Introduction

About LGC Standards

LGC Standards has successfully established a global reputation for the production of impurities, excipients, primary reference standards and working standards, and as a single source for the supply of pharmacopoeia reference materials.

Our production site in Germany is accredited to ISO/IEC 17025 and ISO Guide 34.

Our menu of custom services, including custom synthesis of impurities and metabolites, characterisation, certification, packaging and distribution, adds value to the scientific support we provide to our pharmaceutical customers.

Our relationships with the world's leading pharmacopoeias and their range of Chemical Reference Substances (CRS) and Reference Standards (RS), combined with in-house production of certified reference materials and pharmaceutical impurities, enable us to meet our customers' specific

needs. LGC is currently the exclusive distributor of ATCC cultures and biological products throughout Europe and specified countries on the continent of Africa.

LGC Standards' extensive network of sales offices and distribution centres means we offer the widest range of reference materials from one single source for rapid delivery.

Our staff can provide scientific and technical guidance, including shipping and customs advice, in the local language. Our range of products also includes reference materials for clinical and forensic applications, phytochemicals, environmental analysis, physical properties determination, and food and beverage analysis.

For more information about our range of services, or to receive any of our catalogues, please refer to our website www.lgcstandards.com or contact your local office.

¹ The calculation of the 100 % method follows the formula:

$$\text{Assay (\%)} = (100 \% - \text{KF} - \text{RES}) \times \frac{\text{Purity HPLC (\%)}}{100 \%}$$

Water (KF) and Residual solvents (RES) are considered as absolute contributions, HPLC purity is considered as relative contribution.

For the calculation the system peaks were ignored. The content of the analyte was determined as the ratio of the peak area of the analyte and the cumulative areas of the purities, added up to 100 %.

Results:

Average	99.80 %
Number of results	n=6
Standard deviation	0.01 %

III. Loss on Drying

Conditions: 105 °C for 4 h, EP 7.6 (2.2.32)

No significant amounts of volatile contents were detected (< 0.05 %).

IV. Sulphated Ash

Method: EP 7.6 (2.4.14)

According to the available data, the presence of inorganic impurities in the reference substance others than those detectable by sulphated ash is highly unlikely. The test for sulphated ash (Method: EP 7.6, chapter 2.4.14) resulted in values below the set specification of 0.1 %. Therefore, no assay correction was performed for inorganic impurities.

V. Assay by quantitative NMR spectroscopy

The assay of the reference substance was established by quantitative NMR spectroscopy using DMSO- d_6 as the solvent and with 3,5-Dinitrobenzoic acid (certified reference material, signal 8.62 – 9.40 ppm, 3 H) as internal standard.

Results:

Average	99.67 %
Number of results	n=6

VI. Final Result

Chromatographic purity (HPLC)	99.80 %
Loss on drying	n. d. (not detected)
Sulphated ash	n. d. (not detected)

Assay:

Quantitative NMR spectroscopy	99.67 %
--------------------------------------	---------

The assay is assessed to be 99.7 % 'as is'

The assay 'as is' is equivalent to the assay based on the not anhydrous and not dried substance respectively. It is determined by quantitative NMR spectroscopy and its expanded uncertainty ($k = 2$) is 0.4 %.

The assay is verified by the 100 % method (HPLC): 99.8 % which is inside the expanded uncertainty of the assay by quantitative NMR spectroscopy.

VII. Stability and Homogeneity

Accelerated stability studies indicate no significant instability. The given validity period is based on this data. This is backed up by additional stability testing and historical data over the range of several years. Homogeneity assured by qualified process of preparation, verified by homogeneity testing.

VIII. Further Information

General

For laboratory use only. Not suitable for human or animal consumption.

This material conforms to the characteristics of a primary standard as described within ISO Guide 30 (Terms and definitions used in connection with reference materials).

The values quoted in this certificate are LGC's best estimate of the true values within the stated uncertainties and based on the techniques described in this certificate.

The production of this reference material was realized taking into account the principles of ISO Guide 34.

Certificate of analysis - primary reference materials

Intended Use

Use for identification and quantification.

Handling of the RM

Before usage of the reference material, it should be allowed to warm to room temperature.

Assay and uncertainty

The identity and the assay are assessed by an ISO/IEC 17025 accredited testing method.

The calculation of the 100 % method (HPLC) follows the formula:

$$\text{Assay (\%)} = (100 \% - \text{LOD}) \quad * \quad \frac{\text{Purity HPLC (\%)}}{100 \%}$$

Volatile contents are considered as absolute contributions, HPLC purity is considered as relative contribution.

Uncertainty of the assay is expressed as an expanded uncertainty in accordance with ISO/IEC 17025 at the about 95 % level of confidence.

For quantitative applications use the assay as a calculation value on the as is basis. The uncertainty of the assay can be used for estimation/calculation of your own measurement uncertainty.

Quality Control Assessment

The product quality is controlled by regularly performed quality control tests (retests).
