Abstract: The geographical distribution of plants of Meghalaya show that a total of 548 plant taxa belonging to 302 genera and 100 families are endemic to northeastern India or Indo-Burma or the eastern Himalaya region. Of these, 115 species are exclusively endemic to the state of Meghalaya. The dominant life form is epiphytes (25.4%), followed by trees (25%), shrubs (21.7%), herbs (21%), climbers (6.6%) and parasites (0.4%). In terms of species richness, Orchidaceae is the largest family with 146 species and *Bulbophyllum* is the dominant genera represented by 15 species. The present investigation reveals that most species considered endemic to the state of Meghalaya has extended geographic distribution to neighbouring states and other countries. Majority of the endemic taxa are restricted to protected areas such as national parks, wildlife sanctuaries, conservation reserves, and small forest patches preserved in the form of community forests or sacred groves. Lesser known species with small populations outside the protected areas are on the verge of extinction due to a number of anthropogenic activities, hence warranting immediate conservation measures.

Keywords: Conservation, diversity, forest fragmentation, Indo-Burma hotspot, northeastern India, Orchidaceae.

Competing interests: The authors declare no competing interests.

Author details: DR. AABID HUSSAIN MIR worked extensively in community forests of Meghalaya for his PhD thesis and his interests include plant diversity and conservation biology. DR. KRISHNA UPADHYAYA is a plant ecologist and actively involved in research dealing with plant diversity, ecosystem functioning and regeneration ecology of endemic and threatened species. DR. DILIP KUMAR ROY from Botanical Survey of India, Shillong is a plant taxonomist with interest in field botanical exploration and higher plant taxonomy. DR. CHAYA DEORI working as Scientist D in Botanical Survey of India, Shillong is specialized in Orchidaceae. DR. BIKARMA SINGH working as Scientist in CSIR-Indian Institute of Integrative Medicine, Jammu is higher plant taxonomist working on ethnobotany and plant natural products for value addition.

Author contribution: KU concieved the idea. KU, AHM, DKR, CD and BS collected, compiled and prepared the manuscript

Acknowledgements: We thank the Headman and local people of various localities of the state of Meghalaya for their help in various ways. The help received from Department of Forest, Government of Meghalaya and Head of Office & other staffs of Botanical Survey of India, Eastern Regional Centre, Shillong is also acknowledged.

INTRODUCTION

Population explosion and associated human driven major changes in land use have led to the rapid disappearance of forests and endangered many important plant species and their habitats (Defries 2010). It has also increased the risks of loss of many vital services on which human beings depend (Khandel et al. 2012). Anthropogenic disturbances and its related habitat fragmentation have been identified as a major cause of biodiversity loss (Pao & Upadhyaya 2017). Of particular concern are those places with special biological features that comprise of high diversity and high levels of endemism. Such areas have caught the attention of conservation scientists, practitioners and planners (Margules & Pressey 2000; Myers et al. 2000). The degree of endemism for an area is cited as a measure of the uniqueness of the flora, and consequently is important for prioritizing sites for conservation (Young et al. 2002). Endemic species with limited geographical ranges are more susceptible to extinction than widely distributed species as the former is extremely vulnerable to environmental change and anthropogenic disturbances (Myers 1988). Given that endemism and extinction risks are closely coupled, actions to minimize global extinction needs to focus on patterns in endemism and range-restricted species (Pimm & Brooks 2000).

The state of Meghalaya (owing to the diverse ecological conditions such as wide variation in rainfall, temperature, altitude and edaphic conditions) supports luxuriant growth of different types of vegetation, viz: tropical evergreen, tropical semi evergreen, tropical moist and dry deciduous, subtropical broad leaved hill forests, subtropical pine forests, temperate forests, and grasslands (Champion & Seth 1968; Rao & Hajra 1986). The state, being a part of Indo-Burma hotspot, is rich in plant diversity with a high level of endemism (Khan et al. 1997). The floristic richness of the state has been recognised by several earlier workers (Hooker 1854, 1872–97, 1904; Brandis 1906; Kanjilal et al. 1934–40). Although a total of 3,334 plant species are known from the state (Khan et al. 1997), the information on endemic species is scarce and a complete checklist of endemic plants is still lacking. Though some studies have been carried out to enumerate endemic species (Khan et al. 1997; Lakadong & Barik 2006; Lakadong 2009), these studies are inadequate. Many new taxa have been described from the state in the recent past and several taxa which were earlier considered as endemic to the state have been reported from other parts of the world. Hence, it has become necessary to assess the current

status of endemic plants of the state. The present study was conducted to assess the diversity of endemic plants in the state and provide base line information on their distribution. Such a study will help in taking effective measures for the conservation and management of the intended target species.

MATERIALS AND METHODS

Study area

The state of Meghalaya in northeastern India covers an area of 22,429km² with an altitudinal range of 50–1,990 m. Geographically, being a part of the Indo-Burma hotspot, it is also close to the eastern Himalaya. The vegetation of the state can be broadly categorized into tropical forests, subtropical broadleaved and pine forests, temperate forests and grasslands (Haridasan & Rao 1985–1987 (Images 1–6)). The climate of the area is monsoonal with distinct wet and dry seasons. The wet season extends from May and continues up to October, whereas the dry season extends from November to March. The western part of Meghalaya (Garo Hills) being relatively at a low elevation, experiences high temperatures, whereas Khasi and Jaintia hills have low temperatures. The average rainfall of the state ranges from 2,689mm to 4,000mm, except Cherrapunjee and Mawsynram that record the highest rainfall (12,000–13,000 mm) in the world. The state consists mainly of Archean rock formations, with rich deposits of valuable minerals like coal, limestone, uranium and sillimanite.

Data collection

The database of endemic species was prepared with the help of published literature (Kanjilal et al. 1934–1940; Myrthong 1980; Balakrishnan 1981–1983; Joseph 1982; Kumar 1984; Haridasan & Rao 1985–1987; Ahmedullah & Nayar 1986; Kataki 1986; Rao & Hajra 1986; Renuka 1996; Khan et al. 1997; Nayar & Sastry 1987, 1988, 1990; Seethalakshi & Kumar 1998; Walter & Gillett 1998; Jamir & Pandey 2003; Upadhyaya et al. 2003, 2013; Pandey et al. 2005; Singh et al. 2015) and referring to the specimens deposited in the herbaria of the Botanical Survey of India, Eastern Regional Centre, Shillong (ASSAM) and Department of Botany, North-Eastern Hill University, Shillong (NEHU). This was followed by rapid field exploration in different parts of the state during 2012–2016. Collected plant materials were processed and herbarium specimens prepared following Jain & Rao (1977). Identification was confirmed with the help of available literature (Kanjilal

et al. 1934–1940; Balakrishnan 1981–1983; Haridasan & Rao 1985–1987) and by comparing with the specimens, housed at ASSAM. Voucher specimens were deposited in the herbaria at ASSAM. The distribution of the species in the state and other parts of the world was thoroughly

reviewed. The species whose distribution is restricted only to Meghalaya were considered as ‘narrow endemic’ and those that are distributed in northeastern India, Indo-Burma and/or eastern Himalaya hotspots were considered as endemic.

RESULTS AND DISCUSSION

In the database, a total of 548 species distributed in 100 families and 302 genera were recorded (Appendix 1). Of these, epiphytes were dominant with 139 species, followed by trees (137 species), shrubs (119) and herbs (115) (Images 7–64). Other life forms (climbers and parasites) were represented by <50 species (Fig. 1). Out of the total, 115 species were exclusively endemic to the state and the rest (433) were restricted to northeastern India or Indo-Burma or the eastern Himalayan region. In terms of species richness, Orchidaceae was the dominant family with 146 species, followed by Rubiaceae (27 species), Acanthaceae (23), Lauraceae and Poaceae (21 species each), Zingiberaceae (18), Ericaceae (14), Rosaceae (13), Euphorbiaceae (12), Fabaceae (10), Annonaceae and Myrsinaceae (9 species each), Arecaceae, Balsaminaceae and Elaeocarpaceae (8 species each), Magnoliaceae and Melastomataceae (7 species each), Araliaceae, Celastraceae, Gesneriaceae, Lamiaceae and Theaceae (6 species each), Anacardiaceae, Asclepiadaceae, Myrtaceae, Oleaceae and Primulaceae (5 each), Aquifoliaceae, Araceae, Asparagaceae, Begoniaceae, Clusiaceae, Ebenaceae, Menispermaceae, Piperaceae, Rutaceae and Sapotaceae (4 each), Thymelaeaceae, Boraginaceae, Eriocaulaceae, Loranthaceae, Malpighiaceae, Ranunculaceae, Sabiaceae and Salicaceae (3 each), Achariaceae, Apiaceae, Apocynaceae, Aspleniaceae, Asteraceae, Campanulaceae, Caprifoliaceae, Combretaceae, Convolvulaceae, Moraceae, Pentaphyllaceae, Phyllanthaceae, Putranjivaceae, Sterculiaceae and Vitaceae (2 species each), while the rest of the 40 families were monospecific (Fig. 2). The genus *Bulbophyllum* had the maximum number of species (15), followed by *Coelogyné* (14), *Eria* (13), *Dendrobium*, *Strobilanthes* and *Impatiens* (8 each), *Agapetes*, *Magnolia* and *Ardisia* (7 species each), *Elaeocarpus* (6), while the rest of the 292 genera had less than six species each.

The current study allowed the preparation of an exhaustive checklist of the endemic flora of Meghalaya, thus updating the previous works in which the endemic taxa of the state was analyzed. It was found that the region has a rich endemic floral diversity as evidenced by the presence of 548 species. The preponderance of species belonging to the family Orchidaceae might be attributed to the diverse nature of the family and habitat suitability. Moreover, the higher number of *Bulbophyllum* species endemic to the region makes the family dominant. Series of plant diversity studies carried out in various parts of the state also showed

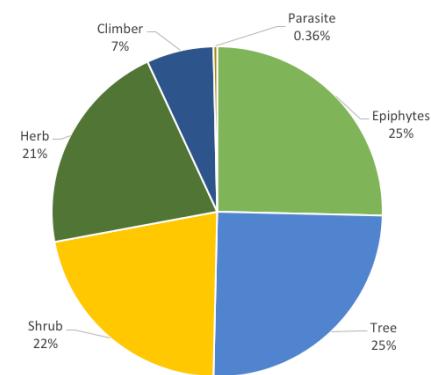

Figure 1. Distribution of life form of endemic plants of Meghalaya.

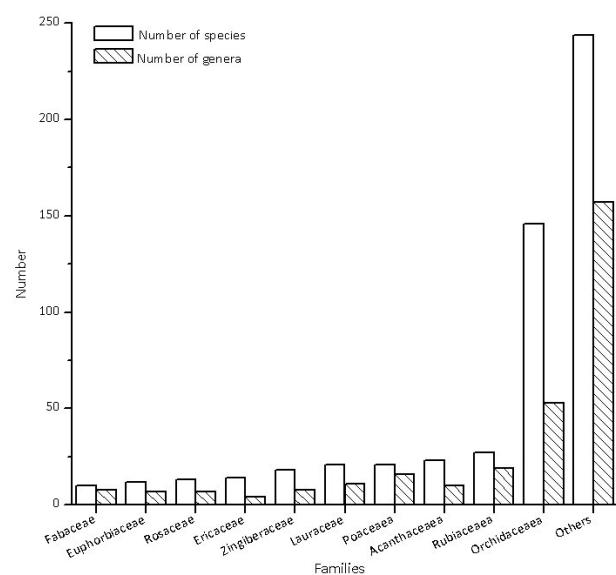

Figure 2. Top 10 families with their respective genera and species.

Orchidaceae to be one of the families with the highest number of species representatives (Hooker 1872–1997; Jamir & Pandey 2003; Upadhyaya et al. 2014). The presence of various primitive families (Magnoliaceae, Ranunculaceae, Annonaceae, Lauraceae, Piperaceae, Aristolochiaceae) provides an idea that endemism of the area is also attributed to primitiveness in terms of evolutionary age and affinities. Climatic factors including rainfall and temperature might also have contributed to high species richness and endemism of the area (Gentry 1982). Moreover, geographic location of the region in the confluence of three biogeographic realms (Indian, Indo-Malayan, and Indo-Chinese) has probably led to the organization of taxa with unique biological properties. Since it is significant to conserve endemic flora, it is equally important to accurately identify them in order to accord them conservation priorities. Many of the endemic species play an

important role as they are used as timber (*Magnolia rabaniana* Hook.f. & Thomson, *M. lanuginosa* Wall.) (Mir et al. 2016, 2017), for fuel and firewood (*Schima khasiana* Dyer, *Viburnum foetidum* Wall., *Elaeocarpus lancifolius* Roxb., *Glochidion thomsonii* Hook.f., *Litsea laeta* (Wall. ex Nees) Hook.f., *Neolitsea umbrosa* (Nees) Gamble, *Ulmus lanceifolia* Roxb.), as medicine in traditional herbalism (*Goniothalamus simonosii* Hook.f. & Thomson, *Trachyspermum khasianum* H.Wolff, *Ilex khasiana* Purkay., *Ilex embelioides* Hook.f., *Euonymus lawsonii* C.B.Clarke ex Prain, *Nepenthes khasiana* Hook.f., *Citrus latipes* Hook.f. & Thomson) and heavily exploited (*Coelogyne flaccida* Lindl., *Dendrobium hookerianum* Lindl., *Micropora rostrata* (Roxb.) N.P.Balakr., *Paphiopedilum insigne* (Wallich ex Lindley) Pfitzer) for ornamental purposes.

The present study reveals the presence of 548 species as endemic to the region, in contrast to 1,236 species reported by earlier workers (Khan et al. 1997; Jamir & Pandey 2003). Likewise, many species (e.g., *Acer laevigatum* Wall., *Aeschynanthus sikkimensis* (Clarke) Stapf., *Carpinus viminea* Wall.ex Lindl., *Cinnamomum bejolghota* (Buch-Ham.) Sweet., *Dendrobium devonianum* Paxton., *Hedera nepalensis* K. Koch, *Porana racemosa* Roxb., *Styrax hookeri* C.B. Clarke, *Turpinia nepalensis* Wall. ex Wight & Arn., *Berchemia floribunda* (Wall.) Brongn., *Chirita hamosa* R.Br., *Calanthe puberula* Lindl., *Drymycoccus racemosus* (Roxb.) Hook.f., *Trachelospermum axillare* Hook.f., *Ilex fragilis* Hook.f., *Euonymus bullatus* Wall. ex Lodd, *Cyathea gigantea* (Wall.ex Hook.) Holttum, *Anoectochilus roxburghii* (Wall.) Lindl., *Pholidota imbricata* Lindl.) which were among the reported endemic species (Khan et al. 1997; Jamir & Pandey 2003; Lakadong & Barik 2006; Upadhaya et al. 2013, 2014), have lost their endemic status as they have been reported from other parts of the world. Similar findings were observed from other parts of India, where 62 earlier reported endemic genera of angiosperms have been found in other countries, and some taxonomic changes to some genera have also affected their status (Irwin & Narasimhan 2011). The present checklist substantially reduces the number of endemic species that was estimated in previous studies, but in no way downlists Meghalaya's globally importance in endemism.

Therefore, it may be concluded that the state is rich in endemic flora. But since the last few decades, the forests in the region have been disappearing at an alarming rate due to fragmentation, expansion of agriculture, logging, mining and other developmental activities (Upadhaya et al. 2013; Pao & Upadhaya 2017). Destruction of forests

has resulted in the degradation of the environment and habitat of native species of the state. The rich genetic diversity has been depleted and many plant species are facing the threat of extinction in their natural habitats (Haridasan & Rao 1985–87). This is evident by the fact that some of the species, exclusively endemic to the state (*Carex repanda* C.B. Clarke and *Sterculia khasiana* Debb.) are considered possibly Extinct (Nayar & Sastry 1987; Upadhaya et al. 2013). There is an urgent need for conservation of the remaining endemic flora of the region. Ecological restoration, through re-vegetation of disturbed areas should be done, using indigenous tree species. Intensive taxonomic and phylogenetic studies, vegetation surveys and biogeographical research should be conducted on the endemic flora. Moreover, the in situ conservation efforts have to be supported by adequate ex situ conservation measures.

Appendix 1. List of endemic plant species along with their habit and distribution.

Name	Family	Habit	Voucher number	Nativness	Distribution	
					Meghalaya	Worldwide
<i>Acanthus leucostachyus</i> Wall. ex Nees	Acanthaceae	Sh	ASSAM, A.H. Mir, 00911 (10.x.2016) Phlangwanbroi, East Khasi Hills	E	Nokrek, Balphakram, Jowai	Indo-Burma
<i>Gymnostachyum venustum</i> (Nees) T.Anderson	Acanthaceae	H	ASSAM, D.K. Roy 129633 (11. iii.2013) Balpakram, South Garo Hills	E	Dawki, Sohka, Nokrek, Balpakram	Northeastern India
<i>Justicia khasiana</i> C.B.Clarke	Acanthaceae	H	ASSAM, A.H. Mir, 04372 (28. vii.2016) Mawranglang, South West Khasi Hills	E	Rngisawlia, Nongstoin	Indo-Burma
<i>Justicia assamica</i> C.B.Clarke*	Acanthaceae	Sh	Specimen not seen	NE	Khasi hills (locality not specified)	Meghalaya
<i>Phlogacanthus guttatus</i> Nees	Acanthaceae	Sh	ASSAM, A.H. Mir, 00626 (09. iv.2014) Rangthaliang, East Khasi Hills	E	Balphakram, Nokrek	Northeastern India and Bhutan
<i>Phlogacanthus pubinervis</i> T.Anderson	Acanthaceae	Sh	ASSAM, D.K. Roy 129495 (08. iii.2013) Balpakram, Garo Hills	E	Pynursla, Sutnga	Eastern Himalaya and Indo-Burma
<i>Phlogacanthus tubiflorus</i> Nees	Acanthaceae	Sh	ASSAM, A.H. Mir, 90331 (22.ii.2014) Pongtung, East Khasi Hills	E	Balphakram, Dambu, Pongtung	Indo-Burma
<i>Phlogacanthus wallichii</i> C.B.Clarke*	Acanthaceae	Sh	ASSAM, U. Kanjilal 2765 (19.x.1913), Syndai, Khasi Hills	E	Syndai	Indo-Burma
<i>Pseuderanthemum indicum</i> A.M.Cowan & Cowan	Acanthaceae	Sh	ASSAM, G. Panigrahi 6059 (26. iii.1957), Shillong Peak, Khasi Hills	E	Shillong Peak	Eastern Himalaya and Indo-Burma
<i>Strobilanthes brunoniana</i> Nees	Acanthaceae	Sh	ASSAM, D.K. Roy 129495 (08. iii.2013) Balpakram, Garo Hills	E	Balphakram, Barapani, Tharia, Pongtung, Mawmluh, Mawsmai	Northeastern India
<i>Strobilanthes denticulata</i> T.Anderson*	Acanthaceae	Sh	ASSAM, G.K. Deka 19131 (06.i.1959), Mahadeo, Garo Hills	E	Balphakram, Nokrek	Northeastern India
<i>Strobilanthes discolor</i> (Nees) T.Anderson	Acanthaceae	Sh	ASSAM, A.H. Mir, 03068 (19. viii.2014) Pongtung, East Khasi Hills	E	Balphakram, Tura Peak	Eastern Himalaya and Indo-Burma
<i>Strobilanthes hamiltoniana</i> (Steud.) Bosser & Heine	Acanthaceae	Sh	ASSAM, D.K. Roy 130079 (05. ii.2014) Balpakram, Garo Hills	E	Tura, Jarain, Balphakram	Eastern Himalaya and Indo-Burma
<i>Strobilanthes nobilis</i> C.B.Clarke	Acanthaceae	Sh	ASSAM, B. Singh, 118458 (04. ii.2009) Wagechiringre	E	Jarain, Pynursla, Wagechiringre	Indo-Burma
<i>Strobilanthes rubescens</i> T.Anderson*	Acanthaceae	Sh	ASSAM, N.P. Balakrishnan 49957 (17.xi.1969), Jarain, Jaintia Hills	E	Jarain, Jowai	Eastern Himalaya and Indo-Burma
<i>Sympagis maculata</i> (Nees) Bremek.	Acanthaceae	Sh	ASSAM, AH Mir, 01024 (05.ii.2017) Umtong, East Khasi Hills	NE	Jowai, Jarain, Cherrapunjee, Umtong.	Meghalaya
<i>Sympagis monadelpha</i> (Nees) Bremek*	Acanthaceae	Sh	ASSAM, G.K. Deka 17521 (06. xi.1938), Jawai, Jaintia Hills	E	Ialong, Jowai.	Eastern Himalaya and Indo-Burma
<i>Rhinacanthus calcaratus</i> Nees*	Acanthaceae	Sh	Specimen not seen	E	Khasi hills (locality not specified)	Northeastern India
<i>Staurogyne argentea</i> Wall.*	Acanthaceae	H	K (image!), Griffith, W., #s.n., K000838873	E	Khasi Hills (locality not specified)	Northeastern India
<i>Staurogyne simonsii</i> Kuntze*	Acanthaceae	H	ASSAM, S.R.Sharma 12186 (28. viii.1935) East Khasi Hills	NE	Barapani, Pontung, Shella	Meghalaya
<i>Strobilanthes adnatus</i> C.B.Clarke*	Acanthaceae	H	ASSAM, S.R. Sharma 17580 (14. ix.1947), Cherra forest	E	Cherrapunjee	Northeastern India
<i>Strobilanthes khasyana</i> T.Anderson*	Acanthaceae	H	K (image!), K000882913, C.B. Clarke, 15226 (20.xi.1871), Khasia, Nongpuaung	E	Nongpoh	Eastern Himalaya, Meghalaya
<i>Tarphochlamys affinis</i> (Griff.) Bremek.*	Acanthaceae	H	North-Eastern Hill University, K.Haridasan 9867, Khasi hills	NE	Shillong	Meghalaya
<i>Gynocardia odorata</i> R.Br.	Achariaceae	T	ASSAM, A.H. Mir, 90411 (19. xii.2015) Mawsynram, East Khasi Hills	E	Jarain, Mawsynram, Laitsohum, Balphakram, Nokrek	Eastern Himalaya and Indo-Burma
<i>Hydnocarpus kurzii</i> (King.) Warb.	Achariaceae	T	ASSAM, A.H. Mir, 90337 (19. viii.2016) Mawrapat, South West Khasi Hills	E	Jarain, Tura, Nokrek, Mawsynram, Laitsohum, Mawcasain, Balphakram	Indo-Burma
<i>Crinum amoenum</i> Ker Gawl. ex Roxb.*	Amaryllidaceae	H	ASSAM, G.Panigrahi 4233 (30.x.1956). Garapani	E	Saitbakon, Nonglykien	Indo-Burma
<i>Cotinus kanaka</i> (R.N.De) D.Chandra*	Anacardiaceae	T	ASSAM, S.R. Sharma 20742 (01. viii.1940) Sonakurung, Khasi Hills	NE	Sona kurung.	Meghalaya
<i>Drymycarpus racemosus</i> (Roxb.) Hook.f.	Anacardiaceae	T	ASSAM, AH Mir, 00670 (11.ix.2015) Mawsmai, East Khasi Hills	E	Cherrapunjee, Mawmluh, Mawsmai, Mawsynram	Indo-Burma

Name	Family	Habit	Voucher number	Nativness	Distribution	
					Meghalaya	Worldwide
<i>Rhus khasiana</i> Hook.f.*	Anacardiaceae	T	K (image!), K000695086, JD Hooker and T. Thomson 1901 (?vii.1850), Khasi Hill	NE	Barapani	Meghalaya
<i>Toxicodendron hookeri</i> (K.C. Sahn & Bahadur) C.Y. Wu & T.L. Ming*	Anacardiaceae	T	ASSAM, N.P. Balakrishnan (27. viii.1968) Nartiang, Jaintia Hills	E	Raliang, Nartiang	Indo-Burma
<i>Toxicodendron bimannii</i> Barbhuiya	Anacardiaceae	T	ASSAM, D.K. Roy 125634 (25. iv.2012) Balphakram, South Garo Hills	E	Balphakram National Park	Northeastern India
<i>Artobotrys caudatus</i> Wall. ex Hook.f. & Thomson*	Annonaceae	Cl	ASSAM, U.K. 4140 (09.iv.1914), Makum range, Garo Hills	NE	Balphakram, Nokrek and Rongrengiri Garo hills	Meghalaya
<i>Cyathocalyx martabanicus</i> Hook.f. & Thomson*	Annonaceae	T	ASSAM, P.C. Kanjilal 5230 (05. iii.1915), Tura Peak, Garo Hills	E	Sanitarium Garo Hills	Northeastern India
<i>Fissistigma verrucosum</i> (Hook.f. & Thomson) Merr.	Annonaceae	Cl	ASSAM, A.H. Mir, 90471 (10. viii.2016) Pynursla, East Khasi Hills	E	Ialong, Raliang, Jawai Raliang, Nokrek, Shangpung, Wakhen	Northeastern India
<i>Goniothalamus simonsii</i> Hook.f. & Thomson	Annonaceae	T	ASSAM, D.K. Roy 130164 (05. vi.2014), Balphakram, South Garo Hills	NE	Nokrek, Nongkhylliem, Borlang, Lailad, Balphakram	Meghalaya, Assam
<i>Polyalthia jenkinsii</i> (Hook.f. & Thomson) Hook.f. & Thomson	Annonaceae	T	ASSAM, A.H. Mir, 90327 (27. ix.2015) Mawkyrwat, East Khasi Hills	E	Laitkynew, Cherrapunjee, Balphakram	Indo-Burma
<i>Polyalthia meghalayensis</i> V.Prakash & Mehrotra*	Annonaceae	Sh	K (image!), K000691478, V. Prakash, #17130 Garo Hills, Meghalaya	NE	Boldoringri forest, Tura Peak	Meghalaya
<i>Trivalvaria kanjilalii</i> D.Das*	Annonaceae	T	ASSAM, U. Kanjilal 6348 (10. xii.1915), Nongkla, Khasi Hill	NE	Syndai	Meghalaya
<i>Uvaria hamiltonii</i> Hook.f. & Thomson*	Annonaceae	Cl	ASSAM, J. Joseph 22298 (24. vi.1940), Nongpoh, Ri Bhoi	E	Balphakram, Rongrengiri, Maheshkola, Nongpoh	Indo-Burma
<i>Uvaria lurida</i> Hook. f. & Thomson*	Annonaceae	Cl	ASSAM, S.R. Sarma s.n. (16. xi.1938), Umsaw, Ri.Bhoi	NE	Balphakram, Maheshkola	Meghalaya
<i>Trachyspermum khasianum</i> (C.B.Clarke) H.Wolff.*	Apiaceae	H	K (image!), K000685640, J.D.Hooker and T. Thomson 1901 (19.viii.1850), Boge Panee, Khasi Hill	E	Jarain	Indo-Burma
<i>Bupleurum khasianum</i> (Clarke) P.K.Mukh.*	Apiaceae	H	K (image!), K000687107, C.B.Clarke, 16663, (31.x.1871), Mairang, Khasia	NE	Mairang	Meghalaya
<i>Gongronema ventricosum</i> Hook.f.*	Apocynaceae	Sh	K (image!), K000872892, s.coll. 6, India, Khasia	NE	Khasi hills (locality not specified)	Meghalaya
<i>Ilex embeloides</i> Hook.f.	Aquifoliaceae	T	ASSAM, A.H. Mir, 90384 (03. xii.2015) Saitbakon, East Khasi Hills	NE	Raliang, Jawai, Dawki, Jarain, Tyrsad, Cherrapunjee, Mawkyrwat, Pariong, Laitryngew, Mawmluh, Mawsmai, Rngisawlia, Saitbakon	Meghalaya
<i>Ilex khasiana</i> Purkay.	Aquifoliaceae	T	ASSAM, AH Mir, 88687 (15.xi.2015) Pyndengnongbri, East Khasi Hills	NE	Shillong peak, Upper Shillong, Elephant falls, Mylliem, Mawtangor, Jakrem, Pyndengnongbri	Meghalaya
<i>Ilex venulosa</i> Hook.f.	Aquifoliaceae	T	ASSAM, A.H. Mir, 88686 (12.v.2015) Cherrapunjee, East Khasi Hills	E	Jowai, Laitlyngkot, Sohrarim, Jarain, Pongtung, Shangpung, Cherrapunjee, Pynursla, Saitbakon, Wakhen, Mawkynot, Mawmluh, Laitryngew, Mawkyrwat, Umtong, Jakrem, Nokrek	Indo-Burma
<i>Ilex godajam</i> Colebr. ex Hook.f.	Aquifoliaceae	T	ASSAM, A.H. Mir, 90343 (20.x.2015) Lawbah Mawsynram, East Khasi Hills	E	Lawbah, Mawsynram, Balphakram	Eastern Himalaya and Indo-Burma
<i>Arisaema album</i> N.E.Br.	Araceae	H	ASSAM, D.K. Roy 130337 (26. viii.2014), Siju, South Garo Hills	E	Mawsmai, Nokrek, Balphakram	Eastern Himalaya and Northeastern India
<i>Arisaema nepenthoides</i> (Wallich) Martius ex Schott & Endlicher	Araceae	H	ASSAM, A.H. Mir, 00591 (15. ix.2014) Pongtung, East Khasi Hills	E	Pongung, Pynursla, Saitbakon	Indo-Burma
<i>Rhipidophora hookeri</i> Schott	Araceae	Ep	ASSAM, B. Singh, 114714 (27. ii.2007) Nokrek Peak, Garo Hills	E	Nokrek	Eastern Himalaya and Indo-Burma

Name	Family	Habit	Voucher number	Nativness	Distribution	
					Meghalaya	Worldwide
<i>Sauromatum meghalayense</i> D.K. Roy, A.D. Talukdar, B.K.Sinha & M. Dutta Choud.	Araceae	H	ASSAM, D.K.R. 130216 (05.vi.2014), Hatisia, South Garo Hills	NE	Balphakram National Park	Meghalaya
<i>Aralia thomsonii</i> Seem. ex C.B.Clarke	Araliaceae	Sh	ASSAM, A.H. Mir, 90478 (23.x.2016) Mawranglang, East Khasi Hills	E	Ialong, Jowai, Wakhen, Pynndengnongbri	Eastern Himalaya and Indo-Burma
<i>Brassaiopsis hispida</i> Seem	Araliaceae	T	ASSAM, B. Singh, 118480 (09. iv.2009) Nokrek Peak, Garo HillsHills	E	Ialong, Nokrek Peak	Eastern Himalaya and Indo-Burma
<i>Panax pseudoginseng</i> Wall.	Araliaceae	H	ASSAM, A.H. Mir, 00757 (05.ii.2016) Rngisawlia, South West Khasi Hills	E	Laitkor, Nongkrem, Mawphlang, Upper Shillong, Tyrsad, Nongstoin	Eastern Himalaya and Indo-Burma
<i>Tupidanthus calyptatus</i> Hook. f. & Thomson	Araliaceae	Sh	ASSAM, A.H. Mir, 90335 (09.v.2014) Cherrapunjee, East Khasi Hills	E	Ialong, Raliang, Jowai, Balphakram, Swer, Mawmluh, Sohra, Rngisawlia, Nokrek	Indo-Burma
<i>Brassaiopsis glomerulata</i> var. <i>rufostellata</i> (Blume) Regel.*	Araliaceae	Sh	ASSAM, J. Joseph 43783(12. iii.1966), N.R.Soil conservation, IB, Umling	E	Umling	North east India
<i>Macropanax meghalayensis</i> Harid. & R.R.Rao*	Araliaceae	Sh	North-Eastern Hill University, K. Haridasan, 10233A, B, Lailad	NE	Lailad	Meghalaya
<i>Calamus erectus</i> Roxb.	Arecaceae	Sh	ASSAM, A.H. Mir, 90423 (10. ix.2015) Pongtung, East Khasi Hills	E	Baghmara, Nokrek, Jaraian, Mawshun, Cherrapunjee, Pongtung, Balphakram	Eastern Himalaya and Indo-Burma
<i>Calamus floribundus</i> Griff.*	Arecaceae	Cl	ASSAM, R.S. 113302 (06.xii.2006) Dawegiri, Garo Hills	E	Cherrapunjee, Smit, Pongtung, Shangpung, Dawegiri	Eastern Himalaya and Indo-Burma
<i>Calamus leptospadix</i> Griff.	Arecaceae	Sh	ASSAM, A.H. Mir, 00584 (15.ii.2016) Nongstoin, West Khasi Hills	E	Nokrek, Balphakram	Eastern Himalaya and Indo-Burma
<i>Calamus meghalayensis</i> A.J.Hend.*	Arecaceae	Cl	Specimen not seen	NE	Locality not known	Meghalaya
<i>Calamus tenuis</i> Roxb.	Arecaceae	Cl	ASSAM, A.H. Mir, 00637 (11. xi.2014) Mawmluh, East Khasi Hills	E	Cherrapunjee, Mawmluh, Mawsmai, Mawsynram	Indo-Burma
<i>Livistona jenkinsiana</i> Griff.	Arecaceae	T	ASSAM, A.H. Mir, 90477 (04. iii.2015) Tynna, South West Khasi Hills	E	Swer, Kharang, Nongstoin, Tynna, Hilland, Mawsynram, Weiloi	Indo-Burma
<i>Phoenix rupicola</i> T.Anderson	Arecaceae	Sh	ASSAM, B. Singh, 114930 (27. ii.2007) Nokrek Peak, Garo Hills	E	Nokrek Peak	Northeastern India
<i>Aristolochia saccata</i> Wall.	Aristolochiaceae	Cl	ASSAM, A.H. Mir, 90403 (13. ix.2015) Mawmluh, East Khasi Hills	E	Nokrek, Cherrapunjee	Eastern Himalaya and Indo-Burma
<i>Ceropegia angustifolia</i> Wight	Asclepiadaceae	Cl	ASSAM, A.H. Mir, 90409 (16.x.2015) Pynursla	NE	Balphakram, Garampani, Jowai, Jaraian, Nokrek	Meghalaya
<i>Ceropegia arnottiana</i> Wight*	Asclepiadaceae	Cl	Specimen not seen	E	Khasi hills (locality not specified)	Meghalaya, Myanmar, Thailand
<i>Ceropegia lucida</i> Wall.	Asclepiadaceae	Cl	ASSAM, B. Singh, 114719 (27. ii.2007) Nokrek Peak, Garo Hills	E	Tharia, Nokrek Peak	Eastern Himalaya and Indo-Burma
<i>Cynanchum wallichii</i> Wight.*	Asclepiadaceae	Cl	ASSAM, SR Sarma 12128 (28. .viii.1935), Pungtong, Khasi Hills	E	Dawki, Pongtung, Nongstoin	Indo-Burma
<i>Hoya lobbia</i> Hook.f.	Asclepiadaceae	Ep	ASSAM, A.H. Mir, 90451 (22.v.2015) Cherrapunjee, East Khasi Hills	NE	Nokrek, Rongrengiri, Dawki, Nongthala, Nongpoh	Meghalaya
<i>Hoya acuminata</i> (Wight) Benth. ex Hook.f.	Asclepiadaceae	Ep	ASSAM, B. Singh, 118556 (11. iv.2009) Mandalgiri, Garo Hills	E	Mawsmai, Nokrek, Cherrapunjee, Balphakram, Mandalgiri	Eastern Himalaya and Indo-Burma
<i>Ophiopogon reptans</i> Hook.f.*	Asparagaceae	H	K (image !), K000846109, C.B.Clarke, 43087(14.ii.1886), Tura, Garo Hills	E	Tura, Garo hills, Garampani, Sonapahar	Indo-Burma
<i>Peliosanthes griffithii</i> Baker	Asparagaceae	H	ASSAM, A.H. Mir, 90470 (05.v.2015) Lynshing, East Khasi Hills	E	Cherapunjee, Mawmluh, Mawsmai, Mawrapat, Lynshing, Balphakram	Indo-Burma
<i>Tupistra nutans</i> Wall.	Asparagaceae	H	BSIS, B.K. Singh 3270 (14.x.2006) Nokrek, West Garo Hills	E	Pynursla, Sohra, Mawsmai, Nokrek	Indo-Burma
<i>Tupistra tupistroides</i> (Kunth) Dandy*	Asparagaceae	H	ASSAM, NP Balakrishna 49972 (17. .xi.1969) Jaraian, Jaintia Hills	E	Jaraian, Nunklow, Cherrapunjee, Mawsmai	Meghalaya, Sikkim

Name	Family	Habit	Voucher number	Nativness	Distribution	
					Meghalaya	Worldwide
<i>Asplenium finlaysonianum</i> Wall. ex Hook.	Aspleniaceae	H	ASSAM, B. Singh, 118391 (03. ii.2009) Ringrey, Garo Hills	E	Baghmara, Balphakram, Siju, Nokrek, Ringrey	Eastern Himalaya and Indo-Burma
<i>Asplenium khasianum</i> Sledge*	Aspleniaceae	H	K (image!), K001092516, C.B. Clarke, Umwai	NE	Umwai	Meghalaya
<i>Inula kalapani</i> C.B.Clarke*	Asteraceae	Sh	ASSAM, G.Panigrahi 16337 (17. vi.1958), Kynshi-Markasa, West Khasi Hills	E	Kynshi, Markasa	Northeastern India
<i>Synotis jowaiensis</i> (Balak.) R.Mathur*	Asteraceae	H	ASSAM, 47400, (?), Jowai	NE	Jowai, Jarain	Meghalaya
<i>Balanophora dioica</i> R.Br. ex Royle	Balanophoraceae	P	ASSAM, A.H. Mir, 90398 (19. xi.2014) Nongstoin, West Khasi Hills	E	Ialong, Raliang, Jowai, Nokrek, Cherrapunjee, Mawmluh, Lynshing, Mawkyrwat, Phud Juad, Nonglang, Shillong, Nongstoin	Eastern Himalaya and Indo-Burma
<i>Impatiens khasiana</i> Hook.f.	Balsaminaceae	H	ASSAM, A.H. Mir, 90308 (10. viii.2015) Lyngjiong, East Khasi Hills	NE	Ialong, Laitkyrhong, Raliang, Jowai, Swer, Tysrad and Lyngjiong	Meghalaya
<i>Impatiens porrecta</i> Wall.	Balsaminaceae	H	ASSAM, M.K.V. Rao 64126 (16. vi.1975) Balphakram,Garo Hills	NE	Jowai, Jarain, Nokrek, Cherrapunjee, Balphakram, Mawsmai and Parkseh	Meghalaya
<i>Impatiens acuminata</i> Benth.	Balsaminaceae	H	ASSAM, C. Deori & S.R.Talukdar 134320 (07.vii.2016), Mawchawma, South West Khasi Hills	E	Jowai, Sokha-Nongthala	Northeastern India
<i>Impatiens laevigata</i> Wall.	Balsaminaceae	H	ASSAM, A.H. Mir, 90428 (10.x.2015) Laitryngew, East Khasi Hills	E	Nokrek, Khleihrait, Mynso, Sokha-Nongthalang, Syndai, Raliang, Mawmluh, Laitryngew, Mawkyrwat, Umsaw	Northeastern India
<i>Impatiens tripetala</i> Roxb. ex DC.	Balsaminaceae	H	ASSAM, C.Deori & S.R.Talukdar 134384, (07.vii.2016) Nongstoin, Nongkhunum river island, West Khasi Hills	E	Nongstoin, Nokrek, Dawki	Indo-Burma
<i>Impatiens jurpia</i> Buch.-Ham.	Balsaminaceae	Sh	ASSAM, DB Deb 28935 Tura Peak, Garo Hills	E	Nokrek, Balphakram	Eastern Himalaya and Northeastern India
<i>Impatiens depauperata</i> Hook.f.*	Balsaminaceae	H	K (image!), K000694748, Griffit, s.n., Khasiya	NE	Khasi hills (locality not specified)	Meghalaya
<i>Impatiens striolata</i> Hook.f.*	Balsaminaceae	H	K (image!), K000694625, J.D. Hooker & T. Thomson 2026 (05. viii.1830), Kalapanee	NE	Khasi hills (locality not specified)	Meghalaya
<i>Begonia brevicaulis</i> A.DC.*	Begoniaceae	H	K (image!), Hooker & Thomson 26, Khasia (Terya to -Cherrapunjee)	E	Khasi Hills (locality not specified)	Indo-Burma
<i>Begonia josephi</i> A.DC.	Begoniaceae	H	ASSAM, A.H. Mir, 90462 (07. viii.2016) Wakhen, East Khasi Hills	E	Wakhen, Pynursla	Eastern Himalaya and Indo-Burma
<i>Begonia hatacoa</i> Buch.-Ham. ex D.Don	Begoniaceae	H	ASSAM, C.Deori & S.R.Talukdar 134282, (07.vi.2016), Nongumiam, West Khasi Hills	E	Dawki, Jarain, Syndai, Muktapur, Cherrapunjee, Laitkynew, Mawkyrwat, Mawphlang, Mawmluh	Eastern Himalaya and Indo-Burma
<i>Begonia thomsonii</i> A.DC.	Begoniaceae	H	ASSAM, B. Singh 115968, (12.x.2007) Nokrek Peak, Garo Hills	E	Nokrek	Eastern Himalaya and Indo-Burma
<i>Berberis wallichiana</i> DC.	Berberidaceae	Sh	ASSAM, A.H. Mir, 00601 (01.i.2014) Thangsnieng, East Khasi Hills	E	Mawphlang, Mawkyrwat, Nonglang, Nonsynrieh, Nonglykien, Thangsning	Eastern Himalaya and Indo-Burma
<i>Tournefortia viridiflora</i> Wall.	Boraginaceae	Sh	ASSAM, D.K. Roy 130389 (08. xi.2014) Balpakram, South Garo Hills	E	Tura, Balphakram	Indo-Burma
<i>Cordia fragrantissima</i> Kurz.	Boraginaceae	T	ASSAM, B. Singh 110587, (04. ii.2009), Tura range, Garo Hills	E	Tura	Indo-Burma
<i>Cordia grandis</i> Roxb.*	Boraginaceae	T	ASSAM, R.N. De 20584 (25.iii.1941), Tura range, Garo Hills	E	Lailad, Baghamara, Tura range	Indo-Burma
<i>Canarium strictum</i> Roxb.*	Burseraceae	T	(image!), K000651668, G. Mann s.n. (June 1878) Nongpoh, Ri Bhoi	E	Lailad, Raliang, Umdem, Nongpoh	Indo-Burma
<i>Phanera khasiana</i> (Baker) Thoth.	Caesalpinaeae	Cl	ASSAM, B. Singh 110586 (04. ii.2009), Tura range, Garo Hills	E	Balphakram, Tura range, Umtapoh.	Indo-Burma

September 2019 | Vol. 11 | No. 12 | Pages: 14471–14630

Date of Publication: 26 September 2019 (Online & Print)

DOI: 10.11609/jott.2019.11.12.14471-14630

Article

Ornithophony in the soundscape of Anaikatty Hills, Coimbatore, Tamil Nadu, India

– Chandrasekaran Divyapriya & Padmanabhan Pramod, Pp. 14471–14483

Communications

A case study on the public knowledge and awareness of the Philippine Pangolin *Manis culionensis* (Mammalia: Pholidota: Manidae)

– Frances Mae Tenorio & Joselito Baril, Pp. 14484–14489

Winter food habits of the Common Palm Civet *Paradoxurus hermaphroditus* (Mammalia: Carnivora: Viverridae) in Patna Bird Sanctuary, India

– Khursid Alam Khan, Jamal Ahmad Khan, Khursheed Ahmad & Narendra Mohan, Pp. 14490–14495

Report of five interesting avian species from Durgapur ecoregion, West Bengal, India by citizen science effort

– Sagar Adhurya & Shantanu Bhandary, Pp. 14496–14502

Brief insight into the behavior, activity, and interspecific interactions of urban *Trimeresurus (Cryptelytrops) albolabris* (Reptilia: Squamata: Viperidae) vipers in Bangkok, Thailand

– Curt Hrad Barnes & Tyler Keith Knierim, Pp. 14503–14510

The distributional pattern of benthic macroinvertebrates in a spring-fed foothill tributary of the Ganga River, western Himalaya, India

– Vijay Prakash Semwal & Asheesh Shivam Mishra, Pp. 14511–14517

Seasonal vegetation shift and wetland dynamics in vulnerable granitic rocky outcrops of Palghat Gap of southern Western Ghats, Kerala, India

– Pathiyil Arabhi & Maya Chandrasekharan Nair, Pp. 14518–14526

A comprehensive checklist of endemic flora of Meghalaya, India

– Aabid Hussain Mir, Krishna Upadhyaya, Dilip Kumar Roy, Chaya Deori & Bikarma Singh, Pp. 14527–14561

Shola tree regeneration is lower under *Lantana camara* L. thickets in the upper Nilgiris plateau, India

– Muneer Ul Islam Najar, Jean-Philippe Puyravaud & Priya Davidar, Pp. 14562–14568

Overcoming the pollination barrier through artificial pollination in the Wild Nutmeg *Krema attenuata* (Myristicaceae), an endemic tree of the Western Ghats, India

– Murugan Govindakurup Govind, Koranapallil Bahuleyan Rameshkumar & Mathew Dan, Pp. 14569–14575

Short Communications

The first photographic record of the Red Panda *Ailurus fulgens* (Cuvier, 1825) from Lamjung District outside Annapurna Conservation Area, Nepal

– Ganesh Ghimire, Malcolm Pearch, Badri Baral, Bishnu Thapa & Rishi Baral, Pp. 14576–14581
