

Chemical and morphological study of a putative hybrid between *Luzuriaga radicans* and *L. polyphylla* (Monocotyledoneae: Luzuriagaceae)

Teillier, Sebastián

Urzúa, Alejandro

Niemeyer, Hermann M.

Patterns of headspace volatiles and flavonoids extracts from flowers of sympatric populations of *Luzuriaga radicans* Ruiz et Pav. (Monocotyledoneae: Luzuriagaceae), *L. polyphylla* (Hook.)

J.FMacbr., and a *Luzuriaga* taxon which presented some morphological characters of one of the species and other characters of the other species, suggest that this latter taxon is a hybrid between the two accepted species. © 2008 Taylor & Francis Group, LLC.
