Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

Table 4A-1 Original Habitat Variables and Corresponding Habitat Observations/Measurements Done by ESS at the Sabajo Concession in June-July 2017

Variable	N ^(a)	Recorded Quality / Quantity	Details / Remarks ^(b)
Landform and meso-topography			
level plateau cover	4	proportion of plot that is part of level terrain of plateau	estimate to nearest 5% based on walkthrough
gully cover	4	proportion of plot that represents a (minor) gully	estimate to nearest 5% based on walkthrough
slope cover	4	proportion of plot that is part of a (major) slope	estimate to nearest 5% based on walkthrough
ridge cover	4	proportion of plot that is part of a (minor) ridge	estimate to nearest 5% based on walkthrough
level valley cover	4	proportion of plot that is part of level terrain of valley	estimate to nearest 5% based on walkthrough
duricrust cover	4	proportion of plot covered by exposed duricrust (continuous rock surface)	estimate to nearest 5% based on walkthrough
boulder cover	4	proportion of plot covered by exposed boulders (at least 60 cm diam.)	estimate to nearest 5% based on walkthrough
stone cover	4	proportion of plot covered by exposed stones (6-60 cm diam.)	estimate to nearest 5% based on walkthrough
escarpment distance	1	<i>distance from plot to the nearest (duricrust) escarpment</i>	<i>estimate of distance (m) based on reconnaissance</i>
escarpment drop	1	<i>vertical drop of nearest (duricrust) escarpment</i>	<i>estimate of drop (m) based on reconnaissance</i>
plateau margin distance	1	<i>distance from plot to the margin of the plateau</i>	<i>estimate in m, based on map and field reconnaissance</i>
Drainage / hydrology			
stagnant water cover	4	proportion of plot that is covered with stagnant water (e.g., pool)	estimate to nearest 5% based on walkthrough
running water cover	4	proportion of plot that is covered with running water (e.g., creek)	estimate to nearest 5% based on walkthrough
surface water surface	4	surface area within plot of any stagnant or running water in the plot	estimate of length x width (m) based on walkthrough
surface water depth	4	depth of any stagnant or running water in the plot	estimate to nearest 0.1 m, based on walkthrough
ground water depth	5	depth of ground water vis-à-vis mineral soil surface	estimate of depth (cm) at 10 cm deep mineral soil pit at node
seasonal creek distance	1	<i>distance from plot to the nearest seasonal creek</i>	<i>estimate of distance (m) based on reconnaissance</i>
seasonal creek width	1	<i>width of nearest seasonal creek bed</i>	<i>estimate of width (m) based on reconnaissance</i>
perennial creek distance	1	<i>distance from plot to the nearest perennial creek</i>	<i>estimate of distance (m) based on reconnaissance</i>
perennial creek width	1	<i>width of nearest perennial creek bed</i>	<i>estimate of width (m) based on reconnaissance</i>
seasonal pool distance	1	<i>distance from plot to the nearest seasonal pool</i>	<i>estimate of distance (m) based on reconnaissance</i>
seasonal pool surface	1	<i>surface of nearest seasonal pool</i>	<i>estimate of length x width (m) based on reconnaissance</i>
seasonal pool depth	1	<i>depth of nearest seasonal pool</i>	<i>estimate of depth to nearest 0.1 m, based on reconnaissance</i>
perennial pool distance	1	<i>distance from plot to the nearest perennial pool</i>	<i>estimate of distance (m) based on reconnaissance</i>
perennial pool surface	1	<i>surface of nearest perennial pool</i>	<i>estimate of length x width (m) based on reconnaissance</i>
perennial pool depth	1	<i>depth of nearest perennial pool</i>	<i>estimate of depth to nearest 0.1 m, based on reconnaissance</i>
Climate			

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

Table 4A-1 Original Habitat Variables and Corresponding Habitat Observations/Measurements Done by ESS at the Sabajo Concession in June-July 2017

Variable	N ^(a)	Recorded Quality / Quantity	Details / Remarks ^(b)
near-ground floor moss cover	5	proportion of near-ground rock / wood / leaf surface covered by epiphytic / epiphytic mosses	estimate of % cover to nearest 5%, within 2.5 m from node, till 30 cm above soil surface,
near-ground non-moss cover	5	proportion of near-ground rock / wood / leaf surface covered by epiphytic / epiphytic plants other than mosses	estimate of % cover to nearest 5%, within 2.5 m from node, till 30 cm above soil surface,
understory moss cover	5	proportion of understory rock / wood leaf surface covered by epiphytic / epiphytic mosses	estimate of % cover to nearest 5%, within 2.5 m from node, 30-300 cm above soil surface
understory non-moss cover	5	proportion of understory rock / wood / leaf surface covered by epiphytic / epiphytic plants other than mosses	estimate of % cover to nearest 5%, within 2.5 m from node, 30-300 cm above soil surface
Soil			
debris / litter cover	4	proportion of plot covered by debris / litter	estimate to nearest 5% based on walkthrough
debris / litter layer thickness	5	thickness of litter layer (mainly non-fragmented dead leaves and twigs)	estimate of depth (cm) of litter layer above mineral soil pit at node
humus layer thickness	5	thickness of humus layer (mainly fragmented dead leaves and twigs)	estimate of depth (cm) of humus layer above mineral soil pit at node
mineral soil penetration	5	penetrability of mineral soil	estimate of penetration depth (cm) of machete blade pushed in soil at node
mineral soil color	5	overall color of the smaller particles (clay / loam / sand) in the upper mineral soil layer	observation of color at 10 cm deep mineral soil pit near node
largest soil particles	5	largest particles in the upper mineral soil (clay / loam / sand / gravel / stone)	observation at 10 cm deep mineral soil pit near node
smallest soil particles	5	smallest particles in the upper mineral soil (clay / loam / sand / gravel / stone)	observation at 10 cm deep mineral soil pit near node
soil type	5	major components of the upper mineral soil (clay / loam / sand / gravel / stone)	observation at 10 cm deep mineral soil pit near node
Vegetation structure			
minimum canopy height	4	height of lower sections of closed forest canopy	estimate to nearest 5 m based on walkthrough
maximum canopy height	4	height of higher sections of closed forest canopy	estimate to nearest 5 m based on walkthrough
erect dead tree stem density	4	number of large dead tree stems standing in the forest	count of dead stems of at least 10 cm diam., standing taller than 3 m
fallen dead tree stems density	4	number of large fallen tree stems or branches in the forest	count of dead stems of at least 10 cm diam., fallen below 3 m / on forest floor
small woody stem density	5	number of small live stems in the understory	count of number of live stems within 2.5 m from node
subcanopy cover	5	proportion of understory that is shielded from incident light by subcanopy vegetation	estimate to nearest 5% based on upward view at node, using a tube to restrict scope
canopy cover	5	proportion of subcanopy that is shielded from incident light by canopy vegetation	estimate to nearest 5% based on upward view at node, using a tube to restrict scope
emergent cover	5	proportion of canopy that is shielded from incident light by emergent tree crowns	estimate to nearest 5% based on upward view at node, using a tube to restrict scope
emergent tree distance	1	distance from plot to the nearest emergent tree	estimate of distance (m) based on reconnaissance
emergent tree height	1	height of the nearest emergent tree	estimate of height (m) based on reconnaissance
large tree density	1	canopy tree density in plot	number of trees / ha with stem diameter of at least 10 cm, based on separate vegetation survey of plot

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

Table 4A-1 Original Habitat Variables and Corresponding Habitat Observations/Measurements Done by ESS at the Sabajo Concession in June-July 2017

Variable	N ^(a)	Recorded Quality / Quantity	Details / Remarks ^(b)
large liana density	1	canopy liana density in plot	number of lianas / ha with stem diameter of at least 1 cm, based on separate vegetation survey of plot
Disturbance			
recent gap distance	1	distance from plot to the nearest recent natural gap (with regrowth < 1 m tall)	estimate of distance (m) based on reconnaissance
recent gap surface	1	surface of nearest recent natural gap (with regrowth < 1 m tall)	estimate of length x width (m) based on reconnaissance
older gap distance	1	distance from plot to the nearest older natural gap (with regrowth > 1 m tall)	estimate of distance (m) based on reconnaissance
older gap surface	1	surface of nearest recent gap (with regrowth > 1 m tall)	estimate of length x width (m) based on reconnaissance
track distance	1	distance from plot to nearest vehicle track (ATV, skidder, excavator, truck)	estimate of distance (m) based on reconnaissance and access to plot
type of track	1	observation of type of vehicle track (ATV trail, skidder or excavator trail, secondary road, primary road)	estimate of distance (m) based on reconnaissance and access to plot
main road distance	1	distance from plot to the main access road	estimate of distance (m) based on satellite image & field reconnaissance
clearance distance	1	distance from plot to the nearest major (> 1 ha) man-made clearing (other than tracks / roads)	estimate of size (m ²) based on satellite image & field reconnaissance
clearance size	1	size of nearest major (> 1 ha) man-made clearing (other than tracks / roads)	estimate of distance (m) based on map and field reconnaissance

a) N = number of replicate observations / measurements per plot; N = 1: one observation only in relation to the plot or its surroundings, mostly based on reconnaissance (see next footnote); N = 4: one observation in each of the four plot segments; N = 5: one observation at each of the five plot nodes.

b) Note that: i) reconnaissance refers to the exploration of the entire plot and an area of some 100 m around it, ii) walkthrough refers to observations / measurements within the plot segments, iii) within 2.5 m from each node, a 10 cm deep soil pit was dug, and various observations / measurements were done, and iv) large tree and liana density data was generated as part of a separate study by ESS.

ATV = all-terrain vehicle; m = meter; cm = centimeter; % = percent; ha = hectare; > = greater than; < = less than.

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

Table 4A-2 Habitat Observation/Measurements by ESS at Sabajo, June-July 2017

A. Single observations / measurements per plot (each measurement made once).

Plot	Seasonal creek distance	Seasonal creek width	Serennial creek distance	Perennial creek width	Seasonal pool distance	Seasonal pool surface	Seasonal pool depth

Notes:

a) Habitus = growth form:

t = mature tree

l = mature liana

y = immature tree or liana

h = mature herbaceous

u = other mature understory plant with woody stem

e = epiphyte in understory

s = mature shrub in a non-forest setting

x = recently felled tree

b) Abund. = % of segment covered by plant (measure of abundance)

1 = no more than 5%

2 = ca. 10%

3 = ca. 25%

4 = more

= record number; Plot = plot code; % = percent; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Notes:

lianases with stems of DBH of at least 2 cm (Figures are no. of stems in plots of 0.1 ha or 0.025 ha, except bottom row).

* Identifies 2 traditionally distinguished groups currently both considered Fabaceae

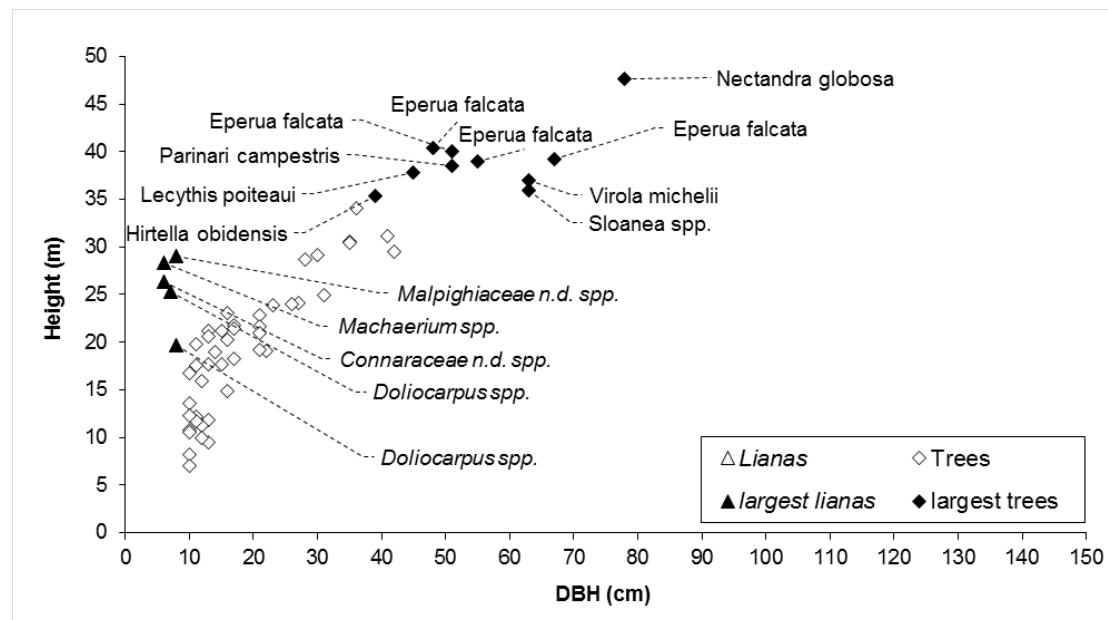

ha = hectare; cm = centimeter; ESS = ESS Environment; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

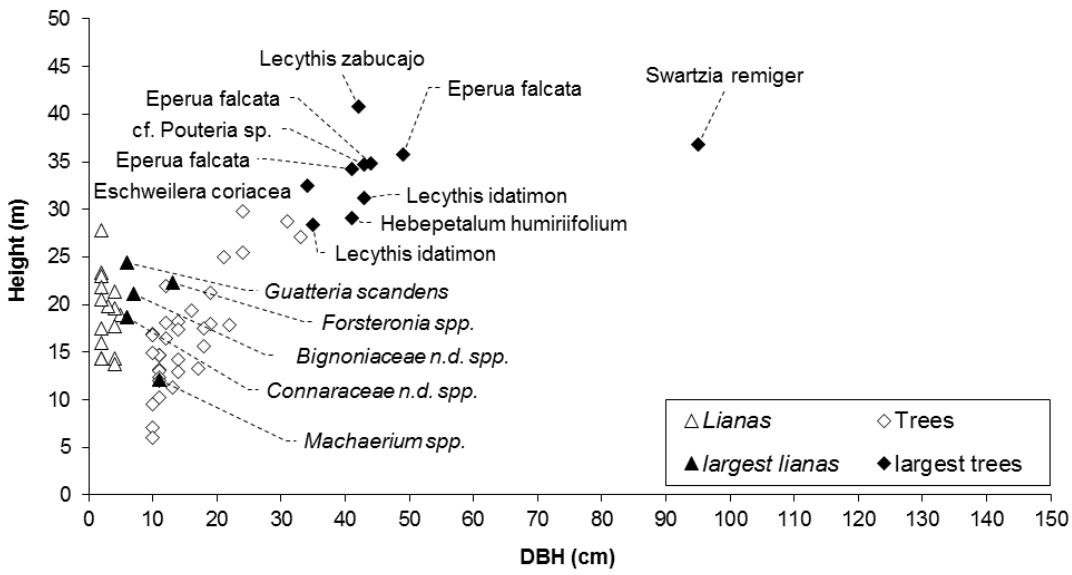

Figure 4A-2 Vegetation Profiles of Habitat/Vegetation Types Based on Large Trees and Lianas

A. High dryland forest on deeper soil (Type F). Location F1

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

B. High dryland forest on deeper soil (Type F). Location F7

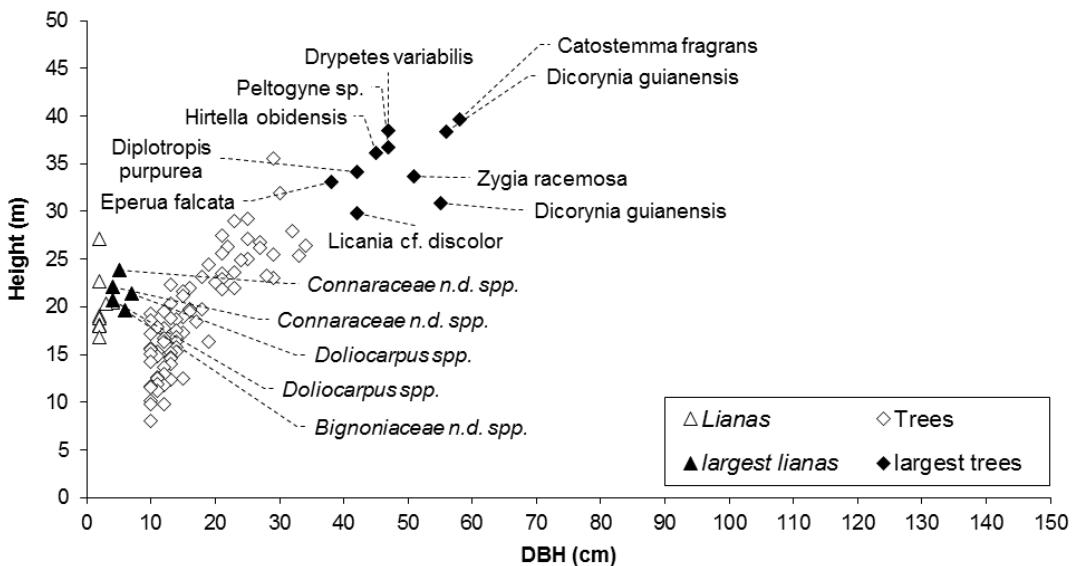

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

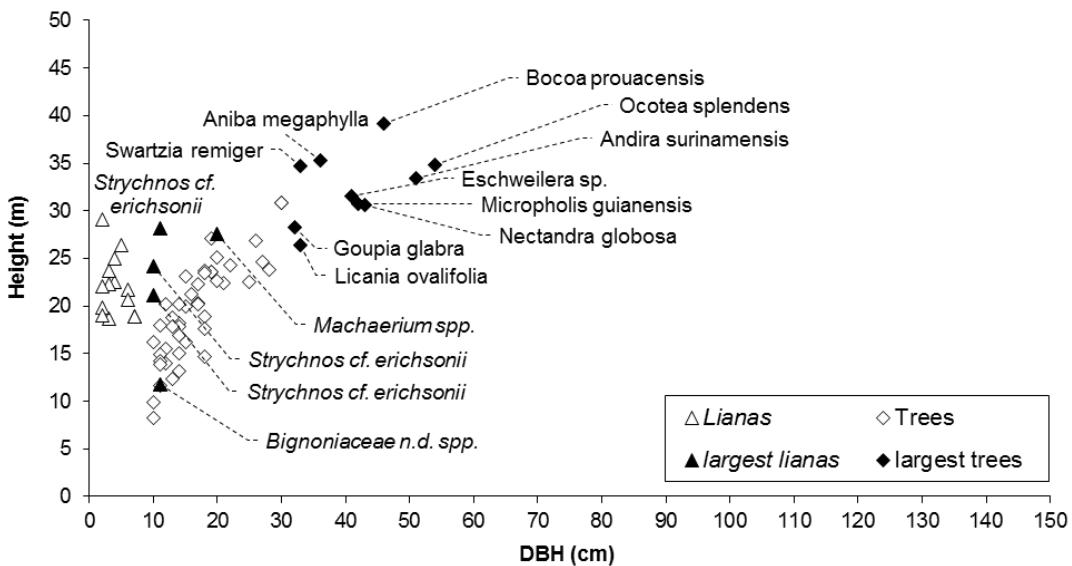

Figure 4A-2 Vegetation Profiles of Habitat/Vegetation Types Based on Large Trees and Lianas

C. High dryland forest on shallower soil (Type E). Locations E1.

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

D. High dryland forest on shallower soil (Type E). Locations F5.

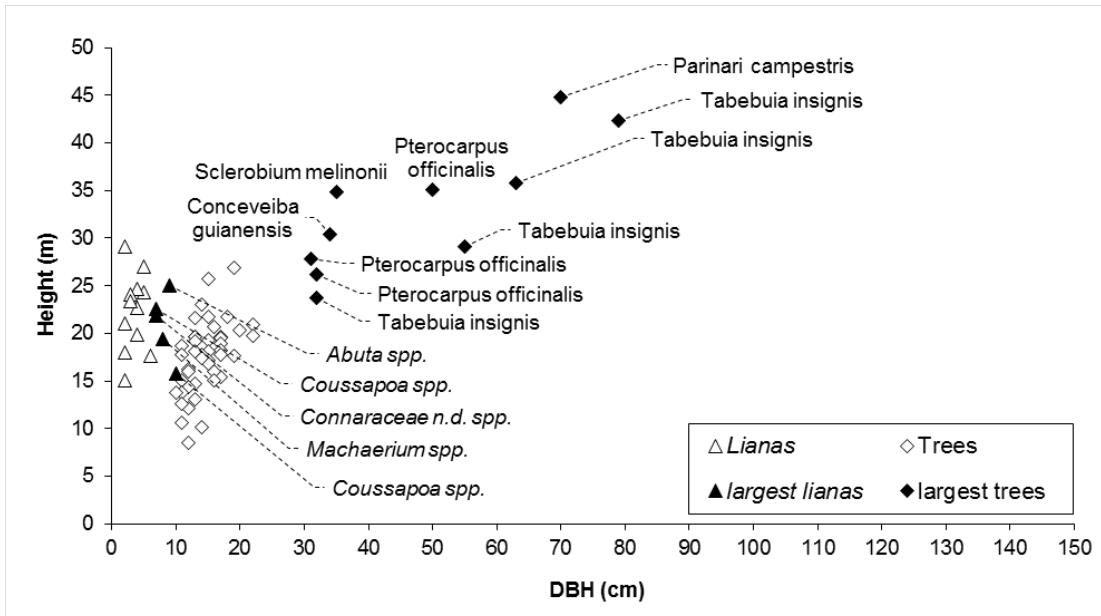

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

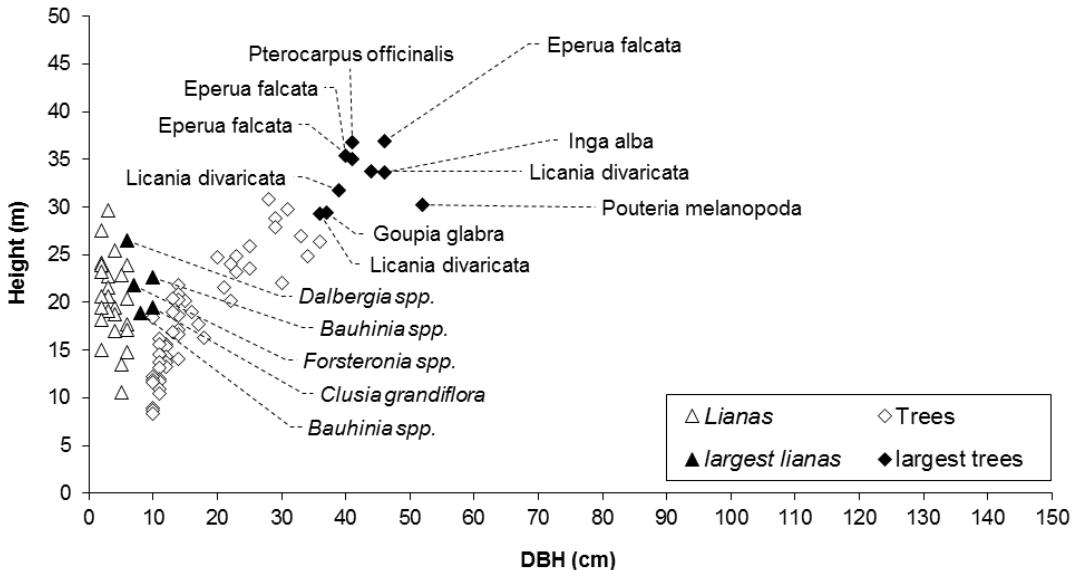

Figure 4A-2 Vegetation Profiles of Habitat/Vegetation Types Based on Large Trees and Lianas

D. Creek forest. Locations A/F1.

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

E. Marsh forest in sandy depression (type C1). Location C1.

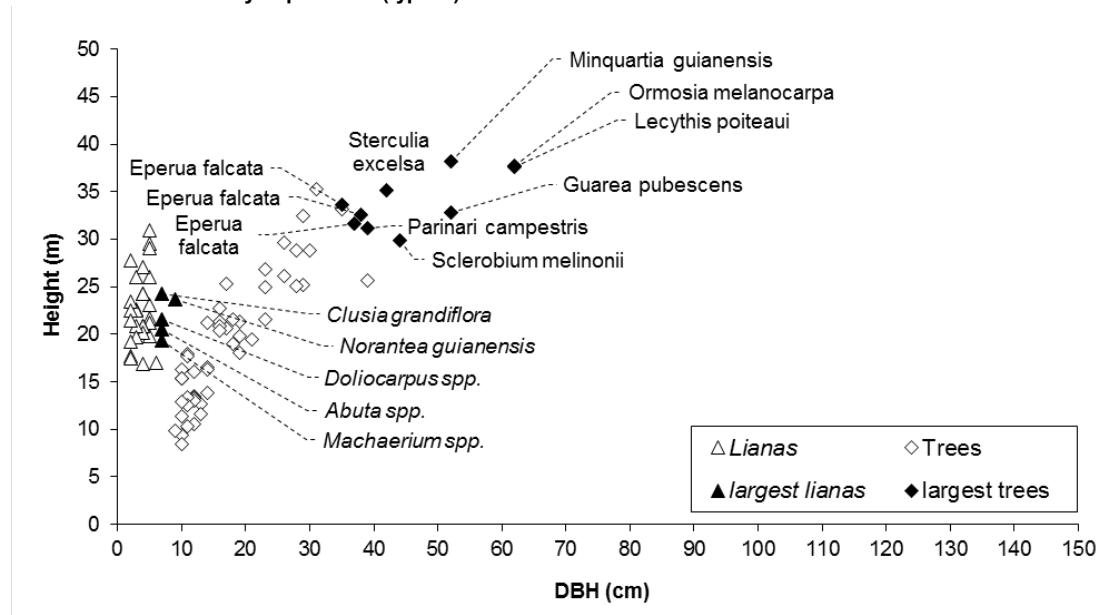

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

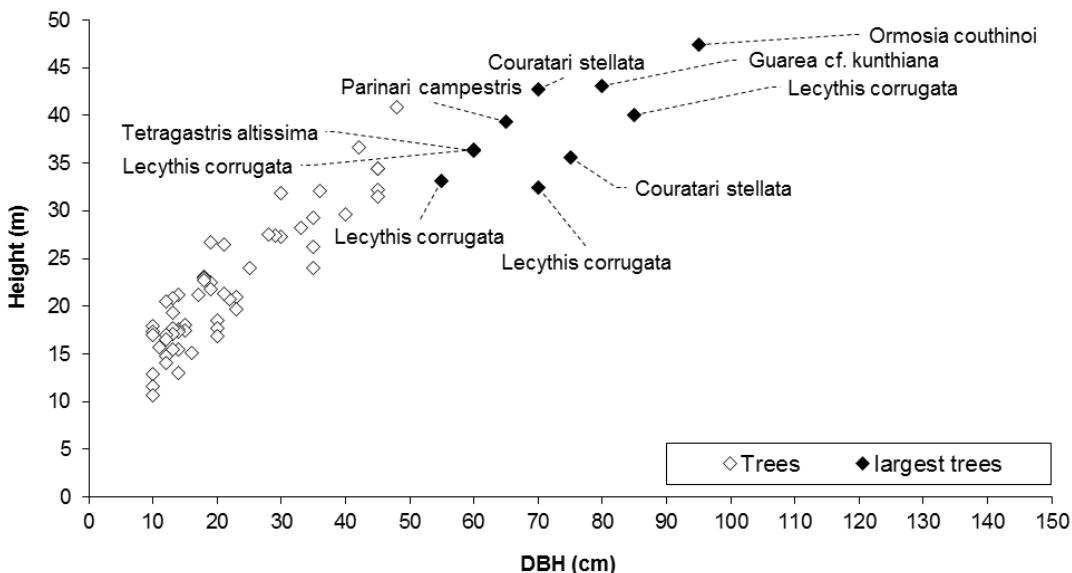

Figure 4A-2 Vegetation Profiles of Habitat/Vegetation Types Based on Large Trees and Lianas

F. Marsh forest in loamy depression (type A). Location A1.

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

G. Marsh forest in the Kleine Commewijne floodplain. Location C2. (Large trees only)

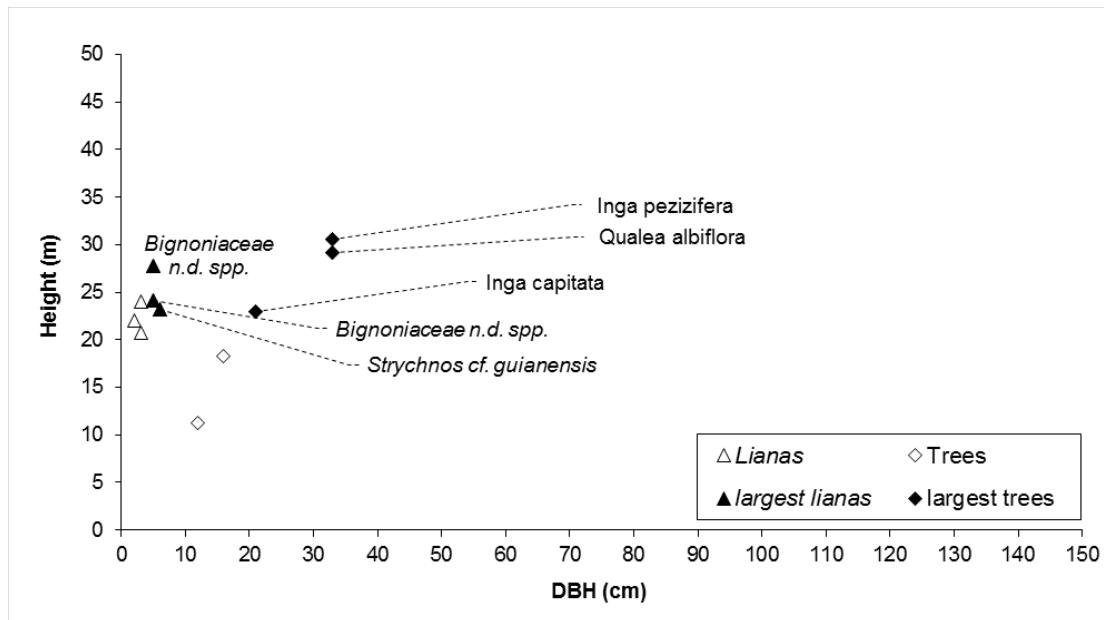

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Appendix 4A, Supporting Information for Vegetation Baseline Study

Figure 4A-2 Vegetation Profiles of Habitat/Vegetation Types Based on Large Trees and Lianas

H. Older secondary forest. Location F8.

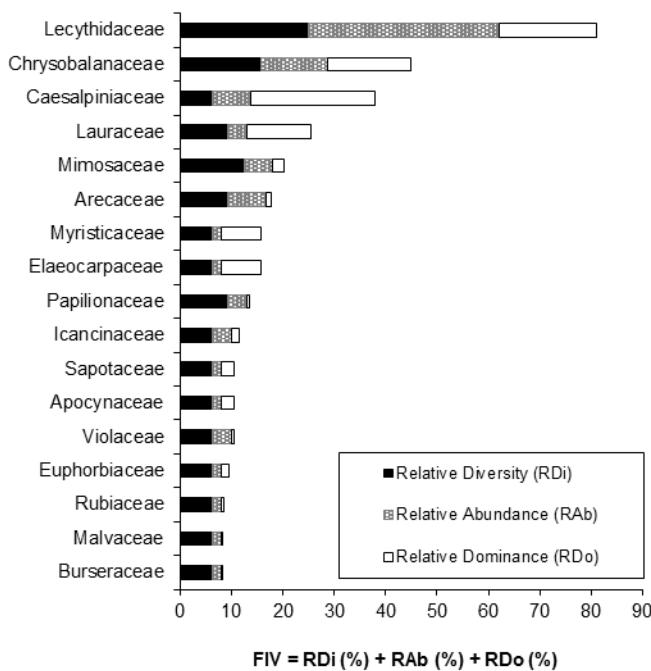

m = meter; cm = centimeter; DBH = diameter (of stem) at breast height.

Environmental and Social Impact Assessment

Appendix 4B, Supporting Information for Aquatic Baseline Study

Figure 4B-1 Diversity in Sites and Sampling Conditions During Sabajo ESIA Aquatic Ecology Studies

Notes:

- A. Shallow Upper Tempati Creek (TEM2) in the dry season (September 2017)
- B. Middle Tempati Creek (TEM1) in the high-water season (July 2017)
- C. An undisturbed, ephemeral forest creek (SAB3) in July (in September this stream had dried up completely)
- D. Seining the inundated banks of the large stream SAB5 during high-water conditions
- E. Large quantities of woody debris and high shores at SAB6 in the low-water season (September)
- F. The Upper Kleine Commewijne River (KC) is colored white-grey by suspended sediments from upstream gold mining (September 2017).

ESIA = Environmental and Social Impact Assessment.

Notes:

LF = life form (T tree, S shrub, H herb, E epiphyte, TL treelet, L liana, AP stemless (acaulescent) palm, TP tree palm, SP shrub (understory) palm, LP liana (climbing) palm, V vine, EC epiphytic climber (hemi-epiphyte), EH herbaceous epiphyte, Sap saprophyte plant,

Hab1 = main habitat (TDF tall dry forest (=High dryland forest type in habitat/vegetation classification), TFF tall floodable forest (=Marsh forest in floodplain; creek forest; and marsh forest on loamy soil types in habitat/vegetation classification), TFS tall forest on sandy alluvium (=Wet savannah forest on sandy soil type in habitat/vegetation classification), SV secondary vegetation (=Young secondary vegetation and older secondary forest types in habitat/vegetation classification), and combinations eg. TD/FS species found both in TDF and TFS),

Hab2 = notable pattern of habitat, crest, dolerite (dol), riverside (river), flatland (flat), white sand (w sand), foothill, open vegetation (open) etc.

Environmental and Social Impact Assessment

Appendix 4C, Supporting Information for Flora Baseline Study

Table 4C-2 Priority Plant Species to Consider for Incorporation into Reclamation and Reforestation Programs

Species (FAMILY) "common name"	Description	High dryland forest	Dry mountain forest on duricrust	Wet savanna forest on sandy soil	Marsh forest Creek forest	Marsh forest on loamy soil	Young secondary vegetation Secondary forest
Economically important species							
<i>Bocoa cf. viridiflora</i> (Ducke) R.S. Cowan (FABACEAE)	Canopy tree, slow growing hard wood. Extremely rare. Endemic to French Guiana, Suriname & Northern Brazil. Protected in French Guiana (2001 Ministry decree).	X					
<i>Bocoa prouacensis</i> Aubl. (FABACEAE) "IJzerhart"	Canopy tree. Endemic to the north of the three Guianas. Among hardest woods known, grows slowly, indicator of historically undisturbed forests, the tree longevity is up to 1000 years.	X	X				
<i>Copaifera guianensis</i> Desf. (FABACEAE) "Upru-udu", "Opoli"	Canopy tree. Non-timber forest species producing the medicinal copaiba (or copahu) oil. Protected in Suriname (1992 Forestry Law).			X			
<i>Dipteryx odorata</i> (Aubl.) Willd (FABACEAE) "Tonka"	Large canopy tree. High agro-forestry value as a non-timber forest product (tonka bean/coumarine). Trees long-lived, up to 1000 years. Protected in Suriname (1992 Forestry Law).	X		X			
<i>Elaeis aff. oleifera</i> (Kunth) Cortés (ARECACEAE) "Sabana Obé"	Stemless understory palm. Endemic to forests on white sand and savanna brush. Very rare in French Guiana and Suriname, at the limit of the species distribution area with populations of a different sub-species than the Central America and Central Amazonian basin ones. Wild genetic resource of major agronomic importance (oil palm). Protected in French Guiana.				X		
<i>Peltogyne cf. paniculata</i> Benth. (FABACEAE)	Large canopy tree. Endemic to Guianas and Northern Amazon. "Purple heart" precious wood, intensively logged in Suriname. Populations threatened by overharvest in all accessible areas.	X					
<i>Peltogyne venosa</i> (Vahl) Benth. (FABACEAE)	Large canopy tree. Endemic to Guiana's and Northern Amazon. "Purple heart" precious wood, intensively logged in Suriname. Populations threatened by overharvest in all accessible areas.	X					
<i>Swartzia panacoco</i> (Aubl.) R.S. Cowan (FABACEAE) " IJzerhart"	Large canopy tree. Endemic to the Guiana Shield. Slow-growing, precious hardwood tree. Rare. All subspecies of the genus from the Guianas listed as Vulnerable to Endangered by IUCN.	X					
<i>Virola surinamensis</i> (Rol. ex Rottb.) Warb. (MYRISTICACEAE) "Laagland babun"	Canopy tree. Valuable veneer wood resource threatened by overharvesting. Listed as Endangered by IUCN.	X				X	

Environmental and Social Impact Assessment

Appendix 4C, Supporting Information for Flora Baseline Study

Table 4C-2 Priority Plant Species to Consider for Incorporation into Reclamation and Reforestation Programs

Species (FAMILY) "common name"	Description	High dryland forest	Dry mountain forest on duricrust	Wet savanna forest on sandy soil	Marsh forest Creek forest Marsh forest on loamy soil	Young secondary vegetation Secondary forest
<i>Vouacapoua americana</i> Aubl. (FABACEAE)	Endemic to Guianas and Amazon delta. Precious pest-resistant hardwood, Listed as Critically Endangered by IUCN.	X				
Rare species						
<i>Anathallis aff. ciliolata</i> (Schltr.) Pridgeon & M.W.Chase (ORCHIDACEAE)	Epiphytic herb. Extremely rare, a form related to a Peruvian species (<i>Anathallis ciliolata</i>). New to Suriname and to the Guianas region.	X				
<i>Stachyarrhena cf. penduliflora</i> K.Schum (RUBIACEAE)	Understory treelet. New to Suriname, only known from Venezuela & west Amazon basin. Very rare species.				X	
Endemic/rare species						
<i>Achetaria guianensis</i> Pennel (PLANTAGINACEAE)	Small shrub species, found in secondary vegetation. Endemic to the Guiana Shield. Rare.					X
<i>Astrocaryum sciophilum</i> (Miq.) Pulle (ARECACEAE) "Bugrumaka"	Understory palm. Endemic to the Guiana Shield, Indicator of historically undisturbed forests, may live centuries.	X	X			
<i>Calathea granvillei</i> L. Andersson & H. Kenn. (MARANTACEAE)	Understory herb. Endemic to the Guiana shield. Very rare species.				X	
<i>Calycorectes grandifolius</i> O. Berg (MYRTACEAE)	Understory tree. Endemic to Suriname and French Guiana and Northern Brazil. Very rare species.				X	
<i>Hymenolobium flavum</i> Kleinhoonte (FABACEAE)	Large canopy tree. Endemic to the Guiana Shield. Very rare species,				X	
<i>Mapania macrophylla</i> (Boeck.) H. Pfeiffer (CYPERACEAE)	Understory herb. Endemic to the Guiana shield and N-Amazon basin. Very rare species,	X				
<i>Martiodendron parviflorum</i> (Amshoff) R. Koeppen (FABACEAE)	Canopy tree. Endemic to the Guianas and Amazon basin. Rare species.	X				
<i>Metaxya scalaris</i> Tuomisto & G.G. Cárdenas (METAXYACEAE)	Understory fern. Endemic to the Guiana Shield and Northern Amazon basin. Extremely rare species.	X				
<i>Miconia eriodonta</i> DC. (MELASTOMATACEAE)	Understory shrub. Endemic to French Guiana, Brazil (states of Para and Amapa). Rare species, new for Suriname.				X	
<i>Mollinedia cf. grazielae</i> Peixoto (MOLINIACEAE)	Tree. Endemic to the Guiana Shield and Northern Amazon basin. Rare.	X				

Environmental and Social Impact Assessment

Appendix 4C, Supporting Information for Flora Baseline Study

Table 4C-2 Priority Plant Species to Consider for Incorporation into Reclamation and Reforestation Programs

Species (FAMILY) "common name"	Description	High dryland forest	Dry mountain forest on duricrust	Wet savanna forest on sandy soil	Marsh forest Creek forest Marsh forest on loamy soil	Young secondary vegetation Secondary forest
<i>Palmorchis prospectorum</i> Veyret (ORCHIDACEAE)	Understory ground orchid. Restricted Range Endemic to the north of French Guiana and Suriname. Rare species.		X	X		
<i>Pouteria sagotiana</i> (Baill.) Eyma (SAPOTACEAE)	Large canopy tree. Endemic to the Guiana shield. Rare tree of the Balata gum family,	X				
<i>Sciaphila albescens</i> Benth. (TRIURIDACEAE)	Understory saprophyte herb. Endemic to the Guiana shield with a disjunction in the distribution area. Uncommon.	X				
<i>Sclerolobium albiflorum</i> Benoist (FABACEAE) "Rode Djedoe"	Canopy tree. Endemic restricted to the north of Suriname and French Guiana. Very rare.	X				
<i>Sclerolobium melinonii</i> Harms (FABACEAE) "Dyadidya"	Large canopy tree. Endemic to French Guiana, Suriname with rare occurrences in Brazil (Para) and Amazonian Peru. Rare.	X				
<i>Sextonia rubra</i> (Mez) van der Werff (LAURACEAE)	Canopy tree. Endemic to the Guiana Shield and Amazon basin. Very rare species.		X	X		
<i>Thyrsodium cf. guianense</i> Sagot ex Marchand (ANACARDIACEAE)	Large canopy tree. Endemic to the Guiana Shield and northern bank of Amazon delta. Very rare.	X				
Potentially new to science						
<i>Anathallis aff. ciliolata</i> (Orchidaceae)	A herbaceous epiphyte	X				
<i>Clidemia sp. nov.</i> (MELASTOMATACEAE)	Understory shrub. Possibly new to science, possibly related (Affine) to <i>Clidemia hirta</i> (L.) Don.				X	
<i>Lundia sp. nov (?) (aff densiflora DC.)</i> (BIGNONIACEAE)	Canopy liana. Possibly new species for science, affinity with <i>L. densiflora</i> but distinct. Known distribution range limited to the present collection,		X			
<i>Oenocarpus sp. nov. (?)</i> (ARECACEAE) "Afa cumbu"	Canopy palm tree. Likely restricted range endemic only known from Northeast Suriname. New species or subspecies of palm of the genus.	X			X	
Important for wildlife						
<i>Diplacrum capitatum</i> (Willd.) Boeck (CYPERACEAE)	Understory sedge. Listed as 'determining species' for important wildlife areas in French Guiana. Infrequent forest species.			X

Table 4D-1 List of Bird Species Observed in the Sabajo Concession Area, Suriname

Scientific name	English name	IUCN	CITES	Endemic	July	October
<i>Thraupis palmarum</i>	Palm Tanager				X	X
<i>Lamprospiza melanoleuca</i>	Red-billed Pied Tanager				X	X
Emberizidae	Sparrows					
<i>Arremon taciturnus</i>	Pectoral Sparrow				X	
Cardinalidae	Cardinal Grosbeaks					
<i>Caryothraustes canadensis</i>	Yellow-green Grosbeak				X	X
<i>Periporphyrus erythromelas</i>	Red-and-black Grosbeak	NT		X	X	X
<i>Cyanoloxia cyanoides</i>	Blue-black Grosbeak				X	X
Parulidae	Wood-Warblers					
<i>Myiothlypis rivularis</i>	Riverbank Warbler					X
Icteridae	New World Blackbirds					
<i>Psarocolius viridis</i>	Green Oropendola				X	X
<i>Cacicus cela</i>	Yellow-rumped Cacique				X	X
<i>Cacicus haemorrhous</i>	Red-rumped Cacique				X	X
<i>Icterus cayanensis</i>	Epaulet Oriole				X	
Fringillidae	Finches					
<i>Euphonia violacea</i>	Violaceous Euphonia				X	X
<i>Euphonia chrysopasta</i>	Golden-bellied Euphonia				X	X
<i>Euphonia cayennensis</i>	Golden-sided Euphonia			X	X	X

Note: List compiled by Sean Dilrosun, Leon Moore and Brian O'Shea, 6-12 July and 10-16 October 2017. Taxonomy and nomenclature follow:

Remsen, J. V., Jr., J. I. Areta, C. D. Cadena, S. Claramunt, A. Jaramillo, J. F. Pacheco, J. Pérez-Emán, M. B. Robbins, F. G. Stiles, D. F. Stotz, and K. J. Zimmer. Version 28 April 2017. A classification of the bird species of South America. American Ornithologists' Union. <http://www.museum.lsu.edu/~Remsen/SACCBaseline.htm>.

"ENDEMIC" species are found only in lowland forests of the Guiana Shield. IUCN classifications are Vulnerable (VU) and Near-Threatened (NT); all other species are categorized as Least Concern (LC).

Environmental and Social Impact Assessment

Appendix 4D, Supporting Information for Bird Baseline Study

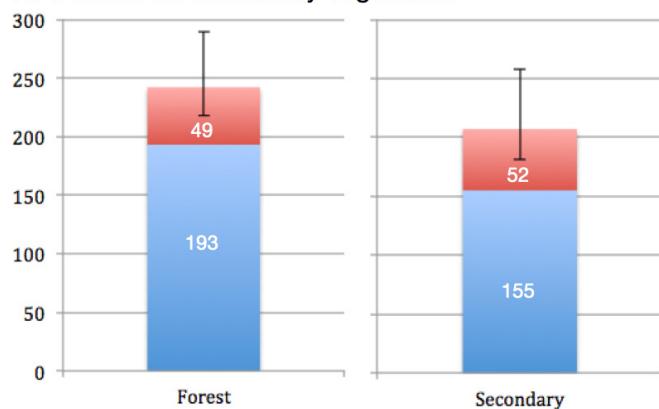

Table 4D-2 Values of Chao's Estimator for Chao's Sørensen Abundance-Based Similarity Index for Pairwise Plot Comparisons

Plot	A1	AF1	C1	E1	F1	F2+3	F4	F5	F6	F7+8
A1	-									
AF1	0.674	-								
C1	0.707	0.440	-							
E1	0.642	0.603	0.559	-						
F1	0.837	0.743	0.741	0.741	-					
F2+3	0.621	0.525	0.394	0.762	0.605	-				
F4	0.287	0.326	0.226	0.556	0.431	0.618	-			
F5	0.726	0.719	0.526	0.764	0.878	0.622	0.467	-		
F6	0.687	0.675	0.432	0.766	0.665	0.873	0.551	0.785	-	
F7+8	0.629	0.702	0.694	0.657	0.836	0.531	0.291	0.604	0.512	-
F9	0.667	0.656	0.375	0.765	0.748	0.932	0.660	0.838	0.881	0.416

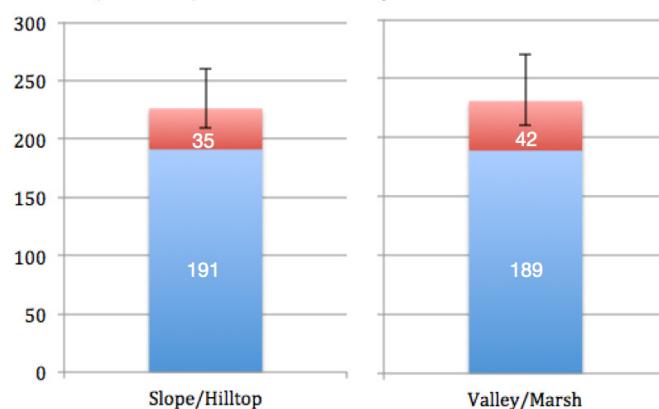

Note: Higher values indicate greater community similarity. Values of Chao's Sørensen estimator for 55 pairwise transect comparisons ranged from .226 -.932 (mean .629, SD .164) and tended to be higher for comparisons among transects sharing similar vegetation structure or landscape aspect.

Figure 4D-1 Comparisons of Bird Diversity

A. Forests vs. Secondary Vegetation

B. Slope/hilltop vs. creek valley/marsh

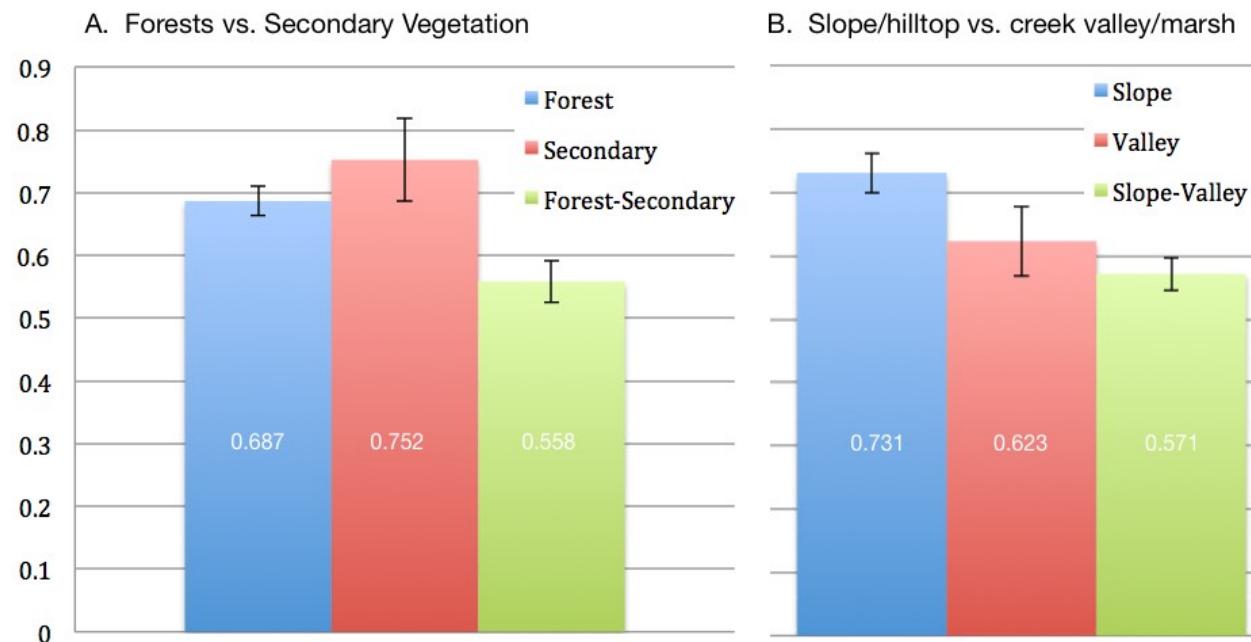

A. Observed (blue) and mean estimated (red) bird diversity in minimally-to-moderately disturbed, medium/tall forest (transects A1, AF1, C1, E1, F1, F5, F7+F8; n=98 samples) vs. more heavily disturbed secondary forest, scrub, and pioneer vegetation (transects F2+F3, F4, F6, F9; n=50 samples).

B. Observed (blue) and mean estimated (red) bird diversity slope/hilltop (dryland; transects A1, E1, F1, F5, F7+F8; n=78 samples) vs. creek valley/marsh habitats (transects AF1, C1, F2+F3, F4, F6, F9; n=70 samples). For all graphs, error bars are 95% confidence intervals for mean values of the Chao 2 incidence-based diversity estimator.

Environmental and Social Impact Assessment

Appendix 4D, Supporting Information for Bird Baseline Study

Figure 4D-2 Mean Pairwise Values of Chao's Estimator of Chao's Sørensen Abundance-Based Similarity Index

A. Plots in forest and secondary habitats.

B. Plots on slopes and hilltops (dryland forest) and those in creek valleys and marshy areas. Error bars are standard errors of the means.
