#### Abstract

The *campos rupestres* form a mosaic of rocky savannas concentrated mainly along the *Espinhaço* chain, on the Brazilian shield. Though the *Serra de São José* lies over 100 km to the south of the *Espinhaço* chain, the *campo rupestre* flora of this small range harbors several endemic plant taxa. The provided checklist is the result of two decades of floristic research complemented with data from herbaria and literature. The flora is compared with the results of several other pertinent surveys. A total of 1,144 vascular plant species, representing 50.3 species/km<sup>2</sup>, were documented to date in the São José range, representing a species-richness per unit area over five times greater than other known *campo rupestre* floras. The most species-rich families were the Asteraceae (126 species), Orchidaceae (106), Melastomataceae (63), Leguminosae (60), Cyperaceae (45), Poaceae (41), Rubiaceae (37), Myrtaceae (28), Bromeliaceae (27), Eriocaulaceae (23), Lamiaceae (23), and Malpighiaceae (22).

#### Introduction

The *Serra de São José* (21°3'-7' S, 44°6'-13' W) is a small quartzite mountain range just northeast of the town of Tiradentes and west of Prados, state of Minas Gerais, Brazil (Figure 1). The local climate is characterized by rainy summer and arid winter, as exemplified the climate diagram from São João del Rey (6 km from the range, Figure 2). The range is recognized as an area of extreme importance for nature conservation within the state of Minas Gerais (PROBIO 2004). Apart from their relatively large species richness, the *campo rupestre* and forest biotas of the *Serra de São José* harbor many endemic and endangered species, and this fact alone justifies the range as a priority area for conservation at both the state and federal levels.

Historically the *Serra de São José* range lay in the path of several field naturalists who travelled into the hinterland and collected botanical material on their expeditions in the late 18th and early 19th Centuries. Several plant names were dedicated to these collectors. *Langsdorffia hypogaea* and *Eugenia langsdorffii* were dedicated to Georg Heinrich von Langsdorff, who collected on the *Serra de São José* between 1774 and 1852.

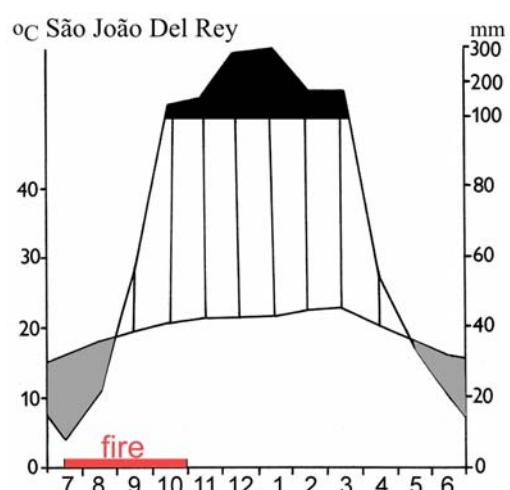

**Figure 1.** Location of the São José range in Minas Gerais and in Brazil.

Carl Friedrich Philippe von Martius collected in the *Serra de São José* during January of 1818, and his specimens are deposited in Vienna, St. Petersburg, London, Leiden, and Leipzig. Several species which occur in the range were described in Martius' monumental *Flora Brasiliensis* and other works, for instance *Psittacanthus robustus*, *Barbacenia (Aylthonia) tomentosa*, and

## LISTS OF SPECIES

*Jacaranda paucifoliata*. Other botanists who collected in the Serra de São José according to the Flora Brasiliensis include Anders Fredrik Regnell (collection years: 1807–1884), Solomon Eberhard Henschen (collection years: 1877–1930), and Friedrich Sellow (collection years: 1818–1820), the latter of which was awarded with at least the following taxa, all of which occur in the Serra de São José: *Miconia sellowiana*, *Mandevilla sellowii*, *Anthurium sellowianum* and *Stachytarpheta sellowiana* (Figure 3). João Barbosa Rodrigues collected in the nearby Lenheiro range, only 6 km away, between 1842 and 1909, but it is not certain whether he collected in the Serra de São José as well. One of the founders of the Museu Nacional herbarium in Rio de Janeiro, Heinrich August Ludwig Riedel (collection years: 1790–1861), collected in the range between 1824 and 1825; *Gaylussacia riedelii* and *Rhynchospora riedeliana* were dedicated to him. Auguste François Marie Glaziou (collection years: 1833–1906) apparently collected in the range, but there are many erroneous and dubious data in collections attributed to him. The topotypic population of *Croton josephinus* (Figure 4) is restricted to the summit of the highest peak. The São José range is the type collection locality for several of the aforementioned species, plus, *Genlisea filiformis* and *Vellozia crinita*.

**Figure 2.** Climate diagram from the São João Del Rey station, only 6 km SW of the São José range. The most frequent period of savannic fires is also indicated.

At the end of the 19th Century, Astolpho Álvaro da Silveira, a very active field naturalist, visited and studied many mountain ranges of Minas Gerais. He wrote several books about various natural aspects of these mountains (for instance Silveira 1920; 1921; 1928; 1931), but all his writings are currently rare and very hard to find. Silveira was very interested in the Eriocaulaceae, a family which has its center of diversity in the campos rupestres – the main type of summit vegetation of the Serra de São José. Silveira's official collection, including material from the Serra de São José (located numbers range from 149–1,257), was acquired by the herbarium of the Museu Nacional in Rio de Janeiro (R), but several of his specimens sporadically appear in other herbaria in Brazil and abroad.

## LISTS OF SPECIES

In the 20th Century, most collections in the *Serra de São José* were rather sporadic, on occasions when naturalists visited the historic towns of Tiradentes, Prados or São João del Rey. Two of these naturalists collected more intensely, but their findings were never systematized: In 1936 the visit of Henrique Lahmeyer de Mello Barreto rendered collections (4,765–5,090 are the numbers located so far), with one probably mistyped collection number: 17,537 from the same date as his number 5,090 (NY, RB). In the 1950s and 60s, Apparicio Pereira Duarte collected intensely in the Range and his material is in many herbaria including the NY, R and RB. His located collection numbers (2,5469,033) are mostly in R and there is even a very large number (34,971) which may be yet another mistyping. So far we were able to locate only 104 of his specimens from the range.

Our study area is indicated in Figure 1. In 1986, as a student, the first author undertook an almost accidental visit to the summit above Tiradentes and, in the following year, began two decades of relatively intense botanizing, especially in the species-rich campo rupestre and on the cliff walls of the range. One of the first long trips was accompanied by Marcos Valério Peron, at that time a promising Myrtaceae taxonomist, who numbered several of our collections (currently in RB). The first author began by studying the Orchidaceae of the range (Alves 1991a), was compelled to describe several new plant species (Alves 1990a; 1991b; 1992a) and ended up overwhelmed by the species richness in other plant groups. In 1989 Ruy J. V. Alves began his post graduate studies of the range under the guidance of the second author, Jiří Kolbek, at the Institute of Botany, former Czechoslovak Academy of Sciences.

*Vellozia kolbekii* (Figure 5) was probably a significant early contribution (Alves 1992a). Since then some taxa described from the Range were renamed. For instance *Pelezia phallocallosa* Alves was renamed *Pachygenium phallocalosum* (R.J.V. Alves) Szlach., R. González and Rutk. (Szlachetko et al. 2001), but Leslie Garay (pers. comm.) considered it a synonym of *P. orthosepala* (Rchb. f. and Warm.) Schltr. Others ended up as synonyms (*Sarcoglottis caudata*

Alves = *S. simplex* (Griseb.) Schltr. (Stannard et al. 1995). After publishing the topotypic rediscovery of the endangered *Stachytarpheta sellowiana* Schau. in the Serra de São José (Atkins et al. 1996), we also found small populations in the Carrancas, Lenheiro and Ouro Branco ranges; at the time we did not know about the collection of Mello Barreto from 1936 (NY). For about a decade, the first author spent most of his time visiting the Range, mailing duplicates to specialists, and photographing over 5,000 slides (most of which are currently damaged by mold due to the humidity of Rio de Janeiro). However, there were unforgettable exceptions, exemplified by the kind treatment and keen sense of humor of Elsie Franklin Guimarães from the Rio Botanic Garden and Margarete Emmerich from the *Museu Nacional*: no matter how busy they were, they always put our plants under the binocular and accompanied us along the tortuous road towards determination.

**Figure 5.** Topotypic specimen of *Vellozia kolbekii* Alves (Velloziaceae), a species restricted to three campo rupestre ranges within a 50 km radius. Not collected. Photo: R. J. V. Alves

In 1996, when the first author assumed his current post at the Rio National Museum, collecting intensified slightly, because several students and a few colleagues accompanied some of the field trips and field courses of phytocoenology annually held in the *Serra de São José*. The exuberant diversity of the vegetation inspired some of these scholars to such an extent that they undertook formal studies in the Range: In 2001, Andréia

## LISTS OF SPECIES

Lúcia Pereira de Oliveira listed most of the Bromeliaceae from our collections in the Range as part of her Bachelor's degree in Biology, and this listing was incorporated herein. Débora Medeiros concluded her MSc in 2002, listing the Euphorbiaceae from cerrado and campo rupestre of the range, which lead to the description of a curious new species of *Croton* with entirely glabrous leaves: *C. arlineae* (Medeiros et al. 2002). This also inspired the development of her doctoral thesis: a revision of the Sect. *Medea* of *Croton* (Medeiros 2007; Medeiros et al. 2008), during which two further new species were found. In her MSc. thesis in 2005, Rosana Augstroze Rutter Drummond listed 56 species of Melastomataceae (Drummond et al. 2007) from the range, which also resulted in the discovery of a new species of *Cambessedesia* (Figure 6) described with the valuable cooperation of Angela Borges Martins and named after the town of Tiradentes (Alves et al. 2008). This spectacular plant is known only from two tiny populations adding to, at the most, fifty individuals, and is probably narrowly endemic.

**Figure 6.** *Cambessedesia tiradentensis* Alves, Drummond & A. B. Martins (Melastomataceae), a new species named after the town of Tiradentes, is known only from two small *campo rupestre* populations in the São José range. The holotype is from this specimen. Photo: R. J. V. Alves.

The PhD thesis of the first author included a floristic checklist of the Serra de São José with 595 species including lichens, bryophytes and vascular plants. This was published in a limited series (Alves 1992). Since then, several other researchers have worked in the Range, and some of them published their results. This work is neither complete nor final. We have concentrated mainly on the *campo rupestre* vegetation on the range summits, the vascular flora of which can be expected to harbor between 1,200 and 1,400 species.

In the survey of forest tree species from the southern foot of the São José range, by Oliveira-Filho and Machado (1993), sampling was limited to individuals with a basal trunk diameter  $\geq 5$  cm (the material is in the ESAL herbarium). Analysing tree species with trunk diameter at breast height  $>5$  cm in 18 evenly distributed belt transects totalling 0.9 ha, Gonzaga et al. (2008) found 130 species in the forests at the southern foot of the Serra de São José. Comparison of this partial flora with another 23 forest fragments in the region revealed affinities with forests of both higher and lower altitudes.

Gavilanes et al. (1995) listed 966 plant binomials belonging to 126 families for the *Serra de São José*, but collection numbers were not provided. In 2007, not even a single voucher specimen from the Range could be located in the PAMG/EPAMIG herbarium, where the material was mentioned to have been deposited. Furthermore the listing has some odd binomials: for instance among the ferns, *Anemia chlupata* and *A. striata*, which are coincident with codenames, written in Czech, from our field notebooks from September 1989 and accidentally printed in the PhD thesis of the first author. Our collections of these were determined later, respectively by Jefferson Prado and John T. Mickel, as *Anemia villosa* and *A. imbricata*.

In 1996 we guided Lea Scheinvar into the range in search of Cactaceae. The resulting collections in the RB herbarium should be viewed with caution: several species were collected in gardens in the town of Tiradentes and not in the Serra de São José as their tags indicate. The Cactaceae listed herein are exclusively from the range.

## LISTS OF SPECIES

Since the very beginning, our collections were intended to subsidize descriptions of vegetation and did not concentrate exclusively on Angiosperms. Hundreds of algal, moss, and lichen specimens were collected and sent to specialists. In 1990, when the lichen specimen Alves 1,118 (PRA) reached Teuvo Ahti in Helsinki, it turned out to be the second known collection of a new species, *Cladonia bahiana* Ahti, at the time still in press (Antonín Vězda, Czech Republic, personal comm.).

Lichenologists and bryologists from the Botanical Institute in São Paulo collected intensely in the range in 1993, but this expedition unfortunately never produced a lichen checklist. The actual lichen richness of the Range is considerable, and the few odd names we were able to compile make no justice to the actual lichen richness, and we list them herein with this *caveat*. Yano and Peralta (2008, in edit.) listed 114 Bryophyte species from the *Serra de São José*, including several new records for Brazil and for the state of Minas Gerais.

There were several other scientific studies directly inspired by the *Serra de São José* floristic and vegetation project. Valéria Cid Maia accompanied us on several field trips, and produced a survey of insect gall diversity from the range (Maia and Fernandes 2004).

### Material and methods

The study area is a small range which consists of several mountains with elevations from 900 to 1,430 m a.s.l. and passes, aligned from SSW to NNE, being less than 2 km wide and roughly 15 km long. The top of the range and a large part of its flanks are covered by *campo rupestre* vegetation, occasionally interrupted by gallery forest and small pockets of latossol with *cerrado*. A roughly 1 km wide belt of dry *cerrado* forest runs along the southern foot of the range, while the northern side is flanked mostly by plantations in previously *cerrado* area. Mean annual temperatures measured in São João Del Rei (6 km from the western extremity of the range, at a similar mean altitude) vary from 14 to 26°C (with absolute temperatures reaching 36°C and 1°C respectively). Winter temperatures atop the range can reach below freezing point (minus 3°C was

measured at 1250 m a.s.l. by Alves 1992) and frost is quite common. Rainfall averages during winter reach a minimum of 8 mm in July, while in the summer they can exceed 300 mm in January. Localized seasonal fires, both natural and provoked, are frequent in the area, and the summits are often grazed and trampled by cattle.

Our collections in the *Serra de São José* span two decades, and approximately half of the voucher specimens (collected prior to 1996) are deposited in the herbarium of the Rio de Janeiro Botanical Garden (RB). Subsequent collections are in the National Museum in Rio de Janeiro (R). In order to minimize impact on rare species such as several Orchidaceae, we only preserved flowers in alcohol for determination by floral analysis (Alves 1990b; c; 1998). Though our efforts were concentrated mainly on the summit rock-dwelling flora, about fifteen complementary collection excursions were also done in the forest at the southern foothills of the range, along its entire length.

Due to the intensity and frequency of changes in higher taxonomic ranks imposed by recent developments in systematics, we have chosen to list the vascular plants in alphabetical order by family, genus and species. As some families still do not have stable circumscriptions assigned by the Angiosperm Phylogeny Group, we follow Cronquist (1988) for convenience of comparison to older floristic lists, and Rapini (2000) for joining the Asclepiadoideae under the Apocynaceae.

About half the determinations were provided by the specialists listed after each family. When several specialists are mentioned, they contributed at distinct times along the two decades. For a few of the specimens in the RB and foreign herbaria, we transcribed the determinations in institutional databases (JABOT 2008, Tropicos.org 2008, New York Botanical Virtual Herbarium 2008). The remaining determinations were done by comparison in herbaria, use of keys and published descriptions. The most recent names in the Tropicos.org (2008) database were adopted (for instance by Harold Robinson for the Asteraceae). For the nomenclature of *Drosera*, however, field observations and

## LISTS OF SPECIES

cultivation have lead us to maintain the distinctions based on field observations of Saint Hilaire, disregarded by many latter authors. There are some cases, however, when the names in the Tropicos.org database are mistyped, or known synonyms are not referred to, and in these we did our best to use the original specific epithets. Apart from this checklist, detailed treatments of some taxonomic groups like the Droseraceae, Lentibulariaceae, Melastomataceae and Bryophytes from the range are currently being edited as chapters of a book by our colleagues. A detailed treatment of the Euphorbiaceae and Phyllanthaceae by Débora Medeiros had been accepted earlier by a journal, and is currently in print, hence only a simple checklist is provided herein. Though we concentrated on the summits, as we passed through the forested areas on our way up, we did collect sporadically, and we also registered peculiar vegetation on shaded quartzite boulders. The classification of life-forms follows the main subdivisions of Raunkiær (1934). For species which can develop more than one life form, only the predominant one was computed.

Distinct yet indetermined morphospecies within a given genus are marked as sp.1, sp.2 etc. Though we initially intended to provide all collection data, observations, determining specialists etc., the resulting list was 100 pages long. Hence the format of the current checklist is simplified, including only the names of taxa, a code for the

predominant life form, and the first or the most representative specimen (collector and number, with herbarium acronyms after Holmgren et al. 1990). The current vascular flora was compared with floristic data from the *Serra do Cipó* (Giulietti et al. 1987) and Pico das Almas (Stannard et al. 1995), followed by the calculation of Sørensen similarity indices.

### Results and Discussion

Current knowledge of species richness values also reflects collection effort, and their comparison is not always a simple matter. There are 3,200 collections in the database, with 1,258 species of vascular plants and bryophytes distributed over less than 25 km<sup>2</sup>. Hence, the São José range has 50.3 species/km<sup>2</sup>, while other much larger campo rupestre localities studied for comparable time periods rendered comparably poorer species richesses per unit of area (Table 1). Of 1,144 vascular morphospecies, 957 are determined to or beyond species level (with 76 as "cf." or "aff."), and 181 are determined to genus (of which 9 are in "cf."). Even if all the taxa with uncertainties of infrafamilial determination were not computed (leaving 885 species and subspecies of vascular plants and 114 bryophytes), this would still result in an astonishing species richness of 35.4 species/km<sup>2</sup>. Though the differences in Table 1 may partly be caused by distinct collection efforts, the *Serra de São José* still has a notoriously high species richness.

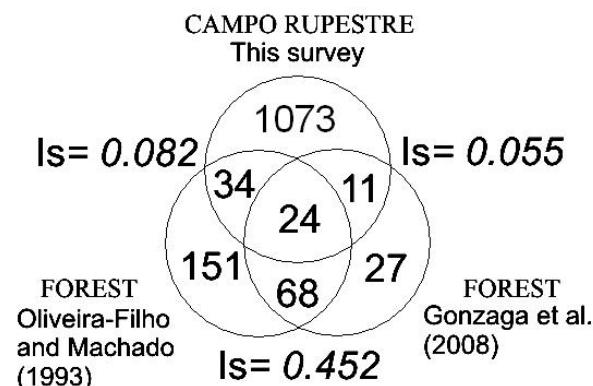

**Table 1.** Floristic composition, collection efforts and species richness in three *campo rupestre* localities with relatively complete surveys. Data sources: *Serra do Cipó*, northern Minas Gerais (Giulietti et al. 1987), *Pico das Almas*, Bahia (Stannard et al. 1995), *Serra de São José*, southern Minas Gerais (Bryophytes by Yano and Peralta, unpublished data, in edit.); the remainder is original data.

Locality	Serra do Cipó	Pico das Almas	Serra de São José
Area (km <sup>2</sup> )	200	170	25
Bryophytes	19	65	114
Pteridophytes	39	51	54
Gymnosperms	2	1	3
Angiosperms	1,530	930	1,087
No. of species	1,590	1,044	1,258
Years collecting	19	21	20
No. of Collectors	>40	>40	15
Species/km <sup>2</sup>	8.0	6.1	50.3

## LISTS OF SPECIES

The distinct selective method used in the forest by Oliveira-Filho and Machado (1993), along with the fact that we concentrated on campo rupestre, may partly explain why only 58 of their 277 species are also listed herein. Only 35 species in the present survey are also reported by Gonzaga et al. (2008). It is a rather curious fact that, in the higher parts of the studied forest where several transects were executed (especially near the southern wall above Tiradentes), several very common tree species such as *Clusia arrudea*, *Dysochroma viridiflora*, *Machura tinctoria*, *Myrciaria tenella*, *Podocarpus sellowii* were not sampled by the latter authors. We speculate that this may possibly be explained by limitations of using symmetrical distribution of sample plots. A systematic survey of all vascular species including herbs and shrubs in these same forests may easily lead to the discovery of several hundred species currently unregistered for the locality.

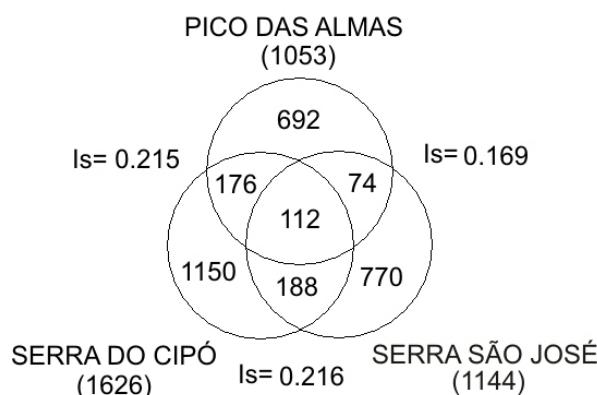

Though both aforementioned surveys are essentially from the same forest and used comparable selection criteria of trunk diameter, they have only 92 species in common, while respectively 185 and 38 exclusive species were sampled. Even when combined into one floristic matrix, both forest surveys are very dissimilar to the *campo rupestre* studied herein (Figure 7). Even if only the 210 *campo rupestre* tree species are considered, the resulting Sørensen similarity index is still only 0.262.

**Figure 7.** Comparison of the floristic surveys of the *Serra de São José campo rupestre* (top) and forest checklists by Oliveira-Filho and Machado (1993) and Gonzaga et al. (2008). Numbers represent species or varieties. Is = Sørensen similarity index.

Only 24 species registered herein are also common to the forest surveys by Oliveira Filho and Machado (1993) and Gonzaga et al. (2008): *Cabralea cangerana*, *Calophyllum brasiliense*, *Calyptrothecia clusifolia*, *Clusia criuva*, *Copaifera langsdorffii*, *Croton floribundus*, *Cupania vernalis*, *Eremanthus erythropappus*, *E. incanus*, *Hedyosmum brasiliense*, *Lithraea molleoides*, *Machaerium nyctitans*, *M. villosum*, *Miconia cinnamomifolia*, *Myrsine coriacea*, *M. umbellata*, *Protium brasiliense*, *P. heptaphyllum*, *Roupala montana*, *Rudgea viburnoides*, *Schinus terebenthifolius*, *Talauma ovata*, *Tibouchina stenocarpa*, and *Vitex polygama*.

Two relatively large *campo rupestre* floras were compared with the checklist herein: the *Serra do Cipó* (Giulietti et al. 1987) and *Pico das Almas* (Stannard et al. 1995). As expected, the Sørensen similarity index is slightly lower between the farthest localities (Figure 8).

**Figure 8.** Comparison of the vascular floras of the *Pico das Almas* in Bahia (Stannard et al. 1995), *Serra do Cipó*, northern Minas Gerais (Giulietti et al. 1987) and the *Serra de São José*. Numbers represent species or varieties. Is = Sørensen similarity index.

Despite the extrazonal nature and small areas occupied by outcrop vegetation in general, the species richness of *campo rupestre* floras seems to follow the first and second biocoenotic principles of Thienemann (1920; 1954): “the more variable the habitat conditions, the higher the diversity in a biocoenosis” and “in a community very rich in species, the incidence of the different species is

## LISTS OF SPECIES

usually low, whereas in a community poor in species, the single members often occur in large numbers, such a community or biocoenose being less stable than the former." (Klötzli 1992).

Amidst the current shiftings of entire groups of species from one genus to another (Alves and Vianna Filho 2007), there seems to be no taxonomic consensus in sight (examples are the *Acianthera-Pleurothallis-Specklinia* and the *Hadrolaelia - Hoffmannseggella - Laelia - Sophronitis* complexes among the Orchidaceae).

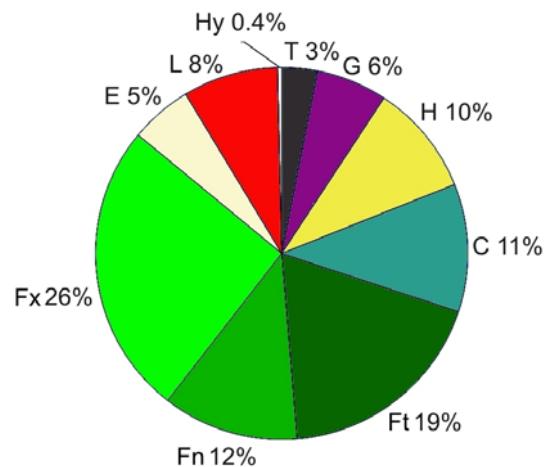

The presence of lithophytes and a higher proportion of epiphytes apparently distinguish *campo rupestre* from surrounding zonal vegetation. Phanerophytes make up 40.3 % of the vascular flora of the São José range, followed by chamaephytes and hemicryptophytes (Figure 9). Among the phanerophytes, we registered 210 species of trees and tall shrubs (18.5 % of the summit flora).

The hydrophytes have not been systematically collected. Of 446 woody species in the flora, 291 species are trees or tall shrubs and 155 are subshrubs. Thickened underground organs such as bulbs, corms, rhizomes, tubers, lignotubers and tuberous roots were found in 446 species belonging to 59 families of the São José range flora. These organs are important adaptations to natural fires. Because not every species encountered in the range was uprooted, the real percentage is probably even higher. The largest numbers of subterranean organs were found among the Asteraceae (94 species), Melastomataceae and Leguminosae (each with 33), Orchidaceae (30), Apocynaceae (including Asclepiadoideae, with 26), Lamiaceae (21), Malpighiaceae (16), Euphorbiaceae (15), and Rubiaceae (13).

As the surrounding savannas, the *campo rupestre* vegetation is also well adapted to natural disturbances by fire, though the ideal periodicity

still remains to be established. The most serious issue in "*campo rupestre*" is the presence of grazing cattle, which fertilize originally oligotrophic soils, and allow the establishment of invasive plant species. Among these, the molasses-grass (*Melinis minutiflora* P. Beauv.) is apparently of most concern, since it promotes the spread of fire to areas previously free from it. As the "*campo rupestre*" in the São José range (and probably many other areas with similar rock-dwelling vegetation) exhibit unprecedented species-richness and occupy extremely reduced geographical areas, the exclusion/removal of grazing domestic animals from these is the most urgent and imperative conservation measure.

Serra de São José Vascular Plant Life Forms

**Figure 9.** Floristic life-form spectrum following Raunkiær (1934) of the vascular flora of the São José range. **T** - therophytes; **G** - geophytes; **H** - hemicryptophytes; **C** - chamaephytes; **F** - phanerophytes (**Ft** - trees and large shrubs; **Fn** - nanophanerophytes without lignotubers; **Fx** - nanophanerophytes or climbers with verified lignotubers); **E** - epiphytes; **L** - lithophytes; **Hy** - Hydrophytes. For species which can develop more than one life form, only the predominant one was computed.

## Acknowledgements

We are most indebted to Pedro Sérgio Fernandes (Aluarte, Tiradentes), to José Nivaldo de Menezes Machado (IBAMA, Ritápolis), Karin von Smigay (*Pousada d'óleo* de Guignard, Tiradentes) and the late Marcelo Duarte (Secretary of the

## LISTS OF SPECIES

Environment, Tiradentes) for their frequent logistic support to our expeditions. This checklist was only possible due to the contributions, comments and determinations of approximately one hundred people and institutions, support by local people and enterprises. Special thanks are due to many taxonomic specialists cited as collaborators in Appendix 1, and to Antonín Vězda (PRA, Lichenes), Jiří Váňa (PRC, Bryopsida and Hepaticopsida), Marcelo Marcelli (SP, Lichenes), Mariângela Menezes (R, Algae and Cyanobacteria), Olga Yano (SP, Bryopsida and Hepaticopsida), Renato Rodrigues Cabral Ramos (*Museu Nacional*, Geology) and Teuvo Ahti (H, Lichenes) for suggestions and valuable comments, Ivana Rajznoverová for technical assistance with the manuscript, the *Instituto Estadual de Florestas* (IEF/MG), especially Ana Paula Pinheiro and Janaína Aguiar, and the *Floresta Nacional de Rítapolis* (FLONA/IBAMA) for occasional logistic support in the field. This project was partly supported and authorized by the *Instituto Estadual de Florestas*. The participation of the second author was possible due to Czech research project number AVOZ 60050516. The scholarships (1988–1996) from the Brazilian Council of Research (CNPq) were also essential to these accomplishments. A notable Brazilian collaborator was Wanderbilt Duarte de Barros, who became a close friend while he presided the Brazilian Foundation for the Conservation of Nature (FBCN), and who, as Director of the Rio Botanical Garden, helped the present Flora effort immensely by inviting the first author to work as a visiting researcher after having concluded his PhD studies in Prague, Czech Republic. Thanks to his support it was possible to compare many collected species in the RB herbarium.

**Appendix 1.** Floristic checklist of the Serra de São José, updated to June 2008. Life forms (♣) following Raunkiær (1934) are designated as: **T** = therophytes; **G** = geophytes; **H** = hemicryptophytes; **C** = chamaephytes; **F** = phanerophytes (**Ft** = trees and large shrubs; **Fn** = nanophanerophytes without lignotubers; **Fx** = nanophanerophytes with verified lignotubers); **V** = Vines/Climbers (**Vx** = Vines with verified lignotubers); **E** = epiphytes; **L** = lithophytes; **Hy** = Hydrophytes. ▲ = accession data for a single selected specimen, consisting of collector, number and herbarium acronym. In order to conserve natural populations, only flowers were collected for determination in most orchids, and these liquid-preserved collections are marked with an asterisk (\*). Collaborators and their respective herbarium acronyms or Institutions are listed after each family or group.

### Pteridophyta

Collaborators: Fabiana Nonato (R), Jefferson Prado (SP), John T. Mickel (NY), Paulo Günther Windisch (HSJRP).

#### Adiantaceae

*Adiantopsis radiata* (L.) Fee; ♣C ▲ Alves RJV 1318 (R)

*Adiantum pedatum* L.; ♣C ▲ Alves RJV 170 (R)

*Adiantum* cf. *pentadactylon* Langsd. & Fisch.; ♣C ▲ Alves RJV 6285 (R)

## LISTS OF SPECIES

*Adiantum* sp.; ♣C ▲ Alves RJV 713 (R)

### Aspleniaceae

*Asplenium* cf. *auritum* Sw. ♣C ▲ Alves RJV 6286 (R)

*Asplenium* cf. *claussenii* Hieron. ♣C ▲ Alves RJV 6287 (R)

*Asplenium formosum* Willd. ♣C ▲ Alves RJV 6057 (R)

*Asplenium* sp. ♣H ▲ Alves RJV 6283 (R)

### Blechnaceae

*Blechnum brasiliense* Desv. ♣F ▲ Alves RJV 6056 (R)

*Blechnum glandulosum* Kaulf. ex Link ♣F ▲ Alves RJV 150 (R)

*Blechnum* aff. *glandulosum* Kaulf. ex Link ♣F ▲ Alves RJV 6217 (R)

*Blechnum* sp. ♣F ▲ Alves RJV 6068 (R)

### Cyatheaceae

*Cyathea delgadii* Sternb. ♣F ▲ Alves RJV 55 (R)

*Alsophila setosa* Kaulf. ♣F ▲ Alves RJV (R)

### Dennstaedtiaceae

*Lindsaea* cf. *stricta* (Sw.) Dry. ex Sm. ♣C ▲ Alves RJV 6350 (R)

*Pteridium aquilinum* (L.) Kuhn ♣G ▲ Alves RJV 6127 (R)

### Equisetaceae

*Equisetum giganteum* L. ♣H ▲ Alves RJV 6284 (R)

*Equisetum* sp. ♣H ▲ Alves RJV 5651 (R)

### Gleicheniaceae

*Dicranopteris flexuosa* (Schrad.) Underw. ♣G ▲ Alves RJV 6055 (R)

*Gleichenia bifida* (Willd.) Spreng. ♣G ▲ Alves RJV 396 (R)

### Grammitidaceae

*Grammitis serrulata* (Sw.) Sw. ♣L ▲ Alves RJV 28 (R, SP)

### Hymenophyllaceae

*Hymenophyllum plumosum* Kaulf. ♣L ▲ Duarte AP 4273 (RB)

*Trichomanes pilosum* Raddi ♣L ▲ Alves RJV 705 (R, SP)

*Trichomanes* sp. ♣L ▲ Alves RJV 6137 (R)

### Lomariopsidaceae

*Elaphoglossum* cf. *macahense* (Fee) Rosenstock ♣L ▲ Alves RJV 753 (R)

*Elaphoglossum* sp. ♣L ▲ Alves RJV 1315 (R)

### Lycopodiaceae

*Lycopodiella alopecuroides* (L.) Cranfill ♣C ▲ Alves RJV 73 (R)

*Lycopodiella camporum* B. Øllg. & P. G. Windisch ♣C ▲ Alves RJV 307 (R)

*Lycopodiella cernua* (L.) L. ♣C ▲ Alves RJV 553 (R)

### Ophioglossaceae

*Ophioglossum pedunculosum* Desv. ♣G ▲ Alves RJV 201 (R, SP)

### Polypodiaceae

*Campyloneurum angustifolium* (Sw.) Féé ♣L ▲ Alves RJV 397 (R)

## LISTS OF SPECIES

*Microgramma squamulosa* (Kaulf.) de la Sota ♣E ▲ Alves RJV s.n. (R)

*Microgramma* sp. ♣E ▲ Alves RJV 6066 (R)

*Phlebodium* cf. *pseudoaureum* (Cav.) Lellinger ♣E ▲ Alves RJV 6067 (R)

*Pleopeltis angusta* Humb. & Bonpl. ex Willd. ♣E ▲ Alves RJV s.n. (R)

*Polypodium hirsutissimum* Raddi ♣E ▲ Alves RJV 6065 (R)

*Polypodium lepidopteris* (Langsd. & Fisch) Kunze ♣E ▲ Alves RJV 704 (R, SP)

*Polypodium* sp. ♣C ▲ Alves RJV 6131 (R)

### Pteridaceae

*Doryopteris ornithopus* (Mett.) J. Smith ♣H ▲ Alves RJV 4873 (R)

*Doryopteris pedata* Kunth ssp. *palmata* (Willd.) Hassl. ♣H ▲ Alves RJV 1316 (R)

*Notholaena venusta* Brade ♣E ▲ Alves RJV 707 (R)

*Pellaea microphylla* (L.) Lindl. ♣H ▲ Alves RJV 1142 (R)

*Pteris* cf. *denticulata* Sw. ♣L ▲ Alves RJV 6159 (R)

*Pteris* sp. ♣L ▲ Alves RJV 6278 (R)

### Schizaeaceae

*Anemia elegans* (Gardner) C. Presl ♣L ▲ Alves RJV 157 (R)

*Anemia* cf. *ferruginea* Kunth ♣H ▲ Alves RJV 6059 (R)

*Anemia oblongifolia* (Cav.) Sw. ♣L ▲ Alves RJV 199 (R)

*Anemia villosa* Humb. & Bonpl. ex Willd. ♣L ▲ Alves RJV 610 (R, SP)

*Anemia* sp. ♣L ▲ Alves RJV 715 (R)

### Selaginellaceae

*Selaginella fragilima* Alv. Silv. ♣C ▲ Silveira AA da 149 (R)

*Selaginella marginata* (Humb. & Bonpl. ex Willd.) Spring ♣C ▲ Alves RJV 1123 (R)

*Selaginella* sp. ♣C ▲ Alves RJV 6062 (R)

### Thelypteridaceae

*Thelypteris* sp. ♣L ▲ Alves RJV 6129 (R)

### Vittariaceae

*Vittaria lineata* (L.) Sw. ♣E ▲ Alves RJV 4773 (R)

## Pinophyta

### Araucariaceae

*Araucaria angustifolia* (Bertol.) Kuntze ♣Ft ▲ Alves RJV s.n. (R)

### Podocarpaceae

*Podocarpus lambertii* Klotzsch ex Endl. ♣Ft ▲ Alves RJV 802 (R)

*Podocarpus sellowii* Klotzsch ex Endl. ♣Ft ▲ Alves RJV s.n. (RB)

## Magnoliophyta

### Acanthaceae

*Jacobinia* aff. *sellowiana* Hieron. ♣Fx ▲ Vianna MC 2373 (GUA)

*Justicia riparia* C. Kameyama ♣Fx ▲ Alves RJV 985 (R)

*Justicia* sp. ♣Fx ▲ Peron MV 301 (RB)

*Ruellia brevifolia* (Pohl) C. Ezcurra ♣C ▲ Alves RJV 286 (RB)

*Ruellia formosa* Andrews ♣C ▲ Duarte AP 3495 (RB)

## LISTS OF SPECIES

*Ruellia geminiflora* Kunth ♣C ▲ Alves RJV 6 (R)

*Ruellia* sp. ♣C ▲ Alves RJV 482 (RB)

*Teliostachya* sp. ♣Fx ▲ Alves RJV 5326 (R)

### Alismataceae

*Echinodorus tenellus* (Mart.) Buch. var. *tenellus* ♣Hy ▲ Alves RJV 5873 (R)

*Echinodorus* sp. ♣Hy ▲ Alves RJV 4912 (R)

### Alstroemeriaceae

Collaborator: Marta Camargo de Assis (UEC)

*Alstroemeria stenopetala* Schenk. ♣G ▲ Alves RJV 978 (R)

*Alstroemeria* sp. ♣G ▲ Alves RJV 189 (R)

*Bomarea edulis* Suess. ♣G ▲ Alves RJV 5809 (R)

### Amaranthaceae

Collaborator: Josafá Carlos da Siqueira (FCAB).

*Alternanthera paronychioides* A. St.-Hil. ♣X ▲ Alves RJV 5657 (R)

*Amaranthus hybridus* L. ♣C ▲ Alves RJV 1144 (R)

*Amaranthus* sp. ♣C ▲ Alves RJV 4372 (R)

*Gomphrena agrestis* Mart. ♣X ▲ Alves RJV 327 (R)

*Gomphrena arborescens* L. f. ♣X ▲ Alves RJV 311 (R)

*Gomphrena velutina* Moq. ♣X ▲ Alves RJV 123 (RB)

*Gomphrena virgata* Mart. ♣X ▲ Alves RJV (R)

*Pfaffia helichrysoides* (Mart.) Kuntze ♣X ▲ Alves RJV 327.2 (R)

*Pfaffia jubata* Mart. ♣X ▲ Alves RJV 965 (R)

*Pfaffia velutina* Mart. ♣X ▲ Alves RJV 5932 (R)

### Amaryllidaceae

Collaborator: Julie Henriette Antoinette Dutilh (UEC).

*Habranthus irwinianus* Rav. ♣G ▲ Alves RJV 5906 (R)

*Habranthus sylvaticus* (Mart. ex Schult.) Herb. ♣G ▲ Alves RJV 979 (R)

*Hippeastrum morelianum* Lem. ♣G ▲ Alves RJV (R)

*Hippeastrum* sp. ♣G ▲ Alves RJV 1309 (R)

### Anacardiaceae

*Lithraea molleoides* (Vell.) Engl. ♣F ▲ Alves RJV (RB)

*Schinus terebenthifolius* Raddi ♣F ▲ Alves RJV s.n. (R)

*Schinus* sp. ♣F ▲ Alves RJV s.n. (R)

### Annonaceae

*Annona crassiflora* Mart. ♣F ▲ Alves RJV 886 (R)

*Annona tomentosa* R. E. Fries ♣F ▲ Alves RJV 874 (R)

*Annona* sp. ♣F ▲ Alves RJV 5853 (R)

*Rollinia emarginata* Schltdl. ♣F ▲ Duarte AP 3512 (RB)

*Rollinia* sp. ♣F ▲ Alves RJV 5967 (R)

### Apiaceae

*Eryngium canaliculatum* Cham. & Schltdl. ♣C ▲ Alves RJV 4443.2 (R)

*Eryngium ebracteatum* Lam. ♣C ▲ Duarte AP 4091 (RB)

*Eryngium horridum* Malme ♣C ▲ Duarte AP 3490 (RB)

*Eryngium juncifolium* (Urban) Math. & Const. ♣C ▲ Alves RJV 4443.3 (R)

## LISTS OF SPECIES

- Eryngium paniculatum* Cav. ♣C ▲ Alves RJV 42 (R)  
*Eryngium pristis* Cham. ♣C ▲ Alves RJV 87 (R)  
*Eryngium* sp. ♣C ▲ Alves RJV 831 (R)  
*Hydrocotyle quinqueloba* Ruiz & Pavon ♣G ▲ Alves RJV 4018 (R)  
*Hydrocotyle* sp. ♣C ▲ Alves RJV 1096 (R)  
*Klotzschia brasiliensis* Cham. ♣C ▲ Alves RJV 358 (R)  
*Spananthe paniculata* H. Wolff ♣C ▲ Duarte AP 5118 (RB)

### Apocynaceae – Apocynoideae

Collaborators: Jorge Fontella Pereira (RB, later R), Luciene Bernardo Santos (R), Miriam Cristina Alvarez Pereira (HB).

- Aspidosperma ramiflorum* Müll. Arg. ♣Fx ▲ Alves RJV 5302 (R)  
*Aspidosperma* sp. ♣Fx ▲ Alves RJV 5870 (R)  
*Dipladenia polymorpha* Müll. Arg. ♣Fx ▲ Alves RJV 775 (R)  
*Macrosiphonia longiflora* (Desf.) Muell. Arg. ♣Fx ▲ Alves RJV 5948 (R)  
*Mandevilla atroviolacea* (Stadelm.) Woodson ♣Vx ▲ Alves RJV 4350 (RB)  
*Mandevilla hirsuta* (Rich.) K. Schum. ♣Fx ▲ Duarte AP 4062 (RB)  
*Mandevilla* cf. *moricandiana* (A. DC.) Woodson ♣Vx ▲ Alves RJV 823 (R)  
*Mandevilla rugosa* (Benth.) Woodson ♣Fx ▲ Alves RJV (R)  
*Mandevilla* aff. *selowii* (Müll. Arg.) Woodson ♣Fx ▲ Alves RJV 823 (R)  
*Mandevilla tenuifolia* (Mikan) Woodson ♣Fx ▲ Alves RJV 775 (R)  
*Mandevilla* aff. *velutina* (Mart.) Woodson ♣Fx ▲ Alves RJV 888.1 (R)  
*Mandevilla* sp. ♣Fx ▲ Alves RJV 889 (R)  
*Rhabdadenia* cf. *pohlii* Müll. Arg. ♣Fx ▲ Alves RJV 888.2 (R)  
*Rhodocalyx rotundifolius* Müll. Arg. ♣Fx ▲ Alves RJV 4322 (R)

### Apocynaceae – Asclepiadoideae

Collaborator: Jorge Fontella Pereira (RB, later R).

- Asclepias curassavica* L. ♣C ▲ Alves RJV 5316 (R)  
*Barjonia erecta* (Vell.) Schum. ♣Fn ▲ Alves RJV 5652 (R)  
*Ditassa cordata* (Turcz.) Fontella var. *abortiva* (E. Fourn.) Fontella ♣Fx ▲ Alves RJV 4353 (RB)

- Dioscorea* sp. ♣G ▲ Alves RJV 4768 (R)

### Droseraceae

- Collaborators: Miloslav Studnička (Liberec Botanical Garden), Nílber Silva (R).  
*Drosera communis* A. St.-Hil. ♣H ▲ Alves RJV 343 (R)  
*Drosera hirtella* A. St.-Hil. var. *lutescens* A. St.-Hil. ♣H ▲ Silva NG (R)  
*Drosera montana* A. St.-Hil. var. *montana* A. St.-Hil. ♣H ▲ Alves RJV 342 (R)  
*Drosera tomentosa* A. St.-Hil. var. *glabrata* A. St.-Hil. ♣H ▲ Silva NG 189 (R)

### Ebenaceae

- Diospyros hispida* A. DC. ♣F ▲ Alves RJV (R)  
*Diospyros inconstans* Jacq. ♣F ▲ Alves RJV 5861 (R)

### Ericaceae

- Collaborator: † Jose Augusto Fernandes da Costa (HB, R).  
*Agarista chlorantha* G. Don ♣Fn ▲ Mello-Barreto HL 4787 (RB)  
*Agarista coriifolia* (Thunb.) Hook. f. ex Nied. var. *reticulata* Meissn. ♣Fn ▲ Alves RJV 7 (R)

## LISTS OF SPECIES

*Agarista oleifolia* G. Don var. *oleifolia* ♣Fn ▲ Duarte AP 3505 (R)

*Gaylussacia brasiliensis* (Spreng.) Meisn. var. *pubescens* (Cham. & Schltl.) Meisn. ♣F ▲ Alves RJV 1063 (R)

*Gaylussacia decipiens* Cham. ♣F ▲ Alves RJV 790 (R)

*Gaylussacia montana* (Pohl) Sleumer ♣Fn ▲ Alves RJV 791 (R)

*Gaylussacia pallida* Cham. ♣F ▲ Duarte AP 3519 (RB)

*Gaylussacia riedelii* Meisn. ♣Fx ▲ Alves RJV 789 (R)

### Eriocaulaceae

Collaborator: Ana Maria Giulietti (SPF).

*Actinocephalus bongardii* (A. St.-Hil.) Sano ♣H ▲ Leitão f. HF 19327 (RB)

*Eriocaulon cipoense* Alv. Silv. ♣T ▲ Alves RJV 25 (R)

*Leiothrix prolifera* (Bong.) Ruhland ♣C ▲ Alves RJV 231 (R)

*Paepalanthus aequalis* (Vell.) Mart. ♣H ▲ Alves RJV 915 (R)

*Paepalanthus bifidus* Ruhland in Urb. ♣H ▲ Alves RJV 4225 (RB)

*Paepalanthus cf. brasiliensis* Mart. ♣H ▲ Alves RJV 302 (R)

*Paepalanthus cf. corymbosus* (Bong.) Kunth ♣H ▲ Alves RJV 752 (R)

*Paepalanthus elongatus* (Bong.) Körn. ♣H ▲ Alves RJV 554 (R)

*Paepalanthus planifolius* (Bong.) Körn. ♣F ▲ Alves RJV 9 (R, SPF)

*Paepalanthus plantagineus* (Bong.) Körn. ♣F ▲ Alves RJV 158 (R, SPF)

*Paepalanthus saxatilis* Körn. ♣H ▲ Alves RJV 344 (R)

*Paepalanthus sebranthus* Ruhland ♣T ▲ Alves RJV 4015 (R)

*Paepalanthus* sp. ♣H ▲ Alves RJV 45 (R)

*Syngonanthus caulescens* (Poir.) Ruhland ♣H ▲ Alves RJV 183 (R, SPF)

*Syngonanthus* aff. *caulescens* (Poir.) Ruhland ♣H ▲ Alves RJV 5987 (R)

*Syngonanthus elegans* (Koern.) Ruhland ♣H ▲ Alves RJV 4879 (R)

*Syngonanthus* aff. *elegans* (Koern.) Ruhland ♣H ▲ Alves RJV 5050 (R)

*Syngonanthus gracilis* (Bong.) Ruhland ♣H ▲ Alves RJV 275 (R)

*Syngonanthus macrocaulon* Ruhland ♣H ▲ Alves RJV 229 (R)

*Syngonanthus nitens* (Bong.) Ruhland ♣H ▲ Alves RJV 955 (R)

*Syngonanthus niveus* (Bong.) Ruhland ♣H ▲ Alves RJV 95 (R)

*Syngonanthus* sp. ♣H ▲ Alves RJV 5971 (R)

*Syngonanthus habrophyllus* Ruhland ♣H ▲ Mello-Barreto HL 4794 (R)

### Erythroxylaceae

*Erythroxylum campestre* A. St.-Hil. ♣F ▲ Alves RJV 1098 (R)

*Erythroxylum deciduum* A. St.-Hil. ♣Fn ▲ Alves RJV 1099 (R)

*Erythroxylum tortuosum* Mart. ♣Fn ▲ Kuhlmann JG 4272 (RB)

*Erythroxylum* aff. *tortuosum* Mart. ♣F ▲ Alves RJV 5413 (R)

*Erythroxylum* sp. ♣Fx ▲ Prof. José Elias (RB)

### Euphorbiaceae

Collaborators: Débora Medeiros (R), Luci de Senna Valle (R), Margarete Emmerich (R).

*Chamaesyce caecorum* (Mart. ex Boiss.) Croizat ♣Fx ▲ Alves RJV 573 (R)

*Chamaesyce hyssopifolia* (L.) Small ♣C ▲ Alves RJV 759 (R)

*Chamaesyce prostrata* (Aiton) Small ♣Fx ▲ Alves RJV Rel50-61 (R)

*Croton antisiphiliticus* Mart. ♣Fx ▲ Alves RJV 881 (R)

*Croton arlineae* D. Medeiros, Senna & Alves ♣Fx ▲ Medeiros D 31 (R)

*Croton campestris* A. St.-Hil. ♣Fx ▲ Alves RJV 6936 (R)

*Croton floribundus* Spreng. ♣F ▲ Medeiros D 134 (R)

*Croton gnidiaceus* Baill. ♣Fx ▲ Medeiros D 66 (R)

## LISTS OF SPECIES

- Croton josephinus* Müll. Arg. ♣Fx ▲ Alves RJV 8345 (R)  
*Croton lobatus* L. ♣F ▲ Duarte AP 3767 (RB)  
*Croton thermarum* Muell. Arg. ♣Fx ▲ Vianna MC Serra de São José 111 (GUA)  
*Croton timandrodes* (Didr.) Müll. Arg. ♣Fx ▲ Medeiros D 3 (R)  
*Croton urucurana* Baill. ♣F ▲ Alves RJV 6953 (R)  
*Croton vestitus* Spreng. ♣Fx ▲ Alves RJV 6937 (RB)  
*Euphorbia chrysophylla* (Klotzsch & Garske) G. Klotz ex Boiss. ♣Fx ▲ Alves RJV 740 (R)  
*Euphorbia* sp.1 ♣Fx ▲ Duarte AP 3516 (RB)  
*Euphorbia* sp.2 ♣Fx ▲ Duarte AP 3499 (RB)  
*Sebastiania brasiliensis* Spreng. ♣Fx ▲ Alves RJV 6313 (R)

### Gentianaceae

- Collaborator: Elsie Franklin Guimarães (RB).  
*Chelonanthus alatus* (Aubl.) Pulle ♣Fx ▲ Alves RJV 726 (R)  
*Chelonanthus viridiflorus* (Mart.) Gilg ♣Fx ▲ Alves RJV s.n. (RB)  
*Curtia tenuifolia* (Aubl.) Knobl. ♣T ▲ Alves RJV 4002 (RB)  
*Deianira nervosa* Cham. & Schldl. ♣Fx ▲ Alves RJV 620 (R)  
*Lisianthus caerulescens* Aubl. ♣Fx ▲ Alves RJV s.n. (RB)  
*Lisianthus pulcherrimus* Mart. ♣Fx ▲ Alves RJV 228 (R)  
*Lisianthus speciosus* Cham. & Schldl. ♣Fx ▲ Alves RJV 4814 (R)  
*Schuebleria tenella* Mart. ♣C ▲ Alves RJV 6051 (R)  
*Schultesia gracilis* Mart. ♣T ▲ Alves RJV 277 (R)

### Gesneriaceae

- Collaborator: Thereza Cristina Costa Lopes (R, RB).  
*Besleria laxiflora* Benth. ♣Fx ▲ Alves RJV 286 (R)  
*Nematanthus strigillosus* (Mart.) H. E. Moore ♣Fx ▲ Alves RJV 161 (RB)  
*Paliavana sericiflora* Benth. ♣Fx ▲ Alves RJV 312 (RB)  
*Sinningia aggregata* (Ker Gawl.) Wiehler ♣G ▲ Alves RJV 4378 (RB)  
*Sinningia douglasii* (Lindl.) Chaute ♣Fx ▲ Alves RJV 5586 (R)  
*Sinningia magnifica* (Otto & A. Dietr.) Wiehler ♣Fx ▲ Alves RJV 466 (R)  
*Sinningia rupicola* (Mart.) Wiehler ♣Fx ▲ Alves RJV 838 (R)  
*Sinningia* sp. ♣Fx ▲ Alves RJV 4377 (R)

### Heliconiaceae

- Heliconia* aff. *psittacorum* L. f. ♣G ▲ Alves RJV 4256 (R)

### Hypericaceae

- Hypericum brasiliense* Choisy ♣C ▲ Alves RJV 6329 (R)

### Hypoxidaceae

- Hypoxis decumbens* L. ♣G ▲ Alves RJV (R)

### Iridaceae

- Sisyrinchium alatum* Hook. ♣G ▲ Alves RJV 308 (R)  
*Sisyrinchium avenaceum* Klatt ♣G ▲ Alves RJV 4443.5 (R)  
*Sisyrinchium vaginatum* Spreng. ♣G ▲ Alves RJV 66 (R)  
*Sisyrinchium* sp. ♣G ▲ Alves RJV 169 (R)  
*Trimezia juncifolia* Klatt ♣G ▲ Alves RJV 345 (R)  
*Trimezia* sp. ♣G ▲ Alves RJV 935 (R)

## LISTS OF SPECIES

### Juncaceae

*Juncus densiflorus* Kunth ♣H ▲ Alves RJV 782 (R)

*Juncus* sp. Kunth ♣H ▲ Alves RJV 5817 (R)

### Lacistemataceae

*Lacistema aggregatum* (Berg) Rusby ♣F ▲ Alves RJV 5872 (R)

### Lamiaceae

Collaborator: Raymond Harley (K).

*Hyptidendron asperimum* (Epling) Harley ♣F ▲ Alves RJV 990 (R, RB, K)

*Hyptis althaefolia* Pohl ex Benth. ♣F ▲ Alves RJV 801 (R)

*Hyptis carpinifolia* Benth. ♣Fx ▲ Alves RJV 6983 (R)

*Hyptis clausenii* Benth. ♣Fx ▲ Alves RJV 348.1 (R)

*Hyptis complicata* A. St.-Hil. ex Benth. ♣Fx ▲ Alves RJV 379 (RB)

*Hyptis conferta* Pohl ex Benth. ♣Fx ▲ Alves RJV 380 (RB)

*Hyptis crinita* Benth. ♣Fx ▲ Alves RJV 1360 (R, K)

*Hyptis cf. cuneata* Pohl ex Benth. ♣Fx ▲ Alves RJV 568 (R, K)

*Hyptis aff. fruticosa* Salzm. ex Benth. ♣F ▲ Alves RJV 212.1 (R)

*Hyptis aff. gardneri* Benth. ♣Fn ▲ Alves RJV 387 (R)

*Hyptis gardneri* Benth. ♣Fn ▲ Alves RJV 804 (R)

*Hyptis lantanifolia* Poit. ♣Fn ▲ Alves RJV 381 (R)

*Hyptis monticola* Mart. ex Benth. ♣Fx ▲ Alves RJV 567 (R, K)

*Hyptis passerina* Mart. ex Benth. ♣Fx ▲ Alves RJV 4037 (RB)

*Hyptis aff. passerina* Mart. ex Benth. ♣Fx ▲ Alves RJV 5477 (R)

*Hyptis petraea* A. St.-Hil. ex Benth. ♣Fx ▲ Alves RJV s.n. (RB)

*Hyptis reticulata* Mart. ex Benth. ♣Fn ▲ Alves RJV 913 (R)

*Hyptis selloi* Benth. ♣Fx ▲ Schwacke (RB)

*Hyptis virgata* Benth. ♣Fx ▲ Alves RJV 125 (R)

*Hyptis* sp. ♣F ▲ Alves RJV 328 (R)

*Ocimum micranthum* Willd. ♣C ▲ Alves RJV s.n. (R)

*Peltodon tomentosus* Pohl ♣C ▲ Alves RJV 381 (RB)

*Rhabdocaulon denudatum* (Benth.) Epling ♣Fx ▲ Alves RJV 877 (R)

### Lauraceae

*Ocotea odorifera* (Vell.) Rohwer ♣F ▲ Barbosa M 2155 (RB)

*Ocotea tristis* Mart. ex Nees ♣F ▲ Peron MV 325 (RB)

*Persea* sp. ♣F ▲ Barbosa M 2169 (RB)

### Leguminosae

Collaborators: Gwilym P. Lewis (K), Haroldo Lima (RB), Marli Pires Morim (RB), Robson Daumas Ribeiro (RB) Ronaldo Marquete (RB), Veronica Maioli (R).

*Acosmium dasycarpum* (Vogel.) Yakol. ♣Fn ▲ Alves RJV 206 (RB)

*Andira fraxinifolia* Benth. ♣Fx ▲ Maioli V 317 (R)

*Andira vermicifuga* Mart. ex Benth. ♣Fx ▲ Alves RJV 111 (RB)

*Trembleya tridentata* Naudin ♣F ▲ Alves RJV 595.1 (R, RB, US)

## LISTS OF SPECIES

### Meliaceae

- Cabralea cangerana* Sald. ♣F ▲ Duarte AP 4266 (RB)  
*Cabralea* sp. ♣F ▲ Alves RJV 5387 (R)  
*Guarea macrophylla* Vahl subsp. *tuberculata* (Vell.) T. D. Penn. ♣F ▲ Alves RJV 613 (R)  
*Guarea tuberculata* Vell. ♣F ▲ Peron MV 354 (RB)  
*Trichilia catigua* A. Juss. ♣F ▲ Alves RJV 4766 (R)  
*Trichilia* cf. *hirsuta* C. DC. ♣F ▲ Alves RJV 5417 (R)  
*Trichilia* sp. ♣F ▲ Alves RJV 6328 (R)

### Menispermaceae

- Cissampelos andromorpha* DC. ♣Fx ▲ Alves RJV 4351 (RB)  
*Cissampelos ovalifolia* DC. ♣Fx ▲ Alves RJV 5902 (R)  
*Odontocarya* sp. ♣Fn ▲ Alves RJV 4131 (RB)

### Molluginaceae

- Mollugo verticillata* L. ♣Fx ▲ Alves RJV 765 (R)

### Monimiaceae

- Mollinedia selloi* (Spreng.) A. DC. ♣F ▲ Alves RJV 6311 (R)  
*Siparuna* sp. ♣F ▲ Duarte AP 8732 (RB)

### Moraceae

- Collaborators: Jorge Pereira Carauta (GUA, later R), Marcelo Dias Vianna Machado filho (R).  
*Dorstenia tubicina* Ruíz & Pavón ♣Fx ▲ Alves RJV 7825 (R)  
*Ficus arpazusa* Casar. ♣F ▲ Vianna Filho MDM 1699 (R)  
*Ficus enormis* (Mart. ex Miq.) Mart. ♣F ▲ Vianna MC s.n. (GUA)  
*Ficus hirsuta* Vell. ♣F ▲ Alves RJV 5300 (R)  
*Ficus mexiae* Standl. ♣F ▲ Vianna Filho MDM 1700 (R)  
*Maclura tinctoria* (L.) D. Don ex Steud. ♣F ▲ Alves RJV (R)  
*Sorocea bonplandii* (Baill.) W. C. Burger, Lanj. & Wess. Boer ♣F ▲ Peron MV 351 (RB)  
*Sorocea* sp. ♣F ▲ Palmeira M 351 (R)

### Myrsinaceae

- Myrsine coriacea* (Sw.) R. Br. ex Roem. & Schult. ♣F ▲ Alves RJV 5613 (R)  
*Myrsine monticola* Mart. ♣F ▲ Alves RJV 329 (R)  
*Myrsine umbellata* Mart. ♣F ▲ Alves RJV 1320 (R)  
*Myrsine* sp. ♣F ▲ Alves RJV 1546 (R)

### Myrtaceae

- Collaborators: †Graziela Maciel Barroso (RB), Marcos Valério Peron (RB).  
*Blepharocalyx salicifolius* (Kunth) O. Berg ♣Fx ▲ Marquete R 3980 (RB)  
*Calyptranthes clusiifolia* (Miq.) Berg ♣Fx ▲ Alves RJV 1321 (RB)  
*Campomanesia eugenoides* (Camb.) Legr. var. *desertorum* (DC.) Landrum ♣Fn ▲ Alves RJV 1364 (R)  
*Campomanesia pubescens* O. Berg ♣Fn ▲ Alves RJV 962 (R)  
*Campomanesia* sp. 1 ♣Fn ▲ Alves RJV 46 (RB)  
*Campomanesia* sp. 2 ♣Fn ▲ Alves RJV 5629 (R)  
*Eugenia aquea* Burm. f. ♣F ▲ Alves RJV 892 (R)  
*Eugenia bimarginata* DC. ♣Fn ▲ Alves RJV 323 (RB)  
*Eugenia langsdorffii* O. Berg ♣Fx ▲ Alves RJV 614 (R)  
*Eugenia punicifolia* (Kunth) DC. ♣Fn ▲ Barbosa M 2309 (RB)  
*Eugenia* sp. ♣Fx ▲ Alves RJV 837 (R)

## LISTS OF SPECIES

- Gomidezia affinis* (Cambess.) D. Legrand ♣Fn ▲ Alves RJV 836 (R)  
*Gomidezia gaudichaudiana* O. Berg ♣Fx ▲ Alves RJV 1043 (R)  
*Gomidezia* sp. ♣Fx ▲ Alves RJV 4921 (R)  
*Myrcia eriocalyx* DC. ♣Fx ▲ Alves RJV 1094 (R)  
*Myrcia* aff. *eriocalyx* DC. ♣Fx ▲ Alves RJV 5419 (R)  
*Myrcia guianensis* (Aubl.) DC. ♣Fn ▲ Alves RJV 49 (RB)  
*Myrcia multiflora* (Lam.) DC. ♣Fn ▲ Peron MV 331 (RB)  
*Myrcia mutabilis* (O. Berg) N. Silveira ♣F ▲ Alves RJV 1044 (R)  
*Myrcia pilodes* Kiaersk. ♣Fn ▲ Farney C 2446 (RB)  
*Myrcia suaveolens* Cambess. ♣F ▲ Alves RJV 124 (RB)  
*Myrcia* sp. ♣Fn ▲ Alves RJV 472 (RB)  
*Myrciaria tenella* (DC.) O. Berg ♣F ▲ Peron MV 328 (RB)  
*Myrciaria* aff. *tenella* (DC.) O. Berg ♣F ▲ Alves RJV 6317 (R)  
*Psidium firmum* Berg ♣Fn ▲ Peron MV 321 (RB)  
*Psidium incanescens* Mart. ex DC. ♣Fn ▲ Peron MV 320 (RB)  
*Psidium* sp. ♣Fn ▲ Alves RJV 5904 (R)  
*Syzygium jambos* (L.) Alston ♣F ▲ Alves RJV 4368 (RB)

### Nyctaginaceae

- Collaborator: Cyl Farney Catarino de Sá (RB).  
*Guapira nitida* (Mart.) Lundell ♣F ▲ Peron M 353 (R)  
*Guapira noxia* (Netto) Lundell ♣F ▲ Alves RJV 1102 (R, R B)  
*Guapira opposita* (Vell.) Reitz ♣F ▲ Alves RJV 1103 (R, RB)  
*Guapira* aff. *opposita* (Vell.) Reitz ♣F ▲ Alves RJV 5334 (R)  
*Guapira* sp. ♣Fx ▲ Alves RJV 4334 (R)

### Ochnaceae

- Collaborator: Claude Sastre (P).  
*Luxemburgia octandra* A. St.-Hil. ♣Fx ▲ Duarte AP 3479 (RB)  
*Luxemburgia* sp. ♣Fx ▲ Alves RJV 7566 (R)  
*Ouratea semiserrata* (Mart. & Nees) Engl. ♣Fn ▲ Alves RJV 1056 (R)  
*Ouratea* sp. ♣Fn ▲ Alves RJV 5978 (R)  
*Sauvagesia erecta* A. St.-Hil. ♣Fx ▲ Alves RJV 5925 (R)  
*Sauvagesia glandulosa* (A. St.-Hil.) Sastre ♣Fx ▲ Alves RJV 4022 (R)  
*Sauvagesia rubiginosa* A. St.-Hil. ♣Fx ▲ Alves RJV 195 (RB)  
*Sauvagesia* sp. 1 ♣Fx ▲ Alves RJV 6221 (R)  
*Sauvagesia* sp. 2 ♣Fx ▲ Alves RJV 6273 (R)

### Onagraceae

- Fuchsia regia* (Vell.) Munz ♣Fx ▲ Alves RJV 4341 (R, RB)  
*Ludwigia nervosa* (Poir.) H. Hara ♣Fn ▲ Alves RJV 340 (RB)  
*Ludwigia* sp. ♣Fn ▲ Vianna MC 116 (GUA)

### Orchidaceae

- Collaborators: Eduardo Leite Borba (BHCB), Fábio de Barros (SP), Leslie Garay (MO).  
*Acianthera johannensis* (Barb. Rodr.) Pridgeon & M. W. Chase ♣L ▲ Alves RJV 200 (R)  
*Acianthera prolifera* (Herb. ex Lindl.) Pridgeon & M. W. Chase ♣L ▲ Alves RJV s.n. (R)  
*Acianthera teres* (Lindl.) Borba ♣L ▲ Alves RJV (RB)  
*Amblostoma tridactylum* (Lindl.) Rchb. f. ♣E ▲ Alves RJV 5801 (R)  
*Bifrenaria aureofulva* (Hook.) Lindl. ♣L ▲ Alves RJV s.n. (R)  
*Bifrenaria harrisoniae* (Hook.) Rchb. f. ♣L ▲ Alves RJV 1131.6 (RB)

## LISTS OF SPECIES

- Bifrenaria tyrianthina* (Loudon) Rchb. f. ♣L ▲ Alves RJV \* (R)  
*Brassavola cebolleta* Rchb. ♣L ▲ Alves RJV \* (R)  
*Bulbophyllum bidentatum* (Barb. Rodr.) Cogn. ♣L ▲ Alves RJV 240 (R)  
*Bulbophyllum ipanemensis* Hoehne ♣L ▲ Alves RJV 20 (R)  
*Bulbophyllum cf. warmingianum* Cogn. ♣E ▲ Alves RJV \* (R)  
*Bulbophyllum weddellii* (Lindl.) Rchb. f. ♣E ▲ Alves RJV 407 (R)  
*Bulbophyllum* sp. ♣L ▲ Alves RJV 241 (R)  
*Camaridium rigidum* (Barb. Rodr.) Schltr. ♣L ▲ Alves RJV \* (R)  
*Campylocentrum micranthum* (Lindl.) Rolfe ♣E ▲ Costa A s.n. (R)  
*Campylocentrum organense* (Rchb. f.) Rolfe ♣E ▲ Alves RJV 210 (RB)  
*Campylocentrum robustum* Cogn. ♣E ▲ Alves RJV \* (R)  
*Cattleya loddigesii* Lindl. ♣E ▲ Alves RJV \* (R)  
*Christensonella neowiedii* (Rchb. f.) S. Koehler ♣L ▲ Alves RJV 314 (R)  
*Cleistes ionoglossa* Hoehne ♣G ▲ Alves RJV 401 (R)  
*Cleistes metallina* (B. Rodr.) Schlecht. ♣G ▲ Alves RJV 4905 (R)  
*Cleistes* sp. (B. Rodr.) Schlecht. ♣G ▲ Alves RJV 4008 (R)  
*Cyclopogon argyrifolius* Barb. Rodr. ♣G ▲ Alves RJV 406 (R, RB)  
*Cyclopogon bicolor* (Ker.) Schltr. ♣G ▲ Alves RJV \* (R)  
*Cyclopogon congestus* (Vell.) Hoehne ♣G ▲ Alves RJV 5484 (R)  
*Cyclopogon longibracteatus* (Barb. Rodr.) Schltr. ♣G ▲ Alves RJV \* (R)  
*Cyclopogon* sp. ♣G ▲ Alves RJV 5340 (R)  
*Cyrtopodium* aff. *vernatum* Rchb. f. & Warm. ♣C ▲ Alves RJV 4327.1 (R)  
*Cyrtopodium paranaense* Schltr. ♣L ▲ Alves RJV 5339 (R)  
*Elleanthus brasiliensis* Rchb. f. ♣L ▲ Alves RJV 237 (R)  
*Eltroplectris triloba* (Lindl.) Pabst ♣G ▲ Alves RJV \* (R)  
*Encyclia* cf. *ondcioides* (Lindl.) Schltr. ♣E ▲ Alves RJV in vivo (R)  
*Epidendrum avicula* Lindl. ♣L ▲ Alves RJV 223 (RB)  
*Epidendrum dendrobioides* Thunb. ♣C ▲ Alves RJV \* (R)  
*Epidendrum* aff. *paniculatum* Ruiz & Pavon ♣C ▲ Alves RJV in vivo (R)  
*Epidendrum parahybuense* Barb. Rodr. ♣C ▲ Alves RJV \* (R)  
*Epidendrum rigidum* Jacq. ♣E ▲ Alves RJV 214 (R)  
*Epidendrum secundum* Jacq. ♣C ▲ Alves RJV 18 (RB)  
*Epidendrum setiferum* Lindl. ♣C ▲ Alves RJV 65 (R)  
*Epidendrum* cf. *versicolor* Hoehne ♣C ▲ Alves RJV 23 (R)  
*Epidendrum* sp. ♣C ▲ Alves RJV 834 (R)  
*Epistephium speciosum* Barb. Rodr. ♣G ▲ Alves RJV \* (R)  
*Eurystyles* cf. *actinosiphila* (Barb. Rodr.) Schltr. ♣E ▲ Alves RJV (R)  
*Galeandra beyrichii* Rchb. f. ♣G ▲ Alves RJV 404 (R)  
*Galeandra montana* Barb. Rodr. ♣G ▲ Alves RJV \* (R)  
*Govenia utriculata* (Lindl.) Correll ♣H ▲ Alves RJV 4434 (RB)  
*Habenaria fastor* Warm. ex Hoehne ♣G ▲ Alves RJV 1000 (R)  
*Habenaria gnoma* Barb. Rodr. ♣G ▲ Alves RJV 22 (R)  
*Habenaria leptoceras* Hook. ♣G ▲ Alves RJV 305.2 (RB)  
*Habenaria* cf. *montevideensis* Spreng. ♣G ▲ Alves RJV 5813 (R)  
*Habenaria petalodes* Lindl. ♣G ▲ Alves RJV 209 (R)  
*Habenaria repens* Nutt. ♣G ▲ Alves RJV 221 (RB)  
*Habenaria strictissima* Rchb. f. var. *odontopetala* (Rchb. f.) L. O. Williams ♣G ▲ Alves RJV 4255 (R)  
*Habenaria* sp. ♣G ▲ Alves RJV 4865 (R)  
*Hadrolaelia brevipedunculata* (Cogn.) Chiron & V. P. Castro ♣L ▲ Alves RJV \* (R)  
*Isabelia virginalis* Barb. Rodr. ♣E ▲ Alves RJV s.n. (R)

*Spermacoce verticillata* (L.) Mey. ♣C ▲ Alves RJV 803 (R, RB)

*Tocoyena formosa* (Cham. & Schldl.) K. Schum. ♣Fx ▲ Alves RJV 916 (R)

## LISTS OF SPECIES

### Santalaceae

*Thesium* sp. ♣H ▲ Alves RJV 882 (R)

### Sapindaceae

*Cupania vernalis* Cambess. ♣F ▲ Alves RJV 1061 (R)

*Paullinia* sp. ♣F ▲ Alves RJV 4981 (R)

*Sapindus saponaria* L. ♣F ▲ Barbosa M 2366 (RB)

*Serjania erecta* Radlk. ♣F ▲ Rutter RA 143 (R)

### Scrophulariaceae

Collaborators: Regina Braga de Moura (R), Ricardo Ribeiro Rodrigues (ESA).

*Buchnera lavandulacea* Cham. & Schldl. ♣C ▲ Alves RJV 1339 (R)

*Buchnera rosea* Kunth ♣Fx ▲ Alves RJV (R)

*Conobea scopariooides* (Cham. & Schldl.) Benth. ♣Fx ▲ Alves RJV 1143 (R)

*Esterhazya campestris* Spix & Mart. ♣Fn ▲ Alves RJV 930 (R)

*Esterhazya splendida* Mikan ♣Fx ▲ Alves RJV 357 (R)

*Melasma* sp. ♣Fx ▲ Alves RJV 4371 (R)

*Stemodia verticillata* (Mill.) Hassl. ♣Fx ▲ Alves RJV 1145 (R)

### Simaroubaceae

*Simarouba* sp. ♣F ▲ Alves RJV 792 (R)

### Smilacaceae

Collaborator: Regina Helena Pott Andreata (RUSU).

*Smilax brasiliensis* Spreng. ♣Fx ▲ Alves RJV (R)

*Smilax coriifolia* A. DC. ♣Fx ▲ Palmeira M 337 (R)

*Smilax elastica* Griseb. ♣Fx ▲ Alves RJV 450 (R)

*Smilax seringoides* Griseb. ♣Fx ▲ Alves RJV 340.1 (R)

### Solanaceae

Collaborators: Lucia d'Avila Freire de Carvalho (RB), Rita de Cássia Almeida Lafetá (CESJ).

*Dysochroma viridiflora* Miers ♣F ▲ Alves RJV 5392 (R)

*Nicotiana langsdorffii* Weinm. ♣C ▲ Duarte AP 3496 (RB)

*Solanum americanum* Mill. ♣Fn ▲ Alves RJV 5313 (R)

*Solanum biceps* Desv. ♣Fn ▲ Alves RJV 862 (R)

*Solanum cernuum* Vell. ♣F ▲ Alves RJV 5518 (R)

*Solanum granulosoleprosum* Dun. ♣F ▲ Alves RJV 5638 (R)

*Solanum lycocarpum* A. St.-Hil. ♣F ▲ Alves RJV 67 (R, RB)

*Solanum refractifolium* Sendtn. ♣F ▲ Alves RJV 5517 (R)

*Solanum scuticum* M. Nee ♣F ▲ Tameirão Neto E 7 (RB)

*Solanum sisymbriifolium* Lam. ♣F ▲ Alves RJV 4370 (RB)

*Solanum subumbellatum* Vell. ♣F ▲ Carvalho AF 217 (RB)

*Solanum viarum* Dun. ♣C ▲ Alves RJV 5639 (R)

*Solanum* sp. ♣C ▲ Alves RJV 4370 (R)

### Sterculiaceae

*Melochia* sp. ♣F ▲ Duarte AP 5119 (RB)

*Waltheria communis* (A. St.-Hil.) K. Schum. in Mart. ♣Fn ▲ Alves RJV 127 (RB)

*Waltheria* sp. ♣Fn ▲ Alves RJV 127 (R)

## LISTS OF SPECIES

### Styracaceae

- Styrax* aff. *ferrugens* Nees & Mart. ♣F ▲ Alves RJV 869 (R)  
*Styrax latifolius* (A. DC.) Perkins ♣F ▲ Duarte AP 3492 (RB)  
*Styrax* sp. ♣Fx ▲ Alves RJV 5636 (R)

### Theaceae

- Collaborator: Marco Antônio Palomares Accardo (R).  
*Gordonia tomentosa* (Mart. & Zucc.) Spreng. ♣F ▲ Alves RJV 7229 (R)  
*Ternstroemia* sp. ♣F ▲ Alves RJV 5980 (R)

### Tiliaceae

- Luehea rufescens* A. St.-Hil. ♣F ▲ Alves RJV 5405 (R)  
*Triumfetta* cf. *bartramii* L. ♣F ▲ Alves RJV 4755 (R)  
*Triumfetta rhomboidea* Jacq. ♣F ▲ Alves RJV 4019 (R)

### Turneraceae

- Turnera* cf. *tenuicaulis* Urb. ♣Fx ▲ Alves RJV s.n. (R)  
*Turnera oblongifolia* Cambess. ♣Fx ▲ Alves RJV 4001 (R, RB)  
*Turnera* sp. ♣Fx ▲ Alves RJV 884 (R)

### Ulmaceae

- Celtis glycycarpa* Mart. ex Miq. ♣F ▲ Alves RJV 6222 (R)  
*Celtis* sp. ♣F ▲ Alves RJV 6219 (R)

### Urticaceae

- Parietaria officinalis* L. ♣C ▲ Alves RJV 1146 (R)  
*Urera baccifera* (L.) Gaudich. ♣F ▲ Alves RJV 4302 (RB)

### Velloziaceae

- Collaborators: Nanuza Luiza de Menezes (SPF), Renato de Mello Silva (SPF).  
*Aylthonia tomentosa* (Mart.) N. L. Menezes ♣L ▲ Alves RJV 10 (R, SPF)  
*Aylthonia* sp. ♣L ▲ Alves RJV 5830.1 (R)  
*Vellozia crassicaulis* Mart. ex Schult. f. ♣L ▲ Alves RJV 334.1 (R)  
*Vellozia crinita* Goeth. & Henr. ♣Fx ▲ Alves RJV 191 (R)  
*Vellozia kolbekii* Alves ♣F ▲ Alves RJV 852 (R)  
*Vellozia* sp. ♣L ▲ Alves RJV s.n. (RB)

### Verbenaceae

- Collaborator: Sandra Atkins (K).  
*Aegiphila lhotskiana* Cham. ♣Fn ▲ Duarte AP 3515 (RB)  
*Aloysia virgata* (Ruiz & Pavon) Pers. ♣F ▲ Alves RJV 5318 (R)  
*Lantana camara* L. ♣F ▲ Alves RJV 632 (R)  
*Lantana fucata* Lindl. ♣Fn ▲ Alves RJV 4973 (R)  
*Lantana* sp. ♣Fn ▲ Alves RJV 5319 (R)  
*Lippia alba* (Mill.) N. E. Br. ♣Fx ▲ Alves RJV 481 (R)  
*Lippia elegans* Cham. ♣Fx ▲ Duarte AP 3500 (RB)  
*Lippia lupulina* Cham. ♣Fx ▲ Alves RJV 795 (R)  
*Lippia rotundifolia* Cham. ♣Fx ▲ Alves RJV 380 (R)  
*Lippia* cf. *thymoides* Mart. & Schauer ♣Fx ▲ Alves RJV 632.1 (R)  
*Petraea* cf. *martiana* Schauer ♣F ▲ Alves RJV 5389 (R)  
*Petraea* sp. ♣F ▲ Alves RJV 1311 (R)

## LISTS OF SPECIES

*Stachytarpheta* aff. *ajugaefolia* Schauer ♣Fx ▲ Alves RJV 4025 (R)

*Stachytarpheta reticulata* Mart. ♣Fx ▲ Alves RJV 4825 (R)

*Stachytarpheta sellowiana* Schau. ♣Fx ▲ Alves RJV 355 (R)

*Vitex polygama* Chamisso ♣F ▲ Alves RJV 1069 (R)

*Vitex* sp. ♣Fx ▲ Alves RJV 6271 (R)

### Viscaceae

Collaborators: Carlos Henrique Reif de Paula (RUSU), Job Kuijt (UVIC).

*Phoradendron affine* (Pohl) Nutt. ♣E ▲ Carrijo T 8 (RB)

*Phoradendron crassifolium* Eichl. ♣E ▲ Alves RJV 1319 (RB)

*Phoradendron dichotomum* Ettingsh. ♣E ▲ Alves RJV 4769 (R)

*Phoradendron dipterum* Eichler ♣E ▲ Reif CH de P s.n. (RUSU)

*Phoradendron piperoides* (Kunth) Trel. ♣E ▲ Reif CH de P s.n. (RUSU)

*Phoradendron undulatum* (Pohl ex DC.) Eichler ♣E ▲ Reif CH de P s.n. (RUSU)

### Vitaceae

*Cissus duarteana* Camb. ♣G ▲ Alves RJV 6338 (R)

*Cissus erosa* Rich. ♣G ▲ Alves RJV 4324 (R, RB)

### Vochysiaceae

Collaborators: Kikyo Yamamoto (UEC), Maria Célia Vianna (GUA).

*Qualea dichotoma* (Mart.) Warm. ♣F ▲ Vianna MC 2360 (GUA)

*Qualea* sp.1 ♣F ▲ Alves RJV 4348 (R)

*Qualea* sp.2 ♣F ▲ Vianna MC 2376 (GUA)

*Salvertia convallariodora* A. St.-Hil. ♣Fx ▲ Alves RJV 1014 (R)

*Vochysia emarginata* Vahl ♣F ▲ Alves RJV 359 (R)

*Vochysia thyrsoidea* Pohl ♣F ▲ Alves RJV 856 (R)

### Xyridaceae

*Xyris anceps* Lam. ♣C ▲ Alves RJV 364 (R)

*Xyris* aff. *anceps* Lam. ♣C ▲ Alves RJV 5840 (R)

*Xyris asperula* Mart. ♣C ▲ Alves RJV 196 (R)

*Xyris bahiana* Malme ♣C ▲ Alves RJV 366 (R)

*Xyris blepharophylla* Mart. ♣C ▲ Alves RJV 367 (R)

*Xyris caroliniana* Walt. var. *caroliniana* ♣C ▲ Alves RJV 304 (R)

*Xyris hymenachne* Mart. ♣C ▲ Alves RJV 349 (R)

*Xyris* cf. *rupicola* Kunth ♣C ▲ Alves RJV 1300 (R)

*Xyris spectabilis* Mart. ♣C ▲ Alves RJV 1064 (R)

*Xyris tenella* Kunth ♣C ▲ Alves RJV 270 (R)

*Xyris* sp. ♣C ▲ Alves RJV 4896 (R)
