

Distribution of Recent
Benthic Foraminifera off the
Pacific Coast of
Mexico and Central America

STEPHEN J. CULVER
and
MARTIN A. BUZAS

SERIES PUBLICATIONS OF THE SMITHSONIAN INSTITUTION

Emphasis upon publication as a means of "diffusing knowledge" was expressed by the first Secretary of the Smithsonian. In his formal plan for the Institution, Joseph Henry outlined a program that included the following statement: "It is proposed to publish a series of reports, giving an account of the new discoveries in science, and of the changes made from year to year in all branches of knowledge." This theme of basic research has been adhered to through the years by thousands of titles issued in series publications under the Smithsonian imprint, commencing with *Smithsonian Contributions to Knowledge* in 1848 and continuing with the following active series:

Smithsonian Contributions to Anthropology
Smithsonian Contributions to Astrophysics
Smithsonian Contributions to Botany
Smithsonian Contributions to the Earth Sciences
Smithsonian Contributions to the Marine Sciences
Smithsonian Contributions to Paleobiology
Smithsonian Contributions to Zoology
Smithsonian Folklife Studies
Smithsonian Studies in Air and Space
Smithsonian Studies in History and Technology

In these series, the Institution publishes small papers and full-scale monographs that report the research and collections of its various museums and bureaux or of professional colleagues in the world of science and scholarship. The publications are distributed by mailing lists to libraries, universities, and similar institutions throughout the world.

Papers or monographs submitted for series publication are received by the Smithsonian Institution Press, subject to its own review for format and style, only through departments of the various Smithsonian museums or bureaux, where the manuscripts are given substantive review. Press requirements for manuscript and art preparation are outlined on the inside back cover.

ABSTRACT

Culver, Stephen J., and Martin A. Buzas. Distribution of Recent Benthic Foraminifera off the Pacific Coast of Mexico and Central America. *Smithsonian Contributions to the Marine Sciences*, number 30, 184 pages, 115 figures, 1987.—A computer file of all published distributional data (presence or absence) on the recent, living and dead benthic foraminifera off the Mexican and Central American Pacific coast was constructed from 21 papers published since 1896. Manipulation of this file produced 5 catalogs and 115 maps.

Catalog 1 lists alphabetically species names with publication and locality information as recorded in the literature (i.e., unsynonymized). Catalog 2 lists synonymized species names with publication and locality information. Catalogs 3 and 4 list alphabetically all unsynonymized and synonymized species names, respectively. Catalog 5 lists synonymized names by increasing latitude and longitude.

Over the past 90 years, 447 names have been used to record benthic foraminifera in the study area. Through synonymization, this number was reduced to 377, of which 114 occur at 5 or more of the 119 sample localities. Computer-generated maps were drawn for the 114 most commonly recorded species.

Species were grouped by depth and geographic (latitudinal) distribution through visual examination of the maps. Thirty-two species are restricted to depths of less than 200 m, 22 occur mainly at depths of less than 2000 m, 22 at depths of greater than 200 m, 5 at depths of greater than 2000 m, 11 are found between 200 and 2000 m, and 22 are ubiquitous with depth.

Latitudinally, the species are grouped into three categories. Sixty-six species are latitudinally ubiquitous in the study area, 47 species are found only to the south of Puerto Angel (16°N) and one species is found only north of Puerto Angel. Although the majority of species are ubiquitous, a faunal break is probably indicated by the species restricted to the south of Puerto Angel.

OFFICIAL PUBLICATION DATE is handstamped in a limited number of initial copies and is recorded in the Institution's annual report, *Smithsonian Year*. SERIES COVER DESIGN: Seascape along the Atlantic coast of eastern North America.

Distribution of Recent Benthic Foraminifera off the Pacific Coast of Mexico and Central America

*Stephen J. Culver
and Martin A. Buzas*

Introduction

One hundred and fifty-nine papers concerning recent benthic foraminifera off the North American Pacific coast from Alaska to Panama were published between 1896 and 1980. This paper represents the first attempt to synthesize the Mexican and Central American data and is the sixth of a series including and summarizing all published data on the distribution of recent benthic foraminifera around North America. All published distributional data for the east coast is presented in Culver and Buzas (1980) and the results of subsequent analysis are given in Buzas and Culver (1980), Culver and Buzas (1981a, 1981b, 1982a). Gulf of Mexico data are given in Culver and Buzas (1981c, 1981d, 1982a, 1983). Distribution data for the Caribbean region are presented in Culver and Buzas (1982b), and the west coast, from Baja to Alaska is the subject of Culver and Buzas (1985, 1986).

The work presented here can be divided into three main parts. First, there is a reference section consisting of the papers used in compiling the presence-absence data utilized by this study and additional references that are cited in this paper. Second, there are five computer-generated catalogs listing every species recorded in publications between 1896 and 1980 on the Mexican and Central American Pacific coast. Third, there are computer-generated maps of the 114 most commonly recorded species, together with a map showing all sample localities in the study area. Explanatory notes for the catalogs and maps can be found later in this introduction.

Following the format of our studies of the benthic foraminifera off the east coast of North America, the Gulf of Mexico, the Caribbean, and the west coast of North America, we have included a key to our concept of each of the 114 most commonly recorded species.

METHODS.—The computerization methods utilized in this work were the same as those described in detail in Culver and Buzas (1980). Of the 159 papers published on the benthic foraminifera of the North American Pacific continental margin, 21 contained data in a form enabling its incorporation in this study. The name of one or more species (living or dead) and the locality where it was found was all that was required. The information typed into the basic compilation file consisted of (1) author of publication, (2) date of publication, (3) generic name used in publication, (4) specific name used in publication, (5) locality, (6) latitude and longitude (see Catalog 1).

When numerous sample sites of a particular study were in very close proximity they were summarized by a single or several representative localities. Thus, all species recorded in the sampled area were considered to have been found at the representative points. In a very few cases, where no detailed locality information was given, a point was arbitrarily chosen to be representative for the records in question. Modification and sorting of this basic file resulted in the production of 5 catalogs which are described below. The 115 maps in this publication are also computer-generated and were drawn on a Calcomp Plotter.

THE CATALOGS.—Five catalogs are included in this section and are designed to enable the reader to have rapid access to all published distributional data on recent benthic foraminifera off the Pacific margin of Mexico and Central America. Catalog 1 lists (alphabetically by binomen) all the records of every species recorded in the study area and also includes publication and locality information. This catalog

Stephen J. Culver and Martin A. Buzas, Department of Geological Sciences, Old Dominion University, Norfolk, Virginia 23508; and Department of Paleobiology, Smithsonian Institution, Washington, D.C. 20560.

contains around 1600 entries and over 8000 pieces of information. Catalog 2 is the synonymized version of Catalog 1. This list is identical to Catalog 1, except that generic and specific names have been changed where necessary. To aid referral between Catalogs 1 and 2, line numbers starting at 10001 are included at the left-hand margin of the files. Thus, for example, it can be seen that *Dorothia scabra* (Catalog 2, line 10808) was originally recorded (Cushman, 1911) as *Gaudyrina scabra* (Catalog 1, line 10808).

Catalogs 3 and 4 aid rapid use of the first two catalogs. Catalog 3 is an alphabetized list of the 447 taxa that have been recorded on the Mexican and Central American Pacific continental margin. Catalog 4 lists alphabetically the 377 species recorded in this area after synonymization achieved by reference to published illustrations and specimens lodged in the USNM collections (National Museum of Natural History, Smithsonian Institution) and the British Museum (Natural History) collections. Catalogs 3 and 4, therefore, are derived directly from Catalogs 1 and 2, respectively.

Catalog 5 is intended for the researcher interested in specific areas. This catalog contains alphabetized lists of synonymized species for each locality (localities are listed by increasing latitude and longitude). If, in the case of synonymized species, the investigator questions the generic or specific name used, he can refer to Catalogs 1 and 2 to find the original name used by the author of the publication in which that species was recorded.

THE MAPS.—One hundred and fifteen computer-generated maps are included in this section and, like the catalogs, are provided as a reference tool for use in distributional studies of recent benthic foraminifera. Figure 1 illustrates the distribution of all the 119 sample localities included in this study. The 183 m and 1830 m submarine contours roughly approximate the edge of the continental shelf and the bottom of the continental slope, respectively. The distribution of the sample localities must be taken into account when examining the maps illustrating the distributions of species.

Figures 2–115 are computer-generated maps of the 114 most commonly recorded species. These are species that have been recorded 5 times or more, or at approximately 4% or more of the 119 localities; the figure of 4% was chosen arbitrarily to conform with the studies of the Atlantic continental margin of North America, the Gulf of Mexico, the Caribbean, and the Pacific continental margin north of Baja, (Culver and Buzas, 1980; 1981c; 1982b; 1985; 1986). The maps are arranged alphabetically by genera and by species within each genus.

ACKNOWLEDGMENTS.—We thank Dante Piacesi and Ken McCormick for their considerable efforts in the computer production of this work. J. Ashmore, D.A. Diddi, A. Lanham, S. Richardson, and L. Smith contributed invaluable library research and secretarial services. Dr. C.G. Adams

kindly allowed access to British Museum (Natural History) collections.

Discussion

The main purpose of this publication is to present all the published distributional data of recent benthic foraminifera from the Pacific continental margin off Mexico and Central America. A total of 447 taxa have been recorded in this region from 119 localities. Synonymization reduced this number to 377. Of these 377 species, 114 occurred at 5 or more of the 119 localities; that is, 30% of the species occur at 4% or more of the sample localities.

Distributional data have been summarized by tabulation. Table 1 is a synopsis of depth distribution and Table 2 summarizes latitudinal distribution. Depth distribution of the 114 most commonly recorded species was determined through visual inspection of the maps.

The narrow nature of the continental margin and the scale of this study result in the gross depth classification of Table 1. This table is intended as a guide to depth distribution of species and the reader is encouraged to peruse the maps for the taxa of interest. The paucity of data for this section of the continental margin, in comparison to other studies in this series, indicates the degree of reliability that should be attributed to Table 1.

The distribution of the species defines the categories that are overlapping. Thirty-two species are restricted to shelf depths (<200 m), 22 species occur between 0 and 2000 m, 11 species are restricted to the slope (200–2000 m), 22 species range from 200 m to abyssal depths, and 5 species are restricted to the abyss. Twenty-two species have a ubiquitous depth distribution, ranging from 200 to more than 2000 m.

Geographic distribution of recent benthic foraminifera is the subject of Table 2. Visual examination of Figures 2–115 resulted in three categories of distribution. Again, the distribution of the species defines the categories. Table 2 is based solely on the data presented in this study and does not take into account distributional data to the north or south of the area covered by this publication. Again, the reader is encouraged to use Table 2 as a guide, keeping in mind the low density of samples.

Sixty-six species are ubiquitous in the study area ranging from central Mexico (22°N) to the Gulf of Panama. Forty-seven species are restricted to the southern part of the study area (south of 16°N, Puerto Angel), while only one species, *Bathysiphon filiformis*, is restricted to the continental margin north of 16°N. Some of these distributions are artifacts of the poor sampling framework and should be used with great care. For example, several of the species restricted to the south of Puerto Angel in this study are known to occur off Baja California and California (Culver and Buzas, 1986). Similarly, *Bathysiphon filiformis*, a deep-sea taxon found

around the world, almost certainly lives in the southern part of the study area. Despite these reservations, there appears to be a faunal break in the region of Puerto Angel (16°N). This corresponds with the boundary between the Mexican and Panamanian provinces recognized by Brusca and Wallerstein (1979).

Summary

1. All published data on the distribution of recent benthic foraminifera off the Mexican and Central American Pacific continental margin is presented in the form of 5 catalogs and 115 maps.

2. 447 taxa have been recorded in the area of study.

3. The taxa have been reduced to 377 by synonymization.

4. Of the 377 synonymized species, 114 occur at 5 or more of the sample locations; that is, 30% of the species occur at 4% or more of the 119 sample localities.

5. Five groups of commonly recorded species character-

ize overlapping depth zones. Thirty-two species are restricted to the continental shelf (<200 m), 11 are restricted to the continental slope (200 to 2000 m) and 5 are found only on the abyssal plain (>2000 m). Twenty-two species are found between 0 and 2000 m, and 22 species are found from 200 m down to abyssal depths.

6. Another group, containing 22 species, is ubiquitous, occurring at neritic, bathyal, and abyssal depths.

7. Three categories of biogeographic (latitudinal) patterns are recognizable. Forty-seven species are restricted to the south and one species is restricted to the north of Puerto Angel (16°N). The majority (66) of commonly recorded species are latitudinally ubiquitous in the area of study.

8. A faunal break is apparent at Puerto Angel (16°N).

Key to the Species on the Maps

Following Culver and Buzas (1980; 1981c; 1982b; 1985; 1986) we list below a key to our concept of the 114 most commonly recorded species on the continental margin off

TABLE 2.—Geographic distribution.

Mexico and Central America. Genera are listed alphabetically as are the species within each genus. Under each species, the reference or references are given where the reader can find published illustrations that adequately convey our concept of each of the commonly recorded species in this study. Many of the 114 species are also included in the keys to commonly recorded species for the east coast of North America, the Gulf of Mexico, the Caribbean and the west coast, north of Baja (Culver and Buzas, 1980; 1981c; 1982b; 1985; 1986): the references given here for these species are generally the same.

- Cibicides mckannai* Galloway and Wissler: Bergen and O'Neil, 1979:1289, pl. 3: figs. 8–10 [as *Cibicides* aff. *mckannai*].
- Cibicides pseudoungerianus* (Cushman): Cushman, 1931:123, pl. 22: figs. 3–7 [as *Cibicides pseudoungeriana*].
- Discorbis versiformis* Bandy: Bandy, 1953:179, pl. 22: fig. 5 [as *Rotalia versiformis*].
- Dyocibicides biserialis* Cushman and Valentine: Todd and Low, 1967:A35, pl. 5: fig. 3.
- Elphidium spinatum* Cushman and Valentine: Lankford and Phleger, 1973:118, pl. 3: fig. 23.
- Elphidium tumidum* Natland: Natland, 1938:144, pl. 5: figs. 5, 6.
- Epistominella bradyana* (Cushman): Cushman, 1927:165, pl. 5: figs. 11–13 [as *Pulvinulinella bradyana*].
- Epistominella exigua* (Brady): Phleger and Parker, 1951:28, pl. 15: figs. 6, 7 [as *Pseudoparrella exigua*].
- Epistominella obesa* Bandy and Arnal: Bandy and Arnal, 1957a:56, pl. 7: fig. 8a–c.
- Epistominella pacifica* (Cushman): Todd and Low, 1967:A32, pl. 5: fig. 18.
- Epistominella smithi* (Stewart and Stewart): Stewart and Stewart, 1930:70, pl. 9: fig. 4a–c [as *Pulvinulinella smithi*].
- Eponides antillarum* (d'Orbigny): Cushman, 1931:42, pl. 9: fig. 2a,c.
- Eponides tenera* Brady: Cushman, 1927:163, pl. 5: figs. 6, 7.
- Eponides turgidus* Phleger and Parker: Phleger and Parker, 1951:22, pl. 11: fig. 9a,b.
- Fursenkoina bramlettei* (Galloway and Morey): Crouch, 1952:828, pl. 2: fig. 12 [as *Virgulina bramlettei*].
- Fursenkoina punctata* (d'Orbigny): Parker, 1954:513, pl. 7: fig. 11 [as *Virgulina punctata*].
- Fursenkoina sandiegoensis* Uchio: Uchio, 1960:63, pl. 6: figs. 17, 18 [as *Virgulina sandiegoensis*].
- Fursenkoina schreibersiana* (Czjek): Cushman, 1922:117, pl. 26: fig. 6 [as *Virgulina schreibersiana*].
- Gaudryina atlantica* (Bailey): Cushman, 1922:70, pl. 13: figs. 1–3.
- Gaudryina excolata* Cushman: Smith 1964:B28, pl. 1: fig. 9.
- Globobulimina pacifica* Cushman: Bergen and O'Neil, 1979:1290, pl. 6: fig. 9.
- Goesella flintii* Cushman: Cushman and McCulloch, 1939:98, pl. 10: figs. 4–9.
- Hanzawaia nitidula* (Bandy): Bandy, 1953:178, pl. 22: fig. 3 [as *Cibicidina basiloba* var. *nitidula*]; Lankford and Phleger, 1973:122, pl. 6: fig. 19.
- Haplophragmoides columbiensis* Cushman: Cushman and McCulloch, 1939:72, pl. 5: figs. 8–10 [as *Haplophragmoides columbiense*].
- Haplophragmoides planissimum* Cushman: Cushman, 1927:135, pl. 1: fig. 6 [as *Haplophragmoides planissima*].
- Hoeglundina elegans* (d'Orbigny): Schnitker, 1971:204, pl. 10: fig. 15.
- Lagena clavata* (d'Orbigny): Cushman, 1923:10, pl. 1: fig. 15.
- Lagena dentaliniformis* Bagg: Cushman and McCulloch, 1950:337, pl. 44: figs. 10, 11.
- Lagena sulcata* (Walker and Jacob): Cushman and McCulloch, 1950:335, pl. 48: fig. 2 [as *Lagena* cf. *sulcata*].
- Lenticulina nicobarensis* (Galloway and Wissler): Galloway and Wissler, 1927:51, pl. 8: fig. 11 [as *Robulus cushmani*].
- Melonis barleeanus* (Williamson): Cushman, 1927:149, pl. 2: fig. 5 [as *Nonion umbilicatula* var. *pacifica*].
- Nonionella atlantica* Cushman: Cushman, 1947:90, pl. 30: figs. 4, 5.
- Nonionella basispinata* Cushman and Moyer: Cushman and McCulloch, 1940:158, pl. 17: figs. 8, 9; pl. 18: figs. 4, 5 [as *Nonion pizarrense* var. *basispinatum*].
- Nonionella grateloupi* (d'Orbigny): Schnitker, 1971:206, pl. 10: fig. 6 [as *Nonion grateloupi*].
- Nonionella miocenica* Cushman: Cushman and McCulloch, 1940:161, pl. 18: fig. 1.
- Nonionella stella* Cushman and Moyer: Cushman and McCulloch, 1940:162, pl. 18: fig. 2 [as *Nonionella miocenica* var. *stella*].
- Nouria polymorphinoides* Heron-Allen and Earland: Parker, Phleger, and Peirson, 1953:11, pl. 3: figs. 1, 2.
- Planulina exorna* Phleger and Parker: Schnitker, 1971:206, pl. 9: fig. 6.
- Planulina ornata* (d'Orbigny): Bandy, 1954:137, pl. 31: fig. 2.
- Planulina wuellerstorfi* (Schwager): Phleger and Parker, 1951:33, pl. 18: figs. 11a,b; pl. 19: figs. 1–3.
- Pullenia bulloides* (d'Orbigny): Phleger and Parker, 1951:29, pl. 15: fig. 11.
- Pullenia elegans* Cushman and Todd: Lankford and Phleger, 1973:125, pl. 6: fig. 9.
- Quinqueloculina auberiana* d'Orbigny: Smith, 1964:B30, pl. 1: fig. 10a,b.
- Quinqueloculina lamarchiana* d'Orbigny: Schnitker, 1971:208, pl. 3: fig. 16.
- Quinqueloculina venusta* Karrer: Parker, 1954:498, pl. 4: figs. 13, 14.
- Rectobolivina bradyi* (Asano): Asano, 1950, 11: figs. 42, 43 [as *Bolivina bradyi*].
- Rectobolivina hancocki* (Cushman and McCulloch): Cushman and McCulloch, 1942:225, pl. 28: figs. 13–19 [as *Bifarina hancocki*].
- Reophax bilocularis* Flint: Smith, 1964:B27, pl. 1: fig. 1.
- Reophax curtus* Cushman: Sen Gupta, 1971:84, pl. 1: figs. 2–4.
- Reophax dentaliniformis* Brady: Cushman, 1920:18, pl. 5: figs. 4, 5.
- Reophax excentricus* Cushman: Cushman and McCulloch, 1939:60, pl. 3: figs. 4–9.
- Rosalina columbiensis* (Cushman). Lankford and Phleger, 1973:127, pl. 5: figs. 10–12.
- Saccamina atlantica* (Cushman): Sen Gupta, 1971:83, pl. 1: fig. 1.
- Spiroloculina soldanii* Fornasini: Smith, 1964:B30, pl. 1: fig. 14a,b.
- Suggrunda eckisi* Natland: Smith, 1963:A24, pl. 31: figs. 13, 14.
- Textularia agglutinans* d'Orbigny: Todd and Bronnimann, 1957:24, pl. 2: fig. 13.
- Textularia candeiana* d'Orbigny: Schnitker, 1971:212, pl. 1: fig. 10; Todd and Bronnimann, 1957:24, pl. 2: fig. 14.
- Textularia corrugata* Heron-Allen and Earland: Lalicker and McCulloch, 1940:126, pl. 14: fig. 9a–d.
- Textularia foliacea* Heron-Allen and Earland: Lalicker and McCulloch, 1940:128, pl. 14: fig. 11a–c.
- Textularia panamensis* Cushman: Smith, 1964:B28, pl. 1: fig. 6a,b.
- Textularia schencki* Cushman and Valentine: Lalicker and McCulloch, 1940:128, pl. 16: fig. 23a–c.
- Textularia secasensis* Lalicker and McCulloch: Lalicker and McCulloch,

- 1940:141, pl. 16: fig. 24.
- Textularia vola* Lalicker and McCulloch: Lalicker and McCulloch, 1940:142, p. 16: fig. 27a-e.
- Thurammina erinacea* Gôes: Gôes, 1896:26, pl. 2: figs. 9-10.
- Trifarina carinata* (Cushman): Cushman and McCulloch, 1948:281, pl. 35: figs. 8, 11 [as *Angulogerina carinata*].
- Triloculina trigonula* (Lamarck): Schnitker, 1971:212, pl. 3: fig. 11.
- Trochammina pacifica* Cushman: Cushman and McCulloch, 1939:103, pl. 11: fig. 3.
- Trochammina rotaliformis* Wright: Cushman and McCulloch, 1939:107, pl. 12: fig. 2.
- Uvigerina auberiana* d'Orbigny: Parker, 1954:519, pl. 7: fig. 38; pl. 8: fig. 1.
- Uvigerina excellens* Todd: Cushman and McCulloch, 1948:258, pl. 33: fig. 2.
- Uvigerina incilis* Todd: Cushman and McCulloch, 1948:260, pl. 33, fig. 4.
- Uvigerina peregrina* Cushman: Cushman, 1923:166, pl. 42: figs. 7-10, Pflum and Frerichs, 1976:108, pl. 8: figs. 2, 3 [as *Uvigerina peregrina peregrina*].
- Uvigerina proboscidea* Schwager: Cushman and McCulloch, 1948:267, pl. 34: fig. 4.

REQUIREMENTS FOR SMITHSONIAN SERIES PUBLICATION

Manuscripts intended for series publication receive substantive review (conducted by their originating Smithsonian museums or offices) and are submitted to the Smithsonian Institution Press with Form SI-36, which must show the approval of the appropriate authority designated by the sponsoring organizational unit. Requests for special treatment—use of color, foldouts, case-bound covers, etc.—require, on the same form, the added approval of the sponsoring authority.

Review of manuscripts and art by the Press for requirements of series format and style, completeness and clarity of copy, and arrangement of all material, as outlined below, will govern, within the judgment of the Press, acceptance or rejection of manuscripts and art.

Copy must be prepared on typewriter or word processor, double-spaced, on one side of standard white bond paper (not erasable), with 1¼" margins, submitted as ribbon copy (not carbon or xerox), in loose sheets (not stapled or bound), and accompanied by original art. Minimum acceptable length is 30 pages.

Front matter (preceding the text) should include: **title page** with only title and author and no other information, **abstract page** with author, title, series, etc., following the established format; table of **contents** with indents reflecting the hierarchy of heads in the paper; also, **foreword** and/or **preface**, if appropriate.

First page of text should carry the title and author at the top of the page; **second page** should have only the author's name and professional mailing address, to be used as an unnumbered footnote on the first page of printed text.

Center heads of whatever level should be typed with initial caps of major words, with extra space above and below the head, but no other preparation (such as all caps or underline, except for the underline necessary for generic and specific epithets). Run-in paragraph heads should use period/dashes or colons as necessary.

Tabulations within text (lists of data, often in parallel columns) can be typed on the text page where they occur, but they should not contain rules or numbered table captions.

Formal tables (numbered, with captions, boxheads, stubs, rules) should be submitted as carefully typed, double-spaced copy separate from the text; they will be typeset unless otherwise requested. If camera-copy use is anticipated, do not draw rules on manuscript copy.

Taxonomic keys in natural history papers should use the aligned-couplet form for zoology and may use the multi-level indent form for botany. If cross referencing is required between key and text, do not include page references within the key, but number the keyed-out taxa, using the same numbers with their corresponding heads in the text.

Synonymy in zoology must use the short form (taxon, author, year:page), with full reference at the end of the paper under "Literature Cited." For botany, the long form (taxon, author, abbreviated journal or book title, volume, page, year, with no reference in "Literature Cited") is optional.

Text-reference system (author, year:page used within the text, with full citation in "Literature Cited" at the end of the text) must be used in place of bibliographic footnotes in all Contributions Series and is strongly recommended in the Studies Series: "(Jones, 1910:122)" or "... Jones (1910:122)." If bibliographic

footnotes are required, use the short form (author, brief title, page) with the full citation in the bibliography.

Footnotes, when few in number, whether annotative or bibliographic, should be typed on separate sheets and inserted immediately after the text pages on which the references occur. Extensive notes must be gathered together and placed at the end of the text in a notes section.

Bibliography, depending upon use, is termed "Literature Cited," "References," or "Bibliography." Spell out titles of books, articles, journals, and monographic series. For book and article titles use sentence-style capitalization according to the rules of the language employed (exception: capitalize all major words in English). For journal and series titles, capitalize the initial word and all subsequent words except articles, conjunctions, and prepositions. Transliterate languages that use a non-Roman alphabet according to the Library of Congress system. Underline (for italics) titles of journals and series and titles of books that are not part of a series. Use the parentheses/colon system for volume (number): pagination: "10(2):5-9." For alignment and arrangement of elements, follow the format of recent publications in the series for which the manuscript is intended. Guidelines for preparing bibliography may be secured from Series Section, SI Press.

Legends for illustrations must be submitted at the end of the manuscript, with as many legends typed, double-spaced, to a page as convenient.

Illustrations must be submitted as original art (not copies) accompanying, but separate from, the manuscript. Guidelines for preparing art may be secured from Series Section, SI Press. All types of illustrations (photographs, line drawings, maps, etc.) may be intermixed throughout the printed text. They should be termed **Figures** and should be numbered consecutively as they will appear in the monograph. If several illustrations are treated as components of a single composite figure, they should be designated by lowercase italic letters on the illustration; also, in the legend and in text references the italic letters (underlined in copy) should be used: "Figure 9*b*." Illustrations that are intended to follow the printed text may be termed **Plates**, and any components should be similarly lettered and referenced: "Plate 9*b*." Keys to any symbols within an illustration should appear on the art rather than in the legend.

Some points of style: Do not use periods after such abbreviations as "mm, ft, USNM, NNE." Spell out numbers "one" through "nine" in expository text, but use digits in all other cases if possible. Use of the metric system of measurement is preferable; where use of the English system is unavoidable, supply metric equivalents in parentheses. Use the decimal system for precise measurements and relationships, common fractions for approximations. Use day/month/year sequence for dates: "9 April 1976." For months in tabular listings or data sections, use three-letter abbreviations with no periods: "Jan, Mar, Jun," etc. Omit space between initials of a personal name: "J.B. Jones."

Arrange and paginate sequentially every sheet of manuscript in the following order: (1) title page, (2) abstract, (3) contents, (4) foreword and/or preface, (5) text, (6) appendixes, (7) notes section, (8) glossary, (9) bibliography, (10) legends, (11) tables. Index copy may be submitted at page proof stage, but plans for an index should be indicated when manuscript is submitted.
