Statistical discrimination has replaced human prejudice in lending

Master the Science of Innovation this Summer

Berkeley Haas alumni enjoy 30% off any open-enrollment program in 2019

Contact us for more details: executive@berkeley.edu For our full program list, visit executive.berkeley.edu

Interested in a custom program for your company? Together with our esteemed faculty, we'll work with you to create programs that fit your organization's distinct needs.

Strategy in Competitive Markets

June 10-12, 2019

Enhance your business strategies to position yourself in a competitive market

This program is led by top thought leader in strategy, innovation, and entrepreneurship, Berkeley Haas Professor Toby Stuart. It uses a unique blend of theory, practice, and case studies to promote a thorough knowledge of competitive strategy and innovation. Understand the world of corporate entrepreneurship and harness emerging technologies for innovation in this upcoming program.

IDEAL FOR: Vice presidents, general managers, sales & marketing executives, finance executives, operations executives, and any position impacting company strategy.

July 15–17, 2019

Reshape your innovation process to bring breakthrough ideas to market faster

Join Professor Henry Chesbrough, PhD 97, pioneer in the concept of Open Innovation, along with Andre Marquis, MBA 96, for this three-day program focused on launching new business model innovations that can capture and drive differentiated competitive value for your company. Go beyond traditional R&D to learn how to develop, evaluate, and scale new business models from the inside out and embrace and extend the external startup ecosystem.

IDEAL FOR: Innovation managers, R&D managers, and C-level executives who want to be inspired to rethink and reshape their business assumptions and strategies.

Second in Command

Eleni Kounalakis, MBA 92, California's 50th Lt. Governor, at her inauguration in Sacramento

The Haas alumni community now counts California's first elected female lieutenant governor among its ranks after Eleni Kounalakis, MBA 92, took the helm on Jan. 7.

Kounalakis, the state's 50th lieutenant governor, will help guide the future of UC Berkeley as a member of the UC Board of Regents and the California State University Board of Trustees. During her inauguration speech, Kounalakis said she would focus on protecting California's environment and on offering avenues to affordable education.

"I am committed to expanding access to public education here in our state," she said. "It is most important now as we face the rapidly changing digital economy."

Kounalakis previously served as President Obama's U.S. ambassador to Hungary. At 43, she was one of the youngest women to head a U.S. embassy. Follow her tweets: @EleniForCA.

Guiding Light

Borenstein

Borenstein will help oversee California's sophisticated power grid. Boren-

stein, the

faculty director of the Energy Institute at Haas, was appointed by Gov. Gavin Newsom to the board of the California Independent System Operator, which maintains an accessible wholesale energy market and ensures that the state's electric power system and transmission lines operate reliably and transparently. The board has an important role in preparing for the effects of climate change and reliably integrating renewable power from wind and solar.

Keen **Burrito**

The UN calls the Bay Area homeless situation "cruel and inhuman," and across the UC system, 44 percent of undergrads and 26 percent of graduate students report being food insecure. So Asst. Prof. Omri Even-Tov recruited Haas MBA students and alumni to launch a new initiative—This is Haas—to help those in need. In February, the group partnered with the East Oakland Burrito Roll—part of a national movement to combat hunger—to serve 620 vegan burritos and 80 sandwiches to the community. "This is Haas" aims to host Burrito Rolls each quarter; to raise \$600 per event to cover ingredients; and to provide a meaningful opportunity for Haas alumni, students, and faculty to connect with one another. To help, join the Facebook group: haas.org/this-is-haas.

Publications **Extreme Makeover** After seven

years with this design, BerkeleyHaas magazine is due for a refresh, and we welcome your feedback as we endeavor to make this our best version yet. Our magazine is designed to keep you connected to the Haas alumni community, tap into Haas thought leadership, illustrate our distinctive culture. and instill pride in your alma mater. Have any ideas for changes, updates, or articles? Let us know: letters@haas. berkeley.edu.

Sustainability

Eco Graph The first-ever student-authored Berkeley Haas Sustainability Report is helping the school understand energy, waste diversion, and water use in its buildings, classrooms, and centers. Chou Hall, for example, uses about half as much water per square foot as other Haas buildings. Haas students print 77,000 pages of paper annually. Report co-authors Tim Tembrink, BS 19; Berklee Welsh, BS 20; and Shane Puthuparambil, BS 22 (environmental science), hope it will help Haas remain a leader in sustainability.

Mettle of Honor

Haas' Long Library recently added a new item to its permanent collection: the Congressional Gold Medal given to Kenneth Taylor, MBA 59, for his heroism during the Iran hostage crisis. As the Canadian ambassador stationed in Tehran, Taylor hid six American embassy workers and helped them escape the country after Iranians stormed the American embassy and took hostages—events that inspired the Oscar-winning movie Argo. The medal was a gift from Taylor's wife, Pat, PhD 64 (bacteriology), whom he met at Berkeley. Taylor died in 2015 at the age of 81.

Real Estate Dig It!

have crushed recent real estate competitions, winning both the National Real Estate Case Challenge at the University of Texas

McCombs School of Business and the Golden Shovel against Stanford GSB.

In Texas, Haas students bested other top b-schools with their creative investment strategy surrounding a new commercial property. It was the first such competition for Claire Collery, MBA 19: Joe Dembesky, MBA 19: and Mike Wiedman. MBA 20, while the remaining team members— Matthew Hines, MBA 19; Robert Kelly, MBA 20; and Mark Trainer, MCP 19 (city planning)—also helped win the Golden Shovel trophy back from Stanford earlier in the year, along with teammates Breck Baird, MBA 18, and Peter Fritz, MBA 19.

The annual, semester-long Golden Shovel competition—which Haas leads 16 to 13—pits Haas students against Stanford MBAs to determine the best use, design, financing, and marketing of a commercial real estate project, in this case Bay Area Rapid Transit's Warm Springs/ South Fremont station property. With the tagline "Make Warm Springs hot again!" the Haas team proposed office development, a parking structure, facilities for startups conducting research and development, and spaces for community and educational services.

Dedicated Service Prof. Nancy Wallace has

been honored with UC Berkeley's prestigious Berkeley Faculty Service Award for her lasting and significant impact on the university—particularly by helping the campus navigate complex financial and real estate issues.

Wallace, the chair of the Haas Real Estate Group, advised campus on the budget for intercollegiate athletics as well as on stra-

tegic banking relationships and a sustainable funding model for the Lower Sproul Plaza redevelopment project. She also served on the Systemwide Committee on UC Faculty Mortgage Programs and played a major role in the financial planning for Memorial Stadium, helping to deliver a blueprint for expanding the stadium's uses.

Culture Club

Jumpstarting a new wave of organizational culture research

Chatman

Assoc. Prof. Sameer Srivastava

Executives from Facebook, Netflix. Zappos, Pixar Animation Studios, Deloitte, and other "culture-aware" companies mingled with top academics from around the world at the inaugural Berkeley Haas Culture Conference in January. They kicked off the new Berkeley Haas Culture Initiative—the brainchild of Prof. Jennifer Chatman, PhD 88, and Assoc. Prof. Sameer Srivastava of the Haas Management of Organizations Group.

"We're interested in developing a shared research agenda to address some of the culture challenges we haven't yet been able to solve," savs Chatman.

Company presenters spoke candidly about the culture challenges they're confronting, whether through mass hiring, mergers, new strategies, or changes in leadership.

Jennifer Cook, MBA 98, the CEO of cancer detection startup Grail, spoke about her experiences at six companies over 15 years. "There were any number of organizational themes and challenges that I had faced, and our teams had faced, for which culture was the relevant solution," she said.

The new initiative will include industry partnerships and interdisciplinary research collaborations, communication exchanges on best practices, and events. The idea was to start by taking stock of a field that has become increasingly fragmented as it has expanded, Srivastava says. "Economists study culture, psychologists study culture, and sociologists study culture all in different ways," he says. "At the same time, companies are developing innovative practices related to culture, and it's often hard to disentangle what works and what doesn't. We wanted to bring everyone together to start a conversation."

Dylan Jorgensen, from Zappos, and Lauren Rivera, assoc. prof. at Northwestern Kellogg, at the Berkeley Haas Culture Conference.

Chou Hall, the country's greenest academic building.

Green at Heart

Haas building earns highest marks possible for efficiency and environmental efforts

It's official: Chou Hall is the country's greenest academic building, having earned TRUE Zero Waste certification at the highest possible level along with a LEED Platinum certification for its energy-efficient design and operation.

The TRUE Platinum Zero Waste certification came after more than a year of dedicated waste sorting, composting, and other efforts to divert over 90 percent of Chou's landfill waste. The official notice came from Green Business Certification Inc. (GBCI) in December, following an on-site audit by the U.S. Green Building Council.

About 25 percent of the more than 100 TRUEcertified facilities have achieved TRUE Platinum. Chou Hall is the only academic building to achieve the honor. The Chou team earned 69 out of the 70 credits they applied for, providing a narrative and evidence for each credit. Credits included such efforts as composting food scraps, tracking the purchase of environmentally preferred products, providing employees with access to zero-waste training, and reducing the use of hazardous-waste chemicals.

Separately, GBCI also announced this month that Chou received LEED Platinum certification for its architectural design, construction, and functioning of the building. Chou earned 85 points, well above the 80 points required for the platinum rating. Points are allotted in areas such as water efficiency, energy use, construction materials, indoor environmental quality. and design innovation.

Haas is also pursuing a third designation, WELL certification, given to buildings that promote user health and well-being.

Survey Says Alumni speak their minds in biennial survey

The results are in from our alumni engagement survey, which was conducted last fall. Undergraduate and graduate alumni who earned their degrees between 1993 and 2017 were polled about their affinity for the Defining Leadership Principles; the kinds of events, offerings, and interactions that would most benefit them; and business topics of interest. The responses will allow Haas to best serve and support members of the Berkeley Haas Alumni Network. Here are some of the insights we gleaned from the survey.

Contentment

Our Net Promoter Score (NPS) shot up 10 points, to 69, indicating alumni are increasingly satisfied. (An NPS over 50 is considered excellent.)

Social butterflies

Social gatherings and networking opportunities are the most valued and most desired offerings.

Location, location

Alumni outside the Bay Area (nationwide & international) want more events and opportunities to connect with one another.

Benefits in hindsight

Alumni need more education about their benefits as many weren't aware of the robust set of resources and services available to them, including career resources, lifelong-learning opportunities, networking events and tools, and more. Learn more at: haas.org/alum-benefits.

Hot topics

Popular business topics alumni are interested in include negotiation, sales, data science, marketing analytics. fintech, proptech (real estate), and artificial intelligence.

Well informed

Haas needs to communicate to alumni its efforts around diversity and inclusion improvements. Find Haas' Diversity, Equity, and Inclusion Action Plan Status Report on our diversity site: haas.berkeley. edu/diversity.

RECESSION FORECAST ECONOMIST KENNETH ROSEN

Economic Outlook: Sunny, Chance of Rain Ahead

Economist Kenneth Rosen says growth continues but recession risk rises in 2020/21

Every year for the past 40, Kenneth Rosen has released his influential real estate and economics forecast. Rosen, faculty director of the Fisher Center for Real Estate and Urban Economics, synthesizes dozens of economic indicators and hundreds of data points about the global, national, and Bay Area economy to assess what's to come. This year's outlook? "In the near term, the economy is still blazing," Rosen says. "But in the longer term, the risk is rising." We asked him more.

You foresee a downturn within the next 24 months or so. What are the main trouble signs starting to appear on the horizon?

KR: We've had these economic cycles every seven to 10 years over the last 50, and it's usually excesses that create the seeds for the next downturn. This time, we've had extremely easy money from the central banks around the world, and that's created bubbles. Now, the central banks are pulling back—especially ours. Easy capital has produced situations that aren't sustainable in a tight or even normal monetary environment. That's what happened last time with the housing boom and bust. Essentially the same thing is happening in this cycle, but it's in leveraged loans, tech, venture capital investments, and private equity. We're going to see a correction in 2020 or 2021—less severe than we had last cycle, more like in 2000–2003.

Are we in a tech bubble, and is it similar to the last one?

KR: What's similar is we've created a lot of companies and a lot of innovations, of which only a small fraction will be successful at sustainable profitability. The difference is we now also have a number of big companies that are very sustainable and profitable: Google, Facebook, Apple. The epicenter of the problem is going to be in startups and the unicorn universe where they're living off capital.

Are California and the Bay Area especially vulnerable?

KR: The Bay Area is the worldwide center of this venture capital tech boom. We've benefited greatly from it in terms of job creation, income growth, and real estate values. We went up the most, and we'll go down the most, just as we did in 2000-2001. Nationally, that was a mild recession but here it was deeper. I expect this one will be moderate.

What are the most important things businesses, especially small businesses, should do?

KR: In a recession, businesses should be prepared for a period where they're going to have 20 to 30 percent less revenue, so they need to have enough reserves to handle that. If you have debt exposure, now is a good time to lock that in so you can avoid higher debt costs. If you have physical assets such as real estate, now might be a good time to sell or exchange them. Again, lock in your gains. And refinance tomorrow if you haven't. —Interview with Laura Counts

SHADOWS OF DOUBT

How regret can stymie decision-making

Of all emotions, regret is one of the most important in decision-making, says Asst. Prof. Ellen Evers.

That nagging quality of self-blame and the desire to avoid it can have a major effect on our choices—from picking a stock to negotiating a deal. Just the anticipation of regret can cause people to defer a risky decision or to stay on a failing course out of fear of making the wrong call.

In a new paper co-written by Philippe van de Calseyde of Eindhoven University of Technology and Marcel Zeelenberg of Tilburg University, Evers explores an underexamined aspect of regret: how the confidence we have in our choices affects the intensity of our regrets.

Most previous research has assumed that any doubts we feel occur before we make a decision. Realistically, however, there's usually doubt between a decision and the time we find out if we were right. "You may spend that time ruminating, unsure if you should have done A or B," Evers says.

Two contradictory schools of thought suggest how post-decision doubts affect regret. On the one hand, psychological studies have shown that people feel stronger emotions when they're surprised—say an Olympic athlete who expects gold but wins bronze. So if you already suspect you made

a wrong choice, you'd feel less surprise—and perhaps less regret— when you find out you did. On the other hand, the more you doubt your decision, the more time you might spend thinking about what you should have done, and the more you might blame yourself and feel regret afterwards.

To test which hypothesis was right, Evers and her co-authors set up three experiments to measure doubt after a decision was made. They found that the second hypothesis, which posits that people blaming themselves for a bad choice causes regret, turned out to be true. In

thought an investor who sold a stock and lost money would feel regret, compared with only 22 percent who felt an investor who held a losing stock would feel regreteven when they lost the same amount of money. "They assume that people ruminate more about something they did rather than something they didn't do," Evers says.

Since anticipation
of regret can be so
detrimental to
decision making,
Evers suggests that
alleviating the sources
of post-decision doubt
might make people

Since anticipation of regret can be so detrimental to decision making ... alleviating the sources of post-decision doubt might make people more prone to take action.

fact, in one experiment, measuring doubt related to answering a trivia question, the amount of doubt someone felt before they answered the question had no effect on regret.

In a classic "trust game" experiment, the degree to which participants doubted whether they should have given money to a counterpart corresponded to the amount of regret they felt when they learned that counterpart betrayed them.

Researchers also examined regret with active versus passive choices. Seventy-eight percent of participants more prone to take action. For example, hospitals often give surgeons medical algorithms based on best practices to guide their choices, rather than relying solely on their own judgment. Similar guidance could help managers make choices in a variety of business scenarios, giving them the confidence to act.

"You want to remove any doubt so they will anticipate less regret and have all of the information they need to act," Evers says. —Michael Blanding

FACULTY THOUGHT LEADERSHIP

LENDING DISCRIMINATION

The Prejudice of Algorithms

Statistical discrimination has replaced human prejudice in lending, Haas study finds

ace-to-face meetings between mortgage officers and homebuyers have been rapidly replaced by online applications, but lending discrimination hasn't disappeared. It's simply morphed from human bias to algorithmic bias.

That's the conclusion of a groundbreaking new Berkeley Haas

That's the conclusion of a groundbreaking new Berkeley Haas study, which found that both online and traditional lenders charge higher interest rates to African-American and Latino borrowers, earning 11 to 17 percent higher profits on such loans. All told, minority homebuyers pay half a billion dollars more in interest every year than white borrowers with comparable credit scores do, researchers found.

The findings raise legal questions about the rise of statistical discrimination in the fintech era and point to potentially widespread violations of U.S. fair lending laws, the researchers say. While lending discrimination has historically been caused by human prejudice, pricing disparities are increasingly the result of algorithms that use machine learning to target applicants who might shop around less and hit them with higher-priced loans.

"Even if the people writing the algorithms intend to create a fair system, their programming is having a disparate impact on minority borrowers—in other words, discriminating under the law," says study co-author Adair Morse, an associate professor of finance.

A key challenge in studying lending discrimination has been that the only large data source that includes race and ethnicity is the Home Mortgage Disclosure Act (HMDA), which covers 90 percent of residential mortgages but lacks information on loan structure and property type. Using machine learning techniques, researchers merged HMDA data with three other large datasets—ATTOM, McDash, and Equifax—connecting, for the first time ever, details on interest rates, loan terms and performance, property location, and borrower's credit with race and ethnicity.

The researchers—including Haas professors Nancy Wallace and Richard Stanton and Prof. Robert Bartlett of Berkeley Law—focused on 30-year, fixed-rate, single-family residential loans issued from 2008 to 2015 and guaranteed by Fannie Mae and Freddie Mac.

This ensured that all the loans in the pool were backed by the U.S. government and followed the same rigorous pricing process, based only on a grid of loan-to-value and credit scores, put in place after the financial crisis. Because the private lenders are protected from default by the government guarantee, any additional variations in loan pricing would be due to the lenders' competitive decisions. This methodology allowed researchers to isolate pricing differences that correlate with race and ethnicity apart from credit risk for the first time.

The analysis found significant discrimination by both face-to-face and algorithmic lenders:

- Black and Latino borrowers pay 5.6 to 8.6 basis points higher interest on purchase loans than white and Asian borrowers do and 3 basis points more on refinance loans.
- These disparities cost borrowers \$250 million to \$500 million annually.
- For lenders, this amounts to 11–17 percent higher profits on purchase loans to minorities (based on the industry average 50-basis-point profit on loan issuance).

Morse says the results are consistent with lenders using big data variables and machine learning to infer the extent of competition for customers and price loans accordingly. This pricing might be based on geography—such as targeting areas with fewer financial services—or on characteristics of applicants. If AI can figure out which applicants might do less comparison shopping and accept higher-priced offerings, the lender has created what Morse calls "algorithmic strategic pricing."

"There are a number of reasons that ethnic minority groups may shop around less—it could be because they live in financial deserts with less access to a range of products and more monopoly pricing, or it could be that the financial system creates an unfriendly atmosphere for some borrowers," says

"Even if the people writing the algorithms intend to create a fair system, their programming is having a disparate impact on minority borrowers—in other words, discriminating under the law."

Morse, noting that her research on the topic is ongoing. "The lenders may not be specifically targeting minorities in their pricing schemes, but by profiling non-shopping applicants they end up targeting them."

This is the type of price discrimination that U.S. fair lending laws are designed to prohibit, Bartlett notes. Several U.S. courts have held that loan pricing differences that vary by race or ethnicity can only be legally justified if they are based on borrowers' creditworthiness. "The novelty of our empirical design is that we can rule out the possibility that these pricing differences are due to differences in credit risk among borrowers," he says.

The data did reveal some good news: Lending discrimination overall has been on a steady decline, suggesting that the rise of new fintech platforms and simpler online application processes for traditional lenders has boosted competition and made it easier for people to comparison shop—which bodes well for underserved homebuyers.

Research showed fintech lenders did not discriminate on accepting minority applicants. Traditional face-to-face lenders, however, were still 5 percent more likely to reject them.—*Laura Counts*

Power of **Haas** Ideas

RETIREMENT PLANS PROF. ANDY ROSE

Singapore Sequel

Global trade expert Andrew Rose, macroeconomics guru for generations of Haas students, will be a dean at the National University of Singapore

uring his 33 years as a Haas professor, Andrew Rose has spent time just about everywhere except in an ivory tower. Rose, the Bernard T. Rocca Jr. Chair in International Business & Trade, has made it his mission to marry theory with practice. As a leading expert on global macroeconomics, trade patterns, and exchange rate policy, he has published ground-breaking research, worked on six continents, and consulted with policymakers at 15 central banks and most of the world's major international finance organizations, including the International Monetary Fund and the World Bank. As a citizen of the United States, Canada, and the United Kingdom, he's a peripatetic scholar who could show up in any part of the world, roll up his sleeves, and dive into the practical economic questions of the day.

This year, Rose is trading his longtime home base of Berkeley for a new post as dean of the business school at the National University of Singapore, one of Asia's leading centers for the study of finance. Rose's retirement from Berkeley after the spring semester will bring to a close a Haas career during which he made a lasting mark through teaching, research, and service to the University, including six years as Haas' associate dean for academic affairs from 2010 to 2016. Last year, he was awarded Haas' highest faculty honor—the Williamson Award—for his service to the school.

"Andy was extraordinarily effective as associate dean," says former Haas Dean Rich Lyons, BS 82, who first met Rose when the two were graduate students at MIT. "He was outstandingly successful in negotiations with faculty we wanted to hire who had live offers from peers. And he kept our culture of producing world-class research strong—even making it stronger."

Rose arrived at Berkeley's business school in 1986 as a newly minted PhD, hired by Haas economist Janet Yellen. He long taught Haas' Macroeconomics in the Global Economy course and was twice a winner of the Earl F. Cheit Award for Excellence in Teaching. In class, he would pepper students with Socratic-style questions and press them to apply what they learned to major policy questions.

Recalls Mercedes Broening, EMBA 16, a vice president at First Republic Bank who took Rose's global macro course, "He had this ability to distill complex macroeconomic ideas into simple terms by using examples the class could understand. He was able to show that a simple decision can have very far-reaching consequences, such as when a country pegs its currency to another country's currency."

Rose works at the interface of international trade and macroeconomics, and his research spans a wide territory, including the consequences of trade blocs and currency unions and how trade relations among countries affect their economic performance. He has investigated exchange rate policies, the impact of removing trade barriers, and how closer international economic ties affect business cycles.

Some of Rose's most influential work has involved studying policy initiatives such as the European Union's moves to lower barriers to trade and introduce a single currency. One of his most widely cited papers, "One Money, One Market: Estimating the Effect of Common Currencies on Trade," published in 2000—just before the European Union launched the euro—asked what would happen to trade if two countries adopted the same currency. "I found a very positive effect on international trade," he notes. In addition, Rose was the first economist to carry out a rigorous examination of the impact of the World Trade Organization on trade flows. In a widely reprinted 2004 paper, he concluded that the establishment of the WTO had little effect.

Rose's ability to bring economic theory to bear on real-world problems has made him much in demand in global policy circles. His specialty is advising governments on how to stabilize nosediving currencies.

Rose's ability to bring economic theory to bear on real-world problems has made him much in demand in global policy circles. "I'm generally called in to help deal with the crisis du jour," he jokes. His specialty is advising governments on how to stabilize nosediving currencies, starting in the 1990s when the British Treasury hired him to defend the pound, which was then under attack by speculators. His most well-known assignment was helping the Swedish government decide whether to adopt the euro (he argued in favor, but Swedish voters rejected the proposal in 2003).

Rose has long-standing ties to Singapore and NUS. He has had several stints as a visiting scholar there and was founding director of the NUS Risk Management Institute in 2006–2007. Rose describes his Haas leave-taking as a bittersweet moment: "Berkeley is a terrific university and the business school has been great to me," he says, recalling fondly his close working relationship with Janet Yellen. "How can you ask for something more than that?" —Sam Zuckerman

PHOTO: JIM BLOCK

How did you get interested in economics?

I started off as a history major with a plan to go to law school. But then I took economics and loved it. One day I saw a posting for someone to do the grading for Econ 101A and the professor, Leo Simon, hired me-although he was taking a bit of a risk since I was an undergraduate. He became my mentor and convinced me to get a

PhD. He really changed my life. After college I became a health economist at Kaiser Foundation Health Plan. It opened my world to the power of data. Kaiser had millions of members, and I would stay in the office until 10:00 p.m., just analyzing the data.

How did your time at the World Bank shape you as a leader?

It taught me diplomacy, patience, and how people can do amazing things when they have the will to work together. After the financial crisis a decade ago, the bank's lending tripled but its overall budget stayed flat. So, there was a lot of competition internally for fewer resources. The different parts of the bank were able to overcome that because of the strong relationships between people.

You are a much-cited scholar in your field. What inspires your research?

As a trade economist, I'm interested in real-world questions and their policy implications. What I find most interesting are big-picture policy issues. During my first business trip to India in 1986, I was part of a team that helped the Indian government formulate policies to increase competition and reduce monopoly power. To be able to take part in a project that helps economies solve problems in real time is very satisfying.

The question I have been most obsessed with recently is whether rising international competition has led to job losses and stagnating wages for the American worker-and whether free-trade economists miscalculated the costs of globalization or whether trade is just a scapegoat. I've concluded through my research that China is not the culprit. The cause of all those job losses is automation. The Factory-Free Economy, a book I co-edited with French economist Lionel Fontagné, looks at what will happen to high-income economies when many tasks become automated and jobs that used to exist are done by machines.

What motivated you to become dean of Haas?

Now is the time in my life when I have an opportunity to give back to the community that nurtured me. Leading Haas—a school where faculty research impacts public

policy in areas ranging from energy to interest rates, where students and alumni are motivated to go beyond themselves to tackle some of the world's biggest challenges—is an opportunity to do just that.

We recently moved up in the U.S. News and World Report rankings of full-time MBA programs to number

six. Our undergraduate and evening and weekend MBA programs are both ranked number two. To remain a top-ranked business school as well as retain our public mission is very important to us. We seek to empower innovative leaders who will not just succeed but who will also create a more sustainable and equitable world. This public aspect to Haas creates an amazing energy. I find

it incredible to be in a place where the faculty, students, and alumni are so inspiring.

People talk about social mobility and they talk about inequality being a huge problem in the U.S., but taking steps to address the problem is very challenging. At the undergraduate level, Berkelev and the other UCs are fulfilling their public missions by actually making a difference. The University of California system and the California State University campuses have a record percentage of students who are first in their families to go to college.

Finally, there is not enough diversity in leadership across both U.S. and non-U.S. business schools. If I have an opportunity to help change the landscape, how could I *not* take on this role?

What do you think of the Defining **Leadership Principles?**

I am a big believer in our principles. Now, more than ever, we need values-based leadership in every organization and at every level. I've been thrilled to see the Defining Leadership Principles thriving in our daily dialogue at Haas.

Are any of them especially resonant

I'd say Students Always pretty much defines who I am. I love learning and have spent my career seeking opportunities to do that. Now that I'm here and in this position. Beyond Yourself resonates the most for me. I really want to serve Berkeley and the Haas community. Also, California is about Confidence Without Attitude, and that's what I've also seen at Haas.

You've been on an extensive listening tour. What key priorities are emerging?

First of all, Haas is in excellent shape and credit for that should go to our beloved former dean, Rich Lyons. Rich worked with generous donors, alumni, students, faculty, and staff to create a healthy financial picture and make Chou Hall a reality. Our reputational ranking is at an all-time high, and we have unique qualities that set us apart from other U.S. business schools. But even though Haas has never been stronger, there are significant challenges on the horizon. There's flattening demand

for business school education at the graduate level. Is it a one-time or two-year phenomena? Or are we facing a transformation in the nature of business education? I believe education as we know it is changing dramatically. At Haas, we are questioning the status quo and betting on the innovation that comes from crossdisciplinary programs.

throughs occur when you cross disciplines or find ways to get people from totally different viewpoints talking to each other. We are part of the Bay Area's innovation economy, where tech is transforming nearly every industry, including food, health, finance, energy, real estate, and more. I think it's important for our business students to have the opportunity to blend different perspectives from across Berkelev-by combining, for example, an MBA with a degree in engineering or law or public policy.

Haas has created three

nology program with engineering. There's a lot we lutions to environmental problems.

You've also identified faculty hiring as a top priority. Why?

Haas has the same number of ladder faculty today as it did nearly 30 years ago. Since then, the number of students at Haas has almost doubled.

I see an opportunity to increase research and teaching in three areas: entrepreneurship and innovation, data analytics, and sustainable business. A large percentage of our students pursue technology-related career paths. At the same time, big data, machine learning, and AI are changing the way companies operate and are leading to important questions about employment and societal impact and benefits. Also, it's critically important that we find solutions to climate change, water scarcity, and our dependency on fossil fuels. These are likely to be defining challenges of the next 100 years—and Haas needs to be at the forefront of it all.

What approach do you plan to take to improve diversity, equity, and inclusion at Haas?

No organization can fix the challenge of diversity and inclusion overnight, but I'm committed to improving diversity within all six degree programs and to increasing opportunities at the alumni level.

We need a multi-pronged approach. We need to identify promising students from diverse backgrounds and get them to apply. Next, we need to make it a financial reality for them to come here. We need our alumni and our supporters to help us create an endowment so that financial assistance can be a permanent solution.

Energizing and increasing alumni engagement across all dimensions-gender, ethnicity, geography, and occupation—is critical. Most importantly, ensuring that all students feel welcome and that they belong here is something we are working on. The diversity, equity, and inclusion task force has made a lot of progress in identifying issues and we are addressing them at Haas.

What does it take to be a successful leader today?

You have to inspire others to do what is the right thing as a collective group. You need to be patient, persistent, and hard-working. It is also critical to have a supportive partner. Successful leaders often credit their spouses for standing behind them, rooting for them, pushing them to succeed. My husband has done that for me. Vicente has been a wonderful partner, and I wouldn't be at Haas today without his support.

verv successful undergraduate programs, such as the Management, Entrepreneurship, & Tech-

can do at the graduate level. We already have graduate programs with law and public health that I'd like to expand. And we're talking with the College of Natural Resources for students who want to find business so-

ground sparked her interest in global economics. She grew up in France and married Vicente Madrigal an economist from the Philippines. Shown top: Harrison (second from right), Madrigal (third from right), and their daughters Alice (orange dress) and Emily (blue dress), with extended family in the Philippines. Lower left: Harrison hiking with her brother. Laurent Harrison. Lower right: Daughters Alice (18), a freshman at UC Santa Barbara and Emily (23), a graduate student at Williams in art history.

STUDENTS ALWAYS

Tasteful Wanderlust

Alumnae serve up food-centered itineraries

Stephanie Lawrence and Aashi Vel, MBA 13s

Co-Founders, Traveling Spoon

Berkeley, Calif.

It's fitting that Stephanie Lawrence and Aashi Vel met over barbecued pork tacos at a Haas orientation event. Co-founders of Traveling Spoon, a service that offers global explorers access to local culture through its cuisine, the two women immediately bonded over their love of food and travel—and a partnership was born.

"Traveling Spoon came out of the desire we each had to connect more deeply with local people when we traveled," Lawrence says. "We discovered that we were both passionate about offering authentic cooking and eating experiences to travelers."

Before embarking on their MBAs, Vel worked in industrial design; Lawrence worked in international development. An entrepreneurial itch led the women to Haas: both knew they wanted to start some kind of business that would make food a key part of experiencing the world.

Their personal travels shaped their ambition. On a trip to Mexico in 2011, Vel had visited a variety of restaurants in a quest for food locals at rather than the typical tourist fare but hadn't found what she was looking for. One afternoon, on a busy street in central Playa del Carmen, she looked through a window and saw a woman making soup.

"I saw this woman cooking, and I wished I could eat with her, hear her story," Vel says.

As for Lawrence, she'd visited China with her family in 2007 and been frustrated by the touristy aspect of her food experiences, eating food no locals would in hotel basement banquet halls. So she moved to Beijing for six months.

"I wanted to learn someone's family recipes, and I was hoping to meet a proverbial Chinese grandmother who would teach me how to make dumplings," she says. "I never did find a woman like that, but the difficulty I had in doing so gave me the idea that Aashi and I would eventually develop into Traveling Spoon."

Traveling Spoon now has hosts in 50 countries and offers its clients a thousand different cross-cultural eating experiences, most of which cost about \$65. Travelers spend three to four hours with a local host, in their home, enjoying a home-cooked meal or cooking class. All hosts, the majority of whom are women, have been personally vetted by the Traveling Spoon team.

"Our hosts are our pride and joy," Vel says. "Through Traveling Spoon, they have a chance to be microentrepreneurs."

The two cite former Haas Lecturer Steve Blank's Lean LaunchPad entrepreneurship philosophy as key to Traveling Spoon's success. A business model predicated on seeking customer feedback and incorporating it into one's operations, it's been used by Lawrence and Vel extensively.

"Steve encouraged us to get out and talk to customers, and we're still doing that, five years later," Vel says.

For both women, the idea of being a lifelong learner inspires their work.

"It can be humbling to realize there's always something more to learn—but also empowering," Lawrence says. "Rather than assuming that we know everything, we try to take a student attitude. It's the best way to grow a business." —Kate Madden Yee

Pension Pundit

Yu (Ben) Meng, MFE 02Chief Investment Officer,
CalPERS
Sacramento, Calif.

Yu (Ben) Meng freely admits that when he started investing, he was more lucky than smart. The new chief investment officer at California Public Employees' Retirement System (CalPERS), Meng came to the U.S. from China in 1995 to study civil engineering at UC Davis—and opened an E-Trade account at the beginning of the tech bubble. "I didn't know the difference between stocks and bonds," he savs. Lucky for him. stocks went up and he sold right before the bubble popped.

That early success convinced him to launch a career in finance via the Berkeley Master of Financial Engineering Program. He appreciated the mathematical approach and practical experience of faculty, which fit his engineer's mindset. "The program gave us a lot of tools and theories and models to understand the market," he says, but admits, "It's more art than science."

Meng cut his teeth on Wall Street as a bond trader with Morgan Stanley, then as a hedge fund manager at Barclays Global Investors in San Francisco before joining CalPERS in 2008, overhauling the pension fund to better manage risk in the wake of the financial crash.

He came back to Haas to teach risk management, winning a Cheit teaching award in 2014. After a three-year stint in China managing the country's \$3 trillion in foreign reserves, he returned to CalPERS to manage its \$360 billion in retirement assets. Meng will deal with increasing market volatility, rising interest rates, and quantitative tightening in order to make the fund's target 7 percent rate of return.

"It's really that uncertainty that gets me excited," Meng says. "I like the challenge." To meet it, he calls upon Confidence Without Attitude. "You have to be humble and honest about what you know and what you don't know and constantly challenge yourself to improve." —MB

Mind Matters

Karan Singh, BS 05 Co-Founder & COO, Ginger San Francisco

When Karan Singh launched the mental health app Ginger in 2011, he was driven by a powerful memory.

"I'd been on the other end of a phone call from someone who tried to take their life," says Singh.

So he sought to provide round-the-clock care for those needing mental and

emotional support. "We believe that prevention and early identification can help to head off an event downstream," Singh says. "Our vision is a world where mental health is never an obstacle."

Named after a remedy Singh's mother gave him as a child, Ginger allows users to discuss life concerns-via text. chat. or video—with licensed therapists, psychiatrists, and master's-level emotional health coaches. The service, which is available 24/7 and is accessed through employerprovided health insurance, employs hundreds of clinicians and is available to over 200.000 people.

Singh says that Ginger reduces the stigma of "actually walking through the door" to talk to a therapist and takes about a minute to connect to a caregiver. The wait time to see a clinician in the U.S. is typically weeks.

Simplicity is the key to Ginger. "Most people think they need a psychiatrist or therapist," Singh says, "but it turns out they could actually get support faster through coaching, as a first step, and get it in a more cost-effective manner."

Ginger measures patient outcomes with standard clinical assessment for depression and anxiety. Patients typically show clinically significant improvement within eight to 12 weeks after starting Ginger, Singh says.

It was at Haas that Singh learned to be "thoughtful, mindful, and premeditated" about what Ginger should be. "Those core principles of humility and confidence without attitude are fundamental to us being successful," he says. —AF

Your **Haas** Network

Voice Activist

Cristy Johnston Limón, EMBA 16 Executive Director, Youth Speaks San Francisco

Cristy Johnston Limón has always sought to advance positive change—as a teenager seeking alternatives to gangs, as a young activist advocating for affordable housing in San Francisco, as a first-generation college student studying political science at UC Berkeley, and as an executive MBA student at Haas.

The daughter of Guate-malan immigrants, Limón is executive director of Youth Speaks, an arts organization providing a platform for young people to ignite positive change through spoken word.

In short, Limón helps give others a voice. "I'm using every skill I learned at Haas to advance social justice through the arts, centering youth voices and narratives to make lasting change for the better," she says. "I knew an MBA could open doors for my social impact work, but I didn't account for other young men and women, particularly young people of color, being inspired by my journey."

Her work doesn't stop in the Bay Area. Recently, she volunteered for the CARA Pro Bono Legal Project, which works with lawyers and translators to help asylum-seeking mothers at the border prepare for their "credible fear interviews," the first step in a lengthy process to seek asylum from violence and persecution in their native countries.

The majority of the women were Central American. "As a Guatemalan who speaks the language and understands our cultural norms, I was able to build rapport and trust quickly with the mothers, some of whom were struggling with the trauma of migration and having been separated from their children [at the border]," Limón says. "I've never felt more proud of my linguistic and cultural fluency than when I discovered that all of the women I worked with were granted asylum and have a fighting chance to start a better life in this country. Isn't that what we all want?" —KG

Numbers and People

Suzann Priest-Cabling, BCEMBA 05 CFO, Jackson Square Properties San Francisco

Suzann Priest-Cabling is a self-described numbers geek. "The most satisfying thing in the world for me is to hit a forecast I've set out for my company," she says, "whether that's a \$100 million investment or my

operating budget here." Her company is Jackson Square Properties, a San Francisco-based private real estate investment firm, where Cabling is CFO. Jackson Square Properties buys and sells apartment buildings nationwide, owning some 20,000 residential units in nine states worth upwards of \$3.8 billion.

Working in the financial services aspect of real estate fulfills a career goal for Cabling, who enrolled in the Berkeley-Columbia Executive MBA Program after working as an accountant and at E-Trade so she could break into the field.

But her work is not all about numbers. Understanding the human element is key in a management role, even when numbers are vour thing, Cabling says. If you can understand what an employee needs and help create a job that's satisfying to him or her, then you'll get optimal performance. Something as simple as offering more flexible hours or work from home time can help lower turnover, which Cabling describes as the most expensive thing that can happen to her firm. "People build up knowledge, and I like to keep that here."

Successful management, she says, requires a blend of self-assurance and compassion. "It's about how you make the person you're interacting with feel. If they are confident in you because of how you present what you know, then that's what we're shooting for. If they feel bad that they don't know the information you do, then you've walked past the line in terms of attitude." -CZ

Greater OutdoorsAlumnus revives a century-old

Damien Huang, MBA 06

President, Eddie Bauer

retail brand

Bellevue, Wash.

As a kid growing up in Hayward, California, the call of the wild frequently beckoned Damien Huang, who delighted in fly fishing in the Sierra Nevada or skiing the back country.

QUESTION THE STATUS QUO

"I've always kept myself busy in the outdoors, no matter what the season or the temperature," says Huang, whose career path, not surprisingly, can be seen as an homage to his rugged lifestyle: last June he was named president of the outdoor apparel company Eddie Bauer. He's been there since 2010, after stints at competitors Patagonia and The North Face.

As head of the Seattle-based clothier, Huang oversees design, merchandising, marketing, retail, e-commerce, licensing, international, and wholesale functions of the business. Eddie Bauer operates more than 400 stores in the U.S., Canada, Germany, and Japan.

When Huang first arrived at the century-old Eddie Bauer, the company had "lost its way a little bit," he says. Huang, then senior vice president of outerwear, accessories, and gear, led the "Best at Outerwear" initiative, which has included an ambitious national advertising campaign each year since 2016.

"Eddie Bauer was making mostly cotton-based casual sportswear," he says. "The first order of business was in trying to get the brand to align with the product, which meant the creation of a lot more performance products: for hiking, traveling, trekking, skiing, climbing, you name it."

At the time, just 20 percent of Eddie Bauer's offerings were performance based; today, through Huang's efforts, it's 70 percent. The bulk of the company's wares are designed for a specific outdoor purpose, and they keep the wearer warm, dry, and comfortable.

Another of Huang's roles is to elevate the customer experience, which he is doing by relying on the company's new analytics-driven approach, using consumer insights to inform marketing.

The company continues to climb its way back to old heights, after surviving Chapter 11 bankruptcy in 2003 and 2009. Last June, private equity firm Golden Gate Capital established a new operating company, PSEB Group, that combined Eddie Bauer and PacSun, which has brought stability and efficiency to the two growing brands.

A revised product line, commitment to the outdoors, and focus on the customer has started to pay off, according to Huang. "We've won more [product] awards than any other major brand in the last five years and seen strong, consistent growth, so we're getting back on track," he says.

Huang is unequivocal about his reasons for success in the competitive outdoor apparel market.

"I don't think I'd be where I am today without Haas," says Huang, who took night and weekend classes at the school while he was product director at The North Face. "What I learned at Haas was complementary to what I was learning on the job. The MBA program teaches context and the ability to look at the business environment across industries and to learn from different cases.

"All of those things—in addition to learning fundamental skills in finance and accounting—are very helpful at giving you the raw skills you need to be a good leader." —*Andrew Faught*

Investing in **Our Future**

Bevond Yourself

Super Sonic

Haruki Satomi, MBA 12, encourages new media startups at Haas

Like many kids of his generation, Haruki Satomi, MBA 12, grew up playing video games. Now president and group COO of Tokyo-based Sega Sammy Holdings Inc., which manufactures arcade and video games (including Sonic the Hedgehog) and pachinko machines, Satomi is gunning for a new high score.

By March 2020, he's hoping to topple competitor Nintendo to become Japan's No. 1 entertainment company.

Satomi joined the Sega Sammy group in 2004, after previously working for a Japanese securities firm. His father, Hajime Satomi, founded Sammy, a developer of pachinko and pachislot machines, in 1975 and later acquired Sega and merged the companies in 2004. Sega Sammy is banking its hopes, in part, on a successful return of the Sonic franchise, which caught the gaming world by storm in the 1990s. Newer releases, including Sonic Mania and Sonic Forces, have netted strong media product reviews.

Satomi's rise can be traced to his days at Haas, which started on a humorous note. In an executive leadership class with Lecturer Mark Rittenberg, students were asked to deliver a one-minute talk titled, "Why I Can Get an A in This Class." Satomi, who was still honing his English skills, was working through some public-speaking jitters. Rittenberg made a strange request.

"Mark stopped my first attempt and told me to jump at the podium," Satomi says. "When I jumped and spoke at the same time, I forgot my worries about speaking English. That gave me a lot of confidence."

Recently, Sega Sammy committed to launching a seed fund competition at Berkeley Haas to encourage startups in the new media space. We asked Satomi about the gift.

Why did you make a gift to Haas?

The biggest reason is gratitude. Haas gave me confidence, and I wanted to help nurture the school's great community and culture by making a gift.

What do you hope your donation will accomplish?

I'd like to encourage entrepreneurs so they can meet hard challenges, and I want this to give them a chance to try to start a business. The world has been changing quickly, but there are a lot of opportunities—especially with the 5G network coming in the next couple of years. These will be opportunities in which I expect new leaders or startup entrepreneurs to emerge.

How do you apply the lessons learned at Haas to your career

Haas' Defining Leadership Principles have been useful in making sure that our customers and employees are always happy. When I became CEO of the Sega division [in 2012], the first thing I did was to revise and create Sega's new defining principles. I also created a Mission Pyramid, consisting of value, mission, vision, goal, strategy, organization, and tactics to help guide our employees.

What advice would you give the next generation of business leaders?

Although everyone has opportunities, you'll never be able to grab them unless you strive to get there. The Haas community will give you those chances and the right people to enhance your life. —*Interview with* Andrew Faught

Cleaning Up

Cleantech to Market program celebrates 10 successful years at Haas

How do the best ideas in clean technology make it from the whiteboard to the marketplace? It's a long road, but Haas' Cleantech to Market (C2M) program helps speed the journey. Over the past decade, C2M has guided more than 300 innovators in bringing promising cleantech solutions to market.

C2M just marked its tenth anniversary. Each year, the program's founding director, Beverly Alexander, and co-director, Brian Steel, oversee six to eight student teams comprised of second-year Berkeley MBA students and other grad students from 20 disciplines campuswide. The teams match passions and expertise with cleantech researchers and entrepreneurs.

For the entrepreneurs, C2M is a chance the C2M program, which advances low carbon to get technology assessment and market research to advance their budding ventures. For the students, it provides a novel interdisciplinary leadership experience with high-pressure deadlines and real-world consequences. "C2M is a true capstone experience that prepares and positions MBAs to become cleantech leaders," Steel says.

C2M has guided more than 300 innovators in bringing promising cleantech solutions to market.

Maxwell Kushner-Lenhoff, MBA 18, says C2M was his most challenging experience at Haas. He led a top-performing team, working with the wastewater treatment startup MICROrganic Technologies. "It was a really good experience, learning what it takes to commercialize a new technology," says Kushner-Lenhoff, who is now a global supply manager of battery materials at Tesla. He says C2M's approach "first entailed understanding the technical hurdles, and then the commercial hurdles, and then working with an interdisciplinary team to package that into a coherent story." He adds. "That basically describes my current job."

Matthew Penfold, MBA 14, uses his C2M experience as vice president of commercialization for Advanced Microgrid Solutions. Penfold led a C2M team in 2013, lives into trying to make this a comworking with CinderBio, a small company that came out of the Lawrence Berkeley

Cleantech to Market Co-Directors Bev Alexander and Brian Steel are celebrating the 10th year of energy, green chemistry, and clean water solutions to address climate change and other environmental issues.

National Laboratory (LBL). CinderBio had developed a new class of enzymes with industrial applications.

When the company came to C2M, Co-Founder Jill Fuss says, "We had the technology, but we didn't know what to do with it." Penfold's team had to find a market CinderBio could compete in. After several dead ends they landed on the dairy industry, which Fuss says is a great technical fit and one CinderBio is still pursuing.

C2M has benefited from sponsors who care enough to keep it going. Jed Bullard, BS 71, and his wife, Sherri, BA 72 (political science), are enthusiastic supporters of C2M. "We're interested in programs that involve students in emerging technologies," Bullard says. "C2M made sense to us because clean technology is not only important in California, but taking it to worldwide markets is critical." C2M has continued to evolve. Before it

grew into a national program, C2M was initially founded by the LBL and by MBA and other grad students in the Berkelev Energy & Resources Collaborative. Early on, participating technologies were little more than conceptual. In the past three years, however, the program has worked exclusively with existing startups. Says Steel. "These entrepreneurs put their mercial success." That ups the ante for everyone involved. —Carol Ghiglieri

Haas Alumni Notes

CONNECTIONS The Power of the Haas Alumni Network

Built-In Community

A revived alumni group opens up the Berkeley real estate network

hough it relaunched only a year ago, the Berkeley Real Estate Alumni Association (BREAA) has already connected hundreds of commercial real estate professionals via several sold-out events. There was a presentation about constructing San Francisco's Salesforce Tower from the building's then-untenanted 56th floor. A Giants game and talk about the team's Mission Rock development near AT&T Park with Giants President and CEO Larry Baer. And an inaugural gala with a keynote by Chris Giles, MBA 10, COO of the Oakland Athletics, who discussed the team's planned "jewel box" waterfront stadium, to name a few.

Key to BREAA's success is its campuswide appeal: all UC Berkeley alumni worldwide are invited to join, and membership includes alumni from Haas, Berkeley Law, the College of Environmental Design, the Goldman School of Public Policy, and others. The goal, say BREAA President Evan Schwimmer and Treasurer Zachary Chan, both MBA 10s, is to maintain the reputation of Haas and Berkeley as the premier real estate school in the country.

BREAA had lapsed for several years, but Haas Lecturer Dennis Williams sparked its resurgence with support from Lecturer Bill Falik and Nancy Wallace, co-chair of the Fisher Center for Real Estate and Urban Economics. Learn more, view job postings, and join the mailing list:

berkeleyrealestate.org.

The inaugural BREAA gala was attended by a who's-who of the commercial real estate community: company presidents, CEOs, CFOs, and managing directors, as well as up-and-coming young professionals, past and present national champions of the UT Austin case competition, winners of the Golden Shovel, current students, and Berkeley administrators including a former chancellor, vice-chancellors, school deans, and more. Bob Lalanne, BA 78 (architecture), received the Berkeley Real Estate Impact Award for his contributions to the industry. Shown, BREAA's board of directors at the gala:Zachary Chan, MBA 10; Will Hu, MBA 10; Briana Harney, MBA 15; Bill Doyle, MBA 10; Tom Wight, MBA 15; Allie Stein, MCP 16 (city and regional planning); Joe South, MBA 16; Evan Schwimmer, MBA 10; and Brian Chadwick, MBA 16. Not pictured: Jan Smidek, MBA 10.

Zachary Chan, MBA 10

BREAA Treasurer, President, Loka Properties "There's a very strong, willing network of Berkeley grads in real estate who love having an organized way to get together. At the gala we had current students and graduates all the way back to the early '60s. It was stunning to see the networking among all the different graduation years."

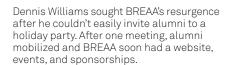

Evan Schwimmer, MBA 10

MBA 10 BREAA President, SVP, John Buck Company "This is a give-back moment. An opportunity to give back to Cal in the form of participation and monetary support of the university and school centers that will directly elevate the membership, current students, and fellow alumni in the industry."

Dennis Williams, BA 84 (economics, political science)

Haas Lecturer, Managing Director, NorthMarq Capital

"It's amazing what our alumni have pulled off." Williams continues to advise the group and envisions membership in the thousands and nationwide chapters. "I've been encouraging them to think big and to have a robust committee system—to identify the next crop of leaders and make the board multigenerational."

Jason Dries-Daffner, BA 92 (Asian studies), MArch 96 (architecture)

Director of Operations, Perkins+Will

"BREAA is truly a nexus of multiple generations of real estate professionals, including developers, brokers, lenders, planners, and architects—and is forward focused while building on decades of scholarship and practice. Supporting BREAA is a proactive way to realize the future of real estate from which we all benefit." PHOTO: JOI CONTI

Claire Collery, MBA 19

Current Haas Student, Member of the winning team of the National Real Estate Case Challenge at UT Austin

"Haas has been a dream vision of a business school where you really feel like there's an ongoing community that cares about the industry and about you. The whole ecosystem around real estate at Berkeley is special.

Being at the BREAA gala inspired me to want to contribute to the community. I'm now working with the student real estate group to host a student and recent alumni reception at my house." PHOTO: AMERICA GONZALEZ PAVLUK

ALUMNI NEWS: ACCOLADES & ACCOMPLISHMENTS

Voted In

Democrat John Garamendi, BS 66, won his sixth term to the U.S. House of Representatives. He serves the 3rd District, which includes Davis, Fairfield, and Yuba City. Garamendi first joined Congress in 2009 and brings nearly four decades of public service to the House Armed Services and Transportation & Infrastructure committees.

John Garamendi, BS 66

Charles "Chappie" Jones, MBA 89, ran unopposed for a second term as a member of the San Jose City Council, representing District 1. In January, he was named vice mayor by San Jose Mayor Sam Liccardo. As vice mayor, Jones will chair meetings and perform other duties when Liccardo is absent.

Chappie Jones, MBA 89

Entrepreneur and management consultant Loren Taylor, MBA 95, was elected to the

Loren Taylor, MBA 95

Oakland City Council unseating a 16-year incumbent on a platform of improving the way local government works, bringing growth and revitalization, and ensuring equity for those who have historically been left out and are at risk of being pushed out.

Laura Parmer-Lohan, MBA 96

Laura Parmer-Lohan. MBA 96, earned a four-year spot on the San Carlos City Council and will serve as a voice for all 30,000 San Carlos residents. Parmer-Lohan is the founder and CEO of Ruckus Partners, a consulting firm dedicated to helping companies launch healthcare solutions in

minimize credit and

market risks, maintain liquidity, and attain a competitive yield on Walnut Creek's portfolio.

UNDERGRADUATE

1962

Robert McNulty, who also earned a JD from Berkeley in 1965 and served in the military with an ROTC commission that culminated, in 1968, with the rank of captain in the infantry, has had a challenging and diverse career. He has just announced his retirement from Partners for Livable Communities, a national nonprofit that he co-founded in 1975 and has led since 1979. Partners is a collaborative organization working across political and racial boundaries to form coalitions of opportunity in American and international cities based upon quality of life, health, wellness, equity, education, and financial prosperity.

In addition, McNulty has been teaching for the last ten years at Oxford University within the Center for the Environment at the undergraduate level and at the doctorate and master's level within the Smith School, a ioint venture with the Saïd Business

School and the Center

for the Environment. He is now a visiting fellow at the Oxford Institute for Population Ageing. This year, he will conclude his time at Oxford and hopefully be spending more time in Park City, Utah, where his two children and four grandchildren live across the street from each other in Old Town. He encourages visitors to give him a call.

1965

Carl Jacobs, in addition to acting as a cantor, has been singing in secular music. Last year he sang Mozart's Requiem with the Los Robles Master Chorale and Orchestra and also Beethoven's

9th with the California Philharmonic Orchestra and chorus at Disney Hall. He sings with the Encore Singers with which he performed solos including "Simple Song" from Bernstein's Mass, Schubert's Gloria, and others. He travels regularly both abroad and within the U.S., Last year his travels included France and Spain: the Tanglewood Music Festival in Stockbridge, New York: the annual Monterey Jazz Festival in California; and New York City, among other places. He is active in the Los Angeles Chapter of the Berkeley Haas Alumni network, chairing the scholarship committee and helping create events as a long-term board member.

1970

Gisela Franken See MBA 1972.

1973

Bradford MacLane, of Benicia, Calif., reports, "Still not retired. Still actively involved in the world of real estate valuation and consulting Moved and expanded the offices of MacLane and Company, Inc. Recently became a vice president of the Northern California/Nevada Chapter of the American Society of Appraisers. Still living in small town of Benicia with my wife of 30 years."

Thomas Leaver, of London, U.K., writes, "I have enjoyed an extensive career in international oil trading, both in physical and derivative crude oil and petroleum products trading. refining, marine terminal operations, and marine transportation. My greatest achievement was to have successfully gained Sultanate of Oman support to launch

Thomas Leaver, BS 75

a physically backed crude oil contract for the East of Suez market that became the world's largest physically traded oil contract while COO and CEO of the first electronic commodity exchange in the Middle East.

"I started my career in

1975 with Edgington Oil Company in Long Beach, Calif., learning the refinery and marine terminal business. I was then hired by Apex Oil Company to continue crude oil and petroleum products trading, moving to London in 1982. I joined the Finnish national oil company Neste Ov as a director and managing director of Neste's crude oil and products/feedstock trading arms for 10 years. I then was asked to establish the OTC oil derivative business in Europe and Asia for Nations Banc-CRT, now Bank of America (which was not a lot of fun). As president of TransCanada International Petroleum I established the global trading arm of Trans-Canada Pipelines, the Canadian utility. As an external consultant/energy expert for McKinsey & Company from 2001 to 2004, and again from 2013 to 2017, I advised national and international oil companies in the Middle East, Europe, and Asia. From August 2014 through September 2017. I was an independent director and chair of the conflicts committee on the board of VTTI

Energy Partners GP LLC, an NYSE-listed MLP with over 50 million barrels of petroleum products and crude oil storage in key logistics hubs in Malaysia, Fujairah, Amsterdam, Rotterdam, Antwerp, and Port Canaveral. "In July 2018, I par-

Ruth Garcia Merino, of

San Jose, Calif., updates, "I retired in 2010 from the City of San Jose's Office of the City Auditor after 24 years as a senior program performance auditor. In 2012, after attending Al Gore's Climate Reality Leadership Corps Training Conference, I realized I could help address climate change during my retirement. As chair of San Jose Com-I led our community group in collaboration with partner organizations to successfully City Council to approve the San Jose Clean Energy (SJCE) program in May 2016. In September 2018. was held in conjunction with San Jose's Global Climate Action Summit affiliate event. SJCE is a community choice energy program that

ticipated in the American Barnstormers Tour, flying 3,200 miles in five Midwest cities culminating in a week at Oshkosh Airventure in my 1928 Travel Air biplane, along with nine other Travel Airs."

1978

munity Energy Advocates, advocate for the San Jose I was honored to speak at the launch of SJCE, which

provides/generates more renewable electricity for the city's businesses and residents and at less than PG&E's rate. Almost everyone in San Jose is enrolled unless they opt out. SJCE has helped a city of a million people take meaningful climate action. SJCE and many programs/utilities throughout the country also offer 100 percent renewable energy for about \$5 more per month— I encourage you to look that up wherever you live. It's a nominal expense that's

great for the planet!"

1965

The late Todd Conover, MBA 65

Todd Conover, age 79, passed away on December 9. 2018, at a retirement home near his home in Meadow Vista, Calif. He was born on October 13, 1939, to Mary Dabney (Marshall/Schneider) and John C. Conover of Bronxville, N.Y. Todd is a graduate of The Hotchkiss School ('57) and has an undergraduate degree from Yale University ('60) and an MBA in finance from Haas. He served two years as an officer in the U.S. Navy. Todd went on to an extraordinary career in business, including serving as a consultant with McKinsev & Company, as a founding partner of Edgar, Dunn & Company, as a consulting partner with KPMG Peat Marwick, and as a principal of Starmont . Asset Management. He served on the boards of PacifiCorp and Blount International during his career. He also authored The Art of Astute Investing. Todd served as comptroller of the currency of the United States,

the nation's top bank regulator, from 1981 to 1985. Todd was a member of the Bohemian Club in San Francisco. Todd leaves behind

Sally, his devoted wife of

57 years; two daughters, Kirsten Wiley (Captain Richard Wiley, USN) and Alison Conover Kinnear (Brian Kinnear); and his grandchildren: Nicholas. Cassidv. and Mackenzie Wiley and Logan and Scott Kinnear. In addition Todd leaves behind his half-sisters Elizabeth Schneider Cohen and Jo Carol Conover Bennington and half-brothers John C. Conover Jr. and Robert A. Conover. Todd is also survived by his uncle Leonard L. Marshall and many first and second cousins, nephews, and nieces as well as his goldendoodle, Charlie. If you wish to honor Todd with a donation in his memory, please consider donations to the USO or the Navy Seal Foundation.

Robert Marwin, MBA 73, with Charlotte Sproul

World traveler Bob Marwin recently sailed in Belize and, in 2014, made it to the bottom of the globe. He writes, "We toured six days in Argentina and spent nine days cruising the Antarctic with the Cal Alumni Association, led by Cal friends Charlotte and Bob Sproul. Cal was the second largest group, with 14. after the Texas Xs with 18.

"Doretta and I started with a three-day winery tour of Mendoza = Malbec country. Visited and sampled wine at three wineries each day including a great lunch I am now a big Malbec aficionado.

"The best part of our trip was nine days touring the Antarctic on a small French cruise boat out of Ushuia at the southern tip of South America. We made seven RIB (Zodiac) tours and landings on Antarctic islands in the NE Antarctic Peninsula, one

on the continent itself, on the Weddell Bay ice shelf, and on South Shetland Island. The 1.5-day Drake Passage crossing over was calm: the return was not. But in general, the weather was amazingly good; Chicago was colder than the NE Antarctic.

"We saw several his-

toric Antarctic explorer sites, and Adelie, Gentoo, and Chinstrap Penguin rookeries with thousands of penguins finishing the raising of their chicks. A penguin rookery is noisy, crowded, smelly, and very interesting to stand and observe for 15 to 30 minutes at a time. Penguins waddling to some destination, maybe waddling along a 'penguin highway' are absolutely relentless in their determination to get where they are going. They will walk by, through, or over people who get in the way. The trip was wonderful, supplemented by two one-hour lectures each day by various college professor types who accompanied the expedition. We saw a lot, learned

granddaughter in Florida and, soon, a grandson nearby in Frederick. Loving life and grateful to Haas for equipping me for a wonderful and successful career."

1979 40th Reunion April 26-28, 2019

Grant Ricketts, of El Cerrito, Calif., reports, "After an early career in advertising in S.F., I ventured back East when my wife, Anne, completed her MBA at HBS. So, I got a second dose of the MBA experience, albeit somewhat vicariously a few years after the first. Both California natives and Cal undergrads, Anne and I returned to the Bay Area in the 1990s. I focused on enterprise software working at Sybase and, later, Oracle, where I met my fellow co-founders of Saba Software, an eventual leader in learning and talent management systems. We started Saba in a garage, had a successful IPO in 2000, and grew the company to over 700 people and \$130M. A lovely wild ride

Grant Ricketts, MBA 79, and Anne Delehunt, BA 80 (history), at the Rio Olympics women's volleyball quarterfinal match, USA vs. Japan. They caught the winning game ball after it was tossed into the crowd after the match

to say the least! The company traded on the NAS-DAQ (SABA) for 14 years, eventually being bought up by a private equity firm that added in a couple of other companies and still operates as Saba Software. I was later CEO and co-founder of another company, Tripos Software, focused on corporate sustainability solutions. It didn't grow as large but was no less fun in addressing big

enterprise challenges. "Today, I am involved with a mobile gaming project, have freedom to travel a lot, sit on a couple advisory boards, and have been known to drop in occasionally at the SkyDeck entrepreneurial incubator program and share some advisory services with its cohort startups. I guess the adage is, to paraphrase the iconic Gen. Douglas MacArthur, 'Old entrepreneurs never die ... and they won't simply fade away.' Celebrated our 30th wedding anniversary this past vear in Marrakesh. Greetings and best wishes to all my former classmates. Cheers!"

1984 35th Reunion April 26-28, 2019

Brian Shefts, of Oakland, Calif., updates, "It has been 10 years since I acquired Boulangerie Solignac, an artisanal commercial bakery specializing in frozen croissants and pastries. The bakery was a year old at the time with a couple of customers that serviced bakeries, restaurants, and hotels. In addition to building that business we developed a line of retail packaged pastries and can be found in the freezer cases of hundreds of retail groceries and stores. It's been an

interesting ride, going from television to book publishing to tech and now the specialty food business. Can't wait to see what's next."

1986

Kate Hart, writes, "I received a huge honor in the form of an invitation to umpire at the Little League Baseball Western Region tournament in San

Bob Merrill, MBA 86

Bernardino this coming August. I'm very excited. Bob Merrill, of Naperville, Ill.. notes. "I retired from JELD-WEN six years after it purchased CMI, the company where I was CEO for 11 years. After taking a bréak for travel and moving to a new downsized townhome in Naperville, I have started REM Consulting to advise middle-market manufacturing companies in marketing, sales, and general management.

My first client is Interbuild, an Asian manufacturer of wood products, and I will serve as U.S. CEO as the company enters the market. Í have been a member of the Chief Executives Network for over 15 years.

"Maureen and I are enjoying our new 'semi-urban' home and the ability to walk to shops and restaurants. Our son Matthew lives in New York, working for The Economist and pursuing

traversing the 66th parallel with National lives in Chicago teaching Geographic. Not only do we highly recommend the trip, it was an unbelievable means to embrace the fact my wife, Eileen, is a cancer survivor."

currently job searching. Would be glad if you could share my profile with alumni job posters or other employers!

"I am married and a wonderful daughter, age 10!"

Shantanu Narayen, CEO of Adobe Systems, was ranked twelfth on a Harvard Business Review list of the world's best-performing CEOs. The ranking, based primarily on financial returns over each CEO's entire tenure, also revealed that 32 of the 100 top-performing CEOs have MBAs.

994 25th Reunion April 26-28, 2019

Dan Kern, of Boston, announces, "I've joined the board of overseers for the Brandeis International Business School. I'm also spending some time in Cambridge as a board member and chair of the investment committee for the Cambridge Community Foundation. Darlene and I are looking forward to two graduations in the spring, son Matt from UC Santa Barbara and Emma from Hofstra."

Yves Speeckaert, of Luxembourg, writes, "After quite a few years spent in the consulting and banking sector, I started a new company in Luxembourg

in 2017 called Emergy Capital Markets, which focuses both on Governance of Private Equity funds and structuring and funding a growing number of projects in the area of impact finance. This includes advising on new greenfield industrial project in Haiti to funding sustainable agriculture projects in Brazil and Africa with donor money. Lots of fun and lots of travelling that led me to 12 countries in 2018 in Latin America and Africa.

Yves Speeckaert, MBA94

"One of the new lines of business I am developing with Emergy is working in the carbon credit (CC) and carbon-offsetting market. identifying quality forestry, environmental, and/ or energy-efficiency projects and matching these with carbon credit buyers in the compliance or voluntary markets. I have got quite a few CC projects in my portfolio, but I am now actively sourcing interested corporate or private buyers, in this \$844 million tCOE2e market. This makes a lot of sense in the wake of the COP 21 Paris commitment and the obvious degradation of climate balance.

"I know that California and Cal Berkeley are at the forefront of climatemitigating initiatives, and Luxembourg is the world's largest financial center for emission of green bonds. Perhaps some creative partnerships possible there.

I am looking forward to connecting again with my fellow graduates from the Class of 1994 Much love from Luxembourg and Belgium and a house available for Haas alumni passing by."

1995

Kassim Chaudry, of Metuchen, N.J., updates, "Recently left Dell EMC in early November to look for new opportunities full time. I spent the last 12+ years at EMC, which was recently acquired by Dell. I have been interviewing with many different companies, hoping to land something in cybersecuity or cloud computing.

"On Thanksgiving Day our house caught fire, and we all had to evacuate in a hurry. Fortunately, no one was hurt and only things were damaged. We are in the throes of getting the house back to being livable again. In many ways this has been a blessing as we pare down our focus of what's really important."

John Stroup, president and CEO of Belden Inc., was invited to the White House to share his innovative approach to confronting substance abuse in the workplace. Belden produces and sells a comprehensive portfolio of connectivity and networking products into a variety of markets, including industrial, enterprise, and broadcast. At its Richmond, Ind., plant, the company offers applicants who fail pre-employment drug screens a tailored rehabilitation program and the promise of a job for those able to get clean. Called Pathways to Employment, the program is garnering a great deal of attention from the surgeon general and other public health officials and making a real difference for over half the people who have gone through the program.

John Winther, real estate veteran, was honored at the 34th annual gala and auction held by the San Francisco Bay Area Council of the Boy Scouts in October. An Eagle Scout and an assistant scoutmaster in his sons' troops, Winther is founder and managing partner of Oaklandbased Harvest Properties.

1996

Alan Seigrist, of Hong Kong, writes, "Thanks Haas for inspiring me to keep going and now on to my third successful venture! Very thrilled to announce that we've closed a major investment round for my loT tech business, Energyboxwith that investment comes a global technology and sales relationship with Cisco Systems! Energybox is a global leader in connected monitoring and control solutions with a focus on facility management, energy efficiency, and food safety monitoring. Check us out at energybox.com."

1997

Komal Shah started an arts conversation series in the South Bay, inviting nationally renowned women and artists of color for quarterly discussions on race, representation of women, and anything in between.

1998

Jennifer Cook was appointed to the board of directors of Denali Therapeutics in November. Cook is currently the CEO of the life sciences company GRAIL Previously, she was at Roche Pharmaceuticals and Genentech, where she held a number of senior management positions during a 25-year tenure, covering the full life cycle of product development and commercialization.

9 20th Reunion April 26-28, 2019

Gonzalo Miranda, of Santiago, Chile, announces, "I just co-authored and published the book Financiamiento Inteligente (Smart Money), aimed to help Latin American entrepreneurs in the fundraising process. The book summarizes how entrepreneurs can successfully negotiate with venture investors. Download a free copy

of the book from www.

financiamientointeligente.cl."

Front page of book Financiamiento Inteligente by Gonzalo Miranda, MBA 99

2001 Christine (Mar) Ciriani, of Geneva, Switzerland, updates, "After

nearly 17 years in international management consulting, I joined Motive Partners, an investment firm dedicated to the tech-enabled companies that power financial services. I am proud to join the team of carefully hand-selected and trusted partners with the mutual goal of unlocking value and empowering management teams to accelerate growth in financial technology. I will remain in Switzerland but continue to travel globally with particular focus on Europe and

Asia. Glad to help firms continue to grow while fostering a culture of entrepreneurship and respect. During my transition it was a pleasure to meet up with several Haas alums and share experiences around the world always inspiring!"

Lisa Rueff and Jennifer Freas, MBA 01, co-founders of Collective Heartss

Jennifer Freas, of Mill

Valley, Calif., writes,

"Last year I co-founded Collective Hearts, a female led iewelry company dedicated to spreading love. Every purchase contributes to the Jacmel Children's Center, a children's school and home built by my co-founder. It's a company with purpose and heart. We just launched an exciting collaboration with Stella & Dot, a fashion social selling company that creates flexible entrepreneurial opportunities for women. We have another big partnership to announce in May. Learn more about our product and mission at collectivehearts.co."

Jon Metzler became a faculty mentor with the Haas International Business Development program. A lecturer at Berkeley Haas, Metzler teaches competitive advantage in technology, telecom, and media markets (Strategy for the IT Firm) and international business. He is also associated faculty for the UC Berkeley Center for Japanese Studies and a faculty mentor at Sky-Deck, the Berkeley-affiliated startup accelerator.

2002

Dan (Pine) Firepine, of Berkelev. Calif., writes. "Same house in Berkeley some of you would remember, work at Kaiser (emergency medicine), own/manage several rental properties. Married with two kids, ages 12 and 13. I'm two years from early retirement and looking for cool second careers. Send me ideas, opportunities, contacts. Thoughts include medical startup advisory/board role, ground-level entrepreneurship if with others wanting to tackle major care organizational and delivery problems, venture capital in the medical space, content expert in revealing medical documentary. or maybe I'll just run for public office.

2004 15th Reunion April 26-28, 2019

Niandong Wang, MBA 04, with wife, Lingling Yang; daughter, Angelina Wang; and dog, Nala, a 6-year-old Cavapoo

Niandong Wang, of Palo Alto, Calif., reports, "I am working for CITCON, a Silicon Valley-based cross-border payment company focused on

Chinese mobile wallets such as WeChat Pav and Alipay. I've also invested in an ed-tech startup to provide career coaching and job searching for international students in U.S. colleges.

"My daughter Angelina graduated from Palo Alto High School in May 2018 and will enter Boston University in the spring. She will spend her summer semester in London and might even intern in Paris. Kids these days."

my new role, I continue to manage the technical aspects of the company in addition to new responsibilities in strategy and product direction."

Bradley Irby, of Rome, Italy, opened a new office in Rome for Alobria Systems, to extend his software outsourcing business to Europe. With current offices in Peru and Bolivia, Alobria Systems now supports clients in North and South America, as well as

for an apartment. We are all nervous but excited, and the kids are looking forward to starting school. We wish everyone an exciting and prosperous 2019."

The late Gregor Schauer, MBA 05, with daughter, Zoe, in 2009

Gregor Karl Schauer, of Berkeley, Calif., passed away unexpectedly on July 14, 2018. Gregor graduated from the evening/weekend program in 2005 and fondly remembered his years there, in particular a summer trip he took to South Africa with Haas. Gregor was born in Germiston, South Africa, in 1969, graduated from the University of the Witwatersrand in Johannesburg with honors (1996), and emigrated to the United States in 1999. He worked at Google's finance division and then subsequently at JMP securities and Jefferies and Baird, all in techrelated finance. He also published tech-related news articles in Business *Insider* and other tech publications. He will fondly be remembered by his children, Adam and Zoe Schauer: his brother and father,

John and Karl Schauer; and his extended Wojcicki family as well as friends and family throughout the Bay Area and the world.

2006

Dan Nash has been named the new CFO of mobile gaming company Machine Zone. Before joining MZ, Nash was a managing director and head of internet investment banking at Wells Fargo Securities.

2007

Robert Kaplan, of Brooklyn, N.Y., launched Beyond Yourself Circulate Capital, a new investment firm focused on preventing ocean plastic and advancing the circular economy in South and Southeast Asia. He announced more than \$100M in commitments to their impact investment strategy from companies like PepsiCo, Danone, and Unilever.

Kate Stillwell. of Berkeley, Calif., writes, "Four vears ago I left structural engineering to found InsurTech startup Jumpstart, and late last year we finally launched! It's a B-corp that builds financial resilience to

natural disasters. Our

Kate Stillwell, MBA 07, during a visit to Hawaii over Thanksgiving with daughters Karen, 9, and Julia, 7

first-of-its-kind "parametric" insurance disburses a lump sum right away, so more people have money when they need it. Huge gratitude to all who helped along the journey. Check it out and sign up! jumpstartrecovery.com."

2008

Preston Smalley, MBA08

Preston Smalley, of Danville, Calif., reports. "Since stepping into my role as VP of product and engineering at Comcast Silicon Valley Innovation Center, some major industry disruptions (digital streaming) have challenged me with navigating the 'innovator's dilemma'—a familiar topic from our strategy courses at Haas. Through integrating the best of OTT streaming (Netflix, Prime Video, YouTube) with the new-age ex-

ideas I've begun writing. My articles on leadership have been featured in major independent publications including Medium and Product Management *Insider*. Finally, this year my family and I-grate-California received continue to compete for the title of 'fastest skier n the family."

2004 15th Reunion April 26-28, 2019

2006

Patricia Rose Duignan,

of Berkelev. Calif., writes. "I've welcomed my third granddaughter into the fold. Having daughters and granddaughters makes me highly aware of the fact that one in three women will experience assault during her lifetime. To combat this horrendous statistic. I have dedicated myself to bringing a program called EAAA (Enhanced Assess, Acknowledge, Act) to colleges in my area. It's a 12-hour course for young women that has proven to cut sexual assaults among its graduates by 50 percent. So, it's working! Each of us needs to do our part in combating this cultural acceptance and ignorance about assault and harassment and coercion. Speak up!

2008

Adam Tachner wrote in to report that he, his wife, and their three kids, ages 11 to 14, are traveling the world for 14 months during a family gap year. They've got 30+countries planned on every continent except

Adam Tachner, BCEMBA 08, and family at the Incan "Gate of the Sun" above Machu Picchu

Australia. Summer and fall of 2018 started in Europe; then, the Tachners were off to South America and Africa. Plans for 2019 include Asia, the Middle East, Cuba, and back to Europe for the summer. Follow their journey at www.tachnergrams.com, where you can also find FAQs responding to common inquiries they receive, such as: Are you homeschooling? (Short answer: yes). Adam is also working on a startup, magtera. com, which he plans to fundraise for and focus on full time when he's back.

2009 10th Reunion April 26-28, 2019

2011

Timothy Campos, of Los Altos Hills, Calif., and Burc Arpat, announced the launch of the app for Woven (www.woven.com), a new company that brings advanced collaboration capabilities to existing calendar software to help busy people be more productive. Campos writes. "Burc and I first met in 2009 as MBA students. In 2016, we both left fantastic positions at Facebook to pursue our vision of 'empowering people to spend time on what matters most.' On November 8, 2018, we launched Woven, the intelligent calendar for busy professionals. We

are thrilled with the

reception of Woven to

date and are hard at work delivering more features to our growing user base."

Woven co-founders Burc Arpat, BCEMBA 11, a former engineering leader at Facebook and Google, and Timothy Campos, BCEMBA 11, former Facebook CIO

stealth mode! ContiNube (continube.com) is a SaaS startup focused on continuous risk management. We make it super easy for you to manage your IT compliance and operations risks. Berkeley alums who want to transform the way you manage IT risks, give me a call: (650) 996-2019 or email me at raj.krishnamurthy@continube.com. Appreciate all referrals."

2014 5th Reunion April 26-28, 2019

2015

Julia Felts married Edward Loh. editor-inchief of MotorTrend, on October 27, 2018. They celebrated with a small reception at St. Francis Winery in Santa Rosa, Calif. Julia and Ed credit the EMBA program for bringing them together, since they were introduced by her 2015 classmate, Christine Elfalan, and her husband. Jon. They live in Redondo Beach, Calif., where Julia works as a lead consultant for BCG Digital Ventures, helping to build new technology startups.

Julia Felts, EMBA 15, with husband, Edward Loh

Srivats lyer, of Sunnyvale, Calif., writes, "Since graduation, my career has moved rapidly in an upward direction. I believe my Haas MBA played a major role, from improving my personal branding to being able to leverage the Haas alumni network. After starting a

new role at a startup, I have been at Facebook now for over a year as a data center technical program manager."

Srivats Iyer, EMBA15

2016

Anita Ratnathicam, of San Francisco, started her new role on the Google Food Team in February. She writes, "Thanks Caroline Yeh, EMBA 15, for the referral and also to the fabulous Haasies who are my personal Board of Directors for their support throughout the interview process!"

2017 1st Reunion April 26-28, 2019

PhD

1971

William Halal, of Washington, D.C., updates as follows: George Washington University Professor William Halal's seventh book, Beyond Knowledge, draws on collective intelligence to show that the tech revolution is creating higher-order challenges that are moving modern societies beyond the Knowledge Age and into an Age of Consciousness. The internet, smartphones, and social media have created today's post-factual world where values and beliefs dominate knowledge and reason. Advanced Alis automating knowledge jobs and moving the

labor force into a new form of creative work that humans excel at. And climate change, financial instability, autocratic rule, and other threats pose a "Crisis of Global Maturity" that must be resolved to reach a sustainable global order. South African futurist Michael Lee called Beyond Knowledge "one of the most intelligent, insightful, relevant, and illuminating books I have ever read on the nature of changing society. It's a marvel." Learn more at www.BillHalal.com.

Serge Matulich, of Orlando, Fla., funded

Margarete and Serge Matulich, PhD 71, celebrating their 61st wedding anniversary

Matulich Foundation, Inc., which will grant an annual scholarship to a business student at the Haas School and to a business student at the Crummer School at Rollins College, from which Serge retired after 18 years of teaching there. First grants to be made in 2020. The amount of the scholarship will depend on the size of the foundation's endowment. which is currently small. The foundation honors Serge's parents for bringing him and his sister and two brothers to America from a refugee camp in the Sinai desert, where they lived for three years during World War II. A short video can be found at MatulichFoundation.org.

1986

Nicholas Hall, of Columbus, Ohio, Berry Professor at Fisher College of Business, The Ohio State University, served as the 24th president of INFORMS during 2018. INFORMS, with 12,500 members in 86 countries. is the world's leading professional society for operations research and business analytics. The U.S. Congress recognized Professor Hall's "tireless dedication to the field of operations research and analytics" with the flying of a flag in his honor over the Capitol on October 30, 2018, at the request of Congressman Steve Stivers, chairman of the National Republican Congressional Committee.

OBITUARIES

Richard Erickson, BS 49, MBA 50, Cal Quarterback, CAA Executive Director

Richard E. (Dick) Erickson, BS 49, MBA 50, a longtime Cal employee, passed away on October 15, 2018. He was 92. While at Berkeley, Erickson played quarterback for the Cal Bears football team that went to the Rose Bowl in 1949. After earning two business degrees at Berkeley, he spent the majority of his career at his alma mater, first as the third executive director of the California Alumni Association, where he served for 16 years, then as the first assistant chancellor for development. For his service to

the university, Erickson was awarded the Glenn Seaborg Award, the Berkeley Citation, and the UC Berkeley Foundation Award.

James Ramsey Bancroft, MS 41, Loyal Haas Supporter

James Ramsey Bancroft, MS 41, a generous supporter of Haas, passed away on November 15, 2018. He was 99. Bancroft earned a bachelor's in economics at Berkeley in addition to a master's in business. He served in the Navy during WW II and afterwards earned a law degree and founded what ultimately became the San Francisco law firm of Bancroft, Avery & McAlister. He also started Bancroft Vineyard in Napa, renowned for its merlot and cabernet sauvignon. Throughout his career Bancroft

was active in the arts and charitable causes, serving on numerous nonprofit boards and supporting many cultural, educational, environmental, and religious organizations nationwide. He was preceded in death by his wife (and Berkeley sweetheart), Jane Marguerite Oberfell, BA 47 (humanities).

Secrets to Data-Driven Success

How to compete—and triumph—as a data-centric organization

"Data is the new oil" is one of many buzz phrases used today to denote the importance of creating data-driven companies. In the 2019 annual executive survey conducted by New Vantage Partners (haas.org/nvp-survey), 77 percent of executives say that adoption of data initiatives continues to represent a challenge for their organization. Respondents clearly say that technology isn't the problem, people and process are. So, what's going on?

While leaders want to build a "science-type" organization that uses operational data to create forward-looking strategies and decisions, the reality is most organizations tend to be a "story-type" or "stats-type" organization. In a story-type organization, work is based on celebrating one-off wins and is typically reactive. A stats-type organization has data but tends to be fragmented, with data often used in a backward-looking way to justify or explain decisions.

Since graduating from Haas, I've had the privilege of running global organizations with over 400 team members. Reflecting on my own experience and many bouts of failure, I've learned three lessons I wish I knew back then. These lessons would have helped me make the transition from a story-type to a stats-type to a science-type organization much easier.

Lesson 1: Having data is not the same as having good data

Most organizations have data in many systems but often the way it's used is inconsistent. For example, one department may consider their key metric to be time to respond to customer questions and another may use overall satisfaction. The challenge is not which is the right answer but how to create a basket of key metrics applicable across the organization. Leaders also need to ensure that these metrics are being calculated and used consistently and that they are visible to everyone via organizational dashboards.

Lesson 2: Data needs to be used by everyone, not just leaders

Department heads typically review data, but team members may not understand how it's connected to their work. To ensure data are converted into actions, I always ask, Is this what we expect to happen? What can we do to improve after looking at this data? Then, use the data for setting individual goals. In a previous organization, as we started to set goals, we realized that individual team members did not have the ability to own the outcomes as they were dependent on other teams. We unpacked clear metrics that worked for the team and through

this process were able to make data more relevant to individual work and connect it back to top-line objectives.

Lesson 3: Don't wait to celebrate the Big Bang; celebrate small wins

At the leadership level, impact is often linked to truly moving the needle, as in, "increased customer facing time by X percent." But driving big impact requires time, and most teams want to know their work is meaningful today and connected to their career aspirations. Consistent communication about progress is important but not sufficient. Leaders need to celebrate key milestones publicly and reward team members for smaller outcomes. Themed awards given quarterly that balance both effort and outcomes have the greatest impact on driving successful change in understanding that data-driven is the way to individual and team success.

The transition to a science-type organization requires more than an investment in technology. Leaders must build new organizational habits for all team members. Apart from discipline, leaders need to engage with their teams to understand their motivations and connect their goals with data. Building the muscles to pivot to a data-centric organization may take time, but the ultimate reward is being able to make forward-looking strategic decisions rapidly.

Dutta Satadip, MBA 09,

is a thought leader, keynote speaker, and tech industry veteran who specializes in customer strategy and scaling operations. He is the global head of customer operations at Pinterest and previously worked at Google as the director of customer success. He has a multidisciplinary leadership background leading operations, marketing, product management, and engineering teams. He often speaks at major conferences and contributes to publications like Harvard Business Review.
