## DATES TO PUT IN YOUR DIARY

### North Shore's dates

**Members Auction** at the October meeting we will be holding our 2<sup>nd</sup> member's auction of the year. The number of plants to be auctioned per membership is restricted to 4 plants. Attached to this bulletin is a list which needs to be filled in and attached to your plants. Gloria and Allan Cushway will be at the front of the hall booking the plants in. Members are requested that the plants you sell be established, healthy and insect free. Plants should also be clearly labelled and if you have a reserve on any plant this should clearly marked.

**Christmas meeting** for new members, at our December meeting we have an informal sit-down two course meal as well as having our monthly meeting. There is no charge for the meal and members may bring a partner. The seating arrangements are 8 people per table and as our Christmas meeting is only 2 months away we are asking that members to start thinking about who you would like to sit with. Gloria will be given you more information at our next meeting

### Other dates

**Southern Orchid Spectacular** 11<sup>th</sup> – 13<sup>th</sup> October Fri & Sat 9.30-4pm & Sun 9.30-2pm. Note it is being held at a new venue, **SUTHERLAND BASKETBALL STADIUM**, in the Waratah Park Reserve, Old Princes Highway, Sutherland. This will be your last chance this year to buy a few more orchids and any unusual supplies that you need.

## *Cattleya (Laelia) purpurata*

Regarded with almost religious reverence in Brazil where this species is endemic, it is known as the Queen of the *Laelia*'s (or nowadays *Cattleya*). It is in fact not only the countries floral emblem but more importantly its national emblem. In Brazil there are societies solely devoted to this orchid and no other, holding annual shows with hundreds of plants on hand and all in bloom at the same time, a mass of varying contrasts of purple and white. On reflection to see this many may seem repetitive & tedious, this is not the case! There are within this one species many varied forms and valid varieties with many different shades and colour combinations. Even as I write this in Brazil there are shows in progress! The competition is fierce with many breeders and growers striving for the perfect bloom! This big bold & vibrant species is very rewarding. It will grow very happily under bush house conditions in the Sydney coastal region, and with just a little more protection (a solid roof) around the foot of the mountains here at Richmond. These plants are well suited to be grown into specimen

plants! A single plant with 10 flowering heads of up to 5 or 6 15cm flowers per spike is nothing short of a masterpiece in the orchid world

It was first discovered by Mr Francois Devos in 1846 in the province of Santa Catherina in the south of Brazil growing high up in the canopy with plenty of light! It has since been found in many other locations on the coast of Brazil, and even on some of the out lying islands, where in these locations it grows on tall trees in swampy areas. It has along with many other species been over collected in the past, although in Brazil there has been serious work at reintroducing many species back into the jungles. Natural propagation is now happening and heavy jail sentences are enforced on anyone poaching any wild orchid.
