Where can I buy ʼ, consumables or spare parts for my device? Don't we need to get down the cold water pipe? This cleaning must be followed by a complete disqualification of the Machine. During the preparation of drinks, the flow is very fast or very slow. If the Machine has no power or if the Machine can be turned on, but the pump does not start when selecting the hot/cold (no way) button, there is nothing you cannot do and the Machine must be repaired. If you don't hear the bomb, but there is no flow, follow the different steps: 1-REMOVE The capsule from the capsule holder.2 Check that there is water in the water tank and that the water tank is well connected.3 Select the cold channel, lift and place Down the water tank several times and then fix it, the flow should eat. Avoid white vinegar that could damage your Machine and cause leakage. To extend the useful life of your Machine, we recommend using the descaling kit sold in our web store or other descaling kit suitable for coffee machines. The Chococino and Nesquik capsules contain chocolate, milk, and the car. Clean the recycle bin regularly. We do not recommend that the device be used by children. To stop dripping, remove and discard the used capsule after the light stops flashing. An espresso has a stronger aroma than a "normal" coffee. In fact, an espresso can be distinguished by its rich aroma and by the creamy foam on the surface of the glass. This requires a press of 15 bar (only accessible by express coffee machines). Water heated to 90-92 ˚ C and fine and measured coffee (7 g per cup). Repeat the process on the hot water position (red button). Why do I sometimes receive different levels of foam/amount of drinks, although always press the same number of bars?
