

Assessment of the Conservation Value of Spiders in Armenia

Reporter: Armine Kosyan Project ID: 34689-1

Yerevan State University, Alek Manukyan 1, Yerevan 0025, Armenia Email: <u>armine.kosyan@ysu.am</u>

Acknowledgments

We would like to thank the Rufford Small Grants Fund for supporting our work on the conservation and study of spiders in Armenia. This opportunity allows us to start and establish a new direction of arachnology at the Department of Zoology, Faculty of Biology YSU.

We are especially grateful to the reviewers of the project, Prof. Marine Arakelyan - Head of the Department of Biology YSU, Dr. Niels Hein - Coordinator of the CaBOL (Caucasian Barcode of Life) project of the König Bonn Museum, and Dr. Stefan Otto - Associate Researcher of CaBOL of Ilya State University for cooperation and support of the project at every stage its preparation and implementation. Dr. Nils Hein and Dr. Stefan Otto visited Armenia twice in September 2021 and May 2022. During their visit, they showed me advanced methods for identifying spiders.

Special thanks to the CaBOL (Caucasian Barcode of Life) project for the opportunity to conduct genetic analyses and support my work at all stages.

In addition, I want to thank my family and friends for their support during the project and for helping with fieldwork and collecting materials.

INTRODUCTION

Spiders are one of the most diverse group of animals on the planet. Spiders are an important part of ecosystems. The study of spiders plays an important role in the assessment of biodiversity. Ecological sustainability in other areas of wildlife research in Armenia and the Caucasus. However, spiders have not been studied in Armenia. There is no national list of spiders and no list of endangered species. I am a post-graduate student at Yerevan State University and my dissertation topic is "Spider diversity and conservation in Armenia. In the framework of the project, I have the following goals:

- 1. Database and collection of spiders in Armenia
- 2. National checklist of spiders, which is absent now
- 3. List and description of rare species of spiders according to IUCN criteria
- 4. Threat analysis for some rare species and conservation measures for them
- 5. Including rare species of spiders in a new edition of the Red Book of Armenia
- 6. Guidebook of spiders for kids
- 7. Arachnological societies in social networks and among the target group of students
- 8. Widespread dissemination of news about Armenian spiders

During the project, the following objectives were fully or partially achieved:

ACTIVITY	STATUS
Getting new information about spiders in Armenia	Established, ongoing
The database of spiders of Armenia (species, regions, location, date, habitat, vegetation type, collector) for the collection of spiders from of all Armenia	Established, ongoing
Create a collection of spiders in Armenia	Established, ongoing
Barcoding of spiders	Established, ongoing
The raising of public awareness concerning the importance of protection of spiders and publication of color brochures for children.	Finished
Create a social science blog (Armenian Society of Arachnology)	Finished
Enhancement of spiders studies (arachnology) in Armenia	Ongoing
Scientific publication and Ph.D., master's, and bachelor's thesis of participants.	Ongoing

EDUCATION AND SOCIAL ACTIVATES

We have created and continue to support a group of students who learn how to work with spiders and develop this direction at the YSU Department of Zoology. Our goal is to prepare and educate high school students and students in order to create a good team of archaeologists who can continue their research and start their projects. It should be noted that there is little data on spiders in Armenia, due to the lack of specialists trained to work with this group of animals. Our goal is to make spider research popular with students. As a result of our work and the involvement of students, the number of students at the Department of Zoology of YSU who are interested in the study of spiders in Armenia is currently growing.

In addition to YSU students, we also organized workshops for 2nd-year students of the Faculty of Agroecology of the Anton Kochinyan College of the National Agrarian University of Armenia to raise their awareness of the potential of spiders for ecosystems. When conducting fieldwork, we also involved students from YSU and the Armenian National Agrarian University However, in our opinion, working with the awareness of the population and raising their level of education in the field of biodiversity should start at an early age. Therefore, we have prepared a spider guide for preschoolers in their native language. In my opinion, it is very important when children know them from childhood and are not afraid of them. The children were very interested in spiders and are learning to tell if they are spiders or insects, how they move, where they live, what they eat, and how some spiders take care of their babies.

We have created a sociological blog on Facebook and Instagram "Spiders of Armenia". This social media group gives us the opportunity to communicate with people in different parts of Armenia and the world. In this way, it is possible to receive information faster, transmit and share scientific news related to arachnology, and make people more informed. This work is ongoing.

RESEARCH ACTIVITIES

The fieldwork focused on collecting and documenting the distribution of spiders throughout Armenia between April and October 2021 and April and May 2022. 3-4 people, including students, made field trips in Armenia. The main periods of fieldwork fell on the period from early spring to autumn, since spiders are active mainly during these periods. In general, we collected about 2000 spiders from different regions of Armenia, and about 500 of them were identified at the species level.

All specimens were collected from 2021-to 2022 from different parts of Armenia by beating shrubs, pitfall traps, sifter, or hand collecting and were preserved in 96% ethanol. The protocol will be recorded in the field by the GPS, weather conditions, habitat, and vegetation type. The specimens are kept in the Yerevan State University Faculty of Biology, Department of Zoology (YSU). During the laboratory work, spider species are determined, and classified, a database is created and genetic research is started. We have segregated some species of spiders for genetic

2.

testing of DNA. For species identification, we use the guidelines World Spider Catalog (2020), Araneae Spiders of Europe, Caucasian spider (2020), and The Biologist Apprentice 2019. The specimens were examined with a Nikon 11-2486 stereomicroscope. Photographs of the copulatory organs and habitat were taken with a Canon EOS 90 D camera mounted on a Nikon 11-2486 compound microscope. Compound focus images were generated using Macro Photo Lens MP- E65mm f/2.8 1-5x.

We recorded 25 families, 108 genera, and 156 spider species

Table 1. List of spider families, and genus that	were recorded during our research
--	-----------------------------------

1	Araneidae Aculepeira	55	Lycosidae Alopecosa
2	Araneidae Araneus	56	Lycosidae Pardosa
3	Araneidae Argiope	57	Lycosidae Arctosa
4	Araneidae Araniella	58	Lycosidae Aulonia
5	Agelenidae Eratigena	59	Lycosidae Hogna
6	Agelenidae Tegenaria	60	Lycosidae Piratula
7	Agelenidae Allagelena	61	Miturgidae Zora
8	Agelenidae Coelotes	62	Oxyopidae Oxyopes
9	Dysderidae Dysdera	63	Palpimanidae Palpimanus
10	Gnaphosidae Civizelotes	64	Philodromidae Tibellus
11	Linyphiidae Agyneta	65	Philodromidae Rhysodromus
12	Lycosidae Trochosa	66	Philodromidae Thanatus
13	Lycosidae Piratula	67	Pholcidae Pholcus
14	Lycosidae Arctosa	68	Pholcidae Holocnemus
15	Philodromidae Thanatus	69	Salticidae Chalcoscirtus
16	Pholcidae ?	70	Salticidae Heliophanus
17	Pisauridae Pisaura	71	Salticidae Cyrba
18	Salticidae Philaeus	72	Salticidae Phlegra

48	Linyphiidae Trichoncus	102	Thomisidae Synema
49	Linyphiidae Gnathonarium	103	Thomisidae Bassanioides
50	Linyphiidae Heliophanus	104	Thomisidae Ozyptila
51	Linyphiidae Diplostyla	105	Thomisidae Monaeses
52	Linyphiidae Linyphia	106	Thomisidae Thomisus
53	Linyphiidae Dismodicus	107	Thomisidae Diaea
54	Liocranidae Agroeca	108	Thomisidae Runcinia

We recorded 156 spider species in the different parts of Armenia in 2021-2022.

Table 2. List	of spiders s	pecies that	collected	during our surveys

1	Aculepeira ceropegia	79	Pardosa aenigmatica
2	Araneus diadematus	80	Alopecosa farinosa
3	Argiope bruennichi	81	Aulonia kratochvili
4	Araniella displicata	82	Alopecosa sulzeri
5	Argiope lobata	83	Alopecosa cuneata
6	Eratigena picta	84	Lycosa praegrandis
7	Tegenaria domestica	85	Pardosa hortensis
8	Allagelena gracilens	86	Arctosa tbiliensis
9	Coelotes terrestris	87	Hogna radiata
10	Dysdera crocata	88	Piratula latitans
11	Civizelotes caucasius	89	Zora nemoralis
12	Agyneta ramosa	90	Oxyopes heterophthalmus
13	Trochosa robusta	91	Palpimanus sogdianus
14	Trochosa ruricola	92	Tibellus oblongus
15	Trochosa terricola	93	Rhysodromus fallax
16	Piratula uliginosa	94	Thanatus imbecillus
17	Arctosa lutetiana	95	Thanatus atratus
18	Trochosa spinipalpis	96	Thanatus oblongiusculus
19	Arctosa fulvolineata	97	Pholcus phalangioides
20	Thanatus oblongiusculus	98	Holocnemus pluchei
21	Pisaura mirabilis	99	Pisaura novicia
22	Philaeus chrysops	101	Chalcoscirtus parvulus
23	Segestria senoculata	102	Heliophanus auratus
24	Olios argelasius	103	Cyrba algerina
25	Tetragnatha dearmata	104	Phlegra bresnieri

26	Tetragnatha extensa	105	Heliophanus cupreus
27	Coriarachne depressa	106	Heliophanus dunini
28	<i>Xysticus cristatus</i>	107	Heliophanus flavipes
29	Misumena vatia	108	Euophrys frontalis
30	Thomisus onustus	109	Aelurillus aeruginosus
31	Ozyptila praticola	110	Aelurillus m-nigrum
32	Anyphaena accentuate	111	Evarcha laetabunda
33	Agalenatea redii	112	Salticus tricinctus
34	Singa lucina	113	Pellenes seriatus
35	Hypsosinga albovittata	114	Pseudeuophrys lanigera
36	Hypsosinga sanguinea	115	Pseudeuophrys erratica
37	Mangora acalypha	116	Evarcha insularis
38	Cyclosa algerica	117	Heliophanus mordax
39	Gibbaranea bituberculata	118	Aelurillus concolor
40	Zilla diodia	119	Heliophanus edentulus
41	Cheiracanthium mildei	120	Attulus ammophilus
42	Cheiracanthium pelasgicum	121	Carrhotus xanthogramma
43	Cheiracanthium erraticum	122	Heliophanus cupreus
44	Dictyna arundinacea	123	Scytodes thoracica
45	Dictyna uncinata	124	Segestria bavarica
46	Archaeodictyna anguiniceps	125	Micrommata virescens
47	Dictyna arundinacea	126	Olios sericeus
48	Dysdera azerbajdzhanica	127	Pachygnatha degeeri
49	Dysdera richteri	128	Metellina kirgisica
50	Harpactea eskovi	129	Metellina mengei
51	Drassodes villosus	130	Steatoda paykulliana
52	Talanites atscharicus	131	Platnickina tincta
53	Nomisia conigera	132	Crustulina scabripes
54	Nomisia exornata	133	Kochiura aulica
55	Drassodes lapidosus	134	Asagena phalerata
56	Berlandina mesopotamica	135	Theridion mystaceum
57	Haplodrassus signifer	136	Steatoda albomaculata
58	Zelotes longipes	137	Steatoda dahli
59	Nomisia ripariensis	138	Titanoeca schineri
60	Gnaphosa ogeri	139	Titanoeca cf. praefica
61	Zelotes subterraneus	140	Nurscia albomaculata
62	Haplodrassus kulczynskii	141	Titanoeca incerta
63	Callilepis nocturna	142	Orthobula charitonovi
64	Trichoncus saxicola	143	Zodarion thoni
65	Gnathonarium dentatum	144	Zodarion danismani
66	Heliophanus cupreus	145	Tmarus punctatissimus
67	Diplostyla concolor	146	Xysticus kochi
68	Linyphia hortensis	147	Heriaeus hirtus
69	Dismodicus bifrons	148	Synema globosum
70	Agroeca cuprea	149	Bassanioides robustus
71	Alopecosa pentheri	150	Ozyptila tuberosa
72	Pardosa italica	151	Monaeses isrealiensis
		0	

73	Alopecosa albofasciata	152	Thomisus onustus
74	Arctosa cinerea	153	Ozyptila praticola
75	Pardosa caucasica	154	Diaea livens
76	Pardosa colchica	155	Xysticus kulczynskii
78	Pardosa morosa	156	Runcinia grammica

A scientific article was published in May, where we present two species of the genus *Argiope*, first registered for the fauna of Armenia: *Argiope bruennichi* (Scopoli, 1772) and *Argiope lobata* (Pallas, 1772). The genus *Argiope*, an orb-weaver spider from the Araneidae family view of two females of *Argiope bruennichi* (Scopoli, 1772) were found in the Lori region (north part), and two female specimens of *Argiope lobata* (Pallas, 1772) were recorded in the Tavush region (northeast part) and Armavir region (south-west) of Armenia in 2020.

Now we are working on the second publication together with German scientists.

Fieldwork

Laboratory work

Collection of spiders

Collection of spiders in Armenia at Yerevan State University, Faculty of Biology, Department of Zoology.

Spider species

Argiope bruennichi

Tetragnatha *extensa(f)*

Araneus diadematus

Argiope *lobata*

Aculepeira ceropegia

Xysticus cristatus

Araniella *displicata*

Segestria *senoculata*

Lycosidae (Wolf spider)

Steatoda *grossa*

Philaeus *chrysops*

Education
