

Western Mexico

25 December 2017 – 12 January 2018

Rob Gordijn & Helen Rijkse (gordijnrob@gmail.com) - <http://www.penguinbirding.com>

Introduction

After visiting Yucatan in 2008 we decided to come back to Mexico but this time bird the Western part of the country. We hired a car in Mexico City and birded the main West Mexico sites (around the cities of Mazatlan, San Blas, Puerto Vallarta and Colima) and as an addition we extended the trip to Baja California and added some places around Mexico City. Some photos can be found here: <https://photos.app.goo.gl/ZxEHqITS8vPo7zCW2>

Itinerary

Day 1	Monday 25 Dec	Arrival in Mexico City (4am) – birding La Lerma – Drive to Tepic
Day 2	Tuesday 26 Dec	Full day birding La Noria – Night in Tepic
Day 3	Wednesday 27 Dec	Morning La Noria – birding around San Blas – Night in San Blas
Day 4	Thursday 28 Dec	Morning Tecuitata – afternoon around San Blas – Night San Blas
Day 5	Friday 29 Dec	Morning Singayta – drive to Topolobampo (overnight ferry to Baja)
Day 6	Saturday 30 Dec	Arrival at La Paz – birding Sewage ponds + afternoon & night at Barilles
Day 7	Sunday 31 Dec	Desert birding Barilles – Estero San Lucas – Sierra de la Laguna
Day 8	Monday 1 Jan	Sierra de la Laguna – afternoon 7 around La Paz
Day 9	Tuesday 2 Jan	La Paz sewage ponds & mud flats – seawatch from ferry to Topolobampo
Day 10	Wednesday 3 Jan	Drive Topolobampo to Durango highway – afternoon Tufted Jay reserve
Day 11	Thursday 4 Jan	Tufted Jay reserve – Panuco road – night at Mazatlan
Day 12	Friday 5 Jan	Los Ebanos road – drive to San Sebastian del Oeste
Day 13	Saturday 6 Jan	Morning La Bufa – drive to Botanical Gardens P. Vallarta – Night El Tuito
Day 14	Sunday 7 Jan	Bioto road – Playa de Oro rd – night at Melaque
Day 15	Monday 8 Jan	Barranca El Chonco – Microondas La Cumbre – night Ciudad Guzman
Day 16	Tuesday 9 Jan	Volcan Nieve – Night at Ciudad Guzman
Day 17	Wednesday 10 Jan	Volcan Fuego – drive to Chapala Lake
Day 18	Thursday 11 Jan	Chapala Lake – drive to Mexico City – El Cima. Night Cuernavaca
Day 19	Friday 12 Jan	Canon de Lobos – Las Maravillas – Flight back to Amsterdam (11pm)

The extension to Baja worked out very well. Birdquest adds this as an extension to their Western Mexico trip but they fly there from Mexico City), we opted instead to take the ferry so that we had no internal flights and the same rental car for the entire stretch and a chance at some seabirds (at least we hoped). Driving from Mexico City also made it possible to include some birding spots around Mexico City. If you are only birding the 'standard' West Mexico sites it is probably easier to fly to Guadalajara and do a roundtrip from there (as a two week trip).

Because we visited the area in December/January we had all the wintering US birds but bird activity (especially early morning) was very low. Most mornings it was very quiet, and some species were not vocal at all.

We focused on the endemics and other new species for our life list. Even though we tried hard we missed some species, for completeness we mention the species we did not see/tried to see/should have tried for.

- Rails (Spotted, Ridgway's, Rufous-necked Wood) – too many tourists at the boat sites in San Blas when we're there (between Christmas and New Year is holiday season).
Tried for Spotted Rail near Crocodillo rd but no luck.
- Craver's Murrelet – We checked a few coastal sites around La Paz including the site where Hottola saw one (channel between mainland and Espirito Santo), but we didn't find them. According to HBW they appear in the waters off the breeding sites in late Dec and Jan and occupy breeding sites from early Feb where then family parties depart from April to May. However Hottola saw them in July, and ebird sightings seem to be throughout the year.
- Eared Poorwill – Rancho la Noria rd, and the Volcanos are possible sites, tried at both but no response.
- White-Naped Swift – areas south of Mexico City and around Mazatlan and San Blas have a reasonable chance
- Mexican Hermit – did not visit Bajada (where there are several leks – check e-bird), and missed them in the upper parts of Tecuitata, and tried hard at the Puerto Vallarta Botanical gardens where they are quite regularly seen (check the heliconia-corner directly right near entrance)
- Amethyst-throated Hummingbird – rare but seen at La Bufa, Volcanos or south of Mexico city.
- Eared Quetzal – Possible at Chara Pinta (and some other sites along Durango Highway), but even some targeted tapping by the CBC-crew at a good site gave no response.
- Strickland's woodpecker – range restricted woodpecker we missed at La Cima/las Maravillas.
- Thick-billed Parrot – a small chance at along the Durango Highway.
- Sinaloa Martin – along Durango highway (near km 211) is a good site in summer.
- Aztec thrush – Durango, La Bufa and Volcanos are possible sites (and later we found out one was seen at Chara Pinta while we were there).
- Audubon's Oriole – La Noria rd, La Bufa, Volcanos are all possible sites.

What would we do different in hindsight.

Given the time we had for this trip it worked out pretty well, but we should have done better around San Blas with a couple of species (and done a boat trip to try for the rails). We did not see much at La Bufa, but we missed a few species that are possible there and it's a nice site. The coastal roads from San Blas via Puerto Vallarta to La Manzanilla aren't very quick though, we understand why Birdquest skips the area around Puerto Vallarta and chooses the inland roads, which is something to think about when designing an itinerary.

Other birders

We met a local private excursion at Tecuitata and a Christmas birdcount-crew at the Tufted Jay reserve.

Practicalities

Guiding

We did not use any guides, all sites can be birded independently.

Literature

For a region that is so often visited (mainly by US birders) it is surprising that there are only a few (independent) trip reports on Cloudbirders. Trip reports that we used: Sargeant (2005), Hottola (2013 - Baja), Pieplow (2015), Burne (2017 – for Mexico city) and the reports from Josh Beck and Kathi Borgman at www.birdsofpassage.wordpress.com (2013). In addition, we tried to obtain as much information as possible from eBird. We had never used eBird this heavily before in preparing a birding trip and in the end we feel there are pros and cons; lots of information about species seen at a hotspot and recent sighting, but a lack of accurate info about the exact location.

In the field we mainly used the Merlin app as a field guide, the app has excellent sound recordings, a few photos per species and good distribution maps. For northern species we also used the Sibley app. We also brought the field guide and the Where to watch by Steve Howell, due to it's weight the field guide remained in the car for the whole trip.

Travelling

We rented a Chevrolet Aveo with Europe Car; a compact car with reasonable clearance which was fine. At the Europe car counter we were charged with some extra fees and insurances contrary to the booking email we had received. At the moment of writing this report we are still waiting for an official response to the complain we filed.

However the car drove everything without problems, exception being the road up the hills into the Sierra Antonio (which was washed out so we walked the last parts) and the sandy tracks towards Punta Arena were a bit tricky.

We navigated using maps.me, but during the trip we noticed Google Maps had a bit more detail for a few tracks so we used Google Maps as well (both with offline maps!). Cuotas (toll roads) are fast and cash is accepted everywhere (except for cuotas in Mexico city, where you need an e-tag which we didn't have). Obviously Mexico city has very busy traffic, so be aware when travelling to the airport.

For the ferry to Baja we tried booking it via their website at www.bajafferries.com but their payment system didn't work on our iPad so we drove up to Mazatlan and informed about the options. Because cabins were booked up anyway we decided to take the ferry from Topolobampo (another three hours drive further north, but the boat trip is shorter and gives more day-light hours for seabird watching). When booking you need your cars registration plates, that's why we didn't book in advance. The fact that the cabins had sold out meant that you can still buy a ticket but that you have to spend the night in the general restaurant/bar area. The entertainment in the bar isn't supportive of sleeping in the bar...

Eating & Sleeping

We mostly stayed in hotels along the way, ranging from 450 – 900 pesos. Nothing was booked in advanced and hotels were mostly found driving around or using maps.me. As we remembered from last time in Mexico, the food was excellent again. Especially the little restaurants and street stalls along the road offer delicious and cheap meals with great fresh tacos + salsas and often a cold Corona on the side.

Weather

Great weather during the entire trip, only on one or two short moments there were a few raindrops but most days were sunny. Temperatures did vary a lot from place to place with the coast being quite hot (25+ Celsius) and up in the mountains and around Mexico city very cold mornings (0-5 Celsius).

Health and safety

Media coverage of drug violence probably is a deciding factor why Mexico is not visited more by tourists. Travel advices vary a little between governments. The U.S. actually upgraded their travel advisory levels while we were in country with for instance Colima and Sinaloa are given the same advisory levels as Syria and Yemen which sounds a bit extreme. We took no special precautions compared to other countries and did not feel unsafe anywhere. (Although police and army are visually present (and heavily armed) in cities and along the major highways.)

Money

ATM's are widely distributed and credit cards are excepted in some hotels, we used cash throughout.

Costs

Total costs for two for the entire 19 day trip:

- Airline tickets (direct flight Amsterdam – Mexico City): 1916 euro
- Car rental with Europe car including fees & insurances: 1252 euro
- Ferry to Baja (two persons with car): 320 euro
- Other expenses (food, accommodation, gas): 1615

Visited Sites

We took a few GPS points of sites and specific birds, those are available here <https://goo.gl/knZfGx>, and can also be requested in e.g. kml (for Google Earth), .gpx (for GPS devices and GPS software) format. Based on the available tripreports and eBird sightings we focused on the following birding sites.

San Blas area

Birding sites are well described elsewhere. We should have done a boat trip along Tovarara river for Ridgway, Rufous-Necked and Spotted rails, but didn't because of the crowds of tourists.

Rancho La Noria rd: We spent a full day and a morning in the forest because this was our first site for the trip. A day should be more than enough. On the first full day we mainly birded the road at the top next to the open fields of the rancho. Bird activity was very high here until around 10.30AM when the heat was kicking in. One of our first birds was a beautiful male bumblebee hummingbird in the tree in front of the gate. In the evening we found Cinerous owl (21.48067, -104.98882) by walking to Pieplow GPS-point (and saw Mexican Whip-poorwill before sundown). Tours seem to see the Owl lower along the road in morning? The next morning our main target was Mexican Woodnymph, based on ebird we searched for it in the road benches around (21.47608, -104.99850) where we found it directly in the corner.

Tecuitata: To access the area you first pay a small fee in the village. You can find Teodoro at first house after turnoff toward Rancho La Noria (we asked around and quickly found him). 100 before (coming from San Blas) the road up the hill starts, clearly visible at googlemaps so not hard to miss. Birding starts immediately, and we made a few stops along the way up. We parked at 21.46159, -105.15499 at the large tree and walked up further. For the first few hours of the day bird activity was high. This was the only place where we saw a group of Rosy Thrush Tanager.

Singayta: Lower Singayta track (21.57535, -105.23108), easy birding, but the mosquitos are terrible here, bring DEET. We birded a morning here but maybe due to the weather activity was low. South Singayta (21.57299, -105.23037) offers another good track through Thorn scrub. We only visited this site shortly one late afternoon, which produced our only Red-breasted Chat of the trip.

Chacalilla: We drove to Chacalilla (a place we had found on ebird). Along the way there we checked out the shrimp ponds but most were empty and dry. We birded a bit beyond Chacalilla (21.61891, -105.26546) which is similar habitat (and similar birds) as Singayta.

Marsh/Fields site: Camino Cocodrilario (21.53045, -105.21692). Another spot which looks promising on ebird but without any specific information it was hard to determine a good strategy. We drove the road up and down and easily found an Bare-throated Tiger Heron along the road here, but sadly no Spotted Rails. We then tried another road (Matanchen) through the same habitat at 21.51322, -105.20296, which is more quiet than the road to the crocodiles but only found some general open country species here.

Baja California

Sea birding: We tried to see some seabirds from the car ferry. On the trip towards Baja the boattrip was during the night, on the way back we had a couple of hours from La Paz (to approx. 60 km from land). We only saw a few Red Phalaropes and one Black-vented Shearwater. We also tried some seabirding from the coast (from beach towards Espirito Santo at 24.33693, -110.31543 where Hottola saw Craveri's Murrelets), and tried to find access to the coast near Punta Arena (but failed to find access in a similar manner like Hottola).

Around La Paz: There two sites just south of La Paz, the poo flats (sewage works) and the mudflats which are both easily reached from highway 1.

- Mudflats: exit highway 1 towards the airport, but immediately take the dirt track before the ramp begins at (24.10751, -110.36427) and follow the dirt tracks towards the coast.
- Pooflats (La Paz Sewage ponds): Enter the dirt track from highway 1 at 24.11295, -110.34928. Park near the ponds and there is some easy birding. We tried to find Beldings Yellowthroat here, but did not find them, the habitat seemed very marginal (although they should be there, see eBird). With some tapping we only found Common Yellowthroat. Obviously Estero San Jose is a better site for the Belding's.

Estero San Jose (23.04954, -109.6887): Since we failed to find Beldings Yellowthroat near the La Paz Sewageworks we drove to Estero San Jose. We parked at the GPS-point and walked the trail to the Estero and saw Beldings Yellowthroat in the first clump of reed we found. After that we birded there for a short while but didn't find it very inspiring and drove back. (It was around none and wind and sun had killed most activity.)

Sierra Antonio: See the description in the Birds of Passage article for more details (<https://goo.gl/rMHEtx>). The turnoff for the road starts at 23.7717, -110.01726. The road crosses several dry river beds and we made a few stops at sites that looked like suitable habitat (e.g. saw Baja Pymy Owl here 23.7113, -110.0074). We checked out the site on our first afternoon and returned a day later to sleep here for one night to try for the Elf and Western Screech owl and walk up to the Bairds Junco site the next morning.

As a few cars already camped out in the dry river bed at the 'campsite' we decided to drive up the road somewhat further since there's more than enough space to camp out along this road. Eventually we parked our car at 23.64013, -109.92531, just after a small river crossing. The last bit of the road we drove and especially the river crossing was about the limit of what the car could manage but we made it out. Here we slept in the car and in the evening found the owls within 100 meters of our car. In the morning we walked up the road further into the Sierra Antonio reserve. First you come across the gate at 23.63316, -109.92239. Continue the track up the hills and turn right at 23.61499, -109.91636. We found the Junco at 23.60911, -109.92307 and turned around (we did not walk further to the dilapidated building described by BoP).

Desert scrub north of Los Barrilos (23.74915, -109.7265): Very good desert scrub birding in dry river bed which we scouted on googlemaps. The dry river bed crosses the road here, so you can go either upstream or down. We birded here twice (both times downstream); one short stop in the afternoon and then again the next morning at dawn. The desert species like California Gnatcatcher, Grey Vireo, Costa's Hummingbird, Greater Roadrunner and Grey Trasher were found without much difficulty.

Durango area

We visited 4 sites in the Mazatlan/Durango area at different elevations.

Los Ebanos Road a side road of La Noria rd that start at 23.41997, -106.341; dirt track with some good thorn scrub (fenced off for cattle). Heard our only Elegant Quail along this road with quite good activity on our first visit, but our second visit was very quiet. We found Purplish-backed Jays quite common along the last part of the Cuota driving south towards La Noria rd and also after turning off crossing from the Cuota towards the libre (e.g. 23.34874, -106.43830).

Panuco Road: Birded this dirt road one late afternoon (23.40805, -105.93142), which was quite good. Military Macaw was common, we easily found Flammulated Flycatcher and saw Colima Pygmy Owl. Just after dusk, we heard Middle-American Screech owl, but it didn't show.

Chara Pinta reserve: We stayed at the cabanas in the reserve, to arrange this we contacted Samuel in advance (in Spanish) via Whatsapp at +52 16691272479. It is probably smart to confirm 2 days before. We called when we arrived and someone drove up from the village to give us a key. You have to bring your own food.

In the afternoon we birded the access road just down from the Cabanas which was very birdy (the rare Colima Warbler was one of the highlights). In the morning we explored the many trails (without descending the steep cliffs) and encountered 2+10 Tufted Jays.

Puente Baluarte: Searching through eBird we found a site for Five-striped Sparrow quite close to Palmito along the new Cuota. Just after the Puente Baluarte (driving from Mazatlan towards Durango) there's a small parking place/mirador at 23.5421, -105.75695 with some foodshacks. There's a trail down the towards some houses, which is gated off, but we asked one of the inhabitants of the houses if it was OK if we walked down and that was no problem. We easily found Lucifer Hummingbird, Lesser Roadrunner and Five-striped Sparrow along the dirt road here.

Around Puerto Vallarta

La Bufa: San Sebastian is a nice colonial town with many accommodations available. From the village the cobble-stone road continues further through great forest up until the peak at 2400 meter. The road is great, and the forest looks great and quite a few species are possible here. We made several stops, but on our morning visit the forest was very quiet for us and we didn't see much new. Best bird was a group of Transvolcanic Jays (which we later saw at the Volcanos as well).

Botanical Gardens: our main reason to visit this site was to try for Mexican Hermit which is regularly seen here. We tried especially in the Heliconia corner directly right at the entrance, but failed. San Blas Jays were common in the gardens and seen on the feeder and West Mexican Chacalaca was seen cuddling with chickens near the restaurant.

Bioto road: Very good birding through riverine forest, thorn scrub and some open country along a dusty road. We parked at the beginning of the road 20.30409, -105.37791 and walked down and back again for a few kms. Good birds included Violet-crowned Hummingbird, Military Macaw and Orange-breasted Bunting.

Around Manzanillo

AirPort Marshes (19.1537, -104.55956): we visited this overgrown marsh site for a very short time on a hot and dry afternoon. Due to cars passing at 100 kmph, limited access away from the road and no bird activity we left quickly. An early morning visit might be better.

Playa de Oro rd (19.16531, -104.495): a small track through thorn scrub. We first drove all the way to the beach (with Lucy's warbler in the first bushes near the beach and lots of tropicbirds and boobies at the offshore rock. Orange-breasted bunting was quite common along the track and we heard Flammulated Flycatcher.

Barranca El Choncho: A small forest patch along a stream along highway 80 at 19.34056, -104.72905 where San Blas Jay was easy.

Volcanos & around Colima

Around Colima: Two sites just south-east of Colima lay next to each other:

- **The Piscilla road** (19.18529, -103.6999) were we easily found Sclater's Wren and Black-chested Sparrow in the hot afternoon and later a Buff-collared nightjar at night in the small quarry.
- **Microondas La Cumbre** (19.1815, -103.69129); more sparrows and wrens and most importantly the target here in the form of a Balsas Screech Owl (19.18115, -103.6898) at night. The road up to the Micricoonas is quite busy by locals for their daily exercise. During the day we drove up with our car, and we walked up while trying to find the owl, but the gate remained open until after 20.00, so driving up is possible as well (a few cars drove down while we were searching for the owl).

Paso del Zarco rd. Following Pieplow's tripreport we tried finding Banded Quail along this road (turn off here 19.17253, -103.55541). We slowly drove the road for the last few hours of the day. We found the road relatively busy, so the chances of finding quails foraging along the road were quite small. But when we returned to the main road it was still light and we turned around for a final try and saw three birds crossing the road (just after another car had passed). We quickly drove to the stop and saw a covey of about 20 birds in grass next to the road on both sides which gave very good views.

Volcano Nieve: Our first day we drove this road up (turnoff at 19.63255, -103.52976). From about km 5 and onwards the road goes through good forest with very good activity. We had a few calling Long-tailed Wood partridges (including a party crossing the road). There was very good flock activity in the km 5-8 area, with Chestnut-sided Shrike vireo being one of the highlights. A bit further up the bigger pine trees start to be more dominant where we had our first Mexican Violetears. At km 17 you enter the National Park, we parked our car here, walked around in the national park but since most target species occur lower down we slowly returned.

Volcano Fuego: the road is slightly worse than the road up the Nieve, but the habitat very different (forest is much more open). It is longer drive to get into better habitat and we miscalculated the driving time which made that we had little time until daybreak (and no response by Eared Poorwill). We drove up until the point where the road is closed with a fence and sign that it is prohibited to drive on because of Volcanic activity. The road is more overgrown beyond the sign with higher earth banks across the road so we decided to obey the sign. We walked down the road and also made a spot to bird the road up to the Microoondas. One of the targets we had left here was the very handsome Slaty Vireo which we happily found at 19.53301, -103.53741.

Lago Zapotlan: a lake next to Ciudad Guzman (Lago Zapotlan/Ciudad Guzman marsh) – the libramiento goes around town through the edge of the lake. Although the road was closed for most traffic it was still quite noisy and dusty. The lake itself was empty and we didn't see many marsh species, but the habitat is extensive (19.7484, -103.47039).

We did not try the other two sites around the Volcanos (Floripondio road or Lago Maria area).

Lakes around Guadalajara

Presa La Vega: On the road towards the coast we made a short stop at Presa La Vega for some waterfowl at 20.68036, -103.84444. Clark's grebe was one of the species we only saw here during our trip.

Chapala Lake: On the way back to Mexico City we visited a city park in Chapala along the lake for Black-backed Oriole (20.2889, -103.18704). The park gates opens at 7:00 and before it became too busy with the locals we were able to find the oriole. We also stopped at a little park on the west side of the lake in Jocotepec where we saw some waterbirds but nothing special. Aztec Rail should be possible here.

Around Mexico City

See Adrian Burne's excellent report for more details about birding sites around Mexico City. His report was just published before we left and confirmed that the birding spots we found using eBird were indeed the best spots. We mainly add some GPS-info below as an addition to his report.

Cienega La Lerma: we tried one track through Marsh (19.23161, -99.47513) and easily found Black-pollled Yellowthroat, Marsh wren and an Aztec Rail which crossed the dike after some taping. Of course, lots of waterfowl as well around and for us a very nice morning to start our birding trip in Mexico.

La Cima: After a long drive from Chapala lake and some terrible traffic around Mexico City we raced to La Cima just before sundown and succeeded in finding the Sierra Madre Sparrows. It's a dusty track through some small arable field, before entering bunch grass with some pines. There are a few tracks through the bunch grass, but we found the sparrows on the edge between the arable fields and the bunch grass. Striped Sparrow was common as well. A day later we visited shortly to try for Stricklands Woodpecker and met the local guards from the village who 'protect' the habitat. We weren't entirely sure what to make of it.

Parque Las Maravillas: we only visited this site for two hours (13.00-15.00). We paid a small entrance fee (25 pesos) at 19.14829, -99.1663, to enter the site with a few dusty tracks through some grassy fields into forest. At the end of the left track, you can park near some picnic spots and follow a track into the forest. We first followed the right track and found Sierra Madre Sparrow here as well. The forest is quite good, but we failed to find Stricklands woodpecker.

Canon los Lobos (18.86259, -99.12328): a dirt-track turnoff from the main road. The thorn scrub was being cleared for agriculture while we were birding there, so not sure how long the site will be good, but for now quite some habitat around. Dusky Hummingbird was quickly found here and a very unexpected bonus came in the form of a Lesser Ground-Cuckoo that briefly perched at the side of the road.

Texcal: weirdest site of the trip, good thorn forest in a reserve, accessed from some back street (18.89489, -99.14235) with an abandoned swimming complex and dilapidated cabanas. We paid a small entrance fee and drove around searching for birds. We found a fruiting tree filled with birds and some cacti in the forest where we easily found Grey-breasted woodpecker.

Three sites we didn't visit:

- **Camino San Juan Tlacotenco-Coajomulco** (e.g. for hummingbirds and other forest birds)
- **Milpa Alta grasslands** (alternative site for Sierra Madre sparrow and Stricklands woodpecker).
- **UNAM Botanical Gardens:** we wanted to visit the botanical gardens as a final stop on our trip, but it closes at 16:30 (from 09.00) and we arrived too late. Good for Hooded Yellowthroat, Black-backed Oriole.

ANNOTATED SPECIES LIST

We have tried to accurately indicate the proper subspecies for all our observations, usually based on geographic locations based on the IOC World Bird List version 8.1. We tried to keep detailed notes throughout the trip but especially commoner species might not have been written down daily.

Triplist generated with iGoterra trips, see www.igoterra.com for details. In my view the best listing software/website!.

- 1 **Black-bellied Whistling Duck** *Dendrocygna autumnalis fulgens*
50 Matanchen 27.12, 10 La Paz - Sewage ponds 30.12 and 15 La Paz - Sewage ponds 2.1
- 2 **Fulvous Whistling Duck** *Dendrocygna bicolor*
250 Vega la Presa 25.12
- 3 **Cinnamon Teal** *Spatula cyanoptera septentrionalium*
5 Vega la Presa 25.12, 5 Cienega de Lerma 25.12, 10 San Blas 27.12, 10 Chacalilla 28.12, 5 La Paz - Sewage ponds 30.12, 5 Estero San Jose 31.12, 25 La Paz - Sewage ponds 2.1 and 5 en route 10.1
- 4 **Blue-winged Teal** *Spatula discors*
10 Vega la Presa 25.12, 10 Cienega de Lerma 25.12, 20 La Paz - Sewage ponds 30.12, 5 Estero San Jose 31.12, 15 La Paz - Sewage ponds 2.1, 2 Chapala lake 10.1 and 5 Chapala lake 11.1
- 5 **Northern Shoveler** *Spatula clypeata*
4 Chacalilla 28.12, 10 La Paz - Sewage ponds 30.12, 25 La Paz - Sewage ponds 2.1 and 500 en route 10.1
- 6 **Gadwall** *Mareca strepera strepera*
5 Cienega de Lerma 25.12 and 15 Chacalilla 28.12
- 7 **American Wigeon** *Mareca americana*
250 Cienega de Lerma 25.12 and 3 en route 10.1
- 8 **Mexican Duck** *Anas diazi*
4 en route 25.12 and 2 Ciudad Guzman marshes (Lago Zapotlan) 9.1
- 9 **Northern Pintail** *Anas acuta*
4 Cienega de Lerma 25.12, 10 La Paz - Sewage ponds 30.12 and 5 La Paz - Sewage ponds 2.1
- 10 **Green-winged Teal** *Anas carolinensis*
10 en route 25.12, 10 San Blas 27.12 and 1 Chapala lake 11.1
- 11 **Redhead** *Aythya americana*
1 Estero San Jose 31.12, 1 La Paz - Sewage ponds 2.1 and 5 La Paz 2.1
