Pterostichus amethystinus Mannerheim, 1843: 201. Type locality: «insula Sitkha [= Baranof Island, Alaska]» (original citation). Syntype(s) location unknown (Lindroth 1966: 464).

Pterostichus amethystinus novellus Casey, 1913: 102. Type locality: Hydesville, Valley of Eel River, Humboldt County, California (lectotype label according to Lindroth 1975: 123). Lectotype (♂), designated by Lindroth (1975: 123), in USNM [# 46981]. Synonymy established by Hatch (1936: 701), confirmed by Lindroth (1966: 464).

Pterostichus amethystinus metlakatlae Casey, 1913: 102. Type locality: «Metlakatla, British Columbia» (original citation). Lectotype (♀), designated by Lindroth (1975: 123), in USNM [# 46983]. Synonymy established by Hatch (1936: 701), confirmed by Lindroth (1966: 464).

Pterostichus jejunus Casey, 1913: 104. Type locality: «probably California» (original citation). Holotype [by monotypy] (♀) in USNM [# 46986]. Synonymy established by Lindroth (1966: 464).

Hypherpes stoicus Casey, 1924: 68. Type locality: «Inverness [probably Inverness Passage], British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 123), in USNM [# 46980]. Synonymy established by Hatch (1936: 701), confirmed by Lindroth (1966: 464).

Distribution. This species is found along the Pacific Coast from the Yakutat Bay in southeastern Alaska (Lindroth 1966: 465) to Mendocino County in California (Van Dyke 1919b: 5).
Records. CAN: BC (QCI, VCI) **USA**: AK, CA, OR, WA

***Pterostichus obsidianus* Casey, 1913**

Pterostichus obsidianus Casey, 1913: 102. Type locality: «Monterey [Monterey County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 175), in USNM [# 46982].

Distribution. This species is known only from the lectotype collected in coastal California.
Records. USA: CA
Note. The lectotype of *P. obsidianus* Casey is structurally similar to and possibly conspecific with members of *P. scutellaris* LeConte.

***Pterostichus scutellaris* LeConte, 1873**

Pterostichus scutellaris LeConte, 1873a: 312. Type locality: «California» (original citation). Lectotype (♂), designated by Bousquet (1999: 179), in MCZ [# 5607].

Distribution. I have seen this species from Marin and Fresno Counties in California (CNC); according to Van Dyke (1919b: 5), it extends south to Monterey County in California. The syntype studied by Lindroth (1966: 462) is not conspecific with the lectotype.
Records. USA: CA

[**arcanus group**]
***Pterostichus arcanus* Casey, 1913**

Pterostichus arcanus Casey, 1913: 103. Type locality: «S[an]ta Cruz M[oun]t[ain]s, California» (original citation). Lectotype (♂), designated by Bousquet (1999: 166), in USNM [# 46985].

Distribution. This species is known only from the lectotype collected in the Coast Ranges of California.
Records. USA: CA

[**castaneus group**]
***Pterostichus castaneus* (Dejean, 1828)**

Feronia castanea Dejean, 1828: 326. Type locality: «détroit de Norfolk [= Sitka Sound, Baranof Island, Alaska] sur la côte nord-ouest de l'Amérique septentrionale» (original citation). Syntype(s) location unknown (possibly in MHNP and MCZ, see Lindroth 1966: 465).

Feronia brunnea Dejean, 1828: 327. Type locality: «Californie» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by LeConte (1873a: 312), confirmed by Lindroth (1966: 465).

Feronia sejungenda Chaudoir, 1868b: 336. Type locality: «Californie» (original citation). One syntype [2 ♀ originally cited] in MHNP. Synonymy established with doubt, under the name *P. brunneus* (Dejean), by Tschitschérine (1900c: 467), herein confirmed. Note. Tschitschérine (1900c: 467) wrote that this taxon was probably a synonym of the true *P. brunneum*. I have seen one of the two syntypes, a damage specimen in Chaudoir's collection in MHNP missing the abdomen, the posterior legs and most of the remaining tarsi. The specimen matches those of *P. castaneus* (Dejean) in all its external characters.

Pterostichus wrangelli Casey, 1913: 131. Type locality: «Fort Wrangell, Alaska» (original citation). Holotype [by monotypy] (♂) in USNM [# 47000]. Synonymy established by Casey (1918: 325), confirmed by Lindroth (1966: 466).

Hypherpes terracensis Casey, 1924: 68. Type locality: «Terrace, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 123), in USNM [# 46984]. Synonymy established by Hatch (1953: 110), confirmed by Lindroth (1966: 466).

Distribution. This species ranges from the southeastern coast of Alaska (Lindroth 1966: 466) to "California" (Dejean 1828: 327, as *Feronia brunnea*; Chaudoir 1868b:

336, as *Feronia sejungenda*), east to southeastern British Columbia (Lindroth 1966: 466) and "Idaho" (Van Dyke 1924a: 8).
Records. CAN: BC (QCI, VCI) **USA**: AK, CA, ID, OR, WA

***Pterostichus tuberculofemoratus* Hatch, 1936**

Pterostichus tuberculo-femoratus Hatch, 1936: 701. Type locality: «Crater L[ake] [Klamath County], Ore[gon]» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from a few localities in southern Oregon (Hatch 1936: 702).
Records. USA: OR

[**castanipes group**]
***Pterostichus castanipes* (Ménétriés, 1843)**

Feronia castanipes Ménétriés, 1843: 59. Type locality: «Rio del Sacramento [= Sacramento River], Californie» (original citation). Lectotype (♀), designated by Bousquet (1999: 168), in ZMH.
Pterostichus contractus LeConte, 1851: 182. Type locality: «San Jose [Santa Clara County, California]» (original citation). Lectotype (♂), designated by Bousquet (1999: 168), in MCZ [# 83]. Synonymy established by LeConte (1873a: 304).
Pterostichus gregalis Casey, 1913: 121. Type locality: «Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 171), in USNM [# 47027]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. At present, this species is known only from the Coast Ranges in north and central California. The record from Utah (Knowlton and Wood 1947: 94) is no doubt in error.
Records. USA: CA

[**congestus group**]
***Pterostichus congestus* (Ménétriés, 1843)**

Feronia congesta Ménétriés, 1843: 59. Type locality: «Californie» (original citation), herein restricted to Anderson Valley, Mendocino County (see Casey, 1913: 105, as *P. breviusculus*). Lectotype (♀), designated by Bousquet (1999: 168), in ZMH.
Brachystylus curtipennis Motschulsky, 1859a: 148. Type locality: «St. Francisco [California]» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 12), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 12).
Pterostichus breviusculus Casey, 1913: 105. Type locality: «Anderson Valley, Mendocino Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 166), in USNM [# 46992]. **New synonymy** (Serge Laplante pers. comm. 1998).

Pterostichus breviusculus mimus Casey, 1913: 105. Type locality: «Sonoma Co[unty], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 166), in USNM [# 46990]. **New synonymy** (Serge Laplante pers. comm. 1998).

Pterostichus plutonicus Casey, 1913: 106. Type locality: «coast regions north of San Francisco, California» (original citation). Lectotype (♂), designated by Bousquet (1999: 177), in USNM [# 46991]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. This species is found along the Coast Ranges from Oregon (Lane County, CNC) to southern California (Fall 1901a: 44).
Records. USA: CA, OR

Pterostichus crenicollis LeConte, 1873

Pterostichus crenicollis LeConte, 1873a: 311. Type locality: «Washington Territory and Vancouver» (original citation), restricted to «Wash[ington]» by Lindroth (1966: 460). Lectotype (♂), designated by Bousquet (1999: 169), in MCZ [# 5602].

Pterostichus rectilatus Casey, 1913: 106. Type locality: «Clackamas Co[unty], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 122), in USNM [# 46996]. Synonymy established by Hatch (1953: 111), confirmed by Lindroth (1966: 460).

Pterostichus pugetanus Casey, 1913: 107. Type locality: «Clackamas Co[unty], Oregon» (original citation). Lectotype (♀), designated by Lindroth (1975: 122), in USNM [# 46995]. Synonymy established by Casey (1918: 328), confirmed by Lindroth (1966: 460).

Distribution. This species is restricted to the Coast Ranges and adjacent areas from the Gulf Coast of Alaska (Lindroth 1966: 460) to northwestern California (Notman 1929b: 222; Will and Gill 2008: 123).
Records. CAN: BC (QCI, VCI) **USA**: AK, CA, OR, WA

Pterostichus suffusus Casey, 1913

Pterostichus suffusus Casey, 1913: 106. Type locality: «Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 181), in USNM [# 46993].

Pterostichus cuneatulus Casey, 1913: 108. Type locality: «Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 169), in USNM [# 46998]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. As far as known, this species is found along the Coast Ranges in northern California.
Records. USA: CA

[**craterensis group**]
***Pterostichus craterensis* (Hatch, 1949)**

Platysma craterense Hatch, 1949a: 80. Type locality: «Crater L[ake] [Klamath County], Ore[gon]» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from a few specimens collected in Klamath County, southern Oregon.
Records. USA: OR

[**ecarinatus group**]
***Pterostichus ecarinatus* Hatch, 1936**

Pterostichus ecarinatus Hatch, 1936: 702. Type locality: «Waha [Nez Perce County], Id[aho]» (original citation). Holotype (♂) in USNM.

Distribution. This species is found along the Rocky Mountains and their foothills in western Alberta, eastern British Columbia (Lindroth 1966: 466), northeastern Washington, northern Idaho (Hatch 1953: 109), and western Montana (Russell 1968: 58; Edwards 1975: 54; Will and Gill 2008: 123).
Records. CAN: AB, BC **USA**: ID, MT, WA

[**gracilior group**]
***Pterostichus annosus* Casey, 1913**

Pterostichus annosus Casey, 1913: 122. Type locality: «California» (original citation). Holotype [by monotypy] (♂) in USNM [# 47030].

Distribution. This species is known only from the holotype.
Records. USA: CA

***Pterostichus baldwini* (Casey, 1924)**

Hypherpes baldwini Casey, 1924: 70. Type locality: «Baldwin Lake (8600 ft.) [San Bernardino County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 166), in USNM [# 47035].

Distribution. This species is known only from the San Bernardino Mountains in southern California.
Records. USA: CA

***Pterostichus esuriens* Casey, 1913**

Pterostichus esuriens Casey, 1913: 122. Type locality: «Hermitage and Guallala, Mendocino Co[unty], California» (original citation), restricted to «Hermitage» by Bousquet (1999: 169). Lectotype (♀), designated by Bousquet (1999: 169), in USNM [# 47033].

Distribution. This species is known only from two specimens collected in Mendocino County, California.
Records. USA: CA

Pterostichus gracilior LeConte, 1873

Brachystylus longicollis Motschulsky, 1859a: 147 [secondary homonym of *Pterostichus longicollis* (Duftschmid, 1812)]. Type locality: «Cap de l'Amiral Drak[e] [= Drakes Head, Marin County, California]» (original citation). Syntype(s) location unknown (possibly in ZMMU though not listed in Keleinikova 1976).

Pterostichus gracilior LeConte, 1873a: 304. Replacement name for *Pterostichus longicollis* (Motschulsky, 1859).

Distribution. This species seems to be confined to the mountains of southern California (Fall 1901a: 44). The records from "Oregon," "Nevada," and "Nebraska" (Schaupp 1882c: 41) are probably in error.
Records. USA: CA

Pterostichus hornii LeConte, 1873

Pterostichus hornii LeConte, 1873a: 313. Type locality: «S[outh]E[ast] Sierras of California» (original citation), herein restricted to near Fort Tejon, Kern County (see Van Dyke 1927a: 196). Holotype [by monotypy] (♀) in MCZ [# 5610]. Etymology. The specific name honors George Henry Horn [1840-1897], long-time friend of J.L. LeConte. An obstetrician by profession, Horn devoted his leisure to taxonomic studies of North American beetles. Along with his mentor LeConte, he coauthored in 1883 the *Classification of the Coleoptera of North America* which was a stepping-stone for the development of coleopterology on this continent.

Distribution. This species is known from a few localities in the southern parts of the Sierra Nevada. The record from Baja California (Horn 1894: 308) needs confirmation.
Records. USA: CA

Pterostichus lacertus Casey, 1913

Pterostichus lacertus Casey, 1913: 123. Type locality: «Hydesville, Valley of Eel River, Humboldt Co[unty], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 173), in USNM [# 47038].

Distribution. This species is known only from the lectotype collected in northwestern California.
Records. USA: CA

Pterostichus mercedianus (Casey, 1918)

Hypherpes mercedianus Casey, 1918: 335. Type locality: «Merced Creek [Mariposa County], California» (original citation). One syntype in USNM [# 47031].

Hypherpes protensipennis Casey, 1918: 336. Type locality: «Berkeley [Alameda County], Cal[ifornia]» (lectotype label). Lectotype (♂), designated by Bousquet (1999: 177), in USNM [# 47029]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. This species is known from the Coast Ranges and Sierra Nevada in central California.
Records. USA: CA

Pterostichus panticulatus Casey, 1913

Pterostichus panticulatus Casey, 1913: 124. Type locality: «with scarcely a doubt from California» (original citation). Holotype [by monotypy] (♀) in USNM [# 47034].

Distribution. This species is known only from the holotype.
Records. USA: CA

Pterostichus pergracilis (Casey, 1920)

Hypherpes pergracilis Casey, 1920: 187. Type locality: «Olancha, Inyo Co[unty], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 177), in USNM [# 47032].

Distribution. This species is known only from the lectotype.
Records. USA: CA

Pterostichus protensiformis (Casey, 1924)

Hypherpes protensiformis Casey, 1924: 70. Type locality: «Berkeley [Alameda County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 177), in USNM [# 47016].

Distribution. This species is known only from the type locality in western California.
Records. USA: CA

Pterostichus sierranus Casey, 1913

Pterostichus sierranus Casey, 1913: 124. Type locality: «Lake Tahoe and Merced Cr[eek], California» (original citation), restricted to «Lake Tahoe [Placer County]» by Bousquet (1999: 180). Lectotype (♀), designated by Bousquet (1999: 180), in USNM [# 47028].

Distribution. This species is known only from Placer (Casey 1913: 124) and Tuolumne Counties (Dajoz 2007: 17) in the Sierra Nevada.
Records. USA: CA
Note. Casey (1913) based the description of this species on two specimens, one from Lake Tahoe, the other from Merced Creek. The specimen from Merced Creek was

later (Casey 1918: 335) considered a distinct species which Casey named *Hypherpes mercedianus*.

Pterostichus sponsor Casey, 1913

Pterostichus sponsor Casey, 1913: 123. Type locality: «Monterey [Monterey County], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 180), in USNM [# 47037].

Distribution. This species is known only from the lectotype collected in west-central California.
Records. USA: CA

Pterostichus spraguei LeConte, 1873

Pterostichus spraguei LeConte, 1873a: 313. Type locality: «Nevada» (original citation). Lectotype (♂), designated by Bousquet (1999: 181), in MCZ [# 5609]. Etymology. The specific name was proposed for Philip Shaw Sprague [1829-1874], an active member of the Boston Society of Natural History. Sprague started collecting beetles in his 30s and his collection went to the Boston Society.

Distribution. Besides the lectotype, I have seen one specimen, probably of this species, from Mono County, California (CNC). The species was also reported from Zion National Park, Utah, by Tanner (1928: 270).
Records. USA: CA, NV [UT]

[**herculaneus group**]

Pterostichus herculaneus Mannerheim, 1843

Pterostichus herculaneus Mannerheim, 1843: 201. Type locality: «insula Sithka [= Baranof Island, Alaska]» (original citation), which is probably incorrect (Lindroth 1966: 463). Syntype(s) location unknown (Lindroth 1966: 463).

Pterostichus scenicus Casey, 1913: 103. Type locality: «British Columbia» (original citation). Holotype [by monotypy] (♀) in USNM [# 46987]. Synonymy established by Hatch (1953: 108), confirmed by Lindroth (1966: 464).

Distribution. This species ranges from northwestern Montana (Russell 1968: 58) to Vancouver Island (Lindroth 1966: 464), south to the Coast Ranges in southwestern Oregon (Niwa and Peck 2002: 787) and Tuolumne County in the Sierra Nevada (Will and Gill 2008: 123). The record from southeastern Colorado (Wickham 1902: 235) is likely in error.
Records. CAN: BC (VCI) **USA**: CA, ID, MT, OR, WA

Pterostichus laborans Casey, 1913

Pterostichus laborans Casey, 1913: 116. Type locality: «Lake Tahoe [Placer County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 173), in USNM [# 47020].

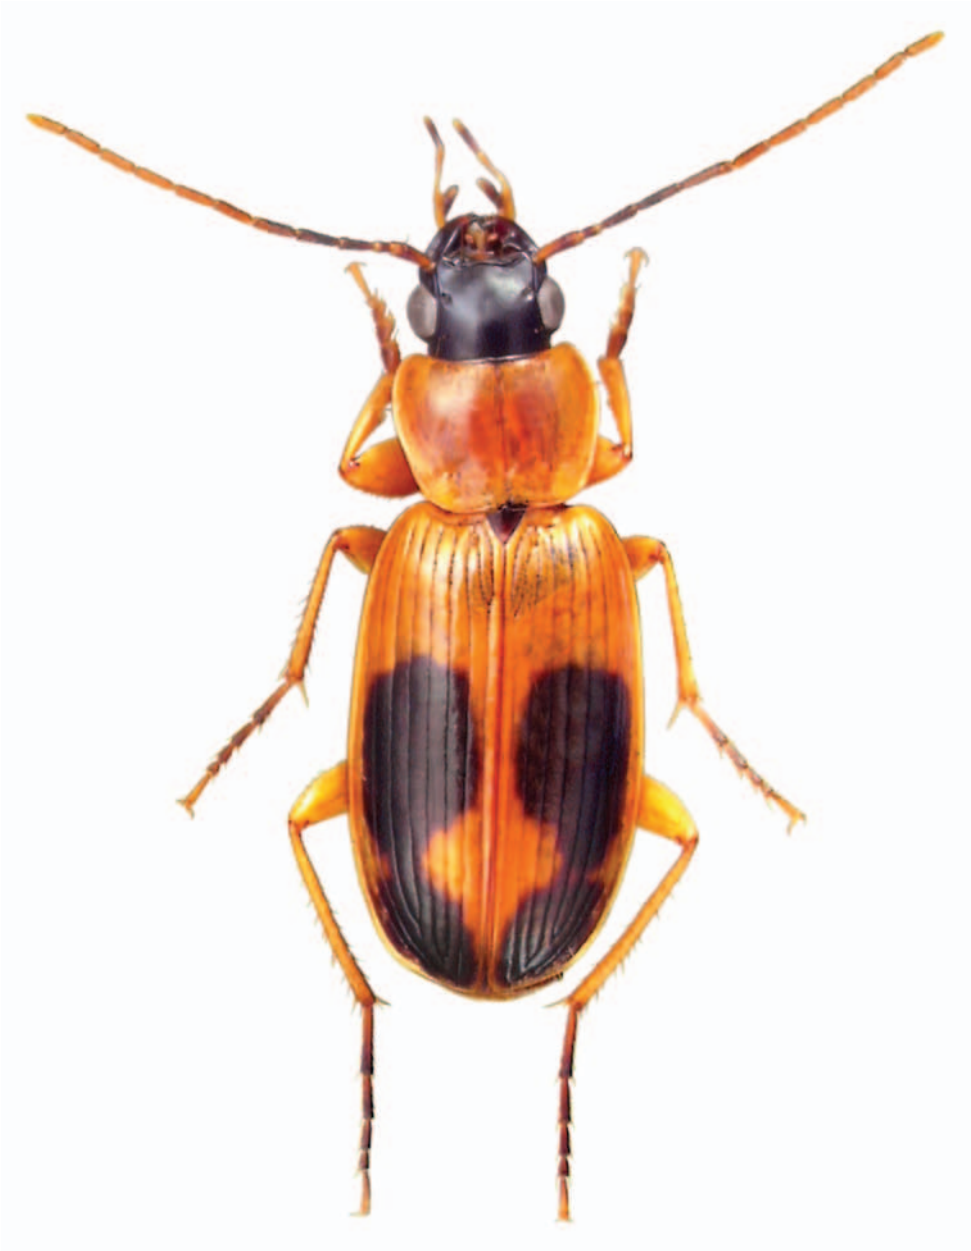

Figure 31. *Badister neopulchellus* Lindroth. This nicely colored licinine was first recognized by Carl Lindroth when he realized that the *Badister pulchellus* of authors included two species, this one which is transcontinental and relatively commonly collected and *B. pulchellus*, a much rarer species restricted to the eastern parts of the continent. With the advent of molecular tools, there is little doubt that several of our carabid species will eventually be showed to be complexes of species that cannot be separately with confidence based on morphology alone.

Pterostichus tahoensis Casey, 1913: 113. Type locality: «Lake Tahoe [Placer County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 181), in USNM [# 47011]. **New synonymy** (Serge Laplante pers. comm. 1998).
Hypherpes placerensis Casey, 1918: 334. Type locality: «Placer Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 177), in USNM [# 47015]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. This species is known only from the Lake Tahoe area in the Sierra Nevada, California.
Records. USA: CA

Pterostichus lattini LaBonte, 2006

Pterostichus lattini LaBonte, 2006: 204. Type locality: «Marys Peak (1092 m), Benton Co[unty], Or[egon]» (original citation). Holotype (♂) in CAS [# 18122].

Distribution. This species is known from the Cascade Range and Coast Ranges of western Oregon [see LaBonte 2006: Fig. 5].
Records. USA: OR

Pterostichus neobrunneus Lindroth, 1966

Pterostichus neobrunneus Lindroth, 1966: 462. Type locality: «Oliver, B[ritish] C[olumbia]» (original citation). Holotype (♂) in CNC [# 9224].

Distribution. This species occurs west of the Rocky Mountains from southern British Columbia, including Vancouver Island (Lindroth 1966: 463), to northern Oregon (Hatch 1953: 109, as *P. brunneus*).
Records. CAN: BC (VCI) **USA**: OR, WA
Note. Prior to Lindroth (1966), this species was reported in the literature under the name *P. brunneus* (Dejean, 1828).

Pterostichus occultus Casey, 1913

Pterostichus occultus Casey, 1913: 112. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 176), in USNM [# 47009].

Distribution. This species is known only from the lectotype collected in northern California.
Records. USA: CA

Pterostichus planctus LeConte, 1853

Pterostichus planctus LeConte, 1853a: 239. Type locality: «Sac[ramento] [Sacramento County, California]» (lectotype label). Lectotype (♀), designated by Bousquet (1999: 177), in MCZ [# 5603].

Distribution. This species is known from "Oregon" (LeConte 1853a: 239) and a few localities in the Sierra Nevada (Fall 1901a: 45).
Records. USA: CA, OR

Pterostichus protractus LeConte, 1860

Pterostichus protractus LeConte, 1860: 319. Type locality: «Jasper House [= Jasper, Alberta]» (original citation). Lectotype (♂), designated by Bousquet (1999: 178), in MCZ [# 5604].

Pterostichus inornatus Bland, 1865: 381. Type locality: «Colorado Territory» (original citation). Lectotype (♂), designated by Bousquet (1999: 178), in ANSP [# 2701]. Synonymy established by LeConte (1873a: 303), confirmed by Bousquet (1999: 178).

Pterostichus fontinalis Casey, 1913: 110. Type locality: «Yellowstone Park, Wyoming» (original citation). Lectotype (♂), designated by Lindroth (1975: 122), in USNM [# 47004]. Synonymy established by Lindroth (1966: 463).

Pterostichus zunianus Casey, 1913: 111. Type locality: «New Mexico» (original citation). Lectotype (♂), designated by Bousquet (1999: 183), in USNM [# 47005]. **New synonymy** (Serge Laplante pers. comm. 1998).

Hypherpes vivax Casey, 1918: 333. Type locality: «Yellowstone Park, Wyoming» (original citation). Lectotype (♂), designated by Lindroth (1975: 122), in USNM [# 47007]. Synonymy established by Lindroth (1966: 463).

Hypherpes intectus Casey, 1918: 333. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Bousquet (1999: 173), in USNM [# 47006]. **New synonymy** (Serge Laplante pers. comm. 1998).

Hypherpes provensis Casey, 1924: 69. Type locality: «Provo Cañon [Utah County], Utah» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 123), in USNM [# 47017]. Synonymy established by Lindroth (1966: 463).

Hypherpes utensis Casey, 1924: 69. Type locality: «Provo Cañon [Utah County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 123), in USNM [# 47010]. Synonymy established by Lindroth (1966: 463).

Distribution. This species occurs from the foothills of the Rocky Mountains in south-central Alberta to the Kootenay River drainage in southeastern British Columbia (Lindroth 1966: 463), south to the Sierra Nevada in California (Fall 1901a: 45; Papp 1978: 167), northern Arizona (Apache and Coconino Counties, CNC), and the Sangre de Cristo Mountains in New Mexico (Fall and Cockerell 1907: 158; Casey, 1913: 111, as *P. zunianus*). The record from Baja California (Horn 1894: 308) is suspect; that from "Nebraska" (Schaupp 1882c: 40) needs confirmation.
Records. CAN: AB, BC **USA**: AZ, CA, CO, ID, MT, NM, NV, OR, UT, WA, WY [NE]

Pterostichus vandykei Schaeffer, 1910

Pterostichus van dykei Schaeffer, 1910: 392. Type locality: «Moscou M[oun]t[ain]s, Idaho» (original citation). Lectotype (♀), designated by Erwin and House (1978: 247), in USNM [# 42497].

Distribution. This species is known from northern Idaho and adjacent eastern Washington (Hatch 1953: 109).
Records. USA: ID, WA

***Pterostichus ybousqueti* Berlov, 1999**

Pterostichus parens Casey, 1913: 112 [secondary homonym of *Pterostichus parens* (Tschitschérine, 1897)]. Type locality: «Siskiyou Co[unty], Cal[ifornia]» (lectotype label). Lectotype (♂), designated by Bousquet (1999: 176), in USNM [# 47008].
Pterostichus ybousqueti O. Berlov, 1999: 60. Replacement name for *Pterostichus parens* Casey, 1913.

Distribution. This species is known only from Siskiyou County in northern California.
Records. USA: CA

[**illustris group**]
***Pterostichus illustris* LeConte, 1851**

Pterostichus illustris LeConte, 1851: 182. Type locality: «S[an] D[iego] [San Diego County, California]» (lectotype label). Lectotype (♂), designated by Bousquet (1999: 172), in MCZ [# 82].

Distribution. As far as known, this species seems to be restricted to southwestern California.
Records. USA: CA
Note. This name has been listed as a junior synonym of *P. congestus* Ménétriés by LeConte (1858a: 28; 1873a: 304) but, as pointed out by Bousquet and Larochelle (1993: 18), it applies to a distinct species.

[**inermis group**]
***Pterostichus inermis* Fall, 1901**

Pterostichus inermis Fall, 1901a: 211. Type locality: «foot-hill cañons of the Sierras near Pomona [Los Angeles County, California]» (original citation). Lectotype (♂), designated by Bousquet (1999: 172), in MCZ [# 23873].

Distribution. This species is known so far only from southwestern California.
Records. USA: CA

***Pterostichus miscellus* Casey, 1913**

Pterostichus miscellus Casey, 1913: 115. Type locality: «S[an]ta Barbara [Santa Barbara County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 175), in USNM [# 47019].

Distribution. This very distinct species is still known only from the lectotype collected at Santa Barbara along the coast of California.
Records. USA: CA

[**isabellae group**]

***Pterostichus canallatus* Casey, 1913**

Pterostichus canallatus Casey, 1913: 120. Type locality: «S[an]ta Barbara [Santa Barbara County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 167), in USNM [# 47026].

Distribution. This species is known only from the type locality in southwestern California.
Records. USA: CA

***Pterostichus gliscans* Casey, 1913**

Pterostichus gliscans Casey, 1913: 119. Type locality: «San Clemente Island [Los Angeles County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 170), in USNM [# 47025].

Distribution. This species is known only from the original specimens collected in San Clemente Island, part of the Channel Islands, in the Pacific Ocean along the coast of southern California.
Records. USA: CA (CHI)

***Pterostichus isabellae* LeConte, 1851**

Pterostichus isabellae LeConte, 1851: 182. Type locality: «S[an]ta Isabel [San Bernardino County, California]» (original citation), cited from «'Bill Williams' Ranch' in the mountains east of San Diego» by LeConte (1853a: 237). Lectotype (♂), designated by Bousquet (1999: 173), in MCZ [# 84].

Distribution. According to Fall (1901b: 44), this species is "common and widely diffuse" in southern California.
Records. USA: CA (CHI)

***Pterostichus jacobinus* Casey, 1913**

Pterostichus jacobinus Casey, 1913: 118. Type locality: «San Diego [San Diego County], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 173), in USNM [# 47024].

Distribution. This species is known yet only from San Diego County in southwestern California.
Records. USA: CA

***Pterostichus ovalipennis* Casey, 1913**

Pterostichus ovalipennis Casey, 1913: 119. Type locality: «between Indio and Colton [probably in Riverside County], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 177), in USNM [# 47023].

Distribution. This species is known only from the lectotype collected in southwestern California.
Records. USA: CA

[**lama group**]
***Pterostichus lama* (Ménétriés, 1843)**

Feronia atra Dejean, 1828: 339 [secondary homonym of *Pterostichus ater* (Sahlberg, 1817)]. Type locality: «Californie» (original citation), herein restricted to Lake Tahoe, Placer County (see Casey, 1913: 97, as *Holciophorus pollens*). Syntype(s) probably in MHNP (Lindroth 1966: 458).
Feronia lama Ménétriés, 1843: 60. Type locality: «Californie» (original citation), herein restricted to Lake Tahoe, Placer County (see Casey, 1913: 97). Syntype(s) location unknown (Lindroth 1966: 458). Synonymy established by LeConte (1853a: 250).
Percus aterrimus Motschulsky, 1845b: 341. Type locality: «Californie» (original citation). Holotype [by monotypy] (♂) location unknown (possibly in ZMMU though not listed in Keleinikova 1976). Synonymy established by Motschulsky (1845b: 341).
Holciophorus vancouveri Casey, 1913: 97. Type locality: «Victoria, Vancouver Island [British Columbia]» (original citation). Lectotype (♂), designated by Lindroth (1975: 122), in USNM [# 46974]. Synonymy established by Hatch (1953: 107), confirmed by Lindroth (1966: 458).
Holciophorus pollens Casey, 1913: 97. Type locality: «Lake Tahoe [Placer County], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 122), in USNM [# 46975]. Synonymy established by Lindroth (1966: 458).
Holciophorus cephalus Casey, 1913: 98. Type locality: «California» (original citation). Holotype [by monotypy] (♂) in USNM. Synonymy established, under the name *P. pollens* (Casey), by Casey (1924: 68).
Holciophorus domitor Casey, 1913: 98. Type locality not stated. Lectotype (♂), designated by Lindroth (1975: 122), in USNM. Synonymy established by Lindroth (1966: 458).

Distribution. This large species is found from the Queen Charlotte Islands (Kavanaugh 1992: 70) south to southern California (Fall 1901a: 44, as *P. ater*; Will and Gill 2008: 124), including Washoe County in northwestern Nevada (La Rivers 1946: 102, as *Feronia ater*).
Records. CAN: BC (QCI, VCI) **USA**: CA, NV, OR, WA

[**lassulus group**]
***Pterostichus lassulus* (Casey, 1920)**

Hypherpes lassulus Casey, 1920: 186. Type locality: «Olancha, Inyo Co[unty], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 174), in USNM [# 46999].

Distribution. This species is known only from the lectotype collected in eastern California.
Records. USA: CA

[**menetriesii group**]
***Pterostichus menetriesii* LeConte, 1873**

Pterostichus menetriesii LeConte, 1873a: 304. Type locality: «Cal[ifornia]» (lectotype label). Lectotype (♀), designated by Bousquet (1999: 175), in MCZ [# 34326]. Etymology. The specific name was proposed for Edouard Ménétriés [1802-1861], the leading Russian entomologist of his time. Born in France, Ménétriés worked at the Museum of the Jardin des Plantes under Cuvier and Latreille before acting as conservator of rarities at the Zoological Museum in the Imperial Academy of Sciences in Saint Petersburg. He described many North American beetles collected in Alaska and northern California by various Russian expeditions. His collection is in the Zoological Institute in Saint Petersburg.

Distribution. This species is found along the Coast Ranges in central California (Marin, San Mateo, and San Francisco Counties, Will and Gill 2008: 125, CNC). It was also reported from Santa Rosa Island in the Pacific Ocean (Fall 1901a: 44).
Records. USA: CA (CHI)

[**morionides group**]
***Pterostichus morionides* (Chaudoir, 1868)**

Feronia morionides Chaudoir, 1868b: 337. Type locality: «Californie» (original citation). Syntype(s) [2 originally cited] probably in MHNP.

Distribution. This species is found along the northern (Siskiyou County, CNC) and central parts of the Sierra Nevada (Will and Gill 2008: 118, 125).
Records. USA: CA
Note. In analyses using molecular data sequences, this species was consistently positioned as the sister-group to {*P. adoxus* + *P. tristis*} which occur in eastern North America (Will and Gill 2008: 118).

[**nigrocaeruleus group**]
***Pterostichus brachylobus* Kavanaugh and LaBonte, 2006**

Pterostichus brachylobus Kavanaugh and LaBonte, 2006: 217. Type locality: «Neskowin Creek at Neskowin Campground, Tillamook County, Oregon» (original citation). Holotype (♂) in CAS [# 18121].

Distribution. This species is known only along the coast in central Oregon [see Kavanaugh and LaBonte 2006: Fig. 14].
Records. USA: OR

Pterostichus nigrocaeruleus Van Dyke, 1926

Pterostichus nigrocaeruleus Van Dyke, 1926a: 70. Type locality: «back of Port Angeles [Clallam County], Washington» (original citation). Holotype (♂) in CAS [# 1821].

Distribution. This species is found along the Pacific Coast from Vancouver Island to northern California (Lindroth 1966: 467).
Records. CAN: BC (VCI) **USA**: CA, OR, WA

[**restrictus group**]

Pterostichus luscus (Casey, 1918)

Hypherpes luscus Casey, 1918: 332. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Bousquet (1999: 179), in USNM [# 47003].

Distribution. This species is yet known only from the lectotype.
Records. USA: CO
Note. This name has been listed in synonymy with *P. restrictus* (Casey) by Erwin et al. (1977: 4.36), based on Armin (1963: 220) unpublished thesis. However, I believe the name probably applies to a distinct species.

Pterostichus restrictus (Casey, 1918)

Pterostichus longulus LeConte, 1873a: 312 [secondary homonym of *Pterostichus longulus* (Reiche and Saulcy, 1856)]. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Bousquet (1999: 179), in MCZ [# 5605].
Hypherpes restrictus Casey, 1918: 331. Type locality: «Boulder Co[unty], Col[orado]» (lectotype label). Lectotype (♂), designated by Bousquet (1999: 179), in USNM [# 47001]. Synonymy established by Erwin et al. (1977: 4.36) based on Armin (1963: 220) unpublished thesis.
Hypherpes elumbis Casey, 1918: 332. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♀) in USNM [# 47002]. Synonymy established by Erwin et al. (1977: 4.36) based on Armin (1963: 220) unpublished thesis.
Pterostichus restrictus var. *lecontellus* Csiki, 1930: 581. Replacement name for *Pterostichus restrictus* var. *longulus* LeConte, 1873.

Distribution. This species is found along the Rocky Mountains from southern Montana (Hatch 1933a: 7) to northern New Mexico (Snow 1885: 67; Fall and Cockerell 1907: 157).
Records. USA: CO, MT, NM, WY

[**setosus group**]
***Pterostichus setosus* Hatch, 1951**

Pterostichus setosus Hatch, 1951: 116. Type locality: «Wrangle Gap, Rogue R[iver] N[ational] F[orest] [Jackson County], Ore[gon]» (original citation). Holotype (♂) in USNM.

Distribution. This very distinct species is known only from southwestern Oregon (Hatch 1951: 116; Niwa and Peck 2002: 787).
Records. USA: OR

[**tarsalis group**]
***Pterostichus serripes* (LeConte, 1875)**

Holciophorus serripes LeConte, 1875c: 169. Type locality: «Yosemite Valley [Mariposa County], Cal[ifornia]» (original citation). Lectotype (♂), designated by Bousquet (1999: 180), in MCZ [# 5600].

Distribution. This species is known so far only from the Yosemite Valley in the Sierra Nevada, California.
Records. USA: CA

***Pterostichus tarsalis* LeConte, 1873**

Pterostichus tarsalis LeConte, 1873a: 311. Type locality: «Lake Taho[e] Valley [Placer County], Sierra Nevada [California]» (original citation). Lectotype (♂), designated by Bousquet (1999: 181), in MCZ [# 5601].
Pterostichus sequoiarum Casey, 1913: 101. Type locality: «Big Trees [Calaveras County], California» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 17), in USNM [# 46979]. Synonymy established by Bousquet and Larochelle (1993: 17).
Hypherpes spissitarsis Casey, 1918: 329. Type locality: «Lake Tahoe [Placer County], California» (original citation). Holotype [by monotypy] (♂) in USNM [# 46978]. Synonymy established by Bousquet and Larochelle (1993: 14).

Distribution. This species is known for sure only from the Sierra Nevada, California. The record from "Oregon" (Schaupp 1882c: 40) needs confirmation.
Records. USA: CA [OR]

[**vicinus group**]
***Pterostichus algidus* LeConte, 1853**

Feronia valida Dejean, 1828: 325 [primary homonym of *Feronia concinna* var. *valida* Dejean, 1828 (page 293)]. Type locality: «détroit de Norfolk [= Sitka Sound, Baranof Island, Alaska] sur la côte nord-ouest de l'Amérique septentrionale» (original citation). Syntype(s) in MHNP.

Pterostichus algidus LeConte, 1853a: 238. Type locality: «Oregon» (original citation). Lectotype (♀), designated by Bousquet (1999: 164), in MCZ [# 7398]. Synonymy established by LeConte (1873a: 303), confirmed by Bousquet (1999: 164).

Pterostichus humboldti Casey, 1913: 114. Type locality: «Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 171), in USNM [# 47012]. **New synonymy** (Serge Laplante pers. comm. 1998).

Pterostichus bucolicus Casey, 1913: 115. Type locality: «Humboldt Co[unty], California» (original citation for the lectotype). Lectotype (♂), designated by Bousquet (1999: 167), in USNM [# 47018]. **New synonymy** (Serge Laplante pers. comm. 1998).

Hypherpes innatus Casey, 1918: 328. Type locality: «Canada, west of the Rocky M[oun] t[ain]s» (original citation). Lectotype (♀), designated by Lindroth (1975: 122), in USNM [# 46989]. Synonymy established by Lindroth (1966: 460).

Hypherpes responsor Casey, 1918: 330. Type locality: «Victoria, Vancouver Island [British Columbia]» (original citation). Lectotype (♀), designated by Lindroth (1975: 122), in USNM [# 46997]. Synonymy established by Hatch (1953: 108), confirmed by Lindroth (1966: 460).

Hypherpes kansanus Casey, 1918: 330. Type locality: «Kansas (probably western)» (original citation), which is incorrect. Lectotype (♂), designated by Bousquet (1999: 173), in USNM [# 46988]. **New synonymy** (Serge Laplante pers. comm. 1998).

Hypherpes anthrax Casey, 1918: 331. Type locality: «Vancouver Island [British Columbia]» (original citation). Lectotype (♀), designated by Lindroth (1975: 122), in USNM [# 46994]. Synonymy established by Lindroth (1966: 460).

Distribution. This species ranges along the Pacific Coast from southern Alaska (Lindroth 1966: 462) to northern California (Fall 1901a: 45; Casey, 1913: 114, as *P. humboldti*).

Records. CAN: BC (QCI, VCI) **USA**: AK, CA, OR, WA

Pterostichus barbarinus Casey, 1913

Pterostichus barbarinus Casey, 1913: 116. Type locality: «S[an]ta Barbara [Santa Barbara County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 166), in USNM [# 47022].

Distribution. This species is known only from the type locality in southwestern California.

Records. USA: CA

Pterostichus californicus (Dejean, 1828)

Feronia californica Dejean, 1828: 222. Type locality: «Californie» (original citation), herein restricted to Hoopa Valley, Humboldt County (see Casey 1913: 114, as *P. cupidus*). Syntype(s) probably in MHNP.

Pterostichus simplex LeConte, 1851: 181. Type locality: «San Jose [Santa Clara County, California]» (lectotype label). Lectotype (♀), designated by Bousquet (1999: 167), in MCZ [# 81]. Synonymy established by LeConte (1857c: 8).

Brachystylus amplicollis Motschulsky, 1859a: 146. Type locality: Californie (inferred from title of the paper). Lectotype (♀), designated by Bousquet (1999: 167), in MCZ [# 8233]. Synonymy established by LeConte (1873a: 304).

Brachystylus parallelus Motschulsky, 1859a: 147 [*nomen dubium*]. Type locality: «St. Francisco [San Francisco County, California]» (original citation). Lectotype (♂), designated by Bousquet and Larochelle (1993: 13), in ZMMU. Synonymy established with doubt by Bousquet and Larochelle (1993: 13).

Pterostichus cupidus Casey, 1913: 114. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 167), in USNM [# 47014]. Synonymy established by Erwin et al. (1977: 4.36), confirmed by Bousquet (1999: 167).

Pterostichus diabolus Casey, 1913: 120. Type locality: «M[oun]t Diablo [Contra Costa County], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 169), in USNM [# 47036]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. As far as known, the range of this species extends along the Coast Ranges of California from Humboldt County (Casey 1913: 114, as *P. cupidus*) to Santa Clara County (LeConte 1851: 181, as *P. simplex*).
Records. USA: CA

Pterostichus ordinarius Casey, 1913

Pterostichus ordinarius Casey, 1913: 116. Type locality: «North Fork, Madera Co[unty], California» (original citation). Lectotype (♂), designated by Bousquet (1999: 176), in USNM [# 47021].

Distribution. This species is known only from the original specimens collected at the type locality in the Sierra Nevada.
Records. USA: CA

Pterostichus vicinus Mannerheim, 1843

Pterostichus vicinus Mannerheim, 1843: 200. Type locality: «California» (original citation). Lectotype (♂), designated by Bousquet (1999: 183), in ZMH.

Hypherpes alamedae Casey, 1918: 334. Type locality: «Alameda [Alameda County], California» (original citation). Lectotype (♀), designated by Bousquet (1999: 164), in USNM [# 47013]. **New synonymy** (Serge Laplante pers. comm. 1998).

Distribution. This species seems to be restricted to the Coast Ranges in California. Fall (1901b: 44) statement that the species is "common in the Sierras and throughout the region [i.e., southern California] to the west" needs confirmation.
Records. USA: CA

Subgenus *Cryobius* Chaudoir, 1838

Cryobius Chaudoir, 1838: 11. Type species: *Poecilus ventricosus* Eschscholtz, 1823 by original designation. Etymology (original). From the Greek *cryos* (cold) and *bios* (life), alluding to the cold habitat where these species live [masculine].

Haptoderus Chaudoir, 1838: 10. Type species: *Feronia spadicea* Dejean, 1828 (= *Feronia pumilio* Dejean, 1828) by original designation. Synonymy established by Bousquet (1999: 183). Etymology (original). From the Greek *hapto* (fasten to, by extension to apply) and *dere* (neck, by extension pronotum) [masculine].

Pseudorthomus Chaudoir, 1838: 12, 19. Type species: *Feronia amaroides* Dejean, 1828 by original designation. Synonymy established by Bousquet (1999: 183). Etymology (original). From the Greek *pseudos* (fallacy, lie) and the generic name *Orthomus* [masculine].

Pseudocryobius Motschulsky, 1850a: ix. Type species: *Feronia nivalis* Sahlberg, 1844 designated by Bousquet (1984a: 4). Synonymy established by Poppius (1906b: 7). Etymology (original). From the Greek *pseudos* (fallacy, lie) and the generic name *Cryobius* [*q.v.*] [masculine].

Abaxodes Gistel, 1857: 31. Type species: *Feronia abaxoides* Dejean, 1828 designated by Strand (1917: 76). Etymology. From the generic name *Abax* [*q.v.*] and the Greek *-odes* (likeness) [masculine].

Orites Schaum, 1858: 442, 463. Type species: *Platysma negligens* Sturm, 1824 by monotypy. Synonymy established by Schatzmayr (1942: 77). Etymology. From the Greek *oreites* (mountaineer) [masculine].

Pyreneorites Jeannel, 1937b: 11, 16. Type species: *Feronia pusilla* Dejean, 1828 by original designation. Synonymy established by Bousquet (1999: 183). Etymology. From the geographical name Pyrenees and the generic name *Orites* [*q.v.*] [masculine].

Euhaptoderus Jeanne, 1969: 33. Type species: *Carabus unctulatus* Duftschmid, 1812 by original designation. Synonymy established by Bousquet (1999: 183). Etymology. From the Greek *eu* (agreeable, original, primitive) and the generic name *Haptoderus* [*q.v.*] [masculine].

Iberoderus Jeanne, 1969: 34. Type species: *Feronia nemoralis* Graells, 1851 by original designation. Synonymy established by Bousquet (1999: 183). Etymology. From the geographic name Iberia (the Iberian Peninsula) and the Greek *dere* (neck, by extension pronotum) [masculine].

Cryobiopterus O. Berlov, 1997: 36. Type species: *Argutor brevicornis* Kirby, 1837 by original designation. Synonymy established by Bousquet (1999: 183). Etymology. From the Greek *cryos* (cold), *bios* (life), and *pteron* (wing, by extension elytron) [masculine].

Diversity. About 115 species in the arctic, subarctic, and boreal regions of North America (23 species) and the Palaearctic Region (about 100 species). Several species are Holarctic.

Identification. Ball (1966a) revised the North American species which he arrayed in three groups. Since then, two new species have been described, one (*P. haftorni*) by Lindroth (1969a) which has been subsequently synonymized, the other one (*P. woodi*) by Ball and Currie (1997), and several species related to *P. planus* have been downgraded to subspecies of *P. bryanti* by Ball and Currie (1997). Species identifications are difficult in part because of the important intraspecific variation observed in most species.
Taxonomic Note. Lorenz (2005: 275) listed *Parahaptoderus* Jeanne as a junior synonym of *Cryobius*. However, the taxon, which is composed of three European species of which one extends to Turkey, is probably not closely related to *Cryobius* (see Bousquet 1999: 187).

[**brevicornis group**]

***Pterostichus brevicornis brevicornis* (Kirby, 1837)**

Argutor brevicornis Kirby, 1837: 31. Type locality: «Lat. 65° [= apparently region of Great Bear Lake, Northwest Territories]» (original citation), restricted to «Good Hope, N[orth]W[est] T[erritories]» by Ball (1966a: 105). Lectotype (♂), designated by Ball (1966a: 105), in BMNH.

Feronia subtilis R.F. Sahlberg, 1844: 35. Type locality: circa Okhotsk, Khabarovsk Kray, Siberia, Russia (inferred from introduction and title of the paper). Lectotype [as holotype] (♀), designated by Ball (1966a: 105), in ZMH. Synonymy established by Ball (1966a: 105).

Cryobius fastidiosus Mannerheim, 1853: 131. Type locality: «ad sinum Woskresenk [= Resurrection Bay] peninsulae Kenai [Alaska]» (original citation). Lectotype (♂), designated by Silfverberg (1987: 16), in ZMH. Synonymy established by Lindroth (1954b: 131).

Pseudocryobius quinquepunctatus Motschulsky, 1860: 93. Type locality: «Kamtschatka [Russia]» (original citation). One syntype in ZMMU (Keleinikova 1976: 213). Synonymy established by Ball (1966a: 105).

Feronia fragilis Mäklin, 1878: 20. Type locality: «Sopotschnaja Korga (71°40' n. lat.) [Siberia, Russia]» (original citation). Syntype(s) location unknown. Synonymy established by Ball (1966a: 105). Note. The lectotype selected by Ball (1966a: 105), apparently in ZMH though not listed in Silfverberg's (1987) type list, is labeled "Waigatsch" (= Vaygach Island in Siberia) and is probably not a syntype.

Feronia infima Mäklin, 1878: 20 [primary homonym of *Feronia infima* Chaudoir, 1868]. Type locality: «Jenisej, nemligen åtminstone från Mesenkin åt söder ända nedom 61 breddgraden [Russia]» (original citation). Syntype(s) location unknown (possibly in NRSS). Synonymy established, under the name *P. fastidiosus* (Mannerheim), by Poppius (1906b: 192), confirmed by Lindroth (1954b: 132).

Feronia arctica J.R. Sahlberg, 1880: 31. Replacement name for *Feronia infima* Mäklin, 1878.

Feronia epipleuralis J.R. Sahlberg, 1885b: 49. Type locality: Port Clarence, Alaska (inferred from title of the paper). Syntype(s) [3 originally cited] in ZMH. Synonymy

established, under the name *P. fastidiosus* (Mannerheim), by Poppius (1906b: 192), confirmed by Ball (1966a: 105).

Platysma aquilonium Tschitschérine, 1904: 125. Type locality: «insula Kolgujev: Bugrino-Stanovishtshe [in Barents Sea, Russia]» (original citation). Syntype(s) [2 ♂ originally cited] probably in ZILR. Synonymy established, under the name *P. fastidiosus* (Mannerheim), by Poppius (1906b: 192).

Cryobius carbo Poppius, 1906b: 182. Type locality not stated. Lectotype (♀), designated by Ball (1966a: 105), in ZMH. Synonymy established by Ball (1966a: 105).

Cryobius fastidiosus minusculus Poppius, 1906b: 199. Type locality: «Bulkur, Unterste Lena [Yakutia, Siberia, Russia]» (original citation). Lectotype (♀), designated by Ball (1966a: 105), in ZMH. Synonymy established by Ball (1966a: 105).

Cryobius delicatus Casey, 1918: 375. Type locality: «S[ain]t Paul Island, Alaska» (original citation). Lectotype [as holotype] (♂), designated by Ball (1966a: 89), in USNM [# 47079]. **New synonymy**. Note. Ball (1966a) retained this name for a subspecies of *P. brevicornis* endemic to the Bering Sea Islands but, as pointed out by himself (Ball 1966a: 121) and Lindroth (1966: 523), there are no constant structural character states between the two forms and intermediate specimens are known. Based on these facts, I prefer not to retain this form as a valid subspecies.

Distribution. This Holarctic subspecies ranges from the Kola Peninsula in northern European Russia eastwards to Newfoundland (Ball 1966a: 119); the species is represented by isolated populations in the Gaspé Peninsula, Maine, New Hampshire, Vermont, New York, Michigan (Ball 1966a: 119-121), northeastern Minnesota (Cook County, CNC), and northern Wyoming (Big Horn County, FFPC) [see Ball and Currie 1997: Fig. 4]. The record from northern Colorado (Armin 1963: 217) is likely in error. Fossil remnants, older than 33,000 years B.P., have been unearthed in southwestern Ontario (Warner et al. 1988: 37); others from a Plio-Pleistocene sequence have been found in northwestern Greenland (Böcher 1995: 28).

Records. CAN: AB, BC, LB, MB, NF, NT, NU, ON, QC, YT **USA**: AK, ME, MI, MN, NH, NY, VT, WY – **Holarctic**

Note. The subspecies *P. brevicornis yasudai* Morita is endemic to the island of Hokkaidō, Japan.

Pterostichus empetricola (Dejean, 1828)

Feronia empetricola Dejean, 1828: 331. Type locality: «île d'Ounalaschka, l'une des îles Aleutiennes [Alaska]» (original citation for the lectotype). Lectotype (♀), designated by Ball (1966a: 122), in MHNP.

Cryobius ruficollis Mannerheim, 1853: 131. Type locality: «insula Afognak [Alaska]» (original citation). Holotype [by monotypy; designated lectotype by Ball (1966a: 122)] (♀) in MHNP. Synonymy established by Poppius (1906b: 65), confirmed by Ball (1966a: 122).

Cryobius rotundicollis Mannerheim, 1853: 132 [secondary homonym of *Pterostichus rotundicollis* (Duftschmid, 1812)]. Type locality: «insula Atkha [= Atka Island, Aleutian Islands, Alaska]» (original citation). Holotype [by monotypy] in ZILR. Synonymy established by Ball (1966a: 122).

Cryobius pacificus Poppius, 1906b: 184. Type locality: «Sibir[ia] or[ientali] [Russia]» (lectotype label). Lectotype (♀), designated by Ball (1966a: 122), in ZMH. Synonymy established by Ball (1966a: 122).

Pterostichus globicollis Csiki, 1930: 654. Replacement name for *Pterostichus rotundicollis* (Mannerheim, 1853).

Distribution. This Holarctic species ranges from the Kuril and Commander Islands (Eremin 1998: 298) on the east coast of Asia to southern Yukon Territory, including Kodiak and Aleutian Islands, south to west-central British Columbia (Lemieux and Lindgren 2004: 562) [see Ball 1963: Fig. 3].

Records. CAN: BC, YT **USA**: AK – **Holarctic**

Note. Lindroth (1966: 524) stated that the taxonomic status of this taxon as a distinct species from *P. brevicornis* Kirby is questionable. Ball (1966a: 123) evoked the fact that the taxon may be regarded as a "parthenogenetic race" of *P. brevicornis*. Both authors concluded that this taxon is parthenogenetic since, as far as known, no males have been found to date that could be associated with it. This is also the case for the Asian specimens studied by Eremin (1998).

Pterostichus mandibularoides Ball, 1966

Pterostichus mandibularoides Ball, 1966a: 125. Type locality: «Anderson R[iver] delta, Northwest Territories» (original citation). Holotype (♂) in CNC [# 9232].

Distribution. This species is found from the western shore of Hudson Bay in Nunavut westwards to the coast of the Bering Sea in Alaska, southwards to northeastern British Columbia and northwestern Alberta (UASM) [see Nielsen et al. 1987: Fig. 18b].

Records. CAN: AB, BC, NT, NU, YT **USA**: AK

Pterostichus nivalis (Sahlberg, 1844)

Feronia nivalis R.F. Sahlberg, 1844: 37. Type locality: «monte Morikan [Okhotsk, Khabarovsk Kray, Russia]» (original citation). Lectotype (♀), designated by Bousquet (1999: 191), in ZMH.

Feronia thulensis J.R. Sahlberg, 1885a: 18. Type locality: «Irkajpi [Chukchi Peninsula, Russia]» (original citation for the lectotype). Lectotype (♂), designated by Ball (1966a: 129), in NRSS. Synonymy established by Ball (1966a: 128).

Distribution. The range of this Holarctic species extends from eastern Siberia (Ball 1966a: 131) eastwards to east-central Yukon Territory (Dempster Highway Mi 35, CNC), south to the Alaska Peninsula [see Ball 1963: Fig. 3].

Records. CAN: YT **USA**: AK – **Holarctic**

[**pinguedineus group**]
***Pterostichus arcticola* (Chaudoir, 1868)**

Feronia arcticola Chaudoir, 1868b: 339. Type locality: «Groenland» (original citation), which is incorrect (Ball 1966a: 29); «Labrador» selected by Ball (1966a: 29), herein restricted to Hopedale (see Ball 1966a: 35). Lectotype (♂), designated by Ball (1966a: 29), in MHNP.

Feronia labradorensis Chaudoir, 1868b: 340. Type locality: «Labrador» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established by Ball (1966a: 29).

Distribution. This species ranges from the Labrador coast and Baffin Island to central Alaska, south at least to central British Columbia (Summit Lake, CNC); isolated on the Adirondack Mountains of New York, the White Mountains of New Hampshire, and the Shickshock Mountains in Gaspé Peninsula [see Ball 1963: Fig. 8; Nielsen et al. 1987: Fig. 17d; Ball and Currie 1997: Fig. 2]. Fossil remnants of this species, dated between about 16,700 and 18,100 years B.P., have been unearthed in southeastern Iowa (Baker et al. 1986: 96).
Records. CAN: BC, LB, MB, NT, NU, QC, YT **USA**: AK, ME, NH, NY

***Pterostichus auriga* Ball, 1962**

Pterostichus auriga Ball, 1962: 14. Type locality: «Crowbill Mountain, Cape Thompson, Alaska» (original citation). Holotype (♂) in MCZ [# 31311].

Distribution. This species is known from two localities along the west coast of Alaska (Ball 1966a: 82).
Records. USA: AK

***Pterostichus barryorum* Ball, 1962**

Pterostichus barryorum Ball, 1962: 17. Type locality: «Delta Islands, Anderson R[iver], Northwest Territories» (original citation). Holotype (♂) in CNC [# 9230].

Distribution. This species ranges from northwestern Nunavut and central Northwest Territories westwards to northeastern Alaska (Ball 1962: 19). The record from McMurray in northern Alberta (Ball 1966a: 49), based upon a single specimen, has been rejected by Ball and Currie (1997: 476). Fossil remnants of this species, dated between about 16,700 and 20,530 years B.P., have been unearthed in southeastern and northeastern Iowa (Baker et al. 1986: 96; Schwert 1992: 77; Woodman et al. 1996: 17).
Records. CAN: NT, NU, YT **USA**: AK

***Pterostichus bryanti biocryus* Ball, 1962**

Pterostichus biocryus Ball, 1962: 10. Type locality: «Crowbill Mountain, Cape Thompson, Alaska» (original citation). Holotype (♂) in MCZ [# 31309].

Distribution. This subspecies is known only from the type locality in the arctic tundra and from the "Alpine interior Alaska" (Matthews 1974b: 1365).
Records. USA: AK

Pterostichus bryanti bryanti (Van Dyke, 1951)

Feronia bryanti Van Dyke, 1951: 27. Type locality: «Aklavik, Mackenzie Delta, Northwest Territor[ies]y» (original citation). Holotype (♂) in CAS [# 6197].

Distribution. This subspecies is known only from a few localities in the arctic from northwestern Northwest Territories (Ball 1966a: 66) to Prudhoe Bay in Alaska, including the Richardson Mountains in Yukon Territory (Ball and Currie 1997: 489).
Records. CAN: NT, YT **USA**: AK

Pterostichus bryanti bryantoides Ball, 1962

Pterostichus bryantoides Ball, 1962: 11. Type locality: «141 Meridian, 69-20 [= 69°20'N, 141°W], Alaska [near the Yukon Territory border]» (original citation). Holotype (♂) in USNM.

Distribution. This subspecies is known for sure only from Kotzebue on the Seward Peninsula (Matthews 1974b: 1365) and the type locality in northeastern Alaska. The record from "Yukon Territory" (Ball and Currie 1997: 452) could not be confirmed.
Records. USA: AK [YT]

Pterostichus bryanti cacumenis Ball, 1966

Pterostichus cacumenis Ball, 1966a: 67. Type locality: «Eagle Summit, Mile 108.5, Steese Highway, Alaska» (original citation). Holotype (♀) in MCZ [# 31310].

Pterostichus haftorni Lindroth, 1969a: 1118. Type locality: «M[oun]t Harper, S[outh] E[ast] Fairbanks, Alaska» (original citation). Holotype (♂) in MCZ [# 35351]. Synonymy established by Ball and Currie (1997: 486). Etymology. The specific name was proposed for the Norwegian ornithologist and biologist Svein Haftorn [1925-2003] who collected the original two specimens.

Distribution. This subspecies is known from a few localities between Yukon River and Fairbanks in the Yukon-Tanana Highlands in Alaska (Ball and Currie 1997: 486).
Records. USA: AK

Pterostichus bryanti stantonensis Ball, 1966

Pterostichus stantonensis Ball, 1966a: 66. Type locality: «Stanton, Wood Bay, Northwest Territories» (original citation). Holotype (♀) in CNC [# 9372].

Distribution. This subspecies is known only from the type locality located at the mouth of the Anderson River along the northwestern coast of Northwest Territories (Ball and Currie 1997: 486).
Records. CAN: NT

Pterostichus bryanti tiliaceoradix Ball, 1962

Pterostichus tiliaceoradix Ball, 1962: 8. Type locality: «Savage River (2660 feet), M[oun]t McKinley National Park [Alaska]» (original citation). Holotype (♂) location unknown (not located in USNM as on 27 September 2006).

Distribution. This subspecies is known only from a few localities in central Alaska (Lindroth 1966: 515).
Records. USA: AK

Pterostichus chipewyan Ball, 1962

Pterostichus chipewyan Ball, 1962: 24. Type locality: «Churchill, Manitoba» (original citation). Holotype (♂) in CNC [# 9090].

Distribution. This species is found from the Hudson Bay coast in northern Ontario to northeastern British Columbia, north to central Northwest Territories [see Ball 1963: Fig. 9].
Records. CAN: AB, BC, MB, NT, ON

Pterostichus gerstlensis Ball, 1962

Pterostichus gerstlensis Ball, 1962: 22. Type locality: «Big Gerstle R[iver], mi[le] 1393, Alaska Highway, Alaska» (original citation). Holotype (♂) in MCZ [# 31305].

Distribution. This species is known only from eastern and central Alaska [see Ball 1963: Fig. 8].
Records. USA: AK

Pterostichus hudsonicus LeConte, 1863

Pterostichus hudsonicus LeConte, 1863c: 11. Type locality: «Hudson's Bay Territory» (original citation), restricted to «Coppermine, Northwest Territories [= Nunavut]» by Bousquet (1999: 190). Lectotype (♂), designated by Ball (1966a: 49), in MCZ [# 5651].

Distribution. The range of this species extends from the Hudson Bay area in Nunavut to Kuskokwim Bay on the western coast of Alaska, south to northeastern British Columbia [see Ball 1963: Fig. 9] and northern Alberta (Birch Mountains, Gerald J. Hilchie pers. comm. 2009, determination of George E. Ball). The records from northern Colorado (Wickham 1902: 236; Armin 1963: 218) are likely in error.
Records. CAN: AB, BC, NT, NU, YT **USA**: AK

Pterostichus kotzebuei Ball, 1962

Pterostichus kotzebuei Ball, 1962: 19. Type locality: «Kotzebue, Alaska» (original citation). Holotype (♂) in MCZ [# 31304].

Distribution. This species is known from the Dempster Highway in Yukon Territory (UASM) to the Seward Peninsula in western Alaska [see Ball 1963: Fig. 8].
Records. CAN: YT **USA**: AK

Pterostichus parasimilis Ball, 1962

Pterostichus parasimilis Ball, 1962: 6. Type locality: «Umiat, Alaska» (original citation). Holotype (♂) in MCZ [# 31307].

Distribution. This Holarctic species is known from the Kamchatka Peninsula, several islands in the Bering Sea, mainland Alaska, and the Ogilvie Mountains in western Yukon Territory [see Ball 1963: Fig. 4].
Records. CAN: YT **USA**: AK – **Holarctic**

Pterostichus pinguedineus (Eschscholtz, 1823)

Poecilus pinguedineus Eschscholtz, 1823: 106. Type locality: «Unalaschka [Aleutian Islands, Alaska]» (original citation). Syntype(s) probably in ZILR. Note. This species was also made available the same year, under the name *Poecilus pinguedinis*, by an illustration in Fischer von Waldheim (1823: plate 19, figure 7).

Feronia frigida Dejean, 1828: 334. Type locality: «Kamschatka [Russia]» (original citation). Lectotype (♀), designated by Ball (1966a: 70), in MHNP. Synonymy established by Ball (1966a: 70).

Argutor mandibularis Kirby, 1837: 31. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Lectotype [as type] (♂), designated by Ball (1966a: 70), in BMNH. Synonymy established by Ball (1966a: 70).

Feronia subsinuosa Chaudoir, 1868b: 339. Type locality: «Kadjak [Island, Alaska]» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Ball (1966a: 70).

Feronia diplogma Chaudoir, 1868b: 340. Type locality: «côte nord-ouest de l'Amérique du Nord» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Ball (1966a: 70).

Feronia stuxbergi Mäklin, 1878: 17. Type locality: «Krestowskoj [Taimyr Autonomous Okrug, Siberia, Russia]» (lectotype label). Lectotype (♂), designated by Ball (1966a: 70), in ZMH. Synonymy established by Ball (1966a: 70). Etymology. The specific name honors the Swedish explorer and naturalist Anton Julius Stuxberg [1849-1902] who took part to the Arctic zoological expeditions with Adolf Erika Nordenskiöld in 1875-1876 and 1878-1879. Stuxberg worked at the geological museum in Göteborg until his death.

Feronia despecta J.R. Sahlberg, 1885a: 14. Type locality: «Pitlekaj [Chukchi Peninsula, Russia]» (lectotype label). Lectotype (♀), designated by Ball (1966a: 70), in NRSS. Synonymy established by Ball (1966a: 70).

Feronia sulcipennis J.R. Sahlberg, 1885a: 15. Type locality: «Pitlekaj [Chukchi Peninsula, Russia]» (original citation). Holotype [by monotypy] (♀) in NRSS. Synonymy established by Ball (1966a: 71).

Feronia laeviuscula J.R. Sahlberg, 1885a: 16 [secondary homonym of *Pterostichus longicollis* var. *laeviusculus* Letzner, 1852]. Type locality: «Nunamo, S[ain]t Lawrence Bay [Chukchi Peninsula, Siberia, Russia]» (original citation). Holotype [by monotypy] (♀) in NRSS. Synonymy established by Ball (1966a: 71).

Feronia splendida J.R. Sahlberg, 1885b: 49. Type locality: Port Clarence, Alaska (inferred from title of the paper). Holotype [by monotypy] (♀) in NRSS. Synonymy established by Ball (1966a: 71).

Cryobius subnitidulus Poppius, 1906b: 62. Type locality: «Insel Kadjak [Alaska]» (original citation). Syntype(s) [2 originally cited] in ZMH (Poppius 1906b: 64). Synonymy established, under the name *P. subsinuosus* (Chaudoir), by Poppius (1908a: 2).

Cryobius holmbergi Poppius, 1906b: 70. Type locality: «Insel Kadjak [Alaska]» (original citation). Holotype [by monotypy] (♀) in ZMH. Synonymy established by Ball (1966a: 71).

Cryobius incognitus Poppius, 1906b: 91. Type locality: «Amer[ica] ross[ica]» (original citation). Holotype [by monotypy] (♀) in ZILR. Synonymy established by Ball (1966a: 71).

Cryobius stuxbergi var. *fortestriatus* Poppius, 1906b: 103. Type locality: «Briochowski-ostroff, Fl[umen] Jenissej, arktisch Sibirien [Russia]» (original citation). Holotype [by monotypy] (♀) in ZMH. Synonymy established by Ball (1966a: 71).

Cryobius stuxbergi repandus Poppius, 1906b: 104. Type locality: «Lena infer[ior] [Yakutia, Siberia, Russia]» (lectotype label). Lectotype (♀), designated by Ball (1966a: 71), in ZMH. Synonymy established by Ball (1966a: 71).

Cryobius alaskensis Poppius, 1906b: 116. Type locality: «Insel Kadjak, Alaska» (original citation). Syntype(s) [4 originally cited] in ZILR. Synonymy established by Ball (1966a: 71).

Pterostichus montanellus Poppius, 1907: 21. Type locality: «White Mountains [New Hampshire]» (original citation). Two syntypes [2 originally cited] in ZMHB (Lindroth 1966: 518) and ZMH (Silfverberg 1987: 20). Synonymy established by Ball (1966a: 71).

Pterostichus beringensis Poppius, 1908b: 4. Type locality: «St. Lawrence Bai [Chukchi Peninsula, Russia]» (original citation). Holotype [by monotypy] location unknown. Synonymy established by Bousquet (2003d: 492).

Cryobius beringi Casey, 1918: 374. Type locality: «S[ain]t Paul Island, Alaska» (original citation). Lectotype [as holotype] (♀), designated by Ball (1966a: 71), in USNM [# 47078]. Synonymy established by Ball (1966a: 71).

Cryobius washingtoni Casey, 1920: 190. Type locality: «White M[oun]t[ain]s, New Hampshire» (original citation). Lectotype (♀), designated by Ball (1966a: 71), in USNM [# 47075]. Synonymy established by Ball (1966a: 71).

Pterostichus anadyricus Csiki, 1930: 651. Replacement name for *Pterostichus laeviusculus* (Sahlberg, 1885).

Distribution. This Holarctic species ranges from the Yenisei River in Siberia eastwards to the Mackenzie River delta in western Northwest Territories; isolated on the top of some mountains in New England and on the Shickshock Mountains of the Gaspé Peninsula, Quebec [see Ball 1963: Fig. 5]. The record from Wyoming (Lavigne 1977: 47) is in error. Fossil remnants of this species, dated between about 12,000 and 18,100 years B.P., have been unearthed in central and southeastern Iowa (Schwert 1992: 77; Baker et al. 1986: 96) and northeastern Pennsylvania (Barnosky et al. 1988: 178); others, older than 33,000 years B.P., have been found in southwestern Ontario (Warner et al. 1988: 37).
Records. CAN: NT, QC, YT **USA**: AK, ME, NH, VT – **Holarctic**
Note. *Platysma poppiusianum* Jacobson, 1907 (a replacement name for *P. insulicola* Poppius, 1906) was listed as a junior synonym of this species by Ball (1966a: 71), as a junior synonym of *P. subgibbus* (Motschulsky, 1860) by Kryzhanovskij et al. (1975: 137), and treated as a valid species by Eremin (1990) and Kryzhanovskij et al. (1995: 102).

Pterostichus planus (Sahlberg, 1885)

Feronia plana J.R. Sahlberg, 1885b: 50. Type locality: Port Clarence, Alaska (inferred from title of the paper). Lectotype (♀), designated by Lindroth (1969a: 1118), in ZMLS.
Feronia blaisdelli Van Dyke, 1943: 24. Type locality: «Nome, Alaska» (original citation). Holotype (♂) in CAS [# 5304]. Synonymy established by Ball (1966a: 69).

Distribution. This species is known only from a few localities in the Seward Peninsula, western Alaska [see Ball 1963: Fig. 6].
Records. USA: AK

Pterostichus similis Mannerheim, 1852

Pterostichus similis Mannerheim, 1852: 296. Type locality: «insula St. Georgii [Pribilof Islands, Alaska]» (original citation). Lectotype (♂), designated by Ball (1966a: 53), in ZMH.
Cryobius quadricollis Mannerheim, 1853: 133. Type locality: «insula St. Georgii [Pribilof Islands, Alaska]» (original citation). Holotype [by monotypy] probably in ZILR. Synonymy established by LeConte (1873a: 310).

Distribution. This species is found from eastern Siberia to the Dempster Highway in Yukon Territory (UASM), including several islands of the Bering Sea [see Ball 1963: Fig. 4].
Records. CAN: YT **USA**: AK – **Holarctic**
Note. Matthews (1974b: 1365) remarked that some specimens of this species have anomalous male genitalia. He interpreted this condition as either *P. similis* "is dimorphic in certain genital characters" or that it "includes two species" as currently defined.

Pterostichus soperi Ball, 1966

Pterostichus soperi Ball, 1966a: 26. Type locality: «Aklavik, N[orth]w[est] T[erritories]» (original citation). Holotype (♂) in CAS [# 9316]. Etymology. This species was named after the Canadian Joseph Dewey Soper [1893-1982], arctic explorer, zoologist, and prolific author. Soper, as biologist for the Canadian Wildlife Service, made important contributions to the knowledge of arctic birds and mammals and to arctic geography.

Distribution. This species is known from the Norton Sound Inlet in western Alaska to the Coronation Gulf in northern Nunavut (Ball 1966a: 28-29).
Records. CAN: NT, NU, YT **USA**: AK

Pterostichus surgens LeConte, 1878

Pterostichus surgens LeConte, 1878a: 449. Type locality: «Alma (10,000 ft.) [Park County], Col[orado]» (lectotype label). Lectotype (♂), designated by Ball (1966a: 24), in MCZ [# 5652].

Distribution. This species is found along the Rocky Mountains from southern Alberta to Utah and Colorado (Ball 1966a: 26).
Records. CAN: AB **USA**: CO, MT, UT, WY

Pterostichus tareumiut Ball, 1962

Pterostichus tareumiut Ball, 1962: 15. Type locality: «Point Barrow, Alaska» (original citation). Holotype (♂) in MCZ [# 31306].

Distribution. This Holarctic species is known in North America along the arctic coast from western Alaska to north-central Nunavut, and from Victoria and Banks Islands; in the Palaearctic Region the species is known only from the northern Bering Sea Coast (Ball 1966a: 47).
Records. CAN: NT, NU, YT **USA**: AK – **Holarctic**

Pterostichus woodi Ball and Currie, 1997

Pterostichus woodi Ball and Currie, 1997: 487. Type locality: «km. 155, Dempster H[igh]w[a]y, Yukon [Territory]» (original citation). Holotype (♂) in CNC [# 23110]. Etymology. The specific name was proposed for Donald Monty Wood [1933-], dipterist at Agriculture and Agri-Food Canada (Canadian National Collection of Insects) who collected most of the specimens of the type series.

Distribution. This species is known only from the Ogilvie Mountains in Yukon Territory.
Records. CAN: YT

[**ventricosus group**]
***Pterostichus caribou* Ball, 1962**

Pterostichus caribou Ball, 1962: 3. Type locality: «Eskimo Point, Northwest Territories [= Nunavut]» (original citation). Holotype (♂) in CNC [# 9094].

Distribution. This species ranges from northern Alaska to the western shores of the Hudson Bay in northern Manitoba and Southampton Island in Nunavut [see Ball 1963: Fig. 2; Nielsen et al. 1987: Fig. 18a]; isolated in eastern Ohio (Usis and MacLean 1998: 67). Fossil remnants of this species, dated between about 16,700 and 21,500 years B.P., have been unearthed in north-central Illinois (Garry et al. 1990: 394) and east-central Iowa (Baker et al. 1986: 96).
Records. CAN: MB, NT, NU, YT **USA**: AK, OH

***Pterostichus riparius* (Dejean, 1828)**

Feronia riparia Dejean, 1828: 332. Type locality: «détroit de Norfolk [= Norfolk Sound, Baranof Island, Alaska] sur la côte nord-ouest de l'Amérique du Nord [Alaska]» (original citation). Holotype [by monotypy; designated lectotype by Ball (1966a: 83)] (♀) in MHNP.

Omaseus fuscoaeneus Chaudoir, 1835: 448. Type locality: «Détroit de Norfolk [= Norfolk Sound, Baranof Island, Alaska]» (original citation). Syntype(s) location unknown. Synonymy established by LeConte (1869b: 248).

Cryobius fatuus Mannerheim, 1853: 130. Type locality: «Kadjak [Alaska]» (lectotype label). Lectotype (♂), designated by Bousquet (1999: 193), in ZMH. Synonymy established by Tschitschérine (1891: 143), confirmed by Ball (1966a: 83).

Cryobius breviusculus Casey, 1918: 375 [secondary homonym of *Pterostichus breviusculus* (Sahlberg, 1844)]. Type locality: «S[ain]t Paul Island, Alaska» (original citation). Lectotype [as holotype] (♀), designated by Ball (1966a: 84), in USNM [# 47077]. Synonymy established by Ball (1966a: 84).

Pterostichus laevilatus Notman, 1919b: 231. Type locality: «Golden, B[ritish] C[olumbia]» (original citation). Holotype [by monotypy] (♀) in USNM [# 75390]. Synonymy established by Hatch (1953: 114).

Cryobius patulus Casey, 1920: 190. Type locality: «Stickine River Cañon, British Columbia» (original citation). Lectotype [as holotype], designated by Ball (1966a: 84), in USNM [# 47076]. Synonymy established by Hatch (1953: 114), confirmed by Ball (1966a: 84).

Pterostichus caseyi Csiki, 1930: 652. Replacement name for *Pterostichus breviusculus* (Casey, 1918).

Distribution. This species ranges from central Alaska to eastern Alberta, including western Northwest Territories, south to west-central Montana, northern Idaho, and northern Oregon [see Ball 1963: Fig. 2]. The records from northern Colorado (Packard 1877: 811; Wickham 1902: 236; Armin 1963: 218; Elias 1987: 632, as *P. fatuus*)

need confirmation. Fossil remnants from a Plio-Pleistocene sequence have been unearthed in northwestern Greenland (Böcher 1995: 28).
Records. CAN: AB, BC (QCI), NT, YT **USA**: AK, ID, MT, OR, WA [CO]

***Pterostichus ventricosus ventricosus* (Eschscholtz, 1823)**

Poecilus ventricosus Eschscholtz, 1823: 106. Type locality: «Unalaschka [Aleutian Islands, Alaska]» (original citation). Two syntypes in ZMH (Silfverberg 1987: 26). Note. This species was also made available the same year by an illustration in Fischer von Waldheim (1823: plate 19, figure 6).

Platysma borealis Ménétriés, 1851: 50 [secondary homonym of *Pterostichus borealis* (Zetterstedt, 1828)]. Type locality: «Taimyrsee bei 74½° n. Br[eite]; Boganida [Russia]» (original citation). Syntypes location unknown (possibly in ZMH). Synonymy established by Ball (1966a: 89).

Omaseus rufiscapus Mannerheim, 1853: 126. Type locality: «insula Kadjak [Alaska]» (original citation). Syntype(s) probably in MHNP (see Chaudoir 1868b: 341). Synonymy established by Ball (1966a: 89).

Cryobius hyperboreus Mannerheim, 1853: 127. Type locality: «insula St. Georgii [Pribilof Islands, Alaska]» (original citation). Holotype [by monotypy] (♀) in ZMH. Synonymy established, under the name *P. subexaratus* (Mannerheim), by Poppius (1906b: 31), confirmed by Ball (1966a: 88).

Cryobius subexaratus Mannerheim, 1853: 128. Type locality: «insula Unalaschka [Alaska]» (original citation for the lectotype). Lectotype (♂), designated by Bousquet (1999: 194), in ZMH. Synonymy established by Ball (1966a: 88).

Cryobius vindicatus Mannerheim, 1853: 129. Type locality: «oris meridionali et occidentali insulae Kadjak [Alaska]» (original citation). Lectotype (♂), designated by Bousquet (1999: 194), in ZMH. Synonymy established by Ball (1966a: 89).

Cryobius subcaudatus Mannerheim, 1853: 132. Type locality: «ad rivulos fl[umen] Tschunuktnu peninsulae Kenai [Alaska]» (original citation). Lectotype (♀), designated by Ball (1966a: 89), in ZMH. Synonymy established by Ball (1966a: 89). Note. Brown (1952: 340) noted that based on Mannerheim's map (1853: plate 2), "Tschunuktnu" River is either Resurrection Creek or Sixmile Creek and that these flow into Turnagain Arm of Cook Inlet and Sunrise respectively.

Feronia quadrangularis J.R. Sahlberg, 1885a: 20. Type locality: «Pitlekaj [Chukchi Peninsula, Siberia]» (original citation). Holotype [by monotypy] (♂) in ZMH. Synonymy established by Ball (1966a: 88).

Feronia rugifera Tschitschérine, 1891: 141. Type locality: «île d'Ounalaschka [Aleutian Islands, Alaska] (original citation). Holotype [by monotypy] (♀) probably in ZILR. Synonymy established by Ball (1966a: 88).

Feronia ventricosa var. *brevicollis* Tschitschérine, 1891: 142 [secondary homonym of *Feronia brevicollis* (LeConte, 1846)]. Type locality not stated. Syntype(s) location unknown (possibly in ZMMU). Synonymy established by Ball (1966a: 88).

Feronia borealis var. *gracilior* Tschitschérine, 1896b: 376. Type locality: «Novaja Zemlja [= Novaya Zemlya, Russia]» (original citation). Syntype(s) [3 originally cited] in ZILR. Synonymy established, under the name *P. borealis* (Ménétriés), by Poppius (1906b: 97).

Pterostichus vegae Poppius, 1906b: 39. Type locality: «Tschuktschen-Halbinsel bei Jinretlen, NO Sibirien [Russia]» (original citation). Holotype [by monotypy] (♀) in NRSS (Ball 1966a: 88). Synonymy established by Ball (1966a: 88).

Cryobius czekanowskii Poppius, 1906b: 46. Type locality: «Fl[umen] Jenissej: Tolstoinos [=Tolstyy Nos, Taymyr Autonomous Okrug, Russia]» (original citation for the lectotype). Lectotype [as holotype] (♀), designated by Ball (1966a: 89), in ZMH. Synonymy established by Ball (1966a: 89).

Cryobius sedakowi Poppius, 1908a: 3. Type locality: «Bureja-Fluss, Ost-Sibirien [Russia]» (original citation). Holotype [by monotypy] (♂) in MHNP (collection Chaudoir). Synonymy established by Ball (1966a: 89).

Platysma ventricosum var. *aleutorum* Lutshnik, 1915c: 427. Replacement name for *Platysma ventricosum* var. *brevicolle* (Tschitschérine, 1891).

Cryobius otariidinus Casey, 1918: 374. Type locality: «S[ain]t Paul Island, Alaska» (original citation), which is probably incorrect (Ball 1966a: 89). Lectotype [as holotype] (♀), designated by Ball (1966a: 89), in USNM [# 47080]. Synonymy established by Ball (1966a: 89).

Pterostichus boreus Csiki, 1930: 652. Replacement name for *Pterostichus borealis* (Ménétriés, 1851).

Distribution. This Holarctic species ranges from Novaya Zemlya in the Arctic Ocean off the coast of European Russia east to Franklin Bay on the coast of Northwest Territories, south in the Nearctic Region to central Northwest Territories and Umnak Island in the Aleutian Islands [see Ball 1963: Fig. 2]. Fossil remnants of this species, dated between about 16,700 and 20,530 years B.P., have been unearthed in northeastern and southeastern Iowa (Schwert 1992: 77; Baker et al. 1986: 96; Woodman et al. 1996: 17); others, older than 33,000 years B.P., have been found in southwestern Ontario (Warner et al. 1988: 37).

Records. CAN: NT, YT **USA**: AK – **Holarctic**

Note. The subspecies *P. ventricosus nechaevi* Lafer and Kuznetsov is endemic to Sakhalin Island and *P. ventricosus paludosus* (Sahlberg) (junior synonym: *P. tungusicus* Poppius) to southeastern Siberia (Ball 1966a: 101).

Genus *Cyclotrachelus* Chaudoir, 1838

Cyclotrachelus Chaudoir, 1838: 27. Type species: *Feronia tenebricosa* Dejean, 1828 (= *Molops faber* Germar, 1824) by monotypy. Etymology (original). From the Greek *cyclos* (circle) and *trachelos* (neck, by extension pronotum), alluding to the rounded shape of the pronotum ("*corselet arrondi*") of the adults in the hands of Chaudoir [masculine].

Diversity. Forty-five species in the temperate and subtropical regions of North America with one species (*P. substriatus*) extending into northern Mexico.
Identification. Freitag (1969) revised the species. Since the publication of his revision, a replacement name has been proposed for *C. obsoleta* and two subspecies are raised to species level in this publication.
Taxonomic Note. This genus, certainly one of the most characteristic pterostichine elements in North America, could be closely related to *Molops* Bonelli (Freitag 1969), whose species inhabit the mountains of Europe and Turkey, or to the *Sterocorax* complex (*Sterocorax* Ortuño, *Paleocorax* Ortuño, *Iberopus* Ortuño), a clade endemic to the Iberian Peninsula and currently included within the genus *Pterostichus* Bonelli (see Bousquet 1999: 198). Based on molecular sequence data, Will and Gill (2008: 113) found that the genus *Pterostichus* was monophyletic if *Cyclotrachelus* were included in the genus and recommended to treat *Cyclotrachelus* as a subgenus of *Pterostichus*.

Subgenus *Cyclotrachelus* Chaudoir, 1838

Cyclotrachelus Chaudoir, 1838: 27. Type species: *Feronia tenebricosa* Dejean, 1828 (= *Molops faber* Germar, 1824) by monotypy.

Fortax Motschulsky, 1866: 246. Type species: *Feronia morio* Dejean, 1828 (= *Pterostichus dejeanellus* Csiki, 1930) designated by Freitag (1969: 101). Synonymy established by Bousquet (1999: 199). Etymology. From the Latin *fortax* (carrier, bearer) [masculine].

Ferestria Leng, 1915: 576. Type species: *Broscus laevipennis* LeConte, 1846 by original designation. Synonymy established, under the name *Fortax* Motschulsky, by Csiki (1930: 674). Etymology. Possibly from the Latin *fero* (to bear, carry) and *stria* (groove, stria) [feminine].

Diversity. Eighteen species, most restricted to the Coastal and Gulf Plains.

[**approximatus group**]

Cyclotrachelus approximatus (LeConte, 1846)

Broscus approximatus LeConte, 1846b: 354. Type locality: «Pennsylvania» (original citation). Lectotype (♀), designated by Freitag (1969: 106), in MCZ [# 5628].

Distribution. This species is restricted to a small area from "Pennsylvania" (LeConte 1846b: 354) to North Carolina [see Freitag 1969: Fig. 126]. The record from Georgia (Fattig 1949: 24) needs confirmation.
Records. USA: DC, MD, NC, PA, VA [GA]

Cyclotrachelus freitagi Bousquet, 1993

Feronia obsoleta Say, 1830b: (5) [3] [primary homonym of *Feronia obsoleta* Say, 1823]. Type locality: «Cades Cove, Blount [Blount County], Tenn[essee]» (neotype label).

Neotype (♂), designated by Lindroth and Freitag (1969: 340), in MCZ [# 33046]. Note. «Indiana» was the area originally cited by Say (1830b: (5) [3]).

Cyclotrachelus freitagi Bousquet [in Bousquet and Larochelle], 1993: 10. Replacement name for *Cyclotrachelus obsoletus* (Say, 1830).

Distribution. The range of this species extends from West Sister Island (Ohio) in the Western Basin of Lake Erie (Will et al. 1995: 62) to northeastern Illinois, south to southern Alabama and northern Georgia [see Freitag 1969: Fig. 126]. The record from Missouri (Summers 1873: 134) needs confirmation.
Records. USA: AL, GA, IL, IN, KY, MI, MS, NC, OH, SC, TN, VA [MO]

Cyclotrachelus iuvenis (Freitag, 1969)

Evarthrus iuvenis Freitag, 1969: 107. Type locality: «24 miles north of Roanoke [Roanoke County], Virginia» (original citation). Holotype (♂) in MCZ [# 31591].

Distribution. This species is known from a small area in west-central and southern West Virginia (Roane and Raleigh Counties, CMNH), western Virginia, and North Carolina [see Freitag 1969: Fig. 126].
Records. USA: NC, VA, WV

[**faber group**]

Cyclotrachelus faber (Germar, 1824)

Molops faber Germar, 1824: 23. Type locality: «Kentucky» (original citation), which is probably incorrect (Freitag 1969: 125); Gainesville, Alachua County, Florida (see Freitag 1969: 126) herein selected. Syntype(s) probably lost.

Feronia tenebricosa Dejean, 1828: 301. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 14). Synonymy established by LeConte (1846b: 353), confirmed by Lindroth (1955b: 14).

Cyclotrachelus roticollis Casey, 1918: 349. Type locality: «Dunedin [Pinellas County], Florida» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 125), in USNM [# 47108]. Synonymy established by Freitag (1969: 125).

Cyclotrachelus fallaciosus Casey, 1924: 77. Type locality: «Dunedin [Pinellas County], Florida» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 125), in USNM [# 47109]. Synonymy established by Freitag (1969: 125).

Distribution. This species is found in southern Georgia and Florida including the Keys [see Freitag 1969: Fig. 129]. The record from northwestern South Carolina (Kirk 1970: 11) is probably in error.
Records. USA: FL, GA

Cyclotrachelus levifaber (Freitag, 1969)

Evarthrus levifaber Freitag, 1969: 123. Type locality: «Camden [Kershaw County], S[outh] C[arolina]» (original citation). Holotype (♀) in MCZ [# 31592].

Distribution. This species is known only from a few specimens collected in "North Carolina," northern South Carolina, and "Georgia" [see Freitag 1969: Fig. 129].
Records. USA: GA, NC, SC

***Cyclotrachelus parafaber* (Freitag, 1969)**

Evarthrus parafaber Freitag, 1969: 122. Type locality: «Mobile [Mobile County], Ala[bama]» (original citation). Holotype (♂) in CAS [# 813].

Distribution. This species is known only from several specimens collected at the type locality in southern Alabama [see Freitag 1969: Fig. 129].
Records. USA: AL

[**laevipennis group**]
***Cyclotrachelus dejeanellus* (Csiki, 1930)**

Feronia morio Dejean, 1828: 302 [secondary homonym of *Pterostichus morio* (Duftschmid, 1812)]. Type locality: «Amérique septentrionale» (original citation), restricted to «Alma [Bacon County], Georgia» by Freitag (1969: 102). Lectotype [as type], designated by Freitag (1969: 102), in MHNP.
Pterostichus dejeanellus Csiki, 1930: 674. Replacement name for *Pterostichus morio* (Dejean, 1828).
Evarthrus taurus Van Dyke, 1943: 25. Type locality: «near Punta Gorda [Charlotte County], Florida» (original citation). Holotype (♂) in CAS [# 5306]. Synonymy established by Freitag (1969: 102).

Distribution. This species ranges from southern Georgia to southwestern Florida [see Freitag 1969: Fig. 125]. The record from Alabama (Löding 1945: 16) needs confirmation.
Records. USA: FL, GA [AL]

***Cyclotrachelus hernandensis* (Van Dyke, 1943)**

Evarthrus hernandensis Van Dyke, 1943: 26. Type locality: «near Brooksville, Hernando County, Florida» (original citation). Holotype (♂) in CAS [# 5308].

Distribution. This species is known from a few localities in the western parts of the Florida Peninsula [see Freitag 1969: Fig. 125].
Records. USA: FL

***Cyclotrachelus laevipennis* (LeConte, 1846)**

Broscus laevipennis LeConte, 1846b: 354. Type locality: «Georgia» (original citation), restricted to «Clayton, Rabun County» by Bousquet (1999: 201). Lectotype (♀), designated by Freitag (1969: 103), in MCZ [# 5627].

Evarthrus acutus LeConte, 1853a: 231. Type locality: «Louisiana» (original citation). Lectotype (♀), designated by Freitag (1969: 104), in MCZ [# 5626]. Synonymy established by Freitag (1969: 104).

Ferestria nanula Casey, 1918: 364. Type locality: «Mobile [Mobile County], Alabama» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 104), in USNM [# 47111]. Synonymy established by Freitag (1969: 104).

Ferestria simiola Casey, 1920: 192. Type locality: «Mobile [Mobile County], Alabama» (original citation). Holotype [by monotypy] (♀) in USNM [# 47112]. Synonymy established by Freitag (1969: 104).

Ferestria castigata Casey, 1920: 192. Type locality: «Mobile [Mobile County], Alabama» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 104), in USNM [# 47110]. Synonymy established by Freitag (1969: 104).

Ferestria bullata Casey, 1920: 193. Type locality: «Mobile [Mobile County], Alabama» (original citation). Holotype [by monotypy] (♀) in USNM [# 47113]. Synonymy established by Freitag (1969: 104).

Distribution. This species inhabits the Gulf Plain and southern Piedmont Plateau from South Carolina to the Florida Panhandle and "Louisiana" (LeConte 1853a: 231, as *Evarthrus acutus*) [see Freitag 1969: Fig. 125].

Records. USA: AL, FL, GA, LA, MS, SC

[**ovulum group**]

***Cyclotrachelus alabamensis* (Casey, 1920)**

Evarthrus constrictus Bates, 1882a: 80 [secondary homonym of *Evarthrus constrictus* (Say, 1823)]. Type locality: «Mexico» (original citation), which is likely incorrect. Holotype [by monotypy] (♀) in BMNH.

Evarthrinus alabamensis Casey, 1920: 198. Type locality: «Allen [= Allenville, Mobile County], Alabama» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 117), in USNM [# 47136]. Synonymy established by Freitag (1969: 117).

Evarthrinus lilliputicus Casey, 1920: 199. Type locality: «Mobile [Mobile County], Alabama» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 117), in USNM [# 47137]. Synonymy established by Freitag (1969: 117).

Pterostichus batesellus Csiki, 1930: 671. Replacement name for *Pterostichus constrictus* (Bates, 1882).

Distribution. This species is known only from Mobile County in southwestern Alabama (Freitag 1969: 118). The record from "Mississippi" (Bousquet and Larochelle 1993: 186) was based on a misidentified specimen (Drew A. Hildebrandt pers. comm. 2007).

Records. USA: AL

***Cyclotrachelus macrovulum* (Freitag, 1969)**

Evarthrus macrovulum Freitag, 1969: 119. Type locality: «Mobile [Mobile County], Ala[bama]» (original citation). Holotype (♂) in CAS [# 9814].

Distribution. This species is known only from southern Alabama, southern Mississippi (Drew A. Hildebrandt pers. comm. 2007), and east-central (West Feliciana Parish, LSAM) and southern Louisiana [see Freitag 1969: Fig. 128].
Records. USA: AL, LA, MS

***Cyclotrachelus ovulum* (Chaudoir, 1868)**

Feronia ovulum Chaudoir, 1868b: 332. Type locality: «Georgetown, Caroline du Sud» (original citation), which according to Freitag (1969: 119) is probably in error for Georgetown, Georgia. Holotype [by monotypy] (♀) in MHNP.

Distribution. This species is known from southern Georgia and northern Florida [see Freitag 1969: Fig. 128].
Records. USA: FL, GA

***Cyclotrachelus texensis* (Freitag, 1969)**

Evarthrus texensis Freitag, 1969: 121. Type locality: «12 mi[les] W[est] Kirbyville, Tyler Co[unty], Texas» (original citation). Holotype (♂) in MCZ [# 35349].

Distribution. This species is known from a few specimens collected in eastern Texas [see Freitag 1969: Fig. 128].
Records. USA: TX

***Cyclotrachelus vinctus* (LeConte, 1853)**

Evarthrus vinctus LeConte, 1853a: 232. Type locality: «Nakutshi valley, Habersham Co[unty], Georgia» (original citation). Lectotype (♀), designated by Freitag (1969: 115), in MCZ [# 5623].

Distribution. This species is found in a small area including eastern Tennessee, southwestern North Carolina, northwestern South Carolina, and northeastern Georgia [see Freitag 1969: Fig. 128].
Records. USA: GA, NC, SC, TN

[**spoliatus group**]
***Cyclotrachelus brevoorti* (LeConte, 1846)**

Feronia brevoorti LeConte, 1846b: 352. Type locality: «Alabama» (original citation), restricted to «Mobile, Mobile County» by Bousquet (1999: 200). Lectotype (♂), designated by Freitag (1969: 114), in MCZ [# 5625]. Etymology. This species was named for James Carson Brevoort [1818-1887], a wealthy American collector.

Distribution. This species is found along the Coastal Plain from South Carolina to central Mississippi [see Freitag 1969: Fig. 127].
Records. USA: AL, FL, GA, MS, SC

Cyclotrachelus fucatus (Freitag, 1969)

Evarthrus fucatus Freitag, 1969: 111. Type locality: «Leesburg, Cherokee Co[unty], Ala[bama]» (original citation). Holotype (♂) in UMAA.

Distribution. This species ranges from southwestern Pennsylvania to southwestern Illinois (Union County, CNC), south to northern Alabama and northwestern Georgia [see Freitag 1969: Fig. 127].
Records. USA: AL, GA, IL, KY, OH, PA, TN, WV

Cyclotrachelus spoliatus (Newman, 1838)

Feronia spoliata Newman, 1838a: 386. Type locality: «northern states of America» (original citation, see page 388), restricted to «Southern Pines [Moore County], N[orth] C[arolina]» by Freitag (1969: 113). Lectotype [as type] (♂), designated by Freitag (1969: 113), in BMNH.

Evarthrus rotundatus LeConte, 1853a: 230. Type locality: «Athens [Clarke County], Georgia» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5624]. Synonymy established by Freitag (1969: 113). Note. The specimen labeled "Va / rotundatus 2" and designated lectotype by Freitag (1969: 113) is not a syntype.

Evarthrinus pinorum Casey, 1920: 198. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 113), in USNM [# 47135]. Synonymy established by Freitag (1969: 113).

Distribution. This species is found in a small area from the District of Columbia south to southern South Carolina [see Freitag 1969: Fig. 127] including northeastern Georgia (LeConte 1853a: 230). The records from "New York" (Leng and Beutenmüller 1893: 138, as *Pterostichus rotundatus*) and northern Alabama (Löding 1945: 15) need confirmation.
Records. USA: DC, GA, NC, SC, VA [AL, NY]

Cyclotrachelus unicolor (Say, 1823)

Feronia unicolor Say, 1823a: 40. Type locality: «Upson Co[unty], G[eorgi]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 340), in MCZ [# 33049].

Distribution. This species is restricted to the Coastal Plain and southern Piedmont from South Carolina (Ciegler 2000: 71) to northeastern Alabama, south to the Florida Panhandle [see Freitag 1969: Fig. 127]. The record from North Carolina (Brimley 1938: 119) needs confirmation.
Records. USA: AL, FL, GA, SC [NC]

Subgenus *Evarthrus* LeConte, 1853

Evarthrus LeConte, 1853a: 226, 227. Type species: *Feronia sigillata* Say, 1823 designated by Casey (1918: 322). Etymology. From the Greek *ev* (original, primitive, by extension simple) and *arthron* (joint), possibly alluding to the simple (i.e., non carinate) basal antennomeres ("*antennae articulis basalibus simplicibus*") of the adult [masculine].

Anaferonia Casey, 1918: 341. Type species: *Feronia constricta* Say, 1823 by original designation. Synonymy established by Freitag (1969: 126). Etymology. From the Greek prefix *ana-* (up, back, again) and the generic name *Feronia* [*q.v.*] [feminine].

Megasteropus Casey, 1918: 350. Type species: *Megasteropus gigas* Casey, 1918 by original designation. Synonymy established by Freitag (1969: 126). Etymology. From the Greek *megas* (large) and the generic name *Steropus* [masculine].

Eumolops Casey, 1918: 351. Type species: *Eumolops sexualis* Casey, 1918 (= *Evarthrus torvus torvus* LeConte, 1863) by original designation. Synonymy established by Freitag (1969: 127). Etymology. From the Greek *eu* (agreeable, primitive) and the generic name *Molops* [masculine].

Evarthrinus Casey, 1918: 357. Type species: *Eumolops decepta* Casey, 1918 designated by Freitag (1969: 127). Synonymy established by Freitag (1969: 127). Etymology. From the generic name *Evarthrus* [*q.v.*] and the Latin suffix *-inus* (pertaining to) [masculine].

Evarthrops Casey, 1920: 194. Type species: *Evarthrus furtivus* LeConte, 1853 designated by Freitag (1969: 127). Synonymy established by Freitag (1969: 127). Etymology. From the generic name *Evarthrus* [*q.v.*] and the Greek suffix *-ops* (having the appearance of) [masculine].

Diversity. Twenty-seven species are known.

[**blatchleyi group**]

Cyclotrachelus blatchleyi (Casey, 1918)

Evarthrus blatchleyi Casey, 1918: 360. Type locality: «Dunedin [Pinellas County], Florida» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 131), in USNM [# 47122]. Etymology. The specific name honors Willis Stanley Blatchley [1859-1940], geologist and naturalist in the true sense of the word, author of several books on Coleoptera, Hemiptera, and Orthoptera.

Distribution. This species ranges from southern Georgia to southwestern Florida [see Freitag 1969: Fig. 131].
Records. USA: FL, GA

Cyclotrachelus floridensis (Freitag, 1969)

Evarthrus floridensis Freitag, 1969: 132. Type locality: «Winter Park [Orange County], Fl[orid]a» (original citation). Holotype (♂) in MCZ [# 31593].

Distribution. This species is endemic to a small area in the eastern part of central Florida [see Freitag 1969: Fig. 131].
Records. USA: FL

[**gigas group**]
***Cyclotrachelus gigas* (Casey, 1918)**

Megasteropus gigas Casey, 1918: 350. Type locality: «Texas» (original citation), restricted to «Victoria, Victoria County» by Bousquet (1999: 206). Lectotype [as holotype] (♀), designated by Freitag (1969: 165), in USNM [# 47123].

Distribution. This species is known from two localities in southeastern Texas [see Freitag 1969: Fig. 136].
Records. USA: TX

***Cyclotrachelus heros* (Say, 1823)**

Feronia heros Say, 1823b: 145. Type locality: «Tex[as]» (neotype label), restricted to «Dallas, Dallas County» by Bousquet (1999: 207). Neotype (♂), designated by Lindroth and Freitag (1969: 340), in MCZ [# 33048]. Note. «the Arkansa» was the area originally cited by Say (1823b: 145).

Distribution. This species is known from southeastern Oklahoma south to Comal County, Texas [see Freitag 1969: Fig. 136]. The record from "Arkansas" (Freitag 1969: 167) derives from the locality originally cited by Say (1823b: 145) which possibly refer to the Arkansas Territory. Prior to 1825, this territory included, besides Arkansas, all of the present state of Oklahoma. It could also refer to the Arkansas River which flows through Colorado, southern Kansas, northeastern Oklahoma, and Arkansas. The record from southeastern Kansas (Knaus 1907: 233) needs confirmation.
Records. USA: OK, TX [KS]

***Cyclotrachelus sallei* (LeConte, 1873)**

Evarthrus sallei LeConte, 1873a: 319. Type locality: United States of America (inferred from title of the paper); restricted to «Texas» by Freitag (1969: 165), and to «Dallas, Dallas County» by Bousquet (1999: 208). Lectotype (♂), designated by Freitag (1969: 165), in MCZ [# 5663].

Distribution. This species is known only from eastern Texas [see Freitag 1969: Fig. 136].
Records. USA: TX

[**gravesi group**]
***Cyclotrachelus gravesi* (Freitag, 1969)**

Evarthrus gravesi Freitag, 1969: 167. Type locality: «Pearl (Jackson), Rankin Co[unty], Miss[issippi]» (original citation). Holotype (♀) in MCZ [# 35350].

Distribution. This species is known from the holotype and four specimens collected in Hinds County in southern Mississippi (Drew A. Hildebrandt pers. comm. 2009).
Records. USA: MS

[**hypherpiformis group**]
***Cyclotrachelus hypherpiformis* (Freitag, 1969)**

Evarthrus hypherpiformis Freitag, 1969: 145. Type locality: «Prairies [= possibly Prairie Lakes], s[outh] Demopolis, Marengo Co[unty], Alabama» (original citation). Holotype (♂) in UMAA.

Distribution. This species is known only from a few specimens collected in western Alabama and northeastern Mississippi [see Freitag 1969: Fig. 132].
Records. USA: AL, MS

[**incisus group**]
***Cyclotrachelus incisus* (LeConte, 1846)**

Feronia incisa LeConte, 1846b: 345. Type locality: «ad Rocky Mountains» (original citation), restricted to «Iowa City, Johnson County, Iowa» by Bousquet (1999: 207). Lectotype (♂), designated by Freitag (1969: 127), in MCZ [# 5620].

Feronia lixa LeConte, 1846b: 346. Type locality: «ad Rocky Mountains» (original citation), cited from «near Long's Peak [Boulder County, Colorado]» by LeConte (1853a: 232). Lectotype (♀), designated by Freitag (1969: 127), in MCZ [# 5622]. Synonymy established by LeConte (1873a: 319), confirmed by Freitag (1969: 127).

Feronia abdominalis LeConte, 1846b: 347. Type locality: «ad Rocky Mountains» (original citation), cited from «near Long's Peak [Boulder County, Colorado]» by LeConte (1853a: 232). Lectotype (♂), designated by Freitag (1969: 128), in MCZ [# 5621]. Synonymy established by LeConte (1873a: 319), confirmed by Freitag (1969: 128).

Anaferonia distincta Casey, 1918: 342. Type locality: «Iowa» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 128), in USNM [# 47103]. Synonymy established by Freitag (1969: 128).

Anaferonia iowana Casey, 1918: 347. Type locality: «Iowa» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 128), in USNM [# 47107]. Synonymy established by Freitag (1969: 128).

Anaferonia fausta Casey, 1918: 348. Type locality: «Pennsylvania» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 128), in USNM [# 47104]. Synonymy established by Freitag (1969: 128).

Distribution. This species is found from southwestern Pennsylvania to southeastern South Dakota, south to southern Colorado (Miller and Peairs 2008: 34; LeConte

1879d: 500; Wickham 1902: 236), Oklahoma, and central Arkansas [see Freitag 1969: Fig. 130]. The records from South Carolina (Kirk 1970: 11; Ciegler 2000: 70) are probably in error; that from "Kentucky" (Bousquet and Larochelle 1993: 188) needs confirmation.
Records. USA: AR, CO, IA, IL, IN, KS, MO, NE, OH, OK, PA, SD, VA [KY]

Cyclotrachelus whitcombi (Freitag, 1969)

Evarthrus whitcombi Freitag, 1969: 129. Type locality: «Hot Springs [Garland County], Ark[ansas]» (original citation). Holotype (♂) in CAS [# 9815]. Etymology. The specific name was proposed in honor of Willard Hall Whitcomb [1915-2002], entomologist and teacher who made important contributions in the field of terrestrial arthropod biology.

Distribution. This species is known from a few localities in eastern Oklahoma, southern Arkansas, and northwestern Louisiana (Natchitoches Parish, LSAM) [see Freitag 1969: Fig. 130].
Records. USA: AR, LA, OK

[**seximpressus group**]

Cyclotrachelus alabamae (Van Dyke, 1926)

Evarthrus vagans alabamae Van Dyke, 1926a: 118. Type locality: «near Mobile [Mobile County], Alabama» (original citation). Holotype (♂) in CAS [# 1858].

Distribution. This species is restricted to the Gulf Coastal Plain from southwestern Alabama to eastern Texas, north to southern Arkansas [see Freitag 1969: Fig. 132]. Freitag (1969: 142) suggested that the specimens labeled from Clay County in northeastern Kansas and Lawrence County in northeastern Arkansas are probably mislabeled.
Records. USA: AL, AR, LA, MS, TX [KS]

Cyclotrachelus engelmani (LeConte, 1853)

Evarthrus engelmani LeConte, 1853a: 228. Type locality: «Texas» (original citation), restricted to «Cuero, DeWitt County» by Bousquet (1999: 206). Lectotype (♂), designated by Freitag (1969: 142), in MCZ [# 5655]. Etymology. The species name was proposed for George Engelmann [1809-1884], physician and eminent botanist. Born in Germany, Engelmann immigrated to the United States and settled in Saint Louis. LeConte originally spelled his name "Engelman."
Evarthrus engelmanni Freitag, 1969: 142. Unjustified emendation of *Evarthrus engelmani* LeConte, 1853.

Distribution. This species is found only in eastern Texas (Freitag 1969: 143, Fig. 132).
Records. USA: TX

***Cyclotrachelus nonnitens* (LeConte, 1873)**

Evarthrus nonnitens LeConte, 1873a: 320. Type locality: «Red River, Louisiana» (original citation). Holotype [by monotypy; designated lectotype by Freitag (1969: 144)] (♀) in MCZ [# 5656].

Evarthrus enormis Casey, 1918: 361. Type locality: «Houston [Harris County], Texas» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 144), in USNM [# 47125]. Synonymy established by Freitag (1969: 144).

Distribution. This species is found along the Gulf Coastal Plain from eastern Texas and southern Arkansas to western Mississippi [see Freitag 1969: Fig. 132]. The record from northwestern South Carolina (Kirk 1970: 11) is in error.
Records. USA: AR, LA, MS, TX

***Cyclotrachelus seximpressus* (LeConte, 1846)**

Feronia seximpressa LeConte, 1846b: 350. Type locality: «ad Rocky Mountains, prope Long's Peak [Boulder County, Colorado]» (original citation), which is improbable, herein restricted to Lake Texoma State Park, Marshall County, Oklahoma (see Freitag 1969: 141). Lectotype (♂), designated by Freitag (1969: 139), in MCZ [# 5653].

Evarthrus rubripes Casey, 1918: 359. Type locality: «S[ain]t Louis, Missouri» (original citation for the lectotype). Lectotype [as holotype] (♂), designated by Freitag (1969: 140), in USNM [# 47121]. Synonymy established by Freitag (1969: 140).

Distribution. This species is found west of the Appalachians Mountains from southwestern Pennsylvania to eastern Nebraska, north to southern Wisconsin and southeastern Minnesota, south to east-central Texas and southern Mississippi (Walthall County, Paul K. Lago pers. comm. 2009) [see Freitag 1969: Fig. 132].
Records. USA: AR, IA, IL, IN, KS, MI, MN, MO, MS, NE, OH, OK, PA, TX, WI

[**sigillatus group**]

***Cyclotrachelus convivus* (LeConte, 1853)**

Evarthrus conviva LeConte, 1853a: 229. Type locality: «Alabama» (original citation), restricted to «Mobile, Mobile County» by Bousquet (1999: 206). Holotype [by monotypy; designated lectotype by Freitag (1969: 137)] (♂) in MCZ [# 5654].

Evarthrus basilaris Motschulsky, 1866: 261. Type locality: «Mobile [Mobile County, Alabama]» (original citation). Lectotype (♂), designated by Bousquet (1984a: 2), in ZMMU. Synonymy established by Bousquet (1984a: 2).

Evarthrus sigillatus parallelus Casey, 1918: 359. Type locality: «Indiana» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 137), in USNM [# 47119]. Synonymy established by Freitag (1969: 137).

Distribution. This species ranges from southwestern Pennsylvania to the Mississippi River in western Illinois, south to southeastern Louisiana and southern Alabama

[see Freitag 1969: Fig. 131]. The record from South Carolina (Kirk 1970: 11; Ciegler 2000: 70) is probably in error.
Records. USA: AL, AR, IL, IN, KY, LA, MO, MS, OH, PA, TN, WV

Cyclotrachelus sigillatus (Say, 1823)

Feronia sigillata Say, 1823a: 42. Type locality: «Phila[delphia] [Philadelphia County], P[ennsylvani]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 340), in MCZ [# 33047]. Note. «Germantown [Pennsylvania]» was the area originally cited by Say (1823a: 43).

Feronia vidua Dejean, 1828: 278. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 15). Synonymy established by LeConte (1846b: 350), confirmed by Lindroth (1955b: 15).

Feronia americana Dejean, 1828: 392. Type locality: «Amérique septentrionale» (original citation). Lectotype [as type] (♂), designated by Freitag (1969: 133), in MHNP. Synonymy established by Freitag (1969: 133).

Feronia orbata Newman, 1838a: 386. Type locality: «northern states of America» (original citation, see page 388). Lectotype [as type] (♀), designated by Freitag (1969: 133), in BMNH. Synonymy established by Freitag (1969: 133).

Evarthrus nimius Motschulsky, 1866: 260. Type locality: «Ohio» (original citation), which is incorrect. Lectotype (♀), designated by Bousquet (1984a: 3), in ZMMU. Synonymy established by Bousquet (1984a: 3).

Evarthrus breviformis Casey, 1918: 360. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 133), in USNM [# 47120]. Synonymy established by Freitag (1969: 133).

Evarthrus montanus Van Dyke, 1926a: 116 [secondary homonym of *Pterostichus montanus* (Motschulsky, 1844)]. Type locality: «base of the Black Mountains, North Carolina» (original citation). Holotype (♂) in CAS [# 1856]. Synonymy established by Freitag (1969: 133).

Pterostichus carolinensis Csiki, 1930: 673. Replacement name for *Pterostichus montanus* (Van Dyke, 1926).

Distribution. This species is found along the Appalachians, Piedmont Plateau, and Coastal Plain from Massachusetts to the Florida Panhandle and eastern Alabama [see Freitag 1969: Fig. 131]. The records from southeastern Louisiana (Summers 1874a: 80, as *Evarthrus americanus*), Missouri (Summers 1873: 134, as *Evarthrus orbatus*), "Iowa" (Wickham 1911b: 6; King 1914: 321; Jaques and Redlinger 1946: 297, as *Evarthrus orbatus*), and Ohio (Dury 1902: 113; Walker 1957: 270, as *Evarthrus americanus*) are in error.
Records. USA: AL, DC, DE, FL, GA, MA, MD, NC, NJ, NY, PA, SC, TN, VA, WV

Cyclotrachelus sinus (Freitag, 1969)

Evarthrus sinus Freitag, 1969: 136. Type locality: «Alabama Port, Mobile Co[unty], Ala[bama]» (original citation). Holotype (♂) in MCZ [# 31594].

Distribution. This species is known from a few localities in southern Alabama and southern Mississippi [see Freitag 1969: Fig. 131].
Records. USA: AL, MS

[**sodalis group**]

***Cyclotrachelus alternans* (Casey, 1920)**

Evarthrinus alternans Casey, 1920: 196. Type locality: «Keokuk [Lee County], Iowa» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 153), in USNM [# 47131].

Distribution. This species ranges from northwestern Wisconsin to northeastern South Dakota, south to central Missouri [see Freitag 1969: Fig. 134]. The record from "North Dakota" (Bousquet and Larochelle 1993: 187) needs confirmation.
Records. USA: IA, IL, MN, MO, SD, WI [ND]

***Cyclotrachelus furtivus* (LeConte, 1853)**

Evarthrus furtivus LeConte, 1853a: 234. Type locality: «Lake superior» (original citation), which is incorrect; «Virginia» selected by Freitag (1969: 152), restricted to «Mount Vernon, Fairfax County» by Bousquet (1999: 206). Holotype [by monotypy; designated lectotype by Freitag (1969: 152)] (♂) in MCZ [# 5662].

Distribution. The range of this species extends from southern Pennsylvania and New Jersey to central Virginia [see Freitag 1969: Fig. 133]. The records from Ohio (Everly 1927: 155; Everly 1938: 141), "Michigan" (Leng 1920: 57), Indiana (Blatchley 1910: 101), North Carolina (Brimley 1938: 199), and Georgia (Fattig 1949: 22) are probably in error.
Records. USA: DC, MD, NJ, PA, VA, WV

***Cyclotrachelus iowensis* (Freitag, 1969)**

Evarthrus iowensis Freitag, 1969: 154. Type locality: «Iowa City [Johnson County], Iowa» (original citation). Holotype (♂) in USNM [# 69820].

Distribution. This species is known from a few localities in southeastern Minnesota, Iowa, and eastern South Dakota [see Freitag 1969: Fig. 134].
Records. USA: IA, MN, SD

***Cyclotrachelus lodingi* (Van Dyke, 1926)**

Evarthrus lodingi Van Dyke, 1926a: 118. Type locality: «Monte Sano, Madison County, Alabama» (original citation). Holotype (♂) in CAS [# 1860].

Distribution. This species is restricted to Tennessee and northern Alabama [see Freitag 1969: Fig. 133].
Records. USA: AL, TN

Note. This form has been treated as a subspecies of *C. sodalis* (LeConte) by Freitag (1969) but I believe it should be regarded as a distinct species based on the character states listed by Freitag (1969: 148).

Cyclotrachelus parasodalis (Freitag, 1969)

Evarthrus parasodalis Freitag, 1969: 150. Type locality: «Washington Co[unty], Ark[ansas]» (original citation). Holotype (♂) in MCZ [# 31608].

Distribution. This species is known only from Arkansas [see Freitag 1969: Fig. 133].
Records. USA: AR

Cyclotrachelus sodalis colossus (LeConte, 1846)

Feronia colossus LeConte, 1846b: 343. Type locality: «Missouri» (original citation), cited from «near the Kansas River» by LeConte (1853a: 233), restricted to «Lathrop, Clinton County» by Bousquet (1999: 209). Lectotype (♂), designated by Freitag (1969: 146), in MCZ [# 5658].

Feronia corax LeConte, 1846b: 347. Type locality: «ad Rocky Mountains» (original citation), cited from «near Long's Peak [Boulder County, Colorado]» by LeConte (1853a: 229). Lectotype (♂), designated by Freitag (1969: 146), in MCZ [# 5661]. Synonymy established by LeConte (1873a: 318), confirmed by Freitag (1969: 146).

Distribution. This subspecies is found west of the Mississippi River from southeastern Minnesota (Gandhi et al. 2005: 926), western Iowa and eastern Nebraska south to southern Kansas and central Missouri [see Freitag 1969: Fig. 133]. At least one specimen simply labeled from Arkansas is known (Freitag 1969: 150). The records from southern Wisconsin (Rauterberg 1885: 15) and northern Colorado (LeConte 1853a: 229, as *F. corax*) need confirmation; that from southeastern Louisiana (Summers 1874a: 80) is probably in error.
Records. USA: IA, KS, MN, MO, NE [AR, CO, WI]

Cyclotrachelus sodalis sodalis (LeConte, 1846)

Feronia sodalis LeConte, 1846b: 349. Type locality: «Pennsylvania» (original citation), restricted to «Pittsburgh, Allegheny County» by Bousquet (1999: 209). Lectotype (♂), designated by Freitag (1969: 146), in MCZ [# 5659].

Feronia vagans LeConte, 1846b: 349 [primary homonym of *Feronia vagans* Dejean, 1831]. Type locality: «provinciis occidentalibus» (original citation), cited from «Ohio» by LeConte (1853a: 229). Lectotype (♂), designated by Freitag (1969: 147), in MCZ [# 5664]. Synonymy established by Freitag (1969: 147).

Evarthrus fatuus LeConte, 1853a: 233. Type locality: «Iowa» (original citation). Holotype [by monotypy; designated lectotype by Freitag (1969: 147)] (♂) in MCZ [# 5060]. Synonymy established by LeConte (1873a: 318), confirmed by Freitag

(1969: 147). Note. LeConte (1853a: 233) reported that the sole specimen he had was a female.

Evarthrus licinoides Motschulsky, 1866: 261. Type locality: «Am[érique] bor[éale]» (original citation). Lectotype (♀), designated by Bousquet (1984a: 3), in ZMMU. Synonymy established by Bousquet (1984a: 3).

Eumolops sulcata Casey, 1918: 355. Type locality: «Florida» (original citation), which is probably incorrect (Freitag 1969: 147). Lectotype [as holotype] (♂), designated by Freitag (1969: 147), in USNM [# 47134]. Synonymy established by Freitag (1969: 147).

Evarthrinus retractus Casey, 1920: 197. Type locality: «probably Indiana» (original citation). Holotype [by monotypy] (♀) in USNM [# 47132]. Synonymy established by Freitag (1969: 147).

Evarthrinus inflatipennis Casey, 1924: 78. Type locality: «near Chicago [Cook County], northern Illinois» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 147), in USNM [# 47133]. Synonymy established by Freitag (1969: 147).

Distribution. This subspecies ranges from southwestern Vermont (Bell and Nielsen 1978: 8) to northeastern Minnesota, including southernmost Ontario, south to northeastern Mississippi and eastern Tennessee [see Freitag 1969: Fig. 133]. The record from northwestern Missouri (Freitag 1969: 149) probably refers to *C. sodalis colossus*.

Records. CAN: ON **USA**: IA, IL, IN, KY, MI, MN, MS, NJ, NY, OH, PA, TN, VA, VT, WI

[**substriatus group**]

***Cyclotrachelus constrictus* (Say, 1823)**

Feronia constricta Say, 1823b: 147. Type locality: «Colo[rado] Spr[ings] [El Paso County], Col[orado]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 340), in MCZ [# 33050]. Note. «the Arkansa river near the rocky mountains» was the area originally cited by Say (1823b: 148).

Feronia ovipennis LeConte, 1846b: 345. Type locality: «ad Rocky Mountains» (original citation). Lectotype (♀), designated by Freitag (1969: 158), in MCZ [# 5619]. Synonymy established by LeConte (1873a: 319), confirmed by Freitag (1969: 158).

Anaferonia vernicata Casey, 1918: 344. Type locality: «Alamogordo [Otero County], New Mexico» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 159), in USNM [# 47105]. Synonymy established by Freitag (1969: 159).

Anaferonia pimalis Casey, 1918: 345. Type locality: «Arizona» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 147), in USNM [# 47106]. Synonymy established by Freitag (1969: 159).

Anaferonia pudica Casey, 1918: 346. Type locality: «Texas» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 147), in USNM [# 47101]. Synonymy established by Freitag (1969: 159).

Figure 32. *Geopinus incrassatus* (Dejean). This species is a good illustration of the fact that overall morphological similarity is not always a good indicator of close relationship. It was described by Dejean in the genus *Daptus* which currently includes five species in the Palaearctic Region. John Lawrence LeConte recognized its distinctness and proposed a new genus for it but still most taxonomists interested in harpalines thought it was closely related to daptines. However, several small structural details of the adults and larvae suggest that the species is simply an aberrant member of the genus *Anisodactylus* and is not closely related to daptines.

Anaferonia papago Casey, 1918: 346. Type locality: «Arizona» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 147), in USNM [# 47102]. Synonymy established by Freitag (1969: 159).

Distribution. This species ranges from southeastern South Dakota and western Iowa south to central Texas, west to central Arizona [see Freitag 1969: Fig. 134].
Records. USA: AZ, CO, IA, KS, NE, NM, OK, SD, TX

Cyclotrachelus substriatus (LeConte, 1846)

Feronia substriata LeConte, 1846b: 344. Type locality: «ad Rocky Mountains» (original citation), restricted to «Sterling, Logan County, Colorado» by Bousquet (1999: 210). Lectotype (♀), designated by Freitag (1969: 156), in MCZ [# 5616].
Evarthrus latebrosus LeConte, 1853a: 233. Type locality: «Missouri Territory; Illinois» (original citation), restricted to «Missouri Territory» by Freitag (1969: 156). Lectotype (♂), designated by Freitag (1969: 156), in MCZ [# 5617]. Synonymy established by LeConte (1873a: 319), confirmed by Freitag (1969: 156).
Anaferonia evanescens Casey, 1918: 343. Type locality: «Colonia Garcia, Sierra Madre M[oun]t[ain]s, Chihuahua, Mexico» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 156), in USNM [# 47100]. Synonymy established by Freitag (1969: 156).
Anaferonia pantex Casey, 1918: 344. Type locality: «Texas» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 156), in USNM [# 47099]. Synonymy established by Freitag (1969: 156).

Distribution. This species ranges from southern Minnesota to southern Wyoming, south to the state of Durango and southeastern Texas [see Freitag 1969: Fig. 134]. The record from Missouri (Summers 1873: 134) needs confirmation.
Records. USA: AZ, CO, KS, MN, NE, NM, OK, SD, TX, WY [MO] – Mexico

[**torvus group**]

Cyclotrachelus deceptus (Casey, 1918)

Evarthrus texanus Motschulsky, 1866: 261 [secondary homonym of *Pterostichus texanus* LeConte, 1863]. Type locality: «Texas» (original citation), restricted to «Dallas, Dallas County]» by Bousquet (1999: 210). Lectotype (♀), designated by Bousquet (1984a: 3), in ZMMU.
Eumolops decepta Casey, 1918: 357. Type locality: «Indiana» (original citation), which is incorrect (Freitag 1969: 161). Lectotype [as holotype] (♀), designated by Freitag (1969: 161), in USNM [# 47356]. Synonymy established by Bousquet (1984a: 3).
Eumolops impolita Casey, 1918: 358. Type locality: «Texas» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 161), in USNM [# 47130]. Synonymy established by Freitag (1969: 161).
Evarthrinus minax Casey, 1920: 194. Type locality: «Indiana» (original citation), which is probably incorrect (Freitag 1969: 161). Lectotype [as holotype] (♂), designated

by Freitag (1969: 161), in USNM [# 47124]. Synonymy established by Freitag (1969: 161).

Pterostichus texicola Csiki, 1930: 659. Replacement name for *Pterostichus texanus* (Motschulsky, 1866).

Distribution. This species is known from Texas, as far south as DeWitt County and west to El Paso County [see Freitag 1969: Fig. 135]. The record from "Oklahoma" (Bousquet and Larochelle 1993: 189) needs confirmation.

Records. USA: TX [OK]

Note. This taxon has been regarded as a subspecies of *C. torvus* (LeConte) by Freitag (1969) but I believe it should be treated as a distinct species.

Cyclotrachelus gravidus (Haldeman, 1853)

Evarthrus gravidus Haldeman, 1853: 361. Type locality not stated; «Texas» selected by Freitag (1969: 163), restricted to «Kerrville, Kerr County» by Bousquet (1999: 206). One possible syntype, a ♀ labeled "[dark red disc] / E. gravidus Hald. [handwritten]," in MCZ (collection LeConte).

Eumolops ampla Casey, 1918: 353. Type locality: «Texas» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 163), in USNM [# 47126]. Synonymy established by Freitag (1969: 163).

Distribution. This species is known from southern Oklahoma (Hatch and Ortenburger 1930: 11, as *Eumolops ampla*) and Texas, as far south as Comal County and west to El Paso County [see Freitag 1969: Fig. 135].

Records. USA: OK, TX

Cyclotrachelus torvus (LeConte, 1863)

Evarthrus torvus LeConte, 1863c: 9. Type locality: «Kansas» (original citation). Syntype(s) location unknown. Note. The specimen in MCZ [# 5657] labeled "Col[orado]" and selected lectotype by Freitag (1969: 160) is not a syntype.

Feronia acuminata Chaudoir, 1868b: 333. Type locality: «Texas» (original citation). Lectotype (♂), designated by Freitag (1969: 160), in MHNP. Synonymy established by Freitag (1969: 160).

Eumolops prominens Casey, 1918: 353. Type locality: «Florida» (original citation), which is probably incorrect (Freitag 1969: 161). Lectotype [as holotype] (♀), designated by Freitag (1969: 161), in USNM [# 47128]. Synonymy established by Freitag (1969: 161).

Eumolops sexualis Casey, 1918: 354. Type locality: «Las Vegas [San Miguel County], New Mexico» (original citation). Lectotype [as holotype] (♂), designated by Freitag (1969: 161), in USNM [# 47124]. Synonymy established by Freitag (1969: 161).

Eumolops inflatula Casey, 1918: 354. Type locality: «Akron [Washington County], Colorado» (original citation). Lectotype [as holotype] (♀), designated by Freitag (1969: 161), in USNM [# 47127]. Synonymy established by Freitag (1969: 161).

Distribution. This species inhabits the Great Plains from southwestern Minnesota (Gandhi et al. 2005: 926) to western South Dakota, south to southern New Mexico and southern Arkansas [see Freitag 1969: Fig. 135]. The record from "Arizona" (Bousquet and Larochelle 1993: 189) is probably in error; one specimen labeled from Hidalgo County in southeastern Texas is probably mislabeled (Freitag 1969: 163).
Records. USA: AR, CO, IA, KS, MO, MN, NE, NM, OK, SD, WY

Genus *Abax* Bonelli, 1810

Abax Bonelli, 1810: Tabula Synoptica. Type species: *Carabus striola* Fabricius, 1792 (= *Carabus parallelepipedus* Piller and Mitterpacher, 1783) designated by Westwood (1838: 4). Etymology. From the Latin *abax* (counting-board), possibly alluding to the shape of the pronotum of the adults [masculine].

Diversity. Eighteen species in Europe, with one species extending into Turkey, arrayed in two subgenera: *Abax s.str.* (16 species) and *Abacopercus* Ganglbauer (two species). One species is adventive in eastern North America.

Subgenus *Abax* Bonelli, 1810

Abax Bonelli, 1810: Tabula Synoptica. Type species: *Carabus striola* Fabricius, 1792 (= *Carabus parallelepipedus* Piller and Mitterpacher, 1783) designated by Westwood (1838: 4).
Bobsus Fischer von Waldheim, 1829a: 20. Type species: *Carabus parallelepipedus* Piller and Mitterpacher, 1783 by monotypy.

Diversity. Sixteen species in Europe and Turkey, one of them adventive in the Nearctic Region.
Identification. The species in North America was covered in Lindroth's (1969a: 1116) monograph.

Abax parallelepipedus (Piller and Mitterpacher, 1783)

Carabus parallelepipedus Piller and Mitterpacher, 1783: 105. Type locality: Slavonia (inferred from title of the book). Syntype(s) probably lost (Lindroth 1969a: 1116).
Carabus ater Villers, 1789: 364 [primary homonym of *Carabus ater* Goeze, 1777]. Type locality: «Gallia Aust.» (original citation). Syntype(s) location unknown. Synonymy established by Csiki (1916: 15).

Distribution. This European species is adventive in North America where it is known from Sydney, Nova Scotia (Brown 1967: 87) and western Newfoundland (David W. Langor pers. comm. 1990). The first inventoried specimen collected on this continent was found in 1965 in Nova Scotia.
Records. CAN: NF, NS – **Adventive**

Tribe Zabrini Bonelli, 1810

Zabrides Bonelli, 1810: Tabula Synoptica. Type genus: *Zabrus* Clairville, 1806.

Diversity. About 700 species arrayed in two subtribes: Zabrina (107 species of *Zabrus* in Europe and western Asia, the vast majority restricted to the Mediterranean region) and Amarina. More than 98% of the species inhabit the Northern Hemisphere.

Subtribe Amarina Zimmermann, 1832

Amaroiden Zimmermann, 1832: 6. Type genus: *Amara* Bonelli, 1810.

Isopleuridae Kirby, 1837: 49. Type genus: *Isopleurus* Kirby, 1837 (= *Celia* Zimmermann, 1832).

Agronomaeidae Gistel, 1848b: [2]. Type genus: *Agronoma* Gistel, 1848 (= *Amara* Bonelli, 1810).

Pangeteidae Gistel, 1856: 358. Type genus: *Pangetes* Gistel, 1856 (= *Amara* Bonelli, 1810).

Diversity. About 595 species placed in one genus.

Genus *Amara* Bonelli, 1810

Amara Bonelli, 1810: Tabula Synoptica. Type species: *Carabus vulgaris* Linnaeus *sensu* Panzer, 1797 (= *Amara lunicollis* Schiødte, 1837) designated by Westwood (1838: 4). Etymology. Probably from the Greek *amara* (trench, by extension furrow, stria), alluding to the presence of laterobasal impressions on the pronotum ("*thorax latus, basi transverse impressus, utrinq. stria sesquialtera angulis rectis*") of the adult rather than from the Greek prefix *a-* (privative) and *mairo* (to shine, by extension to be clear) alluding to the fact that the adults are dark colored as advocated by Zimmermann (1832: 30) or *a-* (with) and *mairo* (to shine) as advocated by Jacquelin du Val (1855: 31) [feminine].

Diversity. About 595 species (Hieke 2007) in the Nearctic (105 species, including ten adventive species), Neotropical (13 species in Middle America, only two of them endemic), Oriental (five species), Palaearctic (about 505 species, 16 of them Holarctic), and Afrotropical (about 12 species, nine of them endemic) Regions. These species are arrayed in 47 subgenera.

Note. Almost all new state and province records listed here are based on specimens determined by Fritz Hieke.

Subgenus *Curtonotus* Stephens, 1827

Curtonotus Stephens, 1827: 67. Type species: *Carabus convexiusculus* Marsham, 1802 designated by Westwood (1838: 4). Etymology (original, see page 138). From the Greek *cyrtos* (curved, by extension convex) and *notos* (back, upper surface), alluding to the convex body ("body ... very convex") of the adult [masculine].

Leirus Dejean, 1828: 457. Type species: *Carabus aulicus* Panzer, 1796 designated by Jeannel (1942: 946). Synonymy established by Zimmermann (1832: 38). Note. This name has been credited to Zimmermann (1832: 38) by most authors and to Fischer von Waldheim (1829a: 16) by Bousquet (2002c: 176). However, Dejean (1828: 457) first described the taxon without citing any species with it. The species first associated with *Leirus* are those listed by Fischer von Waldheim (1829a: 16). The name *Leirus* was proposed by Johann Karl Megerle von Mühlfeld and first made available by Dahl (1823: 6) but his work has been suppressed by the Commission (ICZN 1964).

Cyrtonotus Agassiz, 1846: 108, 114. Unjustified emendation of *Curtonotus* Stephens, 1827.

Lirus Agassiz, 1846: 204, 213. Unjustified emendation of *Leirus* Dejean, 1828.

Leirodema Tschitschérine, 1894: 394. Type species: *Amara sifanica* Tschitschérine, 1894 designated by Hieke (1995a: 54). Synonymy established by Kryzhanovskij (1974: 177).

Feronalius Casey, 1918: 226. Type species: *Amara pterostichina* Hayward, 1908 by original designation. Synonymy established by Hieke (1993: 149).

Paracurtonotus Habu, 1942: 494. Type species: *Leirus giganteus* Motschulsky, 1844 by original designation. Synonymy established by Habu (1953: 39). Etymology. From the Greek *para* (beside, near) and the generic name *Curtonotus* [*q.v.*] [masculine].

Paracyrtonotus Baliani, 1943: 48. Type species: *Amara mixta* Baliani, 1943 by monotypy. Synonymy established by Hieke (1993: 102). Etymology. From the Greek *para* (beside, near) and the generic name *Cyrtonotus* [*q.v.*] [masculine].

Diversity. Eighty-five species (Hieke 2007) in the arctic, subarctic, boreal, and temperate regions of North America (15 species of which three extend into Mexico), Asia (about 60 species), and Europe (13 species, all but possibly one shared with Asia). Six species are Holarctic and one is adventive in eastern North America.

Identification. There is no modern taxonomic revision of the species and such study would be useful. Lindroth (1968, as *aulica* group) covered ten of the 15 species found in North America.

Amara alpina (Paykull, 1790)

Carabus alpinus Paykull, 1790: 119. Type locality: «fummis alpibus Lapponicis & Dalecarlicis» (original citation), restricted to «Abisko, Torne L[ap]p[mar]k, Sweden» by Lindroth (1968: 673). Lectotype (♀), designated by Lindroth (1968: 675), in NRSS.

Amara brunnipennis Dejean, 1831: 800. Type locality: «Labrador» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 16). Synonymy established by Lindroth (1968: 673).

Leirus borealis Chaudoir, 1843b: 775. Type locality not stated. Syntype(s) apparently lost (Lindroth 1968: 673). Synonymy established, under the name *A. brunnipennis* Dejean, by Chaudoir (1861c: 198).

Leirus brevicornis Ménétriés, 1851: 51. Type locality: «Boganida [River] [Taimyr Peninsula, Siberia, Russia]» (original citation). Syntype(s) probably in ZMMU (Lindroth 1968: 673). Synonymy established by Csiki (1929: 459).

Amara obtusa LeConte, 1855: 348. Type locality: «Russian America» (original citation). Syntype(s) in MCZ [# 5671]. Synonymy established, under the name *A. brunnipennis* Dejean, by Hayward (1908: 60), confirmed by Lindroth (1954b: 134).

Curtonotus caligatus Putzeys, 1866b: 252. Type locality: «Ile S[ain]t-Georges, Kamtschatka [Russia]» (original citation). Holotype [by monotypy] (♂) in MHNP (collection Chaudoir). Synonymy established by Sahlberg (1882: 188).

Curtonotus cognatus Putzeys, 1866b: 253. Type locality: «Norwége» (original citation). Holotype [by monotypy] in MHNP (collection Chaudoir). Synonymy established with doubt (as aberration) by Jacobson (1907: 362).

Amara subsulcata J.R. Sahlberg, 1880: 33. Type locality: «Dudinka, Yenisei R[iver] [Taimyr Autonomous Okrug, Russia]» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1968: 674), in NRSS. Synonymy established by Munster (1927: 303), confirmed by Lindroth (1968: 674). Note. The specimen designated as lectotype by Silfverberg (1987: 25) is invalid since there was a prior valid designation of a lectotype (see ICZN 1999: Article 74.1.1).

Amara angustata J.R. Sahlberg, 1885b: 51 [secondary homonym of *Amara angustata* (Say, 1823)]. Type locality: Port Clarence, Alaska (inferred from title of the paper). Holotype [by monotypy] (♀) in ZMH. Synonymy established by Lindroth (1968: 674).

Amara pullula Poppius, 1906a: 55. Type locality: «Bulkur (c:a 71° 45' n. Br.), unterste Lena [Siberia, Russia]» (original citation). Holotype [by monotypy] (♂) in ZMH (Silfverberg 1987: 23). Synonymy established by Lindroth (1968: 674).

Amara birulai Poppius, 1913: 82. Type locality: «Kasatschie, Jana-Mündung [Siberia, Russia]» (original citation). Syntype(s) [2 ♂ originally cited] location unknown. Synonymy established by Hieke (1999b: 156).

Curtonotus rubripennis Casey, 1918: 232. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47152]. Synonymy established, under the name *A. alpina brunnipennis* Dejean, by Lindroth (1954b: 134).

Curtonotus deficiens Casey, 1918: 232. Type locality: «summit of M[oun]t Washington [Coos County], New Hampshire» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47154]. Synonymy established, under the name *A. alpina brunnipennis* Dejean, by Lindroth (1954b: 134).

Curtonotus argutus Casey, 1918: 233. Type locality: «M[oun]t Washington [Coos County], New Hampshire» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47153]. Synonymy established, under the name *A. alpina brunnipennis* Dejean, by Lindroth (1954b: 134).

Curtonotus inanis Casey, 1918: 233. Type locality: «summit of M[oun]t Washington [Coos County], New Hampshire» (original citation). Holotype [by monotypy]

(♀) in USNM [# 47155]. Synonymy established, under the name *A. alpina brunnipennis* Dejean, by Lindroth (1954b: 134).

Curtonotus subtilis Casey, 1924: 45. Type locality: «Stupart Bay [northern Quebec], possibly Labrador» (original citation). Holotype [by monotypy] (♂) in USNM [# 47151]. Synonymy established, under the name *A. alpina brunnipennis* Dejean, by Lindroth (1954b: 135). Note. Stupart Bay is a bay along the coast of the Hudson Strait in northern Quebec, near Maricourt (Wakeham).

Amara alaskana Csiki, 1929: 459. Replacement name for *Amara angustata* Sahlberg, 1885.

Distribution. This Holarctic species is found from Great Britain to the Pacific Coast of Siberia (Hieke 2003a: 558), and from the west coast of Alaska, including the Saint Lawrence Island, to northwestern Newfoundland, south to the James Bay area and to northern New Mexico along the Rocky Mountains [see Lindroth 1963b: Fig. 58]; isolated on the Shickshock Mountains in Gaspé Peninsula (Larochelle 1975: 42) and some mountains in New England (Lindroth 1966: 676). The record from "New York" (Notman 1928: 226) needs confirmation. According to Lindroth (1968: 676), this is the carabid occurring farthest north in North America. Fossil remnants of this species, dated between about 14,000 and 21,500 years B.P., have been unearthed in southeastern and central Iowa (Baker et al. 1986: 96; Schwert 1992: 78) and north-central Illinois (Garry et al. 1990: 394); others from interglacial deposits have been found in northwestern Greenland (Bennike 2000: 31).
Records. CAN: AB, BC, LB, MB, NF, NT, NU, ON, QC, YT **USA**: AK, CO, ME, NH, NM, UT, VT, WY [NY] – **Holarctic**

Amara aulica (Panzer, 1796)

Carabus ruficornis DeGeer, 1774: 95 [*nomen dubium*]. Type locality not stated. Syntype(s) lost.

Carabus aulicus Panzer, 1796b: no 3. Type locality: «Brunsvigiae [= Brunswick, Germany]» (original citation). Syntype(s) location unknown (possibly in ZMHB). Synonymy established with doubt by Schönherr (1806: 181).

Distribution. This European species is adventive in North America where it is known from Newfoundland (Larson and Langor 1982: 593) and Saint Pierre and Miquelon (Lindroth 1955a: 95) to the Saint Lawrence Valley in Quebec (Larochelle 1975: 42), south to Boston Harbor, Massachusetts (Davidson et al. 2011: 512). The first inventoried specimen collected on this continent was found in Cape Breton Island, Nova Scotia in 1929 (Fall 1934: 171). The record from the Similkameen Valley in British Columbia (Smith et al. 2004: 96) was based on a misidentified specimen of *A. carinata* LeConte (personal observation).
Records. FRA: PM **CAN**: NB, NF, NS (CBI), PE, QC **USA**: MA, ME, NH – **Adventive**

Amara blanchardi Hayward, 1908

Amara blanchardi Hayward, 1908: 22. Type locality: «Provo [Utah County], Utah» (original citation). Holotype (♂) in MCZ [# 25666].

Curtonotus sponsor Casey, 1918: 228. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♂), designated by Hieke (1994: 303), in USNM [# 47141]. Synonymy established by Hieke (1994: 303).

Curtonotus tartareus Casey, 1918: 229. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♂) in USNM [# 47143]. Synonymy established by Hieke (1994: 303).

Distribution. This western species occurs from southern Saskatchewan (MCZ) to south-central British Columbia (Lindroth 1968: 666), south to east-central California (Inyo County, CAS) and northwestern New Mexico (San Juan County, CNC).
Records. CAN: AB, BC, SK **USA**: AZ, CA, CO, ID, MT, NM, NV, OR, UT, WA, WY

Amara bokori Csiki, 1929

Amara sahlbergi Poppius, 1906a: 54 [secondary homonym of *Amara sahlbergi* (Zetterstedt, 1838)]. Type locality: «Saostroff, fl. Jenissej [Taimyr Autonomous Okrug, Siberia, Russia]» (original citation). Lectotype (♂), designated by Lindroth (1968: 676), in ZMH. Etymology. The specific name was proposed for John Reinhold Sahlberg (see *Amara john-sahlbergi*).

Amara bokori Csiki, 1929: 461. Replacement name for *Amara sahlbergi* Poppius 1906.

Distribution. This species ranges from eastern Siberia to the Hudson Bay coast in northern Manitoba (Lindroth 1968: 677).
Records. CAN: MB, NT, NU, YT **USA**: AK – **Holarctic**

Amara carinata (LeConte, 1847)

Curtonotus carinatus LeConte, 1847: 368. Type locality: «ad Rocky Mountains» (original citation), cited from «Nebraska Territory, near the Rocky Mountains» by LeConte (1855: 347), restricted to «Bent Co[unty], Color[ado]» by Lindroth (1968: 668). Syntype(s) in MCZ [# 5668].

Curtonotus laticollis LeConte, 1847: 368 [secondary homonym of *Amara laticollis* Stephens, 1828]. Type locality: «ad Rocky Mountains» (original citation), cited from «Nebraska Territory, near the Rocky Mountains» by LeConte (1855: 347). One syntype in MCZ [# 5667]. Synonymy established by Lindroth (1968: 668).

Curtonotus adstrictus Putzeys, 1866b: 238. Type locality: «États-Unis» (original citation). Lectotype (♂), designated by Lindroth (1968: 668), in MHNP. Synonymy established, under the name *A. laticollis* (LeConte), by Casey (1918: 227), confirmed by Lindroth (1968: 668).

Curtonotus concretus Casey, 1918: 228. Type locality: «California» (original citation). Holotype [by monotypy] (♀) in USNM [# 47138]. Synonymy established by Hieke (1994: 304).

Curtonotus spadiceus Casey, 1918: 229. Type locality: «Jemez Springs, Las Vegas and Fort Wingate, New Mexico» (original citation). Lectotype [as holotypus] (♂), designated by Hieke (1994: 305), in USNM [# 47144]. Synonymy established by Hieke (1994: 304).

Curtonotus catenulatus Casey, 1918: 230. Type locality: «Billings [Yellowstone County], Montana» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47145]. Synonymy established by Lindroth (1968: 668).

Curtonotus gilvipes Casey, 1924: 46. Type locality: «Rosebank, Man[itoba]» (lectotype label). Lectotype [as holotype] (♂), designated by Lindroth (1975: 130), in USNM [# 47147]. Synonymy established by Lindroth (1968: 668).

Distribution. This species ranges from the Gaspé Peninsula (Larochelle 1975: 43) to south-central British Columbia (Lindroth 1968: 669), south to the Sierra Nevada in California (Dajoz 2007: 16), central New Mexico (Bernalillo County, CMNH; Lindroth 1968: 668), the Texas Panhandle (Michels et al. 2010: 743), northwestern Arkansas (Carroll County, MCZ), and northeastern Ohio (Lake County, CMNH). The record from "West Virginia" (Bousquet and Larochelle 1993: 190) is in error; that from "Yukon Territory" (Ball and Currie 1997: 452) could not be confirmed.
Records. CAN: AB, BC, MB, ON, QC, SK **USA**: AR, AZ, CA, CO, IA, ID, IL, IN, KS, MA, MN, MO, MT, ND, NE, NH, NM, OH, OR, SD, TX, UT, VT, WI, WY [YT]

Amara daurica (Motschulsky, 1844)

Leirus dauricus Motschulsky, 1844: 177. Type locality: «Kiachta [= Kyakhta], Baikal [Russia]» (lectotype label). Lectotype, designated by Hieke (1993: 77), in ZMMU. Note. Motschulsky (1844: 177) originally cited that he found this species "qu'au delà du Baïcal sur les bords bourbeux des fleuves Ouda et Selenga."

Curtonotus contractus Putzeys, 1866b: 241. Type locality: «Sibér[ie]» (lectotype label). Lectotype (♂), designated by Hieke (1993: 77), in MHNP (collection Chaudoir). Synonymy established by Hieke (1993: 75).

Amara monostigma Jedlička, 1957a: 28. Type locality: «Nertschinsk, Sib. or. [Transbaikalien, Russia]» (original citation). Holotype (♂) in NMP. Synonymy established, under the name *A. contracta* (Putzeys), by Kryzhanovskij (1975: 92).

Distribution. This species is found in Kazakhstan, Mongolia, northern China, and across Siberia (Hieke 2003a: 559). In North America, it is known only from the Anderson River Delta area in northwestern Northwest Territories (Hieke 1994: 306).
Records. CAN: NT – **Holarctic**
Note. The North American specimens differ from the Siberian ones in structural details and, according to Hieke (1994: 307), it is possible that they constitute a distinct subspecies.

Amara deparca (Say, 1830)

Feronia deparca Say, 1830b: (6) [3]. Type locality: «Mexico» (original citation), herein restricted to 10 miles west of El Salto, Durango (CNC). Syntype(s) lost.

Curtonotus substriatus Putzeys, 1866b: 242. Type locality: «Mexique» (original citation). Syntype(s) [4 originally cited] in MHNP (collection Chaudoir). Synonymy established by Bates (1882a: 76).

Amara bowditchi Hayward, 1908: 24. Type locality: «Phoenix [Maricopa County], Ariz[ona]» (original citation). Holotype (♂) in MCZ [# 25667]. Synonymy established by Hieke (1993: 144).

Distribution. This species ranges from Baja California Norte (CAS), southeastern California (Inyo and San Bernardino Counties, CAS, CMNH), and southern Nevada (Clark County, MCZ) east to northwestern Oklahoma (Texas County, CMNH), north to northern Colorado and "Utah" (Hayward 1908: 25, as *A. bowditchi*), south at least to the state of México (Bates 1882a: 76).

Records. USA: AZ, CA, CO, NM, NV, OK, TX, UT – Mexico

Amara hyperborea Dejean, 1831

Amara hyperborea Dejean, 1831: 800. Type locality: «Labrador» (original citation), herein restricted to Hebron (CNC). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 16).

Curtonotus elongatus LeConte, 1850: 207. Type locality: Lake Superior (inferred from title of the paper), cited as «one male found floating in Lake Superior, near the northern shore» by LeConte (1855: 348). One syntype in MCZ [# 5672]. Synonymy established by Lindroth (1954b: 134).

Lirus ovipennis Motschulsky, 1859a: 156. Type locality: «Californie» (original citation), which is incorrect. Lectotype [as holotype] (♂), designated by Hieke (1993: 148), in ZMMU. Synonymy established by Hieke (1993: 148).

Lirus longicollis Motschulsky, 1860: 95. Type locality: «Kamtschatka» (original citation for the lectotype). Lectotype [as holotype], designated by Hieke (1990: 252), in ZMMU. Synonymy established by Putzeys (1865: 338), confirmed by Hieke (1975: 296).

Amara peregrina Morawitz, 1862: 258. Type locality: «Zagan-oluj [Chita region, eastern Siberia, Russia]» (lectotype label). Lectotype (♂), designated by Hieke (1990: 252), in ZILR. Synonymy established by Lindroth (1953a: 18), confirmed by Hieke (1990: 252).

Curtonotus pedestris Putzeys, 1866b: 254. Type locality: «Udskoe Ochotsk [Khabarovsk Kray, Siberia, Russia]» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Hieke (1990: 252).

Curtonotus tristis Putzeys, 1866b: 255. Type locality: «Owho-Bay, Canada boréal» (original citation). Holotype [by monotypy] (♂) in MHNP (collection Chaudoir). Synonymy established by Lindroth (1968: 678).

Curtonotus canadensis Putzeys, 1866b: 256. Type locality: «Canada boréal» (original citation). Holotype [by monotypy] (♀) in MHNP (collection Chaudoir). Synonymy established by Lindroth (1968: 678).

Curtonotus dejeani Putzeys, 1866b: 258. Type locality: «Kamtschatka [Russia]» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established, under the name *A. longicollis* (Motschulsky), by Tschitschérine (1894: 389), confirmed by Hieke (1975: 296).

Harpalus simulans J.R. Sahlberg, 1880: 44. Type locality: «insulam Tschornaja, ad flumen Jenissej [Russia]» (original citation). Syntype(s) [3 originally cited] in NRSS (Lindroth 1955a: 99). Synonymy established with doubt, under the name *A. peregrina* Morawitz, by Hellén (1930: 6), confirmed by Lindroth (1954b: 134).

Curtonotus imperfectus Brown, 1930: 232. Type locality: «Bradore Bay, Que[bec]» (original citation). Holotype (♀) in CNC [# 3163]. Synonymy established by Lindroth (1954b: 134).

Distribution. This Holarctic species ranges from northern Finland to the Pacific Coast, south to Mongolia and northeastern China (Hieke 2003a: 560) and from Alaska (Lindroth 1968: 679) to Newfoundland (Lindroth 1955a: 99), south to the upper peninsula of Michigan (Lindroth 1968: 678). The record from the White Mountains in New Hampshire (Wickham 1896b: 37) needs confirmation; those from "Vermont" (Hamilton 1894a: 10) and Colorado (Snow 1877: 17; Wickham 1902: 236; Armin 1963: 208, as *A. elongatus*) are probably in error.

Records. CAN: AB, BC, LB, MB, NF, NT, ON, QC, SK, YT **USA**: AK, MI [NH] – **Holarctic**

Amara jacobina LeConte, 1855

Amara jacobina LeConte, 1855: 346. Type locality: «San Diego [San Diego County], California» (original citation). Holotype [by monotypy; designated lectotype by Hieke (1990: 285)] (♂) in MCZ [# 5665].

Amara stupida LeConte, 1855: 347. Type locality: «Sacramento [Sacramento County], California» (original citation). Holotype [by monotypy; designated lectotype by Hieke (1990: 286)] (♀) in MCZ [# 5666]. Synonymy established by Hieke (1990: 283).

Distribution. The range of this species extends from "Washington" (Hayward 1908: 23) to the Baja California Peninsula (Horn 1894: 309) and Arizona (Griffith 1900: 565; Hayward 1908: 23). The records from north-central Utah (Horn 1894: 309), "Colorado" (Wickham 1902: 236), and New Mexico (Fall and Cockerell 1907: 159) need confirmation.

Records. USA: AZ, CA, OR, WA [CO, NM, UT] – Mexico

Amara kurnakowi Hieke, 1994

Amara kurnakowi Hieke, 1994: 310. Type locality: «r[iver] Omsuktschan, bas[in] Kolymy [Siberia, Russia]» (original citation). Holotype (♂) in ZMHB (Hieke 2007).

Amara kurnakovi Budarin and Kryzhanovskij [in Budarin], 1995: 27. Type locality: «Magadan area: Omsukchan River (Kolyma River basin) [Siberia, Russia]» (original citation). Holotype (♂) in ZILR. Synonymy established by Hieke (1997: 225).

Distribution. This Holarctic species is known from northeastern Siberia and the Anderson River Delta in northwestern Northwest Territories (Hieke 1994: 311).
Records. CAN: NT – **Holarctic**

Amara lacustris LeConte, 1855

Amara lacustris LeConte, 1855: 346. Type locality: «north shore of Lake Superior [Ontario]» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5669].

Curtonotus manitobensis Casey, 1924: 46. Type locality: «Rosebank, Man[itoba]» (lectotype label). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47142]. Synonymy established by Lindroth (1954b: 135).

Distribution. This species occurs from Nova Scotia (Larochelle and Larivière 1990a: 30, 34) to southwestern British Columbia, north to the coast of Nunavut and northern Alaska (Lindroth 1968: 671), south to northwestern Washington (Hatch 1953: 121), south-central Utah (Wayne County, CNC), southwestern Colorado (La Plata County, CNC), the Black Hills in southwestern South Dakota (Kirk and Balsbaugh 1975: 25), and "Michigan" (Garry A. Dunn pers. comm. 1986). The record from "Nebraska" (Bousquet and Larochelle 1993: 191) needs confirmation.
Records. CAN: AB, BC, MB, NB, NS, NT, NU, ON, SK, YT **USA**: AK, CO, ID, MI, MN, MT, ND, SD, UT, WA, WI, WY [NE]

Amara pennsylvanica Hayward, 1908

Curtonotus fulvipes Putzeys, 1866b: 235 [secondary homonym of *Amara fulvipes* (Audinet-Serville, 1821)]. Type locality: «Missouri» (original citation). Holotype [by monotypy] (♂) in MHNP (collection Chaudoir).

Amara pennsylvanica Hayward, 1908: 34. Replacement name for *Amara fulvipes* (Putzeys, 1866). Note. Because Hayward's name was expressly proposed as a replacement name, the syntypes of *Amara pennsylvanica* in MCZ [# 25668] have no status (see ICZN 1999: Article 72.7).

Distribution. This species ranges from Nova Scotia (Lindroth 1968: 678) to "Wyoming" (Hayward 1908: 34), south to northeastern Colorado (Sedgwick County, Ken Karns pers. comm. 2009), northeastern Texas (Dallas County, MCZ), southwestern Alabama (Mobile County, USNM), and northwestern South Carolina (Ciegler 2000: 75). An old specimen simply labeled from "New Mexico" (MCZ) is known. The record from western Montana (Hatch 1933a: 8) needs confirmation.
Records. CAN: NS, ON, QC **USA**: AL, AR, CO, CT, DC, DE, GA, IA, IL, IN, KS, KY, MA, MD, MI, MN, MO, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, WI, WV, WY [MT, NM]

Amara pterostichina Hayward, 1908

Curtonotus putzeysi Bates, 1878a: 600 [secondary homonym of *Amara putzeysii* Fairmaire, 1867 and *Amara putzeysii* Horn, 1875]. Type locality: «near the capital, Mexico» (original citation). Lectotype (♂), designated by Hieke (1993: 150), in BMNH. Etymology. The specific name was given in honor of the Belgian Jules Antoine Adolphe Henri Putzeys [1809-1882] who, despite his judicial and administrative duties, published extensively on botany and entomology, particularly Odonata and Carabidae.

Amara pterostichina Hayward, 1908: 20. Type locality: «Coolidge [McKinley County], N[ew] M[exico]» (lectotype label). Lectotype (♂), designated by Hieke (1993: 149), in MCZ [# 25664]. Synonymy established by Hieke (1993: 149).

Amara batesiana Csiki, 1929: 466. Replacement name for *Amara putzeysi* Bates, 1878.

Distribution. This species ranges from southern Arizona (Cochise County, CNC) to western Texas (Dajoz 2007: 23; Brewster and Jeff Davis Counties, CNC, MCZ), south to the Federal District and central Veracruz in Mexico (Bates 1882a: 76).
Records. USA: AZ, NM, TX – Mexico

Amara thoracica Hayward, 1908

Amara thoracica Hayward, 1908: 21. Type locality: «Colorado Springs [El Paso County], Colorado» (original citation). Holotype (♂) in MCZ [# 25665].

Distribution. The range of this species extends from southern Saskatchewan (CNC) to the Okanagan Valley in south-central British Columbia (Lindroth 1968: 668), south to northern Arizona (Coconino County, CMNH) and central New Mexico (Torrance County, CMNH; Milford et al. 2000: 21).
Records. CAN: AB, BC, SK **USA**: AZ, CO, MT, NM, NV, WY

Amara torrida (Panzer, 1796)

Carabus torridus Panzer, 1796b: no 2. Type locality: Germany (inferred from title of the book), which according to Lindroth (1968: 671) is incorrect; «Jokkmokk, Swed[en] Lapl[and]» selected by Lindroth (1968: 671). Syntype(s) location unknown (possibly in ZMHB).

Amara melanogastrica Dejean, 1828: 519. Type locality: «île d'Ounalaschka, l'une des îles Aleutiennes [Alaska]» (original citation). Two syntypes in MHNP (Lindroth 1955b: 16). Synonymy established by Hatch (1953: 121), confirmed by Lindroth (1955b: 16).

Leirus eschscholtzii Chaudoir, 1837b: 36. Type locality: «Kamtchatka [Russia]» (original citation). Lectotype (♂), designated by Lindroth (1968: 671), in MHNP. Synonymy established by Lindroth (1968: 671).

Curtonotus rufimanus Kirby, 1837: 35. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), restricted to «Edmonton, Al[ber]ta» by Lin-

droth (1968: 671). One syntype in BMNH (Lindroth 1953b: 172). Synonymy established by Lindroth (1953b: 172).

Curtonotus brevilabris Kirby, 1837: 35. Type locality: «Lat. 65° [= apparently region of Great Bear Lake, Northwest Territories]» (original citation). Holotype [by monotypy] (♂) in BMNH (Lindroth 1953b: 172). Synonymy established, under the name *A. rufimana* (Kirby), by Horn (1876e: 129), confirmed by Lindroth (1953b: 172).

Leirus rufimanus Motschulsky, 1844: 176 [secondary homonym of *Amara rufimana* (Kirby, 1837)]. Type locality: «Kamtchatka [Russia]» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1968: 671), in MHNP (collection Chaudoir). Synonymy established by Lindroth (1968: 671).

Leirus picipes Motschulsky, 1844: 176. Type locality: «sur les bords de l'Irtych à Omsk [Siberia, Russia]» (original citation). Three syntypes in ZMMU (Hieke 1995b: 324). Synonymy established by Hieke (1995b: 324).

Amara infausta LeConte, 1855: 347. Replacement name for *Amara rufimana* (Motschulsky, 1844).

Lirus californicus Motschulsky, 1859a: 155 [*nomen dubium*]. Type locality: California (inferred from title of the paper and specific epithet), which is incorrect, and «ile Kadiak [Alaska]» (original citation). Lectotype (♂), designated by Hieke (1993: 147), in ZILR. Synonymy established by Hieke (1993: 146).

Curtonotus reflexus Putzeys, 1866b: 241. Type locality: «Terre- Neuve (S[ain]t-Pierre-Miquelon)» (original citation). Lectotype (♀), designated by Lindroth (1968: 671), in IRSN. Synonymy established, under the name *A. rufimana* (Kirby), by Hayward (1908: 60), confirmed by Lindroth (1954b: 134).

Curtonotus somnolentus Putzeys, 1866b: 243. Type locality: «Ounalaschka [Aleutian Islands, Alaska]» (original citation). Syntype(s) [2 originally cited] probably in MHNP (collection Chaudoir) and IRSN. Synonymy established by Lindroth (1968: 671).

Curtonotus holmbergi Putzeys, 1866b: 250. Type locality: «Amérique Russe» (original citation). Holotype [by monotypy] (♂) in MHNP (collection Chaudoir). Synonymy established by Lindroth (1968: 671).

Curtonotus striolatus Putzeys, 1866b: 251. Replacement name for *Curtonotus rufimanus* (Motschulsky, 1844).

Amara cylindrica LeConte, 1878a: 450. Type locality: «South Park (8,000 to 10,000 feet), Colorado; Slave Lake; Lake Winnipeg [Manitoba]» (original citation). Syntype(s) in MCZ [# 5670]. Synonymy established by Lindroth (1953b: 172).

Amara ruficornis J.R. Sahlberg, 1880: 32 [secondary homonym of *Amara ruficornis* (DeGeer, 1774)]. Type locality: «Turuchansk [= Turukhansk, Krasnoyarsk Kray, Siberia, Russia]» (original citation). Holotype [by monotypy] (♂) in NRSS. Synonymy established by Lindroth (1968: 672).

Amara hudsonica Hayward, 1908: 29. Type locality: «Ungava Bay, Hudson Bay Territory» (original citation). Syntype(s) [3 originally cited] in USNM (Lindroth 1968: 672). Synonymy established by Lindroth (1968: 672).

Curtonotus labradorensis Casey, 1918: 231. Type locality: «W[est] S[ain]t Modest[e], Labrador» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47148]. Synonymy established by Lindroth (1954b: 134).

Curtonotus scrutatus Casey, 1918: 231. Type locality: «W[est] S[ain]t Modest[e], Labrador» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47150]. Synonymy established by Lindroth (1954b: 134).

Curtonotus albertanus Casey, 1924: 45. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47146]. Synonymy established by Lindroth (1954b: 134).

Curtonotus brevipennis Casey, 1924: 46. Type locality: «Western Hudson Bay region» (original citation). Holotype [by monotypy] (♀) in USNM [# 47149]. Synonymy established by Lindroth (1954b: 135).

Curtonotus durus Casey, 1924: 47. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47139]. Synonymy established by Lindroth (1954b: 135).

Curtonotus biarcuatus Casey, 1924: 47. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47140]. Synonymy established by Lindroth (1954b: 135).

Amara consueta Fall, 1926a: 135. Type locality: «Skagway, Alaska» (original citation). Holotype (♂) in MCZ [# 23874]. Synonymy established by Lindroth (1968: 672).

Amara john-sahlbergi Csiki, 1929: 464. Replacement name for *Amara ruficornis* Sahlberg, 1880. Etymology. The specific name was proposed in honor of the Finnish John Reinhold Sahlberg [1845-1920], professor of entomology at the University of Helsinki and one of the leading European entomologist of his time. Sahlberg collected extensively in Scandinavia but also made several expeditions to other parts of Europe, northern Africa, the Middle East, and Siberia. He worked primarily on Hemiptera and Coleoptera. Both his father, Reinhold Ferdinand Sahlberg [1811-1874], and grandfather, Carl Reinhold Sahlberg [1779-1860], were also naturalists and involved in entomology.

Amara tenuestriata Baliani, 1943: 47. Type locality: «Ochtsk, Siberia sett. or. [Russia]» (original citation). Holotype (♂) in MSNG (collection Baliani). Synonymy established by Hieke (1999b: 188).

Amara pulla Jedlička, 1957a: 30. Type locality: «Tripoli, Baikal [Russia]» (original citation). Holotype (♂) in NMP. Synonymy established by Hieke (1995b: 324). Note. According to Hieke (1995b: 324), the type locality is incorrect and possibly refers to the village Tibelti, about 20 km west of Kultuk in Irkutsk Oblast, Russia.

Amara turanica Jedlička, 1957a: 30. Type locality: «Turan, Baikal [Buryatia, Russia]» (original citation). Holotype in NMP. Synonymy established by Hieke (1993: 101).

Amara nairica Iablokoff-Khnzorian, 1964: 283. Type locality: «Gegamgebirgskette, südöstlich vom Sevansee (etwa 3000 m) [Armenia]» (original citation). Holotype (♂) location unknown. Synonymy established by Iablokoff-Khnzorian (1975: 26) (see Hieke 1975: 320).

Distribution. This circumpolar species is found from northern Finland to the Far East (Hieke 2003a: 561) and from the west coast of Alaska (Lindroth 1968: 673) to Newfoundland (Lindroth 1955a: 96-97), south to Nova Scotia (Lindroth 1968: 673), the Magdalen Islands, Gaspé Peninsula (Larochelle 1975: 48), southern Minnesota (Gandhi et al. 2005: 929), northern Colorado (LeConte, 1878a: 450, as *A. cylindrica*; Hayward 1908: 28, as *A. rufimana*; Armin 1963: 209, as *A. melanogastrica*) along the Rocky Mountains, and southeastern British Columbia (Lindroth 1968: 673); isolated on Mount Washington in New Hampshire (CNC). The records from Prince Edward Island (Bousquet and Larochelle 1993: 192, see Majka et al. 2008: 131), "Wisconsin" (Wickham 1896b: 36, as *A. rufimana*), northwestern Iowa (Wickham 1911b: 6, as *A. rufimana*), and "South Dakota" (Hayward 1908: 28, as *A. rufimana*) are probably in error; those from "New Mexico" (Hamilton 1894a: 10, as *A. eschscholtzii*) and Seboomook in Maine (Dearborn and Donahue 1993: 6) need confirmation. Fossil remnants of this species, dated between about 16,700 and 18,100 years B.P., have been unearthed in southeastern Iowa (Baker et al. 1986: 96).
Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS, NT, ON, QC, SK, YT **USA**: AK, CO, MN, MT, NH, WY [ME, NM] – **Holarctic**

Subgenus *Bradytus* Stephens, 1827

Bradytus Stephens, 1827: 67. Type species: *Carabus ferrugineus* Linnaeus *sensu* Stephens, 1828 (= *Carabus fulvus* Müller, 1776) designated by Westwood (1838: 4). Etymology (original, see page 136). From the Greek *bradytes* (slowness), probably alluding to the slow pace of the adults in nature [masculine].

Linconus Fischer von Waldheim, 1829a: 16. Type species: *Carabus apricarius* Paykull, 1790 designated by Bousquet (2002c: 176). Synonymy established by Bousquet (2002c: 176).

Omius Fischer von Waldheim, 1829a: 16. Type species: *Carabus consularis* Duftschmid, 1812 designated by Bousquet (2002c: 177). Synonymy established by Bousquet (2002c: 177).

Pseudobradytus Csiki, 1908: 353. Type species: *Amara crenata* Dejean, 1828 by monotypy. Synonymy established by Jeannel (1942: 939). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Bradytus* [*q.v.*] [masculine].

Diversity. Thirty-five species (Hieke 2007) in the arctic, subarctic, boreal, and temperate regions of North America (12 species, of which two are adventive), Asia (26 species), and Europe (seven species, all shared with Asia). One species (*A. glacialis*) is Holarctic.
Identification. There is no modern taxonomic revision of the species. Lindroth (1968, as *apricaria* and *insignis* groups) covered all but two (*A. neomexicana* and *A. lindrothi*) of the North American species.

[**fulva group**]

***Amara apricaria* (Paykull, 1790)**

Carabus apricarius Paykull, 1790: 125. Type locality: «Dalecarlia [= Dalarna, Sweden]» (original citation). Lectotype (♂), designated by Lindroth (1968: 683), in NRSS.

Amara pygmea Couper, 1865: 60. Type locality: «Quebec» (original citation). Lectotype (♂), designated by Lindroth (1971: 111), in ORUM. Synonymy established by Lindroth (1971: 111).

Amara putzeysii G.H. Horn, 1875: 129 [primary homonym of *Amara putzeysii* Fairmaire, 1867]. Type locality: «S[ain]t Pierre [and] Miquelon» (original citation). Holotype [by monotypy] (♀) in MCZ [# 666]. Synonymy established with doubt by Horn (in Hamilton 1889b: 95), confirmed by Lindroth (1954b: 135). Note. Horn (1875: 129) noted that the sole specimen he had was a male.

Amara putzeysiana Csiki, 1929: 457. Replacement name for *Amara putzeysii* Horn, 1875.

Distribution. This Palaearctic species is adventive in North America where it is known from Newfoundland (Lindroth 1955a: 100-101) and southern Labrador (Lindroth 1954d: 368) to the Kenai Peninsula in Alaska (Derek S. Sikes pers. comm. 2008), south to northern California (Trinity and Lassen Counties, CAS), west-central Nevada (Bechtel et al. 1983: 474), southern Colorado (Huerfano and Pueblo Counties, CMNH), Kansas (Trego County, CNC), and Virginia (Hoffman et al. 2006: 23; Clarke County, USNM). The first inventoried specimen collected on this continent was found in Quebec prior to 1865 (Couper 1865: 60, as *A. pygmea*). Several records (e.g., AL, AR, GA, NT, SC, YT) listed in Bousquet and Larochelle (1993: 192) are in error or need confirmation.

Records. FRA: PM **CAN**: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AK, CA, CO, CT, DC, DE, IA, ID, IL, IN, KS, MA, MD, ME, MI, MN, MT, ND, NE, NH, NJ, NV, NY, OH, OR, PA, RI, SD, UT, VA, VT, WA, WI, WY – **Adventive**

***Amara avida* (Say, 1823)**

Zabrus avidus Say, 1823b: 148. Type locality: «N[orth] Fork S[outh] Platte Can[y]on (7-8000 ft.), Col[orado]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33033].

Amara confinis Dejean, 1828: 510. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 16). Synonymy established by LeConte (1847: 367), confirmed by Lindroth (1955b: 16).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 100) to southeastern British Columbia (Lindroth 1968: 690), south to southern Colorado (Wickham 1902: 236; Armin 1963: 200), southeastern Kansas (Knaus 1907: 233), Missouri (Summers 1873: 145), and southwestern North Carolina (Macon County, MCZ). The record from southeastern Louisiana (Summers 1874a: 80) is likely in error.

Records. FRA: PM **CAN**: AB, BC, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: CO, CT, DC, IA, IL, IN, KS, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NY, OH, PA, RI, SD, VA, VT, WI

Amara browni Lindroth, 1968

Amara browni Lindroth, 1968: 686. Type locality: «Reindeer Depot, N[orth] W[est] Terr[itories]» (original citation). Holotype (♂) in CNC [# 10509]. Etymology. The specific name was proposed for Williamson James Brown [1902-1977], one of Canada's leading coleopterist of his time. Brown worked at Agriculture Canada on the systematics of several families with a special interest on scarabaeids, elaterids, and chrysomelids. He was also interested by the adventive species in Canada, the problem of sibling species, and the arctic beetles.

Distribution. This species is known from a few localities in Yukon Territory and the Anderson River delta in northern Northwest Territories (Lindroth 1968: 687).
Records. CAN: NT, YT

Amara exarata Dejean, 1828

Amara exarata Dejean, 1828: 509. Type locality: «Amérique septentrionale» (original citation), restricted to «Norfolk [Norfolk County], Mass[achusetts]» by Lindroth (1968: 680). One syntype in MHNP (Lindroth 1955b: 16).

Amara furtiva Say, 1830b: (7) [3]. Type locality: «Wabash Vall[ey], Richland & Lawrence Co[unties], Ill[inois]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 344), in MCZ [# 33032]. Synonymy established by Horn (1875: 128). Note. «Indiana» was the area originally cited by Say (1830b: (7) [3]).

Bradytus gravidus Casey, 1918: 236. Type locality: «Douglas Co[unty], Kansas» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47156]. Synonymy established by Lindroth (1968: 680).

Bradytus curtus Casey, 1918: 236. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47158]. Synonymy established by Lindroth (1968: 680).

Bradytus stygialis Casey, 1918: 237. Type locality: «Pennsylvania» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47157]. Synonymy established by Lindroth (1968: 680).

Distribution. The range of this species extends from southern New Hampshire (Sullivan County, MCZ) to eastern South Dakota (Kirk and Balsbaugh 1975: 26; French et al. 2004: 557), south to northeastern Texas (Dallas County, MCZ), northeastern Georgia (Fattig 1949: 28; Clayton County, USNM), and northwestern South Carolina (Ciegler 2000: 74). The record from "Florida" (Bousquet and Larochelle 1993: 192) is probably in error.
Records. CAN: ON **USA**: AL, CT, DC, GA, IA, IL, IN, KS, MA, MD, MI, MN, MO, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, WI, WV

Amara fulva (Müller, 1776)

Carabus fulvus O.F. Müller, 1776: 77. Type locality: Denmark and Norway (inferred from title of the book); «Denmark» selected by Lindroth (1968: 680). Syntype(s) lost (Lindroth 1968: 680).

Carabus concolor Olivier, 1795: [35] 80 [primary homonym of *Carabus concolor* Gmelin, 1790 and *Carabus concolor* Fabricius, 1792]. Type locality: «environs de Paris» (original citation). Syntype(s) location unknown (possibly in MHNP). Synonymy established by Illiger (1801: 53).

Distribution. This European species is adventive in North America where it is known only in eastern Canada from Newfoundland (Lindroth 1955a: 101) to the Gaspé Peninsula (Larochelle 1975: 44) and the north shore of the Saint Lawrence in Quebec (Brown 1932b: 200), including southern Labrador (Lindroth 1955a: 101). The first inventoried specimen collected on this continent was found in Newfoundland in 1905 (Lindroth 1955a: 101).
Records. CAN: LB, NB, NF, NS (CBI), PE, QC – **Adventive**

Amara glacialis (Mannerheim, 1853)

Bradytus glacialis Mannerheim, 1853: 135. Type locality: «ad fl[umen] Tchuniten peninsulae Kenai [Alaska]» (original citation). Holotype [by monotypy] location unknown (possibly in ZILR). Note. Mannerheim (1853: 135) stated that he had a single specimen of this species from "fl. Tchuniten" but also mentioned that he received from Motschulsky specimens of this species collected "ad litora continentis Americes borealis" which he referred to his "Var. b." Since specimens referred to distinct variants are excluded from the type series (ICZN 1999: Article 72.4.1), the description of this species is based exclusively on a single specimen which is the holotype by monotypy. The sentence "Occurrit etiam in peninsula Kamschatka" added by Mannerheim after the statement that his specimens of "Var. b" were sent to him by Motschulsky clearly refers to the variety. The specimen labeled as "Type 8326" in MCZ is not the holotype.

Amara trybomi J.R. Sahlberg, 1880: 34. Type locality: «Tolstoinos [=Tolstyy Nos, Taymyr Autonomous Okrug, Russia]» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1968: 684), in NRSS. Synonymy established by Poppius (1906a: 49), confirmed by Lindroth (1968: 684). Etymology. The specific name was proposed in honor of the Swedish zoologist Filip Trybom [1850-1913], who was interested initially in entomology and participated in a number of expeditions to northern Russia. He eventually became a fishery research commissioner.

Bradytus nainensis Casey, 1918: 238. Type locality: «Nain, Labrador» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47159]. Synonymy established by Lindroth (1954b: 135).

Distribution. This species is found from the Yenisei River in western Siberia to the coast of Labrador [see Alfimov and Berman 2009: Fig. 1].
Records. CAN: BC, LB, MB, NT, NU, ON, QC, SK, YT **USA**: AK – **Holarctic**

Amara latior (Kirby, 1837)

Curtonotus latior Kirby, 1837: 36. Type locality: northern parts of British America (inferred from title of the book), restricted to «Swift Current, Sask[atchewan]» by Lindroth (1968: 682). Holotype [by monotypy] (♀) in BMNH (Lindroth 1953b: 172).

Amara oregona LeConte, 1855: 349. Type locality: «Fort Vancouver, Oregon [Territory]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 7388]. Synonymy established by Horn (1875: 128), confirmed by Lindroth (1968: 682). Note. Fort Vancouver was a massive British outpost on the north bank of the Columbia River, slightly upstream from the mouth of the Willamette River, in Washington.

Amara libera LeConte, 1855: 349. Type locality: «Lake Superior, Illinois, Wisconsin, Nebraska» (original citation). Syntype(s) in MCZ [# 7387]. Synonymy established with doubt by LeConte (1859c: 33), confirmed by Lindroth (1968: 682).

Bradytus laevistriatus Putzeys, 1866b: 262. Type locality: «Etats-Unis» (original citation). Lectotype (♂), designated by Lindroth (1968: 682), in IRSN. Synonymy established by LeConte (1873b: 323), confirmed by Lindroth (1968: 682).

Bradytus humphreysi Casey, 1918: 240. Type locality: «Humphreys Peak [Coconino County], Arizona» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47160]. Synonymy established by Lindroth (1968: 682).

Bradytus deceptus Casey, 1918: 241. Type locality: «New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47161]. Synonymy established by Lindroth (1968: 682).

Bradytus relictus Casey, 1918: 242. Type locality: «Denver [Denver County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47164]. Synonymy established by Lindroth (1968: 682).

Distribution. The range of this species extends from western Newfoundland (Lindroth 1955a: 102) to Vancouver Island (Lindroth 1968: 682), south to northwestern California (Humboldt County, USNM; Hayward 1908: 44), Arizona (Casey, 1918: 240, as *Bradytus humphreysi*; Chen et al. 2006: 171; Coconino County, USNM), New Mexico (Fall and Cockerell 1907: 158; Casey, 1918: 241, as *Bradytus deceptus*; Taos County, CMNH), "Texas" (Lindroth 1955a: 102), and northern Virginia (Page County, USNM).
Records. CAN: AB, BC (VCI), MB, NB, NF, NS, ON, PE, QC, SK **USA**: AR, AZ, CA, CO, CT, DC, IA, ID, IL, IN, KS, KY, MA, ME, MI, MN, MT, ND, NE, NH, NJ, NM, NY, OH, OR, PA, SD, TX, UT, VA, VT, WA, WI, WY

Amara lindrothi Hieke, 1990

Amara lindrothi Hieke, 1990: 234. Type locality: «Kluane [= Silver City], Y[ukon] T[erritory]» (original citation). Holotype (♂) in CNC [# 23036].

Distribution. This species is known from a few localities in Labrador (CNC), northern Manitoba (CNC), northeastern Alberta (Andrew Lake, UASM), and Yukon Ter-

ritory as far north as Swim Lakes (CNC), south to east-central Nevada (White Pine County, CMNH) and northern New Mexico (Hieke 1990: 234).
Records. CAN: AB, LB, MB, YT **USA**: CO, NM, NV, UT, WY

Amara neomexicana (Casey, 1924)

Bradytus neomexicanus Casey, 1924: 48. Type locality: «Maxwell [Colfax County], New Mexico» (original citation). Holotype [by monotypy] (♂) in USNM [# 47167].

Bradytus novellus Stehr, 1949: 207. Type locality: «F[or]t Davis [Jeff Davis County], Davis M[oun]t[ain]s, Texas» (original citation). Holotype (♂) in MSUE. Synonymy established by Hieke (1997: 240).

Bradytus vegasensis Stehr, 1949: 207. Type locality: «6 mi[les] N[orth] E[ast] of Las Vegas [San Miguel County], New Mexico» (original citation). Holotype (♂) in MSUE. Synonymy established, under the name *A. novella* (Stehr), by Hieke (1994: 326).

Distribution. This species is known from Arizona (Coconino National Forest, CNC), northern New Mexico (Casey 1924: 48; Stehr 1949: 207, as *Bradytus vegasensis*), and western Texas (Stehr 1949: 207, as *Bradytus novellus*).
Records. USA: AZ, NM, TX

Amara schwarzi Hayward, 1908

Isopleurus septentrionalis LeConte, 1847: 358 [secondary homonym of *Amara septentrionalis* Curtis, 1840]. Type locality: «Lacum Superiorem» (original citation), herein restricted to Marquette, Marquette County, Michigan (USNM). Syntype(s) in MCZ [# 7386].

Amara schwarzi Hayward, 1908: 42. Replacement name for *Amara septentrionalis* (LeConte, 1847). Note. Because Hayward's name was expressly proposed as a replacement name, the syntype of *Amara schwarzi* Hayward in MCZ [# 25669] has no status (see ICZN 1999: Article 72.7).

Distribution. This species inhabits the Laurentian Highlands from the north shore of the Saint Lawrence Gulf (Larochelle 1975: 48) to the Great Slave Lake in the Northwest Territories (Lindroth 1968: 684), south to central Washington (Kittitas County, CMNH), southwestern Alberta (Indian Creek at 49°48'N - 114°07'W, CNC), northeastern Minnesota, and the upper peninsula of Michigan (Lindroth 1968: 684). The record from South Dakota (Kirk and Balsbaugh 1975: 26) was based on a small specimen of *A. latior* in MCZ; those from Labrador (Larochelle 1975: 48) and Yukon Territory (Lindroth 1968: 684), and probably also from Colorado (Wickham 1902: 237), refer to *A. lindrothi* (CNC). The records from Ohio (Everly 1927: 155), New Jersey (Smith 1910: 206), and "New York" (Leng and Beutenmüller 1893: 139; Wickham 1896b: 38) are likely in error; that from northern Wisconsin along Lake Superior (Wickham 1896c: 133, as *A. septentrionalis*) needs confirmation.
Records. CAN: AB, MB, NT, ON, QC **USA**: MI, MN, WA [WI]

[**insignis group**]
***Amara insignis* Dejean, 1831**

Amara insignis Dejean, 1831: 796. Type locality: «Californie» (original citation), herein restricted to San Diego, San Diego County (see Casey 1918: 295, as *A. tarsalis*). Two syntypes in MHNP (Lindroth 1955b: 17).

Celia coerulea Motschulsky, 1859a: 153. Type locality: «St. Francisco [San Francisco County, California]» (original citation). Lectotype (♂), designated by Bousquet (1997b: 335), in ZMMU. Synonymy established by Hayward (1908: 61), confirmed by Bousquet (1997b: 335).

Amara tarsalis Casey, 1918: 295. Type locality: «San Diego [San Diego County], California» (original citation). Seven syntypes in USNM [# 47276]. Synonymy established implicitly by Lindroth (1968: 692).

Amara guadalupensis Casey, 1918: 295. Type locality: «Island of Guadalupe, [Baja] California» (original citation). One syntype in USNM [# 47277]. Synonymy established implicitly by Lindroth (1968: 692).

Distribution. This species is found along the Pacific Coast from central California (Lindroth 1968: 692) south to Guadalupe Island off the coast of Baja California (Casey 1918: 295, as *A. guadalupensis*). The record from "Oregon [Territory]" (LeConte 1857c: 9) is probably in error.
Records. USA: CA (CHI) – Mexico

***Amara insularis* Horn, 1875**

Amara insularis G.H. Horn, 1875: 128. Type locality: «island of San Clemente [Los Angeles County] on the coast of California» (original citation). Two syntypes [2 originally cited] in MCZ [# 668] (collection LeConte).

Distribution. This species is known from "all the islands" (Fall 1901a: 45) off the coast of southern California.
Records. USA: CA (CHI)

Subgenus *Neopercosia* Hieke, 1978

Neopercosia Hieke, 1978: 289. Type species: *Amara fortis* LeConte, 1880 by original designation. Etymology. From the Greek prefix *neo-* (new) and the generic name *Percosia* [feminine].

Diversity. One species in southern North America.
Identification. The species was redescribed in Hieke's (1978: 290-292) revision of the subgenus *Percosia*.

***Amara fortis* LeConte, 1880**

Amara fortis LeConte, 1880b: 164. Type locality: «Texas» (original citation), restricted to «Waco [McLennan County]» by Horn (1892b: 27). Syntype(s) in MCZ [# 5685].

Distribution. This species is known from McLennan (Horn 1892b: 27) and Dallas (Hieke 1978: 292) Counties in Texas and from southwestern Oklahoma (Kondratieff et al. 2005: 171).
Records. USA: OK, TX

Subgenus *Percosia* Zimmermann, 1832

Percosia Zimmermann, 1832: 18. Type species: *Amara sicula* Dejean, 1831 designated by Hope (1838: 86). Etymology. Uncertain, possibly from the Latin adjective *percosius* (relative to Percosius, king of Cyzicus an ancient city of Mysia in Asia Minor) [feminine].

Spelaeobia Gistel, 1856: 358. Type species: *Carabus patricius* Duftschmid, 1812 (= *Carabus equestris* Duftschmid, 1812) by monotypy. Synonymy established by Bousquet (2002b: 47).

Diversity. Six species in the boreal and temperate regions of North America (one species), Asia (two species), Europe (three species, two shared with Asia), and northern Africa (two endemic species).
Identification. Hieke (1978) revised the species of this subgenus.

Amara obesa (Say, 1823)

Feronia obesa Say, 1823a: 37. Type locality: «Charity Is[land] [Arenac County], Mich[igan]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 344), in MCZ [# 33030]. Note. «Harrowgate», a neighborhood in the northeast section of Philadelphia, Pennsylvania, was the area originally cited by Say (1823a: 37).

Percosia diffinis LeConte, 1847: 359. Type locality: «ad Rocky Mountains» (original citation), cited from «Nebraska [Territory]» by LeConte (1855: 354). Five syntypes in MCZ [# 5686]. Synonymy established by Horn (1892b: 39), confirmed by Lindroth (1968: 690).

Percosia extensa Casey, 1918: 244. Type locality: «Clackamas Co[unty], Oregon» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47172]. Synonymy established by Hatch (1953: 129), confirmed by Lindroth (1968: 690).

Percosia latissima Casey, 1918: 245. Type locality: «Highland Park [Lake County], Illinois» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47170]. Synonymy established by Lindroth (1968: 690).

Percosia ventricosa Casey, 1918: 245. Type locality: «Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47171]. Synonymy established by Lindroth (1968: 690).

Percosia sulcatula Casey, 1920: 199. Type locality: «Mesa, Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in

USNM [# 47173]. Synonymy established by Hatch (1953: 129), confirmed by Lindroth (1968: 694).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 102) to southern Alaska (CNC), south to central California (Merced County, CAS), northern Arizona (Chen et al. 2006: 171; Apache and Coconino Counties, CMNH, CNC, UASM), northeastern Texas (Hieke 1978: 289), and northern Georgia (Fattig 1949: 28).
Records. CAN: AB, BC (VCI), MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AR, AZ, CA, CO, CT, DC, GA, IA, ID, IL, IN, KS, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY

Subgenus *Xenocelia* Hieke, 2001

Xenocelia Hieke, 2001: 7. Type species: *Carabus municipalis* Duftschmid, 1812 by original designation. Etymology. From the Greek *xenos* (stranger, guest) and the generic name *Celia* [*q.v.*] [feminine].

Diversity. Thirty-two species (Hieke 2007) in the arctic (marginal), subarctic, boreal, and temperate regions of North America (11 species, two extending into northern Mexico), Asia (17 species), and Europe (ten species, many shared with Asia and one extending into northern Africa). One species (*A. hicksi*) is Holarctic.
Identification. Hieke (2001) revised the species. Two Asian species have been described subsequently.

Amara apachensis Casey, 1884

Amara apachensis Casey, 1884b: 3. Type locality: «Arizona» (original citation), herein restricted to Tucson, Pima County (see Casey 1918: 241, as *Bradytus specularis*). Lectotype (♀), designated by Hieke (1993: 115), in USNM [# 47202].

Bradytus specularis Casey, 1918: 241. Type locality: «Tuçson [Pima County], Arizona» (original citation). Lectotype [as typus] (♀), designated by Hieke (1994: 336), in USNM [# 47163]. Synonymy established by Hieke (1994: 336).

Celia amplipennis Casey, 1918: 266. Type locality: «Arizona» (original citation). Lectotype [as holotypus] (♂), designated by Hieke (1993: 116), in USNM [# 47194]. Synonymy established by Hieke (1993: 115).

Celia patula Casey, 1918: 270. Type locality: «Arizona» (original citation). Lectotype (♂), designated by Hieke (1993: 116), in USNM [# 47203]. Synonymy established by Hieke (1993: 115).

Celia decora Notman, 1922b: 101. Type locality: «Sabino Canyon [Pima County], Ariz[ona]» (original citation). Holotype (♂) in USNM [# 26592]. Synonymy established by Hieke (1993: 115).

Distribution. This species ranges from northern Oregon to southern California and Sonora, east to western Texas and Chihuahua in Mexico (Hieke 2001: 128). The record from southwestern Utah (Tanner 1928: 270) needs confirmation.
Records. USA: AZ, CA, NM, OR, TX [UT] – Mexico

Amara bradytonota Hieke, 2001

Amara bradytonota Hieke, 2001: 136. Type locality: «Texas» (original citation), herein restricted to Gatesville, Coryell County (see Hieke 2001: 136). Holotype (♂) in USNM.

Distribution. This species is known from two localities, Manhattan in northeastern Kansas and Gatesville in central Texas (Hieke 2001: 136).
Records. USA: KS, TX

Amara chalcea Dejean, 1828

Amara chalcea Dejean, 1828: 476. Type locality: «Amérique septentrionale» (original citation), restricted to «Billerica [Middlesex County], Mass[achusetts]» by Lindroth (1968: 700). One syntype in MHNP (Hieke 2001: 114).

Celia impunctata Putzeys, 1867a: 170 [*nomen dubium*; secondary homonym of *Amara fulva impunctata* Letzner, 1852]. Type locality: «Etats-Unis» (original citation). Holotype [by monotypy] (♀) location unknown. **New synonymy**. Note. Putzeys (1867a: 171) compared his new species to *A. chalcea* Dejean and observed several but relatively minor structural differences between the two. However, all the differences noted, including the size, seem to fall within the variability of *A. chalcea* as described by Lindroth (1968: 700). The holotype of *C. impunctata* could not be located in MHNP (Fritz Hieke pers. comm. 2001). Obviously, the name is a *nomen dubium* but for convenience it is placed here in synonymy with *A. chalcea* Dejean.

Celia pinorum Casey, 1918: 264. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47191]. Synonymy established by Lindroth (1968: 700).

Celia sodalis Casey, 1918: 265. Type locality: «Staten Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47192]. Synonymy established by Lindroth (1968: 700).

Celia corvina Casey, 1918: 266. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47193]. Synonymy established by Lindroth (1968: 700).

Celia schotti Casey, 1918: 266. Type locality: «Jamaica [Queens County], Long Island, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47195]. Synonymy established by Lindroth (1968: 700). Etymology. The specific name was proposed in honor of Fred M. Schott [1887-1946], long

time entomologist with the New Jersey Department of Agriculture. His main interests were his entomological books as well as his collection of moths and beetles.

Celia sphaerops Casey, 1918: 267. Type locality: «Wyandanch [Suffolk County], Long Island, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47196]. Synonymy established by Hieke (1993: 123).

Celia maneei Casey, 1924: 55. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47197]. Synonymy established by Lindroth (1968: 700). Etymology. The specific name honors the Reverend Abram Herbert Manee [1858-1927] of Southern Pines. Manee was a great collector of insects, especially Coleoptera. His collection is in the North Carolina Department of Agriculture in Raleigh.

Amara jucunda Csiki, 1929: 439. Replacement name for *Amara impunctata* (Putzeys, 1867).

Distribution. This species is found from western Maine (Oxford County, Ross T. Bell pers. comm. 2008) to southeastern Wyoming (Hieke 2001: 116), including southernmost Ontario (Lindroth 1968: 700), south to the Taos Mountains in northern New Mexico (LeConte 1876: 299; McKinley County, USNM), "Texas" (Horn 1892b: 32), southwestern Alabama (Hieke 2001: 116), northern Georgia (Fattig 1949: 29), and central South Carolina (Ciegler 2000: 74).

Records. CAN: ON **USA**: AL, AR, CO, CT, DC, GA, IA, IL, IN, KS, MA, MD, ME, MI, MN, MO, NC, NE, NH, NJ, NM, NY, OH, PA, RI, SC, TX, VT, WI, WY

Amara discors Kirby, 1837

Amara discors Kirby, 1837: 40. Type locality: northern parts of British America (inferred from title of the book), restricted to «Saskatoon, Sask[atchewan]» by Lindroth (1968: 697). Holotype [by monotypy] (♀) in BMNH (Lindroth 1953b: 173).

Celia nevadica Casey, 1918: 264. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47190]. Synonymy established by Lindroth (1968: 697).

Celia scolopax Casey, 1918: 269. Type locality: «Boulder Co[unty], Colorado» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47201]. Synonymy established by Lindroth (1968: 697).

Bradytus spaldingi Casey, 1924: 48. Type locality: «Callao [Juab County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47166]. Synonymy established by Lindroth (1968: 697).

Celia parowana Casey, 1924: 57. Type locality: «summit of Parowan M[oun]t[ain]s, Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47205]. Synonymy established by Lindroth (1968: 697).

Amara wakelandi Hatch, 1949a: 82. Type locality: «Succor Cr[eek] [Owyhee County], Ida[ho]» (original citation). Holotype (♂) in USNM. Synonymy established by

Lindroth (1968: 697). Etymology. The specific name was proposed for Claude Wakeland [1888-1960], professor of entomology at the University of Idaho.

Distribution. This western species ranges from southern Manitoba to southern British Columbia, south to southeastern California (San Bernardino County, David H. Kavanaugh pers. comm. 2008), southern Utah (Garfield County, CNC), south-central New Mexico, and northwestern Nebraska (Hieke 2001: 118).
Records. CAN: AB, BC, MB, SK **USA**: CA, CO, ID, MT, NE, NM, NV, OR, SD, UT, WA, WY

Amara gibba (LeConte, 1847)

Celia gibba LeConte, 1847: 360. Type locality: «Lacum Superiorem» (original citation), herein restricted to Marquette, Marquette County, Michigan (see Casey 1918: 259, as *Celia paganica*). Holotype [by monotypy] (♂) in MCZ [# 3688].

Celia paganica Casey, 1918: 259. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47179]. Synonymy established by Hieke (1993: 135).

Distribution. This species ranges from Newfoundland to Alaska including Kodiak Island; it is also known from the Lake Superior region in northern Michigan (Hieke 2001: 113) and from northeastern New York (Essex County, CNC).
Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, QC, YT **USA**: AK, MI, NY
Note. This form, listed as a synonym of *A. discors* Kirby by Lindroth (1968: 697), was regarded as a valid species by Hieke (1990: 226).

Amara harpalonota Hieke, 2001

Amara harpalonota Hieke, 2001: 119. Type locality: «Spok[ane] Falls [Spokane County], Wash[ington]» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from a few localities in eastern Washington, northern Oregon, and west-central Idaho (Hieke 2001: 119).
Records. USA: ID, OR, WA

Amara hicksi Lindroth, 1968

Amara hicksi Lindroth, 1968: 699. Type locality: «Norman Wells, N[orth] W[est] Terr[itories]» (original citation). Holotype (♂) in CNC [# 10511]. Etymology. The specific name honors Stanton D. Hicks [1910-1983], an amateur coleopterist with a special interest for the fauna of southern Ontario. Hicks, a Canadian, worked at the Canadian National Collection of Insects. Note. The type locality was listed by error as "Good Hope, North West Territory" by Hieke (2001: 58).

Distribution. This Holarctic species is found from western Northwest Territories to Alaska and from Kamtschatka to northern European Russia, south to Mongolia and northern China (Hieke 2001: 61).
Records. CAN: NT **USA**: AK – **Holarctic**

Amara lugubris (Casey, 1918)

Celia lugubris Casey, 1918: 268. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47198].

Distribution. This species ranges from northern California to north-central Colorado, south to southwestern New Mexico and southern Arizona (Hieke 2001: 126-127).
Records. USA: AZ, CA, CO, NM, NV, UT
Note. This form was considered a synonym of *A. discors* Kirby by Lindroth (1968: 697) but treated as a valid species by Hieke (2001: 124).

Amara merula (Casey, 1918)

Celia merula Casey, 1918: 267. Type locality: «probably Colorado» (original citation), restricted to «Pass n[ea]r Ouray, Red M[oun]t[ain]s, Colorado» by Hieke (1993: 128). Holotype [by monotypy] (♀) in USNM [# 47204].

Distribution. This species ranges from the Kodiak Island and Kenai Peninsula in Alaska south to the Sierra Nevada in east-central California, northern Arizona, and northern New Mexico along the Rocky Mountains (Hieke 2001: 122-124).
Records. CAN: AB, BC **USA**: AK, AZ, CA, CO, ID, MT, NM, NV, OR, UT, WA, WY
Note. This form was regarded as a synonym of *A. discors* Kirby by Lindroth (1968: 697) but treated as a valid species by Hieke (1993: 128).

Amara rectangula ciudadensis (Bates, 1891)

Celia ciudadensis Bates, 1891a: 248. Type locality: «Ciudad, in Durango» (original citation). Two syntypes in BMNH (Hieke 1990: 229). Note. According to Selander and Vaurie (1962: 27), the type locality "is presumably the settlement of Ciudad or La Ciudad near the border of Sinaloa 148 km. west-northwest of the city of Durango."

Amara nupera G.H. Horn, 1892b: 33. Type locality: «Salida [Chaffee County], Colo[rado]» (lectotype label). Lectotype (♂), designated by Hieke (1993: 132), in MCZ [# 34449]. Synonymy established by Hieke (2001: 130).

Bradytus obsolescens Casey, 1918: 242. Type locality: «Colorado Springs [El Paso County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47162]. Synonymy established, under the name *A. nupera* Horn, by Hieke (1993: 132).

Bradytus aequalis Casey, 1918: 242. Type locality: «Colonia Garcia, Sierra Madre M[oun]t[ain]s, Chihuahua, Mexico» (original citation). Lectotype [as typus] (♂), designated by Hieke (1997: 194), in USNM [# 47168]. Synonymy established, under the name *A. nupera* Horn, by Hieke (1997: 194).

Celia greenei Casey, 1918: 269. Type locality: «S[an]ta Fé [Santa Fe County], New Mexico» (original citation). Lectotype (♂), designated by Hieke (1993: 135), in USNM [# 47199]. Synonymy established, under the name *A. nupera* Horn, by Hieke (1993: 132).

Bradytus maxwelli Casey, 1924: 49. Type locality: «Maxwell [Colfax County], New Mexico» (original citation). Lectotype [as typus], designated by Hieke (1994: 322), in USNM [# 47165]. Synonymy established, under the name *A. nupera* Horn, by Hieke (1994: 322).

Amara maxvellensis Csiki, 1929: 457. Unjustified emendation of *Amara maxwelli* (Casey, 1924) (cited as *maxvelli*).

Bradytus celianus Stehr, 1949: 208. Type locality: «Jemez M[oun]t[ain]s [Sandoval County], New Mexico» (original citation). Holotype (♂) in MSUE. Synonymy established, under the name *A. nupera* Horn, by Hieke (1994: 306).

Distribution. This subspecies ranges from northern California to northwestern Oklahoma (Cimarron County, CMNH), north to northern Colorado, south to Durango in Mexico (Hieke 2001: 135-136), including western Texas (Jeff Davis County, CMNH), and south-central California (Hieke 2001: 135).
Records. USA: AZ, CA, CO, NM, OK, TX, UT – Mexico
Note. Lindroth (1968: 697) listed *A. obsolescens* Casey as a junior synonym of *A. discors* Kirby but Hieke (1993: 132) considered it a synonym of *A. nupera* Horn.

Amara rectangula rectangula LeConte, 1855

Amara rectangula LeConte, 1855: 355. Type locality: «S[an] Fr[ancisco] [San Francisco County, California]» (lectotype label). Lectotype (♂), designated by Hieke (1993: 132), in MCZ [# 5691]. Note. LeConte (1855: 355) stated that his specimen from San Francisco was a female.

Distribution. This subspecies ranges from northern Idaho and eastern Washington south at least to Monterey County in western California (Hieke 2001: 134).
Records. USA: CA, ID, OR, WA

Amara spuria Lindroth, 1968

Amara spuria Lindroth, 1968: 696. Type locality: «Rampart, Alaska» (original citation). Holotype (♂) in MCZ [# 31227].

Distribution. This species is known from a few localities in Northwest Territories, Yukon Territory (CNC), Alaska, and from Manning Provincial Park in southern British Columbia (Hieke 2001: 110).
Records. CAN: BC, NT, YT **USA**: AK

Subgenus *Reductocelia* Lafer, 1989

Reductocelia Lafer, 1989: 165. Type species: *Amara kuznetzovi* Lafer, 1989 (= *Amara chalcophaea sachalinica* Hieke, 1999) by original designation. Etymology. From the Latin *reducto* (reduce) and the generic name *Celia* [*q.v.*], probably alluding to the absence of the lateromedial setae on the pronotum of the adult [feminine].

Bradycelia Lafer, 1989: 166. Type species: *Amara nigromontana* Lafer, 1989 (= *Amara lucens* Baliani, 1943) by original designation. Synonymy established by Hieke (1997: 229). Etymology. Probably from the generic names *Bradytus* [*q.v.*] contracted and *Celia* [*q.v.*] [feminine].

Diversity. Twenty species (Hieke 2007) in northern North America (one Holarctic species) and eastern Asia.
Identification. Hieke (1999a) revised the species of this subgenus. Subsequently, ten new Chinese species were described.

***Amara colvillensis* Lindroth, 1968**

Amara colvillensis Lindroth, 1968: 687. Type locality: «Colville R[iver], Umiat, Alaska» (original citation). Holotype (♂) in MCZ [# 35344].

Distribution. This Holarctic species is found in Siberia east of the Lena River and in North America from Alaska to the Hudson Bay coast in Manitoba and Nunavut (Hieke 1999a: 347).
Records. CAN: MB, NU, YT **USA**: AK – **Holarctic**

Subgenus *Celia* Zimmermann, 1832

Celia Zimmermann, 1832: 18. Type species: *Harpalus bifrons* Gyllenhal, 1810 designated by Westwood (1838: 4). Etymology (original). From the Greek *cello* (to run) [feminine].

Acrodon Zimmermann, 1832: 40. Type species *Harpalus brunneus* Gyllenhal, 1810 by monotypy. Synonymy established by Dawson (1854: 117). Etymology. From the Greek *acron* (top, summit) and *odon* (tooth), alluding to the entire apex of the mentum tooth ("*menti dente intermedio simplici*") [masculine].

Isopleurus Kirby, 1837: 49. Type species: *Isopleurus nitidus* Kirby, 1837 (= *Celia sinuosa* Casey, 1918) by monotypy. Synonymy established implicitly by Lindroth (1954b: 136), explicitly by Lindroth (1968: 692). Etymology. From the Greek *isos* (equal) and *pleura* (side) [masculine].

Adocron Lutshnik, 1927: 58. Type species: *Amara praetermissa* Sahlberg, 1827 by original designation. Etymology. Anagram of the generic name *Acrodon* [*q.v.*] [masculine].

Embrikiella Lutshnik, 1935: 265. Type species: *Amara kachovskyi* Lutshnik, 1935 (= *Leiocnemis tartariae* Bates, 1878) by monotypy. Etymology (original). From the first name of the Norwegian zoologist Embrik Strand [1876-1947].

Diversity. Forty species (Hieke 2007) in North America (12 species), Middle America (two species, one of them endemic, *A. chihuahuae* Casey), Asia (22 species), and Europe and northern Africa (14 species, several shared with Asia). One species found in the Nearctic Region is adventive (*A. bifrons*), another one is Holarctic (*A. brunnea*).
Identification. There is no modern revision of the species of this subgenus and such work is much needed.

Amara bifrons (Gyllenhal, 1810)

Harpalus bifrons Gyllenhal, 1810: 144. Type locality: «Bahusia [= Bohuslän], Hallandia [Sweden]» (original citation). Lectotype (♂), designated by Lindroth (1968: 700), in UZIU.

Distribution. This European species is adventive in North America where it is known from Newfoundland (Lindroth 1955a: 105) to western Quebec (Larochelle 1975: 43), south to Massachusetts (Davidson et al. 2011: 513). The first inventoried specimen collected on this continent was found in Cape Breton Island in 1929 (Lindroth 1963a: Fig. 39).
Records. FRA: PM **CAN**: LB, NB, NF, NS (CBI), PE, QC **USA**: MA, ME, NH – **Adventive**

Amara brunnea (Gyllenhal, 1810)

Harpalus brunneus Gyllenhal, 1810: 143. Type locality: Sweden (inferred from title of the book), restricted to «Göteborg» by Lindroth (1968: 704). Lectotype (♂), designated by Lindroth (1968: 704), in UZIU.

Harpalus lapponicus C.R. Sahlberg, 1827c: 250. Type locality: «Lapponica» (original citation). One syntype in ZMH (Silfverberg 1987: 19). Synonymy established by Schaum (1858: 548).

Harpalus sahlbergi Zetterstedt, 1837: 36. Unnecessary replacement name for *Harpalus lapponicus* Sahlberg, 1827.

Celia amplicollis Mannerheim, 1853: 139. Type locality: «ad rivulum fl[umen] Tschunuktnu peninsulae Kenai [Alaska]» (original citation). Holotype [by monotypy] location unknown (possibly in collection Chaudoir, MHNP, *fide* Lindroth 1968: 704). Synonymy established by Putzeys (1866b: 197), confirmed by Lindroth (1968: 704). Note. Regarding the type locality, see "Note" section for *Cryobius subcaudatus* Mannerheim.

Harpalus mongolicus Jedlička, 1966: 221. Type locality: «16 km SO von Somon Bajanzogt, Zentral aimak, Mongolei» (original citation). Holotype (♀) in TMB. Synonymy established by Hieke (1973: 116).

Distribution. This Holarctic species is found from northern Manitoba (CNC) to the Kenai Peninsula in Alaska (Lindroth 1968: 706), and in the Palaearctic Region from the Far East to Norway, south to Spain, Italy, Kazakhstan, and Mongolia (Hieke 2003a: 556). The records from British Columbia (Hamilton 1894a: 11; Jarrett and

Scudder 2001: 379) need confirmation; those from "Washington," "Colorado" (Hamilton 1894a: 11; Wickham 1902: 238), and Idaho (Horning and Barr 1970: 24, as *A. amplicollis*) are in error.
Records. CAN: AB, MB, NT, YT **USA**: AK [BC] – **Holarctic**

Amara californica californica Dejean, 1828

Amara californica Dejean, 1828: 474. Type locality: «Californie» (original citation), herein restricted to San Clemente Island, Los Angeles County (see Casey, 1918: 294, as *A. perspecta*). One syntype in MHNP (Lindroth 1955b: 17).
Amara mexicana Dejean, 1831: 792. Type locality: «Mexique» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Hieke (1975: 318).
Celia championi Bates, 1882a: 77. Type locality: «Quezaltenango, 7800 ft. [Guatemala]» (lectotype label). Lectotype (♂), designated by Hieke (1990: 219), in BMNH. Synonymy established by Hieke (1990: 219).
Amara robustula G.H. Horn, 1892b: 32. Type locality: «California» (original citation). Holotype [by monotypy] (♂) in MCZ [# 3154]. Synonymy established by Hieke (1993: 138).
Celia consors Casey, 1918: 250. Type locality: «Salazar, Mex[ico], Mexico» (original citation). Lectotype [as holotypus] (♀), designated by Hieke (1993: 122), in USNM [# 47251]. Synonymy established by Hieke (1993: 122).
Celia gnara Casey, 1918: 255. Type locality: «near the city, Mexico» (original citation). Lectotype [as typus] (♀), designated by Hieke (1993: 125), in USNM [# 47261]. Synonymy established by Hieke (1993: 125).
Amara perspecta Casey, 1918: 294. Type locality: «San Clemente Island [Los Angeles County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 131), in USNM [# 47275]. Synonymy established by Lindroth (1968: 693).
Celia pugetana Casey, 1924: 56. Type locality: «Wawawai [Whitman County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 131), in USNM [# 47206]. Synonymy established by Lindroth (1968: 693).

Distribution. This subspecies ranges from Vancouver Island (Lindroth 1968: 694) to eastern South Dakota (Brookings County, USNM), south to Costa Rica (Hieke 1990: 221) and the Baja California Peninsula (Horn 1894: 309).
Records. CAN: BC (VCI) **USA**: AZ, CA (CHI), CO, ID, MT, NM, NV, OR, SD, TX, UT, WA, WY – Costa Rica, Guatemala, Mexico
Note. The subspecies *A. californica costaricensis* (Bates) is found in Costa Rica (Hieke 1990: 221).

Amara exlineae Minsk and Hatch, 1939

Amara exlineae Minsk and Hatch, 1939: 215. Type locality: «Paradise Park, M[oun]t Rainier [Pierce County], Wash[ington]» (original citation). Holotype (♂) in

USNM. Etymology. The specific name was proposed for the American arachnologist Harriet Idola Exline [1909-1968], also known as Mrs. Donald Leslie Frizzell.

Distribution. This species is known from southwestern Alberta (Waterton Lakes National Park, UASM), southern British Columbia (Jarrett and Scudder 2001: 379), Washington (Minsk and Hatch 1939: 215; Pierce County, UASM), eastern Oregon (Baker County, CNC), and northwestern Montana (Flathead County, UASM). There is one specimen, identified by Hieke, from Mayo in central Yukon Territory (CNC).
Records. CAN: AB, BC **USA**: MT, OR, WA [YT]
Note. This form was considered a synonym of *A. idahoana* Casey by Lindroth (1968: 703) but regarded as a valid species by Hieke (1993: 123).

Amara harpalina LeConte, 1855

Amara harpalina LeConte, 1855: 355. Type locality: «Santa Fe [Santa Fe County], New Mexico» (original citation). Two syntypes [2 ♀ originally cited] in MCZ [# 5690].
Celia acutangula Putzeys, 1866b: 194. Type locality: «États-Unis» (original citation). Holotype [by monotypy] (♂) in MHNP (collection Chaudoir). Synonymy established by Horn (1892b: 40).
Celia shantzi Casey, 1918: 285. Type locality: «Akron [Washington County], Colorado» (original citation). Lectotype [as typus] (♀), designated by Hieke (1993: 140), in USNM [# 47225]. Synonymy established by Hieke (1993: 139). Etymology. The specific name was proposed for Homer Leroy Shantz [1876-1958], American botanist, professor and president of the University of Arizona.

Distribution. This species is known from eastern Oregon (Baker County, USNM) to western South Dakota (Lawrence County, USNM), north to southeastern Montana (Powder River County, USNM), south to western Texas (Culberson County, CMNH) and central Arizona (Gila County, MCZ).
Records. USA: AZ, CO, ID, MT, NM, OR, TX, UT, WY

Amara idahoana (Casey, 1924)

Celia idahoana Casey, 1924: 56. Type locality: «Moscow [Latah County], Idaho» (original citation). Holotype [by monotypy] (♂) in USNM [# 47207].

Distribution. This species ranges from southern Alaska (Anchorage area, UASM) to southern Northwest Territories (CNC), south to northern Oregon (Hood River County, MCZ) and southern Colorado (Elias 1987: 633).
Records. CAN: AB, BC (VCI), NT **USA**: AK, CO, ID, MT, OR, WA, WY

Amara musculis (Say, 1823)

Feronia musculis Say, 1823a: 35. Type locality: «eastern shore of Virginia; Florida» (original citation), restricted to «coast of Virginia» by Lindroth (1968: 707). Lectotype (♂), designated by Lindroth (1968: 707), in MHNP (collection Dejean). Note.

Say (1823a: 35) probably made an error by spelling the specific name *musculis*. He did not give the etymology of the name but the word likely derives from the Latin noun *musculus*, *-i* (little mouse) and should have been spelled in the nominative singular (e.g., *musculus*), in the genitive singular (e.g., *musculi*) or in the genitive plural (e.g., *musculorum*) (see ICZN 1999: Articles 11.9.1.2 and 11.9.1.3). All authors seen, starting with LeConte (1855: 355), have used the spelling *musculus* until Lindroth (1968: 707) returned to the original spelling *musculis*. I consider that Say used an inappropriate connecting vowel and the name is not to be corrected (ICZN 1999: Article 32.5.1).

Acrodon contempta LeConte, 1847: 367. Type locality: «NovEboraci [= New York], et ad Rocky Mountains» (original citation). Syntype(s) presumably lost (not located in MCZ). Synonymy established by LeConte (1855: 355).

Celia lyncea Casey, 1918: 280. Type locality: «Sheepshead Bay [Kings County], Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47214]. Synonymy established by Lindroth (1968: 707).

Celia nugator Casey, 1918: 281. Type locality: «New Jersey seashore» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47215]. Synonymy established by Lindroth (1968: 707).

Celia curticeps Casey, 1918: 281. Type locality: «Fortress Monroe [= Hampton], Virginia» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47218]. Synonymy established by Lindroth (1968: 707).

Celia pimalis Casey, 1918: 283. Type locality: «Arizona» (original citation). Lectotype (♂), designated by Hieke (1993: 137), in USNM [# 47223]. Synonymy established by Hieke (1993: 137).

Celia shoemakeri Casey, 1918: 283. Type locality: «Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47222]. Synonymy established by Lindroth (1968: 707). Etymology. The specific name was proposed for Ernest Shoemaker, an amateur entomologist and painter of insects from Brooklyn, New York. His collection of more than 60,000 specimens, chiefly beetles, was presented to the USNM in 1959.

Celia vegrandis Casey, 1918: 287. Type locality: «Wisconsin» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47228]. Synonymy established by Lindroth (1968: 708).

Celia fluminea Casey, 1918: 287. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47229]. Synonymy established by Lindroth (1968: 708).

Celia crenulata Casey, 1918: 288. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). Holotype [by monotypy] (♂) in USNM [# 47237]. Synonymy established by Lindroth (1968: 708).

Celia limbalis Casey, 1918: 289. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47232]. Synonymy established by Lindroth (1968: 708).

Celia paulula Casey, 1918: 289. Type locality: «Wading River [Suffolk County], Long Island, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47235]. Synonymy established by Lindroth (1968: 708).

Celia scintilla Casey, 1918: 290. Type locality: «Fortress Monroe [= Hampton], Virginia» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47236]. Synonymy established by Lindroth (1968: 708).

Celia brevitarsis Casey, 1918: 290. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47238]. Synonymy established by Lindroth (1968: 708).

Celia minnesotana Casey, 1924: 57. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). Holotype [by monotypy] (♀) in USNM [# 47230]. Synonymy established by Lindroth (1975: 133).

Distribution. This widely distributed species ranges from Nova Scotia (Sable Island, CNC) to south-central British Columbia (Lindroth 1968: 708), south to southern California (San Diego County, CNC), southern New Mexico (Grant County, USNM; Wickham 1896c: 133; Fall and Cockerell 1907: 158), northern Oklahoma (French et al. 2001: 228; Alfalfa County, CMNH), central Mississippi (Casey 1918: 287, as *Celia fluminea*), and the Florida Panhandle (Okaloosa County, CNC). One old specimen labeled from "Texas" (USNM) is known.

Records. CAN: AB, BC, MB, NB, NS, ON, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, OR, PA, RI, SC, SD, TN, UT, VA, VT, WA, WI, WV, WY [TX]

Amara pseudobrunnea Lindroth, 1968

Amara pseudobrunnea Lindroth, 1968: 706. Type locality: «Swift R[iver], Yukon [Territory]» (original citation). Holotype (♂) in CNC [# 10512].

Distribution. This northern species ranges from the coast of Labrador to central Alaska (Lindroth 1968: 707), south in the west to northern Idaho (Bonner County, CNC) and northwestern Montana (Edwards 1975: 56).

Records. CAN: AB, BC, LB, MB, NU, QC, SK, YT **USA**: AK, ID, MT

Amara rubrica Haldeman, 1843

Amara rubrica Haldeman, 1843b: 301. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One probable syntype, a ♀ labeled "[pink disc] / A. rubrica Hald. [handwritten]," in MCZ (collection LeConte).

Amara pallida Casey, 1884b: 5. Type locality: «Willets Point [Queens County], New York Harbor» (original citation). Holotype [by monotypy] (♂) in MCZ [# 34446]. Synonymy established by Horn (1885b: 108), confirmed by Lindroth (1968: 708).

Amara ferruginea Casey, 1884b: 5. Type locality: «Atlantic City [Atlantic County], New Jersey» (original citation). Holotype [by monotypy] (♂) in MCZ [# 34447]. Synonymy established by Horn (1885b: 108), confirmed by Lindroth (1968: 708).

Celia lucina Casey, 1918: 279. Type locality: «Delaware» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47224]. Synonymy established by Lindroth (1968: 708).

Celia proditor Casey, 1918: 280. Type locality: «Cape May [Cape May County], New Jersey» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47213]. Synonymy established by Lindroth (1968: 708).

Celia haldemani Casey, 1918: 281. Type locality: «Douglas Co[unty], Kan[sas]» (lectotype label). Lectotype [as holotypus] (♀), designated by Hieke (1993: 127), in USNM [# 47219]. Synonymy established by Hieke (1993: 126).

Celia liquida Casey, 1918: 282. Type locality: «Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47220]. Synonymy established by Lindroth (1968: 708).

Celia politissima Casey, 1918: 284. Type locality: «Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47217]. Synonymy established by Lindroth (1968: 709).

Celia lubrica Casey, 1918: 286. Type locality: «New Jersey» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47226]. Synonymy established by Lindroth (1968: 709).

Celia nigripennis Casey, 1918: 286. Type locality: «Willets Point [Queens County], Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47227]. Synonymy established by Lindroth (1968: 709).

Celia piceonitens Casey, 1924: 58. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47234]. Synonymy established by Lindroth (1968: 709).

Distribution. This species ranges from Nova Scotia (Majka et al. 2007: 9) to southwestern North Dakota (Tinerella 2003: 636), south to central Colorado (Summit County, UASM; Horn 1892b: 37; Wickham 1902: 238), northeastern Texas (Lamar County, Brian Raber pers. comm. 2010), northern Alabama (Madison County, CMNH, USNM), and northwestern South Carolina (Ciegler 2000: 75).
Records. CAN: NB, NS, ON, QC **USA**: AL, CO, CT, DC, DE, GA, IA, IN, KS, MA, MD, ME, MI, MN, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Amara sinuosa (Casey, 1918)

Isopleurus nitidus Kirby, 1837: 50 [secondary homonym of *Amara nitida* Sturm, 1825]. Type locality: «Rocky Mountains» (original citation). Holotype [by monotypy] (♂) in BMNH (Lindroth 1953b: 175).

Acrodon subaenea LeConte, 1850: 208 [secondary homonym of *Amara subaenea* Sturm, 1825]. Type locality: Lake Superior (inferred from title of the paper). Four syntypes in MCZ [# 5689], one in MHNP (collection Chaudoir) (Putzeys 1866b: 194). Synonymy established by LeConte (1873b: 324), confirmed by Lindroth (1968: 701).

Celia sinuosa Casey, 1918: 277. Type locality: «Aldermere, British Columbia» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47211]. Synonymy established by Lindroth (1968: 701).

Celia elusa Casey, 1918: 277. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♀) in USNM [# 47212]. Synonymy established by Lindroth (1968: 701).

Celia nupta Casey, 1918: 278. Type locality: «Lake Champlain, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47208]. Synonymy established by Lindroth (1968: 701).

Celia thoracica Casey, 1918: 278. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 133), in USNM [# 47209]. Synonymy established by Lindroth (1968: 701).

Celia hospes Casey, 1918: 279. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 133), in USNM [# 47210]. Synonymy established by Lindroth (1968: 701).

Amara subaenescens Csiki, 1929: 445. Replacement name for *Amara subaenea* (LeConte, 1850).

Distribution. This species is found from Newfoundland (Lindroth 1955a: 104-105, as *A. subaenescens*) to the Queen Charlotte Islands (Kavanaugh 1992: 75) and Vancouver Island, north to the Alaskan coast (Lindroth 1968: 703), south at least to east-central Utah (Grand County, CMNH, CNC), southern Colorado (Costilla and Mineral Counties, UASM), the Black Hills in western South Dakota (USNM), northwestern Indiana (Blatchley 1910: 109, as *A. subaenea*), and northern New York (Casey 1918: 278, as *Celia nupta*). The records from southeastern New Jersey (Smith 1910: 206, as *A. subaenea*), "Nebraska" (Bousquet and Larochelle 1993: 199), and Kansas (Knaus 1898: 19 and Snow 1903: 193, as *A. subaenea*) need confirmation.

Records. CAN: AB, BC (QCI, VCI), LB, MB, NB, NF, NT, ON, PE, QC, SK, YT **USA**: AK, CO, IA, ID, IL, IN, ME, MI, MN, MT, NH, NY, SD, UT, WI, WY [KS, NE, NJ]

Amara texana (Putzeys, 1866)

Celia texana Putzeys, 1866b: 196. Type locality: «Texas» (original citation). Syntype(s) [2 originally cited] in MHNP (collection Chaudoir).

Distribution. This species is known from central and southern Texas (Horn 1892b: 38; Riley 2011; Bexar, Harris, and Lee Counties, MCZ) and central and southwestern New Mexico (Bernalillo and Luna Counties, CMNH). The record from southeastern Kansas (Knaus 1885: 58) needs confirmation.

Records. USA: NM, TX [KS]

Amara volatilis (Casey, 1918)

Celia volatilis Casey, 1918: 287. Type locality: «Fortress Monroe [= Hampton], Virginia» (original citation). Lectotype [as typus] (♀), designated by Hieke (1993: 142), in USNM [# 47233].

Celia virginica Casey, 1918: 289. Type locality: «Fortress Monroe [= Hampton], Virginia» (original citation). Lectotype (♂), designated by Hieke (1993: 142), in USNM [# 47231]. Synonymy established by Hieke (1993: 141).

Distribution. This species is found along the Atlantic Coast from "New York" to northern Florida (Hieke 1993: 143).
Records. USA: FL, NC, NJ, NY, SC, VA

Subgenus *Amarocelia* Motschulsky, 1862

Amarocelia Motschulsky, 1862a: 4. Type species: *Amara punctatostriata* Motschulsky, 1860 (= *Amara interstitialis* Dejean, 1828) designated by Hieke (1995a: 17). Etymology. From the generic names *Amara* [*q.v.*] and *Celia* [*q.v.*] [feminine]. Note. Hieke (1995a: 17) listed *Amara interstitialis* Dejean, 1828 as type species of *Amarocelia* Motschulsky, a species not originally included. However, since he placed *Amara interstitialis* Dejean in synonymy with *Amara punctatostriata* Motschulsky, 1860, a species originally included, he is deemed to have designated the latter species as type species (ICZN 1999: Article 69.2.2).

Diversity. Thirteen species in North America, of which two are also found in Mexico and three are Holarctic.
Identification. Lindroth (1968) covered all but four (*A. nexa*, *A. sodalicia*, *A. lugens*, and *A. tenebrionella*) species known at the time. Two species were described subsequently by Hieke (2002). A revision of the subgenus is needed.

Amara ellipsis (Casey, 1918)

Celia ellipsis Casey, 1918: 252. Type locality: «Kansas» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47259].

Celia winnipegensis Casey, 1924: 53. Type locality: «Winnipeg, Manitoba» (original citation). Holotype [by monotypy] (♂) in USNM [# 47255]. Synonymy established by Lindroth (1968: 718).

Distribution. This species ranges from the Magdalen Islands in the Gulf of Saint Lawrence (CNC) to the Queen Charlotte Islands (Kavanaugh 1992: 75), south to southern California (San Bernardino County, CAS, MCZ), southern Arizona (Greenlee County, UASM), southern New Mexico (Otero County, MCZ), "Kansas" (Casey 1918: 252), central Michigan (Dunn 1982b: 37), and eastern New Brunswick (Webster and Bousquet 2008: 18).
Records. CAN: AB, BC (QCI), MB, NB, ON, QC, SK **USA**: AZ, CA, CO, IA, ID, KS, MI, MN, MT, ND, NE, NM, NV, OR, SD, UT, WA, WI, WY

Amara erratica (Duftschmid, 1812)

Carabus erraticus Duftschmid, 1812: 120. Type locality: Austria (inferred from title of the book). Holotype [by monotypy] probably lost (Lindroth 1968: 716).

Amara punctulata Dejean, 1828: 472. Type locality: «Kamtschatka [Russia]; détroit de Norfolk sur la côte nord-ouest de l'Amérique du Nord [Alaska]» (original citation). One syntype in MHNP (Lindroth 1955b: 17). Synonymy established by Zimmermann (1832: 24), confirmed by Lindroth (1955b: 17).

Amara septentrionalis Schiødte, 1837: 170. Type locality: «Lapland [probably Swedish Lappland]» (original citation). Lectotype, designated by Hansen and Martin (2000: 214), in ZMUC. Synonymy established by Schiødte (1841: 187).

Amara affinis Motschulsky, 1850a: 60 [primary homonym of *Amara affinis* Dejean, 1828 and *Amara affinis* Motschulsky, 1845]. Type locality: «Kamtschatka [Russia]» (original citation). Lectotype (♀), designated by Hieke (1975: 328), in ZMMU. Synonymy established by Hieke (1975: 328).

Amara obscuricornis Motschulsky, 1859b: 540. Type locality: region of Yakutsk, east-central Siberia, Russia (inferred from title of the paper); «Kamtschatka» listed by Motschulsky (1850a: 60). Lectotype (♂), designated by Hieke (1975: 323), in ZMMU. Synonymy established by Hieke (1975: 322). Note. Motschulsky described this taxon in a paper about beetles collected by Pavlofski in the "gouvernement de Iakoutsk." In the same publication, Motschulsky refers to his book *Die Kaefer Russlands* (1850) where the species is listed, but not described, and the provenance given is "Kamtschatka." The lectotype, designated by Hieke (1975: 322), bears two labels: "Jakutsk" and "Amara obscuricornis Motsch. Sib. or. Kamtsch."

Amara sibirica Csiki, 1929: 427. Replacement name for *Amara affinis* Motschulsky, 1850.

Distribution. This circumpolar species is found over most of the boreal-alpine region in the Palaearctic Region and in North America from Alaska (Lindroth 1968: 717) to Newfoundland (Lindroth 1955a: 107), south to New England (Lindroth 1968: 716), northern Wisconsin (Messer 2010: 38), southern Colorado (Mineral County, UASM; Lindroth 1968: 716), northern Utah (Salt Lake County, CMNH), and Mount Rainier in western Washington (Lindroth 1968: 717). Several state records (e.g., CA, IA, MI, MN, ND, NM, OR) listed in Bousquet and Larochelle (1993: 196) and taken from earlier authors probably refer to other species or need confirmation.

Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NT, NU, ON, QC, SK, YT **USA**: AK, CO, ID, ME, MT, NH, UT, VT, WA, WI, WY – **Holarctic**

Amara farcta LeConte, 1855

Amara farcta LeConte, 1855: 353. Type locality: «New Mexico» (original citation). Two syntypes in MCZ [# 5684].

Celia lauta Casey, 1918: 248. Type locality: «southern Arizona» (original citation). Lectotype (♂), designated by Hieke (1993: 128), in USNM [# 47248]. Synonymy established by Hieke (1993: 127).

Celia formalis Casey, 1918: 248. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47241]. Synonymy established by Lindroth (1968: 712).

Celia finitima Casey, 1918: 249. Type locality: «Truckee [Nevada County], California» (original citation). Lectotype [as typus] (♂), designated by Hieke (1993: 124), in USNM [# 47256]. Synonymy established by Hieke (1993: 124).

Celia subdepressa Casey, 1918: 249. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47242]. Synonymy established by Lindroth (1968: 712).

Celia shastanica Casey, 1918: 251. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47252]. Synonymy established by Lindroth (1968: 712).

Celia solita Casey, 1918: 252. Type locality: «Nebraska» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47240]. Synonymy established by Lindroth (1968: 712).

Celia vancouveri Casey, 1924: 50. Type locality: «Peachland, B[ritish] C[olumbia]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47243]. Synonymy established by Hatch (1953: 125), confirmed by Lindroth (1968: 712).

Celia olympia Casey, 1924: 50. Type locality: «Wilbur [Lincoln County], Washington» (original citation). Holotype [by monotypy] (♂) in USNM [# 47245]. Synonymy established by Hatch (1953: 125), confirmed by Lindroth (1968: 712).

Celia subsimilis Casey, 1924: 50. Type locality: «Govan [Lincoln County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47244]. Synonymy established by Hatch (1953: 125), confirmed by Lindroth (1968: 713).

Celia marginatella Casey, 1924: 51. Type locality: «Monarch [Manitoba]» (holotype label). Holotype [by monotypy] (♀) in USNM [# 47246]. Synonymy established by Lindroth (1968: 713).

Celia parallela Casey, 1924: 51. Type locality: «L[eth]bridge, Al[ber]ta» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47249]. Synonymy established by Lindroth (1968: 713).

Celia albertae Casey, 1924: 51. Type locality: «L[eth]bridge, Al[ber]ta» (holotype label). Holotype [by monotypy] (♀) in USNM [# 47250]. Synonymy established by Lindroth (1968: 713).

Celia funebris Casey, 1924: 52. Type locality: «Winnipeg, Man[itoba]» (holotype label). Holotype [by monotypy] (♂) in USNM [# 47254]. Synonymy established by Lindroth (1968: 713).

Distribution. This species ranges from eastern Manitoba to southwestern British Columbia, north at least to the Magunday River in southern Yukon Territory (Lindroth 1968: 714), south to southeastern California (San Bernardino County, CAS), southern Arizona (Maricopa County, UASM), southern New Mexico (Grant County, USNM;

Figure 33. *Piosoma setosum* LeConte. Adults of this species are easily recognized by the presence of many, long and erect setae over the body, hence the specific name *setosum*. Prairie inhabitants, the first documented adults were found by John Lawrence LeConte during his expedition of 1845 which brought him along the Platte River up to Fort Laramie in Wyoming, thence to the foot of the Rocky Mountains.

LeConte 1855: 353), and Durango in Mexico (UASM). The record from Wisconsin (Rauterberg 1885: 17) is probably in error; that from "Ontario" (Bousquet and Larochelle 1993: 196), based on a specimen from Nipigon Bay (CMNH) determined by Hieke, needs confirmation as the specimen could be mislabeled or could be a stray.
Records. CAN: AB, BC, MB, SK, YT **USA**: AZ, CA, CO, ID, MT, ND, NE, NM, NV, OR, SD, UT, WA, WY [ON] – Mexico

Amara interstitialis Dejean, 1828

Amara interstitialis Dejean, 1828: 472. Type locality: «Kamtschatka [Russia]» (original citation). Two syntypes [2 originally cited] in MHNP (Lindroth 1955b: 16).

Amara borealis Motschulsky, 1844: 184. Type locality: «Petrop[avlosk], Kamtsch[atka Peninsula], Sib[eria] or[iental] [Russia]» (lectotype label). Lectotype (♂), designated by Hieke (1993: 59), in ZMMU. Synonymy established by Morawitz (1862: 235), confirmed by Hieke (1993: 59). Note. Motschulsky (1844: 184) gave the provenance of the syntypes as "Tourkinsk au-delà du Baïcal ... [et] environs de St.-Pétersbourg" suggesting that the lectotype designated by Hieke (1993: 59) may not be a syntype.

Amara punctato-striata Motschulsky, 1860: 96. Type locality: «Daourie» (original citation). Two syntypes in ZMMU (Keleinikova 1976: 212). Synonymy established by Hieke (1995a: 112).

Amara interstitialis var. *puncticollis* J.R. Sahlberg, 1875: 109 [primary homonym of *Amara puncticollis* Dejean, 1828]. Type locality: «Soroka [= Belomorsk], by vid Hvita hafvet i ryska Karelen [= Republic of Karelia, Russia]» (original citation). Three syntypes in ZMH (Silfverberg 1987: 23). Synonymy established by Hieke (1995a: 113).

Amara interstitialis var. *fennica* Csiki, 1929: 439. Replacement name for *Amara interstitialis* var. *puncticollis* Sahlberg, 1875.

Amara tschitaensis Jedlička, 1957b: 101. Type locality: «Tschita, Transbaikal [Russia]» (original citation). Holotype (♂) in NMP. Synonymy established by Hieke (1973: 107).

Distribution. This Holarctic species ranges from Finland to the Kamtschatka Peninsula (Hieke 2003a: 556) and from Alaska to northwestern Northwest Territories (Lindroth 1968: 716). The records from British Columbia (Jarrett and Scudder 2001: 380) and west-central Montana (Hansen et al. 2009: 353) need confirmation.
Records. CAN: NT, YT **USA**: AK [BC, MT] – **Holarctic**

Amara laevipennis Kirby, 1837

Amara laevipennis Kirby, 1837: 40. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), restricted to «Jasper, Al[ber]ta» by Lindroth

(1968: 717). Two syntypes ["three or four" originally cited] in BMNH (Lindroth 1953b: 173).

Amara aeneolucens Casey, 1918: 312. Type locality: «Duluth [Saint Louis County, Minnesota], Lake Superior» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47324]. Synonymy established by Lindroth (1968: 717).

Distribution. This boreal species is found from Newfoundland to southwestern British Columbia, north to east-central Alaska (Lindroth 1968: 717), south to southwestern California (Ventura County, MCZ), northeastern New Mexico (Snow 1885: 67; Las Vegas, CMNH) along the Rocky Mountains, the Black Hills in western South Dakota (Lawrence County, USNM), northeastern Minnesota along Lake Superior (Casey 1918: 312, as *A. aeneolucens*), northwestern Pennsylvania (Warren County, CMNH), and "Massachusetts" (LeConte 1855: 353; MCZ).
Records. CAN: AB, BC, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AK, CA, CO, ID, MA, ME, MI, MN, MT, NH, NM, NY, OR, PA, SD, UT, VT, WA, WI, WY

Amara lugens Zimmermann, 1832

Amara lugens Zimmermann, 1832: 25. Type locality: «Orizaba [Veracruz, Mexico]» (lectotype label). Lectotype (♀), designated by Hieke (1990: 213), in ZMHB.

Celia högei Bates, 1882a: 77. Type locality: «Las Vigas [Veracruz], Mexico» (original citation for the lectotype). Lectotype (♂), designated by Hieke (1990: 218), in BMNH. Synonymy established by Hieke (1990: 218).

Celia mora Casey, 1918: 253. Type locality: «Colonia Garcia, Sierra Madre M[oun] t[ain]s, Chihuahua, Mexico» (original citation). Lectotype (♂), designated by Hieke (1993: 132), in USNM [# 47257]. Synonymy established by Hieke (1993: 132).

Distribution. This species ranges from northern Arizona (Coconino County, USNM) and New Mexico (San Miguel County, USNM) south at least to the Isthmus of Tehuantepec (Bates 1882a: 77).
Records. USA: AZ, NM – Mexico

Amara nexa (Casey, 1918)

Celia nexa Casey, 1918: 253. Type locality: «Truckee [Nevada County], California» (original citation). Three syntypes [3 originally cited] in USNM [# 47260].

Distribution. This species is known only from the Sierra Nevada in California (Casey 1918: 253; Alpine, Amador, Eldorado, Placer, Plumas, and Shasta Counties, CAS, MCZ, USNM).
Records. USA: CA

Amara patruelis Dejean, 1831

Amara patruelis Dejean, 1831: 793. Type locality: «Amérique septentrionale» (original citation), restricted to «W[est] Roxbury [Suffolk County], Mass[achusetts]» by Lindroth (1968: 714). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 16).

Amara inaequalis Kirby, 1837: 39. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). One syntype in BMNH (Lindroth 1953b: 173). Synonymy established by Casey (1918: 248), confirmed by Lindroth (1953b: 173).

Amara splendida Haldeman, 1843b: 300. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Syntype(s) presumably lost. Synonymy established by Casey (1918: 248).

Celia reducta Casey, 1918: 252. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47258]. Synonymy established by Lindroth (1968: 714).

Celia columbiana Casey, 1924: 52. Type locality: «British Columbia» (original citation). Holotype [by monotypy] (♀) in USNM [# 47247]. Synonymy established by Hatch (1953: 126), confirmed by Lindroth (1954b: 136).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 107) to the Seward Peninsula in western Alaska (Lindroth 1968: 715), south to "California" (Lindroth 1968: 715), central Colorado (Elias 1987: 633; Casey 1918: 252, as *Celia reducta*), eastern South Dakota (Brookings County, USNM), and southwestern North Carolina (Jackson County, USNM) along the Appalachian Mountains. The record from Siberia (Lindroth 1968: 715) refers to *A. transberingiensis* Hieke (Hieke 2002: 671).
Records. CAN: AB, BC, MB, NB, NF, NS, NT, ON, PE, QC, SK, YT **USA**: AK, CA, CO, CT, DC, IA, ID, IL, IN, MA, ME, MI, MN, MT, NC, ND, NH, NJ, NV, NY, OR, PA, RI, SD, UT, VA, VT, WA, WI, WY

Amara rugulifera Hieke, 2002

Amara rugulifera Hieke, 2002: 660. Type locality: «S[ain]t Elmo [San Bernardino County], California» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from Andrew Lake in northeastern Alberta to south-central British Columbia, south to southeastern California, southeastern Arizona, and northeastern New Mexico (Hieke 2002: 660).
Records. CAN: AB, BC **USA**: AZ, CA, CO, MT, NM, UT, WY

Amara sodalicia Casey, 1924

Amara sodalicia Casey, 1924: 62. Type locality: «Maxwell [Colfax County], New Mexico» (original citation). Holotype [by monotypy] (♀) in USNM [# 47311].

Distribution. This species is known only from a few specimens collected in Colfax and Catron Counties, New Mexico (Hieke 1997: 250).
Records. USA: NM

Amara tenebrionella (Bates, 1882)

Celia tenebrionella Bates, 1882a: 78. Type locality: «Las Vigas [Veracruz], Mexico» (original citation). Lectotype (♂), designated by Hieke (1990: 222), in BMNH.

Celia xanthognatha Bates, 1882a: 78. Type locality: «Las Vigas [Veracruz], Mexico» (original citation). Lectotype [as holotypus] (♂), designated by Hieke (1990: 224), in BMNH. Synonymy established by Hieke (1990: 223).

Celia tenebrionella var. *aeneicolor* Bates, 1891a: 248. Type locality: «Ciudad, in Durango» (original citation). Lectotype (♂), designated by Hieke (1990: 222), in BMNH. Synonymy established by Hieke (1990: 222).

Distribution. This species is known from the Rocky Mountains in northern Arizona (Hieke 1990: 223) and from the states of Durango (Bates 1891a: 248, as *Celia tenebrionella* var. *aeneicolor*) and Veracruz (Bates 1882a: 78) in Mexico.
Records. USA: AZ – Mexico

Amara transberingiensis Hieke, 2002

Amara transberingiensis Hieke, 2002: 668. Type locality: «Inuvik, North West Territor[ies]y» (original citation). Holotype (♂) in CNC [# 22916].

Distribution. This species is known from the Hudson Bay region in northeastern Manitoba, from northern British Columbia (CNC), and from the Northwest Territories to the Seward Peninsula in Alaska. In the Palaearctic Region, the species ranges from eastern Siberia to the Taimyr Peninsula, south at least to the Yakutsk area (Hieke 2002: 668).
Records. CAN: BC, MB, NT, YT **USA**: AK – **Holarctic**

Subgenus *Amara* Bonelli, 1810

Amara Bonelli, 1810: Tabula Synoptica. Type species: *Carabus vulgaris* Linnaeus *sensu* Panzer, 1797 (= *Amara lunicollis* Schiødte, 1837) designated by Westwood (1838: 4).

Linomus Fischer von Waldheim, 1829a: 16. Type species: *Carabus lucidus* Duftschmid, 1812 by monotypy. Synonymy established by Bousquet (2002c: 176).

Agronoma Gistel, 1848b: [2]. Type species: *Carabus familiaris* Duftschmid, 1812 designated by Bouchard et al. (2011: 145). Synonymy established by Bouchard et al. (2011: 145).

Pangetes Gistel, 1856: 358. Type species: *Carabus ovatus* Fabricius, 1792 designated by Bousquet (2002b: 37). Synonymy established by Bousquet (2002b: 37).

Diversity. Eighty-seven species (Hieke 2007) in North America (29 species, of which six are adventive), Middle America (four species of which one, *A. dolosa* Say, is endemic), Asia (about 55 species), Europe and northern Africa (about 25 species, most shared with western Asia), and the Afrotropical Region (nine species). Two species are Holarctic (*A. littoralis* and *A. lunicollis*).

Identification. No taxonomic revision has been published for the species of this group and such study is much needed. Hieke (2000) revised the six species of the *impunctricollis* group found in North America. Lindroth (1968) covered all but three (*A. haywardi*, *A. pomona*, and *A. sera*) of the currently valid North American species known at the time. Since his publication, four taxa listed by Lindroth as synonyms (*A. neoscotica*, *A. otiosa*, *A. tenax*, and *A. turbata*) have been revalidated (Hieke 1994, 2000, 2003b), two new species described (Hieke 2002), and three adventive species (*A. communis*, *A. eurynota*, and *A. ovata*) discovered on this continent. Identifications of some species are difficult and require examination of the male genitalia for confirmation.

[**aurata group**]

***Amara aurata* Dejean, 1828**

Amara aurata Dejean, 1828: 475. Type locality: «Californie» (original citation), herein restricted to Monterey, Monterey County (see Casey 1918: 272, as *Celia rotundiceps*). One syntype in MHNP (Lindroth 1955b: 17).

Amara imitatrix G.H. Horn, 1892b: 34. Type locality: «California, Washington and Vancouver» (original citation), restricted to «Calif[ornia]» by Lindroth (1968: 710). Four syntypes in MCZ [# 34450]. Synonymy established by Lindroth (1968: 710).

Celia rotundiceps Casey, 1918: 272. Type locality: «Monterey [Monterey County], California» (original citation). Lectotype [as typus] (♂), designated by Hieke (1993: 120), in USNM [# 47264]. Synonymy established by Hieke (1993: 119).

Celia jacinto Casey, 1918: 272. Type locality: «San Diego [San Diego County], California» (original citation). Lectotype (♂), designated by Hieke (1993: 120), in USNM [# 47265]. Synonymy established by Hieke (1993: 119).

Celia farallonica Casey, 1918: 273. Type locality: «Farallone Islands, San Francisco Co[unty], California» (original citation). Lectotype (♂), designated by Hieke (1993: 121), in USNM [# 47269]. Synonymy established by Hieke (1993: 119).

Celia proba Casey, 1918: 274. Type locality: «San Francisco [San Francisco County], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47271]. Synonymy established by Lindroth (1968: 710).

Celia clementina Casey, 1918: 274. Type locality: «San Clemente Island [Los Angeles County], California» (original citation). Lectotype (♂), designated by Hieke (1993: 121), in USNM [# 47270]. Synonymy established by Hieke (1993: 119).

Celia hilaris Casey, 1918: 275. Type locality: «Cal. [with a "x" over the a] [= Redwood Creek, Humboldt County, California]» (lectotype label). Lectotype (♂), designated by Hieke (1993: 121), in USNM [# 47272]. Synonymy established by Hieke (1993: 119).

Celia evanida Casey, 1918: 275. Type locality: «Columbia River Valley, Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47273]. Synonymy established by Hatch (1953: 126), confirmed by Lindroth (1968: 710).

Celia angustior Casey, 1918: 275. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♂), designated by Hieke (1993: 121), in USNM [# 47274]. Synonymy established by Hieke (1993: 119).

Celia govanensis Casey, 1924: 53. Type locality: «Govan [Lincoln County], Washington» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 134), in USNM [# 47266]. Synonymy established by Hatch (1953: 126), confirmed by Lindroth (1968: 710).

Celia fragilis Casey, 1924: 53. Type locality: «Govan [Lincoln County], Washington» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 134), in USNM [# 47267]. Synonymy established by Hatch (1953: 126), confirmed by Lindroth (1968: 710).

Distribution. The range of this western species extends from western Montana (Russell 1968: 61; Hansen et al. 2009: 353) to Vancouver Island, north to the Prince Rupert area in British Columbia (Lindroth 1968: 711), south to Baja California Norte (CAS). The records from northern Colorado (Armin 1963: 201) and South Dakota (Kirk and Balsbaugh 1975: 26) need confirmation.
Records. CAN: BC (VCI) **USA**: CA (CHI), ID, MT, NV, OR, WA [CO, SD] – Mexico

[**cupreolata group**]

***Amara crassispina* LeConte, 1855**

Amara crassispina LeConte, 1855: 352. Type locality: «Lake Superior» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5676].

Distribution. This species ranges from "Maine" to "Montana" (Hieke 2003b: 207), south to southern Colorado (Elias 1987: 633), southern Texas (Bastrop and Kerr Counties, CNC), and the Florida Panhandle (Okaloosa County, CNC); also recorded from "Oregon" (Hieke 2003b: 207).
Records. USA: AL, AR, CO, CT, DC, FL, GA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, VA, WI, WV

***Amara cupreolata* Putzeys, 1866**

Amara cupreolata Putzeys, 1866b: 180. Type locality: «Etats-Unis» (original citation), restricted to «New Jersey» by Lindroth (1968: 733). Lectotype (♂), designated by Lindroth (1968: 738), in MHNP (collection Chaudoir).

Amara enervis Casey, 1918: 306. Type locality: «Pennsylvania» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47309]. Synonymy established by Lindroth (1968: 733), confirmed by Hieke (2003b: 204).

Distribution. This species is found from Prince Edward Island (King County, CNC) and Nova Scotia (NSNH) to southwestern British Columbia (Creston area, UASM),

south to northern Idaho (Hatten et al. 2007: 359), northern Colorado (Miller and Peairs 2008: 34; Larimer County, UASM), southern Oklahoma (Elliott et al. 2006: 126), southwestern Alabama (Mobile County, USNM), and North Carolina (Hieke 2003b: 205). Several state records (e.g., AR, DC, DE, GA, MS, NE, SC, UT) reported in Bousquet and Larochelle (1993: 195) refer to other species of the group or need confirmation.
Records. CAN: AB, BC, MB, NB, NS, ON, PE, QC, SK **USA**: AL, CO, CT, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MT, NC, ND, NH, NJ, NY, OH, OK, PA, RI, SD, TN, TX, VA, VT, WI, WV

Amara haywardi Csiki, 1929

Amara parviceps Hayward, 1908: 54 [secondary homonym of *Amara parviceps* (Putzeys, 1866)]. Type locality: «Lake Superior» (original citation). Holotype (♂) in MCZ [# 19605].
Amara haywardi Csiki, 1929: 418. Replacement name for *Amara parviceps* Hayward, 1908.
Amara convexissima Hieke, 2002: 634. Type locality: «S[outh] Ill[inois]» (holotype label). Holotype (♂) in USNM. Synonymy established by Hieke (2003b: 207).

Distribution. This species is yet known only from two specimens, both holotypes.
Records. USA: IL
Note. This form was considered a synonym of *Amara cupreolata* Putzeys by Lindroth (1968: 733) but regarded as a valid species by Hieke (2003b: 207).

Amara neoscotica Casey, 1924

Amara neoscotica Casey, 1924: 59. Type locality: «Halifax, N[ova] S[cotia]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47278].

Distribution. This species ranges from Nova Scotia (Hieke 2003b: 206) to the Rocky Mountains in Alberta (CNC), south to "Colorado," "Illinois," and "New Jersey" (Hieke 2003b: 206).
Records. CAN: AB, MB, NB, NS, ON, QC, SK **USA**: CO, IL, MA, ME, MI, NJ, VT, WI
Note. This form was considered a synonym of *Amara cupreolata* Putzeys by Lindroth (1954b: 136) but regarded as a valid species by Hieke (2003b: 205).

Amara tenax Casey, 1918

Amara tenax Casey, 1918: 302. Type locality: «Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47300].
Amara inflaticollis Casey, 1924: 63. Type locality: «Aweme, Man[itoba]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47319]. Synonymy established by Hieke (2003b: 206).

Distribution. This species is found from southern Manitoba (Casey 1924: 63, as *A. inflaticollis*) to southeastern British Columbia (Robson, CNC), north to the Great Slave Lake area in Northwest Territories (CNC), south to "Nevada" (Hieke 2003b: 207), western Colorado (Montrose County, MCZ), "Illinois" (Hieke 2003b: 207), and Massachusetts (Middlesex County, MCZ).
Records. CAN: AB, BC, MB, NT, SK **USA**: CO, IA, IL, KS, MA, MI, MN, ND, NE, NV, NY, SD, UT, VT, WI, WY
Note. This form was considered a synonym of *Amara cupreolata* Putzeys by Lindroth (1968: 733) but regarded as a valid species by Hieke (2003b: 206).

[**impuncticollis group**]

***Amara impuncticollis* (Say, 1823)**

Feronia impuncticollis Say, 1823a: 36. Type locality: «N[orth] Cumberl[an]d, P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 344), in MCZ [# 33029]. Note. «Pennsylvania; on the Missouri» were the areas originally cited by Say (1823a: 36).

Amara anthracina Haldeman, 1843b: 300. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Syntype(s) presumably lost. Synonymy established by LeConte (1855: 351).

Amara difficilis LeConte, 1847: 362. Type locality: «Territorio Missouriensi» (original citation). Syntype(s) location unknown. Synonymy established by LeConte (1855: 351).

Amara arcuata Casey, 1918: 296. Type locality: «Willets Point [Queens County], Long Island, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47283]. Synonymy established by Lindroth (1968: 728).

Amara edax Notman, 1920c: 186. Type locality: «Windsor, Broome Co[unty], N[ew] Y[ork]» (original citation). Holotype [by monotypy] (♂) in SIM (Hennessey 1990: 466). Synonymy established by Lindroth (1968: 728).

Amara wadei Casey, 1924: 63. Type locality: «Hagerstown [Washington County], Maryland» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47296]. Synonymy established by Lindroth (1968: 728). Etymology. The specific name was proposed for Joseph Sanford Wade [1880-1961], scientific assistant at the U.S. Bureau of Entomology in Washington DC.

Distribution. This species is found east of the Rocky Mountains from Maine to at least southern Wisconsin, including southern Quebec and the Ontario Peninsula, south to southern Texas (Hieke 2000: 69), southeastern Louisiana (East Baton Rouge Parish, Igor M. Sokolov pers. comm. 2009), and southern Georgia (Torres and Ruberson 2006: 31). One specimen is known also from Nuevo León in Mexico and four from Costa Rica (Hieke 2000: 69). Several old records listed by Bousquet and Larochelle (1993: 196) (e.g., CO, CT, DE, FL, MB, MN, MS, NB, NF, NM, NS, PE, RI, SD, SK, VT) refer to *A. otiosa* Casey or need confirmation. The record from Montana listed

by Hieke (2000: 69) refers to Missouri; that from British Columbia (Jarrett and Scudder 2001: 380) is likely in error.

Records. CAN: ON, QC **USA**: AL, AR, DC, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MO, NC, NE, NH, NJ, NY, OH, OK, PA, SC, TN, TX, VA, WI, WV – Costa Rica, Mexico

Amara littoralis Dejean, 1828

Amara littoralis Dejean, 1828: 467. Type locality: «détroit de Norfolk [= Norfolk Sound, Baranof Island, Alaska] sur la côte nord-ouest de l'Amérique septentrionale» (original citation). Holotype [by monotypy] probably in MHNP. Note. Mannerheim (1843: 207) first described this species and the name has been attributed to him since. However Dejean (1828: 467) published the name as a junior synonym of *A. plebeja* and the name is available from its publication as a synonym (ICZN 1999: Article 11.6.1). Consequently the lectotype designated by Lindroth (1968: 730) in ZMH is not part of the type series and loses its status (ICZN 1999: Article 72.4.3).

Amara fallax LeConte, 1847: 362. Type locality: «Lacum Superiorem» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5678]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 318).

Amara acuminata Casey, 1918: 297 [secondary homonym of *Amara acuminata* (Paykull, 1798)]. Type locality: «S[an]ta Fé [Santa Fe County], New Mexico» (original citation). Lectotype [as holotypus] (♀), designated by Hieke (1993: 107), in USNM [# 47281]. Synonymy established by Hieke (1993: 107).

Amara mystica Casey, 1918: 298. Type locality: «San Francisco [San Francisco County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47286]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 318).

Amara hesperia Casey, 1918: 298. Type locality: «Cal[ifornia]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47285]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Amara keeni Casey, 1918: 299. Type locality: «Inverness [probably Inverness Passage], British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47289]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Amara lacustrina Casey, 1918: 299. Type locality: «Bayfield [Bayfield County, Wisconsin], Lake Superior» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47287]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Amara laurana Casey, 1918: 300. Type locality: «Boulder [Boulder County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47288]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Amara teres Notman, 1922a: 146. Type locality: «Westfield, Chautauqua Co[unty], N[ew] Y[ork]» (original citation). Holotype (♀) in SIM (Hennessey 1990: 466). Synonymy established with doubt by Lindroth (1968: 730).

Amara oodiformis Casey, 1924: 58. Type locality: «Ilo [= Craigmont, Lewis County], Idaho» (holotype label). Holotype [by monotypy] (♂) in USNM [# 47182]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Amara acuticauda Casey, 1924: 58. Replacement name for *Amara acuminata* Casey, 1918.

Amara convergens Casey, 1924: 59. Type locality: «Peachland, B[ritish] C[olumbia]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47284]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Amara pullmani Casey, 1924: 61. Type locality: «Pullman [Whitman County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47279]. Synonymy established by Lindroth (1968: 730), confirmed by Hieke (1994: 319).

Distribution. This Holarctic species ranges from Newfoundland to the Gulf Coast of Alaska, including Kodiak Island (Lindroth 1968: 731), south to southern California (Dajoz 2007: 20; San Diego County, CNC), northern New Mexico (Casey 1918: 297, as *A. acuminata*; Rio Arriba County, CMNH), western Texas (Dajoz 2007: 23; Brewster County, CMNH), east-central Alabama (Lee County, CNC; LeConte 1855: 352), and eastern South Carolina (Ciegler 2000: 74). In the Palaearctic Region, the species is known only from northwestern Siberia and the Kamchatka Peninsula (Hieke 2000: 67).

Records. CAN: AB, BC (QCI), MB, NB, NF, NS, NT, ON, PE, QC, SK, YT **USA**: AK, AL, AR, AZ, CA, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – **Holarctic**

Amara otiosa Casey, 1918

Amara otiosa Casey, 1918: 300. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47290].

Distribution. This species ranges from Newfoundland to southern Manitoba, south to northeastern Colorado, central Missouri, and North Carolina (Hieke 2000: 72-74). One specimen simply labeled from Texas is known (Hieke 2000: 69).

Records. CAN: MB, NB, NF, NS (CBI), ON, PE, QC **USA**: CO, IL, MA, ME, MI, MN, MO, NC, NH, NJ, NY, OH, PA, RI, VT, WI, WV [TX]

Note. Lindroth (1968: 728) regarded this form as a synonym of *A. impuncticollis* Say but Hieke (2000: 71) considered it as a valid species.

Amara ovata (Fabricius, 1792)

Carabus ovatus Fabricius, 1792: 154 [primary homonym of *Carabus ovatus* Paykull, 1790]. Type locality: «Saxonia [Germany]» (original citation). Two syntypes in ZMUC (Zimsen 1964: 57). Note. *Carabus ovatus* Paykull, 1790 cannot be interpreted at this time. Paykull originally described it as the *Carabus vulgaris* Linnaeus var. β and later (Paykull 1798: 167) listed it as a synonym of *Carabus helopioides* Fabricius, 1792. Until the type specimen(s) can be study Paykull's name should be considered a *nomen dubium*.

Distribution. This European species is adventive in North America where it is known in the east from Nova Scotia (Majka et al. 2006: 605) to southern Wisconsin (Messer 2010: 38), south to Virginia (Hieke 2000: 82). The first inventoried specimen collected on the east coast was found in Massachusetts in 1925. The species is also adventive in the western part of North America where it is known from southeastern British Columbia and Alberta (Hieke 2000: 82). The first inventoried specimen collected on the west coast was found in southeastern British Columbia in 1936 (see Hieke 2000: 82). One specimen simply labeled from Iowa is known (Hieke 2000: 82). The record from "Cleveland, Or." (Hieke 2000: 82) obviously refers to Ohio.
Records. CAN: AB, BC, NB, NS, ON, PE, QC **USA**: CT, MA, NH, NY, OH, PA, RI, VA, WI [IA] – **Adventive**

Amara sera Say, 1830

Amara sera Say, 1830b: (7) [3]. Type locality: «Mexico» (original citation). Syntype(s) lost.

Amara azteca Bates, 1882a: 79. Type locality: «Oaxaca, Mexico» (lectotype label). Lectotype (♂), designated by Hieke (1993: 108), in BMNH. Synonymy established by Hieke (1993: 108).

Distribution. The range of this species extends from southern Arizona and western Texas south to Guatemala (Hieke 1993: 110).
Records. USA: AZ, TX – Guatemala, Mexico

Amara turbata Casey, 1918

Amara turbata Casey, 1918: 307. Type locality: «Akron [Washington County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47310].

Amara microcephala Casey, 1924: 62. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47293]. Synonymy established by Hieke (1994: 337).

Amara recticollis Casey, 1924: 62. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Holotype [by monotypy] (♂) in USNM [# 47291]. Synonymy established by Hieke (1994: 337).

Distribution. This species ranges from southern Quebec to southeastern Alberta, south to southern Arizona, southern Texas, west-central Alabama, and North Carolina (Hieke 2000: 76-79).
Records. CAN: AB, ON, QC, SK **USA**: AL, AR, AZ, CO, IA, ID, IL, IN, KS, KY, MA, MD, MI, MT, NC, NE, NH, NJ, NM, NV, NY, PA, RI, SD, TN, TX, UT, WI, WV, WY
Note. Lindroth (1968: 730) regarded this form as a synonym of *A. littoralis* Mannerheim but Hieke (1994: 337) considered it as a valid species.

[**incertae sedis**]

***Amara aenea* (DeGeer, 1774)**

Carabus aeneus DeGeer, 1774: 98. Type locality not stated; «Uppsala, Sweden» selected by Lindroth (1968: 732). Lectotype (♀), designated by Lindroth (1968: 732), in NRSS.

Amara devincta Casey, 1918: 307. Type locality: «New London [New London County], Connecticut» (original citation). Holotype [by monotypy] (♂) in USNM [# 47312]. Synonymy established by Darlington (1936d: 20), confirmed by Lindroth (1968: 733).

Distribution. This European species is adventive in North America where it is known in the east from Newfoundland (Lindroth 1955a: 111) to southwestern Manitoba (Stjernberg 2011: 71), south to northeastern Oklahoma (Hieke 1990: 203), northern Louisiana (Morehouse and West Carroll Parishes, Igor M. Sokolov pers. comm. 2009), and the Florida Panhandle (Okaloosa County, CNC) and in the west from southern British Columbia (Jarrett and Scudder 2001: 378; CNC) to southeastern Alberta (CNC), south to northern Colorado, north-central Arizona, and the San Francisco Bay area in west-central California [see Hieke 1990: Fig. 23]. The first inventoried specimen collected in the eastern part of this continent was found in Brooklyn, New York, in 1904 and in the western part in San Francisco, California, in 1941 (see Hieke 1990: 202, 204). This species was recorded from "Amérique septentrionale" by Dejean (1828: 466), under the name *Amara trivialis* Gyllenhal, a synonym of *Amara aenea*, suggesting that it was already present in North America by that time. The identification of the specimen(s) was confirmed by Lindroth (1968: 732). However, considering that the next documented specimen from this continent was collected only at the beginning of the xx Century, there is doubt about the provenance of Dejean's specimen(s).
Records. CAN: AB, BC, MB, NB, NF, NS (CBI), ON, PE, QC **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, NE, NH, NJ, NV, NY, OH, OK, OR, PA, RI, SC, TN, VA, VT, WA, WI, WV, WY – **Adventive**

Amara aeneopolita Casey, 1918

Amara aeneopolita Casey, 1918: 304. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47304].

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 108) to west-central Northwest Territories, south to northern Alberta (Lindroth 1968: 723), east-central South Dakota (Kirk and Balsbaugh 1975: 27), central Iowa (O'Rourke et al. 2008: 126; Larsen et al. 2003: 292), and northeastern New York (Essex and Hamilton Counties, USNM); apparently isolated in central Colorado (Elias 1987: 633). The record from "Yukon Territory" (Ball and Currie 1997: 453) could not be confirmed.
Records. CAN: AB, LB, MB, NB, NF, NT, ON, QC, SK **USA**: CO, IA, ME, MI, ND, NH, NY, SD, VT [YT]

Amara anthobia Villa and Villa, 1833

Amara anthobia A. Villa and G.B. Villa, 1833: 33. Type locality not stated; «Italia» selected by Lindroth (1968: 731). Syntype(s) probably lost (Lindroth 1968: 731).

Distribution. This European species is adventive in North America where it is known from southern British Columbia (Jarrett and Scudder 2001: 379) to southern California (Los Angeles County, CMNH). The first inventoried specimen collected in that area was found in southwestern Washington in 1929 (Hatch and Kincaid 1958: 5). The species has been recorded also from the Washington D.C. area since 1964 (Hieke 1990: 205) and has been recently collected in Westchester County in southeastern New York (Peter W. Messer pers. comm. 2011).
Records. CAN: BC **USA**: CA, MD, NY, OR, VA, WA – **Adventive**

Amara basillaris (Say, 1823)

Feronia basillaris Say, 1823a: 35. Type locality: «Dover [Norfolk County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33028].

Amara lucidula Dejean, 1828: 477. Type locality: «Amérique septentrionale» (original citation). Two syntypes in MHNP (Lindroth 1955b: 17). Synonymy established by LeConte (1855: 351), confirmed by Lindroth (1955b: 17).

Amara marylandica Casey, 1884b: 4. Type locality: «banks of the Potomac River, below Washington, Maryland» (original citation). Holotype [by monotypy] (♀) in MCZ [# 31228]. Synonymy established by Horn (1885b: 108), confirmed by Lindroth (1968: 735).

Distribution. This species ranges from "New Hampshire" (Hayward 1908: 54) to southeastern South Dakota (Kirk and Balsbaugh 1975: 27), south to Oklahoma (Alfalfa and Logan Counties, CMNH, USNM), northeastern Georgia (Clarke County,

USNM), and central South Carolina (Ciegler 2000: 74). One old specimen labeled "Tex" (USNM) is known.
Records. USA: CT, DC, DE, GA, IA, IL, IN, KS, KY, MA, MD, MN, NC, NE, NH, NJ, NY, OK, PA, RI, SC, SD, VA, WV [TX]

Amara coelebs Hayward, 1908

Amara coelebs Hayward, 1908: 58. Type locality: «Osoyoos, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1968: 723), in MCZ [# 25671].
Amara rustica Casey, 1918: 303. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47302]. Synonymy established by Lindroth (1968: 723). Note. Since the type locality is in North Carolina, outside the species range, the lectotype of *A. rustica* possibly belongs to another species or the specimen is mislabeled.
Amara nebraskana Casey, 1918: 304. Type locality: «Nebraska» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47298]. Synonymy established by Lindroth (1968: 723).
Amara oblongula Casey, 1918: 305. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47299]. Synonymy established by Lindroth (1968: 723).
Amara leviceps Casey, 1924: 60. Type locality: «Govan [Lincoln County], Washington» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47308]. Synonymy established by Hatch (1953: 125), confirmed by Lindroth (1968: 723).

Distribution. This species ranges from southern Manitoba to south-central British Columbia (Lindroth 1968: 724-725), south to east-central Washington (Casey 1924: 60, as *A. leviceps*), northwestern New Mexico (Sandoval County, UASM, USNM), Kansas (Cheyenne, Douglas and Riley Counties, CNC, UASM, USNM), and central Illinois (Macon County, USNM).
Records. CAN: AB, BC, MB, SK **USA**: CO, IA, ID, IL, KS, MN, ND, NE, NM, SD, WA, WI, WY

Amara communis (Panzer, 1797)

Carabus communis Panzer, 1797: no 2. Type locality: Germany (inferred from title of the book). Syntype(s) location unknown (possibly in ZMHB).

Distribution. This European species is adventive in North America where it is known from the Maritime Provinces (Bousquet 1992a: 504; Majka 2005: 534) and Connecticut (Majka 2005: 534) [see Majka 2005: Fig. 1]. The record from the Gaspé Peninsula, Quebec (Majka 2005: 534), is based on a misidentified specimen of *Amara aenea* (CNC). The first inventoried specimen collected on this continent was found in New Brunswick in 1988 (Bousquet 1992a: 504).
Records. CAN: NB, NS, PE **USA**: CT – **Adventive**

Amara conflata LeConte, 1855

Amara conflata LeConte, 1855: 352. Type locality: «San Francisco [San Francisco County], California» (original citation). Syntype(s) in MCZ [# 5677].

Amara impressicollis Motschulsky, 1859a: 153. Type locality: «St. Francisco [San Francisco County, California]» (original citation). One syntype in ZMMU (Keleinikova 1976: 200). Synonymy established by LeConte (1863b: 10).

Celia semota Casey, 1918: 251. Type locality: «Clackamas Co[unty], Oregon» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47253]. Synonymy established by Lindroth (1968: 726).

Amara diffidens Casey, 1918: 306. Type locality: «near San Francisco [San Francisco County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47305]. Synonymy established by Lindroth (1968: 726).

Amara leydeni Casey, 1918: 306. Type locality: «Coeur d'Alene [Kootenai County], Idaho» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47307]. Synonymy established by Hatch (1953: 124), confirmed by Lindroth (1968: 727).

Distribution. This species ranges from northwestern Montana (Russell 1968: 60) to Vancouver Island (Lindroth 1968: 728), south to southern California (San Diego County, CAS, CNC) and northern Utah (Davis, Salt Lake, and Utah Counties, CMNH).

Records. CAN: BC (VCI) **USA**: CA (CHI), ID, MT, OR, UT, WA

Amara confusa LeConte, 1847

Amara confusa LeConte, 1847: 361. Type locality: «ad Rocky Mountains» (original citation), cited from «Nebraska [Territory], near the Rocky Mountains [probably present day Colorado]» by LeConte (1855: 352). Three syntypes in MCZ [# 5680].

Amara subpunctata LeConte, 1855: 352. Type locality: «at the Rocky Mountains» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5679]. Synonymy established by Lindroth (1968: 725).

Amara protensa Putzeys, 1866b: 183. Type locality: «bords du fl[euve] Ruper [= Ruper River, Quebec], Baie d'Hudson» (original citation), which is likely incorrect. Lectotype (♀), designated by Lindroth (1968: 725), in MHNP. Synonymy established by Lindroth (1968: 725).

Celia modulata Casey, 1918: 250. Type locality: «Fort Wingate [McKinley County], New Mexico» (original citation). Lectotype (♀), designated by Hieke (1993: 131), in USNM [# 47239]. Synonymy established by Hieke (1993: 131).

Amara impedita Casey, 1918: 310. Type locality: «Wyoming» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47320]. Synonymy established by Lindroth (1968: 726).

Amara ebenina Casey, 1918: 310. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47322]. Synonymy established by Lindroth (1968: 726).

Amara castalia Casey, 1918: 311. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Lectotype [as holotypus] (♂), designated by Hieke (1993: 114), in USNM [# 47321]. Synonymy established by Hieke (1993: 114).

Amara viridula Casey, 1924: 60. Type locality: «Lethbridge, Alberta» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47301]. Synonymy established by Lindroth (1968: 726).

Amara oblongiformis Casey, 1924: 60. Type locality: «Govan [Lincoln County], Washington» (original citation). Holotype [by monotypy] (♂) in USNM [# 47306]. Synonymy established by Lindroth (1968: 726).

Amara acomana Casey, 1924: 61. Type locality: «Maxwell [Colfax County], New Mexico» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47313]. Synonymy established by Lindroth (1968: 726).

Amara subarctica Casey, 1924: 64. Type locality: «Boucher, Sask[atchewan]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47323]. Synonymy established by Lindroth (1968: 726).

Distribution. This species is found from southern Manitoba to south-central British Columbia, north to central Alaska (Lindroth 1968: 726), south to the Sierra Nevada in east-central California (Tuolumne County, MCZ), central Arizona (Gila County, MCZ), central New Mexico (Fall and Cockerell 1907: 158), southern Kansas (Knaus 1905a: 218; Casey 1918: 311), and northern Indiana (Blatchley 1910: 107, as *A. protensa*).
Records. CAN: AB, BC, MB, SK, YT **USA**: AK, AZ, CA, CO, ID, IL, IN, KS, MT, ND, NE, NM, NV, OR, SD, UT, WA, WY

Amara convexa LeConte, 1847

Amara convexa LeConte, 1847: 363. Type locality: «Lacum Superiorem» (original citation), restricted to «Port Arthur, Ont[ario]» by Lindroth (1968: 734). Holotype [by monotypy] (♀) in MCZ [# 5682].

Amara polita LeConte, 1847: 364 [secondary homonym of *Amara polita* (Chaudoir, 1846)]. Type locality: «ad Rocky Mountains» (original citation). Four syntypes in MCZ [# 5681]. Synonymy established by Horn (1875: 127), confirmed by Lindroth (1968: 734).

Amara wingatei Casey, 1918: 308. Type locality: «Fort Wingate [McKinley County], New Mexico» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47314]. Synonymy established by Lindroth (1968: 734).

Amara oviformis Casey, 1918: 308. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47315]. Synonymy established by Lindroth (1968: 734).

Amara piceola Casey, 1918: 309. Type locality: «Las Vegas [San Miguel County], New Mexico» (original citation). Holotype [by monotypy] (♂) in USNM [# 47316]. Synonymy established by Lindroth (1968: 734).

Celia frugalis Casey, 1924: 54. Type locality: «Aweme, Man[itoba]» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47268]. Synonymy established by Lindroth (1968: 734).

Amara cockerelli Casey, 1924: 64 [primary homonym of *Amara cockerelli* Wickham, 1912]. Type locality: «Jimtown [= Jamestown, Boulder County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47317]. Synonymy established by Lindroth (1968: 734).

Amara breviformis Casey, 1924: 65. Type locality: «Boulder [Boulder County], Colorado» (original citation). Holotype [by monotypy] (♂) in USNM [# 47318]. Synonymy established by Lindroth (1968: 734).

Amara cockerelliana Csiki, 1929: 411. Replacement name for *Amara cockerelli* Casey, 1924.

Amara lecontei Csiki, 1929: 419. Replacement name for *Amara polita* LeConte, 1847.

Distribution. The range of this species extends from Nova Scotia (Majka et al. 2007: 9) to central British Columbia (Lindroth 1968: 735), south to southeastern Arizona (Greenlee County, MCZ), southern New Mexico (Grant County, USNM), western Texas (Jeff Davis County, Ken Karns pers. comm. 2009), and southern New Jersey (Cape May County, MCZ). The record from North Carolina (Brimley 1938: 122, as *A. polita*) is probably in error. Three old specimens labeled from Brownsville in southeastern Texas (USNM) are known.

Records. CAN: AB, BC, MB, NS, ON, QC, SK **USA**: AZ, CO, CT, IA, ID, IL, IN, KS, MA, ME, MI, MN, MT, ND, NE, NH, NJ, NM, NY, OH, OK, PA, SD, TX, UT, VT, WI, WY

Amara emancipata Lindroth, 1968

Amara emancipata Lindroth, 1968: 718. Type locality: «Anarchist M[oun]t[ain], Osoyoos, B[ritish] C[olumbia]» (original citation). Holotype (♀) in CNC [# 10513].

Distribution. This species is found along and west of the Rocky Mountains from southwestern Alberta to south-central British Columbia, south to "Utah" and northern Colorado (Hieke 2002: 642).

Records. CAN: AB, BC **USA**: CO, ID, MT, UT, WA, WY

Amara eurynota (Panzer, 1796)

Carabus eurynotus Panzer, 1796a: no 23 (as *eyrinotus*). Type locality: Germany (inferred from title of the book). Syntype(s) location unknown (possibly in ZMHB). Note. The spelling *eurynota* is an incorrect subsequent spelling, introduced by Latreille (1804: 366), in prevailing usage and attributed to Panzer (1796a); therefore it is deemed to be the correct original spelling (ICZN 1999: Article 33.3.1).

Carabus acuminatus Paykull, 1798: 166 [primary homonym of *Carabus acuminatus* Olivier, 1790]. Type locality: Sweden (inferred from title of the book). Syntype(s) possibly in NRSS. Synonymy established by Illiger (1801: 50).

Distribution. This European species is adventive in North America where it is known only from a few localities in eastern Newfoundland (Bousquet 1987a: 128-129). The first inventoried specimen collected on this continent was found in 1971.
Records. CAN: NF – **Adventive**

Amara externefoveata Hieke, 2002

Amara externefoveata Hieke, 2002: 642. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Holotype (♂) in USNM.

Distribution. This species is known only from two specimens collected in Maryland [not Pennsylvania as stated by Hieke (2002: 643)] and North Carolina (Hieke 2002: 643).
Records. USA: MD, NC

Amara familiaris (Duftschmid, 1812)

Carabus familiaris Duftschmid, 1812: 119. Type locality: Austria (inferred from title of the book). Syntype(s) probably lost (Lindroth 1968: 731).
Amara humilis Casey, 1918: 302. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47292]. Synonymy established by Darlington (1936d: 20), confirmed by Lindroth (1968: 733).

Distribution. This European species is adventive in North America where it is known in the east from Newfoundland (Lindroth 1955a: 111) to southern Saskatchewan (Ronald R. Hooper pers. comm. 2007), south to central Oklahoma (Grady County, Robert L. Davidson pers. comm. 2012), northwestern Mississippi (Panola County, CMNH) and the Florida Panhandle (Okaloosa County, CNC) [see Hieke 1990: Fig. 25]. The first inventoried specimen collected on the east coast was found in Rhode Island in 1901 (Hieke 1990: 207). The species is also adventive in the western parts of North America where it ranges from southeastern Alaska to central California, east to western Montana [see Hieke 1990: Fig. 25]. The first inventoried specimen collected on the west coast was found in western Washington in 1913 (Hatch 1953: 26).
Records. FRA: PM **CAN**: AB, BC (VCI), MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AK, AL, AR, CA, CT, DC, FL, IA, ID, IL, IN, KY, MA, MD, ME, MI, MO, MS, MT, NC, NH, NJ, NY, OH, OK, OR, PA, RI, SC, TN, VA, VT, WA, WI, WV – **Adventive**

Amara lunicollis Schiødte, 1837

Amara lunicollis Schiødte, 1837: 164. Type locality: «Ravneholm, nordlige Sjaelland [Denmark]» (original citation). Lectotype, designated by Hansen and Martin (2000: 213), in ZMUC.

Amara limbata Schiødte, 1837: 166. Type locality: «Amager [Denmark]» (original citation). Lectotype (♂), designated by Hansen and Martin (2000: 213), in ZMUC. Synonymy established by Schaum (1858: 529).

Amara poeciloides Heer, 1837: 40 [second section]. Type locality: «Camogaskerthal (6800 [feet]) [Switzerland]» (Heer 1837: 59 [first section]). Syntype(s) location unknown (possibly in ETHZ). Synonymy established by Schaum (1858: 528).

Amara assimilis Chaudoir, 1844: 446. Type locality: «Kieff [= Kiev, Ukraine]» (original citation). Syntype(s) in MHNP. Synonymy established by Chaudoir (1861c: 198).

Amara inepta LeConte, 1855: 351. Type locality: «Oregon [Territory]» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5683]. Synonymy established by Hieke (1994: 309). Note. Lindroth (1968: 730) treated *A. inepta* LeConte as a junior synonym of *A. littoralis* Mannerheim but Hieke (1994: 309) considered it a junior synonym of *A. lunicollis* Schiødte.

Amara marquettensis Casey, 1918: 304. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 135), in USNM [# 47303]. Synonymy established by Lindroth (1954b: 136).

Amara carriana Casey, 1924: 65. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♂), designated by Lindroth (1975: 135), in USNM [# 47325]. Synonymy established by Lindroth (1954b: 136).

Amara arsenjevi Lutshnik, 1935: 258. Type locality: «fl. Tumain, Prov. Ussuriensis, Sibirie or. [Russia]» (original citation). One syntype in ZILR (Hieke 1973: 9). Synonymy established by Hieke (1973: 9).

Amara zaisani Jedlička, 1964: 290. Type locality: «Zaisan, Central Aimak, Mongolei» (original citation). Holotype (♂) in TMB. Synonymy established by Hieke (1972: 417).

Distribution. This circumpolar species ranges from eastern Siberia to Ireland, south to Spain, Italy, Mongolia, and northern China (Hieke 2003a: 550) and from Alaska (Lindroth 1968: 721) to Newfoundland (Lindroth 1955a: 109), south to northeastern West Virginia (Randolph County, CMNH), east-central Ohio (Usis and MacLean 1998: 67), southern New Mexico (Otero County, CNC), and southwestern Oregon (Niwa and Peck 2002: 787).

Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CO, CT, MA, ME, MI, MN, MT, NH, NM, NY, OH, OR, PA, RI, VT, WI, WV – **Holarctic**

Amara occidentalis Hieke, 2002

Amara occidentalis Hieke, 2002: 654. Type locality: «Clamath [= Klamath] Falls n[ea]r Algoma [Klamath County], Oregon» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from a few specimens collected in Baker and Klamath Counties in Oregon and Marin and El Dorado Counties in California (Hieke 2002: 654).

Records. USA: CA, OR

Amara pomona Casey, 1918

Amara brunnipes Motschulsky, 1859a: 154 [primary homonym of *Amara similata brunnipes* Letzner, 1852]. Type locality: «St. Francisco [San Francisco County, California]» (original citation). Lectotype (♀), designated by Hieke (1993: 112), in ZMMU. Note. This name was listed as "*Amara brunnipennis*" by Motschulsky (1869: 26).

Amara pomona Casey, 1918: 301. Type locality: «California» (original citation). Lectotype [as typus] (♂), designated by Hieke (1993: 112), in USNM [# 47294]. Synonymy established by Hieke (1993: 111).

Amara vigilax Casey, 1918: 301. Type locality: «near San Francisco [San Francisco County], California» (original citation). Lectotype [as typus] (♀), designated by Hieke (1993: 112), in USNM [# 47295]. Synonymy established by Hieke (1993: 111).

Amara americana Csiki, 1929: 410. Replacement name for *Amara brunnipes* Motschulsky, 1859.

Distribution. This species ranges from northern Washington south to the Mexican border in southern California, east to eastern Nevada (Hieke 1993: 114). One specimen simply labeled from Mexico is known (Hieke 1993: 114).
Records. USA: CA, NV, WA – Mexico

Amara sanjuanensis Hatch, 1949

Amara san-juanensis Hatch, 1949a: 81. Type locality: «Brown's Is[land], San Juan Is[lands] [San Juan County], Wash[ington]» (original citation). Holotype (♂) in USNM.

Distribution. This species is, as far as known, restricted to southern British Columbia, including Vancouver Island (Lindroth 1968: 722), northern Washington, northern Idaho (Hatch 1953: 124), and northwestern Montana (Russell 1968: 60).
Records. CAN: BC (VCI) **USA**: ID, MT, WA

Subgenus *Paracelia* Bedel, 1899

Paracelia Bedel, 1899: 169, 174. Type species: *Amara simplex* Dejean, 1828 by original designation. Etymology. From the Greek *para* (beside, near) and the generic name *Celia* [*q.v.*] [feminine].

Iranoleirides Hieke, 1978: 300. Type species: *Amara astrabadensis* Lutshnik, 1935 by original designation. Synonymy established by Hieke (2006: 296). Etymology. From the geographical name Iran and the generic name *Leirides* [masculine].

Diversity. Twenty-one species (Hieke 2007) in the Palaearctic Region (including the Himalayas and northern Africa), one of them (*A. quenseli*) extending into the Nearctic Region and one (*A. simplex* Dejean) extending into the Afrotropical Region.
Identification. Hieke (2006) revised the species of this subgenus.

***Amara quenseli quenseli* (Schönherr, 1806)**

Carabus quenseli Schönherr, 1806: 201. Type locality: «Lapponia» (original citation), restricted to «Abisko, Torne Lappmark [Sweden]» by Lindroth (1968: 694). Lectotype (♂), designated by Lindroth (1968: 694), in NRSS. Etymology. The specific name honors the Swedish naturalist Conrad Quensel [1767-1806] who worked as professor of natural history and conservator in Stockholm.

Harpalus despectus C.R. Sahlberg, 1827b: 245. Type locality: «Lapponia» (original citation). Lectotype, designated by Silfverberg (1987: 15), in ZMH. Synonymy established by Sahlberg (1875: 106).

Amara remotestriata Dejean, 1828: 473. Type locality: «île d'Ounalaschka, l'une des îles Aleutiennes [Alaska]» (original citation). Two syntypes in MHNP (Lindroth 1955b: 17). Synonymy established by Hatch (1953: 128), confirmed by Lindroth (1954b: 135).

Amara monticola Dejean, 1831: 794. Type locality: «alpes de la Savoie [France]» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Heer (1837: 56), confirmed by Schaum (1858: 542).

Celia remota Zimmermann, 1832: 27. Type locality: «Unalaschka [Aleutian Islands, Alaska]» (original citation). Syntype(s) probably lost. Synonymy established with the name *A. remotestriata* Dejean by Zimmermann (1832: 27).

Celia microcephala Motschulsky, 1844: 191. Type locality: «Tourkinsk [= Turka on the east bank of Lake Baikal, Russia]» (original citation). Two syntypes in ZMMU (Keleinikova 1976: 205). Synonymy established by Hieke (1995a: 102).

Isopleurus terrestris LeConte, 1847: 358. Type locality: «Fort Laramie, flumanis Platte [Nebraska]» (original citation). Syntype(s) in MCZ [# 5687]. Synonymy established, under the name *A. remotestriata* Dejean, by Horn (1892b: 40).

Celia indistincta Mannerheim, 1853: 137. Type locality: «insula Unalaschka [Aleutian Islands, Alaska]» (original citation). Holotype [by monotypy] probably in ZMMU (Lindroth 1968: 694). Synonymy established, under the name *A. remotestriata* Dejean, by Horn (1892b: 40).

Celia relucens Mannerheim, 1853: 138. Type locality: «Kenai, Cast[ellum] Nicol[ajevsk] [= Fort Saint Nicholas, Alaska]» (lectotype label). Lectotype (♂), designated by Lindroth (1968: 694), in ZMH. Synonymy established, under the name *A. remotestriata* Dejean, by LeConte (1855: 354), confirmed by Lindroth (1968: 694).

Celia purpurascens Motschulsky, 1859a: 152. Type locality: California (inferred from title of the paper). Lectotype (♂), designated by Hieke (1993: 138), in ZMMU. Synonymy established by Hieke (1993: 137).

Amara femoralis G.H. Horn, 1892b: 30 [primary homonym of *Amara femoralis* Dejean, 1831]. Type locality: «M[oun]t Lincoln and at Argentine Pass (11,000 to 13,000 feet) [Colorado]» (original citation). Four syntypes in MCZ [# 667]. Synonymy established by Lindroth (1968: 694).

Celia laxicollis Casey, 1918: 258. Type locality: «Sheepshead Bay, Long Island, New York» (original citation for the lectotype). Lectotype (♂), designated by Lindroth

(1975: 131), in USNM [# 47175]. Synonymy established by Lindroth (1968: 694).

Celia brumalis Casey, 1918: 259. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47178]. Synonymy established by Lindroth (1968: 694).

Celia defecta Casey, 1918: 260. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47177]. Synonymy established by Lindroth (1968: 694).

Celia exposita Casey, 1918: 260. Type locality: «Columbia River Valley, Oregon» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47183]. Synonymy established by Hatch (1953: 128), confirmed by Lindroth (1968: 694).

Celia mimica Casey, 1918: 260. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype [as holotype] (♂), designated by Lindroth (1975: 132), in USNM [# 47184]. Synonymy established by Lindroth (1968: 694).

Celia fontinalis Casey, 1918: 261. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47185]. Synonymy established by Lindroth (1968: 694).

Celia eldorensis Casey, 1918: 261. Type locality: «Eldora [Boulder County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47180]. Synonymy established by Lindroth (1968: 694).

Celia docilis Casey, 1918: 262. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47180]. Synonymy established by Lindroth (1968: 694).

Celia brunnescens Casey, 1918: 262. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♀) in USNM [# 47189]. Synonymy established by Lindroth (1968: 694).

Celia definita Casey, 1918: 263. Type locality: «Yreka [Siskiyou County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47187]. Synonymy established by Lindroth (1968: 694).

Celia obligata Casey, 1918: 263. Type locality: «Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47188]. Synonymy established by Lindroth (1968: 694).

Celia piperi Casey, 1924: 49. Type locality: «Grayling, near Bay City [Bay County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47174]. Synonymy established by Lindroth (1968: 694).

Celia explanatula Casey, 1924: 54. Type locality: «Similkameen R[iver], B[ritish] C[olumbia]» (lectotype label). Lectotype (♀), designated by Lindroth (1975: 132), in USNM [# 47176]. Synonymy established by Hatch (1953: 128), confirmed by Lindroth (1968: 694).

Celia tahomae Casey, 1924: 55. Type locality: «Wawawai [Whitman County], Washington» (original citation). Lectotype (♀), designated by Lindroth (1975: 132), in

USNM [# 47200]. Synonymy established by Hatch (1953: 128), confirmed by Lindroth (1968: 694).

Celia washoeana Casey, 1924: 55. Type locality: «Nevada» (original citation). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47181]. Synonymy established by Lindroth (1968: 694).

Celia cervicalis Casey, 1924: 56. Type locality: «N[orth]W[est] T[erritories], Can[ada]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 132), in USNM [# 47182]. Synonymy established by Lindroth (1968: 694).

Amara horni Csiki, 1929: 436. Replacement name for *Amara femoralis* Horn, 1892.

Amara uenoi Habu, 1972: 33. Type locality: «M[oun]t Rishiri (1600 m), Rishiri Is[land], Japan» (original citation). Holotype (♂) in NMNS. Synonymy established by Hieke (1999b: 189).

Distribution. This Holarctic species is widely distributed in the Nearctic Region from Newfoundland (Lindroth 1955a: 103) to Alaska, including the Kodiak, Aleutian and Pribilof Islands (Lindroth 1968: 696), south to southern California (Fall 1901a: 45, as *A. remotestriata*), northern Arizona (Villa-Castillo and Wagner 2002: 246; Apache County, UASM), northern New Mexico (Fall and Cockerell 1907: 158, as *A. remotestriata* and *A. femoralis*; Milford et al. 2000: 21; Rio Arriba and Sandoval Counties, CMNH, UASM), Oklahoma (Hamilton 1894b: 353; Hatch and Ortenburger 1930: 8, as *A. remotestriata*), and southwestern North Carolina (Jackson County, USNM).
Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CA, CO, CT, DE, IA, ID, IL, IN, KS, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SD, UT, VA, VT, WA, WI, WY – **Holarctic**
Note. The subspecies *A. quenseli silvicola* Zimmermann is endemic to Europe (Hieke 2003a: 565).

Subgenus *Zezea* Csiki, 1929

Triaena LeConte, 1847: 365 [junior homonym of *Triaena* Hübner, 1818]. Type species: *Feronia angustata* Say, 1823 designated by Chevrolat (1849: 643). Etymology (original). From the Greek *triaina* (trident), alluding to the trifid protibial spur of the adults ("*tibiisque anticis calcare trifido terminatis*") [feminine].

Zezea Csiki, 1929: 402. Replacement name for *Triaena* LeConte, 1847. Etymology. Unknown [feminine].

Pseudotriaena Minsk and Hatch, 1939: 216. Type species: *Amara glabrata* Minsk and Hatch, 1939 (= *Amara longula* LeConte, 1855) by original designation. Synonymy established by Lindroth (1968: 735). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Triaena* [*q.v.*] [feminine].

Diversity. Twenty-five species (Hieke 2007) in North America (nine species, all endemic), Asia (six species, only one endemic), Europe (13 species, six endemic), and northern Africa (four species, two endemic).

Identification. Lindroth (1968: 735-741, as *pallipes* group) covered all the North American species except *A. belfragei*. Three new species have been described subsequently (Hieke 1990, 2000) and one of Lindroth's species (*A. angustata*) was found to consist of two species (Hieke 2000). Hieke (2000) revised the species of the *angustata* group.

[**angustata group**]

***Amara angustata* (Say, 1823)**

Feronia angustata Say, 1823a: 36. Type locality: «Indep[e]nd[e]nce [Buchanan County], Iowa» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 345), in MCZ [# 33027]. Note. «on the Missouri» was the area originally cited by Say (1823a: 37).

Amara indistincta Haldeman, 1843b: 300. Type locality: «Easton, P[ennsylvani]a» (neotype label). Neotype (♂), designated by Hieke (2000: 49), in CNC [# 23535]. Synonymy established by LeConte (1855: 350).

Distribution. This species ranges from southern Quebec to southeastern British Columbia, south to southeastern Wyoming, southeastern Texas (Fort Bend and Harris Counties, Brian Raber pers. comm. 2010), east-central Louisiana (West Feliciana Parish, Igor M. Sokolov pers. comm. 2009), southern Mississippi (Hinds County, Drew A. Hildebrandt pers. comm. 2010), northern Alabama (Lawrence County, UASM), and South Carolina (Hieke 2000: 49-51). The records from "St. Louis, Montana" and "Cleveland, Oregon" listed by Hieke (2000: 51) refers to Missouri and Ohio respectively. The records from "New Brunswick" and "Prince Edward Island" (Bousquet and Larochelle (1993: 199) refer to other species; that from west-central Colorado (Wickham 1902: 237) needs confirmation.
Records. CAN: BC, MB, ON, QC, SK **USA**: AL, CT, DC, DE, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV, WY [CO]

***Amara angustatoides* Hieke, 2000**

Amara angustatoides Hieke, 2000: 55. Type locality: «Chicago [Cook County], Ill[inois]» (original citation). Holotype (♂) in USNM.

Distribution. This species ranges from New Brunswick to South Dakota, south to southern Pennsylvania (Hieke 2000: 55-57) and northeastern West Virginia (Randolph County, CMNH).
Records. CAN: NB, ON, QC **USA**: CT, IA, IL, IN, MA, ME, MD, MI, MN, NH, NY, OH, PA, SD, VT, WI, WV

***Amara belfragei* Horn, 1892**

Amara belfragei G.H. Horn, 1892a: 19. Type locality: «Waco [McLennan County], Texas» (original citation). Four syntypes in MCZ [# 34448].

Distribution. This species is known from a few localities in central and southern Texas (Hieke 2000: 58).
Records. USA: TX

***Amara flebilis* (Casey, 1918)**

Triaena flebilis Casey, 1918: 316. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47326].

Distribution. This species ranges from Cape Breton Island to southern Manitoba, south to northern Arizona, northeastern Colorado, northern Illinois, and northeastern Virginia (Hieke 2000: 53-55). The record "Cleveland, Oregon" (Hieke 2000: 55) refers to Ohio.
Records. CAN: MB, NB, NS (CBI), ON, QC **USA**: AZ, CO, CT, DC, IA, IL, IN, MA, MD, ME, MI, MN, ND, NH, NJ, NY, OH, PA, VA, VT, WI, WV
Note. This form has been treated as a synonym of *A. angustata* (Say) by Lindroth (1968: 736) but considered a valid species by Hieke (2000: 53).

[**scitula group**]
***Amara inexspectata* Hieke, 1990**

Amara inexspectata Hieke, 1990: 196. Type locality: «San Francisco [San Francisco County], Ca[lifornia]» (original citation). Holotype (♂) in CAS [# 16389].

Distribution. This species occurs along the Pacific Coast from central Oregon (Lincoln County, CNC) to Monterey County in California (Hieke 1990: 196).
Records. USA: CA, OR

***Amara kavanaughi* Hieke, 1990**

Amara kavanaughi Hieke, 1990: 198. Type locality: «10 mi[les] S[outh] of Dixon, Solano Co[unty], California» (original citation). Holotype (♂) in CAS [# 16390].

Distribution. This species is known from southern Oregon (Lake County, CNC) and several localities in northern and central California (Hieke 1990: 198).
Records. USA: CA, OR

***Amara longula* LeConte, 1855**

Amara longula LeConte, 1855: 350. Type locality: «San Francisco [San Francisco County, California]» (original citation). Three syntypes in MCZ [# 5675].
Amara afoveolata Hayward, 1908: 47. Type locality: «Vancouver Island [British Columbia] and California» (original citation), restricted to «Vanc[ouver] Isl[and]» by Lindroth (1968: 740). Three syntypes [3 originally cited] in MCZ [# 25670].

Synonymy established by Lindroth (1968: 740). Note. According to Lindroth (1968: 740), the syntype from California is conspecific with members of *A. scitula*.

Triaena profuga Casey, 1918: 318. Type locality: «Arizona» (original citation). Lectotype (♀), designated by Lindroth (1975: 137), in USNM [# 47330]. Synonymy established by Lindroth (1968: 740).

Amara alaxnoguia Minsk and Hatch, 1939: 217. Type locality: «Seattle [King County], Wash[ington]» (original citation). Holotype (♂) in USNM. Synonymy established by Hatch (1953: 129), confirmed by Lindroth (1968: 740).

Amara atrichata Minsk and Hatch, 1939: 217. Type locality: «Seattle [King County], Wash[ington]» (original citation). Holotype (♂) in USNM. Synonymy established by Lindroth (1968: 740).

Amara glabrata Minsk and Hatch, 1939: 217. Type locality: «Seattle [King County], Wash[ington]» (original citation). Holotype (♂) in USNM. Synonymy established by Hatch (1953: 129), confirmed by Lindroth (1968: 740).

Distribution. This species is found from southwestern British Columbia, including Vancouver Island (Lindroth 1968: 740), to southern California (Hayward 1908: 46; Moore 1937: 10; CAS) and "Arizona" (Casey 1918: 318, as *Triaena profuga*), including eastern Nevada (White Pine County, UASM). The records from "Idaho" and "Utah" (Bousquet and Larochelle 1993: 200) are probably in error.

Records. CAN: BC (VCI) **USA**: CA, NV, OR, WA

Amara pallipes Kirby, 1837

Amara pallipes Kirby, 1837: 39. Type locality: northern parts of British America (inferred from title of the book), restricted to «Edmonton, Al[ber]ta» by Lindroth (1968: 737). Holotype [by monotypy] (♂) in BMNH (Lindroth 1953b: 173).

Triaena depressa LeConte, 1847: 365. Type locality: «Lacum Superiorem» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5674]. Synonymy established by LeConte (1855: 350), confirmed by Lindroth (1968: 737).

Triaena shermani Casey, 1918: 315. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47327]. Synonymy established by Lindroth (1968: 737).

Triaena lawrenceana Casey, 1924: 66. Type locality: «Ogdensburg [Saint Lawrence County], New York» (original citation). Holotype [by monotypy] (♂) in USNM [# 47331]. Synonymy established by Lindroth (1968: 737).

Triaena parallela Casey, 1924: 67. Type locality: «Lake Champlain, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47333]. Synonymy established by Lindroth (1968: 737).

Amara kincaidi Minsk and Hatch, 1939: 217. Type locality: «Renton [King County], Wash[ington]» (original citation). Holotype (♂) in USNM. Synonymy established by Hatch (1953: 129), confirmed by Lindroth (1968: 737).

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1954c: 305) to Vancouver Island (Lindroth 1968: 739), north to Fort Smith in southern Northwest Territories (Bousquet 1987a: 130), south to western Washington (Hatch 1953: 129), southwestern Colorado (Montezuma County, CNC), Iowa (Hayward 1908: 46; Wickham 1911b: 6; Dickinson County, USNM), and Virginia (Casey 1918: 314). The records from "Nevada," "Tennessee" (Bousquet and Larochelle 1993: 200), and Georgia (J.E. LeConte 1849: 26; Fattig 1949: 30) need confirmation.
Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), NT, ON, QC, SK **USA**: CO, CT, DC, IA, ID, IL, IN, MA, ME, MI, MN, MT, ND, NH, NJ, NY, OH, PA, RI, SD, VA, VT, WA, WI, WV [GA, NV, TN]

Amara scitula Zimmermann, 1832

Amara scitula Zimmermann, 1832: 32. Type locality: «Neu-Californien» (original citation), restricted to «Waterman [= probably Barstow in San Bernardino County], Calif[ornia]» by Lindroth (1968: 739). Holotype [by monotypy] in ZILR (*fide* Zimmermann 1832: 33).

Bradytus immundus Casey, 1918: 243. Type locality: «Gualala, Mendocino Co[unty], California» (original citation). Lectotype [as typus] (♂), designated by Hieke (1994: 308), in USNM [# 47169]. Synonymy established by Hieke (1994: 308).

Amara provoana Casey, 1918: 300. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47280]. Synonymy established by Lindroth (1968: 739).

Triaena uinta Casey, 1918: 317. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 136), in USNM [# 47328]. Synonymy established by Lindroth (1968: 739).

Triaena vapida Casey, 1918: 317. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 136), in USNM [# 47329]. Synonymy established by Lindroth (1968: 739).

Amara obliqua Casey, 1924: 63. Type locality: «Victoria, B[ritish] C[olumbia]» (holotype label). Holotype [by monotypy] (♂) in USNM [# 47297]. Synonymy established by Lindroth (1968: 739).

Triaena irregularis Casey, 1924: 66. Type locality: «V[ancouver] I[sland]» (holotype label). Holotype [by monotypy] (♂) in USNM [# 47332]. Synonymy established by Lindroth (1968: 739). Note. According to Lindroth (1975: 137), the type locality originally given by Casey (1924: 66), "Washington State," is incorrect.

Distribution. This species ranges from southern Manitoba to Vancouver Island (Lindroth 1968: 740), south to southern California (Fall 1901a: 45; Moore 1937: 10) and southwestern Colorado (Wickham 1902: 237), east to northwestern South Dakota (Kirk and Balsbaugh 1975: 27).
Records. CAN: AB, BC (VCI), MB, SK **USA**: CA, CO, ID, MT, NV, OR, SD, UT, WA, WY

Tribe Oodini LaFerté-Sénectère, 1851

Oodites LaFerté-Sénectère, 1851: 214, 266. Type genus: *Oodes* Bonelli, 1810.
Thryptocerini Jeannel, 1949a: 775, 829. Type genus: *Thryptocerus* Chaudoir, 1878.
Sphaerodini Jeannel, 1949a: 829. Type genus: *Sphoerodes* Chaudoir, 1883. Note. This family-group name is based on *Sphaerodes*, an incorrect subsequent spelling of *Sphoerodes* not in prevailing usage.
Simoini Basilewsky, 1953a: 153. Type genus: *Simous* Chaudoir, 1882.

Diversity. Worldwide, with about 300 species in 32 genera (Lorenz 2005: 324-327). The Northern Hemisphere is represented by about 45 species (only 14.5% of the world fauna) and the Western Hemisphere by 55 species (about 18.5%). Seventeen species occur in North America.
Identification. Bousquet (1996a) revised and provided a key to the Nearctic, Mexican, and West Indian species.

Genus *Dercylinus* Chaudoir, 1883

Dercylinus Chaudoir, 1883: 525. Type species: *Evolenes impressa* LeConte, 1853 by monotypy. Etymology. From the generic name *Dercylus* and the Latin suffix *-inus* (pertaining to) [masculine].

Diversity. One species in temperate North America.

Dercylinus impressus (LeConte, 1853)

Evolenes impressa LeConte, 1853c: 392. Type locality: «N[ew] Orl[eans] [Orleans Parish, Louisiana]» (holotype label). Holotype [by monotypy] (♀) in MCZ [# 5870].

Distribution. This species is known from a few scattered localities in North Carolina (Brimley 1938: 127), Rabun County in northeastern Georgia (Fattig 1949: 45), southwestern Alabama (Washington County, Paul K. Lago pers. comm. 2009), northeastern Mississippi (Tishomingo County, Drew A. Hildebrandt pers. comm. 2008), southern Louisiana (Bousquet 1996a: 453), central Arkansas (Pulaski County, CMNH), eastern Missouri (Anonymous 2007), east-central Illinois (Coles County, Robert L. Davidson pers. comm. 2012), eastern Oklahoma (Bousquet 1996a: 453), and eastern Texas (Sabine County, Brian Raber pers. comm. 2010; Riley 2011).
Records. USA: AL, AR, GA, IL, LA, MO, MS, NC, OK, TX

Genus *Evolenes* LeConte, 1853

Evolenes LeConte, 1853c: 392. Type species: *Oodes exaratus* Dejean, 1831 designated by Bousquet and Larochelle (1993: 202). Etymology. From the Greek *ev* (well) and *olene* (elbow, arm, by extension tibia), possibly alluding to the expanded protibiae ("*tibiae anticae latiores*") of the adult [feminine].

Diversity. One species in temperate North America.

Evolenes exarata (Dejean, 1831)

Oodes exaratus Dejean, 1831: 678. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile, Mobile Co[unty], Alabama» by Bousquet (1996a: 454). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 26).

Distribution. This species is restricted to the Coastal Plain ranging from the District of Columbia to the Florida Panhandle, west to southeastern Mississippi (Drew A. Hildebrandt pers. comm. 2007) [see Bousquet 1996a: map 1].
Records. USA: AL, DC, FL, GA, MS, NC, SC

Genus *Anatrichis* LeConte, 1853

Anatrichis LeConte, 1853c: 391. Type species: *Oodes minutus* Dejean, 1831 by original designation. Etymology. Probably from the Greek *an* (without) and *trichos* (hair) and alluding to the absence of hairs underneath the metatarsomeres of the adults ("*tarsi posteriores subtus non pubescentes*") contrary to those of *Lachnocrepis* [feminine].

Diversity. Six species (Bousquet 1996a: 456), possibly eight (Lorenz 2005: 324), in the temperate and tropical areas of the Nearctic (two species), Neotropical, Australian, and Oriental Regions.

Anatrichis minuta (Dejean, 1831)

Oodes minutus Dejean, 1831: 677. Type locality: «Amérique septentrionale» (original citation), restricted to «Homestead [Dade County], Flor[ida]» by Lindroth (1969a: 1002). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 26).

Distribution. This species ranges from Massachusetts to central Kansas, south to southeastern Texas and southern Florida [see Bousquet 1996a: map 2]; also recorded from the Bahamas (Turnbow and Thomas 2008: 10).
Records. USA: AL, AR, CT, DC, FL, GA, IL, IN, KS, KY, LA, MA, MD, MO, MS, NC, NH, OH, OK, RI, SC, TN, TX, VA, WV – Bahamas

Anatrichis oblonga Horn, 1891

Anatrichis oblonga G.H. Horn, 1891: 37. Type locality: «near the lower Rio Grande, Texas» (original citation), restricted to «Brownsville, Cameron Co[unty]» by Bousquet (1996a: 457). Holotype [by monotypy] (♀) in MCZ [# 2945].

Distribution. This species ranges from eastern Texas south to Honduras; it also occurs in the Bahamas and Cuba [see Bousquet 1996a: 459, map 3].
Records. USA: TX – Bahamas, Belize, Cuba, Guatemala, Honduras, Mexico

Genus *Oodinus* Motschulsky, 1865

Oodinus Motschulsky, 1865: 352. Type species: *Oodinus piceus* Motschulsky, 1865 by monotypy. Etymology. From the generic name *Oodes* [*q.v.*] and the Latin suffix *-inus* (pertaining to) [masculine].

Oodiellus Chaudoir, 1882: 322. Type species: *Oodiellus mexicanus* Chaudoir, 1882 (= *Anatrichis alutaceus* Bates, 1882) designated by Bousquet and Larochelle (1993: 202). Synonymy established with doubt by Bates (1884: 269), confirmed by Spence (1983: 568). Etymology. From the generic name *Oodes* [*q.v.*] and the Latin suffix *-ellus* (small) [masculine].

Diversity. Ten species in the temperate and tropical areas of the Nearctic (two species), Neotropical, and Australian (one species in the Malay Archipelago) Regions.

Oodinus alutaceus (Bates, 1882)

Anatrichis alutaceus Bates, 1882a [February]: 48. Type locality: «Cordova [Veracruz], Mexico» (original citation). Lectotype (♀), designated by Bousquet (1996a: 464), in BMNH.

Oodiellus mexicanus Chaudoir, 1882 [27 December]: 323. Type locality: «Mexique» (original citation). Syntype(s) [2 originally cited] probably in MHNP. Synonymy established by Sallé (in Chaudoir 1882: 323).

Distribution. This species ranges from southeastern Texas (Bousquet 1996a: 465; map 5) south to Columbia (Martínez 2003: 17).

Records. USA: TX – Colombia, Costa Rica, Honduras, Mexico

Oodinus pseudopiceus Bousquet, 1996

Oodinus pseudopiceus Bousquet, 1996a: 462. Type locality: «Hillsborough R[iver] S[tate] P[ark], Hillsboro[ugh] Co[unty], Fl[orid]a» (original citation). Holotype (♂) in CNC [# 21759].

Distribution. This species is known from the Florida Peninsula and several islands of the West Indies [see Bousquet 1996a: map 4].

Records. USA: FL – Bahamas, Cuba, Dominican Republic

Genus *Lachnocrepis* LeConte, 1853

Lachnocrepis LeConte, 1853c: 391. Type species: *Oodes parallelus* Say, 1830 by monotypy. Etymology. From the Greek *lachnos* (soft hair, down) and *crepis* (boot, sandal), alluding to the presence of dense hairs underneath all tarsomeres ("*tarsi omnes subtus pilosi*") of the adult [feminine].

Eulachnocrepis Habu, 1956b: 96. Type species: *Oodes prolixus* Bates, 1873 by original designation. Synonymy established by Bousquet (1996a: 467). Etymology. From the Greek *eu* (agreeable, original, primitive) and the generic name *Lachnocrepis* [*q.v.*] [feminine].

Diversity. Three species in temperate regions of North America (one species) and eastern Asia (two species).

Lachnocrepis parallela (Say, 1830)

Oodes parallelus Say, 1830b: (3) [3]. Type locality: «L[ouisian]a» (neotype label), restricted to «New Orleans, Orleans Parish» by Bousquet (1996a: 468). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32975]. Note. «Louisiana» was the area originally cited by Say (1830b: (3) [3]).

Distribution. This species has a disjunct distribution over eastern North America. In the north, it ranges from Nova Scotia (Majka et al. 2007: 11) to southeastern Manitoba, south to Nebraska, northwestern Tennessee (Obion County, CMNH), and Maryland; in the south, it occurs along the Coastal Plain from Georgia (Fattig 1949: 45) to southern Florida, west to southern Louisiana [see Bousquet 1996a: map 6]. The species could reach the Rio Grande since Summers (1874b: 135) reported seeing one specimen "from Mexico, near the Rio Grande."
Records. CAN: MB, NB, NS, ON, QC **USA**: AL, CT, DC, FL, GA, IA, IL, IN, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, PA, RI, SD, TN, VA, VT, WI, WV

Genus *Oodes* Bonelli, 1810

Oodes Bonelli, 1810: Tabula Synoptica. Type species: *Carabus helopioides* Fabricius, 1792 by subsequent monotypy in Panzer (1813: 51). Etymology. From the Greek *oön* (egg) and the suffix *-oides* (having the form of), alluding to the ovoid body shape ("*corp*[*us*] *parum convexum, ovale*") of the adult [masculine].

Diversity. About 50 species in temperate and tropical areas of the Nearctic (four species), Palaearctic (11 species), Oriental, Afrotropical (one species), and Australian Regions.

Oodes amaroides Dejean, 1831

Oodes amaroides Dejean, 1831: 674. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1969a: 1000). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 26). Note. Chaudoir's collection in MHNP contains two specimens, a male and a female, of this species and the male has been designated lectotype by Bousquet (1996a: 472). The designation is invalid since Dejean (1831: 675) expressly stated that he had but a single female of this species.

Distribution. This species ranges from southern Maine to east-central Minnesota (Kamal J.K. Gandhi pers. comm. 2008), south to southeastern Texas and the Florida Peninsula; also known from one locality in Cuba [see Bousquet 1996a: map 7]. The record from southeastern Wyoming (Lavigne 1977: 47) is probably based on a mislabeled specimen or a stray.

Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, WI, WV – Cuba

Oodes americanus Dejean, 1826

Oodes americanus Dejean, 1826: 377. Type locality: «Amérique septentrionale» (original citation), restricted to «New Orleans [Orleans Parish], Louis[iana]» by Lindroth (1969a: 997). Lectotype (♂), designated by Bousquet (1996a: 474), in MHNP.

Distribution. This species is restricted to the Coastal Plain ranging from Maryland to central Florida, west to central Louisiana [see Bousquet 1996a: map 9].
Records. USA: AL, FL, GA, LA, MD, MS, NC, SC, VA

Oodes brevis Lindroth, 1957

Oodes brevis Lindroth, 1957a: 63. Type locality: «Fairfax Co[unty], Virginia» (original citation). Holotype (♂) in MCZ [# 29603].

Distribution. This species ranges from southern New Hampshire to northwestern Arkansas, north to southernmost Ontario and the central part of the lower peninsula of Michigan, south to eastern Texas and the Florida Panhandle [see Bousquet 1996a: map 10]. The record from "Iowa" (Bousquet and Larochelle 1993: 200) needs confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IL, IN, LA, MA, MD, MI, MO, MS, NC, NH, NJ, NY, OH, RI, PA, SC, TN, TX, VA [IA]

Oodes fluvialis LeConte, 1863

Oodes fluvialis LeConte, 1863c: 13. Type locality: «Canada and western states» (original citation), restricted to «Turkey Point, Ont[ario]» by Lindroth (1969a: 997). Lectotype (♂), designated by Bousquet (1996a: 473), in MCZ [# 5867].

Distribution. This species occurs from southern Maine and southern Quebec to western Minnesota, south to east-central Texas (Riley 2011), southwestern Louisiana and southern Florida [see Bousquet 1996a: map 8].
Records. CAN: ON, QC **USA**: AL, CT, DC, FL, GA, IA, IL, IN, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, PA, RI, SC, TN, TX, VA, VT, WI

Genus *Stenocrepis* Chaudoir, 1857

Stenocrepis Chaudoir, 1857: 45. Type species: *Oodes cayennensis* Buquet, 1835 designated by Chaudoir (1883: 488). Etymology (original). From the Greek *stenos* (narrow) and *crepis* (sole), alluding to the narrow male protarsomeres 1-3 ("*tarsi in mare articulis tribus dilatatis, angustis*") [feminine].

Diversity. About 30 species in temperate and tropical areas of the Nearctic (six species) and Neotropical Regions, including the West Indies. The species are currently arrayed in two subgenera: *Stenocrepis s.str.* and *Stenous* Chaudoir.

Subgenus *Stenocrepis* Chaudoir, 1857

Stenocrepis Chaudoir, 1857: 45. Type species: *Oodes cayennensis* Buquet, 1835 designated by Chaudoir (1883: 488).

Diversity. Ten species, ranging from southern Texas to central Argentina and including the West Indies, belong to this subgenus.

Stenocrepis insulana (Jacquelin du Val, 1857)

Oodes insulanus Jacquelin du Val, 1857: 20. Type locality: Cuba (inferred from title of the book). Syntype(s) location unknown (possibly in MHNP).

Oodes texanus LeConte, 1863c: 13. Type locality: «Texas» (original citation). Lectotype (♀), designated by Bousquet (1996a: 481), in MCZ [# 5869]. Synonymy established by Bousquet (1996a: 481).

Stenocrepis chalcas Bates, 1882a: 47. Type locality: «Cordova [Veracruz], Mexico» (original citation). Lectotype (♂), designated by Bousquet and Larochelle (1993: 17), in BMNH. Synonymy established, under the name *S. texanus* (LeConte), by Bousquet and Larochelle (1993: 17).

Stenocrepis chalcochrous Chaudoir, 1883: 487. Type locality: «Mexique» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established, under the name *S. chalcas* Bates, by Sallé (in Chaudoir 1883: 487), confirmed by Bousquet (1996a: 481).

Distribution. This species ranges from southern Texas to southern Mexico [see Bousquet 1996a: map 11]; it is also known from the Bahamas, Cuba, Cayman Islands, Trinidad and Tobago, and French Guiana (Bousquet 1996a: 482-483). The record from southeastern Louisiana (Summers 1874a: 80, as *Oodes texanus*) is suspect; that from northeastern Kansas (Knaus 1901: 110) refers to *S. cuprea* (Knaus 1903: 187).
Records. USA: TX [LA] – Bahamas, Cuba, Cayman Islands, French Guiana, Trinidad and Tobago

Subgenus *Stenous* Chaudoir, 1857

Stenous Chaudoir, 1857: 39. Type species: *Oodes cupreus* Chaudoir, 1843 designated by Bousquet and Larochelle (1993: 201). Etymology (original). From the Greek *stenos* (narrow) and *oön* (egg), referring to the shape of the body ("*habitus anguste ovatus*") of the adult [masculine].

Crossocrepis Chaudoir, 1857: 50. Type species: *Oodes quatuordecimstriatus* Chaudoir, 1843 by monotypy. Synonymy established by Bousquet (1996a: 483). Etymology. From the Greek *crossos* (fringe) and *crepis* (sole) [feminine].

Diversity. Twenty species in temperate and tropical areas of the Nearctic (five species) and Neotropical (19 species) Regions, including the West Indies.

Stenocrepis cuprea (Chaudoir, 1843)

Oodes cupreus Chaudoir, 1843b: 761. Type locality: «Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♂), designated by Bousquet (1996a: 491), in MHNP.

Oodes leucodactylus LaFerté-Sénectère, 1851: 273. Type locality: «New Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by Chaudoir (1857: 40).

Distribution. This species ranges from southeastern Wisconsin (Messer 2010: 39) and southernmost Ontario south to southern Florida and the Rio Grande in southern Texas, west along the Rio Grande to central New Mexico [see Bousquet 1996a: map 15]. The species is not yet know from Mexico but it certainly occurs at least along the states bordering Texas. The record from "Pennsylvania" (Bousquet and Larochelle 1993: 201) needs confirmation.

Records. CAN: ON **USA**: AL, AR, FL, GA, IA, IL, IN, KS, KY, LA, MD, MI, MO, MS, NE, NM, OH, OK, SC, TN, TX, VA, WI, WV [PA]

Stenocrepis duodecimstriata (Chevrolat, 1836)

Oodes 12-striatus Chevrolat, 1836b: [no. 173]. Type locality: «Tuspan [Veracruz, Mexico]» (original citation). Holotype [by monotypy] (♂) in UMO.

Oodes humilis LaFerté-Sénectère, 1851: 270. Type locality: «Mexico» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by Bates (1882a: 46).

Oodes striatellus LaFerté-Sénectère, 1851: 272. Type locality: «Mexico» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by Chaudoir (1883: 494).

Stenous le contei Chaudoir, 1857: 41. Type locality: «Louisiane» (original citation). Lectotype (♂), designated by Bousquet (1996a: 485), in MHNP. Synonymy established by Chaudoir (1883: 494), confirmed by Bousquet (1996a: 485).

Distribution. This species ranges from Long Island, New York, to south-central Oklahoma, south to Nicaragua (Bates 1882a: 46) and southern Florida, west to the Mexican state of Nayarit; also known from several islands in the Bahamas and the Greater Antilles [see Bousquet 1996a: map 12].

Records. USA: AL, AR, FL, GA, IL, KY, LA, MD, MS, NC, NJ, NY, OH, OK, SC, VA, TX, WV – Bahamas, Cuba, Dominican Republic, Guatemala, Haiti, Jamaica, Mexico, Nicaragua

***Stenocrepis elegans* (LeConte, 1851)**

Oodes elegans LeConte, 1851: 180. Type locality: «ad fluminis Gilae ripas, circa Pimas [Arizona]» (original citation). Lectotype (♂), designated by Bousquet (1996a: 495), in MCZ [# 76].

Distribution. This species ranges from southwestern California to eastern Arizona, south along the Gulf of California to Nayarit [see Bousquet 1996a: map 17]. A few specimens simply labeled from New Mexico and Texas are known.
Records. USA: AZ, CA [NM, TX] – Mexico

***Stenocrepis mexicana* (Chevrolat, 1835)**

Oodes mexicanus Chevrolat, 1835b: [no. 102]. Type locality: Mexico (inferred from title of the book). Holotype [by monotypy] (♀) in UMO (Bousquet 1996a: 487).

Oodes 14-striatus Chaudoir, 1843b: 759. Type locality: «près de la Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♂), designated by Bousquet (1996a: 487), in MHNP. Synonymy established by Bousquet (1996a: 487).

Oodes picipes LeConte, 1844: 52. Type locality: «Georgia» (original citation). Lectotype (♀), designated by Bousquet (1996a: 487), in MCZ [# 5868]. Synonymy established, under the name *S. quatuordecimstriata* (Chaudoir), by Chaudoir (1857: 51), confirmed by Bousquet (1996a: 487).

Oodes stenocephalus LaFerté-Sénectère, 1851: 271. Type locality: «New Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established, under the name *S. quatuordecimstriata* (Chaudoir), by Chaudoir (1857: 51).

Stenocrepis sulcatus Chevrolat, 1863: 195. Type locality: «Cuba» (original citation). Holotype [by monotypy] (♂) location unknown. Synonymy established by Bousquet (1996a: 487).

Distribution. This species ranges from New Jersey to southern Wisconsin, south through southeastern Kansas (Knaus 1903: 188) and eastern and central Texas to southern Mexico, and to the Florida Keys, west to the Pacific Coast in the Mexican state of Colima; also recorded from the Bahamas (Turnbow and Thomas 2008: 15) and Cuba [see Bousquet 1996a: map 13]. The record from "New Mexico" (Bousquet and Larochelle 1993: 201, as *S. quatuordecimstriata*) is likely in error.
Records. USA: AL, AR, FL, GA, IL, IN, KS, KY, LA, MS, NC, NJ, OH, OK, SC, TN, TX, VA, WI, WV – Bahamas, Cuba, Mexico

***Stenocrepis tibialis* (Chevrolat, 1834)**

Amara tibialis Chevrolat, 1834: [no. 46]. Type locality: Mexico (inferred from title of the book), herein restricted to Mazatlán, Sinaloa (USNM). Lectotype (♂), designated by Bousquet (1996a: 493), in UMO.

Oodes femoralis Chaudoir, 1835: 444. Type locality: «Cuba» (original citation). Lectotype (♀), designated by Bousquet (1996a: 493), in MHNP. Synonymy established by Chaudoir (1837b: 50), confirmed by Bousquet (1996a: 493).

Oodes pallipes Brullé, 1836: plate 2, figure 6. Type locality: «sur les bords du Rio grande, province de Santa-Cruz [Argentina]» (Brullé 1837: 32). Syntype(s) location unknown (possibly in MHNP). Synonymy established, under the name *S. femoralis* (Chaudoir), by Brullé (1837: 32).

Oodes chlorophanus Erichson, 1847: 72. Type locality: Peru (inferred from title of the publication). Syntype(s) location unknown. Synonymy established by Bates (1882a: 46). Note. Chaudoir (1883: 502) retained this name for a distinct, closely related species but the position of Bates (1882a: 46) seems more plausible (Bousquet 1996a: 493).

Distribution. This species ranges from southern Texas south to Argentina (Brullé 1837: 32, as *O. pallipes*) and along the West Indies from Cuba to at least Puerto Rico [see Bousquet 1996a: map 16].

Records. USA: TX – Argentina, Brazil, Cayman Islands, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Jamaica, Mexico, Peru, Puerto Rico.

Tribe Panagaeini Bonelli, 1810

Panagaeides Bonelli, 1810: Tabula Synoptica. Type genus: *Panagaeus* Latreille, 1802.
Tefflini Basilewsky, 1946: 7. Type genus: *Tefflus* Leach, 1819.

Diversity. Worldwide, with about 270 species in 19 genera (Lorenz 2005: 319-323, as Panagaeina). The Northern Hemisphere is represented by only about 40 species (15.5 % of the world fauna). Four species in two genera are found in North America.

Genus *Panagaeus* Latreille, 1802

Panagaeus Latreille, 1802: 91. Type species: *Carabus cruxmajor* Linnaeus, 1758 by monotypy. Etymology. Uncertain, possibly from the Greek *pan-* (all, the whole) and *agaios* (admirable, enviable), alluding to the overall beautiful coloration of the adult, or from the Greek *panagios* (very saintly, very pious), alluding to the cross-shaped color band on the elytra of the species Latreille had before him [masculine].

Diversity. Fourteen species in temperate and tropical areas of the Nearctic (three species), Neotropical (four species), and Palaearctic (eight species) Regions arrayed in two subgenera: *Panagaeus* (Palaearctic Region) and *Hologaeus* (Western Hemisphere).

Identification. Ogueta (1966a) reviewed the Western Hemisphere species and provided a key for their identification.

Subgenus *Hologaeus* Ogueta, 1966

Hologaeus Ogueta, 1966b: 396. Type species: *Panagaeus cruciger* Say, 1823 by original designation. Etymology. From the Greek *holo-* (whole, entire) and *agaios* (admi-

rable, enviable), probably alluding to the overall beautiful coloration of the adults [masculine].

Diversity. Western Hemisphere, with six species in the Nearctic (three species) and Neotropical (four species) Regions.

Panagaeus cruciger Say, 1823

Panagaeus crucigerus Say, 1823a: 69. Type locality: «Surf City [Ocean County], N[ew] J[ersey]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 335), in MCZ [# 33075]. Note. «Senipuxten, eastern shore of Maryland» was the area originally cited by Say (1823a: 70).

Panagaeus lapidarius LaFerté-Sénectère, 1851: 223. Type locality: «New-Orléans [Louisiana]» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by Schaum (1852: 143).

Distribution. This species ranges from Long Island, New York (Notman 1928: 213; MCZ), to southern Florida (Peck and Thomas 1998: 20), west to eastern Texas along the Gulf Coast (Snow 1906a: 141; Galveston County, USNM); also recorded from northern Indiana (Blatchley 1910: 65; Schrock 1985: 352) and along the Ohio River in southwestern Ohio (Dury 1902: 111). The record from "Pennsylvania" (Bousquet and Larochelle 1993: 202) needs confirmation.

Records. USA: AL, DE, FL, IN, LA, MD, MS, NC, NJ, NY, OH, TX, VA [PA]

Panagaeus fasciatus Say, 1823

Panagaeus fasciatus Say, 1823a: 70. Type locality: «P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 335), in MCZ [# 33074].

Distribution. This species is found from Massachusetts (Harris in Scudder 1869: 264) and Connecticut (Krinsky and Oliver 2001: 136) to western South Dakota (Larsen and Purrington 2010: 571), including southern Ontario (Lindroth 1969a: 969), south to southeastern Texas (San Patricio County, CNC) and southern Florida (Peck and Thomas 1998: 20); also recorded from northeastern New Mexico (Fall and Cockerell 1907: 157).

Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, NE, NJ, NM, NY, OH, OK, PA, SC, SD, TN, TX, VA, WI, WV

Panagaeus sallei Chaudoir, 1862

Panagaeus sallei Chaudoir, 1862: 353. Type locality: «Aculzingo, Etat de Vera-Cruz, Mexique» (original citation). Syntype(s) [3 originally cited] in MHNP.

Panagaeus sallaei Bates, 1882a: 41. Unjustified emendation of *Panagaeus sallei* Chaudoir, 1862.

Distribution. This species ranges from central and southern Arizona (Cochise, Santa Cruz, and Yavapai Counties, CMNH, CNC; LeConte 1879c: 60) and western and south-central Texas (Presidio and Bexar Counties, CMNH, MCZ; LeConte 1879c: 60), south at least to central Veracruz and the Federal District in Mexico (Ogueta 1966a: 12); also found in the Baja California Peninsula (Horn 1894: 307).
Records. USA: AZ, TX – Mexico

Genus *Micrixys* LeConte, 1854

Eugnathus LeConte, 1853c: 375 [junior homonym of *Eugnathus* Schönherr, 1833]. Type species: *Panagaeus distinctus* Haldeman, 1852 by monotypy. Etymology. From the Greek *eu* (well, by extension large) and *gnathos* (jaw), probably alluding to the well-developed mandibles ("*mandibulae crassae dilatatae*") of the adult [masculine].

Micrixys LeConte, 1854d: 220. Replacement name for *Eugnathus* LeConte, 1853. Etymology. From the Greek *micros* (small, little) and *ixys* (waist), probably alluding to the abrupt basal constriction of the pronotum ("*thorax postice sensim valde angustatus sub-pedunculatus*", see LeConte 1853c: 375) of the adult [feminine].

Diversity. Two species in temperate and tropical areas of the Nearctic (one species) and Neotropical (two species in Mexico) Regions.
Identification. Van Dyke (1927b: 93) discussed the structural differences between the two species.

Micrixys distincta (Haldeman, 1852)

Panagaeus distinctus Haldeman, 1852: 373. Type locality: «Santa Fé [Santa Fe County, New Mexico]» (original citation). One possible syntype, a ♀ labeled "[dark green disc] / distinctus 3 [handwritten]," in MCZ (collection LeConte).

Distribution. This species ranges from southwestern Tennessee (Hardeman County, CMNH) to southwestern Arizona (Maricopa County, USNM), north to southeastern Colorado (Michels et al. 2008; Las Animas County, Robert L. Davidson pers. comm. 2008) and northeastern Kansas (Riley County, CNC), south to the state of Guanajuato on the Mexican Plateau (Ball and Shpeley 1992a: 60). The record from southern Wisconsin (Rauterberg 1885: 12) is probably in error.
Records. USA: AZ, CO, KS, NM, OK, TN, TX – Mexico

Tribe Chlaeniini Brullé, 1834

Chlaenides Brullé, 1834b: 123. Type genus: *Chlaenius* Bonelli, 1810. Note. 1. Under Article 11.7.2 of the Code, family-group names published in vernacular forms, such as this one, can be made available only if they were published before 1900, have been latinized by later authors, and have been generally accepted as valid and as dating from the first publication in vernacular form. These conditions are met since at least 1998

when Lorenz (1998: 308) used the name Chlaeniini Brullé, 1834 for this tribe. 2. The family-group name Callistidae Laporte, 1834 has been used as the valid name for this tribe by some authors. Tome IV of the *Histoire naturelle des insectes* authored by Brullé was issued in two livraisons and the first one (pages 1-240) was recorded on August 2 by the *Bibliographie de la France*. Laporte's *Etudes entomologiques* was also issued in two livraisons and the first one (pages 1-94 + pls 1-2), in which the name Callistidae was made available, was recorded on August 9 by the *Bibliographie de la France*. Based on this evidence alone, Brullé's name is retained here as the valid one for the tribe.

Diversity. Worldwide, with about 980 species (Lorenz 2005: 328-342) arrayed in two subtribes: Callistina (77 afro-oriental and one Palaearctic species) and Chlaeniina (about 900 species).

Subtribe Chlaeniina Brullé, 1834

Chlaenides Brullé, 1834b: 123. Type genus: *Chlaenius* Bonelli, 1810.
Lissaucheniidae Gistel, 1848b: [2]. Type genus: *Lissauchenius* Macleay, 1825.
Rhopalomelini Alluaud, 1930: 105. Type genus: *Rhopalomelus* Boheman, 1848.
Chlaeniodini Jeannel, 1949a: 776, 777. Type genus: *Chlaeniodus* Jeannel, 1949.
Eccoptomenini Jeannel, 1949a: 776, 821. Type genus: *Eccoptomenus* Chaudoir, 1850.
Chlaenionini Jeannel, 1949a: 776. Type genus: *Chlaenionus* Kuntzen, 1913.
Procletini Basilewsky, 1950: 49. Type genus: *Procletus* Péringuey, 1896.
Pleroticini Basilewsky, 1950: 50. Type genus: *Pleroticus* Péringuey, 1896.
Callistoidini Basilewsky, 1950: 51. Type genus: *Callistoides* Motschulsky, 1864.
Harpaglossini Basilewsky, 1950: 52. Type genus: *Harpaglossus* Motschulsky, 1858.
Chlaenioctenini Basilewsky and Grundmann, 1955: 204. Type genus: *Chlaenioctenus* Bates, 1892.
Brachylobini Basilewsky and Grundmann, 1955: 204. Type genus: *Brachylobus* Chaudoir, 1876.
Leptodinodini Basilewsky and Grundmann, 1955: 205. Type genus: *Leptodinodes* Jeannel, 1949.

Diversity. Worldwide, with about 900 species (Lorenz 2005: 328-341). The vast majority of species (about 81 % of the world fauna) are found in the Oriental and Afrotropical Regions.

Genus *Chlaenius* Bonelli, 1810

Chlaenius Bonelli, 1810: Tabula Synoptica. Type species: *Carabus festivus* Panzer, 1796 designated by Madge (1975: 581). Etymology. From the Greek *chlaena* (coat, blanket), possibly alluding to the pubescence on the elytra of the species in the hands of Bonelli [masculine]. Note. Madge (1975: 581) correctly pointed out that the first valid type species of *Chlaenius* Bonelli, 1810 is *Carabus spoliatus* Rossi, 1792 as designated by Hope (1838: 75). However, acceptance of Hope's designation would

seriously affect the current nomenclature in the genus and I agree with Madge that a request should be addressed to the International Commission on Zoological Nomenclature to set aside Hope's designation and select that of *Carabus festivus* Panzer, 1796 as type species of *Chlaenius*.

Diversity. Worldwide, with about 855 species (Lorenz 2005: 328-341) arrayed in 62 subgenera. The genus is mainly represented in the Afrotropical and Oriental Regions with about 650 species (approximately 76% of the world fauna). The North American fauna has 52 species (6% of the world fauna) in the boreal, temperate, and subtropical regions.

Identification. Bell (1960) revised the North American species. Since the publication of this work, one Neotropical species was discovered in southern Texas (*Chlaenius azurescens*), the name of one species (*C. perplexus*) was replaced by an older one (*C. circumcinctus*), and two of Bell's species (*C. cursor* and *C. herbaceus*) have been shown to be a complex of two species each and the species found in North America to be *C. sparsus* and *C. patruelis* respectively. A number of subspecies recognized by Bell (1960) are placed in synonymy in this catalogue.

Subgenus *Pseudanomoglossus* Bell, 1960

Pseudanomoglossus Bell, 1960: 101. Type species: *Chlaenius maxillosus* Horn, 1876 by original designation. Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Anomoglossus* [*q.v.*] [masculine].

Diversity. One species along the Coastal Plain of eastern North America.

Chlaenius maxillosus Horn, 1876

Chlaenius maxillosus G.H. Horn, 1876d: 260. Type locality: «Lake Harney and Haulover, Florida» (original citation), restricted to «Lake Harney [Volusia County]» by Bell (1960: 102). One syntype [2 ♀ originally cited] in MCZ [# 8004].

Distribution. This species is found from southeastern Georgia (Fattig 1949: 44) to southern Florida (Bell 1960: 102), west to southeastern Texas (Aransas County, USNM); also recorded from South Bimini Island in the Bahamas (Darlington 1953: 8).

Records. USA: AL, FL, GA, MS, TX – Bahamas

Subgenus *Eurydactylus* LaFerté-Sénectère, 1851

Eurydactylus LaFerté-Sénectère, 1851: 255. Type species: *Epomis tomentosus* Say, 1823 by monotypy. Etymology (original). From the Greek *eurys* (broad, wide) and *dactylos* (finger), alluding to the strong dilatation of the male protarsomeres ("*tarses antérieurs du mâle présentant une dilatation tout à fait exceptionnelle*") [masculine].

Glyptoderus LaFerté-Sénectère, 1851: 260. Type species: *Glyptoderus aurolimbatus* LaFerté-Sénectère, 1851 by original designation. Synonymy established by Bell

(1960: 102). Etymology. From the Greek *glyptos* (carved) and *dere* (neck, by extension pronotum) [masculine].

Diversity. Seven species in the Nearctic (two species) and Neotropical (five species) Regions.

Chlaenius pimalicus Casey, 1914

Chlaenius pimalicus Casey, 1914: 38. Type locality: «southern Arizona» (original citation), herein restricted to Douglas, Cochise County (see Bell 1960: 103). Three syntypes [3 originally cited] in USNM [# 47702].

Distribution. To date this species has been recorded only from southeastern Arizona (Bell 1960: 103).
Records. USA: AZ

Chlaenius tomentosus (Say, 1823)

Epomis tomentosus Say, 1823a: 60. Type locality: «Penn[sylvania]» (neotype label), herein restricted to Pocono Lake, Monroe County (see Bell 1960: 104). Neotype (♀), designated by Lindroth and Freitag (1969: 350), in MCZ [# 32996]. Note. «Pennsylvania; the Missouri» were the areas originally cited by Say (1823a: 61).

Amara luctuosa Germar, 1824: 10. Type locality: «Kentucky» (original citation). Syntype(s) probably lost (Lindroth 1969a: 974). Synonymy established by LeConte (1847: 438).

Chlaenius amplus LeConte, 1856b: 29. Type locality: «Georgia» (original citation). One syntype [2 originally cited] in MCZ [# 5866]. Synonymy established by Horn (1876d: 276), confirmed by Bell (1960: 103).

Chlaenius zunianus Casey, 1914: 38. Type locality: «Fort Wingate [McKinley County], New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47718]. Synonymy established by Lindroth (1969a: 974).

Chlaenius tomentosus lacustrinus Casey, 1920: 298. Type locality: «Bayfield [Bayfield County, Wisconsin], Lake Superior» (original citation). Lectotype (♂), designated by Lindroth (1975: 144), in USNM [# 47717]. Synonymy established by Bell (1960: 103).

Distribution. This species ranges from Maine to southern Alberta, south to southeastern Arizona, central Texas, and central Florida (Bell 1960: 104-105).
Records. CAN: AB, MB, ON, QC, SK **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Subgenus *Anomoglossus* Chaudoir, 1857

Anomoglossus Chaudoir, 1857: 4. Type species: *Chlaenius emarginatus* Say, 1823 designated by Bell (1960: 105). Etymology (original). From the Greek *anomos* (ab-

Figure 34. *Trichotichnus dichrous* (Dejean). This eastern species is color-dimorphic, a phenomenon rarely seen in North American carabids. While most adults have the head and pronotum reddish-yellow and the elytra much darker, a small number of adults are known to be uniformly piceous. When he described the species, Dejean had a single specimen of the common morph. The strong color contrast between the forebody and elytra prompt him to propose the name *dichrous*, from the Greek prefix *di-* (two) and *chroma* (color of the skin).

normal) and *glossa* (tongue), alluding to the unusual shape of the ligula ("*ligula omnino abnormis*"), corresponding to the glossa and paraglossae or the glossal sclerite, of the adult [masculine].

Diversity. Three species in eastern North America.
Taxonomic Note. The generic name *Agreuter* Lepeletier and Audinet-Serville (in Latreille et al. 1828: 633) was proposed for two species, *Chlaenius chlorodius* Dejean, 1826 and *Chlaenius elegantulus* Dejean, 1826 (= *Chlaenius pusillus* Say, 1823). Bousquet (2002b: 6) designated *C. elegantulus* as type species and so the name is listed as a synonym of *Anomoglossus* Chaudoir (e.g., Lorenz 2005: 333). However, Duponchel (1840a: 196) had selected *C. chlorodius* as the type species and so *Agreuter* is a senior synonym of *Amblygenius* LaFerté-Sénectère, 1851.

Chlaenius amoenus Dejean, 1831

Chlaenius amoenus Dejean, 1831: 648. Type locality: «Amérique septentrionale» (original citation), restricted to «Georgia» by Bell (1960: 106), herein to Ellijay, Gilmer County (see Fattig 1949: 44). Two syntypes in MHNP (Lindroth 1955b: 26).

Distribution. This species ranges from Virginia (Robert L. Davidson pers. comm. 1992) to northeastern Iowa (Purrington et al. 2002: 201), south to eastern Texas (Sabine County, CMNH), southeastern Louisiana (Colby 2002: 37), and northern Florida (Bell 1960: 106).
Records. USA: AL, AR, FL, GA, IA, IL, LA, MO, MS, NC, SC, TN, TX, VA

Chlaenius emarginatus Say, 1823

Chlaenius emarginatus Say, 1823a: 63. Type locality: North America (inferred from title of the paper); restricted to «White Sulphur Springs [Greenbrier County], W[est] V[irgini]a» by Lindroth and Freitag (1969: 351). Lectotype (♂), designated by Lindroth and Freitag (1969: 351), in MHNP (collection Dejean).
Anomoglossus delectans Casey, 1914: 39. Type locality: «central New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47719]. Synonymy established by Bell (1960: 106).
Anomoglossus gravis Casey, 1914: 40. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). One syntype in USNM [# 47721]. Synonymy established by Bell (1960: 106).
Anomoglossus semotus Casey, 1920: 299. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). One syntype in USNM [# 47720]. Synonymy established by Bell (1960: 106).

Distribution. This species ranges from Nova Scotia (Lindroth 1969a: 975) to eastern South Dakota (Kirk and Balsbaugh 1975: 36; French et al. 2004: 557), south to central Oklahoma and central Florida (Bell 1960: 107). Old specimens labeled "Tex" are also known (Bell 1960: 107).

Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, VA, VT, WI, WV [TX]

Chlaenius pusillus Say, 1823

Chlaenius pusillus Say, 1823a: 63. Type locality: «Frankl[i]nv[i]lle, P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32977].

Chlaenius elegantulus Dejean, 1826: 367. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 26). Synonymy established by Say (1830b: (3)[3]), confirmed by Lindroth (1955b: 26).

Anomoglossus nanulus Casey, 1914: 41. Type locality: «Alexandria [Rapides Parish], Louisiana» (original citation). One syntype in USNM [# 47722]. Synonymy established by Bell (1960: 107).

Distribution. This species ranges from southern Quebec (Saint-Clet, CNC) to southeastern Minnesota (Gandhi et al. 2005: 929), south to southern Texas and central Florida (Bell 1960: 108). At least one specimen labeled "Mass" is known (Bell 1960: 108).
Records. CAN: ON QC **USA**: AL, AR, CT, DC, DE, GA, FL, IA, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, NC, NE, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, WI [MA]

Subgenus *Chlaenius* Bonelli, 1810

Chlaenius Bonelli, 1810: Tabula Synoptica. Type species: *Carabus festivus* Panzer, 1796 designated by Madge (1975: 581).

Chaelinus Basilewsky and Grundmann, 1954: 242. Type species: *Carabus festivus* Panzer, 1796 by original designation. Etymology. Anagram of the generic name *Chlaenius* [*q.v.*] [masculine].

Chinelaus Basilewsky and Grundmann, 1954: 242. Type species: *Epomis pallipes* Gebler, 1823 by original designation. Etymology. Anagram of the generic name *Chlaenius* [*q.v.*] [masculine].

Merochlaenius Grundmann, 1955: 280. Type species: *Chlaenius aestivus* Say, 1823 by original designation. Synonymy established by Bousquet and Larochelle (1993: 204). Etymology. From the Greek *meros* (thigh, femur) and the generic name *Chlaenius* [*q.v.*] [masculine].

Pachychlaenius Grundmann, 1955: 282 (as *Pachychleanius*). Type species: *Chlaenius erythropus* Germar, 1824 by original designation. Synonymy established by Bousquet and Larochelle (1993: 204). Etymology. From the Greek *pachys* (thick) and the generic name *Chlaenius* [*q.v.*] [masculine].

Sericochlaenius Grundmann, 1955: 286. Type species: *Chlaenius cumatilis* LeConte, 1851 by original designation. Synonymy established by Bousquet and Larochelle (1993: 204). Etymology. From the Greek *sericon* (silk) and the generic name *Chlaenius* [*q.v.*] [masculine].

Diversity. About 140 species in all zoogeographical regions except the Australian Region. The Nearctic Region is represented by 14 species.

[**aestivus group**]

***Chlaenius aestivus* Say, 1823**

Chlaenius aestivus Say, 1823a: 62. Type locality: «Rosslyn [Arlington County], V[irgini]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 351), in MCZ [# 32979].

Chlaenius cobaltinus Dejean, 1826: 331. Type locality: «Amérique septentrionale» (original citation). Two possible syntypes in MHNP (Lindroth 1955b: 25). Synonymy established by Brullé (1835c: 284).

Chlaenius congener LeConte, 1844: 51. Type locality: «Georgia» (original citation). Four syntypes in MCZ [# 5859]. Synonymy established by LeConte (1853c: 390).

Distribution. This species ranges from Massachusetts (Bell 1960: 120) to east-central Iowa (Wickham 1888: 82), including southernmost Ontario (Lindroth 1969a: 981), south to southeastern Louisiana (Allen 1965: 75) and central Florida (Bell 1960: 120). The record from eastern Kansas (Popenoe 1877: 23) needs confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KY, LA, MA, MD, MI, MO, MS, NC, NH, NJ, NY, OH, OK, PA, SC, TN, VA, WI [KS]

***Chlaenius augustus* Newman, 1838**

Chlaenius augustus Newman, 1838a: 490. Type locality: «Wilmington [New Castle County], Delaware» (original citation). Syntype(s) probably lost.

Chlaenius lecontei Haldeman, 1843b: 304. Type locality: North America (inferred from title of the paper). Two probable syntypes, a ♀ labeled "[orange disc] / C. augustus Newm. Lecontei Hald. [handwritten]" and a ♂ labeled "[orange disc] / 355. [handwritten] / angustus 2 [handwritten]," in MCZ (collection LeConte). Synonymy established by LeConte (1847: 433).

Distribution. This species ranges from New Jersey (Bell 1960: 121) to east-central South Carolina (Ciegler 2000: 80) and southwestern Alabama (Löding 1945: 23; Bell 1960: 121). The record from "Mississippi" (Bousquet and Larochelle 1993: 204) needs confirmation.
Records. USA: AL, DE, GA, NC, NJ, SC, TN, VA [MS]

***Chlaenius azurescens* Chaudoir, 1876**

Chlaenius azurescens Chaudoir, 1876b: 220. Type locality: «Orizaba [Veracruz]» (original citation). Syntype(s) in MHNP.

Distribution. This species ranges from southern Texas (Johnson 1978: 68) to Veracruz (Davidson 1980: 88) along the east coast of Mexico.
Records. USA: TX – Mexico

Chlaenius platyderus Chaudoir, 1856

Chlaenius diffinis Chaudoir, 1856: 279 [primary homonym of *Chlaenius diffinis* LaFerté-Sénectère, 1851]. Type locality: «midi des Etats-Unis» (original citation), herein restricted to Willard, Greene County, Missouri (see Bell 1960: 122). Syntype(s) in MHNP.

Chlaenius platyderus Chaudoir, 1856: 280. Type locality: «Louisiane» (original citation). Holotype [by monotypy] in MHNP. Synonymy established by Chaudoir (1876b: 218), confirmed by Bell (1960: 122).

Chlaenius kuntzeni Csiki, 1931: 958. Replacement name for *Chlaenius diffinis* Chaudoir, 1856.

Distribution. This species ranges from "Massachusetts" to central North Dakota (Bell 1960: 122), north to southeastern Manitoba (Ryan and Holliday 2006: 414), south to northeastern New Mexico, central Texas, northwestern Georgia (Fattig 1949: 44) along the Appalachians, and Long Island, New York, along the east coast (Bell 1960: 122).
Records. CAN: MB **USA**: AR, CO, CT, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, ND, NE, NJ, NM, NY, OH, OK, PA, RI, SD, TN, TX, VA, WI, WV

Chlaenius viduus Horn, 1871

Chlaenius viduus G.H. Horn, 1871: 325. Type locality: «Missouri probably near S[ain]t Louis» (original citation). Holotype [by monotypy] (♀) in MCZ [# 34530].

Distribution. This rarely collected species is known from Arkansas, southern Missouri (Bell 1960: 121), and eastern Oklahoma (Latimer County, UASM). Specimens labeled «S[outh] Ill[inois]» are known (Bell 1960: 121).
Records. USA: AR, MO, OK [IL]

[**cursor group**]

Chlaenius chaudoiri Horn, 1876

Chlaenius chaudoiri G.H. Horn, 1876d: 270. Type locality: «Texas; Tamaulipas, Mexico» (original citation), restricted to «Texas» by Bell (1960: 118), herein to Palmetto State Park, Gonzalez County (see Bell 1960: 118). Two syntypes [2 originally cited] in MCZ [# 8001]. Etymology. The specific name honors Maximilien Stanislavovitch Baron de Chaudoir [1816-1881]. Born in Ukraine and wealthy by inheritance, Chaudoir devoted his life to the study of Carabidae. His work includes many revisions of highly diverse, world-wide genera.

Distribution. This species is known from southeastern Arizona to central Texas (Bell 1960: 118), south to Durango and San Luis Potosí in Mexico (Davidson 1980: 133).
Records. USA: AZ, NM, TX – Mexico

***Chlaenius cumatilis* LeConte, 1851**

Chlaenius cumatilis LeConte, 1851: 179. Type locality: «San Diego, et S[an]ta Isabel [California]» (original citation), restricted to «San Diego [San Diego County]» by Bell (1960: 117). Six syntypes in MCZ [# 72].

Chlaenius cumatilis sparsellus Casey, 1914: 37. Type locality: «Arizona» (original citation). Two syntypes in USNM [# 47703]. Synonymy established by Bell (1960: 117).

Distribution. This species is known from Sonora (Davidson 1980: 129), southern Arizona, southern California (Bell 1960: 117), and the Baja California Peninsula (Horn 1894: 311).

Records. USA: AZ, CA (CHI) – Mexico

***Chlaenius patruelis* LeConte, 1844**

Chlaenius patruelis LeConte, 1844: 51. Type locality: «Georgia» (original citation), herein restricted to Saint Simons Island, Glynn County (see Fattig 1949: 44). Two syntypes in MCZ [# 5855].

Distribution. This species is known from southern Alabama, southern Georgia, and throughout Florida (Bell 1960: 118). A specimen labeled "N. Car." is known (Bell 1960: 118).

Records. USA: AL, FL, GA [NC]

Note. This species was known for a long time under the name *C. herbaceus* Chevrolat, 1834 (see Bell 1960: 117) until Bell (1966a) showed that *C. patruelis* and *C. herbaceus* were two distinct species. *Chlaenius herbaceus* is known only from Veracruz and Campeche in Mexico (Davidson 1980: 125).

***Chlaenius sparsus* LeConte, 1863**

Chlaenius sparsus LeConte, 1863c: 12. Type locality: «Cape San Lucas, Lower California [Baja California Sur]» (original citation). Four syntypes in MCZ [# 5857].

Distribution. This species is known from the Baja California Peninsula and from southern Arizona south, through central and western Mexico, to Central America (Robert L. Davidson pers. comm. 2007).

Records. USA: AZ – Mexico

Note. Horn (1876d: 275) listed this name as a junior synonym of *Chlaenius cursor* Chevrolat, 1835 described from "Orixaba" in Veracruz. However, both names apply to distinct species (Robert L. Davidson pers. comm. 2007).

[**laticollis group**]

***Chlaenius erythropus* Germar, 1824**

Chlaenius erythropus Germar, 1824: 11. Type locality: «America septentrionali» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1969a: 982). Lectotype (♂), designated by Lindroth (1969a: 982), in ZMHB.

Chlaenius rufilabris Dejean, 1826: 329. Type locality: «Louisiane; Géorgie» (original citation). Syntype(s) [2 originally cited] in MHNP. Synonymy established with doubt by Dejean (1826: 329), confirmed by Chaudoir (1856: 278).

Chlaenius umbritarsis Casey, 1920: 291. Type locality: «Louisiana» (original citation). One syntype in USNM [# 47698]. Synonymy established by Bell (1960: 130).

Chlaenius oblongipennis Casey, 1920: 292. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). One syntype in USNM [# 47699]. Synonymy established by Bell (1960: 130).

Distribution. This species ranges from New Jersey (Bell 1960: 131) to eastern South Dakota (Kirk and Balsbaugh 1975: 36), including southernmost Ontario (Lindroth 1969a: 982), south to northeastern New Mexico (Union County, CNC), southeastern Texas, and southern Florida (Bell 1960: 131).

Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MI, MN, MO, MS, NC, NE, NJ, NM, OH, OK, PA, SC, SD, TN, TX, VA, WI

Chlaenius fuscicornis Dejean, 1831

Chlaenius fuscicornis Dejean, 1831: 647. Type locality: «Amérique septentrionale» (original citation), herein restricted to New Orleans, Orleans Parish, Louisiana (see Bell 1960: 130). One syntype in MHNP (Lindroth 1955b: 25).

Distribution. This species is found in southeastern United States from South Carolina (Kirk 1970: 16; Ciegler 2000: 80) to northern Arkansas, south to southeastern Texas and southeastern Georgia (Bell 1960: 130). The records from Illinois (Leng and Beutenmüller 1893: 143; Blatchley 1910: 166), "Iowa" (Jaques and Redlinger 1946: 296), Kansas (Popenoe 1877: 23; Snow 1903: 193), "Oklahoma" (Arnold 2008), and Missouri (Summers 1873: 145) need confirmation; that from southeastern Pennsylvania (Rathvon 1869: 525) must be in error.

Records. USA: AL, AR, GA, LA, MS, SC, TN, TX [IA, IL, KS, MO, OK]

Chlaenius laticollis Say, 1823

Chlaenius laticollis Say, 1823a: 64. Type locality: «Tonganoxie [Leavenworth County], Ka[nsas]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 351), in MCZ [# 32978]. Note. «the Missouri» was the area originally cited by Say (1823a: 64).

Chlaenius rufipes Dejean, 1826: 331. Type locality: «Caroline» (original citation). One syntype in MHNP (Lindroth 1955b: 25). Synonymy established by LaFerté-Sénectère (1851: 252), confirmed by Lindroth (1955b: 25).

Chlaenius brevicollis LeConte, 1847: 432 [secondary homonym of *Chlaenius brevicollis* (Chaudoir, 1843)]. Type locality: «Georgia» (original citation). One syntype in MCZ [# 5858]. Synonymy established, under the name *C. rufipes* Dejean, by LeConte (1863b: 10).

Chlaenius brachyderus Chaudoir, 1856: 279. Type locality: «Louisiane» (original citation). Syntype(s) in MHNP. Synonymy established with the name *C. brevicollis* LeConte by Chaudoir (1856: 279).

Distribution. This species ranges from southern Maine (Majka et al. 2011: 47) to southeastern Nebraska (Nemaha County, Foster F. Purrington pers. comm. 2012), including southernmost Ontario (Bousquet 1987a: 132), south to Durango and Nuevo León (Davidson 1980: 92) in Mexico and southern Florida (Bell 1960: 129), west along southern United States to southeastern Arizona (Dajoz 2004: 116). The record from Tabasco in Mexico (Davidson 1980: 92) is suspect; that from southern Wisconsin (Rauterberg 1885: 18) needs confirmation.
Records. CAN: ON **USA**: AL, AR, AZ, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MO, MS, NC, NH, NJ, NM, NY, OH, OK, PA, SC, TN, TX, VA, WV [WI] – Mexico

Chlaenius orbus Horn, 1871

Chlaenius orbus G.H. Horn, 1871: 326. Type locality: «central and western Texas» (original citation), herein restricted to Temple, Bell County (see Bell 1960: 128). Syntype(s) in MCZ [# 34529] and IZWP [# 1319] (Mroczkowski 1960: 379).

Distribution. This species ranges from southeastern Arizona to southeastern Texas, south to Oaxaca in Mexico (Bell 1960: 128); also recorded from San Bernardino County in southeastern California (Dajoz 2007: 20).
Records. USA: AZ, CA, NM, TX – Mexico

[**sericeus group**]

Chlaenius sericeus (Forster, 1771)

Carabus sericeus Forster, 1771: 58. Type locality: «America septentrionali» (original citation), restricted to «W[est] Roxbury [Suffolk County], Mass[achusetts]» by Lindroth (1969a: 982). Syntype(s) probably lost (Lindroth 1969a: 982).

Carabus forsteri Turton, 1802: 464. Unnecessary replacement name for *Carabus sericeus* Forster, 1771. Etymology. The specific name was proposed for Johann Reinhold Forster [1729-1798], an English Lutheran pastor who served as naturalist on James Cook's second circumnavigation of the globe on the *Resolution*. He was the father of the naturalist Georg Adam Forster [1754-1794] who often travelled with him.

Chlaenius viridifrons Eschscholtz, 1833: 27. Type locality: «bei St. Franzisco [San Francisco County], Californien» (original citation). Syntype(s) location unknown (possibly in ZMMU). **New synonymy**.

Chlaenius perviridis LeConte, 1847: 434. Type locality: «ad Rocky Mountains» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5856]. Synonymy established by LeConte (1856b: 27) and Chaudoir (1856: 286).

Chlaenius regularis LeConte, 1851: 179. Type locality: «ad flumina Colorado et Gila» (original citation). One syntype in MCZ [# 73]. Synonymy established, under the name *C. sericeus* var. *perviridis* LeConte, by Chaudoir (1876b: 218).

Chlaenius regularis apacheanus Casey, 1914: 34. Type locality: «Arizona (southwestern) and the adjacent parts of California» (original citation). Five syntypes [5 originally cited] in USNM [# 47700]. Synonymy established, under the name *C. sericeus regularis* LeConte, by Bell (1960: 126).

Chlaenius sericeus uteanus Casey, 1914: 35. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 144), in USNM [# 47701]. Synonymy established by Bell (1960: 123).

Chlaenius sierricola Casey, 1914: 36. Type locality: «Mokelumne Hill, Calaveras Co[unty], California» (original citation). One syntype in USNM [# 47711]. **New synonymy**.

Distribution. This transamerican species ranges from Newfoundland (Lindroth 1955a: 135) to southwestern British Columbia (Lindroth 1969a: 983), south to southern California (Bell 1960: 125, 127), Chihuahua (Davidson 1980: 84) and northern Sonora (Bates 1884: 267, as *C. regularis*) in Mexico, and central Florida (Peck and Thomas 1998: 20).

Records. CAN: AB, BC, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – Mexico

Note. Bell (1960: 123-128) recognized four subspecies within *C. sericeus*: *sericeus s.str.*, *regularis*, *viridifrons*, and *sierricola*, all separated by color and relatively minor differences in the pronotum shape.

Subgenus *Lithochlaenius* Kryzhanovskij, 1976

Hemichlaenius Lutshnik, 1933b: 169 [junior homonym of *Hemichlaenius* Bates, 1892]. Type species: *Chlaenius rambouseki* Lutshnik, 1933 by monotypy. Etymology. From the Greek prefix *hemi-* (half) and the generic name *Chlaenius* [*q.v.*] [masculine].

Lithochlaenius Kryzhanovskij, 1976b: 9, 12. Replacement name for *Hemichlaenius* Lutshnik, 1933. Etymology. From the Greek *lithos* (stone) and the generic name *Chlaenius* [*q.v.*] [masculine].

Agilochlaenius Kirschenhofer, 1997: 116. Type species: *Chlaenius latro* LaFerté-Sénectère, 1851 by original designation. Synonymy established by Kirschenhofer (2000: 58). Etymology. From the Latin *agilis* (quick, nimble) and the generic name *Chlaenius* [*q.v.*] [masculine].

Diversity. Nineteen species can be assigned to this subgenus: five in North America (Bell 1960: 109, as *solitarius* group), six in the Neotropical Region (*C. argentinicus* Jedlička, *C. chlorochrous* Chaudoir, *C. ecuadoricus* Jedlička, *C. leucoscelis* Chevrolat, *C.*

peruanus Erichson, and *C. purpureus* Chaudoir), and ten in the Palaearctic Region (see Liu et al. 2011), of which one extends into the Oriental Region.

Taxonomic Note. Liu et al. (2011: 22) argued that it is premature to place any of the Western Hemisphere species of *Chlaenius* in the subgenus *Lithochlaenius* because they differ from the Palaearctic species of *Lithochlaenius* in having the lateral edge of elytron rounded at level of the humerus, instead of being angulate. However, I agree with Robert L. Davidson (pers. comm.) that the Western Hemisphere species related to *C. prasinus* are closely related to the Palaearctic species of *Lithochlaenius* and at this time I prefer to include these species in the subgenus *Lithochlaenius*.

Chlaenius cordicollis Kirby, 1837

Chlaenius cordicollis Kirby, 1837: 22. Type locality: «Canada» (original citation), restricted to «S[outh] Cajuga, Ont[ario]» by Lindroth (1969a: 979). Two syntypes in BMNH (Lindroth 1953b: 169).

Distribution. This species ranges from New Brunswick (Restigouche and Queens Counties, CNC) to southern Manitoba (Lindroth 1969a: 981), south to northwestern Arkansas (Bell 1960: 112), northwestern Mississippi (Coahoma County, Drew A. Hildebrandt pers. comm. 2008), and North Carolina (Robert L. Davidson pers. comm. 1992). The record from southwestern Colorado (Elias 1987: 634) needs confirmation.

Records. CAN: MB, NB, ON, QC **USA**: AR, CT, DC, DE, IA, IL, IN, KY, MA, MD, ME, MI, MN, MO, MS, NC, ND, NH, NJ, NY, OH, PA, SD, TN, VA, VT, WI, WV [CO]

Chlaenius leucoscelis monachus LeConte, 1851

Chlaenius monachus LeConte, 1851: 180. Type locality: «valle fluminis Gilae» (original citation), herein restricted to Phoenix, Maricopa County, Arizona (see Bell 1960: 114). Holotype [by monotypy] (♂) in MCZ [# 75].

Chlaenius gilensis Casey, 1914: 35. Type locality: «Yuma [Yuma County], Arizona» (original citation). Two syntypes [2 originally cited] in USNM [# 47708]. Synonymy established by Bell (1960: 114).

Distribution. This subspecies is found in the drainage basin of the Colorado River in southwestern Colorado, southern Utah, Arizona, and southeastern California (Bell 1960: 114).

Records. USA: AZ, CA, CO, UT

Chlaenius leucoscelis sanantonialis Casey, 1914

Chlaenius sanantonialis Casey, 1914: 36. Type locality: «Texas» (original citation), herein restricted to Hot Springs (Big Bend National Park), Brewster County (see Bell 1960: 115). Two syntypes [2 ♂ originally cited] in USNM [# 47707].

Distribution. This subspecies ranges from central Colorado to southernmost New Mexico and central Texas (Bell 1960: 115), including northwestern Oklahoma (Cimarron County, CMNH, CNC).
Records. USA: CO, NM, OK, TX

Chlaenius leucoscelis sonomae Casey, 1920

Chlaenius sonomae Casey, 1920: 294. Type locality: «north of San Francisco, California» (original citation). Ten syntypes [10 originally cited] in USNM [# 47705].
Chlaenius recticollis Casey, 1920: 294. Type locality: «California» (original citation). One syntype in USNM [# 47706]. Synonymy established by Bell (1960: 114).

Distribution. This subspecies is known from southwestern Oregon (Hatch 1953: 163, as *C. leucoscelis*) and through much of California as far south as Kern County (Bell 1960: 114).
Records. USA: CA, OR

Chlaenius prasinus Dejean, 1826

Chlaenius prasinus Dejean, 1826: 345. Type locality: «Amérique septentrionale» (original citation), herein restricted to Vicksburg, Warren County, Mississippi (see Casey 1920: 292, as *C. regestus*). One syntype in MHNP (Lindroth 1955b: 25).
Chlaenius smaragdinus Chaudoir, 1843b: 755. Type locality: «près de la Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) in MHNP. Synonymy established by Melsheimer (1853: 13).
Chlaenius regestus Casey, 1920: 292. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). One syntype in USNM [# 47704]. Synonymy established by Bell (1960: 110).

Distribution. This species ranges from Massachusetts to "Colorado" (Horn 1876d: 267), including southern Michigan and "Minnesota" (Gandhi et al. 2005: 929), south at least to central Texas and southern Florida (Bell 1960: 110-111).
Records. USA: AL, AR, CO, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, NE, NJ, NY, OH, OK, PA, SC, TN, TX, VA, WI, WV

Chlaenius purpureus Chaudoir, 1876

Chlaenius purpureus Chaudoir, 1876b: 246. Type locality: «Orizaba [Veracruz], Mexique» (original citation). Holotype [by monotypy] (♂) in MHNP.

Distribution. This species ranges from central Missouri (Morgan County, CMNH) to Arizona (Bell 1960: 110), south to Nicaragua (Bates 1882a: 45); also found along the Baja California Peninsula (Davidson 1980: 69).
Records. USA: AZ, KS, MO, NM, TX – Guatemala, Mexico, Nicaragua

***Chlaenius solitarius* Say, 1823**

Chlaenius solitarius Say, 1823a: 65. Type locality: «Opposite Dubuque [Dubuque County], Iowa» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 351), in MCZ [# 32991]. Note. «on the Missouri» was the area originally cited by Say (1823a: 66).

Chlaenius chlorophanus Dejean, 1831: 662. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 25). Synonymy established by LeConte (1867a: 347), confirmed by Lindroth (1955b: 25).

Distribution. This species inhabits the Great Plains and the Great Central Plains from southern Alberta to southwestern Pennsylvania (Allegheny and Westmoreland Counties, Robert L. Davidson pers. comm. 2008), south to northern Mississippi (Drew A. Hildebrandt pers. comm. 2007), east-central Louisiana (West Feliciana Parish, Igor M. Sokolov pers. comm. 2009), central Texas, and central New Mexico (Bell 1960: 111). The records from southwestern Ohio (Dury 1906: 257) and "Utah" (Bousquet and Larochelle 1993: 206) need confirmation. The record from "Georgia" (J.E. LeConte 1849: 26) is probably in error; that from Beaver Islands in Michigan (Hatch 1925: 553) was based on misidentified specimens of *C. cordicollis* (Dunn 1985a: 10). The specimen labeled from northeastern Florida (see Bell 1960: 111) is probably mislabeled (Robert L. Davidson pers. comm. 1992). Old specimens simply labeled from Michigan and Minnesota are known (Bell 1960: 111).
Records. CAN: AB **USA**: AR, CO, IA, IL, IN, KS, KY, LA, MO, MS, MT, ND, NE, NM, OK, PA, SD, TN, TX, WI, WY [MI, MN, OH, UT]

Subgenus *Chlaeniellus* Reitter, 1908

Chlaeniellus Reitter, 1908: 185. Type species: *Carabus vestitus* Paykull, 1790 designated by Jeannel (1942: 971). Etymology. From the generic name *Chlaenius* [*q.v.*] and the Latin suffix *-ellus* (small, little) [masculine].

Agrochlaenius Basilewsky and Grundmann, 1954: 240. Type species: *Buprestis variegatus* Geoffroy, 1785 (= *Chlaenius olivieri* Crotch, 1870) by original designation. Etymology. From the Greek *agros* (field) and the generic name *Chlaenius* [*q.v.*] [masculine]. Note. This name was first proposed by Lutshnik (1933b: 171). However, because he failed to designate a type species, the name cannot be attributed from this publication (ICZN 1999: Article 13.3).

Diversity. About 80 species in all zoogeographical regions except the Australian Region. The subgenus is best represented in the Northern Hemisphere with 58 species (about 73.5% of the world fauna) of which 17 are found in North America.

[**circumcinctus group**]

***Chlaenius circumcinctus* Say, 1830**

Chlaenius circumcinctus Say, 1830b: (3) [3]. Type locality: «L[ouisian]a» (neotype label), herein restricted to New Orleans, Orleans Parish (see Chaudoir, 1843b: 753,

as *C. virens*). Neotype (♂), designated by Lindroth and Freitag (1969: 351), in MCZ [# 32994]. Note. «Louisiana» was the area originally cited by Say (1830b: (3) [3]).

Chlaenius perplexus Dejean, 1831: 655. Type locality: «Sénégal» (original citation), which is incorrect. Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 25). Synonymy established by Horn (1876d: 276), confirmed by Lindroth (1955b: 25).

Chlaenius virens Chaudoir, 1843b: 753. Type locality: «Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) in MHNP. Synonymy established with doubt by LeConte (1847: 440), confirmed by Chaudoir (1856: 284).

Chlaenius poeyi Chevrolat, 1863: 194. Type locality: «Cuba» (original citation). Syntype(s) location unknown (possibly in UMO). Synonymy established, under the name *C. perplexus* Dejean, by Chaudoir (1876b: 237). Etymology. The specific name was proposed for the Cuban ichthyologist and entomologist Felipe Poey y Aloy [1799-1891]. Poey went to Paris and studied under Cuvier. In 1842 he was appointed professor and eventually director of the Zoological Museum in Havana.

Distribution. This species ranges from southern Georgia (Fattig 1949: 43) and throughout Florida west along the Gulf Coast to southeastern Texas, north to north-central Oklahoma (Alfalfa County, CMNH) and central Arkansas (Pulaski County, Robert L. Davidson pers. comm. 2012), south at least to Veracruz along the Gulf Coast (Bell 1960: 146, as *C. perplexus* Dejean); also known from Cuba and Puerto Rico (Bell 1960: 146, as *C. perplexus* Dejean) and the Dominican Republic (CMNH).
Records. USA: AL, AR, FL, GA, LA, MS, OK, TX – Cuba, Dominica Republic, Mexico, Puerto Rico
Note. This species has been known for a long time under the name *C. perplexus* Dejean, 1831 but Say's name has priority (see Bousquet 1993: 6).

[**glaucus group**]

Chlaenius glaucus LeConte, 1856

Chlaenius glaucus LeConte, 1856b [25 March]: 28. Type locality: «Colorado river, near the junction of the Gila» (original citation). Syntype(s) in MCZ [# 5862].

Chlaenius sericinitens Chaudoir, 1856 [after 25 November]: 284. Type locality: «Rio Colorado, Californie» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by LeConte (1863b: 11).

Distribution. This species is found from central California (Bell 1960: 144) to western Texas (Jeff Davis, Ken Karns pers. comm. 2009), south to northern Sonora (Bates 1884: 267).
Records. USA: AZ, CA, NM, TX – Mexico

Chlaenius simillimus Chaudoir, 1856

Chlaenius simillimus Chaudoir, 1856: 283. Type locality: «près de S[an] Francisco, Californie» (original citation). Syntype(s) in MHNP.

Distribution. This species is known only from a few specimens collected in the lower Sacramento River Valley of northwestern California (Bell 1960: 145).
Records. USA: CA

[**impunctifrons group**]
***Chlaenius impunctifrons* Say, 1823**

Chlaenius impunctifrons Say, 1823a: 64. Type locality: «Dorchester [Suffolk County], Ma[ssachusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 350), in MCZ [# 32995].

Distribution. This species ranges from New Brunswick (Webster and Bousquet 2008: 21) to North Dakota (Tinerella 2003: 635), north to southern Manitoba (Lindroth 1969a: 984), south to eastern Texas (Houston County, CNC; Riley 2011) and southern Florida (Bell 1960: 137). The records from "Wyoming" and "Colorado" (Bousquet and Larochelle 1993: 207) are likely in error.
Records. CAN: MB, NB, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV
Note. The name *Chlaenius indutus* LaFerté-Sénectère, 1851 is often listed as a junior synonym of this species (e.g., Bell 1960: 136; Lindroth 1969a: 983). However LaFerté-Sénectère never provided a description of the taxon and the name is a *nomen nudum*.

[**nemoralis group**]
***Chlaenius brevilabris* LeConte, 1847**

Chlaenius brevilabris LeConte, 1847: 437. Type locality: «ad Insulam Longam NovEboraci [= Long Island, New York]» (original citation). Three syntypes in MCZ [# 5864].

Chlaenius consimilis LeConte, 1847: 437 [*nomen dubium*]. Type locality: «ad Rocky Mountains» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5865]. Synonymy established by Horn (1876d: 276). Note. According to Bell (1960: 143), the holotype of *C. consimilis* is a deformed specimen that could be instead an abnormal *C. tricolor*.

Chlaenius texanellus Casey, 1914: 37. Type locality: «Galveston [Galveston County], Texas» (original citation). Nineteen syntypes in USNM [# 47712]. **New synonymy**. Note. Bell (1960: 143) retained this name for a subspecies of *C. brevilabris* based on different forebody metallic lustre; I believe the form does not warrant subspecific status.

Distribution. This species ranges from south-central New Hampshire (Merrimack County, Ross T. Bell pers. comm. 2008) to eastern South Dakota (Kirk and Balsbaugh 1975: 35), including southern Ontario (Lindroth 1969a: 987), south to southern Texas (Bell 1960: 143) and southwestern South Carolina (Hampton County, CMNH).

The records from "Utah" (Bousquet and Larochelle 1993: 207) and New Mexico (Fall and Cockerell 1907: 160) need confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, IA, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, NE, NH, NJ, NY, OH, OK, PA, SC, SD, TN, TX, VA, VT, WI, WV [NM, UT]

Chlaenius nemoralis Say, 1823

Chlaenius nemoralis Say, 1823a: 65. Type locality: «Winter Park [Orange County], Fl[orid]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 351), in MCZ [# 32992]. Note. «Pennsylvania; Georgia and Florida» were the areas originally cited by Say (1823a: 65).

Chlaenius longicollis Chaudoir, 1843b: 752. Type locality: «Nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Chaudoir (1876b: 241).

Distribution. This species ranges from Massachusetts (Easton 1909: 37) to northeastern South Dakota (Kirk and Balsbaugh 1975: 36), including southern Ontario (Lindroth 1969a: 984), south to central Texas and southern Florida (Bell 1960: 140). The record from "New Hampshire" (Bousquet and Larochelle 1993: 208) needs confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, ND, NE, NJ, NY, OH, OK, ON, PA, RI, SC, SD, TN, TX, VA, WI, WV [NH]

Chlaenius oxygonus Chaudoir, 1843

Chlaenius oxygonus Chaudoir, 1843b: 753. Type locality: «Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Holotype [by monotypy] (♂) in MHNP.

Distribution. This species occurs from northwestern Georgia and southwestern South Carolina (Hampton County, CMNH) to central Florida, west to eastern Texas, north to central Oklahoma (Grady County, CMNH) and east-central Arkansas (Bell 1960: 141).
Records. USA: AL, AR, FL, GA, LA, MS, OK, SC, TX

Chlaenius tricolor tricolor Dejean, 1826

Chlaenius tricolor Dejean, 1826: 334. Type locality: «Géorgie» (original citation), herein restricted to Atlanta, Fulton County (see Bell 1960: 141). One syntype in MHNP (Lindroth 1955b: 25).

Chlaenius quadricollis Kirby, 1837: 22. Type locality: «Canada» (original citation). One syntype in BMNH (Lindroth 1953b: 169). Synonymy established with doubt by Chaudoir (1856: 283), confirmed by Lindroth (1953b: 169).

Chlaenius atripennis LeConte, 1847: 436. Type locality: «provinciis mediis» (original citation). Syntype(s) in MCZ [# 5863]. Synonymy established by LeConte (1853c: 390), confirmed by Lindroth (1969a: 986).

Distribution. This subspecies ranges from Newfoundland (Lindroth 1955a: 134) to northwestern Montana (Russell 1968: 66), south to central New Mexico (Fall and Cockerell 1907: 160), central Texas, northwestern Georgia, and northern South Carolina (Bell 1960: 142).
Records. CAN: AB, NB, NF, NS, ON, QC, SK **USA**: AL, AR, CO, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV
Note. Bell (1960: 142) noted the presence of intergrade specimens between the two forms of *C. tricolor* in the area immediately west of the Rocky Mountains.

Chlaenius tricolor vigilans Say, 1830

Chlaenius vigilans Say, 1830b: (3) [3]. Type locality: «Mexico» (original citation). Syntype(s) lost.
Chlaenius chalybeipennis Chevrolat, 1835a: [no. 72]. Type locality: «[apparently] environs de la Véra-Cruz [Mexico]» (original citation). Syntype(s) location unknown (possibly in UMO). Synonymy established by Chaudoir (1876b: 241).
Chlaenius jacinto Casey, 1920: 295. Type locality: «California (southern) and Arizona» (original citation). Six syntypes [6 originally cited] in USNM [# 47710]. Synonymy established by Bell (1960: 142).

Distribution. This subspecies ranges from southern British Columbia, including Vancouver Island (Lindroth 1969a: 986), to southern California (Bell 1960: 142) and Guatemala (Bates 1882a: 44).
Records. CAN: BC (VCI) **USA**: AZ, CA, ID, NV, OR, UT, WA – Guatemala, Mexico

[**pennsylvanicus group**]

Chlaenius flaccidus Horn, 1876

Chlaenius flaccidus G.H. Horn, 1876d: 265. Type locality: «Waco County, Texas» (original citation). Holotype [by monotypy] (♀) in MCZ [# 8003].

Distribution. This species is known only from a few localities in central and southern Texas (Bell 1960: 149). The record from Georgia (Fattig 1949: 43) is likely in error (Bell 1960: 149).
Records. USA: TX

Chlaenius floridanus Horn, 1876

Chlaenius floridanus G.H. Horn, 1876d: 263. Type locality: «Florida» (original citation), herein restricted to Winter Park, Orange County (MCZ). Syntype(s) [3 originally cited] in MCZ [# 8002] and possibly CMNH (collection Ulke).

Distribution. This species is known from northern Georgia (Fattig 1949: 43) to southern Florida (Peck and Thomas 1998: 20) and from Inagua in the Bahamas (Darlington 1953: 8).
Records. USA: FL, GA – Bahamas

Chlaenius nebraskensis LeConte, 1856

Chlaenius nebraskensis LeConte, 1856b: 28. Type locality: «Yellowstone River [probably in Montana]; Santa Fe [New Mexico]» (original citation), restricted to «Yellowstone River» by Bell (1960: 148). Syntype(s) in MCZ [# 5861].

Chlaenius sedulus Casey, 1920: 296. Type locality: «Amarillo [Potter County], Texas» (original citation). One syntype in USNM [# 47714]. Synonymy established by Bell (1960: 148).

Distribution. This species is found from southern Saskatchewan and southern Alberta (Lindroth 1969a: 988) south to southern Arizona and southern Texas (Bell 1960: 148).
Records. CAN: AB, SK **USA**: AZ, CO, KS, MT, ND, NE, NM, NV, OK, SD, TX, UT

Chlaenius pennsylvanicus blanditus Casey, 1920

Chlaenius blanditus Casey, 1920: 297. Type locality: «Vineyard [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 144), in USNM [# 47713].

Distribution. This subspecies ranges from northern Utah to southern Arizona, east to western Texas (Bell 1960: 147).
Records. USA: AZ, NM, TX, UT

Chlaenius pennsylvanicus pennsylvanicus Say, 1823

Chlaenius pennsylvanicus Say, 1823a: 66. Type locality: «Penn[sylvania]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 351), in MCZ [# 32993].

Chlaenius pubescens T.W. Harris, 1828d: 132. Type locality not stated. Syntype(s) presumably lost. Synonymy established by LeConte (1856b: 27).

Chlaenius vicinus Dejean, 1831: 659. Type locality: «Amérique septentrionale» (original citation). Two syntypes in MHNP (Lindroth 1955b: 25). Synonymy established, with *C. pubescens* Harris, by Dejean (1833: 25), confirmed by Lindroth (1955b: 25).

Chlaenius impunctifrons Kirby, 1837: 21 [primary homonym of *Chlaenius impunctifrons* Say, 1823]. Type locality: northern parts of British America (inferred from title of the paper). One syntype in BMNH (Lindroth 1953b: 169). Synonymy established by LeConte (1870: 397), confirmed by Lindroth (1953b: 169).

Chlaenius fulgiceps Newman, 1838a: 490. Type locality: «Ohio» (original citation). Syntype(s) probably lost (Lindroth 1969a: 987). Synonymy established by LeConte (1847: 436).

Distribution. This subspecies ranges from Newfoundland (Lindroth 1955a: 134) to Vancouver Island (Lindroth 1969a: 987), south at least to southwestern Oregon,

southern Colorado along the Rocky Mountains (Bell 1960: 147), southeastern Louisiana (Saint Tammany Parish, Igor M. Sokolov pers. comm. 2009; Summers 1874a: 80), and southern Florida (Peck and Thomas 1998: 20). The record from southwestern California (Moore 1937: 12) is probably in error.
Records. FRA: PM **CAN**: AB, BC (VCI), MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AL, AR, CO, CT, DC, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SC, SD, TN, VA, VT, WA, WI, WV, WY

[**vafer group**]

***Chlaenius pertinax* Casey, 1920**

Chlaenius pertinax Casey, 1920: 295. Type locality: «New Augustine [= Saint Augustine, Saint Johns County], Florida» (original citation). One syntype in USNM [# 47709].

Distribution. This species is endemic to the Florida Peninsula (Bell 1960: 165; Peck and Thomas 1998: 20).
Records. USA: FL

***Chlaenius texanus* Horn, 1876**

Chlaenius texanus G.H. Horn, 1876d: 261. Type locality: «Texas» (original citation), herein restricted to Brownsville, Cameron County (MCZ). Syntype(s) [2 originally cited] in MCZ [# 34531].

Distribution. This species is known from southern Mississippi (Hancock County, Drew A. Hildebrandt pers. comm. 2008), southern Texas, and northern Mexico (Bell 1960: 151).
Records. USA: MS, TX – Mexico

***Chlaenius vafer* LeConte, 1852**

Chlaenius vafer LeConte, 1852b: 66. Type locality: «Creek Boundary [= boundary of the Creek Indian Reservation at that time, located near or in Oklahoma]» (original citation). Syntype(s) in MCZ [# 5860]. Note. LeConte (1852b: 65) stated that this and most of the other species from the expedition were collected "from the boundary of the tract of land ... set apart for the Creek Indians."

Distribution. This species ranges from southeastern Nebraska (Lancaster County, Foster F. Purrington pers. comm. 2010) and central Missouri (Boone County, CMNH) south to Mississippi (CMNH), southwestern Louisiana (Hine 1906: 77), and southern Texas (Bell 1960: 151). The record from eastern South Dakota (Kirk and Balsbaugh 1975: 36) needs confirmation.
Records. USA: AR, KS, LA, MO, MS, NE, OK, TX [SD]

[**variabilipes group**]
***Chlaenius obsoletus* LeConte, 1851**

Chlaenius obsoletus LeConte, 1851: 180. Type locality: «San Diego et Colorado [River] [California]» (original citation), herein restricted to San Diego, San Diego County. Syntype(s) in MCZ [# 74].
Chlaenius rogator Motschulsky, 1859a: 157. Type locality: «St. Francisco [San Francisco County, California]» (original citation). One syntype in ZMMU (Keleinikova 1976: 214). Synonymy established with doubt by Chaudoir (1876b: 244).

Distribution. This species ranges from central California (Bell 1960: 150) south to "Nicaragua" (Bates 1882a: 44) and the Baja California Peninsula (Horn 1894: 311), including western New Mexico (Catron County, UASM; Snow 1885: 67; Fall and Cockerell 1907: 160) and western Texas (Jeff Davis County, UASM). The record from "Utah" (Bousquet and Larochelle 1993: 208) needs confirmation.
Records. USA: AZ, CA (CHI), NM, TX [UT] – Guatemala, Mexico, Nicaragua

***Chlaenius variabilipes* Eschscholtz, 1833**

Chlaenius variabilipes Eschscholtz, 1833: 27. Type locality: «bei St. Franzisco [San Francisco County], Californien» (original citation). Syntype(s) location unknown.
Chlaenius asperulus Ménétriés, 1843: 55. Type locality: «Californie» (original citation). One syntype in ZMH (collection Mannerheim) (Silfverberg 1987: 12). Synonymy established by LeConte (1856b: 28).
Chlaenius obscurus LeConte, 1851: 179. Type locality: «San Jose, et ad flumen Colorado» (original citation). Six syntypes in MCZ [# 70]. Synonymy established by LeConte (1856b: 28) and Chaudoir (1856: 270).

Distribution. The range of this species extends from southeastern Oregon (Harney County, James R. LaBonte pers. comm. 1992) and west-central Nevada (Bell 1960: 150) south to the Baja California Peninsula (Horn 1894: 311) and at least Durango in Mexico (Ball and Shpeley 1992a: 61). The specimens labeled from Texas (Bell 1960: 150) are probably mislabeled or represent strays.
Records. USA: AZ, CA, NV, OR, UT [TX] – Mexico

Subgenus *Callistometus* Grundmann, 1956

Callistometus Grundmann, 1956: 265. Type species: *Chlaenius ruficauda* Chaudoir, 1856 by original designation. Etymology. Uncertain, possibly from the Greek prefix *callo-* (beautiful), *stoma* (mouth), and the Latin suffix *-etus* (provided with) [masculine].

Diversity. Three species in southwestern North America (one species) and Mexico (three species).

Chlaenius ruficauda **Chaudoir, 1856**

Chlaenius apicalis LeConte, 1851: 179 [secondary homonym of *Chlaenius apicalis* (Wiedemann, 1819)]. Type locality: «ad fluminis Colorado ripas» (original citation). Three syntypes in MCZ [# 71].

Chlaenius posticus LeConte, 1853c: 390 [secondary homonym of *Chlaenius posticus* (Fabricius, 1798)]. Replacement name for *Chlaenius apicalis* LeConte, 1851.

Chlaenius ruficauda Chaudoir, 1856: 194. Replacement name for *Chlaenius apicalis* LeConte, 1851 and *Chlaenius posticus* LeConte, 1853.

Distribution. This species ranges from southern California to southwestern New Mexico, south to Oaxaca in Mexico (Bell 1960: 116).

Records. USA: AZ, CA, NM – Mexico

Note. The name *Chlaenius dimidiatus* Motschulsky, 1858 is often listed as a junior synonym of this species (e.g., Csiki 1931: 971; Bell 1960: 115). However, Motschulsky never provided a description of the taxon and the name is a *nomen nudum*.

Subgenus ***Brachylobus*** **Chaudoir, 1876**

Brachylobus Chaudoir, 1876b: 287. Type species: *Chlaenius lithophilus* Say, 1823 by monotypy. Etymology (original). From the Greek *brachys* (short) and *lobos* (lobes), alluding to the markedly short lateral lobes of the mentum ("*mentum vix emarginatum, lobis cum parte media confusis, nec eandem superantibus*") of the adult [masculine].

Diversity. Two species in the boreal and temperate regions of North America.

Chlaenius caurinus **(Horn, 1885)**

Brachylobus caurinus G.H. Horn, 1885a: 134. Type locality: «near Yreka [Siskiyou County], Cal[iforni]a» (original citation). Holotype [by monotypy] (♂) in MCZ [# 34536].

Distribution. This species is known only from the type locality in north-central California (Bell 1960: 139).

Records. USA: CA

Note. Bell (1960: 139) stated that the holotype and still only known specimen may simply be an aberrant individual of *Chlaenius lithophilus*.

Chlaenius lithophilus **Say, 1823**

Chlaenius lithophilus Say, 1823a: 62. Type locality: «Rivervale [Morris County], N[ew] J[ersey]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32976].

Chlaenius viridanus Dejean, 1831: 660. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 26). Synonymy established by LeConte (1847: 434), confirmed by Lindroth (1955b: 26).

Chlaenius smaragdiger Motschulsky, 1865: 338. Type locality: «Pensylvanie» (original citation). One syntype in ZMMU (Keleinikova 1976: 217). Synonymy established by Chaudoir (1876b: 288).

Brachylobus lithophilus indigaceus Casey, 1914: 41. Type locality: «Texas» (original citation). Two syntypes [2 originally cited] in USNM [# 47723]. **New synonymy**. Note. Bell (1960: 138) retained *C. indigaceus* Casey as a subspecies but I believe, as done implicitly by Lindroth (1969a: 989), that the form, which is based exclusively on color, does not warrant a subspecific status.

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 135) to central British Columbia, north to Fort Smith in southern Northwest Territories (Lindroth 1969a: 989), south to northeastern Washington (Hatch 1953: 163), "New Mexico" (Robert L. Davidson pers. comm. 1992), northern Texas (Cooke County, CNC), and northeastern Georgia (Bell 1960: 138). The record from "Oregon" (Wickham 1896c: 135) needs confirmation.

Records. CAN: AB, BC, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AL, AR, CO, CT, DC, GA, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY [OR]

Subgenus *Agostenus* Fischer von Waldheim, 1829

Agostenus Fischer von Waldheim, 1829a: 15. Type species: *Carabus sulcicollis* Paykull, 1798 designated by Jeannel (1942: 971). Etymology. Uncertain, possibly from the Greek *agon* (gathering) or *agos* (leader) or the incorrect transcription of *agan* (very) and *stenos* (narrow, tight) [masculine]. The name was proposed by Franz Anton Ziegler and made available by Fischer von Waldheim. Note. This name has been incorrectly credited to Motschulsky (1850a: x, 65) until Kryzhanovskij et al. (1995: 158).

Pelasnus Fischer von Waldheim, 1829a: 15. Type species: *Carabus quadrisulcatus* Paykull *sensu* Illiger, 1798 (= *Agostenus costulatus* Motschulsky, 1859) by monotypy. Note. This name has been incorrectly credited to Motschulsky (1850a: x, 65, as *Pelasmus*) until Kryzhanovskij et al. (1995: 158).

Agostenops Lutshnik, 1933b: 171. Type species: *Chlaenius alutaceus* Gebler, 1830 by monotypy. Synonymy established by Kryzhanovskij et al. (1995: 158). Etymology. From the generic name *Agostenus* [*q.v.*] and the Greek suffix *-ops* (having the appearance of) [masculine].

Diversity. Nine species in the Nearctic (five species), Neotropical (one Mexican species also found in Arizona), and Palaearctic (four species) Regions.

Chlaenius alternatus Horn, 1871

Chlaenius alternatus G.H. Horn, 1871: 327. Type locality: «Saskatchewan region» (original citation), herein restricted to Meota, Saskatchewan (CNC). Holotype [by monotypy] (♂) in MCZ [# 34534].

Chlaenius albertanus Casey, 1924: 93. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47716]. Synonymy established by Bell (1960: 134).

Distribution. This species ranges from Newfoundland (Larson and Langor 1982: 594) to central Alaska (Lindroth 1969a: 993), south to northeastern Washington (Hatch 1953: 162), central Colorado along the Rocky Mountains, western South Dakota (Meade County, Foster F. Purrington pers. comm. 2010), and eastern Minnesota (Bell 1960: 134). The species is unknown east of the Mississippi south of the Canadian border. Fossil remnants of this species, dated between about 16,700 and 25,200 years B.P., have been unearthed in southeastern Iowa (Baker et al. 1986: 96) and southeastern Illinois (Schwert 1992: 78).
Records. CAN: AB, BC, MB, NB, NF, NS, NT, ON, QC, SK **USA**: AK, CO, MN, MT, ND, SD, WA, WY

Chlaenius caeruleicollis Chaudoir, 1876

Chlaenius caeruleicollis Chaudoir, 1876b: 78. Type locality: «Las Peras [Oaxaca], Mexique» (original citation). Syntype(s) in MHNP.

Chlaenius insperatus G.H. Horn, 1885a: 134. Type locality: «Arizona» (original citation). Three syntypes in MCZ [# 34532]. Synonymy established by Horn (1886b: xii).

Distribution. This species is known from a few specimens simply labeled from Arizona and from Mexico as far south as Oaxaca and central Veracruz (Bell 1960: 132; Davidson 1980: 31).
Records. USA: AZ – Mexico

Chlaenius harpalinus Eschscholtz, 1833

Chlaenius harpalinus Eschscholtz, 1833: 27. Type locality: «bei St. Franzisco [San Francisco County], Californien» (original citation). Syntype(s) location unknown (Lindroth 1969a: 990).

Chlaenius crestonensis Brown, 1933: 43. Type locality: «Creston, B[ritish] C[olumbia]» (original citation). Holotype (♂) in CNC [# 3401]. Synonymy established by Hatch (1953: 161), confirmed by Bell (1960: 132).

Distribution. This species ranges from southeastern Alberta to Vancouver Island (Lindroth 1969a: 990-991), south at least to central California and northern Utah (Bell 1960: 133). One old specimen labeled from "Arizona" is also known (Bell 1960: 133).
Records. CAN: AB, BC (VCI) **USA**: CA, ID, MT, NV, OR, UT, WA [AZ]

Chlaenius interruptus Horn, 1876

Chlaenius interruptus G.H. Horn, 1876d: 259. Type locality: «Washington County, Oregon» (original citation). One syntype [2 originally cited] in MCZ [# 34533] and one in CMNH (collection Ulke).

Distribution. This species is restricted to the Pacific Coast ranging from southern British Columbia, including Vancouver Island (Lindroth 1969a: 993), south through the Coast Range to northern California (Bell 1960: 135). The record from Inyo County, California (Dajoz 2007: 19) needs confirmation. Fossil remnants from a Plio-Pleistocene sequence have been unearthed in northwestern Greenland (Böcher 1995: 25).
Records. CAN: BC (VCI) **USA**: CA, OR, WA

Chlaenius niger Randall, 1838

Chlaenius niger Randall, 1838b: 34. Type locality: «vicinity of Boston [Massachusetts]» (original citation). Syntype(s) lost.
Chlaenius niger var. *ludoviciana* Leng, 1915: 592. Type locality: «Louisiana» (original citation). Holotype location unknown. Synonymy established by Bell (1960: 133).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 133) to south-central British Columbia (Lindroth 1969a: 992), south to northeastern Washington (Hatch 1953: 162), "Wyoming" (Robert L. Davidson pers. comm. 1992), east-central Texas, southern Florida, and Cuba (Bell 1960: 133-134). The record from "Yukon Territory" (Ball and Currie 1997: 453) could not be confirmed.
Records. CAN: AB, BC, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, MT, NE, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WA, WI, WY, TX [YT] – Cuba
Note. The name *Chlaenius exaratus* LaFerté-Sénectère, 1851 is often listed as a junior synonym of this species (e.g., Bell 1960: 133; Lindroth 1969a: 991). However, LaFerté-Sénectère never provided a description of the taxon and the name is a *nomen nudum*.

Subgenus *Randallius* Bousquet, n.subg.

Randallius Bousquet, n.subg. Type species: *Chlaenius purpuricollis* Randall, 1838. Etymology. The generic name is proposed in honor of John Witt Randall [1813-1892] who in his 20s published two descriptive papers on the beetles of Maine and Massachusetts. One of his new species is the type species of this subgenus. Randall did not publish anything else on entomology after these two papers but wrote a volume of poems in 1856 entitled "Consolations of Solitude." His collection is lost (Sprague 1875: 374). The gender of the name is masculine.

Diversity. One North American species.
Taxonomic Note. In my opinion, *Chlaenius purpuricollis* is taxonomically isolated and within the actual structure of the genus *Chlaenius* deserves to be placed in its own sub-

genus. See Bell (1960: 135) and Lindroth (1969a: 994) as "*purpuricollis* group" for the descriptive character states of this new taxon.

Chlaenius purpuricollis Randall, 1838

Chlaenius purpuratus T.W. Harris, 1836: 67 [*nomen dubium*]. Type locality: North America (inferred from title of the paper). Syntype(s) lost. Note. This species was briefly described mainly by comparison with two specimens that Harris attributed with doubt to *Chlaenius aestivus*. Its identity is doubtful but for convenience the name is listed in synonymy with *C. purpuricollis*.

Chlaenius purpuricollis Randall, 1838b: 35. Type locality: Massachusetts (inferred from title of the paper). Syntype(s) lost. **New synonymy**.

Chlaenius frostii Carr, 1920: 219. Type locality: «Edmonton, Al[ber]ta» (original citation). Holotype (♂) in CNC [# 440]. **New synonymy**. Note. Bell (1960: 136) retained *C. frostii* Carr as a subspecies but I believe, as done implicitly by Lindroth (1969a: 994), that the form does not warrant subspecific status.

Chlaenius punctipennis Casey, 1920: 298. Type locality: «Wildur [= Wilbur, Lincoln County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 144), in USNM [# 47715]. Synonymy established by Hatch (1953: 162).

Distribution. This species is found from southern Quebec (Lindroth 1969a: 994) to southeastern British Columbia (CNC), north to Fort Smith in southern Northwest Territories (Bousquet 1987a: 132), south to Oregon (Bell 1960: 136), New Mexico (Perrault 1970: 56), Kansas (Popenoe 1878: 78; Bell 1960: 136), and "New Jersey" (Smith 1890: 92; Smith 1910: 213).

Records. CAN: AB, BC, MB, NT, ON, QC, SK **USA**: CO, CT, IA, ID, IL, IN, KS, MA, MI, MN, ND, NE, NH, NJ, NM, NY, OR, PA, RI, UT, WA, WI, WY

Supertribe HARPALITAE Bonelli, 1810

Harpalii Bonelli, 1810: Tabula Synoptica. Type genus: *Harpalus* Latreille, 1802.

Diversity. Worldwide, with about 13,200 species placed in the following 32 tribes: Anthiini (about 130 species), Atranini (two species), Calophaenini (about 50 species), Catapieseini (nine species), Corsyrini (six species), Ctenodactylini (about 65 species), Cyclosomini (about 120 species), Dryptini (about 85 species), Enoicini (five South African species), Galeritini (about 135 species), Geobaenini (four species), Ginemini (one South American species), Graphipterini (about 155 species), Harpalini (about 2,725 species), Helluonini (about 180 species), Hexagoniini (about 65 species), Lachnophorini (about 115 species), Lebiini (about 4,260 species), Licinini (about 235 species), Masoreini (about 50 species), Odacanthini (about 325 species), Omphreini (14 species), Pentagonicini (about 165 species), Perigonini (about 120 species), Physocrotaphini (about 40 species), Platynini (about 2,670 species), Pseudomorphini (about 320 species), Sarothrocrepidini (about 25 species), Somoplatini (13 species), Sphodrini (about 825 species), Xenaroswellianini (one species), and Zuphiini (about 290 species).

Tribe Licinini Bonelli, 1810

Licinii Bonelli, 1810: Tabula Synoptica. Type genus: *Licinus* Latreille, 1802.

Diversity. Worldwide, with about 235 species arrayed in four subtribes: Dicaelina (45 species), Dicrochilina (30 species), Lestignathina (about 60 species), and Licinina (about 100 species). The Northern Hemisphere is represented by about 150 species (roughly 64% of the world fauna) and North America alone by 62 species (approximately 26.5 %).

Subtribe Dicaelina Laporte, 1834

Dicoelidae Laporte, 1834: 83. Type genus: *Dicoelus* Agassiz, 1846 (unjustified emendation of *Dicaelus* Bonelli, 1813 not in prevailing usage) (= *Dicaelus* Bonelli, 1813).
Rembidae Gistel, 1848: [2]. Type genus: *Rembus* Macleay, 1825.

Diversity. Forty-five species arrayed in two genera, both represented in the Nearctic Region.

Genus *Diplocheila* Brullé, 1835

Rembus W.S. Macleay, 1825: 16 [junior homonym of *Rembus* Germar, 1824]. Type species: *Carabus impressus* Fabricius, 1798 (= *Rembus daldorfi* Crotch, 1871) designated by Westwood (1838: 5). Etymology. Uncertain, possibly from the Greek *rhembo* (turn, revolve, roll) [masculine]. Note. This taxon was made available also by Lepeletier and Audinet-Serville [in Latreille et al.] the same year but the work of Latreille et al. was issued in October 1825 (Evenhuis 1997a: 228) while that of Macleay in July 1825 (Evenhuis 1997b: 507).

Diplocheila Brullé, 1835a: 407. Replacement name for *Rembus* Macleay, 1825. Etymology (original). From the Greek *diplo* (double) and *cheilos* (lip), alluding to the markedly emarginate labrum ("*lèvre supérieure ... presque divisée en deux parties*") of the adult [feminine].

Diplochila Agassiz, 1846: 125. Unjustified emendation of *Diplocheila* Brullé, 1835.
Rhembus Agassiz, 1846: 322, 323. Unjustified emendation of *Rembus* Macleay, 1825.

Distribution. Twenty-nine species in the boreal, temperate, and tropical areas of the Nearctic (nine species), Oriental (12 species), Palaearctic (nine species), and Afrotropical (two species) Regions. The species are placed in three subgenera: *Diplocheila* (nine Oriental and one east Palaearctic species), *Isorembus* (18 species), and *Neorembus* Ball (one Asian species).

Identification. Ball (1959) revised the species of this genus. Since this publication, one new North American species has been described by Will (1998) and a few nomenclatural changes affecting the Nearctic species have been introduced by Lindroth (1968-1969a): Ball's *D. modesta* corresponds to *D. assimilis* and his *D. assimilis* to *D. impressicollis*. Lindroth's (1968: 940-941) key encompasses seven North American species.

Subgenus *Isorembus* Jeannel, 1949

Isorembus Jeannel, 1949a: 771. Type species: *Rembus aegyptiacus* Dejean, 1831 by original designation. Etymology. From the Greek *isos* (equal) and the generic name *Rembus* [*q.v.*] [masculine].

Submera Habu, 1956a: 50, 58. Type species: *Rembus zeelandicus* Redtenbacher, 1868 by original designation. Synonymy established by Ball (1959: 48). Etymology (original). From the generic name *Rembus* [*q.v.*] spelled in reverse with the addition of a terminal *a* [feminine]. Note. Lafer and Kataev (2008) argued that *Submera* should be considered as a valid subgenus.

Shirahataia Habu, 1956a: 50, 63. Type species: *Submera macromandibularis* Habu and Tanaka, 1956 by original designation. Synonymy established by Ball (1959: 48). Etymology. The generic name was proposed for Kôtarô Shirahata [1914-1980], a Japanese policeman interested mainly in Odonata but also in various groups of beetles. After his retirement in 1969, Shirahata (born K. Suzuki) worked as a part-time researcher at the Yamagata Prefectural Museum (Shun-Ichi Uéno pers. comm. 2009).

Diversity. Eighteen species in the Nearctic (nine species), Oriental (three species), Palaearctic (five species), and Afrotropical (two species, one shared with northern Africa and Spain) Regions. Several species listed in this subgenus by Lorenz (2005: 342-343) belong to the subgenus *Diplocheila s.str.*

Diplocheila assimilis (LeConte, 1844)

Rembus assimilis LeConte, 1844: 51. Type locality: «Georgia» (original citation). One syntype in MCZ [# 5703].

Diplocheila modesta Casey, 1920: 203. Type locality: «Montreal [Quebec]» (original citation). One syntype in USNM [# 47379]. Synonymy established by Lindroth (1968: 943).

Distribution. This species is found from New Brunswick (Webster and Bousquet 2008: 20) to east-central South Dakota (Kirk 1971: 239), south to "Georgia" (LeConte 1844: 51).

Records. CAN: NB, ON, QC **USA**: CT, GA, IA, IL, IN, MA, MD, ME, MI, MN, NH, NJ, NY, OH, PA, SC, SD, VT, WI

Diplocheila crossi Will, 1998

Diplocheila crossi Will, 1998: 96. Type locality: «Leroy Percy S[tate] P[ark], Washington Co[unty], Mississippi» (original citation). Holotype (♀) in CUIC [# 6971]. Etymology. The specific name was proposed for the American entomologist William Henley Cross [1928-1984] who is best known for his work on the ecology of the boll weevil with the USDA in Starkville, Mississippi.

Distribution. This species is known from a few localities in the Florida Panhandle and along the Mississippi Basin in northwestern Mississippi, western Tennessee, and southern Illinois [see Will 1998: Fig. 10].
Records. USA: FL, IL, MS, TN

Diplocheila impressicollis (Dejean, 1831)

Rembus impressicollis Dejean, 1831: 682. Type locality: "Amérique septentrionale" (original citation), restricted to «Syracuse [Onondaga County], N[ew] Y[ork]» by Lindroth (1968: 944). One syntype in MHNP (Lindroth 1955b: 17).
Rembus laticollis LeConte, 1847: 419. Type locality: «Syracusas NovEboraci [= Syracuse, Onondaga County, New York]» (original citation). Two syntypes in MCZ [# 5702]. Synonymy established by Lindroth (1955b: 17).
Diplochila cliens Casey, 1897: 348. Type locality: «Kansas» (original citation). One syntype in USNM [# 47376]. Synonymy established by Lindroth (1968: 944).
Diplochila planulata Casey, 1913: 149. Type locality: «Austin [Travis County], Texas» (original citation). One syntype in USNM [# 47377]. Synonymy established by Lindroth (1968: 944).
Diplocheila foveata Casey, 1920: 201. Type locality: «Lake Champlain, New York» (original citation). One syntype in USNM [# 47378]. Synonymy established by Lindroth (1968: 944).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 80) to west-central South Dakota (Kirk and Balsbaugh 1975: 34), south to central New Mexico (Ball 1959: 71, as *D. assimilis*), the Rio Grande in southeastern Texas (Ball 1959: 72, as *D. assimilis planulata*), and southern Virginia (Hoffman 2010: 22). The records from "North Dakota" (Bousquet and Larochelle 1993: 209) and Connecticut (Britton 1920: 214, as *D. laticollis*; see Krinsky and Oliver 2001: 4) need confirmation.
Records. CAN: ON, QC **USA**: DC, IA, IL, IN, KS, MA, MD, MI, MN, MO, MS, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SD, TX, VA, VT, WI [CT, ND]

Diplocheila major major (LeConte, 1847)

Rembus major LeConte, 1847: 418. Type locality: «urbes Detroit et NovAurelianum [= New Orleans, Louisiana]» (original citation), restricted to «Detroit [Wayne County], Mich[igan]» by Lindroth (1969a: 945). Three syntypes in MCZ [# 5704].
Diplochila expansa Casey, 1913: 148. Type locality: «Keokuk [Lee County], Iowa» (original citation). Two syntypes in USNM [# 47372]. Synonymy established by Ball (1959: 75).
Diplochila oblonga Casey, 1913: 148. Type locality: «Kansas» (original citation). Three syntypes in USNM [# 47374]. Synonymy established by Ball (1959: 75).
Diplocheila procera Casey, 1920: 200. Type locality: «Lake Superior» (original citation). One syntype in USNM [# 47373]. Synonymy established by Ball (1959: 75).

Distribution. This subspecies ranges from "Rhode Island" to east-central South Dakota (Ball 1959: 78), south to east-central Kansas (Snow 1880: 78; Ball 1959: 78), "Missouri" (Ball 1960b: 78), and New Jersey (Smith 1890: 82; Smith 1910: 206). The records from Louisiana (Summers 1874a: 80; Casey 1913: 148) and Alabama (Löding 1945: 18) refer to subspecies *melissisa*; those from "North Dakota" (Bousquet and Larochelle 1993: 209) and north-central Colorado (Wickham 1902: 238) need confirmation.
Records. CAN: ON **USA**: CT, IA, IL, IN, KS, MI, MN, MO, NE, NJ, NY, OH, PA, RI, SD, WI [CO, ND]

Diplocheila major melissisa Ball, 1959

Diplocheila major melissisa Ball, 1959: 78. Type locality: «Clewiston, Hendry County, Fl[orid]a» (original citation). Holotype (♀) in MCZ [# 31159].

Distribution. This subspecies ranges along the Coastal Plain from eastern Virginia (Hoffman et al. 2006: 24) to southern Florida (Peck and Thomas 1998: 21), west to southeastern Texas (Ball 1959: 80); also recorded from Cuba (Ball 1959: 80).
Records. USA: AL, FL, LA, MS, NC, SC, TX, VA – Cuba

Diplocheila nupera Casey, 1897

Diplochila nupera Casey, 1897: 348. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). Holotype [by monotypy] (♀) in USNM [# 47382].
Rembus angusticollis Blatchley, 1928b: 61. Type locality: «Dunedin [Pinellas County], Fl[orid]a» (original citation). Holotype [by monotypy] (♀) in PURC. Synonymy established by Ball (1959: 72).

Distribution. As far as known, this species is endemic to the southern half of the Florida Peninsula (Ball 1959: 73).
Records. USA: FL

Diplocheila obtusa (LeConte, 1847)

Rembus obtusus LeConte, 1847: 420. Type locality: «Longs's Peak [Boulder County, Colorado]» (original citation). Three syntypes in MCZ [# 5706].
Diplocheila parallela Casey, 1920: 204. Type locality: «Homer [Champaign County], Illinois» (original citation). One syntype in USNM [# 47383]. Synonymy established by Lindroth (1954b: 136).

Distribution. This species occurs from Cape Breton Island (Bousquet 1987d: 107) to south-central British Columbia, north to central Northwest Territories along the Mackenzie River (Lindroth 1969a: 948), south to eastern Washington, "Nevada" (Ball 1959: 82), the Sierra Blanca in south-central New Mexico (Fall and Cockerell 1907: 159), northwestern Texas (Oldham County, Foster F. Purrington pers. comm. 2010), "Missouri" (Ball 1959: 82), northwestern Tennessee (Stewart County, Foster F. Purrington pers. comm. 2010), and western Virginia (Hoffman et al. 2006: 24). The record

from southern Louisiana (Summers 1874a: 80) is probably in error; that from "Arkansas" (Bousquet and Larochelle 1993: 209) needs confirmation.
Records. CAN: AB, BC, MB, NB, NS (CBI), NT, ON, PE, QC, SK **USA**: CO, CT, IA, ID, IL, IN, KS, MA, ME, MI, MN, MO, MT, ND, NE, NH, NM, NV, NY, OH, PA, SD, TN, TX, VA, VT, WA, WI, WY [AR]

Diplocheila oregona (Hatch, 1951)

Rembus oregona Hatch, 1951: 119. Type locality: «McMinnville [Yamhill County], Ore[gon]» (original citation). Holotype (♂) in USNM.

Distribution. This species ranges from southeastern Manitoba to the Okanagan Valley in southern British Columbia (Lindroth 1968: 943), south to northwestern Oregon (Hatch 1951: 119), "Utah" (Ball 1959: 64), northwestern Wyoming (Sikes 1994), and "North Dakota" (Donald P. Schwert pers. comm. 1989).
Records. CAN: AB, BC, MB, SK **USA**: MT, ND, NV, OR, UT, WY

Diplocheila striatopunctata (LeConte, 1844)

Rembus striatopunctatus LeConte, 1844: 50. Type locality: «Carlisle [Cumberland County], Pennsylvania» (original citation). Syntype(s) in MCZ [# 2729].
Diplochila alternans Casey, 1897: 347. Type locality: «Bayfield [Bayfield County, Wisconsin]» (original citation). One syntype in USNM [# 47375]. Synonymy established by Ball (1959: 60).
Diplocheila amplipennis Casey, 1920: 202. Type locality: «Lake Superior» (original citation). One syntype in USNM [# 47380]. Synonymy established by Ball (1959: 60).
Diplocheila brevicollis Casey, 1920: 203. Type locality: «Ogdensburg [Saint Lawrence County], New York» (original citation). One syntype in USNM [# 47381]. Synonymy established by Ball (1959: 60).

Distribution. This species ranges from central Nova Scotia (Majka et al. 2007: 10) to the Okanagan Valley in British Columbia, north to Fort Smith in southern Northwest Territories (Lindroth 1968: 941), south to Inyo County in California (Dajoz 2007: 19), southeastern Arizona (Dajoz 2007: 21, as *Diplochaetus striatopunctata*), "Kansas," and northeastern New Jersey (Ball 1959: 63). Old specimens simply labeled from Texas and Georgia are known (Ball 1959: 63). The record from "Virginia" (Bousquet and Larochelle 1993: 209) needs confirmation.
Records. CAN: AB, BC, MB, NB, NS, NT, ON, QC, SK **USA**: AZ, CA, IA, ID, IL, IN, KS, MI, MN, MO, MT, ND, NE, NH, NJ, NY, OH, OR, PA, SD, UT, VT, WA, WI [GA, TX, VA]

Diplocheila undulata Carr, 1920

Diplochila undulata Carr, 1920: 218. Type locality: «Edmonton, Al[ber]ta» (original citation). Holotype (♂) in CNC [# 408].

Distribution. This species is known from Alberta, as far north as Edmonton, southern Manitoba (Lindroth 1969a: 946), Minnesota (Tinerella and Rider 2001: 321; Kamal J.K. Gandhi pers. comm. 2008), Wisconsin (Messer 2010: 39), "Illinois" (Ball 1959: 83), and southeastern Nebraska (Hall County, UASM).
Records. CAN: AB, MB **USA**: IL, MN, NE, WI

Genus *Dicaelus* Bonelli, 1813

Dicaelus Bonelli, 1813: 446. Type species: *Dicaelus violaceus* Bonelli, 1813 (= *Dicaelus purpuratus* Bonelli, 1813) designated by Hope (1838: 82). Etymology. From the Greek *dis* (double) and *coilos* (hollow), alluding to the pair of impressions on the anterior part of the frons ("*la tête porte sur le devant deux enfoncements très-considérables ... c'est de ces deux impressions que j'ai tiré le nom Dicaelus*") of the adult [masculine].
Dicoelus Agassiz, 1846: 122, 123. Unjustified emendation of *Dicaelus* Bonelli, 1813.

Distribution. Sixteen species (24 species-group taxa) restricted to the temperate and tropical zones of North America and Mexico (south to the vicinity of Mexico City). Three subgenera are recognized: *Dicaelus s.str.*, *Paradicaelus*, and *Liodicaelus*.
Identification. Ball (1959) revised the species of this genus. Since the publication of this work, Ball (1992a) described one new Mexican species (*D. franclemonti*), one Mexican subspecies was raised to specific level (*D. abbreviatus* Bates), and another one (*D. laevipennis dicaeloides*) was placed in synonymy. A few changes are introduced here: *D. subtropicus* and *D. quadratus* treated as subspecies are raised to specific level, and *D. purpuratus darlingtoni* is placed in synonymy with *D. quadratus*.

Subgenus *Paradicaelus* Ball, 1959

Paradicaelus Ball, 1959: 103. Type species: *Dicaelus furvus* Dejean, 1826 by original designation. Etymology. From the Greek *para* (near) and the generic name *Dicaelus* [*q.v.*] [masculine].

Diversity. Seven North American species arrayed in three species groups.

[**elongatus group**]

Dicaelus elongatus Bonelli, 1813

Dicaelus elongatus Bonelli, 1813: 448. Type locality: «Amérique septentrionale» (original citation, see page 449), restricted to «Blacks M[oun]t[ain]s, N[orth] C[arolina]» by Lindroth (1969a: 950). Syntype(s) location unknown (possibly in MHNG in collection Jurine, see Casale and Giachino 1998: 68).
Dicaelus simplex Dejean, 1826: 389. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 18). Synonymy established by Horn (1880b: xvii).

Dicaelus obscurus LeConte, 1847: 429. Type locality: «provinciis australibus» (original citation). Syntype(s) in MCZ [# 5716]. Synonymy established, under the name *D. simplex* Dejean, by LeConte (1853c: 389), confirmed by Ball (1959: 106).

Dicaelus debiliceps Casey, 1913: 151. Type locality: «Buena Vista Spring, Franklin Co[unty], Pennsylvania» (original citation). One syntype in USNM [# 47359]. Synonymy established by Ball (1959: 106).

Dicaelus ashevillensis Casey, 1920: 205. Type locality: «Asheville [Buncombe County], North Carolina» (original citation). Holotype [by monotypy] (♂) in USNM [# 47360]. Synonymy established by Ball (1959: 106).

Distribution. This species ranges from Maine (Foss 2001: 14) to eastern South Dakota (Kirk and Balsbaugh 1975: 35), including southern Ontario (Lindroth 1969a: 950), south to east-central Texas (Riley 2011) and southern Florida, including the Keys (Peck and Thomas 1998: 21). The record from Montreal, Quebec (Perrault 1977: 153) needs confirmation.

Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI [QC]

[**furvus group**]

***Dicaelus dilatatus dilatatus* Say, 1823**

Dicaelus dilatatus Say, 1823a: 68. Type locality: «Camp Hill[s] [Cumberland County], P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33026]. Note. Say (1823a) did not indicate the area where his specimen(s) came from but later (Say 1825: [53]) noted that the species was "an inhabitant of Pennsylvania."

Dicaelus dejeanii Dejean, 1831: 687. Type locality: «Amérique septentrionale» (original citation), restricted to «coastal plain of Georgia» by Ball (1959: 126). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 17). Synonymy established by Brullé (1835c: 282).

Dicaelus planicollis LeConte, 1847: 427. Type locality: «Georgia ad montes» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5709]. Synonymy established by Ball (1959: 130).

Dicaelus carolinensis Casey, 1913: 150. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Holotype [by monotypy] (♂) in USNM [# 47357]. Synonymy established by Ball (1959: 130).

Distribution. This subspecies ranges from "Maine" (Larochelle and Larivière 1990a: 32) to west-central New York, south to northern Florida (Ball 1959: 131-132), west to eastern Texas (Sabine County, Brian Raber pers. comm. 2010).

Records. USA: AL, CT, DC, DE, FL, GA, MA, MD, ME, MS, NC, NH, NJ, NY, PA, RI, SC, TX, VA, VT, WV

Note. Ball (1959: 132) reported the presence of intergrade populations of this and the *sinuatus* forms in Mississippi, Alabama, northern Florida, Georgia, South Carolina, and North Carolina. For practical reasons, these populations are considered to belong to the nominotypical subspecies.

Dicaelus dilatatus sinuatus Ball, 1959

Dicaelus dilatatus sinuatus Ball, 1959: 132. Type locality: «Mount Pleasant, Henry County, Iowa» (original citation). Holotype (♂) location unknown. Note. The holotype was originally deposited in the Iowa Natural History Survey Collection. The whereabouts of that collection is unknown to the author. Paratypes of the species are in SMEK [# 5445] (Byers and Karren 1968: 3).

Distribution. This subspecies ranges from western Pennsylvania to southeastern Iowa (Ball 1959: 134) and west-central Illinois (Willand et al. 2011: 273 as *D. dilatatus*), south to southern Tennessee and southwestern North Carolina (Ball 1959: 134).
Records. USA: IA, IL, IN, KY, NC, OH, PA, TN, VA, WV

Dicaelus furvus carinatus Dejean, 1831

Dicaelus carinatus Dejean, 1831: 689. Type locality: «Amérique septentrionale» (original citation), restricted to «coastal plain of Georgia» by Ball (1959: 123). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 18).

Distribution. This subspecies ranges from eastern Minnesota (Gandhi et al. 2005: 929) south to eastern Texas (Sabine County, Brian Raber pers. comm. 2010) and southern Mississippi, east to northwestern Georgia (Ball 1959: 123).
Records. USA: AL, AR, GA, IA, KS, MN, MO, MS, NE, OK, TX

Dicaelus furvus furvus Dejean, 1826

Dicaelus furvus Dejean, 1826: 388. Type locality: «Amérique septentrionale» (original citation), restricted to «Pennsylvania, east of the Susquehanna River» by Ball (1959: 121). One syntype in MHNP (Lindroth 1955b: 18).

Dicaelus ovalis LeConte, 1847: 427. Type locality: United States east of the Rocky Mountains (inferred from title of the paper). Syntype(s) in MCZ [# 5715]. Synonymy established by Ball (1959: 120).

Distribution. This subspecies ranges from eastern Pennsylvania to west-central Illinois (McCravy and Willand 2008: 157), south to Tennessee (Ball 1959: 122) and South Carolina (Kirk 1969: 14; Kirk 1970: 15; Ciegler 2000: 84). The records from New York (Notman 1928: 229, as *D. ovalis*) and "Georgia" (J.E. LeConte 1849: 26) need confirmation; that from southern Louisiana (Summers 1874a: 80) is probably in error.
Records. USA: DC, DE, IL, IN, KY, MD, NC, NJ, OH, PA, SC, TN, VA, WV [GA, NY]

Note. Ball (1959: 122) reported the presence of intergrade populations between this and the *carinatus* forms in Ohio, Indiana, Illinois, Tennessee, and North Carolina. For practical reasons, these populations are considered here to belong to the nominotypical subspecies.

Dicaelus sculptilis intricatus LeConte, 1873

Dicaelus sculptilis intricatus LeConte, 1873b: 324. Type locality: North America (inferred from title of the paper); restricted to «eastern Pennsylvania» by Ball (1959: 143). Syntype(s) location unknown (Lindroth 1969a: 952).

Distribution. This subspecies is found from southernmost Ontario and southeastern Michigan south to southern Indiana and central Maryland (Ball 1959: 143-144).
Records. CAN: ON **USA**: IN, MD, MI, OH, PA, VA, WV

Dicaelus sculptilis sculptilis Say, 1823

Dicaelus sculptilis Say, 1823a: 68. Type locality: «Platte Co[unty], M[iss]o[uri]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 345), in MCZ [# 33025]. Note. «Missouri [Territory]» was the area originally cited by Say (1823a: 69).

Dicaelus ocellatus Blatchley, 1912: 77. Type locality: «H[ot] Springs [Garland County], Ark[ansas]» (original citation). Lectotype (♂), designated by Blatchley (1930: 37), in INHS. Synonymy established by Ball (1959: 141).

Distribution. This subspecies is found in the southern part of the Great Plains from northeastern Kansas to central Iowa, south to central Arkansas and eastern Oklahoma (Ball 1959: 142) including southwestern Illinois (Union County, CNC). The record from western Pennsylvania by LeConte (1859d: 53) is probably in error.
Records. USA: AR, IA, IL, KS, MO, OK
Note. Ball (1959: 142) reported the presence of intergrade populations between all three subspecies of *D. sculptilis* in Iowa.

Dicaelus sculptilis upioides Ball, 1959

Dicaelus sculptilis upioides Ball, 1959: 144. Type locality: «Winnipeg, Manitoba» (original citation). Holotype (♂) in CUIC [# 3516].

Distribution. This subspecies ranges from western Ontario to Saskatoon in Saskatchewan (Lindroth 1969a: 953), south to southern New Mexico (Ball 1959: 145), southeastern Nebraska (Lancaster County, Foster F. Purrington pers. comm. 2009), and southern Illinois (Ball 1959: 145).
Records. CAN: MB, ON, SK **USA**: CO, IA, IL, MN, ND, NE, NM, SD, WI, WY

[**politus group**]

***Dicaelus ambiguus* LaFerté-Sénectère, 1841**

Dicaelus ambiguus LaFerté-Sénectère, 1841a: 44. Type locality: «Amer[ica] bor[ealis]» (original citation in Dejean 1836: 31), herein restricted to Columbia, Lancaster County, Pennsylvania (see LeConte, 1847: 430, as *D. reflexus*). Syntype(s) probably in MHNP (collection Chaudoir).

Dicaelus opacus LaFerté-Sénectère, 1841a: 43. Type locality: Texas (inferred from title of the paper). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by LeConte (1873b: 324).

Dicaelus reflexus LeConte, 1847: 430. Type locality: «Columbiam [= Columbia, Lancaster County] Pensylvaniae» (original citation). Syntype(s) in MCZ [# 5717]. Synonymy established with doubt by LeConte (1863b: 10), confirmed by Ball (1959: 112).

Dicaelus turbulentus LeConte, 1863c: 12. Type locality: «Missouri» (original citation). Four syntypes in MCZ [# 5718]. Synonymy established by Horn (1880b: xvii), confirmed by Ball (1959: 112).

Distribution. This species is known from northern New Jersey (Smith 1910: 207) to southeastern Iowa, south to southeastern Texas (Ball 1959: 113) and the Florida Panhandle (Peck and Thomas 1998: 21).

Records. USA: AL, AR, DC, FL, GA, IA, IL, IN, KY, LA, MD, MO, MS, NC, NJ, OH, OK, PA, SC, TN, TX, VA

***Dicaelus politus* Dejean, 1826**

Dicaelus politus Dejean, 1826: 391. Type locality: «Amérique septentrionale» (original citation), restricted to «Uniontown, Penns[ylvania]» by Lindroth (1969a: 951). One syntype in MHNP (Lindroth 1955b: 18).

Dicaelus leonardii T.W. Harris, 1828d: 132. Type locality not stated. Possible syntype(s) in MCZ. Synonymy established by Harris (1829: 1), confirmed by Ball (1959: 110). Note. Harris's collection contains two specimens under the name *D. politus*, both from New Hampshire. Ball (1959: 110) reported the presence of one syntype in MCZ, probably referring to the ♂ specimen in LeConte's collection labeled "[pink disc] / D. politus Dej. Leonardii Harris. [handwritten]."

Dicaelus angustus Casey, 1913: 152. Type locality: «Tennessee» (original citation). One syntype in USNM [# 47363]. Synonymy established by Ball (1959: 110).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 80) to northern Iowa, south to northern Alabama (Ball 1959: 111) and South Carolina (Ciegler 2000: 84). The record from "Florida" (Horn 1880c: 52) needs confirmation.

Records. CAN: ON, QC **USA**: AL, CT, DC, DE, GA, IA, IL, IN, KY, MA, MD, ME, MI, MO, MS, NC, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI, WV [FL]

Dicaelus teter Bonelli, 1813

Dicaelus teter Bonelli, 1813: 449. Type locality: «Amérique septentrionale» (original citation), restricted to «Pike [Wyoming County], N[ew] Y[ork]» by Lindroth (1969a: 952). Syntype(s) probably in MHNP (Casale and Giachino 1998: 68).
Dicaelus ovipennis Casey, 1913: 152. Type locality: «North Carolina» (original citation). One syntype in USNM [# 47362]. Synonymy established by Ball (1959: 114).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 80) to southwestern Indiana, south to northern Alabama (Ball 1959: 115), northern Georgia (Fattig 1949: 31), and northwestern South Carolina (Ciegler 2000: 85). The record from South Dakota (Kirk and Balsbaugh 1975: 35) is likely in error.
Records. CAN: ON, QC **USA**: AL, CT, DC, GA, IN, KY, MA, MD, MI, NC, NJ, NY, OH, PA, SC, TN, VA, VT, WV

Subgenus *Dicaelus* Bonelli, 1813

Dicaelus Bonelli, 1813: 446. Type species: *Dicaelus violaceus* Bonelli, 1813 (= *Dicaelus purpuratus* Bonelli, 1813) designated by Hope (1838: 82).

Diversity. Six North American species, one of them extending into northern Mexico, arrayed in three species groups.

[**costatus group**]

Dicaelus costatus LeConte, 1853

Dicaelus costatus LeConte, 1853c: 389. Type locality: «Texas» (original citation), herein restricted to Kingsville, Kleberg County (see Ball 1959: 168). Syntype(s) [3 originally cited] in MCZ [# 5708].
Dicaelus costatus var. *lerdoensis* Bates, 1891a: 238. Type locality: «Villa Lerdo, in Durango» (original citation). Syntype(s) [2 originally cited] probably in BMNH. Synonymy established by Ball (1959: 166).

Distribution. This species is known from eastern Texas south to southern Tamaulipas and Durango (Ball 1959: 167) in Mexico. Two specimens are known from northern Florida and "Virginia" (Ball 1959: 167).
Records. USA: TX [FL, VA] – Mexico

[**crenatus group**]

Dicaelus alternans Dejean, 1826

Dicaelus alternans Dejean, 1826: 387. Type locality: «Amérique septentrionale» (original citation), herein restricted to Saint Simons Island, Glynn County, Georgia (see Ball 1959: 164). One syntype in MHNP (Lindroth 1955b: 18).

Distribution. This species is known from southeastern coastal Georgia south to southern Florida (Ball 1959: 164).
Records. USA: FL, GA

***Dicaelus crenatus* LeConte, 1853**

Dicaelus crenatus LeConte, 1853c: 389. Type locality: «Louisiana» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5714].

Distribution. This species inhabits the southern part of the Great Plains from "Kansas" to southeastern Missouri (Ball 1959: 162), south to northwestern Mississippi (Coahoma County, Drew A. Hildebrandt pers. comm. 2008), "Louisiana" (LeConte 1853c: 389), and southern Texas (Ball 1959: 162). The records from Alabama (Löding 1945: 18), the Florida Panhandle (Harris and Whitcomb 1974: 99), Georgia (Fattig 1949: 31), and North Carolina (Brimley 1938: 122) need confirmation.
Records. USA: AR, KS, LA, MO, MS, OK, TX [AL, FL, GA, NC]

***Dicaelus subtropicus* Casey, 1913**

Dicaelus subtropicus Casey, 1913: 151. Type locality: «Palm Beach [Palm Beach County], Florida» (original citation). Six syntypes [6 originally cited] in USNM [# 47358].

Distribution. This species is known only from a few localities in the southern third of Florida, including the Keys (Ball 1959: 165).
Records. USA: FL
Note. This form has been considered as a subspecies of *D. alternans* Dejean by Ball (1959: 164) but I believe it is more appropriately treated as a distinct species.

[**purpuratus group**]

***Dicaelus purpuratus purpuratus* Bonelli, 1813**

Dicaelus purpuratus Bonelli, 1813: 447. Type locality: «Caroline» (original citation), incorrectly restricted to «Kentucky» by Lindroth (1969a: 953), herein restricted to Raleigh, Wake County, North Carolina (CNC). Syntype(s) location unknown (possibly in MHNG in collection Jurine, see Casale and Giachino 1998: 68).

Dicaelus violaceus Bonelli, 1813: 447. Type locality: «Caroline» (original citation). Syntype(s) location unknown (possibly in MHNG in collection Jurine). Synonymy established by LeConte (1863b: 10).

Dicaelus chalybeus Dejean, 1826: 385. Type locality: «Louisiane» (original citation). One syntype in MHNP (Lindroth 1955b: 17). Synonymy established with doubt by Dejean (1826: 385), confirmed by Lindroth (1969a: 953).

Dicaelus cyaneus Dejean, 1831: 686. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 18). Synonymy established by Horn (1880c: 52).

Dicaelus confusus LeConte, 1847: 424. Type locality: «Georgia» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5711]. Synonymy established by Horn (1880c: 52), confirmed by Ball (1959: 154).

Dicaelus iricolor LeConte, 1847: 426. Type locality: «urbem S[ain]t Louis [Missouri]» (original citation). Syntype(s) in MCZ [# 5712]. Synonymy established by Horn (1880c: 52), confirmed by Ball (1959: 154).

Distribution. The range of this subspecies extends from Massachusetts to western Wisconsin (Ball 1959: 156), south to southeastern Texas (Cameron County, Brian Raber pers. comm. 2010), southern Louisiana (Summers 1874a: 80; Allen 1965: 73), southwestern Alabama (Ball 1959: 156), and central Georgia (Fattig 1949: 30).
Records. CAN: ON **USA**: AL, CT, DC, GA, IA, IL, IN, KY, LA, MA, MD, MI, MO, MS, NC, NJ, NY, OH, PA, SC, TN, TX, VA, WI, WV

Dicaelus purpuratus splendidus Say, 1823

Dicaelus splendidus Say, 1823a: 69. Type locality: «Platte Co[unty], M[iss]o[uri]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33024]. Note. «Missouri [Territory]» was the area originally cited by Say (1823a: 69).
Dicaelus decoloratus LeConte, 1847: 423. Type locality: «Texas» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5710]. Synonymy established with doubt by LeConte (1853c: 388), confirmed by Ball (1959: 156).
Dicaelus speciosus Casey, 1913: 152. Type locality: «New Mexico» (original citation). Two syntypes in USNM [# 47361]. Synonymy established by Fall (1932: 20), confirmed by Ball (1959: 156).

Distribution. The range of this subspecies extends from "Minnesota" (Ball 1959: 158) to southwestern North Dakota (Tinerella 2003: 636), south to southeastern Arizona, southeastern Texas (Ball 1959: 158), and southeastern Louisiana (Allen 1965: 73), including west-central Illinois (Willand et al. 2011: 273).
Records. USA: AR, AZ, CO, IA, IL, KS, LA, MN, MO, ND, NE, NM, OK, SD, TX

Dicaelus quadratus LeConte, 1847

Dicaelus quadratus LeConte, 1847: 422. Type locality: «Georgia» (original citation). Two syntypes in MCZ [# 5713].
Dicaelus lecontei LaFerté-Sénectère, 1851: 277. Type locality: «Amer[ica] bor[ealis]» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by LeConte (1853c: 388).
Dicaelus darlingtoni Fall, 1932: 19. Type locality: «Homestead [Dade County], Florida» (original citation). Holotype (♀) in MCZ [# 23875]. **New synonymy**.

Distribution. This species has been recorded from "Georgia" (LeConte 1847: 422), the Florida Panhandle and Peninsula including the Keys (Peck and Thomas 1998: 21), and southwestern Alabama (Löding 1945: 18; Ball 1959: 159).
Records. USA: AL, FL, GA
Note. Following Lindroth (1969a: 954), I believe this taxon should be regarded as a valid species, not as a subspecies of *D. purpuratus* Bonelli.

Subgenus *Liodicaelus* Casey, 1913

Liodicaelus Casey, 1913: 154. Type species: *Liodicaelus evanescens* Casey, 1913 (= *Dicaelus laevipennis* LeConte, 1847) by original designation. Etymology. From the Greek prefix *lio-* (smooth) and the generic name *Dicaelus* [*q.v.*] [masculine].

Diversity. Five species in North America (three species) and Mexico (four species, two of them endemic).

Dicaelus chermocki Ball, 1959

Dicaelus chermocki Ball, 1959: 175. Type locality: «Carr Canyon (7,500'), Huachuca M[oun]t[ain]s, Cochise County, Arizona» (original citation). Holotype (♀) in MCZ [# 31162]. Etymology. The specific name was given in honor of Ralph Lucien Chermock [1918-1977], professor of biology at the University of Alabama and eventually director of the Alabama Museum of Natural History. His interest, shared with his wife Ottilie Diana Chermock, was directed mainly to Lepidoptera. Each year, the Ralph L. Chermock Prize is presented to the most outstanding graduate student in systematic and ecology at the University of Alabama.

Distribution. This species is confined to the Huachuca and Chiricahua Mountains of southeastern Arizona [see Ball 1992a: Fig. 17].
Records. USA: AZ

Dicaelus laevipennis laevipennis LeConte, 1847

Dicaelus laevipennis LeConte, 1847: 421. Type locality: «flumen Platte, prope rupem caminatam (Chimney) [Colorado]» (original citation). Two syntypes in MCZ [# 5707].

Liodicaelus evanescens Casey, 1913: 154. Type locality: «San Bernardino Ranch, Cochise Co[unty], Arizona» (original citation). One syntype in USNM [# 47364]. Synonymy established by Ball (1959: 170).

Dicaelus laevipennis dicaeloides Ball, 1959: 172. Type locality: «Cloudcroft (9,000'), Otero County, New Mexico» (original citation). Holotype (♂) in MCZ [# 31161]. Synonymy established by Ball (1992a: 365).

Distribution. This subspecies ranges from southeastern Alberta to southwestern South Dakota, south to southeastern Texas, Chihuahua in Mexico, and southeastern Arizona [see Ball 1992a: Fig. 18].
Records. CAN: AB **USA**: AZ, CO, KS, MT, NE, NM, OK, SD, TX, UT – Mexico
Note. The subspecies *D. laevipennis flohri* Bates is endemic to Mexico ranging from the state of Durango to the Mexico City area (Ball 1992a: 366).

Dicaelus suffusus (Casey, 1913)

Liodicaelus suffusus Casey, 1913: 155. Type locality: «Sierra Madre M[oun]t[ain]s, Chihuahua» (original citation), restricted to «vicinity of Madera» by Ball (1992a: 364). Nine syntypes [9 originally cited] in USNM [# 47365].

Distribution. This species is known only from the Chiricahua Mountains in southern Arizona and the Sierra Madre Occidental in Chihuahua and Sonora [see Ball 1992a: Fig. 17].
Records. USA: AZ – Mexico

Subtribe Licinina Bonelli, 1810

Licinii Bonelli, 1810: Tabula Synoptica. Type genus: *Licinus* Latreille, 1802.
Badistidae Gistel, 1856: 357. Type genus: *Badistes* Agassiz, 1846 (unjustified emendation of *Badister* Clairville, 1806, not in prevailing usage) (= *Badister* Clairville, 1806).

Diversity. Worldwide, with about 100 species in the Nearctic (14 species of *Badister*), Neotropical (five species, one of them belonging to the Chilean genus *Eutogeneius* Solier), Australian (11 species), Oriental (four species), Palaearctic (68 species), and Afrotropical (three species of *Badister*) Regions. Approximately 82% of the species are found in the Northern Hemisphere.
Faunistic Note. Several specimens of *Licinus silphoides* (Rossi) were taken alive in Massachusetts as noted by LeConte (1873b: 324). It is likely that a population persisted for a while but since no specimen has been caught in North America in the xx Century, the species is certainly not established on this continent.

Genus *Badister* Clairville, 1806

Badister Clairville, 1806: 90. Type species: *Carabus bipustulatus* Fabricius, 1792 (= *Carabus bullatus* Schrank, 1798) by monotypy. Etymology. From the Greek *badister*, *-os* (walker) [masculine].
Badistes Agassiz, 1846: 42. Unjustified emendation of *Badister* Clairville, 1806.

Distribution. Forty-eight species in the boreal, temperate, and tropical areas in the Nearctic (14 species), Neotropical (five species in Mexico, the West Indies, and Peru), Australian (two species), Oriental (one species), Palaearctic (27 species), and Afrotropical (three species) Regions. The species are arrayed in three subgenera: *Badister* (23 species), *Baudia* (22 species), and *Trimorphus* Stephens (two Palaearctic species).
Identification. Ball (1959) revised the North American species. No new North American species have been described since. Lindroth's (1969a) key encompasses all North American species but *B. submarinus*.

Subgenus *Badister* Clairville, 1806

Badister Clairville, 1806: 90. Type species: *Carabus bipustulatus* Fabricius, 1792 (= *Carabus bullatus* Schrank, 1798) by monotypy.

Amblychus Gyllenhal, 1810: 74. Type species: *Carabus bipustulatus* Fabricius, 1792 (= *Carabus bullatus* Schrank, 1798) designated by Jeannel (1942: 1000). Etymology. From the Greek *amblys* (blunt, obtuse) [masculine].

Diversity. Twenty-four species in North America (eight species, one of them extending into the Bahamas), Mexico (three species, one of them endemic), Peru (one species), and the Palaearctic Region (14 species).
Identification. Erwin and Ball (2011: 407-409) published a key to the Western Hemisphere species.

[**elegans group**]

***Badister elegans* LeConte, 1880**

Badister elegans LeConte, 1880b: 165. Type locality: «Bosque Co[unty, Texas]» (original citation). Two syntypes [3 originally cited] in MCZ [# 5722].

Distribution. This rarely collected species ranges from "Illinois" to eastern Kansas (Ball 1959: 206), south to Coahuila and Tamaulipas (Ball 1992a: 375) in northern Mexico, southeastern Louisiana (East Baton Rouge Parish, Igor M. Sokolov pers. comm. 2009), and western Alabama (Tuscaloosa County, UASM). The records from southwestern New Jersey (Smith 1910: 207), "Florida" (Leng 1915: 580), "Delaware" (Houghton 1905: 211), and "Colorado" (Csiki 1931: 903) need confirmation.
Records. USA: AL, AR, IL, KS, LA, MO, OK, TX [CO, DE, FL, NJ] – Mexico

***Badister flavipes flavipes* LeConte, 1853**

Badister flavipes LeConte, 1853c: 388. Type locality: «Louisiana» (original citation). Two syntypes [2 originally cited] in MCZ [# 5725].
Europhilus iridipennis Motschulsky, 1865: 321. Type locality: «environs de la nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♀), designated by Liebherr (1991b: 120), in ZMMU. Synonymy established by Liebherr (1991b: 120).
Badister laticeps Blatchley, 1910: 118. Type locality: «Perry County [Indiana]» (original citation for the lectotype). Lectotype (♀), designated by Blatchley (1930: 33), in PURC. **New synonymy**.
Badister flavicornis Casey, 1920: 208. Type locality: «Cedar Rapids [Linn County], Iowa» (original citation). One syntype in USNM [# 47368]. Synonymy established, under the name *B. flavipes laticeps* Blatchley, by Ball (1959: 211).

Distribution. This subspecies ranges from south-central New York (Ball 1959: 213) to southeastern Nebraska (Lancaster County, UASM), including southern Wisconsin (Rauterberg 1885: 17; Purrington et al. 2002: 201), south to southern Texas (Gonzales County, CMNH; Brazoria County, Robert L. Davidson pers. comm. 2008) and southern Florida (Peck and Thomas 1998: 21); also recorded from the Bahamas (Darlington 1953: 8).

Records. USA: AR, DC, FL, GA, IA, IL, IN, KS, KY, LA, MD, MI, MO, MS, NE, NY, OH, PA, TN, TX, WI – Bahamas.
Note. Ball (1959) recognized three subspecies within this taxon, two of them occurring north of Mexico. Because the differences between the two forms are largely based on color and that intermediate specimens are known from Louisiana (Ball 1959: 210), I prefer not to recognize the color forms as distinct subspecies. *Badister flavipes mexicanus* Van Dyke is endemic to Mexico.

Badister maculatus LeConte, 1853

Badister maculatus LeConte, 1853c: 387. Type locality: «Lancaster [Lancaster County], P[ennsylvani]a» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5721].

Distribution. This rarely collected species ranges from southwestern New Jersey (Smith 1910: 207) to central Kansas (Knaus 1898: 19), south to east-central Texas (Riley 2011), central Louisiana (Concordia Parish, CNC), and northern Florida (Peck and Thomas 1998: 21).
Records. USA: AL, AR, DC, FL, GA, IA, IN, KS, KY, LA, MO, MS, NJ, OH, OK, PA, SC, VA, TX

[**notatus group**]
Badister notatus Haldeman, 1843

Badister notatus Haldeman, 1843b: 299. Type locality: southeastern Pennsylvania (Haldeman 1843a: 296). Syntype(s) presumably lost.
Badister terminalis LeConte, 1844: 51. Type locality: «New York» (original citation). One syntype in MCZ [# 5719]. Synonymy established by LeConte (1847: 417), confirmed by Ball (1959: 215).
Badister angustus Casey, 1920: 207. Type locality: «Illinois» (original citation). One syntype in USNM [# 47367]. Synonymy established by Ball (1959: 215).
Badister gilvipes Casey, 1920: 207. Type locality: «Long Island, New York» (original citation). One syntype in USNM [# 47366]. Synonymy established by Ball (1959: 215).

Distribution. This species is found from southwestern New Brunswick (Webster and Bousquet 2008: 20) to eastern South Dakota (Kirk and Balsbaugh 1975: 35; French et al. 2004: 557), south to east-central Texas (Brazos County, CNC; Riley 2011), northern Georgia (Ball 1959: 216-217), and northwestern South Carolina (Ciegler 2000: 85).
Records. CAN: NB, ON, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

[**pulchellus group**]

***Badister ferrugineus* Dejean, 1831**

Badister ferrugineus Dejean, 1831: 690. Type locality: «Californie» (original citation), herein restricted to San Francisco, San Francisco County (see Eschscholtz 1833: 28). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 18).

Badister anthracinus LeConte, 1859a: 83. Type locality: «Oregon» (original citation). One syntype in MCZ [# 5724]. Synonymy established by Lindroth (1969a: 961).

Distribution. This species ranges from southwestern British Columbia, including Vancouver Island (Lindroth 1969a: 962), south to southern California (Ball 1959: 200-201). One old specimen labeled "Nev." is known (Ball 1959: 200).
Records. CAN: BC (VCI) **USA**: CA, OR, WA [NV]

***Badister neopulchellus* Lindroth, 1954**

Badister neopulchellus Lindroth, 1954b: 153. Type locality: «West Roxbury [Suffolk County], Massachusetts» (original citation). Holotype (♂) in MCZ [# 29071].

Distribution. This species ranges from Cape Breton Island to southwestern British Columbia, north to the Great Slave Lake in Northwest Territories (Lindroth 1969a: 959), south to south-central California (Ball 1992a: 375), northeastern Kansas (Popenoe 1878: 78, as *B. pulchellus*), and northeastern Georgia (Fattig 1949: 31, as *B. pulchellus*). Two specimens simply labeled "Tex" (MCZ) are known (Ball 1959: 196).
Records. CAN: AB, BC, MB, NB, NS (CBI), NT, ON, PE, QC, SK **USA**: CA, CO, CT, DC, GA, IA, ID, IL, IN, KS, MA, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SD, UT, VT, WA, WI, WV, WY [TX]

***Badister obtusus* LeConte, 1878**

Badister obtusus LeConte, 1878c: 594. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5723].

Distribution. This species is found from Cape Breton Island (Bousquet 1987a: 132) to south-central British Columbia (Jarrett and Scudder 2001: 380), north to central Northwest Territories (Ball 1992a: 375), south to northeastern New Mexico (Ball 1992a: 375) along the Rocky Mountains, the Guadalupe Mountains in western Texas (Ball 1992a: 375), the upper peninsula of Michigan (LeConte 1878c: 594), southern Ontario (Lindroth 1969a: 961), and southern Maine (Majka et al. 2011: 46). The record from the Pacific Northwest (Hatch 1953: 961) refers to *B. neopulchellus* (Lindroth 1969a: 959).
Records. CAN: AB, BC, MB, NB, NS (CBI), NT, ON, QC, SK **USA**: CO, ME, MI, MN, MT, ND, NM, SD, TX, WI

Badister pulchellus LeConte, 1847

Badister pulchellus LeConte, 1847: 418. Type locality: «Evansville Indianae, et in provinciis orientalibus» (original citation), restricted to «Evanston [error for Evansville, Vanderburgh County]» by Ball (1959: 204). Three syntypes in MCZ [# 5720].

Distribution. This rarely collected species is known from southern Ontario (Lindroth 1969a: 959), northern Ohio (Ashtabula County, Harry J. Lee, Jr. pers. comm. 2008), southern Michigan (Clinton County, CMNH), northern and southwestern Indiana (LeConte 1847: 418; Ball 1959: 205), western Illinois, "Tennessee" (Ball 1959: 205), southwestern Alabama (Lindroth 1954b: 153), and Connecticut (New London County, Foster F. Purrington pers. comm. 2009). Most old (pre-1950s) records of this species refer to *B. neopulchellus*.
Records. CAN: ON **USA**: AL, CT, IL, IN, MI, OH, TN

Subgenus *Baudia* Ragusa, 1884

Baudia Ragusa, 1884: 3. Type species: *Carabus peltatus* Panzer, 1796 by monotypy. Etymology. From the surname of the Italian entomologist Flaminio Baudi di Selve [1821-1901] [feminine].

Diversity. Twenty-two species in the Nearctic (six species), Neotropical (one species shared with North America), Australian (two species, one of them endemic to New Caledonia), Oriental (one species shared with the Australian Region), Palaearctic (11 species), and Afrotropical (three endemic species) Regions.

[**micans group**]

Badister grandiceps Casey, 1920

Badister grandiceps Casey, 1920: 209. Type locality: «District of Columbia» (original citation). Holotype [by monotypy] (♀) in USNM [# 47369].

Distribution. This transamerican species ranges from Cape Breton Island to Vancouver Island, south to "Oregon" (Lindroth 1969a: 964-965), northern Utah (Ball 1959: 225), east-central South Dakota (Kirk and Balsbaugh 1975: 35), northeastern Illinois (Purrington et al. 2002: 200), and the District of Columbia (Ball 1959: 225). The record from "Nebraska" (Bousquet and Larochelle 1993: 213) needs confirmation.
Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), ON, PE, QC **USA**: CT, DC, IA, IL, IN, KY, MA, ME, MI, MN, MT, NH, NJ, NY, OH, OR, PA, SD, UT, VT, WA, WI [NE]

Badister micans LeConte, 1844

Badister micans LeConte, 1844: 52. Type locality: «Georgia» (original citation). One syntype, a ♂ labeled "[orange disc] / micans 3 [handwritten]," in MCZ (collection LeConte).

Figure 35. *Cratacanthus dubius* (Palisot de Beauvois). This widely distributed and morphologically variable species was described by the French naturalist traveler Ambroise Marie Joseph Palisot, Baron de Beauvois, one of the first entomologists to collect and describe American insects. On North American soil, Palisot de Beauvois collected from the Ohio River in the west to Savannah in Georgia. Unfortunately most of his collection was lost in a shipwreck off Nova Scotia in 1798 and his subsequent published descriptions were based on his notes and drawings.

Badister ocularis Casey, 1920: 210. Type locality: «Illinois» (original citation). Holotype [by monotypy] (♀) in USNM [# 47370]. Synonymy established with doubt by Bousquet and Larochelle (1993: 213), herein confirmed.

Distribution. This species occurs from Nova Scotia (Lindroth 1954c: 305) to western Minnesota (Gandhi et al. 2005: 929, as *B. ocularis*), south to northwestern Tennessee (Lake County, UASM) and northern Georgia (Leng 1910: 73; Fattig 1949: 32). The records from "Florida" (Schaupp 1882b: 7), northeastern Kansas (Popenoe 1878: 78), and southern Texas (Wickham 1897: 105) need confirmation.
Records. CAN: NB, NS, ON, PE, QC **USA**: CT, GA, IL, IN, MA, ME, MI, MN, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI [FL, KS, TX]
Note. Casey (1920: 206-207), followed by Ball (1959: 227) and Lindroth (1969a: 966), stated that the species described by LeConte in 1844 as *Badister micans* was "very different" from that described under the same name in 1847 (page 418). However the only difference I can see between the 1844 and 1847 descriptions is the size: 4½ lines (= 9 mm) in the 1844 description and .24 [inch] (= 6 mm) in the 1847 description. In 1844, Georgia is listed as the provenance of the specimen(s) and in 1847 he reported he had a specimen from Georgia and one from Long's Peak. LeConte (1844: 52) added that *Badister micans* "differs very much in its general appearance from all the species of this genus" which also led Casey (1920: 206) to believe that the specimen was "probably not a *Badister*." However, the other two species of *Badister* described by LeConte in 1844 were *B. terminalis* (= *Badister notatus* Haldeman) and *B. testaceus* (= *Philodes alternans* LeConte). Both species are indeed quite different from *Badister ocularis*. My interpretation is that LeConte made a simple mistake in the size of the species in his 1844 description. Blatchley (1928a: 47) also commented on this species.

Badister parviceps Ball, 1959

Badister parviceps Ball, 1959: 225. Type locality: «Crusoe Lake, Wayne County, New York» (original citation). Holotype (♂) in CUIC [# 3517].

Distribution. This species ranges from southwestern Quebec (Bousquet 1987a: 132) to southeastern Minnesota (Ball 1959: 226), north to southern Manitoba (Lindroth 1969a: 967), south to southeastern Texas (Ball 1992a: 377) and northwestern Alabama (Colbert County, CMNH). One specimen labeled from Creston, British Columbia in UBC seen by Lindroth (1969a: 967) is probably mislabeled.
Records. CAN: MB, ON, QC **USA**: AL, AR, CT, DC, IA, IL, IN, KS, MA, MD, MI, MN, MO, MS, NY, OH, PA, TN, TX, VA, WI, WV

Badister reflexus LeConte, 1880

Badister reflexus LeConte, 1880b: 166. Type locality: «New York, Michigan, Louisiana» (original citation), restricted to «New York» by Ball (1959: 222). Four syntypes in MCZ [# 5727].

Badister seclusus Blatchley, 1922: 12. Type locality: «Dunedin [Pinellas County], Fl[orid]a» (original citation). Lectotype (♀), designated by Blatchley (1930: 45), in PURC. Synonymy established by Ball (1959: 222).

Distribution. This species is known from Rhode Island (Sikes and Webster 2005: 315) to southern Wisconsin (Messer 2010: 39), including southernmost Ontario (Lindroth 1969a: 966, probably only as strays), south to the Rio Grande in southeastern Texas (Ball 1992a: 376), the Florida Keys, and the Greater Antilles (Ball 1992a: 376-377); it is also known from a single specimen, possibly a stray, collected in southwestern New Brunswick (Webster and Bousquet 2008: 21) and from Quintana Roo in the Yucatán Peninsula (Ball 1992a: 376). The record from "Quebec" (Bousquet and Larochelle 1993: 213) is in error.
Records. CAN: NB, ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, LA, MA, MD, MI, MS, NC, NE, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, WI, WV – Bahamas, Cayman Islands, Cuba, Dominican Republic, Haiti, Jamaica, Mexico
Note. In the *Zoological Record* for the year 1880 this species is registered (page 22) under the name "*Badister albescens*."

Badister submarinus Motschulsky, 1859

Badistes submarinus Motschulsky, 1859a: 158. Type locality: «environs de la nouvelle Helvétie [= Sacramento, Sacramento County, California]» (original citation). One syntype in ZMMU (Keleinikova 1976: 219) and one in MCZ [# 8327].

Distribution. This species is known from three females collected in southern Oregon (Ball 1992a: 377) and north-central California (Motschulsky 1859a: 158).
Records. USA: CA, OR

[**transversus group**]

Badister transversus Casey, 1920

Badister transversus Casey, 1920: 210. Type locality: «probably Indiana» (original citation), restricted to «Elkhart [Elkhart County], Ind[iana]» by Lindroth (1969a: 962). Holotype [by monotypy] (♀) in USNM [# 47371].

Distribution. This species ranges from New Brunswick (Webster and Bousquet 2008: 20) to southern Manitoba (Lindroth 1969a: 964; Roughley et al. 2010: 230), south to central Nebraska (Loup County, Foster F. Purrington pers. comm. 2010), northern Indiana, and New Jersey (Ball 1959: 219).
Records. CAN: MB, NB, ON, QC **USA**: CT, IL, IN, MA, ME, MI, MN, NE, NH, NJ, NY, OH, PA, SD, VT, WI
Note. This species has been referred to the subgenus *Trimorphus* Stephens (type species: *Trimorphus scapularis* Stephens, 1828 (= *Carabus sodalis* Duftschmid, 1812)) by Ball (1959) but Lindroth (1969a: 962) concluded that it is probably more closely related to members of *Baudia* than to those of *Trimorphus*.

Tribe Harpalini Bonelli, 1810

Harpalii Bonelli, 1810: Tabula Synoptica. Type genus: *Harpalus* Latreille, 1802.

Diversity. Worldwide, with about 2,725 species arrayed in four subtribes: Anisodactylina (about 345 species), Harpalina (about 1,665 species), Pelmatellina (about 90 species), and Stenolophina (about 625 species).

Subtribe Anisodactylina Lacordaire, 1854

Eurytrichini LeConte, 1847: 376 [*nomen oblitum*, see Bouchard et al. (2011: 128, 837-839)]. Type genus: *Eurytrichus* LeConte, 1847 (= *Anisotarsus* Chaudoir, 1837). Note. Family-group name based on a type genus considered to be a junior synonym is not to be replaced (ICZN 1999: Article 40.1) unless it was replaced before 1961 and the replacement name is in prevailing usage (ICZN 1999: Article 40.2). In this case, the replacement name, Anisotarsi Csiki, 1932, is not in prevailing usage and so Eurytrichini LeConte, 1847 is the oldest available name for this subtribe.

Anisodactylides Lacordaire, 1854: 257, 268 [*nomen protectum*]. Type genus: *Anisodactylus* Dejean, 1829.

Anisotarsi Csiki, 1932a: 1039 [replacement name for Eurytrichini]. Type genus: *Anisotarsus* Chaudoir, 1837.

Diversity. Worldwide, with about 345 species arrayed in 30 genera (Lorenz 2005: 348-353). The North American fauna is represented by 48 species (about 14% of the world fauna).

Taxonomic Note. Ball and Bousquet (2000: 90), following Noonan (1973: 388), recognized two genus-groups among the North American taxa, the Notiobii (an unavailable name; referred to as the "Notiobioid main branch" by Noonan) for the genus *Notiobia* and Anisodactyli ("Anisodactyloid main branch" of Noonan) for all remaining genera.

Genus *Notiobia* Perty, 1830

Notiobia Perty, 1830: 13. Type species: *Notiobia nebrioides* Perty, 1830 by monotypy. Etymology (original). From the Greek adjective *notios* (wet, moist, damp) and *bios* (life), alluding to the damp habitat where the species in the hands of Perty lived ("habitatione verosimile demptum est") [feminine].

Diversity. About 95 species in the Nearctic (eight species), Neotropical (47 species), Australian (28 species), and Afrotropical (ten species) Regions arrayed in three subgenera: *Anisotarsus* (53 species), *Diatypus* Murray (ten Ethiopian species), and *Notiobia s.str.* (26 Neotropical species).

Subgenus *Anisotarsus* Chaudoir, 1837

Anisotarsus Chaudoir, 1837b: 41. Type species: *Anisotarsus brevicollis* Chaudoir, 1837 designated by Casey (1914: 209). Etymology (original). From the Greek *anisos*

(unequal) and *tarsos* (tarsus), alluding to the fact that the male protarsomere 1 is distinctly smaller than the following three ("*premier article [du tarse du mâle] très petit, proportionnellement aux 2e, 3e et 4e articles, qui sont larges, cordiformes*") in the two species that Chaudoir included in this taxon [masculine].

Diaphoromerus Chaudoir, 1843a: 402. Type species: *Diaphoromerus iridipennis* Chaudoir, 1843 by monotypy. Synonymy established by Noonan (1973: 295). Etymology (original). From the Greek *diaphoros* (different) and *meros* (part, segment) [masculine].

Eurytrichus LeConte, 1847: 387. Type species: *Feronia terminata* Say, 1823 designated by van Emden (1953b: 525). Synonymy established by LeConte (1870: 403). Etymology (original). From the Greek *eurys* (wide, extensive) and *trichos* (hair), alluding to the dense setae on the ventral surface of the male tarsi ("*tarsis* ♂ *subtus dense pilosis*") [masculine].

Harpalodes Motschulsky, 1864: 208. Type species: *Harpalus fulgens* Dejean, 1829 (= *Poecilus chalcitis* Germar, 1824) by original designation. Synonymy established by Bousquet (2002b: 25). Etymology. From the generic name *Harpalus* [*q.v.*] and the Greek suffix *-odes* (likeness) [masculine].

Stilbolidus Casey, 1914: 171. Type species: *Harpalus mexicanus* Dejean, 1829 by original designation. Synonymy established by Lindroth (1968: 864).

Diversity. Fifty-three species in the Nearctic (eight species, four of them endemic), Neotropical (21 species), and Australian (28 species) Regions.

Identification. Noonan (1973) revised the North and Middle American species and provided a key for their identification.

[**brevicollis group**]

***Notiobia brevicollis* (Chaudoir, 1837)**

Anisotarsus brevicollis Chaudoir, 1837b: 42. Type locality: «Mexique» (original citation), restricted to «state of Puebla» by Noonan (1973: 300). Lectotype (♀), designated by Noonan (1973: 300), in MHNP.

Anisotarsus laeviusculus Chaudoir, 1837b: 43. Type locality: «Mexique» (original citation). Lectotype (♂), designated by Noonan (1973: 300), in MHNP. Synonymy established by Bates (1882a: 49), confirmed by Noonan (1973: 300).

Distribution. This species ranges from southeastern Arizona to southeastern Texas, south to southern Mexico; it is also known from southern Baja California [see Noonan 1973: Fig. 139].

Records. USA: AZ, NM, TX – Mexico

[**terminata group**]

***Notiobia cephala* (Casey, 1914)**

Anisotarsus cephalus Casey, 1914: 215. Type locality: «Florida» (original citation), restricted to «Gainesville, Alachua Co[unty]» by Shpeley (2001: 117). Lectotype [as holotype] (♀), designated by Noonan (1973: 305), in USNM [# 47978].

Figure 36. *Sericoda quadripunctata* (DeGeer). This widely distributed Holarctic species is attracted to fire. The adults are often found in great numbers just after forest fires when the ashes are still hot. This behavior is shared by the other species in the genus and a few other carabids, such as *Harpalus laticeps* and *H. laevipes*. The presence of charcoal is probably a stimulus for oviposition. Henri Goulet was unsuccessful in obtaining eggs from *Sericoda obsoleta* in the laboratory until he added charcoal to his rearing containers.

Anisotarsus tenuitarsis Casey, 1914: 215. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). Lectotype (♂), designated by Noonan (1973: 305), in USNM [# 47979]. Synonymy established by van Emden (1953b: 544), confirmed by Shpeley (2001: 117).

Distribution. This species is endemic to the Florida Peninsula (Shpeley 2001: 118).
Records. USA: FL
Note. This form has been listed as a synonym of *N. nitidipennis* (LeConte) by Noonan (1973: 305) but treated as a distinct species by Shpeley (2001).

***Notiobia maculicornis* (Chaudoir, 1843)**

Harpalus maculicornis Chaudoir, 1843b: 787. Type locality: «près de la Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♂), designated by Noonan (1973: 307), in MHNP.

Harpalus patronus Casey, 1914: 89. Type locality: «Morgan City [Saint Mary Parish], Louisiana» (original citation). One syntype in USNM [# 47793]. Synonymy established by Noonan (1973: 307).

Anisodactylus depressus Notman, 1919b: 236. Type locality: «Austin [Travis County], Tex[as]» (original citation). Lectotype (♂), designated by Noonan (1973: 307), in USNM [# 75704]. Synonymy established by Noonan (1973: 307).

Distribution. This species is known from Connecticut (Krinsky and Oliver 2001: 212), Long Island, New York (Noonan 1973: 307), the coast of southern North Carolina (Brunswick County, Ken Karns pers. comm. 2009), and from "Kansas" and northern Arkansas south to southern Mississippi and eastern Texas [see Noonan 1973: Fig. 134]. The records from New Mexico (Snow 1885: 67; Fall and Cockerell 1907: 162, as *Anisodactylus maculicornis*) are likely in error.
Records. USA: AR, CT, KS, LA, MS, NC, NY, OK, TX

***Notiobia mexicana* (Dejean, 1829)**

Harpalus mexicanus Dejean, 1829: 288. Type locality: «Mexique» (original citation), herein restricted to Guadalajara, Jalisco (see Casey 1914: 208, as *Stilbolidus aztecanus*). Lectotype (♂), designated by Noonan (1973: 320), in MHNP.

Anisodactylus arizonae Casey, 1884b: 6. Type locality: «Arizona» (original citation). Holotype [by monotypy] (♂) in USNM [# 47964]. Synonymy established by Horn (1886b: xii), confirmed by Noonan (1973: 320).

Stilbolidus aztecanus Casey, 1914: 208. Type locality: «Guadalajara [Jalisco], Mexico» (original citation). Lectotype (♀), designated by Noonan (1973: 320), in USNM [# 47965]. Synonymy established by van Emden (1953b: 540), confirmed by Noonan (1973: 320).

Distribution. This species ranges from the mountains in Arizona and northern New Mexico south to northern Panama; also known from the Laguna Mountains in southern Baja California [see Noonan (1973: Fig. 137)].

Records. USA: AZ, NM, TX – Costa Rica, Guatemala, Mexico, Panama

Notiobia nitidipennis (LeConte, 1847)

Eurytrichus nitidipennis LeConte, 1847: 388. Type locality: «Georgia» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5963].

Anisotarsus delicatus Casey, 1914: 214. Type locality: «Asheville [Buncombe County], North Carolina» (original citation). Lectotype (♀), designated by Noonan (1973: 305), in USNM [# 47977]. Synonymy established by van Emden (1953b: 544), confirmed by Lindroth (1968: 869) and Noonan (1973: 305).

Harpalus conspectus Casey, 1924: 103. Type locality: «M[on]t Royal [= Montreal], Quebec» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47806]. Synonymy established by Lindroth (1968: 869).

Harpalus agitabilis Casey, 1924: 104. Type locality: «District of Columbia» (original citation). Holotype [by monotypy] (♂) in USNM [# 47825]. Synonymy established by Noonan (1973: 305).

Distribution. This species ranges from Maine and southern Quebec to southwestern South Dakota (Larsen and Purrington 2010: 571), south to eastern Texas and northeastern Georgia (Shpeley 2001: 119), including "Colorado" (van Emden 1953b: 544) [see Noonan 1973: Fig. 135]. The previous records from Florida (Noonan 1973) refers to *N. cephala* (Casey) (see Shpeley 2001).

Records. CAN: ON, QC **USA**: AL, AR, CO, CT, DC, GA, IA, IL, IN, MA, MD, ME, MI, MO, MS, NC, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Notiobia purpurascens (Bates, 1882)

Anisotarsus purpurascens Bates, 1882a: 50. Type locality: «Las Vigas [Veracruz], Mexico» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1973: 311), in BMNH.

Anisotarsus convexulus Casey, 1914: 210. Type locality: «Galveston [Galveston County], Texas» (original citation). Lectotype (♀), designated by Noonan (1973: 311), in USNM [# 47968]. Synonymy established by Noonan (1973: 311).

Anisotarsus inaudax Casey, 1914: 211. Type locality: «Galveston and westward nearly to El Paso, Texas» (original citation), restricted to «Galveston [Galveston County]» by Noonan (1973: 311). Lectotype (♀), designated by Noonan (1973: 311), in USNM [# 47967]. Synonymy established by Noonan (1973: 311).

Anisotarsus extraneus Casey, 1914: 212. Type locality: «Los Angeles Co[unty], California» (original citation). Lectotype [as holotype] (♀), designated by Noonan (1973: 311), in USNM [# 47969]. Synonymy established by Noonan (1973: 311).

Anisotarsus calathoides Casey, 1914: 212. Type locality: «Arizona» (original citation). Lectotype (♂), designated by Noonan (1973: 311), in USNM [# 47970]. Synonymy established by Noonan (1973: 311).

Distribution. This species ranges from the San Francisco Bay area to southwestern Alabama, including central Missouri (Shockley and Cline 2004: 281), south to central Mexico and southern California [see Noonan 1973: Fig. 145]. The species is adventive on several islands of Hawaii (Liebherr 2009: 403).
Records. USA: AL, AZ, CA, LA, MO, MS, NM, TX – Mexico

***Notiobia sayi* (Blatchley, 1910)**

Eurytrichus piceus LeConte, 1847: 388 [secondary homonym of *Anisodactylus piceus* (Ménétriés, 1843)]. Type locality: «NovEboraci [= New York]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5962].

Anisodactylus sayi Blatchley, 1910: 198. Replacement name for *Anisodactylus piceus* (LeConte, 1847).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 51, as *Anisotarsus piceus*) to northeastern South Dakota (Kirk and Balsbaugh 1975: 32, as *Anisotarsus piceus*), south to eastern Texas and northeastern Florida [see Noonan 1973: Fig. 133].
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VT, WI

***Notiobia terminata* (Say, 1823)**

Feronia terminata Say, 1823a: 48. Type locality: «Cleveland [Cuyahoga County], O[hio]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 355), in MCZ [# 32981].

Harpalus similis Say, 1823a: 29. Type locality: «Fl[orid]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 355), in MCZ [# 32982]. Synonymy established by Noonan (1973: 313). Note. «North Carolina» was the original area cited by Say (1823a: 30).

Harpalus agilis Dejean, 1829: 357. Type locality: «Amérique septentrionale» (original citation), restricted to «Archbold Biological Station, Highland Co[unty], Florida» by Noonan (1973: 313). Lectotype (♂), designated by Noonan (1973: 313), in MHNP. Synonymy established, under the name *N. similis* (Say), by Melsheimer (1853: 23), confirmed by Noonan (1973: 313).

Harpalus ocreatus Say, 1830c: 20. Type locality: «San Cristrobal las Casas (7000'), Chiapas, Mex[ico]» (neotype label). Neotype (♂), designated by Noonan (1973: 313), in MCZ [# 34663]. Synonymy established by Noonan (1973: 313). Note. «Mexico» was the area originally cited by Say (1830c: 20).

Harpalus testaceus Haldeman, 1843b: 301. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One possible syntype, a ♀ labeled "[pink disc] / 291. [handwritten] / E. terminatus (Say) Lec. testaceus Hald. [handwritten]," in MCZ (collection LeConte). Synonymy established by LeConte (1863b: 12), confirmed by Lindroth (1968: 867).

Anisotarsus foveicollis Bates, 1884: 269. Type locality: «Volcan de Chiriqui [Chiriqui], Panama» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1973: 314), in BMNH. Synonymy established by Noonan (1973: 314).

Anisotarsus subvirens Casey, 1914: 213. Type locality: «Austin [Travis County], Texas» (original citation). Lectotype (♀), designated by Noonan (1973: 314), in USNM [# 47976]. Synonymy established by Noonan (1973: 314).

Anisotarsus floridanus Casey, 1914: 214. Type locality: «Florida» (original citation), restricted to «Archbold Biological Station, Highland Co[unty]» by Noonan (1973: 314). Lectotype (♂), designated by Noonan (1973: 314), in USNM [# 47982]. Synonymy established by Noonan (1973: 314).

Anisotarsus hebes Casey, 1924: 136. Type locality: «Dallas [Dallas County], Texas» (original citation). Lectotype (♂), designated by Noonan (1973: 314), in USNM [# 47974]. Synonymy established with doubt, under the name *N. terminatus subvirens* (Casey), by van Emden (1953b: 542), confirmed by Noonan (1973: 314).

Anisotarsus angusticollis Casey, 1924: 137. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype (♂), designated by Noonan (1973: 314), in USNM [# 47975]. Synonymy established with doubt by van Emden (1953b: 542), confirmed by Lindroth (1968: 867) and Noonan (1973: 314).

Anisotarsus fuscipennis Casey, 1924: 137. Type locality: «Bayfield [Bayfield County], Wisconsin» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1973: 314), in USNM [# 47971]. Synonymy established with doubt by van Emden (1953b: 542), confirmed by Lindroth (1968: 867) and Noonan (1973: 314).

Anisotarsus parallelus Casey, 1924: 138. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1973: 314), in USNM [# 47973]. Synonymy established by Noonan (1973: 314).

Anisotarsus subovalis Casey, 1924: 138. Type locality: «Charleston [Mississippi County], Missouri» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1973: 314), in USNM [# 47972]. Synonymy established with doubt by van Emden (1953b: 542), confirmed by Noonan (1973: 314).

Anisotarsus inerrans Casey, 1924: 138. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1973: 314), in USNM [# 47966]. Synonymy established, with doubt under the name *N. similis* (Say), by van Emden (1953b: 541), confirmed by Noonan (1973: 314).

Anisotarsus connivens Casey, 1924: 139. Type locality: «Marion Co[unty], Florida» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1973: 314), in USNM [# 47981]. Synonymy established by Noonan (1973: 314).

Anisotarsus vernicatus Casey, 1924: 140. Type locality: «Everglade Co[unty], Florida» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1973: 314), in USNM [# 47980]. Synonymy established by Noonan (1973: 314).

Distribution. This widely distributed species ranges from western Newfoundland (CNC) to South Dakota (Kirk and Balsbaugh 1975: 32), south to Panama and southern Florida, west to southeastern Arizona [see Noonan 1973: Fig. 144]; also known from sin-

gle specimens collected in southeastern Saskatchewan (Ronald R. Hooper pers. comm. 2007) and northern Colorado (Larimer County, William L. Krinsky pers. comm. 2008). The species is also recorded from Bermuda (Hilburn and Gordon 1989: 677).
Records. CAN: NB, NF, NS, ON, PE, QC, SK **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV – Bermuda, Costa Rica, Guatemala, Honduras, Mexico, Panama

Genus *Xestonotus* LeConte, 1853

Xestonotus LeConte, 1853c: 383. Type species: *Selenophorus lugubris* Dejean, 1829 by monotypy. Etymology. From the Greek *xestos* (smoothed, polished) and *notos* (back, by extension dorsum) [masculine].

Diversity. One North American species in the temperate regions.
Identification. The species is included in Lindroth's (1968: 864) monograph.
Taxonomic Note. Lindroth (1968: 864) regarded this taxon as a subgenus of *Anisodactylus* while Noonan (1973: 347) treated it as a valid genus. As discussed by Bousquet and Tchang (1992: 760), larval characters support Noonan's view.

Xestonotus lugubris (Dejean, 1829)

Selenophorus lugubris Dejean, 1829: 118. Type locality: «Amérique septentrionale» (original citation), restricted to «Lexington [Middlesex County], Mass[achusetts]» by Lindroth (1968: 864). One syntype in MHNP (Lindroth 1955b: 30).
Harpalus manhattanis Casey, 1884b: 9. Type locality: «Staten Island, near the city of New York [New York]» (original citation). Holotype [by monotypy] (♂) in USNM [# 47927]. Synonymy established by Horn (1885b: 109), confirmed by Lindroth (1968: 864).
Anisodactylus tioganus Casey, 1924: 123. Type locality: «Tioga Co[unty], Pennsylvania» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47911]. Synonymy established by Lindroth (1968: 864).

Distribution. This species ranges from Nova Scotia (Lindroth 1954c: 308) and Prince Edward Island (Majka et al. 2008: 132) to southeastern South Dakota (Kirk and Balsbaugh 1975: 31), south to southern Kansas (Snow 1903: 194), southern Arkansas (Kraim 1983: 229), and northwestern North Carolina (Watauga County, USNM). The records from "Colorado" (Snow 1877: 17; Wickham 1902: 243) need confirmation.
Records. CAN: NB, NS, ON, PE, QC **USA**: AR, CT, DC, IA, IL, IN, KS, MA, MD, ME, MI, MN, MO, NC, NH, NJ, NY, OH, PA, RI, SD, VA, VT, WI, WV [CO]

Genus *Anisodactylus* Dejean, 1829

Anisodactylus Dejean, 1829: 4, 132. Type species: *Carabus binotatus* Fabricius, 1787 designated by Westwood (1838: 4). Etymology. From the Greek *anisos* (unequal)

and *dactylos* (finger), probably referring to the fact that the male protarsomere 1 is distinctly smaller than the following three ("*premier article des 4 tarses antérieurs des mâles plus petit que les suivants*") in the species that Dejean included in this taxon [masculine].

Diversity. About 50 species in North America (33 species, one of them adventive), Mexico (seven species, two of them endemic), and the Palaearctic Region (17 species) arrayed in nine subgenera: *Anadaptus* (seven species), *Anisodactylus s.str.* (22 species), *Aplocentrus* (two species), *Gynandrotarsus* (10 species), *Hexatrichus* Tschitschérine (four west Palaearctic species), *Pseudanisodactylus* Noonan (three Palaearctic species), *Pseudaplocentrus* (one species), *Pseudodichirus* Lutshnik (one west Palaearctic species), and *Spongopus* (one species). One Palaearctic species (*A. binotatus*) is adventive in New Zealand (Larochelle and Larivière 2005: 34).

Subgenus *Anisodactylus* Dejean, 1829

Anisodactylus Dejean, 1829: 4, 132. Type species: *Carabus binotatus* Fabricius, 1787 designated by Westwood (1838: 4).

Cephalogyna Casey, 1918: 414. Type species: *Anisodactylus lodingi* Schaeffer, 1911 by original designation. Synonymy established by Lindroth (1968: 849). Etymology. From the Greek *cephale* (head) and *gyne* (female), alluding to the head of the female which is larger than in the male ("very large head, notably larger in the female than in the male") [feminine].

Pseudhexatrichus Noonan, 1973: 282, 352. Type species: *Anisodactylus dejeanii* Buquet, 1840 (= *Carabus heros* Fabricius, 1801) by original designation. Synonymy established by Noonan (1996: 10). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Hexatrichus* [masculine].

Diversity. Twenty-two species in the Nearctic (14 species, of which two extends into the Baja California Peninsula and one is adventive) and Palaearctic (nine species, including the Himalayas) Regions.

Identification. Noonan (1996) revised all the species. One Palaearctic species, *A. emarginatus* Ito, has been described subsequently. Lindroth's key (1968: 835-838) included all North American species except *A. pseudagricola* described subsequently.

[**binotatus group**]

Anisodactylus binotatus (Fabricius, 1787)

Carabus 2notatus Fabricius, 1787: 199. Type locality: «Kiliae [Germany]» (original citation). Lectotype (♀), designated by Lindroth (1968: 851), in ZMUC.

Distribution. This Palaearctic species is adventive in North America where it is known from the Skeena River valley in central British Columbia (Spence and Spence 1988: 158) to northeastern Oregon, east to west-central Montana (Hansen et al. 2009: 353) [see Noonan 1996: Fig. 230]; the species has been recorded also from Sacramento

County in California (Clark 1999: 202). The specimen simply labeled from Nevada and the one labeled from Dickenson County in Iowa (Noonan 1996: 113) are likely mislabeled. The first inventoried specimen collected on this continent was found in 1911 at Portland, Oregon (Noonan 1996: 38). The species is also adventive in New Zealand since 1938 (Larochelle and Larivière 2005: 35).
Records. CAN: BC (VCI) **USA**: CA, MT, OR, WA – **Adventive**

***Anisodactylus consobrinus* LeConte, 1851**

Anisodactylus consobrinus LeConte, 1851: 183. Type locality: «California borealis» (original citation), herein restricted to Arcata, Humboldt County (see Noonan 1996: 105). Lectotype (♂), designated by Noonan (1996: 30), in MCZ [# 88].
Anisodactylus brevicollis LeConte, 1851: 183. Type locality: «S[an]ta Isabel [= Mohave settlement near Needles in San Bernardino County along the Colorado River, California]» (original citation). Lectotype [as holotype] (♀), designated by Noonan (1996: 30), in MCZ [# 87]. Synonymy established by Horn (1880d: 177), confirmed by Noonan (1996: 30).

Distribution. This species ranges from northern Idaho and northern Washington south to northern Baja California Peninsula. A few specimens are known also from central Arizona and southern New Mexico [see Noonan 1996: Fig. 225].
Records. USA: AZ, CA (CHI), ID, NM, NV, OR, WA – Mexico

[**californicus group**]
***Anisodactylus californicus* Dejean, 1829**

Anisodactylus californicus Dejean, 1829: 148. Type locality: «Californie» (original citation), herein restricted to Sequoia Lake, Sequoia National Forest, Fresno County (see Noonan 1996: 123). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 30).
Anisodactylus confusus LeConte, 1851: 183. Type locality: «San Francisco [San Francisco County, California]» (original citation). Lectotype (♂), designated by Noonan (1996: 55), in MCZ [# 86]. Synonymy established by Horn (1875: 130), confirmed by Noonan (1996: 55).
Harpalus depressicollis Motschulsky, 1859a: 136. Type locality: California (inferred from title of the paper). Lectotype [as holotype] (♀), designated by Noonan (1996: 55), in ZMMU. Synonymy established by Noonan (1996: 55).
Anisodactylus obsolescens Casey, 1914: 188. Type locality: «San Francisco [San Francisco County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47922]. Synonymy established by Lindroth (1968: 854).
Anisodactylus angustus Casey, 1914: 188. Type locality: «San Diego [San Diego County], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47920]. Synonymy established by Lindroth (1968: 854).

Anisodactylus oregonus Casey, 1914: 189. Type locality: «Clackamas Co[unty], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47919]. Synonymy established by Hatch (1953: 174), confirmed by Lindroth (1968: 854).

Anisodactylus sinuatus Casey, 1914: 190. Type locality: «Oregon» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47918]. Synonymy established by Lindroth (1968: 854).

Anisodactylus paganicus Casey, 1914: 190. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47917]. Synonymy established by Lindroth (1968: 854).

Anisodactylus humeralis Casey, 1914: 190. Type locality: «Reno [Washoe County], Nevada» (original citation). Holotype [by monotypy] (♀) in USNM [# 47921]. Synonymy established by Lindroth (1968: 854).

Anisodactylus aleneanus Casey, 1924: 124. Type locality: «Coeur d'Alene [Kootenai County], Idaho» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47923]. Synonymy established by Hatch (1953: 174), confirmed by Lindroth (1968: 854).

Anisodactylus comes Casey, 1924: 124. Type locality: «Valley of Redwood Creek, Humboldt Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47924]. Synonymy established by Lindroth (1968: 854).

Anisodactylus maestus Casey, 1924: 124. Type locality: «S[an]ta Cruz [Santa Cruz County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47925]. Synonymy established by Lindroth (1968: 854).

Distribution. This western species ranges from central Alberta to Vancouver Island, south to the Baja California Peninsula, southern Arizona, and northern Colorado [see Noonan 1996: Fig. 240]. Specimens labeled from "New Mexico," Dallas (Texas), Jalisco in west-central Mexico, "Nebraska," Lake County in Illinois, and "New Jersey" are known.
Records. CAN: AB, BC (VCI) **USA**: AZ, CA (CHI), CO, ID, MT, NV, OR, UT, WA, WY [IL, NE, NM, TX] – Mexico

Anisodactylus furvus LeConte, 1863

Anisodactylus furvus LeConte, 1863c: 14. Type locality: «upper part of Georgia» (original citation), herein restricted to Barnesville, Lamar County (see Noonan 1996: 135). Holotype [by monotypy] (♀) in MCZ [# 5952].

Distribution. This eastern species ranges from New Jersey to northwestern Missouri, north to southernmost Ontario, south to east-central Texas and the Florida Panhandle [see Noonan 1996: Fig. 244]. Three specimens labeled from "Colorado," Santa Cruz County in Arizona, and Lane County in Oregon are known.
Records. CAN: ON **USA**: AL, AR, DE, FL, GA, IL, IN, KY, LA, MA, MI, MO, MS, NC, NJ, OH, OK, PA, SC, TN, TX, VA [AZ, CO]

***Anisodactylus similis* LeConte, 1851**

Anisodactylus similis LeConte, 1851: 183. Type locality: «Oregon» (original citation), herein restricted to Ochoco National Forest, Crook County (see Noonan 1996: 133). Lectotype [as holotype] (♂), designated by Noonan (1996: 60), in MCZ [# 89].

Anisodactylus semipunctatus LeConte, 1859a: 83. Type locality: «Oregon, California» (original citation), restricted to «Oregon» by Noonan (1996: 60). Lectotype (♂), designated by Noonan (1996: 60), in MCZ [# 5954]. Synonymy established by Horn (1875: 130), confirmed by Lindroth (1968: 855).

Anisodactylus puncticollis Chaudoir, 1868b: 161. Type locality: «île de Vancouver [British Columbia]» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established by Horn (1875: 130), confirmed by Lindroth (1968: 855).

Anisodactylus incisus Casey, 1914: 185. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47914]. Synonymy established by Lindroth (1968: 855).

Anisodactylus solidus Casey, 1914: 186. Type locality: «n[ea]r San Francisco [California]» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47912]. Synonymy established by Lindroth (1968: 855).

Anisodactylus incertus Casey, 1914: 186. Type locality: «S[an]ta Clara Co[unty], California» (original citation). Lectotype (♀), designated by Noonan (1996: 60), in USNM [# 47916]. Synonymy established by Noonan (1975: 227).

Anisodactylus sericatus Casey, 1914: 187. Type locality: «San Francisco Bay, California» (original citation). Lectotype (♀), designated by Noonan (1975: 227), in USNM [# 47915]. Synonymy established by Noonan (1975: 227).

Distribution. This species occurs from central British Columbia south to the Mexican border in California and the eastern edge of the Rocky Mountains in northern Colorado [see Noonan 1996: Fig. 244]. Two old specimens labeled from "Arizona" and "Texas" are known.

Records. CAN: BC (VCI) **USA**: CA (CHI), CO, ID, MT, NV, OR, UT, WA [AZ, TX]

[**carbonarius group**]

***Anisodactylus carbonarius* (Say, 1823)**

Harpalus carbonarius Say, 1823a: 32. Type locality: «Camden [Kershaw County], S[outh] C[arolina]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 353), in MCZ [# 32987].

Anisodactylus luctuosus Dejean, 1829: 151. Type locality: «Amérique septentrionale» (original citation). Lectotype (♂), designated by Noonan (1996: 69), in MHNP. Synonymy established by LeConte (1847: 382), confirmed by Lindroth (1955b: 29).

Anisodactylus rufipennis LeConte, 1847: 381. Type locality: «Brooklyn, insulae Longae NovEboraci [= New York]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5953]. Synonymy established by Horn (1880d: 177), confirmed by Noonan (1996: 69).

Triplectrus brevior Casey, 1924: 126. Type locality: «Pennsylvania» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47928]. Synonymy established by Lindroth (1968: 848).

Distribution. This species is found from southern Quebec to northeastern South Dakota (Kirk and Balsbaugh 1975: 31), south to northern Colorado (Miller and Peairs 2008: 34), northeastern Texas, and central Florida [see Noonan 1996: Fig. 247]; the species has been collected at three sites in Washington which suggest that it has been introduced into the Pacific northwest.

Records. CAN: ON, QC **USA**: AL, AR, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, MA, MD, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WA, WI, WV

Taxonomic Note. This species was included in the subgenus *Gynandrotarsus* by Lindroth (1968: 848) but in the nominotypical subgenus by Noonan (1973: 351).

Anisodactylus harrisii LeConte, 1863

Anisodactylus harrisii LeConte, 1863c: 14. Type locality: «middle and eastern states» (original citation), restricted to «Marion [Plymouth County], Mass[achusetts]» by Lindroth (1968: 850). Lectotype (♂), designated by Noonan (1996: 71), in MCZ [# 5968].

Anisodactylus lacertosus Casey, 1924: 123. Type locality: «probably Indiana» (original citation), restricted to «Indiana» by Noonan (1996: 71). Holotype [by monotypy] (♀) in USNM [# 47913]. Synonymy established by Lindroth (1968: 850).

Distribution. This species occurs from Nova Scotia to southwestern British Columbia, south to southern California, southern Arizona, the Texas Panhandle (Michels et al. 2010: 743), east-central Louisiana (West Feliciana Parish, Igor M. Sokolov pers. comm. 2009), central Mississippi, and west-central South Carolina (Ciegler 2000: 90) [see Noonan 1996: Fig. 248].

Records. CAN: AB, BC, MB, NB, NS, ON, PE, QC, SK **USA**: AL, AR, AZ, CA, CT, CO, DE, GA, IA, ID, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OR, PA, RI, SC, SD, TX, UT, VA, VT, WA, WI, WV

Anisodactylus lodingi Schaeffer, 1911

Anisodactylus lodingi Schaeffer, 1911: 114. Type locality: «Mobile [Mobile County], Alabama» (original citation). Lectotype (♂), designated by Erwin and House (1978: 234), in USNM [# 42494]. Etymology. The species name was proposed for Henry Peter Löding [1869-1942], a florist and horticulturist in Mobile, Alabama.

Löding is best known in the scientific community as a collector of Coleoptera. He was awarded the honorary degree of Doctor of Science by the University of Alabama in 1932. His collection is at the same University.

Distribution. This species ranges from Long Island, New York, south to northern Florida and southeastern Mississippi [see Noonan 1996: Fig. 246]. One specimen labeled from "Massachusetts" is known.
Records. USA: AL, FL, GA, MS, NY, NC [MA]

***Anisodactylus nigerrimus* (Dejean, 1831)**

Harpalus nigerrimus Dejean, 1831: 842. Type locality: «Amérique septentrionale» (original citation), restricted to «Marion [Plymouth County], Mass[achusetts]» by Lindroth (1968: 850). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 30; Noonan 1996: 65).

Harpalus laticollis Kirby, 1837: 43. Type locality: northern parts of British America (inferred from title of the book). Holotype [by monotypy] (♀) in BMNH. Synonymy established by LeConte (1850: 208), confirmed by Lindroth (1953b: 174).

Anisodactylus punctulatus LeConte, 1863c: 14. Type locality: «Middle States» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1996: 65), in MCZ [# 5955]. Synonymy established by Horn (1880d: 177), confirmed by Lindroth (1968: 851).

Harpalus opacus Casey, 1884b: 8. Type locality: «eastern Pennsylvania» (original citation). Holotype [by monotypy] (♀) in USNM [# 47910]. Synonymy established by Horn (1885b: 109), confirmed by Lindroth (1968: 851).

Distribution. This species is found from Newfoundland to western Ontario, south to northwestern Arkansas, southern Mississippi, and northern Georgia, west to eastern Kansas and Nebraska [see Noonan 1996: Fig. 245]. Seven specimens labeled from "Texas," "South Dakota," "California," southwestern Saskatchewan, and southeastern Alberta are also known (Noonan 1996: 135-138). Several specimens were recently caught in the southern Similkameen Valley in British Columbia (Smith et al. 2004: 96) suggesting that the range of the species extends farther west or that the species was introduced in the area; a misidentification is also possible.
Records. CAN: NB, NF, NS (CBI), ON, PE, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI, WV [AB, BC, CA, SD, SK, TX]

[**melanopus group**]

***Anisodactylus agricola* (Say, 1823)**

Harpalus agricolus Say, 1823a: 33. Type locality: «Allegheny, P[ennsylvani]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 354), in MCZ [# 32985].

Harpalus paradoxus Haldeman, 1843b: 302. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Syntype(s) presumably lost. Synonymy established by Melsheimer (1853: 23).

Anisodactylus striatus LeConte, 1847: 380. Type locality: «Evansville, I[ow]a alterumque ad Rocky Mountains» (original citation), restricted to «Evansville, Iowa» by Noonan (1996: 44). Lectotype (♀), designated by Noonan (1996: 44), in MCZ [# 5956]. Synonymy established by Melsheimer (1853: 23), confirmed by Noonan (1996: 44).

Distribution. This species ranges from Maine and southern Quebec to southeastern Minnesota, south to northern Arkansas (Kraim 1983: 176), central Alabama, and northwestern South Carolina (Ciegler 2000: 89) [see Noonan 1996: Fig. 235]. The record from "Colorado" (Leng 1920: 72) is probably in error.
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, NC, NE, NH, NJ, NY, OH, PA, RI, SC, TN, VA, WI, WV

Anisodactylus melanopus (Haldeman, 1843)

Harpalus melanopus Haldeman, 1843b: 302. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Neotype (♂), designated by Noonan (1996: 48), in MCZ.

Distribution. This species ranges from Massachusetts to southeastern Minnesota (Gandhi et al. 2005: 930), south to southern Missouri, "Mississippi" (Drew A. Hildebrandt pers. comm. 2007), and central South Carolina (Ciegler 2000: 90) [see Noonan 1996: Fig. 237]. There are two specimens from more western sites: one from western Nebraska, the other one from Utah. Whether these specimens are strays or represent elements of permanent populations remain to be seen. The record from South Dakota (Kirk and Balsbaugh 1975: 31) needs confirmation.
Records. CAN: ON **USA**: CT, DC, DE, GA, IA, IL, IN, MA, MD, MI, MN, MO, MS, NC, NJ, NY, OH, PA, RI, SC, VA, VT, WI, WV [NE, SD, UT]

Anisodactylus pseudagricola Noonan, 1996

Anisodactylus pseudagricola Noonan, 1996: 46. Type locality: «Cornwall [Litchfield County], C[onnecticu]t» (original citation). Holotype (♂) in CUIC [# 7001].

Distribution. This species, known only from relatively few specimens, ranges from New Hampshire to eastern Michigan, south to northern Ohio (Ashtabula and Huron Counties, Harry J. Lee, Jr. pers. comm. 2008) and southern Pennsylvania (Somerset County, Robert L. Davidson pers. comm. 2012) [see Noonan 1996: Fig. 236]. One specimen collected in central Missouri (Boone County, CMNH) and identified by Gerald R. Noonan in 1994 is known (Robert L. Davidson pers. comm. 2012).
Records. CAN: ON **USA**: CT, MA, MI, MO, NH, NY, OH, PA

[**nigrita group**]

***Anisodactylus kirbyi* Lindroth, 1953**

Anisodactylus kirbyi Lindroth, 1953b: 174. Type locality: «Cheticamp, Nova Scotia» (holotype label). Holotype (♂) in CNC [# 6574]. Etymology. The specific name honors the English clergyman, entomologist, and naturalist William Kirby [1759-1850] who is best known to the North American entomological community for his taxonomic treatment of the insects brought back by John Richardson from the second arctic expedition (1825-1827) of Sir John Franklin.

Distribution. This species has a disjunct distribution. In the east, the species is found from Cape Breton Island to southeastern Manitoba south to southern Indiana, southern Pennsylvania, and New Jersey; in the west, the species ranges from southern British Columbia south to southwestern California, east to northern Idaho [see Noonan 1996: Fig. 238].

Records. CAN: BC (VCI), MB, NB, NS (CBI), ON, PE, QC **USA**: CA, CT, ID, IL, IN, MA, MD, ME, MI, MN, ND, NH, NJ, NY, OH, OR, PA, RI, SD, VT, WA, WI

***Anisodactylus nigrita* Dejean, 1829**

Anisodactylus nigrita Dejean, 1829: 149. Type locality: «Amérique septentrionale» (original citation), restricted to «Forest Hills [Suffolk County], Mass[achusetts]» by Lindroth (1968: 852). Lectotype (♂), designated by Noonan (1996: 53), in MHNP.

Harpalus interpunctatus Kirby, 1837: 42. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Lectotype (♂), designated by Noonan (1996: 53), in BMNH. Synonymy established by Lindroth (1953b: 174).

Anisodactylus lecontei Chaudoir, 1868b: 161 [primary homonym of *Anisodactylus lecontei* Gemminger and Harold, 1868]. Type locality: «provinciis mediis» (original citation for *A. nigrita* Dejean *sensu* LeConte, 1847). Two syntypes in MCZ. **New synonymy**. Note. This name was proposed for *Anisodactylus nigrita* Dejean, 1829 *sensu* LeConte (1847: 379). LeConte's collection contains four specimens under the name *A. nigrita*. They are labeled as follow: 1. (♂) "[white disc above, yellow under] / = type de nigrita Dej [handwritten] / A. nigrita Dej. [handwritten];" 2. (♀) "[pink under] / nigrita 2 [handwritten];" 3. (♀) "[white disc above, yellow under] / nigrita 3 [handwritten];" 4. (♀) "[pink under] / 260. [handwritten] / var. interpunctatus (? Kirby) Lec. [handwritten] / nigrita 4 [handwritten]." The two specimens with pink discs (= middle states) are probably syntypes. Lindroth (1968: 853) listed this name with doubt as a synonym of *A. kirbyi* Lindroth. However, all four specimens in LeConte's collection are conspecific with members of *A. nigrita* Dejean.

Distribution. This species ranges from Nova Scotia to southern British Columbia, south to southern Washington, Colorado along the Rocky Mountains, Nebraska, and eastern Tennessee and western North Carolina along the Appalachian Mountains [see

Noonan 1996: Fig. 239]. A few specimens simply labeled from California, Kansas, and Mississippi are known. The record from southwestern Alabama (Löding 1945: 25) is probably in error.
Records. CAN: AB, BC, MB, NB, NS, ON, PE, QC, SK **USA**: CO, CT, DC, IA, IL, IN, KY, MA, MD, ME, MI, MN, NC, ND, NE, NH, NJ, NY, OH, PA, RI, SD, TN, VA, VT, WA, WI, WV [CA, KS, MS]

Subgenus *Gynandrotarsus* LaFerté-Sénectère, 1841

Gynandrotarsus LaFerté-Sénectère, 1841b: 202. Type species: *Gynandrotarsus harpaloides* LaFerté-Sénectère, 1841 by monotypy. Etymology. From the Greek *gyne* (female), *andros* (male), and *tarsos* (tarsus), probably alluding to the expanded first protarsomere of the female ("*le premier article des tarses antérieurs des femelles ... une fois et demie aussi large et deux fois aussi long que l'article correspondant des mâles*") as in the male [masculine].

Triplectrus LeConte, 1847: 381. Type species: *Harpalus rusticus* Say, 1823 designated by Lindroth (1968: 843). Synonymy established by Casey (1914: 172). Etymology. From the Greek *treis* (three) and *plectron* (spur), alluding to the trifid apical spur of the protibia ("*tibiae anticae calcare terminale trifido*") of the adult [masculine].

Diversity. Ten species in North America (nine species) and Mexico (four species, one of them endemic, *A. darlingtoni* Noonan).
Identification. Noonan (1973) revised all species.

[**dulcicollis group**]

***Anisodactylus dulcicollis* (LaFerté-Sénectère, 1841)**

Harpalus dulcicollis LaFerté-Sénectère, 1841a: 44. Type locality: Texas (inferred from title of the paper). Lectotype (♂), designated by Noonan (1973: 362), in MHNP.

Anisodactylus ellipticus LeConte, 1847: 384. Type locality: «NoviAureliani [= New Orleans, Orleans Parish, Louisiana]» (original citation). Lectotype [as type] (♂), designated by Noonan (1973: 362), in MCZ [# 5967]. Synonymy established by LeConte (1866: 78), confirmed by Noonan (1973: 362).

Anisodactylus elongatus Chaudoir, 1868b: 163. Type locality: «Texas» (original citation). Holotype [by monotypy] (♂) in MHNP (Noonan 1973: 362). Synonymy established by Lindroth (1968: 847).

Triplectrus modicus Casey, 1914: 178. Type locality: «Houston [Harris County], Texas» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47941]. Synonymy established by Lindroth (1968: 847).

Distribution. This species ranges from extreme southern Ontario (Bousquet 1987a: 130) to eastern Nebraska, south to southeastern Texas and west-central Georgia [see Noonan 1973: Fig. 165]. Three specimens labeled from "Colorado," Arizona (Huachuca Mountains), and California (Los Angeles County) are known. The record from New Jersey (Smith 1890: 98) needs confirmation.

Records. CAN: ON **USA**: AL, AR, GA, IA, IL, IN, KS, KY, LA, MO, MS, NC, NE, OH, OK, SC, TN, TX, VA [AZ, CA, CO, NJ]

Anisodactylus harpaloides (LaFerté-Sénectère, 1841)

Gynandrotarsus harpaloides LaFerté-Sénectère, 1841b: 203. Type locality: «Texas» (original citation). Lectotype (♀), designated by Noonan (1973: 360), in MHNP.
Triplectrus beryllus Casey, 1924: 131. Type locality: «McPherson [McPherson County], Kansas» (original citation). Lectotype (♂), designated by Noonan (1973: 360), in USNM [# 47973]. Synonymy established by Noonan (1973: 360).

Distribution. This species ranges from northeastern Nebraska to eastern Virginia (Hoffman et al. 2006: 26), south to northern Mississippi (Lafayette and Panola Counties, Paul K. Lago pers. comm. 2009), northwestern Louisiana, and northeastern Texas (Noonan 1973: 361, Fig. 159). The records from "North Carolina" (Leng 1920: 72), South Carolina (Kirk 1969: 13; Kirk 1970: 14; Ciegler 2000: 90), Georgia (Fattig 1949: 50), "Florida" (Noonan 1973: 361), and southwestern Louisiana (Hine 1906: 77) need confirmation.
Records. USA: AR, IL, KS, LA, MO, MS, NE, OK, TN, TX, VA [FL, GA, NC, SC]

Anisodactylus opaculus (LeConte, 1863)

Gynandrotarsus opaculus LeConte, 1863c: 16. Type locality: «Texas» (original citation), herein restricted to Austin, Travis County (see Casey 1924: 130, as *Triplectrus paulus*). Holotype [by monotypy] (♀) in MCZ [# 5948].
Triplectrus paulus Casey, 1924: 130. Type locality: «Austin [Travis County], Texas» (original citation). Lectotype (♂), designated by Noonan (1973: 359), in USNM [# 47942]. Synonymy established by Noonan (1973: 359).

Distribution. This species ranges from northern Kansas to northeastern Kentucky (Fayette County, Robert L. Davidson pers. comm. 2012) south to western Alabama and Nuevo León in northeastern Mexico [see Noonan 1973: Fig. 158]. The western limit of the species range is along the Rio Grande in western Texas, although it has been recorded from one locality in southwestern Arizona (Snow 1907: 142). The species is also known from south-central Wisconsin (Sauk County, Robert L. Davidson pers. comm. 2012). The records from South Carolina (Kirk 1969: 13; Kirk 1970: 14; Ciegler 2000: 90) need confirmation.
Records. USA: AL, AR, KS, KY, LA, MO, MS, NM, OK, TN, TX, WI [AZ, SC] – Mexico

Anisodactylus texanus Schaeffer, 1910

Anisodactylus texanus Schaeffer, 1910: 404. Type locality: «New Braunfels [Comal County], Texas» (original citation). Lectotype (♂), designated by Noonan (1973: 361), in USNM [# 75703].

Distribution. This species ranges from southeastern Louisiana to southeastern Arizona, south to northern Mexico [see Noonan 1973: Fig. 164].
Records. USA: AZ, LA, TX – Mexico

[**rusticus group**]

***Anisodactylus anthracinus* (Dejean, 1829)**

Harpalus anthracinus Dejean, 1829: 369. Type locality: «Mexique» (original citation), herein restricted to Majaica (7000'), 45 miles northwest Chihuahua, Chihuahua (CNC). Holotype [by monotypy] (♀) in MHNP.

Anisodactylus dilatatus Say, 1830c: 18. Type locality: «37 mi[les] west of Durango (8400'), D[uran]go [Mexico]» (neotype label). Neotype (♂), designated by Noonan (1973: 366), in MCZ [# 34664]. Synonymy established by Bates (1882a: 52). Note. «Mexico» was the area originally cited by Say (1830c: 18).

Triplectrus convexus Casey, 1914: 176. Type locality: «Arizona» (original citation), restricted to «Madera Canyon, Pima County» by Noonan (1973: 366). Lectotype (♂), designated by Noonan (1973: 366), in USNM [# 47938]. Synonymy established by Noonan (1973: 366).

Distribution. This species ranges from Tulare County in east-central California to southwestern Texas, south to the Federal District area of Mexico [see Noonan 1973: Fig. 160].
Records. USA: AZ, CA, NM, TX – Mexico

***Anisodactylus haplomus* Chaudoir, 1868**

Anisodactylus haplomus Chaudoir, 1868b: 163. Type locality: Amérique septentrionale (inferred from title of the paper), restricted to «Galveston [Galveston County], Tex[as]» by Lindroth (1968: 845). Holotype [by monotypy] (♀) in MHNP (Noonan 1973: 363).

Triplectrus peropacus Casey, 1914: 176. Type locality: «Galveston [Galveston County], Texas» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47935]. Synonymy established by Lindroth (1968: 845).

Triplectrus breviceps Casey, 1924: 129. Type locality: «Mobile [Mobile County], Alabama» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47936]. Synonymy established by Lindroth (1968: 845).

Triplectrus longicollis Casey, 1924: 129. Type locality: «District of Columbia» (original citation). Holotype [by monotypy] (♂) in USNM [# 47973]. Synonymy established by Noonan (1973: 364).

Distribution. This species ranges from Long Island, New York, to northeastern Oklahoma (Foster F. Purrington pers. comm. 2010), south to east-central Texas (Riley 2011) and southern Florida [see Noonan 1973: Fig. 166].
Records. USA: AL, AR, DC, FL, GA, IL, KY, LA, MO, MS, NC, NY, OH, OK, SC, TN, TX, VA

***Anisodactylus merula* (Germar, 1824)**

Harpalus merula Germar, 1824: 24. Type locality: «Kentucky» (original citation). Lectotype (♀), designated by Lindroth (1968: 845), in MHNP.

Anisodactylus pinguis LeConte, 1847: 382. Type locality: «ad Rocky Mountains» (original citation). Lectotype (♀), designated by Noonan (1973: 368), in MCZ [# 5950]. Synonymy established by Melsheimer (1853: 23), confirmed by Lindroth (1968: 845).

Anisodactylus crassus LeConte, 1847: 382. Type locality: «NovEboraci [= New York]» (original citation). Lectotype (♀), designated by Noonan (1973: 368), in MCZ [# 5951]. Synonymy established by Melsheimer (1853: 23), confirmed by Lindroth (1968: 845).

Anisodactylus gravidus LeConte, 1847: 383. Type locality: «NovEboraci [= New York]» (original citation). Lectotype (♀), designated by Noonan (1973: 368), in MCZ [# 5949]. Synonymy established by Melsheimer (1853: 9), confirmed by Lindroth (1968: 845).

Triplectrus aethiops Casey, 1914: 175. Type locality: «Austin and Waco, Texas» (original citation), restricted to «Austin [Travis County]» by Casey (1924: 128). Lectotype (♀), designated by Noonan (1973: 369), in USNM [# 47932]. Synonymy established by Noonan (1973: 369).

Triplectrus marginatus Casey, 1924: 126. Type locality: «Grayling, near Bay City [Bay County], Michigan» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1973: 369), in USNM [# 47934]. Synonymy established by Lindroth (1968: 845).

Triplectrus wolcotti Casey, 1924: 127. Type locality: «near Chicago [Cook County], Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47930]. Synonymy established by Lindroth (1968: 845). Etymology. The specific name honors Albert Burk Wolcott [1869-1950] who worked for a long time as preparator of educational exhibits for the public schools of Chicago. An amateur coleopterist, Wolcott specialized in Cleridae. His clerid collection and library were deposited at the Field Museum of Natural History, Chicago in 1946.

Triplectrus sulcipennis Casey, 1924: 128. Type locality: «Waco [McLennan County], Texas» (original citation). Lectotype (♀), designated by Noonan (1973: 369), in USNM [# 47931]. Synonymy established by Noonan (1973: 369).

Triplectrus kempi Casey, 1924: 130. Type locality: «Lake George [Warren County], New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47940]. Synonymy established by Lindroth (1968: 845). Etymology. The specific name was proposed for James Furman Kemp [1859-1926], distinguished professor of geology at Columbia University.

Distribution. This eastern species ranges from southern Quebec to west-central Minnesota, north to southwestern Manitoba (Lindroth 1968: 846), south to southeastern Texas and the Florida Keys [see Noonan 1973: Fig. 161]. One specimen labeled

from Anaheim, California is known. The records from "Arizona" and "North Dakota" (Bousquet and Larochelle 1993: 217) need confirmation.
Records. CAN: MB, ON, QC **USA**: AL, AR, CO, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI [AZ, CA, ND]

Anisodactylus ovularis (Casey, 1914)

Triplectrus ovularis Casey, 1914: 177. Type locality: «S[ain]t Louis, Missouri» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1973: 372), in USNM [# 47939].

Triplectrus semirubidus Casey, 1924: 127. Type locality: «Highland Park [Lake County], north of Chicago, Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47929]. Synonymy established by Lindroth (1968: 846).

Distribution. This species ranges from Long Island, New York, to central South Dakota (Kirk and Balsbaugh 1975: 31), including southern Ontario, south to northeastern Texas, northeastern Georgia (House and All 1981: 195; Morrill 1992: 181), and west-central South Carolina (Ciegler 2000: 90) [see Noonan 1973: Fig. 163].
Records. CAN: ON **USA**: AR, GA, IA, IL, IN, KS, LA, MD, MI, MN, MO, MS, NE, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, WI, WV

Anisodactylus rusticus (Say, 1823)

Harpalus rusticus Say, 1823a: 32. Type locality: «Rumney [Grafton County], N[ew] H[ampshire]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 353), in MCZ [# 32986].

Anisodactylus tristis Dejean, 1829: 158. Type locality: «Amérique septentrionale» (original citation). Lectotype (♂), designated by Noonan (1973: 365), in MHNP. Synonymy established by Horn (1880d: 177), confirmed by Lindroth (1955b: 29).

Triplectrus oblongus Casey, 1924: 128. Type locality: «Nisbet [Lycoming County], Pennsylvania» (original citation). Holotype [by monotypy] (♀) in USNM [# 47933]. Synonymy established by Lindroth (1968: 843).

Distribution. This species ranges from Prince Edward Island to Yellowstone National Park in Wyoming, north to southern Manitoba (Lindroth 1968: 845), south to northern Colorado (Miller and Peairs 2008: 34), eastern Texas, and northern Florida [see Noonan 1973: Fig. 162]. The records from "Arizona" (Leng 1920: 72) and New Mexico (Fall and Cockerell 1907: 162) need confirmation.
Records. CAN: MB, NB, NS, ON, PE, QC **USA**: AL, AR, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV, WY [AZ, NM]

Subgenus *Anadaptus* Casey, 1914

Anadaptus Casey, 1914: 203. Type species: *Anisodactylus discoideus* Dejean, 1831 designated by Lindroth (1968: 838). Etymology. From the Greek *ana* (upward, outward) and the generic name *Daptus*, alluding to the possibility of a close relationship between members of this taxon and those of *Daptus* ("this is one of the most interesting genera ... and the outward suggestion of Daptus may not be so very fanciful after all") [masculine].

Diversity. Seven species in North America (six species) and Mexico (*A. rotundangulus* Bates).
Identification. Noonan (2001) revised the species and provided a key for their identification.

***Anisodactylus alternans* (Motschulsky, 1845)**

Harpalus alternans Motschulsky, 1845b: 343. Type locality: «Californie» (original citation), herein restricted to San Jose, Santa Clara County (see LeConte 1851: 184, as *A. alternans* LeConte). Holotype [by monotypy] (♀) in ZMMU (Bousquet and Larochelle 1993: 14).
Anisodactylus alternans LeConte, 1851: 184. Type locality: «San Jose [Santa Clara County, California]» (original citation). Lectotype (♀), designated by Noonan (2001: 314), in MCZ [# 90]. Synonymy established by Bousquet and Larochelle (1993: 14).
Anisodactylus nivalis G.H. Horn, 1880d: 172. Type locality: «Nev[ada]» (lectotype label). Lectotype (♀), designated by Noonan (2001: 315), in MCZ [# 2956]. Synonymy established by Noonan (2001: 315).
Anadaptus parvulus Casey, 1914: 204. Type locality: «California» (original citation). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47962]. Synonymy established, under the name *A. nivalis* Horn, by Lindroth (1968: 841).

Distribution. This western species is found from southeastern British Columbia south to the Mexican border in California, southwestern Utah, and central Colorado [see Noonan 2001: Fig. 51].
Records. CAN: BC **USA**: CA, CO, ID, MT, NV, OR, UT, WA

***Anisodactylus discoideus* Dejean, 1831**

Anisodactylus discoideus Dejean, 1831: 831. Type locality: «Amérique septentrionale» (original citation), restricted to «Rumney [Grafton County], N[ew] H[ampshire]» by Lindroth (1968: 839). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 30).

Distribution. This species ranges from southern Nova Scotia to eastern Montana, north to southern Manitoba (Lindroth 1968: 839) and west-central Saskatchewan, south to southeastern Texas and northern Florida [see Noonan 2001: Fig. 49]. The

species is also, quite unexpectedly, found in western Oregon, some 1200 km from the western edge of the species main distribution area (Noonan 2001: 313).
Records. CAN: MB, NB, NS, ON, QC, SK **USA**: CT, DC, FL, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Anisodactylus pitychrous LeConte, 1861

Anisodactylus pitychrous LeConte, 1861b: 339. Type locality: «California» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5956]. Note. LeConte (1861b: 339) mentioned that the sole specimen he had was a male.

Distribution. This species ranges from southeastern Manitoba (CNC) to northwestern Washington, south to the Los Angeles area in California and, along the Rocky Mountains, to Arizona and northern New Mexico [see Noonan 2001: Fig. 44].
Records. CAN: AB, MB, SK **USA**: AZ, CA, CO, ID, NM, NV, OR, UT, WA

Anisodactylus porosus (Motschulsky, 1845)

Ophonus porosus Motschulsky, 1845b: 344. Type locality: «Californie» (original citation). Holotype [by monotypy; designated lectotype by Bousquet (1997b: 330)] (♂) in ZMMU.

Ophonus sublaevis Motschulsky, 1859a: 138. Type locality: «California» (lectotype label). Lectotype (♀), designated by Bousquet (1997b: 334), in ZMMU. Synonymy established by Horn (1880d: 178), confirmed by Bousquet (1997b: 334).

Anisodactylus chalceus LeConte, 1859c: 2 [secondary homonym of *Anisodactylus chalceus* (Brullé, 1838)]. Type locality: «Santa Fé [Santa Fe County, New Mexico]» (original citation). Lectotype (♀), designated by Noonan (2001: 316), in MCZ [# 5958]. Synonymy established by Horn (1880d: 178), confirmed by Noonan (2001: 316).

Anisodactylus viridescens LeConte, 1861b: 339. Type locality: «Calif[ornia]» (lectotype label). Lectotype (♂), designated by Noonan (2001: 316), in MCZ [# 5957]. Synonymy established by Horn (1880d: 178), confirmed by Noonan (2001: 316).

Anisodactylus lecontei Gemminger and Harold, 1868a: 256. Replacement name for *Anisodactylus chalceus* LeConte, 1859.

Anadaptus idahoensis Hatch, 1949a: 88. Type locality: «Sand Point [Bonner County], Id[aho]» (original citation). Holotype (♂) in USNM. Synonymy established, under the name *A. viridescens* LeConte, by Hatch (1953: 177), confirmed by Noonan (2001: 317).

Distribution. This species occurs from northern Idaho and eastern Washington, south to central California [see Noonan 2001: Fig. 49]. The records from New Mexico (LeConte, 1859c: 2; Fall and Cockerell 1907: 162) and "Arizona" (Leng 1920: 73) need confirmation. One specimen labeled "V[ancouver] I[sland]" is known (Lindroth 1968: 842, as *A. viridescens*).
Records. USA: CA, ID, OR, WA [AZ, BC, NM]

Anisodactylus rudis LeConte, 1863

Anisodactylus rudis LeConte, 1863c: 15. Type locality: «California» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5959].

Distribution. This species ranges from southwestern British Columbia to northwestern Wyoming (Park County, Ken Karns pers. comm. 2009), south to northeastern Nevada and the Mexican border in California [see Noonan 2001: Fig. 56].
Records. CAN: BC **USA**: CA, ID, NV, OR, WA, WY

Anisodactylus sanctaecrucis (Fabricius, 1798)

Carabus st.crucis Fabricius, 1798: 58. Type locality: «Americae Insulis» (original citation), which is incorrect; «Washington, D.C.» selected by Lindroth (1968: 839). Syntype(s) presumably lost (Zimsen 1964: 57).
Harpalus baltimoriensis Say, 1823a: 33. Type locality: «Pen[n]ington Gap [Lee County], V[irgini]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 354), in MCZ [# 32983]. Synonymy established by Schaum (1847: 47).
Anadaptus uteanus Casey, 1924: 136. Type locality: «Stockton [Tooele County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47963]. Synonymy established by Lindroth (1968: 839).

Distribution. This species ranges from the Sept-Iles region in easternmost Quebec to Vancouver Island, south to the Sierra Nevada in east-central California, southern Colorado in the Rocky Mountains, Oklahoma, southern Louisiana, and northern Florida; seemingly isolated in northwestern British Columbia [see Noonan 2001: Fig. 50].
Records. CAN: AB, BC (VCI), MB, NB, NS, ON, PE, QC, SK **USA**: AL, AR, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NY, OH, OK, OR, PA, RI, SC, SD, TN, UT, VA, VT, WA, WI, WV, WY

Subgenus *Spongopus* LeConte, 1847

Spongopus LeConte, 1847: 377. Type species: *Spongopus verticalis* LeConte, 1847 by monotypy. Etymology. From the Greek *spongos* (spongy) and *pous* (foot), probably alluding to the adhesive setae on the male protarsomeres giving the impression of a sponge [masculine].

Diversity. One North American species in the temperate regions.
Identification. Lindroth (1968: 863-864) covered the species.
Taxonomic Note. Lindroth (1968: 862) and Noonan (1973: 374) treated this taxon as a subgenus of *Anisodactylus*. As discussed by Bousquet and Tchang (1992: 762), larval characters suggest that *Spongopus* is probably not closely related to *Anisodactylus* and thus may be more appropriately treated as a distinct genus as done by Ball (1960b: 144).

Anisodactylus verticalis (LeConte, 1847)

Spongopus verticalis LeConte, 1847: 378. Type locality: «Paterson [Passaic County], Novae Caesareae [= New Jersey]» (original citation). One syntype in MCZ [# 5960].

Distribution. This species ranges from New Brunswick (Webster and Bousquet 2008: 19) to southern Saskatchewan (Roche Percee, CNC), south to east-central Texas (Riley 2011), northwestern Louisiana (Natchitoches Parish, Igor M. Sokolov pers. comm. 2009), northern Georgia (Fattig 1949: 52), and northwestern South Carolina (Ciegler 2000: 91).
Records. CAN: MB, NB, ON, QC, SK **USA**: AR, CT, DC, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, SC, SD, TN, TX, VA, VT, WI

Subgenus *Aplocentrus* LeConte, 1847

Aplocentrus LeConte, 1847: 385. Type species: *Harpalus caenus* Say, 1823 designated by Lindroth (1968: 857). Etymology. From the Greek *haplos* (simple) and *centron* (spur), alluding to the simple (i.e., not trifid as compared to members of *Triplectrus* [= *Gynandrotarsus*]) apical spur of protibia of the adult ("*tibiae anticae calcare terminali simplice*") [masculine].

Haplocentrus Csiki, 1932a: 1077. Unjustified emendation of *Aplocentrus* LeConte, 1847.

Aplocentroides Ball and Bousquet, 2000: 92. Unnecessary replacement name for *Aplocentrus* LeConte, 1847. Etymology. From the generic name *Aplocentrus* [*q.v.*] and the Greek suffix *-oides* (resembling, having the form of) [masculine]. Note. *Aplocentrus calliops* Rafinesque, 1819, the type species and sole species in the genus *Aplocentrus* Rafinesque, 1819 is "apparently a mythical" species of fish based on a purely imaginative drawing that Audubon prepared as a hoax (Eschmeyer 1998: 1843). Therefore, the name *Aplocentrus* Rafinesque, 1819 is a *nomen nudum* and the replacement name, *Aplocentroides* Ball and Bousquet, 2000, is unnecessary.

Diversity. Two North American species in the temperate regions.
Identification. Both species are included in Lindroth's (1968: 857, 860) monograph.

Anisodactylus amaroides LeConte, 1851

Anisodactylus amaroides LeConte, 1851: 184. Type locality: «San Francisco [San Francisco County, California]» (original citation). Three syntypes in MCZ [# 91].

Distribution. This species is found west of the Rocky Mountains, from south-central British Columbia (Lindroth 1968: 857) south to southern California (Fall 1901a: 51; Moore 1937: 13).
Records. CAN: BC **USA**: CA, OR, WA

Anisodactylus caenus (Say, 1823)

Harpalus caenus Say, 1823a: 34. Type locality: «Amer[ica] Bor[ealis]» (lectotype label), restricted to «Newark [Essex County], N[ew] J[ersey]» by Lindroth (1968: 860). Lectotype (♀), designated by Lindroth and Freitag (1969: 354), in MHNP.

Anisodactylus subaeneus LeConte, 1847: 385. Type locality: «Brooklyn, NovEboraci [= New York]» (original citation). Syntype(s) in MCZ [# 5965]. Synonymy established by Horn (1880d: 178).

Anisodactylus obscurus LeConte, 1847: 386. Type locality: «Massachusetts» (original citation). Syntype(s) in MCZ [# 5964]. Synonymy established by Horn (1880d: 178).

Anisodactylus viridans Casey, 1924: 125. Type locality: «McPherson [McPherson County], Kansas» (original citation). One syntype in USNM [# 47926]. Synonymy established with doubt by Lindroth (1968: 860).

Distribution. This species ranges from "Massachusetts" (LeConte, 1847: 386, as *A. obscurus*) to central Kansas (Casey 1924: 125, as *A. viridans*), including central Iowa (Larsen and Purrington 2010: 570), south to northern Texas (Tarrant and Dallas Counties, CNC, UASM), northeastern Louisiana (Allen 1965: 70), southwestern Alabama (Löding 1945: 25), and northwestern South Carolina (Ciegler 2000: 89).
Records. USA: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MO, MS, NC, NJ, NY, OH, OK, PA, SC, TN, TX, VA

Subgenus *Pseudaplocentrus* Noonan, 1973

Pseudaplocentrus Noonan, 1973: 377. Type species: *Anisodactylus laetus* Dejean, 1829 by original designation. Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Aplocentrus* [*q.v.*] [masculine].

Diversity. One eastern North American species in the temperate and subtropical regions.
Identification. The species is covered in Lindroth's (1968: 860) monograph.

Anisodactylus laetus Dejean, 1829

Anisodactylus laetus Dejean, 1829: 154. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1968: 860). One syntype in MHNP (Lindroth 1955b: 30).

Harpalus gemmeus Casey, 1914: 108. Type locality: «Urbana [Champaign County], Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47817]. Synonymy established by Lindroth (1975: 142).

Distribution. This species occurs from southeastern New York (Notman 1928: 248) to eastern South Dakota (Kirk and Balsbaugh 1975: 31), including southernmost Ontario (Bousquet 1987a: 131), south to east-central Texas (Riley 2011; Horn 1880d: 175) and southern Florida (Peck and Thomas 1998: 21).

Records. CAN: ON **USA**: AL, AR, DC, FL, GA, IA, IL, KS, KY, LA, MI, MN, MO, MS, NC, NE, NJ, NY, OH, OK, PA, SC, SD, TX, VA, WI

Genus *Geopinus* LeConte, 1847

Geopinus LeConte, 1847: 371. Type species: *Daptus incrassatus* Dejean, 1829 by monotypy. Etymology. From the Greek prefix *geo-* (earth) and *pinos* (dirt, filth), probably alluding to the habitat where LeConte found his specimens ("*terram laborans, quasi fodiens*") [masculine].

Diversity. One North American species in the temperate regions.
Identification. The species is covered in Lindroth's (1968: 832-833) monograph.
Taxonomic Note. This taxon has always been treated as a valid genus. In a phylogenetic analysis based on characters of the adult conducted by Noonan (1973: Fig. 241), this taxon nested within the genus *Anisodactylus*. Bousquet and Tchang's (1992: 769) phylogenetic analysis based on larval characters suggested that *Geopinus* may be the sister-group to *Gynandrotarsus* of the genus *Anisodactylus*. Based on these two studies, *Anisodactylus* as presently recognized is probably paraphyletic. However, I prefer to leave *Geopinus*, with its highly distinctive species, as a distinct genus until more conclusive evidence is found.

Geopinus incrassatus (Dejean, 1829)

Daptus incrassatus Dejean, 1829: 21. Type locality: «Amérique septentrionale» (original citation), restricted to «Hope [Hempstead County], Ark[ansas]» by Lindroth (1968: 832). One syntype [2 originally cited] in MHNP (Lindroth 1955b: 26).

Geopinus incrassatus fluviaticus Casey, 1914: 52. Type locality: «Keokuk [Lee County], Iowa» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47724]. Synonymy established by Lindroth (1968: 832).

Distribution. This widely distributed species ranges from Maine (Robert E. Nelson pers. comm. 1989) and southern Quebec (Larochelle 1975: 85) to southwestern Idaho and northwestern Nevada, north to the southern parts of the Prairie Provinces, south to northern Arizona (Johnson and Clark 1989: 443; Fig. 1), southern Texas (Johnson 1978: 67), and southern Georgia (Fattig 1949: 46).
Records. CAN: AB, MB, ON, QC, SK **USA**: AL, AR, AZ, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, PA, RI, SC, SD, TN, TX, UT, VA, VT, WI, WY

Genus *Amphasia* Newman, 1838

Amphasia Newman, 1838a: 388. Type species: *Amphasia fulvicollis* Newman, 1838 (= *Feronia interstitialis* Say, 1823) by monotypy. Etymology. From the Greek *amphi*

(double) and *phasis* (appearance), probably alluding to the presence in the adults of character states found in two related genera ("apparently partaking of the characters of *Harpalus* and *Mazoreus*") [feminine]. According to Duponchel (1840b: 374), the name *Amphasia* derives from the Greek *amphi* (around, on both sides) and *asis* (slime, mud, by extension marsh); there is no evidence in Newman (1838) pointing to that interpretation.

Diversity. Two North American species arrayed in two subgenera.
Identification. Lindroth (1968: 860-861) covered both species in his treatment of the genus *Anisodactylus*.
Taxonomic Note. Lindroth (1968: 860) regarded this taxon as a subgenus of *Anisodactylus* while Noonan (1973: 347) treated it as a valid genus. Larval characters support Noonan's view (Bousquet and Tchang 1992: Fig. 42).

Subgenus *Pseudamphasia* Casey, 1914

Pseudamphasia Casey, 1914: 195. Type species: *Harpalus sericeus* Harris, 1828 by original designation. Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Amphasia* [*q.v.*] [feminine].

Diversity. One North American species in the temperate regions.

Amphasia sericea (Harris, 1828)

Harpalus sericeus T.W. Harris, 1828b: 117. Type locality not stated; «Camden [Kershaw County], S[outh] C[arolina]» selected by Lindroth (1968: 861). Three syntypes in MCZ (collection Harris).
Harpalus femoratus Dejean, 1829: 224. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 30). Synonymy established by Dejean (1831: 837), confirmed by Lindroth (1955b: 30).

Distribution. This species ranges from New Brunswick (Webster and Bousquet 2008: 19) to western South Dakota (Kirk and Balsbaugh 1975: 32), north to southern Saskatchewan (Ronald R. Hooper pers. comm. 1990), south to east-central Texas (Riley 2011), south-central Louisiana (Evangeline Parish, MCZ) and the Florida Panhandle (Liberty County, CNC).
Records. CAN: MB, NB, ON, QC, SK **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Subgenus *Amphasia* Newman, 1838

Amphasia Newman, 1838a: 388. Type species: *Amphasia fulvicollis* Newman, 1838 (= *Feronia interstitialis* Say, 1823) by monotypy.

Diversity. One North American species in the temperate regions.

Amphasia interstitialis (Say, 1823)

Feronia interstitialis Say, 1823a: 57. Type locality: «Camp Hill [Cumberland County], P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 354), in MCZ [# 32984]. Note. «Missouri [Territory]; Pennsylvania» were the areas originally cited by Say (1823a: 57).

Harpalus obscuripennis Dejean, 1829: 247. Type locality: «Amérique septentrionale» (original citation). One syntype [2 originally cited] in MHNP (Lindroth 1955b: 30). Synonymy established by Say (1830c: 19), confirmed by Lindroth (1955b: 30).

Amphasia fulvicollis Newman, 1838a: 388. Type locality: «Trenton Falls [Oneida County, New York]» (original citation). Holotype [by monotypy] in BMNH. Synonymy established by LeConte (1847: 376).

Amphasia mollis Casey, 1924: 131. Type locality: «Highland Park [Lake County], north of Chicago, Illinois» (original citation). Holotype [by monotypy] (♀) in USNM [# 47944]. Synonymy established by Lindroth (1968: 860).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 49) to southeastern South Dakota (Kirk and Balsbaugh 1975: 32), south to east-central Texas (Riley 2011), northern Arkansas (Kraim 1983: 221), and west-central South Carolina (Kirk 1970: 14; Ciegler 2000: 92).

Records. CAN: ON, QC **USA**: AR, CT, DC, DE, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Genus *Dicheirus* Mannerheim, 1843

Dicheirus Mannerheim, 1843 ["31 December", permit delivered on 28 March]: 211. Type species: *Harpalus dilatatus* Dejean, 1829 designated by Desmarest (1851: 126). Etymology. From the Greek *dis* (twice) and *cheiros* (hand), probably alluding to the trifid (mistakenly thought to be double) apical spur of the protibia ("*tibiae anticae spina apicali duplici*") of the adult [masculine].

Diplocheirus Ménétriés, 1843 [29 July]: 62. Type species: *Harpalus dilatatus* Dejean, 1829 by monotypy. Etymology. From the Greek prefix *diplo-* (double) and *cheiros* (hand) [masculine]. Note. With the evidence available, this name should have precedence. However, the name is not in prevailing usage and for that reason it is not retained here as valid (see *Principle of priority* in the "Nomenclature" section).

Dichirus Agassiz, 1846: 122. Unjustified emendation of *Dicheirus* Mannerheim, 1843.

Dicherius Motschulsky, 1859a: 138. Unjustified emendation of *Dicheirus* Mannerheim, 1843.

Diversity. Five North American species, of which two extend into northern Baja California and Guadalupe Island.

Identification. Noonan (1968) revised the species and provided a key for their identification.

***Dicheirus brunneus* (Dejean, 1829)**

Harpalus brunneus Dejean, 1829: 239 [primary homonym of *Harpalus brunneus* Gyllenhal, 1810]. Type locality: «Californie» (original citation), restricted to «5.5 mi[les] N[orth] W[est] Ruth Dam, Trinity County» by Noonan (1968: 294). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 30). Note. This name is a junior primary homonym of *Harpalus brunneus* Gyllenhal, 1810 [= *Amara brunnea* (Gyllenhal, 1810)]. Since both names apply to taxa not considered congeneric since 1899, the case is to be referred to the Commission and meanwhile prevailing usage of both names must be maintained (ICZN 1999: Article 23.9.5).

Anisodactylus pilosus G.H. Horn, 1880d: 165. Type locality: «San Joaquin Valley, California» (original citation). Lectotype (♀), designated by Noonan (1968: 295), in MCZ [# 8006]. Synonymy established by Noonan (1968: 293).

Dicheirus exiguus Casey, 1924: 133. Type locality: «Del Norte Co[unty], California» (original citation). Two syntypes in USNM [# 47951]. Synonymy established by Noonan (1968: 293).

Dicheirus gracilis Casey, 1924: 134. Type locality: «Govan [Lincoln County], Washington» (original citation). Holotype [by monotypy] (♀) in USNM [# 47949]. Synonymy established by Noonan (1968: 293).

Distribution. This species is known from east-central Washington (Casey 1924: 134, as *D. gracilis*) south to Eldorado County in eastern California [see Noonan 1968: Fig. 16].

Records. USA: CA, OR, WA

***Dicheirus dilatatus angulatus* Casey, 1914**

Dicheirus angulatus Casey, 1914: 199. Type locality: «San Diego [San Diego County], California» (original citation). Six syntypes [6 originally cited] in USNM [# 47952].

Dicheirus blaisdelli Van Dyke, 1926a: 125. Type locality: «Poway, San Diego County, California» (original citation). Holotype (♀) in CAS [# 1869]. Synonymy established by Noonan (1968: 299). Etymology. The species name was proposed for Frank Elsworth Blaisdell [1862-1947], physician and professor of surgery at Stanford University School of Medicine. Blaisdell was also a naturalist and interested in beetles, particularly the Tenebrionidae and Melyridae. He gave his collection of almost 200,000 beetles to the California Academy of Sciences where he pursued his interest after his retirement. In my opinion, his taxonomic treatment of the large and difficult tenebrionid genus *Eleodes* in 1909 is exceptional and avant-gardist.

Distribution. This subspecies is known from a few localities in southernmost California and northern Baja California [see Noonan 1968: Fig. 19].

Records. USA: CA – Mexico

Dicheirus dilatatus dilatatus (Dejean, 1829)

Harpalus dilatatus Dejean, 1829: 241. Type locality: «Californie» (original citation), herein restricted to Sequoia National Park, Tulare County (see Noonan 1968: 299). One syntype [2 ♂ originally cited] in MHNP (Lindroth 1955b: 30).

Harpalus hirsutus Ménétriés, 1843: 61. Type locality: «Californie» (original citation). Syntype(s) in ZMH (collection Mannerheim) (Silfverberg 1987: 17) and probably also in ZILR. Synonymy established by Horn (1880d: 176).

Dicheirus firmus Casey, 1924: 132. Type locality: «Alameda and San Francisco, California» (original citation). Two syntypes in USNM [# 47946]. Synonymy established by Noonan (1968: 296).

Dicheirus multiplex Casey, 1924: 132. Type locality: «Port Harford, S[an] Luis Obispo Co[unty], California» (original citation). One syntype in USNM [# 47947]. Synonymy established by Noonan (1968: 296).

Dicheirus beniciensis Casey, 1924: 133. Type locality: «Benicia [Solano County], California» (original citation). Three syntypes [3 originally cited] in USNM [# 47945]. Synonymy established by Noonan (1968: 296).

Dicheirus beniciensis validicornis Casey, 1924: 133. Type locality: «California» (original citation). Two syntypes [2 originally cited] in USNM [# 47948]. Synonymy established by Noonan (1968: 296).

Distribution. This subspecies is found over most of California, south to the Los Angeles area and San Clemente Island [see Noonan 1968: Fig. 19].
Records. USA: CA (CHI)

Dicheirus obtusus LeConte, 1852

Dicheirus obtusus LeConte, 1852a: 185. Type locality: «San Jose [Santa Clara County, California]» (original citation). Lectotype (♂), designated by Noonan (1968: 287), in MCZ [# 93].

Anisodactylus immanis G.H. Horn, 1880d: 165. Type locality: «San Joaquin Valley, California» (original citation). Lectotype (♀), designated by Noonan (1968: 288), in MCZ [# 8007]. Synonymy established by Noonan (1968: 286).

Dicheirus brevisetosus Casey, 1914: 198. Type locality: «Lake Tahoe [Placer County], California» (original citation). Holotype [by monotypy, see page 202] (♂) in USNM [# 47950]. Synonymy established by Noonan (1968: 286).

Distribution. This species is known from northeastern Oregon south to Los Angeles County in southern California [see Noonan 1968: Fig. 15].
Records. USA: CA, OR

Dicheirus piceus (Ménétriés, 1843)

Harpalus piceus Ménétriés, 1843: 61. Type locality: «Californie» (original citation), herein restricted to Blocksburg, Humboldt County (see Noonan 1968: 290). One syntype in ZMH (collection Mannerheim) (Silfverberg 1987: 22).

Dicheirus villosus Motschulsky, 1845b: 344. Type locality: «Californie» (original citation). Holotype [by monotypy] probably in ZMMU (collection Eschscholtz). Synonymy established by Horn (1880d: 177).

Dicheirus irregularis Motschulsky, 1845b: 345. Type locality not stated; «Calif[ornia]» reported by Motschulsky (1869: 14). Holotype [by monotypy] probably in ZMMU (collection Eschscholtz). Synonymy established by Horn (1880d: 177).

Dicheirus paralellus LeConte, 1851: 184. Type locality: «S[an] D[iego] [San Diego County, California]» (lectotype label). Lectotype (♀), designated by Noonan (1968: 291), in MCZ [# 92]. Synonymy established by LeConte (1858a: 29), confirmed by Noonan (1968: 288).

Dicheirus alutaceus Casey, 1914: 200. Type locality: «Valley of Eel River, Humboldt Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47953]. Synonymy established by Noonan (1968: 288).

Dicheirus piceus rupimontis Casey, 1914: 200. Type locality: «Utah» (original citation). One syntype in USNM [# 47955]. Synonymy established by Noonan (1968: 288).

Dicheirus piceus angustulus Casey, 1914: 200. Type locality: «Trinity River and Redwood Creek, Humboldt Co[unty], California» (original citation). Two syntypes in USNM [# 47956]. Synonymy established by Noonan (1968: 288).

Dicheirus australinus Casey, 1914: 201. Type locality: «San Diego and San Clemente Island, California» (original citation). Fifteen syntypes [15 originally cited] in USNM [# 47960]. Synonymy established by Noonan (1968: 288).

Dicheirus australinus insularis Casey, 1914: 201. Type locality: «Guadalupe Island» (original citation). Fifteen syntypes [15 originally cited] in USNM [# 47961]. Synonymy established by Noonan (1968: 288).

Dicheirus decoloratus Casey, 1914: 201. Type locality: «Arizona» (original citation). Holotype [by monotypy] (♂) in USNM [# 47957]. Synonymy established by Noonan (1968: 288).

Dicheirus incidens Casey, 1924: 134. Type locality: «Columbia River [Clatsop County], Oregon» (original citation). Three syntypes [3 originally cited] in USNM [# 47954]. Synonymy established by Hatch (1953: 177), confirmed by Noonan (1968: 288).

Dicheirus facilis Casey, 1924: 135. Type locality: «Columbia River [Clatsop County], Oregon» (original citation). Two syntypes [2 ♀ originally cited] in USNM [# 47959]. Synonymy established by Hatch (1953: 177), confirmed by Noonan (1968: 288).

Dicheirus sodalis Casey, 1924: 135. Type locality: «Wawawai [Whitman County], Washington» (original citation). Holotype [by monotypy] (♀) in USNM [# 47958]. Synonymy established by Hatch (1953: 177), confirmed by Noonan (1968: 289).

Distribution. This species ranges from Vancouver Island to northwestern Montana (Russell 1968: 67), south to northwestern Utah and the Mexican border in California [see Noonan 1968: Fig. 18]; also recorded from Guadalupe Island in the Pacific (Noonan 1968: 289).

Records. CAN: BC (VCI) **USA**: AZ, CA (CHI), ID, MT, OR, UT, WA – Mexico

Dicheirus strenuus (Horn, 1869)

Anisodactylus strenuus G.H. Horn, 1869b: 130. Type locality: «Fort Tejon [Kern County], California» (original citation). Lectotype, designated by Noonan (1968: 296), in MCZ [# 34550].

Distribution. This species is known only from a few localities in Kern and Tulare Counties in southern California [see Noonan 1968: Fig. 17].
Records. USA: CA

Subtribe Pelmatellina Bates, 1882

Pelmatellinae Bates, 1882a: 67. Type genus: *Pelmatellus* Bates, 1882.

Diversity. New World, with about 90 species arrayed in eight genera: *Hakaharpalus* Larochelle and Larivière (five New Zealand species), *Kupeharpalus* Larochelle and Larivière (three New Zealand species), *Lecanomerus* Chaudoir (35 Australian species), *Nemaglossa* Solier (one Chilean species), *Notospeophonus* Moore (three species in Australia), *Pelmatellus* (28 species), *Syllectus* Bates (three New Zealand species), and *Trachysarus* Reed (eight species from the Juan Fernández).
Taxonomic Note. In the phylogenetic analysis of the tribe Harpalini using molecular sequence data conducted by Martínez-Navarro et al. (2005) members of Pelmatellina clustered within those of Stenolophina.

Genus *Pelmatellus* Bates, 1882

Pelmatellus Bates, 1882a: 68. Type species: *Pelmatellus nitescens* Bates, 1882 designated by Goulet (1974b: 84). Etymology. Possibly from the Greek *pelma* (sole of the foot) and the Latin *tellus* (earth) [masculine].

Diversity. Twenty-eight species in the Nearctic (two species) and Neotropical (28 species) Regions arrayed in three subgenera: *Pelmatellopsis* Perrault (17 South American species), *Pelmatellus s.str.* (10 species), and *Thenarellus* Bates (one Middle American species).

Subgenus *Pelmatellus* Bates, 1882

Pelmatellus Bates, 1882a: 68. Type species: *Pelmatellus nitescens* Bates, 1882 designated by Goulet (1974b: 84).

Diversity. Ten North and Middle American species.
Identification. Goulet (1974b) revised the species and provided a key for their identification.

Pelmatellus obtusus Bates, 1882

Pelmatellus obtusus Bates, 1882a: 68. Type locality: «Ostuncalco, Guatemala» (original citation for the lectotype). Lectotype (♂), designated by Goulet (1974b: 90), in BMNH.

Bradycellus lucidus Casey, 1884b: 8 [primary homonym of *Bradycellus lucidus* Bates, 1878]. Type locality: «Arizona» (original citation). One syntype in USNM [# 47990]. Synonymy established by Goulet (1974b: 90).

Tachycellus turbatus Fall, 1905: 173. Type locality: «Beulah (8,000 ft.), and Cloudcroft (9,000 ft.), New Mexico» (original citation). Syntype(s) [2 originally cited] in MCZ [# 23880]. Synonymy established with the name *P. lucidus* (Casey) by Casey (1914: 234).

Pelmatellus sinuosus Casey, 1914: 235. Type locality: «Salazar, Mex[ico state], Mexico» (original citation). Holotype [by monotypy] (♀) in USNM [# 47991]. Synonymy established by Goulet (1974b: 90).

Distribution. The range of this species extends from southeastern Arizona and southwestern New Mexico south to Guatemala [see Goulet 1974b: Fig. 32].
Records. USA: AZ, NM – Guatemala, Mexico

Pelmatellus stenolophoides parallelus Goulet, 1974

Pelmatellus stenolophoides parallelus Goulet, 1974b: 93. Type locality: «M[oun]t Lemmon [Pima County], Catalina M[oun]t[ain]s (9150 feet), Arizona» (original citation). Holotype (♂) in CAS [# 12171].

Distribution. This subspecies is known only from the holotype collected in southern Arizona.
Records. USA: AZ
Note. The subspecies *P. stenolophoides stenolophoides* Bates occurs from central Mexico to Guatemala. The record from "Arizona" (Bousquet and Larochelle 1993: 213) for the nominotypical subspecies is an error and refers to the subspecies *P. stenolophoides parallelus*.

Subtribe Stenolophina Kirby, 1837

Stenolophidae Kirby, 1837: 46. Type genus: *Stenolophus* Dejean, 1821.
Polpochilinae Bates, 1891b: 10. Type genus: *Polpochila* Solier, 1849.
Acupalpini Tschitschérine, 1900a: 342, 351. Type genus: *Acupalpus* Latreille, 1829.
Cratocarini Casey, 1914: 48, 299. Type genus: *Cratocara* LeConte, 1863 (= *Polpochila* Solier, 1849).
Bradycellini Jeannel, 1942: 693, 700. Type genus: *Bradycellus* Erichson, 1837.
Anthracini Schuler, 1970: 113, 114. Type genus: *Anthracus* Motschulsky, 1850.

Diversity. Worldwide, with about 625 species (Lorenz 2005: 353-362) arrayed in approximately 35 genera. The Northern Hemisphere is represented by about 325 species (roughly 52% of the world fauna) and North America alone by 102 species (16.3%).
Taxonomic Note. Ball and Bousquet (2000: 90) recognized two genus-groups among the North American taxa, the Polpochili for the genus *Polpochila* and Stenolophi for all remaining genera.

Genus *Stenolophus* Dejean, 1821

Stenolophus Dejean, 1821: 15. Type species: *Carabus vaporariorum* Linnaeus *sensu* Fabricius, 1787 (= *Carabus teutonus* Schrank, 1781) designated by Westwood (1838: 5). Etymology. Probably from the Greek *stenos* (narrow) and *lophos* (crest, ridge) [masculine]. The name was proposed by Johann Karl Megerle von Mühlfeld and made available by Dejean.

Diversity. About 170 species (Lorenz 2005: 353-355, excluding *Agonoleptus*) arrayed in four subgenera: *Agonoderus* (seven species), *Astenolophus* Habu (11 Palaearctic species in Asia, two of them extending into the Oriental Region), *Egadroma* Motschulsky (about 90 species in Africa, Asia, and the Australian Region), and *Stenolophus s.str.* (about 60 species). The North American fauna has 22 species (roughly 13% of the world fauna). *Egadroma* is often listed as a separate genus.

Subgenus *Stenolophus* Dejean, 1821

Stenolophus Dejean, 1821: 15. Type species: *Carabus vaporariorum* Linnaeus *sensu* Fabricius, 1787 (= *Carabus teutonus* Schrank, 1781) designated by Westwood (1838: 5).

Notiocharis Gistel, 1856: 359. Type species: *Carabus vaporariorum* Linnaeus *sensu* Fabricius, 1787 (= *Carabus teutonus* Schrank, 1781) designated by Bousquet (2002b: 34). Etymology. From the Greek *notios* (southern) and *charis* (grace) [feminine].

Diversity. About 60 species in the Nearctic (15 species), Neotropical (ten species), Oriental (11 species), and Palaearctic (about 25 species) Regions.

Identification. Lindroth (1968: 905-907) treated all currently recognized valid species in his key except for *S. splendidulus*. Bousquet (1997b: 335) commented on *S. splendidulus* and illustrated the median lobe.

Stenolophus anceps LeConte, 1857

Stenolophus anceps LeConte, 1857c: 28. Type locality: «San Francisco [San Francisco County, California]» (original citation). Syntype(s) in MCZ [# 5926].

Stenolophus fidelis Casey, 1914: 275. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 48039]. Synonymy established by Lindroth (1968: 910).

Stenolophus peregrinus Casey, 1914: 278. Type locality: «Provo [Utah County], Utah» (original citation). Seven syntypes [7 originally cited] in USNM [# 48045]. **New synonymy** (Gerald R. Noonan pers. comm. 2008).

Distribution. This species ranges from Vancouver Island (Lindroth 1968: 911) to western Montana (Russell 1968: 67), south to southern Colorado (Elias 1987: 634) and southern California (Fall 1901a: 50; Andrews et al. 1979: 28).

Records. CAN: BC (VCI) **USA**: CA, CO, ID, MT, NV, OR, UT, WA

***Stenolophus carbo* Bousquet, 1993**

Harpalus carbonarius Dejean, 1829: 398 [primary homonym of *Harpalus carbonarius* Say, 1823]. Type locality: «Amérique septentrionale» (original citation), restricted to «Hope [Hempstead County], Ark[ansas]» by Lindroth (1968: 908). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 31).

Stenolophus carbo Bousquet [in Bousquet and Larochelle], 1993: 11. Replacement name for *Stenolophus carbonarius* (Dejean, 1829).

Distribution. The range of this species extends from northern New Hampshire (Reeves et al. 1983: 459) to eastern South Dakota (Kirk and Balsbaugh 1975: 33), including southernmost Ontario (Lindroth 1968: 908), south to southern Texas (Johnson 1978: 67) and southern Florida (Peck and Thomas 1998: 22). The record from Nova Scotia (Lindroth 1954c: 309) is considered doubtful by Majka et al. (2007: 10).
Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KY, LA, MA, MD, MI, MO, MS, NC, NH, NJ, NY, OK, RI, SC, SD, TN, TX, VA, WI [NS]

***Stenolophus cincticollis* LeConte, 1858**

Stenolophus cincticollis LeConte, 1858b: 60. Type locality: «Colorado River, near the Gila [southwestern Arizona]» (original citation). Holotype [by monotypy] in MCZ [# 5927].

Stenolophus lamprotus Bates, 1891a: 246. Type locality: «Villa Lerdo, in Durango» (original citation). Syntype(s) [2 originally cited] in BMNH. **New synonymy** (Gerald R. Noonan pers. comm. 2008).

Stenolophus semitinctus Casey, 1914: 279. Type locality: «El Paso [El Paso County], Texas» (original citation). Four syntypes [4 originally cited] in USNM [# 48046]. **New synonymy** (Gerald R. Noonan pers. comm. 2008).

Stenolophus extensicollis Casey, 1924: 145. Type locality: «Tempe [Maricopa County], Arizona» (original citation). Holotype [by monotypy] (♂) in USNM [# 48044]. **New synonymy** (Gerald R. Noonan pers. comm. 2008).

Distribution. This species ranges from southeastern California (Imperial County, MCZ, USNM) to westernmost Texas (Casey 1914: 279, as *S. semitinctus*), south at least to the state of Durango in Mexico. The record from "Colorado" (Csiki 1932a: 1260) needs confirmation.
Records. USA: AZ, CA, NM, TX [CO] – Mexico

***Stenolophus dissimilis* Dejean, 1829**

Stenolophus dissimilis Dejean, 1829: 410. Type locality: «Louisiane» (original citation). Two syntypes [2 originally cited] in MHNP (Lindroth 1955b: 31).

Distribution. This species ranges from northeastern Ohio (Purrington et al. 1999: 47) to southern Wisconsin (Rauterberg 1885: 21; Messer 2010: 40), north to Charity Island in the Michigan waters of Lake Huron (Andrews 1916: 79), south to south-

ern Texas (Johnson 1978: 67), northern Georgia (Fattig 1949: 54), and northwestern South Carolina (Ciegler 2000: 94). The record from New Jersey (Smith 1910: 216) needs confirmation.
Records. USA: AL, AR, GA, IL, IN, KS, KY, LA, MI, MO, MS, NC, OH, OK, SC, TN, TX, WI [NJ]

Stenolophus flavipes LeConte, 1858

Stenolophus flavipes LeConte, 1858b: 60. Type locality: «San Diego [San Diego County], California» (original citation). Syntype(s) in MCZ [# 5928].

Distribution. This species is known from northern California (Shasta County, USNM) to southern California (Fall 1901a: 50; Dajoz 2007: 20) and "Arizona" (Leng 1920: 74). The record from "Oregon" (Schaupp 1883a: 14) is probably in error (Hatch 1953: 184).
Records. USA: AZ, CA

Stenolophus fuliginosus Dejean, 1829

Stenolophus fuliginosus Dejean, 1829: 423. Type locality: «Amérique septentrionale» (original citation), restricted to «Rumney [Grafton County], N[ew] H[ampshire]» by Lindroth (1968: 909). One syntype in MHNP (Lindroth 1955b: 31).

Stenolophus versicolor Kirby, 1837: 46. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Three syntypes [3 originally cited] in BMNH (Lindroth 1953b: 175). Synonymy established by LeConte (1847: 410), confirmed by Lindroth (1953b: 175).

Stenolophus fuscipennis LeConte, 1847: 410. Type locality: «NovEboraci [= New York]» (original citation). Syntype(s) in MCZ [# 5924]. Synonymy established by LeConte (1853c: 386), confirmed by Lindroth (1968: 910).

Distribution. The range of this species extends from Newfoundland (Lindroth 1955a: 149) to Vancouver Island (Lindroth 1968: 910), south to the Sierra Nevada in California (Dajoz 2007: 16), northern Colorado (Haubold 1951: 706; Armin 1963: 122), and eastern Georgia (Fattig 1949: 54). The record from southern Louisiana (Summers 1874a: 81) needs confirmation.
Records. CAN: AB, BC (VCI), MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AR, CA, CO, CT, DC, GA, IA, ID, IL, IN, MA, MD, ME, MI, MN, MT, NC, ND, NH, NJ, NY, OH, OR, PA, RI, SC, SD, VA, VT, WA, WI, WY [LA]

Stenolophus fuscatus Dejean, 1829

Stenolophus fuscatus Dejean, 1829: 426. Type locality: «Amérique septentrionale» (original citation), restricted to «Galesburg [Knox County], Illin[ois]» by Lindroth (1968: 914). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 31). Note. Dejean (1829: 427) stated that the unique specimen of this species in his collection was a female.

Distribution. This species occurs from southwestern New Brunswick (Webster and Bousquet 2008: 19) to eastern South Dakota (Kirk and Balsbaugh 1975: 33), south to northeastern Kansas (Popenoe 1878: 79) and south-central Maryland (Prince Georges County, USNM). The record from southern Colorado (Elias 1987: 634) needs confirmation.
Records. CAN: NB, ON, QC **USA**: CT, IL, IN, KS, MA, MD, ME, MI, NE, NH, NJ, NY, OH, PA, RI, SD, VT, WV [CO]

Stenolophus humidus Hamilton, 1893

Stenolophus humidus Hamilton, 1893: 306. Type locality: near Allegheny [Pennsylvania] (inferred from title of the paper). Six syntypes [15 originally cited] in CMNH.

Distribution. This species ranges from southern Nova Scotia (Christopher G. Majka pers. comm. 2007) to southwestern Michigan (Allegan County, CMNH), south to southeastern Mississippi (Stone County, Drew A. Hildebrandt pers. comm. 2008), northern Georgia (Fattig 1949: 54), and eastern South Carolina (Ciegler 2000: 94).
Records. CAN: NS, ON, QC **USA**: CT, DC, GA, KY, MA, MD, ME, MI, MS, NC, NH, NJ, NY, OH, PA, RI, SC, VA, VT, WV

Stenolophus incultus Casey, 1914

Stenolophus incultus Casey, 1914: 275. Type locality: «Truckee [Nevada County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48040].

Stenolophus abstinens Casey, 1914: 273. Type locality: «Arizona» (original citation). Two syntypes in USNM [# 48037]. **New synonymy** (Gerald R. Noonan pers. comm. 2008).

Stenolophus remissus Casey, 1914: 274. Type locality: «southern California» (original citation). One syntype in USNM [# 48038]. **New synonymy** (Gerald R. Noonan pers. comm. 2008).

Stenolophus consors Casey, 1914: 276. Type locality: «Gualala River, Mendocino Co[unty], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 48041]. Synonymy established by Lindroth (1968: 911).

Stenolophus debiliceps Casey, 1914: 276. Type locality: «Lake Tahoe [Placer County], California» (original citation). Holotype [by monotypy] (♀) in USNM [# 48042]. Synonymy established by Lindroth (1968: 911).

Distribution. This species is found from Vancouver Island (Lindroth 1968: 911) to northern Idaho (Hatch 1953: 183), south to "Arizona" (Casey 1914: 273, as *S. abstinens*) and southern California (Casey 1914: 274, as *S. remissus*). The record from "Montana" (Bousquet and Larochelle 1993: 220) needs confirmation.
Records. CAN: BC (VCI) **USA**: AZ, CA, ID, OR, UT, WA [MT]

Stenolophus limbalis LeConte, 1857

Stenolophus limbalis LeConte, 1857c: 28. Type locality: «San Jose [Santa Clara County], California» (original citation). Syntype(s) in MCZ [# 5923].

Stenolophus indistinctus Motschulsky, 1859a: 134. Type locality: «St. José [Santa Clara County], California» (lectotype label). Lectotype (♂), designated by Bousquet (1997b: 333), in ZMMU. Synonymy established by LeConte (1863b: 13), confirmed by Bousquet (1997b: 333).

Stenolophus longitarsis Casey, 1914: 277. Type locality: «Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 48043]. Synonymy established by Hatch (1953: 184), confirmed by Lindroth (1968: 909).

Distribution. This species ranges from Vancouver Island (Lindroth 1968: 909) to northwestern Montana (Russell 1968: 67), south to central Utah (Casey 1914: 276) and southern California (Fall 1901a: 50; Moore 1937: 14). The species is adventive on Oahu, Hawaii (Liebherr 2009: 403).
Records. CAN: BC (VCI) **USA**: CA (CHI), ID, MT, NV, OR, UT, WA

Stenolophus megacephalus Lindroth, 1968

Stenolophus megacephalus Lindroth, 1968: 914. Type locality: «Bala, N[orth]W[est] Gravenhurst, Ont[ario]» (original citation). Holotype (♂) in CNC [# 10579].

Distribution. This species is restricted to a small area from southern Quebec and the Ontario Peninsula (Bousquet 1987a: 131) south to central Pennsylvania (Clinton County, CMNH) and "Rhode Island" (Sikes 2003: 8).
Records. CAN: ON, QC **USA**: CT, KY, MA, NH, NY, PA, RI

Stenolophus ochropezus (Say, 1823)

Feronia ochropeza Say, 1823a: 54. Type locality: North America (inferred from title of the paper); restricted to «Camden [Kershaw County], S[outh] C[arolina]» by Lindroth (1968: 911). Lectotype (♂), designated by Lindroth and Freitag (1969: 356), in MHNP (collection Dejean).

Stenolophus convexicollis LeConte, 1847: 409. Type locality: «Rocky Mountains» (original citation). Syntype(s) in MCZ [# 5929]. Synonymy established by LeConte (1869a: 379), confirmed by Lindroth (1968: 912).

Stenolophus rotundicollis Motschulsky, 1859a: 135. Type locality: «California» (lectotype label). Lectotype (♀), designated by Bousquet (1997b: 333), in ZMMU. Synonymy established by Bousquet (1997b: 333).

Stenolophus laticollis Motschulsky, 1864: 202. Type locality: «N[ew] Orl[eans] [Orleans Parish, Louisiana]» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 18), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 18).

Stenolophus gracilis Casey, 1884b: 14. Type locality: «Arizona» (original citation). Holotype [by monotypy] presumably lost (Lindroth 1968: 912). Synonymy established by Horn (1885b: 109).

Stenolophus testaceicollis Casey, 1924: 145. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Holotype [by monotypy] (♀) in USNM [# 48035]. Synonymy established by Lindroth (1968: 912).

Stenolophus floridanus Casey, 1924: 145. Type locality: «Florida» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 48036]. Synonymy established by Lindroth (1968: 912).

Distribution. This species ranges from Nova Scotia (Lindroth 1954c: 309) to southeastern Saskatchewan (Ronald R. Hooper pers. comm. 2007), south to southern Texas (Johnson 1978: 67) and southern Florida (Peck and Thomas 1998: 22), west along the southwest to southern California (Horn 1894: 312; Andrews et al. 1979: 28); also found in southern Baja California (Horn 1894: 312), the Bahamas (Darlington 1953: 10), Cuba (Darlington 1934: 112), Jamaica (Darlington 1941a: 14), Dominican Republic (Robert L. Davidson pers. comm. 2012) and Puerto Rico (Wolcott 1936: 191).

Records. CAN: MB, NB, NS (CBI), ON, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, UT, VA, VT, WI, WV – Bahamas, Cuba, Dominican Republic, Jamaica, Mexico, Puerto Rico

Stenolophus plebejus Dejean, 1829

Stenolophus plebejus Dejean, 1829: 424. Type locality: «Amérique septentrionale» (original citation), restricted to «Wellesley, Mass[achusetts]» by Lindroth (1968: 913). One syntype [2 ♂ originally cited] in MHNP (Lindroth 1955b: 31).

Acupalpus lugubris Haldeman, 1843b: 302 [*nomen dubium*]. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Syntype(s) presumably lost. Synonymy established by Casey (1914: 279).

Stenolophus humeralis Motschulsky, 1864: 202. Type locality: «Am[érique] b[oréale]» (lectotype label). Lectotype (♂), designated by Bousquet and Larochelle (1993: 18), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 18).

Stenolophus rivularis Casey, 1924: 146. Type locality: «S[ain]t Louis, Missouri» (original citation). Holotype [by monotypy] (♀) in USNM [# 48048]. Synonymy established by Lindroth (1968: 913).

Distribution. The range of this species extends from southern Quebec (Larochelle 1975: 255) to eastern Iowa (Johnson County, USNM), south to southeastern Texas (Aransas County, USNM) and southern Florida (Peck and Thomas 1998: 22); also recorded from Bermuda (Hilburn and Gordon 1989: 677). The records from central Colorado (Wickham 1902: 242) and Tabasco in Mexico (Bates 1891a: 246) are probably in error.

Records. CAN: ON, QC **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KY, LA, MA, MD, ME, MI, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WV – Bermuda

Stenolophus splendidulus Motschulsky, 1864

Stenolophus splendidulus Motschulsky, 1864: 201. Type locality: «Am[érique] bor[éale]» (original citation). Lectotype (♂), designated by Bousquet (1997b: 335), in ZMMU.

Distribution. Besides the three original specimens, I assign to this species a series of specimens collected in southernmost Ontario (Rondeau Provincial Park, CNC).
Records. CAN: ON

Stenolophus spretus Dejean, 1831

Stenolophus spretus Dejean, 1831: 845. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 31).

Distribution. This species is known from New Jersey (Smith 1910: 215; Lindroth 1968: 905) to the Florida Keys (Peck and Thomas 1998: 22), west along the Gulf Plain to southern Texas (Johnson 1978: 67), north to western Kansas (Scott County, CMNH).
Records. USA: AL, AR, DC, FL, GA, KS, LA, MD, MS, NJ, OK, SC, TX, VA

Subgenus *Agonoderus* Dejean, 1829

Agonoderus Dejean, 1829: 49. Type species: *Carabus lineola* Fabricius, 1775 designated by Brullé (1835b: 15). Etymology (original). From the Greek *a* (absence), *gonia* (angle), and *dere* (neck, by extension pronotum), alluding to the rounded posterior angles of the pronotum of adults ("*corselet ovalaire ou en carré dont les angles sont arrondis*") of the three species Dejean had before him [masculine].

Diversity. Seven species in North America, of which two extend into northern Mexico, Bermuda, the Bahamas, and Cuba.
Identification. The subgenus has been reviewed by Heading (1964) but his work remains unpublished. Lindroth (1968: 916-920, as *comma* group) covered four species. A revision of the group would be useful.

Stenolophus binotatus (Casey, 1914)

Agonoderus binotatus Casey, 1914: 291. Type locality: «Alexandria [Rapides Parish], Louisiana» (original citation). One syntype in USNM [# 48060].

Distribution. This species is known from southern Oklahoma (Marshall County, CMNH) to eastern Coahuila in Mexico (UASM), east to southeastern Louisiana (Heading 1964: 34).
Records. USA: LA, OK, TX – Mexico

***Stenolophus comma* (Fabricius, 1775)**

Carabus comma Fabricius, 1775: 248. Type locality: «America» (original citation), restricted to «Arlington [Middlesex County], Mass[achusetts]» by Lindroth (1968: 918). Lectotype (♂), designated by Lindroth (1968: 918), in ZMUC.

Trechus similis Kirby, 1837: 48. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Two syntypes [2 originally cited] in BMNH (Lindroth 1953b: 175). Synonymy established by LeConte (1873b: 325), confirmed by Lindroth (1953b: 175).

Agonoderus dorsalis LeConte, 1847: 373. Type locality: «provinciis mediis et occidentalibus» (original citation). Syntype(s) in MCZ [# 5876]. Synonymy established by LeConte (1869a: 375). Note. Fall (1933: 104) pointed out that the specimen labeled "dorsalis" in LeConte's collection is conspecific with those of *Stenolophus lecontei* Chaudoir and since LeConte (1869a: 375) listed his *dorsalis* in synonymy with *S. comma* (Fabricius), it seems likely that the specimen labeled *dorsalis* is not a syntype.

Agonoderus oculatus Casey, 1914: 295. Type locality: «Austin [Travis County], Texas» (original citation). Holotype [by monotypy] (♂) in USNM [# 48066]. Synonymy established by Bousquet and Larochelle (1993: 221), based on Heading's (1964) unpublished thesis.

Agonoderus gracilitarsis Casey, 1914: 296. Type locality: «New York» (original citation for the lectotype). Lectotype, designated by Lindroth (1975: 143), in USNM [# 48068]. Synonymy established by Lindroth (1968: 918).

Agonoderus quadricollis Casey, 1914: 296. Type locality: «Oklahoma» (original citation). Holotype [by monotypy] (♂) in USNM [# 48067]. Synonymy established by Bousquet and Larochelle (1993: 221), based on Heading's (1964) unpublished thesis.

Agonoderus obliqulus Casey, 1914: 297. Type locality: «Provo [Utah County], Utah» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48070]. Synonymy established by Lindroth (1968: 918).

Agonoderus pallescens Casey, 1914: 297. Type locality: «Arizona» (original citation). Five syntypes [5 originally cited] in USNM [# 48071]. Synonymy established by Bousquet and Larochelle (1993: 221), based on Heading's (1964) unpublished thesis.

Agonoderus latipennis Casey, 1914: 298. Type locality: «Utah» (original citation). Holotype [by monotypy] in USNM [# 48072]. Synonymy established by Bousquet and Larochelle (1993: 221), based on Heading's (1964) unpublished thesis.

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 150) to Vancouver Island (Lindroth 1968: 919), south to southeastern California (Dajoz 2007: 20), southern Arizona, central Texas, northern Alabama, and east-central South Carolina (Ciegler 2000: 93) [see Heading 1964: Fig. 19]. The record from "Mississippi" (Bousquet and Larochelle 1993: 221) needs confirmation.

Records. FRA: PM **CAN**: AB, BC (VCI), MB, NB, NF, NS, ON, PE, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY [MS]

Stenolophus infuscatus (Dejean, 1829)

Agonoderus infuscatus Dejean, 1829: 54. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1968: 917). Syntype(s) in MHNP.

Agonoderus suturalis LeConte, 1847: 373. Type locality: «NovEboraci [= New York]» (original citation). Syntype(s) in MCZ [# 5874]. Synonymy established by LeConte (1853c: 381).

Distribution. This species ranges from "New York" (LeConte 1847: 373) and New Jersey to southern Florida including the Keys (Peck and Thomas 1998: 22), west to northern Oklahoma (Alfalfa County, Robert L. Davidson pers. comm. 2008) and southeastern Texas [see Heading 1964: Fig. 18]; also recorded from the Bahamas and Cuba (Darlington 1953: 11). The records from southeastern Minnesota (Gandhi et al. 2005: 931) and southwestern Ohio (Blatchley 1910: 177) need confirmation.
Records. USA: AL, DE, FL, GA, LA, MD, MS, NC, NJ, NY, OK, SC, TX, VA [MN, OH] – Bahamas, Cuba.

Stenolophus lecontei (Chaudoir, 1868)

Agonoderus lecontei Chaudoir, 1868b: 164. Type locality: «provinciis australibus et occidentalibus» (original citation for *A. pallipes* Fabricius *sensu* LeConte, 1847), restricted to «Hope [Hempstead County], Ark[ansas]» by Lindroth (1968: 919). Lectotype (♂), designated by Lindroth (1968: 919), in MHNP. Note. This name was proposed for *Agonoderus pallipes* (Fabricius, 1801) *sensu* LeConte (1847: 373).

Agonoderus idoneus Casey, 1914: 292. Type locality: «Keokuk [Lee County], Iowa» (original citation). One syntype in USNM [# 48061]. Synonymy established by Bousquet and Larochelle (1993: 222), based on Heading's (1964) unpublished thesis.

Agonoderus plagiatus Casey, 1914: 294. Type locality: «Wisconsin» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48062]. Synonymy established by Lindroth (1968: 919).

Agonoderus tarsalis Casey, 1914: 294. Type locality: «El Paso [El Paso County], Texas» (original citation). One syntype in USNM [# 48064]. Synonymy established by Bousquet and Larochelle (1993: 222), based on Heading's (1964) unpublished thesis.

Agonoderus vividus Casey, 1914: 294. Type locality: «Arkansas» (original citation). One syntype in USNM [# 48063]. Synonymy established by Bousquet and Larochelle (1993: 222), based on Heading's (1964) unpublished thesis.

Agonoderus vacans Casey, 1914: 294. Type locality: «Waco [McLennan County], Texas» (original citation). Two syntypes in USNM [# 48065]. Synonymy established by Bousquet and Larochelle (1993: 222), based on Heading's (1964) unpublished thesis.

Distribution. The range of this species extends from western Maine (Kennebec and Somerset Counties, Ross T. Bell pers. comm. 2008) to eastern South Dakota (Ellsbury et al. 1998: 621), south to east-central Texas (Riley 2011) and the Florida Panhandle (Peck and Thomas 1998: 22). Also known from northern Idaho (Hatten et al. 2007: 359) and from a single, old (1926) specimen (possibly mislabeled) from western Oregon (Westcott et al. 2006: 9). The records from northern Colorado (Armin 1963: 115) and New Mexico (Fall and Cockerell 1907: 161, *Agonoderus pallipes*) need confirmation.
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [CO, NM, OR]

Stenolophus lineola (Fabricius, 1775)

Carabus lineatus Forster, 1771: 59 [potential *nomen oblitum*]. Type locality: «Americâ septentrionali» (original citation). Syntype(s) lost.

Carabus lineola Fabricius, 1775: 244 [potential *nomen protectum*]. Type locality: «America septentrionali» (original citation), restricted to «Hope [Hempstead County], Ark[ansas]» by Lindroth (1968: 917). One syntype in BMNH (Zimsen 1964: 57; Lindroth 1968: 917). Synonymy established by Goeze (1777: 655).

Carabus furcatus Fabricius, 1792: 164. Type locality: «America» (original citation). Syntype(s) probably lost (Lindroth 1968: 917). Synonymy established with doubt by Dejean (1829: 51).

Carabus chrysomalinus Frölich, 1792: 162. Type locality: «Virginien» (original citation). Syntype(s) lost. Synonymy established by Crotch (1871: 10).

Distribution. This species is found from Prince Edward Island to southern Alberta (Lindroth 1968: 918), south to "Baja California" (Leng 1920: 74), southeastern California (Andrews et al. 1979: 28), southern Arizona (Heading 1964: Fig. 18), north-central Mexico (Heading 1964: 30), and central Florida (Peck and Thomas 1998: 22); also known from one specimen collected in northern Oregon (Westcott et al. 2006: 9) and reported as "common in light traps" in Bermuda (Hilburn and Gordon 1989: 677).
Records. CAN: AB, MB, ON, PE, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WI, WV, WY – Bermuda, Mexico

Stenolophus maculatus (LeConte, 1869)

Agonoderus maculatus LeConte, 1869a: 374. Type locality: «California and Nevada» (original citation). Syntype(s) in MCZ [# 5873].

Distribution. This species is found throughout California, in southeastern Arizona [see Heading 1964: Fig. 18], and in "Nevada" (LeConte 1869a: 374); one specimen labeled from south-central Washington is also known (Heading 1964: 32).
Records. USA: AZ, CA, NV [WA]

Stenolophus rugicollis (LeConte, 1859)

Agonoderus rugicollis LeConte, 1859a [February]: 83. Type locality: «California» (original citation), herein restricted to North Fork, Madera County (see Casey 1914: 297, as *S. rectus*). Syntype(s) in MCZ [# 5875].

Dichirus pallidus Motschulsky, 1859a [after 27 November]: 137. Type locality: «Calif[ornia]» (lectotype label). Lectotype (probably ♀), designated by Bousquet (1997b: 333), in ZMMU. Synonymy established by Casey (1914: 298), confirmed by Bousquet (1997b: 333).

Agonoderus rectus Casey, 1914: 297. Type locality: «North Fork, Madera Co[unty], California» (original citation). Holotype [by monotypy] (♀) in USNM [# 48069]. Synonymy established by Bousquet and Larochelle (1993: 222), based on Heading's (1964) unpublished thesis.

Distribution. This species is known from central Washington to southwestern California [see Heading 1964: Fig. 19].
Records. USA: CA, OR, WA

Genus *Agonoleptus* Casey, 1914

Agonoleptus Casey, 1914: 284. Type species: *Agonoleptus parviceps* Casey, 1914 by monotypy. Etymology. From the Greek *a* (without), *gonia* (angle), and *leptos* (fine, thin, delicate), probably alluding to the fact that adults of the sole, relatively small species known to Casey have the posterior angles of the pronotum rounded ("*the hind angles of the prothorax are rounded*") [masculine].

Diversity. Seven North American species in the temperate regions.
Identification. There is no key for the identification of all species. Lindroth (1968: 921-924) covered four species, leaving *A. dolosus* and *A. parviceps*.
Taxonomic Note. Adults and particularly larvae (personal observation) are structurally quite different from those of *Stenolophus s.str.* and *Agonoderus* and I am unable to find any character states that would conclusively suggest that *Agonoleptus* is closely related to the other two taxa. For that reason, I consider *Agonoleptus* as a distinct genus.

[**conjunctus group**]

Agonoleptus conjunctus (Say, 1823), new combination

Trechus conjunctus Say, 1823a: 90. Type locality: «Wh[i]t[e] Sulphur Spr[i]ngs [Greenbrier County], W[est] V[irgini]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 356), in MCZ [# 32966].

Acupalpus humilis Dejean, 1829: 462. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 31). Synonymy established by Lindroth (1955b: 31).

Acupalpus misellus Dejean, 1829: 467. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 31). Synonymy established by Say (1830c: 21), confirmed by Lindroth (1955b: 31).

Trechus immunis Kirby, 1837: 48. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Syntype(s) [2 originally cited] in BMNH (Lindroth 1953b: 175). Synonymy established by LeConte (1873b: 325), confirmed by Lindroth (1953b: 175).

Acupalpus obesus Bates, 1878a: 593. Type locality: «near the capital, Mexico» (original citation). Syntype(s) probably in BMNH. Synonymy established by Bates (1882a: 71).

Stenolophus captiosus Casey, 1914: 281. Type locality: «Boulder Co[unty], Colorado» (original citation for the lectotype). Lectotype, designated by Lindroth (1975: 143), in USNM [# 48050]. Synonymy established by Lindroth (1968: 921).

Stenolophus moquinus Casey, 1914: 282. Type locality: «Arizona» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48051]. Synonymy established by Lindroth (1968: 921).

Distribution. This species ranges from Cape Breton Island (Lindroth 1954c: 309) to Vancouver Island (Lindroth 1968: 922), south to the Sierra Nevada in California (Dajoz 2007: 16), at least San Luis Potosí in Mexico (CNC), and central Florida (Peck and Thomas 1998: 22). The record from Guatemala (Bates 1882a: 71) needs confirmation.
Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), ON, PE, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – Mexico

Agonoleptus rotundatus (LeConte, 1863), new combination

Stenolophus rotundatus LeConte, 1863c: 17. Type locality: «Louisiana» (original citation). One syntype in MCZ [# 5925].

Distribution. This species ranges from east-central Ohio (Usis and MacLean 1998: 67) to southeastern Wyoming (Lavigne 1977: 47) and northeastern Colorado (Lavigne 1978: 102), including southernmost Ontario (Lindroth 1968: 924; Bousquet 1987a: 131), south to southeastern Texas (Casey 1914: 282) and northwestern South Carolina (Kirk 1970: 15). The record from "New York" (Bousquet and Larochelle 1993: 222) needs confirmation.
Records. CAN: ON **USA**: AL, AR, CO, IN, KS, KY, LA, MD, MO, MS, OH, OK, PA, NC, SC, TN, TX, VA, WV, WY [NY]

Agonoleptus rotundicollis (Haldeman, 1843), new combination

Acupalpus rotundicollis Haldeman, 1843b: 302. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One possible syntype, a ♂ labeled "[pink disc] / var.

rotundicollis Hald. [handwritten] / conjunctus 3 [handwritten]," in MCZ (collection LeConte).

Mazoreus americanus Motschulsky, 1864: 234. Type locality: «Am[érique] bor[éale]» (original citation). Lectotype, designated by Bousquet and Larochelle (1993: 15), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 15).

Stenolophus scitulus Casey, 1884c: 78. Type locality: «near Philadelphia [Philadelphia County], Pennsylvania» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 48053]. Synonymy established by Lindroth (1968: 922).

Stenolophus scitulus incitatus Casey, 1914: 283. Type locality: «probably New Jersey» (original citation). Holotype [by monotypy] (♂) in USNM [# 48054]. Synonymy established by Lindroth (1968: 922).

Distribution. The range of this species extends from southern Quebec (Larochelle 1975: 109) to eastern Minnesota (Gandhi et al. 2005: 931), south to west-central Mississippi (Washington County, CMNH) and northwestern South Carolina (Kirk 1970: 15). The record from Colorado (Elias 1987: 634) is probably in error.
Records. CAN: ON, QC **USA**: CT, MA, MD, ME, MI, MN, MS, IA, IL, NC, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI, WV

Agonoleptus thoracicus (Casey, 1914), new combination

Stenolophus thoracicus Casey, 1914: 282. Type locality: «S[ain]t Louis, Missouri» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48052].

Distribution. This species ranges from east-central Vermont to southeastern North Dakota, south to northeastern Kansas, Tennessee, and northeastern Virginia [see Bousquet and Messer 2010: Fig. 3].
Records. USA: DC, IA, IL, IN, KS, KY, MA, MD, MI, MO, ND, NJ, NY, OH, PA, SD, TN, VA, VT, WI
Note. This taxon has been listed in synonymy with *A. conjunctus* (Say) by Lindroth (1968: 921) but considered a valid species by Bousquet and Messer (2010).

[**unicolor group**]

Agonoleptus dolosus (Casey, 1914), new status, new combination

Stenolophus unicolor dolosus Casey, 1914: 280. Type locality: «Los Angeles Co[unty], California» (original citation). Two syntypes in USNM [# 48049].

Distribution. This species is known only from the type series collected in southwestern California.
Records. USA: CA
Note. I have studied both syntypes, including the male genitalia of one of them, and I have little doubt that they belong to a distinct species, though probably closely related to *A. unicolor* (Dejean) based on Lindroth's (1968: 924) description of the holotype of

A. unicolor. The name *Stenolophus dolosus* is listed as a junior synonym of *S. unicolor* (Dejean, 1829) in Lorenz (2005: 354).

Agonoleptus parviceps Casey, 1914

Agonoleptus parviceps Casey, 1914: 285. Type locality: «Colorado Springs [El Paso County], Colorado» (original citation). Lectotype (♀), designated by Bousquet (1990: 203), in USNM [# 48055].

Distribution. This species is known from two localities in eastern Colorado and central New Mexico (Bousquet 1990: 203).
Records. USA: CO, NM

Agonoleptus unicolor (Dejean, 1829), new combination

Stenolophus unicolor Dejean, 1829: 411. Type locality: «Californie» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 31).

Distribution. This species is known for sure only from southern California, as far north as the San Francisco Bay (Casey 1914: 280). The records from Colorado (Wickham 1902: 242; Elias 1987: 634) need confirmation; that from the Similkameen Valley in British Columbia (Smith et al. 2004: 96) was based on misidentified specimens of *A. conjuctus* (Say).
Records. USA: CA [CO]

Genus *Bradycellus* Erichson, 1837

Bradycellus Erichson, 1837: 64. Type species: *Carabus collaris* Paykull, 1798 (= *Acupalpus caucasicus* Chaudoir, 1846) designated by Andrewes (1935: 20). Etymology. From the Greek *bradys* (slow) and *cello* (to run), probably alluding to the slow pace of the adults in nature [masculine]. Note. As pointed out by Andrewes (1935: 20), the first valid type species designation for *Bradycellus* Erichson is that of *Harpalus placidus* Gyllenhal, 1827 as selected by Westwood (1838: 6). This species is currently included in *Trichocellus* Ganglbauer, 1892. In order to preserve stability, an application should be submitted to the Commission to suppress Westwood's designation.

Diversity. About 130 species (Lorenz 2005: 356-358) arrayed in ten subgenera: *Atlantocellus* Wrase and Jaeger (five species from the Canary and Madeira Islands), *Bradycelloides* Habu (one east Palaearctic species), *Bradycellus s.str.* (45 species), *Catharellus* (one species), *Desbordesius* Maindron (one east Palaearctic species), *Liocellus* (eight species), *Lipalocellus* (two species), *Stenocellus* (34 species), *Tachycellus* Morawitz (27 Palaearctic species from Asia with one species extending into the Oriental Region), and *Triliarthrus* (six species). The North American fauna is represented by 51 species (roughly 39% of the world fauna).

Taxonomic Note. Noonan (1976: 21) also included *Psychristus* Andrewes (six species) and *Nipponobradycellus* Habu (four species) in this genus. In Lorenz (2005: 358), *Nipponobradycellus* is listed as a subgenus of the genus *Psychristus*.

Subgenus *Liocellus* Motschulsky, 1864

Liocellus Motschulsky, 1864: 207. Type species: *Acupalpus nitidus* Dejean, 1829 designated by Lindroth (1968: 882). Etymology. From the Greek prefix *lio-* (smooth) and *cello* (to run) [masculine].

Glycerius Casey, 1884c: 79. Type species: *Acupalpus nitidus* Dejean, 1829 by monotypy. Etymology. Possibly from the Greek *glyceros* (sweet) [masculine].

Diversity. Eight species in North America (seven species) and Mexico (one species).
Identification. Fall (1905: 175, as *Glycerius*) published a key to the four North American species then known. Casey (1924) subsequently added three new species. The subgenus is in need of a taxonomic revision.

Bradycellus curticollis (Casey, 1924)

Glycerius curticollis Casey, 1924: 140. Type locality: «Monterey [Monterey County], California» (original citation). Two syntypes [2 originally cited] in USNM [# 47987].

Distribution. This species is known only from the type locality in west-central California.
Records. USA: CA

Bradycellus intermedius (Fall, 1905)

Glycerius intermedius Fall, 1905: 176. Type locality: «San Bernardino M[oun]t[ain]s [and] Lake Tahoe, California» (original citation). Syntype(s) [3 ♀ originally cited] in MCZ [# 23877].

Distribution. This species is known from the Sierra Nevada and San Bernardino Mountains (Fall 1905: 176) and from San Diego County (Moore 1937: 14) in California.
Records. USA: CA

Bradycellus laticollis (Casey, 1924)

Glycerius laticollis Casey, 1924: 141. Type locality: «Reno [Washoe County], Nevada» (original citation). Two syntypes in USNM [# 47989].

Distribution. This species is known only from the type locality in northwestern Nevada.
Records. USA: NV

***Bradycellus nitidus* (Dejean, 1829)**

Acupalpus nitidus Dejean, 1829: 474. Type locality: «Californie» (original citation). One syntype in MHNP (Lindroth 1955b: 30).
Acupalpus obsoletus Say, 1830c: 22. Type locality: «Mexico» (original citation). Syntype(s) lost. Synonymy established by Horn (1894: 312).

Distribution. The range of this species extends from southwestern Washington (Hatch and Kincaid 1958: 6; Pacific County, MCZ) southwards to the Baja California Peninsula (Horn 1894: 312) and Guatemala (Ball and Shpeley 1992a: 58). The record from "British Columbia" (Horn 1894: 312) is likely in error (Lindroth 1968: 883).
Records. USA: AZ, CA (CHI), NM, OR, UT, WA – Guatemala, Mexico

***Bradycellus obtusus* (Fall, 1905)**

Glycerius obtusus Fall, 1905: 176. Type locality: «Pasadena, Azusa, Claremont, [all in] southern California» (original citation). Syntype(s) in MCZ [# 23878].

Distribution. This species is known so far only from southern California (Fall 1905: 176).
Records. USA: CA

***Bradycellus politus* (Fall, 1905)**

Glycerius politus Fall, 1905: 176. Type locality: «The Dalles, Oregon to southern California» (original citation), restricted to «Pomona [Los Angeles County], Calif[ornia]» by Lindroth (1968: 883). Syntype(s) in MCZ [# 23879].

Distribution. This species ranges from the Okanagan Valley in south-central British Columbia (Lindroth 1968: 883) to southern California (Fall 1905: 176; Dajoz 2007: 20).
Records. CAN: BC **USA**: CA, OR, WA

***Bradycellus tahoensis* (Casey, 1924)**

Glycerius tahoensis Casey, 1924: 140. Type locality: «Lake Tahoe [Placer County], California» (original citation). Two syntypes [2 originally cited] in USNM [# 47988].

Distribution. This species is known only from the type locality in the Sierra Nevada.
Records. USA: CA

Subgenus *Bradycellus* Erichson, 1837

Bradycellus Erichson, 1837: 64. Type species: *Carabus collaris* Paykull, 1798 (= *Acupalpus caucasicus* Chaudoir, 1846) designated by Andrewes (1935: 20).
Tetraplatypus Tschitschérine, 1897: 62. Type species: *Acupalpus similis* Dejean, 1829 (= *Trechus ruficollis* Stephens, 1828) by monotypy. Synonymy established by Lin-

droth (1968: 883), accepted by Jaeger (2008: 1513-1514). Etymology. From the Greek *tetra* (four), *platys* (wide, broad) and *pous* (foot), possibly alluding to the expanded male mesotarsomeres ("♂ *ont les tarses intermédiaires faiblement dilatés*") [masculine].

Diversity. About 45 species in the Nearctic (two species, one of them adventive), Neotropical (25 species), and Palaearctic (17 species) Regions.
Identification. The two species found in North America have been covered by Lindroth (1968: 883-884, as *harpalinus* group).

Bradycellus fenderi Hatch, 1951

Bradycellus fenderi Hatch, 1951: 120. Type locality: «Depoe Bay [Lincoln County], Ore[gon]» (original citation). Holotype location unknown (not in USNM). Etymology. This species was named after Kenneth M. Fender [1910-1987], a rural mail carrier at McMinnville, Oregon, and collector of Pacific Northwest beetles. Along with his wife, Dorothy McKey, Fender specialized in Lycidae and Cantharidae and the two published several taxonomic papers together.

Distribution. This species is found along the Pacific Coast from northwestern Washington (Nelson 1988b: 56) to southwestern Oregon (Coos County, CNC).
Records. USA: OR, WA

Bradycellus harpalinus (Audinet-Serville, 1821)

Carabus fulvus Marsham, 1802: 456 [primary homonym of *Carabus fulvus* Müller, 1776]. Type locality: Great Britain (inferred from title of the book). Syntype(s) probably in BMNH (collection Stephens).
Trechus harpalinus Audinet-Serville, 1821: 84. Type locality: «environs de Paris [France]» (original citation). Syntype(s) probably lost. Synonymy established by Dejean (1829: 472).

Distribution. This Palaearctic species is adventive in North America where it is known from the Vancouver area in southwestern British Columbia (Lindroth 1968: 883) south to Oregon (Westcott et al. 2006: 7; Lincoln County, Foster F. Purrington pers. comm. 2009). The first inventoried specimen collected on this continent was found in Vancouver in 1951 (Lindroth 1968: 883).
Records. CAN: BC **USA**: OR, WA – **Adventive**

Subgenus *Catharellus* Casey, 1914

Catharellus Casey, 1914: 242. Type species: *Geobaenus cordicollis* LeConte, 1847 (= *Bradycellus lecontei* Csiki, 1932) by monotypy. Etymology. Uncertain, possibly from the Greek *catharos* (clean, pure) and the Latin suffix *-ellus* (small, little) [masculine].

Diversity. One North American species.
Identification. The species was covered in Lindroth's (1968: 885) treatment of the Canadian *Bradycellus*.

***Bradycellus lecontei* Csiki, 1932**

Geobaenus cordicollis LeConte, 1847: 406 [secondary homonym of *Bradycellus cordicollis* Wesmael, 1835]. Type locality: «Lacum Superiorem» (original citation), herein restricted to Marquette, Marquette County, Michigan (see Hubbard and Schwarz 1878: 629). One syntype in MCZ [# 5938].
Bradycellus lecontei Csiki, 1932a: 1233. Replacement name for *Bradycellus cordicollis* (LeConte, 1847).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 147) to eastern Alaska (Lindroth 1968: 885), south to northern Oregon (Hatch 1953: 182, as *B. cordicollis*), northern Colorado (Larimer County, UASM; Lindroth 1955a: 147), eastern South Dakota (Kirk and Balsbaugh 1975: 32), and northeastern West Virginia (Tucker County, CMNH).
Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CO, ID, IL, MA, ME, MI, MN, MT, ND, NH, NY, OR, PA, SD, VT, WA, WI, WV, WY

Subgenus *Stenocellus* Casey, 1914

Stenocellus Casey, 1914: 243. Type species: *Trechus rupestris* Say, 1823 designated by Lindroth (1968: 885). Etymology. From the Greek *stenos* (narrow) and the last two syllables of the generic name *Bradycellus*, alluding to the narrower body of these *Bradycellus*-related species ("*distinguished at once from Bradycellus by their more slender elongate parallel ... form*") [masculine].

Diversity. Thirty-four species in North America (33 species), Mexico (three species, one endemic to Guadalupe Island), and the Bahamas (one species).
Identification. Casey (1914: 243-257) published a key to the species then known except *S. nebulosus*, *S. nigriceps*, and *S. subcordatus*. He subsequently described three new species (Casey 1924). Lindroth (1968, as *rupestris*, *nigriceps*, and *tantillus* groups) covered nine species. The subgenus is in need of a revision.
Faunistic Note. According to Kataev and Matalin (in Kryzhanovskij et al. 1995: 135), the sole syntype (a badly damage ♂) of *Stenolophus elongatus* Motschulsky, 1860 in ZMMU, reported from the Kuril Islands, is a specimen of this subgenus. Since no species of *Stenocellus* are known from the Far East, they concluded that the specimen is mislabeled and probably originated from northwestern North America.

[**nigriceps group**]
***Bradycellus insulsus* (Casey, 1914)**

Stenocellus insulsus Casey, 1914: 246. Type locality: «near the city [of New York], New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 47999].

Distribution. This species, as far as known, ranges from southeastern New Hampshire (Rockingham County, Ross T. Bell pers. comm. 2008) to northwestern Minnesota (Gandhi et al. 2005: 930), including southernmost Ontario (Lindroth 1968: 892), south to South Carolina (Charleston County, CNC).
Records. CAN: ON **USA**: CT, MD, MI, MN, NH, NJ, NY, OH, PA, SC, VA, VT, WV

***Bradycellus neglectus* (LeConte, 1847)**

Geobaenus neglectus LeConte, 1847: 407. Type locality: «insulam Mackinaw [Mackinac County, Michigan]» (original citation). Holotype [by monotypy] in MCZ [# 5937].

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 147-148) to northeastern British Columbia (Lindroth 1968: 892), south to southwestern Oklahoma (Kondratieff et al. 2005: 171), southern Arkansas (Kraim 1983: 277), northeastern Georgia (Fattig 1949: 53), and southeastern South Carolina (Ciegler 2000: 96). The record from southwestern Alabama (Löding 1945: 26) needs confirmation; that from "Utah" (Bousquet and Larochelle 1993: 225) is probably in error.
Records. CAN: AB, BC, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AR, CT, GA, IL, MA, ME, MI, MN, NC, ND, NH, NY, OH, OK, PA, SC, SD, TN, VT, WI [AL]

***Bradycellus nigriceps* LeConte, 1869**

Bradycellus nigriceps LeConte, 1869a: 381. Type locality: «New Jersey and Virginia» (original citation), restricted to «New Jersey» by Lindroth (1968: 889). One syntype [2 originally cited] in MCZ [# 5945].
Stenocellus occultus Casey, 1914: 246. Type locality: Bluff Point, Lake Champlain, New York (lectotype label according to Lindroth 1975: 143). Lectotype, designated by Lindroth (1975: 143), in USNM [# 47997]. Synonymy established by Lindroth (1968: 889).

Distribution. This species ranges from New Brunswick (Lindroth 1968: 891) to North Dakota (Tinerella 2003: 636), north to southeastern Manitoba (Lindroth 1968: 891), south to east-central Arkansas (Kraim 1983: 280), northeastern Mississippi (Snodgrass and Cross 1983: 16), and southeastern South Carolina (Ciegler 2000: 96). The record from "New Mexico" (Fall and Cockerell 1907: 162) is probably in error.
Records. CAN: MB, NB, ON, QC **USA**: AR, CT, DC, IA, IL, IN, MA, MD, ME, MI, MN, MS, ND, NH, NJ, NY, OH, PA, SC, VA, VT, WI, WV

Figure 37. *Rhadine lindrothi* Barr. This species, named after Carl H. Lindroth, is the only one of the genus *Rhadine* that reaches as far north as southern Canada. Ecologically, members of the genus can be divided into two groups, one that includes cavernicolous species and the other that includes surface dwelling species like *R. lindrothi*. Most species are more or less depigmented and with relatively long legs.

***Bradycellus supplex* (Casey, 1914)**

Stenocellus supplex Casey, 1914: 245. Type locality: «Atlantic City [Atlantic County], New Jersey» (original citation). Two syntypes in USNM [# 48000].

Distribution. This species is known only from the type locality.
Records. USA: NJ
Note. The two syntypes are morphologically similar to adults of *B. insulsus* Casey and may be conspecific with them.

[**rupestris group**]

***Bradycellus congener* (LeConte, 1847)**

Geobaenus congener LeConte, 1847: 407. Type locality: «Rocky Mountains» (original citation). Syntype(s) in MCZ [# 5939].
Stenocellus alutaceus Casey, 1914: 250. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48005]. Synonymy established by Lindroth (1968: 888).

Distribution. This species ranges from Nova Scotia (Majka et al. 2007: 10) to Vancouver Island (Lindroth 1968: 888), south at least to central California (Clark 1999: 202; Dajoz 2007: 17), northern Sonora in Mexico (Bates 1884: 277), southern Texas (Johnson 1978: 67), southeastern Louisiana (East Baton Rouge Parish, Igor M. Sokolov pers. comm. 2009), Tennessee (Cumberland County, CNC), and southern West Virginia (McDowell County, Ken Karns pers. comm. 2009).
Records. CAN: AB, BC (VCI), MB, NS, ON, QC, SK **USA**: AZ, CA, CO, IA, ID, IL, KS, LA, MA, ME, MI, MN, MT, ND, NH, NM, NV, OH, OR, SD, TN, TX, UT, VT, WA, WI, WV, WY – Mexico

***Bradycellus lustrellus* (Casey, 1914)**

Stenocellus lustrellus Casey, 1914: 251. Type locality: «Redwood Creek, Humboldt Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 48006].

Distribution. This species is known only from the type locality along the Pacific Coast of California.
Records. USA: CA

***Bradycellus nebulosus* LeConte, 1853**

Acupalpus suturalis LeConte, 1847: 411 [primary homonym of *Acupalpus suturalis* Dejean, 1829]. Type locality: «Georgia» (original citation). One syntype in MCZ [# 5946].
Bradycellus nebulosus LeConte, 1853c: 385. Replacement name for *Bradycellus suturalis* (LeConte, 1847).

Distribution. This species is known from northwestern Georgia (Fattig 1949: 53) and "Texas" (Horn 1883a: 52). The record from Baja California (Horn 1894: 312) needs confirmation.
Records. USA: GA, TX
Note. Fall (1905: 171) stated that *B. nebulosus* is "closely resembling and probably not distinct from *rupestris*."

Bradycellus nigerrimus Lindroth, 1968

Bradycellus nigerrimus Lindroth, 1968: 889. Type locality: «Maple Creek, Sask[atchewan]» (original citation). Holotype (♂) in CNC [# 10578].

Distribution. This species is known from a small area including southern Saskatchewan, southern Alberta (Lindroth 1968: 889), and southwestern North Dakota (Tinerella 2003: 636). The records from "Montana" and "Wyoming" (Bousquet and Larochelle 1993: 225) need confirmation.
Records. CAN: AB, SK **USA**: ND [MT, WY]

Bradycellus nubifer LeConte, 1858

Bradycellus nubifer LeConte, 1858b: 60. Type locality: «San Diego, California and at Tuvac in northern Sonora» (original citation), restricted to «San Diego [San Diego County]» by Lindroth (1968: 887). Syntype(s) in MCZ [# 5940].
Bradycellus ventralis LeConte, 1858b: 61. Type locality: «Gila River» (original citation). Holotype [by monotypy] in MCZ [# 5941]. Synonymy established by LeConte (1869a: 382), confirmed by Lindroth (1968: 887).
Stenocellus nubicollis Casey, 1914: 253. Type locality: «Cal [with a dot within the "C"] [= San Francisco, San Francisco County, California]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 48011]. Synonymy established by Lindroth (1968: 887).

Distribution. The range of this western species extends from central Alberta to Vancouver Island (Lindroth 1968: 887), south to southern California and northern Sonora (LeConte 1858b: 60). The record from southern Texas (Johnson 1978: 67) needs confirmation.
Records. CAN: AB, BC (VCI) **USA**: AZ, CA, ID, NV, OR, WA [TX] – Mexico

Bradycellus rupestris (Say, 1823)

Trechus rupestris Say, 1823a: 91. Type locality: «Arlington [Middlesex County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 355), in MCZ [# 32967].
Acupalpus elongatulus Dejean, 1829: 457. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 30). Synonymy established by Harris (1833: 568), confirmed by Lindroth (1955b: 30).
Stenolophus cinctus Say, 1830c: 20 [*nomen dubium*]. Type locality: «Massachusetts» (original citation). Syntype(s) lost. Synonymy established by Melsheimer (1853: 25).

Acupalpus debilipes Say, 1830c: 21 [*nomen dubium*]. Type locality: «Indiana» (original citation). Syntype(s) lost. Synonymy established doubtfully with *B. parallelus* Chaudoir by LeConte (1869a: 382).

Trechus flavipes Kirby, 1837: 47. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Two syntypes in BMNH (Lindroth 1953b: 175). Synonymy established by LeConte (1847: 407), confirmed by Lindroth (1953b: 175).

Bradycellus parallelus Chaudoir, 1868b: 166. Type locality: «Louisiane» (original citation). One syntype in MHNP (Lindroth 1968: 886). Synonymy established by Schaupp (1883c: 50), confirmed by Lindroth (1968: 886).

Stenocellus antennalis Casey, 1914: 245. Type locality: «Catskill M[oun]t[ain]s, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47998]. Synonymy established by Lindroth (1968: 886).

Distribution. This species ranges from Cape Breton Island (Lindroth 1954c: 308) to southeastern Wyoming (Lavigne 1977: 44), south to southern New Mexico (Fall and Cockerell 1907: 162), southern Texas (Wickham 1897: 113), southern Louisiana (Summers 1874a: 81; Allen 1965: 72, as *B. debilipes*), northern Georgia (Fattig 1949: 53), and eastern South Carolina (Ciegler 2000: 96). One specimen simply labeled from Florida is known (Leng 1915: 599).
Records. CAN: NB, NS (CBI), ON, QC **USA**: AL, AR, CO, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV, WY [FL]

[**subcordatus group**]

***Bradycellus subcordatus* Chaudoir, 1868**

Bradycellus subcordatus Chaudoir, 1868b: 166. Type locality: Amérique septentrionale (inferred from title of the paper). Holotype [by monotypy] (♂) in MHNP (Lindroth 1968: 881).

Distribution. This species is known only from the holotype. Casey (1914: 258) assumed that the species was "possibly a native of California" because the holotype was sent to Chaudoir by Motschulsky. Although Motschulsky described several species from the west coast, he never set foot in western United States.
Records. USA: ?CA

[**tantillus group**]

***Bradycellus californicus* (LeConte, 1857)**

Stenolophus californicus LeConte, 1857c: 29. Type locality: «California» (original citation). Four syntypes in MCZ [# 5942].

Distribution. This species is found from Vancouver Island (Lindroth 1968: 894) to western Montana (Russell 1968: 68), south to west-central Nevada (Lyon County, CNC) and southern California (Fall 1901a: 50).
Records. CAN: BC (VCI) **USA**: CA (CHI), ID, MT, NV, OR, WA

***Bradycellus rivalis* LeConte, 1858**

Bradycellus rivalis LeConte, 1858b: 61. Type locality: «Colorado Desert, at New River and at the Colorado» (original citation). Four syntypes in MCZ [# 5943].

Distribution. This species is known from "Texas" (Horn 1894: 312), Arizona (Griffith 1900: 566; Casey 1914: 249), southeastern California (Fall 1901a: 50), and the Baja California Peninsula (Horn 1894: 312).
Records. USA: AZ, CA, TX – Mexico

***Bradycellus tantillus* (Dejean, 1829)**

Acupalpus tantillus Dejean, 1829: 465. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1968: 892). One syntype in MHNP (Lindroth 1955b: 31).
Acupalpus difficilis Dejean, 1829: 467. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 31). Synonymy established by Chaudoir (1868b: 167), confirmed by Lindroth (1955b: 31).

Distribution. This species ranges from southwestern Maine (Majka et al. 2011: 46) to eastern South Dakota (Kirk and Balsbaugh 1975: 33), including southern Ontario (Lindroth 1968: 893; Bousquet 1987a: 131), south to southeastern Texas (Fort Bend, Brian Raber pers. comm. 2010), northern Louisiana (Allen 1965: 72), southern Florida (Peck and Thomas 1998: 21), and the Bahamas (Darlington 1953: 10). The record from "Quebec" (Bousquet and Larochelle 1993: 226) was based on a misidentified specimen of *B. nigriceps* (CNC); those from northern Colorado (Haubold 1951: 706; Armin 1963: 118) need confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, LA, MA, MD, MO, MS, NC, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WV [CO] – Bahamas

[**incertae sedis**]
***Bradycellus ardelio* (Casey, 1914)**

Stenocellus ardelio Casey, 1914: 254. Type locality: «Siskiyou Co[unty], California» (original citation). One syntype in USNM [# 48016].

Distribution. This species is known only from the type locality in northern California.
Records. USA: CA

***Bradycellus aridus* (Casey, 1914)**

Stenocellus aridus Casey, 1914: 248. Type locality: «San Diego [San Diego County], California» (original citation). Holotype [by monotypy] (♂) in USNM [# 48001].

Distribution. This species is known only from the type locality in southwestern California.
Records. USA: CA

***Bradycellus carolinensis* (Casey, 1924)**

Stenocellus carolinensis Casey, 1924: 142. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). One syntype in USNM [# 48020].

Distribution. This species is known only from the type locality.
Records. USA: NC

***Bradycellus decorus* (Casey, 1914)**

Stenocellus decorus Casey, 1914: 248. Type locality: «Tuçson [Pima County], Arizona» (original citation). Holotype [by monotypy] (♀) in USNM [# 48004].

Distribution. This species is known only from the type locality in southern Arizona.
Records. USA: AZ

***Bradycellus discipulus* (Casey, 1914)**

Stenocellus discipulus Casey, 1914: 252. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). One syntype in USNM [# 48008].

Distribution. This species is known only from the type locality in northwestern California.
Records. USA: CA

***Bradycellus exstans* (Casey, 1914)**

Stenocellus exstans Casey, 1914: 253. Type locality: «Sacramento Co[unty], California» (original citation). Holotype [by monotypy] (♀) in USNM [# 48014].

Distribution. This species is known only from the type locality in north-central California.
Records. USA: CA

***Bradycellus festinans* (Casey, 1914)**

Stenocellus festinans Casey, 1914: 257. Type locality: «Sedgwick Co[unty], Kansas and Texas» (original citation). Three syntypes [3 originally cited] in USNM [# 48022].

Distribution. This species ranges from southern Montana (Hatch 1933a: 10) and South Dakota (Kirk and Balsbaugh 1975: 33) south to "Texas" (Casey 1914: 257) and southern Arkansas (Kraim 1983: 283). The record from Cuba (Darlington 1934: 110) is doubtful.
Records. USA: AR, KS, MT, SD, TX, WY

***Bradycellus humboldtianus* (Casey, 1924)**

Stenocellus humboldtianus Casey, 1924: 142. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). One syntype in USNM [# 48012].

Distribution. This species is known only from the type locality in northwestern California.
Records. USA: CA

***Bradycellus larvatus* (Casey, 1914)**

Stenocellus larvatus Casey, 1914: 256. Type locality: «El Paso [El Paso County], Texas» (original citation). Holotype [by monotypy] (♀) in USNM [# 48018].

Distribution. This species is known only from the type locality in westernmost Texas.
Records. USA: TX

***Bradycellus lineatus* (Casey, 1914)**

Stenocellus lineatus Casey, 1914: 253. Type locality: «S[an]ta Cruz M[oun]t[ain]s, California» (original citation). One syntype in USNM [# 48013].

Distribution. This species is known only from the type locality in western California.
Records. USA: CA

***Bradycellus montanus* (Casey, 1914)**

Stenocellus montanus Casey, 1914: 251. Type locality: «Truckee [Nevada County], California» (original citation). Two syntypes [2 originally cited] in USNM [# 48010].

Distribution. This species is known only from the type locality in the Sierra Nevada.
Records. USA: CA

***Bradycellus picipes* (Casey, 1914)**

Stenocellus picipes Casey, 1914: 255. Type locality: «Lake Tahoe [Placer County], California» (original citation). Six syntypes [7 originally cited] in USNM [# 48015].

Distribution. This species is known only from the type locality in the Sierra Nevada.
Records. USA: CA

***Bradycellus provoensis* (Casey, 1914)**

Stenocellus provoensis Casey, 1914: 256. Type locality: «Provo [Utah County], Utah» (original citation). One syntype in USNM [# 48017].

Distribution. This species is known only from the type locality in north-central Utah.
Records. USA: UT

***Bradycellus puncticollis* (Casey, 1914)**

Stenocellus puncticollis Casey, 1914: 251. Type locality: «San Francisco Bay and northward in the coast regions, California» (original citation). Nine syntypes [10 originally cited] in USNM [# 48009].

Distribution. This species is known from the type series and San Diego County (Moore 1937: 14) in California.
Records. USA: CA

Bradycellus purgatus (Casey, 1914)

Stenocellus purgatus Casey, 1914: 249. Type locality: «near San Diego [San Diego County], California» (original citation). Two syntypes in USNM [# 48003].

Distribution. This species is known only from the type locality in southwestern California.
Records. USA: CA

Bradycellus sejunctus (Casey, 1914)

Stenocellus sejunctus Casey, 1914: 252. Type locality: «Alameda Co[unty] and Santa Rosa, California» (original citation). Two syntypes in USNM [# 48007].

Distribution. This species is known for sure only from the type series collected in western California; it was also recorded from Humboldt County (Notman 1929b: 222).
Records. USA: CA

Bradycellus suavis (Casey, 1914)

Stenocellus suavis Casey, 1914: 257. Type locality: «Austin [Travis County], Texas» (original citation). One syntype in USNM [# 48021].

Distribution. This species is known for sure only from the type locality in east-central Texas. The record from South Dakota (Kirk and Balsbaugh 1975: 33) needs confirmation.
Records. USA: TX [SD]

Bradycellus symetricus (Motschulsky, 1850)

Stenolophus symetricus Motschulsky, 1850a: 23. Type locality: «California» (original citation), cited from «Colonie Ross [farming community about 75 miles north of San Francisco along the coast, California]» by Motschulsky (1859a: 134). Syntype(s) location unknown (possibly in ZMMU though not listed in Keleinikova 1976).
Stenocellus symmetricus Casey, 1914: 254. Unjustified emendation of *Stenocellus symetricus* (Motschulsky, 1850).

Distribution. This species is known for sure only from the type series collected on the west coast in central California. Casey (1914: 254) reported it from Saint Helena, Sonoma County, California.
Records. USA: CA

***Bradycellus veronianus* (Casey, 1924)**

Stenocellus veronianus Casey, 1924: 142. Type locality: «Vero [Beach] [Indian River County], Florida» (original citation). One syntype in USNM [# 48019].

Distribution. This species is known yet only from the type locality.
Records. USA: FL

Subgenus *Lipalocellus* Ball and Bousquet, 2000

Liocellus Tschitschérine, 1901: 247 [junior homonym of *Liocellus* Motschulsky, 1864]. Type species: *Harpalus nigrinus* Dejean, 1829 by original designation. Etymology. From the Greek prefix *lio-* (smooth) and *cello* (to run) [masculine].

Lipalocellus Ball and Bousquet, 2000: 94. Replacement name for *Liocellus* Tschitschérine, 1901. Etymology. The name was composed from an arbitrary combination of syllables [masculine].

Diversity. Two North American species.
Identification. Lindroth (1968: 894-898, as *nigrinus* group) reviewed the species.

***Bradycellus nigrinus* (Dejean, 1829)**

Harpalus nigrinus Dejean, 1829: 399. Type locality: «détroit de Norfolk [= Norfolk Sound, Baranof Island, Alaska], sur la côte nord-ouest de l'Amérique septentrionale» (original citation). One syntype [2 ♂ originally cited] in MHNP (Lindroth 1955b: 30).

Trechus tibialis Kirby, 1837: 46. Type locality: northern parts of British America (inferred from title of the book). Holotype [by monotypy] in BMNH (Lindroth 1953b: 175). Synonymy established with doubt by Chaudoir (1868b: 167), confirmed by Lindroth (1953b: 175).

Geobaenus quadricollis LeConte, 1847: 405. Type locality: «Lacum Superiorem» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5944]. Synonymy established, under the name *B. tibialis* (Kirby), by Chaudoir (1868b: 167), confirmed by LeConte (1869a: 382) and Lindroth (1968: 896).

Distribution. This species extends from Newfoundland (Lindroth 1955a: 146) to southeastern Alaska, including Kodiak Island (Lindroth 1968: 896), south to mountains in southeastern California (Lindroth 1968: 896; San Bernardino County, CNC) and New Mexico (Fall and Cockerell 1907: 162), northwestern Indiana (Blatchley 1910: 193), and southeastern West Virginia (Greenbrier County, CNC). The record from "North Carolina" (Bousquet and Larochelle 1993: 226) needs confirmation.
Records. FRA: PM **CAN**: AB, BC (QCI, VCI), MB, NB, NF, NS (CBI), ON, PE, QC, SK, YT **USA**: AK, CA, CO, CT, ID, IL, IN, MA, ME, MI, MN, MT, NH, NM, NY, OH, OR, PA, UT, VA, VT, WA, WI, WV [NC]

Bradycellus semipubescens Lindroth, 1968

Bradycellus semipubescens Lindroth, 1968: 896. Type locality: «Fairy Lake, Queb[ec]» (original citation). Holotype (♂) in CNC [# 10577].

Distribution. This species ranges from Nova Scotia (Majka et al. 2007: 10) to central Minnesota (Gandhi et al. 2005: 930), north to southeastern Manitoba (Roughley et al. 2010: 230), south at least to east-central Missouri (Saint Louis, MCZ), southwestern Illinois (Saint Clair County, MCZ), and southeastern Pennsylvania (Dauphin County, MCZ). The single specimen from McMurray, Alberta (Lindroth 1968: 898) is possibly mislabeled or represents a stray.
Records. CAN: MB, NB, NS, ON, QC **USA**: IA, IL, MA, ME, MI, MN, MO, NH, NY, PA, VT, WI [AB]

Subgenus *Triliarthrus* Casey, 1914

Triliarthrus Casey, 1914: 238. Type species: *Stenolophus badipennis* Haldeman, 1843 designated by Lindroth (1968: 898). Etymology. Probably from the Greek prefix *tri-* (three), *lis* (smooth), and *arthron* (joint), alluding to the glabrous antennomeres 1-3 of the adults ("the first three joints of the antennae are glabrous") [masculine].

Diversity. Six North American species in the boreal and temperate regions.
Identification. Lindroth (1968: 898-903, as *badipennis* group) reviewed all species.

Bradycellus atrimedeus (Say, 1823)

Feronia atrimedea Say, 1823a: 39. Type locality: «Iowa City [Johnson County, Iowa]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 355), in MCZ [# 32968]. Note. «the Missouri» was the area originally cited by Say (1823a: 40). Say (1823a: 39) obviously made an error in the epithet *atrimedea* which comes from the Latin adjectives *atrox*, *-ocis* (black) and *medius*, *-a*, *-um* (middle). Most authors, starting with LeConte (1847: 404), have used the spelling *atrimedius*, but this spelling is not in prevailing usage since Lindroth (1968: 899).

Distribution. The range of this species extends from New Brunswick (Lindroth 1968: 899) to eastern South Dakota (Kirk and Balsbaugh 1975: 32), north to southeastern Manitoba (Lindroth 1968: 899), south to "Texas" (Fall 1905: 172), Tennessee (Sevier County, CNC), and northeastern Georgia (Fattig 1949: 53).
Records. CAN: MB, NB, ON, QC **USA**: DC, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, NC, NE, NH, NJ, NY, OH, PA, RI, SD, TN, TX, VA, VT, WI, WV

Bradycellus badipennis (Haldeman, 1843)

Stenolophus badipennis Haldeman, 1843b: 302. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One possible syntype, labeled "[pink disc] /510.

[handwritten] / B. badiipennis (Hald.) Lec. ruficrus ‡ Lec. [handwritten]," in MCZ (Lindroth 1968: 899).

Triliarthrus badiipennis Casey, 1914: 239. Unjustified emendation of *Triliarthrus badipennis* (Haldeman, 1843).

Triliarthrus properus Casey, 1914: 240. Type locality: «West Point [Orange County], New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 47995]. Synonymy established by Fall (1930: 251), confirmed by Lindroth (1968: 898).

Stenolophus curticollis Casey, 1924: 146. Type locality: «Somerset [Montgomery County], Maryland» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48047]. Synonymy established by Lindroth (1968: 898).

Distribution. This species is known from southwestern New Brunswick (Webster and Bousquet 2008: 19) to northern Minnesota (Gandhi et al. 2005: 930), including southern Quebec and the Ontario Peninsula (Lindroth 1968: 899), south to northeastern Kansas (Popenoe 1877: 24), Tennessee (Knox County, CNC), northern Georgia (Fattig 1949: 53), and eastern South Carolina (Ciegler 2000: 96). The records from Colorado (Wickham 1902: 242; Armin 1963: 119) are probably in error.
Records. CAN: NB, ON, QC **USA**: CT, DC, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, NC, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI, WV

Bradycellus conformis (Fall, 1905)

Tachycellus conformis Fall, 1905: 173. Type locality: «Washington State and P[oin]t Reyes, California» (original citation), restricted to «Washington State» by Lindroth (1968: 903). Syntype(s) in MCZ [# 23881].

Triliarthrus tetricus Casey, 1914: 241. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 47996]. Synonymy established by Fall (1930: 251), confirmed by Lindroth (1968: 903).

Distribution. This species is restricted to the Pacific Coast from southern British Columbia, including Vancouver Island (Lindroth 1968: 903), south at least to the San Francisco Bay in California (Fall 1905: 173). The record from northern Colorado (Armin 1963: 119) is likely in error.
Records. CAN: BC (VCI) **USA**: CA, OR, WA

Bradycellus georgei Lindroth, 1968

Bradycellus georgei Lindroth, 1968: 899. Type locality: «McMurray, Al[ber]ta» (original citation). Holotype (♀) in CNC [# 10576].

Distribution. This species is yet known only from a few localities in Alberta.
Records. CAN: AB

Bradycellus kirbyi (Horn, 1883)

Tachycellus kirbyi G.H. Horn, 1883a: 51. Type locality: «near Grimsby, Ontario» (original citation). Eight syntypes in MCZ [# 34551].

Distribution. This species ranges from southwestern New Brunswick (Webster and Bousquet 2008: 19) to central Minnesota (Sherburne County, CNC), including southern Quebec and the Ontario Peninsula (Lindroth 1968: 901), south to northeastern West Virginia (Randolph County, CMNH).
Records. CAN: NB, ON, QC **USA**: CT, MA, ME, MI, MN, NH, NJ, NY, OH, PA, RI, VA, VT, WI, WV

Bradycellus lugubris (LeConte, 1847)

Geobaenus lugubris LeConte, 1847: 405. Type locality: «Lacum Superiorem» (original citation). Two syntypes in MCZ [# 5947].

Triliarthrus protractus Casey, 1914: 239. Type locality: «Massachusetts» (original citation). Lectotype (♂), designated by Lindroth (1975: 143), in USNM [# 47994]. Synonymy established by Lindroth (1968: 901).

Tachycellus frosti Fall, 1930: 251. Type locality: «Natick [Middlesex County], Massachusetts» (original citation). Holotype (♂) in MCZ [# 23882]. Synonymy established, under the name *B. protractus* (Casey), by Lindroth (1954b: 143).

Distribution. The range of this species extends from northeastern Newfoundland (Lindroth 1955a: 146, as *Triliarthrus protractus*) to the Rocky Mountains in Alberta (Lindroth 1968: 902), south to Minnesota (Lindroth 1955a: 146; Epstein and Kulman 1990: 214), Tennessee (Lindroth 1968: 901), and southwestern North Carolina (Jackson County, CNC).
Records. CAN: AB, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: CT, DC, IL, MA, ME, MI, MN, NC, NH, NJ, NY, OH, PA, TN, VA, VT, WI, WV

Genus *Amerinus* Casey, 1884

Amerinus Casey, 1884b: 7. Type species: *Bradycellus linearis* LeConte, 1863 by monotypy. Etymology. Uncertain, possibly a simple modification of the generic name *Amerizus* [*q.v.*] to which the adults of the sole species vaguely resemble or from the English adjective American and the Latin suffix *-inus* (pertaining to), alluding to the region where the species live [masculine].

Diversity. One North American species in the temperate regions.
Identification. The species was treated by Lindroth (1968: 877-878).

Amerinus linearis (LeConte, 1863)

Bradycellus linearis LeConte, 1863c: 16. Type locality: «Pennsylvania; Wisconsin» (original citation). One syntype in MCZ [# 5935].

Amerinus longipennis Casey, 1914: 259. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). Holotype [by monotypy] (♀) in USNM [# 48026]. Synonymy established by Bousquet and Larochelle (1993: 12).

Amerinus fuscicornis Casey, 1914: 260. Type locality: «Fort Monroe, Virginia» (original citation). Holotype [by monotypy] (♂) in USNM [# 48025]. Synonymy established by Bousquet and Larochelle (1993: 12).

Distribution. This species ranges from Massachusetts (Lindroth 1968: 878) to southeastern Wisconsin (Rauterberg 1885: 20), including southernmost Ontario (Bousquet 1987a: 131), south to southeastern Texas (Harris County, Brian Raber pers. comm. 2010), northern Louisiana (Allen 1965: 71, as *A. longipennis*; Claiborne Parish, CNC), west-central Mississippi (Casey 1914, as *A. longipennis*), and west-central South Carolina (Ulyshen et al. 2005: 252).

Records. CAN: ON **USA**: AR, DC, IA, IL, IN, LA, MA, MD, MO, MS, NC, NJ, NY, OH, PA, SC, TX, VA, WI

Genus *Dicheirotrichus* Jacquelin du Val, 1855

Dicheirotrichus Jacquelin du Val, 1855: 35, 65. Type species: *Harpalus obsoletus* Dejean, 1829 by original designation. Etymology (original). From the Greek *dis* (twice), *cheiros* (hand), and *trichos* (hair) [masculine].

Dichirotrichus Gemminger and Harold, 1868a: 262. Unjustified emendation of *Dicheirotrichus* Jacquelin du Val, 1855.

Diversity. Forty-six species (Lorenz 2005: 358) in the Nearctic (two Holarctic species) and Palaearctic (46 species) Regions arrayed in five subgenera: *Cardiostenus* Tschitschérine (four Palaearctic species), *Dicheirotrichus s.str.* (nine Palaearctic species), *Oreoxenus* (one Holarctic species), *Pelagophilus* Tschitschérine (one west Palaearctic species), and *Trichocellus* (31 species).

Identification. Lindroth (1968: 874-877) covered both species found in North America under the generic name *Trichocellus*.

Subgenus *Oreoxenus* Tschitschérine, 1899

Oreoxenus Tschitschérine, 1899b: 445. Type species: *Bradycellus mannerheimii* Sahlberg, 1844 designated by Noonan (1976: 22). Etymology. From the Greek *oreos* (mountain) and *xenos* (stranger, foreigner, guest), probably alluding to the mountainous habits of the species ("*les espèces ... paraissent alpines*") in the hands of Tschitschérine [masculine].

Diversity. One Holarctic species.

Dicheirotrichus mannerheimii mannerheimii (Sahlberg, 1844)

Bradycellus mannerheimii R.F. Sahlberg, 1844: 51. Type locality: «montis Morikan [Okhotsk, Khabarovsk Kray, Siberia, Russia]» (original citation). One syntype in ZMH (Silfverberg 1987: 20).

Trichocellus porsildi Brown, 1932a: 3. Type locality: «Baker L[ake], N[orth]W[est] T[erritories]» (original citation). Holotype (♂) in CNC [# 3249]. Synonymy established by Lindroth (1968: 877). Etymology. The specific name was proposed in honor of the botanist Alf Erling Porsild [1901-1977] who collected some of the specimens of the type series. Born in Copenhagen, Porsild grew up on the University of Copenhagen Arctic Station in Qeqertarsuaq, Greenland. He settled in Ottawa where he held the position of curator at the National Museum of Canada in Ottawa between 1936 and 1945 and eventually head of the department of botany from 1945 to 1967. Mount Porsild in the Yukon Territory is named after him.

Distribution. This Holarctic subspecies ranges from eastern Siberia (Jaeger and Kataev 2003: 402) to Labrador (Lindroth 1954d: 370); isolated at high altitude in Colorado (Lindroth 1968: 877). Fossil remnants from the Early Wisconsinan have been unearthed in southern Ontario (Morgan and Morgan 1981: 1108).
Records. CAN: AB, BC, LB, MB, NT, QC, SK, YT **USA**: AK, CO – **Holarctic**
Note. Two other subspecies, *D. mannerheimii oreophilus* K. Daniel and J. Daniel and *D. mannerheimii ponojensis* Sahlberg (synonym: *D. setiporus* Reitter) are found in the Palaearctic Region.

Subgenus *Trichocellus* Ganglbauer, 1891

Trichocellus Ganglbauer, 1891a: 366. Type species: *Harpalus placidus* Gyllenhal, 1827 designated by Andrewes (1934: 201). Etymology. From the Greek *trichos* (hair) and *cello* (to run) [masculine].

Diversity. Thirty-one species in the Nearctic (one Holarctic species) and Palaearctic (31 species) Regions.

Dicheirotrichus cognatus (Gyllenhal, 1827)

Harpalus cognatus Gyllenhal, 1827 [July-October]: 455. Type locality: Höberg, N. Vånga, Västergötland, Sweden (lectotype label). Lectotype (♂), designated by Lindroth (1968: 875), in UZIU.

Harpalus deutschii C.R. Sahlberg, 1827d [23 June]: 261. Type locality: «Lapponia» (original citation). One syntype in ZMH (Silfverberg 1987: 15). Synonymy established by Dejean (1829: 440). Note. This name may be older than *D. cognatus* but is not in "prevailing usage" (see *Principle of priority* under "Nomenclature" section).

Trechus ruficrus Kirby, 1837: 47. Type locality: northern parts of British America (inferred from title of the book). Holotype [by monotypy] in BMNH (Lindroth 1953b: 175). Synonymy established by Horn (1876e: 130), confirmed by Lindroth (1953b: 175).

Ophonus obscuritarsis Motschulsky, 1844: 228. Type locality: «Omsk [Russia]» (lectotype label). Lectotype (♂), designated by Kataev and Shilenkov (in Kryzhanovskij

et al. 1995: 136), in ZMMU. Synonymy established by Kataev and Shilenkov (in Kryzhanovskij et al. 1995: 136).

Bradycellus marginicollis Motschulsky, 1845b: 345. Type locality: «Kamtschatka [Russia]» (original citation). Lectotype (♂), designated by Kataev and Shilenkov (in Kryzhanovskij et al. 1995: 136), in ZMMU. Synonymy established by Kataev and Shilenkov (in Kryzhanovskij et al. 1995: 136).

Acupalpus axillaris Mannerheim, 1853: 124. Type locality: «insula Kadjak [Alaska]» (original citation). Lectotype (♂), designated by Lindroth (1968: 875), in ZMH. Synonymy established by Schaupp (1883c: 50), confirmed by Lindroth (1968: 875).

Stenolophus quadripunctatus Mannerheim, 1853: 125. Type locality: «insula Sitkha [= Baranof Island, Alaska]» (original citation). Syntype(s) location unknown (possibly in ZMH). **New synonymy**. Note. Mannerheim (1853: 125) described a "var[iety] b" of *Acupalpus axillaris* Mannerheim, 1853 and noted that it refers to the name *Stenolophus quadripunctatus*, provided by Ménétriés, and listed but not described in Motschulsky (1850a: 22). As such he made the name available.

Acupalpus longiusculus Mannerheim, 1853: 125. Type locality: «ad sinum Woskresensk [= Resurrection Bay] peninsulae Kenai [Alaska]» (original citation). Lectotype (♂), designated by Lindroth (1968: 875), in ZMH. Synonymy established by LeConte (1863b: 12), confirmed by Lindroth (1968: 875).

Acupalpus conflagratus Mannerheim, 1853: 126. Type locality: «ad ostia fl[umen] Kaktnu [= Kenai River] peninsulae Kenai [Alaska]» (original citation). Lectotype (♂), designated by Lindroth (1968: 875), in ZMH. Synonymy established by Chaudoir (1868b: 166), confirmed by Lindroth (1968: 875).

Bradycellus nitens LeConte, 1858b: 60. Type locality: «San Diego [San Diego County], California» (original citation). Holotype [by monotypy] in MCZ [# 5936]. Synonymy established by LeConte (1869a: 382), confirmed by Lindroth (1968: 875).

Bradycellus enwaldi J.R. Sahlberg [in Reuter], 1882: 154. Type locality: «Ponoj [=Ponoy, Kola Peninsula, Russia]» (original citation). Two syntypes in ZMH (Silfverberg 1987: 16). Synonymy established by Hellén (1930: 5).

Trichocellus boreellus Casey, 1914: 229. Type locality: «Queen Charlotte Islands [British Columbia]» (original citation). Lectotype (♂), designated by Lindroth (1975: 142), in USNM [# 47983]. Synonymy established by Hatch (1953: 180), confirmed by Lindroth (1968: 875).

Trichocellus lateralis Casey, 1914: 230. Type locality: «Fort Wingate [McKinley County], New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47984]. Synonymy established by Lindroth (1968: 875).

Trichocellus monticola Casey, 1914: 230. Type locality: «Truckee [Nevada County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47985]. Synonymy established by Lindroth (1968: 875).

Trichocellus punctipennis Casey, 1914: 230. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♀), designated by Lindroth (1975: 142), in USNM [# 47986]. Synonymy established by Lindroth (1968: 875).

Distribution. This circumpolar species ranges from Iceland to eastern Siberia (Jaeger and Kataev 2003: 403) and from Alaska (Lindroth 1968: 876) to Greenland (Böcher 1988: 14), south to southeastern Massachusetts (Cape Cod, CNC), central Iowa (Wickham 1911b: 8), central South Dakota (Kirk and Balsbaugh 1975: 32), the Sacramento Mountains in New Mexico (Fall and Cockerell 1907: 162), and the Baja California Peninsula (Horn 1894: 312). The records from southeastern New York (Notman 1928: 249) and "Pennsylvania" (Bousquet and Larochelle 1993: 227) need confirmation.
Records. DEN: GL **FRA**: PM **CAN**: AB, BC (QCI), LB, MB, NB, NF, NS (CBI), NT, NU, ON, PE, QC, SK, YT **USA**: AK, AZ, CA, CO, IA, ID, IN, MA, ME, MI, MN, MT, ND, NH, NM, NV, OR, SD, UT, VT, WA, WI, WY [NY, PA] – Mexico – **Holarctic**

Genus *Acupalpus* Latreille, 1829

Acupalpus Latreille, 1829: 391. Type species: *Carabus meridianus* Linnaeus, 1760 designated by Blanchard [in Audouin et al. 1842: plate 21]. Etymology. From the Latin nouns *acus* (needle, pin) and *palpus* (feeler, by extension palp), alluding to the acuminate last maxillary palpomere ("*les palpes extérieurs se terminent par un article pointu au bout*") of the adult [masculine].

Diversity. Worldwide, with about 125 species in the Nearctic (12 species), Neotropical (ten species), Australian (about ten species), Oriental (about 15 species), Palaearctic (about 50 species), and Afrotropical (30 species) Regions arrayed in eight subgenera: *Acupalpus s.str.* (about 75 species), *Ancylostria* Schauberger (four species), *Anthracus* (32 species), *Palcuapus* Habu (one east Palaearctic species), *Pseudanthracus* Habu (three species), *Setacupalpus* Habu (two east Palaearctic species), *Subacupalpus* Habu (two Asian species), and *Tachistodes* (four species). The North American fauna is represented by 12 species (roughly 9.6% of the world fauna), one of them is adventive.
Taxonomic Note. Noonan (1976: 23) treated *Hemiaulax* Bates (two species), with *Idiomelas* Tschitchérine (two species) as synonym, as a subgenus of *Acupalpus*. In Lorenz (2005: 361), *Hemiaulax* and *Idiomelas* are listed as valid genera with *Egaploa* Alluaud (two species) considered a subgenus of *Idiomelas*.

Subgenus *Acupalpus* Latreille, 1829

Acupalpus Latreille, 1829: 391. Type species: *Carabus meridianus* Linnaeus, 1760 designated by Blanchard [in Audouin et al. 1842: plate 21].
Manicellus Motschulsky, 1864: 207. Type species: *Stenolophus elegans* Dejean, 1829 designated by Jeannel (1942: 712). Synonymy established by Tschitschérine (1900a: 365).

Diversity. Worldwide with about 75 species in the Nearctic (six species, one of them adventive), Neotropical (ten species), Australian (three species), Oriental (six species), Palaearctic (28 species), and Afrotropical (22 species) Regions.

Identification. Lindroth (1968: 929-934, as *meridianus* group) covered all species found in North America.

Acupalpus canadensis Casey, 1924

Acupalpus canadensis Casey, 1924: 144. Type locality: «M[oun]t Royal [= Montreal], Quebec» (original citation). Holotype [by monotypy] in USNM [# 48032].

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 149) to southern Saskatchewan (Lindroth 1968: 934), south to "South Dakota" (Lindroth 1955a: 149), northern Indiana (La Porte County, CMNH), and central Pennsylvania (Lycoming and Clinton Counties, CMNH). The record from "Delaware" (Bousquet and Larochelle 1993: 228) was based on a misidentified specimen of *A. carus* in MCZ. **Records. CAN**: MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: IN, MA, ME, MI, MN, ND, NH, NY, OH, PA, SD, VT, WI

Acupalpus carus (LeConte, 1863)

Stenolophus carus LeConte, 1863c: 18. Type locality: «Hudson's Bay Territory and Illinois» (original citation), restricted to «Illinois» by Lindroth (1968: 930). Syntype(s) in MCZ [# 5933].

Acupalpus expertus Casey, 1914: 267. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48031]. Synonymy established by Lindroth (1968: 930).

Acupalpus trivialis Casey, 1914: 268. Type locality: «Lake Champlain, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 143), in USNM [# 48034]. Synonymy established by Lindroth (1968: 930).

Acupalpus subrectus Casey, 1924: 143. Type locality: «Beverly Hills [Cook County], Illinois» (original citation). Lectotype, designated by Lindroth (1975: 144), in USNM [# 48030]. Synonymy established by Lindroth (1968: 930).

Acupalpus curtipennis Casey, 1924: 144. Type locality: «northern Illinois» (original citation). Holotype [by monotypy] (♀) in USNM [# 48029]. Synonymy established by Lindroth (1968: 930).

Distribution. The range of this species extends from Saint Pierre and Miquelon and southwestern Newfoundland (Lindroth 1955a: 148, as *A. expertus*) to southern Saskatchewan (Ronald R. Hooper pers. comm. 2007), south to northern Louisiana (Allen 1965: 72) and southern North Carolina (Macon County, CNC); also known from northwestern Oregon (Westcott et al. 2006: 6), Washington (Spokane County, CMNH), northern Idaho (Hatch 1953: 185), and south-central British Columbia (Lindroth 1968: 931). The record from northern Colorado (Armin 1963: 114) needs confirmation.
Records. FRA: PM **CAN**: BC, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AR, CT, DC, DE, IA, ID, IL, IN, LA, MA, ME, MI, MN, MO, NC, NH, NJ, NY, OH, OR, PA, RI, SD, VT, WA, WI, WV [CO]

Acupalpus hydropicus (LeConte, 1863)

Stenolophus hydropicus LeConte, 1863c: 17. Type locality: «New York» (original citation). Five syntypes in MCZ [# 5932].

Distribution. This species ranges from southeastern New Hampshire (Rockingham County, Ross T. Bell pers. comm. 2008) to at least northern Illinois (Cook County, CMNH), south to northeastern Louisiana (Allen 1965: 72) and northern Florida (Alachua County, CNC).
Records. USA: CT, DC, DE, FL, IL, IN, KY, LA, MA, MD, MI, MO, NH, NJ, NY, OH, PA, RI, VA, VT, WV

Acupalpus meridianus (Linnaeus, 1760)

Carabus meridianus Linnaeus, 1760: 221. Type locality: Sweden (inferred from title of the book). Three possible syntypes, two belonging to the present species, in LSL (Lindroth 1957b: 332).

Distribution. This Palaearctic species is adventive in North America where it is known from the Quebec City area (Chantal 1971: 202) in the east and from south-central Saskatchewan (Ronald R. Hooper pers. comm. 2007) to Vancouver Island (Lindroth 1968: 930), including central Alberta (Pollock 1991a: 705), south to "Oregon" (Hatch 1953: 185) and northern Idaho (Hatten et al. 2007: 359) in the west. The first inventoried specimen collected on this continent was found in Seattle in 1931 (Hatch 1946: 77).
Records. CAN: AB, BC (VCI), QC, SK **USA**: ID, OR, WA – **Adventive**

Acupalpus nanellus Casey, 1914

Acupalpus nanellus Casey, 1914: 268. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype, designated by Lindroth (1975: 144), in USNM [# 48033].

Distribution. This species ranges from Nova Scotia (Lindroth 1968: 933) to northwestern Minnesota (Polk County, CMNH), north to southeastern Manitoba (Roughley et al. 2010: 230; CMNH), south at least to southwestern Pennsylvania (Allegheny County, CMNH) and Rhode Island (Casey 1914: 268). One old specimen simply labeled from Illinois is known (CMNH). The record from "Connecticut" (Bousquet and Larochelle 1993: 228) needs confirmation (see Krinsky and Oliver 2001: 4).
Records. CAN: MB, NB, NS, ON, QC **USA**: MA, ME, MI, MN, NH, NY, OH, PA, RI, VT, WI [CT, IL]

Acupalpus pumilus Lindroth, 1968

Acupalpus pumilus Lindroth, 1968: 931. Type locality: «Amberley S[outh] Kincardine, Ont[ario]» (original citation). Holotype (♂) in CNC [# 10580].

Distribution. The range of this species extends from Nova Scotia (Lindroth 1968: 932) to northwestern Minnesota (Polk County, CMNH), south to west-central West Virginia (Mason County, CMNH) and Delaware (Lindroth 1968: 932). The record from eastern South Dakota (Kirk and Balsbaugh 1975: 33) needs confirmation.
Records. CAN: NS, ON, PE, QC **USA**: CT, DE, IL, MA, ME, MI, MN, NH, NY, OH, PA, VA, WI, WV [SD]

Subgenus *Tachistodes* Casey, 1914

Tachistodes Casey, 1914: 286. Type species: *Acupalpus pauperculus* Dejean, 1829 designated by Lindroth (1968: 934). Etymology. Uncertain, possibly from the generic name *Tachys* [*q.v.*] and the Greek *-odes* (likeness), alluding to the resemblance of adults of the species included by Casey in this group to those of *Tachys* [masculine].

Diversity. Four North American species, one of them extending into the Bahamas.
Identification. Lindroth (1968: 934-938, as *pauperculus* group) covered all species.

Acupalpus indistinctus Dejean, 1831

Acupalpus indistinctus Dejean, 1831: 846. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1968: 935). Holotype [by monotypy] in MHNP.
Tachistodes obscurus Casey, 1924: 147. Type locality: «near the city [of New York], New York» (original citation). Lectotype, designated by Lindroth (1975: 144), in USNM [# 48057]. Synonymy established by Lindroth (1968: 935).

Distribution. This species ranges from Massachusetts (Suffolk County, MCZ) to central Iowa (Wickham 1911b: 8), including southernmost Ontario (Lindroth 1968: 935; Bousquet 1987a: 132), south to southern Texas (Johnson 1978: 67) and central Florida (Peck and Thomas 1998: 21); also recorded from north-central Maine (Majka et al. 2011: 46). The records from Colorado (Elias 1987: 634) and southeastern Arizona (Dajoz 2004: 116) need confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MS, NC, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, WI, WV [AZ, CO]

Acupalpus partiarius (Say, 1823)

Trechus partiarius Say, 1823a: 90. Type locality: «Gorham [Jackson County], Ill[inois]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 356), in MCZ [# 32965].
Tachistodes lyratus Casey, 1924: 147. Type locality: «Kansas» (original citation). Lectotype, designated by Lindroth (1975: 144), in USNM [# 48058]. Synonymy established by Lindroth (1968: 937).
Tachistodes convergens Casey, 1924: 148. Type locality: «Rockaway Beach [Queens County], Long Island, New York» (original citation). Lectotype, designated by Lindroth (1975: 143), in USNM [# 48059]. Synonymy established by Lindroth (1968: 937).

Distribution. This species is found from Maine (Procter 1946: 111) to South Dakota (Kirk and Balsbaugh 1975: 33), including southern Quebec (Larochelle 1975: 31) and southern Ontario (Lindroth 1968: 937), south to southeastern Colorado (Miller and Peairs 2008: 34), southeastern Texas (Casey 1914: 288), and northeastern Florida (Saint Johns County, MCZ).
Records. CAN: ON, QC **USA**: AR, CO, CT, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI

Acupalpus pauperculus Dejean, 1829

Acupalpus pauperculus Dejean, 1829: 463. Type locality: «Amérique septentrionale» (original citation), restricted to «Sherborn [Middlesex County], Mass[achusetts]» by Lindroth (1968: 935). Syntype(s) in MHNP.
Acupalpus consimilis Dejean, 1829: 465. Type locality: «Amérique septentrionale» (original citation). Syntype(s) in MHNP. Synonymy established by Chaudoir (1868b: 165), confirmed by LeConte (1869a: 376) and Lindroth (1968: 935).

Distribution. This species occurs from Nova Scotia (Lindroth 1954c: 309) to eastern South Dakota (Kirk and Balsbaugh 1975: 33; French et al. 2004: 557), south to southeastern Colorado (Miller and Peairs 2008: 34), southern Texas (Wickham 1897: 113; Harris County, Foster F. Purrington pers. comm. 2009), and southern Florida (Monroe County, Drew A. Hildebrandt pers. comm. 2007).
Records. CAN: NB, NS (CBI), ON, PE, QC **USA**: AL, AR, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Acupalpus testaceus Dejean, 1829

Acupalpus testaceus Dejean, 1829: 460. Type locality: «Amérique septentrionale» (original citation), restricted to «Camden [Kershaw County], S[outh] C[arolina]» by Lindroth (1968: 937). Syntype(s) in MHNP.
Acupalpus micros LeConte, 1847: 412. Type locality: «provinciis australibus» (original citation). Syntype(s) in MCZ [# 5878]. Synonymy established by LeConte (1853c: 386), confirmed by Lindroth (1968: 937).
Tachistodes fusciceps Casey, 1914: 288. Type locality: «Atlantic City [Atlantic County], New Jersey» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 48056]. Synonymy established by Lindroth (1968: 937).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 32) to southeastern South Dakota (Kirk and Balsbaugh 1975: 33), south to eastern Texas (Snow 1906a: 141, as *Agonoderus micros*; Nacogdoches, Orange, and San Augustine Counties, CNC, CMNH), northeastern Louisiana (Allen 1965: 72), southern Florida, and the Bahamas (Peck and Thomas 1998: 21).

Records. CAN: ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, WI, WV – Bahamas

Subgenus *Anthracus* Motschulsky, 1850

Anthracus Motschulsky, 1850a: 21. Type species: *Carabus consputus* Duftschmid, 1812 by original designation. Etymology. From the Greek *anthrax* (coal), probably alluding to the color of adults of the sole species Motschulsky had before him [masculine].

Balius Schiødte, 1861: 184 [junior homonym of *Balius* Guérin-Méneville, 1857]. Type species: *Carabus consputus* Duftschmid, 1812 by monotypy.

Diversity. Thirty-two species in the Nearctic (two western species), Australian (five species), Oriental (five species), Palaearctic (15 species), and Afrotropical (eight species) Regions.

Identification. The two North American species have never been compared and the specific independence of the two not tested.

Taxonomic Note. This taxon is considered a distinct genus by several authors, including Jaeger and Kataev (2003: 399). However, the main character state separating members of *Anthracus* from those of *Acupalpus* is the shape of the pronotum which is cordiform with the sides sinuate in basal half and the posterior angles well distinct, right (see Jeannel 1948a: 714; Basilewsky 1951: 232; Habu 1973a: 301-302). However this character is not constant. Antoine (1959: 453) reported that adults of *A.* (*Acupalpus*) *cantabricus cantabricus* Piochard de la Brûlerie in Morocco have the sides of the pronotum arcuate and the posterior angles rounded while those of *A. cantabricus zaerensis* Antoine (these two taxa are now considered separate species) have the sides sinuate and the posterior angles right and that some specimens greatly resemble adults of *Anthracus*. Basilewsky (1951: 237) separated *A.* (*Acupalpus*) *angulatus* Jeannel from most other species in his key to Afrotropical *Acupalpus* by the clearly sinuate sides of pronotum with the posterior angles markedly acute. Other character states usually reported, such as the mandibles and antennae relatively longer, the prosternum with small setae, and the median line of the pronotum deeper, more or less sulciform in *Anthracus* are also variable and not at all diagnostic of *Anthracus*. Until the relationships between members of the acupalpine complex are better known, I prefer to follow Ball (1960b: 147), Lindroth (1968: 925), Noonan (1976: 24), and Ball and Bousquet (2000: 94) and treat *Anthracus* as a subgenus of *Acupalpus*.

Acupalpus punctulatus Hatch, 1953

Acupalpus punctulatus Hatch, 1953: 185. Type locality: «Forest Grove [Washington County], Or[egon]» (original citation). Holotype (♀) in USNM.

Distribution. This species is known from a few localities from northwestern Oregon (Hatch 1953: 185) to southeastern Oregon (Harney County, CNC).

Records. USA: OR

Acupalpus tener (LeConte, 1857)

Stenolophus tener LeConte, 1857c: 29. Type locality: «San Jose [Santa Clara County], California» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5931].

Distribution. This species is known from California, from Humboldt County (CAS) to Santa Clara County (LeConte, 1857c: 29).
Records. USA: CA

Genus *Philodes* LeConte, 1861

Philodes LeConte, 1861a: 33. Type species: *Stenolophus alternans* LeConte, 1853 designated by Lindroth (1968: 927). Etymology. Uncertain, possibly from the Greek *philos* (beloved) and the suffix *-odes* (likeness) [masculine].

Diversity. Four North American species, one of them extending into the Bahamas, placed in two subgenera.
Identification. Lindroth (1968: 925-926) treated all currently recognized species in his key to Canadian *Acupalpus*.
Taxonomic Note. This taxon has been treated as a subgenus of *Acupalpus* by North American students since Ball (1960b: 147). However, members of the group are characteristic in having three or more discal setae on the third elytral interval and the endophallus with four large, curved spines and a basal pillow of pigmented hairs. To my knowledge, all other acupalpines have one or no discal seta on the third elytral interval. The situation regarding the sclerites in the endophallus is more complex. While most species of *Acupalpus* (including *Anthracus*) are described as having the internal sac unarmed, there are exceptions. Jeannel (1948a: 720) reported that the endophallus of the Madagascan *Anthracus madecassus* Jeannel has some large spines (*quelques grosses dents visibles par transparence*), Habu (1981: 44) described the endophallus of *Acupalpus hilaris* Tschitschérine as having "four large thorn-like copulatory pieces," and Antoine (1959: 451) stated that the internal sac of *Acupalpus elegans* Dejean has 18 large hooks arranged in two rows (*18 grands crochets à base ovale régulièrement disposés sur deux rangs, un droit et un gauche*) reminiscent of the condition found in members of *Stenolophus*. However, in members of *Philodes* the four endophallus structures are proportionally bigger than in any of these species. At this time, I prefer to regard *Philodes* as generically distinct from *Acupalpus* even though *Acupalpus* may eventually be shown to be paraphyletic in regard to *Philodes*.

Subgenus *Philodes* LeConte, 1861

Philodes LeConte, 1861a: 33. Type species: *Stenolophus alternans* LeConte, 1853 designated by Lindroth (1968: 927).

Diversity. One species occurring over eastern North America.

***Philodes alternans* (LeConte, 1853)**

Badister testaceus LeConte, 1844: 52 [secondary homonym of *Acupalpus testaceus* Dejean, 1829]. Type locality: «Pennsylvania» (original citation). Three syntypes in MCZ [# 5930].

Stenolophus alternans LeConte, 1853c: 386. Replacement name for *Stenolophus testaceus* (LeConte, 1844).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 31) south to eastern Oklahoma (Latimer County, UASM), northwestern Arkansas (Newton County, Peter W. Messer pers. comm. 2008), southeastern Mississippi (George and Greene Counties, Drew A. Hildebrandt pers. comm. 2008), east-central Kentucky (Jessamine County, MCZ), and northern Virginia (Hoffman and Roble 2000: 38).
Records. CAN: ON, QC **USA**: AR, DC, DE, IL, IN, KY, MS, NH, NJ, NY, OH, OK, PA, VA, VT

Subgenus *Goniolophus* Casey, 1914

Goniolophus Casey, 1914: 262. Type species: *Goniolophus lucens* Casey, 1914 (= *Stenolophus flavilimbus* LeConte, 1869) by original designation. Etymology. From the Greek *gonia* (angle, corner) and *lophos* (crest, comb, tuft) [masculine].

Diversity. Three eastern North American species of which one extends into the Bahamas.
Taxonomic Note. This subgenus is in need of a taxonomic revision. I have seen at least four species in eastern North America, one of them (from Baker and Ware Counties in Georgia and Highlands County in Florida) being undescribed.

***Philodes flavilimbus* (LeConte, 1869)**

Stenolophus flavilimbus LeConte, 1869a: 378. Type locality: «Georgia» (original citation). Holotype [by monotypy] in MCZ [# 5934].

Goniolophus lucens Casey, 1914: 264. Type locality: «Galveston [Galveston County], Texas» (original citation). Four syntypes in USNM [# 48028]. **New synonymy**.

Distribution. This species ranges from Georgia (LeConte 1869a: 378; Fattig 1949: 53) to eastern Texas along the Gulf Coast (Casey 1914: 264, as *Goniolophus lucens*), south to central Florida (Peck and Thomas 1998: 21), north to north-central Tennessee (Smith County, Robert L. Davidson pers. comm. 2012) and central Arkansas (Montgomery and Arkansas Counties, Foster F. Purrington pers. comm. 2009).
Records. USA: AL, AR, FL, GA, LA, MS, TN, TX

***Philodes longulus* (Dejean, 1829)**

Acupalpus longulus Dejean, 1829: 459. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 31).

Distribution. This species ranges from southern Virginia (Hoffman and Roble 2000: 38) and Tennessee (Bradley, Crockett, Loudon, Maury, and Smith Counties, CMNH) to southern Florida (Peck and Thomas 1998: 21) and the Bahamas (Darlington 1953: 11), west at least to east-central Texas (Riley 2011), including southeastern Louisiana (Saint Tammany and Tangipahoa Parishes, CNC). The records from Rhode Island (Davis 1904: 14), Delaware (Houghton 1905: 212), and "Arkansas" (Bousquet and Larochelle 1993: 228) need confirmation.
Records. USA: AL, FL, GA, KY, LA, MS, NC, SC, TN, TX, VA [AR, DE, RI] – Bahamas

Philodes rectangulus (Chaudoir, 1868)

Acupalpus rectangulus Chaudoir, 1868b: 167. Type locality: Amérique septentrionale (inferred from title of the paper), restricted to «Brookline [Norfolk County], Mass[achusetts]» by Lindroth (1968: 928). Lectotype (♂), designated by Lindroth (1968: 928), in MHNP.

Distribution. The range of this species extends from southern Quebec (Larochelle 1975: 32) to eastern South Dakota (Kirk and Balsbaugh 1975: 33), south to eastern Texas (San Augustine and Hardin Counties, CMNH, UASM) and southern Florida (Peck and Thomas 1998: 21).
Records. CAN: ON, QC **USA**: AL, AR, DC, DE, FL, GA, IA, IL, IN, LA, MA, MD, MI, MO, MS, NC, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI

Genus *Pogonodaptus* Horn, 1881

Pogonodaptus G.H. Horn, 1881: 178. Type species: *Pogonodaptus piceus* G.H. Horn, 1881 (= *Polpochila mexicana* Bates, 1878) by monotypy. Etymology. From the generic names *Pogonus* [*q.v.*] and *Daptus*, alluding to the resemblance of the adults to those of the two genera ("a small species resembling *Daptus* and somewhat also *Pogonus*") [masculine].

Diversity. Two species in southern United States and Middle America (one species) and the West Indies (one species in Haiti).
Identification. Darlington (1936c: 205) discussed the structural differences between the two species.

Pogonodaptus mexicanus (Bates, 1878)

Polpochila mexicana Bates, 1878a: 589. Type locality: «Vera Cruz, Mexico» (original citation). Syntype(s) probably in BMNH.
Pogonodaptus piceus G.H. Horn, 1881: 179. Type locality: «Texas» (original citation). Holotype [by monotypy] (♀) in MCZ [# 34537]. Synonymy established by Bates (1884: 277).

Distribution. This species is known from central (Grady County, Robert L. Davidson pers. comm. 2008) and southwestern Oklahoma (Kondratieff et al. 2005: 173), Arkansas (Garland and Ouachita Counties, Robert L. Davidson pers. comm. 2012), western Louisiana (Sabine Parish, CMNH), and southern Texas (Wickham 1897: 113) south at least to Nicaragua (Blackwelder 1944: 48).
Records. USA: AR, LA, OK, TX – Guatemala, Mexico, Nicaragua

Genus *Polpochila* Solier, 1849

Melanotus Dejean, 1831: 698 [junior homonym of *Melanotus* Eschscholtz, 1829]. Type species: *Melanotus flavipes* Dejean, 1831 designated by Hope (1838: 111). Etymology (original). From the Greek *melas* (black) and *notos* (back, dorsum), alluding to the coloration of the adults [masculine].

Polpochila Solier, 1849: 217. Type species: *Polpochila parallela* Solier, 1849 (= *Melanotus chilensis* Chaudoir, 1837) by monotypy. Synonymy established by LeConte (1869b: 248). Etymology. Unknown [feminine].

Cratocara LeConte, 1863b: 11. Replacement name for *Melanotus* Dejean, 1831. Etymology. From the Greek *cratos* (strength) and *cara* (head) [feminine].

Diversity. About 25 species in the Western Hemisphere arrayed in two subgenera: *Phymatocephalus* (two species) and *Polpochila s.str.* (23 species).
Identification. Nègre (1963) revised the species, including all three found in North America, known at the time.

Subgenus *Phymatocephalus* Schaum, 1864

Phymatocephalus Schaum, 1864: 125. Type species: *Phymatocephalus riehlii* Schaum, 1864 (= *Melanotus erro* LeConte, 1854) by monotypy. Etymology. From the Greek *phymatos* (tumor, growth) and *cephale* (head), alluding to the big head ("*caput crassum*") of the adult [masculine].

Diversity. Two species in southern North America and Mexico.

Polpochila capitata (Chaudoir, 1852)

Melanotus capitatus Chaudoir, 1852: 83. Type locality: «Mexique» (original citation). Syntype(s) in MHNP.

Distribution. This species ranges from southern Arizona southwards through the Sonoran and Chihuahuan deserts to Oaxaca in Mexico (Ball and Shpeley 1992a: 55). The records from southwestern New Mexico (Fall and Cockerell 1907: 161) and "California" (Csiki 1932a: 1061) need confirmation.
Records. USA: AZ [CA, NM] – Mexico

Polpochila erro (LeConte, 1854)

Melanotus erro LeConte, 1854d: 221. Type locality not stated; Tucson [Pima County], Arizona, herein selected (see Nègre 1963: 215). Holotype [by monotypy] in MCZ [# 5877].

Phymatocephalus riehlii Schaum, 1864: 126. Type locality: «Mexico» (original citation). Syntype(s) location unknown (possibly in UMM in collection Riehl). Synonymy established by Nègre (1963: 215). Etymology. The specific name was proposed for Friedrich Riehl [1795-1876], an auditor in Germany who collected beetles. Riehl gave his well-ordered collection, which contained many specimens from the Western Hemisphere including some received from Gundlach in Cuba, to the Zoological Institute of the University of Marburg in Germany.

Cratocara mentalis Casey, 1914: 302. Type locality: «supposed[ly] Arizona» (original citation). Holotype [by monotypy] (♂) in USNM [# 48074]. Synonymy established by Nègre (1963: 215).

Distribution. This species is known from southern Arizona (Nègre 1963: 215) to western Texas (Culberson, Jeff Davis, and Presidio Counties, CMNH), south to Durango and Sinaloa (Nègre 1963: 215).
Records. USA: AZ, NM, TX – Mexico

Subgenus *Polpochila* Solier, 1849

Polpochila Solier, 1849: 217. Type species: *Polpochila parallela* Solier, 1849 (= *Melanotus chilensis* Chaudoir, 1837) by monotypy.

Diversity. Twenty-three species in the Nearctic (one species) and Neotropical (23 species) Regions.

Polpochila rotundicollis Bates, 1882

Polpochila rotundicollis Bates, 1882a: 74. Type locality: «Leon [Guanajuato], Mexico» (original citation). Syntype(s) probably in BMNH.

Cratocara brunnea Casey, 1914: 302. Type locality: «Willcox [Cochise County], Arizona» (original citation). Three syntypes [3 originally cited] in USNM [# 48073]. Synonymy established by Nègre (1963: 218).

Distribution. This species is known from southern Arizona to the state of Guerrero in western Mexico (Nègre 1963: 218).
Records. USA: AZ – Mexico

Subtribe Harpalina Bonelli, 1810

Harpalii Bonelli, 1810: Tabula Synoptica. Type genus: *Harpalus* Latreille, 1802.
Ophonidae Laporte, 1834: 68. Type genus: *Ophonus* Dejean, 1821.
Stenomorphidae Laporte, 1834: 71. Type genus: *Stenomorphus* Dejean, 1831.

Daptini LeConte, 1847: 371. Type genus: *Daptus* Fischer von Waldheim, 1823.
Amblystomini Fauvel, 1889a: 17. Type genus: *Amblystomus* Erichson, 1837.
Selenophorini Casey, 1914: 48, 134. Type genus: *Selenophorus* Dejean, 1829. Synonymy established by Jeannel (1948a: 640).
Trichotichnini Jeannel, 1942: 615, 624. Type genus: *Trichotichnus* Morawitz, 1863. Synonymy established by Jeannel (1948a: 640).
Eriotomi Antoine, 1959: 331, 354. Type genus: *Eriotomus* Piochard de la Brûlerie, 1873 (= *Oedesis* Motschulsky, 1850). Synonymy established by Noonan (1976: 29).
Granigerini Antoine, 1959: 326, 331, 357. Type genus: *Graniger* Motschulsky, 1864. Synonymy established by Noonan (1976: 29).
Bleusei Antoine, 1959: 386, 427. Type genus: *Bleusea* Bedel, 1896. Synonymy established by Noonan (1976: 29).
Cratacanthi Lindroth, 1968: 742. Type genus: *Cratacanthus* Dejean, 1829. Synonymy established by Noonan (1976: 29).

Diversity. Worldwide, with about 1,665 species (Lorenz 2005: 362-387, as Harpalina, Amblystomina, and Ditomina). The Northern Hemisphere is represented by about 895 species (53.5% of the world fauna) and North America alone by 138 species (about 8%), of which five are adventive.
Taxonomic Note. Noonan (1976) arrayed the genera of this subtribe into the following genus-groups: Acinopi (no North American representatives), Amblystomi (no North American representatives), Bleusei (no North American representatives), Bradybaeni (no North American representatives), Dapti (including *Cratacanthus*), Ditomi (no North American representatives), Harpali (including *Euryderus*, *Harpalobrachys*, *Harpalus*, *Hartonymus*, *Ophonus*, and *Piosoma*), and Selenophori (including *Amblygnathus*, *Athrostictus*, *Aztecarpalus*, *Discoderus*, *Selenophorus*, *Stenomorphus*, and *Trichotichnus*). Ball and Bousquet (2000: 91) followed Noonan's classification with the exception that the Selenophori were divided into the Selenophori proper and the Trichotichni (including *Aztecarpalus* and *Trichotichnus*).

Genus *Piosoma* LeConte, 1847

Piosoma LeConte, 1847: 374. Type species: *Piosoma setosum* LeConte, 1847 by monotypy. Etymology (original). From the Greek *pio* (fat) and *soma* (body), alluding to the chubby shape of the adults ("*corpus crassum*") [neuter].

Diversity. One North American species in the temperate regions.
Identification. Lindroth (1968: 745-746) treated the species.

Piosoma setosum LeConte, 1847

Piosoma setosum LeConte, 1847: 375. Type locality: «circiter Long's Peak [Boulder County, Colorado], Rocky Mountains» (original citation). Syntype(s) in MCZ [# 5872].

Piosoma brevipennis Casey, 1914: 54. Type locality not stated. Holotype [by monotypy] (♂) in USNM [# 47725]. Synonymy established by Lindroth (1968: 745).

Distribution. This species ranges from Saskatchewan to central British Columbia (Lindroth 1968: 745-746), south to southern Arizona (Snow 1907: 142; Pima County, CMNH), central New Mexico (Fall and Cockerell 1907: 161; Bernalillo and Socorro Counties, CMNH, UASM), and southeastern Kansas (Wilson County, MCZ). One old specimen labeled "Tex" is known (MCZ).
Records. CAN: AB, BC, SK **USA**: AZ, CO, ID, KS, MT, ND, NE, NM, NV, SD, UT, WY [TX]

Genus *Euryderus* LeConte, 1846

Eurydera LeConte, 1846a: 151. Type species: *Eurydera zabroides* LeConte, 1846 (= *Amara grossa* Say, 1830) by monotypy. Etymology. From the Greek *eurys* (broad, wide) and *dere* (neck, by extension pronotum), alluding to the broad pronotum ("*thorax ... longitudine duplo latior*") of the adult [masculine].

Nothopus LeConte, 1852b: 67. Unnecessary replacement name for *Eurydera* LeConte, 1846 [incorrectly supposed to be a junior homonym of *Eurydera* Laporte, 1831]. Etymology. Uncertain, possibly from the Greek *nothos* (spurious) and *pous* (foot) [masculine].

Diversity. One North American species in the temperate regions.
Identification. Ball (1960b) and Lindroth (1968: 747-748) treated the species.

Eurydera grossus (Say, 1830)

Amara grossa Say, 1830b: (7) [3]. Type locality: «Denver [Denver County], Col[orado]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32974]. Note. «North-West Territory» was the area originally cited by Say (1830b: (7) [3]).

Eurydera zabroides LeConte, 1846a: 152. Type locality: «apud flumen Platte supra furcationem» (original citation). Holotype [by monotypy] in MCZ [# 5871]. Synonymy established with doubt by LeConte (1863b: 11), accepted by Ball (1960a: 49).

Nothopus valens Casey, 1914: 55. Type locality: «Keokuk [Lee County], Iowa» (original citation for the lectotype). Lectotype [as type], designated by Ball (1960a: 49), in USNM [# 47727]. Synonymy established with doubt by Leng (1920: 70), confirmed by Ball (1960b: 49).

Nothopus obtusus Casey, 1914: 56. Type locality: «Colorado» (original citation). Lectotype [as type], designated by Ball (1960a: 49), in USNM [# 47729]. Synonymy established by Ball (1960a: 49).

Nothopus zabroides privatus Casey, 1914: 56. Type locality: «El Paso [El Paso County], Texas» (original citation). Lectotype [as type], designated by Ball (1960a: 50), in USNM [# 47726]. Synonymy established by Ball (1960a: 50).

Nothopus arizonicus Casey, 1914: 56. Type locality: «Arizona» (original citation). Lectotype [as type], designated by Ball (1960a: 50), in USNM [# 47728]. Synonymy established by Ball (1960a: 50).

Distribution. This species ranges from western New York (Ball 1960a: 59, Fig. 3) to the Okanagan Valley in British Columbia (Lindroth 1968: 747), south to northeastern Oregon (Hatch 1953: 165), southern Arizona, southern Texas (Ball 1960a: Fig. 3), southern Louisiana (Allen 1965: 69), and northwestern Mississippi (Bolivar County, Drew A. Hildebrandt pers. comm. 2008), east to southern Georgia (Torres and Ruberson 2006: 32). The records from southeastern Pennsylvania (Rathvon 1869: 526, as *Nothopus zabroides*) and "California" (Leng 1920: 70, as *Nothopus valens*) are probably in error.
Records. CAN: AB, BC, MB, ON, SK **USA**: AR, AZ, CO, GA, IA, ID, IL, IN, KS, LA, MI, MN, MO, MS, MT, ND, NE, NM, NY, OH, OK, OR, SD, TX, UT, WA, WI, WY

Genus *Ophonus* Dejean, 1821

Ophonus Dejean, 1821: 13. Type species: *Carabus sabulicola* Panzer, 1796 designated by Guérin-Méneville (1827: 244) (see ICZN 1990). Etymology. Uncertain, possibly from the Greek prefix *ob-* (to, toward, against, opposite) modified by the elision of the "*b*" and *phonos* (to slaughter, murder) [masculine]. According to Desmarest (1851: 125), the name derives from the mythological name *Ophioneus*. The name was proposed by Franz Anton Ziegler and made available by Dejean.

Diversity. About 70 Palaearctic species arrayed in six subgenera: *Brachyophonus* Sciaky (two species), *Hesperophonus* Antoine (16 species), *Incisophonus* Sciaky (one species), *Macrophonus* Tschitschérine (three species), *Metophonus* (about 40 species), and *Ophonus s.str.* (ten species). A single species is found in the Far East and two species are adventive in the Nearctic Region.
Identification. Lindroth (1968: 756-758, as *rufibarbis* group) reviewed both species found in North America and provided a mean for their identification through his key to *Harpalus*. Both species are also included in Noonan's (1991: 20-45) key to the North American species of *Harpalus* excluding the subgenera *Pseudoophonus* and *Glanodes*.

Subgenus *Metophonus* Bedel, 1897

Metophonus Bedel, 1897: 111. Type species: *Harpalus syriacus* Dejean, 1829 by original designation. Etymology. From the Greek *meta* (between, among, beyond) and the generic name *Ophonus* [*q.v.*] [masculine].

Sulcophonus Schauberger, 1933: 130. Type species: *Harpalus sulcifer* Tschitschérine, 1902 (= *Ophonus cribrellus* Reiche and Saulcy, 1855) by monotypy. Synonymy established by Sciaky (1987: 70). Etymology. From the Latin *sulcus* (furrow, groove) and the generic name *Ophonus* [*q.v.*] [masculine].

Diversity. About 40 Palaearctic species, of which a single one, *O. stricticollis* Tschitschérine, is found in eastern Asia. Two species are adventive in eastern North America.

Ophonus puncticeps Stephens, 1828

Ophonus puncticeps Stephens, 1828a: 163. Type locality: «near Dover [United Kingdom]» (original citation). Lectotype (♂), designated by Lindroth (1968: 757), in BMNH.

Distribution. This Palaearctic species is adventive in North America where it is known from Prince Edward Island and Nova Scotia (Majka et al. 2006: 606) to eastern Iowa (Linn County, Doug A. Veal pers. comm. 2009), south to southern Pennsylvania [see Larochelle and Larivière 1989b: Fig. 1] and New Jersey (Steffens and Davidson 1979: 64). The first inventoried specimen collected on this continent was found in Long Island, New York, in 1954 (Dietrich 1958: 46).
Records. CAN: NB, NS, ON, PE, QC **USA**: CT, IA, IL, MA, ME, MI, NH, NJ, NY, OH, PA, RI, VT, WI – **Adventive**

Ophonus rufibarbis (Fabricius, 1792)

Carabus rufibarbis Fabricius, 1792: 159. Type locality: «Germania» (original citation). Lectotype (♂), designated by Lindroth (1968: 757), in ZMUC.

Distribution. This Palaearctic species is adventive in North America where it is known from Montreal (Lindroth 1968: 758) and the Quebec City region (Landry and Rancourt 1976: 53; CNC) in Quebec. The first inventoried specimen collected on this continent was found in Montreal in 1953.
Records. CAN: QC – **Adventive**

Genus *Harpalus* Latreille, 1802

Harpalus Latreille, 1802: 92. Type species: *Carabus proteus* Paykull, 1790 (= *Carabus affinis* Schrank, 1781) designated by Andrewes (1935: 19). Etymology (see Latreille 1804: 325). From the Greek *harpaleos* (grasping, greedy, voracious, by extension living by plunder) [masculine]. According to Mulsant (1830: 327), so named "*à cause de la guerre qu'ils font aux insectes plus faibles qu'eux*." Note. As stated by Andrewes (1935) and Noonan (1976: 31), the first valid type species designation for *Harpalus* Latreille is *Carabus ruficornis* Fabricius, 1775 (= *Carabus rufipes* DeGeer, 1774) as designated by Latreille (1810: 426). This species is currently included in the subgenus *Pseudoophonus* Motschulsky, 1844. Acceptance of Latreille's designation would require nomenclatural changes at the subgeneric level within the genus *Harpalus*. A request should be addressed to the Commission to suppress Latreille's designation. A first request was postponed (ICZN 1950).
Harpaleus Billberg, 1820: 23. Unjustified emendation of *Harpalus* Latreille, 1802.

Diversity. About 415 species (Lorenz 2005: 363-372) in the Nearctic, Neotropical (Mexico only), Australian (one adventive species in New Zealand), Oriental, Palaearctic, and Afrotropical Regions. The Northern Hemisphere is represented by about 360 species (roughly 87% of the world fauna) and North America alone by 59 species (approximately 14%). Five species are Holarctic and three North American species are adventive.

Subgenus *Pseudoophonus* Motschulsky, 1844

Holosus Fischer von Waldheim, 1829a: 21 [potential *nomen oblitum*, see Bousquet (2002c: 176)]. Type species: *Carabus ruficornis* Fabricius, 1775 (= *Carabus rufipes* DeGeer, 1774) designated by Bousquet (2002c: 176). Etymology. Uncertain, possibly from the Greek *holos* (whole, entire) and *sos* (sound) [masculine].

Pseudoophonus Motschulsky, 1844: 196 [potential *nomen protectum*]. Type species: *Carabus ruficornis* Fabricius, 1775 (= *Carabus rufipes* DeGeer, 1774) designated by Desmarest (1851: 124). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Ophonus* [*q.v.*] [masculine]. Note. *Pseudophonus* is an incorrect subsequent spelling, introduced by Ménétriés (1848: 37), not in prevailing usage.

Empeirus Motschulsky 1844: 197 (as *Empeinus*). Type species: *Harpalus pastor* Motschulsky, 1844 designated by Noonan (1976: 36). Synonymy established by Kataev (2002: 192). Note. Motschulsky originally used the spelling *Empeinus* (p. 197) but corrected it to *Empeirus* in his corrigendum (p. xi) issued simultaneously with the original work. Therefore *Empeirus* is the correct original spelling (ICZN 1999: Article 32.5.1.1) despite that Motschulsky used *Empeinus* in his subsequent publications (1848: 487; 1850a: vii, 25).

Platus Motschulsky, 1844: 197. Type species: *Harpalus calcitrapus* Motschulsky, 1844 (= *Carabus calceatus* Duftschmid, 1812) designated by Noonan (1976: 33).

Pardileus des Gozis 1882: 289. Type species: *Carabus calceatus* Duftschmid, 1812 by original designation. Synonymy established by Ball and Anderson (1962: 4).

Migadophonus Tschitschérine, 1897: 47. Type species: *Ophonus aenigma* Tschitschérine, 1897 by monotypy. Synonymy established by Habu (1968: 287). Etymology. From the Greek *migados* (mixed pell-mell) and the generic name *Ophonus* [*q.v.*] [masculine].

Neopardileus Habu, 1954b: 281. Type species: *Ophonus itoshimanus* Habu, 1954 (= *Carabus calceatus* Duftschmid, 1812) by monotypy. Etymology. From the Greek prefix *neo-* (new) and the generic name *Pardileus* [masculine].

Diversity. About 60 species in North America (13 species), Mexico (four species, one of them, *H. alienus* Bates, endemic), Asia (about 45 species), and Europe and northern Africa (three species, none endemic).

Identification. Ball and Anderson (1962) revised the North American species and provided a key for their identification. Lindroth (1968: 758-765) covered ten species. Subsequently one new species was described by Will (2002a).

[**compar group**]

***Harpalus actiosus* Casey, 1914**

Harpalus actiosus Casey, 1914: 79. Type locality: «Keokuk [Lee County], Iowa» (original citation for the lectotype). Lectotype (♂), designated by Ball and Anderson (1962: 67), in USNM [# 47759].

Harpalus pubitarsis Casey, 1914: 82. Type locality: «probably Indiana» (original citation for the lectotype). Lectotype (♂), designated by Ball and Anderson

(1962: 67), in USNM [# 47762]. Synonymy established by Ball and Anderson (1962: 67).

Distribution. This species ranges from New Jersey and Virginia to northeastern North Dakota, south to the Gulf Coast of Texas and northwestern Mississippi (Bolivar County, Drew A. Hildebrandt pers. comm. 2007); also known from north-central Colorado [see Ball and Anderson 1962: Fig. 39].
Records. USA: AR, CO, IA, IL, IN, KS, MD, MO, MS, ND, NE, NJ, OH, OK, PA, SD, TX, VA, WI

Harpalus compar LeConte, 1847

Carabus bicolor Fabricius, 1775: 241 [primary homonym of *Carabus bicolor* Drury, 1773]. Type locality: «America» (original citation), restricted to «Rumney [Grafton County], N[ew] H[ampshire]» by Lindroth (1968: 763). Lectotype (♀), designated by Lindroth (1968: 763) in ZMUC.

Harpalus compar LeConte, 1847: 395. Type locality: United States east of the Rocky Mountains (inferred from title of the paper). Lectotype (♀), designated by Ball and Anderson (1962: 70), in MCZ [# 5895]. Synonymy established by Ball and Anderson (1962: 70).

Harpalus nactus Casey, 1914: 82. Type locality: «Arizona» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 70), in USNM [# 47773]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 70).

Harpalus feroculus Casey, 1924: 98. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Holotype [by monotypy] (♀) in USNM [# 47760]. Synonymy established with doubt by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 70).

Harpalus admissus Casey, 1924: 99. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation for the lectotype). Lectotype (♂), designated by Ball and Anderson (1962: 70), in USNM [# 47772]. Synonymy established by Ball and Anderson (1962: 70).

Harpalus excubans Casey, 1924: 99. Type locality: «Watch Hill [Washington County], Rhode Island» (original citation). Lectotype (♂), designated by Lindroth (1975: 137), in USNM [# 47775]. Synonymy established with doubt by Lindroth (1968: 763). Note. Ball and Anderson (1962: 79) regarded the lectotype of *H. excubans* Casey as an hybrid *erythropus* x *bicolor*. Lindroth (1968: 764) believed the specimen was probably a small *H. bicolor*.

Distribution. This species ranges from Nova Scotia to southern Manitoba, south to southeastern Arizona, southeastern Texas, and central Florida [see Ball and Anderson 1962: Fig. 39].
Records. CAN: MB, NS, ON, QC **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV, WY

Harpalus erythropus **Dejean, 1829**

Harpalus erythropus Dejean, 1829: 258. Type locality: «Amérique septentrionale» (original citation), restricted to «Dorchester [Suffolk County], Mass[achusetts]» by Lindroth (1968: 764). One syntype in MHNP (Lindroth 1955b: 27).

Harpalus rufopiceus Casey, 1914: 80. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 76), in USNM [# 47765]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 76).

Harpalus deludens Casey, 1914: 80. Type locality: «Keokuk [Lee County], Iowa» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 77), in USNM [# 47763]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 76).

Harpalus effetus Casey, 1914: 81. Type locality: «Willets Point [Queens County], Long Island, New York» (original citation). Holotype [by monotypy] (♂) in USNM [# 47769]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 76).

Harpalus fenisex Casey, 1914: 81. Type locality: «S[ain]t Louis, Missouri» (original citation). Holotype [by monotypy] (♂) in USNM [# 47767]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 76).

Harpalus abstrusus Casey, 1914: 87. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype (♂), designated by Ball and Anderson (1962: 79), in USNM [# 47764]. Synonymy established with doubt by Lindroth (1968: 764). Note. Ball and Anderson (1962: 76) regarded the lectotype of *H. abstrusus* Casey as an hybrid *erythropus* x *bicolor*. Lindroth (1968: 764) believed the specimen was probably an abnormal *H. erythropus*.

Harpalus cupiens Casey, 1924: 98. Type locality: «northern Illinois» (original citation). Holotype [by monotypy] (♀) in USNM [# 47766]. Synonymy established with doubt by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 76).

Distribution. This species is widely distributed east of the Rocky Mountains from Nova Scotia (Lindroth 1968: 764) to southern Manitoba, south to north-central Colorado, southern Oklahoma, and central Florida [see Ball and Anderson 1962: Fig. 39]. The record from south-central Montana (Hatch 1933a: 10) is probably in error.

Records. CAN: MB, NS, ON, QC **USA**: AL, AR, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, VA, VT, WI, WV, WY

Harpalus paratus **Casey, 1924**

Harpalus paratus Casey, 1924: 100. Type locality: «Akron [Washington County], Colorado» (original citation for the lectotype). Lectotype (♂), designated by Ball and Anderson (1962: 73), in USNM [# 47771].

Harpalus spaldingi Casey, 1924: 103. Type locality: «Vineyard [Utah County], Utah» (original citation). Holotype [by monotypy] (♂) in USNM [# 47768]. Synonymy established by Ball and Anderson (1962: 74).

Distribution. This primarily prairie species ranges from southeastern Michigan to southern Alberta, south to central Arizona and the Rio Grande Basin in south-central Texas [see Ball and Anderson 1962: Fig. 39]. According to Ball and Anderson (1962: 76), the species is also found in "Mexico." The records from "Arkansas" and "Pennsylvania" (Bousquet and Larochelle 1993: 232) need confirmation.
Records. CAN: AB, SK **USA**: AZ, CO, IA, ID, IN, KS, MI, MN, ND, NE, NM, OH, OK, SD, TX, UT, WI [AR, PA] – Mexico

Harpalus vagans LeConte, 1865

Harpalus longicollis LeConte, 1847: 396 [primary homonym of *Harpalus longicollis* Rambur, 1838]. Type locality: «NovEboraci [= New York]» (original citation). Lectotype (♂), designated by Ball and Anderson (1962: 64), in MCZ [# 5887].

Harpalus vagans LeConte, 1865b: 102. Type locality: «western states» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 64), in MCZ [# 5886]. Synonymy established by Ball and Anderson (1962: 64).

Harpalus haldemani Casey, 1914: 79. Type locality: «Pennsylvania» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 64), in USNM [# 47766]. Synonymy established by Ball and Anderson (1962: 64).

Harpalus dolosus Casey, 1914: 84. Type locality: «R[hode] I[sland]» (lectotype label). Lectotype (♀), designated by Ball and Anderson (1962: 79), in USNM [# 47778]. Synonymy established by Lindroth (1968: 762). Note. Ball and Anderson (1962: 79) regarded the lectotype of *H. dolosus* Casey as an hybrid *erythropus* x *bicolor*. Lindroth (1968: 764) believed the specimen was conspecific with members of *H. longicollis*.

Harpalus latescans Casey, 1924: 97. Type locality: «Pennsylvania» (original citation). Lectotype (♂), designated by Ball and Anderson (1962: 64), in USNM [# 47758]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 64).

Distribution. This eastern species occurs from the Saguenay River in southern Quebec to eastern South Dakota, south to central Kansas, southern Mississippi, and southwestern Georgia [see Ball and Anderson 1962: Fig. 39]. The record from "Nova Scotia" (Bousquet and Larochelle 1993: 231) was based on a misidentified specimen of *Harpalus erythropus* (Majka and Bousquet 2008: 474).
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, GA, IA, IL, IN, KS, MA, MD, MI, MO, MS, NC, NJ, NY, OH, OK, PA, RI, SC, SD, TN, VA, VT, WI, WV

[**pensylvanicus group**]
***Harpalus liobasis* Chaudoir, 1868**

Harpalus mexicanus Chaudoir, 1837b: 46 [primary homonym of *Harpalus mexicanus* Dejean, 1828]. Type locality: «Mexique» (original citation). Syntype(s) probably in MHNP.

Harpalus liobasis Chaudoir, 1868b: 170. Type locality: «côte occidentale de l'Amérique septentrionale» (original citation). Holotype [by monotypy; designated lectotype by Lindroth (1968: 761)] (♂) in MHNP. Synonymy established by Erwin et al. (1977: 4.48)].

Harpalus montezumae Csiki, 1932a: 1183. Replacement name for *Harpalus mexicanus* Chaudoir, 1837.

Distribution. This species is known only from "Arizona" (Erwin et al. 1977: 4.48) and "Mexico" (Bates 1882a: 57). The record from "near Philadelphia," Pennsylvania (Casey 1914: 82) is likely in error.

Records. USA: AZ – Mexico

Note. Ball and Anderson (1962: 45) listed *H. liobasis* Chaudoir as a junior synonym of *H. pensylvanicus* but Lindroth (1968: 761) treated it as a distinct species.

***Harpalus pensylvanicus* (DeGeer, 1774)**

Carabus pensylvanicus DeGeer, 1774: 108. Type locality: «Pensylvanie» (original citation). Lectotype (♂), designated by Lindroth (1968: 760), in NRSS.

Harpalus longior Kirby, 1837: 43. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), which according to Lindroth (1968: 760) is probably incorrect. Two syntypes [2 originally cited] in BMNH (Lindroth 1953b: 174). Synonymy established by Lindroth (1953b: 174).

Harpalus pennsylvanicus mormonicus Casey, 1914: 86. Type locality: «Utah» (original citation). Lectotype (♂), designated by Ball and Anderson (1962: 47), in USNM [# 47779]. Synonymy established by Hatch (1932: 174), confirmed by Ball and Anderson (1962: 47).

Harpalus immixtus Casey, 1924: 97. Type locality: «Keene Valley, Adirondack M[oun]t[ain]s [Essex County], New York» (original citation). Lectotype (♂), designated by Ball and Anderson (1962: 47), in USNM [# 47761]. Synonymy established by Ball and Anderson (1962: 47).

Distribution. This common species occurs over a large area in North America from Prince Edward Island (Lindroth 1968: 761) and Nova Scotia to south-central British Columbia, south to southern California, northwestern Mexico, southeastern Texas, southern Florida, and the Bahamas [see Ball and Anderson 1962: Fig. 38].

Records. CAN: BC, MB, NB, NS, ON, PE, QC, SK **USA**: AK, AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – Bahamas, Mexico

Harpalus protractus Casey, 1914

Harpalus protractus Casey, 1914: 85. Type locality: «S[ain]t Louis, Missouri» (original citation). Holotype [by monotypy] (♂) in USNM [# 47776].
Harpalus thoracinus Casey, 1914: 85. Type locality not stated. Holotype [by monotypy] (♂) in USNM [# 47770]. Synonymy established by Ball and Anderson (1962: 57).

Distribution. This species is found from Maryland to southern Nebraska (Nuckolls County, Foster F. Purrington pers. comm. 2011), south to south-central Oklahoma, northern Louisiana, and east-central Alabama [see Ball and Anderson 1962: Fig. 38].
Records. USA: AL, GA, IL, IN, KS, KY, LA, MD, MO, MS, NC, NE, OH, OK, SC, TN, VA, WV

Harpalus texanus Casey, 1914

Harpalus texanus Casey, 1914: 83. Type locality: «Austin [Travis County], Texas» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 51), in USNM [# 47777].

Distribution. This species is restricted to the Coastal Plain ranging from south-central North Carolina to southern Florida, west to eastern Texas [see Ball and Anderson 1962: Fig. 38].
Records. USA: FL, GA, MS, NC, TX

[**rufipes group**]

Harpalus faunus Say, 1823

Harpalus faunus Say, 1823a: 28. Type locality: «Penn[sylvania]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32970].
Harpalus badius Dejean, 1829: 254. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 27). Synonymy established with doubt by Brullé (1835c: 286), confirmed by Lindroth (1955b: 27). Note. Dejean (1829: 256) noted that the unique specimen of *H. badius* he had was a female.
Harpalus convivus LeConte, 1865b: 102. Type locality: «New York» (original citation). Lectotype (♀), designated by Ball and Anderson (1962: 38), in MCZ [# 5885]. Synonymy established by Ball and Anderson (1962: 38).

Distribution. This species ranges from southwestern Maine (Majka et al. 2011: 46) and southern Quebec (Larochelle 1975: 87) to western North Dakota, south to western (Dajoz 2007: 23) and northeastern Texas, southeastern Louisiana, and the Florida Panhandle (Peck and Thomas 1998: 21); also known from northern (Villa-Castillo and Wagner 2002: 246) and east-central Arizona [see Ball and Anderson 1962: Fig. 37].
Records. CAN: MB, ON, QC **USA**: AR, AZ, CO, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Harpalus hatchi Ball and Anderson, 1962

Harpalus hatchi Ball and Anderson, 1962: 41. Type locality: «Harvey County, Kansas» (original citation). Holotype (♂) in SMEK [# 6478] (Byers and Karren 1968: 3).

Distribution. This species is known only from three specimens collected in Kansas (Ball and Anderson 1962: 43) and five specimens from central Oklahoma (Seminole County, Robert L. Davidson pers. comm. 2008).
Records. USA: KS, OK

Harpalus rufipes (DeGeer, 1774)

Carabus rufipes DeGeer, 1774: 96. Type locality not stated; «Sweden» selected by Lindroth (1968: 759). Lectotype (♂), designated by Lindroth (1968: 759), in NRSS.
Carabus ruficornis Fabricius, 1775: 241 [primary homonym of *Carabus ruficornis* DeGeer, 1774]. Type locality: «Europa» (original citation). Lectotype (♂), designated by Lindroth (1968: 759), in ZMUC. Synonymy established by Schönherr (1806: 182).

Distribution. This adventive species is found from Newfoundland (Larson and Langor 1982: 593) to near Montreal, Quebec (Mercado Cárdenas and Buddle 2007: 140), south to Connecticut (Krinsky and Oliver 2001: 210) and Rhode Island (Zhang et al. 1994: 69). The record from Wayne County, New York (Hajek et al. 2007) is in error (see Hajek et al. 2009: 913). The first inventoried specimen collected on this continent was found on Prince Edward Island in 1937 (Brown 1950b: 199).
Records. FRA: PM **CAN**: NB, NF, NS (CBI), PE, QC **USA**: CT, MA, ME, NH, RI, VT – **Adventive**

[**incertae sedis**]

Harpalus poncei Will, 2002

Harpalus poncei Will, 2002a: 448. Type locality: «Naples [Collier County], Fl[orid]a» (original citation). Holotype (♂) in CUIC [# 7161]. Etymology. The specific name honors the Spanish explorer Juan Ponce de León [1460-1521] who died in Cuba of wounds sustained during an expedition against the Carib Indians of Guadeloupe.

Distribution. This species is known only from two specimens collected in 1963 in two localities in Florida, along the coast of the Gulf of Mexico [see Will 2002a: Fig. 5].
Records. USA: FL

Subgenus *Megapangus* Casey, 1914

Megapangus Casey, 1914: 71. Type species: *Carabus caliginosus* Fabricius, 1775 by monotypy. Etymology. From the Greek *megas* (large) and the generic name *Pangus* [masculine].

Diversity. Two North American species, both extending into northern Mexico.

Identification. Will (1997) reviewed the species of this subgenus and provided a key for their identification.
Taxonomic Note. This taxon is listed as a synonym of *Pseudoophonus* Motschulsky by Kataev et al. (2003: 384).

Harpalus caliginosus (Fabricius, 1775)

Carabus caliginosus Fabricius, 1775: 240. Type locality: «America» (original citation), restricted to «Hope [Hempstead County], Arkansas» by Lindroth (1968: 765). Lectotype (♂), designated by Lindroth (1968: 765), in ZMUC.
Harpalus caliginosus dux Casey, 1924: 94. Type locality: «southern Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47741]. Synonymy established by Lindroth (1968: 765).

Distribution. This species ranges from Nova Scotia (King County, CNC) to Washington, north to southern Manitoba (Lindroth 1968: 765) and southern Saskatchewan (CNC), south to the northern part of the Baja California Peninsula, northeastern Mexico, and northern Florida [see Will 1997: Fig. 1A].
Records. CAN: MB, NS, ON, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – Mexico

Harpalus katiae Battoni, 1985

Harpalus katiae Battoni, 1985: 356. Type locality: «Burkburnett at Red river, Wichita Co[unty], Texas» (original citation). Holotype (♂) location unknown.

Distribution. This species ranges from northern Colorado (Will 1997: 47) to southern Virginia (Hoffman and Roble 2000: 37), north to Wisconsin (Purrington et al. 2002: 201), south to northern Florida, northeastern Mexico (Will 1997: 47, 49), southeastern New Mexico (Dunn 1986: 2), and southeastern Arizona (Cochise County, Ken Karns pers. comm. 2009) [see Will 1997: Fig. 1B].
Records. USA: AL, AR, AZ, CO, GA, FL, IL, LA, MO, MS, NC, NE, NM, OK, SC, TN, TX, VA, WI – Mexico

Subgenus *Plectralidus* Casey, 1914

Plectralidus Casey, 1914: 72. Type species: *Harpalus erraticus* Say, 1823 designated by El-Moursy (1959: 37). Etymology. From the Greek *plectron* (spur), probably alluding to the dentiform process on the elytral edge delimiting laterally the subapical sinuation (“external dentition of the elytral apices”) [masculine].

Diversity. Two North American species.
Identification. El-Moursy (1959) and Noonan (1991: 131-135) revised the species. Both species were also treated by Lindroth (1968: 766-767).

***Harpalus erraticus* Say, 1823**

Harpalus erraticus Say, 1823a: 27 (as *eraticus*). Type locality: «Medora [Reno County], K[ansa]s» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32973]. Note. The incorrect subsequent spelling *erraticus*, introduced by Harris (1833: 568), is in prevailing usage and attributed to the publication of the original spelling; therefore it is deemed to be the correct original spelling (ICZN 1999: Article 33.3.1).

Harpalus caudalis Casey, 1914: 73. Type locality: «S[ain]t L[ouis], M[iss]o[uri]» (lectotype label). Lectotype (♂), designated by Lindroth (1975: 138), in USNM [# 47742]. Synonymy established by El-Moursy (1959: 41).

Distribution. This species occurs east of the Rocky Mountains ranging from southern Quebec to southeastern Alberta, south to central New Mexico, southern Kansas, central Alabama [see Noonan 1991: Fig. 285], and southeastern South Carolina (Ciegler 2000: 100).

Records. CAN: AB, MB, ON, QC, SK **USA**: AL, AR, AZ, CO, CT, DC, DE, GA, IA, IL, IN, KS, MA, MD, ME, MI, MN, MO, MS, MT, ND, NE, NH, NJ, NM, NY, OH, RI, SC, SD, TN, VT, WI

***Harpalus retractus* LeConte, 1863**

Harpalus impiger LeConte, 1854c: 79 [secondary homonym of *Harpalus impiger* (Duftschmid, 1812)]. Type locality: «Santa Fe, New Mexico; Frontera [New Mexico]» (original citation), restricted to «Santa Fe [Santa Fe County]» by Lindroth (1968: 767). Lectotype (♂), designated by Noonan (1991: 134), in MCZ [# 5884].

Harpalus retractus LeConte, 1863b: 13. Replacement name for *Harpalus impiger* LeConte, 1854.

Harpalus collucens Casey, 1914: 73. Type locality: «Fort Wingate [McKinley County], New Mexico» (original citation). Lectotype (♂), designated by Noonan (1991: 134), in USNM [# 47743]. Synonymy established by El-Moursy (1959: 41).

Harpalus acomanus Casey, 1914: 73. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Twelve syntypes [12 originally cited] in USNM [# 47744]. Synonymy established by El-Moursy (1959: 41).

Harpalus rectangulus Casey, 1914: 74. Type locality: «Arizona» (original citation). Holotype [by monotypy] (♂) in USNM [# 47745]. Synonymy established by El-Moursy (1959: 41).

Distribution. This species is restricted to mountains in "Utah" (Noonan 1991: 135), Arizona, New Mexico, and southern Colorado [see Noonan 1991: Fig. 285]. The record from "Mexico" (Csiki 1932a: 1186) is probably in error.

Records. USA: AZ, CO, NM, UT

Subgenus *Opadius* Casey, 1914

Opadius Casey, 1914: 66. Type species: *Cratognathus cordatus* LeConte, 1853 by original designation. Etymology. Possibly from the Greek *opados* (accompanying, attending) [masculine].

Pharalus Casey, 1914: 68. Type species: *Pangus testaceus* LeConte, 1853 (= *Harpalus indianus* Csiki, 1932) by monotypy. **New synonymy**. Etymology. Anagram of the generic name *Harpalus* [*q.v.*] [masculine].

Euharpalops Casey, 1924: 116. Type species: *Euharpalops wadei* Casey, 1924 (= *Harpalus fraternus* LeConte, 1852) by original designation. **New synonymy**. Etymology. From the Greek *eu* (good, agreeable, very), the generic name *Harpalus* [*q.v.*], and the suffix *-ops* (having the appearance of) [masculine].

Haploharpalus Schauberger, 1926: 44. Type species: *Harpalus froelichii* Sturm, 1818 designated by Habu (1973a: 68). **New synonymy**. Etymology. From the Greek prefix *haplo-* (single) and the generic name *Harpalus* [*q.v.*] [masculine].

Cordoharpalus Hatch, 1949a: 87. Type species: *Harpalus cordifer* Notman, 1919 by original designation. Synonymy established by Bousquet and Larochelle (1993: 234). Etymology. From the Latin *cordis* (heart) and the generic name *Harpalus* [*q.v.*] [masculine].

Diversity. This group is represented in the Nearctic and Palaearctic Regions but the number of species cannot be assessed at this time. The North American fauna has 19 species.

Identification. The species of this subgenus have been revised by Noonan (1991: 45-127). Lindroth (1968) covered all the species except *H. gravis, H. cordatus*, and *H. apache*.

Taxonomic Note. This taxon corresponds to the *fraternus* stock of Noonan (1991: 45). Although I have doubt about monophyly of this complex, I have followed Noonan's (1991) conclusion since it is the last major study on these species. Kataev et al. (2003: 371) listed *Opadius* Casey and its synonyms as synonyms of the subgenus *Harpalus* Latreille. In 2010, Kataev included *H. apache* and *H. cordatus* (as *cordatus* group) in the subgenus *Glanodes* Casey.

[**cordatus group**]

***Harpalus apache* Kataev, 2010**

Harpalus apache Kataev, 2010: 829. Type locality: «near Santa Rosa, Guadalupe Co[unty], N[ew] M[exico]» (original citation). Holotype (♂) in FMNH.

Distribution. This species is known only from the type locality in east-central New Mexico.

Records. USA: NM

***Harpalus cordatus* (LeConte, 1853)**

Cratognathus cordatus LeConte, 1853c: 381. Type locality: «New Mexico» (original citation), herein restricted to Albuquerque, Bernalillo County (see Noonan 1991: 99). Lectotype (♀), designated by Noonan (1991: 95), in MCZ [# 5913].
Harpalus tadorcus Ball, 1972: 185. Replacement name for *Harpalus cordatus* (LeConte, 1853).

Distribution. This species is restricted to arid grasslands in eastern Arizona, southern Colorado, and New Mexico [see Noonan 1991: Fig. 276].
Records. USA: AZ, CO, NM
Note. Ball (1972: 185) proposed *H. tadorcus* to replace *H. cordatus* (LeConte, 1853), a junior secondary homonym of *H. cordatus* (Duftschmid, 1812), both species being then placed in the genus *Harpalus*. Since Duftschmid's species is currently included in the genus *Ophonus* and the replacement name was proposed after 1960, the original species-group name is to be reinstated (ICZN 1999: Article 59.4).

***Harpalus cordifer* Notman, 1919**

Harpalus cordifer Notman, 1919b: 235. Type locality: «Br[itish] Col[umbia]» (original citation), herein restricted to Mission City (CNC). Lectotype (♂), designated by Noonan (1991: 93), in SIM.
Harpalus washingtoniensis Van Dyke, 1926a: 123. Type locality: «Port Angeles [Clallam County], Washington» (original citation). Holotype (♂) in CAS [# 1865]. Synonymy established by Hatch (1949a: 87), confirmed by Lindroth (1968: 786).

Distribution. This species ranges from the Alexander Archipelago and northwestern British Columbia south to southwestern Oregon, east to eastern Washington [see Noonan 1991: Fig. 276].
Records. CAN: BC (VCI) **USA**: AK, OR, WA

[**desertus group**]
***Harpalus desertus* LeConte, 1859**

Harpalus desertus LeConte, 1859c: 3. Type locality: «near Santa Fé [Santa Fe County, New Mexico]» (original citation as deduced from page vi). Holotype [by monotypy] (♀) in MCZ [# 5907].
Harpalus furtivus LeConte, 1865b: 103. Type locality: «Colorado Territory» (original citation), restricted to «Colorado» by Noonan (1991: 116). Holotype [by monotypy] (♂) in MCZ [# 5905]. Synonymy established by Noonan (1991: 116).
Harpalus lucidus LeConte, 1865b: 104 [primary homonym of *Harpalus lucidus* Morawitz, 1863]. Type locality: «Nebraska [Territory], near the Rocky Mountains [probably in present day Colorado]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5908]. Synonymy established by Lindroth (1968: 810).

Harpalus clandestinus LeConte, 1878a: 450. Type locality: «[Fort] Garland (8,000 feet) [Costilla County], Col[orado]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 3904]. Synonymy established by Noonan (1991: 116).

Harpalus lustrans Casey, 1884a: 64. Replacement name for *Harpalus lucidus* LeConte, 1865.

Harpalus probatus Casey, 1914: 119. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1991: 117), in USNM [# 47849]. Synonymy established by Noonan (1991: 117).

Harpalus nitescans Casey, 1914: 119. Type locality: «Socorro Co[unty], New Mexico» (original citation). Lectotype (♂), designated by Noonan (1991: 116), in USNM [# 47847]. Synonymy established by Noonan (1991: 117).

Harpalus clientus Casey, 1914: 120. Type locality: «Socorro Co[unty], New Mexico» (original citation). Lectotype (♀), designated by Noonan (1991: 116), in USNM [# 47850]. Synonymy established by Noonan (1991: 116).

Harpalus malacus Casey, 1914: 121. Type locality: «New Mexico» (original citation). Holotype [by monotypy] (♂) in USNM [# 47848]. Synonymy established by Noonan (1991: 116).

Harpalus illectus Casey, 1914: 121. Type locality: «Virgin River [Clark County], Utah» (original citation). Holotype [by monotypy] (♂) in USNM [# 47852]. Synonymy established by Noonan (1991: 116).

Harpalus nugax Casey, 1914: 122. Type locality: «New Mexico» (original citation). Lectotype (♀), designated by Noonan (1991: 117), in USNM [# 47851]. Synonymy established by Noonan (1991: 117).

Harpalus vacivus Casey, 1914: 123. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47853]. Synonymy established by Lindroth (1968: 810).

Harpalus socors Casey, 1914: 124. Type locality: «Arizona» (original citation). Lectotype (♂), designated by Noonan (1991: 117), in USNM [# 47854]. Synonymy established by Noonan (1991: 117).

Harpalus curticornis Casey, 1914: 124. Type locality: «Salida [Chaffee County], Colorado» (original citation). Lectotype (♂), designated by Noonan (1991: 116), in USNM [# 47853]. Synonymy established by Noonan (1991: 116).

Harpalus cyrtonotoides Notman, 1919b: 234 [*nomen dubium*]. Type locality: «Col[orado]» (original citation). Syntype(s) [2 ♂ originally cited] location unknown (originally in collection C.W. Leng). **New synonymy**. Note. *Harpalus cyrtonotoides* is here considered a doubtful synonym of *H. desertus* LeConte based on comment made by Ball and Bousquet (2000: 98).

Harpalus maxwelli Casey, 1924: 108. Type locality: «Maxwell [Colfax County], New Mexico» (original citation). Holotype [by monotypy] (♂) in USNM [# 47856]. Synonymy established by Noonan (1991: 117).

Harpalus dulciculus Casey, 1924: 109. Type locality: «Akron [Washington County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47830]. Synonymy established by Lindroth (1968: 810).

Harpalus captiosus Casey, 1924: 110. Type locality: «Akron [Washington County], Colorado» (original citation). Holotype [by monotypy] (♀) in USNM [# 47831]. Synonymy established by Lindroth (1968: 810).

Harpalus metuens Casey, 1924: 110. Type locality: «Arizona» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47829]. Synonymy established by Lindroth (1968: 810).

Harpalus maxwellensis Csiki, 1932a: 1183. Unjustified emendation of *Harpalus maxwelli* Casey, 1924.

Harpalus couleensis Hatch, 1949a: 87. Type locality: «Upper Grand Coulee [Grant County, Washington]» (original citation). Holotype (♂) in USNM. Synonymy established, under the name *H. lustrans* Casey, by Hatch (1953: 171), confirmed by Lindroth (1968: 810).

Distribution. This western species occurs from south-central British Columbia to western Minnesota (Gandhi et al. 2005: 930), south to east-central and westernmost Texas, southern Arizona, and northern California [see Noonan 1991: Figs 279-282].

Records. CAN: AB, BC, SK **USA**: AZ, CA, CO, ID, KS, MN, MT, ND, NE, NM, NV, OK, OR, SD, TX, UT, WA, WY

Note. Noonan (1991: 119-124) recognized two morphs within this species, the *desertus* and *furtivus* morphs, that Lindroth (1968: 809) regarded as distinct species. Noonan (1991: 124) indicated that intergradation between the two morphs occurs throughout the areas in which the *furtivus* morph occurs.

Harpalus gravis LeConte, 1858

Harpalus gravis LeConte, 1858b: 60. Type locality: «San Antonio [Bexar County], Texas» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5911].

Distribution. This species is found along the Coastal Plain and Piedmont Plateau from southeastern New York and New Jersey to northern Florida, west to southeastern Oklahoma and southeastern Texas [see Noonan 1991: Fig. 270]. The record from southwestern Ohio (Blatchley 1910: 186) is probably in error.

Records. USA: AL, AR, FL, GA, LA, MO, MS, NC, NJ, NY, OK, SC, TX, VA

Harpalus indianus Csiki, 1932

Pangus testaceus LeConte, 1853c: 385 [secondary homonym of *Harpalus testaceus* Haldeman, 1843]. Type locality: «Illinois» (original citation), herein restricted to Chicago, Cook County (see Noonan 1991: 115). Lectotype (♀), designated by Noonan (1991: 113), in MCZ [# 5910]. Note. The lectotype designated by Noonan (1991: 113) is labeled "Io[w]a" and is probably not a syntype. One specimen with a yellow disc (which includes Illinois) in the LeConte collection (MCZ) may be one of the two syntypes cited originally by LeConte (1853c: 385).

Harpalus indianus Csiki, 1932a: 1186. Replacement name for *Harpalus testaceus* (LeConte, 1853).

Distribution. This species ranges from southernmost Ontario (Bousquet 1987a: 130) to southeastern South Dakota (Kirk and Balsbaugh 1975: 28), south to southeastern Kansas (Noonan 1991: 115) and northern Mississippi (Drew A. Hildebrandt pers. comm. 2007). Two old specimens simply labeled from Louisiana and Florida are known (Noonan 1991: 115).
Records. CAN: ON **USA**: AR, IA, IL, IN, KS, MI, MO, MS, NE, OH, SD, TN, WI [FL, LA]

[**laticeps group**]

***Harpalus animosus* Casey, 1924**

Harpalus montanus LeConte, 1865b: 102 [primary homonym of *Harpalus montanus* Sturm, 1818]. Type locality: «Colorado Territory» (original citation), restricted to «Colorado» by Noonan (1991: 46). Lectotype (♂), designated by Noonan (1991: 46), in MCZ [# 5898].

Harpalus animosus Casey, 1924: 101. Type locality: «Miner's Peak [Iron County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47783]. Synonymy established by Lindroth (1968: 774).

Harpalus montuosus Csiki, 1932a: 1183. Replacement name for *Harpalus montanus* LeConte, 1865.

Distribution. This western species occurs from northwestern British Columbia to southwestern Saskatchewan, south to north-central New Mexico and northern Arizona in the Rocky Mountains and to northern Oregon along the coast [see Noonan 1991: Fig. 267]. The record from south-central South Dakota (Kirk and Balsbaugh 1975: 29, as *H. montuosus*) needs confirmation.
Records. CAN: AB, BC (VCI), SK **USA**: AZ, CO, ID, MT, NM, NV, OR, UT, WA, WY [SD]

***Harpalus laticeps* LeConte, 1850**

Harpalus laticeps LeConte, 1850: 208. Type locality: Lake Superior (inferred from title of the paper), herein restricted to Marquette, Marquette County, Michigan (see Noonan 1991: 56). Lectotype (♂), designated by Noonan (1991: 53), in MCZ [# 5900].

Harpalus solutus Casey, 1914: 90. Type locality: «New Hampshire» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47784]. Synonymy established by Lindroth (1968: 774).

Distribution. This species is transcontinental in the north ranging from Newfoundland (Lindroth 1955a: 139; probably only as strays) to western Yukon Territory, south to northern Oregon along the west coast, southeastern Arizona and central New Mexico in the Rocky Mountains, the Black Hills in western South Dakota, northern Illinois, and southwestern Pennsylvania (Noonan 1991: 56) in the east [see Noonan 1991: Fig. 268]. The records from Connecticut (Britton 1920: 218; see Krinsky and

Oliver 2001: 5), Indiana (Blatchley 1910: 186), and southwestern Oklahoma (Kondratieff et al. 2005: 172) need confirmation.
Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CO, ID, IL, MA, ME, MI, MN, MT, ND, NH, NM, NV, NY, OR, PA, SD, VT, WA, WI, WY [CT, IN, OK]

Harpalus providens Casey, 1914

Harpalus viduus LeConte, 1865b: 103 [primary homonym of *Harpalus viduus* LeConte, 1859]. Type locality: «Rock Island [Rock Island County], Illinois» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5901].

Harpalus providens Casey, 1914: 90. Type locality: «New Jersey» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 472785]. Synonymy established by Lindroth (1968: 775).

Distribution. This eastern species ranges from southern Quebec to northern Minnesota, south to central Missouri and southwestern Virginia (Hoffman and Roble 2000: 38) [see Noonan 1991: Fig. 267]; also known from southwestern South Dakota (Larsen and Purrington 2010: 571). An old specimen simply labeled from Kansas and one labeled from Alabama are known (Noonan 1991: 51).
Records. CAN: ON, QC **USA**: CT, DC, IA, IL, IN, KY, MA, MD, ME, MI, MN, MO, NE, NH, NJ, NY, OH, PA, RI, SD, VA, VT, WI, WV [AL, KS]

[**nigritarsis group**]

Harpalus megacephalus LeConte, 1847

Harpalus megacephalus LeConte, 1847: 397. Type locality: «Lacum Superiorem» (original citation), herein restricted to Marquette, Marquette County, Michigan (see Hubbard and Schwarz 1878: 629). Lectotype (♂), designated by Noonan (1991: 108), in MCZ [# 5888].

Distribution. This species ranges from Maine (Piscataquis County, CNC) and northern New Brunswick (Webster and Bousquet 2008: 20) west to Manitoba and Minnesota (Lindroth 1968: 785), south to the Black Hills in western South Dakota (CMNH). The record from the Ungava Bay in Labrador (Sherman 1910: 181) is probably in error.
Records. CAN: MB, NB, ON, QC **USA**: ME, MI, MN, SD, WI
Note. This species is externally very similar to *H. fulvilabris* and Lindroth (1968: 783) included these two species in one species group. However, Noonan (1991) listed the two species in different species groups suggesting that the similarities are probably due to convergent evolution.

Harpalus nigritarsis Sahlberg, 1827

Harpalus nigritarsis C.R. Sahlberg, 1827b: 237. Type locality: «Lapponia» (original citation). Lectotype (♂), designated by Noonan (1991: 100), in ZMH.

Harpalus femoralis Motschulsky, 1844: 215 [primary homonym of *Harpalus femoralis* Stephens, 1828]. Type locality: «montagnes du Hamar-Daban au sud du Baïcal [Irkutsk Oblast, Russia]» (original citation). Lectotype (♂), designated by Kataev and Shilenkov (in Kryzhanovskij et al. 1995: 145), in ZMMU. Synonymy established by Kataev and Shilenkov (in Kryzhanovskij et al. 1995: 145).

Harpalus proximus LeConte, 1847: 398. Type locality: «Lacum Superiorem» (original citation). Lectotype (♀), designated by Noonan (1991: 100), in MCZ [# 5891]. Synonymy established by Lindroth (1968: 795).

Harpalus curtatus Mannerheim, 1853: 124. Type locality: «ad sinum Woskresensk [= Resurrection Bay] peninsulae Kenai [Alaska]» (original citation). Lectotype (♂), designated by Noonan (1991: 100), in MHNP. Synonymy established by Lindroth (1968: 795).

Harpalus recensus Casey, 1914: 99. Type locality: «W[est] S[ain]t Modest[e], Labrador» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47798]. Synonymy established, under the name *H. nigritarsis proximus* LeConte, by Lindroth (1954b: 141).

Harpalus mansuetus Casey, 1914: 104. Type locality: «Tallac [El Dorado County], California» (original citation). Lectotype (♂), designated by Noonan (1991: 100), in USNM [# 47810]. Synonymy established by Noonan (1991: 100).

Harpalus seclusus Casey, 1914: 106. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47813]. Synonymy established by Noonan (1991: 100).

Harpalus opicus Casey, 1914: 106. Type locality: «Placer Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 139), in USNM [# 47808]. Synonymy established by Noonan (1991: 100).

Harpalus fanaticus Casey, 1924: 102. Type locality: «The Mammoth, summit of Parowan M[oun]t[ain]s (10000 ft.), Utah» (original citation). Lectotype (♀), designated by Noonan (1991: 101), in USNM [# 47786]. Synonymy established by Noonan (1991: 101).

Harpalus parowanus Casey, 1924: 105. Type locality: «The Mammoth, Parowan M[oun]t[ain]s (10000 feet), Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47815]. Synonymy established, under the name *H. seclusus* Casey, by Lindroth (1968: 797).

Harpalus sibiricus Csiki, 1932a: 1141. Replacement name for *Harpalus femoralis* Motschulsky, 1844.

Distribution. This Holarctic species ranges in the Nearctic Region from Newfoundland to the Alaskan coast, south to the Sierra Nevada in California, southern Arizona, southeastern Nebraska, and New Hampshire and New York [see Noonan 1991: Figs 277 and 278]. The species is known only from a few scattered localities in the prairies. The record from southern Indiana (Wiedenmann et al. 1992: 286) needs confirmation. In the Palaearctic Region, the species is known from Sweden to the Far East and the Altai in Kazakhstan (Kataev et al. 2003: 379).

Records. FRA: PM **CAN**: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, QC, YT **USA**: AK, AZ, CA, CO, ID, MI, MN, MT, NE, NH, NM, NV, NY, OR, SD, UT, WA, WI, WY [IN] – **Holarctic**

Note. Noonan (1991: 102-104) recognized two morphs in this species, the *nigritarsis* and *seclusus* morphs, which Lindroth (1968) regarded as distinct species. Noonan stated that a broad zone of intergradation between the two morphs occurs in the northern part of the Rocky Mountains and adjacent mountains and in lowland areas of northwestern United States, western Canada, and Alaska.

[**spadiceus group**]

***Harpalus fraternus* LeConte, 1852**

Harpalus fraternus LeConte, 1852a: 185. Type locality: «Oregon» (original citation), herein restricted to Moro, Sherman County (see Casey 1924: 116, as *Euharpalops wadei*). Holotype [by monotypy; designated lectotype by Noonan 1991: 70] (♂) in MCZ [# 96].

Harpalus oblitus LeConte, 1859c: 2 [primary homonym of *Harpalus oblitus* Dejean, 1829]. Type locality: «Santa Fé [Santa Fe County, New Mexico]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5903]. Synonymy established by LeConte (1861b: 339), confirmed by Noonan (1991: 70).

Harpalus occidentalis Chaudoir, 1868b: 168. Type locality: «Vancouver [British Columbia]» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established by Horn (1875: 126), confirmed by Noonan (1991: 70).

Harpalus lecontei Casey, 1914: 117. Replacement name for *Harpalus oblitus* LeConte, 1859.

Harpalus fraternus nimius Casey, 1924: 100. Type locality: «Columbia River [Clatsop County], Oregon» (original citation). Holotype [by monotypy] (♂) in USNM [# 47781]. Synonymy established by Hatch (1953: 172), confirmed by Noonan (1991: 71).

Harpalus praestans Casey, 1924: 101. Type locality: «Provo Cañon [Utah County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47782]. Synonymy established by Lindroth (1968: 771).

Euharpalops wadei Casey, 1924: 116. Type locality: «Moro [Sherman County], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 138), in USNM [# 47746]. Synonymy established by Hatch (1953: 172), confirmed by Noonan (1991: 71).

Harpalus hoppingi Lindroth, 1968: 777. Type locality: «Vernon, B[ritish] C[olumbia]» (original citation). Holotype (♂) in CAS [# 9860]. Synonymy established by Noonan (1991: 71). Etymology. The specific name was proposed for George Redstone Hopping [1899-1974], entomologist for the Federal Government in Vernon and later in Calgary. Hopping published many papers on forest entomology and management of stands subject to insect attack but also on taxonomy of various groups of beetles including Cerambycidae and Scolytinae.

Distribution. This western species occurs from Vancouver Island to southeastern Manitoba (Roughley et al. 2010: 230), north to northeastern British Columbia, south to western Texas, southern Arizona, and the White Mountains in California, east to eastern Nebraska [see Noonan 1991: Fig. 271].
Records. CAN: AB, BC (VCI), MB, SK **USA**: AZ, CA, CO, ID, KS, MT, NE, NM, NV, OR, SD, TX, UT, WA, WY
Note. Noonan (1991: 75) recognized two forms within this species, a southern one, known as *H. lecontei*, that Lindroth (1968) treated as a distinct species, and a more northern one which corresponds to *H. fraternus* LeConte *sensu* Lindroth.

Harpalus fulvilabris Mannerheim, 1853

Harpalus fulvilabris Mannerheim, 1853: 123. Type locality: «in ora orientali insulae Kadjak [Alaska]» (original citation). Lectotype (♂), designated by Lindroth (1968: 783), in ZMH [# 2348].
Harpalus subaeneus Mannerheim, 1853: 123. Type locality: «in ora orientali insulae Kadjak [Alaska]» (original citation). Syntype(s) probably in ZMH. **New synonymy**. Note. This taxon was described by Mannerheim (1853: 123) as "var[iety] b" of *Harpalus fulvilabris* Mannerheim, 1853.

Distribution. This species is transcontinental in the north, ranging from Newfoundland to the Aleutian Islands in Alaska, south to the Lillooet Land District in British Columbia, north-central New Mexico along the Rocky Mountains, the Black Hills in western South Dakota, and New England in the east [see Noonan 1991: Fig. 276].
Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CO, ME, MI, MN, NH, NM, NY, SD, VT, WI

Harpalus indigens Casey, 1924

Harpalus indigens Casey, 1924: 114. Type locality: «Monmouth [Kennebec County], Maine» (original citation). Holotype [by monotypy] (♂) in USNM [# 47863].
Opadius piperi Casey, 1924: 93. Type locality: «Grayline, near Bay City [Bay County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 139), in USNM [# 47740]. Synonymy established by Lindroth (1968: 782).
Harpalus beatulus Casey, 1924: 114. Type locality: «Marquette [Marquette County], Michigan» (original citation). Holotype [by monotypy] (♂) in USNM [# 47862]. Synonymy established by Lindroth (1968: 782).

Distribution. This species ranges from the Nova Scotia Peninsula (Christopher G. Majka pers. comm. 2008) to southern South Dakota (Kirk and Balsbaugh 1975: 30), north to southeastern Manitoba (Roughley et al. 2010: 230), south to Nebraska and southern Pennsylvania (Noonan 1991: 85; Fig. 272).
Records. CAN: MB, NB, NS, ON, QC **USA**: CT, IA, IL, MA, ME, MI, NE, NH, NJ, NY, PA, SD, VT, WI

***Harpalus laevipes* Zetterstedt, 1828**

Harpalus laevipes Zetterstedt, 1828: 26. Type locality: «Juckasjervi Lapponiae Tornensis [Sweden]; Bossekop [= Bossogohppi, Finnmark, Norway] prope Altengaard Finmarkiae» (original citation). Four syntypes in ZMLS (Lindroth 1938: 18).

Harpalus quadripunctatus Dejean, 1829: 326. Type locality: «Styrie [Austria]» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1991: 58), in MHNP. Synonymy established by Schaum (1860: 596).

Harpalus impressipennis Motschulsky, 1844: 213 [primary homonym of *Harpalus impressipennis* Dejean, 1829]. Type locality: «Tourkinsk [= Turka] sur le bord oriental du [Lac] Baïcal» (original citation). Three syntypes in ZMMU (Keleinikova 1976: 200). Synonymy established by Kryzhanovskij et al. (1995: 142).

Harpalus rufimanus LeConte, 1847: 402 [secondary homonym of *Harpalus rufimanus* (Marsham, 1802)]. Type locality: «Lacum Superiorem» (original citation). Lectotype (♂), designated by Noonan (1991: 58), in MCZ [# 5897]. Synonymy established, under the name *H. egregius* Casey, by Lindroth (1968: 776).

Harpalus alienus LeConte, 1879d: 508 [primary homonym of *Harpalus alienus* Bates, 1878]. Type locality: «[La] Veta Pass [Costilla County, Colorado]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5912]. Synonymy established, under the name *H. egregius* Casey, by Lindroth (1968: 776).

Harpalus sachalinensis Matsumura, 1911: 110. Type locality: «Kusunnai [Sakhalin, Russia]» (original citation). Holotype (♀) location unknown. Synonymy established by Kataev (in Kryzhanovskij et al. 1995: 142).

Harpalus pimalicus Casey, 1914: 87. Type locality: «base of Humphrey's Peak [Coconino County], Arizona» (original citation). Lectotype (♂), designated by Noonan (1991: 58), in USNM [# 47774]. Synonymy established, under the name *H. quadripunctatus* Dejean, by Noonan (1991: 58).

Harpalus egregius Casey, 1914: 88. Replacement name for *Harpalus alienus* LeConte, 1879.

Harpalus instructus Casey, 1924: 107. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♂), designated by Lindroth (1975: 138), in USNM [# 47833]. Synonymy established, under the name *H. egregius* Casey, by Lindroth (1968: 776).

Harpalus motschoulskyanus Schauberger, 1928: 80. Replacement name for *Harpalus impressipennis* Motschulsky, 1844.

Harpalus baergi Csiki, 1932a: 1180. Replacement name for *Harpalus rufimanus* LeConte, 1847.

Harpalus cascadiensis Hatch, 1949a: 85. Type locality: «Van Horn, Skagit Co[unty], Wash[ington]» (original citation). Holotype (♂) in USNM. Synonymy established, under the name *H. egregius* Casey, by Lindroth (1968: 776).

Distribution. This Holarctic species ranges in North America from Newfoundland to southeastern Alaska (Lindroth 1968: 777), south to west-central Oregon, southern Nevada, southeastern Arizona and south-central New Mexico along the Rocky Mountains, the lower peninsula of Michigan, and southern New York [see Noonan 1991: Fig. 269]. The records from southern Indiana (Wiedenmann et al. 1992: 282,

as *H. egregius*) and "Iowa" (Jaques and Redlinger 1946: 297, as *H. rufimanus*) need confirmation.
Records. CAN: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CO, ME, MI, MN, MT, NH, NM, NV, NY, OR, UT, WA, WI [IA, IN] – **Holarctic**

Harpalus lewisii LeConte, 1865

Harpalus lewisii LeConte, 1865b: 103. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation for the lectotype). Lectotype (♂), designated by Noonan (1991: 62), in MCZ [# 5899]. Etymology. The specific name was proposed for Samuel Lewis, a physician from Philadelphia who had an interest in North American Coleoptera. Lewis provided LeConte and other coleopterists with fine specimens from many parts of the continent.
Harpalus aesopus Casey, 1914: 117. Type locality: «Plattsburg [Clinton County], New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47780]. Synonymy established by Casey (1924: 101), confirmed by Lindroth (1968: 773).

Distribution. This species ranges from Nova Scotia to central Alberta and southeastern Northwest Territories, south to southern Wisconsin and Connecticut [see Noonan 1991: Fig. 270]. All known sites in the United States are east of the Mississippi.
Records. CAN: AB, MB, NB, NS, NT, ON, QC, SK **USA**: CT, IN, MA, ME, MI, MN, ND, NH, NY, VT, WI

Harpalus reversus Casey, 1924

Harpalus funestus LeConte, 1847: 402 [primary homonym of *Harpalus funestus* Audinet-Serville, 1821]. Type locality: «prope Long's Peak [Boulder County, Colorado], Rocky Mountains» (original citation). Lectotype (♂), designated by Noonan (1991: 66), in MCZ [# 5902].
Harpalus reversus Casey, 1924: 103. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47794]. Synonymy established by Lindroth (1968: 779).
Harpalus funerarius Csiki, 1932a: 1182. Replacement name for *Harpalus funestus* LeConte, 1847.

Distribution. With the exception of two specimens labeled from "British Columbia" and "Victoria" on Vancouver Island (Noonan 1991: 70), this species occurs east of the Rocky Mountains from central Alberta to the Quebec City area (Larochelle 1975: 87, map 302), south to Massachusetts, northwestern Pennsylvania (Erie County, Robert L. Davidson pers. comm. 2012), southern Kansas, central New Mexico, and southeastern Arizona [see Noonan 1991: Fig. 271]. This species is much more abundant in the prairies of central North America and both Lindroth

(1968: 779; 1971: 1456, 1457) and Noonan (1991: 69) concluded that the species was originally an inhabitant of the prairies that expanded its range eastwards after humans cut down forests in the east.

Records. CAN: AB, MB, ON, QC, SK **USA**: AZ, CO, IA, KS, MA, ME, MI, MN, MT, ND, NE, NH, NM, NY, PA, SD, VT, WI, WY [BC]

Harpalus spadiceus Dejean, 1829

Harpalus spadiceus Dejean, 1829: 336. Type locality: «Amérique septentrionale» (original citation), restricted to «White Sulphur Springs [Greenbrier County], W[est] Virg[ina]» by Lindroth (1968: 780). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 27).

Harpalus comis Haldeman, 1843b: 301 [*nomen dubium*]. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Syntype(s) presumably lost. Synonymy established with doubt by LeConte (1863b: 13).

Harpalus carolinae Schaeffer, 1910: 402. Type locality: «Black Mountains, North Carolina» (original citation). Lectotype (♂), designated by Erwin and House (1978: 238), in USNM [# 42509]. Synonymy established by Noonan (1991: 86).

Distribution. This eastern species ranges from southern Quebec, southern Ontario, and the New England states south through the Appalachian mountains to northern Georgia [see Noonan 1991: Figs 273-275]. The record from southwestern Manitoba (Stjernberg 2011: 70) is probably in error.

Records. CAN: ON, QC **USA**: CT, DC, DE, GA, KY, MA, NC, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WV

Note. Noonan (1991: 87-88) recognized two morphs for this species, the *spadiceus* and *carolinae* morphs, that Lindroth (1968: 780-781) treated as distinct species. According to Noonan (1991: 88), the two morphs intergrade over an area extending southwards from Virginia to Georgia.

Harpalus ventralis LeConte, 1847

Harpalus ventralis LeConte, 1847: 399. Type locality: «prope Long's Peak [Boulder County, Colorado]» (original citation). Lectotype (♀), designated by Noonan (1991: 80), in MCZ [# 5892].

Harpalus electus Casey, 1924: 115. Type locality: «Edmonton, Alberta» (original citation). Holotype [by monotypy] (♀) in USNM [# 47861]. Synonymy established by Lindroth (1968: 781).

Distribution. This species ranges from central Alberta to southeastern Manitoba (Roughley et al. 2010: 230), south to western Kansas, northern New Mexico, and northeastern Utah [see Noonan 1991: Fig. 272].

Records. CAN: AB, MB, SK **USA**: CO, KS, MN, MT, ND, NE, NM, SD, UT, WY

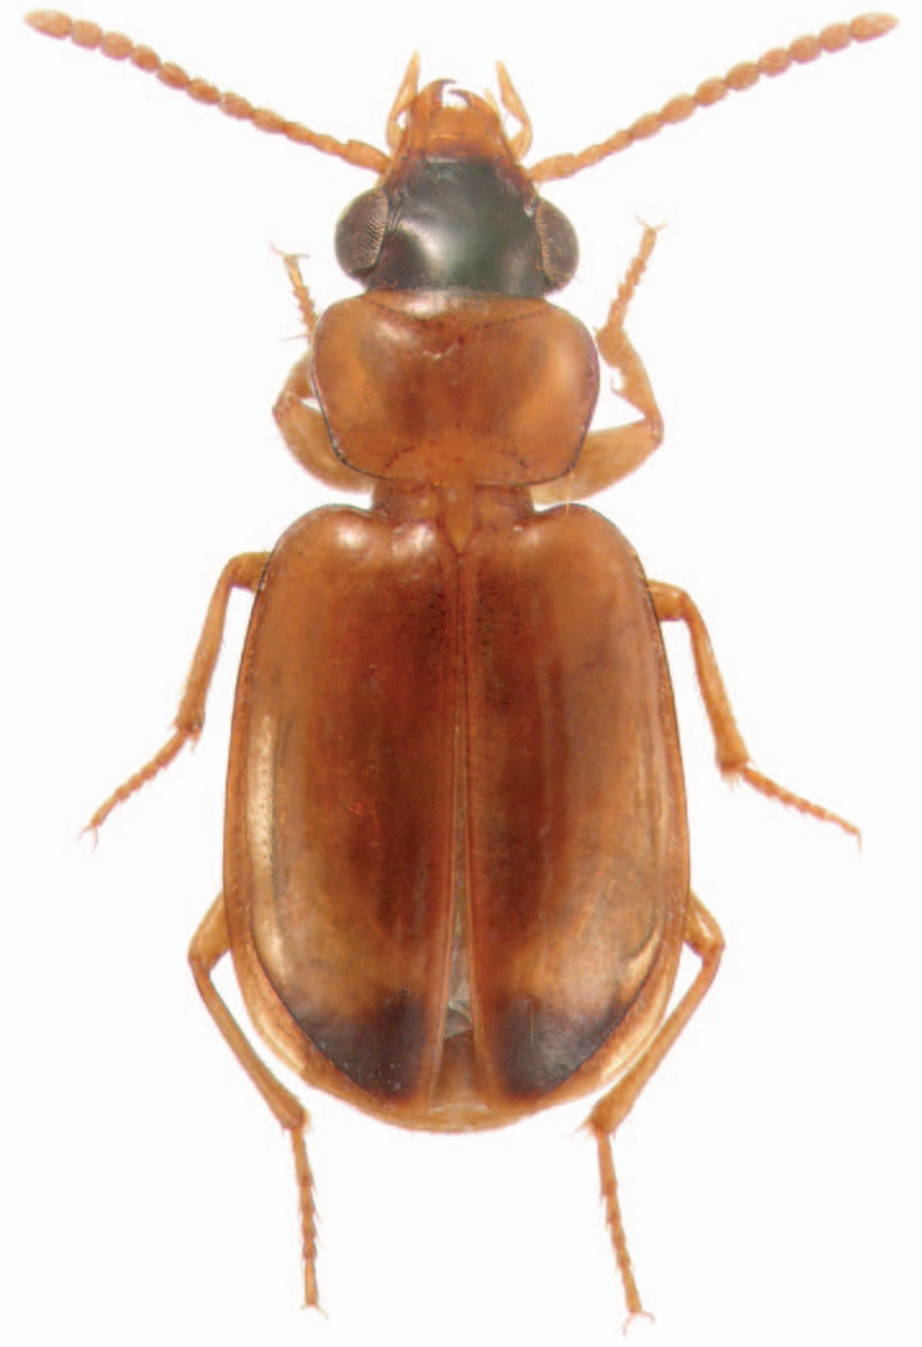

Figure 38. *Perigona nigriceps* (Dejean). While most adventive carabid species have been introduced from Europe, this species, which is now subcosmopolitan, is probably native from southern Asia where it is common around the Indian Ocean. Contrary to European adventive species which have been introduced to North America through ballast and nursery stocks, this species was probably transported around the world among stored products on ships.

Subgenus *Harpalus* Latreille, 1802

Harpalus Latreille, 1802: 92. Type species: *Carabus proteus* Paykull, 1790 (= *Carabus affinis* Schrank, 1781) designated by Andrewes (1935: 19).

Proteonus Fischer von Waldheim, 1829a: 21. Type species: *Carabus distinguendus* Duftschmid, 1812 designated by Bousquet (2002c: 178). Synonymy established by Bousquet (2002c: 178).

Amblystus Motschulsky, 1864: 209. Type species: *Carabus rubripes* Duftschmid, 1812 by original designation. Synonymy established by Tschitschérine (1901: 240).

Harpalomerus Casey, 1914: 76. Type species: *Harpalus amputatus* Say, 1830 designated by Lindroth (1968: 769). Synonymy established by Kataev et al. (2003: 371). Etymology. From the generic name *Harpalus* [*q.v.*] and the Greek *meros* (part, segment) [masculine].

Diversity. This subgenus includes native species in North America, Mexico, and the Palaearctic and Afrotropical Regions. The total number of species cannot be determined at this time. The North American fauna is represented by 17 species, of which two are adventive.

Identification. Noonan (1991) revised all the North American species except the two adventive ones but his key (pages 20-45) included all 17 species. Lindroth (1968) covered all but three (*H. balli*, *H. martini*, and *H. rubripes*) species in his monograph of the Canadian Carabidae.

[**affinis group**]

***Harpalus affinis* (Schrank, 1781)**

Carabus aeneus Fabricius, 1775: 245 [primary homonym of *Carabus aeneus* DeGeer, 1774]. Type locality: «Lipsia [= Leipzig, Saxony, Germany]» (original citation). Lectotype (♂), designated by Lindroth (1968: 768), in ZMUC.

Carabus affinis Schrank, 1781: 212. Type locality: Austria (inferred from title of the book). Syntype(s) probably lost (Lindroth 1968: 768). Synonymy established by Schönherr (1806: 204).

Carabus proteus Paykull, 1790: 115. Type locality: «Svecia australi» (original citation). Syntype(s) probably in NRSS. Synonymy established by Fabricius (1792: 156).

Harpalus viridi-aeneus Palisot de Beauvois, 1811: 108. Type locality: «Pensylvanie» (original citation). Syntype(s) probably lost (Lindroth 1968: 768). Synonymy established by Hatch (1949a: 84).

Harpalus viridis Say, 1823a: 31. Type locality: «East Boston, Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32972]. Synonymy established by Brullé (1835c: 287).

Harpalus assimilis Dejean, 1829: 272. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 26). Synonymy established, under the name *H. viridis* Say, by Say (1830c: 19), confirmed by Lindroth (1955b: 26).

Harpalus convictor Casey, 1884b: 12. Type locality: «Willets Point [Queens County], Long Island [New York]» (original citation). One syntype in USNM [# 47747]. Synonymy established, under the name *H. viridiaeneus* Palisot de Beauvois, by Horn (1885b: 109), confirmed by Lindroth (1954b: 141).

Harpalus canonicus Casey, 1884b: 12. Type locality: «Rhode Island» (original citation). One syntype in USNM [# 47748]. Synonymy established, under the name *H. viridiaeneus* Palisot de Beauvois, by Horn (1885b: 109), confirmed by Lindroth (1968: 768).

Harpalus lustralis Casey, 1884b: 12. Type locality: «New York State» (original citation). One syntype in USNM [# 47749]. Synonymy established, under the name *H. viridiaeneus* Palisot de Beauvois, by Horn (1885b: 109), confirmed by Lindroth (1968: 768).

Harpalus aenescens Casey, 1884b: 12. Type locality: «Rhode Island; Willets Point, Long Island» (original citation). One syntype [4 originally cited] in USNM [# 47750]. Synonymy established, under the name *H. viridiaeneus* Palisot de Beauvois, by Horn (1885b: 109), confirmed by Lindroth (1968: 768).

Distribution. This Palaearctic species is adventive in North America where it is known in the east from Newfoundland (Lindroth 1955a: 137) to eastern Minnesota (Ramsey County, CMNH), south to "Kansas" (Lindroth 1955a: 137) and northern (Tucker and Preston Counties, CMNH) and eastern West Virginia (Pendleton County, Foster F. Purrington pers. comm. 2009). The record from southern Florida (Peck and Thomas 1998: 21) may represent a separate introduction. In the west, the species ranges from Alberta and British Columbia, including Vancouver Island (Lindroth 1968: 769), south to western Oregon (Clackamas, Linn, and Yamhill Counties, CMNH) and southwestern Idaho (Owyhee County, Ken Karns pers. comm. 2009); the species is also found in southeastern Arizona (Cochise County, CNC). The first inventoried specimen caught in the east was collected prior to 1798 in Pennsylvania (Palisot de Beauvois, 1811: 108, as *H. viridiaeneus*). The species is also adventive in New Zealand since 1975 (Larochelle and Larivière 2005: 52).

Records. FRA: PM **CAN**: AB, BC (VCI), LB, NB, NF, NS (CBI), ON, PE, QC **USA**: AZ, CT, DE, FL, IA, ID, IL, IN, KS, MA, MD, ME, MI, MN, MO, NH, NJ, NY, OH, OR, PA, RI, VA, VT, WA, WI, WV – **Adventive**

Harpalus rubripes (Duftschmid, 1812)

Carabus rubripes Duftschmid, 1812: 77. Type locality: «um Linz [Austria]» (original citation). Syntype(s) probably lost.

Harpalus rufipes Motschulsky, 1844: 212 [secondary homonym of *Harpalus rufipes* (DeGeer, 1774)]. Type locality: «Alpes du Caucase» (original citation). Lectotype (♀), designated by Kataev (1989: 200), in ZMMU. Synonymy established by Kataev (1989: 199).

Harpalus hyperboreus Motschulsky, 1844: 214. Type locality: «bords du fleuve Selenga à Tchertovkino [Siberia, Russia]» (original citation). Lectotype, designated by Kataev (1989: 200), in ZMMU. Synonymy established by Kataev (1989: 199).

Distribution. This Palaearctic species is adventive in North America where it is known from Nova Scotia (Majka et al. 2006: 606) and Prince Edward Island (Majka et al. 2008: 132) to eastern Ontario (near Reids Mills, CNC), including southern Quebec (Chantal 1994: 29), south to eastern Pennsylvania (Davidson et al. 2011: 517). The first inventoried specimen collected on this continent was found in New Hampshire in 1981 (Bell and Davidson 1987: 56).
Records. CAN: NB, NS, ON, PE, QC **USA**: CT, MA, ME, NH, NY, PA, RI, VT – **Adventive**

[**amputatus group**]

***Harpalus amputatus amputatus* Say, 1830**

Harpalus amputatus Say, 1830c: 19. Type locality: «La Junta, Bent Co[unty], Col[orado]» (neotype label), not «San Luis Valley, Colo[rado]» as specified by Lindroth and Freitag (1969: 352). Neotype (♂), designated by Lindroth and Freitag (1969: 352), in MCZ [# 32971]. Note. The type locality of *H. amputatus* was discussed by Noonan (1991). «N[orth] W[est] Territory» was the area originally cited by Say (1830c: 19).

Harpalus rotundicollis Kirby, 1837: 44. Type locality: northern parts of British America (inferred from title of the book). Lectotype (♀), designated by Noonan (1991: 174), in BMNH. Synonymy established by Horn (1876e: 130), confirmed by Lindroth (1953b: 174).

Harpalus stephensii Kirby, 1837: 45. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Holotype [by monotypy] (♂) in BMNH (Noonan 1991: 174). Synonymy established by LeConte (1847: 397), confirmed by Noonan (1991: 175).

Harpalus transversus Casey, 1914: 77. Type locality: near Santa Fé, Santa Fe County, New Mexico (lectotype label according to Lindroth 1975: 138). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47751]. Synonymy established by Lindroth (1968: 769).

Harpalus papagonalis Casey, 1914: 77. Type locality: «Arizona » (original citation). Holotype [by monotypy] (♀) in USNM [# 47753]. Synonymy established by Lindroth (1968: 769).

Harpalus bracatus Casey, 1924: 95. Type locality: «Miner's Peak [Iron County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 138), in USNM [# 47752]. Synonymy established by Lindroth (1968: 769).

Harpalus ancillaris Casey, 1924: 95. Type locality: «Columbia River [Clatsop County], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 138), in USNM [# 47754]. Synonymy established by Hatch (1953: 170), confirmed by Noonan (1991: 175).

Harpalus cupreolatus Casey, 1924: 96. Type locality: «Pullman [Whitman County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 138), in USNM [# 47756]. Synonymy established by Hatch (1953: 170), confirmed by Noonan (1991: 175).

Harpalus cuculus Casey, 1924: 96. Type locality: «Las Vegas [San Miguel County], New Mexico» (original citation). Holotype [by monotypy] (♂) in USNM [# 47755]. Synonymy established by Lindroth (1968: 769).

Distribution. This species is found west of the Mississippi River from northeastern Alaska to northwestern Minnesota, south to the highlands of central Mexico (Noonan 1991: 179) and southern California [see Noonan 1991: Fig. 289].
Records. CAN: AB, BC, MB, NT, SK, YT **USA**: AK, AZ, CA, CO, ID, KS, MN, MT, ND, NE, NM, NV, OK, OR, SD, TX, UT, WA, WY – Mexico
Note. Three subspecies of *H. amputatus* are known from Asia (see Kataev et al. 2003: 372).

[**atrichatus group**]
***Harpalus atrichatus* Hatch, 1949**

Harpalus atrichatus Hatch, 1949a: 86. Type locality: «Ocean Park [Pacific County], Wash[ington] (original citation). Holotype (♂) in USNM.

Distribution. This species is known only from a few scattered localities from southwestern British Columbia, including Vancouver Island, south to west-central Oregon, east to northern Idaho [see Noonan 1991: Fig. 291].
Records. CAN: BC (VCI) **USA**: ID, OR, WA

[**cautus group**]
***Harpalus balli* Noonan, 1991**

Harpalus balli Noonan, 1991: 151. Type locality: «Mantoloking, Ocean County, New Jersey» (original citation). Holotype (♂) in MCZ [# 35204].

Distribution. This species is known from only six specimens collected near the coast in Massachusetts and New Jersey [see Noonan 1991: Fig. 283]. The collection date of the last known specimen is 1932 and Noonan (1991: 153) believes that it "might be extinct because of destruction of ocean side habitats."
Records. USA: MA, NJ

***Harpalus cautus* Dejean, 1829**

Harpalus cautus Dejean, 1829: 367. Type locality: «Californie» (original citation), herein restricted to Point Reyes National Seashore, Marin County (see Noonan 1991: 142). Lectotype (♀), designated by Noonan (1991: 138), in MHNP.
Harpalus albionicus Mannerheim, 1843: 213 [*nomen dubium*]. Type locality: «California ad Ross [farming community about 75 miles north of San Francisco along the coast]» (original citation). Syntype(s) presumably lost (Lindroth 1968: 802). Synonymy established with doubt by LeConte (1865b: 102).

Harpalus advena LeConte, 1852a: 185. Type locality not stated; «Oregon» selected by Noonan (1991: 138). Holotype [by monotypy] (♂) in MCZ [# 95]. Synonymy established by Casey (1914: 95), confirmed by Lindroth (1968: 802).

Harpalus defixus Walker, 1866: 316 [*nomen dubium*]. Type locality: British Columbia (inferred from title of the book). Syntype(s) lost (Lindroth 1968: 802; Noonan 1991: 138). Synonymy established with doubt by LeConte (1870: 400).

Harpalus crenatellus Casey, 1914: 94. Type locality: «California» (original citation). Holotype [by monotypy] (♂) in USNM [# 47788]. Synonymy established by Lindroth (1968: 802).

Harpalus oregonensis Casey, 1914: 94. Type locality: «Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47789]. Synonymy established by Hatch (1953: 168), confirmed by Lindroth (1968: 802).

Harpalus columbianus Casey, 1924: 104. Type locality: «Goldstream, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47809]. Synonymy established by Hatch (1953: 168), confirmed by Lindroth (1968: 802).

Distribution. This western species occurs from central Alaska south to southern California, southeastern Arizona, and south-central Colorado, east to western Nebraska [see Noonan 1991: Fig. 286]. The records from northeastern Kansas (Popenoe 1877: 24) and Beaver Island in Michigan (Hatch 1925: 554) are probably in error. According to Noonan (1991: 143), this species is one of the most abundant *Harpalus* along the west coast. **Records. CAN**: AB, BC (VCI) **USA**: AK, AZ, CA, CO, ID, MT, NE, NV, OR, UT, WA, WY

Harpalus ellipsis LeConte, 1847

Harpalus ellipsis LeConte, 1847: 400. Type locality: «Territorio Missouriensi» (original citation), herein restricted to Halsey, Thomas County, Nebraska (see Noonan 1991: 148). Lectotype (♂), designated by Noonan (1991: 143), in MCZ [# 5893].

Harpalus vespertinus Casey, 1884b: 10. Type locality: «Arizona» (original citation). Lectotype [as holotype] (♂), designated by Noonan (1991: 143), in USNM [# 47826]. Synonymy established by Noonan (1991: 143).

Harpalus fractus Casey, 1924: 107. Type locality: «Akron [Washington County], Colorado» (original citation). Lectotype (♂), designated by Noonan (1991: 143), in USNM [# 47838]. Synonymy established by Noonan (1991: 143).

Harpalus provensis Casey, 1924: 113. Type locality: «North Fork, Provo Cañon [Utah County], Utah» (original citation). Lectotype (♂), designated by Noonan (1991: 143), in USNM [# 47834]. Synonymy established by Noonan (1991: 143).

Distribution. The range of this species extends from central Alberta and southern Saskatchewan south to southwestern Texas and southeastern Arizona; seemingly isolated in Minnesota (Gandhi et al. 2005: 930) and northwestern Oregon [see Noonan 1991: Fig. 287]; also recorded from northern Sonora in Mexico (Bates 1884: 271).

Records. CAN: AB SK **USA**: AZ, CO, ID, KS, MN, MT, NE, NM, OR, SD, TX, UT, WY – Mexico

Harpalus innocuus LeConte, 1863

Harpalus innocuus LeConte, 1863c: 17. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5894].

Harpalus persolus Casey, 1914: 96. Type locality: «Oregon» (original citation). Lectotype (♀), designated by Lindroth (1975: 139), in USNM [# 47787]. Synonymy established by Lindroth (1968: 800).

Harpalus macilentus Casey, 1914: 96. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Noonan (1991: 155), in USNM [# 47822]. Synonymy established by Noonan (1991: 155).

Harpalus fugitans Casey, 1914: 98. Type locality: «Frazier Valley, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47796]. Synonymy established by Lindroth (1968: 800).

Harpalus paululus Casey, 1914: 110. Type locality: «Eldora [Boulder County], Colorado» (original citation). Lectotype (♂), designated by Noonan (1991: 155), in USNM [# 47821]. Synonymy established by Noonan (1991: 155).

Harpalus intactus Casey, 1924: 112 [primary homonym of *Harpalus intactus* Casey, 1914]. Type locality: «Marquette [Marquette County], Michigan» (original citation). Holotype [by monotypy] (♂) in USNM [# 47843]. Synonymy established by Lindroth (1968: 800).

Distribution. This species ranges from western Quebec to Vancouver Island, north to southern Northwest Territories, south to the Sierra Nevada in California, southern Colorado in the Rocky Mountains, southwestern South Dakota (Custer County, Peter W. Messer pers. comm. 2011), the upper peninsula of Michigan, and southwestern Pennsylvania [see Noonan 1991: Fig. 288]. Several specimens simply labeled from "New Mexico" are known (Noonan 1991: 159). East of the Rocky Mountains, the species is known only from a few scattered localities.
Records. CAN: AB, BC (VCI), NT, ON, QC, SK **USA**: CA, CO, ID, MI, MN, MT, OR, PA, SD, WA, WI, WY [NM]

Harpalus ochropus Kirby, 1837

Harpalus ochropus Kirby, 1837: 42. Type locality: northern parts of British America (inferred from title of the book), restricted to «Nipigon, Ont[ario]» by Lindroth (1968: 808)]. Lectotype [as holotype] (♂), designated by Noonan (1991: 149), in BMNH.

Distribution. The range of this species extends from Alaska (Lindroth 1968: 808) east to Anticosti Island in Quebec, south to northeastern Minnesota (Purrington and Maxey 2007: 219) and the southern part of the Prairie Provinces [see Noonan 1991:

Fig. 287]. The records from Colorado (Wickham 1902: 242) and New Mexico (Fall and Cockerell 1907: 161) are likely in error.
Records. CAN: AB, BC, MB, ON, QC, SK, YT **USA**: AK, MN

***Harpalus vittatus alaskensis* Lindroth, 1968**

Harpalus alaskensis Lindroth, 1968: 801. Type locality: «7-15 mi[les] N[orth] of New Rampart House, Alaska» (original citation). Holotype (♂) in USNM [# 75705]. Note. New Rampart House was a trading post on the Porcupine River in Yukon Territory near the border with Alaska.

Distribution. This Holarctic subspecies ranges from eastern Siberia (Kataev et al. 2003: 384) to the Alaska-Yukon border along the Porcupine River. On this continent, the subspecies is known from extant specimens only from the type locality. It was cited as a dominant taxon in a late Pleistocene site in the Klondike region of Yukon Territory (Zazula et al. 2006: 265).
Records. USA: AK – **Holarctic**
Note. This taxon was originally described as a distinct species but Kataev (1990: 396) listed it as a subspecies of *H. vittatus* Gebler. The nominotypical subspecies and *H. vittatus kiselevi* Kataev and Shilenkov are found in Asia (Kataev et al. 2003: 384).

[**obnixus group**]
***Harpalus obnixus* Casey, 1924**

Harpalus obnixus Casey, 1924: 105. Type locality: «Provo Cañon [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47837].
Harpalus antiphon Casey, 1924: 106. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Lectotype (♀), designated by Noonan (1991: 160), in USNM [# 47839]. Synonymy established by Noonan (1991: 160).

Distribution. This species ranges from southwestern Alberta and British Columbia (Noonan 1991: 162-163) south to west-central Oregon, northeastern Nevada, and northwestern New Mexico (Casey 1924: 106, as *H. antiphon*) [see Noonan 1991: Fig. 290]. One old specimen simply labeled from Nebraska is known (Noonan 1991: 163).
Records. CAN: AB, BC **USA**: CO, ID, MT, NM, NV, OR, UT, WA, WY [NE]

***Harpalus plenalis* Casey, 1914**

Harpalus plenalis Casey, 1914: 108. Type locality: «New Brunswick» (original citation), herein restricted to Pennfield, Charlotte County (CNC). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47819].
Harpalus latebricola Casey, 1914: 109. Type locality: «Las Vegas [San Miguel County], New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47845]. Synonymy established by Lindroth (1968: 807).

Harpalus modulatus Casey, 1924: 112. Type locality: «F[or]t Coulonge, Quebec» (original citation). Holotype [by monotypy] (♀) in USNM [# 47844]. Synonymy established by Lindroth (1954b: 142).

Distribution. This species is known from scattered localities from Newfoundland (Lindroth 1955a: 143) to southern British Columbia, north to southwestern Northwest Territories, south to central Arizona, north-central New Mexico, eastern Texas, and southwestern North Carolina [see Noonan 1991: Fig. 292].
Records. CAN: BC, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AR, AZ, CO, ID, IL, KS, MA, ME, MI, NC, NH, NJ, NM, NY, TX, VA, VT, WI

[**opacipennis group**]

***Harpalus opacipennis* (Haldeman, 1843)**

Ophonus opacipennis Haldeman, 1843b: 301. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Lectotype (♀), designated by Noonan (1991: 169), in MCZ [# 28698].

Harpalus oodioides Chaudoir, 1868b: 168. Type locality: «terre de Rupert [former name for the entire drainage basin of Hudson's Bay, thus including most of northern Quebec, Ontario, Manitoba, etc. (Lamb 1971)]» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established by Lindroth (1968: 804).

Harpalus lacustris Casey, 1914: 111. Type locality: «Bayfield [Bayfield County], Wisconsin» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47823]. Synonymy established by Lindroth (1968: 805).

Harpalus coloradensis Casey, 1914: 111. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Noonan (1991: 169), in USNM [# 47824]. Synonymy established by Noonan (1991: 169).

Harpalus mobilis Casey, 1914: 112. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Noonan (1991: 169), in USNM [# 47827]. Synonymy established by Noonan (1991: 169).

Harpalus leviceps Casey, 1924: 112. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47846]. Synonymy established by Lindroth (1968: 805).

Distribution. This species ranges from southern New Brunswick (Webster and DeMerchant 2012: 6) to south-central Alaska (Lindroth 1968: 806), south to the Sierra Nevada in California, central Arizona and central New Mexico along the Rocky Mountains, southern Indiana, and Maryland (Erwin 1981b: 175) [see Noonan 1991: Fig. 296].
Records. CAN: AB, BC (VCI), MB, NB, NT, ON, QC, SK, YT **USA**: AK, AZ, CA, CO, ID, IN, MA, MD, ME, MI, MN, MT, ND, NM, NV, NY, OH, OR, PA, SD, UT, VT, WA, WI, WY

[**somnulentus group**]

***Harpalus herbivagus* Say, 1823**

Harpalus herbivagus Say, 1823a: 29. Type locality: «Rumney [Grafton County], N[ew] H[ampshire]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 353), in MCZ [# 32769].

Ophonus mutabilis Haldeman, 1843b: 301. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Lectotype (♂), designated by Noonan (1991: 181), in MCZ [# 34542]. Synonymy established by LeConte (1863b: 13), confirmed by Lindroth (1968: 794).

Harpalus foveicollis LeConte, 1847: 399. Type locality: «fines Aquilones, provinciae Maine» (original citation). Lectotype (♂), designated by Noonan (1991: 181), in MCZ [# 5890]. Synonymy established by Lindroth (1954b: 141).

Harpalus assensus Casey, 1924: 107. Type locality: «Boulder Co[unty], Colorado» (original citation). Holotype [by monotypy] (♂) in USNM [# 47828]. Synonymy established by Lindroth (1968: 794).

Distribution. The range of this species extends from Nova Scotia to south-central British Columbia, north to central Alberta, south to southern Oregon, east-central Arizona and central New Mexico along the Rocky Mountains, the Texas Panhandle (Michels et al. 2010: 743), northern Missouri, and southern Georgia [see Noonan 1991: Fig. 293]. The record from "Florida" (Leng 1920: 71) needs confirmation.
Records. CAN: AB, BC, MB, NB, NS, ON, PE, QC, SK **USA**: AL, AR, AZ, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY [FL]

***Harpalus martini* Van Dyke, 1926**

Harpalus martini Van Dyke, 1926a: 124. Type locality: «Bear Lake [= Baldwin Lake, San Bernardino County (see Noonan 1991: 190)], San Bernardino Mountains, California» (original citation). Holotype (♂) in CAS [# 1867]. Etymology. The specific name was proposed for James Otis Martin [1870-1951], a coleopterist by avocation. Martin served as a preparator of insects at the California Academy of Sciences from 1924 to 1932. His collection of 12,000 well-prepared beetles, most from western North America, was presented to the California Academy of Sciences in 1928.

Distribution. This species is known from only 16 specimens (including 15 ♂) from mountains in southern California [see Noonan 1991: Fig. 287] and could be either endangered or extinct according to Noonan (1991: 189). The last known specimen found was collected in 1919.
Records. USA: CA

Harpalus solitaris Dejean, 1829

Carabus fuliginosus Duftschmid, 1812: 83 [primary homonym of *Carabus fuliginosus* Panzer, 1809]. Type locality: «um Linz [Austria]» (original citation). Syntype(s) probably lost (Lindroth 1968: 798).

Harpalus lapponicus Zetterstedt, 1828: 26 [primary homonym of *Harpalus lapponicus* Sahlberg, 1827]. Type locality: «Lapponia Tornensi; Juckasjervi [Sweden]» (original citation). Five syntypes in ZMLS (Lindroth 1938: 18). Synonymy established by Schaum (1860: 596). Note. This name was listed as *nomen oblitum* by Kataev et al. (2003: 382) and *Harpalus solitaris* Dejean, 1829 as *nomen protectum*. Since *Harpalus lapponicus* Zetterstedt, 1828 is a junior primary homonym, there is no need for such qualifiers.

Harpalus solitaris Dejean, 1829: 337. Type locality: «Kamtschatka [Russia]; nord de la Laponie» (original citation). Syntype(s) in MHNP. Synonymy established, under the name *H. lapponicus* Zetterstedt, by Mäklin (1857: 179).

Distribution. The range of this Holarctic species extends in northern North America from Newfoundland to south-central Alaska (Lindroth 1968: 799), south to east-central British Columbia, "Minnesota" (Lindroth 1968: 799), northeastern Wisconsin (Messer 2010: 41), "Michigan" (Lindroth 1968: 799), and Maine (Noonan 1991: 187) [see Noonan 1991: Fig. 294]. The records from the Sierra Nevada and Colorado (Elias 1987: 633) are probably in error; that from Prince Edward Island (Bousquet and Larochelle 1993: 237) needs confirmation (see Majka et al. 2008: 132).
Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS, NT, ON, QC, SK, YT **USA**: AK, ME, MI, MN, NH, WI [PE] – **Holarctic**

Harpalus somnulentus Dejean, 1829

Harpalus somnulentus Dejean, 1829: 333. Type locality: «détroit de Norfolk [= Norfolk Sound, Baranof Island, Alaska] sur la côte nord-ouest de l'Amérique septentrionale» (original citation). Lectotype (♂), designated by Noonan (1991: 190), in MHNP.

Harpalus pleuriticus Kirby, 1837: 41. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), restricted to «Edmonton, Al[ber]ta» by Lindroth (1968: 792). Lectotype (♂), designated by Noonan (1991: 190), in BMNH. Synonymy established by Noonan (1991: 190).

Harpalus fallax LeConte, 1859c: 2. Type locality: «Santa Fé [Santa Fe County, New Mexico]» (original citation). Lectotype (♂), designated by Noonan (1991: 190), in MCZ [# 5889]. Synonymy established by Noonan (1991: 190).

Harpalus stupidus LeConte, 1859c: 3. Type locality: «route to Fort Bridger» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5906]. Synonymy established by Noonan (1991: 191).

Harpalus viduus LeConte, 1859c: 3. Type locality: «New Jersey» (original citation). Syntype(s) presumably lost. Synonymy established, under the name *H. fallax* LeConte, by Lindroth (1968: 794).

Harpalus carbonatus LeConte, 1860: 319. Type locality: «Saskatchewan» (original citation). Lectotype (♀), designated by Noonan (1991: 191), in MCZ [# 5896]. Synonymy established by Noonan (1991: 191).

Harpalus placidus Casey, 1884b: 10 [primary homonym of *Harpalus placidus* Gyllenhal, 1827]. Type locality: «N[ew] J[ersey]» (holotype label). Holotype [by monotypy] (♂) in USNM [# 47807]. Synonymy established, under the name *H. fallax* LeConte, by Horn (1885b: 109), confirmed by Noonan (1991: 191). Note. «Willets Point, Long Island» was the locality cited in the original description.

Harpalus recisus Casey, 1914: 93. Type locality: «New Jersey» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47791]. Synonymy established, under the name *H. fallax* LeConte, by Lindroth (1968: 794).

Harpalus futilis Casey, 1914: 97. Type locality: «Lake Tahoe [Placer County], California» (original citation). Holotype [by monotypy] (♂) in USNM [# 47803]. Synonymy established by Noonan (1991: 191).

Harpalus intactus Casey, 1914: 97. Type locality: «California» (original citation). Holotype [by monotypy] (♀) in USNM [# 47795]. Synonymy established by Noonan (1991: 192).

Harpalus aequabilis Casey, 1914: 100. Type locality: «Buena Vista [Chaffee County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 139), in USNM [# 47779]. Synonymy established, under the name *H. pleuriticus* Kirby, by Lindroth (1954b: 142).

Harpalus lascivus Casey, 1914: 100. Type locality: «British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47800]. Synonymy established, under the name *H. pleuriticus* Kirby, by Hatch (1953: 169), confirmed by Noonan (1991: 192).

Harpalus pumilio Casey, 1914: 100 [primary homonym of *Harpalus pumilio* Dejean, 1829]. Type locality: «Bayfield [Bayfield County], Wisconsin» (original citation). Lectotype (♀), designated by Lindroth (1975: 139), in USNM [# 47801]. Synonymy established, under the name *H. pleuriticus* Kirby, by Lindroth (1954b: 142).

Harpalus perspicuus Casey, 1914: 101. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47797]. Synonymy established, under the name *H. pleuriticus* Kirby, by Lindroth (1954b: 142).

Harpalus lividulus Casey, 1914: 101. Type locality: «Bayfield [Bayfield County], Wisconsin» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47804]. Synonymy established, under the name *H. pleuriticus* Kirby, by Lindroth (1954b: 142).

Harpalus pellax Casey, 1914: 105. Type locality: «Yellowstone National Park» (original citation). Lectotype (♂), designated by Noonan (1991: 190), in USNM [# 47812]. Synonymy established by Noonan (1991: 192).

Harpalus peritus Casey, 1914: 107. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♂), designated by Noonan (1991: 190), in USNM [# 47814]. Synonymy established by Noonan (1991: 192).

Harpalus celox Casey, 1914: 107 (as *celax*, typographic error, see Casey 1914: 383). Type locality: «Clackamas Co[unty], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47816]. Synonymy established by Noonan (1991: 191).

Harpalus uteanus Casey, 1914: 118. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47835]. Synonymy established by Noonan (1991: 191).

Harpalus oppositus Casey, 1914: 125. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47860]. Synonymy established, under the name *H. celox* Casey, by Hatch (1953: 169), confirmed by Lindroth (1968: 789).

Harpalus amiculus Casey, 1924: 102. Type locality: «Lake George [Warren County], New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47792]. Synonymy established, under the name *H. fallax* LeConte, by Lindroth (1968: 794).

Harpalus contactus Casey, 1924: 106. Type locality: «Cedar City [Iron County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47818]. Synonymy established by Lindroth (1968: 789).

Harpalus uintanus Casey, 1924: 106. Type locality: «Cedar City [Iron County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47820]. Synonymy established, under the name *H. intactus* Casey, by Lindroth (1968: 789).

Harpalus blanditus Casey, 1924: 108. Type locality: «Terrace, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 139), in USNM [# 47802]. Synonymy established, under the name *H. pleuriticus* Kirby, by Hatch (1953: 169), confirmed by Noonan (1991: 193).

Harpalus nivalis Casey, 1924: 109. Type locality: «Redvers, Sask[atchewan]» (holotype label). Holotype [by monotypy] (♂) in USNM [# 47805]. Synonymy established, under the name *H. pleuriticus* Kirby, by Lindroth (1954b: 142).

Harpalus pacificus Fall, 1926a: 136. Type locality: «Ketchikan, Alaska» (original citation). Holotype (♂) in MCZ [# 23876]. Synonymy established by Lindroth (1968: 789).

Harpalus rewolinskii Noonan, 1991: 214. Type locality: «2.3 mi[les] S[outh] Oyen, Alberta» (original citation). Holotype (♂) in CNC [# 23531]. Synonymy established by Ball and Bousquet (2000: 99).

Distribution. This species is transcontinental in the north ranging from Newfoundland to the Kenai Peninsula in Alaska, south to southern California, central Arizona and New Mexico in the Rocky Mountains, Nebraska, and northern Virginia [see Noonan 1991: Figs 297-309]. The records from central Alabama (see Noonan 1991: Figs 302 and 304), "Arkansas" (Bousquet and Larochelle 1993: 237) and southern Kansas (Snow 1903: 194, as *H. fallax*) need confirmation.

Records. FRA: PM **CAN**: AB, BC (QCI, VCI), LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CA, CO, CT, DE, IA, ID, IL, IN, MA, MD,

ME, MI, MN, MO, MT, ND, NE, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SD, UT, VA, VT, WA, WI, WV, WY [AL, AR, KS]

Note. Noonan (1991: 196-207) recognized six morphs within this species, the *pleuriticus*, *fallax*, "dark," *uteanus*, *somnulentus*, and *carbonatus* morphs, which Lindroth (1968) treated as distinct species, except for the "dark" one. Noonan went on to report numerous intergradation zones between all morphs.

Subgenus *Glanodes* Casey, 1914

Glanodes Casey, 1914: 50, 60. Type species: *Harpalus obliquus* Horn, 1880 by original designation. Etymology. Uncertain, possibly from the Greek *glanos* (hyena) and the suffix *-odes* (likeness) [masculine].

Diversity. Six species in southwestern North America.

Identification. Ball (1972) revised the species and provided a key for the identification of the males.

Harpalus cohni Ball, 1972

Harpalus cohni Ball, 1972: 195. Type locality: «Marfa [Presidio County], Texas» (original citation). Holotype (♂) in CAS [# 11640].

Distribution. This species is known only from western Texas (Ball 1972: Fig. 13) and southeastern New Mexico (Perrault 1974: 120).

Records. USA: NM, TX

Harpalus corpulentus (Casey, 1914)

Glanodes corpulentus Casey, 1914: 62. Type locality: «Virgin River, Utah» (original citation), restricted to «S[ain]t George [Washington County]» by Ball (1972: 191). Lectotype [as holotype] (♀), designated by Ball (1972: 191), in USNM [# 47736].

Distribution. This species is known for sure only from Summit and Washington Counties in Utah (Ball 1972: 192). The record from "Arizona" (Bousquet and Larochelle 1993: 237) needs confirmation.

Records. USA: UT [AZ]

Harpalus huachuca Ball, 1972

Harpalus huachuca Ball, 1972: 193. Type locality: «Huachuca M[oun]t[ain]s, Ariz[ona]» (original citation). Holotype (♂) in USNM [# 72116].

Distribution. This species is known only from the holotype collected in southeastern Arizona [see Ball 1972: Fig. 13].

Records. USA: AZ

Harpalus obliquus Horn, 1880

Harpalus obliquus G.H. Horn, 1880a: 140. Type locality: «Fort Bayard [Grant County], New Mexico» (original citation). Lectotype [as type] (♂), designated by Ball (1972: 194), in MCZ [# 34601].

Glanodes regressus Casey, 1914: 62. Type locality: «near Benson [Cochise County], Arizona» (original citation). Lectotype [as holotype] (♀), designated by Ball (1972: 196), in USNM [# 47737]. **New synonymy**. Note. The lectotype of *H. regressus* (Casey) is a female that could not be identified with certainty. However, Ball (1972: 196) wrote that the specimen is "probably ... a member of *H. obliquus* Horn." Based on that statement, I believe it is best to treat Casey's name as a junior synonym of *H. obliquus*.

Distribution. This species is found in southern (Perrault 1974: 120) and western New Mexico and southeastern Arizona [see Ball 1972: Fig. 13].
Records. USA: AZ, NM

Harpalus puncticeps (Casey, 1914)

Glanodes puncticeps Casey, 1914: 61. Type locality: «Peach Spring[s] [Mohave County], Arizona» (original citation). Lectotype [as holotype] (♀), designated by Ball (1972: 192), in USNM [# 47735].

Harpalus cunctipeps Ball, 1973: 74. Replacement name for *Harpalus puncticeps* (Casey, 1914).

Distribution. This species is known only from northwestern Arizona [see Ball 1972: Fig. 13; Perrault 1982b: 269].
Records. USA: AZ
Note. Ball (1973: 74) proposed *H. cunctipeps* to replace *H. puncticeps* (Casey, 1914), a junior secondary homonym of *H. puncticeps* (Stephens, 1828), both species being then placed in the genus *Harpalus*. Since Stephens' species is currently included in the genus *Ophonus* and the replacement name was proposed after 1960, the original species-group name is to be reinstated (ICZN 1999: Article 59.4).

Harpalus stephani Ball, 1972

Harpalus stephani Ball, 1972: 194. Type locality: «Arivaca, Pima County, Arizona» (original citation). Holotype (♂) in USNM [# 72117]. Etymology. This species was named after Karl Heinz Stephan [1931-2005], an accomplished beetle collector and naturalist. Stephan spent 30 years collecting Coleoptera in Latimer County in Oklahoma. Most of his specimens are deposited in the Florida State Collection of Arthropods, in Texas A&M Insect Collection, and in the Field Museum of Natural History (Staphylinidae and Histeridae).

Distribution. This species is known only from Culberson County in western Texas and Pima County in southern Arizona [Ball 1972: 194, Fig. 13].
Records. USA: AZ, TX

Subgenus *Harpalobius* Reitter, 1900

Harpalobius Reitter, 1900: 76. Type species: *Harpalus fuscipalpis* Sturm, 1818 designated by Habu (1973a: 68). Etymology. From the generic name *Harpalus* [*q.v.*] and the Greek *bios* (life) [masculine].

Harpalellus Lindroth, 1968: 815. Type species: *Harpalus basilaris* Kirby, 1837 (= *Harpalus fuscipalpis* Sturm, 1818) by original designation. Synonymy established by Kataev (1989: 219). Etymology. From the generic name *Harpalus* [*q.v.*] and the suffix *-ellus* (small, little) [masculine].

Diversity. Four Palaearctic species, of which one is Holarctic.

Identification. The North American species was covered in Lindroth (1968: 815-817) monograph under the name *Harpalellus basilaris*.

Harpalus fuscipalpis Sturm, 1818

Carabus contristatus Duftschmid, 1812: 102 [potential *nomen oblitum*]. Type locality: «Wien [Austria]» (original citation). Syntype(s) probably lost (see Ledoux and Roux 2005: 682).

Harpalus fuscipalpis Sturm, 1818: 66 [potential *nomen protectum*]. Type locality: «Oesterreich [= Austria]» (original citation). Syntype(s) location unknown. Synonymy established by Schaum (1860: 610).

Harpalus basilaris Kirby, 1837: 41. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), restricted to «Edmonton, Al[ber]ta» by Lindroth (1968: 816). Two syntypes in BMNH (Lindroth 1953b: 173). Synonymy established by Kataev (1989: 219).

Harpalus taphrioides Motschulsky, 1844: 201. Type locality: «step[pes] Kislar» (lectotype label). Lectotype (♂), designated by Kataev (1989: 221), in ZMMU. Synonymy established by Kataev (1989: 219).

Harpalus fulvipennis Motschulsky, 1844: 221. Type locality: «Kulscha Bäd[er], Transbaic[alia] [Russia]» (lectotype label). Lectotype (♂), designated by Kataev (1989: 221), in ZMMU. Synonymy established by Kataev (1989: 219).

Harpalus varicornis LeConte, 1847: 401. Type locality: «Lacum Superiorem» (original citation). One syntype in MCZ [# 5909]. Synonymy established, under the name *Harpalellus basilaris* Kirby, by Lindroth (1968: 816).

Harpalus celioïdes Ménétriés, 1848: 39. Type locality: «steppes des Kirghises?» (original citation). Lectotype (♂), designated by Kataev (1989: 221), in ZILR. Synonymy established by Kataev (1989: 219).

Harpalus obesulus LeConte, 1852a: 185. Type locality: «Oregon» (original citation). Holotype [by monotypy] (♀) in MCZ [# 94]. Synonymy established, under the name *H. basilaris* Kirby, by LeConte (1870: 397), confirmed by Lindroth (1968: 816).

Amara extensa Walker, 1866: 314. Type locality: British Columbia (inferred from title of the book). Syntype(s) in BMNH. Synonymy established, under the name *H. basilaris* Kirby, by LeConte (1873b: 325), confirmed by Lindroth (1954b: 142).

Harpalus turculus Bates, 1878b: 714. Type locality: «probably near Yarkand [Kashgaria, China]» (original citation). Lectotype (♂), designated by Kataev (2002: 193), in MHNP. Synonymy established by Kataev (2002: 193).

Harpalus oblongus Casey, 1914: 126. Type locality: «Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47836]. Synonymy established, under the name *H. basilaris* Kirby, by Hatch (1953: 171), confirmed by Lindroth (1968: 816).

Harpalus sejunctus Casey, 1914: 126. Type locality: «Eldora [Boulder County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47858]. Synonymy established, under the name *Harpalellus basilaris* Kirby, by Lindroth (1968: 816).

Harpalus renoicus Casey, 1914: 127. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47857]. Synonymy established, under the name *Harpalellus basilaris* Kirby, by Lindroth (1968: 816).

Harpalus furviculus Casey, 1924: 110. Type locality: «Wawawai [Whitman County], Washington» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 140), in USNM [# 47840]. Synonymy established, under the name *H. basilaris* Kirby, by Hatch (1953: 171), confirmed by Lindroth (1968: 816).

Harpalus stocktonensis Casey, 1924: 111. Type locality: «Stockton [Tooele County], Utah» (original citation). Holotype [by monotypy] (♀) in USNM [# 47832]. Synonymy established, under the name *Harpalellus basilaris* Kirby, by Lindroth (1968: 816).

Harpalus ventricosus Casey, 1924: 111. Type locality: «Spencer, British Columbia» (original citation). Holotype [by monotypy] (♀) in USNM [# 47841]. Synonymy established, under the name *H. basilaris* Kirby, by Hatch (1953: 171), confirmed by Lindroth (1968: 816).

Harpalus durescans Casey, 1924: 111. Type locality: «F[or]t Coulonge, Quebec» (original citation). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47842]. Synonymy established, under the name *Harpalellus basilaris* Kirby, by Lindroth (1968: 816).

Harpalus subenormis Casey, 1924: 113. Type locality: «Callao [Juab County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47859]. Synonymy established, under the name *Harpalellus basilaris* Kirby, by Lindroth (1968: 816).

Distribution. This Holarctic species ranges from Germany to eastern Siberia (Kataev et al. 2003: 376) and from Alaska to Nova Scotia (Lindroth 1968: 817, as *Harpalellus basilaris*), south to northwestern Ohio (Lucas County, Harry J. Lee, Jr. pers. comm. 2008), southeastern Wisconsin (Messer 2010: 41), northern Iowa (Wickham 1911b: 8, as *H. basilaris*), northwestern New Mexico (Lindroth 1968: 816), and northern California (Siskiyou County, CNC).

Records. CAN: AB, BC (VCI), MB, NS, NT, ON, QC, SK, YT **USA**: AK, AZ, CA, CO, IA, ID, MI, MN, MT, ND, NH, NM, NV, OH, OR, SD, UT, WA, WI, WY – **Holarctic**

Genus *Harpalobrachys* Tschitschérine, 1899

Harpalobrachys Tschitschérine, 1899c: 601. Type species: *Harpalus leiroides* Motschulsky, 1844 by monotypy. Etymology. From the generic name *Harpalus* [*q.v.*] and the Greek *brachys* (short) [masculine].

Diversity. One Holarctic species.
Identification. The species was treated by Lindroth (1968: 748-749) and Noonan (1991: 212-213).
Taxonomic Note. Noonan (1991: 211) treated this taxon as a group within the genus *Harpalus*. Lindroth (1968: 748), Kryzhanovskij et al. (1995: 140), and Kataev et al. (2003: 370) regarded *Harpalobrachys* as a distinct genus.

Harpalobrachys leiroides (Motschulsky, 1844)

Harpalus leiroïdes Motschulsky, 1844: 217. Type locality: «environs de Koul [near Nerchinsk, eastern Siberia, Russia] sur la grande route de Nertchinsk» (original citation). Five syntypes in ZMMU (Keleinikova 1976: 203).

Distribution. This Holarctic species ranges from the European part of Russia to eastern Siberia (Kataev et al. 2003: 370) and in the Nearctic Region from east-central Alaska to southern Northwest Territories (Lindroth 1968: 749), south to central Alberta (Bousquet 1987a: 130). The species is rarely collected on this continent.
Records. CAN: AB, NT, YT **USA**: AK – **Holarctic**

Genus *Hartonymus* Casey, 1914

Hartonymus Casey, 1914: 165. Type species: *Hartonymus hoodi* Casey, 1914 by original designation. Etymology. From the surname of Charles Arthur Hart [1859-1918], an entomologist at the Illinois State Natural History Survey who first found adults of the type species [masculine].

Diversity. Two allopatric species in temperate areas of North America.
Identification. Ball (1976b) revised the species and provided a key for their recognition.

Hartonymus alternatus (LeConte, 1863)

Cratognathus alternatus LeConte, 1863c: 13. Type locality: «Arkansas» (original citation). Lectotype (♂), designated by Ball (1976b: 425), in CMNH (collection Ulke).

Distribution. This species is known from "Arkansas" to eastern New Mexico [see Ball 1976b: Fig. 7], including southeastern Colorado (Michels et al. 2008).
Records. USA: AR, CO, NM, OK, TX

Hartonymus hoodi Casey, 1914

Hartonymus hoodi Casey, 1914: 167. Type locality: «Topeka [Mason County], Illinois» (original citation). Lectotype (♀), designated by Ball (1976b: 423), in USNM [# 47906]. Etymology. The specific name honors Joseph Douglas Hood [1889-1966], professor at the University of Rochester and later at Cornell University. Hood (1952) recounted that while he already had the description of this species ready for publication and a drawing of the habitus of the adult, for which he paid $6.00 in 1911, he visited Casey in Washington to "ask him to check my determination." Casey looked at the specimens, closed the box which he carefully placed at the near corner of his desk and said to Hood "I am an old man. This is the finest carabid that I have ever seen or will see, and I hope that you will allow me to describe it."

Distribution. This species in found along the Mississippi Basin from west-central Wisconsin (Messer 2010: 41) to eastern Nebraska (Colfax County, Foster F. Purrington pers. comm. 2010; Greeley County, R. Michael Brattain collection), south to Oklahoma (Ball and Bousquet 2000: 99) and Missouri [see Ball 1976b: Fig. 7].
Records. USA: IA, IL, MO, NE, OK, WI

Genus *Amblygnathus* Dejean, 1829

Amblygnathus Dejean, 1829: 62. Type species: *Amblygnathus cephalotes* Dejean, 1829 designated by Brullé (1835b: 10). Etymology (original). From the Greek *amblys* (blunt, obtuse) and *gnathos* (jaw, by extension mandible), alluding to the obtuse mandibles ("*mandibules … obtuses*") of adults of the four species Dejean had before him [masculine].

Diversity. Twenty-four species in temperate, subtropical, and tropical areas of the Nearctic (four species, only one endemic) and Neotropical (23 species) Regions, including the West Indies (three species, one of them endemic).
Identification. Ball and Maddison (1987) revised the species and provided a key for their identification.

Amblygnathus evansi Ball and Maddison, 1987

Amblygnathus evansi Ball and Maddison, 1987: 214. Type locality: «Mazatlan, State of Sinaloa, México» (original citation). Holotype (♂) in USNM. Etymology. The specific name was proposed in honor of Howard Ensign Evans [1919-2002], an internationally recognized authority on the systematics and behavior of Hymenoptera, especially the Sphecidae, Pompilidae, and Bethylidae. During his academic career, Evans worked at the Kansas State University (1949-1952), Cornell University (1952-1960), the Museum of Comparative Zoology (1960-1973), and the Colorado State University (1973-1986). He described one new wasp family (Scolebythidae), 31 new genera, and almost 800 new species of wasps.

Distribution. This species ranges from southeastern California and southwestern Arizona, south along the Pacific Coast to El Salvador [see Ball and Maddison 1987: Fig. 29].
Records. USA: AZ, CA – El Salvador, Guatemala, Mexico

Amblygnathus iripennis (Say, 1823)

Harpalus iripennis Say, 1823a: 30. Type locality: «Ent[er]prise [Volusia County], Fl[orid]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 353), in MCZ [# 32989].

Selenophorus varicolor LeConte, 1847: 392. Type locality: «Pennsylvania et Georgia» (original citation). Lectotype (♀), designated by Ball and Maddison (1987: 206), in MCZ [# 5920]. Synonymy established by LeConte (1863b: 13), confirmed by Ball and Maddison (1987: 206).

Distribution. This species is found along and near the Atlantic Coastal Plain from New Jersey to the Florida Keys [see Ball and Maddison 1987: Fig. 28] and along the Gulf of Mexico in southwestern Alabama (Löding 1945: 25; Robert L. Davidson pers. comm. 2012). The record from "Pennsylvania" (LeConte 1847: 392), "Illinois," and "Texas" (Horn 1880e: 182) are probably in error.
Records. USA: AL, FL, GA, MD, NC, NJ, SC, VA

Amblygnathus mexicanus Bates, 1882

Amblygnathus mexicanus Bates, 1882a: 66. Type locality: «Cordova [Veracruz], Mexico» (original citation). Lectotype (♀), designated by Ball and Maddison (1987: 208), in BMNH.

Hemisopalus delumbis Casey, 1914: 140. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). Lectotype (♀), designated by Ball and Maddison (1987: 208), in USNM [# 47872]. Synonymy established by Ball and Maddison (1987: 208).

Distribution. This species ranges along the Coastal Plain from New Jersey to southern Florida, west to southeastern Texas, north along the Mississippi Basin to southern Arkansas (Ouachita County, CMNH) and northeastern Mississippi; south of the Rio Grande it occurs through eastern Mexico and Central America to the Canal Zone in Panama [see Ball and Maddison 1987: Fig. 29]. The record from "Pennsylvania" (Ball and Maddison 1987: 210) needs confirmation.
Records. USA: AL, AR, FL, GA, LA, MS, NC, NJ, SC, TX, VA [PA] – Guatemala, Honduras, Mexico, Nicaragua, Panama

Amblygnathus subtinctus (LeConte, 1867)

Selenophorus subtinctus LeConte, 1867b: 365. Type locality: «Louisiana» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5919].

Hemisopalus angulatus Casey, 1914: 139. Type locality: «Brownsville [Cameron County], Texas» (original citation). Lectotype [as holotype] (♀), designated by Ball and Maddison (1987: 226), in USNM [# 47871]. Synonymy established by Ball and Maddison (1987: 226).

Distribution. The range of this species extends along the Gulf Coast from the Florida Panhandle (Jefferson County, CMNH) to central Veracruz in Mexico [see Ball and Maddison 1987: Fig. 31].
Records. USA: FL, LA, MS, TX – Mexico

Genus *Athrostictus* Bates, 1878

Athrostictus Bates, 1878a: 592. Type species: *Athrostictus sericatus* Bates, 1878 designated by Noonan (1976: 41). Etymology. From the Greek *athroos* (assembled, crowded) and *stictos* (punctured), alluding to the dense punctuation on the dorsum of the body ("*corpus ... supra (praecipue elytris) dense minute punctatum*") of the adult [masculine]. Note. *Arthrostictus* is an incorrect subsequent spelling, introduced by Rye (1880: 33), not in prevailing usage.

Diversity. Eighteen species in the Neotropical Region, of which one extends into southern Texas.
Identification. There is no modern key for the identification of the species. The genus is in need of a revision.

Athrostictus punctatulus (Putzeys, 1878)

Selenophorus punctatulus Putzeys, 1878: 65. Type species: «Yucatan» (original citation). Syntype(s) [8 originally cited] in MHNP (collection Chaudoir) and probably IRSN (collection Putzeys).
Selenophorus perpolitus Casey, 1884c: 76. Type locality: «Texas» (original citation). Three syntypes [6 originally cited] in USNM [# 47866]. **New synonymy** (based on a communication of George E. Ball posted on http://bugguide.net/node/view/204062).

Distribution. This species is known from northeastern Arkansas (Kraim 1983: 137, as *Selenophorus perpolitus*), Amite County in southwestern Mississippi (Peter W. Messer pers. comm. 2012), East Baton Rouge Parish in southern Louisiana (Igor Sokolov pers. comm. 2009), and from southern Texas (Johnson 1978: 68; Zapata, Live Oak, and Uvalde Counties, CMNH) to Yucatán (Putzeys 1878: 65).
Records. USA: AR, LA, MS, TX – Mexico
Note. The systematic position of this species is not quite settled. It was transferred to the genus *Athrostictus* by Erwin [in Reichardt 1977: 428, under the spelling *A. punculatus* (Putzeys, 1878)]. It was retained in the genus *Selenophorus* by Noonan (1985: 41) although he did not study specimens. Bates (1891a: 243) wrote "the species [i.e., *Selenophorus punctatulus*] belongs to a group of the genus in which the thorax (except on the disk) and the elytra are closely punctured, a group which connects *Selenophorus* with *Arthrostictus* [sic]."

Genus *Selenophorus* Dejean, 1829

Selenophorus Dejean, 1829: 80. Type species: *Carabus palliatus* Fabricius, 1798 designated by Hope (1838: 84). Etymology (original). From the Greek *selenis* (half-moon, lunule) and *phero* (to bear, carry), possibly alluding to the shape of the mentum of the adult which, in the absence of a median tooth, is in the shape of a half-moon ("*menton échancré en arc de cercle*") [masculine].

Diversity. Western Hemisphere, with about 190 species arrayed in two subgenera: *Celiamorphus* and *Selenophorus s.str.*, both represented in North America.
Identification. Putzeys (1878) reviewed the genus but his work is outdated. About one-third of the currently recognized valid North American species were described by Casey and there is little doubt that several of them will turn out to be synonyms. A revision of the genus is much needed.

Subgenus *Celiamorphus* Casey, 1914

Celiamorphus Casey, 1914: 141. Type species: *Selenophorus ellipticus* Dejean, 1829 designated by Lindroth (1968: 828). Etymology. From the generic name *Celia* [*q.v.*] and the Greek *morphe* (form), probably alluding to a vague resemblance of adults of the species Casey had before him to those of *Celia* [masculine].

Diversity. Fourteen species in temperate, subtropical, and tropical areas of the Nearctic (nine species) and Neotropical (eight species) Regions.

Selenophorus adjunctus (Casey, 1914)

Celiamorphus adjunctus Casey, 1914: 144. Type locality: «Galveston [Galveston County], Texas» (original citation). Four syntypes [5 originally cited] in USNM [# 47875].

Distribution. This species is known only from the type locality in southeastern Texas.
Records. USA: TX

Selenophorus contractus (Casey, 1914)

Celiamorphus contractus Casey, 1914: 144. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). One syntype in USNM [# 47876].

Distribution. This species is known from North Carolina (Casey 1914: 144) and northeastern Georgia (Fattig 1949: 48).
Records. USA: GA, NC

Selenophorus discopunctatus Dejean, 1829

Selenophorus discopunctatus Dejean, 1829: 92. Type locality: «île Saint-Barthélemy [Guadeloupe]; Amérique septentrionale» (original citation). Syntype(s) location unknown (not found in MHNP, George E. Ball pers. comm. 2008).

Selenophorus cuprinus Dejean, 1829: 96. Type locality: «île Saint-Barthélemy [Guadeloupe]» (original citation). Syntype(s) in MHNP. Synonymy established by Putzeys (1878: 25).

Selenophorus harpaloides Reiche, 1843b: 142. Type locality: «Caracas, Venezuela» (original citation). Syntype(s) in MHNP (George E. Ball pers. comm. 2008). Synonymy established by Putzeys (1878: 25).

Selenophorus aeratus Reiche, 1843b: 142. Type locality: «Colombia» (original citation). Syntype(s) in MHNP (George E. Ball pers. comm. 2008). Synonymy established by Putzeys (1878: 25).

Selenophorus chokoloskei Leng, 1915: 596. Type locality: «Chokoloskee; Everglade [Florida]» (original citation). Syntype(s) location unknown. Synonymy established by Darlington (1935a: 161).

Distribution. This species is found in Mississippi (Harrison, Jackson, and Stone Counties, Paul K. Lago pers. comm. 2009), throughout the Florida Peninsula (Peck and Thomas 1998: 22), on several islands of the West Indies (Peck 2005: 32; Peck 2011: 13), and in Venezuela (Reiche 1843b: 142, as *S. harpaloides*) and Colombia (Reiche 1843b: 142, as *S. aeratus*).

Records. USA: FL, MS – Antigua, Bahamas, British Virgin Islands, Cayman Islands, Colombia, Cuba, Dominica, Guana Island, Hispaniola, Jamaica, Montserrat, Navassa, Puerto Rico, Venezuela

Selenophorus ellipticus Dejean, 1829

Selenophorus ellipticus Dejean, 1829: 108. Type locality: «Amérique septentrionale» (original citation), restricted to «Atlantic City [Atlantic County], N[ew] J[ersey]» by Lindroth (1968: 829). One syntype in MHNP (Lindroth 1955b: 28).

Selenophorus ovalis Dejean, 1829: 106. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 27). Synonymy established by Lindroth (1968: 829).

Celiamorphus opaculus Casey, 1914: 143. Type locality: «Atlantic City [Atlantic County], New Jersey» (original citation). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47873]. Synonymy established by Lindroth (1968: 829).

Celiamorphus currens Casey, 1914: 143. Type locality: «Catskill M[oun]t[ain]s, New York» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47874]. Synonymy established by Lindroth (1968: 829).

Distribution. The range of this species extends from west-central Maine (Majka et al. 2011: 46) to eastern Minnesota (Gandhi et al. 2005: 931), south to "Texas" (Horn 1880e: 183) and southern Florida (Peck and Thomas 1998: 22); also cited from "northern Mexico" (Casey 1914: 143).

Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, WI – Mexico

***Selenophorus fossulatus* Dejean, 1829**

Selenophorus fossulatus Dejean, 1829: 88. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 28).

Distribution. This species is known from North Carolina (Brimley 1938: 128), Georgia (Horn 1880e: 182; Fattig 1949: 48), throughout Florida (Peck and Thomas 1998: 22), Alabama (Löding 1945: 25), and southeastern coastal Mississippi (Drew A. Hildebrandt pers. comm. 2007).
Records. USA: AL, FL, GA, MS, NC

***Selenophorus granarius* Dejean, 1829**

Selenophorus granarius Dejean, 1829: 109. Type locality: «Amérique septentrionale» (original citation), restricted to «Mass[achusetts]» by Lindroth (1968: 830). One syntype in MHNP (Lindroth 1955b: 28).
Selenophorus pulicarius Dejean, 1829: 108. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 28). Synonymy established by Putzeys (1878: 21), confirmed by Lindroth (1955b: 28).

Distribution. This species ranges from "Massachusetts" (Lindroth 1968: 830) to southern Florida (Vince Golia pers. comm. 2007), west to southern Texas (Johnson 1978: 67), and north along the Mississippi Basin to eastern Iowa (Linn County, Doug A. Veal pers. comm. 2009), "Illinois" (Bousquet and Larochelle 1993: 239), and "Indiana" (Schrock 1985: 355).
Records. USA: AL, CT, FL, GA, IA, IL, IN, MA, MD, MS, NC, NJ, NY, RI, TX, VA

***Selenophorus municeps* (Casey, 1924)**

Celiamorphus municeps Casey, 1924: 117. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Two syntypes [2 originally cited] in USNM [# 47878].

Distribution. This species is known only from the type locality in central North Carolina.
Records. USA: NC

***Selenophorus nanulus* (Casey, 1924)**

Celiamorphus nanulus Casey, 1924: 118. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Two syntypes [2 ♂ originally cited] in USNM [# 47877].

Distribution. This species is known only from the type locality in central North Carolina.
Records. USA: NC

Selenophorus subtropicus (Casey, 1924)

Celiamorphus subtropicus Casey, 1924: 118. Type locality: «Texas and northern Mexico» (original citation). Five syntypes [5 originally cited] in USNM [# 47879].

Distribution. This species is known only from the type series.
Records. USA: TX – Mexico

Subgenus *Selenophorus* Dejean, 1829

Selenophorus Dejean, 1829: 80. Type species: *Carabus palliatus* Fabricius, 1798 designated by Hope (1838: 84).

Gynandropus Dejean, 1831: 810, 817. Type species: *Gynandropus americanus* Dejean, 1831 (= *Harpalus hylacis* Say, 1823) by monotypy. Synonymy established by Noonan (1985: 39). Etymology (original). From the Greek *gyne* (female), *andros* (male), and *pous* (foot), alluding to the expanded first protarsomere of the male and female ("*les quatre premiers articles des ... tarses antérieurs dilatés dans les mâles ... le premier des tarses antérieurs des femelles fortement dilaté*") [masculine].

Hemisopalus Casey, 1914: 135. Type species: *Harpalus opalinus* LeConte, 1863 by original designation. Synonymy established by Noonan (1976: 41).

Diversity. About 175 species in temperate, subtropical, and tropical areas of the Nearctic (29 species) and Neotropical (about 150 species) Regions.

Selenophorus aeneopiceus Casey, 1884

Selenophorus aeneopiceus Casey, 1884b: 13. Type locality: «Arizona» (original citation). Six syntypes in USNM [# 47888].

Distribution. This species is known from northern Colorado (Denver and Boulder Counties, UASM) and southern Utah (Kane and Garfield Counties, CMNH) south to the Isthmus of Tehuantepec in Mexico (UASM).
Records. USA: AZ, CO, NM, TX, UT – Mexico

Selenophorus blanchardi Manee, 1915

Selenophorus blanchardi Manee, 1915: 175. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). One syntype [4 originally cited] in ANSP [# 8223].

Distribution. This species is known from North Carolina (Manee 1915: 175), northeastern Georgia (Fattig 1949: 49), and southern South Carolina (Ciegler 2000: 103).
Records. USA: GA, NC, SC

Selenophorus chaparralus Purrington, 2000

Selenophorus chaparralus Purrington, 2000: 9. Type locality: «Amistad Reservoir, Val Verde Co[unty], Tex[as]» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from a few localities on the lower Rio Grande of southern Texas (Purrington 2000: 9).
Records. USA: TX

***Selenophorus concinnus* Schaeffer, 1910**

Selenophorus concinnus Schaeffer, 1910: 403. Type locality: «Huachuca Mountains, Arizona» (original citation). Lectotype (♀), designated by Erwin and House (1978: 248), in USNM [# 42511].

Distribution. This species is known yet only from the Huachuca Mountains in southeastern Arizona.
Records. USA: AZ

***Selenophorus cupreolus* Casey, 1914**

Selenophorus cupreolus Casey, 1914: 149. Type locality: «Texas» (original citation). One syntype in USNM [# 47883].

Distribution. This species is known only from the type series.
Records. USA: TX

***Selenophorus discoderoides* Schaeffer, 1910**

Selenophorus discoderoides Schaeffer, 1910: 404. Type locality: «Esperanza Ranch, near Brownsville [Cameron County], Texas» (original citation for the lectotype). Lectotype (♂), designated by Erwin and House (1978: 248), in USNM [# 42512].

Distribution. This species is known only from southeastern Texas.
Records. USA: TX

***Selenophorus elongatus* (LeConte, 1847)**

Gynandropus elongatus LeConte, 1847: 408. Type locality: «Georgia» (original citation). One syntype in MCZ [# 5883].

Distribution. This species ranges from "Georgia" (LeConte 1847: 408) to central Florida (Peck and Thomas 1998: 22), west to southwestern Alabama (Löding 1945: 25).
Records. USA: AL, FL, GA

***Selenophorus famulus* Casey, 1914**

Selenophorus famulus Casey, 1914: 146. Type locality: «Arizona (probably southern)» (original citation). Five syntypes [5 originally cited] in USNM [# 47880].

Distribution. This species is known from southern Arizona (Cochise, Graham, Maricopa, Pima and Santa Cruz Counties, UASM), northern Sonora (UASM), Baja California Norte (UASM), and "California" (CMNH).

Records. USA: AZ, CA – Mexico

Selenophorus fatuus LeConte, 1863

Harpalus fatuus LeConte, 1863c: 17. Type locality: «South Carolina to Texas» (original citation). Syntype(s) in MCZ [# 5917].

Distribution. This species ranges from North Carolina (Brimley 1938: 128) and northern Tennessee (Montgomery County, Foster F. Purrington pers. comm. 2011) to southern Florida (Peck and Thomas 1998: 22), west to eastern Texas (Johnson 1978: 68) and south to eastern Mexico (George E. Ball pers. comm. 2008).
Records. USA: AL, FL, GA, LA, MS, NC, SC, TN, TX – Mexico

Selenophorus gagatinus Dejean, 1829

Selenophorus gagatinus Dejean, 1829: 112. Type locality: «Amérique septentrionale» (original citation), restricted to «Arlington [Middlesex County], Mass[achusetts]» by Lindroth (1968: 824). One syntype in MHNP (Lindroth 1955b: 27).

Selenophorus maurus Haldeman, 1843b: 301. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One possible syntype, a ♀ labeled "[pink disc] / 243. [handwritten] / H. (S.) gagatinus (Dej.) maurus Hald. [handwritten]," in MCZ (collection LeConte). Synonymy established by LeConte (1847: 390).

Selenophorus viridescens LeConte, 1847: 392. Type locality: «insula Longa NovEboraci [= Long Island, New York]» (original citation). Syntype(s) in MCZ [# 5921]. Synonymy established by Horn (1880e: 183).

Distribution. The range of this species extends from Nova Scotia (Kings County, NSNH) to central Wisconsin (Purrington et al. 2002: 201), south to central Texas (Travis County, UASM) and southern Florida (Peck and Thomas 1998: 22). The records from southern Arizona (Horn 1880e: 181; Wickham 1898: 301) need confirmation.
Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CT, DC, FL, GA, IL, IN, MA, MD, ME, MI, MO, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TX, VA, VT, WI, WV [AZ]

Selenophorus houstoni Casey, 1914

Selenophorus houstoni Casey, 1914: 151. Type locality: «Austin [Travis County], Texas» (original citation). Six syntypes in USNM [# 47886].

Distribution. This species is known only from the type locality in central Texas.
Records. USA: TX

Selenophorus hylacis (Say, 1823)

Harpalus hylacis Say, 1823a: 31. Type locality: «Dorchester [Suffolk County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 32988].

Gynandropus americanus Dejean, 1831: 818. Type locality: «Amérique septentrionale» (original citation). One syntype [2 originally cited] in MHNP (Lindroth 1955b: 29). Synonymy established by LeConte (1847: 408), confirmed by Lindroth (1955b: 29).

Distribution. This species is found from southwestern Maine (Majka et al. 2011: 46) to eastern Minnesota (Gandhi et al. 2005: 931), including southernmost Ontario (possibly only as strays) (Lindroth 1968: 821), south to eastern Texas (Nacogdoches County, CMNH) and central Florida (Manatee County, CNC).
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WI, WV

Selenophorus implicans Casey, 1914

Selenophorus implicans Casey, 1914: 151. Type locality: «Alexandria [Rapides Parish], Louisiana» (original citation). Three syntypes [3 originally cited] in USNM [# 47887].

Distribution. This species is known from central Louisiana (Casey 1914: 151) and Texas (Leng 1920: 72; McCulloch County, USNM). One specimen determined by Casey (USNM) from Kansas is known.
Records. USA: LA, TX [KS]

Selenophorus integer (Fabricius, 1798)

Carabus integer Fabricius, 1798: 58 (as *nteger*). Type locality: «Americae Insulis» (original citation). One syntype in ZMUC (Zimsen 1964: 57). Note. The spelling *integer*, used by all subsequent authors, is an incorrect subsequent spelling in prevailing usage and attributed to the publication of the original spelling; therefore it is deemed to be the correct original spelling (ICZN 1999: Article 33.3.1).

Distribution. This species is known from southern Florida and several islands of the West Indies (Peck and Thomas 1998: 22).
Records. USA: FL – Bahamas, Cuba, Hispaniola, Jamaica, Puerto Rico

Selenophorus laesus (LeConte, 1858)

Harpalus laesus LeConte, 1858b: 59. Type locality: «Fort Gates, Texas and Tampico [Tamaulipas]» (original citation). Syntype(s) in MCZ [# 5914].

Distribution. This species ranges from central Texas south at least to southern Tamaulipas in Mexico (LeConte 1858b: 59). The record from "Arizona" (Bousquet and Larochelle 1993: 241) needs confirmation.
Records. USA: TX [AZ] – Mexico
Note. Horn (1880e: 180) regarded *S. palliatus* (Fabricius) as synonym of this species.

Selenophorus maritimus Casey, 1914

Selenophorus maritimus Casey, 1914: 148. Type locality: «Galveston [Galveston County], Texas» (original citation). Two syntypes in USNM [# 47882].

Distribution. This species is known from central and southern Florida (Vince Golia pers. comm. 2007; Highland and Palm Beach Counties, CMNH, UASM), southern Mississippi (Hancock and Jackson Counties, Drew A. Hildebrandt pers. comm. 2008; Lago et al. 2002: 202), and southern Texas (Casey 1914: 148; Zapata and San Patricio Counties, CMNH, UASM).
Records. USA: FL, MS, TX

Selenophorus opalinus (LeConte, 1863)

Selenophorus iripennis LeConte, 1847: 389 [secondary homonym of *Selenophorus iripennis* (Say, 1823)]. Type locality: «Carolina, et NovEboraci [= New York]» (original citation), restricted to «Carolina» by Lindroth (1968: 824). Syntype(s) in MCZ [# 32989].

Harpalus opalinus LeConte, 1863b: 13. Replacement name for *Harpalus iripennis* (LeConte, 1847).

Distribution. The range of this species extends from western New Brunswick (Webster and Bousquet 2008: 19) to Minnesota (Epstein and Kulman 1990: 215) and South Dakota (Kirk and Balsbaugh 1975: 30), including southern Quebec and Ontario (Lindroth 1968: 824), north to southeastern Manitoba (Roughley et al. 2010: 230), south to southern Texas (Johnson 1978: 67), the Florida Keys (Peck and Thomas 1998: 22), and South Bimini Island in the Bahamas (Ball and Shpeley 1992b: 96).
Records. CAN: MB, NB, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV – Bahamas

Selenophorus otiosus Casey, 1914

Selenophorus otiosus Casey, 1914: 148. Type locality: «Arizona (southern)» (original citation). One syntype in USNM [# 47881].

Distribution. This species is known only from the type series.
Records. USA: AZ

Selenophorus palliatus (Fabricius, 1798)

Carabus palliatus Fabricius, 1798: 58. Type locality: «America boreali» (original citation). One syntype in ZMUC (Zimsen 1964: 57).

Harpalus stigmosus Germar, 1824: 25. Type locality: «Georgia» (original citation). Syntype(s) probably lost. Synonymy established by Brullé (1835c: 290).

Selenophorus impressus Dejean, 1829: 82. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 28). Synonymy established with the name *S. stigmosus* Germar by Dejean (1829: 82), confirmed by Lindroth (1955b: 28).

Distribution. This species is found throughout much of southern United States from North Carolina (Brimley 1938: 128) to the Florida Keys and the Bahamas (Peck and Thomas 1998: 22), west to southeastern California (Andrews et al. 1979: 28) and the Baja California Peninsula (Horn 1894: 312), including southern Illinois (Union and Pope Counties, UASM), south to southeastern Texas (Wickham 1897: 113; Johnson 1978: 68; Cameron and San Patricio Counties, UASM) and San Luis Potosí (UASM). The record from "Virginia" (Bousquet and Larochelle 1993: 241) needs confirmation.
Records. USA: AL, AR, AZ, CA, FL, GA, IL, LA, MS, NC, NM, SC, TX [VA] – Bahamas, Mexico

***Selenophorus parumpunctatus* Dejean, 1829**

Carabus sinuatus Gyllenhal [in Schönherr], 1806: 203 [primary homonym of *Carabus sinuatus* Gmelin, 1790]. Type locality: «Americae insulis» (original citation). Syntype(s) location unknown (possibly in UZIU).

Selenophorus parumpunctatus Dejean, 1829: 104. Type locality: «je crois qu'il vient d'Amérique et probablement des Antilles, mais je n'en suis pas certain [I believe it came from America and probably from the West Indies but I am not certain]» (original citation). Syntype(s) in MHNP (George E. Ball pers. comm. 2008). **New synonymy** (George E. Ball pers. comm. 2008).

Selenophorus excisus LeConte, 1878b: 377 [primary homonym of *Selenophorus excisus* Putzeys, 1878]. Type locality: «southern Florida» (original citation). Syntype(s) [3 originally cited] in MCZ [# 5918]. **New synonymy** (George E. Ball pers. comm. 2008).

Selenophorus mustus Casey, 1914: 152. Type locality: «Biscayne Bay [Dade County], Florida» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47889]. Synonymy established, under the name *S. excisus* LeConte, by Casey (1918: 413).

Distribution. This species is known from southern Florida (Peck and Thomas 1998: 22, as *S. sinuatus*) and several islands of the West Indies (Peck 2011: 13). The record from South Carolina (Ciegler 2000: 103, as *S. mustus*) is probably in error.
Records. USA: FL – Antigua, Bahamas, Barbados, Cayman Islands, Cuba, Dominica, Guadeloupe, Guana Island, Hispaniola, Jamaica, Montserrat, Navassa, Puerto Rico, Virgin Islands.

***Selenophorus pedicularius* Dejean, 1829**

Selenophorus pedicularius Dejean, 1829: 100. Type locality: «Amérique septentrionale» (original citation), restricted to «Fort Worth [Tarrant County], Texas» by Lindroth (1968: 825). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 29).

Selenophorus troglodytes Dejean, 1829: 101. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 28). Synonymy established by Horn (1880e: 183), confirmed by Lindroth (1955b: 28).

Selenophorus aereus LeConte, 1847: 393. Type locality: «territorio Missouriensi» (original citation). Syntype(s) in MCZ [# 5915]. Synonymy established by Horn (1880e: 183), confirmed by Lindroth (1968: 825).

Selenophorus puellus Putzeys, 1878: 40. Type locality: «Etats-unis» (original citation). Syntype(s) [9 originally cited] in MHNP (collection Chaudoir). Synonymy established by Horn (1880e: 180), confirmed by Lindroth (1955b: 29).

Distribution. This species is found from Connecticut (Krinsky and Oliver 2001: 218) to southern Montana (Hatch 1933a: 10), south to southern New Mexico (Fall and Cockerell 1907: 162), southern Texas (Johnson 1978: 67), and central Florida (Peck and Thomas 1998: 22), west along the south to southern Arizona (Griffith 1900: 566; Snow 1906b: 163; Snow 1907: 142; Greenlee and Pima Counties, CMNH) and Baja California (Horn 1894: 311).
Records. CAN: ON **USA**: AL, AR, AZ, CO, CT, DC, FL, GA, IA, IL, IN, KS, LA, MD, MO, MS, MT, NC, NJ, NM, NY, OH, OK, PA, SC, SD, TN, TX, VA, WI, WV, WY – Mexico

Selenophorus planipennis LeConte, 1847

Selenophorus planipennis LeConte, 1847: 394. Type locality: «prope Long's Peak [Boulder County, Colorado], Rocky Mountains» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5916].

Distribution. This species ranges from southernmost Ontario (possibly only as strays) to south-central British Columbia (Lindroth 1968: 828), south to northeastern Oregon (Westcott et al. 2006: 9), Durango in Mexico (Ball and Shpeley 1992a: 59), northwestern Mississippi (Bolivar County, Drew A. Hildebrandt pers. comm. 2008), and northwestern Ohio (Lucas County, Harry J. Lee, Jr. pers. comm. 2008).
Records. CAN: AB, BC, MB, ON, SK **USA**: AZ, CO, IA, IL, KS, MI, MN, MS, MT, ND, NE, NM, OH, OK, OR, SD, TX, UT, WI, WY – Mexico

Selenophorus riparius Casey, 1914

Selenophorus riparius Casey, 1914: 150. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). One syntype in USNM [# 47885].

Distribution. This species is known only from the type locality in western Mississippi.
Records. USA: MS

***Selenophorus schaefferi* Csiki, 1932**

Selenophorus schaefferi Csiki, 1932a: 1201. Type locality: «Huachuca Mountains [Cochise County] and Yuma County, Arizona» (original citation for *S. semirufus* Bates *sensu* Schaeffer, 1910). Syntype(s) [2 originally cited] probably in USNM. Note. This name was proposed for *Selenophorus semirufus* Bates, 1882 *sensu* Schaeffer (1910: 403) and the name is available by indication (bibliographic reference to a previously published description).

Distribution. This species is known from the Huachuca Mountains and Yuma County in southern Arizona (Schaeffer 1910: 403) and from Riverside County in southeastern California (Andrews et al. 1979: 28, as *S. semirufus*). The record from "Texas" (Csiki 1932a: 1201) is probably in error.
Records. USA: AZ, CA

***Selenophorus scolopaceus* Casey, 1914**

Selenophorus scolopaceus Casey, 1914: 150. Type locality: «Colorado» (original citation). One syntype in USNM [# 47884].

Distribution. This species is known only from the type series.
Records. USA: CO

***Selenophorus sinuaticollis* Notman, 1922**

Selenophorus sinuaticollis Notman, 1922b: 102. Type locality: «Tucson [Pima County], Ariz[ona]» (original citation). Holotype (♀) in USNM [# 26590].

Distribution. This species is known from the type locality in southern Arizona, from southern New Mexico (Dona Ana County, CMNH), and from southern Sonora in Mexico (UASM).
Records. USA: AZ, NM – Mexico

***Selenophorus striatopunctatus* Putzeys, 1878**

Selenophorus striatopunctatus Putzeys, 1878: 33. Type locality: «Antilles; Chiapas, Mexique» (original citation). Syntype(s) in MHNP (collection Chaudoir) and probably IRSN (collection Putzeys).

Hemisopalus vigilans Casey, 1914: 137. Type locality: «Florida» (original citation). One syntype in USNM [# 47869]. Synonymy established by Peck and Thomas (1998: 22).

Hemisopalus depressulus Casey, 1914: 137. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47867]. Synonymy established by Peck and Thomas (1998: 22).

Distribution. This species is known so far from Florida and several islands of the West Indies (Peck and Thomas 1998: 22; Peck 2009a: 13), from south-central Louisiana (Saint Landry Parish, Igor M. Sokolov pers. comm. 2009), as well as from southern Texas (Johnson 1978: 67; San Patricio and Cameron Counties, UASM), southern Mexico (Putzeys 1878: 33), and Colombia (Martínez 2003: 9). The record from Georgia (Fattig 1949: 48, as *S. depressulus*) needs confirmation. The species is adventive on several islands of Hawaii (Liebherr 2009: 403).
Records. USA: FL, LA, TX [GA] – Bahamas, Barbados, Cayman Islands, Cuba, Colombia, Dominican Republic, Jamaica, Leeward Islands, Mexico, Puerto Rico, Windward Islands

Selenophorus trepidus (Casey, 1924)

Hemisopalus trepidus Casey, 1924: 117. Type locality: «Cape Sable [Monroe County], Florida» (original citation). Holotype [by monotypy] (♀) in USNM [# 47868].

Distribution. This species is known only from the type locality in southern Florida.
Records. USA: FL

[**incertae sedis**]

Selenophorus breviusculus Horn, 1880

Selenophorus breviusculus G.H. Horn, 1880e: 181. Type locality: «Fort Cobb [Caddo County, Oklahoma], Indian Territory» (original citation). One syntype [2 originally cited] in MCZ [# 34543] and one in CMNH (collection Ulke).

Distribution. This peculiar species is known from southern Kansas (Barber County, Robert L. Davidson pers. comm. 2012), west-central Oklahoma (Horn 1880e: 181), and northeastern Texas (Hunt County, CNC).
Records. USA: KS, OK, TX
Note. The systematic position of this species is not settled. It was not listed by Noonan (1985) in his classification and names of the Selenophori group. The species is markedly distinctive in its structural characters.

Genus *Discoderus* LeConte, 1853

Discoderus LeConte, 1853c: 381. Type species: *Selenophorus parallelus* Haldeman, 1843 designated by Lindroth (1968: 830). Etymology. From the Greek *discos* (circular plate) and *dere* (neck, by extension pronotum), alluding to the rounded lateral edges of the pronota ("*thorace ... lateribus rotundatis*" for *D. parallelus* and "*magis rotundatis*" for *D. tenebrosus*) of adults of the two species LeConte had before him [masculine].

Selenalius Casey, 1914: 153. Type species: *Discoderus cordicollis* Horn, 1891 by original designation. Synonymy established by Noonan (1985: 48).

Diversity. Twenty-eight species in North America (19 species) and Middle America (11 species).
Identification. This genus has never been revised and such study is much needed. More than 60% of the currently valid North American species have been described by Casey and some of them will certainly fall in synonymy.

Discoderus aequalis Casey, 1914

Discoderus aequalis Casey, 1914: 161. Type locality: «Texas» (original citation). Two syntypes in USNM [# 47899].

Distribution. This species is known from western Missouri (Vernon County, UASM), Texas (several Counties, UASM), southeastern New Mexico (Chaves County, UASM), and southeastern Arizona (Cochise County, UASM).
Records. USA: AZ, MO, NM, TX

Discoderus amoenus LeConte, 1863

Discoderus amoenus LeConte, 1863c: 14. Type locality: «New Mexico» (original citation). Syntype(s) location unknown. Note. The single specimen in the LeConte collection, labeled "Utah" and "Type 5881," is not a syntype.

Distribution. This species ranges from eastern Wyoming (Lavigne 1977: 45) to southeastern Oregon (Westcott et al. 2006: 8), south to southern California (Fall 1901a: 50) and south-central New Mexico (Fall and Cockerell 1907: 161).
Records. USA: AZ, CA, CO, ID, NM, NV, OR, UT, WY

Discoderus congruens Casey, 1914

Discoderus congruens Casey, 1914: 162. Type locality: «Arizona (probably southern)» (original citation). One syntype in USNM [# 47893].

Distribution. This species is known from southeastern Colorado (Bent County, CNC), central New Mexico (Bernalillo County, CNC), and southern Arizona (Cochise and Santa Cruz Counties, UASM).
Records. USA: AZ, CO, NM

Discoderus cordicollis Horn, 1891

Discoderus cordicollis G.H. Horn, 1891: 34. Type locality: «from Fort Yuma eastward to Tucson, Ariz[ona]» (original citation). Ten syntypes in MCZ [# 34541].

Distribution. This species is known from southern Arizona (Horn 1891: 34; Griffith 1900: 565; Cochise and Maricopa Counties, UASM), New Mexico (Hidalgo and Quay Counties, CMNH; Luna County, UASM; Fall and Cockerell 1907: 161), western Texas (Brewster County, UASM), and Coahuila, Sonora, and Baja California Norte in Mexico.

Records. USA: AZ, NM, TX – Mexico

Discoderus crassicollis Horn, 1891

Discoderus crassicollis G.H. Horn, 1891: 35. Type locality: «southern Arizona» (original citation). Five syntypes in MCZ [# 34540].

Distribution. This species is known, besides the type series, from a few specimens collected in Cochise County in southeastern Arizona (Robert L. Davidson, pers. comm. 2012).
Records. USA: AZ

Discoderus dallasensis Casey, 1924

Discoderus dallasensis Casey, 1924: 120. Type locality: «Dallas and Amarillo, Texas» (original citation). Eight syntypes [8 originally cited] in USNM [# 47901].

Distribution. This species is known from northern Texas only (Casey 1924: 120).
Records. USA: TX

Discoderus impotens (LeConte, 1858)

Harpalus impotens LeConte, 1858a: 14. Type locality: «El Paso [El Paso County, Texas]» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5879].

Distribution. This species ranges from Kansas (Knaus 1907: 233; Trego, Scott, and Barber Counties, CMNH, CNC) to southeastern Utah (San Juan County, UASM), south to northern Sonora (Bates 1884: 276), Coahuila (UASM), and southeastern Texas (San Patricio County, UASM).
Records. USA: AZ, CO, KS, NM, OK, TX, UT – Mexico

Discoderus longicollis Casey, 1914

Discoderus longicollis Casey, 1914: 162. Type locality: «Austin [Travis County], Texas» (original citation). Holotype [by monotypy] (♂) in USNM [# 47894].

Distribution. This species is known only from the type locality in central Texas.
Records. USA: TX

Discoderus obsidianus Casey, 1914

Discoderus obsidianus Casey, 1914: 158. Type locality: «Arizona (probably southern)» (original citation). One syntype in USNM [# 47892].

Distribution. This species is known only from Cochise County in southeastern Arizona (UASM).
Records. USA: AZ

***Discoderus papagonis* Casey, 1924**

Discoderus papagonis Casey, 1924: 119. Type locality: «Arizona; Alamogordo [Otero County], New Mexico» (original citation). Two syntypes in USNM [# 47891].

Distribution. This species is known from southeastern Arizona (Cochise County, UASM) and southern New Mexico (Casey 1924: 119).
Records. USA: AZ, NM

***Discoderus parallelus* (Haldeman, 1843)**

Selenophorus parallelus Haldeman, 1843b: 301. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). Syntype(s) presumably lost.

Pangus americanus Motschulsky, 1859a: 137 [*nomen dubium*]. Type locality: «Californie» (original citation). Syntype(s) location unknown (possibly in ZMMU though not listed in Keleinikova 1976). Synonymy established by Casey (1914: 163). Note. Horn (1883c: iv) stated that this species is probably identical with *D. impotens* (LeConte) and that Motschulsky's specimen(s) came from the Piccolomini collection. If exact, then the type locality is incorrect and the specimen(s) has probably been collected in Texas or northern Mexico.

Discoderus hesperus Casey, 1914: 163. Type locality: «Boulder [Boulder County], Colorado» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47905]. Synonymy established by Lindroth (1968: 831).

Discoderus parvuliceps Casey, 1924: 121. Type locality: «Wray [Yuma County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47903]. Synonymy established by Lindroth (1968: 831).

Discoderus gener Casey, 1924: 121. Type locality: «Wawawai [Whitman County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47904]. Synonymy established by Hatch (1953: 178), confirmed by Lindroth (1968: 831).

Distribution. This species ranges from southeastern New Hampshire (Rockingham County, Ross T. Bell pers. comm. 1992) to the Okanagan Valley in south-central British Columbia (Lindroth 1968: 831), south to northern Oregon (Union, Wallowa, and Wasco Counties, James R. LaBonte pers. comm. 2009), northern Utah (Salt Lake County, Foster F. Purrington pers. comm. 2009), New Mexico (Fall and Cockerell 1907: 161), western and central Texas (Lee and Brewster Counties, MCZ; Lindroth 1968: 831), southwestern Alabama (Clarke County, CMNH), central Georgia (Fattig 1949: 49), and eastern South Carolina (Ciegler 2000: 104).
Records. CAN: BC, ON **USA**: AL, AR, AZ, CO, DC, GA, IA, ID, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, MT, NC, NE, NH, NJ, NM, OH, OK, OR, PA, SC, SD, TN, TX, UT, VA, WA, WI, WY

***Discoderus parilis* (Casey, 1914)**

Selenalius parilis Casey, 1914: 155. Type locality: «El Paso [El Paso County], Texas» (original citation). Two syntypes in USNM [# 47890].

Distribution. This species is known only from the type locality in western Texas.
Records. USA: TX

***Discoderus peregrinus* Casey, 1924**

Discoderus peregrinus Casey, 1924: 120. Type locality: «El Paso [El Paso County], Texas» (original citation). One syntype in USNM [# 47895].

Distribution. This species is known only from the type locality in western Texas.
Records. USA: TX

***Discoderus pinguis* Casey, 1884**

Discoderus pinguis Casey, 1884c: 75. Type locality: «Arizona» (original citation). One syntype [6 originally cited] in USNM [# 47897].

Distribution. This species is known from southern Arizona (Cochise County, UASM).
Records. USA: AZ

***Discoderus robustus piceus* Casey, 1914**

Discoderus robustus piceus Casey, 1914: 159. Type locality: «near Benson [Cochise County], Arizona» (original citation). Twelve syntypes [12 originally cited] in USNM [# 47896].

Distribution. This subspecies is known only from the type locality in southeastern Arizona.
Records. USA: AZ

***Discoderus robustus robustus* Horn, 1883**

Discoderus robustus G.H. Horn, 1883a: 52. Type locality: «Arizona» (original citation). Syntype(s) in MCZ [# 34539].

Distribution. This subspecies ranges from southern Arizona (Wickham 1898: 301; Griffith 1900: 565; Snow 1906b: 162; Snow 1907: 142) and northern Sonora in Mexico (Bates 1884: 276, as *Discoderus* ?, see Horn 1886a: ix) to western Texas (Brewster and Jeff Davis Counties, CMNH, UASM).
Records. USA: AZ, NM, TX – Mexico

***Discoderus subviolaceus* Casey, 1914**

Discoderus subviolaceus Casey, 1914: 160. Type locality: «near Benson [Cochise County], Arizona» (original citation). One syntype in USNM [# 47898].

Distribution. This species is known from Arizona (Cochise, Gila, Graham, Pima, Santa Cruz, and Yavapai Counties, UASM; Casey 1914: 160) and western Texas (Terrell and Jeff Davis Counties, UASM).
Records. USA: AZ, TX

***Discoderus symbolicus* Casey, 1914**

Discoderus symbolicus Casey, 1914: 161. Type locality: «Arizona (probably southern)» (original citation). One syntype in USNM [# 47902].

Distribution. This species is known only from the type series.
Records. USA: AZ

***Discoderus tenebrosus* (LeConte, 1847)**

Selenophorus tenebrosus LeConte, 1847: 391. Type locality: «ad Rocky Mountains» (original citation). Three syntypes in MCZ [# 5880].

Distribution. This species has been recorded only from Santa Fe in New Mexico (Fall and Cockerell 1907: 161).
Records. USA: NM

***Discoderus texanus* Casey, 1924**

Discoderus texanus Casey, 1924: 119. Type locality: «Dallas [Dallas County], Texas» (original citation). Two syntypes [2 originally cited] in USNM [# 47900].

Distribution. This species is known only from the type locality in northeastern Texas.
Records. USA: TX

Genus *Stenomorphus* Dejean, 1831

Stenomorphus Dejean, 1831: 696. Type species: *Stenomorphus angustatus* Dejean, 1831 by monotypy. Etymology (original). From the Greek *stenos* (slender) and *morphe* (form), alluding to the slender form ("*corselet très-allongé ... élytres allongées*") of the species of this genus [masculine].

Agaosoma Ménétriés, 1843: 63. Type species: *Agaosoma californicum* Ménétriés, 1843 by monotypy. Synonymy established by Chaudoir (1844: 478). Etymology (original). From the Greek *agaios* (admirable) and *soma* (body), alluding to the unusual and agreeable body form of adults of this genus [neuter].

Diversity. Six species in North America (three species), Middle and South America (five species), and the West Indies (two species, one of them endemic).
Identification. Ball et al. (1991) revised the species.
Taxonomic Note. Ball et al. (1991: 942) postulated that the Neotropical genus *Trichopselaphus* Chaudoir (eight species) is the sister-group to this genus and that *Anisocnemus* Chaudoir (two Neotropical species) is the sister-group to {*Trichopselaphus* + *Stenomorphus*}.

[**angustatus group**]

***Stenomorphus californicus californicus* (Ménétriés, 1843)**

Agaosoma californicum Ménétriés, 1843: 63. Type locality: «Californie» (original citation), which is very unlikely (see Ball et al. 1991: 960); Douglas, Cochise County, Arizona (see Ball et al. 1991: 961) herein selected. Lectotype (♂), designated by Ball et al. (1991: 960), in MCZ [# 8235].

Stenomorphus rossi Van Dyke, 1943: 29. Type locality: «Chiricahua [Cochise County], Arizona» (original citation). Holotype (♂) in CAS [# 5313]. Synonymy established by Ball et al. (1991: 960).

Distribution. This subspecies is known from a small area in southeastern Arizona and southwestern New Mexico [see Ball et al. 1991: Fig. 24].
Records. USA: AZ, NM
Note. Besides the two subspecies found in North America, two other subspecies are known, one (*S. californicus manni* Darlington) from Haiti and the other (*S. californicus darlingtoni* Ball and Shpeley) from Central America.

***Stenomorphus californicus rufipes* LeConte, 1858**

Stenomorphus rufipes LeConte, 1858b: 59. Type locality not stated; «Brownsville, Cameron County, Texas» selected by Ball et al. (1991: 958). Lectotype [as holotype] (♀), designated by Ball et al. (1991: 958), in MCZ [# 5882].

Stenomorphus batesi Casey, 1914: 168. Type locality: «Guanajuato, Mexico» (holotype label). Holotype [by monotypy] (♂) in BMNH (Ball et al. 1991: 958). Synonymy established by Ball et al. (1991: 958). Etymology. The specific name was proposed in honor of the English naturalist Henry Walter Bates [1825-1892], one of the most remarkable and progressive systematists of his time. After collecting for 11 years in different areas of Amazonia, Bates returned to England and eventually took the position of Assistant Secretary at the Royal Geographical Society of London. Bates published mainly on the systematics of Lepidoptera and Coleoptera. Note. Casey (1914: 168) described this taxon from the illustration published in Bates (1882a: plate III, figure 22). The specimen upon which the illustration was drawn is in the British Museum (Natural History) and is *de facto* the holotype (ICZN 1999: Article 72.5.6).

Stenomorphus scolopax Casey, 1914: 169. Type locality: «Fort Worth [Tarrant County], Texas» (original citation). Lectotype (♂), designated by Ball et al. (1991: 958), in USNM [# 47907]. Synonymy established by Ball et al. (1991: 959).

Stenomorphus parallelus Casey, 1924: 122. Type locality: «McPherson [McPherson County], Kansas» (original citation). Lectotype [as holotype] (♀), designated by Ball et al. (1991: 958), in USNM [# 47908]. Synonymy established by Ball et al. (1991: 959).

Stenomorphus arcuatus Casey, 1924: 122. Type locality: «Dallas [Dallas County], Texas» (original citation). Holotype [by monotypy] (♀) in USNM [# 47909]. Synonymy established by Ball et al. (1991: 959).

Distribution. This subspecies ranges from northern Missouri to southern Nebraska (Adams County, Foster F. Purrington pers. comm. 2009), south to the Yucatán Peninsula, west to the southern portion of the Baja California Peninsula, east to central Alabama [see Ball et al. 1991: Fig. 24]. One specimen is known from Clemson, South Carolina (Ciegler 2000: 104).

Records. USA: AL, AR, AZ, CA, KS, LA, MO, MS, NE, OK, TX [SC] – Mexico

[**convexior group**]

***Stenomorphus convexior* Notman, 1922**

Stenomorphus convexior Notman, 1922b: 103. Type locality: «Tucson [Pima County], Ariz[ona]» (original citation). Holotype (♀) in USNM [# 26593].

Distribution. This species ranges from southern Arizona southwards along the Pacific Versant of Mexico to central Jalisco [see Ball et al. 1991: Fig. 21].

Records. USA: AZ – Mexico

[**sinaloae group**]

***Stenomorphus sinaloae* Darlington, 1936**

Stenomorphus sinaloae Darlington, 1936a: 37. Type locality: «Sinaloa, Mex[ico]» (original citation). Holotype (♂) in USNM [# 75661].

Distribution. This species ranges from southeastern Arizona and southwestern New Mexico south along the Pacific Versant of Mexico to Guerrero; it is also known from the southern parts of the Baja California Peninsula [see Ball et al. 1991: Fig. 23]. As pointed out by Ball et al. (1991: 951) the record from central Colorado based on a male is questionable but not impossible.

Records. USA: AZ, NM [CO] – Mexico

Genus *Trichotichnus* Morawitz, 1863

Trichotichnus Morawitz, 1863: 63 [*nomen protectum*, see Bousquet (2008b: 328)]. Type species: *Trichotichnus longitarsis* Morawitz, 1863 by monotypy. Etymology. From the Greek *trichotos* (hairy) and *ichnos* (footprint, track), probably alluding to the long setae present on both side of the tarsomeres ("*Die Füsse sind unten zu beiden Seiten mit langen Seidenhaaren besetzt*") of the adult [masculine].

Diversity. About 250 species (Lorenz 2005: 380-382), more than 85% of them inhabiting Asia, arrayed in six subgenera: *Amaroschesis* Tschitschérine (about 55 species), *Bellogenus* Clarke (about 45 species), *Harpaloxenus* Schauberger (12 species), *Iridessus* (six species), *Lampetes* Andrewes (nine species), and *Trichotichnus s.str.* (about 120 species). The Western Hemisphere has only four species, all endemic to eastern North America. **Identification.** Lindroth (1968) reviewed all four North American species, one of them (*T. fulgens*) under the genus *Harpalus*.

Subgenus *Trichotichnus* Morawitz, 1863

Trichotichnus Morawitz, 1863: 63. Type species: *Trichotichnus longitarsis* Morawitz, 1863 by monotypy.

Asmerinx Tschitschérine, 1898b: 183. Type species: *Carabus laevicollis* Duftschmid, 1812 designated by Tschitschérine (1900a: 363). Synonymy established by Reitter (1908: 174).

Pteropalus Casey, 1914: 64, 131. Type species: *Harpalus vulpeculus* Say, 1823 designated by Habu (1954a: 245). Synonymy established by Csiki (1932a: 1217).

Carbanus Andrewes, 1937: 27. Type species: *Carbanus flavipes* Andrewes, 1937 (= *Trichotichnus claripes* Lorenz, 1998) by monotypy. Synonymy established by Noonan (1976: 43).

Velimius Jedlička, 1952: 51. Type species: *Velimius edai* Jedlička, 1952 by monotypy. Synonymy established by Habu (1973a: 224).

Lyter Darlington, 1968: 40, 63. Type species: *Lyter glaber* Darlington, 1968 by original designation. Synonymy established by Noonan (1985: 67).

Diversity. About 120 species in the Nearctic (two eastern species), Australian (six species), Oriental (about 25 species), and Palaearctic (about 90 species, the vast majority in its eastern part) Regions.

Trichotichnus dichrous (Dejean, 1829)

Harpalus dichrous Dejean, 1829: 258. Type locality: «Amérique septentrionale» (original citation), restricted to «S[ain]t Charles [Saint Charles County], Missouri» by Lindroth (1968: 819). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 27).

Pteropalus fluvialis Casey, 1914: 133. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype (♀), designated by Lindroth (1975: 141), in USNM [# 47864]. Synonymy established by Lindroth (1968: 819).

Pteropalus versutulus Casey, 1924: 116. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 141), in USNM [# 47865]. Synonymy established by Lindroth (1968: 819).

Distribution. The range of this species extends from southern Quebec (Serge Laplante pers. comm. 2002) to southeastern South Dakota (Kirk and Balsbaugh 1975: 30), south to "Texas" (Lindroth 1968: 819) and central South Carolina (Ciegler 2000: 105).
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MO, MS, NC, NH, NJ, NY, OH, OK, PA, SC, SD, TN, TX, VA, VT, WI, WV
Note. Say (1830c: 19) noted that "*H[arpalus] iricolor*, Say, has been recently described by Dejean under the name of *dichrous*." I have not found any species described by Say under the name *Harpalus iricolor*. Say's name has been listed as a junior synonym of *T. dichrous* (Dejean) in several checklists but it is a *nomen nudum* as pointed out by Lindroth and Freitag (1969: 353).

Trichotichnus vulpeculus (Say, 1823)

Harpalus vulpeculus Say, 1823a: 30. Type locality: «Washington, D[istrict of] C[olumbia]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 353), in MCZ [# 32990].
Harpalus nigripennis Dejean, 1829: 260. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 27). Synonymy established by Say (1830c: 19), confirmed by Lindroth (1955b: 27).

Distribution. The range of this species extends from western New Brunswick (Webster and Bousquet 2008: 19) to southwestern Wisconsin (Grant County, Peter W. Messer pers. comm. 2008), south to northern Arkansas (Boone County, UASM) and eastern Georgia (Fattig 1949: 47). The records from "Florida" and "Minnesota" (Bousquet and Larochelle 1993: 244) need confirmation.
Records. CAN: NB, ON, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KY, MA, MD, ME, MI, MO, NC, NH, NJ, NY, OH, PA, RI, TN, VA, VT, WI, WV [FL, MN]

Subgenus *Iridessus* Bates, 1883

Argestes J.E. LeConte, 1849: 26 [*nomen oblitum*, see Bousquet (2008b: 328)]. Type species: *Harpalus nitidulus* Chaudoir, 1843 (= *Trichotichnus fulgens* Csiki, 1932) by monotypy. Etymology. Name of the north-west wind in classical antiquity. Note. Hardy et al. (1986: 472) argued that the paper in which this name was proposed was written by J.E. LeConte and not his son, J.L. LeConte.
Iridessus Bates, 1883b: 240. Type species: *Harpalus lucidus* Morawitz, 1863 designated by Habu (1954a: 245). Etymology. Uncertain, possibly from the Latin *iris* (rain-

bow) and the French noun *dessus* (above), alluding to the iridescence on the elytra of adults of the species included by Bates in this taxon [masculine].

Episcopellus Casey, 1914: 235. Type species: *Feronia autumnalis* Say, 1823 by original designation. Synonymy established by Ball and Bousquet (2000: 96). Etymology. Uncertain, possibly from the Greek *episcopos* (overseer) and the suffix *-ellus* (small, little) [masculine].

Diversity. Six species in the Nearctic (two species) and east Palaearctic (four species) Regions.

Taxonomic Note. Kataev (in Ball and Bousquet 2000: 96) revalidated *Iridessus* Bates as a subgenus, considered by most authors as a synonym of *Trichotichnus*.

Trichotichnus autumnalis (Say, 1823)

Feronia autumnalis Say, 1823a: 48. Type locality: «Nahant [Essex County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 355), in MCZ [# 32980].

Episcopellus nitescens Casey, 1914: 236. Type locality: «District of Columbia» (original citation). Lectotype (♀), designated by Lindroth (1975: 140), in USNM [# 47993]. Synonymy established by Lindroth (1968: 813).

Distribution. This species ranges from west-central Maine (Majka et al. 2011: 46) and southern Quebec (CNC) to east-central Minnesota (Gandhi et al. 2011: 673), north to Kapuskasing in central Ontario (CNC), south at least to northeastern Kansas (Popenoe 1877: 24), central Arkansas (Pulaski County, Robert L. Davidson pers. comm. 2008), southwestern Mississippi (Hinds County, CMNH), northern Georgia (Fattig 1949: 52), and eastern South Carolina (Ciegler 2000: 105).

Records. CAN: ON, QC **USA**: AR, CT, DC, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, PA, RI, SC, VA, VT, WI, WV

Trichotichnus fulgens (Csiki, 1932)

Harpalus nitidulus Chaudoir, 1843b: 788 [primary homonym of *Harpalus nitidulus* Stephens, 1828]. Type locality: «Nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♂), designated by Lindroth (1968: 811), in MHNP.

Harpalus fulgens Csiki, 1932a: 1182 [primary homonym of *Harpalus fulgens* Dejean, 1829]. Replacement name for *Harpalus nitidulus* Chaudoir, 1843. Note. This name is a junior primary homonym of *Harpalus fulgens* Dejean, 1829 (= *Notiobia chalcitis* (Germar, 1824)). Since both names apply to taxa not considered congeneric since 1899, the case is to be referred to the Commission and meanwhile prevailing usage of both names must be maintained (ICZN 1999: Article 23.9.5).

Distribution. This eastern species extends from Massachusetts (Middlesex County, Peter W. Messer pers. comm. 2008) to northeastern Kansas, including southernmost Ontario (Bousquet 1987a: 130) and southeastern Iowa, south to southeastern Texas

and southern Florida, west to western Texas [see Noonan 1991: Fig. 286]. The record from southern Wisconsin (Rauterberg 1885: 21, as *H. nitidulus*) needs confirmation.
Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MO, MS, NC, NJ, NY, OH, OK, PA, SC, TN, TX, VA, WV [WI]
Note. This species was included in the genus *Harpalus* Latreille by Lindroth (1968: 811) and Noonan (1991: 136) but placed in the genus *Trichotichnus* Morawitz by Ball and Bousquet (2000: 96) on information provided *in litteris* by Boris Kataev.

Genus *Aztecarpalus* Ball, 1970

Aztecarpalus Ball, 1970: 102. Type species: *Harpalus hebescens* Bates, 1882 by original designation. Etymology (original). From Aztec (name of the most important group of Indians living in Mexico) and the generic name *Harpalus* [*q.v.*], alluding to the homeland and superficial affinities of the species to those of the genus *Harpalus* [masculine].

Diversity. Nine species in eastern Mexico, one of them extends into southeastern Texas.
Identification. Ball (1970, 1976a) revised the species and provided a key (Ball 1976a: 62-63) for their identification.

Aztecarpalus schaefferi Ball, 1970

Harpalus iripennis Schaeffer, 1910: 402 [primary homonym of *Harpalus iripennis* Say, 1823]. Type locality: «Brownsville [Cameron County], Texas» (original citation). Lectotype (♂), designated by Erwin and House (1978: 238), in USNM [# 42510].
Aztecarpalus schaefferi Ball, 1970: 119. Replacement name for *Aztecarpalus iripennis* (Schaeffer, 1910).

Distribution. This species is known only from southeastern Texas and northeastern Mexico (Ball 1970: 120).
Records. USA: TX – Mexico

Genus *Cratacanthus* Dejean, 1829

Cratacanthus Dejean, 1829: 40. Type species: *Cratacanthus pensylvanicus* Dejean, 1829 (= *Harpalus dubius* Palisot de Beauvois, 1811) by monotypy. Etymology (original). From the Greek *cratos* (strong) and *acanthos* (spine), alluding to the strong labial tooth ("*menton ... au milieu de son échancrure une forte dent aigüe, presque en épine*") of the adult [masculine].

Diversity. One North American species in the temperate regions.
Identification. The species is covered in Lindroth's (1968: 744-745) monograph.

***Cratacanthus dubius* (Palisot de Beauvois, 1811)**

Harpalus dubius Palisot de Beauvois, 1811: 108. Type locality: «Pensylvanie» (original citation), herein restricted to Philadelphia, Philadelphia County (see Casey 1884c: 75, as *C. bisectus*). Syntype(s) probably lost (Lindroth 1968: 744).

Cratacanthus pensylvanicus Dejean, 1829: 41. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 26). Synonymy established by Duponchel (1843: 327), confirmed by Lindroth (1955b: 26).

Cratacanthus litoreus Casey, 1884c: 74. Type locality: «Atlantic City [Atlantic County], New Jersey» (original citation). Lectotype (♀), designated by Lindroth (1975: 137), in USNM [# 47731]. Synonymy established by Horn (1885b: 108).

Cratacanthus bisectus Casey, 1884c: 75. Type locality: «Fairmont Park, Philadelphia [Philadelphia County, Pennsylvania]» (original citation). Lectotype (♂), designated by Lindroth (1975: 137), in USNM [# 47730]. Synonymy established by Horn (1885b: 108).

Cratacanthus texanus Casey, 1884c: 75. Type locality: «Texas» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 13), in USNM [# 47732]. Synonymy established by Horn (1885b: 108), confirmed by Bousquet and Larochelle (1993: 13).

Cratacanthus subovalis Casey, 1914: 59. Type locality: «southern Atlantic seaboard» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 13), in USNM [# 47733]. Synonymy established by Bousquet and Larochelle (1993: 13).

Cratacanthus cephalotes Casey, 1914: 59. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype (♂), designated by Bousquet and Larochelle (1993: 13), in USNM [# 47734]. Synonymy established by Bousquet and Larochelle (1993: 13).

Distribution. The range of this species extends from Long Island, New York (Notman 1928: 244), to southeastern Alberta (Lindroth 1968: 745), south to southern Arizona (Cochise, Greenlee and Pima Counties, CNC, UASM), Durango (Bates 1891a: 241) and southern Coahuila (UASM) in Mexico, western Alabama (Pickens and Tuscaloosa Counties, UASM), and "Florida" (Leng 1920: 70, as *C. subovalis*).

Records. CAN: AB, SK **USA**: AL, AR, AZ, CO, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, MT, NC, ND, NE, NJ, NM, NY, OH, OK, PA, SC, SD, TN, TX, UT, VA, WI, WY – Mexico

Tribe Sphodrini Laporte, 1834

Sphodridae Laporte, 1834: 78. Type genus: *Sphodrus* Clairville, 1806.

Diversity. About 825 species in the Nearctic (13 species), Neotropical (16 species in Mexico), Oriental (about eight species), Palaearctic (about 775 species), and Afrotropical (17 species in Ethiopia) Regions, arrayed in six subtribes: Atranopsina (about 100 species), Calathina (about 185 species), Dolichina (17 species), Pristosiina (about 65 Asian species), Synuchina (about 100 species), and Sphodrina (about 360 species).
Taxonomic Note. Several authors, including Lindroth (1966) and Ball and Bousquet (2000), placed the sphodrines within the tribe Platynini.

Subtribe Atranopsina Baehr, 1982

Atranopsina Baehr, 1982: 265. Type genus: *Atranopsis* Baehr, 1982.

Diversity. About 100 species in Europe (about 60 species), northern Africa (about 20 species), western Asia, including India (about 25 species), and eastern North America (one species); most species occur in the Mediterranean region.
Taxonomic Note. Lindroth (1968: 653) listed the genus *Pseudamara* in the tribe Amarini (= Zabrini) and pointed out that the sole species of the genus was "not very closely related to *Amara*". Recently Hieke (2010) concluded that *Pseudamara* belongs to the subtribe Atranopsina, of the Sphodrini, and was probably closely related to the genus *Amaroschema* Jeannel, which includes a single species in the Canary Islands.

Genus *Pseudamara* Lindroth, 1968

Pseudamara Lindroth, 1968: 653. Type species: *Geobaenus arenarius* LeConte, 1847 by original designation. Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Amara* [*q.v.*] [feminine].

Disamara Lindroth, 1976b: 132. Unnecessary replacement name for *Pseudamara* Lindroth, 1968. Note. Lindroth (1976b: 132) incorrectly assumed that his name *Pseudamara* was a junior homonym of *Pseudoamara* Baliani, 1934.

Diversity. One species in the boreal and temperate regions of eastern North America.
Identification. Lindroth (1968: 653-654) treated the species in his monograph.

Pseudamara arenaria (LeConte, 1847)

Geobaenus arenarius LeConte, 1847: 403. Type locality: «provinciis orientalibus» (original citation), restricted to «M[oun]t Washington [Coos County], N[ew] H[ampshire]» by Lindroth (1968: 654). One syntype in MCZ [# 5673].

Distribution. This species is found from Cape Breton Island (Bousquet 1987a: 128) to northern Minnesota (Gandhi et al. 2005: 929), south to southwestern North Carolina (Macon County, MCZ).

Records. CAN: NB, NS (CBI), ON, PE, QC **USA**: IL, MA, ME, MI, MN, NC, NH, NY, OH, PA, RI, VA, VT, WI, WV

Subtribe Calathina Laporte, 1834

Calathidae Laporte, 1834: 71. Type genus: *Calathus* Bonelli, 1810.

Diversity. About 185 species (Lorenz 2005: 396-399) placed in the genus *Calathus.* Based on recent molecular sequence analyses (Ruiz et al. 2009), *Synuchidius* Apfelbeck and *Thermoscelis* Putzeys, often ranked as distinct genera, are considered subgenera of *Calathus*.

Genus *Calathus* Bonelli, 1810

Calathus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus cisteloides* Panzer, 1793 (= *Carabus fuscipes* Goeze, 1777) designated by Curtis (1827: plate 184). Etymology. Possibly from the Greek *calathos* (basket) [masculine].

Diversity. About 185 species (Lorenz 2005: 396-399) in North America (eight species, one of them adventive), Mexico (14 species), Ethiopia (17 species), and the Palaearctic Region (about 145 species) arrayed in 11 subgenera: *Calathus s.str.* (50 species), *Lauricalathus* Machado (19 species endemic to the Canary Islands), *Trichocalathus* Bolívar y Pieltain (three species endemic to the Canary Islands), *Neocalathus* (45 species), *Amphyginus* Haliday (two European species), *Tachalus* Ball and Nègre (one Mexican species), *Bedelinus* Ragusa (one species in Europe and northern Africa), *Lindrothius* Kurnakov (13 species restricted to Caucasia), *Acalathus* (11 species), *Synuchidius* Apfelbeck (one southeast European species), and *Thermoscelis* Putzeys (one Caucasian species). About 40 species, including all those from Ethiopia, are currently unplaced (Lorenz 2005: 398-399).
Identification. Ball and Nègre (1972) revised the Western Hemisphere species and provided a key for their identification.

Subgenus *Calathus* Bonelli, 1810

Calathus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus cisteloides* Panzer, 1793 (= *Carabus fuscipes* Goeze, 1777) designated by Curtis (1827: plate 184).

Diversity. Fifty species (Lorenz 2005: 396-397) in Europe, the Middle East, and Nepal. Most of the species are endemic to the Mediterranean region. One species is adventive in western North America.
Taxonomic Note. *Fuscocalathus* Nègre (1969: 7) is usually cited as a junior synonym of this subgenus following Ball and Nègre (1972: 510). However, the name is a *nomen nudum* since Nègre (1969) failed to designate a type species for his new taxon.

Calathus fuscipes (Goeze, 1777)

Carabus fuscipes Goeze, 1777: 666. Type locality not stated; «n[ea]r Paris, France» selected by Lindroth (1966: 542). Syntype(s) possibly in MHNP. Note. This taxon

was first described by Geoffroy (1762: 161) under the name "*Bupreste noir à pattes brunes*" as mentioned by Goeze (1777: 666). Goeze (1777: 666) reproduced Geoffroy's original description in Latin and provided a scientific name. I consider that Goeze's name was made available by a bibliographic reference to a description and as such the type series consists of Geoffroy's specimens (ICZN 1999: Article 72.4.4).

Carabus cisteloides Panzer, 1793: no 12. Type locality: «Brunsvigiae [= Brunswick, Germany]» (original citation). Syntype(s) location unknown (possibly in ZMHB). Synonymy established by Schönherr (1806: 195).

Distribution. This Palaearctic species is adventive in North America where it is known from southwestern British Columbia (Lindroth 1966: 543) to northwestern Oregon (Westcott et al. 2006: 7). The first inventoried specimen collected on this continent was found in the vicinity of Vancouver, British Columbia, in 1928 (Hatch 1949c: 151).

Records. CAN: BC **USA**: OR, WA – **Adventive**

Subgenus *Neocalathus* Ball and Nègre, 1972

Neocalathus Ball and Nègre, 1972: 426. Type species: *Carabus melanocephalus* Linnaeus, 1758 by original designation. Etymology. From the Greek prefix *neo-* (new) and the generic name *Calathus* [*q.v.*] [masculine].

Diversity. Forty-five species in North America (six species), Mexico (13 species), and the Palaearctic Region (27 species, no endemic species in eastern Asia).

Taxonomic Note. Gañán and Novoa (2006) considered *Neocalathus* as a synonym of *Amphyginus* Haliday, 1841 (type species: *Carabus piceus* Marsham, 1802 (= *Calathus rotundicollis* Dejean, 1828)). If this approach is followed, then *Amphyginus* is the valid name for this subgenus (see Alonso-Zarazaga 2006).

Faunistic Note. The record of *Calathus ambigens* Bates from Huachuca Mountains in southeastern Arizona (Schaeffer 1910: 394) is probably in error since the species is recorded only from Durango and Chihuahua in Mexico by Ball and Nègre (1972: 461-462).

Calathus calceus Ball and Nègre, 1972

Calathus calceus Ball and Nègre, 1972: 489. Type locality: «Sprague R[iver] Canyon, 5 mi[les] E[ast] Bly, Klamath County, Oregon» (original citation). Holotype (♂) in CAS [# 11313].

Distribution. This species ranges from the southern Gulf Islands of southwestern British Columbia (James C. Bergdahl pers. comm. 1993) to southern Idaho, south to northern Utah and Mono County in the Sierra Nevada of California [see Ball and Nègre 1972: Fig. 53].

Records. CAN: BC **USA**: CA, ID, NV, OR, UT, WA

Calathus gregarius (Say, 1823)

Feronia gregaria Say, 1823a: 47. Type locality: «Phila[delphia] [Philadelphia County], P[ennsylvani]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 345), in MCZ [# 33022].

Calathus piceus T.W. Harris, 1828c: 123 (as *piceous*). Type locality not stated. Syntype(s) presumably lost. Synonymy established with doubt by Harris (1833: 567).

Calathus distinguendus LeConte, 1844: 53 (as *distinguenidus*). Type locality: «Georgia» (original citation). Lectotype [as holotype] (♂), designated by Ball and Nègre (1972: 486), in MCZ [# 5728]. Synonymy established by LeConte (1854b: 36), confirmed by Lindroth (1966: 543).

Distribution. This species is found from Cape Breton Island in Nova Scotia (Lindroth 1966: 544) to western North Dakota (Tinerella 2003: 636), south to Nebraska, northern Alabama, and northeastern Georgia (Fattig 1949: 32) [see Ball and Nègre 1972: Fig. 51]. The records from Prince Edward Island (Bousquet and Larochelle 1993: 245, see Majka et al. 2008: 133) and eastern Kansas (Popenoe 1877: 23) need confirmation; those from "Florida," Texas (Wickham 1896c: 133; Knaus 1905b: 348), and New Mexico (Fall and Cockerell 1907: 159) are likely in error (see Ball and Nègre 1972: 486).
Records. CAN: NB, NS (CBI), ON, QC **USA**: AL, CT, DC, DE, GA, IA, IL, IN, KY, MA, MD, ME, MI, MN, MO, NC, ND, NE, NH, NJ, NY, OH, PA, RI, SC, SD, TN, VA, VT, WI, WV [KS, PE]

Calathus ingratus Dejean, 1828

Calathus ingratus Dejean, 1828: 77. Type locality: «île d'Ounalaschka, l'une des îles Aleutiennes [Alaska]» (original citation). One possible syntype (♂) in MHNP (Lindroth 1955b: 18).

Calathus incommodus Mannerheim, 1853: 139. Type locality: «ad ostia fl[umen] Kaktnu [= Kenai River] peninsulae Kenai [Alaska]» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1966: 544), in ZMH. Synonymy established by LeConte (1860: 317), confirmed by Lindroth (1954b: 137).

Calathus confusus LeConte, 1854b: 36. Type locality: «Lake Superior» (original citation). Syntype(s) in MCZ [# 5729]. Synonymy established by LeConte (1860: 317), confirmed by Lindroth (1954b: 136).

Calathus coloradensis Casey, 1913: 157. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 125), in USNM [# 47548]. Synonymy established by Lindroth (1954b: 137).

Calathus reductus Casey, 1913: 158. Type locality: «Colorado» (original citation). Five syntypes [5 originally cited] in USNM [# 47546]. Synonymy established by Erwin et al. (1977: 4.39).

Calathus acomanus Casey, 1913: 158. Type locality: «New Mexico» (original citation). Two syntypes in USNM [# 47536]. Synonymy established by Erwin et al. (1977: 4.39).

Calathus labradorinus Casey, 1913: 158. Type locality: «West S[ain]t Modest[e], Labrador» (original citation). Lectotype (♀), designated by Lindroth (1975: 125), in USNM [# 47547]. Synonymy established by Lindroth (1954b: 137).

Calathus planifer Casey, 1920: 217. Type locality: «S[ain]t Paul Island, Alaska» (original citation), which is incorrect (Lindroth 1975: 125). Holotype [by monotypy] (♀) in USNM [# 47545]. Synonymy established by Lindroth (1954b: 137).

Calathus beringi Casey, 1920: 218. Type locality: «S[ain]t Paul Island, Alaska» (original citation), which is no doubt incorrect (Lindroth 1975: 125). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47543]. Synonymy established by Lindroth (1954b: 137).

Calathus nanulus Casey, 1920: 218. Type locality: «S[ain]t Paul Island, Alaska» (original citation), which is incorrect (Lindroth 1975: 125). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47544]. Synonymy established by Lindroth (1954b: 137).

Calathus calator Casey, 1920: 220. Type locality: «Peaceful Valley [Boulder County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 125), in USNM [# 47549]. Synonymy established by Lindroth (1966: 544).

Calathus aquilus Casey, 1920: 220. Type locality: «Ouray [Ouray County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47550]. Synonymy established by Lindroth (1954b: 137).

Distribution. The range of this transamerican species extends from Newfoundland (Lindroth 1955a: 112-113) to Alaska, including the Aleutian Islands (Lindroth 1966: 545), south to Washington (Hatch 1953: 131), central Arizona, southern New Mexico, the Black Hills in southwestern South Dakota (Kirk and Balsbaugh 1975: 23), and the Adirondack Mountains in northeastern New York (Notman 1928: 230) [see Ball and Nègre 1972: Fig. 53].

Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CO, ID, ME, MI, MN, MT, ND, NH, NM, NY, SD, UT, VT, WA, WI, WY

Calathus opaculus LeConte, 1854

Calathus opaculus LeConte, 1854b: 37. Type locality: «middle, southern and western states» (original citation), restricted to «Lawrence [Douglas County], Kansas» by Lindroth (1966: 543). Lectotype (♀), designated by Ball and Nègre (1972: 487), in MCZ [# 5730].

Calathus sonoricus Casey, 1913: 156. Type locality: «Arizona» (original citation). Lectotype [as holotype] (♂), designated by Ball and Nègre (1972: 487), in USNM [# 47541]. Synonymy established by Lindroth (1966: 543).

Calathus alutaceus Casey, 1913: 157. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype [as holotype] (♂), designated by Ball and Nègre (1972: 488), in USNM [# 47537]. Synonymy established by Ball and Nègre (1972: 488).

Calathus appalachius Casey, 1913: 157. Type locality: «Asheville [Buncombe County], North Carolina» (original citation for the lectotype). Lectotype [as holotype] (♀), designated by Ball and Nègre (1972: 488), in USNM [# 47538]. Synonymy established by Ball and Nègre (1972: 488).

Calathus obesulus Casey, 1913: 157. Type locality: «M[oun]t Hope [Sedgwick County], Kansas» (original citation for the lectotype). Lectotype [as holotype], designated by Ball and Nègre (1972: 488), in USNM [# 47539]. Synonymy established by Ball and Nègre (1972: 488).

Calathus ventricosus Casey, 1920: 219. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). Lectotype [as holotype] (♀), designated by Ball and Nègre (1972: 488), in USNM [# 47542]. Synonymy established by Ball and Nègre (1972: 488).

Distribution. The range of this species extends from southern Quebec (Larochelle 1975: 69) to southeastern Utah, south to southeastern Arizona, southern Texas, and northern Florida [see Ball and Nègre 1972: Fig. 52]. The record from New Brunswick (see Majka et al. 2007: 11) is in error (Christopher G. Majka pers. comm. 2009).
Records. CAN: ON, QC **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, TN, TX, UT, VA, VT, WI, WV, WY

Calathus peropacus Casey, 1920

Calathus peropacus Casey, 1920: 219. Type locality: «Palmerlee [= Garcés, Cochise County], Arizona» (original citation). Lectotype (♀), designated by Ball and Nègre (1972: 492), in USNM [# 47540].

Distribution. This species is confined, as far as known, to mountains in southeastern Arizona (Ball and Nègre 1972: 505).
Records. USA: AZ

Calathus ruficollis grandicollis Casey, 1920

Calathus grandicollis Casey, 1920: 215. Type locality: «Hydesville, Valley of Eel River, Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Ball and Nègre (1972: 468), in USNM [# 47558].

Distribution. The range of this subspecies extends from southwestern British Columbia, including Vancouver Island, south to Humboldt County in northern California [see Ball and Nègre 1972: Fig. 40].
Records. CAN: BC (VCI) **USA**: CA, OR, WA

Calathus ruficollis ignicollis Casey, 1920

Calathus ignicollis Casey, 1920: 213. Type locality: «Mokelumne Hill, Calaveras Co[unty], California» (original citation). Lectotype [as holotype] (♀), designated by Ball and Nègre (1972: 468), in USNM [# 47556].

Figure 39. *Atranus pubescens* (Dejean). This species is found over eastern North America and the only other species in the genus, *A. ruficollis*, occurs in southern Europe and the Middle East. The only other carabid genus with a similar vicariant distribution is *Olisthopus* although one European species, *O. sturmii*, extends to the Far East. Most amphiatlantic vicariant carabid groups, such as *Pseudanophthalmus-Duvaliopsis*, are at least generically distinct.

Distribution. This subspecies occurs from eastern Washington and western Idaho south to central California [see Ball and Nègre 1972: Fig. 40].
Records. USA: CA, ID, OR, WA

Calathus ruficollis ruficollis Dejean, 1828

Calathus ruficollis Dejean, 1828: 78. Type locality: «Californie» (original citation), restricted to «Los Angeles [Los Angeles County]» by Lindroth (1966: 545). One syntype in MHNP (Lindroth 1955b: 18).

Calathus behrensii Mannerheim, 1843: 195. Type locality: «California ad Ross [farming community about 75 miles north of San Francisco along the coast]» (original citation). Lectotype [as holotype] (♀), designated by Ball and Nègre (1972: 466), in ZMH. Synonymy established by Casey (1920: 216), confirmed by Ball and Nègre (1972: 466).

Calathus quadricollis LeConte, 1854b: 37. Type locality: «San Francisco [San Francisco County], California» (original citation). Lectotype (♂), designated by Ball and Nègre (1972: 466), in MCZ [# 5731]. Synonymy established by Lindroth (1966: 546).

Calathus obscurus LeConte, 1854b: 37. Type locality: «southern part of California» (original citation), restricted to «San Diego [San Diego County]» by Ball and Nègre (1972: 466). Holotype [by monotypy] (♀) in MCZ [# 5732]. Synonymy established by Ball and Nègre (1972: 466).

Calathus longulus Casey, 1913: 158. Type locality: «Los Angeles Co[unty], California» (original citation). Lectotype [as holotype] (♀), designated by Ball and Nègre (1972: 466), in USNM [# 47552]. Synonymy established by Ball and Nègre (1972: 466).

Calathus montereyanus Casey, 1920: 213. Type locality: «Monterey [Monterey County], California» (original citation). Lectotype [as holotype] (♀), designated by Ball and Nègre (1972: 466), in USNM [# 47554]. Synonymy established by Ball and Nègre (1972: 466).

Calathus tenuistriatus Casey, 1920: 214. Type locality: «San Diego [San Diego County], California» (original citation). Holotype [by monotypy] (♂) in USNM [# 47557]. Synonymy established by Ball and Nègre (1972: 468).

Calathus minuens Casey, 1920: 216. Type locality: «S[an]ta Clara Co[unty], California» (original citation). Lectotype (♂), designated by Ball and Nègre (1972: 468), in USNM [# 47551]. Synonymy established by Ball and Nègre (1972: 468).

Calathus piceolus Casey, 1920: 217. Type locality: «San Diego [San Diego County], California» (original citation). Lectotype (♀), designated by Ball and Nègre (1972: 468), in USNM [# 47556]. Synonymy established by Ball and Nègre (1972: 468).

Distribution. This subspecies ranges from Mendocino County in California south to the northern parts of the Baja California Peninsula and southern Arizona (Ball and Nègre 1972: 482, Fig. 40); it also occurs on the Channel Islands. The record from "Nevada" (Ball and Nègre 1972: 482) is doubtful. The subspecies is adventive in Hawaii (Liebherr and Zimmerman 2000: 465).

Records. USA: AZ, CA (CHI) [NV] – Mexico
Note. According to Ball and Nègre (1972: 482), this form intergrades with the *ignicollis* form along the Great Central Valley of California.

Subgenus *Acalathus* Semenov, 1889

Acalathus Semenov, 1889a: 365. Type species: *Acalathus semirufescens* Semenov, 1889 by monotypy. Etymology. Probably from the Greek prefix *a-* (with, sameness) and the generic name *Calathus* [*q.v.*], possibly alluding to the similarity of the adults with those of *Calathus* [masculine]. Note. This taxon was also described as new by Semenov (1889b: 691).

Procalathus Jedlička, 1953: 106. Type species: *Calathus fallax* Semenov, 1889 by original designation. Synonymy established by Lindroth (1966: 547). Etymology. From the Latin *pro-* (before, in front of) and the generic name *Calathus* [*q.v.*] [masculine].

Diversity. Eleven species in North America (one species) and the Chinese provinces of Kansu, Szechwan, and Tsinghai, and the Autonomous Region of Tibet (ten species).
Taxonomic Note. This taxon has been listed as a distinct genus in the subtribe Dolichina by Hovorka and Sciaky (2003: 529). However, Ruiz et al. (2009) concluded from molecular sequence analyses that the taxon is closely related to *Calathus* and should be ranked as a subgenus of *Calathus*.

Calathus advena (LeConte, 1846)

Agonum molle Eschscholtz, 1823: 102 [secondary homonym of *Calathus mollis* (Marsham, 1802)]. Type locality: «Unalaschka [Alaska]» (original citation). Lectotype (♀), designated by Lindroth (1966: 548), in ZMH.

Pristodactyla advena LeConte, 1846b: 217. Type locality: «prope fines Aquilones [apparently along northeastern boundary of Maine, see LeConte (1854b: 38)]» (original citation). Two syntypes in MCZ [# 35336]. Synonymy established by Schaupp (1883c: 49), confirmed by Lindroth (1954b: 137).

Anchomenus brunnescens Mannerheim, 1852: 294. Type locality: «insula Atkha [= Atka Island, Aleutian Islands, Alaska]» (original citation). Lectotype (♂), designated by Lindroth (1966: 548), in ZMH. Synonymy established by Lindroth (1954b: 138).

Anchomenus breviusculus Mannerheim, 1852: 294. Type locality: «insula Atkha [= Atka Island, Aleutian Islands, Alaska]» (original citation). Lectotype (♂), designated by Lindroth (1966: 548), in ZMH. Synonymy established by Lindroth (1954b: 138).

Anchomenus lenis Mannerheim, 1853: 140. Type locality: «insula Kadjak [Alaska]» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1966: 548), in ZMH. Synonymy established by Van Dyke (1924a: 11), confirmed by Lindroth (1955a: 114).

Anchomenus dulcis Mannerheim, 1853: 141. Type locality: «regionibus interioribus peninsulae Kenai [Alaska]» (original citation). Lectotype (♂), designated by Lin-

droth (1966: 548), in ZMH. Synonymy established by Harold (1868: 90), confirmed by Lindroth (1954b: 137).

Pristodactyla binaria Casey, 1920: 222. Type locality: «S[outh] Arkansas» (original citation), which is highly doubtful (Lindroth 1975: 125). Lectotype (♀), designated by Lindroth (1975: 125), in USNM [# 47567]. Synonymy established by Lindroth (1954b: 137).

Pristodactyla scolopax Casey, 1920: 223. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47568]. Synonymy established by Lindroth (1954b: 138).

Distribution. This species ranges in the east from eastern Newfoundland to Lake Superior, south to southwestern New York, and in the west from Kodiak Island in Alaska south to northern Oregon, east-central Nevada, and southern New Mexico along the Rocky Mountains, east to the Black Hills in southwestern South Dakota (Pennington County, CNC) [see Ball and Nègre 1972: Fig. 1]. The records from "California" (Lindroth 1955a: 114) and "Vermont" (Hamilton 1894a: 11) need confirmation.

Records. FRA: PM **CAN**: AB, BC, LB, NB, NF, ON, QC, SK **USA**: AK, AZ, CO, ID, ME, MI, MN, MT, ND, NH, NM, NV, NY, OR, SD, UT, WA, WY [CA, VT]

Subtribe Synuchina Lindroth, 1956

Synuchi Lindroth, 1956b: 489. Type genus: *Synuchus* Gyllenhal, 1810.

Diversity. About 100 species (Lorenz 2005: 400-401) in North America and Mexico (three species) and the Palaearctic Region (about 95 species), arrayed in four genera: *Parabroscus* Lindroth (two species from Japan and Taiwan), *Nipponosynuchus* Morita (one Japanese species), *Synuchus* (about 80 species), and *Trephionus* Bates (14 Japanese species).

Genus *Synuchus* Gyllenhal, 1810

Synuchus Gyllenhal, 1810: 77. Type species: *Carabus nivalis* Panzer, 1796 (= *Carabus vivalis* Illiger, 1798) by monotypy. Etymology. Probably from the Greek *synochos* (join, continued) rather than from the Greek prefix *syn-* (together, with) and *onyx*, *-ychos* (claw) [masculine].

Taphria Dejean, 1821: 10. Type species: *Carabus vivalis* Illiger, 1798 by monotypy. Etymology. From the Greek *taphros* (ditch, trench, by extension stria, dimple) [feminine]. This name was proposed by Franco Andrea Bonelli and made available by Dejean.

Pristodactyla Dejean, 1828: 82. Type species: *Pristodactyla americana* Dejean, 1828 (= *Feronia impunctata* Say, 1823) by monotypy. Synonymy established by Lindroth (1955a: 115). Etymology (original). From the Greek *pristes* (sawyer) and *dactylos* (finger), alluding to the denticulate claws ("*crochets des tarses dentelés en-dessous*") of the adult [feminine].

Synochus Agassiz, 1846: 359. Unjustified emendation of *Synuchus* Gyllenhal, 1810.

Diversity. About 80 species in the Nearctic (two species), Neotropical (one species from northwestern Mexico), and Palaearctic (77 species, of which one is Eurasian, nine are from the Himalayas, and the remaining from eastern Asia) Regions.
Identification. Lindroth (1966: 550-552) treated both North American species.

Synuchus dubius (LeConte, 1854)

Pristodactyla dubia LeConte, 1854b: 38. Type locality: «New Mexico» (original citation), herein restricted to Cloudcroft, Otero County (UASM). Holotype [by monotypy] possibly in MCZ [# 5734]. Note. The specimen of *S. dubius* in the LeConte collection with the type label is also labeled "Col." and so is not the holotype. Two other specimens in LeConte's collection are labeled "N.M." and one of them could be the holotype.

Pristodactyla arizonica Casey, 1913: 160. Type locality: «Arizona» (original citation). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47563]. Synonymy established by Lindroth (1954b: 137).

Pristodactyla zuniana Casey, 1913: 161. Type locality: «New Mexico» (original citation). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47565]. Synonymy established by Lindroth (1954b: 137).

Pristodactyla neomexicana Casey, 1920: 221. Type locality: «Cloudcroft [Otero County], New Mexico» (original citation). Lectotype (♂), designated by Lindroth (1975: 125), in USNM [# 47566]. Synonymy established by Lindroth (1954b: 137).

Pristodactyla juabitica Casey, 1924: 87. Type locality: «Trout Creek, Juab Co[unty], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47562]. Synonymy established by Lindroth (1954b: 138).

Distribution. This species is found in the southern part of the Rocky Mountains in western Utah (Casey 1924: 87, as *P. juabitica*), Colorado (Wickham 1902: 238; Lindroth 1956b: 523), New Mexico (LeConte 1854b: 38; Fall and Cockerell 1907: 159; Lindroth 1956b: 523), and Arizona (Wickham 1898: 300; Casey 1913: 160, as *P. arizonica*; UASM).
Records. USA: AZ, CO, NM, UT

Synuchus impunctatus (Say, 1823)

Feronia impunctata Say, 1823a: 45. Type locality: «Tyngs[boro] [Middlesex County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 346), in MCZ [# 33023]. Note. «Germantown [Pennsylvania]» was the area originally cited by Say (1823a: 43).

Pristodactyla americana Dejean, 1828: 83. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 18). Synonymy established by LeConte (1846b: 217), confirmed by Lindroth (1955b: 18).

Pristonychus americanus LeConte, 1844: 52 [secondary homonym of *Pristonychus americanus* (Dejean, 1828)]. Type locality: «Georgia» (original citation). Syntype(s) location unknown. Synonymy established by Lindroth (1956b: 521, as *P. corvina*). Note. There is no specimen in LeConte's collection under the name *Calathus impunctatus* with an orange disc (= southern states which included Georgia). The specimen with the type label is labeled "[pink disc] / Type 5733 / [blank white square label] / P. corvinus Lec. Priston. amer. Lec. var. praec. [handwritten] / impunctatus 11 [handwritten]."

Pristodactyla corvina LeConte, 1846b: 217. Replacement name for *Pristodactyla americana* (LeConte, 1844).

Pristodactyla impunctata convexa Casey, 1913: 160. Type locality: «Lake Champlain, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 125), in USNM [# 47560]. Synonymy established by Lindroth (1954b: 137).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 115-116) to southwestern British Columbia (Lindroth 1966: 551), south to western Washington (Hatch 1953: 132), northern Idaho (Hatten et al. 2011: 325), eastern Kansas (Cook and Holt 2006: 2313), and northern Georgia (Fattig 1949: 32). The record from southwestern Colorado (Wickham 1902: 238) needs confirmation.
Records. FRA: PM **CAN**: AB, BC, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: CT, DC, DE, GA, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, ND, NE, NH, NJ, NY, OH, PA, RI, SD, VA, VT, WA, WI, WV [CO]

Subtribe Sphodrina Laporte, 1834

Sphodridae Laporte, 1834: 78. Type genus: *Sphodrus* Clairville, 1806.
Pristonychidae Gistel, 1848b: [2]. Type genus: *Pristonychus* Dejean, 1828.

Diversity. About 360 species (Lorenz 2005: 401-407), all but one (*Miquihuana rhadiniformis* Barr from Mexico) native to the Palaearctic Region. Two species are adventive in several regions of the world.
Identification. Casale (1988) revised all species then known.

Genus *Laemostenus* Bonelli, 1810

Laemostenus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus janthinus* Duftschmid, 1812 designated by Madge (1975: 583). Etymology. From the Greek *laimos* (throat, gullet, by extension neck) and *stenos* (narrow, tight) (see Bedel 1878: 250) [masculine].

Diversity. About 195 species (Lorenz 2005: 403-406) in Europe, northern Africa, western and central Palaearctic Asia, and the Himalayas arrayed in 12 subgenera. Two species are adventive in several parts of the world.
Identification. Lindroth (1966: 549-550) treated both species found in North America.

Subgenus *Laemostenus* Bonelli, 1810

Laemostenus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus janthinus* Duftschmid, 1812 designated by Madge (1975: 583). Note. *Laemosthenes* is an incorrect subsequent spelling of *Laemostenus* Bonelli, introduced by Agassiz (1846: 199), not in prevailing usage.

Ctenipus Latreille, 1829: 400. Type species: *Carabus janthinus* Duftschmid, 1812 designated by Desmarest (1851: 136). Etymology. From the Greek *ctenos* (comb) and *pous* (foot) [masculine].

Ctenopus Agassiz, 1846: 107. Unjustified emendation of *Ctenipus* Latreille, 1829.

Diversity. Twenty species in Europe (eight species), northern Africa (four species), and Asia (13 species), one of them has been dispersed by trade to several continents and islands.

***Laemostenus complanatus* (Dejean, 1828)**

Pristonychus complanatus Dejean, 1828: 58. Type locality: «Portugal, Espagne, midi de la France, Italie, Sicile, Égypte, côte de Barbarie» (original citation), restricted to «Francia meridionale» by Casale (1988: 458). Lectotype (♂), designated by Casale (1988: 458), in MHNP.

Distribution. This species is now subcosmopolitan (Casale 1988: 460). It is adventive in North America and known from southern British Columbia, including Vancouver Island (Lindroth 1966: 550), to southwestern California, east across the Central Valley to the western foothills of the Sierra Nevada (David H. Kavanaugh pers. comm. 2008). The first inventoried specimen collected on this continent was found prior to 1874 since the species is reported by Crotch (1874: 12).
Records. CAN: BC (VCI) **USA**: CA, OR, WA – **Adventive**

Subgenus *Pristonychus* Dejean, 1828

Pristonychus Dejean, 1828: 43. Type species: *Carabus terricola* Herbst, 1784 designated by Westwood (1838: 2). Etymology (original). From the Greek *pristes* (saw) and *onychos* (claw), alluding to the denticulate claws ("*crochets des tarses dentelés en-dessous*") of the adult [masculine].

Eutrichomerus Carret, 1907: 95, 99, 106. Type species: *Carabus terricola* Herbst, 1784 designated by Jeannel (1914: 237). Etymology. From the Greek *eu* (well), *trichos* (hair), and *meros* (femur), alluding to the presence of long setae on the profemur ("*fémurs antérieurs ... garnis de longs poils dressés et plus ou moins groupés sur la tranche postérieure de l'arête externe*") of the adult [masculine].

Diversity. About 55 species in Europe, northern Africa, western Asia, and the Himalayas. One European species is adventive in North America and India (Casale 1988: 786-787).

***Laemostenus terricola terricola* (Herbst, 1784)**

Carabus terricola Herbst, 1784: 140. Type locality: «Berlin [Germany]» (original citation). Syntype(s) in ZMHB (Casale 1988: 781).

Carabus inaequalis Panzer, 1795: 60. Type locality: Germany (inferred from title of the book). Syntype(s) location unknown (possibly in ZMHB). Synonymy established, under the name *Sphodrus subcyaneus* (Illiger), by Sturm (1824: 152).

Carabus subcyaneus Illiger, 1801: 57. Type locality: Prussia, Germany (inferred from title of Illiger's 1798 book). Syntype(s) location unknown. Synonymy established by Schönherr (1806: 183). Note. This name was proposed for *Carabus terricola* Herbst, 1784 *sensu* Illiger (1798: 184).

Harpalus episcopus Drapiez, 1819: 130. Type locality: «Mons, en Hainaut [Belgium]» (original citation). One possible syntype in MHNP (see Casale 1988: 781). Synonymy established by Casale (1988: 781).

Sphodrus reichenbachi Schaufuss, 1861: 15. Type locality: «prov[incia] Alaba [= Álava], Hispan[ia] occ[identalis]» (original citation). Lectotype (♂), designated by Casale (1988: 782), in ZMHB. Synonymy established by Casale (1988: 782).

Distribution. This European subspecies is adventive in North America where it is known from Newfoundland (Lindroth 1966: 550; Larson and Langor 1982: 593) and the Maritimes (Lindroth 1966: 550) to the Saint Lawrence Estuary (Larochelle 1975: 98), from three specimens collected in 2005 and 2008 in Boston Harbor, Massachusetts (Davidson et al. 2011: 518), and from one specimen collected in 1980 in southeastern British Columbia (Bousquet 1987a: 125). The first inventoried specimen collected on this continent was found in Nova Scotia prior to 1894 (Bousquet 1992a: 507).

Records. FRA: PM **CAN**: BC, NB, NF, NS, PE, QC **USA**: MA – **Adventive**

Note. The subspecies *L. terricola punctatus* Dejean is restricted to eastern Europe.

Tribe Platynini Bonelli, 1810

Platynii Bonelli, 1810: Tabula Synoptica. Type genus: *Platynus* Bonelli, 1810.

Anchomenii Bonelli, 1810: Tabula Synoptica. Type genus: *Anchomenus* Bonelli, 1810.

Sericodiadae Kirby, 1837: 14. Type genus: *Sericoda* Kirby, 1837.

Agonidae Kirby, 1837: 23. Type genus: *Agonum* Bonelli, 1810. Note. The Commission (ICZN 1996: 223) ruled that the stem of the genus *Agonum* is *Agonum-*, not *Agon-* as it should be, to remove homonymy with Agonidae Swainson, 1839 (Osteichthyes, Scorpaeniformes).

Colpodidas Chaudoir, 1872c: 285. Type genus: *Colpodes* Macleay, 1825.

Agelaeina Jacobson, 1907: 334. Type genus: *Agelaea* Gené, 1839.

Diversity. Worldwide, with about 2,670 species arrayed in 170 genera (Lorenz 2005: 407-437, excluding Enoicina and *Atranus*). The Northern Hemisphere has about 750 species (28% of the world fauna) and North America alone about 160 (6%).

Genus *Olisthopus* Dejean, 1828

Odontonyx Stephens, 1827: 67. Type species: *Carabus rotundicollis* Marsham, 1802 (= *Carabus rotundatus* Paykull, 1790) designated by Westwood (1838: 2). Etymology (original, see page 96). From the Greek *odontos* (tooth) and *onyx* (claw), alluding to the denticulate claws ("claws denticulated") of the adult [masculine]. Note. Lindroth (1966: 553) pointed out that *Carabus rotundicollis sensu* Stephens (1828a: 96), based on Stephens' key and description as well as his collection, consisted of two species, *Olisthopus rotundicollis* Marsham (= *O. rotundatus* Paykull) and *Synuchus vivalis* Illiger. There is no provision in the Code to deal with such cases and therefore correct identification of the species is assumed (ICZN 1999: Article 70.1).

Olisthopus Dejean, 1828: 176. Type species: *Carabus rotundatus* Paykull, 1790 designated by Westwood (1838: 3). Etymology (original). From the Greek *olisthos* (slippery, escape easily) and *pous* (foot), alluding to the agility of the species known to Dejean to escape on feet ("*petits carabiques vifs et agiles*") [masculine]. Note. This name has been in prevailing usage for several decades now. However, reversal of precedence (ICZN 1999: Article 23.9) cannot be applied in this case because *Odontonyx* has been used as a valid name after 1899 by several authors. A submission should be made to the Commission to preserve *Olisthopus* as the valid name for this taxon.

Diversity. Twenty-one species in temperate areas of the Nearctic (seven species) and Palaearctic (14 species, only one extending to eastern Asia) Regions.
Identification. Casey (1913: 169-171) published a key to all North American species except *O. micans* but the genus is in need of a taxonomic revision.

[**micans group**]

Olisthopus filicornis Casey, 1913

Olisthopus filicornis Casey, 1913: 171. Type locality: «Rhode Island» (original citation). One syntype in USNM [# 47575].

Distribution. This species has been recorded from Rhode Island (Casey 1913: 171) and from Richland County in South Carolina (Ciegler 2000: 106).
Records. USA: RI, SC

Olisthopus micans LeConte, 1846

Olisthopus micans LeConte, 1846b: 230. Type locality: «Georgia» (original citation). Two syntypes in MCZ [# 5790].

Distribution. The range of this species extends from southern Quebec (Larochelle 1975: 96) to "Iowa" (Jaques and Redlinger 1946: 295), south to southern Louisiana (Calcasieu Parish, CNC) and northern Florida (Baker County, CMNH). The record from "Wisconsin" (Bousquet and Larochelle 1993: 248) needs confirmation.

Records. CAN: ON, QC **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, LA, MA, MD, MI, MO, MS, NH, NJ, NY, OH, PA, RI, SC, VA, VT [WI]

[**parmatus group**]

***Olisthopus brevicornis* Casey, 1913**

Olisthopus brevicornis Casey, 1913: 171. Type locality: «Illinois» (original citation). One syntype in USNM [# 47573].

Distribution. This species is known only from the type series.
Records. USA: IL

***Olisthopus innuens* Casey, 1913**

Olisthopus innuens Casey, 1913: 170. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Holotype [by monotypy] (♂) in USNM [# 47572].

Distribution. This species is known only from the holotype.
Records. USA: RI

***Olisthopus iterans* Casey, 1913**

Olisthopus parmatus iterans Casey, 1913: 170. Type locality: «Indiana» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47570].

Distribution. This species is known only from the original two specimens.
Records. USA: IN
Note. Lindroth (1966: 553) listed this form in synonymy with *O. parmatus* Say but Bousquet and Larochelle (1993: 18) treated it as a distinct species.

***Olisthopus parmatus* (Say, 1823)**

Feronia parmata Say, 1823a: 49. Type locality: «Wis[s]ahick[o]n Cr[eek] [Philadelphia County], P[ennsylvani]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 348), in MCZ [# 33008].
Olisthopus cinctus Say, 1830b: (5) [3]. Type locality: «Pennsylvania» (original citation). Syntype(s) lost. Synonymy established by LeConte (1854b: 58).
Olisthopus pictus Casey, 1913: 169. Type locality: «Bayfield [Bayfield County], Wisconsin» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47571]. Synonymy established by Lindroth (1966: 553).

Distribution. This species ranges from "Nova Scotia" (Larochelle and Larivière 1990a: 30) to eastern Minnesota (Epstein and Kulman 1990: 215; Wickham 1896c: 134), south to northern Oklahoma (French et al. 2001: 229), Arkansas (Logan County, CNC), the Florida Panhandle (Leng 1915: 582), and southwestern Georgia (Fattig 1949: 35). The record from northern Colorado (Armin 1963: 158) needs confirmation.

Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, VA, VT, WI, WV [CO]

Olisthopus pusio Casey, 1913

Olisthopus pusio Casey, 1913: 171. Type locality: «Alexandria [Rapides Parish], Louisiana» (original citation). Holotype [by monotypy] (♂) in USNM [# 47574].

Distribution. This species is known only from the holotype collected in central Louisiana.
Records. USA: LA

Genus *Elliptoleus* Bates, 1882

Elliptoleus Bates, 1882a: 97. Type species: *Anchomenus vixstriatus* Bates, 1878 designated by Casey (1920: 5). Etymology. Unknown [masculine].

Diversity. Eleven Mexican species, of which one extends into southern United States.
Identification. Liebherr (1991b) revised the species.

Elliptoleus acutesculptus Bates, 1882

Elliptoleus acutesculptus Bates, 1882a: 98. Type locality: Refugio, Durango, Mexico (lectotype label). Lectotype (♀), designated by Liebherr (1991b: 95), in MHNP. Note. In the original description, the locality listed by Bates (1882a: 98) is "Mexico, near the city." Liebherr (1991b: 95) pointed out that Bates probably made a mistake in listing this locality since no specimen of *E. acutesculptus* in Bates' collection bears a Mexico City locality label.

Distribution. This species extends from east-central Arizona and southwestern Texas south to the state of San Luis Potosí in central Mexico [see Liebherr 1991b: Fig. 269]. Only two localities have been reported for the United States.
Records. USA: AZ, TX – Mexico

Genus *Sericoda* Kirby, 1837

Sericoda Kirby, 1837: 14. Type species: *Sericoda bembidioides* Kirby, 1837 by monotypy. Etymology. From the Greek *sericos* (silk), alluding to the silky appearance of adults ("black underneath, above black-bronze rather silky") of *S. bembidioides* in the eyes of Kirby [feminine].

Rhytiderus Chaudoir, 1844: 470. Type species: *Dromius decempunctatus* Reiche, 1842 (= *Sericoda bembidioides* Kirby, 1837) by original designation. Etymology (original). From the Greek *rhytis* (wrinkle) and *dere* (neck, by extension pronotum), alluding to the irregular, granulate, transversely strigulate microsculpture on the pronotum, which Chaudoir believed were wrinkles ("*thorax ... disco toto transverse rugis irregularibus tecto*"), of the adult [masculine].

Rhytidoderus Agassiz, 1846: 327. Unjustified emendation of *Rhytiderus* Chaudoir, 1844.
Agonodromius Reitter, 1908: 139 (as *Agnonodromius*), 239 (index). Type species: *Carabus quadripunctatus* DeGeer, 1774 designated by Jeannel (1942: 873). Synonymy established by Gray and Hatch (1941: 19). Etymology. From the generic names *Agonum* [*q.v.*] and *Dromius* [*q.v.*], alluding to the resemblance of these *Agonum* species to those of *Dromius* ("*Dromius-ähnich*") [masculine].

Diversity. Eight species in North America (four species, only one of them endemic), Middle America (two species, no endemism), the West Indies (one endemic Cuban species), South America (one species, no endemism), Asia (four species, three of them endemic), and Europe (two species, no endemism).
Identification. Liebherr (1991b) revised the species. One species, *S. balli* Schmidt, was subsequently described from Pakistan.

[**bogemannii group**]
***Sericoda bembidioides* Kirby, 1837**

Sericoda bembidioides Kirby, 1837: 15. Type locality: northern parts of British America (inferred from title of the paper), restricted to «Edmonton, Al[ber]ta» by Lindroth (1966: 569). Holotype [by monotypy] (♀) in BMNH (Lindroth 1953b: 169).
Dromius 10 punctatus Reiche, 1842: 310. Type locality: «Santa-Fe de Bogota [Colombia]» (original citation). Syntype(s) in MHNP. Synonymy established by Horn (1886b: xii).
Sericoda cicatricosa Mannerheim, 1853: 144. Type locality: «sur les rives du fl[euve] Kwytch-Pack [= apparently Kwikpak, Yukon River Delta (Lindroth 1966: 569)] sur le continent Américain russe» (see Motschulsky 1864: 233). Three syntypes in ZMMU (Keleinikova 1976: 191). Synonymy established by Mannerheim (1853: 144). Note. Motschulsky (1864: 233) first described this species and the name has been attributed to him since. However, Mannerheim (1853: 144) first published the name as a junior synonym of *Anchomenus bembidioides* and therefore the name is available from its first publication as a synonym (ICZN 1999: Article 11.6.1). The fact that the name was previously listed, but not described, by Motschulsky (1850a: 11) in a list is irrelevant. Because no specimen(s) was cited with this name by Mannerheim (1853: 144), the type series consists of the specimens cited when the species was described (ICZN 1999: Article 72.4.3).
Sericoda monticola Casey, 1920: 94. Type locality: «Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47518]. Synonymy established by Lindroth (1966: 569).
Sericoda colonica Casey, 1920: 94. Type locality: «Colonia Garcia, Sierra Madre M[oun]t[ain]s, Chihuahua, Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47519]. Synonymy established by Lindroth (1966: 569).

Distribution. This species is widely distributed in the Western Hemisphere ranging from southeastern Manitoba to central Alaska, south to northern Oregon and through the Rocky Mountains, Transverse Volcanic, Central America, and the Andes to southern Ecuador, east in South America to western Venezuela [see Liebherr 1991b: Fig. 240].
Records. CAN: AB, BC (VCI), MB, NT, SK, YT **USA**: AK, AZ, CO, ID, KS, MT, NM, OR, WA – Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Mexico, Panama, Venezuela

Sericoda bogemannii (Gyllenhal, 1813)

Harpalus bogemannii Gyllenhal, 1813: 697. Type locality: «Smolandia [= Småland province, Sweden]» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1966: 567), in UZIU.

Anchomenus strigicollis Mannerheim, 1852: 294. Type locality: «ad fontes Kaknu [Kenai Peninsula, Alaska] in continenti Americes borealis» (original citation). Lectotype (♂), designated by Lindroth (1966: 567), in ZMH. Synonymy established by Hamilton (1889b: 97), confirmed by Lindroth (1954b: 138).

Batenus costulatus Motschulsky, 1865: 319. Type locality: «Sibérie orientale [Russia]» (original citation). At least one syntype in ZMMU (Schmidt and Liebherr 2009: 254). Synonymy established by Shilenkov (in Kryzhanovskij et al. 1995: 114).

Sericoda invidiosa Casey, 1920: 97. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47524]. Synonymy established by Lindroth (1954b: 139).

Sericoda tacomae Casey, 1920: 98. Type locality: «Washington State» (original citation). Holotype [by monotypy] (♀) in USNM [# 47523]. Synonymy established by Gray (1937: 311), confirmed by Lindroth (1954b: 139).

Distribution. This Holarctic species is found in the New World from west-central Alaska south to central California and to southern New Mexico along the Rocky Mountains. Disjunct populations are also known from Chiapas in Mexico and Guatemala [see Liebherr 1991b: Fig. 230]. In the Old World, the species is known from disjunct populations in Lapland, the Austrian Alps, and Burma [see Liebherr 1991b: Fig. 231].
Records. CAN: AB, BC (VCI), YT **USA**: AK, CA, CO, ID, MT, NM, OR, WA – Guatemala, Mexico – **Holarctic**

Sericoda obsoleta (Say, 1823)

Feronia obsoleta Say, 1823a: 57. Type locality: «Bayf[ie]ld [Bayfield County], Wis[consin]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 348), in MCZ [# 33011].

Agonum luctuosum Dejean, 1828: 172. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 21). Synonymy established by Say (1830b: (5) [3]), confirmed by Lindroth (1966: 565).

Platynus consimilis LeConte, 1854b: 57 [secondary homonym of *Platynus consimilis* (Gyllenhal, 1810)]. Type locality: «Michipicoton [Ontario], Lake Superior» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5780]. Synonymy established by Lindroth (1966: 565).

Platynus vicinus Gemminger and Harold, 1868a: 377. Replacement name for *Platynus consimilis* LeConte, 1854.

Sericoda insulina Casey, 1920: 97. Type locality: «Victoria, Vancouver Island [British Columbia]» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47522]. Synonymy established by Lindroth (1966: 566).

Distribution. This Nearctic species ranges from Newfoundland to Vancouver Island (Casey 1920: 97, as *S. insulina*), north to southern Northwest Territories, south to central Oregon, central Colorado (Wickham 1902: 239), eastern Texas, and coastal Georgia [see Liebherr 1991b: Fig. 229]. One specimen simply labeled from California is known (Liebherr 1991b: 74). There is also one specimen recorded from near Mexico City (Liebherr 1991b: 72) which in my opinion is probably mislabeled.

Records. CAN: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, QC, SK **USA**: AL, AR, CO, CT, DC, GA, IA, ID, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NH, NJ, NY, OH, OR, PA, RI, SC, TN, TX, VA, VT, WA, WI, WV [CA]

[**quadripunctata group**]

***Sericoda quadripunctata* (DeGeer, 1774)**

Carabus 4-punctatus DeGeer, 1774: 102. Type locality not stated; «Uppsala, Sweden» selected by Lindroth (1966: 568). Lectotype (♂), designated by Lindroth (1966: 568), in NRSS.

Carabus foveolatus Illiger, 1801: 61. Type locality: Prussia (inferred from title of the paper). Holotype [by monotypy] probably lost. Synonymy established by Gyllenhal (1810: 160).

Anchomenus octocolus Mannerheim, 1853: 144. Type locality: «ad rivulos fl[umen] Tschunuktnu peninsulae Kenai [Alaska]» (original citation). Holotype [by monotypy] probably in ZMMU. Synonymy established by LeConte (1879b: 57). Note. Regarding the type locality, see "Note" section for *Cryobius subcaudatus* Mannerheim.

Platynus stigmosus LeConte, 1854b: 58. Type locality: «Lake Superior, Maine and New Hampshire» (original citation), restricted to «L[ake] Superior» by Lindroth (1966: 568). Three syntypes in MCZ [# 5785]. Synonymy established with doubt, under the name *S. octocola* (Mannerheim), by LeConte (1857c: 8), confirmed by Lindroth (1966: 568).

Anchomenus ambiguus Mäklin, 1855: 36. Type locality: «Ajan [Khabarovsk Kray, Russia]» (original citation). Syntype(s) location unknown (possibly in ZMH). Synonymy established by Jacobson (1907: 330).

Distribution. This Holarctic species ranges in North America from central Alaska to Newfoundland (Lindroth 1955a: 117), south to eastern North Carolina and west-

ern Tennessee along the Appalachian Mountains, to northern New Mexico along the Rocky Mountains, and to central Washington [see Liebherr 1991b: Fig. 221]. In the Palaearctic Region, the range of the species extends from Great Britain to the Kamchatka Peninsula, south to the Philippines Islands, the Himalayan Mountains, and Italy in Europe [see Liebherr 1991b: Fig. 222].
Records. CAN: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, QC, SK, YT **USA**: AK, ID, IL, IN, MA, ME, MI, MN, MT, NC, NH, NJ, NM, NY, PA, SD, TN, VT, WA, WI – **Holarctic**

Genus *Tetraleucus* Casey, 1920

Tetraleucus Casey, 1920: 88. Type species: *Anchomenus picticornis* Newman, 1844 by monotypy. Etymology. From the Greek *tetra* (four) and *leukos* (white), probably alluding to the fact that the antennomeres 8-11 of the adults are white ("the last four joints [of the antenna] being very abruptly of a creamy white") [masculine].

Diversity. One eastern North American species in the temperate regions.
Identification. Liebherr (1991b) redescribed the species and illustrated some of its structural character states.

Tetraleucus picticornis (Newman, 1844)

Anchomenus picticornis Newman, 1844: 414. Type locality: «near S[ain]t John's Bluff [Duval County], in east Florida» (original citation). Holotype [by monotypy] (♀) in BMNH (Lindroth 1966: 615).

Distribution. This species is known from scattered localities in eastern North America ranging from western Vermont to "Minnesota," south to east-central Texas (Riley 2011), southern Louisiana and central Florida [see Liebherr 1991b: Fig. 187]. The record from Sainte-Rose (= Laval) in Quebec (Hausen 1891b: 159) needs confirmation.
Records. CAN: ON **USA**: AL, AR, DC, FL, IA, IL, IN, KY, LA, MD, MN, MS, NC, NY, OH, PA, SC, TX, VA, VT, WI, WV [QC]

Genus *Anchomenus* Bonelli, 1810

Anchomenus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus prasinus* Thunberg, 1784 (= *Carabus dorsalis* Pontoppidan, 1763) designated by Westwood (1838: 3). Etymology. From the Greek *anchomenos* (strangled), possibly alluding to the cordate pronotum ("*th*[*orax*] *obcordatus*," character of the stripe Anchomenii of Bonelli) of the adult [masculine].

Diversity. Fourteen species in the Nearctic (three species) and Palaearctic (ten species) Regions and one species (*A. capensis* Liebherr) endemic to Baja California. These species are arrayed in two subgenera: *Anchodemus* Motschulsky (three Palaearctic species) and *Anchomenus s.str.* (11 species).

Identification. Liebherr (1991b) revised the species except for three Palaearctic species of the subgenus *Anchomenus s.str.*

Subgenus *Anchomenus* Bonelli, 1810

Anchomenus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus prasinus* Thunberg, 1784 (= *Carabus dorsalis* Pontoppidan, 1763) designated by Westwood (1838: 3).

Ectenes Billberg, 1820: 29. Type species: *Carabus prasinus* Thunberg, 1784 (= *Carabus dorsalis* Pontoppidan, 1763) designated by Bousquet (2002b: 19).

Clibanarius des Gozis, 1882: 295 [junior homonym of *Clibanarius* Dana, 1852]. Type species: *Carabus dorsalis* Pontoppidan, 1763 by original designation. Etymology. From the Latin *clibanarius* (cuirassier) [masculine].

Chlaeniomimus Semenov, 1889b: 687. Type species: *Chlaenius gracilicollis* Jakowleff, 1887 (= *Atranus virescens* Motschulsky, 1864) by original designation. Synonymy established by Liebherr (1991b: 33). Etymology. From the generic name *Chlaenius* [*q.v.*] and the Latin *mimus* (actor), probably alluding to the resemblance of the adults in the eyes of Semenov to those of some *Chlaenius* [masculine].

Idiochroma Bedel, 1902: 216. Replacement name for *Clibanarius* des Gozis, 1882. Etymology. From the Greek *idios* (personal, individual) and *chroma* (color) [neuter].

Pseudanchus Casey, 1920: 45. Type species: *Platynus funebris* LeConte, 1854 designated by Lindroth (1966: 632). Synonymy established by Liebherr (1991b: 33). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Anchus* [*q.v.*] [masculine].

Nipponachus Habu, 1978: 36. Type species: *Anchomenus leucopus* Bates, 1873 by original designation. Synonymy established by Liebherr (1991b: 33). Etymology. From the English *nippon* (a Japanese name for Japan) and the generic name *Anchus* [*q.v.*] [masculine].

Diversity. Eleven species in North America (three endemic species), Baja California (one endemic species), Asia (seven species, four of them endemic), Europe (three species), and northern Africa (one species).

Anchomenus aeneolus (LeConte, 1854)

Platynus aeneolus LeConte, 1854b: 45. Type locality: «Oregon» (original citation), herein restricted to Hilgard Junction State Park, Union County (see Liebherr 1991b: 52). Holotype [by monotypy] (♀) in MCZ [# 5755].

Agonum bjorkmanae Gray and Hatch, 1941: 16. Type locality: «Upper Deschutes River, Thurston Co[unty], Wash[ington]» (original citation). Holotype (♀) in USNM. Synonymy established by Hatch (1953: 136). Note. Hatch (1953: 136) pointed out that the holotype is a composite specimen, the forebody being of *A. aeneolus* LeConte, the hindbody of *A. subsericeum* LeConte.

Distribution. This taxon is found from the Rocky Mountains in southwestern Alberta to south-central British Columbia, south to central Oregon and south-central Idaho [see Liebherr 1991b: Fig. 200].
Records. CAN: AB, BC **USA**: ID, MT, OR, WA

***Anchomenus funebris* (LeConte, 1854)**

Anchomenus micans Ménétriés, 1843: 57 [primary homonym of *Anchomenus micans* Nicolai, 1822]. Type locality: «Californie» (original citation). One syntype in ZMH (collection Mannerheim) (Silfverberg 1987: 20).

Platynus funebris LeConte, 1854b: 45. Type locality: «San Diego [San Diego County], California» (original citation). Lectotype (♀), designated by Liebherr (1991b: 53), in MCZ [# 5757]. Synonymy established by LeConte (1879b: 47), confirmed by Liebherr (1991b: 53).

Scaphiodactylus opacus Motschulsky, 1859a: 160. Type locality: «California» (lectotype label). Lectotype (probably ♀), designated by Bousquet (1997b: 335), in ZMMU. Synonymy established by LeConte (1863b: 7), confirmed by Bousquet (1997b: 335).

Anchomenus morbillosus Casey, 1920: 48. Type locality: «Redwood Creek, Humboldt Co[unty], California» (original citation). Lectotype (♀), designated by Liebherr (1991a: 117), in USNM [# 47419]. Synonymy established by Liebherr (1991a: 117).

Anchomenus nevadensis Casey, 1920: 48. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♀), designated by Liebherr (1991a: 117), in USNM [# 47420]. Synonymy established by Liebherr (1991a: 117).

Anchomenus concurrens Casey, 1920: 49. Type locality: «S[an]ta Rosa [Sonoma County], California» (original citation for the lectotype). Lectotype (♀), designated by Liebherr (1991a: 116), in USNM [# 47421]. Synonymy established by Hatch (1953: 136), confirmed by Liebherr (1991a: 117).

Anchomenus opacellus Casey, 1920: 50. Type locality: «S[an]ta Rosa [Sonoma County], California» (original citation). Lectotype (♀), designated by Liebherr (1991a: 117), in USNM [# 47422]. Synonymy established by Liebherr (1991a: 117).

Anchomenus renoanus Casey, 1920: 51. Type locality: «Reno [Washoe County], Nevada» (original citation). Lectotype (♂), designated by Liebherr (1991a: 117), in USNM [# 47425]. Synonymy established by Liebherr (1991a: 117).

Anchomenus parvus Casey, 1920: 51. Type locality: «Reno [Washoe County], Nevada» (original citation). Holotype [by monotypy] (♀) in USNM [# 47424]. Synonymy established by Liebherr (1991a: 117).

Agonum funebre var. *micantulum* Csiki, 1931: 861. Replacement name for *Agonum funebre* var. *micans* (Ménétriés, 1843).

Distribution. This western species ranges from central Oregon to Baja California Norte, including west-central Nevada [see Liebherr 1991b: Fig. 200].
Records. USA: CA (CHI), NV, OR – Mexico

***Anchomenus quadratus* (LeConte, 1854)**

Platynus quadratus LeConte, 1854b: 50. Type locality: «Oregon» (original citation), herein restricted to Dilley, Washington County (see Casey 1920: 52, as *A. dilleyanus*). Holotype [by monotypy] (♀) in MCZ [# 5756].

Anchomenus cornicula Casey, 1920: 51. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation for the lectotype). Lectotype (♂), designated by Liebherr (1991a: 116), in USNM [# 47423]. Synonymy established by Liebherr (1991a: 116).

Anchomenus metuens Casey, 1920: 52. Type locality: «Newport [Lincoln County], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47426]. Synonymy established by Hatch (1953: 137), confirmed by Lindroth (1966: 617).

Anchomenus dilleyanus Casey, 1920: 52. Type locality: «Dilley [Washington County], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47427]. Synonymy established by Hatch (1953: 137), confirmed by Lindroth (1966: 617).

Distribution. This western species is found from west-central British Columbia south to northern California [see Liebherr 1991b: Fig. 187].
Records. CAN: BC **USA**: CA, OR, WA

Genus *Rhadine* LeConte, 1846

Rhadine LeConte, 1846b: 218. Type species: *Rhadine larvalis* LeConte, 1846 by monotypy. Etymology. From the Greek *rhadinos* (slender), probably alluding to the slenderness of adults ("*corpus gracillimum*") of the sole species LeConte had before him [feminine].

Comstockia Van Dyke, 1919a: 179. Type species: *Comstockia subterranea* Van Dyke, 1919 by original designation. Synonymy established implicitly by Jeannel (1931: 407), explicitly by Barr and Lawrence (1960: 138). Etymology. The generic name honors John Henry Comstock [1849-1931], professor of entomology at Cornell University. Comstock established the Department of Entomology at Cornell, the first such department in the United States.

Spelaeorhadine Bolívar y Pieltain, 1944: 27. Type species: *Spelaeorhadine araizai* Bolívar y Pieltain, 1944 by original designation. Synonymy established implicitly by Bolívar y Pieltain and Hendrichs (1964: 6). Etymology. From the Greek *spelaion* (cave, cavern) and the generic name *Rhadine* [*q.v.*], alluding to the place where the adults live [feminine].

Diversity. Forty-nine species in North America (40 species) and Mexico (11 species) arrayed in six species groups.
Identification. Barr (1960b) revised the cavernicolous species and provided a key for their identification, but several new species have been described since. Barr (1974b)

published a key to the species groups and a revision of the species of the *subterranea* group. Five new species in this group have been described subsequently by Reddell and Cokendolpher (2001, 2004) and Reddell and Dupérré (2009). Barr (1982) also revised the Mexican species of *Rhadine*. A taxonomic revision of the other five species groups is needed.

[**dissecta group**]

***Rhadine anthicoides* Casey, 1913**

Rhadine anthicoides Casey, 1913: 167. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). One syntype in USNM [# 35021].

Distribution. This species is known only from the type series collected in northwestern New Mexico.
Records. USA: NM

***Rhadine balesi* (Gray, 1937)**

Agonum balesi Gray, 1937: 310. Type locality: «Pasco [Franklin County], Wash[ington]» (as cited by Gray and Hatch 1941: 27). Holotype (♂) in USNM.

Distribution. This species is known from a few localities in southeastern Oregon (Harney County, James R. LaBonte pers. comm. 1992), southeastern Washington, and southern Idaho (Hatch 1953: 146; Stafford et al. 1986: 288). The record from northern Colorado (Armin 1963: 147) needs confirmation.
Records. USA: ID, OR, WA [CO]

***Rhadine constricta* Casey, 1913**

Rhadine constricta Casey, 1913: 165. Type locality: «San Francisco M[oun]t[ain]s [Greenlee County], Arizona» (original citation). One syntype in USNM [# 35014].

Distribution. This species is known only from the type series collected in southeastern Arizona.
Records. USA: AZ

***Rhadine dissecta* (LeConte, 1863)**

Platynus dissectus LeConte, 1863c: 8. Type locality: «Nebraska; Texas» (original citation). Two syntypes in MCZ [# 5737].

Distribution. This species is known from "Nebraska" (LeConte 1863c: 8) to southwestern Colorado (LeConte 1879b: 54; Wickham 1902: 238), south to northern Arizona (Coconino County, CMNH; Snow 1906b: 162), the Sacramento Mountains in south-central New Mexico (Fall and Cockerell 1907: 159), and "Texas" (LeConte 1863c: 8).
Records. USA: AZ, CO, NE, NM, TX

Rhadine lindrothi Barr, 1965

Rhadine lindrothi Barr, 1965b: 140. Type locality: «Medicine Hat, Alberta» (original citation). Holotype (♂) in MCZ.

Distribution. This species is found from southern Saskatchewan and southern Alberta (Lindroth 1966: 647) south to Utah (Barr 1965b: 141), northeastern Colorado (Bell 1971: 52), and South Dakota (Kirk and Balsbaugh 1975: 25). The record from "Nebraska" (Bousquet and Larochelle 1993: 251) needs confirmation.
Records. CAN: AB, SK **USA**: CO, ID, ND, SD, UT, WY [NE]

Rhadine longipes Casey, 1913

Rhadine longipes Casey, 1913: 167. Type locality: «Las Vegas [San Miguel County], New Mexico» (original citation). One syntype in USNM [# 35022].

Distribution. This species is known only from the type locality in northeastern New Mexico.
Records. USA: NM

Rhadine rossi Van Dyke, 1949

Rhadine rossi Van Dyke, 1949a: 51. Type locality: «near Somerset [Bexar County], Texas» (original citation for the holotype). Holotype (♂) in CAS [# 6011]. Etymology. The specific name was proposed for Edward Shearman Ross [1915-], curator of insects at the California Academy of Sciences. Ross was at one time a specialist on Histeridae and later became interested in the taxonomy, biology, and evolution of Embioptera.

Distribution. This species is known from many specimens collected in south-central Texas.
Records. USA: TX

Rhadine rubra (Barr, 1960)

Agonum rubrum Barr, 1960b: 49. Type locality: «Big Mouth Cave, 3 mi[les] N[orth] of Shamrock on left bank Red River, Wheeler Co[unty], Texas» (original citation). Holotype (♂) in USNM [# 75389].

Distribution. This species is known from a few specimens collected in southeastern Colorado and northwestern Texas (Barr 1960b: 50).
Records. USA: CO, TX

Rhadine testacea Casey, 1920

Rhadine testacea Casey, 1920: 12. Type locality: «Cripple Creek [Teller County], Colorado» (original citation). One syntype in USNM [# 35015].

Distribution. This species is known only from the syntype collected in central Colorado.
Records. USA: CO

[**jejuna group**]
***Rhadine jejuna* (LeConte, 1878)**

Platynus jejunus LeConte, 1878a: 449. Type locality: «mountains of California, Oregon, Nevada, and Idaho» (original citation). Three syntypes in MCZ [# 5738].
Rhadine gracilenta Casey, 1913: 166. Type locality: «California» (original citation). One syntype in USNM [# 35019]. **New synonymy**.
Rhadine plumasensis Casey, 1920: 12. Type locality: «Plumas Co[unty], California» (original citation). One syntype in USNM [# 35016]. **New synonymy**.
Rhadine pugetana Casey, 1920: 13. Type locality: «Wawawai [Whitman County], Washington» (original citation). One syntype in USNM [# 35017]. Synonymy established by Gray (1937: 310).
Rhadine tenuipes Casey, 1920: 13. Type locality: «California» (original citation). One syntype in USNM [# 35018]. **New synonymy**.

Distribution. This species ranges from eastern Washington to southwestern Wyoming (Parmenter and MacMahon 1984: 26), south to northern Arizona (Wichkam 1896a: 157) and the Sierra Nevada in California (Casey 1913: 166). The records from Colorado (Cockerell 1893: 72; Wickham 1902: 238) need confirmation.
Records. USA: AZ, CA, ID, NV, OR, WA, WY [CO]
Note. A preliminary study of the type specimens of *R. gracilenta* Casey, *R. plumasensis* Casey, and *R. tenuipes* Casey did not show any significant external differences from members of *R. jejuna* (LeConte).

***Rhadine lanei* (Gray, 1937)**

Agonum lanei Gray, 1937: 310. Type locality: «Wilma [Whitman County], Wash[ington]» (as cited by Gray and Hatch 1941: 27). Holotype (♂) in USNM.

Distribution. This species is known only from the type locality in southeastern Washington (Hatch 1953: 146).
Records. USA: WA

[**larvalis group**]
***Rhadine caudata* (LeConte, 1863)**

Platynus caudatus LeConte, 1863c: 7. Type locality: «western states» (original citation), herein restricted to Cumberland Caverns, Warren County, Tennessee (see Barr 1960b: 47). Holotype [by monotypy] (♂) in MCZ [# 5736].

Distribution. This species ranges from southwestern Pennsylvania (Hamilton 1895: 350, 379; Ehrman 1900: 499) to southeastern Wisconsin (Rauterberg 1885: 14), south to northern Alabama (Jeannel 1949b: 95; Barr 1960b: 47) and northern Georgia (Fattig

1949: 32). The record from southwestern Colorado (Wickham 1902: 238) must be in error; that from "Arkansas" (Bousquet and Larochelle 1993: 250) needs confirmation.
Records. USA: AL, DC, GA, IL, IN, KY, MD, NC, OH, PA, TN, VA, WI, WV [AR]

Rhadine larvalis LeConte, 1846

Rhadine larvalis LeConte, 1846b: 219. Type locality: «in vicinia urbis S[ain]t Louis» (original citation). One syntype in MCZ [# 5735].

Agonum jonesi Barr, 1960b: 48. Type locality: «Turk's Cave, near Brooklyn, Conecuh Co[unty], Alabama» (original citation). Holotype (♂) in ALM. Synonymy established by Barr (1982a: 178).

Distribution. This species is found from the Florida Panhandle (Choate and Rogers 1976: 364) to central Arkansas (Barr 1982a: 178), north to east-central Missouri (LeConte 1846b: 219). The records from northern Colorado (Wickham 1902: 238), northern Arizona (Wickham 1896a: 157), southern Montana (Hatch 1933a: 9), and southwestern Pennsylvania (Ehrman 1900: 500) are probably in error.
Records. USA: AL, AR, FL, IL, MO, MS, TN

Rhadine ozarkensis Sanderson and Miller, 1941

Rhadine ozarkensis Sanderson and Miller, 1941: 39. Type locality: «Fincher's Cave, Washington Co[unty], Arkansas» (original citation). Holotype (♂) in INHS (Webb 1980: 78).

Distribution. This species is known only from the original specimens collected in Fincher's Cave, near Fayetteville, Arkansas (Barr 1960b: 49).
Records. USA: AR

[**nivalis group**]

Rhadine nivalis (Horn, 1881)

Platynus nivalis G.H. Horn [in LeConte and Horn], 1881: 74. Type locality: «Santa Fe canon (7,000 feet), New Mexico» (original citation). Holotype [by monotypy] (♀) in MCZ [# 34453].

Distribution. This species has been recorded from several localities in New Mexico (Fall and Cockerell 1907: 159; Casey 1913: 163).
Records. USA: NM

Rhadine sublustris Casey, 1913

Rhadine sublustris Casey, 1913: 164. Type locality: «San Francisco M[oun]t[ain]s [Greenlee County], Arizona» (original citation). One syntype in USNM [# 35013].

Distribution. This species is known from Greenlee (Casey 1913: 164) and Coconino Counties (CMNH) in southeastern and northern Arizona.

Records. USA: AZ

***Rhadine umbra* Casey, 1913**

Rhadine umbra Casey, 1913: 163. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). One syntype in USNM [# 35012].

Distribution. This species is known only from the type series collected in northwestern New Mexico.
Records. USA: NM

[**perlevis group**]
***Rhadine albamontana* Dajoz, 1998**

Rhadine albamontana Dajoz, 1998: 90. Type locality: «White Mountains, Mono County, Californie» (original citation). Holotype in Dajoz's collection (Paris, France).

Distribution. This species is known only from the original specimens collected in the White Mountains, eastern California.
Records. USA: CA

***Rhadine babcocki* (Barr, 1960)**

Agonum babcocki Barr, 1960b: 52. Type locality: «Mayfield's Cave, Sutton Co[unty], Texas» (original citation). Holotype (♂) in USNM [# 75388]. Etymology. The specific name was proposed in honor of Orville Gorman Babcock [1885-1973] who collected some of the paratypes. Babcock was an entomologist who worked with the USDA on animal insect parasites.

Distribution. This species is known from a number of caves in Sutton, Edwards, and Pecos Counties, western Texas (Barr 1960b: 52).
Records. USA: TX
Note. This taxon has been considered a subspecies of *R. araizi* by Bolívar y Pieltain and Hendricks (1964: 6) but treated as a distinct species by Barr (1982a: 183-184).

***Rhadine howdeni* (Barr and Lawrence, 1960)**

Agonum howdeni Barr and Lawrence, 1960: 143. Type locality: «Wilson's Cave, 20 miles southwest of Hunt, Kerr County, Texas» (original citation). Holotype (♂) in CNC [# 7117]. Etymology. The specific name was proposed for Henry Fuller Howden [1925-], one of the leading taxonomists on the Scarabaeoidea.

Distribution. This species is known from a number of caves in Kerr, Edwards, Uvalde, and Bexar Counties, southern Texas (Barr and Lawrence 1960: 143; Reddell and Cokendolpher, 2004: 157).
Records. USA: TX

***Rhadine longiceps* Van Dyke, 1949**

Rhadine longiceps Van Dyke, 1949a: 52. Type locality: «10 miles west of Alpine [Brewster County], Texas» (original citation). Holotype (♀) in CAS [# 6013].

Distribution. This species is known only from the type locality in western Texas.
Records. USA: TX

***Rhadine longicollis* Benedict, 1927**

Rhadine longicollis Benedict, 1927: 44. Type locality: «Bat Cave [Eddy County, New Mexico]» (original citation). Holotype (♂) in SMEK [# 1079] (Byers and Karren 1968: 3).

Distribution. This species is known from numerous caves in Eddy County, southeastern New Mexico, and Culberson County, western Texas (Cokendolpher and Polyak 2004: 192).
Records. USA: NM, TX

***Rhadine myrmecodes* (Horn, 1892)**

Platynus myrmecodes G.H. Horn, 1892c: 42. Type locality: «Arizona» (original citation). Holotype [by monotypy] (♀) in MCZ [# 34497].

Distribution. This species has been recorded from southwestern Utah (Tanner 1928: 270), west-central (Bechtel et al. 1983: 474) and southern (Tanner and Tanner 1974: 218) Nevada, "Arizona" (Horn 1892c: 42), and New Mexico as far south as the Sierra Blanca Range (Fall and Cockerell 1907: 159).
Records. USA: AZ, NM, NV, UT

***Rhadine perlevis* Casey, 1913**

Rhadine perlevis Casey, 1913: 168. Type locality: «Colonia Garcia, Sierra Madre M[oun]t[ain]s, Chihuahua, Mexico» (original citation). One syntype in USNM [# 35023].

Distribution. This species is known from southern Arizona and western Chihuahua in northern Mexico (Barr 1982a: 182).
Records. USA: AZ – Mexico

[**subterranea group**]
***Rhadine austinica* Barr, 1974**

Rhadine austinica Barr, 1974b: 11. Type locality: «Bandit Cave, in the Rollingwood subdivision on the south side of Austin, Travis County, Texas» (original citation). Holotype (♂) in AMNH [# 1301].

Distribution. This species is found in several caves in central Travis County, Texas (Barr 1974b: 12).
Records. USA: TX

Rhadine bullis **Reddell and Cokendolpher, 2004**

Rhadine bullis Reddell and Cokendolpher, 2004: 154. Type locality: «Stahl Cave, Camp Bullis, Bexar County, Texas» (original citation). Holotype (♂) in AMNH.

Distribution. This species is known from several caves on Camp Bullis, a U.S. Army installation in Bexar and Comal Counties, south-central Texas (Reddell and Cokendolpher, 2004: 154-155).
Records. USA: TX

Rhadine exilis **(Barr and Lawrence, 1960)**

Agonum exile Barr and Lawrence, 1960: 141. Type locality: «Marnock Cave [= John Wagner Ranch Cave No. 3], 1 mile north of Helotes, Bexar County, Texas» (original citation). Holotype (♂) in CAS [# 8154].

Distribution. This species is known only from caves near Helotes and Camp Bullis in Bexar County, south-central Texas (Barr 1974b: 16; Reddell and Cokendolpher, 2004: 156).
Records. USA: TX
Note. This species has been listed as endangered by the U.S. Fish and Wildlife Service in December 2000.

Rhadine grubbsi **Reddell and Dupérré, 2009**

Rhadine grubbsi Reddell and Dupérré, 2009: 111. Type locality: «Lime Kiln Quarry Cave, Hays County, Texas» (original citation). Holotype (♂) in AMNH.

Distribution. This species is known from three caves in or near San Marcos, Hays County, in south-central Texas (Reddell and Dupérré 2009: 112).
Records. USA: TX

Rhadine infernalis ewersi **(Barr, 1960)**

Agonum infernale ewersi Barr, 1960b: 55. Type locality: «Headquarters Cave, Camp Bullis, Bexar Co[unty], Texas» (original citation). Holotype (♂) in CMC (Vulinec and Davis 1984: 233).

Distribution. This subspecies is known from three caves in southern Bexar County, south-central Texas (Reddell and Cokendolpher, 2004: 157).
Records. USA: TX

Rhadine infernalis infernalis **(Barr and Lawrence, 1960)**

Agonum infernale Barr and Lawrence, 1960: 139. Type locality: «Madla Cave, 3 miles north of Helotes, Bexar County, Texas» (original citation). Holotype (♂) in CAS [# 8155].

Distribution. This subspecies is known from a few small caves, near Helotes, in the highlands north of San Antonio, southern Texas (Barr 1974b: 23).

Records. USA: TX
Note. A series of eight specimens collected at Bat Cave in Government Canyon, Bexar County, Texas, are reported as hybrids *infernalis* x *ewersi* by Barr (1974b: 24). The species *R. infernalis* has been listed as endangered by the U.S. Fish and Wildlife Service in December 2000.

Rhadine insolita Barr, 1974

Rhadine insolita Barr, 1974b: 20. Type locality: «Fischer Cave, near Fischers Store, Comal County, Texas» (original citation). Holotype (♂) in AMNH [# 1307].

Distribution. This species is known only from the type-locality cave in south-central Texas.
Records. USA: TX

Rhadine ivyi Reddell and Cokendolpher, 2004

Rhadine ivyi Reddell and Cokendolpher, 2004: 159. Type locality: «Vera Cruz Shaft, Camp Bullis, Bexar County, Texas» (original citation). Holotype (♂) in AMNH.

Distribution. This species is known only from the type-locality cave in south-central Texas (Reddell and Cokendolpher, 2004: 161).
Records. USA: TX

Rhadine koepkei koepkei (Barr, 1960)

Agonum koepkei Barr, 1960b: 56. Type locality: «Schneider's Ranch Cave, 14 mi[les] N[orth]E[ast] of Boerne, Kendall Co[unty], Texas» (original citation). Holotype (♂) in CAS [# 8156].

Distribution. This subspecies is known from two caves in south-central Texas (Barr 1974b: 24).
Records. USA: TX

Rhadine koepkei privata Barr, 1974

Rhadine koepkei privata Barr, 1974b: 25. Type locality: «Skunk-X Water Cave, near Boerne, Kendall County, Texas» (original citation). Holotype (♂) in AMNH [# 1311].

Distribution. This subspecies is known from a few caves in south-central Texas (Barr 1974b: 25).
Records. USA: TX

Rhadine noctivaga Barr, 1974

Rhadine noctivaga Barr, 1974b: 10. Type locality: «Cobb Cavern, 12 miles north of Georgetown, Williamson County, Texas» (original citation). Holotype (♀) in AMNH [# 1300].

Distribution. This species is known only from Cobb Cavern and Cricket Cave in northern Williamson County, central Texas (Barr 1974b: 11).
Records. USA: TX

Rhadine persephone Barr, 1974

Rhadine persephone Barr, 1974b: 17. Type locality: «Tooth Cave, 15 miles northwest of Austin on the Kretschmarr Ranch, Travis County, Texas» (original citation). Holotype (♂) in AMNH [# 1305].

Distribution. This species has been collected in caves in northern Travis and southern Williamson Counties, central Texas (Reddell and Cokendolpher 2001: 110).
Records. USA: TX
Note. This species, also known under the vernacular name "Tooth Cave Ground Beetle," is listed as an endangered species by the World Wildlife Fund.

Rhadine reyesi Reddell and Cokendolpher, 2001

Rhadine reyesi Reddell and Cokendolpher, 2001: 110. Type locality: «Tippit Cave, Fort Hood, Coryell County, Texas» (original citation). Holotype (♂) in AMNH.

Distribution. This species is known from a number of caves on the Fort Hood Military Reservation in Bell and Coryell Counties, central Texas (Reddell and Cokendolpher 2001: 110).
Records. USA: TX

Rhadine russelli Barr, 1974

Rhadine russelli Barr, 1974b: 9. Type locality: «Lunsford Cave, 7 miles west of Leander on the George Lunsford Ranch, Travis County, Texas» (original citation). Holotype (♂) in AMNH [# 1299].

Distribution. This species is known only from the type-locality cave on the Jollyville plateau in central Texas.
Records. USA: TX

Rhadine specum crinicollis Barr, 1974

Rhadine speca crinicollis Barr, 1974b: 15. Type locality: «Kappelmans Salamander Cave, 4 miles east of Bulverde, Comal County, Texas» (original citation). Holotype (♂) in AMNH [# 1303].

Distribution. This subspecies has been found yet only in two caves along Cibolo Creek in southern Texas (Barr 1974b: 16).
Records. USA: TX

Rhadine specum gentilis Barr, 1974

Rhadine speca gentilis Barr, 1974b: 14. Type locality: «Little Gem Cave, on the R.A. Mittman Ranch 4 miles west of New Braunfels, Comal County, Texas» (original citation). Holotype (♂) in AMNH [# 1302].

Distribution. This subspecies is known only from two caves in south-central Texas (Barr 1974b: 15).
Records. USA: TX

Rhadine specum specum (Barr, 1960)

Agonum specum Barr, 1960b: 58. Type locality: «Cave-Without-A-Name, Kendall Co[unty], Texas» (original citation). Holotype (♂) in CAS [# 8157]. Note. Barr (1960b) did not give the etymology of the specific name but it certainly derives from the Latin noun *specus*, *-us* (cave). Barr believed the word could be used as an adjective since he described later (Barr 1974b: 14) a *Rhadine speca gentilis*. However, the word is a noun (Theil 1883: 297) and the species should have been named *Agonum specus* (nominative singular and genitive singular) or *A. specuum* (genitive plural). I consider that Barr's name is not a Latin or latinized word; as such it does not need to agree in gender with the generic name with which it is combined (ICZN 1999: Article 31.2.3). Therefore, *Rhadine specum*, not *R. speca*, is the correct spelling for this name.

Distribution. This subspecies is known from a few caves in Kendall and Comal Counties, southern Texas (Barr 1974b: 13; Reddell and Cokendolpher, 2004: 158).
Records. USA: TX

Rhadine sprousei Reddell and Cokendolpher, 2004

Rhadine sprousei Reddell and Cokendolpher, 2004: 158. Type locality: «Cannonball Cave, Camp Bullis, Bexar County, Texas» (original citation). Holotype (♂) in AMNH.

Distribution. This species is known yet only from the type-locality cave in south-central Texas (Reddell and Cokendolpher, 2004: 159).
Records. USA: TX

Rhadine subterranea mitchelli Barr, 1974

Rhadine subterranea mitchelli Barr, 1974b: 7. Type locality: «Steam Cave, 2 miles south of Georgetown, Williamson County, Texas» (original citation). Holotype (♂) in AMNH [# 1298].

Distribution. This subspecies is known from several caves in central Texas (Barr 1974b: 8).

Records. USA: TX

***Rhadine subterranea subterranea* (Van Dyke, 1919)**

Comstockia subterranea Van Dyke, 1919a: 182. Type locality: «a cave near Austin, Texas» (original citation); according to Barr (1974b: 7), the holotype is from Sam Bass (= McNeil Quarry) Cave, near McNeil, Williamson County. Holotype (♀) in CUIC [# 259].

Distribution. This subspecies is known from several caves in southern Williamson and northern Travis Counties, central Texas (Barr 1974b: 7).
Records. USA: TX

***Rhadine tenebrosa mckenziei* Barr, 1974**

Rhadine tenebrosa mckenziei Barr, 1974b: 19. Type locality: «Skeleton Cave, 5 miles north of Leakey on the Orell Ranch, Real County, Texas» (original citation). Holotype (♂) in AMNH [# 1306].

Distribution. This subspecies is found in a few caves in Real and Uvalde Counties, southwestern Texas (Barr 1974b: 20).
Records. USA: TX

***Rhadine tenebrosa tenebrosa* (Barr, 1960)**

Agonum tenebrosum Barr, 1960b: 57. Type locality: «Wilson's Cave, 25 mi[les] S[outh] W[est] of Hunt, Kerr Co[unty], Texas» (original citation). Holotype (♂) in CNC [# 7118].

Distribution. This subspecies is known from a few caves in Kerr, Real, and Bandera Counties, southwestern Texas (Barr 1974b: 19).
Records. USA: TX

[**incertae sedis**]
***Rhadine pertenuis* Casey, 1920**

Rhadine pertenuis Casey, 1920: 14. Type locality: «Esmeralda Co[unty], Nevada» (original citation). One syntype in USNM [# 35020].

Distribution. This species is known for sure only from the type locality in southwestern Nevada. The record from "California" (Bousquet and Larochelle 1993: 251) needs confirmation.
Records. USA: NV [CA]

Genus *Mexisphodrus* Barr, 1965

Mexisphodrus Barr, 1965c: 65. Type species: *Mexisphodrus veraecrucis* Barr, 1965 by original designation. Etymology. From the English adjective *mexican* (of Mexico) and the generic name *Sphodrus*, alluding to the country where these *Sphodrus*-like species live [masculine].

Diversity. Eleven species in Texas (one species) and Mexico (ten species).
Identification. Barr (1982a) revised the species and provided a key for their identification.
Taxonomic Note. Valentine (1987) believed this genus is closely related to the genera *Bryanites* Valentine of Western Samoa and *Prosphodrus* Britton of New Zealand. He proposed the family-group name Prosphodrini to include the three genera.

Mexisphodrus valverdensis Barr, 1982

Mexisphodrus valverdensis Barr, 1982a: 177. Type locality: «Ladder Cave, 25 km N[orth]W[est] Del Rio, Val Verde Co[unty], Texas» (original citation). Holotype (♂) in AMNH.

Distribution. This species is known from two nearby caves in southwestern Texas.
Records. USA: TX
Note. This species belongs to the *boneti* species group which includes only the polymorphic *M. boneti* (Bolívar y Pieltain and Hendrichs) from Nuevo León and *M. valverdensis* Barr.

Genus *Tanystoma* Motschulsky, 1845

Tanystoma Motschulsky, 1845b: 341. Type species: *Anchomenus striatus* Dejean, 1828 by original designation. Etymology. From the Greek *tanyo* (long) and *stoma* (mouth) [neuter].

Tanystola Motschulsky, 1850a: 69. Unnecessary replacement name for *Tanystoma* Motschulsky, 1845.

Leucagonum Casey, 1920: 99. Type species: *Agonum maculicolle* Dejean, 1828 designated by Bousquet and Larochelle (1993: 252). Synonymy established by Liebherr (1985: 1184). Etymology. From the Greek *leucos* (white) and the generic name *Agonum* [*q.v.*], probably alluding to the color ("color pale flavo-testaceous") of the adults [neuter].

Diversity. Five species in western North America (four species) and the Baja California Peninsula and Guadalupe Island in Mexico (two species, one of them endemic).
Identification. Liebherr (1985) revised the species. Subsequently he described a new species, the endemic Baja Californian *T. diabolicum*, and provided a key to all species (Liebherr 1989).

Taxonomic Note. According to Liebherr (1989: 184), the genus *Rhadine* is the sister-group of *Tanystoma*.

Tanystoma cuyama Liebherr, 1985

Tanystoma cuyama Liebherr, 1985: 1194. Type locality: «L[a]k[e] Cachuma (800'), 18 mi[les] S[outh]E[ast] Hwy. 101, Santa Barbara Co[unty], Ca[lifornia]» (original citation). Holotype (♂) in CUIC [# 5860].

Distribution. This species ranges through the Coast Ranges from central California south to the Mexican border [see Liebherr 1985: Fig. 27].
Records. USA: CA

Tanystoma maculicolle (Dejean, 1828)

Agonum maculicolle Dejean, 1828: 175. Type locality: «Californie» (original citation), restricted to «Santa Barbara [Santa Barbara County]» by Liebherr (1985: 1194). Lectotype (♂), designated by Liebherr (1985: 1194), in MHNP.

Agonum maculicolle guadalupense Casey, 1920: 100. Type locality: «Guadalupe Island, [Baja] California» (original citation). Lectotype (♂), designated by Liebherr (1991a: 117), in USNM [# 47471]. Synonymy established by Liebherr (1985: 1190).

Agonum angustior Casey, 1920: 101. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Liebherr (1991a: 116), in USNM [# 47472]. Synonymy established by Liebherr (1985: 1190).

Distribution. This species, also known under the vernacular name "tule beetle," ranges from southwestern Oregon south through California, including the Channel Islands, to Baja California Norte and Guadalupe Island [see Liebherr 1985: Fig. 25]. The species is apparently adventive and possibly established at Seattle, Washington (Liebherr 1985: 1194). The record from "Utah" (Bousquet and Larochelle 1993: 252) is likely in error.
Records. USA: CA (CHI), OR, WA – Mexico

Tanystoma striatum (Dejean, 1828)

Anchomenus striatus Dejean, 1828: 132. Type locality: «Californie» (original citation), restricted to San Bruno M[oun]t[ai]n, San Mateo Co[unty]» by Liebherr (1985: 1198). Lectotype (♂), designated by Liebherr (1985: 1198), in MHNP.

Distribution. This species occurs along the Coast Ranges of California from Siskiyou County to Santa Cruz and Alameda Counties and in the Sierra Nevada between Tulare and Shasta Counties [see Liebherr 1985: Fig. 27].
Records. USA: CA

Tanystoma sulcatum (Dejean, 1828)

Anchomenus sulcatus Dejean, 1828: 131. Type locality: «Californie» (original citation), herein restricted to Hayfork, Trinity County (see Liebherr 1985: 1202). Lectotype (♀), designated by Liebherr (1985: 1200), in MHNP. Note. Liebherr (1985: 1200) selected «Coos Bay, Oregon» as type locality of *T. sulcatum* but it should be rejected since Dejean (1828: 131) specified that his specimen(s) came from California.

Agonum charactum Hatch, 1951: 117. Type locality: «Marshfield [= Coos Bay], Coos Co[unty], Ore[gon]» (original citation). Holotype (♂) in USNM. Synonymy established by Liebherr (1985: 1200).

Distribution. This species ranges from northwestern Oregon to northern California [see Liebherr 1985: Fig. 27]. An old specimen labeled from western Washington is known.
Records. USA: CA, OR [WA]

Genus *Paranchus* Lindroth, 1974

Paranchus Lindroth, 1974: 81. Type species: *Carabus albipes* Fabricius, 1794 by original designation. Etymology. From the Greek *para* (near, next to) and the generic name *Anchus* [*q.v.*] [masculine].

Diversity. Two species endemic to the Canary Islands and one European species, *P. albipes*, which is adventive in northeastern North America.
Identification. The North American species is covered in Lindroth's (1966: 630-631, as *Agonum albipes*) monograph.

Paranchus albipes (Fabricius, 1794)

Carabus oblongus Fabricius, 1792: 140 [primary homonym of *Carabus oblongus* Fabricius, 1792]. Type locality: «Germania» (original citation). Syntype(s) location unknown. Note. There is one specimen under the name *Carabus pallipes* Fabricius in ZMUC (Zimsen 1964: 55) but, according to Lindroth (1966: 630), the specimen is not a syntype.

Carabus albipes Fabricius, 1794a: 468. Replacement name for *Carabus oblongus* Fabricius, 1792.

Carabus pavidus Panzer, 1799: no 7. Type locality: «Dresdae [Germany]» (original citation). Syntype(s) location unknown (possibly in ZMHB). Synonymy established with doubt by Illiger (1801: 54).

Carabus pallipes Fabricius, 1801: 187 [primary homonym of *Carabus pallipes* Fabricius, 1787]. Replacement name for *Carabus oblongus* Fabricius, 1792.

Carabus circulatus Marsham, 1802: 450. Type locality «fluvium Usk prope Crickhowell et prope Ealing [Great Britain]» (original citation). Syntype(s) location unknown. Synonymy established by Schönherr (1806: 190).

Carabus sordidus Marsham, 1802: 457. Type locality: Great Britain (inferred from title of the book). Two syntypes in BMNH (collection Stephens). Synonymy established implicitely by Stephens (1828a: 82). Note. Stephens (1828a: 82) listed

this taxon as a valid species but also said "I do not think them [the two specimens of *sordidus* from Marsham's collection in his hands] sufficiently distinct from the preceding [*Anchomenus albipes* Illiger]."

Platynus clemens LeConte, 1863c: 8. Type locality: «Nova Scotia» (original citation). Two syntypes in MCZ [# 5758]. Synonymy established by Lindroth (1954b: 138).

Distribution. This Palaearctic species is adventive in North America where it is known from southern Newfoundland, Nova Scotia, New Brunswick, and Maine (Lindroth 1966: 631). The first inventoried specimen collected on this continent was found in Newfoundland before 1835. The Canadian Museum of Nature in Gatineau holds color drawings made by Philip Henry Gosse executed prior to 1834 of insects from Newfoundland and one drawing represents this species; the plates are bound together under the title *Entomologia Terrae Novae - P.H. Gosse - 1833.*

Records. CAN: NB, NF, NS (CBI) **USA**: ME – **Adventive**

Note. *Carabus ruficornis* Goeze, 1777 is often listed as a synonym of this species (e.g., Lindroth 1966: 630; Bousquet 2003c: 462). However, Goeze (1777: 663) did not propose a new species under such name since he referred to *Carabus ruficornis* DeGeer, 1774 which is considered a doubtful synonym of *Amara aulica* (Panzer, 1796) following Schönherr (1806: 181). Goeze (1777: 663) apparently misidentified DeGeer's *Carabus ruficornis*.

Genus *Oxypselaphus* Chaudoir, 1843

Oxypselaphus Chaudoir, 1843a: 415. Type species: *Oxypselaphus pallidulus* Chaudoir, 1843 (= *Carabus obscurus* Herbst, 1784) by monotypy. Etymology (original). From the Greek *oxys* (acute, sharp) and *pselaphos* (palpus), alluding to the acuminate last maxillary palpomere ("*palpi maxillares ... 4o acuminato*") of the adult [masculine].

Anchus LeConte, 1854b: 38. Type species: *Anchus pusillus* LeConte, 1854 by monotypy. Etymology. From the Greek *ancho* (strangle), probably alluding to the basally narrow pronotum ("thorax ... cordate, almost turned into a pedicel at the base") of the adult [masculine].

Diversity. Four species, two endemic to northern Africa, one to Europe and western Asia, and one to North America.

Identification. The North American species is covered in Lindroth's (1966: 633-634, as *Agonum puncticeps*) monograph.

Taxonomic Note. Jeanne (1988: 77-78) pointed out the morphological differences between the type species of *Oxypselaphus* and *Anchus* and suggested that the two should be treated as generically distinct.

Oxypselaphus pusillus (LeConte, 1854)

Anchus pusillus LeConte, 1854b: 39. Type locality: «Massachusetts; Illinois» (original citation), restricted to «Mass[achusetts]» by Lindroth (1966: 633). Three syntypes in MCZ [# 5759].

Anchus puncticeps Casey, 1920: 2. Type locality: «Ontario» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47452]. Synonymy established by Lindroth (1966: 633).

Distribution. This species ranges from Cape Breton Island (Bousquet 1987a: 126) to the Okanagan river in south-central British Columbia (Lindroth 1966: 634), south to western Oregon (Hatch 1953: 138), northeastern Kansas (Popenoe 1878: 78), and northwestern South Carolina (Anderson County, CNC). The record from "Georgia" (Bousquet and Larochelle 1993: 253) needs confirmation.
Records. CAN: AB, BC, MB, NB, NS (CBI), ON, PE, QC, SK **USA**: CT, IA, ID, IL, IN, KS, MA, ME, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SC, SD, VA, VT, WA, WI [GA]

Genus *Agonum* Bonelli, 1810

Agonum Bonelli, 1810: Tabula Synoptica. Type species: *Carabus marginatus* Linnaeus, 1758 designated by Curtis (1827: plate 183). Etymology. Uncertain, possibly from the Greek *a* (without) and *gonia* (angle), alluding to the rounded posterior angles of the pronotum ("*th*[*orax*] ... *angulis baseos rotundatis*") of the adult or from the Greek *agonos* (barren), or from the Greek *agon*, *-os* (contest, struggle) [neuter].
Amolyntus Gistel, 1848a: viii. Unnecessary replacement name for *Agonum* Bonelli, 1810.
Agonothorax Motschulsky, 1850a: 67. Unnecessary replacement name for *Agonum* Bonelli, 1810.

Diversity. About 130 species (Liebherr and Schmidt 2004: 202-203) in the Nearctic (72 species, one adventive), Neotropical (15 species in Middle America, all but two shared with North America), Palaearctic (63 species, of which seven are Holarctic), and Afrotropical (three endemic species) Regions. The species are arrayed in four subgenera, following Liebherr and Schmidt (2004): *Europhilus*, *Platynomicrus*, *Agonum s.str.*, and *Olisares*, all represented in North America. All other subgenera of *Agonum* listed in Lorenz (2005: 411-412) have been excluded by Liebherr and Schmidt (2004: 152) as most of them "are most likely evolutionary affiliates of the highly diverse and taxonomically confused *Platynus*-"*Colpodes*" group of genera." About 50 species are left unplaced in Lorenz (2005: 412) and some of them may belong to *Agonum*.
Identification. Liebherr (1994) published a key to all species found in the Western Hemisphere as well as a review of the Middle American species. Lindroth (1966, 1969a) covered all North American species except *A. anthracinum* Dejean, *A. cyanopis* Bates, *A. elongatulum* Dejean, *A. extimum* Liebherr, *A. muiri* Liebherr, *A. pacificum* Casey, and *A. parextimum* Liebherr.

Subgenus *Platynomicrus* Casey, 1920

Platynomicrus Casey, 1920: 90. Type species: *Agonum nigriceps* LeConte, 1846 by original designation. Etymology. From the generic name *Platynus* [*q.v.*] and the Greek *micros* (small) [masculine].

Diversity. Two species in North America, one of them is Holarctic.

Agonum ferruginosum (Dejean, 1828)

Anchomenus ferruginosus Dejean, 1828: 128. Type locality: «Californie» (original citation). One syntype in MHNP (Lindroth 1955b: 20), one specimen [labeled "type"] in MCZ (collection LeConte) (Lindroth 1966: 588).

Platynus erasus LeConte, 1879b: 52. Type locality: «Vancouver Island [British Columbia]» (original citation). Two syntypes [2 originally cited] in MCZ [# 5754]. Synonymy established by Lindroth (1966: 588).

Anchomenus wadei Casey, 1920: 62. Type locality: «Wilbur [Lincoln County], Washington» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47442]. Synonymy established, under the name *A. erasum* (LeConte), by Gray (1937: 313), confirmed by Lindroth (1966: 588).

Anchomenus marcidus Casey, 1920: 65. Type locality: «Ouray [Ouray County], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47447]. Synonymy established by Lindroth (1966: 588).

Distribution. The range of this species extends from Saskatchewan to Vancouver Island (Lindroth 1966: 589), north to southeastern Alaska (Lindroth 1966: 589), south to southeastern California (San Bernardino County, CNC; Casey 1920: 65) and southwestern Colorado (Casey 1920: 65, as *Anchomenus marcidus*).
Records. CAN: AB, BC (QCI, VCI), SK **USA**: AK, CA, CO, ID, MT, NV, OR, UT, WA, WY

Agonum nigriceps LeConte, 1846

Agonum nigriceps LeConte, 1846b: 229. Type locality: «Lacum Superiorem» (original citation), herein restricted to Eagle Harbor, Keweenaw County, Michigan (see LeConte 1854b: 54). One syntype in MCZ [# 5789].

Platynomicrus fragilissimus Casey, 1920: 92. Type locality: «Toronto [Ontario]» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47517]. Synonymy established by Lindroth (1954b: 139).

Distribution. This Holarctic species is known from the Kamchatka Peninsula (Lindroth 1966: 584) and from Alaska (Lindroth 1966: 584) to Newfoundland (Lindroth 1955a: 129), south to northern New Hampshire (Coos County, Donald S. Chandler pers. comm. 2008), southeastern Michigan (Oakland County, UMAA), "Iowa" (Lindroth 1966: 584), east-central South Dakota (Brookings County, MCZ), east-central Colorado (Kiowa County, Foster F. Purrington pers. comm. 2010), "Idaho" (Lindroth 1966: 584), and northern Washington (Okanogan County, UASM). The record from "Pennsylvania" (Bousquet and Larochelle 1993: 255) needs confirmation.
Records. CAN: AB, BC, MB, NB, NF, NT, ON, PE, QC, SK, YT **USA**: AK, CO, IA, ID, IL, ME, MI, MN, MT, ND, NH, NY, SD, WA, WI, WY [PA] – **Holarctic**

Subgenus *Europhilus* Chaudoir, 1859

Europhilus Chaudoir, 1859: 124. Type species: *Anchomenus micans* Nicolai, 1822 designated by Motschulsky (1865: 317). Etymology. Probably from the Greek *euros* (mold, decay), rather than *euros* (east wind), and *philos* (beloved) [masculine].

Diversity. Twenty-nine species in the Nearctic (16 species) and Palaearctic (17 species, six of them endemic to eastern Asia) Regions. Four species are Holarctic.

[**limbatum group**]

***Agonum limbatum* Motschulsky, 1845**

Agonum limbatum Motschulsky, 1845a: 21. Type locality: «Californie» (original citation), herein restricted to San Francisco, San Francisco County (see LeConte 1851: 178, as *Platynus variolatus*). Lectotype, designated by Bousquet and Larochelle (1993: 11), in ZMMU.

Platynus variolatus LeConte, 1851: 178. Type locality: «San Francisco [San Francisco County, California]» (original citation). Three syntypes in MCZ [# 69]. Synonymy established by Motschulsky (1855b: 79, as *P. variolaris*), confirmed by Bousquet and Larochelle (1993: 11).

Sericoda variolata coronadina Casey, 1920: 96. Type locality: «San Diego [San Diego County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47521]. Synonymy established by Lindroth (1966: 589).

Sericoda shastanica Casey, 1920: 96. Type locality: «Siskiyou Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47520]. Synonymy established by Lindroth (1966: 589).

Distribution. This species ranges along the west coast from southern British Columbia, including Vancouver Island (Lindroth 1966: 589, as *A. variolatum*), to southern California (Fall 1901a: 46, as *A. variolatum*).
Records. CAN: BC (VCI) **USA**: CA (CHI), OR, WA

[**sordens group**]

***Agonum anchomenoides* Randall, 1838**

Agonum anchomenoides Randall, 1838a: 2. Type locality: «Augusta [Kennebec County, Maine]» (original citation). Syntype(s) lost.

Agonum lanellum Gray, 1937: 311. «Type locality: Orient [Ferry County], Washington» (original citation). Holotype (♂) in USNM. Synonymy established by Hatch (1953: 144), confirmed by Lindroth (1966: 589).

Distribution. This species ranges from western Newfoundland (Lindroth 1955a: 125) to eastern Alaska (Lindroth 1966: 590), south to northeastern Washington (Gray 1937: 310, as *A. lanellum*), western Montana (Russell 1968: 63), east-central South Dakota (Kirk and Balsbaugh 1975: 24), and southern Pennsylvania (Hamilton 1895: 322;

Allegheny, Lancaster, and Westmoreland Counties, Robert L. Davidson pers. comm. 2008). The records from "Wyoming," "Colorado," "Iowa," "Nebraska," and "Kansas" (Bousquet and Larochelle 1993: 253) are probably in error.
Records. CAN: AB, BC, MB, NB, NF, NS, NT, ON, PE, QC, SK, YT **USA**: AK, CT, IL, IN, MA, ME, MI, MN, MT, ND, NH, NJ, NY, OH, PA, SD, VT, WA, WI

Agonum canadense Goulet, 1969

Agonum elongatulum Haldeman, 1843b: 300 [secondary homonym of *Agonum elongatulum* (Dejean, 1828)]. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One possible syntype, a ♂ labeled "[pink disc] / elongatulum Hald. [handwritten] / picipennis 4 [handwritten]," in MCZ (Lindroth 1966: 581).

Agonum canadense Goulet, 1969: 279. Type locality: «Bala, N[orth]W[est] Gravenhurst, Ontario» (original citation). Holotype (♂) in CNC [# 11574]. **New synonymy**. Note. The specimen probably belonging to *A. elongatulum* Haldeman in LeConte's collection is conspecific with specimens of *A. canadense* Goulet. Goulet's name is retained as valid since Haldeman's name is a junior homonym of *A. elongatulum* (Dejean).

Distribution. This species is found from Cape Breton Island (Bousquet 1987d: 106) to southern Manitoba (Goulet 1969: 280), south to east-central South Dakota (Larsen and Purrington 2010: 570), northern Illinois (Goulet 1969: 280), and northern West Virginia (Tucker and Preston Counties, CMNH). The record from "Nebraska" (Bousquet and Larochelle 1993: 253) needs confirmation.
Records. CAN: MB, NB, NS (CBI), ON, PE, QC **USA**: CT, IL, IN, MA, ME, MI, NH, NJ, NY, PA, SD, VT, WI, WV [NE]

Agonum consimile (Gyllenhal, 1810)

Harpalus consimilis Gyllenhal, 1810: 161. Type locality: «Lapponia [Sweden]» (original citation), restricted to «Abisko, Torne Lappmark» by Lindroth (1966: 572). Lectotype (♂), designated by Lindroth (1966: 572), in UZIU.

Anchomenus fragilis Mannerheim, 1853: 142. Type locality: «insula Sitkha [= Baranof Island, Alaska]» (original citation). One syntype in MHNP (Lindroth 1966: 572). Synonymy established by Lindroth (1955a: 126).

Batenus borealis Motschulsky, 1865: 319. Type locality: «nord de la Sibérie orientale» (original citation). Two syntypes in ZMMU (Keleinikova 1976: 189). Synonymy established by Shilenkov (in Liebherr 1991b: 78).

Agonum invalidum Casey, 1924: 84. Type locality: «Edmonton, Alberta» (original citation). Holotype [by monotypy] (♂) in USNM [# 47493]. Synonymy established by Lindroth (1953b: 171).

Distribution. A Holarctic species occurring in the Palaearctic Region from Norway to the Far East (Bousquet 2003c: 452) and in North America from Alaska (Lindroth 1966: 573) to Newfoundland (Lindroth 1955a: 126), south to Cape Breton Island (Lindroth 1954c: 307), Vancouver Island (Lindroth 1966: 573), and northern Wash-

ington (Glesne et al. 2000: 89). Fossil remnants, dated between 14,000 and 15,400 years B.P., have been unearthed in central Iowa (Schwert 1992: 78).
Records. FRA: PM **CAN**: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, QC, YT **USA**: AK, WA – **Holarctic**

Agonum darlingtoni Lindroth, 1954

Agonum darlingtoni Lindroth, 1954b: 159. Type locality: «Lexington [Middlesex County], Mass[achusetts]» (holotype label). Holotype (♂) in MCZ [# 29072]. Etymology. The specific name honors Philip Jackson Darlington, Jr. [1904-1983], field naturalist, biogeographer, and systematist, specialist of the family Carabidae. Darlington was curator of entomology at the Museum of Comparative Zoology. Note. Although Lindroth's description is very short, I believe he met the requirements of availability for a species-group name published after 1930 (ICZN 1999: Article 13.1). Lindroth (1955c: 12) redescribed the species in length.

Distribution. This species is restricted to a small area from Nova Scotia to the Ontario Peninsula (Lindroth 1966: 583), south to central Pennsylvania (Clinton County, CMNH) and New Jersey (Lindroth 1966: 583).
Records. CAN: NB, NS, ON, QC **USA**: CT, MA, ME, NH, NJ, NY, PA, RI, VT

Agonum exaratum (Mannerheim, 1853)

Anchomenus exaratus Mannerheim, 1853: 143. Type locality: «ora orientali insulae Kadjak [Alaska]» (original citation). Lectotype (♀), designated by Lindroth (1966: 573), in ZMH.

Batenus aeneolus Motschulsky, 1865: 320. Type locality: «Kadiak [Alaska]» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 12), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 12).

Platynus aldanicus Poppius, 1906a: 36. Type locality: «Aldan-Mündung, Lena-Ufern [Yakutia, Siberia, Russia]» (original citation). Holotype (♀) in ZMH. Synonymy established by Lindroth (1954b: 139).

Distribution. A Holarctic species ranging from the Kola Peninsula to eastern Siberia and in North America from Alaska to the Hudson Bay in Nunavut and northern Manitoba (Lindroth 1966: 574). Fossil remnants, dated between 14,000 and 20,700 years B.P., have been unearthed in east-central Iowa and central Illinois (Schwert 1992: 78).
Records. CAN: BC, MB, NT, NU, YT **USA**: AK – **Holarctic**

Agonum galvestonicum (Casey, 1920)

Europhilus galvestonicus Casey, 1920: 126. Type locality: «Galveston [Galveston County], Texas» (original citation). Holotype [by monotypy] (♂) in USNM [# 47532].

Distribution. This rarely collected species is known from Pennsylvania (Carbon, Chester and Greene Counties, Robert L. Davidson pers. comm. 2012), southernmost

Ontario (Lindroth 1966: 583) and southern Michigan (Ingham County, CMNH) south to southeastern Texas (Casey 1920: 126) and eastern South Carolina (Kirk 1969: 12; Ciegler 2000: 112).
Records. CAN: ON **USA**: MI, MO, MS, OH, PA, SC, TN, TX, VA, WV

***Agonum gratiosum* (Mannerheim, 1853)**

Platynus ruficornis LeConte, 1850: 205. Type locality: Lake Superior (inferred from title of the paper), herein restricted to Marquette, Marquette County, Michigan (see Hubbard and Schwarz 1878: 628). Three syntypes in MCZ [# 5784]. Note. This name has been considered a junior secondary homonym of *Agonum ruficorne* (Goeze, 1777). As stated before (see "Note" section for *Paranchus albipes* (Fabricius)), Goeze's name is based on a misidentification and has no nomenclatural status. Therefore, *Platynus ruficornis* LeConte is not a homonym and should be used as the valid name for this taxon. However, the name *Agonum gratiosum* is well established for this common species since the 1960s and I believe it should be preserved. The case should be submitted to the Commission for a ruling. Reversal of precedence (ICZN 1999: 23.9) cannot be used here since LeConte's name has been used as valid after 1899 (e.g., Blatchley 1910: 135).

Anchomenus gratiosus Mannerheim, 1853: 142. Type locality: «insula Kadjak [Alaska]» (original citation). Lectotype (♀), designated by Lindroth (1955c: 7), in ZMH. Synonymy established by LeConte (1879b: 58), confirmed by Lindroth (1954b: 139).

Europhilus symmetricus Casey, 1920: 129. Type locality: «Devil's Lake [Ramsey County], N[orth] Dakota» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47528]. Synonymy established by Hatch (1953: 145), confirmed by Lindroth (1954b: 140).

Europhilus properans Casey, 1920: 129. Type locality: «Durham [Strafford County], New Hampshire» (original citation). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47530]. Synonymy established by Lindroth (1954b: 140).

Europhilus antiquus Notman, 1922b: 102. Type locality: «Lyme [New London County], C[onnecticu]t» (original citation). Holotype (♂) in USNM [# 26591]. Synonymy established by Lindroth (1954b: 140).

Europhilus carri Casey, 1924: 85. Type locality: «Edmonton [Alberta]» (original citation). Lectotype (♂), designated by Lindroth (1966: 577), in USNM [# 47529]. Synonymy established with doubt by Lindroth (1955c: 7), confirmed by Lindroth (1966: 577). Etymology. The specific name was proposed in honor of Frederick Stephens Carr [1881-1934], teacher and inspector in the educational system in Alberta and amateur coleopterist. His collection, which consisted at the time of his death of about 6,500 North American species, was deposited at the University of Alberta.

Distribution. This widely distributed species ranges from western Newfoundland (Lindroth 1955a: 128) to Kodiak Island, north to the Anderson River delta in northern Northwest Territories (Lindroth 1966: 578), south to the Sierra Nevada in Califor-

nia (El Dorado County, CAS), San Miguel County in New Mexico (Fall and Cockerell 1907: 159, as *Platynus ruficornis*), northeastern Kansas (Popenoe 1878: 78, as *Platynus ruficornis*), northern Illinois (Lake County, CNC), and northern West Virginia (Tucker and Randolph Counties, CMNH). The species is also known from the Far East (Bousquet 2003c: 453).

Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CA, CO, CT, IA, IL, IN, KS, MA, ME, MI, MN, MT, ND, NE, NH, NJ, NM, NY, OH, OR, PA, RI, SD, UT, VT, WA, WI, WV, WY – **Holarctic**

Agonum lutulentum (LeConte, 1854)

Platynus lutulentus LeConte, 1854b: 54. Type locality: «Maine and Lake Superior» (original citation), restricted to «Nipigon, Ont[ario]» by Lindroth (1966: 580). Three syntypes in MCZ [# 5788].

Europhilus lutulentus elegantulus Casey, 1920: 127. Type locality: «New Jersey» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47525]. Synonymy established by Casey (1924: 85), confirmed by Lindroth (1966: 580).

Europhilus lutulentus adustus Casey, 1920: 127. Type locality: «Indiana» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47526]. Synonymy established by Lindroth (1954b: 140).

Europhilus atriceps Casey, 1920: 128. Type locality: «Massachusetts» (original citation). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47527]. Synonymy established by Lindroth (1955c: 9).

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1954c: 307) to Vancouver Island (Lindroth 1966: 581), north to southern Northwest Territories (Bousquet 1987a: 125), south to eastern Washington (Hatch 1953: 145), central Kansas (Trego and Scott Counties, CNC, CMNH), and northwestern Maryland (Garrett County, CMNH).

Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), NT, ON, PE, QC, SK **USA**: CT, DC, DE, IA, IL, IN, KS, MA, MD, ME, MI, MN, MO, MT, ND, NE, NH, NJ, NY, OH, PA, RI, SD, VT, WA, WI, WV

Agonum palustre Goulet, 1969

Agonum palustre Goulet, 1969: 280. Type locality: «Amberley, S[outh] Kincardine, Ontario» (original citation). Holotype (♂) in CNC [# 11575].

Distribution. This species is found from southwestern New Brunswick (Webster and Bousquet 2008: 22) to Minnesota (Epstein and Kulman 1990: 214; Sherburne County, CNC), south to southwestern Nebraska (Lincoln County, Foster F. Purrington pers. comm. 2010) and along the Appalachian Mountains to central Alabama (Lee County, CNC).

Records. CAN: NB, ON, QC **USA**: AL, CT, IA, IL, IN, KY, MA, MD, ME, MI, MN, NC, NE, NH, NJ, NY, OH, PA, RI, TN, VA, VT, WI, WV

Agonum picicornoides Lindroth, 1966

Agonum picicornoides Lindroth, 1966: 574. Type locality: «Nipigon, L[ake] Sup[erior], Ont[ario]» (original citation). Holotype (♂) in CNC [# 9228].

Distribution. This species ranges from the Nova Scotia Peninsula to south-central British Columbia, north to northern Alberta and Anticosti Island in Quebec, south to southeastern Wisconsin (Messer 2010: 42), the Saginaw Bay area in northern Michigan, and southern Vermont (Lindroth 1966: 574). Fossil remnants, dated about 10,800 years B.P., have been unearthed in central North Dakota (Ashworth and Schwert 1992: 260).
Records. CAN: AB, BC, MB, NB, NS, ON, PE, QC, SK **USA**: ME, MI, NH, VT, WI

Agonum retractum LeConte, 1846

Agonum retractum LeConte, 1846b: 228. Type locality: «Lacum Superiorem» (original citation), restricted to «Nipigon, Ont[ario]» by Lindroth (1966: 576). Syntype(s) in MCZ [# 5786].

Europhilus dilutipennis Motschulsky, 1865: 322. Type locality: «nouveau Mexique [= New Mexico]» (original citation), which is probably incorrect. One syntype in ZMMU (Lindroth 1969a: 1119). Synonymy established by Lindroth (1969a: 1119).

Europhilus collusor Casey, 1920: 129. Type locality: «Montana» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47531]. Synonymy established by Lindroth (1954b: 140).

Europhilus facilis Casey, 1920: 130. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype (♀), designated by Lindroth (1975: 126), in USNM [# 47533]. Synonymy established by Lindroth (1954b: 140).

Europhilus serenus Casey, 1920: 131. Type locality: «Bayfield [Bayfield County, Wisconsin], Lake Superior» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47534]. Synonymy established by Lindroth (1954b: 140).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 127) to western British Columbia (Lindroth 1966: 576), north to southern Northwest Territories (CNC), south to "Montana" (Casey 1920: 129, as *Europhilus collusor*), South Dakota (Kirk and Balsbaugh 1975: 25), central West Virginia (Pocahontas County, CMNH), and northern Virginia (Madison and Rappahannock Counties, CNC). The record from New Mexico (type locality of *A. dilutipenne* Motschulsky) is probably in error; those from "Illinois" and "Indiana" (Bousquet and Larochelle 1993: 254) need confirmation.

Records. FRA: PM **CAN**: AB, BC, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: CT, MA, MD, ME, MI, MN, MT, NH, NY, PA, RI, SD, VA, VT, WI, WV [IL, IN]

Agonum simile Kirby, 1837

Agonum simile Kirby, 1837: 27. Type locality: northern parts of British America (inferred from title of the book), restricted to «Pikwitonei, Manit[oba]» by Lindroth (1966: 571). Two syntypes in BMNH (Lindroth 1953b: 171).

Distribution. This rarely collected species is known from scattered localities from north-central Manitoba to the Gulf Coast of Alaska (Lindroth 1966: 571).
Records. CAN: AB, BC, MB, SK, YT **USA**: AK

Agonum sordens Kirby, 1837

Agonum sordens Kirby, 1837: 25. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), restricted to «Edmonton, Al[ber]ta» by Lindroth (1966: 575). One syntype [2 originally cited] in BMNH (Lindroth 1953b: 170).

Platynus picicornis LeConte, 1860: 319. Type locality: «Jasper House [= Jasper, Alberta]» (original citation). One syntype in MCZ [# 5783]. Synonymy established by Hatch (1953: 144) and Lindroth (1953b: 170).

Anchomenus ineptus Casey, 1920: 63. Type locality: «Coeur d'Alene [Kootenai County], Idaho» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47441]. Synonymy established by Lindroth (1966: 575).

Europhilus frosti Casey, 1924: 86. Type locality: «Eastbrook [Hancock County], Maine» (original citation). Lectotype (♂), designated by Lindroth (1975: 126), in USNM [# 47535]. Synonymy established by Lindroth (1954b: 140).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 127) to central Alaska (Lindroth 1966: 576), south to "Oregon" (Hatch 1953: 144), southern Colorado (Wickham 1902: 239; LeConte 1879d: 500), northern Illinois (Lake County, CNC), and Maryland (Erwin 1981b: 154). The records from "Iowa" (Jaques and Redlinger 1946: 295), northeastern Kansas (Popenoe 1878: 78), and "North Carolina" (Bousquet and Larochelle 1993: 254) need confirmation.
Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CO, ID, IL, MA, MD, ME, MI, MN, MT, ND, NH, NJ, NY, OR, PA, SD, UT, VT, WA, WI, WV [IA, KS, NC]

Agonum superioris Lindroth, 1966

Agonum superioris Lindroth, 1966: 578. Type locality: «Nipigon, W[estern] Ont[ario]» (original citation). Holotype (♂) in CNC [# 9229].

Distribution. This species ranges from New Brunswick (Bousquet 1987a: 125) to the Rocky Mountains in Alberta and eastern Alaska (Lindroth 1966: 579), south to northwestern Wisconsin (Messer 2010: 42), Beaver Islands, Lake Michigan, in northern Michigan (Dunn 1987: 11), and New England (Lindroth 1966: 579).
Records. CAN: AB, MB, NB, NT, ON, PE, QC, SK, YT **USA**: AK, ME, MI, NH, VT, WI

Agonum thoreyi Dejean, 1828

Agonum affine Stephens, 1828a [1 March]: 94 [potential *nomen oblitum*]. Type locality: «near London» (original citation). Holotype [by monotypy] probably in BMNH (collection Stephens, see Dawson 1854: 94). Note. This taxon was first placed in synonymy with *Anchomenus pelidnus* (Herbst) *sensu* Paykull (1798: 134) (= *Agonum thoreyi thoreyi* (Dejean, 1828)), by Dawson (1854: 93).

Agonum thoreyi Dejean, 1828 [29 November]: 165 [potential *nomen protectum*]. Type locality: «environs de Hambourg, nord de l'Allemagne» (original citation). Syntype(s) in MHNP.

Anchomenus melanocephalus Dejean, 1828 [29 November]: 118. Type locality: «Espagne [= Spain]» (original citation). Syntype(s) probably in MHNP. Synonymy established by Bedel (1900b: 248).

Agonum puellum Dejean, 1828 [29 November]: 166. Type locality: «environs de Berlin [Germany]» (original citation). Syntype(s) probably in MHNP. Synonymy established, under the name *Anchomenus pelidnus* (Herbst) *sensu* Paykull (1798: 134) (= *Agonum thoreyi thoreyi* (Dejean, 1828)), by Schiødte (1841: 254).

Agonum lenum Dejean, 1828 [29 November]: 166 [*nomen dubium*]. Type locality: «Amérique septentrionale» (original citation). Syntype(s) presumably lost (Lindroth 1955b: 21). Synonymy established by Lindroth (1954b: 138), subsequently considered a *nomen dubium* by the same author (Lindroth 1955b: 21).

Agonum longicolle Lacordaire [in Boisduval and Lacordaire], 1835: 215. Type locality: «Bondy [northeastern suburbs of Paris, France]» (original citation). Syntype(s) location unknown. Synonymy established, under the name *Anchomenus pelidnus* (Herbst) *sensu* Paykull (1798: 134) (= *Agonum thoreyi thoreyi* (Dejean, 1828)), by Erichson (1837: 117).

Agonum picipenne Kirby, 1837: 24. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation). Three syntypes in BMNH (Lindroth 1953b: 170). Synonymy established, under the name *A. lenum* Dejean, by Melsheimer (1853: 17), confirmed by Lindroth (1953b: 170).

Agonum lehmanni Chaudoir, 1837b: 25. Type locality: «Livonie [currently in Latvia and Estonia]» (original citation). Syntype(s) probably in MHNP. Synonymy established, under the name *Anchomenus pelidnus* (Herbst) *sensu* Paykull (1798: 134) (= *Agonum thoreyi thoreyi* (Dejean, 1828)), by Chaudoir (1850b: 107).

Agonum convexiusculum Chaudoir, 1843b: 765. Type locality: «Smyrne [= Izmir, Turkey]» (original citation). One syntype in MHNP (Schmidt and Liebherr 2009: 250). Synonymy established by Schmidt and Liebherr (2009: 250).

Agonum longulum Motschulsky, 1844: 133. Type locality: «fl[euve] Ichim [Russia]» (lectotype label). Lectotype (♂), designated by Schmidt and Liebherr (2009: 250), in ZMMU. Synonymy established, under the name *Anchomenus puellus* (Dejean), by Chaudoir (1850b: 108).

Platynus gemellus LeConte, 1879b: 54. Type locality: «Vancouver Island [British Columbia]» (original citation). Two syntypes [2 originally cited] in MCZ [# 5787]. Synonymy established by Hatch (1953: 145) and Lindroth (1953b: 170).

Distribution. A Holarctic species widely distributed in the Palaearctic Region from Ireland to the Far East, south to Spain and Italy (Bousquet 2003c: 453). In North America, the taxon ranges from Alaska (Lindroth 1966: 580) to Newfoundland (Lindroth 1955a: 129), south to the District of Columbia (Ulke 1902: 7, as *Platynus picipennis*), central Kansas (Trego County, CNC), east-central Colorado (Kiowa County, Foster F. Purrington pers. comm. 2010), and "California" (Lindroth 1955a: 129).
Records. CAN: AB, BC (VCI), MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CA, CO, CT, DC, IA, ID, IL, IN, KS, MA, ME, MI, MN, MT, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SD, VT, WA, WI – **Holarctic**

Subgenus *Agonum* Bonelli, 1810

Agonum Bonelli, 1810: Tabula Synoptica. Type species: *Carabus marginatus* Linnaeus, 1758 designated by Curtis (1827: plate 183).

Megalonychus Chaudoir, 1843a: 418. Type species: *Megalonychus madagascariensis* Chaudoir, 1843 by monotypy. Synonymy established by Liebherr and Schmidt (2004: 202). Etymology (original). From the Greek prefix *megalo-* (large) and *onychos* (claws), alluding to the size of the last tarsomeres ("*tarsi sublineares; articulis ... ultimo longissimo*") of the adult [masculine].

Agonocyrthes Motschulsky, 1865: 317. Type species: *Agonocyrthes orbicollis* Motschulsky, 1865 (= *Agonum sinense* Csiki, 1931) by original designation. Synonymy established by Liebherr and Schmidt (2004: 202).

Agonopsis Semenov, 1889a: 359 [junior homonym of *Agonopsis* Gill, 1861]. Type species: *Anchomenus humerosus* Semenov, 1889 by monotypy. Synonymy established by Liebherr and Schmidt (2004: 202). Etymology. From the generic name *Agonum* [*q.v.*] and the Greek suffix *-opsis* (having the appearance of) [feminine].

Platynopsis Lutshnik, 1915d: 186. Type species: *Agonum semenowi* Lutshnik, 1915 (= *Agonum rugicolle* Chaudoir, 1846) by original designation. Synonymy established by Schmidt and Liebherr (2009: 228). Etymology. From the generic name *Platynus* [*q.v.*] and the Greek suffix *-opsis* (having the appearance of) [feminine].

Paragonum Casey, 1920: 123. Type species: *Feronia placida* Say, 1823 designated by Lindroth (1966: 613). Synonymy established by Ball (1960b: 133). Etymology. From the Greek *para* (near) and the generic name *Agonum* [*q.v.*] [neuter].

Nagonium Habu, 1956c: 166. Type species: *Agonum kitanoi* Habu, 1956 by original designation. Synonymy established by Liebherr and Schmidt (2004: 202).

Liebherrius Shilenkov [in Kryzhanovskij et al.], 1995: 115. Type species: *Anchomenus bicolor* Dejean, 1828 by original designation. Synonymy established by Liebherr and Schmidt (2004: 202).

Agonops Bousquet, 2002b: 5. Replacement name for *Agonopsis* Semenov, 1889. Etymology. From the generic name *Agonum* [*q.v.*] and the Greek suffix *-ops* (having the appearance of) [masculine].

Diversity. Twenty-nine species in the Nearctic (four species, of which one extends into southern Mexico and one is adventive), Palaearctic (24 species, of which one is Holarctic), and Afrotropical (three species in eastern Africa including Madagascar) Regions.

[**bicolor group**]

***Agonum bicolor* (Dejean, 1828)**

Anchomenus bicolor Dejean, 1828: 126. Type locality: «Kamtschatka [Russia]» (original citation). Three syntypes in MHNP (Lindroth 1955b: 20) and ZMHB (Schmidt 1995: 162).

Agonum alpinum Motschulsky, 1844: 139. Type locality: «sommités des Alpes du Hamar-Daban [Irkutsk Oblast, Russia]» (original citation). Lectotype (♀), designated by Schmidt (1995: 162), in ZMMU. Synonymy established by Schmidt (1995: 162).

Agonum sibiricum Gebler, 1847: 330. Type locality: «Alpe des kusnezkischen Gebirges [= south Kuznetskiy Alatau, Siberia, Russia]» (original citation). Holotype [by monotypy] location unknown. Synonymy established doubtfully with *Agonum alpinum* Motschulsky by Chaudoir (1850b: 105).

Platynus marginellus LeConte, 1860: 315. Type locality: «Fort Simpson [Northwest Territories]» (original citation). Syntype(s) in MCZ [# 5752]. Synonymy established by LeConte (1863b: 7), confirmed by Lindroth (1966: 585).

Agonum jemelianovi Lafer, 1992: 612. Type locality: «r. Samarga, ust'e r. Odui, Primorsk[iy] Kr[ay] [Russia]» (original citation). Holotype location unknown. Synonymy established by Schmidt (1995: 162).

Distribution. A Holarctic species ranging in the Palaearctic Region across Siberia up to the Ob River (Lindroth 1966: 586), south to Kazakhstan and Mongolia (Bousquet 2003c: 454). In North America, the species ranges from Alaska and northern British Columbia to northeastern Alberta (Lindroth 1966: 586). The records from Colorado (Wickham 1902: 238) and New Mexico (Fall and Cockerell 1907: 159) probably refer to *A. piceolum*.
Records. CAN: AB, BC, NT, YT **USA**: AK – **Holarctic**

***Agonum piceolum* (LeConte, 1879)**

Platynus piceolus LeConte, 1879b: 52. Type locality: «Oregon and British Columbia» (original citation), restricted to «Oregon» by Lindroth (1966: 587). Two syntypes [3 originally cited] in MCZ [# 5753].

Anchomenus tritus Casey, 1920: 63. Type locality: «Bayfield [Bayfield County], Wisc[onsin]» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47443]. Synonymy established by Lindroth (1966: 587).

Anchomenus tritus fractus Casey, 1920: 63. Type locality: «Provo [Utah County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47444]. Synonymy established by Lindroth (1966: 587).

Anchomenus lascivus Casey, 1920: 66. Type locality: «Stikine River, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47446]. Synonymy established by Hatch (1953: 138), confirmed by Lindroth (1966: 587).

Anchomenus frigidulus Casey, 1920: 66. Type locality: «Stikine River, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47445]. Synonymy established by Lindroth (1966: 587).

Anchomenus dissensus Casey, 1920: 67. Type locality: «Priest River [Bonner County], Idaho» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47448]. Synonymy established by Hatch (1953: 138), confirmed by Lindroth (1975: 127).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 125) to Vancouver Island (Lindroth 1966: 588), north to southern Yukon Territory (Hyland River, UASM), south to west-central California (Lindroth 1966: 587), southwestern Arizona (Maricopa County, UASM), New Mexico (Fall and Cockerell 1907: 159; UASM), and mountains of New England (Lindroth 1966: 587). The record from "Connecticut" (Bousquet and Larochelle 1993: 255) was based on a misidentified specimen of *A. extensicolle* (Krinsky and Oliver 2001: 5); that from "Massachusetts" (Bousquet and Larochelle 1993: 255) needs confirmation.

Records. CAN: AB, BC (VCI), MB, NB, NF, ON, QC, SK, YT **USA**: AZ, CA, CO, ID, ME, MI, MT, NH, NM, NV, OR, UT, WA, WI, WY [MA]

[**muelleri group**]

***Agonum muelleri* (Herbst, 1784)**

Carabus VI-punctatus O.F. Müller, 1776: 78 [primary homonym of *Carabus sexpunctatus* Linnaeus, 1758]. Type locality: Denmark and Norway (inferred from title of the book). Syntype(s) lost.

Carabus mülleri Herbst, 1784: 139. Replacement name for *Carabus sexpunctatus* Müller, 1776. Etymology. The specific name was proposed in honor of Otto Friedrich Müller [1730-1784], a Danish naturalist, theologian, linguist, and trumpet player.

Following his marriage in 1773, Müller became financially independent and devoted himself exclusively to science.

Carabus parumpunctatus Fabricius, 1792: 157. Type locality: «Germania» (original citation). Two syntypes in ZMUC (Zimsen 1964: 57). Synonymy established by Illiger (1798: 195).

Platynus hardyi LeConte, 1879b: 53. Type locality: «Newfoundland» (original citation). Three syntypes [3 originally cited] in MCZ [# 28696]. Synonymy established by Hatch (1953: 141), confirmed by Lindroth (1954b: 138).

Platynus hornii Hausen, 1890: 235. Type locality: «S[ain]te-Rose [= Laval] and Ile Perrot, P[rovince of] Q[uebec]» (original citation). Syntypes presumably lost. **New synonymy**. Note. Lindroth (1966: 629) listed this name as synonym of *Agonum decorum* (Say, 1823) on the basis of an "authentic ♂," labeled "Montreal. Hausen" in the CNC. Unfortunately the specimen could not be located. However, there is serious doubt that the specimen was really a syntype. Hausen (1890: 236) stated that "on being shown a specimen, Dr. Horn declared he doubted the American origin of this species." It would have been surprising that Horn did not recognize *Agonum decorum*. On the other hand, *Agonum muelleri* was little known in North America, being first noticed by LeConte in 1879 when he described it under the name *Platynus hardyi*. The description is poor but seems to fit better *A. muelleri* than *A. decorum*, particularly the size (0.375 in = 9.5 mm).

Distribution. This Palaearctic species is adventive in North America where it is known from west-central Alberta (Emerald Lake, Gerald J. Hilchie pers. comm. 2009) and southern British Columbia, including Vancouver Island (Lindroth 1966: 593), to northwestern California (Humboldt County, James R. LaBonte pers. comm. 1992) in the west and from Newfoundland (Lindroth 1955a: 121) to northeastern Minnesota (Kamal J.K. Gandhi pers. comm. 2008), south to northeastern Iowa (Larsen and Purrington 2010: 570) and northeastern West Virginia (Tucker County, CMNH) in the east. The first inventoried specimen collected in the east was found in Newfoundland around 1840 (Lindroth 1955a: 122) and in the west in 1933 (Lindroth 1966: 593; Leech 1935: 122, as *Platynus hardyi*). The species is also adventive in Hawaii (Liebherr et al. 2009: 98).

Records. FRA: PM **CAN**: AB, BC (VCI), NB, NF, NS (CBI), ON, PE, QC **USA**: CA, CT, IA, MA, ME, MI, MN, NH, NY, OH, OR, PA, RI, VA, VT, WA, WI, WV – **Adventive**

Agonum placidum (Say, 1823)

Feronia placida Say, 1823a: 43. Type locality: «Dorchester [Suffolk County], Mass[achusetts]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 348), in MCZ [# 33012].

Agonum morosum Dejean, 1828: 145. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 21). Synonymy established by LeConte (1854b: 55), confirmed by Lindroth (1966: 613).

Agonum alcyoneum Chaudoir, 1837b: 24. Type locality: «Mexique» (original citation), restricted to «Amecameca, Mexico state» by Liebherr (1991a: 119). Lectotype (♂), designated by Liebherr (1991a: 119), in MHNP. Synonymy established by Liebherr (1991a: 119).

Anchomenus transpunctatus Bates, 1878a: 593. Type locality: «near the capital, Mexico» (original citation). Syntype(s) probably in BMNH. Synonymy established by Bates (1882a: 94).

Agonum placidum amplior Casey, 1920: 124. Type locality: «Boulder Co[unty], Colorado» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 128), in USNM [# 47491]. Synonymy established by Lindroth (1966: 613).

Agonum placidum aztecanum Casey, 1920: 124. Type locality: «Amecameca [México], Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 128), in USNM [# 47492]. Synonymy established by Lindroth (1966: 613).

Agonum placidum citatum Casey, 1920: 124. Type locality: «New Hampshire» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47494]. Synonymy established by Lindroth (1966: 613).

Agonum rhodeanum Casey, 1924: 84. Type locality: «Rhode Island» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47490]. Synonymy established by Lindroth (1966: 613).

Distribution. This widely distributed species ranges from Newfoundland (Lindroth 1955a: 120; Larson and Langor 1982: 594) to western British Columbia (Lindroth 1966: 614), south to Inyo County in California, the Sierra de Miahuatlán in Oaxaca (Liebherr 1994: 32), and northern Georgia (Fattig 1949: 34).

Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), ON, PE, QC, SK **USA**: AR, AZ, CA, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OR, PA, RI, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – Mexico

Subgenus *Olisares* Motschulsky, 1865

Olisares Motschulsky, 1865: 326. Type species: *Olisares flavolimbatus* Motschulsky, 1865 (= *Carabus pallipes* Fabricius, 1792) designated by Liebherr (1991a: 120). Etymology. Probably an arbitrary combination of letters [masculine].

Taphranchus Casey, 1920: 52. Type species: *Agonum excavatum* Dejean, 1828 designated by Lindroth (1966: 623). Synonymy established by Liebherr and Schmidt (2004: 203). Etymology. From the Greek *taphros* (ditch, trench, by extension stria) and the generic name *Anchus* [*q.v.*] [masculine].

Stictanchus Casey, 1920: 54. Type species: *Feronia extensicollis* Say, 1823 designated by Lindroth (1966: 625). Synonymy established by Liebherr and Schmidt (2004: 203). Etymology. From the Greek *stictos* (punctured) and the generic name *Anchus* [*q.v.*] [masculine].

Deratanchus Casey, 1920: 70. Type species: *Platynus quadrimaculatus* Horn, 1885 by monotypy. Synonymy established by Liebherr and Schmidt (2004: 202).

Circinalia Casey, 1920: 72. Type species: *Feronia punctiformis* Say, 1823 by original designation. Synonymy established by Liebherr and Schmidt (2004: 203).

Circinalidia Casey, 1920: 78. Type species: *Agonum aeruginosum* Dejean, 1828 designated by Bousquet and Larochelle (1993: 258). Synonymy established by Liebherr and Schmidt (2004: 203).

Micragonum Casey, 1920: 80. Type species: *Feronia nutans* Say, 1823 by original designation. Synonymy established by Liebherr and Schmidt (2004: 203). Etymology. From the Greek *micros* (small, little) and the generic name *Agonum* [*q.v.*] [neuter].

Stereagonum Casey, 1920: 80. Type species: *Agonum ferreum* Haldeman, 1843 designated by Lindroth (1966: 624). Synonymy established by Liebherr and Schmidt (2004: 203). Etymology. From the Greek *stereos* (solid, firm, hard) and the generic name *Agonum* [*q.v.*] [neuter].

Melanagonum Casey, 1920: 111. Type species: *Agonum melanarium* Dejean, 1828 designated by Lindroth (1966: 598). Synonymy established by Liebherr and Schmidt (2004: 202). Etymology. From the Greek *melanos* (black) and the generic name *Agonum* [*q.v.*] [neuter].

Punctagonum Gray, 1937: 311. Type species: *Platynus belleri* Hatch, 1933 by monotypy. Synonymy established by Liebherr and Schmidt (2004: 203). Etymology. From the Latin *punctum* (small hole, by extension puncture) and the generic name *Agonum* [*q.v.*] [neuter].

Diversity. Seventy-two species in the Nearctic (50 species), Neotropical (14 species in Middle America but only two endemic), and Palaearctic (21 species, one Holarctic) Regions.

[**albicrus group**]

***Agonum albicrus* Dejean, 1828**

Agonum albicrus Dejean, 1828: 158. Type locality: «Amérique septentrionale» (original citation), restricted to «M[ount] Vernon, Alab[ama]» by Lindroth (1966: 615). One syntype in MHNP (Lindroth 1955b: 21).

Distribution. The range of this species extends from southeastern New Hampshire (Rockingham County, Ross T. Bell pers. comm. 2008) to eastern Kansas (Douglas County, Robert L. Davidson pers. comm. 2009), including southernmost Ontario (Lindroth 1966: 615), south to eastern Oklahoma (Latimer County, UASM), northwestern Louisiana (Bossier Parish, CMNH) and the Florida Panhandle (Jackson County, CNC). The record from "Iowa" (Bousquet and Larochelle 1993: 255) needs confirmation.

Records. CAN: ON **USA**: AL, AR, CT, FL, GA, IL, IN, KS, LA, MA, MD, MS, NC, NH, NJ, OH, OK, PA, RI, SC, TN, VA [IA]

[**cupripenne group**]
***Agonum belleri* (Hatch, 1933)**

Platynus belleri Hatch, 1933c: 120. Type locality: «Chase Lake, Snohomish County, Washington» (original citation). Holotype (♂) in USNM. Etymology. The specific name was proposed for Samuel Beller who did a Master Thesis, under the direction of Melville H. Hatch, on the Chrysomelidae of Washington at the University of Washington in 1931.

Distribution. This species is known from a few localities in the Pacific Northwest from the Queen Charlotte Islands (Kavanaugh 1992: 74) to northwestern Oregon (Clackamas County, James R. LaBonte pers. comm. 1992).
Records. CAN: BC (QCI) **USA**: OR, WA

***Agonum cupreum* Dejean, 1831**

Agonum cupreum Dejean, 1831: 735. Type locality: «Amérique septentrionale» (original citation), restricted to «Duluth [Saint Louis County], Minnes[ota]» by Lindroth (1966: 596). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 21).

Agonum seminitidum Kirby, 1837: 26. Type locality: «Lat. 54° [= along North Saskatchewan River]» (original citation), restricted to «Edmonton, Al[ber]ta» by Lindroth (1966: 596). Three syntypes in BMNH (Lindroth 1953b: 170). Synonymy established by LeConte (1870: 396), confirmed by Lindroth (1953b: 170).

Agonum chalceum LeConte, 1846b: 224. Type locality: «Lacum Superiorem» (original citation); cited from «Sault Ste Marie, Michigan» by LeConte (1854b: 55). Three syntypes in MCZ [# 5777]. Synonymy established with doubt by LeConte (1863b: 7), confirmed by LeConte (1869b: 248) and Lindroth (1966: 596).

Platynus protractus LeConte, 1854b: 55. Type locality: «Lake Superior and Sandy Lake, Minnesota» (original citation). Four syntypes in MCZ [# 5778]. Synonymy established by LeConte (1879b: 57), confirmed by Lindroth (1966: 596).

Platynus crassicollis LeConte, 1860: 319. Type locality: «Jasper House [= Jasper, Alberta], Rocky Mountains» (original citation). One syntype in MCZ [# 5779]. Synonymy established by Henshaw (1882: 209), confirmed by Lindroth (1966: 596).

Agonum longulum Casey, 1920: 107. Type locality: «[Fort] Douglas [Salt Lake County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47463]. Synonymy established by Lindroth (1966: 596).

Agonum parallelum Casey, 1920: 108. Type locality: «Magnolia, Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47464]. Synonymy established by Lindroth (1966: 596).

Agonum marquettense Casey, 1920: 108. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47465]. Synonymy established by Lindroth (1966: 596).

Agonum seminitidum borealinum Casey, 1920: 109. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47467]. Synonymy established by Lindroth (1966: 596).

Agonum ovalicauda Casey, 1920: 109. Type locality: «Magnolia, Boulder Co[unty], Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47468]. Synonymy established by Lindroth (1966: 596).

Agonum esuriale Casey, 1920: 109. Type locality: «Colorado» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47470]. Synonymy established by Lindroth (1966: 596).

Agonum cupreolucens Casey, 1924: 83. Type locality: «Winnipeg [Manitoba]» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47466]. Synonymy established by Lindroth (1966: 596).

Agonum uintanum Casey, 1924: 83. Type locality: «Mammoth (10000 ft.) [Juab County], Parowan M[oun]t[ain]s, Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47469]. Synonymy established by Liebherr (1991a: 118).

Distribution. This species ranges from central Prince Edward Island (CNC) and New Brunswick (Kouchibouguac National Park, CNC) to central Alaska (Lindroth 1966: 598), south at least to east-central California (Mono County, CAS), southeastern Arizona (Dajoz 2007: 21; UASM), northeastern New Mexico (San Miguel County, UASM), South Dakota including the Black Hills (Kirk and Balsbaugh 1975: 25), and northern Michigan (Dunn 1985a: 8; Casey 1920: 108, as *A. marquettense*). The record from "Kansas" (Horn 1872c: 385, as *Platynus chalceus*) needs confirmation.
Records. CAN: AB, BC, MB, NB, NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CA, CO, ID, MI, MN, MT, ND, NM, NV, OR, SD, UT, WA, WI, WY [KS]
Note. Lindroth (1966: 597) treated *A. uintanum* Casey as a subspecies of *A. cupreum* Dejean.

Agonum cupripenne (Say, 1823)

Feronia cupripennis Say, 1823a: 50. Type locality: «Fall River [Bristol County], Mass[achusetts]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 347), in MCZ [# 33014]. Note. Lindroth and Freitag (1969: 347) reported that the neotype was from "W[est] Roxbury [Suffolk County], Mass[achusetts]" but the label on the specimen indicates that it was collected at Fall River, Massachusetts.

Agonum nitidulum Dejean, 1828: 143. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 20). Synonymy established by LeConte (1869b: 248), confirmed by Lindroth (1955b: 20).

Agonum gemmeum Casey, 1920: 103. Type locality: «Kansas» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47457]. Synonymy established by Lindroth (1966: 591).

Agonum tahoense Casey, 1920: 106. Type locality: «Truckee [Nevada County], California» (original citation). Lectotype (♀), designated by Liebherr (1991a: 118), in USNM [# 47460]. Synonymy established by Liebherr (1991a: 118).

Figure 40. *Cymindis platicollis* (Say). This *Cymindis* is a typical element of the temperate forest of eastern North America. Unlike most carabids inhabiting the temperate and boreal regions, this species lives above the surface of the ground in trees and is usually collected by beating branches. An arboreal way of life is a common feature among tropical carabids.

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1954c: 305) to Vancouver Island (LeConte 1869c: 370), north to west-central Northwest Territories (Bousquet 1987a: 125), south to the Sierra Nevada in California (Casey, 1920: 106, as *A. tahoense*; Dajoz 2007: 16), southeastern Arizona (Greenlee County, UASM), New Mexico (Wickham 1896c: 133; Fall and Cockerell 1907: 159; Cibola County, CMNH), "Kansas" (Lindroth 1966: 591), Tennessee (Sevier County, CNC), and northern Georgia (Fattig 1949: 34). The record from "Louisiana" (Bousquet and Larochelle 1993: 256) needs confirmation.
Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), NT, ON, PE, QC, SK **USA**: AZ, CA, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, MA, ME, MD, MI, MN, MO, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SD, TN, VA, VT, WA, WI, WV, WY [LA]

Agonum deplanatum Ménétriés, 1843

Agonum deplanatum Ménétriés, 1843: 57. Type locality: «Californie» (original citation), herein restricted to Berkeley, Alameda County (see Casey 1924: 82, as *Anchomenus amplicollis*). Lectotype (♀), designated by Lindroth (1966: 598), in ZMH.

Platynus fallianus Leng, 1919b: 203. Unnecessary replacement name for *Platynus deplanatus* (Ménétriés, 1843).

Anchomenus amplicollis Casey, 1924: 82. Type locality: «Berkeley [Alameda County], California» (original citation). Lectotype (♂), designated by Liebherr (1991a: 116), in USNM [# 47436]. Synonymy established by Liebherr (1991a: 116).

Distribution. This species is known from southwestern Oregon (Jackson County, CNC) to southern California (Fall 1901a: 46), including the Sierra Nevada (Papp 1978: 163). The record from "Idaho" (Horn 1872c: 385) is probably in error.
Records. USA: CA, OR
Note. *Agonum fallianum* Leng has been retained as the valid name for this taxon by most authors since 1919 on the account that *Agonum deplanatum* Ménétriés was a junior homonym of *Agonum deplanatum* (Chaudoir). Leng (1919b: 203) believed the date of publication for Ménétriés' name was 1844 and Chaudoir's name 1843. However, both names were published in 1843. Ménétriés' publication was issued on 29 July 1843 as indicated on page 64 of the journal and Chaudoir's publication was issued after 7 October 1843, the date of permission for publication as indicated on the recto of the title page. The reversal of precedence (ICZN 1999: Article 23.9) cannot be applied in this case because *Agonum deplanatum* Ménétriés has been used as a valid name after 1899 (e.g., Csiki 1931: 841).

Agonum fossiger Dejean, 1828

Agonum fossiger Dejean, 1828: 160. Type locality: «Californie» (original citation), herein restricted to Redwood Creek, Humboldt County (see Casey 1920: 121, as *A. tumidulum*). Holotype [by monotypy] in MHNP (Lindroth 1955b: 21). Note. Because Dejean (1828: 160) used the spelling *fossiger* in combination with the genus name *Agonum*, he obviously regarded the specific name as a noun in apposi-

tion, not as an adjective. In such case, the noun need not agree in gender with the generic name with which it is combined (ICZN 1999: Articles 31.2.1 and 34.2.1). *Agonum fossiger*, not *A. fossigerum*, is the correct spelling for this species.

Agonum famelicum Ménétriés, 1843: 58. Type locality: «Californie» (original citation). Lectotype (♀), designated by Lindroth (1966: 596), in ZMH. Synonymy established by LeConte (1863b: 7), confirmed by Lindroth (1966: 596).

Agonothorax robustus Motschulsky, 1859a: 158. Type locality: California (inferred from title of the paper). Two syntypes in ZMMU (Keleinikova 1976: 214) and one in MCZ (collection LeConte) (Lindroth 1966: 596). Synonymy established by LeConte (1863b: 7), confirmed by Lindroth (1966: 596).

Platynus foveiceps Notman, 1919b: 233. Type locality: «Franktown [Washoe County], Nevada» (original citation). Holotype [by monotypy] (♀) in USNM. Synonymy established by Liebherr (1991a: 121).

Agonum breviusculum Casey, 1920: 119. Type locality: «Lake Tahoe [Placer County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47485]. Synonymy established by Lindroth (1966: 596).

Agonum pertinax Casey, 1920: 119. Type locality: «Reno [Washoe County], Nevada» (original citation). Holotype [by monotypy] (♂) in USNM [# 47479]. Synonymy established by Lindroth (1966: 596).

Agonum atromicans Casey, 1920: 120. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♂) in USNM [# 47484]. Synonymy established by Lindroth (1966: 596).

Agonum vegetum Casey, 1920: 121. Type locality: «S[an]ta Cruz [Santa Cruz County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47487]. Synonymy established by Lindroth (1966: 596).

Agonum columbicum Casey, 1920: 121. Type locality: «The Dalles [Wasco County], Oregon» (original citation). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47488]. Synonymy established by Hatch (1953: 143), confirmed by Lindroth (1966: 596).

Agonum tumidulum Casey, 1920: 121. Type locality: «Redwood Creek, Humboldt Co[unty], California» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47489]. Synonymy established by Lindroth (1966: 596).

Distribution. This species is found west of the Rocky Mountains from "Washington" (Hatch 1953: 143) and western Idaho (Nez Perce County, CNC) to southern California (Fall 1901a: 46). The record from Baja California (Horn 1894: 309) needs confirmation since the species is not listed in Liebherr's (1994) review of the Mexican *Agonum*; those from southwestern British Columbia (Hatch 1953: 143) and Colorado (LeConte 1858a: 28) are probably in error.

Records. USA: CA, ID, NV, OR, WA

Agonum muiri **Liebherr, 1984**

Agonum muiri Liebherr, 1984b: 374. Type locality: «M[oun]t Lyell (11,000 ft.) [Madera County], Cal[ifornia]» (original citation). Holotype (♂) in CAS [# 15255]. Etymology. The specific name was proposed in honor of John Muir [1838-1914], naturalist, author, and conservationist. Born in Scotland, Muir came to United States as a boy and in 1868 settled in California where his activism helped save several wilderness areas. The Sierra Club, which he founded, is now one of the most important conservation organizations in the United States.

Distribution. This species is endemic to the Sierra Nevada [see Liebherr 1984b: Fig. 6], ranging from Lassen County to Tulare County.
Records. USA: CA

Agonum pacificum **Casey, 1920**

Agonum pacificum Casey, 1920: 102. Type locality: «California» (original citation), restricted to «Julian, San Diego Co[unty]» by Liebherr (1984b: 381). Lectotype (♂), designated by Liebherr (1984b: 381), in USNM [# 47461].

Distribution. This species ranges from west-central California south through the Coast Ranges to Baja California Norte [see Liebherr 1984b: Fig. 6].
Records. USA: CA – Mexico

Agonum quinquepunctatum **Motschulsky, 1844**

Agonum 5-punctatum Motschulsky, 1844: 137. Type locality: «Koul [Lake Baikal district, Siberia, Russia] au dela du Baïcal» (original citation). Lectotype (♂), designated by Lindroth (1966: 594), in ZMH.

Platynus perforatus LeConte, 1863c: 9. Type locality: «Methy [Portage] [= Portage La Loche, northern Saskatchewan], Hudson's Bay Territory» (original citation). Two syntypes in MCZ [# 5776]. Synonymy established by Lindroth (1966: 594). Note. Concerning the type locality, see "Note" under *Pelophila rudis*.

Distribution. This Holarctic species is found in eastern Siberia (Bousquet 2003c: 451) and in North America from Alaska (Lindroth 1966: 595) to Labrador (Goose Bay, CNC). The record from "Newfoundland" (Bousquet and Larochelle 1993: 258) refers to Labrador. Fossil remnants of this species, dated between about 14,000 and 18,100 years B.P., have been unearthed in central and southeastern Iowa (Baker et al. 1986: 96; Schwert 1992: 78).
Records. CAN: AB, BC, LB, MB, NT, ON, QC, SK, YT **USA**: AK – **Holarctic**

Agonum suturale **Say, 1830**

Agonum suturale Say, 1830b: (4) [3]. Type locality: «6.8 km N[orth] Tlaxco, Tlaxcala, Mexico» (neotype label). Neotype (♂), designated by Liebherr (1994: 34), in MCZ [# 35413]. Note. «Mexico» was the area originally cited by Say (1830b: (4) [3]).

Platynus subsericeus LeConte, 1863c: 8. Type locality: «Kansas» (original citation). Lectotype [as type] (♀), designated by Lindroth (1966: 592), in CMNH (collection Ulke). Synonymy established by Liebherr (in Ball and Shpeley 1992a: 49).

Agonum viridissimum Casey, 1920: 103. Type locality: «Stockton [Tooele County], Utah» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 127), in USNM [# 47456]. Synonymy established, under the name *A. subsericeum* (LeConte), by Hatch (1953: 141), confirmed by Lindroth (1966: 591).

Agonum suffusum Casey, 1920: 104. Type locality: «Agassiz, British Columbia» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47453]. Synonymy established, under the name *A. subsericeum* (LeConte), by Hatch (1953: 141), confirmed by Lindroth (1966: 591).

Agonum suffusum latiusculum Casey, 1920: 104. Type locality: «California» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47454]. Synonymy established, under the name *A. subsericeum* (LeConte), by Lindroth (1966: 591).

Agonum suffusum uteanum Casey, 1920: 104. Type locality: «Ogden [Weber County], Utah» (original citation). Lectotype (♀), designated by Lindroth (1975: 127), in USNM [# 47455]. Synonymy established, under the name *A. subsericeum* (LeConte), by Lindroth (1966: 591).

Agonum sierranum Casey, 1920: 105. Type locality: «Truckee [Nevada County], California» (original citation). Lectotype (♀), designated by Liebherr (1991a: 118), in USNM [# 47458]. Synonymy established by Liebherr (1991a: 118).

Agonum sierranum sequoiarum Casey, 1920: 105. Type locality: «Redwood Creek, Humboldt Co[unty], California» (original citation). Holotype [by monotypy] (♀) in USNM [# 47459]. Synonymy established by Liebherr (1991a: 118).

Agonum sybariticum Casey, 1920: 107. Type locality: «California (southern)» (original citation), restricted to «Lake Henshaw, San Diego Co[unty]» by Liebherr (1991a: 118). Lectotype (♀), designated by Liebherr (1991a: 118), in USNM [# 47462]. Synonymy established by Liebherr (1991a: 118).

Distribution. The range of this species extends from southern Saskatchewan to Vancouver Island (Lindroth 1966: 592, as *A. subsericeum*), south to southern California (Casey 1920: 107, as *A. sybariticum*) and Tlaxcala in Mexico (Liebherr 1994: 34).

Records. CAN: AB, BC (VCI), SK **USA**: AZ, CA, CO, ID, KS, MT, NM, NV, OR, UT, WA, WY – Mexico

[**cyclifer group**]

***Agonum anthracinum* Dejean, 1831**

Agonum anthracinum Dejean, 1831: 739. Type locality: «Mexique» (original citation), herein restricted to Durango, Durango (see Liebherr 1994: 24). Holotype [by monotypy, designated lectotype by Liebherr (1994: 23)] (♂) in MHNP (Liebherr 1994: 23).

Distribution. This species ranges from southeastern Arizona to the Isthmus of Tehuantepec [see Liebherr 1994: Fig. 29].
Records. USA: AZ – Mexico

***Agonum cyclifer* (Bates, 1884)**

Anchomenus cyclifer Bates, 1884: 281. Type locality: «near the city, Mexico» (original citation). One syntype in MHNP (Liebherr 1994: 22). Note. This species-group name may be either a noun in apposition or an adjective in the masculine gender (ICZN 1999: Example for Article 31.2.2). It was treated as an adjective (e.g., *A. cycliferum*) by Csiki (1931: 847), Blackwelder (1944: 41) and Liebherr (1991a: 120) and as a noun in apposition (e.g., *A. cyclifer*) by Bousquet and Larochelle (1993: 256), Liebherr (1994: 13) and Lorenz (2005: 410). When the evidence of usage is not decisive as in this case, the name is to be treated as a noun in apposition (Article 31.2.2).

Platynus arizonensis G.H. Horn, 1892c: 42. Type locality: «Camp Grant [Pinal County], Arizona» (original citation). Lectotype (♂), designated by Liebherr (1991a: 120), in MCZ [# 34498]. Synonymy established by Liebherr (1991a: 120). Note. The type locality probably refers to the "old" Camp Grant located in eastern Pinal County near Winkelman, where Horn collected while serving as a surgeon with the California Volunteers, rather than the "new" Camp Grant located in Graham County. The "old" Camp Grant was in operation from 1859 to 1872 and the scene of the infamous Camp Grant Massacre of 1871.

Distribution. The range of this species extends from southeastern Arizona to the Rio Grande drainage in south-central Texas, north to southeastern Colorado (Michels et al. 2008; Las Animas County, Robert L. Davidson pers. comm. 2008), south to the Federal District of Mexico [see Liebherr 1994: Fig. 28].
Records. USA: AZ, CO, NM, TX – Mexico

[**errans group**]
***Agonum errans* (Say, 1823)**

Feronia errans Say, 1823b: 147. Type locality: «Buena Vista [Chaffee County], Col[orado]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 347), in MCZ [# 33016].

Agonum erythropum Kirby, 1837: 28 [secondary homonym of *Agonum erythropum* (Dejean, 1828)]. Type locality: «Canada» (original citation). One syntype in BMNH (Lindroth 1953b: 171). Synonymy established by LeConte (1879b: 56), confirmed by Lindroth (1953b: 171).

Platynus subcordatus LeConte, 1850: 205. Replacement name for *Platynus erythropus* (Kirby, 1837). Note. Although not explicitly indicated, I believe LeConte (1850: 205) proposed *P. subcordatus* as a replacement name for *P. erythropus* (Kirby) but that he forgot to add the parallels (‖) after Kirby's name as usual; he did so subsequently (LeConte 1854b: 52). Lindroth (1966: 616) made the same assumption.

Because LeConte's name was proposed as a replacement name, the specimen labeled as type [# 5760] of *P. subcordatus* in MCZ has no status (see ICZN 1999: Article 72.7).

Distribution. This species ranges from the Saguenay River in Quebec (Larochelle 1975: 35) to southeastern British Columbia (Lindroth 1966: 616), south to "Oregon" (Hatch 1953: 143), New Mexico (LeConte 1879b: 56; UASM), "Texas" (LeConte 1858a: 28, as *P. subcordatus*), and southeastern South Carolina (Ciegler 2000: 111).
Records. CAN: AB, BC, MB, ON, QC, SK **USA**: AL, AR, CO, GA, IA, ID, IN, KS, MA, MI, MN, MS, MT, NC, ND, NE, NH, NM, NY, OR, PA, SC, SD, TX, UT, VA, VT, WA, WI, WY

Agonum ferreum Haldeman, 1843

Agonum ferreum Haldeman, 1843b: 299. Type locality: southeastern Pennsylvania (Haldeman 1843a: 295). One possible syntype, a ♀ labeled "[pink disc] / P. ferreus (Hald.) Lec. A. ocreatum Hald. [handwritten]," in MCZ (collection LeConte).

Agonum ocreatum Haldeman, 1843b: 299. Type locality: «Alleghany M[oun]t[ain]s» (original citation). Syntype(s) presumably lost. Synonymy established by LeConte (1854b: 51).

Micragonum quadrulum Casey, 1920: 81. Type locality: «Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47506]. Synonymy established by Lindroth (1966: 624).

Micragonum solidulum Casey, 1920: 82. Type locality: «Highland Park [Lake County], northern Illinois» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47505]. Synonymy established by Lindroth (1966: 624).

Distribution. This species ranges from western New Hampshire (Grafton County, Ross T. Bell pers. comm. 2008) to eastern Oklahoma (Foster F. Purrington pers. comm. 2012), including southernmost Ontario (Lindroth 1966: 624), south to eastern Mississippi (Noxubee County, CMNH), southern Alabama (Löding 1945: 19), and central South Carolina (Ciegler 2000: 112). The record from northern Wisconsin along Lake Superior (Wickham 1896c: 134) is likely in error.
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, MA, MD, MI, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, VA, VT, WV

Agonum sulcipenne (Horn, 1881)

Platynus sulcipennis G.H. Horn [in LeConte and Horn], 1881: 75. Type locality: «Florida» (original citation). Syntype(s) in MCZ [# 34474].

Distribution. This species is known from a few localities along the Coastal Plain from southern Georgia (Fattig 1949: 33) and the Florida Panhandle (Peck and Thomas

1998: 23) west to northeastern Mississippi (Snodgrass and Cross 1983: 13), north along the Mississippi Basin to southern Illinois (Gallatin, Alexander, and Jackson Counties, CMNH, CNC). The record from "North Carolina" (Bousquet and Larochelle 1993: 260) needs confirmation.
Records. USA: AL, FL, GA, IL, MS, TN [NC]

[**excavatum group**]

***Agonum excavatum* Dejean, 1828**

Agonum excavatum Dejean, 1828: 169. Type locality: «Amérique septentrionale» (original citation), restricted to «Dorchester [Suffolk County], Mass[achusetts]» by Lindroth (1966: 623). One syntype in MHNP (Lindroth 1955b: 20).

Anchomenus ontarionis Casey, 1920: 54. Type locality: «Toronto, Ontario» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47428]. Synonymy established by Lindroth (1966: 623).

Anchomenus trinarius Casey, 1920: 54. Type locality: «probably Indiana» (original citation). Holotype [by monotypy] (♂) in USNM [# 47429]. Synonymy established by Lindroth (1966: 623).

Distribution. This species ranges from New Brunswick (Lindroth 1966: 623) to southern Wisconsin (Messer 2010: 42), south to eastern Oklahoma (Latimer County, UASM), west-central Arkansas (Logan County, CNC), northern Georgia (Fattig 1949: 34), and eastern South Carolina (Ciegler 2000: 111). The records from "Minnesota" and "Louisiana" (Bousquet and Larochelle 1993: 256) need confirmation.
Records. USA: NB, ON, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KY, MA, MD, ME, MI, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, VA, VT, WI, WV [LA, MN]

[**extensicolle group**]

***Agonum cyanopis* (Bates, 1882)**

Anchomenus cyanopis Bates, 1882a: 94. Type locality: «Guanajuato, Mexico» (original citation for the lectotype). Lectotype (♂), designated by Liebherr (1982: 153), in BMNH. Note. The specific name probably derives from the Latin adjective *cyaneus*, *-a*, *-um* (dark blue) and the Latin noun *ops*, *-opis* (riches, wealth) and refers to the dark blue coloration of the adult. The ending of the name remains unchanged whether the name is combined with a masculine generic name such as *Anchomenus* or a neutral generic name such as *Agonum*. The spelling *Agonum cyanope*, used by modern authors since the 1980s, is incorrect.

Distribution. This species is found from eastern Arizona and western New Mexico south through the Sierra Madre Occidental to the Mexican states of Guerrero, Puebla, and Vera Cruz [see Liebherr 1986: Fig. 37].
Records. USA: AZ, NM – Mexico

***Agonum decorum* (Say, 1823)**

Feronia decora Say, 1823a: 53. Type locality: «Arlington [Middlesex County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33017].

Anchomenus thoracicus Dejean, 1828: 114. Type locality: «Amérique septentrionale» (original citation), restricted to «Utah» by Lindroth (1966: 629). Holotype [by monotypy] in MHNP (Lindroth 1955b: 19). Synonymy established by LeConte (1846b: 223), confirmed by Liebherr (1986: 124).

Anchomenus californicus Dejean, 1828: 127. Type locality: «Californie» (original citation). One syntype in MHNP (Lindroth 1955b: 20). Synonymy established by Liebherr (1986: 124).

Anchomenus obscurus LeConte, 1846b: 223. Type locality: «Lacum Onondaga [Onondaga County, New York]» (original citation). Six syntypes in MCZ [# 5749]. Synonymy established by LeConte (1854b: 46), confirmed by Lindroth (1966: 629).

Platynus simplex LeConte, 1854b: 46. Type locality: «Colorado River, California» (original citation). Four syntypes in MCZ [# 5748]. Synonymy established by Liebherr (1986: 124).

Anchomenus charmis Bates, 1884: 280. Type locality: «near the city, Mexico» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Liebherr (1986: 124).

Platynus testaceonotus Hausen, 1891b: 162. Type locality: «S[ain]te-Rose [= Laval], P[rovince of] Q[uebec]» (original citation). Holotype [by monotypy] presumably lost. Synonymy established by Lindroth (1966: 629).

Anchomenus solutus Casey, 1920: 60. Type locality: «Reno [Washoe County], Nevada» (original citation). Holotype [by monotypy] (♀) in USNM [# 47437]. Synonymy established by Liebherr (1986: 125).

Anchomenus impictus Casey, 1920: 60. Type locality: «San Joaquin Co[unty], California» (original citation). Lectotype (♂), designated by Liebherr (1991a: 117), in USNM [# 47438]. Synonymy established by Liebherr (1986: 125).

Anchomenus irruptus Casey, 1920: 60. Type locality: «Priest River [Bonner County], Idaho» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47439]. Synonymy established, under the name *A. californicum* (Dejean), by Hatch (1953: 137), confirmed by Lindroth (1966: 628).

Anchomenus vinnulus Casey, 1920: 61. Type locality: «Battle M[oun]t[ain]s, Nevada» (original citation). Lectotype (♂), designated by Liebherr (1991a: 118), in USNM [# 47440]. Synonymy established by Liebherr (1986: 125).

Anchomenus luxatus Casey, 1920: 67. Type locality: «Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47449]. Synonymy established, under the name *A. thoracicum* (Dejean), by Lindroth (1955b: 19).

Anchomenus decorus arenarius Casey, 1920: 68. Type locality: «Galveston [Galveston County], Texas» (original citation). Holotype [by monotypy] (♂) in USNM [# 47450]. Synonymy established by Lindroth (1966: 629).

Anchomenus tepidus Casey, 1920: 68. Type locality: «Tuçson [Pima County], Arizona» (original citation). Holotype [by monotypy] (♀) in USNM [# 47451]. Synonymy established by Lindroth (1966: 629).

Anchomenus uteanus Casey, 1924: 81. Type locality: «Callao [Juab County], Utah» (original citation). Lectotype (♂), designated by Liebherr (1991a: 118), in USNM [# 47433]. Synonymy established by Liebherr (1986: 125).

Agonum extensicolle cubanum Darlington, 1934: 97. Type locality: «Soledad (near Cienfuegos), Cuba» (original citation). Holotype (♂) in MCZ [#19517]. Synonymy established by Liebherr (1986: 125).

Distribution. This widely distributed species ranges from southern Quebec to Vancouver Island, south to Baja California Norte, the Isthmus of Tehuantepec, and central Florida; also present on several islands of the West Indies [see Liebherr 1986: Figs 51-54].

Records. CAN: BC (VCI), MB, ON, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WY – Cayman Islands, Cuba, Hispaniola, Jamaica, Mexico

Agonum elongatulum (Dejean, 1828)

Anchomenus elongatulus Dejean, 1828: 112. Type locality: «Amérique septentrionale» (original citation), restricted to «Winter Park [Orange County], Flor[ida]» by Lindroth (1966: 627). Two syntypes in MHNP (Lindroth 1955b: 19).

Platynus floridanus LeConte, 1878b: 374. Type locality: «[Fort] Capron and Lake Harney [Florida]» (original citation). Six syntypes in MCZ [# 5750]. Synonymy established by Lindroth (1955b: 19), confirmed by Liebherr (1986: 137).

Anchomenus gravidulus Casey, 1920: 59. Type locality: «Indian River Haulover, Florida» (original citation). Lectotype (♀), designated by Liebherr (1991a: 117), in USNM [# 47435]. Synonymy established by Liebherr (1986: 137).

Anchomenus collisus Casey, 1920: 59. Type locality: «Marion Co[unty], Florida» (original citation). Lectotype (♂), designated by Liebherr (1991a: 116), in USNM [# 47434]. Synonymy established by Liebherr (1986: 137).

Distribution. This species is found only in southern Georgia, throughout Florida including the Keys, and on Bimini [see Liebherr 1986: Fig. 58].

Records. USA: FL, GA – Bahamas

Note. Liebherr (1986: 140) reported the presence of a series of putative hybrids *elongatulum* x *decorum* from Okracoke Island, North Carolina.

Agonum extensicolle (Say, 1823)

Feronia extensicollis Say, 1823a: 54. Type locality: «Rumney [Grafton County], N[ew] H[ampshire]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 346), in MCZ [# 33018].

Anchomenus obscuratus Chaudoir, 1843b: 763. Type locality: «Etats unis de l'Amérique septentrionale» (original citation). Syntype(s) in MHNP. Synonymy established by LeConte (1859c: 32).

Anchomenus le contei LeConte, 1844: 53. Type locality: North America (inferred from title of the paper). Syntype(s) in MCZ. Synonymy established by Melsheimer (1853: 16). Note. LeConte (1844: 53) did not specify the origin of his specimen(s) but most of the other species described in the same paper came from Georgia. There is one specimen in LeConte's collection with an orange disc, labeled "extensicollis 2," that could be a syntype.

Anchomenus viridis LeConte, 1846b: 222. Type locality: «Indiana ad flumen Ohio» (original citation). One syntype in MCZ [# 5747]. Synonymy established by LeConte (1859c: 32), confirmed by Lindroth (1966: 625).

Anchomenus cyanescens Motschulsky, 1859a: 159. Type locality: California (inferred from title of the paper). One syntype in ZMMU (Keleinikova 1976: 194). Synonymy established by LeConte (1879b: 55). Note. This name was listed as "*Anchomenus cyaneus*" by Motschulsky (1869: 21).

Anchomenus gaudens Casey, 1920: 55. Type locality: «Lake Champlain, New York» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47430]. Synonymy established by Lindroth (1966: 625).

Anchomenus gaudens clientulus Casey, 1920: 55. Type locality: «Rutherford [Bergen County], New Jersey» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47431]. Synonymy established by Lindroth (1966: 625).

Anchomenus vigilans Casey, 1920: 56. Type locality: «Asheville [Buncombe County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47432]. Synonymy established by Lindroth (1966: 625).

Distribution. This species ranges from Cape Breton Island (Bousquet 1987d: 106) to northwestern Montana, including southern Manitoba and southern Saskatchewan (Ronald R. Hooper pers. comm. 2007), south to south-central Arizona, Jalisco in Mexico, and northern Florida [see Liebherr 1986: Fig. 46].

Records. CAN: MB, NB, NS (CBI), ON, QC, SK **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, UT, VA, VT, WI, WV, WY – Mexico

Agonum extimum Liebherr, 1986

Agonum extimum Liebherr, 1986: 100. Type locality: «31.2 km E[ast] San Pedro (900 m), Coahuila, Mexico» (original citation). Holotype (♀) in CAS [# 15040].

Distribution. This species ranges from southern Arizona to southeastern Texas, south to southern Coahuila in Mexico [see Liebherr 1986: Fig. 41].

Records. USA: AZ, NM, TX – Mexico

***Agonum parextimum* Liebherr, 1986**

Agonum parextimum Liebherr, 1986: 103. Type locality: «Los Mochis, Sinaloa, Mexico» (original citation). Holotype (♀) in CAS [# 15041].

Distribution. This species ranges from south-central Arizona south to the Mexican states of Sonora and southern Sinaloa along the Gulf of California Coast [see Liebherr 1986: Fig. 41].
Records. USA: AZ – Mexico

***Agonum texanum* (LeConte, 1878)**

Platynus texanus LeConte, 1878b: 374. Type locality: «Texas» (original citation), restricted to «Clifton, Bosque Co[unty]» by Lindroth (1966: 629). Six syntypes in MCZ [# 5751].

Anchomenus megillus Bates, 1891a: 252. Type locality: «Villa Lerdo, in Durango» (original citation). Lectotype (♂), designated by Liebherr (1982: 153), in BMNH. Synonymy established by Liebherr (1986: 107).

Distribution. This taxon ranges from central Kansas south to Chiapas in Mexico, west to central Arizona [see Liebherr 1986: Fig. 43].
Records. USA: AZ, KS, NM, OK, TX – Mexico

[**melanarium group**]

***Agonum affine* Kirby, 1837**

Agonum affine Kirby, 1837: 27 [primary homonym of *Agonum affine* Stephens, 1828]. Type locality: northern parts of British America (inferred from title of the book), restricted to «Edmonton, Al[ber]ta» by Lindroth (1966: 603). Holotype [by monotypy] (♂) in BMNH (Lindroth 1953b: 171). Note. *Agonum affine* Kirby, 1837 is a primary homonym of *Agonum affine* Stephens, 1828 (a junior synonym of *A. thoreyi thoreyi* Dejean, 1828). Although *Agonum affine* Stephens has not been used as a valid name after 1899, I am unable to meet the condition of Article 23.9.1.2 of the ICZN (1999) in order to qualify *Agonum affine* Stephens of *nomen oblitum* and *Agonum affine* Kirby of *nomen protectum*. Nevertheless, I believe that the name *A. affine* Kirby should be maintained for this species until the case is submitted to the International Commission on Zoological Nomenclature.

Platynus carbo LeConte, 1850: 205. Type locality: Lake Superior (inferred from title of the paper), cited from the «northern shore of Lake Superior» by LeConte (1854b: 49). Holotype [by monotypy] (♀) in MCZ [# 5767]. Synonymy established by Lindroth (1953b: 171).

Agonothorax planipennis Motschulsky, 1850a: 68 [*nomen dubium*]. Type locality: «Sitka [Alaska]» (original citation). Syntype(s) location unknown (possibly in ZMMU though not listed in Keleinikova 1976). Synonymy established with doubt by Bousquet and Larochelle (1993: 11). Note. This name was listed as "*Agonothorax flavipennis*" by Motschulsky (1869: 21). Horn (in Wickham 1902: 239) stated that

this name "is probably a variety of *P[latynus] fossiger* Dej." If this is correct, then the type locality reported by Motschulsky is in error.

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 123, as *A. carbo*) to central Alaska (Lindroth 1966: 605), south to southern Oregon (Westcott et al. 2006: 6), the Sangre de Cristo Mountains in New Mexico (Fall and Cockerell 1907: 159), northern Indiana (Blatchley 1910: 130; Wolcott and Montgomery 1933: 127), southwestern Pennsylvania (Westmoreland County, William L. Krinsky pers. comm. 2012) and the District of Columbia (Ulke 1902: 7, as *Platynus carbo*).
Records. FRA: PM **CAN**: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CO, CT, DC, IA, ID, IL, IN, MA, ME, MI, MN, MT, NH, NJ, NM, NY, OH, OR, PA, RI, VT, WA, WI, WY

Agonum brevicolle Dejean, 1828

Agonum brevicolle Dejean, 1828: 159. Type locality: «Californie» (original citation), herein restricted to San Francisco, San Francisco County (see LeConte 1854b: 49, as *P. frater*). Holotype [by monotypy] in MHNP (Lindroth 1955b: 20).

Platynus frater LeConte, 1854b: 49. Type locality: «San Francisco and San Diego, California» (original citation), restricted to «San Francisco [San Francisco County]» by Lindroth (1966: 608). Three syntypes in MCZ [# 5769]. Synonymy established by LeConte (1869b: 248), confirmed by Lindroth (1966: 608).

Distribution. This western species ranges from western British Columbia (Lindroth 1966: 609), as far north as the Skeena river area and Queen Charlotte Islands (Kavanaugh 1992: 75), south to southern California (Fall 1901a: 46, as *Platynus frater*), including eastern Nevada (Liebherr 1986: 130).
Records. CAN: BC (QCI, VCI) **USA**: CA, NV, OR, WA

Agonum collare (Say, 1830)

Anchomenus collaris Say, 1830b: (4) [3]. Type locality: «Woodbury [Gloucester County], N[ew] J[ersey]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 347), in MCZ [# 33015]. Note. «Indiana» was the area originally cited by Say (1830b: (4)[3]).

Distribution. This species ranges from Rhode Island (Sikes 2003: 8; CMNH) to northeastern Illinois (Cook County, CMNH), south to eastern Texas along the Gulf Coast (Snow 1906a: 141) and central Florida (Brevard and Highlands Counties, CNC). The records from "Wisconsin" and "Pennsylvania" (Bousquet and Larochelle 1993: 258) need confirmation.
Records. USA: AL, CT, FL, GA, IL, IN, KY, LA, MD, MI, MS, NC, NJ, NY, OH, PA, RI, SC, VA, TX [PA, WI]

Agonum corvus (LeConte, 1860)

Platynus corvus LeConte, 1860: 319. Type locality: «Black Hills [South Dakota]; Saskatchewan» (original citation), restricted to «Black Hills» by Lindroth (1966: 603). One syntype in MCZ [# 5768].

Agonum hyslopi Casey, 1920: 113. Type locality: «Wilbur [Lincoln County], Washington» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47477]. Synonymy established by Lindroth (1966: 603). Etymology. The specific name was proposed for James Augustus Hyslop [1884-1953], entomologist for the Bureau of Entomology in Washington DC. Hyslop worked mainly on elaterids.

Agonum debiliceps Casey, 1920: 118. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). Holotype [by monotypy] (♀) in USNM [# 47481]. Synonymy established by Lindroth (1966: 603).

Distribution. This species ranges from the Saint Lawrence Valley in southern Quebec (Larochelle 1975: 33) to the Fraser Valley in British Columbia (Lindroth 1966: 603), south to northern California (Siskiyou County, CNC), east-central California (Mono County, Foster F. Purrington pers. comm. 2012), northern Arizona (Coconino and Apache Counties, CNC), southern Colorado (Alamosa County, CNC), and southern Nebraska (Chase County, Foster F. Purrington pers. comm. 2010). The record from "Michigan" (Bousquet and Larochelle 1993: 256) needs confirmation.
Records. CAN: AB, BC, MB, ON, QC, SK **USA**: AZ, CA, CO, ID, MN, MT, ND, NE, OR, SD, UT, VT, WA, WV, WY [MI]

Agonum deceptivum (LeConte, 1879)

Platynus deceptivus LeConte, 1879b: 53. Type locality: «Nova Scotia and Lake Superior» (original citation), restricted to «Nova Scotia» by Lindroth (1966: 611). Syntype(s) in MCZ [# 5771].

Distribution. This rarely collected species is found along the provinces and states bordering the Atlantic Coast from Cape Breton Island (Lindroth 1966: 611) to Connecticut (New London County, William L. Krinsky pers. comm. 2008).
Records. CAN: NS (CBI) **USA**: CT, MA, ME, NH

Agonum fidele Casey, 1920

Platynus laevis LeConte, 1854b: 48 [secondary homonym of *Agonum laeve* (Gyllenhal, 1827)]. Type locality: «middle and western states» (original citation). Syntype(s) in MCZ [# 5763].

Platynus molestus LeConte, 1863b: 7 [secondary homonym of *Agonum molestum* Motschulsky, 1844]. Replacement name for *Platynus laevis* LeConte, 1854.

Agonum fidele Casey, 1920: 116. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype (♂), designated by Lindroth (1975:

128), in USNM [# 47480]. Synonymy established by Hatch (1953: 142), confirmed by Lindroth (1954b: 139).

Agonum subinflatum Casey, 1920: 117. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47478]. Synonymy established by Lindroth (1954b: 140).

Distribution. This species ranges from Cape Breton Island (Lindroth 1954c: 306) to western Wisconsin (Kleintjes et al. 2003: 81; Messer 2010: 42), south to northeastern Mississippi (Snodgrass and Cross 1983: 13) and west-central South Carolina (Ciegler 2000: 112). The record from "Prince Edward Island" (Bousquet and Larochelle 1993: 256) is based on misidentified small specimens of *A. melanarium* Dejean (CNC).
Records. CAN: NB, NS (CBI), ON, QC **USA**: CT, DC, IA, IL, KY, MA, MD, ME, MI, MS, NC, NH, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI, WV

Agonum harrisii LeConte, 1846

Agonum harrisii LeConte, 1846b: 225. Type locality: «Massachusetts» (original citation). One syntype in MCZ [# 5766]. Etymology. The specific name honors Thaddeus William Harris [1795-1856], American entomologist and botanist. Harris first made his living as a physician but soon became librarian at Harvard University. He also taught natural history at Harvard but never achieved full-time professorship. Harris is best known for his work on economic entomology and is often viewed as the founder of applied entomology in the United States.

Agonum mordax Casey, 1920: 113. Type locality: «Beaver Dam [Dodge County], Wisconsin» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47474]. Synonymy established by Lindroth (1966: 609).

Agonum aethiops Casey, 1920: 116. Type locality: «probably British America» (original citation). Holotype [by monotypy] (♀) in USNM [# 47475]. Synonymy established by Lindroth (1966: 609).

Distribution. This species ranges from Cape Breton Island (Lindroth 1954c: 306) to Vancouver Island (Lindroth 1966: 609), south to "Oregon" (CAS), north-central Idaho (Idaho County, CNC), southeastern Wyoming (Lavigne 1977: 43), southern Minnesota (Hennepin County, CNC), northeastern Illinois (Purrington et al. 2002: 200), and southeastern Virginia (Surry County, CMNH). The record from "Nebraska" (Bousquet and Larochelle 1993: 257) is probably in error.
Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), ON, PE, QC, SK **USA**: CT, ID, IL, IN, MA, ME, MI, MN, MT, NH, NJ, NY, OH, OR, PA, RI, VA, VT, WA, WI, WV, WY

Agonum imitans (Notman, 1919)

Platynus imitans Notman, 1919b: 232. Type locality: «North America» (original citation). Holotype [by monotypy] (♂) in USNM [# 104255].

Distribution. This species is known only from the holotype which has no locality or state label (see Liebherr 1991a: 121-122).
Records. None.

Agonum melanarium Dejean, 1828

Feronia scutellaris Say, 1823b: 146 [*nomen dubium*]. Type locality not stated. Syntype(s) lost. Note. LeConte (1879b: 56) remarked that this species was based on "a distorted specimen [of *A. melanarium*], the name is therefore rejected."

Agonum melanarium Dejean, 1828: 152. Type locality: «Amérique septentrionale» (original citation), restricted to «Arlington [Middlesex County], Mass[achusetts]» by Lindroth (1966: 599). One syntype in MHNP (Lindroth 1955b: 20). Synonymy established by LeConte (1879b: 56).

Agonum maurum Haldeman, 1843b: 300. Type locality: southeastern Pennsylvania (Haldeman 1843a: 297). One possible syntype, a ♂ labeled "[pink disc] / P. melanarius (Dej.) Lec. A. maurum Hald. Fer. scutellaris Say [handwritten]," in MCZ (collection LeConte). Synonymy established by LeConte (1846b: 225).

Agonum nitidum T.W. Harris [in Scudder], 1869: 230 [*nomen dubium*]. Type locality not stated. Syntype(s) lost. Synonymy established with doubt by Bousquet and Larochelle (1993: 12).

Agonum politulum T.W. Harris [in Scudder], 1869: 230. Type locality not stated. Syntype(s) lost. Synonymy established by LeConte (in Scudder 1869: 230).

Agonum militare Casey, 1920: 114. Type locality: «West Point [Orange County], New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 128), in USNM [# 47473]. Synonymy established by Lindroth (1966: 600).

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1954c: 306) to southwestern British Columbia (Lindroth 1966: 600), south to northwestern California (Trinity County, CNC), northern Colorado (Haubold 1951: 705; Armin 1963: 150), west-central Kansas (Trego County, CNC), and North Carolina (Haywood County, CNC).
Records. CAN: AB, BC, MB, NB, NS (CBI), ON, PE, QC, SK **USA**: CA, CO, CT, DC, DE, IA, ID, IL, IN, KS, MA, MD, ME, MI, MN, MT, NC, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SD, UT, VA, VT, WA, WI, WV, WY

Agonum metallescens (LeConte, 1854)

Platynus metallescens LeConte, 1854b: 48. Type locality: «Sault S[ain]te Marie, and northern shore of Lake Superior» (original citation), restricted to «Sault S[ain]te Marie, Ont[ario]» by Lindroth (1966: 605). Syntype(s) in MCZ [# 5770].

Agonum lacustre Casey, 1920: 114. Unnecessary replacement name for *Agonum metallescens* (LeConte, 1854).

Agonum terracense Casey, 1924: 85. Type locality: «Terrace, British Columbia» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47476]. Synonymy established by Lindroth (1954b: 139).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 122) to the Queen Charlotte Islands (Kavanaugh 1992: 74), north to southern Northwest Territories (Bousquet 1987a: 125), south to northern Idaho (Peter W. Messer pers. comm. 2008), northwestern Montana (Glacier County, CNC), northern Wisconsin (Wickham 1896c: 133; Casey 1920: 114, as *A. lacustre*), the upper peninsula of Michigan along Lake Superior (Casey 1920: 114, as *A. lacustre*), and New Jersey (Smith 1890: 85; Smith 1910: 208).
Records. FRA: PM **CAN**: AB, BC (QCI, VCI), MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: ID, MA, ME, MI, MN, MT, ND, NH, NJ, NY, VT, WI

Agonum moerens Dejean, 1828

Agonum moerens Dejean, 1828: 152. Type locality: «Amérique septentrionale» (original citation), restricted to «Elkhart [Elkhart County], Indiana» by Lindroth (1966: 610). One syntype in MHNP (Lindroth 1955b: 20).

Distribution. This species is known from western Maine (Franklin, Kennebec, and York Counties, Ross T. Bell pers. comm. 2008), southwestern Quebec, the Ontario Peninsula, and southern Manitoba (Lindroth 1966: 611) south to southern Louisiana (Assumption and East Baton Rouge Parishes, LSAM) and northern Florida (Alachua County, CNC).
Records. CAN: MB, ON, QC **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, LA, MA, MD, ME, MI, MN, MS, NC, NJ, NY, OH, PA, RI, SC, TN, VA, VT, WI

Agonum mutatum (Gemminger and Harold, 1868)

Platynus atratus LeConte, 1850: 205 [secondary homonym of *Platynus atratus* (Duftschmid, 1812)]. Type locality: Lake Superior (inferred from title of the paper), cited from the «northern shore of Lake Superior» by LeConte (1854b: 49), herein restricted to Marquette, Marquette County, Michigan (see Hubbard and Schwarz 1878: 628, as *Platynus mutatus*). Two syntypes in MCZ [# 5762].

Platynus mutatus Gemminger and Harold, 1868a: 374. Replacement name for *Platynus atratus* LeConte, 1850.

Distribution. This species is found from Newfoundland (Lindroth 1955a: 124) to British Columbia, north to east-central Alaska (Lindroth 1966: 601), south to west-central Washington (Lindroth 1966: 601), northwestern Montana (Russell 1968: 64), central Indiana (Downie 1957: 116; Schrock 1985: 343), and eastern South Carolina (Kirk 1969: 11; Ciegler 2000: 112).
Records. CAN: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AK, CT, DE, IA, IN, MA, ME, MI, MN, MT, NC, NH, NJ, NY, OH, PA, RI, SC, VT, WA, WI, WV

Agonum propinquum (Gemminger and Harold, 1868)

Agonum piceum LeConte, 1846b: 226 [secondary homonym of *Agonum piceum* (Linnaeus, 1758)]. Type locality: «Massachusetts» (original citation). Syntype(s) in MCZ [# 5764]. Note. The specimen in MCZ labeled as "Type" is also labeled "Can" and is not a syntype.

Platynus propinquus Gemminger and Harold, 1868a: 375. Replacement name for *Platynus piceus* (LeConte, 1846).

Platynus fraterculus LeConte, 1869c: 373. Type locality: Vancouver Island, British Columbia (inferred from title of the paper). Holotype [by monotypy] (♀) in MCZ [# 5765]. Synonymy established by Lindroth (1966: 611).

Anchomenus xanthocnemis Bates, 1884: 281. Type locality: «Mexico» (original citation). Holotype [by monotypy] (♀) in BMNH. Synonymy established by Liebherr (1991a: 119).

Agonum humile Casey, 1920: 117. Type locality: «Kalispell [Flathead County], Montana» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47482]. Synonymy established by Lindroth (1954b: 140).

Agonum insuetum Casey, 1920: 118. Type locality: «Wilbur [Lincoln County], Washington» (original citation). Lectotype (♀), designated by Lindroth (1975: 128), in USNM [# 47483]. Synonymy established by Hatch (1953: 142), confirmed by Lindroth (1954b: 140).

Agonum amens Casey, 1924: 83. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47486]. Synonymy established by Lindroth (1954b: 140).

Distribution. This widely distributed species extends from Newfoundland (Lindroth 1955a: 124) to Alaska (Lindroth 1966: 612), south to the Sierra Nevada in northeastern California (Liebherr 1991a: 119), southwestern Colorado (Wickham 1902: 239; Ouray County, CNC), northwestern Nebraska (Sheridan County, CNC), northwestern Pennsylvania (Erie County, CMNH), and "Maryland" (Liebherr 1994: 30). One specimen is also known from the city of Mexico (Liebherr 1994: 30) but in my opinion it is likely mislabeled.

Records. CAN: AB, BC (VCI), MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CA, CO, CT, ID, IN, MA, MD, ME, MI, MN, MT, ND, NE, NH, NJ, NY, OR, PA, SD, VT, WA, WI, WY

Agonum tenue (LeConte, 1854)

Platynus tenuis LeConte, 1854b: 48. Type locality: «middle and eastern states» (original citation), restricted to «Cambridge [Middlesex County], Mass[achusetts]» by Lindroth (1966: 610). Three syntypes in MCZ [# 5761].

Distribution. This species ranges from Cape Breton Island (Lindroth 1954c: 306) to northeastern Minnesota (Kamal J.K. Gandhi pers. comm. 2008), south to southern Georgia (Fattig 1949: 34). The record from "Nebraska" (Bousquet and Larochelle 1993: 258) needs confirmation.

Records. CAN: NB, NS (CBI), ON, PE, QC **USA**: CT, DC, DE, GA, IA, IL, IN, MA, MD, ME, MI, MN, NC, NH, NJ, NY, OH, PA, RI, SC, VA, VT, WI, WV [NE]

Agonum trigeminum Lindroth, 1954

Agonum trigeminum Lindroth, 1954b: 156. Type locality: «Sackville [near] Halifax, Nova Scotia» (original citation). Holotype (♂) in CNC [# 6573].

Distribution. This species is known from Cape Breton Island (CNC) to southern Manitoba (Lindroth 1966: 601), south to southwestern North Carolina (Macon County, CNC).
Records. CAN: MB, NB, NS (CBI), ON, PE, QC **USA**: CT, MA, MD, ME, MI, MN, NC, NH, NJ, NY, OH, PA, RI, VT, WI, WV

[**nutans group**]

Agonum aeruginosum Dejean, 1828

Agonum aeruginosum Dejean, 1828: 168. Type locality: «Amérique septentrionale» (original citation), restricted to «Rivervale [Bergen County], N[ew] J[ersey]» by Lindroth (1966: 623). One syntype in MHNP (Lindroth 1955b: 21).

Circinalia undulata Casey, 1920: 79. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47516]. Synonymy established by Lindroth (1966: 623).

Distribution. This species ranges from Nova Scotia (Lindroth 1954c: 306) to southeastern South Dakota (Kirk and Balsbaugh 1975: 25), south at least to northeastern Kansas (Popenoe 1877: 23), central Louisiana (East Feliciana Parish, CMNH, CNC), and the Florida Panhandle (Peck and Thomas 1998: 22).
Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, PA, RI, SC, SD, TN, VA, VT, WI, WV

Agonum basale LeConte, 1846

Agonum basale LeConte, 1846b: 227. Type locality: «ad Rocky Mountains» (original citation); cited from «Nebraska [Territory], near the mountains [probably in present day Colorado]» by LeConte (1854b: 52). One syntype in MCZ [# 5772]. Note. Prior to 1854, Nebraska included the area between the Missouri river and the Rockies from 40°N to the Canadian border.

Platynus vagans LeConte, 1854b: 52. Type locality: «New York» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5773]. Synonymy established by LeConte (1879b: 56), confirmed by Lindroth (1966: 620).

Micragonum concretum Casey, 1920: 83. Type locality: «Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47503]. Synonymy established by Lindroth (1966: 620).

Micragonum concretum amicum Casey, 1920: 83. Type locality: «northern Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47504]. Synonymy established by Lindroth (1966: 620).

Distribution. This species ranges from "New York" (LeConte 1854b: 52, as *P. vagans*) and New Jersey (Smith 1890: 85; Smith 1910: 208) to northeastern Colorado (LeConte 1854b: 52), south to northwestern South Carolina (Kirk 1970: 12; Ciegler 2000: 110). The record from "Florida" (Leng and Beutenmüller 1893: 140) is probably in error; that from "Wisconsin" (Bousquet and Larochelle 1993: 258) needs confirmation.

Records. USA: CO, IA, IL, IN, KS, NE, NJ, NY, PA, SC [WI]

Agonum crenulatum (LeConte, 1854)

Platynus crenulatus LeConte, 1854b: 53. Type locality: «Georgia; Louisiana» (original citation). Syntype(s) in MCZ [# 5775].

Micragonum maritimum Casey, 1920: 85. Type locality: «Galveston [Galveston County], Texas» (original citation). Lectotype (♀), designated by Liebherr (1991a: 117), in USNM [# 47496]. Synonymy established by Liebherr (1991a: 117).

Micragonum semiviride Casey, 1920: 85. Type locality: «Fruitdale [Washington County], Alabama» (original citation). Lectotype (♀), designated by Lindroth (1975: 128), in USNM [# 47498]. Synonymy established by Lindroth (1966: 619).

Micragonum ovalipenne Casey, 1920: 86. Type locality: «Southern Pines [Moore County], North Carolina» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47499]. Synonymy established by Lindroth (1966: 619).

Micragonum pinorum Casey, 1920: 86. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47500]. Synonymy established by Lindroth (1975: 129).

Micragonum houstoni Casey, 1920: 87. Type locality: «Galveston [Galveston County], Texas» (original citation). Holotype [by monotypy] (♂) in USNM [# 47497]. Synonymy established by Lindroth (1966: 619).

Distribution. This species ranges from central North Carolina (Casey 1920: 86, as *Micragonum ovalipenne* and *M. pinorum*) and South Carolina (Ciegler 2000: 111) west to southeastern Texas (Casey 1920: 85, 87, as *M. maritimum* and *M. houstoni*). The records from Missouri (Summers 1873: 134) and "Florida" (Bousquet and Larochelle 1993: 258) need confirmation.

Records. USA: AL, GA, LA, MS, NC, SC, TN, TX [FL, MO]

Agonum nutans (Say, 1823)

Feronia nutans Say, 1823a: 52. Type locality: «Phila[delphia] Neck, P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 347), in MCZ [# 33013].

Agonum femoratum Dejean, 1828: 145. Type locality: «Amérique septentrionale» (original citation). Two syntypes in MHNP (Lindroth 1955b: 20). Synonymy established by LeConte (1846b: 227), confirmed by Lindroth (1955b: 20).

Distribution. This eastern species is found from southern Quebec (Larochelle 1975: 38) to eastern South Dakota (Kirk and Balsbaugh 1975: 24), south to Oklahoma (French et al. 2001: 228; Latimer County, UASM) and the District of Columbia (Ulke 1902: 7). The records from central Arizona (Griffith 1900: 565), northern Colorado (Wickham 1902: 239; Armin 1963: 149), southeastern Texas (Snow 1906a: 141), "Mississippi," "Alabama" (Bousquet and Larochelle 1993: 259), and "Florida" (LeConte 1879b: 56) are probably in error; those from "Maryland," "Delaware" (Bousquet and Larochelle 1993: 259), and South Carolina (Kirk 1970: 12, as *Agonum* possibly *nutans*) need confirmation.
Records. CAN: ON, QC **USA**: AR, CT, DC, IA, IL, IN, KS, MA, ME, MI, MN, MO, NE, NH, NJ, NY, OH, OK, PA, RI, SD, VT, WI [DE, MD, SC]

Agonum striatopunctatum Dejean, 1828

Agonum striatopunctatum Dejean, 1828: 167. Type locality: «Amérique septentrionale» (original citation), restricted to «Mobile [Mobile County], Alab[ama]» by Lindroth (1966: 618). One syntype in MHNP (Lindroth 1955b: 20).

Agonum decipiens LeConte, 1846b: 229. Type locality: «Georgia» (original citation). Syntype(s) in MCZ [# 5774]. Synonymy established by LeConte (1854b: 53), confirmed by Lindroth (1966: 618).

Micragonum breviceps Casey, 1920: 87. Type locality: «Vicksburg [Warren County], Mississippi» (original citation). Lectotype (♂), designated by Lindroth (1975: 128), in USNM [# 47502]. Synonymy established by Lindroth (1966: 618).

Micragonum luculentum Casey, 1920: 88. Type locality: «Indiana» (original citation). Lectotype (♀), designated by Lindroth (1975: 128), in USNM [# 47501]. Synonymy established by Lindroth (1966: 618).

Distribution. This species ranges from New Jersey (Essex County, CMNH) to east-central Iowa (Muscatine County, Doug A. Veal pers. comm. 2010), including southernmost Ontario (Lindroth 1966: 619), south to southeastern Texas (Casey 1920: 88) and northern Florida (Peck and Thomas 1998: 23). The record from "Wisconsin" (Bousquet and Larochelle 1993: 259) needs confirmation.
Records. CAN: ON **USA**: AL, AR, DC, FL, GA, IA, IL, IN, KS, KY, LA, MD, MI, MO, MS, NC, NJ, OH, OK, PA, SC, TN, TX, VA [WI]

[**octopunctatum group**]
***Agonum octopunctatum* (Fabricius, 1798)**

Carabus 8punctatus Fabricius, 1798: 55. Type locality: «America boreali» (original citation), restricted to «Milton [Strafford County], N[ew] H[ampshire]» by Lindroth (1966: 593). Lectotype (♂), designated by Lindroth (1966: 593), in ZMUC.

Distribution. This species ranges from Nova Scotia (Lindroth 1966: 594) to southeastern Manitoba (UASM), south to eastern Texas (Orange and Sabine Counties, CNC; Dajoz 2007: 23) and central Florida (Peck and Thomas 1998: 23).
Records. CAN: MB, NB, NS, ON, PE, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WI, WV

[**pallipes group**]
***Agonum crenistriatum* (LeConte, 1863)**

Platynus crenistriatus LeConte, 1863c: 9. Type locality: «Illinois» (original citation). One syntype in MCZ [# 5781].
Circinalia politissima Casey, 1920: 76. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47513]. Synonymy established by Lindroth (1966: 621).
Circinalia politissima statenensis Casey, 1920: 77. Type locality: «Staten Island, New York» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47514]. Synonymy established by Lindroth (1966: 621).
Circinalia liticola Casey, 1920: 77. Type locality: «Iowa City [Johnson County], Iowa» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47512]. Synonymy established by Lindroth (1966: 621).
Circinalia roticollis Casey, 1920: 78. Type locality: «New Jersey» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47515]. Synonymy established by Lindroth (1966: 621).

Distribution. The range of this species extends from Cape Breton Island (Bousquet 1987a: 125) to southeastern South Dakota (Kirk and Balsbaugh 1975: 25), south to southeastern Nebraska (Hall County, Foster F. Purrington pers. comm. 2009), east-central Missouri (Saint Louis, CNC), and northwestern South Carolina (Kirk 1970: 12; Ciegler 2000: 111). The records from southern Louisiana (Summers 1874a: 80), "Kansas," and "Arkansas" (Bousquet and Larochelle 1993: 259) need confirmation.
Records. CAN: NB, NS (CBI), ON, PE, QC **USA**: CT, DC, IA, IL, IN, KY, MA, MD, ME, MI, MN, MO, NE, NH, NJ, NY, OH, PA, RI, SC, SD, VA, VT, WI, WV [AR, KS, LA]

***Agonum pallipes* (Fabricius, 1787)**

Carabus pallipes Fabricius, 1787: 202. Type locality: «America» (original citation), restricted to «Hope [Hempstead County], Arkans[as]» by Lindroth (1966: 620). Lectotype [as type], designated by Staig (1931: 33), in HMUG.

Feronia limbata Say, 1823a: 49. Type locality: «Camden [Kershaw County], S[outh] C[arolina]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33010]. Synonymy established by Fall (1933: 103).

Agonum palliatum Dejean, 1828: 174. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 21). Synonymy established, under the name of *A. limbatum* (Say), by Say (1830b: (5) [3]), confirmed by Lindroth (1955b: 21).

Olisares flavolimbatus Motschulsky, 1865: 327. Type locality: «environs de Mobile [Mobile County, Alabama]» (original citation). Lectotype (♂), designated by Liebherr (1991a: 120), in ZMMU. Synonymy established by Liebherr (1991a: 120).

Distribution. This species ranges from "Maryland" (CMNH) to north-central Oklahoma (Kay County, CNC), south at least to central Texas (Travis and Blanco Counties, CMNH; Casey 1920: 73), eastern Louisiana (Washington Parish, LSAM), and the Florida Panhandle (Peck and Thomas 1998: 23). The record from "Kansas" (Bousquet and Larochelle 1993: 259) needs confirmation.

Records. USA: AL, AR, DC, FL, GA, IL, IN, KY, LA, MD, MO, MS, NC, OK, SC, TN, TX, VA [KS]

***Agonum punctiforme* (Say, 1823)**

Feronia punctiformis Say, 1823a: 58. Type locality: «Phila[delphia] Neck, P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 348), in MCZ [# 33009].

Agonum orbicollis Say, 1830b: (4) [3]. Type locality: «35 km NE Zimapan, Hidalgo, Mexico» (neotype label). Neotype (♀), designated by Liebherr (1994: 17), in MCZ [# 35412]. Synonymy established by Bates (1882a: 95). Note. «Mexico» was the area originally cited by Say (1830b: (4) [3]).

Agonum foveicolle Chaudoir, 1843b: 764. Type locality: «Nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♀), designated by Lindroth (1966: 622), in MHNP. Synonymy established by LeConte (1854b: 50), confirmed by Lindroth (1966: 622).

Olisares picipes Motschulsky, 1865: 326. Type locality: «Caraccas [Venezuela]» (original citation), which is likely incorrect. Lectotype (♂), designated by Liebherr (1991a: 120), in ZMMU. Synonymy established by Liebherr (1991a: 120).

Circinalia ludoviciana Casey, 1920: 76. Type locality: «Alexandria [Rapides Parish], Louisiana» (original citation). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47511]. Synonymy established by Lindroth (1966: 622).

Distribution. This species ranges from southeastern New Hampshire (Rockingham County, Ross T. Bell pers. comm. 2008) to southeastern Colorado (Michels et al. 2008), including southern Ontario (CNC), south to southern Mexico (Liebherr 1994: 20) and southern Florida (Peck and Thomas 1998: 23), west along the southwest to southern California (Liebherr 1994: 19-20); also recorded from the Bahamas and Bermuda where it is probably adventive (Hilburn and Gordon 1989: 677; Liebherr 1994: 19). The record from Quebec (Lindroth 1966: 622) refers to *A. rufipes* (Lindroth 1969a: 1120); that from northern Wisconsin along Lake Superior (Wickham 1896c: 134) is probably in error.
Records. CAN: ON **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WV – Bahamas, Bermuda, Mexico

Agonum rigidulum (Casey, 1920)

Circinalia rigidula Casey, 1920: 75. Type locality: «Southern Pines [Moore County], North Carolina» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 129), in USNM [# 47507].

Circinalia rigidula semipunctata Casey, 1920: 75. Type locality: «Norfolk, Virginia» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47508]. Synonymy established by Lindroth (1966: 621).

Circinalia rigidula putata Casey, 1920: 75. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47510]. Synonymy established by Lindroth (1966: 621).

Circinalia ventricula Casey, 1920: 75. Type locality: «Mobile [Mobile County], Alabama» (original citation). Lectotype (♀), designated by Lindroth (1975: 129), in USNM [# 47509]. Synonymy established by Lindroth (1966: 621).

Distribution. This species ranges from New Jersey (Ocean County, CMNH) south to northwestern Louisiana (Bossier Parish, LSAM), southwestern Mississippi (Hancock and Hinds Counties, CMNH), southwestern Alabama (Casey 1920: 75, as *Circinalia ventricula*), and southwestern Georgia (Fattig 1949: 33, as *Platynus ventricula*).
Records. USA: AL, GA, LA, MD, MS, NC, NJ, TN, VA

Agonum rufipes Dejean, 1828

Agonum rufipes Dejean, 1828: 173. Type locality: «Amérique septentrionale» (original citation), restricted to «Galesburg [Knox County], Illin[ois]» by Lindroth (1966: 621). Two syntypes in MHNP (Lindroth 1955b: 21).

Platynus rubripes Zimmermann [in LeConte], 1869b: 244. Type locality: «M[arylan]d» (syntype label). One syntype in MCZ [# 5782]. Synonymy established by Lindroth (1966: 621).

Distribution. The range of this eastern species extends from southeastern New Hampshire (Rockingham County, Donald S. Chandler pers. comm. 2009) to eastern South Dakota (Kirk and Balsbaugh 1975: 25), including southern Ontario (Lindroth 1969a: 1120), south to southeastern Texas (Casey 1920: 74) and southeastern Georgia (Fattig 1949: 32, as *Platynus rubripes*); also recorded from southern Arizona (Casey 1920: 74). The record from Connecticut (Britton 1920: 215, as *Platynus rubripes*) needs confirmation (see Krinsky and Oliver 2001: 4); that from Quebec (Lindroth 1966: 622, as *A. punctiforme*) based on specimens collected by Beaulne are very likely mislabeled.
Records. CAN: ON **USA**: AL, AR, AZ, CA, DC, GA, IL, IN, KS, KY, MD, MI, MO, NC, NE, NH, NJ, NY, OH, OK, PA, SD, TN, TX, VA, WI, WV [CT]

[**quadrimaculatum group**]
***Agonum quadrimaculatum* (Horn, 1885)**

Platynus quadrimaculatus G.H. Horn, 1885a: 130. Type locality: «near Owensburgh [probably Owensboro, Davies County], K[entuck]y (banks of the Ohio, near Louisville)» (original citation). Holotype [by monotypy] (♀) in MCZ [# 34454].

Distribution. This species is known from scattered localities from southwestern Indiana (Blatchley 1910: 123) south to southwestern Georgia (Fattig 1949: 34), southwestern Alabama (Casey 1920: 71; Mobile County, MCZ), southeastern Mississippi (George County, MCZ), north-central Louisiana (Winn Parish, MCZ), and northeastern Texas (Wood County, UASM). The record from Alberta (see Lindroth 1966: 631) must be in error after all; those from northwestern New York (Notman 1928: 235) and "Michigan" (Bousquet and Larochelle 1993: 261) need confirmation.
Records. USA: AL, AR, GA, IN, KY, LA, MO, MS, TN, TX [MI, NY]

Genus *Platynus* Bonelli, 1810

Platynus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus angusticollis* Fabricius, 1801 (= *Carabus assimilis* Paykull, 1790) by subsequent monotypy in Germar (1817: 303). Etymology. From the Greek *platyno* (to broaden, widen), possibly alluding to the large abdomen ("*abd*[omen] *latissimum*") of the adults in the hands of Bonelli [masculine].

Diversity. The number of species of *Platynus* is difficult to assess. Lorenz (2005: 429-434) assigned about 550 species to the genus arrayed in 14 subgenera, with about 95 species left unplaced. However, Liebherr (1998: 997) restricted the concept of *Colpodes* Macleay to three species from Java and suggested assigning the remaining species to "a broader *Platynus*." Lorenz (2005: 416-418) listed about 270 species in *Colpodes* and if Liebherr's advice is followed, this brings the total number of *Platynus* species to about 820. The Northern Hemisphere has about 155 species (19% of the world fauna) of the *Platynus*-"*Colpodes*-like" complex and 23 of them, placed in five subgenera, occur in North America.

Identification. Liebherr and Will (1996: 303-307) published a key for the identification of all species found in North America. Bousquet (2012: 77-78) described a new species and issued a key for the species found east of the Mississippi River.

Subgenus *Microplatynus* Barr, 1982

Microplatynus Barr, 1982b: 98. Type species: *Platynus pecki* Barr, 1982 by original designation. Etymology. From the Greek *micros* (small, little) and the generic name *Platynus* [*q.v.*], alluding to the comparatively small size of adults of these *Platynus* species [masculine].

Diversity. Two species in southwestern North America.

Platynus agilis LeConte, 1863

Platynus fragilis LeConte, 1854b: 41 [secondary homonym of *Platynus fragilis* (Mannerheim, 1853)]. Type locality: «in the mountains near Santa Isabel [San Bernardino County], in the southern part of California» (original citation). Three syntypes in MCZ [# 5739].

Platynus agilis LeConte, 1863b: 6. Replacement name for *Platynus fragilis* LeConte, 1854.

Distribution. This species is restricted to southern California from the Santa Ynez Mountains to San Diego County (Liebherr and Will 1996: 318).
Records. USA: CA

Platynus pecki Barr, 1982

Platynus pecki Barr, 1982b: 98. Type locality: «Monjeau Lookout northwest of Ruidoso (9,100 feet), Lincoln County, New Mexico» (original citation). Holotype (♂) location unknown (not in CNC).

Distribution. This species is known only from the Sierra Blanca (Barr 1982b: 98), Capitan, and Sacramento Mountains (Liebherr and Will 1996: 318) in New Mexico.
Records. USA: NM

Subgenus *Platynus* Bonelli, 1810

Platynus Bonelli, 1810: Tabula Synoptica. Type species: *Carabus angusticollis* Fabricius, 1801 (= *Carabus assimilis* Paykull, 1790) by subsequent monotypy in Germar (1817: 303).

Lyrophorus Chaudoir [in Chevrolat], 1846: 522. Type species: *Carabus angusticollis* Fabricius, 1801 (= *Carabus assimilis* Paykull, 1790) by monotypy. Etymology (original). From the Greek *lyra* (lyre) and *phoro* (to bear, carry) [masculine]. Note. This name is usually credited to Seidlitz (1872: 15 [Arten]) but it was made available by Chaudoir many years earlier.

Limodromus Motschulsky, 1850a: 70. Type species: *Carabus angusticollis* Fabricius, 1801 (= *Carabus assimilis* Paykull, 1790) designated by Motschulsky (1865: 316). Etymology. Probably from the Greek prefix *limo-* (meadow) and *dromos* (running) [masculine].

Diversity. Sixteen species in the Nearctic (nine species, of which one extends into Mexico) and Palaearctic (seven species) Regions.

Platynus brunneomarginatus (Mannerheim, 1843)

Anchomenus brunneomarginatus Mannerheim, 1843 [after 28 March]: 196. Type locality: «California» (original citation), herein restricted to San Diego, San Diego County (see LeConte 1854b: 43, as *P. bicolor*). Syntype(s) location unknown.

Anchomenus rugiceps Mannerheim, 1843 [after 28 March]: 196 [*nomen dubium*]. Type locality: «California» (original citation). Syntype(s) location unknown (Lindroth 1966: 637). Synonymy established with doubt by LeConte (1863b: 6).

Anchomenus marginatus Ménétriés, 1843 [29 July]: 56 [secondary homonym of *Platynus marginatus* (Linnaeus, 1758)]. Type locality: «Californie» (original citation). Syntype(s) location unknown (Lindroth 1966: 637). Synonymy established by LeConte (1879b: 55).

Anchomenus ovipennis Motschulsky, 1845b: 339 [primary homonym of *Anchomenus ovipennis* Mannerheim, 1843]. Type locality: «Californie» (original citation). Syntype(s) location unknown (possibly in ZMMU). Synonymy established, under the name *P. rugiceps* (Mannerheim), by Motschulsky (1850a: 70).

Platynus bicolor LeConte, 1854b: 43 [secondary homonym of *Platynus bicolor* (Dejean, 1828)]. Type locality: «San Diego [San Diego County], California» (original citation). Syntype(s) in MCZ [# 5746]. Synonymy established by LeConte (1879b: 55).

Platynus cinctellus LeConte, 1854b: 43. Type locality: «San Francisco [San Francisco County], California» (original citation). Syntype(s) in MCZ [# 5745]. Synonymy established by LeConte (1863b: 6), confirmed by Lindroth (1966: 637).

Platynus bicoloratus Gemminger and Harold, 1868a: 368. Replacement name for *Platynus bicolor* LeConte, 1854.

Platynus tenebricosus Gemminger and Harold, 1868a: 377. Replacement name for *Platynus marginatus* (Ménétriés, 1843).

Distribution. This species ranges from southern British Columbia, including Vancouver Island (Lindroth 1966: 639), south to the northern parts of the Baja California Peninsula (Horn 1894: 309), east to western New Mexico (Liebherr and Will 1996: 316) and northern Sonora (Bates 1884: 280).

Records. CAN: BC (VCI) **USA**: AZ, CA (CHI), ID, NM, NV, OR, UT, WA – Mexico

Platynus daviesi Bousquet, 2012

Platynus daviesi Bousquet, 2012: 70. Type locality: «Powell Gap (2300'), Shenandoah N[ational] P[ark], Virg[inia]» (original citation). Holotype (♂) in CNC [# 23464].

Distribution. This species occurs along the Appalachian Mountains from Connecticut to southern Pennsylvania, south to northwestern Alabama [see Bousquet 2012: Fig. 4]
Records. USA: AL, CT, KY, MD, NC, NY, PA, TN, VA, WV

***Platynus decentis* (Say, 1823)**

Feronia decentis Say, 1823a: 53. Type locality: «Marion [Plymouth County], Mass[achusetts]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 346), in MCZ [# 33020]. Note. The specific name derives from the Latin adjective *decens*, *-entis* (decent, proper). All authors seen, starting with LeConte (1850: 205), have used the spelling *decens* (nominative singular) until Lindroth (1966: 636) returned to the spelling *decentis* (genitive singular). Although the ICZN (1999: Article 11.9.1.1) mandates that a Latin adjective is to be proposed in the nominative singular, it could be argued in this case that the adjective is used in a nominal form and so can be formulated in the genitive case (Miguel A. Alonso-Zarazaga pers. comm. 2012).

Anchomenus gagates Dejean, 1828: 107. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 19). Synonymy established by Dejean (1828: 107), confirmed by Lindroth (1955b: 19).

Anchomenus sinuatus Dejean, 1828: 108. Type locality: «Amérique septentrionale» (original citation), restricted to «Bethel [Oxford County], Maine» by Lindroth (1966: 636). One syntype in MHNP (Lindroth 1955b: 19). Synonymy established by Lindroth (1955b: 118).

Anchomenus depressus Haldeman, 1843b: 299. Type locality: southeastern Pennsylvania (Haldeman 1843a: 296). Syntype(s) presumably lost. Synonymy established, under the name *P. sinuatus* (Dejean), by LeConte (1879b: 54).

Anchomenus coracinus LeConte, 1846b: 220. Type locality: «NovEboraci [= New York]» (original citation). Syntype(s) in MCZ [# 5741]. Synonymy established by LeConte (1854b: 44), confirmed by Lindroth (1966: 636). Note. The specimen in the LeConte collection with the type label is also labeled "S.C." and is probably not a syntype. Two other specimens in LeConte's collection have pink labels (e.g., middle states, which included New York) and are probably syntypes.

Anchomenus oblongipennis Casey, 1920: 31. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47402]. Synonymy established by Lindroth (1966: 636).

Anchomenus turbidus Casey, 1920: 32. Type locality: «Bayfield [Bayfield County, Wisconsin], Lake Superior» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [47403]. Synonymy established by Lindroth (1966: 636).

Anchomenus iowanus Casey, 1920: 32. Type locality: «Iowa City [Johnson County], Iowa» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47401]. Synonymy established by Lindroth (1966: 636).

Anchomenus aleneanus Casey, 1920: 36. Type locality: «Coeur d'Alene [Kootenai County], Idaho» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47407]. Synonymy established by Hatch (1953: 135), confirmed by Lindroth (1966: 636).

Anchomenus pacatus Casey, 1920: 43. Type locality: «Peaceful Valley [Boulder County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47416]. Synonymy established by Lindroth (1966: 636).

Anchomenus missourianus Casey, 1924: 81. Type locality: «Westminster [= probably Westminster College in Fulton, Callaway County], Missouri» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47399]. Synonymy established by Lindroth (1966: 636).

Anchomenus albertanus Casey, 1924: 81. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47400]. Synonymy established by Lindroth (1966: 636).

Distribution. This species ranges from Newfoundland (Lindroth 1955a: 118, as *Agonum sinuatum*) to south-central British Columbia (Lindroth 1966: 637), north to the coast of southern Alaska (Lindroth 1969a: 1120), south to western Oregon (Hatch 1953: 135), the Sangre de Cristo Mountains in New Mexico (Fall and Cockerell 1907: 159; Lindroth 1955a: 118), northeastern Kansas (Knaus 1901: 110; Ottawa County, CNC), east-central Alabama (Lee County, CNC), and southern Georgia (Torres and Ruberson 2006: 32). The records from "Louisiana" and "Texas" (Bousquet and Larochelle 1993: 262) need confirmation.
Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK **USA**: AK, AL, AR, CO, CT, DC, DE, GA, IA, ID, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OR, PA, RI, SC, SD, TN, UT, VA, VT, WA, WI, WV, WY [LA, TX]

Platynus indecentis Liebherr and Will, 1996

Platynus indecentis Liebherr and Will, 1996: 307. Type locality: «McLean Bog, Tompkins Co[unty], New York» (original citation). Holotype (♂) in CUIC [# 6964]. Note. The remark made in the "Note" section for *Feronia decentis* (see previous species) also applies in this case.

Distribution. This species ranges from Nova Scotia (Majka et al. 2007: 11) to eastern Ohio, south to West Virginia and Maryland [see Liebherr and Will 1996: Fig. 18].
Records. CAN: NB, NS, ON, QC **USA**: CT, MD, ME, NH, NY, OH, PA, RI, VT, WV

Platynus opaculus LeConte, 1863

Platynus opaculus LeConte, 1863c: 8. Type locality: «Ohio» (original citation). Syntype(s) in MCZ [# 5742]. Note. The specimen labeled "Type 5742" and "Lectotype" (by Liebherr, 1996; apparently not published) has a pink label and is

probably not a syntype. The second specimen in LeConte's collection has a yellow disc and is probably a syntype.

Anchomenus inquisitor Casey, 1920: 30. Type locality: «Marquette [Marquette County], Michigan» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47904]. Synonymy established by Lindroth (1966: 641).

Anchomenus boopis Casey, 1920: 37. Type locality: «S[outh] Meriden [New Haven County], Connecticut» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47411]. Synonymy established by Lindroth (1966: 641).

Distribution. This species ranges from southwestern New Brunswick (Webster and Bousquet 2008: 22) to northeastern Iowa (Allamakee County, Doug A. Veal pers. comm. 2009), including the upper peninsula of Michigan (Casey 1920: 30, as *Anchomenus inquisitor*), south to west-central Illinois (Fulton County, Ken Karns pers. comm. 2009), southwestern Indiana (Blatchley 1910: 125), and west-central South Carolina (Ciegler 2000: 115).

Records. CAN: NB, ON, QC **USA**: CT, IA, IL, IN, MA, MI, NH, NJ, NY, OH, PA, RI, SC, VT, WI

***Platynus ovipennis* (Mannerheim, 1843)**

Anchomenus ovipennis Mannerheim, 1843: 196. Type locality: «California» (original citation), herein restricted to Redwood Creek, Humboldt County (see Casey 1920: 33, as *Anchomenus rugulifer*). Syntype(s) location unknown.

Anchomenus maurus Motschulsky, 1845b: 339. Type locality: «Californie» (original citation). Holotype [by monotypy] location unknown (possibly in ZMMU in collection Eschscholtz). Synonymy established by Hatch (1953: 136).

Anchomenus rotundipennis Motschulsky, 1845b: 340. Unnecessary replacement name for *Anchomenus ovipennis* Mannerheim, 1843.

Anchomenus rugulifer Casey, 1920: 33. Type locality: «Redwood Creek, Humboldt C[ounty], California» (original citation). Holotype [by monotypy] (♀) in USNM [# 47406]. Synonymy established by Liebherr (1991a: 118).

Anchomenus tersus Casey, 1920: 35. Type locality: «Redwood Creek, Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Liebherr (1991a: 118), in USNM [# 47409]. Synonymy established by Liebherr (1991a: 118).

Anchomenus arachnoides Casey, 1920: 35. Type locality: «Clackamas Co[unty], Oregon» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47410]. Synonymy established by Hatch (1953: 136), confirmed by Lindroth (1966: 644).

Anchomenus similatus Casey, 1920: 35. Type locality: «Hydesville, Eel River Valley, Humboldt Co[unty], California» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47405]. Synonymy established by Lindroth (1966: 644).

Distribution. This species is found along the west coast from Vancouver Island (Lindroth 1966: 645) to at least west-central California (Marin County, CNC). The record from northern Colorado (Wickham 1902: 238; Armin 1963: 153) is in error.
Records. CAN: BC (VCI) **USA**: CA, OR, WA

Platynus parmarginatus Hamilton, 1893

Platynus parmarginatus Hamilton, 1893: 305. Type locality: near Allegheny [Pennsylvania] (inferred from title of the paper). Lectotype (♂), designated by Lindroth (1966: 641), in CMNH.

Distribution. This species ranges from southwestern Pennsylvania southwestwards to eastern Oklahoma [see Bousquet 2012: Fig. 4].
Records. USA: AR, IL, IN, MO, OK, PA

Platynus tenuicollis (LeConte, 1846)

Anchomenus tenuicollis LeConte, 1846b: 222. Type locality: «ad cataractam Sanctae Mariae (Sault de S[ain]te Marie) [= Sault Sainte Marie, Ontario]» (original citation). One syntype in MCZ [# 5743].

Anchomenus marginatus LeConte, 1846b: 221 [primary homonym of *Anchomenus marginatus* Ménétriés, 1843]. Type locality: «NovEboraci [= New York]» (original citation). One syntype in MCZ [# 5744]. Synonymy established by Lindroth (1966: 641).

Limodromus acuticollis Motschulsky, 1865: 319. Type locality: «états méridionaux de l'Amérique du Nord» (original citation), restricted to «Washington, D.C.» by Liebherr (1991a: 119). Lectotype (♂), designated by Liebherr (1991a: 119), in ZMMU. Synonymy established by Liebherr (1991a: 119).

Colpodes approximatus Chaudoir, 1879: 370. Type locality: «du nord du Mexique» (original citation), restricted to «Jefferson County, Colorado» by Whitehead (1973: 212). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Whitehead (1973: 212). Note. The type locality given by Chaudoir (1879: 371) indicates that the holotype was collected in northern Mexico. As far as known, *P. tenuicollis* has not been found in Mexico.

Platynus reflexus LeConte, 1879b: 55. Replacement name for *Platynus marginatus* (LeConte, 1846).

Anchomenus pennsylvanicus Casey, 1920: 40. Type locality: «Pennsylvania» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47414]. Synonymy established by Lindroth (1966: 641).

Anchomenus distinguendus Casey, 1920: 40. Type locality: «Ridgeway, Ontario» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47413]. Synonymy established by Lindroth (1966: 641).

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1966: 643) to the Black Hills in southwestern South Dakota (Kirk and Balsbaugh 1975: 24), south to northern Colorado (Armin 1963: 154; UASM), northwestern Tex-

as (Wheeler County, CMNH), northeastern Oklahoma (Delaware County, CMNH), and southern South Carolina (Ciegler 2000: 115). The record from "Florida" (Bousquet and Larochelle 1993: 262) needs confirmation.
Records. CAN: NB, NS (CBI), ON, PE, QC **USA**: AL, AR, CO, CT, DC, GA, IA, IL, IN, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [FL]

Platynus trifoveolatus Beutenmüller, 1903

Platynus trifoveolatus Beutenmüller, 1903: 516. Type locality: «Pigeon River, Retreat [Haywood County], western North Carolina» (original citation). Syntype(s) [6 originally cited] in USNM, AMNH [# 4], ANSP, and MCZ (collection Horn).

Distribution. This species is known from high mountains along the Tennessee - North Carolina border (Barr 1969: 81); it was also reported from northeastern Georgia (Fattig 1949: 33).
Records. USA: GA, NC, TN

Subgenus *Batenus* Motschulsky, 1865

Batenus Motschulsky, 1865: 317. Type species: *Harpalus livens* Gyllenhal, 1810 by original designation. Etymology. Uncertain, possibly from the Greek *bates* (walker) and the Latin suffix *-enus* (pertaining to) [masculine].

Platynidius Casey, 1920: 4. Type species: *Feronia hypolithos* Say, 1823 by original designation. Synonymy established by Liebherr (1990: 434).

Paranchomenus Casey, 1920: 30. Type species: *Platynus stygicus* LeConte, 1854 (= *Anchomenus mannerheimii* Dejean, 1828) designated by Bousquet and Larochelle (1993: 262). Synonymy established by Bousquet and Larochelle (1993: 262). Etymology. From the Greek *para* (near, beside) and the generic name *Anchomenus* [*q.v.*] [masculine].

Pseudoplatynus Habu, 1973b: 11. Type species: *Anchomenus magnus* Bates, 1873 by original designation. Synonymy established by Kryzhanovskij et al. (1995: 117). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Platynus* [*q.v.*] [masculine].

Platynomenus Ádám, 1996: 12. Type species: *Carabus scrobiculatus* Fabricius, 1801 by original designation. Synonymy established by Lorenz (1998: 406). Etymology. From the generic name *Platynus* [*q.v.*] and the Greek *menos* (force, strength) [masculine].

Diversity. Forty-four species are recorded by Lorenz (2005: 429-430), five in the Nearctic Region, with one of them Holarctic, and 40 in the Palaearctic Region. A number of Palaearctic species considered as *incertae sedis* by Lorenz (2005: 433-434) have been listed in this subgenus by Bousquet (2003c: 462-464).

Platynus angustatus Dejean, 1828

Platynus angustatus Dejean, 1828: 98. Type locality: «Amérique septentrionale» (original citation), restricted to «Little Switzerland [Mitchell County], Blacks M[oun]t[ain]s (3400 ft), N[orth] Carol[ina]» by Lindroth (1966: 646). One syntype in MHNP (Lindroth 1955b: 18).

Platynus gracilentus Beutenmüller, 1903: 517. Type locality: «summit of the Black Mountains (5000-6717 feet), N[orth] C[arolina]» (original citation). Sixteen syntypes in AMNH [# 2] (Grossbeck 1912: 361), one in ANSP. Synonymy established by Lindroth (1955b: 18).

Platynidius enormis Casey, 1920: 8. Type locality: «Black M[oun]t[ain]s, North Carolina» (original citation). Holotype [by monotypy] (♀) in USNM [# 47385]. Synonymy established by Lindroth (1966: 646).

Platynidius aesopus Casey, 1920: 9. Type locality: «Adirondack M[oun]t[ain]s, New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47386]. Synonymy established by Lindroth (1966: 646).

Platynidius rhombiceps Casey, 1920: 9. Type locality: «New Jersey» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47389]. Synonymy established by Lindroth (1966: 646).

Platynidius cervicalis Casey, 1920: 10. Type locality: «Pennsylvania» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47388]. Synonymy established by Lindroth (1966: 646).

Platynidius carolinensis Casey, 1920: 10. Type locality: «Black M[oun]t[ain]s, North Carolina» (original citation). Lectotype (♀), designated by Lindroth (1975: 130), in USNM [# 47387]. Synonymy established by Lindroth (1966: 646).

Distribution. This species is found from the Adirondack Mountains in New York (Casey 1920: 9 as *Platynidius aesopus*; Liebherr and Song 2002: 135) to at least south-central Ohio (Will and Androw 1993), south to southwestern Alabama (Löding 1945: 19) and southeastern South Carolina (Ciegler 2000: 114). The records from "Indiana" (Schrock 1985: 353), "Illinois" (Thomas 1861: 635), and Mount Washington in New Hampshire (Bowditch 1896: 2) need confirmation.

Records. USA: AL, GA, KY, MD, NC, NJ, NY, OH, PA, SC, TN, VA, WV [IL, IN, NH]

Platynus cincticollis (Say, 1823)

Feronia cincticollis Say, 1823a: 52. Type locality: «Phila[delphia] [Philadelphia County], P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 343), in MCZ [# 33019].

Feronia maculifrons Say, 1823b: 146 [*nomen dubium*]. Type locality: «Arkansa Territory» (original citation). Syntype(s) lost. Synonymy established with doubt by LeConte (1854b: 43).

Platynus blandus Germar, 1824: 12 [*nomen dubium*]. Type locality: «America septentrionali» (original citation). Syntype(s) probably lost (Lindroth 1966: 640). Synonymy established by Say (1830b: (4) [3]).

Anchomenus corvinus Dejean, 1828: 109. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 19). Synonymy established by Say (1830b: (4) [3]), confirmed by Lindroth (1955b: 19).

Anchomenus deplanatus Chaudoir, 1843b: 763. Type locality: «Nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) in MHNP. Synonymy established by LeConte (1854b: 43).

Anchomenus marginalis Haldeman, 1843b: 299. Type locality: southeastern Pennsylvania (Haldeman 1843a: 296). One possible syntype, a ♀ labeled "[pink disc] / marginalis praec. var. Hd. [handwritten] / cincticollis 4 [handwritten]," in MCZ (collection LeConte). Synonymy established, under the name *P. deplanatus* (Chaudoir), by LeConte (1846b: 221).

Distribution. This species ranges from Sable Island (CNC) off the Nova Scotia coast to southeastern Minnesota (Gandhi et al. 2005: 932), south to southern Texas (Casey 1920: 40, as *P. cincticollis deplanatus*; Dajoz 2007: 23) and southern Florida (Peck and Thomas 1998: 23); also recorded from Bermuda (Hilburn and Gordon 1989: 677).
Records. CAN: NS, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KY, LA, MA, MD, MI, MN, MO, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WI, WV – Bermuda

Platynus hypolithos (Say, 1823)

Feronia hypolithos Say, 1823a: 59. Type locality: «Cleveland [Cuyahoga County], O[hio]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 346), in MCZ [# 33021].

Platynus erythropus Dejean, 1828: 97. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 18). Synonymy established by LeConte (1854b: 41), confirmed by Lindroth (1955b: 18).

Platynidius ontariensis Casey, 1920: 8. Type locality: «Ontario» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47384]. Synonymy established by Lindroth (1966: 645).

Distribution. This species is found from Vermont (Rutland County, CNC) to the lower peninsula of Michigan (Hubbard and Schwarz 1878: 644), including southern Ontario (Lindroth 1966: 646), south to east-central Kentucky (Powell County, CNC). The record from "Iowa" (Bousquet and Larochelle 1993: 263) needs confirmation; that from "Virginia" (Bousquet and Larochelle 1993: 263) is probably in error (Richard L. Hoffman pers. comm. 2009).
Records. CAN: ON **USA**: IN, KY, MA, MD, MI, NY, OH, PA, VT, WV [IA]
Note. Morvan (2000: 76) treated this taxon as a subspecies of *P. angustatus* Dejean.

Platynus mannerheimii (Dejean, 1828)

Anchomenus mannerheimii Dejean, 1828: 104. Type locality: «Finlande» (original citation). Syntype(s) probably in MHNP.

Anchomenus morio Gebler, 1847: 325. Type locality: «Flusse Ters [= Ters River in the Kuznetsky Alatau Mountain Range, eastern border of Kemerovo Oblast in southwestern Siberia]» (original citation). Syntype(s) [2 originally cited] probably in ZILR. Synonymy established by Chaudoir (1850b: 102).

Anchomenus melas Gebler, 1848: 68. Unnecessary replacement name for *Anchomenus morio* Gebler, 1847.

Platynus stygicus LeConte, 1854b: 42. Type locality: «Sault S[ain]te Marie [Ontario]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5740]. Synonymy established by Lindroth (1966: 634).

Anchomenus octofoveolatus Mäklin, 1855: 34. Type locality: «Kadjak [Alaska]» (original citation). Lectotype, designated by Silfverberg (1987: 21), in ZMH. Synonymy established, under the name *P. mannerheimii stygicus* LeConte, by Lindroth (1954b: 138).

Limodromus interstitialis Motschulsky, 1865: 318. Type locality: «Kadiak [Alaska]» (original citation). Three syntypes in ZMMU (Keleinikova 1976: 201). Synonymy established by Lindroth (1966: 634).

Distribution. This Holarctic species ranges from Newfoundland (Lindroth 1955a: 119) to central British Columbia and Alaska (Lindroth 1966: 636), south to northeastern Minnesota (Casey 1920: 36, as *P. stygicus*), central Wisconsin (Messer 2010: 43), and northern West Virginia (Preston County, CMNH). In the Palaearctic Region, the species is found from the Far East to Finland (Bousquet 2003c: 463).
Records. FRA: PM **CAN**: AB, BC, LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, CT, ME, MI, MN, NH, NY, VT, WI, WV – **Holarctic**

Platynus prognathus Van Dyke, 1926

Platynus prognathus Van Dyke, 1926a: 119. Type locality: «S[ain]t Simon[s] Island, Georgia» (original citation). Holotype (♀) in CAS [# 1861]. Note. Van Dyke (1926a: 119) recorded the type locality as «St. Simon Island, Okefinokee Swamp, Georgia». I have not been able to locate such island in the Okefinokee Swamp in Georgia.

Distribution. This characteristic species is known for sure only from the holotype. However, Fattig (1949) recorded it also from Dalton, Georgia but the specimen(s) was apparently destroyed (Liebherr 1990: 432).
Records. USA: GA

Subgenus *Glyptolenopsis* Perrault, 1991

Glyptolenopsis Perrault, 1991b: 48. Type species: *Glyptolenopsis degallieri* Perrault, 1991 by original designation. Etymology. From the generic name *Glyptolenus* and the

Greek suffix *-opsis* (likeness), alluding to the resemblance of adults of this group to those of *Glyptolenus* [feminine].

Diversity. Thirty-six species in Middle America (28 species, of which one extends into southern North America and two into South America) and the West Indies (eight species).
Identification. Liebherr (1992) revised the species.

Platynus ovatulus (Bates, 1884)

Anchomenus ovatulus Bates, 1884: 281. Type locality: «Chihuahua, Mexico» (original citation). Lectotype (♀), designated by Whitehead (1973: 205), in BMNH.

Platynus languidus G.H. Horn, 1892c: 42. Type locality: «southern Arizona» (original citation), restricted to «Cochise Stronghold, Dragoon M[oun]t[ai]ns, Cochise Co[unty]» by Liebherr (1991a: 121). Lectotype (♂), designated by Liebherr (1991a: 121), in MCZ [# 2888]. Synonymy established by Liebherr (1991a: 121).

Distribution. This species is known from southeastern Arizona and the northern Sierra Madre Occidental in Sonora and Chihuahua [see Liebherr 1992: Fig. 160].
Records. USA: AZ – Mexico

Subgenus *Trapezodera* Casey, 1920

Trapezodera Casey, 1920: 19. Type species: *Colpodes aeneicauda* Bates, 1891 by original designation. Etymology. From the Greek *trapezion* (an irregular four-shaped figure, by extension trapezoid) and *dere* (neck, by extension pronotum), alluding to the shape of the pronotum ("trapezoidal outline of the prothorax") of the adult [feminine].

Diversity. Four species are assigned to this subgenus, one from southwestern United States and three from Mexico (Liebherr and Will 1996: 316).

Platynus cohni Liebherr and Will, 1996

Platynus cohni Liebherr and Will, 1996: 313. Type locality: «Madera C[an]y[o]n (4400'), Santa Rita M[oun]t[ain]s, Pima Co[unty], Arizona» (original citation). Holotype (♂) in CUIC [# 6965].

Distribution. This species is known from several localities in southeastern Arizona [see Liebherr and Will 1996: Fig. 24].
Records. USA: AZ

Subgenus *Dyscolus* Dejean, 1831

Dyscolus Dejean, 1831: 279, 437. Type species: *Dyscolus memnonius* Dejean, 1831 designated by Hope (1838: 105). Etymology (original). From the Greek *dyscolos* (difficult), probably alluding to the difficulty Dejean had to find the systematic place of the three species he had before him ("*formé sur des insectes qui ... semblent ... former le passage entre les Féroniens et les Troncatipennes, et que je n'ai*

de même placé dans cette tribu que faute de pouvoir les mettre convenablement ailleurs") [masculine].

Ophryodactylus Chaudoir, 1842: 832. Type species: *Ophryodactylus subviolaceus* Chaudoir, 1842 by monotypy. Synonymy established by Moret (1989: 143). Etymology (original). From the Greek *ophrys* (brow, by extension turned-up margin) and *dactylos* (finger), alluding to the furrowed sides of the protarsomeres ("*tarses antérieurs ... tous fortement sillonnés sur les côtés, ce qui fait paraître ceux-ci relevés en bourrelet*") of the adults [masculine].

Paranomus Chaudoir, 1842: 835. Type species: *Paranomus lherminieri* Chaudoir, 1842 by monotypy. Synonymy established by Moret (1989: 143). Etymology (original). From the Greek *para* (beside, near, outside) and *nomos* (usage, law) [masculine].

Pleurasoma Guérin-Méneville, 1844b: 9. Type species: *Pleurasoma sulcatum* Guérin-Méneville, 1844 by monotypy. Synonymy established by Moret (1989: 143). Etymology (original). From the Greek *pleura* (side) and *soma* (body) [neuter]. Note. This genus was described again the same year under the spelling *Pleurosoma* by Guérin-Méneville (1844d: 1).

Metallosomus Motschulsky, 1865: 304. Type species: *Metallosomus virescens* Motschulsky, 1865 designated by Jeannel (1948a: 515). Synonymy established by Moret (1989: 143). Etymology. Probably from the Greek *metallon* (metal) and *soma* (body) and alluding to the metallic coloration of the adults in the hands of Motschulsky [masculine].

Omiastus Motschulsky, 1865: 306. Type species: *Omiastus rutilans* Motschulsky, 1865 designated by Lorenz (1998: 129). Synonymy established by Perrault (1992: 276).

Diversity. About 320 species are listed in this subgenus by Lorenz (2005: 430-433). Of these only five unrelated species are found in southern United States, two of them being endemic (*P. falli* and *P. rufiventris*). The other species of the subgenus occur in the Neotropical Region, including the West Indies and the Galapagos Islands.

[**cazieri group**]

***Platynus cazieri* Liebherr and Will, 1996**

Platynus cazieri Liebherr and Will, 1996: 312. Type locality: «El Mirador Ranch, 4 mi[les] N[orth]W[est] Sasabe, Baboquivari M[oun]t[ain]s, Pima Co[unty], Arizona» (original citation). Holotype (♂) in AMNH [# 1610].

Distribution. This species is known only from Pima and Santa Cruz Counties in southeastern Arizona and from one specimen without precise locality collected in Mexico [see Liebherr and Will 1996: Fig. 24].

Records. USA: AZ – Mexico

[**falli group**]
***Platynus falli* (Darlington, 1936)**

Colpodes falli Darlington, 1936e: 152. Type locality: «Baboquivari M[oun]t[ain]s, Arizona» (original citation). Holotype (♂) in MCZ [# 34577].

Distribution. This species is known from Pima, Cochise, and Santa Cruz Counties in southern Arizona (Liebherr and Will 1996: 318).
Records. USA: AZ
Note. Whitehead (1973: 196) stated that adults of this form are possibly conspecific with those of *P. segregatus* (Bates), a species known from the states of Michoacán, Colima, Morelos, Guerrero, and Oaxaca.

[**lyratus group**]
***Platynus lyratus* (Chaudoir, 1879)**

Colpodes lyratus Chaudoir, 1879: 347. Type locality: «Capulalpam, Mexique» (original citation for the lectotype). Lectotype (♂), designated by Whitehead (1973: 200), in MHNP.
Anchomenus pinalicus Casey, 1920: 42. Type locality: «Pinal M[oun]t[ain]s [Gila County], Arizona» (original citation). Holotype [by monotypy] (♂) in USNM [# 47415]. Synonymy established by Whitehead (1973: 200).

Distribution. This species ranges from southern Utah, eastern Arizona, and western New Mexico south to Oaxaca in Mexico; it also occurs throughout the Baja California Peninsula (Liebherr and Will 1996: 318).
Records. USA: AZ, NM, UT – Mexico

[**megalops group**]
***Platynus megalops* (Bates, 1882)**

Colpodes megalops Bates, 1882a: 116. Type locality: «Guanajuato, Mexico» (original citation). Lectotype (♂), designated by Whitehead (1973: 200), in BMNH.
Platynus longiceps Schaeffer, 1910: 394. Type locality: «Huachuca M[oun]t[ain]s, Arizona» (original citation). Lectotype (♀), designated by Whitehead (1973: 200), in USNM [# 42502]. Synonymy established by Whitehead (1973: 200).

Distribution. The range of this species extends from southern Arizona and western Texas (Jeff Davis County, CMNH) south to the state of Oaxaca (Whitehead 1973: 201).
Records. USA: AZ, TX – Mexico

[**rufiventris group**]
***Platynus rufiventris* (Van Dyke, 1926)**

Colpodes rufiventris Van Dyke, 1926a: 120. Type locality: «Mount Washington (6000 feet), near Nogales [Santa Cruz County], Arizona» (original citation). Holotype (♂) in CAS [# 1862].

Distribution. This species is yet known only from Cochise, Pima, and Santa Cruz Counties in southern Arizona (Liebherr and Will 1996: 318). The record from southwestern Utah (Tanner 1928: 270) is probably in error.
Records. USA: AZ

Genus *Metacolpodes* Jeannel, 1948

Metacolpodes Jeannel, 1948a: 516. Type species: *Colpodes buchanani* Hope, 1831 by original designation. Etymology. From the Greek *meta* (between, among, beyond) and the generic name *Colpodes* [masculine].

Diversity. Twenty-three species in the Palaearctic (11 Asian species) and Oriental (15 species) Regions are listed in this genus by Lorenz (2005: 423). Liebherr (2005), on the other hand, redefined cladistically the genus to include seven Pacific and Asian species. One of these species is adventive in western North America.
Identification. The sole species present in North America is included in Hatch's (1953: 132) monograph on the beetles of the Pacific Northwest. It is also described in length by Habu (1978: 126-128).

Metacolpodes buchanani (Hope, 1831)

Colpodes buchanani Hope, 1831: 21 (as *buchannani*). Type locality: Nepal (inferred from title of the paper). Syntype(s) probably in BMNH. Note. The spelling *buchanani*, used by most authors, is an incorrect subsequent spelling, introduced by Lacordaire (1854: 361), in prevailing usage and attributed to the publication of the original spelling; therefore it is deemed to be the correct original spelling (ICZN 1999: Article 33.3.1).

Agonum sargentorum Malkin and Hatch, 1952: 107. Type locality: «Eugene [Lane County], Oregon» (original citation). Holotype (♂) in USNM. Synonymy established by Malkin and Hatch (1953: 134).

Distribution. This adventive species is known in North America from a few specimens collected in southern British Columbia (Jarrett and Scudder 2001: 382), southwestern Washington (Pacific County, Peter W. Messer pers. comm. 2011), western Oregon (Hatch 1953: 132), and northern Idaho (Liebherr and Will 1996: 303). The first specimen collected on this continent was found in 1931 in Portland, Oregon (Hatch 1953: 132). The species is also adventive in Hawaii (Liebherr and Zimmerman 2000: 466).
Records. CAN: BC **USA**: ID, OR, WA – **Adventive**

Tribe Perigonini Horn, 1881

Trechichinae Bates, 1873: 224, 281 [*nomen oblitum*, see Bouchard et al. (2011: 140, 836-837)]. Type genus: *Trechicus* LeConte, 1853.

Perigonae G.H. Horn, 1881: 143 [*nomen protectum*]. Type genus: *Perigona* Laporte, 1835.

Diversity. About 120 species (Lorenz 2005: 438-439), mainly in the tropical regions, arrayed in five genera. Only one endemic species (*Perigona pallipennis*) is found in North America and one in Europe (*Galiciotyphlotes weberi* Assmann from northwestern Spain).

Genus *Perigona* Laporte, 1835

Perigona Laporte, 1835: 151. Type species: *Perigona pallida* Laporte, 1835 by monotypy. Etymology. Uncertain, either from the Greek *peri* (around, near, very) and *gone* (offspring) or from Perigone, daughter of the brigand Sinis. According to Desmarest (1851: 104), the name derives from the Greek *peri* and *gonia* (angle) [feminine].

Diversity. Excluding the subcosmopolitan *P. nigriceps*, about 105 species (Lorenz 2005: 438-439) in the temperate, subtropical, and tropical areas of the Nearctic (one species), Neotropical (twelve species), Australian (about 17 species), Oriental (about 30 species), eastern Palaearctic (five species), and Afrotropical (about 40 species) Regions. These species are arrayed in 12 subgenera: *Cryptoperigona* Perrault (one Neotropical species), *Euripogena* Basilewsky (four Afrotropical species), *Euryperigona* Jeannel (three species in the Philippines, Indonesia, and New Guinea), *Hirtoperigona* Perrault[9] (two Oriental species), *Neoperigona* Perrault (three Neotropical species), *Perigona s.str.* (57 species in the Old World as well as the Neotropical and Australian Regions), *Perigonillus* Jeannel (three Afrotropical species), *Ripogena* Jeannel (ten Afrotropical species), *Trechicus* (18 species), *Typhlonestra* Jeannel (one Oriental and one Afrotropical species), *Xenogona* Jeannel (one Afrotropical species), and *Xenogonilla* Basilewsky (one Afrotropical species).

Subgenus *Trechicus* LeConte, 1853

Trechicus LeConte, 1853c: 386. Type species: *Trechicus umbripennis* LeConte, 1853 (= *Bembidium nigriceps* Dejean, 1831) designated by Jeannel (1926: 247). Etymology. From the generic name *Trechus* [*q.v.*] and the Greek *eicon* (image, figure), probably alluding to the resemblance of the adults to those of *Trechus* ("have very much the appearance of minute Trechus") [masculine].

Extromus Péringuey, 1896: 584, 586. Type species: *Extromus pusillus* Péringuey, 1896 (= *Bembidium nigriceps* Dejean, 1831) by monotypy.

Diversity. Eighteen species in the Nearctic (one endemic species), Australian (seven endemic species), and Afrotropical (ten endemic species) Regions and one (*P. nigriceps*) subcosmopolitan species.

Identification. Bousquet (1987a: 128) commented on the structural differences between the two species found in North America.

[9] This subgenus is herein removed from synonymy with *Trechicus*, see "Taxonomic Note" under *Trechicus*.

Taxonomic Note. *Hirtoperigona* Perrault is placed in synonymy with *Trechicus* in Lorenz (2005: 438). However, the position of the median group of setae of the umbilical series in the type species (*P. tronqueti* Perrault from Sri Lanka) and in *P. pubescens* Jeannel (from Vietnam) suggests that members of *Hirtoperigona* are more closely related to *Perigona s.str.* than to *Trechicus*. Perrault (1988) placed a third species (*P. hirtella* Basilewsky from Africa) in *Hirtoperigona* on the basis of the original description alone; according to Basilewsky (1989: 447), the species belongs to *Trechicus*.

The relationship of the endemic North American species (*P. pallipennis* LeConte) has not been studied and, in my opinion, it may be more closely related to members of *Cryptoperigona* than to those of *Trechicus*.

Perigona nigriceps (Dejean, 1831)

Bembidium nigriceps Dejean, 1831: 44. Type locality: «Amérique septentrionale» (original citation), restricted to «Georgia» by Lindroth (1968: 651). Holotype [by monotypy] in MHNP (Lindroth 1955b: 22; Erwin 1974a: 126).

Trechicus umbripennis LeConte, 1853c: 386. Type locality: «Georgia; Carolina» (original citation). Three syntypes in MCZ [# 5791]. Synonymy established by Horn (1875: 126), confirmed by Bousquet (1987a: 128).

Polyderis testaceolimbata Motschulsky, 1862b: 33. Type locality: «environs de Mobile [Mobile County, Alabama]» (original citation). Lectotype, designated by Erwin (1974a: 127), in ZMMU. Synonymy established by Erwin (1974a: 127).

Polyderis glabrella Motschulsky, 1862b: 34. Type locality: «Mobile [Mobile County, Alabama]» (original citation). Lectotype, designated by Erwin (1974a: 127), in ZMMU. Synonymy established by Erwin (1974a: 127).

Distribution. This species is subcosmopolitan. It is adventive in North America where it is known from Nova Scotia (Pictou County, CNC) to eastern Iowa (Muscatine County, Doug A. Veal pers. comm. 2009), south to east-central Texas (Riley 2011), central Louisiana (Grant Parish, CNC) and southern Florida (Peck and Thomas 1998: 23) in the east, and from Oregon (Hatch 1953: 147) to southern California (Fall 1901a: 47) in the west. The first inventoried specimen collected on this continent was found prior to 1853 (LeConte 1853c: 386, as *Trechicus umbripennis*). Basilewsky (1953a: 108) believed the species originated along the coast of the Indian Ocean where it is very abundant in rubbish and groundnut.

Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CA, CT, DC, FL, GA, IA, IL, IN, KY, LA, MA, MD, ME, MI, MS, NC, NE, NH, NJ, NY, OH, OR, PA, RI, SC, TX, VA, VT, WI, WV – **Adventive**

Perigona pallipennis (LeConte, 1853)

Trechicus pallipennis LeConte, 1853c: 386. Type locality: «Carolina» (original citation). One syntype in MCZ [# 5792].

Perigona pallidipennis Csiki, 1931: 898. Unjustified emendation of *Perigona pallipennis* (LeConte, 1853).

Distribution. The range of this species extends from southwestern Maine (Nelson 1991: 284) to eastern Iowa (Wickham 1911b: 7), including southernmost Ontario, south to "Missouri," "Alabama" (Bousquet 1987a: 127-128), and northern Florida (Hamilton, Okaloosa, and Taylor Counties, CNC).
Records. CAN: ON **USA**: AL, DC, FL, GA, IA, IL, IN, MD, ME, MI, MO, MS, NC, NJ, NY, OH, PA, SC, VA

Tribe Atranini Horn, 1881

Atrani G.H. Horn, 1881: 145. Type genus: *Atranus* LeConte, 1847.

Diversity. One genus with two species in the Nearctic and Palaearctic Regions.

Genus *Atranus* LeConte, 1847

Atranus LeConte, 1847: 438. Type species: *Anchomenus pubescens* Dejean, 1828 by monotypy. Etymology (original). From the Greek *a* (privative) and *tranos* (clear, distinct), possibly alluding to the obscure relationships of the genus to the eyes of LeConte [masculine].

Diversity. Two species in the temperate regions of eastern North America (*A. pubescens*) and Europe (*A. ruficollis* Gautier des Cottes).
Identification. Lindroth (1968: 649) commented on the structural differences between the two species.

Atranus pubescens (Dejean, 1828)

Anchomenus pubescens Dejean, 1828: 122. Type locality: «Amérique septentrionale» (original citation), restricted to «White Sulphur Springs [Greenbrier County], W[est] V[irgini]a» by Lindroth (1966: 648). Holotype [by monotypy] in MHNP (Lindroth 1955b: 22).

Anchomenus obconicus Haldeman, 1843b: 299. Type locality: southeastern Pennsylvania (Haldeman 1843a: 296). Syntype(s) presumably lost. Synonymy established by LeConte (1847: 439).

Atranus pallescens Casey, 1913: 172. Type locality: «Fairmont Park, Philadelphia [Philadelphia County, Pennsylvania]» (original citation). Lectotype (♂), designated by Lindroth (1975: 130), in USNM [# 47616]. Synonymy established (as aberration) by Csiki (1931: 740), confirmed by Lindroth (1966: 648).

Distribution. The range of this species extends from central Nova Scotia (Hants County, Christopher G. Majka pers. comm. 2008) to southwestern Nebraska (Foster F. Purrington pers. comm. 2010), south to "Texas" (Barr 1964: 3; Lindroth 1968: 649) and west-central South Carolina (Ciegler 2000: 108).

Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CT, DC, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, SC, TN, TX, VA, VT, WI, WV

Tribe Lachnophorini LeConte, 1853

Lachnophori LeConte, 1853c: 370, 375. Type genus: *Lachnophorus* Dejean, 1831.
Anchonodérides Lacordaire, 1854: 373. Type genus: *Anchonoderus* Reiche, 1843.
Eucaeri LeConte, 1861a: 21. Type genus: *Eucaerus* LeConte, 1853.
Egini G.H. Horn, 1881: 125, 152. Type genus: *Ega* Laporte, 1834.
Selinini Jeannel, 1948a: 743. Type genus: *Selina* Motschulsky, 1858.

Diversity. About 115 species (Lorenz 2005: 440-441, as Lachnophorina) in the Nearctic and Neotropical Regions, arrayed in 11 genera, and one species (*Selina westermanni* Motschulsky) in the Oriental and Afrotropical Regions.
Taxonomic Note. Ball and Bousquet (2000: 108) recognized two groups of genera within this tribe. The eucaerine complex comprising *Eucaerus*, *Aporesthus* Bates, *Amphitasus* Bates, and *Asklepia* Liebke and the lachnophorine complex encompassing *Lachnophorus*, *Euphorticus*, *Calybe*, *Anchonoderus*, and *Selina*. Subsequently to their investigation, three new genera have been proposed: *Pseudophorticus* Erwin (four species), *Guatemalteca* Erwin (one species), and *Quammenis* Erwin (one species).

Genus *Anchonoderus* Reiche, 1843

Anchonoderus Reiche, 1843a: 38. Type species: *Platynus elegans* Brullé, 1838 by original designation. Etymology. From the Greek *anchone* (strangling) and *dere* (neck, by extension pronotum), alluding to the cordate shape of the pronotum ("*thorax transversus valde cordatus*") of the adult [masculine].
Axylosius Liebke, 1936: 461. Type species: *Lachnophorus humeralis* Bates, 1883 by original designation. Synonymy established by Liebherr (1988: 24).

Diversity. Western Hemisphere, with 26 species (Lorenz 2005: 440) in the Nearctic (two species) and Neotropical (24 species) Regions.
Identification. Schaeffer (1910: 395) commented on the structural differences between the two species found in North America.

Anchonoderus quadrinotatus Horn, 1878

Anchonoderus quadrinotatus G.H. Horn, 1878b: 53. Type locality: «Texas» (original citation). Two syntypes [2 originally cited] in MCZ [# 8182].

Distribution. This species is known only from Texas (Val Verde County, CNC).
Records. USA: TX

Anchonoderus schaefferi **Liebke, 1928**

Anchonoderus unicolor Schaeffer, 1910: 395 [primary homonym of *Anchonoderus unicolor* Chaudoir, 1850]. Type locality: «New Braunfels [Comal County], Tex[as]» (original citation). Holotype (♂) in USNM [# 56139].

Anchonoderus schaefferi Liebke, 1928: 128. Replacement name for *Anchonoderus unicolor* Schaeffer, 1910.

Distribution. This species is known from southeastern Arizona (Graham County, CNC) and southern Texas (Schaeffer 1910: 395).

Records. USA: AZ, TX

Genus *Lachnophorus* Dejean, 1831

Lachnophorus Dejean, 1831: 28. Type species: *Lachnophorus pilosus* Dejean, 1831 designated by Desmarest (1851: 189). Etymology (original). From the Greek *lachnos* (soft hair, down) and *phoro* (to bear, carry), alluding to the pubescence covering the dorsal surface ("*corps pubescent*") of the adults [masculine].

Aretaonus Liebke, 1936: 461, 463. Type species: *Lachnophorus elegantulus* Mannerheim, 1843 by original designation. Synonymy established by Liebherr (1988: 34).

Diversity. Western Hemisphere, with about 35 species in temperate, subtropical, and tropical areas of the Nearctic (one species only) and Neotropical Regions.

Taxonomic Note. According to Liebherr (1988: 34), *Stigmaphorus* Motschulsky, 1855 (type species: *Stigmaphorus tessellatus* Motschulsky, 1855), considered a junior synonym of *Lachnophorus* by several authors, "should not be considered the same as *Lachnophorus*."

Lachnophorus elegantulus **Mannerheim, 1843**

Lachnophorus elegantulus Mannerheim, 1843 [after 28 March]: 215. Type locality: «California» (original citation). Syntype(s) location unknown (possibly in ZMH).

Bembidium mediosignatum Ménétriés, 1843 [29 July]: 62. Type locality: «Californie» (original citation). Syntype(s) location unknown (possibly in ZMH). Synonymy established by Motschulsky (1845a: 29). Note. This name may be older than *L. elegantulus* but is not in "prevailing usage" (see *Principle of priority* under "Nomenclature" section).

Lachnophorus sculptifrons Bates, 1878a: 604. Type locality: «Chinautla (4100 feet) [and] Chontales, Guatemala» (original citation). Syntype(s) probably in BMNH. Synonymy established by Horn (1886b: xii). Note. Liebke (1936: 463) retained this form as a valid species.

Lachnophorus elegantulus ocularis Casey, 1920: 225. Type locality: «Texas» (original citation). Holotype [by monotypy] in USNM [# 47615]. Synonymy established by Erwin et al. (1977: 4.32).

Distribution. This species ranges from Kansas (LeConte 1858a: 28; Horn 1872c: 385) to southwestern Oregon (Hatch 1953: 146; Jackson County, MCZ, UASM), south to southern California (Moore 1937: 11; San Diego County, CNC, MCZ) and Costa Rica (Liebke 1936: 463).
Records. USA: AZ, CA, KS, NM, OK, OR, TX, UT – Costa Rica, Guatemala, Mexico, Nicaragua

Genus *Euphorticus* Horn, 1881

Euphorticus G.H. Horn, 1881: 144. Type species: *Lachnophorus pubescens* Dejean, 1831 by monotypy. Etymology. From the Greek *eu* (good, beautiful) and *phorticos* (of bearing) [masculine].

Diversity. Four species in temperate, subtropical, and tropical areas of the Nearctic (two species) and Neotropical (three species) Regions.
Identification. Horn (1891: 38) commented on the structural differences between the two species found in North America.

Euphorticus occidentalis Horn, 1891

Euphorticus occidentalis G.H. Horn, 1891: 38. Type locality: «near Los Angeles [Los Angeles County], Cal[ifornia]» (original citation). One syntype in MCZ [# 35339].

Distribution. This species is known so far only from southwestern California (Horn 1891: 38; Fall 1901a: 47; Moore 1937: 11).
Records. USA: CA

Euphorticus pubescens (Dejean, 1831)

Lachnophorus pubescens Dejean, 1831: 30. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 22).

Lachnophorus niger Gory, 1833: 245. Type locality: «Cayenne [French Guiana]» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by Bates (1883a: 156).

Lachnophorus laevicollis Reiche, 1843c: 180. Type locality: «provincia Novae Granatae [= present day Panama and Colombia]» (original citation). Syntype(s) probably in MHNP (collection Chaudoir). Synonymy established by Bates (1883a: 156).

Euphorticus pubescens var. *aeneolus* Bates, 1883a: 156. Type locality: «Jalapa, Oaxaca [in] Mexico; near the city, San Gerónimo, Paso Antonio [in] Guatemala; Amazons to Santa Catharina, S. Brazil» (original citation). Syntype(s) in BMNH. Synonymy established by Liebherr (1988: 28).

Distribution. This species is found along the Coastal Plain from southeastern North Carolina to central Florida, west to northeastern Texas (Dallas County, MCZ) and central Oklahoma (Grady County, Robert L. Davidson pers. comm. 2012), including west-central Louisiana (Allen 1965: 67), along the Mississippi Basin in southwestern

Ohio (Blatchley 1910: 137) and central Indiana (Downie and White 1967: 308), in the West Indies from the Bahamas (Turnbow and Thomas 2008: 12) to Trinidad, in tropical mainland from central Mexico to Santa Catarina in Brazil [see Liebherr 1988: Fig. 17], and along southwestern United States from New Mexico (Snow 1885: 66; Fall and Cockerell 1907: 159) to southern Arizona (Pima County, MCZ); also recorded from the southern part of the Baja California Peninsula (Horn 1895: 226). The record from southeastern Pennsylvania (Rathvon 1869: 523) must be in error.
Records. USA: AL, AZ, FL, GA, IN, LA, MS, NC, NM, OH, OK, SC, TX – Bahamas, Brazil, Colombia, Cuba, French Guiana, Guatemala, Honduras, Jamaica, Mexico, Venezuela

Genus *Calybe* Laporte, 1834

Calybe Laporte, 1834: 92. Type species: *Calybe leprieuri* Laporte, 1834 by monotypy. Etymology. Mythological name designating a Trojan Nymph loved by King Laomedon of Troy. Literately, *kalybe* or *calybe* designates a rustic cabin or hut [feminine]. Note. *Chalybe* is an incorrect subsequent spelling, introduced by Dejean (1836: 56), not in prevailing usage.

Diversity. Twenty-five species (Lorenz 2005: 440-441) in the Western Hemisphere arrayed in two subgenera: *Calybe s.str.* (eight species) represented in the Neotropical Region only and *Ega* (17 species).

Subgenus *Ega* Laporte, 1834

Ega Laporte, 1834: 93. Type species: *Ega formicaria* Laporte, 1834 by monotypy. Etymology. Uncertain, either from Ega (also spelled Aega), the mayor of the palace and regent of Neustria and Burgundy or from Ega the old name for the city and river port of Tefé in northwestern Brazil [feminine].
Aega Agassiz, 1846: 8, 134. Unjustified emendation of *Ega* Laporte, 1834.

Diversity. Seventeen species in the temperate, subtropical, and tropical areas of the Nearctic (two species) and Neotropical (17 species) Regions.
Identification. Horn (1881: 153) commented on the structural differences between the two species found in North America.

Calybe laetula (LeConte, 1851)

Ega laetula LeConte, 1851: 173. Type locality: «ad flumina Colorado et Gila» (original citation). Three syntypes in MCZ [# 59].

Distribution. This species ranges from southernmost Nevada (Clark County, CNC) south to Guatemala (Bates 1883a: 157), including southeastern California (Riverside County, MCZ, UASM) and southern Arizona (Fall 1901a: 48; Maricopa and Pima Counties, MCZ, UASM). The record from "Colorado" (LeConte 1858a: 28) probably refers to the Colorado River.
Records. USA: AZ, CA, NV – Guatemala, Mexico

Calybe sallei (Chevrolat, 1839)

Ega sallei Chevrolat, 1839: 308. Type locality: «environs de la Nouvelle-Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) location unknown (possibly in UMO).
Ega sallaei Bates, 1883a: 157. Unjustified emendation of *Ega sallei* Chevrolat, 1839.

Distribution. This species is known along the Coastal Plain from South Carolina (Kirk 1969: 12; Ciegler 2000: 116; Clarendon County, MCZ) to southern Florida (Peck and Thomas 1998: 23), west to central and southeastern Texas (Lee and Cameron Counties, MCZ; Wickham 1897: 107), and south to Nicaragua (Bates 1883a: 157). The record from "Arizona" (Ball and Bousquet 2000: 109) refers to *Calybe laetula*. Old specimens simply labeled "Ill." and "Ks" are known (MCZ).
Records. USA: AL, AR, FL, GA, LA, MS, SC, TX [IL, KS] – Guatemala, Mexico, Nicaragua

Genus *Eucaerus* LeConte, 1853

Eucaerus LeConte, 1853c: 386. Type species: *Eucaerus varicornis* LeConte, 1853 by monotypy. Etymology. From the Greek *eu* (well) and *caeros* (fit, opportune) [masculine].

Diversity. Fourteen species in the Western Hemisphere arrayed in two subgenera: *Eucarus s.str.* (11 species) and *Lachnaces* Bates (three Amazonian species).

Subgenus *Eucaerus* LeConte, 1853

Eucaerus LeConte, 1853c: 386. Type species: *Eucaerus varicornis* LeConte, 1853 by monotypy.

Diversity. Eleven species in temperate, subtropical, and tropical areas of the Nearctic (one species) and Neotropical (ten species) Regions arrayed in two species groups (Ball and Hilchie 1983: 107-108).

Eucaerus varicornis LeConte, 1853

Eucaerus varicornis LeConte, 1853c: 387. Type locality: «New Orleans [Orleans Parish, Louisiana]» (original citation). Holotype [by monotypy] in MCZ [# 5834].

Distribution. This species inhabits the Coastal Plain from central Maryland (Hoffman et al. 2006: 28) to southern Florida (Peck and Thomas 1998: 23), west to eastern Texas (Hardin County, UASM), including southeastern Mississippi (Jackson County, Drew A. Hildebrandt pers. comm. 2008).
Records. USA: AL, FL, GA, LA, MD, MS, NC, SC, TX, VA

Tribe Pentagonicini Bates, 1873

Pentagonicinae Bates, 1873: 225, 320. Type genus: *Pentagonica* Schmidt-Göbel, 1846.

Scopodinae Bates, 1874: 275. Type genus: *Scopodes* Erichson, 1842.

Diversity. Worldwide but excluding Europe and northern Africa, with about 165 species (Lorenz 2005: 445-447) arrayed in five genera: *Aeolodermus* Andrewes (one Oriental species), *Homethes* Newman (ten australo-oriental species), *Parascopodes* Darlington (one Australian species), *Pentagonica* (about 85 species), and *Scopodes* Erichson (68 australo-oriental species). The Northern Hemisphere is underrepresented with only 17 species (about 10% of the world fauna).

Genus *Pentagonica* Schmidt-Göbel, 1846

Rhombodera Reiche, 1842: 313 [junior homonym of *Rhombodera* Burmeister, 1838]. Type species: *Rhombodera virgata* Reiche, 1842 (= *Lebia trivittata* Dejean, 1831) designated by Bousquet and Larochelle (1993: 245). Etymology. From the Greek *rhombos* (lozenge) and *dere* (neck, by extension pronotum), alluding to the shape of the pronotum ("*thorax sub rhomboideus*") of the adult [feminine].

Pentagonica Schmidt-Göbel, 1846: 47. Type species: *Pentagonica ruficollis* Schmidt-Göbel, 1846 designated by Andrewes (1938: 137). Synonymy established by Chaudoir (1877: 212). Etymology (original). From the Greek *pente* (five) and *goniakos* (angular), not *gonichos* as originally cited by Schmidt-Göbel, alluding to the shape of the pronotum ("*thorax pentagonus*") of the adult [feminine].

Didetus LeConte, 1853c: 377. Type species: *Didetus flavipes* LeConte, 1853 by monotypy. Synonymy established by LeConte (1861a: 25). Etymology. From the Greek prefix *di-* (two) and *detos* (bound) [masculine].

Diversity. About 85 species in the temperate, subtropical, and tropical areas of the Nearctic (six species, only one endemic), Neotropical (about 25 species), Australian (10 species), Oriental (about 20 species), Palaearctic (11 Asian species), and Afrotropical (25 species) Regions.

Identification. Lindroth's (1969a: 1013) key covered all North American known at the time. Two new species have been described subsequently by Bell (1987) and Mateu (1995).

Pentagonica bicolor (LeConte, 1863)

Rhombodera bicolor LeConte, 1863c: 7. Type locality: «western states» (original citation), herein restricted to Columbus, Colorado County, Texas (see Reichardt 1968: 150). One syntype in MCZ [# 5836].

Pentagonica semifulva Bates, 1883a: 217. Type locality: «Cordova, Jalapa [in] Mexico; Cerro Zunil, Pantaleon [in] Guatemala» (original citation). Syntype(s) in BMNH. Synonymy established by Reichardt (1968: 150).

Distribution. This species ranges from Colorado County in southeastern Texas to Guatemala (Reichardt 1968: 150).

Records. USA: TX – Guatemala, Mexico

Pentagonica felix Bell, 1987

Pentagonica felix R.T. Bell, 1987: 373. Type locality: «Rustler Park, Cochise Co[unty], Ariz[ona]» (original citation). Holotype (♀) in CNC [# 19859].

Distribution. This species is known from a few localities from southeastern Arizona and southwestern New Mexico (Bell 1987: 373) south to Chiapas in southern Mexico (Bell 1989a: 156).
Records. USA: AZ, NM – Mexico

Pentagonica flavipes flavipes (LeConte, 1853)

Didetus flavipes LeConte, 1853c: 377. Type locality: «Louisiana» (original citation). Two syntypes in MCZ [# 5835].

Pentagonica americana Motschulsky, 1864: 224. Type locality: «environs de Mobile [Mobile County, Alabama]» (original citation). Lectotype, designated by Bousquet (1997b: 339), in ZMMU. Synonymy established by Horn (1882: 163), confirmed by Bousquet (1997b: 339).

Pentagonica albipes Bates, 1883a: 218. Type locality: «Mirandilla, Guatemala; Bugaba, Panama» (original citation). Syntype(s) in BMNH. Synonymy established by Reichardt (1968: 153).

Rhombodera picea Fleutiaux and Sallé, 1890: 362. Type locality: «Cascade Vauchelet, Camp- Jacob; Trois-Rivières [Guadeloupe]» (original citation). Syntype(s) probably in MHNP. Synonymy established by Reichardt (1968: 153).

Distribution. This subspecies ranges from southwestern New Jersey (Smith 1910: 212) and northern Virginia (Hoffman and Roble 2000: 39) to northeastern Kansas (Popenoe 1877: 23, as *Rhombodera pallipes*), south to eastern Texas (Sabine County, CNC) and the Florida Keys (Peck and Thomas 1998: 22). It is also known from Central America, Colombia, Brazil, and the West Indies (Reichardt 1968: 153; Bell 1985a: 326). The record from "Arizona" (Leng 1915: 589) needs confirmation.
Records. USA: AL, AR, FL, GA, IA, IN, KS, LA, MS, NC, NJ, OH, OK, SC, TX, VA [AZ] – Antigua, Bahamas, Belize, Brazil, Cayman Islands, Colombia, Costa Rica, Cuba, Dominica, Dominican Republic, Guadeloupe, Guana Island, Guatemala, Monserrat, Panama, Trinidad and Tobago
Note. The subspecies *P. flavipes picipes* Darlington is restricted to Jamaica, Hispaniola, Puerto Rico, and the Virgin Islands (Reichardt 1968: 154; Bell 1985a: 326).

Pentagonica marshalli Mateu, 1995

Pentagonica marshalli Mateu, 1995: 141. Type locality: «3 mill. N[orth]W[est] Alligator P[oin]t, Franklin Co[unty], Florida» (original citation). Holotype (♂) in Mateu's collection (Almería, Spain).

Distribution. This species is known from southeastern Georgia (Camden and Glynn Counties, CMNH), central Florida (Pinellas County, CMNH), north-central Mississippi (Grenada County, Drew A. Hildebrandt pers. comm. 2010), and east-central (Riley 2011) and south-central Texas (Bastrop County, Peter W. Messer pers. comm. 2010).
Records. USA: FL, GA, MS, TX

Pentagonica nigricornis Darlington, 1934

Pentagonica nigricornis Darlington, 1934: 121. Type locality: «Soledad (near Cienfuegos), Cuba» (original citation). Holotype in MCZ [# 19537].

Distribution. This species is known only from the Florida Peninsula as far north as Alachua County (Peck and Thomas 1998: 22), the Bahamas (Turnbow and Thomas 2008: 14), Cuba (Bell 1985a: 323), and the Cayman Islands (Darlington 1947: 211).
Records. USA: FL – Bahamas, Cuba, Cayman Islands

Pentagonica picticornis Bates, 1883

Pentagonica picticornis Bates, 1883a: 217. Type locality: «El Jicaro, Guatemala» (original citation). Holotype [by monotypy] in BMNH.

Distribution. This species ranges from southern Quebec (Larochelle 1975: 98) to western Wisconsin (Messer 2010: 42), south to Guatemala (Bates 1883a: 217), southeastern Louisiana (Saint Tammany Parish, Igor M. Sokolov pers. comm. 2009), and central Florida (Vince Golia pers. comm. 2007), west to southern Arizona and the Baja California Peninsula (Horn 1894: 311).
Records. CAN: ON, QC **USA**: AR, AZ, FL, GA, IA, IL, IN, KS, LA, MD, MI, MO, MS, NE, NH, NJ, NM, OH, OK, PA, TN, TX, VA, VT, WI, WV – Guatemala, Mexico

Tribe Odacanthini Laporte, 1834

Odacanthidae Laporte, 1834: 40. Type genus: *Odacantha* Paykull, 1798.
Casnoniae LeConte, 1861a: 21. Type genus: *Cosnania* Dejean, 1821. Note. This family-group name is based on *Casnonia*, an incorrect subsequent spelling of *Cosnania* Dejean, not in prevailing usage.
Colliurini Bedel, 1910: 72. Type genus: *Colliuris* DeGeer, 1774.
Lasiocerini Jeannel, 1948a: 757. Type genus: *Lasiocera* Dejean, 1831.

Diversity. Worldwide, with about 325 species (Lorenz 2005: 441-445, as Odacanthina) in the Nearctic (five species), Neotropical, Australian, Oriental, Palaearctic (21 species, several shared with the Oriental Region), and Afrotropical Regions.

Genus *Colliuris* DeGeer, 1774

Colliuris DeGeer, 1774: 79. Type species: *Attelabus surinamensis* Linnaeus, 1758 by monotypy. Etymology. From the Latin *collum* (neck, by extension pronotum), al-

luding to the unusually long pronotum ("*à cause de la grande étendue de leur corcelet qui leur forme comme un très long col*") of the adult [feminine].

Collyris Agassiz, 1846: 94 [junior homonym of *Collyris* Fabricius, 1801]. Unjustified emendation of *Colliuris* DeGeer, 1774.

Diversity. Western Hemisphere, with about 100 species (Lorenz 2005: 442-444, as *Cosnania* and *Colliuris*) in temperate, subtropical, and tropical areas of the Nearctic (five species) and Neotropical Regions. The species are arrayed in 20 subgenera.

Identification. Bousquet (2010b) reviewed the Nearctic, Mexican and West Indian (Greater Antilles) species and provided a key for their identification.

Taxonomic Note. Liebke (1930, 1938) recognized an array of subgenera and several appear to be polyphyletic assemblages. A taxonomic revision of the genus is much needed. Lorenz (2005: 442) recognized *Cosnania* as generically distinct from *Colliuris*. I see no reason to support this approach particularly since *Cosnania*, as currently recognized, is likely polyphyletic (see below).

Subgenus *Mimocasnonia* Liebke, 1938

Mimocasnonia Liebke, 1938: 51, 57. Type species: *Casnonia pilatei* Chaudoir, 1848 by original designation. Etymology. From the Greek *mimos* (imitator, actor) and *Casnonia*, an incorrect subsequent spelling of the generic name *Cosnania* [*q.v.*] [feminine].

Diversity. Three species in the Neotropical Region (Liebke 1938: 57), one of them extending into southern Arizona.

Colliuris pilatei (Chaudoir, 1848)

Casnonia pilatei Chaudoir, 1848: 47 (as *pilati*). Type locality: «Yucatan [Mexico]» (original citation). Syntype(s) [2 originally cited] probably in MHNP. Note. The incorrect subsequent spelling *pilatei*, first used by Bates (1883a: 161), is in prevailing usage and attributed to the publication of the original spelling; therefore it is deemed to be the correct original spelling (ICZN 1999: Article 33.3.1).

Distribution. This species ranges from southern Arizona (Bousquet 2010b: 7) to Panama (FSCA).

Records. USA: AZ – Costa Rica, Guatemala, Honduras, Mexico, Panama

Subgenus *Cosnania* Dejean, 1821

Macrotrachelus Latreille, 1818a: 16 [potential *nomen oblitum*, see Bousquet (2002b: 30)]. Type species: *Attelabus pensylvanicus* Linnaeus, 1758 by monotypy. Etymology. From the Greek *macros* (long) and *trachelos* (neck, by extension pronotum), alluding to the elongate pronotum of the adult [masculine].

Cosnania Dejean, 1821: 2 [potential *nomen protectum*]. Type species: *Attelabus pensylvanicus* Linnaeus, 1758 by monotypy. Etymology. Unknown; this is also the case for the spelling *Casnonia* [feminine]. Note. *Casnonia* is an incorrect subsequent spelling, first used by Dejean (1825: 170), not currently in prevailing usage. The spelling was in prevailing usage until the 1990s but not attributed to the publication of the original spelling. Therefore *Casnonia* cannot be considered as the correct original spelling (see ICZN 1999: Article 33.3.1).

Odacanthella Liebke, 1930: 658. Type species: *Attelabus pensylvanicus* Linnaeus, 1758 by original designation. Etymology. From the generic name *Odacantha* and the Greek suffix *-ella* (small, little) [feminine].

Diversity. Fourteen species are listed in this subgenus by Lorenz (2005: 442) but some (e.g., *C. lioptera*, *C. tetrastigma*, and *C. emdeni* Liebke) are not closely related to the type species, *C. pensylvanica*. Two North American species belong to this subgenus.

Colliuris lengi (Schaeffer, 1910)

Casnonia lengi Schaeffer, 1910: 395. Type locality: «Nogales [Santa Cruz County], Arizona» (original citation). Holotype [by monotypy] (♀) in USNM [# 56140]. Etymology. The species name honors Charles William Leng [1859-1941], coleopterist and historian. Born on Staten Island, Leng was early in his adult life a business partner with his father in importing iron and steel, with bicycles as a new and promising sideline. He eventually became director of the Staten Island Institute of Arts and Sciences. He is of course well known for the catalogue of North American beetles he published in 1920 at the request of John D. Sherman, Jr.

Distribution. This species has a very restricted distribution; it is known from southeastern Arizona and adjacent northern Mexico [see Bousquet 2010b: Fig. 19].
Records. USA: AZ – Mexico

Colliuris pensylvanica (Linnaeus, 1758)

Attelabus pensylvanicus Linnaeus, 1758: 387. Type locality: «Philadelphia [Philadelphia County, Pennsylvania]» (original citation). Syntype(s) probably lost (see Lindroth 1957b: 327).

Casnonia picta Chaudoir, 1843b: 697. Type locality: «Californie» (original citation), which is likely incorrect. Syntype(s) in MHNP. Synonymy established by Bousquet (2010b: 9).

Casnonia suturalis Chaudoir, 1872d: 405. Type locality: «midi des Etats-Unis» (original citation). Syntype(s) [3 originally cited] in MHNP. Synonymy established by LeConte (1880a: 85).

Casnonia limbata C.O. Waterhouse, 1879: 304. Type locality: «Jamaica» (lectotype label). Lectotype (♀), designated by Bousquet (2010b: 9), in BMNH. Synonymy established by Bousquet (2010b: 9).

Colliuris picta var. *extrema* Liebke, 1930: 689. Type locality: «Mexico» (original citation). Lectotype (♂), designated by Bousquet (2010b: 10), in ZMHB. Synonymy established by Bousquet (2010b: 9).

Colliuris picta var. *concluda* Liebke, 1930: 689. Type locality: «Durango city [Mexico]» (lectotype label). Lectotype (♂), designated by Bousquet (2010b: 9), in ZMHB. Synonymy established by Bousquet (2010b: 9).

Colliuris yucatana Liebke, 1930: 700. Type locality: «Temax, N[orth] Yucatan [Mexico]» (original citation). Holotype in BMNH. Synonymy established by Bousquet (2010b: 9).

Distribution. This species ranges from Maine (Dearborn and Donahue 1993: 8; Foss 2001: 14) to eastern South Dakota (Kirk and Balsbaugh 1975: 37), including southern Quebec (Larochelle 1975: 78) and the Ontario Peninsula (Lindroth 1969a: 1008), south to the Yucatán Peninsula and southern Florida, west to southern Arizona and Baja California Sur [see Bousquet 2010b: Fig. 18]; also known from Cuba and Jamaica (Bousquet 2010b: 10).
Records. CAN: ON, QC **USA**: AL, AR, AZ, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV – Cuba, Jamaica, Mexico

Subgenus *Calocolliuris* Liebke, 1938

Calocolliuris Liebke, 1938: 55. Type species: *Casnonia ludoviciana* Sallé, 1849 by original designation. Etymology. From the Greek prefix *calo-* (beautiful) and the generic name *Colliuris* [*q.v.*] [feminine].

Diversity. Five Nearctic and Neotropical species were included in this subgenus by Liebke (1938: 55-56). However, a number of species (e.g., *C. liptera* Bates, *C. tetrastigma* Chaudoir, *C. caymanensis* Darlington, *C. ellipticeps* Liebke, and *C. gundlachi* Darlington), placed in other subgenera by Liebke (1938), are closely related to members of *Calocolliuris* (personal observation).

Colliuris caymanensis Darlington, 1947

Colliuris tetrastigma caymanensis Darlington, 1947: 211. Type locality: «South Sound, Grand Cayman» (original citation). Holotype (♂) in BMNH.

Distribution. This species is known from southern Florida, Cuba, the Cayman Islands, Jamaica, and Haiti (Bousquet 2010b: 23).
Records. USA: FL – Cayman Islands, Cuba, Haiti, Jamaica

Colliuris lioptera (Bates, 1891)

Casnonia lioptera Bates, 1891a: 265. Type locality: «Atoyac, in Vera Cruz [Mexico]» (original citation). Syntype(s) in BMNH.

Distribution. This species ranges from southeastern Arizona (Bousquet and Larochelle 1993: 334) south at least to Honduras (USNM).
Records. USA: AZ – Honduras, Mexico

Colliuris ludoviciana (Sallé, 1849)

Casnonia ludoviciana Sallé, 1849: 297. Type locality: «Nouvelle-Orléans [Orleans Parish], Louisiane» (original citation). One syntype [2 originally cited] in MHNP (collection Chaudoir) and one in MCZ (collection LeConte).

Distribution. This species inhabits the Coastal Plain and ranges from southeastern New York to southern Florida, west to eastern Louisiana [see Bousquet 2010b: Fig. 20]. The species was also recorded from "N. Yucatan" by Liebke (1938: 56) and from "Pennsylvania" by Leng (1920: 65); both records are suspect.
Records. USA: AL, DC, FL, LA, MD, NC, NJ, NY, VA [PA]

Tribe Ctenodactylini Laporte, 1834

Ctenodactylidae Laporte, 1834: 45. Type genus: *Ctenodactyla* Dejean, 1825.

Diversity. Western Hemisphere, with about 65 species (Lorenz 2005: 393) arrayed in 16 genera.

Genus *Leptotrachelus* Latreille, 1829

Leptotrachelus Latreille, 1829: 371. Type species: *Odacantha dorsalis* Fabricius, 1801 by monotypy. Etymology. From Greek *leptos* (thin, slender) and *trachelos* (neck, by extension pronotum), alluding to the narrow pronotum ("*où cette partie du corps* [pronotum] *est à peu près cylindrique*") of the adult [masculine].
Spheracra Say, 1830a: 133. Type species: *Odacantha dorsalis* Fabricius, 1801 by monotypy.

Diversity. Thirty-four species (Lorenz 2005: 393) in the temperate, subtropical, and tropical areas of the Nearctic (three species) and Neotropical (32 species) Regions.
Identification. Bousquet (1997b: 336) commented on the structural differences between *L. dorsalis* and *L. pallidulus*. The third species (*L. depressus*) is known only from the holotype which is very similar to members of *L. pallidulus* and may eventually prove to be conspecific with them.

Leptotrachelus depressus Blatchley, 1923

Leptotrachelus depressus Blatchley, 1923: 15. Type locality: «Lake Wales [Polk County], Fl[orid]a» (original citation). Holotype [by monotypy] (♂) in PURC.

Distribution. This species is known only from the Florida Peninsula (Peck and Thomas 1998: 23).
Records. USA: FL

Leptotrachelus dorsalis (Fabricius, 1801)

Odacantha dorsalis Fabricius, 1801: 229. Type locality: «Carolina» (original citation), herein restricted to Yemassee, Hampton County, South Carolina (see Ciegler 2000: 117). Syntype(s) location unknown (Lindroth 1969a: 1006).

Distribution. This species ranges from Rhode Island (William L. Krinsky pers. comm. 2009) and Connecticut (Krinsky and Oliver 2001: 232) to southeastern South Dakota (Kirk and Balsbaugh 1975: 36), including the Ontario Peninsula (Lindroth 1969a: 1006), south to southeastern Texas (Wharton County, CNC) and southern Florida (Peck and Thomas 1998: 23); also found in Cuba (Gundlach 1891: 19), Barbados, and Hispaniola (Peck and Thomas 1998: 23).
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, NC, NE, NJ, NY, OH, PA, RI, SC, SD, TN, TX, VA, WI, WV – Barbados, Cuba, Hispaniola

Leptotrachelus pallidulus Motschulsky, 1864

Leptotrachelus pallidulus Motschulsky, 1864: 218. Type locality: «Nouv[elle] Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype, designated by Bousquet (1997b: 335), in ZMMU.

Distribution. This species is known from a few scattered localities in Tennessee, Louisiana (Bousquet 1997b: 338), and Texas (Chaudoir 1872d: 412).
Records. USA: LA, TN, TX

Tribe Cyclosomini Laporte, 1834

Cyclosomidae Laporte, 1834: 69. Type genus: *Cyclosomus* Latreille, 1829.
Tétragonodérides Chaudoir, 1871a: 111. Type genus: *Tetragonoderus* Dejean, 1829.
Sarothrocrepidae Chaudoir, 1876d: 2, 83. Type genus: *Sarothrocrepis* Chaudoir, 1850.
Note. The stem of *Sarothrocrepis* is *Sarothrocrepid-* (Madge 1989: 467).

Diversity. About 120 species in the Nearctic (four species), Neotropical (about 40 species of *Tetragonoderus*), Australian (one adventive *Tetragonoderus*), Oriental, Palaearctic (20 species), and Afrotropical Regions. These species are arrayed in four genera: *Cyclosomus* Latreille (13 species), *Cyclicus* Jeannel (22 afro-oriental species), *Mnuphorus* Chaudoir (11 species) and *Tetragonoderus* (about 75 species). The Northern Hemisphere is represented by about 25 species (approximately 21% of the world fauna).
Taxonomic Note. This tribe is treated here in a restricted sense following Ball and Bousquet (2000: 109) and excluded the graphipterines, corsyrines, masoreines, somoplatines, and nemotarsines.

Genus *Tetragonoderus* Dejean, 1829

Tereus Billberg, 1820: 26 [potential *nomen oblitum*, see Bousquet (2002b: 50)]. Type species: *Carabus quadrinotatus* Fabricius, 1798 designated by Bousquet (2002b: 50). Etymology. Unknown [masculine].

Tetragonoderus Dejean, 1829: 485 [potential *nomen protectum*]. Type species: *Carabus quadrum* Fabricius, 1792 designated by Hope (1838: 89). Synonymy established by Bousquet (2002b: 50). Etymology (original). From the Greek *tetragonos* (square) and *dere* (neck, by extension pronotum), alluding to the shape of the pronotum ("*corselet ... plus ou moins carré*") of adults of the 16 species Dejean had before him [masculine].

Diversity. About 75 species (Lorenz 2005: 453) arrayed in two subgenera, *Tetragonoderus s.str.* with about 35 species in the Old World and *Crossonychus* for the Western Hemisphere species.
Identification. Lindroth (1969a: 1010) included a key to four of the five species found in North America.

Subgenus *Crossonychus* Chaudoir, 1848

Crossonychus Chaudoir, 1848: 98. Type species: *Dromius viridis* Dejean, 1831 by monotypy. Etymology. From the Greek *crossos* (fringe) and *onyx*, *-ychos* (claw) [masculine].

Lobius Motschulsky, 1864: 230. Type species: *Dromius viridis* Dejean, 1831 designated by Lorenz (1998: 108).

Peronoscelis Chaudoir, 1876d: 56. Type species: *Tetragonoderus figuratus* Dejean, 1831 designated by Bousquet and Larochelle (1993: 266). Synonymy established by Ball (2000: 190). Etymology. From the Greek *perone* (pin, something pointed) and *scelos* (leg) [feminine].

Diversity. Western Hemisphere, with about 40 species in the Nearctic (five species, one of them adventive) and Neotropical (about 40 species) Regions. One South American species (*T. undatus* Dejean) is adventive in Australia (Moore 1976). The species have been arrayed in two species groups by Ball (2000: 190), the *figuratus* and *intersectus* groups; only the last one is represented in North America.

Tetragonoderus fasciatus (Haldeman, 1843)

Coptodera fasciata Haldeman, 1843b: 298. Type locality: North America (inferred from title of the paper), «Fairfax Co[unty], V[irgini]a» selected by Lindroth (1969a: 1010). One possible syntype, a ♀ labeled "[pink disc] / T. fasciatus (Hald.) Lec. [handwritten]," in MCZ (collection LeConte).

Tetragonoderus undulatus LeConte, 1863c: 6. Type locality: «Cape San Lucas, Lower California» (original citation). Two syntypes in MCZ [# 5797]. Synonymy established by Horn (1882: 160).

Tetragonoderus distigma Motschulsky, 1864: 222. Type locality: «Etat de Tennessée» (original citation). Lectotype (♀), designated by Bousquet (1997b: 338), in ZMMU. Synonymy established by Bousquet (1997b: 339).

Distribution. This species ranges from southwestern Maine (Majka et al. 2011: 47) and southern Quebec (CNC) to southwestern Minnesota (Gandhi et al. 2005: 932), south

to southern Texas (Wickham 1897: 107; Zapata County, CMNH) and central Florida (Peck and Thomas 1998: 23), west along the south to Riverside County in California (Dajoz 2007: 19) and the Baja California Peninsula (Horn 1894: 310; Horn 1895: 226).
Records. CAN: ON, QC **USA**: AL, AR, AZ, CA, CT, DC, DE, FL, GA, IA, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, SC, TN, TX, VA, VT, WI – Mexico

Tetragonoderus intersectus (Germar, 1824)

Bembidion intersectum Germar, 1824: 28. Type locality: «Kentucky» (original citation). Lectotype (♀), designated by Lindroth (1969a: 1012), in ZMHB.

Tetragonoderus lecontei Dejean, 1829: 499. Type locality: «Amérique septentrionale» (original citation). Two syntypes in MHNP (Lindroth 1955b: 22). Synonymy established by LeConte (1853c: 378), confirmed by Lindroth (1955b: 22).

Distribution. This species ranges from North Carolina (Moore County, CNC) to southern Arizona (Pima County, CMNH), south to Jalisco in Mexico (CMNH), southern Texas (Johnson 1978: 68), and southern Florida (Peck and Thomas 1998: 23); also known from the Bahamas (Darlington 1953: 16). The record from "Virginia" (Bousquet and Larochelle 1993: 266) needs confirmation; that from southern Ontario (Belaoussoff et al. 2003: 878) probably refers to *T. fasciatus*.
Records. USA: AL, AR, AZ, FL, GA, KY, LA, MS, NC, SC, TN, TX [VA] – Bahamas, Mexico

Tetragonoderus laevigatus Chaudoir, 1876

Tetragonoderus laevigatus Chaudoir, 1876d: 46. Type locality: «près de Montevideo, Uruguay» (original citation). One syntype (♂) in MHNP (Shpeley and Ball 2008: 7).

Tetragonoderus unicolor Chaudoir, 1876d: 47 [primary homonym of *Tetragonoderus unicolor* Gemminger and Harold, 1868]. Type locality: «province de Rio-Janeiro [Brazil]» (original citation). Lectotype (♂), designated by Shpeley and Ball (2008: 7), in MHNP. Synonymy established by Shpeley and Ball (2008: 7).

Tetragonoderus chaudoiri Liebke, 1928: 129. Replacement name for *Tetragonoderus unicolor* Chaudoir, 1876.

Distribution. This South American species is adventive in southeastern Florida (Shpeley and Ball 2008: 9). The first inventoried specimen collected on this continent was found in March 2007 (Halbert 2007: 7; Shpeley and Ball 2008: 9). In South America, the species ranges from the Baía de Marajó along the Atlantic Coast in northern Brazil to southern Uruguay and central Argentina (Shpeley and Ball 2008: Fig. 6).
Records. USA: FL – **Adventive**

Tetragonoderus latipennis LeConte, 1874

Tetragonoderus latipennis LeConte, 1874b: 44. Type locality: «Texas» (original citation). Four syntypes in MCZ [# 5798].

Distribution. This species occurs from southwestern Alabama (Baldwin and Clarke Counties, CMNH) to central Arizona (Yavapai County, CNC), south to southern Texas (Wickham 1897: 107; Johnson 1978: 68); also recorded from Mexico (Blackwelder 1944: 52).
Records. USA: AL, AR, AZ, LA, MS, TX – Mexico

Tetragonoderus pallidus Horn, 1869

Tetragonoderus pallidus G.H. Horn, 1869b: 130. Type locality: «Temescal, southern California and Arizona» (original citation). Syntype(s) in MCZ [# 34501].

Distribution. This species is known from southwestern California (Fall 1901a: 48; Moore 1937: 11) to the western tip of Texas (El Paso County, CMNH), including western Nevada (Bechtel et al. 1983: 474); also recorded from the Baja California Peninsula (Horn 1895: 226).
Records. USA: AZ, CA, NV, TX – Mexico

Tribe Lebiini Bonelli, 1810

Lebiotae Bonelli, 1810: Tabula Synoptica. Type genus: *Lebia* Latreille, 1802.

Diversity. Worldwide, with about 4,260 species arrayed in 237 genera (Lorenz 2005: 453-502, as Nemotarsina and Lebiini). The North American fauna is underrepresented both in term of species (about 155 species or 3.6% of the world fauna) and genera (25 genera or 10.5%). The lebiine genera are classified into the following 17 subtribes: Actenonycina (one New Zealand species), Agrina (about 585 species), Apenina (about 115 species), Calleidina (about 660 species), Celaenephina (two species), Cymindidina (about 315 species), Demetriadina (14 species), Dromiusina (about 735 species), Gallerucidiina (ten species), Lebiina (about 800 species), Metallicina (about 70 species), Nemotarsina (nine species), Peliocypadina (about 70 species), Pericalina (about 825 species), Physoderina (45 species), Sugimotoina (one species), and Trichina (five species).

Subtribe Pericalina Hope, 1838

Pericalidae Hope, 1838: 105 (as Pericallidae). Type genus: *Pericalus* Macleay, 1825.
Coptodérides Chaudoir, 1848: 116 (as Costodérides). Type genus: *Coptodera* Dejean, 1825.
Mormolycites Blanchard, 1845: 390. Type genus: *Mormolyce* Hagenbach, 1825. Synonymy established by Ball (1975: 149).
Thyréoptérides Chaudoir, 1870a: 113. Type genus: *Thyreopterus* Dejean, 1831.
Eucheilinae Bates, 1883a: 168. Type genus: *Eucheila* Dejean, 1829.
Miscelini Sloane, 1907: 473. Type genus: *Miscelus* Klug, 1834.
Thysanotini Jeannel, 1949a: 947, 975. Type genus: *Thysanotus* Chaudoir, 1848.
Lobodontini Jeannel, 1949a: 1007. Type genus: *Lobodontus* Chaudoir, 1842.

Somotrichini Mateu, 1963: 122, 131. Type genus: *Somotrichus* Seidlitz, 1887. Synonymy established by Ball (1975: 147).

Diversity. Worldwide, with about 825 species arrayed in 77 genera (Lorenz 2005: 454-464). The subtribe is underrepresented in the Northern Hemisphere with about 70 species (8.5% of the world fauna), of which nine (about 1%) only occur in North America.
Identification. Shpeley and Ball (2001) reviewed all 111 native species-group taxa found in the Western Hemisphere and provided keys for their identification. Their work is to be used in conjunction with a previous study (Ball and Shpeley 1983).
Taxonomic Note. In a cladistic analysis based on characters of the adults performed by Ball et al. (1995: Fig. 7), this subtribe is positioned as the sister-group to {Sugimotoina + Actenonycina}. In Casale's (1998: Fig. 91) cladistic analysis, the pericalines showed up as the sister-group to the remaining Lebiini.

Genus *Mochtherus* Schmidt-Göbel, 1846

Mochtherus Schmidt-Göbel, 1846: 76. Type species: *Mochtherus angulatus* Schmidt-Göbel, 1846 (= *Dromius tetraspilotus* Macleay, 1825) designated by Andrewes (1938: 136). Etymology (original). From the Greek *mochtheros* (toiling, suffering, wretched, by extension cheaply, stunted) [masculine].

Cyrtopterus Motschulsky, 1861: 106. Type species: *Cyrtopterus quadrinotatus* Motschulsky, 1861 (= *Dromius tetraspilotus* Macleay, 1825) designated by Habu (1967: 103). Etymology. From the Greek *cyrtos* (curved) and *pteron* (wing, by extension elytron) [masculine].

Diversity. Nine species (Lorenz 2005: 460) in the Palaearctic (eastern Asia only), Oriental, and Australian Regions, with one of them adventive in Florida.
Identification. The character states of the sole species found in North America are described in detail by Habu (1967: 104-105) under the name *Dolichoctis tetraspilotus*.
Taxonomic Note. Habu (1967: 100) treated this taxon as a subgenus of *Dolichoctis* Schmidt-Göbel.

Mochtherus tetraspilotus (Macleay, 1825)

Dromius tetraspilotus W.S. Macleay, 1825: 25. Type locality: Java (inferred from title of the book). Syntype(s) location unknown (possibly in USS).

Distribution. This species is widely distributed in Asia from India to Japan, south through the Malay Archipelago to New Guinea; it is also known from Christmas Island and Samoa. The species is adventive in southeastern United States and currently known from Florida, where the first specimens were detected in 1992 in Palm Beach County (Choate 2001), southern Mississippi (Pearl River County, Peter W. Messer pers. comm. 2010), and east-central Louisiana (West Feliciana Parish, Igor M. Sokolov pers. comm. 2009).
Records. USA: FL, LA, MS – **Adventive**

Genus *Phloeoxena* Chaudoir, 1870

Phloeoxena Chaudoir, 1870a: 145. Type species: *Phloeoxena picta* Chaudoir, 1870 designated by Ball (1975: 178). Etymology. From the Greek *phloios* (bark) and *xenos* (stranger, guest) [feminine].

Diversity. Thirty-four species in the temperate, subtropical, and tropical areas of the Nearctic (one eastern species) and Neotropical (34 species) Regions. These species are arrayed in five subgenera: *Oenaphelox* Ball (nine species), *Tacana* Ball (one species), *Phloeoxena s.str.* (15 species), *Oxephloena* Shpeley and Ball (one species), and *Ochropisus* Bates (eight species).
Identification. Shpeley and Ball (2001: 78-80) published a key for the identification of all known species.

Subgenus *Oenaphelox* Ball, 1975

Oenaphelox Ball, 1975: 205. Type species: *Coptodera signata* Dejean, 1825 by original designation. Etymology. Anagram of the generic name *Phloeoxena* [*q.v.*] [masculine].

Diversity. Nine species in North America and Middle America.

Phloeoxena signata (Dejean, 1825)

Coptodera signata Dejean, 1825: 275. Type locality: «Géorgie» (original citation), herein restricted to Billy's Island, Okefinokee Swamp, Charlton County (see Ball 1975: 222). Lectotype [as holotype] (♂), designated by Ball (1975: 213), in MHNP.
Coptodera collaris LeConte, 1846b: 197. Type locality: «Georgia» (original citation). Lectotype (♀), designated by Ball (1975: 215), in MCZ [#5810]. Synonymy established by Horn (1882: 160), confirmed by Ball (1975: 215).
Phloeoxena maculicollis Chaudoir, 1870a: 151. Type locality: «Nouvelle-Grenade» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Ball (1975: 215).
Phloeoxena högei Bates, 1883a: 178. Type locality: «Mirador [Veracruz], Mexico» (original citation for the lectotype). Lectotype (♀), designated by Ball (1975: 215), in BMNH. Synonymy established by Ball (1975: 215).
Phloeoxena signata var. *nigripennis* Leng, 1915: 587. Type locality: «Enterprise [Volusia County, Florida]» (original citation). Syntype(s) location unknown. Synonymy established (as aberration) by Csiki (1932b: 1359), accepted by Ball (1975: 215).

Distribution. This species extends from Maryland (Steiner et al. 2007: 224) to central Florida (Peck and Thomas 1998: 24) and southeastern Louisiana, and from the states of Tamaulipas and Jalisco in Mexico to Panama [see Ball 1975: Fig. 112].
Records. USA: AL, FL, GA, LA, MD, MS, NC, SC, TN, VA – Costa Rica, Guatemala, Honduras, Mexico, Nicaragua, Panama

Genus *Eucheila* Dejean, 1829

Eucheila Dejean [in Dejean and Boisduval], 1829: 60 (as *Eucheyla*). Type species: *Eucheyla flavilabris* Dejean, 1829 by monotypy. Etymology (original). From the Greek *eu* (well, large) and *cheilos* (lip), alluding to the large size of the labrum ("*lèvre supérieure très-grande*") of the adult [feminine]. Note. *Eucheila* is an incorrect subsequent spelling of *Eucheyla* Dejean, 1829 introduced by Dejean (1831: 455). The spelling *Eucheila* is in prevailing usage and attributed to the original publication by recent authors (e.g., Lorenz 2005: 463; Anichtchenko 2010: 189); therefore, it is deemed to be the correct original spelling (ICZN 1999: Article 33.3.1).

Euchila Agassiz, 1846: 146 [junior homonym of *Euchila* Billberg, 1820]. Unjustified emendation of *Eucheila* Dejean, 1829.

Diversity. Twenty-four species (Lorenz 2005: 463-464) in the Neotropical Region, one of them reaching southeastern Texas. The species are arrayed in five subgenera: *Inna* Putzeys (ten species), *Eucheila s.str.* (six species), *Pseudoinna* Mateu (four species), *Bordoniella* Mateu (two species), and *Hansus* Ball and Shpeley (two species).

Subgenus *Inna* Putzeys, 1861

Inna Putzeys, 1861: 71. Type species: *Inna punctata* Putzeys, 1861 (= *Polistichus boyeri* Solier, 1835) by monotypy. Etymology. Unknown [feminine].

Periglossium Liebke, 1929: 246. Type species: *Periglossium nevermanni* Liebke, 1929 by original designation. Synonymy established by Reichardt (1966: 14), confirmed by Ball and Shpeley (1983: 756).

Diversity. Ten species in the Neotropical Region, one of them reaching southeastern Texas.

Eucheila boyeri (Solier, 1835)

Polistichus boyeri Solier, 1835: 111. Type locality: «Colombie» (original citation). Lectotype [as holotype] (♂), designated by Ball and Shpeley (1983: 775), in MHNP (collection Oberthür). Etymology. The specific name was proposed for Etienne Laurent Joseph Hippolyte Boyer de Fonscolombe [1772-1853], pharmacist and entomologist in Aix-en-Provence in France. Boyer published mainly on economic insects and Hymenoptera and had a large entomological collection.

Inna punctata Putzeys, 1861: 72. Type locality: «Aragua [Venezuela]» (original citation). Holotype [by monotypy] (♂) in ZMHB. Synonymy established by Ball and Shpeley (1983: 775).

Inna texana Schaeffer, 1910: 400. Type locality: «Esperanza Ranch, Brownsville [Cameron County], Texas» (original citation). Lectotype (♂), designated by Erwin and House (1978: 239), in USNM [# 42508]. Synonymy established by Ball and Shpeley (1983: 775).

Distribution. This species ranges from southern Texas (Shpeley and Ball 2001: 162) south to northeastern Brazil [see Ball and Shpeley 1983: Fig. 62].
Records. USA: TX – Brazil, Colombia, Costa Rica, Guatemala, Honduras, Mexico, Netherlands Antilles, Nicaragua, Panama, Venezuela

Genus *Somotrichus* Seidlitz, 1887

Somotrichus Seidlitz, 1887: 7 [Gattung]. Type species: *Carabus elevatus* Fabricius, 1792 (= *Lebia unifasciata* Dejean, 1831) by monotypy. Etymology. From the Greek *soma* (body) and *trichos* (hair), probably alluding to the pubescence on the elytra ("*Fl*[*ü*] *g*[*el*]*d*[*ecken*] ... *dicht behaart*") of the adult [masculine].

Diversity. Two species from the Afrotropical Region, one restricted to Madagascar, the other subcosmopolitan, having been dispersed through commerce.
Identification. The character states of the species found in North America are described in detail by Habu (1967: 75-77).
Taxonomic Note. This genus was listed in the tribe Singilini (currently considered a synonym of Dromiusina) by Jeannel (1949a: 915-916) along with the genera *Singilis* Rambur (eight species in the Mediterranean region and Middle East), *Phloeozetus* Peyron (about 55 species in Africa, Mediterranean region, and Middle East), *Velindopsis* Burgeon (three Afrotropical species), *Pephrica* Alluaud (six Afrotropical species), and *Paulianites* Jeannel (one Madagascan species).

Somotrichus unifasciatus (Dejean, 1831)

Carabus elevatus Fabricius, 1792: 162 [primary homonym of *Carabus elevatus* Fabricius, 1787]. Type locality: «Parisiis [France]» (original citation). One syntype in ZMUC (Zimsen 1964: 59).
Lebia unifasciata Dejean, 1831: 389. Type locality: «Ile-de-France» (original citation). Holotype [by monotypy] in MHNP. Synonymy established by Brullé (1834a: 108).
Coptodera 2-cincta Hope, 1845: 15. Type locality: Canton (= Guangzhou in Guangdong province), China (inferred from title on page 13). Syntype(s) location unknown (possibly in UMO). Synonymy established by Andrewes (1919: 178).
Coptodera massiliensis Fairmaire, 1850: 419. Type locality: «Marseille [France]» (original citation). Syntype(s) location unknown (possibly in MHNP). Synonymy established by Chaudoir (1854: 133).

Distribution. This species is adventive in North America where it is known from Randolph County in North Carolina (Peter W. Messer pers. comm. 2012), Aiken County in South Carolina (Peter W. Messer pers. comm. 2011), Telfair and Jeff Davis Counties in southern Georgia (Harry J. Lee, Jr. pers. comm. 2010), Broward County in Florida (Peck and Thomas 1998: 25), Polk and Garland Counties in Arkansas (CMNH), and Santa Cruz County in southern Arizona (Ober and Maddison 2008: 30, as *S. elevatus*). The record from Seattle, Washington (Hatch 1953: 153) is based on specimens inter-

cepted in nuts from Brazil; that from "Texas" (Bousquet and Larochelle 1993: 270) needs confirmation.
Records. USA: AR, AZ, FL, GA, NC, SC [TX] – **Adventive**

Genus *Coptodera* Dejean, 1825

Coptodera Dejean, 1825: 273. Type species: *Coptodera festiva* Dejean, 1825 designated by Hope (1838: 85). Etymology (original). From the Greek *copto* (to cut, chop) and *dere* (neck, by extension pronotum), alluding to the straight (i.e., without lobe as in *Lebia*) basal edge of the pronotum ("*corselet ... coupé carrément postérieurement*") of the adult [feminine].

Diversity. About 105 species (Lorenz 2005: 457-458) in the Nearctic (five species), Neotropical (43 species), Australian, Afrotropical, Oriental, and Palaearctic (13 species in eastern Asia only) Regions. These species are arrayed in four subgenera: *Coptodera s.str.* (about 45 species), *Haplocrepis* Jeannel (six Afrotropical species), *Coptoderina* Jeannel (53 species), and *Coptoderinella* Hansen (one Afrotropical species).

Subgenus *Coptodera* Dejean, 1825

Coptodera Dejean, 1825: 273. Type species: *Coptodera festiva* Dejean, 1825 designated by Hope (1838: 85).
Stenoglossa Chaudoir, 1848: 116. Type species: *Stenoglossa variegata* Chaudoir, 1848 (= *Coptodera sallei* Shpeley and Ball, 1994) by monotypy. Synonymy established by Shpeley and Ball (1994: 18). Etymology. From the Greek *stenos* (narrow) and *glossa* (tongue), alluding to the narrow ligula ("*ligula longissima angustissimaque*") of the adult [feminine].

Diversity. About 45 species in temperate, subtropical, and tropical areas of the Western Hemisphere arrayed in 11 species groups. Five species are found in North America.
Identification. Shpeley and Ball (1994) revised the species and provided a key for their identification.

[**aerata group**]

Coptodera aerata Dejean, 1825

Coptodera aerata Dejean, 1825: 277. Type locality: «Amérique septentrionale» (original citation), restricted to «Jone's Creek, Lee Co[unty], V[irgini]a» by Lindroth (1969a: 1039). Lectotype (♂), designated by Shpeley and Ball (1994: 118), in MHNP.
Coptodera viridipennis Gory, 1833: 194. Type locality: «Java» (original citation), which is incorrect (Shpeley and Ball 1994: 118). Lectotype [as holotype] (♂), designated by Shpeley and Ball (1994: 118), in MHNP (collection Chaudoir). Synonymy established by Chaudoir (1850a: 357), confirmed by Shpeley and Ball (1994: 118).

Coptodera viridipennis LeConte, 1846b: 196 [primary homonym of *Coptodera viridipennis* Gory, 1833]. Type locality: «Alabama» (original citation). Lectotype (♂), designated by Shpeley and Ball (1994: 118), in MCZ [# 34513]. Synonymy established by Melsheimer (1853: 6), confirmed by Shpeley and Ball (1994: 118).

Coptodera ruficornis Chaudoir, 1870b: 179. Type locality: «états méridionaux de l'Union américaine» (original citation). Holotype [by monotypy; designated lectotype by Shpeley and Ball (1994: 119)] (♀) in MHNP. Synonymy established by Horn (1882: 160), confirmed by Shpeley and Ball (1994: 119).

Distribution. The range of this species extends from Connecticut (New London County, William L. Krinsky pers. comm. 2012) to southeastern Nebraska, south to eastern Texas and west-central Florida [see Shpeley and Ball 1994: map 19]. According to Shpeley and Ball (1994: 119), the specimens labeled from Gallatin County in Montana (CAS) and Santa Cruz County in Arizona (AMNH) are probably mislabeled.
Records. USA: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MD, MI, MO, MS, NC, NE, NJ, NY, OH, OK, PA, SC, TN, TX, VA, WV

Coptodera brunnea Shpeley and Ball, 1994

Coptodera brunnea Shpeley and Ball, 1994: 116. Type locality: «Guadalupe Canyon, Cochise County, Arizona» (original citation). Holotype (♂) in USNM.

Distribution. This species is found from southeastern Arizona and southeastern New Mexico south to Honduras and Belize [see Shpeley and Ball 1994: map 18].
Records. USA: AZ, NM – Belize, Honduras, Mexico

Coptodera nitidula (Buquet, 1835)

Lebia nitidula Buquet, 1835: 677. Type locality: «Guyane centrale» (original citation). Lectotype [as holotype] (♂), designated by Shpeley and Ball (1994: 112), in MHNP. Note. The specimen selected as lectotype is labeled "Brézil" (Shpeley and Ball 1994: 112) and therefore may not be a syntype.

Lebia triangularis Buquet, 1835: 678. Type locality: «non loin des sources du Jari [Brazil]» (original citation). Lectotype [as holotype] (♂), designated by Shpeley and Ball (1994: 112), in MHNP. Synonymy established by Shpeley and Ball (1994: 112).

Coptodera luculenta Erichson, 1847: 69. Type locality: Peru (inferred from title of the paper). Lectotype [as holotype] (♂), designated by Shpeley and Ball (1994: 112), in MHNP. Synonymy established, under the name *C. triangularis* (Buquet), by Chaudoir (1870b: 185), confirmed by Shpeley and Ball (1994: 112).

Coptodera debilis Bates, 1869: 76. Type locality: «St. Paulo [= possibly São Paulo de Olivença, Brazil], Upper Amazons» (original citation). Lectotype (♀), designated by Shpeley and Ball (1994: 112), in MHNP. Synonymy established by Bates (1871: xvi), confirmed by Shpeley and Ball (1994: 112).

Coptodera nubiculosa Chaudoir, 1870b: 186. Type locality: «Paramaribo [Surinam]» (lectotype label). Lectotype (♂), designated by Shpeley and Ball (1994: 112), in MHNP. Synonymy established by Shpeley and Ball (1994: 112).

Coptodera flavodisca Chaudoir, 1870b: 187. Type locality: «Ega (Haut-Amazone) [Brazil]» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Shpeley and Ball (1994: 112).

Coptodera flavodisca var. *immaculipennis* Bates, 1883a: 182. Type locality: «San Gerónimo, Guatemala» (original citation for the lectotype). Lectotype, designated by Shpeley and Ball (1994: 112), in BMNH. Synonymy established by Shpeley and Ball (1994: 112).

Distribution. The range of this species extends from southern Arizona and southwestern New Mexico south to southeastern Brazil and northern Argentina [see Shpeley and Ball 1994: map 17].

Records. USA: AZ, NM – Argentina, Bolivia, Brazil, Colombia, Costa Rica, Ecuador, Guatemala, Guyana, Mexico, Nicaragua, Panama, Paraguay, Peru, Surinam, Trinidad and Tobago, Venezuela

[**festiva group**]

***Coptodera festiva* Dejean, 1825**

Coptodera festiva Dejean, 1825: 274. Type locality: «île de Cuba» (original citation). Holotype [by monotypy; designated lectotype by Shpeley and Ball (1994: 82)] (♂) in MHNP.

Coptodera chloris Bates, 1883a: 182. Type locality: «Mirador [Veracruz], Mexico» (original citation). Lectotype (♂), designated by Shpeley and Ball (1994: 82), in BMNH. Synonymy established by Shpeley and Ball (1994: 82).

Distribution. This species occurs in southern Florida, the West Indies, and from Mexico (as far north as San Luis Potosí) to Brazil [see Shpeley and Ball 1994: map 12].

Records. USA: FL – Brazil, Colombia, Costa Rica, Cuba, Ecuador, Guatemala, Haiti, Jamaica, Mexico, Panama, Puerto Rico, Venezuela

[**picea group**]

***Coptodera picea* Dejean, 1826**

Coptodera picea Dejean, 1826: 458. Type locality: «Brésil» (original citation). Lectotype (♂), designated by Shpeley and Ball (1994: 108), in MHNP.

Coptodera velox Gory, 1833: 195. Type locality: «Cayenne [French Guiana]» (original citation). Lectotype [as holotype] (♂), designated by Shpeley and Ball (1994: 108), in MHNP. Synonymy established by Chaudoir (1850a: 357), confirmed by Shpeley and Ball (1994: 108).

Coptodera unicolor Chevrolat, 1834: [no. 40]. Type locality: «Orixaba [Mexico]» (original citation). Lectotype (♀), designated by Shpeley and Ball (1994: 108), in UMO. Synonymy established by Shpeley and Ball (1994: 108).

Coptodera obscura Laporte, 1834: 51. Type locality: «Orizaba [Veracruz], Mexique» (original citation). Syntype(s) location unknown (possibly in MHNP). Synonymy established, under the name *C. unicolor* Chevrolat, by Chaudoir (1850a: 358).

Lebia rufula Buquet, 1835: 680. Type locality: «environs de Cayenne [French Guiana]» (original citation). Lectotype [as holotype] (♂), designated by Shpeley and Ball (1994: 108), in MHNP. Synonymy established by Chaudoir (1870b: 178), confirmed by Shpeley and Ball (1994: 108).

Distribution. This species is known from the tip of Florida, the West Indies, including the Bahamas (Turnbow and Thomas 2008: 12), Cuba, and the Dominican Republic (Shpeley and Ball 2001: 148), and from the state of San Luis Potosí in Mexico to southeastern Brazil [see Shpeley and Ball 1994: map 16].

Records. USA: FL – Bahamas, Belize, Bolivia, Brazil, Colombia, Cuba, Dominican Republic, Ecuador, French Guiana, Guatemala, Guyana, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Surinam, Trinidad and Tobago, Venezuela

Subtribe Cymindidina Laporte, 1834

Cymindidae Laporte, 1834: 46. Type genus: *Cymindis* Latreille, 1805. Note. The stem of *Cymindis* is *Cymindid-* (Madge 1989: 462).

Taridae Gistel, 1848b: [2]. Type genus: *Tarus* Clairville, 1806 (= *Cymindis* Latreille, 1805).

Pseudomasoreini Jeannel, 1942: 1039. Type genus: *Pseudomasoreus* Desbrochers des Loges, 1904. Synonymy established by Ball and Hilchie (1983: 132).

Diversity. About 315 species (Lorenz 2005: 465-470, excluding *Metaxymorphus*) in the Nearctic (27 species), Neotropical (12 species), Oriental (six species), Palaearctic (about 170 species), and Afrotropical (about 115 species) Regions. These species are arrayed in nine genera: *Taridius* Chaudoir (four Oriental species), *Afrotarus* Jeannel (seven species in Africa, Arabia, and India), *Cymindis* (about 200 species), *Petrimagnia* Kryzhanovskij and Mikhailov (one species from Tadzhikistan), *Leptosarcus* Péringuey (two Afrotropical species), *Pseudomasoreus* Desbrochers des Loges (20 species in Africa, one of them extending into southwestern Europe), *Assadecma* Basilewsky (one Madagascan species), *Hystrichopus* Boheman (about 70 species in Africa and one in Yemen), and *Plagiopyga* Boheman (13 Afrotropical species). According to Ball and Hilchie (1983: 197), the Afrotropical genus *Metaxymorphus* Chaudoir belongs to the subtribe Dromiusina. On the other hand, Basilewsky (1984: 551), followed by Lorenz (2005: 470), listed it, but with strong doubt, with the Cymindidina.

Genus *Cymindis* Latreille, 1805

Cymindis Latreille, 1805: 190. Type species: *Buprestis humeralis* Geoffroy, 1785 by monotypy. Etymology. From the Greek *cymindis* (kind of hawk in Pliny the Elder)

[feminine]. Note. Bousquet and Larochelle (1993: 267-269) treated *Cymindis* as masculine but the name is feminine (Theil 1882: 709).

Tarus Clairville, 1806: 94, 95. Type species: *Buprestis humeralis* Geoffroy, 1785 designated by Curtis (1828: plate 235).

Diversity. About 200 species (Lorenz 2005: 465-469, as *Pinacodera* and *Cymindis*) in the Nearctic (27 species), Neotropical (13 species), and Palaearctic (167 species) Regions arrayed in 15 subgenera.

Taxonomic Note. Ball and Hilchie (1983) regarded *Afrotarus*, *Pinacodera*, and *Taridius* as subgenera of *Cymindis*, implicitly considering all 14 subgenera of *Cymindis* currently recognized in Lorenz (2005) as synonyms of *Cymindis s.str.* For practical reasons this approach is not followed here except that *Pinacodera* is retained as a subgenus of *Cymindis*.

Subgenus *Tarulus* Bedel, 1906

Tarulus Bedel, 1906: 253. Type species: *Tarus zargoides* Wollaston, 1863 by monotypy. Etymology. From the generic name *Tarus* [*q.v.*] and the Latin suffix *-ulus* (small, little) [masculine].

Diversity. Twenty-one species in North America (16 species, one of them Holarctic), Mexico (two species shared with North America), Eurasia (two species, one endemic to eastern Asia), and North Africa (four endemic species).

Identification. Lindroth (1969a) reviewed all North American species. Since then, one Palaearctic species *(C. vaporariorum*) has been found to occur naturally also in North America. Shpeley and Ball (1999: 420-421) published an emendation to Lindroth's (1969a: 1072-1073) key of *Cymindis* to incorporate *C. vaporariorum* and commented on the structural differences to separate that species from *C. unicolor* which is most similar externally.

Taxonomic Note. Lorenz (2005) listed all Nearctic species in the subgenus *Cymindis s.str.* However, Lindroth (1969a: 1070) noted that the North American species belong to the subgenus *Tarulus*, to which *C. vaporariorum* is included.

Cymindis americana Dejean, 1826

Cymindis americana Dejean, 1826: 446. Type locality: «Amérique septentrionale» (original citation), restricted to «Concord [Middlesex County], Mass[achusetts]» by Lindroth (1969a: 1079). One syntype in MHNP (Lindroth 1955b: 25).

Cymindis venator Dejean, 1831: 311. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 25). Synonymy established by Horn (1882: 162), confirmed by Lindroth (1955b: 25).

Cymindis continens Casey, 1920: 287. Type locality: «Colorado» (original citation), which is probably incorrect (Lindroth 1969a: 1082). Lectotype (♀), designated by Lindroth (1975: 146), in USNM [# 47607]. Synonymy established by Lindroth (1969a: 1079).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 78) to eastern South Dakota (Kirk and Balsbaugh 1975: 39), south to northeastern Texas (Lamar County, Brian Raber pers. comm. 2010), southern Louisiana (Chaudoir 1873c: 103), northern Alabama (Madison County, CMNH), and southeastern South Carolina (Ciegler 2000: 119). The record from "Florida" (Bousquet and Larochelle 1993: 267) needs confirmation.
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, GA, KS, IA, IL, IN, KY, LA, MA, MD, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [FL]

Cymindis arizonensis Schaeffer, 1910

Cymindis arizonensis Schaeffer, 1910: 400. Type locality: «Huachuca M[oun]t[ain]s, Arizona» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1969a: 1074), in USNM.

Cymindis zuniana Casey, 1913: 181. Type locality: «Benson [Cochise County], Arizona» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 145), in USNM [# 47591]. Synonymy established by Lindroth (1969a: 1075).

Distribution. This species ranges from southwestern California to "New Mexico" (Lindroth 1969a: 1075).
Records. USA: AZ, CA, NM

Cymindis borealis LeConte, 1863

Cymindis borealis LeConte, 1863c: 7. Type locality: «North Red River; Nova Scotia» (original citation), restricted to «North Red River [either in southern Manitoba or on Minnesota-Dakota line]» by Lindroth (1969a: 1082). Five syntypes in MCZ [# 5830].

Distribution. The range of this species extends from Newfoundland (Lindroth 1955a: 132) to southern British Columbia, south to "New Mexico" (Lindroth 1969a: 1082), northern Wisconsin along Lake Superior (Wickham 1896c: 135; MCZ), northwestern Pennsylvania (Erie County, CMNH), and Connecticut (Krinsky and Oliver 2001: 272). The record from "South Dakota" (Bousquet and Larochelle 1993: 267) is probably in error.
Records. CAN: AB, BC, MB, NB, NF, NS (CBI), ON, QC, SK **USA**: CO, CT, ME, MI, MN, ND, NH, NM, NY, PA, UT, VT, WI, WY

Cymindis californica Horn, 1895

Cymindis californica G.H. Horn, 1895: 231. Type locality: «San Luis Obispo [San Luis Obispo County, California]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 34519].

Distribution. This species is known so far only from the holotype (Lindroth 1969a: 1086) collected in southwestern California.
Records. USA: CA

***Cymindis cribricollis* Dejean, 1831**

Cymindis cribricollis Dejean, 1831: 311. Type locality: «Amérique septentrionale» (original citation), restricted to «Rumney [Grafton County], N[ew] H[ampshire]» by Lindroth (1969a: 1075). One syntype in MHNP (Lindroth 1955b: 24).

Cymindis marginatus Kirby, 1837: 13. Type locality: «from New York to Cumberland-house; Lat. 65° [= apparently region of Great Bear Lake, Northwest Territories]» (original citation), restricted to «Fort Wrigley, N[orth] W[est] T[erritories]» by Lindroth (1969a: 1075). Two syntypes [2 originally cited] in BMNH (Lindroth 1953b: 169). Synonymy established by LeConte (1846b: 186), confirmed by Lindroth (1953b: 169).

Cymindis reflexa LeConte, 1850: 203. Type locality: Lake Superior (inferred from title of the paper). Four syntypes in MCZ [# 5824]. Synonymy established by LeConte (1869b: 244), confirmed by Lindroth (1955a: 131).

Cymindis abstrusa LeConte, 1859a: 82. Type locality: «Washington Territory» (original citation). Syntype(s) in MCZ [# 5825]. Synonymy established by Henshaw (1882: 209), confirmed by Lindroth (1969a: 1075).

Cymindis acomana Casey, 1913: 181. Type locality: «New Mexico» (original citation). Lectotype (♂), designated by Lindroth (1975: 145), in USNM [# 47597]. Synonymy established by Lindroth (1954b: 140).

Cymindis rupimontis Casey, 1913: 183. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47601]. Synonymy established by Lindroth (1954b: 141).

Cymindis alticola Casey, 1913: 183. Type locality: «White M[oun]t[ain]s, New Hampshire» (original citation). Lectotype (♂), designated by Lindroth (1975: 145), in USNM [# 47603]. Synonymy established by Lindroth (1954b: 141).

Cymindis kirbyi Casey, 1924: 88. Type locality: «Caribou District, British Columbia» (original citation). Holotype [by monotypy] (♂) in USNM [# 47602]. Synonymy established by Hatch (1953: 158), confirmed by Lindroth (1954b: 141).

Cymindis planifera Casey, 1924: 89. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♂) in USNM [# 47598]. Synonymy established by Lindroth (1954b: 141).

Cymindis obliqua Casey, 1924: 89. Type locality: «Edmonton, Alberta» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47598]. Synonymy established by Lindroth (1954b: 141).

Cymindis sinuata Casey, 1924: 90 [primary homonym of *Cymindis sinuata* Reiche and Saulcy, 1855]. Type locality: «New Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47595]. Synonymy established by Lindroth (1954b: 141).

Cymindis alternans Casey, 1924: 90 [primary homonym of *Cymindis alternans* Rambur, 1837]. Type locality: «probably Colorado» (original citation). Holotype [by monotypy] (♀) in USNM [# 47596]. Synonymy established by Lindroth (1954b: 141).

Cymindis tarda Liebke, 1927: 104. Replacement name for *Cymindis sinuata* Casey, 1924.

Cymindis caseyi Liebke, 1927: 104. Replacement name for *Cymindis alternans* Casey, 1924.

Distribution. This widely distributed species ranges from Newfoundland (Lindroth 1955a: 131) to Vancouver Island, north to Yukon Territory (Lindroth 1969a: 1076), south to "Oregon" (Horn 1882: 152), southeastern Arizona (Snow 1906b: 162), southern New Mexico (Otero County, CMNH; Lindroth 1969a: 1076), northeastern South Dakota (Kirk and Balsbaugh 1975: 38), and western Maryland (Bailey et al. 1994: 320). The records from "Prince Edward Island" (Bousquet and Larochelle 1993: 267, see Majka et al. 2008: 133), "Kansas" (Horn 1872c: 385), and "Nebraska" (Wickham 1896c: 135) need confirmation; that from southern California (Moore 1937: 12) is probably in error though one old specimen labeled "Cal." is known (MCZ).
Records. FRA: PM **CAN**: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, QC, SK, YT **USA**: AZ, CO, CT, MA, MD, ME, MI, MN, MT, ND, NH, NJ, NM, NY, OH, OR, PA, RI, SD, UT, VT, WA, WI, WY [CA, KS, NE, PE]

Cymindis elegans LeConte, 1846

Cymindis elegans LeConte, 1846b: 186. Type locality: «provinciis australibus» (original citation). Syntype(s) in MCZ [# 5827].

Cymindis elegans mobilensis Casey, 1920: 288. Type locality: «Mobile [Mobile County], Alabama» (original citation). Two syntypes in USNM [# 47606]. **New synonymy**.

Distribution. This species is found from Massachusetts (Darlington 1936b: 148; Hampden County, MCZ) south to the Florida Panhandle (Peck and Thomas 1998: 24) and southwestern Alabama (Casey 1920: 288).
Records. USA: AL, DC, FL, GA, MA, NC, NJ, NY, RI, SC

Cymindis evanescens Casey, 1913

Cymindis evanescens Casey, 1913: 179. Type locality: «Marysvale [Piute County], Utah» (original citation). Lectotype (♂), designated by Lindroth (1975: 146), in USNM [# 47594].

Distribution. This species is known from a few localities in southern Oregon (Westcott et al. 2006: 8; Harney County, CMNH; Lake County, Foster F. Purrington pers. comm. 2009), west-central Idaho (Valley County, USNM), southwestern Wyoming (Parmenter and MacMahon 1984: 26), south-central Utah (Casey 1913: 179; Knowlton 1939: 2; Piute County, MCZ), "Nevada" (CMNH, MCZ), and east-central California (Lindroth 1969a: 1079). The record from Seattle, Washington (Hatch 1953: 158) needs confirmation.
Records. USA: CA, ID, NV, OR, UT, WY [WA]

Cymindis interior Lindroth, 1969

Cymindis interior Lindroth, 1969a: 1074. Type locality: «Albuquerque [Bernalillo County], New Mex[ico]» (original citation). Holotype (♂) in MCZ [# 34676].

Distribution. This species is found from the southern part of the Prairie Provinces south to southeastern Arizona (Graham County, UASM), central New Mexico (Lindroth 1969a: 1074), western Texas (Ward County, Ken Karns pers. comm. 2009), and northwestern Oklahoma (Woods County, CMNH).
Records. CAN: AB, MB, SK **USA**: AZ, CO, KS, MN, ND, NE, NM, OK, SD, TX, WY

Cymindis laticollis Say, 1830

Cymindis laticollis Say, 1830a: 134. Type locality: «Col[orado]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 350), in MCZ [# 33002]. Note. «near the Rocky Mountains» was the area originally cited by Say (1830a: 134).
Cymindis villigera Chaudoir, 1873c: 96. Type locality: «Texas» (original citation). Holotype [by monotypy] (♀) in MHNP. Synonymy established by Horn (1882: 162), confirmed by Lindroth (1969a: 1073).

Distribution. This species ranges from northwestern South Dakota (Kirk and Balsbaugh 1975: 38) to western Montana (Hatch 1933a: 9), south to northern Sonora (Bates 1884: 296) and southern Texas (Sutton, Val Verde, Edwards, and Colorado Counties, CMNH). The record from "Arkansas" (Bousquet and Larochelle 1993: 268) needs confirmation; those from southern Wisconsin (Rauterberg 1885: 14) and southwestern California (Moore 1937: 12) are probably in error.
Records. USA: AZ, CO, KS, MT, NM, OK, SD, TX, WY [AR] – Mexico

Cymindis neglecta Haldeman, 1843

Cymindis neglecta Haldeman, 1843b: 298. Type locality: southeastern Pennsylvania (Haldeman 1843a: 295). One possible syntype, a ♀ labeled "[pink disc] / C. neglecta Hald. [handwritten]," in MCZ (collection LeConte).

Distribution. The range of this species extends from Sable Island (Christopher G. Majka pers. comm. 2007) off the coast of Nova Scotia to southern Alberta (Lindroth 1969a: 1086), south to northwestern South Dakota (Kirk and Balsbaugh 1975: 39) and southern South Carolina (Ciegler 2000: 119).
Records. CAN: AB, MB, NB, NS, ON, QC, SK **USA**: CT, DC, DE, IA, IL, IN, MA, ME, MI, MN, NC, ND, NH, NJ, NY, OH, PA, SC, SD, VA, VT, WI, WV

Cymindis pilosa Say, 1823

Cymindis pilosus Say, 1823a: 10. Type locality: «Dorchester [Suffolk County], Mass[achusetts]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 350), in MCZ [# 33000].

Cymindis pubescens Dejean, 1825: 215. Type locality: «Amérique septentrionale» (original citation). Two syntypes in MHNP (Lindroth 1955b: 24). Synonymy established by Dejean (1826: 446), confirmed by Lindroth (1955b: 24).

Cymindis cribrata LeConte, 1859c: 2. Type locality: «Nebraska» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5829]. Synonymy established by Lindroth (1969a: 1083).

Distribution. This species ranges from southern Quebec (Larochelle 1975: 79) to southeastern North Dakota (Ransom County, CNC), north to southwestern Manitoba (Stjernberg 2011: 71), south to "Texas" (Lindroth 1969a: 1083) and northeastern Florida (Duval County, USNM). The record from the state of Puebla in Mexico (Bates 1891a: 270) needs confirmation.

Records. CAN: MB, ON, QC **USA**: AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Cymindis planipennis LeConte, 1863

Cymindis planipennis LeConte, 1863c: 6. Type locality: «New Mexico» (original citation). Four syntypes in MCZ [# 5826].

Cymindis brevipennis Zimmermann [in LeConte], 1869b: 243. Type locality: «Kansas» (original citation). Syntype(s) probably lost. Synonymy established by Horn (1882: 162), confirmed by Lindroth (1969a: 1077).

Cymindis bipartita Casey, 1913: 185. Type locality: «Green River [Sweetwater County], Wyoming» (original citation). Lectotype (♂), designated by Lindroth (1975: 145), in USNM [# 47604]. Synonymy established by Lindroth (1969a: 1077).

Cymindis directa Casey, 1920: 286. Type locality: «Akron [Washington County], Colorado» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47605]. Synonymy established by Lindroth (1969a: 1077).

Cymindis govanica Casey, 1924: 89. Type locality: «Govan [Lincoln County], Washington» (original citation). Lectotype (♀), designated by Lindroth (1975: 146), in USNM [# 47599]. Synonymy established, under the name *C. brevipennis* Zimmermann, by Hatch (1953: 159), confirmed by Lindroth (1969a: 1077).

Distribution. The range of this species extends from southern Manitoba to the Okanagan Valley in south-central British Columbia, north to southern Northwest Territories (Lindroth 1969a: 1078), south to northern Oregon (Baker and Wasco Counties, CMNH, USNM; Hatch 1953: 158), northern Arizona (Coconino County, USNM; Snow 1906b: 162), northwestern Texas (Potter County, USNM), and Wisconsin (Purrington and Maxwell 1998: 190); also known from one specimen collected in southern Quebec (Lindroth 1969a: 1078).

Records. CAN: AB, BC, MB, NT, QC, SK **USA**: AZ, CO, IA, ID, KS, MN, MT, ND, NE, NM, NV, OR, SD, TX, UT, WA, WI, WY

Cymindis seriata Hatch, 1953

Cymindis seriata Hatch, 1953: 158. Type locality: «Steilacoom [Pierce County], Wash[ington]» (original citation). Holotype (♂) in USNM.

Distribution. This species is known from a few localities in Washington (Hatch 1953: 158) and western Oregon (Westcott et al. 2006: 8).
Records. USA: OR, WA

Cymindis unicolor Kirby, 1837

Cymindis unicolor Kirby, 1837: 14. Type locality: northern parts of British America (inferred from title of the paper), restricted to «Fort Smith, N[orth] W[est] Terr[itories]» by Lindroth (1969a: 1083). Holotype [by monotypy] in BMNH (Lindroth 1953b: 169).

Cymindis hudsonica LeConte, 1863c: 6. Type locality: «Methy Lake [Saskatchewan] and Labrador» (original citation). One syntype in MCZ [# 5828]. Synonymy established by LeConte (1873b: 322), confirmed by Lindroth (1955a: 130).

Cymindis parowana Casey, 1924: 88. Type locality: «Parowan M[oun]t[ain]s (10000 ft.) [Juab County] Utah» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 146), in USNM [# 47592]. Synonymy established by Lindroth (1955a: 130).

Distribution. This species occurs from Newfoundland (Lindroth 1955a: 131) to southwestern Yukon Territory (Shpeley and Ball 1999: 422), south to the Sierra Nevada in east-central California (Papp 1978: 165; Nelson 1988a: Fig. 1), Santa Catalina Mountains in southern Arizona (Nelson 1988a: Fig. 1), and southern Colorado (Wickham 1902: 240; Lindroth 1969a: 1085); isolated on some mountains of northern New England. The records from "Vermont," "Massachusetts," "Connecticut," and "Rhode Island" (Erwin et al. 1977: 4.58) are likely in error; that from Alaska (Lindroth 1969a: 1085) probably refers to *C. vaporariorum* Linnaeus (Shpeley and Ball 1999: 423). Fossil remnants of this species, dated between 11,200 and 20,530 years old, have been found in northeastern Wisconsin (Schwert 1992: 78), south-central Minnesota (Ashworth et al. 1981: 77), and southeastern and northeastern Iowa (Baker et al. 1986: 96; Schwert 1992: 78; Woodman et al. 1996: 17).
Records. CAN: AB, BC, LB, MB, NF, NT, NU, ON, QC, SK, YT **USA**: AZ, CA, CO, ME, MT, NH, OR, UT, WA, WY

Cymindis uniseriata Bates, 1884

Cymindis uniseriata Bates, 1884: 296. Type locality: «Pinos Altos in Chihuahua, Mexico» (original citation). Syntype(s) probably in BMNH.

Cymindis agitata Casey, 1920: 285. Type locality: «Colonia Garcia, Chihuahua, Mexico» (original citation). Lectotype (♀), designated by Lindroth (1975: 146), in USNM [# 47593]. Synonymy established by Lindroth (1969a: 1085).

Distribution. This species is known from southeastern Arizona (Bousquet and Larochelle 1993: 334) and central New Mexico (Torrance County, Ken Karns pers. comm. 2009) south to the state of Durango along the Sierra Madre Occidental (Ball and Shpeley 1992a: 61).
Records. USA: AZ, NM – Mexico

***Cymindis vaporariorum* (Linnaeus, 1758)**

Carabus vaporariorum Linnaeus, 1758: 415. Type locality: «Europa» (original citation), restricted to «Uppsala, Suecia» by Lindroth (1957b: 339). One possible syntype in LSL (Lindroth 1957b: 335).

Carabus humeralis Paykull, 1790: 40 [secondary homonym of *Cymindis humeralis* (Geoffroy, 1785)]. Type locality: Sweden (inferred from title of the book). Syntype(s) probably in NRSS. Synonymy established by Chaudoir (1850b: 86).

Cymidis basalis Gyllenhal, 1810: 174. Type locality: Sweden (inferred from title of the book). Syntype(s) probably in UZIU. Synonymy established by Germar (1840b: 442). Note. Gyllenhal (1810: 172-175) used the spelling *Cymidis*, an incorrect subsequent spelling of *Cymindis*.

Cymindis punctata Dejean, 1825: 214. Type locality: «Suède; Alpes de la Haute Styrie; dans les Pyrénées orientales au Canigou et Carlitte; Alpes du Piémont» (original citation). Syntype(s) in MHNP. Synonymy established with the name *C. basalis* Gyllenhal by Dejean (1825: 214).

Cymindis immaculata Dejean [in Dejean and Boisduval], 1829: 93. Type locality: «Kamtschatka [Russia]» (original citation). Syntype(s) in MHNP. Synonymy established (as aberration) by Csiki (1932b: 1482).

Cymindis intricata Motschulsky, 1844: 46. Type locality: «Alpes du Hamar-Daban au sud du Baïcal et auprès de Tourkinsk au N[ord] O[uest] du Baïcal, Sibérie orientale [Irkutsk Oblast, Russia]» (original citation). Three syntypes in ZMMU (Keleinikova 1976: 201). Synonymy established, under the name *C. immaculata* Dejean, by Chaudoir (1850b: 87).

Tarus gebleri Motschulsky, 1850a: 40. Type locality: «Altaïi» (original citation). One syntype, listed as "corruptum," in ZMMU (Keleinikova 1976: 199). Synonymy established, under the name *C. vaporariorum immaculata* Dejean, by Emetz (1976: 227). Note. According to Emetz (1976: 227), the syntype is labeled "Alp. Altai, Ajan [= Ayan, a city along the coast of the Sea of Okhotsk, in northern Khabarovskii Kray Province, Russia]."

Tarus dilatipennis Motschulsky, 1865: 300. Type locality: «Ajan [Khabarovsk Kray], Sib[érie] or[ientale]» (original citation). One syntype in ZMMU (Keleinikova 1976: 195). Synonymy established by Chaudoir (1873c: 99).

Cymindis subarcticus Kano, 1933: 96. Type locality: «Oboedomari near Ohtomari, S. Saghalien [Russia]» (original citation). Holotype (♀) in USMT (Habu 1967: 69). Synonymy established, under the name *C. vaporariorum immaculata* Dejean, by Habu (1982: 122).

Cymindis subarcticus asahiensis Habu and Baba, 1962: 13. Type locality: «M[oun]t Asahidake (2,300 m), Niigata Prefecture, Honshu, Japan» (original citation). Holotype (♂) in NIAS. Synonymy established, under the name *C. vaporariorum immaculata* Dejean, by Habu (1982: 122).

Distribution. This Holarctic species ranges from Ireland to the Far East, south to Spain, Portugal, Greece, Kazakhstan, Mongolia, northern China (Kabak 2003: 418), and in the Nearctic Region from Alaska to northwestern Northwest Territories [see Shpeley and Ball 1999: Fig. 6].
Records. CAN: NT, YT **USA**: AK – **Holarctic**

Subgenus *Pinacodera* Schaum, 1857

Pinacodera Schaum, 1857a: 294. Type species: *Cymindis limbata* Dejean, 1831 designated by Lindroth (1969a: 1067). Etymology. From the Greek *pinacos* (board, tablet, chart) and *dere* (neck, by extension pronotum) [feminine].

Planesus Motschulsky, 1864: 240. Type species: *Cymindis fuscata* Dejean, 1831 (= *Lebia platicollis* Say, 1823) by original designation. Synonymy established by Chaudoir (1875: 2).

Diversity. Nineteen species in the temperate, subtropical, and tropical regions of North America (11 species) and Middle America (11 species).
Identification. Casey (1920) published a key to all but three (*P. complanata*, *P. punctigera*, and *P. punctifera*) of the currently valid North American species. As usual his key is difficult to use. A taxonomic revision of the subgenus is needed.
Taxonomic Note. Lorenz (2005: 465) listed *Pinacodera* as a valid genus. However, Ball and Hilchie (1983: 149) presented arguments to treat this group as a subgenus of *Cymindis*.

Cymindis abbreviata (Casey, 1920)

Pinacodera abbreviata Casey, 1920: 283. Type locality: «Colorado» (original citation). One syntype in USNM [# 47614].

Distribution. This species is known only from the type series.
Records. USA: CO

Cymindis ampliata (Casey, 1920)

Pinacodera ampliata Casey, 1920: 282. Type locality: «Colorado» (original citation). One syntype in USNM [# 47611].

Distribution. This species is known only from the type series.
Records. USA: CO

Cymindis atripennis (Casey, 1920)

Pinacodera atripennis Casey, 1920: 284. Type locality: «Florida» (original citation). Holotype [by monotypy] in USNM [# 47613].

Distribution. This species ranges from east-central Georgia (Emanuel County, UASM) to southern Florida (Collier County, CMNH). The record from "South Carolina" (Bousquet and Larochelle 1993: 268) needs confirmation.
Records. USA: FL, GA [SC]

Cymindis blanda Casey, 1913

Cymindis blanda Casey, 1913: 184. Type locality: «Douglas, Cochise Co[unty], Arizona» (original citation). Three syntypes [3 originally cited] in USNM [# 47608].

Distribution. This species is known only from the type locality in southeastern Arizona.
Records. USA: AZ

Cymindis complanata Dejean, 1826

Cymindis complanata Dejean, 1826: 448. Type locality: «Amérique septentrionale» (original citation), restricted to «S[ain]t John's Bluff [Duval County], Flor[ida]» by Lindroth (1969a: 1070). Two syntypes in MHNP (Lindroth 1955b: 24).
Lebia russata Newman, 1840: 31. Type locality: «S[ain]t John's Bluff [Duval County], East Florida» (original citation). One syntype in BMNH (Lindroth 1969a: 1070). Synonymy established by Lindroth (1969a: 1070).

Distribution. This species ranges from Maryland (Prince Georges County, UASM) and northeastern Virginia (UASM) south to central Florida (Peck and Thomas 1998: 24) and southwestern Alabama (Mobile and Washington Counties, UASM). All other state records listed in Bousquet and Larochelle (1993: 269) as well as that from southeastern Pennsylvania (Rathvon 1869: 524, as *Lebia russata*) need confirmation.
Records. USA: AL, FL, GA, MD, NC, SC, VA [LA, NJ, PA, TX]

Cymindis limbata Dejean, 1831

Cymindis limbata Dejean, 1831: 320. Type locality: «Amérique septentrionale» (original citation), restricted to «Marion [Plymouth County], Mass[achusetts]» by Lindroth (1969a: 1067). One syntype in MHNP (Lindroth 1955b: 24).
Cymindis comma T.W. Harris [in Scudder], 1869: 82 [*nomen dubium*]. Type locality not stated. Syntype(s) presumably lost. Synonymy established with doubt by Bousquet and Larochelle (1993: 13).

Distribution. This species ranges from Nova Scotia (Lindroth 1954c: 307) to northwestern Minnesota (Becker County, UASM), south to southeastern Texas (Brazoria County, CMNH) and central Florida (Peck and Thomas 1998: 24). The record from "North Dakota" (Bousquet and Larochelle 1993: 269) needs confirmation.
Records. CAN: NB, NS, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WI, WV [ND]

Cymindis obscura (Casey, 1920)

Pinacodera obscura Casey, 1920: 284. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). One syntype in USNM [# 47612].

Distribution. This species is known only from the type locality in central North Carolina and one locality in northern Georgia (Fattig 1949: 40).
Records. USA: GA, NC

Cymindis platicollis (Say, 1823)

Lebia platicollis Say, 1823a: 14. Type locality: «Allegheny, P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 349), in MCZ [# 33001].

Cymindis fuscata Dejean, 1831: 321. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 24). Synonymy established by Lindroth (1969a: 1068).

Planesus laevigatus Motschulsky, 1865: 297. Type locality: «environs de Mobile [Mobile County, Alabama]» (original citation). Lectotype, designated by Bousquet and Larochelle (1993: 17), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 17).

Planesus fuscicollis Motschulsky, 1865: 298. Type locality: «états méridionaux de l'Amérique du Nord» (original citation). Lectotype (♀), designated by Bousquet and Larochelle (1993: 17), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 17).

Pinacodera virescens Dury, 1911: 275. Type locality: «Plott Balsam M[oun]t[ain]s, North Carolina» (original citation). Holotype [by monotypy] (♂) in CMC (Vulinec and Davis 1984: 233). Synonymy established by Ball (in Vulinec and Davis 1984: 233).

Distribution. This species ranges from southwestern Maine (Majka et al. 2011: 47) and southern Quebec (Bousquet 1987a: 133) to eastern North Dakota (Tinerella 2003: 636), south to western Texas, Nuevo León in Mexico, and southern South Carolina [see Hunting 2009: Fig. 4.12]. The record from northern Sonora (Bates 1884: 296) needs confirmation.
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, GA, IA, IL, IN, KS, LA, MA, MD, ME, MI, MN, MS, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, TN, TX, VA, VT, WI, WV – Mexico

Cymindis punctifera (LeConte, 1884)

Lebia punctifera LeConte, 1884: 2. Type locality: «Arizona» (original citation). Holotype [by monotypy] (♀) in MCZ [# 5800].

Distribution. This species is known from western Arizona to western Texas, south to Nuevo León, Coahuila, Durango, and Sonora in Mexico (Ball and Shpeley 1992a: 62).
Records. USA: AZ, NM, TX – Mexico

Cymindis punctigera LeConte, 1851

Cymindis punctigera LeConte, 1851: 178. Type locality: «ad flumina Colorado et Gila» (original citation). Three syntypes in MCZ [# 66].

Distribution. This species ranges from northeastern California to north-central Colorado, south to eastern Michoacán in Mexico and southern California [see Hunting 2009: Fig. 4.23].
Records. USA: AZ, CA, CO, NM, NV, TX, UT – Mexico

Cymindis subcarinata (Casey, 1920)

Pinacodera subcarinata Casey, 1920: 281. Type locality: «Tuçson [Pima County], Arizona» (original citation). One syntype in USNM [# 47609].

Distribution. This species is known only from the type locality in southern Arizona.
Records. USA: AZ

Subtribe Apenina Ball, 1983

Apenina Ball, 1983: 516. Type genus: *Apenes* LeConte, 1851.

Diversity. About 115 species (Lorenz 2005: 464-465) in the Nearctic (eight species of *Apenes*), Neotropical (72 species of *Apenes*), Australian (one species in New Guinea), Oriental (nine species), Palaearctic (22 species), and Afrotropical (14 species) Regions. These species are arrayed in five genera: *Apenes* (75 species), *Habutarus* Ball and Hilchie (one species from New Guinea), *Cymindoidea* Laporte (15 species), *Platytarus* Fairmaire (12 species), and *Trymosternus* Chaudoir (13 species from the Iberian Peninsula and northern Africa).
Taxonomic Note. 1. The family-group names Platytarini and Trymosternini were proposed by Zaballos and Jeanne (1994: 116) and recorded as synonyms of Apenina by Lorenz (2005: 464). However, both names are unavailable since they were not accompanied by a description or a reference to a published description (ICZN 1999: Article 13.1). 2. Apenina came out as the sister-group to the remaining lebiine subtribes, with the exclusion of sugimotoinines, actenocynines, and pericalines, in Ball et al. (1995) and Casale (1998: Fig. 91) cladistic analyses.

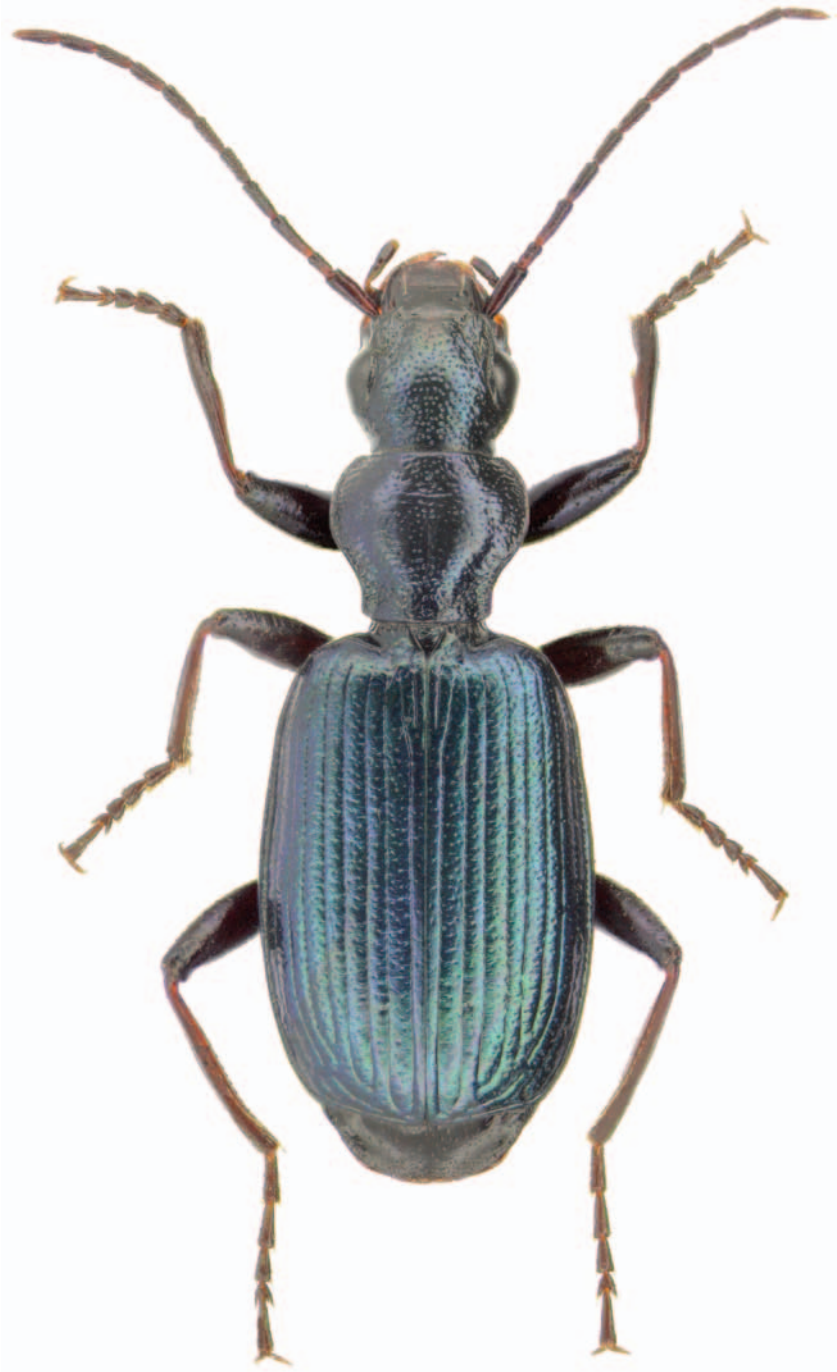

Figure 41. *Tecnophilus croceicollis peigani* Larson. Adults of this handsome subspecies are usually found during the day on clay-sand soil on the ground or climbing on very low vegetation along the bases of south facing coulees. The subspecific name derives from the name of an Indian tribe of the Blackfoot Confederation, Peigan, which inhabited the prairies of southern Alberta where the taxon is found in Canada.

Genus *Apenes* LeConte, 1851

Sphenopalpus Blanchard, 1842: plate1 [*nomen oblitum*, see Ball and Shpeley (2009: 95)]. Type species: *Sphenopalpus parallelus* Blanchard, 1842 (= *Cymindis aenea* Dejean, 1831) by monotypy. Etymology. From the Greek *sphenos* (wedge) and the Latin *palpus* (feeler, by extension palp), alluding to the shape of the last maxillary and labial palpomeres ("*palpes cylindriques, ayant leur dernier article ovalaire terminé en pointe*," see Blanchard 1853: 32) of the adult [masculine]. Note. Since Chaudoir (1875: 38) listed *Sphenopalpus parallelus* Blanchard as a junior synonym of *Apenes aenea* (Dejean), *Sphenopalpus* has been considered a junior synonym of *Apenes* on the account that it was made available with the publication of the text in 1853. However, the name was first made available by the publication of the plate in 1842 (see Emberson 1992).

Apenes LeConte, 1851: 174 [*nomen protectum*]. Type species: *Cymindis lucidula* Dejean, 1831 designated by Lacordaire (1854: 110). Synonymy established by Chaudoir (1875: 38). Etymology. From the Greek *apenes* (rough, harsh, cruel, ferocious) [feminine]. Note. *Apenes* have been treated as masculine (e.g., Bousquet and Larochelle 1993: 269-270; Lorenz 2005: 464-465) or feminine (e.g., Lindroth 1969a: 1087-1088; Ball and Shpeley 1992b). It comes from a transliteration of the Greek adjective Απηνής, ές and so could be masculine or feminine. In such case, the name is to be treated as masculine unless its author, when establishing the name, stated that it is feminine or treated it as feminine in combination with an adjectival species-group name (ICZN 1999: Article 30.1.4.2). LeConte (1851) did not specify the gender but described the species "*A. opaca*", so treating the generic name *Apenes* as feminine. As such *Apenes* is feminine.

Sphenopselaphus Gemminger and Harold, 1868a: 299. Unjustified emendation of *Sphenopalpus* Blanchard, 1842.

Diversity. Seventy-five species in the Western Hemisphere arrayed in two subgenera: *Apenes s.str.* (67 species) and *Didymochaeta* Chaudoir (eight Neotropical species).

Subgenus *Apenes* LeConte, 1851

Apenes LeConte, 1851: 174. Type species: *Cymindis lucidula* Dejean, 1831 designated by Lacordaire (1854: 110).

Nominus Motschulsky, 1864: 240. Type species: *Cymindis pustulata* Dejean, 1831 (= *Cymindis sinuatus* Say, 1823) by original designation. Synonymy established by Gemminger and Harold (1868a: 124).

Malisus Motschulsky, 1864: 240. Type species: *Cymindis variegata* Dejean, 1825 (= *Carabus pallipes* Fabricius, 1792) by original designation. Synonymy established by Bates (1883a: 188).

Diversity. Sixty-seven species in the temperate, subtropical, and tropical areas of the Nearctic (nine species) and Neotropical (64 species) Regions.

Identification. Horn (1882: 156) wrote a key to four of the species found in North America. A taxonomic revision of the subgenus is needed.

Apenes angustata Schwarz, 1878

Apenes angustata Schwarz, 1878: 354. Type locality: «Enterprise [Volusia County, Florida]» (original citation). Lectotype (♂), designated by Erwin and House (1978: 234), in USNM [# 4495].

Distribution. This species is known from Alabama (Löding 1945: 22) and northwestern Georgia (Fattig 1949: 41) south to southern Florida (Peck and Thomas 1998: 23).
Records. USA: AL, FL, GA

Apenes coriacea (Chevrolat, 1863)

Cymindis coriacea Chevrolat, 1863: 188. Type locality: Cuba (inferred from title of the paper). Lectotype (♀), designated by Ball and Shpeley (2009: 109), in UMO.
Apenes laevis Liebke, 1939: 473. Type locality: «Amer[ica] mer[idionalis]» (lectotype label according to Ball and Shpeley 2009: 111). Lectotype (♀), designated by Ball and Shpeley (2009: 111), in IZWP. Synonymy established by Ball and Shpeley (2009: 111). Note. Liebke (1939: 473) originally cited the type locality as "Nord Amerika."

Distribution. This species is known from Monroe and Dade Counties in southern Florida (Thomas 2011: 308), Cuba, Jamaica, and the Grand Cayman Island [see Ball and Shpeley 2009: Fig. 9].
Records. USA: FL – Cayman Islands, Cuba, Jamaica

Apenes hilariola Bates, 1891

Apenes hilariola Bates, 1891a: 271. Type locality: «Cuernavaca [Morelos], Colima City [Colima]» (original citation). Syntype(s) [2 originally mentioned] in BMNH.

Distribution. This species is known from the Mexican states of Morelos, Colima (Bates 1891a: 271) and Baja California Norte (Notman 1919b: 234) and from southern Arizona (Ober and Maddison 2008: 30).
Records. USA: AZ – Mexico

Apenes lucidula lucidula (Dejean, 1831)

Cymindis lucidula Dejean, 1831: 320. Type locality: «Amérique septentrionale» (original citation), restricted to «Baltimore, M[arylan]d» by Lindroth (1969a: 1087). One syntype in MHNP (Lindroth 1955b: 25).

Distribution. This subspecies ranges from Massachusetts (Davidson et al. 2011: 514) to southeastern Minnesota (Gandhi et al. 2005: 932), south to southern Texas (Live Oak County, Brian Raber pers. comm. 2010), northwestern Louisiana (Natchitoches Parish, USNM), and central Florida (Highlands and Pasco Counties, CMNH; Horn 1882: 157); also known from southern Arizona (Pima and Santa Cruz Counties, UASM, CMNH) and the Baja California Peninsula (Horn 1895: 226).

Records. USA: AL, AZ, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, NC, NJ, NY, OH, PA, RI, SC, TN, TX, VA, WV – Mexico
Note. The subspecies *A. lucidulus dulculia* Ball and Shpeley and *A. lucidulus michelii* Ball and Shpeley are found in the West Indies.

Apenes nebulosa LeConte, 1867

Apenes nebulosa LeConte, 1867b: 364. Type locality: «Cape San Lucas, Lower California [= Baja California Sur]» (original citation). Two syntypes in MCZ [# 5833].

Distribution. This species ranges from southern and western Texas (Duval, Val Verde, and Jeff Davis Counties, CMNH) to southeastern California (Dajoz 2007: 20) and the Baja California Peninsula (LeConte 1867b: 364).
Records. USA: AZ, CA, NM, TX – Mexico

Apenes opaca LeConte, 1851

Apenes opaca LeConte, 1851: 175. Type locality: «Georgia» (original citation). Holotype [by monotypy] (♂) in MCZ [# 5832].

Distribution. This species is found along the Coastal Plain from South Carolina (Ciegler 2000: 120) to southern Florida (Peck and Thomas 1998: 23), west to southern Alabama (Löding 1945: 22); also recorded from the Bahamas (Turnbow and Thomas 2008: 11).
Records. USA: AL, FL, GA, SC – Bahamas

Apenes pallidipes (Chevrolat, 1836)

Cymindis pallidipes Chevrolat, 1836a: [no. 153]. Type locality: «environs de Tuspan [Mexico]» (original citation). Holotype [by monotypy] location unknown (possibly in UMO).

Apenes marginipennis Chaudoir, 1875: 24. Type locality: «Yucatan [Mexico]» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established by Bates (1883a: 189).

Apenes mexicana Chaudoir, 1875: 25. Type locality: «Mexique» (original citation). Holotype [by monotypy] (♀) in IZWP (Mroczkowski 1960: 372). Synonymy established by Chaudoir (1875: 25).

Distribution. This species ranges from southern Arizona (Bousquet and Larochelle 1993: 334) to Panama (Bates 1883a: 189).
Records. USA: AZ – Guatemala, Mexico, Panama

Apenes parallela parallela (Dejean, 1825)

Cymindis parallela Dejean, 1825: 218. Type locality: «île de Cuba» (original citation). One syntype in MHNP (Ball and Shpeley 2009: 115). Note. Ball and Shpeley

(2009: 115) mentioned that the specimen is MHNP is the holotype. However, Dejean (1825: 218) did not specify that he had a single specimen and so the specimen is a syntype.

Distribution. This subspecies is known from Dade County in southeastern Florida (Thomas 2011: 307), the Bahamas, Cuba, and the Cayman Islands [see Ball and Shpeley 2009: Fig. 13].
Records. USA: FL – Bahamas, Cayman Islands, Cuba
Note. Two other subspecies, *A. parallela inaguae* Darlington and *A. parallela sublaevis* Darlington, are known from the West Indies.

Apenes sinuata (Say, 1823)

Cymindis sinuatus Say, 1823a: 8. Type locality: «M[arylan]d» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 350), in MCZ [# 32999]. Note. «Maryland» was the area originally cited by Say (1823a: 8).
Cymindis pustulata Dejean, 1831: 316. Type locality: «Amérique septentrionale» (original citation). Two syntypes [2 originally cited] in MHNP (Lindroth 1955b: 25). Synonymy established by LeConte (1846b: 189), confirmed by Lindroth (1955b: 25).

Distribution. The range of this species extends from Rhode Island (USNM) to northeastern Kansas (Popenoe 1877: 23), including southernmost Ontario (Lindroth 1969a: 1088), south to southern Texas (Wickham 1897: 112; Galveston and San Patricio Counties, UASM) and the Florida Keys (Peck and Thomas 1998: 23).
Records. CAN: ON **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MO, MS, NC, NE, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA, WV

Subtribe Dromiusina Bonelli, 1810

Dromiei Bonelli, 1810: Tabula Synoptica. Type genus: *Dromius* Bonelli, 1810. Note. The spelling of the family-group name based on *Dromius* was emended to Dromiusidae by the International Commission on Zoological Nomenclature (ICZN 2006).
Lichnasthenitae J. Thomson, 1858: 35 (as Lichnastenitae), 458. Type genus: *Lichnasthenus* Thomson, 1858.
Lionychidae Jeannel, 1948a: 378, 380. Type genus: *Lionychus* Wissmann, 1846.
Singilini Jeannel, 1949a: 881, 915. Type genus: *Singilis* Rambur, 1837.
Metadromiina Basilewsky, 1984: 543. Type genus: *Metadromius* Bedel, 1907.
Metaxymorphina Basilewsky, 1984: 549. Type genus: *Metaxymorphus* Chaudoir, 1850.
Singiliomimina Basilewsky, 1984: 552. Type genus: *Singiliomimus* Péringuey, 1896.

Diversity. Worldwide, with about 735 species arrayed in 48 genera (Lorenz 2005: 470-478, 480, as Lionychina, Pseudotrechina, Dromiina, Lichnasthenina, Singilina,

plus *Metaxymorphus*). The North American fauna is represented by 33 species (about 4.5 % of the world fauna), of which two are adventive.

Taxonomic Note. Jeannel (1949a: 991) grouped this subtribe and the demetriadines under the subfamily Dromiitae and stated that this complex is characterized by having the basal bulb of the median lobe reduced. The peliocypidines were included in this subtribe by Ball and Bousquet (2000: 112).

Genus Dromius Bonelli, 1810

Dromius Bonelli, 1810: Tabula Synoptica. Type species: *Carabus quadrimaculatus* Linnaeus, 1758 by subsequent monotypy in Samouelle (1819: 155). Etymology. Probably from the Greek *dromeus* (runner) and alluding to the agility of the adults in the field [masculine]. Note. Madge (1975: 582) pointed out that the type species of *Dromius* Bonelli, 1810 should be *Carabus truncatellus* Linnaeus, 1760 by subsequent monotypy in Panzer (1813: 73). That species is now included in the genus *Syntomus* Hope, 1838. Acceptance of this species as type species of *Dromius* would require nomenclatural changes for both *Dromius* and *Syntomus*. A request should be addressed to the International Commission on Zoological Nomenclature to set aside *Carabus truncatellus* Linnaeus, 1760 as type species of *Dromius* Bonelli, 1810.

Dromaeus Billberg, 1820: 26. Unjustified emendation of *Dromius* Bonelli, 1810.

Ocaeus Gistel, 1848a: ix. Unnecessary replacement name for *Dromius* Bonelli, 1810.

Diversity. About 105 species (Lorenz 2005: 475-477) in the Nearctic (two species), Neotropical (20 species), Australian (one adventive species in New Zealand), Oriental, Palaearctic (53 species), and Afrotropical Regions. These species are placed in three subgenera: *Dromius s.str.* (about 50 species), *Obodromius* Jedlička (one species), and *Klepterus* Péringuey (47 species), with six species unplaced.

Subgenus *Dromius* Bonelli, 1810

Dromius Bonelli, 1810: Tabula Synoptica. Type species: *Carabus quadrimaculatus* Linnaeus, 1758 by subsequent monotypy in Samouelle (1819: 155).

Eudromius Acloque, 1896: 49 [junior homonym of *Eudromius* Gould, 1841]. Type species: *Dromius testaceus* Erichson, 1837 (= *Dromius angustus* Brullé, 1834) designated by Bousquet (2002b: 20). Synonymy established by Bousquet (2002b: 20).

Dinodromius Casey, 1920: 277. Type species: *Dromius piceus* Dejean, 1831 designated by Lindroth (1969a: 1041). Synonymy established by Lindroth (1969a: 1041). Etymology. Probably from the Greek prefix *dino-* (terrible, fearful) and the generic name *Dromius* [*q.v.*] [masculine].

Diversity. About 50 species in the Nearctic (two species, one of them adventive), Neotropical (20 species), Australian (one adventive species in New Zealand), Oriental (four species), and Palaearctic (28 species) Regions.

Identification. Larson (1998: 126) discussed the structural differences between the two species found in North America.

Dromius fenestratus (Fabricius, 1794)

Carabus fenestratus Fabricius, 1794a: 443 [primary homonym of *Carabus fenestratus* Müller, 1776]. Type locality: «Germania» (original citation). One syntype, without head and pronotum, in ZMUC (Zimsen 1964: 59). Note. Fabricius' name should be permanently invalid because it is a primary homonym. However, *Carabus fenestratus* Müller has never been interpreted since its original description to my knowledge and the name is a *nomen dubium*.

Distribution. This European species is adventive in North America where it is known only from three specimens collected in Newfoundland (Larson 1998: 126) and Nova Scotia (Majka and Klimaszewski 2004: 9; Halifax County, UASM). The first inventoried specimen collected on this continent was found in 1952 in Armdale, near Halifax, Nova Scotia (UASM).
Records. CAN: NF, NS – **Adventive**

Dromius piceus Dejean, 1831

Dromius piceus Dejean, 1831: 353. Type locality: «Amérique septentrionale» (original citation), restricted to «Bethel [Oxford County], Maine» by Lindroth (1969a: 1041). Holotype [by monotypy] in MHNP (Lindroth 1955b: 24).
Dromius quadricollis LeConte, 1859a: 82. Type locality: «Puget Sound [Washington]» (original citation). One syntype in MCZ [# 5812]. Synonymy established by Horn (1882: 160).

Distribution. The range of this species extends from Cape Breton Island (Bousquet 1987d: 107) to Vancouver Island (Lindroth 1969a: 1043), south to southern California (Fall 1901a: 48; MCZ), the states of Sonora (CNC) and Durango (CNC) in Mexico, and the Florida Panhandle (Peck and Thomas 1998: 24). Fossil remnants, undated but believed to be younger than 3 million years B.P., have been unearthed in northwestern Yukon Territory (Elias and Matthews 2002: 914).
Records. CAN: AB, BC (VCI), MB, NB, NS (CBI), ON, PE, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, FL, GA, IA, IL, IN, KY, LA, MA, MD, ME, MI, MN, MS, MT, NC, NE, NH, NJ, NM, NY, OH, OR, PA, RI, SC, SD, TN, TX, VA, VT, WA, WI, WV, WY – Mexico
Note. Lindroth (1969a: 1042-1043) studied superficially the structural variation in this species and concluded there was a single species but that the specimens west of the Rockies "may very well be treated" as a subspecies for which the name *D. quadricollis* LeConte, 1859 is available. Until a detailed study of the variation is done, I prefer not to recognize subspecies for this taxon.

Genus *Philorhizus* Hope, 1838

Philorhizus Hope, 1838: 63. Type species: *Carabus fasciatus* Paykull, 1790 (= *Carabus sigma* Rossi, 1790) by original designation. Etymology (original). Anagram of the

generic name *Risophilus* (as *Rizophilus*), derived from the Greek *philos* (beloved) and *rhiza* (root) [masculine].

Dromiolus Reitter, 1905: 230, 235. Type species: *Dromius nigriventris* Thomson, 1857 (= *Dromius notatus* Stephens, 1827) by original designation. Etymology. From the generic name *Dromius* [*q.v.*] and the Latin suffix *-olus* (diminutive) [masculine].

Similidromius Mateu, 1953: 140. Type species: *Dromius elliptipennis* Wollaston, 1864 by monotypy. Synonymy established by Machado (1992: 519). Etymology. From the Latin adjective *similis*, *-e* (like) and the generic name *Dromius* [*q.v.*], alluding to the resemblance of the species in the hands of Mateu to those of *Dromius* [masculine].

Diversity. About 50 species (Lorenz 2005: 477) in the Nearctic (two species, one of them adventive), Oriental (two species), Palaearctic (about 35 species, 15 of them endemic to the Canary and Madeira Islands), and Afrotropical (11 species) Regions.
Identification. Bousquet (2004b: 49-51) commented on the structural differences between the two species found in North America.

Philorhizus atriceps (LeConte, 1880)

Dromius atriceps LeConte, 1880b: 163. Type locality: «Bayou Sara [West Feliciana Parish], L[ouisian]a» (original citation). One syntype in MCZ [# 5813].

Distribution. This Coastal Plain species is found from "Massachusetts" (Lindroth 1969a: 1043) to southern Florida (Peck and Thomas 1998: 24), west to Louisiana (LeConte 1880b: 163) and north to western Tennessee (Tipton County, CMNH).
Records. USA: AL, CT, FL, GA, LA, MA, MS, NJ, NY, RI, SC, TN, VA

Philorhizus melanocephalus (Dejean, 1825)

Dromius melanocephalus Dejean, 1825: 234. Type locality: «environs de Paris et de Lyon, France; Allemagne; Angleterre» (original citation). Syntype(s) probably in MHNP.

Distribution. This Palaearctic species is adventive in North America where it known from four specimens (CNC) collected in 1996 on Vancouver Island, at Saanich Peninsula, Island View Beach (Bousquet 2004b: 49).
Records. CAN: BC (VCI) – **Adventive**

Genus *Microlestes* Schmidt-Göbel, 1846

Microlestes Schmidt-Göbel, 1846: 41. Type species: *Microlestes inconspicuus* Schmidt-Göbel, 1846 designated by Andrewes (1934: 201). Etymology (original). From the Greek *micros* (small, little) and *lestes* (robber, mugger) [masculine].

Blechrus Motschulsky, 1847: 219. Type species: *Lebia glabrata* Duftschmid, 1812 (= *Carabus minutulus* Goeze, 1777) designated by Desmarest (1851: 70). Synonymy established by Chaudoir (1848: 95). Etymology. From the Greek *blechros* (faint, gentle, slight) [masculine].

Bomius LeConte, 1851: 177. Type species: *Bomius linearis* LeConte, 1851 designated by Lindroth (1969a: 1048). Synonymy established by Zimmermann (in LeConte 1869b: 243). Etymology. From the Greek *bomos* (base, plinth, pedestal), alluding to the lobate posterior edge of the pronotum ("*basi pedunculatus*") of the adult [masculine].

Diversity. About 130 species (Lorenz 2005: 473-474) in the Nearctic (eight species), Neotropical (one species endemic to Cuba and one species in northern Mexico), Oriental, Palaearctic (about 55 species), and Afrotropical Regions.
Identification. Lindroth (1969a: 1047-1054) reviewed the Nearctic species. Since then, one new North American species (*M. lindrothi*) has been described by Mateu (1995).

Microlestes brevilobus brevilobus Lindroth, 1969

Microlestes brevilobus Lindroth, 1969a: 1054. Type locality: «Long Point, Ont[ario]» (original citation). Holotype (♂) in CNC [# 11577].

Distribution. This subspecies is known from scattered localities from southernmost Ontario (Lindroth 1969a: 1054) to southern Arizona (Pima County, CMNH), southwestern Texas (Val Verde County, CNC), northwestern Alabama (Walker County, CNC), and southwestern North Carolina (Macon County, CMNH). One specimen simply labeled from California is also known (Lindroth 1969a: 1054).
Records. CAN: ON **USA**: AL, AR, AZ, CO, IA, KS, MO, MS, NC, OH, OK, TX, WV [CA]
Note. The subspecies *M. brevilobus mexicanus* Mateu is known from Michoacán in Mexico.

Microlestes curtipennis (Casey, 1920)

Blechrus curtipennis Casey, 1920: 270. Type locality: «San Francisco [San Francisco County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47685].

Distribution. This species is known from scattered localities from central Saskatchewan (Lindroth 1969a: 1053) to the Okanagan Valley in south-central British Columbia (Blades and Maier 1996: 66), south to the San Francisco area (Casey 1920: 270), northern Utah (Lindroth 1969a: 1053), northeastern Colorado (Bell 1971: 47), and southwestern South Dakota (Kirk and Balsbaugh 1975: 38).
Records. CAN: AB, BC, SK **USA**: CA, CO, OR, SD, UT, WY

Microlestes lindrothi Mateu, 1995

Microlestes lindrothi Mateu, 1995: 144. Type locality: «Berkeley [Alameda County], California» (original citation). Holotype (♂) in Mateu's collection (Almería, Spain).

Distribution. This species is known only from the original two specimens collected at Berkeley, on the San Francisco Bay in western California.
Records. USA: CA

Microlestes linearis (LeConte, 1851)

Dromius angustus LeConte, 1846b: 191 [primary homonym of *Dromius angustus* Brullé, 1834]. Type locality: «ad Rocky Mountains» (original citation). Two syntypes in MCZ [# 5815].

Bomius linearis LeConte, 1851: 177. Replacement name for *Bomius angustus* (LeConte, 1846).

Blechrus prominulus Casey, 1920: 269. Type locality: «Reno [Washoe County], Nevada» (original citation for the lectotype). Lectotype (♂), designated by Lindroth (1975: 145), in USNM [# 47686]. Synonymy established by Lindroth (1969a: 1050).

Distribution. The range of this species extends from Nova Scotia to southwestern British Columbia, though not quite reaching the coast (Lindroth 1969a: 1051), south to northern California (Lindroth 1969a: 1051; Casey 1920: 269, as *Blechrus prominulus*), northern Arizona (Lindroth 1969a: 1051), southern Oklahoma (Elliott et al. 2006: 126), and "Virginia" (CMNH, collection Ulke). The record from "Mississippi" (Bousquet and Larochelle 1993: 274) needs confirmation.

Records. CAN: AB, BC, MB, NS, ON, QC, SK **USA**: AR, AZ, CA, CO, CT, DC, IA, ID, IL, IN, KS, MA, MD, ME, MI, MN, MO, MT, ND, NE, NH, NJ, NV, NY, OH, OK, OR, PA, UT, VA, VT, WA, WI, WY [MS]

Note. This species has passed under the name of *Blechrus glabratus* (Duftschmid, 1812) until the 1960s.

Microlestes lucidus lucidus (LeConte, 1851)

Bomius lucidus LeConte, 1851: 177. Type locality: «Colorado [River, California]» (original citation). Four syntypes in MCZ [# 65].

Distribution. This subspecies is known from southern California (Fall 1901a: 48; Mateu 1974: 264), "Nevada" (Horn 1882: 134), southeastern Colorado (Bent County, CNC), and central Texas (Casey 1920: 270). The records from northeastern Kansas (Popenoe 1877: 23) and "Oregon" (Horn 1882: 134) need confirmation. The previous records from "Colorado" (Wickham 1902: 239; Mateu 1974: 264) were probably based on a misinterpretation of the type locality.

Records. USA: CA, CO, NV, TX [KS, OR]

Note. The subspecies *M. lucidus subdeserticus* Mateu is known from the states of Durango and Querétaro in Mexico.

Microlestes major Lindroth, 1969

Microlestes major Lindroth, 1969a: 1049. Type locality: «W[ashington] T[erritory]» (holotype label), herein restricted to Seattle, King County, Washington (see Lindroth 1969a: 1049). Holotype (♂) in MCZ [# 34512].

Distribution. This species is known from a few specimens collected along the coast in southwestern British Columbia, west-central Washington (Lindroth 1969a: 1049), and Oregon (Lane County, CNC).
Records. CAN: BC **USA**: OR, WA

Microlestes nigrinus (Mannerheim, 1843)

Dromius nigrinus Mannerheim, 1843: 184. Type locality: «California» (original citation), herein restricted to Port Harford, San Luis Obispo County (see Casey 1920: 269, as *Blechrus nigrinus obispinus*). Lectotype (♂), designated by Lindroth (1969a: 1051), in ZMH.

Blechrus nigrinus fretus Casey, 1920: 269. Type locality: «San Francisco [San Francisco County], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47683]. Synonymy established by Lindroth (1969a: 1051).

Blechrus nigrinus obispinus Casey, 1920: 269. Type locality: «Port Harford, S[an] L[uis] Obispo Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47684]. Synonymy established by Lindroth (1969a: 1051).

Distribution. The range of this species extends from Vancouver Island to eastern South Dakota (Kirk and Balsbaugh 1975: 38; French et al. 2004: 557), south to southern Colorado (Wickham 1902: 239; Boulder County, CMNH), northern Arizona (Coconino County, CMNH), and southern California (Lindroth 1969a: 1053). The record from "New Mexico" (Wickham 1896c: 135) needs confirmation.
Records. CAN: BC (VCI) **USA**: AZ, CA, CO, ID, OR, SD, UT, WA, WY [NM]

Microlestes pusio (LeConte, 1863)

Blechrus pusio LeConte, 1863c: 6. Type locality: «Louisiana» (original citation). Syntype(s) location unknown. Note. All four specimens under this name in the LeConte collection (MCZ # 5816) are labeled either "Tex" or "Dallas, Texas" suggesting that none of these specimens are syntypes.

Distribution. This species is found from Long Island, New York (Notman 1928: 238) to eastern South Dakota (Kirk and Balsbaugh 1975: 38), including southernmost Ontario (Lindroth 1969a: 1054), south to southeastern Texas (Horn 1882: 135; Snow 1906a: 141; Casey 1920: 270), east-central Mississippi (Snodgrass and Cross 1983: 17), and northeastern Tennessee (Hylton 1980: 25). The record from the District of Columbia (Ulke 1902: 7) needs confirmation.
Records. CAN: ON **USA**: IL, IN, KS, LA, MO, MS, NY, OH, OK, PA, SD, TN, TX, WI [DC]

Genus *Apristus* Chaudoir, 1846

Apristus Chaudoir [in Chaudoir and Hochhuth], 1846: 62. Type species: *Apristus subaeneus* Chaudoir, 1846 by monotypy. Etymology (original). From the Greek *a*

(absence) and *prizos* (saw-like), alluding to the smooth (i.e., not denticulate) tarsal claws ("*crochets des tarses non dentelés*") of the adults [masculine].

Diversity. About 60 species (Lorenz 2005: 472) in the Nearctic (13 species), Neotropical (five species in Middle America and the West Indies), Australian, Oriental, Palaearctic (27 species), and Afrotropical Regions.
Identification. Casey (1920: 272-276) wrote a key to all but one (*A. latens*) North American species. As usual his key is difficult to use. Ten of the current 13 species in North America have been described by Casey (1920) and only two (*A. constrictus* and *A. pugetanus*) have been study subsequently (Lindroth 1969a). A taxonomic revision of the genus is needed.

Apristus actuosus Casey, 1920

Apristus actuosus Casey, 1920: 274. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Holotype [by monotypy] (♂) in USNM [# 47687].

Distribution. This species is known only from the type locality in central North Carolina and two localities in northern Georgia (Fattig 1949: 39).
Records. USA: GA, NC

Apristus agitatus Casey, 1920

Apristus liratus agitatus Casey, 1920: 276. Type locality: «San Diego [San Diego County], Ca[l]ifornia» (original citation). Holotype [by monotypy] (♂) in USNM [# 47691].

Distribution. This species is known only from the holotype collected in southwestern California.
Records. USA: CA

Apristus cephalus Casey, 1920

Apristus cephalus Casey, 1920: 272. Type locality: «Cloverdale, Sonoma Co[unty], California» (original citation). Holotype [by monotypy] (♀) in USNM [# 47692].

Distribution. This species is known only from the holotype collected along the coast of California.
Records. USA: CA

Apristus constrictus Casey, 1920

Apristus constrictus Casey, 1920: 276. Type locality: «S[an]ta Rosa [Sonoma County], California» (original citation). Lectotype, designated by Lindroth (1975: 145), in USNM [# 47696].

Distribution. The range of this species extends from southwestern Alberta to Vancouver Island, south to west-central California (Lindroth 1969a: 1046) and southwestern Colorado (Elias 1987: 634).
Records. CAN: AB, BC (VCI) **USA**: CA, CO, MT, OR, WA

Apristus latens (LeConte, 1846)

Dromius latens LeConte, 1846b: 191. Type locality: «ad Mississippi scaturigines [according to Lindroth (1969a: 1046) apparently in present day Minnesota]» (original citation). One syntype in MCZ [# 5814].

Apristus fuscipennis Motschulsky, 1864: 233. Type locality: «nouveau Mexique [= New Mexico]» (original citation). Lectotype, designated by Bousquet and Larochelle (1993: 12), in ZMMU. Synonymy established by Horn (1882: 160), confirmed by Bousquet and Larochelle (1993: 12).

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1969a: 1046) to southern Saskatchewan (Ronald R. Hooper pers. comm. 2007), south to southern Arizona (Pima County, CMNH), central Texas (Casey 1920: 274, as *A. fuscipennis*; Terrell County, CMNH), and southern Georgia (Torres and Ruberson 2006: 31). The record from "Montana" (Bousquet and Larochelle 1993: 273) needs confirmation.
Records. CAN: MB, NB, NS (CBI), ON, QC, SK **USA**: AL, AR, AZ, CO, GA, IA, IL, MA, MD, ME, MN, MS, NE, NH, NJ, NM, OH, OK, PA, SD, TN, TX, VA, VT, WV [MT]
Note. This species has passed under the name *A. subsulcatus* (Dejean, 1826) in the literature until Lindroth (1969a: 1045-1046).

Apristus laticollis LeConte, 1851

Apristus laticollis LeConte, 1851: 176. Type locality: «San Diego [San Diego County, California]» (original citation). Four syntypes in MCZ [# 64].

Apristus subcyaneus G.E. Horn, 1894: 360. Type locality: «San José del Cabo [Baja California Sur, Mexico]» (original citation). One syntype in CAS [# 3]. Synonymy established by Leng (1920: 66).

Distribution. This species is known from east-central Oregon (Grant County, UASM; Horn 1882: 134; Lindroth 1969a: 1044) to northern Colorado (Armin 1963: 179), including southern Idaho (Horning and Barr 1970: 25), south to central New Mexico (Bernalillo County, CMNH), southern Arizona (Pima County, CMNH; Horn 1882: 134), and the Baja California Peninsula (Horn 1894: 310).
Records. USA: AZ, CA, CO, ID, NM, NV, OR, UT – Mexico

Apristus liratus Casey, 1920

Apristus liratus Casey, 1920: 276. Type locality: «Humboldt Co[unty] and S[an]ta Rosa [Sonoma County], California» (original citation). Two syntypes [2 originally cited] in USNM [# 47690].

Distribution. This species is known only from the two syntypes collected along coastal California.
Records. USA: CA

Apristus nevadensis Casey, 1920

Apristus nevadensis Casey, 1920: 273. Type locality: «Reno [Washoe County], Nevada» (original citation). Holotype [by monotypy] in USNM [# 47695].

Distribution. This species is known only from the holotype collected in northwestern Nevada.
Records. USA: NV

Apristus pugetanus Casey, 1920

Apristus pugetanus Casey, 1920: 275. Type locality: «Washington State» (original citation). Four syntypes [4 originally cited] in USNM [# 47689].

Distribution. This species ranges from Vancouver Island (Lindroth 1969a: 1047) to northwestern Montana (Flathead County, Ken Karns pers. comm. 2009), south to southwestern New Mexico (Hidalgo County, CMNH), southern Arizona (Graham, Pinal, Cochise, Pima, and Greenlee Counties, CMNH), and northern California (Shasta and Yolo Counties, CMNH).
Records. CAN: BC (VCI) **USA**: AZ, CA, CO, ID, MT, NM, OR, UT, WA

Apristus subdeletus Casey, 1920

Apristus subdeletus Casey, 1920: 272. Type locality: «M[oun]t Diablo [Contra Costa County], California» (original citation). Holotype [by monotypy] (♂) in USNM [# 47694].

Distribution. This species is known only from the holotype collected in western California.
Records. USA: CA

Apristus subsulcatus (Dejean, 1826)

Dromius subsulcatus Dejean, 1826: 451. Type locality: «Amérique septentrionale» (original citation), restricted to «Northfield [Franklin County], Mass[achusetts]» by Lindroth (1969a: 1044). One syntype in MHNP (Lindroth 1955b: 24).
Dromius cordicollis LeConte, 1846b: 190. Type locality: «NovEboraci [= New York]» (original citation). Three syntypes in MCZ [# 35338]. Synonymy established by Lindroth (1955b: 24).

Distribution. The range of this species extends from Cape Breton Island (Lindroth 1954c: 307, as *A. cordicollis*) to Minnesota (Gandhi et al. 2005: 932), south to Mississippi (Casey 1920: 275, as *A. cordicollis*), southeastern Alabama (Kharboutli and

Mack 1991: 1017), and southern South Carolina (Ciegler 2000: 122). The records from Colorado (LeConte 1879d: 500; Armin 1963: 179), "New Mexico," and Texas (Horn 1882: 133; Wickham 1897: 109) need confirmation since they could refer to *A. latens* (LeConte).
Records. CAN: NB, NS (CBI), ON, QC **USA**: AL, AR, CT, DC, GA, IA, IL, IN, MA, MD, ME, MI, MN, MO, MS, NH, NJ, NY, OH, PA, RI, SC, VA, VT, WI, WV [CO, NM, TX]

Apristus thoracicus Casey, 1920

Apristus thoracicus Casey, 1920: 275. Type locality: «Jemez Springs [Sandoval County], New Mexico» (original citation). Three syntypes [3 originally cited] in USNM [# 47688].

Distribution. This species is known only from the syntypes collected in northwestern New Mexico.
Records. USA: NM

Apristus tuckeri Casey, 1920

Apristus tuckeri Casey, 1920: 273. Type locality: «Tuçson [Pima County], Arizona» (original citation). One syntype in USNM [# 47693].

Distribution. This species is known only from the type series collected in southern Arizona.
Records. USA: AZ

Genus *Syntomus* Hope, 1838

Syntomus Hope, 1838: 64. Type species: *Carabus truncatellus* Linnaeus, 1760 by monotypy. Etymology (original). From the Greek *syntomos* (shortened), alluding to the small size ("body short") of the adults [masculine].

Metabletus Schmidt-Göbel, 1846: 38. Type species: *Lebia obscuroguttata* Duftschmid, 1812 designated by Andrewes (1934: 201). Synonymy established by Lacordaire (1854: 122). Etymology (original). From the Greek *metabletos* (variable) [masculine].

Charopterus Motschulsky, 1858: 155. Type species: *Carabus truncatellus* Linnaeus, 1760 designated by Habu (1967: 238). Etymology. From the Greek *charops* (glad-eyed, joyous) and *pteron* (wing, by extension elytron) [masculine].

Apristomorphus Motschulsky, 1861: 104. Type species: *Apristomorphus sexpunctatus* Motschulsky, 1861 (= *Metabletus quadripunctatus* Schmidt-Göbel, 1846) by monotypy. Synonymy established, under the name *Metabletus* Schmidt-Göbel, by Andrewes (1928: 7). Etymology. From the generic name *Apristus* [*q.v.*] and the Greek *morphe* (form), alluding to the resemblance of the adults to those of *Apristus* ("*dromiide de la forme parallèle des Apristus*") [masculine].

Diversity. About 50 species (Lorenz 2005: 470-471) in the boreal, temperate, and tropical areas of the Nearctic (one species), Australian (one widely distributed Old World species), Oriental, Palaearctic (about 35 species), and Afrotropical Regions.
Identification. The North American species is included in Lindroth's (1969a: 1056) monograph on the Canadian and Alaskan Carabidae.

***Syntomus americanus* (Dejean, 1831)**

Dromius americanus Dejean, 1831: 361. Type locality: «Amérique septentrionale» (original citation), restricted to «Rumney [Grafton County], N[ew] H[ampshire]» by Lindroth (1969a: 1056). Holotype [by monotypy] in MHNP (Lindroth 1955b: 24).

Metabletus borealis Zimmermann [in LeConte], 1869b: 243. Type locality: «Lake Superior» (original citation). Syntype(s) probably lost (Lindroth 1969a: 1056). Synonymy established by Horn (1882: 161).

Distribution. The range of this species extends from Newfoundland (Lindroth 1955a: 130) to east-central Alaska (Lindroth 1969a: 1056), south to the Sierra Nevada in California (Dajoz 2007: 16), southeastern Arizona (Graham and Greenlee Counties, UASM), central New Mexico (Fall and Cockerell 1907: 160), south-central South Dakota (Kirk and Balsbaugh 1975: 38), central Illinois (Wolcott 1895: 309), and western North Carolina (Yancey County, USNM) along the Appalachians. The records from "Nebraska" and "Texas" (Bousquet and Larochelle 1993: 274) need confirmation.
Records. CAN: AB, BC (VCI), LB, MB, NB, NF, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AK, AZ, CA, CO, CT, DC, IA, ID, IL, IN, MA, MD, ME, MI, MN, MT, NC, ND, NH, NJ, NM, NY, OH, OR, PA, RI, SD, TN, UT, VA, VT, WA, WI, WV, WY [NE, TX]

Genus *Axinopalpus* LeConte, 1846

Axinopalpus LeConte, 1846b: 190. Type species: *Dromius biplagiatus* Dejean, 1825 by monotypy. Etymology. From the Greek *axine* (ax, wedge) and the Latin *palpus* (feeler, by extension palp), alluding to the shape of the terminal labial palpomere ("*palpi labiales ... articulo ultimo magno, obconico, subsecuriformi*") of the adult [masculine].

Variopalpis Solier, 1849: 148. Type species: *Variopalpis humeralis* Solier, 1849 by monotypy. Synonymy established by Reed (1874: 69-70). Etymology. From the Latin *vario* (change, different) and *palpus* (feeler, by extension palp) [masculine]. Note. *Variopalpus* is an incorrect subsequent spelling of *Variopalpis* Solier used by Reed (1874: 69).

Axinopselaphus Gemminger and Harold, 1868a: 128. Unjustified emendation of *Axinopalpus* LeConte, 1846.

Diversity. Fifteen species in the temperate, subtropical, and tropical areas of the Nearctic (seven species) and Neotropical (nine species) Regions.

Identification. There is no modern taxonomic revision of the species of *Axinopalpus* and such study is much needed. A preliminary study of the type material of the species described by Casey and Hatch led to the three new synonyms proposed herein.

Axinopalpus biplagiatus (Dejean, 1825)

Dromius biplagiatus Dejean, 1825: 243. Type locality: «Amérique septentrionale» (original citation), restricted to «Hays [Ellis County], Kansas» by Lindroth (1969a: 1058). Syntype(s) presumably lost (Lindroth 1969a: 1058).

Dromius californicus Motschulsky, 1845b: 336 [*nomen dubium*]. Type locality: «Californie» (original citation). Syntype(s) location unknown (possibly in ZMMU though not listed in Keleinikova 1976). Synonymy established by LeConte (1880b: 164).

Axinopalpus coloradensis Casey, 1920: 266. Type locality: «Boulder Co[unty], Colorado» (original citation). One syntype in USNM [# 47680]. **New synonymy**.

Axinopalpus habilis Casey, 1920: 266. Type locality: «Austin [Travis County], Texas» (original citation). Holotype [by monotypy] in USNM [# 47679]. **New synonymy**.

Axinopalpus demissus Casey, 1920: 267. Type locality: «San Francisco to Los Angeles, California» (original citation). Two syntypes in USNM [# 47681]. **New synonymy**.

Distribution. This species ranges from "Maine" (Larochelle and Larivière 1990a: 32) to "Washington" (Hatch 1953: 156), north to the southern part of the Prairie Provinces (Bousquet 1987a: 133), south to southwestern California (Casey 1920: 266, as *A. demissus*; Moore 1937: 12), southern Arizona (Wickham 1898: 300; Ober and Maddison 2008: 31), southern Texas (Wickham 1897: 109; Kerr and Hidalgo Counties, CNC, USNM), and west-central Georgia (Fattig 1949: 39). The records from "Pennsylvania," "Florida" (Bousquet and Larochelle 1993: 272), Vancouver Island (see Lindroth 1969a: 1058), and Mexico (Blackwelder 1944: 58) need confirmation.
Records. CAN: AB, MB, ON, QC, SK **USA**: AL, AZ, CA, CO, CT, DE, GA, IA, ID, IL, IN, KS, MA, ME, MI, MN, MO, ND, NE, NH, NJ, NM, NY, OK, OR, RI, SD, TX, UT, VT, WA, WI, WY [BC, FL, PA]

Axinopalpus denticulatus Hatch, 1949

Axinopalpus denticulatus Hatch, 1949a: 84. Type locality: «Grand Coulee [Grant County], Wash[ington]» (original citation). Holotype (♀) in USNM.

Distribution. This species is known only from the holotype collected in central Washington.
Records. USA: WA

Axinopalpus fusciceps LeConte, 1851

Axinopalpus fusciceps LeConte, 1851: 175. Type locality: «San Jose [Santa Clara County, California]» (original citation). Three syntypes in MCZ [# 61].

Axinopalpus nigriceps LeConte, 1880b: 164. Type locality: «Tex[as]» (syntype labels). Three syntypes in MCZ [# 5817]. Synonymy established by Henshaw (1882: 209).

Distribution. This species ranges from western Idaho (Washington County, CNC) to northern Oklahoma (Alfalfa County, CMNH), south to Guatemala (Bates 1883a: 193) and southwestern California (LeConte 1851: 175; Fall 1901a: 48).
Records. USA: AZ, CA, CO, ID, NM, OK, TX – Guatemala, Mexico

Axinopalpus illectus Casey, 1920

Axinopalpus illectus Casey, 1920: 265. Type locality: «Jountville, Napa Co[unty], California» (original citation). One syntype in USNM [# 47682].

Distribution. This species is known only from the type series collected in west-central California.
Records. USA: CA

Axinopalpus pratti Hatch, 1949

Axinopalpus pratti Hatch, 1949a: 83. Type locality: «Coupeville [Island County], Wash[ington]» (original citation). Holotype (♀) in USNM. Etymology. The specific name honors Robert Y. Pratt [1915-1999], a resident of Coupeville, on Whidbey Island, Washington. Pratt collected insects in the Pacific Northwest and left his collection of several thousand specimens, mostly beetles, to Au Sable-Pacific Rim. He also bequeathed 147 acres of his land to the Nature Conservancy. The reserve now safeguards a unique grassland ecosystem, including rare populations of golden paintbrush and brittle cactus, the only cactus native to western Washington.

Distribution. This species is known only from the holotype collected in northwestern Washington.
Records. USA: WA

Axinopalpus utahensis Tanner, 1928

Axinopalpus utahensis Tanner, 1928: 270. Type locality: «S[ain]t George [Washington County], Utah» (holotype label). Holotype (♂) in BYUC (Shawn M. Clark pers. comm. 2007). Note. The type locality is incorrectly spelled "St. Geroge" on the holotype label (Shawn M. Clark pers. comm. 2007).

Distribution. This species is known only from Utah and Washington Counties in Utah (Tanner 1928: 270).
Records. USA: UT

Axinopalpus vittatus Hatch, 1949

Axinopalpus vittatus Hatch, 1949a: 84. Type locality: «Seattle [King County], Wash[ington]» (original citation). Holotype (♀) in USNM.

Distribution. This species is known from the type locality in west-central Washington (Hatch 1953: 156) and from southeastern Oregon (Westcott et al. 2006: 6).
Records. USA: OR, WA

Subtribe Lebiina Bonelli, 1810

Lebiotae Bonelli, 1810: Tabula Synoptica. Type genus: *Lebia* Latreille, 1802.
Encratidae Gistel, 1856: 355. Type genus: *Encrates* Gistel, 1848 (= *Lebia* Latreille, 1802).
Lampriadae Chaudoir, 1871a: 115. Type genus: *Lamprias* Bonelli, 1810.

Diversity. Worldwide, with about 800 species arrayed in 25 genera (Lorenz 2005: 481-489). The North American fauna has 49 species (about 6 % of the world fauna) placed in two genera.
Taxonomic Note. Casale's (1998: Fig. 91) cladistic analysis suggests that this subtribe is possibly the sister-group to {cymindidines + dromiusines + physoderines + agrines + metallicines + calleidines + demetriadines + peliocypadines}.

Genus *Lebia* Latreille, 1802

Lebia Latreille, 1802: 85. Type species: *Carabus haemorrhoidalis* Fabricius, 1792 (= *Buprestis marginatus* Geoffroy, 1785) designated by Desmarest (1851: 76). Etymology (see Bedel 1878: 247). From the Greek *lebias* (kind of fish) [feminine]. Note. As stated by Andrewes (1935: 24), the first valid type species designation for *Lebia* Latreille, 1802 is that of *Carabus quadrimaculatus* Linnaeus, 1758 by Latreille (1810: 426). That species is also the type species of *Dromius* Bonelli, 1810. Acceptance of Latreille's designation would require nomenclatural changes for the taxa *Lebia* Latreille, 1802 and *Dromius* Bonelli, 1810. A request should be addressed to the International Commission on Zoological Nomenclature to suppress Latreille's designation. A first request was postponed (ICZN 1950).
Encrates Gistel, 1848a: ix. Unnecessary replacement name for *Lebia* Latreille, 1802.

Diversity. Worldwide, with about 740 species (Lorenz 2005: 481-488) arrayed in 17 subgenera. The North American fauna includes 48 species (about 6.5 % of the world fauna) in the boreal, temperate, and subtropical regions. These species are currently placed in four subgenera.
Identification. Madge (1967) revised the North American species. Since the publication of his work, one of his species (*L. viridis*) has been shown to be a complex of two species (*L. viridis* and *L. moesta*) by Lindroth (1969a).

Subgenus *Loxopeza* Chaudoir, 1871

Loxopeza Chaudoir, 1871a: 117, 138. Type species: *Lebia grandis* Hentz, 1830 designated by Madge (1967: 153). Etymology (original). From Greek *loxos* (slanting,

by extension oblique) and *peza* (foot), alluding to the oblique anterior edge of the male first three protarsomeres ("*tarsi antici maris articulis tribus apice valde oblique truncatis*") [feminine].

Diversity. Twenty-five species in the Nearctic (eight species) and Neotropical (18 species) Regions.

[**atriventris group**]

***Lebia atriceps* LeConte, 1863**

Lebia atriceps LeConte, 1863c: 5. Type locality: «Nebraska» (original citation), herein restricted to Mitchell, Scotts Bluff County (see Madge 1967: 156). One syntype in MCZ [# 5803].

Loxopeza nanulina Casey, 1920: 238. Type locality: «Boulder Co[unty], Colorado» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47622]. Synonymy established by Madge (1967: 155).

Distribution. This species ranges from southern Manitoba to eastern Oregon (Baker County, James R. LaBonte pers. comm. 1992), as far north as central Alberta, south to northern Sonora (Bates 1884: 298) and southwestern Texas [see Madge 1967: Fig. 141]. On specimen is known from Strafford County, northeastern Virginia (Hoffman 2010: 23), probably resulting from anthropogenic transport.

Records. CAN: AB, MB, SK **USA**: AZ, CO, ID, KS, MT, ND, NE, NM, NV, OK, OR, SD, TX, UT, WY – Mexico

***Lebia atriventris* Say, 1823**

Lebia atriventris Say, 1823a: 13. Type locality: «Arlington [Middlesex County], Mass[achusetts]» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 349), in MCZ [# 33007].

Loxopeza enormis Casey, 1920: 237. Type locality: «near the city [of New York], New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47620]. Synonymy established by Madge (1967: 154).

Distribution. This species ranges from "Maine" (Larochelle and Larivière 1990a: 32) to southwestern Montana, north to northern Alberta (Fort McMurray area, Gerald J. Hilchie pers. comm. 2009), Saskatchewan and southern Manitoba, south to central New Mexico (Fall and Cockerell 1907: 159), central Texas, and northeastern Florida [see Madge 1967: Fig. 117]. The records from "California" (Erwin et al. 1977: 4.61; Bousquet and Larochelle 1993: 274) and Mexico (Chaudoir 1871a: 143) are likely in error.

Records. CAN: AB, MB, ON, QC, SK **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

[**tricolor group**]

***Lebia deceptrix* Madge, 1967**

Lebia deceptrix Madge, 1967: 158. Type locality: «Pena Blanca (4000'), Santa Cruz Co[unty], Ariz[ona]» (original citation). Holotype (♂) in CNC [# 9559].

Distribution. This species is known from southern Arizona and western Texas (Madge 1967: 159).
Records. USA: AZ, TX

***Lebia grandis* Hentz, 1830**

Lebia grandis Hentz, 1830: 255. Type locality: «North Carolina» (original citation), herein restricted to Asheville, Buncombe County (see Madge 1967: 163). Syntype(s) [2 originally cited] lost.

Loxopeza majuscula Chaudoir, 1871a: 141. Type locality: «Texas» (original citation). Syntype(s) [2 originally cited] in MHNP. Synonymy established by Madge (1967: 161).

Loxopeza grandis rivularis Casey, 1920: 235. Type locality: «Brownsville [Cameron County], Texas» (original citation). One syntype in USNM [# 47618]. Synonymy established by Madge (1967: 161).

Loxopeza magister Casey, 1920: 236. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47617]. Synonymy established by Madge (1967: 161).

Distribution. This species is found east of the Rocky Mountains from southern Quebec (Larochelle 1975: 91) to northeastern North Dakota (Tinerella 2003: 637), south to southeastern Texas along the Rio Grande and southern South Carolina, west to western Texas and western Oklahoma [see Madge 1967: Fig. 137]. The records from Baja California (Horn 1894: 310), Arizona (Wickham 1898: 300; Snow 1907: 142, as *L. majuscula*), New Mexico (Fall and Cockerell 1907: 159, 160 as *L. majuscula*), and "Colorado" (Snow 1877: 17; Wickham 1902: 239) need confirmation.
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, DE, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [AZ, CO, NM]

***Lebia pimalis* (Casey, 1920)**

Loxopeza pimalis Casey, 1920: 237. Type locality: «Arizona» (original citation), herein restricted to Brown's Canyon, Baboquivari Mountains, Pima County (see Madge 1967: 159). One syntype in USNM [# 47619].

Distribution. This species is known so far only from southern Arizona (Madge 1967: 159).
Records. USA: AZ

***Lebia subdola* Madge, 1967**

Lebia subdola Madge, 1967: 157. Type locality: «Madera C[a]n[yon] Sta[tion] (5000'-5800'), Rita M[oun]t[ain]s, S[an]ta Cruz Co[unty], Ariz[ona]» (original citation). Holotype (♂) in CNC [# 9558].

Distribution. This species is known from southern Arizona and western Texas (Madge 1967: 158), including southwestern New Mexico (Luna County, Ken Karns pers. comm. 2009).
Records. USA: AZ, NM, TX

***Lebia subgrandis* Madge, 1967**

Lebia subgrandis Madge, 1967: 160. Type locality: «Pena Blanca (4000'), Santa Cruz Co[unty], Ariz[ona]» (original citation). Holotype (♂) in CNC [# 9557].

Distribution. This species ranges from southern Arizona to western Texas (Madge 1967: 161).
Records. USA: AZ, NM, TX

***Lebia tricolor* Say, 1823**

Lebia tricolor Say, 1823a: 11. Type locality: «Pennsylvania; on the Missouri» (original citation), restricted to «Pennsylvania» by Lindroth and Freitag (1969: 349), herein to Milford, Pike County (see Madge 1967: 157). Lectotype (♀), designated by Lindroth and Freitag (1969: 349), in MHNP.

Distribution. This species occurs from Nova Scotia (Halifax and Colchester Counties, CNC) to eastern Minnesota, north to southern Manitoba (CNC), south to northern Oklahoma (Alfalfa County, Foster F. Purrington pers. comm. 2010), southern Louisiana, and central Florida [see Madge 1967: Fig. 126]. Old specimens simply labeled from "Texas" (Madge 1967: 157) are known.
Records. CAN: MB, NB, NS, ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, VA, VT, WI, WV [TX]

Subgenus *Polycheloma* Madge, 1967

Polycheloma Madge, 1967: 163. Type species: *Lebia lecontei* Madge, 1967 by original designation. Etymology (original). From the Greek *polys* (many) and *cheloma* (notch), alluding to the presence of several preapical notches on the mesotibia of the male [neuter].

Diversity. One species in southern United States and northeastern Mexico.

***Lebia lecontei* Madge, 1967**

Lebia lecontei Madge, 1967: 164. Type locality: «Texas» (original citation), herein restricted to 2.5 miles east of Nickle Creek Station, Culberson County (see Madge

1967: 164). Syntype(s) in MCZ [# 5802]. Note. Madge (1967: 164) proposed the name *Lebia lecontei* as a replacement name for *Lebia testacea* (LeConte, 1880). However, LeConte never provided a description for *L. testacea*. The first description of the species was done by Madge (1967: 164).

Distribution. This species is known from a few specimens collected in western Texas (Madge 1967: 164), southeastern Arizona (Cochise County, CNC, UASM), and "Tamaulipas" (MCZ, collection LeConte) and Nuevo León (UASM) in Mexico. The record from Baja California (Horn 1894: 310, as *L. testacea*) needs confirmation.

Records. USA: AZ, TX – Mexico

Subgenus *Lamprias* Bonelli, 1810

Lamprias Bonelli, 1810: Tabula Synoptica. Type species: *Carabus cyanocephalus* Linnaeus, 1758 by subsequent monotypy in Panzer (1813: 71). Etymology. From the Greek *lampros* (bright, brilliant) and the suffix *-ios* (pertaining to), possibly alluding to the vivid coloration of the adults in the hands of Bonelli [masculine].

Echimuthus Leach, 1815: 81. Type species: *Carabus cyanocephalus* Linnaeus, 1758 by monotypy.

Lamprus Billberg, 1820: 26. Unjustified emendation of *Lamprias* Bonelli, 1810.

Omalomorpha Motschulsky, 1844: 13[table], 42 [junior homonym of *Omalomorpha* Brullé, 1835]. Type species: *Lebia punctata* Gebler, 1843 designated by Lorenz (1998: 129). Synonymy established by Chaudoir (1871a: 129). Etymology. From the Greek *homalos* (even, equal) and *morphe* (form) [feminine].

Homalops Motschulsky, 1850a: viii, 42. Replacement name for *Omalomorpha* Motschulsky, 1844.

Rhopalostyla Chaudoir, 1850b: 96. Replacement name for *Omalomorpha* Motschulsky, 1844. Etymology (original). From the Greek *rhopalon* (club) and *stylos* (pillar, base) [feminine].

Lebida Motschulsky, 1862b: 51. Type species: *Lebida pilosella* Motschulsky, 1862 (= *Carabus cyanocephalus* Linnaeus, 1758) designated by Lorenz (1998: 104).

Diversity. Fourteen species in the Nearctic (one species) and Palaearctic (13 species) Regions.

Lebia divisa LeConte, 1850

Lebia concinna LeConte, 1846b: 192 [primary homonym of *Lebia concinna* Brullé, 1838]. Type locality: «Lacum Superiorem» (original citation), herein restricted to Eagle Harbor, Keweenaw County, Michigan (see Hubbard and Schwarz 1878: 627). One syntype in MCZ [# 5801].

Lebia divisa LeConte, 1850: 203. Replacement name for *Lebia concinna* LeConte, 1846.

Distribution. This species ranges from the Prairie Provinces, as far north as central Alberta, south to northern Colorado (Wickham 1902: 239) and eastern Kansas (Popenoe 1877: 23), east to west-central Indiana (Downie 1957: 116; Schrock 1985: 351), west to northwestern Idaho [see Madge 1967: Fig. 120]. The record from northeastern New Mexico (Fall and Cockerell 1907: 159) needs confirmation.
Records. CAN: AB, MB, SK **USA**: CO, ID, IL, IN, KS, MN, MT, SD, WI, WY [NM]

Subgenus *Lebia* Latreille, 1802

Lebia Latreille, 1802: 85. Type species: *Carabus haemorrhoidalis* Fabricius, 1792 (= *Buprestis marginatus* Geoffroy, 1785) designated by Desmarest (1851: 76).
Metabola Chaudoir, 1871a: 160 [junior homonym of *Metabola* Mayer, 1867]. Type species: *Metabola rufopyga* Chaudoir, 1871 (= *Lebia pulchella* Dejean, 1826) by monotypy. Synonymy established by Madge (1967: 166).
Aphelogenia Chaudoir, 1871b: 25. Type species: *Carabus vittatus* Fabricius, 1777 designated by Madge (1967: 166). Synonymy established by Madge (1967: 166).
Dianchomena Chaudoir, 1871b: 45. Type species: *Lebia abdominalis* Chaudoir, 1843 designated by Casey (1920: 239). Synonymy established by Madge (1967: 166). Etymology. From the Greek *dis* (twice, double) and *anchomenos* (strangled), possibly alluding to the constriction of the vertex ("*caput basi valde strangulatum*") of the adult [feminine].

Diversity. Worldwide, with about 525 species (Lorenz 2005: 481-488) of which 38 (about 7 % of the world fauna) occur in North America.

[**analis group**]

Lebia analis Dejean, 1825

Lebia analis Dejean, 1825: 265. Type locality: «Amérique septentrionale» (original citation), restricted to «Newark [Essex County], N[ew] J[ersey]» by Lindroth (1969a: 1030). One syntype in MHNP (Lindroth 1955b: 23).
Lebia anchora Chevrolat, 1835c: [no. 132]. Type locality: «environs d'Orixaba [Veracruz, Mexico]» (original citation). Holotype [by monotypy] location unknown (Lindroth 1969a: 1030). Synonymy established by Madge (1967: 184).
Lebia bonellii Putzeys, 1845a: 39. Type locality: «Mexique» (original citation). Holotype [by monotypy] location unknown (Lindroth 1969a: 1030). Synonymy established, under the name *L. anchora* Chevrolat, by Chaudoir (1871a: 212). Etymology. The specific name honors Franco Andrea Bonelli [1784-1830], professional entomologist and professor of zoology at the University of Turin. Bonelli proposed the first classification of the family Carabidae when he classified the species into 22 "stirpes" in his "Tabula Synoptica" published in 1810.
Lebia subfigurata Motschulsky, 1864: 227. Type locality: «Amér[ique] bor[éale]» (original citation). Lectotype, designated by Bousquet and Larochelle (1993: 14), in

Figure 42. *Helluomorphoides praeustus bicolor* (Harris). Adults of most carabids are opportunist predators or scavengers but those of *Helluomorphoides* seem to have adopted a different, more dangerous life-style. Adults of two North American species have been observed to plunder foraging and migrating columns of army ant species of the genus *Neivamyrmex* and run away with their prey and broods. The beetles do not inhabit the ant nest or bivouac but can detect and follow the chemical trails of the ants at night. Whether this habit is common to all species of *Helluomorphoides* remains to be investigated.

ZMMU. Synonymy established with doubt with the name *L. analis* var. *appendiculata* Chaudoir by Horn (1872a: 142), confirmed by Bousquet and Larochelle (1993: 14).

Lebia sublimbata Motschulsky, 1864: 226. Type locality: «états septentrionaux de l'Amérique du Nord» (original citation). Lectotype, designated by Bousquet and Larochelle (1993: 15), in ZMMU. Synonymy established by Bousquet and Larochelle (1993: 15).

Lebia appendiculata Chaudoir, 1871a: 212. Type locality: «Louisiane» (original citation). Syntype(s) [4 originally cited] in MHNP. Synonymy established by LeConte (1880a: 88).

Distribution. This species ranges from northwestern Vermont to eastern South Dakota (Kirk and Balsbaugh 1975: 37), including southernmost Ontario (Bousquet 1987a: 133), south to Guatemala (Bates 1883a: 229, as *L. anchora*) and the Florida Keys, west along the southwest to southeastern Arizona [see Madge 1967: Fig. 130] and the Baja California Peninsula (Blackwelder 1944: 52); also recorded from the Bahamas (Turnbow and Thomas 2008: 13). The record from "Maine" (Bousquet and Larochelle 1993: 276) needs confirmation.

Records. CAN: ON **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, NE, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [ME] – Bahamas, Guatemala, Mexico

[**bitaeniata group**]

***Lebia bitaeniata* Chevrolat, 1834**

Lebia bitaeniata Chevrolat, 1834 [6 August]: [no. 37]. Type locality: «Orixaba [Veracruz, Mexico]» (original citation). Syntype(s) location unknown (possibly in UMO).

Lebia bicincta Laporte, 1834 [30 June]: 47. Type locality: «Orizaba [Veracruz], Mexique» (original citation). Syntype(s) location unknown (possibly in MHNP). Synonymy established by Chaudoir (1871a: 208). Note. Based on bibliographic research I made, this name may be older than Chevrolat's name but is not in "prevailing usage" (see *Principle of priority* under "Nomenclature" section).

Lia femorata Motschulsky, 1864: 228. Type locality: «Am[érique] centr[ale]» (original citation). One syntype in ZMMU (Keleinikova 1976: 197). Synonymy established with doubt by Chaudoir (1871a: 208).

Lebia callizona Bates, 1878a: 607. Type locality: «Guatemala» (original citation). Syntype(s) probably in BMNH. Synonymy established (as aberration) by Csiki (1932b: 1332).

Distribution. This species ranges from southeastern Texas (Madge 1967: 172) to Colombia (Martínez 2003: 14); also recorded from the Bahamas (Turnbow and Thomas 2008: 13), Cuba (Gundlach 1891: 16), Jamaica (Darlington 1941a: 14), Puerto Rico (Wolcott 1936: 188), and Dominica (Peck 2006: 176).

Records. USA: TX – Bahamas, Colombia, Costa Rica, Cuba, Dominica, Guatemala, Jamaica, Mexico, Nicaragua, Puerto Rico

[**bivittata group**]

***Lebia abdominalis* Chaudoir, 1843**

Lebia abdominalis Chaudoir, 1843b: 704. Type locality: «près de la Nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Syntype(s) in MHNP.

Dianchomena convictor Casey, 1920: 262. Type locality: «Cairo [Alexander County], Illinois» (original citation). One syntype in USNM [# 47665]. Synonymy established by Madge (1967: 198).

Distribution. This species ranges from New Jersey to northeastern Kansas (Popenoe 1877: 23), south to Nicaragua (Bates 1883a: 240) and southern Florida, west to northwestern Texas [see Madge 1967: Fig. 119]; also recorded from Cuba (Gundlach 1891: 16; Darlington 1934: 113) and Jamaica (Darlington 1941a: 14). The record from "Wisconsin" (Bousquet and Larochelle 1993: 276) needs confirmation.

Records. USA: AL, AR, DC, DE, FL, GA, IL, IN, KS, LA, MD, MO, NC, NJ, OH, PA, SC, TN, TX, VA, WV [WI] – Belize, Cuba, Guatemala, Jamaica, Mexico, Nicaragua

***Lebia bilineata* Motschulsky, 1859**

Lebia bilineata Motschulsky, 1859a: 145. Type locality: «Col[onie] Ross [farming community about 75 miles north of San Francisco along the coast, California]» (original citation). Syntype(s) location unknown (possibly in ZMMU though not listed in Keleinikova 1976).

Distribution. This species ranges from central Idaho and northern Oregon south to southern California along the Mexican border [see Madge 1967: Fig. 133].

Records. USA: CA, ID, NV, OR

***Lebia bivittata* (Fabricius, 1798)**

Carabus 2vittatus Fabricius, 1798: 59. Type locality: «America» (original citation), restricted to «Galesburg [Knox County], Illin[ois]» by Lindroth (1969a: 1034). Syntype(s) apparently lost (Lindroth 1969a: 1034).

Lebia quadrivittata Dejean, 1825: 268. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 23). Synonymy established by LeConte (1863b: 5), confirmed by Lindroth (1955b: 23).

Dianchomena aemula Casey, 1920: 263. Type locality: «Kansas» (original citation). Two syntypes in USNM [# 47666]. Synonymy established by Madge (1967: 196).

Dianchomena devincta Casey, 1920: 264. Type locality: «Boulder Co[unty], Colorado» (original citation). One syntype in USNM [# 47667]. Synonymy established by Madge (1967: 196).

Distribution. The range of this species extends from northern New Jersey to north-central Colorado, north to southeastern Michigan, south at least to southern Arizona, Guanajuato and the Federal District in Mexico (Bates 1883a: 241), and central Georgia [see Madge 1967: Fig. 124]. At least one old specimen simply labeled from Wisconsin is known (Madge 1967: Fig. 124). The record from "Massachusetts" (Leng and Beutenmüller 1893: 142) needs confirmation.
Records. USA: AL, AR, AZ, CO, DC, DE, GA, IA, IL, IN, KS, KY, LA, MD, MI, MO, MS, NE, NJ, NM, NY, OH, PA, TX, VA [MA, WI] – Mexico

[**collaris group**]

***Lebia collaris* Dejean, 1826**

Lebia collaris Dejean, 1826: 456. Type locality: «Amérique septentrionale» (original citation), herein restricted to Southern Pines, Moore County, North Carolina (see Madge 1967: 215). One syntype in MHNP (Chaudoir 1871a: 200).

Distribution. This rarely collected species is known from southern Ohio (Purrington et al. 1999: 48) and southern Indiana, from North Carolina to southern Florida [see Madge 1967: Fig. 136], from southeastern Louisiana (Saint Tammany Parish, Igor M. Sokolov pers. comm. 2009), from east-central Texas (Riley 2011), and from western Arkansas (Polk and Garland Counties, Robert L. Davidson pers. comm. 2012). The records from New York (LeConte 1846b: 195), Alabama (Löding 1945: 21), and Cuba (Darlington 1934: 113) need confirmation.
Records. USA: AR, FL, GA, IN, LA, NC, OH, TX [AL, NY]

[**fuscata group**]

***Lebia abdita* Madge, 1967**

Lebia abdita Madge, 1967: 201. Type locality: «Pena Blanca (4000'), S[an]ta Cruz Co[unty], Ariz[ona]» (original citation). Holotype (♂) in CNC [# 9560].

Distribution. This species is known from southern Arizona and the Baja California Peninsula (Madge 1967: 202).
Records. USA: AZ – Mexico

***Lebia calliope* Bates, 1883**

Lebia calliope Bates, 1883a: 231. Type locality: «Mirador [and] Cerro de Plumas, Mexico; San Gerónimo, Guatemala» (original citation). Syntype(s) probably in BMNH.
Lebia serpentina Casey, 1920: 256. Type locality: «Brownsville [Cameron County], Texas» (original citation). Seven syntypes [7 originally cited] in USNM [# 47655]. Synonymy established by Madge (1967: 212).

Distribution. This species ranges from southeastern Texas (Madge 1967: 212) along the Rio Grande south at least to Guatemala (Bates 1883a: 231).
Records. USA: TX – Guatemala, Mexico

Lebia esurialis Casey, 1920

Lebia esurialis Casey, 1920: 257. Type locality: «Brownsville [Cameron County], Texas» (original citation). Two syntypes [2 originally cited] in USNM [# 47656].

Distribution. This species is known from northwestern and south-central Louisiana (Caddo and Saint Landry Parishes, Igor M. Sokolov pers. comm. 2009), eastern Texas (Madge 1967: 212; Riley 2011), and "Mexico" (Erwin et al. 1977: 4.62); also recorded from the Bahamas (Turnbow and Thomas 2008: 13) and Cuba (Mateu 1977: 378). The record from South Dakota (Kirk and Balsbaugh 1975: 38) needs confirmation.
Records. USA: LA, TX [SD] – Bahamas, Cuba, Mexico

Lebia fuscata Dejean, 1825

Lebia fuscata Dejean, 1825: 270. Type locality: «Amérique septentrionale» (original citation), restricted to «Rumney [Grafton County], N[ew] H[ampshire]» by Lindroth (1969a: 1035). One syntype in MHNP (Lindroth 1955b: 23).

Lebia canonica Casey, 1920: 257. Type locality: «Marquette [Marquette County, Michigan], Lake Superior» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47657]. Synonymy established by Madge (1967: 203).

Distribution. This species is found from Nova Scotia to western Washington, as far north as southern Manitoba and southwestern British Columbia (Lindroth 1969a: 1036), south to west-central California, east-central Texas (Riley 2011), and southern Florida [see Madge 1967: Fig. 127]. The species has been rarely collected in the Great Plains.
Records. CAN: BC (VCI), MB, NB, NS, ON, PE, QC **USA**: AL, AR, CA, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NY, OH, OR, PA, RI, SC, SD, TN, TX, VA, VT, WA, WI, WV

Lebia guttula LeConte, 1851

Lebia guttula LeConte, 1851: 178. Type locality: «ad Colorado [River, California]» (original citation). Holotype [by monotypy] (♀) in MCZ [# 67].

Lebia metuens Casey, 1920: 258. Type locality: «California» (original citation). Two syntypes in USNM [# 47658]. Synonymy established by Madge (1967: 199).

Lebia pacifica Casey, 1920: 259. Type locality: «Lake Co[unty], California» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47659]. Synonymy established by Madge (1967: 200).

Distribution. The range of this species extends from southern Alberta (Drumheller, CNC) and southern British Columbia south to southern California, southern New Mexico [see Madge 1967: Fig. 134], and western Texas (Jeff Davis County, Ken Karns pers. comm. 2009). One old specimen simply labeled from Kansas is known (Madge 1967: 201).

Records. CAN: AB, BC **USA**: AZ, CA, CO, ID, MT, ND, NM, NV, OR, TX, UT, WA, WY [KS]

Lebia insulata Madge, 1967

Lebia insulata Madge, 1967: 202. Type locality: «Esperanza Ranch, Brownsville [Cameron County], Tex[as]» (original citation). Holotype (♂) in MCZ [# 34669].

Distribution. This species is known only from southeastern Texas (Madge 1967: 203).
Records. USA: TX

Lebia lobulata LeConte, 1863

Lebia lobulata LeConte, 1863c: 5. Type locality: «Ohio and Louisiana» (original citation). Syntypes location unknown. Note. The specimen in LeConte's collection [Type 5807] is labeled "V[irgini]a" and so is not a syntype.

Lebia brunnicollis Motschulsky, 1864: 227. Type locality: «Atlanta [Georgia]» (lectotype label). Lectotype, designated by Bousquet and Larochelle (1993: 14), in ZMMU. Synonymy established by Horn (1872a: 142), confirmed by Bousquet and Larochelle (1993: 14).

Distribution. This species ranges from southeastern Maine (Majka et al. 2011: 47) to eastern North Dakota (Tinerella 2003: 637), south to eastern Texas and central Florida [see Madge 1967: Fig. 135].
Records. CAN: ON **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, LA, MD, ME, MO, MS, NC, ND, NJ, NY, OH, OK, PA, SC, SD, TN, TX, VA, WI, WV

Lebia ornata Say, 1823

Lebia ornata Say, 1823a: 13. Type locality: «Wis[s]ahick[o]n Cr[eek] [Philadelphia County], P[ennsylvani]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 349), in MCZ [# 33005].

Lebia axillaris Dejean, 1831: 372. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] in MHNP (Lindroth 1955b: 23). Synonymy established by LeConte (1869b: 248), confirmed by Lindroth (1969a: 1036).

Lebia marginella Dejean, 1831: 373. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 23). Synonymy established, under the name *L. axillaris* Dejean, by LeConte (1869b: 248), confirmed by Lindroth (1969a: 1036).

Lebia nigripennis Dejean, 1831: 373. Type locality: «Amérique septentrionale» (original citation). Two syntypes in MHNP (Lindroth 1955b: 23). Synonymy established by Madge (1967: 208).

Lebia nigripennis var. *erythrocephala* Dejean, 1831: 373. Type locality: «Amérique septentrionale» (original citation). Syntype(s) in MHNP. Synonymy established by Chaudoir (1871a: 201).

Dromius apicalis Haldeman, 1843b: 298. Type locality: southeastern Pennsylvania (Haldeman 1843a: 296). Syntype(s) presumably lost. Synonymy established, under the name *L. axillaris* Dejean, by LeConte (1846b: 194).

Lebia brunnea Haldeman, 1843b: 298. Type locality: southeastern Pennsylvania (Haldeman 1843a: 296). Syntype(s) presumably lost. Synonymy established, under the name *L. axillaris* Dejean, by Melsheimer (1853: 5).

Lebia flaviventris Motschulsky, 1864: 227 [*nomen dubium*]. Type locality: «Am[érique] bor[éale]» (original citation). One syntype, represented only by parts of legs (Bousquet 1997b: 339), in ZMMU. Synonymy established with doubt by Horn (1872a: 142).

Lebia frigida Chaudoir, 1871a: 242. Type locality: «Boston? [Massachusetts]» (original citation). Lectotype (♂), designated by Lindroth (1969a: 1036), in MHNP. Synonymy established by Casey (1920: 260), confirmed by Lindroth (1969a: 1036).

Lebia reperta Casey, 1920: 255. Type locality: «New York» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47651]. Synonymy established by Madge (1967: 208).

Lebia virginica Casey, 1920: 255. Type locality: «Va [with a black dot below the "a"] [= Norfolk, Virginia]» (lectotype label). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47652]. Synonymy established, under the name *L. axillaris* Dejean, by Lindroth (1955b: 23).

Lebia virginica ashevillensis Casey, 1920: 256. Type locality: «Asheville [Buncombe County], North Carolina» (original citation). Holotype [by monotypy] (♀) in USNM [# 47653]. Synonymy established, under the name *L. axillaris* Dejean, by Lindroth (1955b: 23).

Lebia fluviatilis Casey, 1920: 256. Type locality: «Vicksburg [Warren County], Mississippi» (original citation for the lectotype). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47654]. Synonymy established by Madge (1967: 208).

Distribution. This species ranges from Cape Breton Island, Nova Scotia (Christopher G. Majka pers. comm. 2007) to northwestern South Dakota (Kirk and Balsbaugh 1975: 37), including northern Minnesota, south to eastern Texas and central Florida (Peck and Thomas 1998: 24) [see Madge 1967: Fig. 128].

Records. CAN: NB, NS (CBI), ON, QC **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV

Lebia perpallida Madge, 1967

Lebia perpallida Madge, 1967: 206. Type locality: «Pena Blanca (4000'), S[an]ta Cruz Co[unty], Ariz[ona]» (original citation). Holotype (♂) in CNC [# 9561].

Distribution. This species is known only from a few specimens collected in southern Arizona (Madge 1967: 207).

Records. USA: AZ

***Lebia subrugosa* Chaudoir, 1871**

Lebia subrugosa Chaudoir, 1871a: 227. Type locality: «Mexique» (original citation). Syntype(s) in MHNP.

Distribution. This species is known from southern Arizona to western Texas (Madge 1967: 206), south to Guatemala (Bates 1883a: 230).
Records. USA: AZ, NM, TX – Guatemala, Mexico

[**lecta group**]
***Lebia bumeliae* Schaeffer, 1910**

Lebia bumeliae Schaeffer, 1910: 399. Type locality: «Brownsville [Cameron County], Texas» (original citation). Lectotype (♀), designated by Erwin and House (1978: 239), in USNM [# 42507].

Distribution. This species is known only from a few specimens collected in southeastern Texas (Madge 1967: 213).
Records. USA: TX

***Lebia lecta* Horn, 1885**

Lebia lecta G.H. Horn, 1885a: 131. Type locality: «Florida» (original citation), herein restricted to Miami, Dade County (see Madge 1967: 214). Holotype [by monotypy] (♀) in MCZ [# 34502].

Distribution. This species is known only from Dade, Monroe, and Walton Counties in Florida (Peck and Thomas 1998: 24).
Records. USA: FL

[**pulchella group**]
***Lebia pulchella* Dejean, 1826**

Lebia pulchella Dejean, 1826: 457. Type locality: «Amérique septentrionale» (original citation), restricted to «Texas» by Lindroth (1969a: 1023), herein to Brownsville, Cameron County (see Madge 1967: 169). One syntype in MHNP (Lindroth 1955b: 22).

Metabola rufopyga Chaudoir, 1871a: 160 [*nomen dubium*]. Type locality: «Mexique» (original citation). Holotype [by monotypy] (♂) in MHNP. Synonymy established with doubt by Lindroth (1969a: 1023). Note. Lindroth (1969a: 1023) stated that Madge (1967) synonymized *L. rufopyga* (Chaudoir) with *L. pulchella* though with a question mark. In fact Madge (1967: 167) simply wrote that "at least one [*M. vivida* Bates] and probably both species of *Metabola* are variants of *Lebia pulchella*." However, he did not list *M. rufopyga* Chaudoir in synonymy with *L. pulchella*.

Metabola vivida Bates, 1884: 298. Type locality: «Arizona; northern Sonora, Mexico» (original citation). Syntype(s) in BMNH and ANSP. Synonymy established by Madge (1967: 167).

Lebia tahoensis Casey, 1920: 252. Type locality: «Lake Tahoe [Placer County], California» (original citation). Three syntypes [3 originally cited] in USNM [# 47623]. Synonymy established by Madge (1967: 167).

Distribution. This species is found from northern New Hampshire to central Alberta, south to central California, the state of Hidalgo in Mexico (Ball and Shpeley 1992a: 64), and southern Florida [see Madge 1967: Fig. 123].
Records. CAN: AB, MB, ON, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IL, IN, KS, LA, MA, MD, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, PA, RI, SC, TN, TX, VA, WI, WV, WY – Mexico

[**pumila group**]
***Lebia pumila* Dejean, 1831**

Lebia pumila Dejean, 1831: 388. Type locality: «Amérique septentrionale» (original citation), restricted to «S[outh] McAlester [Pittsburg County, Oklahoma], Ind[ian Territory]» by Lindroth (1969a: 1038). One syntype in MHNP (Lindroth 1955b: 23).
Lebia maculicornis LeConte, 1846b: 195. Type locality: «Georgia» (original citation). Syntype(s) in MCZ [# 5805]. Synonymy established by LeConte (1880a: 88), confirmed by Lindroth (1969a: 1038).
Lebia rhodopus Schwarz, 1878: 354. Type locality: «Tampa [Hillsborough County, Florida]» (original citation). Lectotype (♂), designated by Erwin and House (1978: 239), in USNM [# 4494]. Synonymy established by Madge (1967: 215).
Lebia tertiaria Casey, 1920: 248. Type locality: «District of Columbia» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47650]. Synonymy established by Madge (1967: 215).
Lebia ludoviciana Casey, 1920: 248. Type locality: «Alexandria [Rapides Parish], Louisiana» (original citation). Lectotype (♂), designated by Lindroth (1975: 145), in USNM [# 47646]. Synonymy established by Madge (1967: 215).
Lebia quadrata Casey, 1920: 249. Type locality: «Southern Pines [Moore County], North Carolina» (original citation). Lectotype, designated by Lindroth (1975: 145), in USNM [# 47647]. Synonymy established by Lindroth (1955b: 23).
Lebia illini Casey, 1920: 249. Type locality: «Illinois» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47648]. Synonymy established by Madge (1967: 215).
Lebia frugalis Casey, 1920: 250. Type locality: «Bayfield [Bayfield County], Wisconsin» (original citation). Lectotype (♀), designated by Lindroth (1975: 145), in USNM [# 47649]. Synonymy established by Madge (1967: 215).

Distribution. This species ranges from Nova Scotia (Lindroth 1954c: 307) and Prince Edward Island (Majka et al. 2008: 133) to southeastern Alberta, south to southeastern Texas along the Rio Grande and southern Florida. The species is also known from one locality in southwestern British Columbia and one in western Washington [see Madge 1967: Fig. 132].

Records. CAN: AB, BC, MB, NB, NS, ON, PE, QC, SK **USA**: AL, AR, CT, DC, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WA, WI, WV
Note. *Lebia floricola*, credited to Harris, has been cited as a synonym of this species, first by LeConte (1846b: 195), on the basis that the name was published in the "N[ew] E[ngland] Farmer." I have not found any publication of Harris citing such a name. The name is a *nomen nudum* as mentioned by Madge (1967: 216).

[**scalpta group**]
***Lebia scalpta* Bates, 1883**

Lebia scalpta Bates, 1883a: 230. Type locality: «Jalapa [and] Yucatan, Mexico» (original citation). Syntype(s) probably in BMNH.

Distribution. This species ranges from southern Arizona and southern Texas (Madge 1967: 186) south at least to the Yucatán Peninsula (Bates 1883a: 230) in Mexico.
Records. USA: AZ, TX – Mexico

[**scapula group**]
***Lebia scapula* Horn, 1885**

Lebia scapula G.H. Horn, 1885a: 132. Type locality: «Arizona» (original citation), herein restricted to Nogales, Santa Cruz County (see Madge 1967: 184). Holotype [by monotypy] (♀) in MCZ [# 34504].

Distribution. This species is found from Arizona (Madge 1967: 184) to western Texas (Graves and Suter 1979: 6).
Records. USA: AZ, NM, TX

[**viridipennis group**]
***Lebia viridipennis* Dejean, 1826**

Lebia viridipennis Dejean, 1826: 452. Type locality: «Amérique septentrionale» (original citation), restricted to «Brookline [Norfolk County], Mass[achusetts]» by Lindroth (1969a: 1025). One syntype in MHNP (Lindroth 1955b: 23).
Lebia borea Hentz, 1830: 255. Type locality: «Massachusetts» (original citation). Syntype(s) lost. Synonymy established by LeConte (1846b: 193).
Lebia abrupta Casey, 1920: 250. Type locality: «Indiana» (original citation). One syntype in USNM [# 47624]. Synonymy established by Madge (1967: 170).
Lebia viridipennis frontalis Casey, 1920: 251. Type locality: «Keokuk [Lee County], Iowa» (original citation). One syntype in USNM [# 47625]. Synonymy established by Madge (1967: 170).
Lebia rhodeana Casey, 1920: 251. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). One syntype in USNM [# 47626]. Synonymy established by Madge (1967: 170).

Distribution. The range of this species extends from southwestern Maine (Majka et al. 2011: 47) and southwestern Quebec (LeSage 1996: 22) to southeastern South Dakota (Kirk and Balsbaugh 1975: 37), including southernmost Ontario (Pettit 1869: 107; CNC), south to southeastern Texas along the Rio Grande and southern Florida [see Madge 1967: Fig. 122]. The record from "North Dakota" (Bousquet and Larochelle 1993: 278) needs confirmation.
Records. CAN: ON, QC **USA**: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, LA, MA, MD, ME, MI, MN, MO, MS, NC, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [ND]

[**viridis group**]

***Lebia arizonica* Schaeffer, 1910**

Lebia arizonica Schaeffer, 1910: 398. Type locality: «Huachuca M[oun]t[ain]s [Cochise County], Arizona» (original citation). Lectotype (♂), designated by Erwin and House (1978: 239), in USNM [# 42506].

Distribution. The range of this species extends from southern Arizona to western Texas (Madge 1967: 175). The record from "Nevada" (Bousquet and Larochelle 1993: 276) needs confirmation.
Records. USA: AZ, NM, TX [NV]

***Lebia cyanipennis* Dejean, 1831**

Lebia cyanipennis Dejean, 1831: 385. Type locality: «Californie» (original citation), restricted to «San Diego [San Diego County]» by Lindroth (1969a: 1026). Holotype [by monotypy] in MHNP (Lindroth 1955b: 22).

Lebia ruficollis LeConte, 1851: 178. Type locality: «San Diego [San Diego County, California]» (original citation). Two syntypes in MCZ [# 68] and at least one in MHNP (collection Chaudoir). Synonymy established by Casey (1920: 251), confirmed by Madge (1967: 170).

Lebia montana G.H. Horn, 1885a: 131. Type locality: «Montana» (original citation). Two syntypes in MCZ [# 34503]. Synonymy established by Madge (1967: 176).

Lebia barbarae Casey, 1920: 242. Type locality: «S[an]ta Barbara [Santa Barbara County], California» (original citation). One syntype in USNM [# 47637]. Synonymy established by Madge (1967: 176).

Lebia melaena Hatch, 1953: 152. Type locality: «Pullman [Whitman County], Wash[ington]» (original citation). Holotype (♂) in USNM. Synonymy established by Madge (1967: 176).

Distribution. This species ranges from southern Saskatchewan to south-central British Columbia, south to southern California along the Mexican border and northern New Mexico [see Madge 1967: Fig. 129]. At least one specimen is known from "Texas" (Madge 1967: 177). The record from "North Dakota" (Bousquet and Larochelle 1993: 276) needs confirmation.

Records. CAN: AB, BC, SK **USA**: AZ, CA, CO, ID, MT, NM, OR, UT, WA, WY [ND, TX]

Lebia marginicollis Dejean, 1825

Lebia marginicollis Dejean, 1825: 271. Type locality: «Géorgie» (original citation), herein restricted to Tifton, Tift County (see Madge 1967: 181). One syntype in MHNP (Lindroth 1955b: 22).

Lebia cyanea Dejean, 1831: 386. Type locality: «île de Cuba; Cayenne [French Guiana]» (original citation), restricted to «Cuba» by Madge (1967: 180). Syntype(s) apparently lost (Lindroth 1969a: 1030). Synonymy established by Madge (1967: 180). Note. Lindroth (1969a: 1030) stated that the sole specimen in Chaudoir's collection under this name cannot be a syntype since its structural features do not match those reported in the original description. He agreed with Madge (1967: 180) that the syntypes were probably conspecific with members of *L. marginicollis* Dejean.

Lebia affinis Dejean, 1831: 387. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] in MHNP (Lindroth 1955b: 22). Synonymy established by LeConte (1869b: 248), confirmed by Lindroth (1955b: 22).

Lamprias limbicollis Motschulsky, 1859a: 145. Type locality: «Canada» (original citation), which is likely incorrect. Lectotype (probably ♀), designated by Bousquet (1997b: 334), in ZMMU. Synonymy established, under the name *L. affinis* Dejean, by LeConte (1863b: 5), confirmed by Bousquet (1997b: 334).

Distribution. The range of this species extends from New Jersey (Smith 1890: 87; Smith 1910: 210) to Arizona, north to northwestern Ohio (Hancock County, Foster F. Purrington pers. comm. 2009), southern Michigan, and northern Illinois, south to Brazil (Chaudoir 1871a: 185) and southern Florida [see Madge 1967: Fig. 125]; also found "on all the Greater Antilles" (Darlington 1953: 11, as *L. cyanea*) and Dominica (Peck 2006: 176). The record from Montana (Hatch 1933a: 9) is probably in error.
Records. USA: AL, AR, AZ, DC, FL, GA, IL, IN, LA, MI, MO, MS, NC, NJ, NM, OH, OK, SC, TN, TX, VA – Bahamas, Brazil, Cuba, Dominica, French Guiana, Guatemala, Jamaica, Mexico, Nicaragua, Puerto Rico

Lebia moesta LeConte, 1850

Lebia moesta LeConte, 1850: 203. Type locality: «Michipicotin [Ontario]» (original citation). Syntype(s) in MCZ [# 5811].

Lebia cynica Casey, 1920: 241. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). Lectotype (♂), designated by Lindroth (1975: 144), in USNM [# 47634]. Synonymy established by Lindroth (1969a: 1028).

Distribution. This species ranges from Newfoundland (Larson and Langor 1982: 594) and southern Labrador to Vancouver Island (Lindroth 1969a: 1028-1029), south at least to northern Oregon (Tillamook and Umatilla Counties, CNC), southern Wyoming (Lavigne 1977: 46; Lincoln County, CNC), eastern Nebraska (Cuming County,

Foster F. Purrington pers. comm. 2009), east-central Ohio (Usis and MacLean 1998: 67), and the District of Columbia (Ulke 1902: 7). The record from east-central Missouri (Summers 1873: 134) needs confirmation.
Records. CAN: AB, BC (VCI), LB, MB, NB, NF, NS, ON, PE, QC, SK **USA**: DC, ID, IL, MA, ME, MI, MN, MT, NE, NH, NJ, NY, OH, OR, RI, SD, VT, WA, WI, WY [MO]
Note. Madge (1967: 177) listed this form as synonym of *L. viridis* Say.

Lebia perita Casey, 1920

Lebia perita Casey, 1920: 241. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). One syntype in USNM [# 47636].

Distribution. This species occurs from southern British Columbia, including Vancouver Island, south to southern California along the Mexican border, east to southwestern Idaho [see Madge 1967: Fig. 140].
Records. CAN: BC (VCI) **USA**: CA, ID, OR, WA

Lebia pleuritica LeConte, 1846

Lebia pleuritica LeConte, 1846b: 193. Type locality: «Lacum Superiorem» (original citation), herein restricted to Eagle Harbor, Keweenaw County, Michigan (see Hubbard and Schwarz 1878: 627). Two syntypes in MCZ [# 5806].

Distribution. This species extends from southwestern Quebec (LeSage 1996: 22) to south-central Saskatchewan (Hooper 1977: 51), south to northeastern Kansas (Madge 1967: 174), central Missouri (Cooper County, CMNH), and northwestern North Carolina (Watauga County, CMNH). The records from the Organ Mountains in southern New Mexico (Fall and Cockerell 1907: 160) and "Mexico" (Blackwelder 1944: 55) are probably in error.
Records. CAN: ON, QC, SK **USA**: DC, IA, IL, IN, KS, MA, MI, MN, MO, NC, NE, NJ, NY, PA, SD, VT, WI

Lebia rufopleura Schaeffer, 1910

Lebia rufopleura Schaeffer, 1910: 398. Type locality: «Brownsville [Cameron County], Texas» (original citation). Lectotype (♂), designated by Erwin and House (1978: 239), in USNM [# 42505].

Distribution. This species is known only from a few localities in southeastern Texas (Madge 1967: 173).
Records. USA: TX

Lebia tuckeri (Casey, 1920)

Loxopeza tuckeri Casey, 1920: 237. Type locality: «Tuçson [Pima County], Arizona» (original citation). Five syntypes [5 originally cited] in USNM [# 47621].

Distribution. This species is found from southern California to western Texas, north to Mesa County in Colorado (Madge 1967: 175).
Records. USA: AZ, CA, CO, NM, TX

Lebia viridis Say, 1823

Lebia viridis Say, 1823a: 14. Type locality: «Camp Hill [Cumberland County], P[ennsylvani]a» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 349), in MCZ [# 33006].

Lebia viridis Dejean, 1825: 271 [primary homonym of *Lebia viridis* Say, 1823]. Type locality: «Kentucki» (syntype label). One syntype in MHNP (Lindroth 1955b: 22). Synonymy established with doubt by Say (1830a: 135), confirmed by Lindroth (1955b: 22).

Lebia smaragdula Dejean, 1831: 387. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 23). Synonymy established by LeConte (1880a: 88).

Lamprias cyanellus Motschulsky, 1850a: 42. Type locality: «California» (original citation), cited from «St. Francisco [San Francisco County]» by Motschulsky (1859a: 145). Lectotype, designated by Bousquet (1997b: 331), in ZMMU. Synonymy established, under the name *L. smaragdula* Dejean, by LeConte (1869b: 248), confirmed by Bousquet (1997b: 331).

Lebia viridis var. *violaceipennis* Chaudoir, 1871a: 193. Type locality: «Guatemala» (original citation). Syntype(s) in MHNP. Synonymy established by Bates (1883a: 223).

Lebia viridis var. *subopaca* Schaeffer, 1910: 397. Type locality: «Huachuca M[oun] t[ain]s [Cochise County], Arizona» (original citation). Lectotype (♀), designated by Erwin and House (1978: 239), in USNM [# 42504]. Synonymy established by Madge (1967: 177).

Lebia truckeensis Casey, 1920: 241. Type locality: «Reno [Washoe County], Nevada» (original citation). Holotype [by monotypy] in USNM [# 47635]. Synonymy established by Madge (1967: 178).

Lebia castigata Casey, 1920: 242. Type locality: «Placer Co[unty], California» (original citation). One syntype in USNM [# 47638]. Synonymy established by Madge (1967: 178).

Lebia adolescens Casey, 1920: 242. Type locality: «Boston Neck, Rhode Island; Southern Pines, North Carolina» (original citation), restricted to «Boston Neck [Washington County]» by Madge (1967: 178). Four syntypes in USNM [# 47639]. Synonymy established by Madge (1967: 178).

Lebia evoluta Casey, 1920: 243. Type locality: «Las Vegas, New Mexico; Kansas» (original citation), restricted to «Las Vegas [San Miguel County]» by Madge (1967: 178). Two syntypes in USNM [# 47640]. Synonymy established by Madge (1967: 178).

Lebia histrica Casey, 1920: 243. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). One syntype in USNM [# 47641]. Synonymy established by Madge (1967: 178).

Lebia bracata Casey, 1920: 243. Type locality: «probably Indiana» (original citation). Holotype [by monotypy] (♀) in USNM [# 47642]. Synonymy established by Madge (1967: 178).

Lebia magica Casey, 1920: 244. Type locality: «S[ain]t Louis, Missouri» (original citation). One syntype in USNM [# 47643]. Synonymy established by Madge (1967: 178).

Lebia incitata Casey, 1920: 244. Type locality: «Hoopa Valley, Humboldt Co[unty], California» (original citation). One syntype in USNM [# 47644]. Synonymy established by Madge (1967: 178).

Lebia subaffinis Casey, 1920: 244. Type locality: «Fort Wingate [McKinley County], New Mexico» (original citation). Two syntypes in USNM [# 47645]. Synonymy established by Madge (1967: 178).

Lebia vermiculina Casey, 1920: 245. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). One syntype in USNM [# 47628]. Synonymy established by Madge (1967: 178).

Lebia prominens Casey, 1920: 245. Type locality: «probably Indiana» (original citation). Holotype [by monotypy] in USNM [# 47627]. Synonymy established by Madge (1967: 178).

Lebia planifera Casey, 1920: 246. Type locality: «Tuçson [Pima County], Arizona» (original citation). Six syntypes in USNM [# 47629]. Synonymy established by Madge (1967: 178).

Lebia cobaltina Casey, 1920: 246. Type locality: «Colonia Garcia, Sierra Madre M[oun]t[ain]s, Chihuahua, Mexico» (original citation). One syntype in USNM [# 47630]. Synonymy established by Madge (1967: 178).

Lebia papago Casey, 1920: 247. Type locality: «Tuçson [Pima County], Arizona» (original citation). One syntype in USNM [# 47631]. Synonymy established by Madge (1967: 178).

Lebia papago trajecta Casey, 1920: 247. Type locality: «Arizona» (original citation). One syntype in USNM [# 47632]. Synonymy established by Madge (1967: 178).

Lebia duluthiana Casey, 1920: 247. Type locality: «Duluth [Saint Louis County], Minnesota» (original citation). One syntype in USNM [# 47633]. Synonymy established by Madge (1967: 178).

Distribution. This widely distributed species ranges from Nova Scotia to northwestern Yukon Territory, south to southern California along the Mexican border, Guatemala (Chaudoir 1871a: 192), and southern Florida [see Madge 1967: Fig. 139]; also reported from some islands of the Greater Antilles (Blackwelder 1944: 56). According to Shimonoya (2004), this species has been recently found in Fukui Prefecture, Japan. **Records. CAN**: AB, BC (VCI), MB, NB, NS (CBI), NT, ON, PE, QC, SK, YT **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WV, WY – Cuba, Dominican Republic, Guatemala, Mexico, Puerto Rico

[**vittata group**]

***Lebia histrionica* Bates, 1883**

Lebia histrionica Bates, 1883a: 240. Type locality: «Mexico; Guatemala» (original citation). Syntype(s) probably in BMNH.

Lebia histrionica var. *scutellata* Bates, 1883a: 241. Type locality: «Playa Vicente [Veracruz], Mexico» (original citation). Syntype(s) probably in BMNH. Synonymy established by Madge (1967: 193).

Lebia histrionica var. *nigrosignata* Bates, 1883a: 241. Type locality: «Guanajuato, Mexico» (original citation). Syntype(s) probably in BMNH. Synonymy established by Madge (1967: 193).

Distribution. This species ranges from southern Arizona (Madge 1967: 194) to Guatemala (Bates 1883a: 240).

Records. USA: AZ – Guatemala, Mexico

***Lebia miranda* (Horn, 1872)**

Dianchomena miranda G.H. Horn, 1872a: 139. Type locality: «Camp Grant [Pinal County], Arizona» (original citation). Syntype(s) in MCZ [# 8325].

Distribution. This species is found in southern Arizona (Madge 1967: 189). At least one specimen labeled from "Texas" is known.

Records. USA: AZ [TX]

Note. Madge (1967: 189) retained this name only for the Arizona (and possibly Texas) populations but pointed out that populations, probably representing the same species but with different color patterns, were seen from Mexico and Colombia.

***Lebia nigricapitata* Madge, 1967**

Lebia nigricapitata Madge, 1967: 195. Type locality: «Oak C[ree]k Canyon [Coconino County], Ariz[ona]» (original citation). Holotype (♂) in CAS [# 8162].

Distribution. This species is known only from a few localities in Arizona (Madge 1967: 196).

Records. USA: AZ

***Lebia pectita* Horn, 1885**

Lebia pectita G.H. Horn, 1885a: 133. Type locality: «Pennsylvania to Texas» (original citation for *L. vittata* Fabricius *sensu* Horn, 1872), herein restricted to Jacksonville, Duval County, Florida (see Madge 1967: 195). Syntype(s) in MCZ [# 34507]. Note. This name was proposed for *Lebia vittata* (Fabricius, 1777) *sensu* Horn (1872a: 140). Horn's collection in MCZ contains three specimens under this name: two are labeled "N.M." (one of which has a type label) and the other one "Fla."

Distribution. This species is found from New Hampshire to northeastern Kansas (Knaus 1903: 188), south to eastern Texas and northern Florida [see Madge 1967: Fig. 121]. The state record of "New Mexico" (Bousquet and Larochelle 1993: 277), based on two specimens in Horn collection (MCZ) labeled "N.M.," needs confirmation.
Records. USA: AL, AR, CT, DC, FL, GA, IL, IN, KS, KY, LA, MA, MD, MI, MS, NC, NH, NJ, NY, OH, OK, PA, RI, SC, TN, TX, VA [NM]

Lebia solea Hentz, 1830

Lebia solea Hentz, 1830: 256. Type locality: «Massachusetts» (original citation), herein restricted to Framingham, Middlesex County (see Madge 1967: 188). Syntype(s) lost.

Lebia scapularis Dejean, 1831: 377. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 23). Synonymy established by LeConte (1859c: 31), confirmed by Lindroth (1955b: 23).

Lebia conjungens LeConte, 1846b: 194. Type locality: «NovEboraci [= New York]» (original citation). Two syntypes in MCZ [# 5809]. Synonymy established, under the name *L. scapularis* Dejean, by Horn (1872a: 138). Note. Madge (1967: 190) listed this name in synonymy with *L. vittata* Fabricius. Horn (1872a: 138) referred it to this species and the original description clearly suggests that his interpretation is correct. The specimen labeled as type in MCZ is not a syntype since it bears the label "N.J."

Lebia flavolineata Motschulsky, 1864: 227. Type locality: «Am[érique] bor[éale]» (original citation). Lectotype (♀), designated by Bousquet (1997b: 339), in ZMMU. Synonymy established with doubt by Horn (1872a: 142), confirmed by Bousquet (1997b: 339).

Lebia scapularis var. *limbigera* Chaudoir, 1871b: 54. Type locality: «Louisiane» (original citation). Holotype [by monotypy] probably in MHNP. **New synonymy**. Note. This name has been forgotten in the literature. The elytral color of the sole specimen seen by Chaudoir (1871b: 54), which was the reason for proposing the new taxon, falls within the variability of *L. solea* as expressed by Madge (1967: 187).

Lebia websteri Casey, 1920: 260. Type locality: «Indiana» (original citation). Lectotype (♀), designated by Lindroth (1975: 144), in USNM [# 47664]. Synonymy established by Madge (1967: 187). Etymology. The specific name honors Francis Marion Webster [1849-1916], a self-made entomologist who worked as a special field agent to the United States Department of Agriculture under Charles Valentine Riley before joining the U.S. Bureau of Entomology.

Distribution. This species is found east of the Rocky Mountains from southern Nova Scotia to southwestern Saskatchewan, south to southeastern Texas along the Rio Grande and southern Florida [see Madge 1967: Fig. 131]; also recorded from Cuba (Darlington 1934: 113) and "Mexico" (Lindroth 1969a: 1031). The record from southwestern New Mexico (Fall and Cockerell 1907: 160, as *L. scapularis*) needs confirmation.

Records. CAN: MB, NS, ON, QC, SK **USA**: AL, AR, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV [NM] – Cuba, Mexico

***Lebia vittata* (Fabricius, 1777)**

Carabus vittatus Fabricius, 1777: 240. Type locality: «America boreali» (original citation), restricted to «Elkhart [Elkhart County], Ind[iana]» by Lindroth (1969a: 1031). Syntype(s) apparently lost (Lindroth 1969a: 1031).

Lebia flavovittata Chevrolat, 1836a: [no. 161]. Type locality: «environs de Mexico» (original citation). Syntype(s) [2 originally cited] location unknown (possibly in UMO). Synonymy established by Chaudoir (1871b: 40).

Lebia furcata LeConte, 1846b: 193. Type locality: «ad flumen Platte, et ad Lacum Superiorem» (original citation), restricted to «Eagle Harbor [Keweenaw County], Mich[igan]» by Lindroth (1969a: 1031). Syntype(s) in MCZ [# 5808]. Synonymy established by Madge (1967: 189).

Aphelogenia vittata var. *connecta* Chaudoir, 1871b: 40. Type locality: Etats de l'Union américaine (inferred from text on page 41). Syntype(s) in MHNP. Synonymy established by Madge (1967: 190).

Aphelogenia spraguei G.H. Horn, 1872a: 139. Type locality: «Texas» (original citation). Holotype [by monotypy] (♀) in MCZ [# 34506]. Synonymy established by Horn (1885a: 133).

Lebia depicta G.H. Horn, 1885a: 133. Type locality: «Montana» (original citation). Two syntypes in MCZ [# 34505]. Synonymy established by Madge (1967: 190).

Lebia sonomae Casey, 1913: 191. Type locality: «Mendocino Co[unty], California» (original citation). Two syntypes in USNM [# 47662]. Synonymy established by Madge (1967: 190).

Lebia debiliceps Casey, 1913: 192. Type locality: «Indiana» (original citation). Lectotype (♂), designated by Lindroth (1975: 144), in USNM [# 47660]. Synonymy established, under the name *L. furcata* LeConte, by Hatch (1953: 153), confirmed by Lindroth (1969a: 1032).

Lebia amnicola Casey, 1913: 192. Type locality: «Brownsville [Cameron County], Texas» (original citation). One syntype in USNM [# 47661]. Synonymy established by Madge (1967: 190).

Lebia tempeana Casey, 1924: 92. Type locality: «Tempe [Maricopa County], Arizona» (original citation). One syntype in USNM [# 47663]. Synonymy established by Madge (1967: 190).

Distribution. This species is found from Nova Scotia to southeastern British Columbia (Lindroth 1969a: 1033), south to southern California, southwestern New Mexico (Fall and Cockerell 1907: 160), southeastern Texas, and southern Florida [see Madge 1967: Fig. 118]; also recorded from "Mexico" (Bates 1883a: 240) and the state of Tabasco (Bates 1891a: 274, as *L. furcata*).

Records. CAN: AB, BC, MB, NS, ON, QC, SK **USA**: AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI, WY – Mexico

Genus *Hyboptera* Chaudoir, 1873

Hyboptera Chaudoir, 1873b: 161. Type species: *Hyboptera angulicollis* Chaudoir, 1873 designated by Reichardt (1973: 48). Etymology (original). From Greek *hybos* (hump, tubercle) and *pteron* (wing, by extension elytron), alluding to the presence of linear series of tubercles on the elytra ("*elytra ... supra seriatim tuberculata*") of the adult [feminine].

Diversity. Seven species are known (Erwin 2004: 33) in the Neotropical Region, one of which extends into southern Texas.
Identification. Reichardt (1973) reviewed the species then known and published a key for their identification. Subsequently, two new species were described by Erwin (2004).

Hyboptera auxiliadora Erwin, 2004

Hyboptera auxiliadora Erwin, 2004: 35. Type locality: «Bentsen State Park, Mission, Hidalgo County, Texas» (original citation). Holotype (♂) in USNM.

Distribution. This species ranges from southern Texas to Costa Rica (Erwin 2004: 37).
Records. USA: TX – Costa Rica, Mexico

Subtribe Calleidina Chaudoir, 1873

Callidides Chaudoir, 1873b: 97. Type genus: *Callida* Agassiz, 1846 (unjustified emendation of *Calleida* Latreille, 1824, not in prevailing usage) (= *Calleida* Latreille, 1824).

Plochionidae des Gozis, 1875: 3. Type genus: *Plochionus* Dejean, 1821.

Anomotarina Habu, 1967: 117. Type genus: *Anomotarus* Chaudoir, 1875. Synonymy established by Ball and Hilchie (1983: 173).

Diversity. Worldwide, with about 660 species arrayed in 46 genera (Lorenz 2005: 491-498). The North American fauna is represented by 24 species (about 3.5 % of the world fauna).
Taxonomic Note. Erwin (2004: 6) advocated combining calleidines with agrines into one subtribe (Agrina) but did not provide any justification. In a cladistic analysis of lebiine exemplars performed by Casale (1998: Fig. 91), calleidines turned out as the sister-group to metallicines and agrines as the sister-group to physoderines. In this work, agrines are retained as a distinct subtribe. In the analysis of Ball et al. (1995), calleidines showed up as the sister-group to gallerucidiines. Jeannel (1949a: 946) listed the gallerucidiines and thysanotines (currently considered as pericalines) with the calleidines (including trichines).

Genus *Plochionus* Dejean, 1821

Plochionus Dejean, 1821: 5. Type species: *Lebia bonfilsii* Audinet-Serville, 1821 (= *Carabus pallens* Fabricius, 1775) by monotypy. Etymology (see Dejean 1825: 250). From the Greek *plochion* (chain), alluding to the moniliform antennomeres 4-11 of the adult which reminded Dejean of a pearl necklace ("*antennes ... dont les sept derniers articles sont ... arrondis comme des perles formant un collier*") [masculine].

Plocionus Agassiz, 1846: 299. Unjustified emendation of *Plochionus* Dejean, 1821.

Diversity. Seventeen species (Lorenz 2005: 495) in the Nearctic (four species), Neotropical (14 species), and Australian (one species from New Caledonia) Regions. One species, *P. pallens*, has become subcosmopolitan through commerce.

Identification. Horn (1882: 145) provided a key for the identification of the North American species. Since then, one new species (*P. bicolor*) has been described by Notman (1919b: 234). A taxonomic revision of the species would be useful.

Subgenus *Menidius* Chaudoir, 1872

Menidius Chaudoir, 1872b: 170. Type species: *Plochionus timidus* Haldeman, 1843 designated by Lindroth (1969a: 1066). Etymology (original). From the Greek *mene* (moon) and *eidos* (form), alluding to the semicircular (i.e., half-moon) shape of the pronotum ("*thorax ... fere semicircularis*") of the adult [masculine].

Diversity. Fourteen species in the temperate, subtropical, and tropical areas of the Nearctic (four species, all of them extending into the West Indies or Mexico) and Neotropical Regions.

Plochionus amandus Newman, 1840

Plochionus amandus Newman, 1840: 32. Type locality: «S[ain]t John's Bluff [Duval County], East Florida» (original citation). Syntype(s) probably in BMNH.

Plochionus vittatus LeConte, 1844: 48. Type locality: «Florida» (original citation). One syntype in MCZ. Synonymy established by LeConte (1863b: 5).

Distribution. This species ranges from southeastern Georgia (Fattig 1949: 40; McIntosh County, CNC) to southern Florida (Peck and Thomas 1998: 24), west to southwestern Alabama (Leng 1915: 588; Mobile County, MCZ, USNM); also recorded from the Bahamas (Turnbow and Thomas 2008: 13). The record from Guana Island (Valentine and Ivie 2005: 275) in the British Virgin Islands needs confirmation.

Records. USA: AL, FL, GA – Bahamas

Plochionus bicolor Notman, 1919

Plochionus bicolor Notman, 1919b: 234. Type locality: «Key Largo [Monroe County], Fl[orid]a» (original citation). One syntype [2 ♂ originally cited] in SIM (Hennessey 1990: 466).

Distribution. This species is known only from southern Florida (Peck and Thomas 1998: 24), Cuba (Darlington 1934: 117), and Navassa (Steiner 2008: 132).
Records. USA: FL – Cuba, Navassa
Note. According to Ball (in Peck 2005: 39), *Plochionus rubrofasciatus* Zayas, 1988, described from Cuba, is probably a synonym of this species.

Plochionus discoideus LeConte, 1880

Plochionus amandus var. *discoideus* LeConte, 1880a: 86. Type locality: «Fl[orid]a» (original citation). Five syntypes in MCZ.
Plochionus dorsalis G.H. Horn, 1882: 146. Type locality: «Florida» (original citation). Six syntypes in MCZ [# 8186]. Synonymy established by Leng (1915: 588).

Distribution. This species is known from northern Georgia (Fattig 1949: 40), the Florida Peninsula, as far south as Dade County (Peck and Thomas 1998: 24), and the Bahamas (Darlington 1953: 13).
Records. USA: FL, GA – Bahamas

Plochionus timidus Haldeman, 1843

Plochionus timidus Haldeman, 1843b: 298. Type locality: «Alabama» (original citation). One possible syntype, a ♀ labeled "[orange disc] / Plochionus timidus Hald. [handwritten]," in MCZ (collection LeConte).

Distribution. The range of this species extends from southeastern New Hampshire (Strafford County, Ross T. Bell pers. comm. 2008) to southern Wisconsin (Messer 2010: 44) and northern Iowa (Wickham 1911b: 7), including southern Ontario (Pettit 1869: 107), south to central Texas (Haldeman 1852: 373; Blanco County, CMNH), southern Louisiana (East Baton Rouge, Iberville, Saint Martin, and Saint Tammany Parishes, Igor M. Sokolov pers. comm. 2009), and central Florida (Pinellas County, CMNH; Schwarz 1878: 435), west along southwestern United States to southern California (Moore 1937: 12; Kern and Fresno Counties, CNC) and the Baja California Peninsula (Horn 1894: 310).
Records. CAN: ON **USA**: AL, AR, AZ, CA, CT, DC, DE, FL, GA, IA, IL, IN, KS, LA, MA, MD, MI, MO, MS, NC, NH, NJ, NM, NV, NY, OH, PA, RI, SC, TN, TX, VA, WI, WV – Mexico

Subgenus *Plochionus* Dejean, 1821

Plochionus Dejean, 1821: 5. Type species: *Lebia bonfilsii* Audinet-Serville, 1821 (= *Carabus pallens* Fabricius, 1775) by monotypy.

Diversity. Two Neotropical species, one of them subcosmopolitan, and one New Caledonian species (*P. niger* Fauvel).

***Plochionus pallens* (Fabricius, 1775)**

Carabus pallens Fabricius, 1775: 244. Type locality: «Dresdae [Germany]» (original citation). Syntype(s) apparently lost (Lindroth 1969a: 1066).

Lebia bonfilsii Audinet-Serville, 1821: 11. Type locality: «Bordeaux [France]» (original citation). Syntype(s) probably lost. Synonymy established by Chevrolat (1863: 189). Note. LeConte's collection holds a specimen labeled "P. Bonfilsii Dej. type! [handwritten] / pallens 2 [handwritten]."

Plochionus valens LeConte, 1863c: 5. Type locality: «Pennsylvania; Tampico, Mexico» (original citation), restricted to «Penns[ylvania]» by Lindroth (1969a: 1066). Two syntypes in MCZ [# 5823]. Synonymy established, under the name *P. bonfilsi* (Audinet-Serville), by LeConte (1880a: 86).

Distribution. Lindroth (1969a: 1066) stated that this species is almost cosmopolitan and probably of South American origin. In North America, it is known from "Massachusetts" (Harris 1833: 566, as *P. bonfilsii*?), "Pennsylvania" (LeConte 1846b: 192; Lindroth 1969a: 1066), Maryland (Charles County, USNM), District of Columbia (USNM), northern Georgia (Rabun County, USNM), eastern Florida (Leng 1915: 588), Missouri (Summers 1873: 133, as *P. bonfilsii*), Kansas (Douglas County, USNM), and Indiana (Alien County, USNM). The record from "California" (Csiki 1932b: 1451) needs confirmation.

Records. USA: DC, FL, GA, IN, KS, MA, MD, MO, PA [CA] – **Adventive**

Genus *Tecnophilus* Chaudoir, 1877

Tecnophilus Chaudoir, 1877: 239. Type species: *Calleida croceicollis* Ménétriés, 1843 designated by Larson (1969: 44). Etymology. Anagram of the generic name *Philotecnus*, derived from the Greek *tecnon* (child, young) and *philos* (beloved), although Chaudoir was aware that there was no data suggesting that adults of these species care for their young ("*quoique l'amour de ces insectes pour leur progéniture ne soit rien moins que prouvé*") [masculine].

Diversity. Two Nearctic species, one of them extending into northern Mexico.

Identification. Larson (1969) revised the species.

***Tecnophilus croceicollis croceicollis* (Ménétriés, 1843)**

Calleida croceicollis Ménétriés, 1843: 53. Type locality: «Californie» (original citation), herein restricted to Bay Farm Island, Alameda County (see Larson 1969: 61). Syntype(s) location unknown (Lindroth 1969a: 1064).

Callida chloridipennis Motschulsky, 1850a: 39. Type locality: «California» (original citation), cited from «Col[onie] Ross [farming community about 75 miles north of San Francisco along the coast]» by Motschulsky (1859a: 140). One syntype in ZMMU (Keleinikova 1976: 191). Synonymy established by Horn (1882: 161).

Philotecnus nigricollis LeConte, 1851: 176. Type locality: «San Jose [Santa Clara County, California]» (original citation). Syntype(s) in MCZ [# 63] and MHNP (collection Chaudoir). Synonymy established by Horn (1882: 161).

Philotecnus ruficollis LeConte, 1851: 176. Type locality: «San Diego [San Diego County, California]» (original citation). Holotype [by monotypy] (♀) in MCZ [# 62]. Synonymy established by LeConte (1853c: 379).

Tecnophilus glabripennis Chaudoir, 1877: 242. Type locality: «Nevada» (original citation). Holotype [by monotypy] in MHNP. Synonymy established by Horn (1882: 161).

Distribution. This subspecies occurs from northern California to eastern Colorado, south to southeastern Texas, Durango and Sinaloa in Mexico, and southern California [see Larson 1969: Fig. 63]. The record from "Oregon" (Bousquet and Larochelle 1993: 280) needs confirmation.

Records. USA: AZ, CA, CO, NM, NV, TX, UT [OR] – Mexico

Tecnophilus croceicollis peigani Larson, 1969

Tecnophilus croceicollis peigani Larson, 1969: 61. Type locality: «Milk River near junction with Lost River, Lost River Ranch, Alberta» (original citation). Holotype (♂) in CNC [# 10540].

Distribution. The range of this subspecies extends from southern Saskatchewan (several localities, CNC) and southern Alberta south to southwestern Idaho, northern Utah, and "Colorado" [Larson 1969: 62, Fig. 63].

Records. CAN: AB, SK **USA**: CO, ID, MT, UT, WY

Tecnophilus pilatei Chaudoir, 1877

Tecnophilus pilatei Chaudoir, 1877: 239. Type locality: «Texas» (original citation), herein restricted to Goose Island State Park, Aransas County (see Larson 1969: 46). Holotype [by monotypy] (♀) in MHNP.

Distribution. This species is restricted to the Gulf Coast of Texas [see Larson 1969: Fig. 62].

Records. USA: TX

Genus *Calleida* Latreille, 1824

Calleida Latreille [in Latreille and Dejean], 1824: 132. Type species: *Carabus decorus* Fabricius, 1801 designated by Desmarest (1851: 72). Etymology. From the Greek *callos* (beauty) and *eidos* (form), alluding to the elegant form of adults of the two species known to Latreille [feminine].

Callida Agassiz, 1846: 58. Unjustified emendation of *Calleida* Latreille, 1824.

Caloidea Maindron, 1905: 331. Unjustified emendation of *Calleida* Latreille, 1824.

Caloida Bedel, 1907: 265. Unjustified emendation of *Calleida* Latreille, 1824.

Diversity. About 275 species primarily in tropical areas of the Neotropical, Oriental, and Afrotropical Regions (over 95 % of the world fauna) with a few elements found in the Nearctic (11 species) and Palaearctic (ten species in Asia) Regions. The species are arrayed in three subgenera: *Calleida s.str.* (about 175 species), *Callidiola* Jeannel (60 species), and *Stenocallida* Jeannel (40 species), though some authors (e.g., Casale 2008) treat *Callidiola* and *Stenocallida* as distinct genera.

Subgenus *Calleida* Latreille, 1824

Calleida Latreille [in Latreille and Dejean], 1824: 132. Type species: *Carabus decorus* Fabricius, 1801 designated by Desmarest (1851: 72).

Spongoloba Chaudoir, 1873b: 152. Type species: *Calleida fulgida* Dejean, 1831 designated by Habu (1960: 157). Synonymy established by Horn (1882: 139). Etymology (original). From the Greek *spongos* (sponge) and *lobos* (lobe), alluding to the bilobed, with spongy pubescence underneath, of the male fourth protarsomere ("*tarsi ... anteriores articulo ... quarto fortiter bilobo, lobis ovatis latis, subtus dense spongiosis*") [feminine].

Lecalida Casey, 1920: 288. Type species: *Lecalida pimalis* Casey, 1920 (= *Callida platynoides* Horn, 1882) by original designation. Synonymy established by Bousquet and Larochelle (1993: 280). Etymology. Anagram of the generic name *Calleida* [*q.v.*] [feminine].

Diversity. About 175 species confined to the Western Hemisphere. Only 11 species are endemic (five species) or extends (six species) into the Nearctic Region.
Identification. There is no key for the identification of the North American species.

Calleida circumcincta Bates, 1883

Calleida circumcincta Bates, 1883a: 212. Type locality: «Jalapa [Veracruz], Mexico» (original citation). Syntype(s) location unknown (possibly in BMNH). Note. The type series was collected by Höge. According to Bates (1884: 256), Höge, on his return to Europe, mislabeled many specimens collected in the city of Oaxaca as "Jalapa" and vice versa.

Distribution. This species is known from southeastern Texas (Schaeffer 1905: 142; MCZ) south at least to Veracruz, Mexico (Bates 1883a: 212); it may occur much further south, as far as Venezuela (Schaeffer 1910: 397).
Records. USA: TX – Mexico

Calleida decora (Fabricius, 1801)

Carabus decorus Fabricius, 1801: 181 [primary homonym of *Carabus decorus* Panzer, 1799]. Type locality: «Carolina» (original citation). Syntype(s) location unknown (Zimsen 1964: 53), though according to Motschulsky (1855a: 51) in ZMUC. Note. This name is a junior primary homonym of *Carabus decorus* Panzer, 1799 (= *Bembidion decorum* (Panzer, 1799)). Since both names apply to taxa not considered

congeneric since 1899, the case is to be referred to the Commission and meanwhile prevailing usage of both names must be maintained (ICZN 1999: Article 23.9.5).

Calleida cordicollis Putzeys, 1845a: 21. Type locality: «Oaxaca, Mexique» (original citation). Holotype [by monotypy] location unknown. Synonymy established by Horn (1882: 161).

Calleida cyanoptera LeConte, 1858b: 59 [primary homonym of *Calleida cyanoptera* Solier, 1849]. Type locality not stated. Three syntype(s) in MCZ [# 5819]. Synonymy established by Horn (1882: 161).

Callida coeruleipennis Gemminger and Harold, 1868a: 115. Replacement name for *Calleida cyanoptera* LeConte, 1858.

Distribution. This species ranges from south-central North Dakota (Burleigh County, Donald P. Schwert pers. comm. 1989) to southeastern Virginia (Hoffman and Roble 2000: 40), south to southern Florida (Peck and Thomas 1998: 24), the Bahamas (Darlington 1953: 11), and Nicaragua (CMNH), west to southern Arizona (Santa Cruz and Pima Counties, CMNH, UASM).
Records. USA: AL, AR, AZ, FL, GA, IA, IL, IN, KS, LA, MS, NC, ND, NE, OK, SC, SD, TN, TX, VA – Bahamas, Belize, Mexico, Nicaragua

Calleida fimbriata Bates, 1883

Calleida fimbriata Bates, 1883a: 212. Type locality: «Jalapa [Veracruz], Mexico» (original citation). Syntype(s) location unknown (possibly in BMNH).

Distribution. This species is found in southern Texas (Bousquet and Larochelle 1993: 334) south at least to Veracruz (Bates 1883a: 212) in Mexico.
Records. USA: TX – Mexico

Calleida fulgida Dejean, 1831

Calleida fulgida Dejean, 1831: 330. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 24).

Calleida striata Casey, 1913: 177. Type locality: «Florida» (original citation). Two syntypes in USNM [# 47675]. **New synonymy**.

Distribution. This species ranges from southern South Carolina (Ciegler 2000: 126) to southern Florida (Peck and Thomas 1998: 24), west to "Texas" (Leng 1915: 587) and central Oklahoma (Hatch and Ortenburger 1930: 11). The records from Colorado (Wickham 1902: 240) and northeastern Kansas (Knaus 1901: 110) need confirmation.
Records. USA: AL, FL, GA, OK, SC, TX [CO, KS]

Calleida obrieni Mateu, 1995

Calleida obrieni Mateu, 1995: 146. Type locality: «Myakka R[iver] St[ate] Park, Sarasota Co[unty], Florida» (original citation). Holotype (♀) in Mateu's collection (Almería, Spain).

Distribution. This species is known only from the holotype collected in central Florida.
Records. USA: FL

Calleida planulata LeConte, 1858

Calleida planulata LeConte, 1858b: 59. Type locality not stated. Holotype [by monotypy] (♂) in MCZ [# 34515]. Note. Horn (1882: 140) stated that the specimen upon which LeConte described this species "may have been taken in Mexico or Texas." It was described by LeConte in a paper on new species chiefly collected by the United States and Mexican Boundary Commission.
Callida metallescens Chaudoir, 1873b: 120. Type locality: «Vera-Cruz, Mexique» (original citation. Holotype [by monotypy] (♀) probably in MHNP. Synonymy established with doubt by Horn (1882: 140).

Distribution. This species ranges from the Rio Grande Valley in southern Texas (Wickham 1897: 111) south to Guatemala and Belize (Bates 1883a: 208, as *C. metallescens*).
Records. USA: TX – Belize, Guatemala, Mexico

Calleida platynoides Horn, 1882

Callida platynoides G.H. Horn, 1882: 139. Type locality: «mountains east of Visalia, California; southwestern Utah» (original citation). Two syntypes in MCZ [# 8185].
Lecalida pimalis Casey, 1920: 288. Type locality: «Tuçson [Pima County], Arizona» (original citation). Seven syntypes [7 originally cited] in USNM [# 47676]. Synonymy established by Ball (in Bousquet and Larochelle 1993: 281).
Lecalida nigritula Casey, 1920: 289. Type locality: «Tuçson [Pima County], Arizona» (original citation). Holotype [by monotypy] (♀) in USNM [# 47677]. Synonymy established by Ball (in Bousquet and Larochelle 1993: 281).

Distribution. This species ranges from southwestern California (Moore 1937: 12) to southeastern Texas (Cameron County, CNC), including northern Sonora (Bates 1884: 298); also known from Baja California Sur (Santa Rosa, MCZ).
Records. USA: AZ, CA, NM, NV, TX, UT – Mexico

Calleida punctata LeConte, 1846

Calleida punctata LeConte, 1846b: 189. Type locality: «ad flumen Kansas [Kansas]» (original citation). Two syntypes in MCZ [# 5820].

Distribution. The range of this species extends from Maine (Dearborn and Donahue 1993: 8; Foss 2001: 14) to southern Manitoba (Bousquet 1987a: 133), south to "Kansas" (Horn 1882: 141) and northwestern South Carolina (Anderson County, Robert L. Davidson pers. comm. 2012). The records from "Texas," "Florida" (Erwin et al. 1977: 4.59), "Louisiana" (Chaudoir 1873b: 153), "Arkansas" (Bousquet and La-

rochelle 1993: 281), northern Alabama (Löding 1945: 22), and southwestern Georgia (Fattig 1949: 40) need confirmation.
Records. CAN: MB, ON, QC **USA**: CT, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, NC, ND, NE, NH, NJ, NY, OH, PA, SC, SD, TN, VA, VT, WI, WV [AL, AR, FL, GA, LA, TX]

Calleida punctulata Chaudoir, 1848

Calleida punctulata Chaudoir, 1848: 86. Type locality: Mexique (inferred from text on page 87). Syntype(s) in MHNP.
Callida rugicollis G.H. Horn, 1894: 361. Type locality: «Coral de Piedra, Sierra El Taste, Pescadero and San José del Cabo [Mexico]» (original citation). Two syntypes in CAS [# 4, 5]. Synonymy established by Schaeffer (1910: 396).

Distribution. This species is known from the Baja California Peninsula (Horn 1894: 361, as *C. rugicollis*) and southern Texas (Wickham 1897: 111; Cameron County, CNC), south at least to Nicaragua (CMNH). The record from "California" (Bousquet and Larochelle 1993: 281) is probably in error.
Records. USA: TX – Guatemala, Mexico, Nicaragua

Calleida purpurea (Say, 1823)

Cymindis purpureus Say, 1823a: 10. Type locality: «Neb[raska]» (neotype label). Neotype (♂), designated by Lindroth and Freitag (1969: 349), in MCZ [# 33003]. Note. «the Missouri» was the area originally cited by Say (1823a: 10).
Calleida smaragdina Dejean, 1825: 225. Type locality: «Géorgie» (original citation). Two syntypes in MHNP (Lindroth 1955b: 24). Synonymy established by Horn (1882: 161), confirmed by Lindroth (1955b: 24).
Calleida cyanipennis Chaudoir, 1844: 467. Type locality: «Amérique» (original citation). Syntype(s) probably in MHNP. Synonymy established, under the name *C. smaragdina* Dejean, by LeConte (1869b: 248).

Distribution. This species ranges from "New Hampshire" (Lindroth 1969a: 1062) to northeastern South Dakota (Kirk and Balsbaugh 1975: 38), north to southern Manitoba (Lindroth 1969a: 1062; Bousquet 1987a: 133), south to eastern Kansas (Popenoe 1877: 23), central Louisiana (Rapides Parish, Igor M. Sokolov pers. comm. 2009), and northern Florida (Peck and Thomas 1998: 24). The records from Colorado (LeConte 1846b: 188; Snow 1877: 17) need confirmation.
Records. CAN: MB **USA**: AL, CT, FL, GA, IA, IL, KS, LA, MA, MI, MO, MN, NC, NE, NH, NJ, NY, OH, PA, RI, SC, SD, WI [CO]

Calleida viridipennis (Say, 1823)

Cymindis viridipennis Say, 1823a: 9. Type locality: «Wash[ington] Co[unty], P[ennsylvani]a» (neotype label). Neotype (♀), designated by Lindroth and Freitag (1969: 349), in MCZ [# 33004].

Calleida marginata Dejean, 1825: 222. Type locality: «Géorgie» (original citation). One syntype in MHNP (Lindroth 1955b: 24). Synonymy established by Dejean (1826: 450), confirmed by Lindroth (1955b: 24).

Distribution. This species ranges from southwestern New York (Notman 1928: 239) to eastern New Mexico (Chaves and De Baca Counties, CMNH), including southwestern Iowa (Fremont County, Doug A. Veal pers. comm. 2009), south to southeastern Texas (Wickham 1897: 111), southern Louisiana (East Baton Rouge, Iberville, Pointe Coupee, Saint Martin, and Saint Tammany Parishes, Igor M. Sokolov pers. comm. 2009), and southern Florida (Peck and Thomas 1998: 24). The records from "Utah," "Arizona," and "California" (Csiki 1932b: 1449) are likely in error.
Records. USA: AL, AR, DC, DE, FL, GA, IA, IL, KY, LA, MD, MO, MS, NM, NY, OH, OK, PA, SC, TN, TX, VA, WV

Genus *Philophuga* Motschulsky, 1859

Philophuga Motschulsky, 1859a: 140. Type species: *Calleida cyanea* Motschulsky, 1850 (= *Cymindis viridis* Dejean, 1831) designated by Larson (1969: 29). Etymology. From the Greek *philos* (beloved) and *phyge* or *pheuge* (escape) [feminine].
Philophyga Gemminger and Harold, 1868a: 118. Unjustified emendation of *Philophuga* Motschulsky, 1859.
Philopheuga Bates, 1883a: 202. Unjustified emendation of *Philophuga* Motschulsky, 1859.

Diversity. Four species comprised this genus: one (*P. brachinoides* Bates) is found in Mexico only, another one (*A. viridis*) in Canada and United States, and the other two in United States and Mexico.
Identification. Larson (1969) revised the species.
Taxonomic Note. This taxon is ranked as a subgenus of *Calleida* by some authors.

Philophuga caerulea Casey, 1913

Calleida viridis Chevrolat, 1836a: [no. 155] [secondary homonym of *Calleida viridis* (Dejean, 1831)]. Type locality: «Las Vigas [Veracruz, Mexico]» (original citation). Syntype(s) [2 originally cited] location unknown (possibly in UMO).
Philophuga caerulea Casey, 1913: 174. Type locality: «Arizona» (original citation). Lectotype [as holotype] (♀), designated by Larson (1969: 33), in USNM [# 47668]. Synonymy established by Larson (1969: 33).

Distribution. This species ranges from Arizona south to the Isthmus of Tehuantepec [see Larson 1969: Fig. 58].
Records. USA: AZ – Mexico

Philophuga viridicollis (LeConte, 1846)

Cymindis viridicollis LeConte, 1846b: 188. Type locality: «Long's Peak [Boulder County, Colorado], Rocky Mountains» (original citation). Lectotype (♀), designated by Larson (1969: 31), in MCZ [# 5821].

Philopheuga subcordata Chaudoir, 1877: 246. Type locality: «Mexique» (original citation). Syntype(s) [2 originally cited] in MHNP. Synonymy established by Horn (1882: 161).

Distribution. This species ranges from eastern Colorado and Kansas south to northeastern Mexico and southwestern Texas [see Larson 1969: Fig. 58]. The record from South Dakota (Kirk and Balsbaugh 1975: 38) needs confirmation. One specimen labeled from "Alabama" and two specimens from California seen by Larson (1969: 32) are probably mislabeled.

Records. USA: CO, KS, NM, OK, TX [SD] – Mexico

Philophuga viridis amoena (LeConte, 1846)

Cymindis amoena LeConte, 1846b: 188. Type locality: «Long's Peak [Boulder County, Colorado], Rocky Mountains» (original citation). Lectotype (♀), designated by Larson (1969: 42), in MCZ [# 5822].

Philophuga canora Casey, 1913: 174. Type locality: «Texas» (original citation). Lectotype [as holotype] (♀), designated by Larson (1969: 42), in USNM [# 47669]. Synonymy established by Larson (1969: 42).

Philophuga puella Casey, 1913: 176. Type locality: «Boulder Co[unty], Colorado» (original citation). Lectotype [as holotype] (♂), designated by Larson (1969: 42), in USNM [# 47671]. Synonymy established by Larson (1969: 42).

Philophuga obscura Casey, 1924: 91. Type locality: «Lake George, New York» (original citation), which is incorrect. Lectotype [as holotype] (♀), designated by Larson (1969: 42), in USNM [# 47674]. Synonymy established by Larson (1969: 42).

Distribution. The range of this subspecies extends from southern Manitoba to south-central British Columbia, south to northern Oregon, Colorado (Larson 1969: 42-43), and east-central Kansas (Knaus 1907: 233). The records from "New Mexico" and "Utah" (Bousquet and Larochelle 1993: 281), based on misplaced dots on Larson's (1969) figure 59, are in error; those from "Oklahoma" (Arnold 2008) and "Texas" (Casey 1913: 174, as *P. canora*) need confirmation.

Records. CAN: AB, BC, MB, SK **USA**: CO, ID, KS, MT, ND, NE, OR, WA, WY [OK, TX]

Philophuga viridis horni Chaudoir, 1877

Philopheuga horni Chaudoir, 1877: 245. Type locality: «Nevada» (original citation), herein restricted to Winnemucca, Humboldt County (see Larson 1969: 41). Syntype(s) [2 originally cited] in MHNP.

Philophuga cobaltina Casey, 1924: 91. Type locality: «Trout Creek, Juab Co[unty], Utah» (original citation). Lectotype [as holotype] (♂), designated by Larson (1969: 41), in USNM [# 47672]. Synonymy established by Larson (1969: 41).

Philophuga uteana Casey, 1924: 92. Type locality: «Stockton [Tooele County], Utah» (original citation for the lectotype). Lectotype [as holotype] (♂), designated by Larson (1969: 41), in USNM [# 47673]. Synonymy established by Larson (1969: 41).

Distribution. This subspecies ranges from northern Washington to eastern Wyoming (Lavigne 1977: 45, as *Calleida viridis viridis*), south to northeastern New Mexico, south-central Arizona, and northeastern California (Larson 1969: 41, Fig. 59).
Records. USA: AZ, CA, CO, ID, NM, NV, OR, UT, WA, WY

Philophuga viridis klamathea Larson, 1969

Philophuga viridis klamathea Larson, 1969: 40. Type locality: «Klamath Falls [Klamath County], Oregon» (original citation). Holotype (♂) in CAS [# 9812].

Distribution. This subspecies is known only from south-central Oregon and northern California [see Larson 1969: Fig. 59].
Records. USA: CA, OR

Philophuga viridis viridis (Dejean, 1831)

Cymindis viridis Dejean, 1831: 325. Type locality: «Californie» (original citation), herein restricted to Lake Merced, San Francisco County (see Larson 1969: 38). Syntype(s) presumably lost (Lindroth 1955b: 24).

Calleida cyanea Motschulsky, 1850a: 39. Type locality: «California» (original citation), cited from «St. Francisco [San Francisco County]» by Motschulsky (1859a: 144). One syntype, described as "destructum," in ZMMU (Keleinikova 1976: 194). Synonymy established by Horn (1882: 161).

Philophuga lauta Casey, 1913: 175. Type locality: «California» (original citation). Lectotype [as holotype] (♂), designated by Larson (1969: 38), in USNM [# 47670]. Synonymy established by Larson (1969: 38).

Distribution. This subspecies is known only from the San Francisco Bay area in California [see Larson 1969: Fig. 59].
Records. USA: CA

Genus *Infernophilus* Larson, 1969

Infernophilus Larson, 1969: 43. Type species: *Philophuga castanea* Horn, 1882 by original designation. Etymology (original). From the Latin *infernus* (hell) and the Greek *philos* (beloved), alluding to the hot desert region where the sole species is found [masculine].

Diversity. One Nearctic species extending into northern Mexico.
Identification. The character states of the sole species are described in detail by Larson (1969: 43-44).

Infernophilus castaneus (Horn, 1882)

Philophuga castanea G.H. Horn, 1882: 144. Type locality: «high mountains in Kern Co[unty], California» (original citation). Two syntypes [2 originally cited] in MCZ [# 34516].

Distribution. This species is known from "Nevada" and the Lake Tahoe region in the Sierra Nevada south to the Mexican border in California [see Larson 1969: Fig. 61]. According to Ball and Bousquet (2000: 114), the species is also found in northwestern Mexico.
Records. USA: CA, NV – Mexico

Genus *Onota* Chaudoir, 1873

Onota Chaudoir, 1873b: 165. Type species: *Onota bicolor* Chaudoir, 1873 designated by Bousquet and Larochelle (1993: 280). Etymology (original). From the Greek *onos* (donkey, ass) and *otos* (ear), alluding to the shape of the paraglossae (*paraglossae membranaceae, parallelae, glabrae, utroque angulo antico late subproducto-rotundato (inde nom. gen.)*) of the adults [feminine].

Diversity. Ten species in Central America and South America, of which two reach southern United States.
Identification. This genus has not been revised in modern times and such work is needed.

Onota angulicollis (Reiche, 1842)

Lebia angulicollis Reiche, 1842: 312. Type locality: «Provincia novae Granatae [= present day Panama and Colombia]» (original citation). On syntype in MHNP (see Erwin 2004: 38).

Distribution. This species ranges from southeastern Texas (Cameron County, Edward G. Riley pers. comm. 2009) south to the Amazonia (Chaudoir 1873b: 166). This is a **new record** for America north of Mexico.
Records. USA: TX – Brazil, Colombia, Costa Rica, Guatemala, Nicaragua, Panama, Peru, Surinam.

Onota floridana Horn, 1881

Onota floridana G.H. Horn, 1881: 159. Type locality: «near Lake Poinsett [Brevard County], Florida» (original citation). Syntype(s) [3 originally cited] in MCZ [# 8187].

Distribution. This species is known only from Brevard County in central Florida (Peck and Thomas 1998: 24).
Records. USA: FL

Genus *Cylindronotum* Putzeys, 1845

Cylindronotum Putzeys, 1845a: 22. Type species: *Cylindronotum aeneum* Putzeys, 1845 by monotypy. Etymology. From the Greek *cylindros* (roller, cylinder) and *notos* (back, upper surface), probably alluding to the cylindrical pronotum ("*corselet ... presque cylindrique*") of the adult [neuter].

Stenonotum Lacordaire, 1854: 107. Unnecessary replacement name for *Cylindronotum* Putzeys, 1845. Etymology. From the Greek *stenos* (narrow) and *notos* (back, dorsum) [neuter].

Micragra Chaudoir, 1873b: 155. Unnecessary replacement name for *Cylindronotum* Putzeys, 1845. Etymology (original). From the Greek *micros* (small) and the generic name *Agra* [*q.v.*], alluding to the resemblance of adults of these small insects to those of *Agra* ("*ces petits insectes, qui ont le facies des Agra*") [feminine].

Pseudometabletus Liebke, 1930: 722. Type species: *Pseudometabletus nevermanni* Liebke, 1930 by original designation. Synonymy established by Erwin (2004: 22). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Metabletus* [*q.v.*] [masculine].

Diversity. Seven Neotropical species, of which one reaches southeastern Texas.
Identification. This genus has not been revised in modern times and such work would be useful.

Cylindronotum aeneum Putzeys, 1845

Cylindronotum aeneum Putzeys, 1845a: 22. Type locality: «Cayenne [French Guiana]» (original citation). Lectotype, designated by Erwin (2004: 22), in MHNP.

Distribution. This species is found from southeastern Texas (Wickham 1897: 108; Snow 1906a: 141 as "*Micragra brunnea* Putzeys") south to Panama and French Guiana (Bates 1883a: 199).
Records. USA: TX – Belize, French Guiana, Guatemala, Mexico, Nicaragua, Panama.

Subtribe Agrina Kirby, 1837

Agridae Kirby, 1837: 13. Type genus: *Agra* Fabricius, 1801.

Diversity. About 585 species (Lorenz 2005: 498-502) belonging to the Western Hemisphere genus *Agra*.

Genus *Agra* Fabricius, 1801

Agra Fabricius, 1801: 224. Type species: *Agra aenea* Fabricius, 1801 designated by Latreille (1810: 426). Etymology. From the Greek *agra* (catch, booty, prey, seizure) [feminine].
Agrana Rafinesque, 1815: 109. Unjustified emendation of *Agra* Fabricius, 1801.
Agridia Chaudoir, 1861d: 109. Type species: *Agridia platyscelis* Chaudoir, 1861 designated by Erwin (1982a: 45). Synonymy established by Erwin (1982a: 45).

Diversity. About 585 species in the Neotropical Region, one of them extending into southeastern Texas.
Taxonomic Note. 1. Erwin (1982a: 45) postulated that *Agra* is the putative sister-group of *Callidiola* Jeannel of Africa and Asia, currently recognized as a subgenus of *Calleida*. Casale (1998: 401) challenged this hypothesis and postulated that *Agra* could be the sister-group to physoderines which are found in Australia, some Pacific islands, eastern Asia, and central and south Africa. 2. According to Erwin (in Ball and Bousquet 2000: 115), two species, both undescribed, reach southeastern Texas. Therefore, the species currently recorded from United States is probably not a resident of North America.

Agra oblongopunctata oblongopunctata Chevrolat, 1836

Agra oblongopunctata Chevrolat, 1836b: [no. 183]. Type locality: «environs de la Véra-Cruz [Mexico]» (original citation). Syntype(s) location unknown (possibly in UMO).

Distribution. This subspecies ranges from southeastern Texas (Wickham 1897: 106) to Guatemala (Bates 1883a: 247). As mentioned previously, the Texas specimens actually belong to an undescribed species.
Records. USA: TX – Guatemala, Mexico
Note. The subspecies *A. oblongopunctata hypsophila* Straneo is found in Costa Rica.

Subtribe Metallicina Basilewsky, 1984

Metallicini Basilewsky, 1984: 534, 542. Type genus: *Metallica* Chaudoir, 1873.

Diversity. About 70 species (Lorenz 2005: 490) in the Nearctic (three species), Neotropical (16 species of *Euproctinus*), Oriental, Palaearctic (31 species), and Afrotropical Regions. These species are arrayed in four genera: *Parena* Motschulsky (47 species), *Metallica* Chaudoir (six species), *Pachycallida* Jeannel (three species), and *Euproctinus* (16 species).
Taxonomic Note. This subtribe came out as the sister-group to {Calleidina + Gallerucidiina} in the phylogenetic analysis of Ball et al. (1995).

Genus *Euproctinus* Leng and Mutchler, 1927

Euproctus Solier, 1849: 131 [junior homonym of *Euproctus* Gené, 1839]. Type species: *Euproctus fasciatus* Solier, 1849 by monotypy. Etymology. Uncertain, possibly from the Greek *eu* (well, by extension large) and *proctos* (anus, tail) [masculine].

Euproctinus Leng and Mutchler, 1927: 14. Replacement name for *Euproctus* Solier, 1849. Etymology. From the generic name *Euproctus* [*q.v.*] and the Latin suffix *-inus* (pertaining to) [masculine].

Andrewesella Csiki, 1932b: 1456. Replacement name for *Euproctus* Solier, 1849. Etymology. Although not specified, this name probably originates from the surname of Herbert Edward Andrewes [1863-1950] who devoted a large part of his life to the study of Carabidae of the Oriental Region.

Diversity. Sixteen species restricted to the Western Hemisphere, currently arrayed in two subgenera: *Euproctinus s.str.* (one species, *E. fasciatus* Solier from Chile and Argentina) and *Neoeuproctus* (15 species).
Identification. Shpeley (1986) revised the species and provided a key for their identification.

Subgenus *Neoeuproctus* Shpeley, 1986

Neoeuproctus Shpeley, 1986: 284. Type species: *Euproctus sigillatus* Bates, 1883 by original designation. Etymology. From the Greek prefix *neo-* (new) and the generic name *Euproctus* [*q.v.*] [masculine].

Diversity. Fifteen species in the Neotropical Region, of which three extend into southern United States.

[**abjectus group**]

Euproctinus abjectus (Bates, 1883)

Euproctus abjectus Bates, 1883a: 196. Type locality: «Almolonga [Veracruz], Mexico» (original citation for the lectotype). Lectotype (♂), designated by Shpeley (1986: 291), in BMNH.

Euproctus texanus Wickham, 1897: 109. Type locality: «Brownsville [Cameron County] Texas» (lectotype label). Lectotype (♀), designated by Shpeley (1986: 292), in USNM. Synonymy established by Shpeley (1986: 292).

Distribution. This species is found from southern California and southeastern Texas south to Guatemala and southern Baja California [see Shpeley 1986: map 4].
Records. USA: CA, TX – Guatemala, Mexico

Euproctinus balli Shpeley, 1986

Euproctinus balli Shpeley, 1986: 286. Type locality: «21.8 miles north of Juchatengo (7100'), Oaxaca, México» (original citation). Holotype (♂) in USNM.

Distribution. This species ranges from southeastern Arizona south to southern Mexico [see Shpeley 1986: map 3].
Records. USA: AZ – Mexico

[**trivittatus group**]
***Euproctinus trivittatus* (LeConte, 1878)**

Onota trivittata LeConte, 1878b: 373. Type locality: «Florida» (original citation), restricted to «F[or]t Capron [Saint Lucie County]» by Shpeley (1986: 295). Lectotype (♀), designated by Shpeley (1986: 295), in MCZ [# 5818].

Distribution. This species is found along the east coast of Florida, including the Keys, and in Cuba [see Shpeley 1986: map 6].
Records. USA: FL – Cuba

Subtribe Nemotarsina Bates, 1883

Nemotarsinae Bates, 1883a: 173. Type genus: *Nemotarsus* LeConte, 1853.

Diversity. One genus endemic to the Western Hemisphere.
Taxonomic Note. Jeannel (1949a: 860) and Basilewsky (1984: 527) considered this taxon as a masoreimorph (i.e., masoreines and cyclosomines). Ball and Bousquet (2000: 113-114) retained it as a lebiines, as previously done by Ball (1960b: 158) and Lindroth (1969a: 1014), but recognized that its position remains to be determined.

Genus *Nemotarsus* LeConte, 1853

Nemotarsus LeConte, 1853c: 377. Type species: *Nemotarsus elegans* LeConte, 1853 by monotypy. Etymology. From the Greek *nema* (thread) and *tarsos* (tarsus), alluding to the filiform tarsi ("*tarsi filiformes*") of the adult [masculine].
Nematotarsus Gemminger and Harold, 1868a: 145. Unjustified emendation of *Nemotarsus* LeConte, 1853.

Diversity. Nine species in the temperate and tropical areas of the Nearctic (two species) and Neotropical (eight species) Regions.
Identification. This genus has not been revised in modern times and such work is needed.

Nemotarsus elegans LeConte, 1853

Nemotarsus elegans LeConte, 1853c: 378. Type locality: «Illinois; Upper Georgia» (original citation), restricted to «Illin[ois]» by Lindroth (1969a: 1014). Two syntypes [2 originally cited] in MCZ [# 5799].

Distribution. The range of this species extends from the District of Columbia (CMNH) to "Illinois" (LeConte 1853c: 378), including southwestern Pennsylvania (Westmoreland County, Robert L. Davidson pers. comm. 2008), south to southern Texas (Cameron, Colorado, and Sabine Counties, USNM, Brian Raber pers. comm. 2010) and northern Florida (Peck and Thomas 1998: 24). The record from "Iowa" (Bousquet and Larochelle 1993: 279) needs confirmation.
Records. USA: AL, AR, DC, FL, GA, IL, LA, MD, MS, NC, OK, PA, SC, TX, VA [IA]

Nemotarsus rhombifer Bates, 1883

Nemotarsus rhombifer Bates, 1883a: 173. Type locality: «Jalapa, Mexico; Dueñas, Guatemala» (original citation). Syntype(s) probably in BMNH.

Distribution. This species ranges from southern Texas (Cameron and Hidalgo Counties, Edward G. Riley pers. comm. 2009; Brian Raber pers. comm. 2010) south to Guatemala (Bates 1883a: 173). This is a **new record** for America north of Mexico.
Records. USA: TX – Guatemala, Mexico

Tribe Zuphiini Bonelli, 1810

Zuphietae Bonelli, 1810: Tabula Synoptica. Type genus: *Zuphium* Latreille, 1805.

Diversity. Worldwide, with about 290 species (Lorenz 2005: 504-507, excluding Planetina) arrayed in 20 genera. The tribe is represented in the Northern Hemisphere by about 65 species (22% of the world fauna). Three subtribes are recognized: Leleupidiina (about 90 species in the Old World and the Australian Region), Zuphiina (about 200 species), and Dicrodontina (three species endemic to the Canary Islands).
Taxonomic Note. The planetines are included in this tribe by Lorenz (2005: 507). However Basilewsky (1963b), Reichardt (1967), Ball (1985), and Baehr (1986) presented arguments suggesting that planetines are probably more closely related to galeritines than to zuphiines.

Subtribe Zuphiina Bonelli, 1810

Zuphietae Bonelli, 1810: Tabula Synoptica. Type genus: *Zuphium* Latreille, 1805.
Patriziini Basilewsky, 1953b: 266. Type genus: *Patrizia* Alluaud, 1931.

Diversity. Worldwide, with about 200 species placed in 14 genera. The North American fauna is represented by 18 species (about 9% of the world fauna).

Genus *Zuphium* Latreille, 1805

Zuphium Latreille, 1805: 198. Type species: *Carabus olens* Rossi, 1790 designated by Latreille (1810: 426). Etymology. Uncertain, possibly from the Greek *zoyphion* (small animal) or *zophos* (obscure, dark) [neuter].
Zophium Gistel, 1840: 112. Unjustified emendation of *Zuphium* Latreille, 1805.
Zoyphium Agassiz, 1846: 393. Unjustified emendation of *Zuphium* Latreille, 1805.

Diversity. Worldwide, with about 75 species of which six are found in the temperate and subtropical areas of North America.
Identification. Mateu (1981) reviewed the North American species and provided a key for their identification.

Zuphium americanum Dejean, 1831

Zuphium americanum Dejean, 1831: 298. Type locality: «Amérique septentrionale» (original citation), restricted to «Brownsville [Cameron County], Tex[as]» by Lindroth (1969a: 1090). Holotype [by monotypy] (♂) in MHNP (Lindroth 1955b: 22).

Distribution. This species ranges from New Jersey (Morris County, USNM) to southern South Dakota (Kirk and Balsbaugh 1975: 39), including southernmost Ontario (Lindroth 1969a: 1090), south to southeastern Texas (Snow 1906a: 141; Cameron, Kleberg, and Gonzales Counties, CMNH, MCZ) and the Florida Keys (Peck and Thomas 1998: 25), west to southern Arizona (Mateu 1981: 118); seemingly isolated in western Oregon (Malkin 1943: 52).
Records. CAN: ON **USA**: AL, AR, AZ, FL, GA, IA, IL, IN, KS, LA, MD, MI, MO, MS, NC, NE, NJ, NM, OH, OK, OR, PA, SC, SD, TN, TX, VA, WV

Zuphium delectum Liebke, 1933

Zuphium delectum Liebke, 1933: 469. Type locality: «Framingham [Middlesex County], Massachusetts» (original citation). Syntype(s) [2 originally cited] in DEI (Döbler 1975: 110) and IZWP [# 1704] (Mroczkowski 1960: 399).

Distribution. This species is known only from the original two specimens.
Records. USA: MA

Zuphium longicolle LeConte, 1879

Zuphium longicolle LeConte, 1879c: 62. Type locality: «San Joaquin Co[unty], Cal[ifornia]; Texas» (original citation), restricted to «San Joaquín Co[unty]» by Mateu (1981: 123). Two syntypes in MCZ [# 5795].

Distribution. This species is known from western Arkansas (Polk and Hempstead Counties, CMNH, MCZ), Texas, as far south as the Rio Grande in the southeast (Mateu 1981: 125; Dajoz 2007: 18-19), southern Arizona (Pima County, MCZ), and central California (LeConte 1879c: 62). The record from "Oklahoma" (Arnold 2008) needs confirmation.
Records. USA: AR, AZ, CA, TX [OK]

Zuphium magnum Schaeffer, 1910

Zuphium magnum Schaeffer, 1910: 396. Type locality: «Brownsville [Cameron County], Texas» (original citation). Holotype (♀) in USNM [# 42503].

Distribution. This species is known from "Louisiana" (USNM) and from Cameron (Schaeffer 1910: 396) and Zapata Counties (CMNH) in southern Texas.
Records. USA: LA, TX

***Zuphium mexicanum* Chaudoir, 1863**

Zuphium mexicanum Chaudoir, 1863: 314. Type locality: «Veracruz?, Mexique» (original citation). Lectotype (♀), designated by Mateu (1985: 330), in MHNP.

Zuphium vicinum Liebke, 1933: 471. Type locality: «Mexiko» (original citation). Holotype [by monotypy] in IZWP [# 1711] (Mroczkowski 1960: 400). Synonymy established by Mateu (1985: 330).

Distribution. This species ranges from southwestern Arizona to southeastern Texas (Mateu 1981: 127). It was also reported from "Mexico" (Chaudoir 1863: 314; Liebke 1933: 471).
Records. USA: AZ, NM, TX – Mexico

***Zuphium pseudamericanum* Mateu, 1981**

Zuphium pseudamericanum Mateu, 1981: 118. Type locality: «Fort Yuma [Imperial County, California], Arizona» (original citation). Holotype (♂) in USNM. Note. Mateu (1981) used two different original spellings for this species: *pseudoamericanum* (page 115) and *pseudamericanum* (page 118). I am acting as First Reviser (see ICZN 1999: Article 24.2.3) and select *pseudamericanum* to have precedence over *pseudoamericanum*.

Distribution. This species is known from a few scattered localities from southern California to southeastern Texas (Mateu 1981: 119).
Records. USA: AZ, CA, TX

Genus *Pseudaptinus* Laporte, 1834

Diaphorus Dejean, 1831: 300 [junior homonym of *Diaphorus* Meigen, 1824]. Type species: *Diaphorus lecontei* Dejean, 1831 by monotypy. Etymology (original). From the Greek *diaphoros* (different) [masculine].

Pseudaptinus Laporte, 1834: 56. Type species: *Polistichus albicornis* Klug, 1834 by monotypy. Synonymy established by Laporte (1840: 33). Etymology. From the Greek *pseudos* (fallacy, lie) and the generic name *Aptinus* [*q.v.*], alluding to the resemblance of the adults to those of *Aptinus pigmaeus* ("*le petit insecte sur lequel je forme ce genre a le faciès de l'Aptinus Pigmaeus*") [masculine].

Tiphys Gistel, 1848a: ix [junior homonym of *Tiphys* Koch, 1837]. Replacement name for *Diaphorus* Dejean, 1831.

Diversity. About 55 species in temperate, subtropical, and tropical areas of the Nearctic (12 species but only four endemic), Neotropical (about 40 species), and Australian (nine species in Australia) Regions.

Subgenus *Pseudaptinus* Laporte, 1834

Pseudaptinus Laporte, 1834: 56. Type species: *Polistichus albicornis* Klug, 1834 by monotypy.

Diversity. Eighteen species (Lorenz 2005: 505, as *Pseudaptinus s.str.*) in the Nearctic (three species) and Neotropical (16 species) Regions.
Identification. Two of the North American species are included in Liebke's (1934: 372-373) key to the species of this genus. A taxonomic revision is needed.

Pseudaptinus lecontei (Dejean, 1831)

Diaphorus lecontei Dejean, 1831: 301. Type locality: «Amérique septentrionale» (original citation), herein restricted to Florence, Florence County, South Carolina (see Ciegler 2000: 127). Holotype [by monotypy] (♀) in MHNP (Lindroth 1955b: 22). Etymology. The specific name was proposed for Major John Eatton LeConte [1784-1860] who devoted most of his time after his early retirement from the army to the education of his only child, John Lawrence LeConte [1825–1883]. Himself a naturalist, the Major was interested in botany, Lepidoptera, and Coleoptera. In 1845 he published the first taxonomic revision of the North American Histeridae for which some of the nice plates were drew by his son. To my knowledge, this is the first revision of a North American beetle family ever published. The LeContes came from a wealthy and prominent family in France of Huguenot ancestry. They fled to the United States to escape the intolerance of Louis XIV and the revocation of the Edict of Nantes (Mallis 1971: 243).

Distribution. This Coastal Plain species ranges from southeastern Virginia (Davidson 1995: 18) to central Florida (Peck and Thomas 1998: 25), west to southeastern Texas (Cameron County, USNM).
Records. USA: AL, AR, FL, GA, LA, MS, NC, SC, TX, VA

Pseudaptinus oviceps Van Dyke, 1926

Pseudaptinus oviceps Van Dyke, 1926a: 121. Type locality: «Griffith Park [Los Angeles, Los Angeles County], California» (original citation). Holotype (♀) in CAS [# 1863].

Distribution. This species is known only from the type locality in southwestern California.
Records. USA: CA

Pseudaptinus tenuicollis (LeConte, 1851)

Diaphorus tenuicollis LeConte, 1851: 173. Type locality: «San Jose [Santa Clara County, California]» (original citation). Holotype [by monotypy] in MCZ [# 665].

Diaphorus tenuicornis Chaudoir, 1872b: 106. Type locality: «intérieur du Mexique» (original citation). Syntype(s) in MHNP. Synonymy established by LeConte (1880a: 85).

Distribution. The range of this species extends from southern Washington (Zack et al. 2003) to southern California (Fall 1901a: 47), east along the southwest to western Arkansas (Polk County, Robert L. Davidson pers. comm. 2008) and southern Texas (Zapata County, CMNH; Liebke 1934: 373), north to central Kansas (Knaus 1905a: 218), south at least to Oaxaca (Bates 1883a: 166).
Records. USA: AR, AZ, CA, KS, NM, OK, OR, TX, WA – Mexico

Subgenus *Thalpius* LeConte, 1851

Thalpius LeConte, 1851: 174. Type species: *Helluo pygmaeus* Dejean, 1826 by monotypy. Etymology. Probably from the Greek *thalpos* (warmth, heat), possibly alluding to the climatic region where the sole species then known lived [masculine].
Enaphorus LeConte, 1851: 174. Type species: *Enaphorus rufulus* LeConte, 1851 by monotypy. Synonymy established by LeConte (1853c: 373).
Zuphiosoma Laporte, 1867: 103. Type species: *Zuphiosoma fulva* Laporte, 1867 by monotypy. Synonymy established by Csiki (1932b: 1561). Etymology. From the generic name *Zuphium* [*q.v.*] and the Greek *soma* (body) [neuter].

Diversity. Thirty-four species (Lorenz 2005: 505) in the Nearctic (nine species but only two endemic), Neotropical (23 species), and Australian (nine species in Australia) Regions.
Identification. Messer (2011: 422-423) published a key to all species found in the United States and Mexico.
Taxonomic Note. This taxon is considered as a distinct genus by some authors (e.g., Ball and Bousquet 2000: 115) but Baehr (1985: 36) found out that the character states between *Thalpius* and *Pseudaptinus* were "very few and rather weak." I am following him and treat *Thalpius* as a subgenus of *Pseudaptinus*.

Pseudaptinus cubanus (Chaudoir, 1877)

Diaphorus cubanus Chaudoir, 1877: 252. Type locality: «Cuba» (original citation). Holotype [by monotypy] in MHNP.

Distribution. This species is found in central and southern Florida (Darlington 1935a: 161; Peck and Thomas 1998: 25), the Bahamas (Turnbow and Thomas 2008: 15), Cuba (Chaudoir 1877: 252; Peck 2005: 39), and the Dominican Republic (CMNH).
Records. USA: FL – Bahamas, Cuba, Dominican Republic

Pseudaptinus deceptor Darlington, 1934

Pseudaptinus deceptor Darlington, 1934: 128. Type locality: «Soledad (near Cienfuegos), Cuba» (original citation). Holotype in MCZ [# 19545].

Distribution. This species is known from Hidalgo and Cameron Counties in southern Texas (Peter W. Messer pers. comm. 2011), from southern Florida (Bousquet and Larochelle 1993: 334), and from Cuba (Darlington 1934: 128), the Cayman Islands, and Dominican Republic (Messer 2011: 422).
Records. USA: FL, TX – Cayman Islands, Cuba, Dominican Republic

Pseudaptinus dorsalis (Brullé, 1834)

Diaphorus dorsalis Brullé, 1834b: 181. Type locality: «Amérique septentrionale» (original citation). Syntype(s) location unknown (possibly in MHNP).

Pseudaptinus bierigi Liebke, 1934: 387. Type locality: «Habana, Kuba» (original citation). Holotype [by monotypy] in IZWP [# 1704]. Synonymy established by Darlington (1937: 117). Etymology. The specific name was proposed for Alexander Bierig [1884-1963]. Born in Germany, Bierig moved with his family after World War I to Cuba and finally in 1939 to Costa Rica where he became professor of entomology at the University of Costa Rica in San José. Although he published quite extensively on Staphylinidae, most of his publications as professional dealt with the biology and control of insects injurious to tropical crops. His collection of about 26,000 specimens was purchased in 1966 by the Field Museum of Natural History.

Distribution. The range of this species extends from the District of Columbia (Ulke 1902: 7) to western South Dakota (Kirk and Balsbaugh 1975: 39), south to southern Texas (Johnson 1978: 68) and southern Florida (Peck and Thomas 1998: 25); also recorded from the Bahamas (Turnbow and Thomas 2008: 15), Cuba (Darlington 1934: 128), Jamaica (Darlington 1941a: 14), Guana Island in the British Virgin Islands (Valentine and Ivie 2005: 275), Dominican Republic, and Mexico (Messer 2011: 423). The record from Arizona (Snow 1906b: 162) is probably in error.
Records. USA: AL, AR, DC, FL, GA, KY, LA, MS, OH, OK, SC, SD, TN, TX, VA – Bahamas, British Virgin Islands, Cuba, Dominican Republic, Jamaica, Mexico

Pseudaptinus hoegei (Bates, 1883)

Diaphorus högei Bates, 1883a: 166. Type locality: «Maltrata [Veracruz], Mexico» (original citation). Syntype(s) in MCZ [# 1668]. Etymology. The specific name was proposed for Carl Friedrich [Frederik] Höge [1834-1908], an insect dealer in Hamburg. Högue travelled several times to Mexico between 1878 and 1889 for collecting. He left his Mexican collection of tiger beetles, *Calosoma*, and *Pasimachus* to the Zoological Museum in Hamburg.

Distribution. This species is known from Horn Island in southeastern Mississippi (Drew A. Hildebrandt pers. comm. 2010), "Texas" (Liebke 1934: 374), and Veracruz in Mexico (Bates 1883a: 166).
Records. USA: MS, TX – Mexico

***Pseudaptinus horni* (Chaudoir, 1872)**

Diaphorus horni Chaudoir, 1872b: 107. Type locality: «Californie» (original citation). Syntype(s) location unknown (possibly in MHNP).

Distribution. This species ranges from southeastern California (Fall 1901a: 47; Andrews et al. 1979: 28) and west-central Nevada (Storey County, David H. Kavanaugh pers. comm. 2008) east to southeastern Texas (Cameron County, CMNH, MCZ; LeConte 1880a: 85; Snow 1906a: 141), south to the states of Veracruz and Nayarit in Mexico (Peter W. Messer pers. comm. 2011); also recorded from "Oklahoma" (Messer 2011: 423).
Records. USA: AZ, CA, NM, NV, OK, TX – Mexico

***Pseudaptinus microcephalus* (Van Dyke, 1926)**

Thalpius microcephalus Van Dyke, 1926a: 122. Type locality: «Griffith Park, Los Angeles [Los Angeles County], California» (original citation). Holotype (♀) in CAS [# 1864].

Distribution. This species is known only from the type locality in southwestern California.
Records. USA: CA

***Pseudaptinus nobilis* Liebke, 1934**

Pseudaptinus nobilis Liebke, 1934: 380. Type locality: «Mexiko» (original citation). Holotype [by monotypy] in IZWP [# 1655] (Mroczkowski 1960: 397).

Distribution. This species is known from Veracruz in Mexico and from two specimens collected in Live Oak County in southern Texas (Messer 2011: 420).
Records. USA: TX – Mexico

***Pseudaptinus pygmaeus* (Dejean, 1826)**

Helluo pygmaeus Dejean, 1826: 460. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 22).

Distribution. This species ranges from southeastern Virginia (Davidson 1995: 18) to eastern Missouri (Anonymous 2007), south to southern Texas (Johnson 1978: 68) and central Florida (Peck and Thomas 1998: 25); also recorded from Cuba (Liebke 1934: 373; Peck 2005: 39).
Records. USA: AL, AR, FL, GA, LA, MO, MS, NC, OK, SC, TN, TX, VA – Cuba

***Pseudaptinus rufulus* (LeConte, 1851)**

Enaphorus rufulus LeConte, 1851: 174. Type locality: «San Jose [Santa Clara County, California]» (original citation). Two syntypes in MCZ [# 60].

Distribution. This species ranges from southeastern Oregon (LaBonte 1996: 357) to the Baja California Peninsula (Horn 1897: 367) and southern Arizona (Maricopa and Pima Counties, MCZ); its is also known from western Texas (El Paso and Brewster Counties, Robert L. Davidson pers. comm. 2012).
Records. USA: AZ, CA, OR, TX – Mexico

Tribe Galeritini Kirby, 1825

Galeritae Kirby, 1825: 564. Type genus: *Galerita* Fabricius, 1801. Note. This family-group name is a homonym of Galeritidae Gray, 1825 (based on *Galerites* Lamark, 1801), a valid family of fossil Echinodermata.

Diversity. Worldwide (though not represented in Europe), with about 130 species (Lorenz 2005: 507-509, as Planetina and Galeritini). The group is underrepresented in the Northern Hemisphere with only 17 species (about 12.5% of the world fauna). Two subtribes are recognized: Galeritina (about 105 species) and Planetina (27 species in the Eastern Hemisphere).

Subtribe Galeritina Kirby, 1825

Galeritidae Kirby, 1825: 564. Type genus: *Galerita* Fabricius, 1801.
Galeritinini Jeannel, 1949a: 1057. Type genus: *Galeritina* Jeannel, 1949 (= *Galerita* Fabricius, 1801). Note. This name has been placed on the Official Index of Rejected and Invalid Family-Group Names in Zoology (ICZN 1968: 98).
Galeritulini Jedlička, 1963: 279. Type genus: *Galeritula* Strand, 1936 (= *Galerita* Fabricius, 1801). Note. This name has been placed on the Official Index of Rejected and Invalid Family-Group Names in Zoology (ICZN 1968: 98).

Diversity. About 105 species in the temperate, subtropical, and tropical areas of the Nearctic (eight species of *Galerita*), Neotropical (64 species), Oriental (seven species of *Galerita*), Palaearctic (five species of *Galerita*), and Afrotropical (31 species) Regions. The species are placed in four genera: *Ancystroglossus* Chaudoir (six Neotropical species), *Eunostus* Laporte (14 Afrotropical species), *Galerita* (82 species), and *Trichognathus* Latreille (one Neotropical species).

Genus *Galerita* Fabricius, 1801

Galerita Fabricius, 1801: 214. Type species: *Carabus americanus* Linnaeus, 1758 designated by Latreille (1810: 426). Etymology. Uncertain, most likely from the Latin adjective *galeritus*, *-a*, *um* (wearing a hood) but possibly also from the Greek *galeros* (cheerful) [feminine]. According to Latreille (1804: 260), the name *galerite* was used formerly to designate a bird or a fish with some kind of crest. Note. The name *Galerita* Gouan, 1770 has been suppressed for the purposes of the Principles of Priority and Homonymy and the name *Galerita* Fabricius, 1801 placed on the Official List of Generic Names in Zoology (ICZN 1968: 98).

Galeritula Strand, 1936: 168. Replacement name for *Galerita* Fabricius, 1801.
Galeritina Jeannel, 1949a: 1057. Replacement name for *Galerita* Fabricius, 1801.

Diversity. Eighty-two species in the Western Hemisphere (58 species) and the Old World (24 species) currently arrayed in two subgenera, both represented in the Nearctic Region. Only eight species are found in North America and a single one (*G. bicolor*) is endemic.
Identification. Reichardt (1967) revised the Western Hemisphere species and provided keys for their identification.

Subgenus *Progaleritina* Jeannel, 1949

Progaleritina Jeannel, 1949a: 1058. Type species: *Carabus janus* Fabricius, 1792 by original designation. Etymology. From the Latin prefix *pro-* (before) and the generic name *Galeritina* [*q.v.*] [feminine].

Diversity. Seven species in North America (seven species), Middle America (six species), and the West Indies (one species).
Identification. Subsequent to Reichardt's (1967) revision, Ball and Nimmo (1983) published a synopsis of the species of *Progaleritina* leading to two new species-group taxa (*G. reichardti* and *G. lecontei veracrucis*) and subspecific status for two of Reichardt's species (*G. tenebricosa* Klug and *G. bicoloripes* Reichardt).

Galerita atripes LeConte, 1858

Galerita atripes LeConte, 1858b: 59. Type locality: «Fort Riley [junction of Republican and Smoky Hill Rivers], Kansas» (original citation). Lectotype (♂), designated by Reichardt (1967: 28), in MCZ [# 5793].
Galerita decipiens G.H. Horn, 1885a: 131. Type locality: «Arizona» (original citation). Lectotype (♀), designated by Reichardt (1967: 28), in MCZ [# 34500]. Synonymy established by Reichardt (1967: 28).

Distribution. This species is known from southeastern Louisiana (Saint Tammany Parish, Igor M. Sokolov pers. comm. 2009), Missouri, southeastern Nebraska (Nemaha County, Foster F. Purrington pers. comm. 2011), eastern Kansas (Popenoe 1877: 23; Horn 1872c: 385), eastern Texas, several mountain ranges in southern Arizona, and from the Sierra Huachinera of eastern Sonora and western Chihuahua in northern Mexico [see Ball and Nimmo 1983: Fig. 10]; it is also listed from "Oklahoma" by Arnold (2008). The record from eastern Iowa (Wickham 1911b: 7) needs confirmation.
Records. USA: AZ, KS, LA, MO, NE, OK, TX [IA] – Mexico

Galerita bicolor (Drury, 1773)

Carabus bicolor Drury, 1773: [index]. Type locality: «Virginie» (original citation, see Drury 1770: 95). Syntype(s) lost (Reichardt 1967: 41).

Galerita longicollis Chaudoir, 1843b: 700. Type locality: «environs de la Nouvelle Orléans [Orleans Parish, Louisiana]» (original citation). Lectotype (♂), designated by Reichardt (1967: 41), in MHNP. Synonymy established by LeConte (1863b: 5), confirmed by Reichardt (1967: 41).

Galerita dubia LeConte, 1844: 48. Type locality: «Georgia» (original citation). Lectotype [as type] (♂), designated by Reichardt (1967: 41), in MCZ [# 5794]. Synonymy established by LeConte (1863b: 5), confirmed by Reichardt (1967: 41).

Galerita bicolor obliqua Casey, 1897: 350. Type locality: «Lake Worth [Palm Beach County], Florida» (original citation). Two syntypes in USNM [# 47582]. Synonymy established by Reichardt (1967: 41).

Galerita bicolor iowensis Casey, 1920: 230. Type locality: «Iowa» (original citation). One syntype in USNM [# 47580]. Synonymy established by Reichardt (1967: 41).

Galerita bicolor rhombiceps Casey, 1920: 230. Type locality: «Indiana» (original citation). One syntype in USNM [# 47579]. Synonymy established by Reichardt (1967: 41).

Distribution. The range of this eastern species extends from Rhode Island (Sikes and Webster 2005: 317) to southeastern South Dakota (Kirk and Balsbaugh 1975: 39), south to southeastern Texas and southern Florida [see Ball and Nimmo 1983: Fig. 14].
Records. USA: AL, AR, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MD, MI, MN, MO, MS, NC, NJ, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, WI, WV

Galerita forreri Bates, 1883

Galerita forreri Bates, 1883a: 165. Type locality: «Presidio [either the Río Presidio or the village on the river, Sinaloa], Mexico» (original citation). Lectotype (♀), designated by Reichardt (1967: 37), in BMNH.

Distribution. This species ranges from southern Arizona southwards along the Pacific Coast to Guerrero [see Ball and Nimmo 1983: Fig. 7].
Records. USA: AZ – Mexico

Galerita janus (Fabricius, 1792)

Carabus janus Fabricius, 1792: 136. Type locality: «Carolina» (original citation). Lectotype (♂), designated by Lindroth (1969a: 1093), in ZMUC.

Galerita cyanipennis Dejean, 1831: 293. Type locality: «Amérique septentrionale» (original citation). Lectotype (♂), designated by Reichardt (1967: 24), in MHNP. Synonymy established by Mannerheim (1843: 183), confirmed by Lindroth (1955b: 22).

Galerita borealis Laporte, 1840: 35. Type locality: «Amérique boréale» (original citation). Syntype(s) probably in MHNP (collection Oberthür). Synonymy established by Reichardt (1967: 24).

Galerita cordicollis Chaudoir, 1843b: 699. Type locality: environs de Nouvelle Orleans [Orleans Parish, Louisiana] (lectotype label according to Reichardt 1967: 24). Lectotype (♂), designated by Reichardt (1967: 24), in MHNP. Synonymy established by Melsheimer (1853: 3), confirmed by Reichardt (1967: 24).

Galerita thoracica Casey, 1897: 350 [primary homonym of *Galerita thoracica* Chevrolat, 1834]. Type locality: «Florida» (original citation). One syntype in USNM [# 47578]. Synonymy established by Reichardt (1967: 24).

Galerita bicolor intermedia Casey, 1897: 351 [primary homonym of *Galerita intermedia* Fairmaire, 1887]. Type locality: «Iowa» (original citation). Holotype [by monotypy] (♂) in USNM [# 47577]. Synonymy established by Reichardt (1967: 24).

Galerita caseyi Leng, 1919b: 203. Replacement name for *Galerita thoracica* Casey, 1897.

Galerita angusticeps Casey, 1920: 227. Type locality: «S[ain]t Louis, Missouri» (original citation). Lectotype (♂), designated by Bousquet and Larochelle (1993: 14), in USNM [# 47586]. Synonymy established by Bousquet and Larochelle (1993: 14).

Galerita occipitalis Casey, 1920: 228. Type locality: «Boston Neck [Washington County], Rhode Island» (original citation). One syntype in USNM [# 47576]. Synonymy established by Reichardt (1967: 24).

Galerita caseyi Liebke, 1928: 129 [primary homonym of *Galerita caseyi* Leng, 1919]. Replacement name for *Galerita intermedia* Casey, 1897.

Galerita ahasverus Liebke, 1929: 297. Replacement name for *Galerita caseyi* Liebke, 1928.

Distribution. This species is found from southern Quebec to southeastern South Dakota, north to southern Manitoba (Bousquet 1987a: 134), south to east-central Texas and central Florida; isolated populations are known from southwestern New Mexico (Grant County, Robert L. Davidson pers. comm. 2008), southeastern Arizona, and Chihuahua in Mexico [see Ball and Nimmo 1983: Fig. 10].

Records. CAN: MB, ON, QC **USA**: AL, AR, AZ, CO, CT, DC, DE, FL, GA, IA, IL, IN, KS, KY, LA, MA, MD, MI, MN, MO, MS, NC, ND, NE, NH, NJ, NM, NY, OH, OK, PA, RI, SC, SD, TN, TX, VA, VT, WI, WV – Mexico

***Galerita lecontei lecontei* Dejean, 1831**

Galerita lecontei Dejean, 1831: 294. Type locality: «Amérique septentrionale» (original citation), herein restricted to Port Arthur, Jefferson County, Texas (see Reichardt 1967: 32). Lectotype (♂), designated by Reichardt (1967: 31), in MHNP.

Galerita californica Mannerheim, 1843: 183. Type locality: «California» (original citation). Syntype(s) location unknown (possibly in ZMH). Synonymy established by LeConte (1879c: 61).

Galerita infirma Casey, 1897: 350. Type locality: «Yuma [Yuma County], Arizona» (original citation). One syntype in USNM [# 47585]. Synonymy established by Reichardt (1967: 31).

Galerita crinicornis Casey, 1920: 229. Type locality: «near El Paso [El Paso County], Texas» (original citation). One syntype in USNM [# 47581]. Synonymy established by Reichardt (1967: 31).

Galerita californica arizonica Casey, 1920: 231. Type locality: «Arizona and Texas» (original citation). Three syntypes in USNM [# 47583]. Synonymy established by Reichardt (1967: 31).

Distribution. The range of this subspecies is disjunct: there is an eastern component ranging from Virginia to southwestern Kentucky (Trigg County, Foster F. Purrington pers. comm. 2011) southwards to southern Florida and South Bimini Island in the Bahamas, westwards to eastern Texas; the western population ranges from central California southeastwards to the state of Durango in Mexico [see Ball and Nimmo 1983: Fig. 17]. The record from east-central Missouri (Summers 1873: 133) needs confirmation.
Records. USA: AL, AR, AZ, CA, FL, GA, KY, LA, MS, NC, NM, SC, TN, TX, VA [MO] – Bahamas, Mexico
Note. The subspecies *G. lecontei bicoloripes* Reichardt is found in central Mexico, that of *G. lecontei veracrucis* Ball and Nimmo along the Gulf states of Mexico, and that of *G. lecontei tenebricosa* Klug in several islands of the Greater Antilles.

Galerita mexicana Chaudoir, 1872

Galerita mexicana Chaudoir, 1872b: 103. Type locality: «Mexique» (original citation), herein restricted to Ciudad Victoria, Tamaulipas (see Reichardt 1967: 29). Lectotype (♀), designated by Reichardt (1967: 29), in MHNP.

Galerita melanopus Casey, 1920: 232. Type locality: «Amarillo [Potter County], Texas» (original citation). One syntype in USNM [# 47584]. Synonymy established by Reichardt (1967: 29).

Distribution. This species ranges from southeastern Nebraska (Lancaster County, Foster F. Purrington pers. comm. 2011) to south-central Arizona, south to Costa Rica [see Ball and Nimmo 1983: Fig. 12].
Records. USA: AZ, KS, NE, NM, OK, TX – Costa Rica, El Salvador, Guatemala, Honduras, Mexico

Galerita reichardti Ball and Nimmo, 1983

Galerita reichardti Ball and Nimmo, 1983: 304. Type locality: «3.5 km e[ast] Jaltipan, Veracruz, Mexico» (original citation). Holotype (♂) in USNM. Etymology. The specific name was proposed for Hans Reichardt [1939-1976], Brazilian taxonomist with an interest in the South American carabid fauna. Reichardt tragically died in a car accident.

Distribution. This species is known from a few localities from eastern Texas southwards along the Gulf and Caribbean Coasts to Honduras [see Ball and Nimmo 1983: Fig. 7].

Records. USA: TX – Honduras, Mexico

Subgenus *Galerita* Fabricius, 1801

Galerita Fabricius, 1801: 214. Type species: *Carabus americanus* Linnaeus, 1758 designated by Latreille (1810: 426).

Diversity. Seventy-five species in the Western Hemisphere (51 species) and the Old World (24 species). One Neotropical species extends into southern Texas.

Galerita aequinoctialis Chaudoir, 1852

Galerita aequinoctialis Chaudoir, 1852: 37 (as *aeguinoctialis*). Type locality: «Mexique» (original citation), herein restricted to Jalapa Enríquez, Veracruz (see Reichardt 1967: 90). Syntype(s) probably in MHNP. Note. The fact that Chaudoir's name is spelled *aequinoctialis* in "Table des Matières" of the original publication (page 103) should be regarded as a clear indication of an inadvertent error in the original spelling *aeguinoctialis* (page 37).

Distribution. This species ranges from the Rio Grande in southeastern Texas south to Colombia (Martínez 2003: 7) [see Reichardt 1967: Fig. 76]. The record from "Arkansas" (Bousquet and Larochelle 1993: 285) is in error.
Records. USA: TX – Colombia, Mexico, Panama

Tribe Helluonini Hope, 1838

Helluonidae Hope, 1838: 110. Type genus: *Helluo* Bonelli, 1813.

Diversity. Worldwide (though absent from Europe) with about 180 species (Lorenz 2005: 510-512) arrayed in 26 genera: five of these genera (about 60 species) are represented in the Western Hemisphere and 21 (about 120 species) in the Eastern Hemisphere. The group is underrepresented in the Northern Hemisphere with 14 species (about 8% of the world fauna), only five of them being endemic (about 3%). Two subtribes are recognized: Helluonina, with 40 species in the Australian Region, and Omphrina with about 140 species.

Subtribe Omphrina Jedlička, 1941

Omphrini Jedlička, 1941: 6, 26. Type genus: *Omphra* Dejean, 1825.
Helluomorphina Reichardt, 1974: 224, 226. Type genus: *Helluomorpha* Laporte, 1834.

Diversity. About 140 species in the Nearctic (seven species of *Helluomorphoides*), Neotropical (about 55 species), Australian (two species of *Creagris* Nietner, one of them endemic), Oriental (27 species), Palaearctic (seven Asian species but only two endemic, both in the Middle East), and Afrotropical (about 50 species) Regions.

Genus *Helluomorphoides* Ball, 1951

Helluomorphoides Ball, 1951: 136. Type species: *Helluomorpha texana* LeConte, 1853 by original designation. Etymology. From the generic name *Helluomorpha* and the Greek suffix *-oides* (resembling, having the form of), alluding to the resemblance of adults to those of *Helluomorpha* [masculine].

Diversity. Twenty-three species in temperate, subtropical, and tropical areas of the Nearctic (seven species) and Neotropical (20 species) Regions.
Identification. Ball (1956a) revised the North American species. The taxonomy and nomenclature of these species have not changed since.

Helluomorphoides clairvillei (Dejean, 1831)

Helluo clairvillei Dejean, 1831: 406. Type locality: «Amérique septentrionale» (original citation), herein restricted to Lucedale, George County, Mississippi (see Lindroth 1955b: 25). One syntype in MHNP.

Distribution. This species is found along the Coastal Plain and Piedmont from southern New Jersey to southern Florida (Peck and Thomas 1998: 25), west to southeastern Mississippi (Ball 1956a: 85, Fig. 34). The record from south-central Kansas (Knaus 1901: 110) is probably in error.
Records. USA: AL, FL, GA, MS, NC, NJ, SC

Helluomorphoides ferrugineus (LeConte, 1853)

Helluomorpha ferruginea LeConte, 1853c: 373. Type locality: «Texas» (original citation), herein restricted to Brownsville, Cameron County (see Ball 1956a: 77). Lectotype [as type], designated by Ball (1956a: 78), in MCZ [# 5838].
Helluomorpha languida Casey, 1913: 190. Type locality: «Brownsville [Cameron County], Texas» (original citation). Four syntypes [4 originally cited] in USNM [# 47589]. Synonymy established by Ball (1956a: 75).

Distribution. This species ranges from New Jersey (Smith 1890: 90; Smith 1910: 212) to northwestern South Carolina (Ciegler 2000: 130), west to the Baboquivari Mountains in southern Arizona, north to southwestern Utah (Washington County, CMNH) and northeastern Kansas, south to Sinaloa in Mexico (Ball 1956a: 78). The records from New York City and vicinity (Leng and Beutenmüller 1893: 143) and "Florida" (Leng 1920: 67) need confirmation.
Records. USA: AL, AR, AZ, GA, KS, NC, NJ, NM, OK, SC, TX, UT, VA [FL, NY] – Mexico

Helluomorphoides latitarsis (Casey, 1913)

Helluomorpha latitarsis Casey, 1913: 189. Type locality: «Arizona» (original citation), herein restricted to Baboquivari Mountains, Pima County (see Ball 1956a: 83). Lectotype [as type] (♂), designated by Ball (1956a: 84), in USNM [# 47590].

Distribution. This species is found from western Texas to south-central Arizona, south at least to Durango in Mexico (Ball 1956a: 84, Fig. 34). The record from "Oklahoma" (Arnold 2008) needs confirmation.
Records. USA: AZ, NM, TX [OK] – Mexico

Helluomorphoides nigripennis (Dejean, 1831)

Helluo nigripennis Dejean, 1831: 408. Type locality: «Amérique septentrionale» (original citation), herein restricted to Raleigh, Wake County, North Carolina (CNC). Two possible syntypes in MHNP (Lindroth 1955b: 25).

Distribution. This species is found from Massachusetts to west-central Georgia (Fattig 1949: 41), west to eastern Texas (Ball 1956a: 75), and north to central Illinois (Purrington et al. 2002: 200) and western Michigan (Newaygo County, CMNH).
Records. USA: AL, AR, DC, GA, IL, LA, MA, MD, MI, MS, NC, NJ, NY, OK, SC, TX, VA

Helluomorphoides papago (Casey, 1913)

Helluomorpha papago Casey, 1913: 190. Type locality: «Arizona» (original citation), herein restricted to Ramsey Canyon, 15 miles south Sierra Vista, Cochise County (CNC). Lectotype [as type] (♂), designated by Ball (1956a: 86), in USNM [# 47588].

Distribution. This species ranges from the mountains of southern Arizona to southwestern Texas, south at least to Durango (Ball 1956a: 86, Fig. 34).
Records. USA: AZ, TX – Mexico

Helluomorphoides praeustus bicolor (Harris, 1828)

Zuphium bicolor T.W. Harris, 1828b: 117. Type locality: «vicinity of Salem [Essex County, Massachusetts]» (original citation). Holotype [by monotypy] (♂) in MCZ [# 28191].

Helluo laticornis Dejean, 1831: 407. Type locality: «Amérique septentrionale» (original citation). Holotype [by monotypy] presumably lost (Lindroth 1955b: 25). Synonymy established by LeConte (1863b: 5).

Helluo pubescens Klug, 1834: 77. Type locality not stated. Syntype(s) location unknown. Synonymy established by LeConte (1879c: 61).

Distribution. This subspecies occurs from southeastern New Hampshire (Cooper 1976: 165) to southeastern Wyoming (Platte County, CMNH) and northern Colorado (Ball 1956a: Fig. 33), south to Oklahoma (French et al. 2001: 228; Grady County, CMNH), west-central Arkansas (Garland County, Robert L. Davidson pers. comm. 2012), and northeastern Georgia (Fattig 1949: 42). The record from southwestern Alabama (Löding 1945: 23) needs confirmation.
Records. USA: AR, CO, CT, DC, DE, GA, IA, IL, IN, KS, MA, MD, MI, MN, MO, ND, NE, NH, NJ, NY, OH, OK, PA, SD, TN, VA, WI, WV, WY [AL]

Helluomorphoides praeustus floridanus Ball, 1956

Helluomorphoides praeustus floridanus Ball, 1956a: 80. Type locality: «Ormond, Volusia County, Florida» (original citation). Holotype (♂) in USNM [# 75438].

Distribution. This subspecies is endemic to the Florida Peninsula (Peck and Thomas 1998: 25).
Records. USA: FL

Helluomorphoides praeustus praeustus (Dejean, 1825)

Helluo praeustus Dejean, 1825: 289. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Lindroth 1955b: 25).

Distribution. This subspecies is known for sure only from Mississippi (Harrison and Lafayette Counties, Drew A. Hildebrandt pers. comm. 2008), "New Jersey," and "Alabama" (Ball 1956a: 79) where Löding (1945: 23) recorded it from Colbert and Mobile Counties. The record from southwestern Ohio (Blatchley 1910: 155) is probably in error; those from Sand Point and Tampa in Florida (Leng 1915: 589) need confirmation.
Records. USA: AL, NJ, MS [FL]

Helluomorphoides texanus (LeConte, 1853)

Helluomorpha texana LeConte, 1853c: 374. Type locality: «Texas» (original citation), herein restricted to Tyler, Smith County (CNC). Holotype [by monotypy] (♂) in MCZ [# 5837].

Distribution. This species ranges from southwestern Kentucky (Trigg County, Foster F. Purrington pers. comm. 2010) and central Tennessee to southeastern New Mexico (Lea and Chaves Counties, CMNH), north to southwestern Iowa (Fremont County, Doug A. Veal pers. comm. 2009) and southeastern Nebraska (Jefferson County, Foster F. Purrington pers. comm. 2010), south to northeastern Mexico (Ball 1956a: 82-83, Fig. 34) and southwestern Georgia (Fattig 1949: 42). The records from southern Arizona (Snow 1907: 142) and Indiana (Blatchley 1910: 156) need confirmation.
Records. USA: AL, AR, CO, GA, IA, KS, KY, MO, MS, NE, NM, OK, TN, TX [AZ, IN] – Mexico

Tribe Pseudomorphini Hope, 1838

Pseudomorphidae Hope, 1838: 108 (as Heteromorphidae). Type genus: *Pseudomorpha* Kirby, 1823 (as *Heteromorpha* Kirby, 1823). Note. This family-group name is based on an incorrect original spelling of the name of its type genus (*Heteromorpha*) and must be corrected (ICZN 1999: Article 35.4.1). Therefore Heteromorphidae is corrected to Pseudomorphidae Hope, 1838.

Diversity. About 325 species (Lorenz 2005: 388-390) in the Western Hemisphere (35 species) and the Australian (285 species, close to 90% of the world fauna), Oriental

Figure 43. *Pseudomorpha sp.* Members of *Pseudomorpha* are among the most unusual North American carabids. The body shape of the adults is very characteristic. In addition, contrary to other Nearctic carabids that lay eggs, they are ovoviviparous. The females carry hatched larvae in their bursa copulatrix, vagina, and lateral oviducts. Such behavior probably greatly reduces egg mortality.

(four species of *Cryptocephalomorpha*), and Afrotropical (one species of *Cryptocephalomorpha* in South Africa) Regions. These species are arrayed in 12 genera: *Adelotopus* Hope (123 Australian species), *Cainogenion* Notman (11 Australian species), *Cryptocephalomorpha* Ritsema (seven species in the Eastern Hemisphere), *Manumorpha* Erwin and Geraci (one South American species), *Notopseudomorpha* Baehr (two species in South America), *Paussotropus* Waterhouse (one Australian species), *Procainogenion* Baehr (one Australian species), *Pseudomorpha* (30 species), *Samiriamorpha* Erwin and Geraci (one species in Peru), *Sphallomorpha* Westwood (145 Australian species), *Tuxtlamorpha* Erwin and Geraci (one species in Middle America), and *Yasunimorpha* Erwin and Geraci (one species from Ecuador).

Genus *Pseudomorpha* Kirby, 1823

Pseudomorpha Kirby, 1823a: 98. Type species: *Pseudomorpha excrucians* Kirby, 1823 by monotypy. Etymology. From the Greek *pseudos* (fallacy, lie) and *morphe* (form), probably alluding to the fact that the shape of the adult is completely different from that of other Carabidae ("though its exhibits the characters, has not the aspect, of that tribe [i.e., Carabi]") [feminine]. Note. Kirby (1823a) originally used two different names for this taxon, *Pseudomorpha* (in the description on page 98) and *Heteromorpha* (in the explanation of the figures on page 109). Both names are considered different original spellings of the same name. Kirby reissued the paper later the same year in another journal, without the plate, and so only *Pseudomorpha* was used. As such, Kirby (1823b) is the "First Reviser" and *Pseudomorpha* is the correct original spelling (ICZN 1999: Article 24.2.4).

Axinophorus Dejean [in Dejean and Boisduval], 1829: 60. Type species: *Axinophorus lecontei* Dejean, 1829 (= *Pseudomorpha excrucians* Kirby, 1823) designated by Notman (1925: 30). Etymology (original). From the Greek *axine* (ax) and *phero* (to carry), alluding to the markedly securiform last labial palpomere ("*dernier article ... des labiaux très fortement sécuriforme*") of the adult [masculine].

Drepanus Dejean, 1831: 434. Type species: *Axinophorus lecontei* Dejean, 1829 (= *Pseudomorpha excrucians* Kirby, 1823) designated by Hope (1838: 109). Etymology. Uncertain, possibly from the Greek *drepane* (sickle, scimitar), or from Drepanum, the old name of the city of Trapani, in Sicily, or from Drepanus the surname of Saturne [masculine]. Note. This name was first used, but not made available, by Illiger (1807: 344).

Diversity. Thirty species in temperate, subtropical, and tropical areas of the Western Hemisphere (30 species) and southern Australia (three species) arrayed in two subgenera: *Pseudomorpha* (27 species) and *Austropseudomorpha* Baehr (three Australian species). The North American fauna has 19 known species (57.5% of the world fauna).
Taxonomic Note. According to Baehr (1994: Fig. 1), *Pseudomorpha* is the sister-group to a clade including *Adelotopus* Hope, *Cainogenion* Notman, *Paussotropus* Waterhouse, and *Cryptocephalomorpha* Ritsema.

Subgenus *Pseudomorpha* Kirby, 1823

Pseudomorpha Kirby, 1823a: 98. Type species: *Pseudomorpha excrucians* Kirby, 1823 by monotypy.

Diversity. Twenty-seven species in the Western Hemisphere.
Identification. Notman (1925) published a key to all species known at the time except *P. ruficollis* described the previous year. Since then, two new North American species have been described by Van Dyke (1943, 1953a). Species identification of the Nearctic fauna is almost impossible without recourse to type material. A thorough revision is needed.

Pseudomorpha alleni Van Dyke, 1953

Pseudomorpha alleni Van Dyke, 1953a: 99. Type locality: «Tuba City [Coconino County], Arizona» (original citation). Holotype (♂) in CAS [# 8166].

Distribution. This species is known only from the type locality in northern Arizona.
Records. USA: AZ

Pseudomorpha alutacea Notman, 1925

Pseudomorpha alutacea Notman, 1925: 17. Type locality: «Mesilla [Dona Ana County], New Mexico» (original citation). Holotype (♀) in USNM [# 26171].

Distribution. This species is known only from the type locality in southern New Mexico.
Records. USA: NM

Pseudomorpha augustata Horn, 1883

Pseudomorpha augustata G.H. Horn, 1883b: 274. Type locality: «Arizona» (original citation). Syntype(s) in MCZ [# 7383].

Distribution. This species is known from central and southern Arizona (Griffith 1900: 566; Notman 1925: 22) and southwestern New Mexico (Fall and Cockerell 1907: 162; Notman 1925: 22).
Records. USA: AZ, NM

Pseudomorpha behrensi Horn, 1870

Pseudomorpha behrensi G.H. Horn, 1870a: 76. Type locality: United States (inferred from title of the paper). Holotype [by monotypy] in MCZ [# 7382]. Etymology. The specific name honors James H. Behrens [1824-1898], an insect collector in San Francisco who sent many beetles from the western part of the continent to LeConte and Horn. Born in Germany, Behrens was elected resident member of the California Academy of Sciences. A few years prior to his death, he sent his collection to the Naturhistorisches Museum in Lübeck.

Distribution. This species has been cited from Butte County in southeastern Idaho (Stafford et al. 1986: 289), Churchill County in western Nevada (Bechtel et al. 1983: 474), Contra Costa County (Notman 1925: 21) and the San Joaquin Valley (Fall 1901a: 51) in California, and the state of Durango (Bates 1883a: 255) in Mexico.
Records. USA: CA, ID, NV – Mexico

Pseudomorpha castanea Casey, 1909

Pseudomorpha castanea Casey, 1909: 278. Type locality: «Stockton [Tooele County], Utah» (original citation). Syntype(s) in USNM.

Distribution. This species is known from southeastern Oregon (Hatch 1953: 187), Sacramento County in California, and northwestern Utah (Notman 1925: 22).
Records. USA: CA, OR, UT

Pseudomorpha champlaini Notman, 1925

Pseudomorpha champlaini Notman, 1925: 20. Type locality: «Paradise [Cochise County], Arizona» (original citation). Holotype (♂) in USNM [# 26173]. Etymology. The specific name was proposed for Alfred B. Champlain [1882-1957], entomologist for the U.S. Bureau of Entomology.

Distribution. This species is known from southeastern Arizona (Notman 1925: 20). The record from "California" (Csiki 1933a: 1638) needs confirmation.
Records. USA: AZ [CA]

Pseudomorpha consanguinea Notman, 1925

Pseudomorpha consanguinea Notman, 1925: 18. Type locality: «Morena Dam, San Diego County, California» (original citation). Holotype (♂) in MCZ [# 27143].

Distribution. This species is known from San Diego County in southwestern California and Yavapai County in central Arizona (Notman 1925: 19).
Records. USA: AZ, CA

Pseudomorpha cronkhitei Horn, 1867

Pseudomorpha cronkhitei G.H. Horn, 1867b: 151. Type locality: «Owen's Valley [Inyo County], California» (original citation). Syntype(s) [3 originally cited] in MCZ [# 7381].

Distribution. This species is known from Inyo (Horn 1867b: 151) and Tulare (Notman 1925: 21) Counties in California.
Records. USA: CA

***Pseudomorpha cylindrica* Casey, 1889**

Pseudomorpha cylindrica Casey, 1889: 40. Type locality: «El Paso [El Paso County], Texas» (original citation). Holotype [by monotypy] (♂) in USNM.

Distribution. This species is known only from the type locality in westernmost Texas.
Records. USA: TX

***Pseudomorpha excrucians* Kirby, 1823**

Pseudomorpha excrucians Kirby, 1823a: 101. Type locality: «in Georgiae forsan aquaticis?» (original citation). One syntype in BMNH (Erwin and Geraci 2008: 84).
Axinophorus lecontei Dejean [in Dejean and Boisduval], 1830: 176. Type locality: «Amérique septentrionale» (original citation). One syntype in MHNP (Erwin and Geraci 2008: 85). Synonymy established with doubt by Dejean (1831: 435), confirmed by Erwin and Geraci (2008: 85).
Pseudomorpha ruficollis Casey, 1924: 148. Type locality: «Covington [Saint Tammany Parish], Louisiana» (original citation). One syntype in USNM [# 48078]. Synonymy established by Erwin and Geraci (2008: 84).

Distribution. This Coastal Plain species is found from northern South Carolina (Ciegler 2000: 130) to Louisiana (Notman 1925: 22; Erwin and Geraci 2008: 85).
Records. USA: AL, GA, LA, MS, SC

***Pseudomorpha falli* Notman, 1925**

Pseudomorpha falli Notman, 1925: 15. Type locality: «Jacumba, San Diego County, California» (original citation). Holotype (♂) in MCZ [# 27142].

Distribution. This species is known only from the holotype collected in southwestern California.
Records. USA: CA

***Pseudomorpha hubbardi* Notman, 1925**

Pseudomorpha hubbardi Notman, 1925: 15. Type locality: «Rincon Mountains [Pima County], Arizona» (original citation). Holotype (♂) in SIM (Hennessey 1990: 466).

Distribution. This species is known from Pima, Pinal (Notman 1925: 15), and Cochise (MCZ) Counties in southern Arizona.
Records. USA: AZ

***Pseudomorpha parallela* Van Dyke, 1943**

Pseudomorpha parallela Van Dyke, 1943: 30. Type locality: «Warners, San Diego County, California» (original citation). Holotype (♂) in CAS [# 5315].

Distribution. This species is known from southern California (Van Dyke 1943: 30; Andrews et al. 1979: 28).

Records. USA: CA

Pseudomorpha schwarzi Notman, 1925

Pseudomorpha schwarzi Notman, 1925: 21. Type locality: «Santa Rita Mountains, Arizona» (original citation). Holotype (♂) in USNM [# 26174]. Etymology. The specific name was proposed for Eugene Amandus Schwarz [1844-1928], entomologist at the U.S. Department of Agriculture with a specialization in the taxonomy of Coleoptera, especially the more obscure groups.

Distribution. This species is known only from the holotype collected in southern Arizona.
Records. USA: AZ

Pseudomorpha tenebroides Notman, 1925

Pseudomorpha tenebroides Notman, 1925: 16. Type locality: «Tucson [Pima County], Arizona» (original citation). Holotype (♂) in USNM [# 26170].

Distribution. This species is known only from the holotype collected in southern Arizona.
Records. USA: AZ

Pseudomorpha vandykei Notman, 1925

Pseudomorpha van dykei Notman, 1925: 18. Type locality: «Santa Cruz Village (about 3,100 feet), Cobabi Mountains [= Ko Vaya Hills, Pima County], Arizona» (original citation). Holotype (♀) in AMNH [# 334].

Distribution. This species is known only from the holotype collected in southern Arizona.
Records. USA: AZ

Pseudomorpha vicina Notman, 1925

Pseudomorpha vicina Notman, 1925: 17. Type locality: «Jacumba, San Diego County, California» (original citation). Holotype (♂) in MCZ [# 27141].

Distribution. This species has been reported from San Diego County in southwestern California and Lyon County in west-central Nevada (Notman 1925: 18).
Records. USA: CA, NV

Pseudomorpha vindicata Notman, 1925

Pseudomorpha vindicata Notman, 1925: 19. Type locality: «Stockton [Tooele County], Utah» (original citation). Holotype (♂) in SIM (Hennessey 1990: 466).

Distribution. This species is known only from the holotype collected in northwestern Utah.
Records. USA: UT

Acknowledgments

Several persons have contributed to this catalogue. Thomas C. Barr, Jr., Ross T. and Joyce Bell, James C. Bergdahl, Eric van den Berghe, Sydney G. Cannings, Donald S. Chandler, Robert L. Davidson, Garry A. Dunn, Kamal J.K. Gandhi, Vince Golia, Gerald J. Hilchie, Drew A. Hildebrandt, Richard L. Hoffman, Ronald R. Hooper, Ken Karns, David H. Kavanaugh, William L. Krinsky, James R. LaBonte, Paul K. Lago, David W. Langor, Serge Laplante, André Larochelle, Kirk J. Larsen, Harry J. Lee, Jr., David R. Maddison, Christopher G. Majka, Peter W. Messer, Steve Nanz, Robert E. Nelson, Darren A. Pollock, Foster F. Purrington, Brian Raber, Edward G. Riley, Donald P. Schwert, Derek S. Sikes, Igor M. Sokolov, Doug A. Veal, and Reginald P. Webster provided many new state or province records. George E. Ball, Robert L. Davidson, Serge Laplante, David R. Maddison, and Gerald R. Noonan granted permission to include unpublished nomenclatural findings (new synonymies) from their research. Philip D. Perkins and Hans Silfverberg provided information on T.W. Harris' and Mannerheim's collections respectively, Robert E. Acciavatti, George E. Ball, Shawn M. Clark, Lee H. Herman, Fritz Hieke, Stuart Hine, and Bernd Jaeger information on type specimens, and Shun-Ichi Uéno information about K. Shirahata. Nadine Dupérré provided label data of a holotype housed at AMNH and information from books and journals available at the AMNH. Paul Skelley and Boris Kataev sent photocopies of pages of books housed in the Division of Plant Industry Library (FSCA) and the Zoological Museum of Moscow University Library respectively. Warren E. Steiner, Jr. and Terry L. Erwin, Robert L. Davidson, and Philip D. Perkins assisted by arranging visits I made in 2008 to collections at the USNM, CMNH, and MCZ respectively. George E. Ball reviewed the manuscript section on the genus *Selenophorus*. Vasily V. Grebennikov and Aleš Smetana translated texts in Russian and German respectively. Anthony Davies, Patrice Bouchard, and Serge Laplante reviewed sections of the manuscript. I extend my sincere appreciation to all these individuals.

I wish to thank also Steve Gamman and Patricia Madaire of the Canadian Agricultural Library (Entomology) in Ottawa, Eileen Mathias of The Ewell Sale Stewart Library at The Academy of Natural Sciences in Philadelphia, Dana Fischer of the Ernst Mayr Library at the Museum of Comparative Zoology in Cambridge, Massachusetts, and Marty Schlabach at the Comstock Memorial Library of Entomology at Cornell University in Ithaca, New York, for their assistance in locating obscure and difficult-to-find works. I am indebted to my colleague Aleš Smetana for access to his impressive personal library.

Finally, I acknowledge Henri Goulet for the permission to use some of his nice color illustrations.

References

Dates of publication are important for taxonomic purposes and searches have been made to find precise dates for all works cited in this catalogue. The dates are listed after the references, unless only the year was found. They were obtained either from the book or the journal itself (in such cases no reference is given), from library stamps, bibliographic works (abbreviated references given unless the work is listed in the "reference" section), or from the following recording journals and society journals:

Recording journals

Dates of receipt (stamps) from several libraries were used to establish dates of publication of works in the absence of more precise dates. The year of publication was not changed if the stamp was dated in the month of January of the following year.

Months of issues for journal published at regular intervals (such as *The Canadian Entomologist*) were not considered as publication dates unless I have found evidence that the issue was indeed published in the month listed. Months of issues for journals published at irregular intervals (such as the *Boston Journal of Natural History*) were considered the publication dates unless I found evidence to the contrary. I have accepted as publication dates, dates listed as "mailed on," "published on," "issued on," and "editum."

In reference to the dates given, the following symbols and abbreviations are used:

>:	after
<:	before
c.:	*circa*
CAL:	Canadian Agriculture Library at Eastern Cereal and Oilseed Research Center, Ottawa, Ontario
CISTI:	Canada Institute for Scientific and Technical Information, Ottawa, Ontario
CML:	Canadian Museum of Natural History Library, Gatineau, Quebec
CUL:	Cornell University, Ithaca, New York
DP:	Date of publication
McD:	McDonald College, Sainte-Anne-de-Bellevue, Quebec
NRC:	National Research Council, Ottawa, Ontario
OTU:	University of Ottawa Library, Ottawa, Ontario
USNM:	Smithsonian Institution Library, Washington, D.C.

Chaudoir M (1879) Révision des genres *Onychopterygia*, *Dicranoncus* et *Colpodes*. *Annales de la Société Entomologique de France* (cinquième série) 8 [1878]: 337-382 [DP: 26 March 1879]

Note. Chaudoir's paper covers pages 275 to 382; pages 275-336 were issued 27 November 1878.

Chaudoir M (1881) Monographie des scaritides (Scaritini). Deuxième partie. *Annales de la Société Entomologique de Belgique* 23 [1880]: 5-130 [DP: January 1881 (*Bibl. Belg.*)]

Chaudoir M (1882) Monographie des oodides 1re partie. *Annales de la Société Entomologique de France* (sixième série) 2: 317-378 [DP: 27 December 1882]

Chaudoir M (1883) Monographie des oodides 2e partie. *Annales de la Société Entomologique de France* (sixième série) 2 [1882]: 485-554 [DP: 30 May 1883]

Chaudoir M, Hochhuth MH (1846) *Enumération des carabiques et hydrocanthares, recueillis pendant un voyage au Caucase et dans les provinces transcaucasiennes par le Baron M. de Chaudoir et le Baron A. de Gotsch.* J. Wallner, Kiew. 268 pp. [DP: June 1846]

Chen Z, Grady K, Stephens S, Villa-Castillo J, Wagner MR (2006) Fuel reduction treatment and wildfire influence on carabid and tenebrionid community assemblages in the ponderosa pine forest of northern Arizona, USA. *Forest Ecology and Management* 225: 168-177 [15 April 2006]

Chevrolat LAA (1834) *Coléoptères du Mexique* [2e Fascicule (implicitly nos. 25-46)]. G. Silbermann, Strasbourg [DP: 6 August 1834 (*Soc. Ent. Fr.*)] Note. The pages for the series *Coléoptères du Mexique* are unnumbered; each species treated is sequently numbered, implicitly for the first four fascicles, explicitly for the remaining ones.

Chevrolat LAA (1835a) *Coléoptères du Mexique. 4e Fascicule* [implicitly nos 71-102]. G. Silbermann, Strasbourg [DP: 18 July 1835 (*Feuil. J. Libr.*)]

Chevrolat LAA (1835b) *Coléoptères du Mexique. 5e Fascicule* [nos 101-124]. G. Silbermann, Strasbourg [DP: 10 October 1835 (*Feuil. J. Libr.*)]

Chevrolat LAA (1835c) *Coléoptères du Mexique. 6e Fascicule* [nos 125-147]. G. Silbermann, Strasbourg [DP: 2 December 1835 (*Soc. Ent. Fr.*)]

Chevrolat LAA (1836a) *Coléoptères du Mexique. 7e Fascicule* [nos 148-170]. G. Silbermann, Strasbourg. Note. Despite the wrapper is dated 1835, this fascicle was probably published in the first months of 1836.

Chevrolat LAA (1836b) *Coléoptères du Mexique. 8e Fascicule* [nos 171-200]. G. Silbermann, Strasbourg. [DP: May 1836 (Guyot de Fère, 1837, *Statistique des gens de Lettres et des savans existant en France, seconde édition*, p. 102)] Note. The wrapper is dated 1835 due to the fact that the publisher used wrappers of previous issues.

Chevrolat LAA (1839) Description d'une seconde espèce du genre *Ega*, de M. Delaporte, carabique de la cohorte des subulipalpes, de Latreille. *Revue Zoologique* [2]: 308 [DP: 7 October 1839 (*Acad. Sci.*)]

Chevrolat LAA (1841) Coléoptères du Mexique (201). (Pentamères carabiques). *Magasin de Zoologie, d'Anatomie Comparée et de Paléontologie* (deuxième série) [3]: 1-16 (pls 55-59).

Chevrolat LAA (1846) *Lyrophorus*. Pp. 522 *in* d'Orbigny C (Ed.). *Dictionnaire universel d'histoire naturelle résumant et complétant tous les faits présentés par les encyclopédies, les anciens dictionnaires scientifiques, les oeuvres complètes de Buffon, et les meilleurs traités spéciaux sur les diverses branches des sciences naturelles; - Donnant la description des êtres et des divers phénomènes de la nature, l'étymologie et la définition des noms scientifiques, et les principales applications des corps organiques et inorganiques à l'agriculture, à la médecine, aux arts industriels,*

etc. Tome septième. MM. Renard, Martinet et Cie., Paris. 806 pp. [DP: <31 August 1846, see Evenhuis (1997*b*: 575-576)]

Chevrolat LAA (1849) *Triaena*. Pp. 643 *in* d'Orbigny C (Ed.). *Dictionnaire universel d'histoire naturelle résumant et complétant tous les faits présentés par les encyclopédies, les anciens dictionnaires scientifiques, les oeuvres complètes de Buffon, et les meilleurs traités spéciaux sur les diverses branches des sciences naturelles; - Donnant la description des êtres et des divers phénomènes de la nature, l'étymologie et la définition des noms scientifiques, et les principales applications des corps organiques et inorganiques à l'agriculture, à la médecine, aux arts industriels, etc. Tome douxième.* MM. Renard, Martinet et Cie., Paris. 816 pp.

Chevrolat LAA (1852) Description de coléoptères nouveaux. *Revue et Magasin de Zoologie pure et appliquée* (2ᵉ série) 4: 414-422 [DP: September 1852]

Chevrolat LAA (1863) Coléoptères de l'Ile de Cuba. (Suite). Notes, synonymies et descriptions d'espèces nouvelles. Familles des cicindélètes, carabiques, dytiscides, gyrinides et palpicornes. *Annales de la Société Entomologique de France* (quatrième série) 3: 182-210 [DP: 12 August 1863]

Desmarest E (1851) *Encyclopédie d'histoire naturelle ou traité complet de cette science d'après les travaux des naturalistes les plus éminents de tous les pays et de toutes les époques Buffon, Daubenton, Lacépède, G. Cuvier, F. Cuvier, Geoffroy Saint-Hilaire, Latreille, de Jussieu, Brongniart, etc., etc. Ouvrage résumant les observations des auteurs anciens et comprenant toutes les découvertes modernes jusqu'à nos jours par le Dr Chenu. Coléoptères cicindelètes, carabiques, dytisciens, hydrophiliens, sylphales et nitidulaires, avec la collaboration de M.E. Desmarest, secrétaire de la Société Entomologique.* Marescq et Compagnie, Paris. 312 pp. + 28 pls. Note. Jean Charles Chenu is listed as the author on the title page. However, as discussed by Bouchard *et al*. (2011: 12), there is clear evidence that Eugène Desmarest was the author of the three tomes dealing with Coleoptera. This volume was issued in livraisons and the first one was published on 21 September 1850 as recorded by the *Bibliographie de la France*. However, since I am unable to assert which pages were published in 1850, the date for the whole book is given as 1851.

Fischer von Waldheim G (1820) *Entomographie de la Russie. Entomographia imperii Russici. Volumen I.* Augusti Semen, Mosquae. 26 pls. Note. This work contains two sections separately paginated. One has the title "Entomographie de la Russie. Entomographia Ruthenica" and contains 210 pages and 25 plates. The title page bears the date 1820-1822. The second section has the title "Genres des insectes. Genera insectorum systematica exposita et analysi iconographica instructa" and contains 104 pages and one plate. The title page bears the date 1821. According to C.D. Sherborn (1922, *Index animalium*, p. liii), the plates were printed in 1820, the second section "post Sept. 1821" and the first one "post May 1822." Therefore, all new species figured on the plates were first made available by association with illustrations and the date of publication for these species is the date of the plates. The text is in French and Latin.

Fischer von Waldheim G (1822) *Entomographie de la Russie. Entomographia imperii Russici. Volumen I.* Augusti Semen, Mosquae. 210 pp. [DP: >May 1822 (Sherborn 1922, *Index animalium*, p. liii)]

Fischer von Waldheim G (1823) *Entomographie de la Russie. Entomographia imperii Rossici. Tome II.* Augusti Semen, Mosquae. Pls 18-50 [Coleoptera] + 6-11 [Lepidoptera]. Note. This work contains xx + 264 pp. besides the plates. The front page bears the date 1823-1824. According to C.D. Sherborn (1922, *Index animalium*, p. liii), the plates were printed in 1823 and the text "post Nov. 1824." The date of publication of the new species figured on the plates is the date of the plates.

Fischer von Waldheim G (1824) *Entomographie de la Russie. Entomographia imperii Rossici. Tome II.* Augusti Semen, Mosquae. xx + 264 pp. [DP: >November 1824 (Sherborn 1922, *Index animalium*, p. liii)]

Fischer von Waldheim G (1828) *Entomographie de la Russie. Entomographia imperii Rossici. Tome III.* Augusti Semen, Mosquae. viii + 314 pp. + 18 pls. Note. The cover-page bears the date 1825-1828. The text was issued "post Nov. 1828" (Sherborn 1922, *Index animalium*, p. liii) but at least some of the plates were available as early as 1824. Indeed, in the second volume of the work, issued in 1824, Fisher von Waldheim (1824: 263-264) stated that plates I-IX of the third volume have been achieved and listed the species names for each plate. However, I have not been able to find any indication for the engraving dates of the remaining plates. For that reason, I prefer to date the text and all the plates from 1828.

Fischer von Waldheim G (1829a) *Museum Historiae Naturalis Universitatis Caesareae Mosquensis. Pars II. Insecta.* Typis Universitatis Caesareae, Mosquae. 143 pp. [DP: >25 February 1829] Note. This catalogue was published anonymously. As discussed by Bousquet (2002*c*: 174), Fischer von Waldheim was the author.

Guérin-Méneville FE (1827) Ophone. *Ophonus*. P. 244 *in*: *Dictionnaire classique d'histoire naturelle, par Messieurs Audouin, Isid. Bordon, Ad. Brongniart, De Candolle, Dandebard de Férussac, A. Desmoulins, Drapiez, Edwards, Flourens, Geoffroy de Saint-Hilaire, A. De Jussieu, Kunth, G. de Lafosse, Lamouroux, Latreille, Lucas fils, Presle-Duplessis, C. Prévost, A. Richard, Thiébaut de Berneaud, et Bory de Saint-Vincent. Ouvrage dirigé par ce dernier collaborateur, et dans lequel on a ajouté, pour le porter au niveau de la science, un grand nombre de mots qui n'avaient pu faire partie de la plupart des dictionnaires antérieurs. Tome douzième. NUA-PAM.* Ray et Gravier & Baudoin Frères, Paris. 634 + [1] pp. [DP: 18 August 1827 (Evenhuis 1997*a*: 111)]

Guérin-Méneville FE (1829) *Iconographie du Règne Animal de G. Cuvier, ou représentation d'après nature de l'une des espèces les plus remarquables, et souvent non encore figurées, de chaque genre d'animaux. Avec un texte descriptif mis au courant de la science. Ouvrage pouvant servir d'atlas à tous les traités de zoologie.* 2e livraison. J.B. Baillière, Paris. 10 pls (including pls 6 and 7 of insects) [DP: 18 July 1829 (*Bibl. Fr.*)] Note. This work was published from 1829 to 1837 and in 1844. It contains 450 plates that appeared in 45 livraisons of 10 plates each from 1829 to 1837; the text was issued in 1844. The section on insects contains 576 pages and 110 plates (see Cowan 1971, *J. Soc. Bibl. Nat. Hist.* 6: 18-29).

Guérin-Méneville FE (1840) Cicindèles nouvelles, découvertes à Pensacola (Am. Bor.), par M.E. De Saulcy. *Revue Zoologique* [3]: 37 [DP: 2 March 1840 (*Acad. Sci.*)]

Guérin-Méneville FE (1844a) *Iconographie du Règne Animal de G. Cuvier, ou représentation d'après nature de l'une des espèces les plus remarquables, et souvent non encore figurées, de chaque genre d'animaux. Avec un texte descriptif mis au courant de la science. Ouvrage pouvant servir d'atlas à tous les traités de zoologie. Insectes.* J.B. Baillière, Paris [&] Londres. 576 pp. [DP: 12 August 1844 (Evenhuis 1997*a*: 333)] Note. This constitutes livraisons 46-50 of the entire work; the previous 45 livraisons contain plates only.

Guérin-Méneville FE (1844b) Description de quelques coléoptères de la Nouvelle-Grenade. *Revue Zoologique* [7]: 8-19.

Guérin-Méneville FE (1844c) Description de coléoptères nouveaux découverts par M. A. Niéto dans l'intérieur du Mexique. *Revue Zoologique* [7]: 253-262 [DP: 12 August 1844 (*Acad. Sci.*)]

Guérin-Méneville FE (1844d) [Descriptions du genre *Pleurosoma* et de *P. sulcatum*]. *Magasin de Zoologie, d'Anatomie Comparée et de Paléontologie* (deuxième série) 6: 1-2 (pl. 136).

Guérin-Méneville FE (1849) [Descriptions du genre *Dromochorus* et de *D. pilatei*]. *Magasin de Zoologie, d'Anatomie Comparée et de Paléontologie* (deuxième série) 7 [1845]: 1-4 (pl. 162).

Gundlach J (1891) *Contribucion á la entomologia Cubana. Tomo III.* La Habana. 494 pp. Note. The sole copy I saw of this book had no publication date but the date of 1891 is generally attributed to it (e.g., Blackwelder 1957: 1106; Peck 2005: 7; Derksen and Scheiding-Göllner 1965, *Index Litteraturae Entomologicae* Band II, p. 236). However, as indicated on the wrappers of the issues of the *Anales de la Real Academia de Ciencias Medicas, fisicas y naturales de La Habana* (*Revista Cientifica*) for the years 1892 to 1896 (tomes 29-32), this work was originally published under the title "Contribucíon al estudio de los Coléopteros de la isla de Cuba" as separate sheets ("pliego aparte") to the journal. Unfortunately, no information was found to fix the dates of publication of the various parts. For that reason I am retaining the date of 1891.

W.Thorne Williams, Savannah. 624 + 77 pp.

LeConte JL (1844) Descriptions of new species of North American Coleoptera. *Proceedings of the Academy of Natural Sciences of Philadelphia* 2 [1844-45]: 48-53 [DP: 21 June 1844 (*Amer. Phil. Soc.*)]

LeConte JL (1845a) Descriptions of some new species of coleopterous insects inhabiting the United States. *Proceedings of the Boston Society of Natural History* 1 [1844]: 201 [DP: 2 September 1845 (*Acad. Nat. Sci. Phil.*)]

LeConte JL (1845b) Descriptions of some new and interesting insects, inhabiting the United States. *Boston Journal of Natural History* 5 [1845-47]: 203-209 [DP: 15 October 1845]

LeConte JL (1846a) Monograph of the species of *Pasimachus* inhabiting the United States; with descriptions of two new genera, belonging to the family Carabica. *Annals of the Lyceum of Natural History of New York* 4 [1846-48]: 141-154 [DP: February 1846]

LeConte JL (1846b) A descriptive catalogue of the geodephagous Coleoptera inhabiting the United States east of the Rocky Mountains. *Annals of the Lyceum of Natural History of New York* 4 [1846-48]: 173-354 [= 173-254] [DP: August 1846] Note. This paper was issued in nos 6-7 (pp. 173-354), published August 1846 (date on wrapper), of volume 4 of the *Annals*, 8-9 (pp. 355-416), published April 1847 (wrapper), 10-11 (pp. 417-464), published July 1847 (wrapper), and 12 (pp. 465-474), published September 1848 (wrapper). Due to a printing error, pages after 233 are numbered 100 too high; so the last page, although numbered 474, is actually the 374th page.

LeConte JL (1847) A descriptive catalogue of the geodephagous Coleoptera inhabiting the United States east of the Rocky Mountains. *Annals of the Lyceum of Natural History of New York* 4 [1846-48]: 355-464 [= 255-364] [DP: (pp. 355-416), April 1847; (pp. 417-464), July 1847]

LeConte JL (1848) A descriptive catalogue of the geodephagous Coleoptera inhabiting the United States east of the Rocky Mountains. *Annals of the Lyceum of Natural History of New York* 4 [1846-48]: 465-474 [= 365-374] [DP: September 1848]

LeConte JL (1850) General remarks upon the Coleoptera of Lake Superior. Pp. 201-242 *in* Agassiz, J.L.R. *Lake Superior: its physical character, vegetation, and animals, compared with those of other and similar regions. With a narrative of the tour, by J. Eliott Cabot. And contributions by other scientific gentlemen.* Gould, Kendall and Lincoln, Boston. x + [2] + 428 pp. + 8 pls. [DP: 16 March 1850 (*The Literary World* 163: 285)]

LeConte JL (1851) Descriptions of new species of Coleoptera, from California. *Annals of the Lyceum of Natural History of New York* 5 [1851-52]: 125-184 [DP: September 1851]

LeConte JL (1852a) Descriptions of new species of Coleoptera, from California. *Annals of the Lyceum of Natural History of New York* 5 [1851-52]: 185-216 [DP: February 1852]

LeConte JL (1852b) Remarks on some coleopterous insects collected by S.W. Woodhouse, M.D., in Missouri Territory and New Mexico. *Proceedings of the Academy of Natural Sciences of Philadelphia* 6 [1852-53]: 65-68 [DP: 9 June 1852 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xi)]

LeConte JL (1853a) Synopsis of the species of *Pterostichus* Bon. and allied genera inhabiting temperate North America. *Journal of the Academy of Natural Sciences of Philadelphia* (series 2) 2 [1850-54]: 225-256 [DP: 18 January 1853]

LeConte JL (1853b) Descriptions of some new Coleoptera from Texas, chiefly collected by the Mexican Boundary Commission. *Proceedings of the Academy of Natural Sciences of Philadelphia* 6 [1852-53]: 439-448 [DP: 31 December 1853 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xi)]

LeConte JL (1853c) Notes on the classification of the Carabidae of the United States. *Transactions of the American Philosophical Society* (new series) 10: 363-403 [DP: May 1853]

LeConte JL (1854a) Descriptions of some new Coleoptera from Oregon, collected by Dr. J.G. Cooper of the North Pacific R.R. Expedition, under Gov. J.J. Stevens. *Proceedings of the Academy of Natural Sciences of Philadelphia* 7 [1854-55]: 16-20 [DP: 17 March 1854 (*Amer. Phil. Soc.*)]

LeConte JL (1854b) Synopsis of the species of *Platynus* and allied genera, inhabiting the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* 7 [1854-55]: 35-59 [DP: 19 May 1854 (*Amer. Phil. Soc.*)]

LeConte JL (1854c) Notice of some coleopterous insects, from the collections of the Mexican Boundary Commission. *Proceedings of the Academy of Natural Sciences of Philadelphia* 7 [1854-55]: 79-85 [DP: 18 August 1854 (*Amer. Phil. Soc.*)]

LeConte JL (1854d) Descriptions of new Coleoptera collected by Thos. H. Webb, M.D., in the years 1850-51 and 52, while Secretary to the U.S. and Mexican Boundary Commission. *Proceedings of the Academy of Natural Sciences of Philadelphia* 7 [1854-55]: 220-225.

LeConte JL (1855) Notes on the Amarae of the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* 7 [1854-55]: 346-356 [DP: 20 July 1855 (*Amer. Phil. Soc.*)]

LeConte JL (1856a) Revision of the Cicindelae of the United States. *Transactions of the American Philosophical Society* (new series) 11: 27-63 [DP: 4 April 1856 (*Amer. Phil. Soc.*), reprint]

LeConte JL (1856b) Analytical table of the species of *Chlaenius* found in the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* 8: 25-29 [DP: 25 March 1856 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xi)]

LeConte JL (1857a) Catalogue of the species of *Bembidium* found in the United States and contiguous northern regions. *Proceedings of the Academy of Natural Sciences of Philadelphia* [9]: 2-6 [DP: 25 February 1857 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xi)]

LeConte JL (1857b) Synopsis of the species *Clivina* and allied genera inhabiting the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* [9]: 75-83 [DP: <7 January 1858 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xi)]]

LeConte JL (1857c) Report upon insects collected on the survey. Pp. 1-72 + 2 pls *in*: *Part III. Zoological report. Reports of explorations and surveys, to ascertain the most practicable and economical route for a railroad from the Mississippi River to the Pacific Ocean. Made under the direction of the Secretary of war, in 1853-5, according to acts of Congress of March 3, 1853, May 31, 1854, and August 5, 1854. Volume XII. Book II.* Thomas H. Ford, Washington [DP: June 1857] Note. Two editions of the survey reports were published, one for the Senate and one for the House of Representatives. LeConte's paper came in volume 12 which was issued in one volume for the Senate edition in 1859 and two volumes for the House of Representatives edition in 1860 (Meisel 1929, *A bibliography of American Natural History. Volume III*, p. 217). Preprints of this paper were available in 1857. The appendix (pp. 72a-d) was not available for the preprint.

LeConte JL (1858a) Catalogue of Coleoptera of the regions adjacent to the boundary line between the United States and Mexico. *Journal of the Academy of Natural Sciences of Philadelphia* (series 2) 4: 9-42 [DP: 17 December 1858 (*Amer. Phil. Soc.*), reprint]

LeConte JL (1858b) Description of new species of Coleoptera, chiefly collected by the United States and Mexican Boundary Commission, under Major W.H. Emory, U.S.A. *Proceedings of the Academy of Natural Sciences of Philadelphia* [10]: 59-89 [DP: 19 April 1858 (see

Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xii)]

LeConte JL (1859a) Catalogue of the Coleoptera of Fort Tejon, California. *Proceedings of the Academy of Natural Sciences of Philadelphia* [11]: 69-90 [DP: 31 March 1859 (*Bost. Soc. Nat. Hist.*)]

LeConte JL (1859b) Additions to the coleopterous fauna of northern California and Oregon. *Proceedings of the Academy of Natural Sciences of Philadelphia* [11]: 281-292 [DP: 31 December 1859 (*Bost. Soc. Nat. Hist.*)]

LeConte JL (1859c) *The Coleoptera of Kansas and eastern New Mexico.* Smithsonian Contributions to Knowledge No 11. Smithsonian Institution, Washington DC. vi + 58 pp. + 2 pls [DP: December 1859]

LeConte JL (1859d) *The complete writings of Thomas Say on the entomology of North America. Edited by John L. Le Conte, M.D. With a memoir of the author, by George Ord. Vol. I.* Ballière Brothers, New York. xxiv + 412 pp. [DP: 13 December 1859 (*Acad. Nat. Sci. Phil.*)]

LeConte JL (1859e) *The complete writings of Thomas Say on the entomology of North America. Edited by John L. Le Conte, M.D. With a memoir of the author, by George Ord. Vol. II.* Ballière Brothers, New York. 814 pp. [DP: 13 December 1859 (*Acad. Nat. Sci. Phil.*)]

LeConte JL (1860) Notes on Coleoptera found at Fort Simpson, Mackenzie River, with remarks on northern species. *Proceedings of the Academy of Natural Sciences of Philadelphia* [12]: 315-321 [DP: 21 September 1860 (*Bost. Soc. Nat. Hist.*)]

LeConte JL (1861a) *Classification of the Coleoptera of North America. Prepared for the Smithsonian Institution. Part I.* Smithsonian Miscellaneous Collections [No. 136]. Smithsonian Institution, Washington DC. xxiv + 214 pp. [DP: May 1861]

LeConte JL (1861b) New species of Coleoptera inhabiting the Pacific district of the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* [13]: 338-359 [DP: 31 December 1861 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xii)]

LeConte JL (1862) Notes on the species of *Calosoma* inhabiting the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* [14]: 52-53 [DP: 25 April 1862 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xiii)]

LeConte JL (1863a) Note on the species of *Brachinus* inhabiting the United States. *Proceedings of the Academy of Natural Sciences of Philadelphia* [14] [1862]: 523-525 [DP: 26 February 1863 (see Fox 1913, *An index to the scientific contents of the Journal and Proceedings of the Academy of Natural Sciences of Philadelphia*, p. xiii)]

LeConte JL (1863b) *List of the Coleoptera of North America. Prepared for the Smithsonian Institution. Part I.* Smithsonian Miscellaneous Collections [No] 140. Smithsonian Institution, Washington [D.C.]. [3] + 56 pp. [DP: March 1863]

Thomson CG (1859) *Skandinaviens Coleoptera, synoptiskt bearbetade. I. Tom.* Berlingska Boktryckeriet, Lund. [2] + 290 pp. [DP: November 1859 (*Svensk Bibl.*)]

Thomson CG (1871) *Opuscula entomologica. Fasciculus quartus.* Berlingska Boktryckeriet, Lund. Pp. 361-452.

Thomson J (1857) *Monographie des cicindélides ou exposé méthodique et critique des tribus, genres et espèces de cette famille. Tome premier.* J.-B. Ballières, Paris. xvii + 66 pp. + 10 pls. Note. This work was published in three livraisons. According to von Hayek (1989, *Arch. Nat. Hist.* 16: 92), the third livraison (pp. 19-66) was likely published in 1858. Until evidence is found to confirm this, the date on the title page (e.g., 1857) is retained.

Thomson J (1858) *Archives entomologiques ou recueil contenant des illustrations d'insectes nouveaux ou rares. Tome deuxième.* [Author], Paris. 469 + [2] pp. + 14 pls. Note. The second volume of the *Archives entomologiques* has a second title page which reads "*Voyage au Gabon. Histoire naturelle des insectes et des arachnides recueillis pendant un voyage fait au Gabon en 1856 et en 1857 par M. Henry C. Deyrolle sous les auspices de MM. le Comte de Mniszech et James Thomson précédée de l'histoire du voyage par M. James Thomson - Arachnides, par M. H. Lucas.*" This volume made up livraisons 13-20 of the entire work. According to von Hayek (1989, *Arch. Nat. Hist.* 16: 89), livraisons 18-20 (pp. 337-464) were probably published in 1859.

Appendix 1. List of North American fossil Geadephaga

Nebriini

Nebria abstracta Scudder, 1900*b*: 70. Type locality: «Reservoir Park, Toronto [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. According to Kavanaugh (1978: 276), the holotype probably belongs to the genus *Agonum*.

Nebria occlusa Scudder, 1900*a*: 17. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1755]. Note. 1. Although noted originally as from the Miocene period, most authors agree that the shales of the Florissant Basin are from the Early Oligocene (Wilson 1978: 17). 2. According to Kavanaugh (1978: 275), the holotype probably belongs to the genus *Amara*.

Nebria paleomelas Scudder, 1879: 178B. Type locality: «Nicola River, below main coal seam [British Columbia]» (original citation), from the Miocene period. Holotype [by monotypy] location unknown. Note. According to Kavanaugh (1978: 275), the holotype probably belongs to the genus *Amara*.

Cychrini

Cychrus minor Horn, 1876*b*: 243. Type locality: «Port Kennedy, Penn[sylvani]a» (original citation), from the Pleistocene period. Holotype location unknown. Note. According to Horn (1876*b*: 243), this species is "almost exactly that of *andrewsii*" but Roeschke (1907*a*: 270) believed it belongs to the *elevatus* group rather than to be related to *S. andrewsii*.

Cychrus wheatleyi Horn, 1876*b*: 242. Type locality: «Port Kennedy, Penn[sylvani]a» (original citation), from the Pleistocene period. Holotype location unknown. Etymology. The specific name was proposed for Charles M. Wheatley [1822-1882], mine operator, mineralogist, palaeontologist, naturalist, conchologist, and copper metallurgist. Born in England, Wheatley emigrated to the United States with his parents as a young boy. Note. Horn (1876*b*: 242) believed this species is related to *Scaphinotus viduus*.

Nomaretus serus Scudder, 1900*a*: 13. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1762]. Note. Roeschke (1907*a*: 271) stated that this species is not a member of the tribe Cychrini.

Carabini

Calosoma calvini Wickham, 1909: 126. Type locality: «Florissant [Teller County, Colorado]» (original citation), from the early Oligocene period. Holotype in PMNH [# 4]. Note. According to Jeannel (1940*a*: 34), the only difference between this species and *C. emmonsii* is the slightly longer size of the elytra and the specimen could be conspecific with those of *C. scrutator*.

Calosoma cockerelli Wickham, 1910: 47. Type locality: Florissant [Teller County], Colorado (inferred from title of the book), from the early Oligocene period. Holotype in PMNH [# 10]. Note. Jeannel (1940*a*: 34) had no opinion on the specimen.

Calosoma emmonsii Scudder, 1900*a*: 16. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1756, 1757]. Etymology. The specific name honors the American geologist, educator, and physician Ebenezer Emmons [1799-1863] who is credited for having named the Adirondack Mountains in 1838 and the Taconic Mountains in 1844. Note. Lapouge (1930: 159) stated that this species does not differ from *C. externum* and Jeannel (1940*a*: 34) believed it could be identical to *C. scrutator*.

Calosoma fernquisti Cockerell, 1924: 14. Type locality: «Deep Creek Canon, near Spokane, Washington» (original citation), from the Upper Eocene period. Holotype in USNM [# 69218]. Note. 1. Jeannel (1940*a*: 34) believed the species is very likely *C. externum*. 2. According to Nel (1989: 265), fossil specimens described as *Calosoma* by Wickham, Scudder, and Cockerell could all be conspecific.

Carabus jeffersoni Scudder, 1900*a*: 15. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Two syntypes [2 specimens originally cited] in MCZ [# 1758, 1759]. Etymology. The specific name honors Thomas Jefferson [1743-1826], third president of the United States and one of the earliest writers on American palaeontology. Jefferson is also famous for writing the Declaration of Independence in 1776. Note. According to Lapouge (1930: 159), this species does not belong to the subfamily Carabinae.

Carabus maeander sangamon Wickham, 1917*b*: 139. Type locality: «north bank of the Sangamon River near Mahomet, Champaign County, Illinois» (original citation), from the Pleistocene period. Holotype [by monotypy] in UICU.

Neothanes testeus (Scudder, 1878: 758) (as *Cychrus testeus*). Type locality: «immediate vicinity of Green River Station on the Union Pacific Railroad in Wyoming» (original citation), from the Eocene period. Holotype [by monotypy] location unknown. Note. The genus *Neothanes* was proposed by Scudder (1890: 535) for *Cychrus testeus* Scudder, 1878 and, according to him, is "allied to *Carabus*."

Cicindelini

Cicindelopsis eophilus Cockerell, 1920: 254. Type locality: «White River, Colorado» (original citation), from the "Eocene rock of Green River Age." Holotype in USNM [# 66576]. Note. 1. According to Wilson (1978: 14), the "White River" collections made by Scudder, some of which were described by Cockerell, came from the Green River Formation localities along the White River near the Colorado-Utah border. 2. According to Cockerell (1920: 254), the single elytron representing this species "suggests a cicindelid" but is narrower, without any distinct inner apical angle, and the surface is neither punctured nor striate. He also stated that "the Collyrinae have narrow elytra shaped essentially as in *Cicindelopsis*." The species was subsequently transferred to the Melandryidae (Cockerell 1924: 12)

based on Herbert S. Barber's opinion. The holotype was also studied by Walther Horn who believed it did not belong to the Cicindelinae (Cockerell 1924: 12).

Elaphrini

Diacheila matthewsi Böcher, 1995: 21. Type locality: «Peary Land, Greenland» (original citation), from the Plio-Pleistocene period (2-2.5 million years B.P.). Holotype in ZMUC. Note. Böcher (1995: 21, 22) noted that fossil remnants of *Diacheila* reported from Alaska (about 2.9 million B.P.), Yukon Territory, Banks, Prince Patrick and Meighen Islands (Pliocene), and Ellesmere Island probably belong to this species.

Elaphrus clairvillei lynni Pierce, 1948*a*: 52. Type locality: «Lynn Creek, British Columbia» (original citation), from the Pleistocene period. Holotype in LACM. Note. Goulet (1983: 271) listed this name in synonymy with *Elaphrus clairvillei* Kirby, 1837.

Elaphrus irregularis Scudder, 1890: 534. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] in MCZ. Note. Goulet (1983: 321) concluded from a study of the fossil elytron that several character states present in the holotype suggest "a match with *E. parviceps* [= *E. trossulus* Semenov]."

Elaphrus ruscarius foveatus Pierce, 1948*b*: 54. Type locality: «McKittrick [Kern County, California]» (original citation), from the Pleistocene period. Holotype in LACM. Note. Goulet (1983: 303) listed this name in synonymy with *Elaphrus finitimus* Casey, 1920.

Loricerini

Loricera exita Scudder, 1900*b*: 70. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. Ball and Erwin (1969: 894) stated that the single fragment of an elytron representing this species probably belongs "to a carabid, possibly an agonine."

Loricera glacialis Scudder, 1877: 763. Type locality: Scarborough, Ontario (inferred from title of the paper), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. Ball and Erwin (1969: 894) indicated that the elytra of two specimens assigned to this species "are probably those of a weevil."

Loricera ? *lutosa* Scudder, 1890: 533. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. Ball and Erwin (1969: 894) stated that the single elytron representing this species has characteristics "of a brachyrhinine weevil, not of a carabid, and certainly not of *Loricera*." Morgan and Morgan (1980: 23) stated that the species is "definitely a member of the Scarabaeidae, almost certainly of the genus *Aegialia* and probably *A. lacustris* LeC."

Trechini

Trechus fractus Wickham, 1912: 6. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in

UCM [# 8272]. Note. Based on the illustration provided, this species, if really of a carabid, could belong to any groups and not necessary to the genus *Trechus*.

Bembidiini

Bembidium damnosum Scudder, 1900*b*: 73. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Bembidion davidae Pierce, 1944: 7. Type locality: «Cuyama River outcrop section on the west bank of the river, near its junction with Huasna Creek, in San Luis Obispo County near center of section 27, Township 11 N, R. 33 W. San Bernardino Base Line and Meridian [California]» (original citation), from the "Upper Lower Miocene." Holotype in LACM. Etymology. The specific name was proposed for the American palaeontologist Lore Rose David [1905-1985]. Note. This species is represented by a single elytron and was assigned to the subgenus *Ochthedromus* by Pierce (1944: 7).

Bembidion everestae Pierce, 1944: 11. Type locality: «Bellevue District, near town of Rosedale, 6 miles due west of Bakersfield, Kern Co[unty], California» (original citation), from the "Upper Lower Miocene, Saucesian Age." Holotype in LACM. Note. This species, represented by a fragment of an elytron and its impression in oil shale core, was tentatively assigned to the subgenus *Odontium* LeConte by Pierce (1944: 12).

Bembidium exoletum Scudder, 1876: 77. Type locality: «Green River group, near White River, in one of the two localities called ... Chagrin Valley and Fossil Cañon» (original citation), from the Eocene period. Holotype [by monotypy] location unknown.

Bembidium expletum Scudder, 1900*b*: 72. Type locality: «Reservoir Park, Toronto [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Bembidium florissantensis Wickham, 1913: 6. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 90451].

Bembidion fragmentum Scudder, 1890: 531. Type locality: «shores of Lake Erie, near Cleveland, Ohio» (Scudder 1895: 54), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. The type locality was originally cited as "Scarboro[ugh], Ontario" but corrected to the present one subsequently. Scudder (1890: 531) indicated that this species "is represented by a single elytron with the tip broken off" and agrees "better among modern types with *B. constrictum*."

Bembidion glaciatum Scudder, 1890: 531. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Syntype(s) [2 originally cited] location unknown. Note. According to Scudder (1890: 531), this species is represented by a couple of elytra and is "nearly allied to the scarcely smaller *B. longulum* LeC. [= *Bembidion concolor* (Kirby)]."

Bembidium haywardi Scudder, 1900*b*: 70. Type locality: «Logan's brickyard, Toronto [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Bembidium obductum Scudder, 1900*a*: 18. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype in MCZ [# 1768].

Bembidium praeteritum Scudder, 1900*b*: 72. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Bembidium tumulorum Scudder, 1900*a*: 19. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype in USNM.

Bembidium vanum Scudder, 1900*b*: 71. Type locality: «Scarborough; Reservoir Park, Toronto [Ontario]» (original citation), from the Pleistocene period. Syntypes [2 originally cited] location unknown.

Bembidium vestigium Scudder, 1900*b*: 71. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Tachys haywardi Wickham, 1913: 7. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 90582B].

Patrobini

Patrobus decessus Scudder, 1900*b*: 73. Type locality: «Reservoir Park, Toronto; Scarborough [Ontario]» (original citation), from the Pleistocene period. Lectotype [as type], designated by Darlington (1938: 155), in MCZ. Note. Darlington (1938: 155) listed this name in synonymy with *Patrobus stygicus* Chaudoir, 1871.

Patrobus frigidus Scudder, 1900*b*: 74. Type locality: «Reservoir Park, Toronto [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] in MCZ. Note. Darlington (1938: 155) listed this name in synonymy with *Patrobus stygicus* Chaudoir, 1871.

Patrobus gelatus Scudder, 1890: 530. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] in MCZ. Note. Darlington (1938: 155) listed this name in synonymy with *Patrobus stygicus* Chaudoir, 1871.

Patrobus henshawi Wickham, 1917*b*: 140. Type locality: «north bank of the Sangamon River near Mahomet, Champaign County, Illinois» (original citation), from the Pleistocene period. Holotype [by monotypy] in UICU.

Brachinini

Brachinus newberryi Scudder, 1900*a*: 32 (as *Brachynus newberryi*). Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Four syntypes [4 originally cited] in MCZ [# 1850-1853]. Etymology. The specific name was proposed in honor of the American geologist, palaeontolo-

gist, physician, explorer, and author John Strong Newberry [1822-1892]. Note. Erwin (1970*a*: 164) noted that the specimens assigned to this species "should be placed in the genus *Lebia*."

Brachinus repressus Scudder, 1900*a*: 33 (as *Brachynus repressus*). Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype in MCZ [# 1848]. Note. According to Erwin (1970*a*: 164), the single specimen of this species "is too fragmentary to make definitive comparisons, but is similar in some respects to members of *Cymindis*."

Paussini

Paussopsis nearctica Cockerell, 1911: 71. Type locality: «Florissant [Teller County, Colorado]» (original citation), from the early Oligocene period. Holotype in UCM [# 4508]. Note. The genus *Paussopsis* Cockerell, 1911 was proposed for this species.

Paussopsis secunda Wickham, 1912: 10. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype in UCM [# 8200]. Note. According to Wasmann (1926: 25), members of *Paussopsis* do not belong to paussines.

Pterostichini

Cyclotrachelus tenebricus (Scudder, 1900*a*: 24) (as *Evarthrus tenebricus*). Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1786]. Note. This species is represented only by a head. Based on the original description, Freitag (1969: 168) stated that the specimen "may or may not be a member of the genus *Evarthrus* [= *Cyclotrachelus*]."

Loxandrus gelidus Scudder, 1877: 763. Type locality: Scarborough, Ontario (inferred from title of the paper), from the Pleistocene period. Syntype(s) [5 originally cited] location unknown. Note. According to Scudder (1890: 528), this species closely resembles *Pterostichus hudsonicus* LeConte.

Myas rigefactus Scudder, 1900*a*: 20. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1766].

Myas umbrarum Scudder, 1900*a*: 21. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [3 originally cited] in MCZ [# 1763, 1764, 1767].

Pterostichus abrogatus Scudder, 1890: 525. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. According to Scudder (1890: 525), this species is represented by a "fragment of an elytron" and its features suggest "a species closely allied to *P. herculaneus* Mann."

Pterostichus depletus Scudder, 1900*b*: 75. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Pterostichus destitutus Scudder, 1890: 526. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. According to Scudder (1890: 526), this species is "represented by a single elytron of a mahogany color, which seems to be nearly related to *P. sayi* Brullé [= *Poecilus chalcites* (Say)]."

Pterostichus destructus Scudder, 1890: 527. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Syntype(s) [2 originally cited] location unknown. Note. According to Scudder (1890: 527), this species, represented by a couple of elytra, "closely resembles *P. patruelis* Dej."

Pterostichus dormitans Scudder, 1890: 526. Type locality: «shores of Lake Erie, near Cleveland, Ohio» (Scudder 1895: 51), from the Pleistocene period. Syntype(s) [2 originally cited] location unknown. Note. The type locality was originally listed as "Scarboro[ugh], Ontario" but corrected to the present one subsequently. According to Scudder (1890: 526), this species, "represented by two opposite ends of elytra, is very close indeed in size and general character to *P. laetulus* LeC. [= *Poecilus laetulus* (LeConte)]."

Pterostichus fernquisti Wickham, 1931: 318. Type locality: «Deep Creek Canyon [near Spokane, Washington]» (original citation), from the Miocene period. Holotype in MCZ. Note. According to Wickham (1931: 318), this species, represented by three elytra, is perhaps "most reminiscent of *P. gracilior*."

Pterostichus fractus Scudder, 1890: 527. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. This species is represented by a single elytron with the extreme apex broken. According to Scudder (1890: 527), the species is "closely allied to *P. destitutus*."

Pterostichs laevigatus Scudder, 1890: 528. Type locality: «Bone caves of Port Kennedy, Pennsylvania» (original citation), from the Pleistocene period. Syntype(s) location unknown.

Pterostichus pumpellyi Scudder, 1900*a*: 23. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Two syntypes [2 originally cited] in MCZ [# 1775, 1776]. Etymology. The specific name was proposed for the American geologist and explorer Raphael Pumpelly [1837-1923].

Pterostichus walcotti Scudder, 1900*a*: 23. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [6 originally cited] in MCZ [# 1769-1772, 1774] and USNM. Etymology. The specific name honors the American geologist and palaeontologist Charles Doolittle Walcott [1850-1927] who for some time was director of the United States Geological Survey.

Zabrini

Amara cockerelli Wickham, 1912: 7. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in UCM [# 8236].

Amara danae Scudder, 1900*a*: 27. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [15 originally cited] in MCZ [# 1787, 1788, 1801, 1802, 1804-1806, 1808, 1809, 1811, 1812, 4167] and USNM. Etymology. The specific name honors the American geologist, mineralogist, and zoologist James Dwight Dana [1813-1895].

Amara powellii Scudder, 1900*a*: 26. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [12 originally cited] in MCZ [# 1777, 1790-1794, 1796-1800] and USNM [# 59646]. Etymology. This species was named after the American geologist and explorer Major John Wesley Powell [1834-1902] who led a three-month expedition in 1867 down the Green and Colorado rivers that included the first passage through the Grand Canyon. Powell served as the second director of the United States Geological Survey from 1881 to 1894.

Amara revocata Scudder, 1900*a*: 25. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1785].

Amara sterilis Scudder, 1900*a*: 25. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [4 originally cited] in MCZ [# 1782-1784] and USNM.

Amara veterata Scudder, 1900*a*: 26. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [5 originally cited] in MCZ [# 1778-1781, 1813].

Chlaeniini

Chlaenius plicatipennis Wickham, 1917*b*: 143. Type locality: «north bank of the Sangamon River near Mahomet, Champaign County, Illinois» (original citation), from the Pleistocene period. Holotype [by monotypy] in UICU.

Chlaenius punctulatus Horn, 1876*b*: 244 [homonym of *Chlaenius punctulatus* Chaudoir, 1876]. Type locality: «Port Kennedy, Penn[sylvani]a» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. This species is represented by one elytron "of the size and very similar to that of *C. laticollis*" (Horn 1876*b*: 244).

Licinini

Badister antecursor Scudder, 1900*b*: 75. Type locality: «Logan's brickyard, Toronto [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Dicaelus alutaceus Horn, 1876*b*: 244. Type locality: «Port Kennedy, Penn[sylvani]a» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Diplocheila ? *henshawi* Scudder, 1890: 523. Type locality: «Florissant [Teller County, Colorado]» (original citation), from the early Oligocene period. Holotype [by monotypy] location unknown.

Harpalini

Cratacanthus florissantensis Wickham, 1917*a*: 464. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 63442]. Note. Based on the illustration provided by Wickham (1917*a*: plate 37, figure 2), the specimen is not necessarily a *Cratacanthus*, not even a carabid.

Euryderus kingii (Scudder, 1900*a*: 34) (as *Nothopus kingii*). Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1847]. Etymology. The species was named for the American geologist and mountaineer Clarence King [1842-1901] who served as first director of the United States Geological Survey from 1879 to 1881.

Harpalus conditus Scudder, 1900*b*: 77. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Harpalus maceratus Wickham, 1911*a*: 54. Type locality: «Florissant [Teller County, Colorado]» (original citation), from the early Oligocene period. Holotype in UCM [# 8246].

Harpalus nuperus Scudder, 1900*a*: 34. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype in MCZ [# 1846]

Harpalus redivivus Wickham, 1917*a*: 465. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 63444].

Harpalus ulomaeformis Wickham, 1917*a*: 464. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 63443].

Harpalus veterum Cockerell, 1920: 256. Type locality: «Roan Mountain, Colorado» (original citation), from the Eocene period. Holotype in USNM [# 66578].

Harpalus whitfieldi Scudder, 1900*a*: 35. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. One syntype [3 originally cited] in MCZ [# 1845] and two in USNM. Etymology. The species was named after the American palaeontologist, teacher, and curator Robert Parr Whitfield [1828-1910].

Stenolophus religatus Scudder, 1900*a*: 35. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1858].

Platynini

Platynus caesus Scudder, 1890: 522. Type locality: «Green River, Wyoming» (original citation), from the Eocene period. Syntype(s) [2 originally cited] location unknown.

Platynus calvini Wickham, 1917*b*: 142. Type locality: «north bank of the Sangamon River near Mahomet, Champaign County, Illinois» (original citation), from the

Pleistocene period. Syntypes [2 originally cited] in UICU. Etymology. The specific name was proposed for Samuel Calvin [1840-1911], professor of geology at the State University of Iowa.

Platynus casus Scudder, 1890: 519. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. This species is represented by a single elytron. According to Scudder (1890: 519), it is best comparable to *Platynus rubripes* Zimmermann (= *Agonum rufipes* Dejean) among extant species.

Platynus desuetus Scudder, 1890: 521. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Syntype(s) [6 originally cited] location unknown. Note. According to Scudder (1890: 521), this species "is more nearly allied to *P. crenistriatus* LeC. than to any other living species."

Platynus dilapidatus Scudder, 1895: 49. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown. Note. According to Scudder (1895: 49), this species, represented by a fragment of a single elytron, "belongs rather in the near vicinity of *P. maculicollis* Dej. [= *Tanystoma maculicolle* (Dejean)]."

Platynus dissipatus Scudder, 1890: 521. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Syntype(s) [2 originally cited] location unknown. Note. According to Scudder (1890: 521), this species agrees with *P. halli* "in its general features and in the minute texture of the surface."

Platynus exterminatus Scudder, 1900*b*: 75. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Platynus florissantensis Wickham, 1913: 7. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 63441]. Note. Wickham (1913: 7) noted that this species "compared with recent species ... remind one of *P. placidus* by the fine striae and of *P. melanarius* by the size and form."

Platynus halli Scudder, 1890: 520. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Syntype(s) [3 originally cited] location unknown. Etymology. The specific name honors the American geologist and palaeontologist James Hall [1811-1898]. Note. According to Scudder (1890: 520), this species is "allied to *P. crenistriatum* LeC. ... [but] more nearly related to *P. hindei*."

Platynus harttii Scudder, 1890: 522. Type locality: «Scarboro[ugh], Ontario» (original citation), from the Pleistocene period. Syntype(s) [2 originally cited] location unknown. Etymology. The specific name was proposed in honor of the American geologist and teacher Charles Frederic Hartt [1840-1878] who led, in his last years, the Brazilian Geological Commission. Note. According to Scudder (1890: 522), this small species "is most nearly allied to the largest [= *P. desuetus* Scudder]."

Platynus hindei Scudder, 1890: 520. Type locality: «Scarboro[ugh], Ontario» (original citation), from the "clay beds of interglacial deposits" [Pleistocene period].

Syntype(s) [9 originally cited] location unknown. Etymology. This species was named for the geologist and palaeontologist George Jennings Hinde [1839-1918]. Note. The species is represented by "a number of fragments" and, according to Scudder (1890: 520), "seems to be allied to *P. rubripes* Zimm. [= *Agonum rufipes* Dejean]."

Platynus interglacialis Scudder, 1900*b*: 76. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Platynus interitus Scudder, 1900*b*: 76. Type locality: «Reservoir Park, Toronto [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Platynus insculptipennis Wickham, 1917*a*: 463. Type locality: Florissant [Teller County], Colorado (inferred from title of the paper), from the early Oligocene period. Holotype in USNM [# 63441].

Platynus longaevus Scudder, 1900*b*: 77. Type locality: «Scarborough [Ontario]» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Platynus pleistocenicus Wickham, 1917*b*: 141. Type locality: «north bank of the Sangamon River near Mahomet, Champaign County, Illinois» (original citation), from the Pleistocene period. Holotype [by monotypy] in UICU.

Platynus senex Scudder, 1878: 759. Type locality: «immediate vicinity of Green River Station on the Union Pacific Railroad in Wyoming» (original citation), from Eocene period. Holotype [by monotypy] location unknown.

Platynus subgelidus Wickham, 1917*b*: 142. Type locality: «north bank of the Sangamon River near Mahomet, Champaign County, Illinois» (original citation), from the Pleistocene period. Holotype [by monotypy] in UICU.

Platynus tartareus Scudder, 1900*a*: 30. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Syntype(s) [4 originally cited] in MCZ [# 1838, 1840, 1841, 1857].

Lebiini

Cymindis aurora Horn, 1876*b*: 243. Type locality: «Port Kennedy, Penn[sylvani]a» (original citation), from the Pleistocene period. Syntype(s) location unknown. Note. According to Horn (1876*b*: 243), the species "is closely related to *C. americana*, but somewhat larger."

Cymindis extorpescens Scudder, 1898: 743. Type locality: «Fort River in Hadley, Massachusetts, near its entrance into the Connecticut» (original citation), from the Pleistocene period. Holotype [by monotypy] location unknown.

Lebia protospiloptera Cockerell, 1921: 35. Type locality: «back of house at Smith's ranch, shale of Green River formation, Colorado» (original citation), from the Eocene period. Holotype in USNM [# 66928].

Plochionus lesquereuxi Scudder, 1900*a*: 31. Type locality: «Florissant [Teller County], Colorado» (original citation), from the early Oligocene period. Holotype [by monotypy] in MCZ [# 1855]. Etymology. The species was named after the

bryologist and paleobotanist Leo Lesquereux [1806-1889]. Born in Switzerland, Lesquereux progressively lost his hearing, consequent to a near-fatal fall from the top of a cliff at the age of seven, which had considerable ramifications in his professional life. He moved with his wife and five children to the United States in 1847. Note. According to Scudder (1900*a*: 31), this species could rather belong to the genus *Cymindis* of the subgenus *Pinacodera*.

Galeritini

Galerita marshii Scudder, 1900*a*: 31. Type locality: «Green River, Wyoming» (original citation), from the Eocene period. Holotype [by monotypy] location unknown. Etymology. The specific name was proposed for the American palaeontologist Othniel Charles Marsh [1831-1899] who uncovered the first pterosaur fossil in America. Marsh is also known for his heated rivalry with Edward Drinker Cope [1840-1897] which led the two palaeontologists to use underhanded methods to out-compete the other in the field, resorting to bribery, theft, and destruction of bones (the Bone Wars). They attack each other in scientific publications, attempting to ruin the other's credibility. Marsh is credited to have persuaded his uncle, George Peabody [1795-1869], to establish the Peabody Museum of Natural History at Yale.

Incertae Sedis

Carabites (?) *arapahoensis* Cockerell, 1918: 307. Type locality: «one mile west of Spicer, Arapahoe Pass Road, North Park, Colorado, 2½ miles south of fork of road» (original citation), from the Eocene period. Holotype [by monotypy] in UCM [# 5822].

Carabites eocenicus Cockerell, 1920: 255. Type locality: «White River, Colorado» (original citation), from the Eocene period. Holotype in USNM [# 66577].

Carabites exanimus Scudder, 1892: 17. Type locality: «White River, Utah, about 5 miles from the Colorado line» (original citation), from the Eocene period. Holotype [by monotypy] location unknown. Note. Based on Scudder's description, this species, which is represented only by the elytra, is that of a large species with the elytral epipleura crossed. Scudder (1892: 17) stated that the species "seems to agree best with the Pterostichini."

Carabites feildenianus Heer, 1878: 38. Type locality: Grinnell-Landes [= central section of Ellesmere Island, Nunavut] (inferred from title of the paper), from the Miocene period. Syntype(s) location unknown. Etymology. The specific name was proposed for Henry Wemyss Feilden [1838-1921], naturalist of the British north-polar expedition of Captain George Nares in 1875-76.

Carabites kincaidi Cockerell, 1908: 51. Type locality: «Green River, Wyoming» (original citation), from the Eocene period. Holotype [by monotypy] in PMNH. Note. This species was described from a larva. Cockerell (1908: 52) noted that the larva may be that of "the genus *Neothanes* Scudder, described from the Green River beds; but as this cannot be demonstrated, I leave it in the blanket genus *Carabites.*"

Carabites russelli Cockerell, 1928: 37. Type locality: Fox Hills, South Dakota (inferred from title of the paper), from the Cretaceous period. Holotype probably in PMNH.

Appendix 2. List of North American Geadephaga larvae described or illustrated

Along with the reference, the following information is provided: pages where the character states of the species are indicated, the figures illustrating character states, the stage described, and the provenance of the material, either reared (RR) or field collected (FC). A question mark in front of a reference indicates that the identification of the taxon is uncertain according to the author(s). A dagger after the name of a species indicates that the taxon is adventive in North America. The abbreviations used are:

FC field collected
LIT Literature
L_1 first instar
L_2 second instar
L_3 third instar
L_{1-3} instar not determined
L_{2-3} second and/or third instar
RR reared

Trachypachini

Trachypachus gibbsii LeConte[10]: Lindroth (1960*a*: 33; Figs 2, 4a-h) [L_2; RR]; Thompson (1979*a*: Figs 26a-e); Luff (1993: Figs 25-32); Luna de Carvalho (1989: Figs 27c-d).

Trachypachus inermis Motschulsky: Bousquet and Goulet (1984: Figs 25, 37, 42, 51, as *T. holmbergi*); Beutel (1993: Figs 2, 8, 13, 16, 21, 29, as *T. holmbergi*); Arndt and Beutel (1995: 442; Figs 4, 6, 12, as *T. holmbergi*) [L_1; RR].

Clinidiini

Clinidium (*Arctoclinidium*) *sculptile* (Newman): Böving and Craighead (1931: Pl. 3); Hůrka (1978: Fig. H-10); Thompson (1979*a*: Figs 10a-c).

Pelophilini

Pelophila borealis (Paykull): Johnson and Carpenter (1898: 136-139; Figs 1-12) [L_3; RR]; Sharova (1958: 37; Figs 31, 81, 82) [L_{1-3}; ?]; Sharova (1964: 143, 144; Figs 99-4, 128, 129-1) [L_{1-3}; ?]; Haberman (1968: Fig. 57-1); Andersen (1970: 92, 93; Figs 2a-i, 3a-c) [L_{1-3}; FC]; Luff (1972: 176, 177; Figs 51-62) [L_{1-3}; RR+FC]; Thompson (1979*a*: Figs 34a-c); Luff (1993: 58, 59; Figs 160-163) [L_1, L_{2-3}; ?]; Makarov (1994: Fig. 84); Bousquet (2010*a*: Figs 373-376).

[10] The field-collected larva described as *Trachypachus sp.* by Garner (1954: 49, 50; Figs a-c [Pl. 1]) is misidentified.

Opisthiini

Opisthius richardsoni Kirby: Garner (1954: 160, 161; Figs a-c [Pl. 9]) [L_1, L_{2-3}; RR+FC]; Lindroth (1960*a*: 38, 40, 41; Figs 3, 6a-g) [L_1, L_2, L_3; FC]; Thompson (1979*a*: Figs 37a-c); Bousquet and Smetana (1991: 110; Figs 3, 9a) [L_1, L_2, L_3; RR].

Nebriini

Leistus (*Leistus*) *ferrugineus* (Linnaeus)†: Larsson (1941: 280) [L_{1-3}; ?]; Verhoeff (1921: Fig. 22); Larsson (1968: 324) [L_{1-3}; ?]; Luff (1972: 162, 165; Fig. 12) [L_{1-3}; FC]; Arndt (1991*b*: 72) [L_{1-3}; LIT]; Luff (1993: 48; Figs 122, 123) [L_{1-3}; ?]; Bousquet (2010*a*: Figs 378, 379).

Nebria (*Nebria*) *brevicollis* (Fabricius)†: Blisson (1848: 73-76; Figs 1-6 [Pl. 1]) [L_{2-3}; FC]; Schiødte (1867: 461-465; Figs 1-7 [Pl. 14]) [L_{1-3}; ?]; Znojko (1929: Fig. 4b); Raynaud (1935: 12, 13, 16) [L_3?; FC]; Larsson (1941: 278; Figs 5, 6, 17a, 18a) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 74a-h); Sharova (1958: 38; Figs 6, 18, 85a) [L_{1-3}; ?]; Habu (1958: Figs 12, 14); Sharova (1964: 145; Figs 88, 93-2, 130-1) [L_{1-3}; ?]; Larsson (1968: 321, 322; Figs 5, 6, 17a, 18a) [L_{1-3}; ?]; Haberman (1968: Fis 57-2, 57-4, 58-2); Andersen (1970: 91) [L_3; LIT]; Luff (1972: 171, 173; Figs 32-41) [L_1, L_{2-3}; FC]; Arndt (1991*b*: 71, 72; Figs 2, 62) [L_1, L_{2-3}; ?]; Luff (1993: 49, 54, 57; Figs 2, 3, 7, 8, 143-155) [L_1, L_{2-3}; ?]; Sustek (1993: 522) [L_3; LIT].

Nebria (*Boreonebria*) *gyllenhali* Schönherr: Larsson and Gígja (1959: 15, as *N. gyllenhali munsteri*) [L_{1-3}; FC]; Andersen (1970: 91-93; Figs 4a-i, 5a-c) [L_{1-3}; FC]; Luff (1972: 171, 174, 176, as *N. rufescens*; Figs 45-49) [L_1, L_{2-3}; RR+FC]; Böcher (1988: Fig. 1, as *N. rufescens*); Arndt (1991*b*: 71, 72) [L_1, L_{2-3}; ?]; Luff (1993: 50-52, as *N. rufescens*; Figs 131-136) [L_1, L_{2-3}; ?]; Sustek (1993: 522) [L_3; LIT]; Makarov (1994: Figs 85, 86).

Nebria (*Boreonebria*) *lacustris* Casey: Spence (1974: 13, 17; Fig. 4) [L_1, L_2, L_3; RR]; Spence *et al*. (1976: 81; Figs 2a-c, 3a) [L_1, L_2, L_3; RR]; Spence and Sutcliffe (1982: Figs 1, 2, 6-19).

Nebria (*Boreonebria*) *nivalis* (Paykull): Andersen (1970: 91-93; Figs 6a-d) [L_{1-3}; FC]; Luff (1993: 50, 52; Figs 137-142) [L_{1-3}; FC].

Nebria (*Reductonebria*) *pallipes* Say: Spence (1974: 13, 17; Fig. 4) [L_1, L_2, L_3; RR]; Spence *et al*. (1976: 81; Figs 1, 3b) [L_1, L_2, L_3; RR].

Nebria prob. *schwarzi* (Alberta): Garner (1954: 186, 202, 203) [L_{2-3}; FC].

Nebria prob. *trifaria* (Oregon): Garner (1954: 189, 204, 205) [L_{2-3}; FC].

Nebria sp. A (Washington, D.C.): Garner (1954: 189-191) [L_{2-3}; FC].

Nebria sp. B (California): Garner (1954: 189, 191, 192) [L_{2-3}; FC].

Nebria sp. C (Utah): Garner (1954: 189, 192-194) [L_{2-3}; FC].

Nebria sp. D (Oregon): Garner (1954: 189, 194, 195) [L_{2-3}; FC].

Nebria sp. E (Oregon): Garner (1954: 189, 196, 197) [L_{2-3}; FC].

Nebria sp. F (Tennessee): Garner (1954: 189, 197-199) [L_{2-3}; FC].

Nebria sp. G (Montana): Garner (1954: 189, 199, 200) [L_{2-3}; FC].

Nebria sp. H (Illinois): Garner (1954: 189, 200-202) [L_{2-3}; FC].

Nebria sp. (Colorado): Thompson (1979*a*: Figs 36a-c).

Nebria sp.: Bousquet and Goulet (1984: Figs 27, 48); Bousquet (1991*a*: Figs 34.77, 34.101); Bousquet (2010*a*: Figs 377, 380, 382-385).

Notiophilini

Notiophilus aquaticus (Linnaeus): Schiødte (1867: 456; Fig. 19 [Pl. 13]) [L_{1-3}; ?]; Larsson (1941: 283) [L_{1-3}; ?]; Garner (1954: 174, 175) [L_{2-3}; FC]; Sharova (1958: 38) [L_{1-3}; ?]; Davies (1964: 208) [L_{1-3}; LIT]; Sharova (1964: 145) [L_{1-3}; ?]; Larsson (1968: 326-328) [L_{1-3}; ?]; Haberman (1968: 135) [L_{2-3}; ?]; Luff (1976: 52, 59; Figs 17-19) [L_1, L_3; FC]; Arndt (1991*b*: 74) [L_{1-3}; ?]; Luff (1993: 61, 62; Figs 168-170) [L_1, L_{2-3}; ?].

Notiophilus biguttatus (Fabricius)†: Schiødte (1867: 456; Figs 12-17 [Pl. 13]) [L_{1-3}; ?]; Saalas (1923: 667) [L_{1-3}; ?]; Larsson (1941: 283, 284; Figs 20, 22a) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 75a-d); van Emden (1942: Fig. 4); Garner (1954: 176, 177) [L_{2-3}; FC]; Sharova (1958: 39; Fig. 86a) [L_{1-3}; ?]; Davies (1964: 207, 208; Fig. 1) [L_1, L_{2-3}; FC]; Sharova (1964: 146; Fig. 130-3) [L_{1-3}; ?]; Larsson (1968: 327, 328; Figs 20, 22a) [L_{1-3}; ?]; Haberman (1968: 135; Fig. 68-3) [L_{2-3}; ?]; Luff (1976: 52, 53, 55; Figs 1-10) [L_1, L_{2-3}; FC]; Arndt (1991*b*: 74) [L_{1-3}; ?]; Luff (1993: 61, 64; Figs 178-183) [L_1, L_{2-3}; ?].

Notiophilus novemstriatus LeConte: Thompson and Allen (1974: 186-189; Figs 1a-c) [L_{2-3}; FC]; Thompson (1979*a*: Figs 38a-b).

Notiophilus palustris (Duftschmid)†: Larsson (1941: 283, 284) [L_{1-3}; ?]; Sharova (1958: 39; Fig. 80) [L_{1-3}; ?]; Davies (1964: 207, 208) [L_1, L_{2-3}; FC]; Sharova (1964: 146; Fig. 127) [L_{1-3}; ?]; Larsson (1968: 327-329) [L_{1-3}; ?]; Haberman (1968: 136) [L_{2-3}; ?]; Luff (1976: 52, 56; Figs 12, 13) [L_2; FC]; Arndt (1991*b*: 74; Fig. 64) [L_{1-3}; ?]; Luff (1993: 61-63) [L_{1-3}; ?].

Notiophilus sp. A (California): Garner (1954: 169, 170; Figs a-c [Pl. 10]) [L_{2-3}; FC].

Notiophilus sp. B (Illinois): Garner (1954: 170-172) [L_{2-3}; FC].

Notiophilus sp. C (Illinois): Garner (1954: 172-174) [L_1, L_{2-3}; FC].

Amblycheila baroni Rivers: Knisley and Pearson (1984: 502; Figs 25-31) (L_3; FC].

Amblycheila cylindriformis (Say): Horn (1878*a*: 29-31; Figs 1a-g [Pl. II]) [L_{2-3}; FC]; Riley *et al*. (1878: Figs 53a-h); Schaupp (1879: 3) [L_{2-3}; LIT]; Hamilton (1925: 70; Figs 4, 19, 11, 16, 20, 26, 31, 36, 41, 81, 123, 148) [L_{2-3}; RR]; Böving and Craighead (1931: Figs b,d [Pl. 4]).

Amblycheila schwarzi Horn**?**: Horn (1908*a*: 285, 286; Figs 1-5) [L_{2-3}; FC]; Putchkov and Arndt (1994: Figs 6, 13, 23, 44, 46, 50).

Omus audouini Reiche: Hamilton (1925: 66-68, as *O. ambiguus* [see Leffler 1986*b*: 54]); Figs 47, 86, 121) [L_{2-3}; RR]; Leffler (1979*a*: 70-71; Fig. 7a) [L_3; FC]; Leffler (1986*b*: 55, 62; Fig. 2) [L_3; FC].

Omus californicus Eschscholtz: Hamilton (1925: 66-67; Figs 3, 12, 13, 19, 25, 30, 35, 44, 46, 82-84, 118, 119) [L_{2-3}; RR]; Hamilton (1925: 69, as *O. edwardsii* [see Leffler 1986*b*: 54]) [$_{L2-3}$; FC]; Hamilton (1925: 66, 68, 69, as *O. sequoiarum* [see Leffler 1986*b*: 54]; Figs 45, 85, 120) [L_{2-3}; RR]; Böving and Craighead (1931: Fig. e [Pl. 4]); van Emden (1935: Fig. 1); Leffler (1986*b*: 55-56, 62) [L_3; FC]; Leffler (1979*a*: Fig. 4a).

Omus dejeanii Reiche: Horn (1878*a*: 31-33; Figs 2a-e [Pl. II]) [L_{2-3}; FC]; Schaupp (1879: 3) [L_{2-3}; LIT]; Leffler (1979*a*: 68-69) [L_1, L_2, L_3; FC]; Leffler (1986*b*: 56-57, 62; Fig. 1) [L_3; FC].

Omus submetallicus Horn: Leffler (1986*b*: 57-58, 62) [L_3; FC].

Omus sp.: Putchkov and Arndt (1994: Fig. 24).

Megacephalini

Tetracha (*Tetracha*) *carolina* (Linnaeus): Horn (1878*a*: 34-35; Figs 3a-e [Pl. II]) [L_{2-3}; FC]; Schaupp (1879: 3) [L_{2-3}; LIT]; Hamilton (1925: 59-60; Figs 2, 9, 15, 18, 24, 29, 34, 43, 80, 116) [L_{2-3}; RR]; Putchkov and Arndt (1997: 61) [L_3; LIT]; Leonard and Bell (1999: 27, 153; Figs 35-37, 148, 149) [L_3; LIT].

Tetracha (*Tetracha*) *virginica* (Linnaeus): Hamilton (1925: 60-61; Figs 79, 117) [L_{2-3}; RR]; Putchkov and Arndt (1997: 61) [L_3; LIT].

Cicindelini

Cicindela (*Cicindelidia*) *abdominalis* Fabricius: Hamilton (1925: 19, 44-45; Figs 72, 109, 139) [L_{2-3}; FC]; Spangler (1956: 84) [L_{2-3}; LIT]; Willis (1967: 173) [L_{2-3}; LIT].

Cicindela (*Cicindelidia*) *amargosae* Dahl: Leffler (1979*a*: 86-87) [L_{2-3}; FC].

Cicindela (*Cicindela*) *ancocisconensis* Harris: Leonard and Bell (1999: 33, 63; Figs 76-78) [L_3; FC]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *arenicola* Rumpp: Rumpp (1967: 133; Figs 1[a-b]) [L_3; FC]; Shook and Clark (1988: Fig. 2).

Cicindela (*Cicindela*) *bellissima* Leng: Leffler (1979*a*: 76-77; Fig. 5e) [L_{1-2}, L_3; FC].

Cicindela (*Cicindela*) *decemnotata* Say: Leffler (1979*a*: 80-81) [L_3; FC].

Cicindela (*Cicindela*) *denikei* Brown: Kaulbars and Freitag (1993*b*: 45, 46, 48; Figs 1-7) [L_3; FC].

Cicindela (*Cicindela*) *depressula* Casey: Leffler (1979*a*: 73-74) [L_{1-2}, L_3; FC].

Cicindela (*Cicindela*) *duodecimguttata* Dejean: Shelford (1908: 170, 172, 173; Figs 37-39) [L_1, L_2, L_3; RR]; Hamilton (1925: 19, 39-40; Figs 68, 105, 135) [L_{2-3}; RR]; Leonard and Bell (1999: 33, 97; Figs 51, 104, 105) [L_3; LIT]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *formosa* Say: Shelford (1908: 170, 172, 173; Figs 40-42) [L_1, L_2, L_3; RR]; Hamilton (1925: 19, 46-48; Figs 49-51, 74, 88-90, 111, 141, 142) [L_{2-3}; FC]; Gaumer[11] (1977: 182, 190-193, 205, 206, 211-213, 217-219, 223-225, 230, 231; Figs 45d, 46d, 47d, 48d, 49d, 50c) [L_1, L_2, L_3; FC]; Leonard and Bell (1999: 34, 58; Figs 41, 53, 72, 73) [L_3; LIT]; Bousquet (2010*a*: 404) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *fulgida* Say: Willis (1967: 165-168, 173; Figs 41-46) [L_3; FC].

Cicindela (*Cicindelidia*) *hemorrhagica* LeConte: Leffler (1979*a*: 88-89) [L_3; FC]; Knisley and Pearson (1984: 497-499, 533-534; Figs 86-91) [L_1, L_2, L_3; RR+FC].

Cicindela (*Cicindela*) *hirticollis* Say: Shelford (1908: 172, 173) [L_1, L_2, L_3; RR]; Hamilton (1925: 20, 55; Figs 55-57, 92, 93, 146) [L_{2-3}; RR]; Leffler (1979*a*: 75; Fig. 5f) [L_2, L_3; FC]; Thompson (1979*a*: Figs 12a-e); Leonard and Bell (1999: 36, 80, 81; Figs 57, 92, 93) [L_3; LIT]; Bousquet (2010*a*: 404; Fig. 418) [L_{2-3}; LIT].

Cicindela (*Cicindelidia*) *hornii* Schaupp: Knisley and Pearson (1984: 496-498, 511-514; Figs 44-49) [L_1,L_2, L_3; RR+FC].

Cicindela (*Cicindela*) *latesignata* LeConte: Hamilton (1925: 18, 29; Figs 61, 98, 128) [L_{2-3}; FC].

Cicindela (*Cicindela*) *lengi* Horn: Leffler (1979*a*: 89-90) [L_3; FC].

Cicindela (*Cicindela*) *limbalis* Klug: Shelford (1908: 172, 173; Figs 49-51) [L_1, L_2, L_3; RR]; Hamilton (1925: 18, 25-26; Figs 1, 5-8, 14, 17, 21-23, 27, 28, 32, 33, 37-40, 42, 52-54, 96, 126) [L_{2-3}; RR]; Böving and Craighead (1931: Fig. c [Pl. 4]);

[11] Gaumer (1977) described larvae of five subspecies of *Cicindela formosa*.

?Bousquet and Goulet (1984: Fig. 28); Leonard and Bell (1999: 30, 119; Figs 44, 122-124) [L_3; LIT]; Bousquet (2010*a*: 405; Figs 421, 423) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *limbata* Say: Hamilton (1925: 20, 56-57; Figs 77, 114, 145) [L_{2-3}; FC]; Leonard and Bell (1999: 36, 89; Figs 101, 102) [L_3; LIT].

Cicindela (*Cicindela*) *longilabris* Say: Leffler (1979*a*: 81-82) [L_2; FC]; Spanton (1988: 99; Figs 28-32) [L_{1-3}; RR]; Leonard and Bell (1999: 32, 107, 108; Figs 113, 114) [L_2, L_3; LIT]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *nebraskana* Casey: Leffler (1979*a*: 83-84) [L_3; FC]; Brust and Hoback (2010: 345; Figs 3-8) [L_1, L_2, L_3; RR].

Cicindela (*Cicindelidia*) *nigrocoerulea* LeConte: Knisley and Pearson (1984: 497-499, 528-530; Figs 11, 74-79) [L_1, L_2, L_3; RR].

Cicindela (*Cicindelidia*) *obsoleta* Say: Hamilton (1925: 18, 34-35, as *Cicindela* species D [see Knisley and Pearson (1984: 507)]; Figs 152, 164, 178) [L_{2-3}; FC]; Knisley and Pearson (1984: 496-498, 505, 507; Figs 32-37) [L_1, L_2, L_3; RR+FC].

Cicindela (*Cicindelidia*) *ocellata* Klug: Hamilton (1925: 19, 42-43, as *C. flavopunctata rectilatera*; Figs 70, 107, 137) [L_{2-3}; RR]; Knisley and Pearson (1984: 497, 499, 536-537; Figs 18, 21, 92-97) [L_1, L_2, L_3; RR+FC].

Cicindela (*Cicindela*) *oregona* LeConte: Hamilton (1925: 18, 38; Figs 67, 104, 134) [L_{2-3}; FC]; Leffler (1979*a*: 72; Figs 5b, 7b-c) [L_2, L_3; FC].

Cicindela (*Cicindela*) *parowana* Wickham: Leffler (1979*a*: 84-85) [L_3; FC].

Cicindela (*Cicindela*) *patruela* Dejean: Willis (1982: 49, 56; Figs 1-6) [L_3; RR]; Leonard and Bell (1999: 33, 46, 47; Figs 63-65) [L_3; LIT].

Cicindela (*Cicindela*) *pimeriana* LeConte: Knisley and Pearson (1984: 496, 498, 519-520; Figs 13, 56-61) [L_1, L_2, L_3; RR].

Cicindela (*Cicindela*) *pugetana* Casey: Leffler (1979*a*: 78-79) [L_3; FC].

Cicindela (*Cicindela*) *pulchra* Say: Hamilton (1925: 19, 51; Figs 76, 113, 144) [L_{2-3}; FC]; Hamilton (1925: 19, 51-52, as *C. obsoleta* [see Knisley and Pearson (1984: 507)]; Figs 158, 169, 179) [L_{2-3}; FC]; Knisley and Pearson (1984: 496-498, 508-509; Figs 1-9, 22-24, 38-43) [L_1, L_2, L_3; RR+FC].

Cicindela (*Cicindelidia*) *punctulata* Olivier: Shelford (1908: 172, 173) [L_1, L_2, L_3; RR]; Hamilton (1925: 19, 41; Figs 69, 106, 136) [L_{2-3}; RR]; Knisley and Pearson (1984: 497-499, 525-526; Figs 68-73) [L_1, L_2, L_3; RR]; Leonard and Bell (1999: 34, 112; Figs 52, 117, 118) [L_3; LIT]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *purpurea* Olivier: Shelford (1908: 170, 172-173; Figs 7-11, 25-27) [L_1, L_2, L_3; RR]; Hamilton (1925: 18, 27; Figs 60, 97, 127) [L_{2-3}; RR]; Leffler (1979*a*: 77-78; Fig. 5c) [L_3; FC]; Leonard and Bell (1999: 31, 124; Figs 47, 128, 129) [L_3; LIT]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Cicindela (*Cicindela*) *repanda* Dejean: Horn (1878*a*: 35-37; Figs a-d [Pl. II]) [L_{2-3}; FC]; Schaupp (1879: 13) [L_{2-3}; LIT]; Schaupp (1884*b*: 123; Fig. 124) [L_{2-3}; FC]; Shelford (1908: 170, 172, 173; Figs 34-36) [L_1, L_2, L_3; RR]; Hamilton (1925: 18, 31; Figs 63, 100, 130) [L_{2-3}; RR]; Leffler (1979*a*: 71; Fig. 5a) [L_2, L_3; FC]; Leonard and Bell (1999: 32, 53, 54; Figs 49, 68, 69) [L_3; LIT]; Bousquet (2010*a*: 405; Figs 420, 422) [L_{2-3}; LIT].

Cicindela (*Cicindelidia*) *rufiventris* Dejean: Beatty and Knisley (1984: 4-8; Figs 1-11) [L_1, L_2, L_3; RR]; Leonard and Bell (1999: 32, 103, 104; Figs 46, 48, 109, 110) [L_3; LIT].

Cicindela (*Cicindela*) *scutellaris* Say: Shelford (1908: 170-173; Figs 46-48) [L_1, L_2, L_3; RR]; Hamilton (1925: 19, 48-49; Figs 75, 112, 143) [L_{2-3}; RR]; Leonard and Bell (1999: 35, 131, 132; Figs 55, 133, 134) [L_3; LIT]; Bousquet (2010*a*: 404; Fig. 417) [L_{2-3}; LIT].

Cicindela (*Cicindelidia*) *sedecimpunctata* Klug: Knisley and Pearson (1984: 497, 539; Figs 116-119) [L_3; RR].

Cicindela (*Cicindela*) *sexguttata* Fabricius: Shelford (1908: 170, 172, 173; Figs 28-30) [L_1, L_2, L_3; RR]; Hamilton (1925: 17, 23-24; Figs 58, 94, 124) [L_{2-3}; RR]; Willis (1967: 172) [L_{2-3}; LIT]; Kaulbars and Freitag (1993*b*: 48) [L_3; LIT]; Leonard and Bell (1999: 29, 41, 42; Figs 59, 60) [L_3; LIT]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Cicindela (*Cicindelidia*) *tenuisignata* LeConte: Knisley and Pearson (1984: 497-499, 530-531; Figs 80-85) [L_1, L_2, L_3; RR].

Cicindela (*Cicindela*) *theatina* Rotger: Pineda and Kondratieff (2002: 166, 170, 171; Figs 1-8) [L_1, L_2, L_3; RR+FC].

Cicindela (*Cicindela*) *tranquebarica* Herbst: Shelford (1908: 172-173; Figs 43-45) [L_1, L_2, L_3; RR]; Hamilton (1925: 18, 36; Figs 66, 103, 133) [L_{2-3}; RR]; Leffler (1979*a*: 91) [L_3; FC]; Leonard and Bell (1999: 33, 69; Figs 82, 83) [L_3; LIT]; Bousquet (2010*a*: 405; Fig. 424) [L_{2-3}; LIT].

Cicindela (*Cicindelidia*) *willistoni* LeConte: Willis (1967: 172, 173; Figs 59-64) [L_3; FC]; Leffler (1979*a*: 87) [L_3; FC]; Knisley and Pearson (1984: 497, 498, 514, 515; Figs 120-121) [L_1, L_2; FC].

Cicindela sp. A (California; probably *C. trifasciatus sigmoidea*): Hamilton (1925: 17, 22-23; Figs 59, 95, 125) [L_{2-3}; FC].

Cicindela sp. B (Colorado; possibly *C. cimarrona* or *C. obsoleta*): Hamilton (1925: 18, 28; Figs 62, 99, 129; according to Leffler (1979*a*: 78) and Knisley and Pearson (1984: 507) Hamilton's species is neither *C. cimarrona* or *C. obsoleta* respectively) [L_{2-3}; FC].

Cicindela sp. C (Indiana): Hamilton (1925: 18, 30; Figs 151, 163, 175) [L_{2-3}; FC].

Cicindela sp. D (Colorado): Hamilton (1925: 18, 34-35; Figs 152, 164, 178) [L_{2-3}; FC].

Cicindela sp.: Bousquet (1991*a*: Figs 34.76, 34.78, 34.92); Bousquet (2010*a*: Figs 414-416, 425).

Cylindera (*Cylindera*) *cursitans* (LeConte): Brust *et al.* (2005: 383-385; Figs 2-7) [L_1, L_2, L_3; RR].

Cylindera (*Cylindera*) *debilis* (Bates): Knisley and Pearson (1984: 540, 542; Figs 16-17, 98-103) [L_1, L_2, L_3; RR+FC].

Cylindera (*Cylindera*) *lemniscata* (LeConte): Knisley and Pearson (1984: 496, 498, 499, 542-545; Figs 104-109) [L_1,L_2, L_3; RR+FC].

Cylindera (*Cylindera*) *terricola* Say: Leffler (1979*a*: 91-92, as *C. cinctipennis*) [L_3; FC].

Cylindera (*Cylindera*) *unipunctata* (Fabricius): Hamilton (1925: 19, 43-44; Figs 71, 108, 138) [L_{2-3}; FC].

Cylindera (*Cylindera*) *viridisticta* (Bates): Knisley and Pearson (1984: 496, 498, 499, 545-546; Figs 110-115) [L_1, L_2, L_3; RR+FC].

Dromochorus pruininus Casey: Spomer *et al.* (2008*b*: 38-40; Figs 1-6) [L_1, L_2, L_3; RR].

Ellipsoptera gratiosa (Guérin-Méneville): Hamilton (1925: 18, 34; Figs 65, 102, 132) [L_{2-3}; RR].

Ellipsoptera lepida (Dejean): Shelford (1908: 171-173; Figs 49-51) [L_1, L_2, L_3; RR]; Hamilton (1925: 18, 32-33; Figs 64, 101, 131) [L_{2-3}; RR]; Leonard and Bell (1999: 32, 146, 147; Figs 50, 144, 145) [L_3; LIT]; Bousquet (2010*a*: 405; Fig. 419) [L_{2-3}; LIT].

Ellipsoptera macra (LeConte): Shelford (1908: 171-173, as *E. cuprascens*; Figs 55, 56) [L_1, L_2; RR]; Hamilton (1925: 19, 49-50; Figs 153, 165, 172) [L_{2-3}; RR+FC].

Ellipsoptera marginata (Fabricius): Hamilton (1925: 19, 45-46; Figs 73, 110, 140) [L_{2-3}; RR]; Spangler (1956: 84) [L_{2-3}; LIT]; Willis (1967: 173) [L_{2-3}; LIT]; Leonard and Bell (1999: 29, 86; Figs 40, 98, 99) [L_3; LIT]; Bousquet (2010*a*: 404) [L_{2-3}; LIT].

Ellipsoptera nevadica (LeConte): Willis (1967: 168, 173; Figs 47-52) [L_3; RR].

Ellipsoptera puritana (Horn): Leonard and Bell (1999: 33, 74, 75; Figs 87-90) [L_3; LIT (unpublished)]; Bousquet (2010*a*: 405) [L_{2-3}; LIT].

Ellipsoptera rubicunda (Harris): Knisley and Pearson (1984: 496-498, 516-517, as *E. marutha*; Figs 12, 50-55) [L_1, L_2, L_3; RR+FC].

Eunota togata (LaFerté-Sénectère): Willis (1967: 170, 173; Figs 53-58) [L_3; RR].

Habroscelimorpha circumpicta (LaFerté-Sénectère): Spangler (1956: 82, 84; 14 figs) [L_{2-3}; FC]; Willis (1967: 163-165, 173; Figs 35-40) [L_3; RR].

Habroscelimorpha dorsalis (Say): Hamilton (1925: 17, 20-21; Figs 78, 115, 147) [L_{2-3}; RR]; Leonard and Bell (1999: 29, 142; Figs 141, 142) [L_3; LIT].

Habroscelimorpha fulgoris (Casey): Knisley and Pearson (1984: 496-498, 522-523; Figs 14-15, 19-20, 62-67) [L_1, L_2, L_3; RR+FC].

Loricerini

Loricera (*Loricera*) *decempunctata* Eschscholtz: Ball and Erwin (1969: 897; Fig. 49) [L_3; FC].

Loricera (*Loricera*) *pilicornis* (Fabricius): Schiødte (1867: 465-469; Figs 8-16 [Pl. 14]) [L_{1-3}; ?]; Gernet (1867: 10-12; Figs 2a-f [Pl. 1]) [L_{1-3}; FC]; Larsson (1941: 290, as *L. coerulescens*; Figs 27, 28a-c) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 92a-f); van Emden (1942: Fig. 48); Garner (1954: 149, 150) [L_{2-3}; FC]; Sharova (1958: 40; Figs 25a-e) [L_{1-3}; ?]; Sharova (1964: 146; Figs 97-1,2,3,4,5,6) [L_{1-3}; ?]; Larsson (1968: 335; Figs 27, 28a-c) [L_{1-3}; ?]; Haberman (1968: 155, 156; Figs 85.1-6) [L_{2-3}; ?]; Ball and Erwin (1969: 894, 896; Figs 50, 53, 56, 57) [L_1, L_3; RR+FC]; Raynaud (1976*d*: 167, 168; Figs 1-7 [Pl. 16B]) [L_3; FC]; Luff (1978: 269, 270; Figs 9-17) [L_1, L_{2-3}; FC]; Thompson (1979*a*: Figs 39a-c, as *Loricera sp.*); Bousquet and Goulet (1984: Figs 30, 49); Bousquet (1991*a*: Figs 34.85, 34.91); Arndt (1991*b*: Figs 67, 68);

Luff (1993: 69, 70; Figs 1, 206-213) [L_1, L_{2-3}; ?]; Makarov (1994: Fig. 102); Makarov (1996; Fig. 39); Bousquet (2010*a*: Figs 426-430).

Loricera sp. A (California): Garner (1954: 149, 151, 152; Figs a-c [Pl. 8]) [L_{2-3}; FC].

Loricera sp. B (California): Garner (1954: 149, 153, 154) [L_{2-3}; FC].

Elaphrini

Blethisa julii LeConte: Lindroth (1954*a*: 23, 24; Figs 9b, 10b, 11b, 12b, 13c, 15b) [L_{2-3}; FC]; Sharova (1958: Fig. 90b); Sharova (1964: Figs 133-1); Thompson (1979*a*: Figs 41a-e).

Blethisa multipunctata (Linnaeus): Bøving (1910: 357-363; Figs 8, 12, 15) [L_{2-3}; FC]; Znojko (1929: Fig. 4e); Larsson (1941: 287; Fig. 25) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 87a-e); van Emden (1942: Fig. 74); Lindroth (1954*a*: 24, Figs 11c, 13b, 14b, 15a) [L_{2-3}; FC]; Garner (1954: 121, 122; Figs a-c [Pl. 6]) [L_{2-3}; FC]; Sharova (1958: Figs 89a-e); Sharova (1964: Figs 132-1,2,3,4,5); Larsson (1968: 332; Fig. 25) [L_{1-3}; ?]; Haberman (1968: Figs 83.1-5); Luff (1976: 60, 65, 67; Figs 39-47) [L_3; FC]; Goulet (1983: Figs 96a-b); Arndt (1991*b*: 75; Fig. 66) [L_{1-3}; ?]; Luff (1993: 65; Figs 184-189) [L_{2-3}; ?]; Makarov (1994: Fig. 51); Makarov (1996: Fig. 26); Bousquet (2010*a*: 411; Figs 432, 435) [L_{2-3}; RR+FC].

Blethisa quadricollis Haldeman: Lindroth (1954*a*: 23; Figs 9c, 11d, 13d, 14c) [L_{2-3}; FC]; Goulet (1983: Figs 88a-b, 95); Bousquet (2010*a*: 411; Fig. 436) [L_{2-3}; FC].

Diacheila arctica (Gyllenhal): Lindroth (1954*a*: Figs 9a, 10a, 11a, 12a, 13a, 14a); Sharova (1958: 41; Figs 27b, 90a, 92a) [L_{1-3}; ?]; Sharova (1964: 149; Figs 98-2,3, 133-1, 135-1) [L_{1-3}; ?]; Goulet (1983: Figs 78, 84, 94); Luff (1993: 66; Figs 190-192) [L_{1-3}; ?]; Makarov (1994: Fig. 50).

Diacheila polita (Faldermann): Sharova (1958: 41; Figs 26, 27a, 88, 92b) [L_{1-3}; ?]; Sharova (1964: 149; Figs 98-1, 131-2, 135-2) [L_{1-3}; ?]; Goulet (1983: Figs 79, 83a-c, 87a-b, 93a-b); Luff (1993: 66) [L_{1-3}; LIT]; Bousquet (2010*a*: Figs 431, 434).

Elaphrus (*Elaphrus*) *americanus americanus* Dejean: Goulet (1983: 287, 288, 309; Figs 100a-b) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 413; Figs 433, 437) [L_{2-3}; RR].

Elaphrus (*Elaphrus*) *americanus sylvanus* Goulet: Goulet (1983: 311) [L_1, L_3; FC].

Elaphrus (*Elaphroterus*) *angusticollis* Sahlberg: Goulet (1983: 325, 326, 335-336; Figs 151, 152, 156) [L_1, L_2, L_3; RR].

Elaphrus (*Elaphrus*) *californicus* Mannerheim: Goulet (1983: 286-288, 302; Figs 154, 155) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 413) [L_{2-3}; RR].

Elaphrus (*Neoelaphrus*) *cicatricosus* LeConte: Goulet (1983: 250, 251, 253, 263-264; Figs 99a-b) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 412; Fig. 439) [L_{2-3}; RR].

Elaphrus (*Neoelaphrus*) *clairvillei* Kirby: Lindroth (1954*a*: 26; Figs 12c, 14d, 16c, 17c) [L_{2-3}; FC]; Thompson (1979*a*: Fig. 40b); Goulet (1983: 251-253, 275; Figs 76a-g, 80, 82a-b, 85a-c, 90a-b, 98a-c) [L_1, L_2, L_3; RR]; Beutel (1993: Figs 17, 25); Bousquet (2010*a*: 412; Fig. 438) [L_{2-3}; RR].

Elaphrus (*Elaphrus*) *finitimus* Casey: Goulet (1983: 288, 305-306) [L_3; FC].

Elaphrus (*Neoelaphrus*) *fuliginosus* Say: Goulet (1983: 250, 251, 253, 261-262) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 412) [L_{2-3}; RR].

Elaphrus (*Neoelaphrus*) *laevigatus* LeConte: Goulet (1983: 251-253, 281-282) [L_1, L_2, L_3; RR].

Elaphrus (*Arctelaphrus*) *lapponicus* Gyllenhal: Lindroth (1954*a*: 25; Figs 13e, 16a, 17a) [L_{2-3}; FC]; Sharova (1958: Fig. 91); Sharova (1964: Fig. 134); Luff (1976: 62, 63, 65; Figs 34-38) [L_1, L_{2-3}; FC]; Thompson (1979*a*: Fig. 40a); Luff (1993: 67, 68; Figs 193-194) [L_1, L_{2-3}; ?]; Goulet (1983: 243; Figs 89a-b, 97) [L_3; FC]; Bousquet (2010*a*: 412) [L_{2-3}; FC].

Elaphrus (*Elaphrus*) *lecontei* Crotch: Garner (1954: 127, 128) [L_3; FC]; Goulet (1983: 286-288, 297-298; Figs 81, 91a-b) [L_1, L_2, L_3; RR].

Elaphrus (*Neoelaphrus*) *lindrothi* Goulet: Goulet (1983: 250-252, 265-266) [L_1, L_2, L_3; RR].

Elaphrus (*Neoelaphrus*) *olivaceus* LeConte: Lindroth (1954*a*: 25; Figs 16b, 17b) [L_{2-3}; FC]; Goulet (1983: 251-253, 279-280) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 413) [L_{2-3}; RR].

Elaphrus (*Elaphroterus*) *purpurans* Hausen: Goulet (1983: 324-326, 332-333; Figs 86, 92a-b, 102a-b) [L_1, L_2, L_3; RR].

Elaphrus (*Elaphrus*) *ruscarius* Say: Goulet (1983: 287, 288, 295) [L_1, L_2, L_3; RR].

Elaphrus (*Elaphrus*) *tuberculatus* Mäklin: Goulet (1983: 287, 288, 318) [L_1, L_2, L_3; RR].

Elaphrus (*Elaphrus*) *viridis* Horn: Goulet and Smetana (1997: 215) [L_3; FC].

Omophronini

Omophron (*Omophron*) *americanum* Dejean: Silvey (1936: 691-692; Figs 17-19) [L_3; FC].

Omophron (*Omophron*) *nitidum* LeConte: **?**Böving and Craighead (1931: Figs a-e [Pl. 5]).

Omophron (*Omophron*) *tessellatum* Say: Silvey (1936: 688-690; Figs 13, 15, 16) [L_3; FC]; Landry and Bousquet (1984: Figs 1-21); Bousquet and Goulet (1984: Figs 29, 50, 52, 56); Bousquet (1991*a*: Figs 34.73, 34.88, 34.94, 34.97); Bousquet (2010*a*: Figs 440-447).

Omophron sp. A (California): Garner (1954: 134-136) [L_{2-3}; FC].

Omophron sp. B (California): Garner (1954: 134, 136, 137) [L_{2-3}; FC].

Omophron sp. C (Nebraska): Garner (1954: 134, 138, 139) [L_{2-3}; FC].

Omophron sp. D (Nebraska): Garner (1954: 134, 140, 141; Pl. 7, Figs a-c) [L_{2-3}; FC].

Omophron sp. (Ontario): Thompson (1979*a*: Figs 33a-e).

Pasimachini

Pasimachus (*Pasimachus*) *elongatus* LeConte: Garner (1954: 234, 237, 238) [L_{2-3}; FC]; Kirk (1972: 1355; Figs 22 [Pl. 2], 3-22) [L_{1-3}; FC]; Thompson and Allen (1974: 189-192; Figs 2a-c) [L_3; FC]; Thompson (1979*a*: Figs 45a-d).

Pasimachus sp. A (North Carolina): Garner (1954: 234, 238, 239; Pl. 16, Figs a-c) [L_{2-3}; FC].

Pasimachus sp. B (Texas): Garner (1954: 234, 240, 241) [L_{2-3}; FC].

Pasimachus sp. C (Florida): Garner (1954: 234, 241, 242) [L_{2-3}; FC].
Pasimachus sp. D (Montana): Garner (1954: 234, 242, 243) [L_{2-3}; FC].

Scaritini

Scarites (*Scarites*) *quadriceps* Chaudoir: van Emden (1942: Fig. 51); Garner (1954: 227, 231, 232, as *S.* prob. *substriatus*) [L_{2-3}; FC]; Kirk (1972: 1355; Figs 23 [Pl. 2], 3-23, as *S. substriatus*) [L_{2-3}; FC]; Thompson (1979*a*: Figs 46a-c, as *S. substriatus*).
Scarites (*Scarites*) *subterraneus* Fabricius: Wickham (1893*b*: 332, 333; Figs 3-4 [Pl. 9]) [L_3; FC]; Garner (1954: 227, 230; Pl. 15, Figs a-c) [L_{2-3}; FC]; Bousquet (2010*a*: Figs 448-450).

Clivinini

Clivina (*Clivina*) *collaris* (Herbst)†: Luff (1978: 272, 281; Fig. 57) [L_1, L_2; RR+FC]; Vaněk (1984: 100-103, 111; Figs 1-47) [L_1, L_2, L_3; RR]; Arndt (1991*b*: 78, Figs 78, 80) [L_{1-3}; LIT]; Luff (1993: 71, 72; Fig. 222) [L_1, L_{2-3}; ?]; Makarov (1994: Fig. 24).
Clivina (*Semiclivina*) *dentipes* Dejean: Thompson (1979*a*: Figs 47a-c).
Clivina (*Clivina*) *fossor* (Linnaeus)†: Bøving (1911: 148-153, 172-178; Pl. 6; Figs 4, 10, 15, 20, 23) [L_{2-3}; FC]; Larsson (1941: 296) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 100a-g); van Emden (1942: Fig. 76); Garner (1954: 258, 262, 263) [L_{2-3}; FC]; Sharova (1958: 44; Figs 32, 34, 97, 99a) [L_{1-3}; ?]; Sharova (1964: 153; Figs 100-1, 101-1, 138, 139-2) [L_{1-3}; ?]; Larsson (1968: 342; Fig. 32) [L_{1-3}; ?]; Haberman (1968: Figs 87.1, 88.1,3,4); Luff (1978: 272, 280, 281; Figs 49-56) [L_1, L_{2-3}; RR+FC]; Vaněk (1984: 108, 109, 111; Figs 48-53) [L_1, L_2, L_3; RR]; Arndt (1991*b*: 78) [L_{1-3}; LIT]; Luff (1993: 71, 72; Figs 214-221) [L_1, L_{2-3}; ?]; Bousquet (2010*a*: Figs 451, 458).
Clivina (*Clivina*) *impressefrons* LeConte: Phillips (1909: 14-16; Figs 8b,e,f) [L_3; FC]; Kirk (1972: 1355; Figs 16 [Pl. 2], 3-16) [L_{1-3}; FC].
Clivina sp. A (Nebraska): Garner (1954: 258, 261, 262; Pl. 18, Figs a-c) [L_{2-3}; FC].
Clivina sp. B (Louisiana): Garner (1954: 258, 264, 265) [L_{2-3}; FC].
Clivina sp. C (Illinois): Garner (1954: 258, 265, 266) [L_{2-3}; FC].
Schizogenius (*Schizogenius*) *lineolatus* (Say): Bousquet (1996*b*: 348-351; Figs 1-11) [L_1, L_{2-3}; RR+FC]; Bousquet (2010*a*: Figs 452, 454, 456, 459, 461).
Semiardistomis viridis (Say): Bousquet (2006*c*: 5; Figs 36-39) [L_1; RR].
Genus A sp. A (Florida): Garner (1954: 270, 271; Pl. 19, Figs a-c) [L_{2-3}; FC].

Dyschiriini

Akephorus marinus LeConte: Garner (1954: 248, 251; Pl. 17, Figs a-c) [L_{2-3}; FC].
Dyschirius dejeanii Putzeys: Kirk (1972: 1355; Figs 18 [Pl. 2], 3-18, as *D. integer*) [L_{1-3}; FC].
Dyschirius globosus (Herbst)†: Larsson (1941: 292, 295) [L_{1-3}; ?]; Sharova (1958: 44) [L_{1-3}; ?]; Sharova (1964: 154) [L_{1-3}; ?]; Larsson (1968: 338, 341) [L_{1-3}; ?]; Haberman (1968: 167) [L_{1-3}; ?]; Raynaud (1976*e*: 276, 277; Figs 4-8) [F_3; FC]; Luff

(1978: 271, 277; Figs 41-47) [L_3; FC]; Arndt (1991*b*: 78) [L_{1-3}; ?]; Luff (1993: 73, 76; Figs 243-245) [L_{1-3}; ?].

Dyschirius globulosus (Say): Garner (1954: 248, 254) [L_3; FC].

Dyschirius politus (Dejean): Larsson (1941: 293, 294; Figs 30d, 31e) [L_{1-3}; ?]; Sharova (1958: 45; Fig. 101e) [L_{1-3}; ?]; Sharova (1964: 154; Fig. 139-7) [L_{1-3}; ?]; Larsson (1968: 338 340; Figs 30d, 31e) [L_{1-3}; ?]; Haberman (1968: 168; Fig. 95.7) [L_{1-3}; ?]; Luff (1978: 271, 277; Figs 38-40) [L_3; FC]; Arndt (1991*b*: 78) [L_{1-3}; ?]; Luff (1993: 73, 75, 76; Figs 231, 232) [L_{1-3}; ?].

Dyschirius sphaericollis (Say): Silvey (1936: 685-687; Figs 9, 11, 12) [L_3; FC].

Dyschirius sp. A (Louisiana): Garner (1954: 248, 252, 253) [L_{2-3}; FC].

Dyschirius sp. (Quebec): Bousquet (1988*a*: Figs 31-34); Bousquet (2010*a*: Figs 453, 455, 457, 460).

Promecognathini

Promecognathus laevissimus (Dejean)[12]: Bousquet and Smetana (1986: 27-30; Figs 1-12) [L_1; RR]; Bousquet (1991*a*: Fig. 34.80).

Broscini

Broscus cephalotes (Linnaeus)†: Schiødte (1867: 504-507; Figs 1-8 [Pl. 19]) [L_{1-3}; ?]; Znojko (1929: Fig. 8a); Larsson (1941: 297; Figs 32a-b) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 110a-e); van Emden (1942: Fig. 39); Sharova (1958: 45; Figs 36, 37) [L_{1-3}; ?]; Sharova (1964: 154, 155; Figs 102-1,2) [L_{1-3}; ?]; Larsson (1968: 343; Figs 33a-b) [L_{1-3}; ?]; Andersen (1968: 74) [L_3; ?]; Haberman (1968: Figs 112d1-d2); Luff (1978: 282-285; Figs 58-65) [L_1, L_{2-3}; FC]; Sharova and Makarov (1984: 742, 744, 746; Figs 1-2) [L_1, L_2, L_3; FC]; Arndt (1991*b*: Figs 69-71); Luff (1993: 77, 78; Figs 246-251) [L_1, L_{2-3}; ?]; Beutel (1993: Figs 4, 10, 18); Makarov (1994: Fig. 26); Bousquet (2010*a*: Figs 464, 468).

Miscodera arctica (Paykull): Andersen (1968: 71-74; Fig. 1, 2a-c, 3a-b) [L_3; FC]; Larsson (1968: 343) [L_{1-3}; ?]; Luff (1978: 282, 285, 286; Figs 66-75) [L_1, L_{2-3}; FC]; Thompson (1979*a*: Figs 43a-f); Luff (1993: 79; Figs 252, 253) [L_1, L_{2-3}; FC]; Makarov (1994: Fig. 25); Bousquet (2010*a*: Figs 462, 463, 465-467).

Gehringiini

Gehringia olympica Darlington: Lindroth (1960*a*: 37; Figs 5a-f) [L_1; RR]; Thompson (1979*a*: Figs 27a-f); Luna de Carvalho (1989: 55; Fig. 27b) [L_{1-3}; LIT].

Trechini

Blemus discus (Fabricius)†: ?Bousquet (2010*a*: Figs 469-473).

[12] The field-collected and reared larvae described by Garner (1954: 220, 221; Pl. 14, Figs a-c) as *Promecognathus laevissimus* are misidentified.

Neaphaenops tellkampfii (Erichson): Packard (1874: 563, as *Pseudanophthalmus sp.*) [L_3; FC]; Hubbard (1888: 77-78; Figs 18a-b, as *Pseudanophthalmus sp.*) [L_3; FC]; Jeannel (1920*a*: 538, 539; Fig. 62) [L_3; FC]; Jeannel (1926: 396) [L_3; FC].

Pseudanophthalmus sp. A (Higginbotham's Cave, West Virginia): Boldori (1951: 143, 144; Figs 39, 42) [L_{2-3}; FC].

Pseudanophthalmus sp. B (Higginbotham's Cave, West Virginia): Boldori (1951: 145) [L_{2-3}; FC].

Pseudanophthalmus sp. C (Coffman's Cave, West Virginia): Boldori (1951: 145; Fig. 40) [L_{2-3}; FC].

Pseudanophthalmus sp. D (Shelta Cave, Alabama): Boldori (1951: 145; Fig. 41) [L_{2-3}; FC].

Pseudanophthalmus sp. E (Johnson's Cave, Tennessee): Boldori (1951: 145) [L_{2-3}; FC].

Trechus (*Trechus*) *apicalis* Motschulsky: Thompson (1979*a*: Figs a-d); ⁇Bousquet (2010*a*: Fig. 474).

Trechus (*Trechus*) *obtusus* Erichson†[13]: Boldori (1931*a*: 6) [L_3; FC]; Boldori (1931*b*: 157; Figs 1-3, 2-3) [L_3; FC]; Larsson (1941: 303, 304; Fig. 34c) [L_{1-3}; ?]; Boldori (1951: Fig. 3); Sharova (1958: 47; Fig. 105c) [L_{1-3}; ?]; Sharova (1964: 157; Fig. 143-3) [L_{1-3}; ?]; Larsson (1968: 352, 353; Fig. 36c) [L_{1-3}; ?]; Haberman (1968: 274; Fig. 122.3) [L_{1-3}; ?]; Luff (1985: 302, 304; Fig. 11) [L_{2-3}; FC]; Arndt (1991*b*: 82) [L_{1-3}; ?]; Luff (1993: 85, 86; Figs 284-286) [L_{1-3}; ?].

Trechus (*Trechus*) *quadristriatus* (Schrank)†: Bøving (1911: 141-147, 172-178; Figs 3, 9, 14, 19, 22 [Pl. 5]) [L_{2-3}; FC]; Jeannel (1920*a*: 523, 539; Figs 13-17) [L_{1-3}; FC]; Jeannel (1926: 387) [L_{2-3}; FC]; Beier and Strouhal (1928: 1-4; Figs 1a-b, 2a-e, 3 [Pl. 1]) [L_3; FC]; Boldori (1931*a*: 6) [L_3; FC]; Boldori (1931*b*: 158; Figs 1-2, 2-2) [L_3; FC]; Larsson (1941: 303; Fig. 34b) [L_{1-3}; ?]; Jeannel (1941*b*: Figs 113a-f); Boldori (1951: Fig. 2); Sharova (1958: 47; Fig. 105d) [L_{1-3}; ?]; Sharova (1964: 157; Fig. 143-4) [L_{1-3}; ?]; Larsson (1968: 352, 353; Fig. 36b) [L_{1-3}; ?]; Haberman (1968: 273; Fig. 122.3) [L_{1-3}; ?]; Luff (1985: 302, 304; Figs 1-10) [L_1, L_{2-3}; FC]; Arndt (1991*b*: 82; Figs 72, 73) [L_{1-3}; ?]; Luff (1993: 84-86; Figs 281-283) [L_1, L_{2-3}; ?]; Makarov (1994: Fig. 32).

Trechus (*Trechus*) *rubens* (Fabricius)†: Larsson (1941: 303, 304; Fig. 34a) [L_{1-3}; ?]; Sharova (1958: 47; Fig. 105b) [L_{1-3}; ?]; Larsson and Gígja (1959: 27) [L_{1-3}; FC]; Sharova (1964: 157; Fig. 143-2) [L_{1-3}; ?]; Larsson (1968: 352, 353; Fig. 36a) [L_{1-3}; ?]; Haberman (1968: 273; Fig. 122.2) [L_{2-3}; ?]; Luff (1985: 302, 304, 306; Figs 12-16) [L_3; FC]; Bousquet (1991*a*: Figs 34.95, 34.98); Arndt (1991*b*: 82) [L_{1-3}; ?]; Luff (1993: 85; Figs 278-280) [L_{1-3}; ?].

Bembidiini

Asaphidion alaskanum Wickham: Maddison (1993: 153, 271; Figs 195, 225) [L_1; RR].

Asaphidion yukonense Wickham: Thompson (1979*a*: Figs a-c).

---

[13] As pointed out by Jeannel (1920*a*: 510), the field-collected larva described by Xambeu (1901: 58, 59) as *Trechus obtusus* has been incorrectly associated.

Bembidion (*Odontium*) *aenulum* Hayward: Maddison (1993: 172; Fig. 223) [L_1; RR].

Tachyta (*Tachyta*) *inornata* (Say): Erwin (1975: Figs 158, 160, 162, 164, 169, 171-173); Thompson (1979*a*: Figs 49a-d).

Pogonini

Thalassotrechus barbarae (Horn): Moore (1956: 215; Figs 1-7) [L_{2-3}; FC]; Thompson (1979*a*: Figs a-g); Grebennikov and Bousquet (1999: 438; Figs 6, 13, 16, 20) [L_1; RR].

Patrobini

Diplous (*Platidius*) *aterrimus* (Dejean): Thompson (1979*a*: Figs a-c).

Diplous (*Platidius*) *rugicollis* (Randall): Bousquet (2010*a*: Figs 487, 490, 492).

Patrobus foveocollis (Eschscholtz): Bousquet and Goulet (1984: Figs 31, 53, 57).

Patrobus longicornis (Say): Schaupp (1882*a*: 56) [L_{2-3}; FC]; Thompson (1979*a*: Figs 55a-d); Bousquet (2010*a*: Figs 485, 488, 489).

Patrobus septentrionis Dejean: Larsson (1941: 305, 306; Fig. 35b) [L_{1-3}; ?]; Larsson and Gígja (1959: 30) [L_{1-3}; FC]; Larsson (1968: 356, 357; Fig. 38b) [L_{1-3}; ?]; Houston and Luff (1975: 60, 64; Fig. 16) [L_1, L_{2-3}; FC]; Böcher (1988: Fig. 2); Arndt (1991*b*: 84, 85) [L_1, L_{2-3}; LIT]; Luff (1993: 79, 80; Figs 254-257) [L_1, L_{2-3}; ?].

Platypatrobus lacustris Darlington: Bousquet and Grebennikov (1999: 6, 8, 10; Figs 7-15) [L_1, L_2, L_3; RR+FC].

Psydrini

Nomius pygmaeus (Dejean): Jeannel (1948*b*: 74, 75; Figs 1a-c) [L_3; FC]; Hůrka (1978: 54) [L_{1-3}; LIT].

Psydrus piceus LeConte: Dajoz (1997*b*: 133-134; Figs 1-11) [L_3; FC].

Metriini

Metrius contractus Eschscholtz[14]: Bousquet and Goulet (1984: Figs 39, 44); Bousquet (1986: 375, 376; Figs 1-20) [L_1; RR]; Luna de Carvalho (1989: 993; Figs 597a-j) [L_1; LIT]; Luna de Carvalho (1992: 287, 288; Figs 1-9 [Pl. 1]) [L_1; LIT]; Moore and Di Giulio (2006: 15) [L_{1-3}; ?].

Ozaenini

Goniotropis kuntzeni Bänninger: Moore and Di Giulio (2006: 10-14, 16; Figs 9-36) [L_1, L_2; RR].

Brachinini

Brachinus (*Neobrachinus*) *americanus* (LeConte): Thompson (1979*a*: Figs 86a-b).

Brachinus (*Neobrachinus*) *cyanipennis* Say: Clausen (1940: Figs 226a-c).

Brachinus (*Neobrachinus*) *janthinipennis* (Dejean): Wickham (1893*b*: 330-332; Figs 1-2 [Pl. 9]) [L_{1-3}; FC]; Dimmock and Knab (1904: 31-34; Fig. 4; Figs 1-2 [Pl. 3]) [L_1, L_{2-5}; FC].

[14] The field-collected larvae described by Garner (1954: 211, 212; Pl. 13, Figs a-c) as *Metrius contractus* are obviously misidentified.

Brachinus (*Neobrachinus*) *pallidus* Erwin: Erwin (1967: 44-47; Figs 1-3 [Pl. 1]; Figs 1-6 [Pl. 2]; Figs 1-6 [Pl. 3]) [L_1, L_2, L_3; L_{4-5}; FC]; Thompson (1979*a*: Figs 85a-b).
Brachinus (*Neobrachinus*) *sp.*: Bousquet and Goulet (1984: Figs 26, 38, 43, 55); Bousquet (1991*a*: Figs 34.90, 34.100); Bousquet (2010*a*: Figs 493-497).

Morionini

Morion monilicornis (Latreille): van Emden (1953*a*: 51, as *M. georgiae*) [L_{2-3}; FC]; Thompson (1979*b*: 85, 86; Figs 48a-g) [L_{2-3}; FC].

Abacetini

Loxandrus velocipes Casey: Thompson (1979*a*: Figs a-d); Thompson (1979*b*: 53, 54; Figs 28a-d) [L_1, L_{2-3}; RR]; Bousquet (1985*c*: 200, 203, 207-208; Figs 14, 26) [L_1, L_2, L_3; RR]; Bousquet (1989: 30, 33) [L_1, L_2, L_3; RR].

Pterostichini

Abax (*Abax*) *parallelepipedus* (Piller and Mitterpacher)†: Schiødte (1872: 179-180, as *Pterostichus striola*; Figs 3-8 [Pl. 1]) [L_{1-3}; ?]; Larsson (1941: 330, as *A. ater*; Fig. 49g) [L_{1-3}; ?]; van Emden (1942: Fig. 99, as *A. ater*); Jeannel (1942: Figs 251a-f); Sharova (1958: Figs 50a-e, *A. ater*); Sharova (1964: 168, as *A. ater*; Figs 108-1,2,3,4,5) [L_{1-3}; ?]; Larsson (1968: 390, *A. ater*; Fig. 53g) [L_{1-3}; ?]; Raynaud (1976*d*: 171, 172, 174, as *A. ater*; Figs 1-7 [Pl. 17B]) [L_3; FC]; Bousquet (1985*c*: 200, 203, 221; Figs 17, 58, 65, 73, 84, 96) [L_1, L_2, L_3; RR]; Bousquet (1989: 30, 33; Figs 33, 38) [L_1, L_2, L_3; RR]; Arndt (1989: 264-268; Figs 16-21) [L_1, L_2, L_3; RR+FC]; Bousquet (1991*a*: Fig. 34.89); Arndt (1991*b*: 94; Fig. 14) [L_1, L_{2-3}; LIT]; Luff (1993: 104, 115; Figs 379-384) [L_1, L_{2-3}; ?]; Makarov (1994: Fig. 72); Bousquet (1999: Fig. 126); Bousquet (2010*a*: Figs 500, 526, 531).
Cyclotrachelus (*Evarthrus*) *alternans* (Casey): Kirk (1972: 1355; Figs 20 [Pl. 2], 3-20) [L_{1-3}; FC]; Bousquet (2010*a*: Fig. 499).
Cyclotrachelus (*Evarthrus*) *parasodalis* (Freitag): Thompson (1979*a*: Figs 62a-c); Thompson (1979*b*: 52; Figs 26a-h) [L_3; FC].
Cyclotrachelus (*Evarthrus*) *seximpressus* (LeConte): Thompson (1979*b*: 52; Figs 27a-g) [L_1, L_{2-3}; RR]; Bousquet (1985*c*: 200, 202, 222; Figs 18, 32, 66, 69, 74) [L_1, L_2; RR]; Bousquet (1989: 30, 33) [L_1, L_2; RR]; Bousquet (1999: Fig. 122).
Cyclotrachelus (*Evarthrus*) *torvus* (LeConte): Kirk (1972: 1355; Figs 21 [Pl. 2], 3-21) [L_1; FC].
Cyclotrachelus sp.: Bousquet (2010*a*: Figs 509, 542, 546).
Gastrellarius blanchardi (Horn): Bousquet (1989: 29, 32, 33; Figs 5-7) [L_1, L_2, L_3; RR].
Gastrellarius honestus (Say): Bousquet (1985*c*: 200, 203, 224-225; Figs 19, 33, 34, 59, 75, 97) [L_1, L_2, L_3; RR]; Bousquet (1989: 30, 33; Figs 15, 34) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: Figs 510, 533, 549).
Lophoglossus haldemanni (LeConte): Thompson (1979*b*: 57, 68, 69; Figs 37a-e) [L_1, L_2; RR].

Lophoglossus scrutator (LeConte): Bousquet (1985*c*: 200, 204, 211; Figs 15, 27, 28, 63, 71, 88) [L_1, L_2, L_3; RR]; Bousquet (1989: 30, 34; Figs 8, 13, 32) [L_1, L_2, L_3; RR]; Bousquet (1999: Fig. 120); Bousquet (2010*a*: Figs 505, 506, 539).

Myas (*Trigonognatha*) *cyanescens* Dejean: Thompson (1979*a*: Figs a-b); Thompson (1979*b*: 54, 55; Figs 29a-g) [L_3; FC]; Bousquet (1985*c*: 203, 219-220; Figs 31, 77, 95) [L_3; FC]; Bousquet (1989: 33; Figs 14, 36) [L_3; FC]; Makarov (1994: Figs 73, 76); Bousquet (1999: Fig. 125); Bousquet (2010*a*: Figs 501, 508, 550).

Piesmus submarginatus (Say): Bousquet (1999: 47, 48, 71, 72) [L_1, L_2, L_3; RR].

Poecilus (*Poecilus*) *chalcites* (Say): Kirk (1972: 1355; Figs 29 [Pl. 3], 3-29) [L_{1-3}; FC]; Thompson (1979*b*: 55, 62, 63; Figs 33a-f) [L_1, L_{2-3}; RR]; Bousquet (1985*c*: 201, 204, 213-214; Figs 16, 57, 76, 93, 100) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 34; Figs 9-10, 30) [L_1, L_2, L_3; RR]; Bousquet (1999: Figs 119, 123); Bousquet (2010*a*: 441; Figs 532, 547) [L_2, L_3; RR].

Poecilus (*Poecilus*) *corvus* (LeConte): Thompson (1979*b*: 55, 65, 66; Figs 35a-h) [L_1, L_2; RR].

Poecilus (*Poecilus*) *lucublandus* (Say): Schaupp (1881*a*: 88, 89; Figs Di-v) [L_3; FC]; van Emden (1942: Fig. 23); Larsson (1968: Fig. 54c); Kirk (1972: 1355; Figs 28 [Pl. 3], 3-28) [L_{1-3}; FC]; Thompson (1979*b*: 55, 74, 75; Figs 41a-g) [L_1, L_{2-3}; RR]; Bousquet (1985*c*: 201, 204, 212-213; Fig. 29) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 34) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 441; Fig. 498) [L_2, L_3; RR].

Poecilus (*Derus*) *nearcticus* (Lindroth): Bousquet (1999: 65) [L_2, L_3; FC].

Poecilus (*Poecilus*) *sp.*: Dogger and Olson (1966: 93, 94, as *Micromaseus femoralis*; Figs 1-2) [L_3; FC].

Pterostichus (*Hypherpes*) *adoxus* (Say): Bousquet (1985*c*: 200, 203, 246; Figs 55, 99) [L_1, L_2, L_3; RR]; Bousquet (1989: 30, 34) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 444; Fig. 523) [L_2, L_3; RR].

Pterostichus (*Bothriopterus*) *adstrictus* Eschscholtz: Larsson and Gígja (1959: 37) [L_{1-3}; FC]; Goulet (1974*a*: 21, 22) [L_1, L_2, L_3; RR]; Thompson (1979*b*: 56, 59; Figs 30a-c) [L_1, L_{2-3}; RR]; Bousquet (1985*c*: 202, 205, 234) [L_1, L_2, L_3; RR]; Bousquet (1989: 32, 35) [L_1, L_2, L_3; RR]; Bousquet (1991*a*: Fig. 34.103); Luff (1993: 107, 109) [L_{1-3}; ?]; Bousquet (2010*a*: 445) [L_2, L_3; RR].

Pterostichus (*Hypherpes*) *algidus* LeConte: Thompson (1979*b*: 56, 59, 60; Figs 31a-h) [L_1, L_{2-3}; RR].

Pterostichus (*Hypherpes*) *amethystinus* Mannerheim: Thompson (1979*b*: 57, 61, 62; Figs 32a-e) [L_1, L_{2-3}; RR].

Pterostichus (*Cryobius*) *arcticola* (Chaudoir): Bousquet (1985*c*: 202, 206, 249) [L_1, L_2, L_3; RR]; Bousquet (1989: 32, 37) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 447) [L_2, L_3; RR].

Pterostichus (*Cryobius*) *brevicornis* (Kirby): Bousquet (1985*c*: 202, 203, 248; Fig. 98) [L_1, L_2, L_3; RR]; Bousquet (1989: 32, 33) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 444; Fig. 553) [L_2, L_3; RR].

Pterostichus (*Melanius*) *castor* Goulet and Bousquet: Bousquet (1985*c*: 202, 206, 237) [L_1, L_2, L_3; RR]; Bousquet (1989: 33, 36) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 446) [L_2, L_3; RR].

Pterostichus (*Lamenius*) *caudicalis* (Say): Bousquet (1985*c*: 201, 206, 235; Figs 24, 42, 91) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 36; Fig. 12) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 446; Figs 515, 529) [L_2, L_3; RR].

Pterostichus (*Argutor*) *commutabilis* (Motschulsky): Bousquet (1985*c*: 202, 206, 225-226, as *P. leconteianus*; Fig. 35) [L_1, L_2, L_3; RR]; Bousquet (1989: 32, 36, as *P. leconteianus*; Fig. 16) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 446, 447; Fig. 511) [L_2, L_3; RR].

Pterostichus (*Euferonia*) *coracinus* (Newman): Bousquet (1985*c*: 201, 205, 242-243; Figs 62, 81) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 35; Fig. 20) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 446; Fig. 534) [L_2, L_3; RR].

Pterostichus (*Melanius*) *corvinus* (Dejean): Thompson (1979*b*: 56, 65; Figs 34a-g) [L_1, L_{2-3}; RR+FC]; Bousquet (1985*c*: 202, 206, 236; Figs 43, 44, 86, 92) [L_1, L_2, L_3; RR]; Bousquet (1989: 33, 36; Fig. 28) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 446; Figs 516, 530, 538) [L_2, L_3; RR].

Pterostichus (*Monoferonia*) *diligendus* (Chaudoir): Bousquet (1985*c*: 202, 206, 239; Figs 1-13, 48, 70, 82, 87) [L_1, L_2, L_3; RR]; Bousquet (1989: 32, 36; Figs 21, 29, 31) [L_1, L_2, L_3; RR]; Bousquet (1991*a*: Figs 34.74, 34.81); Bousquet (2010*a*: 446; Figs 502, 503, 537, 545, 551) [L_2, L_3; RR].

Pterostichus (*Phonias*) *femoralis* (Kirby): Bousquet (1985*c*: 201, 204, 227-228) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 34) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 444, 445) [L_2, L_3; RR].

Pterostichus (*Euferonia*) *lachrymosus* (Newman): Thompson (1979*b*: 56, 71; Figs 38a-g) [L_1, L_3; RR]; Bousquet (1985*c*: 201, 205, 241-242; Figs 51, 61) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 35; Fig. 19) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 446; Figs 520, 535) [L_2, L_3; RR].

Pterostichus (*Hypherpes*) *lama* (Ménétriés): Thompson (1979*b*: 56, 71, 72; Figs 39a-f) [L_3; FC].

Pterostichus (*Pseudomaseus*) *luctuosus* (Dejean): Thompson (1979*b*: 56, 74; Figs 40a-g) [L_1, L_{2-3}; RR]; Bousquet (1985*c*: 201, 204, 238; Figs 45-47, 68) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 34; Fig. 27) [L_1, L_2, L_3; RR]; Bousquet (2010*a*: 444; Figs 517, 518, 544) [L_2, L_3; RR].

Pterostichus (*Morphnosoma*) *melanarius* (Illiger)†: Schiødte (1867: 511) [L_{1-3}; ?]; Rupertsberger (1872: 573-575) [L_3; FC]; van Emden (1936*b*: Fig. 1, as *P. vulgaris*); Larsson (1941: 326-328, as *P. vulgaris*; Fig. 49d) [L_{1-3}; ?]; Sharova (1958: 64, as *P. vulgaris*; Figs 120aa, 123f) [L_{1-3}; ?]; Sharova (1964: 175, as *P. vulgaris*; Figs 150-24, 154-6) [L_{1-3}; ?]; Larsson (1968: 384, 387, as *P. vulgaris*; Fig. 53d) [L_{1-3}; ?]; Haberman (1968: 461; Fig. 275.11, 276.9) [L_{2-3}; ?]; Thompson (1979*b*: 56, 77; Figs 42a-f) [L_{2-3}; FC]; Bousquet (1985*c*: 201, 205, 241; Figs 50, 80, 85) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 35) [L_1, L_2, L_3; RR]; Arndt (1991*b*: 89, 93) [L_1, L_{2-3}; ?]; Arndt and Hůrka (1992*a*: 106; Figs 7, 10) [L_1, L_2, L_3; RR]; Luff (1993: 108, 111;

Figs 364-366) [L_1, L_{2-3}; ?]; Arndt and Hůrka (1993: 45, 48) [L_1, L_{2-3}; ?]; Bousquet (2010*a*: 445; Figs 519, 525) [L_2, L_3; RR].

Pterostichus (*Eosteropus*) *moestus* (Say): Bousquet (1984*b*: 1616; Figs 7-12) [L_1, L_2, L_3; RR]; Bousquet (1989: 31, 35, 36; Figs 22, 35) [L_1, L_2, L_3; RR].

Oxypselaphus pusillus (LeConte): Bousquet (2010*a*: Fig. 628).

Paranchus albipes (Fabricius)†: Xambeu (1898: 55-57, as *Anchomenus pallipes*) [L_{1-3}; ?FC]; Kemner (1913: 21, 22, as *Platynus ruficornis*; Figs 12, 3-4 [Pl. 2]) [L_3; FC]; Raynaud (1940*b*: 76-78, as *Platynus ruficornis*) [L_3; FC]; Larsson (1941: 319, 320, as *Platynus ruficornis*; Fig. 42b) [L_{1-3}; ?]; Sharova (1958: 61, as *Agonum ruficorne*; Fig. 120o) [L_{1-3}; ?]; Sharova (1964: 172, 173, as *Agonum ruficorne*; Fig. 150-12) [L_{1-3}; ?]; Larsson (1968: 376, 377, as *Agonum ruficorne*; Fig. 47b) [L_{1-3}; ?]; Haberman (1968: 517, as *Agonum ruficorne*; Fig. 306.12) [L_{2-3}; ?]; Arndt (1991*b*: 98, 99, as *Platynus ruficornis*) [L_1, L_{2-3}; ?]; Luff (1993: 125, 130, 131; Figs 422-424) [L_1, L_{2-3}; ?].

Platynus (*Platynus*) *decentis* (Say): Thompson (1979*a*: Figs a-d); Thompson (1979*b*: 41, 42; Figs 20a-j) [L_1, L_{2-3}; RR+FC]; Bousquet (2010*a*: Figs 632, 636, 641).

Platynus (*Batenus*) *hypolithos* (Say): Thompson (1979*b*: 41, 44; Figs 21a-i) [L_3; FC].

Platynus (*Batenus*) *mannerheimii* (Dejean): ?Saalas (1917: 286; Figs 1-2) [L_{2-3}; FC]; ?Saalas (1923: 667) [L_{2-3}; FC]; Thompson (1979*b*: 41, 45, 46; Figs 22a-f) [L_{2-3}; FC].

Sericoda bembidioides Kirby: Liebherr (1991*b*: 130, 132; Figs 328-338) [L_1; RR].

Sericoda obsoleta (Say): Thompson (1979*b*: 8, 18, 19; Figs 6a-f) [L_1, L_{2-3}; RR].

Tanystoma maculicolle (Dejean): van Emden (1945: 24) [L_{1-3}; ?]; Liebherr (1984*a*: 531, 532, 534, 536; Figs 1, 2a-g, 3a-i) [L_1, L_2, L_3; RR].

Tetraleucus picticornis (Newman): Thompson (1979*b*: 8, 24; Figs 9a-f) [L_1, L_{2-3}; RR]; Liebherr (1991*b*: 125; Figs 293-304) [L_1; RR].

Atranini

Atranus pubescens (Dejean): Bousquet (1985*b*: 330-331; Figs 1-6) [L_1, L_2, L_3; FC]; Makarov (1994: Fig. 81); Bousquet (2010*a*: Figs 642-646).

Lachnophorini

Calybe (*Ega*) *sallei* (Chevrolat): Liebherr (1983: 255; Figs 1-7) [L_2, L_3; FC].

Odacanthini

Colliuris (*Cosnania*) *pensylvanica* (Linnaeus): Thompson (1979*a*: Figs 77a-c); Bousquet (2010*a*: 491; Figs 647-650) [L_1, L_{2-3}; FC].

Ctenodactylini

Leptotrachelus dorsalis (Fabricius): Erwin and White (2012: 22, 24, 25, 27, 28 ; Figs 3-12) [$L_{1,3}$; RR].

Lebiini

Apristus subsulcatus (Dejean): Bousquet (2010*a*: 496-498; Figs 660, 669, 671, 673) [L_1, L_2, L_3; RR+FC].

Axinopalpus biplagiatus (Dejean): Bousquet (2010*a*: 496; Fig. 659) [L_{2-3}; FC].

Calleida (*Calleida*) *decora* (Fabricius): Thompson (1979*a*: Figs 78a-d); Zhou and Goyer (1993: Fig. 3a).

Calleida (*Calleida*) *punctata* LeConte: Bousquet and Goulet (1984: Fig. 36); Bousquet (1991*a*: Fig. 34.84); Zhou and Goyer (1993: Fig. 3b); Bousquet (2010*a*: Figs 663, 664, 676).

Calleida (*Calleida*) *viridipennis* (Say): Zhou and Goyer (1993: 234-236; Figs 1a-d) [L_1, L_2, L_3; RR].

Cymindis (*Tarulus*) *vaporariorum* (Linnaeus): Hůrka (1969: 105-107; Figs 3a-m) [L_1, L_2, L_3; FC]; Hůrka (1986: 47; Figs 85-99) [L_1, L_2, L_3; RR]; Hůrka (1986: 48, as *C. vaporariorum immaculata*; Figs 100-103) [L_1, L_2; RR]; Arndt (1991*b*: 133) [L1, L_1, L_{2-3}; LIT]; Luff (1993: 176, 177; Figs 581, 582) [L_1, L_{2-3}; ?]; Makarov (1996: Fig. 31).

Cymindis sp.: Bousquet and Goulet (1984: Figs 35, 46, 54, 59); Bousquet (1991*a*: Fig. 34.104); Bousquet (2010*a*: Figs 665, 666, 677, 678).

Dromius (*Dromius*) *piceus* Dejean: Mahar *et al*. (1983: 24-26; Figs 1-7) [L_1, L_2, L_3; FC].

Lebia (*Lebia*) *analis* Dejean: Thompson (1979*a*: Figs 80a-b).

Lebia (*Loxopeza*) *grandis* Hentz: Chaboussou (1939: 414-419; Figs 18-20, 22-34) [L_1, L_2; RR].

Lebia (*Lebia*) *viridis* Say: Capogreco (1989*a*: 187-191; Figs 2-5, 7-16) [L_1, L_2; RR]; Makarov (1994: Figs 123, 125); Bousquet (2010*a*: Figs 656-658).

Microlestes sp.: Bousquet (2010*a*: 499; Figs 662, 670, 672, 674) [L_{2-3}; FC].

Mochtherus tetraspilotus (Macleay)†: Gardner (1936: 193, 194; Figs 47-50) [L_3; FC]; van Emden (1942: 78) [L_3; FC].

Onota floridana Horn: van Emden (1942: 79) [L_2; FC].

Philophuga viridicollis (LeConte): Larson (1969: 26; Figs 9, 11) [L_3; FC].
Philophuga viridis amoena (LeConte): Mahar *et al*. (1983: Fig. 9).
Philorhizus melanocephalus (Dejean)†: Xambeu (1904: 88, 89) [L_{1-3}; FC]; Larsson (1941: 357, 358; Fig. 67f) [L_{1-3}; ?]; Larsson (1968: 429, 431; Fig. 73f) [L_{1-3}; ?]; Luff (1993: 169, 172, 173; Figs 564-568) [L_1, L_{2-3}; FC].
Plochionus (*Plochionus*) *pallens* (Fabricius): van Emden (1945: 25) [L_{1-3}; ?]; Arndt (1991*b*: Fig. 143).
Plochionus (*Menidius*) *timidus* Haldeman: Duffey (1892: 538; Figs a-e [Pl. 10]) [L_1, L_3; RR]; Larson (1969: 25; Figs 7, 8) [L_{2-3}; FC]; Thompson (1979*a*: Figs 79a-b); Zhou and Goyer (1993: 237-240; Figs 2a-d) [L_1, L_2, L_3; RR].
Somotrichus unifasciatus (Dejean): van Emden (1945: 27) [L_{1-3}; ?].
Syntomus americanus (Dejean): Bousquet (2010*a*: Figs 661, 667, 668, 675).
Tecnophilus croceicollis croceicollis (Ménétriés): Larson (1969: 24; Figs 6, 10, 12) [L_{1-3}; RR]; Mahar *et al*. (1983: Fig. 8).
Tecnophilus croceicollis peigani Larson: Larson (1969: 24; Figs 13, 14) [L_{1-3}; RR].

Galeritini

Galerita (*Progaleritina*) *janus* (Fabricius): Packard (1871: 29, 30; Figs 13a-b) [L_3; FC]; Hubbard (1875: 49-51) [L_3; FC]; Schaupp (1879: 14) [L_{2-3}; LIT]; Kirk (1981: 368; Fig. 1) [L_{2-3}; FC]; Arndt and Drechsel (1998: Fig. 6); Bousquet (2010*a*: Figs 679-681).
Galerita (*Progaleritina*) *lecontei* Dejean: Sallé (1849: 298-299; Figs 2c-d [Pl. 8]) [L_3; FC]; Chapuis and Candèze (1853: 367-369) [L_3; FC]; Schaupp (1879: 14) [L_{2-3}; LIT].
Galerita sp. (Arkansas): Thompson (1979*a*: Figs 82a-c).

Helluonini

Helluomorphoides praeustus bicolor (Harris): Bousquet (1987*c*: 922, 925-927; Figs 1-7) [L_1, L_2; FC]; Bousquet (2010*a*: Figs 682-686).
Helluomorphoides sp. (Georgia): Thompson (1979*a*: Figs 83a-c).

Pseudomorphini

Pseudomorpha (*Pseudomorpha*) *augustata* Horn: Liebherr and Kavanaugh (1985: 1081) [L_1; RR].
Pseudomorpha (*Pseudomorpha*) *hubbardi* Notman: Liebherr and Kavanaugh (1985: 1081; Figs 1a-b) [L_1; RR].
Pseudomorpha sp. [Arizona]: Erwin (1981*a*: 56, 58; Fig. 24) [?L_2; FC].
Pseudomorpha sp. [Nevada]: Thompson (1979*a*: Figs 84a-f); Erwin (1981*a*: 54-56; Figs 1-23) [L_1, L_{2-3}; FC].

Appendix 3. List of Geadephaga species described from specimens mislabeled as from North America

A number of available species were listed originally as from North America and were subsequently found not to belong to the region. The following is an annotated alphabetical list of species described from specimens mislabeled or incorrectly assumed to be from North America.

Agonum splendidulum Motschulsky, 1844: 138. Type locality listed as "Sitka et du Kamtchatka." Chaudoir (1850*b*: 123) stated that the specimens he identified as *A. splendidulum* from Kamchatka seemed to represent a very minor variety of *Agonum impressum* (Panzer). *Agonum splendidulum* is currently considered a junior synonym of *A. impressum*, a Palaearctic species (Bousquet 2003*c*: 450). The original description is very short and uninterpretable (see Lindroth 1966: 594). According to Keleinikova (1976: 218), three syntypes from Kamchatka are present in ZMMU.

Aretharea helluonis Say, 1830*a*: 68. Type locality listed as "Pennsylv[ania]" although Say (1830*a*: 68) added "I am not sure whether I obtained it on our journey to the Rocky Mountains, to St. Peter's river, or in Pennsylvania, but I think the latter." LeConte (1859*e*: 524) wrote the following about this species: "No insect has yet been seen by other entomologists, which at all approaches the description here given ... In fact, there is nothing in the description of the head, thorax and anterior legs, which forbids a reference to *Cryptobium bicolor* or *C. melanocephalum* [Staphylinidae]. With regard to the elytra and posterior legs, I must suppose them to have been derived from some foreign *Carabide*, and that the union was effected unintentionally, before the specimen came under Say's notice."

Bembidium glabriusculum Motschulsky, 1844: 272. Type locality given as "Sitka [Baranof Island, Alaska]." Maddison (1993: 176) remarked that the holotype of this species is conspecific with members of *Bembidion argenteolum* Ahrens, a species found only west of the Lena River and Ussuri River areas of Russia. The original locality given by Motschulsky (1844: 272) is in error.

Calleida rubricollis Dejean, 1825: 225. Type locality given as "Amérique septentrionale." Dejean (1831: 328) acknowledged receiving specimens of this species from Cuba, including some from Klug under the name *elegans*, which did not differ from his specimens of *C. rubricollis*. Chaudoir (1844: 469) described *Calleida elegans* (which he credited to Klug) by pointing out structural differences between his sole specimen and those of *C. rubricollis*. Later Chaudoir (1873*b*: 144) concluded that the differences reported in 1844 between the specimens from the United States and Cuba were only "accidental" and that all the specimens belonged to the same species. I have seen a specimen from Chaudoir's collection in MHNP labeled "rubricollis mihi elegans [illegible letters] in Ins. Cuba D. Klug [handwritten] / Lectotype ♂ Calleida rubricollis Dej. by

Erwin '76 [partly handwritten]." The specimen is probably one received from Klug and noticed in 1831 by Dejean and therefore is likely not a syntype. Based on the original description by Dejean (1825: 225) and this specimen, I believe that *C. rubricollis* is structurally most similar to *C. decora* (Fabricius) among the North American species but specifically distinct. I have not seen a conspecific specimen from North America and believe the type locality listed by Dejean (i.e., Amérique septentrionale) is in error. The statement by Chaudoir (1873*b*: 144) that the specimens from United States were identical with those from Cuba may be based on a comparison of his Cuban specimens with those of Dejean, which he believed came from the United States. At the time, Chaudoir owned Dejean's carabid collection. Already in his first catalogue, LeConte (1863*b*: 6) stated that "*C. rubricollis* Dej. is not found within the present limits of the United States, but is confined to Cuba."

Carabus beauvoisi Dejean, 1826: 67. Type locality listed as "Amérique septentrionale." Motschulsky (1850*a*: 81) listed this name as a "var.?" of *Carabus californicus*, a species he described only in 1866 [see next entry]. LeConte (1863*b*: 3) reported that this species is identical to "*Carabus catenulatus* Fabricius." Motschulsky (1866: 287, as *C. bauvoisii* Dej.) stated that Haldeman gave him specimen(s) of this species during his trip to America. Kraatz (1878: 158) agreed with LeConte and stated that Dejean's specimen(s) was conspecific with *C. catenulatus* and that the locality given was in error. Lapouge (1931: 570) considered this name to be a questionable junior synonym of *Carabus taedatus agassii* LeConte. Csiki (1927: 81) listed it as a variety of *Carabus problematicus* Herbst, and Breuning (1933*b*: 810) as a junior synonym of *Carabus problematicus problematicus* natio *gallicus* Géhin. There is no indication that either Csiki or Breuning saw the name-bearing type specimen(s) and therefore, if their conclusions are correct, the type locality was in error. Jeannel (1941*b*: 132) listed also the name as a junior synonym of *Carabus problematicus*, adding that the type locality of "Amér. du Nord" is in error. In the latest catalogue of the genus *Carabus* (Deuve 2004: 240), this name is listed as a junior synonym of *C. problematicus harcyniae* Sturm. Dejean's original specimens came from Palisot de Beauvois' collection which, according to Dejean (1825: 101), was not in order.

Carabus bifasciatus Olivier, 1790*b*: 347. Type locality listed as "Amérique septentrionale." This species was transferred to the genus *Calophaena* by Klug (1821: 297) which is confirmed by the illustration provided by Olivier (1795: Fig. 80 [plate 7]). The genus is not found in North America, north of Mexico, and the type locality is obviously in error.

Carabus californicus Motschulsky, 1866: 288. This name was listed as a variety of the Palaearctic *Carabus problematicus* Herbst by Csiki (1927: 81), as a junior synonym of *Carabus problematicus problematicus* natio *gallicus* Géhin by Breuning (1933*b*: 810), and as a junior synonym of *Carabus problematicus gallicus* by Kryzhanovskij (1968: 175). In the latest catalogue of the genus *Carabus* (Deuve 2004: 240), this name is listed as a questionable junior synonym of *C. problematicus solutus* Oberthür. Obviously the provenance, implied by the specific name, is incorrect.

Carabus carolinus Fabricius, 1792: 126. Type locality given as "Carolina meridionali." LeConte (1863*b*: 3) reported that Fabricius' taxon was identical to *Carabus splendens* Olivier. The name is still listed in synonymy with *C. splendens* in Deuve's (2004) latest catalogue of the genus *Carabus*. Since this species is found only in southwestern France, the provenance given by Fabricius is obviously incorrect.

Carabus latus Linnaeus, 1758: 415. Type locality listed as "Europa; America septentrionali." Lindroth (1957*b*: 332) discussed the status of this species and came to the conclusion that the name should be retained for *Harpalus latus* auctorum, one of the commonest species in Sweden. However, none of the six "Linnean" specimens in LSL belong to this species. Motschulsky (1855*a*: 44) interpreted Linnaeus' species as the North American *Harpalus herbivagus* Say.

Casnonia rufipes Dejean, 1825: 172. Type locality listed as "Amérique septentrionale." The holotype came from Palisot de Beauvois' collection. Chaudoir (1863: 278) indicated that the species is not found in North America but occurs from Cayenne (in French Guiana) to Brazil.

Chlaenius nimrod Horn, 1897: 372. Type locality given as "Custer, South Dakota." Bell (1960: 116) stated that the original specimens were obviously mislabeled and probably belonged to an Old World species.

Cicindela baltimorensis Herbst, 1806: 181. Type locality given as "Baltimore." Schaum (see LeConte 1863*b*: 1) reported that this taxon is the East Indian *Cylindera minuta* (Olivier) with an erroneous locality. Acciavatti and Pearson (1989: 291) found syntypes of *C. baltimorensis* in ZMHB and confirmed Schaum's identification.

Cicindela californica californica Ménétriés, 1843: 52. Type locality listed as "Californie." The nominotypical subspecies of *Habroscelimorpha californica* is known from the coast of central and southern Baja California (Pearson *et al*. 2006: 138) suggesting that the type locality is in error. However, all the other species described from California by Ménétriés (1843), except maybe *Agaosoma californicum*, are currently found in California. Two other possibilities are conceivable. The subspecies had a wider range in the XIX Century and did occur in California or our concept of *H. californica californica* is in error and the name actually applies to one of the two subspecies of *H. californica* found in California. As far as I know, nobody has reported studying syntype(s) of the nominotypical subspecies.

Cicindela coerulea Herbst, 1806: 182. Type locality given as "Nordamerica." LeConte (1863*b*: 2) listed this name as a synonym of the Palaearctic *Cylindera germanica* (Linnaeus). The type locality is obviously in error.

Cicindela magdalenae LeConte, 1873*b*: 321. Type locality listed as "found in turpentine barrels brought to London, supposed to be from North Carolina." Horn (1880*f*:

xix) noted the similarity between the elytral markings of LeConte's species and those of some South African species and later (1883*b*: 269-270) reported that the species was identical to *Lophyra senegalensis* (Dejean).

Cicindela tortuosa Dejean, 1825: 87. Type locality: "Amérique septentrionale et dans les Antilles." Gistel (1837: 49) listed this name in synonymy with *Cicindela trifasciata* Fabricius. LeConte's (1851: 172) record of this species in "Georgia et Louisiana, in oryzaceis" refers to *Cicindela trifasciata ascendens* LeConte (Horn 1926: 294). Currently *C. tortuosa* is listed in catalogues (e.g., Wiesner 1992: 146; Lorenz 2005: 49) as a junior synonym of *C. trifasciata trifasciata* Fabricius, which occurs commonly over the West Indies. However, Dejean's type series likely includes specimens of *C. trifasciata trifasciata* and *C. trifasciata ascendens* LeConte. As far as I know, a lectotype has not been designated for *C. tortuosa* Dejean.

Cicindela triguttata Herbst, 1806: 182. Type locality given as "Nordamerica." LeConte (1863*b*: 2) stated that Herbst's species was "not North American." Acciavatti and Pearson (1989: 253), upon an examination of the syntypes in ZMHB, concluded that *C. triguttata* Herbst is a synonym of *Cylindera viduata* (Fabricius), a species found in Asia. The type locality originally reported is in error.

Clivina biguttata Putzeys, 1867*b*: 157. Type locality given as "Cuba. Louisiane." Nichols (1988*a*: 129) reported this species from Cuba, Isla de Pinos, and Jamaica. As far as I know, the species has not been reported subsequently from North America.

Clivina picipes Bonelli, 1813: 481. Bonelli originally stated that the country of origin was unknown. Dejean (1825: 416) reported that his specimen(s) of this species originated from "Amérique" and Putzeys (1846: 105) redescribed the sole specimen in Dejean's collection and listed "Amérique boréale" as the provenance. Subsequently Putzeys (1867*b*: 110) listed this name as a junior synonym of *Clivina attenuata* (Herbst) and pointed out that the species was from India.

Curtonotus transversicollis Putzeys, 1866*b*: 236. Type locality given as "Amér[ique] Russe. (Akina)." According to Lindroth (1968: 665), the lectotype is conspecific with members of the Palaearctic *Amara brevicollis* (Chaudoir) and probably originated from Akima in Transbaikalia.

Cymindis morio Dejean, 1825: 219. Type locality listed as "Amérique septentrionale." The specimen(s) was given to Dejean by Palisot de Beauvois. Schaum (1857*a*: 293) stated that this species belongs to the genus *Apenes* LeConte and occurs in Haiti. LeConte (1863*b*: 6) said that it "does not occur in the United States." According to Ball (1992*b*: Fig. 5.6), the species is found in the Bahamas and on Hispaniola.

Dinodes rotundicollis Dejean, 1826: 373. Type locality given as "Amérique septentrionale." The specimen(s) was given to Dejean by Palisot de Beauvois. According to LeConte (1863*b*: 11), this species "is probably not North American." Chaudoir (1876*b*: 58), who had access to Dejean's types, stated that *D. rotundicollis* "n'est qu'un individu de l'*azureus* [= *Chlaenius decipiens* (Dufour)]" and that the locality originally given was in error.

Dromius geminatus Haldeman, 1843*b*: 298. Type locality indicated as "south-eastern Pennsylvania" by Haldeman (1843*a*: 296). LeConte (1863*b*: 5) stated that this species is identical to *Dromius quadrinotatus* (Panzer) [= *Calodromius spilotus* (Illiger)] of Europe, suggesting that the type locality given was in error.

Feronia quadricollis LeConte, 1846*b*: 343. Type locality given as "Pennsylvania." LeConte (1853*a*: 235) stated that his species is identical to *Abax parallelus* Duftschmid of Europe, suggesting that the type locality was in error.

Lebia angulata Boheman, 1858: 7. Type locality given as "California." As pointed out by Horn (1872*a*: 141), the California record is unreliable and the specimen(s) probably originated from South America (see also LeConte 1869*b*: 248). Chaudoir (1871*a*: 113) transferred the species to the genus *Rhombodera* (= *Pentagonica*). Reichardt (1968: 154) listed *L. angulata* as a questionable synonym of *Pentagonica picea* Chaudoir. *Lebia goniodera* Gemminger and Harold, 1868 is a replacement name for *Lebia angulata* Boheman, 1858.

Lebia cupripennis Boheman, 1858: 7. Type locality given as "California." LeConte (1869*b*: 248) stated that *L. cupripennis* Boheman is identical to *Lebia cupripennis* Chaudoir and that Boheman's specimens did not originate from California but from Peru and Chile. *Lebia chalcoptera* Gemminger and Harold, 1868 is a replacement name for *Lebia cupripennis* Boheman, 1858.

Myosodus femoratus Motschulsky, 1845*a*: 22. Type locality given as "Sitka." Motschulsky (1850*a*: 47) listed this species from "Sitka? Irkutsk?" Tschitschérine (1902*b*: 105) suspected this taxon to be a form of *Pterostichus kamtschaticus* (Motschulsky). Csiki (1930: 681) listed the name as a valid species in section *Lyperopherus* Motschulsky and reported it from Siberia and Alaska. Lindroth (1966: 526) believed the type locality was "almost certainly false." Finally, Kryzhanovskij *et al*. (1995: 105), followed by Bousquet (2003*d*: 497), listed the name as a questionable junior synonym of *Pterostichus costatus* (Ménétriés). According to Keleinikova (1976: 197), there is one "corruptum" syntype in Motschulsky's collection (ZMMU). *Pterostichus cruralis* (Tschitschérine, 1902) is a replacement name for *P. femoratus* (Motschulsky, 1845).

Nebria macrocephala Motschulsky, 1844: 128. Type locality listed as "probablement de Sitka ou d'Ounalachka [Alaska]." Mannerheim (1853: 111), who apparently saw

syntypes of this taxon, noted that they were conspecific with specimens of *N. stigmula* Dejean, 1826 (= *N. hellwigii* Panzer, 1803). Farkač and Janata (2003: 95) listed this form as a valid species of the subgenus *Tetungonebria* Shilenkov from "Siberia." The provenance given by Motschulsky is likely incorrect.

Oodes schaumi Chaudoir, 1882: 346. Type locality given as "trouvée probablement dans la Louisiane." The holotype in ZMHB belongs to the genus *Coptocarpus* Chaudoir (Bousquet 1996*a*: 471) which is endemic to the Australian Region. The provenance originally given is obviously in error.

Pogonus minutus Dejean, 1828: 15. Type locality listed as "Amérique septentrionale." The sole specimen came from Palisot de Beauvois' collection. Chaudoir (1872*a*: 27), who owned Dejean's collection at the time, stated that the type of this species was conspecific with that of *Pogonus senegalensis* Dejean [= *Pogonus minutus* Dejean] from western Africa. The locality as originally given is in error.

Scarites attenuatus Herbst, 1806: 255. Type locality given as "Nordamerica." Putzeys (1867*b*: 110) stated that this species, which belongs to the genus *Clivina* Latreille, occurs in India and it is by error that Herbst listed it from North America.

Scarites emarginatus Herbst, 1806: 255. Type locality listed as "Nordamerica." Bänninger (1933: 116) studied the "type" of Herbst's species in ZMHB and concluded that it was conspecific with *Scarites dentatus* Andrewes of India. The locality as originally given is in error.

Scarites gagates Bonelli, 1813: 475. Type locality given as "Amérique septentrionale." Bänninger (1938: 112) stated that Bonelli's specimen(s) is conspecific with those of *Scarites indus* Olivier of the Oriental Region and that the provenance originally given was obviously incorrect.

Scarites polyphemus Herbst, 1806: 254. Type locality given as "Nordamerica." Dejean (1825: 372) listed Herbst's name in synonymy with a new species, *Scarites herbstii* Dejean, from Cape of Good Hope although Dejean's description indicates that he considered the two as distinct species. Bänninger (1938: 176), who saw Herbst's type specimen(s), listed *S. polyphemus* as a synonym of *S. herbstii* Dejean and noted that the species does not occur in North America but in South Africa.

Selenophorus beauvoisii Dejean, 1829: 98. Type locality listed as "Amérique septentrionale." Dejean's specimen(s) came from Palisot de Beauvois' collection. LeConte (1870: 403) saw the name-bearing type(s) in Paris and reported that the species was "abundant in the Antilles, but does not occur in the United States." In Blackwelder (1944: 49) the species is listed as valid and from Jamaica, with *Selenophorus aeneocupreus* Dejean as a junior synonym.

Steropus rugulosus Motschulsky, 1845*b*: 342. Type locality given as "Ounalaschka." Motschulsky's original description was based on a single specimen in ZMMU. Csiki (1930: 658) listed the taxon as a valid species in the subgenus *Cryobius* and reported it from Alaska. Based on a study of the holotype, Bousquet and Larochelle (1993: 333) concluded that it belongs to an undetermined species of *Abacetus* Dejean. The provenance originally given by Motschulsky is obviously incorrect. *Pterostichus rugatinus* Csiki, 1930 is a replacement name for *Pterostichus rugulosus* (Motschulsky, 1845).

Tachypus elongatus Motschulsky, 1850*a*: 16. Type locality given as "Sitka?" According to Lindroth (1963*b*: 204), this *Asaphidion* is "almost certainly not from N. America." A syntype of Motschulsky's species is present in ZMMU (Keleinikova 1976: 196) and a study of the specimen is needed to determine its identity.

Trechus ruficollis Van Dyke, 1926*a*: 66. Type locality given as "Lawrence, Massachusetts." Barr (1962*a*: 76-77) stated that the four original specimens of this species were likely mislabeled and Donabauer (2010*b*: 45) pointed out that they are conspecific with members of *Trechus striatulus* Putzeys, a species endemic to the western Carpathians. Because of homonymy, Van Dyke's name was first changed to *Trechus vandykei* Jeannel, 1928 (also a homonym) and subsequently to *Trechus dietrichi* Barr, 1962. The holotype (♂) is in CUIC [# 1635].

Appendix 4. List of unavailable Geadephaga names listed from North America

Many species- or genus-group names have been reported from North America but are unavailable (*nomina nuda*) because they were either not described [**DES**], or proposed as infrasubspecific entities [**INF**], or first proposed as junior synonyms and not treated as valid names or senior homonyms before 1961 [**SYN**], or proposed as generic entities after 1930 without type species designations [**TYP**], or not published [**PUB**]. All these names have no taxonomic status and are not listed in the catalogue itself. This list does not pretend to be complete.

Acupalpus minuatus Rathvon, 1869: 527. **DES**
Agonothorax anchomenoides Motschulsky, 1850*a*: 68. **DES**
Agonum aeneicolle Sturm, 1843: 23. **DES**
Agonum coracinum Sturm, 1843: 22. **DES**
Agonum formosum Sturm, 1826: 89. **DES**
Agonum foveolatum Sturm, 1826: 89. **DES**
Agonum rotundicolle Sturm, 1843: 23. **DES**
Agonum saltuum Sturm, 1826: 89. **DES**
Agonum sulcatum T.W. Harris [in Scudder], 1869: 230. **SYN**

Trechus laevigatus LeConte, 1863*b*: 14. **DES**

Appendix 5. List of nomenclatural acts included in this catalogue

New taxon

Randallius Bousquet, new subgenus. Type species: *Chlaenius purpuricollis* Randall, 1838.

New replacement name

Pterostichus amadeus Bousquet for *Pterostichus vexatus* Bousquet, 1985.

New synonymies

Agonum canadense Goulet, 1969 = *Agonum elongatulum* Haldeman, 1843.
Anisodactylus lecontei Chaudoir, 1868 = *Anisodactylus nigrita* Dejean, 1829.
Axinopalpus coloradensis Casey, 1920 = *Axinopalpus biplagiatus* (Dejean, 1825).
Axinopalpus demissus Casey, 1920 = *Axinopalpus biplagiatus* (Dejean, 1825).
Axinopalpus habilis Casey, 1920 = *Axinopalpus biplagiatus* (Dejean, 1825).
Badister laticeps Blatchley, 1910 = *Badister flavipes flavipes* LeConte, 1853.
Bembidion arizonae Lindroth, 1963 = *Bembidion durangoense* Bates, 1891.
Bembidium lapponicum C.G. Thomson, 1857 = *Bembidion lapponicum* Zetterstedt, 1828.
Brachylobus lithophilus indigaceus Casey, 1914 = *Chlaenius lithophilus* Say, 1823.
Calleida striata Casey, 1913 = *Calleida fulgida* Dejean, 1831.
Carabus franciscanus Casey, 1913 = *Carabus taedatus agassii* LeConte, 1850.
Celia impunctata Putzeys, 1867 = *Amara chalcea* Dejean, 1828.
Chlaenius frostii Carr, 1920 = *Chlaenius purpuricollis* Randall, 1838.
Chlaenius purpuricollis Randall, 1838 = *Chlaenius purpuratus* Harris, 1836.
Chlaenius sierricola Casey, 1914 = *Chlaenius sericeus* (Forster, 1771).
Chlaenius texanellus Casey, 1914 = *Chlaenius brevilabris* LeConte, 1847.
Chlaenius viridifrons Eschscholtz, 1833 = *Chlaenius sericeus* (Forster, 1771).
Clivina cordata Putzeys, 1846 = *Clivina acuducta* Haldeman, 1843.
Cryobius delicatus Casey, 1918 = *Pterostichus brevicornis brevicornis* (Kirby, 1837).
Cymindis elegans mobilensis Casey, 1920 = *Cymindis elegans* LeConte, 1846.
Darlingtonea kentuckensis lexingtoni Valentine, 1952 = *Darlingtonea kentuckensis* Valentine, 1952.
Dicaelus darlingtoni Fall, 1932 = *Dicaelus quadratus* LeConte, 1847.
Euharpalops Casey, 1924 = *Opadius* Casey, 1914.
Glanodes regressus Casey, 1914 = *Harpalus obliquus* Horn, 1880.
Goniolophus lucens Casey, 1914 = *Philodes flavilimbus* (LeConte, 1869).
Haploharpalus Schauberger, 1926 = *Opadius* Casey, 1914.
Harpalus cyrtonotoides Notman, 1919 = *Harpalus desertus* LeConte, 1859.
Harpalus subaeneus Mannerheim, 1853 = *Harpalus fulvilabris* Mannerheim, 1853.
Hypherpes alamedae Casey, 1918 = *Pterostichus vicinus* Mannerheim, 1843.
Hypherpes intectus Casey, 1918 = *Pterostichus protractus* LeConte, 1860.
Hypherpes kansanus Casey, 1918 = *Pterostichus algidus* LeConte, 1853.

Hypherpes placerensis Casey, 1918 = *Pterostichus laborans* Casey, 1913.
Hypherpes protensipennis Casey, 1918 = *Pterostichus mercedianus* (Casey, 1918).
Lebia scapularis var. *limbigera* Chaudoir, 1871 = *Lebia solea* Hentz, 1830.
Micranillodes Jeannel, 1963 = *Anillinus* Casey, 1918.
Moritapterus O. Berlov, 2000 = *Euferonia* Casey, 1918.
Neomyas lindrothi Allen, 1980 = *Myas cyanescens* Dejean, 1828.
Pharalus Casey, 1914 = *Opadius* Casey, 1914.
Platynus hornii Hausen, 1891 = *Agonum muelleri* (Herbst, 1784).
Poecilus lucublandus acomanus Casey, 1924 = *Poecilus lucublandus* (Say, 1823).
Poecilus lucublandus louisinus Casey, 1924 = *Poecilus lucublandus* (Say, 1823).
Pterostichus breviusculus Casey, 1913 = *Pterostichus congestus* (Ménétriés, 1843).
Pterostichus breviusculus mimus Casey, 1913 = *Pterostichus congestus* (Ménétriés, 1843).
Pterostichus bucolicus Casey, 1913 = *Pterostichus algidus* LeConte, 1853.
Pterostichus cuneatulus Casey, 1913 = *Pterostichus suffusus* Casey, 1913.
Pterostichus diabolus Casey, 1913 = *Pterostichus californicus* (Dejean, 1828).
Pterostichus gregalis Casey, 1913 = *Pterostichus castanipes* (Ménétriés, 1843).
Pterostichus humboldti Casey, 1913 = *Pterostichus algidus* LeConte, 1853.
Pterostichus plutonicus Casey, 1913 = *Pterostichus congestus* (Ménétriés, 1843).
Pterostichus tahoensis Casey, 1913 = *Pterostichus laborans* Casey, 1913.
Pterostichus zunianus Casey, 1913 = *Pterostichus protractus* LeConte, 1860.
Rhadine gracilenta Casey, 1913 = *Rhadine jejuna* (LeConte, 1878).
Rhadine plumasensis Casey, 1920 = *Rhadine jejuna* (LeConte, 1878).
Rhadine tenuipes Casey, 1920 = *Rhadine jejuna* (LeConte, 1878).
Selenophorus excisus LeConte, 1878 = *Selenophorus parumpunctatus* (Dejean, 1829).
Selenophorus parumpunctatus Dejean, 1829 = *Selenophorus sinuatus* (Gyllenhal, 1806).
Selenophorus perpolitus Casey, 1884 = *Athrostictus punctatulus* Putzeys, 1878.
Steniridia andrewsi barksdalei Valentine, 1936 = *Scaphinotus andrewsi darlingtoni* (Valentine, 1935).
Steniridia andrewsi montana Valentine, 1935 = *Scaphinotus andrewsii amplicollis* (Casey, 1920).
Steniridia andrewsi nantahalae Valentine, 1936 = *Scaphinotus andrewsi darlingtoni* (Valentine, 1935).
Steniridia andrewsi saludae Valentine, 1936 = *Scaphinotus andrewsi darlingtoni* (Valentine, 1935).
Steniridia ridingsi intermedia Valentine, 1935 = *Scaphinotus ridingsii ridingsii* (Bland, 1863).
Steniridia violacea carolinae Valentine, 1935 = *Scaphinotus violaceus* (LeConte, 1863).
Stenolophus abstinens Casey, 1914 = *Stenolophus incultus* Casey, 1914.
Stenolophus extensicollis Casey, 1924 = *Stenolophus cincticollis* LeConte, 1858.
Stenolophus lamprotus Bates, 1891 = *Stenolophus cincticollis* LeConte, 1858.
Stenolophus peregrinus Casey, 1914 = *Stenolophus anceps* LeConte, 1857.
Stenolophus quadripunctatus Mannerheim, 1853 = *Dicheirotrichus cognatus* (Gyllenhal, 1827).

Stenolophus remissus Casey, 1914 = *Stenolophus incultus* Casey, 1914.
Stenolophus semitinctus Casey, 1914 = *Stenolophus cincticollis* LeConte, 1858.

New status
Agonoleptus dolosus Casey, 1914 from *Agonoleptus unicolor dolosus*.

New combinations
Agonoleptus conjunctus (Say, 1823) from *Stenolophus*.
Agonoleptus dolosus Casey, 1914 from *Stenolophus*.
Agonoleptus rotundatus (LeConte, 1863) from *Stenolophus*.
Agonoleptus rotundicollis (Haldeman, 1843) from *Stenolophus*.
Agonoleptus thoracicus (Casey, 1914) from *Stenolophus*.
Agonoleptus unicolor (Dejean, 1829) from *Stenolophus*.
Anillinus affabilis (Brues, 1902) from *Anillodes*.
Anillinus depressus (Jeannel, 1963) from *Micranillodes*.
Anillinus sinuatus (Jeannel, 1963) from *Anillodes*.
Calosoma dawsoni (Dajoz, 1997) from *Callisthenes*.
Scaphinotus hoffmani (Barr, 2009) from *Maronetus*.
Scaphinotus reichlei (Barr, 2009) from *Maronetus*.

Changes in precedence
Agonum deplanatum Ménétriés, 1843 for *Agonum fallianum* (Leng, 1919).
Badister micans LeConte, 1844 for *Badister ocularis* Casey, 1920.
Ellipsoptera rubicunda Harris, 1911 for *Ellipsoptera marutha* Dow, 1911.

Index of personal names

Only personal names cited other than for taxonomic purposes are indexed.

Index of supraspecific names

Taxon and author names are formatted as follows: family-group names regarded as valid and represented in North America are in small capitals without their authors, all other family-group names are in regular type without their authors; valid genus-group names with representatives in North America are in bold, those not represented in North America are in regular type; invalid genus-group names are in italics.

Index of species-group names

Valid names are in regular type and invalid ones in italics.
