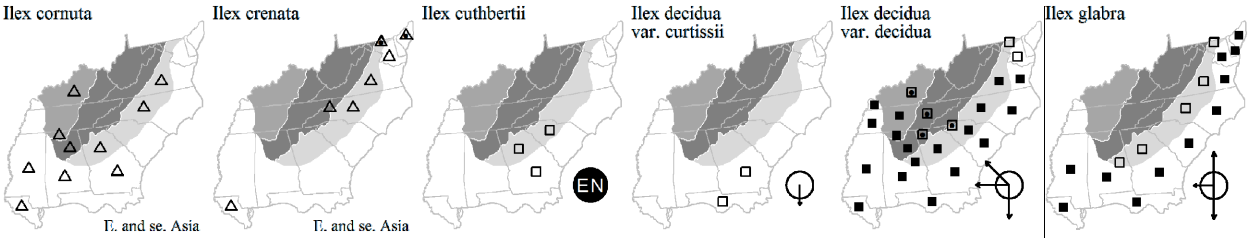
* ***Ilex crenata*** Thunberg, Japanese Holly. Planted as a landscaping shrub, escaped into forests in suburban areas; native of Japan. First reported for NC by Pittillo & Brown (1988). [= K]

Ilex cuthbertii Small, Cuthbert Holly. Upland circumneutral woodlands and forestse. Endemic to an area along the Fall Line in SC and adjacent GA (Krakow 1989). Perhaps best treated as a variety of *I. longipes*, but the combination has not yet been made. [= K; >< *I. cuthbertii* – S (as to type, not as to range); = *I. longipes* var. *cuthbertii* (Small) G.A. Krakow, in prep. – Z]

Ilex decidua Walter *var.* ***curtissii*** Fernald, Suwanee Possum-haw, Curtiss's Holly. Floodplains and moist forests in the Suwanee River drainage. Mid-March-mid-April; September-October. Apparently endemic to the Suwannee River drainage of s. GA and n. FL. [= Z; < *I. decidua* – GW, K, Y; = *I. curtissii* (Fernald) Small – S]

Ilex decidua Walter *var.* ***decidua***, Possum-haw. Floodplain forests, less commonly on mesic (or even dry), upland slopes. March-May; September-October. MD south to Panhandle FL, west to TX on the Coastal Plain, extending also to adjacent provinces (the Piedmont and rarely Mountains in our area), and extending north in the interior to c. TN, w. KY, s. IL, c. MO, se. KS, and e. OK; also disjunct (as a variety) in the Sierra Madre Oriental of e. Mexico. The Mexican material was recognized by Krakow (1989) at the varietal level, but has not been formally named; it is known from a single collection from Nuevo León, Mexico. [= Z; < *I. decidua* var. *decidua* – RAB; < *I. decidua* – C, F, G, GW, K; > *I. decidua* var. *decidua* – Y (also including *I. cuthbertii*)]

Ilex glabra (Linnaeus) A. Gray, Little Gallberry, Inkberry. Savannas, pine flatwoods, pocosin margins, swamps, primarily in wetlands, but extending upslope even into sandhills. May-June; September-November. NS and ME south to FL, west to TX. [= RAB, C, F, G, GW, K, S, Y]



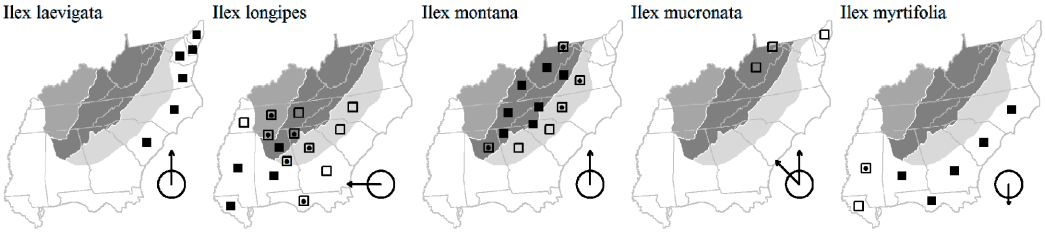
Ilex laevigata (Pursh) A. Gray, Smooth Winterberry. Pocosins, other wet, acidic sites, such as in small blackwater stream swamps. April-May; September-October. ME and NY south to SC, mostly near the coast. [= RAB, C, F, G, GW, K, S]

Ilex longipes Chapman ex Trelease, Georgia Holly, Chapman's Holly. Upland forests. April-May; September-October. Sc. NC, sc. TN (Chester, Wofford, & Kral 1997), and wc. AR south to Panhandle FL, s. MS, and se. TX. [= GW, K, S; = *I. decidua* var. *longipes* (Chapman ex Trelease) Ahles – RAB, Y; < *I. longipes* – F, G (apparently also including *I. collina*); = *I. longipes* var. *longipes* – Z]

Ilex montana Torrey & A. Gray ex A. Gray, Mountain Holly. Mesic forests, rarely bogs or bog edges. April-June; August-September. W. MA and w. NY south to n. GA and n. AL, essentially an Appalachian endemic. The range of this species is sometimes stated or shown as broader, extending into the Coastal Plain in our area, and as far south as n. FL, LA, and e. TX, but these reports are based on misidentifications, primarily of the "*beadlei*" component of *I. ambigua*. [= K, WV, Z; = *I. ambigua* var. *montana* (Torrey & A. Gray ex A. Gray) Ahles – RAB; = *I. montana* var. *montana* – C, F, G; = *I. monticola* A. Gray – S; = *I. ambigua* var. *monticola* (A. Gray) Wunderlin & Poppleton – W]

Ilex mucronata (Linnaeus) M. Powell, V. Savolainen, & S. Andrews, Nemopanthus. Bogs and moist, high-elevation forests. NL (Newfoundland) west to ON and MN, south to MD, WV, OH, IN, and IL (and allegedly in VA, according to Fernald 1950). It can be separated vegetatively from other hollies in the mountain regions of w. VA (*I. montana*, *I. collina*, *I. opaca*, and *I. verticillata*) by its smaller, narrower, entire (or nearly so) leaves, 2-5 (-6) cm long, 1-2.5 cm wide. Debate about the distinctiveness of *Nemopanthus* from *Ilex* have now been unequivocally answered, with *Nemopanthus* to be included in *Ilex* (Powell et al. 2000; Manen, Boulter, & Naciri-Graven 2002). [= X; = *Nemopanthus mucronatus* (Linnaeus) Trelease – C, F, G, K, WV]

Ilex myrtifolia Walter, Myrtle Holly. Limesink (doline) ponds, wet savannas. May-June; October-November. A Southeastern Coastal Plain endemic: se. NC south to n. peninsular FL and west to e. LA. See *I. cassine* for comments about these two taxa. [= GW, K, S, Y; = *I. cassine* var. *myrtifolia* (Walter) Sargent – RAB]

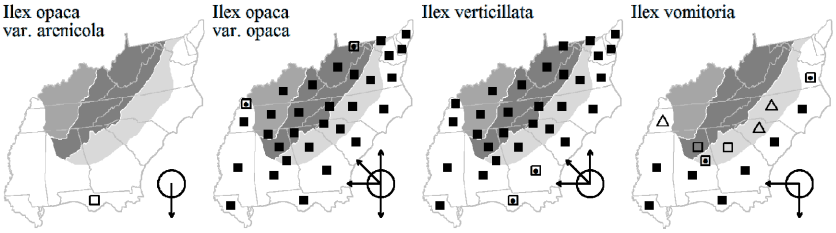


Ilex opaca Aiton *var.* ***arenicola*** (Ashe) Ashe, Scrub Holly. Xeric sands of sand pine scrub. Baker and Clay counties (ne. FL) south to c. peninsular FL. [= K; = *I. cumulicola* Small – S; = *I. arenicola* Ashe]

Ilex opaca Aiton var. ***opaca***, American Holly, Christmas Holly. In a wide variety of forests, ranging from xeric to wetland. April-June; September-October. MA (? NS and ME), IL, MO, and OK south to s. peninsular FL and TX. This is our only species of *Ilex* that becomes a medium to large tree. [= GW, K, Y; < *I. opaca* – RAB, C, F, G, W, WV; = *I. opaca* – S]

Ilex verticillata (Linnaeus) A. Gray, Winterberry. Bogs, pocosins, swampy forests. April-June; September-November. NL (Newfoundland) west to MN, south to FL and TX. [= RAB, GW, K, S, W, WV, Y; > *I. verticillata* var. *padifolia* (Willdenow) Torrey & A. Gray ex S. Watson – C, F, G; > *I. verticillata* var. *verticillata* – C, F, G]

Ilex vomitoria Aiton, Yaupon. Maritime forests, other dry sandy forests. March-May; October-November. Widespread in the Southeastern United States, primarily on the Coastal Plain, from e. VA (from Northampton County south) south to c. peninsular FL and west to se. TX. *I. vomitoria* from the Deep South often has much smaller leaves than plants in our area. In NC and VA, yaupon is nearly restricted to maritime habitats, on the barrier islands and in a narrow band on the mainland, in forests with substantial maritime influence. *I. vomitoria* is increasingly popular as an ornamental shrub, and is persistent or establishing in suburban woodlands. [= RAB, C, F, G, GW, K, S, Y]



391. CAMPANULACEAE A.L. de Jussieu 1789 (Bellflower Family) [in ASTERALES]

A family of about 80-82 genera and 2000-2400 species, mostly herbs, cosmopolitan. There is controversy about the circumscription of the family, specifically whether subfamily Lobelioideae should be recognized at the family level. References: Rosatti (1986)=Z; Eddie et al. (2003); Shulkina, Gaskin, & Eddie (2003); Lammers in Kadereit & Jeffrey (2007). [also see *SPHENOCLEACEAE*]

1 Corollas bilaterally symmetrical (zygomorphic); carpels 2; [subfamily *Lobelioideae*].....***1. Lobelia***
1 Corollas radially symmetrical (actinomorphic); carpels (2-) 3-5; [subfamily *Campanuloideae*].
  2 Capsule dehiscent laterally (the pores nearly apical in some *Campanula*); flowers in spikes, racemes, or panicles; [mostly native species of various habitats (some of them weedy)].
    3 Inflorescence spicate, the flowers sessile, mostly in the axils of well-developed leaves; corollas rotate and style straight.....***5. Triodanis***
    3 Inflorescence racemose or paniculate, the flowers pedicelled, sometimes axillary to well-developed leaves; corollas campanulate, funnelform, or rotate, with a straight or curved style .....***6. Campanula***
  2 Capsule dehiscent apically; flowers solitary or in very diffuse panicles (*Platycodon, Wahlenbergia*), or in compact involucrate umbels (*Jasione*); [aliens, generally in weedy or disturbed situations].
    4 Flowers and fruits borne in an involucrate umbel ..... ***4. Jasione***
    4 Flowers and fruits solitary or in a diffuse inflorescence.
      5 Flowers large, 1 to few, solitary or nearly so; leaves large, ovate to elliptic; [Platycodonoid clade].....***2. Platycodon***
      5 Flowers small, several to many, borne in a diffuse inflorescence; leaves small, linear to narrowly elliptic; {Wahlenbergioid clade] .....
      6 .....***3. Wahlenbergia***

1. Lobelia Linnaeus 1753 (Lobelia)
(contributed by A.S. Weakley and B.A. Sorrie)

A genus of over 400 secies, herbs, shrubs, trees, cosmopolitan. References: Rosatti (1986)=Z; McVaugh (1936)=Y; Thompson & Lammers (1997); Lammers in Kadereit & Jeffrey (2007). Key based in part on Y, GW, C, and F.

Identification notes: Vegetative *Lobelia* can be recognized by their milky sap, and the alternate leaves with obscure, whitish, callus-tipped, and often irregular or divergent teeth.

1 Corolla bright red (faded in dried specimens) or very rarely white, 30-45 mm long; filament-tube 19-33 mm long.....***L. cardinalis***

1 Corolla blue, purple, or white, 10-33 mm long; filament-tube 2-15 mm long.
2 Larger leaves in a basal rosette, **either** linear to linear-oblanceolate or orbicular, with a well-developed petiole; [plants generally of wetlands, often growing in shallow water, more rarely in dry or seasonally dry habitats].
3 Rosette leaf blades orbicular, broadly rounded at the base and the apex; stems trailing, rooting at nodes, mat-forming; [of FL]..... ***L. feayana***
3 Rosette leaf blades linear to linear-oblanceolate; stems erect.
4 Calyx segments with small auricles at the base; pedicels with very small bracteoles at the base; filament tube (6-) 7-9 (-11) mm long; corolla tube not fenestrate (lacking lateral slits); larger leaves 10-30 cm long; plants (5-) 8-10 (-15) dm tall ..... ***L. floridana***
4 Calyx segments not auriculate; pedicels lacking bracteoles; filament tube 3-4.5 mm long; corolla tube fenestrate (with lateral slits); larger leaves 5-12 cm long; plants (4-) 5-6 (-13) dm tall ..... ***L. paludosa***
2 Larger leaves cauline; [collectively of a range of habitats].
5 Flowers relatively large, the corolla (including the hypanthium) 18-33 mm long, fenestrate (with a slit or window on each side of the tube near the base).
6 Calyx with prominent leafy auricles; pedicels with bracteoles near the middle.
7 Stems, leaves, hypanthium, and calyx glabrous (or with very few hairs); leaves usually < 1.5 cm wide; flowers 6-20; [WI, MB, ND, and WY, south to MS, LA, and TX] ..... ***L. siphilitica*** *var.* ***ludoviciana***
7 Stems, leaves, hypanthium, and calyx hirsute; leaves usually 2-6 cm wide; flowers usually > 20; [ME, ON, and MN, south to GA, AL, MS, AR] ..... ***L. siphilitica*** *var.* ***siphilitica***
6 Calyx not auriculate; pedicels with bracteoles near the base (or sometimes near the middle in *L. puberula*).
8 Stems and leaves evidently short-pubescent throughout.
9 Stem densely short-hirsute; calyx lobes long-hirsute or villous, the lobes undulate-margined or crisped, 3-5 mm wide at base, and with large and broadly rounded basal auricles; lower and mid stem leaves ascending to appressed, the callous teeth oscure; [of the Coastal Plain and Piedmont] ..... ***L. puberula*** *var.* ***puberula***
9 Stem minutely puberulent; calyx lobes glabrous to sparsely short-pubescent, the lobes usually entire, 1.2-2 mm wide at the base, with or without prominent auricles; lower and mid stem leaves spreading to strongly ascending, the callous teeth prominent.
10 Leaves somewhat to strongly ascending, often short-pilose beneath; sinuses of calyx with prominent auricles; [mainly of sc. United States, east to AL] ..... ***L. puberula*** *var.* ***mineolana***
10 Leaves spreading to somewhat ascending, glabrous or scabrous beneath; sinuses of calyx with small auricles; [Appalachian and south into the Gulf Coastal Plain] ..... ***L. puberula*** *var.* ***simulans***
8 Stems and leaves glabrous or glabrescent, sometimes sparsely hairy near the base of the plant.
11 Calyx lobes prominently glandular-toothed (not all lobes will be toothed; check several flowers) (ignore leafy bract at base of calyx).
12 Corolla pubescent on outside; calyx tube with pustular-based translucent hairs, calyx lobes 4.5-8 mm long; leaves linear to lanceolate and < 3 cm; [flowering March-May] ..... ***L. brevifolia***
12 Corolla glabrous/glabrate on outside; calyx tube glabrous or hairy as above, calyx lobes 4-12 mm long; leaves linear to elliptical and > 3 cm (usually 4-15 cm); [flowering September-November].
13 Corolla lip glabrous basally; calyx tube glabrous, calyx lobes 6-12 mm long ..... ***L. georgiana***
13 Corolla lip densely pubescent basally; calyx tube with pustular-based translucent hairs or not, calyx lobes 4-7 mm long ..... ***L. glandulosa***
11 Calyx lobes smooth, without prominent glandular teeth (ignore leafy bract at base of calyx).
14 Leaves elliptic to lanceolate; calyx lobes 6-12 mm long; [of river shores and banks, small stream swamps, floodplains].
15 Flowers loosely arranged; anther tube 2.5-3.5 mm; [of Mountains and Piedmont, rarely lower Piedmont] ..... ***L. amoena***
15 Flowers densely arranged; anther tube 4 mm long; [of Coastal Plain and lower Piedmont] ..... ***L. elongata***
14 Leaves linear, occasionally lanceolate; calyx lobes 4-7 (-8) mm long; [of wet savannas and flatwoods, pitcher-plant bogs, seepage slopes, streamheads].
16 Corolla lip densely pubescent basally, corolla tube relatively densely pubescent within; corolla 19-27(-29) mm long; [of middle and outer Coastal Plain, mostly in wet savannas, flatwoods, pitcher-plant bogs] ..... ***L. glandulosa***
16 Corolla lip glabrous basally, corolla tube glabrate within; corolla 17-23 mm long; [endemic of NC-SC Sandhills region, mostly in wet streamheads and adjacent seepage slopes] ..... ***L. species 1***
5 Flowers relatively small, the corolla (including the hypanthium) 7-22 mm long, not fenestrate (thus lacking a slit or window on each side of the tube near the base) (except sometimes *L. flaccidifolia*).
17 Plants creeping, rooting at the nodes, mat-forming; flowers solitary, axillary in the axils of leaves ..... ***L. chinensis***
17 Plants erect or recling, not rooting at nodes nor mat-forming; flowers several-many in bracteate terminal racemes.
18 Stem leaves very narrow, the largest on a plant 1-5 mm wide.
19 Pedicels lacking bracteoles (but with subtending bracts); stem leaves subulate-filiform, < 0.5 mm wide; plant perennial from rhizomes, the stem often spongy-thickened toward the base ..... ***L. boykinii***
19 Pedicels bearing bracteoles near the base or middle (and also with subtending bracts); stem leaves linear to lanceolate, flat, 1-4 mm wide; stems not spongy-thickened.
20 Bracteoles borne near the middle of the pedicel; [of northern wetlands, south to WV and PA] ..... ***L. kalmii***
20 Bracteoles borne at the base of the pedicel; [collectively widespread in our area].
21 Lower lip of corolla pubescent inside at the base; corolla blue, lacking a white eye ..... ***L. canbyi***
21 Lower lip of the corolla glabrous; corolla blue, with a white eye ..... ***L. nuttallii***
18 Stem leaves broader, the largest on a plant > 10 mm wide.
22 Bracteoles borne near the middle of the pedicel ..... ***L. flaccidifolia***
22 Bracteoles borne at the base of the pedicel.
23 Stems long-hirsute, at least on the lower part of the stem; plant usually repeatedly branched (unless depauperate); hypanthium obovoid, almost as long as the corolla; hypanthium strongly inflated in fruit and including the capsule ..... ***L. inflata***

23 Stems lacking hirsute hairs, either densely puberulent (at least below) or glabrous to glabrescent (with a few chaffy hairs on the lower stem); plant unbranched or with a few upright branches; hypanthium obconic, shorter than the corolla; hypanthium slightly inflated in fruit.
24 Stem glabrous to glabrescent (with a few chaffy hairs on the lower stem); leaf bases (all) clasping to rounded; flowers 10-15 mm long.
25 Calyx segments prominently ciliate-margined; basal auricles of the calyx segments prominent and declined, obscuring the corolla tube; plants to 9 dm tall..... ***L. appendiculata***
25 Calyx segments glabrous (rarely minutely ciliate); basal auricles of the calyx segments small, not declined and obscuring the corolla tube; plants to 5.5 dm tall..... ***L. gattingeri***
24 Stem densely puberulent , at least at the base; leaf bases petiolate to sessile (and then decurrent); flowers 7-12 mm long.
26 Leaves chiefly basal, the stem leaves < 5 and much smaller than the basal; [of s. PA south to SC, west to LA, especially on the Piedmont]..... ***L. spicata*** *var.* ***scaposa***
26 Leaves mainly on the stem, basal leaves absent or if present no larger than the stem leaves; [collectively widespread].
27 Calyx lobes with long, slender auricles, these often as long as the hypanthium; [of WV south]..... ***L. spicata*** *var.* ***leptostachys***
27 Calyx lobes lacking auricles or with these much shorter than the hypanthium.
28 Flowers 7-9 mm long, deep purplish-blue; anthers white; [south to NJ, DE, MD, WV, s. IN, and IL]..... ***L. spicata*** *var.* ***campanulata***
28 Flowers 9-12 mm long, light blue to white; anthers pale bluish-gray; [south to GA]..... ***L. spicata*** *var.* ***spicata***

Lobelia amoena Michaux, Southern Lobelia. Marshes, streambanks, seeps, floodplain forests. Late July-October. W. NC and e. TN south through w. SC to c. GA and ec. AL; disjunct in FL Panhandle and Coastal Plain of GA and SC. Reported for VA by Kartesz (1999), supposedly on the basis of McVaugh (1936), but McVaugh does not record *L. amoena* for VA and no specimens have been seen from there. [= RAB, C, GW, S, Y; = *L. amoena* var. *amoena* – K, WH; < *L. amoena* – W]

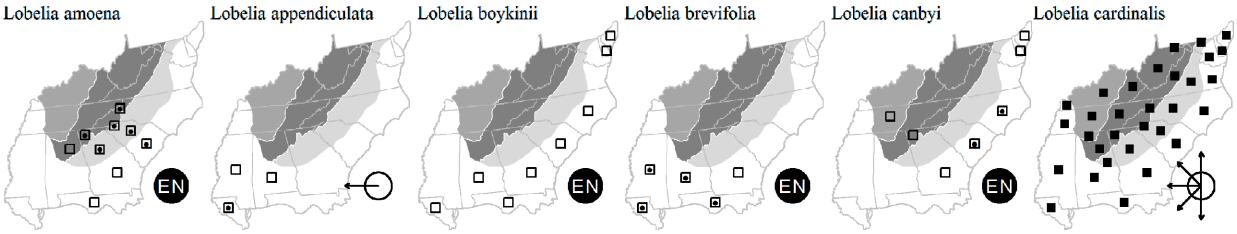
Lobelia appendiculata Alphonse de Candolle. Pinelands, prairies, roadsides, usually in mesic or dry soils. AR and se. KS south to LA and TX; disjunct east of the Mississippi in c. AL, MS, and e. LA. [= GW, S, Y; = *Lobelia appendiculata* Alphonse de Candolle var. *appendiculata* – K]

Lobelia boykinii Torrey & A. Gray ex Alphonse de Candolle, Boykin's Lobelia. Cypress ponds and depression meadows. May-July (-August). NJ and DE (formerly) south to w. Panhandle FL, s. AL, and s. MS (Sorrie & Leonard 1999). [= RAB, C, F, G, GW, K, S, WH, Y]

Lobelia brevifolia Nuttall ex Alphonse de Candolle, Shortleaf Lobelia. Savannas, flatwoods, and bogs. July-November. Endemic to the East Gulf Coastal Plain of c. and w. Panhandle FL, west through s. AL and s. MS to e. LA (Florida Parishes). [= GW, K, S, WH, Y]

Lobelia canbyi A. Gray, Canby's Lobelia. Depression ponds, Carolina bays, pine savannas. July-November. NJ to GA in the Coastal Plain; disjunct in Coffee County (and three other counties), TN, and in Bartow County, GA, with other Coastal Plain plants. [= RAB, C, F, G, GW, K, S, Y]

Lobelia cardinalis Linnaeus, Cardinal Flower. Streambanks, riverbanks, marshes, swamp forests. July-October. NB, QC, ON, MN, CO, UT, and s. CA south to c. peninsular FL, TX, and south through Mexico and Central America to Colombia. See Thompson & Lammers (1997). [= RAB, F, G, K, S, W, WH, WV, Y; > *L. cardinalis* var. *cardinalis* – C; > L. *cardinalis* ssp. *cardinalis* – GW; > *L. cardinalis* ssp. *cardinalis* var. *cardinalis*]



* ***Lobelia chinensis*** Loureiro, Chinese Lobelia, Creeping Lobelia. Tidal river banks. July-September. Reported for s. NJ and adjacent PA (Rhoads & Block 2007; Kartesz 2010). [= K2]

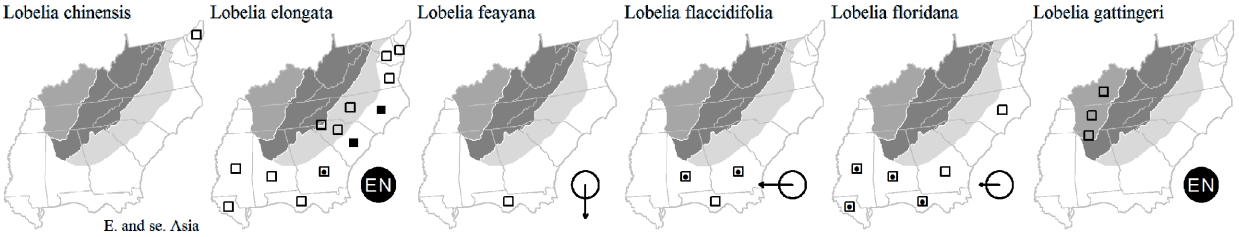
Lobelia elongata Small. River and stream margins, floodplain forests, marshes, bogs, pine savannas. August-October. Primarily a Southeastern Coastal Plain endemic from DE to se. GA, rarely inland onto the lower Piedmont of NC and SC. [= C, F, G, GW, K, S, Y; < *L. elongata* – RAB]

Lobelia feayana A. Gray, Bay Lobelia, Feay's Lobelia. Open, moist areas. Ne. FL (Duval County) and e. Panhandle FL (Madsion and Taylor counties) south to s. FL. [= GW, K, S, WH, Y]

Lobelia flaccidifolia Small. Depression ponds, swampy woods along rivers and streams. June-September. E. GA south into Panhandle FL, west to sw. AL (and presumably s. MS); disjunct in sw. LA and e. TX. [= GW, K, S, WH; > *L. halei* Small – Y]

Lobelia floridana Chapman, Florida Lobelia. Wet pine savannas and flatwoods, depression ponds. S. GA (Jones & Coile 1988) and Panhandle FL west to LA; disjunct in se. NC? McVaugh (1936) reports this species for Wilmington, New Hanover County, NC, based on a collection by MacFarlane in 1909 (PENN). This record seems unlikely and needs confirmation; mislabeling is a possibility. [= GW, K, S, WH, Y]

Lobelia gattingeri A. Gray, Gattinger's Lobelia. Calcareous glades. Endemic to sc. KY south through c. TN to n. AL. [= GW, S, Y; = *Lobelia appendiculata* Alphonse de Candolle var. *gattingeri* (A. Gray) McVaugh – K]



Lobelia georgiana McVaugh. Swamps, floodplain forests, wet places. August-October. E. VA to Panhandle FL, inland to w. NC and e. TN. Very close to *L. elongata* and inhabiting apparently the same habitats; additional taxonomic work is desirable. See McVaugh (1940) for an explanation of the need to replace the name *L. glandulifera* with *L. georgiana*. [= C, F, G, GW; < *L. elongata* – RAB; = *L. amoena* Michaux var. *glandulifera* A. Gray – K, WH; = *L. glandulifera* (A. Gray) Small – S, Y; < *L. amoena* – W]

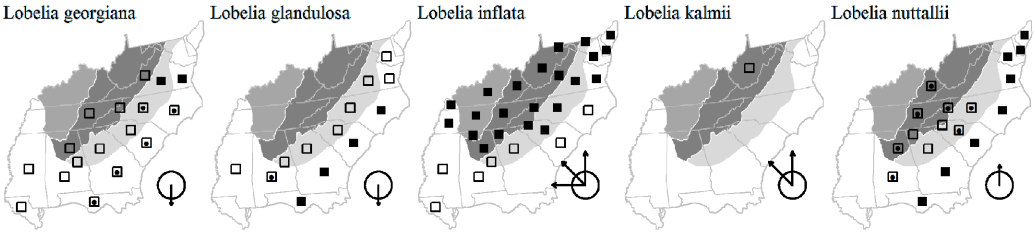
Lobelia glandulosa Walter. Seepage slopes, pitcher-plant bogs, streamhead margins, pine savannas, flatwoods, margins of beaver ponds. September-October. E. NC (or se. VA) to s. FL, west to s. AL. Prior reports from the Piedmont are erroneous, most referring to *L. elongata* and *L. georgiana*. [= RAB, C, F, G, GW, K, S, W, WH, Y]

Lobelia homophylla E. Wimmer. Just south of our area in FL (St Johns County) (Wunderlin & Hansen 2003). [= GW, K, S, WH, Y] {neither keyed nor mapped}

Lobelia inflata Linnaeus, Indian-tobacco. Fields, meadows, gardens, open woodlands, disturbed areas. July-November. PE west to MN, south to GA, AL, se. MS, e. LA, s. AR, and se. OK. [= RAB, C, F, G, GW, K, S, W, Y; > *L. inflata* var. *inflata* – WV; > *L. inflata* var. *simplex* (Rafinesque) Millspaugh – WV]

Lobelia kalmii Linnaeus, Kalm's Lobelia. Calcareous swamps. July-September. NL (Newfoundland) and BC, south to PA, e. WV, OH, IL, and MN. [= C, F, G, K, Y]

Lobelia nuttallii J.A. Schultes, Nuttall's Lobelia. Flatwoods, bogs, savannas. May-November. NY (Long Island) south to FL Panhandle on the Coastal Plain; less commonly disjunct inland to w. NC, w. SC, KY, and TN. [= RAB, C, F, G, GW, K, S, W, WH, Y]



Lobelia paludosa Nuttall, White Lobelia. Flatwoods, savannas, ditches, dune swales. March-May. Se. GA (Jones & Coile 1988) and FL Panhandle south to s. FL. [= F, GW, K, S, WH, Y]

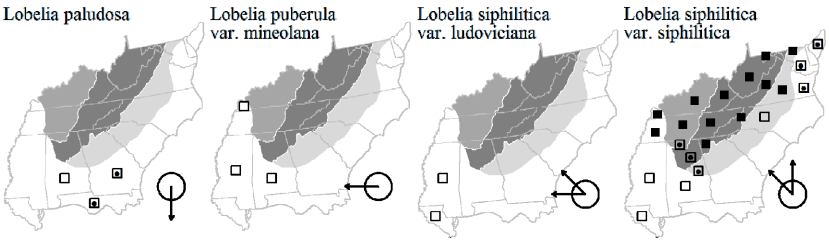
Lobelia puberula Michaux *var.* ***mineolana*** F. Wimmer, Western Downy Lobelia. Forests, openings. W. KY, s. MO, and e. OK, south to s. AL, MS, LA, and e. TX. [= K; < *L. puberula* – C, G, GW, S; = *L. puberula* "form d" – Y]

Lobelia puberula Michaux *var.* ***puberula***, Coastal Plain Downy Lobelia. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): forests, openings, fields; common. Late July-October. NJ and PA south to c. peninsular FL, primarily on the Coastal Plain and Piedmont. [= F, K; < *L. puberula* – RAB, C, G, GW, S, W, WH, Y]

Lobelia puberula Michaux *var.* ***simulans*** Fernald, Appalachian Downy Lobelia. Mt (GA, NC, SC, VA, WV), Pd (GA), Cp (GA): {habitats}; {abundance}, common in WV. Late July-October. Sw. VA, s. WV, and IL south to n. FL, AL, MS, and LA. [= F, K; < *L. puberula* – RAB, C, G, GW, S, W; = *L. puberula* "form a" – Y]

Lobelia siphilitica Linnaeus *var.* ***ludoviciana*** A. DC., Western Great Blue Lobelia. Bottomlands, moist forests, ditches, wet meadows, streambanks. Late July-October. WI, MB, ND, and WY, south to MS, LA, and TX. [=C, F, G, GW, K, Y; < *L. siphilitica* – RAB, S]

Lobelia siphilitica Linnaeus *var.* ***siphilitica***, Eastern Great Blue Lobelia. Bottomlands, moist forests, ditches, wet meadows, streambanks. Late July-October. ME, ON, and MN, south to GA, AL, MS, AR. [= C, F, G, GW, K, Y; < *L. siphilitica* – RAB, S, W]



Lobelia species 1, Batson's Lobelia. Wet streamheads and seepage slopes. Endemic to the Sandhills Region of NC and SC. Under study by A. Bert Pittman. [= "*L. batsonii*" in prep.]

Lobelia spicata Lamarck *var.* ***campanulata*** McVaugh. {habitats}. S. ME west to MN, south to NJ, DE, MD, WV, s. IN, and IL. [= F, G, K, WV, Y; < *L. spicata* var. *spicata* – C; < *L. spicata* – W]

Lobelia spicata Lamarck *var.* ***leptostachys*** (Alphonse de Candolle) Mackenzie & Bush. Meadows, woodlands, disturbed areas. Late May-August. WV west to IL and KS, south to GA, AL, MS, and AR. [= C, F, G, K, WV, Y; < *L. spicata* – RAB, GW, W; = *L. leptostachys* Alphonse de Candolle – S]

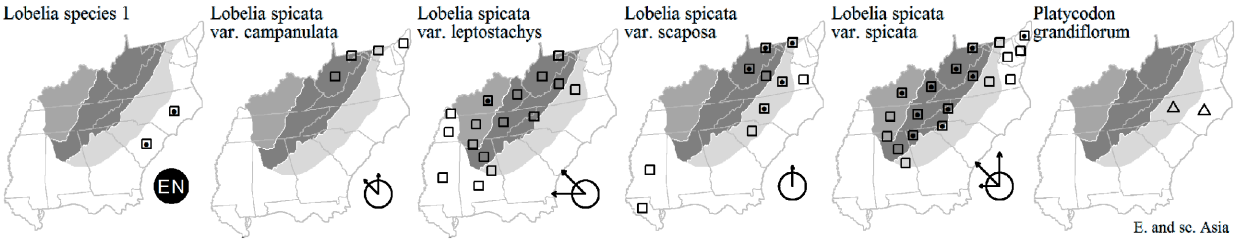
Lobelia spicata Lamarck *var.* ***scaposa*** McVaugh. Meadows, woodlands, disturbed areas. Late May-August. S. PA south to SC, west to LA. [= C, F, G, K, WV, Y; < *L. spicata* – RAB, GW, S, W]

Lobelia spicata Lamarck *var.* ***spicata***. Meadows, woodlands, disturbed areas. Late May-August. ME and NB west to ND, south to PA and AR, and in the mountains to n. GA. [= F, G, K, WV; < *L. spicata* var. *spicata* – C; < *L. spicata* – RAB, GW, W; > *L. spicata* – S; > *L. bracteata* Small – S; = *L. spicata* var. *originalis* – Y]

2. Platycodon Alphonse de Candolle 1830 (Japanese Bellflower, Balloonflower)

A monotypic genus, an herb, of ne. Asia. References: Rosatti (1986)=Z; Lammers in Kadereit & Jeffrey (2007).

* ***Platycodon grandiflorum*** (Jacquin) Alphonse de Candolle, Japanese Bellflower, Balloonflower. Ditches, disturbed areas, spread from horticultural cultivation; native of e. Asia. [= RAB, K, Z]



3. Wahlenbergia Schrader ex Roth 1821 (Wahlenbergia)

A genus of ca. 260 species, annual and perennial herbs, and shrubs, of southern South America, southern Africa, e. Asia, and Oceania. References: Rosatti (1986)=Z; Lammers in Kadereit & Jeffrey (2007).

1 Hypanthium narrowly obconic to nearly cylindric, 3.5-4.5 mm long at anthesis, lengthening to as much as 12 mm in fruit; fruit opening by 2 terminal pores; perennial ..... ***W. linarioides***
1 Hypanthium ellipsoid or ovoid, 1.5-3 mm long at anthesis, lengthening to as much as 7.5 mm in fruit; fruit opening by 3 terminal pores; annual ..... ***W. marginata***

* ***Wahlenbergia linarioides*** (Lamarck) Alphonse de Candolle. Disturbed areas; native of s. South America. [= K] {add Z synonymy}

* ***Wahlenbergia marginata*** (Thunberg) Alphonse de Candolle. Sandy soils along roadsides and in fields; native of e. Asia and Oceania. February-December. Apparently only recently introduced in se. United States, the earliest recorded date 1937 in Alachua County, FL (Rosatti 1986), but now quite common on sandy roadsides. [= RAB, K, Z]

4. Jasione Linnaeus 1753 (Sheep's-bit)

A genus of 16 species, herbs, European and Mediterranean. References: Rosatti (1986)=Z; Lammers in Kadereit & Jeffrey (2007).

* ***Jasione montana*** Linnaeus, Sheep's-bit. Disturbed areas in sandy soils; native of Europe. June-September. [= C, F, G, K; > *J. montana* var. *montana* – Z]

5. Triodanis Rafinesque 1838 (Venus's Looking-glass)

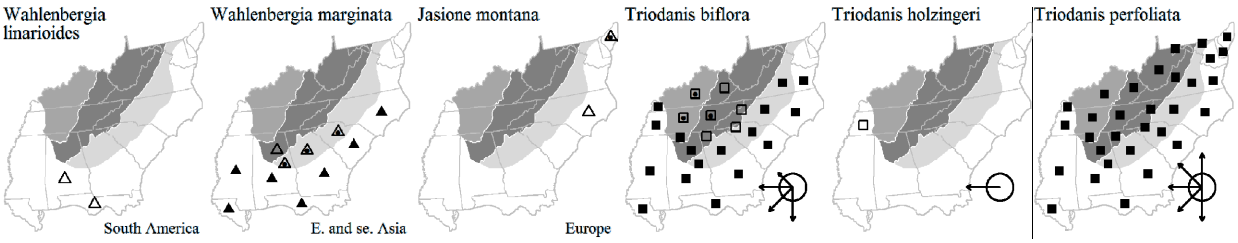
A genus of 6-8 species, annual herbs, of America. References: McVaugh (1945)=Z; McVaugh (1948); Lammers in Kadereit & Jeffrey (2007). Key based on Z.

1 Openings of the capsule linear, 0.2-0.4 mm wide; seeds minutely tuberculate in longitudinal lines; [sw. TN westward] ..... ***T. holzingeri***
1 Openings of the capsule broadly elliptic, oval, or rounded, 0.5-1.5 mm wide; seeds either muriculate over the entire surface or nearly to quite smooth; [collectively more widespread].
  2 Pores at or very near the apex of the capsule; seeds smooth and highly polished; open (chasmogamous) corolla usually 1 (the terminal), the others usually closed (cleistogamous) ..... ***T. biflora***
  2 Pores well below the apex of the capsule (usually 1-1.5 mm below), usually about midway between apex and base; seeds muriculate or smooth and lustrous; open (chasmogamous) corollas usually several ..... ***T. perfoliata***

Triodanis biflora (Ruiz & Pavón) Greene. Roadsides, gardens, glades, disturbed areas. April-June. E. VA, KY, KS, AZ, and OR, south c. peninsular FL and Mexico; South America. [= C, K, WH, Z; = *Specularia biflora* (Ruiz & Pavón) Fischer & C.A. Meyer – RAB, F, G; = *T. perfoliata* var. *biflora* (Ruiz & Pavón) Bradley – W]

Triodanis holzingeri McVaugh. {habitats} MO west to CO, south to sw. TN, AR, TX, and NM. [= K, Z; = *Specularia holzingeri* (McVaugh) Fernald – F]

Triodanis perfoliata (Linnaeus) Nieuwland. Roadsides, gardens, glades, dry forests, disturbed areas. April-June. ME and BC south to c. peninsular FL and Mexico; West Indies; Ecuador. [= C, K, Z, WH; = *Specularia perfoliata* (Linnaeus) Alphonse de Candolle – RAB, F, G, WV; = *T. perfoliata* var. *perfoliata* – W]



6. Campanula Linnaeus 1753 (Bellflower)

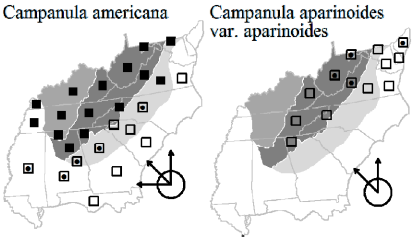
A genus of about 300-425 species, herbs (rarely shrubby), north temperate, most diverse in s. Europe. The appropriate circumscription remains uncertain and controversial, and related genera are sometimes combined into a broadly circumscribed *Campanula*, or alternately, several segregates recognized (*Campanula*, *Rapunculus*, *Campanulastrum*, etc.). A broad circumscription is adopted here, based on considerations discussed in Roquet et al. (2008). Park et al. (2006) propose splitting Campanula into a number of segregates, a suggestion which also has some merits; if followed, most or all of our species would likely be placed in the genus *Rapunculus*. References: Roquet et al. (2008); Park et al. (2006); Rosatti (1986)=Z; Shetler & Morin (1986); Shetler (1982)=Y; Shulkina, Gaskin, & Eddie (2003); Lammers in Kadereit & Jeffrey (2007).

1 Corolla rotate
  2 Stem erect; leaf obviously serrate or crenate; [of FL and northward, of uplands] ..... ***C. americana***
  2 Stem sprawling; leaf entire or with obscure teeth; [of FL wetlands] ..... ***C. floridana***
1 Corolla campanulate.
  3 Stems weak and slender, reclining, 3-angled.
    4 Corolla 4-10 mm long; pedicels divergent, the bractless portion 0.4-4 cm long; corolla white to very pale blue ..... ***C. aparinoides*** *var.* ***aparinoides***
    4 Corolla 5-13 mm long; pedicels ascending, the bractless portion 1-8 cm long; corolla pale blue ..... ***[C. aparinoides*** *var.* ***grandiflora]***
  3 Stems more robust, erect, terete or nearly so.
    5 Flowers on long pedicels (generally longer than 40 mm long), the inflorescence a diffuse panicle; [native species of rock outcrops or rocky woodlands].
      6 Corolla 6-8 mm long; leaves lanceolate, averaging about 1 cm wide, generally with prominent, often somewhat divergent teeth..... ***C. divaricata***
      6 Corolla 12-20 mm long; leaves (of the stem) linear, averaging < 5 mm wide, generally lacking teeth (or the teeth minute and obscure) ..... ***C. rotundifolia***
    5 Flowers mostly on short pedicels (the upper < 5 mm long), the inflorescence a raceme; [alien species usually of disturbed areas].
      7 Capsules with pores in the apical half ..... ***C. persicifolia***
      7 Capsules with pores at or near the base ..... ***C. rapunculoides***

Campanula americana Linnaeus, Tall Bellflower. Moist to fairly dry forests, especially over mafic or calcareous rocks. Late June-September; August-October. NY, ON, MN, and SD, south to Panhandle FL, LA, and OK. Shetler & Morin (1986) stated that "Small's view [segregating *Campanula americana* into the monotypic genus *Campanulastrum*] appears to have increasing justification from palynological, cytological, and now seed evidence." Also recently supported as a genus by Shulkina, Gaskin, & Eddie (2003), but combined into *Campanula* by Lammers in Kadereit & Jeffrey (2007) and Roquet et al. (2008). [= RAB, C, F, G, W, WH, Z; = ***Campanulastrum americanum*** (Linnaeus) Small – K, S; *Rapunculus*]

Campanula aparinoides Pursh *var.* ***aparinoides***, Marsh Bellflower. Bogs, marshes, wet meadows, seepage slopes over mafic or calcareous rocks. Late June-August; August-September. Widespread in ne. North America, south to nc. GA (Jones & Coile 1988), KY, MO, and NE. [= C, G; < *C. aparinoides* – RAB, K, W, Z; = *C. aparinoides* – F, S]

Campanula aparinoides var. *grandiflora* Holzinger ranges south to PA. It should be sought in our area. It has been variously treated as a species, variety, geographic phase, or form; its taxonomic status is uncertain. [= C, G; < *C. aparinoides* – K; = *C. uliginosa* Rydberg – F] {not mapped}

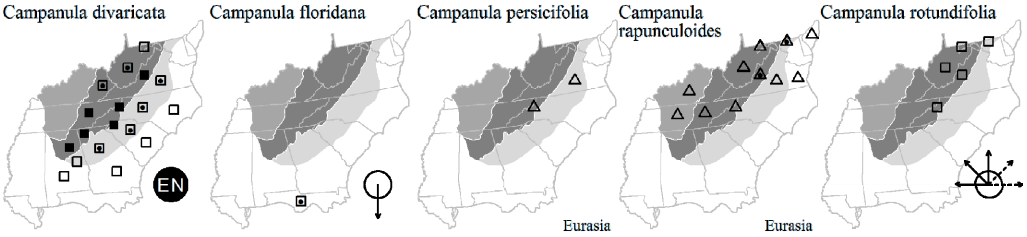


Campanula divaricata Michaux, Southern Harebell, Appalachian Bellflower. Rock outcrops, cliffs, rocky summits, talus, up to at least 1850m. July-October; September-December. A broad endemic of the Southern and Central Appalachians: MD and KY south to AL and GA. [= RAB, C, F, G, K, W, Z; = *C. flexuosa* Michaux – S; *Rapunculus*]

Campanula floridana S. Watson ex A. Gray, Florida Bellflower. Cypress ponds, depressions marshes, wet prairies. March-May. Ne. FL and Panhandle FL south to s. peninsular FL. [= GW, K, WH; = *Rotantha floridana* (S. Watson ex A. Gray) Small – S]

* ***Campanula persicifolia*** Linnaeus, Peachleaf Bellflower. Naturalized from gardens; native of Eurasia. This species was reported by Small (1933) as "escaping from gardens" in w. NC; no specimens have been seen to document this occurrence. Additional documentation is needed to confirm this record. [= RAB, K, S; = *Rapunculus persicifolius* (Linnaeus) Fournier; = *Neocodon persicifolius* (Linnaeus) A.A.Kolakovskiĭ & L.B.Serdyukova]

* ***Campanula rapunculoides*** Linnaeus, Rampion Bellflower, Rover Bellflower. Disturbed areas; native of Eurasia. June-August (-October). [= RAB, C, F, G, K, S, Z; *Rapunculus*]



Campanula rotundifolia Linnaeus, Bluebell, Harebell, Bluebell-of-Scotland. Limestone outcrops, high elevation rocky summits (in thin soil over amphibolite). July-August; August-September. A circumboreal species, widespread and common in n. North America and n. Eurasia, south to nw. NC, TN, MO, TX, NM, AZ, and CA. In our area rare, and generally limited to limestone in its occurrences in the Central Appalachians of WV and VA and to mafic rocks in nw. NC. It was added to the flora of NC in 1991 (Three Top Mountain, Ashe County). See Shetler (1982) for a detailed study of the species. [= C, F, G, K, Y, Z; *Rapunculus*]

397. MENYANTHACEAE Dumortier 1829 (Buckbean Family) [in ASTERALES]

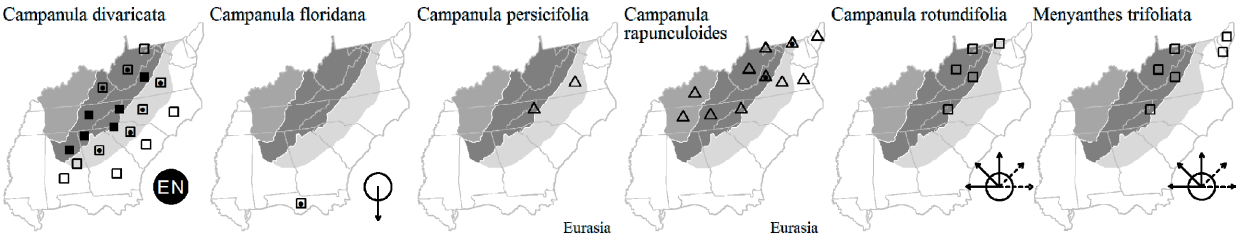
A family of about 5 genera and 40 species, wetland herbs, of cosmopolitan distribution. References: Wood (1983a)=Z.

1 Leaves trifoliate; inflorescence a raceme ..... ***Menyanthes***
1 Leaves simple; inflorescence an umbel ..... ***Nymphoides***

Menyanthes Linnaeus 1753 (Buckbean, Bogbean)

The genus is monotypic, an herb, circumboreal. References: Wood (1983a)=Z

Menyanthes trifoliata Linnaeus, Buckbean, Bogbean. Mucky soils of mountain bogs at high elevations over amphibolite (in the Blue Ridge), boggy marshes over calcareous rocks (in the Ridge and Valley), seepage swamps (in the Coastal Plain). May-June. This circumboreal species is widespread in n. North America and n. Eurasia, ranging south in North America to NJ, DE, w. VA, IN, MO, and CA, and disjunct to Long Hope Valley, Watauga County, NC. The NC populations are disjunct about 400 km from the next nearest populations in VA and WV. McDowell (1984) reported the first documentation of the species for NC. [= C, G, K, W, WV, Z; > *M. trifoliata* var. *minor* Rafinesque – F]



Nymphoides Séquier 1754 (Floating Heart)

A genus of about 20 species, aquatic herbs, cosmopolitan. References: Wood (1983a)=Z; Burks (2002).

Identification notes: As the scientific name indicates, the leaves of *Nymphoides* bear a superficial resemblance to those of *Nymphaea*. The leaves of *Nymphoides* are more cordate, the two basal lobes more rounded, rather than having a rather sharp corner or angle. *Nymphoides cordata* has much smaller leaves than *Nymphaea*, while the thickly pebbled texturing of *Nymphoides aquatica* is very unlike the glossy smoothness of *Nymphaea*.

1 Flowers yellow; floating stems usually with multiple leaves; capsules 12-25 mm long ..... ***N. peltata***
1 Flowers white; floating stems with single leaves; capsules 3-14 mm long.
  2 Adaxial petal surface bearing a ruffled crest down its length in the middle ..... ***N. cristata***
  2 Adaxial petal surface not crested.
    3 Leaves 5-15 cm wide, roughly pebbled below, thick in texture; stems 1.3-2.5 mm in diameter a few cm below the inflorescence, with conspicuous red spots; tuberous roots of floating clusters stout, blunt-tipped; seeds conspicuously papillate; capsule 10-14 mm long ..... ***N. aquatica***
    3 Leaves 3-7 cm wide, smooth below, thin in texture; stems 0.6-0.9 mm in diameter a few cm below the inflorescence, rarely spotted with red; tuberous roots of floating clusters slender, with pointed tips; seeds smooth (rarely papillate); capsule 4-5 mm long ..... ***N. cordata***

Nymphoides aquatica (Walter ex J.F. Gmelin) Kuntze, Big Floating Heart, Banana Floating Heart. Limesink ponds (dolines), other acidic and nutrient-poor water-filled depressions, sluggish streams, beaverponds, primarily in the Outer and Middle Coastal Plain. Late April-September. A Southeastern Coastal Plain endemic: NJ south to FL and west to TX. [= RAB, C, F, GW, K, S, Z; = *N. aquaticum* – G, orthographic variant]

Nymphoides cordata (Elliott) Fernald, Little Floating Heart. Upland depression ponds, sluggish streams, beaverponds, primarily in the fall-line Sandhills. NL (Newfoundland) and ON south MD; disjunct in the Coastal Plain of NC and SC; disjunct from sw. GA and Panhandle FL west to e. LA. [= RAB, C, F, GW, K, Z; = *N. cordatum* – G, orthographic variant; ? *N. lacunosa* (Ventenat) Kuntze – S, misapplied]

* ***Nymphoides cristata*** (Roxburgh) Kuntze, Crested Floating Heart, Water Snowflake. Ponds and lakes; native of China and India. Apparently first naturalizing in North America in FL in 2000; introduced for water gardens and aquariums, and considered a noxious aquatic weed in our area.

* ***Nymphoides peltata*** (S.G. Gmelin) Kuntze, Yellow Floating Heart. Ponds; native of Europe. This European native is sparingly naturalized in e. North America; it is sold for cultivation in water gardens, and will likely become more widely naturalized. [= C, F, K; = *N. peltatum* – G, orthographic variant]

398. GOODENIACEAE R. Brown 1810 (Goodenia Family) [in ASTERALES]

A family of about 11 genera and 440 species, herbs and shrubs, mostly of the Southern Hemisphere, and especially Autralia. References: Carolin in Kadereit & Jeffrey (2007).

Scaevola Linnaeus 1771 (Fanflower, Half-flowerr, Scaevola)

A genus of about 130 species, perennial herbs, shrubs, woody scramblers and trees, tropical nd subtropical, especially in Australia and nearby islands. References: Carolin in Kadereit & Jeffrey (2007).

Scaevola plumieri (Linnaeus) Vahl, Beachberry, Inkberry, Gull-feed. Coastal dunes, marsh edges. January-December. N. peninsular FL south to s. FL; s. LA; s. TX south through Mexico into Central and South America; West Indies. [= K, S, WH]

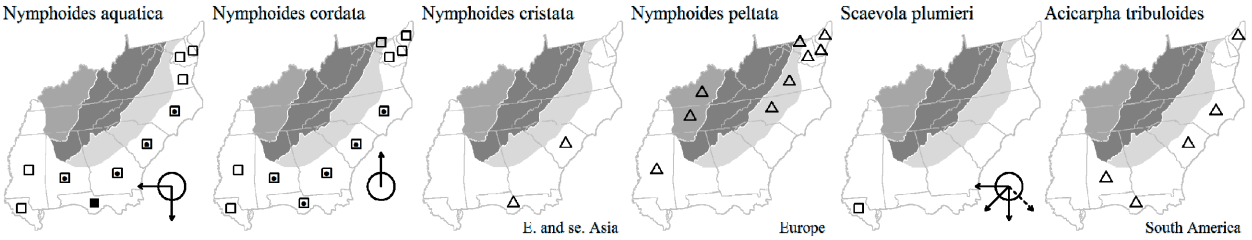
399. CALYCERACEAE R. Brown ex Richard 1820 (Calycera Family) [in ASTERALES]

A family of 4 genera and ca. 60 species, perennial and annual herbs, endemic to s. South America. References: Hellwig in Kadereit & Jeffrey (2007).

Acicarpha Antoine Laurent de Jussieu

A genus of 3-5 species, of subequatorial South America. References: DeVore (1991)=Z; Hellwig in Kadereit & Jeffrey (2007).

* ***Acicarpha tribuloides*** Antoine Laurent de Jussieu, Madam Gorgon. On ship's ballast near old port-cities; probably no longer present, native of South America (Brazil, Uruguay, Paraguay, and Argentina). The NC and SC records were both collected by Gerald McCarthy in 1888; though the localities are not specified, the likely sites (based on his itinerary and what is known of the species) are Wilmington (New Hanover County, NC) and Charleston (Charleston County, SC). DeVore (1991) discusses ballast plants and the apparent failure of *Acicarpha* to naturalize in North America. This species has not been collected in our area (or North America) since 1888; it is here treated for historical interest and to increase the likelihood that it will be relocated, if it is, indeed, actually naturalized. [= K, S, WH, Z]



400. ASTERACEAE Dumortier 1822 or ***COMPOSITAE*** Giseke 1792 (Aster Family) [in ASTERALES]

A family of about 1500-1700 genera and 20,000-25,000 species, shrubs, herbs, trees, and vines, cosmopolitan. References: Cronquist (1980)=SE throughout family treatment.

Identification notes: {define liguliflorous, discoid, disciform, radiant, and radiate heads; define various pappus characters. define calyculus. define palea and phyllary}

1 Plant a shrub or woody vine, definitely with woody growth well above ground level ..... **Key A**
1 Plant an annual, biennial, or perennial, lacking woody growth above ground level.
  2 Leaves opposite or whorled, at least on the lower stem nodes (the leaves higher on the stem sometimes alternate).
    3 Heads discoid or disciform ..... **Key B** {under construction}
    3 Heads radiate.
      4 Rays yellow, orange, or red (sometimes with some brown, maroon, or purple coloration as well) ..... **Key C** {under construction}
      4 Rays white, cream-colored, or pale pink or lavender ..... **Key D** {under construction}
  2 Leaves **either** alternate (not opposite even at lower nodes of the stem) **or** basal only (the heads on scapiform stems).
    6 Heads liguliflorous (composed of ligulate florets); sap usually milky ..... **Key E**
    6 Heads discoid, disciform, radiant, or radiate; sap usually clear.
      7 Heads discoid or disciform ..... **Key F** {under construction}
      7 Heads radiate or radiant ..... {under construction}

Key A – shrubby composites

1 Leaves strictly alternate; [tribe *Astereae*].
  2 Heads discoid; shrubs to 5 m tall; [widespread in our area] ..... ***Baccharis***
  2 Heads radiate (most or all on a plant); [of se. NC southwards, native in the Coastal Plain only].
    3 Leaves with clasping base, with a midvein and lateral veins and tertiary reticulation; rays pink or rose; sprawling viny shrub to 4 m tall; [of wet habitats of SC (or se. NC) southwards, also cultivated] ..... ***Ampelaster***
    3 Leaves with a cuneate base, with a midvein and otherwise minutely pebbled; rays yellow; intricately branched shrub to 1 m tall, with persistent sterile shoots with evergreen leaves and annual flowering shoots (the entire shoot and leaves deciduous); [of xeric sandy barrens, of se. NC southwards] ..... ***Chrysoma***
1 Leaves opposite, at least on the lower stem nodes (the leaves higher on the stem sometimes alternate); [tribe *Heliantheae*].
  4 Heads radiate, ray florets yellow; disc florets yellow; leaves strictly opposite; [of tidally inundated salt and brackish marshes of the outer Coastal Plain]; [tribe *Heliantheae*; subtribe *Ecliptinae*] ..... ***Borrichia***
  4 Heads discoid or disciform, ray florets lacking; disc florets pink, purple, or whitish; leaves opposite, but usually at least in part alternate higher on the stem; [collectively of various habitats, Coastal Plain and inland].
    5 Heads solitary, axillary in the axils of leaves or leafy bracts; heads nodding, the involucre 2-7 mm high; [collectively widespread in our area, of maritime and inland wetlands or moist disturbed areas]; [tribe *Heliantheae*; subtribe *Ambrosiinae*] ..... ***Iva***
    5 Heads many, terminal on the branches of corymbiform arrays; heads erect, the involucre 4-12 mm high; [of Coastal Plain of FL, s. GA, s. AL, and c. MS, of dry, sandy scrub and pinelands, blackland prairies, or dry, disturbed areas].
      6 Leaves with punctate glands; pappus of 60-70 barbellate bristles, 8-12 mm long; [tribe *Heliantheae*; subtribe *Eupatoriae*] .... ***Garberia***
      6 Leaves lacking punctuate glands; pappus of 4-10 scales, 0.3-7 mm long; [tribe *Heliantheae*; subtribe *Chaenactidinae*] ..... ***Palafoxia***

Key B – herbaceous composites with opposite or whorled leaves and discoid or disciform heads (lacking ray florets)

1 Disc florets yellow.
2
2
Acmella
Flaveria
Pulicaria
Dittrichia
Inula

1 Disc florets white, pink, purplish.
6
6
Ambrosia
Xanthium
Iva
Cyclachaena
Melanthera
Lagascea
Palafoxia
Eupatorium
Eutrochium
Conoclinium
Ageratum
Brickellia
Hartwrightia
Fleischmannia
Chromolaena
Mikania
Chevreulia
Sclerolepis

Key C – herbaceous composites with opposite leaves and radiate heads, the rays predominantly yellow, orange, or red

Key D – herbaceous composites with opposite leaves and radiate heads, the rays predominantly white, cream or pale lavender or pink

Key E – herbaceous composites with leaves alternate or basal, liguliflorous heads (composed of ligulate florets), and sap usually milky

1 Cypselas (at least of the inner florets of the head) beaked.
2 Heads solitary and terminal at the end of a stem unbranched to its base.
3 Leaves basal and cauline, grasslike (untoothed and unlobed); stem leafy ..... ***Tragopogon***
3 Leaves basal only, variously toothed to pinnately lobed; stem scapiform (leafless).
4 Pappus of bristles ..... ***Taraxacum***
4 Pappus **either** of outer scales and inner bristles **or** entirely of aristate scales.
5 Pappus of outer scales and inner plumose bristles; leaves oblanceolate to oblong; plants annual or perennial ..... ***Leontodon***
5 Pappus of aristate scales; leaves linear to narrowly lanceolate; plants annual ..... ***Uropappus***
2 Heads several per stem, in various corymbiform, umbrelliform, spiciform, or paniculiform arrays (rarely solitary and terminal in the smallest and most depauperate individuals in a population.
6 Achenes distinctly flattened ..... ***Lactuca***
6 Achenes terete or prismatic.
7 Pappus of plumose bristles, at least the inner series; plant an annual or biennial.
8 Receptacles lacking paleae ..... ***Helminthotheca***
8 Receptacles with paleae ..... ***Hypochaeris***
7 Pappus of simple capillary bristles; plant an annual, biennial, or perennial.
9 Beak of the cypsela with a ring of soft white reflexed hairs at the summit (just below the pappus) ..... ***Pyrrhopappus***
9 Beak of the cypsela lacking a ring of hairs as described.
10 Pappus of 80-150 barbellulate bristles; plant an annual or biennial ..... ***Crepis***
10 Pappus **either** of 40-50 (or more) smooth bristles **or** of 20-30 barbellulate bristles; plant a perennial
11 Pappus of 40-50 (or more) smooth bristles ..... ***Chondrilla***
11 Pappus of 20-30 barbellulate bristles ..... ***Ixeris***
1 Cypselas beakless.
12 Leaves basally disposed (stem leaves few or none generally smaller in size than the basal leaves, which are persistent into flowering and fruiting); corollas yellow, orange, or red.
13 Pappus absent **or** of both scales and barbellulate bristles ..... ***Krigia***
13 Pappus of bristles only (these barbellulate or plumose).
14 Pappus of plumose bristles (these somewhat flattened at their bases) ..... ***Oporinia***

14 Pappus of barbellulate bristles.
15 Leaves with entire margins; plants perennials, **either** from long to short rhizomes **or** from a short caudex with fibrous roots..... ***Hieracium***
15 Leaves coarsely toothed or pinnately lobed; plants annuals, from a taproot.
16 Involucre 5-12 mm high; achenes usually > 2.5 mm long; pappus bristles distinct, 3-7 mm long..... ***Crepis***
16 Involucre 3-5 mm high; achenes 1.5-2.5 mm long; pappus bristles basally connate, 2.5-3.5 mm long ..... ***Youngia***
12 Leaves basal and cauline (plant often beginning with a basal rosette, but by flowering bearing well-developed stem leaves about as large as the basal leaves, the basal rosette often withering prior to flowering and fruiting); corollas yellow, orange, red, blue, pink, white, or lavender.
17 Pappus absent or of scales.
18 Corollas pale blue (rarely pink or white)..... ***Cichorium***
18 Corollas yellow (rarely orange).
19 Stem winged and spiny; leaves spiny-margined; receptacle with paleae..... ***Scolymus***
19 Stem not winged or spiny; leaves not spiny-margined; receptable lacking paleae.
20 Cypselas 1.2-2.8 mm long; heads borne single at the ends of scapiform stems that are unbranched (rarely few-branched near the base); plnats to 7 dm tall..... ***Krigia***
20 Cypselas 3-5 mm long; heads borne in corymbiform or thyrsiform arrays; plants to 15 dm tall ..... ***Lapsana***
17 Pappus of numerous smooth or barbellate bristles.
21
21
Lygodesmia
Crepis
Sonchus
Hieracium
Picris
Prenanthes

Key F

Key G

Acanthospermum Schrank 1820 (Paraguay Bur)

A genus of about 6 species, herbs, of tropical America. References: Strother in FNA (2006c); Cronquist (1980)=SE.

1 Stems prostrate and rooting at the nodes; bur 7-9 mm long, slightly compressed, strongly 5-7-ribbed ..... ***A. australe***
1 Stems erect; bur 2-6 mm long, obviously compressed, obscurely ribbed or 3-ribbed.
2 Leaves (2-) 4-12 (-15) cm long, sessile or subsessile; bur with prickles on all surface ..... ***A. hispidum***
2 Leaves 1-3 (-4.5) cm long, petiolate, the petiole 4-18 mm long; bur unarmed or nearly so on the side faces, the prickles along the ribs and around the tip ..... ***A. humile***

* ***Acanthospermum australe*** (Loefling) Kuntze, Paraguay Bur, Sheep Bur. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (SC): disturbed areas; common (rare in VA), native of South America. May-November. [= RAB, C, F, FNA, G, K, S, SE, WH]
* ***Acanthospermum hispidum*** A.P. de Candolle, Hispid Starbur. Cp (FL, GA, SC, VA): disturbed areas, soybean and peanut fields, gardens; uncommon, native of n. South America. July-November. First reported from SC by Hill & Horn (1997). [= FNA, K, S, SE, WH]
* ***Acanthospermum humile*** (Swartz) A.P. de Candolle, Low Starbur. Cp (FL, SC): disturbed areas; rare, native of the West Indies. Reported for SC by Nelson (2003). [= FNA, K, S, SE, WH; = *Melampodium humile* Swartz]

Achillea Linnaeus 1753 (Yarrow, Milfoil, Thousand-leaf)

A genus of about 115 species, herbs, primarily Eurasian. References: Ramsey, Robertson, & Husband (2008)=Y; Guo, Ehrendorfer & Samuel (2004); Guo et al. (2005); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z; Trock in FNA (2006a).

1 Leaves pinnately dissected into linear segments; [section *Achillea*]..... ***A. millefolium***
1 Leaves serrate to almost entire; [section *Ptarmica*]..... ***A. ptarmica***

Achillea millefolium Linnaeus, Yarrow, Thousandleaf. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): grassy balds, roadsides, disturbed areas; common (rare in FL). April-November. Circumboreal (as here broadly treated). A taxonomically very complex entity, with races of different ploidies, and apparently both introduced and native genotypes in e. North America. It would be desirable to treat the variation, but a workable treatment has not yet been produced. Ramsey, Robertson & Husband (2008) have recommended treating native North American races as *A. borealis*, but it is not clear what (if any) eastern North American races are native. [= RAB, FNA, SE; > *A. millefolium* ssp. *millefolium* – C, G; > *A.*

millefolium ssp. *lanulosa* (Nuttall) Piper – C, G, W; > *A. lanulosa* Nuttall – F, Z; > *A. millefolium* – F, Y, Z; > *A. millefolium* var. *millefolium* – K; > *A. millefolium* var. *occidentalis* de Candolle – K; > *A. borealis* Bongard – Y]

* ***Achillea ptarmica*** Linnaeus, Sneezeweed, Sneezewort. Mt (WV): disturbed areas; rare, native of Eurasia. Naturalized south to WV and at scattered sites in PA (Rhoads & Klein 1993). [= C, F, FNA, G, K, Z]

* ***Achillea filipendulina*** Lamarck, Fern-leaf Yarrow. Cp (DE): {habitat}; uncommon. [= FNA, K] {not yet keyed; add to synonymy}

Acmella L.C. Richard ex C.H. Persoon 1807 (Spotflower)

A genus of about 30 species, herbs, primarily of tropical distribution. References: Jansen (1985)=Z; Strother in FNA (2006c); Cronquist (1980)=SE.

1 Leaves linear to lanceolate; petioles 2-4.5 mm long; outer series of phyllaries narrowly to broadly ovate, the apex acute; heads radiate or discoid ..... ***A. pusilla***
1 Leaves narrowly to broadly ovate; petioles (3-) 5-43 mm long; outer series of phyllaries lanceolate, the apex acuminate; heads radiate ..... ***A. repens***

* ***Acmella pusilla*** (Hooker & Arnott) R.K. Jansen, Argentine Spotflower. Cp (FL, GA, NC, SC): lawns, disturbed areas (especially around old seaports); rare, native of South America. May-September. Known from scattered locations in the se. United States (NC, SC, GA, FL), associated with old seaports, such as Wilmington, NC, Savannah, GA, Pensacola and Apalachicola, FL, and perhaps not well-established at some of the reported locations. Reported as naturalized and "locally common" at a site in Chatham County, GA (Carter, Baker, & Morris 2009). [= FNA, K, WH, Z]

Acmella repens (Walter) L.C. Richard in Persoon, Creeping Spotflower. Cp (FL, GA, NC, SC), Pd (NC, SC): floating vegetation mats, roadsides, streambanks, other moist, open, habitats; common (uncommon in GA, rare in NC, SC). July-December. Se. NC south to s. FL, west to e. TX, north in the Mississippi Embayment to w. TN and s. MO. Jansen (1985) treats this as var. *repens* of *A. oppositifolia*, the typic var. *oppositifolia* widely distributed from c. Mexico south through Central America into n. South America, stating that var. *repens* "can be easily separated from var. *oppositifolia* by its lanceolate, acuminate phyllaries and short double hairs on the achene margins." Jansen also states that "four factors have caused extreme difficulties in delimiting taxa at the specific and infraspecific level within this group: very close morphological similarity; polyploidy; hybridization, especially between different ploidy levels; and asexual reproduction." In his more statistical taxonomic analyses, his var. *repens* (tetraploid, and the only taxon out of 39 native to North America) separates rather well from *A. oppositifolia* (diploid, tetraploid, and hexaploid). Given the morphological distinctiveness and substantial allopatry of the two taxa, I prefer not to associate this taxon as a variety of the complex *A. oppositifolia*. [= FNA; = *Spilanthes americana* (Mutis ex Linnaeus f.) Hieronymus var. *repens* (Walter) A.H. Moore – RAB, F; < *Spilanthes americana* – C, G, GW, S, SE; = *Acmella oppositifolia* (Lamarck) R.K. Jansen var. *repens* (Walter) R.K. Jansen – K, WH, Z]

Acroptilon Cassini 1827 (Russian Knapweed)

A monotypic genus, native of Eurasia. References: Keil in FNA (2006a); Susanna & Garcia-Jacas in Kadereit & Jeffrey (2007)=Z.

* *Acroptilon repens* (Linnaeus) de Candolle, Russian Knapweed. Reported for VA (FNA), but there is apparently no documentation for its occurrence there; this serious invasive weed is widespread in western North America, east to OH, KY, and AR. [= FNA, K; = *Centaurea repens* Linnaeus – C, F, G; = *Rhaponticum repens* (Linnaeus) Hidalgo – Z]

Ageratina Spach 1847 (Milk-poison, White Snakeroot)

A genus of about 250-290 species, American. The separation of *Ageratina* from *Eupatorium* is clearly warranted, on morphological, karyological, and molecular grounds. References: Nesom in FNA (2006c); Clewell & Wooten (1971)=Z; Cronquist (1980)=SE. Key based in part on Z and SE.

1 Leaves subcoriaceous in texture; leaves crenate or crenate-serrate; leaf blades 3-7 (-10) cm long, 2-5 cm wide; [primarily of xeric or submesic sites].
  2 Larger leaf blades >5× as long as the petiole; leaf margins crenate; corolla lobes densely long-pubescent; achenes glabrous; [widespread in our area] ..... ***A. aromatica***
  2 Larger leaf blades (1-) 2-4× as long as the petiole; leaf margins crenate, dentate, or incised; corolla lobes glabrous or sparsely short-pubescent; achenes usually short-pubescent, at least near the apex; [of e. GA southward] ..... ***A. jucunda***
1 Leaves membranaceous in texture; leaves serrate or coarsely dentate; leaf blades 6-18 cm long, 3-12 cm wide (at least the larger on a given plant usually more 8 cm long); [primarily of mesic sites].
  3 Leaves delicately membranaceous, coarsely dentate; larger leaf blades 1.0-1.4× as long as the petiole; [of seepage and waterfall splash zones associated with sandstone rockhouses and cliff bases] ..... ***A. luciae-brauniae***
  3 Leaves membranaceous, of a "typical" herbaceous character, coarsely serrate; larger leaf blades 1.4-5× as long as the petiole; [of a wide variety of mesic habitats, especially moist forests and forest openings].

4 Phyllaries mostly 3-5 mm long, acute (to obtuse); heads with (9-) 12-25 flowers; leaves deltoid to ovate (the base generally broadly cuneate); heads arranged in open corymbs; [widespread in our area]..... ***A. altissima*** *var*. ***altissima***
4 Phyllaries mostly 5-7 mm long, cuspidate-acuminate; heads with (15-) 20-34 flowers; leaves generally deltoid (the base generally subcordate or truncate); heads arranged in dense corymbs; [of moderate to high elevation forests and openings, in the Mountains and upper Piedmont] ..... ***A. altissima*** *var* ***roanensis***

Ageratina altissima King & H.E. Robinson *var*. ***altissima***, Common White Snakeroot, Common Milk-poison. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): moist forests, such as cove forests; common (uncommon in Coastal Plain south of DE). Late July-October. Var. *altissima* ranges from QC west to se. ND, south to Panhandle FL and c. TX. Var. *angustata* (A. Gray) Clewell & Wooten ranges from IL and e. KS south to LA and c. TX. This species has been shown to be the cause of the "milk sickness" of pioneer days; the plants contain a poison which is transmissable to humans through cow milk. [= FNA, K; < *Eupatorium rugosum* Houttuyn – RAB, G, W; = *E. rugosum* Houttuyn var. *rugosum* – C, SE; > *E. rugosum* var. *rugosum* – F; > *E. rugosum* var. *chlorolepis* Fernald – F; > *E. rugosum* var. *tomentellum* (B.L. Robinson) Blake – F; = *Eupatorium urticifolium* Reichard – S; < *A. altissima* var. *altissima* (also see *A. luciae-brauniae*) – WH, Z]

Ageratina altissima King & H.E. Robinson *var*. ***roanensis*** (Small) Clewell & Wooten, Appalachian White Snakeroot, Appalachian Milk-poison. Mt (GA, NC, SC, VA): moist forests, often abundant at high elevations; common. August-October. Endemic to moderate to high elevations of the Southern Appalachians, from nw. VA south to w. SC, n. GA, e. TN, e. KY, and possibly ne. AL. [= FNA, K, Z; < *Eupatorium rugosum* Houttuyn – RAB, G, W; = *Eupatorium rugosum* var. *roanense* (Small) Fernald – C, F, SE; = *Eupatorium roanensis* Small – S]

Ageratina aromatica (Linnaeus) Spach, Small-leaved White Snakeroot, Wild-hoarhound. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): woodlands and forests, usually xeric, and often fire-maintained, also woodland edges; common (uncommon in Piedmont and Mountains, rare in DE and WV). Late August-October. MA, NY, and OH, south to ne. FL, Panhandle FL, and e. LA (Florida parishes). Two varieties have been delineated, both of them occurring in our area. Var. *incisa* (A. Gray) C.F. Reed is described as differing from var. *aromatica* in having the leaves cuneate (vs. truncate to rounded), acuminate (vs. acute), sharply toothed (vs. bluntly toothed, thin in texture (vs. thick), and the petioles slender and 0.5-2 cm long (vs. less slender and 0.1-1.5 cm). It is supposed to be Southeastern in range, from se. VA south to FL, on the Coastal Plain. The validity of this variety needs further assessment. [= FNA, WH, Z; = *Eupatorium aromaticum* Linnaeus – RAB, C, G, SE, W; > *Eupatorium aromaticum* var. *aromaticum* – F; > *Eupatorium aromaticum* var. *incisum* A. Gray – F; > *A. aromatica* var. *aromatica* – K; > *A. aromatica* var. *incisa* (Gray) C.F. Reed – K; > *Eupatorium latidens* Small – S; > *Eupatorium aromaticum* Linnaeus – S]

Ageratina jucunda (Greene) Clewell & Wooten, Hammock Snakeroot. Cp (FL, GA): sandhills, dry pinelands, and subxeric hardwood hammocks; common (uncommon in GA). Se. GA south to s. FL, west to e. Panhandle FL. [= FNA, K, WH, Z; = *Eupatorium jucundum* Greene – S, SE]

Ageratina luciae-brauniae (Fernald) King & H.E. Robinson, Rockhouse White Snakeroot. Mt (KY, TN): sandstone rockhouses, at the base of sandstone cliffs (usually overhanging) in seepage or splash; rare. Endemic to the Cumberland Plateau of ne. TN (Chester, Wofford, & Kral 1997) and se. KY. Although considered by Clewell & Wooten (1971) as mere aberrant plants, Wofford (1976) determined that *A. luciae-brauniae* is a species. [= FNA, K; = *Eupatorium luciae-brauniae* Fernald – C, F, G, SE; < *A. altissima* var. *altissima* – Z]

Ageratum Linnaeus 1753 (Ageratum, Flossflower, Pussyfoot)

A genus of about 44 species, herbs, of tropical America. References: Nesom in FNA (2006c); Cronquist (1980)=SE. Key based in part on SE.

1 Peduncles with short and long non-glandular hairs; phyllaries glabrous to sparsely pubescent with non-glandular hairs..... ***A. conyzoides***
1 Peduncles with shrt and long hairs, many of them glandular; phyllaries stipitate-glandular and sparsely pubescent with non-glandular hairs..... ***A. houstonianum***

* ***Ageratum conyzoides*** Linnaeus, Ageratum. Cp (NC): disturbed areas; rare, apparently native of South America. July-August. [= FNA, K, S, SE, WH]

* ***Ageratum houstonianum*** P. Miller, Ageratum. Cp (NC, SC): disturbed areas; rare, apparently native of se. Mexico and Central America. July-August. [= FNA, K, S, SE, WH]

Amblyolepis A.P. de Candolle 1836 (Huisache-daisy)

A monotypic genus, an annual herb, native of Texas and n. Mexico. References: Bierner in FNA (2006c).

* ***Amblyolepis setigera*** A.P. de Candolle, Huisache-daisy. Cp (SC): wool-combing mill waif (Nesom 2004d); rare, native of TX and n. Mexico. [= FNA, K]

Ambrosia Linnaeus 1753 (Ragweed)

A genus of about 43 species, herbs, cosmopolitan. References: Cronquist (1980)=SE; Strother in FNA (2006c).

1 Leaves either undivided, with 2 lateral teeth, or palmately 3-5-lobed.
2 Leaves sessile to clasping, 2.5-7 cm long, undivided, with 2 teeth near the base ..... ***A. bidentata***
2 Leaves petiolate, 7-30 cm long, (1-) 3 (-5) lobed..... ***A. trifida*** *var.* ***trifida***
1 Leaves 1- to 2-pinnatifid.
3 Annual, with fibrous roots; fruiting involucre with short, sharp spines ..... ***A. artemisiifolia***
3 Perennial, with deep-seated, creeping roots; fruiting involucre with bumps..... ***A. psilostachya***

Ambrosia artemisiifolia Linnaeus. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): roadsides, gardens, disturbed soils, thin soils on rock outcrops; common. August-November. NL (Newfoundland), Nunuvut, and BC south to FL, TX, CA and southward. [= RAB, C, FNA, G, SE; > *A. artemisiifolia* Linnaeus var. *elatior* (Linnaeus) Descourtils – F, K; > *A. artemisiifolia* Linnaeus var. *paniculata* (Michaux) Blank – F, K; > *A. artemisiifolia* Linnaeus var. *artemisiifolia* – F, K; > *A. elatior* Linnaeus – S; > *A. monophylla* (Walter) Rydberg – S; > *A. glandulosa* Scheele – S]

Ambrosia bidentata Michaux. Pd (VA), Mt (GA, NC, WV); {SC}: mafic woodlands; uncommon (rare in WV). August-November. CT, NY, and MN south to Panhandle FL and TX. Widely scattered throughout TN, east to e. TN (Chester, Wofford, & Kral 1997) and in nw. GA (Jones & Coile 1988). [= RAB, C, FNA, G, K, S, SE]

Ambrosia psilostachya A.P. de Candolle, Perennial Ragweed. Cp (FL, GA, NC, SC), Pd (VA): loamy sandy soil of flats and slight depressions in periodically burned longleaf pine uplands, also in disturbed areas; uncommon. September-November. MI west to MT, south to LA and NM; also scattered along eastern seaboard states (ME, NH, NY, NC, SC, GA, FL), where perhaps some of the distribution is adventive. Apparently first collected in VA in 2000. [= C, FNA, G, K, SE, WH; > *A. psilostachya* – RAB; > *A. rugelii* Rydberg – RAB, S; > *A. psilostachya* var. *coronopifolia* (Torrey & Gray) Farwell – F]

Ambrosia sp. 1, Glade Ragweed. Under investigation by P. McMillan and colleagues at CLEMS. {not yet keyed}

Ambrosia trifida Linnaeus *var.* ***trifida***. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): floodplains, moist pastures; disturbed ground; common (uncommon in VA Coastal Plain, rare in Coastal Plain south of VA). July-November. NS and BC south to n. peninsular FL, Panhandle FL, TX, and CA. [= C, F, G; < *A. trifida* var. *trifida* – K; < *A. trifida* – RAB, FNA, SE; = *A. trifida* – S]

Ampelaster Nesom 1995 (Climbing-aster)

A monotypic genus, a vining shrub, of se. North America. References: Semple in FNA (2006b); Nesom (2000b); Nesom (1994)=X; Cronquist (1980)=SE.

Ampelaster carolinianus (Walter) Nesom, Climbing Aster. Cp (FL, GA, NC, SC): swamps, thickets, marshes, streambanks; common (uncommon in GA and SC, rare in NC). Late September-October. Se. NC south to s. FL. Grown horticulturally. [= FNA, K, X; = *Aster carolinianus* Walter – RAB, GW, S, SE; = *Virgulus carolinianus* (Walter) Reveal & Keener; = *Symphyotrichum carolinianum* (Walter) Wunderlin & B.F. Hansen – WH]

Amphiachyris (A.P. de Candolle) Nuttall 1840 (Broomweed)

A genus of 2 species, herbs, of sc. North America. References: Nesom in FNA (2006b); Nesom (2000b); Cronquist (1980)=SE.

* ***Amphiachyris dracunculoides*** (A.P. de Candolle) Nuttall, Prairie Broomweed, Broom Snakeroot. Mt (VA), Cp (SC): disturbed areas over calcareous rocks, wool-combing mill waif (Nesom 2004d); rare, presumably adventive from further west. August-September. This species is common and weedy in disturbed cedar glade habitats in the Nashville Basin of c. TN, where apparently native (Chester, Wofford, & Kral 1997). [= FNA, K, S; = *Gutierrezia dracunculoides* (A.P. de Candolle) Blake – F, G, SE; = *Xanthocephalum dracunculoides* (A.P. de Candolle) Shinners]

Anaphalis A.P. de Candolle 1838 (Pearly-everlasting)

A genus of about 35 to 110 species, herbs, of tropical and temperate areas, with a center of diversity in Asia. References: Nesom in FNA (2006a); Arriagada (1998)=Z; Cronquist (1980)=SE.

Anaphalis margaritacea (Linnaeus) Bentham & Hooker f., Pearly-everlasting. Mt (NC*, VA, WV), Pd (DE, VA): dry open places, probably persistent from cultivation in NC, seemingly native in DE and VA; uncommon (rare in DE, NC, and VA). July-September. Interruptedly circumboreal, in North America from NL (Labrador) and NL (Newfoundland) west to AK, south to NC, TN, OK, TX, NM, CA, and Baja California. Very abundant and weedy in large parts of n. and w. North America, sometimes grown for ornament (especially dried arrangements) in our area. [= C, FNA, G, K, S, SE, W, Z; > *A. margaritacea* var. *angustior* (Miquel) Nakai – F; > *A. margaritacea* var. *intercedens* Hara – F]

Antennaria Gaertner 1791 (Pussytoes)

A genus of about 70 species, herbs, of temperate and subtropical areas. Of our species, *A. neglecta*, *A. solitaria*, *A. virginica*, and *A. plantaginifolia* are sexual diploids. *A. parlinii* is of multiple hybrid origin, includes sexual and asexual populations, and is derived from *A. plantaginifolia*, *A. solitaria*, and *A. racemosa*. *A. howellii* is strictly asexual, and is derived from *A. plantaginifolia*, *A. racemosa*, *A. virginica*, and *A. neglecta* (Bayer 1985). For reasons discussed in Bayer & Stebbins (1982) and parallel to those applied in this work to allopolyploid taxa in *Eupatorium*, the treatment of Bayer (1985) and Bayer & Stebbins (1993, 1982) is preferable to Cronquist's treatments, used in most of the floras covering or approaching our area. Much remains to be learned about the relative habitats and distributions of the various taxa in our area. References: Bayer in FNA (2006a); Bayer & Stebbins (1993)=Z; Bayer & Stebbins (1982)=Y; Arriagada (1998)=X; Cronquist (1980)=SE; Bayer (1985); Bayer & Stebbins (1987); Bayer (1984). Key closely adapted from Z, Y.

1 Flowering stalks with 1 head.....***A. solitaria***
1 Flowering stalks with 2 or more heads.
2 Basal leaves prominently 3-5 (-7)-nerved, mostly > 1.5 cm wide.
3 Pistillate involucres 5-7 mm high; pistillate corollas 3-4 mm high; staminate corollas 2-3.5 mm high; basal leaves tomentose on the upper surface; young stolons mostly ascending; staminate and pistillate plants equally common .....***A. plantaginifolia***
3 Pistillate involucres 7-10 mm high; pistillate corollas 4-7 mm high; staminate corollas 3.5-5 mm high; basal leaves tomentose or glabrous on the upper surface; young stolons mostly decumbent; sexual and apomictic populations present.
4 Basal leaves tomentose on the upper surface (becoming glabrate in age); summit of young cauline stem usually glandless..... ..... ***A. parlinii*** *ssp.* ***fallax***
4 Basal leaves glabrous or nearly so on the upper surface (even when young); summit of young cauline stem usually with purple glandular hairs.....***A. parlinii*** *ssp.* ***parlinii***
2 Basal leaves prominently 1-nerved (sometimes with 2 additional obscure veins), mostly < 1.5 cm wide.
5 Young and mature basal leaves glabrous on the upper surface; phyllary tips whitish; flags (flat scarious appendages similar to the tips of phyllaries on the tip of the leaf) present on the upper cauline leaves; species apomictic, populations consisting of pistillate plants only ... .***A. howellii*** *ssp.* ***canadensis***
5 Young basal leaves pubescent on the upper surface, mature leaves either remaining pubescent or becoming glabrous with age; phyllary tips white, ivory, to light brown; flags present or absent on the upper cauline leaves; species apomictic or sexual.
6 Largest basal leaves < 6.0 mm wide and < 20 mm long; pistillate involucres 4.5-7 mm high; species sexual, populations consisting of both pistillate and staminate plants; [of shale barrens from w. VA northward and westward].....***A. virginica***
6 Largest basal leaves > 6.0 mm wide and > 20 mm long; pistillate involucres 7-10 mm high; species apomictic or sexual; [collectively of various habitats and more widespread].
7 Middle and upper cauline leaves tipped with flags; mature basal leaves glabrous, young basal leaves pubescent, glabrescent with age; species sexual, populations consisting of both pistillate and staminate plants.....***A. neglecta***
7 Middle and upper cauline leaves blunt or with subulate tips (only those leaves immediately around the corymb with flags); mature and young basal leaves pubescent; species apomictic, populations consisting of pistillate plants only.
8 Basal leaves spatulate, with a distinct petiole; stolons mostly 5-8 cm long, with leaves along the stolon almost equal in size to those of the terminal rosette.....***A. howellii*** *ssp.* ***neodioica***
8 Basal leaves oblanceolate, lacking a distinct petiole; stolons mostly 8-12 cm long, with leaves along the stolon smaller than those of the terminal rosette.....***A. howellii*** *ssp.* ***petaloidea***

Antennaria howellii Greene *ssp.* ***canadensis*** (Greene) Bayer. Mt (VA): dry woodlands; rare? NL (Newfoundland) wet to YT, south to VA, WV, OH, IN, and MN. [= FNA, K, Z; = *A. neglecta* Greene var. *canadensis* (Greene) Cronquist – C; = *A. canadensis* Greene – F; = *A. neglecta* Greene var. *randii* (Fernald) Cronquist – G, SE; = *A. neodioica* Greene ssp. *canadensis* (Greene) Bayer & Stebbins – Y]

Antennaria howellii Greene *ssp.* ***neodioica*** (Greene) Bayer. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE): dry woodlands and rock outcrops; common (uncommon in WV). NL (Newfoundland) west to North West Territory, south to NC, TN, KS, CO, and OR. [= FNA, K, Z; = *A. neglecta* Greene var. *neodioica* (Greene) Cronquist – C; > *A. neodioica* Greene var. *neodioica* – F; > *A. neodioica* Greene var. *attenuata* Fernald – F; = *A. neglecta* Greene var. *attenuata* (Fernald) Cronquist – G, SE; = *A. neodioica* Greene ssp. *neodioica* – Y]

Antennaria howellii Greene *ssp.* ***petaloidea*** (Fernald) Bayer, Field Pussytoes. Mt (NC, VA, WV), Pd (VA): dry woodlands; rare. March-May. NL (Newfoundland) west to BC, south to NC, WV, IN, IL, CO, and OR. [= FNA, K, Z; = *A. neglecta* Greene var. *petaloidea* (Fernald) Cronquist) – C; = *A. petaloidea* Fernald var. *petaloidea* – F; < *A. neglecta* Greene var. *neglecta* – G, SE; = *A. neodioca* Greene ssp. *petaloidea* (Fernald) Bayer & Stebbins – W]

Antennaria neglecta Greene, Field Pussytoes. Pd (DE, NC, VA), Mt (VA, WV), Cp (DE): dry woodlands and fields; (uncommon in NC, VA, and WV). NS west to NT, south to VA, KY, AR, OK, and CO. *A. neglecta* is a sexual diploid ancestor of the *A. howellii* complex (FNA). [= F, FNA, K, X, Y, Z; = *A. neglecta* var. *neglecta* – C; < *A. neglecta* Greene var. *neglecta* – G, SE]

Antennaria parlinii Fernald *ssp.* ***fallax*** (Greene) Bayer & Stebbins, Big-head Pussytoes. Pd (DE, NC, VA), Cp (DE, NC, VA), Mt (NC, VA, WV), {GA, SC}: dry woodlands; common. Late March-early May. NS west to MN, south to GA, AL, MS, LA, and TX. [= FNA, K, X, Z; = *A. plantaginifolia* (Linnaeus) Richardson var. *ambigens* (Greene) Cronquist – RAB, C, G, SE; = *A. fallax* Greene var. *calophylla* (Greene) Fernald – F; > *A. calophylla* Greene – S; > *A. fallax* Greene – S; < *A. parlinii* – W]

Antennaria parlinii Fernald *ssp.* ***parlinii***, Parlin's Pussytoes. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE, NC, VA), {GA}: woodlands, roadbanks; common. Late March-early May. NS west to SK, south to GA, AL, MS, LA, and TX. [= FNA, K, X, Z; = *A. plantaginifolia* (Linnaeus) Richardson var. *arnoglossa* (Greene) Cronquist – RAB, G, SE; = *A. plantaginifolia* var. *parlinii* (Fernald) Cronquist – C; > *A. parlinii* Fernald var. *parlinii* – F; > *A. parlinii* var. *arnoglossa* (Greene) Fernald – F; < *A. parlinii* – W]

Antennaria plantaginifolia (Linnaeus) Richardson, Plantain Pussytoes. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): dry woodlands; common (rare in FL). Late March-early May. NS west to SK, south to FL, AL, MS, AR, and OK. *A. plantaginifolia* is a sexual diploid ancestor of the *A. howellii* complex (FNA). [= FNA, K, W, X, Z,

WH; = *A. plantaginifolia* var. *plantaginifolia* – RAB, C, G, SE; > *A. plantaginifolia* var. *plantaginifolia* – F; > *A. plantaginifolia* var. *petiolata* (Fernald) Heller – F; > *A. plantaginifolia* – S; > *A. caroliniana* Rydberg – S; > *A. plantaginifolia* – S]

Antennaria solitaria Rydberg, Southern Single-head Pussytoes. Mt (NC, VA), Pd (NC, VA), Cp (NC, VA), {GA, SC}: forests and woodlands, often mesic; common (uncommon in NC and VA). Late March-early May. VA, WV, sw. PA, and s. IN south to GA, LA, and OK. *A. solitaria* is a sexual diploid ancestor of the *A. parlinii* complex (FNA). [= RAB, C, F, FNA, G, K, S, SE, W, X, Z]

Antennaria virginica Stebbins, Shale-barren Pussytoes. Mt (VA, WV), Pd (VA): shale barrens and other dry, rocky habitats; uncommon. C. PA and w. VA west to OH. *A. virginica* is a sexual diploid (and tetraploid) ancestor of the *A. howellii* complex (FNA). [= C, FNA, K, W, Y, Z; > *A. virginica* var. *virginica* – F; > *A. virginica* var. *argillicola* Stebbins – F; = *A. neglecta* Greene var. *argillicola* (Stebbins) Cronquist – G, SE]

Anthemis Linnaeus 1753 (Chamomille)

A genus of about 175-210 species, herbs, mainly Eurasian. References: Watson in FNA (2006a); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z. Key adapted from C. [also see *Chamaemelum, Cota*]

1 Rays yellow ..... ***[see Cota tinctoria]***
1 Rays white.
  2 Rays sterile and usually neutral; receptacle chaffy only toward the middle ..... ***A. cotula***
  2 Rays pistillate and fertile; receptacle chaffy throughout.
    3 Achenes not tuberculate; leaves not glandular-punctate beneath ..... ***A. arvensis***
    3 Achenes tuberculate; leaves glandular-punctate beneath ..... ***[A. secundiramea]***

* ***Anthemis arvensis*** Linnaeus, Corn Chamomille. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): roadsides, disturbed areas; common (uncommon in DE, rare in FL), native of Europe. Late April-July. Var. *agrestis* differs from var. *arvensis* in having chaff shorter than the disk flowers; both varieties apparently occur in our area. [= RAB, C, FNA, G, S, SE, W, WH, Z; > *A. arvensis* var. *arvensis* – F, K; > *A. arvensis* var. *agrestis* (Wallroth) A.P. de Candolle – F, K]

* ***Anthemis cotula*** Linnaeus, Mayweed, Stinking Chamomille, Mayweed, Dog-fennel. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): roadsides, disturbed areas; common (uncommon in GA, NC, SC, VA, rare in FL), native of Eurasia. May-July. [= RAB, C, F, FNA, G, K, SE, W, WH, Z; = *Maruta cotula* (Linnaeus) A.P. de Candolle – S]

* *Anthemis secundiramea* Bivona-Bernardi. Cp (VA): railroad embankment; rare, native of Mediterranean Europe, probably merely a waif and not established. [= C, F, FNA, K, SE]

Aphanostephus A.P. de Candolle 1836 (Doze-daisy)

A genus of 4 species, of s. United States and Mexico. References: Nesom in FNA (2006b).

Aphanostephus skirrhobasis (Alphonse deCandolle) Trelease *var.* ***thallasius*** Shinners, Dune Doze-daisy. Cp (FL): dunes, disturbed coastal sands; rare. S. LA west to coastal TX and Tamaulipas; scattered in n. FL, both Panhandle FL (Bay and Escambia counties) and ne. FL (St. Johns County) (Wunderlin & Hansen 2004). [= FNA, K, SE, WH; = *A. skirrobasis* – S, orthographic variant]

Arctium Linnaeus 1753 (Burdock)

A genus of about 11 species (though circumscription remains uncertain), herbs, of the temperate Old World. References: Keil in FNA (2006a); Cronquist (1980)=SE; Duistermaat (1996)=Z.

1 Inner phyllaries constricted above the middle, widened toward the truncate (or rarely acuminate) apex ..... ***[A. tomentosum]***
1 Inner phyllaries never constricted above the middle, gradually narrowing toward the acute to acuminate apex.
  2 Petiole of the basal leaves solid; heads in the upper part of the inflorescence on peduncles > 2.5 cm long; heads corymbosely arranged on the main branches ..... ***A. lappa***
  2 Petiole of the basal leaves hollow (at least toward its base); heads in the upper party of the inflorescence on peduncles < 2 cm long; heads racemosely arranged on the main branches.
    3 Heads 1.1-2.4 cm in diameter; heads on terminal branches sessile or pedunculate; middle phyllaries < 1.8 mm wide; corolla with glandular hairs ..... ***A. minus***
    3 Heads 1.9-2.9 cm in diameter; heads on terminal branches sessile; middle phyllaries (1.6-) 1.7-2.5 mm wide; corolla glabrous ..... ***[A. nemorosum]***

* ***Arctium lappa*** Linnaeus, Great Burdock. Pd (DE), Cp (DE), Mt (NC): fields and roadsides; common (uncommon in DE Coastal Plain, rare in NC), native of Eurasia. July-November. [= RAB, C, F, FNA, G, K, SE, Z]

* ***Arctium minus*** Bernhardi, Common Burdock. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, SC, VA): pastures, barnyards, roadsides, other disturbed areas; common (uncommon in Piedmont south of DE, uncommon in Coastal Plain south of DE), native of Eurasia. Late June-November. [= RAB, C, F, FNA, K, S, SE, W, Z; < *A. minus* – G; = *A. minus* ssp. *minus*]

* *Arctium nemorosum* Lejeune & Courtois. Reported for VA by Kartesz (1999) on the basis of Fernald (1950); it is probable that this record is a misidentification. [= C, F, FNA, Z; < *A. minus* – G; = *A. vulgare* (Hill) Evans – K; = *A. minus* Bernhardi ssp. *nemorosum* (Lejeune & Courtois) Syme]

* *Arctium tomentosum* P. Miller, Cotton Burdock. Material purporting to be this taxon from Union County, SC, and the basis of its occurrence in that state, is actually a pubescent form of *A. minus*. May-November. [= C, F, FNA, G, K, SE, Z; = *A. nemorosum* Lejeune & Courtois – RAB, misapplied]

Arctotis Linnaeus 1753 (African-daisy, Arctotis)

A genus of about 60 species, annual and perennial herbs, native of South Africa. References: Norlindh (1965)=Z; Mahoney in FNA (2006a); McKenzie et al. (2006).

* ***Arctotis venusta*** T. Norlindh, Blue-eyed African-daisy, Silver Arctotis. Cp (SC): disturbed areas; rare, native of s. Africa. [= Z; < *Arctotis stoechadifolia* P.J. Bergius – FNA, K]

Arnica Linnaeus 1753 (Arnica)

A genus of about 29-32 species, perennial herbs, north temperate, boreal, and arctic. References: Wolf in FNA (2006c); Cronquist (1980)=SE.

Arnica acaulis (Walter) Britton, Sterns, & Poggenburg, Leopard's-bane, Southeastern Arnica. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): pine savannas, sandhills, clayey or sandy woodlands, powerline rights-of-way, roadbanks; common (rare in DE and FL). Late March-early June. DE (historical) and se. PA (where on serpentine) south to Panhandle FL, on the Coastal Plain and lower Piedmont. [= RAB, C, F, FNA, G, GW, K, S, SE; = *Doronicum acaule* Walter]

Arnoglossum Rafinesque 1817 (Indian-plantain)

A genus of about 8 species, herbs, of e. North America. References: Anderson in FNA (2006b); Cronquist (1980)=SE; Anderson (1998)=Z; Barkley (1999)=Y; Kral & Godfrey (1958)=X; Ward (2004c)=Q; Harper (1905)=V; Pippen (1978)=U; Robinson (1974).

1 Larger leaves palmately veined, cordate at the base, either strongly toothed or lobed.
  2 Leaves glaucous beneath; stem glaucous and terete (or slightly striate) ..... ***A. atriplicifolium***
  2 Leaves green beneath; stem green and conspicuously grooved ..... ***A. reniforme***
1 Larger leaves parallel-veined (the primary veins parallel and converging toward the leaf apex), lanceolate to elliptic-lanceolate, cuneate at the base, entire to remotely toothed (usually fewer than 10 teeth per leaf).
  3 Phyllaries not wing-keeled; stem terete.
    4 Basal and lower cauline leaves linear to lanceolate, green to slightly glaucous below; plants 0.5-2.5 m tall; [usually of pine savannas, se. NC south to s. FL, west to e. TX] ..... ***A. ovatum*** *var.* ***lanceolatum***
    4 Basal and lower cauline leaves ovate to ovate-lanceolate, glaucous beneath; plants 1.5-2.5 m tall; [usually of shaded, moist to bottomland habitats, e. GA west to e. LA] ..... ***A. ovatum*** *var.* ***ovatum***
  3 Phyllaries wing-keeled; stem strongly angled or sulcate.
    5 Basal and low-cauline leaves truncate or subcordate at the base; larger leaves irregularly angulate-lobed or toothed, often somewhat hastate at the base; corolla usually pale lavender ..... ***A. diversifolium***
    5 Basal and low-cauline leaves cuneate at the base; larger leaves entire, crenate, sinuate, but not lobed or hastate; corolla creamy yellow (or greenish or tinged with pink).
      6 Phyllary wings highest towards the base; phyllary wings chalky white, erose; leaves with main lateral veins running with the midrib for 2-4 cm into the blade before diverging; [of FL Panhandle] ..... ***A. album***
      6 Phyllary wings uniform or highest towards the tip; phyllary wings pale green, entire; leaves with main lateral veins diverging from the midrib at or very near the base of the blade, not concurrent; [collectively more widespread].
        7 Involucres 12-15 mm high; corollas (9-) 11-12 mm long ..... ***A. floridanum***
        7 Involucres 8-14 mm high; corollas 7-11.5 mm long.
          8 Involucres (9.5-) 10-12 (-14) mm high; corollas 8-10 (-11.5) mm long; leaves usually with 7-9 main parallel veins; mid-stem leaves petiolate, with rounded bases) ..... ***[A. plantagineum]***
          8 Involucres (8-) 9.5-10 (-12) mm high; corollas 6-8 (-9.5) mm long; leaves usually with 3-5 main parallel veins; mid-stem leaves sessile, with broadly cuneate bases ..... ***A. sulcatum***

Arnoglossum album L.C. Anderson. Cp (FL): wet pine savannas; rare. Endemic to FL Panhandle (Bay and Gulf counties). [= FNA, K, WH, Z]

Arnoglossum atriplicifolium (Linnaeus) H.E. Robinson, Pale Indian-plantain. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): mesic forests, woodland edges, clearings; common (rare in DE and FL). June-October. NY, MN, and NE south to Panhandle FL and LA (attribution to MA is in error, A.Haines, pers.comm.). [= FNA, K, WH, Y, Z; = *Cacalia atriplicifolia* Linnaeus – RAB, C, F, G, SE, U, W; = *Mesadenia atriplicifolia* (Linnaeus) Rafinesque – S]

Arnoglossum diversifolium (Torrey & A. Gray) H.E. Robinson, Variable-leaf Indian-plantain. Cp (AL, FL, GA): calcareous swamps; rare. Sw. GA and Panhandle FL, west to s. AL; disjunct in nw. peninsular FL. May-August; July-September. [= FNA, GW, K, WH, Y, Z; = *Mesadenia diversifolia* (Torrey & A. Gray) Greene – S; = *Cacalia diversifolia* Torrey & A. Gray – SE, U, X]

Arnoglossum floridanum (A. Gray) H.E. Robinson. Cp (FL): sandhills; uncommon. Ne. FL and e. FL Panhandle south to c. peninsular FL. [= FNA, K, WH, Z; = *Cacalia floridana* A. Gray – SE, U, X; = *Mesadenia floridana* (A. Gray) Greene – S]

Arnoglossum ovatum (Walter) H.E. Robinson *var.* ***lanceolatum*** (Nuttall) D.B. Ward, Savanna Indian-plantain. Cp (FL, GA, NC, SC): wet savannas, especially over coquina limestone ("marl"); rare. Late July-October. Se. NC to s. FL, west to e. TX. [= Q; < *Arnoglossum ovatum* – FNA, GW, K, WH, Y, Z; = *Cacalia lanceolata* Nuttall – RAB; < *Cacalia ovata* Walter – SE, U; = *Mesadenia lanceolata* (Nuttall) Rafinesque – S; > *Mesadenia lanceolata* var. *lanceolata* – V; > *Mesadenia lanceolata* var. *virescens* Harper – V; = *Cacalia lanceolata* var. *lanceolata* – X]

Arnoglossum ovatum (Walter) H.E. Robinson *var.* ***ovatum***, Broadleaf Indian-plantain. Cp (FL, GA), Pd (GA): bottomlands, bay forests, moist or wet forests; uncommon. Late July-October. E. GA west to e. LA. The division of *A. ovatum* into two taxa (species or, as done here, varieties) needs additional study. [= Q; < *Arnoglossum ovatum* – FNA, GW, K, WH, Y, Z; < *Cacalia ovata* Walter – SE, U; > *Mesadenia elliottii* R.M. Harper – S; > *Mesadenia maxima* R.M. Harper – S; = *Cacalia lanceolata* var. *elliottii* (Shinners) Kral & Godfrey – X]

Arnoglossum reniforme (Hooker) H.E. Robinson, Great Indian-plantain. Mt (GA, NC, VA, WV): cove forests, other mesic forests; common (uncommon in WV, rare in VA). June-October. The very large, reniform leaves (sometimes up to 80 cm across) are conspicuous in rich cove forests. PA and MN, south to GA, MS, and OK. [= FNA, Y, Z; = *Arnoglossum muehlenbergii* (Schultz 'Bipontinus') H.E. Robinson – K; = *Cacalia muhlenbergii* (Schultz 'Bipontinus') Fernald – RAB, C, F, G, SE, U, V, W; = *Mesadenia reniformis* (Hooker) Rafinesque – S]

Arnoglossum sulcatum (Fernald) H.E. Robinson, Grooved-stem Indian-plantain. Cp (GA): bottomland forests; uncommon (rare in GA). Sw. GA and Panhandle FL west to s. AL. [= FNA, GW, K, Y, WH, Z; = *Mesadenia sulcata* (Fernald) Harper – S; = *Cacalia sulcata* Fernald – SE, U, X]

Arnoglossum plantagineum Rafinesque. Reported for sc. SC, in the unpublished flora of the Savannah River Site by Batson, Angerman, and Jones. It is known definitely from the Nashville Basin of c. TN (Chester, Wofford, & Kral 1997), AL, MS, LA, and KY. [= FNA, K, Y, Z; = *Cacalia tuberosa* Nuttall – G; = *Mesadenia tuberosa* (Nuttall) Britton – S; = *Cacalia plantaginea* (Rafinesque) Shinners – SE, U]

Artemisia Linnaeus 1753 (Wormwood, Mugwort, Sage)

If defined (as here) to include the segregate genus *Seriphidium*, a genus of about 500 species, shrubs and herbs, north temperate, boreal, and arctic. References: Shulz in FNA (2006a); Ling Yeou-Ruenn (1995)=Z; Cronquist (1980)=SE; Arriagada & Miller (1997)=Y. Key based primarily on C.

1 Disk flowers sterile, with abortive ovaries; plant not aromatic when fresh; [subgenus *Dracunculus*] ..... ***A. caudata***
1 Disk flowers fertile, with normal ovaries; plant variously aromatic or not when fresh.
  2 Receptacle bearing dense long hairs between the flowers; plant strongly aromatic when fresh; [subgenus *Absinthium*] ..... ***A. absinthium***
  2 Receptacle not pubescent; plant variously aromatic or not when fresh; [subgenus *Artemisia*].
    3 Leaves green, essentially glabrous on the lower surface; annuals or biennials from a taproot; plants lacking nonflowering shoots.
      4 Inflorescence obviously paniculate, the branches evident, the heads on slender peduncles; involucres 1-2 mm high and 1-2 mm wide; fresh plants sweet-aromatic ..... ***A. annua***
      4 Inflorescence spike-like, the heads crowded and hiding the branches; involucres 2-3 mm high, 2-3 mm wide; fresh plants not aromatic..... ***A. biennis*** *var.* ***biennis***
    3 Leaves tomentose on the lower surface, densely so in many species; perennials from a branched rhizome or woody caudex; plants with nonflowering shoots.
      5 Principal leaves 2-3-pinnatifid, the terminal segments < 1.5 mm wide; plant a shrub or suffrutescent herb.
        6 Leaves green above, 3-6 cm long..... ***A. abrotanum***
        6 Leaves white-tomentose above, 1-3 cm long..... ***A. pontica***
      5 Principal leaves entire to 2-pinnatifid, the terminal segments > 2 mm wide; plant an herb (sometimes somewhat woody at the base).
        7 Involucres 6-10 mm high; disk corollas 3.2-4 mm long..... ***A. stelleriana***
        7 Involucres 2.5-5 mm high; disk corollas 1-3 mm long.
          8 Leaves entire to 1-pinnatifid; leaves lacking stipule-like lobes at the base..... ***A. ludoviciana***
          8 Leaves 2-pinnatifid; leaves with 1-2 stipule-like lobes at the base ..... ***A. vulgaris***

* ***Artemisia abrotanum*** Linnaeus, Southernwood, Lad's Love, Old Man. Pd (DE, NC?), Cp (DE, VA), {SC}: disturbed areas; rare, native of Eurasia. August-September. Also reported as a waif in e. VA (Reed 1964). [= C, F, FNA, G, K, S, SE, Y, Z]

* ***Artemisia absinthium*** Linnaeus, Common Wormwood, Absinthium. Pd? (NC), {SC}: disturbed areas; rare, native of Europe. July-September. [= C, F, FNA, G, K, S, SE, Y, Z; > *A. absinthium* var. *insipida* Stechmann]

* ***Artemisia annua*** Linnaeus, Sweet Annie, Sweet Wormwood, Annual Mugwort. Cp (DE, SC, VA), Pd (DE, VA), Mt (VA, WV), {NC?}: roadsides, disturbed areas, waste areas around wool-combing mills (Nesom 2004d); common (uncommon in NC, SC, VA, and WV), native of Asia and e. Europe. August-November. [= C, F, FNA, G, K, S, SE, Y, Z]

* ***Artemisia biennis*** Willdenow *var.* ***biennis***, Biennial Wormwood. Cp (DE, SC), Pd (DE), Mt (WV): disturbed areas, waste area around wool-combing mills; rare, native of the w. United States. Reported for SC by Nesom (2004d); also reported to be naturalized as far east as TN and WV (Hardy County). [= C, K; < *A. biennis* – F, FNA] {synonymy incomplete}

* ***Artemisia caudata*** Michaux. Cp (SC): sandy woodlands; rare, presumably introduced from western United States. September-October. [= RAB, S, Z; = *A. campestris* Linnaeus ssp. *caudata* (Michaux) H.M. Hall & Clements – FNA, K, SE, WH, Y; > *A. caudata* var. *caudata* – F; > *A. caudata* var. *calvens* Lunell – F; = *Oligosporus caudatus* (Michaux) Poljakov; = *Oligosporus campestris* (Linnaeus) Cassini ssp. *caudatus* (Michaux) W.A. Weber]

* ***Artemisia ludoviciana*** Nuttall, White Sage, Prairie Sage. Pd (DE, NC, SC, VA), Cp (DE, FL, NC, VA), Mt (VA), {GA}: roadsides, disturbed areas; common (rare in FL), native of western North America. Late August-November. [= WH; > *A. ludoviciana* – RAB, Z; = *A. ludoviciana* var. *ludoviciana* – C, G, SE; > *A. ludoviciana* Nuttall var. *gnaphalodes* (Nuttall) Torrey & A. Gray – F; > *A. ludoviciana* var. *ludoviciana* – F; = *A. ludoviciana* ssp. *ludoviciana* – FNA, K]

* ***Artemisia pontica*** Linnaeus, Roman Wormwood, Green-ginger. Cp (DE), Pd (DE), Mt (WV): disturbed areas, old fields, woodland edges, roadsides, ditches; rare, native of Europe. Naturalized at least as far south as DE, se. PA (Rhoads & Klein 1993), and KY. [= C, F, FNA, G, K]

* ***Artemisia stelleriana*** Besser, Beach Wormwood, Dusty Miller, Hoary Mugwort. Cp (DE, NC, VA), Pd (DE), Mt (WV): sandy roadsides, dunes, other disturbed areas; uncommon (rare in NC and VA), native of Japan and ne. Asia. May-September. This plant is reported (with documenting photograph) as naturalized and spreading in Nags Head (Dare County, NC) (Graetz 1973). [= C, F, FNA, G, K, SE, WH, Z; = *A. stellerana* – Y, orthographic variant]

* ***Artemisia vulgaris*** Linnaeus, Mugwort, Felon Herb. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, VA, WV): roadsides, pastures, disturbed areas; common, native of Eurasia. Late August-November. [= RAB, C, FNA, S, SE, WH, Y, Z; > *A. vulgaris* var. *vulgaris* – F, K]

Aster Linnaeus 1753 (Aster)

It is now abundantly clear that the traditional, broad circumscription of *Aster*, as a genus of some 250 species of North America and Eurasia, is untenable. All of our native asters have affinities elsewhere than with Old World Aster; most are now placed in *Symphyotrichum* and *Eurybia*, with fewer species in *Ampelaster*, *Doellingeria*, *Ionactis*, *Oclemena*, and *Sericocarpus*. These changes will undoubtedly cause uproar. It may be worth noting for those that consider the dissolution of *Aster* as radical, that most of the segregate genera were recognized in the 19th century, and many have been widely recognized for much of the time since. For instance, *Sericocarpus* and *Doellingeria* were both segregated from *Aster* in the early 1830's, and were frequently recognized as distinct, including by Small (1903, 1913, 1933); *Sericocarpus* was in fact usually regarded as a good genus until sunk by Cronquist. References: Brouillet in FNA (2006b); Semple & Brouillet (1980a, 1980b); Jones (1980a, 1980b); Brouillet & Semple (1981); Reveal & Keener (1981); Jones & Young (1983); Jones (1984); Semple, Chmielewski, & Lane (1989); Nesom (1993a, 1993b, 1994a, 1994b, 2000b); Semple, Heard, & Xiang (1996); Noyes & Rieseberg (1999); Nesom (1994)=X; Semple, Heard, & Xiang (1996); Cronquist (1980)=SE; R. Jones (1992); Lamboy (1992); Nesom (1997); Xiang & Semple (1996). [also see *Ampelaster, Doellingeria, Eurybia, Ionactis, Oclemena, Sericocarpus, Symphyotrichum*]

* ***Aster tataricus*** Linnaeus f., Tartarian Aster. Pd (NC, VA), Mt (GA, NC, VA, WV), Cp (DE, VA): commonly cultivated, rarely persisting or spreading short distances from plantings; rare, native of Eurasia. September-November. [= RAB, C, FNA, G, K, SE, W, X]

Astranthium Nuttall 1840 (Western-daisy)

A genus of about 11 species, herbs, of sc. North America and Mexico. References: Nesom in FNA (2006b); Cronquist (1980)=SE; Nesom (2005a)=Z; DeJong (1965)=Y; Nesom (2000b).

Astranthium integrifolium (Michaux) Nuttall. Mt (GA, WV): limestone glades; rare. Nc. KY south through c. TN to nw. GA and ne. AL (primarily in the Interior Low Plateau); disjunct in c. MS and also disjunct in nc. WV, where perhaps introduced. The related *A. ciliatum* (Rafinesque) Nesom of the Ozarkian region and Texas is sometimes treated as a variety, subspecies, or unnamed component of *A. integrifolium*, but see Nesom (2005a) for rationale for recognition at the specific rank. The report for NC by Kartesz (1999) is erroneous; the cited documentation does not mention NC. [= FNA, Z; = *A. integrifolium* var. *integrifolium* – C; = *A. integrifolium* ssp. *integrifolium* – K, Y; < *A. integrifolium* – F, G, SE, W]

Baccharis Linnaeus 1753 (Silverling, High-tide Bush, Mullet Bush, Groundsel Tree)

A genus of about 350-450 species, shrubs, perennial herbs, and trees, of tropical, subtropical, and warm temperate America. References: Sundberg & Bogler in FNA (2006b); Nesom (2000b); Cronquist (1980)=SE. Key based in part on SE.

1 Leaves linear, 1-3 mm wide, entire ..... ***B. angustifolia***
1 Leaves obovate, oblanceolate, or elliptic, the larger > 7 mm wide and generally coarsely toothed toward the tip.
  2 Leaves entire, spatulate-obovate, 1.5-3 (-3.5) cm long (including the petiole) ..... ***[B. dioica]***

2 Leaves (at least the larger) with coarse teeth and > 3.5 cm long (including the petiole).
3 Most of the heads sessile (a few pedunculate), the glomerules scattered along leafy branches in the axils of well-developed leaves; [strictly of the outer Coastal Plain, not spread inland as a weed] ..... ***B. glomeruliflora***
3 Most of the heads pedunculate (a few sessile), the glomerules grouped into terminal paniculiform inflorescences; [of the outer Coastal Plain and also spread extensively inland as a weed] ..... ***B. halimifolia***

Baccharis angustifolia Michaux, False-willow. Cp (FL, GA, NC, SC): interdune swales, wet hammocks, marsh edges; uncommon (rare in GA, NC, SC). September-October. Ne. NC (Dare County) south to s. FL, west to LA; Bahamas. [= RAB, FNA, GW, K, S, SE, WH]

Baccharis glomeruliflora Persoon. Cp (FL, GA, NC, SC): wet hammocks, marsh edges, interdune swales; common (rare in GA, NC, SC). October-November. Se. NC (Brunswick County) south to s. FL, west to MS; West Indies. [= RAB, FNA, GW, K, S, SE, WH]

Baccharis halimifolia Linnaeus, Silverling, High-tide Bush, Mullet Bush, Groundsel Tree. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC): fresh and brackish marshes, marsh borders, hammocks, moist abused land, roadsides, ditches, old fields, and a wide variety of disturbed areas; common (rare in Mountains and VA Piedmont). September-October. Se. MA south to s. FL, west to TX, AR, and OK; West Indies. *B. halimifolia* is becoming increasingly common inland, and can be an aggressive invader in sunny sites after silvicultural disturbance. [= RAB, C, F, FNA, G, GW, K, S, SE, WH]

Baccharis dioica Vahl, Broombush False-willow. Dunes and shores. S. AL; s. FL; West Indies. [= FNA, K, S, SE, WH]

Balduina Nuttall 1818 (Honeycomb-head, Balduina)

A genus of 3 species, herbs, of se. North America. References: Keener in FNA (2006c); Parker & Jones (1975)=Z; Cronquist (1980)=SE.

Identification notes: The common name alludes to the honeycomb-like texture of the receptacle, made up of connected receptacular bractlets which surround the achenes. This condition is diagnostic of the genus, and can be seen even when the plant is in flower by stripping the flowers from the receptacle. Superficially, the perennial species resemble some *Helenium* (particularly *H. pinnatifidum* and *H. vernale*), but these bloom months earlier. The punctate leaves are very distinctive.

1 Plant an annual or biennial; cauline leaves numerous, linear, 0.5-1.9 mm wide; outer involucral bracts 0.6-1.7 mm wide, lanceolate, acuminate; disk 6-15 mm wide; pappus scales obovate-orbicular, 0.3-0.6 mm long ..... ***[B. angustifolia]***
1 Plant a perennial; cauline leaves few, linear-spatulate, 2-7 mm wide; outer involucral bracts 1.7-3.1 mm wide, ovate, acute; disk (10-) 15-25 mm wide; pappus scales lanceolate, 1.1-2.1 mm long.
2 Disk corollas purple; basal leaves linear-spatulate, (7-) avg. 14 (-32) cm long, about 20× as long as wide; cauline leaves 3.8-6.2 cm long; outer phyllaries 2.9-5.4 mm long; inner phyllaries 4.5-7.6 mm long; ray flower ligules 2.3-4.7 mm wide at apex ..... ***B. atropurpurea***
2 Disk corollas yellow to reddish-orange; basal leaves spatulate, (5-) avg. 7.5 (-10.5) cm long; about 8× as long as wide; cauline leaves 2.7-4.3 cm long; outer phyllaries 4-7.2 mm long; inner phyllaries 5.1-11 mm long; ray flower ligules 3.2-8.6 mm wide at apex ..... ***B. uniflora***

Balduina angustifolia (Pursh) B.L. Robinson. Cp (FL, GA): sandhills and other dry, sandy soils; common. GA south to s. FL, west to s. MS; it should be sought in s. SC. [= FNA, K, SE, WH, Z; = *Actinospermum angustifolium* (Pursh) Torrey & A. Gray – S]

Balduina atropurpurea R.M. Harper, Bog Honeycomb-head, Purple Honeycomb-head, Purple Balduina. Cp (FL, GA, NC, SC): peaty seepage bogs and wet pine savannas; rare. Late August-early November; October-December. A southeastern Coastal Plain endemic, very rare and disjunct in se. NC and nc. SC (where not recently seen), primarily in ne. to sc. GA and ne. FL. [= RAB, FNA, GW, K, SE, Z; = *Endorima atropurpurea* (R.M. Harper) Small – S]

Balduina uniflora Nuttall, Savanna Honeycomb-head, Yellow Balduina. Cp (FL, GA, NC, SC): wet pine savannas and pine flatwoods; common (uncommon in GA and NC, rare in SC). Late July-September. A southeastern Coastal Plain endemic: se. NC and immediately adjacent ne. SC (apparently absent from much of SC), and from extreme s. SC south to ne. FL, FL Panhandle, and west to e. LA. [= RAB, FNA, GW, K, SE, Z; = *Endorima uniflora* (Nuttall) Rafinesque – S]

Bellis Linnaeus 1753 (English Daisy)

A genus of about 8 species, herbs, of Europe. References: Nesom (2000b); Brouillet in FNA (2006b); Cronquist (1980)=SE.

* ***Bellis perennis*** Linnaeus, English Daisy. Mt (NC, VA, WV), Pd (VA), Cp (VA): lawns, grassy roadsides; uncommon (rare in NC and VA), native of Europe. April-May. [= RAB, C, F, FNA, G, K, SE]

Berlandiera A.P. de Candolle 1836 (Green-eyes)

A genus of 4-5 species, perennial herbs and subshrubs, of s. North America and Mexico. References: Pinkava in FNA (2006c); Cronquist (1980)=SE; Nesom & Turner (1998)=Z.

1 Leaves mainly cauline; leaves unlobed; disk flowers red to maroon; [of nc. SC south to n. FL, west to TX] ..... ***B. pumila*** *var.* ***pumila***

1 Leaves basally disposed; leaves deeply lobed; disk flowers yellow; [of n. FL southward] ..... ***B. subacaulis***

Berlandiera pumila (Michaux) Nuttall *var.* ***pumila***, Eastern Green-eyes. Cp (FL, GA, SC): sandhills, disturbed sandy areas; common. Late May-November. Nc. SC south to n. peninsular FL, west to s. AL; w. LA to c. TX. Plants in w. LA and e. TX accepted here as *B. pumila* var. *scabrella* Nesom & Turner (1998) are also considered to represent introgression between *B. pumila* and *B. texana* de Candolle (Pinkava in FNA 2006c). [= K, Z; < *B. pumila* – RAB, FNA, S, SE, WH]

Berlandiera subacaulis (Nuttall) Nuttall, Florida Green-eyes. Cp (FL): sandhills; rare. Endemic to FL, from ne. FL (Clay and Columbia counties) and e. Panhandle FL (Leon, Jefferson, and Taylor counties) south to s. FL (Wunderlin & Hansen 2004). [= FNA, K, S, SE, WH]

Bidens Linnaeus 1753 (Beggar-ticks, Bur-marigold)

A genus of about 240 species, herbs, cosmopolitan. Recent molecular studies suggest that the relationship between *Bidens* and *Coreopsis* is complex, and that changes in taxonomy will be needed to more accurately reflect relationships (Kim et al. 1999; Crawford & Mort 2005). References: Strother & Weedon in FNA (2006c); Cronquist (1980)=SE; Sherff & Alexander (1955)=Z; Ballard (1986)=Y. Key based on FNA.

Identification notes: The involucre of phyllaries is subtended by an additional series of bracteal structures, the **calyculus**.

1 Plant aquatic, the leaves finely divided into segments < 0.5 mm wide; pappus awns 13-25 (-40) mm long ..... ***[B. beckii]***
1 Plant terrestrial or wetland, but not aquatic, the leaf segments > 0.5 mm wide; pappus awns lacking or present, if present < 10 mm long.
2 Inner cypselas more-or-less equally 4-angled, thickest near the middle and equally tapered to both ends; ray florets white, pink, or pale yellow (or absent).
3 Leaves 2-3× dissected, primary lobes > 20, the ultimate segments rounded to acute, 2-10 mm wide; ray florets yellowish .... ***B. bipinnata***
3 Leaves mostly once-pinnate, primary lobes 3-7, the ultimate segments serrate and acute, 8-50 mm wide; ray florets white or absent.
4 Ray florets 5-8, the ligule 5-16 mm long; cypselas 2-awned, the awns 1-2 mm long; outer phyllaries (8-) 12 (-16) ..... ***B. alba*** *var.* ***radiata***
4 Ray florets 0 (or if a few present, the ligule < 3 mm long); cypselas 3 (-5)-awned, the awns 1-3 mm long; outer phyllaries 7-10 ..... ***B. pilosa***
2 Inner cypselas flattened (if 4-angled, the alternating angles acute and obtuse), thickest towards the tip; ray florets yellow or orange (or absent).
5 Most leaves simple, the margins dentate to serrate or incised (with 3-7 lobes).
6 Leaves (except sometimes the lower) sessile; heads usually nodding, at least in age.
7 Rays absent, or present and 2-15 (-18) mm long; pales (receptacular bracts) with tan or yellow tips; outer cypselas (3-) 5-6+ mm long, inner cypselas 4-8 mm long (the margins ± thickened or winged); pappus of (2-) 4 awns (1-) 2-4 mm long ..... ***B. cernua***
7 Rays present, (10-) 15-25 (-30) mm long; pales (receptacular bracts) with orange or red tips; outer cypselas 6-8 mm, inner cypselas 8-10 mm (margins not notably thickened or winged); pappus of 2-4 awns 3-5 mm long ..... ***B. laevis***
6 Leaves with a distinct petiole 1-4 cm long (this sometimes winged); heads erect.
8 Rays 12-25+ mm long; cypselas 2.5-4.5 mm long, the margins not barbed or ciliate ..... ***B. mitis***
8 Rays absent or 2-5 (-12) mm long; cypselas (3-) 6-13 mm long, the margins sometimes barbed or ciliate.
9 Involucres usually campanulate to cylindric, sometimes ± hemispheric; disc florets (6-) 10-25 (-60); cypsela faces usually ± striate, sometimes tuberculate ..... ***[B. bidentoides]***
9 Involucres campanulate to hemispheric or broader; disc florets (5-) 20-60 (-150+); cypsela faces usually smooth or tuberculate (not notably striate).
10 Cypselas ± flattened, sometimes weakly 3 (-4)-angled and 3 (-4)-awned, the faces usually smooth, seldom notably tuberculate; disc corollas 4-lobed, light yellow; anthers usually pale ..... ***B. comosa***
10 Cypselas (at least inner) usually ± 4-angled and 4-awned, the faces usually strigose or tuberculate; disc corollas 5-lobed, orange-yellow; anthers usually blackish ..... ***B. connata***
5 Most leaves **either** 1-pinnately compound, the 3-5 (-7) leaflets petiolulate, **or** -1-2× pinnately lobed.
11 Ray florets 0, or rays 1-3, the laminae 2-3.5 mm long.
12 Calyculus bractlets (3-) 4 (-5), seldom ciliate; disc florets usually 10-20 ..... ***B. discoidea***
12 Calyculus bractlets 5-21, usually ciliate; disc florets 20-150.
13 Calyculus bractlets (5-) 8 (-10); leaves usually 3 (-5)-foliolate ..... ***B. frondosa***
13 Calyculus bractlets 10-16 (-21); leaves usually laciniate or pinnatisect ..... ***B. vulgata***
11 Ray florets (5-) 8-13, the laminae 10-30 mm long.
14 Cypselas 2.5-4× as long as wide ..... ***B. trichosperma***
14 Cypselas 1.5-2 (-2.5)× as long as wide.
15 Cypselas 2.5-5 mm long, the margins not winged, barbed, or ciliate ..... ***B. mitis***
15 Cypselas (4-) 5-8 mm long, the margins usually barbed or ciliate, and often also corky-winged.
16 Calyculus bractlets 8-12 (-16), these (4-) 5-7 (-12) mm long ..... ***B. aristosa***
16 Calyculus bractlets 12-21, these (6-) 8-12 (20) mm long ..... ***B. polylepis***

Bidens alba (Linnaeus) A.P. de Candolle *var.* ***radiata*** (Schultz 'Bipontinus') Ballard ex T.E. Melchert. Cp (FL, GA, NC, SC, VA): disturbed areas; common (uncommon in GA, NC, SC, rare in VA), adventive from the New World tropics. [= K, Y; < *B. pilosa* Linnaeus – RAB, FNA, S, SE; < *B. alba* – WH; = *B. pilosa* Linnaeus var. *radiata* Schultz 'Bipontinus' – Z]

Bidens aristosa (Michaux) Britton, Midwestern Tickseed-sunflower. Cp (DE*, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): marshes, wet meadows, ditches; common (rare in DE). August-October (-November). DE, MD,

IL, and MO south to FL and TX (and adventive farther north). [= RAB, C, FNA, G, GW, S, SE, W; > *B. aristosa* var. *aristosa* – F, S, Z; > *B. aristosa* var. *fritcheyi* Fernald – F, Z; > *B. aristosa* var. *mutica* (A. Gray) Gattinger – F, S, Z; < *B. aristosa* – K (also see *B. polylepis*)]

Bidens bidentoides (Nuttall) Britton. Cp (DE), Pd (DE): tidal shores and mudflats; rare. NY south to se. PA, DE, and e. MD. July-October. [= C, FNA, G, K; > *B. bidentoides* – F; > *B. mariana* Blake – F; > *B. bidentoides* var. *bidentoides* – Z; > *B. bidentoides* var. *mariana* – Z]

Bidens bipinnata Linnaeus, Spanish Needles. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): floodplains, disturbed areas, gardens, fields, roadsides, ditches; common (uncommon in FL). MA, NY, ON, IA, NE, and AZ south to Mexico; also e. Asia. [= RAB, C, F, FNA, G, K, S, SE, W, WH; > *B. bipinnata* var. *bipinnata* – Z]

Bidens cernua Linnaeus, Bur-marigold. Mt (GA, NC, VA, WV), Pd (DE, VA), Cp (DE, GA, VA): marshes, wet meadows, bogs, ditches; common. August-October. Circumboreal, south in North America to GA, AL, LA, NM, AZ, and CA. [= RAB, C, FNA, G, GW, K, S, SE, W; > *B. cernua* var. *cernua* – F, Z; > *B. cernua* var. *elliptica* Wiegand – F; > *B. cernua* var. *integra* Wiegand – F]

Bidens comosa (A. Gray) Wiegand, Strawstem Beggar-ticks. Cp (DE, VA), Pd (DE, VA), Mt (VA, WV), {GA, NC, SC}: marshes, bogs, wet meadows, disturbed areas; common. August-October. NL (Newfoundland) and BC south to GA, TX, and CA. Closely related to, and sometimes included in, the Eurasian *B. tripartita*. [< *B. comosa* (A. Gray) Wiegand – C, F, G, S; < *B. tripartita* – RAB, FNA, K; = *B. tripartita* ssp. *comosa* (A. Gray) A. Haines]

Bidens connata Muhlenberg, Purplestem Beggar-ticks. Mt (GA, WV), Cp (DE, VA), {NC, SC}: marshes, bogs, wet meadows, disturbed areas; uncommon? (rare in VA and WV). August-October. QC, ON, and ND south to GA, AL, and KS. [= C, FNA, G, K, S; < *B. tripartita* Linnaeus – RAB; > *B. connata* var. *anomala* Farwell – F, Z; > *B. connata* var. *connata* – F, Z; > *B. connata* var. *fallax* (Warnstorf) Sherff – F, Z; > *B. connata* var. *petiolata* (Nuttall) Farwell – F, Z]

Bidens discoidea (Torrey & A. Gray) Britton, Few-bracted Beggar-ticks. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, VA, WV): floodplain forests, marshes; common (rare in FL, rare in VA and WV Mountains). Late August-November. NS and MN south to ne. FL, Panhandle FL, and TX. [= RAB, C, F, FNA, G, GW, K, S, SE, W, WH, Z]

Bidens frondosa Linnaeus, Devil's Beggar-ticks. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): fields, pastures, wet meadows, swamp forests, ditches; common (uncommon in FL). June-October. Nova Scaotia and AK south to FL, TX, CA, and southward. [= RAB, C, FNA, G, GW, K, S, SE, W, WH; > *B. frondosa* var. *frondosa* – F, Z; > *B. frondosa* var. *anomala* Porter – Z]

Bidens laevis (Linnaeus) Britton, Sterns, & Poggenburg, Showy Bur-marigold. Cp (DE, FL, GA, NC, SC, VA), Pd (NC, VA), Mt (VA, WV): marshes, stream banks, ditches; common (uncommon in FL, rare in VA and WV Mountains). August-November. ME, NY, IN, MO, NV, and CA southward. [= RAB, C, F, FNA, G, GW, K, SE, W, WH, Z; > *B. laevis* – S; > *B. nashii* Small – S]

Bidens mitis (Michaux) Sherff, Coastal Plain Tickseed-sunflower. Cp (DE, FL, GA, NC, SC), Pd (GA), Mt (NC): brackish marshes, fresh marshes, bogs (inland); uncommon (rare in Mountains, rare in DE). July-October. NJ south to FL, west to TX, primarily Coastal Plain, rare and scattered inland. [= RAB, C, F, FNA, G, GW, K, SE, W, WH, Z; > *B. mitis* var. *leptophylla* (Nuttall) Small – S; > *B. mitis* var. *mitis* – S]

* ***Bidens pilosa*** Linnaeus. Cp (FL, GA?, NC?, SC): waste areas near wool-combing mill, ballast, other disturbed areas; rare, native of tropical America. Reported for NC (Kartesz 1999), perhaps based on confusion with *B. alba*; known from ballast in se. PA (Rhoads & Klein 1993). [= K, WH; > *B. pilosa* – FNA; > *B. pilosa* var. *pilosa* – Z; > *B. pilosa* Linnaeus var. *bimucronata* (Turczaninov) Schultz 'Bipontinus' – Z]

* ***Bidens polylepis*** Blake, Ozark Tickseed-sunflower. Mt (GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, SC, VA): marshes, wet meadows, bogs, ditches; uncommon (common in DE Coastal Plain). August-October. NJ, QC, and CO south to SC, AL, TX, and NM. [= RAB, C, FNA, G, GW, SE, W; > *B. polylepis* var. *polylepis* – F, Z; > *B. polylepis* var. *retrorsa* Sherff – F, Z; < *B. aristosa* – K]

Bidens trichosperma (Michaux) Britton, Northern Tickseed-sunflower. Cp (DE, FL, GA, NC, VA), Mt (WV): tidal marshes, other marshes; uncommon (rare in WV). August-October. QC, MN, and SD south to GA, LA, and NE. [= FNA; = *B. coronata* (Linnaeus) Britton – RAB, C, G, GW, K, S, SE (name invalid); > *B. coronata* var. *coronata* – F, Z; > *B. coronata* var. *brachyodonta* Fernald – F; > *B. coronata* var. *trichosperma* (Michaux) Fernald – F]

Bidens vulgata Greene, Tall Beggar-ticks. Mt (NC, SC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): fields, marshes, wet places; common (uncommon south of DE). August-October. QC and BC south to GA, LA, and CA. [= RAB, C, FNA, G, GW, K, S, SE, W; > *B. vulgata* var. *vulgata* – F, Z]

Bidens beckii Torrey ex Sprengel, Water-marigold, Water Beggar-ticks. South to c. PA and NJ. July-October. This species is sometimes treated in the monotypic genus *Megalodonta*; this is contradicted by molecular evidence, which shows *B. beckii* as a component of *Bidens* (Ganders 2000). [= C, FNA, G; = *Megalodonta beckii* (Torrey ex Sprengel) Greene – F, K; > *Megalodonta beckii* var. *beckii* – Z]

* *Bidens tripartita* Linnaeus. Eurasian; not known to be in our area. {combined distribution of *comosa*, *connata*, and *tripartita*: Mt (GA, NC, SC, VA), Pd (NC, SC, VA), Cp (VA): marshes, swamps} [> *B. tripartita* – F, G, W, Z; < *B. comosa* (A. Gray) Wiegand – C, F, G, S; < *B. tripartita* – FNA, K; < *B. tripartita* – RAB, GW (also see *B. connata* and *B. comosa*)] {not keyed}

Bigelowia A.P. de Candolle 1836 (Rayless-goldenrod)

A genus of 2 species (one with 2 varieties), herbs, of se. North America. References: Nesom in FNA (2006b); Anderson (1970)=Z; Cronquist (1980)=SE; Nesom (2000b).

1 Basal leaves many, 1-2 mm wide; plants strongly rhizomatous and colonial; [of dry clayey or rocky places] ..... ***B. nuttallii***
1 Basal leaves few, 2-14 mm wide; plants cespitose, or weakly rhizomatous; [of wet to mesic pine savannas and flatwoods].
  2 Leaves mostly > 10 cm long, 2-4 mm wide; involucre 6-7.5 mm high ..... ***B. nudata*** *var.* ***australis***

2 Leaves mostly < 10 cm long, 4-14 mm wide; involucre 4.5-6 mm high ..... ***B. nudata*** *var.* ***nudata***

Bigelowia nudata (Michaux) A.P. de Candolle *var.* ***australis*** (L.C. Anderson) Shinners. Cp (FL): mesic pine flatwoods; rare. Ne. FL (Bradford County) south to s. FL. [= FNA, SE; = *B. nudata* ssp. *australis* L.C. Anderson – GW, K, WH, Z; < *Chondrophora nudata* (Michaux) Britton – S]

Bigelowia nudata (Michaux) A.P. de Candolle *var.* ***nudata***, Rayless-goldenrod. Cp (AL, FL, GA, LA, MS, NC, SC): savannas, pine flatwoods, pocosin edges; common. August-October. E. NC south to n. FL and west to LA. [= FNA, SE; = *B. nudata* ssp. *nudata* – GW, K, WH, Z; < *Chondrophora nudata* (Michaux) Britton – RAB, S]

Bigelowia nuttallii (Michaux) A.P. de Candolle. Cp (AL, FL, GA), Pd (GA), Mt (AL): prairies, sandstone glades, granite flatrocks, Altamaha Grit glades, and roadbanks; rare. September-October. W. LA west to e. TX; disjunct eastward in Mountains of ne. AL, Piedmont of c. GA, and Coastal plain of s. AL, ec. GA (Jones & Coile 1988, Bridges & Orzell 1989), Panhandle FL, and wc. peninsular FL. [= FNA, GW, K, SE, WH, Z; = *Chondrophora virgata* (Nuttall) Greene – S, misapplied]

Boltonia L'Héritier 1789 (Doll's-daisy)

(contributed by John F. Townsend and Alan S. Weakley)

A genus of about 6-7 species, herbs, of e. and c. North America. References: Karaman-Castro & Urbatsch in FNA (2006b); Townsend & Karaman-Castro (2006)=X; Morgan (1966)=Z; Anderson (1987)=Y; Cronquist (1980)=SE; Nesom (2000b).

1 Achenes with pappus reduced to a short ring of bristles to 0.15 mm long or with occasional slender awns to 0.6 mm; achene wings lacking or up to 0.1 mm wide; faces of achenes glabrous.
  2 Phyllaries 0.2-0.5 mm wide, whitened throughout or with greenish tip, midrib relatively prominent (25-35% phyllary width); heads 4.3-6.1 mm wide, peduncles 0.25-0.5 mm in diameter; ray corollas white fading to pinkish in age; bracteal leaves narrowly oblanceolate to linear; [of Coastal Plain and Piedmont of VA southwards] ..... ***B. caroliniana***
  2 Phyllaries 0.4-0.9 mm wide, whitened in lower 1/3 to 1/2 only, distal portion green, midrib relatively narrow (8-14% phyllary width); heads 6-11.5 mm wide, peduncles 0.5-1.1 mm in diameter; ray corollas lilac or pinkish (-white); bracteal leaves oblanceolate to oblong; [of Mountains of VA (Augusta County) northwards] ..... ***B. montana***
1 Achenes with two distinct pappus awns in addition to a shorter ring of bristles, the awns mostly 0.3-1.8 mm long; achene wings obvious, mostly 0.2-0.5 mm wide; faces of achenes pubescent.
  3 Phyllaries spatulate, oblanceolate, or linear-oblanceolate, apices cuspidate, pappus awns 2/3 or more as long as the achenes; inflorescence diffusely branched, with numerous heads.
    4 Phyllaries spatulate to obovate-spatulate, (2-) 2.5-6 mm wide, membranaceous margins broad ..... ***B. asteroides*** *var.* ***latisquama***
    4 Phyllaries oblanceolate to linear-oblanceolate, 1-2.5 (-3) mm wide, membranaceous margins narrow ..... ***B. asteroides*** *var.* ***recognita***
  3 Phyllaries linear-subulate to lanceolate; inflorescence various.
    5 Inflorescence subulate-bracteate.
      6 Phyllaries subulate; peduncles filiform ..... ***B. diffusa*** *var.* ***diffusa***
      6 Phyllaries linear-oblong; peduncles thick ..... ***B. diffusa*** *var.* ***interior***
    5 Inflorescence more or less leafy-bracteate.
      7 Inflorescence diffusely branched, heads relatively numerous, phyllaries (0.2-) 0.3-0.4 (-0.5) mm wide, (1.3-) 1.4-1.8 (-2.1) mm long, pappus awns 0.3-0.8 mm long ..... ***B. apalachicolensis***
      7 Inflorescence with loosely ascending branches, heads relatively few, phyllaries (0.5-) 0.7-0.9 (-1.1) mm wide, (1.5-) 2.1-2.4 (-3.5) mm long, pappus awns (0.2-) 0.8-1.1(-1.3) mm long.
        8 Plants reproducing vegetatively by basal offsets, culms ascending, leaves elliptic to obovate with rounded or blunt apices, held at various angles from culm and inflorescence branches, plants with weak apical dominance; [of the Susquehanna River of MD and PA] ..... ***B. asteroides*** *var.* ***asteroides***
        8 Plants reproducing vegetatively by elongate stolons, culms more strictly erect, leaves lanceolate with acute apices, the leaves oriented at an acute angle to the culm and inflorescence branches, plants with relatively strong apical dominance; [more widespread in our area] ..... ***B. asteroides*** *var.* ***glastifolia***

Boltonia apalachicolensis L.C. Anderson, Apalachicola Doll's-daisy. Cp (FL): floodplain forests; rare. August-October. Panhandle FL, s. MS, west to LA. [= FNA, K, WH; < *Boltonia* sp. – GW]

Boltonia asteroides (Linnaeus) L'Héritier *var.* ***asteroides***, Susquehanna Doll's-daisy. Riverbanks. Along the Susquehanna River, MD and PA. [= Y; < *B. asteroides* var. *asteroides* – C, FNA, G, K, SE, X, Z; = *B. asteroides* var. *asteroides* – F]

Boltonia asteroides (Linnaeus) L'Héritier *var.* ***glastifolia*** (Hill) Fernald, Eastern Doll's-daisy. Cp (DE, FL, NC, SC, VA), Mt (NC), {GA}: marshes, ditches; common (rare in Mountains, rare in FL and VA). August-October. NJ south to Panhandle FL, west to MS and LA, mostly on the Coastal Plain, but with a few disjunct occurrences inland, such as Henderson County, NC. [= F; < *B. asteroides* – RAB, W, WH, Y; < *B. asteroides* var. *asteroides* – C, FNA, G, K, SE, X, Z; < *Boltonia* sp. – GW]

Boltonia asteroides (Linnaeus) L'Héritier *var.* ***recognita*** (Fernald & Griscom) Cronquist. MI, OH, KY, TN west to SK and OK. [= C, FNA, G, K; = *Boltonia recognita* (Fernald & Griscom) G.N. Jones] {synonymy incomplete}

* ***Boltonia asteroides*** (Linnaeus) L'Héritier *var.* ***latisquama*** (A. Gray) Cronquist, Midwestern Doll's-daisy. Cp (NC, VA): ditches; rare, native of mw. United States. August-October. WI west to ND, south to MS and OK; disjunct (presumably introduced) in NC and se. VA. [= C, FNA, G, K, SE, Z; > *B. latisquama* var. *latisquama* – F; > *B. latisquama* var. *recognita* Fernald & Griscom – F; < *Boltonia sp.* – GW]

Boltonia caroliniana (Walter) Fernald, Carolina Doll's-daisy. Cp, Pd (NC, SC, VA), {GA}: bottomlands, ditches, roadsides, prairies; common (rare in GA and VA). August-October. Se. VA south to s. SC (and GA according to Kartesz 1999),

primarily on the Coastal Plain and Piedmont. [= C, FNA, G, K, SE, X, Y; < *B. caroliniana* – RAB (also see *B. diffusa* var. *diffusa*); > *B. caroliniana* – F; > *B. ravenelii* Fernald & Griscom – F; < *Boltonia* sp. – GW; = *B. diffusa* var. *caroliniana* – Z]

Boltonia diffusa Elliott *var.* ***diffusa***, Southern Doll's-daisy. Cp (FL, GA, SC), Pd* (NC*, VA*): clay-based Carolina bays, roadsides, powerline rights-of-way, and other artificially open areas; uncommon (rare in NC, SC, VA). August-October. Se. SC south to s. FL, west to e. TX, inland in the interior to c. TN, s. IL, s. MO, AR, and se. OK; disjunct in the Bahamas (Mangrove Cay of Andros Island). See Sorrie & LeBlond (2008) for comments on distribution and nativity. [= FNA, K, Z; < *B. caroliniana* – RAB; < *B. diffusa* – C, G, SE, WH, Y; < *Boltonia* sp. – GW]

Boltonia diffusa Elliott *var.* ***interior*** Fernald & Griscom. KY and TN west to IL, OK, and LA. [= FNA, K; < *B. diffusa* – C; < *Boltonia* sp. – GW] {synonymy incomplete}

Boltonia montana J.F. Townsend & V. Karaman-Castro, Valley Doll's-daisy. Mt (VA): sinkhole ponds; rare. August-October. Augusta Co. VA and Ridge and Valley wetlands in NJ. See Townsend & Karaman-Castro (2006) for detailed information. [= X; < *B. asteroides* (Linnaeus) L'Héritier var. *asteroides* – FNA; < *Boltonia* sp. – GW]

Borrichia Adanson 1763 (Seaside Oxeye)

A genus of 2 species, shrubs, of se. United States and West Indies. References: Semple in FNA (2006c); Cronquist (1980)=SE.

Borrichia frutescens (Linnaeus) A.P. de Candolle, Seaside Oxeye. Cp (FL, GA, NC, SC, VA): salt and brackish marshes; common. May-September. DC and e. VA south to s. FL, west to TX and Mexico; also in Bermuda. This species often forms nearly pure stands of many hectares, conspicuous from the fleshy, gray leaves. [= RAB, C, F, FNA, G, K, SE, WH]

Brickellia Elliott 1823 (False-boneset)

A genus of about 110 species, herbs and shrubs, primarily of sw. North America, Central America, and South America. *Kuhnia* appears to be a part of *Brickellia* (King & Robinson 1987; Shinners 1971). References: Scott in FNA (2006c); Cronquist (1980)=SE; Shinners (1971)=Z; Shinners (1946)=Y; Turner (1989)=X.

1 Leaves rounded at base; upper stem leaves reduced in size but similar in shape to the lower leaves; pappus purplish, of ca. 40 bristles; [of s. GA south] ..... ***B. cordifolia***

1 Leaves cuneate at base; upper stem leaves (at least) linear-lanceolate; pappus whitish, of 20-25 bristles; [widespread in our area] ..... ***B. eupatorioides*** *var.* ***eupatorioides***

Brickellia cordifolia Elliott, Flyr's False-boneset. Cp (FL, GA): mesic pine-hardwood or oak-hickory woods of upland hammocks; rare. Late August-late October. Sw. GA (Jones & Coile 1988; Carter, Baker, & Morris 2009) and AL south to Panhandle FL and n. peninsular FL. [= FNA, K, SE, WH; = *Coleosanthus cordifolius* (Elliott) Kuntze – S]

Brickellia eupatorioides (Linnaeus) Shinners var. *corymbulosa* (Torrey & Gray) Shinners, Midwestern False-boneset. Var. *corymbulosa* (Torrey & Gray) Shinners ranges as far east as IN, IL, MO, and AR (and allegedly to KY) and has larger heads than var. *eupatorioides* (9-15 mm high, with mostly 15-35 florets, vs. 7-11 mm high, with mostly 6-15 florets). [] {investigate; add synonymy; add to key}

Brickellia eupatorioides (Linnaeus) Shinners *var.* ***eupatorioides***, Eastern False-boneset. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (FL, GA, NC, SC, VA): dry slopes, shale barrens, dry woodlands, thickets; common (uncommon in Mountains, uncommon in VA Piedmont, rare in VA Coastal Plain). June-October. NJ west to IN, south to c. peninsular FL and se. TX. In addition to var. *eupatorioides*, *B. eupatorioides* includes several other varieties, of more southern or western distribution. Var. *floridana* (R.W. Long) B.L. Turner [= *B. mosieri* Small] has all leaves linear and is apparently restricted to s. FL; previous references to its occurrence further north (as by SE) are now interpreted as being based on narrow-leaved forms of *B. eupatorioides* var. *eupatorioides*. Var. *texana* (Shinners) Shinners [= var. *ozarkana* (Shinners) Shinners] has the outer phyllaries prolonged into setae, nearly or fully as long as the inner phyllaries, and should be considered a possibility for our area, in dry open habitats with prairie or midwestern affinities; it is known from as far eastward as AR and MO. [= FNA, K, X, Z; < *Kuhnia eupatorioides* Linnaeus – RAB, S, W; = *Kuhnia eupatorioides* var. *eupatorioides* – C, F, G, SE; < *Brickellia eupatorioides* – WH; = *Kuhnia eupatorioides* var. *pyramidalis* Rafinesque – Y]

Brintonia Greene 1895 (Brintonia)

A monotypic genus of the East Gulf Coastal Plain of the Southeastern United States, though sometimes combined with *Solidago*. References: Semple in FNA (2006b); Nesom (1993).

Brintonia discoidea (Elliott) Greene, Brintonia, Rayless Mock-goldenrod. Cp (FL, GA): rich bluff forests; rare. August-October. A Southeastern Coastal Plain endemic: sw. GA and Panhandle FL west to LA. [= FNA, S, SE, WH; = *Solidago discoidea* Elliott – K]

Calotis R. Browne 1820

* ***Calotis cuneifolia*** R. Browne. Cp (SC): waste areas near wool-combing mill; rare, native of Australia. Reported by Nesom (2004d). [= K]

Calyptocarpus Lessing 1832 (Straggler-daisy, Lawnflower)

A genus of 3 species, herbs, of sw. North America south to Central America. References: Strother in FNA (2006c); Sherff & Alexander (1955)=Z; Cronquist (1980)=SE.

* ***Calyptocarpus vialis*** Lessing, Straggler-daisy, Lawnflower. Cp (FL, GA, SC): disturbed areas, lawns; rare, native of tropical America. [= FNA, K, S, SE, WH, Z]

Carduus Linnaeus 1753 (Plumeless Thistle)

A genus of about 90 species, herbs, of temperate Old World. References: Keil in FNA (2006a); Cronquist (1980)=SE. [also see *Cirsium*]

1 Phyllaries 2-8 mm wide; heads mostly nodding (declined at least slightly from the vertical) ..... ***C. nutans***
1 Phyllaries 1-2 mm wide; heads erect.
  2 Involucres cylindrical or narrowly ellipsoid..... ***C. pycnocephalus*** *ssp.* ***pycnocephalus***
  2 Involucres spherical or hemispherical.
    3 Involucre 14-20 mm high, 25-35 mm across (excluding the flowers); leaves glabrate to glabrous beneath; plants very spiny; stem tough. ..... ***C. acanthoides*** *ssp.* ***acanthoides***
    3 Involucre 12-17 mm high, 15-20 (-25) mm across (excluding the flowers); leaves cottony-tomentose beneath, at least when young; plants not very spiny; stem brittle ..... ***C. crispus***

* ***Carduus acanthoides*** Linnaeus *ssp.* ***acanthoides***, Plumeless Thistle. Mt (NC, VA, WV), Pd (VA), Cp (VA): disturbed areas, pastures; common (uncommon in WV, rare in NC), native of Eurasia. June-October. [= FNA; < *C. acanthoides* – RAB, C, F, G, K, SE, W]
* ***Carduus crispus*** Linnaeus, Welted Thistle. Cp (VA), Mt (WV): disturbed areas, naturalized around large ports; rare, native of Eurasia. June-September. [= C, F, FNA, G, K, SE]
* ***Carduus nutans*** Linnaeus, Musk Thistle, Nodding Thistle. Mt (VA, WV), Pd (GA, NC, VA), Cp (DE, SC, VA): fields, roadsides, disturbed areas; uncommon (rare in DE, NC, and SC), native of Eurasia. Late May-November. *C. nutans* in its native range consists of a complex of taxa variously treated at specific, subspecific, and varietal rank; the application of these taxa to North American material is problematic and unresolved (see FNA for discussion). [= RAB, C, F, FNA, G, SE, W; > *Carduus nutans* Linnaeus ssp. *macrolepis* (Petermann) Kazmi – K]
* ***Carduus pycnocephalus*** Linnaeus *ssp.* ***pycnocephalus***, Italian Plumeless-thistle. Cp (SC): waste areas around wool-combing mill; rare, native of n. Africa and w. Asia. Reported by Nesom (2004d). Scattered other occurrences in e. North America, including old ballast collections (FNA). [= FNA; < *C. pycnocephalus* – K]

* *Carduus tenuiflorus* W. Curtis. Known from ballast collections from se. PA from 1877-1879 (Rhoads & Klein 1993) and from NJ (Kartesz 1999). [= FNA, K] {not keyed}

Carphephorus Cassini 1816

A genus of 4 species, herbs, endemic to the Southeastern Coastal Plain of North America. The merger of *Trilisa* and *Litrisa* into *Carphephorus* has been questioned (Schmidt & Schilling 2000) and Schilling (2011) provides evidence that both *Trilisa* and *Litrisa* should be maintained as separate genera. The only species of this complex not occurring in our area is *Litrisa carnosa* Small (of c. peninsular FL). References: Nesom in FNA (2006c); Schilling (2011)=V; Correa & Wilbur (1969)=Z; DeLaney, Bissett, & Weidenhamer (1999)=Y; Orzell & Bridges (2002)=X; Cronquist (1980)=SE.

Identification notes: *Trilisa* can be distinguished from *Carphephorus* by its smaller heads (involucres 3.5-6 mm high vs. 6-15 mm high) and fewer phyllaries (6-12 vs. 15-40). When vegetative, *Trilisa* lacks shining resin dots on the leaves, while *Carphephorus* has numerous resin dots.

1 Stem glabrous or nearly so, the pubescence (if present) short and appressed; surfaces of the basal leaves glabrous; inflorescence corymbiform.
  2 Stem leaves few, most of the stem exposed; basal leaves 4-20 cm long, 0.5-2.5 cm wide, dull, minutely punctate-pitted, fairly thick in texture, but not succulent; stems 1-5 dm tall, (1-) 2-5 per plant; [se. VA south to e. GA]..... ***C. bellidifolius***
  2 Stem leaves numerous, densely clothing the stem at least below; basal leaves 9-50 cm long, 2-10 cm wide, shiny, succulent, not glandular-punctate; stems 6-20 dm tall, 1 per plant; [se. NC south to FL, west to e. LA] ..... ***[Trilisa odoratissima]***
1 Stem conspicuously spreading hirsute, at least on the lower part of the stem; surfaces of the basal leaves conspicuously pubescent to glabrous; inflorescence corymbiform or thyrsoid-paniculate.
  3 Leaves linear, the widest 1-3 mm wide; [sw. GA west through the East Gulf Coastal Plain] ..... ***C. pseudoliatris***
  3 Leaves oblancolate, the widest 7-40 mm wide; [collectively widespread in the Coastal Plain of our area].

4 Inflorescence thyrsoid-paniculate; florets 4-10 per head; basal leaves glabrous, minutely and inconspicuously punctate, lacking resin droplets; phyllaries in 1-2 (-3) series, scarcely overlapping.....***[Trilisa paniculata]***
4 Inflorescence corymbiform; florets 15-30 per head; leaves generally conspicuously pubescent (sometimes glabrate or with a few long hairs on the upper surface), not punctate, copiously beset with resin droplets; phyllaries in 3-6 series, closely imbricate.
5 Phyllaries glabrous on the back; phyllaries subacute to rounded, entire to erose; phyllaries mostly 15-20.....***C. corymbosus***
5 Phyllaries viscid-pubescent on the back; phyllaries acute to subacute, entire and often callus-tipped; phyllaries 20-40.....***C. tomentosus***

Carphephorus bellidifolius (Michaux) Torrey & A. Gray, Sandhill Chaffhead. Cp (GA, NC, SC, VA): xeric sandy forests and woodlands, primarily in sandhills; common (rare in GA and VA). August-October. Se. VA to extreme e. GA. The leaf apices are generally blunt, giving the leaves a nearly spatulate shape. Although often occurring with other species of *Carphephorus*, *C. bellidifolius* ranges into drier habitats than its congeners. [= RAB, C, F, FNA, G, K, S, SE, V, Z]

Carphephorus corymbosus (Nuttall) Torrey & A. Gray. Cp (FL, GA, SC): wet flatwoods; common (rare in GA and SC). August-October. Se. SC south to s. FL. This species was reported as far north as NC by Small (1933); Correa & Wilbur (1969) considered the northern limit of the species to be e. GA, but it is now known from Jasper County, SC. [= RAB, FNA, K, S, SE, V, WH, Y, Z]

Carphephorus pseudoliatris Cassini, Lavender Lady. Cp (FL, GA): seepage bogs, savannas, wet to moist pinelands; common (rare in GA). Sw. GA and FL Panhandle west to e. LA. [= FNA, GW, K, S, V, WH, Y, Z; = *C. pseudo-liatris* – SE, orthographic variant]

Carphephorus tomentosus (Michaux) Torrey & A. Gray. Cp (GA, NC, SC, VA): savannas, flatwoods, and sandhills; common (rare in VA). August-October. Se. VA south to s. GA. The specific epithet is somewhat misleading; *C. tomentosus* is highly variable in its pubescence, ranging from glabrate to densely hirsute. [= RAB, C, FNA, G, GW, K, S, SE, V, Z; > *C. tomentosus* var. *tomentosus* – F; > *C. tomentosus* var. *walteri* (Elliott) Fernald – F]

Carthamus Linnaeus 1753 (Distaff-thistle)

A genus of 14 specoies, annual and perennial herbs, of the Mediterranean region. Closely related to *Centaurea*, and perhaps to be included there. References: Keil in FNA (2006a).

* ***Carthamus creticus*** Linnaeus, Smooth Distaff-thistle. Cp (SC): waste area around wool-combing mill; rare, native of s. Europe and n. Africa. Reported by Nesom (2004d) for SC, as *C. baeticus*. [= FNA; ? *Carthamus lanatus* Linnaeus ssp. *baeticus* (Boissier & Reuter) Nyman – K; ? *Carthamus baeticus* Boissier & Reuter; = *Centaurea cretica* (Linnaeus) Sprengel]

Centaurea Linnaeus 1753 (Star-thistle, Knapweed)

A genus of about 500 species, herbs, native of Eurasia and n. Africa. References: Keil & Ochsmann in FNA (2006a); Cronquist (1980)=SE. Key adapted from C, SE, and FNA. [also see *Acroptilon*, *Carthamus,* and *Plectocephalus*]

1 Phyllaries evidently spine-tipped.
2 Leaf bases not decurrent on the stem, the stem merely angled; pappus absent; corollas purple
3 Central spines of the principal phyllaries 10-25 mm long.....***C. calcitrapa***
3 Central spines of the principal phyllaries 1-3 mm long.....***[C. diffusa]***
2 Leaf bases decurrent on the stem as wings (only shortly so in *C. benedicta*); pappus present in at least the central flowers in the head; corollas yellow.
4 Heads sessile, closely subtended and partially concealed by large foliar bracts.....***C. benedicta***
4 Heads obviously pedunculate, lacking large foliar bracts subtending the head.
5 Larger spines of the middle and outer phyllaries 5-9 mm long; marginal and central flowers of the head with pappus.....***C. melitensis***
5 Larger spines of the middle and outer phyllaries 11-22 mm long; marginal flowers of the head lacking pappus.....***C. solstitialis***
1 Phyllaries not spine-tipped.
6 Plant an annual; flowers pale to medium blue, flowering April-June.....***C. cyanus***
6 Plant a perennial; flowers pink to purple, flowering June-October.
7 Phyllary appendages tapering to long, often recurved, pectinately dissected, filiform tips.....***C. phrygia***
7 Phyllary appendages obtuse to acute, erect or ascending.
8 Involucres 10-13 mm high.....***C. stoebe*** *ssp.* ***micranthos***
8 Involucres 15-25 mm high.
9 Phyllary appendages evidently decurrent along phyllary margins.....***[C. scabiosa]***
9 Phyllary appendages not or only slightly decurrent along phyllary margins.
10 Phyllary appendages roundish (seldom triangular), scarious, light to dark brown, undivided to irregularly lacerate.....***C. jacea***
10 Phyllary appendages more-or-less triangular, brown to black, more-or-less wholly pectinate-margined.
11 Heads discoid (the peripheral florets not expanded and showy); pappus blackish, < 1 mm long; green parts of phyllaries nearly or completely covered by black appendages, the involucres thus appearing totally black.....***C. nigra***
11 Heads radiate (the peripheral florets expanded and showy); pappus absent or rudimentary (when present usually not black); green part of phyllaries sometimes evident, or the appendages light to dark brown.
12 Heads relatively broad, the pressed involucres usually as wide as or wider than long; green parts of phyllaries usually covered by brown, variously pectinate fimbriate appendages, the involucres thus light to dark brown..... ***C. ×moncktonii***

12 Heads relatively narrow, the pressed involucres usually longer then wide; green parts of phyllaries not fully covered by black appendages, the involucres black and green.....***C. nigrescens***

* ***Centaurea benedicta*** (Linnaeus) Linnaeus, Blessed-thistle. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA), Mt (VA): fields, roadsides, disturbed areas; uncommon (rare in FL), native of Mediterranean Europe. Late March-June. [= RAB, FNA; = *Cnicus benedictus* Linnaeus – C, F, G, K, S, SE, W, WH]

* ***Centaurea calcitrapa*** Linnaeus, Purple Star-thistle, Caltrops. Mt, Cp, Pd (VA): roadsides, disturbed areas; rare, native of Europe. June-September. [= C, F, FNA, G, K, S, SE]

* ***Centaurea cyanus*** Linnaeus, Cornflower, Batchelor's-buttons. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (NC, SC, VA, WV): roadsides, disturbed areas; common (uncommon in VA and WV Mountains, uncommon in DE, rare in FL), native of Mediterranean Europe. April-June. [= RAB, C, F, FNA, G, K, S, SE, W, WH]

* ***Centaurea jacea*** Linnaeus, Brown Knapweed. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE): roadsides, disturbed areas; uncommon (rare south of DE), native of Europe. June-September. This species is increasing rapidly in the VA Ridge and Valley. Reported for Alleghany County, NC (D. Poindexter, pers. comm. 2009). [= C, F, FNA, G, K, SE; = *Jacea pratensis* Lamarck]

* ***Centaurea melitensis*** Linnaeus, Maltese Star-thistle. Cp (GA, SC): waste areas near wool-combing mill, roadsides, disturbed areas; rare, native of Mediterranean Europe. June-September. [= C, F, FNA, G, K, S, SE]

* ***Centaurea ×moncktonii*** C.E. Britton, Meadow Knapweed. Mt (VA), Pd (VA): roadsides, disturbed areas; rare, native of Europe. July-October. [= FNA; = *C. ×pratensis* Thuillier – C; ? *C. nigra* var. *radiata* A.P. de Candolle – F; ? *C. debeauxii* Godron & Grenier ssp. *thuillieri* Dostál]

* ***Centaurea nigra*** Linnaeus, Black Knapweed, Spanish-buttons. Mt (WV), Pd (DE, VA), Cp (DE): roadsides, disturbed areas; uncommon (rare in VA), native of Europe. July-October. [= C, F, FNA, G, K, SE]

* ***Centaurea nigrescens*** Willdenow, Tyrol Knapweed, Short-fringed Knapweed. Mt (VA, WV), Pd (DE, VA): roadsides, disturbed areas; uncommon (rare in DE and VA), native of Europe. July-October. This species is increasing rapidly in the n. VA Piedmont. *C. transalpina* Schleicher ex de Candolle was also reported for VA by Kartesz (1999). [= FNA; = *C. dubia* Suter – C, SE, W (not a valid name); > *C. vochinensis* Bernhardi ex Reichenbach – F; > *C. dubia* ssp. *vochinensis* (Berhardi ex Reichenbach) Hayek – G; > *C. nigrescens* – K; > *C. transalpina* Schleicher ex de Candolle – F, K]

* ***Centaurea phrygia*** Linnaeus, Wig Knapweed. {VA}. Reported for VA in FNA. [= FNA, K; > *Centaurea austriaca* Willdenow]

* ***Centaurea solstitialis*** Linnaeus, Barnaby's-thistle, Yellow Star-thistle. Mt (VA, WV), Pd (VA), Cp (NC, SC): roadsides, disturbed areas; rare, native of Mediterranean Europe. June-August. First reported for South Carolina by Hill & Horn (1997). [= RAB, C, F, FNA, G, K, S, SE, WV]

* ***Centaurea stoebe*** Linnaeus *ssp.* ***micranthos*** (S.G. Gmelin ex Gugler) Hayek, Spotted Knapweed, Bushy Knapweed. Mt (NC, SC, VA, WV), Pd (NC, SC, VA), Cp (DE, FL, VA): roadsides, disturbed areas; common (rare in FL and SC), native of Europe. Late June-November. [= FNA, WH; = *Centaurea biebersteinii* A.P. de Candolle – K; = *C. maculosa* Lamarck – RAB, C, F, G, SE, W, misapplied]

* *Centaurea diffusa* Lamarck, Tumble Knapweed. Naturalized in Davidson County, TN (Chester, Wofford, & Kral 1997); also in KY (FNA). [= C, F, FNA, G, K; = *Acosta diffusa* (Lamarck) Soják]

* *Centaurea scabiosa* Linnaeus, Greater Knapweed, Hardheads. Naturalized in KY, PA, NJ (FNA), MD (Kartesz 1999), and other states in e. North America. [= FNA, C, F, G, K]

Chaetopappa A.P. de Candolle 1836 (Least-daisy)

A genus of 11 species, annual or perennial herbs, of sc. and sw. United States and n. Mexico. References: Nesom in FNA (2006b).

* ***Chaetopappa asteroides*** (Nuttall) A.P. de Candolle *var.* ***asteroides***, Tiny Lazy-daisy. Cp (SC): waste areas near wool-combing mills; rare, native of sc. United States. Reported by Nesom (2004d). [= FNA, K, SE]

Chamaemelum P. Miller 1754 (Chamomile)

A genus of 2 species, herbs, of the Medterrannean region. References: Cronquist (1980)=SE. [also see *Cladanthus*]

1 Rays white with a yellow base; plant an annual .....***[see Cladanthus mixtus]***
1 Rays white; plant a perennial ..... ***C. nobile***

* ***Chamaemelum nobile*** (Linnaeus) Allioni, Garden Chamomile. Pd (NC): persistent from cultivation in gardens; rare, native of Europe. [= FNA, K; = *Anthemis nobilis* Linnaeus – C, F, G, S, SE]

Chaptalia Ventenat 1802 (Sunbonnets)

A genus of about 60 species, herbs, of warm temperate, subtropical, and tropical America. The remainder of the genus is distributed in the West Indies, Central America, and South America. References: Nesom in FNA (2006a); Vuilleumier (1969)=Z; Nesom (1995a)=Y; Cronquist (1980)=SE.

Identification notes: The basal leaves are distinctive, the undersurface permanently and tightly white floccose, the upper surface floccose when young but glabrate in age, and the margins with obscure denticulations.

Chaptalia tomentosa Ventenat, Sunbonnets, Pineland Daisy, Night-nodding Bog-dandelion, Woolly Sunbonnets. Cp (FL, GA, NC, SC): savannas, sandhill seeps, pine flatwoods; common. February-May. A Southeastern Coastal Plain endemic: e. NC south s. FL and west to e. TX. [= RAB, FNA, GW, K, S, SE, WH, Y, Z]

Chevreulia Cassini 1817

* ***Chevreulia sarmentosa*** (Persoon) S.F. Blake. Cp (SC): waste area near wool-combing mill; rare, native of s. South America. Reported for SC by Nesom (2004d).

Chondrilla Linnaeus 1753 (Skeleton-weed)

A genus of about 25 species, herbs, of temperate Eurasia. References: Gottlieb in FNA (2006a); Cronquist (1980)=SE.

* ***Chondrilla juncea*** Linnaeus, Skeleton-weed, Gum-succory. Pd (DE, GA, VA), Cp (DE, VA), Mt (VA, WV): cultivated fields, disturbed areas, roadsides; uncommon, native of Eurasia. June-August. [= C, F, FNA, G, K, SE]

Chromolaena A.P. de Candolle 1836

A genus of about 165 species, perennial herbs and shrubs, of s. North America, Central America, and South America. References: Nesom in FNA (2006c).

*? ***Chromolaena ivifolia*** (Linnaeus) King & Robinson, Ivy-leaf Thoroughwort. Cp (FL): prairies and fields; rare. August-November. S. FL, Panhandle FL, s. AL, s. MS, TX; West Indies, Mexico, Central America, South America (Woods, Diamond, & Searcy 2003; Kartesz 1999, Nesom in FNA 2006c). [= FNA, K, WH; = *Osmia ivaefolia* (Linnaeus) Schultz 'Bipontinus' – S; = *Eupatorium ivaefolium* – SE, orthographic variant]

Chrysanthemum Linnaeus 1753 (Chrysanthemum)

If circumscribed narrowly, a genus of 3 species, herbs, of n. Africa and Europe. References: Cronquist (1980)=SE; Arriagada & Miller (1997)=Z. [also see *Glebionis, Leucanthemum,* and *Tanacetum*]

* *Chrysanthemum indicum* Linnaeus, Garden Chrysanthemum, is persistent or perhaps naturalized as far south as se. PA (Rhoads & Klein 1993). [= *Dendranthema* ×*grandiflorum* Kitam. – K; *? Dendranthema morifolium* (Ramat.) Tzvelev; *? Chrysanthemum morifolium* Ramat.; *Dendranthema indicum* × *japonicum*]

Chrysogonum Linnaeus 1753 (Green-and-gold)

A genus of 1 species (with varieties), herbs, of se. North America. References: Nesom in FNA (2006c); Nesom (2001b)=Z; Cronquist (1980)=SE. Key based on Nesom (2001b).

1 Plants occurring individually, not producing stolons; earliest flowering stems leafless, later flowering stems leafy; leafy flowering stems mostly 15-35 (-50) cm high; [of e. VA, sc. PA, and se. OH south to se. NC, nc. SC, nw. NC, and sw. VA]..... ***C. virginianum*** *var.* ***virginianum***

1 Plants colonial, forming mats by stolons; flowering stems leafless or leafy; leafy flowering stems (if present) 15-25 cm high; [of ne. SC, sc. NC, nw. NC, ne. TN. and se. KY southward].

2 Earliest flowering stems leafless, mostly 2-10 cm high; later flowering stems leafy, 15-25 cm high; longest stolon internodes 2-6 cm long; [of ne. SC, sc. NC, nw. NC, sw. VA, ne. TN. and se. KY south to e. GA, c. GA, and ec. AL]..... ***C. virginianum*** *var.* ***brevistolon***

2 Earliest flowering stems leafless, 2-10 cm high; later flowering stems leafless as well, 2-10 cm high; longest stolon internodes 12-60 cm long; [of sc. and sw. GA west to e. LA]..... ***C. virginianum*** *var.* ***australe***

Chrysogonum virginianum Linnaeus *var.* ***australe*** (Alexander ex Small) Ahles, Gulf Coast Green-and-gold. Cp (FL, GA): moist to fairly dry woodlands and forests; uncommon (rare in FL). Late March-early June. A Gulf Coastal Plain endemic: sc.

and sw. GA west to e. LA. [= FNA, WH, Z; < *C. virginianum* var. *australe* – RAB, K, SE, W (also see var. *brevistolon*); < *C. australe* Alexander ex Small – S (also see var. *brevistolon*)]

Chrysogonum virginianum Linnaeus *var.* ***brevistolon*** Nesom, Carolina Green-and-gold. Pd (GA, NC, SC), Cp (GA, SC), Mt (GA, NC, SC, VA): moist to fairly dry woodlands and forests; common (rare in VA). Late March-early June. Ne. SC, sc. NC, nw. NC, sw. VA, ne. TN. and se. KY south to e. GA, c. GA, and ec. AL. [= FNA, Z; < *C. virginianum* var. *australe* – RAB, K, SE, W; < *C. australe* Alexander ex Small – S]

Chrysogonum virginianum Linnaeus *var.* ***virginianum***, Northern Green-and-gold, Virginia Green-and-gold. Cp (NC, SC, VA), Pd (NC, VA), Mt (VA, WV): moist to fairly dry woodlands and forests; common (uncommon in WV). Late March-early June. E. VA, sc. PA, and se. OH south to se. NC, nc. SC, nw. NC, and sw. VA. [= RAB, C, FNA, K, SE, W, Z; = *C. virginianum* – S]

Chrysoma Nuttall 1834 (Woody Goldenrod)

A monotypic genus, a shrub, of se. North America. References: Nesom in FNA (2006b); Nesom (2000b); Cronquist (1980)=SE.

Chrysoma pauciflosculosa (Michaux) Greene, Woody Goldenrod. Cp (FL, GA, NC, SC): xeric sands of very barren, open, white-sand sandhills, in our area primarily on fluvial dunes, and less commonly in the fall-line Sandhills; uncommon (rare north of FL). Late July-October. S. NC south to n. FL and west to s. MS. *Chrysoma* has a growth habit unlike any other shrub in our flora. From a trunk-like base, numerous branches ascend, forming a flat-topped shrub 3-5 dm tall. Each branch has a cluster of evergreen leaves restricted to its terminal few cm, the internodes very short (a few mm at most). In summer, some of the woody branches produce terminal, deciduous, flowering branches, which elongate rapidly, the leaves widely spaced, reaching a height of a meter or more. Following flowering and fruiting, the deciduous branches die back to the summit of the woody branches. The leaves are gray-green, rather thick-textured, and finely reticulate, the reticulations giving an appearance rather like anole skin. The midrib is prominent below, almost invisible on the upper surface. Godfrey (1988) has an excellent drawing and description of this distinctive shrub. [= FNA, K, S, SE, WH; = *Solidago pauciflosculosa* Michaux – RAB; = *Chrysoma solidaginoides* Nuttall]

Chrysopsis (Nuttall) Elliott 1823 (Golden-aster)

A genus of about 10 species, herbs, of se. North America, Mexico, and the Bahamas. This remains a difficult and rather poorly understood group. The appropriate taxonomic status of many of the entities remains unclear; for the moment, I am recognizing a number of entities at the specific level that should perhaps be recognized at lower taxonomic levels; in some cases, the appropriate nomenclatural combinations are not already available. References: Semple in FNA (2006b); Semple (1981)=Z; Harms (1974)=Y; Semple (1996)=X; Cronquist (1980)=SE; Nesom (2000b); DeLaney, Wunderlin, & Semple (2003). Key adapted from Semple (1981). [also see *Heterotheca* and *Pityopsis*]

1 Stem, leaves, and phyllaries sparsely to densely pubescent with spreading non-glandular hairs as well has having minutely glandular pubescence; annuals with taproots; [section *Bradburia*] ..... ***C. pilosa***
1 Stems, leaves, and phyllaries various but lacking spreading non-glandular hairs; biennials or perennials, either fibrous-rooted or with a mostly short and quickly disintegrating taproot; [section *Chrysopsis*].
  2 Peduncles and phyllaries glabrous or the outer phyllaries basally with a few stipitate glands; achenes usually with raised yellow-red translucent ribs.
    3 Stems erect; leaf margins serrate-ciliate, the surfaces sparsely pubescent to glabrous; all phyllaries glabrous ..... ***C. hyssopifolia***
    3 Stems decumbent to ascending; leaf margins entire, either eciliate and glabrous, or sometimes ciliate with glabrate to sparsely woolly surfaces; phyllaries either glabrous and glandular punctate or the outer basally stipitate-glandular.
      4 Stem leaves glabrous and eciliate (but rosette leaves densely woolly), lower stem leaves absent at flowering; outer phyllaries with a few stipitate glands basally, the involucre otherwise glabrous ..... ***C. cruiseana***
      4 Stem leaves eciliate or ciliate, the surfaces glabrate to sparsely woolly, the hairs often only or mostly near the margin, lower stem leaves usually present at flowering; phyllaries glabrous, glandular-punctate ..... ***C. trichophylla***

{Add *linearifolia* under 2a}

  2 Peduncles and phyllaries evidently stipitate-glandular or woolly-hairy, or both; achenes with or without raised yellow-red translucent ribs.
    5 Upper stem leaves woolly-hairy; not stipitate-glandular; peduncles and involucres sparsely pubescent to woolly, sometimes stipitate-glandular as well.
      6 Stems decumbent; inflorescence loosely corymbose-cymose, buds not nodding; peduncles stipitate-glandular or not, ligules 7-12 mm long; achenes sparsely to moderately strigose, usually with raised yellow-red translucent ribs; [of se. VA to FL] ..... ***C. gossypina***
      6 Stems decumbent to ascending; inflorescence corymbose, buds nodding; peduncles densely stipitate-glandular, ligules 10-15 mm long; achenes densely strigose, lacking raised yellow-red translucent ribs; [of barrier islands of w. FL Panhandle] ..... ***C. godfreyi***
    5 Upper stem leaves arachnoid to glabrate or densely stipitate-glandular; peduncles and involucres stipitate-glandular but otherwise glabrous.
      7 Upper stem leaves lacking stipitate glands, either arachnoid to glabrate, or woolly ..... ***C. mariana***
      7 Upper stem leaves densely stipitate-glandular, not woolly.
        8 Stems decumbent to ascending; leaves lanceolate; inflorescence compactly corymbose; involucres 9-12 mm long; phyllaries acute to attenuate; ligules 10-15 mm long ..... ***C. godfreyi***
        8 Stems erect; leaves linear-elliptic; inflorescence open flat-topped corymbose; involucres 6-9 mm long; phyllaries obtuse; ligules 6-8 mm long ..... ***C. scabrella***

{Add *lanuginosa* & *latisquamea* under 2b}

Chrysopsis cruiseana Dress. Cp (AL, FL): coastal sand dunes. October-December. FL Panhandle and s. AL. [= *Chrysopsis gossypina* (Michaux) Elliott ssp. *cruiseana* (Dress) Semple – FNA, K, WH, Z] {add synonymy}

Chrysopsis godfreyi Semple. Cp (AL, FL): coastal sand dunes. November-December. FL Panhandle and s. AL. Plants with densely stipitate-glandular, non-woolly upper stem leaves have been treated as forma *viridis* (Semple 1981). [= FNA, K, WH, Z] {add synonymy}

Chrysopsis gossypina (Michaux) Elliott, Cottonleaf Golden-aster. Cp (FL, GA, NC, SC, VA): sandhills, coastal dunes, other dry sandy places; common (rare in VA). September-October. Se. VA south to c. peninsular FL and sw. GA. [< *Chrysopsis gossypina* ssp. *gossypina* – FNA, K, WH, Z; < *Heterotheca gossypina* (Michaux) Shinners – RAB (also see *C. pilosa*); < *C. gossypina* – C, G, SE; > *C. longii* Fernald – F; >< *C. arenicola* Alexander – S; > *C. decumbens* Chapman – S; > *C. pilosa* – S, misapplied; < *Heterotheca gossypina* (Michaux) Shinners – Y]

Chrysopsis hyssopifolia Nuttall. Cp (FL): dry sands; uncommon. October-December. N. FL peninsula west to FL Panhandle, s. AL, s. MS, and se. LA. [= SE; = *Chrysopsis gossypina* (Michaux) Elliott ssp. *hyssopifolia* (Nuttall) Semple – FNA, K, WH, Z; > *Chrysopsis hyssopifolia* – S; > *Chrysopsis gigantea* Small – S; = *Heterotheca hyssopifolia* (Nuttall) Harms – Y]

Chrysopsis mariana (Linnaeus) Elliott, Maryland Golden-aster. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dry forests and woodlands, roadsides, other dry habitats; common. Late June-October. Se. NY west to se. OH, c. KY, w. TN, south to c. peninsular FL and se. TX. [= C, FNA, G, K, S, SE, W, WH, Z; = *Heterotheca mariana* (Linnaeus) Shinners – RAB, Y; > *Chrysopsis mariana* var. *mariana* – F; > *C. mariana* var. *macradenia* Fernald – F]

* ***Chrysopsis pilosa*** Nuttall. Cp (FL, GA?, NC, SC, VA): sandy roadsides; rare, introduced from a primary, native range from s. MO and se. KS, south to TX. See Anderson (2007) for FL record. [= F, G, K, SE, Z; < *Heterotheca gossypina* (Michaux) Shinners – RAB; = *Heterotheca pilosa* (Nuttall) Shinners – Y; = *Bradburia pilosa* (Nuttall) Semple – FNA, X]

* ***Chrysopsis scabrella*** Torrey & A. Gray. Cp (NC?, SC): sandy roadsides; rare, presumably introduced from FL (but possibly native and disjunct). [= FNA, K, SE, S, WH, Z; < *Chrysopsis scabrella* – SE; = *Heterotheca scabrella* (Torrey & A. Gray) Harms – Y]

Chrysopsis trichophylla (Nuttall) Elliott. Cp (GA?, NC, SC): sandhills, sandy roadsides, coastal dunes; rare (NC Watch List). The taxon treated by many authors as *C. trichophylla* was reduced to a form by Semple (1981), as *C. gossypina* ssp. *gossypina* f. *trichophylla* (Nuttall) Semple. He suggests, though, that varietal status may be warranted. Plants in SC previously identified as *C. cruiseana* are referrable to *C. trichophylla*. [= SE; = *Heterotheca trichophylla* (Nuttall) Shinners – RAB; < *Chrysopsis gossypina* ssp. *gossypina* – FNA, K, Z; < *C. gossypina* – C, G; > *C. trichophylla* – S; >< *C. arenicola* Alexander – S; >< *C. pilosa* – S, misapplied; < *Heterotheca gossypina* (Michaux) Shinners – Y]

Chrysopsis lanuginosa Small, Lynn Haven Goldenaster. Cp (FL): dry pinelands; rare. Endemic to FL Panhandle. [= FNA, K, WH; < *Chrysopsis scabrella* Torrey & A. Gray – SE] {not yet keyed; synonymy incomplete}

Chrysopsis latisquamea Pollard. Cp (FL): sandhills; uncommon. Ne. FL south to c. peninsular FL. [= FNA, K, SE, WH; = *Heterotheca latisquamea* (Pollard) V.L. Harms] {not yet keyed; synonymy incomplete}

Chrysopsis linearifolia Semple. Cp (FL): scrub, sandhills; uncommon. Endemic to FL Panhandle. [= *Chrysopsis linearifolia* ssp. *linearifolia* – FNA, K, WH] {not yet keyed; synonymy incomplete}

Cichorium Linnaeus 1753 (Chicory)

A genus of 7 species, herbs, of Europe and n. Africa. References: Strother in FNA (2006a); Cronquist (1980)=SE; Kiers (1999)=Z.

* ***Cichorium intybus*** Linnaeus, Chicory, Succory, Blue-sailors. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, SC, VA): roadsides, fencerows, vacant lots, disturbed areas; common (rare in FL), native of Europe. Late May-November. The dried roasted root is used as a flavoring or substitute for coffee. See Anderson (2007) for FL record. [= RAB, C, F, FNA, G, K, S, SE, W, WH, Z]

Cirsium P. Miller 1754 (Thistle)

A genus of about 250 species, herbs, north temperate. References: Keil in FNA (2006a); Cronquist (1980)=SE. Key adapted in part from SE.

1 Plant colonial from creeping rhizomes; heads 13-20 (-25) mm high; phyllaries all lacking spine tips, or the outermost tipped with spines < 1 mm long; plant perennial; [alien weeds, generally in altered habitats] ..... ***C. arvense***

1 Plant not colonial; heads 25-50 mm high (as small as 15-25 mm in *C. carolinianum, C. nuttallii, C. muticum,* and *C. virginianum*); phyllaries mostly spine-tipped, with at least some of the spines > 1 mm long (except sometimes mostly or entirely spine free in *C. muticum*); plant biennial (to weakly perennial); [native (except *C. vulgare*), in natural or some species also in disturbed habitats].

2 Leaves decurrent onto the stem below, the decurrency extending as a wing at least several cm down the stem, and often to the leaf below; leaves scabrous-hispid above; phyllaries lacking a glutinous dorsal ridge; [alien weed] ..... ***C. vulgare***

2 Leaves not decurrent as a conspicuous wing, or the decurrency extending < 1 cm (sometimes more decurrent in *C. lecontei*); leaves not scabrous-hispid above; [native, sometimes in disturbed habitats].

3 Phyllaries lacking spine tips (the outermost sometimes with a weak spine-tip to 0.5 mm long); leaves deeply lobed, to 55 cm long and 20 cm wide ..... ***C. muticum***

3 Phyllaries (at least the outer and middle) with well-developed spine-tips > 1 mm long; leaves lobed or merely toothed, generally < 30 cm long and < 10 cm wide (except in *C. altissimus*).

4 Heads immediately subtended by several spiny-toothed leaves (appearing as a leafy involucre); flowers yellow, white, or purple.
5 Involucres more-or-less densely tomentose; stems densely tomentose; [of the Coastal Plain and Piedmont]..... ***C. horridulum** var. **horridulum***
5 Involucres glabrous; stems glabrous or sparsely tomentose; [of the Coastal Plain].
6 Leaves shallowly to deeply pinnatifid; main spines of the leaves 10-30 mm long; [of s. AL and Panhandle FL westward] ..... ***[C. horridulum var. megacanthum]***
6 Leaves spinose-dentate to shallowly pinnatifid; main spines mostly 5-10 mm long; [widespread in the Coastal Plain] ..... ***C. horridulum** var. **vittatum***
4 Heads pedunculate (rarely with 1 or 2 reduced leaves below); flowers pink, purple, lavender, or white.
7 Lower surface of the leaves densely white-tomentose beneath, this persistent and entirely obscuring the green surface.
8 Heads 15-25 mm high; plants 4-15 dm tall; larger leaves < 5 cm wide.
9 Cauline leaves mostly 10-25; plants flowering April-June; [of dry soils of the Piedmont] ..... ***C. carolinianum***
9 Cauline leaves mostly 30-70; plants flowering August-October; [of moist to dry soils of the Coastal Plain (and rarely the lower Piedmont in association with other Coastal Plain species, such as *Pinus palustris*)]..... ***C. virginianum***
8 Heads 25-35 mm high; plants 10-40 dm tall; larger leaves usually > 5 cm wide.
10 Leaves toothed or shallowly lobed ..... ***C. altissimum***
10 Leaves deeply pinnatifid ..... ***C. discolor***
7 Lower surface of the leaves thinly and loosely white-tomentose beneath, this sloughing off in age, the green surface visible through the tomentum except on very small, young leaves.
11 Heads 15-25 mm high; plants 5-35 dm tall, usually much branched and with numerous heads ..... ***C. nuttallii***
11 Heads 25-50 mm high; plants 2-10 dm tall, usually strict or few-branched and with 1 or a few heads.
12 Heads on well-developed peduncles; [of moist to wet pinelands of the Coastal Plain from NC and SC south] ..... ***C. lecontei***
12 Heads on short peduncles; [of various habitats, mostly inland from the Coastal Plain, or of dry pinelands of the Coastal Plain].
13 Plants generally with well-developed, persistent basal leaves; cauline leaves with internodes usually > 2 cm; [of various habitats, mostly inland from the Coastal Plain] ..... ***C. pumilum***
13 Plants lacking well-developed basal leaves; cauline leaves with internodes mostly 0.5-2 cm long; [of dry pinelands of the Coastal Plain]..... ***C. repandum***

Cirsium altissimum (Linnaeus) Hill, Tall Thistle. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, GA): pastures, woodlands, thickets; uncommon (rare in DE, FL, and VA). September-November. MA west to ND, south to Panhandle FL (Jackson County) and TX. [= C, F, FNA, G, K, S, SE, W, WH; = *Carduus altissimus* Linnaeus – RAB]

* ***Cirsium arvense*** (Linnaeus) Scopoli, Canada Thistle, Field Thistle. Mt (NC, VA, WV), Pd (DE, Cp (DE): pastures, disturbed areas; common (uncommon in NC and VA), native of Europe. July-November. Two varieties are often recognized: var. *arvense*, with leaves shallowly undulate-lobed and with only a few fine marginal prickles, and var. *horridum*, with leaves strongly sinuate-pinnatifid and with numerous well-developed marginal prickles. [= FNA, K, S, W; = *Carduus arvensis* (Linnaeus) Robson – RAB; > *C. arvense* var. *arvense* – C, G, SE; > *Cirsium arvense* (Linnaeus) Scopoli var. *horridum* Wimmer & Gräbner – C, G, SE; > *Cirsium arvense* var. *mite* Wimmer & Gräbner – F; > *Cirsium arvense* var. *arvense* – F, misapplied; = *Breea arvense* (Linnaeus) Lessing]

Cirsium carolinianum (Walter) Fernald & Schubert, Carolina Thistle, Spring Thistle. Pd (GA, NC, SC, VA), Mt (GA): prairies, open woodlands over mafic, ultramafic, or calcareous rocks; rare. April-June (-July). N. VA west to s. OH and MO, south to w. SC, n. GA, AL, and TX. In our area, *C. carolinianum* seems to be restricted to prairies and woodlands (or maintained powerline or road rights-of-way) over circumneutral rocks and soils, in situations which were oak savannas or even prairies prior to fire suppression. [= C, F, FNA, G, K, SE, W; = *Carduus carolinianus* Walter – RAB; > *Cirsium flaccidum* Small – S; > *Cirsium virginianum* – S, misapplied]

Cirsium discolor (Muhlenberg ex Willdenow) Sprengel, Field Thistle. Mt (NC, SC, VA, WV), Pd (DE, GA, NC, VA), Cp (DE, VA): pastures, woodlands, thickets; common. August-November. QC west to MB, south to NC, MS, LA, and KS. [= C, F, FNA, G, K, S, SE, W; = *Carduus discolor* (Muhlenberg ex Willdenow) Nuttall – RAB]

Cirsium horridulum Michaux *var.* ***horridulum***, Common Yellow Thistle. Cp (DE, FL?, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC): roadsides, woodlands, pine savannas; common (rare in DE and VA Piedmont, rare in Mountains). Late March-early June. ME south to FL, west to TX, mostly on the Coastal Plain and adjacent provinces; also in Mexico. [= C, K, SE; = *Carduus spinosissimus* Walter – RAB; < *Cirsium horridulum* – F, G, WH; < *Cirsium horridulum* complex – GW; = *Cirsium horridulum* – S]

Cirsium horridulum Michaux *var.* ***megacanthum*** (Nuttall) D.J. Keil, Bigspine Thistle. Cp (AL, FL): moist ground; uncommon. AL and Panhandle FL west to TX and OK. [= FNA; < *Cirsium horridulum* complex – GW; < *Cirsium horridulum* var. *vittatum* – K, SE; > *Cirsium vittatum* – S; < *Cirsium horridulum* – WH]

Cirsium horridulum Michaux *var.* ***vittatum*** (Small) R.W. Long, Southern Yellow Thistle. Cp (FL, GA?, NC, SC): wet pine savannas; uncommon. May-July. Se. NC south to s. peninsular FL and Panhandle FL. [= *Carduus smallii* (Britton) Ahles – RAB; < *Cirsium horridulum* complex – GW; < *Cirsium horridulum* var. *vittatum* – K, SE; > *Cirsium smallii* Britton – S; > *Cirsium vittatum* Small – S; < *Cirsium horridulum* – WH]

Cirsium lecontei Torrey & A. Gray, LeConte's Thistle. Cp (FL, GA, NC, SC): wet pine savannas, bogs; uncommon (rare in GA, NC, SC). June-August. E. NC south to Panhandle FL, west to LA. [= FNA, GW, K, S, SE, WH; = *Carduus lecontei* (Torrey & A. Gray) Pollard – RAB]

Cirsium muticum Michaux, Swamp Thistle. Cp (DE, FL, NC, SC, VA), Mt (GA, NC, VA, WV), Pd (DE, NC, VA): swamps, wet thickets, woodlands, seepage slopes, wet prairies, meadows; uncommon (rare in DE, FL, and GA, VA Piedmont and Coastal Plain). August-November. NL (Newfoundland) west to SK, south to DE, NC, TN, and MO, and less commonly south to FL, AL (Diamond & Woods 2009), and TX. [= C, FNA, G, GW, K, S, SE, W, WH; = *Carduus muticus* (Michaux) Persoon – RAB; > *Cirsium muticum* var. *muticum* – F]

Cirsium nuttallii A.P. de Candolle, Coastal Tall Thistle. Cp (FL, GA, NC, SC, VA): pine savannas, roadsides, pastures; uncommon (rare in VA). June-August. Se. VA south to FL, west to LA; reported for the first time from NC (Krings, Westbrooks, & Lloyd 2002). [= C, F, FNA, G, GW, K, S, SE, WH; = *Carduus nuttallii* (A.P. de Candolle) Pollard – RAB]

Cirsium pumilum (Nuttall) Sprengel, Pasture Thistle. Pd (DE, NC, VA), Cp (DE, VA), Mt (VA, WV): pastures, thickets, and woodlands, perhaps especially over mafic rocks; uncommon (rare in Coastal Plain south of DE). Late May-July. S. ME west to w. NY, south to DE, and w. NC. [= C, F, G, K, SE, W; = *Carduus pumilus* Nuttall – RAB; = *Cirsium pumilum* var. *pumilum* – FNA; = *Cirsium odoratum* (Muhlenberg ex W. Bart.) Petrak – S]

Cirsium repandum Michaux, Sandhill Thistle. Cp (GA, NC, SC, VA): sandhills, other dry sandy habitats; common (rare in VA). May-July. Se. VA south to e. GA, nearly endemic to the Carolinas. Similar in distribution to *Vaccinium crassifolium, Carphephorus bellidifolius,* and *Baptisia cinerea*, which are all locally abundant endemic indicators of Carolina pinelands. [= C, FNA, G, K, S, SE; = *Carduus repandus* (Michaux) Persoon – RAB]

Cirsium virginianum (Linnaeus) Michaux, Virginia Thistle. Cp (DE, FL, GA, NC, SC, VA), Pd (NC): moist to fairly dry pine savannas, bogs; uncommon (rare in DE and VA). August-October. S. NJ south to ne. FL, on the Coastal Plain. [= C, F, FNA, G, GW, K, SE, WH; = *Carduus virginianus* Linnaeus – RAB; = *Cirsium revolutum* (Small) Petrak – S]

* ***Cirsium vulgare*** (Savi) Tenore, Bull Thistle. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, VA): meadows, pastures, and disturbed areas; common (rare in FL, uncommon in DE Piedmont), native of Europe. Late June-November. [= C, F, FNA, G, K, SE, W, WH; < *Carduus lanceolatus* Linnaeus – RAB; < *Cirsium lanceolatum* (Linnaeus) Scopoli – S, misapplied]

Cladanthus Cassini 1816

A genus of about 5 species, herbs, of the Mediterranean region. References: Watson in FNA (2006a).

* ***Cladanthus mixtus*** (Linnaeus) Chevallier. Cp (FL), Pd (NC): disturbed areas; rare, native of Europe. June. [= FNA; = *Anthemis mixta* Linnaeus – C, F, G, SE; = *Chamaemelum mixtum* (Linnaeus) Allioni – K, WH; = *Ormenis mixta* (Linnaeus) Dumortier – S]

Conoclinium A.P. de Candolle 1836 (Mistflower)

A genus of 4 species, of e. and c. North America extending into Mexico. References: Patterson & Nesom in FNA (2006c); Schmidt & Schilling (2000).

Conoclinium coelestinum (Linnaeus) A.P. de Candolle, Mistflower, Ageratum. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): moist to wet disturbed areas, especially ditches; common (uncommon in Piedmont of NC and SC, rare in Mountains of GA, NC, SC, and VA), probably more common than formerly. Late July-October. NJ west to IL, c. MO, se. KS, and OK, south to s. FL and c. TX; also in Cuba, and scattered further north (as in NY, n. OH, and n. IN) probably as escapes from cultivation. See Wooten & Clewell (1971) for further discussion of this species. [= FNA, K, WH; = *Eupatorium coelestinum* Linnaeus – RAB, C, F, G, SE, W, WV]

Conyza Lessing 1832 (Horseweed)

A genus of about 60 species, herbs, shrubs, and trees, of temperate, subtropical, and tropical regions. Recent molecular studies have indicated the likely polyphyly of *Conyza* and its close relationship with *Erigeron*; the ultimate circumscription of these genera is in doubt (Nesom 2000b, Noyes 2000). References: Strother in FNA (2006b); Cronquist (1980)=SE; Nesom (2000b). Key based in part on SE.

1 Plants diffusely branched from the base and throughout; plants 1-2.5 (-3) dm tall ..... ***[C. ramosissima]***
1 Plants with a well-developed central axis, sparingly branched (unless mowed or otherwise injured); plants 1-15 dm tall.
  2 Involucre 4-6 mm high, densely pubescent; pistillate flowers (50-) 70-200 or more per head..... ***C. bonariensis***
  2 Involucre 3-4 mm high, glabrous or very sparsely pubescent; pistillate flowers mostly 25-45 per head.
    3 Stem coarsely spreading-hirsute; leaves ciliate, the larger generally with a few to many coarse teeth; phyllaries green-tipped ..... ***C. canadensis*** *var.* ***canadensis***
    3 Stem glabrous or with widely scattered, appressed hairs; leaves with a few cilia toward the base, generally entire; phyllaries purple-tipped ..... ***C. canadensis*** *var.* ***pusilla***

* ***Conyza bonariensis*** (Linnaeus) Cronquist, South American Horseweed. Cp (FL, GA, NC, SC, VA), Pd (SC): fields, disturbed areas; uncommon, apparently native of South America. April-October. Se. VA south into the tropics. [= C, FNA, K, SE, WH; = ***Erigeron bonariensis*** Linnaeus – RAB, F; = *Conyza floribunda* Kunth – G, misapplied; > *Leptilon bonariense* (Linnaeus) Small – S; > *Leptilon linifolium* (Willdenow) Small – S]

Conyza canadensis (Linnaeus) Cronquist *var.* ***canadensis***, Common Horseweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): old fields, disturbed areas, gardens; common. July-November. S. Canada south through nearly all of the United States to tropical America. [= C, G, K, SE, W, WH; = *Erigeron canadensis* Linnaeus var. *canadensis* – RAB; < *C. canadensis* – FNA; = ***Erigeron canadensis*** – F; = *Leptilon canadense* (Linnaeus) Britton – S; < *Erigeron canadensis* – WV]

Conyza canadensis (Linnaeus) Cronquist *var.* ***pusilla*** (Nuttall) Cronquist, Southern Horseweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dunes, old fields, disturbed areas; common (rare in WV). (May-) July-December. Se. MA and CT west to s. IN, south to FL and TX, and south into tropical America. [= C, G, K, SE, W, WH; = *Erigeron canadensis* Linnaeus var. *pusillus* (Nuttall) Boivin – RAB; < *C. canadensis* – FNA; **= *Erigeron pusillus*** Nuttall – F; = *Leptilon pusillum* (Nuttall) Britton – S; = *Conyza parva* Cronquist]

* *Conyza floribunda* Kunth. Reported as introduced in GA, AL, and MS by Kartesz (1999), probably on the basis of confusion with *C. bonariensis*. [= FNA, K] {rejected; not keyed}

Conyza ramosissima Cronquist. Weedy situations. OH west to MN, south to KY, ec. TN (Chester, Wofford, & Kral 1997), ne. AL, LA, and TX. [= C, FNA, G, K, SE; = *Erigeron divaricatus* Michaux – F; = *Leptilon divaricatum* (Michaux) Rafinesque – S]

Coreopsis Linnaeus 1753 (Coreopsis, Tickseed)

[contributed by Alan S. Weakley and Bruce A. Sorrie]

A genus of about 50 species, herbs, of America. Recent molecular studies suggest that the relationship between *Bidens* and *Coreopsis* (as traditionally circumscribed) is complex, and that changes in taxonomy will be needed to more accurately reflect relationships (Kim et al. 1999; Crawford & Mort 2005). References: Strother in FNA (2006c); Smith (1976)=Z; Sherff & Alexander (1955)=Y; Cronquist (1980)=SE. Key adapted from Y and Z.

1 Disk flowers with 4 corolla lobes and 4 anthers; ray flowers usually apically 3-lobed.
- 2 Leaves pinnately or bipinnately lobed into linear segments or narrowly lanceolate segments; [section *Calliopsis*] ..... ***C. tinctoria*** *var.* ***tinctoria***
- 2 Leaves simple or with 1-2 auriculate lobes at the base; [section *Eublepharis*].
  - 3 All of the major cauline leaves opposite (except in *C. linifolia* the lowermost few leaves may be alternate).
    - 4 Ray flowers pink (white); plant rhizomatous ..... ***C. rosea***
    - 4 Ray flowers yellow; plant fibrous-rooted.
      - 5 Leaf blades ovate (to elliptical), very gradually reduced upward, margins ciliolate, surfaces lacking tiny dark dots; achenes about 5 mm long; [se. SC south to Panhandle FL] ..... ***C. integrifolia***
      - 5 Leaf blades linear-oblanceolate to linear, rapidly reduced upward, margins glabrous, surfaces with numerous tiny dark dots (easiest to see on undersurface); achenes < 2.5 mm long; [se. VA south to ne. and Panhandle FL, west to e. TX] ..... ***C. linifolia***
  - 3 All of the major cauline leaves alternate.
    - 6 Ray flowers pink; leaves juncoid (linear-terete) ..... ***C. nudata***
    - 6 Ray flowers yellow; leaves with an expanded blade.
      - 7 Outer phyllaries deltoid and very short, less than 0.3× as long as the inner phyllaries; flowering late September-January; [endemic to FL] ..... ***C. floridana***
      - 7 Outer phyllaries lanceolate, 0.4-0.8× as long as the inner phyllaries; flowering various but not past early November; [collectively widespread].
        - 8 Basal/lower leaves (at least 4 nodes) absent at anthesis; mid-cauline leaves broadly (to narrowly) elliptical; achene awns average 0.85 mm; [swamp forests and streamside openings, fresh-tidal creek margins, from se. NC south to n. FL]
          - 9 Leaves 4-15 cm long, 10-45 mm wide, the blades broadly to narrowly elliptical, 5-15× as long as wide; achene awns 0.7-1.0 mm long ..... ***C. helianthoides***
          - 9 Leaves 8-15+ cm long, 2-7 mm wide, the blades linear to linear-oblanceolate, 20-50× as long as wide; achene awns 0.2-0.4 mm long ..... ***C. species 1***
        - 8 Basal/lower leaves present at anthesis; leaves rapidly reduced upwards such that mid-cauline leaves are narrow or slender; achene awns various; [wet savannas, seepage slopes, pitcher-plant bogs, streamhead ecotones, pocosin ecotones, collectively more widespread].
          - 10 Leaves (at least one major leaf per plant) with 1-few slender auricles near base (rarely no auricled leaves present or at least readily visible); achene wing broad, >3/4 width of achene body; achene awns averaging 0.5 mm; leaf texture firm but not thick and leathery; flowering early May-early July; [se. VA south to e. GA] ..... ***C. falcata***
          - 10 Leaves without auricles; achene wing narrow, < ½ the width of the achene body; achene awns averaging 1.5 mm long; leaf texture thick and leathery; flowering mid August-early November; [se. NC south to c. FL and west to s. MS; also rarely inland in GA, NC, SC, off the Coastal Plain] ..... ***C. gladiata***

1 Disk flowers with 5 corolla lobes and 5 anthers; ray flowers apically entire, or with (2-) 4-5 teeth.
- 11 All of the leaves simple or the plant with a mixture of simple leaves and leaves with 1-2 (-4) basal auricles or leaflets, these distinctly smaller than the terminal lobe or leaflet.
  - 12 Leaves all simple, 4-12 cm wide, the margins coarsely serrate (some of the lower leaves sometimes pinnately lacerate basally); [section *Silphidium*] ..... ***C. latifolia***
  - 12 Leaves simple, usually (but not always) some of the leaves on a plant with basal auricles or lobes, the leaf blades (or terminal leaflets) 0.5-3.5 cm wide, the margins entire; [section *Coreopsis*].
    - 13 Stems with 1-5 (-8) nodes between the first node > 1 cm above the basal leaves and the first head.
      - 14 Plants spreading by elongate stolons; leaf blades (or terminal leaflets) 1-2.2× as long as wide ..... ***C. auriculata***
      - 14 Plants lacking stolons; leaf blades (or terminal leaflets) > 3× as long as wide (basal leaves sometimes broader) ..... ***C. lanceolata***
    - 13 Stems with (5-) 6-12 nodes between the first node > 1 cm above the basal leaves and the first head.
      - 15 Leaf blades (or terminal leaflets) more or less broadly elliptical, ca. 1.5-4 cm wide, acute; stem (and often also the leaves) rather densely hairy (to glabrate) ..... ***C. pubescens*** *var.* ***pubescens***
      - 15 Leaf blades (or terminal leaflets) narrowly elliptical to oblanceolate, ca. 0.6-2 cm wide, acuminate; stem and leaves glabrous ..... ***C. pubescens*** *var.* ***robusta***

11 Most or all of the leaves deeply lobed or dissected into distinct leaflets or divisions, the leaflets or divisions 3-20 or more, if only 3, then the lateral leaflets nearly or fully as large and well-developed as the terminal.
16 Leaves sessile or with a short subpetiolar base < 2 mm long, the initial division of the leaves palmate into 3 leaflets (these sometimes further divided), giving the 2 opposite leaves the superficial appearance of a whorl of 6 leaves; [section *Gyrophyllum*].
17 Leaves palmately 3-foliolate (rarely simple or 3-foliolate with the middle leaflet 2- or 3-lobed), the total number of leaflets or divisions thus 3 (-5), the middle leaflet of median leaves 5-30 mm wide.
18 Leaf blades rather densely short-pubescent; outer phyllaries rather densely short-pubescent; middle leaflet of median leaves 10-30 mm wide; leaflets herbaceous ..... ***C. major*** *var.* ***major***
18 Leaf blades slightly short-pubescent to glabrous; outer phyllaries slightly short-pubescent to glabrous; middle leaflet of median leaves 5-10 (-12) mm wide; leaflets subcoriaceous and stiff ..... ***C. major*** *var.* ***rigida***
17 Leaves palmately compound, the leaflets simple to lobed or pinnatifid, the total number of leaflets or divisions (3-) 5-25, the middle leaflet of median leaves 0.5-7 mm wide.
19 Leaflets usually lobed (rarely simple), the total number of leaflets or divisions (3-) 5-11 (-15) per leaf, the segments of median leaves (1.5-) 2-7 (-9) mm wide ..... ***C. delphiniifolia***
19 Leaflets pinnatifid, the total number of leaflets or divisions 11-25 or more per leaf, the segments of median leaves 0.2-1.2 mm wide ..... ***C. verticillata***
16 Leaves, at least the lower, distinctly petioled on petioles 5-50 mm or more long.
20 Ray flowers not toothed terminally (or rarely with a few with inconspicuous and irregular teeth); mid-cauline leaves palmately 3-foliolate, the terminal leaflet sometimes again 3-5-foliolate (sometimes giving an appearance of a pinnately 5-7-foliolate leaf), the leaflets 6-35 mm wide, 3-15× as long as wide; [section *Gyrophyllum*] ..... ***C. tripteris***
20 Ray flowers apically with (2-) 4-5 teeth; mid-cauline leaves pinnately 5-11-foliolate, the leaflets either 3-15 mm wide and about 1-3× as long as wide, or 0.5-2 mm wide and > 20× as long as wide; [section *Coreopsis*].
21 Disk flowers reddish; ray flowers usually with a basal red mark; leaflets of mid-cauline leaves 3-15 mm wide and about 1-3× as long as wide ..... ***C. basalis***
21 Disk flowers yellow; ray flowers yellow; leaflets of mid-cauline leaves 0.5-6 (-10) mm wide and > 10× as long as wide.
22 Achene wings fimbriate; [of granitic outcrops of the Piedmont of GA and AL] ..... ***C. grandiflora*** *var.* ***saxicola***
22 Achene wings entire; [collectively more widespread].
23 Divisions of the midstem and upper cauline leaves with 1-3 divisions; plants reclining; flowering late June-July; [of dolomite glades in c. AL] ..... ***[C. grandiflora*** *var.* ***inclinata]***
23 Divisions of the midstem and upper cauline leaves with > 5 divisions; plants erect; flowering May-late June; [of granite outcrops and disturbed areas].
24 Larger divisions of midstem and upper stem leaves 2-6 (-10) mm wide ..... ***C. grandiflora*** *var.* ***grandiflora***
24 Larger divisions of midstem and upper stem leaves 0.5-1.5 mm wide ..... ***C. grandiflora*** *var.* ***harveyana***

Coreopsis auriculata Linnaeus, Lobed Coreopsis. Pd (GA, NC, SC, VA), Cp (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): moist slopes and woodlands; common (rare in Coastal Plain and Mountains). April-June. C. and ne. VA, s. WV, and KY south to MS, AL, and GA. [= RAB, C, F, FNA, G, K, S, SE, W, WV, Y, Z]

* ***Coreopsis basalis*** (A. Dietrich) Blake, Texas Coreopsis. Cp (FL, GA, NC, SC), Pd (GA): sandy roadsides and fields; common (uncommon in FL), native of farther west. May-July. Probably native only to e. TX, now distributed across the Coastal Plain from TX east to FL and north to NC. [= RAB, C, F, FNA, G, K, SE, WH, Z; > *C. basalis* var. *basalis* – Y]

Coreopsis delphiniifolia Lamarck, Larkspur Coreopsis. Cp (GA, SC, VA), Pd (GA, NC, SC), Mt (GA): dry woodlands; uncommon (rare north of GA). May-July. The species ranges from e. VA and s. NC south to c. GA, and se. TN (Polk County) (Chester, Wofford, & Kral 1997), and reputedly AL. Smith (1976) indicates that the species is an allopolyploid derivative (at 4x, 6x, and 8x) of *C. major*, *C. tripteris*, and *C. verticillata*. Its range extends south well beyond the range of *C. verticillata*. [= FNA, K; < *C. major* var. *stellata* – RAB; = *C. delphinifolia* – F, G, S, SE (an orthographic variant); > *C. delphinifolia* var. *delphinifolia* – Y; > *C. delphinifolia* var. *chlooidea* Sherff – Y; > *C. major* Walter var. *linearis* Small – Y; = *C.* ×*delphiniifolia* – Z]

Coreopsis falcata Boynton, Pool Coreopsis. Cp (GA, NC, SC, VA), Mt (SC): peat bogs, very wet savannas, ditches and borrow pits in savannas; common (rare in VA). Early May-early July (rarely later, perhaps in response to growing season fire). The species is endemic to the Coastal Plain of se. VA (City of Chesapeake), e. NC, e. SC, and e. GA; disjunct in Oconee County, SC. First reported for VA by Wieboldt et al. (1998). *C. falcata* should not be included (as by Cronquist in C and SE) in *C. gladiata*; the two species are distinctive in ecological preferences, morphology, phenology, and distribution. [= RAB, GW, K, S, Y, Z; < *C. gladiata* var. *gladiata* – C, SE; < *C. gladiata* – FNA, WH]

Coreopsis floridana E.B. Smith, Florida Coreopsis. Cp (FL): wet pine flatwoods; uncommon. Late September-January (-February). Panhandle FL south to s. FL (absent from ne. FL). [= FNA, GW, K, WH, Z]

Coreopsis gladiata Walter, Swamp Coreopsis. Cp (FL, GA, NC, SC), Mt (GA, NC, SC): swamp forests; rare (SC Rare). Mid-August-early November. Se. NC south to c. FL and west to s. MS; scattered inland as a disjunct in montane NC, SC, and GA. See *C. helianthoides* and *C. linifolia* for further discussion of the taxonomy of this group of species. [= RAB, S, Z; < *C. gladiata* var. *gladiata* – C, G, SE (also see *C. falcata*); < *C. gladiata* – FNA, GW, K, WH (also see *C. helianthoides*); > *C. gladiata* – Y; > *C. longifolia* Small var. *longifolia* – Y; > *C. longifolia* Small var. *godfreyi* Sherff – Y]

Coreopsis grandiflora Hogg ex Sweet *var.* ***grandiflora***, Large-flowered Coreopsis. Pd (GA, SC): in thin soils of rock outcrops, especially granitic flatrocks; rare. Late May-late June. Var. *grandiflora* ranges from c. GA and w. SC west to e. TX and e. OK, very scattered in distribution; it differs from var. *harveyana* in having the leaf divisions 2-6 mm wide (vs. 0.5-2 mm wide). [= F, K, Z; < *C. grandiflora* – RAB, FNA, G, S, W; < *C. grandiflora* var. *grandiflora* – C, SE (also see var. *harveyana*); > *C. grandiflora* var. *grandiflora* – Y; > *C. grandiflora* var. *pilosa* Sherff – Y]

* ***Coreopsis grandiflora*** Hogg ex Sweet *var.* ***harveyana*** (A. Gray) Sherff, Large-flowered Coreopsis. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (NC, SC, VA, WV): disturbed areas; rare, native of farther west. Late May-late June. As treated by Smith (1976), the species consists of 4 varieties. Var. *harveyana* is the most abundant variety, probably originally endemic to AR, n.

LA, ne. TX, OK, e. KS, and s. and c. MO, but now scattered eastward to IN, NC, and SC. Var. *longipes* (Hooker) Torrey & Gray is endemic to e. TX. See Crawford & Smith (1984) for additional discussion of the varieties. [= F, K, Y, Z; < *C. grandiflora* – RAB, FNA, G, S, W, WH, WV; < *C. grandiflora* var. *grandiflora* – C, SE]

Coreopsis grandiflora Hogg ex Sweet *var.* ***saxicola*** (Alexander) E.B. Smith, Stone Mountain Coreopsis. Pd (GA): granitic outcrops; uncommon. As interpreted by Smith (1976) and Cronquist (1980), this variety is endemic to granite outcrops in c. GA and ec. AL and to sandstone outcrops in nc. AR; the AR plants, differing in morphology, phenology, karyotype, and distribution, may well warrant separate status. [= K, SE, Z; < *C. grandiflora* Hogg ex Sweet – FNA; = *C. saxicola* Alexander – S; > *C. saxicola* var. *saxicola* – Y; > *C. saxicola* var. *duncanii* Sherff – Y]

Coreopsis helianthoides Beadle, Beadle's Coreopsis. Cp (GA, NC, SC), Mt (NC), Pd (GA): swamp forests, swamp edges, and bogs; rare. September-October. Se. NC south to c. and w. FL and west to s. MS, with a disjunct occurrence in sw. NC. The validity of this taxon is controversial. Smith (1976) includes it in *C. gladiata*, considering it merely a pubescent form. Cronquist (in SE) regards it as distinct at the species level, despite his serious over-lumping of all its close relatives into a single species with two varieties: *C. gladiata* var. *gladiata* (including *C. falcata* and *C. gladiata*), and var. *linifolia* (including *C. oniscicarpa* and *C. linifolia*). [= RAB, S, SE, Y, Z; < *H. gladiata* – FNA, GW, K, WH]

Coreopsis integrifolia Poiret, Chipola Dye-flower. Cp (GA, SC): banks and floodplains of small blackwater streams (especially over limestone), edges of swamp forests bordering longleaf pinelands or bordering brackish marshes; rare (GA Special Concern). Mid August-early November. Se. SC south to FL Panhandle, apparently uncommon throughout its range. It is related to *C. helianthoides* and *C. linifolia*; the leaves are cauline and opposite, the petioles are ciliate. [= FNA, GW, K, S, SE, WH, Y, Z]

Coreopsis lanceolata Linnaeus, Longstalk Coreopsis. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): disturbed areas; common (uncommon in DE, rare in Mountains). April-June. S. MA, MI and WI south to c. peninsular FL, e. TX, and NM. Often spread from cultivation, its original range obscure. [= RAB, C, FNA, K, SE, W, WH, WV, Z; > *C. lanceolata* var. *lanceolata* – Y; > *C. lanceolata* var. *villosa* Michaux – F, G, Y; > *C. heterogyna* Fernald – F; > *C. lanceolata* – S; > *C. crassifolia* Aiton – S]

Coreopsis latifolia Michaux, Broadleaf Coreopsis. Mt (GA, NC, SC): in rich, moist, cove forests and slopes at medium elevations, primarily from 500 m in the Blue Ridge Escarpment to nearly 1500 m; rare (though often locally abundant). (July-) August-September. A Southern Appalachian endemic: sw. NC and se. TN (Polk County) (Chester, Wofford, & Kral 1997) south into nw. SC and ne. GA. This species is treated by Smith (1976) in a monotypic section (section *Silphidium*) of *Coreopsis*, and, indeed, it does not closely resemble our other species. Smith (1976) considered it a primitive species, with its closest relatives in Mexico, and all of his attempts to hybridize it with other Southeastern *Coreopsis* failed. Flowering appears to be triggered by canopy tree-fall light gaps. It often occurs with *Helianthus glaucophyllus*. [= RAB, FNA, K, S, SE, W, Y, Z; = *Leiodon latifolius* (Michaux) Shuttleworth]

Coreopsis linifolia Nuttall, Savanna Coreopsis. Cp (FL, GA, NC, SC, VA): savannas, sandhill seeps, sandhill-pocosin ecotones; common (rare in VA). Early July-late October. Se. VA south to ne. and Panhandle FL, west to e. TX. Basal rosettes of this species are abundant in wet savannas and can be distinguished readily by the distinctive leaves: very long-petiolate, about 1 cm across, the pinnate venation very neat (the main lateral veins straight and parallel to the other laterals on the same side of the leaf), with small dark dots when backlit, and very thick (ca. 1 mm) and stiff in texture. The proper taxonomic treatment of this taxon and its relatives remains unclear. Smith (1976) interpreted *C. linifolia* to range from se. VA south and west along the Coastal Plain to e. TX (with a few inland disjunctions) and to consist of two chromosome races, a diploid Gulf Coast race (w. FL to se. TX) and a tetraploid Atlantic Coast race (s. GA to se. VA), "not differing sufficiently morphologically to justify nomenclatural recognition." Fernald, however, named *C. oniscicarpa* (the tetraploid) based on morphologic characters. Given the existence of morphologic characters, the failure of Smith's attempted hybridizations of the two "races," his speculation that the tetraploid could be an allotetraploid (though likely an autotetraploid), and the allopatric ranges of the two races, specific recognition is plausible. Further study is needed. Cronquist (in C, G, SE) does not recognize *C. oniscicarpa* as distinct from *C. linifolia*, and reduces *C. linifolia* (*sensu lato*) to a variety of *C. gladiata*, also including *C. falcata* in the typic variety of *C. gladiata*. The abundant morphologic, phenologic, and ecologic differences between *C. gladiata*, *C. linifolia*, and *C. falcata* render such an approach undesirable. [= GW, K, W, Y, Z; = *C. angustifolia* Aiton – RAB, possibly misapplied; = *C. gladiata* var. *linifolia* (Nuttall) Cronquist – C, G, SE; > *C. oniscicarpa* Fernald var. *oniscicarpa* – F; > *C. oniscicarpa* var. *simulans* Fernald – F; < *C. gladiata* – FNA]

Coreopsis major Walter *var.* ***major***, Woodland Coreopsis. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): woodlands; common (rare in GA, NC, SC, VA). May-July. W. VA, s. OH, and KY south to SC, GA, w. FL, s. AL, and s. MS. How to treat the "*Coreopsis major* complex" (here including *C. major* var. *major*, *C. major* var. *rigida*, *C. delphiniifolia*, and *C. verticillata*) is not clear. The group apparently includes diploids and a variety of allopolyploids and autopolyploids (at various ploidies) variously derived from *C. major* var. *major* and *C. verticillata*. [= RAB, C, F, G, SE, W, Y; < *C. major* – FNA, K, S, WH, Z]

Coreopsis major Walter *var.* ***rigida*** (Nuttall) F.E.Boynton, Stiffleaf Coreopsis. Mt (GA, NC, SC, WV), Pd (GA, NC, SC), Cp (GA, NC, SC), {VA}: dry woodlands and forests; common (rare in WV). June-August. VA, WV, and KY south to w. FL, s. AL, s. MS, and se. LA. The recognition of varieties is problematic and controversial. [= C, SE, Y; >< *C. major* var. *stellata* (Nuttall) B.L. Robinson – RAB, WV; > *C. major* var. *stellata* – F, G, Y; > *C. major* var. *rigida* – F, Y; < *C. major* – FNA, K, S, WH, Z]

Coreopsis nudata Nuttall. Cp (FL, GA): seasonally flooded pineland depressions, either herbaceous-dominated or under a canopy of *Taxodium ascendens*; uncommon. E. GA (in close proximity to SC) south to ne. FL and Panhandle FL, west to e. LA. [= FNA, GW, K, S, SE, WH, Y, Z]

Coreopsis pubescens Elliott *var.* ***pubescens***, Common Hairy Coreopsis. Mt (NC, VA, WV), Pd (GA, NC), Cp (NC): forests, woodlands, and rock outcrops; common, rare in Piedmont and Coastal Plain (rare in VA and WV). July-September. The species as a whole is largely centered in the Southern Appalachians and Ozarks-Ouachitas, with scattered outlying occurrences;

var. *pubescens* has essentially the range of the species, from s. VA, s. KY, s. IL, and s. MO south to nw. FL, MS, and LA. Var. *robusta*, of the Southern Appalachians, is discussed below. [= F, GW, K, Y, Z; < *C. pubescens* – RAB, C, FNA, G, S, SE, W, WH, WV]

Coreopsis pubescens Elliott *var.* ***robusta*** Gray ex Eames, Mountain Hairy Coreopsis. Mt (GA, NC, SC, VA), Pd (NC), Cp* (NC): rocky slopes, glades, edges of rock outcrops; common (rare in Piedmont and Coastal Plain, rare in VA and WV). July-September. Var. *robusta* is a Southern Appalachian endemic, known from sw. VA, w. NC, nw. SC, n. GA, e. TN, and c. AL. [= F, GW, K, Y, Z; < *C. pubescens* – RAB, C, FNA, G, S, SE, W, WV]

Coreopsis rosea Nuttall. Cp (DE, GA, SC): upland depression ponds in the Inner Coastal Plain, drawdown zones on banks of blackwater rivers in the Outer Coastal Plain; rare. July-September. Coastal Plain of s. NS, MA, RI, NY (Long Island), NJ, DE, MD, e. SC, and e. GA, where it occurs on shores with fluctuating water levels, primarily on Coastal Plain pond shores, but also on river banks. It occurs in Horry County, SC, in the drawdown zone on the banks of the Waccamaw River; it should be sought in NC. It is immediately distinguishable from all our species by its pink to white ray flowers; another pink-rayed species, *C. nudata* Nuttall, ranges in the Coastal Plain from GA west to e. LA and has linear, terete, "juncoid" leaves. [= FNA, GW, K, S, SE, Y, Z]

Coreopsis species 1. Cp (NC): calcareously influenced acid savannas; rare. September-October. Known from a single site on the Onslow-Pender county line, where growing with *Thalictrum cooleyi*, *Allium species 1*, and *Scleria species 1*.

* ***Coreopsis tinctoria*** Nuttall *var.* ***tinctoria***, Calliopsis, Plains Coreopsis. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): roadsides and other disturbed places; uncommon (rare in VA and WV Mountains), probably introduced from farther west. Var. *tinctoria* was apparently widespread in the Great Plains, now distributed nearly throughout North America. Var. *similis* (Boynton) H.M. Parker ex E.B. Smith is endemic to s. TX and adjacent Tamaulipas and Nuevo León. [= C, K, Z; < *C. tinctoria* – FNA, G, GW, SE, W, WH, WV; > *C. tinctoria* – RAB, S; > *C. cardaminefolia* (A.P. de Candolle) Torrey & A. Gray – RAB, S, Y; > *C. tinctoria* var. *tinctoria* – Y; > *C. stenophylla* Boynton – Y]

Coreopsis tripteris Linnaeus, Tall Coreopsis. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (FL, GA, NC, VA): rich, moist woodlands and woodland borders, primarily over calcareous or mafic rocks or on nutrient-rich alluvium; common (uncommon in FL, GA, NC, SC, and VA). July-early September. MA, s. ON, and WI south to Panhandle FL and TX. [= RAB, C, FNA, G, GW, K, S, SE, W, WH, WV, Z; > *C. tripteris* var. *deamii* Standley – F; > *C. tripteris* var. *smithii* Sherff – F, Y; > *C. tripteris* var. *tripteris* – F, Y]

Coreopsis verticillata Linnaeus, Threadleaf Coreopsis. Pd (NC, SC, VA), Cp (NC, SC, VA), Mt (NC, SC, VA, WV): dry sandy, rocky, or clayey woodlands and woodland borders; common (uncommon in Coastal Plain and Mountains, rare in WV Mountains). May-July. Smith (1976) indicates that the species consists of two chromosome races, a diploid, ranging in the Piedmont and Mountains from c. SC and NC north to ne. WV, and s. MD, and an allotetraploid, limited to the Coastal Plain of ne. NC and se. VA. The finely-divided leaves are attractive and the plant is cultivated horticulturally; scattered occurrences outside the ranges indicated above are escapes from cultivation. [= RAB, C, F, FNA, G, K, S, SE, W, WV, Y, Z]

Coreopsis grandiflora Hogg ex Sweet var. *inclinata* J. Allison, Ketona Tickseed, Ketona Coreopsis, is endemic to dolomitic Ketona glades of c. AL (Allison & Stevens 2001). [< *C. grandiflora* – FNA]

Coreopsis leavenworthii Torrey & Gray. AL and FL. [= FNA, K; > *C. leavenworthii* vars. – Y] {not yet keyed; synonymy incomplete}

Coreopsis pubescens Elliott *var.* ***debilis*** (Sherff) E.B. Smith. Cp (FL): {habitat}; rare. C. TN south through AL and ne. MS to w. FL, s. AL, s. MS, and se. LA; it has very narrow leaf blades or terminal leaflets. [= GW, K, Z; < *C. pubescens* – FNA, S, SE; > *C. corninsularis* Sherff – Y; > *C. debilis* Sherff – Y] {not yet keyed}

Coreopsis pulchra F.E. Boynton, Lookout Mountain Coreopsis. Nw. GA and ne. AL. [= FNA, K, S, SE, Y, Z] {not yet keyed}

Coreopsis tinctoria Nuttall *var.* ***atkinsoniana*** (Douglas ex Lindley) H.M. Parker ex E.B. Smith. Mt (GA): roadsides; rare, apparently introduced eastward in nw. GA from a distribution in the w. North America. [= K; < *C. tinctoria* – FNA, SE; = *C. atkinsoniana* Douglas ex Lindley – Y] {not yet keyed; synonymy incomplete]

Cosmos Cavanilles 1791 (Cosmos)

A genus of about 26 species, of tropical, subtropical, and warm temperate America. References: Kiger in FNA (2006c); Cronquist (1980)=SE; Sherff & Alexander (1955)=Z.

1 Rays pink or white; ultimate leaf segments mostly ca. 1 mm wide or less ..... ***C. bipinnatus***
1 Rays orange, yellow, or red; ultimate leaf segments mostly > 2 mm wide ..... ***C. sulphureus***

* ***Cosmos bipinnatus*** Cavanilles, Common Cosmos. Cp (DE, NC, SC, VA), Pd (DE, NC, SC, VA), Mt (NC, WV): garden edges, roadsides, disturbed areas, commonly cultivated, sometimes escaped; uncommon (rare in NC, SC, VA, and WV), native of Mexico. August-November. [= RAB, C, F, FNA, G, K, S, SE, WV; > *C. bipinnatus* var. *bipinnatus* – Z]

* ***Cosmos sulphureus*** Cavanilles, Orange Cosmos. Cp (GA, NC, SC, VA), Mt (WV): garden edges, roadsides, disturbed areas; commonly cultivated, rarely escaped, native of tropical America. August-November. [= C, F, FNA, G, K, S, SE; > *C. sulphureus* var. *sulphureus* – Z]

Cota J. Gay ex Gussone 1845 (Golden Marguerite)

A genus of ca. 40 species, herbs, of Europe, sw. Asia , and Africa. References: Watson in FNA (2006a).

* ***Cota tinctoria*** (Linnaeus) J. Gay ex Gussone, Yellow Chamomile, Golden Marguerite. Cp (VA), Mt (WV): disturbed areas, roadsides; rare, native of Europe. June-September. [= FNA; = *Anthemis tinctoria* Linnaeus – C, F, G, K, WV, Z]

Cotula Linnaeus 1753 (Brassbuttons)

A genus of about 55 species, annual and perennial herbs, of the Old World, mainly southern hemisphere. References: Watson in FNA (2006a).

1 Stems hairy; leaf blades 2-3× pinnately lobed; annual ..... ***C. australis***
1 Stems glabrous; leaf blades entire or with a few teeth or lobes; perennial ..... ***C. coronopifolia***

* ***Cotula australis*** (Sieber) Hooker f. Cp (SC): waste area around wool-combing mill; rare, native of Australia and New Zealand. Reported for SC by Nesom (2004d). [= FNA, K]
* *Cotula coronopifolia* Linnaeus, Brass-buttons. MD. Native of Old World. [= FNA]

Crepis Linnaeus 1753 (Hawksbeard)

A genus of about 200 species, herbs, of the Northern Hemisphere, South America, and southern Africa. References: Bogler in FNA (2006a); Cronquist (1980)=SE. Key adapted from C and SE. [also see *Youngia*]

1 Cypselas (at least the inner in the head) with a distinct narrow beak
  2 Cypselas dimorphic, the inner beaked ..... ***C. foetida***
  2 Cypselas monomorphic, all beaked.
    3 Stems coarsely setose, the setae yellowish; bractlets subtending the phyllaries 10-14, not reflexed ..... ***[C. setosa]***
    3 Stems glabrate, hispid, or tometose, if sparsely setose the setae blackish; bractlets subtending the phyllaries 5-12, reflexed ..... ***C. vesicaria*** *ssp.* ***taraxacifolia***
1 Cypselas narrowed toward the summit, but not distinctly beaked.
  4 Stems (at least towards the base) hispid and viscid with stipitate glands; phyllaries glabrous on both the inner and outer surfaces; cypselas 4-6 mm long ..... ***C. pulchra***
  4 Stems variously pubescent, but not viscid with stipitate glands; phyllaries variously pubescent on one or both surfaces; cypselas 1.5-7 mm long.
    5 Inner surface of the inner phyllaries glabrous; outer surface stipitate-glandular and with 2 rows of black setae; cypselas 1.5-2.5 mm long ..... ***C. capillaris***
    5 Inner surface of the inner phyllaries pubescent with appressed, shining, white hairs 0.1-0.2 mm long; outer surface of phyllaries tomentose, hispidulous, or canescent, but the hairs not glandular and without setae; cypselas 3-7 mm long.
      6 Cypselas 4-7 mm long, yellowish- or reddish-brown, with 13-20 ribs; pappus 5-7 mm long; biennial ..... ***C. biennis***
      6 Cypselas 3-4 mm long, reddish- or purplish-brown, with 10 ribs; pappus 4-5 mm long; annual ..... ***C. tectorum***

* ***Crepis capillaris*** (Linnaeus) Wallroth, Smooth Hawksbeard. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE): pastures, roadsides, disturbed areas; common (rare in Piedmont and Coastal Plain), native of Eurasia. May-November. [= RAB, C, F, FNA, G, K, SE, W, WV]
* ***Crepis pulchra*** Linnaeus, Smallflower Hawksbeard. Pd (GA, NC, SC, VA), Mt (NC, SC, VA, WV), Cp (FL, NC, SC, VA): roadsides, fields, disturbed areas; common in Piedmont (rare in Mountains and Coastal Plain), native of Eurasia. Late April-July. [= RAB, C, F, FNA, G, K, SE, W, WH, WV]
* ***Crepis tectorum*** Linnaeus. Mt (NC), Cp (VA): disturbed areas; rare, perhaps not established, native of Europe. June-July. [= C, F, FNA, G, K, S]
* ***Crepis vesicaria*** Linnaeus *ssp.* ***taraxacifolia*** (Thuillier) Thellung. Mt (NC): lawns; rare, native of Mediterranean and w. Europe. Late May-July. [= RAB, C, FNA, K, SE; *? Crepis vesicaria* Linnaeus ssp. *haenseleri* (Boiss. ex A.P. de Candolle) P.D. Sell]

* ***Crepis biennis*** Linnaeus, Rough Hawkbeard. {VA} native of Europe. June-August. [= FNA, K]
* ***Crepis foetida*** Linnaeus, Stinking Hawksbeard. {NC} native of Eurasia. April-September. [= FNA, K]
* *Crepis setosa* Haller f., Bristly Hawksbeard. Reported for Polk County, TN by Chester, Wofford, & Kral (1997) and from s. PA by Rhoads & Klein (1993). [= C, FNA, K] {not yet keyed}

Croptilon Rafinesque 1837 (Scratch-daisy)

A genus of 3 species, herbs, of s. North America. References: Smith (1981); Correll & Johnston (1970); Cronquist (1980)=SE; Nesom (2000b).

Croptilon divaricatum (Nuttall) Rafinesque, Scratch-daisy. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): sandy soils of fields, roadsides, and sandhill woodlands; common (rare in VA). August-November. Se. VA south to c. peninsular FL and west to c. TX, inland to se. OK and s. AR. [= FNA, K; = *Haplopappus divaricatus* (Nuttall) A. Gray – RAB, C, F, G, SE, W; = *Isopappus divaricatus* (Nuttall) Torrey & Gray – S]

Cyclachaena Fresenius 1838

A monotypic genus, a perennial herb, of North America. References: Strother in FNA (2006c).

* ***Cyclachaena xanthiifolia*** (Nuttall) Fresenius, Big Marsh-elder. Mt (VA), Pd (VA), Cp (SC): disturbed areas, waste areas near wool-combing mills; rare, native of w. North America. August-October. See Nesom (2004d). [= FNA; = *Iva xanthifolia* Nuttall – C, F, G, K, SE, orthographic variant; = *I. xanthiifolia* Nuttall]

Diaperia Nuttall 1840 (Dwarf Cudweed)

A genus of 3 species, annual herbs, of c. United States and n. Mexico. References: Morefield in FNA (2006a); Arriagada (1998)=Z; Cronquist (1980)=SE; Anderberg (1991)=Y. Key based closely on FNA.

1 Heads ellipsoid to cylindrical, 3.5-4.5 mm high, 2-3× as high as wide; capitular leaves visible between and surpassing the heads; cypselas 0.9-1.2 mm long ..... ***D. prolifera*** *var.* ***prolifera***
1 Heads campanulate to spherical, 2-3.3 mm high, about 1× as high as wide; capitular leaves more-or-less hidden between and surpassed by the heads; cypselas 0.7-0.9 mm long.
2 Pistillate paleas individually visible through thin, silky pubescence; heads spherical, the largest 2.5-3.3 mm high ..... ***[D. verna*** *var.* ***drummondii]***
2 Pistillate paleas collectively hidden by dense woolly pubescence; heads campanulate the largest 2.0-2.5 mm long ..... ***D. verna*** *var.* ***verna***

Diaperia prolifera (Nuttall ex de Candolle) Nuttall *var.* ***prolifera***, Cotton-rose, Bighead Pygmy-cudweed. Cp (*SC): disturbed areas, waste areas around wool-combing mill; rare, introduced from farther south and west (Nesom 2004d). May-June. MO west to MT, south to LA and TX; disjunct eastwards in the Black Belt prairies of AL and MS. [= FNA; < *Filago prolifera* (Nuttall ex A.P. de Candolle) Britton – Y, Z; < *Evax prolifera* Nuttall ex A.P. de Candolle – K, SE]

* ***Diaperia verna*** (Rafinesque) Morefield *var.* ***verna***, Cotton-rose, Poverty-weed. Pd (GA), Cp (SC): disturbed areas, waste areas around wool-combing mill; rare, introduced from farther south and west (Nesom 2004d). Early March-late June. [= FNA; = *Filago verna* (Rafinesque) Rafinesque – Y, Z; *? Evax verna* Rafinesque var. *verna* – K; *? Filaginopsis nivea* Small – S; *? E. multicaulis* A.P. de Candolle – SE]

Diaperia verna (Rafinesque) Morefield var. *drummondii*, Gulf Coast Rabbit-tobacco. Dunes, beaches, disturbed sandy soils. AL west to TX. Mid February-mid May. [= FNA; = *Evax verna* Rafinesque var. *drummondii* (Torrey & A> Gray) Kartesz & Gandhi – K]

Dittrichia W. Greuter 1973

A genus of 2 species, herbs, of the Mediterranean region. References: Preston in FNA (2006a).

* ***Dittrichia graveolens*** (Linnaeus) W. Greuter. Cp (SC): waste area around wool-combing mill; rare, native of Meditteranean Europe, but quite possibly introduced into SC by wool from Australia (Nesom 2004d). [= FNA, K] {add to synonymy}

* *Dittrichia viscosa* (Linnaeus) Greuter. Cp (FL): disturbed areas, on ballast; rare, native of Mediterranean Europe. Collected as a ballast weed in Pensacola, Escambia County, FL, and elsewhere in eastern North America, in the late 1800s; it does not appear to be naturalized. [= FNA, WH; = *Cupularia viscosa* (Linnaeus) Godron & Grenier – S; = *Inula viscosa* (Linnaeus) Aiton – SE] {not keyed}

Doellingeria Nees 1832 (Flat-topped Aster)

A genus of about 7 species, herbs, of e. North America and e. Asia. This group of species has long been recognized as distinctive, sometimes given status as the genus *Doellingeria* (first by Nees in 1832), or as subgenus *Doellingeria* of *Aster*. Nesom (1993d) argues that *Doellingeria* should be separated from *Aster*, as its affinities seem to be at least as strongly to *Solidago* and its relatives, an assertion supported by molecular evidence (Noyes & Rieseberg 1999). References: Semple & Chmielewski in FNA (2006b); Nesom (1993d)=Z; Cronquist (1980)=SE; Nesom (2000b).

1 Disk flowers 4-14 per head; ray flowers 2-7 per head; leaves mostly 1.5-4× as long as wide; [of sandhill ecotones and streamhead pocosins of the Coastal Plain (primarily fall-line sandhills) from sc. NC southward] ..... ***D. sericocarpoides***
1 Disk flowers 16-40 per head; ray flowers 5-14 per head; leaves 2-6× as long as wide; [collectively widespread in our area].
2 Plants with stems solitary or several from a crown, to 11 dm tall; leaves mostly 2-4 (-5)× as long as wide ..... ***D. infirma***
2 Plants with stems scattered from creeping rhizomes (forming clonal patches), to 20 dm tall; leaves mostly 4-6× as long as wide..... ***D. umbellata***

Doellingeria infirma (Michaux) E. Greene, Appalachian Flat-topped White Aster. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, VA): woodland borders, dry or dry-mesic woodlands, glades; common (rare in DE and FL). Late June-September. MA west to KY, south to SC, GA, Panhandle FL (Gadsden County), AL, and wc. TN. [= FNA, K, WH, Z; = *Aster infirmus* Michaux – RAB, C, G, SE, W, WH; > *Doellingeria infirma* – S; >< *Doellingeria humilis* (Willdenow) Britton – S, in part]

Doellingeria sericocarpoides Small, Pocosin Flat-topped Aster. Cp (FL, GA, NC, SC): sandhill ecotones and streamhead pocosins; uncommon. Late July-October. Sc. NC south to ne. FL and Panhandle FL, west to AL; also in AR, OK, and TX. [= FNA, K, S, WH, Z; = *Aster sericocarpoides* (Small) K. Schumann – SE; = *A. umbellatus* P. Miller var. *brevisquamus* Fernald – RAB, misapplied; = *A. umbellatus* var. *latifolius* A. Gray – GW; >< *Doellingeria humilis* (Willdenow) Britton – S, in part, misapplied]

Doellingeria umbellata (P. Miller) Nees, Tall Flat-topped White Aster. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, VA), Cp (DE, VA): wet meadows, pastures, bogs, marshes, stream floodplains, roadbanks, to at least 1900 m; common (uncommon in DE, rare in Coastal Plain south of DE). August-September. NL (Newfoundland) west to MN, south to e. VA, w. NC, nw. SC (P. McMillan pers.comm. 2002), n. GA, ne. AL, TN, and KY. [= S, Z; = *Aster umbellatus* P. Miller – C, G, SE, W, WH; = *A. umbellatus* var. *umbellatus* – RAB, GW; > *Doellingeria umbellata* var. *umbellata* – FNA, K]

Dracopis Cassini 1825 (Coneflower)

A monotypic genus, an annual herb, of sc. and se. North America, perhaps better included in *Rudbeckia*. References: Urbatsch & Cox in FNA (2006c).

Dracopis amplexicaulis (Vahl) Cassini. Cp (FL, SC*), Pd* (GA*): prairies, calcareous bttomlands, dry open areas, disturbed areas, waste areas near wool-combing mill; rare, introduced at least in part in our area. Native to prairie-like areas and calcareous bottomlands from GA (?) and AL west to KS and TX; reported for nc. GA (Jones & Coile 1988) and introduced in SC (Nesom 2004d). [= K, SE, WH; = *Rudbeckia amplexicaulis* Vahl – F, FNA]

Dyssodia Cavanilles 1802

A genus of 4 species, herbs, of North America south to Central America. References: Strother in FNA (2006c).

* ***Dyssodia papposa*** (Ventenat) A.S. Hitchcock, Dogweed. Cp (SC), Mt (WV): waste areas near wool-combing mill, other disturbed areas; rare, native of c. and sw. North America. Reported for SC by Nesom (2004d). [= FNA, K, SE; = *Boebera papposa* (Ventenat) Rydberg – S]

Echinacea Moench 1794 (Purple Coneflower)

A genus of 4-9 species, herbs, endemic to e. and c. North America. There has been considerable medicinal use of extracts from many of the species, and collection of plants from the wild to meet the demand of the herbal trade has extirpated many populations, particularly in c. United States. Foster (1991) presents a lengthy and detailed discussion of medicinal uses of *Echinacea*, along with considerable information on the biology, conservation needs, taxonomy, and nomenclatural history of the genus. Binns, Baum, & Arnason (2002) provide no rationale for their approach of recognizing the same number of taxa as McGregor, but treating them as 4 species and 10 varieties; the entities seem to be distinct at the specific level. References: Urbatsch, Neubig, and Cox in FNA (2006c); Baskin, Snyder, & Baskin (1993)=Z; Foster (1991)=Y; Cronquist (1980)=SE; Binns, Baum, and Arnason (2002)=X; McKeown (1999); Gaddy (1991); McGregor (1968).

1 Leaves lanceolate to ovate, the larger > 5 cm wide, the stem leaves well-developed, though smaller than the basal.
  2 Leaves glabrous on both sides, or scabrous above; chaffy bracts (pales) ca. 9 mm long, the awns about a fourth as long as the body of the pales and with incurved tips; rays 3.5-8 cm long, strongly drooping ..... ***E. laevigata***
  2 Leaves pubescent or scabrous on both sides; chaffy bracts (pales) 10-13 mm long, the awns about half as long as the body of the pales and with straight tips; rays 2.5-5.5 cm long, horizontal to slightly drooping ..... ***E. purpurea***
1 Leaves lanceolate to linear, the larger < 5 cm wide, stem leaves few and poorly developed, the basal leaves predominant.
  3 Rays curved upward, medium pink, 2.5-3.2 cm long; [endemic to calcareous glades in c. TN] ..... ***[E. tennesseensis]***
  3 Rays horizontal to drooping, pale pink, 4-9 cm long; [widely scattered in our area].
    4 Fresh pollen white ..... ***E. pallida***
    4 Fresh pollen pale to bright yellow ..... ***E. simulata***

Echinacea laevigata (C.L. Boynton & Beadle) S.F. Blake, Smooth Purple Coneflower. Pd (NC, VA), Mt (GA, SC, VA), Cp (SC): open woodlands and glades over mafic or calcareous rocks, such as diabase, limestone, and dolostone, rarely in oak-pine savannas of the upper Coastal Plain over circumneutral clay sediments; rare. Late May-July. The species is an eastern sibling of *E. purpurea*. In NC, this attractive, medicinal plant is now limited to a few populations in Durham, Granville, and Rockingham counties. Extensive populations occur over Elbrook Dolomite in Montgomery, VA. Populations of this species in sandy soils of the Coastal Plain of SC have been variously interpreted as native or introduced (Nelson & Kelly 1997). [= RAB, C, F, FNA, K, S, SE, W, X, Y; = *E. purpurea* var. *laevigata* (C.L. Boynton & Beadle) Cronquist – G]

*? ***Echinacea pallida*** (Nuttall) Nuttall, Pale Purple Coneflower. Pd (GA, NC?, VA), Mt (VA), Cp (GA): roadsides; rare, perhaps introduced in part from c. US (GA Special Concern, NC Watch List). June-July. ON west to MI, WI, and NE, south to IN, LA, and TX; disjunct eastwards in TN, AL, GA, SC, NC, and VA, where probably but uncertainly native). Some at least of the eastern populations considered to be *E. pallida* are actually the closely related *E. simulata*; additional work is needed to disentangle the relative distributions of these two species in our area. [= RAB, FNA, K, Y, Z; < *E. pallida* var. *pallida* – C, SE; < *E. pallida* – F, G, W; = *E. pallida* var. *pallida* – X]

Echinacea purpurea (Linnaeus) Moench, Eastern Purple Coneflower. Mt (NC, VA*, WV*), Pd (NC, VA*), Cp (FL): open woodlands, roadsides, some of the occurrences persistent or spread from cultivation; rare. OH, WI, and IA south to FL and TX; introduced more broadly as in ne. United States and ON, the exact limits of the native distribution unclear. [= RAB, C, F, FNA, K, SE, W, WH, X, Y; = *E. purpurea* var. *purpurea* – G]

Echinacea simulata R.L. McGregor, Prairie Purple Coneflower. Mt (GA!, VA*?), Pd (NC!, VA*?), Cp (NC!): prairies, roadsides; rare. June-July. IN, IL, and MO south to KY and TN; some of the more eastern disjunct populations previously considered to be *E. pallida* are actually *E. simulata*; additional work is needed to disentangle the relative distributions of these two species in our area. GA native populations (Floyd Co.) are *E. simulata*. [= FNA, K, Y, Z; < *E. pallida* var. *pallida* – C, SE; < *E. pallida* – F, G, W; = *E. pallida* (Nuttall) Nuttall var. *simulata* (McGregor) Binns, B.R. Baum, & Arnason – X]

Echinacea tennesseensis (Beadle) Small, Tennessee Purple Coneflower. Ip (TN): calcareous glades; rare. Endemic to the Nashville Basin of c. TN (Davidson, Rutherford, & Wilson counties) (Chester, Wofford, & Kral 1997). [= FNA, K, S, Y, Z; < *E. pallida* (Nuttall) Nuttall var. *angustifolia* (A.P. de Candolle) Cronquist – SE; = *E. pallida* (Nuttall) Nuttall var. *tenneseensis* (Beadle) Binns, B.R. Baum, & Arnason – X; = *E. angustifolia* A.P. de Candolle var. *tennesseensis* (Beadle) S.F. Blake]

Echinops Linnaeus (Globe-thistle)

A genus of about 120 species, herbs, of temperate and subtropical Europe, Asia, and Africa. References: Keil in FNA (2006a).

* ***Echinops sphaerocephalus*** Linnaeus, Globe-thistle. Mt (VA, WV): roadsides, edges of railroad tracks, disturbed areas; rare, native of Europe and w. Asia. July-October. Reported as introduced as far south as se. PA (Rhoads & Klein 1993) and VA (Fernald 1950; Keil in FNA 2006a). Its occurrence in VA has recently been verified (C.N. Horn, pers. comm. 2006). [= C, F, FNA, G, K, WV]

Eclipta Linnaeus 1753

A genus of 4 species, herbs, of temperate, subtropical, and tropical regions. References: Strother in FNA (2006c); Cronquist (1980)=SE.

Eclipta prostrata (Linnaeus) Linnaeus, Yerba-de-tajo. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): moist or wet disturbed areas, ditches, shores, disturbed bottomlands; common (uncommon in Mountains). June-November. MA west to WI, south to s. FL and TX, and southward into the tropics. [= C, FNA, K, WH; = *E. alba* (Linnaeus) Hasskarl – RAB, F, G, GW, SE, W, WV; = *Verbesina alba* Linnaeus – S]

Elephantopus Linnaeus 1753 (Elephant's-foot)

A genus of about 12-30 species, of tropical, subtropical, and warm temperate regions. References: Strother in FNA (2006a); Jones (1982)=Z; Cronquist (1980)=SE.

Identification notes: The acaulescent species are easily and often confused with *Vernonia acaulis*, especially when sterile. *Vernonia* has leaves scabrous above and sparsely pilose to glabrate beneath; *Elephantopus* has leaves sparely pilose above, densely pilose or tomentose below. *Vernonia* leaves tend to have a more acute apex, and the veins above are more strikingly differentiated in their color (white or pink) from the adjacent leaf tissue. When in flower, the presence of subtending foliose bracts below the compound glomerule of heads in *Elephantopus* (versus the absence of foliose bracts below the simple head in *Vernonia*) is diagnostic.

1 Leaves cauline, the stem with well-developed leaves over 10 cm long ..... ***E. carolinianus***
1 Leaves basal, the stem scapose or with a few leaves much smaller than the basal, usually < 8 cm long.
  2 Longest phyllaries 10-13 mm long; pappus 6-8 mm long; basal leaves 5.5-10.5 cm wide, usually at least some on a plant > 7 cm wide; leaves pubescent on the midrib below with spreading or reflexed hairs; [of the Coastal Plain, Piedmont, and rarely the Mountains]..... ..... ***E. tomentosus***
  2 Longest phyllaries 6-9 mm long; pappus 3-4.5 mm long; basal leaves 1.5-7.5 cm wide, rarely any on a plant > 7 cm wide; leaves pubescent on the midrib below with appressed or spreading hairs; [of the Coastal Plain, and rarely the lower Piedmont].
    3 Phyllaries densely villous with white hairs (0.3-) 0.5-1.0 mm long, the punctate glands obscured; cypselas 3-3.5 mm long; [of e. SC southward] ..... ***E. elatus***
    3 Phyllaries punctate-glandular, also sparsely pubescent with hairs 0.05-0.3 (-0.5) mm long; cypselas 2.5-3.0 mm long; [widespread in our area]..... ***E. nudatus***

Elephantopus carolinianus Räuschel, Leafy Elephant's-foot. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): mesic to dry forests and woodlands; common (uncommon in VA Mountains, rare in DE Coastal Plain). August-November. NJ west to KS, south to s. FL and e. TX; West Indies. [= RAB, C, F, FNA, G, GW, K, S, SE, WH, WV, Z]

Elephantopus elatus Bertoloni, Southern Elephant's-foot. Cp (FL, GA, SC): pine barrens; common (rare in GA and SC). Late August-September. E. SC south to s. FL, west to se. LA, on the Coastal Plain. [= RAB, FNA, K, S, SE, WH, Z]

Elephantopus nudatus A. Gray, Coastal Plain Elephant's-foot. Cp (DE, FL, GA, NC, SC, VA), Pd (NC, SC, VA): woodlands and woodland borders, usually fairly dry; common (rare in Piedmont, rare in DE). Late July-September. DE south to n. peninsular FL, west to e. TX and AR, primarily on the Coastal Plain; south into n. South America. [= RAB, C, F, FNA, G, GW, K, S, SE, WH, Z]

Elephantopus tomentosus Linnaeus, Common Elephant's-foot. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): woodlands and woodland borders, usually fairly dry; common (rare in Mountains). August-November. MD south to Panhandle FL, west to e. TX, north in the interior to w. NC, KY, and south to Chiapas, Mexico. [= RAB, C, F, FNA, G, K, S, SE, WH, Z]

Emilia Cassini 1817 (Tasselflower)

A genus of 50-100 species, of the Old World. References: Barkley in FNA (2006b); Cronquist (1980)=SE.

1 Leaves well-distributed along the stem, with at most few and shallow lobes; corollas salmon or red-orange; involucre 1-2 (-3)× as high as wide ..... ***E. fosbergii***
1 Leaves mostly on the lower portion of the stem, the larger lyrate-pinnatifid; corollas lilac; involucre 3-4× as high as wide..... ***E. sonchifolia*** *var.* ***sonchifolia***

* ***Emilia fosbergii*** Nicolson, Salmon Tasselflower. Cp (FL, GA): disturbed areas; rare, native of Old World tropics. Scattered as an introduction in FL, including the Panhandle; reported for Lowndes County, GA (Carter, Baker, & Morris 2009). [= FNA, K, SE, WH]

* ***Emilia sonchifolia*** (Linnaeus) A.P. de Candolle *var.* ***sonchifolia***, Lilac Tasselflower. Cp (FL, SC), Pd (GA): disturbed areas, native of the Old World tropics. The occurrence of this species in SC was first reported by Nelson & Kelly (1997); it is unclear how well established *Emilia* is in the northern part of our area. See Anderson (2007) for FL Panhandle record. [= FNA, K; < *E. sonchifolia* – S, SE, WH]

Erechtites Rafinesque 1817 (Fireweed)

A genus of about 12-15 species, American and Australian. Barkley in FNA (2006a) points out that the genus should be treated as masculine gender. References: Barkley in FNA (2006b); Cronquist (1980)=SE. Key based in part on C and FNA.

1 Denuded receptacle 5-8 mm in diameter; achenes 2-3 mm long, with 10-12 ribs ..... ***E. hieraciifolius***
1 Denuded receptacle 9-12 mm in diameter; achenes 4-5 mm long, with 16-20 ribs ..... ***[E. megalocarpus]***

Erechtites hieraciifolius (Linnaeus) Rafinesque ex de Candolle, Fireweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): in disturbed soil in nearly all habitats except the extremely xeric, present in most parts of the modern (beat-up) landscape at least as seedlings, liable to turn up at the smallest disturbance (such as small tree-fall tip-up mounds or campfires, even in large natural areas), most abundant in areas extensively disturbed or scarified by timber-harvest, bulldozing, or severe fire; common. Late July-November. NL (Newfoundland) west to SK, south to s. FL and e. TX; West Indies; tropical America. Ecologically filling something of the same role in the south as the other (unrelated) "fireweed" in the north, *Epilobium angustifolium*. The only other species in our area as adept at appearing (seemingly from nowhere) at small soil disturbances in forests are *Phytolacca americana* and the moss *Atrichum angustatum* (Brid.) BSG. [= *E. hieracifolia* var. *hieracifolia* – C, G, K, SE; < *E. hieracifolia* – RAB, GW, S, W, WV; > *E. hieracifolia* var. *hieracifolia* – F; > *E. hieracifolia* var. *intermedia* Fernald – F; > *E. hieracifolia* var. *praealta* (Rafinesque) Fernald – F; = *E. hieraciifolius* var. *hieraciifolius* – FNA; < *E. hieraciifolius* – WH]

Erechtites megalocarpus (Fernald) Cronquist. Coastal marshes (brackish or salty) from MA to NJ and should be sought in our area, especially in VA. As the differences between this and *E. hieraciifolius* consist of multiple, non-overlapping morphological characters, the presumption should be to treat the two as specifically distinct. [= *E. hieracifolia* var. *megacarpa* – C, G, K; = *E. megalocarpa* Fernald – F, orthographic variant; = *E. hieraciifolius* var. *megalocarpus* – FNA]

Erigeron Linnaeus 1753 (Daisy Fleabane)

A genus of about 150 species, nearly cosmopolitan. References: Nesom in FNA (2006b); Cronquist (1980)=SE; Allison & Stevens (2001)=Z. Key adapted from those references. [also see *Conyza*]

1 Stem leaves sessile; pappus of the pistillate (ray) flowers consisting only of a few short, slender scales, < 1 mm long (visible at 20× magnification); annual or perennial (rarely biennial).
2 Stem leaves many, mostly toothed, the larger > 1cm wide; pubescence of the mid-stem long and spreading.....***E. annuus***
2 Stem leaves few, mostly entire, the larger usually < 1 cm wide; pubescence of the mid-stem usually short and appressed.
3 Phyllary hairs flattened, 0.5-1.2 mm long; stem hairs appressed to spreading, 0.5-1.0 mm long .....***[E. strigosus** var. **septentrionalis]***
3 Phyllary hairs terete, mostly 0.1-0.5 mm long; stem hairs appressed to spreading, 0.1-0.4 (-0.8) mm long.
4 Plants annual (rarely biennial), lacking rhizomes; [of various, often weedy, habitats]..... ***E. strigosus** var**. strigosus***
4 Plants perennial, rhizomatous; [plants of shallow soil over calcareous rock].
5 Basal leaves oblanceolate to narrowly obovate or spatulate, (3.2-) 3.8-15 (-21) mm wide; cauline leaves glabrous, except along the midvein and the cilate margins; [of limestone glades and barrens of c. TN, nw. GA, and n. AL]..... ***E. strigosus** var. **calcicola***
5 Basal leaves linear-oblanceolate, 1-3.5 (-6) mm wide; cauline leaves sparsely to moderately strigillose; [of dolostone glades of c. AL (Bibb Co.)] .....***[E. strigosus** var. **dolomiticola]***
1 Stem leaves relatively large and clasping, or small and sessile (in *E. vernus*); pappus of the pistillate (ray) flowers of elongate capillary bristles (sometimes also with scales); plants biennial or perennial.
6 Plants trailing or ascending, rooting at the nodes, and with stolons .....***[E. procumbens]***
6 Plants erect (sometimes the shoots curved at the base but ultimately vertical).
7 Stem leaves not clasping; basal leaves fleshy; rays 25-40, white, 0.5-1.3 mm wide; [of moist to wet habitats of the Coastal Plain] ....***E. vernus***
7 Stem leaves clasping; basal leaves herbaceous; rays 50-400, pink, blue, purplish, or white, either 0.3-0.5 mm wide (in *E. philadelphicus* var. *philadelphicus, E. quercifolius,* and *E. tenuis*) or 0.8-1.2 mm wide (in *E. pulchellus* var. *pulchellus*); [of more general distribution and habitat].
8 Disk corollas 4-6 mm long; rays 50-100, 0.8-1.2 mm wide.
9 Stems and leaves glabrous .....***E. pulchellus** var. **brauniae***
9 Stems and leaves densely pubescent with long hairs.....***E. pulchellus** var**. pulchellus***
8 Disk corollas 2.0-3.2 mm long; rays 60-400, 0.3-0.5 mm wide.
10 Involucre 4-6 mm high; rays 150-400, white to deep pink, 5-10 mm long.....***E. philadelphicus** var**. philadelphicus***
10 Involucre 2.5-4 mm high; rays 60-250, blue-lavender (rarely white to pink), 2.5-5 (-6) mm long.
11 Pappus simple; stem spreading pubescent throughout (or appressed pubescent in the upper third only); rays 100-250 ....***E. quercifolius***
11 Pappus double, with short outer setae in addition to the long slender bristles; stem appressed pubescent in at least the upper half; rays 60-120 ..... ***E. tenuis***

Erigeron annuus (Linnaeus) Persoon, Annual Fleabane. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, SC, VA): roadsides, disturbed areas; common (uncommon in FL, rare in Coastal Plain of SC). May-October. NL (Newfoundland) west to MB, south to Panhandle FL and TX (and beyond). [= RAB, C, F, FNA, S, SE, W, WH, WV; > *E. annuus* var. *annuus* – G]

Erigeron philadelphicus Linnaeus *var.* ***philadelphicus***, Philadelphia-daisy. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): roadsides, meadows, disturbed areas; common (uncommon in FL, NC, SC, and VA Coastal Plain). April-August. NL (Newfoundland) west to BC, south to n. FL and TX. Var. *scaturicola* Fernald, of bluffs along the James River in VA, seems to be merely an extreme form. Other varieties [var. *glaber* Henry and var. *provancheri* (Victorin & Rouss.) Boivin] may have more merit. [= FNA, K; < *E. philadelphicus* – RAB, C, G, GW, S, SE, W, WH, WV; > *E. philadelphicus* var. *philadelphicus* – F; > *E. philadelphicus* var. *scaturicola* Fernald – F]

Erigeron pulchellus Michaux *var.* ***brauniae*** Fernald. Mt (WV): sandy woodlands and forests, riverbanks; uncommon. April-June. MD, WV, and s. OH south to KY. [= C, F, FNA, G, K, WV]

Erigeron pulchellus Michaux *var.* ***pulchellus***, Robin's-plantain. Mt (DE, GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist slopes, coves, limestone bluffs, trail margins, roadbanks; common (uncommon in Coastal Plain, rare in FL). April-early June. ME west to MN, south to Panhandle FL (Jackson County), GA, and TX. In addition to the widespread var. *pulchellus*, and the Alleghenian var. *brauniae*, *E. pulchellus* has an additional local variety, var. *tolsteadii* Cronquist, of se. MN. [= C, F, FNA, G, K, SE, WV; < *E. pulchellus* – RAB, GW, S, W, WH]

Erigeron quercifolius Lamarck, Oak-leaved Fleabane. Cp (FL, GA, NC, SC, VA): sandy roadsides, disturbed areas; common, rare in VA. April-June. Se. VA south to s. FL, west to TX, north in the interior to TN; Bahamas. [= RAB, C, F, FNA, G, K, S, SE, WH]

Erigeron strigosus Muhlenberg ex Willdenow *var.* ***calcicola*** J. Allison, Cedar Glade Daisy Fleabane. Mt (GA): limestone glades; rare. (April-) May-October. Central basin of TN (Allison & Stevens 2001), nw. GA (GANHP) and n. AL. [= FNA, Z]

Erigeron strigosus Muhlenberg ex Willdenow *var.* ***strigosus***, Common Rough Fleabane. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): roadsides, disturbed areas; open woodlands; common. Late April-October. NS west to WA, south to c. peninsular FL and TX. [= FNA; < *E. strigosus* – RAB, W, WH, WV; > *E. strigosus* var. *strigosus* – C, F, G, K, SE, Z; > *E. strigosus* var. *beyrichii* – C, F, G, K, SE, Z; < *E. ramosus* (Walter) Britton, Sterns, & Poggenburg – S]

Erigeron tenuis Torrey & A. Gray, Midwestern Fleabane. Cp (FL): disturbed areas; rare. FL Panhandle (Okaloosa County) and AL west to KS, OK, and TX. Reported for w. NC (Nesom 1980); but later discounted (Nesom in FNA 2006b). Mid March-May (sporadically later). [= FNA, K, SE, WH]

Erigeron vernus (Linnaeus) Torrey & A. Gray, Whitetop Fleabane. Cp (FL, GA, NC, SC, VA): wet savannas, seepages, interdunal swales; common (rare in VA). Late March-June. E. VA south to s. FL, west to LA. [= RAB, C, F, FNA, G, GW, K, S, SE, WH]

Erigeron procumbens (Houstoun ex Miller) Nesom, Corpus Christi Fleabane. Moist to dry coastal areas, including marsh edges. S. MS (?), LA, TX, Tamaulipas, Veracruz. [= FNA, K; = *E. myrionactis* Small –S, SE]

Erigeron strigosus Muhlenberg ex Willdenow var. *dolomiticola* J. Allison, Cahaba Daisy Fleabane. Mt (AL): calcareous Ketona glades; rare. Endemic to Bibb County, AL (Allison & Stevens 2001). Late May-October. [= FNA, Z]

Erigeron strigosus Muhlenberg ex Willdenow var. *septentrionalis* (Fernald & Wiegand) Fernald. Scattered in n. North America, south to NY, TN (FNA), AR, OK, WY, CA. [= C, FNA, F, G, K]

Eupatorium Linnaeus 1753 (Eupatorium, Thoroughwort, Dog-fennel)

A genus of about 40 species, herbs, of e. North America and Eurasia (after the exclusion of *Ageratina, Chromolaena, Conoclinium, Eutrochium, Fleischmannia*, and other genera). I have differed considerably from Cronquist's treatments, as for instance in SE, regarding the rank at which to recognize taxonomic entities in *Eupatorium*. In the Southeastern United States, *Eupatorium* is a reticulately evolved complex, including diploids, triploids, and tetraploids; derivatives of hybridization produce sterile pollen but in some cases reproduce vigorously via agamospermous production of seeds. In some cases, these entities form separate populations from their presumed parental species, with distinctive ranges and habitats and more-or-less distinctive morphology. Cronquist treats morphologically highly distinctive entities, such as *E. pinnatifidum*, as full species, while stating that they are "not long-persistent." He treats morphologically more subtle entities as varieties of one of the two presumed parental species, such as *E. album* var. *vaseyi* ("very probably derived by hybridization of *E. album* var. *album* and *E. sessilifolium*"). Other entities, difficult to distinguish morphologically from another species, he does not recognize, as for instance *E. saltuense*, included as a synonym under *E. altissimum* ("*E. saltuense* may reflect hybridization between *E. altissimum* and some other species such as *E. album*, or possibly between *E. hyssopifolium* and *E. album*"].

A species concept that stresses ecological, biological, and distributional independence seems preferable. When plants of a putative hybrid occur in substantial populations, reproducing independently of one or both alleged parents, and in geographically and/or ecologically distinctive situations they should be treated as a separate species. Only field observations and studies can provide the necessary information. I have seen no evidence that *E. ×pinnatifidum* (though morphologically strikingly distinctive) occurs independent of its parents; thus I treat it as a hybrid (see below). *E. vaseyi* regularly occurs without one or both of its presumed parents, forms fertile achenes, occurs in large populations, and (in NC) is distributionally more limited than its presumed parents (Sullivan 1978). Biologically, it is best treated as an allopolyploid species; its treatment as a variety leads to conceptual and nomenclatural problems (reflected in the synonymy above): of which species should it be a variety? Sullivan (1978) considered that *E. saltuense* was derived from hybridization of *E. album* and *E. lecheifolium* (= *hyssopifolium*), but found it to be a triploid, growing in association with triploid (and pollen-sterile) *E. lecheifolium*. She concluded that "the origin of *E. saltuense* through hybridization could have occurred in the ancient past when diploids of *E. lecheifolium* were more prevalent." In addition to its postulated "ancient origin," *E. saltuense* appears to occur in NC in habitats different from any of its variously alleged parents; for these reasons it seems best to treat *E. saltuense* as an allopolyploid species as well. Species in our flora believed to be of allopolyploid derivation include *E. anomalum*, *E. cordigerum*, *E. godfreyanum*, *E. linearifolium*, *E. mohrii*, *E. pubescens*, *E. saltuense*, *E. torreyanum*, and *E. vaseyi*. References: Siripun & Schilling in FNA (2006c); Cronquist (1980)=SE; Godfrey (1949). The key adapted from those references. (also see *Ageratina, Chromolaena, Conoclinium, Eutrochium, Fleischmannia*)

1 Leaves generally in whorls of 3-7 (very rarely all of them opposite), most of them > 2 cm wide; involucre 6.5-9 mm high, the flowers pale pink to purple.....*[see **Eutrochium**]*
1 Leaves generally opposite, sometimes in whorls of 3-4 (if so the leaves usually < 2 cm wide), or some of them alternate; involucre mostly 2-6 mm high, the flowers mostly white, rarely blue (rarely the involucre 6-11 mm high, then the flowers white).
2 Leaves pinnate or pinnatifid, divided into linear or capillary segments, 0-5 mm wide..... **Key A**
2 Leaves simple or palmately 3 (-5)-lobed, the leaves or lobes generally over 5 mm wide.
3 Leaves palmately 3 (-5)-lobed ..... ***E. cannabinum***
3 Leaves simple.
4 Leaves long-petiolate, the petioles of larger leaves > 10 mm long.
5 Leaf blades deltate or rhombic, held vertically; [of FL]..... ***E. mikanioides***
5 Leaf blades lanceolate, held horizontally; [widespread] ..... ***E. serotinum***
4 Leaves sessile or short-petiolate, the petioles < 9 mm long.
6 Florets (3-) 5 (-7) per head..... **Key B**
6 Florets 7-14 per head.
7 Leaf bases fused..... ***E. perfoliatum***
7 Leaf bases tapering to a cuneate base..... ***E. resinosum***

Key A – leaves pinnatifid or pinnate into linear or capillary segments (Dog-fennels)

1 Stem glabrous throughout, or short-pubescent in the lower portion only; inflorescence paniculate, the panicle branches recurved, the heads secundly arranged..... ***E. leptophyllum***
1 Stem pubescent throughout, generally conspicuously so; inflorescence paniculate, the branches not recurved, the heads not secund.
2 Leaves bright green, glabrous, sparsely glandular-punctate, segments of the **basal** leaves 1-1.5 mm wide, segments of the **upper** leaves 0.2-0.5 mm wide ..... ***E. capillifolium***
2 Leaves grayish-green, pubescent, densely glandular-punctate, segments of the **basal** leaves 2-5 mm wide, segments of the **upper** leaves 1-2.5 mm wide..... ***E. compositifolium***

Key B – leaves simple, flowers usually 5 per head

1 Phyllaries acuminate to attenuate.
2 Larger leaves 0.2-1.3 cm wide; stems puberulent; involucre 3.5-7 mm high.
3 Rhizome absent to < 2 cm long; leaves usually reflexed-spreading to spreading-ascending, the larger (5-) 6-13 mm wide; leaf margins and surfaces moderately to densely strigose; involucre 5-8 mm long; pappus (3.3-) 3.9-5.0 mm long; corolla:pappus length ratio 0.63-0.89; mature achene 2.2-3.5 mm long ..... ***E. leucolepis***
3 Rhizome 2-20 cm long; leaves usually ascending to erect-recurved, the larger 2-4.5 mm wide; leaf margins and adaxial surface glabrous to sparsely strigose; involucre 3.5-5.5 mm long; pappus 2.7-4.1 mm long; corolla:pappus length ratio 0.83-1.00; mature achene 1.6-2.3 mm long ..... ***E. paludicola***
2 Larger leaves 1.5-3 (-4) cm wide; stems villous to puberulent; involucre 8-11 mm high.
4 Leaves with few or no resin-glands; phyllaries glabrous, lacking resin-glands; [of the Coastal Plain of GA, Panhandle FL, AL, and MS] ..... ***E. petaloideum***
4 Leaves with resin-glands; phyllaries puberulent to villous (at least towards the base and on the midrib); [collectively widespread]
5 Leaves 3-nerved from the base; leaves 4-7 cm long, 10-20 mm wide; [of DC, DE, NJ, and NY] ..... ***[E. album*** *var.* ***subvenosum]***
5 Leaves 3-nerved from above the base; leaves 5-11 cm long, 10-40 mm wide; [collectively widespread].
6 Leaves pubescent, the pubescence short to long; phyllaries generally attenuate (rarely acuminate); leaves (2.5-) 3-6× as long as wide; leaf apices obtuse; teeth obtuse or rounded ..... ***E. album*** *var.* ***album***
6 Leaves sparsely pubescent to nearly glabrous, the pubescence generally short; phyllaries generally acuminate, sometimes abruptly so; leaves 2-4× as long as wide; leaf apices acute to acuminate; teeth sharp ..... ***E. vaseyi***
1 Phyllaries acute to obtuse.
7 Leaf bases broadly cuneate, truncate, or subcordate, the leaves generally distinctly broadest near the base.
8 Leaves (2.5-) 3-6 (-7)× as long as wide; plants glabrous below the inflorescence.
9 Leaves subcoriaceous, the larger ones 8-18 cm long, 3-6 cm wide, averaging about 3× as long as wide ..... ***E. sessilifolium*** *var.* ***brittonianum***
9 Leaves membranaceous, the larger ones 9-18 cm long, 2-4 cm wide, averaging about 5× as long as wide ..... ***E. sessilifolium*** *var.* ***sessilifolium***
8 Leaves 1-3 (-3.5)× as long as wide; plants pubescent below the inflorescence.
10 Leaves pinnately veined ..... ***E. godfreyanum***
10 Leaves 3-veined from the base or just above it.
11 Leaves averaging (1.5) 2-2.5× as long as wide, usually with a purple border; upper leaves and main inflorescence branches often alternate ..... ***E. pilosum***
11 Leaves averaging 1-2× as long as wide, usually lacking a purple border; upper leaves and main inflorescence branches usually all opposite.
12 Leaf base broadly rounded, cordate-clasping; leaves very densely pubescent, the pubescence often harsh; larger leaves usually 4-10 cm long; principal pair of lateral veins diverging from the midrib 2-10 mm above the base of the leaf; toothing of leaf often irregular and coarse ..... ***E. cordigerum***
12 Leaf base cuneate, broadly cuneate, rounded, or cordate (but not clasping); leaves densely to sparsely pubescent; larger leaves usually 2-6 cm long; principal pair of lateral veins diverging at the base or 2-10 mm above the base of the leaf; toothing of leaf regular and relatively fine.
13 Leaves mostly 1-1.5 (-1.7)× as long as wide, tending to be obtuse (the apex usually 90º or more), the teeth generally rounded (the 2 sides of each tooth usually distinctly convex-curved, the end of the tooth therefore rounded), the principal pair of lateral veins diverging directly from the base of the midrib ..... ***E. rotundifolium***
13 Leaves mostly (1.2-) 1.5-2× as long as wide, tending to be acute (the apex usually 90º or less), the teeth generally rather sharp (the 2 sides of each tooth straight to gently curved, the end of the tooth therefore triangular), the principal pair of lateral veins diverging 2-10 mm above the base of the midrib.
14 Leaves broadly cuneate to broadly rounded, thin in texture, the pubescence rather soft and long (and also often sparse), the leaf blade not twisted at base, not borne in a vertical plane, up to 10 cm long and 6.5 cm wide ..... ***E. pubescens***
14 Leaves distinctly cuneate, firm in texture, the pubescence rather harsh and short, the leaf blade twisted at the base, thus borne in a vertical plane, up to 5.5 cm long and 3 cm wide ..... ***E. scabridum***
7 Leaf bases narrowly cuneate, the leaves generally broadest near the middle or toward the tip.
15 Plants from conspicuously tuberous-thickened (ca. 1 cm in diameter) horizontal rhizomes; leaves deflexed, spreading, or ascending.
16 Leaves 15-30 mm wide, spreading or ascending ..... ***E. anomalum***
16 Leaves 2-12 mm wide, deflexed to erect-ascending.
17 Leaves erect-ascending, 2-5.5 mm wide; pappus 4.0-5.4 mm long ..... ***E. mohrii × paludicola***
17 Leaves deflexed to spreading, 3-12 mm wide; pappus 2.5-3 mm long.
18 Stems 3-6 (-7) dm tall, often erectly branching from near the base; involucres 3-4 mm high, the bracts with rounded apices ..... ***E. recurvans***
18 Stems (6-) 10-15 dm tall, not branching near the base; involucres 5-7 mm high, at least some of the inner bracts with acute apices ..... ***E. mohrii***
15 Plants from crowns or caudices; leaves usually spreading or ascending (not deflexed).
19 Plants generally with numerous branches from at or near the base, the axillary shoots of the lower internodes elongating; leaves 2-5 cm long, oblanceolate.
20 Leaves broadly oblanceolate, 5-15 mm wide, crenate or serrate in the upper half ..... ***E. glaucescens***
20 Leaves narrowly oblanceolate, 3-8 mm wide, entire or remotely serrate apically ..... ***E. linearifolium***
19 Plants generally simple below the middle, the axillary shoots of the lower nodes not elongating (except in response to injury of the main stem); leaves 3-12 cm long, lanceolate or linear.
21 Leaves mostly 6-40× as long as wide, the larger ones usually < 10 mm wide, ranging from 1-12 mm wide, whorled or opposite (rarely alternate above).

22 Leaves linear to narrowly lanceolate, the principal leaves 2-7 cm long, 1-5 mm wide, 10-40× as long as wide, entire to obscurely toothed, the leaves mostly in whorls of 3 or 4 ..... ***E. hyssopifolium***
22 Leaves lanceolate, the principal leaves 5-12 cm long, 5-10 (-12) mm wide, 6-15× as long as wide, conspicuously and divergently toothed, the leaves mostly opposite or in whorls of 3 ..... ***E. torreyanum***
21 Leaves mostly 2.5-7× as long as wide, the larger ones > 10 mm wide, ranging from 8-30 mm wide, opposite, alternate, or whorled.
23 Involucre 2.5-4 mm high; leaves obtuse to acute, elliptic to elliptic-oblanceolate, the 2 main lateral veins separating from the midrib about 1 cm above the base; leaves commonly 3 per node ..... ***E. semiserratum***
23 Involucre 4.5-7 mm high; leaves acute to attenuate-acuminate, lanceolate, the 2 main lateral veins separating from the midvein at the base; leaves rarely 3 per node.
24 Leaves 3-5 cm long, 5-13 mm wide; leaf surfaces generally glabrous; [of AL westward] ..... ***[E. lancifolium]***
24 Leaves 5-12 cm long, 5-20 mm wide; leaf surfaces short or long puberulent; [widespread].
25 Leaf surfaces glandular-punctate, densely puberulent on the surfaces and veins, the hairs fairly long and curling or twisted (as seen with at least 10× magnification); stem densely puberulent; leaves entire to serrate, the teeth varying from obscure to sharp, generally about 1 mm long (measured on the side toward the leaf apex), rarely to 3 mm long, generally forward-pointing; leaves acuminate to acute, the terminal portion not strongly attenuated, and about as likely to have teeth as the rest of the margin ..... ***E. altissimum***
25 Leaf surfaces densely glandular-punctate, sparsely puberulent (mainly on the veins), the hairs short; stem sparsely puberulent; leaves serrate to pinnatifid, the teeth often 1-5 mm long (measured on the side toward the leaf apex), often salient or divergent; leaves attenuate-acuminate, the terminal 1/3 extended and generally entire ..... ***E. saltuense***

Eupatorium album Linnaeus *var.* ***album***, White-bracted Thoroughwort. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dry woodlands; common (rare in Mountains, uncommon in Piedmont). Late June-September. CT, NY, OH, and TN, south to FL and LA. Var. *glandulosum* is alleged to differ from var. *album* in having the involucre with copious dark glands (vs. glandless or nearly so). The distinction is dubious; variation seems essentially continuous in our area, with frequent intermediates, and there seems to be little correlation between morphology and habitat/range. [= FNA; < *E. album* – RAB, S, WH; < *E. album* var. *album* – C, K, SE, W (also see *E. petaloideum*); > *E. album* var. *album* – F, G, WV; > *E. album* var. *glandulosum* (Michaux) A.P. de Candolle – F, G, WV]

Eupatorium altissimum Linnaeus, Tall Thoroughwort. Pd (GA, NC, VA), Mt (GA, VA, WV), Cp (FL): woodlands, old fields, woodland borders, and openings over mafic rocks (such as diabase) or calcareous rocks (such as limestone and calcareous sandstone); common (uncommon in WV, rare south of VA, rare in Coastal Plain). Late August-October. CT, NY, QC, MN, and NE, south to Panhandle FL and TX, primarily in the midwest, especially on limestone substrates, and uncommon east of the mountains. [= RAB, F, G, S, W, WV; < *E. altissimum* – C, FNA, K, SE, WH (also see *E. saltuense*)]

Eupatorium anomalum Nash, Anomalous Eupatorium. Cp (FL, GA, NC, VA): moist savannas, moist interdune swales; rare. August-October. *E. anomalum* is believed to be a triploid and tetraploid, apomictic derivative of the hybrid *E. mohrii* × *serotinum*. Se. VA south to c. peninsular FL and west to s. AL. Inasmuch as it is now a separate lineage (as evidenced by a distinct distribution, more-or-less recognizable morphology, and phenologic separation), treatment as a separate taxon seems warranted. [= FNA, GW, K, SE; < *E. recurvans* – RAB; < *E. anomalum* – S (also see *E. mohrii*); = *E.* ×*anomalum* – WH]

* ***Eupatorium cannabinum*** Linnaeus, Hemp-agrimony. Cp, Pd (VA): disturbed areas; rare, perhaps merely a waif or garden remnant, native of Europe. July-September. The documentation for VA is an 1899 specimen from Fairfax County and a record from Westmoreland County. [= FNA, K]

Eupatorium capillifolium (Lamarck) Small, Common Dog-fennel, Yankeeweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, WV): disturbed soils; common (uncommon in GA, NC, and SC Mountains, uncommon in VA Piedmont, rare in WV Mountains). September-November. CT, PA, KY, MO, and OK south to s. FL and TX. This species, like *E. compositifolium*, is an excellent indicator of soil disturbance. [= C, F, FNA, G, GW, K, S, SE, W, WH, WV; = *E. capillifolium* var. *capillifolium* – RAB]

Eupatorium compositifolium Walter, Coastal Dog-fennel, Yankeeweed. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): sandy disturbed areas; common. September-December. S. VA, KY, and OK south to s. FL and TX. This species, like *E. capillifolium*, is an excellent indicator of soil disturbance. At its northern limit, in se. VA, this species occurs on riverbanks, in the seasonally exposed drawdown zone (Fleming & Ludwig 1996). [= RAB, FNA, GW, K, S, SE, W]

Eupatorium cordigerum (Fernald) Fernald, Clasping Roundleaf Eupatorium. Cp (NC, SC, VA): woodlands; rare. July-August. VA, NC, and SC west to AR and MS. This taxon is an apomictic, polyploid derivative of the hybrid *E. perfoliatum* × *rotundifolium*. [= F; > *E. rotundifolium* var. *ovatum* – RAB, G (also see *E. pubescens*); = *E. rotundifolium* var. *cordigerum* Fernald – C, K, SE; = *E.* ×*cordigerum* (Fernald) Fernald – FNA; < *E. rotundifolium* – GW; < *E. pubescens* – S]

Eupatorium glaucescens Elliott, Wedgeleaf Eupatorium, Broadleaf Bushy Eupatorium. Cp (GA, NC, SC, VA): sandhills, dry sandy woodlands; common (rare in VA). Late July-October. Widespread in the Southeastern Coastal Plain, ranging from se. VA south to FL and west to MS. The name *E. cuneifolium* must be rejected on nomenclatural grounds (Gandhi & Thomas 1991). [= K; < *E. cuneifolium* Willdenow – RAB, C, G, SE (also see *E. linearifolium*); ? *E. cuneifolium* var. *cuneifolium* – F; = *E. cuneifolium* – S; < *E. linearifolium* Walter – FNA, WH]

Eupatorium godfreyanum Cronquist, Godfrey's Eupatorium. Pd (GA, NC, VA), Mt (NC, VA, WV), Cp (VA): dry woodlands; common (uncommon in VA Coastal Plain, uncommon in WV Mountains, rare in GA and NC). July-September; August-October. NJ, MD, and WV south through VA to nc. NC and TN, reaching its greatest abundance in wc. VA. See Cronquist (1985) for additional information and illustrations. Siripun & Schilling (2006) confirmed that this species is of hybrid origin from *E. rotundifolium* and *E. sessilifolium*. [= C, FNA, K; < *E. sessilifolium* var. *vaseyi* (Porter) Fernald & Griscom – RAB; < *E. sessilifolium* var. *vaseyi* (Porter) Fernald & Griscom – F; < *E. vaseyi* Porter – G; < *E. sessilifolium* – SE]

Eupatorium hyssopifolium Linnaeus, Hyssopleaf Eupatorium. Cp (DE, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadbanks, pastures, fields, disturbed areas, dry woodlands; common (rare in Mountains). Late July-

October. MA south to GA and west to TN and LA. [= *E. hyssopifolium* var. *hyssopifolium* – C, FNA, G, SE, W; < *E. hyssopifolium* – RAB, WV (rejected) (also see *E. torreyanum*); > *E. hyssopifolium* var. *hyssopifolium* – F, K; > *E. hyssopifolium* var. *calcaratum* Fernald & Schubert – F, K; > *E. sessilifolium* – S; > *E. lecheifolium* Greene – S]

Eupatorium leptophyllum A.P. de Candolle, Limesink Dog-fennel. Cp (FL, GA, NC, SC): limesink depression ponds (dolines) in the outer Coastal Plain and clay-based Carolina bays in the inner Coastal Plain; common (rare in GA, NC, SC). September-November. A Southeastern Coastal Plain endemic, ranging from se. NC south to FL and west to s. GA and s. AL; also in the Bahamas and Cuba. [= FNA, GW, K, S, SE, WH; = *E. capillifolium* var. *leptophyllum* (A.P. de Candolle) Ahles – RAB]

Eupatorium leucolepis (A.P. de Candolle) Torrey & Gray, Savanna Eupatorium. Cp (DE, FL, GA, NC, SC, VA), Pd (VA), Mt (VA, WV): savannas, seepage bogs, depression ponds; common (uncommon in DE and VA, rare in Piedmont and Mountains). August-October. Primarily of the Southeastern Coastal Plain, ranging from NY south to n. peninsular FL, Panhandle FL, and west to LA; disjunct in Coffee County, TN (Chester, Wofford, & Kral 1997). This species is often confused with members of the *E. recurvans-mohrii-anomalum* complex. The following differences are useful: *E. leucolepis* has phyllaries acuminate to attenuate (vs. acute to obtuse), leaves of the uppermost nodes below the inflorescence opposite, or rarely the uppermost 1-2 nodes subopposite (vs. leaves of the uppermost 2-15 nodes below the inflorescence alternate), and leaves generally longitudinally folded (vs. generally planar). The plants formerly called *E. leucolepis* var. *novae-angliae* Fernald and endemic to freshwater pondshores in MA and RI apparently represent a distinct allopolyploid species, *E. novae-angliae* (Fernald) V.I. Sullivan ex A. Haines & Sorrie, and should not be treated as a variety of *E. leucolepis*. [= W; = *E. leucolepis* var. *leucolepis* – C, F, G; < *E. leucolepis* – RAB, GW, S, SE, WH; < *E. leucolepis* var. *leucolepis* – FNA, K]

Eupatorium linearifolium Walter, Narrowleaf Bushy Eupatorium. Cp (FL, GA, NC, SC, VA): sandhills; uncommon. Late July-October. Se. VA south to FL and west to LA. The appropriate treatment of this taxon is unclear; it may be a derivative of the hybrid *E. cuneifolium* × *hyssopifolium*. [= F; < *E. cuneifolium* – RAB, C, G, SE; = *E. hyssopifolium* var. *linearifolium* (Walter) Fernald – K; = *E. tortifolium* Chapman – S; < *E. linearifolium* – FNA, WH]

Eupatorium mikanioides Chapman, Semaphore Thoroughwort. Cp (FL): saline and brackish flats, seasonally ponded freshwater wetlands, wet flatwoods; rare. Endemic to FL, primarily in the peninsula, but also along the coast of the eastern Panhandle (Bay, Franklin, Gulf, Taylor, and Wakulla counties). July-September. [= FNA, GW, K, S, SE, WH]

Eupatorium mohrii Greene, Mohr's Eupatorium. Cp (FL, GA, NC, SC, VA): moist savannas, other wet habitats; common (uncommon in VA). August-October. Se. VA south to s. FL and west to TX. This is by far the most abundant of the *E. recurvans-anomalum-mohrii* complex in our area. Like *E. anomalum*, *E. mohrii* is believed to be a triploid and tetraploid, apomictic derivative of the hybrid *E. recurvans* × *rotundifolium*; it is more widespread than *E. recurvans* sensu stricto. Inasmuch as it is now a separate lineage (as evidenced by a distinct distribution, more-or-less recognizable morphology, and phenologic separation), treatment as a separate taxon seems warranted. [= GW; < *E. recurvans* – RAB, F, G (also see *E. anomalum* and *E. recurvans*); < *E. mohrii* – C, FNA, K, SE, W, WH (also see *E. recurvans*); < *E. anomalum* – S (also see *E. anomalum*)]

Eupatorium paludicola E.E. Schilling & LeBlond. Cp (NC, SC): cypress savannas, clay-based bays, and small depressions ponds; rare. A Cape Fear Arch endemic, ranging from the se. Coastal Plain and Sandhills of NC, to ne. Coastal Plain of SC. See LeBlond et al. (2007) and Schilling et al. (2007). [< *E. leucolepis* – RAB, GW, S, SE; < *E. leucolepis* var. *leucolepis* – FNA, K]

Eupatorium perfoliatum Linnaeus, Boneset. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): marshes, swamps, bogs, wet pastures, and other wet habitats; common (uncommon in FL). August-October. NS west to MB, south to n. peninsular FL and TX. [= RAB, FNA, GW, W, WH, WV; = *E. perfoliatum* var. *perfoliatum* –C, F, G, K, S, SE; *?* *E. cuneatum* Engelmann – S (actually a hybrid)]

Eupatorium petaloideum Britton, Showy White Thoroughwort. Cp (FL, GA): sandhills, scrub, dryish pinelands; uncommon? GA south to FL, west to s. MS. [= FNA, S; < *E. album* Linnaeus var. *album* – K, SE; < *E. album* – WH; = *E. album* var. *petaloideum* (Britton) Godfrey ex D.B. Ward]

Eupatorium pilosum Walter, Ragged Eupatorium. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): savannas, bogs, other moist areas; common (uncommon in Piedmont, rare in Mountains). August-October. MA south to c. peninsular FL, west to KY, c. TN, and MS. This species is clearly distinct; it should not be treated as a variety of *E. rotundifolium*. [= RAB, C, F, FNA, GW, K, WH, WV; = *E. verbenaefolium* Reichard – S; = *E. rotundifolium* var. *saundersii* (T.C. Porter) Cronquist – G, SE, W]

Eupatorium pubescens Muhlenberg ex Willdenow, Inland Roundleaf Eupatorium. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, NC, SC, VA): forests and woodlands, woodland edges, roadbanks; common (uncommon in Mountains, uncommon in Coastal Plain south of DE). July-September. The distribution, abundance, and phenology of *E. pubescens* in our area need additional study. Where growing together, *E. pubescens* apparently flowers about a month earlier than *E. rotundifolium*. Primarily in the Appalachians and adjacent provinces, ranging from ME south to n. GA and n. AL. This taxon appears to be a stabilized polyploid complex originating from hybridization of *E. rotundifolium* and (perhaps) *E. sessilifolium*; in that it now functions as a more-or-less independent evolutionary lineage, with distinctive morphology, habitat, and distribution, it is here treated as a species. [= F, WV; < *E. rotundifolium* var. *ovatum* (Bigelow) Torrey – RAB (also see *E. cordigerum*); = *E. rotundifolium* var. *ovatum* (Bigelow) Torrey – C, FNA, G, K, SE, W; < *E. rotundifolium* – GW; < *E. pubescens* – S (also see *E. cordigerum*); = *E. rotundifolium* Linnaeus ssp. *ovatum* (Bigelow) Montgomery & Fairbrothers]

Eupatorium recurvans Small, Recurved Eupatorium. Cp (FL, GA, NC, SC): moist savannas; rare (NC Watch List). August-October. Se. NC south to GA and s. FL. The diploid sexual *E. recurvans* (sensu stricto) is rare in our area; GW gives its range as se. and sc. GA and FL. *E. mohrii* is believed to be a triploid and tetraploid, apomictic derivative of the hybrid *E. recurvans* × *rotundifolium*; it is more widespread. [= GW, S; < *E. recurvans* – RAB, WH (also see *E. anomalum* and *E. mohrii*); < *E. mohrii* – C, FNA, K, SE]

Eupatorium resinosum Torrey ex A.P. de Candolle, Resinous Boneset, Pinebarren Eupatorium. Cp (DE, NC, SC): seepage bogs, beaver ponds, frequently burned streamhead pocosins, in the Sandhills and inner Coastal Plain of sc. NC; rare. August-

October. A "bimodal endemic," known from the NJ, DE (formerly), and (formerly) NY, thence disjunct to the Sandhills and upper Coastal Plain of NC and SC. [= RAB, C, FNA, G, GW, K, SE; > *E. resinosum* var. *resinosum* – F]

Eupatorium rotundifolium Linnaeus, Common Roundleaf Eupatorium. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA): savannas, seepage bogs, woodlands; common (uncommon in Piedmont north of VA, rare in Mountains). August-October. MA, NY, IN, and OK south to s. FL and TX. [= F, S; = *E. rotundifolium* var. *rotundifolium* – RAB, C, FNA, G, K, SE, W; < *E. rotundifolium* – GW, WH (also see *E. pubescens* and *E. cordigerum*); *E. rotundifolium* Linnaeus ssp. *rotundifolium*]

Eupatorium saltuense Fernald, Tall Boneset, Pasture Eupatorium. Pd (NC, VA), Cp (VA): upland forests, woodland borders, marsh edges; uncommon (rare in NC). August-October. Known from e. and c. VA and NC. Considered by some to be a hybrid of *E. album* and *E. altissimum*. Reported for nc. WV by Harmon, Ford-Werntz, & Grafton (2006). [= RAB, F, G; < *E. altissimum* – C, FNA, K]

Eupatorium scabridum Elliott, Roughleaf Eupatorium. Cp (FL, GA, SC): savannas, wet pinelands; uncommon. Late July-October. SC south to n. FL, west to AR, LA, and OK. This plant is believed to be an allopolyploid derivative of the hybrid *E. rotundifolium* × *semiserratum.* In some areas it apparently consists only of short-lived diploids, but in others (according to GW especially in SC, AR and LA) to occur as populations of polyploid apomicts. It resembles *E. rotundifolium*, but has cuneate leaves with a less prominent pair of lateral veins, narrower leaves, and is more likely to have 3-whorled leaves (as *E. semiserratum* often does). [= GW, S; = *E. rotundifolium* var. *scabridum* (Elliott) A. Gray – FNA, K, SE; < *E. rotundifolium* – WH]

Eupatorium semiserratum A.P. de Candolle. Cp (FL, GA, NC, SC, VA): swamp forests, seepage bogs, savannas, clay-based Carolina bays, other wetlands; uncommon. Late July-October. Se. VA south to ne. FL, Panhandle FL, west to TX and AR; disjunct in sc. TN. This species often has 3 leaves per node; most similar species rarely or never have whorled leaves. [= RAB, C, FNA, G, GW, K, S, SE, WH; = *E. cuneifolium* var. *semiserratum* (A.P. de Candolle) Fernald & Griscom – F]

Eupatorium serotinum Michaux, Late Eupatorium. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): interdune swales, fields, open forests, powerline rights-of-way, tidal marshes, disturbed areas; common (uncommon in DE). Late August-October. MA, NY, MI, WI, MN, and NE south to s. FL, LA, and TX. This species was apparently largely or strictly coastal in our area, but has spread inland rapidly along corridors of disturbance, somewhat similarly to *Baccharis halimifolia*. [= RAB, C, F, FNA, G, GW, K, S, SE, W, WH, WV]

Eupatorium sessilifolium Linnaeus *var.* ***brittonianum*** Porter, Britton's Eupatorium. Mt (NC, WV): circumneutral soils of woodlands at moderate elevations; rare. August; September. NH and MN, south to NJ, PA, MD, w. NC, KY, and MO. The only collection from NC known to me is from Cedar Cliff, Buncombe County, in 1897. I disagree with Cronquist's equation of this taxon with *E. godfreyanum*. [= F, K, WV; < *E. sessilifolium* var. *sessilifolium* – RAB; < *E. sessilifolium* – C, FNA, G, S, SE, W]

Eupatorium sessilifolium Linnaeus *var.* ***sessilifolium***, Sessile-leaf Eupatorium. Pd (DE, GA, NC, VA), Mt (GA, NC, VA, WV), Cp (DE, VA): open upland woodlands and woodland borders, especially calcareous or mafic; common (uncommon in VA Piedmont, rare in VA Coastal Plain, rare in DE). July-October. S. NH west to se. MN, south to n. GA, n. AL, n. MS, n. AR, and e. KS. Grubbs, Small, & Schilling (2009) discuss the genetics of *E. sessilifolium*; most of the species' distribution consists of agamospermous triploids, with sexual diploids only known from two disjunct areas of the southern Appalachians (w. VA, and w.NC-e. TN). There may be merit to the taxonomic recognition of the diploids and the triploids. [= F, K, WV; < *E. sessilifolium* var. *sessilifolium* – RAB (also see var. *brittonianum*); < *E. sessilifolium* – C, FNA, G, S, SE, W]

Eupatorium torreyanum Short & Peter, Torrey's Eupatorium. Pd (GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA), Mt (GA, NC, SC, WV): dry woodlands, marshes; common (rare in DE and FL, rare in Mountains). Late July-October. NY south to n. peninsular FL, Panhandle FL, and west to OH, TN, and LA. SE considers this taxon a "well-marked variety," "probably originated through hybridization between *E. hyssopifolium* and some other species, but now a stable entity." The other parent is postulated by Sullivan (1978) to be *E. semiserratum*. For reasons stated in the comments before the species accounts, the taxon is here treated as a species. [= S; = *E. hyssopifolium* var. *laciniatum* Gray – C, F, FNA, G, K, SE, W, WH; < *E. hyssopifolium* – RAB, WV (rejected)]

Eupatorium vaseyi T.C. Porter, Vasey's Eupatorium. Mt (GA, NC, VA, WV), Pd (NC, VA), Cp (DE): moist to dry woodlands and openings; uncommon (rare in upper Piedmont). July-October. MD, DE, and VA south to se. TN (Chester, Wofford, & Kral 1997), n. GA, and n. AL. This species is apparently a tetraploid derivative of *E. album* × *sessilifolium*. It is sometimes treated as a variety of *E. album*, but seems better regarded as a species of hybrid origin. [< *E. album* var. *vaseyi* – RAB, W (also see *E. godfreyanum*); = *E. album* var. *vaseyi* (T.C. Porter) Cronquist – C, FNA, SE; = *E. album* var. *monardifolium* (Fernald) – F; < *E. vaseyi* – G; = *E. sessilifolium* var. *vaseyi* (Porter) Fernald & Griscomb – K, WV; ? *E. fernaldii* Godfrey]

Eupatorium album Linnaeus *var.* ***subvenosum*** A. Gray. Cp (DE): pine barrens, open woodlands; rare. DC, DE, NJ, NY. July-September. [= C, F, FNA, K, SE] {add to synonymy}

Eupatorium lancifolium (Torrey & A. Gray) Small. Prairies, open woodlands. AL west to s. AR and TX. [= FNA, GW, K, S, SE; = *E. semiserratum* A.P. de Candolle var. *lancifolium* Torrey & A. Gray]

Eupatorium ×*pinnatifidum* Elliott. E. VA south to Panhandle FL. It is variously considered a species (as by S), a species of hybrid origin (as by SE), or a hybrid (as by GW and K). The parents are variously listed as *E. capillifolium* × *perfoliatum* (as by K) or *E. capillifolium* or *compositifolium* × *perfoliatum* (as by GW and SE). I have seen the plant in Pender County, NC, where it appears to be a first-generation hybrid, growing with *E. capillifolium* and *E. perfoliatum*. Until and unless additional evidence appears that it reproduces itself and exists in independent populations I am inclined to treat it as a hybrid rather than a species of hybrid origin. It is recognizable by its pinnatifid or bipinnatifid leaves (the segments broader than in the dog-fennels) and its corymbose-paniculate inflorescence. [= FNA, K, WH; = *E. pinnatifidum* Elliott – GW, S, SE] {not keyed}

Eurybia (Cassini) Cassini 1820 (Wood-aster)

A genus of about 23 species, perennial herbs, of North America and n. Eurasia. References: Brouillet in FNA (2006b); Nesom (1994b)=X; Lamboy (1987)=Y; Lamboy (1992, 1988). Key based in part on SE and FNA.

1 Basal and lower cauline leaves both distinctly petioled and with a cordate or subcordate blade; [subgenus *Eurybia*, section *Eurybia*].
  2 Outer phyllaries squarrose-reflexed; rhizomes short or absent, the plants not forming extensive clonal colonies; [of rich slopes an bottomlands of the lower Piedmont of NC, SC, GA, and AL].
    3 Involucre (10-) 11-13 mm tall; phyllaries 36-50, ovate, elliptic, or lanceolate, acute to acuminate at the apex, squarrose in life, often only the innermost squarrose in dried specimens, the reflexed portion with a distinct hyaline margin; ray florets 7-15, blue or violet; [of the lower Piedmont of GA and AL] ..... ***E. jonesiae***
    3 Involucre 7-10 (-12) mm high; phyllaries 46-75 (-90), oblong-lanceolate, acute, obtuse, or rounded at the apex, squarrose in life, generally remaining so in dried specimens, the reflexed portion herbaceous with a narrow hyaline margin or none at all; ray florets (7-) 16-20 (-30), white or lavender; [of the lower Piedmont of s. NC and SC] ..... ***E. mirabilis***
  2 Outer phyllaries appressed (or slightly and irregularly spreading); rhizomes long, the plants forming extensive clonal colonies; [of various habitats and distribution].
    4 Ray flowers purplish or bluish; branches of the inflorescence glandular-pubescent ..... ***E. macrophylla***
    4 Ray flowers white; branches of the inflorescence not glandular-pubescent.
      5 Plants with basal leaves on well-developed shoots separate from the flowering shoots; larger leaves with 15-30 teeth per side ..... ***E. schreberi***
      5 Plants without basal leaves on well-developed shoots separate from the flowering shoots; larger leaves with 5-20 teeth per side.
        6 Longest peduncle in inflorescence > 1.5 cm long; involucre 6.5-9 (-10) mm tall; ray florets (8-) 12-16 (-20), the ray portion (10-) 17-18 (-20) mm long; disc florets (12-) 17-26; [mostly of high mountain forests, primarily over 1200 m in elevation] ..... ***E. chlorolepis***
        6 Longest peduncle in inflorescence < 1.5 cm long; involucre (3.5-) 4.2-6 (-7.5) mm tall; ray florets 5-10 (-12), the ray portion (5-) 10-15 mm long; disc florets 12-19 (-25); [mostly of lower elevation forests, primarily below 1200 m in elevation] ..... ***E. divaricata***
1 Basal and lower cauline leaves not as above.
  7 Leaves linear, up to about 10 mm wide; leaves strongly basally disposed.
    8 Inflorescence flat-topped (corymbiform); [subgenus *Heleastrum*, section *Heleastrum*].
      9 Pappus fine, the bristles not thickened above; ray florets 8-15 (-25); [of the Piedmont and low Mountains of GA, SC, and possibly sw. NC] ..... ***E. avita***
      9 Pappus coarse, the larger bristles thickened above (clavellate-flattened); ray flowers 15-35; [of the Coastal Plain, of ne. NC south to ne. FL] ..... ***E. paludosa***
    8 Inflorescence elongate (spike-like or raceme-like).
      10 Stem spreading-hairy throughout; ray florets 25-60, white or pinkish; disc florets; [endemic of FL Panhandle and adjacent sw. GA]; [subgenus *Heleastrum*, section *Eryngiifolii*] ..... ***E. eryngiifolia***
      10 Lower stem glabrous, upper stem variously hairy; ray florets 8-30, deep lavender or purple; [collectively widespread]
        11 Upper stem strigillose; phyllaries 48-64; ray florets 15-30; disc florets (40-) 52-80+; [widespread]; [subgenus *Heleastrum*, section *Heleastrum*] ..... ***E. hemisphaerica***
        11 Upper stem villous to glabrescent; phyllaries 20-40; ray florets 8-17; disc florets 18-30; [endemic of FL Panhandle]; [subgenus *Heleastrum*, section *Eryngiifolii*] ..... ***E. spinulosa***
  7 Leaves broader, the largest on a plant over 15 m wide; leaves somewhat basally disposed, the lowermost sometimes withering before flowering.
    12 Leaves obviously veined beneath, usually toothed, hairy on the undersurface; [subgenus *Eurybia*, section *Radulini*].
      13 Larger leaves < 2.5 (-3.6) cm wide; rays purple; [of w. VA, WV, northward] ..... ***E. radula***
      13 Larger leaves > 4.0 cm wide; rays white to pale purple; [of the Cumberland Plateau of KY and n. TN] ..... ***E. saxicastellii***
    12 Leaves very obscurely veined beneath, entire or nearly so, glabrous on the undersurface; [subgenus *Eurybia*, section *Calliastrum*].
      14 Ray florets 9-14; rays 5-15 mm long ..... ***E. compacta***
      14 Ray florets 15-35; rays 10-25 mm long.
        15 Phyllaries glandular-pubescent on the back and also glandular-ciliate; involucre 8-16 mm high ..... ***E. spectabilis***
        15 Phyllaries slightly or not at all glandular-pubescent on the back (sometimes glandular-ciliate); involucre 7-12 mm high ..... ***E. surculosa***

Eurybia avita (Alexander) Nesom, Alexander's Rock Aster. Pd (GA, SC), Mt (NC?): in shallow soils on granitic flatrocks and granitic domes where moist from seasonal seepage; rare. Upper Piedmont endemic: w. SC (or sw NC?) to wc. GA. A diploid species (2n=18). [= FNA, K, X; = *Aster avitus* Alexander – SE, W]

Eurybia chlorolepis (E.S. Burgess) Nesom, Blue Ridge White Heart-leaved Aster. Mt (GA, NC, SC, VA, WV?): northern hardwood forests, spruce-fir forests; common (rare in VA). August-October. A Southern Appalachian endemic: sw. VA south through w. NC and e. TN to nw. SC and n. GA (Lamboy 1992); also reported for scattered locations in WV (Harmon, Ford-Werntz, & Grafton 2006). Lamboy (1992) has shown that *Eurybia chlorolepis* is a species distinct from *Eurybia divaricata*. *E. chlorolepis* is tetraploid (2n=36) and hexaploid (2n=54); *E. divaricatus* is diploid (2n=18). [= FNA, K, X; = *Aster chlorolepis* E.S. Burgess – G, S, Y; = *A. divaricatus* Linnaeus var. *chlorolepis* (E.S. Burgess) Ahles – RAB, C, SE, W; < *A. divaricatus* – F, WV]

Eurybia compacta Nesom, Slender Aster. Cp (DE, GA, NC, SC, VA): pine savannas; uncommon (rare in GA). Late July-October. An Atlantic Coastal Plain endemic: NJ to e. GA. A diploid species (2n=18). [= FNA, K, X; = *Aster gracilis* Nuttall – RAB, C, F, G, S, SE]

Eurybia divaricata (Linnaeus) Nesom, Common White Heart-leaved Aster. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, VA): moist to fairly dry forests and woodlands; common (uncommon in VA Coastal Plain, rare in DE Coastal Plain). August-October. N. NH west to s. ON, sw. QC, and n. OH, south to e. NC, c. SC, n. GA, and c. AL. The many species described by Burgess and here treated as synonyms may deserve further assessment; see S for details. A diploid species (2n=18). [= FNA, K, X; = *Aster divaricatus* Linnaeus – G, Y; = *A. divaricatus* var. *divaricatus* – RAB, C, SE, W; < *A. divaricatus* – F, WV

(also see *Eurybia chlorolepis*); > *A. boykinii* E.S. Burgess - S; > *A. castaneus* E.S. Burgess – S; > *A. divaricatus* – S; > *A. excavatus* E.S. Burgess – S; > *A. flexilis* E.S. Burgess – S; > *A. stillettiformis* E.S. Burgess – S; > *A. tenebrosus* E.S. Burgess – S]

Eurybia eryngiifolia (Torrey & A. Gray) Nesom, Eryngo-leaved Aster. Cp (FL, GA): pine savannas; rare. East Gulf Coastal Plain endemic: sw. GA and Panhandle FL west to AL. [= FNA, K, WH, X; = *Aster eryngiifolius* Torrey & A. Gray – S, SE]

Eurybia hemispherica (Alexander) Nesom, Prairie Grass-leaved Aster. Mt (GA), Cp (FL, GA?): glades, barrens, rocky woodlands; uncommon (rare in FL). E. TN west to MO, south to nw. GA, se. GA, and FL Panhandle. Apparently diploid (2n=18) and tetraploid (2n=36). [= FNA, K, WH, X; = *Aster hemisphericus* Alexander – C, F, SE; = *A. paludosus* Aiton ssp. *hemisphericus* (Alexander) Cronquist – G; = *A. hemisphaericus* – W, orthographic variant]

Eurybia jonesiae (Lamboy) Nesom, Piedmont Big-leaved Aster. Pd (GA): moist forests; rare. August-October. Endemic to the Piedmont: e. GA west to e. AL (Lee Co.). A hexaploid species (2n=54). [= FNA, K, X; = *Aster jonesiae* Lamboy; = *A. commixtus* (Nees) Kuntze – S, misapplied; < *A. commixtus* (Nees) Kuntze – SE, misapplied]

Eurybia macrophylla (Linnaeus) Cassini, Big-leaved Aster. Mt (GA, NC, SC, VA, WV), Pd (VA): moist to dryish forests, in NC mostly at moderate to high elevations, particularly in red oak forests on ridgetops; common (uncommon in Piedmont). Late July-September. NB and QC west to MN, south to PA, MD, VA, NC, ne. GA, e. TN, and IN. *Aster macrophyllus* var. *ianthinus* [= *Aster multiformis*] is sometimes recognized. It is alleged to differ in having the stipitate glands of the pedicels with minute heads (vs. broadly capitate), the leaves thin in texture and only slightly scabrous (vs. thick in texture and strongly scabrous). Many other varieties have been recognized by Fernald (1950); see F for a key. *E. macrophylla* is octoploid (2n=72). [= FNA, K, X; = *Aster macrophyllus* Linnaeus – RAB, C, G, SE, W, Y; > *Aster macrophyllus* var. *macrophyllus* – F, WV; > *A. macrophyllus* var. *ianthinus* (E.S. Burgess) Fernald – F, WV; > *A. macrophyllus* var. *pinguifolius* E.S. Burgess – F; > *A. macrophyllus* var. *pinquifolius* E.S. Burgess – WV, misspelling; > *A. macrophyllus* var. *excelsior* E.S. Burgess – F, WV; > *A. macrophyllus* var. *velutinus* E.S. Burgess – F, WV; > *A. macrophyllus* var. *sejunctus* E.S. Burgess – F; > *A. macrophyllus* var. *apricensis* E.S. Burgess – F; > *A. macrophyllus* – S; > *A. multiformis* E.S. Burgess – S; > *A. riciniatus* E.S. Burgess – S]

Eurybia mirabilis (Torrey & A. Gray) Nesom, Piedmont Aster. Pd (NC, SC): nutrient-rich bottomlands and moist slopes in the lower Piedmont; rare. July-September. Endemic to the lower Piedmont of NC and SC. A diploid species (2n=18). [= FNA, K, X; = *Aster mirabilis* Torrey & A. Gray – S; < *A. commixtus* (Nees) Kuntze – RAB, SE, misapplied]

Eurybia paludosa (Aiton) Nesom, Savannah Grass-leaved Aster. Cp (FL, GA, NC, SC): wet savannas, sandhill / pocosin ectones; common (rare in FL). July-October. An Atlantic Coastal Plain endemic: ne. NC south to se. GA and ne. FL (Nassau County). A teraploid species (2n=36). [= FNA, K, WH, X; = *Aster paludosus* Aiton – RAB, C, GW, SE; = *A. paludosus* ssp. *paludosus* – G]

Eurybia radula (Aiton) Nesom, Low Rough Aster. Mt (VA, WV), Cp (DE): circumneutral to calcareous wet meadows, possibly stream banks; rare. July-September. NL (Newfoundland) and NL (Labrador) south to DE (historically), MD, WV, and w. VA. A diploid species (2n=18). [= FNA, K, X; = *Aster radula* Aiton – C, G, SE, W, WV; > *A. radula* var. *radula* – F]

Eurybia saxicastellii (J.J.N. Campbell & Medley) Nesom, Rockcastle Wood-aster. Mt (KY, TN): boulder/cobble bars along the Rockcastle River; rare. Endemic to the Cumberland Plateau region of KY and n. TN (Scott County, TN) (Chester, Wofford, & Kral 1997). A hexaploid species (2n=54). [= K, X; = *Aster saxicastellii* J.J.N. Campbell & Medley – C; = *E. saxicastelli* – FNA, orthographic variant]

Eurybia schreberi (Nees) Nees, Schreber's Aster. Mt (VA, WV), Pd (DE, VA): mesic forests and seepage slopes; uncommon (rare in DE). Late June-October. NH west to WI, south to DE, MD, sc. and w. VA, ne. TN (Chester, Wofford, & Kral 1997), AL, and KY. *E. schreberi* is hexaploid (2n=54). [= FNA, K, X; = *Aster schreberi* Nees – C, G, SE, W, Y; > *A. schreberi* – F; > *A. glomeratus* (Bernhart ex Nees) E.S. Burgess – F]

Eurybia spectabilis (Aiton) Nesom, Low Showy Aster. Cp (DE, NC, SC, VA), Pd (NC): pine barrens, dry road banks; rare. August-October. Coastal Plain (and rarely adjacent provinces) from MA south to SC; disjunct in AL. An octoploid species (2n=72). [= X; = *Aster spectabilis* Aiton – RAB, C, SE; > *A. spectabilis* Aiton var. *cinerascens* Blake – G; > *A. spectabilis* Aiton var. *spectabilis* – F, G; > *A. spectabilis* var. *suffultus* Fernald – F, G; > *A. smallii* Alexander – S; > *A. spectabilis* – S]

Eurybia spinulosa (Chapman) Nesom, Apalachicola Aster. Cp (FL): longleaf pine savannas; rare. Endemic to Panhandle FL (Bay, Calhoun, Gulf, and Franklin counties). May-July. [= FNA, K, WH, X; = *Aster spinulosus* Chapman – GW, S, SE]

Eurybia surculosa (Michaux) Nesom, Creeping Aster. Mt (NC, SC, VA): rock outcrops, glades, rocky woodlands; uncommon (rare in VA). Late August-October. A Southern Appalachian endemic: se. KY and w. VA south to w. NC, e. TN, nw. SC, and n. GA. Alleged occurrences of *E. surculosa* on the Coastal Plain in se. SC and e. GA are based on misidentifications of *E. compacta*. A tetraploid species (2n=36). [= FNA, K, X; = *Aster surculosus* Michaux – RAB, C, F, G, S, SE, W]

Euthamia (Nuttall) Cassini 1825 (Flat-topped Goldenrod)

A genus of about 8-10 species, herbs, of North America. There are a number of serious problems remaining in our knowledge of *Euthamia*. References: Sorrie (in prep.)=V; Haines in FNA (2006b); Sieren (1981)=Z; Taylor & Taylor (1983)=Y; Johnson (1995)=X; Cronquist (1980)=SE.

1 Leaves with numerous slightly raised, pale, translucent, blister-like pustules; leaves transmit light when held up; plant glabrous ..... ***E. leptocephala***

1 Leaves without pale pustules, or if present then leaves opaque and do not transmit light; plants glabrate to pubescent.

2 Major veins on leaf underside 3-5 (if 3 then all 3 veins bold), leaves 5-12 mm wide; heads with 20-50 flowers.

3 Leaves 3-6 (-8) mm wide, punctae on leaf upperside bold, flower heads 10-20 flowered ..... ***[E. gymnospermoides]***

3 Leaves 5-12 mm wide, punctae on leaf upperside obscure or not bold, flower heads 20-50 flowered.

4 Leaf undersides, upper stems, and branches glabrate, often with villous hairs on midrib of leaf underside ..... ***E. graminifolia*** *var.* ***graminifolia***

4 Leaf undersides, upper stems, and branches copiously to moderately short villous ..... ***E. graminifolia** var. **nuttallii***
2 Major veins on leaf underside 1-3 (-5) (if 3 or 5 then only the midvein bold), leaves <6 mm wide (-8 in gymnospermoides); heads with 10-20 flowers.
5 Leaves < 3 mm wide; major veins 1 (-3), nearly always with axillary fascicles (rarely without); [of Coastal Plain and lower Piedmont from se LA eastward] ..... ***E. caroliniana***
5 Leaves >3 mm wide, main veins 3 (-5), without axillary fascicles.
6 Upper surface of leaves glabrous, inflorescence branches glabrous or glabrate; [of midwestern interior] ..... ***[E. gymnospermoides]***
6 Upper surface of leaves with line of very short, scabridulous hairs on midvein near base, and often also beyond midleaf; [of outer Coastal Plain] ..... ***E. hirtipes***

Euthamia caroliniana (Linnaeus) Greene ex Porter & Britton. Cp (DE, FL, GA, NC, SC, VA), Pd (VA), Mt (VA): pine savannas, moist forests, ditches, pastures, disturbed areas; common. September-December. S. ME south to s. FL and west to se. LA, mainly on the Coastal Plain, extending somewhat into the Piedmont in places (reports from further north or further west are mased on misidentifications or on broader circumscriptions of the taxon). [= FNA, K, WH, V, X; > *Solidago microcephala* (Nuttall) Bush – RAB, F, G; >< *Solidago tenuifolia* Pursh – RAB; > *E. tenuifolia* (Pursh) Nuttall var. *microcephala* Nuttall – C; > *E. tenuifolia* var. *tenuifolia* – C; > *Solidago tenuifolia* var. *tenuifolia* – F; > *Solidago tenuifolia* – G; < *E. tenuifolia* – GW (also see *E. hirtipes*); > *E. minor* (Michaux) Greene – GW, SE; = *E. minor* – S; > *E. tenuifolia* (Pursh) Nuttall – SE; = *E. tenuifolia* – W, Z]

Euthamia graminifolia (Linnaeus) Nuttall *var.* ***graminifolia***. Mt (VA, WV), Pd (DE, VA), Cp (DE, SC*, VA): moist to dry weedy situations, riverbanks, bottomlands, bog margins; common (rare in SC). August-September. NL (Newfoundland) and ND south to MD, c. VA, WV, n. KY, TN, and e. IA; a SC Coastal Plain report (Hill & Horn 1997) is probably an introduction. Also introduced on the Gulf Coast (LA and MS?). [= C, V, X, Y, Z; < *E. graminifolia* – S, SE, W; < *Solidago graminifolia* (Linnaeus) Salisbury – RAB; < *Euthamia graminifolia* – FNA; > *Solidago graminifolia* var. *polycephala* Fernald – F; > *S. graminifolia* var. *graminifolia* – F, G; < *E. graminifolia* var. *graminifolia* – K]

Euthamia graminifolia (Linnaeus) Nuttall *var.* ***nuttallii*** (Greene) W. Stone. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE, SC*, VA): moist to dry weedy situations, riverbanks, bottomlands, bog margins; common (rare in NC and SC). August-September. NL (Newfoundland) south to se. VA, w.NC, KY, nw. TN and MO. Also introduced on the Gulf Coast (LA and MS?). [= C, V, X, Y, Z; < *E. graminifolia* – S, SE, W; < *Solidago graminifolia* (Linnaeus) Salisbury – RAB; < *Euthamia graminifolia* – FNA; = *S. graminifolia* var. *nuttallii* (Greene) Fernald – F, G; < *E. graminifolia* var. *graminifolia* – K]

Euthamia hirtipes (Fernald) Sieren, Marsh Flat-topped Goldenrod. Cp (DE, FL, GA, NC, SC, VA): brackish marshes, salt marshes, marsh edges, wet hammocks; uncommon (rare in VA). September-December. S. NJ and DE south to c. peninsular FL, west to s. AL. *E. hirtipes* has been variously treated: considered by Fernald to be a hybrid of "*minor*" and "*graminifolia* var. *nuttallii*," by Sieren to be a species endemic to NC, SC, and VA, by Taylor and Taylor (1983) to be a variety of *E. graminifolia* ranging from se. VA south to FL and west to LA, and by GW to be equivalent to *E. tenuifolia*. [= V, Z; < *Solidago tenuifolia* Pursh – RAB; < *Euthamia graminifolia* – FNA; = *Euthamia ×hirtipes* (Fernald) Sieren (pro sp.) – C; > *Solidago ×hirtipes* Fernald – F; >< *Solidago gymnospermoides* (Greene) Fernald – F, G, misapplied as to our plants; >< *Solidago leptocephala* Torrey & A. Gray – F, misapplied as to our plants; < *E. tenuifolia* – GW; = *E. graminifolia* (Linnaeus) Nuttall var. *hirtipes* (Fernald) C. & J. Taylor – K, WH, X, Y]

Euthamia leptocephala (Torrey & A. Gray) Greene. Mt (GA), Pd (GA): fields, pastures, roadsides, prairies, savannas; uncommon. KY, IL, MO, and OK south to nw. GA (Floyd and Heard counties), AL, and TX. [= C, FNA, GW, K, S, SE, V, Z; = *Solidago leptocephala* Torrey & A. Gray – F, G]

Euthamia gymnospermoides Greene, Texas Goldentop. Prairies, roadsides, and light woodlands. MI, nw. MN, and e. ND south to c. IN, sw. KY (Graves Co), w. TN (Hardeman, Lawrence counties), ec. and c. AR, ne. TX, w. OK, and e. CO.; disjunct in Coffee Co. TN. [= FNA, K, SE, V, Z; < *Solidago gymnospermoides* (Greene) Fernald – F, G]

Eutrochium Rafinesque 1838 (Joe-pye-weed)

The separation of *Eutrochium (Eupatoriadelphus)* from *Eupatorium* has been supported by Schmidt & Schilling (2000). Lamont (2004) makes the necessary combinations under the oldest available generic name, *Eutrochium* Rafinesque. References: Lamont in FNA (2006c); Lamont (2004)=X; Schmidt & Schilling (2000)=Y; Lamont (1995)=Z.

1 Florets (4-) 6-9 (-12) per head; leaves more or less 3-nerved from the base, rather abruptly contracted to the short petiole, thick in texture, 5-12 (-15) cm long, strongly resin-dotted beneath; leaves in whorls of (2-) avg. 3-4 (-5); stem generally purple-speckled (sometimes uniformly purple); [primarily of the Coastal Plain] ..... ***E. dubium***
1 Florets **either** (8-) 9-22 **or** 4-7 per head; leaves generally pinnately veined (rarely with a tendency to be 3-nerved), usually cuneate and less abruptly contracted to the petiole, thick or thin in texture, 6-35 cm long, weakly or not at all resin-dotted beneath (except often strongly resin-dotted in *E. maculatum*); leaves in whorls of (2-) 3-7; stem purple-speckled, purple at the nodes, purple throughout, or green; [collectively widespread in our area].
2 Florets (8-) 9-22 per head; leaves mostly in whorls of (3-) avg. 4-5 (-6), 6-20 cm long; inflorescence more or less flat-topped; stem usually speckled with purple (rarely evenly purplish) ..... ***E. maculatum** var. **maculatum***
2 Florets 4-7 per head; leaves in whorls of (2-) 3-7, 8-35 cm long; inflorescence rounded; stem usually purple throughout, purple at the nodes, or lacking purplish pigment.
3 Stem hollow (with a large central cavity), purple throughout, strongly glaucous when fresh; flowers bright pink-purple; leaves in whorls of (3-) avg. 5 (-7); leaves mostly 3.5-5.5× as long as broad ..... ***E. fistulosum***
3 Stem solid (rarely with a slender central cavity), dark purple at the nodes or greenish purple throughout, not glaucous or only slightly so when fresh; flowers pale pink-purple; leaves in whorls of (2-) avg. 3-4 (-5); leaves mostly 2-4× as long as broad.
4 Stem persistently glandular-pubescent throughout; lower surface of leaves glandular-pubescent; leaves mostly 2-2.5× as long as wide; stem greenish-purple (or evenly purple); [of the Mountains] ..... ***E. steelei***

4 Stem glandular-puberulent in the inflorescence, glabrous below the inflorescence; lower surface of leaves with few, sessile resin dots; leaves mostly 2.5-4× as long as broad; stem greenish, often dark purple at the nodes, particularly when sun-grown; [widespread in our area] ..... ***E. purpureum*** *var.* ***purpureum***

Eutrochium dubium (Willdenow ex Poiret) E.E. Lamont, Three-nerved Joe-pye-weed. Cp (DE, NC, SC, VA), Pd (DE, NC, SC), Mt (NC): swamp forests, pocosins, other wet, acidic habitats; common (uncommon in Piedmont south of DE). July-October. NS, s. ME, and NH south to se. SC, on or near the Coastal Plain. Reported as adventive in West Virginia (Harmon, Ford-Werntz, & Grafton 2006). [= FNA, X; = *Eupatoriadelphus dubius* (Willdenow ex Poiret) King & H.E. Robinson – GW, Y; = *Eupatorium dubium* Willdenow ex Poiret – RAB, C, F, G, K, SE, W, Z; = *Eupatorium purpureum* – S, misapplied]

Eutrochium fistulosum (Barratt) E.E. Lamont, Hollow-stem Joe-pye-weed. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): moist forests, marshes, ditches; common (uncommon in Coastal Plain). July-October. S. ME, NY, IL, and MO, south to c. peninsular FL, Panhandle FL, and e. TX. [= FNA, X; = *Eupatoriadelphus fistulosus* (Barratt) King & H.E. Robinson – GW, Y; = *Eupatorium fistulosum* Barratt – RAB, C, F, G, K, SE, W, WH, WV, Z; = *Eupatorium maculatum* – S, misapplied]

Eutrochium maculatum (Linnaeus) E.E. Lamont *var.* ***maculatum***, Spotted Joe-pye-weed. Mt (NC, VA, WV), Pd (VA): marl fens, wet calcareous meadows, cove forests, grassy balds; uncommon (rare in VA and WV). Late July-October. The species is widespread across n. North America. NL (Newfoundland), ME, QC, ON, and MN, south to PA, OH, n. KY, c. IL, and c. IA, and in the Mountains south to e. WV, w. VA, and w. NC. Var. *bruneri* (A. Gray) E.E. Lamont is more western; var. *foliosum* (Fernald) E.E. Lamont, is more northern. Further investigation is needed of the peculiar and implausible change in habitat of this species, from calcareous wetlands in c. VA northward, to mesic high elevation slopes and forests (in acidic to very acidic soils) from sw. VA southward. Such a change is suggestive of the presence of an unrecognized, cryptic taxon in the Southern Appalachians. [= FNA, X; = *Eupatorium maculatum* Linnaeus var. *maculatum* – F, G, K, SE; < *Eupatorium maculatum* – RAB, W, WV; = *Eupatorium maculatum* ssp. *maculatum* var. *maculatum* – C, Z; < *Eupatoriadelphus maculatus* – Y]

Eutrochium purpureum (Linnaeus) E.E. Lamont *var.* ***carolinianum*** Sorrie, Carolina Joe-Pye-weed. Pd (NC, SC): dry forests, woodlands, oak savannas, and roadsides; rare. See Sorrie (2010) for additional detail. [< *Eutrochium purpureum* var. *purpureum* – FNA, X; < *Eupatorium purpureum* Linnaeus var. *purpureum* – K, Z; < *E. purpureum* – RAB, C, F, SE, W, WH; < *Eupatorium purpureum* var. *purpureum* – G, WV; < *Eupatorium trifoliatum* Linnaeus – S]{not yet keyed}

Eutrochium purpureum (Linnaeus) E.E. Lamont *var.* ***purpureum***, Purple-node Joe-pye-weed. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, DE, GA, NC, SC, VA): upland, usually mesic forests; common (rare in Coastal Plain, uncommon in DE Piedmont). July-October. NH west to se. MN, IA, and e. NE, south to SC, GA, Panhandle FL, n. LA, and e. OK; var. *holzingeri* (Rydberg) E.E. Lamont, differing in having the lower leaf surface densely and persistently pubescent (vs. glabrous or nearly so) is found in the Midwest (Lamont 1990). *Eupatorium purpureum* var. *amoenum* is smaller, more slender, with narrower leaves which are nearly glabrous below; it is probably only a form. [< *Eutrochium purpureum* var. *purpureum* – FNA, X; < *Eupatorium purpureum* Linnaeus var. *purpureum* – K, Z; < *E. purpureum* – RAB, C, F, SE, W, WH; > *Eupatorium purpureum* var. *amoenum* (Pursh) Gray – G, WV; < *Eupatorium purpureum* var. *purpureum* – G, WV; < *Eupatorium trifoliatum* Linnaeus – S]

Eutrochium steelei (E.E. Lamont) E.E. Lamont, Appalachian Joe-pye-weed, Steele's Joe-pye-weed. Mt (NC, VA): cove hardwood and northern hardwood forests, up to at least 1600 m; uncommon. July-October. A Southern Appalachian endemic: e. KY and w. VA south w. NC and e. TN. [= FNA, X; = *Eupatoriadelphus steelei* (E. Lamont) G.J. Schmidt & Schilling – Y; = *Eupatorium steelei* E.E. Lamont – Z]

Facelis Cassini 1819

A genus of 3 species, herbs, of South America. References: Nesom in FNA (2006a); Arriagada (1998)=Z; Cronquist (1980)=SE; Anderberg (1991)=Y.

* ***Facelis retusa*** (Lamarck) Schultz 'Bipontinus', Trampweed. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (SC): fields, roadsides, lawns, disturbed areas; common (rare in VA), native of s. South America. Late April-June. [= RAB, FNA, K, SE, WH, Y, Z; *? F. apiculata* Cassini – S]

Filago Linnaeus 1753 (Cotton-rose, Herba Impia, Rabbit-tobacco)

A genus of about 40 species, herbs, of Eurasia, North America, and n. Africa. Arriagada (1998) favors the inclusion of *Evax* in *Filago*. References: Morefield in FNA (2006a); Arriagada (1998)=Z; Cronquist (1980)=SE; Anderberg (1991)=Y.

1 Inner flowers of the head with a well-developed capillary pappus; heads woolly, but not so densely and completely as to hide the phyllaries ... . ***F. vulgaris***

1 All flowers of the head lacking a pappus of capillary bristles; heads completely surrounded by wool, the phyllaries hidden ..... ***[see Diaperia]***

* ***Filago vulgaris*** Lamarck, Herba Impia. Pd (NC, VA), Mt (VA, WV), Cp (VA): disturbed areas; uncommon, native of Europe. May-September. [= FNA, K, Y; = *F. germanica* – RAB, C, F, G, SE, WV, Z; = *Gifola germanica* Dumortier – S]

Flaveria de Jussieu 1789

A genus of about 21 species, herbs and subshrubs, subcosmopolitan in tropical and subtropical areas. References: Yarborough & Powell in FNA (2006c); Cronquist (1980)=SE.

1 Heads borne in axillary glomerules; disc florets 0-1 (-2) ..... ***F. trinervia***
1 Heads borne in terminal arrays; disc florets (2-) 3-8.
  2 Lower leaves petiolate, 10-25 (-70) mm wide; annual; cypselas 2.0-2.5+ mm long..... ***F. bidentis***
  2 Lower leaves sessile, 1-4 (-15) mm wide; perennial; cypselas 1.2-1.8 mm long ..... ***F. linearis***

* ***Flaveria bidentis*** (Linnaeus) Kuntze. Cp (FL, GA): disturbed areas; rare, native of tropical America. FL Panhandle, s. FL, AL, GA. [= FNA, K, S, SE, WH]

Flaveria linearis Lagasca y Segura, Narrowleaf Yellowtops. Cp (FL): beaches, marshes, hammocks, pinelands; rare. Native in peninsular and Panhandle FL. [= FNA, GW, K, S, WH; < *F. linearis* – SE]

* ***Flaveria trinervia*** (Sprengel) C. Mohr, Clustered Yellowtops. Cp (SC, VA): waste areas around wool-combing mill, ore piles, seaport ballast; rare, probably only a waif, introduced from sw. United States (Nesom 2004d). March-December. Also known from ballast at Mobile, AL (Cronquist 1980). [= FNA, K, S, SE, WH]

Fleischmannia Schultz 'Bipontinus' 1850

A genus of about 80 species of s. North America, south through Central America to w. (Andean) South America. References: Nesom in FNA (2006c); Wooten & Clewell (1971)=Z; Schultz & Schilling (2000).

Fleischmannia incarnata (Walter) King & H.E. Robinson, Pink Thoroughwort, Pink Eupatorium. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (FL, GA, NC, SC, VA): nutrient-rich, moist to dry, forests and woodlands over diabase, limestone, coquina limestone, or other basic rocks, or on rich alluvium; rare. Late August-October. Se. VA west to WV, s. OH, s. IN, s. IL, s. MO, and e. OK, south to w. peninsular FL, Panhandle FL, s. TX, and e. Mexico, the distribution fragmented. See Wooten & Clewell (1971) for further information about this species. [= FNA, K, WH, Z; = *Eupatorium incarnatum* Walter – RAB, C, F, G, S, SE, W, WV]

Gaillardia Fougeroux 1786 (Blanket-flower, Gaillardia, Fire-wheels)

A genus of about 15-30 species, herbs, of temperate North America and South America. References: Strother in FNA (2006c); Cronquist (1980)=SE; Turner & Whalen (1975)=Z; Turner et al. (2003)=Y.

1 Receptacle naked, lacking well-developed setae (if setae present, < 1 mm long) ..... ***G. aestivalis*** *var.* ***aestivalis***
1 Receptacle with well-developed setae 2-3 mm long.
  2 Leaves fleshy; perennial or annual, strongly branching, the secondary branches spreading and therefore forming compact, rounded "bushes" ..... ***G. pulchella*** *var.* ***drummondii***
  2 Leaves herbaceous; annual, with secondary branches ascending ..... ***G. pulchella*** *var.* ***pulchella***

Gaillardia aestivalis (Walter) H. Rock *var.* ***aestivalis***, Sandhills Gaillardia. Cp (FL, GA, NC, SC), Mt? (GA?): sandhills, disturbed sandy soils; common, rare north of FL. July-October. Sc. NC south to c. peninsular FL, west to TX. The occurrence in nw. GA reported in Jones & Coile (1988) is odd. [= K, SE; < *G. aestivalis* – RAB, FNA; = *G. lanceolata* Michaux var. *lanceolata* – G; < *G. lanceolata* – S]

Gaillardia pulchella Fougeroux *var.* ***drummondii*** (Hooker) B.L. Turner, Beach Blanket-flower. Cp (FL, GA, NC, SC): sandy flats behind the dunes; common. April-December. Ne. NC south to FL, west to TX. [= Y; = *G. pulchella* Fougeroux var. *picta* (Sweet) A. Gray – K, Z; < *G. pulchella* – RAB, C, F, FNA, G, SE, WH; = *G. picta* Sweet – S]

* ***Gaillardia pulchella*** Fougeroux *var.* ***pulchella***, Common Blanket-flower. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): disturbed areas, persistent after cultivation; rare, introduced from further south and west. April-September. [= K, Y, Z; < *G. pulchella* – RAB, C, F, FNA, G, SE, WH; = *G. drummondii* (Hooker) A.P. de Candolle – S, misapplied]

Galinsoga Ruiz & Pavón 1794 (Peruvian-daisy, Quickweed)

A genus of about 13 species, herbs, of temperate and subtropical Central America and South America. References: Canne-Hilliker in FNA (2006c); Cronquist (1980)=SE.

1 Rays 0-1.5 (-2) mm long, lacking pappus scales (or with vestigial scales); outer phyllaries 2-4, with scarious margins; inner paleae deeply 3-lobed; pappus scales of the disc florets not awn-tipped; stem usually glabrous or sparsely pubescent with appressed (rarely spreading) hairs; gland-tipped hairs of the peduncles < 0.5 mm long; teeth of leaf margin obscure, broadly rounded or reduced to thickened bumps..... ***G. parviflora*** *var.* ***parviflora***
1 Rays 2-3 mm long, with pappus scales about as long as the corolla tube; outer phyllaries 1-2, with green herbaceous margins; inner paleae usually entire; pappus scales of the disc florets awn-tipped; stem usually moderately pubescent with long, spreading hairs; gland-tipped hairs of the peduncles > 0.5 mm long; teeth of leaf margins usually well developed, acute..... ***G. quadriradiata***

* ***Galinsoga parviflora*** Cavanilles *var.* ***parviflora***, Lesser Peruvian-daisy. Mt (NC, SC, VA, WV), Pd (VA), Cp (VA): disturbed areas, roadsides, barnyards; uncommon (rare in WV), native of Central and South America. May-November. [= FNA; < *G. parviflora* – C, F, G, K, S, SE, W, WV]

* ***Galinsoga quadriradiata*** Ruiz & Pavón, Common Peruvian-daisy, Devil's-delight, Raceweed. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, NC, SC, VA): disturbed areas, roadsides, barnyards; common (uncommon in GA, NC, SC, uncommon in DE Piedmont, rare in FL), native of Central and South America. May-November. A serious weed, especially in the cooler climates of the Mountains; Small (1933) described it as "a particularly pestiferous weed of such rapid growth and seeding as to make eradication extremely difficult." Fortunately, it does not seem especially prone to invade undisturbed natural areas. [= C, K, SE, W; > *G. ciliata* (Rafinesque) Blake – RAB, F, G, S, WV; > *G. caracasana* (A.P. de Candolle) Schultz 'Bipontinus' – F, G; > *G. bicolorata* St. John & White – F, G]

Gamochaeta Weddell 1856 (Cudweed, Everlasting)

A genus of about 50-80 species, herbs, subcosmopolitan, but primarily in South America. *Gamochaeta* is more closely related to other genera than it is to *Gnaphalium*. References: Nesom in FNA (2006a); Nesom (1990)=Z; Arriagada (1998)=Y; Nesom (2004b, 2004c)=X; Cronquist (1980)=SE; Pruski & Nesom (2004). Key based closely on FNA.

1 Leaves concolored or weakly bicolored (abaxial and adaxial faces more or less equally greenish to gray-greenish, indument usually loosely tomentose or arachnose, sometimes subpannose).
  2 Blades of basal and lower cauline leaves 4-16 mm wide; bracts among the inflorescence heads spatulate to oblanceolate, the lowermost (at least) surpassing the heads ..... ***G. pensylvanica***
  2 Blades of basal and lower cauline leaves 2-6 (10) mm wide; bracts among the inflorescence heads linear, oblanceolate, or oblong, surpassing the heads or not.
    3 Involucres 2.5-3 mm high, seated in tomentum; capitulescence initially cylindric and uninterrupted, at least distally, the main axis obscured by clustered heads; phyllaries in 3-4 (-5) series, the outer and middle ovate-lanceolate with narrowly to broadly acute apices, the outer 1/3-½ as long as the inner, none with purplish color; flowering May-July ..... ***G. antillana***
    3 Involucres 3-3.5 mm high, lightly arachnose only at the base if at all; capitulescence interrupted at least distally, the main axis visible up to the terminal heads; phyllaries in 5-7 series, the outer and middle ovate-triangular with sharply acute-acuminate apices, the outer ½-2/3 as long as the inner, at least the innermost commonly tinged with purple at the stereome-lamina junction; flowering (February-) March-May (sometimes later because of moisture or disturbance) ..... ***G. calviceps***
1 Leaves strongly to weakly bicolored with greenish glabrescent upper surfaces; leaves spatulate-obovate to oblanceolate; basal leaves present at flowering.
  4 Basal and proximal cauline leaves usually withering before anthesis (clusters of smaller leaves usually present in cauline axils); stems erect or ascending; plants (30-) 50-85 cm; apices of inner phyllaries acute-acuminate; flowering mostly July-August ..... ***G. simplicicaulis***
  4 Basal and proximal cauline leaves present or not at anthesis; stems erect to decumbent-ascending; plants mostly 10-50 cm; apices of inner phyllaries acute to obtuse, rounded, or blunt; flowering mostly April-June (-July in *G. calviceps*).
    5 Upper leaf surfaces glabrous or glabrate; involucres 2.5-3.0 mm high, more-or-less purplish, the bases glabrous; outer phyllaries elliptic-obovate to broadly ovate-elliptic, apices rounded to obtuse; bisexual florets 2-3 ..... ***G. coarctata***
    5 Upper leaf surfaces sparsely arachnose (hairs persistent, evident at 10× magnification); involucres 3.0-4.5(-5) mm high, sometimes purplish, bases (imbedded in tomentum) often sparsely arachnose on the lower 1/5-1/2; outer phyllaries ovate, ovate-triangular, or ovate-lanceolate, apices acute to acuminate; bisexual florets 2-6.
      6 Stems not pannose (indument whitish, like closely appressed, polished cloth, hairs usually not individually evident); involucres 3.0-3.5(-4.0) mm high; apices of inner phyllaries acute to acute-acuminate; bisexual florets 2-4; cypselae purple ..... ***G. chionesthes***
      6 Stems usually ± pannose or pannose-tomentose (hairs individually evident, longitudinally arranged); involucres 3.0-4.5 mm high; apices of inner phyllaries acute, obtuse, or truncate-rounded, sometimes apiculate; bisexual florets 3-6; cypselae tan to brownish.
        7 Blades of cauline leaves oblanceolate to oblanceolate-oblong or oblanceolate-obovate; involucres 3.0-3.5 mm high; laminae of inner phyllaries elliptic-oblong to oblong, apices truncate-rounded or obtuse and apiculate; bisexual florets (3-) 4-6; plants usually fibrous-rooted, rarely taprooted ..... ***G. argyrinea***
        7 Blades of cauline leaves oblanceolate to spatulate (basal cells of hairs on adaxial faces persistent, expanded, glassy); involucres 4.0-4.5 mm high; laminae of inner phyllaries triangular, apices acute (not apiculate); bisexual florets 3-4; plants fibrous-rooted or taprooted ..... ***G. purpurea***

Gamochaeta antillana (Urban) Anderberg, Caribbean Everlasting. Cp (FL, GA, NC, SC, VA): disturbed areas, fields, lawns; common. March-July. VA south to s. FL, west to AR and TX; Cuba; South America; Europe (introduced); New Zealand (introduced). [= FNA, WH, X; < *Gamochaeta falcata* (Lamarck) Cabrera – K, Z; < *Gnaphalium purpureum* Linnaeus var. *falcatum* (Lamarck) Torrey & A. Gray – RAB, C, G, SE; < *Gnaphalium calviceps* Fernald – F; < *Gnaphalium falcatum* Lamarck – S; < *Gnaphalium purpureum* Linnaeus – W]

* ***Gamochaeta argentina*** Cabrera. Cp (SC): waste areas near wool-combing mill; rare, perhaps merely a waif, native of Argentina and Uruguay. See Nesom (2004d). [= FNA] {not yet keyed}

Gamochaeta argyrinea Nesom. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): disturbed areas, roadsides, fields, lawns; common (rare in DE?). March-July. DE, MD, WV, KY, s. MO, se. KS, south to Panhandle FL and e. TX. [= FNA, WH, X; < *Gamochaeta purpurea* (Linnaeus) Cabrera – K, Y, Z; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – RAB, C, G, SE; < *Gnaphalium purpureum* Linnaeus – F, S, W]

Gamochaeta calviceps (Fernald) Cabrera. Cp (GA, NC, SC, VA), {GA, NC, SC}: disturbed areas, roadsides; uncommon (rare in VA). March-July. VA south to FL, west to TX; South America, California (introduced); Europe (introduced), New

Zealand (introduced). [= FNA, X; < *Gamochaeta falcata* (Lamarck) Cabrera – K, Z; < *Gnaphalium purpureum* Linnaeus var. *falcatum* (Lamarck) Torrey & A. Gray – RAB, C, G, SE; < *Gnaphalium calviceps* Fernald – F; < *Gnaphalium falcatum* Lamarck – S; < *Gnaphalium purpureum* Linnaeus – W]

* ***Gamochaeta chionesthes*** Nesom. Cp (FL, GA, NC, SC), Pd (GA): roadsides, disturbed areas; rare, apparently introduced from South America. March-July. [= FNA, WH, X; < *Gamochaeta purpurea* (Linnaeus) Cabrera – K, Y, Z; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – RAB, C, G, SE; < *Gnaphalium purpureum* Linnaeus – F, S, W]

* ***Gamochaeta coarctata*** (Willdenow) Kerguélen. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC): sandy roadsides, disturbed areas; common (rare in VA), native of South America. March-July. [= FNA, WH, X; < *Gamochaeta americana* (P. Miller) Weddell – K, Y, Z, misapplied; < *Gnaphalium purpureum* Linnaeus var. *americanum* (P. Miller) Klatt – RAB, misapplied]

* ***Gamochaeta pensylvanica*** (Willdenow) Cabrera, Pennsylvania Everlasting. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC), Mt (GA?, NC): fields, roadsides, pastures, disturbed areas; common, probably native of South America. March-July. PA south to s. FL, west to TX, mostly on the Coastal Plain, and widespread in South America and elsewhere. [= FNA, K, WH, X, Z; >< *Gnaphalium purpureum* Linnaeus var. *spathulatum* (Lamarck) Baker – RAB; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – C, G, SE; > *Gnaphalium peregrinum* Fernald – F; >< *Gnaphalium spathulatum* Lamarck – S; < *Gnaphalium purpureum* Linnaeus – W]

Gamochaeta purpurea (Linnaeus) Cabrera, Spoonleaf Purple Everlasting. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): fields, roadsides, pastures, disturbed areas; common. Late March-September. ME west to MI, south to s. FL and e. TX; apparently disjunct in CA and OR, adventive in w. US, Mexico, South America, and elsewhere. [= FNA, WH, X; < *Gamochaeta purpurea* (Linnaeus) Cabrera – K, Y, Z; < *Gnaphalium purpureum* Linnaeus var. *purpureum* – RAB, C, G, SE; < *Gnaphalium purpureum* Linnaeus – F, S, W, WV]

* ***Gamochaeta simplicicaulis*** (Willdenow ex Sprengel) Cabrera. Cp (FL, GA, NC, SC): disturbed areas, roadsides; uncommon (rare in FL), apparently native of South America. Late June-August. See Nesom (1999, 2000d, 2004b) for additional information. [= FNA, WH, X]

Garberia A. Gray 1879 (Garberia)

A monotypic genus, a shrub, of peninsular FL. References: Lamont in FNA (2006c).

Garberia heterophylla (W. Bartram) Merrill & F. Harper, Garberia. Cp (FL): scrub; rare. October-December. Endemic from ne. FL south to s. peninsular FL. [= FNA, WH; = *G. fruticosa* (Nuttall) A. Gray – S, SE]

Glebionis Cassini 1826 (Chryanthemum)

A genus of 2 species, annuals, native of Eurasia and n. Africa. References: Strother in FNA (2006a); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z.

1 Leaf blades 2-3-pinnate; rays pale yellow, 15-25 mm long ..... ***G. coronaria***
1 Leaf blades not lobed or coarsely 1-pinnate; rays golden yellow, 8-20 mm long..... ***G. segetum***

* ***Glebionis coronaria*** (Linnaeus) Cassini ex Spach, Garland Chrysanthemum, Crown-daisy. Cp (FL), {NC, SC}: disturbed areas; rare, native of Eurasia, cultivated and escapes and occurs as waifs in our area. [= FNA, WH; = *Chrysanthemum coronarium* Linnaeus – K, Z]

* ***Glebionis segetum*** (Linnaeus) Fourreau, Corn Marigold, Corn Chrysanthemum. Pd (NC): disturbed areas, trash heaps, field edges; commonly cultivated, rarely escaped, persistent, or as a waif, native of Eurasia. April-May. [= FNA; = *Chrysanthemum segetum* Linnaeus – RAB, C, F, G, K, S, SE]

Gnaphalium Linnaeus 1753 (Cudweed, Rabbit Tobacco)

A genus of about 40 species (as recircumscribed more narrowly), distributed on most continents. References: Nesom in FNA (2006a); Anderberg (1991)=Z. [also see *Gamochaeta* and *Pseudognaphalium*]

1 Involucre 2-3 mm high; plants to 2.5 dm tall; inflorescence of many, small, axillary and terminal clusters overtopped by subtending leaves..... ***Gn. uliginosum***
1 Involucre 4-7 mm high; plants generally well over 2.5 dm tall; inflorescence terminal, usually elongate ..... ***[see Pseudognaphalium]***

Gnaphalium uliginosum Linnaeus, Low Cudweed. Mt (VA, WV), Cp* (DE*), Pd* (DE*): high elevation openings, especially in ruts or mud-puddles, rocky places; rare, possibly introduced in North America. July-October. NL (Newfoundland) west to BC, south to VA, WV, OH, IN, MN, CO, UT, and OR. [= C, F, FNA, G, K, S, SE, WV, Z]

Grindelia Willdenow 1807 (Gum-plant, Tarweed, Rosinweed, Gumweed)

A genus of about 55 species, herbs and shrubs, of w. North America and South America. References: Strother & Wetter in FNA (2006b); Cronquist (1980)=SE.

1 Phyllaries loose (but not squarrose), only slightly imbricate ..... ***G. lanceolata*** *var.* ***lanceolata***
1 Phyllaries squarrose-reflexed, strongly imbricate..... ***G. squarrosa*** *var.* ***squarrosa***

* ***Grindelia lanceolata*** Nuttall *var.* ***lanceolata***. Mt (VA), Cp (SC, VA): disturbed areas, waste areas around wool-combing mill; rare, presumably introduced from farther west. This species is regarded as native as far east as the Nashville Basin of c. TN and scattered localities in the Ridge and Valley Province of e. TN (Chester, Wofford, & Kral 1997). [= C, K; < *G. lanceolata* – F, FNA, G, SE]
* ***Grindelia squarrosa*** (Pursh) Dunal *var.* ***squarrosa***, Curly-top Gumweed. Mt (VA), Pd (VA), Cp (DE): disturbed areas; uncommon (rare in VA), introduced from farther west. Other varieties are also adventive eastward, and might be expected in our area. [= C, F, G, K, SE; < *G. squarrosa* – FNA]

Guizotia Cassini in Cuvier 1829 (Niger-seed)

A genus of 6 species, herbs, of Africa. References: Strother in FNA (2006c); Sherff & Alexander (1955)=Z.

* ***Guizotia abysinica*** (Linnaeus f.) Cassini, Niger-seed, Niger-thistle, Ramtilla. Pd, Cp (VA): disturbed areas; rare, native of Africa. September-October. [= C, F, G, K; = *G. abyssinica* – FNA, Z, orthographic variant]

Gutierrezia Lagasca y Segura 1816

A genus of 28 species, annual and perennial herbs and subshrubs, of w. North America and w. South America. References: Nesom in FNA (2006b).

1 Subshrub; stems minutely hispidulous; ray florets 2-8; disc florets 2-9 ..... ***G. sarothrae***
1 Annual; stems glabrous; ray florets 5-23; disc florets 7-13..... ***G. texana*** *var.* ***texana***

* ***Gutierrezia sarothrae*** (Pursh) Britton & Rusby, Kindlingweed. Cp (SC): waste areas around wool-combing mill; rare, perhaps merely a waif, native of w. North America. See Nesom (2004d). [= FNA, K; = *Xanthocephalum sarothrae* (Pursh) Shinners]
* ***Gutierrezia texana*** (A.P. de Candolle) Torrey & A. Gray *var.* ***texana***, Texas Snakeweed Cp (SC): waste areas around wool-combing mill; rare, perhaps merely a waif, native of sc. North America. See Nesom (2004d). [= FNA, K; = *Xanthocephalum texanum* (A.P. de Candolle) Shinners]

Hartwrightia A. Gray ex S. Watson 1888 (Hartwrightia)

A monotypic genus, a perennial herb, of se. United States (FL and GA). References: Nesom in FNA (2006c).

Hartwrightia floridana A. Gray ex S. Watson, Hartwrightia. Cp (FL, GA): seepages and wet pinelands; rare. July-September. Se. GA south to c. peninsular FL. [= FNA, K, S, SE, WH]

Helenium Linnaeus 1753 (Sneezeweed, Bitterweed)

A genus of about 32-40 species, herbs, of America. References: Bierner (1989)=Y; Bierner (1972)=Z; Rock (1957); Knox (1987); Rydberg (1915); Cronquist (1980)=SE.

1 Stem leaves very numerous, 0.5-2 (-4) mm wide, not decurrent on the stem or branches; plant a taprooted annual; [section *Amarum*].
  2 Disc corollas yellow, the lobes yellow or yellow-brown; lower and basal leaves usually withered at anthesis; lower leaves usually entire (rarely toothed); basal leaves entire to toothed (rarely pinnatifid)..... ***H. amarum*** *var.* ***amarum***
  2 Disc corollas yellow, the lobes (and sometimes also the upper portion of the corolla tube) purple; lower and basal leaves often persistent; lower leaves linear to ovate, entire, toothed, lobed or pinnatifid; basal leaves pinnatifid..... ***H. amarum*** *var.* ***badium***
1 Stem leaves few to numerous, at least the larger > 4 mm wide, decurrent on the stems and branches; plant a fibrous-rooted perennial **or** a taprooted annual.
  3 Ray flowers lacking a pistil and style, sterile; [section *Leptopoda*].
    4 Disc flowers with lobes brown, red, or purple.
      5 Disc flowers 5-lobed and with 5 stamens..... ***H. brevifolium***
      5 Disc flowers predominately 4-lobed and with 4 stamens ..... ***H. flexuosum***
    4 Disc flowers with lobes yellow.

6 Midstem leaves barely decurrent on the stem, the decurrency < 0.5 cm; basal leaves often pinnatifid (less commonly merely dentate, repand, or entire), the lower portion of the leaf not contracted so as to be petiolate in form; achene pubescent on the ribs; peduncle pubescent; basal leaves (3.0-) 4.5-8.0 (-19.0) cm long, 0.3-1.1 cm wide, averaging ca. 7-10× as long as wide ..... ***H. pinnatifidum***

6 Midstem leaves decurrent on the stem, the decurrency > 2 cm , and usually extending to the next leaf down; basal leaves usually repand or entire (rarely somewhat lobed or pinnatifid), the lower portion narrowed into a petiolate form which enlarges at its base to more-or-less clasp the stem; achene glabrous, or pubescent on the ribs; peduncle pubescent or glabrous; basal leaves averaging narrower or broader in shape (see below).

7 Peduncle pubescent to tomentose or lanose between the uppermost leaf and the head; achene pubescent on the ribs; heads 1-4 per plant; basal leaves (2.5-) 4.0-10.5 (-18.0) cm long, (0.8-) 1.2-2.0 (-2.5) cm wide, averaging ca. 4-6× as long as wide ..... ***H. brevifolium***

7 Peduncle glabrous or glabrate between the uppermost leaf and the head; achene glabrous; heads 1 per plant; basal leaves (3.0-) 6.5-17.0 (-25.0) cm long, (0.4-) 0.6-1.0 (-1.5) cm wide, averaging ca. 10-15× as long as wide ..... ***H. vernale***

3 Ray flowers bearing a pistil and style, fertile.

8 Plant a fibrous-rooted perennial; [native species, collectively widespread and common]; [section *Helenium*].

9 Leaves not basally disposed, the basal leaves usually absent at flowering (if present, mostly < 2 cm long), the stem leaves not progressively reduced upward; pappus scales brownish, 0.3-1.2 mm long (usually < 1 mm long); upper cauline leaves serrate (rarely entire), mostly oblanceolate, usually broadest near the midpoint or beyond it, with conspicuous lateral veins apparent on the lower surface ..... ***H. autumnale***

9 Leaves basally disposed, the basal rosette usually present at flowering, the basal leaves > 4 cm long, larger than the progressively smaller stem leaves; pappus scales white-hyaline, 0.9-1.9 mm long (usually > 1 mm long); upper cauline leaves entire, lanceolate, usually broadest at or near the base and rather evenly tapered to the apex, lacking conspicuous lateral veins ..... ***H. virginicum***

8 Plant a tap-rooted annual or biennial; [alien species, rare waifs of wool-combing mills]; [section *Tetrodus*].

10 Disc corollas 4-lobed; heads 7-11 (-14) mm high, 6-11 wide (excluding the ray flowers) ..... ***H. quadridentatum***

10 Disc corollas 5-lobed; heads 4-8 mm high, 4-8 mm wide (excluding the ray flowers).

11 Upper leaves entire ..... ***H. elegans*** *var.* ***elegans***

11 Upper leaves serrate ..... ***H. microcephalum*** *var.* ***microcephalum***

* ***Helenium amarum*** (Rafinesque) H. Rock *var.* ***amarum***, Bitterweed. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): roadsides, overgrazed pastures, urban areas; common (rare in Mountains), apparently introduced from further west. May-December. Now widespread in e. North America. Bierner (1989) discusses the taxonomy of section *Amarum*, consisting only of the 2 varieties of *H. amarum*. Var. *amarum* is widespread; var. *badium* (A. Gray ex S. Watson) Waterfall, distinguished in part by its purple disk flowers, occurs in OK, TX, and Mexico. The plant has a very bitter taste and is generally avoided by grazing animals, a point noted by Rafinesque in his original description (in 1817): "the whole plant is odoriferous and intensely bitter, it gives an abominable taste to the milk of the cows that feed on it in summer." Overgrazed areas come to be dominated by *H. amarum*. In areas where it is frequently mowed, *H. amarum* appears to evolve a genotype capable of flowering and fruiting when only a few cm tall. [= C, FNA, K, Y; = *H. tenuifolium* Nuttall – F, S; = *H. amarum* – RAB, G, W, Z; < *H. amarum* – SE, WH]

* ***Helenium amarum*** (Rafinesque) H. Rock *var.* ***badium*** (A. Gray ex S. Watson) Waterfall. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of OK and TX. May-June. See Nesom (2004d). [= FNA, K, Y; < *H. amarum* – SE; = *H. badium* (A. Gray ex S. Watson) Greene – Z]

Helenium autumnale Linnaeus, Common Sneezeweed. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): moist pastures, forests, woodlands, forest edges; common. September-October. QC west to BC, south to n. peninsular FL, TX, and CA. Like *H. amarum*, *H. autumnale* is bitter and unpalatable to grazing animals, becoming more abundant in pastures. [= RAB, FNA, WH; > *H. autumnale* var. *autumnale* – C, F, G, K, SE, WV; > *H. autumnale* var. *parviflorum* (Nuttall) Fernald – F, K, WV; > *H. latifolium* P. Miller – S; > *H. parviflorum* Nuttall – S; < *H. autumnale* – GW, W (also see *H. virginicum*)]

Helenium brevifolium (Nuttall) A. Wood. Cp (GA, NC, VA), Mt (NC, VA), Pd (GA, NC, VA): seepage bogs; rare. May-June. *H. brevifolium* has a peculiar distribution, reaching its greatest abundance on the Gulf Coastal Plain, from Panhandle FL west to e. LA, and occurring at widely scattered disjunct sites in c. and n. AL, wc. GA, c. and w. NC, ec. TN (Chester, Wofford, & Kral 1997), and sw. and se. VA. [= RAB, C, FNA, G, GW, K, SE, W, WH, Z; > *H. brevifolium* – F, S; > *H. curtisii* A. Gray – F, S]

* ***Helenium elegans*** A.P. de Candolle *var.* ***elegans***. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of LA, OK, and TX. May. See Nesom (2004d). [= FNA, K, Z]

Helenium flexuosum Rafinesque, Southern Sneezeweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): moist pastures, moist forests, riverbanks; common. May-August. S. ME west to MN, south to c. peninsular FL and TX. [= RAB, C, FNA, G, GW, K, SE, W, WH, WV, Z; > *H. nudiflorum* Nuttall – F, S; > *H. polyphyllum* Small – S]

* ***Helenium microcephalum*** A.P. de Candolle *var.* ***microcephalum***. Cp (SC): waste areas around wool-combing mills; rare, perhaps only a waif, native of OK, TX, NM, and CO. May-July. See Nesom (2004d). [= FNA, K, Z]

Helenium pinnatifidum (Nuttall) Rydberg. Cp (FL, GA, NC, SC): wet savannas and adjacent ditches; rare (NC Rare, SC Rare). April-May. A Southeastern Coastal Plain endemic: se. NC south to s. FL, west to Panhandle FL, sw. GA, and s. AL. [= RAB, FNA, GW, K, SE, WH, Z; = *H. vernale* – S, misapplied]

* ***Helenium quadridentatum*** Labill. {SC}: location and habitat unknown; presumably introduced from sc. United States. Reported for SC by Rydberg (1915), Small (1933), and Kartesz (1999); also east to AL (SE). [= FNA, K, S, SE, Z]

Helenium vernale Walter. Cp (FL, GA, NC, SC): wet savannas and adjacent ditches; rare (rare in NC). April-May. A Southeastern Coastal Plain endemic: se. NC south to ne. FL, Panhandle FL, and west to e. LA. [= RAB, FNA, GW, K, SE, WH, Z; = *Helenium helenium* (Nuttall) Small – S]

Helenium virginicum S.F. Blake, Virginia Sneezeweed. Mt (VA): seasonal sinkhole ponds and clearings where such ponds once occurred; rare. July-September. *H. virginicum* is bimodally endemic in VA (Augusta and Rockingham counties, VA, where a series of sinkhole ponds (dolines) on acid colluvium support numerous Coastal Plain disjuncts) and MO (Ozarkian

highlands). See Knox (1987) for a comparison of this narrow endemic and *H. autumnale*. Knox (1997) presents a study of the demography and habitat of *H. virginicum*. [= C, F, FNA, G, K, SE; < *H. autumnale* – GW, W]

Helianthus Linnaeus 1753 (Sunflower)

A genus of about 50 species, herbs, of North America. References: Schilling in FNA (2006c); Heiser *et al.* (1969); Cronquist (1980)=SE; Schilling *et al*. (1998). Key adapted from FNA, SE, RAB, and Heiser *et al.* (1969).

1 Leaves basally disposed, the plants scapose to subscapose, the stem leaves relatively few (with 2-8 nodes below the inflorescence), those on the upper stem opposite or alternate, strongly reduced upward in size as compared to the persistent basal leaves; [section *Atrorubentes*] ..... **Key A**
1 Leaves cauline, plants leafy the length of the stem, the stem leaves many (with 10 or more nodes below the inflorescence), basal leaves lacking (at least at anthesis).
2 Plant a tap-rooted annual (rarely surviving a second year) ..... **Key B**
2 Plant a perennial from crown buds or rhizomes, the roots sometimes tuberous-thickened; [section *Atrorubentes*].
3 Disk flowers red or purple (at least in part) ..... **Key C**
3 Disk flowers yellow ..... **Key D**

Key A – sunflowers with basally disposed leaves

1 Disk flowers yellow.
2 Basal leaves 13-30 cm long, 0.7-2.0 cm wide; leaves 10-20× as long as wide, glabrous ..... ***H. longifolius***
2 Basal leaves 6-15 cm long, 2-8 cm wide; leaves 1.5-5× as long as wide, scabrous or hirsute (rarely glabrous) ..... ***H. occidentalis*** *ssp.* ***occidentalis***
1 Disk flowers red or purple (at least in part).
3 Basal leaves 6-20 cm long; lower several pairs of stem leaves up to 1/2 as long and wide as the basal leaves.
4 Trichomes on the leaf abaxial midrib > 1 mm long; lower stem with a few pairs of leaves (< 8 nodes below the capitulescence), these strongly reduced upward; leaf blades (1.3-) 1.7-2.5 (-3)× as long as wide; petiole often > 1/3 as long as the blade, broadly winged toward the blade; plants to 2 m tall; nonflowering stems usually absent; [widespread in our area] ..... ***H. atrorubens***
4 Trichomes on the leaf abaxial midrib < 1 mm long; lower stem leafy, often to above the middle (> 8 nodes below the capitulescence); leaf blades 1-1.7 (-2)× as long as wide; petiole usually < 1/3 as long as the blade, narrowly winged toward the blade; plants to 3 m tall; nonflowering stems usually present; [west of our area] ..... ***[H. silphioides]***
3 Basal leaves 4-15 cm long; lower several pairs of stem leaves often < 1/2 as long and wide as the basal leaves.
5 Basal leaves (1.6-) 2-5× as long as wide; ray flowers present, typically 1.5-3.5 cm long; [of wet savannas and bogs] ..... ***H. heterophyllus***
5 Basal leaves 1-1.5× as long as wide; ray flowers none, or present but < 1 cm long; [of dry savannas and sandhills] ..... ***H. radula***

Key B – annual sunflowers

1 Disk flowers yellow.
2 Leaves ovate, 10-40 cm long, 5-25 cm wide, toothed, the base often cordate or subcordate; disc corollas 5-8 mm long; stems 10-30 dm tall; [section *Helianthus*] ..... ***H. annuus***
2 Leaves 5-10 cm long, 0.2-1.0 cm wide, entire or nearly so, the base cuneate; disc corollas 2.8-3.5 mm long; stems 4-10 dm tall; [section *Porteri*] ..... ***H. porteri***
1 Disk flowers red or purple (at least in part).
3 Leaves, stems and phyllaries densely covered with soft, silvery-white pubescence; [section *Helianthus*] ..... ***H. argophyllus***
3 Leaves, stems, and phyllaries nearly glabrous to scabrous or hirsute.
4 Style branches yellow; [section *Agrestes*] ..... ***H. agrestis***
4 Style branches red; [section *Helianthus*].
5 Phyllaries ovate to ovate-oblong, > 4 mm wide, abruptly contracted to an acuminate tip, the margins strongly ciliate; leaves 5-25 cm wide; disk (2-) 3-30 cm wide; plants (0.5-) 1-3 m tall ..... ***H. annuus***
5 Phyllaries lanceolate, gradually tapering to an acuminate tip, the margins not ciliate or weakly so; leaves 1.5-9 cm wide; disk 1-2.5 cm wide; plants 0.4- 1 (-1.5) m tall.
6 Tips of the receptacular bracts in the center of the head conspicuously white-bearded; stems normally not mottled ..... ***H. petiolaris*** *var.* ***petiolaris***
6 Tips of the receptacular bracts in the center of the head not bearded; stems normally mottled with purple
7 Peduncles 25-50 cm long; leaves usually shallowly but regularly serrate; ligules usually > 2 cm long ..... ***H. debilis*** *ssp.* ***cucumerifolius***
7 Peduncles usually < 25 cm long; leaf usually deeply irregularly serrate; ligules usually < 2 cm long ..... ***H. debilis*** *ssp.* ***tardiflorus***

Key C – perennial sunflowers with leafy stems and red disk flowers

1 Leaf blades long and narrow, linear or lanceolate and usually > 10× as long as wide.
2 Stems glabrous and glaucous; leaf margins not revolute ..... ***[H. salicifolius]***

2 Stems pubescent; leaf margins often revolute.
3 Plants short, < 1.5 m tall; leaves < 1 cm wide; rhizomes lacking or poorly developed ..... ***H. angustifolius***
3 Plants robust, > 1.5 m tall; leaves > 1 cm wide; rhizomes well developed ..... ***H. simulans***
1 Leaf blades shorter and broader, lanceolate, lance-ovate, deltoid, deltoid-ovate and usually < 5× as long as wide.
4 Phyllaries 1.5-3 mm broad, lanceolate ..... ***H. floridanus***
4 Phyllaries 3-5 mm broad, oblong, ovate, or obovate.
5 Abaxial surfaces of leaves and ligules lacking subsessile glandular trichomes; leaves usually broadly ovate to orbicular and with a petiole > 1 cm long ..... ***[H. silphioides]***
5 Abaxial surfaces of leaves and ligules with subsessile glandular trichomes; leaves usually lanceolate to lance-ovate or rhombic-ovate and with a petiole usually < 1 cm long.
6 Phyllaries oblong-lanceolate, apex acuminate, abaxially usually pubescent ..... ***H. laetiflorus***
6 Phyllaries elliptical to oblong-ovate, apex acute, abaxially glabrate ..... ***H. pauciflorus*** *ssp.* ***pauciflorus***

Key D – perennial sunflowers with leafy stems and yellow disk flowers

1 Stems below the capitulescence glabrous or nearly so, sometimes glaucous.
2 Leaves whorled at principal nodes, either alternate or opposite at other nodes ..... ***H. verticillatus***
2 Leaves either alternate or opposite (or both).
3 Leaves grayish-green or bluish green in color, sessile, and abaxially glabrous and glaucous.
4 Rays 10-14; leaves strumose adaxially, rough to the touch; phyllaries 3.5-4.5 mm wide ..... ***H. eggertii***
4 Rays 5-10; leaves glabrous or glabrate adaxially, smooth or only slightly rough to the touch; phyllaries 2-3 mm wide .... ***H. laevigatus***
3 Leaves light to dark green, sometimes whitish abaxially, but not grayish or bluish green in color; leaves sessile or petiolate, glabrous or pubescent.
5 Leaves linear-lanceolate, with only a single main vein ..... ***H. smithii***
5 Leaves linear-lanceolate to lanceolate, lance-ovate, or ovate, triplinerved at base.
6 Rays few, usually 5 or 8; heads small, the involucres 9 mm broad or less.
7 Leaves abaxially whitish in color and glabrous and glaucous, lacking subsessile glandular trichomes ("resin dots") ..... ***H. glaucophyllus***
7 Leaves abaxially greenish in color, usually tomentulose (sometimes glabrate), with abundant subsessile glandular trichomes ..... ***H. microcephalus***
6 Rays usually 10 or more in larger heads; heads larger, the involucres usually > 9 mm broad.
8 Leaves sessile, rounded to cordate at base, and trinerved, with the 2 lateral veins diverging from the midrib at the very base of the leaf ..... ***H. divaricatus***
8 Leaves sessile to petiolate, but narrowing gradually to base and triplinerved, the 2 lateral veins diverging from the midrib above the base of the blade.
9 Anther appendages yellow.
10 Leave blade lanceolate to lance-ovate, sessile to petiolate but the petiole usually < ¼ as long as the blade; phyllaries not conspicuously graduated and imbricate, usually loose and spreading ..... ***H. grosseserratus***
10 Leaf blade ovate to elliptic, with a distinct petiole usually > 2 cm long and ½ as long as blade or longer; phyllaries conspicuously graduated and imbricate, usually appressed, not exceeding disk ..... ***H. occidentalis*** *ssp.* ***occidentalis***
9 Anther appendages dark or reddish-brown.
11 Plants producing abundant tubers; leaves subsessile, the petioles < 1 cm long; [endemic to the Piedmont of NC and SC] ..... ***H. schweinitzii***
11 Plants rhizomatous, but not producing tubers; leaves petiolate, the petioles 1-5 cm long; [collectively widespread in our area].
12 Phyllaries equal to or slightly exceeding disk, apex acute; leaves moderately serrate to entire, with a petiole 1-3 cm long, and abaxially with usually abundant subsessile glandular trichomes ("resin dots") ..... ***H. strumosus***
12 Longer phyllaries usually exceeding disk by ½ their length or more, apex acuminate; larger leaves moderately to conspicuously serrate, with a petiole 2-5 cm long, and abaxially with usually relatively few subsessile glandular trichomes ..... ***H. decapetalus***
1 Stems pubescent throughout, not glaucous.
13 Leaves sessile and cordate, mostly or all opposite ..... ***H. mollis***
13 Leaves petiolate or sessile, but not cordate, and alternate or opposite.
14 Phyllaries attenuate, conspicuously exceeding the disk in length and reflexed, apically with numerous subsessile glandular trichomes ("resin dots"); leaf bases often convex, the basically ovate or lance-ovate blade joined to a broadly winged and gradually narrowed petiole ..... ***H. resinosus***
14 Phyllaries acute to attenuate, but not reflexed, subsessile glandular trichomes present or absent; leaf bases usually attenuate to truncate or rounded, the blade lance-linear or lanceolate, or if ovate or lance-ovate either sessile or with a petiole that is at most narrowly winged.
15 Leaves conduplicate and entire, usually with only a single prominent main vein; inflorescence when well developed spiciform or racemose ..... ***H. maximilianii***
15 Leaves not conduplicate, entire or serrate, triplinerved (with a prominent lateral pair of veins near the base); inflorescence not spiciform or racemose.
16 Phyllaries conspicuously graduated and imbricate, usually appressed.
17 Leaf blades lanceolate to ovate, petiole 1-5 cm long and usually < ½ as long as blade; anther appendages with dark pigment; cypselas 4-5 mm, usually sterile ..... ***H. laetiflorus***
17 Leaf blades ovate to elliptic, petiole distinct, > 2 cm and usually > ½ as long as the blade; anther appendages yellow; cypselas 3-4 mm long, fertile ..... ***H. occidentalis*** *ssp.* ***occidentalis***
16 Phyllaries not conspicuously graduated and imbricate, usually loose or spreading.

18 Leaves with a prominent petiole > 2 cm long, blades lance-ovate to ovate and > 5 cm broad; cypselas 5-7 mm long; tubers produced late in growing season ..... ***H. tuberosus***
18 Leaves sessile or with a short petiole usually < 2 cm long; blades linear to lanceolate, < 4.5 cm broad; cypselas 3-5 cm long; tubers present or absent.
19 Leaves truncate to broadly rounded at base, shortly but distinctly petiolate ..... ***H. hirsutus***
19 Leaves cuneate, gradually narrowing to base, sessile to petiolate.
20 Ligules lacking subsessile glandular trichomes; leaves not strongly revolute ..... ***H. giganteus***
20 Ligules abaxially with subsessile glandular trichomes ("resin dots"); leaves usually revolute.
21 Heads relatively small, the discs usually < 15 mm across; tubers present ..... ***H. schweinitzii***
21 Heads larger, the discs (at least the larger) > 15 mm across; tubers absent.
22 Leaves conspicuously undulate; ovate to elliptical to lanceolate, occasionally linear (if so, usually < 10 cm long), usually < 5× as long as wide; heads 1-6 per plant; outer phyllaries acute to obtuse ..... ***H. floridanus***
22 Leaves not conspicuously undulate; linear to lanceolate, > 5× as long as broad (and also 8-16 cm long); heads 3-16 per plant; outer phyllaries acuminate to acute.
23 Plants short, < 1.5 m tall; leaves < 1 cm wide; rhizomes lacking or poorly developed ..... ***H. angustifolius***
23 Plants robust, > 1.5 m tall; leaves > 1 cm wide; rhizomes well developed ..... ***H. simulans***

Helianthus agrestis Pollard, Southeastern Sunflower. Cp (FL, GA): mucky areas in pine flatwoods; rare (GA Special Concern). August-December. S. GA south to s. FL. [= FNA, GW, K, S, SE, WH]

Helianthus angustifolius Linnaeus, Narrowleaf Sunflower. Cp (DE, FL, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV*), Pd (GA, NC, SC, VA): savannas, ditches, marshes, other wet habitats; common (uncommon in Piedmont of GA, NC, and SC, uncommon in DE Coastal Plain, rare in VA Piedmont, rare in Mountains). (July-) September-October (-frost). Primarily Coastal Plain, from Long Island, NY south to c. peninsular FL and west to TX, irregularly inland to OH, IN, and MO. This plant is very showy when in flower on roadsides, especially in October. [= RAB, C, FNA, G, GW, K, S, SE, W, WH, WV; > *H. angustifolius* var. *angustifolius* – F; > *H. angustifolius* var. *planifolius* Fernald – F]

* ***Helianthus annuus*** Linnaeus, Common Sunflower. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, NC, SC, VA), Mt (NC, SC, VA, WV): disturbed areas, often cultivated in gardens, sometimes cultivated in fields; uncommon, native of the Plains states. June-October. This is the common cultivated sunflower grown for its flowers, seeds, and oil. [= RAB, C, F, FNA, G, K, S, SE, W, WH, WV]

* ***Helianthus argophyllus*** Torrey & A. Gray, Silverleaf Sunflower. Cp (FL, NC): dunes and disturbed sandy soil on a barrier island; rare, native of TX. July-October. Native to s. TX. Heiser *et al.* (1969) noted a collection from NC, but stated their uncertainty as to its establishment. *H. argophyllus* is well-established near Captain Charlie's on Bald Head Island, Brunswick County, where it has apparently persisted and spread over the last 30 years (at least). [= F, FNA, K, S, SE, WH]

Helianthus atrorubens Linnaeus, Appalachian Sunflower. Mt (GA, NC, SC, VA), Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA): dry soils of rocky, sandy, or clayey woodlands and roadbanks; common (uncommon in VA Mountains, rare in FL). Late July-October. N. VA west to w. TN, and south to c. GA, Panhandle FL, AL, and se. LA. Related to the Ozarkean *H. silphioides* Nuttall. [= RAB, C, FNA, G, K, SE, W; > *H. atrorubens* var. *alsodes* Fernald – F; > *H. atrorubens* var. *atrorubens* – F; < *H. atrorubens* – S (also see *H. silphioides* Nuttall)]

Helianthus debilis Nuttall *ssp.* ***cucumerifolius*** (Torrey & A. Gray) Heiser, Cucumber-leaf Sunflower. Cp (FL, GA*?, NC*, SC*, VA*), Mt* (VA*, WV*): sandy soils of fields and roadsides; common (uncommon in FL, rare in VA and WV), native from FL westward along the Gulf Coast states. May-August. [= FNA, K; = *H. debilis* var. *cucumerifolius* (Torrey & A. Gray) A. Gray – RAB, C, F, WV; = *H. cucumerifolius* Torrey & A. Gray – G, S; = *H. debilis* ssp. *cucumerifolius* (Torrey & A. Gray) Heiser var. *cucumerifolius* (Torrey & A. Gray) A. Gray – SE; < *H. debilis* ssp. *cucumerifolius* – WH]

Helianthus debilis Nuttall *ssp.* ***tardiflorus*** Heiser. Cp (FL, GA): sandy beaches, dry pinelands; uncommon. March-September. GA, FL, AL, and MS. [= FNA, K; < *H. debilis* – S; = *H. debilis* ssp. *cucumerifolius* (Torrey & Gray) Heiser var. *tardiflorus* (Heiser) Cronquist – SE; < *H. debilis* ssp. *cucumerifolius* – WH]

Helianthus decapetalus Linnaeus, Forest Sunflower. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (NC, SC, VA): mesic woodlands and forests; common (rare in Coastal Plain). July-October. ME and QC west to WI and IA, south to GA and MO. [= RAB, C, FNA, G, K, S, SE, W; > *H. decapetalus* – F, WV; > *H. trachelifolius* P. Miller – F, WV]

Helianthus divaricatus Linnaeus, Spreading Sunflower. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): mesic to dry woodlands and forests, forest edges; common (rare in Coastal Plain, rare in DE Piedmont). June-August. ME, QC, ON, and IA south to Panhandle FL, LA, and OK. [= RAB, C, FNA, G, K, S, SE, W, WH, WV; > *H. divaricatus* var. *angustifolius* Kuntze – F; > *H. divaricatus* var. *divaricatus* – F]

Helianthus eggertii Small, Eggert's Sunflower. Pd (SC): limestone and diabase barrens; rare. Sc. KY, c. TN, and n. AL; apparently disjunct in nc. SC (P. McMillan, pers. comm. 2003, specimen at CLEMS). [= FNA, K, S, SE]

Helianthus floridanus A. Gray ex Chapman, Florida Sunflower. Cp (GA, NC, SC): wet savannas and pocosin edges; common (rare in NC and SC). September-October. A Southeastern Coastal Plain species: se. NC south to c. peninsular FL, and west to se LA. [= RAB, FNA, GW, K, S, SE, WH]

Helianthus giganteus Linnaeus, Tuberous Sunflower, Swamp Sunflower. Pd (DE, NC, SC, VA), Mt (GA, NC, VA, WV), Cp (DE, NC, VA): bog edges, moist thickets, ditches; common (uncommon south of VA). Late July-October. NB and ME west to MN, south to n. SC, n. GA, e. and c. TN, c. KY, n. IN, n. IL, and WI. [= RAB, C, F, FNA, G, GW, K, S, SE, W, WV; > *H. giganteus* – S; > *H. alienus* E.E. Watson – S; > *H. validus* E.E. Watson – S]

Helianthus glaucophyllus D.M. Smith, Whiteleaf Sunflower. Mt (NC, SC), Pd (SC): moist forests, woodlands, and woodland edges, at medium elevations, mostly from 1000-1500 m (but sometimes lower), generally flowering only when in a canopy gap (as caused by a tree-fall) or along banks of narrow roads; rare. July-September. A narrow Southern Appalachian

endemic: w. NC, nw. SC, and ne. TN (Chester, Wofford, & Kral 1997). First reported for SC by Hill & Horn (1997). [= RAB, FNA, K, SE, W]

* ***Helianthus grosseserratus*** Martens, Sawtooth Sunflower. Pd (DE, GA, NC, VA), Mt (VA, WV), Cp (DE, VA): disturbed areas; uncommon (rare in GA, NC, and VA Coastal Plain, rare in VA Mountains, rare in DE Piedmont), introduced from farther west. The original range of this species was apparently centered in OH, IN, IL, IA, and MO, but its exact extent is obscured by its subsequent spread. Reported for NC by Matthews & Mellichamp (1989). [= C, F, FNA, G, K, W, WV; = *H. grosse-serratus* – S, SE, orthographic variant]

Helianthus heterophyllus Nuttall, Savanna Sunflower. Cp (GA, NC, SC): wet savannas, seepage bogs; uncommon (rare in GA). August-October. A Southeastern Coastal Plain endemic: se. NC south to Panhandle FL and west to se. LA. [= RAB, FNA, GW, K, S, SE, WH]

Helianthus hirsutus Rafinesque, Hairy Sunflower. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (FL, SC): woodlands and other sunny or semi-sunny habitats; uncommon (rare in FL and VA). July-October. PA and MN, south to n. FL and TX. [= RAB, C, FNA, G, K, S, SE, W, WH, WV; > *H. hirsutus* var. *hirsutus* – F; > *H. hirsutus* var. *trachyphyllus* Torrey & Gray – F; > *H. hirsutus* var. *stenophyllus* Torrey & Gray – F]

* ***Helianthus laetiflorus*** Persoon. Cp (NC, SC, VA), Pd (NC, SC, VA), Mt (VA, WV): disturbed areas; uncommon, introduced from farther west. Late July-September. Widely scattered in e. and c. North America, believed to be a derivative of the hybrid of *H. pauciflorus* Nuttall ssp. *subrhomboideus* (Rydberg) O. Spring & E. Schilling and *H. tuberosus*. [= RAB, G, S, SE, WV; = *H.* ×*laetiflorus* Persoon (pro sp.) – C, FNA, K; = *H. laetiflorus* var. *laetiflorus* – F]

Helianthus laevigatus Torrey & A. Gray, Shale-barren Sunflower, Smooth Sunflower. Mt (NC, VA, WV), Pd (NC, SC, VA): on dry, rocky or shaly soils, on roadbanks, powerline rights-of-way, open woodlands, in the Carolinas nearly limited to the Carolina Slate Belt; common in VA, uncommon in WV, rare in NC and SC). August-October. The primary range of *H. laevigatus* is in the mountains of c. and w. VA and e. WV, from whence it is disjunct to a few areas in the Piedmont of NC and SC, most notably the Carolina Slate Belt in Montgomery and Stanly counties, NC. [= RAB, C, F, FNA, G, K, SE, W, WV; > *H. laevigatus* – S; > *H. reindutus* (Steele) E.E. Watson – S]

Helianthus longifolius Pursh, Longleaf Sunflower. Mt (GA, NC*), Pd, Cp (GA): sandstone and granite glades and woodlands, loamy to xeric longleaf pine sandhills; rare. August-October. This species is apparently rare, occurring in ne. AL, n. GA (introduced in sw. NC). [= RAB, FNA, K, S, SE]

* ***Helianthus maximilianii*** Schräder, Maximilian Sunflower. Pd (NC, SC, VA), Mt (NC, SC, VA, WV), Cp (NC, VA): moist roadsides and disturbed areas; uncommon, introduced from farther west. September-October. MI and MB west to BC and south to TX; introduced in the East. [= C, SE, W; = *H. maximiliani* – RAB, F, FNA, G, K, S, orthographic variant]

Helianthus microcephalus Torrey & A. Gray, Small-headed Sunflower. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (GA, NC, SC): dry woodlands and roadbanks; common (uncommon in Coastal Plain, rare in VA Piedmont). July-October. NJ west to MN, south to Panhandle FL and se. LA. [= RAB, F, FNA, G, K, S, W, WH, WV; < *H. microcephalus* – C, SE]

Helianthus mollis Lamarck, Ashy Sunflower, Gray Sunflower. Cp* (NC, SC, VA), Pd* (GA, NC, VA), Mt (GA, NC*, VA*, WV*): calcareous prairies and barrens, disturbed places; rare, in much of our area introduced from farther west. July-September. Apparently native of the Midwest, centered in IN, IL, MO, AR, c. TN, and w. KY, its original distribution obscured by its subsequent spread. Native in nw. GA. [= RAB, C, FNA, G, K, S, SE, W; > *H. mollis* var. *cordatus* S. Watson – F; > *H. mollis* var. *mollis* – F]

Helianthus occidentalis Riddell *ssp.* ***occidentalis***, Naked-stem Sunflower. Mt (GA, NC, VA, WV), Pd (VA), Cp (FL): rocky or sandy flood-scoured riversides, dry hammocks (in FL); rare. July-October. MD and DC west to MN, and south to w. NC, n. GA, Panhandle FL, and TX. Ssp. *occidentalis* occupies most of the range of the species. Ssp. *plantagineus* (Torrey & Gray) Shinners occurs in sw. LA, se. TX, and AR. Var. *dowellianus* Torrey & Gray, of uncertain status (if valid, then usually treated as a variety under ssp. *occidentalis*), occurs in the Appalachian portion of the range. The species has been collected only twice in NC, the type collection of *H. dowellianus* M.A. Curtis, from "near Franklin, Macon Co.," and in 1897, near Asheville, Buncombe County ("sandy bottoms along the French Broad River near Biltmore"). GAHP reports *H. occidentalis* as a rare species in the state, from "limestone glades and barrens, rocky or cherty soils" (GAHP 2003); it is uncertain what variety is represented. [= FNA, K; > *H. occidentalis* Riddell var. *dowellianus* (M.A. Curtis) Torrey & A. Gray – C, F, SE; = *H. occidentalis* – RAB, G, S, W, WH; > *H. occidentalis* – WV; > *H. dowellianus* M.A. Curtis – WV]

* ***Helianthus pauciflorus*** Nuttall *ssp.* ***pauciflorus***, Stiff Sunflower. Mt (GA), Pd (GA*, VA*), Cp (VA*): disturbed areas; rare, native in the more western portion of our area, introduced eastwards. July-September. Reported for VA by Fernald (1950) under the name *H. laetiflorus* var. *rigidus* and for nc. GA by Jones & Coile (1988) under the name *H. rigidus* (Cassini) Desf. [= FNA, K; = *H. pauciflorus* var. *pauciflorus* – C; > *H. laetiflorus* var. *rigidus* (Cassini) Fernald – F; > *H. rigidus* (Cassini) Desfontaines – S; *? H. rigidus* var. *rigidus* – SE]

* ***Helianthus petiolaris*** Nuttall *ssp.* ***petiolaris***, Plains Sunflower. Cp (NC, SC, VA): disturbed areas in sandy soil; rare, native of the Great Plains. May-August. [= FNA, K; < *H. petiolaris* – RAB, F, G, S; = *H. petiolaris* var. *petiolaris* – C, SE]

Helianthus porteri (A. Gray) Pruski, Confederate Daisy. Pd (GA, NC*, SC): in shallow soils over granite on low-elevation granite domes or flatrocks; uncommon, native in GA and SC, introduced and vigorously established in NC (SC Rare). August-September. A Piedmont endemic: nw. SC south to GA and ec. AL. The species has often been treated in *Viguiera*; see Pruski (1998) and Schilling et al. (1998) for discussion of the reasons for treating this species in *Helianthus*. It is well-established at two sites in NC, on Rocky Face Mountain (Alexander County, NC) and Mitchell Mill Flatrock (Wake County, NC), where it was introduced with soil blocks of *Diamorpha smallii* as part of a ecological experiment (Mellinger 1972; McCormick & Platt 1964). [= FNA, K; = *Viguiera porteri* (A. Gray) Blake – S, SE]

Helianthus radula (Pursh) Torrey & A. Gray, Roundleaf Sunflower, Rayless Sunflower. Cp (FL, GA, SC): sandhills, dryish savannas, and dry pine flatwoods; common (rare in SC). Late August-October. S. SC south to s. peninsular FL and west

to se. LA. It is readily distinguishable from all other species by its rosette of orbicular to nearly round leaves, borne flat against the ground. [= RAB, FNA, GW, K, S, SE, WH]

Helianthus resinosus Small, Resinous Sunflower. Pd (GA, NC, SC), Mt (GA, NC, SC), Cp (FL, GA, NC, SC): woodlands, thickets, roadsides; uncommon. June-October. Nc. and w. NC south to Panhandle FL and west to MS. Listed for VA by F; documentation unknown. [= FNA, K, S, SE, W, WH; = *H. tomentosus* Michaux – RAB, F, S, misapplied]

Helianthus schweinitzii Torrey & A. Gray, Schweinitz's Sunflower. Pd (NC, SC): clayey soils of woodlands and roadsides, in areas formerly with post oak-blackjack oak savannas, xeric oak-pine woodlands, or "Piedmont prairies," now primarily on mowed road or powerline rights-of-way; rare. Late August-October. Piedmont of nw. NC and nc. SC, primarily within 100 km of Charlotte, NC. Some earlier reports (as in Heiser *et al.* 1969) of occurrences in se. NC, e. SC, and c. SC are based on misidentifications. See Matthews, Barden, & Matthews (1997) for an informative discussion about this species. [= RAB, FNA, K, S, SE]

Helianthus simulans E. Watson. Cp (FL, GA, NC*, SC), Pd* (GA*, SC*): wet soils, ditches, roadsides; uncommon (rare in GA and SC). October-November. Native from SC south to c. peninsular FL, FL Panhandle, and west to LA; now spread more widely by horticultural use. [= FNA, GW, K, S, SE, WH]

Helianthus smithii Heiser, Smith's Sunflower. Mt (GA): dry forests and woodlands; rare. August-September. Known from n. GA, e. AL, and se. TN. It has small heads (like *H. microcephalus*, *H. laevigatus*, *H. schweinitzii*), the leaves narrowly lanceolate and subsessile (like *H. schweinitzii* or *H. laevigatus*), the leaves resin-dotted below (like *H. microcephalus*), but nearly glabrous. It may be a hybrid derivative of *H. microcephalus* and *H. strumosus*. [= FNA, K; < *H. microcephalus* – C, SE]

Helianthus strumosus Linnaeus, Roughleaf Sunflower. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): woodlands and roadsides; common (rare in Coastal Plain, rare in DE). Late July-September. ME, MN, and KA south to ne. FL, Panhandle FL, and TX. [= RAB, C, F, FNA, G, K, SE, W, WH, WV; > *H. strumosus* – S; > *H. montanus* E.E. Watson – S; > *H. saxicolus* – S]

* ***Helianthus tuberosus*** Linnaeus, Jerusalem Artichoke. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): native in rich bottomlands and along streams, disturbed areas, cultivated in gardens for the edible tubers; common, native of farther west (uncommon in DE Coastal Plain, rare in FL, rare in DE Piedmont). July-October. [= RAB, C, FNA, K, S, SE, W, WH; > *H. tuberosus* var. *tuberosus* – F, G]

Helianthus verticillatus Small, Whorled Sunflower. Mt (GA): seasonally wet to moist calcareous prairies; rare. August-October. Nw. GA, ne. AL, and sc. TN. This taxon is a species, not a hybrid; its morphological characteristics alone (with its unique whorled leaves) make hybrid status implausible. See Matthews et al. (2002) for additional information. [= FNA, S; = *H.* ×*verticillatus* E.E. Watson (pro sp.) – K; = "a hybrid of *H. angustifolius* with either *H. eggertii* or *H. grosseserratus*"– C, SE]

Helianthus carnosus Small, Flatwoods Sunflower. Cp (FL): wet flatwoods, wet prairies; rare. September-November. Endemic to ne. FL (including Clay County in our area). [= FNA, K, S, SE, WH] {not yet keyed}

* *Helianthus salicifolius* A. Dietrich. Reported for MD by Kartesz (1999). Not in our area in FNA. [= C, F, FNA, G, K, SE] {not keyed; check for documentation}

Helianthus silphioides Nuttall. East to se. TN (Chester, Wofford, & Kral 1997) and e. AL. [= C, F, FNA, K, SE; = *H. atrorubens* Linnaeus var. *pubescens* Kuntze] {synonymy incomplete}

Heliomeris Nuttall 1848 (Golden-eye)

A genus of 4-5 species, annuals and perennials, of sw. United States and Mexico. References: Schilling in FNA (2006c).

* ***Heliomeris multiflora*** (Nuttall) Blake *var.* ***multiflora***, Golden-eye. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of western United States and Mexico. May. [= FNA, K; = *Viguiera multiflora* (Nuttall) Blake]

Heliopsis Persoon 1807 (Sunflower-everlasting, Oxeye)

A genus of about 18 species, herbs, of America. References: Smith in FNA (2006c); Fisher (1957)=Z; Cronquist (1980)=SE. Key adapted in part from Z.

1 Plants 3-8 dm tall; larger leaves on a plant generally 3-8 cm long; heads 1 (-3) per plant; rays 6-10 (-13) per head; rays 1-2 (-2.4) cm long; [of the Coastal Plain]..... ***H. helianthoides*** *var.* ***gracilis***

1 Plants (4-) 8-15 dm tall; larger leaves on a plant generally 7-15 cm long; heads (1-) 3-8 per plant; rays (8-) 10-16 per head; rays (1.5-) 2-4 cm long; [widespread in our area, rare in the Coastal Plain].

2 Leaves smooth on both sides (or sometimes sparsely pubescent below and slightly scabrous above); leaves (4.0-) 4.5-6.0 (-12) cm wide; stem glabrous and glaucous below, slightly pubescent above, the hairs generally all slender and ascending..... ***H. helianthoides*** *var.* ***helianthoides***

2 Leaves moderately to densely scabrous on both sides; leaves 2.0-3.5 (-5.0) cm wide; stem also scabrous with short, broad-based hairs ..... ***H. helianthoides*** *var.* ***scabra***

Heliopsis helianthoides (Linnaeus) Sweet *var.* ***gracilis*** (Nuttall) Gandhi & Thomas, Smooth Oxeye, Pineywoods Oxeye, Coastal Plain Sunflower-everlasting, Coastal Plain Oxeye. Cp (FL, GA, SC): moist calcareous forests; rare. April-July; May-July. A Southeastern Coastal Plain endemic: se. SC (Berkeley, Dorchester, and Charleston counties) south to GA (Jones & Coile

1988) and Panhandle FL, and west to LA (Thomas & Allen 1996). [= K, WH; = *H. minor* (Hooker) C. Mohr – S; = *H. gracilis* Nuttall – SE, Z]

Heliopsis helianthoides (Linnaeus) Sweet *var.* ***helianthoides***, Eastern Sunflower-everlasting, Eastern Oxeye. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, VA): forests, woodlands, woodland borders; common (rare in Coastal Plain, rare in DE Piedmont). May-October. VT, ON, and WI south to GA and LA. [= C, G, K, SE; < *H. helianthoides* – RAB, W; > *H. helianthoides* var. *helianthoides* – F; > *H. helianthoides* var. *solidaginoides* (Linnaeus) Fernald – F; = *H. helianthoides* – S, WV; = *H. helianthoides* ssp. *helianthoides* – Z]

Heliopsis helianthoides (Linnaeus) Sweet *var.* ***scabra*** (Dunal) Fernald, Western Sunflower-everlasting, Rough Oxeye, Western Oxeye. Mt (WV), Pd (VA): dry, open forests and woodlands, woodland borders; uncommon (rare in VA). May-October. NL (Newfoundland) and SK south to VA, WV, KY, GA, LA, TX, and NM. FNA mentions frequent intergradation, and some plants in our area best considered var. *scabra* do not seem to be "pure." [= C, F, G, K, SE; = *H. scabra* Dunal – S, WV; = *H. helianthoides* ssp. *scabra* (Dunal) Fisher – Z]

Helminthotheca Zinn 1757 (Oxtongue)

A genus of 4 species, herbs, of Europe. References: Strother in FNA (2006a).

* ***Helminthotheca echioides*** (Linnaeus) Holub, Bristly Oxtongue. Cp (VA?): disturbed areas; rare, native of Europe. July-September. Reported from DC and VA; uncertain whether documented from our area. [= FNA; = *Picris echioides* Linnaeus – C, F, G, K, SE]

Heterotheca Cassini 1817 (Camphorweed, Golden-aster)

A genus of about 28 species, herbs, of North America. References: Semple in FNA (2006b); Wagenknecht (1960)=Z; Semple (1996)=Y; Gandhi & Thomas (1989)=X; Semple (2004)= Q; Cronquist (1980)=SE; Semple (1983). Key adapted in part from Z and X. [also see *Chrysopsis* and *Pityopsis*]

1 Ray flowers with pappus; perennial, from creeping rhizomes; upper and lower leaves cuneate to a sessile base..... ***H. camporum*** *var.* ***glandulissimum***
1 Ray flowers without pappus; annual or biennial, taprooted; upper leaves rounded to clasping at the sessile base, lower leaves (deciduous by late in the season) petiolate.
  2 Plants erect, 0.5-2 m tall; leaves hirsute-pilose on both sides or scabrous above; phyllaries moderately hirsute and glandular on the back; [of a variety of weedy habitats, mainly inland]..... ***H. latifolia*** *var.* ***latifolia***
  2 Plants erect or decumbent, 0.3-1 m tall; leaves scabrous on both sides or only beneath; phyllaries densely hirsute and glandular on the back; [of coastal dunes] ..... ***H. subaxillaris***

* ***Heterotheca camporum*** (Greene) Shinners *var.* ***glandulissima*** Semple, Nashville Camphorweed. Mt , Pd (GA, NC, VA), Cp (NC): roadsides, disturbed areas; rare, native of c. TN. This variety is apparently native in the Nashville Basin of Tennessee. [= FNA; = *H. camporum* var. *glandulissimum* – K, Y, orthographic variant; = *Chrysopsis camporum* Greene var. *glandulissima* (Semple) Cronquist – C; < *Chrysopsis camporum* – F, SE, W; < *Chrysopsis villosa* (Pursh) Nuttall var. *camporum* (Greene) Cronquist – G]

* ***Heterotheca latifolia*** Buckley *var.* ***latifolia***, Common Camphorweed. Pd (GA, NC, SC, VA), Cp (FL, NC, SC, VA), Mt (NC, SC): roadsides, disturbed areas; common, native of the sc. United States and adjacent Mexico. [= Y, Z; = *H. subaxillaris* (Lamarck) Britton & Rusby var. *latifolia* (Buckley) Gandhi & Thomas – X; < *H. subaxillaris* – RAB, C, F, G, K, S, SE, W, WH; = *H. subaxillaris* (Lamarck) Britton & Rusby ssp. *latifolia* (Buckley) Semple – FNA, Q]

Heterotheca subaxillaris (Lamarck) Britton & Rusby, Dune Camphorweed. Cp (DE, FL, GA, NC, SC, VA), Pd (GA): coastal dunes and sand-flats; common. July-October (-December). NJ south to FL, west to TX and Mexico, along the coast. This taxon is apparently native in our area, and is a conspicuous component of the flora of ocean dunes. [= Y; = *H. subaxillaris* (Lamarck) Britton & Rusby var. *subaxillaris* – X, Z; < *H. subaxillaris* – RAB, C, F, G, K, S, SE, WH (also see *H. latifolia*); = *H. subaxillaris* ssp. *subaxillaris* – FNA, Q]

Hieracium Linnaeus 1753 (Hawkweed, King-devil)

A genus of 250-1000 species, herbs, primarily temperate. *Hieracium* is a complicated genus, with many apomictic races sometimes recognized as taxa. Sometimes separated into *Hieracium* and *Pilosella*. References: Strother in FNA (2006a); Cronquist (1980)=SE. Key adapted from C.

1 Leaves primarily cauline, the largest leaves definitely on the stem, basal leaves usually absent; [*Hieracium* s.s.].
  2 Florets 8-20 (-30) per head; leaves nearly glabrous, or with a few long hairs on the lower surface; upper stem glabrous..... ***H. paniculatum***
  2 Florets 30-110 per head; leaves setose, with long hairs on the upper and lower surfaces; upper stem stipitate-glandular, stellate-pubescent, or glabrous.
    3 Leaves with entire margins, rounded to obtuse at the tip; [widespread in our area]..... ***H. scabrum***
    3 Leaves with toothed to laciniate margins, acute to obtuse at the tip; [disjunct at high elevations in WV] ..... ***H. umbellatum***
1 Leaves primarily basal, the largest leaves basal, leaves in some species extending onto the lower portion of the stem.

4 Plants stoloniferous; [aliens of weedy habitats, especially pastures, roadsides, and lawns]; [*Pilosella*].
5 Heads 1 (-3) per plant ..... ***H. pilosella***
5 Heads (1-) 2-many per plant.
6 Heads (1-) 2-6 per plant, leaves nearly glabrous on the upper surface ..... ***H. flagellare***
6 Heads (3-) 5-50 per plant; leaves nearly glabrous or distinctly long-pubescent on the upper surface.
7 Flowers deep orange ..... ***H. aurantiacum***
7 Flowers yellow.
8 Leaves not glaucous; leaves hairy on the upper surface ..... ***H. caespitosum***
8 Leaves glaucous; leaves glabrous (or nearly so) on the upper surface ..... ***H. floribundum***
4 Plants not stoloniferous; [primarily natives (except *H. caespitosum* and *H. piloselloides*), of various (mostly dry) habitats].
9 Cypselas 1.5-2 mm long, truncate at the tip; basal leaves mostly 5-12× as long as wide (the petiole included); well-developed basal leaves rarely over 3 cm wide; [alien]; [*Pilosella*].
10 Leaves and stem not glaucous; leaves hairy on the upper surface ..... ***H. caespitosum***
10 Leaves and stem glaucous; leaves sparsely hairy to nearly glabrous on the upper surface ..... ***H. piloselloides***
9 Cypselas 2-4 mm long, usually distinctly narrowed to the tip (except *H. scabrum*); basal leaves mostly 1.5-5× as long as wide (the petiole included); well-developed basal leaves often over 3 cm wide; [native]; [*Hieracium* s.s.].
11 Leaves purple-veined (when fresh).
12 Lower stem strongly pilose; leaves weakly purple-veined ..... ***H. marianum***
12 Lower stem glabrous or nearly so; leaves strongly purple-veined ..... ***H. venosum***
11 Leaves not purple-veined.
13 Inflorescence a narrow panicle.
14 Cypselas truncate, broadest at the tip; flowers 40-100 per head ..... ***H. scabrum***
14 Cypselas narrowed to the tip; flowers 20-40 per head
15 Hairs of the lower stem 1-4 mm long; inflorescence 2-4× as long as wide; [widespread in our area] ..... ***H. gronovii***
15 Hairs of the lower stem 6-15 mm long; inflorescence 4-7× as long as wide; [of KY and TN westward] ..... ***[H. longipilum]***
13 Inflorescence corymbiform.
16 Cypselas 2-3 mm long, truncate, broadest at the tip; flowers 40-100 per head ..... ***H. scabrum***
16 Cypselas 2.2-5 mm long, at least the longer achenes narrowed to the tip; flowers 15-40 per head.
17 Stem with several well-developed leaves slightly smaller than the basal leaves; inflorescence corymbiform or tending toward paniculate.
18 Involucre mostly 6-9 mm high; inflorescence generally elongate and cylindric (appearing corymbiform in depauperate individuals); achenes 2.5-4 mm long; corollas 8-9 mm long ..... ***H. gronovii***
18 Involucre mostly 8-11 mm high; inflorescence broadly corymbiform; achenes 3.5-5 mm long; corollas 10-13 mm long ..... ***H. megacephalum***
17 Stem leafless, or with only a few leaves distinctly smaller than the basal leaves; inflorescence strongly corymbiform.
19 Involucre glabrous or with short stipitate glands, but lacking long setae (either gland-tipped or glandless) ..... ***H. marianum***
19 Involucre with long setae (either gland-tipped or glandless).
20 Involucral setae gland-tipped; [of the Coastal Plain] ..... ***H. megacephalum***
20 Involucral setae not gland-tipped (but with shorter gland-tipped hairs); [of the Mountains (and Piedmont?) of VA] ..... ***H. traillii***

* ***Hieracium aurantiacum*** Linnaeus, Orange Hawkweed, Devil's-paintbrush, Orange King-devil, Fox-and-cubs. Mt (GA, NC, VA, WV), Pd (VA): pastures, roadsides; rare, native of Europe. May-July. [= RAB, F, FNA, G, K, SE, W, WH, WV; **= *Pilosella aurantiaca*** (Linnaeus) F. Schultz & Schultz 'Bipontinus']

* ***Hieracium caespitosum*** Dumortier, Yellow King-devil, Yellow Fox-and-cubs. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): pastures, fields, roadsides, grassy balds; common (uncommon in DE, rare in VA Coastal Plain), native of Europe. May-July. [= C, FNA, K, SE, W; *? H. pratense* Tausch – RAB, F, G, WV; **= *Pilosella caespitosa*** (Dumortier) Sell & C. West]

* ***Hieracium flagellare*** Willdenow, Whiplash Hawkweed. Mt? (VA), Pd (DE): roadsides; rare, native of Europe. Considered to derive from hybridization between *H. caespitosum* Dumortier and *H. pilosella* Linnaeus. [= C, F, FNA, SE; = *H. ×flagellare* Willdenow (pro sp.) var. *flagellare* – K; **= *Pilosella flagellaris*** (Willdenow) Sell & C. West]

* ***Hieracium floribundum*** Wimmer & Grabowski, Glaucous Hawkweed. Mt (VA), Pd (VA): roadsides, pastures; rare, native of Europe. Considered to derive from hybridization between *H. caespitosum* Dumortier and *H. lactucella* Wallroth. [= C, F, G; = *H. ×floribundum* Wimmer & Grabowski (pro sp.) – K; **= *Pilosella floribunda*** (Wimmer & Grabowski) Arvet-Touvet]

Hieracium gronovii Linnaeus, Beaked Hawkweed. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): sandhills, dry forests, woodland margins, roadsides; common (uncommon in VA Piedmont). July-November. MA west to s. ON and KS, south to c. peninsular FL and TX. [= RAB, C, F, FNA, G, K, S, SE, W, WH, WV]

Hieracium marianum Willdenow, Maryland Hawkweed. Cp (NC, SC), Pd (NC, SC), Mt (NC, SC, WV) {GA}: dry forests, woodland margins, roadsides; common (uncommon in WV). May-November. NH west to OH, south to FL and MS. Considered to derive from hybridization between *H. gronovii* Linnaeus and *H. venosum* Linnaeus. There is apparently no definite report from VA. [= F, K, S, WV; = *H. ×marianum* Willdenow (pro sp.) – RAB, C, SE]

Hieracium megacephalum Nash, Bigheaded Hawkweed. Cp (GA): dry sandy soils of pinelands and hammocks; uncommon. S. GA south to s. FL. [= FNA, SE; = *Hieracium megacephalon* Nash – K, WH, orthographic variant; > *H. megacephalon* – S; > *H. argyraeum* Small – S]

Hieracium paniculatum Linnaeus, Leafy Hawkweed. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, VA): dry to mesic forests, especially along dirt roads; common. July-October. NS and QC west to MN, south to w. NC, n. GA, and OH. The leafy stem and lack of basal leaves of *H. paniculatum* readily distinguish it from our other species of *Hieracium*. In fact, it often puzzles the inexperienced botanist, who may overlook the possibility that this plant is a *Hieracium*! The milky sap and obscure teeth on the leaves are good corroborative characters. [= RAB, C, F, FNA, G, K, S, SE, W, WV]

* ***Hieracium pilosella*** Linnaeus, Mouse-ear Hawkweed. Mt (GA, NC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): pastures, roadsides, disturbed areas; uncommon (rare in DE), native of Europe. May-July. [= RAB, C, FNA, G, SE, W; > *H. pilosella* var. *pilosella* – F, K, WV; **= *Pilosella officinarum*** F. Schultz & Schultz 'Bipontinus']

* ***Hieracium piloselloides*** Villars, Glaucous King-devil. Mt (GA, NC, SC, VA, WV), Pd (DE, VA), Cp (VA): fields, pastures, roadsides, uncommon (rare in GA, NC, SC, VA, and WV), native of Europe. May-September. [= C, FNA; *? H. florentinum* Allioni – RAB, G, SE, W; > *H. florentinum* – F; > *H. piloselloides* – K; > *Hieracium praealtum* (Villars) ex Gochnat var. *decipiens* W.D.J. Koch – F, K; **= *Pilosella piloselloides*** (Villars) Soják]

Hieracium scabrum Michaux, Rough Hawkweed. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): dry forests, woodland margins, roadsides; common (rare in GA, rare in Coastal Plain south of DE). July-November. NS and QC west to MN, south to VA, n. GA, KY, and MO. [= RAB, C, FNA, G, S, SE, W, WV; > *H. scabrum* var. *scabrum* – F, K]

Hieracium traillii Greene, Shale-barren Hawkweed. Mt (VA, WV), Pd? (VA): shale barrens and dry shaley woodlands, other xeric woodlands; uncommon. May-June. Sc. PA south to w. VA and e. WV. [= C, F, FNA, G, SE, W; = *H. greenii* Porter & Britton – K, S, WV, a preoccupied name]

Hieracium umbellatum Linnaeus, Northern Hawkweed. Mt (WV): rocky areas; rare. Circumboreal, south in North America to PA, WV (Spruce Knob), IN, MO, CO, and OR. [= C, FNA, K; > *H. canadense* Michaux var. *fasciculatum* (Pursh) Fernald – F, G; > *H. canadense* var. *hirtirameum* Fernald – F, G]

Hieracium venosum Linnaeus, Veiny Hawkweed. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): dry forests, woodland margins, roadsides; common. April-September. NY west to MI, south to GA, AL, and TN; apparently disjunct in FL. [= RAB, C, FNA, G, S, SE, W, WV; > *H. venosum* var. *venosum* – F, K; > *H. venosum* var. *nudicaule* (Michaux) Farwell – F, K]

* ***Hieracium lachenalii*** K.C. Gmelin, European Hawkweed. Pd (DE), Mt (WV): disturbed areas; uncommon, native of Europe. [= C, K; ? *H. vulgatum* Fr. – FNA, F, G] {not yet keyed}

Hieracium longipilum Torrey. ON, OH, KY, and TN west to MN, NE, KS, OK, and TX. [= C, F, FNA, G, K, SE]

* *Hieracium sabaudum* Linnaeus. Naturalized south to NJ and PA; native of Europe. August-October. May be found in our area. [= C, F, FNA, G, K] {not keyed}

Many of our species hybridize, and some of the species listed above are apparently hybrid derivatives. I prefer to treat taxa such as *H. marianum* as species (even if hybridization-derived) because they occur independently of the parental taxa (see above). Other hybrids of native species known in our area include: *H. gronovii* × *H. paniculatum* [*H.* ×*alleghaniense* Britton (pro sp.)], *H. gronovii* × *H. venosum, H. paniculatum* × *H. scabrum, H. paniculatum* × *H. venosum* [*H.* ×*scribneri* Small (pro sp.); *H. scribneri* – K], *H. scabrum* × *H. venosum.*

Hymenopappus L'Héritier 1788 (Woolly-white)

A genus of about 11-14 species, herbs, of s. North America. References: Strother in FNA (2006c); Cronquist (1980)=SE.

Hymenopappus scabiosaeus L'Héritier *var.* ***scabiosaeus***. Cp (FL, GA, SC): turkey oak sandhills and adjacent sandy fields; common (rare in GA and SC). Sc. SC south to n. peninsular FL, west to AR, MO, and OK, and north in the interior to n. IN, c. and s. IL, and se. MO. Var. *corymbosus* (Torrey & A. Gray) B.L. Turner is distributed in the s. Great Plains and adjacent areas, from NE south to TX and Coahuila. [= C, FNA, K, SE; < *H. scabiosaeus* – RAB, F, G, S, WH]

Hymenoxys Cassini 1825

A genus of about 25 species, herbs, of w. North America, south through Central America to South America. References: Bierner in FNA (2006c).

* ***Hymenoxys odorata*** A.P. de Candolle. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of sw. United States. See Nesom (2004d). [= K; = *Picradenia odorata* (A.P. de Candolle) Britton]

Hypochaeris Linnaeus 1753 (Cat's-ear)

A genus of about 60 species, herbs, of South America, Europe, Asia, and n. Africa. The controversial spelling of the genus name is now resolved in favor of *Hypochaeris*. References: Bogler in FNA (2006a); Cronquist (1980)=SE.

1 Stem with at least a few well-developed leaves, clasping and similar to the basal; pappus of one length, all long and plumose.
  2 Flowers yellow; middle and outer phyllaries hispid; heads usually 5-8 mm across at anthesis, the involucre campanulate ..... ***H. chillensis***
  2 Flowers white; middle and outer phyllaries glabrous or puberulent; heads usually 2-4 mm wide at anthesis, the involucre cylindric ..... ***H. microcephala*** *var.* ***albiflora***
1 Stem naked, or only with few and very small bracts; pappus of two lengths, the outer short and barbellate, the inner long and plumose.
  3 Plants glabrous or apparently so; plants mostly annual ..... ***H. glabra***
  3 Plants conspicuously pubescent, as on the hispid leaves; plants mostly perennial ..... ***H. radicata***

* ***Hypochaeris chillensis*** (Kunth) Britton, Brazilian Cat's-ear. Cp (FL, GA, NC, SC), Pd (GA, SC), Mt (SC): roadsides, fields, other disturbed places; common, native of South America. Late April-July. More common in the NC Coastal Plain than shown in RAB (common in Duplin, Sampson, and Wayne cos.) (A.J. Bullard, pers. comm. 2003). [= FNA; ? *Hypochaeris brasiliensis* (Less.) Grisebach var. *tweediei* (Hooker & Arnott) Baker – K, SE, WH; *?* *Hypochoeris elata* (Weddell) Grisebach – RAB, misapplied]

* ***Hypochaeris glabra*** Linnaeus, Smooth Cat's-ear. Cp (FL, GA, NC, SC), Pd (NC, SC), Mt (WV): roadsides, fields, disturbed areas; common (rare in NC and WV, uncommon in FL), native of Europe. Late March-July. [= FNA, K, S, WH; = *Hypochoeris glabra* – RAB, C, SE, WV, orthographic variant]

* ***Hypochaeris microcephala*** (Schultz 'Bipontinus') Cabrera *var.* ***albiflora*** (Kuntze) Cabrera, White-flowered Cat's-ear. Cp (GA): disturbed areas; rare, native of South America. This species has been found as a naturalized introduction at Fort Pulaski (Chatham County, GA) (T. Govus, pers. comm. 2006) and in Camden County, GA (Carter, Baker, & Morris 2009). [= FNA, K, SE]

* ***Hypochaeris radicata*** Linnaeus, Spotted Cat's-ear. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadsides, fields, disturbed areas; common (uncommon in DE Piedmont, rare in FL), native of Eurasia. April-July (or later). [= FNA, G, K, S, WH; = *Hypochoeris radicata* – RAB, C, F, SE, WV, orthographic variant]

Inula Linnaeus 1753 (Elecampane)

A genus of about 90-100 species, of temperate and subtropical Old World. References: Arriagada (1998)=Z; Cronquist (1980)=SE.

* ***Inula helenium*** Linnaeus, Elecampane. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE): damp pastures, roadsids, other disturbed areas; rare, native of Europe. May-September. [= RAB, C, F, FNA, G, K, S, SE, W, WV, Z]

Ionactis Greene 1897 (Stiff-leaved Aster)

A genus of 5 species, herbs, of North America. *Ionactis* has usually been included in *Aster*, but differs in many characters and is more closely related to *Heterotheca* (Nesom & Leary 1992). References: Nesom in FNA (2006b); Nesom & Leary (1992)=Z; Cronquist (1980)=SE.

Ionactis linariifolia (Linnaeus) Greene, Stiff-leaved Aster. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): dry savannas, sandhills, pine flatwoods, prairie-like openings, glades, and barrens, high elevation rock outcrops and glades, to at least 1450 m, dry roadbanks, woodland edges, rocky woodlands; common (uncommon in WV, rare in DE). August-November. ME and QC west to WI, south to ne. FL, Panhandle FL, and TX. There appears to be substantial variation in *I. linariifolius*, with montane (and northern) populations having considerably longer and broader leaves than Coastal Plain (and southern) populations; additional study is needed. [= FNA, WH, Z; = *I. linariifolius* – K, S, orthographic variant; = *Aster linariifolius* Linnaeus – RAB, C, G, SE, W, WV]

Iva Linnaeus 1753 (Marsh-elder)

A genus of about 9 species, shrubs and herbs, of North America and the West Indies, as circumscribed more narrowly by recent authors. References: Turner (2009a)=Z; Cronquist (1980)=SE; Jackson (1960)=Y; Strother in FNA (2006c).

1 Plants perennial, fleshy, glabrous (or strigillose on the leaf faces); [mostly of maritime situations, such as brackish marshes, marsh edges, or ocean dunes]; [section *Iva*].
  2 Outer phyllaries united; [rare waif of disturbed areas and beaches] ..... ***I. axillaris***
  2 Outer phyllaries distinct; [collectively common and widespread natives of the outer Coastal Plain].
    3 Leaves 1.5-4.5 (-6.0) cm long, 0.4-1.0 (-1.5) cm wide, 1-3 mm thick when fresh, mostly untoothed; involucres 4-7 mm high; leaves alternate from midstem upward; [mostly of dunes and the upper beach] ..... ***I. imbricata***
    3 Leaves 4-10 cm long, 0.7-4.0 cm wide, 0.5-1 mm thick when fresh, usually toothed; involucres 2-4 mm high; leaves opposite (alternate above or in the inflorescence); [mostly of marshes, marsh edges, and wet hammocks].
      4 Larger leaves 4-7 (-8.5) cm long, 0.7-1.5 (-2.1) cm wide, 4-10× as long as wide, subentire or with 1-8 (rarely more) teeth on each side; [of NJ southward] ..... ***I. frutescens* *var.* *frutescens***
      4 Larger leaves 6-10 cm long, 2.0-4.0 cm wide, 1.5-4× as long as wide, usually with 8-17 teeth on each side; [of n. NC northward] ..... ***I. frutescens* *var.* *oraria***
1 Plants annual (perennial in *I. asperifolia*) , not fleshy, more-or-less pubescent (at least in the inflorescence); [of mainly inland wetlands or disturbed areas].
  5 Leaves 20-70 mm wide, ovate; staminate flowers usually 8-16 (-20) per head; [mostly of disturbed ground]; [section *Iva*] ..... ***I. annua***
  5 Leaves 0.5-8 mm wide, linear; staminate flowers 1-9 per head; [section *Linearbracta*].
    6 Involucres 1.5-2 mm high; outer phyllaries distinct, glandular-punctate; leaves 0.5-3 mm wide; pistillate flowers 3 per head ..... ***I. microcephala***
    6 Involucres 2.5-3 mm high; outer phyllaries connate, not glandular-punctate; leaves 1-8 mm wide; pistillate flowers 1 (-2) per head
      7 Plants annuals, erect, 5-12 dm tall; staminate flowers 1-5 per head ..... ***[I. angustifolia]***

7 Plants perennials, decumbent, rooting at the nodes, 2-5 dm tall; staminate flowers 3-9 per head.....***I. asperifolia***

* ***Iva asperifolia*** Lessing, Narrowleaf Marsh-elder. Cp (FL): wet disturbed areas; rare, native of sw. United States and Mexico. August-September. Perhaps *I. asperifolia* and *I. angustifolia* are best treated as only varietally distinct, as done by Turner (2009). [= S, Y; < *I. angustifolia* Nuttall ex deCandolle – FNA, K, SE, WH; = *Iva asperifolia* var. *asperifolia* – Z]

Iva annua Linnaeus, Sumpweed, Rough Marsh-elder. Cp (FL, GA*?, NC*, SC*, VA*), Pd* (NC, SC, VA), Mt (GA, WV*): fields, disturbed places; rare, in the eastern and inland part of area probably introduced (by native Americans) from further west. September-November. PA, ND, and CO south to FL, NM, and Mexico (the original distribution uncertain). This species was apparently an important crop of native Americans. The so-called var. *macrocarpa* (Blake) R.C. Jackson, known only from archeological remains and presumed extinct, is almost certainly a cultivated form, selected for its large seeds. [= RAB, C, FNA, GW, SE, W, WH; = *I. ciliata* Willdenow – F; > *I. ciliata* Willdenow var. *ciliata* – G; > *I. ciliata* var. *macrocarpa* Blake – G; > *I. annua* var. *annua* – K, Y; > *I. annua* var. *caudata* (Small) R.C. Jackson – K, Y; > *I. annua* var. *macrocarpa* (Blake) R.C. Jackson – K, Y; > *I. ciliata* – S; > *I. caudata* Small – S]

* ***Iva axillaris*** Pursh, Deer-root. Cp (SC): waste areas around wool-combing mill; rare, perhaps only a waif, native of w. United States. May-October. See Nesom (2004d). [= FNA, K, Y]

Iva frutescens Linnaeus ***var. frutescens***, Southern Maritime Marsh-elder. Cp (DE?, FL, GA, NC, SC, VA): brackish marshes and marsh edges, normally on the back side of barrier islands; common. Late August-November. NJ south to s. FL, west to TX. See *I. frutescens* var. *oraria* for discussion of the two taxa. [= C, F, G, SE; = *I. frutescens* ssp. *frutescens* – GW, K, Y; < *I. frutescens* – RAB, FNA, S, WH]

Iva frutescens Linnaeus ***var. oraria*** (Bartlett) Fernald & Griscom, Northern Maritime Marsh-elder. Cp (DE, MD, NC, VA): brackish marshes and marsh edges, normally on the back side of barrier islands; common (uncommon south of MD). Late August-November. NS south to Dare County, NC. The two varieties are morphologically distinct, except in the zone of overlap (NJ south to Dare County, NC), where intermediates will be encountered. Even in the zone of overlap, though, most plants are readily identified to variety. There might be some merit in considering these taxa species, with limited hybridization in a small portion of their total distributions. [= C, F, G, SE; = *I. frutescens* ssp. *oraria* (Bartlett) R.C. Jackson – K, Y; < *I. frutescens* – RAB, FNA, S; = *I. oraria* Bartlett]

Iva imbricata Walter, Dune Marsh-elder. Cp (FL, GA, NC, SC, VA): dunes, upper beach, island-end flats; common (rare in VA). Late August-November. Se. VA south to s. FL, west to LA; Bahamas and Cuba. This plant is often the most oceanward perennial plant, often the first perennial to colonize the upper beach or incipient dunes on island-end flats, where it occurs with such upper beach annuals as *Euphorbia polygonifolia*, *Euphorbia bombensis*, *Cakile edentula*, and *Amaranthus pumilus*. [= RAB, C, F, FNA, G, K, S, SE, WH, Y]

Iva microcephala Nuttall, Small-headed Marsh-elder. Cp (FL, GA, NC, SC): wet pine flatwoods, flatwood ponds, clay-based Carolina bays; common (rare north of FL). September-October. C. NC south to s. FL, west to se. AL. A seed-banking annual, locally abundant some years and absent others depending on the variable hydrologic conditions of Carolina bays and other seasonally flooded wetlands. [= RAB, FNA, GW, K, S, SE, WH, Y]

Iva angustifolia Nuttall ex deCandolle, Narrowleaf Marsh-elder. Cp (LA): wet disturbed areas. August-September. Native of sw. United States and Mexico, eastward to Livingston Parish, LA. See *I. asperifolia* above for taxonomic comments. [= Y; < *I. angustifolia* – FNA, K, SE; = *I. asperifolia* Lessing var. *angustifolia* (Lessing) B.L. Turner – Z]

Ixeris (Cassini) Cassini 1822

A genus of ca. 20 species, herbs, of e. and se. Asia. References: Strother in FNA (2006a).

* *Ixeris stolonifera* A. Gray, Creeping Lettuce. Established as a weed in lawns, gardens, and plant nurseries in se. PA (Rhoads & Klein 1993) NY (Long Island), and DE (Cronquist 1980). Native of Japan. June-August. [= C, FNA, K, SE; = *Lactuca stolonifera* (A. Gray) Bentham ex Maximowicz – F]

Jamesianthus Blake & Sherff 1940 (Warbonnet)

A monotypic genus, a perennial herb, endemic to c. AL and wc. GA. References: Strother in FNA (2006c).

Jamesianthus alabamensis Blake & Sherff, Alabama Warbonnet. Mt (GA): streambanks over limestone or other calcareous rocks; rare (GA Special Concern). Endemic to stream banks in c. AL and wc. GA. The opposite leaves are squared off at the base in a distinctive manner. [= FNA, K, SE]

Krigia Schreber 1791 (Cynthia, Dwarf-dandelion)

A genus of 7 species, herbs, of (mainly e.) North America. References: Chambers & O'Kennon in FNA (2006a); Kim & Turner (1992)=Z; Cronquist (1980)=SE; Chambers (2004)=Y.

1 Phyllaries erect in fruit, 2-4× as long as wide; pappus absent (or represented by minute scales or bristles < 2 mm long); plant a leafy-stemmed winter annual.
2 Phyllary midveins evident but not forming curved keels; cypselae fusiform, ca. 2× as long as broad..... ***K. cespitosa***
2 Phyllary midveins becoming prominent and curving inward at bases to form keels; cypselae obovoid, ca. 1.5× as long as broad..... ***[K. wrightii]***
1 Phyllaries reflexed in fruit, 3-8× as long as broad; pappus present, consisting of 5 or more scales and 5 or more bristles (the bristles > 4 mm long); plant a scapose, subscapose, or leafy-stemmed perennial or a scapose or subscapose winter annual.
3 Pappus of 5 scales and 5 bristles; plant a winter annual; stem leafless or leafy at the base only..... ***K. virginica***
3 Pappus of 15-40 scales and 15-40 bristles; plant a perennial; stem leafless, leafy at the base only, or with many leaves extending up the stem.
4 Stems leafless, the peduncles terminal; perennial from ovoid tubers, with long slender stolons which form new plants or tubers; pappus bristles (5.0-) 5.3-7.7 (-10.0) mm long ..... ***K. dandelion***
4 Stems leafy, at least at the base, the peduncles axillary; perennials from stout creeping rhizomes or short caudices, not bearing tubers; pappus bristles 4.0-7.0 mm long.
5 Peduncles usually 1 per leaf axil; leaves linear-lanceolate, the larger 1-12 mm wide; perennial from an underground rhizome (to 5 mm in diameter), larger plants with an extensive rootmat and multiple stems ..... ***K. montana***
5 Peduncles usually 2 per leaf axil; leaves oblanceolate, the larger 15-45 mm wide; solitary-stemmed perennial from a short caudex ..... ***K. biflora*** *var.* ***biflora***

Krigia biflora (Walter) S.F. Blake *var.* ***biflora***, Orange Dwarf-dandelion. Mt (GA, NC, VA), Pd (GA, NC): rich, moist forests; uncommon (rare in GA, NC, and VA). May-October. Var. *biflora* ranges from MA s. ON and MN south to GA, AL, MS, AR, and e. OK; the smaller var. *viridis* (Standley) Kim occurs in CO, AZ, and NM. The natural hexaploid hybrid *Krigia* ×*shinnersiana* K.L. Chambers *[K. biflora* × *montana]* is documented from the Craggy Mountains, Buncombe County, NC (Chambers 2004; Kim & Turner 1992). [= K, Z; < *K. biflora* – RAB, C, F, FNA, G, SE, W, WV; = *Cynthia virginica* (Linnaeus) D. Don – S]

Krigia cespitosa (Rafinesque) K.L. Chambers, Opposite-leaf Dwarf-dandelion. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, WV*): fields, roadsides, disturbed places; common (rare in VA and WV). Late March-early June. Se. VA and NE south to c. peninsular FL and TX. *K. gracilis* (A.P. de Candolle) Shinners occurs in TX, OK, and LA; it is sometimes treated as *K. cespitosa* var. *gracilis* (A.P. de Candolle) K.L. Chambers, but is better considered as a species, as it is sympatric and generally distinct. [= *K. cespitosa* (Rafinesque) K.L. Chambers var. *cespitosa* – FNA, Y; < *K. cespitosa* – GW, WH, Z; = *K. oppositifolia* Rafinesque – RAB, C, G, SE, W; = *Serinia oppositifolia* (Rafinesque) Kuntze – F, S; < *K. caespitosa* – K, orthographic variant]

Krigia dandelion (Linnaeus) Nuttall, Colonial Dwarf-dandelion. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): rocky woodlands, roadsides, disturbed areas; common (uncommon in VA Coastal Plain, rare in GA, NC, SC Coastal Plain). April-May. NJ, IL, and KA, south to Panhandle FL and ne. TX. [= RAB, C, F, FNA, G, GW, K, SE, W, Z; = *Cynthia dandelion* (Linnaeus) A.P. de Candolle – S]

Krigia montana (Michaux) Nuttall, Mountain Dwarf-dandelion. Mt (GA, NC, SC): cliffs and rock outcrops at medium to high elevations; uncommon (rare in SC). May-September. A Southern Appalachian endemic: w. NC, e. TN, nw. SC, and ne. GA. The natural hexaploid hybrid *Krigia* ×*shinnersiana* K.L. Chambers *[K. biflora* × *montana]* is documented from the Craggy Mountains, Buncombe County, NC (Chambers 2004; Kim & Turner 1992). [= RAB, FNA, K, SE, W, Z; = *Cynthia montana* (Michaux) Standley – S]

Krigia virginica (Linnaeus) Willdenow, Virginia Dwarf-dandelion. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): rocky woodlands, roadsides, disturbed areas; common (uncommon in WV). Late March-July. ME west to MN, south to c. peninsular FL and c. TX. [= RAB, C, F, FNA, G, GW, K, S, SE, W, WH, Z]

Krigia occidentalis Nuttall. {GA}. March-May. MO and KS south to LA and TX; disjunct eastwards in GA. [= FNA, K] {add to synonymy}

Krigia wrightii (A. Gray) K.L. Chambers ex K.J. Kim, Wright's Dwarf-dandelion. AR and OK south to LA and TX. [= FNA]

Lactuca Linnaeus 1753 (Lettuce)

A genus of about 75 species, herbs, nearly cosmopolitan (especially north temperate). References: Strother in FNA (2006a); Cronquist (1980)=SE; McVaugh (1972). [also see *Ixeris*]

Identification notes: Most species are highly variable in leaf lobing.

1 Achene beaks stout and short, 0.1-0.5 (-1.0) mm long (< ½ as long as the body of the achene); rays blue to violet (rarely yellow or white).
2 Pappus tawny; flowers mostly 20-30 per head..... ***L. biennis***
2 Pappus bright white; flowers mostly 10-15 per head..... ***L. floridana***
1 Achene beaks filiform and long, 1-4 mm long (> ½ as long as the body of the achene); rays yellow or blue (sometimes white or drying bluish).
3 Each face of the achene with (3-) 5-9 nerves; stems typically white or pale green; rays yellow (sometimes drying blue); [aliens].
4 Unlobed cauline leaves lanceolate to linear..... ***L. saligna***
4 Unlobed cauline leaves oblong, obovate, or spatulate.
5 Phyllaries usually erect in fruit; midribs of leaves usually smooth ..... ***L. sativa***
5 Phyllaries usually reflexed in fruit; midribs of leaves prickly setose ..... ***L. serriola***

3 Each face of the achene with 1 (-3) nerves; stems typically medium to dark green or reddish; rays yellow or blue; [natives, though often weedy].
6 Unlobed leaves and lobes of lobed leaves narrow, usually < 1 cm wide; leaves basally disposed, the basal and lower-stem leaves the largest and most persistent; plants 3-12 dm tall; [primarily of the Coastal Plain, rare elsewhere].....***L. graminifolia** var. **graminifolia***
6 Unlobed leaves and lobes of lobed leaves wider, usually > 1 cm wide; leaves well-distributed on the stem; plants 3-33 dm tall; [collectively widespread].
7 Fruiting involucres 10-15 mm tall; achenes 2.5-3.5 mm long (excluding the beak)..... ***L. canadensis***
7 Fruiting involucres 15-22 mm tall; achenes 4.5-6 mm long (excluding the beak).
8 Leaf margins not prickly (or barely so); flowers 13-25 per head; [widespread in our area] .....***L. hirsuta***
8 Leaf margins prickly; flowers 20-56 per head; [of KY and MS westward].....***[L. ludoviciana]***

Lactuca biennis (Moench) Fernald, Tall Blue Lettuce. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE): pastures, roadsides, forest edges, thickets; common (uncommon south of DE). August-November. NL (Labrador) and AK south to NC, TN, IA, CO, UT, and CA. [= RAB, C, F, FNA, G, K, SE, W, WV; > *Mulgedium spicatum* (Lamarck) Small var. *spicatum* – S; > *Mulgedium spicatum* var. *integrifolium* (Torrey & A. Gray) Small – S]

Lactuca canadensis Linnaeus, American Wild Lettuce. Mt (NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): fields, roadsides, disturbed ground; common (uncommon in FL). June-November. NS and BC south to n. peninsular FL, TX, and CA. [= RAB, C, FNA, K, SE, W, WH; > *L. canadensis* var. *canadensis* – F, G, WV; > *L. canadensis* var. *latifolia* Kuntze – F, G, WV; > *L. canadensis* var. *longifolia* (Michaux) Farwell – F, G, WV; > *L. canadensis* var. *obovata* Wiegand – F, G; > *L. canadensis* – S; > *L. sagittifolia* – S]

Lactuca floridana (Linnaeus) Gaertner, Woodland Lettuce. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): mesic and dry-mesic forests; common (rare in DE, rare in GA Coastal Plain). August-November. NY, MB and MN south to s. FL and TX. [= RAB, C, FNA, SE, W, WH, WV; > *L. floridana* var. *floridana* – F, G, K; > *L. floridana* var. *villosa* (Jacquin) Cronquist – F, G, K; > *Mulgedium floridanum* (Linnaeus) de Candolle – S; > *Mulgedium villosum* (Jacquin) Small – S]

Lactuca graminifolia Michaux *var.* ***graminifolia***, Coastal Plain Lettuce. Cp (GA, NC, SC), Pd (GA, SC), Mt (VA): mesic to dry-mesic pine-oak woodlands and forests, longleaf pine sandhills, sandy fields, and sandy roadsides; common (rare in Piedmont, rare in Mountains). April-July. E. NC south to s. FL, west to c. LA; disjunct in s. NJ. Var. *arizonica* McVaugh is distributed in mesic canyons in montane w. TX, s. CO, NM, and AZ, south into w. Mexico. Var. *mexicana* McVaugh is distributed in Tamaulipas, Veracruz, Oaxaca, Chiapas, and Guatemala. [= K; < *L. graminifolia* – RAB, F, FNA, SE, W, WH; = *L. graminifolia* – S]

Lactuca hirsuta Muhlenberg ex Nuttall, Downy Lettuce. Cp (GA, NC, SC, VA), Pd (NC, SC, VA), Mt (NC, SC, VA, WV): forests and forest edges; uncommon (rare in Piedmont and Mountains, rare in GA Coastal Plain). Late May-November. NS and ON south to n. FL and TX. [= RAB, C, FNA, S, SE, W, WV; > *L. hirsuta* var. *hirsuta* – F, G, K; > *L. hirsuta* var. *sanguinea* (Bigelow) Fernald – F, G, K]

* ***Lactuca saligna*** Linnaeus, Willowleaf Lettuce. Mt (NC, VA, WV), Pd (DE, SC, VA), Cp (DE, VA), {GA}: fields, roadsides, disturbed ground, perhaps associated with circumneutral soils; common (rare in DE, GA, NC, SC, and VA), native of Europe. August-November. [= RAB, C, F, FNA, G, K, SE, W, WV]

* ***Lactuca sativa*** Linnaeus, Garden Lettuce. Mt (GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): cultivated throughout our area in home gardens and commercially, rarely weakly persistent; common as a cultivated plant, rare as a short-lived waif, native of Eurasia. June-October. [= F, FNA, G, K]

* ***Lactuca serriola*** Linnaeus, Prickly Lettuce. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): roadsides, disturbed ground, pastures; common (rare in FL and GA), native of Europe. June-November. [= C, FNA, K, SE, WH; = *L. scariola* Linnaeus – RAB, F, WH; > *L. serriola* var. *integrata* Gren. & Godr. – G, W; > *L. scariola* – S; > *L. virosa* – S, misapplied]

Lactuca ludoviciana (Nuttall) Riddell, Louisiana Lettuce. MB and BC, south to IN, KY, MS, LA, TX, and CA. [= C, F, FNA, G, K, S, SE]

* *Lactuca virosa* Linnaeus, Bitter Lettuce. Reported for DC and AL (Kartesz 1999; FNA); no specimens have been seen that document this distribution. [= FNA, K] {not keyed}

Lagascea Cavanilles 1803

A genus of 8 species, herbs and shrubs, of sw. United States, Mexico, and Central America, not pantropical by introduction. References: Harris in FNA (2006c); Stuessy (1978)=Z.

* *Lagascea mollis* Cavanilles, Silkleaf. Cp (FL): disturbed areas (on ballast); rare (not recently collected), native of Mexico (but now pantropical). Collected at Apalachicola, Franklin County, FL by A.W. Chapman and previously in FL by Rugel. [= FNA, WH, Z] {not keyed}

Lapsana Linnaeus 1753 (Nipplewort)

A monotypic genus (after the removal of most members to *Lapsanastrum*), an annual herb, of temperate Eurasia. References: Bogler in FNA (2006a); Cronquist (1980)=SE.

* ***Lapsana communis*** Linnaeus, Nipplewort. Mt (GA, NC, VA, WV), Pd, Cp (VA): fields, forests, disturbed areas; uncommon (rare in GA, NC, and Coastal Plain of VA), native of Europe. June-September. First reported for GA (Rabun County) by Stiles & Howel (1998). See Poindexter (2006). [= RAB, C, F, FNA, G, K, SE, W, WV]

Leontodon Linnaeus 1753 (Hawkbit)

A genus of about 30 species, herbs, primarily of temperate Eurasia. Samuel et al. (2006) show that *Leontodon* subgenus *Oporinia* should be recognized as a separate genus from *Leontodon* sensu stricto. References: Samuel et al. (2006); Bogler in FNA (2006a); Cronquist (1980)=SE. [also see *Oporinia*]

1 Heads (solitary-) several; scapes usually scaly-bracted above; pappus of plumose bristles ..... ***[see Oporinia]***
1 Head solitary; scapes usually naked; pappus type mixed, at least the outer pappus of the outer florets in each head of scales.
2 Pappus type mixed on each cypsela (with the scales outward and the plumose bristles inwards; phyllaries densely and coarsely hispid or hirsute ..... ***[L. hispidus]***
2 Pappus type mixed in each head (the outer cypselas with scales, the inner cypselas with plumose bristles); phyllaries glabrate to coarsely hirsute ..... ***L. saxatilis*** *ssp.* ***saxatilis***

* ***Leontodon saxatilis*** Lamarck *ssp.* ***saxatilis***, Little Hawkbit. Cp (VA), Mt (NC): roadsides, fields; rare, native of Europe. July-October. [= FNA; = *Leontodon taraxacoides* (Villars) Willdenow ex Mérat ssp. *taraxacoides* – K; < *L. taraxacoides* – C, W; *? L. nudicaulis* (Linnaeus) Banks ex Schinz & R. Keller – RAB, apparently misapplied; *? L. leysseri* (Wallroth) G. Beck – F, G]

* *Leontodon hispidus* Linnaeus, Bristly Hawkbit. Scattered states in eastern North America. {GA, PA (FNA)} {MD, DC (Kartesz 1999) – investigate} [= FNA; > *Leontodon hispidus* ssp. *hispidus* – K; > *L. hirtus* Linnaeus – K]

Leucanthemum P. Miller 1754 (Oxeye Daisy)

A genus of about 35 species, herbs, of Eurasia. References: Strother in FNA (2006a); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z.

1 Leaves larger near or slightly below mid-stem; leaves toothed only ..... ***L. lacustre***
1 Leaves larger toward the base of the plant; leaves usually at least partly lobed or pinnatisect, as well as toothed ..... ***L. vulgare***

* ***Leucanthemum lacustre*** (Brotero) Sampaio, Portuguese Daisy. Cp (NC, SC, VA), Pd (NC, SC): old fields, ditches, disturbed areas; rare, native of Europe. June-July. [= FNA, K, Z; = *Chrysanthemum lacustre* Brotero – RAB, C, SE]
* ***Leucanthemum vulgare*** Lamarck, Oxeye Daisy, White Daisy, Common Daisy, Marguerite. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, SC, VA): fields, roadsides, pastures, disturbed areas; common (uncommon in DE), native of Eurasia. April-August. [= FNA, K, Z; = *Chrysanthemum leucanthemum* Linnaeus – RAB, C, G, SE, W; > *C. leucanthemum* var. *pinnatifidum* Lecoq & Lamotte – F, WV; = *Leucanthemum leucanthemum* (Linnaeus) Rydberg – S]

Liatris Schreber 1791 (Blazing-star, Gayfeather)

A genus of 40-50 species, herbs, of e. and c. North America. References: Nesom in FNA (2006c); Gaiser (1946)=Z; Cronquist (1980)=SE; Stucky & Pyne (1990); Godfrey (1948)=Y; Stucky (1991); Stucky (1992); Mayfield (2002). Key adapted in large part from FNA.

1 Pappus plumose, the barbels mostly 0.5-1.0 mm long.
2 Inner phyllaries with apices prolonged, loosely spreading, slightly dilated, and petaloid (white to yellow, pink, or purplish); heads 3-5 mm in diameter, with 4-6 flowers per head; corolla lobes glabrous within; [of the Coastal Plain from SC southward].
3 Heads sessile; petaloid phyllary apices lavender, pink, or magenta, recurved, the petaloid portion short relative to the green phyllary bases ..... ***L. elegans*** *var.* ***elegans***
3 Heads pedunculate on short peduncles; petaloid phyllary apices light yellow or cream (rarely pale lavender), divergent with tips ascending, the petaloid portion elongate relative to the green phyllary bases ..... ***L. elegans*** *var.* ***kralii***
2 Inner phyllaries not prominently petaloid; heads 10-20 mm in diameter, with 10-60 flowers per head; corolla lobes coarsely hairy within; [collectively widespread].
4 Outer phyllaries as long as or (more usually longer than) the inner phyllaries, spreading or reflexed, the spreading portion typically > 2 mm long ..... ***L. squarrosa*** *var.* ***squarrosa***
4 Outer phyllaries shorter than the inner phyllaries, erect-appressed to spreading or reflexed, the spreading portion 0-2 mm long.
5 Stems and leaves usually glabrous; inner phyllaries usually apically rounded to truncate, apiculate, all essentially erect and appressed, usually with a narrow hyaline border ..... ***L. cylindracea***
5 Stems and leaves hirsute to hirsute-pilose; inner phyllaries apically acute-acuminate, all usually spreading to reflexed on the distal 1/3 (outer) to 1/5 (inner), usually without a hyaline border ..... ***L. hirsuta***
1 Pappus barbellate, the barbels 0.1-0.3 (-0.4) mm long.
6 Heads mostly 1-7 (-10) in a subcorymbiform arrangement; [of Bibb Co., AL] ..... ***L. oligocephala***
6 Heads usually > 10 in a spiciform or racemiform arrangement; [collectively widespread].

7 Leaves 3-5-veined.
8 Basal and lower cauline leaves (2-) 4-8 mm wide, cauline usually abruptly reduced in size at ca. midstem, continuing distally as linear, bract-like leaves; heads in a densely (- to loosely) spiciform arrangement; involucres 7-9 mm, purplish to greenish; florets 5-6 (-8) per head; [mainly of the Coastal Plain] ..... ***L. spicata*** *var.* ***resinosa***
8 Basal and lower cauline leaves 4-10 (-20) mm wide, cauline usually gradually reduced in size distally; heads in a densely to loosely spiciform arrangement; involucres (7-) 8-11 mm, usually greenish; florets (4-) 6-8 (-12) per head; [of the Mountains and Piedmont] .. .. ***L. spicata*** *var.* ***spicata***
7 Leaves 1-veined.
9 Mid and inner phyllaries either apically acute or rounded-retuse and minutely involute-cuspidate to apiculate.
10 Stems hirtellous with spreading to slightly deflexed hairs or variously puberulent to hirsute.
11 Stems hirsute to puberulent to pilose-puberulent or strigose-puberulent ..... ***L. gracilis***
11 Stems hirtellous with spreading to slightly deflexed hairs.
12 Heads sessile, relatively crowded in a cylindric arrangement, rigidly ascending, appressed to the rachis and to each other, densely overlapping; [e. NC south to Panhandle FL and AL] ..... ***L. chapmanii***
12 Heads sessile to short-pedunculate, in a relatively loose, spiciform, racemoid, or paniculate, commonly secund arrangement; [e. GA south through ne. FL to c. peninsular FL] ..... ***L. pauciflora***
10 Stems glabrous.
13 Phyllaries apically usually rounded-retuse and minutely involute-cuspidate to apiculate; corolla tubes glabrous within.
14 Stems and basal leaves glabrous; basal leaves mostly arising from congested nodes at very base of plant, (1-) 2-6 (-9) mm wide, abruptly reduced in size distally, surfaces minutely white-dotted by stomates, not glandular-punctate ..... ***L. laevigata***
14 Stems and basal leaves glabrous to very sparsely pilose, leaves usually with a few, spreading cilia near insertion; basal and lower cauline leaves arising from numerous, separated nodes on proximal part of stem, 1-2 (-2.5) mm wide and relatively even-sized, surfaces glandular-punctate ..... ***L. tenuifolia***
13 Phyllaries apically acute; corolla tubes pilose within.
15 Heads often in a secund arrangement; involucres 7-15 mm; phyllaries obovate; florets 3-6.
16 Stems glabrous (rarely sparsely hirtellous); leaves and phyllaries sparsely or not at all gland-dotted; involucres 11-15 mm high; inner phyllaries with acute apices ..... ***L. pauciflora***
16 Stems minutely puberulent-hirtellous; leaves and phyllaries gland-dotted; involucres 7-10 (-14) mm high; inner phyllaries with abruptly acuminate apices, often apiculate por mucronulate ..... ***L. secunda***
15 Heads in a secund arrangement or not; involucres (6-) 7-9 mm; phyllaries ovate-triangular to generally oblong; florets 4-10 (-12).
17 Heads densely arranged, on internodes 1-2 (-5) mm long, often secund; phyllary apex sharply acuminate-acute, distinctly involute, lamina relatively thin, glands consistently present and superficial at least on proximal portion; florets 4-7 (-9); basal and lower cauline leaves 2-5 mm wide, gradually reduced in length distally ..... ***L. cokeri***
17 Heads loosely arranged, on internodes 6-15 (-20) mm long, not secund; phyllary apex sharply acute to obtuse-angled with a thickened apiculum, not markedly involute, lamina relatively thick, usually with evidently sunken punctate glands, without superficial glands; florets 7-10 (-12); basal and lower cauline leaves 4-9 (-12) mm wide, quickly reduced in width and length distally ..... ***L. virgata***
9 Mid and inner phyllaries apically rounded, not rounded-retuse or cuspidate to apiculate.
18 Stems glabrous (rarely sparsely to moderately pilose in *L. pilosa*).
19 Involucres 5-7 (-9) mm; florets 4-5 (-6); corolla tubes glabrous within; pappus bristles usually about half the length of corolla tubes ..... ***L. microcephala***
19 Involucres 6-10 mm; florets (6-) 7-13 (-17); corolla tubes internally pilose; pappus bristles as long as the corolla tubes (shorter in some populations of *L. helleri*).
20 Stems 15-55 cm; leaves and phyllaries weakly or not at all punctate; pappus bristles 1/3-2/3 to equal the corolla tube length; montane ..... ***L. helleri***
20 Stems 40-120 cm; leaves and phyllaries distinctly punctate-glandular to weakly punctate; pappus bristles equal the corolla tube length; coastal plain and piedmont.
21 Stems glabrous; heads loosely arranged, on internodes (2-) 5-10 (-14) mm; peduncles 0-2 (-7) mm; involucres 6-8 mm; phyllaries in 3-4 (-5) series ..... ***L. elegantula***
21 Stems glabrous to sparsely or moderately pilose; heads densely arranged, on internodes (1-) 2-5 (-7) mm; peduncles 0-10 (-17, -80 in proximal part of capitulescence) mm; involucres (7-) 8-10 mm, phyllaries in (3-) 4-5 (-6) series ..... ***L. pilosa***
18 Stems puberulent to strigose.
22 Involucres 2.5-7 mm wide; florets 3-12.
23 Stems and peduncles puberulent to pilose-puberulent or strigose-puberulent; heads usually on ascending peduncles 2-10(-12) mm; involucres 2.5-4(-5) mm wide; phyllaries apically rounded or obtuse to acute or acuminate; florets 3-6 (-9).... ***L. gracilis***
23 Stems and peduncles stiffly short-strigose with closely ascending hairs; heads on divergent, arcuate-ascending peduncles 10-25 (-30) mm; involucres 5-7 mm wide; phyllaries apically rounded to nearly flat; florets 7-12 ..... ***L. patens***
22 Involucres 13-22 (-25) mm wide or (6-) 8-15 mm wide (*L. squarrulosa*); florets 11-80.
24 Heads usually on peduncles usually 8-50 mm (rarely subsessile); phyllaries erect, not reflexing; florets ca. 30-80 (19-33 in *L. scariosa*); corolla tubes glabrous or pilose within.
25 Leaves or leafy bracts 8-20 (-25) below the heads, cauline usually abruptly reduced above the basal; florets 19-33; [plants of the Central and Southern Appalachians] ..... ***L. scariosa*** *var.* ***scariosa***
25 Leaves or leafy bracts 20-85 below the heads, usually continuing relatively even-sized upward above the basal; florets ca. 30-80; [plants of WV and PA northward] ..... ***L. scariosa*** *var.* ***nieuwlandii***
24 Heads usually sessile, less commonly subsessile on peduncles 1-8 mm (rarely more); at least outer phyllaries usually reflexing; florets 11-26 (-30); corolla tubes pilose within.
26 Phyllaries glabrous, bullate, with broad, conspicuous, often erose to lacerate or irregular, hyaline border ..... ***L. aspera***
26 Phyllaries glabrous to puberulent or puberulent-hirtellous, essentially flat (not bullate), without hyaline border or border narrow and inconspicuous ..... ***L. squarrulosa***

Liatris aspera Michaux, Rough Blazing-star. Prairies, barrens, glades. August-September (-October). ON and ND south to Panhandle FL and TX. [= RAB, C, FNA, G, SE, W, WH; > *Liatris aspera* var. *aspera* – F; > *Liatris aspera* Michaux var. *intermedia* (Lunell) Gaiser – F, K, WV, Y; > *Laciniaria aspera* (Michaux) Greene var. *aspera* – S; > *Liatris spheroidea* Michaux – K; > *Laciniaria aspera* (Michaux) Greene var. *spheroidea* (Michaux) Alexander – S]

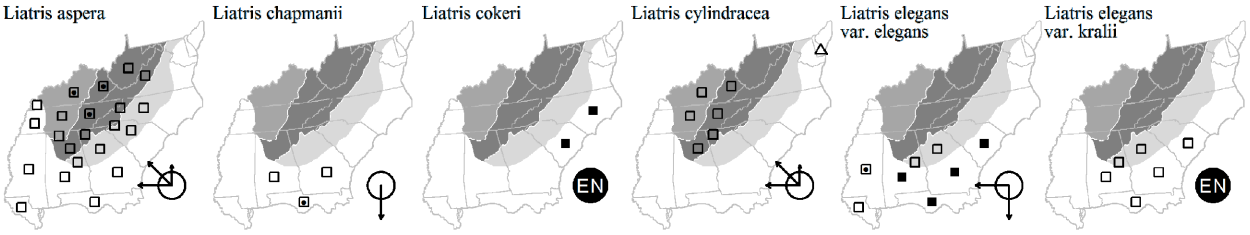
Liatris chapmanii Torrey & A. Gray, Chapman's Blazing-star. Xeric sands of scrub. August-October. Sw. GA, s. AL, south to s. FL. [= FNA, K, SE, WH; = *Laciniaria chapmanii* (Torrey & A. Gray) Kuntze – S] {synonymy incomplete}

Liatris cokeri Pyne & Stucky, Sandhills Blazing-star. Sandhills. (August-) September-October. Sc. and se. NC south to nc. SC. [= FNA; = *Liatris regimontis* (Small) K. Schumann – RAB, SE, W, Y, misapplied; > *Liatris cokeri* – K; > *Liatris regimontis* – K]

Liatris cylindracea Michaux, Barrelhead Blazing-star. Limestone glades, prairies, rarely escaped from cultivation eastwards. July-September. NY, ON, and MN south to se. TN (Ridge and Valley) (Chester, Wofford, & Kral 1997), nw. GA, and c. AL (Bibb County), and OK. [= C, F, FNA, G, K, SE] {synonymy incomplete}

Liatris elegans (Walter) Michaux *var.* ***elegans***, Common Elegant Blazing-star. Sandhills. SC south to FL, west to TX. See Mayfield (2002) for discussion of infraspecific taxa in this species. [= FNA; < *Liatris elegans* – RAB, SE, WH; < *L. elegans* var. *elegans* – K, Z; > *Liatris elegans* var. *flabellata* (Small) Gaiser – K, Z; >< *Laciniaria elegans* (Walter) Kuntze – S; > *Laciniaria flabellata* Small – S]

Liatris elegans (Walter) Michaux *var.* ***kralii*** Mayfield. Kral's Elegant Blazing-star. Sandhills. Se. SC (Allendale Co.) south to n. FL and west to s. MS. See Mayfield (2002) for discussion of infraspecific taxa in this species. [= FNA, K, WH; < *Liatris elegans* – SE, Z; < *Laciniaria elegans* (Walter) Kuntze – S]



Liatris elegantula (Greene) K. Schumann. Cp (FL, GA): sandhills; uncommon. August-October (-November). GA south to n. peninsular FL, west to MS. [= FNA, WH; = *Liatris graminifolia* Willdenow var. *elegantula* (Greene) Gaiser – Z; = *Laciniaria elegantula* Greene; < *Laciniaria graminifolia* (Willdenow) Kuntze – S; < *Liatris graminifolia* – SE] {synonymy incomplete}

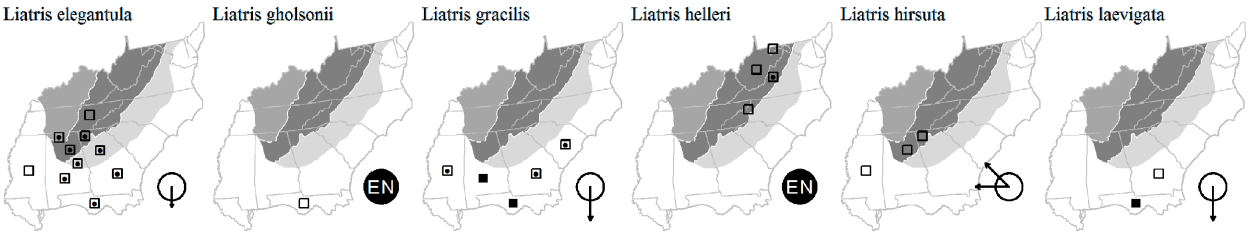
Liatris gholsonii L.C. Anderson, Gholson's Gayfeather. Mesic sandy sites. (July-) August-October (-November). Endemic to Liberty and Leon counties, FL. [= FNA, WH] {not yet keyed; add to synonymy}

Liatris gracilis Pursh, Slender Blazing-star. Sandhills, dry pine flatwoods. (July-) August-October (-November). SC south to s. FL, west to MS. [= RAB, FNA, K, SE, WH; > *Laciniaria laxa* Small – S; > *Laciniaria gracilis* (Pursh) Kuntze – S]

Liatris helleri T.C. Porter, Heller's Blazing-star. High elevation rock outcrops, sometimes on ledges of precipitous cliffs, rocky openings in heath balds, shale barrens. July-mid September. E. WV and w. VA south to w. NC. See Nesom (2005) for additional discussion. [= FNA; > *Liatris helleri* T.C. Porter – RAB, K, SE, W, Y, Z; > *Liatris turgida* Gaiser – RAB, C, F, G, K, SE, W, WV, Y, Z; > *Laciniaria helleri* (Porter) Porter ex Heller – S; > *Laciniaria pilosa* (Aiton) Heller – S, misapplied]

Liatris hirsuta Rydberg. Glades, and prairies. IA and NE south to MS, LA, and TX; disjunct eastward in nw. GA. [= FNA; < *Laciniaria squarrosa* (Linnaeus) Hill – S; = *Liatris squarrosa* (Linnaeus) Michaux var. *hirsuta* (Rydberg) Gaiser – C, F, G, K, SE, Y, Z; < *Liatris squarrosa* – W] {add to synonymy}

Liatris laevigata (Nuttall) Small, Smooth Blazing-star. Longleaf pine sandhills, scrub. August-October (-November). Se. GA (Charlton and Camden counties) (Carter, Baker, & Morris 2009) south to s. FL. [= FNA; = *Liatris tenuifolia* Nuttall *var. quadriflora* Chapman – K, SE, WH; < *Laciniaria tenuifolia* (Nuttall) Kuntze – S]



Liatris microcephala (Small) K. Schumann, Small-head Blazing-star. Outcrops of acidic rocks (sandstone, granite, gneiss). August-October. W. NC and KY south to w. SC, n. and c. GA, and n. AL. [= RAB, C, F, FNA, G, K, SE, W, Y, Z; = *Laciniaria microcephala* Small – S]

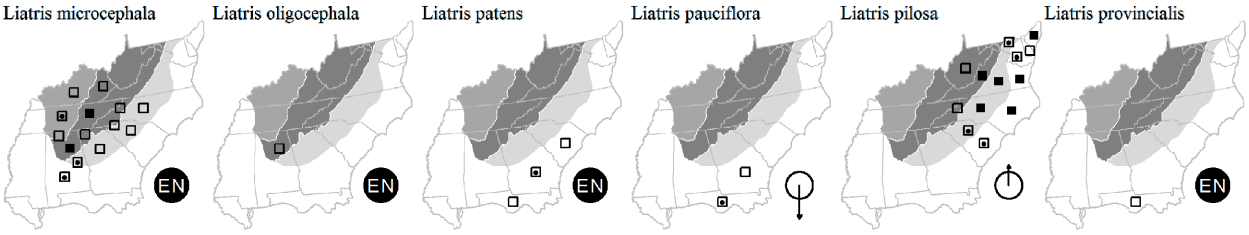
Liatris oligocephala J. Allison, Cahaba Blazing-star, Cahaba Torch. Dolomitic Ketona glades. Endemic to Bibb County, c. AL (Allison & Stevens 2001). Also see Hardig, Allison, & Schilling (2005). June-July (-August). [= FNA]

Liatris patens Nesom & Kral, Georgia Blazing-star. Longleaf pine sandhills and dry flatwoods. Late August-early November. SC south to e. Panhandle FL. See Kral & Nesom (2003) for detailed information. [= FNA, WH]

Liatris pauciflora Pursh, Few-flower Blazing-star. Xeric sands of scrub. August-October. GA (Tatnall Co.) south to c. peninsular FL; alleged by Small (1933) to extend to SC. [< *Liatris pauciflora* – K, SE (also see *L. secunda*); = *Laciniaria pauciflora* (Pursh) Kuntze – S; = *Liatris pauciflora* var. *pauciflora* – FNA, WH]

Liatris pilosa (Aiton) Willdenow. Sandhills, pine barrens, fields, roadbanks. (August-) September-October (-November). NJ, DE, and PA south to SC. [= FNA, K; < *Liatris graminifolia* Willdenow – RAB, SE, W (also see *Liatris virgata*); = *Liatris graminifolia* – C, G; > *Liatris graminifolia* var. *graminifolia* – F; > *Liatris graminifolia* var. *lasia* Fernald & Griscom – F; > *Liatris graminifolia* var. *racemosa* (A.P. de Candolle) Venard – F, WV; > *Liatris graminifolia* var. *typica* – Y, Z; > *Liatris graminifolia* var. *dubia* (Barton) A. Gray – WV, Y, Z; = *Laciniaria graminifolia* (Walter) Kuntze – S]

Liatris provincialis R.K. Godfrey. Sandhills, scrub, dunes. (August-) September-October. Endemic to FL Panhandle (Franklin and Wakulla counties). [= FNA, WH] {not yet keyed; add to synonymy}



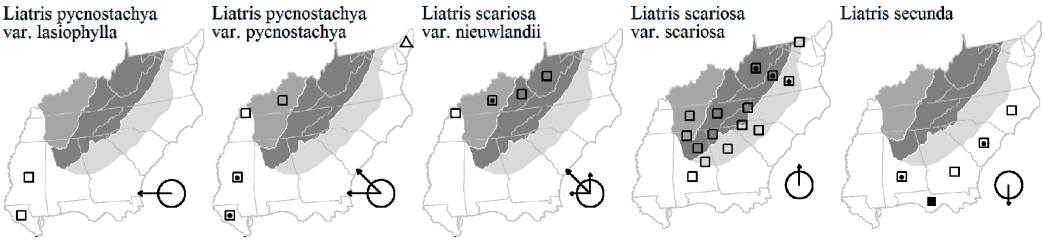
Liatris pycnostachya Michaux *var.* ***lasiophylla*** Shinners. [= FNA; < *Laciniaria pycnostachya* (Michaux) Kuntze – S; < *Liatris pycnostachya* – SE] {not yet keyed; add to synonymy}

Liatris pycnostachya Michaux *var.* ***provincialis***. [= FNA; < *Laciniaria pycnostachya* (Michaux) Kuntze – S; < *Liatris pycnostachya* – C, F, G, SE] {not yet keyed}

Liatris scariosa (Linnaeus) Willdenow *var.* ***scariosa***, Northern Blazing-star. Shale barrens, dry rock outcrops, roadbanks. August-September (-October). PA, MD, and WV south to NC and TN. [= C, FNA, K, SE; < *Liatris scariosa* – RAB, W; = *Liatris scariosa* – F, G; < *Laciniaria scariosa* (Linnaeus) Hill – S (also see *Liatris squarrulosa*); > *Liatris scariosa* var. *scariosa* – WV, Y, Z; > *Liatris scariosa* var. *virginiana* (Lunell) Gaiser – WV, Y, Z]

Liatris scariosa (Linnaeus) Willdenow *var.* ***nieuwlandii*** (Lunell) E.G. Voss. Prairies, glades, and woodlands. August-September (-October). CT, NY, MI, and WI south to PA, WV, IN, IL, and AR. [= FNA, C, G, K, SE; < *Liatris borealis* Nuttall – F; = *Liatris novae-angliae* (Lunell) Shinners var. *nieuwlandii* Lunell] {synonymy incomplete}

Liatris secunda Elliott, Sandhill Blazing-star. Sandhills. August-September (-October). S. NC south to w. Panhandle FL and s. AL. [= RAB, Y; < *Liatris pauciflora* Pursh – K, SE; = *Laciniaria secunda* (Elliott) Small – S; = *L. pauciflora* Pursh var. *secunda* (Elliott) D.B. Ward – FNA, WH]



Liatris spicata (Linnaeus) Willdenow *var.* ***resinosa*** (Nuttall) Gaiser. Bogs, wet pine savannas, seepages. (July-) August-October (-November). NJ south to s. FL, west to LA. [= RAB, F, FNA, G, K, WV, Y, Z; < *Liatris spicata* – C, SE, W, WH; < *Laciniaria spicata* (Linnaeus) Kuntze – S]

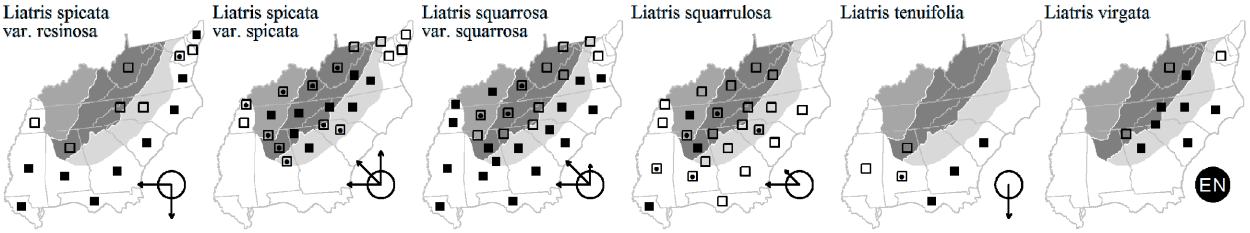
Liatris spicata (Linnaeus) Willdenow *var.* ***spicata***, Florist's Gayfeather. Prairies, roadsides, seepages, bogs, grassy balds. July-September. MA, ON, and MI, south to GA, AL, MS, and AR. [= RAB, F, FNA, G, K, WV; = *Liatris spicata* var. *typica* – Y, Z; < *Liatris spicata* – C, SE, W; < *Laciniaria spicata* (Linnaeus) Kuntze – S]

Liatris squarrosa (Linnaeus) Michaux *var.* ***squarrosa***. Dry woodlands, glades, barrens. [= C, FNA, G, K, SE; > *Liatris squarrosa* var. *squarrosa* – F; > *L. squarrosa* var. *gracilenta* Gaiser – F, Y, Z; < *Liatris squarrosa* – RAB, W, WH, WV; < *Laciniaria squarrosa* (Linnaeus) Hill – S; > *Liatris squarrosa* var. *typica* Gaiser – Y, Z]

Liatris squarrulosa Michaux. Diabase barrens, other glades and barrens, prairies, open woodlands. August-October (-November). S. WV, KY, IL, and MO south to GA, Panhandle FL, AL, and TX. Highly variable and needing additional study to determine if multiple taxa should be recognized. [= C, FNA, K, SE, W, WH; > *Liatris earlei* (Greene) Schumann – F, RAB, Y, Z; > *Liatris squarrulosa* – G; > *Liatris scabra* (Greene) K. Schumann – F, G; > *Laciniaria ruthii* Alexander – S; > *Laciniaria shortii* Alexander – S; = *Liatris scariosa* var. *squarrulosa* – Y, Z]

Liatris tenuifolia Nuttall. Longleaf pine sandhills. August-November. SC south to s. FL, west to AL. [= FNA, RAB; = *Liatris tenuifolia* Nuttall *var. tenuifolia* – K, SE, WH; < *Laciniaria tenuifolia* (Nuttall) Kuntze – S (also see *Liatris laevigata*)]

Liatris virgata Nuttall. Open woods, roadbanks. (July-) August-October (-November). {distribution}. [= FNA, K; < *Liatris graminifolia* – RAB, SE, W; > *Liatris graminifolia* var. *smallii* (Britton) Fernald & Griscom – F, Y, Z; > *Liatris regimontis* (Small) K. Schumann – C, G, Y; > *Liatris regiomontis* – F, orthographic variant; > *Laciniaria regimontis* Small – S; > *Laciniaria smallii* Britton – S; > *Liatris graminifolia* var. *virgata* (Nuttall) Fernald – F]



Ligularia Cassini 1816 (Ligularia)

A genus of 125 species (or more), perennial herbs, natives of temperate Eurasia. References: Barkley in FNA (2006b).

* ***Ligularia dentata*** (A. Gray) H. Hara. Commonly cultivated horticulturally in ne. North America, locally established or persistent, as in MD; native of China and Japan. [= FNA, K; = *Senecio clivorum* (Maximowicz) Maximowicz – C, SE]

Lygodesmia D. Don 1829 (Rush Pink, Skeletonplant)

genus of about 5-7 species, herbs, of w. and s. North America. References: Bogler in FNA (2006a); Tomb (1980)=Z; Cronquist (1980)=SE.

Lygodesmia aphylla (Nuttall) Torrey & A. Gray, Flowering Straws, Rose-rush. Xeric sandhills. C. GA south to s. FL and west to c. Panhandle FL. [= FNA, K, S, SE, WH, Z]

Madia Molina 1782 (Tarweed)

A genus of about 10 species, of w. North America and Chile. References: Baldwin & Strother in FNA (2006c); Cronquist (1980)=SE.

* ***Madia sativa*** Molina, Tarweed. Disturbed areas, scattered occurrences (perhaps only waifs) in eastern North America, including GA, NC, PA; variously considered native of Chile or w. North America (see FNA). [= K; *M. capitata* Nuttall; > *M. sativa* var. *sativa* – SE; > *M. sativa* var. *congesta* Torrey & A. Gray – SE]

Marshallia Schreber 1791 (Barbara's-buttons)

A genus of about 11 species, perennial herbs, of the se. United States. *Marshallia* ranges from sc. VA, sw. PA, WV, s. KY, s. MO, and c. OK, south to c. peninsular FL, and sw. TX. References: Channell (1957)=Z; Watson in FNA (2006c); Watson & Estes (1990)=Y; Cronquist (1980)=SE; Watson, Elisens, & Estes (1991); Watson, Jansen, & Estes (1991); Beadle & Boynton (1901)=X.

1 Leaves not basally disposed, the leaves all about the same size; plants glabrous throughout; plants colonial by persistent rhizomes; internodes 10-25 (and leaves 2-5× as long as wide) ..... ***M. trinervia***
1 Leaves basally disposed, either all of the leaves below the midpoint of the stem, or the upper leaves markedly smaller than the lower stem and basal leaves (the basal leaves sometimes withered); plants pubescent at least below the heads; plants producing lateral offsets which are separated from the parent in less than a year; internodes 1-12 (and leaves 3-15× as long as wide) or 10-35 (and leaves 8-20× as long as wide).
2 Phyllaries with acuminate-subulate tips; paleae (receptacular bracts, interspersed with the flowers) with acuminate-subulate tips; plants usually with 2 or more heads; flowering late July-mid October.
3 Lower stem leaves (and basal leaves) erect, narrowly lanceolate to linear-lanceolate, with attenuate or long-acuminate apices, relatively thick in texture, the 2-4 lateral nerves (parallel to the midnerve) prominent; caudex with fibrous remnants of the previous year's leaves (if not burned off); phyllaries thick, ovate-attenuate; [NC, SC, and extreme e. GA] ..... ***M. graminifolia***
3 Lower stem leaves (and basal leaves) spreading, oblanceolate or spatulate, with rounded or obtuse apices, relatively thin in texture, the 2 lateral nerves (parallel to the midnerve) often obscure; caudex lacking fibrous remnants of the previous year's leaves; phyllaries thin, linear-subulate; [e. GA southward and westward] ..... ***M. tenuifolia***
2 Phyllaries with rounded to acute apices; paleae (receptacular bracts, interspersed with the flowers) slightly to strongly broadened or clavate-thickened just below the acute to obtuse apex; plants with 1 head (or more in *M. mohrii* and *M. ramosa*); flowering in late April-July.
4 Heads 2-10 (-20) (rarely solitary on depauperate plants).
5 Leaves 6-10 cm long, 8-23 mm wide, mostly 3-10× as long as wide; heads 2-5 (-10), 22-37 mm in diameter; [sandstone, limestone, and dolostone glades of nw. GA and c. AL] ..... ***M. mohrii***
5 Leaves 8-20 cm long, 2-7 (-10) mm wide, mostly > 15× as long as wide; heads (2-) 4-10 (-20), 10-25 mm in diameter; [Altamaha Grit glades pinelands, and ultramafic outcrop barrens of e. GA and Panhandle FL] ..... ***M. ramosa***
4 Head solitary.
6 Leafy portion of the stem 0-20 (-30) cm long, the naked peduncle 1.5-10× (or more) as long as the leafy portion of the stem; stem leaves (if present) not reduced upward, the uppermost > 1/2 as long and wide as the largest leaves on the plant; basal leaves obovate

to oblanceolate, the apex obtuse to rounded (often emarginate); outer well-developed phyllaries with obtuse to rounded apex; corollas white to very pale pink; plants flowering late April-May (-early June).

7 Plant with 3-10 leaves on the lower stem, extending (5-) 8-20 (-30) cm up the stem; pappus scales (0.5-) 1.0-1.5 mm long; plant (2-) 3-5 (-7) dm tall; [of the Piedmont from sc. VA southward] ..... ***M. obovata* var. *obovata***

7 Plant scapose (all of the leaves basal) or nearly scapose, with 1-5 leaves extending 1-5 (-10) cm up the stem; pappus scales (1.0-) 1.5-2.5 (-3.0) mm long; plant (0.5-) 1.5-3.5 (-5.0) dm tall; [of the Coastal Plain from NC southward] ..... ***M. obovata* var. *scaposa***

6 Leafy portion of the stem 23-50 cm long, the naked peduncle 0.4-1.2× as long as the leafy portion of the stem; stem leaves reduced upward, the uppermost < 1/3 as long and wide as the largest leaves on the plant; basal leaves obovate to oblanceolate, the apex obtuse to acute or acuminate; outer well-developed phyllaries with acute to obtuse apex; corollas medium pink; plants flowering late June-July.

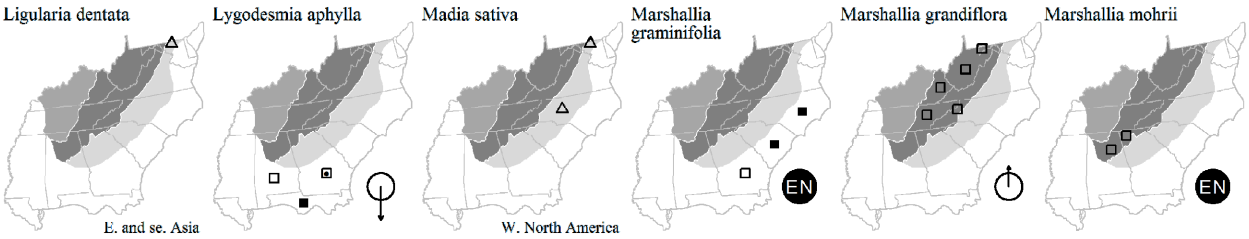
8 Basal and lower cauline leaves (2-) 3-13 (-20) cm long (including the petiole), (5-) 10-20 (-30) mm wide, averaging about 6× as long as wide (including the petiole), the apex obtuse to rounded; pappus scales ca. 2 mm long; plants (2-) 3-5 (-8.5) dm tall; achenes without resin-dots between the ridges; [of the Mountains] ..... ***M. grandiflora***

8 Basal and lower cauline leaves (8-) 15-25 (-32) cm long (including the petiole), (3-) 7-12 (-15) mm wide, averaging about 10× as long as wide (including the petiole), the apex acute to acuminate; pappus scales ca. 1.2 mm long; plants (4-) 6-9 (-10) dm tall; achenes with copious resin-dots between the ridges; [of the Piedmont] ..... ***M. species 1***

Marshallia graminifolia (Walter) Small, Grassleaf Barbara's-buttons. Pine savannas. Late July-mid October. Ne. NC south to se. SC, and rarely to e. GA (Emanuel County) (Sorrie 1998b). Closely related to *M. tenuifolia* Rafinesque, which differs in having a well-developed horizontal rosette of thin-textured spatulate leaves, which do not leave fibrous remains (vs. with firm, ascending, linear-lanceolate basal leaves, which leave fibrous remains). [= GW, RAB, SE, Z; < *M. graminifolia* – FNA; = *M. graminifolia* var. *graminifolia* – K; > *M. laciniarioides* Small - S; > *M. williamsonii* Small – S; > *M. graminifolia* var. *graminifolia* – X; > *M. graminifolia* var. *lacinarioides* (Small) Beadle & F.E. Boynton – X; = *M. graminifolia* ssp. *graminifolia* – Y]

Marshallia grandiflora Beadle & F.E. Boynton, Appalachian Barbara's-buttons, Large-flowered Barbara's-buttons. Sandy or rocky riverbanks, bog margins, dry slopes over mafic rocks. June-August. Sw. PA south to sw. NC, e. TN (Cumberland Plateau) (Chester, Wofford, & Kral 1997), and se. KY. [= C, F, FNA, G, K, S, SE, W, WV, X, Y, Z; < *M. grandiflora* – RAB (also see *M. species 1*)]

Marshallia mohrii Beadle & F.E. Boynton, Coosa Barbara's-buttons. Sandstone, limestone, and dolostone glades, calcareous prairies. Nw. GA and n. and c. AL. It somewhat resembles *M. grandiflora*, but typically has 2-10 heads per plant (or solitary in depauperate individuals). [= FNA, K, S, SE, X, Y, Z]



Marshallia obovata (Walter) Beadle & F.W. Boynton *var.* ***obovata***, Piedmont Barbara's-buttons, Spoon-leaved Barbara's-buttons. Clay flats, woodland borders, dry woodlands. Late April-May (-early June). Sc. VA south to se. TN (Chester, Wofford, & Kral 1997), sw. GA, Panhandle FL, and c. AL, primarily in the Piedmont. [= C, G, K, RAB, SE, Y, Z; = *M. obovata* var. *platyphylla* (M.A. Curtis) Beadle & F.E. Boynton – F, X; < *M. obovata* – FNA, S, W, WH]

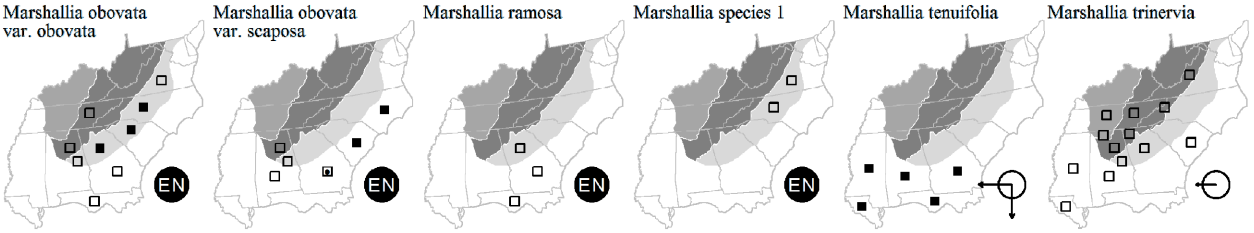
Marshallia obovata (Walter) Beadle & F.W. Boynton *var.* ***scaposa*** Channell. Pine savannas. Late April-May. E. NC south to se. AL, in the Coastal Plain. [= K, RAB, SE, Y, Z; = *M. obovata* var. *obovata* – F, X, misapplied; < *M. obovata* – FNA, S]

Marshallia ramosa Beadle & F.E. Boynton, Pineland Barbara's-buttons, Southern Barbara's-buttons. Pinelands, Altamaha Grit outcrops, woodlands over ultramafic rocks. Coastal Plain from e. GA south to ne. FL and Panhandle FL. It somewhat resembles *M. graminifolia* in its linear leaves, but differs in the phyllaries acute (vs. subulate-acuminate), and flowering period (late May-June vs. July-mid-October). [= FNA, K, S, SE, WH, X, Y, Z]

Marshallia species 1, Oak Barrens Barbara's-buttons. Diabase barrens and fire-maintained woodlands over greenstone. Late June-July; August-September. This species is known from three extant and one extirpated population, in Granville County, NC and Halifax Co. VA, where associated with numerous rare and disjunct taxa of prairie or barren affinities: *Solidago ptarmicoides, Solidago rigida* var. *glabrata, Symphyotrichum depauperatum, Echinacea laevigata, Silphium terebinthinaceum, Baptisia australis* var. *aberrans, Linum sulcatum* var. *sulcatum, Carex meadii, Eryngium yuccifolium* var. *yuccifolium, Scutellaria leonardii, Lithospermum canescens,* and others. [< *M. grandiflora* – RAB]

Marshallia tenuifolia Rafinesque. Pine savannas. E. GA south to c. peninsular FL, west to e. TX. See *M. graminifolia* for additional discussion. [= GW, SE, WH, Z; < *M. graminifolia* – FNA; = *M. graminifolia* (Walter) Small var. *cynanthera* (Elliott) Beadle & F.E. Boynton – K, X; = *M. graminifolia* – S, misapplied; = *M. graminifolia* (Walter) Small ssp. *tenuifolia* (Rafinesque) L. Watson – Y]

Marshallia trinervia (Walter) Trelease, Colonial Barbara's-buttons, Broadleaf Barbara's-buttons. Moist rocky streambanks and in calcareous clays. July. E. SC (?), sw. NC, and sc. TN, south to s. AL and s. MS (Sorrie & Leonard 1999). Reported for VA by C; the documentation is unknown. [= C, F, FNA, G, K, RAB, S, SE, W, X, Y, Z]



Matricaria Linnaeus 1740 (Mayweed)

A genus of about 7 species, herbs, of Eurasia and n. Africa. References: Brouillet in FNA (2006a); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z. [also see *Tripleurospermum*]

1 Heads with evident white rays (very rarely lacking rays); plant chamomile-scented; disc flowers 5-lobed.....***M. chamomilla***
1 Heads discoid (lacking rays); plant pineapple-scented; disc flowers 4-lobed.....***M. discoidea***

* ***Matricaria chamomilla*** Linnaeus, German Chamomile, False Chamomile, Scented Mayweed. Roadsides; native of Europe. July-September. [= F, FNA, G, SE; = *Matricaria recutita* Linnaeus – C, K, Z; = *Chamomilla recutita* (Linnaeus) Rauschert]
* ***Matricaria discoidea*** A.P. de Candolle, Pineapple-weed, Rayless Chamomile. Barnyards, pastures, roadsides; native of w. North America. May-November. [= FNA, K, Z; = *M. matricarioides* (Lessing) T.C. Porter – C, F, G, RAB, SE, illegitimate name; *? Lepidotheca suaveolens* (Pursh) Nuttall; *? Chamomilla suaveolens* (Pursh) Rydberg]

Melampodium Linnaeus 1753

A genus of about 36 species, herbs, of tropoical and subtropical America. References: Strother in FNA (2006c).

* ***Melampodium divaricatum*** (Richard) DC. Disturbed areas; native of tropical America. [= FNA, K, WH]

Melanthera Rohr 1792

A genus of about 35 species, herbs, of tropical and subtropical areas. References: Parks in FNA (2006c); Cronquist (1980)=SE; Wagner & Robinson (2001)=Z.

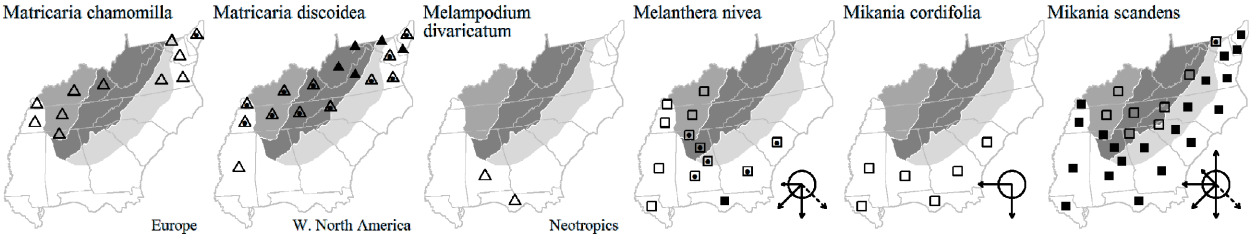
Melanthera nivea (Linnaeus) Small. Calcareous outcrops, sandy woodlands. June-October. E. SC south to s. FL, west to LA; also widespread in the West Indies, Mexico, Central America, and northern South America (Colombia, Ecuador, Peru, and Venezuela). [= FNA, K, SE, WH, Z; > *M. hastata* Michaux – RAB, S]

Mikania Willdenow 1803 (Climbing Hempweed)

A genus of about 430-450 species, vines, perennial herbs, and shrubs, primarily pantropical in distribution, but with extensions into temperate areas (Holmes 1995). References: Holmes in FNA (2006c); Cronquist (1980)=SE.

1 Involucre 6.5-8 mm; achenes 3.5-4.5 mm long; pubescence of the stems, leaves, and involucres spreading; [of se. SC southward].....***M. cordifolia***
1 Involucre 4-5.5 (-6) mm high; achenes 1.5-2.5 (-2.7) mm long; pubescence of the stems, leaves, and involucres puberulent or nearly smooth; [widespread in our area].....***M. scandens***

Mikania cordifolia (Linnaeus f.) Willdenow, Heartleaf Climbing Hempweed. Bottomland hardwood forests, mesic hammocks near the coast, margins of tidal marshes. Se. SC (Beaufort and Colleton counties) (P. McMillan, pers. comm. 2005), e. GA (Bryan & Camden counties) (Carter, Baker, & Morris 2009), south to s. FL, west to s. LA. [= K, S, SE, WH]
Mikania scandens (Linnaeus) Willdenow, Climbing Hempweed. Marshes, swamp forests, wet thickets, seepages. July-October. ME to s. ON, south to s. FL and e. TX, south into the tropics. [=C, G, GW, K, RAB, S, SE, W, WH; > *M. scandens* var. *pubescens* (Nuttall) Torrey & A. Gray – F; > *M. scandens* var. *scandens* – F]



Oclemena E.L. Greene 1903 (Aster, Nodding-aster)

A genus of 3 species, perennial herbs, of e. North America. There now appears to be strong evidence (morphologic and molecular) and something approaching a consensus for the recognition of *Oclemena* as distinct from *Aster*. It appears that *Oclemena* is most closely related to *Ionactis*, and that these two genera are more closely related to *Solidago* and *Heterotheca* than to *Aster* (in a narrower sense). References: Brouillet in FNA (2006b); Nesom (1994)=Z; Semple, Heard, & Xiang (1996)=Y; Cronquist (1980)=SE; Nesom (1997).

1 Leaves 30-100 or more per plant, 1-8 mm wide ..... ***O. nemoralis***
1 Leaves 11-30 per plant, 10-50 mm wide.
2 Leaves obovate, acuminate at the tip, thin in texture; [of the Mountains] ..... ***O. acuminata***
2 Leaves narrowly elliptic, acute to obtuse at the tip, coriaceous in texture; [of the Coastal Plain, from se. SC southward] ..... ***O. reticulata***

Oclemena acuminata (Michaux) Greene, Whorled Aster, Whorled Nodding-aster. Spruce-fir forests, northern hardwood forests, mountain seepages and streambanks, other cool, moist situations. July-September. NL (Newfoundland) and QC south to w. NC, ne. GA, and e. TN. [= FNA, K, Y, Z; = *Aster acuminatus* – C, F, G, RAB, SE, W, WV]

Oclemena nemoralis (Aiton) Greene, Leafy Bog Aster, Bog Nodding-aster. Peaty bogs. NL (Labrador) and ON south to nc. PA, MD, DE (formerly), and NJ. [= FNA, K, Z; = *Aster nemoralis* Aiton – C, F, G]

Oclemena reticulata (Pursh) Nesom, Pine-barren Aster. Wet pine flatwoods. Late April-early June. Se. SC south through e. GA to c. peninsular FL. [= FNA, K, WH, Z; = *Aster reticulatus* Pursh – GW, RAB, SE; = *Doellingeria reticulata* (Pursh) Greene – S]

Onopordum Linnaeus 1753 (Scotch Thistle, Cotton-thistle)

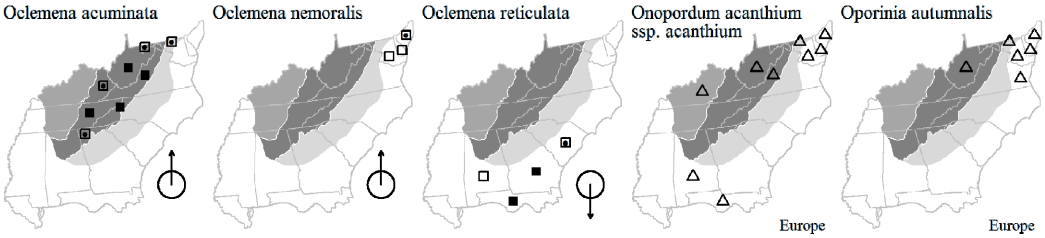
A genus of about 60 species, herbs, of the Mediterranean region and w. Asia. References: Keil in FNA (2006a); Cronquist (1980)=SE.

* ***Onopordum acanthium*** Linnaeus *ssp.* ***acanthium***, Scotch Thistle, Cotton-thistle. Disturbed areas; native of Europe. July-October. [= FNA; > *O. acanthium* – C, F, G, K, S, SE, WH]

Oporinia D. Don 1829 (Fall-dandelion)

A genus of about 20 species, herbs, primarily of temperate Eurasia. Samuel et al. (2006) show that *Leontodon* subgenus *Oporinia* (including *L. autumnalis* among the species treated below) should be recognized as a separate genus from *Leontodon* sensu stricto. References: Samuel et al. (2006); Bogler in FNA (2006a); Cronquist (1980)=SE.

* ***Oporinia autumnalis*** (Linnaeus) D. Don, Fall-dandelion. Roadsides, fields; native of Europe. June-October. [= *Leontodon autumnalis* Linnaeus – FNA, SE, WV; > *Leontodon autumnalis* Linnaeus var. *autumnalis* – C, F, G; > *L. autumnalis* ssp. *autumnalis* – K]



Packera Á. & D. Löve 1976 (Ragwort)

A genus of about 64 species, annual and perennial herbs, of subtropical, temperate, and arctic North American, with a few species in Siberia. These species have usually been considered part of *Senecio*, and have often been given informal status as "the Aureoid group". According to recent interpretations, this group warrants generic status, as *Packera* (Bremer 1994). References:

Trock in FNA (2006b); Barkley (1962)=Z; Cronquist (1980)=SE; Barkley (1999)=Y; Barkley (1978)=X; Bremer (1994); Mahoney & Kowal (2008).

1 Plant an annual (rarely a biennial); leaf with lateral lobes broadly rounded, resembling the terminal lobe; [of wet soil of swamps and wet fields] ..... ***P. glabella***
1 Plant a perennial (rarely a biennial); leaf with lateral lobes absent, or distinctly narrower than the terminal lobe; [of dry to mesic soils, but not generally as above].
2 Principal leaves (especially the basal) 2-3-pinnatifid, the segments mostly 1-3 mm wide ..... ***P. millefolium***
2 Principal leaves entire, toothed, or irregularly and raggedly 1-pinnatifid.
3 Plants densely tomentose or floccose when young, remaining visibly tomentose throughout the growing season on the leaves (these appearing grayish because of the persistent tomentum); basal leaves entire, obscurely crenate, or serrate (rarely lobed).
4 Basal leaves (including petioles) mostly 10-25 cm long, held in a vertical posture; [Coastal Plain and Piedmont of NC, SC, and VA, and Mountains of SC] ..... ***P. tomentosa***
4 Basal leaves (including petioles) mostly 3-10 cm long, arching or prostrate; [Mountains].
5 Tomentum of leaf blades very fine and tight; [shale barrens and woodlands, w. VA and WV north to w. MD and wc. PA] ..... ***P. antennariifolia***
5 Tomentum of leaf blades coarser, looser; [calcareous, mafic, or ultramafic cliffs, barrens, and woodlands, w. VA and e. VA southward to w. NC and e. TN] ..... ***P. paupercula*** *var.* ***appalachiana***
3 Plants glabrate to sparsely floccose when young, becoming glabrous to glabrate later in the growing season, though some species with some persistent floccose tomentum near the base or in the leaf axils (the leaves appearing green); basal leaves serrate or lobed.
6 Basal leaves ovate, orbicular, or reniform, the blade 0.8-2× as long as wide; leaf blades cordate, truncate, or abruptly narrowed at the base.
7 Basal leaves reniform, strongly cordate at the base ..... ***P. aurea***
7 Basal leaves obovate to orbicular, truncate or abruptly narrowed at the base ..... ***P. obovata***
6 Basal leaves oblanceolate, narrowly elliptic, the blade 2-8× as long as wide; leaf blades cuneate at the base (truncate to cordate in *P. schweinitziana*); plants usually not forming clonal patches by stolons or widely creeping rhizomes.
8 Basal leaves with truncate to cordate bases (and typically oblique); [high elevation grassy balds] ..... ***P. schweinitziana***
8 Basal leaves cuneate at the base; [collectively widespread and of various habitats].
9 Heads many, generally 20-100; basal leaves (including petioles) up to 30 cm long and 3.5 cm wide ..... ***P. anonyma***
9 Heads few, generally 5-20; basal leaves (including petioles) up to 12 cm long and 2 cm wide ..... ***P. paupercula*** *var.* ***paupercula*** *and* ***P. crawfordii***

Packera anonyma (Wood) W.A. Weber & Á. Löve, Appalachian Ragwort, Small's Ragwort. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): rock outcrops, roadsides, woodlands; hammocks, disturbed areas; common (rare in DE). May-early June. S. PA, DE, and KY, south to Panhandle FL and c. MS. [= FNA, K, WH, Y; = *Senecio anonymus* Wood – C, SE, X; = *Senecio smallii* Britton – F, G, RAB, S, WV]

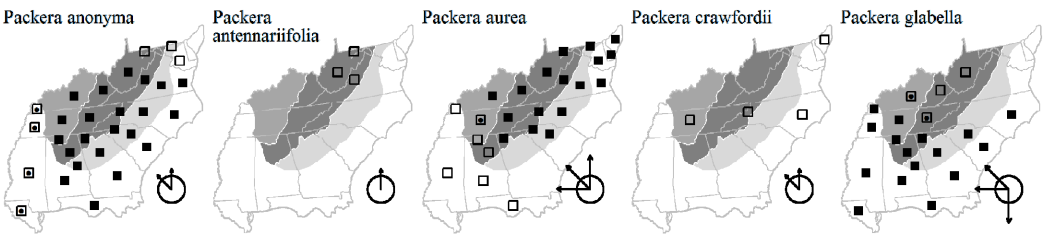
Packera antennariifolia (Britton) W.A. Weber & Á. Löve, Shalebarren Ragwort. Mt (VA, WV): shale barrens and shale woodlands; rare. April-June. Sc. PA and w. MD south to w. VA and e. WV. [= FNA, K, Y; = *Senecio antennariifolius* Britton – C, F, G, SE, WV]

Packera aurea (Linnaeus) Á. & D. Löve, Golden Ragwort, Heartleaf Ragwort. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, FL, VA): moist forests, bottomlands, bogs, stream banks; common (rare in FL). Late March-June. NL (Labrador) west to MN, south to NC, ne. SC, n. GA, n. AL, and c. AR; disjunct in Panhandle FL. This species is variable, and some of the more striking variants have been named; some may well warrant formal taxonomic recognition, but additional study is needed. [= FNA, K, WH, Y; = *Senecio aureus* Linnaeus – C, G, GW, RAB, SE, WV, X; > *Senecio aureus* var. *aureus* – F; > *Senecio aureus* var. *intercursus* Fernald – F; > *Senecio aureus* var. *gracilis* (Pursh) Hooker – F; > *Senecio aureus* – S; > *Senecio gracilis* Pursh – S]

Packera crawfordii (Britton) A.M. Mahoney & R.R. Kowal ined. Mt, Cp (NC): bogs and fens; rare. NJ, PA, and s. IN south to e. NC, w. NC, and TN. [< *Senecio pauperculus* Michaux – RAB, C, G, GW, S, SE, X; = *Senecio crawfordii* (Britton) G.W. & G.R. Douglas – F; < *Packera paupercula* (Michaux) Á. & D. Löve – FNA]

Packera glabella (Poiret) C. Jeffrey, Butterweed, Smooth Ragwort, Yellowtop. Cp (FL, GA, NC, SC), Pd (GA, SC), Mt (GA, WV): swamp forests, bottomland forests, cleared areas in bottomlands, often in mucky soils; common (rare in WV). March-early June. E. NC south to s. FL, west to e. TX, north in the interior to sw. WV, OH, MO, and SD. [= FNA, K, WH, Y; = *Senecio glabellus* Poiret – C, F, G, GW, RAB, S, SE, WV, X]

Packera millefolium (Torrey & A. Gray) W.A. Weber & Á. Löve, Blue Ridge Ragwort, Yarrowleaf Ragwort. Mt (GA, NC, SC, VA): granitic domes, cliffs, and rocky woodlands, over granite, gneiss, schist, and amphibolite, and in calcareous glades (in sw. VA); rare. Late April-early June. Endemic to sw. NC, nw. SC, and ne. GA; disjunct in sw. VA (Lee Co.). The hybrid with *Packera anonyma* [= *Senecio* ×*memmingeri* Britton (pro sp.)] occurs with the parents. The epithet in *Packera* is often spelled "*millefolia*," ignoring that this epithet is a noun in apposition based on the pre-Linnaean genus name *Millefolium* (for *Achillea*).. [= *Senecio millefolium* Torrey & A. Gray – C, F, S, RAB, SE, X; = *Packera millefolia* – FNA, K, Y, orthographic variant]



Packera obovata (Muhlenberg ex Willdenow) W.A. Weber & Á. Löve, Roundleaf Ragwort, Running Ragwort. Nutrient rich forests and woodlands (dry or moist), usually over calcareous or mafic rocks. April-June. VT west to KS, south to Panhandle FL and TX. [= FNA, K, WH, Y; = *Senecio obovatus* Muhlenberg ex Willdenow – C, RAB, S, SE, X; > *Senecio obovatus* var. *obovatus* – F, G, WV; > *Senecio obovatus* var. *elliottii* (Torrey & A. Gray) Fernald – F, G, WV; > *Senecio obovatus* var. *rotundus* Britton – F; > *Senecio obovatus* – S; > *Senecio rotundus* (Britton) Small – S]

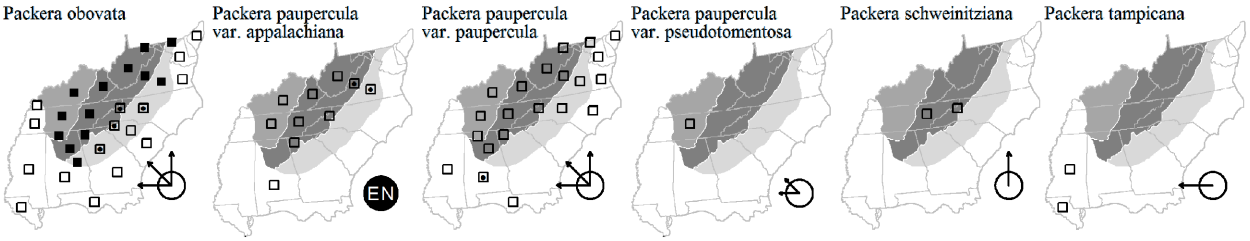
Packera paupercula (Michaux) Á. & D. Löve *var.* ***appalachiana*** A.M. Mahoney, Appalachian Ragwort. Glades, cliffs, barrens, over mafic, ultramafic, or calcareous rocks. April-May. E. WV and w. VA south to w. NC and e. TN. [= ; < *Packera plattensis* (Nuttall) W.A. Weber & Á. Löve – FNA, K, Y, misapplied to our material; < *Senecio plattensis* Nuttall – C, F, G, SE, X, misapplied to our material]

Packera paupercula (Michaux) Á. & D. Löve *var.* ***paupercula***, Balsam Ragwort, Northern Meadow Groundsel. Thickets, meadows, glades, generally over circumneutral soils derived from calcareous or mafic rocks. April-May. NL (Labrador) west to AK, south to GA, Panhandle FL (Bay County), AL, and OR. [< *Packera paupercula* (Michaux) Á. & D. Löve – FNA, K, WH, X, Y; < *Senecio pauperculus* Michaux – C, G, GW, RAB, S, SE; > *Senecio pauperculus* var. *pauperculus* – F; > *Senecio pauperculus* var. *balsamitae* (Muhlenberg ex Willdenow) Fernald – F; > *Senecio pauperculus* var. *praelongus* (Greenman) House – F]

Packera paupercula (Michaux) Á. & D. Löve var. *pseudotomentosa* (Mackenzie & Bush) R.R. Kowal. {habitats}; rare. [] {not yet keyed; add to synonymy}

Packera schweinitziana (Nuttall) W.A. Weber & Á. Löve, New England Ragwort. Grassy balds (in deep soil), at high elevations, in our area generally over metagabbro or amphibolite. May-July. NS and QC south to n. NY; disjunct to a few locations in w. NC and e. TN, notably on grassy balds on Roan Mountain, Snake Mountain, Rich Mountain, and Big Bald. [= FNA, K; = *Senecio schweinitzianus* Nuttall – C, SE, X; = *Senecio robbinsii* Oakes ex Rusby – F, G, RAB, S; = *Packera schweinitzianus* – Y, orthographic variant]

Packera tampicana (de Candolle) C. Jeffery, Great Plains Ragwort. AR and KS south and east to e. LA (Florida parishes) or s. MS (SE), and south to TX and Mexico. [= FNA; = *Senecio imparipinnatus* Klatt – SE] {not yet keyed}



Packera tomentosa (Michaux) C. Jeffrey, Woolly Ragwort. Sandy roadsides, sandy woodlands and forests, granitic flatrocks, granitic domes. April-early June. S. NJ south to GA, west to TX, primarily on the Coastal Plain, but extending inland in the Piedmont and Mountains in thin sandy soils around rock outcrops, and as a roadside weed. [= FNA, K, Y; = *Senecio tomentosus* Michaux – C, F, G, GW, RAB, SE, X; > *Senecio tomentosus* – S; > *Senecio alabamensis* Britton – S]

Palafoxia Lagasca y Segura 1816 (Palafoxia)

A genus of about 12 species, shrubs and herbs, of s. North America. References: Strother in FNA (2006c); Turner & Morris (1976)=Z; Cronquist (1980)=SE.

1 Perennial suffrutescent herb or shrub, 3-15 dm tall; phyllaries unequal, the longer inner phyllaries 8-11 mm long; pappus scales of the inner cypselas 4-7 mm long; [longleaf pine sandhills and sandy scrub, of sc. GA and FL] ..... ***P. integrifolia***
1 Annual herb, 2-8 dm tall; phyllaries equal, 3-10 mm long; pappus scales of the inner cypselas **either** 0.3-1 **or** 2-6 mm long.
  2 Phyllaries 3-5 mm long; corollas 5-6 mm long; leaves 1-4 mm wide; pappus scales of the inner cypselas 0.3-1 mm long; [of calcareous prairies and glades, of MS westward] ..... ***P. callosa***
  2 Phyllaries 5-8 mm long; corollas 7-10 mm long; leaves 5-20 mm wide; pappus scales of the inner cypselas 2-6 mm long; [alien in our area, of disturbed sites] ..... ***P. texana*** *var.* ***ambigua***

Palafoxia callosa (Nuttall) Torrey & A. Gray, Small Palafoxia. Blackland prairies. MO, AR, and OK south to c. TX and Coahuila; disjunct in c. MS. [= FNA, K, SE, Z]

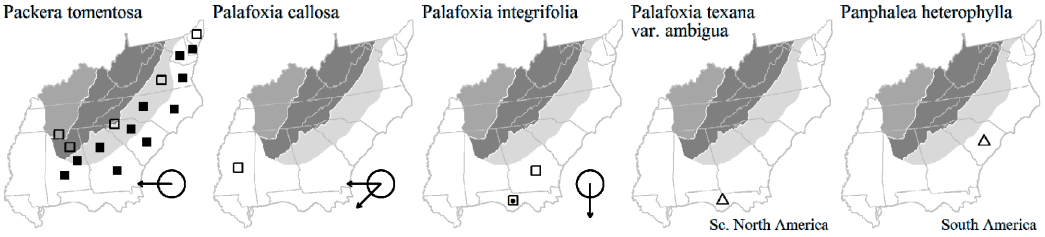
Palafoxia integrifolia (Nuttall) Torrey & A. Gray, Coastal Plain Palafoxia. Sandhills. Sc. GA (Carter, Baker, & Morris 2009) south to s. FL. [= FNA, K, SE, WH, Z; = *Polypteris integrifolia* Nuttall – S]

* ***Palafoxia texana*** deCandolle *var.* ***ambigua*** (Shinners) B.L. Turner & M.I. Morris, Texas Palafoxia. Dry, disturbed areas; native of TX and Tamaulipas. [= K, WH, Z; < *P. texana* – FNA]

Panphalea Lagasca y Segura 1811

A genus of 9 species, herbs, of n. South America. Sometimes spelled *Pamphalea* (Hind in Kadereit & Jeffrey 2007). References: Pruski (2004); Hind in Kadereit & Jeffrey (2007).

* ***Panphalea heterophylla*** Lessing. Waste areas around wool-combing mill; perhaps merely a waif, native of South America. April. See Pruski (2004) and Nesom (2004d).



Parthenium Linnaeus 1753 (Wild Quinine)

A genus of about 16 species, herbs and shrubs, of North America and the West Indies. Mears (1975) does not seem to me to be a fully satisfactory explanation of the variation within the genus. Morphologically and ecologically, *P. auriculatum* seems worthy of specific status, and I have not followed Mears's reduction of it to varietal status. *P. integrifolium* var. *henryanum*, var. *mabryanum*, and var. *integrifolium* serve to describe real patterns of variation, but are disturbingly confluent morphologically, ecologically, and geographically. References: Mears (1975)=Z; Cronquist (1980)=SE; Strother in FNA (2006c).

1 Leaves pinnatifid to bipinnatifid, the primary sinuses extending 9/10 or more of the way to the midrib; leaves thin in texture; pappus of 2 petaloid scales; [alien annual] ..... ***P. hysterophorus***
1 Leaves toothed (pinnatifid in forms of *P. integrifolium* var. *mabryanum*, the sinuses extending up to 3/4 of the way to the midrib); leaves somewhat thick in texture; pappus of 2-3 weak awns; [native perennials].
2 Stems with coarse, spreading pubescence 1-3 mm long; cauline leaves all auriculate-clasping, the upper cauline leaves sessile and auriculate-clasping, the lower cauline leaves with winged petioles, the wings expanded at the base; blades of basal leaves 11-18 (-20) cm long, 5-8 cm wide ..... ***P. auriculatum***
2 Stems glabrous or with short, appressed pubescence <1 mm long; cauline leaves only rarely auriculate-clasping, the upper cauline leaves sessile or petiolate, the lower cauline leaves petiolate, the petioles winged or not; blades of basal leaves (4-) 6-21 (-27) cm long, (1.4-) 2-12 (-13.5) cm wide.
3 Blades of basal leaves ovate-lanceolate, (4-) 6-12 (-20) cm long, (3-) 4-8 (-9.5) cm wide, never undulately lobed; heads (18-) 90-180 (-400) per inflorescence ..... ***P. integrifolium*** *var.* ***integrifolium***
3 Blades of basal leaves linear-lanceolate to ovate-lanceolate, (6-) 7-12 (-13.5) cm long, (1.4-) 2-4 (-4.5 cm) wide, sometimes undulately lobed throughout their length; heads (30) 40-75 (-85) per inflorescence ..... ***P. integrifolium*** *var.* ***mabryanum***

Parthenium auriculatum Britton, Glade Wild Quinine. In shallow, xeric, circumneutral soil of glades, barrens, and woodlands, over calcareous rocks (such as dolostone) or mafic rocks (such as diabase). Mid May-August. Ne. WV south to c. NC and n. AL, west to c. TN. As indicated by the confusion over its taxonomy, the relationships and appropriate taxonomic treatment of this taxon are unclear. It is clearly a close relative of the Ozarkian *P. hispidum* Rafinesque, and perhaps not readily distinguished from it; some, at least, of our material has creeping rhizomes and heads over 7 mm in diameter, supposed to be distinguishing features of *P. hispidum*. [= C, G, K, SE; = *P. integrifolium* var. *auriculatum* (Britton) Cornelius ex Cronquist – RAB, Z; = *P. hispidum* Raf. var. *auriculatum* (Britton) Rollins – F, WV; < *P. integrifolium* – FNA, S; < *P. hispidum* Rafinesque – W]

* ***Parthenium hysterophorus*** Linnaeus, Santa Maria, Feverfew. Disturbed areas; native of tropical America, including the West Indies. July-November. [= C, F, FNA, G, K, S, SE, WH]

Parthenium integrifolium Linnaeus *var.* ***integrifolium***, Common Wild Quinine. Various dryish habitats, mainly open or sparsely wooded. Late May-August. VA west to MN, south to SC, GA, ne. MS, and nw. AR. Var. *henryanum* Mears appears to be merely a form of var. *integrifolium*. [= K; < *P. integrifolium* var. *integrifolium* – RAB; < *P. integrifolium* – C, F, FNA, G, S, SE, W, WV; > *P. integrifolium* var. *integrifolium* – Z; > *P. integrifolium* var. *henryanum* Mears – Z]

Parthenium integrifolium Linnaeus *var.* ***mabryanum*** Mears, Mabry's Wild Quinine. Sandhills and other dry soils, in forest openings or woodlands. Late May-November (blooming strongly in response to fire). Nc. SC, e. NC, and se. VA, barely extending into the e. Piedmont of NC in dry sandy soils around granitic flatrocks or in (formerly) fire-maintained communities. Var. *mabryanum* is the characteristic variety of *P. integrifolium* in the Sandhills of NC. Mears named a new species, *P. radfordii* Mears, to accomodate sinuate-lobed *Parthenium* from the fall-line sandhills of NC and SC, which he also believed to be later-blooming (August-November) than other *Parthenium*. Extensive observations in the Sandhills of NC show that "*P. radfordii*" consistently co-occurs in mixed populations with *P. integrifolium* var. *mabryanum*, and that flowering is triggered by fire. These sinuate-lobed plants are best considered a form of var. *mabryanum*. [= K; < *P. integrifolium* var. *integrifolium* – RAB; < *P. integrifolium* – C, F, FNA, G, S, SE, W; > *P. integrifolium* var. *mabryanum* – Z; > *P. radfordii* Mears – Z]

Pascalia Ortega 1797

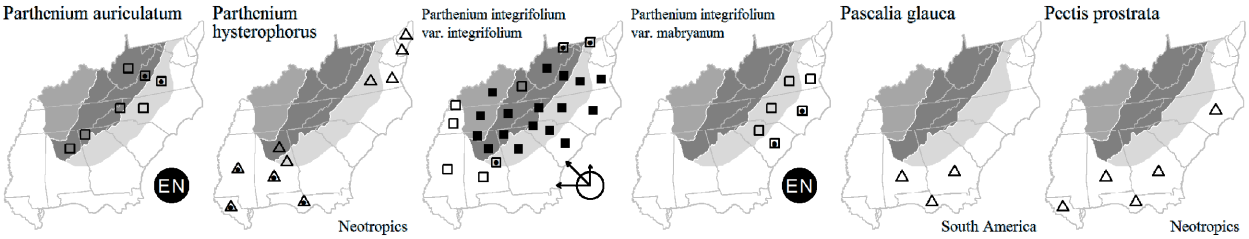
A genus of 2 species, perennial herbs, of South America. References: Strother in FNA (2006c).

* ***Pascalia glauca*** Ortega, Beach Creeping Oxeye. Coastal dunes, disturbed areas; native of South America, perhaps only a waif. Reported for FL, GA, and AL. [= FNA, K, S, WH; = *Wedelia glauca* (Ortega) O. Hoffmann – SE]

Pectis Linnaeus 1759

A genus of about 90 species, herbs, of s. North America, Mexico, Central America, West Indies, South America, and Pacific Islands. References: Keil in FNA (2006c).

* ***Pectis prostrata*** Cavanilles. Roadsides, mowed areas, other dry disturbed areas; native of tropical America (probably including s. FL). July-November. Reported for NC (Basinger, pers. comm. 2006) and GA (Carter, Baker, & Morris 2009); likely to be in AL and SC. Spreading northward along roadsides. [= FNA, WH]



Peripleura (N.T. Burbidge) Nesom 1994

* ***Peripleura arida*** (N.T. Burbidge) Nesom. Waste areas around wool-combing mill; perhaps only a waif, native of Australia. See Nesom (2004d). [= *Vittadinia arida* N.T. Burbidge]

Petasites P. Miller 1754 (Butterbur)

A genus of 15-18 species, perennial herbs, of Eurasia and boreal North America. References: Bayer, Bogle, & Cherniawsky in FNA (2006b).

* *Petasites hybridus* (Linnaeus) P.G. Gaertner, B. Meyer, & Scherbius, Butterbur, Butterfly-dock. Disturbed areas, frequently cultivated, rarely naturalized or persisting, native of Europe. Introduced and naturalizing south to DE, WV, and se. PA. [= C, F, FNA, G, K, SE]

Phoebanthus S.F. Blake 1916

A genus of 2 species, perennial herbs, of the Southeastern United States (FL and AL). References: Schilling in FNA (2006c).

1 Leaves 3-5 mm wide; phyllaries appressed; [of ne. FL south to s. peninsular FL].....***P. grandiflorus***
1 Leaves 1.2 mm wide; phyllaries spreading; [of Panhandle FL and s. AL] .....***P. tenuifolius***

Phoebanthus grandiflorus (Torrey & A. Gray) S.F. Blake. Sandhills. March-November. Ne. FL (Clay County) south to c. peninsular FL. [= FNA, K, SE, WH; = *P. grandiflora* – S, orthographic variant]

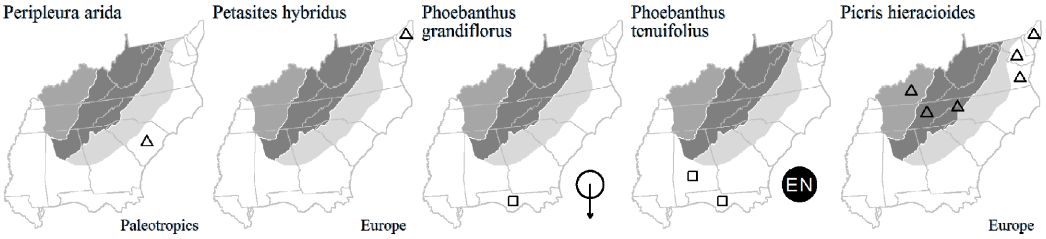
Phoebanthus tenuifolius (Torrey & A. Gray) S.F. Blake. Sandhills and flatwoods. May-September. Endemic to s. AL and Panhandle FL. [= FNA, K, SE, WH; = *P. tenuifolia* – S, orthographic variant]

Picris Linnaeus 1753 (Bitterweed, Oxtongue)

A genus of about 40 species, of the Old World, particularly the Mediterranean region. References: Strother in FNA (2006a); Cronquist (1980)=SE. [also see *Helminthotheca*]

1 Phyllaries in 2 series; phyllaries 3.5-8 mm wide; inner phyllaries 12-20 mm long; plant annual or biennial .....***[***see ***Helminthotheca echioides]***
1 Phyllaries imbricate; phyllaries <3 mm wide; inner phyllaries 11-13 mm long; plant biennial to perennial.....***P. hieracioides***

* ***Picris hieracioides*** Linnaeus, Hawkweed Oxtongue, Cat's-ear. Disturbed areas; native of Europe. May-October. [= RAB, C, F, FNA, G, SE, W; > *Picris hieracioides* Linnaeus ssp. *hieracioides* – K]



Pityopsis Nuttall 1840 (Grass-leaved Golden-aster)
(contributed by Bruce A. Sorrie)

A genus of about 8 species (and numerous infraspecific taxa), herbs, of se. North America south to Central America. *Pityopsis* is taxonomically and nomenclaturally a difficult genus. The problems include nomenclatural issues involving typification and application (and frequently misapplication) of a plethora of names at specific and varietal level, disagreement over whether to include *Pityopsis* within an inclusive *Chrysopsis*, whether then to include *Chrysopsis* within an even more inclusive *Heterotheca*, and differences in species concepts in a morphologically and cytologically diverse group. References: Semple in FNA (2006b); Semple & Bowers (1985)=Z; Ward (2004c)=Y; Cronquist (1980)=SE.

1 Basal leaves shorter than the stem leaves; middle and upper stem leaves similar in size to one another.
  2 Leaves and stem glabrate, not silky pubescent; leaves 0.8-1.5 mm wide; [of the fall line Sandhills, from sc. NC south to AL] ..... ***P. pinifolia***
  2 Leaves and stems silky pubescent; leaves 2-7 mm wide; [of se. TN, **or** of s. NJ northward, **or** of FL Panhandle].
    3 Peduncles and phyllaries moderately to densely stipitate-glandular; [plants of the Mountains of TN] ..... ***[P. ruthii]***
    3 Peduncles and phyllaries not stipitate-glandular (or only sparsely and minutely so); [plants of the Coastal Plain].
      4 Stems straight; involucres 5-8 mm high; [plants of sandy places, from s. NJ northward] ..... ***P. falcata***
      4 Stems flexuous; involucres (7-) 8-11 mm high, equaling the pappus; [plants of Panhandle FL] ..... ***P. flexuosa***
1 Basal leaves much longer than the stem leaves; stem leaves strongly reduced upward, the upper stem leaves much smaller than middle stem leaves.
  5 Heads < 10; cauline leaves few, generally 2-7; [of sw. GA westward and southward] ..... ***P. oligantha***
  5 Heads > 10; cauline leaves many; [collectively widespread in our area].
    6 Peduncles and upper stem densely glandular-hairy (stipitate-glandular); phyllaries densely glandular-hairy; involucres 4.5-8 mm high; lower leaves < 10 mm wide.
      7 All stem leaves silky pubescent; [widespread in our area] ..... ***P. aspera*** *var.* ***adenolepis***
      7 Lower leaves silky pubescent, the mid to upper stem leaves glabrate and evidently stipitate glandular along the margins; [of sc. GA south into Panhandle FL] ..... ***P. aspera*** *var.* ***aspera***
    6 Peduncles and upper stem eglandular to sparsely glandular; phyllaries eglandular, or the inner phyllaries sparsely to densely glandular, at least distally; involucres 5-14 mm high; lower leaves up to 20 mm wide.
      8 Involucres 8-14 mm high; disc florets > 30
        9 Involucres 8-12 mm high; ray florets 10-16; disc corolla throats and lobes glabrous to short pilose (never long pilose); [widespread] ..... ***P. graminifolia*** *var.* ***latifolia***
        9 Involucres 12-14 mm high; ray florets 13-25; disc corolla throats and lobes sometimes long-pilose; [of FL Panhandle] ..... ***P. graminifolia*** *var.* ***tracyi***
      8 Involucres 5-8 mm high; disc florets 15-29.
        10 Inner phyllaries densely stipitate-glandular, at least distally ..... ***P. graminifolia*** *var.* ***graminifolia***
        10 Inner phyllaries eglandular to sparsely glandular ..... ***P. graminifolia*** *var.* ***tenuifolia***

Pityopsis aspera (Shuttleworth ex Small) Small *var.* ***adenolepis*** (Fernald) Semple & Bowers. Dry woodlands, forests, and disturbed places, apparently in the NC Mountains only in the Escarpment. Late June-October. E. and c. VA south to n. FL and west to s. MS. Var. *adenolepis* includes 2 chromosome numbers (2n = 18 and 36), which "account, in part, for the range of variation in involucre, floret, and fruit size" (Semple & Bowers 1985). [= FNA, K, Z; > *Heterotheca adenolepis* (Fernald) Ahles – RAB; > *Heterotheca graminifolia* (Michaux) Shinners – RAB, misapplied; < *Chrysopsis graminifolia* (Michaux) Elliott var. *aspera* (Shuttleworth ex Small) A. Gray – C, G, SE, W; = *Chrysopsis graminifolia* (Michaux) Elliott – F, misapplied; = *P. adenolepis* (Fernald) Semple; < *Pityopsis aspera* – S, WH; < *Heterotheca aspera* (Shuttleworth ex Small) Shinners]

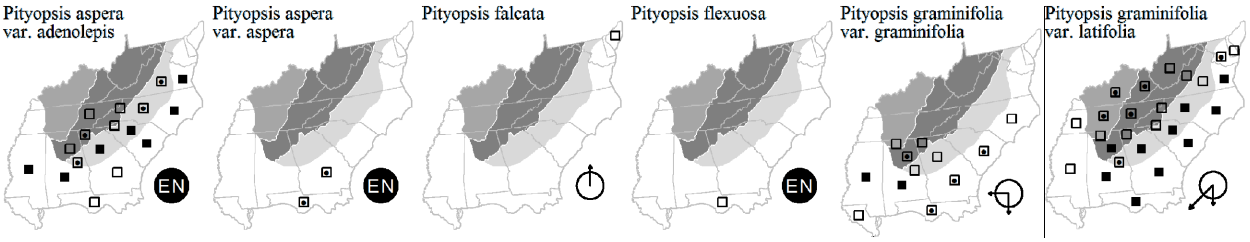
Pityopsis aspera (Shuttleworth ex Small) Small *var.* ***aspera***. Sandhills, dry flatwoods. Sc. GA south to Panhandle FL. [= FNA, K, Z; < *Pityopsis aspera* – S, WH; < *Chrysopsis graminifolia* (Michaux) Elliott var. *aspera* (Shuttleworth ex Small) A. Gray – SE]

Pityopsis falcata (Pursh) Nuttall. Stable dunes (NJ), further north in sandplain grasslands, coastal heathlands, pitch pine-scrub oak barrens. Se. MA south through RI, CT, and NY (Long Island) to s. NJ; found once as a rare introduction in wc. peninsular FL (Pinellas County – Wunderlin & Hansen 2003). [= FNA, K, Z; = *Chrysopsis falcata* (Pursh) Elliott – C, F, G]

Pityopsis flexuosa (Nash) Small. Sandhills. E. Panhandle FL. [= FNA, S, WH, Z; = *Chrysopsis flexuosa* Nash – SE]

Pityopsis graminifolia (Michaux) Nuttall *var.* ***graminifolia***. Sandhills. July-October. As interpreted here, *P. graminifolia* includes 5 varieties "that intergrade and hybridize, when the ploidy level is the same" (Semple & Bowers 1985). Var. *graminifolia* ranges from se. NC south to c. peninsular FL, and west to e. LA; in our area it is known only from the outer Coastal Plain. Two of the varieties do not reach our area, being restricted to peninsular FL: var. *aequilifolia* Bowers & Semple and the hexaploid (2n = 54) var. *tracyi* (Small) Semple. [= FNA, K, Z; < *Heterotheca nervosa* (Willdenow) Shinners var. *microcephala* (Small) Shinners ex Ahles – RAB; < *Chrysopsis graminifolia* (Michaux) Elliott var. *graminifolia* – C; < *Pityopsis microcephala* (Small) Small – S; < *Chrysopsis graminifolia* (Michaux) Elliott var. *microcephala* (Small) Cronquist – SE; < *Pityopsis graminifolia* – WH]

Pityopsis graminifolia (Michaux) Nuttall *var.* ***latifolia*** Fernald. Sandhills, dry woodlands and forests (such as ridgetop pine/heath communities in the Mountains), roadbanks. June-October. Var. *latifolia* is the most widely distributed variety of *P. graminifolia*, ranging from DE (formerly), s. OH, and c. AR south to s. FL and e. TX; Bahamas; and in Mexico (Tamaulipas, Vera Cruz, Oaxaca, Chiapas) and Central America (Belize, Guatemala, Honduras). [= FNA, K, Z; > *Heterotheca nervosa* (Willdenow) Shinners var. *nervosa* – RAB; > *Heterotheca correllii* (Fernald) Ahles – RAB; = *Chrysopsis graminifolia* (Michaux) Elliott var. *latifolia* Fernald – C, W; > *Chrysopsis nervosa* (Willdenow) Fernald var. *nervosa* – F; < *Chrysopsis graminifolia* (Michaux) Elliott – G; > *Chrysopsis nervosa* var. *virgata* Fernald – F; > *Chrysopsis nervosa* var. *stenolepis* Fernald – F; = *Pityopsis graminifolia* – S, misapplied; = *Chrysopsis graminifolia* (Michaux) Elliott var. *graminifolia* – SE, misapplied; < *Pityopsis graminifolia* – WH]



Pityopsis graminifolia (Michaux) Nuttall *var.* ***tenuifolia*** (Torrey) Semple & Bowers. Sandhills, sandy woodlands, savannas, pine flatwoods. July-October. Var. *tenuifolia* ranges from se. NC south to s. FL and west to e. TX (north inland to c. AR and e. OK); apparently disjunct in se. VA. [= FNA, K, Z; < *Heterotheca nervosa* (Willdenow) Shinners var. *microcephala* (Small) Shinners ex Ahles – RAB (also see *P. graminifolia* var. *graminifolia*); < *Pityopsis microcephala* (Small) Small – S (also see *P. graminifolia* var. *graminifolia*); < *Chrysopsis graminifolia* (Michaux) Elliott var. *microcephala* (Small) Cronquist – SE (also see *P. graminifolia* var. *graminifolia*); < *Pityopsis graminifolia* – WH; *? Pityopsis nervosa* var. *nervosa* – Y]

Pityopsis graminifolia (Michaux) Nuttall *var.* ***tracyi*** (Small) Semple. Sandhills. October-December. Endemic to Panhandle FL; reports of it in n. AL are probably based on aberrant individuals of *P. graminifolia*. [= FNA, K, Z; = *P. tracyi* Small – S; < *Chrysopsis graminifolia* – SE; < *Pityopsis graminifolia* – WH; = *Pityopsis nervosa* (Willdenow) Dress var. *tracyi* (Small) D.B. Ward]

Pityopsis oligantha (Chapman ex Torrey & A. Gray) Small, Narrow-leaved Goldenaster. Wet flatwoods and pitcherplant bogs. Sw. GA and Panhandle FL west to s. AL (alleged reports from further west seem to be in error). [= FNA, K, S, WH, Z; = *Chrysopsis oligantha* Chapman ex Torrey & A. Gray – SE; = *Heterotheca oligantha* (Chapman ex Torrey & A. Gray) Harms]

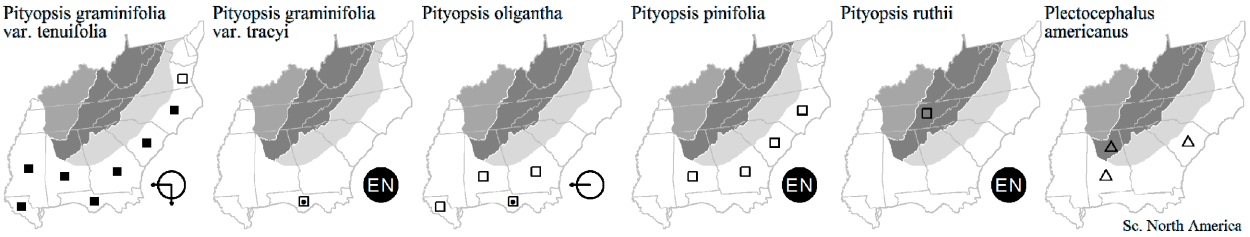
Pityopsis pinifolia (Elliott) Nuttall, Sandhill Goldenaster. Sandhills, sandy roadsides. August-October. This species is locally abundant (and often weedy) but very local in distribution, limited to (apparently) scattered counties in the Sandhills (rarely middle Coastal Plain) of s. NC, SC, GA, and c. AL. [= FNA, K, S, Z; = *Heterotheca pinifolia* (Elliott) Ahles – RAB; = *Chrysopsis pinifolia* Elliott – SE]

Pityopsis ruthii (Small) Small. Flood-scoured rocks along rivers. Restricted to rocks within the flood zone of the Hiwassee and Ocoee rivers, Polk County, TN; it should be sought in adjacent sw. NC. [= FNA, K, S, Z; = *Chrysopsis ruthii* Small – SE; = *Heterotheca ruthii* (Small) V.L. Harms]

Plectocephalus D. Don in R. Sweet 1830 (Basketflower)

A genus of 4 species, annual herbs, of midwestern North America, Mexico, South America, and Africa. References: Keil in FNA (2006a).

* ***Plectocephalus americanus*** (Nuttall) D. Don in R. Sweet, American Basketflower. Waste ground around wool-combing mills; Native of sc. North America (Nesom 2004d). [= FNA; = *Centaurea americana* Nuttall – C, F, G, K, SE]



Pluchea Cassini 1817 (Marsh-fleabane)

A genus of about 40 species, herbs and shrubs, of tropical, subtopical, and warm temperate regions. References: Nesom in FNA (2006a); Godfrey (1952)=Z, Nesom (1989, 2004a)=Y; Arriagada (1998)=X; Pruski (2005)=V; Cronquist (1980)=SE. Key based on FNA and other sources.

1 Stems winged by decurrent leaf bases ..... ***P. sagittalis***
1 Stems not winged by decurrent leaf bases.
  2 Leaves petiolate or narrowly cuneate at the base; [section *Pluchea*].

3 Phyllaries glandular on the outer surface (the outer bracts also somewhat pubescent); inflorescence paniculiform, the lateral branches not reaching or exceeding the central branches; plants to 20 dm tall; [in freshwater habitats, widespread in the Coastal Plain and Piedmont] ..... ***P. camphorata***

3 Phyllaries short-pubescent with several-celled glandular-tipped hairs; inflorescence more-or-less cymiform and flat-topped, some of the lower lateral branches elongate and reaching or exceeding the central branches; plants to 10 (-15) dm tall; [mainly in salty or brackish habitats, restricted to the outer Coastal Plain] ..... ***P. odorata***

2 Leaves sessile, and either rounded, truncate, or clasping at the base; [section *Amplectifolium*].

4 Leaves mostly 8-20 cm long and 3-7 cm wide; involucre 9-12 mm high; middle phyllaries 2.5-3 mm wide ..... ***P. longifolia***

4 Leaves mostly 3-10 cm long and 1-3 cm wide; involucre 5-10 mm high; middle phyllaries 1-1.5 mm wide.

5 Stems and leaves glandular, otherwise nearly glabrous; involucre 4-5 mm wide ..... ***P. yucatanensis***

5 Stems and leaves puberulent or arachnose as well as glandular; involucre 5-12 mm wide.

6 Corollas pink or purple; heads 4-6 mm high, 5-9 mm wide; phyllaries usually arachnoid and commonly also with dense, thick, viscid hairs; outer phyllaries acuminate; nutlets black, 0.5-1 mm long, densely pubescent; [flowering June-July] ..... ***P. baccharis***

6 Corollas creamy white; heads 6-10 mm high, 6-12 mm wide; phyllaries thinly arachnoid, with sessile glands; outer phyllaries obtuse or obtuse-apiculate; nutlets pinkish, ca. 1 mm long, pubescent on the angles; [flowering late July-October].

7 Plants 3-11 dm tall; inner phyllaries 4-6 mm long; [widespread in our area] ..... ***P. foetida*** *var.* ***foetida***

7 Plants 9-25 dm tall; inner phyllaries 6-7 mm long; [of the Coastal Plain of SC southward] ..... ***P. foetida*** *var.* ***imbricata***

Pluchea baccharis (P. Miller) Pruski, Marsh Fleabane. Wet savannas, natural ponds, marshes, ditches. June-July. E. NC south to s. FL, west to se. TX; Bahamas, Cuba, Mexico, and Central America. Pruski (2005) established that *P. baccharis* is the correct name for the taxon known in recent decades as *P. rosea*. Godfrey (1952) recognized two varieties of *P. rosea*, var. *rosea* of se. United States and var. *mexicana* R.K. Godfrey of gypsum plains in San Luis Potosí, Mexico; Nesom (1989) recognized the latter taxon at the species level, *P. mexicana* (R.K. Godfrey) Nesom. [= FNA, V. WH; = *P. rosea* R.K. Godfrey – RAB, K, WH, X, Y; = *P. rosea* var. *rosea* – GW, SE]

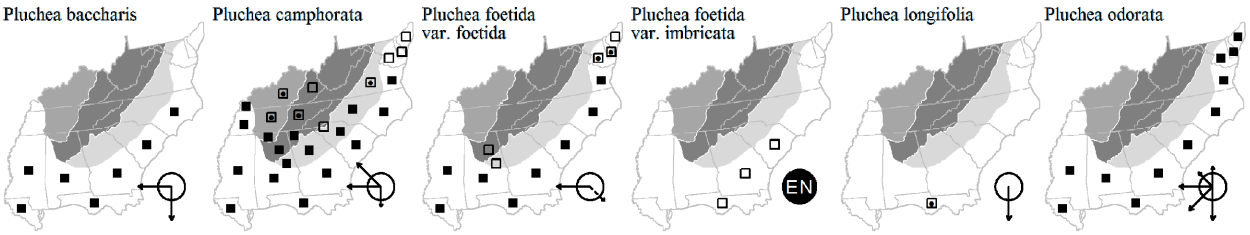
Pluchea camphorata (Linnaeus) A.P. de Candolle, Camphorweed, Camphor Pluchea. Bottomland sloughs, clay flatwoods, other freshwater wetlands. August-October. DE (formerly) and MD south to n. peninsular FL, west to TX and OK, north in the interior to s. OH and e. KS. [= RAB, C, F, FNA, G, GW, K, SE, WH, X, Y; = *P. petiolata* Cassini – S]

Pluchea foetida (Linnaeus) A.P. de Candolle *var.* ***foetida***, Stinking Fleabane. Seasonally wet areas, ditches, various other freshwater wetlands. Late July-October. S. NJ south to s. FL, west to e. TX; West Indies (?). [= K; < *P. foetida* – RAB, C, F, FNA, G, GW, SE, WH, X, Y; > *P. foetida* – S; > *P. tenuifolia* Small – S]

Pluchea foetida (Linnaeus) A.P. de Candolle *var.* ***imbricata*** Kearney. Freshwater wetlands. Late July-October. SC south to FL Panhandle. The validity and distribution of this taxon need additional study. [= K; < *P. foetida* – RAB, C, FNA, GW, SE, WH, X, Y; = *P. imbricata* (Kearney) Nash – S]

Pluchea longifolia Nash. Brackish and freshwater marshes and swamps, ditches, canals. Ne. FL and eastern FL Panhandle (Wakulla and Taylor counties) south to c. peninsular FL (Wunderlin & Hansen 2008). [= FNA, GW, S, WH]

Pluchea odorata (Linnaeus) Cassini, Saltmarsh Fleabane. Salt and brackish marshes. August-October. MA and MI south to s. FL and TX (mostly on the Coastal Plain), also in w. United States, Central America, and South America. Two varieties are sometimes recognized, the widespread and more robust, but small headed var. *odorata* (involucre 4-6 (-7) mm across the disk, with 6-13 (19) functionally staminate flowers; plants 2-8 (-20) dm tall; of VA southward), and the northeastern North American and less robust but large-headed var. *succulenta* (involucre 7-8 (-10) mm across the disk, with (14-) 21-34 functionally staminate flowers; plants 2-6 dm tall; of NC northward). Additional study is needed to warrant recognition of the varieties. [= GW, WH, X, Y; = *P. purpurascens* (Swartz) A.P. de Candolle – RAB; > *P. odorata* var. *odorata* – C, FNA, K, SE; > *P. odorata* (Linnaeus) Cassini var. *succulenta* (Fernald) Cronquist – C, FNA, K, SE; > *P. purpurascens* (Swartz) A.P. de Candolle var. *purpurascens* – F, G; > *P. purpurascens* (Swartz) A.P. de Candolle var. *succulenta* Fernald – F, G; > *P. camphorata* – S, misapplied]



* ***Pluchea sagittalis*** (Lamarck) Cabrera, Wing-stem Camphorweed. Disturbed areas, probably only a waif, known from old collections (1891-1901) from Pensacola, FL, and Mobile, AL; native of South America. July-August. [= FNA, WH; = *P. quitoc* de Candolle – S; = *P. suaveolens* (Vell.) Kuntze – SE] {synonymy incomplete}

* ***Pluchea yucatanensis*** Nesom, Yucatan Camphorweed. Brackish marshes; native of Mexico and Belize. Introduced in s. AL and s. MS. [= FNA]

Polymnia Linnaeus 1753

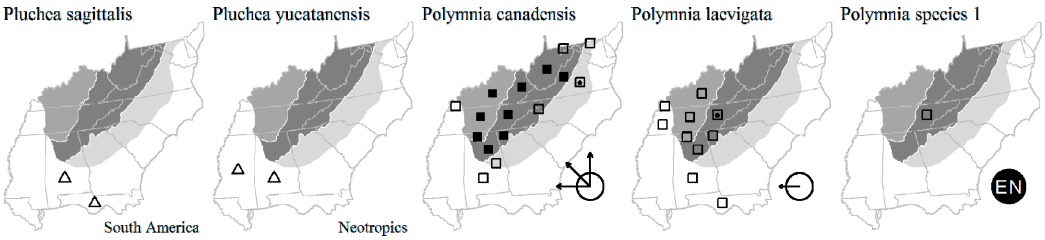
A genus of 4 species, herbs, of e. North America. References: Wells (1965)=Z; Strother in FNA (2006c); Cronquist (1980)=SE. [also see *Smallanthus*]

1 Cypselas 3-ribbed; leaves of the lower and middle stem with 2-3 lobes on either side of the midvein; stem obviously and usually densely long-pubescent (rarely glabrous or glabrescent except the upper stem) ..... ***P. canadensis***
1 Cypselas 4-6-ribbed; leaves of the lower and middle stem with > 5 lobes on each side of the midvein; stem glabrous or nearly so (except sometimes short-hairy in the inflorescence) ..... ***P. laevigata***

Polymnia canadensis Linnaeus, White-flowered Leafcup. Moist forests, particularly over calcareous rocks. July-October. VT and ON west to MN, south to NC, nw. GA, AL, and AR. [= C, F, FNA, G, K, RAB, SE, W, WV, Z; > *P. canadensis* – S; > *P. radiata* (A. Gray) Small – S]

Polymnia laevigata Beadle, Tennessee Leafcup. Bouldery slopes, coquina outcrops and rubble (in FL). W., c., and se. TN (Chester, Wofford, & Kral 1997), AL, Panhandle FL (Jackson County), nw. GA, and MO. [= FNA, K, S, SE, WH, Z]

Polymnia species 1. Limestone boulders and outcrops. Under research by Dwayne Estes. {not yet keyed}



Prenanthes Linnaeus 1753 (Rattlesnake-root)

A genus of about 30 species, herbs, of north temperate parts of the New and Old World. Molecular and morphological studies suggest that *Prenanthes* includes disparate components, and North American taxa are best treated in the segregate genus *Nabalus*. References: Bogler in FNA (2006a); Johnson (1980)=Z; Fusiak & Schilling (1984)=Y; Cronquist (1980)=SE. Key adapted from C and SE, in part.

Identification notes: The species cannot be reliably identified in sterile condition. "Principal phyllaries" are the inner, well-developed, excluding the few smaller and poorly-developed outer phyllaries.

1 Principal phyllaries 12-15; florets 15-38 per head; [entering our area in WV from the north and west] ..... ***P. crepidinea***
1 Principal phyllaries 4-10; flowers mostly 4-19 per head; [collectively widespread in our area].
  2 Phyllaries evidently (though sometimes sparsely) pubescent with long coarse hairs (1.5-3 mm long).
    3 Inflorescence corymbiform to paniculiform, many of the branches well-developed.
      4 Phyllaries densely setose; leaves usually merely toothed, sinuate, or shallowly lobed ..... ***P. barbata***
      4 Phyllaries sparsely setose; principal leaves usually evidently lobed ..... ***P. serpentaria***
    3 Inflorescence cylindric, thyrsoid, the branches very short.
      5 Heads ascending or nearly erect; principal phyllaries (6-) 8 (-10); flowers (8-) 11-14 (-19) per head; [WV, KY, TN, nw. AL, MS and westwards] ..... ***P. aspera***
      5 Heads nodding; principal phyllaries 4-7 (-9); flowers 5-8 (-13) per head; [of the Southern Appalachians] ..... ***P. roanensis***
  2 Phyllaries glabrous or with few cilia or inconspicuous fine short pubescence at the tip.
    6 Principal phyllaries (4-) 5 (-6); flowers 4-6 per head ..... ***P. altissima***
    6 Principal phyllaries 7-10; flowers 8-15 per head.
      7 Inflorescences narrow and elongate (virgate); flowers pink to purple ..... ***P. autumnalis***
      7 Inflorescences open, corymbiform to paniculiform, with some elongate branches; flowers white, cream, yellowish, pink, or purple.
        8 Pappus cinnamon-brown; corolla whitish to pinkish ..... ***P. alba***
        8 Pappus straw-colored to light brown; corolla pale yellow ..... ***P. trifoliolata***

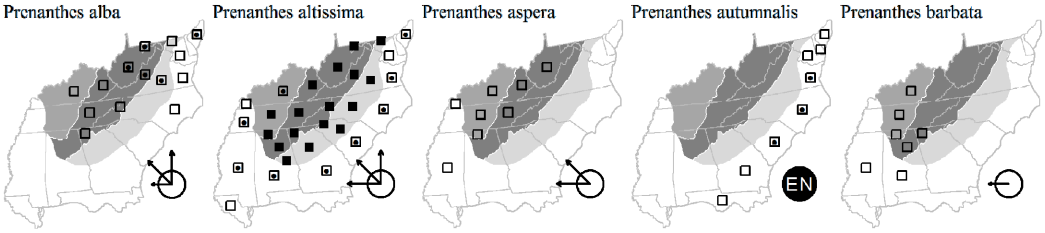
Prenanthes alba Linnaeus, Northern Rattlesnake-root. Forests. August-November. ME west to MB, south to ne. NC, w. NC, WV, and MO. Reported for GA (GANHP). Reports of *P. alba* from the Coastal Plain of NC and perhaps VA are based on *P. alba* ssp. *pallida*, which is invalidly published; additionally, specimens attributed to this taxon appear to be better attributed to *P. trifoliolata*. [= C, F, FNA, G, K, SE, W, Z; = *P. alba* ssp. *alba* – RAB; = ***Nabalus albus*** (Linnaeus) Hooker – S]

Prenanthes altissima Linnaeus, Tall Rattlesnake-root. Forests. August-November. NL (Newfoundland) west to MI, south to GA, LA, and AR. [= FNA, G, K, RAB, W, WV, Y, Z; > *P. altissima* var. *altissima* – C, F, SE; = ***Nabalus altissimus*** (Linnaus) Hooker – S]

Prenanthes aspera Michaux, Rough Rattlesnake-root. Prairies, glades, and barrens. August-September. PA, OH, WI, MN, and SD south to c. TN, MS, LA, and OK. [= C, F, G, K, SE; = ***Nabalus asper*** (Michaux) Torrey & A. Gray – S; = *Nabalus asperus*, orthographic variant]

Prenanthes autumnalis Walter, Slender Rattlesnake-root. Pocosins, pine savannas, forest edges. September-November. NJ south to ne. FL, a Southeastern Coastal Plain endemic. [= C, F, FNA, G, K, RAB, SE, WH, Z; = *Nabalus virgatus* (Michaux) A.P. de Candolle – S; = ***Nabalus species 1***]

Prenanthes barbata (Torrey & A. Gray) Milstead, Barbed Rattlesnake-root, Flatwoods Rattlesnake-root. Limestone glades and barrens. C. TN (Western Highland Rim) (Chester, Wofford, & Kral 1997), nw. GA, and n. AL west to se. AR, e. TX and w. LA. [= FNA, K, SE; < *Nabalus integrifolius* Cassini – S, misapplied; = *P. serpentaria* Pursh var. *barbata* Torrey & A. Gray; = ***Nabalus barbatus*** (Torrey & A. Gray) A. Heller]

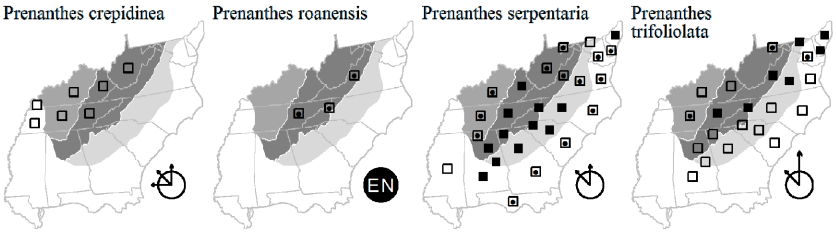


Prenanthes crepidinea Michaux, Midwestern Rattlesnake-root. Rich forests. August-October. A midwestern species, ranging east to NY, sw. PA, e. WV, and c. TN (Western Highland Rim) (Chester, Wofford, & Kral 1997). [= C, F, FNA, G, K, SE, WV; = ***Nabalus crepidineus*** (Michaux) A.P. de Candolle – S]

Prenanthes roanensis (Chickering) Chickering, Roan Rattlesnake-root, Appalachian Rattlesnake-root. Mountain forests, grassy balds, at high elevations. August-October. Sw. VA south to w. NC and e. TN. Fusiak & Schilling (1984) studied *P. roanensis* and related species. Additional characters (other than those explicitly used in the key above) useful in separating *P. roanensis* from *P. altissima* are: phyllary tips usually black (vs. usually green), flowers 5-8 per head (vs. 4-6), and inflorescence usually narrow and thyrsoid (vs. usually conspicuously branched). [= C, FNA, K, RAB, SE, W, Y, Z; > *P. cylindrica* (Small) Braun – G; > ***Nabalus roanensis*** Chickering – S; > *Nabalus cylindricus* Small – S]

Prenanthes serpentaria Pursh, Lion's-foot, Gall-of-the-earth. Forests. August-October. MA south to GA, ne. FL, Panhandle FL, and MS. [= C, F, FNA, G, K, RAB, SE, W, WH, WV, Y, Z; > ***Nabalus serpentarius*** (Pursh) Hooker – S; >< *Nabalus integrifolius* Cassini – S (also see *Prenanthes barbata*)]

Prenanthes trifoliolata (Cassini) Fernald, Gall-of-the-earth. Forests. August-November. NL (Newfoundland) south to e. NC, n. GA, and TN. [= C, FNA, G, K, SE, W, Z; > *P. trifoliolata* – RAB; > *P. alba* ssp. *pallida* Milstead – RAB, not validly published; *?* *P. trifoliolata* var. *trifoliolata* – F; = *Nabalus trifoliatus* – S, orthographic variant; = ***Nabalus trifoliolatus*** Cassini]



Pseudognaphalium Kirpicznikov 1950 (Rabbit-tobacco)

A genus of about 100 species, herbs, nearly cosmopolitan, especially of American temperate regions. References: Nesom in FNA (2006a); Mahler (1975)=Z; Arriagada (1998)=Y; Cronquist (1980)=SE; Nesom (2001a)=X; Anderberg (1991). Key based, in part, on SE.

1 Involucre 2-3 mm high; plants 3-15 (-25) cm tall; inflorescence of many, small, axillary and terminal clusters overtopped by subtending leaves ..... ***[see Gnaphalium uliginosum]***
1 Involucre 3-7 mm high; plants 15-100 cm tall; inflorescence terminal, elongate, clustered, or corymbiform.
2 Leaves distinctly (but shortly) decurrent 1-10 mm and adnate-auriculate on the stem.
3 Upper surface of the leaves coarsely glandular-hairy; heads in corymbiform arrays ..... ***Ps. macounii***
3 Upper surface of the leaves loosely tomentose, not glandular; heads in terminal glomerules
4 Involucres 3-4 mm high; bisexual florets 5-10 (corollas red-tipped); cypselae with papilliform hairs ..... ***Ps. luteoalbum***
4 Involucres 4-6 mm high; bisexual florets mostly 18-28 (corollas evenly yellowish, not red-tipped); cypselae glabrous..... ***Ps. stramineum***
2 Leaves sessile, not decurrent or adnate-auriculate.
5 Stem white-woolly or arachnoid with matted white hairs, the stem surface generally obscured (sometimes glandular-pubescent at the base of the stem only)..... ***Ps. obtusifolium***
5 Stem glandular-pubescent or glandular-puberulent, the hairs at right angles to the stem, the stem surface plainly visible.
6 Stems glandular-villous, the stipitate glands (0.1-) 0.3-1.0 mm high, prominently variable in height on any portion of the stem, with a stalk broadened toward the base and about equal the gland width; pistillate florets 83–107, bisexual florets 9–15; leaves mostly oblong-lanceolate, 2.5–7 cm long, 4–20 mm wide, 4–8 times longer than wide; plant 4-10 dm tall ..... ***Ps. helleri***
6 Stems glandular-puberulent, the stipitate glands 0.1–0.2 mm high, relatively even in height on any portion of the stem, with a filiform stalk of even width and narrower than the gland width; pistillate florets 47–78, bisexual florets (7–) 11–20; leaves linear to linear-lanceolate or linear-oblanceolate, 1.5–5.5 cm long, 1.5–10 mm wide, 6–10 times longer than wide; plant 3-7 dm tall..... ***Ps. micradenium***

Pseudognaphalium helleri (Britton) A. Anderberg, Heller's Rabbit Tobacco. Dry woodlands and openings (especially over mafic rocks), sandhills. September-October. Sc. VA south to Panhandle FL, s. AL, west to AR, LA, and ne. TX. [= FNA, X; = *Gnaphalium helleri* Britton var. *helleri* – Z; < *Gnaphalium helleri* – C, G, RAB, S, SE, W (also see *Ps. micradenium*); = *Gnaphalium obtusifolium* var. *helleri* (Britton) Blake – F, Y; = *Pseudognaphalium helleri* (Britton) A. Anderberg ssp. *helleri* – K; < *Pseudognaphalium helleri* – WH]

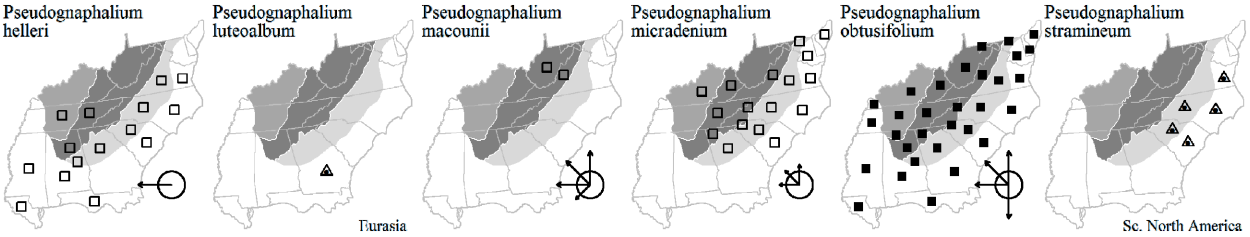
* ***Pseudognaphalium luteoalbum*** (Linnaeus) Hilliard & B.L. Burtt, Red-tipped Rabbit Tobacco. Mowed rights-of-way; native of Eurasia. April-June. [= FNA, K] {add synonymy}

Pseudognaphalium macounii (Greene) Kartesz, Clammy Cudweed, Winged Cudweed, Clammy Everlasting. Dry fields, pastures, and woodland edges at high elevations. July-September. QC west to BC, south to w. VA, WV, TN, and Mexico. [= FNA, K; = *Gnaphalium macounii* Greene – C, F, S, WV; < *Gnaphalium viscosum* – SE, Y, misapplied; < *Pseudognaphalium viscosum* (Kunth) W.A. Weber, misapplied]

Pseudognaphalium micradenium (Weatherby) Nesom, Small Rabbit Tobacco. Dry woodlands and openings. September-October. Se. ME west to WI, south to e. SC, c. GA, se. TN, and s. MO. Nesom (2001a) discusses the distinctiveness of this taxon and its treatment as a species, rather than variety. [= FNA, X; = *Gnaphalium helleri* Britton var. *micradenium* (Weatherby) Mahler – Z; < *Gnaphalium helleri* – C, G, RAB, S, SE, W; = *Gnaphalium obtusifolium* var. *micradenium* Weatherby – F, Y; = *Pseudognaphalium helleri* (Britton) A. Anderberg ssp. *micradenium* (Weatherby) Kartesz – K]

Pseudognaphalium obtusifolium (Linnaeus) Hilliard & Burtt, Fragrant Rabbit Tobacco. Openings, woodlands, coastal dunes, sandy pinelands. disturbed areas. August-October. NL (Newfoundland) west to ON, south to s. FL and TX. [= FNA, WH, X; = *Gnaphalium obtusifolium* Linnaeus – RAB, S, SE, W, WV; > *G. obtusifolium* var. *obtusifolium* – F; > *Gnaphalium obtusifolium* Linnaeus *var. praecox* Fernald – F; = *Gnaphalium obtusifolium* var. *obtusifolium*– C, G, Y; > *Pseudognaphalium obtusifolium* ssp. *obtusifolium* – K; > *Pseudognaphalium obtusifolium* ssp. *praecox* (Fernald) Kartesz – K; *? Gnaphalium polycephalum* Michaux]

* ***Pseudognaphalium stramineum*** (Kunth) A. Anderberg. Sandy fields, roadsides, disturbed places; native of TX south through Mexico and into South America. Late May-August. [= FNA, K; = *Gnaphalium stramineum* Kunth – C; *? G. chilense* Sprengel – RAB, SE, Y]



Pterocaulon Elliott 1823 (Blackroot)

A genus of about 18 species, herbs, of tropical, subtropical, and warm temperate America, and of Oceania and se. Asia. References: Nesom in FNA (2006a); Arriagada (1998)=Z; Cronquist (1980)=SE.

Identification notes: *Pterocaulon* is an unmistakable plant, the stems and leaf undersurfaces creamy-white floccose-tomentose, the leaf bases decurrent down the stem, the heads in oblong, terminal spikes, the tip nodding before anthesis.

Pterocaulon pycnostachyum (Michaux) Elliott, Blackroot, Wingstem. Sandhills, dry pinelands, pine flatwoods. May-June. Se. NC south to s. FL and west to s. AL. [= RAB, FNA, GW, K, SE, WH, Z; = *P. undulatum* (Walter) C. Mohr – S]

Pulicaria Gaertner 1791 (False-fleabane)

A genus of 100 or more species, herbs (rarely shrubs), of Europe, Asia, and Africa. References: Preston in FNA (2006a).

* ***Pulicaria arabica*** (Linnaeus) Cassini. Disturbed areas (on ballast); perhaps just a waif (not recently collected), native of Africa. [= FNA, SE, WH; = *Vicoa auriculata* Cassine – S (misapplied)] {not keyed}

Pyrrhopappus A.P. de Candolle 1838 (False-dandelion)

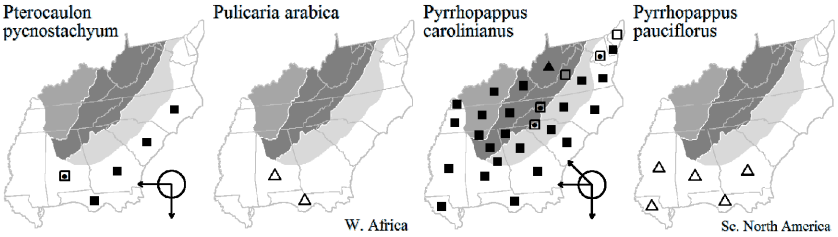
A genus of 3-5 species, herbs, of sw. and se. North America. References: Strother in FNA (2006a); Cronquist (1980)=SE.

1 Outer phyllaries mainly 1/3-2/3 as long as the inner phyllaries; lower and middle stem usually glabrous; leaf margins usually glabrous; upper cauline leaves usually pinnately (3-) 5-7 (-9)-lobed ..... ***P. carolinianus***

1 Outer phyllaries mainly < 1/3 as long as the inner phyllaries; lower and middle stem usually sparsely to densely pilose; leaf margins usually ciliate; upper cauline leaves usually unlobed or pinnately 1-5-lobed..... ***P. pauciflorus***

Pyrrhopappus carolinianus (Walter) A.P. de Candolle, False-dandelion. Dry and moist forests, roadsides, meadows, fields. March-June (and sometimes later). DE, se. PA, and MD south to c. peninsular FL, west to IL, MO, and TX; he pre-Columbian range is uncertain. [= C, F, FNA, G, K, W, WH, WV; > *P. carolinianus* var. *carolinianus* – RAB, SE; > *P. carolinianus* var. *georgianus* (Shinners) Ahles – RAB, SE; = *Sitilias caroliniana* (Walter) Rafinesque – S; > *Pyrrhopappus georgianus* Shinners]

Pyrrhopappus pauciflorus (D. Don) A.P. de Candolle, Small-flowered Desert-Chicory. Disturbed areas. (Feb.) April-May. Probably merely adventive in our area from a native distribution from TX south to Coahuila, Nuevo Léon, and Tamaulipas. [= FNA; < *P. pauciflorus* – K; = *Sitilias multicaulis* (A.P. de Candolle) Greene – S; = *P. multicaulis* A.P. de Candolle – SE]



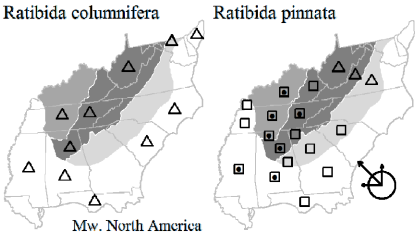
Ratibida Rafinesque 1817 (Prairie Coneflower)

A genus of about 7 species, herbs, of North America. References: Urbatsch & Cox in FNA (2006c); Richards (1968)=Z; Cronquist (1980)=SE. Key adapted from SE.

1 Disks columnar, 2-4.5× as long as thick; plant a tap-rooted perennial; rays < 2 (-2.5) cm long; achenes ciliate and winged, crowned by a pappus consisting of 1 or more awn-teeth ..... ***R. columnifera***
1 Disks ellipsoid-globular, 1-1.6× as long as thick; plant a fibrous-rooted perennial from a woody rhizome or caudex; rays 2.5-3.5 (-4.5) cm long; achenes smooth, lacking a pappus ..... ***R. pinnata***

* ***Ratibida columnifera*** (Nuttall) Wooton & Standley, Columnar Prairie Coneflower. Dry disturbed areas, established around nurseries or plantings, waste areas near wool-combing mills; introduced from further west. May-August. ON west to AB, south to TX, Mexico, and AZ; introduced at scattered sites eastward, including e. NC, e. SC, and c. TN (Chester, Wofford, & Kral 1997). [= C, F, FNA, G, K, SE, WH, WV, Z; = *R. columnaris* (Sims) D. Don – S]

Ratibida pinnata (Ventenat) Barnhart, Globular Prairie Coneflower, Grey-headed Coneflower. Prairie-like glades and oak savannas over gabbro (usually in Iredell soils) or calcareous rocks, cedar glades, calcareous (black belt or chalk) prairies, disturbed areas (naturalized from cultivation). June-August. S. ON west to MN and SD, south to w. PA, e. TN, nw. GA, Panhandle FL, MS, OK, and ne. TX (Singhurst, Mink, & Holmes 2010); disjunct in nc. SC. A characteristic plant of midwestern prairies and limestone glades, remarkably disjunct to "Piedmont prairie" remnants in SC (Nelson 1993). [= C, F, FNA, G, K, S, SE, W, WH, WV, Z]



Rudbeckia Linnaeus 1753 (Yellow Coneflower, Black-eyed Susan)

A genus of about 15 species, herbs, of North America. References: Urbatsch & Cox in FNA (2006c); Cronquist (1980)=SE; Perdue (1957)=Z. Key adapted in part from SE and FNA.

Identification notes: This treatment needs considerable additional work in the herbarium, and will likely be substantially modified.

1 Leaves grasslike, linear-lanceolate, > 10× as long as wide, the basal with blade 10-20 cm long and < 1 cm wide; [of Coastal Plain, of s. GA southward and westward].
  2 Plant with 1 head; rays red, orange, or maroon, 1.0-1.5 cm long; plant pubescent ..... ***R. graminifolia***
  2 Plant with several heads; rays yellow, 1.5-3.5 cm long; plant glabrous ..... ***R. mohrii***
1 Leaves broader, lanceolate, ovate, or pinnately-cleft, < 10× as long as wide; [collectively widespread].
  3 Leaves (at least some of the largest and generally more basal) 3-lobed or more divided.
    4 Disc flowers yellow or yellowish-green; achenes 3.5-6.0 mm long.
      5 Basal and lower stem leaves 1-5-lobed; plants 0.5-2 m tall.
        6 Heads small, the disc mostly 1.0-1.5 cm wide; rays usually 5 or 8; [of the Coastal Plain and Piedmont, VA south to FL, west to LA] ..... ***R. laciniata*** *var.* ***digitata***
        6 Heads larger, the disc mostly 1.5-2.0 cm wide; rays usually 8 or 13; [of high elevations of the Appalachians, VA and KY south to NC and TN] ..... ***R. laciniata*** *var.* ***humilis***
      5 Basal and lower stem leaves 1-2-pinnatifid, with 5-many lobes; plants 1-3 m tall.
        7 Achenes 3.5-4.0 mm long; pappus > 0.7 mm long; [of DE, MD, and PA northward] ..... ***R. laciniata*** *var.* ***bipinnata***
        7 Achenes 4.2-6.0 mm long; pappus < 0.7 mm long; [widespread in our area] ..... ***R. laciniata*** *var.* ***laciniata***
    4 Disc flowers purple-brown; achenes 1.9-3.5 mm long.
      8 Pales acute, hairy near the tip; rays 20-40 mm long ..... ***R. subtomentosa***
      8 Pales cuspidate, with awn-like tips ca. 1.5 mm long, glabrous; rays 8-30 mm long.

9 Cauline leaves 1-3-lobed (at least some on a plant 3-lobed).
10 Ray blades 8-17 mm long; discs 10-15 mm across; [widespread in our area] ... ***R. triloba*** *var.* ***triloba***
10 Ray blades 18-30 mm long; discs 15-20 mm across; [at moderate to high elevations in the Appalachians] ... ***R. triloba*** *var.* ***rupestris***
9 Cauline leaves 1-7-lobed (at least some on a plant 5-7-lobed).
11 Phyllaries > 9 mm long; [of the Mountains of NC, VA, and TN] ... ***R. triloba*** *var.* ***beadlei***
11 Phyllaries < 7 mm long; [of the Coastal Plain of s. AL and Panhandle FL] ... ***R. triloba*** *var.* ***pinnatiloba***
3 Leaves simple, unlobed, toothed (or not).
12 Pales (bracts of the receptacle) glabrous or nearly so (except sometimes for a minutely cilate margin).
13 Pales cuspidate, with awn-like tips ca. 1.5 mm long ... [go to key lead 8b, above]
13 Pales obtuse to acute.
14 Larger leaves < 2 cm wide ... ***[R. missouriensis]***
14 Larger leaves > 2 cm wide.
15 Plants 2-3 m tall; stem leaves strongly auriculate-clasping ... ***R. auriculata***
15 Plants 0.5-1.3 m tall; stem leaves petiolate or sessile, but not auriculate-clasping.
16 Basal leaves with bases cuneate to broadly cuneate.
17 Basal leaves with blades 2.5-3.5× as long as wide; plants villous-hirsute ... ***R. fulgida*** *var.* ***fulgida***
17 Basal leaves with blades < 2× as long as wide; plants glabrous to sparsely hairy.
18 Basal leaves attenuate-cuneate at the base; rays 15-25 mm long; upper stem leaves notably reduced in size from the lower stem leaves ... ***R. fulgida*** *var.* ***spathulata***
18 Basal leaves broadly cuneate at the base; rays 20-40 mm long; upper stem leaves not typically reduced in size from the lower stem leaves ... ***R. fulgida*** *var.* ***speciosa***
16 Basal leaves with bases rounded to cordate.
19 Upper stem leaves notably reduced in size from the lower stem leaves ... ***R. fulgida*** *var.* ***sullivantii***
19 Upper stem leaves not typically reduced in size from the lower stem leaves.
20 Basal leaves with bases rounded; rays 20-40 mm long ... ***R. fulgida*** *var.* ***speciosa***
20 Basal leaves with bases broadly rounded to cordate; rays 10-30 mm long ... ***R. fulgida*** *var.* ***umbrosa***
12 Pales densely pubescent near the tip.
21 Plants glabrous or with scattered inconspicuous hairs.
22 Stem very sparsely spreading-villous (to more conspicuously hairy, and then keyable under 21b); disc to 15 mm high ... ***R. heliopsidis***
22 Stem glabrous; disc elongating in fruit, ultimately 12-60 mm high.
23 Leaves strongly blue-green and glaucous; flowering plants 1-2.5 m tall; largest leaves 7-16 cm wide; [cultivated in our area and rarely persisting or spreading] ... ***R. maxima***
23 Leaves green; flowering plants 0.5-1.3 m tall; largest leaves < 6.5 cm wide; [native of pitcherplant bogs and wet flatwoods of e. GA and ne. FL west to s. AL] ... ***R. nitida***
21 Plants conspicuously hirsute or pilose.
24 Plants perennials from a woody rhizome; pappus a low crown; style appendages short, blunt.
25 Disc 10-15 mm across; rays 6-12, mostly spreading, 15-25 mm long; leaves not folded longitudinally ... ***R. heliopsidis***
25 Disc 15-25 mm across; rays 12-25, mostly reflexed, 30-50 mm long; leaves folded longitudinally.
26 Stem hairy only on the upper stem, the hairs ascending and < 0.5 mm long ... ***[R. grandiflora*** *var.* ***alismaefolia]***
26 Stem hairy throughout, the hairs spreading on the lower stem, ascending on the upper stem and ca. 1.0 mm long ... ***R. grandiflora*** *var.* ***grandiflora***
24 Plants annuals, biennials, or perennials from fibrous roots; pappus lacking **or** a low crown to 0.1 mm high; style appendages elongate, subulate (*R. hirta*) or short, acute to obtuse (*R. mollis*).
27 Stems and leaves softly pilose to woolly; style branches short, acute to obtuse; [plants of dry sands of the Coastal Plain of SC southward] ... ***R. mollis***
27 Stems and leaves with coarse and stiffish hairs; style branches elongate, subulate; [plants collectively widespread in our area].
28 Stems leafy mainly towards the base, branched mainly near the middle; peduncles usually ½ the height of the plants; [of the Coastal Plain] ... ***R. hirta*** *var.* ***angustifolia***
28 Stems leafy throughout, branched mainly well above the middle; peduncles < 1/3 the height of the plants; [collectively widespread].
29 Basal leaves broadly elliptic to ovate, 2.5-7 cm wide, mostly ca. 2× as long as wide, with coarsely serrate margins; [primarily Appalachian and westward, mostly of undisturbed habitats] ... ***R. hirta*** *var.* ***hirta***
29 Basal leaves lanceolate to oblanceolate 1-2.5 (-5) cm wide, mostly 3-5× as long as wide, with entire to serrate margins; [widespread and weedy] ... ***R. hirta*** *var.* ***pulcherrima***

Rudbeckia auriculata (Perdue) Kral, Swamp Black-eyed Susan. Cp (FL, GA): pitcherplant bogs, wet roadsides and powerline rights-of-way, seepages; rare (GA Special Concern). Sw. GA and Panhandle FL (Walton County) west to c. and s. AL. See Diamond & Boyd (2004) for detailed information. [= FNA, K, SE, WH; = *R. fulgida* Aiton var. *auriculata* Perdue]

Rudbeckia fulgida Aiton *var.* ***fulgida***, Common Eastern Coneflower. Mt (WV), Pd (DE) {FL?, GA, NC, VA}: dry to wet meadows; uncommon in WV (rare in DE). August-October. Rudbeckia laciniata Linnaeus *var.* ***digitata*** (Miller) Fiori, Coastal Plain Cutleaf Coneflower. Cp (FL, GA, NC, SC, VA): bottomlands, streamsides; common (uncommon in VA). July-October. VA south to FL, west to LA. [= C, F, K, SE; < *R. laciniata* – RAB, GW, S, W, WH; < *R. laciniata* var. *humilis* A. Gray – FNA; < *R. laciniata* var. *laciniata* – G]

Rudbeckia laciniata Linnaeus *var.* ***humilis*** A. Gray, Blue Ridge Cutleaf Coneflower. Mt (NC, SC?, VA): seeps, bog edges, brookbanks, moist forests; common (uncommon in VA). July-October. VA and KY south to NC. [= C, F, G, K, SE; < *R. laciniata* – RAB, GW, S, W; < *R. laciniata* var. *humilis* A. Gray – FNA]

Rudbeckia laciniata Linnaeus *var.* ***laciniata***, Common Cutleaf Coneflower, Goldenglow. Cp (DE, FL?, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA): moist forests, bottomlands, streambanks; common (uncommon in DE Coastal Plain). July-October. NB, ON, and MB south to FL and TX. [= FNA, K, SE; < *R. laciniata* – RAB, GW, S, W, WH; < *R. laciniata* var. *laciniata* – C, G; > *R. laciniata* var. *laciniata* – F, WV; > *R. laciniata* var. *hortensia* L.H. Bailey – F, misspelling > *R. laciniata* var. *hortensis* L.H. Bailey – WV]

* ***Rudbeckia maxima*** Nuttall, Giant Coneflower. Cp (SC): disturbed ground; rare, cultivated and rarely persistent, native of sc. United States (AR and OK south to LA and TX). [= F, FNA, K, S, SE]

Rudbeckia mohrii A. Gray, Mohr's Coneflower. Cp (FL, GA): wet pine savannas; common. Ec. GA to Panhandle FL. [= FNA, K, S, SE, WH]

Rudbeckia mollis Elliott, Woolly Coneflower. Cp (FL, GA, SC): longleaf pine / turkey oak sandhills; uncommon (rare in SC). Late August-October. SC south to n. peninsular FL, FL Panhandle, west to s. AL. [= RAB, FNA, K, S, SE, WH, Z]

Rudbeckia nitida Nuttall, St. John's Black-eyed Susan. Cp (FL, GA): wet pine savannas; uncommon. E. GA and ne. FL south to c. peninsular FL, west to s. AL. [= FNA, K, WH; > *R. nitida* – S; > *R. glabra* A.P. de Candolle – S; = *R. nitida* var. *nitida* – SE]

Rudbeckia subtomentosa Pursh. Pd* (NC*): moist to dry woodlands, prairies, disturbed areas; rare. Nc. TN (Chester, Wofford, & Kral 1997). MI, IA, and OK south to TN, MS and TX; eastwards as introductions or possibly disjuncts. Known for NC only from a single 1897 specimen from Hollow Rock, Orange Co. NC; probably an introduction. [= F, FNA, K, S, SE, Z]

Rudbeckia triloba Linnaeus *var.* ***beadlei*** (Small) Fernald, Chauncey's Coneflower. Mt (NC, VA): seepy mafic or limestone cliffs; rare. July-October. A Southern Appalachian endemic: sw. VA and KY south to w. NC and TN. It is not at all clear that this taxon is distinct. [< *R. triloba* var. *beadlei* – F; < *R. triloba* var. *pinnatiloba* Torrey & A. Gray – C, FNA, G, K, SE, Z (defined broadly to include "*R. beadlei*"); < *R. triloba* – RAB, W; = *R. beadlei* Small – S]

Rudbeckia triloba Linnaeus *var.* ***pinnatiloba*** Torrey & A. Gray, Pinnate-leaf Coneflower. Cp (FL): calcareous soil, {additional habitat}; rare. S. AL and Panhandle FL. July-October. [< *R. triloba* var. *pinnatiloba* Torrey & A. Gray – C, FNA, G, K, SE, Z (defined broadly to include "*R. beadlei*"); = *R. pinnatiloba* (Torrey & A. Gray) Beadle – S; < *R. triloba* – WH] {synonymy incomplete, etc.}

Rudbeckia triloba Linnaeus *var.* ***rupestris*** (Chickering) A. Gray, Blue Ridge Three-lobed Coneflower. Mt (NC): moist forests and rock outcrops; common. July-October. A Southern Appalachian endemic: KY south to NC and TN. [= F, FNA, K, SE, Z; < *R. triloba* – RAB, W; = *R. rupestris* Chickering – S]

Rudbeckia triloba Linnaeus *var.* ***triloba***, Common Three-lobed Coneflower. Mt (GA, VA, WV), Pd (DE, GA, VA), Cp (DE, VA), {NC}: moist forests and rock outcrops; common (uncommon in DE). July-October. VT, ON, MN, and NE south to GA and TX; westward in CO and UT (as introductions?). [= C, F, FNA, G, K, SE; < *R. triloba* – RAB, W, WV; = *R. triloba* – S]

Rudbeckia grandiflora (Sweet) A.P. de Candolle var. *alismifolia* (Torrey & A. Gray) Cronquist. Cp: prairies, open woodlands. MS west to AR, LA, and TX; disjunct in KY. [= K; = *R. grandiflora* var. *alismaefolia* – FNA, SE, orthographic variant; = *R. alismaefolia* Torrey & A. Gray – S]

Rudbeckia laciniata Linnaeus var. *bipinnata* Perdue. NH and NY south to DE, MD, and PA. [= FNA, K; < *R. laciniata* var. *laciniata* – C, F, G]

Rudbeckia missouriensis Engelmann ex C.L. Boynton & Beadle, Missouri Coneflower. KY, IL, MO, and OK south to LA and TX. [= FNA, C, F, K, S, SE; = *R. fulgida* var. *missouriensis* (Engelmann) Cronquist – G]

Rugelia Shuttleworth ex Chapman 1860 (Rugelia, Rugel's Ragwort)

A monotypic genus, an herb, endemic to the Great Smoky Mountains of w. North Carolina and e. Tennessee. Treated variously as *Senecio* or *Cacalia* in most recent North American floras (see synonymy), this species is anomalous in both and is best treated as a monotypic genus (Bremer 1994). References: Barkley in FNA (2006b); Bremer (1994)=Z; Barkley (1999)=Y; Pippen (1978)=X; Cronquist (1980)=SE.

Rugelia nudicaulis Shuttleworth ex Chapman, Rugelia, Rugel's Ragwort, Winter-well. High elevation forests and openings, primarily in spruce-fir forests, but extending in places downslope into northern hardwood forests. June-August. The genus and species is endemic to the Great Smoky Mountains of w. NC and e. TN, all known populations within Great Smoky Mountains National Park. Where it occurs, it is usually locally abundant, often even the dominant herb. The basal rosettes are evergreen, and are conspicuous in all seasons. [= FNA, K, Y, Z; = *Senecio rugelia* Gray – RAB, S; = *Cacalia rugelia* (Gray) Barkley & Cronquist – SE, W, X]

Santolina Linnaeus 1753

A genus of about 8-18 species, shrubs, of the Mediterranean region. References: Watson in FNA (2006a).

* ***Santolina chamaecyparissus*** Linnaeus, Holy-flax, Lavender-cotton, Cypress Lavender-cotton. Disturbed areas; native of Mediterranean Europe. March-October. This species is introduced in e. and w. NC (Fox, Godfrey, & Blomquist 1952). Graetz (1973) recommended it for planting in barrier island areas of the Carolinas. [= C, K]

Sclerolepis Cassini 1816 (Sclerolepis)

A monotypic genus, a perennial herb, of se. North America. References: Lamont in FNA (2006c); Cronquist (1980)=SE.

Sclerolepis uniflora (Walter) Britton, Sterns, & Poggenburg, Sclerolepis. In shallow water (later sometimes stranded on shore by dropping water levels) of clay-based Carolina bays, natural lake shores, blackwater stream shores and swamps, in seepage wetlands including sea-level fens. May-August; July-October. NH south to c. peninsular FL, west to sw. AL (very rare north of NC); slightly disjunct in s. MS and se. LA (Sorrie & LeBlond 2008). [= RAB, C, F, FNA, G, GW, K, SE, WH]

Scolymus Linnaeus 1753 (Golden Thistle)

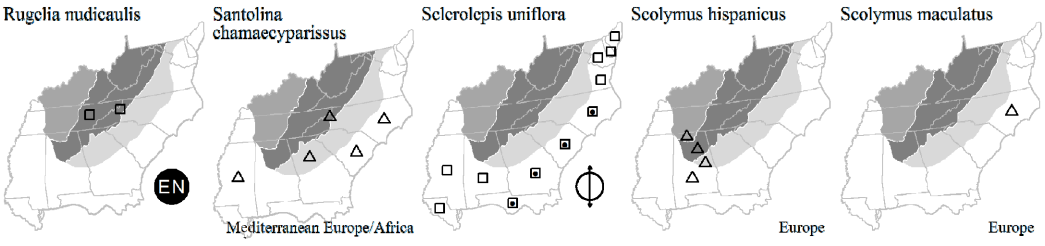
A genus of 3 species, herbs, of the Mediterranean region. References: Strother in FNA (2006a).

1 Stem wings and leaf blades with margins little or not whitened and thickened; pappus of several scales; plant a biennial or perennial ..... ***S. hispanicus***

1 Stem wings and leaf blades with margins white and thickened; pappus absent; plant an annual ..... ***S. maculatus***

* ***Scolymus hispanicus*** Linnaeus, Golden Thistle, Spanish Salsify. On ballast at seaports (at least formerly); native of Europe. AL. [= FNA, K]

* ***Scolymus maculatus*** Linnaeus, Golden Thistle. On ballast at seaports (formerly); native of Europe. Small (1933) states that *Scolymus* "has been found on ballast on the seacoast of N.C."; the site was likely the port of Wilmington. [= FNA, K, S]



Senecio Linnaeus 1753 (Ragwort, Groundsel)

A genus of very uncertain circumscription, if treated broadly with as many as 1500-2000 species, trees, shrubs, herbs, and vines. The trend is to divide *Senecio* into smaller, more natural genera. Most species traditionally treated as "*Senecio*" in our flora are

not even part of a broadly defined core group, and have been transferred to *Packera* and *Rugelia*. *Hasteola* (*Synosma*) has been treated as a small genus of perennial herbs (consisting of *Hasteola suaveolens* and the FL peninsular endemic, *H. robertiorum* L.C. Anderson), but Pelser et al. (2007) demonstrate that *Hasteola* is deeply embedded in *Senecio* and closely related to a group of New World *Senecio*; it is so included here. References: Barkley in FNA (2006b); Pelser et al. (2007); Bremer (1994); Cronquist (1980)=SE; Barkley (1999)=Z; Barkley (1978)=Y; Anderson (1994)=X; Pippen (1978)=V. [also see *Ligularia, Packera, Rugelia*]

1 Leaves ovate, hastate at the base, merely toothed, 10-30 (-40) cm long, 4-20 cm wide.....***S. suaveolens***
1 Leaves ovate to oblanceolate, tapered at the base, pinnatifid (or at least strongly toothed), 2-10 cm long, 0.5-2 (-4) cm wide .....***S. vulgaris***

* ***Senecio brasiliensis*** (Sprengel) Lessing *var.* ***tripartitus*** (A.P. de Candolle) Baker, Hempleaf Ragwort. Disturbed areas (on ballast); rare (not collected since 1894, Pensacola, Escambia County, FL), native of South America. [= FNA, WH; = *S. cannabinaefolius* Hooker & Arnott] {not keyed}

Senecio suaveolens (Linnaeus) Elliott, Sweet Indian-plantain. Sandy bottomlands and riverbanks. MA, NY, n. OH, n. IN, c. WI and se. MN, south to n. VA, sw. VA, sw. NC, wc. TN (Chester, Wofford, & Kral 1997), and se. MO; apparently rare through much of its range. This species has not been seen in NC in recent years. [= *Hasteola suaveolens* (Linnaeus) Pojarkova – FNA, K, X; = *Cacalia suaveolens* Linnaeus – RAB, C, F, G, GW, SE, V, W, WV, Y; = *Synosma suaveolens* (Linnaeus) Rafinesque ex Britton – S]

* ***Senecio vulgaris*** Linnaeus, Common Groundsel. Roadsides, fields, disturbed areas; native of Eurasia. March-June. [= RAB, C, F, FNA, G, K, S, SE, W, WH, WV, Y, Z]

Sericocarpus Nees 1832 (White-topped Aster)

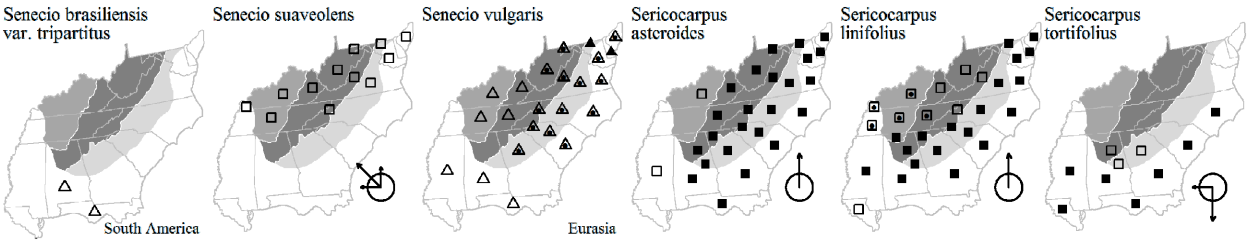
A genus of 5 species, herbs, of North America. This group of species, traditionally treated as *Sericocarpus*, was transferred to *Aster* by Cronquist, a treatment followed by most (but not all) recent floristic works. It now appears, based on morphological and molecular studies, that the traditional treatment as a separate genus is far superior. Nesom (1993a) argues that a variety of characters indicate that *Sericocarpus* is more closely allied to *Solidago*, *Euthamia*, *Bigelowia*, *Chrysoma*, and *Gutierrezia* than it is to *Aster*. Noyes & Rieseberg (1999) provide strong support for this contention, based on molecular evidence. See Nesom (1993a), Jones (1980), Semple & Brouillet (1980), and Noyes & Rieseberg (1999) for further discussion about the affinities of this group. References: Semple & Leonard in FNA (2006b); Leonard, Cook, & Semple (2005)=Y; Nesom (1993a)=Z; Cronquist (1980)=SE.

1 Leaves basally disposed, leaves of the basal rosette much larger than the cauline leaves; leaves (at least the basal) toothed..... ***S. asteroides***
1 Leaves cauline, basal rosette lacking, the mid-cauline leaves the largest; leaves entire (or with 1-2 teeth in *S. tortifolius*).
  2 Leaves (2-) 4-8 cm long, 0.2-1.2 cm wide, linear to oblanceolate, 6-12× as long as wide, not twisted at the base (the leaf blade in a more-or-less horizontal plane); leaves glabrous (but with a ciliate margin), glandular-punctate; involucres glabrous.....***S. linifolius***
  2 Leaves 1.5-4 cm long, 0.6-1.5 (-2.0) cm wide, obovate, 1.5-4× as long as wide, twisted at the base (bringing the leaf blade into a more-or-less vertical plane); leaves puberulent, glandular-punctate, and with prominent resin globules (at 10× magnification); involucres puberulent .....***S. tortifolius***

Sericocarpus asteroides (Linnaeus) Britton, Sterns, & Poggenburg, Toothed White-topped Aster. Dry woodlands, thin soils around rock outcrops, sandhills, dry pinelands. June-July. S. ME and s. VT west to c. OH, south to e. SC, c. GA, w. Panhandle FL, s. AL, and s. MS. Coastal Plain populations are rhizomatous, while inland populations are not; some taxonomic distinction may be warranted (Nesom, pers. comm.). [= F, FNA, K, S, WH, WV, Y, Z; = *Aster paternus* Cronquist – RAB, C, G, SE, W]

Sericocarpus linifolius (Linnaeus) Britton, Sterns, & Poggenburg, Narrow-leaf White-topped Aster. Dry woodlands, sandhills. June-July. MA west to s. OH and s. IN, south to se. SC, c. GA, s. AL, s. MS, and e. LA (Florida parishes). [= F, FNA, K, S, WV, Y, Z; = *Aster solidagineus* Michaux – RAB, C, G, SE, W]

Sericocarpus tortifolius (Michaux) Nees, Twisted-leaf White-topped Aster. Dry to mesic sandhills. August-October. E. NC south to s. FL, west to e. LA (Florida parishes), more or less restricted to the Coastal Plain, but inland onto hard-rock provinces in nc. GA and nc. AL. [= FNA, K, WH, Y, Z; = *Aster tortifolius* Michaux – RAB, SE, W; = *Sericocarpus bifoliatus* (Walter) Porter – S]



Silphium Linnaeus 1753 (Rosinweed)

A genus of 20-30 species, herbs, of e. North America. References: Sweeney (1970)=Z; Perry (1937)=Y; Clevinger in FNA (2006c); Clevinger (2004)=X; Cronquist (1980)=SE; Cruden (1962); Medley (1989); Steyermark (1951).

Identification notes: The number of ray flowers per head is a useful taxonomic character in *Silphium*; since only ray flowers are fertile, the number of ray flowers can also be determined by the number of achenes in freshly fruiting material. The key and taxonomic treatment is provisional.

1 Leaves basally disposed, the basal leaves large and persistent, the stem with very few to many leaves, but these definitely reduced upward in size; leaves entire to toothed, to deeply cut; plants with definite taproots (except *S. brachiatum, S. mohrii,* and *S. wasiotense*).
2 Stem relatively leafy, with 4-5 nodes or more, the stem leaves smaller than the basal, but not merely bracteal.
3 Leaves deeply pinnatifid to bipinnatifid ..... ***S. laciniatum***
3 Leaves merely nearly entire to coarsely toothed (but not pinnatifid).
4 Leaves cuneate to rounded at the base; rays pale (sulphur) yellow; phyllaries acuminate, hispid ..... ***S. mohrii***
4 Leaves subcordate, cordate, to truncate-sagittate at the base; phyllaries glabrous, obtuse to acute.
5 Stem glabrous; pedicel glabrous; phyllaries acute; leaves truncate-sagittate at the base ..... ***[S. brachiatum]***
5 Stem hispid; pedicel hispidulous with hairs ca. 1 mm long; phyllaries obtuse; leaves cordate to subcordate at the base ..... ***[S. wasiotense]***
2 Stem nearly naked, bearing only a few bracteal (very reduced) leaves.
6 Heads relatively large (involucre 13-25 mm high, disk 15-25 mm wide), with 14-40 ray flowers; [of calcareous or mafic glades or woodlands].
7 Principal leaves deeply pinnatifid (or, if entire, definitely lanceolate and with the base tapering to the petiole) ..... ***S. pinnatifidum***
7 Principal leaves toothed (or subentire), cordate or truncate at the base (rarely abruptly narrowed) ..... ***S. terebinthinaceum***
6 Heads relatively small (involucre 6-11 mm high, disk 8-15 mm wide), with 6-12 ray flowers; [of a wide range of mostly dry, often acidic habitats].
8 Blades of basal leaves unlobed (or with a single obscure basal lobe on each side), reniform, usually wider than long, often > 25 cm wide; leaves usually puberulent beneath; achenes shorter than the phyllaries at maturity; [of the upper Piedmont and Mountains] ..... ***S. reniforme***
8 Blades of basal leaves divided or shallowly to deeply lobed, with several lobes on each side, about as wide as long, or longer than wide, < 25 cm wide; leaves usually glabrous (or sparsely scabrous) beneath; achenes longer than (or as long as) the phyllaries at maturity; [collectively widespread].
9 Involucre mostly 1.0-1.5 cm wide; achenes 6-9 mm long at maturity; achene wings < 1 mm wide, the wing tips long acute to acuminate, the sinus between the wing tips V-shaped; [of the Coastal Plain and lower Piedmont from se. VA south to extreme e. GA] ..... ***S. compositum*** *var.* ***compositum***
9 Involucre mostly 1.5-3.0 cm wide; achenes 8-14 mm long at maturity; achene wings 1-2 mm wide, the wing tips either acute to acuminate or obtuse, the sinus between the wing tips either V-shaped or narrowly U-shaped.
10 Achene wing tip obtuse, the sinus between the wing tips narrowly U-shaped; leaf blade usually longer than wide; petiole short, as long as or shorter than the leaf blade (midrib); [of se. SC south to c. peninsular FL and FL Panhandle] ..... ***S. compositum*** *var.* ***ovatifolium***
10 Achene wing tip acute to acuminate, the sinus between the wing tips V-shaped; leaf blade usually as long as wide; petiole long, as long as or longer than the leaf blade (midrib); [of se. NC south to se. GA and FL Panhandle] ..... ***S. compositum*** *var.* ***venosum***

1 Leaves primarily on the stem, basal leaves usually absent or soon withering, the stem with many leaves, these similar in size; leaves entire or toothed; plants fibrous-rooted from a crown, rhizome, or caudex.
11 Stem square; upper leaves connate, fused basally, the stem thus perfoliate.
12 Stem spreading-hispid (rarely nearly glabrous); heads with usually ca. 8 or ca. 13 rays; hairs on lower leaf surface or veins 1-2 mm long ..... ***S. connatum***
12 Stem glabrous or glabrescent; heads with usually ca. 21 or ca. 34 rays; hairs on lower leaf surface absent or < 1 mm long ..... ***S. perfoliatum***
11 Stem terete; leaves not connate.
13 Basal and lower cauline leaf blades cordate, sagittate, or truncate at the base, **and** on well-developed petioles ..... ***[S. brachiatum]***
13 Basal and lower cauline leaf blades either rounded or cuneate at the base, **or** sessile.
14 Stems, leaves, and phyllaries densely stipitate-glandular (in addition to the eglandular pubescence).
15 Plants mostly 8-15 dm tall, with usually 6 or 7 nodes below the inflorescence; glandular hairs of the stems and leaves longer than the eglandular hairs; rays (8-) 12-14 (-16) per head; [of dolomite or limestone in Bibb County, c. AL] ..... ***S. glutinosum***
15 Plants mostly 15-20 dm tall, with usually 9-12 nodes below the inflorescence; stems and leaves ; glandular hairs of the stems and leaves about as long as the eglandular hairs; rays (17-) 19-23 (-33) per head; [of chalk in c. AL] ..... ***S. perplexum***
14 Stems, leaves, and phyllaries not stipitate-glandular, either smooth, scabrous, or hispid.
16 Leaves **both** strictly opposite throughout **and** clasping the stem.
17 Ray flowers 12-22 per head; phyllary surfaces scabrous, hirsute, or hispid ..... ***S. integrifolium***
17 Ray flowers 20-36 (or more) per head; phyllary surfaces glabrous ..... ***S. speciosum***
16 Leaves alternate, opposite, whorled, or combinations of those states (if strictly opposite then not clasping the stem).
18 Ray flowers 20-30 per head (or more) ..... ***[S. radula]***
18 Ray flowers 12-20 per head.
19 Leaf surfaces glabrous.
20 Cauline leaves predominately in whorls of 3 ..... ***S. asteriscus*** *var.* ***trifoliatum***
20 Cauline leaves opposite ..... ***S. asteriscus*** *var.* ***latifolium***
19 Leaf surfaces scabrous to hispid.
21 Basal leaves persistent at flowering ..... ***S. asteriscus*** *var.* ***simpsonii***
21 Basal leaves caducous at flowering.
22 Pales stipitate-glandular ..... ***S. asteriscus*** *var.* ***dentatum***
22 Pales eglandular, scabrous to puberulent ..... ***S. asteriscus*** *var.* ***asteriscus***

Silphium asteriscus Linnaeus *var.* ***asteriscus***. Cp (FL), {Mt, Pd, Cp (GA, NC, SC, VA)} VA, KY, and MO south to FL and TX. [= C, FNA, K1, K2; > *S. asteriscus* – RAB; > *S. dentatum* var. *gatesii* (Mohr) Ahles – RAB; = *S. asteriscus* – F, G, W; > *S. asteriscus*

Silphium compositum Michaux *var.* ***ovatifolium*** Torrey & A. Gray. Cp (FL, GA, SC): sandhills; rare. May-September. Se. SC south to c. peninsular FL and FL Panhandle. [= K1; = *Silphium ovatifolium* (Torrey & A. Gray) Small – S, Y; < *S. compositum* – FNA, K2, SE, WH; = *S. compositum* ssp. *ovatifolium* (Torrey & A. Gray) Sweeney & Fisher – Z]

Silphium compositum Michaux *var.* ***venosum*** (Small) Kartesz & Gandhi. Cp (FL, GA, NC, SC), Pd (SC): sandhills, xeric forests. May-September. Se. NC south to se. GA and FL Panhandle. [= K1; = *Silphium venosum* Small – Y; < *S. compositum* var. *compositum* – RAB; > *S. lapsuum* Small – S; > *S. venosum* Small – S; < *S. compositum* – FNA, K2, SE, WH; = *S. compositum* ssp. *venosum* (Small) Sweeney & Fisher – Z]

Silphium connatum Linnaeus, Virginia Cup-plant. Mt (NC, VA, WV), Pd (NC, VA): floodplain forests and openings; uncommon. June-August. VA and WV south to nw. NC. [= RAB, F, WV, Y; = *S. perfoliatum* var. *connatum* (Linnaeus) Cronquist – C, FNA, K1, K2, SE; < *S. perfoliatum* – G, W]

Silphium glutinosum J. Allison, Sticky Rosinweed. Mt (AL): dolomite glades; rare. Known only from calcareous Ketona glades in Bibb County, c. AL (Allison & Stevens 2001). [= FNA, K2]

Silphium integrifolium Michaux, Prairie Rosinweed. Prairies, calcareous glades and barrens. July-September. MI, WI, and se. SD south to c. TN, se. AL, s. MS, s. LA, and OK. [= *S. integrifolium* Michaux var. *integrifolium* – C, FNA, G, K2, SE; > *S. integrifolium* var. *integrifolium* – F, K1, Y; > *S. integrifolium* var. *deamii* L.M. Perry – F, K1; > *S. integrifolium* var. *gattingeri* L.M. Perry – K1, Y]

Silphium laciniatum Linnaeus, Compass-plant. Prairies, limestone barrens, calcareous glades, also sometimes cultivated (including outside of its native distribution). July-September. S. ON, MI. WI, s. MN, and e. SD south to se. TN, s. AL, c. MS, s. LA, c. TX, and n. NM. [= C, FNA, G, K2, SE; > *S. laciniatum* var. *robinsonii* L.M. Perry – F, K1, Y]

Silphium mohrii Small, Shaggy Rosinweed. Mt (GA): prairies; rare. Endemic to c., sc., and se. TN (Chester, Wofford, & Kral 1997) south to nw. GA (Jones & Coile 1988) and nc. AL. [= C, FNA, K1, K2, S, SE, Y]

Silphium perfoliatum Linnaeus, Common Cup-plant. Mt (NC, VA, WV), Pd (NC): floodplain forests and openings, sometimes escaped from cultivation; uncommon (rare in DE and WV). June-August. VT, ON, and ND south to sc. NC, AL, and TX. [= RAB, F, S, WV, Y; = *S. perfoliatum* var. *perfoliatum* – C, FNA, K1, K2, SE; < *S. perfoliatum* – G, W]

Silphium perplexum J. Allison, Old Cahaba Rosinweed. Mt (AL): dolomitic glades and woodlands; rare. Endemic to c. AL (Allison & Stevens 2001). [= FNA; = *S. ×perplexum* – K2]

Silphium pinnatifidum Elliott. Mt (GA): limestone glades and woodlands; rare. C. and se. TN south to nw. GA and AL. [= K1, S, SE; = *S. terebinthinaceum* Jacquin var. *pinnatifidum* (Elliott) A. Gray – F, FNA, K2, Y; < *S. terebinthinaceum* – G; > *S. chickamaugense* Canby]

Silphium reniforme Rafinesque ex Nuttall. Mt (NC, SC, VA, WV), Pd (NC, SC, VA): dry forests; uncommon. Sc. VA, e. WV, and e. TN, south to c. SC, c. GA, and e. AL. Plants with shallowly lobed leaves, with nearly the same distribution as typical *S. reniforme*, have been variously interpreted. [= S; = *S. compositum* Michaux var. *reniforme* (Rafinesque ex Nuttall) Torrey & A. Gray – RAB, F, K1, Y; < *S. compositum* – C, FNA, G, SE, W; < *S. compositum* – K2; = *S. compositum* ssp. *reniforme* (Rafinesque ex Nuttall) Sweeney & Fisher – WV, Z]

Silphium speciosum Nuttall. Prairies, calcareous glades and barrens. July-September. MO west to NE, south to OK; disjunct in c. TN. [= F, Y; = *S. integrifolium* Michaux var. *laeve* Torrey & A. Gray – C, FNA, G, K1, K2, SE]

Silphium terebinthinaceum Jacquin, Prairie-dock. Mt (GA, VA), Pd (NC, SC): mafic glades, barrens, woodlands, and roadsides (NC, SC), calcareous glades, barrens, and woodlands (GA, VA); rare. July-=September. NY, ON, WI, and NE south to nw. GA, MS,and AR; disjunct eastwards in Piedmont of NC and n. SC. *S. rumicifolium* Small refers to plants of limestone in the Ridge and Valley province of e. TN and extreme sw. VA, alleged to differ from *S. terebinthinaceum* in the leaf bases cuneate at the base (vs. cordate or truncate), smaller leaf blades (only to 15 cm long), smaller plants (to 8 dm tall vs. to 30 dm tall), and

outer phyllaries broader than long (vs. longer than broad). The distinction of var. *luciae-brauniae* Steyermark, with leaf blades glabrous above vs. scabrous, is dubious and needs additional study. [= RAB, SE; = *S. terebinthinaceum* var. *terebinthinaceum* – F, FNA, K2; < *S. terebinthinaceum* – G; > *S. terebinthinaceum* var. *terebinthinaceum* – K1, Y; > *S. terebinthinaceum* var. *luciae-brauniae* Steyermark – K1; > *S. terebinthinaceum* – S; > *S. rumicifolium* Small – S, Y]

Silphium wasiotense M. Medley, Appalachian Rosinweed. Open forests. July-September. E. KY and ne. TN (Risk & Wyrick 1996, Chester, Wofford, & Kral 1997). [= C, FNA, K1, K2; = *S. wasiotensis*, orthographic variant]

Silphium brachiatum Gattinger, Cumberland Rosinweed. Endemic to sc. and se. TN (Chester, Wofford, & Kral 1997) and n. AL. And GA? [= F, FNA, G, K1, S, SE, Y]

Silphium radula Nuttall. Mt (GA): rocky hardwood forests; rare (GA Rare). East to nw. GA (Jones & Coile 1988). Not given credence as in our area in FNA and other sources. [= K1, SE; ? *S. asperrimum* Hooker – Y, misapplied; ? *S. gatesii* Mohr – Y?]

Silybum Adanson 1763 (Milk-thistle)

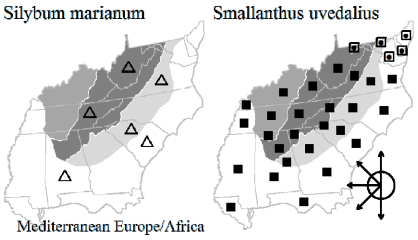
A genus of 2 species, herbs, of the Mediterranean region. References: Keil in FNA (2006a); Cronquist (1980)=SE.

* ***Silybum marianum*** (Linnaeus) Gaertner, Milk-thistle, Blessed-thistle. Disturbed areas; native of s. Europe. May-July. Reported for NC by FNA; documentation unknown. [= C, F, FNA, G, K, SE; = *Mariana mariana* (Linnaeus) Hill – S]

Smallanthus Mackenzie ex Small 1933 (Bearsfoot)

A genus of about 20 species, of tropical, subtropical, and warm temperate America. Robinson (1978) describes the morphological and karyological differences warranting recognition of *Smallanthus* as a genus separate from *Polymnia*. References: Strother in FNA (2006c); Robinson (1978)=Z; Wells (1965)=Y; Cronquist (1980)=SE.

Smallanthus uvedalius (Linnaeus) Mackenzie ex Small, Bearsfoot, Leafcup. Moist forests, bottomland forests, and disturbed places. July-October. NY and IL south to c. peninsular FL and TX; possibly extending through e. Mexico and Central America to Panama, depending on circumscription. [= FNA, K, S, WH, Z; = *Polymnia uvedalia* Linnaeus – RAB, C, SE, W, WV; > *Polymnia uvedalia* var. *uvedalia* – F, G, Y; > *Polymnia uvedalia* var. *densipilis* Blake – F, G, Y; > *Polymnia uvedalia* var. *floridana* Blake – F, Y]



Solidago Linnaeus 1753 (Goldenrod)

A genus of 90-110 species, herbs, primarily North American, but with a few species in South America, Macaronesia, and Eurasia. The placement of the flat-topped goldenrods has been controversial; they are here included in *Solidago* rather than being treated as the separate genus *Oligoneuron*. References: Semple & Cook in FNA (2006b); Nesom (1990); Cronquist (1980)=SE; Morton (1973, 1974); Zhang (1996); Cook & Semple (2004); Nesom (1993b)=Z; Heard & Semple (1988)=Y; Brouillet & Semple (1981)=X; Cronquist (1980)=SE; Braun (1942). Portions of the key adapted (in part) from various sources, especially FNA and SE. [also see *Brintonia, Chrysoma*, and *Euthamia*]

Identification notes: Several related genera readily mistaken for (and/or sometimes included in) *Solidago* are included here as keying "failsafes."

1 Inflorescence corymbiform, flat-topped or broadly rounded and about as broad as long, or broader; [section *Ptarmicoideae*, and section *Solidago*, subsection *Multiradiatae*] ..... **Key A**

1 Inflorescence a panicle, raceme, thyrse, or in axillary clusters, usually longer than broad, or with either the central branch well-developed and elongate, or with numerous branches elongate and more-or-less secund heads; [section *Solidago*].

2 Leaves basally disposed, the basal and lower cauline leaves larger, petiolate, and usually persistent, the middle and upper cauline leaves smaller and less petiolate.

3 Inflorescence cylindrical, of axillary clusters subtended by well-developed stem leaves, **or** a terminal thyrse or raceme, the branches not secund (unless the stem is arching and the heads become oriented to the side of the axis); [subsections *Glomeruliflorae*, *Humiles*, *Maritimae*, *Squarrosae*) ..... **Key B**

3 Inflorescence paniculiform, the major branches (at least) recurved with the heads borne secundly; [subsections *Argutae*, *Junceae*, *Maritimae*, *Nemorales*] ..... **Key C**

2 Leaves chiefly cauline, the basal and lower cauline leaves (when not early withering) the same size as or smaller than the middle and upper cauline leaves.
4 Inflorescence predominantly axillary, with well-developed leaves in at least the lower part of the inflorescence; [subsections *Argutae*, *Glomeruliflorae*, *Squarrosae*, *Thyrsiflorae*] ..... **Key D**
4 Inflorescence a well-developed panicle; [subsections *Triplinervae*, *Venosae*] ..... **Key E**

Key A – goldenrods with corymbiform inflorescences (section *Ptarmicoideae*, and section *Solidago*, subsection *Multiradiatae*)

1 Plant a woody shrub; leaves with a markedly pebbled surface ..... ***[see Chrysoma]***
1 Plant an herb; leaves variously smooth or rugose, but not pebbled.
2 Inflorescence flat-topped; disk flowers 2-12, usually fewer than the ray flowers ..... ***[see Bigelowia]***
2 Inflorescence corymbose (rounded); disk flowers 17-60, more than the ray flowers.
3 Rays white; leaves linear-lanceolate to linear-oblanceolate, the longer (10-) 15-20× as long as wide; pappus bristles slightly to strongly clavellate-thickened; [section *Ptarmicoideae*] ..... ***S. ptarmicoides***
3 Rays yellow; leaves oblong, elliptic, obovate, or spatulate, 2-8× as long as wide; pappus bristles not clavellate thickened.
4 Larger leaves obovate, 5-10 cm long, 1.5-4 cm wide, with prominent teeth; plants small, 0.5-4 dm tall; [of high elevation rock outcrops on Grandfather Mountain, Roan Mountain, and Hanging Rock Mountain (Avery, Watauga, and Mitchell counties), NC]; [section *Solidago*, subsection *Multiradiatae*] ..... ***S. spithamaea***
4 Larger leaves elliptic-oblong, 6-25 cm long, 2-10 cm wide, wiith small, obscure teeth; plants robust, 4-15 dm tall; [of dry, prairie-like sites at low elevations]; [section *Ptarmicoideae*]
5 Larger leaves 3-6 cm wide, ca. 2-8× as long as wide, acute to obtuse, serrate to crenate with numerous teeth (sometimes the teeth very obscure), with many pinnate-netted veins; leaves, stems, and peduncles moderately to densely pubescent.
6 Outer series of phyllaries glabrous on the back (glabrous to short-ciliate on the margin); leaf undersurface glabrous to somewhat hispid (0-20 hairs per mm^2) (the margins and midrib beneath often more densely pubescent); stems glabrous to somewhat hispid (0-25 hairs per mm^2) ..... ***S. rigida* *var.* *glabrata***
6 Outer series of phyllaries pubescent on the back (short-ciliate on the margin); leaf undersurface hispid (7-50 hairs per mm^2); stems slightly to strongly hispid (10-70 hairs per mm^2) ..... ***S. rigida* *var.* *rigida***
5 Larger leaves 0.4-1.6 cm wide, ca. 12-25× as long as wide, acuminate to acute, entire or serrate with a few salient teeth on either side, with 3+ parallel veins.
7 Rays 1-4 per head; cypselas 2-3 mm long; leaves acute to obtuse, rarely folded along the midvein; [of prairies and longleaf pine savannas from MS westward on the Coastal Plain] ..... ***S. nitida***
7 Rays 7-9 per head; cypselas 1.5-2.2 mm long; leaves acuminate, often folded along the midvein; [of wet prairies and fens of interior physiographic provinces] ..... ***S. riddellii***

Key B – goldenrods with basally disposed leaves and elongate, non-secund inflorescences (section *Solidago*, subsections *Glomeruliflorae*, *Humiles*, *Maritimae*, *Squarrosae*)

1 Heads very large, involucre 8-13 mm high; fresh leaves noticeably thick and rubbery in texture; [subsection *Glomeruliflorae*]; [plants of high elevations of NC and TN] ..... ***S. glomerata***
1 Heads smaller, involucre < 8 mm high; fresh leaves not thick or rubbery in texture; [plants collectively widespread].
2 Phyllaries and often also vegetative parts with minute sticky glands; stem leaves petiolate; [subsection *Humiles*].
3 Leaves, peduncles, and phyllaries copiously glandular; [plants of Coastal Plain sandhills] ..... ***S. kralii***
3 Leaves, peduncles, and phyllaries slightly glandular; [plants of rocky glades, cliffs, barrens, and river-scoured outcrops, primarily on mafic or calcareous rocks)].
4 Involucres 7-12 mm high; basal leaves 15-40 mm wide; [of n. AL, e. TN, and e. KY] ..... ***S. arenicola***
4 Involucres 3-7 mm high; basal leaves (2-) 3-22 (-31) mm wide; [of sc. NC, w. VA, and n. VA northward].
5 Achenes glabrous (even when young); flowering plants (3-) 4-10 (-13) dm tall; inflorescence broadly cylindrical, averaging 5-6 cm in diameter; [of rocky, flood-scoured riversides, known only from the Yadkin River in sc. NC] ..... ***S. plumosa***
5 Achenes pubescent (even when mature); flowering plants 1.5-6 (-8.5) dm tall; inflorescence narrowly cylindrical, averaging 2-4 cm in diameter.
6 Lower cauline leaves 7-15× as long as wide, (2.5-) 4.6-9.4 (-11.2) cm long, (2-) 3-9 (-17) mm wide, generally obscurely toothed; [of rocky, flood-scoured riversides, from e. KY, e. TN, and n. VA northward] ..... ***S. racemosa***
6 Lower cauline leaves 3-8× as long as wide, (4.2-) 6.2-11.3 (-15.9) cm long, (5-) 10-22 (-31) mm wide, generally sharply toothed; [of cliffs and barrens, primarily over mafic rocks, from w. VA northward] ..... ***S. randii***
2 Phyllaries and vegetative parts lacking minute sticky glands; stem leaves sessile.
7 Petioles of lower stem leaves sheathing the stems; [of bog and marsh habitats, growing in soils which are permanently or at least seasonally saturated]; [subsection *Maritimae*].
8 Basal leaves 0.7-8 cm wide; plants short, 4-10 (-15) dm tall, typically fairly stout; [of the Mountains and northward].
9 [of seepage over sloping rock on granitic domes, of sw. NC, nw. SC, and ne. GA] ..... ***S. simulans***
9 [of peaty bogs, of w. NC and e. TN northward]
10 Basal leaves 0.7-2.5 cm wide; [south to PA and WV] ..... ***[S. uliginosa* *var.* *linoides]***
10 Basal leaves 3-8 cm wide; [south to NC and TN] ..... ***S. uliginosa* *var.* *uliginosa***
8 Basal leaves 0.7-2.5 (-5) cm wide; plants short to tall, 3-20 dm tall, typically very slender; [of the Coastal Plain and lower Piedmont and southward].
11 Leaf margins smooth, entire; ray flowers 8-13 per head; disk flowers 14-25 per head; pappus (2.5-) 3.0-3.5 mm long ..... ***S. pulchra***
11 Leaf margins (of the basal leaves at least) scabrous-margined, also often toothed; ray flowers 2-7 per head; disk flowers 6-16 per head; pappus (3.0-) 3.5-4.5 (-5.0) mm long.

12 Leaf margins scabrous (or at least tuberculate) throughout; panicle branches often spreading-erect with recurved-secund tips; pappus 2.2-4.0 mm long ..... ***S. gracillima***
12 Leaf margins tending to become smooth on the upper stem; panicle branches usually stiffly erect; pappus 4.0-4.5 (-5.0) mm long ..... ***S. stricta***
7 Petioles of lower stem leaves not sheathing the stems; [of mesic or drier habitats]; [subsection *Squarrosae*].
13 Phyllaries spreading or with squarrose tips ..... ***S. squarrosa***
13 Phyllaries appressed.
14 Phyllaries sparsely to moderately finely stipitate-glandular; [of the Outer Coastal Plain of se. NC] ..... ***S. villosicarpa***
14 Phyllaries and peduncular bracts not glandular; [collectively widespread].
15 Phyllaries linear-lanceolate, attenuate, tapering to pointed or minutely rounded tip.
16 Proximal to mid stem glabrous; rays mostly 6-9; inner phyllaries usually striate with 2 prominent secondary veins ..... ***S. roanensis***
16 Stems and leaves finely hairy throughout with minute strigillose hairs; rays mostly 9-16; inner phyllaries not striate.
17 Leaves 20-50 (-60) per stem; midstem leaves usually 4-5 cm long; phyllaries attenuate; [of the Mountains and Piedmont (rarely Coastal Plain), of GA northward] ..... ***S. puberula*** *var.* ***puberula***
17 Leaves (20-) 50-120 per stem; midstem leaves usually 1-4 cm long; phyllaries acute to acuminate; [of the Coastal Plain from se. VA southward] ..... ***S. puberula*** *var.* ***pulverulenta***
15 Phyllaries ovate to lanceolate, acute to obtuse or rounded.
18 Rays white ..... ***S. bicolor***
18 Rays yellow (may turn pale yellow with age).
19 Leaves and stems sparsely to densely hairy with spreading to appressed hairs ..... ***S. hispida***
19 Leaves and upper stems glabrous.
20 Inflorescence either very narrowly thyrsiform and often interrupted or branches well spaced; mid cauline leaves 0.5-2.0 cm wide; [of MA to se. IN, south to GA and MI, mostly avoiding the Coastal Plain southward] ..... ***S. erecta***
20 Inflorescence usually denser, broader, and crowded, sometimes more open in robust plants, or narrow in plants outside range of *S. erecta*; mid cauline leaves often > 20 mm wide; [of MA to GA, west to SD and scattered south in CO to ne. NM].
21 Mid-stem leaves 0.4-1.5 (-2.0) cm wide; basal leaves 0.8-2.0 cm wide, entire or slightly serrate, present or absent at flowering ..... ***S. speciosa*** *var.* ***rigidiuscula***
21 Mid-stem leaves usually > 2 cm wide; basal leaves (2.0-) 3.0-5.5 cm wide, coarsely serrate, present at flowering ..... ***S. speciosa*** *var.* ***speciosa***

Key C – goldenrods with basally disposed leaves and elongate, secund inflorescences (section *Solidago*, subsections *Argutae*, *Junceae*, *Maritimae*, *Nemorales*)

1 Basal and lower cauline leaves petiolate with a cordate or subcordate blade and/or a cordate-clasping petiole; [subsection *Argutae*].
2 Pappus > ½× as long as the disc corollas; rays 1-3 ..... ***S. auriculata***
2 Pappus < ¼× as long as the disc corollas; rays 3-6 ..... ***S. sphacelata***
1 Basal and lower cauline leaves with cuneate leaf blades and petioles not cordate-clasping (though leaves may have petioles which sheath the stem).
3 Blades of lower leaves ovate to elliptic to oblanceolate, their bases truncate, abruptly tapering, or gradually tapering to petiole; lower leaves including petioles mostly less than 4× as long as wide (sometimes longer in *S. brachyphylla* with densely puberulent leaf surfaces and stems, and in *S. arguta* var. *boottii* and *S. arguta* var. *caroliniana* with blades sharply serrate and heads lacking phyllary-like bracts interior to ray florets); [subsection *Argutae*].
4 Leaves definitely scabrous or moderately to densely soft-villous or puberulent.
5 Leaves scabrous on the upper surface.
6 Basal and lower cauline leaves 8-30 cm long, 4-10 cm wide, mostly 2-3× as long as wide; upper stem leaves few, somewhat reduced, sharply toothed; [of the Mountains and rarely Piedmont] ..... ***S. patula*** *var.* ***patula***
6 Basal and lower cauline leaves 6-24 cm long, 2-6 cm wide, mostly 3-5× as long as wide; upper stem leaves many, strongly reduced, mostly entire; [of the Coastal Plain and lower Piedmont] ..... ***S. patula*** *var.* ***strictula***
5 Leaves moderately to densely soft-villous or puberulent.
7 Leaves puberulent; rays 0 (-2); flowering September-November; [of SC (NC?) south to FL and AL] ..... ***S. brachyphylla***
7 Leaves soft-villous; flowering May-June; rays 7-12; [of Coastal Plain of e. NC and e. SC] ..... ***S. verna***
4 Leaves glabrous (or nearly so) **or** strigose or strigillose.
8 Plants with slender, stoloniferous rhizomes (in addition to the main, more deeply-seated rhizomes) ..... ***S. tarda***
8 Plants lacking slender, stoloniferous rhizomes.
9 Phyllaries striate, with several nerves prominent; involucres 4.5-6 (-7) mm high ..... ***S. faucibus***
9 Phyllaries not striate, only the midvein prominent; involucres 2.5-5.6 mm high.
10 Basal leaves truncate at the base; leaves thick in texture ..... ***S. harrisii***
10 Basal leaves cuneate to rounded at the base; leaves of normal herbaceous texture.
11 Achenes glabrous ..... ***S. arguta*** *var.* ***arguta***
11 Achenes strigillose, at least towards the apex.
12 Leaves strigose or strigillose ..... ***S. arguta*** *var.* ***boottii***
12 Leaves glabrous ..... ***S. arguta*** *var.* ***caroliniana***
3 Blades of lower leaves oblanceolate to narrowly ovate, gradually tapering to petiole; lower leaves including petioles mostly more than 4× as long as wide (sometimes shorter in *S. juncea* with at least a few phyllary-like bracts interior to ray florets).
13 Petiole bases of basal and lower cauline leaves not sheathing the stem; [of mesic or dry habitats].
14 Stems obviously densely and loosely puberulent; [subsection *Nemorales*] ..... ***S. nemoralis*** *var.* ***nemoralis***
14 Stems glabrous or nearly so; [subsection *Junceae*].

15 Rhizomes thin, elongated, creeping; stem leaves usually 3-nerved; [disjunct from west to glades and barrens] ..... ***S. missouriensis*** *var.* ***fasciculata***
15 Rhizomes thick, short; stem leaves not 3-nerved; [collectively of various habitats].
16 Rays 7-13; disc florets 8-12 ..... ***S. juncea***
16 Rays 3-7; disc florets 5-9
17 Upper stem leaves ascending to appressed, usually lacking axillary fascicles; [west of the Blue Ridge] ..... ***S. gattingeri***
17 Upper stem leaves spreading or reflexed, with axillary fascicles of reduced leaves; [east of the Blue Ridge] ..... ***S. pinetorum***
13 Petiole bases of basal and lower cauline leaves sheathing the stem; [of seasonally saturated habitats]; [subsection *Maritimae*].
18 Leaves somewhat fleshy, the stem leaves reduced but not very markedly so; inflorescence almost always with lower branches strongly recurved with second heads; [of coastal or otherwise saline habitats].
19 Involucres 3-4 mm high; rays 7-11; disc flowers ca. 10-16; [of MA south to FL, west to TX and beyond] ..... ***S. sempervirens*** *var.* ***mexicana***
19 Involucres 4-7 mm high; rays 12-17; disc flowers ca. 17-22; [of VA northward] ..... ***S. sempervirens*** *var.* ***sempervirens***
18 Leaves not fleshy (rarely so in *S. stricta* of near coastal situations), the stem leaves much reduced relative to the basal; inflorescence showing only relatively weak tendency to recurved branches with second heads; [of inland habitats, except rarely *S. stricta*].
20 Basal leaves 0.7-2.5 (-5) cm wide; plants short to tall, 3-20 dm tall, typically very slender; [of the Coastal Plain and lower Piedmont and southward].
21 Leaf margins smooth, entire; ray flowers 8-13 per head; disk flowers 14-25 per head; pappus (2.5-) 3.0-3.5 mm long; plants to 1 m tall ..... ***S. pulchra***
21 Leaf margins (of the basal leaves at least) scabrous-margined, also often toothed; ray flowers 2-7 per head; disk flowers 6-16 per head; pappus 2.2-4.5 (-5.0) mm long; plants to 2 m tall.
22 Leaf margins scabrous (or at least tuberculate) throughout; panicle branches often spreading-erect with recurved-secund tips; pappus 2.2-4.0 mm long ..... ***S. gracillima***
22 Leaf margins tending to become smooth on the upper stem; panicle branches usually stiffly erect; pappus 4.0-4.5 (-5.0) mm long ..... ***S. stricta***
20 Basal leaves 0.7-8 cm wide; plants short, 4-10 (-15) dm tall, typically fairly stout; [of the Mountains, e. VA, and northward].
23 [of seepage over sloping rock on granitic domes, of sw. NC, nw. SC, and ne. GA] ..... ***S. simulans***
23 [of peaty bogs, of w. NC and e. TN northward].
24 Basal leaves 0.7-2.5 cm wide; [south to PA and WV] ..... ***S. uliginosa*** *var.* ***linoides***
24 Basal leaves 3-8 cm wide; [south to NC and TN] ..... ***S. uliginosa*** *var.* ***uliginosa***

Key D – goldenrods with cauline leaves and axillary inflorescences (section *Solidago*, subsections *Argutae*, *Glomeruliflorae*, *Squarrosae*, *Thyrsiflorae*)

1 Leaves entire or obscurely few-toothed; achenes glabrous at maturity; outer phyllaries with squarrose tips (tips appressed in *S. speciosa* var. *rigidiuscula*).
2 Outer phyllaries appressed; [subsection *Squarrosae*] ..... ***S. speciosa*** *var.* ***rigidiuscula***
2 Outer phyllaries with squarrose tips.
3 Leaves oblanceolate-obovate, often short acuminate at the apex; mid-cauline leaves 8-14 cm long, 18-40 mm wide, the margins sharply serrate on at least the upper 2/3; [subsection *Argutae*] ..... ***[S. buckleyi]***
3 Leaves narrowly to broadly elliptic (or less commonly slightly oblanceolate), acute at the apex; mid-cauline leaves 3-8 (-10) cm long, 8-25 mm wide, margins entire to shallowly serrate on only the upper 1/2 to 2/3; [subsection *Thyrsiflorae*] ..... ***S. petiolaris*** *var.* ***petiolaris***
1 Leaves generally many- and sharp-toothed; achenes persistently pubescent; outer phyllaries with appressed tips; [subsection *Glomeruliflorae*].
4 Stem terete, glaucous.
5 Lower midstem leaves narrowly lanceolate, 5-15 cm long, 0.8-3 cm wide, 5-6× as long as wide; stems strongly arching; [plants widespread in our area] ..... ***S. caesia*** *var.* ***caesia***
5 Lower midstem leaves broadly lanceolate to rhombic, 5-9 cm long, 1.3-2.4 cm wide, 3-4× as long as wide; stems weakly arching; [plants of the Gulf Coastal Plain of GA westward] ..... ***S. caesia*** *var.* ***zedia***
4 Stem striate-angled, green.
6 Larger leaf blades on a plant 2-6 cm long; stems with spreading white hairs; [endemic to sandstone rockhouses in the Red River Gorge in Menifee, Powell, and Wolfe counties, KY] ..... ***S. albopilosa***
6 Larger leaf blades on a plant 8-20 cm long; stems glabrous or sparsely pubescent; [of various dry and mesic habitats, collectively widespread in our area].
7 Leaves 1-3 (-3.5)× as long as wide.
8 Leaves (2.2-) 2.5-3 (-3.5)× as long as wide, cuneate to a sessile base; teeth of the leaf margins not notably elongate and narrow, mostly 1-2 (-3) mm long (as measured on the upper side of the teeth) ..... ***S. flaccidifolia***
8 Leaves 1-2.2 (-2.5)× as long as wide, abruptly contracted to a winged petiole; teeth of the leaf margins elongate and narrow, acuminate, mostly (2-) 3-8 mm long (as measured on the upper side of the teeth) ..... ***S. flexicaulis***
7 Leaves 3-10× as long as wide.
9 Involucre (2.5-) 3-5 (-6) mm high; phyllaries 0.7-1 mm wide, 1-nerved; stems 4-9 (-10) dm tall; ray flowers 2-4 (-6); [broadly Appalachian] ..... ***S. curtisii***
9 Involucre 4.5-7 mm high; phyllaries 1-1.5 mm wide, 3-10-nerved; stems 6-16 dm tall; ray flowers 5-8; [apparently restricted to high elevations in the Blue Ridge of NC and TN] ..... ***S. lancifolia***

Key E – goldenrods with cauline leaves and well-developed paniculate inflorescences (section *Solidago*, subsections *Nemorales, Triplinervae* and *Venosae*)

1 Mid-stem leaves 3-nerved (obscurely so in *S. tortifolia*); leaves elliptic, lanceolate, oblanceolate, or linear.
2 Rays 2-6; larger leaves linear to lance-linear, 2-7 (-10) mm wide, twisted at base; plants (3-) 7-13 dm tall; [subsection *Triplinervae*] ..... ***S. tortifolia***
2 Rays 4-17 (-24); larger leaves 5-30 mm wide, not twisted at base; plants 5-20 dm tall.
3 Rays 4-10 (-11); plants 3-15 dm tall.
4 Rays 4-7; plants 3-9 dm tall; stems scabrous to loosely puberulent below; cauline leaves oblanceolate, 7-20 (-30) mm wide, faces slightly to strongly scabrous; involucres 3-5 mm long; ray floret laminae 2-3.5 × 0.2-0.7 mm; disc floret corolla lobes 1 mm long; pappi 3 mm long [of Piedmont and Mountains of KY, NC, SC, GA, and AL, and from IL and KS south to LA and TX]; [subsection *Nemorales*] ..... ***S. radula***
4 Rays 7-11; plants 5-15 dm tall; stems glabrous below; cauline leaves linear-elliptic, 6-12 mm wide, faces glabrous (or puberulent on abaxial midnerve); involucres 2-3 mm long; ray floret laminae 1-2 × 0.1-0.2 mm; disc floret corolla lobes 0.4-0.6 mm long; pappi 2-2.5 mm long [of MD and PA south to VA, and IN, KY, and TN]; [subsection *Triplinervae*] ..... ***S. rupestris***
3 Rays (7-) 9-17 (-24); plants (5-) 10-20 dm tall; [collectively widespread]; [subsection *Triplinervae*].
5 Stems glabrous and usually also glaucous ..... ***S. gigantea***
5 Stems pubescent (at least the upper portion).
6 Leaves glabrous above and below, or pubescent only on the main veins beneath; midstem leaves serrulate, with 1-10 teeth per side, the largest < 0.5 mm long; [of the Coastal Plain, from NC south to FL and AL] ..... ***S. leavenworthii***
6 Leaves moderately to densely pubescent across the lower surface, and scabrous to puberulent above; midstem leaves entire, serrulate, or serrate; [collectively widespread].
7 Mid-stem leaves entire to serrulate; involucres (2.5-) 3-4.5 mm high ..... ***S. altissima*** *var.* ***altissima***
7 Mid-stem leaves serrate, the teeth 3-10 per side, the largest > 1.5 mm long; involucres 1.7-2.5 (-3.0) mm high.
8 Lower to mid-stem glabrous or sparsely pubescent ..... ***S. canadensis*** *var.* ***canadensis***
8 Lower to mid-stem moderately pubescent ..... ***S. canadensis*** *var.* ***hargeri***

1 Mid-stem leaves reticulate-nerved; leaves generally obovate, elliptic, lanceolate, or oblanceolate (if linear, then the fresh leaves anise-scented); [subsection *Venosa*].
9 Stems from branched caudices or short rhizomes, lacking elongated rhizomes.
10 Leaves serrate; leaves not translucent-punctate; fresh leaves not anise-scented
11 Stem spreading-hirsute; [of the Ozarks, disjunct in MS] ..... ***[S. ulmifolia*** *var.* ***palmeri]***
11 Stem glabrous or nearly so, except just below the inflorescence; [widespread] ..... ***S. ulmifolia*** *var.* ***ulmifolia***
10 Leaves entire; leaves translucent-punctate; fresh leaves anise-scented.
12 Main leaves ovate to lanceolate, 2-5 (-6)× as long as wide; stem pubescence general and circumferential; [of FL] ..... ***S. chapmanii***
12 Main leaves lanceolate to linear, (4-) 5-15× as long as wide; stem pubescence in lines decurrent down the stem from the margins of the leaf bases; [widespread] ..... ***S. odora***
9 Stems from elongated creeping rhizomes.
13 Mid-stem leaves sessile, somewhat clasping; leaf margins nearly entire to obscurely serrulate; leaves planar ..... ***S. fistulosa***
13 Mid-stem leaves subsessile, not clasping; leaf margins strongly serrate; leaves rugose.
14 Involucres 4-6 mm high; broader phyllaries 0.7-1.2 mm wide; stems glabrous below the inflorescence; mid-stem leaves elliptic (widest near the middle) ..... ***S. latissimifolia***
14 Involucres (2-) 2.5-3.5 (4.5) mm high; phyllaries mostly < 0.5 mm wide; stems hairy or glabrous below the inflorescence; mid-stem leaves lanceolate to ovate (widest below the middle).
15 Leaves relatively thin, not very rugose, usually sharply serrate, the apices acuminate, glabrous or soft-hairy on the surfaces.
16 Stems and leaves hairy ..... ***S. rugosa*** *var.* ***rugosa***
16 Stems and leaves glabrous ..... ***S. rugosa*** *var.* ***sphagnophila***
15 Leaves relatively thick and firm, strongly rugose, usually subentire to bluntly serrate, the apices often only acute, scabrous or stiffly-hairy on the surfaces.
17 Inflorescences narrow, the lower lateral branches only slightly exceeding the subtending leaves; leaves sparsely pubescent; [of the Southern Appalachians] ..... ***S. rugosa*** *var.* ***cronquistiana***
17 Inflorescences broad, the lower lateral branches generally much longer than the subtending leaves; leaves moderately to densely pubescent; [collectively widespread].
18 Upper cauline leaves lanceolate to elliptic, not much reduced relative to leaves lower on the stem ..... ***S. rugosa*** *var.* ***aspera***
18 Upper cauline leaves ovate, much reduced relative to leaves lower on the stem ..... ***S. rugosa*** *var.* ***celtidifolia***

Solidago albopilosa E.L. Braun, Rockhouse Goldenrod, Cave Goldenrod. Sandstone rockhouses. In the Red River Gorge of e. KY (Menifee, Powell, and Wolfe counties). September. See Esselman & Crawford (1997). [= C, F, FNA, G, K, SE]

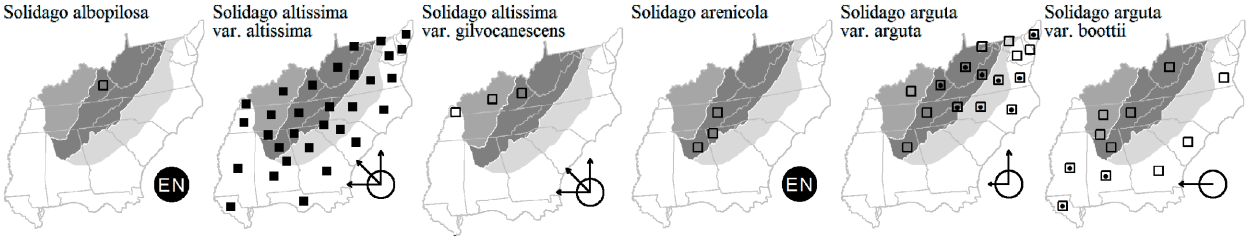
Solidago altissima Linnaeus *var.* ***altissima***, Tall Goldenrod. Fields, roadsides, disturbed areas. August-October. NS, QC, and SK south to c. peninsular FL, TX, and Mexico; introduced in w. North America. Var. *gilvocanescens* (Rydberg) Semple, with heads smaller (mainly 2-3 mm high vs. 3-4 mm high) is mainly distributed in the Great Plains. [= FNA; = *S. altissima* – F, K, WV; = *S. canadensis* Linnaeus var. *scabra* Torrey & Gray – C, G, SE, WH; < *S. altissima* Linnaeus – RAB, GW (including *S. canadensis* vars. and *S. rupestris*); = *S. hirsutissima* P. Miller – S; < *S. canadensis* – W; = *S. altissima* ssp. *altissima* – FNA]

Solidago altissima Linnaeus var. *gilvocanescens* (Rydberg) Semple, Great Plains Common Goldenrod. Attributed to VA by Kartesz (1999). [= *S. canadensis* Linnaeus var. *gilvocanescens* Rydberg – C, F, K; = *S. pruinosa* Greene – G; < *S. canadensis* – S, W; = *S. altissima* L. ssp. *gilvocanescens* (Rydberg) Semple – FNA] {not keyed}

Solidago arenicola B.R. Keener & Kral, Black Warrior Goldenrod. Riverside scour areas. September-October. Known from Blount County, AL (Black Warrior River) and on rivers in the Cumberland Plateau of TN and KY (notably Big South Fork of the Cumberland River). See Keener & Kral (2003) for additional information. [= FNA]

Solidago arguta Aiton *var.* ***arguta***, Forest Goldenrod. Woodlands, woodland borders, road margins. August-October. ME and s. ON west to MO, south to NC and TN. [= *S. arguta* ssp. *arguta* – C, SE, W; < *S. arguta* – RAB (also see *S. tarda* and *S. vaseyi*); = *S. arguta* – F, G, S; = *S. arguta* ssp. *arguta* var. *arguta* – FNA; < *S. arguta* var. *arguta* – K]

Solidago arguta Aiton *var.* ***boottii*** (Hooker) Palmer & Steyermark, Boott's Goldenrod. Dry open woodlands, dry slopes, often in sandy or rocky soils. September-October. C. SC south to s. AL, west to LA, AR, and s. MO, most common in the Ozarks. Reported for n. WV by Harmon, Ford-Werntz, & Grafton (2006), but it seems likely that this is based on different interpretations of the taxa. [= K, SE; < *S. arguta* – RAB (also see *S. tarda* and *S. vaseyi*); > *S. boottii* – F, S, WV; > *S. strigosa* – F, G, S; = *S. arguta* ssp. *caroliniana* (A. Gray) G.H. Morton var. *boottii* (Hooker) Palmer & Steyermark – FNA; > *S. boottii* var. *boottii* – G; = *S. arguta* Aiton ssp. *boottii* (Hooker) G.H. Morton]



Solidago arguta Aiton *var.* ***caroliniana*** A. Gray, Vasey's Goldenrod. Forests, woodlands, grassy balds. September-October. WV west to c. TN and s. MO, south to ne. FL, Panhandle FL, s. Solidago auriculata Shuttleworth ex Blake, Eared Goldenrod. Rocky forests over circumneutral rocks, bottomland forests, calcareous hammocks. August-September. Wc. SC, sc. TN (Chester, Wofford, & Kral 1997), AR, and OK south to GA, c. Panhandle FL, AL, MS, LA, and TX. [= FNA, K, SE, WH; = *S. notabilis* Mackenzie – RAB, S]

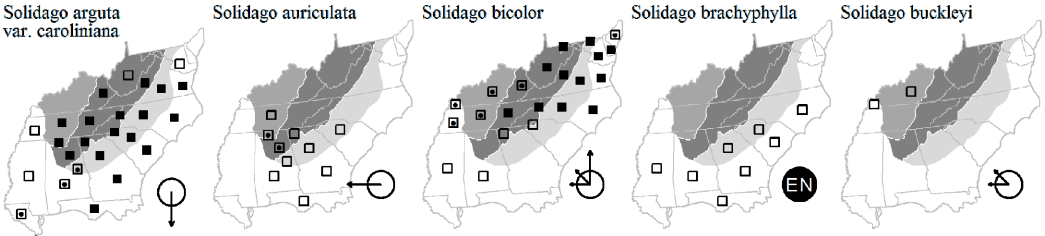
Solidago bicolor Linnaeus, Silverrod, White Goldenrod. Woodlands, roadbanks, pastures. August-October. NS and MB south to GA and LA. [= RAB, C, FNA, G, K, S, SE, W, WV; > *S. bicolor* var. *bicolor* – F; > *S. bicolor* var. *ovalis* – F]

Solidago brachyphylla Chapman, Dixie Goldenrod. Open woodlands, bluff forests. September-November. SC (NC?) south to ne. FL and Panhandle FL, west to s. AL (s. MS?). [= FNA, K, S, SE, WH]

Solidago buckleyi Torrey & A. Gray, Buckley's Goldenrod. Forests, open ridgetop and bluff woodlands. September. W. KY, s. IN, s. IL, s. MO; perhaps eastwards in GA and AL (these occurrences controversial as to identification). [= F, FNA, G, K, S, SE; < *S. petiolaris* – RAB]



Solidago caesia Linnaeus var. ***caesia***, Axillary Goldenrod. Moist forested slopes. August-October. ME and ON south to FL and LA. [= FNA; < *S. caesia* – RAB, C, F, G, K, S, SE, W, WH, WV]

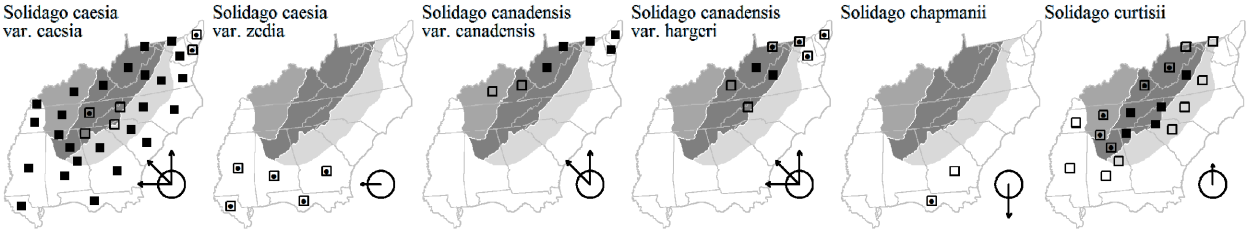
Solidago caesia Linnaeus *var.* ***zedia*** R.E. Cook & Semple, Gulf Coast Axillary Goldenrod. Moist forests. September-October. GA and Panhandle FL west to LA and AR. [= FNA; < *S. caesia* – K, S, SE, WH]

Solidago canadensis Linnaeus *var.* ***canadensis***, Northern Common Goldenrod. Old fields, pastures, roadesides. August-October. NL (Newfoundland) west to MN, south to VA, OH, and IL. See Fernald (1950), p. 1408. [= C, F, FNA, K, SE; < *S. canadensis* var. *canadensis* – G; < *S. canadensis* – S, WV]

Solidago canadensis Linnaeus *var.* ***hargeri*** Fernald, Harger's Common Goldenrod. Old fields, pastures, roadsides. August-October. VT and NH west to MN, south to VA, NC, KY, OH, IL, and IA. First reported for NC by Poindexter & Murrell (2008). Likely much more common than assumed, but misrepresented due to taxonomic confusion with *S. altissima*. [= C, F, FNA, K, SE; < *S. canadensis* var. *canadensis* – G; < *S. canadensis* – S, W, WV]

Solidago chapmanii A. Gray, Chapman's Goldenrod. Sandhills and dry, open hammocks. September-October. S. GA south to s. FL and Panhandle FL. [= S; = *Solidago odora* Aiton var. *chapmanii* (A. Gray) Chapman – K, WH; = *Solidago odora* Aiton var. *chapmannii* (A. Gray) Chapman – SE, orthographic error; = *S. odora* ssp. *chapmanii* (A. Gray) Semple – FNA]

Solidago curtisii Torrey & A. Gray, Curtis's Goldenrod. Moist forested slopes, and rarely in mafic woodlands in the Piedmont of VA. September-October. A Central and Southern Appalachian endemic: PA, WV, and MD south to n. GA and n. AL. Var. *curtisii*, with stem glabrous or slightly puberulent in the inflorescence, and var. *pubens* (M.A. Curtis) A. Gray, with stem densely puberulent, are sometimes distinguished. They do not appear to be worthy of taxonomic recognition. [= C, SE, W, WV; < *S. curtisii* var. *curtisii* – RAB (also see *S. lancifolia*); > *S. curtisii* var. *curtisii* – F, G; > *S. curtisii* var. *pubens* (M.A. Curtis) A. Gray – RAB, F, G; = *S. curtisii* var. *curtisii* – FNA; < *S. curtisii* – K (also see *S. lancifolia*); = *S. caesia* Linnaeus var. *curtisii* (Torrey & A. Gray) Wood; > *S. curtisii* – S; > *S. pubens* M.A. Curtis – S]



Solidago delicatula Small. Possibly east to AL, FL. August-October. [= FNA, SE; = *S. ulmifolia* Muhlenberg ex Willdenow var. *microphylla* A. Gray – K; < *S. ulmifolia* – S] {not keyed; not mapped}

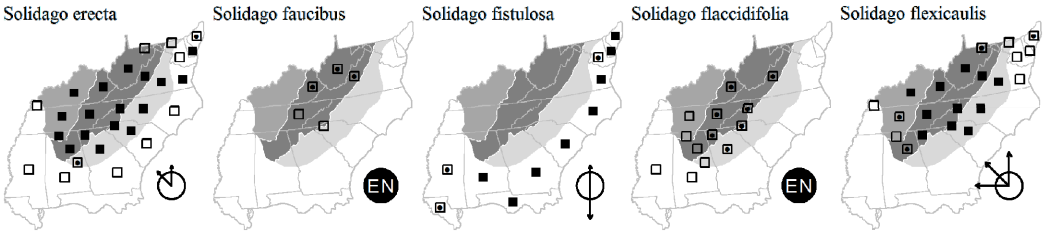
Solidago erecta Pursh. Woodlands, old fields, woodland borders, grassy balds. August-October. NY and CT south to GA, AL, and MS. [= RAB, C, F, FNA, G, K, S, SE, W, WV; < *S. erecta* – FNA (also see *S. porteri*); = *S. speciosa* Nuttall var. *erecta* (Pursh) MacMillan]

Solidago faucibus Wieboldt, Gorge Goldenrod. Moist forests. Late August-October. S. WV south to sw. VA, and se. KY; disjunct in nw. SC. See Wieboldt & Semple (2003) for additional information. [= FNA]

Solidago fistulosa P. Miller, Hairy Pineywoods Goldenrod. Pocosins, swamp forests, wet savannas, wet pine flatwoods, maritime forests. August-November. NS south to s. FL, west to LA. [= RAB, C, F, FNA, G, GW, K, S, SE]

Solidago flaccidifolia Small, Appalachian Goldenrod. Moist slopes. September-October. VA and KY south to GA and ne. AL; disjunct in nc. MS. [= C, G, K, SE, W; < *S. caesia* – RAB, F; = *S. latissimifolia* – S, misapplied; = *S. curtisii* Torrey & A. Gray var. *flaccidifolia* (Small) R.E. Cook & Semple – FNA; = *S. caesia* Linnaeus var. *paniculata* A. Gray]

Solidago flexicaulis Linnaeus, Zigzag Goldenrod. Moist wooded slopes, especially over calcareous or mafic rocks. August-October. NS, ON and ND south to GA, AL, MS, and KS. [= RAB, C, F, FNA, G, K, S, SE, W, WV]



Solidago gattingeri Chapman, Gattinger's Goldenrod. Cedar glades. AR, MO, c. TN (Chester, Wofford, & Kral 1997). [= F, FNA, G, K, S, SE]

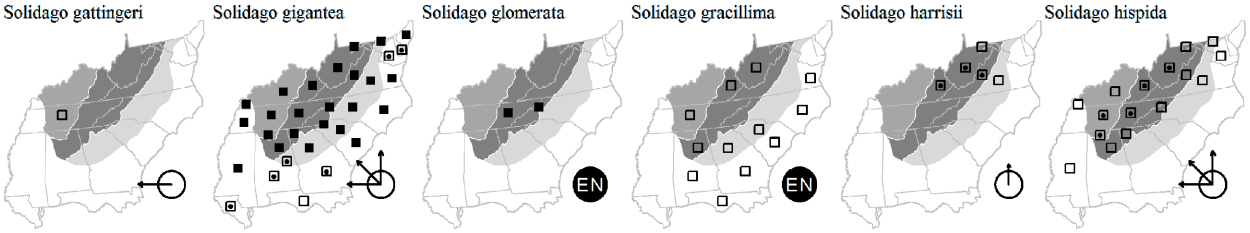
Solidago gigantea Aiton, Smooth Goldenrod. Old fields, roadsides, streamside meadows, bottomlands. August-September (-October). NS west to SK and MT, south to Panhandle FL (Liberty County), TX, and CO. [= RAB, C, GW, K, W, WH; > *S. gigantea* var. *gigantea* – F, G, SE, WV; > *S. gigantea* Aiton var. *serotina* (Kuntze) Cronquist – G, SE; > *S. gigantea* var. *leiophylla* Fernald – F, WV; = *S. serotina* – S]

Solidago glomerata Michaux, Skunk Goldenrod. High elevation situations, including grassy balds, rock outcrops, heath balds, northern hardwood forests, and spruce-fir forests. Mid August-October. A narrow Southern Appalachian endemic, restricted to w. NC and e. TN (perhaps reaching its northern limit on Elk Knob, Watauga County, NC). The basal rosettes are evergreen, and are a conspicuous component of the winter flora at high elevations. The plants have a distinctive skunky odor, easily smelled without touching or bruising the plant. [= RAB, FNA, K, S, SE, W]

Solidago gracillima Torrey & A. Gray, Southern Bog Goldenrod, Graceful Goldenrod. Wet pine savannas, seepage bogs. August-October. E. VA south to c. Panhandle FL, west to s. AL. Several distinct entities appear to have been referred to this taxon; the number of entities, and the appropriate names to apply to them, are presently obscure. The names *S. perlonga* Fernald, *S. austrina* Small, and *S. simulans* Fernald have been synonymized under *S. gracillima* (as by Cronquist 1980). Cronquist (1980) refers material from WV and high elevation granitic domes of sw. NC (*S. simulans*) to *S. gracillima*, a treatment which is not phytogeographically credible. The distinction between *S. gracillima* s.s and *S. austrina* may prove warranted. They are alleged to differ as follows: *S. austrina*: pappus 2.2-2.8 mm long, ray flowers 2-4, disc flowers 6-8; of the inner Coastal Plain and lower Piedmont; *S. gracillima*: pappus (3.0-) 3.5-4.0 mm long; ray flowers 3-7; disk flowers 9-13; of the Coastal Plain. [= RAB, K, W, WH; < *S. gracillima* – C, SE (also see *S. simulans*); > *S. austrina* Small – F, G, S; > *S. perlonga* Fernald – F; = *S. stricta* Aiton ssp. *gracillima* (Torrey & A. Gray) Semple – FNA; > *S. gracillima* – S]

Solidago harrisii Steele, Shale-barren Goldenrod. Limestone, dolostone, greenstone, shale, and calcareous siltstone woodlands, barrens, and cliffs. August-September. A Central Appalachian endemic: w. MD south to e. WV and w. VA. [= F, S, W, WV; = *S. arguta* Aiton var. *harrisii* (Steele) Cronquist – C, K, SE; = *S. arguta* ssp. *arguta* var. *harrisii* – FNA; < *S. boottii* var. *boottii* – G]

Solidago hispida Muhlenberg ex Willdenow, Hairy Goldenrod. Dry rocky forests and woodland edges. August-October. NL (Labrador) west to SK, south to nw. GA, AL, AR, IA, and SD. Widespread in e. and c. TN (Chester, Wofford, & Kral 1997) and in nw. GA (Jones & Coile 1988). Also reported for NC and SC by Kartesz (1999). [= C, FNA, S, SE, W, WV; > *S. hispida* var. *hispida* – F, G, K]



Solidago juncea Aiton, Early Goldenrod. Meadows, pastures, roadbanks, woodland borders. July-September. NS west to MN, south to GA, AL, MS, and LA. [= RAB, C, FNA, S, SE, W, WV; > *S. juncea* var. *juncea* – F, G, K; > *S. juncea* var. *neobohemica* Fernald – F, K; > *S. juncea* var. *ramosa* Porter & Britton – G]

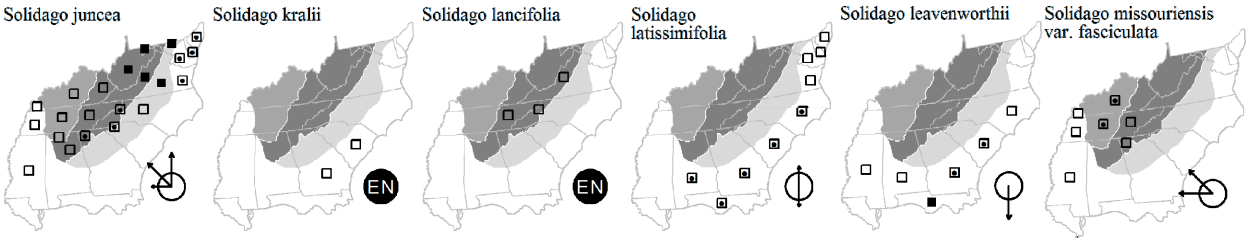
Solidago kralii Semple, Kral's Goldenrod. Longleaf pine sandhills. August-September. SC south to GA. See Semple (2003) for additional information. [= FNA]

Solidago lancifolia (Torrey & A. Gray) Chapman, Lanceleaf Goldenrod. Mountain slopes, mostly at high elevations. Late August-September. W. VA and e. WV south to w. NC and e. TN. [= C, FNA, S, SE, W; < *S. curtisii* var. *curtisii* – RAB; < *S. curtisii* – K]

Solidago latissimifolia P. Miller, Coastal Swamp Goldenrod. Pocosins, swamp forests, sandhill seepages, sandhill-pocosin ecotones. August-October. NS south c. peninsular FL, west to s. AL. [= FNA, K, WH; = *S. elliottii* Torrey & A. Gray – RAB, C, G, GW, S, SE; > *S. elliottii* var. *ascendens* Fernald – F; > *S. elliottii* var. *pedicellata* Fernald – F]

Solidago leavenworthii Torrey & A. Gray, Leavenworth's Goldenrod. Wet pine savannas, wet pine flatwoods, pond margins, marshes. August-November. Se. NC south to s. FL, west to s. AL. [= RAB, FNA, GW, K, S, SE, WH]

Solidago missouriensis Nuttall *var.* ***fasciculata*** Holzinger. Barrens, Coosa prairies. (July-) August-October. In nw. GA (T. Govus, pers. comm. 2009); in c. TN (Chester, Wofford, & Kral 1997). [= C, F, G, K, SE; < *S. missouriensis* – FNA; = *S. glaberrima* Martens – S]



Solidago nemoralis Aiton *var.* ***nemoralis***, Eastern Gray Goldenrod. Woodlands, glades, barrens, roadbanks. NS west to ND, south to Panhandle FL and TX. The more western var. *decemflora* (de Candolle) Fernald does not enter our area. [= K; > *S. nemoralis* var. *nemoralis* – C, F, G, SE, WV; > *S. nemoralis* var. *haleana* Fernald – C, F, G, SE, WV; < *S. nemoralis* – RAB, S, W, WH; = *S. nemoralis* ssp. *nemoralis* – FNA]

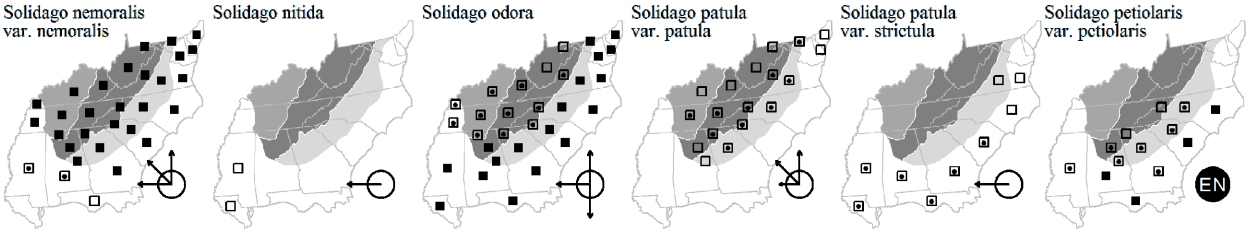
Solidago nitida Torrey & A. Gray, Shiny Goldenrod. Pine savannas, prairies. (July-) August-October. MS west to s. AR, se. OK, and TX. [= FNA, SE; = *Oligoneuron nitidum* (Torrey & A. Gray) Small – K, S, Z; = *Solidago nitida* Torrey & A. Gray – FNA, SE]

Solidago odora Aiton, Licorice Goldenrod. Dry forests and woodlands, especially in dry pinelands, such as sandhills, of the Coastal Plain, inland in dry, fire-maintained sites, such as glades, barrens, and ridgetop pine-oak woodlands. July-October. NH, VT, NY, OH, and MO south to FL and TX. [= RAB, F, G, S, W, WV; = *S. odora* var. *odora* – C, K, SE, WH; = *S. odora* ssp. *odora* – FNA]

Solidago patula Muhlenberg ex Willdenow *var.* ***patula***, Northern Roughleaf Goldenrod. Bogs, seepages over mafic rocks, grassy balds (as Whitetop Mountain). August-September (-October). NH and VT west to WI, WI, MI, and IA, south to GA, AL, MS, and MO. Some or all of the coastal records may actually represent ambiguous specimens of *S. patula* var. *strictula*. [= RAB, C, F, G, K, SE; = *S. patula* ssp. *patula* – FNA; < *S. patula* – GW, W, WV; = *S. rigida* – S, misapplied]

Solidago patula Muhlenberg ex Willdenow *var.* ***strictula*** Torrey & A. Gray, Southern Roughleaf Goldenrod. Streamhead pocosins, sandhill seepages, swamp edges. September-October. Se. VA south to Panhandle FL, west to MO, OK, and TX. Perhaps better treated as *S. salicina*. [= RAB, C, G, K, SE, WH; > *S. patula* var. *strictula* – F; > *S. salicina* – F; = *S. patula* ssp. *strictula* (Torrey & A. Gray) J.C. Semple – FNA; < *S. patula* – GW; = *S. salicina* Elliott – S]

Solidago petiolaris Aiton *var.* ***petiolaris*.** Upland forests and woodlands. Late August-November. The distribution of *S. petiolaris* (in the broad sense) is peculiar, with an eastern component (NC south to ne. FL and Panhandle FL, west to AL) and a western component (IL, MO, AR, and LA west to NE, CO, and NM). The eastern component is sometimes treated as *S. petiolaris* (sensu stricto) and the western as *S. angusta* Torrey & A. Gray. Alternatively these are recognized as the varietal rank (as here), or combined entirely. Var. *angusta* (Torrey & A. Gray) A. Gray and var. *wardii* (Britton) Fernald are Ozarkian and more western (Nesom 2008). [= C, F, K, SE; < *S. petiolaris* – RAB, W, WH (and also see *S. buckleyi*); = *S. petiolaris* var. *petiolaris* – C, F, K, SE; = *S. petiolaris* – G; > *S. milleriana* Mackenzie – S; > *S. harperi* Mackenzie in Small – S]



Solidago pinetorum Small, Pineywoods Goldenrod. Dry woodlands, woodland borders, roadbanks, dry pinelands. July-September. N. and wc. VA south through e., c, and nw. NC to nc. SC. [= RAB, C, F, FNA, G, K, S, SE, W]

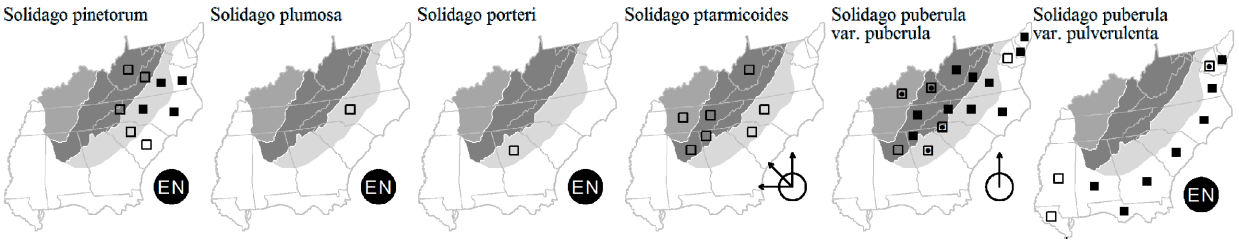
Solidago plumosa Small, Yadkin River Goldenrod. In crevices of outcrops in rocky, flood-scoured riverbanks. September. Known only from the type locality, the gorge of the Yadkin River in c. NC. Most of the population was lost by construction of two hydropower dams, one at each of the two ends of the gorge, and the flooding of the intervening area. This species is related to the more northern *S. racemosa* and the newly described and more western *S. arenicola*. [= FNA, K, S, SE]

Solidago porteri Small, Porter's Goldenrod. Upland forests. So far as known, this species is endemic to the Piedmont of GA; its taxonomic status is very uncertain. [= K, S, SE; < *S. erecta* – FNA] {not yet keyed}

Solidago ptarmicoides (Nees) Boivin, White Prairie-goldenrod, Upland White Aster. Prairie-like barrens over mafic, ultramafic, or calcareous rock, serpentine woodlands, prairies. August-October. VT and NY west to SK, south to e. TN (Rhea and Roane counties in the Ridge and Valley) (Chester, Wofford, & Kral 1997), nw. GA (Floyd County), AR, and CO; disjunct in nc. NC (Granville County, and historically in Rowan County) and nc. SC (York County). [= C, FNA, SE, W, X= ***Oligoneuron album*** (Nuttall) Nesom – K, Z; = *Aster ptarmicoides* (Nees) Torrey & A. Gray – F, G, S; = *Unamia alba* (Nuttall) Rydberg; > *Aster ptarmicoides* var. *georgianus* A. Gray (referring to plants of se. US); = *Solidago asteroides* Semple, superfluous name]

Solidago puberula Nuttall *var.* ***puberula***. Bogs, wet meadows, and wet pastures, in dry acid soils in VA and WV. August-October. NS west to ON, south to GA and TN. [= RAB, C, F, G, K, SE; = *S. puberula* ssp. *puberula* – FNA; = *S. puberula* – S; < *S. puberula* – W, WV]

Solidago puberula Nuttall *var.* ***pulverulenta*** (Nuttall) Chapman. Savannas, streamhead pocosins, flatwoods, swamps, seepages in pinelands, and disturbed areas. September-October. Se. VA south to Panhandle FL, west to LA. [= RAB, C, F, G, K, SE, WH; = *S. puberula* ssp. *pulverulenta* (Nuttall) Semple – FNA; = *S. pulverulenta* Nuttall – S]



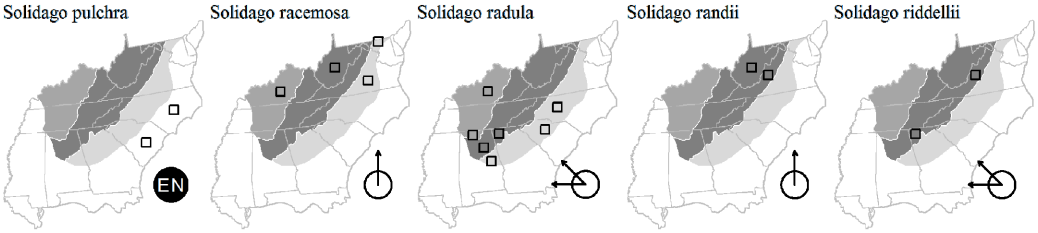
Solidago pulchra Small, Beautiful Goldenrod, Carolina Goldenrod. Wet pine savannas, seepage bogs. July-September. Endemic to a small part of the Coastal Plain of se. NC, where locally common in the few wet savannas remaining. Notable sites include Green Swamp (Brunswick County), Holly Shelter Game Land (Pender County), Camp Lejeune Marine Corps Base (Onslow County), and Croatan National Forest (Carteret County). There is no question of the distinctness of this species from *S. stricta* and *S. gracillima*. Once learned, the basal leaves are recognizable at a glance, the petiole very long (often twice as long as the leaf blade), the venation finely netted, the margins smooth and entire, the tip usually acute and prominently mucronate. Even following fire, sterile rosettes typically outnumber flowering plants 100 to 1. [= FNA, K, S, SE; < *S. stricta* – RAB, GW]

Solidago racemosa Greene, Sticky Goldenrod. Rocky, flood-scoured riversides. ME and QC south to n. VA and WV; plants in the Cumberland Plateau of KY and ne. TN (Churchill & Schell 1992; Chester, Wofford, & Kral 1997) placed here are problematic and may represent another taxon or taxa. This complex remains poorly understood. [= WV; = *S. simplex* Kunth ssp. *randii* (Porter) Ringius var. *racemosa* (Greene) Ringius – C, FNA, K; = *S. racemosa* Greene var. *racemosa* – F; = *S. spathulata* A.P. de Candolle ssp. *randii* (Porter) Cronquist var. *racemosa* (Greene) Cronquist – G, SE]

Solidago radula Nuttall, Rough Goldenrod. Dry woodlands over mafic rocks. August-October. IL west to KS, south to LA and TX; disjunct eastward in KY, NC, SC, GA, and AL. [= RAB, C, FNA, G, S, SE, W; > *S. radula* var. *radula* – K]

Solidago randii (Porter) Britton, Rand's Goldenrod. Cliffs and barrens, primarily over mafic (such as greenstone and hornblende) or calcareous rocks. NS west to ON and MI, south to w. VA and WV. [= WV; < *S. simplex* ssp. *randii* (Porter) Ringius var. *monticola* (Porter) Ringius – C, FNA; > *S. randii* – F; > *S. maxonii* Pollard – F; = *S. spathulata* A.P. de Candolle ssp. *randii* (Porter) Cronquist var. *randii* – G; = *S. simplex* Kunth ssp. *randii* (Porter) Ringius var. *randii* – K]

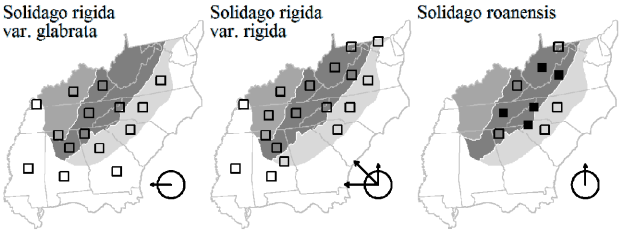
Solidago riddellii Frank ex Riddell, Riddell's Goldenrod. Wet, calcareous prairies; rare. ON and MB south to OH, IN, IL, AR, and KS; disjunct in w. VA and nw. GA. The specimen from Fort Monroe ("Fortress Monroe, Va." – Fernald 1950) is accurately identified but may be mislabeled. [= C, F, FNA, G; = ***Oligoneuron riddellii*** (Frank ex Riddell) Rydberg – K, Z]



Solidago rigida Linnaeus *var.* ***glabrata*** E.L. Braun, Southeastern Bold Goldenrod. Glades, barrens, and prairie-like areas, over mafic (such as diabase) or calcareous (such as calcareous shale) rocks, and in adjacent disturbed areas, such as roadbanks and powerline rights-of-way. Late August-October. Sc. VA, se. TN, c. OH, and e. MO south to c. SC, sw. GA, and e. TX. This taxon (variously treated as a species, subspecies, or variety) is rare and scattered throughout its range, restricted to prairie-like situations. Var. *glabrata* is apparently strictly diploid. [= C, G, SE; = ***Oligoneuron rigidum*** (Linnaeus) Small *var.* ***glabratum*** (E.L. Braun) Nesom – K, Z; < *Solidago rigida* Linnaeus – RAB, W; = *Solidago jacksonii* (Kuntze) Fernald – F; = *Solidago rigida* ssp. *glabrata* (E.L. Braun) Heard & Semple – FNA, Y; = *Oligoneuron jacksonii* (Kuntze) Small – S]

Solidago rigida Linnaeus *var.* ***rigida***, Midwestern Bold Goldenrod. Glades, barrens, and prairie-like areas, over mafic or calcareous rocks. August-October. RI and MA west to NY, s. ON, MI, WI, s. MN and c. NE, south to c. VA, sc. NC, w. NC, sc. TN, c. AR, and se. TX. Var. *rigida* is generally rare and restricted to relictual prairie-like situations east of MI, IN, IL, MO, and OK. Var. *rigida* is tetraploid through most of its range, including (apparently) all of our area. A third variety, var. *humilis* (T.C. Porter) Nesom, is more northern and western, ranging from ON west to AB, south to MI, IN, IL, MO, OK, n. TX, and NM. [= C, G, SE; = ***Oligoneuron rigidum*** (Linnaeus) Small *var.* ***rigidum*** – K, Z; < *Solidago rigida* Linnaeus – RAB, W; = *Solidago rigida* – F; = *Solidago rigida* ssp. *rigida* – FNA, Y; = *Oligoneuron grandiflorus* (Rafinesque) Small – S]

Solidago roanensis Porter, Roan Mountain Goldenrod. Mt (GA, NC, SC, VA, WV), Pd (NC, SC): forests, woodlands, roadbanks; common (rare in upper Piedmont). July-September. MD and WV south to AL and GA. [= RAB, C, FNA, G, K, S, SE, W; > *S. roanensis* var. *roanensis* – F; > *S. roanensis* var. *monticola* (Torrey & A. Gray) Fernald – F; > *S. roanesis* var. *monticola* – WV, misspelling]



Solidago rugosa P. Miller *var.* ***aspera*** (Aiton) Fernald. Mt (WV), Cp (DE, FL), Pd (DE), {GA, NC, SC, VA}: fields, forests, roadsides; common. August-November. ME west to MI, south to FL and TX. [= F, WV; < *S. rugosa* var. *rugosa* – RAB; < *S. rugosa* ssp. *aspera* – C, G, K, SE, W, WH; = *S. rugosa* ssp. *aspera* (Aiton) Cronquist var. *aspera* – FNA; < *S. rugosa* – GW; < *S. altissima* – S, misapplied]

Solidago rugosa P. Miller *var.* ***celtidifolia*** (Small) Fernald, Hackberry-leaf Goldenrod. Cp (FL), {GA, NC, SC, VA}: fields, forests, wetlands; uncommon. September-November. VA south to FL, west to OK and TX. [= RAB, F; < *S. rugosa* ssp. *aspera* (Aiton) Cronquist – C, G, K, SE, W, WH; = *S. rugosa* ssp. *aspera* (Aiton) Cronquist var. *celtidifolia* (Small) Fernald – FNA; < *S. rugosa* – GW; = *S. celtidifolia* Small – S]

Solidago rugosa P. Miller *var.* ***cronquistiana*** Semple, Cronquist's Goldenrod. Mt (GA, NC): high elevation balds and forests; uncommon. September-October. A Southern Appalachian endemic: w. NC and e. TN south to n. GA. See Semple (2003) for additional information. [= *S. rugosa* ssp. *aspera* (Aiton) Cronquist var. *cronquistiana* Semple – FNA; < *S. rugosa* var. *rugosa* – RAB; < *S. rugosa* ssp. *aspera* – K, SE, W; < *S. rugosa* – GW; < *S. altissima* – S]

Solidago rugosa P. Miller *var.* ***rugosa***, Wrinkle-leaf Goldenrod. Mt (WV), Cp (DE), Pd (DE), {GA, NC, SC, VA}: fields, forests, wetlands; common. August-October. NS west to ON, south to GA, AL, MS, LA, TX. [< *S. rugosa* var. *rugosa* – RAB; = *S. rugosa* ssp. *rugosa* var. *rugosa* – C, FNA, G, K, SE; > *S. rugosa* ssp. *rugosa* var. *villosa* – C, G, K, SE; > *S. rugosa* var. *rugosa* – F, WV; > *S. rugosa* var. *villosa* – F, WV; < *S. rugosa* – GW; < *S. rugosa* ssp. *rugosa* – W]

Solidago rugosa P. Miller *var.* ***sphagnophila*** Graves, Peat-loving Goldenrod. Cp (DE, NC, SC, VA): boggy habitats; common. August-October. NS and ME south to SC. [= F; < *S. rugosa* var. *rugosa* – RAB; = *S. rugosa* ssp. *rugosa* var. *sphagnophila* Graves – C, FNA, G, K; < *S. rugosa* – GW; < *S. rugosa* ssp. *rugosa* – W; = *S. aestivalis* E. Bicknell]

Solidago rupestris Rafinesque, Riverbank Goldenrod, Rock Goldenrod. Pd (VA), Mt (VA): crevices in rocky, flood-scoured riversides; rare. July-September. PA, OH, and IL south to n. VA and TN. [= C, F, FNA, K, SE; < *S. altissima* – RAB; = *S. canadensis* var. *rupestris* (Rafinesque) Porter – G; < *S. canadensis* – S]

Solidago sempervirens Linnaeus *var.* ***mexicana*** (Linnaeus) Fernald, Southern Seaside Goldenrod. Cp (DE?, FL, GA, NC, SC, VA): coastal dunes, dune slacks, maritime wet grasslands, tidal marshes; common (rare in VA). Late August-December (and sporadically until at least January in mild winters). DE (or allegedly MA) south to s. FL, west and south to TX and Mexico; west Indies. [= C, F, G, GW, K, SE; < *S. sempervirens* – RAB, WH; = *S. mexicana* Linnaeus – S; = *S. sempervirens* ssp. *mexicana* (Linnaeus) Semple – FNA]

Solidago sempervirens Linnaeus *var.* ***sempervirens***, Northern Seaside Goldenrod. Cp (DE, VA): coastal dunes, dune slacks, maritime wet grasslands, tidal marshes; common. Late August-November. NL (Newfoundland) south to se. VA along

the coast (and introduced inland in saline situations such as along salted roadways). [= C, F, G, K, SE; = *S. sempervirens* Linnaeus – S; = *S. sempervirens* ssp. *sempervirens* – FNA]

Solidago shortii Torrey & A. Gray. Endemic to nc. KY (Fleming, Jefferson, Nicholas, Robertson counties) and s. IN. August-October. See Smith et al. (2004) and Homoya & Abrell (2005) for additional, detailed information. [= C, F, FNA, G, K, SE] {not yet keyed}

Solidago simulans Fernald, Granite Dome Goldenrod, Cliffside Goldenrod. Mt (GA, NC, SC): in thin soil mats wetted by periodic seepage on granitic domes and lower elevation montane cedar hardwood woodlands; rare. August-September. Endemic to sw. NC, nw. SC, and ne. GA. [= K; < *S. uliginosa* – RAB, FNA; < *S. gracillima* – SE]

Solidago speciosa Nuttall *var.* ***rigidiuscula*** Torrey & A. Gray. Mt (GA): limestone barrens; rare. (August-) September-October. ON west to ND and WY, south to TN, LA, and TX; disjunct eastward in glade habitats to nw. GA (GANHP), TN (Chester, Wofford, & Kral 1997), and KY. [= C, G, K, SE; = *S. speciosa* var. *angustata* Torrey & A. Gray – F, misapplied; = *S. speciosa* ssp. *speciosa* var. *rigidiuscula* – FNA; = *S. rigidiuscula* (Torrey & A. Gray) Porter – S] {synonymy incomplete}

Solidago speciosa Nuttall *var.* ***speciosa***, Showy Goldenrod. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (NC, SC, VA): pastures, forests, woodlands, roadbanks; uncommon (rare in VA Coastal Plain). September-October. NH, VT, NY, and WI south to GA, MS, LA, and OK. [= C, F, G, K, SE; < *S. speciosa* – RAB, W, WV; > *S. conferta* – S; > *S. harperi* Mackenzie – S; = *S. speciosa* ssp. *speciosa* var. *speciosa* – FNA]

Solidago sphacelata Rafinesque, Limestone Goldenrod, False Goldenrod. Mt (GA, NC, VA, WV), Pd (NC, VA): rock outcrops and dry rocky forests, usually over calcareous or mafic rocks; uncommon. (July-) August-September (-October). C. VA, s. WV, OH, IN, and IL south to GA, AL, and MS. [= RAB, C, F, G, K, SE, W, WV; = *Brachychaeta sphacelata* (Rafinesque) Britton – S]

Solidago spithamaea M.A. Curtis, Blue Ridge Goldenrod. Mt (NC): in crevices of sloping to nearly vertical outcrops of high elevation rocky summits on Grandfather Mountain, Hanging Rock Mountain, and Roan Mountain; rare. Mid August-October. Endemic to the three mountains named, the first two in NC, the third on the NC-TN border. *S. spithamaea* is a very restricted endemic, apparently related most closely to *S. multiradiata* Aiton and *S. leiocarpa* de Candolle. *S. multiradiata* is an arctic-alpine species (with several recognized varieties) of n. Canada and AK, ranging south in w. North America to CA and CO. *S. cutleri* occurs in alpine situations on the higher peaks of QC, ME, NH, VT, and NY. *S. spithamaea* is a part of the remarkable "pseudo-alpine" flora of high elevation rocky summits in nw. NC; it typically is found with *Liatris helleri, Huperzia appressa, Geum radiatum, Trichophorum caespitosum, Sibbaldiopsis tridentata, Polypodium appalachianum, Paronychia argyrocoma, Kalmia buxifolia, Stenanthium leimanthoides, Heuchera villosa* var. *villosa, Hydatica petiolaris, Solidago glomerata, Houstonia montana, Carex misera,* and *C. brunnescens.* [= RAB, FNA, K, S; = *S. spithamea* – SE, W, orthographic variant]

Solidago squarrosa Nuttall, Ragged Goldenrod, Stout Goldenrod, Squarrose Goldenrod. Mt (NC, VA, WV), Pd (DE, VA): upland forests; uncommon (rare in DE and NC, rare in VA Piedmont). August-September. NB and ON south to DE, w. NC, and OH. [= RAB, C, F, FNA, G, K, S, SE, W, WV]

Solidago stricta Aiton, Wand Goldenrod. Cp (DE, FL, GA, NC, SC, VA?): pine savannas, Coastal Plain bogs, pocosins; common (rare in DE). Late August-October. NJ and DE (formerly) south to s. FL, west to TX; West Indies and s. Mexico. [= C, F, G, K, SE, WH; < *S. stricta* – RAB, GW (also see *S. pulchra*); = *S. petiolata* P. Miller – S, misapplied; = *S. stricta* Aiton ssp. *stricta* – FNA]

Solidago tarda Mackenzie. Cp (DE, FL, GA, VA), Pd (GA, VA): sandhills, other dry pinelands, xeric fluvial sand ridges, Piedmont barrens; rare. September-October. NJ and e. PA south to e. VA, c. and s. GA, AL, and Panhandle FL, in our area primarily in the Coastal Plain; disjunct in Marion County, TN (Chester, Wofford, & Kral 1997). [= C, FNA, S, SE; < *S. arguta* – RAB; < *S. ludoviciana* – F, misapplied as to our area; < *S. arguta* var. *arguta* – K; < *S. arguta* var. *caroliniana* – WH]

Solidago tortifolia Elliott, Leafy Pineywoods Goldenrod. Cp (FL, GA, NC, SC, VA): sandhills and dry pinelands; uncommon (rare in NC and VA). August-November. Se. VA south to s. FL, west to AR and TX. [= RAB, C, F, FNA, G, K, S, SE, WH]

Solidago uliginosa Nuttall *var.* ***linoides*** (Torrey & A. Gray) Fernald. Mt (WV): bogs; rare. NS and NL (Labrador) west to MB, south to s. PA, e. WV, OH, IN, and IL. [= K; < *S. uliginosa* – C, FNA; > *S. uliginosa* var. *linoides* – F; > *S. purshii* Porter – F, WV; > *S. uliginosa* var. *peracuta* (Fernald) Friesner – G]

Solidago uliginosa Nuttall *var.* ***uliginosa***, Northern Bog Goldenrod. Mt (GA?, NC, VA, WV), Cp (DE, VA): bogs, wet meadows, mafic fens, acidic seepage swamps; rare. NL (Labrador) west to Keewatin, south to e. VA, w. NC, ne. TN, IL, and IA (reports from further south need additional evaluation; some material formerly identified as *S. uliginosa* is actually *S. simulans* or *S. gracillima*). [= F, G, K, WV; < *S. uliginosa* – RAB, C, FNA, SE, W; < *S. uniligulata* (A.P. de Candolle) Porter – S]

Solidago ulmifolia Muhlenberg ex Willdenow var. *palmeri* Cronquist. East to MS (and AL?). [= FNA, G, K, SE; < *S. ulmifolia* – S]

Solidago ulmifolia Muhlenberg ex Willdenow *var.* ***ulmifolia***, Elmleaf Goldenrod. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, FL, VA): rocky forests and woodlands, especially on mafic and calcareous substrates, moist hammocks (in FL); common (rare in DE, FL, GA, NC, SC, rare in VA Coastal Plain, where usually confined to coquina limestone). August-October. NS, ME, ON, and MN, south to FL and TX. [= C, FNA, G, K, SE; < *S. ulmifolia* – RAB, F, S, W, WH, WV]

Solidago verna M.A. Curtis, Spring-flowering Goldenrod. Cp (NC, SC): moist pine savannas, lower slopes of sandhills, pineland roadbanks; rare. May-June. Se. NC south to e. SC. [= RAB, FNA, K, S, SE]

Solidago villosicarpa LeBlond, Carolina Maritime Goldenrod. Cp (NC): dry-mesic and mesic hardwood forests (and related disturbed areas), in the outer Coastal Plain; rare. September. Endemic to se. NC (Onslow, Pender, Brunswick, and Craven counties). See LeBlond (2000) for additional information. [= FNA]

Soliva Ruiz & Pavón 1794 (Burweed)

A genus of about 8 species, herbs, of South America. References: Watson in FNA (2006a); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z. [also see *Gymnostyles*]

1 Achenes (1.5-) 2.5-3.0 mm long, usually winged, the wings not transversely ribbed ..... ***S. sessilis***
1 Achenes 1.5-2.2 mm long, winged, transversely ribbed.
2 Leaves mostly basal; leaf blades 3-8 (-15) cm long, 2-3× pinnatifid ..... ***S. anthemifolia***
2 Leaves cauline and basal; leaf blades 1-2 (-3) cm long, 1 (-2)× pinnatifid ..... ***S. stolonifera***

* ***Soliva anthemifolia*** (Antoine Laurent de Jussieu) Sweet. Cp (FL): lawns, disturbed areas; rare, native of South America. February-April. [= FNA, SE, Z = *Gymnostyles anthemifolia* Antoine Laurent de Jussieu – K, S, WH]
* ***Soliva sessilis*** Ruiz & Pavón, Field Burweed, Lawn Burweed, Spurweed. Cp (FL, GA, NC, SC, VA), Pd (GA, NC): lawns, roadsides; uncommon (rare in GA, NC, SC, VA), native of South America. April-May. [= FNA, K, S, WH, Z; = *S. pterosperma* (Antoine Laurent de Jussieu) Lessing – RAB, SE]
* ***Soliva stolonifera*** (Brotero) Loureiro, Carpet Burweed. Cp (FL, GA, SC): lawns, roadsides, moist open areas; uncommon, native of South America. March-April. [= FNA, SE, Z; = *Gymnostyles stolonifera* (Brotero) Tutin – K, WH; *? Soliva nasturtiifolia* (Antoine Laurent de Jussieu) A.P. de Candolle – RAB, misapplied; *? Gymnostyles nasturtiifolia* Antoine Laurent de Jussieu – S, misapplied]

Sonchus Linnaeus 1753 (Sow-thistle, Milk-thistle)

A genus of about 50-60 species, herbs and shrubs, of the Old World. References: Hyatt in FNA (2006a); Cronquist (1980)=SE.

1 Heads 30-50 mm across in flower, the involucre (10-) 15-20 mm high; perennials from creeping rhizomes.
2 Phyllaries and peduncles densely pubescent with glandular hairs; longer phyllaries 14-17 mm long ..... ***S. arvensis*** *var.* ***arvensis***
2 Phyllaries and peduncles glabrous (but with sessile glands); longer phyllaries 10-15 mm long ..... ***S. arvensis*** *var.* ***glabrescens***
1 Heads 15-25 mm across in flower, the involucre 9-13 mm high; annuals.
3 Leaf base auricles rounded; mature achenes not transversely rugose ..... ***S. asper***
3 Leaf base auricles sagittate, the two lobes on either side of the stem coming to a point; mature achenes transversely rugose ..... ***S. oleraceus***

* ***Sonchus arvensis*** Linnaeus *var.* ***arvensis***, Perennial Sow-thistle. Mt (WV): disturbed areas; rare. Native of Europe, south to WV (Strausbaugh & Core 1978), MD, PA, TN, KY, and MS (Kartesz 1999). [= C, F, SE; = *S. arvensis* ssp. *arvensis* – FNA, K; = *S. arvensis* – G]
* ***Sonchus arvensis*** Linnaeus *var.* ***glabrescens*** (Günther) Grabowski & Wimmer, Perennial Sow-thistle. Mt (NC, VA, WV), Pd (VA): disturbed areas; uncommon (rare in NC), native of Europe. June-November. [= C, SE, WV; < *S. arvensis* – RAB, W; = *Sonchus arvensis* ssp. *uliginosus* (Bieberstein) Nyman – FNA, K; > *S. arvensis* var. *glabrescens* – F; > *S. uliginosus* Bieberstein – F; = *S. uliginosus* – G]
* ***Sonchus asper*** (Linnaeus) Hill, Spinyleaf Sow-thistle, Prickly Sow-thistle. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadsides, fields, pastures, disturbed areas; common, native of Europe. Late March-July. [= RAB, C, F, FNA, G, K, S, SE, W, WH, WV]
* ***Sonchus oleraceus*** Linnaeus, Common Sow-thistle. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, VA, WV): roadsides, fields, pastures, disturbed areas; common (uncommon in FL, GA, NC, SC, VA, and WV), native of Europe. Late March-July. [= RAB, C, F, FNA, G, K, S, SE, W, WH, WV]

Sphagneticola O. Hoffmann 1900

A genus of about 4 species, perennial herbs, of tropical America and Asia. References: Strother in FNA (2006c).

* ***Sphagneticola trilobata*** (Linnaeus) Pruski. Cp (FL): disturbed areas; rare, native of tropical America. Naturalized in FL (including several counties in the Panhandle adjacent to GA) (Wunderlin & Hansen 2003). [= FNA, K, WH; = *Wedelia trilobata* (Linnaeus) A.S. Hitchcock – S, SE]

Stokesia L'Héritier 1789 (Stokesia, Stokes Aster)

A monotypic genus, an herb, of se. North America. References: Strother in FNA (2006a); Jones (1982)=Z; Cronquist (1980)=SE.

Stokesia laevis (Hill) Greene, Stokesia, Stokes Aster, Blue Stokesia. Cp (FL, GA, SC), Pd* (NC*): native in pitcherplant bogs and moist pinelands of FL, GA, and SC, rather frequently grown as a garden plant and naturalized from cultivation at least in NC; rare. Late June-August. Native from e. SC south ne. FL, FL Panhandle, west to LA. There seems no reason to question the validity and native status of the early record from SC. A unique tetraploid population found by the Atlanta Botanical Garden in Omega, GA (near Tifton) in the 1990s was distinguished by having distinct upright and long scapes, up to 1 meter in length; the original population has been destroyed, but a selection derived from it was named 'Omega Skyrocket' and introduced into the commercial trade (D. Werner, pers. comm. 2006). [= RAB, FNA, K, S, SE, WH, Z]

Stuartina Sonder 1853

A genus of 2 species, endemic to Australia.

* ***Stuartina hamata*** Philipson. Cp (SC): waste area near wool-combing mill; rare, native of Australia. See Nesom (2004d).

Symphyotrichum Nees 1833 (American Aster)

A genus of about 90 species, of the Americas and e. Asia, most diverse in our area. References: Brouillet et al. FNA (2006b); Brouillet & Semple (1981); Cronquist (1980)=SE; Jones (1980a, 1980b, 1984); Jones & Young (1983); R. Jones (1983)=Z; R. Jones (1992); Lamboy (1987, 1992)=Y; Nesom (1994)=X; Nesom (2005b)=V; Nesom (1993a, 1993b, 1994, 1997); Noyes & Rieseberg (1999); Semple & Brouillet (1980a, 1980b); Semple, Chmielewski, & Lane (1989); Semple, Heard, & Xiang (1996); Sundberg (2004)=Q; Reveal & Keener (1981); Warners & Laughlin (1999); Xiang & Semple (1996). Key to subgenus *Astropolium* based on Nesom (2005b).

1 Basal and lower stem leaves **both** petiolate **and** with cordate blades; [subgenus *Symphyotrichum*, section *Heterophylli*] ..... **Key A**
1 Basal and lower stem leaves not **both** petiolate and cordate-bladed.
2 Annuals, from a taproot; [of moist, usually maritime, and usually saline habitats]; [subgenus *Astropolium*] ..... **Key B**
2 Perennials, from a caudex, rhizome, or crown; [collectively of various habitats].
3 Stem leaves fleshy, entire, linear; stems glabrous ..... **Key C**
3 Leaves not fleshy, usually toothed, stems usually variously pubescent.
4 Leaves **either** very numerous on the main stem, the internodes < 1 cm long (in some species the leaves of the lower and middle main stem withered or deciduous by flowering season, the internode length then reckonable by leaf scars), the leaves clasping or sessile, **or** leaves rather numerous on main stem, the internodes < 3.5 cm long, the leaves of the main stem strongly auriculate clasping (*S. georgianum*, *S. phlogifolium*); stem leaves entire, (often scabrous-margined); rays purple, lavender, rose, or blue (or characteristically white in *S. ericoides* and very rarely also in other species); [subgenus *Virgulus*] ..... **Key D**
4 Leaves less numerous on the main stem, the internodes averaging > 3.5 cm long, the leaves clasping, subclasping, or not clasping; stem leaves toothed (or rarely entire); rays blue, purple, lavender, pink, or white.
5 Stem leaves clasping to sheathing; rays blue, purple, or lavender ..... **Key E**
5 Stem leaves not clasping; rays blue, purple, lavender, rose, or white ..... **Key F**

Key A *Symphyotrichum* with petiolate, cordate-bladed lower leaves [of subgenus *Symphyotrichum*, section *Heterophylli*]

1 Disc florets 35-50 (or more); ray florets (13-) 20-30; involucre (6-) 7-10 mm high; phyllary tips spreading to squarrose ..... ***S. retroflexum***
1 Disc florets (8-) 10-25 (-30); ray florets 8-20 (-25); involucre 3.8-7 mm high (or to 8 mm high in *S. oolentangiense*); phyllary tips appressed (or the outer phyllaries spreading).
2 Cauline leaf blades sessile and cordate-clasping, or petiolate, the petiole strongly dilated to a cordate-clasping base, or both ..... ***S. undulatum***
2 Cauline leaves not cordate clasping; [collectively widespread].
3 Lower stems glabrous; upper stems sparsely hirtellous or pilose.
4 Basal leaves deeply cordate; phyllaries with lanceolate diamond shaped blaze (2-3× as long as wide), purple to greenish purple ..... ***S. cordifolium***
4 Basal leaves shallowly cordate to truncate; phyllaries with short diamond shaped blaze (1-1.5× as long as wide) or linear-lanceolate-shaped blaze (> 4× as long as wide), green.
5 Phyllaries with short diamond shaped green blaze (1-1.5× as long as wide) ..... ***S. lowrieanum***
5 Phyllaries with linear-lanceolate-shaped green blaze (> 4× as long as wide) ..... ***S. urophyllum***
3 Lower stems glabrous to sparsely hirsute; upper stems densely hirtellous to hirsute; [mainly west of the Appalachians].
6 Phyllaries with short diamond-shaped green blaze (1-1.5× as long as wide); basal and lower stem leaves mostly crenate to entire; upper stem leaves entire.
7 Plants with only the basal and lower stem leaves cordate or subcordate; phyllary faces glabrous; lower disc florets (15-) 20-25 (-30) ..... ***S. oolentangiense*** *var.* ***oolentangiense***
7 Plants with nearly all basal and stem leaves cordate or subcordate; phyllary faces short-pubescent; disc florets 16-23 ..... ***S. shortii***
6 Phyllaries with elongate green blaze (> 2× as long as wide); basal and lower stem leaves serrate or crenate; upper stem leaves serrate or crenate (to entire).
8 Plants 4-12 dm tall; cypselae glabrous ..... ***S. drummondii*** *var.* ***drummondii=S. drummondii***
8 Plants 3-8 dm tall; cypselae strigillose ..... ***[S. drummondii*** *var.* ***texanum]=[S. texanum]***

Key B – annual salt-marsh asters [of subgenus *Astropolium*]

1 Heads usually dense in an elongate, pyramidal-paniculate arrangement; inner phyllaries 6-7 mm long, phyllary apices linear-acuminate, distal margins often inrolled/involute, green zone of phyllaries narrowly lanceolate, usually extending the entire length of the phyllary, chartaceous bases short or absent; pappus accrescent, 4-5.5 mm long at maturity and usually longer than coiled ray corollas; [habitats wet, saline] ..... ***S. subulatum***

1 Heads corymbiform to thyrsiform, diffusely paniculate, or secund to subsecund and paniculiform arrangements or at the tips of long, bracteate branches; inner phyllaries 4-6.5 mm long, phyllary apices acute to acuminate, distal margins inrolled/involute or not, green zone of phyllaries lanceolate to elliptic, chartaceous bases usually conspicuous; pappus not accrescent, 3.5-4 (-5) mm long at maturity, longer or shorter than ray corollas; [habitats moist to wet, rarely saline].
2 Phyllary tips appressed, acute, flat, inner phyllaries with broadly lanceolate, distinctly demarcated, apical green zone, proximal ½ -1/3 white-chartaceous; ray floret laminae erect, often involute along the edges (curling inward lengthwise), rarely coiling back distally (if so, then only ca. 1/2 coil), usually shorter than mature pappus; disc florets (3-) 7-14 ..... ***S. squamatum***
2 Phyllary tips loose, linear-acuminate, distal margins often inrolled/involute, inner phyllaries with narrowly lanceolate, often weakly demarcated apical green zone, white-chartaceous bases short, ca. 1/3–1/2 the length of the phyllaries; ray floret laminae not involute along edges, usually coiling back distally in 1–4 or more coils, usually as long or longer than mature pappus; disc florets **either** (6-) 8-15 **or** 11-23 **or** (20-) 33-45 (-50).
3 Heads usually corymbiform to thyrsiform in arrangement (borne primarily on distal branches, distally clustered); inner phyllaries 4-5.5 (-6) mm long; phyllary apices acute to abruptly short-acuminate or long-acuminate, the distal margins inrolled/involute or not; ray florets in 1 (-2) series, corollas 2-3 mm long, the laminae 0.1-0.3 mm wide (dried), white to light pinkish or slightly blue, coiling back in 1-2 coils or less commonly remaining straight; disc florets (6-) 8-15; [of FL westward across the Gulf Coast] ..... ***S. expansum***
3 Heads diffusely paniculiform to pyramidal-paniculiform to corymbiform or second to subsecund and paniculiform; inner phyllaries 5-6.5 mm long; phyllary apices long-acuminate, the distal margins usually inrolled/involute; ray florets in 1-3 series, corollas 2-7 mm long, the laminae 0.2-0.8 mm wide (dried), white to blue or purple, coiling back in 2-5 coils; disc florets **either** 11-23 **or** (20-) 33-45 (-50).
4 Heads at first at ends of long, bracteate branches, then produced and maturing as axillary and nearly sessile or on very short lateral branches, commonly on one side of the main stem and appearing secund to subsecund, in paniculiform arrangements; ray florets in 2-3 series, corollas mostly 2–3.5 (-4) mm long, laminae 0.2-0.4 mm wide (dry), blue to purple, coiling back in 2-3 (-4) coils; disc florets 11-23; [e. GA southwards] ..... ***S. bahamense***
4 Heads often at ends of long, bracteate branches, axillary heads usually maturing on elongate lateral branches, the whole arrangement often diffusely paniculiform to pyramidal-paniculiform, or heads more distally disposed and the arrangement corymbiform to thyrsiform; ray florets in 1 series, corollas mostly 4-7 mm long, laminae 0.4-0.8 mm wide (dry), blue to white, coiling back in 3-5 coils; disc florets (20-) 33-45 (-50); [sc. United States east to AL and scattered eastward as an introduction] ..... ***S. divaricatum***

Key C – perennial asters with linear, fleshy leaves
[of *Symphyotrichum* subgenera *Astropolium* and *Chapmaniani*]

1 Leaves basally disposed; disc florets 47-57; ray floret laminae (10-) 14-15 (-20) mm long; [of FL]; [subgenus *Chapmaniani*] ..... ***S. chapmanii***
1 Leaves mainly cauline, the basal and lower stem lives typically withered by flowering season; disc florets (10-) 13-45 (-54); ray floret laminae (4.5-) 5-8.5 (-9.5) mm long; [collectively widespread]; [subgenus *Astropolium*]
2 Midstem leaves (1.0-) 1.5-2.7 mm wide; involucres 4.1-5.3 mm high; ray florets 10-16; disc florets (10-) 13-23; achenes 1.5-2.0 (-2.5) mm long; pappus 3.0-4.4 mm long; [of FL southward] ..... ***S. bracei***
2 Midstem leaves (1.5-) 3-6 mm wide; involucres 6-9.5 (-11) mm high; ray florets (12-) 17-25; disc florets 25-45 (-54); achenes 2.8-4.0 (-4.5) mm long; pappus 5.0-6.1 mm long; [widespread in our area] ..... ***S. tenuifolium***

Key D – perennial asters
[of *Symphyotrichum* subgenus *Virgulus*]

1 Mid and upper stem leaves > 8× as long as wide; phyllaries tipped with a small, white spine; rays white (to pale pink); involucre 2.5-4.5 (-5) mm high; disc florets 6-12 (-20) per head; [section *Ericoidi*] ..... ***S. ericoides* var. *ericoides***
1 Mid and upper stem leaves 2-7× as long as wide; phyllaries not spine-tipped; rays purple, lavender, rose, blue (rarely nearly white); involucre >5 mm high (except sometimes as short as 4 mm high in *S. adnatum* of s. GA and FL west to LA); disc florets (6-) 11-110 per head.
2 Disc florets yellow, cream, or white (with purplish corolla lobes), fading purple or brown; mid and upper stem leaves with bases rounded to cuneate (or slightly clasping in *S. plumosum* of FL Panhandle); phyllaries not stipitate-glandular; [section *Virgulus*].
3 Rays 13-15 (-36); cypselas glabrous ..... ***S. pratense***
3 Rays 7-12; cypselas densely strigose.
4 Phyllaries long-acuminate, spreading to recurved; phyllaries with woolly, tangled hairs; involucre 7-9 mm tall; [of Franklin County, FL Panhandle] ..... ***S. plumosum***
4 Phyllaries acute, appressed; phyllaries **either** with appressed, straight hairs (moderately to densely sericeous) **or** glabrous to sparsely pilose; involucre 5-7 mm high; [collectively widespread].
5 Phyllaries and upper stem leaves moderately to densely sericeous (silky-pubescent); [widespread] ..... ***S. concolor* var. *concolor***
5 Phyllaries and upper stem leaves glabrous or sparsely pilose; [of the Gulf Coastal Plain] ..... ***S. concolor* var. *devestitum***
2 Disc florets pink, fading purple; mid and upper stem leaves with bases clasping or auriculate clasping (except cuneate, rounded, or slightly clasping in *S. grandiflorum, S. oblongifolium*, and *S. fontinale*); phyllaries stipitate glandular (or sometimes or always lacking stipitate glands in *S. fontinale* and *S. walteri* (of the Coastal Plain from e. NC southward), and *S. patens* var. *patentissimum* (of KY and MS westward).
6 Mid-stem leaves < 1.5 cm long, **either** ascending-appressed, **or** spreading, and then the apical portion abruptly deflexed; rays 5-9 (-11) mm long; [of the Coastal Plain]; [section *Patentes*].
7 Blades of mid-stem leaves ascending-appressed, basally decurrent; [of s. GA south to s. FL, west to se. LA] ..... ***S. adnatum***
7 Blades of mid-stem leaves spreading, the apical portion then abruptly deflexed, basally clasping; [of e. NC to c. peninsular FL] ..... ***S. walteri***
6 Mid-stem leaves > 2 cm long, spreading; rays > 9 mm long (to as short as 7 mm in *S. fontinale* of Panhandle FL); [collectively widespread].
8 Mid-stem leaves cuneate, rounded, or subclasping; [section *Grandiflori*].

9 Phyllaries appressed; phyllary faces glabrous or glabrate, lacking stipitate glands (though there may be a few stipitate glands on the phyllary margins); heads 6-7.6 mm high; [of wet pinelands and marshes of e. Panhandle FL south to s. FL]..... ***S. fontinale***

9 Phyllaries spreading, squarrose, or reflexed; phyllary faces moderately to densely stipitate-glandular (and also often pubescent or scabrous with non-stipitate hairs); heads (5-) 7-12 (-15) mm high; [of dry habitats, of mainly inland provinces, though extending to the Coastal Plain in e. VA, e. NC, and nc. SC].

10 Involucres 8.5-12 (-15) mm high; lower stem leaves (often withered by flowering season) cordate-clasping; [of acidic habitats of the Coastal Plain and Piedmont of e. and c. VA south through e. and c. NC to to nc. SC]..... ***S. grandiflorum***

10 Involucres (5-) 7-9 mm high; lower stem leaves (typically persisting) cuneate, rounded, or subclasping; [of calcareous habitats, south to sc. VA, w. NC, nc. AL, n. MS] ..... ***S. oblongifolium***

8 Mid-stem leaves clasping to auriculate-clasping.

11 Phyllaries with attenuate, loosely spreading tips; disc florets 50-110; ray florets (40-) 50-75 (-100); [mainly of sunny, moist to wet marshes, swamps, fens, south to GA, wc. AL, c. MS]; [section *Grandiflori*] ..... ***S. novae-angliae***

11 Phyllaries with obtuse to acute tips (the inner phyllaries sometimes acuminate, but not attenuate); disc florets 15-50; ray florets 9-24 (-30); [of sunny to semi-sunny dry sites, or of moist forests, collectively widespread, south to ne. FL, Panhandle FL, s. AL, s. MS, se. LA].

12 Involucres 8-10 (-12) mm high; disc florets 8-10 mm long, white with purplish lobes; heads 4-5 (-6) cm across (ray tip to ray tip), the rays 14-24 mm long; plants strongly rhizomatous, forming clonal colonies with the stems mostly scattered along the rhizome (new stems typically arising at least several cm from the old ones); achenes 2.5-4.0 mm long, pale gray-brown, the trichomes about 0.4 mm long and distributed on and between the ribs; anthers purplish; pollen white; [section *Grandiflori*] ..... ***S. georgianum***

12 Involucres 5.5-7.5 (-8.5) mm high (or to 12 mm high in *S. patens* var *patentissimum*, barely entering our area in w. KY and w. MS); disc florets 5.5-8 mm long, either white with purplish lobes or bright yellow; heads 3-4 (-4.5) cm across (ray tip to ray tip), the rays 10-18 (-20) mm long; plants cespitose, generally with 1 or more stems arising from caudices (the new stems arising near the old); achenes 2.0-4.0 mm long, tan, gray, brown, dark-brown, or black, the trichomes various (see below); anthers purplish or yellow; pollen white or yellow; [section *Patentes*].

13 Disc florets white with purplish lobes; stem leaves 7.5-12.5 (-14) cm long, thin in texture, soft-pubescent, the venation apparent, rugose-veiny and wrinkled; anthers purplish; pollen white; achenes 2.5-4.0 mm long, the trichomes concentrated on the ribs, < 0.4 mm long, appressed; [primarily of the Mountains, less commonly the Piedmont, mostly in moist, shady to semi-sunny situations]..... ***S. phlogifolium***

13 Disc florets bright yellow; stem leaves (2-) 3-7 (-9) cm long, thick in texture, scabrous, the venation inconspicuous; anthers yellow; pollen yellow; achenes 2.0-3.5 mm long, the trichomes distributed on and between the ribs, mostly > 0.4 mm long, spreading; [collectively widespread in our area, mostly in dry, semi-sunny to sunny situations]

14 Involucres 8-12 mm high; phyllaries appressed, in 5-7 series; phyllaries obtuse, lacking stipitate glands or sparsely stipitate-glandular; [from w. KY and w. MS westward]..... **[*S. patens* *var. patentissimum*]**

14 Involucres 5.5-7.5 mm high; phyllaries squarrose, in 4-5 series; phyllaries acute to acuminate, sparsely to densely stipitate-glandular; [collectively widespread].

15 Middle phyllaries 0.7-1 mm wide; phyllary faces sparsely stipitate-glandular and densely strigillose; [from se. LA and w. MS westward] ..... **[*S. patens* *var. gracile*]**

15 Middle phyllaries 1-1.2 mm wide; phyllary faces densely stipitate-glandular and sparsely strigillose; [widespread]..... ***S. patens* *var. patens***

Key E

1 Phyllaries appressed (or in some species the outer slightly spreading); rays usually < 20 [(10-) 12-23 (-34)]; [section *Heterophylli*].

2 Middle stem leaves strongly clasping; involucre 3.8-5.5 mm high; disc corollas 15-22 (-25); phyllaries acute, acuminate, to attenuate; green blaze on phyllary lanceolate to elongate diamond-shaped..... ***S. undulatum***

2 Middle stem with a winged, sheathing petiole; involucre (4.2-) 4.5-8 mm high; disc corollas (15-) 19-33 (-43); phyllaries acute, green blaze on phyllary diamond-shaped, about as long as wide or slightly longer.

3 Leaf faces scabrous ..... ***S. oolentangiense* *var. oolentangiense***

3 Leaf faces glabrous.

4 Leaves basally disposed, the largest basal and persistent; largest leaves linear, to 20 cm × 2.5 cm, avg. 10× as long as wide; leaf margins often strongly scabrous; [mainly of the Coastal Plain, of SC and GA west to AR and TX]..... ***S. laeve* *var. purpuratum=S. attenuatum***

4 Leaves cauline, the largest on the stem; largest leaves narrowly to broadly lanceolate, avg. < 9× as long as wide; leaf margins usually only slightly scabrous; [mainly of inland provinces, of NS west to MB, south to GA, Panhandle FL, MS, LA, and OK].

5 Larger leaves > 5× as long as wide, rarely > 2.5 cm wide, the bases slightly clasping; [NYand KY south to GA, Panhandle FL (Jackson County), and MS]..... ***S. laeve* *var. concinnum=S. concinnum***

5 Larger leaves < 5× as long as wide, often > 2.5 cm wide, the bases strongly clasping; [NS west to MB, south to GA, LA, and OK] ..... ***S. laeve* *var. laeve=S. laeve s.s.***

1 Phyllaries spreading to squarrose; rays usually > 20 [15-50 (-60)].

Symphyotrichum adnatum (Nuttall) Nesom. Cp (FL, GA): sandhills, pine flatwoods; common. S. GA south to s. FL, west to se. LA. [= FNA, K, WH, X; = *Aster adnatus* Nuttall – S, SE]

Symphyotrichum bahamense (Britton) Nesom, Bahama Salt-marsh Aster. Cp (FL, GA): salt, brackish, and fresh marshes, ditches, wet areas; uncommon. October-November. E. GA and e. FL Panhandle south to s. FL; the Bahamas. [= K, V; = *S. subulatum* (Michaux) Nesom var. *elongatum* (Bosserd) S.D. Sundberg – FNA, Q; < *Aster subulatus* – GW; < *A. subulatus* Michaux var. *cubensis* – SE; = *A. subulatus* Michaux var. *elongatus* Bosserd]

Symphyotrichum boreale (Torrey & A. Gray) Löve & Löve, Rushlike Aster, Northern Bog Aster. Mt (WV): calcareous wetlands; rare. August-October. NL (Newfoundland) west to AK, south to n. NJ, ne PA, nw. PA, WV, OH, IN, IL, IA, NE, CO, ID, and WA. Reported for WV (Barbour, Fayette, Nicholas, and Randolph counties), PA, and NJ. [= FNA, K, X; = *Aster borealis* (Torrey & A. Gray) Provancher – C; ? *Aster junciformis* Rydberg – F, G]

Symphyotrichum bracei (Britton ex Small) Nesom, Brace's Aster. Cp (FL): brackish marshes; rare. August-December (-February). Panhandle FL south to s. FL; Bahamas; Cuba. [= K, V, WH, X; = *Aster bracei* Britton ex Small – S, SE; = *S. tenuifolium* (Linnaeus) Nesom var. *aphyllum* (R.W. Long) S.D. Sundberg – FNA, Q]

Symphyotrichum chapmanii (Torrey & Gray) Semple & Brouillet, Chapman's Aster. Cp (FL): flatwoods and seepage bogs; rare. Endemic to Panhandle FL and s. AL, with a few widely scattered records in the FL peninsula. [= FNA, WH; = *Eurybia chapmanii* (Torrey & Gray) Nesom – K, X; = *Aster chapmanii* Torrey & Gray – S, SE]

Symphyotrichum concolor (Linnaeus) Nesom *var.* ***concolor***, Eastern Silvery Aster. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA): sandhills, Piedmont woodlands, forest edges, roadbanks; common (rare in DE, rare in Mountains). September-October. MA and NY south to s. FL, west to LA, inland less commonly to TN and KY. [= FNA; < *S. concolor* (Linnaeus) Nesom – K, WH, X; < *Aster concolor* Linnaeus – RAB, C, F, G, S, SE, W; < *Virgulus concolor* (Linnaeus) Reveal & Keener; = *Symphyotrichum concolor* ssp. *concolor* – Haines (2010)]

Symphyotrichum concolor (Linnaeus) Nesom *var.* ***devestitum*** (S.F. Blake) Semple, Gulf Coast Silvery Aster. Cp (FL, GA?, SC?): savannas; uncommon. Panhandle FL, maybe extending to GA, AL, and SC. See Semple (2004). [= FNA; < *Symphyotrichum concolor* (Linnaeus) Nesom – K, WH, X; < *Aster concolor* Linnaeus – RAB, S, SE; < *Virgulus concolor* (Linnaeus) Reveal & Keener; = *Aster concolor* Linnaeus var. *devestitus* S.F. Blake; = *Symphyotrichum concolor* ssp. *devestitum* (S.F. Blake) A. Haines – Haines (2010)]

Symphyotrichum cordifolium (Linnaeus) Nesom. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, SC, VA): rich forests, shaded roadbanks; common (rare in Piedmont south of DE, rare in Coastal Plain). September-October. [= K; < *Aster cordifolius* Linnaeus – RAB (also see *S. lowrieanum*); = *A. cordifolius* – C, G, S, SE, W; > *A. cordifolius* var. *cordifolius* – F, WV; > *A. cordifolius* var. *polycephalus* Porter – F; > *A. cordifolius* var. *racemiflorus* Fernald – F, WV; < *S. cordifolium* – FNA (also see *S. lowrieanum*); > *S. cordifolium* (Linnaeus) Nesom var. *cordifolium* – X; > *S. cordifolium* (Linnaeus) Nesom var. *polycephalum* (Porter) Nesom – X; > *S. cordifolium* (Linnaeus) Nesom var. *racemiflorum* (Fernald) Nesom – X]

Symphyotrichum depauperatum (Fernald) Nesom, Serpentine Aster. Pd (NC), Mt (WV): glades and barrens over mafic rocks (diabase) [or calcareous rocks in WV?]; rare. Early September-October. MD and se. PA; disjunct southward in nc. NC. Reported for Hardy County, WV (Harmon, Ford-Werntz, & Grafton 2006, Strausbaugh & Core 1978). [= FNA, K, X; = *Aster depauperatus* Fernald – C, F, G, SE]

* ***Symphyotrichum divaricatum*** (Nuttall) Nesom, Midwestern Salt-marsh Aster. Cp (SC, VA), Pd (VA): disturbed areas, including mowed fields, periodically flooded floodplains, waste areas near wool-combing mill; rare, native of sc. United States and Mexico. October-November. See Nesom (2000). [= K, V, X; = *Aster exilis* Elliott – RAB, F, S, apparently misapplied; = *Symphyotrichum subulatum* (Michaux) Nesom var. *parviflorum* (Nees) S.D. Sundberg – FNA, Q; < *Aster subulatus* – GW; = *Aster subulatus* Michaux var. *ligulatus* Shinners – SE]

Symphyotrichum drummondii (Lindley) Nesom *var.* ***drummondii***, Hairy Heart-leaved Aster. Mt (WV): mesic to dry forests; rare. August-October. PA, OH, MI, WI, MN, and NE, south to MD, WV, TN, AL, MS, and LA (including the Florida Parishes). [= FNA, K, X; < *Aster drummondii* Lindley – C, G, SE; = *Aster sagittifolius* var. *drummondii* (Lindley) Shinners – F; = *Aster drummondii* var. *drummondii*; = ***Symphyotrichum drummondii*** (Lindley) Nesom]

Symphyotrichum dumosum (Linnaeus) Nesom var. ***dumosum***, Long-stalked Aster. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): old fields, disturbed areas, pastures; common. Late August-October. NB, WV, IN, IL, OK south to FL and TX. [= K, X; < *Aster dumosus* – RAB, C, G, GW, SE, W; > *Aster dumosus* Linnaeus var. *dumosus* – F; > *A. dumosus* var. *coridifolius* (Michaux) Torrey & A. Gray – F, WV; < *S. dumosum* – FNA, WH; > *A. dumosus* – S; > *A. coridifolius* Michaux – S]

Symphyotrichum dumosum (Linnaeus) Nesom *var.* ***gracilipes*** (Wiegand) Nesom. Cp (FL), {GA, SC}. Late August-October. SC south to FL, west to LA. [= K; < *Aster dumosus* – RAB, GW, SE; < *S. dumosum* – FNA, WH; = *A. gracilipes* (Wiegand) Alexander – S; = *Aster dumosus* Linnaeus var. *gracilipes* Wiegand]

Symphyotrichum dumosum (Linnaeus) Nesom *var.* ***pergracile*** (Wiegand) Nesom. {NC, SC}. Late August-October. Endemic to NC and SC. [= K; < *Aster dumosus* – RAB, GW, SE; < *S. dumosum* – FNA; = *Aster dumosus* Linnaeus var. *pergracile* Wiegand]

Symphyotrichum dumosum (Linnaeus) Nesom var. ***strictior*** (Torrey & A. Gray) Nesom. Mt (VA), {NC}: woodlands and glades over mafic rock; rare. Late August-October. NH, ON, and WI south to NC and MO. [= K, X; < *Aster dumosus* – RAB, C, G, GW, SE, W; = *A. dumosus* Linnaeus var. *strictior* Torrey & A. Gray – F; < *S. dumosum* – FNA]

Symphyotrichum dumosum (Linnaeus) Nesom var. ***subulifolium*** (Torrey & A. Gray) Nesom. Cp (FL), {GA, NC, SC, VA} Late August-October. ME south to FL, west to TX. [= K, X; < *Aster dumosus* – RAB, C, G, GW, SE, W; = *Aster dumosus* Linnaeus var. *subulifolius* Torrey & A. Gray – F; < *S. dumosum* – FNA, WH]

Symphyotrichum elliottii (Torrey & A. Gray) Nesom, Southern Swamp Aster, Elliott's Aster. Cp (FL, GA, NC, SC, VA): bogs, swamps, and marshes, mainly in the outer Coastal Plain, on tree bases, hummocks, and stumps in tidal freshwater swamps, especially where salinities may occasionally exceed 5-10 ppt; uncommon (rare in GA and VA). Late September-November. Se. VA south to s. FL, west to LA. The Jones & Coile (1988) record for n. GA is rejected. [= FNA, K, WH, X; = *Aster elliottii* Torrey & A. Gray – RAB, C, F, G, GW, S, SE; = *Aster puniceus* Linnaeus var. *elliottii* (Torrey & A. Gray) A. G. Jones]

Symphyotrichum ericoides (Linnaeus) Nesom *var.* ***ericoides***, Heath Aster, Squarrose White Aster. Mt (GA, VA): limestone glades; rare. ME, NL (Labrador), ON, ND, CO, AZ, south to VA, MS, TX, Nuevo Léon, and Coahuila. [= FNA; > *Symphyotrichum ericoides* (Linnaeus) Nesom var. *ericoides* – K, X; > *Symphyotrichum ericoides* (Linnaeus) Nesom var. *prostratum* (Kuntze) Nesom – K, X; > *Aster ericoides* Linnaeus var. *ericoides* – G; > *Aster ericoides* Linnaeus var. *prostratus* (Kuntze) Blake – G; = *Aster ericoides* – C, F, SE, W; = *S. ericoides* var. *ericoides* – FNA; = *Virgulus ericoides* (Linnaeus) Reveal & Keener]

Symphyotrichum expansum (Poeppig ex Sprengel) Nesom. Cp (FL): pond margins, disturbed wet areas; rare. July-November (-January). FL Panhandle and peninsula, AL, OK, UT, NV, and CA south through Mexico and Central America to n. South America; West Indies. [= K, V, X; = *S. subulatum* (Michaux) Nesom var. *parviflorum* (Nees) S.D. Sundberg – FNA, Q] {add synonymy – S}

Symphyotrichum firmum (Nees) Nesom, Shining Aster. Mt (WV): {GA, NC?, VA} (NC Watch List). Included by Nesom (1997) in *Symphyotrichum puniceum* (Linnaeus) Nesom var. *puniceum*, but see Warners & Laughlin (1999) for an analysis of differences between it and *S. puniceum*. [= FNA, X; = *Aster firmus* Nees – C; < *Aster puniceus* – RAB; = *Aster puniceus* Linnaeus var. *firmus* (Nees) Torrey & A. Gray – F, WV; > *Aster puniceus* Linnaeus var. *firmus* (Nees) Torrey & A. Gray – G; > *Aster lucidulus* (A. Gray) Wiegand – G, SE, W; = *Aster puniceus* Linnaeus ssp. *firmus* (Nees) A.G. Jones; < *S. puniceum* (Linnaeus) Löve & Löve var. *puniceum* – K]

Symphyotrichum fontinale (Alexander in Small) Nesom. Cp (FL): wet pinelands, marshes; rare. E. Panhandle FL south to s. FL. [= FNA, WH, X; = *Aster fontinalis* Alexander in Small – S, SE; = *A. patens* Aiton var. *floridanus* R.W. Long]

Symphyotrichum georgianum (Alexander) Nesom, Georgia Aster. Pd (GA, NC, SC), Cp (FL, GA): dry, rocky woodlands, woodland borders, roadbanks, powerline rights-of-way, primarily in places that formerly would have burned and likely been post oak or blackjack oak woodlands or savannas, also in thin soils around granitic flatrocks; rare. Early October-mid November; November-December. Sc. NC south to c. GA and west to c. AL; apparently disjunct on the Coastal Plain of sw. GA and e. Panhandle FL (Leon County). [= FNA, K, WH, X; = *Aster georgianus* Alexander – S, Z; < *Aster patens* – RAB; = *Aster patens* Aiton var.

georgianus (Alexander) Cronquist – SE; = *Virgulus georgianus* (Alexander) Semple; = *Virgulus patens* (Aiton) Reveal & Keener var. *georgianus* (Alexander) Reveal & Keener]

Symphyotrichum grandiflorum (Linnaeus) Nesom, Big-headed Aster. Cp, Pd (NC, SC, VA): dry woodlands, forest edges; roadbanks and powerline rights-of-way; common. Late September-November. E. and c. VA south through e. and c. NC to to nc. SC. [= FNA, K, X; = *Aster grandiflorus* Linnaeus – RAB, C, F, G, S, SE, W; = *Virgulus grandiflorus* (Linnaeus) Reveal & Keener]

Symphyotrichum laeve (Linnaeus) Löve & Löve *var.* ***concinnum*** (Willdenow) Nesom, Narrow-leaved Smooth Aster. Pd (DE, NC, SC, VA), Mt (VA, WV), Cp (FL), {GA}: dry woodlands over mafic or calcareous rocks; rare. September-October. NYand KY south to GA, Panhandle FL (Jackson County), and MS. [= FNA, K, WH, X; = *Aster concinnus* Willdenow – C, G, S, SE; < *A. laevis* – F, WV; = *A. laevis* Linnaeus var. *concinnus* (Willdenow) House – RAB, W; = *S. laeve* ssp. *concinnum* (Willdenow) Semple & Brouillet]

Symphyotrichum laeve (Linnaeus) Löve & Löve *var.* ***laeve***, Smooth Blue Aster. Pd (DE, NC, SC, VA), Mt (NC, VA, WV), Cp (DE, VA), {GA}: mesic hardwood forests; rare. September-October. NS west to MB, south to GA, LA, and OK. [= FNA, K, X; = *Aster laevis* Linnaeus var. *laevis* – RAB, C, G, SE, W; >< *A. laevis* – F, WV; > *A. steeleorum* Shinners – F, WV; > *A. laevis* – S; > *A. falcidens* E.S. Burgess – S]

Symphyotrichum laeve (Linnaeus) Löve & Löve *var.* ***purpuratum*** (Nees) Nesom, Gulf Coast Smooth Aster. Cp (GA, SC): open dry woodlands, prairies; rare (SC Rare). September-October. SC and GA west to AR and TX. [= FNA, K, X; > *Aster attenuatus* Lindley ex Hooker – G, S; > *Aster purpuratus* Nees – S; = *Aster laevis* Linnaeus var. *purpuratus* (Nees) A. G. Jones; = ***Symphyotrichum attenuatum*** (Lindley) Semple]

Symphyotrichum lanceolatum (Willdenow) Nesom var. ***interior*** (Wiegand) Nesom. {VA}: (Kartesz 1999). NH west to MN, south to VA, KY, AR, and OK. South at least to s. PA (Rhoads & Klein 1993). Symphyotrichum novae-angliae (Linnaeus) Nesom, New England Aster, Michaelmas-daisy. Mt (GA, NC, VA, WV), Pd (DE, VA), Cp (DE, VA*): wet meadows, bogs, prairies; common (rare in GA and NC). September-October. NS west to MT, south to GA, wc. AL, c. MS, s. AR, OK, and NM. [= FNA, K, Z; = *Aster novae-angliae* Linnaeus – RAB, C, F, G, GW, S, SE, W, WV; = *Virgulus novae-angliae* (Linnaeus) Reveal & Keener]

Symphyotrichum novi-belgii (Linnaeus) Nesom *var.* ***elodes*** (Torrey & A. Gray) Nesom, New York Aster. Cp (DE, NC, SC, VA): wet pine savannas, marshes; common. Late September-November. NB south to NY, apparently disjunct southward from e. MD south to e. SC. [= FNA, K, X; < *Aster novi-belgii* – RAB, C, G, GW, SE; = *A. novi-belgii* Linnaeus var. *elodes* (Torrey & A. Gray) A. Gray – F; = *A. elodes* Torrey & A. Gray – S]

Symphyotrichum novi-belgii (Linnaeus) Nesom *var.* ***novi-belgii***, New York Aster. Mt (WV), Cp (DE): {habitat}; common (rare in WV). August-September. NL (Newfoundland) and NL (Labrador) south to MD and WV. [= FNA, K, X; < *Aster novi-belgii* – RAB, C, G, GW, SE; = *A. novi-belgii* Linnaeus *var. novi-belgii* – F; = *A. novi-belgii* – S]

Symphyotrichum oblongifolium (Nuttall) Nesom, Eastern Aromatic Aster, Shale-barren Aster. Mt (NC, VA, WV), Pd (VA): rock outcrops and dry woodlands over limestone, calcareous shale; common (uncommon in WV, rare in NC). Late September-October. NY, WI, MN, and MT, south to sc. VA, w. NC, nc. AL, n. MS, TX, and NM. [= FNA, K, X; > *Aster oblongifolius* Nuttall var. *angustatus* Shinners – G, SE; > *A. oblongifolius* var. *orientis* Shinners – WV; = *A. oblongifolius* – RAB, C, F, S, W; = *Virgulus oblongifolius* (Nuttall) Reveal & Keener]

Symphyotrichum ontarionis (Wiegand) Nesom *var.* ***ontarionis***, Bottomland Aster. Mt (WV), {GA}: bottomlands, samps, bogs; rare. August-October. QC, ON, MN, and SD, south to WV, GA, AL, MS, LA, and TX. See Nesom (1997) and Brouillet

& Labrecque (1997). [= FNA; < *Aster lateriflorus* – RAB; < *Aster ontarionis* Wiegand – C, F, G, SE, W; = *S. ontarione* var. *ontarione* – K, X, orthographic variant]

Symphyotrichum oolentangiense (Riddell) Nesom var. ***oolentangiense***. Cp (FL), {GA}: {habitat}; rare. NY, ON, MN, and SD, south to Panhandle FL and TX. Reported for GA (Kartesz 1999) on the basis of Fernald (1950), and also reported for GA in FNA. East to sw. TN (Chester, Wofford, & Kral 1997), AL, and Panhandle FL (Wunderlin & Hansen 2008). [= K, X; < *Aster oolentangiensis* – C; = *A. azureus* Lindley var. *azureus* – F; < *A. azureus* – G, SE; < *S. oolentangiense* – FNA]

Symphyotrichum patens (Aiton) Nesom var. ***patens***, Common Clasping Aster. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, FL, GA, NC, SC, VA): dry woodlands, roadsides, woodland edges, clearings, roadbanks; common (rare in FL). Late August-early November; October-November. Var. *patens* ranges from VT and NY west to PA, s. OH, s. IN, s. MO, and se. KS, south to e. GA, ne. FL, Panhandle FL, s. AL, s. MS, s. LA, and sc. TX. [= FNA, K, X; > *Aster patens* Aiton var. *patens* – C, F, G, SE, WV; < *A. patens* – RAB, W; >< *A. patens* var. *gracilis* Hooker – C, F, G, SE, misapplied as to our area (now more narrowly defined and occurring only west of our area); = *A. patens* – S; = *A. patens* var. *patens* – Z; < *Virgulus patens* (Aiton) Reveal & Keener var. *patens*]

Symphyotrichum phlogifolium (Muhlenberg ex Willdenow) Nesom, Appalachian Clasping Aster. Mt (GA, NC, SC, VA, WV), Pd (NC, SC, VA): mesic, nutrient-rich mixed hardwood forests; uncommon (rare in GA). Late August-mid October. NJ and Long Island, NY west to PA, n. OH, and e. IN south to c. VA, c. NC, w. SC, n. GA, and ne. AL, primarily in the Appalachian Mountains and adjacent provinces. [= FNA, K, X; < *Aster patens* – RAB; = *A. phlogifolius* Muhlenberg ex Willdenow – S, W, Z; = *A. patens* Aiton var. *phlogifolius* (Muhlenberg ex Willdenow) Nees – C, F, G, SE, WV; = *Virgulus patens* (Aiton) Reveal & Keener var. *phlogifolius* (Muhlenberg ex Willdenow) Reveal & Keener]

Symphyotrichum pilosum (Willdenow) Nesom var. ***pilosum***. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, SC, VA): old fields, disturbed areas, woodland borders; common. September-November. NB west to MN, south to Panhandle FL and TX. [= FNA, K, X; < *Aster pilosus* – RAB, W; = *A. pilosus* Willdenow var. *pilosus* – C, F, G, SE, WV; < *S. pilosum* – WH]

Symphyotrichum pilosum (Willdenow) Nesom var. ***pringlei*** (A. Gray) Nesom. Cp (DE, NC), Pd (DE, NC, VA), Mt (WV), {GA, SC}: {habitat}; common (uncommon in NC and VA, rare in WV). September-November. NS west to MN, south to GA and TN. [= FNA, K, X; = *Aster pilosus* Willdenow var. *demotus* Blake – RAB, SE; = *Aster pilosus* var. *pringlei* A. Gray – C; > *A. pilosus* Willdenow var. *demotus* Blake – F, G, WV; > *A. pilosus* var. *pringlei* – F, G, WV]

Symphyotrichum plumosum (Small) Semple. Cp (FL): dry flatwoods; rare. October-November. Endemic to c. Panhandle FL. [= FNA; < *Symphyotrichum concolor* (Linnaeus) Nesom – K; = *Aster plumosus* Small – S; = *S. concolor* (Linnaeus) G.L. Nesom var. *plumosum* (Small) Wunderlin & B.F. Hansen – WH]

Symphyotrichum praealtum (Poiret) Nesom var. ***angustior*** (Wiegand) Nesom, Willow Aster, Veiny Lined Aster. Mt (VA), {NC?}: fen-like calcareous wetlands; rare (VA Rare). ME south to NC and TN. Abrams Creek, Frederick County, VA. Also reported for NC by Kartesz (1999). [= K, X; < *Aster praealtus* – C, GW, W; = *A. praealtus* Poiret var. *angustior* Wiegand – F; < *S. praealtum* – FNA; < *A. praealtus* var. *praealtus* – G, SE]

Symphyotrichum praealtum (Poiret) Nesom var. ***praealtum***. Mt (GA, VA, WV): moist forests over limestone, wooded fens (with *Acer rubrum* and *Fraxinus nigra*); rare. NY, MN, and SD south to Panhandle FL and TX. Reported for Giles County, VA. [= K, X; < *Aster praealtus* – C, GW, W, WV; = *A. praealtus* Poiret *var. praealtus* – F; < *A. praealtus* var. *praealtus* – G, SE; < *S. praealtum* – WH]

Symphyotrichum pratense (Rafinesque) Nesom, Barrens Silky Aster. Mt (GA, VA?), Cp (FL, GA): calcareous glades and barrens; rare. September-October. Se. AR west to ne. TX, south to sc. LA and e. TX; disjunct at scattered localities east of the Mississippi River, as in sw. VA (Ludwig 1999), c. KY, TN (Chester, Wofford, & Kral 1997), nw. GA, sw. GA, Panhandle FL (Gadsden County), n. and c. AL, wc. MS. See Jones, Witsell, & Nesom (2008) for extensive discussion. [= FNA, K, X; < *Aster sericeus* – C, F, G, SE; = *S. sericeum* (Ventenat) Nesom var. *microphyllum* (A.P. de Candolle) Wunderlin & B.F. Hansen – WH; = *A. pratensis* Rafinesque; = *A. sericeus* Ventenat var. *microphyllus* A.P. de Candolle]

Symphyotrichum prenanthoides (Muhlenberg ex Willdenow) Nesom, Zigzag Aster. Mt (NC, VA, WV), Pd (DE, VA): forests, roadbanks; common (rare in DE). Late August-October. MA, NY, s. ON, and MN, south to w. NC, TN, IL, and IA. [= FNA, K, X; = *Aster prenanthoides* Muhlenberg ex Willdenow – RAB, C, F, G, S, SE, W, WV]

Symphyotrichum priceae (Britton) Nesom, Miss Price's Aster. Mt (GA): limestone glades; rare. KY south through c. TN to nw. GA and n. AL. [= FNA, K, X; = *Aster pilosus* Willdenow var. *priceae* (Britton) Cronquist – C, G, SE; < *A. pilosus* var. *pringlei* – F; < *A. pilosus* – W; = *A. priceae* Britton]

Symphyotrichum puniceum (Linnaeus) Löve & Löve var. ***puniceum***, Purple-stem Aster, Swamp Aster. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, NC, VA): bogs, seeps, ditches, wet meadows; common (rare in Coastal Plain south of VA). September-October. NL (Newfoundland) and NL (Labrador) west to BC, south to GA, AL, MO, and SD. Unresolved material from Grayson County mafic seeps. [= K, X; < *Aster puniceus* Linnaeus – RAB, C, GW, S, SE, W; > *A. puniceus* var. *puniceus* – F, WV; > *A. puniceus* var. *compactus* Fernald – F; = *A. puniceus* var. *puniceus* – G; *? A. conduplicatus* E.S. Burgess – S]

Symphyotrichum racemosum (Elliott) Nesom *var.* ***racemosum***, Small White Aster. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (VA, WV): bottomlands, marshes; common. ME south to n. FL, west to TX, and inland to OH, IN, IL, MO, and OK. [= K, X; = *Aster vimineus* Lamarck – RAB, G, GW, SE, W, misapplied; < *A. racemosus* – C; > *A. vimineus* var. *vimineus* – F, misapplied; > *A. racemosus* – F; < *S. racemosum* – FNA; > *A. brachypholis* Small – S]

Symphyotrichum racemosum (Elliott) Nesom *var.* ***subdumosum*** (Wiegand) Nesom. Mt (WV), {in e. WV and apparently through our area judging from F} [= X; < *Aster racemosus* Elliott – C; = *A. vimineus* Lamarck var. *subdumosus* Wiegand – F; < *S. racemosum* – FNA; = *A. fragilis* Willdenow var. *subdumosus* (Wiegand) A.G. Jones, misapplied]

Symphyotrichum retroflexum (A.P. de Candolle) Nesom. Mt (GA, NC, SC): forests; common. Late August-October. W. NC and e. TN south to nw. SC and n. GA. [= FNA, K, X; = *Aster curtisii* Torrey & A. Gray – RAB, S, SE, W; = *A. retroflexus* Lindley ex A.P. de Candolle – C]

Symphyotrichum rhiannon Weakley & Govus, Buck Creek Aster, Rhiannon's Aster. Mt (NC): ultramafic outcrop barren; rare. October-November. Endemic (as far as is known) to the Buck Creek Serpentine Barren, Clay County, NC. Showing some similarities to *S. puniceum* and *S. prenanthoides*, but unique in many characters and not seemingly intermediate. See Kauffman et al. (2004) for additional information. [= FNA]

Symphyotrichum ×schistosum (Steele) Nesom [*S. cordifolium* × *laeve* var. *laeve*], Millboro Aster. Mt (VA): rare. [= K, X; = *Aster ×schistosus* Steele (pro sp.); = *A. schistosus* Steele]

Symphyotrichum shortii (Lindley) Nesom, Midwestern Blue Heart-leaved Aster, Short's Aster. Pd (GA, VA), Mt (GA, NC, WV), Cp (FL): dry, rocky slopes, calcareous hammocks (in FL); uncommon (rare in FL, GA, NC, and VA). PA, s. ON, and MN, south to w. NC, c. GA, Panhandle FL (Gadsden and Jackson counties), MS, and AR. The lower stem leaves are indeed reminiscent of the leaves of *Asplenium rhizophyllum* (formerly known as *Camptosorus*), explaining one of Small's names for this species. [= FNA, K, X; = *Aster shortii* Lindley – C, F, G, SE, WV; > *A. shortii* – S; > *A. camptosorus* Small – S]

Symphyotrichum simmondsii (Small) Nesom. Cp (FL, GA, NC, SC), Pd (SC): ditches, other wet places, uncommon? Se. NC south to s. FL. [= K, X; < *S. simmondsii* – FNA, WH (also see *S. kralii*); = *Aster simmondsii* Small; ? *A. pinifolius* Small]

* ***Symphyotrichum squamatum*** (Sprengel) Nesom, South American Salt-marsh Aster. Cp (FL): disturbed areas (on ballast), escaped to coastal marshes and dunes; rare, native of South America. AL (Mobile County), FL (Escambia County), LA, TX. [= K, V, WH, X; = *S. subulatum* (Linnaeus) Nesom var. *squamatum* (Sprengel) S.D. Sundberg – FNA, Q; < *Aster subulatus* Michaux var. *cubensis* – SE; *? Aster subulatus* Michaux var. *australis* (A. Gray) Shinners]

Symphyotrichum subulatum (Michaux) Nesom, Eastern Salt-marsh Aster. Cp (DE, FL, GA, NC, SC, VA): tidal marshes; common. September-November. S. ME south to ne. FL, Panhandle FL, west to LA. See Sundberg (2004). [= K, V, WH, X; = *Aster subulatus* Michaux var. *subulatus* – C, SE; < *A. subulatus* – RAB, GW; = *S. subulatum* var. *subulatum* – FNA, Q; > *A. subulatus* var. *subulatus* – F, G; > *A. subulatus* var. *obtusifolius* Fernald – F, G; > *A. subulatus* Michaux var. *euroauster* Fernald & Griscom – F]

Symphyotrichum tenuifolium (Linnaeus) Nesom, Perennial Salt-marsh Aster. Cp (DE, FL, GA, NC, SC, VA): brackish marshes; common. July-November. ME south to c. peninsular FL, west to TX. See Sundberg (2004). [= K, V, WH, X; = *Aster tenuifolius* Linnaeus – RAB, C, G, GW, SE; = *Symphyotrichum tenuifolium* var. *tenuifolium* – FNA, Q]

Symphyotrichum undulatum (Linnaeus) Nesom. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): dry forests, woodlands, roadbanks; common. August-November. NS west to s. ON, south to c. peninsular FL and LA. [= FNA, K, WH, X; = *Aster undulatus* Linnaeus – RAB, C, G, SE, W; > *A. undulatus* var. *undulatus* – F, WV; > *A. undulatus* var. *loriformis* E.S. Burgess – F, WV; > *A. undulatus* var. *diversifolius* (Michaux) A. Gray – F; > *A. asperifolius* E.S. Burgess – S; > *A. linguiformis* E.S. Burgess – S; > *A. loriformis* (E.S. Burgess) E.S. Burgess – S; > *A. mohrii* E.S. Burgess – S; > *A. claviger* E.S. Burgess – S; > *A. corrigiatus* E.S. Burgess – S; > *A. gracilescens* E.S. Burgess – S; > *A. proteus* E.S. Burgess – S; > *A. sylvestris* E.S. Burgess – S; > *A. triangularis* (E.S. Burgess) E.S. Burgess – S; > *A. truellius* E.S. Burgess – S*; > A. undulatus* – S; > *A. undulatus* Linnaeus *var. asperulus* (Torrey & A. Gray) Wood]

Symphyotrichum urophyllum (Lindley in A.P. de Candolle) Nesom, White Arrowleaf Aster. {confused} Mt (VA), Pd (NC, SC), Cp (FL, NC, SC), {GA, VA} Late August-October. ME west to MN and NE, south to e. Panhandle FL, MS, and OK. [= FNA, K, WH, X; = *Aster sagittifolius* Wedemeyer ex Willdenow – RAB, C, G, S, SE, W; = *A. sagittifolius var. sagittifolius* – F; = *A. urophyllus* Lindley in A.P. de Candolle]

Symphyotrichum walteri (Alexander) Nesom. Cp (FL, GA, NC, SC): sandhills, pine flatwoods; common. E. NC south to c. peninsular FL. [= FNA, K, WH, X; = *Aster walteri* Alexander – S, SE; = *A. squarrosus* Walter – RAB (the name preoccupied); = *Virgulus walteri* (Alexander) Reveal & Keener]

Symphyotrichum drummondii (Lindley) Nesom var. *texanum* (E.S. Burgess) Nesom. East to MS, AL, and KY. [= FNA, K; = *Aster texanus* Burgess – C, G, SE; = *Aster drummondii* Lindley var. *texanus* (E.S. Burgess) A.G. Jones; = ***Symphyotrichum texanum*** (E.S. Burgess) Semple] {synonymy incomplete}

Symphyotrichum kralii Nesom. Cp (FL): East Gulf Coastal Plain of AL and FL. See Nesom (1997); the name *A. pinifolius* is illegitimate. [= K; = *Aster pinifolius* Alexander in Small – S, name illegitimate; < *S. simmondsii* (Small) Nesom – FNA, WH; < *Aster dumosus* – SE]

Symphyotrichum lateriflorum (Linnaeus) Löve & Löve var. *angustifolium* (Wiegand) Nesom. South to KY and NJ (Kartesz (1999). [= K, X; < *S. lateriflorum* – FNA] {add to synonymy}

Symphyotrichum lateriflorum (Linnaeus) Löve & Löve *var.* ***spatelliforme*** (E.S. Burgess) Nesom. Cp (FL): [= X; < *S. lateriflorum* – FNA, WH; = *Aster spatelliformis* E.S. Burgess]

Symphyotrichum longifolium (Lamarck) Nesom. Cp (SC): [= X; = *A. longifolius* Lamarck]

Symphyotrichum patens (Aiton) Nesom var. *gracile* (Hooker) Nesom. Var. *gracile*, as defined more narrowly by Z, ranges east to se. LA, s. MS, and s. AL from a core range in LA, e. and c. TX, and OK. [= FNA, K; < *A. patens* Aiton var. *gracilis* Hooker – C, F, G, SE; = *A. patens* var. *gracilis* – Z]

Symphyotrichum patens (Aiton) Nesom var. *patentissimum* (Lindley ex de Candolle) Nesom. Var. *patentissimum* is largely Ozarkian, east to w. KY and w. MS. [= FNA, K; = *Aster patens* Aiton var. *patentissimus* (Lindley) Torrey & A. Gray – C, F, G, SE, Z]

Symphyotrichum praealtum (Poiret) Nesom var. *subasperum* (Lindley) Nesom. KY, IN, IL, MO, and OK south to AL and TX. [= K; < *S. praealtum* – FNA]

Symphyotrichum puniceum (Linnaeus) Löve & Löve var. *scabricaule* (Shinners) Nesom. Pineland seepage bogs. AL, MS, LA, TX. [= FNA, K; < *Aster puniceus* Linnaeus – C, GW, S, SE, W]

Symphyotrichum sericeum (Ventenat) Nesom, Western Silvery Aster. See Jones, Witsell, & Nesom (2008); all reports of this species east of the Mississippi River and south of the Ohio River are based on misidentifications (or a taxonomically broader application of) *S. pratense*. [= FNA, K, X; = *Aster sericeus* Ventenat – G, S; < *A. sericeus* Ventenat – C, F, SE; = *Virgulus sericeus* (Ventenat) Reveal & Keener]

Synedrella Gaertner 1791 (Nodeweed)

A monotypic genus, an annual herb, native of tropical America. References: Strother in FNA (2006c).

* ***Synedrella nodiflora*** (Linnaeus) Gaertner, Nodeweed. Cp (FL): moist to wet disturbed areas (on ballast); rare (not collected since the late 1800s), native of tropical America. January-December. [= FNA, S, SE, WH]

Tagetes Linnaeus 1753 (Marigold)

A genus of about 40-50 species, of tropical and warm temperate America. References: Strother in FNA (2006c); Cronquist (1980)=SE.

1 Rays inconspicuous, ca. 1-2 mm long; [plant a well-established weed, primarily in the Coastal Plain]..... ***T. minuta***
1 Rays showy, mostly > 10 mm long; [plant cultivated, rarely occurring as a waif].
2 Peduncles conspicuously swollen and hollow below the flower; involucre 15-20 mm high; achenes 7-10 mm long ..... ***T. erecta***
2 Peduncles not conspicuously swollen and hollow below the flower; involucre 10-15 mm high; achenes 4-7 mm long..... ***T. patula***

* ***Tagetes erecta*** Linnaeus, Common Marigold, African Marigold, Aztec Marigold, Big Marigold. Cp (FL, GA, NC, SC, VA), Pd (NC, SC, VA), Mt (NC, SC, VA): commonly cultivated, rarely persistent or as a waif, native of Mexico. July-November. [= RAB, C, F, G, K, S, SE, WH; < *T. erecta* – FNA]
* ***Tagetes minuta*** Linnaeus, Muster John Henry. Cp (FL, GA, NC, SC, VA), Pd (GA, SC): sandy fields, pecan orchards, sandy roadsides; common (rare in FL), native of South America. Late September-November. [= RAB, C, F, FNA, G, K, S, SE, WH]
* ***Tagetes patula*** Linnaeus, French Marigold. Mt (VA), Pd (NC, SC), Cp (NC, SC, VA): commonly cultivated, rarely persistent or as a waif, native of Mexico. July-November. [= RAB, C, G, K, SE; < *T. erecta* – FNA]

Tanacetum Linnaeus 1753 (Tansy)

A genus of about 150 species, herbs, of north temperate regions, especially the Old World. References: Watson in FNA (2006a); Cronquist (1980)=SE; Arriagada & Miller (1997)=Z.

1 Leaves simple, crenate (sometimes with a few basal lobes)..... ***T. balsamita***
1 Leaves 1-3-pinnatifid.
2 Rays present, white; leaf blades 4-10 cm long, 1-2-pinnate (with 3-5 pairs of primary lobes) ..... ***T. parthenium***
2 Rays absent; leaf blades 8-20 cm long, 2-3-pinnate (with 4-20+ pairs of primary lobes)..... ***T. vulgare***

* ***Tanacetum balsamita*** Linnaeus, Costmary. Cp (DE): disturbed areas, rare, native of Mediterranean Europe. Introduced south to PA (Rhoads & Klein 1993), MD (Kartesz 1999), and DE (Kartesz 1999). August-September. [= FNA; = *Chrysanthemum balsamita* (Linnaeus) Baillon – C; = *Balsamita major* Desfontaines – K]
* ***Tanacetum parthenium*** (Linnaeus) Schultz 'Bipontinus', Feverfew. Cp (DE, SC), Pd (DE, NC), Mt (WV): disturbed areas; rare, native of Europe. June-September. [= FNA, K, Z; = *Chrysanthemum parthenium* (Linnaeus) Bernhardi – RAB, C, F, G, SE, WV; = *Matricaria parthenium* Linnaeus – S]
* ***Tanacetum vulgare*** Linnaeus, Common Tansy, Golden-buttons. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE, VA), {GA}: uncommon, native of Eurasia. August-October. [= RAB, C, F, FNA, G, K, S, SE, W, WV, Z]

Taraxacum G.H. Weber ex Wiggers 1780 (Dandelion)

A genus of about 60 species (or as many as 2000 if apomictic microspecies are recognized), herbs, of boreal and temperate regions. There seems little utility in trying to reconcile the numerous European microspecies against our introduced material. References: Brouillet in FNA (2006a); Cronquist (1980)=SE.

1 Cypselas reddish or purplish at maturity; leaves usually deeply cut throughout their length, the lobes narrow..... ***T. erythrospermum***
1 Cypselas brown or tan at maturity; leaves less deeply cut, particularly toward the base ..... ***T. officinale***

* ***Taraxacum erythrospermum*** Andrzejowski ex Besser, Redseeded Dandelion. Mt (GA, NC, VA, WV), Pd (DE, GA, NC, VA), Cp (DE, NC, SC, VA): roadsides, lawns, pastures, other disturbed sites; uncommon, native of Eurasia. January-December. Brouillet in FNA explains the nomenclatural and taxonomic complexities involved with the various names applied, and the reason for retaining *T. erythrospermum* at this time. [= RAB, F, FNA, WV; >< *T. laevigatum* (Willdenow) de Candolle – C, G, K, SE, W; >< *Leontodon erythrospermum* (Andrzejowski) von Eichwald – S]
* ***Taraxacum officinale*** G.H. Weber ex Wiggers, Common Dandelion. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): lawns, roadsides, urban areas, pastures, disturbed areas, trailsides, less commonly in a variety of less disturbed habitats; common, native of Eurasia. January-December. [= RAB, C, FNA, G, SE, W, WH, WV; > *T. officinale* var. *officinale* – F; > *T. officinale* ssp. *officinale* – K; = *Leontodon taraxacum* Linnaeus – S]

Tetragonotheca Linnaeus 1753 (Squarehead)

A genus of 4 species, herbs, endemic to se. North America. The other three species in the genus occur in LA, TX, and adjacent Mexico. References: Strother in FNA (2006c); Turner & Dawson (1980)=Z; Cronquist (1980)=SE.

Tetragonotheca helianthoides Linnaeus, Squarehead, Pineland-ginseng. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC): sandhills, sandy woodlands, open hammocks, roadsides; common (uncommon in NC, rare in VA). April-July. Se. VA and e. TN south to c. peninsular FL and s. MS. [= RAB, C, F, FNA, G, K, S, SE, W, WH, Z]

Tetraneuris E.L. Greene 1898 (Bitterweed)

A genus of about 9 species, herbs, of North America. References: Bierner & Turner in FNA (2006c).

* ***Tetraneuris linearifolia*** (Hooker) Greene *var.* ***linearifolia***. Cp (SC): waste area near wool-combing mill; rare, perhaps merely a waif, native of sc. United States. See Nesom (2004d). [= FNA, K; *? Hymenoxys linearifolia* Hooker]

Thelesperma Lessing 1831

A genus of 10 or more species, of c. and w. North America, Mexico, and South America. References: Strother in FNA (2006c).

Thelesperma filifolium (Hooker) A. Gray. MS. Prairies, glades, and roadsides over calcareous substrates. MO, SD, and WY south LA, TX, Nuevo Léon, and NM; disjunct eastward in the Black Belt of MS and on a chalk bluff in Sumter County, wc. AL (Keener (2009). [= FNA; > *Th. filifolium* var. *filifolium* – SE]

Thymophylla Lagasca y Segura 1816

A genus of about 13 species, herbs and shrubs, of sw. and sc. United States and Mexico. References: Strother in FNA (2006c).

* ***Thymophylla tenuiloba*** (A.P. de Candolle) Small *var.* ***tenuiloba***, Dahlberg Daisy, Golden-fleece Cp (FL, SC): dry, disturbed areas, waste areas near wool-combing mills; rare, native of sc. United States. Also known as a naturalized introduction in AL and MS (Nesom 2004d, FNA). [= FNA, K; < *T. tenuiloba* – S, WH; = *Dyssodia tenuiloba* (A.P. de Candolle) B.L. Robinson var. *tenuiloba* – SE]

Tithonia Desfontaines ex Jussieu 1789 (Sunflowerweed)

A genus of about 11 species, herbs, shrubs, and rarely trees, of sw. United States, Mexico, and Central America. References: La Duke in FNA (2006c).

* ***Tithonia rotundifolia*** (Miller) S.F. Blake, Clavel de Muerto. Cp (FL): disturbed areas; rare, native of Mexico. November-January. Also reported for Orleans Parish, LA. [= FNA, K, WH]

Tragopogon Linnaeus 1753 (Goat's-beard)

A genus of about 110 species, herbs, of temperate Eurasia and the Mediterranean region. References: P. Soltis in FNA (2006a); Voss (1996); Cronquist (1980)=SE.

1 Flowers purple; pappus brownish ..... ***T. porrifolius***
1 Flowers yellow; pappus dingy white.
  2 Peduncle obviously swollen below the flower and fruit; margins of the phyllaries green (or pale); leaf tips straight; rays pale yellow, obviously shorter than the longest phyllaries ..... ***T. dubius***
  2 Peduncle only slightly swollen below the flower and fruit; margins of the phyllaries reddish purple (rarely green); leaf tips more or less curled or curved; rays bright yellow, as long as or longer than the phyllaries ..... ***T. pratensis***

* ***Tragopogon dubius*** Scopoli, Goat's-beard, Yellow Salsify. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): roadsides, fields, other disturbed places; common (uncommon in DE, rare in NC), native of Europe. April-July. [= RAB, C, FNA, G, K, SE, W; ? *T. major* Jacquin – F, WV]

* ***Tragopogon porrifolius*** Linnaeus, Salsify, Vegetable-oyster, Purple Goat's-beard. Mt (NC, VA, WV), Pd (DE, GA, NC, VA), Cp (DE): roadsides, fields; uncommon (rare in GA, NC, and VA), native of Europe. Late April-July. [= RAB, C, F, FNA, G, K, S, SE, W, WV]

* ***Tragopogon pratensis*** Linnaeus, Showy Goat's-beard, Yellow Goat's-beard, Meadow Salsify, Jack-go-to-bed-at-noon. Mt (VA, WV), Pd (DE, VA), Cp (DE), {GA?, NC?}: roadsides, fields; uncommon (rare in VA), native of Europe. April-August. Also reported for NC and GA in FNA. [= C, F, FNA, G, K, S, SE, W, WV]

Tridax Linnaeus 1753

A genus of about 26 species, herbs, mainly of the New World tropics. References: Strother in FNA (2006c); Powell (1965)=Z.

* ***Tridax procumbens*** Linnaeus. Cp (FL): disturbed areas; rare, native of Mexico, Central America, and n. South America. January-December. [= FNA, SE, WH, S, Z]

Trilisa Cassini 1820 (Trilisa)

A genus of 2 species, perennial herbs, endemic to the Southeastern Coastal Plain of North America. The name is an anagram of *Liatris*, as is *Litrisa*, of peninsular FL. Schilling (2011) shows that *Trilisa* and *Litrisa* should be separated from *Carphephorus*. References: Schilling (2011); Nesom in FNA (2006c); Schilling (2011)=V; Correa & Wilbur (1969)=Z; DeLaney, Bissett, & Weidenhamer (1999)=Y; Orzell & Bridges (2002)=X; Cronquist (1980)=SE.

Identification notes: *Trilisa* can be distinguished from *Carphephorus* by its smaller heads (involucres 3.5-6 mm high vs. 6-15 mm high) and fewer phyllaries (6-12 vs. 15-40). When vegetative, *Trilisa* lacks shining resin dots on the leaves, while *Carphephorus* has numerous resin dots.

1 Stem glabrous; capitulescence corymbose, the lateral branches equally or overtopping the central ones; leaves 1-6 (-11) cm wide..... ***T. odoratissima***
1 Stem densely spreading-pubescent; capitulescence a cylindrical panicle; leaves (0.5-) 1-3 (-4) cm wide ..... ***T. paniculata***

Trilisa odoratissima, Deer's-tongue, Vanilla-leaf. Cp (FL, GA, NC, SC): moist to mesic savannas and flatwoods; uncommon. Late July-October; September-November. Se. NC south to c. peninsular FL and west to e. LA. *T. odoratissima* has the largest leaves of our species of *Carphephorus* and *Trilisa*; its leaves are normally wider than 3 cm, and have a very wide and prominent midrib, usually purple toward the base of the leaf and white toward the tip. This species contains coumarin and gives off a pleasant vanilla odor when drying; it is gathered from the wild and used as a supplementary flavoring in cigarettes. See DeLaney, Bissett, & Weidenhamer (1999), Ward (2001), and Orzell & Bridges (2002) for discussion of a southern Florida taxon related to *T. odoratissima*, named (in *Carphephorus*) as a species, *Carphephorus subtropicanus* DeLaney, N. Bissett, & Weidenhamer, and later reduced in rank to a variety, *C. odoratissimus* var. *subtropicanus* (DeLaney, N. Bissett, & Weidenhamer) Wunderlin & B.F. Hansen. It is probably best treated at the varietal level, but the combination is not yet available in *Trilisa*. [= *Carphephorus odoratissimus* (J.F. Gmelin) Herbert var. *odoratissimus* – FNA, WH, X; < *Carphephorus odoratissimus* – GW, K, SE, Z; = *Carphephorus odoratissimus* – Y; < *Trilisa odoratissima* (J.F. Gmelin) Cassini – RAB, S; = *Trilisa odoratissima* var. *odoratissima* – V]

Trilisa paniculata (J.F. Gmelin) Cassini. Cp (FL, GA, NC, SC): savannas and flatwoods; common. August-October; September-November. Se. NC south to s. FL, and west to the FL Panhandle and s. AL. The leaves of this species are reminiscent of *C. odoratissimus*, but are narrower, (0.5-) 1-3 (-4) cm wide, vs. 1-6 (-11) cm wide in *C. odoratissimus*. Sterile *C. paniculatus* can be mistaken for glabrate *C. tomentosus*, which has shorter and broader leaves. [= RAB, S, V; = *Carphephorus paniculatus* (J.F. Gmelin) Herbert – FNA, GW, K, SE, WH, Y, Z]

Tripleurospermum Schultz 'Bipontinus' 1844 (Mayweed)

A genus of about 40 species, herbs, of the northern hemisphere. References: Brouillet in FNA (2006a); Arriagada & Miller (1997)=Z.

1 Stem ascending or erect; achenes with resin glands > 2× as long as wide; annual.....***[T. inodorum]***
1 Stem procumbent (rarely ascending); achenes with resin glands 1.0-1.5× as long as wide; perennial or biennial..... .....***[T. maritimum** ssp. **maritimum]***

* *Tripleurospermum inodorum* (Linnaeus) Schultz 'Bipontinus', Scentless Chamomille. Introduced at scattered locations in North America, such as AL, FL, KY, MD, and PA. [= FNA; = *T. perforata* (Mérat) M. Lainz – K, Z; ? *Matricaria maritima* Linnaeus var. *agrestis* (Knaf) Wilmott – F; = *Matricaria perforata* Mérat]

* *Tripleurospermum maritimum* (Linnaeus) W.D.J. Koch ssp. *maritimum*, Scentless Chamomille. Introduced at scattered locations in eastern North America, such as AL, PA, NJ. [= FNA; = *Matricaria maritima* Linnaeus var. *maritima* – F; = *T. maritima* ssp. *maritima* – K, orthographic variant; ? *Chamomilla maritima* (Linnaeus) Rydberg – S]

Tussilago Linnaeus 1753 (Coltsfoot)

A monotypic genus, an herb, of Eurasia and n. Africa. References: Barkley in FNA (2006b); Cronquist (1980)=SE.

* ***Tussilago farfara*** Linnaeus, Coltsfoot. Mt (NC, VA, WV), Pd (DE, NC, VA), Cp (VA): roadsides, especially gravelly or shaly roadbanks or ditches, streamside gravel bars, disturbed ground; common (uncommon in VA Piedmont and Coastal Plain, rare in DE, rare in NC Piedmont), native of Eurasia. This species has spread rapidly southward from the Northeast, where it was introduced in North America. Fernald (1950) considered its southern limit to be "New Jersey, Pennsylvania, and Ohio". Gleason (1952) extended it to WV. Strausbaugh and Core (1978) reported that the first collection in WV was actually in 1933, "migrating southward year by year, now abundant and often conspicuous along highways, on strip-mined areas and other denuded areas, in every county of the state." First reported in NC in 1971, it is now rather common in most of the mountain counties, and is beginning to appear at scattered sites in the Piedmont. Though preferring a cool and moist climate, *Tussilago* seems likely to continue to increase in abundance and to spread into the Piedmont. [= C, F, FNA, G, K, SE, W, WV]

Uropappus Nuttall 1841 (Silver-puffs)

A monotypic genus, an annual herb, of w. North America and nw. Mexico. References: Chambers in FNA (2006a).

* ***Uropappus lindleyi*** (A.P. de Candolle) Nuttall, Lindley's Silver-puff. Cp (SC): waste area near wool-combing mill; rare, perhaps merely a waif, native of sw. United States. See Nesom (2004d). [= FNA, K]

Verbesina Linnaeus 1753 (Crownbeard, Wingstem, Frostweed)

A genus of about 200-300 species, trees, shrubs, and herbs, of tropical, subtropical, and warm temperate America. References: Strother in FNA (2006c); Olsen (1979)=Z; Coleman (1966)=Y; Cronquist (1980)=SE.

1 Stem and lower leaf-surfaces grey strigose-canescent; alien annuals, 2-10 dm tall, with taproots; [section *Ximenesia*] ..... ***V. encelioides*** *var.* ***encelioides***
1 Stem and lower leaf surfaces glabrous or pubescent, but not grey strigose-canescent; native perennials, 5-40 dm tall, with fibrous or fleshy-fibrous roots.
2 Leaves primarily opposite (the uppermost sometimes alternate).
3 Internodes winged; [collectively widespread].
4 Plants 4-5 (-10) dm tall, perennating from short horizontal rhizomes; ray florets (5-) 8; disc florets 20-60+; [endemic to ne. FL and se. GA]; [section *Pterophyton*] ..... ***V. heterophylla***
4 Plants 10-30 dm tall, perennating from a crown with fleshy roots; ray florets (0-) 1-3 (-5); disc florets 8-15+; [widespread]; [section *Phaethusa*] ..... ***V. occidentalis***
3 Internodes not winged; [collectively of sw. GA, s. AL, and FL Panhandle]; [section *Pterophyton*].
5 Ray florets (5-) 11-13, yellow; heads 3-20 ..... ***V. aristata***
5 Ray florets 0; heads 1 (-3) ..... ***V. chapmanii***
2 Leaves primarily alternate (the lowermost sometimes opposite).
6 Heads few, 1-15 (-20), in a compact inflorescence; disc 7-16 mm wide at anthesis; ray florets (5-) 7-15, yellow; plants 5-12 dm tall; [section *Pterophyton*] ..... ***V. helianthoides***
6 Heads numerous, 10-200 or more, in a dense to open inflorescence; disc 3-15 mm wide at anthesis; ray florets either absent, or 1-5 and white, or 2-10 and yellow; plants 10-40 dm tall.
7 Ray florets 1-5, white; [section *Ochractinia*].
8 Lower and middle leaves pinnately lobed or dissected; achenes of ray florets glabrous; [of the outer Coastal Plain from SC southward] ..... ***V. virginica*** *var.* ***laciniata***
8 Lower and middle leaves entire, serrate, or slightly undulate; achenes of ray florets papillose or short-pubescent; [more widespread in our area] ..... ***V. virginica*** *var.* ***virginica***
7 Ray florets absent, **or** 2-10 and yellow; [section *Actinomeris*].
9 Ray florets present, 2-10, yellow; disc florets yellow ..... ***V. alternifolia***
9 Ray florets absent; disc florets white ..... ***V. walteri***

Verbesina alternifolia (Linnaeus) Britton ex Kearney, Common Wingstem. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, NC, VA): alluvial forests, marshes, floodplain pastures; common (uncommon in VA Coastal Plain, rare in DE and FL). August-September. NY and s. ON west to IA, south to Panhandle FL and LA. [= RAB, C, FNA, G, GW, K, SE, WH, WV; = *Ridan alternifolia* (Linnaeus) Britton – S]

Verbesina aristata (Elliott) Heller, Coastal Plain Crownbeard. Cp (FL, GA): longleaf pine sandhills, swamp margins, dry woodlands; rare. Sw. GA and ne. FL west to FL Panhandle and s. AL. June-August. [= FNA, K, SE, WH; = *Pterophyton aristatum* (Elliott) Alexander – S]

Verbesina chapmanii J.R. Coleman. Cp (FL): bogs and wet pine flatwoods; rare. June-August. FL Panhandle (6 county endemic). [= FNA, GW, K, SE, WH; = *Pterophyton pauciflorum* (Nuttall) Alexander – S, mispplied; *V. warei* A. Gray, misapplied]

* ***Verbesina encelioides*** (Cavanilles) Bentham & Hooker f. ex A. Gray *var.* ***encelioides***, Skunk-daisy. Cp (FL, GA, NC, SC): fields, pastures, and disturbed areas; uncommon (rare in FL), native of w. United States. May-October. [= C, SE; < *V. encelioides* – RAB, F, FNA, G, WH; = *V. encelioides* ssp. *encelioides* – K, Y; < *Ximenesia encelioides* Cavanilles – S]

Verbesina helianthoides Michaux, Ozark Crownbeard. Mt (NC), Cp? (GA?): dry woodlands over mafic rocks; rare. May-October. OH west to IA and KS, south to c. TN, nw. GA, n. AL, and nc. TX; disjunct in w. NC and e. GA. [= C, F, FNA, G, K, SE; = *Pterophyton helianthoides* (Michaux) Alexander – S]

Verbesina heterophylla (Chapman) A. Gray. Cp (FL, GA): pine flatwoods; rare. (April-) June. Ne. FL (8 counties) and se. GA (Charlton County). [= FNA, GW, K, SE, WH; = *Pterophyton heterophyllum* (Chapman) Alexander – S]

Verbesina occidentalis (Linnaeus) Walter, Southern Crownbeard. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): forests, woodlands, pastures, and roadsides, especially abundant in alluvial areas or upslope over mafic or calcareous rocks; common (uncommon in FL). MD west to OH and MO, south to Panhandle FL and MS. [= RAB, C, F, FNA, G, GW, K, SE, WH, WV; = *Phaethusa occidentalis* (Linnaeus) Britton – S]

Verbesina virginica Linnaeus *var.* ***laciniata*** (Poiret) A. Gray, Southern Frostweed. Cp (FL, GA, NC?, SC): moist forests and thickets; rare. September-October. E. SC (or e. NC?) south to s. FL. Olsen (1979) maps this variety as occurring in e. NC; I know of no documentation. The two varieties need additional study; specific status may be warranted. [= RAB, GW, K, SE, Z, WH; < *V. virginica* – FNA; = *Phaethusa laciniata* (Poiret) Small – S; = *V. laciniata* (Poiret) Nuttall]

Verbesina virginica Linnaeus *var.* ***virginica***, Common Frostweed. Mt (CA, NC, SC, VA), Pd (GA, NC, SC), Cp (FL, GA, SC, VA): moist to dryish forests, especially over mafic or calcareous rocks, in Coastal Plain ravines in VA over coquina limestone; uncommon (rare in VA). July-October. Sc. NC (e. VA?) west to e. KS, south to s. FL and c. TX. Populations of *V. virginica* from e. VA appear to be substantially disjunct from other populations of either variety. [= RAB, C, GW, K, SE, Z; < *V. virginica* – F, FNA, G, WH; = *Phaethusa virginica* (Linnaeus) Britton – S]

Verbesina walteri Shinners, Walter's Wingstem. Cp (GA, SC), Pd (NC): floodplains, low moist forests; rare (NC Watch List). Late August-September. Coastal Plain of SC south to GA, west to LA; disjunct in Piedmont of NC and Ouachita Mountains of AR. [= RAB, FNA, GW, K, SE; = *Ridan paniculata* (Walter) Small – S]

Vernonia Schreber 1791 (Ironweed)

A genus of about 20 species, perennial herbs, of e. and c. North America and n. Mexico; a few species in South America. Tradititionally very broadly circumscribed to include about 500 species, trees, shrubs, and herbs, of tropical, subtropical, and warm temperate regions, especially America and Africa; this broader circumscription appears increasinglyt indefensible. References: Strother in FNA (2006a); Jones (1982)=Z; Urbatsch (1972)=Y; Jones in Cronquist (1980)=SE. Key based on FNA and SE.

Identification notes: Hybrids are frequent between co-occurring species. Only *V.* ×*georgiana* is keyed separately below (because of its distinctive appearance). Others may be recognized by intermediate morphology and ecological / geographic context.

1 Basal rosette present, its leaves larger than those of the stem; [of xeric habitats of the Coastal Plain and (in NC southward) xeric rocky habitats of the Piedmont].
2 Phyllary tips acute to rounded (sometimes minutely apiculate), the narrowest short acuminate; [from s. MS westward] ..... ***[V. texana]***
2 Phyllary tips subulate to filiform, the broadest long-acuminate.
3 Basal leaves 2-10 cm wide; stem leaves few, abruptly reduced upward in size relative to the basal..... ***V. acaulis***
3 Basal leaves 0.5-2.5 cm wide; stem leaves relatively many, gradually reduced upward..... ***V. ×georgiana***
1 Basal rosette absent; [collectively of a wide variety of habitats].
4 Phyllary tips subulate to filiform, the broadest long-acuminate.
5 Involucres 11-15 mm in diameter; phyllaries (50-) 60-70+; florets 50-100+ ..... ***V. arkansana***
5 Involucres 4-8 (-10) mm in diameter; phyllaries 22-46 (-60+); florets 12-45 (-65).
6 Middle cauline leaves 1.2-7.5 cm wide; plants 4-35 dm tall; [of various habitats, but not typically in Coastal Plain pinelands].
7 Pappus whitish to yellowish, 30 outer bristles intergrading with 30+ inner bristles; leaf blades 2.5-3.5 (-4)× as long as wide ..... ***V. glauca***
7 Pappus brown to purple, 20 outer scales contrasting with 30-40+ inner bristles; leaf blades (3.3-) 4-6× as long as wide..... ***V. noveboracensis***
6 Middle cauline leaves 0.1-1.8 cm wide; plants 3-11 dm tall; [of Coastal Plain pinelands].
8 Leaves 3-7 cm long, (5-) 10-20+ mm wide, 2.5-6× as long as wide, somewhat auriculate at the base ..... ***V. pulchella***
8 Leaves 5-12 cm long, 2-4 (-8+) mm wide, (8-) 12-50× as long as wide, attenuate at the base.
9 Tips of the inner phyllaries long-acuminate, 1.4-4.8 mm long..... ***V. angustifolia*** *var.* ***scaberrima***
9 Tips of the inner phyllaries acuminate, 0.1-1.0 mm long ..... ***V. angustifolia*** *var.* ***angustifolia***
4 Phyllary tips acute to rounded (sometimes minutely apiculate), the narrowest short acuminate.
10 Leaves 2-4 (-8+) mm wide, (8-) 12-50× as long as wide.
11 Heads 16-19-flowered; phyllary tips acuminate ..... ***V. angustifolia*** *var.* ***angustifolia***
11 Heads 8-15-flowered; phyllary tips acute..... ***V. angustifolia*** *var.* ***mohrii***
10 Leaves 5-70 mm wide, 2-9 (-17)× as long as wide.
12 Undersurface of leaf glabrous or nearly so, with pits (best seen at > 10× magnification) containing awl-shaped hairs or glands..... ***[V. fasciculata*** *var.* ***fasciculata]***
12 Undersurface of leaves conspicuously scabrous or pubescent, lacking pits.
13 Stems glabrous ..... ***V. flaccidifolia***
13 Stems hairy.
14 Leaf undersurfaces scabrous with appressed awl-shaped hairs, with few or no resin glands.
15 Heads with 13-30 flowers; leaf blades linear-lanceolate, 10-30 cm long, 1.2-7.5 cm wide, 4-10× as long as wide ..... ***V. gigantea***
15 Heads with 9-20 flowers; leaf blades elliptic to oblanceolate, 6-20 cm long, 1.2-5 cm wide, 3-5× as long as wide.....

.....***V. ovalifolia***
14 Leaf undersurfaces with curled, erect hairs, and with conspicuous resin glands.
16 Heads with (15-) 20-25 (-35) florets; involucres 4-6.7 mm high, 4-7 mm across ..... ***[V. baldwinii** var. **baldwinii]***
16 Heads with 30-55 florets; involucres (6-) 7-10 mm high, 5-9 mm across ..... ***V. missurica***

Vernonia acaulis (Walter) Gleason. Cp, Pd (GA, NC, SC): sandhills, dry rocky woodlands, bluffs, and barrens; common. Late June-August; August-October. Coastal Plain and lower Piedmont of ne. and nc. NC south to sc. GA. [= RAB, FNA, K, S, SE]

Vernonia angustifolia Michaux *var.* ***angustifolia***. Cp (GA, NC, SC), Mt? (NC): sandhills; common. Late June-early September; September-October. Se. NC south to GA. [= RAB; < *V. angustifolia* – FNA, S; = *V. angustifolia* ssp. *angustifolia* – K, SE]

Vernonia angustifolia Michaux *var.* ***mohrii*** S.B. Jones. Cp (FL, GA): sandhills; uncommon? Sw. GA and Panhandle FL west to s. AL and s. MS. [< *V. angustifolia* Michaux – FNA, S, WH; = *V. angustifolia* ssp. *mohrii* (S.B. Jones) S.B. Jones & Faust – K, SE]

Vernonia texana (A. Gray) Small, Texas Ironweed. S. MS west to OK and TX. [= FNA, K, S, SE]

Vittadinia A. Richard 1832

* ***Vittadinia sulcata*** N. Burbidge. Cp (SC): waste area near wool-combing mill; rare, perhaps merely a waif, native of sw. Australia. See Nesom (2004d).

Xanthium Linnaeus 1753 (Cocklebur)

A genus of about 3 species, herbs, cosmopolitan (of somewhat uncertain original distribution). References: Strother in FNA (2006c); Cronquist (1980)=SE.

1 Leaves lanceolate, 2-5× as long as wide, cuneate at the base; leaf axil with a 1-3 cm long yellow 3-forked spine .....***X. spinosum***
1 Leaves ovate or orbicular, 0.8-1.5× as long as wide, cordate at the base; leaf axil lacking spines .....***X. strumarium***

* ***Xanthium spinosum*** Linnaeus, Spiny Cocklebur. Mt (VA, WV), Cp (DE, NC, SC), Pd (DE, GA, VA): fields, disturbed ground; uncommon (rare in GA, NC, SC, VA, and WV), introduced, but the native distribution unknown. July-November. [= RAB, C, FNA, K, SE, WV; > *X. spinosum* var. *spinosum* – F; > *X. spinosum* var. *inerme* Bel – F; > *X. ambrosioides* Hooker & Arnott – F; = *Acanthoxanthium spinosum* (Linnaeus) Fourreau – S]

Xanthium strumarium Linnaeus, Cocklebur. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): disturbed ground, roadsides, pastures, barnyards, beaches; common. July-November. Nearly cosmopolitan, its original distribution unclear, but probably native to the New World. Various taxa have been recognized (see synonymy); it is unclear that any are usefully distinguished. The most commonly followed recent treatment is that by Cronquist, recognizing two varieties in eastern North America: var. *canadense*, with burs 2-3.5 cm long, the prickles of the bur with spreading hairs and stipitate glands toward the prickle bases, and var. *glabratum* (A.P. de Candolle) Cronquist, with burs 1.5-2 cm long, the prickles of the bur nearly glabrous or with short glandular or nonglandular puberulence toward the prickle bases. [= FNA, GW; > *X. strumarium* var. *glabratum* (A.P. de Candolle) Cronquist – RAB, C, G, K, SE, W, WH; > *X. strumarium* var. *strumarium* – RAB, misapplied; > *X. strumarium* var. *canadense* (P. Miller) Torrey & A. Gray – C, G, K, SE, W, WH; > *X. chinense* P. Youngia Cassini 1831(Youngia)

A genus of about 30-40 species, herbs, of Asia. References: Spurr in FNA (2006a); Cronquist (1980)=SE.

* ***Youngia japonica*** (Linnaeus) A.P. de Candolle, Asiatic Hawk's-beard, Youngia. Cp (FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC): roadsides, disturbed areas, trail edges; uncommon, native of se. Asia. Spreading rapidly in our area, and now moving into minimally-disturbed natural areas. [= C, FNA, K, SE, WH; = *Crepis japonica* (Linnaeus) Bentham – RAB, F, G, S; > *Y. japonica* ssp. *japonica*]

Zinnia Linnaeus 1759 (Zinnia)

A genus of about 17 species, herbs, of sw. North America south to South America. References: Smith in FNA (2006c); Cronquist (1980)=SE.

1 Achenes wingless; receptacular bracts (chaff) toothed or erose on the lip ..... ***Z. peruviana***
1 Achenes winged; receptacular bracts (chaff) with a differentiated fimbriate lip ..... ***Z. violacea***

* ***Zinnia peruviana*** (Linnaeus) Linnaeus, Peruvian Zinnia. Cp (FL, GA, NC, SC): disturbed areas; rare (commonly cultivated), native of the New World tropics. May-November. [= FNA, K, SE, WH; *? Z. pauciflora* Linnaeus – S]
* ***Zinnia violacea*** Cavanilles, Garden Zinnia, Elegant Zinnia. Cp (FL, GA, NC, SC): disturbed areas; rare (commonly cultivated), native of the New World tropics. May-November. [= FNA, K, WH; = *Z. elegans* Jacquin – S, SE]

405. ADOXACEAE Trautvetter 1853 (Moschatel Family) [in DIPSACALES]

A family of about 4 genera and about 165-200 species, shrubs, small trees, and herbs (here interpreted as including *Sambucus* and *Viburnum*). There now appears to be little doubt that *Sambucus* and *Viburnum* are more naturally placed in the Adoxaceae, in contrast to their traditional placement in the Caprifoliaceae (Zhang et al. 2003, Eriksson & Donoghue 1997). References: Ferguson (1966a).

1 Leaves pinnately compound; fruit 3-5-seeded ..... ***Sambucus***
1 Leaves simple; fruit 1-seeded ..... ***Viburnum***

Sambucus Linnaeus 1753 (Elderberry)

A genus of about 9 species of shrubs and small trees, north temperate and subtropical. References: Bolli (1994)=Z; Ferguson (1966a)=Y.

1 Inflorescence racemose, normally longer than broad; fruits red when ripe; pith of stems and second-year branches brown; leaves with 5-7 leaflets, these never further divided; foliage and young twigs puberulent; [primarily of the Mountains, extending into the Piedmont in VA] ..... ***S. racemosa*** *var.* ***pubens***
1 Inflorescence cymose, normally broader than long; fruits black or deep purple when ripe; pith of stems and second-year branches white; leaves with 5-11 leaflets, the lower leaflets sometimes further divided; foliage and young twigs glabrous or with trichomes mostly limited to the veins of the leaves; [collectively widespread].
  2 Fruits purplish black, 4-6 mm in diameter; plant a shrub to small tree (usually multi-stemmed from the base); [common, widespread, and native] ..... ***S. canadensis***
  2 Fruits black, 6-8 mm in diameter; plant a small tree; [rare, restricted, and alien] ..... ***S. nigra***

Sambucus canadensis Linnaeus, Common Elderberry. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): streambanks, thickets, moist forests, disturbed areas; common. Late April-July; July-August. NS west to MB, south to s. FL, TX, Mexico; West Indies. The leaflets, particularly of young shoots or stunted sprouts, are often variegated. This is one of the first woody plants to leaf out in the spring. Bolli (1994) treats this taxon as a subspecies of a

broadly defined *S. nigra*. He recognizes 6 subspecies: ssp. *nigra* in Europe, ssp. *palmensis* (Link) R. Bolli in the Canary Islands, ssp. *maderensis* (Lowe) R. Bolli in Madeira Island, ssp. *canadensis* in eastern North America, Mexico, Central America, and the West Indies, ssp. *cerulea* (Rafinesque) R. Bolli of western North America, and ssp. *peruviana* (Humboldt, Bonplandt, and Kunth) R. Bolli of South America. I prefer to retain these taxa at the species level, particularly as Bolli states "the geographical races, in the following defined as subspecies, turned out to be the biological units in *Sambucus*." Bolli further discusses 3 races within what is here called *S. canadensis* (his *S. nigra ssp. canadensis*), one from eastern North America, another from montane Mexico and Central America, and a third from subtropical se. North America and the West Indies; he considers these geographic races to represent "morphological and perhaps genetical" differences, and that "at present, all races are probably interconnected." This variation may be worthy of taxonomic recognition at the varietal level, and these "races" have formerly been considered to be species or varieties. Plants of most of our area represent *S. canadensis* var. *canadensis*, while evergreen (or tardily deciduous), bipinnate plants of FL, s. GA, s. AL, s. MS, s. LA, se. TX, and the West Indies represent *S. canadensis* var. *laciniata* A. Gray. [= RAB, C, GW, W, WV, Y; > *S. canadensis* var. *canadensis* – F, G; > *S. canadensis* var. *submollis* Rehder – F, G; = *S. nigra* Linnaeus ssp. *canadensis* (Linnaeus) R. Bolli – K, WH, Z; > *S. canadensis* – S; > *S. simpsonii* Rehder ex Sargent – S; > *Sambucus canadensis* Linnaeus var. *laciniata* A. Gray]

* ***Sambucus nigra*** Linnaeus, European Elder. Pd (VA): disturbed areas, uncommonly cultivated; rare, native of Europe. Reported for Petersburg, Dinwiddie County, VA by Fernald (1941). [= C, F, G; = *S. nigra* ssp. *nigra* – K, Z]

Sambucus racemosa Linnaeus *var.* ***pubens*** (Michaux) Koehne, Red Elderberry. Mt (GA, NC, VA, WV), Pd (VA): spruce-fir and northern hardwood forests, especially typical on boulderfield, talus, and other rocky situations, primarily at high elevations in the Mountains, though sometimes descending in our area (mainly in VA) to low elevations (as low as 75 m); uncommon (rare in VA Piedmont). Late April-early June; late June-August. As interpreted here, *S. racemosa* is an interruptedly circumboreal species, represented in ne. North America by var. *pubens*, in n. Europe by var. *racemosa*, and in ne. Asia and nw. North America by several additional varieties. *S. racemosa var. pubens* ranges from NL (Newfoundland) west to BC (?), south to PA, IN, IL, and in the mountains to w. NC, e. TN, and ne. GA (Jones & Coile 1988). [= *S. pubens* – RAB, F, G, S, W, WV; = *S. racemosa* ssp. *pubens* (Michaux) House var. *pubens* – C; < *S. pubens* ssp. *pubens* – Y; < *S. racemosa* var. *racemosa* – K, Z]

Viburnum Linnaeus 1753 (Viburnum)

(contributed by B.A. Sorrie & A.S. Weakley)

A genus of about 150 species of shrubs and small trees, largely temperate, and primarily in Asia and North America. There remain a number of taxonomic problems, particularly in the *Viburnum dentatum* complex; the treatment and key for that group is highly provisional. Dirr (2007) discusses the genus in detail from a horticultural perspective. References: McAtee (1956)=Z; Ferguson (1966a)=Y; Weckman et al. (2002); Winkworth & Donoghue (2005).

Identification notes: Leaves vary in shape in some taxa more than in others; we have allowed for some of this variation in the key, but readers should expect that some specimens will not key cleanly, especially vegetative shoots. Petiole length of leaves varies considerably, even with those possessing “short” petioles. However, by measuring only the petioles of the first leaves below an inflorescence one reduces the chances of misidentifications greatly. Warning: even in some of the “long” petioled taxa, one may occasionally encounter unusually short petioles; therefore it is wise to examine several twigs. Density of pubescence and glandularity of leaves, petioles, and inflorescences varies more in some taxa than in others; we have allowed for some of this variation in the key, but readers should expect that some specimens will not key cleanly, especially vegetative shoots. Stipitate glands are usually very short, especially those on leaf veins; a 10× lens may not be adequate to see them clearly. It is our belief, based on thousands of specimens examined and years of fieldwork, that most *Viburnum* tend to lose pubescence, and perhaps glandularity as well, as the season progresses.

1 Leaves (at least the larger and better developed) palmately lobed and veined.
  2 Petioles lacking glands near its junction with the leaf blade; flowers all alike and fertile; twibs pubescent; fruit blue-black; [section *Lobata*] ..... ***V. acerifolium***
  2 Petioles with several glands near its junction with the leaf blade; marginal flowers of the inflorescence sterile and much larger than the fertile central flowers (or in cultivated forms all the flowers sterile and enlarged); twigs glabrous; fruit red; [section *Opulus*].
    3 Petiolar glands mostly taller than wide, stalked, rounded on the top; [native, of n. WV, PA, and NJ northward] ..... ***V. opulus*** *var.* ***americanum***
    3 Petiolar glands mostly wider than tall, sessile, concave on the top; [alien, sometimes planted and escaped] ..... ***V. opulus*** *var.* ***opulus***
1 Leaves unlobed and pinnately veined.
  4 Lateral veins curving and branching repeatedly through most of their length, not noticeably parallel, the lateral veins becoming obscure in the general pattern of anastamosing veins and not obviously leading to marginal teeth; [section *Lentago*].
    5 Leaves entire or with a crenate margin, the teeth < 5 per cm of margin.
      6 Leaves 2-5 cm long, obovate or spatulate, widest towards the tip; [of e. SC southward in then Coastal Plain] ..... ***V. obovatum***
      6 Leaves 5-12 cm long, generally elliptic or ovate, widest at or below the middle; [collectively widespread and of various habitats].
        7 Leaves dull to slightly shiny above; peduncle (5-) avg. 13 (-25) mm long; leaves undulate-crenulate (or rarely entire); [of Mountains and upper Piedmont] ..... ***V. cassinoides***
        7 Leaves shiny above (as if varnished); peduncle (20-) avg. 35 (-50) mm long; leaves entire (rarely somewhat undulate-crenate); [of Coastal Plain, Piedmont, and low elevation boggy sites in the Mountains] ..... ***V. nudum***
    5 Leaves serrulate, the teeth > 5 per cm of margin.
      8 Leaves mostly strongly acuminate at the tip; [of w. VA northward] ..... ***V. lentago***
      8 Leaves acute, obtuse, or rounded (rarely somewhat acuminate) at the tip; [collectively widespread in our area].
        9 Leaves herbaeous in texture, dull above; petioles and veins (lower surface) glabrous or slightly brown-scurfy; [widespread in our area, usually in bottomland or other mesic forests] ..... ***V. prunifolium***

9 Leaves somewhat coriaceous in texture, glossy above (as if lacquered); petioles and veins (lower surface) red-scurfy; [of c. VA southward, usually in dry to dry-mesic woodlands and forests] ..... ***V. rufidulum***

4 Lateral veins of the leaves nearly straight and prominently parallel for most of their length, many of them forking near the margin, the ultimate veins leading to a tooth.

10 Winter buds consisting of tightly folded leaves uncovered by bud scales; plants strongly and noticeably stellate pubescent, especially on young parts and on the lower leaf surface; fruits red then turning black.

11 Leaves lanceolate, 3-5× as long as wide, entire; leaf base truncate to rounded; leaf surface strongly rugose; [section *Viburnum*] ..... ***V. rhytidophyllum***

11 Leaves ovate, 1-2.5× as long as wide, serrate; leaf base cordate; leaf surface planar to somewhat rugose.

12 Leaves 10-25 cm long, 8-20 cm wide, deeply cordate at the base; [native, of cool, high elevation forests and bogs]; [section *Pseudotinus*] ..... ***V. lantanoides***

12 Leaves 5-12 cm long, 2-6 cm wide, rounded to cordate at the base; [alien, cultivated and escaping to suburban forests]; [section *Lantana*].

13 Flowers all alike and fertile ..... ***V. lantana***

13 Marginal flowers of the inflorescence sterile and much larger than the fertile central flowers (or all the flowers sterile and enlarged) ..... ***[V. macrocephalum]***

10 Winter buds covered by bud scales; plants noticeably stellate-pubescent or not; fruits orange, red, or blue-black.

14 Leaves oblong-obovate, wider towards the tip; inflorescence paniculate, with an elongate central axis, the lowest branches opposite and with other branches above; fresh leaves malodorous; [section *Solenotinus*] ..... ***V. sieboldii***

14 Leaves ovate or suborbicular, widest near or below the middle; inflorescence umbelliform, the main branches all attached at the same point; fresh leaves not malodorous.

15 Leaves with 8-12 lateral veins on each side; marginal flowers of the inflorescence sterile and much larger than the fertile central flowers; winter buds with 2 scales; [section *Tomentosa*] ..... ***V. plicatum***

15 Leaves with 5-9 lateral veins on each side; flowers all alike and fertile; winter buds with > 2, imbricate scales.

16 Fruit orange or red; [aliens, planted and escaping]; [section *Succodontotinus*].

17 Leaves broadly ovate, acute, pubescent on both surfaces ..... ***V. dilatatum***

17 Leaves ovate or ovate-lanceolate, acuminate, glabrous except for long, somewhat appressed hairs along the veins beneath ..... ***V. setigerum***

16 Fruit blue-black; [native].

18 Petioles short, those immediately below a cyme ≤ 8mm long.

19 Cymes and petioles stipitate-glandular; leaf shape ovate, occasionally rotund; [endemic to two small areas: Ozark and Ouachita Mountains of s. MO-AR-e OK and n AL-sc TN-nw GA] ..... ***V. bracteatum***

19 Cymes and petioles eglandular (cymes occasionally sparsely so); leaf shape ovate; [more widespread] ..... ***V. rafinesqueanum***

18 Petioles longer, those immediately below a cyme ≥ 11mm long.

19 Cymes stipitate-glandular (occasionally glabrous in *V. dentatum* var. *deamii* and *V. dentatum* var. *indianense*).

20 Leaf bases strongly cordate; plants usually restricted to limestone substrates.

21 Petioles eglandular; leaf veins eglandular; leaves glabrate beneath or with simple hairs in axils; bark not exfoliating; [endemic to two small areas: n. AL, sc. TN, and nw. GA, and Ozark and Ouachita Mountains of s. MO, AR, and e. OK] ..... ***V. bracteatum***

21 Petioles stipitate-glandular (may be sparse); leaf veins stipitate-glandular; leaves densely pubescent beneath (forma *molle*) to glabrate (forma *leiophyllum*); bark of stems and branches exfoliating ..... ***[V. molle]***

20 Leaf bases cuneate, truncate, or occasionally subcordate; plants of various substrates.

22 Stipitate glands absent on petioles and leaf veins; stipular leaf bracts absent; [of sandstone substrates in Lookout Mountain region of ne. AL] ..... ***V. species 1***

22 Stipitate glands present on petioles and leaf veins; stipular leaf bracts often present.

23 Petioles with stellate hairs all over; leaves beneath moderately to densely stellate pubescent ..... ***[V. dentatum** var. **deamii]***

23 Petioles with stellate hairs confined to groove; leaves beneath glabrate ..... ***[V. dentatum** var. **indianense]***

19 Cymes eglandular (occasionally glandular in *V. dentatum* var. *dentatum* and *V. scabrellum*)

24 Petioles glabrous or glabrate; stellate hairs absent on leaves and petioles; hairs on leaf undersides confined to axils and a few veins; leaf shape usually ovate ..... ***V. dentatum** var. **lucidum***

24 Petioles sparsely to densely stellate pubescent; stellate hairs present on leaf underside and petiole, dense and soft to touch (*V. carolinianum*, *V. scabrellum*, most *V. venosum*) or sparse to moderate (*V. dentatum* var. *dentatum*, some *V. venosum*); leaf shape various.

25 Cymes not stellate pubescent (occasionally sparsely so); leaves thinner textured and with less prominent veins, sparsely to moderately stellate pubescent below; [plants relatively widespread] ..... ***V. dentatum** var. **dentatum***

25 Cymes stellate-pubescent; leaves thick textured and with prominent veins, moderately to densely stellate-pubescent below.

26 Leaf shape ovate to broadly ovate; leaf teeth 5-12 per side; upper leaf surface scabridulous with abundant simple hairs; [of southern Atlantic and Gulf Coastal Plain] ..... ***V. scabrellum***

26 Leaf shape rotund; leaf teeth 10-18 per side; upper leaf surface glabrate, not scabridulous; [of Southern Appalachian mountains or northern Atlantic Coastal Plain].

27 Leaf underside densely pubescent and soft to touch (felt-like); stipular leaf bracts often present; fruits pubescent; leaf teeth 13-18 per side; [of southern Appalachian mountains of w. NC, n. GA, and se. TN] ..... ***V. carolinianum***

27 Leaf underside moderately to densely pubescent and somewhat soft to touch (but not felt-like); stipular leaf bracts absent; fruits glabrous; leaf teeth 10-15 per side; [of northern Atlantic Coastal Plain of se. MA, s. RI, and Long Island, NY] ..... ***V. venosum***

Viburnum acerifolium Linnaeus, Mapleleaf Viburnum, Dockmackie. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): mesic to dry forests and woodlands; common (rare in Coastal Plain of GA, NC, and SC). Late April-early June; August-October. NB, ON, and WI south to Panhandle FL and TX. [= RAB, C, G, K, S, W, WH, WV, Y; > *V. acerifolium* var. *acerifolium* – F, Z; > *V. acerifolium* Linnaeus var. *glabrescens* Rehder – F, Z; > *V. acerifolium* var. *densiflorum* (Chapman) McAtee – Z; > *V. acerifolium* var. *ovatum* (Rehder) McAtee – Z]

Viburnum bracteatum Rehder, Limerock Arrow-wood. Mt (GA): calcareous forests and woodlands; rare. Late April-early May. Se. TN south to nw. GA and ne. AL; disjunct westwards in the Ozark region of s. MO, nw. AR, and e. OK. [> *V. bracteatum* Rehder – K, S, Y, Z; > *V. ozarkense* W.W. Ashe – K, S, Y, Z]

Viburnum carolinianum Ashe, Carolina Arrow-wood. Mt (GA, NC, SC?, VA?), Pd (NC): moist to dry forests, rock outcrops, streambanks; uncommon. April; July-September. Sw. NC and adjacent GA and TN; remainder of distribution unclear at this time. [<? *V. dentatum* Linnaeus var. *deamii* (Rehder) Fernald – C, F, G; < *V. dentatum* var. *dentatum* – RAB, K; < *V. dentatum* – GW; < *V. semitomentosum* (Michaux) Rehder – S; > *V. carolinianum* Ashe var. *cismontanum* McAtee – Z; > *V. carolinianum* Ashe var. *carolinianum* – Z]

Viburnum cassinoides Linnaeus, Northern Wild Raisin, Withe-rod, Shonny Haw. Mt (GA, NC, SC, VA, WV), Pd (NC, SC), Cp (DE): bogs, moist forests, high elevation forests and outcrops; common (rare in DE). Late May-June; August-October. NL (Newfoundland), ON, and WI south to n. GA and AL. [= RAB, F, G, S, W, WV, Y; = *V. nudum* Linnaeus var. *cassinoides* (Linnaeus) Torrey & A. Gray – C, K; < *V. nudum* – GW; > *V. cassinoides* var. *cassinoides* – Z; > *V. cassinoides* var. *nitidum* Aiton – Z; > *V. cassinoides* var. *harbisonii* McAtee – Z]

Viburnum dentatum Linnaeus *var.* ***dentatum***, Arrow-wood. Cp (DE, FL?, NC, SC, VA), Pd (DE, NC, SC, VA), Mt (NC, SC, VA, WV): marshes, streambanks, other moist places; common (rare in WV). Late March-April; July-September. East of the Appalachians, from Se. PA and sw. NJ south to s. SC and ne. GA, with scattered records westward to sw. NC, nc. TN, sw. VA, n. WV, and w. MD. [= C, F, G, K; < *V. dentatum* var. *dentatum* – RAB (also see *V. carolinianum*); < *V. dentatum* – GW, W, WH, WV, Y; < *V. semitomentosum* (Michaux) Rehder – S; = *V. dentatum* – Z]

Viburnum dentatum Linnaeus *var.* ***lucidum*** Aiton, Smooth Arrow-wood. Cp (DE, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): marshes, moist forests, streambanks; common. Late March-May; July-September. ME, NY, and OH south to e. SC, c. GA, and ne. AL. [= RAB, C, G; = *V. recognitum* Fernald – F, K, WV; < *V. dentatum* – GW, W; = *V. dentatum* – S, misapplied; > *V. recognitum* var. *recognitum* – Z; > *V. recognitum* var. *alabamense* McAtee – Z]

* ***Viburnum dilatatum*** Thunberg, Linden Viburnum. Pd (DE, VA), Cp (VA): suburban woodlands; uncommon (rare in VA), native of e. Asia. [= C, K]

* ***Viburnum lantana*** Linnaeus, Wayfaring Tree. Mt (WV): widely planted, sometimes escaped or persistent; rare, native of Eurasia. Reported as naturalized as far south as MD (Kartesz 1999) and KY (Weckman et al. 2002). May; September. [= C, F, G, K, Z]

Viburnum lantanoides Michaux, Hobblebush, Witch's-hobble, Tangle-legs. Mt (GA, NC, VA, WV): spruce-fir forests, northern hardwood forests, boulderfields, primarily over 1000 m elevation; common. April-early June; June-July. NB and ON south to w. NC, ne. GA, e. TN, and OH. [= K, S, W, Y; = *V. alnifolium* Marshall – RAB, C, F, G, WV; = *V. grandifolium* Aiton – Z]

Viburnum lentago Linnaeus, Nannyberry, Sheepberry. Mt (VA, WV), Pd (DE): shrubby stream-bottoms, other wetlands and wetland margins; rare. NB and SK south to w. VA, MO, and CO. Reported in the past for NC (see Radford, Ahles, & Bell 1968), from GA (Kartesz 1999), and from AL; these reports all appear to be based on misidentifications. [= RAB, C, F, G, K, S, W, WV, Y, Z]

Viburnum nudum Linnaeus, Southern Wild Raisin, Possumhaw. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA): bogs, blackwater floodplains, seepages; common (rare in Mountains). April-May; August-October. RI, CT, and NY south to c. peninsular FL, west to TX, inland to w. NC, TN, w. KY, and AR. [= RAB, G, S, W, WH, Y, Z; = *V. nudum* var. *nudum* – C, K; > *V. nudum* var. *nudum* – F; > *V. nudum* var. *angustifolium* Torrey & A. Gray – F; < *V. nudum* – GW)]

Viburnum obovatum Walter, Small-leaf Viburnum, Walter's Viburnum. Cp (FL, GA, SC): alluvial forests; common. March-April; September-October. E. SC south to s. FL, west to s. AL. [= RAB, GW, K, Y, Z; > *V. obovatum* – S; > *V. nashii* Small – S]

Viburnum opulus Linnaeus *var.* ***americanum*** Aiton, Cranberry-tree, Highbush-cranberry. Mt (WV): wet forests, along streams; rare. June. NL (Newfoundland) and BC south to s. PA (Rhoads & Klein 1993), NJ, n. WV, OH, NE, and WY. [= C, G, K; = *V. trilobum* Marshall – F, WV; = *V. opulus* var. *trilobum* (Marshall) McAtee – Z]

* ***Viburnum opulus*** Linnaeus *var.* ***opulus***, Guelder-rose, Snowball. Mt (VA, WV): commonly cultivated, and rarely persistent or escaping; rare, native of Europe. Well-established in KY (Weckman et al. 2002). [= C, G, K, Z; > *V. opulus* var. *opulus* – F, WV; > *V. opulus* var. *roseum* Linnaeus – F, WV]

* ***Viburnum plicatum*** Thunberg, Japanese Snowball, Doublefile Viburnum. Pd (DE, NC), Mt (WV): suburban woodlands; uncommon (rare in NC), native of e. Asia. Also reported as naturalized in various more northern states, including se. and sw. PA (Rhoads & Klein 1993), OH (Cooperrider 1995), MI (Voss 1996), and others. [= C, G, K, Z]

Viburnum prunifolium Linnaeus, Black Haw, Nannyberry. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (DE, GA, NC, SC, VA): alluvial forests, other mesic forests; common. March-April; September-October. NY, MI, WI, IA, and KS south to GA, AL, MS, LA, and TX. [= RAB, C, K, S, W, WV, Y, Z; > *V. prunifolium* var. *prunifolium* – F, G]

Viburnum rafinesqueanum J.A. Schultes, Downy Arrow-wood. Pd (GA, NC, VA), Mt (VA, WV), Cp (DE, VA): dry-mesic to dry woodlands and forests, especially over mafic rocks (but not at all restricted to such sites); common (uncommon in WV, rare in DE and GA). Mid April-May; June-July. NH, QC and MB south to n. GA, AL, AR, and OK; apparently not yet recorded for SC. [= *V. rafinesquianum* – RAB, K, S, W, WV (orthographic variant); > *V. rafinesquianum* var. *rafinesquianum* – C, F, G, Y; =? *V. affine* Bush ex Schneider var. *hypomalacum* Blake – Z]

* ***Viburnum rhytidophyllum*** Hemsley, Leatherleaf Viburnum. Mt (NC): planted and rarely naturalizing; rare, native of . c. and w. China. First reported for NC by Pittillo & Brown (1988): "naturalized beneath hedges on the campus of Western Carolina University" (Jackson County, NC). Elsewhere escaping at least as far south as KY (Weckman et al. 2002). [= K]

Viburnum rufidulum Rafinesque, Southern Black Haw. Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA), Mt (GA, NC, SC, VA): dry woodlands, dry-mesic woodlands and forests, especially common over mafic rocks (but not at all restricted to such sites); common (uncommon in VA). Late March-April; September-October. C. VA, OH, IL, and KS south to n. peninsular FL and TX. [= RAB, C, F, G, K, W, WH, Y, Z; > *V. rufidulum* – S; > *V. rufotomentosum* Small]

Viburnum scabrellum (Torrey & A. Gray) Chapman. Cp (FL, GA, SC): streambanks, marshes, other moist sites; common. A Coastal Plain endemic, ranging from se. GA south to c. peninsular FL, west to e. TX; with scattered collections north to ec. GA (Richmond County), ne. AL (Cherokee County), nw. AL (Lamar County), c. MS, and n. LA. Expected in s AR, but no specimens seen. Specimens of *V. dentatum* from s. SC show signs of hybridization. Mohr (1901) and some other 19th century authors misapplied the name *V. molle* to it. [< *V. dentatum* var. *dentatum* – RAB; < *V. dentatum* var. *venosum* (Britton) Gleason – G, K; < *V. dentatum* – GW, W, WH, Y; < *V. semitomentosum* (Michaux) Rehder – S, misapplied; > *V. scabrellum* (Torrey & Gray) Chapman var. *scabrellum* – Z; > *V. scabrellum* var. *ashei* Bush – Z; = *Viburnum dentatum* Linnaeus var. *scabrellum* Torrey & A. Gray]

* ***Viburnum setigerum*** Hance, Tea Viburnum. Pd (DE, NC): suburban forests, commonly planted horticulturally; uncommon (rare in NC), native of China. Naturalizing at Guilford Courthouse National Military Park (Greensboro, Guilford County, NC) and in Battle Park (Chapel Hill, Orange County, NC), and elsewhere in our area. Also naturalizing in KY (Weckman et al. 2002). [= K]

* ***Viburnum sieboldii*** Miquel, Siebold's Viburnum. Pd (DE, VA), Mt (WV): suburban forests, commonly planted horticulturally; uncommon (rare in NC), native of c. and s. Japan. Also naturalizing in KY (Weckman et al. 2002). [= C, F, K; = *V. sieboldi* – Z, orthographic variant]

Viburnum species 1, Alabama Arrow-wood. Mt (AL): sandstone substrates; rare. Restricted to Lookout Mountain region of ne. AL, in Cullman, DeKalb, and Marshall Counties. Closer to *V. dentatum* than to *V. recognitum* due to hairy petioles and broad ovate-rotund leaf shape. [< *V. recognitum* Fernald – K; = *V. recognitum* var. *alabamense* McAtee – Z]

Viburnum venosum Britton. Cp (VA): moist places; rare? E. MA, RI, s. Long Island, NY (and reputedly as far south as e. MD and e. VA). [= *V. dentatum* Linnaeus var. *venosum* (Britton) Gleason – G, K; < *V. dentatum* – GW, W, Y; < *V. semitomentosum* (Michaux) Rehder – S; = *V. scabrellum* Torrey & A. Gray var. *venosum* (Britton) McAtee – Z]

* *Viburnum macrocephalum* Fortune, Chinese Snowball. Mt (NC): suburban areas near plantngs; rare, native of China. Reported as naturalized in the Mountains of NC (Pittillo 2003, pers. comm.). {investigate}

Viburnum molle Michaux. Limestone areas. Scattered, discontinuous range (but locally may occur in several contiguous counties) from sw. OH, nc. IN, wc. IL, and se. IA south to sc. TN, nw. AR; disjunct in sw. IA. [= C, F, G, K, Y, Z]

406a. DIERVILLACEAE (Rafinesque) Pyck 1998 (Bush-honeysuckle Family) [in DIPSACALES]

Various segregate families (or reassignments) of taxa traditionally placed in the Caprifoliaceae have been proposed, including the transfer of *Sambucus* and *Viburnum* to the Adoxaceae, placement of *Diervilla* and *Weigela* in the Diervillaceae (Backlund & Pyck 1998), placement of *Abelia* and *Linnaea* in the Linnaeaceae (Backlund & Pyck 1998, Pyck et al. 2002), and retention of *Lonicera, Symphoricarpos,* and *Triosteum* in a much more narrowly circumscribed Caprifoliaceae. Alternatively, all these taxa could be included in the Caprifoliaceae, along with Dipsacaceae and Valerianaceae, as a broadly circumscribed Caprifoliaceae. References: Backlund & Pyck (1998); Pyck et al. (2002); Ferguson (1966a).

Diervilla P. Miller (Bush-honeysuckle)

A genus of 3 species, shrubs, of e. North America. References: Hardin (1968)=Z; Ferguson (1966a)=Y.

1 Petioles 5-8 mm long; leaves ciliate on the margins; twig terete in cross-section; [of the Mountains of VA and n. NC, south to Buncombe and McDowell counties, NC]..... ***D. lonicera***
1 Petioles 0-5 mm long; leaves not ciliate; twig more-or-less square in cross-section; [of the Mountains of SC and s. NC, north to Mitchell and Yancey cos., NC].
  2 Branchlets, leaves, pedicels, and calyx densely pubescent; sepal lobes < 2 mm long ..... ***D. rivularis***
  2 Branchlets, leaves, pedicels, and calyx glabrous, except for hairs on the twig angles; sepal lobes 2-3 mm long ..... ***D. sessilifolia***

Diervilla lonicera P. Miller, Northern Bush-honeysuckle. Mt (GA?, NC, VA, WV), Pd (DE), {DC, MD, NJ?, TN, WV}: rock outcrops and ridges at high elevations; uncommon (rare in DE). June-July; August-October. NL (Newfoundland) west to SK, south to w. NC, e. TN, IN, and IA. Reported for GA (GANHP). [= RAB, C, G, K, S, W, WV, Y, Z; > *D. lonicera* var. *lonicera* – F; > *D. lonicera* var. *hypomalaca* Fernald – F]

Diervilla rivularis Gattinger, Hairy Southern Bush-honeysuckle. Mt (GA, NC), {AL, TN}: rock outcrops, ridges, and streambanks at moderate to high elevations; rare (NC Rare). June-August; August-October. W. NC (Yancey County) and e. TN south to nw. GA (Jones & Coile 1988) and ne. AL. [= K, S, Y, Z; = *D. sessilifolia* Buckley var. *rivularis* (Gattinger) Ahles – RAB, W]

Diervilla sessilifolia Buckley, Smooth Southern Bush-honeysuckle. Mt (GA, NC, SC), {AL, TN}: rock outcrops, ridges, landslide scars, trail margins, other rocky open places, streambanks, at moderate to high elevations; uncommon. June-August; August-October. Sw. NC and e. TN south to nw. SC, ne. GA, and ne. AL. [= F, K, S, Y, Z; = *D. sessilifolia* Buckley var. *sessilifolia* – RAB, W]

Weigela Thunberg (Weigela)

A genus of about 10 species, shrubs, of e. Asia.

* *Weigela floribunda* (Siebold & Zuccarini) K. Koch, Weigela, native of Asia, is cultivated and sometimes naturalized, as in e. TN (Chester, Wofford, & Kral 1998). [= K]

406b. CAPRIFOLIACEAE A.L. de Jussieu 1789 (Honeysuckle Family) [in DIPSACALES]

As here circumscribed, a family of about 5 genera and 220 species, shrubs, trees, and less typically herbs and vines, mainly north temperate and boreal. Circumscription of the family is controversial. Various segregate families (or reassignments) of taxa traditionally placed in the Caprifoliaceae have been proposed, including the transfer of *Sambucus* and *Viburnum* to the Adoxaceae, placement of *Diervilla* and *Weigela* in the Diervillaceae (Backlund & Pyck 1998), placement of *Abelia* and *Linnaea* in the Linnaeaceae (Backlund & Pyck (1998), and retention of *Lonicera, Symphoricarpos,* and *Triosteum* in a much more narrowly circumscribed Caprifoliaceae. Alternatively, all these taxa could be included in the Caprifoliaceae, along with Dipsacaceae and Valerianaceae, as a very broadly circumscribed Caprifoliaceae (APG III 2009). References: Backlund & Pyck (1998); Ferguson (1966a). [also see *ADOXACEAE, DIERVILLACEAE, and LINNAEACEAE*]

1 Erect herb ..... ***Triosteum***
1 Shrubs or woody lianas.
  2 Corolla usually > 10 mm long, bilaterally symmetrical; ovary 2-3-locular ..... ***Lonicera***
  2 Corolla 3-8 mm long, radially symmetrical or nearly so; ovary 4-locular ..... ***Symphoricarpos***

Lonicera Linnaeus 1753 (Honeysuckle)

A genus of about 180 species, shrubs and vines, mainly north temperate. References: Ferguson (1966a)=Z; Rehder (1903)=Y; Green (1966).

1 Flowers in opposite 3-flowered cymules, borne in terminal clusters subtended by connate leaves; corolla red and yellow (or yellowish-orange only); twining vine or shrub with vining tendencies (in *L. flava* the "vininess' sometimes not apparent).
  2 Corolla tube (20-) 30-50 mm long; corolla lobes 4-8 mm long, more or less radially symmetrical; [of a wide variety of habitats, primarily in the Piedmont and Coastal Plain] ..... ***L. sempervirens***
  2 Corolla tube 10-35 mm long; corolla lobes 8-15 mm long, unequally divided into 2 lips (4 lobes on the upper side and one lobe on the lower side); [of ridgetops, rocky slopes, granite domes, and bogs of the Mountains, or of areas to the north or west of the primary area].
    3 Leaves pubescent on the upper surface; [of moist forests, south to PA] ..... ***[L. hirsuta]***
    3 Leaves glabrous on the upper surface.
      4 Fused leaves immediately below the inflorescence glaucous on the upper surface, rounded or emarginate; [of c. TN and other areas west and north of our primary area] ..... ***L. reticulata***
      4 Fused leaves immediately below the inflorescence green on the upper surface, pointed to mucronate.
        5 Corolla tube 30-35 mm long; leaves gray beneath; [of soil mats on dome outcrops of s. NC, SC, and GA and westward] .... ***L. flava***
        5 Corolla tube 15-25 mm long; leaves strongly white-glaucous beneath; [of rocky forests, ridgetops, and bogs of n. NC, VA, and northward] ..... ***L. dioica***
1 Flowers in peduncled pairs in the axils of leaves, not subtended by connate leaves; corolla white to pastel pink or yellow; plant an erect shrub or (*L. japonica*) a trailing or climbing vine.
  6 Trailing or climbing vine; corolla 30-50 mm long; fruit black at maturity; leaves of vigorous shoots often pinnately lobed ..... ***L. japonica***
  6 Upright shrub; corolla 7-25 mm long; fruit red or yellow at maturity; leaves unlobed.
    7 Branches with solid and continuous, white pith; [native and exotic species].
      8 Corolla lobes 5, nearly equal; ovaries separate, divergent; [native species of cool moist forests and bogs] ..... ***L. canadensis***
      8 Corolla lobes fused into a 4-lobed lip and a 1-lobed lip; ovaries fused; [exotic species].
        9 Branches glabrous; corolla glabrous on the exterior ..... ***L. fragrantissima***
        9 Branches retrorsely hispid with reddish-brown hairs; corolla pilose on the exterior ..... ***L. standishii***
    7 Branches hollow between the nodes, with tannish pith; [exotic species, many of them seriously invasive and likely to be encountered in natural areas].
      10 Peduncles shorter than or equal to the subtending petiole; leaves ovate (broadest near the base) and distinctly long-acuminate ..... ***L. maackii***
      10 Peduncles longer than the subtending petiole; leaves elongate (broadest near the middle) and obtuse to acute (rarely short-acuminate).
        11 Leaves glabrous; peduncles 15-25 mm long ..... ***L. tatarica***
        11 Leaves pubescent, at least on the lower surface; peduncles 5-15 mm long.
          12 Corolla pink (aging to yellow), nearly glabrous on the exterior, barely bulging on one side at the base; leaves thinly pubescent beneath ..... ***L. ×bella***
          12 Corolla white (aging to yellow), pubescent on the exterior, distinctly bulging on one side at the base; leaves rather densely grayish-pubescent beneath.
            13 Bracts and sepals ciliate, not glandular; ovary lacking glands; leaf blades broadest at or below the middle ..... ***L. morrowii***
            13 Bracts and sepals glandular; ovary glandular; leaf blades broadest beyond the middle ..... ***L. xylosteum***

* ***Lonicera ×bella*** Zabel [*L. morrowii* × *tatarica*], Pretty Honeysuckle. Forests, woodlands, fencerows, suburban woodlands; native of Eurasia. April-May. [= RAB, C, F, K, Z; = *L. bella* – G; = *L. tatarica* × *morrowii* – Y]

Lonicera canadensis Bartram ex Marshall, American Fly-honeysuckle. Shrubby mountain bogs at high elevations, bouldery northern hardwood forests, hemlock and spruce swamps. May-June; June-July. South NS to SK, south to PA, w. NC, n. GA, OH, IN, and MN. [= RAB, C, F, G, K, W, WV, Y, Z; = *Xylosteon ciliatum* Pursh – S]

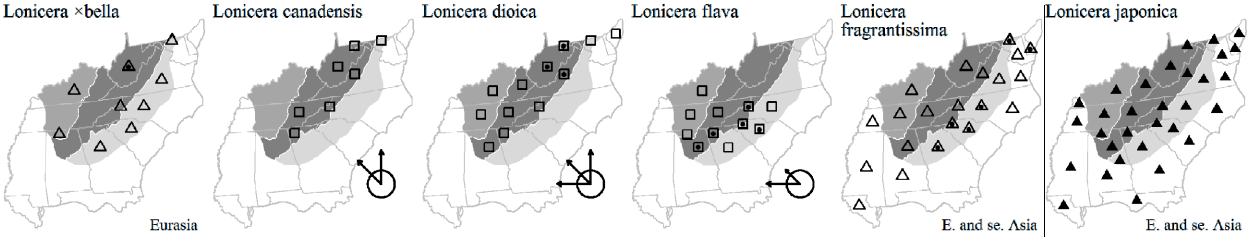
Lonicera dioica Linnaeus. Seepages, bogs, rocky woods, shrubby mountain bogs at high elevations, rocky ridgetop thickets over amphibolite. June-August; August-September. MA and QC west to WI, south to NJ, NC, and IN. Varieties or species have sometimes been maintained based on minor variation of pubescence; it is unlikely that these are taxonomically meaningful. Var. *orientalis* has the lower leaf surfaces, hypanthium, and style hairy (vs. glabrous or nearly so in var. *dioica*). [= RAB, K, W, WV; > *L. dioica* var. *dioica* – C, F, G, Z; > *L. dioica* Linnaeus var. *orientalis* Gleason – C, G; > *L. dioica* var. *glaucescens* (Rydberg) Butters – F, Z; > *L. dioica* – S, Y; > *L. glaucescens* (Rydberg) Rydberg – S, Y]

Lonicera flava Sims, Yellow Honeysuckle. In soil mats around granitic domes. April-May; July-August. W. NC, KY, and MO, south to GA and AR. [= RAB, C, G, K, W, Y; > *L. flava* – F, S; > *L. flavida* Cockerell ex Rehder – F, S; > *L. flava* var. *flava* – Z; > *L. flava* var. *flavescens* Gleason – Z]

* ***Lonicera fragrantissima*** Lindley & Paxton, Sweet-breath-of-spring. Forests, woodlands, old house sites; native of China. February-early April; April-May. [= RAB, K, Y, Z; = *Xylosteon fragrantissimum* (Lindley & Paxton) Small – S]

Lonicera hirsuta Eaton, Hairy Honeysuckle. QC west to MB, south to c. PA (Rhoads & Klein 1993) and MN. [= F, K, Y; > *L. hirsuta* var. *interior* Gleason – C] {rejected; keyed; not mapped}

* ***Lonicera japonica*** Thunberg, Japanese Honeysuckle. Nearly ubiquitous, especially common in the Piedmont and Coastal Plain and in mesic habitats; native of e. Asia. April-June; August-October. Schweitzer & Larson (1999) report on physiological characteristics that make *L. japonica* a successful invasive species. [= RAB, C, G, GW, K, W, WH, WV, Z; > *L. japonica* var. *chinensis* (P.W. Watson) Baker – F, Y; > *L. japonica* var. *japonica* – F, Y; = *Nintooa japonica* (Thunberg) Sweet – S]



* ***Lonicera maackii*** (Ruprecht) Maximowicz, Amur Honeysuckle. Suburban woodlands, moist forests, fencerows; native of e. Asia (Korea, China, Japan). May-June. This is one of worst "shrub-weeds", aggressively invasive in various parts of eastern North America, as in the vicinity of DC and in calcareous substrate parts of the interior South. [= C, K, Y, Z]

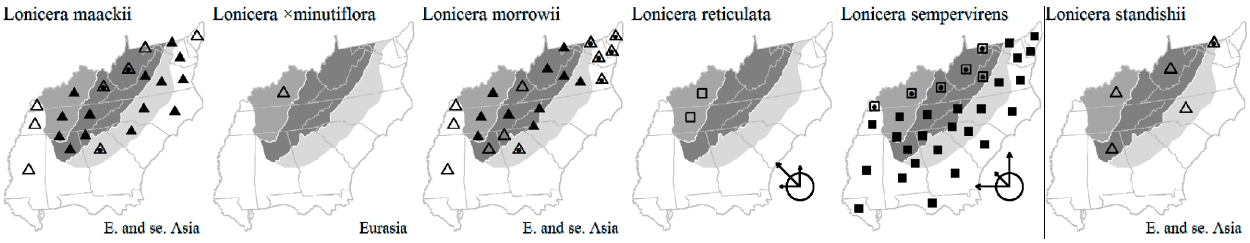
* *Lonicera ×minutiflora* Zabel [of complex hybrid origin, apparently involving *L. morrowii, L. tatarica,* and *L. xylosteum*]. Suburban areas, disturbed areas. Known from KY and other states in e. North America (Clark et al. 2005). [= K] {not yet keyed}

* ***Lonicera morrowii*** A. Gray, Morrow's Honeysuckle. Forests, woodlands, old house sites, suburban woodlands; native of Japan. April. Seriously invasive in WV, MD, DC, and northward; first reported for NC by Leonard (1971b) and for SC by Hill & Horn (1997). [= C, K, W, Y; = *L. morrowi* – F, G, WV, orthographic variant]

Lonicera reticulata Rafinesque. {habitats}. NY west to WI, south to TN and AR. In nc. TN (Davidson County) (Chester, Wofford, & Kral 1997; Wofford & Chester 2002). [= K; > *L. prolifera* (G. Kirchner) Booth ex Rehder var. *prolifera* – C, G; = *L. sullivantii* A. Gray – Y; = *L. prolifera* – F, Z]

Lonicera sempervirens Linnaeus, Coral Honeysuckle. Dry forests and woodlands, maritime forests. March-July (and sporadically to November); July-September. CT to OK, south to c. peninsular FL and TX; and more widely distributed as an escape from cultivation. Var. *hirsutula* has sometimes been maintained, differing from var. *sempervirens* in its ciliate leaf margins, pubescent upper leaf surfaces, sometimes glandular hypanthia and stems (vs. glabrous; it is doubtful that these distinctions are taxonomically meaningful. [= RAB, GW, W, WH, WV, Z; > *L. sempervirens* Linnaeus var. *sempervirens* – C, G, K, Y; > *L. sempervirens* Linnaeus var. *hirsutula* Rehder – C, F, G, K, Y; > *L. sempervirens* var. *sempervirens* – F; > *L. sempervirens* var. *minor* Aiton – F; = *Phenianthus sempervirens* (Linnaeus) Rafinesque – S]

* ***Lonicera standishii*** Jacques, Standish's Honeysuckle. Forests, woodlands, old home sites; native of China. Locally abundant and invasive in c. NC (Uwharrie National Forest, Montgomery County, NC). Also reported from KY (Jones 2005), se. PA (Rhoads & Klein 1993), and MD (Kartesz 1999). [= F, K, Y]



* ***Lonicera tatarica*** Linnaeus, Tartarian Honeysuckle. Disturbed forests; native of Central Asia. [= C, F, G, K, WV; > *L. tatarica* var. *tatarica* – Y]

* ***Lonicera xylosteum*** Linnaeus, European Fly-honeysuckle. Suburban forests, disturbed forests; native of Europe and Asia. Establishing mainly in ne. United States, south to VA, MD (Kartesz 1999), and KY (Clark et al. 2005). [= C, F, G, K; > *L. xylosteum* var. *xylosteum* – Y]

Symphoricarpos Duhamel 1755 (Snowberry, Coralberry)

A genus of about 17 species, shrubs, of North America and e. Asia. References: Jones (1940); Ferguson (1966a)=Z.

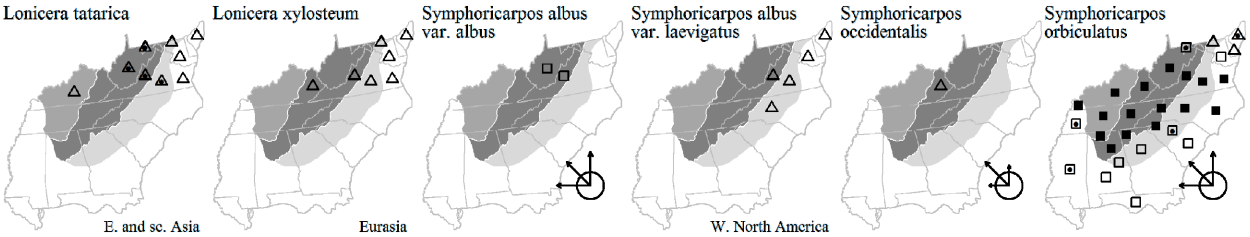
1 Corolla 2-4 mm long; fruits pink to purple ..... ***S. orbiculatus***
1 Corolla 5-9 mm long; fruits white.
  2 Fruit 6-10 (-12) mm in diameter; young twigs puberulent; leaves usually pubescent beneath; shrub usually < 1 m tall; [native] ..... ***S. albus* var. *albus***
  2 Fruit 12-20 mm in diameter; young twigs glabrous; leaves usually glabrous beneath; shrub usually 1-2 m tall; [introduced] ..... ***S. albus* var. *laevigatus***

Symphoricarpos albus (Linnaeus) Blake *var.* ***albus***, Common Snowberry. Limestone woodlands. QC west to s. AK, south to w. VA, WV, MI, MN, and CA; the original native distribution somewhat uncertain due to cultivation and escapes. Var. *albus* is the more eastern variety. [= C, F, G, K, Z; < *S. albus* – RAB, S, W, WV]

* ***Symphoricarpos albus*** (Linnaeus) Blake *var.* ***laevigatus*** (Fernald) Blake, Pacific Snowberry. Disturbed areas, sometimes in natural areas; native of w. North America. [= C, F, G, K, Z; < *S. albus* – RAB, S, W; *? S. rivularis* Suksdorf]

* *Symphoricarpos occidentalis* Hooker, Western Snowberry, Wolfberry. In PA, MD, KY. {investigate} [= F, K] {not yet keyed}

Symphoricarpos orbiculatus Moench, Coralberry. Moist to dry forests, woodlands, thickets, pastures, and old fields, especially over mafic or calcareous rocks. Late July-September; September-November (and often persisting well into winter). CT west to IN, MN, and CO, south to Panhandle FL, TX, and Mexico; the original native distribution somewhat uncertain due to cultivation and escapes. Seemingly increasing in VA and behaving aggressively in dry woodlands and barrens over greenstone and diabase. [= RAB, C, F, G, K, W, WH, WV, Z; = *S. symphoricarpos* (Linnaeus) MacM. – S]



Triosteum Linnaeus 1753 (Horse-gentian, Feverwort)

A genus of 6 species, rather woody herbs, of e. Asia (3 species) and e. North America (3 species); the 3 North American species form one clade, the 3 Asian species another (Gould & Donoghue 2000). References: Gould & Donoghue (2000); Ferguson (1966a)=Z.

1 Longer (nonglandular) hairs of the stem 1.5-3 mm long; corolla greenish-yellow; leaves 1.5-6 cm wide.
  2 Lower leaf surface glabrous or pubescent only along the main veins; leaves averaging 4× as long as wide ..... ***T. angustifolium* var. *angustifolium***
  2 Lower leaf surface densely puberulent; leaves averaging 2× as long as wide ..... ***T. angustifolium* var. *eamesii***
1 Longer (nonglandular) hairs of the stem 0-1.5 mm long (or with a very few longer hairs); leaves 4-15 cm wide; corolla greenish-yellow to purple.
  3 Most the stem hairs 1-2 mm long, mostly not gland-tipped; leaves predominantly not connate (or if 1-3 pairs connate, then only 1-2 cm wide at the joined base); style equaling or slightly shorter than the corolla (rarely exserted) ..... ***T. aurantiacum* var. *aurantiacum***
  3 Most the stem hairs 0-0.5 mm long (sometimes with a few scattered longer hairs), gland-tipped; leaves predominantly connate-perfoliate, the joined base 3-9 cm wide); style exserted beyond the corolla ..... ***T. perfoliatum***

Triosteum angustifolium Linnaeus *var.* ***angustifolium***, Smooth Lesser Horse-gentian. Cp (DE, Pd (DE), Mt (WV), {Pd (NC, VA), Mt (GA, VA), Cp (VA)}: distributional and habitat information needed for two varieties} (GA Rare). April-May; July-August. CT west to ON and MO, south to NC, nw. GA (Jones & Coile 1988), AL, and LA. [= C, F, G; < *T. angustifolium* – RAB, K, S, W, WV, Z]

Triosteum angustifolium Linnaeus *var.* ***eamesii*** Wiegand, Hairy Lesser Horse-gentian. {Pd (NC, VA), Mt (VA), WV?}: distributional and habitat information needed for two varieties}. April-May; July-August. CT and NJ south to NC. [= C, F, G; < *T. angustifolium* – RAB, K, S, W, Z]

Triosteum aurantiacum Bicknell *var.* ***aurantiacum***. Mt (GA?, NC, SC, VA, WV), Pd (DE, NC, VA): woodlands and forests in circumneutral soils, particularly those over mafic or calcareous rocks; uncommon (rare in DE, GA, and NC). Late May-early June; August-October. QC west to MN, south to GA, KY, and OK; other varieties are more restricted and midwestern or northern in distribution. [= C, F, K; < *T. aurantiacum* – RAB, S, W, WV, Z; < *T. perfoliatum* Linnaeus var. *aurantiacum* (Bicknell) Wiegand – G]

Triosteum perfoliatum Linnaeus, Perfoliate Horse-gentian. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, VA): woodlands and forests in circumneutral soils, particularly those over mafic or calcareous rocks; uncommon (rare in DE). Late May-early June; August-October. MA west to MN, south to n. SC, n. GA (Jones & Coile 1988), and OK. [= RAB, C, F, K, S, W, WV, Z; = *T. perfoliatum* var. *perfoliatum* – G]

406c. LINNAEACEAE (Rafinesque) A. Backlund 1998 (Twinflower Family) [in DIPSACALES]

A family of 5 genera and about 35 species, shrubs and suffrutescent herbs. Various segregate families (or reassignments) of taxa traditionally placed in the Caprifoliaceae have been proposed, including the transfer of *Sambucus* and *Viburnum* to the Adoxaceae, placement of *Diervilla* and *Weigela* in the Diervillaceae (Backlund & Pyck 1998), placement of *Abelia*, *Linnaea*, and *Kolkwitzia* in the Linnaeaceae (Backlund & Pyck 1998), and retention of *Lonicera, Symphoricarpos,* and *Triosteum* in a much more narrowly circumscribed Caprifoliaceae. Alternatively, all these taxa could be included in the Caprifoliaceae, along with Dipsacaceae and Valerianaceae, as a very broadly circumscribed Caprifoliaceae. References: Backlund & Pyck (1998).

1 Trailing shrubby herb; [native] ..... ***Linnaea***
1 Upright shrub; [planted and persistent or weakly naturalizing].
  2 Sepals oblanceolate, the larger > 1 mm wide; fruit and ovaries free, not hirsute ..... ***Abelia***
  2 Sepals lanceolate to linear, < 1 mm wide; fruit and ovaries fused in pairs, densely hirsute ..... ***Kolkwitzia***

Abelia R. Brown, Abelia

A genus of about 30 species, shrubs, primarily of s. and e. Asia.

* ***Abelia ×grandiflora*** (André) Rehder [***chinensis* × *uniflora***], Abelia. Cp (AL, FL, NC): suburban thickets; commonly planted in our area; sometimes persistent or rarely weakly naturalizing, the parent species native of China. Reported for AL (Diamond & Woods 2009). [= K, WH]

Kolkwitzia Graebner (Beautybush)

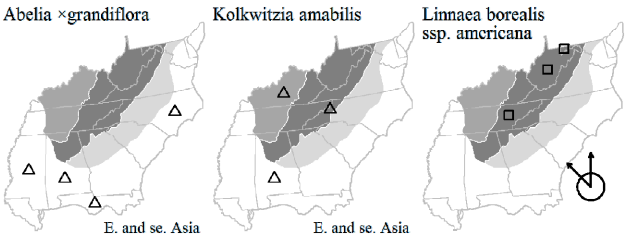
A monotypic genus, a shrub, of c. China.

* ***Kolkwitzia amabilis***, Beautybush. Mt (NC) {KY}: disturbed areas; planted as an ornamental shrub, rarely naturalized from plantings, native of c. China. [= K]

Linnaea Linnaeus (Twinflower)

A monotypic genus, a trailing weak shrub, circumboreal.

Linnaea borealis Linnaeus *ssp.* ***americana*** (Forbes) Hultén ex Clausen, American Twinflower. Mt (MD, TN, WV): northern hardwoods; rare. Greenland, NL (Labrador), and AK south to WV, IN, IL, IA, NM, AZ, and CA; disjunct in e. TN. *L. borealis* is documented by an early specimen (1892) from Sevier County, TN, presumably from the Great Smoky Mountains; the TN population (not seen since) is disjunct from e. WV and w. MD. [= K; = *L. borealis* var. *longiflora* Torrey – C, G; = *L. borealis* var. *americana* (Forbes) Rehder – F; < *L. borealis* – W; = *L. americana* Forbes; = *L. borealis* ssp. *longiflora* (Torrey) Hultén]



406d. DIPSACACEAE A.L. de Jussieu 1789 (Teasel Family) [in DIPSACALES]

A family of about 11 genera and 300 species, herbs and shrubs, of Eurasia and Africa.

1 Stem prickly ..... ***Dipsacus***
1 Stem not prickly ..... ***Knautia***

Dipsacus Linnaeus (Teasel)

A genus of about 15 species, herbs, of Eurasia. *Dipsacus* begins flowering about halfway up the head, the flowers then opening sequentially toward both the base and the tip of the inflorescence. References: Ferguson (1965)=Z; Ferguson & Brizicky (1965); Stace (2010).

1 Principal cauline leaves laciniate-pinnatifid, cut at least halfway to the midrib; stems to 3 (-4) m tall ..... ***D. laciniatus***
1 Principal cauline leaves entire or toothed; stems to 2 (-3) m tall.
2 Bracts on the receptacle with straight apical spines, these stiff but flexible; bracts of the involucre curved upward ..... ***D. fullonum***
2 Bracts on the receptacle with recurved apical spines, these rigid; bracts of the involucre spreading more or less horizontally..... ***D. sativus***

* ***Dipsacus fullonum*** Linnaeus, Wild Teasel, Common Teasel. Mt (GA, NC, VA, WV), Pd (VA), Cp (DE, VA): roadsides, pastures, disturbed areas; common (rare in DE and NC, rare in VA Coastal Plain), native of Europe. July-September; September-October. Recently discovered for GA in Floyd County (T. Govus, pers. comm. 2009). The inflorescences are frequently collected for crafts and dried arrangements. [= K, W, Z; = *D. sylvestris* Hudson – RAB, C, F, G, S, WV; = *D. fullonum* ssp. *sylvestris* (Hudson) Clapham]

* ***Dipsacus laciniatus*** Linnaeus, Cutleaf Teasel. Mt (VA, WV), Pd (VA): disturbed areas; uncommon, native of Europe. July-September; September-October. [= C, F, G, K, WV, Z]

* ***Dipsacus sativus*** (Linnaeus) Honckeny, Fuller's Teasel. Mt (VA): disturbed areas; rare, native of Europe. July-September; September-October. I am here following Ferguson (1965), Ferguson & Brizicky (1965), and Stace (2010) in their determination that *D. sativus* is the correct name to apply to this plant. The occurrence of this species in our area is implied in various sources; I have not seen specimens. The dried inflorescences were used in the past for fulling cloth (raising the nap). [= K, Z; = *D. fullonum* – C, F, G, misapplied]

Knautia Linnaeus

A genus of about 60 species, herbs, of Europe, w. Asia, and n. Africa.

* ***Knautia arvensis*** (Linnaeus) Coulter, Blue Buttons. Mt (WV): dry areas, pastures, other disturbed areas; rare, native of Europe. June-September. Naturalized south at least to s. PA (Rhoads & Klein 1993), MD (Kartesz 1999), and WV (Harmon, Ford-Werntz, & Grafton 2006). [= C, F, G, K; = *Scabiosa arvensis* Linnaeus]

406e. VALERIANACEAE Batsch 1802 (Valerian Family) [in DIPSACALES]

A family of about 10 genera and 300-350 species, herbs (rarely shrubs), nearly cosmopolitan in distribution. References: Bell (2004); Ferguson (1965).

1 Stem leaves divided into 3-21 segments ..... ***Valeriana***
1 Stem leaves simple ..... ***Valerianella***

Valeriana Linnaeus 1753 (Valerian)

A genus of about 200 species, herbs and shrubs, of temperate North America and Eurasia, s. Africa, and Andean South America.

1 Corolla tube 12-16 mm long; stem leaves pinnately divided into 3-7 segments; [native, of VA and TN northward]..... ***V. pauciflora***
1 Corolla tube 1.5-4 mm long; stem leaves divided **either** into 3 segments **or** into 11-21 segments.
2 Upright perennial herb; stem leaves divided into 11-21 segments; corolla tube 3-4 mm long; [alien, grown as an ornamental and casually escaped]..... ***V. officinalis***
2 Scandent vine; stem leaves divided into 3 segments; corolla tube 1.5-2 mm long; [native, of FL]..... ***V. scandens***

* ***Valeriana officinalis*** Linnaeus, Garden-heliotrope. Mt (WV): cultivated and rarely escaped; rare, native of Europe. Sometimes cultivated in our area; it may escape or persist. May-August. [= C, F, G, K]

Valeriana pauciflora Michaux, Pink Valerian, Long-tube Valerian. Pd (VA, WV): very nutrient-rich alluvium in floodplain forests; uncommon (rare in VA). May; June. MD, se. PA, and sw. PA, west to s. IL, south to n. VA, sc. TN, KY, and MO. [= C, F, G, K, W, WV]

Valeriana scandens Linnaeus, Florida Valerian. Cp (FL): floodplain forests, hammocks; rare. Ne. FL south to c. peninsular FL. [= K, S, WH]

Valerianella P. Miller 1754 (Corn-salad)

A genus of about 50 species, herbs, of temperate North America, Eurasia, and n. Africa. References: Ware (1983)=Z.

Identification notes: *Valerianella* species exhibit an interesting set of fruit polymorphisms; the fruit forms in a single species are often strikingly different, and these forms were traditionally regarded as separate taxa. Ware (1983) demonstrated that they were under simple genetic control,

and that different fruit forms were found in the same population. Thus, some taxa previously considered distinct are best considered mere fruit types. The fruit consists of three locules, one of which is fertile and dorsal to or more-or-less flanked by the two sterile locules. The sterile locules may be elongate, forming (between them) a groove, or they may be expanded laterally well beyond the width of the fertile locule into flattened or bulbous wings. In *V. locusta*, there is additionally a corky mass on the side of the fertile locule opposite the two sterile locules.

1 Fruit greatly thickened by a corky mass on the back of the fertile locule; corolla pale blue (or white).....***V. locusta***
1 Fruit lacking a corky mass on the back of the fertile locule; corolla white.
2 Fertile locule much wider than the combined width of the 2 sterile locules; fruit sharply triangular in ×-section ..... ***V. chenopodiifolia***
2 Fertile locule slightly wider or narrower than the combined width of the 2 sterile locules; fruit not sharply triangular in ×-section.
3 Corolla 1.5-2 mm long, the corolla lobes 0.4-0.8 mm long.....***V. radiata***
3 Corolla 3-5 mm long, the corolla lobes 1-2 mm long.....***V. umbilicata***

Valerianella chenopodiifolia (Pursh) A.P. de Candolle. Mt (VA, WV): moist forests, bottomlands; common (rare in VA). S. ON west to WI, south to MD, PA, WV, sw. VA, IN, and IL. [= K; = *V. chenopodifolia* – C, F, G, WV, orthographic variant]

* ***Valerianella locusta*** (Linnaeus) Laterrade, European Corn-salad. Pd (DE, GA, NC, SC, VA), Cp (DE, NC, VA), Mt (GA, NC, VA): roadsides, moist forests, bottomlands, disturbed areas; common (uncommon in DE), native of Europe. April-May. [= RAB, C, K, S, WV, Z; = *V. olitoria* (Linnaeus) Pollich – F, G]

Valerianella radiata (Linnaeus) Dufresne. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): moist forests, bottomlands, disturbed areas; common (rare in WV). April-May. VA, s. IL, and KS, south to n. FL, Panhandle FL, and TX. [= RAB, C, K, S, WH, WV, Z; > *V. radiata* var. *fernaldii* Dyal – F, G; > *V. radiata* var. *radiata* – F, G]

Valerianella umbilicata (Sullivant) Wood. Pd (NC, VA), Mt (NC, VA, WV), Cp (VA), {SC?}: moist forests, bottomlands, disturbed areas; rare. S. NY west to IL, south to NC and sc. TN (Chester, Wofford, & Kral 1997). Ware (1983) raises the question of whether *V. woodsiana* is a distinct taxon; further study is needed. [= Z; < *V. umbilicata* – RAB, C, WV; > *V. umbilicata* – F, G; > *V. patellaria* (Sullivant ex A. Gray) Wood – F, S; > *V. intermedia* Dyal – F; > *V. radiata* var. *intermedia* (Dyal) Gleason – G]

* ***Valerianella dentata*** (Linnaeus) Pollich. Reported as naturalized in central TN by Kral (1981) and Chester et al. (1997), in nc. GA (Jones & Coile 1988), and in AL (Kartesz 1999). [= K] {not yet keyed; synonymy incomplete}

Valerianella woodsiana (Torrey & A. Gray) Walpers. Cp (NC, SC, VA), Pd (SC): bottomlands; rare. {distribution} [= K, S, Z;] {not yet keyed; add to synonymy}

410. PITTOSPORACEAE R. Brown 1814 (Pittosporum Family) [in APIALES]

A family of about 9-11 genera and 150-200 species, trees, shrubs, and vines, of tropical and warm temperate Old World. References: Judd (1996).

Pittosporum Banks ex Solander (Pittosporum)

A genus of about 100-150 species, trees and shrubs, of tropical and warm temperate Old World. References: Judd (1996)=Z.

* ***Pittosporum tobira*** (Thunberg) Aiton f., Japanese Pittosporum, Australian Laurel. Cp (FL, GA?, NC, SC?): frequently planted on barrier islands, at least persisting and apparently naturalizing; rare, native of Japan and China. Various cultivars are seen, including ones with variegated leaves. This species is one of the more common landscaping plants used on developed barrier islands. The revolute, obovate leaves are characteristic. [= K, WH, Z]

411. ARALIACEAE A.L. de Jussieu 1789 (Ginseng Family) [in APIALES]

A family of about 47 genera and 1325 species, trees, shrubs, vines, and rarely herbs, mainly tropical in distribution. *Hydrocotyle* is more closely related to Araliaceae than to Apiaceae, and is transferred here (Chandler & Plunkett 2003). References: Frodin & Govaerts (2003); Graham (1966); Smith (1944).

1 Plant a woody vine; [tribe *Schefflereae*].....***Hedera***
1 Plant an herb, shrub, or tree.
2 Leaves simple, peltate or cordate, roundish (if lobed, with 3-5 rounded lobes), 0.3-10 cm wide; rhizomatous, creeping herbs....***Hydrocotyle***
2 Leaves **either** compound with 3-many leaflets **or** simple and then with 5-7 pointed lobes (*Kalopanax*), > 10 cm wide; herbs, shrubs, or trees; [tribe *Aralieae*].
3 Leaves simple, palmately-lobed.
4 Leaves 5-7-lobed; tree ..... ***[Kalopanax]***
4 Leaves >9-lobed (some of the lobes themselves sublobed); robust herb to shrub ..... ***Tetrapanax***
3 Leaves compound
5 Leaves 2-3× compound, at least the final order of division pinnate; leaves either 1 from a subterranean stem or 2-many, alternate on an aboveground stem; inflorescence compound, consisting of (2-) 3-many umbels, either on a separate peduncle from the rhizome or in a terminal panicle or raceme; fruit purple or black.....***Aralia***
5 Leaves 1× palmately compound, leaflets 3-7; leaves 3-5 in a whorl at the summit of the stem (*Panax*) or many, clustered on spur shoots (*Eleutherococcus*); inflorescence of a single, simple umbel borne terminally on the stem; fruit red to yellow (*Panax*) or black (*Eleutherococcus*).

6 Plant a shrub, with prickles; fruit black ..... ***[Eleutherococcus]***
6 Plant an herb, lacking prickles; fruit red or yellow..... ***Panax***

Aralia Linnaeus 1753 (Aralia)

A genus of about 30-70 species, herbs, shrubs, vines, and trees, primarily of e. North America, e. Asia, and se. Asia. Wen (1998) has suggested that *A. nudicaulis* may need to be removed from the genus *Aralia* in order to maintain both *Aralia* and *Panax* as monophyletic genera. References: Smith (1982)=Z; Moore, Glenn, & Ma (2009)=V; Wen et al. (1998); Wen (1993); Wen (1998); Smith (1944)=Y; Frodin & Govaerts (2003)=X.

1 Plant a shrub or small tree, 3-6 (-10) m tall, definitely woody; stem armed throughout with prickles, those on the stem stout, broad-based, and distributed to the summit of the stem; leaves usually armed with prickles on the axes and the main veins; [section *Dimorphanthus*]
2 Main lateral veins running all the way to the teeth; inflorescence 3-6 dm long, often broader than long, lacking a well-developed main axis; petiolules 0-1 (-6) mm long; dry fruit 3.0-3.5 mm long; [alien spreading southward from ne. United States] ..... ***A. elata***
2 Main lateral veins running branching repeatedly and getting smaller before reaching the teeth; inflorescence 4-12 dm long, usually longer than broad, with a well-developed central axis; petiolules 1-7 mm long; dry fruit 4.0-5.0 mm long; [widespread native] ..... ***A. spinosa***
1 Plant an acaulescent herb or stout, suffruticose herb, not at all to somewhat woody at the base; stem unarmed (or in *A. hispida* bristly with thin prickles on the lower stem only); leaves unarmed.
3 Plant an acaulescent herb, the solitary leaf and scapose inflorescence arising from a subterranean rhizome; inflorescence a raceme of (2-) 3 (-7) umbels; [section *Nanae*] ..... ***A. nudicaulis***
3 Plant a caulescent herb, the leaves several and alternate, the inflorescence terminal on the leafy stem; inflorescence a raceme or panicle of (2-) 5-many umbels.
4 Stem bristly toward its base; inflorescence a raceme or weak panicle of (2-) 5-25 umbels; [section *Hispidae*] ..... ***A. hispida***
4 Stem unarmed; inflorescence a compound panicle of 15-many umbels; [section *Aralia*]..... ***A. racemosa***

* ***Aralia elata*** (Miquel) Seemann, Japanese Angelica-tree. Pd (DE): suburban woodlands; uncommon. Naturalizing in ne. North America at least as far south as NJ, DE, se. PA, and DC (likely to be present in MD). See Moore, Glenn, & Ma (2009) for detailed information on this alien species and its naturalization in the northeastern United States. [= K, V]

Aralia hispida Ventenat, Bristly Sarsaparilla. Mt (NC?, VA, WV,): rocky woodlands, cliffs, and clearings, primarily over acidic rocks (such as quartzite, granite, and sandstone); rare. June-August. NL (Labrador) and NL (Newfoundland) west to MB, south to w. VA, w. NC (?), WV, OH, IN, IL, and MN. This species appears to be strongly dependent on disturbance, such as fire, appearing in great numbers following fire where previously rare or apparently absent. F and Y credit this species to w. NC; the documentation is not known to me, and the species was not treated by RAB. Doug Rayner (pers. com. 2002) reports a site record of it in Polk County, NC. [= C, F, G, K, S, W, X, Y, Z]

Aralia nudicaulis Linnaeus, Wild Sarsaparilla. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): upland forests and woodlands, rocky places, most typically in rather dry places, such as ridgetop forests; common (uncommon in Piedmont south of DE, rare in Coastal Plain south of DE, rare in GA). May-July. NL (Labrador) and NL (Newfoundland) west to BC, south to e. VA, c. NC, ne. GA, w. TN, IL, MO, NE, CO, and ID. [= RAB, C, F, G, K, S, W, X, Y, Z]

Aralia racemosa Linnaeus, Spikenard, Hungry-root. Mt (GA, NC, SC, VA, WV), Pd (DE, NC, VA), Cp (DE, VA): rich woodlands, trail margins and roadsides; uncommon (rare in Coastal Plain, locally common in Mountains of far sw. VA). June-August. NB and QC west to MN and SD, south to NC, n. GA, AL, MS, MO, and e. KS. The related *A. bicrenata* Wooton & Standley (sometimes treated as a subspecies of *A. racemosa*) occurs in AZ, NM, TX, and n. Mexico. [= RAB, C, F, G, S, W, X, Y, Z; = *A. racemosa* ssp. *racemosa* – K]

Aralia spinosa Linnaeus, Devil's-walking-stick, Hercules's-club, Prickly-ash. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): disturbed pocosins and bottomlands, disturbed areas, moist to dry forests and woodlands; common. June-September. NJ west to s. IN, IL, and IA, south to c. peninsular FL and e. TX. Smith (1982) discusses the juvenile (prickly) and adult (unarmed) leaf phases of *A. spinosa*. [= RAB, C, F, G, GW, K, S, V, W, WH, X, Y, Z]

Eleutherococcus Maximowicz 1859 (Fiveleaf Aralia)

A genus of about 38 species, shrubs, of e. Asia. References: Frodin & Govaerts (2003)=Z.

* ***Eleutherococcus sieboldianus*** (Makino) Koidz., Fiveleaf Aralia. Mt (WV): disturbed areas; rare, native to e. Asia. Reported as introduced and apparently naturalized in Randolph County, WV, scattered locations in PA (Rhoads & Klein 1993), OH, and n. KY (Clark et al. 2005). [= Z; < *Eleutherococcus pentaphyllus* (Siebold & Zuccarini) Nakai – K, misapplied; = *Acanthopanax sieboldianus* Makino]

Hedera Linnaeus 1753 (Ivy)

A genus of 5-15 species, vines, distributed from Mediterranean Europe west to e. Asia. References: Graham (1966)=Y; Stace (2010)=Z; Staff of the Bailey Hortorium (1976)=X; Ackerfield & Wen (2002)=Q; Frodin & Govaerts (2003)=V.

Identification notes: The leaves of *Hedera* are dimorphic, sometimes confusing observers; "juvenile" leaves (those of the sterile branches) are about as wide as long and (in *H. helix*) palmately 3-5-lobed, those of the fertile branches (less commonly seen) are obovate or elliptic.

1 Trichomes scale-like, 0.1-0.4 mm, those on the leaves, petioles, and young stems with rays fused basally for 1/4 to 1/2 their length; juvenile leaves orbicular, little or not at all lobed, the larger 15-25 cm wide ..... ***H. colchica***
1 Trichomes stellate, 0.5-1.0 mm, those on the leaves, petioles, and young stems with rays fused basally for < 1/8 their length; juvenile leaves slightly to deeply lobed, the larger 5-15 cm wide.
2 Hairs of young stems, leaves, and petioles whitish, the rays erect (at a right angle to the leaf surface); juvenile leaves usually < 8 cm wide, usually dark green and often also marbled with white, often lobed > ½ the way to the base; [often strongly climbing] ..... ***H. helix*** *var.* ***helix***
2 Hairs of young stems, leaves, and petioles yellowish-brown to rusty-brown, the rays not erect (parallel to the leaf surface); juvenile leaves often > 8 cm wide, usually medium green (rarely also marbled with white), usually lobed < ½ the way to the base; [usually not climbing] .. .. ***H. hibernica***

* ***Hedera colchica*** (K. Koch) K. Koch, Persian Ivy. Pd (NC), Cp (SC): persistent after cultivation, perhaps not naturalized; rare, native of the Caucasus. [= K, Q, V, X, Z]

* ***Hedera helix*** Linnaeus *var.* ***helix***, Common Ivy, English Ivy. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): persistent, established, and spreading around old home sites, in suburban woodlands and waste areas; uncommon (rare in FL), native of Europe. June-July. Var. *helix* is diploid, n = 24. Hundreds of cultivars, varying greatly in habit and leaf size, lobing, and marbling are grown; see for instance, Staff of the Bailey Hortorium (1976) for a partial listing and brief descriptions. [= X, Y; < *H. helix* – RAB, C, F, G, K, S, W, WH; = *H. helix* ssp. *helix* – Q, V, Z]

* ***Hedera hibernica*** (G. Kirchner) Carrière, Atlantic Ivy, Irish Ivy. Pd (NC, SC): persistent, established , and spreading around old home sites, in suburban woodlands and waste areas; uncommon, native of Europe. June-July. Var. *hibernica* is tetraploid, n = 48. [= Q, V; = *H. helix* Linnaeus var. *hibernica* G. Kirchner – X, Y; < *H. helix* – RAB, C, F, G, K, S, W; = *H. helix* ssp. *hibernica* (G. Kirchner) D. McClint. – Z]

Hydrocotyle Linnaeus 1753 (Water-pennywort)

A genus of about 130 species, herbs, cosmopolitan (especially Australia). Molecular analyses have clarified that the affinities of *Hydrocotyle* lie with the Araliaceae rather than the Apiaceae (Downie et al. 1998; Chandler & Plunkett 2004). References: Mathiuas & Constance (1945)=MC.

1 Leaves peltate, lacking a sinus extending to the attachment of the petiole.
2 Inflorescence umbellate; leaves 1-4 (-7) cm wide ..... ***H. umbellata***
2 Inflorescence verticillate or umbellate-verticillate (when first developing sometimes appearing merely umbellate); leaves 1-15 cm wide.
3 Inflorescence compound, the main inflorescence axis with nodes which produce verticels or umbels of pedicellate flowers, the inflorescence nodes also producing branches which themselves produce verticels or umbels of flowers; leaves (1-) 4-15 cm wide .... ***H. bonariensis***
3 Inflorescence verticillate, all the flowers borne sessile or on pedicels on the unbranched inflorescence axis; leaves 1-6 cm wide.
4 Flowers and fruits pedicellate, the pedicels 1-10 mm long ..... ***H. prolifera***
4 Flowers and fruits sessile or subsessile ..... ***H. verticillata***
1 Leaves not peltate, a sinus extending to the attachment of the petiole.
5 Central leaf lobe notably more distinct than the other lobes (the sinuses on either side extending 1/3 to 3/4 of the way to the petiolar attachment); stems and petioles fleshy ..... ***H. ranunculoides***
5 Central leaf lobe not more distinct than the other lobes (the sinuses on either side extending 1/10 to 1/4 the way to the petiolar attachment); stems and petioles filiform.
6 Fruiting umbels on peduncles 1-3 mm long; leaves 10-50 mm wide; [native of bogs, spray cliffs, and other wetlands] ..... ***H. americana***
6 Fruiting umbels on peduncles 9-24 mm long; leaves 5-30 mm wide; [alien of lawns and other disturbed habitats].
7 Leaves 5-lobed, 15-30 mm wide ..... ***H. bowlesioides***
7 Leaves 7-lobed, 5-13 mm wide ..... ***H. sibthorpioides***

Hydrocotyle americana Linnaeus, American Water-pennywort. Mt (NC, VA, WV), Pd (DE, VA), Cp (DE): bogs, marshes, seepages, cliffs and ledges where wet by seepage or spray from waterfalls, sometimes roadside ditches; uncommon (rare in NC). June-September. Widespread in ne. North America, south to w. NC, SC, e. and c. TN, and IN. [= RAB, C, F, G, GW, K, MC, S, W, WV]

Hydrocotyle bonariensis Lamarck, Dune Water-pennywort. Cp (FL, GA, NC, SC, VA): beaches, dunes, and moist sandy areas; uncommon (rare in VA). April-September. Widespread in South and Central America, north in North America to the Southeastern Coastal Plain, se. VA to s. FL and TX. [= RAB, GW, K, MC, S, WH]

* ***Hydrocotyle bowlesioides*** Mathias & Constance. Cp (FL, GA): lawns; rare, native of Costa Rica and Panama (naturalized in South America, se. United States, and New Zealand). See Anderson (1983) for discussion of the species' occurrence in Thomasville, Thomas Co. GA. Reported for Panhandle FL (Wunderlin & Hansen 2008). [= K, MC; = *H. sibthorpioides* Lamarck var. *oedipoda* O. Degener & Greenwood]

Hydrocotyle prolifera Kellogg. Cp (DE, FL, GA, NC, SC, VA): swamp forests, pools; uncommon. May-July. Widespread in North, Central, and South America. [= K; = *H. verticillata* Thunberg var. *triradiata* (A. Richard) Fernald – RAB, C, G, GW, MC, WH; < *H. verticillata* var. *verticillata* – F; > *H. australis* Coulter & Rose – S; > *H. canbyi* Coulter & Rose – S]

Hydrocotyle ranunculoides Linnaeus f., Swamp Water-pennywort. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, VA), Mt (VA, WV): stagnant to (less commonly) swiftly flowing waters of swamps pools, backwaters, blackwater streams; common (rare in WV). April-July. Widespread in North, Central, and South America. [= RAB, C, F, G, GW, K, MC, S, W, WH, WV]

* ***Hydrocotyle sibthorpioides*** Lamarck, Lawn Water-pennywort. Pd (DE, GA, NC, VA), Cp (DE, FL, GA, NC, VA), Mt (WV): lawns, pond margins; uncommon (rare in FL and WV, rare in VA Piedmont, rare in DE), native of Asia and Africa. March-September. Apparently becoming more common as a lawn weed. [= RAB, C, F, G, K, MC, WH, WV]

Hydrocotyle umbellata Linnaeus, Marsh Water-pennywort. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): moist areas; common (rare in lower Piedmont only). April-September. Widespread in North, Central, and South America. [= RAB, C, F, G, GW, K, MC, S, WH]

Hydrocotyle verticillata Thunberg. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, SC): swamp forests, pools; uncommon. May-July. Widespread in North, Central, and South America. [= S; = *H. verticillata* var. *verticillata* – RAB, C, G, GW, K, MC, WH; < *H. verticillata* var. *verticillata* – F]

Kalopanax Miquel 1863 (Castor Aralia)

A monotypic genus, a medium-sized trees, of e. Asia. References: Frodin & Govaerts (2003)=Z.

* *Kalopanax septemlobus* (Thunberg ex A. Murray) Koidzumi, Castor Aralia. Introduced in ne. United States, apparently naturalizing in s. MD and n. VA (Fort Belvoir, Fairfax County) (E. Wells, pers. comm., 2006). [= K; > *K. septemlobus* ssp. *lutchuensis* (Nakai) H. Ohashi – Z; > *K. septemlobus* ssp. *septemlobus* – Z; = *Kalopanax pictus* (Thunberg) Nakai]

Panax Linnaeus 1753 (Ginseng)

Panax is a genus of ca. 14 species, herbs, 12 of e. Asia and 2 of e. North America. Wen & Zimmer (1996) and Choi & Wen (2000) studied the phylogeny of *Panax* using molecular techniques. *P. trifolius* does not appear to be closely related to any of the other species, and is interpreted as a basal component of the genus. *P. quinquefolius* is most closely related to *P. ginseng* C.A. Meyer and *P. japonicus* C.A. Meyer. References: Smith (1944)=Z; Frodin & Govaerts (2003)=Y; Wen & Zimmer (1996); Choi & Wen (2000).

1 Leaflets (3-) 5, petiolulate, the petiolules (0.7-) 1-2.5 cm long; larger leaflets 6-15 cm long, 3.5-7 cm wide, mostly about 2× as long as wide, the apex acuminate; fruit bright red when ripe ..... ***P. quinquefolius***
1 Leaflets 3 (-5), sessile or subsessile; larger leaflets 4-8 cm long, 0.5-2.5 cm wide, mostly about 3× as long as wide, the apex obtuse to acute; fruit yellow-green when ripe ..... ***P. trifolius***

Panax quinquefolius Linnaeus, Ginseng, Sang, American Ginseng. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, GA, NC, VA): cove forests, mesic hardwood forests, generally in nutrient-rich forests though tending to avoid the richest coves; uncommon (rare in DE). May-June; August-October. QC west to MN and SD, south to e. VA, e. NC, nc. SC, GA, c. AL, LA, and OK. *P. quinquefolius* is gathered in quantity throughout its range for the herbal trade; most of the North American harvest is shipped to China, where it is prized for medicinal uses. Dried roots command prices in excess of $1000 per kilogram; in our area, "sang" is a multimillion dollar industry. Formerly abundant and occurring in large populations, *P. quinquefolius* has been reduced in most of its range to small populations of scattered individuals, a classic example of a "predator-prey" relationship. Collection and trade in ginseng is monitored and regulated in most states. In NC, it is illegal for ginseng dealers to buy ginseng from collectors before September; this allows the plants to mature fruits prior to collection. Schlessman (1985) discusses the floral biology of *P. quinquefolius*. [= F, K, W, WV, Y, Z; = *P. quinquefolium* – RAB, C, G, S, orthographic variant]

Panax trifolius Linnaeus, Dwarf Ginseng. Mt (GA, NC, VA), Pd (DE, NC, VA), Cp (DE, VA): cove forests, bottomland forests, other nutrient-rich forests; uncommon (rare south of VA). April-June; August-October. NS and QC west to MN, south to PA, e. VA, c. NC, nc. GA, ec. TN, IN, and IA. [= F, K, W, WV, Y, Z; = *P. trifolium* – RAB, C, G, S, orthographic variant]

Tetrapanax (K. Koch) K. Koch 1859 (Ricepaper-plant)

A monotypic genus, a robust herb or shrub, of China.

* ***Tetrapanax papyriferus*** (Hooker) K. Koch, Ricepaper-plant. Cp (FL): disturbed forests; rare, native of Asia. [= K, WH]

413. APIACEAE Lindley 1836 or ***UMBELLIFERAE*** A.L. de Jussieu 1789 (Carrot Family) [in APIALES]

A family of about 445 genera and about 3540 species of herbs (rarely shrubs or trees), cosmopolitan, but especially north temperate. *Hydrocotyle* is more closely related to Araliaceae, and has been transferred there (Chandler & Plunkett 2004). References: Mathias & Constance (1945)=MC. [also see *ARALIACEAE*]

[only a small fragment of the key to genera complete at this time]

1 Fruits (partly to fully mature) with thin-edged wings; flowers yellow, maroon, or white; central flower of each umbellet staminate and pedicelled; fruits all pedicelled in all umbellets..... ***Thaspium***

1 Fruits ribbed (with rounded, cordlike ribs), lacking thin-edged wings; flowers yellow; central flower of each umbellet either staminate and pedicelled, or pistillate and sessile; fruits all pedicelled in some umbellets (those with a staminate central flower), or the central fruit sessile in some umbellets (those with a pistillate central flower) ..... ***Zizia***

Aegopodium Linnaeus 1753 (Goutweed)

A genus of 5-7 species, perennial herbs, of temperate Eurasia. References: Mathias & Constance (1945)=MC.

* ***Aegopodium podograria*** Linnaeus, Goutweed. Mt (GA, NC, VA, WV), Pd (DE, GA, NC, VA), Cp (DE, SC, VA): disturbed areas; rare, native of Europe. The cultivated forms encountered in our area are usually those with white-margined or variegated leaves. [= C, F, K, MC; > *A. podograria* var. *podograria* – RAB, G; > *A. podograria* var. *variegatum* L.H. Bailey – RAB, G]

Aethusa Linnaeus 1753

A monotypic genus, an annual herb, of Europe, n. Africa, and w. Asia. References: Sell & Murrell (2009)=Z; Mathias & Constance (1945)=MC.

* ***Aethusa cynapium*** Linnaeus, Fool's-parsley. Cp (DE), Pd (DE), Mt (WV): disturbed areas; uncommon, native of Eurasia. Introduced and naturalized in ne. United States, at least as far south as se. PA (Rhoads & Klein 1993), DE, and Pocahontas County, WV. In Europe, several subspecies are often recognized; it is not known how these entities relate to material naturalized in North America and for now we treat the species broadly. [= C, F, G, K, MC, WV; > *A. cynapium* ssp. *agrestis* (Wallr.) Dostál – Z; > *A. cynapium* ssp. *cynapium* – Z; > *A. cynapium* ssp. *gigantea* (Lejeune) P.D. Sell; > *A. cynapium* ssp. *cynapioides* (M. Bieb.) Arcangeli – Z]

Ammi Linnaeus 1753 (Bishop's-weed)

A genus of about 4-10 species, annual or biennial herbs, distributed in Mediterranean Europe. References: Mathias & Constance (1945)=MC.

1 Lower leaves with elliptic to narrowly elliptic segments; fruits 1.5-2 mm long; rays 15-60, not rigid and thickened at maturity; bracts not strongly reflexed in fruit ..... ***A. majus***
1 Lower leaves with filiform segments; fruits 2-2.8 mm long; rays up to 150, rigid and thickened at maturity; bracts strongly reflexed in fruit .... ***A. visnaga***

* ***Ammi majus*** Linnaeus, Bullwort. Cp (FL, GA, SC): disturbed areas; rare, native of Mediterranean Europe. June. [= RAB, K, MC, S, WH]

* ***Ammi visnaga*** (Linnaeus) Lamarck, Toothpick-plant. Cp (FL, NC): dry sandy roadsides, disturbed areas; rare, native of Mediterranean Europe. May-June. [= RAB, K, MC, S, WH]

Ammoselinum Torrey & A. Gray 1855 (Sand-parsley)

A genus of 3 species, herbs, of sc. and sw. North America and temperate s. South America. References: Mathias & Constance (1945)=MC.

1 Umbels sessile; fruit glabrous (or slightly roughened) ..... ***A. butleri***
1 Umbels pedunculate; fruit roughened with well-developed teeth ..... ***A. popei***

* ***Ammoselinum butleri*** (Engelmann ex S. Watson) Coulter & Rose, Butler's Sand-Parsley. Pd (NC): lawns, disturbed places; rare, native of sc. United States (MO and se. KS south through AR and OK to LA and TX). March-April. Boufford (1977) reports the naturalization of this diminutive midwestern umbel on a grassy, weed-covered slope in NC, and since reported from additional southeastern states, including MS (Bryson 1991) and AL (Keener 2007). [= GW, K, MC]

Ammoselinum popei Torrey & A. Gray, Pope's Sand-parsley. Ip (TN): limestone barrens; rare. KS, OK, TX, and NM south to ne. Mexico (Nuevo Léon); disjunct and apparently native in the Nashville Basin of c. TN. [= K, MC]

Anethum Linnaeus 1753 (Dill)

A monotypic genus, an annual herb, apparently native to sw. Asia. References: Mathias & Constance (1945)=MC.

* ***Anethum graveolens*** Linnaeus, Dill, Dillweed. Mt (NC, VA, WV), Pd (NC, VA): roadsides, disturbed areas, abandoned garden plots; rare, native of sw. Asia. June-July. [= RAB, C, F, G, K, MC, S]

Angelica Linnaeus 1753 (Angelica)

A genus of about 60-110 species, perennial herbs of the northern hemisphere. References: Mathias & Constance (1945)=MC.

1 Larger leaflets 3-6 cm long, 1-2.5 cm wide, obtuse at the apex; umbels **either** densely pubescent **or** glabrous; ovary and fruit **either** pubescent **or** glabrous; [collectively widespread in our area, in dry to mesic habitats].
  2 Umbels glabrous; ovary and fruit glabrous; leaf segments coarsely toothed ..... ***A. dentata***
  2 Umbels pubescent; ovary and fruit hispid; leaf segments finely toothed ..... ***A. venenosa***
1 Larger leaflets 8-15 cm long, 4-8 cm wide, acute to acuminate at the apex; umbels glabrous or sparsely pubescent; ovary and fruit glabrous or sparsely pubescent; [restricted to the Mountains in our area, in mesic habitats]
  3 Leaflets acute, the margin hyaline and mostly glabrous; umbels with 20-45 umbellets ..... ***A. atropurpurea***
  3 Leaflets acuminate, the margin ciliolate; umbels with 13-25 umbellets ..... ***A. triquinata***

Angelica atropurpurea Linnaeus, Purple Angelica. Pd (DE), Mt (NC*?, WV): riverbanks, streambanks, moist roadsides; rare. May-June; July-August. S. NL (Labrador) west to WI and MN, south to NL (Newfoundland), NS, DE, MD, WV, OH, IN, IL, and ne. IA (and in the mountains to ne. TN and w. NC – the NC occurrences have sometimes been speculated to be naturalized). [= RAB, C, G, K, MC, W; > *A. atropurpurea* var. *atropurpurea* – F]

Angelica dentata (Chapman) Coulter & Rose, Sandhill Angelica. Cp (FL, GA): sandhills, flatwoods; uncommon (rare in GA). Sw. GA, sc. GA, and e. Panhandle FL. [= K, MC, S, WH]

* *Angelica lucida* Linnaeus. Native to n. North America. Reported by Harvill et al. (1992) for Warren County, VA; more information is needed to substantiate this surprising record, presumably from cultivation. [= C, G, K, MC; = *Coelopleurum lucidum* (Linnaeus) Fernald – F] {not keyed}

Angelica triquinata Michaux, Mountain Angelica, Filmy Angelica. Mt (GA, NC, VA, WV): mesic forests at moderate to high elevations, grassy balds, brookbanks; common (uncommon in WV). August-September; September-October. PA south to sw. NC, se. TN, and n. GA, a Southern and Central Appalachian endemic. The nectar is very attractive, but apparently strongly intoxicating, to yellow jackets and hornets; on the grassy balds of Roan Mountain one can see thousands of umbels of *Angelica* densely coated by lethargic bees. [= RAB, C, F, G, K, MC, W; ? *A. curtisii* Buckley – S]

Angelica venenosa (Greenway) Fernald, Hairy Angelica. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): dry forests and woodlands, woodland borders, longleaf pine sandhills, hammocks; common (rare in DE and FL). June-August; July-September. MA west to MN, south to Panhandle FL, MS, and AR. Populations of this species in dry sandhill communities in the Fall Line Sandhills have a number of peculiar features: basal leaves often borne appressed against the ground, small leaflets, coarse and more equilateral toothing of the leaflets. These populations may be worthy of taxonomic recognition; they need further study. [= RAB, C, F, G, K, MC, W; ? *A. villosa* (Walter) Britton, Sterns, & Poggenburg – S]

Anthriscus Persoon 1814 (Chervil)

A genus of about 10-20 species, herbs, of Eurasia and mountains of Africa. References: Spalik (1996)=Z; Mathias & Constance (1945)=MC.

1 Fruit ovoid, 2.9-3.2 mm long, hispid with hooked hairs; [section *Anthriscus*] ..... ***A. caucalis***
1 Fruit lanceolate or linear, 6-10 mm long, glabrous.
  2 Beak of fruit (1-) 2-4 mm long, well-differentiated from the body; plant an annual; umbel rays pubescent; [section *Anthriscus*] ..... ***A. cerefolium***
  2 Beak of fruit ca. 1 mm long, scarcely differentiated from the body; plant a perennial; umbel rays glabrous (or nearly so); [section *Cacosciadium*] ..... ***A. sylvestris*** *ssp.* ***sylvestris***

* ***Anthriscus caucalis*** Bieberstein, Bur Chervil, Bur-parsley. Mt (NC, WV), Pd (NC, SC, VA), Cp (DE, GA, NC, SC): disturbed areas; rare, native of Europe. April-May; May-June. First reported for South Carolina by Hill & Horn (1997) and for GA (Carter, Baker, & Morris 2009). [= C, K, Z; = *A. scandicina* (Weber ex Wiggers) Mansfeld – RAB, F, G, MC, illegitimate name]

* ***Anthriscus cerefolium*** (Linnaeus) Hoffmann, Garden Chervil. Pd (VA): cultivated in gardens, sometimes persistent or escaped; rare, native of western Medterranean Europe. May-July. [= C, F, G, K, MC, Z]

* ***Anthriscus sylvestris*** (Linnaeus) Hoffmann *ssp.* ***sylvestris***, Wild Chervil, Cow-parsley. Mt (NC, TN, VA), Pd (DE): moist disturbed areas; rare, native of Eurasia. May-July. This species has also been reported from the NC-TN state line, on Roan Mountain (Mellichamp, Matthews, & Smithka 1987, 1988); the population is actually entirely in TN. Reported for Watauga, Ashe, and Alleghany counties, NC (Poindexter, pers. comm. 2009). [= Z; < *A. sylvestris* – C, F, G, K, MC]

Apium Linnaeus 1753 (Celery)

A genus of about 20 species, herbs, of temperate and subtropical regions, mainly Southern Hemisphere. References: Ronse et al. (2010)=Z; Mathias & Constance (1945)=MC.

1 Involucel absent; fresh plant smelling of celery; stem solid ..... ***A. graveolens*** *var.* ***dulce***
1 Involucel present; fresh plant not smelling of celery; stem hollow ..... ***[Heliosciadium nodiflorum]***

* ***Apium graveolens*** Linnaeus *var.* ***dulce*** (P. Miller) A.P. de Candolle, Celery. Cp (FL, NC, SC), Mt (WV): disturbed areas, escaped or persisting from cultivation; rare, native of Europe. June-July; July-August. [= K; < *A. graveolens* Linnaeus – RAB, C, F, G, MC, WH, WV; < *Celeri graveolens* (Linnaeus) Britton – S; = *A. graveolens* ssp. *dulce* (P. Miller) Bertoloni]

Bifora Hoffmann 1816 (Bishop)

A genus of 4-6 species, annual herbs, of Mediterranean Europe, w. Asia (Caucasus), and w. North America.

* *Bifora americana* Bentham, Prairie Bishop. Disturbed areas; native of sc. North America. April-June. [= K] {perhaps not naturalized; not keyed or mapped}
* *Bifora radians* Bieberstein. [= K] {probably not naturalized; not keyed or mapped}
* *Bifora testiculata* (Linnaeus) Sprengel. [= K] {probably not naturalized; not keyed or mapped}

Bowlesia Ruiz & Pavón 1794 (Bowlesia)

A genus of ca. 15 species, herbs, of South America. References: Mathias & Constance (1945)=MC.

* ***Bowlesia incana*** Ruiz & Pavón. Cp (FL): open wet hammocks and bottomlands; rare, native of South America. [= GW, K, MC, WH; = *Bowlesia septentrionalis* Coulter & Rose – S]

Bupleurum Linnaeus 1753 (Hare's-ear, Thoroughwax)

A genus of about 190 species, herbs and shrubs, primarily Eurasian. References: Snogerup & Snogerup (2001)=Z; Mathias & Constance (1945)=MC.

1 Upper leaves linear, sessile; [section *Aristata*] ..... ***B. gerardii***
1 Upper leaves ovate, perfoliate; [section *Bupleurum*] ..... ***B. rotundifolium***

* ***Bupleurum gerardii*** Allioni. Mt (VA): disturbed areas over limestone; rare, native of Mediterranean Europe. Also reported for c. TN (Neves, Weakley, & Cox 2009). Snogerup & Snogerup (2001) apply narrower taxonomic concepts in this group, and would treat our material as *B. virgatum*, a segregate of *B. gerardii*. [= *B. odontites* Linnaeus – K, apparently misapplied; = *B. fontanesii* Gussone – C, G, MC, apparently misapplied; > *B. virgatum* Cavanilles – Z]
* *Bupleurum lancifolium* Hornemann. Reported as a waif for MD by Shetler & Orli (2000) and Reed (1964). [= K] {not keyed; not mapped}
* *Bupleurum odontites* Linnaeus. Reported as a waif for MD by Shetler & Orli (2000) and Reed (1964). [= K; > *B. fontanesii* Guss. ex Careul – C, G, MC] {not keyed; not mapped}
* ***Bupleurum rotundifolium*** Linnaeus, Hare's-ear, Thoroughwax. Mt (VA, WV), Pd (DE, NC, VA), Cp (DE): lawns, disturbed areas; rare, native of Eurasia. June. [= RAB, C, F, G, K, MC, S, W]

Carum Linnaeus 1753 (Caraway)

A genus of about 30 species, temperate. References: Mathias & Constance (1945)=MC.

* ***Carum carvi*** Linnaeus, Caraway. Mt (NC, VA, WV): disturbed areas, roadsides; rare, native of Eurasia. May-June. [= RAB, C, F, G, K, MC, WV]

Centella Linnaeus 1764 (Centella, Coinleaf)

A genus of about 40 species, of warm temperate and tropical regions, centered in s. Africa. References: Mathias & Constance (1945)=MC.

Centella erecta (Linnaeus f.) Fernald, Centella, Coinleaf. Cp (DE, GA, NC, SC, VA): savannas, pondshores, ditches, and a wide variety of other moist to wet habitats; common (rare in DE). June-August; July-September. S. NJ and DE south to s. FL, west to s. TX; West Indies, Mexico, Central America. *C. erecta* has sometimes been included in the pantropical *C. asiatica*, but the two taxa differ in morphology and chromosome number (*C. erecta* has n = 27, *C. asiatica* has n = 9). [= C, F, G, K, MC; < *C. asiatica* (Linnaeus) Urban – RAB, GW, misapplied; ? *C. repanda* (Persoon) Small – S]

Chaerophyllum Linnaeus 1753 (Chervil)

A genus of about 35 species, herbs, of north temperate areas. References: Mathias & Constance (1945)=MC.

1 Ribs of fruit broad, the intervals between the ribs much narrower than the ribs; pedicels somewhat club-shaped; stem and leaf surfaces essentially glabrous ..... ***C. tainturieri***
1 Ribs of fruit narrow, the intervals between the ribs equal to or wider than the ribs; pedicels mostly uniform in shape; stem and leaf surfaces mostly pilose.
2 Fruit glabrous, 6-10 mm long, 1.5-2 mm broad ..... ***C. procumbens* *var.* *procumbens***
2 Fruit densely puberulent, 4.5-6.5 mm long, 2-2.5 mm broad ..... ***C. procumbens* *var.* *shortii***

* *Chaerophyllum bulbosum* Linnaeus, Parsnip Chervil. Waif in DC; native of Europe. [= C, G, K, MC] {not keyed; not mapped}

Chaerophyllum procumbens (Linnaeus) Crantz *var.* ***procumbens***, Common Spreading Chervil. Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA), Mt (VA, WV): alluvial forests; common (uncommon in NC, rare in DE, FL, GA, and SC). Late March-April; April-May. NY and s. ON to MI, s. WI, and e. NE, south to GA, AR, and OK. [= RAB, C, F, G, K, MC; < *C. procumbens* – GW, W, WH; = *C. procumbens* – S]

Chaerophyllum procumbens (Linnaeus) Crantz *var.* ***shortii*** Torrey & A. Gray, Short's Spreading Chervil. Mt (VA, WV), Pd (SC): nutrient-rich mountain forests, alluvial forests; rare. March-April. W. PA west to IN, south to SC, TN, and LA. The validity of this variety needs additional study. [= RAB, C, F, G, K, MC; < *C. procumbens* – GW, W; = *C. shortii* (Torrey & A. Gray Bush – S]

Chaerophyllum tainturieri Hooker, Southern Chervil. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV): roadsides, disturbed areas, fields; common (rare in DE and WV). March-April; April-May. MD west to NE, south to c. peninsular FL, TX, and AZ. Var. *tainturieri* (with fruits glabrous) and var. *dasycarpum* (with fruits pubescent) are sometimes distinguished (see synonymy). They have largely overlapping distributions, and seem unlikely to warrant taxonomic status, but need additional study. *C. texanum* Coulter & Rose is reported as a native in the Nashville Basin of TN (Chester, Wofford, & Kral 1997); it is usually now included in *C. tainturieri* (var. *tainturieri*). [= RAB, C, GW, W, WH; > *C. tainturieri* var. *tainturieri* – K; > *C. tainturieri* var. *tainturieri* – F, G, MC; > *C. tainturieri* var. *floridanum* Coulter & Rose – F; > *C. texanum* Coulter & Rose – F, G, MC; > *C. teinturièri* – S, orthographic variant; > *C. floridanum* (Coulter & Rose) Bush – S; > *C. tainturieri* var. *dasycarpum* Hooker ex S. Watson – K, MC; > *C. dasycarpum* (Hooker ex S. Watson) Nuttall ex Small – S]]

* *Chaerophyllum temulem* Linnaeus, Rough Chervil. Native of Europe; introduced as a waif south to PA and NJ (Kartesz 1999). [= C, G, K, MC] {not keyed; not mapped}

Cicuta Linnaeus 1753 (Water-hemlock)

A genus of 8 species, herbs, north temperate in distribution. References: Mulligan (1980)=Z; Mathias & Constance (1945)=MC.

1 Flowers usually aborting (if present, the fruits 1.5-2 mm long); axils of upper leaves bearing clusters of bulbils; leaflets with narrowly linear segments, usually < 5 mm wide ..... ***C. bulbifera***
1 Flowers usually forming mature fruits 2-4 mm long; axils of leaves not bearing bulbils; leaflets lanceolate, usually > 6 mm wide.
2 Dorsal and lateral corky ribs of the fruit much narrower than the oil tubes; fruit abruptly and unevenly constricted at the commissure ..... ***C. bolanderi***
2 Dorsal and lateral corky ribs of the fruit equaling to slightly exceeding the width of the oil tubes; fruit restricted or not at the commissure, but not as above.
3 Lateral ribs of the commissure flush against one another; leaflets lanceolate, 0.6-3 cm wide ..... ***C. maculata* *var.* *maculata***
3 Lateral ribs of the commissure separated by a groove; leaflets ovate, up to 3.5-5 cm wide..... ***C. mexicana***

Cicuta bolanderi S. Watson. Marshes, bogs, seepages, ditches, swamp forests. Scattered in distribution, from NJ, WI, and MN south to GA, TX, Mexico, and AZ. Further study is needed of the distinctiveness, distribution, and ecology of this species. [= K, MC; < *C. maculata* var. *maculata* – C, F, G; = *C. maculata* Linnaeus var. *bolanderi* (S. Watson) Mulligan – Z]

Cicuta bulbifera Linnaeus, Bulb-bearing Water-hemlock. Marshes and swamps. July-September. NL (Newfoundland) west to AK, south to MD, n. VA (?), OH, KY, IN, IL, IA, NE, MT, ID, and OR; disjunct (perhaps introduced only) in NC and FL. [= C, F, G, K, MC, Z]

Cicuta maculata Linnaeus *var.* ***maculata***, Water-hemlock. Marshes, bogs, seepages, ditches, swamp forests. May-August; July-September. NS west to AK, south to FL, CA, and Mexico. Two other varieties are more northern or western: var. *victorinii* (Fernald) Boivin of QC and var. *angustifolia* Hooker of western North America. All parts of the plant, especially the tubers, are dangerously poisonous. [= *C. maculata* – RAB, GW, MC, S, W; < *C. maculata* var. *maculata* – C, F, G (also see var. *bolanderi*); < *C. maculata* var. *maculata* – K, Z (also see *C. mexicana*); < *C. maculata* – WH]

Cicuta mexicana Coulter & Rose, Southern Water-hemlock. Marshes, bogs, seepages, ditches, swamp forests, floating vegetation mats. May-August; July-September. Se. VA (GW), south to FL, and west to TX, south into Mexico (more inland records in our area and westward are of uncertain disposition). Though not recognized by Mulligan (1980), this taxon appears to warrant taxonomic recognition. It is a generally coarser plant than *C. maculata*. [= RAB, GW, MC; = *C. maculata* var. *curtissii* (Coulter & Rose) Fernald – F, G; < *C. maculata* var. *maculata* – K, Z; = *C. curtissii* Coulter & Rose – S; < *C. maculata* – WH]

Conioselinum Hoffmann 1819 (Hemlock-parsley)

A genus of about 10 species, herbs, north temperate in distribution. References: Mathias & Constance (1945)=MC.

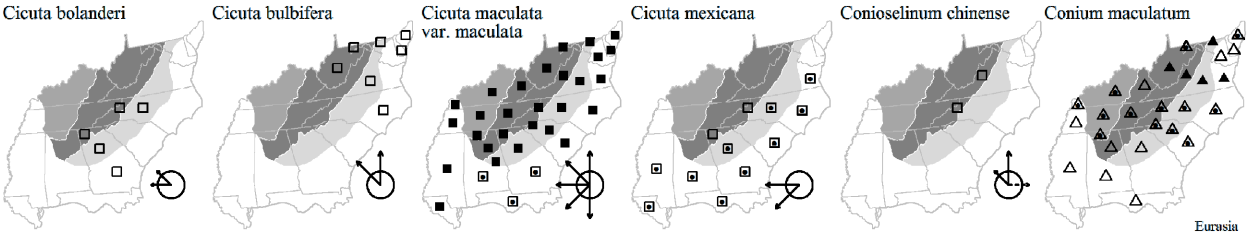
Conioselinum chinense (Linnaeus) Britton, Sterns, & Poggenburg, Hemlock-parsley. Nutrient-rich seepage over cliffs and through boulderfields, at high elevations, known from seepage over cliffs and through boulderfields at about 1500 m on the north

slope of Grandfather Mountain (Avery County, NC), and from a north-facing greenstone cliff-top seep at 1150 m on Stony Man, Page County (VA). July-September. The specific epithet is a misnomer; the species is native to n. North America (the specific epithet a misnomer): south to PA, IN, IA, and NB, and disjunct in VA and NC) and ne. Asia (e. Siberia), but not found in China (the epithet a mistake based on confusion between "Genesee," New York, and "Chinensem"). The single NC population was first discovered in 1842 by Asa Gray and John Carey, and not seen again until 1989. The VA population was first reported by Fleming & Ludwig (1996). The report of the species from Roan Mountain was found to be in error; see *Anthriscus* (Mellichamp, Matthews, & Smithka 1987, 1988). [= RAB, C, F, G, K, MC, S, W]

Conium Linnaeus 1753 (Poison-hemlock)

A genus of 6 species, herbs, north temperate and s. African in distribution. References: Mathias & Constance (1945)=MC.

* ***Conium maculatum*** Linnaeus, Poison-hemlock. Ditches, roadsides, streambanks, disturbed areas; native of Eurasia. May-June; June-July. All parts of the plant are highly toxic if ingested, causing respiratory failure in humans and other mammals. [= RAB, C, F, GW, K, MC, S, W, WV]



Coriandrum Linnaeus 1753 (Coriander, Cilantro)

A genus of 3 species, herbs, sw. Asian in distribution. References: Mathias & Constance (1945)=MC.

* ***Coriandrum sativum*** Linnaeus, Coriander, Cilantro, Mexican-parsley, Chinese-parsley. Disturbed areas, cultivated in gardens, sometimes persisting or escaped; native of Eurasia. June-July. [= RAB, C, F, G, K, MC, S]

Cryptotaenia A.P. de Candolle 1829 (Honewort)

A genus of 6 species, herbs, in north temperate areas (and montane Africa). References: Mathias & Constance=MC.

Cryptotaenia canadensis (Linnaeus) A.P. de Candolle, Honewort. Moist and nutrient-rich forests (alluvial, bottomland, slope, and cove forests). May-June; June-August. NB and QC to MB, south to e. GA, sw. GA, Panhandle FL, AL, and TX; also in Japan. [= RAB, C, F, GW, K, MC, WH, WV; = *Deringa canadensis* (Linnaeus) Kuntze – S]

Cyclospermum Lagasca y Segura 1821 (Marsh-parsley)

A genus of 3 species, herbs, of tropical and warm temperate America. Only distantly related to *Apium* and warranting generic ststus (Ronse et al. 2010). References: Ronse et al. (2010)=Z; Mathias & Constance (1945)=MC.

Cyclospermum leptophyllum (Persoon) Sprague ex Britton & Wilson, Marsh-parsley. Freshwater marshes, disturbed areas, roadside ditches. April-early June; June-July. Widespread in se. North America, from NC and OK south into tropical America. [= K, WH, Z; = *Apium leptophyllum* (Persoon) F. Mueller ex Bentham – RAB, C, G, GW, MC; = *Ciclospermum leptophyllum*, orthographic variant; ? *Ciclospermum ammi* Lagasca y Segura – S]

Cynosciadium A.P. de Candolle 1829

A genus of 2 species, of sc. North America. References: Mathias & Constance (1945)=MC.

Cynosciadium digitatum A.P. de Candolle. Wet places, ditches, blackland prairies. IL, sw. TN (Shelby County), and AL west to OK and TX. [= C, F, G, GW, K, MC, S]

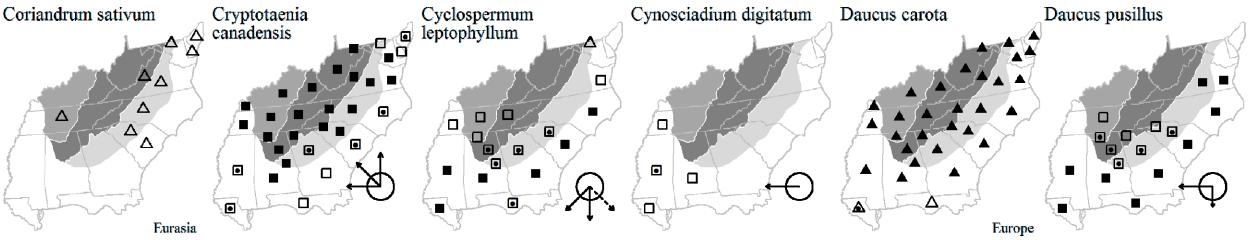
Daucus Linnaeus 1753 (Wild Carrot, Queen-Anne's-lace)

A genus of about 22 species, herbs, of temperate and tropical areas, primarily Old World. References: Mathias & Constance (1945)=MC.

1 Involucral bracts scarious-margined, spreading or reflexed in fruit; spines of fruit not prominently barbed apically; umbel rays 10-65 mm long (at least some in a given inflorescence usually exceeding 3 cm); umbellets (10-) 20-numerous flowered; central flower of the umbel usually dark purple; plant a freely-branched biennial.....***D. carota***
1 Involucral bracts not scarious-margined, appressed-ascending in fruit; spines of fruit prominently barbed apically; umbel rays 5-26 mm long; umbellets 5-12 flowered; central flower of the umbel white; plant an unbranched (or rarely few-branched) annual ..... ***D. pusillus***

* ***Daucus carota*** Linnaeus, Queen-Anne's-Lace, Carrot, Wild Carrot. Pastures, fields, roadsides, waste places; native of Europe. May-September. The cultivated carrot is a form with a fleshy taproot rich in carotene; the familiar field weed has a "carroty" flavor, but the root is woody and tan in color. [= RAB, C, F, G, K, MC, S, W, WH, WV]

Daucus pusillus Michaux, American Queen-Anne's-lace. Pastures, fields, roadsides, waste places. April-May; May-June. This native relative of *D. carota* is smaller and less branched. Widespread in Southeastern United States, north to NC and MO. It should be expected in the lower Piedmont of NC and in the Coastal Plain of se. VA, which it closely approaches. Robert Wright has collected this species as a waif in Henrico County, VA (R. Wright, 2002, pers. comm.). [= RAB, C, F, G, K, MC, S, W, WH]



Erigenia Nuttall 1818 (Harbinger-of-spring, Pepper-and-salt)

A monotypic genus, an herb of e. North America. References: Buddell & Thieret (1985)=Z; Mathias & Constance (1945)=MC.

Erigenia bulbosa (Michaux) Nuttall, Harbinger-of-spring, Pepper-and-salt, Erigenia. Mesic, nutrient-rich forests, either over calcareous substrate or on very rich alluvial deposits (such as riverbanks). February-May. S. PA, w. NY, s. ON, c. MI, and se. WI south to MD, DC, c. VA, w. VA, nc. NC, w. NC, e. TN, nw. GA, c. AL, n. MS, sw. AR, and se. KS (almost entirely west of the Blue Ridge). Rodgers (1950) states "reported in mtns. of N.C. by Kephart and Hyams;" now documented from both the nc. Piedmont and the w.MD, DC, Mountains. See Buddell & Thieret (1985) for a very interesting and entertaining account of this plant. [= RAB (excluded), C, F, G, K, MC, S, W, WV, Z]

Eryngium Linnaeus 1753 (Eryngo)

A genus of about 250 species, herbs, tropical and temperate. References: Bell (1963)=Z; Mathias & Constance (1945)=MC; Calviño, Martínez, & Downie (2008).

1 Leaves thickly coriaceous, palmately lobed, the lobes and teeth tipped with stout spines; [subgenus *Eryngium*] .....***E. maritimum***
1 Leaves thin, fleshy, or subcoriaceous, entire, toothed, palmately lobed, or pinnately incised, the teeth or lobes (if present) unarmed or with weak spines.
2 Inflorescence unbranched, the heads solitary on peduncles from the leaf axils of the prostrate to erect stem; [subgenus *Monocotyloidea*].
3 Leaves pinnately lobed or dissected.....***E. divaricatum***
3 Leaves entire, irregularly toothed (rarely with some irregular lobing).
4 Heads subglobose or hemispherical when fully developed, about as wide as long; bracts subtending the head barely extending beyond the base of the head; main stems leaves linear, narrowly elliptic, narrowly oblanceolate, sometime tricuspid apically ....***E. baldwinii***
4 Heads cylindrical, longer than wide; bracts subtending the head longer than the radius of the head, thus extending conspicuously beyond the base of the head; main stem leaves elliptic, broader than above.....***E. prostratum***
2 Inflorescence branched, the heads in a cyme borne terminally on the erect stem.
5 Basal and cauline leaves (all, or at least many of the cauline) definitely deeply lobed into 3 or more divisions, < 10 cm long.
6 Heads blue; basal leaves serrate but not divided; [subgenus *Monocotyloidea*].....***E. hookeri***
6 Heads greenish; basal leaves pinnately or pinnately-ternately divided.
7 Plants slender, not fleshy, green; basal and cauline leaves 2-6 cm long, 3-5 (-7) pinnately parted; heads 5-8 mm in diameter; [native species of dry pinelands of the Coastal Plain of e. GA, s. AL, and FL]; [subgenus *Monocotyloidea*] ..... ***E. aromaticum***
7 Plants stout, fleshy, usually glaucescent; basal leaves 10-25 cm long and wide, pinnately or pinnate-ternately divided into > 7 segments, the cauline leaves similar but reduced in size and number of divisions; heads 10-15 mm in diameter; [rare ballast waif of disturbed ground]; [subgenus *Eryngium*] .....***E. campestre***
5 Basal and cauline leaves unlobed (except sometimes the uppermost; note that bracts in the inflorescence are often lobed), 3-100 cm long; [subgenus *Monocotyloidea*].
8 Blades of basal and lower cauline leaves 3-7 (-10) cm long, acute to obtuse apically, cordate to truncate basally, with a length/width ratio of 1.5-3 (-6) .....***E. integrifolium***

8 Blades of basal and lower cauline leaves 10-100 cm long, acuminate to acute apically, clasping basally, with a length/width ratio of 5-50.
9 Leaves with primary veins parallel, with marginal bristles; flowers greenish-white.
10 Larger leaves > 1.5 cm wide; marginal bristles of leaves solitary ..... ***E. yuccifolium*** *var.* ***yuccifolium***
10 Larger leaves < 1.5 cm wide; marginal bristles in fascicles of 1-3 (-4), those on the lower portion of the leaf usually in fascicles of 2-3 ..... ***E. yuccifolium*** *var.* ***synchaetum***
9 Leaves with primary veins pinnate-reticulate, with or without marginal bristles; flowers blue.
11 Styles 3.0-3.5 mm long at maturity, scarcely exceeding the bractlets (which subtend each flower); heads subglobose to hemispherical, 6-12 mm in diameter; middle cusp of the bractlets elongate, distinctly longer than the lateral cusps ..... ***E. aquaticum*** *var.* ***aquaticum***
11 Styles 4.0-6.0 mm long at maturity, exceeding the bractlets; heads globose, 9-15 mm in diameter; middle cusp of the bractlets about equal in length to the lateral cusps ..... ***E. aquaticum*** *var.* ***ravenelii***

Eryngium aquaticum Linnaeus *var.* ***aquaticum***, Marsh Eryngo. Cp (DE, FL, GA, NC, SC, VA): tidal freshwater to brackish marshes; uncommon (rare in DE). July-September. NJ to ne. FL along the Atlantic coast, mostly in brackish marshes. [= RAB, K, MC, Z; < *E. aquaticum* – C, F, G, GW, WH; = *E. virginianum* Lamarck – S]

Eryngium aquaticum Linnaeus *var.* ***ravenelii*** (A. Gray) Mathias & Constance, Ravenel's Eryngo. Cp (FL, GA, NC, SC): wet savannas, mostly or entirely over calcareous substrate; rare. July-September. Se. NC (Onslow and Pender counties) south to sw. GA and n. FL. McMillan (2003) suggests that it may warrant specific status distinct from *E. aquaticum*. [= RAB, K, MC, Z; < *E. aquaticum* – GW, WH; = *E. ravenelii* A. Gray – S]

Eryngium aromaticum Baldwin, Fragrant Eryngo. Cp (FL, GA): dry pinelands; common (uncommon in GA). E. GA west to s. AL, south to s. FL. [= K, MC, S, WH, Z]

Eryngium baldwinii Sprengel. Cp (FL, GA): pinelands, temporary pools, ditches, other moist to wet sites; common (uncommon in GA). Se. GA and sw. GA south to s. FL. [= GW, K, S, WH, Z; = *E. baldwini* – MC, orthographic variant]

* *Eryngium campestre* Linnaeus, Field Eryngo. Ballast waif around ports, in AL (Mobile), MD, and NJ (Z; Kartesz 1999). Native of Eurasia. [= K, MC, Z]

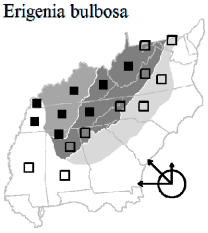
* ***Eryngium divaricatum*** Hooker & Arnott. Cp (FL, NC): disturbed areas, introduced on ballast at old port towns (Wilmington, NC; Pensacola, FL); rare, native of South America. July-October. Not seen in recent years and probably not persistent. [= RAB, K, MC, S, WH, Z]

* *Eryngium foetidum* Linnaeus, Spiritweed. Listed by Kartesz (1999) as introduced in GA and FL, but the only reports are very early and anecdotal, and the species was excluded from the North American flora by Coulter & Rose (1900), with no subsequent documentation that would change that conclusion. Native of Mexico, Central America, South America, and West Indies. [= K, MC] {not keyed}

*? *Eryngium hookeri* Walpers. Ditches, other wet areas. MS and AR west to OK and TX, perhaps recently adventive in the eastward portions of that distribution, not credited as occurring east of TX in Matthias & Constance (1945). [= K, MC]

Eryngium integrifolium Walter, Savanna Eryngo. Cp (FL, GA, NC, SC), Mt (GA, NC, SC), Pd (GA, NC, SC, VA): savannas, pine flatwoods, seepages, other moist, nutrient-poor places; common (rare in Piedmont and Mountains). August-October. Se. VA (Greensvillle County) (Belden et al. 2004) and e. NC south to ne. FL and Panhandle FL, west to OK and TX, inland in c. TN. [= RAB, K, MC, W, WH, Z; > *E. integrifolium* – S; > *E. ludovicianum* Morong – S]

Erigenia bulbosa



* ***Eryngium maritimum*** Linnaeus, Sea Holly. Cp (NC): ocean and soundside dunes; rare, presumably native of Europe, though perhaps adventive. July. [= RAB, C, G, K, MC, Z]

Eryngium prostratum Nuttall ex A.P. de Candolle, Spreading Eryngo. Cp (DE*, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA), Mt (NC, SC): floodplain forests, bogs, pond ,margins, moist ditches and lawns, other moist, open habitats; uncommon, definitely native southwards, perhaps only rather recently spread to the northern parts of our area. May-October. Se. VA south to FL, west to OK and TX. [= RAB, C, GW, K, MC, S, W, WH, Z; > *E. prostratum* var. *prostratum* – F, G; > *E. prostratum* var. *disjunctum* Fernald – F, G]

Eryngium yuccifolium Michaux *var.* ***synchaetum*** A. Gray ex Coulter & Rose, Southern Rattlesnake-master. Cp (FL, GA, NC, SC): wet savannas, especially those over calcareous clay soils; rare (NC Watch List). June-August. A Southeastern Coastal Plain endemic: se. NC to s. FL and west across the Gulf Coastal Plain, the exact range limits obscure. The distinction between the two varieties, seemingly clear in NC and elsewhere in states bordering the Atlantic, seems to become less straightforward further west, as in LA and AR. In NC it has been seen in Pender, Brunswick, Columbus, Bladen, and Robeson counties. [= RAB, K, MC, Z; < *E. yuccifolium* – GW, WH; = *E. synchaetum* (Gray ex Coulter & Rose) Coulter & Rose – S]

Eryngium yuccifolium Michaux *var.* ***yuccifolium***, Northern Rattlesnake-master. Pd (GA, NC, SC, VA), Mt (GA, NC, SC, VA), Cp (FL?, GA, NC, SC, VA): diabase barrens and glades, olivine barrens, pine savannas, pine flatwoods over loamy or clay soils, other open sites with at least periodic moisture, generally in sites showing some prairie affinities; uncommon (rare in VA). June-August. Widespread in southeastern and midwestern North America, the exact range limits of the typic variety and var. *synchaetum* somewhat obscure. [= RAB, K, MC, Z; < *E. yuccifolium* – C, F, G, W, WH; < *E. yuccifolium* – GW (also see *E. yuccifolium* var. *synchaetum*); = *E. aquaticum* – S, misapplied]

Falcaria Fabricius 1827 (Sickleweed)

A monotypic genus, an herb, of Eurasia. References: Mathias & Constance (1945)=MC.

* ***Falcaria vulgaris*** Bernhardi, Sickleweed. Mt (VA, WV): disturbed areas; rare, native of Eurasia. July-September. [= C, F, K; = *F. sioides* (Wibel) Ascherson – G, MC, WV]

Foeniculum P. Miller 1763 (Fennel)

A genus of 4-5 species, herbs, of Asia and Mediterranean Europe. References: Mathias & Constance (1945)=MC.

* ***Foeniculum vulgare*** P. Miller, Fennel. Cp (DE, FL, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Pd (DE, NC, SC, VA): fields, dredge spoil, old gardens, waste places, vacant lots, roadsides; uncommon (sometimes locally common, rare in DE and WV), native of Mediterranean Europe. June-August; August-September. This is the common garden fennel, cultivated for its seeds, leaves, "bulbs" (finocchio), and ornamental appearance (especially bronze forms), widely used in Mediterranean cuisines. [= RAB, C, F, G, K, MC, W, WH, WV; = *Foeniculum foeniculum* (Linnaeus) Karsten – S]

Harperella Rose 1906 (Harperella)

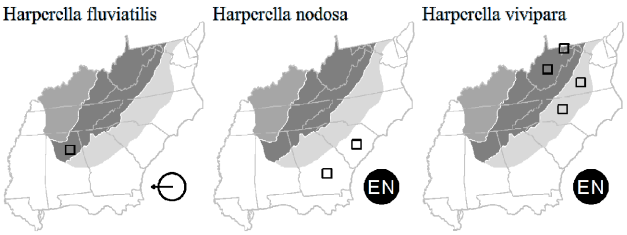
A genus of 3 species, herbs, temperate, of e. North America. Based on work of Feist & Downie (2008), *Harperella* should be (re)-separated from *Ptilimnium*. Some authors, such as C, K, and Kral (1981a) prefer to include *H. fluviatilis* and *H. vivipara* in *H. nodosa*, but recent electrophoretic and morphologic data suggest the existence of three taxa: *H. vivipara* of w. MD, e. WV, VA, and c. NC, *P. fluviatilis* of n. AL and AR, and *P. nodosa* of SC and GA. See Maddox & Bartgis (1990) and Kress, Maddox, & Roesel (1994) for additional information. Further electrophoretic and morphologic studies are underway. References: Feist & Downie (2008); Easterly (1957)=Z; Kral (1981a)=Y; Rose (1911)=X; Mathias & Constance (1945)=MC; Kress, Maddox, & Roesel (1994).

1 Leaves 8-30 cm long; plants 4-10.5 dm tall, not proliferating from the nodes (strictly annual); rays 10-25 mm long, 6-15 per inflorescence; pedicels 3.0-6.0 mm long; [of still water of Coastal Plain ponds] ..... ***H. nodosa***
1 Leaves 4-12 (-15) cm long; plants 1-5 (-8) dm tall, proliferating from the nodes (thus adventitiously perennial); rays 1-9 mm long, 2-5 (-9) per inflorescence; pedicels 0.5-2.0 (-2.5) mm long; [of shoals, outcrops, and banks of rocky streams or rivers]
  2 Umbellets 6-15-flowered; [n. AL and AR] ..... ***H. fluviatilis***
  2 Umbellets 2-8-flowered; [w. MD, e. WV, VA, and c. NC] ..... ***H. vivipara***

Harperella fluviatilis Rose, Gulf River Harperella. Rocky riverbeds. N. AL and AR. [= X; = *Ptilimnium fluviatilis* – MC, orthographic variant; < *P. fluviatile* (Rose) Mathias – RAB, G, GW, Z; < *P. nodosum* (Rose) Mathias – C, K, Y; < *Harperella fluviatilis* Rose – S, X]

Harperella nodosa Rose, Pond Harperella. Upland depression ponds, seepage on granite outcrops. June. Known only from a few sites in SC and c. GA. [= S, X; = *Ptilimnium nodosum* (Rose) Mathias – RAB, GW, MC, Z; < *P. nodosum* (Rose) Mathias – C, K, Y (also see *P. fluviatile*)]

Harperella vivipara Rose, Atlantic River Harperella. Rocky riverbeds. July-August. Belden et al. (2004) provide details on the Virginia occurrence in Aquia Creek, Stafford County. [= X; = *Ptilimnium viviparum* (Rose) Mathias – MC; < *Ptilimnium fluviatile* (Rose) Mathias – RAB, G, GW, WV, Z; < *P. nodosum* (Rose) Mathias – C, K, Y; = *P. viviparum* (Rose) Mathias – F; < *Harperella fluviatilis* Rose – S]



Helosciadium W.D.J. Koch 1824

A genus of 5 species, herbs, of Eurasia. References: Ronse et al. (2010)=Z; Mathias & Constance (1945)=MC.

* ***Helosciadium nodiflorum*** (Linnaeus) W.D.J. Koch, Fool's Watercress. Cp (SC): disturbed areas near old seaports; rare, native of Eurasia. [= Z; = *Apium nodiflorum* (Linnaeus) Lagasca y Segura – RAB, K, MC; = *Ciclospermum nodiflorum* (Linnaeus) W.D.J. Koch – S]

Heracleum Linnaeus 1753 (Cow-parsnip, Hogweed)

A genus of about 65 species, herbs, north temperate (and tropical mountains). References: Mathias & Constance (1945)=MC.

* *Heracleum mantegazzianum* Sommier & Levier. Native to the Caucasus Mountains, has been introduced in ne. North America and is becoming established; it may eventually spread to our area. It is considerably larger and coarser even than *H. maximum* (not a paltry herb itself), reaching 5.5 m in height, the hollow stems to 15 cm in diameter, the lower leaves to 2.5 m long, and the umbels to 5 dm across. More modestly-sized individuals may be distinguished from *H. maximum* by wider oil tubes on the fruit [(0.6-) 0.8-1.0 mm wide vs. 0.3-0.5 (-0.8). [= K] {not keyed}

Heracleum maximum W. Bartram, Masterwort, Cow-parsnip, American Hogweed. Mt (GA, NC, VA, WV), Pd (DE): forests, roadbanks, meadows, forest openings; uncommon (rare in GA). May-July; July-August. NL (Labrador) west to AK, south to DE, PA, OH, IN, IL, MO, KS, NM, AZ, CA, and in the Appalachians south to w. NC, e. TN, and n. GA; also in e. Siberia. The synonymy reflects two questions, one nomenclatural, the other taxonomic. North American plants are very similar to European ones, leading some workers to treat our plants as a subspecies or variety of the European. If recognized as specifically distinct from European *H. sphondylium*, the nomenclatural question is whether to accept Bartram's (older) name as validly published. [= F, GW, K, WV; = *H. lanatum* Michaux – RAB, C, G, MC, W; = *H. sphondylium* Linnaeus var. *lanatum* (Michaux) Dorn; ? *H. sphondylium* Linnaeus ssp. *montanum* (Schleicher ex Gaudin) Briquet]

Imperatoria Linnaeus 1753 (Masterwort)

A genus of 3 species, of Eurasia. References: Ball in FNA (in prep.); Mathias & Constance (1945)=MC.

* ***Imperatoria ostruthium*** Linnaeus, Masterwort. Mt (TN, WV): disturbed areas; rare, native of Europe. May-July. Naturalized in ne. United States from Europe. Reported from Carter County, TN (Chester, Wofford, & Kral 1997), and also is reported for scattered localities in PA (Rhoads & Klein 1993). [= FNA, MC, WV; = *Peucedanum ostruthium* (Linnaeus) W.D.J. Koch – C, K]

Ligusticum Linnaeus 1753 (Lovage)

A genus of 40-50 species, herbs, circumboreal and north temperate. References: Mathias & Constance (1945)=MC.

Ligusticum canadense (Linnaeus) Britton, Nondo, Angelico, American Lovage. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (FL, NC): moist to dryish, nutrient-rich forests and woodlands; common (rare in Coastal Plain). June-July; August-September. S. PA south to c. GA, AL, and Panhandle FL; also in s. MO and n. AR, centered in the Southern and Central Appalachians and the Ozarks-Ouachitas, but extending considerably into adjacent provinces, and even slightly into the Coastal Plain. A distinctive character is the straightish and toothless basal portion of each leaflet. [= RAB, C, F, G, K, MC, S, W, WV]

Lilaeopsis Greene 1891 (Lilaeopsis)

A genus of about 13 species, herbs, warm temperate and tropical, of America, Australia, and New Zealand. References: Affolter (1985)=Z; Mathias & Constance (1945)=MC; Hatch & Slack (2008).

1 Leaves 7-30 (or more) cm long, often spatulate, up to 11 mm wide toward the apex, with (7-) 10-20 transverse septae; peduncles much shorter than the leaves; pedicels 5-10 mm long ..... ***L. carolinensis***
1 Leaves 1-5 cm long, linear (rarely spatulate), 1-2 (-5) mm wide, with 4-8 (-10) transverse septae; peduncles about as long as or longer than the leaves; pedicels 3-4 mm long ..... ***L. chinensis***

Lilaeopsis carolinensis Coulter & Rose, Carolina Lilaeopsis. Cp (FL, GA, NC, SC, VA): freshwater marshes and pondshores, ditches, interdune ponds, shores of brackish to freshwater estuarine sounds and rivers; uncommon (rare in GA, NC, SC, and VA)). May-June. Se. VA south to FL and west to e. TX (Hatch & Slack 2008); it is also found in South America (Argentina, Brazil, and Paraguay). [= RAB, F, GW, K, S, WH, Z; = *L. attenuata* (Hooker & Arnott) Fernald – C, G, MC]

Lilaeopsis chinensis (Linnaeus) Kuntze, Marsh Lilaeopsis. Cp (DE, FL, GA, NC, SC, VA): brackish and freshwater tidal marshes, especially in mud-flats in the intertidal zone; common. May-June. NS south to FL and west to TX (Brown & Marcus 1998). The epithet "*chinensis*" is a misnomer; the species is native to e. North America and has nothing to do with China. [= RAB, F, G, GW, K, MC, WH, Z; = *L. lineata* (Michaux) Greene – S]

Oenanthe Linnaeus 1753 (Water-dropwort)

A genus of ca. 40 species, herbs, of north temperate areas.

* ***Oenanthe javanica*** A.P. de Candolle, Water Celery, Water Parsley, Java Dropwort, Seri. Pd (VA), Mt (GA): edge of swamp forests, ditches; rare (but seemingly with the ability to spread rapidly), native of Asia. July-August. [] {add to synonymy}

Osmorhiza Rafinesque 1819 (Sweet Cicely, Wild Chervil)

A genus of about 10 species, herbs, of temperate North America, temperate South America, montane tropical Central and South America, and Asia (Wen et al. 2002). References: Lowry & Jones (1979)=Z; Mathias & Constance (1945)=MC; Wen et al. (2002).

1 Styles plus stylopodium 0.5-1.5 mm long; flowers 4-7 (-10) per umbellet (inclusing withering staminate flowers); flowers 3-4 mm across; umbellets 3-5 (-6) per umbel, on rays 2-8 (-10) cm long, the umbel therefore relatively uncrowded; roots (and foliage) not strongly anise-scented ..... ***O. claytonii***
1 Styles plus stylopodium 2.0-3.5 mm long; flowers (6-) 9-18 per umbellet (including withering staminate flowers); flowers 5-6 mm across; umbellets 4-6 (-8) per umbel, on rays 1.5-5.0 (-7.5) cm long, the umbel therefore rather crowded; roots (and foliage) strongly anise-scented ..... ***O. longistylis***

Osmorhiza claytonii (Michaux) C.B. Clarke, Bland Sweet Cicely, Hairy Sweet Cicely. Mt (GA, NC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, VA): cove forests, other moist, fertile forests; common (rare in Piedmont south of DE, rare in Coastal Plain, rare in SC). April-May; May-June. NS and QC west to SK, south to NC, n. GA, AL, and AR. [= RAB, C, F, G, K, MC, W, Z; = *O. claytoni* – WV; = *Osmorrhiza claytonii* – S, misspelling]

Osmorhiza longistylis (Torrey) A.P. de Candolle, Anise-root, Smooth Sweet Cicely. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, VA, WV), Cp (DE, GA, NC, VA): moist, fertile forests; common (uncommon in DE Coastal Plain, rare in GA, NC, and VA Coastal Plain). April-May; May-June. QC west to SK, south to GA, TX, and CO. [= RAB, C, F, G, K, W, Z; > *O. longistylis* var. *brachycoma* Blake – F, MC, WV; > *O. longistylis* var. *longistylis* – F, MC, WV; > *O. longistylis* var. *villicaulis* Fernald – F, MC; = *Osmorrhiza longistylis* – S, misspelling]

Oxypolis Rafinesque 1825 (Dropwort, Hog-fennel, Cowbane)

A genus of about 7 species, herbs, of temperate North America. Based on work of Feist & Downie (2008), *Oxypolis* is likely to be split into two genera. References: Feist & Downie (2008); Mathias & Constance (1945)=MC; Kral (1981); Tucker et al. (1983).

1 Leaves with 1-13 leaflets, the leaflets flat; [***Oxypolis*** *s.s.*].
  2 Leaflets (5-) 7-11 (-13), pinnately disposed, usually toothed (rarely entire), net-veined ..... ***O. rigidior***
  2 Leaflets 1-3, entire, palmately disposed, parallel-veined ..... ***O. ternata***
1 Leaves reduced to hollow, linear, nodose-septate quills, consisting of the petiole and leaflet-less rachis, undivided; [***Tiedemannia***].
  3 Mature fruits with corky-thickened peripheral ribs, the fruit with a narrowly rectangular cross-section, about as thick near the ends of the ribs as at the center, 0.8-2 mm thick at the edge; plants with stoloniferous rhizomes 1-3 (-10) dm long; lower nodes often losing their leaves by flowering ; umbellets/umbel 5-9 (-12) ..... ***O. canbyi***
  3 Mature fruits with peripheral ribs progressively thinning away from the seed cavity, the fruit with a fusiform cross-section, distinctly thinner toward the ends of the ribs than at the center, 0.2 mm thick at the edge; plants with stout rhizomes or a caudex, not long stoloniferous; lower nodes generally retaining their leaves until flowering; umbellets/umbel 10-20
    4 Flowers white; segments of phyllodia cylindrical ..... ***O. filiformis***
    4 Flowers maroon; segments of phyllodia distinctly bulging ..... ***O. greenmanii***

Oxypolis canbyi (Coulter & Rose) Fernald, Canby's Cowbane. Cp (DE, GA, NC, SC): clay-based Carolina bays and other depressional wetlands; rare. July-August; August-September. Sw. GA through SC to se. NC (mostly in the middle and inner Coastal Plain); and from e. MD to (formerly) DE. See Tucker et al. (1983) for detailed information on this rare species and a comparison of it to the more widespread *O. filiformis*. [= C, F, G, K, MC; ***Tiedemannia***]

Oxypolis filiformis (Walter) Britton, Water Dropwort. Cp (FL, GA, NC, SC): wet savannas, sandhill seepages; common (uncommon north of FL). July-August; August-September. Se. NC south to s. FL, west to se. TX; West Indies. [= RAB, GW, K, MC, S; = *O. filiformis* ssp. *filiformis* – WH; ***Tiedemannia***]

Oxypolis greenmanii Mathias & Constance. Cp (FL): depression ponds, wet pine flatwoods; rare. Endemic to Bay, Calhoun, and Gulf counties, FL. [= K, MC; = *O. filiformis* (Walter) Britton ssp. *greenmanii* (Mathias & Constance) Judd – WH; ***Tiedemannia***]

Oxypolis rigidior (Linnaeus) Rafinesque, Cowbane, Pig-potato. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): bogs, seepages, swamps, wet meadows, streambanks; common (uncommon in FL and WV). August-October; October-November. NY west to MN and south to n. FL and TX. Very variable in the size and shape of the leaflets. [= RAB, C, G, GW, K, MC, W, WH; > *O. rigidior* var. *rigidior* – F, WV; > *O. rigidior* var. *ambigua* (Nuttall) Robinson – F, WV; > *O. rigidior* – S; > *O. turgida* Small – S]

Oxypolis ternata (Nuttall) A. Heller, Savanna Cowbane. Cp (FL, GA, NC, SC, VA): wet pine savannas, sandhill seepages; rare. September-October; October-November. Scattered from se. VA south to Panhandle FL; alleged occurrences in e. TX are based on misidentifications of narrow-leafleted forms of *O. rigidior* (Sorrie et al. 2003). Edmondson's (2005) change of the name to *O. denticulata* is incorrect; the type of *O. denticulata* is unquestionably *O. rigidior* (Feist 2009). [= *O. ternata* (Nuttall) A. Heller – RAB, C, F, G, GW, K, MC, S, WH; = *O. denticulata* (Baldwin) J.R. Edmondson, misapplied]

Pastinaca Linnaeus 1753 (Parsnip)

A genus of about 14 species, herbs, of temperate Eurasia. References: Mathias & Constance (1945)=MC.

* ***Pastinaca sativa*** Linnaeus, Parsnip. Mt (NC, SC, VA, WV), Pd (DE, NC, SC, VA), Cp (DE, NC, VA): roadsides, fields; common (uncommon in DE Piedmont, rare in DE Coastal Plain), native of Europe. June-July; July-August. [= RAB, C, F, K, MC, S, W, WV; > *P. sativa* var. *hortensis* Ehrhart – G; > *P. sativa* var. *sativa* – G]

Perideridia Reichenbach 1837

A genus of about 13 species, perennial herbs, mainly of w. North America. References: Mathias & Constance (1945)=MC.

Perideridia americana (Nuttall ex A.P. de Candolle) Reichenbach, Eastern Yampah. East to the Nashville Basin of c. TN (Davidson, Rutherford, Williamson, and Giles counties) (Chester, Wofford, & Kral 1997; Estes 2004). [= C, F, G, K, MC; = *Eulophus americanus* Nuttall ex A.P. de Candolle – S]

Petroselinum J. Hill 1756 (Parsley)

A genus of about 2 species, herbs, of Mediterranean Europe. References: Mathias & Constance (1945)=MC.

* ***Petroselinum crispum*** (P. Miller) Nyman ex A.W. Hill, Parsley, Garden Parsley. Cp (FL, SC), Pd (GA, NC): commonly cultivated in gardens, rarely persistent or weakly escaped, native of Mediterranean Europe. June-July. [= RAB, C, F, G, K, MC, WH; = *Apium petroselinum* Linnaeus – S]

Pimpinella Linnaeus 1753

A genus of about 150 species, herbs, of Europe and Africa. References: Mathias & Constance (1945)=MC.

* ***Pimpinella saxifraga*** Linnaeus *ssp.* ***saxifraga***, Burnet-saxifrage. Cp (DE), Pd (DE), Mt (VA, WV): fields and roadsides, disturbed areas; common (rare in VA), native of Eurasia. [= K, MC; < *P. saxifraga* – C, F, G]

Polytaenia A.P. de Candolle 1830

A genus of 2 species, herbs, of North America. References: Mathias & Constance (1945)=MC.

Polytaenia nuttallii A.P. de Candolle, Prairie-parsley. Prairies, glades. MI west to NE, south to TX and NM, occurring as a disjunct eastward in prairie-like or glade situations in MS and c. TN (Chester, Wofford, & Kral 1998). [= C, F, G, K, MC; = *Pleiotaenia nuttallii* (A.P. de Candolle) Coulter & Rose – S]

Pseudotaenidia Mackenzie 1903 (Mountain Pimpernel)

A monotypic genus, an herb, endemic to the central Appalachians. Although this species has been traditionally separated into a monotypic genus, *Pseudotaenidia*; Cronquist (1982) has suggested that *Pseudotaenidia* be submerged in *Taenidia*. Cronquist's argument that the two monotypes are most closely related to one another is very possibly correct and has been generally followed since, but awaits further assessment with molecular methods. References: Cronquist (1982)=Z; Mathias & Constance (1945)=MC.

Pseudotaenidia montana Mackenzie, Mountain Pimpernel, Shale-barren Pimpernel. Mt (VA, WV): shale barrens and rocky woodlands over shale, greenstone, calcareous sandstone, and other calcareous and mafic rocks; rare. May-June. A Central Appalachian endemic: w. VA and e. WV north to sc. PA. [= F, G, MC, W, WV; = *Taenidia montana* (Mackenzie) Cronquist – C, K, Z]

Ptilimnium Rafinesque 1819 (Bishopweed, Harperella)

A genus of 5 species, annual and perennial herbs, temperate, of e. North America. Based on work of Feist & Downie (2008), *Ptilimnium* should be re-split into two genera, *Harperella* and *Ptilimnium s.s.* References: Feist (2010)=V; Feist & Downie (2008); Easterly (1957)=Z; Kral (1981a)=Y; Rose (1911)=X; Mathias & Constance (1945)=MC; Weakley & Nesom (2004)=Q; Kress, Maddox, & Roesel (1994).

1 Leaves reduced to hollow, linear, nodose-septate quills, consisting of the petiole and leaflet-less rachis, undivided..... [see ***Harperella***]
1 Leaves dissected into filiform or linear segments.

2 Styles on fruit (0.8-) 1-2 mm long; plant perennial from a small rounded corm at base of stem; rachis of mid-stem leaves with (8-) 10-16 nodes, each node frequently bearing >4 whorled segments; flowering July-October; fruiting mid July-October; fruits 2.2-4 mm long..... ..... ***P. costatum***

2 Styles on fruit 0.1-0.6 mm long; plant annual; rachis of mid-stem leaves with 2-10 nodes, each bearing 1-3 segments; flowering April-August; fruiting late May-September; fruits 1.0-4.2 mm long.

3 Styles on fruit (0.3-) 0.4-0.6 mm long; rachis of mid-stem leaves with 2-4 (-5) nodes; fruits 1.0-1.9 mm long ..... ***P. nuttallii***

3 Styles on fruit 0.1-0.2 mm long; rachis of mid-stem leaves with <10 nodes.; fruits 1.4-4.2 mm long

4 Fruits 2.7-4.2 mm long; umbellets usually 5-7 per umbel; flowers usually 5-7 (-8) per umbellet; bracts subtending the umbels and umbellets with 1 (-3) linear segments; leaf segments of mid-stem leaves 15-30 (40), capillary to linear, 0.5-1.9 mm wide; flowering May-early June; fruiting late May-July; [plants of tidal marshes]..... ***P. ahlesii***

4 Fruits 1.4-2.0 mm long; umbellets usually 10 or more per umbel; flowers usually 10 or more per umbellet; bracts subtending the umbel and umbellets with (1-) 3-5 linear segments; leaf segments of mid-stem leaves 50 or more, capillary, usually < 0.5 mm wide (except in submersed leaves); flowering June-August, fruiting July-September; [plants of a wide variety of wet habitats, including tidal marshes]..... ***P. capillaceum***

Ptilimnium ahlesii Weakley & Nesom, Carolina Bishopweed, Coastal Bishopweed. Cp (GA, NC, SC): tidal freshwater marshes; rare. May-June; Late May-July. This species, recognized but not validly named by H.E. Ahles, ranges from se. NC (Onslow, New Hanover, and Brunswick counties) south through SC to e. GA. The lowermost leaves (withering prior to fruiting) sometimes lack leaflets and thus approach in appearance the quill-leaves of *P. fluviatile* and *P. nodosum*. Feist (2010) expresses doubt as to its distinctiveness. [= Q; < *P. capillaceum* – RAB, V; = *P. macrospermum* – K, nomen nudum]

Ptilimnium capillaceum (Michaux) Rafinesque, Eastern Bishopweed, Atlantic Bishopweed. Cp (DE, FL, GA, NC, SC, VA), Pd (GA, NC, SC, VA): ditches, marshes, other wet places; common. June-August; July-September. MA, NY, and MO south to s. FL and TX. [= RAB, C, F, G, GW, K, MC, Q, S, W, WH, Z; < *P. capillaceum* – RAB, V]

Ptilimnium costatum (Elliott) Rafinesque, Big Bishopweed. Cp (NC), Pd (GA), Mt (GA): tidal freshwater marshes (NC), wet prairies (GA), bottomland hardwood forests (GA); rare. July-October; mid July-October. Se. NC south to GA, and west to IL, MO, and AR (material from LA and TX is of *P. texense*); it is rare and disjunct through much of that range. It has the potential to be a great deal larger and coarser than any other member of the genus, but individuals will be encountered no larger than a fairly robust plant of *P. ahlesii* or *P. capillaceum*. [= RAB, C, F, G, GW, K, MC, Q, S, V, Z]

Ptilimnium nuttallii (A.P. de Candolle) Britton, Midwestern Bishopweed. Cp (AL): marshes, distches, wetlands; rare. April-July; late May-early August. KY, MO, and KS south to se. TN (Chester, Wofford, & Kral 1997), s. AL, s. LA, and e. TX. [= C, F, G, GW, K, MC, Q, S, V, Z]

Sanicula Linnaeus 1753 (Sanicle, Snakeroot)

A genus of about 40 species, herbs, nearly cosmopolitan. References: Pryer & Phillippe (1989)=Z; Mathias & Constance (1945)=MC. Key based in part on Z.

Identification note: *Sanicula* species cannot be reliably determined from sterile plants. Fruits or flowers are required for identification of *Sanicula* species. An important character is the length of the styles in relation to the calyx and/or to the bristles on the fruit. In the longer-styled species, the styles are slender and curved outward, sometimes enmeshed in the bristles, but distinctly longer than them or than the calyx. In the shorter-styled species, the styles are straight to slightly curved, shorter than or about as long as the bristles, and more or less included in the calyx. In most species the calyx is inconspicuous, but consists of 5 deltoid to narrowly triangular (or even subulate) calyx lobes, 0.4-2.0 mm long, at the summit of the schizocarp (the fruit).

1 Styles 1.5× or more as long as the calyx; umbellets dimorphic – some contain both perfect and staminate flowers, while others contain staminate flowers only (except sometimes *S. canadensis* var. *grandis*, which may have polygamous umbellets only).

2 Calyx lobes 0.4-0.7 mm long, deltoid, flexible or weak in texture, the apices acute to obtuse; petals yellowish green, much longer than the calyx ..... ***S. odorata***

2 Calyx lobes 0.7-2.0 mm long, narrowly triangular to subulate, rigid in texture, the apices acute-acuminate; petals white or greenish-white, equal to or slightly longer than the calyx.

3 Styles about 1.5× as long as the calyx, inconspicuously exserted from between the calyx lobes and recurved; umbellets usually polygamous (rarely some staminate only); polygamous umbellets with 6-18 flowers (3 perfect and 3-15 staminate); fruit with a short but distinct pedicel 0.5-1.0 mm long; bases of fruit bristles dilated but not bulbous, often minutely papillose ..***S. canadensis*** *var.* ***grandis***

3 Styles > 2× as long as the calyx, conspicuously exserted from the calyx and recurved; umbellets dimorphic, some polygamous and others staminate only; polygamous umbellets with 12-120 flowers (3-4 perfect and the remainder staminate); fruits sessile to subsessile; bases of fruit bristles prominently bulbous, with a minutely warty-reticulate surface pattern ..... ***S. marilandica***

1 Styles shorter than (or rarely as long as) the calyx; umbellets usually monomorphic (all containing both perfect and staminate flowers), with staminate flowers 1-7 per umbellet.

4 Sepals on mature fruit connivent, forming a beak-like structure equaling or usually exceeding the adjacent fruit bristles, the tips of the sepals subulate and incurved; pedicels of staminate flowers 3-8 mm long; [mostly of the Mountains in our area, rarely in the Piedmont of VA]..... ***S. trifoliata***

4 Sepals on mature fruit somewhat spreading, loose, inconspicuous and immersed in the adjacent fruit bristles, the tips of the sepals acute or narrowly acute, straight; pedicels of staminate flowers 1-2 (-3) mm long; [collectively widespread in our area].

5 Plant a perennial, from thickened, cordlike roots; umbellets with 7-9 flowers (3 perfect and 4-6 staminate)..... ***S. smallii***

5 Plant a biennial, from slender, fibrous roots; umbellets with 4-6 flowers (3 perfect and 1-3 staminate).

6 Larger leaves mostly 8-15 cm across; leaf teeth weak, hyaline; [widespread in our area, mostly not in the Coastal Plain south of VA]. ..... ***S. canadensis*** *var.* ***canadensis***

6 Larger leaves mostly 3-8 cm across, thick in texture; leaf teeth stiff, sharp, and prominently whitened; [of the Coastal Plain in our area].....***S. canadensis** var. **floridana***

Sanicula canadensis Linnaeus *var.* ***canadensis***, Canada Sanicle, Black Snakeroot. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): dry-mesic to mesic forests; common. April-May; June-July. VT and s. ON west to MN and SD, south to Panhandle FL and e. TX. [= F, G, Z; < *S. canadensis* – RAB, C, MC, W, WH, WV; < *S. canadensis* var. *canadensis* – K; = *S. canadensis* – S]

Sanicula canadensis Linnaeus *var.* ***floridana*** (Bicknell) H. Wolff, Florida Sanicle, Florida Snakeroot. Cp (FL, GA, NC, SC, VA): dry-mesic to mesic, sandy forests, often associated with *Fagus grandifolia* (and southward *Magnolia grandiflora*); common (uncommon north of GA). April-May; June-July. Se. VA south to c. peninsular FL, west to s. MS, in the Coastal Plain. Additional differences between var. *floridana* and var. *canadensis* should be investigated. They may not be worthy of taxonomic differentiation. [= F, G; < *S. canadensis* – RAB, C, MC, WH; < *S. canadensis* var. *canadensis* – K; = *S. floridana* Bicknell – S]

Sanicula canadensis Linnaeus *var.* ***grandis*** Fernald, Large Sanicle. Mt (NC?, VA?, WV): {herbarium work, and information on habitats, rarity, phenology}. VT and n. NY west to s. ON, WI, se. MN, and n. IA, south to PA, n. WV, n. KY, c. IL, and allegedly south in the Mountains to VA and/or NC. [= F, K, Z; < *S. canadensis* – RAB, C, MC, W, WV]

Sanicula marilandica Linnaeus, Maryland Sanicle. Mt (GA, NC, SC, VA, WV), Cp (FL, GA, NC, SC, VA), Pd (DE, NC, SC, VA): mesic to dry-mesic nutrient-rich forests; common (uncommon in Coastal Plain, uncommon in WV, rare in DE). May-June; July-August. QC and NL (Newfoundland) west to BC, south to Panhandle FL, se. LA, NM, and WA. The Coastal Plain populations (designated as var. *petiolulata* by Fernald) are disjunct from the main range of distribution, occur in rather different (more acidic) habitats, and warrant additional study. The primary morphological difference indicated by F is that var. *petiolulata* has "the leaflets of 1 or 2 lower cauline leaves on petiolules 1.5-5 cm long" (vs. sessile or short-petiolulate). [= RAB, C, K, MC, W, WH, WV, Z; > *S. marilandica* var. *marilandica* – F, G; > *S. marilandica* var. *petiolulata* Fernald – F, G; = *S. marylandica* – S, orthographic variant]

Sanicula odorata (Rafinesque) K.M. Pryer & L.R. Phillippe, Clustered Sanicle, Clustered Snakeroot. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (DE, FL, GA, NC, SC, VA): mesic to dry-mesic nutrient-rich forests; uncommon. May-June; June-July. NS and QC west to MN and e. SD, south to Panhandle FL and e. TX. [= K, WH, Z; = *S. gregaria* Bicknell – RAB, C, F, G, MC, S, W, WV]

Sanicula smallii Bicknell, Southern Sanicle, Small's Sanicle. Pd (Ga, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (FL, GA, NC, SC, VA): mesic to dry-mesic forests; common (uncommon in Coastal Plain, rare in FL and WV). April; May-June. C. VA, sw. VA, s. WV, KY, se. MO, south to Panhandle FL, se. LA, c. LA, and e. TX. [= RAB, C, F, G, K, MC, S, W, WH]

Sanicula trifoliata Bicknell, Beaked Sanicle, Large-fruited Sanicle. Mt (GA, NC, SC, VA, WV), Pd (DE, VA): cove forests, other mesic, nutrient-rich forests; common (rare in Piedmont, rare in GA). May; June-July. QC and VT west to s. WI and se. MN, south to n. VA, w. NC, n. GA, c. TN, c. IL, and ne. IA. [= RAB, C, F, G, K, MC, S, W, WV, Z]

Scandix Linnaeus 1753 (Venus'-comb)

A genus of about 15-20 species, herbs, temperate, of Eurasia. References: Mathias & Constance (1945)=MC.

* ***Scandix pecten-veneris*** Linnaeus, Venus'-comb, Shepherd's-needle. Pd (GA, NC, SC), Cp (FL): roadsides, fields, disturbed areas; rare, native of Mediterranean Europe. March-April. [= RAB, C, G, K, MC, S, WH]

Sium Linnaeus 1753 (Water-parsnip)

A genus of about 14 species, herbs, of the northern hemisphere. References: Mathias & Constance (1945)=MC.

Sium suave Walter, Water-parsnip. Cp (DE, FL, GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Mt (NC, SC, VA, WV): freshwater marshes, brackish marshes, swamp forests; uncommon (rare in Piedmont south of DE, rare in Mountains). June-August; August-October. NL (Newfoundland) west to AK and Siberia, south to Panhandle FL, n. peninsular FL, and CA. The plant can be very coarse, up to 3 m in height and the stem to 5 cm in diameter. The taxonomic status of *Sium floridanum* Small, known from se. VA south to GA, needs additional investigation; it is probably just a depauperate shade form. [= RAB, C, K, W, WH, WV; > *S. suave* – F, G, GW, MC; > *S. floridanum* Small – F, G, GW, MC, S; > *S. cicutaefolium* Schrank – S]

Smyrnium Linnaeus 1753

A genus of ca. 7 species, herbs, native of Europe.

* ***Smyrnium perfoliatum*** Linnaeus. Mt (AL): moist forests; rare, introduced. Found in a mesic forest in Cherokee County, AL, apparently introduced via seed in nursery material (Keener 2007).

Spermolepis Rafinesque 1825 (Spermolepis)

A genus of 5 species, herbs, of North America, Argentina, and Hawaii. References: Mathias & Constance (1945)=MC.

1 Ovary and fruit with hooked bristles.....***S. echinata***
1 Ovary and fruit smooth or tubercled.
2 Primary rays of the umbel widely spreading to weakly ascending, not greatly differing in length .....***S. divaricata***
2 Primary rays of the umbel strongly ascending, differing conspicuously in length.....***S. inermis***

Spermolepis divaricata (Walter) Rafinesque ex Seringe, Southern Spermolepis, Roughfruit Spermolepis. Cp (FL, GA, NC, SC, VA), Pd (GA, SC): sandy roadsides, disturbed areas; common. April-May; May-June. VA south to s. FL, west to TX, and north in the interior to KS and MO. Apparently native in our area, though weedy in behavior, and perhaps introduced only in VA. [= RAB, C, G, GW, K, MC, S, WH]

* ***Spermolepis echinata*** (Nuttall ex A.P. de Candolle) Heller, Bristlefruit Spermolepis, Hooked Spermolepis. Cp (FL, GA, SC, VA): sandy roadsides, disturbed areas; common (rare in GA, SC, VA), native of sc. United States. April; May. [= RAB, C, F, G, K, MC, S, WH]

Spermolepis inermis (Nuttall ex A.P. de Candolle) Mathias & Constance, Western Spermolepis. Mt (GA), Cp (NC*): calcareous prairies in the Mountains (GA), disturbed areas in the Coastal Plain (NC); rare (GA Rare), northeastward in our area native of sc. United States. April; May. [= RAB, C, F, G, K, MC; *? S. patens* (Nuttall ex A.P. de Candolle) B.L. Robinson – S]

Taenidia (Torrey & A. Gray) Drude 1898 (Yellow Pimpernel)

A monotypic genus (unless *Pseudotaenidia* is included), an herb, temperate, of e. North America. References: Mathias & Constance (1945)=MC. [also see *Pseudotaenidia*]

Taenidia integerrima (Linnaeus) Drude, Yellow Pimpernel. Pd (DE, GA, NC, SC, VA), Mt (GA, NC, SC, VA, WV), Cp (VA): in rocky, dry to dry-mesic forests and woodlands over mafic or calcareous rock, such as diabase, amphibolite, calcareous siltstone, calcareous shale, or limestone; common (uncommon in NC and SC, rare in DE). April-May; May-June. QC, ON, MN, and SD south to c. GA, AL, MS, LA, and TX. [= RAB, C, F, G, K, MC, S, W, WV]

Thaspium Nuttall 1818 (Meadow-parsnip)

A genus of 3-4 species, herbs, temperate, of e. North America. References: Mathias & Constance (1945)=MC; Cooperrider (1985)=Z; Coulter & Rose (1900)=Y.

Identification notes: Because *Thaspium* and *Zizia* are often confused when not in fruit, a combined key emphasizing vegetative characters has been provided; it may also be helpful to use the key to genera, and if a clear answer is obtained, then use the *Thaspium-Zizia* combined key, skipping taxa of the "wrong" genus

1 Leaves 3-4-ternate, the very numerous ultimate segments 1-3 mm wide; petals white (fading to yellowish tan in older herbarium material).....***Thaspium pinnatifidum***
1 Leaves simple, 3-foliolate, or 2-3-ternate, the final leaflets or segments > 5 mm wide; petals yellow, maroon, or pale yellow.
2 Basal leaves 2-ternate or more divided.
3 Leaflets coarsely and rather lacerately serrate or incised, many of the teeth at least 2 mm long as measured on the shorter side; umbel rays 8-10, < 3.5 cm long even in fruit; petals pale to creamy yellow .....***Thaspium barbinode***
3 Leaflets finely to coarsely serrate, but not lacerate or incised, few if any of the teeth > 2 mm long as measured on the shorter side; umbel rays mostly either more in number or longer; petals golden yellow.
4 Teeth of the leaflets fine, averaging (4-) 5-10 per cm of margin, acuminate (the 2 sides making an angle of about 45 degrees); umbel rays (8-) 10-18, in fruit 2.5-4 (-5) cm long; basal leaves many-foliolate, the leaflets mostly acuminate; fruit ca. 2× as long as wide .....***Zizia aurea***
4 Teeth of the leaflets coarse, averaging (1-) 2-3 (-4) per cm of margin, acute to obtuse (the 2 sides making an angle of about 90 degrees); umbel rays 4-10 (-12), the longest to 11 cm long in fruit (some on a plant at least 5 cm long); basal leaves 3-5 (-7)-foliolate, the leaflets mostly rounded to obtuse at the apex; fruit 1-1.5× as long as wide.....***Zizia trifoliata***
2 Basal leaves simple or 3-foliolate.
5 Teeth of the leaflets coarse, averaging 2-3 (-4) per cm of margin, the long side of most of the teeth 2-10 mm long; basal leaves mostly 3-foliolate (or more divided); middle and upper stem leaves equally or more divided than the basal leaves (the most divided leaves usually those of the mid-stem).....***Zizia trifoliata***
5 Teeth of the leaflets fine, averaging 4-10 per cm of margin, the long side of most of the teeth 0.5-2 (-4) mm long; basal leaves simple (and cordate) or 3-foliolate; middle and upper stem leaves 3-foliolate (rarely simple).
6 Teeth relatively acute, without a well-developed callous tip and a thickened, translucent border (use 10×); lower portion of stem puberulent, the upper nodes also usually puberulent (use 10×); leaf margins often ciliolate; umbel rays 7-15; flowers golden yellow.....***Zizia aptera***
6 Teeth relatively obtuse, with a well-developed callous tip and a thickened, translucent border (use 10×); lower portion of stem glabrous, the upper nodes sometimes minutely roughened; leaf margins glabrous and hyaline; umbel rays 4-10 (-11); flowers maroon or golden yellow.
7 Flowers golden yellow .....***Thaspium trifoliatum* *var.* *aureum***
7 Flowers dark maroon.....***Thaspium trifoliatum* *var.* *trifoliatum***

Thaspium barbinode (Michaux) Nuttall. Mt (GA, NC, SC, VA), Pd (DE, GA, NC, SC, VA), Cp (GA, NC, SC, VA): moist forests; common (rare in DE). April-May; July-August. NY and ON west to IA, south to c. GA, c. AL, and ne. MO. The hispid, purple-tinged leaf sheath is a good additional character for this species. [= RAB, S, W; = *Th. barbinode* var. *barbinode* – F, Y; < *Th. barbinode* – C, G, K, MC, WV, Z (also see *Th. chapmanii*)]

Thaspium pinnatifidum (Buckley) A. Gray. Mt (GA, NC): forests and woodlands over calcareous rock, such as limestone, dolostone, or calcareous siltstone); rare. May-June; June-July. KY south to w. NC, e TN (Chester, Wofford, & Kral 1997), and n. AL. The report from VA is of unknown documentation. The distribution and rarity of this plant is complicated because of confusion with *Th. chapmanii*. [= RAB, C, F, G, K, MC, S, W, Y, Z]

Thaspium trifoliatum (Linnaeus) A. Gray *var.* ***aureum*** (Linnaeus) Britton. Mt (NC, SC, VA), Pd (NC, SC, VA), Cp (NC, SC, VA), {GA}: moist forests; uncommon (rare in Coastal Plain). April-May; July-August. NY west to MN, south to SC, AL, AR, and se. KS. Various workers have differed on the characters used to separate two varieties in *T. trifoliatum*. RAB and C separate the two strictly on petal color; F, however, allows var. *aureum* to sometimes have purple petals, seeming to regard the critical differences to be var. *aureum*'s generally more robust size and larger fruits (4.5 mm long vs. 3-4 mm long). It is presently not clear how two varieties should be separated, or, indeed, if varieties are warranted. Though the ranges overlap, var. *aureum* is generally more northern and western, var. *trifoliatum* more southern and eastern. [= K, S, Y; = *T. trifoliatum* var. *flavum* Blake – RAB, C, F, MC, W, WV, Z; < *T. trifoliatum* – G]

Thaspium trifoliatum (Linnaeus) A. Gray *var.* ***trifoliatum***. Mt (NC, SC, VA), Pd (NC, SC, VA), Cp (FL, NC, SC, VA), {GA}: moist forests; common (rare in Coastal Plain). April-May; July-August. NJ, PA, and MO, south to Panhandle FL and LA. [= RAB, C, F, K, MC, S, W, WV, Y, Z; < *T. trifoliatum* – G]

Thaspium chapmanii (Coulter & Rose) Small. Mt (GA, WV), Pd (GA), Cp (FL, GA): calcareous bluffs; rare. Sw. PA, s. ON, s. MI, sw. WI, and s. MN south to Panhandle FL and e. TX. [= *T. barbinode* var. *angustifolium* Coulter & Rose – F; < *Th. barbinode* (Michaux) Nuttall – C, G, K, MC, WH, WV, Z; > *Th. barbinode* var. *angustifolium* – Y; > *Th. barbinode* var. *chapmanii* Coulter & Rose – Y] {not yet keyed}

Torilis Adanson 1763 (Hedge-parsley, Bur-parsley)

A genus of about 15 species, herbs, temperate, of the Old World. References: Mathias & Constance (1945)=MC.

1 Rays reduced or absent, < 5 mm long, the inflorescence therefore compact, appearing like a head; inflorescences opposite the leaves, on peduncles 0-1 (-2) cm long; mericarps dimorphic, one with spines, the other tuberculate..... ***T. nodosa***
1 Rays and pedicels well-developed, > 5 mm long, the inflorescence therefore open, distinctly and obviously an umbel; inflorescences opposite the leaves and terminal, on peduncles (1-) 3-16 cm long; mericarps monomorphic, both with spines.
2 Involucral bracts 0-1; fruits 3-4 mm long (not including the spines); spines straight or nearly so, with a minute hook at the tip ..... ***T. arvensis***
2 Involucral bracts >2, generally 1 per ray; fruits 2-2.5 mm long (not including the spines); spines curved, not hooked at the tip..... ***T. japonica***

* ***Torilis arvensis*** (Hudson) Link, Spreading Bur-parsley, Field Hedge-parsley. Mt (GA, NC, VA, WV), Cp (FL, GA, SC, VA), Pd (GA, NC, SC, VA): roadsides, fields, disturbed areas; uncommon (rare in WV), native of Europe. May-June. [= RAB, C, MC, W; > *T. arvensis* ssp. *arvensis* – K]

* ***Torilis japonica*** (Houttuyn) A.P. de Candolle. Mt (VA, WV), Pd (VA), Cp (VA): disturbed areas; uncommon (rare in VA), native of Eurasia, naturalized south to se. PA and VA. [= C, F, G, K, MC, WV; = *T. anthriscus* (Linnaeus) Gmelin]

* ***Torilis nodosa*** (Linnaeus) Gaertner, Knotted Bur-parsley. Cp (GA?, NC, SC): disturbed areas; rare, native of Mediterranean Europe. May. [= RAB, G, K, MC, S]

Trepocarpus Nuttall ex A.P. de Candolle 1829

A monotypic genus, an herb, temperate, of se. United States. References: Mathias & Constance (1945)=MC.

Trepocarpus aethusae Nuttall ex A.P. de Candolle. Cp (FL), Pd (SC), ?? (GA): rich moist forests, sometimes weedy in disturbed soils; rare. May-June. C. SC south to Panhandle FL and AL, west to e. TX, north in the interior to w. TN, w. KY, AR, and se. OK. Nelson (1993) states that despite "something of a reputation as a rarity," *Trepocarpus* is "a reasonably successful weed." [= RAB, C, GW, K, MC, WH]

Zizia W.D.J. Koch 1825 (Golden-Alexanders)

A genus of about 4 species, herbs, temperate, of North America. References: Mathias & Constance (1945)=MC; Cooperrider (1985)=Z.

[see combined key to *Thaspium* and *Zizia* under *Thaspium*]

Zizia aptera (A. Gray) Fernald, Heartleaf Golden-Alexanders. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist forests, openings, and woodland edges; common (rare in Coastal Plain, rare in DE). April-May;

July-August. NY west to BC, south to GA, Panhandle FL, MO, and CO. [= RAB, F, G, GW, K, MC, W, WH, WV, Z; > *Z. aptera* var. *aptera* – C; = *Z. cordata* W.D.J. Koch ex A.P. de Candolle – S]

Zizia aurea (Linnaeus) W.D.J. Koch, Common Golden-Alexanders. Mt (GA, NC, SC, VA, WV), Pd (DE, GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist forests; common (uncommon in WV, rare in Coastal Plain, rare in DE). April-May; June-July. NB west to SK, south to sw. GA, Panhandle FL, and e. TX. [= RAB, C, F, G, GW, K, MC, S, W, WH, WV, Z]

Zizia trifoliata (Michaux) Fernald, Mountain Golden-Alexanders. Mt (GA, NC, SC, VA, WV), Pd (GA, NC, SC, VA), Cp (FL, GA, NC, SC, VA): moist forests, woodlands, and woodland borders; common (rare in Coastal Plain). April-May; July-August. VA and WV west to AR, south to n. peninsular and Panhandle FL. [= RAB, C, F, G, GW, K, W, WH, WV; > *Z. trifoliata* – MC; > *Z. latifolia* Small – MC, S; > *Z. bebbii* (Coulter & Rose) Britton – S]

AUXILIARY KEYS

Key to *Maianthemum (RUSCACEAE)*, *Polygonatum (RUSCACEAE)*, *Prosartes (LILIACEAE)*, *Streptopus (LILIACEAE)*, and *Uvularia (COLCHICACEAE)*, emphasizing vegetative features

1 Leaves perfoliate.
  2 Leaves puberulent beneath (or rarely glabrate); leaves below the fork (0-) 1 (-2); tepals glabrous within; ..... ***Uvularia grandiflora***
  2 Leaves glabrous and often glaucous beneath; leaves below the fork 2-4; tepals conspicuously granular-papillose within..... ***Uvularia perfoliata***
1 Leaves sessile (though sometimes slightly to strongly clasping).
  3 Stem branched.
    4 Stem brown, wiry, puberulent; distalmost 2 leaves on each branch approximate to one another (sometimes subopposite) and with noticeably oblique bases; flowers and fruits terminal on the branches.
      5 Leaf glabrous on the surface above (except for sparsely pubescent on the midrib and main veins), densely pubescent on the midrib below, sparsely pubescent on the surface below; leaf pubescence weak, often twisted or curled apically (as seen at 10-20× magnification), the leaf therefore very soft to the touch; fruit glabrous, ellipsoid, weakly triangular in cross-section, the surface smooth and shiny, red when ripe; tepals greenish, unspotted; leaves relatively many and small..... ***Prosartes lanuginosa***
      5 Leaf sparsely pubescent on the surface and veins above and below; leaf pubescence stiff, generally straight and perpendicular to the surface (as seen at 10-20× magnification), the leaf therefore slightly rough to the touch; fruit pubescent, strongly 3-lobed (or 1- or 2-lobed by abortion), the surface textured and dull, whitish-tan when ripe; tepals whitish, spotted with purple; leaves relatively few and large..... ***Prosartes maculata***
    4 Stem green, not wiry, glabrous; distalmost 2leaves on each branch no closer together than other leaves, with symmetrical bases; flowers (and fruits) **either** terminal on the branches **or** solitary and axillary to most leaves.
      6 *Streptopus*
        7 Leaf margins and nodes not coarsely ciliate; leaves strongly cordate-clasping; fruit ellipsoid..... ***Streptopus amplexifolius*** *var.* ***amplexifolius***
        7 Leaf margins and nodes coarsely ciliate; leaves sessile to somewhat cordate-clasping (especially the lower leaves of robust individuals); fruit globose ..... ***Streptopus lanceolatus*** *var.* ***lanceolatus***
      6 *Uvularia*
  3 Stem simple.

Maianthemum

Polygonatum

1 Leaves pubescent on the veins beneath; flowers 7-13 mm long ..... ***Polygonatum pubescens***
1 Leaves glabrous; flowers 12-21 mm long.
  2 Stem slender, 1.5-5 mm in diameter; plants to 9 dm tall; lower axillary peduncles terete or nearly so, with (1-) 2-3 (-5) flowers; lowest peduncle in the axil of the (1st-) 3rd (-5th) axil; larger leaves 5.5-15 cm long, 1.2-6 cm wide; lower leaves clasping to 90° (-180°)..... ***Polygonatum biflorum*** *var.* ***biflorum***
  2 Stem robust, 5-13 mm thick below the leaves; plants to 20 dm tall; lower axillary peduncles strongly flattened, with (2-) 3-6 (-15) flowers; lowest peduncle in the axil of the (3rd-) 4th-5th (-8th) leaf; larger leaves 9-25 cm long, 3.5-13 cm wide; lower leaves clasping to 300° ..... ***Polygonatum biflorum*** *var.* ***commutatum***

Uvularia

1 Leaves sessile, the margins scarious and minutely papillose-denticulate; [section *Oakesiella*].
  3 Undivided portion of the style 0.5-1× as long as the style branches; upper stem and lower leaf surfaces puberulent to glabrous, light green; rhizome very short, with clustered, thickened roots.
    4 Leaves cuneate at base, thin in texture, faintly reticulate on the undersurface, glabrous (rarely puberulent becoming glabrate); stems usually glabrous; [of the Coastal Plain and Piedmont]..... ***U. puberula*** *var.* ***nitida***
    4 Leaves broadly rounded to somewhat clasping at base, firm in texture, obviously reticulate on the undersurface, puberulent (sometimes becoming glabrate); stems usually minutely puberulent in lines; [of the Mountains and Piedmont]..... ***Uvularia puberula*** *var.* ***puberula***
  3 Undivided portion of the style 3-5× as long as the style branches; upper stem and lower leaf surfaces glabrous, usually also glaucous; rhizome elongate, with scattered, fibrous roots.
    5 Pedicel bearing a sessile, leaf-like bract 5-17 mm below the flower; capsule sessile at base, conspicuously beaked at apex ..... ***Uvularia floridana***
    5 Pedicel bractless; capsule on a stalk 2-4 (-6) mm long, not beaked..... ***Uvularia sessilifolia***

1 Flowers in a terminal panicle ..... ***Maianthemum racemosum ssp. racemosum***
1 Flowers in a simple raceme.
2 Perianth segments 4 (flowers 2-merous); leaves (1-) 2 (-3)..... ***Maianthemum canadense***
2 Perianth segments 6 (flowers 3-merous); leaves 6 or more ..... ***Maianthemum stellatum***
