Abstract Novel species of fungi described in this study include those from various countries as follows: **Angola**, *Gnomoniopsis angolensis* and *Pseudopithomyces angolensis* on unknown host plants. **Australia**, *Dothiora corymbiae* on *Corymbia citriodora*, *Neoeucasphaeria eucalypti* (incl. *Neoeucasphaeria* gen. nov.) on *Eucalyptus* sp., *Fumagopsis stellae* on *Eucalyptus* sp., *Fusculina eucalyptorum* (incl. *Fusculinaceae* fam. nov.) on *Eucalyptus socialis*, *Harknessia corymbicola* on *Corymbia maculata*, *Neocelosporium eucalypti* (incl. *Neocelosporium* gen. nov., *Neocelosporiaceae* fam. nov. and *Neocelosporiales* ord. nov.) on *Eucalyptus cyanophylla*, *Neophaeomoniella corymbiae* on *Corymbia citriodora*, *Neophaeomoniella eucalyptigena* on *Eucalyptus pilularis*, *Pseudoplagiostoma corymbicola* on *Corymbia citriodora*, *Teratosphaeria gracilis* on *Eucalyptus gracilis*, *Zasmidium corymbiae* on *Corymbia citriodora*. **Brazil**, *Calonectria hemileiae* on pustules of *Hemileia vastatrix* formed on leaves of *Coffea arabica*, *Calvatia caatinguenensis* on soil, *Cercospora solani-betacei* on *Solanum betaceum*, *Clathrus natalensis* on soil, *Diaporthe poincianellae* on *Poincianella pyramidalis*, *Gastrum piquirunense* on soil, *Geosmithia carolliae* on wing of *Carollia perspicillata*, *Henningsia resupinata* on wood, *Penicillium guabinense* from soil, *Periconia caespitosa* from leaf litter, *Pseudocercospora styracina* on *Styrax* sp., *Simplicillium filiforme* as endophyte from *Citrullus lanatus*, *Thozetella pindobacuensis* on leaf litter, *Xenosonderhenia coussapoae* on *Coussapoa floccosa*. **Canary Islands (Spain)**, *Orbilia amarilla* on *Euphorbia canariensis*. **Cape Verde Islands**, *Xylodon jacobaeus* on *Eucalyptus camaldulensis*. **Chile**, *Colletotrichum arboricola* on *Fuchsia magellanica*. **Costa Rica**, *Lasiosphaeria miniovina* on tree branch. **Ecuador**, *Ganoderma chocoense* on tree trunk. **France**, *Neofitzroyomyces nerii* (incl. *Neofitzroyomyces* gen. nov.) on *Nerium oleander*. **Ghana**, *Castanediella tereticornis* on *Eucalyptus tereticornis*, *Falcocladium africanum* on *Eucalyptus brassiana*, *Rachichladosporium corymbiae* on *Corymbia citriodora*. **Hungary**, *Entoloma silvae-frondosae* in *Carpinus betulus-Pinus sylvestris* mixed forest. **Iran**, *Pseudopyricularia persiana* on *Cyperus* sp. **Italy**, *Inocybe roseascens* on soil in mixed forest. **Laos**, *Ophiocordyceps huaynangensis* on Coleoptera larva. **Malaysia**, *Monilochaetes melastomae* on *Melastoma* sp. **Mexico**, *Absidia terrestris* from soil. **Netherlands**, *Acaulium pannemaniae*, *Conioscypha boutwelliae*, *Fusicolla septimanifinisciæ*, *Gibellulopsis simonii*, *Lasionectria hilhorstii*, *Lectera nordwiniana*, *Leptodiscella rintelii*, *Parasarocladium debruyntii* and *Sarcocladium dejongiae* (incl. *Sarcocladiaceae* fam. nov.) from soil. **New Zealand**, *Gnomoniopsis rosae* on *Rosa* sp. and *Neodevriesia metrosideri* on *Metrosideros* sp. **Puerto Rico**, *Neodevriesia cocclobae* on *Coccloba uvifera*, *Neodevriesia tabebuiae* and *Alfaria tabebuiae* on *Tabebuia chrysanthia*. **Russia**, *Amanita paludosa* on bogged soil in mixed deciduous forest, *Entoloma tiliæ* in forest of *Tilia x europaea*, *Kwoniella endophytica* on *Pyrus communis*. **South Africa**, *Coniella diospyri* on *Diospyros mespiliformis*, *Neomelanconiella combreti* (incl. *Neomelanconiellaceae*

Abstract (cont.)

fam. nov. and *Neomelanconiella* gen. nov.) on *Combretum* sp., *Polyphialoseptoria natalensis* on unidentified plant host, *Pseudorobillarda bolusanthi* on *Bolusanthus speciosus*, *Thelonectria pelargonii* on *Pelargonium* sp. **Spain**, *Vermiculariopsis lauracearum* and *Anungitopsis lauri* on *Laurus novocanariensis*, *Geosmithia xerotolerans* from a darkened wall of a house, *Pseudopenidiella gallaica* on leaf litter. **Thailand**, *Corynespora thailandica* on wood, *Lareunionomyces loeiensis* on leaf litter, *Neocochlearomyces chromolaenae* (incl. *Neocochlearomyces* gen. nov.) on *Chromolaena odorata*, *Neomyrmecridium septatum* (incl. *Neomyrmecridium* gen. nov.), *Pararamichloridium carnicola* on *Carex* sp., *Xenodactylaria thailandica* (incl. *Xenodactylariaceae* fam. nov. and *Xenodactylaria* gen. nov.), *Neomyrmecridium asiaticum* and *Cymostachys thailandica* from unidentified vine. **USA**, *Carolinigaster bonitoi* (incl. *Carolinigaster* gen. nov.) from soil, *Penicillium fortuitum* from house dust, *Phaeotheca shathenatiana* (incl. *Phaeothecaceae* fam. nov.) from twig and cone litter, *Pythium wohlseniorum* from stream water, *Superstratomyces tardicrescens* from human eye, *Talaromyces iowaense* from office air. **Vietnam**, *Fistulinella olivaceoalba* on soil. Morphological and culture characteristics along with DNA barcodes are provided.

Acknowledgements Tatiana M. Bulyonkova and colleagues are grateful to Dr Rodham Tulloss for his patient guidance and help, and to Dr Torbjørn Borgen Lindhardt for his invaluable advice. Thays G.L. Oliveira, Maria T.C. Felipe, Jadson D.P. Bezerra and Oliane M. C. Magalhães acknowledge financial support and/or scholarships from the CAPES (Finance Code 001), CNPq and FACEPE. Aline O.B. da Cunha, Alexandre R. Machado, Eder Barbier, Enrico Bernard and Cristina M. Souza-Motta acknowledge financial support and/or scholarships from the CAPES (Finance Code 001), CNPq, FACEPE, CECAV and ICMBio from Brazil. Rejane M.F. da Silva and colleagues express their gratitude to the Coordenação de Aperfeiçoamento de Pessoal de Nível Superior (CAPES) for a scholarship to Rejane M.F. da Silva and to the Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq) for a research fellowships and/or financial support to Gladstone A. da Silva, Cristina M. Souza-Motta, José L. Bezerra and Rafael J.V. de Oliveira (Processes 458622/2014-1 and 312186/2016-9). Olinto L. Pereira, Vanessa P. Abreu, Jackeline P. Andrade and colleagues would like to thank the CNPq, CAPES and FAPEMIG for financial support. The study of Olga V. Morozova was carried out within the framework of a research project of the Komarov Botanical Institute RAS 'Herbarium funds of the BIN RAS' (AAAA-A18-118022090078-2) with the support of the molecular work by the Russian Foundation for the Basic Research (project no. 15-29-02622). Anna M. Glushakova and Aleksey V. Kachalkin were supported by the Russian Foundation for Basic Research (RFBR), project no. 16-04-00624a. Janet Jennifer Luangsa-ard and colleagues were supported by 'The Promotion Project on Science, Technology and Innovation Collaboration with ASEAN Member Countries under the Office of International Cooperation, MOST-Thailand'. They would also like to thank Ms Duangkaew Chongkachornphong, Ms Papawee Nupason (International Cooperation Section, BIOTEC) and Ms Bakeo Souvannalath (Director of Biotechnology Division, Biotechnology and Ecology Institute, BEI) for their kind cooperation. Javier Fernández-López and colleagues are grateful to Marian Glenn for checking the text, and were supported by DGICT projects CGL2012-35559 and CGL2015-67459-P. Javier Fernández-López was also supported by Predoctoral Grants (BES-2013-066429) from the Ministerio de Economía y Competitividad (Spain). María E. Ordoñez and colleagues acknowledge Pontificia Universidad Católica del Ecuador for financial support for project M13415. Taimy Cantillo is thankful to PEC-PG/CAPES for the PhD grant (proc. 12636134/2014) (Finance Code 001) and to the International Association for Plant Taxonomy (IAPT) for the Research Grant. Luis F.P. Gusmão is grateful to CNPq for Grant support (Proc. 303062/2014-2). Hugo Madrid was partially funded by Comisión Nacional de Investigación Científica y Tecnológica (CONICYT),

Fondo Nacional de Desarrollo Científico y Tecnológico (FONDECYT), Chile, project no. 11140562. Tor Erik Brandrud, Bálint Dima, Machiel E. Noordeloos and Egil Bendiksen thank the financial support of the Norwegian Taxonomy Initiative, with funding from the Norwegian Biodiversity Information Centre (NBIC); the majority of the Oslofjord material was sequenced through NorBOL (collections labelled NOBAS, CAFUN), and we thank Gunnhild Marthinsen and Katriona Bendiksen, NHM, University of Oslo as well as Rakel Blaalid, NINA, for performing the major work with the barcoding; the Kits van Waveren Foundation (Rijksherbariumfonds Dr E. Kits van Waveren, Leiden, Netherlands) contributed substantially to the costs of sequencing types. The Austrian *Entoloma* material (by Irmgard Krisai-Greilhuber) was sequenced within ABOL, subproject HRSFM University of Vienna, supported by the Austrian Federal Ministry of Education, Science and Research. Adriene M. Soares and colleagues would like to thank the Instituto Chico Mendes de Conservação da Biodiversidade (ICMBio) and the Instituto Brasileiro de Meio Ambiente (IBAMA) for support during field trips and R.L.M. Alvarenga for the figures. They also acknowledge CAPES for the Ph.D. scholarship of Adriene M. Soares, and CNPq (307601/2015-3), CAPES (CAPES-SIU 008/13), and FACEPE (APQ-0375-2.03/15) for financial support. Angus J. Carnegie acknowledges support from the Forestry Corporation of NSW, and David Sargeant for assistance with site photos. Adel Pordel and colleagues thank the University of Tehran for financial support. Luis Quijada acknowledges support from 'Fundación Ramón Areces'. Robert W. Barreto and colleagues thank the World Coffee Research/Texas AgriLife for financial support, as well as the Conselho Nacional de Desenvolvimento Científico e Tecnológico (CNPq), the Coordenação de Aperfeiçoamento de Pessoal de Nível Superior (CAPES). Sara Salcedo-Sarmiento was supported by the 'Programa de Estudante-Convênio de Pós-Graduação' (PEC-PG) from CAPES. The research of Cobus M. Visagie and Keith A. Seifert was supported by grants from the Alfred P. Sloan Foundation Program on the Microbiology of the Built Environment. Blaise A. Darvaux acknowledges Keith A. Seifert for help with identification, Nicholas Mauriello for validating the Latin name, Mauricia Lawrence and Meagan Tillotson for help with material preparation. We are grateful to Gavin Phillips, Seed Bank Officer, Australian Botanic Garden, Mt Annan for field assistance and identification of plant species collected in New South Wales, Australia. Collection of specimens from Mungo National Park was supported by the ABRS Bush Blitz program, a partnership between the Australian Government, BHP and Earthwatch Australia. The National Geographic Okavango Wilderness Project is acknowledged for assistance and funding to J. Roux for material collected in Angola.

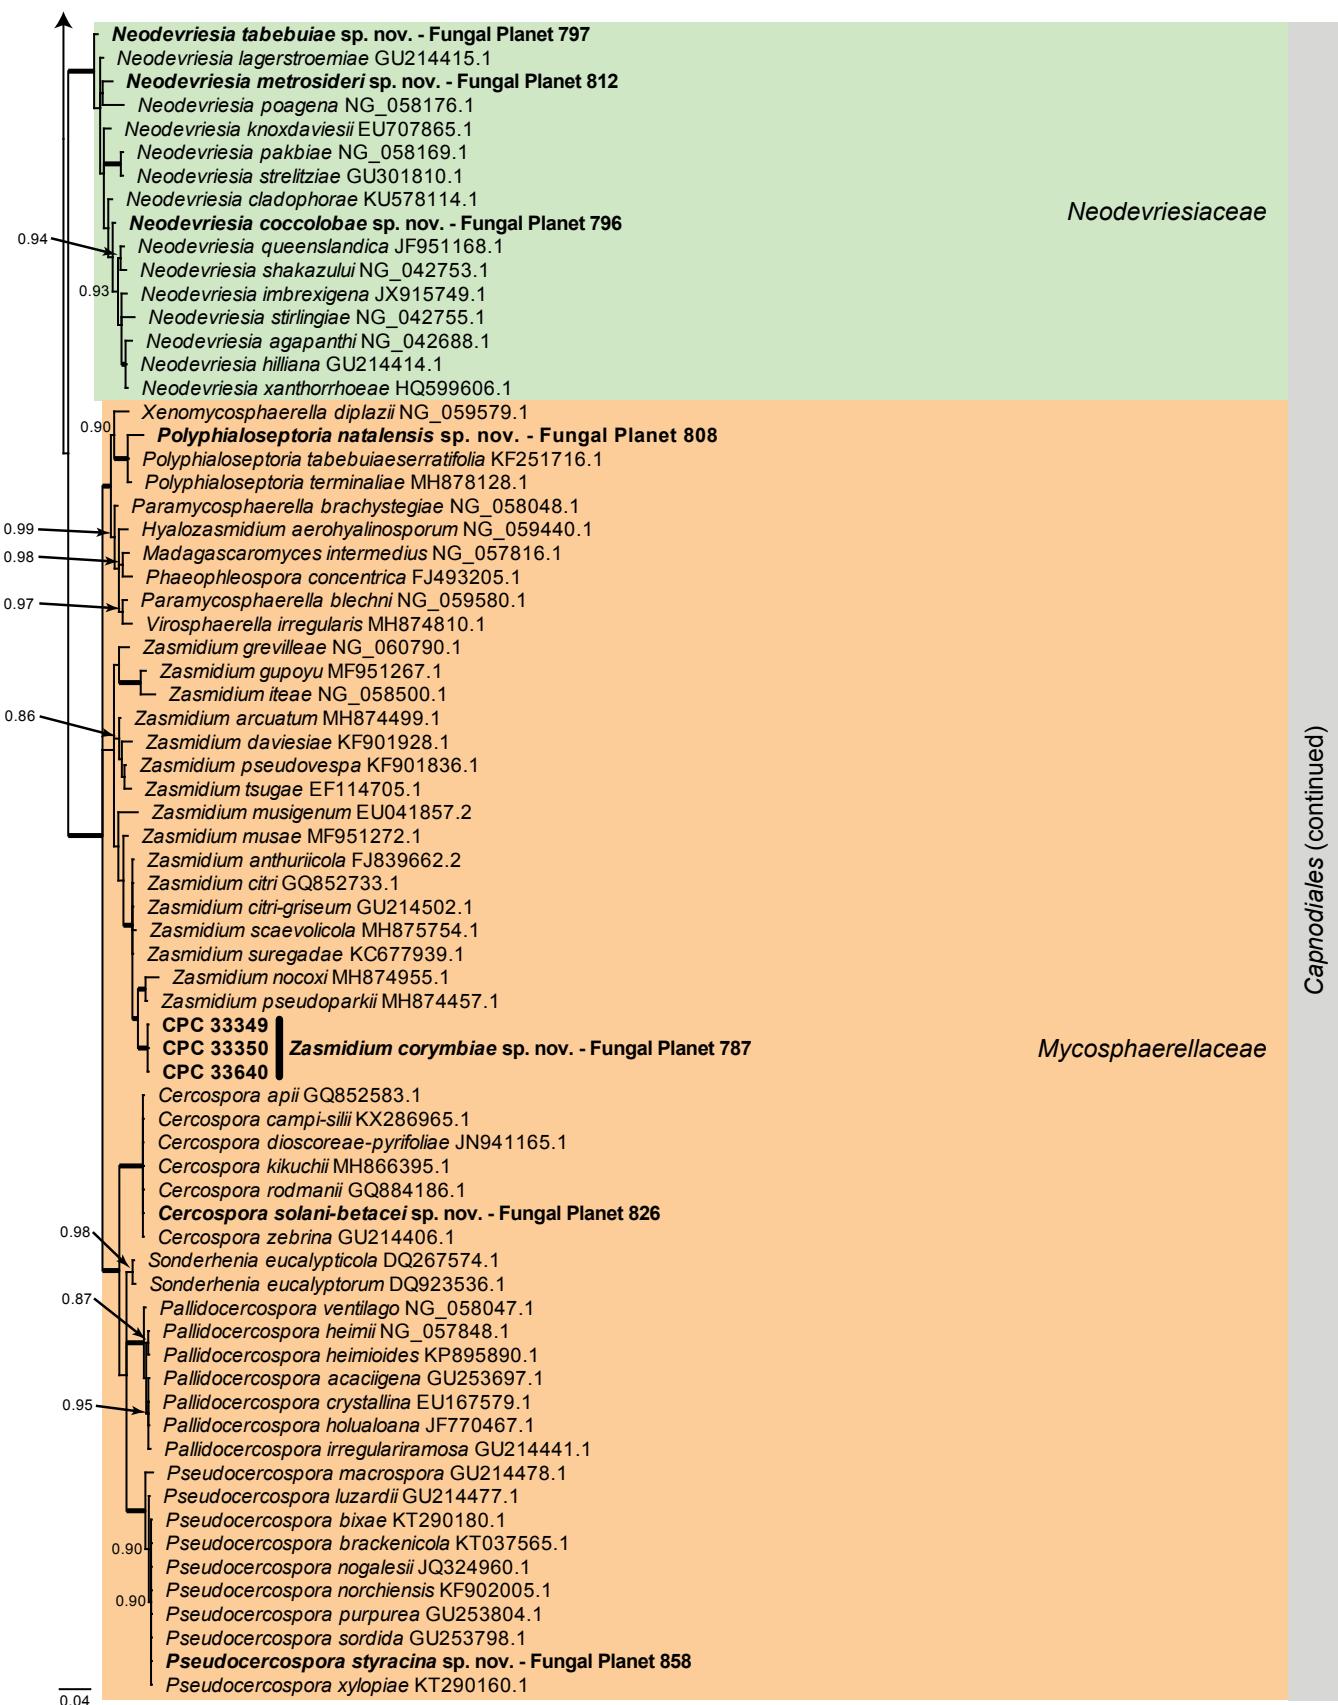

Overview Dothideomycetes phylogeny – part 1

Consensus phylogram (50 % majority rule) of 2478 trees resulting from a Bayesian analysis of the LSU sequence alignment (206 taxa including outgroup; 801 aligned positions; 464 unique site patterns) using MrBayes v. 3.2.6 (Ronquist et al. 2012). Bayesian posterior probabilities (PP) > 0.84 are shown at the nodes and thickened lines represent nodes with PP = 1.00. The scale bar represents the expected changes per site. Families and orders are indicated with coloured blocks to the right of the tree. GenBank accession and/or Fungal Planet numbers are indicated behind the species names. The tree was rooted to *Candida broadrunensis* (GenBank KY106372.1) and the taxonomic novelties described in this study for which LSU sequence data were available are indicated in bold face. The alignment and tree were deposited in TreeBASE (Submission ID S23436).

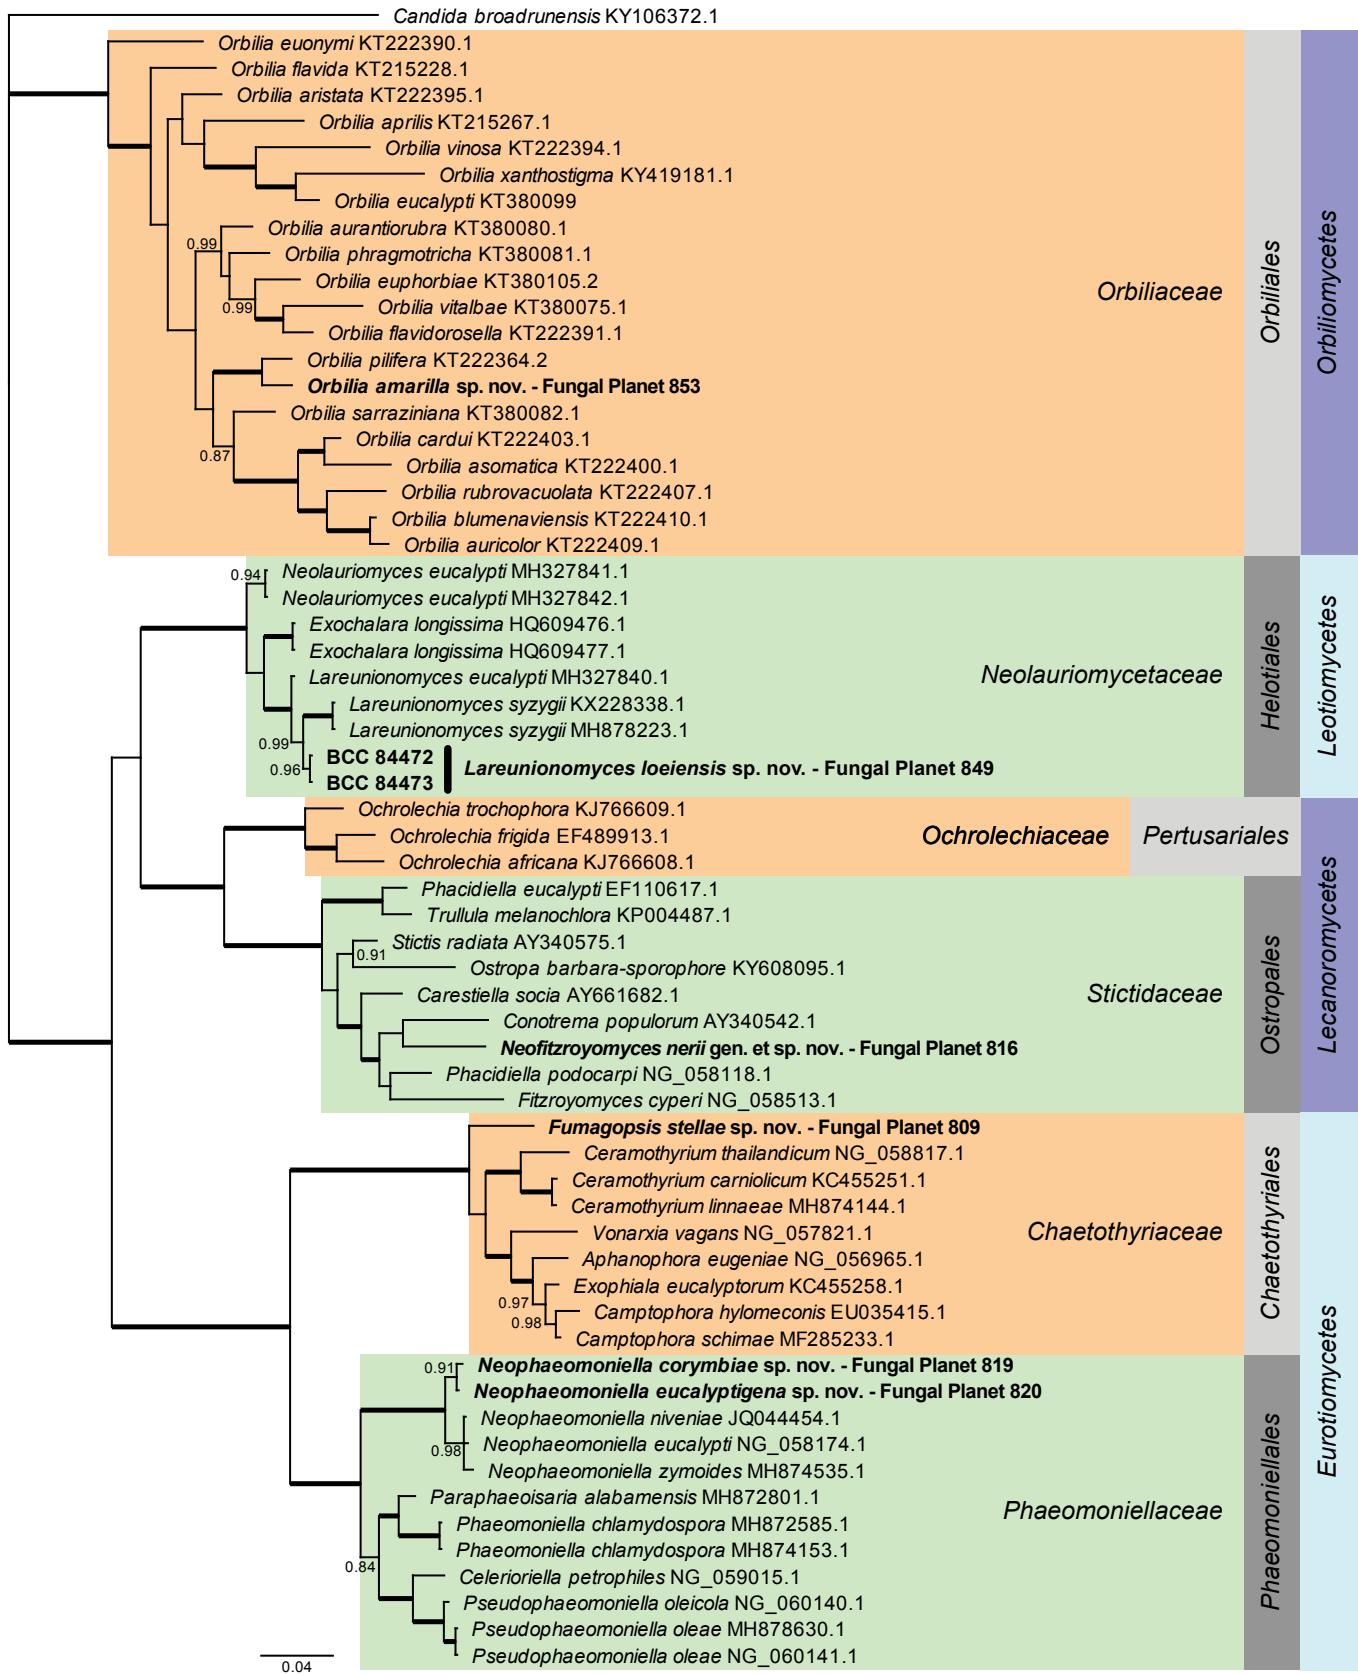

Overview Dothideomycetes phylogeny (cont.) – part 2

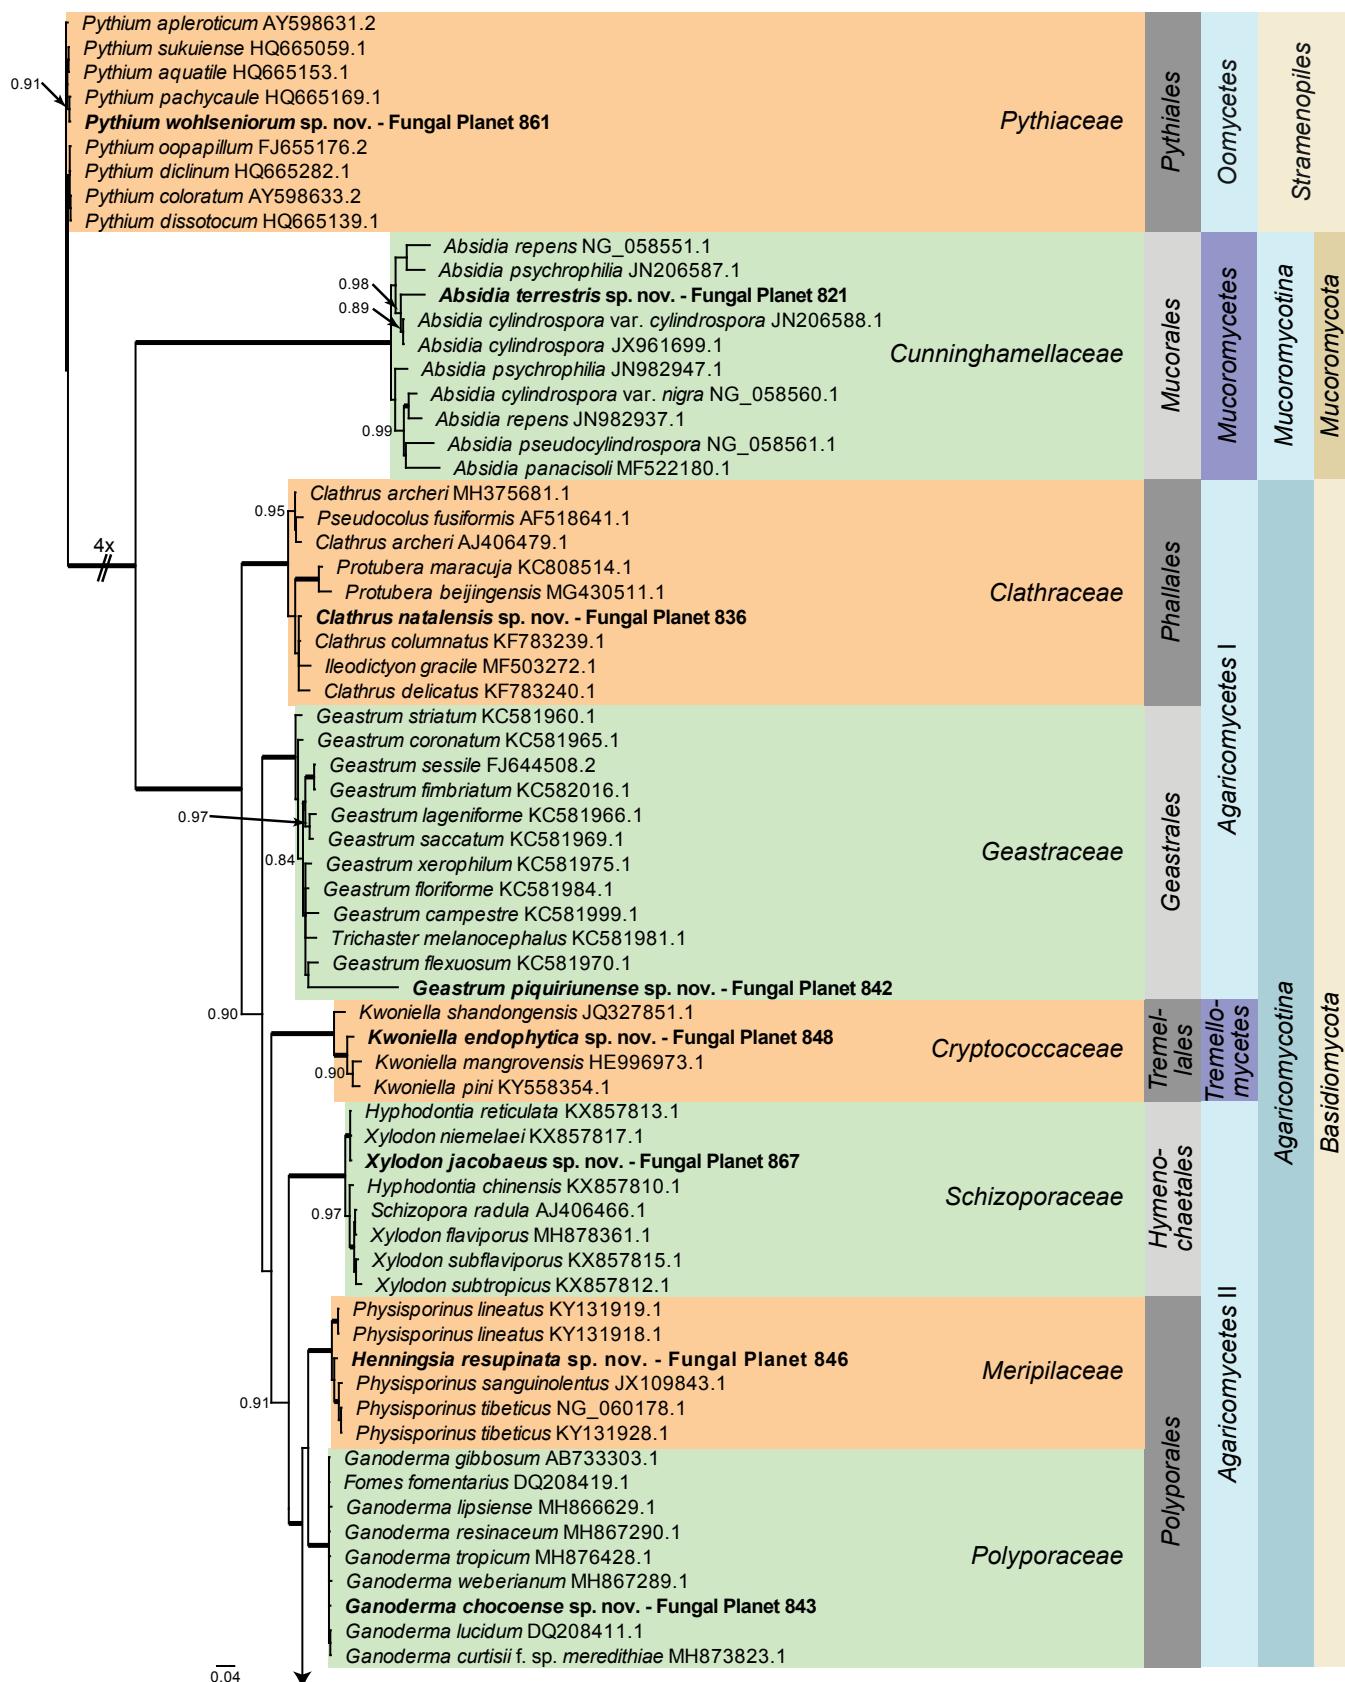

Capnodiales (continued)

Overview Dothideomycetes phylogeny (cont.) – part 3

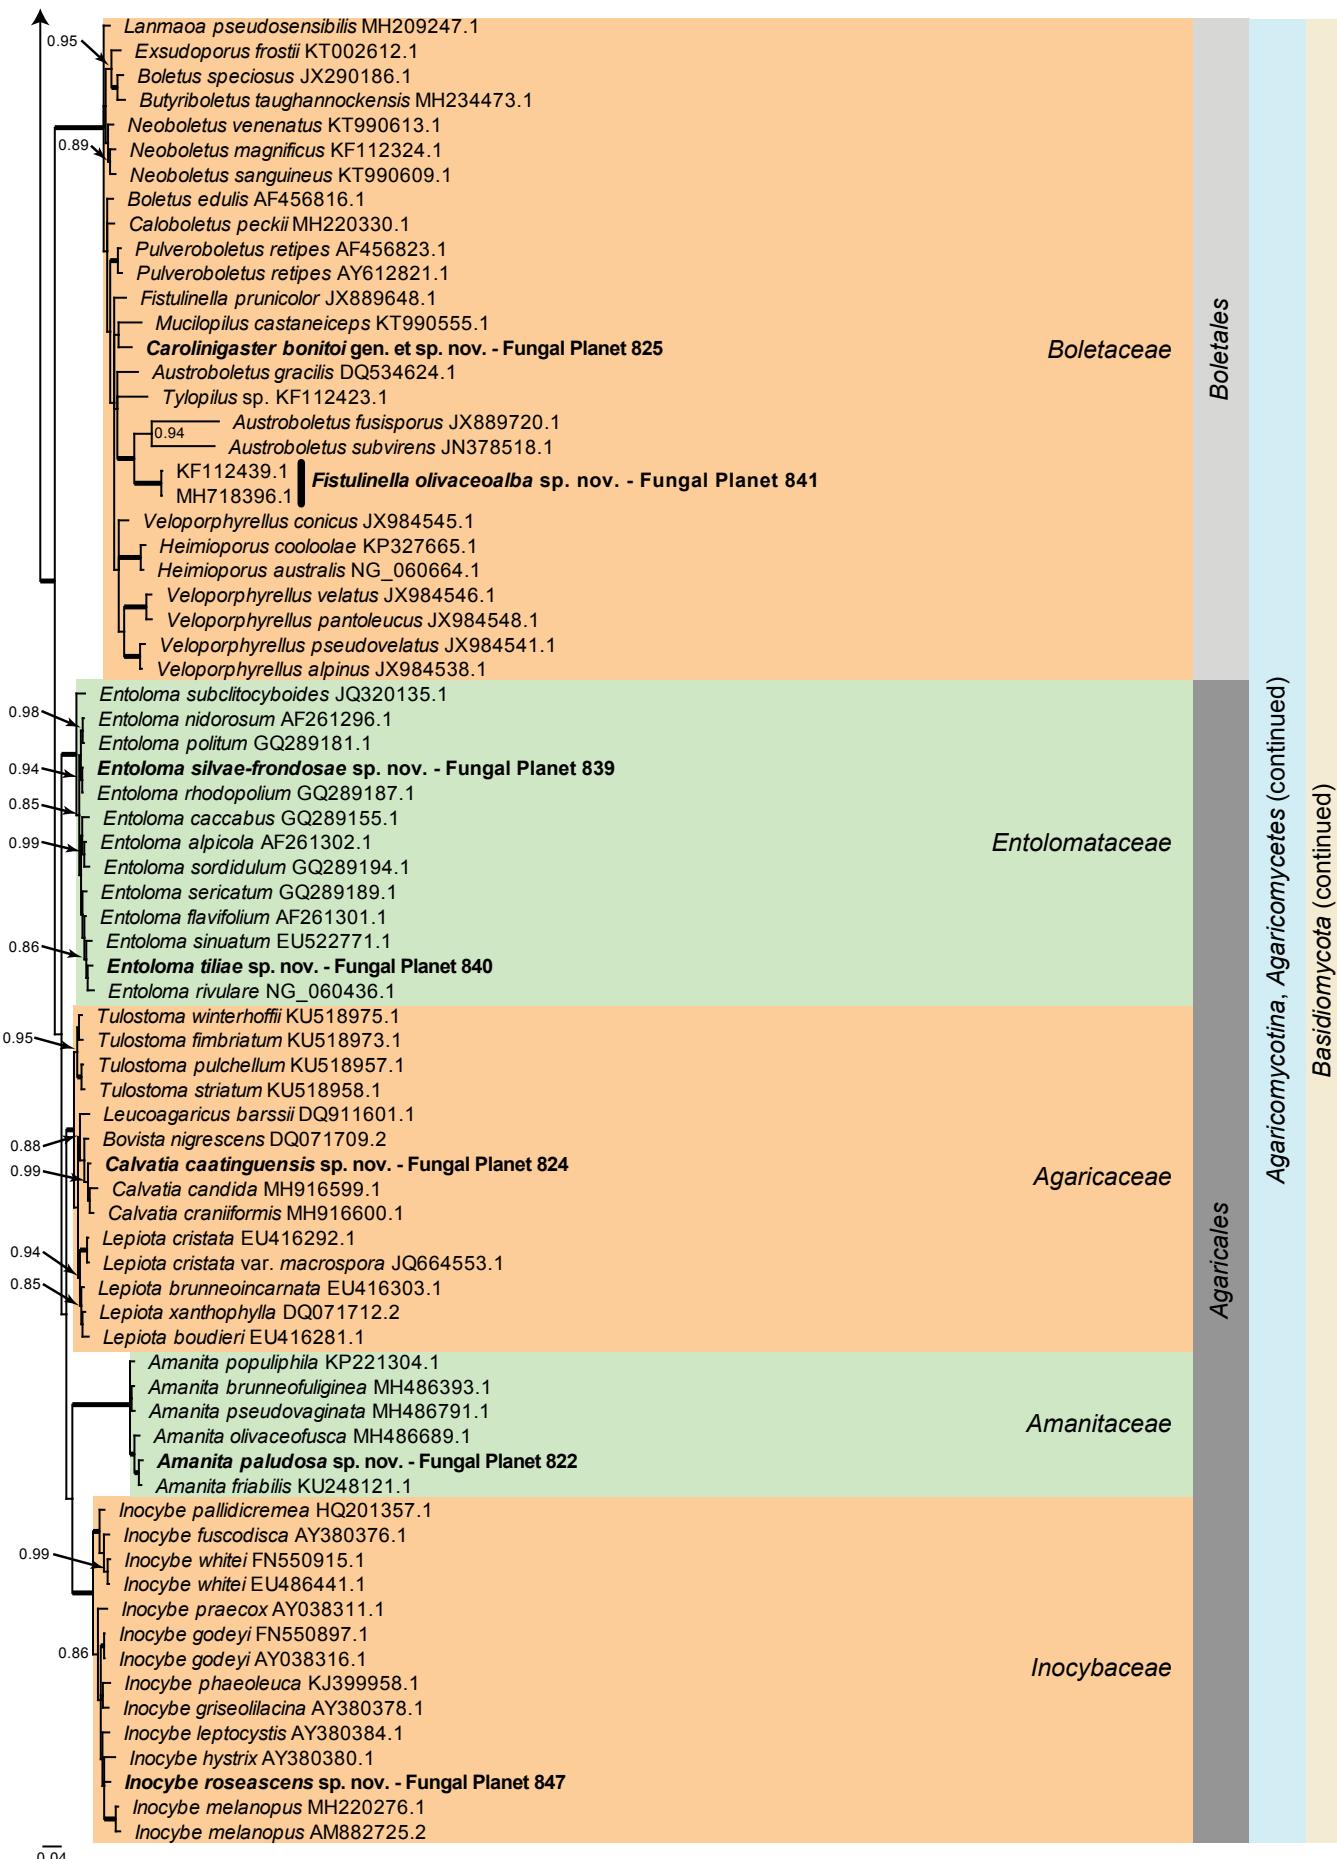

Overview *Orbiliomycetes*, *Leotiomycetes*, *Lecanoromycetes* and *Eurotiomycetes* phylogeny

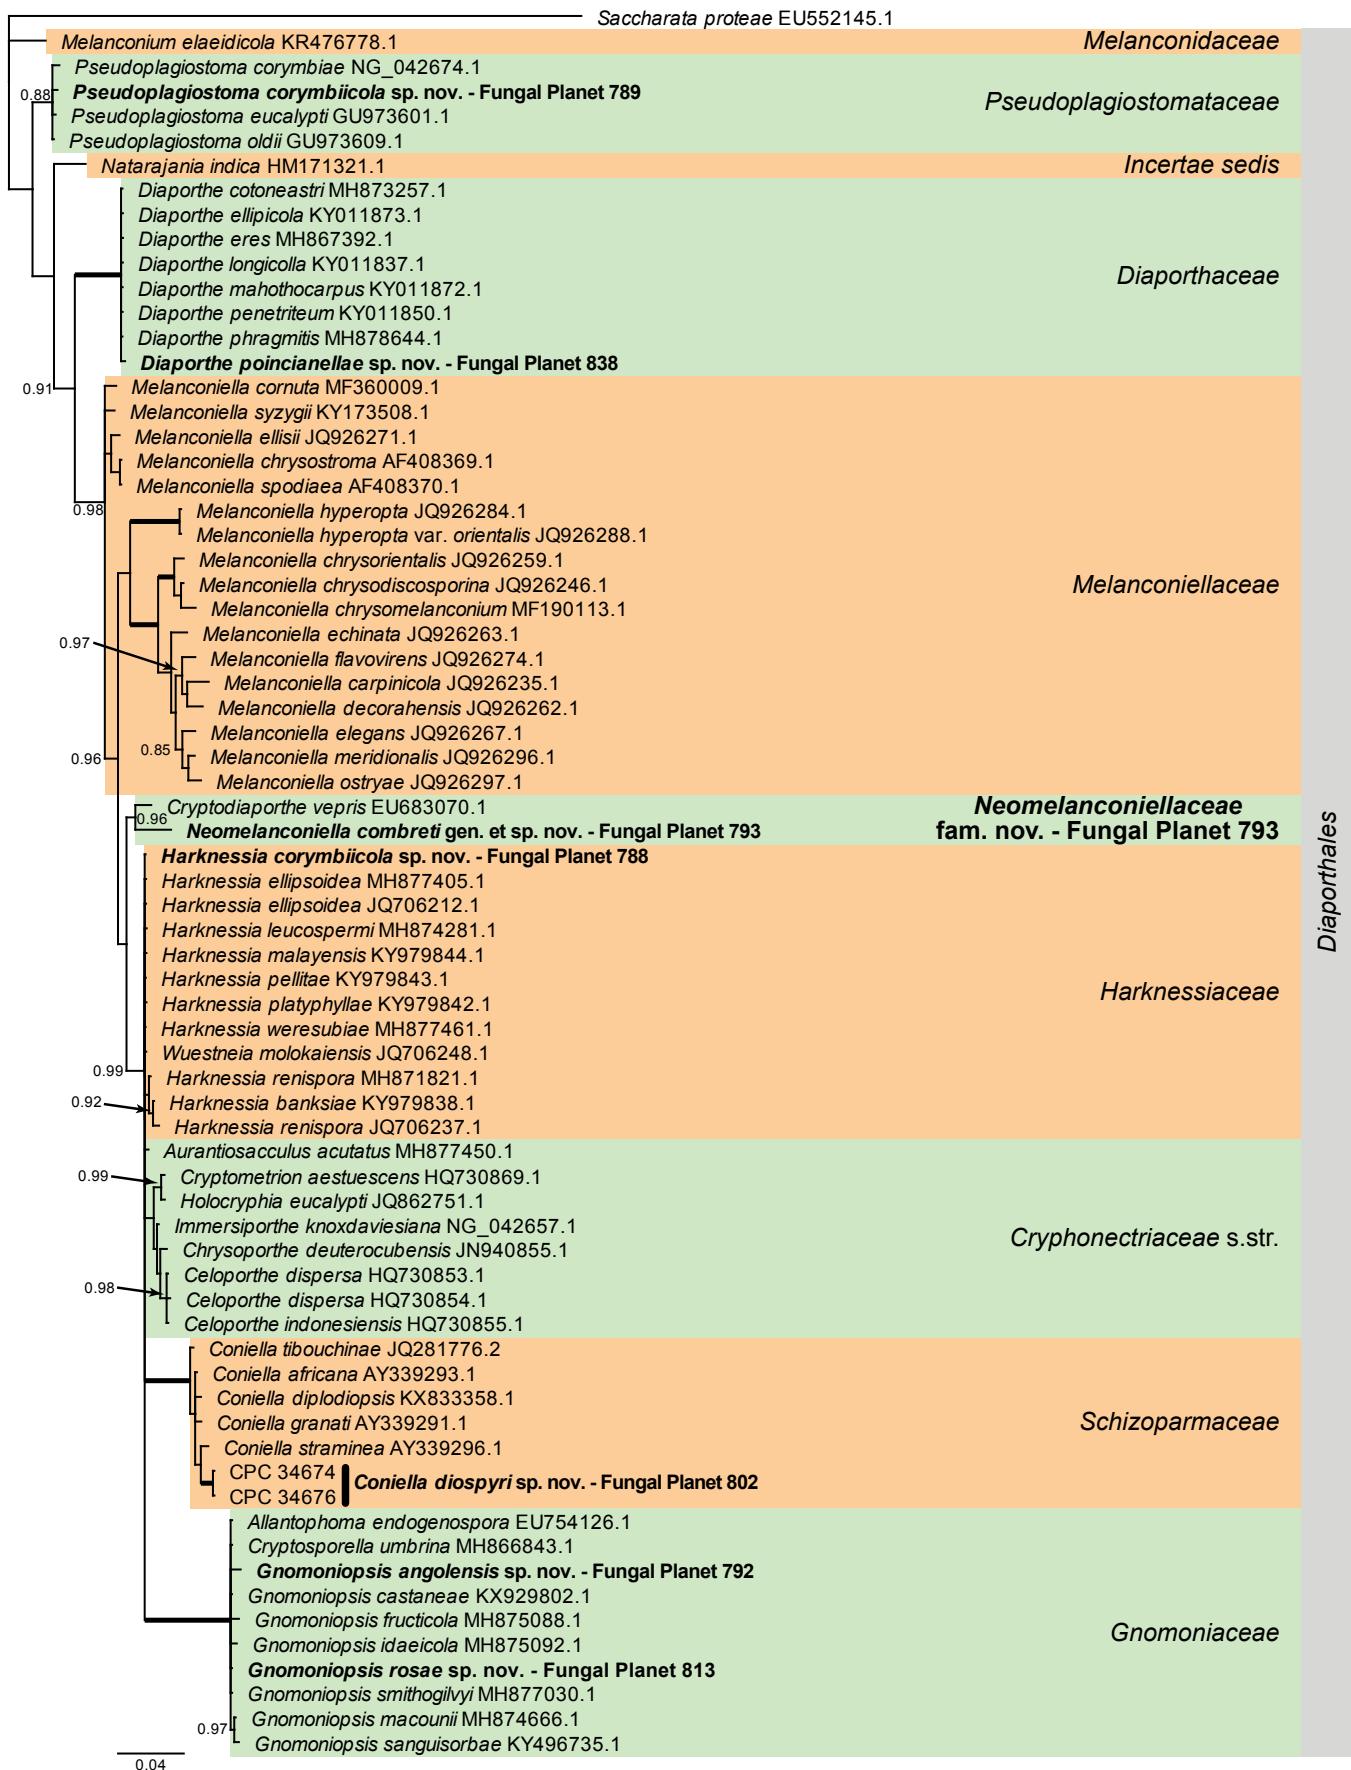

Consensus phylogram (50 % majority rule) of 12452 trees resulting from a Bayesian analysis of the LSU sequence alignment (78 taxa including outgroup; 829 aligned positions; 360 unique site patterns) using MrBayes v. 3.2.6 (Ronquist et al. 2012). Bayesian posterior probabilities (PP) > 0.84 are shown at the nodes and thickened lines represent nodes with PP = 1.00. The scale bar represents the expected changes per site. Families, orders and classes are indicated with coloured blocks to the right of the tree. GenBank accession and/or Fungal Planet numbers are indicated behind the species names. The tree was rooted to *Candida broadrunensis* (GenBank KY106372.1) and the taxonomic novelties described in this study for which LSU sequence data were available are indicated in **bold** face. The alignment and tree were deposited in TreeBASE (Submission ID S23436).

Overview Stramenopiles, Mucoromycota and Basidiomycota phylogeny – part 1

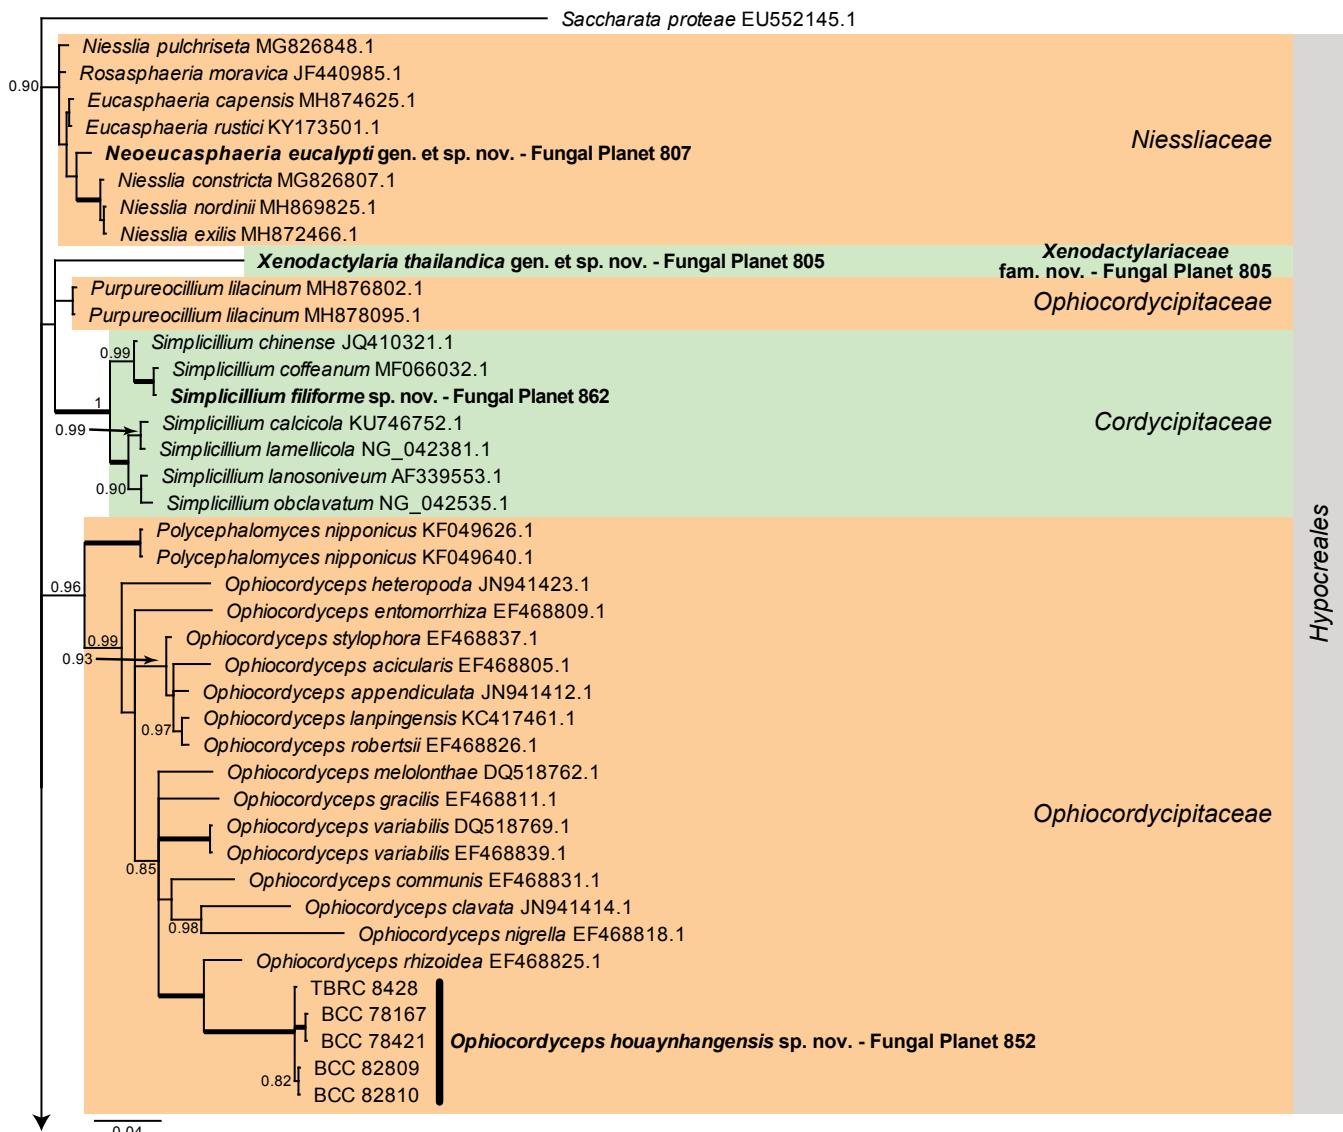

Consensus phylogram (50 % majority rule) of 113852 trees resulting from a Bayesian analysis of the LSU sequence alignment (141 taxa including outgroup; 980 aligned positions; 654 unique site patterns) using MrBayes v. 3.2.6 (Ronquist et al. 2012). Bayesian posterior probabilities (PP) > 0.84 are shown at the nodes and thickened lines represent nodes with PP = 1.00. The scale bar represents the expected changes per site. Families, orders, classes, subdivisions and phyla are indicated with coloured blocks to the right of the tree. GenBank accession and/or Fungal Planet numbers are indicated behind the species names. The tree was rooted to the Stramenopiles clade and the taxonomic novelties described in this study for which LSU sequence data were available are indicated in bold face. The alignment and tree were deposited in TreeBASE (Submission ID S23436).

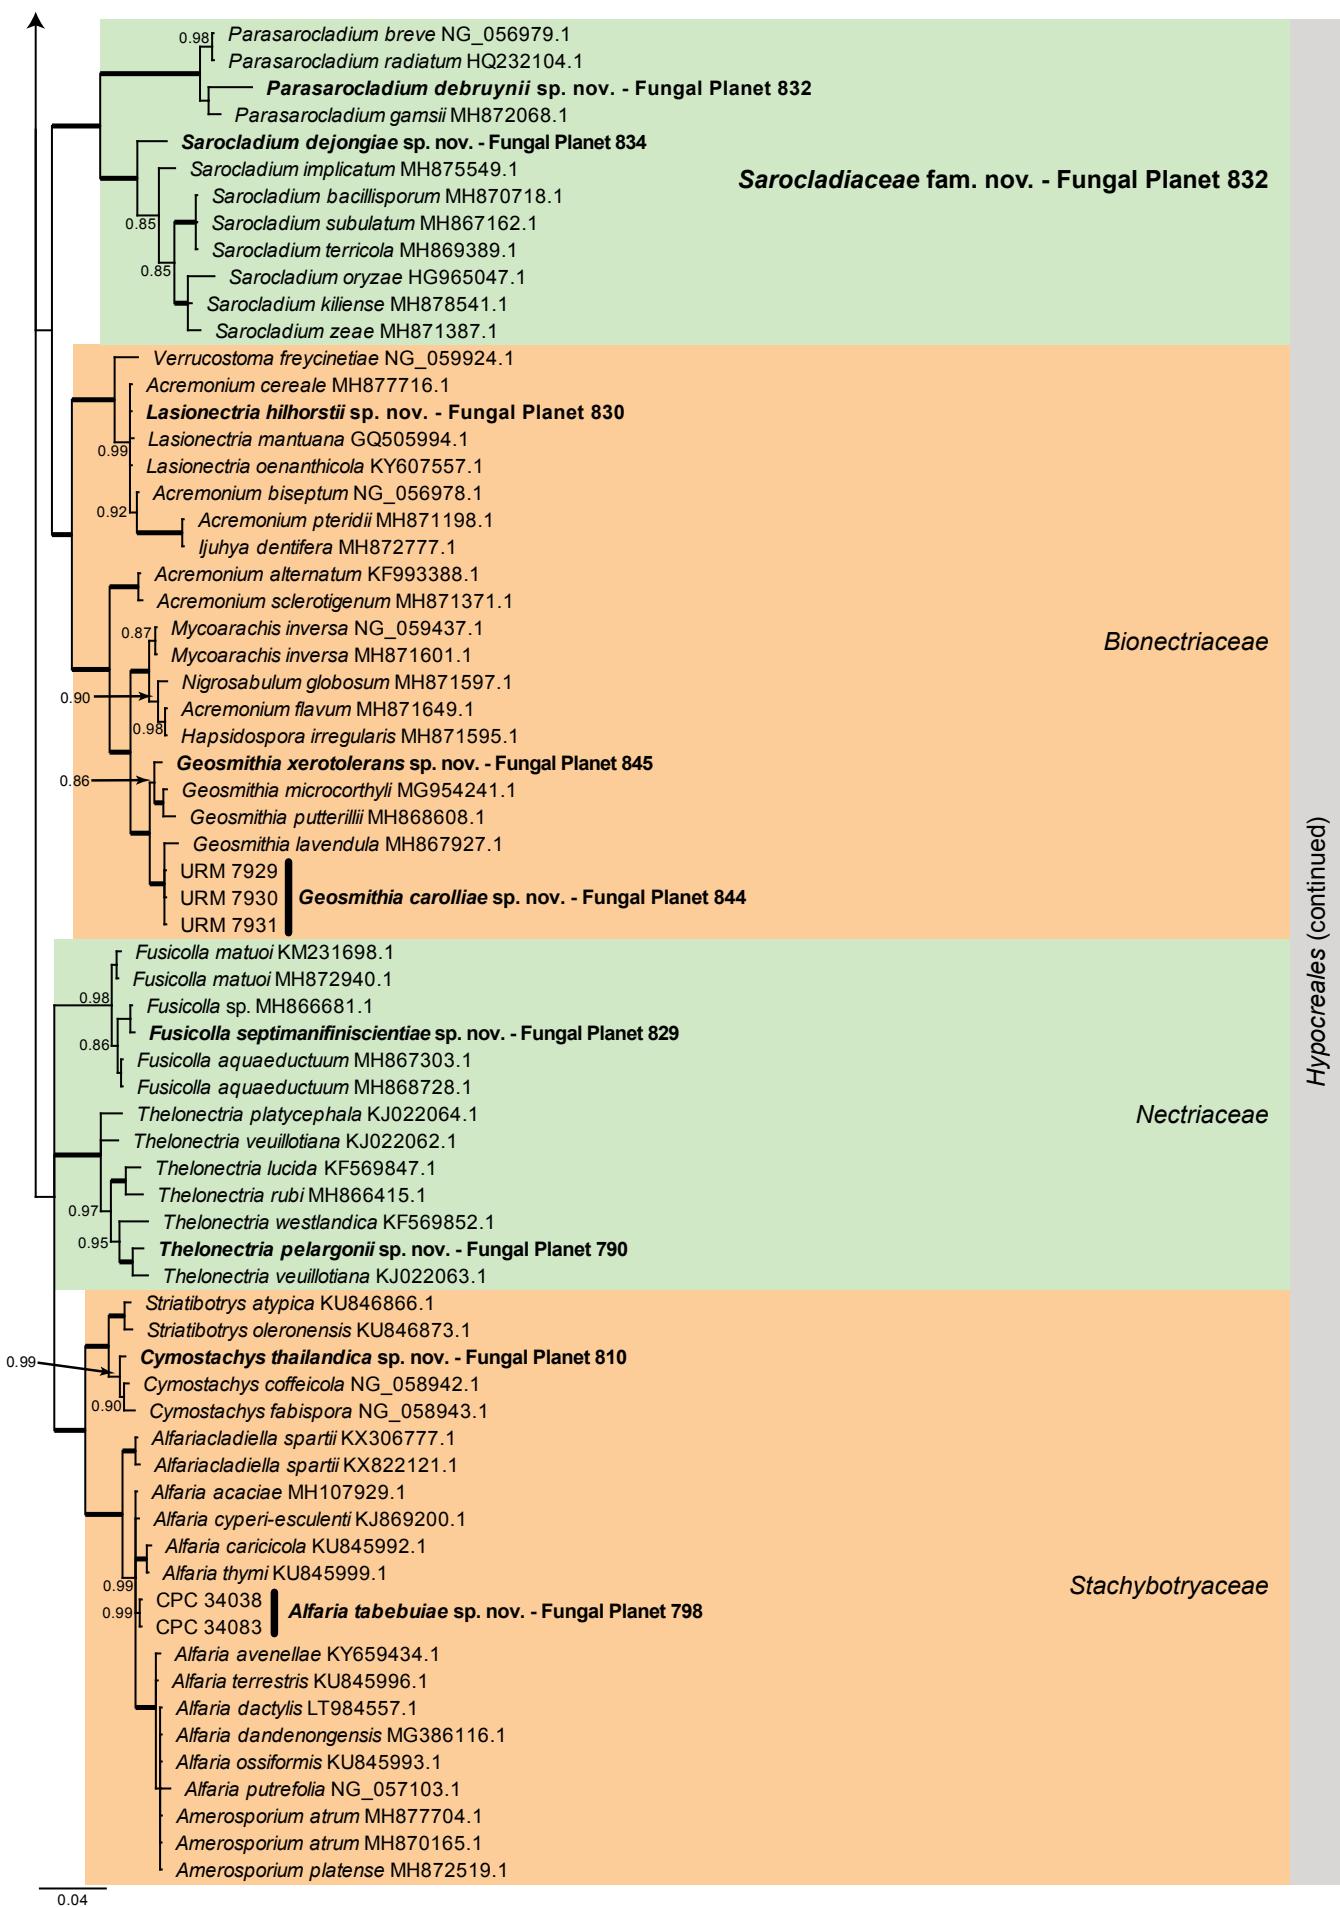

Overview Diaporthales (Sordariomycetes) phylogeny

Consensus phylogram (50 % majority rule) of 1052 trees resulting from a Bayesian analysis of the LSU sequence alignment (71 taxa including outgroup; 768 aligned positions; 176 unique site patterns) using MrBayes v. 3.2.6 (Ronquist et al. 2012). Bayesian posterior probabilities (PP) > 0.84 are shown at the nodes and thickened lines represent nodes with PP = 1.00. The scale bar represents the expected changes per site. Families and orders are indicated with coloured blocks to the right of the tree. GenBank accession and/or Fungal Planet numbers are indicated behind the species names. The tree was rooted to *Saccharata proteae* (GenBank EU552145.1) and the taxonomic novelties described in this study for which LSU sequence data were available are indicated in bold face. The alignment and tree were deposited in TreeBASE (Submission ID S23436).

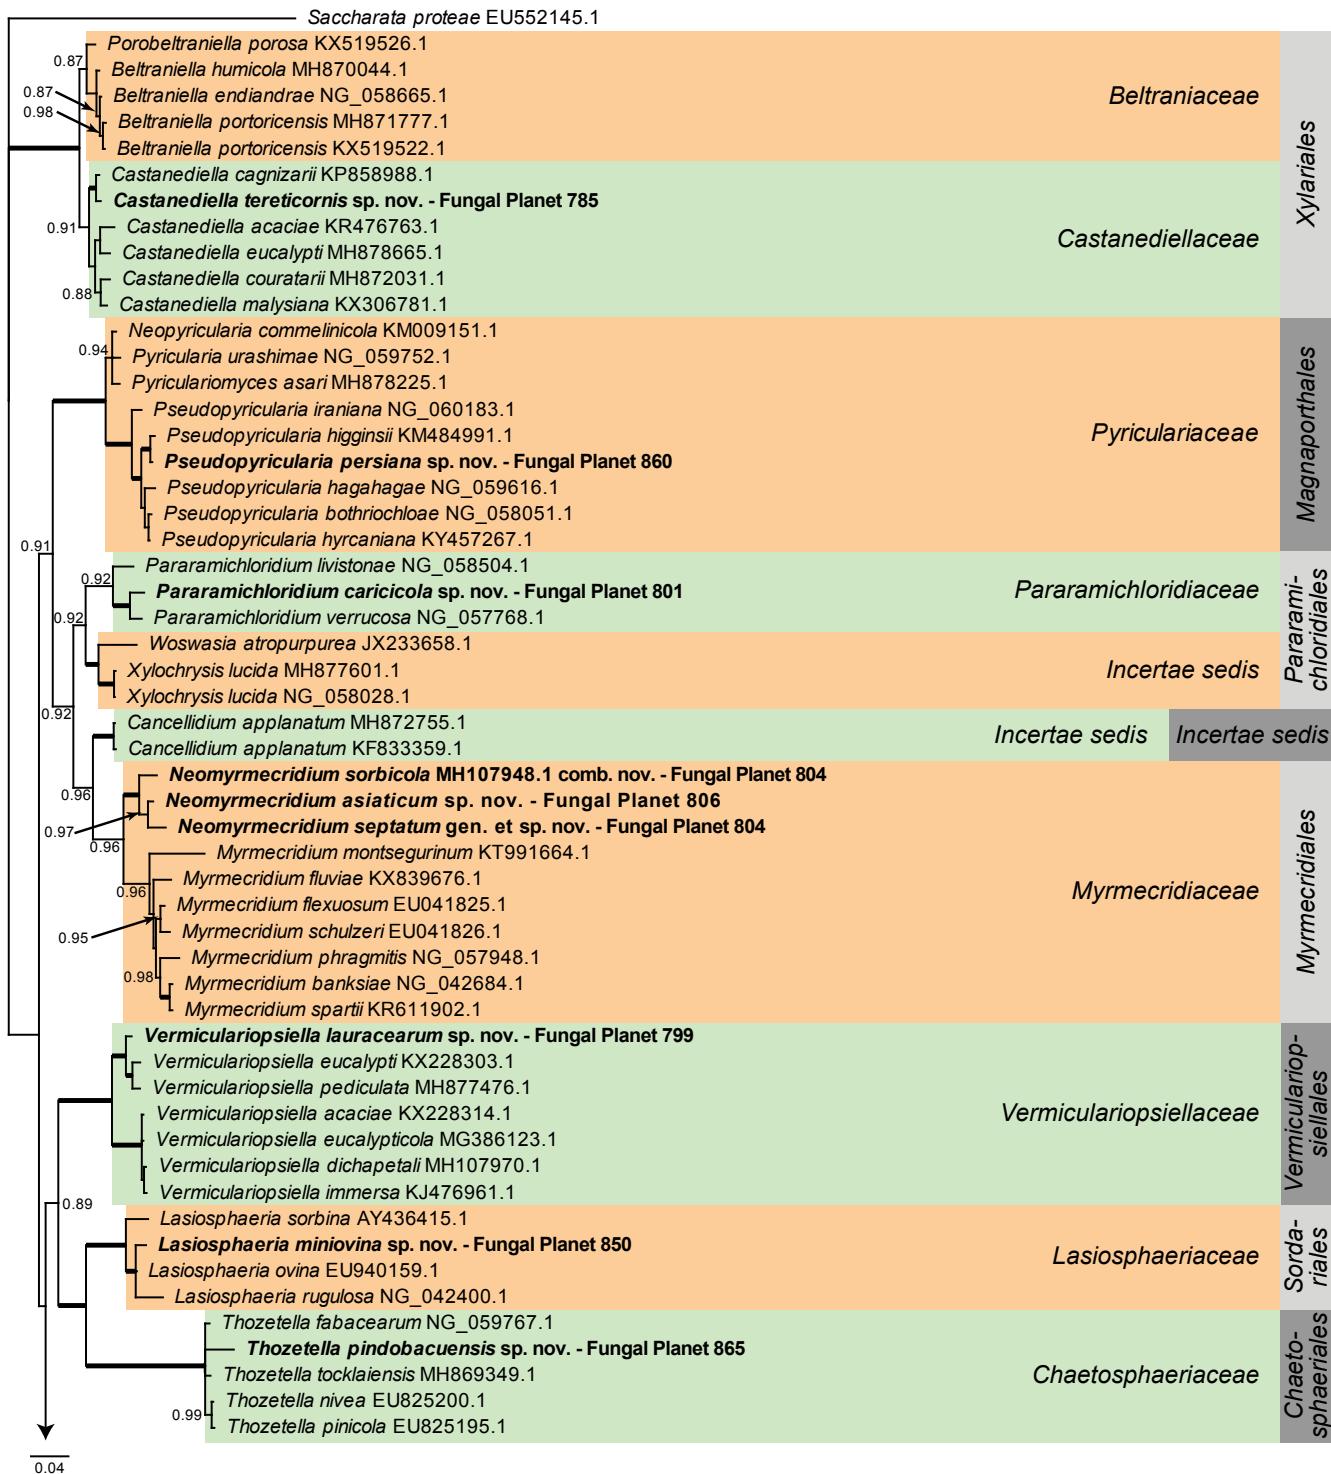

Overview Hypocreales (Sordariomycetes) phylogeny – part 1

Consensus phylogram (50 % majority rule) of 3078 trees resulting from a Bayesian analysis of the LSU sequence alignment (110 taxa including outgroup; 820 aligned positions; 339 unique site patterns) using MrBayes v. 3.2.6 (Ronquist et al. 2012). Bayesian posterior probabilities (PP) > 0.84 are shown at the nodes and thickened lines represent nodes with PP = 1.00. The scale bar represents the expected changes per site. Families and orders are indicated with coloured blocks to the right of the tree. GenBank accession and/or Fungal Planet numbers are indicated behind the species names. The tree was rooted to *Saccharata proteae* (GenBank EU552145.1) and the taxonomic novelties described in this study for which LSU sequence data were available are indicated in bold face. The alignment and tree were deposited in TreeBASE (Submission ID S23436).

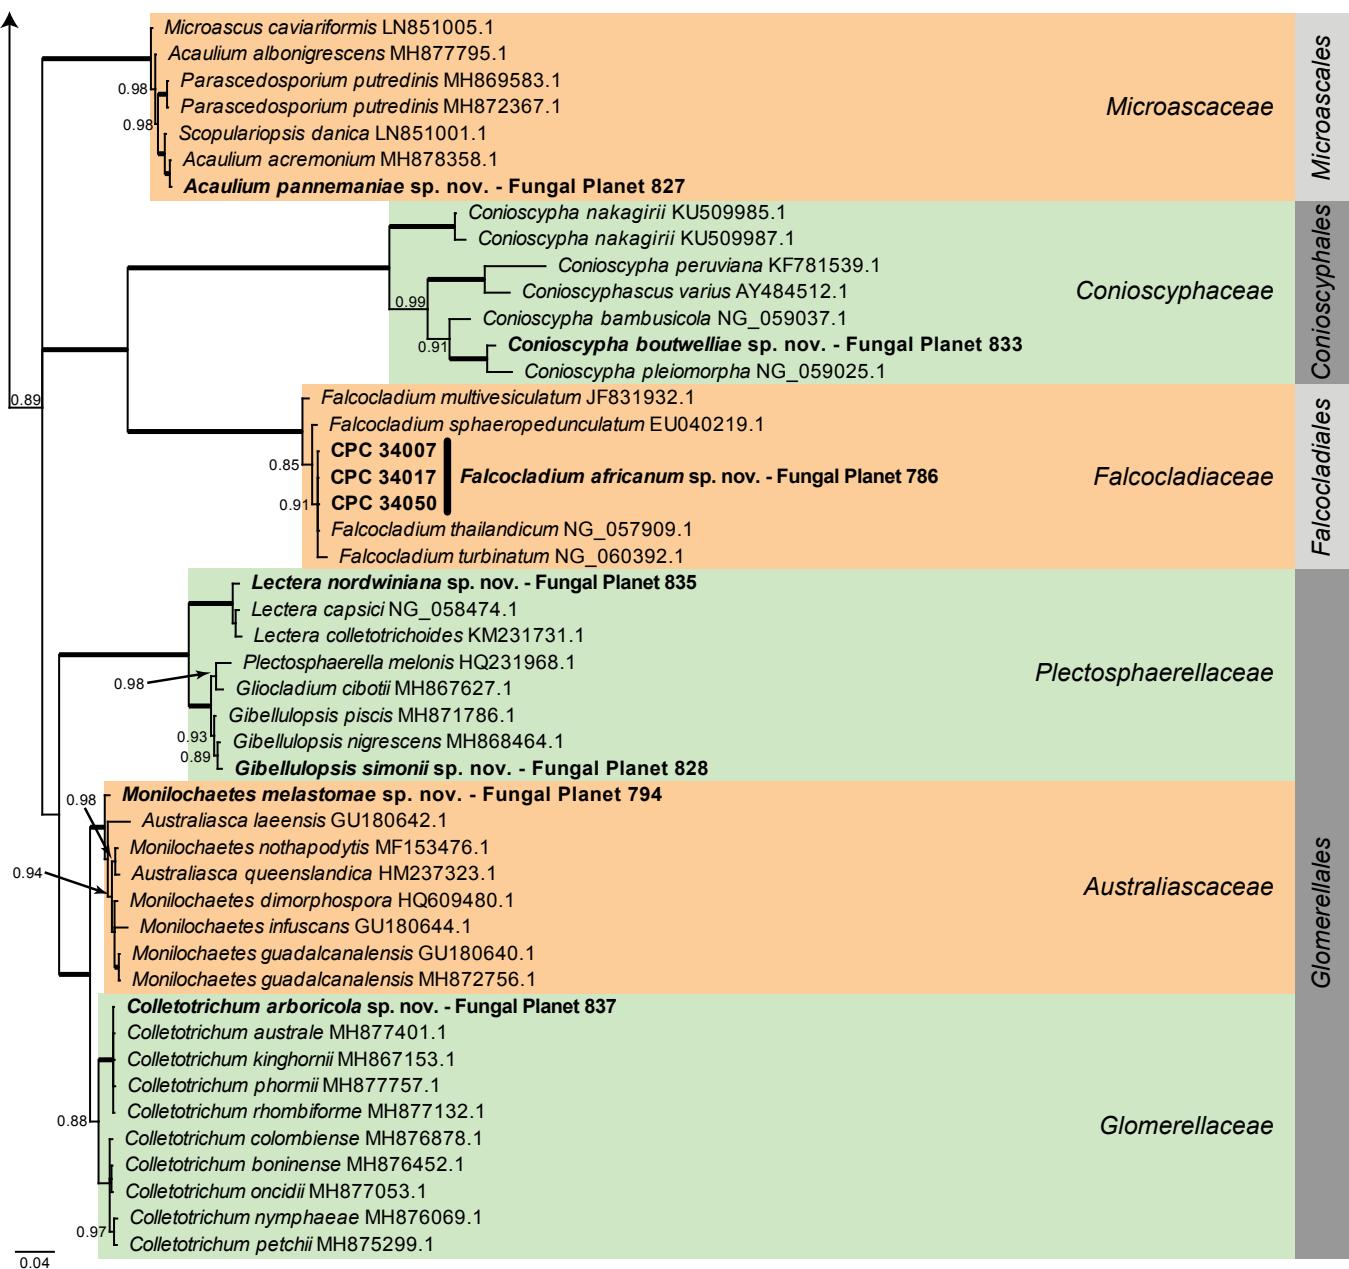

Hypocreales (continued)

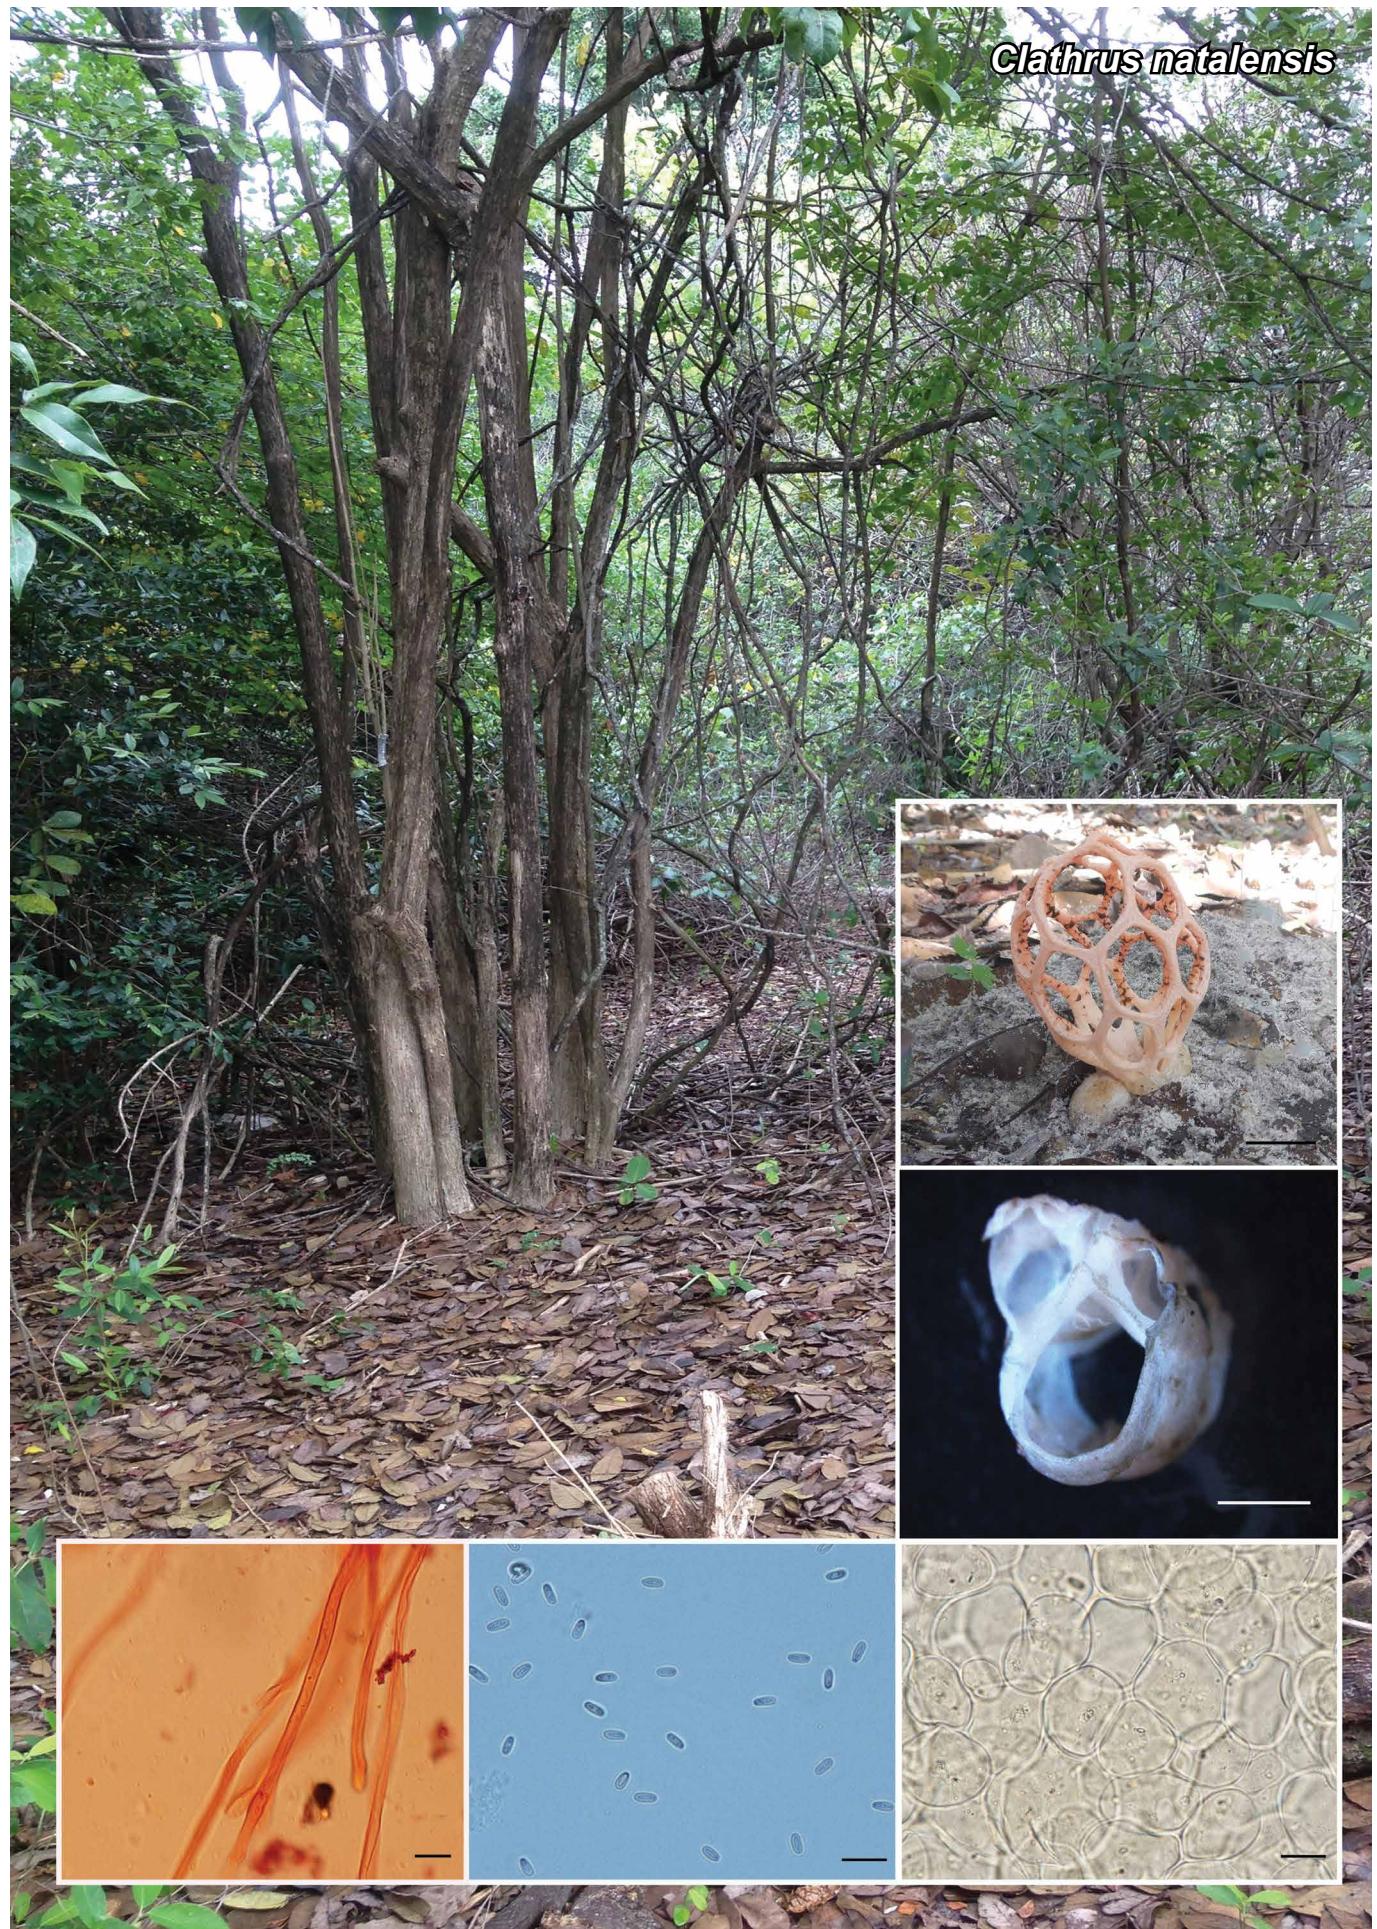

Overview other orders (Sordariomycetes) phylogeny – part 1

Consensus phylogram (50 % majority rule) of 452 trees resulting from a Bayesian analysis of the LSU sequence alignment (102 taxa including outgroup; 782 aligned positions; 396 unique site patterns) using MrBayes v. 3.2.6 (Ronquist et al. 2012). Bayesian posterior probabilities (PP) > 0.84 are shown at the nodes and thickened lines represent nodes with PP = 1.00. The scale bar represents the expected changes per site. Families and orders are indicated with coloured blocks to the right of the tree. GenBank accession and/or Fungal Planet numbers are indicated behind the species names. The tree was rooted to *Saccharata proteae* (GenBank EU552145.1) and the taxonomic novelties described in this study for which LSU sequence data were available are indicated in **bold** face. The alignment and tree were deposited in TreeBASE (Submission ID S23436).

Overview other orders (Sordariomycetes) phylogeny (cont.) – part 2

Fungal Planet 836 – 13 December 2018

Clathrus natalensis G.S. Medeiros, Melanda, T.S. Cabral, B.D.B Silva & Baseia, sp. nov.

Etymology. Named in reference to the type locality, Natal City.

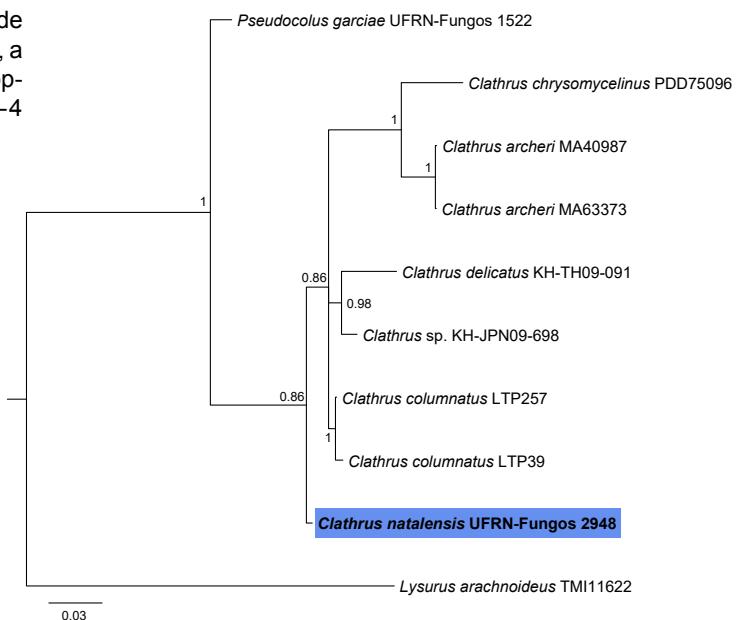

Classification — *Clathraceae*, *Phallales*, *Phallomycetidae*.

Immature basidiomata subglobose, 13–18 × 16–22 mm, greyish white (12A1–12B1 KW) with a single and thick rhizomorph greyish white (12A1–12B1 KW). Expanded basidiomata obovate to subglobose 46–95 × 24–71 mm. Arm meshes pentagonal to hexagonal, rugose at the beginning of development, becoming smooth afterwards, 32–90 × 20–70 mm, dull red to pinkish white (8B3–8A2), transverse section of an arm shows 3–4 tubes subglobose, elongated to piriform. *Pseudostipe* absent. Gleba mucilaginous, in all inner part of arms, olive brown (KW 4F4), with an unpleasant smell. Volva 50–140 × 10–40 mm, greyish white (12A1–12B1 KW), with thick rhizomorph, greyish white (12A1–12B1 KW). Basidiospores cylindrical, 4.6–5.6 × 1.9–2.7 µm ($5.2 \pm 0.4 \times 2.3 \pm 0.3 \mu\text{m}$; Qm = 2.29; n = 30 spores), wall ≤ 0.7 µm, smooth, hyaline in KOH. Arms exhibiting subglobose to globose and pyriform cells, 19.5–45.6 × 13–33.5 µm, wall ≤ 2.2 µm diam, hyaline. Volva composed of filamentous hyphae, 2.7–5.2 µm diam, wall ≤ 1.1 µm diam. Rhizomorph composed of filamentous hyphae, 3.2–4.7 µm diam, wall ≤ 0.9 µm diam.

Typus. BRAZIL, Rio Grande do Norte, Natal, Centro de Biociências, on soil with litter, 5 Apr. 2017, G.S. Medeiros (holotype UFRN-Fungos 2948, isotype UFRN-Fungos 2947, paratype UFRN-Fungos 2946, ITS and LSU sequences GenBank MH107232 and MH107235, MycoBank MB824737).

Notes — *Clathrus natalensis* was found in a remnant of Atlantic rainforest at the Universidade Federal do Rio Grande do Norte (UFRN) and is characterised by robust basidiomata, a pale red colouration, rugose arms at the beginning of development, becoming smooth afterwards, with the presence of 3–4

tubes in transverse section. This species presents similarities with *Clathrus cristatus* with the colour of the arms and mesh arrangement, but that presents basidiomata with crests along the arm edges (Fazolino et al. 2010), a characteristic absent in *C. natalensis*. In a BLASTn search, the ITS sequence obtained in this study has 94 % similarity to *Clathrus ruber* (GenBank GQ981501). However, *C. ruber* can easily be distinguished by the bright red colour, smaller meshes, and the immature basidiome marked by reticulations (Dring 1980). In the phylogenetic analysis, *C. natalensis* does not group with any species available on GenBank; in fact, they are clearly morphologically different. *Clathrus columnatus* and *C. archeri* show distinct receptacle arrangements, columnar in the first, and united arms below with pointed tips initially attached in the latter (Bosc 1811, Dring 1980); *C. crysomycelinus* and *C. delicatus* have white basidiomata, the first differs by a glebifer attached at the junction of the arms, and the second by a smaller receptacle (up to 25 mm high × 15 mm wide) and deep grooves in the outer face of the arms (Möller 1895, Dring 1980) – characteristics absent in *C. natalensis*. Thus, both morphological characters and the phylogenetic analysis separate *C. natalensis* from the already known species.

Colour illustrations. Brazil, Universidade Federal do Rio Grande do Norte, Centro de Biociências, locality where the type species was collected; basidiomata, transverse section of an arm showing the tubes, subglobose to globose and pyriform cells on arm, smooth spores, and filamentous hyphae in the rhizomorph. Scale bars = 20 mm (basidiomata), 2 mm (tubes), 10 µm (cells on arm, spores and rhizomorph hyphae). All morphology photos from the holotype UFRN-Fungos 2948.

Phylogenetic tree obtained with MrBayes v. 3.1.2. (Huelsenbeck & Ronquist 2001) using ITS, nuc-LSU and *atp6* (MK035869), under GTR+G (ITS/nucLSU) and HKY+G models (*atp6*), for 20 M generations. The type specimen is marked with a rectangle. Posterior probability values are indicated on the branches. TreeBASE submission ID 22520.
