Rare Plant Status Review: *Astragalus hornii* var. *hornii* Kristi Lazar (CNPS) and Roxanne Bittman (CNDDB) October 27, 2006

Background

Astragalus hornii var. hornii is an annual herb in the Fabaceae. This species is known in California from approximately 21 occurrences from Inyo, Kern, San Bernardino, and Tulare Counties. This species is also known from western Nevada. The other variety of *A. hornii*, *A. hornii* var. multifidus is only known from Baja California. *A. hornii* var. hornii is included in *The Jepson Manual. A. hornii* was once common; however, it has been subjected to eradication efforts because it is poisonous to sheep. As a result, it is now nearly eliminated from its historical range. In addition, conversion of its habitat to cultivated farming land has also contributed to the decline of this species. *A. hornii* tends to occur on plains and flats in alkali soils between 60 m and 150 m (850 m in the western Mojave Desert). This species is considered highly threatened due to the eradication efforts practiced in the early 1900's. This plant seems to still be doing well in the Bakersfield area of Kern County; however, it is considered extirpated from the San Bernardino Valley and the specimen from Inyo County was collected in 1919 and is therefore considered historical. The occurrence from Tulare County may be from adjacent Kings County; however it is difficult to conclude given the vague locality description of "Tulare Lake" given on the specimen.

A. hornii var. hornii is currently known in California from 21 occurrences (with only 5 occurrences documented in the last 50 years) and requires review for inclusion in both the CNPS Inventory and the CNDDB.

Recommended Actions

CNPS: Add to CNPS List 1B.1

CNDDB: Add to CNDDB as G2G3 / S2S3.1

Please review the draft CNPS Inventory record below, respond Yes or No on the proposal to add this species to the Inventory and CNDDB, and provide any edits/comments. If responding No, please provide supporting information.

Draft CNPS Inventory Record

Astragalus hornii A. Gray var. hornii

Fabaceae

"Horn's milkvetch"

List 1B.1

Inyo, Kern, San Bernardino*, Tulare?; Nevada

189B [Grapevine/3411888], 189C [Frazier Mtn./3411878], 214A [Arvin/3511827], 215A [Conner/3511921], 216B [Taft/3511924], 217A [Fellows/3511925], 239C [Lamont/3511838], 240C [Stevens/3511932], 240D [Gosford/3511931], 242C [Reward/3511936], 265B [Lost Hills NW/3511966], 351A [Union Wash/3611861]

Meadows and seeps, playas / lake margins, alkaline; elevation 60-850 meters.

Annual herb, blooms May-October.

Added to 1B.1 on 28-Nov-2006

Subject to eradication efforts in early 1900's because it was poisonous to sheep. Threatened by habitat alteration. See *Proceedings of the California Academy of Arts* 7: 398 (1868) for original description.
