Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Chordata	Actinopterygii	Perciformes	Sciaenidae

Taxon Name: *Umbrina imberbis* Günther, 1873

Taxonomic Notes:

According to Walker and Radford (1992), there have been many instances where Eastern Pacific species have been ascribed to *Umbrina* (e.g., *U. imberbis* = *Sciaena*, probably *callaensis*). However, current taxonomic authority databases continue to use the name *Umbrina imberbis*.

Assessment Information

Red List Category & Criteria: Data Deficient [ver 3.1](#)

Year Published: 2010

Date Assessed: November 11, 2009

Justification:

This species is known only from one specimen from Chile, and the the taxonomic validity of the species has been questioned by Walker and Radford (1992). Therefore, it is listed as Data Deficient. More research on this species' taxonomy, distribution, population status, habitat and ecology is needed.

Geographic Range

Range Description:

This species is only known from a single specimen from the type locality at Iquique, Chile.

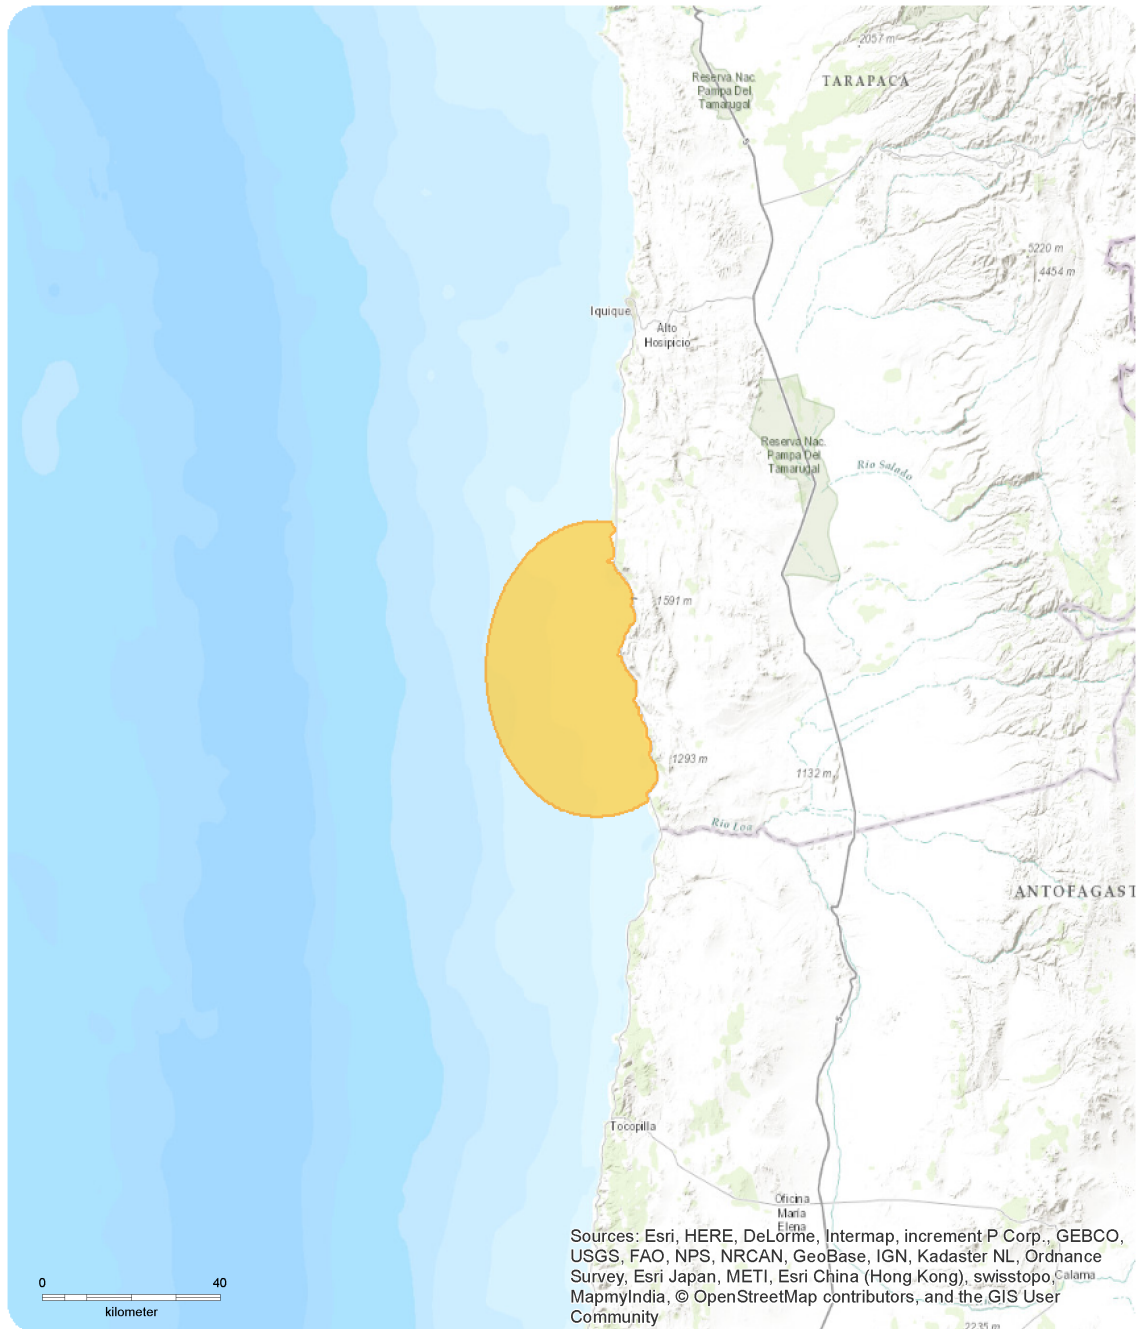

Country Occurrence:

Native: Chile

FAO Marine Fishing Areas:

Native: Pacific - southeast

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

There is no population information available, as it is known only from a single specimen.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

There is no information on habitat and ecology for this species.

Systems: Marine

Threats

There are no major threats known for this species.

Conservation Actions

There are no conservation measures for this species. Further fieldwork is necessary to locate specimens and define the distribution of this species, its population status, habitat, and ecology and any potential threats.
