Plants 1-3 m tall

Plant is not armed with spines

Leaves doubly serrated and finely pubescent below

Plant is a spreading to mostly erect, bushy shrub, 1-3 m tall. **Stems** long and flexible, slender, zigzag, with reddish-brown shredding bark. **Leaves** are well distributed throughout the plant, cordate, palmately lobed, doubly serrated, glabrous above and finely pubescent below. **Inflorescence** large, white, single flowers carried terminally on leafy branches with 5 oblong petals; stamens and pistils numerous, style densely hairy. **Fruit** a deep red, hemispheric, raspberry-like cap.

Lookalikes
Rubus spp.

differs from featured plant by
Featured plant may be distinguished because it is not armed with spines, as are most other *Rubus* species.

Rubus bartonianus M. Peck

Bartonberry

PLANTS symbol: RUBA

August 2019 status Oregon:C; ORBIC: List 1

Distribution: Snake River Canyon, Wallowa County, Oregon and Idaho County, Idaho.

Habitat: In protected areas on canyonsides and rocky slopes, forming thickets along stream banks.

Elevation: 380-550 m

Best survey time (in flower): April to May
