**BORN ON THE  
RACE COURSE.  
BUILT TO  
PERFORM.**

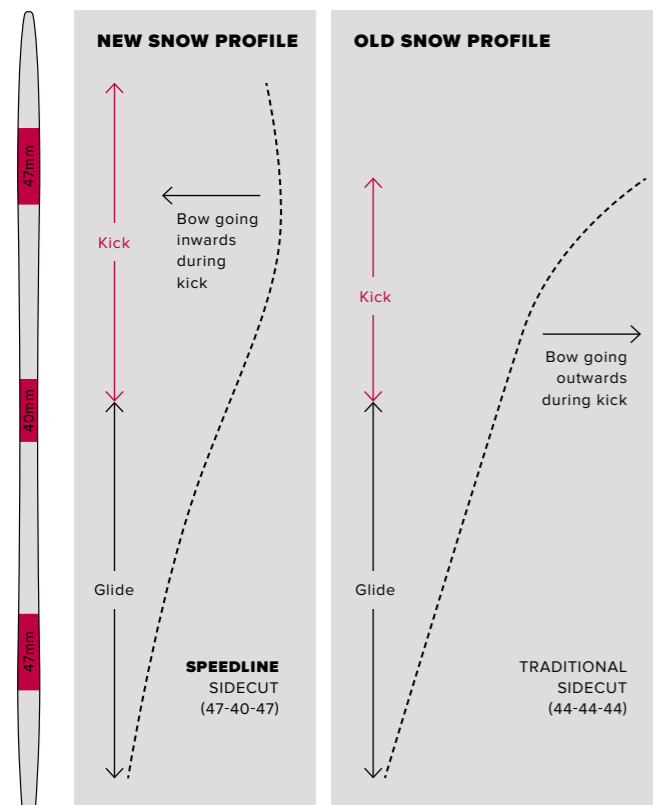

Redster skating skis are designed for maximum performance on the track, and represent the pinnacle of skating ski evolution. Featuring the same Atomic innovations used by the world's top skiers, the Redster S9 Gen S ski offers supreme stride efficiency thanks to a totally redesigned shape, as well as increased control and agility through its shorter body. Together with a new sidewall that generates an even closer connection between ski edge and snow, Redster Gen S technology will revolutionize your cross-country experience — from the skate track to the race course.

# REDSTER GEN S

Redster Gen S will revolutionize your cross-country experience from the skate track to the race course.

## SPEEDLINE

Speedline is our new deeper sidecut with a wider tip and tail (47-40-47mm). In the illustration below you can see the difference. The dashed line is the trace the ski leaves in the snow after each step: Speedline makes this trace curve inwards during the kick and keeps the ski moving forwards for longer (left). The result is a more powerful kick and longer stride, which in turn leads to better stability and a big boost to skiing efficiency.

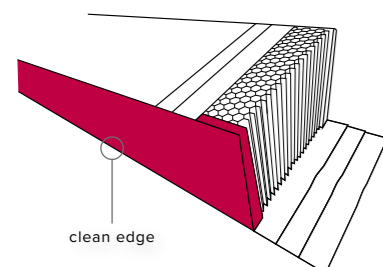

## SPEEDSCALE

With the new Speedscale geometry we're offering one unique ski length that eliminates the need for multiple skating ski sizes, while boosting precision, agility and maneuverability.

## RACEWALL

Racewall, our new sidewall construction, generates an even closer connection between ski edge and snow, meaning more direct power transmission, more stability, and faster skiing.

## ATOMIC PRO CENTER

### ATOMIC PRO CENTER SKI SELECTION

Retailers can now offer the ultimate personalized skis for customers: visit the Atomic Pro Center and choose from the exact same skis as our world-cup athletes, supported by the exact same service team. Select skis to fit an individual customer's profile and get them grinded for their intended snow conditions. Or if you can't come to our Pro Centre in person, our team will find the perfect match on your behalf.

## PERFECT SETUP REDSTER SKATE

**Headwear** Alps Tech Headband

# REDSTER

REDSTER S9 GEN S

### Energy-saving efficiency

With a wider tip and tail from the Speedline sidecut, you'll get a stronger push — which means longer strides, improved steering ability, and a big boost to skiing efficiency.

### One size, superior agility

Thanks to Redster Gen S technology, we've eliminated the need for varying sizes of skating skis. This innovative combination of new materials, our new Speedline sidecut, and the new Speedscale geometry offers increased precision, agility, and maneuverability on the track.

### Race-winning acceleration

Speed is everything when fractions of a second count. Racewall — our new sidewall construction — generates an even closer connection between ski edge and snow, meaning more direct power transmission, more stability, and faster skiing.

# THE PROOF IS ALREADY ON THE PODIUM

The new Gen S technology is already winning world cup races. Simen Krüger was victorious at Davos on his new Redster Gen S skis. Simen ran a special black-boxed design to keep the new technology under-wraps until the January 2021 launch.

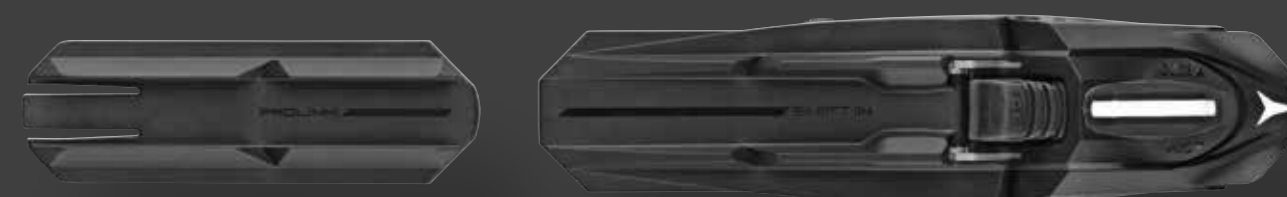

# GRIP AND GLIDE LIKE NEVER BEFORE

Shift while you're in! Atomic Prolink Shift-In is the new high-tech moveable binding that lets you adjust for more grip or glide as you go. Shift the binding forwards for more grip and stability. Backwards for better glide. Without even stepping out!

## PROLINK SHIFT-IN

### Shift while you're in

The new Shift-In button means you can adjust your position while you're still in the binding. In another major improvement the button is integrated into the lever, for a remarkable improvement in swing weight and perfectly balanced skis.

### Perfect your performance

Forwards for more grip. Backwards for better glide. Adapt your binding position to suit your terrain, snow and skiing level, and fine-tune during your session.

### Bonded for ultimate power

For the first time the Shift-In plate is bonded to the ski, which results in the best power transmission and stability possible. Get the maximum performance from the power you put in.
