White Spruce – Trembling Aspen / Prickly Rose / Wild Sarsaparilla

Épinette blanche – Peuplier faux-tremble / Rosier aciculaire / Aralie à tige nue

Subassociations: none

CNVC Alliance: CA00025 *Picea glauca* – *Abies balsamea* – *Populus tremuloides* / *Rosa acicularis* / *Aralia nudicaulis*

CNVC Group: CG0011 Central Boreal Mesic-Moist Trembling Aspen – White Spruce Forest

Source: M. McLaughlan

Type Description

Concept: CNVC00263 is a boreal mixedwood forest Association that ranges from Alberta to Manitoba. It has a closed canopy of white spruce (*Picea glauca*) and trembling aspen (*Populus tremuloides*), sometimes with paper birch (*Betula papyrifera*) as a minor associate. The moderately developed shrub layer commonly includes low abundance of prickly rose (*Rosa acicularis*) and squashberry (*Viburnum edule*), along with lower constancy of several other shrub species. The herb layer is moderately developed and commonly includes bunchberry (*Cornus canadensis*), twinflower (*Linnaea borealis*), wild lily-of-the-valley (*Maianthemum canadense*), wild sarsaparilla (*Aralia nudicaulis*), dwarf raspberry (*Rubus pubescens*), arctic sweet coltsfoot (*Petasites frigidus*), wild strawberry (*Fragaria virginiana*) and northern bedstraw (*Galium boreale*). The forest floor cover is mainly broad-leaf litter so the moss layer is sparse, with only minor cover of red-stemmed feathermoss (*Pleurozium schreberi*) and stairstep moss (*Hylocomium splendens*). CNVC00263 typically succeeds an early seral, post-fire Association. It occurs in a region with a subhumid continental boreal climate and is most frequently found on mesic, nutrient-medium sites. Disturbance type and history, as well as site conditions, affect the relative dominance of trembling aspen and white spruce in each stand of this Association.

Vegetation: CNVC00263 is a mixedwood forest Association with a closed canopy of *Picea glauca* and *Populus tremuloides*, sometimes with *Betula papyrifera* as a minor canopy associate. The shrub layer is moderately developed and typically includes low abundance of *Rosa acicularis* and *Viburnum edule*, although *Corylus cornuta* can be abundant where present. The moderately developed herb layer commonly includes *Cornus canadensis*, *Linnaea borealis*, *Maianthemum canadense*, *Aralia nudicaulis*, *Rubus pubescens*, *Petasites frigidus*, *Fragaria virginiana* and *Galium boreale*. Forest floor cover is predominantly broad-leaf litter so the moss layer is poorly developed, with only *Pleurozium schreberi* and *Hylocomium splendens* common, mainly on fallen logs and at the base of trees.

Environment: CNVC00263 occurs in a subhumid continental boreal climate where regional fire cycles are intermediate (100-270 years) or short (<100 years). Although found on a wide range of site conditions, it occurs most frequently on level sites with mesic moisture and medium nutrient status. Soils are typically deep, but textures and parent materials are variable (lacustrine, fluvial, morainal and eolian primarily). Mor humus forms are typical.

Canadian National Vegetation Classification (CNVC) Classification nationale de la végétation du Canada (CNVC)

<http://cnvc-cnvc.ca>

Picea glauca – Populus tremuloides / Rosa acicularis / Aralia nudicaulis CNVC00263

Type Description (cont'd)

Dynamics: CNVC00263 usually succeeds early seral Associations that establish after stand-replacing fire or harvesting (e.g., CNVC00094 [*Populus tremuloides / Rosa acicularis – Viburnum edule*]) but can also form the first cohort after disturbance. *Populus tremuloides* is a pioneer species that can reproduce vegetatively from root suckers following any disturbance that does not kill its roots. It also produces abundant, light, wind-dispersed seeds that can readily colonize mineral soil seedbeds exposed by disturbance. It grows rapidly in full-light conditions but is intolerant of shade so does not replace itself in a stand without further disturbance. *Picea glauca* becomes established in these stands when seeds are disseminated from nearby areas, with trees growing into the canopy and forming CNVC00263 as the *P. tremuloides* declines. If seed sources are available, *P. glauca* sometimes re-colonizes at the same time as *P. tremuloides*, but *P. glauca* grows more slowly, so it usually requires several decades to attain canopy height. *Abies balsamea* can also establish by seed and may grow into the canopy leading to CNVC00093 [*Picea glauca – Abies balsamea – Betula papyrifera – Populus tremuloides / Rosa acicularis / Aralia nudicaulis*].

Forest tent caterpillar (*Malacosoma disstria*) and *Armillaria* root disease (*Armillaria* spp.) can have significant impacts on *P. tremuloides*. Defoliation by the caterpillar can reduce growth, cause dieback and sometimes lead to mortality. *Armillaria* spp. can weaken or kill individual or small groups of trees. Canopy openings that result from insect or pathogen disturbance can promote forest succession by enhancing the growth of *Picea glauca* in the understory or, conversely, provide opportunities for *P. tremuloides* to regenerate from seeds or suckers, maintaining the mixedwood condition.

Range: CNVC00263 occurs on the boreal plains of western Canada, from Alberta to Manitoba.

Conservation Status (NatureServe)

Global Conservation Rank: no applicable rank

Related Concepts

Similar CNVC Associations:

CNVC00083 [*Picea glauca – Populus tremuloides / Lonicera involucrata*] occurs on moister, richer sites in the same range and has more *Populus balsamifera* in the overstory and *Lonicera involucrata* and *Calamagrostis canadensis* in the understory.

CNVC00090 [*Populus tremuloides – Picea glauca / Vaccinium myrtilloides / V. vitis-idaea*] occurs in Alberta on drier, poorer sites and has more *Vaccinium myrtilloides*, *Arctostaphylos uva-ursi*, *Leymus innovatus* and *V. vitis-idaea* in the understory.

CNVC00093 [*Picea glauca – Abies balsamea – Betula papyrifera – Populus tremuloides / Rosa acicularis / Aralia nudicaulis*] occurs on similar sites in the same range but has *Abies balsamea* and more *Betula papyrifera* in the overstory.

CNVC00095 [*Populus tremuloides – Picea glauca / Rosa acicularis – Viburnum edule*] occurs in Alberta on similar sites but has more *Calamagrostis canadensis*, *Chamerion angustifolium*, *Lathyrus ochroleucus* and *Leymus innovatus* in the herb layer.

CNVC00103 [*Picea glauca – Abies balsamea / Rosa acicularis / Aralia nudicaulis*] is a similar conifer Association that occurs on comparable sites in the same range. It has less *Populus tremuloides* and *Betula papyrifera* and more *Abies balsamea*.

CNVC00261 [*Populus tremuloides – Picea glauca – Picea mariana / Shepherdia canadensis*] occurs in Alberta, north of the range of CNVC00263, on comparable sites. It has more *Picea mariana* in the overstory and understory and greater *Shepherdia canadensis*, *Chamerion angustifolium* and *Vaccinium vitis-idaea* in the understory.
