Perennial herb with stout, horizontal rhizomes covered with dark scales. **Flowering stems** single, unbranched, 5-20(30) cm tall, sparsely strigillose. **Leaves** basal, single, trifoliate, the leaflets once (twice) shallowly lobed and deeply serrate, the ultimate lobes 6-10 mm wide. Inflorescence of a single flower, on a stalk with one whorl of three leaf-like bracts; terminal bract leaflets 1-4 cm long and 0.8-2.5 cm wide, base cuneate, margins more sharply serrate than basal leaves, with 2-5 teeth per side, apex acuminate to narrowly acute; lateral leaflets usually once-lobed with ultimate lobes 4-10 mm wide. **Inflorescence** a single flower. **Flower** with a single whorl of petal-like sepals; sepals 5(6-8), ovate-oblong to oblong-elliptic, (10)12-20 mm long, unequal in length, the upper surface white, the lower surface reddish, violet, or purplish along margins; stamens 60-75. **Achenes** narrowly oblong, ca. 4 mm long, finely pubescent; achene beak ca. 0.5 mm long, glabrous.

**Lookalikes**

**differs from featured plant by**

*Anemone oregana* ..... habitat shady woods and open hillsides, stamens 30-60, (blue windflower) sepals the same color above and below, foothills of Cascade Mountains

*Anemone lyallii* ..... sepals 3.5-8(10) mm long, foothills of Cascades (little mountain anemone)

***Anemone oregana* A. Gray  
var. *felix* (M. Peck) C.L. Hitchc.**

bog anemone, coast anemone

PLANTS symbol: ANORF

August 2019 status ORBIC: List 2

**Distribution:** Coastal Lincoln and Tillamook cos. and one locality in the Cascade foothills of Linn Co.; also in Grays Harbor Co., Washington.

**Habitat:** sphagnum bogs and marshes.

**Elevation:** 10-350, 2000-3500 feet

**Best survey time(in flower):** late March-June

**Associated species:**

- Sphagnum* spp. (peat moss)
- Chamaenerion angustifolium* (fireweed)
- Caltha leptosepala* (=biflora) (marshmarigold)
- Erythronium oregonum* (Oregon fawnlily)
- Scirpus americanus* (three square)
- Maianthemum dilatatum* (false lily of the valley)
