

# APPENDIX I

## Statewide Summary of Strategy Species

***Although Strategy species were designated by ecoregion and not statewide, we recognize that appropriate conservation actions for a Strategy species outside the ecoregion(s) that has been identified will contribute to the overall conservation for that species. Thus, conservation actions for Strategy species may be important throughout the state, and should be considered when planning or implementing conservation activities. However, the ecoregions designated have the greatest conservation need and/or opportunities for Strategy species. These areas will be considered the highest priority for Strategy implementation.***

Marine species, including marine mammals, will be addressed in the Oregon Nearshore Strategy.

---

### KEY

---

#### **Federal Status:**

- C – Candidate
- LE – Listed Endangered
- LT – Listed Threatened
- SOC – Species of Concern

#### **State Status:**

- C – Candidate (plants only)
  - LE – Listed Endangered
  - LT – Listed Threatened
  - SC – Sensitive Species, Critical category
  - SP – Sensitive Status, Peripheral or Naturally Rare category
  - SU – Sensitive Species, Undetermined Status category
  - SV – Sensitive Species, Vulnerable Category
- (note: Sensitive Species applies to vertebrates only)

#### **Heritage List** (Oregon Natural Heritage Information Center rank):

- 1 (List 1) – threatened with extinction or presumed to be extinct throughout their entire range
- 2 (List 2) – threatened with extirpation or presumed to be extirpated in Oregon
- 3 (List 3) – More information is needed before status can be determined, but may be imperiled in Oregon or throughout range
- 4 (List 4) – of conservation concern but not currently imperiled

#### **G Rank (Global) and S Rank (State)**

(NatureServe/Natural Heritage Network Ranks):

- 1 = Critically imperiled because of extreme rarity or because it is somehow especially vulnerable to extinction or extirpation, typically with 5 or fewer occurrences.
- 2 = Imperiled because of rarity or because other factors demonstrably make it very vulnerable to extinction or extirpation, typically with 6-20 occurrences.
- 3 = Rare, uncommon or threatened, but not immediately imperiled, typically with 21-100 occurrences.
- 4 = Not rare and apparently secure, but with cause for long-term concern, usually with more than 100 occurrences.
- 5 = Demonstrably widespread, abundant, and secure.
- H = Historical Occurrence, formerly part of the native biota with the implied expectation that it may be rediscovered.
- T = subspecies, variety or recognized race.
- X = Presumed extirpated or extinct.
- U = Unknown rank.
- NR = Not yet ranked.

**G and S Rank Qualifiers:**

Q = Questionable taxonomy.

? = Inexact Numeric Rank. Taxa that can be ranked, but for which the rank is not certain. Ranks with a "?" indicate that the rank is probably correct, but that either documentation is lacking or there is still some uncertainty. Such ranks are always provisional.

Range Ranks = Ranks with more than one value. These can be G1G2, G1G3, etc. These indicate that the predicted final rank would be within the range, but with no indication of preference among the possibilities.

**Ecoregions:**

BM – Blue Mountains

CP – Columbia Plateau

CR – Coast Range

EC – East Cascades

KM – Klamath Mountains

NBR – Northern Basin and Range

WC – West Cascades

WV – Willamette Valley

X = Strategy Species within that ecoregion

ext = Extirpated from ecoregion (conservation priority is in ecoregions where populations still occur naturally, but translocation back into ecoregions of extirpation may be appropriate. For plants and invertebrates, extirpation status may reflect lack of complete survey data. Recent populations have been found for some "extirpated" plants.)

DG = Data gap (known occurrence, but unknown conservation status)
