

HASA OPTIX
Belgium

Optimise cost and quality of

Cataract Surgery

Premium Single-Use
Recyclable Instruments

Distributed by  **Rayner**

Grateful for the support from surgeons worldwide

Dr. Vincent Qin, MD, MBA, MPH, FEBO
Ophthalmology & Eye Surgery Consultant

“Since using the HASA OPTIX Cataract Sets, I never have to worry about missing or broken instruments. I can fully perform cataract surgery in the best material conditions.”

Dr. Eric Donnenfeld
Clinical Professor of Ophthalmology NYU at OCLI

“These instruments are basically an extension of my hands, in the patient’s eye, and I feel a level of comfort that I haven’t felt otherwise.”

Dr. Ivo Guber, MD
Owner & Medical Director bei augenchirurgie.ch
Winterthur, Zurich, Switzerland

“Excellent quality of instruments for unbeatable price.”

Ms. Masara Laginaf
Consultant & Ophthalmic Surgeon Specialized in Cornea, cataract and Refractive Surgery at OCL Vision London (UK)

“Created with a strong ethical position to improve sustainability in the field of ophthalmology whilst providing streamlined solutions and beautifully engineered instruments.”

A genuine desire to empower all those involved in ophthalmic surgery

Hospitals, surgical centres, and ophthalmic clinics face the challenge of working profitably whilst maintaining high levels of patient care.

HASA OPTIX exists to develop products that offer all stakeholders involved in ophthalmic surgery solutions that contribute to a more cost-controlled work environment, as well as improved quality of care.

We are passionate about eliminating cross contamination and reducing risk management whilst increasing efficiency, convenience and reliability. Our innovative solution provides total peace of mind, confidence, and satisfaction.

Size specifications are stated as accurately as possible. Tip drawings are enlarged to show tip detail. Surgical instruments shown in this catalogue are made of stainless steel, unless otherwise indicated.

Why choose HASA OPTIX surgical instruments?

HASA OPTIX is a Belgian medical device company that manufactures a wide range of premium recyclable single-use instruments. Through partnership with HASA OPTIX, Rayner is pleased to offer surgeons a comprehensive portfolio of pre-sterilised instruments and sets which meet high quality material standards.

Premium quality

Premium quality disposable recyclable instruments offering the same constant quality as reusable instruments but with increased convenience and efficiency.

Cost control

HASA OPTIX instruments provide an excellent procurement solution by aiding the precise calculation of surgery costs.

Environmentally friendly

Supplied in recyclable pre-packed pouches relevant to each ophthalmic procedure, helping to reduce waste and environmental impact.

Simplicity

Pre-packed pouches help reduce the number of SKUs, contributing towards a simpler, more efficient repository solution.

Peace of mind

Innovative solutions that provide total peace of mind ensuring the correct surgical instruments are easily accessible.

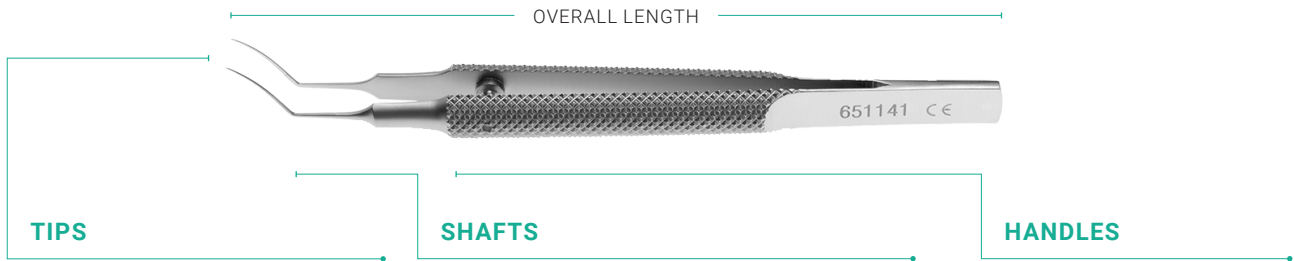

Infection control

Single use and pre-sterilised instruments ensure all surgeons can be confident with their patient safety of care.

A **sustainable and innovative** solution with **precision performance**, that contributes to a **better cost-controlled environment** and **increased quality of patient care**.

Instrument Specifications

Capsulorhexis Forcep

Pointed
The sharp tip of this instrument acts as a cystotome and allows for a firm grasp of the capsule.

Micro-pointed/Angled jaws
This instrument has micro jaws on a 23 or 25G platform, which can be operated using a squeeze handle.

Angled - Fine, angled shafts with an iris stop that allow for easy movement in the anterior chamber. It can be easily manipulated through a 1.8mm incision.

Curved - This instrument has a vaulted shaft that contours the shape of the anterior capsule.

Cross Action/Short Bridge - These spring handle forceps have a short bridge cross action mechanism.

Cross Action/Long Bridge - These spring handle forceps have a long bridge cross action mechanism.

23G/25G - The small diameter shaft of this instrument allows for usage through a side port.

Flat - This instrument features a flat handle for good manual grip and control of the tip, but may require significant hand, wrist, or forearm movement.

Round - This instrument has ability to rotate the handle that allows for micro control of the tip with minimum movement by rolling between the fingers.

Flat Cross Action - This forcep opens and closes tips by asserting and releasing pressure, offering micro control with a flat handle.

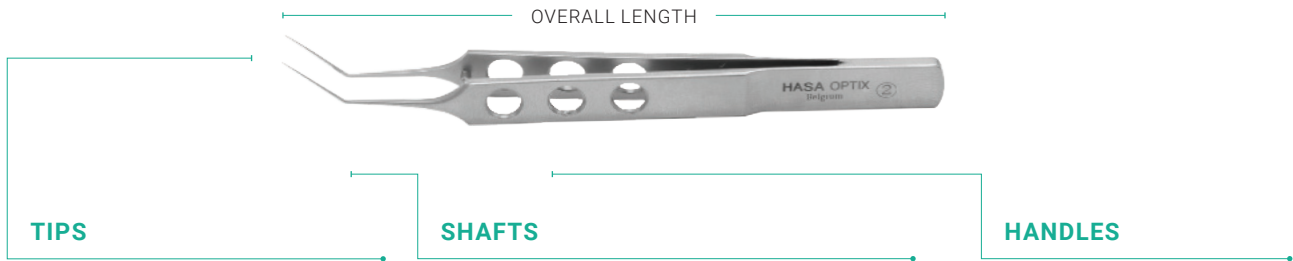

Round Cross Action - This forcep opens and closes tips by asserting and releasing pressure, offering micro control with a round handle.

23G/25 Gauge - The squeeze handle of this instrument provides delicate, tactile feedback and enables excellent control.

Instrument Specifications

Anatomy Forcep

Plain - The general purpose of this forcep is to remove sutures.

Serrated - This forcep is designed for atraumatic grasping of tissue.

Platform - This forcep is used for holding, tying, and removing sutures.

Notched - This forcep is designed for atraumatic grasping and holding of tissue, as well as tying sutures using the platform.

Toothed - This forcep is designed for grasping and holding tissue, including muscle, as well as tying sutures using the platform.

Straight

Curved

Angled

Colibri - This forcep is designed to enhance visualization and positioning of the tip.

Cross-action - This forcep is designed for maximum opening of the tip within a small incision.

Flat - This instrument features a flat handle for good manual grip and control of the tip, but may require significant hand, wrist, or forearm movement.

Round - This instrument has ability to rotate the handle that allows for micro control of the tip with minimum movement by rolling between the fingers.

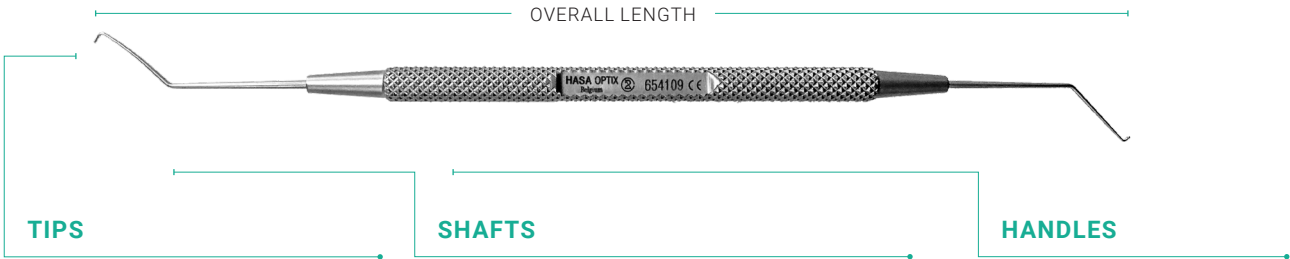

Cross Action - This forcep opens and closes tips by asserting and releasing pressure, offering micro control.

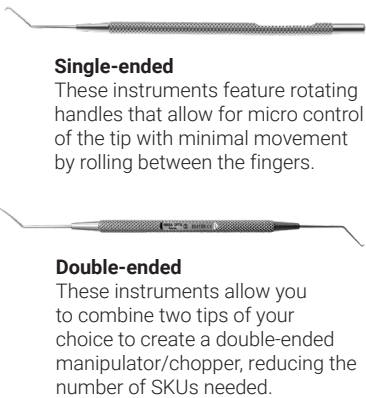

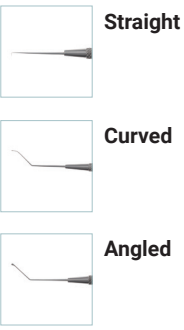

Castroviejo - This forcep is designed for good manual grip and control of the tip, but may require significant hand, wrist, or forearm movement.

Instrument Specifications

Manipulator

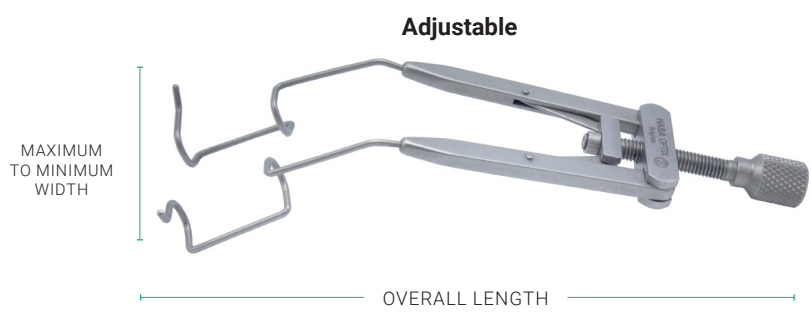

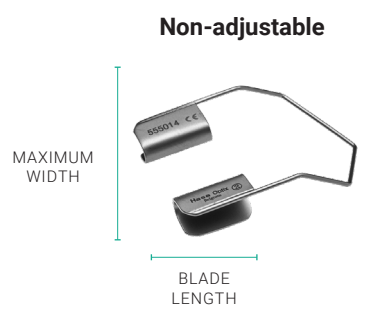

A wide range of tips are available, from manipulators to choppers.

Single-ended
These instruments feature rotating handles that allow for micro control of the tip with minimal movement by rolling between the fingers.

Double-ended
These instruments allow you to combine two tips of your choice to create a double-ended manipulator/chopper, reducing the number of SKUs needed.

Anatomy Speculums

BLADE

-  **Open** - Allows good access for instruments e.g Phaco handpiece that might otherwise rest on the top bar of a closed blade making surgery difficult
-  **Closed** - Good hold on eyelids for procedures where the top bar does not cause a problem e.g trabeculectomy or temporal incision Phaco.
-  **V-shaped** - Open wire blades are designed to retain the surgical drape under the eyelids.
-  **Solid** - Holds eyelids securely.

MODEL

- Size** - Different sizes are available (neonatal / infants/adults).
- Model** - Available in adjustable and non adjustable models.
- Approach** - Specific models are available for temporal or nasal approaches.
