

# DEALER WORKBOOK

---

2018/2019

---

# HIGHTECH MADE WHERE WE LIVE AND SKI. BAVARIA, GERMANY.

---

True passion lies at the heart of every great company. At the heart of Völkl lies a true passion for the sport of skiing, as well as a true passion for engineering. The goal of everyone at Völkl is to create a never ending story about innovation and inspiration in the world of skiing.

In the beginning, we set out as avid engineers driven by German engineering virtues: accuracy, attention to detail, perseverance, determination, ambition. Ever since, these virtues have run through every single product we make. They have been passed down from generation to generation since 1923.

To us, the label "Made in Germany" isn't just a promise but a responsibility. We work hard to honor it every day.

At our main factory in Straubing, one of the world's most technologically advanced ski plants, hand crafting, engineering acumen, and high-tech production equipment come together to produce some of the finest skis in the world: incredibly precise, forward-thinking, and of unrivaled quality.

We are proud of our engineering skills, but our mission doesn't end here. Ultimately, we are skiers. We believe skiing is the greatest sport in the world. We want to allow people to fully engage with the power of skiing. On skis, we feel transformed – literally and figuratively, we distance ourselves from the confines of our stress-filled lives. Skis bring us to our happy place, whether that is adrenaline, competition, or just plain freedom. No matter if that is neck deep in powder, upside down over a kicker, or on the sun deck, skiing is our lifeblood. We put so much energy into it because we get so much more of it back.

The 2018/19 collection is refined and tuned with fascinating new products and technologies, and over a dozen new models sure to amaze and thrill skiers everywhere.

# NEW FOR 2018 2019

**NEW**

## M5 MANTRA

The iconic Mantra was the first ski of its kind to master everything from powder to ice with ease - introducing the next all mountain benchmark, the M5 Mantra. The key innovation on the 5th generation Mantra is a new way of arranging the metal layers called Titanal Frame: the metal sections follow the ski shape in the tip and tail, with an added carbon inlay in the tip. This intricate construction is lighter in weight, with the same damping properties as a full sheet of metal. Its new shape is 134-96-117mm, with a tightened radius of 19.8m in size 177. Tip and Tail Rocker design with camber underfoot, and Full Sidewall construction round out the setup. Yet another new performance standard for all mountain freeride skis.

TIP & TAIL  
ROCKER

**NEW**

## SECRET

The new Secret features the same Titanal Frame Construction found in the new M5 Mantra, but in a narrower 130-92-113mm shape that is designed to deliver just the right blend of float in softer snow with tenacious edge grip on harder snow. With Tip and Tail Rocker and camber underfoot, our Full Sidewall construction, and a carbon inlay in the tip, the new Secret delivers an unparalleled level of all mountain performance no matter what snow conditions the mountain hands out.

TIP & TAIL  
ROCKER

**NEW**

## DEACON 76

The new Deacon 76 is one of 4 new frontside models intended to make firm and even icy conditions more fun. Völkl engineers have developed a 3D.Glass sandwich construction with two layers of fiberglass - one that wraps around the base and extends over the sidewalls, and one that sits just below the metal layer on top. This setup provides more power while allowing a smooth, progressive flex down the entire length of the ski. Combined with a full wood core, vertical sidewall construction and two sheets of titanal, the new Deacon models breathe new life into the frontside ski category.

XTD  
TIP & TAIL  
ROCKER

# TITANAL FRAME

The new M5 Mantra and Secret models feature a new construction called Titanal Frame that assures the most efficient and lively all mountain freeride performance. By shaping the top layer of metal in just the right way, Völkl engineers created a lighter weight design that maintains stability and adds liveliness and energy.

## VÖLKL ROCKER DESIGNS

// When a rockered ski is going straight ahead, there is less pressure on the tips and tails, making it significantly easier to maneuver.

// As the ski goes on edge, its effective edge length extends – the higher the edge angle, the more effective and engaged the edge becomes. The edge contact grows as needed, automatically engaging more in steep terrain.

// To further enhance performance, Völkl harmonizes the flex, sidecut, and exact rocker profile of each ski model to achieve the desired on-snow feel.

// Because rocker allows a significantly smoother transition to the edge, and turns are significantly easier to initiate, skiers of all abilities can benefit from it.

### Full Rocker

*The ski is bent at a constant curvature along its entire length*

### XTD Tip & Tail Rocker

*Unique rocker shape, longer rocker profile compared to traditional tip & tail rocker, very short cambered profile under foot, stiffer shovel and softer midbody*

### Tip & Tail Rocker

*Bends up only in the shovel and tail zones, with a camber shape in the middle*

### Tip Rocker

*Only bends upwards in the shovel area, while the middle and tail of the ski feature a camber shape*

# V-WERKS

More performance AND less weight? Impossible. Right? No. Vökl's high tech V-WERKS series proves it. This custom series focuses on no-holds-barred, revolutionary designs that trim every possible gram, with performance enhancing materials like carbon fiber and Titanal. Trailblazing engineering and cutting-edge production methods result in extremely lightweight skis with world-class

performance capabilities, without sacrificing even a hint of stability or durability. Top end 3D.RIDGE constructions with ultra-slim designs translate into fantastic edge grip and lightning-fast responsiveness.

## ICE.OFF TOPSHEET

The next step in weight reduction, ICE.OFF offers the latest topsheet technology in touring skis. Its unique 3D surface structure and material composition avoid icing, causing snow to simply slide off the topsheet. This leads to a drastic reduction - up to 20 to 30 percent-of the weight during use. In addition,

white colorations add to the anti-icing effect. Lighter skis prevent fatigue and offer enhanced performance on long, steep ascents.

// unique surface structure avoids icing  
// effective weight reduction (app. 20 to 30%)

## VÖKL'S FOCUS ON LIGHT WEIGHT

We started down the path of futuristic, lightweight ski constructions several years ago with our V-WERKS technology. Since first hitting the market, these award-winning models have served as a benchmark for the entire industry in lightweight design and performance. They attest to VÖKL's leading role in the area of weight optimization, performance, and efficiency.

On models in every series within the line, the skier will benefit from Vökl's lightweight constructions on several levels:

// Performance and sensitivity are enhanced, with a more lively, playful feel  
// Less exertion and reduced fatigue  
// Improved handling, skier reaction, control, and self confidence

## BASES

To ensure maximum speed, agility and durability, Vökl uses only high quality base materials. More than 90% of our ski collection features sintered P-Tex bases. They guarantee excellent gliding characteristics due to a high level of wax absorption, abrasion resistance,

and durability. Depending on intended use and price point, we use a variety of bases with varying molecular weights: from P-Tex 750 to P-Tex 2100, to P-Tex 4500, the highest molecular weight available, straight from the World Cup.

## WOOD CORES

The core is at the heart of every ski, and is a major factor in determining its flex, stability, liveliness, and/or playfulness. Each model features a unique core that is individually tuned to its intended end use. We choose amongst a broad range of woods, composites, and hybrids, based on a variety of desired characteristics. Weight optimization is also an important factor – many of our wood cores target weight savings to give the skier more comfort, maneuverability, and agility.

## PERFECT SETUP

VÖKL'S PERFECT SETUP approach is an exhaustive process of optimizing all elements of ski design, paying particular attention to how they work together. Each model has a desired set of skiing characteristics, and the PERFECT SETUP concept allows our engineers to target the perfect ski construction, drawing higher performance out of every model. This process lays the groundwork for the stable, durable, yet lively and playful performance for which Vökl skis have been known for decades. A list of considerations:

// MATERIAL SELECTION  
// TECHNOLOGY/CONSTRUCTION  
// LENGTH/RADIUS  
// FLEX  
// CORE  
// BINDINGS SYSTEM  
// ROCKER  
// SIDECUT

# 3D.GLASS

Vökl's 3D. GLASS constructions are further refined for 18/19. The enhanced designs can be found on the new Racetiger and Deacon models.

**1) 3D.GLASS IS INTEGRATED IN THE TIP AND TAIL OF THE SKI**

// flat glass section under the binding making the mid-body softer  
// variable turn shape at any speed

**2) GLASS ABOVE THE SIDEWALL**

// provides additional support for superior edge grip on ice and hard snow

**3) VERTICAL GLASS IN TIP & TAIL**

// more pop for faster edge to edge changes

# UVO.3D

**1) HORIZONTAL DAMPING FUNCTION**

// builds tip pressure earlier  
// quicker turn initiation

**2) THE ENHANCED VERTICAL FUNCTION INCREASES DAMPING EFFECT**

// significantly reduced vibration amplitudes  
// a new level of reliability and confidence to lay the ski over!
