

CRUSTOSE LICHENS REPORTED FROM OHIO
-An Ongoing Compilation-
Don G. Flenniken April 2009

A list of microlichens (crustose, squamulose, and dwarf fruticose species) is presented based upon the previous investigations of John Wolfe (1940), Conan J. Taylor (1967), various published literature, and recent collections made by Clifford Wetmore, the Tuckerman Workshop, the OMLA Forays, David Smith, Don G. Flenniken, and miscellaneous other sources and collections. Herbarium specimens have not been examined at this time, not have any of the presented identifications been verified. Names are followed by the county (counties) from which the record is based.
