ANNOTATED LIST OF THE KNOWN PUBLICATIONS OF F. RAYMOND FOSBERG

BY

ANNA L. WEITZMAN

INTRODUCTION

F. Raymond Fosberg kept a card file and reprints of scientific publications, reviews, popular articles, and less formally distributed writings. None of those sources is complete and I have filled in some gaps by searching through periodicals that he used frequently. There will undoubtedly be corrections and additions to this list. Scientific publications are numbered 1-625, with Dr. Fosberg's own numbering in parentheses following the sequential numbers I assigned (his numbering had many publications numbered out of order or unnumbered). I did not number republications of articles. Because this is an attempt to give a relatively complete summation of the published views of Dr. Fosberg, I have included reviews, published letters, published abstracts, anonymous committee reports that he attributed to himself, and informally published (often duplicated and distributed by Dr. Fosberg at meetings) documents in this list. These publications were not carefully documented and I am sure that this list is far from complete. Those categories are numbered separately as R1-89 (reviews), L1-20 (letters), and D1-86 (abstracts and informal documents) respectively.

In many instances, especially later in his career, large and small publications included information about named taxa. Many of those, such as the regional checklists, do not need further explanation, but some include other information about a number of taxa. I have included a list of genera discussed following the citation of the article. Those names are also indexed by citation and page numbers following the publication list. In nearly all cases I have omitted the names of taxa when the information given is merely distributional. I have made a judgment about what genera are included, necessarily subjective, but where there is information that may help the user understand Dr. Fosberg's views on the taxon or taxa, or help the user identify and apply the correct name to plants, the generic name is listed and indexed. I have sometimes included synonyms in the list because they are lectotypified, or because I thought it useful to include them.

I have also included a list of publications that are known (by the Botany Department at the National Museum of Natural History) to be in press or submitted for publication. I expect an additional paper of Pacific plant distribution notes based on manuscripts found in his office. There are other publications which are expected to be completed and published by co-authors including: The Vegetation of the Pacific Islands with Dieter Mueller-Dombois to be published by Fischer Verlag, a list of vascular plants of Kosrae with Jerome Ward, and various articles written with David Stoddart. Other publications which Dr. Fosberg was working on are unlikely to appear. Those include a checklist of vascular plants of the Society Islands; a supplement to the Micronesian checklists; a Marquesas checklist; Flora of Micronesia, part 6; the bulk of the planned Forster list; a *Spermacoce* (Rubiaceae) monograph; and an *Alyxia* (Apocynaceae) monograph. The treatments of Malvaceae and Rubiaceae for the Flora of Ceylon have been forwarded to others for completion. The Pacific plant checklists will be used in preparation of a planned checklist for all of Oceania. Readers who would like to use materials that Dr. Fosberg did not publish should contact the Botany Department of the National Museum of Natural History.

Periodical titles are abbreviated following *B-P-H* (G.H.M. Lawrence et al.'s 1968 *Botanico-Periodicum-Huntianum*) and its *Supplement* (Bridson and Smith, 1991). Unless marked with *, all citations

were checked against original publications or reprints with original pagination. Where actual date of publication or distribution differs from that on the title page, the date on the title page is placed in brackets following the actual date of distribution according to Dr. Fosberg's records or other sources. A few citations verified by Lu Eldredge (Pacific Science Association) are indicated with **, one verified by Scott Miller (Bishop Museum) is indicated with ***. The assistance of Dan Nicolson throughout my work on this list is gratefully acknowledged.

A brief list of some published photographs and biographical information of F.R. Fosberg follows the list of publications. This is not intended to be a complete list, merely a compilation of what I found in compiling this list of publications.

KNOWN PUBLICATIONS OF F.R. FOSBERG

1929
