Software Development Tools

Abstract

As a part of the program to provide information to Federal agencies on the availability, capabilities, limitations, and applications of software development tools, a database of information about existing tools was collected over a 3-year period. The purpose of this report is to present an analysis of the information contained in the database. Various categorizations of the tools are presented in classes listed by their characteristic features. The lists incorporate percentage summaries that are based on the total number of tools for which information is stored in the database. Trends found in the lists are analyzed and discussed. Abstracts of each tool are presented in an appendix.

Key words: programming aids; software automation; software development; software engineering; software testing; software tools.

1. Introduction

The Institute for Computer Sciences and Technology (ICST) within the National Bureau of Standards (NBS) has a mission under Public Law 89-306 (Brooks Act) to develop standards to enable the "economic and efficient purchase, lease, maintenance, operation, and utilization of automatic data processing equipment by Federal departments and agencies." As part of its current program, ICST is studying and evaluating methods that increase the productivity and quality of software procured by the Government and software developed within the Government. A partial solution to achieving higher quality software and increasing programmer productivity appears to lie in the use of the computer technology itself. Automation must be used to serve and augment itself. A recent

NOTE: Certain commercial products are identified in this report in order to adequately present the subject area. In no case does identification of commercial products imply recommendation or endorsement by the National Bureau of Standards, nor does it imply that the product identified is necessarily the best or the only one available for the purpose.

GAO report [GAO80] endorses this use of automation and concludes that software tools can offer the Federal Government the following:

-- Better management control of computer software development, operation, maintenance, and conversion.

-- Lower costs for computer software development, operation, maintenance, and conversion.

-- Feasible means of inspecting both contractor-developed and in-house-developed computer software for such quality indications as conformance to standards and thoroughness of testing.

To this end, ICST initiated a project to study, evaluate, and make recommendations concerning the use of software development tools. A taxonomy of software tool features was published [Houg81] to provide a means for classifying and evaluating the capabilities of the ever more complex tools available in the marketplace. A survey of the use of software tools [Hech81] by representative software development groups in Government agencies, Government-supported research agencies, and commercial organizations was performed. NBS co-sponsored the tool fair [Houg81a] that was held in conjunction with the Fifth International Conference on Software Engineering.

As a part of the program to provide information to Federal agencies on the availability, capabilities, limitations, and applications of software development tools, a database containing information about existing tools [1] was collected over a 3-year period. Last year, a report [Houg80] was published to review the contents of the database. Since that report, the following work has been completed: (1) information on over 100 tools was added

---

[1] The database contains information about 362 software development tools. There are, however, many more tools than this (for example, see [Schi81], [RCI81], or [SRA81]). A deliberate effort was made to keep the scope of the database within reason, but at the same time include a representative set of tools. Examples of tools that were excluded from the database include: (1) traditional software tools that are normally provided by computer vendors, such as compilers, editors, and operating system utilities; (2) assembly and machine language tools; and (3) tools that are not necessarily oriented to the software development process, such as management information systems and database management systems. However, when a completed submission was received directly from the developer of a tool, the information was almost always included in the database. Further discussion of the sources for tool information is presented in section 2.5.

to the database, (2) all the tools were classified according to the taxonomy of tool features, (3) many retrieval programs were developed, and (4) much of the information was updated.

The purpose of this report is to analyze and to present the current information on software development tools that is contained in the database. Various categorizations of the tools are presented in classes listed by their characteristic features. The lists incorporate percentage summaries that are based on the total number of tools for which information is stored in the database. These lists provide an overview of the database information as well as a means to determine tools of interest for a given category. The appendices provide additional information about specific tools.

2. A Profile of Software Tools

There are many ways in which one can view the characteristics of software tools [Houg81b]. The approach that is taken in this section is to choose several different vantage points. Each of the various points, of course, is based on the inherent structure of the database.

The first vantage point is a coarse functional view of tools. A very simple classification system that consists of only six categories is used. This view is followed by a much more detailed perspective in Section 2.2 that is based on the taxonomy of tool features. In this section, each feature is described and defined. Percentage summaries of tools that are characterized by these features are presented. The third view in Section 2.3 involves the hardware and software characteristics of tools. The fourth and fifth views, Sections 2.4 and 2.5, involve other important considerations about software tools, such as their availability, their sources, and their documentation.

2.1 General Classes of Software Tools

Software development tools have grown in complexity in recent years as have other software applications. Most early tools performed a single function and were very simple to describe. Tutorial papers of this era [Rama75] [Reif75] classified tools usually according to the function that they performed. These early, simpler tools have since given way to more complex tools which have increased functionality. The evolution of tool development is causing major shifts in the types of tools being developed and marketed. For example, formerly one heard a lot about compilers, debuggers, dump analyzers, flowcharters, and editors. Now one hears a lot about

software development systems, application generators, software engineering facilities, program generators, and programming environments. The capabilities of these current tools are much more sophisticated than their earlier counterparts.

Consequently, the tools in the database are not extensively classified according to traditional schemes because of their limitation in describing current technology. The number of categories in the traditional classification scheme was reduced to the following six:

Software Management, Control, and Maintenance Tools (MAC)
Software Modeling and Simulation Tools (SAM)
Requirements/Design Specification and Analysis Tools (RAD)
Program Construction and Generation Tools (GEN)
Source Program Analysis and Testing Tools (TAA)
Software Support System/Programming Environment Tools (ENV)

Since the above classes are not mutually exclusive, this categorization provides only a broad overview of the types of tools currently available.

The list that follows shows the number and percentage of tools [1] in the database that fall into these classes.

TAA.....	126	(34%)
MAC.....	120	(33%)
RAD.....	54	(14%)
GEN.....	37	(10%)
SAM.....	13	(3%)
ENV.....	12	(3%)

Appendix A lists the names of the tools in each class. The two most popular classes are MAC and TAA which, when combined, comprise almost three-quarters of all the tools in the database. The tools in these classes are primarily oriented to the analysis or management of programs written in a specific language. Two of the lesser populated classes, ENV and GEN, contain many tools

---

[1] In all cases, except where noted, percentage values are based on the total number of tools in the database. The summation of percentages for a given profile is not, in most cases, equal to 100 percent for one of the following reasons: (1) truncation of the fraction, (2) a tool having no information for the profile subject, or (3) a tool being counted more than once within the profile subject. For example, a tool is likely to have more than one static analysis feature.

that have been more recently developed and, in some cases, are still under development. Tools in these classes are popular research areas.

2.2 Taxonomic View of Software Tools

To provide a more useful way of identifying tools of interest, each of the tools in the database is classified according to the taxonomy of tool features. The taxonomy is a hierarchical arrangement of software tool features and is illustrated in Figure 1. The highest level (@) is the most abstract and covers all the features below it. The second level of the taxonomy covers the basic processes of a tool. These are input (in), function (fn), and output (out). At the third level are the classes of tool features. These are subject (I), control input (C), transformation (T), static analysis (S), dynamic analysis (D), user output (U), and machine output (M). At the bottom or feature level of the hierarchy are a total of 53 tool features. The ranges between brackets signify the number of features in each of the classes.

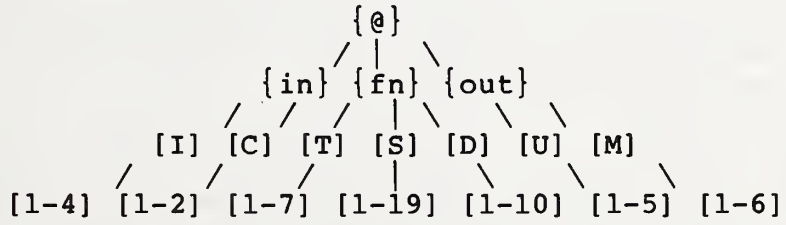

Figure 1. Taxonomy of Tool Features

In classifying tools for the database, some liberties were taken to extend the taxonomy when more detailed information was available or when a new feature was discovered. Also, on occasion, some features were further specified to avoid confusion with other features of the same name. For example, "data" which is input was changed to "data input" to avoid confusion with "data" that is output. This experience will influence future revisions of the taxonomy.

In the paragraphs that follow, the taxonomy is used to organize the detailed analysis of the types of tools and tool features that are found in the database. For completeness, definitions of most of the terms in the taxonomy are also given.

INPUT

Tool input features are based on the forms of input which can be provided to a tool. These features fall into two classes, one which is based on how the tool should operate (control input) and the other based on what the tool should operate on (subject). The difference between these classes is clarified further in the paragraphs that follow.

Subject. The subject is usually the main input to a tool. It is the input which is subjected to the main functions performed by a tool. The four types of tool subjects are code, VHLL (very high level language), data, and text. Although the difference between these types is somewhat arbitrary, the taxonomy has very specific definitions for each.

The list that follows shows the number and percentage of tools that fall in these classes.

CODE INPUT	246	(67%)
VHLL INPUT	76	(20%)
DATA INPUT	69	(19%)
TEXT INPUT	19	(5%)

Appendix B lists the tools with each of these features and with the extensions defined below for code and VHLL input. Data and text input were not extended further.

Code Input - accepts a program written in a high level, assembly, or object level language. Code is the language form in which most programming solutions are expressed. The tools in this class are, in most cases, further classified according to the specific language that they accept. The list that follows shows the number and percentage of tools classified by language that is accepted as input.

JCVS	1	(0%)
CSL	1	(0%)
MODULA	1	(0%)
MEFIA	1	(0%)
SCOBOL	1	(0%)
CMS-2	1	(0%)

Almost half of the tools with the code input feature accept FORTRAN and they comprise about one-third of all the tools in the database. However, it is still interesting to note the range of languages accepted by code input tools. The range includes LISP, SNOBOL, BASIC, CHILL, PL/1, ALGOL, APL ADA, MODULA, and even memory dumps (although one could argue whether a memory dump is code). It is also somewhat disturbing to note the relatively low percentage of COBOL tools since COBOL is the most frequently used programming language. The main reason for this fact is that for COBOL-type applications, the traditional tools have been oriented toward data management problems. A proliferation of tools oriented specifically to the COBOL language (compilers excluded) is a phenomenon that is just recently starting to appear. In fact, approximately 25 percent of the last 60 tools that were added to the database are COBOL tools.

VHLL Input - accepts a program written in a very high level language that is typically not in an executable form. Tools with this feature may define programs, track program requirements throughout their development, or synthesize programs through use of some non-procedural VHLL. The list that follows shows the number and percentage of tools that fall in this class.

Data Input - accepts a string of characters to which meaning is or might be assigned. The input (e.g. raw data) is not in an easily interpreted, natural language form.

Text Input - accepts statements in a natural language form. Certain types of tools are designed to operate on text only (e.g., text editors, document preparation systems) and require no other input except directives or commands. In most cases, these tools are oriented toward the development of documentation. Because the emphasis of the database is on tools that are specific to software development, there are many tools that have text as input that are not included in the database. Examples of excluded tools are general purpose text editors, data base management systems, report generators, and text processors.

Control Input. Tools that have control input features accept statements or data that specify the type of operations and any detail associated with the operations. Unfortunately, features in this area are very difficult to determine from tool descriptions. In a few cases, tools are described as being very interactive and a classification may be assumed. However, without actually seeing samples of the user input, features would have to be guessed. Consequently, very little data was collected and the results are not reported in this publication. This does not mean that control input features are not important. They relate to the user interface, which in many cases determines user acceptance or rejection of a tool. Tool descriptions sorely lack this type of information.

FUNCTION

The features for this class describe the processing functions performed by a tool and fall into three classes: transformation, static analysis, and dynamic analysis.

Transformation. Transformation features describe how the subject is manipulated to accommodate the user's needs. They describe what transformations take place as the input to the tool is processed. The list that follows shows the number and percentage of tools that have transformation features.

FORMATTING	48	(13%)
TRANSLATION	45	(12%)
INSTRUMENTATION	42	(11%)
EDITING	29	(8%)
SYNTHESIS	17	(4%)
RESTRUCTURING	14	(3%)
OPTIMIZATION	6	(1%)

Appendix C lists tools with these features and with the extensions defined for translation.

Formatting - arranging a program according to predefined or user defined conventions. A tool that "cleans up" a program by making all statement numbers sequential, alphabetizing variable declarations, indenting statements, and making other standardizing changes has this feature.

Translation - converting from one language form to another. Tools that have this feature can be further classified with the following extensions: compilation, structure preprocessing, macro expansion and conversion. The list that follows shows the number and percentage of translation tools that have been further classified.

STRUCTURE PREPROCESSING	18	(4%)
COMPILATION	8	(2%)
MACRO EXPANSION	8	(2%)
CONVERSION	7	(1%)

Instrumentation - adding sensors and counters to a program for the purpose of collecting information useful for dynamic analysis. Most code analyzers instrument the source code at strategic points in the program to collect execution statistics required for coverage analysis and tuning. See dynamic analysis features.

Editing - modifying the content of the subject by inserting, deleting, or moving characters, numbers, or data. Of course, there are a very large number of tools that have this feature that are not included in the database. Many of the ones that are included provide editing to enhance the capability of the user environment. Most tools do not include an editing capability and therefore require users to modify the subject through use of a vendor supplied editor.

Synthesis - generating an application or program from a specification or from an intermediate language. Tools that have this feature include application generators, program generators, compiler compilers, and preprocessor generators. Tools with this feature show promise toward increasing programmer productivity; thus there is considerable

research and development going on in this area.

Restructuring - reconstructing and arranging the subject in a new form according to well-defined rules. A tool that generates structured code from unstructured code is an example of a tool with this feature.

Optimization - modifying a program to improve performance, e.g. to make it run faster or to make it use fewer resources. Many vendors' compilers provide this feature. There are many tools that claim this feature, but do not really modify the subject program. Instead, these tools provide data on the results of execution which may be used for tuning purposes. See tuning under dynamic analysis.

Static Analysis. Static analysis features describe operations on the subject without regard to the executability of the subject. They describe the manner in which the subject is analyzed. The list that follows shows the static analysis features with the number of times they occur and their percentages.

Management - aiding the management or control of software development. Because of its broad coverage, management is further extended into the following areas:

CONFIGURATION MANAGEMENT	20	(5%)
GLOBAL VARIABLE MANAGEMENT	18	(4%)
PROJECT MANAGEMENT	18	(4%)
DATA BASE MANAGEMENT	13	(3%)
CHANGE CONTROL	11	(3%)
TEST DATA MANAGEMENT	10	(2%)

LIBRARY MANAGEMENT	9	(2%)
VERSION CONTROL	7	(1%)
DOCUMENTATION MANAGEMENT	5	(1%)
PERFORMANCE MANAGEMENT	3	(0%)
CAPACITY PLANNING	2	(0%)
MANAGEMENT PLANNING	1	(0%)

Cross Reference - referencing entities to other entities by logical means.

Scanning - examining an entity sequentially to identify key areas or structure.

Auditing - conducting an examination to determine whether or not predefined rules have been followed.

Data Flow Analysis - graphical analysis of the sequential patterns of definitions and references of data.

Consistency Checking - determining whether or not each entity is internally consistent in the sense that it contains uniform notation and terminology, and is consistent with its specification.

Statistical Analysis - performing statistical data collection and analysis.

Error Checking - determining discrepancies, their importance, and/or their cause.

Structure Checking - detecting structural flaws within a program (e.g. improper loop nestings, unreferenced labels, unreachable statements, and statements with no successors).

Comparison - determining and assessing differences between two or more items.

Completeness Checking - assessing whether or not an entity has all its parts present and if its parts are fully developed.

Complexity Measurement - determining how complicated an entity (e.g., routine, program, system, etc.) is by evaluating some number of associated characteristics. For example, the following characteristics can impact complexity:

instruction mix, data references, structure/control flow, number of interactions/interconnections, size, and number of computations.

Tracking - tracking the development of an entity through the software life cycle.

Interface Analysis - checking the interfaces between program elements for consistency and adherence to predefined rules and/or axioms.

I/O Specification Analysis - analyzing the input and output specification in a program, usually for the purpose of generating input data.

Type Analysis - evaluating whether or not the domain of values attributed to an entity are properly and consistently defined.

Cost Estimation - assessing the behavior of the variables which impact life cycle cost.

Units Analysis - determining whether or not the units or physical dimensions attributed to an entity are properly defined and consistently used.

Scheduling - assessing the software development schedule and its impact on the software life cycle.

Dynamic Analysis. Dynamic analysis features specify operations that are determined during or after execution takes place. Dynamic analysis features differ from those classified as static by virtue of the fact that they require some form of symbolic or machine execution. They describe the techniques used by the tool to derive meaningful information about a program's execution behavior. The list that follows shows the 10 dynamic analysis features along with the number of times they occur and their percentages.

COVERAGE ANALYSIS	40	(11%)
TRACING	30	(8%)

RESOURCE UTILIZATION	17	(4%)
SYMBOLIC EXECUTION	10	(2%)
ASSERTION CHECKING	9	(2%)
REGRESSION TESTING	6	(1%)
CONSTRAINT EVALUATION	3	(0%)

Appendix E lists the tools with these features and with the extensions for tracing.

Coverage Analysis - determining and assessing measures associated with the invocation of program structural elements to determine the adequacy of a test run. Coverage analysis is useful when the user is attempting to execute each statement, branch, path, or iterative structure (i.e., DO loops in FORTRAN) in a program.

Tracing - tracing the historical record of execution of a program. Because of its broad coverage, tracing has been, in many cases, further extended into the following areas:

PATH FLOW TRACING.....	13	(3%)
BREAKPOINT CONTROL.....	2	(0%)
LOGIC FLOW TRACING.....	2	(0%)
DATA FLOW TRACING.....	1	(0%)

Tuning - determining what parts of a program are being executed the most.

Simulation - representing certain features of the behavior of a physical or abstract system by means of operations performed by a computer.

Timing - reporting actual CPU times associated with a program or its parts.

Resource Utilization - analysis of resource utilization associated with system hardware or software.

Symbolic Execution - reconstructing logic and computations along a program path by executing the path with symbolic, rather than actual values of data.

Assertion Checking - checking of user-embedded statements that assert relationships between elements of a program. An assertion is a logical expression that specifies a condition or relation among the program variables. Checking may be performed with symbolic or run-time data.

Regression Testing - rerunning test cases which a program has previously executed correctly in order to detect errors spawned by changes or corrections made during software development and maintenance.

Constraint Evaluation - generating and/or solving path input or output constraints for determining test input or for proving programs correct.

OUTPUT

Output features provide links from the tool to both the human user and the target machine (where applicable). They describe the types and forms of outputs that are produced by a tool.

User Output. User output features describe the types of information that are returned from the tool to the human user and the forms in which these outputs are presented. There are five user output features. The list that follows shows the number and percentage of tools that fall in these classes.

LISTINGS	171	(47%)
TABLES	151	(41%)
DIAGNOSTICS	84	(23%)

Appendix F lists the tools with these features and with the extensions for graphics and user-oriented text.

Listings - output that lists source programs or data and that may be annotated.

Tables - output that is arranged in parallel columns to exhibit a set of facts or relations in a definite, compact and comprehensive form.

Diagnostics - output that simply indicates what software discrepancies have occurred.

Machine Output. Machine output features handle the interface from the tool to a non-human user. The machine output can be directed to a target machine or to another tool for further processing. Machine output features describe what the receiving tool or machine expects as output. The list that follows shows the number and percentage of tools that fall in these classes.

Data - a set of representations of characters or numeric quantities to which meaning has been assigned.

Object Code - a program expressed in machine language which is normally an output of a given translation process.

Intermediate Code - code that is between source code and machine code.

VHLL - a program written in a very high level language.

Prompts - a series of procedural operators that are used to interactively inform the system in which the tool operates that it is ready for the next input.

2.3 The Environment of Software Tools

The environment required by a tool depends on how portable the tool is. The list that follows shows the number and percentage of tools [1] that are considered portable, partially portable, or not portable.

PORTABLE		
YES.....	69	(19%)
NO.....	26	(7%)
PARTIAL.....	6	(1%)

A tool is considered portable if (1) it is written in a portable subset of a language, (2) it is written according to a Federal standard for a language, or (3) it is available on three or more different manufacturers' computers of significantly different architecture. A tool is considered partially portable if it is available on different manufacturers' computers of significantly different architecture or minor modifications are required to move it to other machines. Appendix H lists the portable tools.

Another important environmental factor is the language or languages in which a tool is written. The list that follows shows the number and percentage of tools by source language.

Appendix I lists the tools by source language. Information on the language dialects is provided for each tool in Appendix N. As one would expect, FORTRAN and COBOL are the most popular tool languages.

The hardware requirements of a tool have the largest impact on the environment. Many tools may require the presence of a specific manufacturer's hardware system. Others have simply been developed on a specific system and their availability on other systems has not been tested [1]. The list that follows profiles the hardware systems that are referenced by the tools in the database.

2.4 Availability of Software Tools

Many tools have restrictions on their outside availability or are for internal use by a company or research organization. These organizations are willing to share information about their tools for professional reasons, but are not necessarily willing to make their tools generally available. The list that follows shows the number and percentage of tools by their availability to potential users [1].

Many tools are developed for non-commercial purposes. These tools, in many cases, are made available to the general public for no cost or at a nominal cost. When this is the case the

---

[1] Although one might consider it likely that an organization would make known the availability of a tool, the percentages indicate that this may not be the case. When a tool is developed by a non-marketing group of an organization, the decision to make a tool available depends on proprietary concerns, mission reviews, market studies, and personnel availability. These issues put many tools into an unknown category of public availability.

tools are considered to be in the public domain. The most common repositories for public domain tools are the National Technical Information Service (NTIS) Computer Products Support Group [1], the Federal Software Exchange [2], the Computer Software Management and Information Center (COSMIC) [3], and the many computer user groups that are either directly or indirectly supported by computer hardware vendors. The list that follows shows the number and percentage of tools by their availability in the public domain.

Other information about the availability of tools is also stored in the database. This information includes restrictions on the availability such as copyright, licenses, legal agreements, etc. It also includes information about support for a tool and the current stage of development. This information can be found listed by tool in Appendix N.

2.5 Tool Literature and Sources

Documentation is the most important source of information for users, developers, and maintainers of software tools. The list that follows includes many of the more common and not so common forms of documentation that are referenced by the tools in the database.

There is a great diversity among the developers of tools. Tool developers can be found within governments, industries, universities, and private homes. The list that follows is a profile of the various types of tool developers.

COMMERCIAL VENDORS OF TOOLS	...	122	(33%)

It can be seen from the list that a vast majority of software development tools are not necessarily marketed commercially. The largest group of non-vendors are commercial research organizations. These organizations have developed software tools in-house primarily for their own use and do not actively market tools. Government supported research centers are non-profit organizations that perform work primarily under Government contract.

The list that follows shows the information sources for the tools that are included in the database.

Appendix M lists the tools by the information sources.

Information for the database was solicited through announcements in trade publications, Commerce Business Daily, and NBS publications. The preferred response from the solicitation was a completed paper submitted to NBS by the developer or user of a tool. When this was the case, the information obtained was usually complete and all the possible records for a tool could be filled and stored in the database. However in most cases, information was referred to NBS through various catalogs, surveys, product descriptions, and technical papers. Consequently, there are occasional gaps in the information. The most notable areas are portability, availability, user interface, and documentation.

Finally, people are the most common sources for information about tools. The database maintains records of people who are contacts for information about tools or who have submitted information about tools. For the sake of curiosity, the geographic location of these people was compiled. The list that follows shows the distribution [1] by country and state.

As one might expect, California turned out with the highest percentage. The names and addresses of the people who are contacts for tools in the database are printed by tool in Appendix N.

3. Conclusions

As noted in Section 1, the main purposes for compiling information on software tools were to obtain information to support NBS efforts and to transfer information to the Federal Government, industry, and research groups. The database has served these purposes. The features of software tools that appeared in an earlier version of the database have aided the development of the taxonomy of tool features reported in Section 2. The taxonomy is slated for further publications and is being used as a basis for several ongoing NBS efforts.

In the area of information transfer, the database helped the General Services Administration locate Government-owned software tools for inclusion in the Federal Software Exchange Catalog. In addition, information from the database was made available to many people in the Federal Government, including many members of the Federal ADP Users Group. The database was demonstrated at the 5th International Conference on Software Engineering and the National Computer Conference. An earlier report on the database has received wide distribution both inside and outside the Government.

Since the purposes for the database have been accomplished, plans are being made for transferring the database from NBS to the Data and Analysis Center for Software (DACS) [Duva80]. DACS was established in August of 1978 to serve as a central source for information and data on software technology by the Rome Air Development Center. The NBS database will form a basis for the DACS Software Tools Database. It is understood that DACS intends to implement the DACS database under the National Software Works (NSW) and to offer a user-oriented software tool search capability.

Acknowledgments. The author wishes to acknowledge the contributions of others in the development of the NBS Software Tools Database. The need for the database was established at the IEEE Testing and Documentation Workshop, Fort Lauderdale, FL, December 1978 which was attended by Dr. Selden Stewart, Dr. W. Richards Adrion, and Dr. Martha Branstad of NBS. During one of the discussion sessions, it was concluded that a public information exchange on software tools was needed and NBS agreed to initiate its development. Drs. Stewart, Adrion, and Branstad have each, at one time or another, supervised the development of the database. During the initiation of the database, Dr. Donald Deutsch, Dr. Leonard Gallagher, and Mr. Charles Sheppard of NBS provided much assistance in the use of relational models for the tool data. Programs for the database were developed in Pascal/R [Schm80] which is an extension of Pascal developed at the University of Hamburg, West Germany. The extension allows the

programmer to specify and use data relations within the Pascal programming language, which in essence, allows one to establish a relational database. Assistance in populating the data base and editing the tool information was provided by Ms. Karen Oakley. Programming assistance was provided by Ms. Sheila Frankel and Ms. Karen Oakley. Review and translation of parts of [Andr80] were provided by Ms. Victoria Roy.

STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN, COMPASS
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: THE ABSTRACT RETRIEVAL PROGRAM WILL PROVIDE A MEANS OF MAINTAINING A FILE OF DOCUMENTS AND/OR ANY INFORMATION THAT IS CORRELATED BY SOME IDENTIFICATION CODE (KEYWORD). THE PROGRAM WILL ALLOW FOR THE UPDATING OR EDITING OF THESE FILES AS WELL AS VARIOUS TYPES OF RETRIEVAL LISTINGS. THE ABSTRACT RETRIEVAL PROGRAM IS A VERY SIMPLE KEYWORD SYSTEM. ITS POTENTIAL APPLICATIONS EXTEND FAR BEYOND STORAGE OF DOCUMENT OR PROGRAM ABSTRACTS. FOR EXAMPLE, A KEYWORD SYSTEM CAN BE USED TO CORRELATE TEST REQUIREMENTS STATEMENTS WITH TEST CASE NUMBERS, OR TO CORRELATE PROPOSAL PARAGRAPH NUMBERS WITH RFP/SOW PARAGRAPH NUMBERS FOR REQUIREMENTS TRACEABILITY. ALTHOUGH A GIM-TYPE SYSTEM MAY BE REQUIRED FOR MORE COMPLICATED INDEXING AND STORAGE REQUIREMENTS THE ABSTRACT RETRIEVAL PROGRAM IS A SIMPLE, INEXPENSIVE APPROACH TO SOLVING A CLASS OF STRAIGHTFORWARD KEYWORD PROBLEMS. (UNLIKE GIM, THE PROGRAM IS NOT AN ON-LINE KEYWORD SYSTEM. THIS MAY BE A SIGNIFICANT LIMITATION FOR CERTAIN APPLICATIONS.)

IMPLEMENTATION LANGUAGE: ASSEMBLY
COMPUTER (OTHER HARDWARE): XDS SIGMA X
TOOL SUMMARY: ASSIST-I IS A COMPUTER PROGRAM WHICH PERFORMS AUTOMATIC TESTS ON THE CORRECTNESS OF ARITHMETIC COMPUTATIONS, STORAGE REFERENCES, AND EXECUTION SEQUENCING WITHIN EVERY POSSIBLE LOGIC PATH OF THE COMPUTER PROGRAM UNDERGOING TEST. IT IS DESIGNED TO OPERATE ON ASSEMBLY LANGUAGE OBTAINED AS OUTPUT FROM A COMPILER OR CODED DIRECTLY IN ASSEMBLY LANGUAGE. THE BASIC CONCEPT OF ASSIST-I IS THAT EVERY COMPUTER PROGRAM CAN BE SECTIONED INTO LOGICAL TEST UNITS (LTU) WHICH CONSIST OF SERIALLY-EXECUTED STATEMENTS. ASSIST-I PROCESSES THE SUBJECT PROGRAM IN A SEQUENTIAL MANNER, RECORDING ALL BRANCHES OR POTENTIAL BRANCHES. AT THE END OF EACH LTU, ASSIST-I COMPARES THE COMPUTED RESULTS WITH THE PREDICTED RESULTS AND OUTPUTS AN ERROR MESSAGE INDICATING DISCREPANCIES, IF ANY. AT THE END OF THE SUBJECT PROGRAM, ASSIST-I LISTS EVERY POSSIBLE LOGIC PATH THROUGH THE PROGRAM BY LTU NAME.

COMPUTER (OTHER HARDWARE): CDC CYBER, CDC 6X00/7X00
OS (OTHER SOFTWARE): KRONOS
TOOL AVAILABLE: YES, PUBLIC DOMAIN: YES
TOOL SUPPORTED: YES, TOOL SUPPORT: NAVAL AIR DEVELOPMENT CENTER
TOOL SUMMARY: THE ATA AUTOMATICALLY SCANS THE SOURCE PROGRAM, DETERMINES THE PATHS BETWEEN DECISION POINTS, AND INSTRUMENTS THE SOURCE CODE WITHOUT ALTERING THE INTENDED COMPUTATIONS. THE INSTRUMENTED PROGRAM IS THEN DYNAMICALLY EXECUTED WITH TEST DATA WHILE SPECIAL RUN-TIME ROUTINES RECORD DATA; THE DYNAMIC EXECUTION MAY BE ON THE SOFTWARE EMULATOR OR THE ACTUAL HARDWARE. THE RECORDED DATA IS POST-PROCESSED TO SHOW WHAT PATHS HAVE BEEN TESTED AS WELL AS THE FREQUENCY OF EXECUTION. THE RESULTANT STATISTICS ARE ACCUMULATED OVER MANY TESTS, FORMING A COMPLETE TEST PICTURE. A PROJECT MANAGER CAN ASSESS THE PROGRESS OF THE TESTING EFFORT AND HAS A QUANTITATIVE INDICATION OF THE RISK ASSOCIATED WITH RELEASING SOFTWARE WHICH IS NOT 100% TESTED. IN THIS CASE 100% TESTING MEANS ALL STATEMENTS HAVE BEEN EXECUTED AT LEAST ONCE. THE FREQUENCY OF

EXECUTION OF CERTAIN PATHS PROVIDES INFORMATION TO THE SOFTWARE ENGINEER FOR IMPROVING THE PERFORMANCE OF THE SOFTWARE.

STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): UNIVAC 11XX
TOOL SUMMARY: THE ATDG IS AN EXPERIMENTAL INTERACTIVE TOOL WITH TWO DIFFERENT FUNCTIONS: THE TEST DATA GENERATION (TDG) FUNCTION PROVIDES AUTOMATED SUPPORT TO PROGRAM TESTING AT THE UNIT LEVEL (I.E., A SINGLE SUB- ROUTINE, FUNCTION, OR MAIN PROGRAM) BY IDENTIFICATION OF EFFECTIVE TEST CASE PATHS AND THE DATA CONSTRAINTS WHICH MUST BE SATISFIED TO EXECUTE THESE PATHS; THE STATIC ERROR ANALYSIS (SEA) FUNCTION PROVIDES A DIAGNOSTIC CAPABILITY TO SUPPLEMENT THE ERROR DETECTION FUNCTIONS OF CONVENTIONAL FORTRAN COMPILERS BY IDENTIFICATION OF PATH-DEPENDENT ERRORS (E.G., UNINITIALIZED VARIABLES, INFINITE LOOPS, UNREACHABLE CODE). THESE TWO FUNCTIONS ARE PERFORMED BY ANALYZING A LOGIC NETWORK OF THE SOFTWARE ELEMENT USING THE PRINCIPLES OF DIRECTED GRAPH THEORY AND DYNAMIC PROGRAMMING. A NETWORK IS CONSTRUCTED BY DEFINING A SOFTWARE ELEMENT IN TERMS OF SEGMENTS (LOGIC BLOCKS OF FORTRAN STATEMENTS THAT CAN BE ADDRESSED), AND BY IDENTIFYING THE TRANSFERS AND CONNECTIVE PROPERTIES BETWEEN THESE SEGMENTS.

TOOL SUMMARY: AUDIT IS PART OF A PROCUREMENT SYSTEM DEVELOPED BY THE NAVAL SHIP RESEARCH AND DEVELOPMENT CENTER (NSRDC) TO EXAMINE CONTRACTOR PRODUCED COMPUTER PROGRAMS. AUDIT ANALYZES A FORTRAN PROGRAM TO INSURE THAT IT CONFORMS TO A SET OF PROGRAMMING STANDARDS AND ISSUES A REPORT DETAILING THE DEVIATIONS FROM THESE STANDARDS. THE AUDIT STANDARDS PRIMARILY INSURE PROGRAM UNIVERSALITY AMONG A CLASS OF COMPILERS AND ARE SIMILAR TO THE AMERICAN NATIONAL STANDARD FOR FORTRAN. AUDIT ALSO DETERMINES IF THE INPUT PROGRAM CONTAINS PATHS ALONG WHICH A VARIABLE MAY BE NEEDED BEFORE IT HAS BEEN DEFINED. TO DO THIS, AUDIT CONSTRUCTS A DIRECTED GRAPH OF THE FORTRAN PROGRAM AND TRACES EACH PATH OF THE GRAPH. A TOTAL FOR THE NUMBER OF PATHS THAT ARE TRACED FOR EACH MODULE IS ALSO PROVIDED.

CLASSIFICATION: SOFTWARE MANAGEMENT, CONTROL, AND MAINTENANCE
FEATURES: SUBJECT, CODE INPUT, FORTRAN, FORTRAN IV, USER OUTPUT, LISTINGS, STATIC ANALYSIS, MANAGEMENT, GLOBAL VARIABLE MANAGEMENT,
STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: THE AUTOMATIC COMMON BLOCK INSERTION PROGRAM IS A TOOL FOR THE INSERTION OF COMMON BLOCKS IN FORTRAN SOFTWARE. THE AUTOCOM SYSTEM ALLOWS THE USER TO KEEP GLOBAL VARIABLES AND PROGRAM CODE IN SEPARATE FILES FOR UPDATE AND LISTING PURPOSES, AND AUTOMATICALLY INSERTS INTO PROGRAM CODE THOSE COMMON BLOCKS WHICH ARE NECESSARY, BASED UPON THE USE OF THE GLOBAL VARIABLES IN THE CODE. WITHOUT A MANAGING SYSTEM, COMMON BLOCKS ARE INSERTED MANUALLY BY THE USER, BASED UPON A VISUAL CHECK OF A ROUTINE'S GLOBAL VARIABLE USAGE. SUCH INSERTIONS ARE OFTEN IN ERROR; OMITTING NEEDED BLOCKS OR INSERTING ALL POSSIBLE BLOCKS TO INSURE GLOBAL VARIABLE COVERAGE. THE USE OF MOST AUTOMATED SYSTEMS REQUIRES THE INSERTION OF FLAGS WITHIN THE SOURCE CODE TO NOTE WHICH COMMON BLOCKS ARE DESIRED, AND REQUIRES THAT THE USER MONITOR THE STATUS OF THESE FLAGS DURING PROGRAM DEVELOPMENT. AUTOCOM RESOLVES THE ENTIRE QUESTION OF COMMON BLOCK MANAGEMENT TO AN AUTOMATED PROCESS.

STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): HONEYWELL 6XXX
TOOL SUMMARY: CARA IS A SOFTWARE TOOL WHICH FACILITATES THE TASK OF TRANSLATING THE SOFTWARE REQUIREMENTS INTO THE SOFTWARE DESIGN. THE TOOL USES THE USER REQUIREMENTS LANGUAGE (URL) AS THE MEANS OF PRESENTING THE SOFTWARE DESIGN PROPERTIES AND CHARACTERISTICS. AS IT IS ENTERED, THE USER REQUIREMENT ANALYZER (URA) CHECKS FOR CORRECTNESS AND CONSISTENCY WITH THAT ALREADY IN THE DATA BASE. UPON REQUEST, URA WILL PRODUCE REPORTS ON ALL OR ANY SELECTED PART OF THE DATA IN THE DATA BASE. THE DATA MAY HAVE BEEN ENTERED BY DIFFERENT ANALYSTS AT DIFFERENT TIMES. DURING THE PRODUCTION OF A REPORT, URA CARRIES OUT NUMEROUS CHECKS AND ANALYSES AND PRODUCES WARNINGS AND DIAGNOSTICS AS APPROPRIATE. WHEN PROJECT IS COMPLETE, COPIES OF THE VARIOUS REPORTS CAN BE PRODUCED AND ASSEMBLED TO MEET THE FORMAT OF THE FINAL SPECIFICATION DOCUMENT REQUIRED BY THE ORGANIZATION.

CLASSIFICATION: SOURCE PROGRAM ANALYSIS AND TESTING
FEATURES: SUBJECT, CODE INPUT, FORTRAN, MACHINE OUTPUT, DATA OUTPUT, USER OUTPUT, LISTINGS, DYNAMIC ANALYSIS, SYMBOLIC EXECUTION, PATH CONSTRAINT SOLUTION,
STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
TOOL SUMMARY: CASEGEN IS DESIGNED TO GENERATE TEST DATA AUTOMATICALLY FOR TESTING FORT PROGRAMS. IT CONSISTS OF FOUR MAJOR SUBSYSTEMS: FORTRAN SOURCE CODE PROCESSOR.

PATH GENERATOR. PATH CONSTRAINT GENERATOR. TEST DATA GENERATOR FSCP GENERATES A DATA BASE CONSISTING OF THE PROGRAM GRAPH, THE SYMBOL TABLE AND THE INTERNAL REPRESENTATION OF THE SOURCE CODE. THE PATH GENERATOR, BY PARTITIONING THE PROGRAM GRAPH, GENERATES A MINIMAL SET OF PATHS TO COVER ALL EDGES. THE PATH CONSTRAINT GENERATOR USES SYMBOLIC EXECUTION TO PRODUCE A SET OF EQUALITY AND INEQUALITY CONSTRAINTS ON THE INPUT VARIABLES. THE TEST DATA GENERATOR CREATES A SET OF INPUTS WHICH SATISFY THE CONSTRAINTS AND CAN BE USED TO EXECUTE THE PROGRAM PATH. THE CONSTRAINTS ARE SOLVED BY MEANS OF RANDOM NUMBER GENERATION AND SYSTEMATIC TRIAL AND ERROR PROCEDURES, WITH VALUES BEING ASSIGNED TO PROGRAM VARIABLES UNTIL ALL CONSTRAINTS ARE SATISFIED.

IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: THE PURPOSE OF THE COMGEN PROGRAM IS TO EMULATE THE COMDECK CAPABILITY OF THE CDC UPDATE SYSTEM. WORKING ON FORTRAN CODE USING THE TIMESHARE SYSTEM, IT SPECIALIZES ON JUST THIS ONE ASPECT OF THE UPDATE SYSTEM. THIS ALLOWS COMGEN TO PROVIDE A FASTER MORE EFFICIENT TOOL FOR THE MULTIPLE RUNS DURING PROGRAM DEVELOPMENT. THE USER'S FILES ARE IN A FORMAT FOR CONVERSION TO UPDATE AFTER DEVELOPMENT IS COMPLETED, IF THAT IS DESIRED. THE FILE INPUT TO COMGEN CONSISTS OF TWO RECORDS. A MASTER COMDECK, CONTAINING ALL OF THE COMMON VARIABLES, IS IN THE FIRST RECORD. THE SECOND RECORD CONTAINS THE USER'S SOURCE ROUTINES. DURING PROCESSING, COMMON BLOCKS IDENTIFIED IN THE COMDECK RECORD WHICH ARE REQUESTED BY SOURCE ROUTINES ARE INSERTED, CREATING AN OUTPUT COMPILE FILE. THIS ALLOWS CHANGES TO COMMON BLOCKS TO BE MADE IN ONLY ONE PLACE THUS ELIMINATING ERRORS DUE TO CHANGES MADE IN SOME ROUTINES BUT NOT IN OTHERS. A FILE LISTING IS ALSO GENERATED WHICH IS DATED, PAGE NUMBERED AND WHICH BEGINS EACH ROUTINE ON A NEW PAGE.

STAGE OF DEVELOPMENT: IMPLEMENTED, DATE (YYMMDD): 810200
TOOL AVAILABLE: YES, PUBLIC DOMAIN: NO

TOOL SUPPORTED: YES, TOOL SUPPORT: BGS SYSTEMS
TOOL SUMMARY: CRYSTAL (TM) IS A SOFTWARE DEVELOPMENT TOOL TO HELP PROJECT MANAGERS, SYSTEM DESIGNERS, AND CAPACITY PLANNERS SPECIFY AND PREDICT SYSTEM PERFORMANCE BEFORE AND DURING THE DEVELOPMENT PROCESS. CRYSTAL TAKES ESTIMATES OF SOFTWARE STRUCTURE AND MODULE RESOURCE USAGE, AND AUTOMATICALLY BUILDS A PERFORMANCE MODEL TO BE RUN BY OUR PERFORMANCE CALCULATION PACKAGE, BEST/1 (TM). INITIALLY, THESE ESTIMATES ARE OBVIOUSLY "BALLPARK", BUT EVEN THEN YOU CAN SEE WHAT WILL HAPPEN IF SOME ESTIMATES ARE OFF BY 50%, OR EVEN 100%. AS THE DEVELOPMENT PROCEEDS, AND SOME MODULES ACTUALLY GET CODED, THESE IMPRECISE ESTIMATES ARE REPLACED BY ACTUAL FIGURES, RESULTING IN A SUCCESSION OF IMPROVED PERFORMANCE PREDICTION. IF THE PREDICTED PERFORMANCE IS LESS THAN ACCEPTABLE, THEN THE PROJECT MANAGER HAS ADEQUATE TIME TO TAKE CORRECTIVE ACTION BEFORE A CRISIS DEVELOPS.

THE DESIGN QUALITY METRICS SYSTEM (DQM) IS AN INITIAL STEP TO SOLVE THIS PROBLEM. AS SHOWN ALGORITHMS HAVE BEEN DEVELOPED WHICH, WHEN APPLIED TO THE STRUCTURE CHART OF SOFTWARE MODULES, PRODUCE A QUANTIFICATION OF THE DESIGN USING A PLOT OF COMPLEXITY AS A FUNCTION OF TREE DEPTH. THE RESULTS OF THIS TECHNIQUE HAVE BEEN VALIDATED ON TWO MAJOR SOFTWARE DEVELOPMENT EFFORTS AND HAVE BEEN SHOWN TO CORRELATE CLOSELY WITH THE NUMBER OF ERRORS ENCOUNTERED IN SOFTWARE TESTING. IN OTHER WORDS, DQM QUANTIFIES QUALITATIVE GUIDELINES AND, THEREFORE, PROVIDES A PREDICTIVE TOOL WHICH CAN REDUCE THE NUMBER OF ERRORS AND THE COST.

TOOL SUMMARY: DYNA IS A TOOL FOR FORTRAN PROGRAMS WHICH ALLOWS THE USER TO SEE THE DYNAMIC BEHAVIOR OF A MODULE WHILE IT IS EXECUTING TEST DATA. THE TEST DATA USED IS THAT OF THE USERS OR DEVELOPERS. NO MODIFICATION TO EITHER THE PROGRAM OR ITS TEST DATA ARE REQUIRED. DYNA OPERATES IN THREE STEPS. DURING THE PREPROCESSING STEP, PROBES (ADDITIONAL FORTRAN STATEMENTS) ARE AUTOMATICALLY INSERTED IN THE SOURCE CODE AND THE "INSTRUMENTED SOURCE" CODE IS COMPILED. DURING THE EXECUTION STEP, COUNTS ARE MADE OF NUMBER OF TIMES EACH STATEMENT IS EXECUTED BY THE TEST DATA. THE COUNTS MAY BE ACCUMULATED WITH THE COUNTS FROM PREVIOUS EXECUTIONS, IF DESIRED. DURING THE POST PROCESSING STEP, THE EXECUTION DATA IS FORMATTED INTO REPORTS.

SYNTAX ERRORS ARE FLAGGED DURING THE ANALYSIS FORAN'S PRIMARY USE IS TO DETERMINE POSSIBLE COMPUTATION OF LOGIC ERRORS FROM THE STATIC ANALYSIS OF DATA USAGE. IT IS ALSO VALUABLE IN ANALYZING THE EFFECT OF A PROGRAM MODIFICATION ON DATA USAGE.

STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): IBM 360/370
TOOL SUMMARY: FORMAN IS USED TO DEFINE AND MAINTAIN SUBROUTINE COMMON DATA STRUCTURES DURING THE DEVELOPMENT AND MAINTENANCE PHASES OF LARGE FORTRAN PROGRAMS. WHEN DEFINING THE COMMON DATA BASE, THE USER INPUTS CARDS WHICH IDENTIFY THE NAME OF EACH VARIABLE, ITS DIMENSION, TYPE AND DESCRIPTION. FORMAN CONSTRUCTS A DICTIONARY CONTAINING THIS DATA AND PRODUCES PRINTED OUTPUT DOCUMENTING EACH COMMON BLOCK IN THE PROGRAM. A SECOND OPTION OF THE FORMAN SYSTEM ACCEPTS AS INPUT THE NUMBER OF EACH COMMON VARIABLE UTILIZED BY A PARTICULAR ROUTINE. FORMAN OUTPUTS ALL OF THE CARD IMAGES REQUIRED EFFECT THE LINKAGE TO COMMON THAT FORTRAN REQUIRES. THESE CARDS ARE NORMALLY INSERTED BY HAND INTO THE FORTRAN SOURCE DECK. THE GENERAL USE COMMON DATA BASE MANAGEMENT SOFTWARE CAN GREATLY REDUCE THE MAN HOURS REQUIRED TO UPDATE PROGRAMS AS WELL AS TO DEBUG COMMON PROBLEMS THAT MAY EXIST.

TOOL PORTABLE: YES
TOOL SUMMARY: THE GOTO-ANALYZER IS A STATIC ANALYZER WHICH COUNTS ALL OCCURRENCES OF THE GOTO STATEMENT IN A COMPLETE FORTRAN PROGRAM AND DIVIDES THEM OVER THE FOLLOWING CATEGORIES: (1) JUMP FORWARD, BACKWARD, OR TO THE END OF THE MODULE, (2) JUMPS DEPENDING ON A LOGICAL IF, AND (3) "KNOTS", IE, TWO JUMPS CROSSING EACH OTHER'S PATH. EACH CATEGORY HAS A CERTAIN WEIGHT. FOR INSTANCE, "KNOTS" ARE PENALIZED MORE HEAVILY THAN JUMPS TO THE END OF A MODULE. THE NUMBER OF EXECUTABLE STATEMENTS IS ALSO ESTABLISHED. TOOL SUMMARY: HARP CREATES CHARTS FOR THE GRAPHIC DISPLAY OF PROJECT SCHEDULE AND RESOURCE INFORMATION. THE SYSTEM HAS BEEN DESIGNED TO PRESENT TEXTUAL, NUMERIC, AND SCHEDULE DATA IN A FORMAT WHICH IS TAILORED TO FIT THE REQUIREMENTS OF A PARTICULAR APPLICATION OR PROJECT. THE HARP SYSTEM PROVIDES PROJECT MANAGEMENT AND COST CAPABILITIES WHICH ARE VALUABLE OVER THE ENTIRE LIFE CYCLE A PROJECT; INCLUDING PROPOSAL PRESENTATIONS, CONCEPT DESIGN, DATA VISUALIZATION, PROJECT SCHEDULE AND COST CONTROL, AND ENHANCEMENT OF DELIVERABLE PRODUCTS. SEPARATION OF CHART DESIGN AND CHART DATA WITHIN THE SYSTEM ENABLES NEW AND SPECIAL CHARTS TO BE CREATED WITH NO MODIFICATION OF THE DATA BASE CHARTS ARE ALL RECTANGULAR IN SHAPE, AND DIMENSIONS ARE EXPANDED AUTOMATICALLY TO ACCOMMODATE ALL ENTERED DATA. THE POSITION AND NUMBER OF VERTICAL COLUMNS IS DETERMINED BY THE USER ONCE IN AN INITIAL DESIGN OF A CHART. DATA IS SEQUENTALLY ENTERED INTO THIS FORMAT, AND CHARTS MAY BE PRODUCED WHENEVER UPDATES OCCUR WITHOUT MANIPULATING THE CHART FORMAT.

A NEW 'FIRST EXECUTABLE STATEMENT' IS THEN COPIED ONTO THE SOURCE OUTPUT FILE, TO WIT 'WRITE(7, "NAME")'. THE AUGMENTED STRUCTURAL ANALYSIS PROGRAM WAS THEN COMPILED AND EXECUTED, THE TAPE PRODUCED BY EXECUTION WAS EXAMINED FOR MODULE CALLS, AND THE UNUSED MODULES OF THE PROGRAM WERE DELETED. A SIMPLE MODIFICATION TO 'INSERT' WOULD ALLOW IT TO ALSO INSERT TEXT PRECEDING A 'RETURN' STATEMENT. STAGE OF DEVELOPMENT: CONCEPT
TOOL AVAILABLE: NO
TOOL SUMMARY: IPDS IS A TOOL BEING PLANNED BY SEVERAL MEMBERS OF THE COMPUTER SCIENCE DEPARTMENT AT CORNELL UNIVERSITY. THE TOOL WILL BE BASED ON THE PRL SYSTEM DESCRIBED IN A RECENT TECHNICAL REPORT. THE REPORT EXPLORES THE VIEW THAT CORRECT PROGRAMS ARE MOST NATURALLY PRODUCED AS A RESULT OF CORRECT DEVELOPMENT AND THAT REASONING ABOUT CODE IS NOT THE PROPER PARADIGM FOR SUCH DEVELOPMENT. INSTEAD PROGRAMMERS SHOULD REASON ABOUT SPECIFICATIONS IN A LOGIC FORMULATED FOR CONSTRUCTIVELY PROVING THAT SPECIFICATIONS HAVE ACCEPTABLE IMPLEMENTATIONS; FROM THESE PROOFS CODE MAY BE EXTRACTED. THIS APPROACH PROVIDES A UNIFORM VIEW OF BOOLEAN FORMULAS AND PROGRAM SPECIFICATIONS AS PROVABLE PROPOSITIONS. THERE IS NO ASSERTION/CODE DISTINCTIONS BECAUSE PROOFS INCLUDE NEITHER ASSERTIONS NOR CODE. THUS, PROGRAMMERS TRULY CONCENTRATE ON PROOF DEVELOPMENT, NOT ON CODING. EXECUTABLE TEXT IS SIMPLY A VALUABLE BY-PRODUCT OF CORRECT REASONING.

TOOL SUPPORTED: YES, TOOL SUPPORT: LOGICON
TOOL SUMMARY: THE LOGICFLOW SYSTEM IS A LOGICON-DEVELOPED SOFTWARE SYSTEM WHICH AIDS THE DESIGN, DEVELOPMENT, ANALYSIS AND DOCUMENTATION OF RELIABLE SOFTWARE. DURING THE DESIGN PHASE, LOGICFLOW ACCEPTS PROGRAM DESIGN LANGUAGE (PDL) AND PRODUCES A GRAPHIC REPRESENTATION OF THAT DESIGN IN FLOWCHART FORM FOR EVALUATION. SINCE LOGICFLOW ANALYZES THE SYNTAX OF THE INPUT TO PRODUCE THE GRAPHIC REPRESENTATION AT THIS STAGE, IT ALSO CHECKS FOR BASIC LOGIC ERRORS SUCH AS IMPROPER LOOP CONSTRUCTS. METRICS OF THAT DESIGN CAN BE OBTAINED BY INVOKING A METRICS EVALUATOR. THIS FEATURE PROVIDES THE ANALYST NORMALIZED METRICS ON SELECTED DESIGN CHARACTERISTICS SUCH AS STRUCTUREDNESS, SIMPLICITY, AND COMPLEXITY. A CROSS-REFERENCE OF ALL DESIGN NAMES CAN BE OBTAINED USING THE CROSS-REFERENCE GENERATOR. THE LOGICFLOW FLOWCHARTER AUTOMATICALLY PRODUCES HIGH-QUALITY FLOWCHARTS FROM DESIGN LANGUAGE OR FORTRAN SOURCE.

FEATURES: SUBJECT, CODE INPUT, USER OUTPUT, GRAPHICS, FLOW CHARTS, STATIC ANALYSIS, SCANNING,

STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN, ASSEMBLY
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: LOGIFLOW IS A SEMI-AUTOMATIC FUNCTIONAL FLOWCHARTING TOOL WHICH BRIDGES THE GAP BETWEEN THE COMPLETELY AUTOMATIC FLOWCHARTERS LIKE AUTOFLOW AND FLOWGEN AND THE COMPLETELY MANUAL APPROACH. LOGIFLOW PROVIDES THE USER COMPLETE FLEXIBILITY IN FUNCTIONALLY GROUPING STATEMENTS TO BE FLOWCHARTED. THE USER MAY BE AS DETAILED OR AS GENERAL AS DESIRED. LOGIFLOW OPERATES IN EITHER A BATCH OR REMOTE TERMINAL ENVIRONMENT. THE FLOWCHARTS ARE PRODUCED BY CALCOMP PLOTTERS. ALTHOUGH DESIGNED FOR USE PRIMARILY WITH FORTRAN PROGRAMS, LOGIFLOW MAY BE USED TO CHART ANY TEXTUAL MATERIAL. FOR ANY REQUIREMENT WHERE MEANINGFUL, FUNCTIONAL FLOWCHARTS MUST BE PRODUCED, LOGIFLOW IS SUPERIOR TO COMPLETELY AUTOMATIC FLOWCHARTERS LIKE AUTOFLOW OR FLOWGEN BY ALLOWING THE INTELLIGENT, FUNCTIONAL GROUPING OF STATEMENTS. IT IS MORE CONVENIENT THAN THE MANUAL APPROACH IN THAT IT AUTOMATICALLY GENERATES THE FLOW DIAGRAM (WITH THE EXCEPTION OF LOGICAL BRANCHING LINES WHICH THE USER MUST FILL IN) ACCORDING TO USER SUPPLIED DIRECTIVE.

MEDL-D IS AN INTERACTIVE HIGH-LEVEL DESIGN TOOL ORIENTED PRIMARILY TOWARD DEFINING AND CAPTURING SOFTWARE STRUCTURES AND COMPONENT PROCEDURE. MEDL-D IS BASED UPON A CONCEPTUAL FRAMEWORK THAT RECOGNIZES THREE BASIC COMPONENT CATEGORIES CALLED FUNCTIONAL, DATA, AND TEMPORAL OBJECTS. CENTERED ABOUT THESE BASIC DESIGN COMPONENTS ARE MEANS FOR CHARACTERIZING THESE ENTITIES AND THE OBJECTS WITH WHICH THEY ARE ASSOCIATED. IN ORDER TO SUPPORT HIERARCHICAL DEFINITIONS OF DATA STRUCTURES, FUNCTIONAL DECOMPOSITION, AND DISCRETE SCHEDULING, EACH OBJECT IS IMPLICITLY RELATED TO ITSELF. THE CHARACTERISTICS OF FUNCTIONAL OBJECTS ARE REFERRED TO AS PROPERTIES, WHEREAS DATA OBJECTS POSSESS ATTRIBUTES, AND TEMPORAL OBJECTS ARE CHARACTERIZED WITH RATES. RESPOND TO A FEW RIGOROUS QUESTIONS ABOUT EACH REQUIREMENT, WHILE STILL ALLOWING A GOOD DEAL OF EXPRESSION IN ENGLISH TEXT. THE LANGUAGE RELIES HEAVILY UPON KEYWORDS TO SIMPLIFY THE CHARACTERIZATIONS OF REQUIREMENTS. EACH OF THE MEDL-R KEYWORDS NOT ONLY PROVIDES AN ASPECT OF CHARACTERIZATION, BUT ALSO IMPLICITLY RELATES REQUIREMENTS WHICH POSSESS COMMON ASPECTS. THIS RESULTS IN A LARGE NUMBER OF IMPLICIT INTERRELATIONSHIPS WHICH PROVIDE THE BASIS FOR SUBSEQUENT ANALYSIS OPERATIONS. UNDER MEDL-R, ALL REQUIREMENT INTERRELATIONSHIPS AND INTERDEPENDENCIES ARE RETAINED, AND OBSOLETE ITEMS, THOUGH ARCHIVED, REMAIN AVAILABLE FOR MANIPULATION AND ANALYSIS BY THE USER. ADDITIONAL MEDL-R FEATURES PROVIDE FOR REQUIREMENT TO DESIGN ITEM TRACEABILITY, SOURCE TO DESTINATION DOCUMENT TRACEABILITY CONSISTENCY AND COMPLETENESS CHECKING, AND DATABASE REPORTING.

ADDITIONALLY, MEDL-X ALLOWS THE TEXT OF STANDARD ("BOILERPLATE") PARAGRAPHS TO BE STORED WITHIN A "BOILERPLATE" FILE FOR SUBSEQUENT INCLUSION INTO A GIVEN DOCUMENT. THE FORMAT AND CONTENT OF A GIVEN SOFTWARE DOCUMENT IS DETERMINED BY THE STANDARDS OF THE CUSTOMER OR THE SOFTWARE DEVELOPER. BY ALLOWING THE "RULES" ASSOCIATED WITH A GIVEN DOCUMENT TO BE STORED WITHIN AN EASILY UPDATED FILE, MEDL-X WILL MAINTAIN ITS ABILITY TO SERVE, IRRESPECTIVE OF THE VOLATILITY WHICH MAY AFFECT A GIVEN SET OF STANDARDS.

RESTRICTIONS (COPYRIGHTS, LICENSES, ETC.): MARKETED COMMERCIALLY
TOOL SUPPORTED: YES, TOOL SUPPORT: SOFTOOL CORPORATION
TOOL SUMMARY: FORTRAN PROGRAMMERS ARE FORCED, BY THE VERY DEFINITION OF THE FORTRAN LANGUAGE, TO ALLOCATE MEMORY SPACE FOR THEIR DATA IN A WASTEFUL MANNER. MOREOVER, MOST FORTRAN IMPLEMENTATIONS ALLOCATE TO A PROGRAM AN AMOUNT OF MEMORY EQUAL TO THE MAXIMUM THAT MAY EVER BE USED BY THE PROGRAM, RATHER THAN THE AMOUNT NEEDED FOR EACH SPECIFIC RUN. THE PURPOSE OF A DYNAMIC MEMORY MANAGER IS TO

AUTOMATICALLY MANAGE MEMORY SO AS TO ALLOCATE TO A PROGRAM ONLY THE AMOUNT OF MEMORY SPACE IT NEEDS FOR ITS DATA FOR A GIVEN EXECUTION, AND NO MORE. LARGE MEMORY SAVINGS AND EMBARRASSING OVERFLOWS ARE MINIMIZED. SOFTOOL OFFERS A FAMILY OF DYNAMIC MEMORY MANAGERS. EACH MEMBER OF THE FAMILY EMPLOYS A DIFFERENT STRATEGY FOR THE MANAGEMENT OF MEMORY SPACE. THE STRATEGIES VARY FROM THE VERY SIMPLE TO THE VERY SOPHISTICATED, INCLUDING ONE THAT IMPLEMENTS A VIRTUAL MEMORY FACILITY AND ALLOWS THE PROGRAMMER TO DEFINE THE VIRTUAL ARCHITECTURE (E.G., PAGE SIZE, VIRTUAL SPACE).

TOOL AVAILABLE: NO, PUBLIC DOMAIN: NO
TOOL SUMMARY: THE META TRANSLATOR IS A GENERAL PURPOSE TOOL, WHICH PROVIDES THE USER WITH AUTOMATED TECHNIQUES FOR THE GENERATION OF LANGUAGE SPECIFIC TRANSLATORS. AN ASSOCIATED META-LANGUAGE (METRAN) PROVIDES A DESCRIPTIVE MEDIUM FOR THE USER TO DESCRIBE THE SYNTAX OF THE SOURCE LANGUAGE IN A MODIFIED BNF FORM AND TO SPECIFY TRANSLATIONAL AS WELL AS CODE GENERATIVE SEMANTICS. TRANSLATIONAL DATA STRUCTURES ARE DEFINABLE AT THE METRAN LEVEL WHICH ALLOW THE USER TO DEFINE AND SUBSEQUENTLY EXPLOIT HASH CODED SYMBOL TABLES (WITH ATTRIBUTES); PUSH DOWN-POP UP (FIFO) STACKS LINKED DYNAMIC LISTS OF DATA STRUCTURES; SYNTACTIC PARSING PRIMITIVES ARE PROVIDED SO THAT THE USER NEED NOT BE CONCERNED WITH AN AD HOC CREATION OF A PARSING ALGORITHM. THE BNF-LIKE DESCRIPTION OF THE LANGUAGE IS MAPPED INTO A FORTRAN PARSING PROGRAM WHICH UTILIZES THESE PARSING PRIMITIVES TO PRODUCE A TOP-DOWN RECURSIVE DESCENT PARSER FOR THE LANGUAGE WITH EMBEDDED LINKAGES TO SYSTEM SEMANTIC PROCEDURES OR THE DESIRED USER DEFINED SEMANTIC PROCEDURES.

TOOL SUMMARY: IN THE CASE OF DATA GENERAL AOS SYSTEMS, THE INTERPLAY BETWEEN THE LIBRARY AND THE BINDER IS OF CRUCIAL IMPORTANCE TO SUCCESSFUL SYSTEMS UTILIZATION. THE BINDER REQUIRES THAT ALL MODULES PRESENTED TO IT FOR BINDING, WHICH ORIGINATE IN AN UNSHARED LIBRARY, BE IN FORWARD ORDERING. THIS REQUIREMENT PLACES A CLERICAL BURDEN ON THE USER WHICH, IN MANY INSTANCES, MAKES BINDING WITH USER CREATED LIBRARIES UNNECESSARILY TEDIOUS AND TIME CONSUMING. THE MODULE ORDERER IS A SOFTWARE PRODUCT THAT ACCEPTS AS INPUT A COLLECTION OF OBJECT MODULES AND AUTOMATICALLY ORGANIZES AND STORES THEM IN A LIBRARY IN FORWARD ORDERING. THE TOOL IS VERY EASY TO USE. THE AUTOMATIC FORWARD ORDERING OF MODULES IS AN IMPORTANT AND BENEFICIAL ENHANCEMENT THAT RELIEVES THE USER OF DG SYSTEMS FROM MUCH CLERICAL AND ERROR-PRONE WORK. TOOL SUMMARY: THE MSL IS A VERY HIGH LEVEL LANGUAGE FOR SPECIFYING A DESCRIPTION OF THE ALGORITHMS BY WHICH A SOFTWARE MODULE IS TO ACCOMPLISH ITS PURPOSE. THE DESCRIPTION IS DIRECTED AT WHAT THE ALGORITHM DOES AND NOT ON HOW IT IS TO BE IMPLEMENTED. THE USE OF MSL IS TO DEVELOP A PRECISE AND COMPLETE STATEMENT OF THE SOFTWARE MODULE DESIGN TO ENABLE A PROGRAMMER TO IMPLEMENT IT IN DIFFERENT COMPUTING ENVIRONMENTS WITH DIFFERENT PROGRAMMING LANGUAGES. MSL INPUTS ARE DIVIDED INTO TWO PARTS, AN ACTION PART WHICH DESCRIBES WHAT ACTION THE SOFTWARE MODULE IS TO PERFORM AND A DATA SECTION WHICH DESCRIBES THE DATA THE SOFTWARE MODULE IS TO USE AND WHAT VIEW OF THAT DATA THE MODULE HAS. THE ACTION DESCRIPTION IS BASED ON THE USE OF STRUCTURED KEYWORDS OF IF, ELSE, ELSEIF, FOREACH, WHILE, LOOP, BREAK, AND NEXT. THE MSL DESIGN ANALYZER PRODUCES A FORMATTED LISTING OF THE MODULE SPECIFICATION.

THE SYSTEM USES AN UPDATABLE, TRANSACTION- LOADED DICTIONARY THAT ALLOWS INTERFACES WITH ANY SYSTEM DEVELOPMENT LIFE CYCLE METHODOLOGY AND STANDARD. IT ALSO CONTAINS A TRANSACTION HISTORY FOR IN-DEPTH ANALYSIS OF EACH PERSON'S PERFORMANCE BY FUNCTION, TASK, AND PROJECT, AND OFFERS TOTAL REPORTING CAPABILITIES. BY USING THIS DATA AND SIMULATING VARIOUS CONDITIONS, THE USER OF PROJECT MANAGEMENT SYSTEMS CAN BUILD A DATA BASE FOR ESTIMATING GUIDELINES AND GOALS.

IMPLEMENTATION LANGUAGE: FORTRAN IV
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: THE N-SQUARED CHART GENERATION PROGRAM IS A GRAPHIC DISPLAY TOOL FOR THE CREATION OF PROJECT AND TASK INTERFACE CHARTS. IT WAS DEVELOPED FOR USE AS A PROPOSAL AND PROJECT MANAGEMENT AID TO ASSIST IN THE PORTRAYAL OF

SYSTEM ACTIVITY INTERACTION IN A CLEAR, EASY TO READ AND EASY TO DESIGN FORMAT. SYSTEM ACTIVITIES ARE REPRESENTED AS TITLED BOXES ARRANGED DIAGONALLY IN A SINGLE LINE ON A CHART. INTERFACES BETWEEN ANY TWO ACTIVITIES ON THIS DIAGONAL ARE REPRESENTED AS NUMBERED CIRCLES PLACED IN GRID FORMAT ADJACENT TO THE DIAGONAL. GROUPS OF BOXES MAY BE IDENTIFIED AROUND WHICH HEAVY EMPHASIS LINES WILL BE DRAWN AND TO WHICH A GROUP TITLE MAY BE GIVEN. CHARTS ARE OUTPUT ON EITHER CALCOMP OR VERSATEC PLOTTING DEVICES. INPUT IS DESIGNED TO BE SIMPLE AND FLEXIBLE TO ALLOW FOR EASY CHART CREATION AND MODIFICATION. EACH BOX IS ASSOCIATED WITH A UNIQUE ALPHANUMERIC CHARACTER IN THE INPUT STREAM, AND INTERFACES BETWEEN BOXES UTILIZE THESE IDENTIFIERS.

NUMBER AIDS IN THE PROCESS BY MAINTAINING THE ALIGNMENT OF PIC AND VALUE CLAUSES WHENEVER POSSIBLE AND BY THE INSERTION OF BLANK LINES BETWEEN MARGIN A ITEMS; E.G., GROUP ITEM FIELDS, SECTIONS AND PARAGRAPHS. OPTIONALLY, THE RECEIVING FIELDS OF MOVE STATEMENTS CAN ALSO BE ALIGNED IN THE PROCEDURE DIVISION.

THIS IS LIKELY TO BE OF VALUE WHEN LARGE PROGRAMS ARE BEING TRANSPORTED AND WILL MINIMIZE THE EFFORT REQUIRED TO ISOLATE NON-CONFORMING CONSTRUCTIONS BETWEEN SYSTEMS. FINALLY, INFORMATION PRODUCED BY THE VERIFIER MAY BE USED AS DATA TO FURTHER SOFTWARE TOOLS. IN ADDITION, THE VERIFIER PRODUCES CROSS-REFERENCE TABLES FOR ALL VARIABLE NAMES, ALL FUNCTIONS, ALL LINE NUMBERS USED AS LABELS AND ALL LINES BY STATEMENT TYPE.

FEATURES: SUBJECT, CODE INPUT, STRUCTURED FORTRAN, USER OUTPUT, GRAPHICS, FLOW CHARTS, STATIC ANALYSIS, SCANNING,
STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: PDS FLOW CREATES FLOWCHARTS FOR PROGRAMS WRITTEN IN A STRUCTURED LANGUAGE. FLOWCHARTS ARE CREATED ON A GRAPHICS DEVICE AND ARE DESIGNED TO REPRESENT THE COMPLETE CONTROL FLOW OF THE PROGRAM FROM A SOURCE CODE FILE. WHILE SPECIAL SYMBOLS HAVE BEEN CREATED TO REPRESENT THE COMPLETE CONTROL FLOW OF THE PROGRAM FROM A SOURCE CODE FILE. WHILE SPECIAL SYMBOLS HAVE BEEN CREATED TO REPRESENT THE STRUCTURED CODE FORM, BOTH STRUCTURED AND UNSTRUCTURED CONSTRUCTS ARE PLOTTED. PDS FLOW POSITIONS CODE TO INDICATE ITS PLACE WITHIN THE CONTROL STRUCTURE OF THE ROUTINE. IN THIS SENSE, CODE IS NOT SIMPLY PLOTTED A LINE AT A TIME. INDENTATION IS USED TO SHOW THE POSITION OF CODE WITHIN DO WHILE, DO UNTIL, DO FOR, IF THEN ELSE, AND IF THEN ORIF ELSE CONSTRUCTS, AND LINES OF CONSECUTIVELY EXECUTABLE CODE WHICH DO NOT EFFECT THE CONTROL STRUCTURE ARE PLOTTED WITHIN A SINGLE BLOCK. SUCH FEATURES ARE USED TO CONTROL PLOT SIZE AND PRESENT A ROUTINE IN A MANNER ACCENTUATING THE CONTROL FLOW WHILE PRESERVING DETAIL.

FEATURES: SUBJECT, DATA INPUT, USER OUTPUT, GRAPHICS, TABLES, STATIC ANALYSIS, MANAGEMENT, PROJECT MANAGEMENT,
STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: THE PROJECT DATA SCHEDULING SYSTEM WAS DEVELOPED TO ASSIST IN THE SCHEDULING AND MANAGEMENT OF PROJECT EVENTS AND DELIVERABLES. USING A DATA BASE CONTAINING DATES AND DATE-MODIFYING INFORMATION FOR PROJECT EVENTS, PDSS PRODUCES A GRAPHIC DISPLAY OF THE PREDICTED SCHEDULE FOR THE PROJECT. EVENTS MAY BE SCHEDULED RELATIVE TO KEY PROJECT DATES, MAY BE ENTERED AS ACTUAL DATES OR MAY BE LEFT BLANK. ALL DATA IS ENTERED ONLY ONCE, AND NEED NOT BE MANIPULATED UNLESS CHANGES OCCUR. PDSS CALCULATES ALL

POSSIBLE EVENT DATES USING WHATEVER INFORMATION IS AVAILABLE, INCLUDING HOLIDAYS IN CALCULATIONS IF DESIRED. ADDITIONALLY, KEY PROJECT DATES MAY BE ENTERED SEPARATELY WITH AN IDENTIFIER (IE: CDR, FCA). USE OF THIS IDENTIFIER TO FIX OTHER PROJECT EVENTS ALLOWS A FLUXUATION OF THE KEY DATES WITH A MINIMAL EFFECT ON THE DATA BASE. OUTPUT FROM PDSS IS PRODUCED ON THE VERSATEC PLOTTER, AND MAY BE SORTED IN A VARIETY OF WAYS. REPORT OUTPUT INCLUDES EVENT TITLES, DELIVERY DATES AND CONTROLLING DATES.

A PROPOSED SYSTEM MAY BE DESIGNED GRAPHICALLY, AND A LIBRARY DESIGNED OR AN EXISTING LIBRARY UTILIZED TO REPRESENT THE SYSTEM'S COMPONENTS. SIMULATIONS OF THE TARGET SYSTEM CAN THEN BE CREATED AND THE SYSTEM REVISED UNTIL VERIFIED THROUGH ALTERATIONS IN THE LIBRARY AND ELT DESIGN.

FEATURES: SUBJECT, CODE INPUT, USER OUTPUT, LISTINGS, DYNAMIC ANALYSIS, RESOURCE UTILIZATION, TIMING,
STAGE OF DEVELOPMENT: IMPLEMENTED

COMPUTER (OTHER HARDWARE): IBM 360/370
TOOL SUMMARY: PPE ENABLES A USER TO IDENTIFY TIME CONSUMING AREAS OF PROGRAM CODE OR OTHER PROGRAM CHARACTERISTICS THAT RESULT IN INEFFICIENT RUNNING TIMES. PPE'S APPROACH IS TO HAVE AN IN-CORE RESIDENT MONITOR, THE EXTRACTOR PROGRAM, WHICH SAMPLES THE ACTIVITY OF THE PROBLEM PROGRAM AND OUTPUTS THIS ACTIVITY DATA TO AN EXTRACTOR DATA SET. THE EXTRACTOR DATA SET CAN BE RECORDED ON TAPE OR DISK. THE USER'S PROGRAM RUNS NORMALLY, AND NO RECOMPILATION IS NECESSARY. THE REPORT PROGRAM, ANALYZER, PRODUCES AN EASY-TO-UNDERSTAND CODE ACTIVITY REPORT, BASED ON THE EXTRACTOR DATA SET THE ANALYZER CAN BE RUN AS THE SECOND PART OF A JOB WITH THE EXTRACTOR OR AT A LATER TIME AS A STAND ALONE JOB.

TOOL SUMMARY: THIS PROGRAM IS DESIGNED TO INTERACTIVELY CREATE, MODIFY, AND PLOT SOFTWARE DEVELOPMENT PROJECT STRUCTURES USING A 4014 OR 4015 TEKTRONIX STORAGE TERMINAL AS A FRONT-END TO PERT OR CPM. A 12" BY 9" WINDOW CAN BE VIEWED AS A SECTION OF A 36" BY 30" PLOTTING SURFACE. THE PLOTTING PROGRAM CAN CREATE A LARGE SIZE CALCOMP PLOT IN COLOR OR BLACK AND WHITE, TOGETHER WITH ANY NUMBER OF SMALL PLOTS. THE OPERATION OF THE PROGRAM IS CONDUCTED BY TYPING A UNIQUE KEYSTROKE FOR EACH OPERATION. THE PROGRAM CAN GENERATE FIGURES, LINES AND TEXT. ONLY ONE FLOW CHART AT A TIME CAN BE CREATED, SO THAT A DATA SET MUST BE DEFINED AND SAVED FOR EACH DRAWING. THE DATA SET WILL SERVE AS THE INPUT TO A PROGRAM THAT WILL CREATE A CALCOMP 30" WIDE PLOT. THE END PRODUCT IS THEN USED AS AN INPUT INTO STANDARD PERT OR CPM SOFTWARE.

PROGTIME USES A CONTROL CLOCK TO SNAP A PICTURE OF ANY PROGRAM RUNNING UNDER IT AND RECORDS THIS INFORMATION IN A SPECIALLY FORMATTED DATA SET.

IT IS DESIGNED TO HANDLE OVERLAY STRUCTURES AND DYNAMIC PROGRAMMING LINKAGES. THE NEW VERSION OF PROGTIME HAS PROVISIONS FOR ELIMINATING INTERFERENCE FROM OTHER JOBS IN THE SYSTEM. IT WILL ALSO PROPERLY TIME PROGRAMS USING THE LOAD MACRO. THE SPECIALLY FORMATTED DATA SETS SERVE AS INPUT FOR PROGPLOT, WHICH PRINTS SUMMARIES OF THE OBSERVATIONS. THE TWO PROGRAMS WORK IN CONJUNCTION TO PRODUCE GRAPHS THAT SHOW WHERE THE PROGRAM HAS SPENT ITS TIME (BOTH RUN AND WAIT-TIME) AND HOW PERFORMANCE CAN BE IMPROVED.

TOOL SUMMARY: THE PRONET (PROJECT NETWORK) SYSTEM IS DESIGNED TO MONITOR BOTH THE PLANNING AND THE EXECUTION OF A GIVEN PROJECT. THE DEFINITION OF THIS PROJECT MAY FOLLOW A FREE FORMAT, OR ELSE, IF THE RELATIONSHIPS BETWEEN PROJECT ACTIVITIES ARE THEMSELVES DEFINABLE, THE PROJECT MAY BE DEFINED IN TERMS OF NETWORK PLANNING. IN EITHER CASE, PRONET GENERATES AND GRAPHICALLY DISPLAYS A PERT CHART ON WHICH IS TRACED THE PROGRESS OF THE PLAN. THE SYSTEM STORES INFORMATION CONCERNING THE FACTORS INVOLVED IN ARRIVING AT THE TARGET DATA AND IN ESTIMATING THE COST OF THE PROJECT IN QUESTION. SHOULD ANY OF THESE FACTORS CHANGE, THE SYSTEM CALCULATES NECESSARY REVISIONS. THIS FACILITATES MODIFICATIONS OF THE PROJECT AND ASSISTS THE PROJECT TEAM IN DEALING WITH THE UNEXPECTED. TOOL SUMMARY: PROBLEM STATEMENT LANGUAGE/PROBLEM STATEMENT ANALYZER (PSL/PSA) IS A LANGUAGE AND ASSOCIATED PROCESSOR THAT SUPPORTS AN ANALYST IN THE PREPARATION OF A REQUIREMENTS DOCUMENT OR A TOP LEVEL DESIGN OF AN INFORMATION PROCESSING SYSTEM. PSL/PSA HAS BEEN DEVELOPED AT THE ISDOS PROJECT AT THE UNIVERSITY OF MICHIGAN UNDER THE DIRECTION OF PROFESSOR D. TEICHROEW. IT IS CURRENTLY AVAILABLE ON A NUMBER OF LARGE SCALE COMPUTERS. TO USE PSL/PSA, THE ANALYST FIRST DESCRIBES A PORTION OF THE TARGET SYSTEM USING THE FORMAL STATEMENTS OF PSL. THESE STATEMENTS ARE THEN ANALYZED BY PSA FOR SYNTACTICAL CORRECTNESS AND ARE ADDED TO A DATA BASE THAT CONTAINS ALL INFORMATION ABOUT THE TARGET SYSTEM. AT THE COMMAND OF THE ANALYST, VARIOUS REPORTS ARE GENERATED BY PSA THAT DESCRIBE DIFFERENT ASPECTS OF THE TARGET SYSTEM. THESE THREE STEPS ARE REPEATED UNTIL ALL ASPECTS OF THE TARGET SYSTEM ARE DESCRIBED IN PSL AND HAVE BEEN ENTERED INTO THE DATA BASE.

TOOL AVAILABLE: YES, PUBLIC DOMAIN: NO
RESTRICTIONS (COPYRIGHTS, LICENSES, ETC.): FOR LEASE, FOR SALE
TOOL SUMMARY: REFLECT II MONITORS THE EXECUTION OF USER PROGRAMS AND MEASURES PROGRAM PERFORMANCE. IT CONSISTS OF TWO MAJOR COMPONENTS: A MONITOR PROGRAM AND A REPORT GENERATOR. THE MONITOR PROGRAM OVERSEES THE EXECUTION OF A USER PROGRAM. IT ISSUES TIMER INTERRUPT REQUESTS AND, AT EACH INTERRUPT, MAKES AN ENTRY IN A TRACE FILE THAT RECORDS THE STATE OF THE USER PROGRAM. THE REPORT GENERATOR READS THE TRACE FILE AND PRODUCES REPORTS THAT SUMMARIZE THE SAMPLING DATA COLLECTED BY THE MONITOR. THE MOST SIGNIFICANT OF THESE REPORTS IS A HISTOGRAM, WHICH CLEARLY DEPICTS THE DISTRIBUTION OF CPU TIME UTILIZATION WITHIN A

PROGRAM. REFLECT II IS DESIGNED TO PROVIDE THE INFORMATION NEEDED TO QUICKLY LOCATE AND ELIMINATE COSTLY BOTTLENECKS IN COMPUTER PROGRAMS WRITTEN IN ANY LANGUAGE. WITHOUT REQUIRING RELINKING OR MODIFICATION, THE SYSTEM GENERATES A RESOURCE UTILIZATION PROFILE OF THE PROGRAM. THE PROFILE CLEARLY IDENTIFIES THOSE PORTIONS OF THE PROGRAM THAT SHOULD BE OPTIMIZED IN ORDER TO REDUCE EXECUTION COSTS SUBSTANTIALLY.

REFORM INSURES THAT: 1) ALL CODE IS STRUCTURALLY CONSISTENT. 2) ALL VARIABLE SPECIFICATION STATEMENTS ARE COMBINED AND ALPHABETIZED. 3) THE IMPLIED HIERARCHY OF ARITHMETIC AND LOGICAL OPERATORS IS EXPLICITLY SHOWN BY WAY OF SELECTIVE SPACING. (4) STATEMENT LABELS ARE IN ASCENDING ORDER (5) LOOPS ARE INDENTED TO SHOW THE NESTING LEVELS. (6) COMMENTS ARE FORMATTED TO IMPROVE READABILITY. (7) BLANK COMMENTS ARE ADDED TO EMPHASIZE BLOCK STRUCTURE.

CLASSIFICATION: SOURCE PROGRAM ANALYSIS AND TESTING
FEATURES: SUBJECT, DATA INPUT, USER OUTPUT, TABLES, STATIC ANALYSIS, STATISTICAL ANALYSIS, RELIABILITY ANALYSIS,
STAGE OF DEVELOPMENT: IMPLEMENTED
TOOL PORTABLE: YES
TOOL AVAILABLE: YES
TOOL SUMMARY: MEAN-TIME-TO-FAILURE (MTTF) IS A USEFUL METRIC FOR CHARACTERIZING SYSTEM OPERATION AND FOR CONTROLLING CHANGE DURING THE MAINTENANCE PHASE. AN AUTOMATED MODEL HAS BEEN DEVELOPED USING A NUMBER OF FUNDAMENTAL EQUATION WHICH RELATE FAILURES EXPERIENCE, PRESENT MTTF, MTTF OBJECTIVE, AND TIME REQUIRED TO MEET THE MTTF OBJECTIVE. THE MODEL REQUIRES THE INPUT OF THE EXECUTION TIME INTERVALS BETWEEN EXPERIENCED FAILURES, THE MTTF OBJECTIVE AND A PARAMETER DESCRIBING THE ENVIRONMENT. THE MODEL CAN PROVIDE A QUANTITATIVELY-BASED MECHANISM FOR CHANGE CONTROL IN THE OPERATIONS AND MAINTENANCE PHASE. GENERALLY, THE MTTF WILL DROP AFTER THE INSTALLATION OF SOFTWARE CHANGES AND IMPROVE DURING THE FOLLOWING PERIOD OF ERROR REMOVAL. IF THE MTTF CAN BE TRACKED AND IF MTTF SERVICE OBJECTIVES CAN SET FOR THE SYSTEM, THE MODEL CAN BE USED AS A TOOL FOR THE MANAGEMENT OF SYSTEM MODIFICATIONS. WHEN THE MTTF FALLS BELOW THE SERVICE OBJECTIVE, THE SYSTEM CAN BE FROZEN UNTIL IMPROVEMENT OCCURS.

FOR EXAMPLE, A REAL TIME SOFTWARE SYSTEM WHICH MUST PROCESS QUEUED INPUT MESSAGE TRAFFIC IS IN MANY RESPECTS A DISCRETE-EVENT SYSTEM. A SIMULATION CAN BE USED TO GAIN INSIGHT INTO A NUMBER OF CRITICAL QUESTIONS ABOUT A PROPOSED OR ACTUAL SYSTEM.

TOOL SUMMARY: SCOBOL IS A PROGRAMMING LANGUAGE FOR STRUCTURED PROGRAMMING. IT IS A SUPERSET OF COBOL. IT GIVES YOU EVERYTHING THAT COBOL DOES PLUS THE CONTROL STRUCTURES YOU NEED FOR STRUCTURED CODING. THE CENTRAL PART OF THE SCOBOL SYSTEM IS A PRECOMPILER PROGRAM. IT READS A PROGRAM THAT YOU HAVE WRITTEN IN THE SCOBOL LANGUAGE AND TRANSLATES IT INTO A COBOL PROGRAM READY TO BE COMPILED BY YOUR COMPILER. A PROGRAMMER'S MOST IMPORTANT TOOL IS HIS PROGRAMMING LANGUAGE. IT AFFECTS NOT ONLY THE WAY HE CODES BUT THE WAY HE THINKS ABOUT A PROBLEM. SCOBOL MAKES IT POSSIBLE FOR PROGRAMMERS TO WRITE CORRECT PROGRAMS USING THE PROPER CONTROL STRUCTURES OF STRUCTURED PROGRAMMING WITHOUT THE LABORIOUS AND ERROR-PRONE HAND TRANSLATION REQUIRED TO DO THIS IN COBOL.

TOOL SUMMARY: SDL IS A DESIGN LANGUAGE FOR DEFINING THE DESIGN STRUCTURE OF A SOFTWARE SYSTEM. SDL WITH ASSOCIATED SOFTWARE DESIGN ANALYZER (SDA) PROVIDES AUTOMATED SUPPORT TO AID IN THE LOGIC AND ACCURACY DESIGN PRIOR TO IMPLEMENTATION OR PROGRAMMING CONSIDERATIONS. FIRST THE OBJECT IS DEFINED, WITH UNIQUE NAMES FROM ALLOWABLE TYPES SUCH AS SUBSYSTEMS, MODULE, OPERATORS, COLLECTION OF DATA, ETC. NEXT THE RELATIONSHIP AMONG THE OBJECTS IS DEFINED FROM ALLOWABLE TYPES SUCH AS REFERENCES, COMPOSED OF, HAS SUBPARTS, ETC. THE USER ALSO ATTACHES INFORMATION TO EACH OBJECT IN THE FORM OF COMMENT ENTRIES OR VALUES OF SPECIFIC PROPERTIES. THE SDA ADDS (UPDATES) NEW OBJECTS TO THE DATA BASE AND ADDS RELATIONS, ATTRIBUTES, PROPERTIES AND TEXT AS SPECIFIED. FEATURES: SUBJECT, CODE INPUT, USER OUTPUT, TABLES, LISTINGS, STATIC ANALYSIS, MANAGEMENT, CONFIGURATION MANAGEMENT, VERSION CONTROL,
STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): IBM 360/370
TOOL SUMMARY: ONE OF THE PROBLEMS ENCOUNTERED DURING THE DEVELOPMENT AND MAINTENANCE OF A LARGE SCALE SOFTWARE SYSTEM IS ACCURATELY DETERMINING THE CURRENT SOFTWARE CONFIGURATION. THIS INVOLVES THE IDENTIFICATION OF EACH ACCOUNTABLE ELEMENT IN THE SYSTEM (SUBROUTINE, MODULE, PROGRAM, DATA BASE ENTRY, ETC.) AND ITS CURRENT MODIFICATION LEVEL. ALTHOUGH FREQUENTLY DONE BY HAND, THIS IDENTIFICATION PROCESS CAN EASILY TAKE ON MAMMOTH PROPORTIONS AS THE NUMBER OF IDENTIFIABLE ENTITIES GROWS INTO THE HUNDREDS AND THE THOUSANDS. THE SOURCE DIRECTORY PROGRAM WAS WRITTEN TO AUTOMATE THE IDENTIFICATION OF EACH SUBROUTINE IN THE CUR- RENT SYSTEM CONFIGURATION. THE PRINTED OUTPUT PROVIDES THE PROJECT WITH A CONCISE ACCURATE RECORD OF EACH ROUTINE NAME, CURRENT VERSION NUMBER (MODIFICATION LEVEL), DOCUMENT NUMBER (CORRESPONDING TO THE SOURCE LISTING) AND NUMBER OF CARDS IN THE ROUTINE. EVERY PROJECT HAS TO REPORT THIS DATA IN SOME FORM. THIS PROGRAM

PROVIDES AN AUTOMATED WAY TO RETRIEVE AND MAINTAIN THIS INFORMATION.

STAGE OF DEVELOPMENT: IMPLEMENTED
TOOL AVAILABLE: YES, PUBLIC DOMAIN: NO

TOOL SUPPORTED: YES, TOOL SUPPORT: PHOENIX SYSTEMS, INC.
TOOL SUMMARY: SYSTEM-80 UTILIZES A DATA DICTIONARY (SYSTEM-80'S ENCYCLOPEDIA) COUPLED WITH PROGRAM GENERATORS TO PRODUCE PROGRAMS WHICH CONFORM TO THE NEEDS OF THE USER. THESE PROGRAMS ARE ANSI STANDARD COBOL SOURCE CODE WHICH THE USER MAY MODIFY, ALTHOUGH IT IS NOT NORMALLY NECESSARY TO DO SO. DURING THE FIRST PHASE OF THE PROCESS, THE USER DEVELOPS THE SCHEME FOR THE VARIOUS FILES. ADDITIONALLY, REQUIRED INPUT VALIDATION CRITERIA AND/OR OUTPUT EDITS SHOULD BE DETERMINED. THE USER THEN INTERACTS WITH SYSTEM-80 DURING THE DEFINITION PHASE OF THE OPERATION. AT THIS TIME SYSTEM-80 ACQUIRES THE MANY VARIABLE PARAMETERS SUCH AS FILE-ID, PRINT EDITS, DATA TYPE, ETC. SCREEN FORMATS, IF NEEDED, ARE ALSO SPECIFIED DURING THIS PHASE. DURING THE GENERATION PHASE, THE USER SPECIFIES THE TYPE OF PROGRAM REQUIRED. INTERACTING WITH THE USER, SYSTEM-80 THEN PRODUCES THE SPECIFIED PROGRAM, A LINE AT A TIME. THIS FEATURE MINIMIZES THE RISK OF NEEDLESS CODE BEING INSERTED INTO THE PROGRAM.

TOOL SUMMARY: STRUCTURED RETROFIT IS A SOFTWARE TOOLS BASED METHODOLOGY. IT INTRODUCES TODAY'S STRUCTURED PROGRAMMING METHODOLOGIES INTO EXISTING SYSTEMS IN ORDER TO MEET FUTURE DEMANDS FOR CHANGE. ITS FOCUS IS ON APPLICATION SYSTEMS MAINTENANCE. TODAY MAINTENANCE CONSUMES 70% OF THE TYPICAL MIS BUDGET. THE STRUCTURED PROGRAMMING METHODOLOGIES CUT MAINTENANCE COSTS BY A RATIO OF 3 TO 1. STRUCTURED RETROFIT ALLOWS AN ORGANIZATION TO INTRODUCE THE STRUCTURED METHODOLOGIES INTO SYSTEMS DEVELOPED WITHOUT THEM IN A STRAIGHTFORWARD, FAST, AND RELIABLE MANNER. RETROFIT TAKES WORKING COBOL PROGRAMS-- WRITTEN AND MAINTAINED BY A VARIETY OF PROGRAMMERS IN A VARIETY OF STYLES--AND RESTRUCTURES AND REFORMATS THEM MECHANICALLY. IT GIVES THE CODE A CONSISTENT STRUCTURE AND FORMAT, MAKING IT MORE READABLE, UNDERSTANDABLE, AND MAINTAINABLE. IT IS THE

APPLICATION OF THE STRUCTURED PROGRAMMING CONSTRUCTS TO EXISTING "SPAGHETTI" CODE.

TOOL PORTABLE: YES
TOOL AVAILABLE: NO, PUBLIC DOMAIN: YES
TOOL SUMMARY: TOOLPACK IS AN APPROACH BEING TAKEN TO CONFIGURE A SET OF TOOL CAPABILITIES WHOSE GOAL IS THE SUPPORT OF MATHEMATICAL SOFTWARE DEVELOPMENT MAINTENANCE

AND TRANSPORTATION. THE TOOLPACK TOOL SET IS BEING DESIGNED TO SUPPORT SUCH ACTIVITIES AS EDITING, TESTING, ANALYSIS, FORMATTING, TRANSFORMATION, DOCUMENTATION, AND PORTING OF CODE. TOOLS FOR REALIZING MOST OF THESE FUNCTIONAL CAPABILITIES ALREADY EXIST, YET TOOLPACK AIMS TO DO FAR MORE THAN SIMPLY BRING THEM TOGETHER AS A COLLECTION OF SIDE-BY-SIDE INDIVIDUAL TOOLS. TOOLPACK SEEKS TO MERGE THESE CAPABILITIES INTO A SYSTEM WHICH IS SMOOTHLY INTEGRATED BOTH INTERNALLY AND FROM A USER'S EXTERNAL POINT OF VIEW. THE INTERNAL INTEGRATION APPROACH INVOLVES THE DECOMPOSITION OF ALL TOOLS INTO A MORE OR LESS STANDARD SET OF MODULAR "TOOL FRAGMENTS". THE EXTERNAL INTEGRATION APPROACH INVOLVES THE CREATION OF A COMMAND LANGUAGE AND A SET OF CONCEPTUAL ENTITIES WHICH IS CLOSE TO THE CONCEPTUAL SET USED BY MATHEMATICAL SOFTWARE WRITERS.

IT ALLOWS THE PROGRAMMER TO WRITE EFFICIENT, STRUCTURED CODE FREE OF GO TO STATEMENTS. THE USE OF STATEMENT NUMBERS IS ELIMINATED AND THE NESTING OF CONTROL STRUCTURES ENFORCED. TRANSFOR AND FORTRAN

STATEMENTS ARE COMPLETELY COMPATIBLE AND CAN BE FREELY INTERMIXED. THE RESULTANT SOFTWARE IS MORE READABLE BECAUSE OF THE AUTOMATIC INDENTATION OF CONTROL STATEMENTS BY WHICH NESTING IS DEPICTED. SNEAK PATHS AND UNANTICIPATED EXECUTION SEQUENCES ARE RARE, SINCE THE PROGRAMMER IS ABLE TO SEE PRIMARILY STRAIGHTFORWARD LOGIC.

ACRONYM: UCA, TITLE: UNITS CONSISTENCY ANALYSIS
CLASSIFICATION: SOURCE PROGRAM ANALYSIS AND TESTING
FEATURES: SUBJECT, CODE INPUT, FORTRAN, USER OUTPUT, DIAGNOSTICS, LISTINGS, STATIC ANALYSIS, UNITS ANALYSIS, SCANNING,

STAGE OF DEVELOPMENT: IMPLEMENTED
IMPLEMENTATION LANGUAGE: FORTRAN
COMPUTER (OTHER HARDWARE): CDC 6X00/7X00
TOOL SUMMARY: THE UNITS CONSISTENCY ANALYSIS PROGRAM IS A QUALITY ASSURANCE TOOL WHICH SCANS A FORTRAN PROGRAM AND ITS ASSOCIATED DATA BASE (FOR ACCESS TO VARIABLE UNITS DEFINITION) TO DETERMINE IF THE UNITS OF THE VARIABLES USED IN THE PROGRAM ARE CONSISTENT WITHIN THE SOURCE STATEMENTS. THE PROGRAM SYMBOLICALLY INTERPRETS THE EQUATIONS REFERENCING THE VARIABLES TO ASSURE THAT THE UNITS ARE CORRECT AND CONSISTENT WITHIN THE EQUATIONS. FOR EXAMPLE, IN THE C = A * B IF VARIABLES A AND B WERE DEFINED TO BE IN UNITS OF FEET, VARIABLE C OUGHT TO BE DEFINED IN UNITS OF SQUARE FEET, OR A DIAGNOSTIC WOULD BE PRINTED. OPTIONAL INPUTS ALLOW THE USER TO OVERRIDE THE THE UNITS SPECIFICATION IN THE DATA BASE, AND ADD UNITS DEFINITIONS FOR VARIABLES NOT FOUND IN THE DATA BASE.

TOOL SUMMARY: THE UNIVERSAL FLOWCHARTER PRODUCES STRUCTURED DESIGN DIAGRAMS AND CONCORDANCES FOR SOURCE PROGRAMS. BY UNIVERSAL, WE MEAN PROGRAMMING LANGUAGE. A STRUCTURED DESIGN DIAGRAM AS A FLOW CHART IN A CONCISE, TREE-LIKE FORMAT APPROPRIATE FOR REPRESENTING FLOW OF CONTROL IN A STRUCTURED PROGRAM. THE DIAGRAMS ARE NEATLY INDENTED, AND HAVE NO LINES THAT CROSS OTHERS, OR LOOP BACK UP THE PAGE AS TRADITIONAL FLOW CHARTS DO. IN ORDER TO USE THE FLOWCHARTS ON PROGRAMS WITHIN A PARTICULAR LANGUAGE, ONE MUST FIRST SPECIFY THE GRAMMAR OF THAT LANGUAGE. PREPARING THE GRAMMAR IS NON-TRIVIAL, BUT IT IS DONE ONLY ONCE; FROM THEN ON, ANY PROGRAM WRITTEN IN THAT LANGUAGE CAN BE FLOWCHARTED, WITHOUT ANY ADDITIONS TO THE SOURCE PROGRAM. PRODUCING A FLOWCHART IS AS EASY AS ADDING A CARD TO A COMPILATION JOB. THE UNIVERSAL FLOWCHARTER WAS DEVELOPED AS PART OF THE MUST OF SUPPORT TOOLS, AND IS INSTALLED AT LANGLEY RESEARCH CENTER.

As a part of the program to provide information to Federal agencies on the availability, capabilities, limitations, and applications of software development tools, a database of information about existing tools was collected over a 3-year period. The purpose of this report is to present an analysis of the information contained in the database. Various categorizations of the tools are presented in classes listed by their characteristic features. The lists incorporate percentage summaries that are based on the total number of tools for which information is stored in the database. Trends found in the lists are analyzed and discussed. Abstracts of each tool are presented in an appendix.

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent Bureau publications in both NBS and non-NBS media. Issued six times a year. Annual subscription: domestic $18; foreign $22.50. Single copy, $4.25 domestic; $5.35 foreign.

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NBS under the authority of the National Standard Data Act (Public Law 90-396).

NOTE: The principal publication outlet for the foregoing data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order the **above** *NBS publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.*

Order the **following** *NBS publications—FIPS and NBSIR's—from the National Technical Information Services, Springfield, VA 22161.*

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NBS Interagency Reports (NBSIR)—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services, Springfield, VA 22161, in paper copy or microfiche form.
