

reaction irreversibility or by formation of two or more complex species in equilibrium with each other. In this last case it is necessary to apply the method by De Ford and Hume paragraph (d) (8) of this section to calculate stepwise formation constants.

(2) *Test report.* (i) The test report should list for each metal ion investigated the half-wave potential $E_{1/2}$, co-ordination number and overall stability constant.

(ii) In addition, the following should also be reported:

(A) Type of polarisable micro-electrode, the reference electrode and, in the case of the dropping mercury electrode, the flow rate in mg/sec and drop time.

(B) IR correction (if applied).

(C) Maxima suppressors (if used).

(D) Supporting electrolyte.

(E) Buffer.

(F) Temperature of measurement.

(G) Total ionic strength.

(H) Technique applied (pilot ion, standard addition, or other).

(I) Technical difficulties encountered.

(J) Estimate of accuracy.

(K) Polarographic technique employed (e.g. DC-, AC, polarography, single sweep polarography, radio frequency

polarography or square-wave polarography).

(3) *Interpretation and evaluation of results.* (i) Stability constants determined for a new substance can be compared with literature values for standard substances (see Reference substances, above) and used therefore to evaluate the strength of its complexing ability.

(ii) The system is physically meaningful if (A) the value of the stability constant is positive and (B) the standard error is less than the constant (the t-test should be used as a criterion).

(iii) If data are not significant, it is necessary to use methods based on different physicochemical principles, such as spectrophotometry or nuclear magnetic resonance spectrometry.

(d) *Literature references.* For additional background information on this test guideline the following references should be consulted:

September 27, 1985

Part III

Department of Labor

**Employment Standards Administration,
Wage and Hour Division**

**Minimum Wages for Federal and
Federally Assisted Construction; General
Wage Determination Decisions; Notice**

DEPARTMENT OF LABOR**Employment Standards
Administration, Wage and Hour
Division****Minimum Wages for Federal and
Federally Assisted Construction;
General Wage Determination
Decisions**

General wage determination decisions of the Secretary of Labor specify, in accordance with applicable law and on the basis of information available to the Department of Labor from its study of local wage conditions and from other sources, the basic hourly wage rates and fringe benefit payments which are determined to be prevailing for the described classes of laborers and mechanics employed on construction projects of the character and in the localities specified therein.

The determinations in these decisions of such prevailing rates and fringe benefits have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 5.1 (including the statutes listed at 36 FR 306 (1970) following Secretary of Labor's Order No. 24-70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of part 1 of subtitle A of title 29 of Code of Federal Regulations Procedure for Predetermination of Wage Rates, 48 FR 19533 (1983) and of Secretary of Labor's Orders 9-83, 48 FR 35736 (1983), and 6-84, 49 FR 32473 (1984). The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in the effective date as prescribed in that section, because the necessity to issue construction industry wage determination frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General wage determination decisions are effective from their date of publication in the *Federal Register* without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5. Accordingly, the applicable decision together with any modifications issued subsequent to its publication date shall be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR Part 5. The wage rates contained therein shall be the minimum paid under such contract by contractors and subcontractors on the work.

**Modifications and Supersedeas
Decisions to General Wage
Determination Decisions**

Modifications and supersedeas decisions to general wage determination decisions are based upon information obtained concerning changes in prevailing hourly wage rates and fringe benefit payments since the decisions were issued.

The determinations of prevailing rates and fringe benefits made in the modifications and supersedeas decisions have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 5.1 (including the statutes listed at 36 FR 306 (1970) following Secretary of Labor's Order No. 24-70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of Part 1 of Subtitle A of Title 29 of Code of Federal Regulations Procedure for Predetermination of Wage Rates, 48 FR 19533 (1983) and of Secretary of Labor's Order 6-84, 49 FR 32473 (1984). The prevailing rates and fringe benefits determined in foregoing general wage determination decisions, as hereby modified, and/or superseded shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged in contract work of the character and in the localities described therein.

Modifications and supersedeas decisions are effective from their date of publication in the *Federal Register* without limitation as to time and are to

be used in accordance with the provisions of 29 CFR Parts 1 and 5.

Any person, organization, or governmental agency having an interest in the wages determined as prevailing is encouraged to submit wage rate information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Office of Program Operations, Division of Wage Determinations, Washington, D.C. 20210. The cause for not utilizing the rulemaking procedures prescribed in 5 U.S.C. 553 has been set forth in the original General Determination Decision.

**Modification to General Wage
Determination Decisions**

The numbers of the decisions being modified and their dates of publication in the *Federal Register* are listed with each State.

Arkansas:	AR84-4090.....	Jan. 13, 1984.

- b. Employer contributes 6% of basic hourly rate for under 5 years of service and 8% of basic hourly rate for over 5 years of service as Vacation Pay Credit.
- c. Paid Holidays: New Year's Day, Memorial Day, Independence Day, Labor Day, Veterans Day, Thanksgiving Day, and Christmas Day.

DECISION NO.: MD85-3055

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITIONS

Group I - Operators handling or setting steel, stone, pre-stressed concrete or machine. (over cranes).

Group II - Backfiller, backhoe, concrete mixing plants, batching plants, cable way, derrick, derrick boats, dragline, elevating grader, compressors (2 or more), space heaters, hoist (2 active drums or more), pile driving machine, power crane, power shovel, standard gauge locomotive, trenching machine, tunnel mucking machine, smelter rig certified welders, concrete paver, double concrete pump, front end loader (over 2 yds.), over welders top scale (more than 6, another man), Elisco type overhead loader, Wellpoint systems, mighty midget with compressor, equipment formers, twin engine scraper (25 yds. 6 over), mechanic's welder, grader, all bulldozers, tire maintenance trucks.

Group III - Tractor with attachments (2 or more).

Group IV - Concrete mixer, concrete pump, one drum hoist, narrow gauge locomotive, power roller, asphalt spreader, pumps (not exceeding 4), well drill, engine driven welders (not exceeding 4), single compressors (over 210 CFM), steam hammer, pile extractor, conveyor, some crusher, hi-lift, excavating scoop, front end loader (up to 6 including 2 yds.), finishing machine, hull float, longitudinal float, screening machine, concrete spreaders, sub grader.

Group V - Fireman, truck crane oiler, wheel tractor, grease truck operator.

Group VI - Oilier, greaser, mechanic's helper, (using compressor over 180 CFM and up to 210 CFM).

TRUCK DRIVERS CLASSIFICATION DEFINITIONS

Group I - Dumper.

Group II - Pick-ups, dump trucks (under 5 yds., capacity), straight trucks.

Group III - Helpers, panel trucks, straight trucks with multiple axles, dumpers (under 5 yds. capacity), transit mix, dumps (5 to 9 yds. capacity), flatbody material trucks (straight jobs), grasers, treaman, mechanics, helpers, rubber-tired (towing & pushing flatbody vehicles), form trucks, dispatcher, gardener.

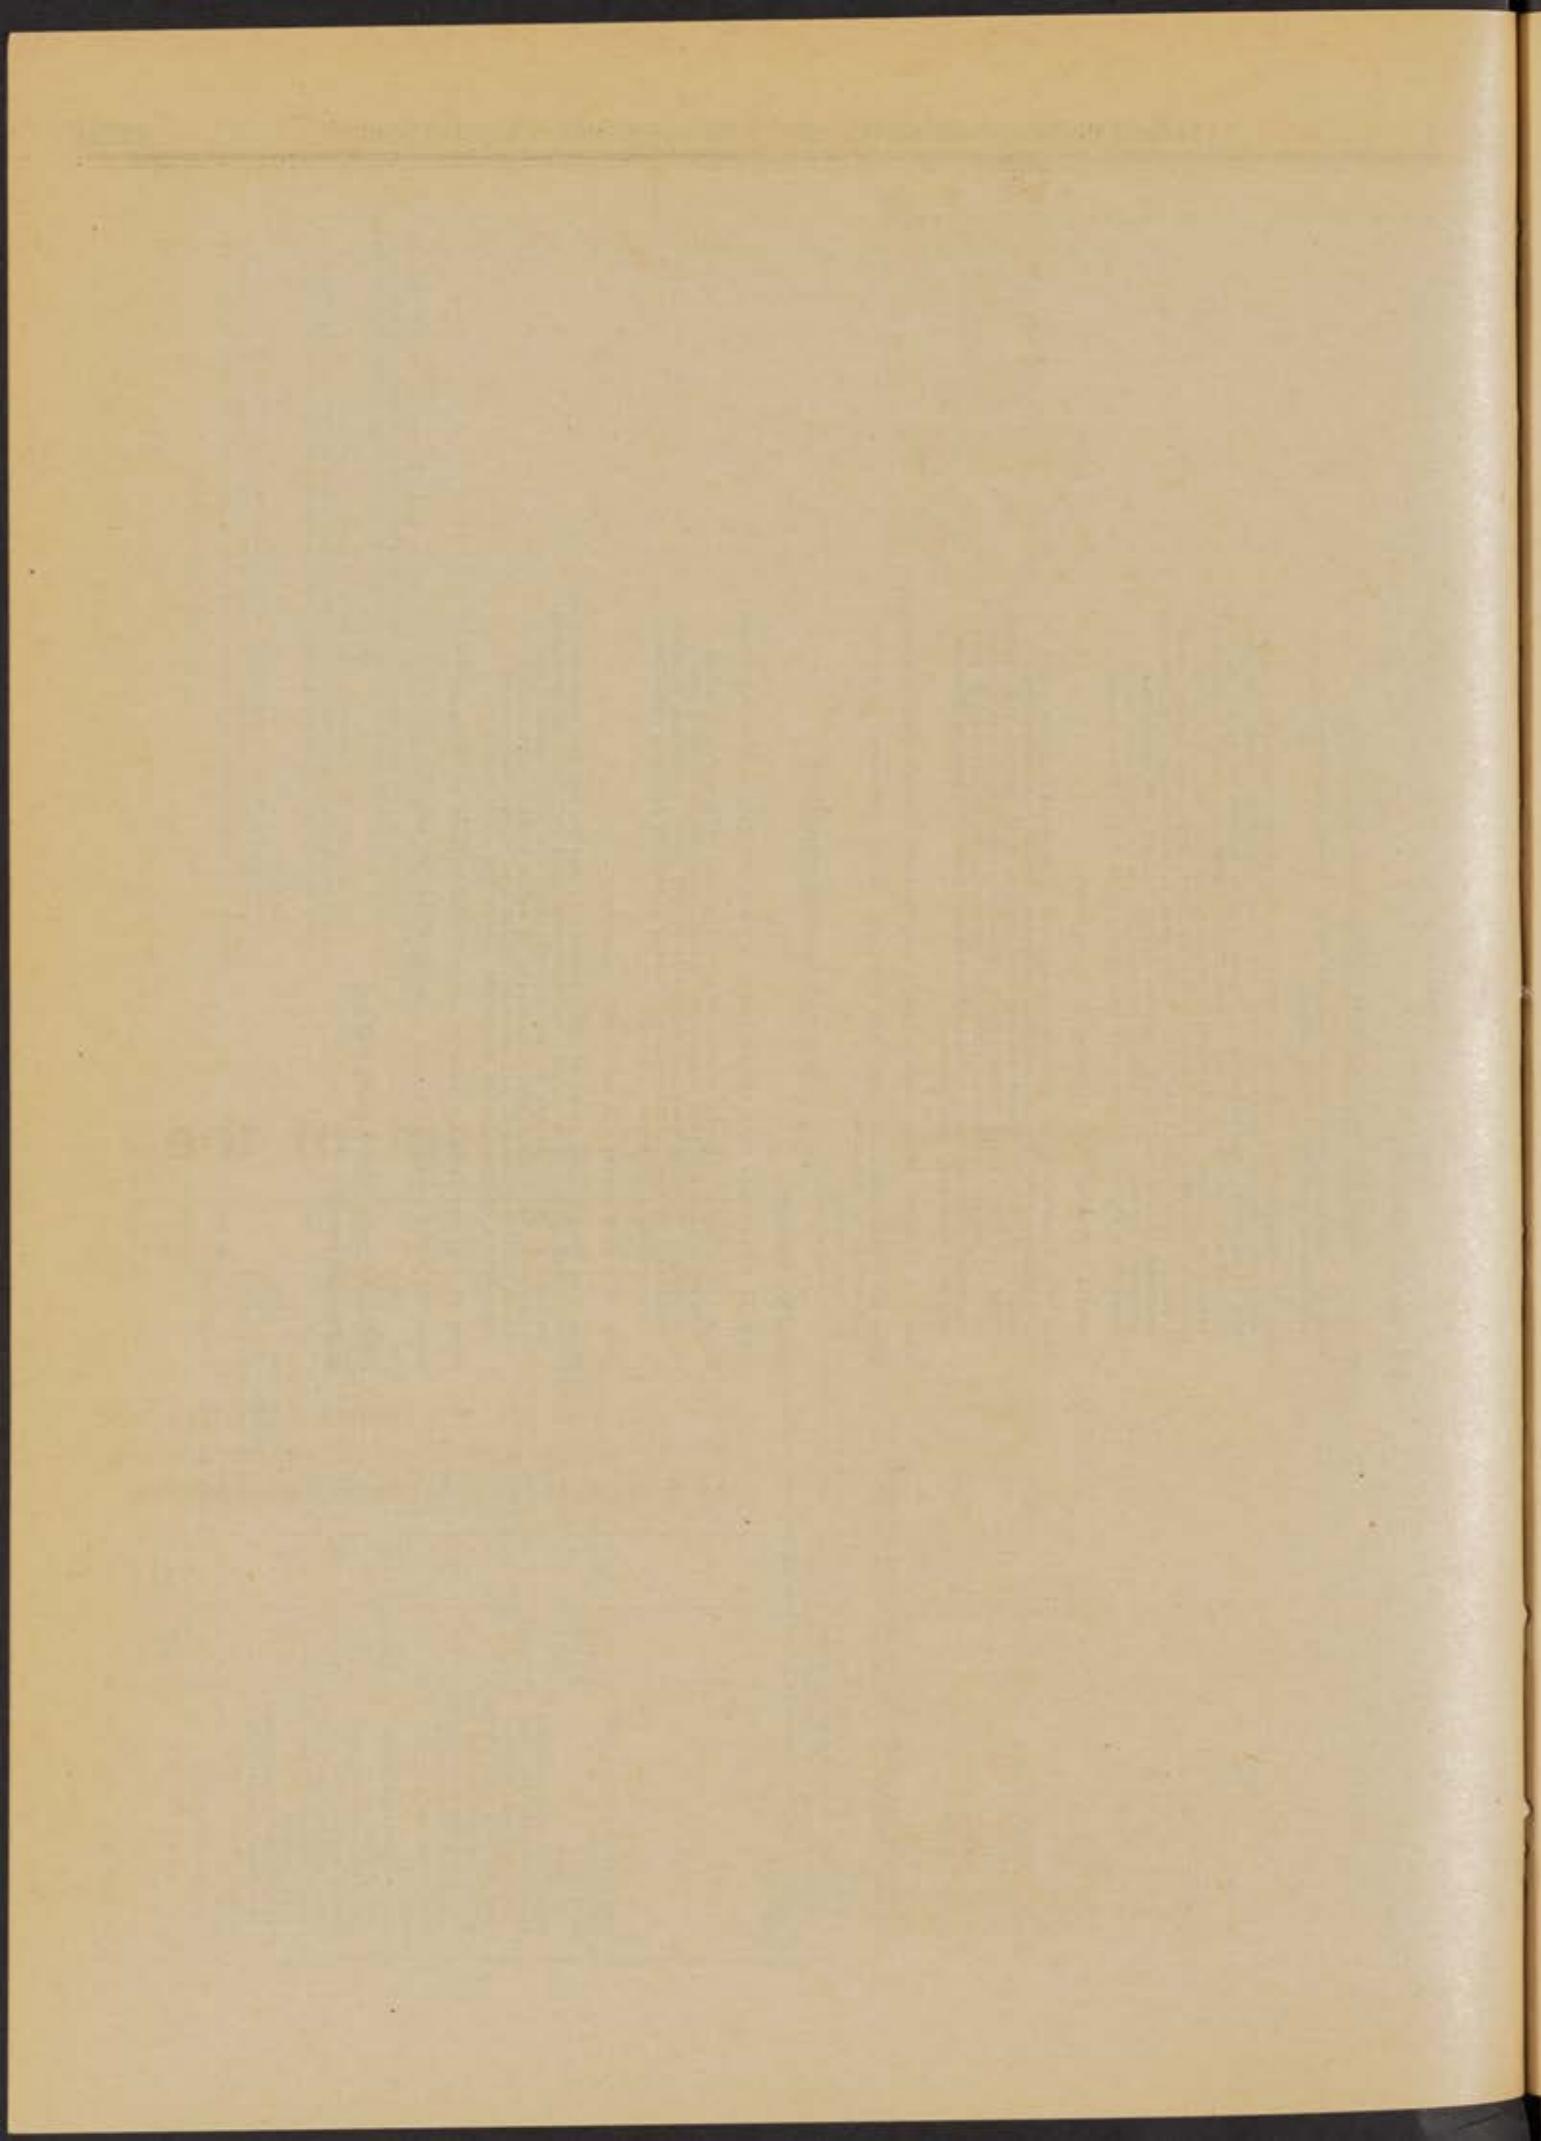

Group IV - Dump trucks (10 to 15 yds. capacity).

Group V - Dump trucks (over 15 yds. capacity), button and end dump euclids, all other euclid type trucks, turnarockers, ross carriers, atchey wagons, mechanics, semi-trailers or tractor-trailers, low boy, asphalt distributors, agitator mixer, dump trucks or batch trucks, specialized earth moving equipment, off-highway tandem back-dump, twin engine equipment & double hatched equipment (where not self-loaded).

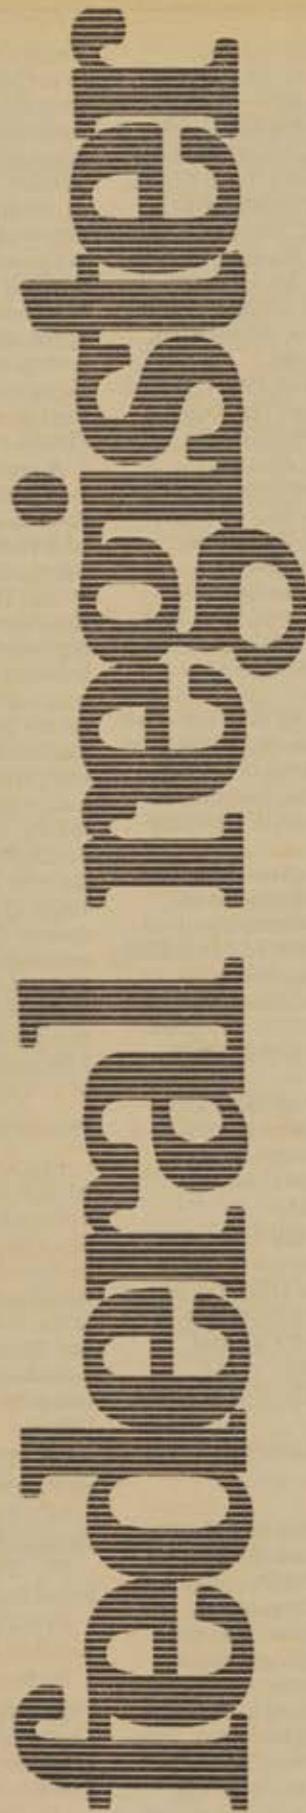

Group VI - All equipment listed in Group V over 49 tons to 59 tons.

Group VII - All equipment listed in Group V over 59 tons.

Part IV

**Department of the
Interior**

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and
Plants; Review of Plant Taxa for Listing
as Endangered or Threatened Species;
Notice of Review

DEPARTMENT OF THE INTERIOR**Fish and Wildlife Service****50 CFR Part 17****Endangered and Threatened Wildlife and Plants; Review of Plant Taxa for Listing as Endangered or Threatened Species**

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of review.

SUMMARY: The Service issues an updated notice of vascular plant taxa native to the United States that are being reviewed for possible addition to the List of Endangered and Threatened Plants under the Endangered Species Act of 1973, as amended. Changes from previous notices primarily involve additions of taxa to and deletions of taxa from active consideration, changes in category for candidate taxa, and additions and deletions in State distributions. While it is prudent to take candidate taxa into account in environmental planning, none of the substantive or procedural provisions of the Act apply to a species that is designated as a candidate for listing.

DATE: Comments are requested until further notice.

ADDRESSES: Interested persons or organizations should submit comments to the appropriate Regional Director(s) below or to: Director (OES), 500 Brohill Building, U.S. Fish and Wildlife Service, Washington, D.C. 20240. Comments and materials relating to this notice are available for public inspection by appointment during usual business hours at the Service's Office of Endangered Species, Suite 500, 1000 North Glebe Road, Arlington, Virginia.

Information relating to particular taxa may be obtained from the Endangered Species Coordinator(s) in the appropriate Service Regional Office(s) listed below:

Region 1.—California, Hawaii, Idaho, Nevada, Oregon, Washington, and Pacific territories

Regional Director (ARD/FA), U.S. Fish and Wildlife Service, Suite 1892, Lloyd 500 Building, 500 N.E. Multnomah Street, Portland, Oregon 97232, Telephone: 503/231-6131 (FTS: 8/429-6131);

Region 2.—Arizona, New Mexico, Oklahoma, and Texas

Regional Director (ARD/AFF), U.S. Fish and Wildlife Service, 500 Gold Avenue, S.W., Albuquerque, New Mexico 87103, Telephone: 505/766-3972 (FTS: 8/474-3972);

Region 3.—Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Wisconsin

Regional Director (ARD/AFF), U.S. Fish and Wildlife Service, Federal Building, Fort Snelling, Twin Cities, Minnesota 55111, Telephone: 612/725-3276 (FTS: 8/725-3276);

Region 4.—Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Puerto Rico, and the Virgin Islands.

Regional Director (ARD/FA), U.S. Fish and Wildlife Service, The Richard B. Russell Federal Building, 75 Spring Street, S.W., Atlanta, Georgia 30303, Telephone: 404/221-3583 (FTS: 8/242-3583);

Region 5.—Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, and West Virginia

Regional Director (ARD/FA), U.S. Fish and Wildlife Service, Suite 700, One Gateway Center, Newton Corner, Massachusetts 02158, Telephone: 617/965-5100, ext. 316 (FTS: 8/829-9316, 7, 8);

Region 6.—Colorado, Kansas, Montana, Nebraska, North Dakota, South Dakota, Utah, and Wyoming

Regional Director (ARD/FA), U.S. Fish and Wildlife Service, P.O. Box 25486, Denver Federal Center, Denver, Colorado 80225, Telephone: 303/236-7398 (FTS: 8/776-7398);

Region 7.—Alaska

Regional Director (ARD/AFF), U.S. Fish and Wildlife Service, 1101 East Tudor Road, Anchorage, Alaska 99503, Telephone: 907/786-3435 (FTS: 8/907/786-3435).

FOR FURTHER INFORMATION CONTACT:

Endangered Species Coordinator(s) in the appropriate Regional Office(s), or Mr. John L. Spinks, Jr., Chief, Office of Endangered Species, U.S. Fish and Wildlife Service, Washington, D.C. 20240, Telephone: 703/235-2771 (FTS: 8/235-2771).

SUPPLEMENTARY INFORMATION:**Background**

The Endangered Species Act of 1973, as amended (Act), requires the Service to identify species of wildlife and plants that are endangered or threatened, based on the best available scientific and commercial data. Recognizing a special need to focus on the conservation of endangered and threatened plants, which had not previously been eligible for Federal protection, the 1973 Act directed the

Secretary of the Smithsonian Institution to prepare a report on endangered and threatened plant species and to recommend necessary conservation measures. The Smithsonian report, published as House Document No. 94-51, included a list of more than 3,000 native taxa. The Service published a notice on July 1, 1975 (40 FR 27823), in which it announced that this report had been accepted as a petition under the terms of the Act, and that the taxa named in the report and notice were being reviewed for possible inclusion in the List of Endangered and Threatened Plants.

A revision of the Smithsonian's report was published in 1978 as a book: E.S. Ayensu and R.A. DeFilipps, *Endangered and Threatened Plants of the United States*, Smithsonian Institution and World Wildlife Fund, Washington, D.C.; this revision was also accepted as a petition for the taxa newly included therein (48 FR 6752). The July 1975 notice was superseded on December 15, 1980, by the Service's publication in the *Federal Register* (45 FR 82479) of a new comprehensive notice of review for native plants, which took into account the Smithsonian petitions and other accumulated information (*Endangered Species Technical Bulletin*, January, 1981). A petition on one additional species (*Serianthes nelsonii*) was accepted in the February 15, 1983, *Federal Register* (48 FR 6752). On November 28, 1983 (48 FR 53640), the Service published a supplement to its 1980 notice, noting changes in the status of various taxa.

Present Notice

This notice reflects the Service's current judgment of the possible vulnerability of all native candidate plant taxa. Taxa in the notice are assigned to several status categories, noted in the "Status" column of the table. Unlike previous plant notices, this one lists all taxa in one table, with coded entries to indicate current category. The codes are explained below:

LE—Taxa formally listed as endangered.

LE—Taxa formally listed as threatened.

PE—Taxa proposed to be formally listed as endangered.

PT—Taxa proposed to be formally listed as threatened.

S—Synonyms.

1—Taxa for which the Service currently has on file substantial information on biological vulnerability and threat(s) to support the

appropriateness of proposing to list them as endangered or threatened species. Presently, data are being gathered concerning precise habitat needs and, for some of the taxa, concerning the precise boundaries for critical habitat designations.

Development and publication of proposed rules on these taxa are anticipated, but, because of the large number of such taxa, could take some years.

Also included in category 1 are taxa whose status in the recent past is known, but that may already have become extinct. These plants may retain a high priority for addition to the List, subject to the confirmation of extant populations. Such possibly extinct taxa are indicated by an asterisk (*). Double asterisks (**) indicate taxa believed to be extinct in the wild, but known to be extant in cultivation.

2—Taxa for which information now in possession of the Service indicates that proposing to list them as endangered or threatened species is possibly appropriate, but for which substantial data on biological vulnerability and threat(s) are not currently known or on file to support the immediate preparation of rules. Such taxa that are possibly extinct are again indicated by an asterisk (*). Taxonomically questionable taxa that are believed extinct in the wild, but are extant in cultivation, are marked by double asterisks (**). Further biological research and field study usually will be necessary to ascertain the status of the taxa in category 2, and some of the taxa are of uncertain taxonomic validity. It is likely that some of these will not warrant listing, while others will be found to be in greater danger of extinction than some taxa in category 1. It is hoped that this notice will encourage necessary research on vulnerability, taxonomy, and/or threats for these taxa. To organize and elaborate status information that may be submitted, contributors are encouraged to use the status report guidelines of Henifin *et al.*, pages 261–282 in L.E. Morse and M.S. Henifin, editors, *Rare Plant Conservation*, 1981, the New York Botanical Garden, Bronx, New York; copies of these guidelines are available from the Service.

3—Taxa that are no longer being considered for listing as threatened or endangered species. Such taxa are further coded to indicate three subcategories, depending on the reason(s) for removal from consideration.

3A—Taxa for which the Service has persuasive evidence of extinction. If rediscovered, however, such taxa might acquire high priority for listing. At this time, the best available information indicates that the taxa included in this

subcategory, or the habitats from which they were known, are in fact extinct or destroyed, respectively.

3B—Names that, on the basis of current taxonomic understanding, usually as represented in published revisions and monographs, do not represent taxa meeting the Act's definition of "species." Such supposed taxa could be reevaluated in the future on the basis of subsequent research.

3C—Taxa that have proven to be more abundant or widespread than was previously believed and/or those that are not subject to any identifiable threat. Should further research or changes in land use indicate significant decline in any of these taxa, they may be reevaluated for possible inclusion in category 1 or 2.

The taxa in categories 1 and 2 of this notice are candidates for possible addition to the List of Endangered and Threatened Plants. The Service encourages their consideration in environmental planning, such as in environmental impact analysis under the National Environmental Policy Act of 1969 (implemented at 40 CFR Parts 1500–1508). Information regarding the range, status, and habitat needs of such species is available from the Service's Regional Offices (see "ADDRESSES" above) to assist in such planning.

The Service hereby requests that further information on the vulnerable taxa named in this notice be submitted as soon as possible and on a continuing basis. Especially sought are data for our files—

(1) Indicating that a taxon would more properly be assigned to a category other than the one in which it appears;

(2) Nominating a taxon not included;

(3) Recommending an area as critical habitat for a candidate taxon, or indicating that proposal of critical habitat would not be prudent for a taxon;

(4) Documenting threats to any of the included taxa;

(5) Informing the Service of the intensity and immediacy of threats to any of the taxa;

(6) Pointing out taxonomic or nomenclatural changes for any of the taxa;

(7) Suggesting appropriate common names; or

(8) Noting errors, such as any in the indicated historic distributions.

The Service intends to consider all information received in response to this notice, to amend the contents of categories 1, 2, and 3 to reflect current knowledge concerning affected plant taxa, and to indicate its intentions with regard to future listing actions (in accord with 50 CFR 424.15). Substantive changes will be announced by periodic supplemental or revised notices in the Federal Register.

Summary of Status Categories

For ease of reference, numerical totals for taxa included in the various status categories are provided below:

LE	—88
LT	—25
PE	—25
PT	—3
1	—894
1*	—177
1**	—4
2	—1623
2*	—27
2**	—1
3	—1414
3A	—60
3B	—310
3C	—1044

Relationship To Petition Requirements

All candidate plant taxa (those in category 1 or 2 of this notice) are treated as under petition for listing, and this notice initiates the review of status required by section 4(b)(3)(A) of the Act, as amended in 1982.

Organization of Table

The following table is arranged alphabetically by names of genera and species. Synonyms have been provided when necessary to avoid confusion. In some cases, taxa have been included that have not yet been formally described in the scientific literature. Such taxa are identified by a generic name followed by "SP. (SSP., VAR.) NOV./INED." Following the scientific name of each species (subspecies, variety) are a family designation and any common name. Known historical ranges are given on the right for all included taxa, usually indicated by abbreviations for States. Some taxa may no longer occur in some of the areas shown. For each taxon, the assigned status category appears on the left.

This notice was prepared by Dr. John J. Fay in the Service's Office of Endangered Species in Washington (703/235-1975; FTS 8/235-1975), from evaluations by appropriate staff botanists or biologists in the Washington Office and in the Service's Endangered Species Program in Regional Offices and Field Stations. The Service gratefully acknowledges the computer assistance of Dr. Larry E. Morse, The Nature Conservancy, Arlington, Virginia, and Dr. John Nagy, Brookhaven National Laboratory, Upton, New York, in compiling the lists of taxa.

List of Subjects in 50 CFR Part 17

Endangered and threatened wildlife. Fish, Marine mammals, Plants (agriculture).

Dated: September 20, 1985.

P. Daniel Smith,

Acting Deputy Assistant Secretary for Fish and Wildlife and Parks.

Part V

**Department of
Housing and Urban
Development**

Office of the Assistant Secretary for
Housing—Federal Housing Commissioner

24 CFR Part 200

**Minimum Property Standards for One and
Two Family Dwellings; Final Rule**

(Replaces HUD Handbook 4900.1)

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Housing—Federal Housing Commissioner

24 CFR Part 200

[Docket No. R-85-1183; FR-1655]

Revision of Minimum Property Standards (MPS) for One and Two Family Dwellings

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Final rule.

SUMMARY: This final rule changes the basic structure of HUD's Minimum Property Standards (MPS) for one and two family dwellings. The handbook which contained the MPS for such structures is eliminated. The Department will now rely upon acceptable local building codes, acceptable State building codes where there are no acceptable local building codes, or the Counsel of American Building Officials' (CABO) One and Two Family Dwelling Code where there are no acceptable State building codes. State and local codes are acceptable when the HUD Field Office verify them as being comparable to one of the national model codes. Necessary requirements which are unlikely to be contained in State or local codes and not contained in the CABO One and Two Family Dwelling Code are set forth in the Department's regulations as written herein.

These revisions will preserve the quality of one and two family dwellings and protect the Department's insurance fund while simplifying the Department's construction criteria.

EFFECTIVE DATE: November 1, 1985.

FOR FURTHER INFORMATION CONTACT:

Mark W. Holman, Manufactured Housing and Construction Standards Division, Room 9156, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410, telephone (202) 755-6584. (This is not a toll-free number).

SUPPLEMENTARY INFORMATION: The National Housing Act, 12 U.S.C. 1701-1749, authorizes the Secretary of Housing and Urban Development (Secretary) to prescribe standards for determining the acceptability of one and two family residential structures for purposes of mortgage insurance. See, e.g., 12 U.S.C. 1715(f). Some general statutory guidelines govern the nature of these standards. For example, the standards are "to establish the

acceptability of . . . prop[er]ties for mortgage insurance . . ." 12 U.S.C. 1715(f). In addition, the standards must be consistent with the declared national housing policy of realizing "the goal of a decent and suitable living environment for every American family. . . ." See 42 U.S.C. 1441.

The Department has prescribed these standards by issuing the Minimum Property Standards (MPS) for One and Two Family Dwellings, which were published as HUD Handbook 4900.1, and incorporated by reference into the Department's regulations by authority of 24 CFR 200.927. Changes in the structure of the MPS are being made to further the indicated statutory purposes.

The Department also has evaluated the revisions to the MPS in light of the recent amendment of Section 526 of the National Housing Act, 12 U.S.C. 1735f-4. See Housing and Urban-Rural Recovery Act of 1983, Pub. L. 98-181, sec. 405, 97 Stat. 1153 (1983). As amended, section 526 now permits the Secretary to require, with respect to health and safety, that properties other than manufactured homes comply "with one of the nationally recognized model building codes, or with a State or local building code based on one of the nationally recognized model building codes or their equivalent." The Secretary is "responsible for determining the comparability of the State and local codes to such model codes. . . ."

On October 11, 1984, the Department published a proposed rule to revise the MPS. See 49 FR 39855. That rule proposed that the Department rely upon acceptable State and local codes and eliminate the handbook containing the MPS for One and Two Family Dwellings. This final rule adopts as final that proposed rule. It is also similar in many respects to the final rule amending the MPS for Multifamily Housing which was published on May 1, 1984 [49 FR 18690].

Four hundred sixty-one comments were received in response to the proposed rule, and the Department has evaluated the revisions to the MPS in light of those comments.

The Department is aware of the fact that unnecessary or needlessly complex regulations can increase the final cost of a home. This rule is part of the Department's continuing effort to eliminate regulations where possible and to simplify regulations that cannot be eliminated.

I. Description of Final Rule

A. General

The Department is revising the MPS for One and Two Family Dwellings in order to simplify them. Generally, HUD will rely upon State or local building codes or the Council of American Building Officials' (CABO) One and Two Family Dwelling Code to provide the health and safety criteria for its single family construction standards. The Department will rely upon a State or local code only after it has been accepted by the Department as being comparable to one of the nationally recognized model building codes or its equivalent. In some jurisdictions, the Department may partially accept a State or local code. In such areas, the Department will rely upon the State or local code, plus those provisions of the CABO One and Two Family Dwelling Code identified by the local HUD Field Office in accordance with 24 CFR 200.926c. In jurisdictions where a State or local code has not been accepted or partially accepted by the Department, or where no State or local code exists, the Department will require compliance with the CABO One and Two Family Dwelling Code, the Electrical Code for One and Two Family Dwellings and the requirements under Sections 200.926 d and e.

In those instances where the Department will require compliance with the CABO One and Two Family Dwelling Code, the developer or other interested party must also comply with the mandatory codes or standards incorporated by reference therein and the requirements of § 200.926e. In addition, compliance with the Electrical Code for One and Two Family Dwellings, NFPA 70A, 1984 edition, including the appendices, is required. This is identified in 24 CFR 200.926b(a)(2).

In all instances, the Department will require compliance with the standards set forth in § 200.926d, entitled "Construction Requirements". This section contains standards relating to energy and certain other matters.

Section 521 of the National Housing Act, 12 U.S.C. 1735e, requires the Secretary to "adopt a uniform procedure for the acceptance of materials and products to be used in structures approved for mortgages or loans insured under [the National Housing] Act." The Secretary has established such procedures in Handbook 4950.1 and in 24 CFR 200.935. This final rule will not affect these procedures.

Section 100-2 of the now-eliminated MPS for One and Two Family

Dwellings, HUD Handbook 4900.1, provided that "[e]xisting construction shall comply with the Requirements for Existing Housing—One- to Four-Family Living Units, HUD Handbook 4905.1." Under this final rule, this handbook will not be referenced in the Code of Federal Regulations. This handbook will, however, be maintained by the Department as a single family program handbook.

B. Standard for Determining Comparability of State or Local Codes

The Department will determine whether a State or local code is comparable to one of the nationally recognized model codes by conducting an analysis of the comprehensiveness of the State or local code. For use in performing this analysis, the Department has prepared a list of construction-related areas. See § 200.926a. This list is based upon the provisions of the nationally recognized model building codes and is made up of major areas and subareas. Each major area has been made a separate paragraph of § 200.926a. For example, Fire Safety is paragraph (a) and Light and Ventilation is paragraph (b). Each major area has been further divided into subareas. For example, the Light and Ventilation paragraph has been divided into two subareas: (1) Habitable rooms and (2) Bath and Toilet rooms.

A State or local code will be found comparable, and therefore acceptable, if it regulates every subarea set forth in § 200.926a. A State or local code will be found partially acceptable if it fails to regulate from one to eight subareas in the same major area; however, no code will be found partially acceptable if it fails to regulate subareas in more than one of the major areas.

Consequently, every State or local code which is partially accepted will be deficient in only one major area. The local HUD Field Office will remedy the deficiency by designating those provisions of the CABO One and Two Family Dwelling Code which regulate the entire major area found deficient. This designation will be made in accordance with the table set forth in § 200.926c.

If a local code is not found to be acceptable or partially acceptable, one and two family residential structures will have to comply, for HUD purposes, with the State code if the State code is considered acceptable or partially acceptable. If the State code is not found acceptable or partially acceptable, one and two family residential structures will have to comply, for HUD purposes, with the CABO One and Two Family Dwelling Code, § 200.926e, and NFPA

70A. In all cases, the requirements set forth in § 200.926d shall apply.

The HUD Field Office, using provisions from the CABO code, will remedy deficiencies in partially acceptable State or local codes so they may be used for HUD purposes. For example, a jurisdiction's code may be deficient in the "Plumbing" major area because it fails to regulate the "Vents and Venting" and the "Cleanouts" subareas. In such a case, the code will be found to be partially acceptable because only subareas from one major area are lacking. The Field Office will remedy the deficiencies in the "Plumbing" major area by designating Part V of the CABO One and Two Family Dwelling Code. Thus, in that jurisdiction, for HUD purposes, properties will have to comply with Part V of the CABO One and Two Family Dwelling Code, the entire local code except for the plumbing requirements, and the requirements set forth in § 200.926d.

To determine whether this method of evaluating comparability would protect the Department's interests and satisfy all statutory requirements, the Department conducted a study of representative local codes. Codes from nine jurisdictions were evaluated. Three of the jurisdictions were large cities, three were medium sized cities, and three were small cities. One city of each size was selected from geographically diverse areas of the nation. As a result of this evaluation, it was found that seven of the codes regulated the areas identified in § 200.926a.

These seven codes were then subjected to a more detailed evaluation. This detailed analysis was performed to determine whether the local codes were in fact comparable to one of the nationally recognized model codes. In each case where the Department subjected a code to detailed analysis, we determined that it was comparable to one of the model codes.

C. Review Process

Before a State or local code can be relied upon to provide health and safety requirements for HUD purposes, it will have to be accepted or partially accepted by the Department. The review process for State codes, however, differs from that for local codes. With respect to State codes, the HUD Field Offices will immediately review them, without requests or submissions from lenders or other interested parties.

The Department will review a local code when it receives a request from a lender or other interested party. The person requesting review must submit to the HUD Field Office a copy of the local

building code and a copy of the statute, ordinance, order or regulation establishing the code, if any. The submitting party will not be required to submit copies of any part of a code already in the possession of the particular HUD Field Office. If the Department accepts the local code, it will issue a letter stating that the code is acceptable. If the Department declines to accept a local code, the submitting party will be notified, and given an opportunity to present its views as to why the local code should be accepted.

If the local code has been neither previously accepted nor partially accepted and if a lender or other interested party wishes to have it accepted, then it must submit the material described in the preceding paragraph. If a local code has been previously accepted or partially accepted, then lenders or other interested parties must submit either a certificate stating that the local code has not been changed since the date of its acceptance or partial acceptance by the Secretary, or a copy of all changes that have been made since the date of the Secretary's acceptance or partial acceptance. All submissions must be made by the time of application for mortgage insurance or other benefits.

Each Regional and Field Office will maintain a current list of States and jurisdictions with accepted or partially accepted codes, including the dates of acceptances.

D. Use of the Council of American Building Officials (CABO) One and Two Family Dwelling Code

In those jurisdictions without acceptable or partially acceptable local codes, one and two family dwellings must comply, for HUD purposes, with an acceptable or partially acceptable State code. In those jurisdictions without acceptable or partially acceptable State or local codes, one and two family dwellings will have to comply, for HUD purposes, with the CABO One and Two Family Dwelling Code identified in 24 CFR 200.926b(a) and with the requirements of § 200.926e. In all cases, the requirements set forth in § 200.926d shall apply.

In those jurisdictions with a partially acceptable local code or a partially acceptable State code, certain portions of the CABO code identified in 24 CFR 200.926b(a) will be used. The HUD Field Office will identify, in the written notice of partial acceptance, those portions of the CABO code with which the dwelling must comply. In so doing, the HUD Field Office will rely upon the table at § 200.926c to determine which portions

of the CABO code will supplement the partially acceptable State or local code.

The requirement to comply, for HUD purposes, with all or part of the CABO code or any State or local code applies only to the particular one or two family dwelling in question and has no applicability to other buildings in the community.

E. Differences Between the Proposed and Final Rules

Under the proposed rule, if the code which was applicable in a particular jurisdiction was found to be neither acceptable nor partially acceptable, then one and two family dwellings would have had to comply, for HUD purposes, with one of three nationally recognized model codes. The code to be evaluated was the code applicable in the jurisdiction, whether it was a local code, a State code, or a combination of the two. The final rule changes this system in two respects. First, the Department will evaluate a local code, if there is one, to determine its acceptability. If it is found to be neither acceptable nor partially acceptable, then one and two family dwellings will have to comply, for HUD purposes, with an acceptable or partially acceptable State code, if one exists. If no acceptable or partially acceptable State code exists, then one and two family dwelling will have to comply, for HUD purposes, with the CABO One and Two Family Dwelling Code. Reliance upon the CABO code is the second change in the system which would have been established under the proposed rule. Under the proposed rule, the Department would have permitted reliance upon the BOCA Basic/National Building Code; the Standard Building Code; or the Uniform Building Code. In addition to these changes, the final rule adds references to Appendices C and F of HUD Handbook 4910.1, "Minimum Property Standards for Multifamily Housing." Finally, a number of minor editorial changes have been made in the rule in order to clarify its meaning and application.

II. Public Comments

A. General

The Department received 461 comments. Most of these were concerned with the thermal energy requirements set forth in § 200.926d. Many of the comments indicated support for the policies underlying the rule change. Other comments suggested changes to specific provisions of the proposed rule.

The Department received several comments with respect to the rule's

general policy of relying on State or local codes to the greatest extent possible. One commenter complained that the rule would allow an "unnecessary and excessive proliferation" of different requirements throughout the country. All housing, whether conventionally or HUD financed, has always had to comply with local building codes. Only HUD financed housing had to comply with an additional set of standards, the MPS. The Department believes that the use of State or local codes will significantly reduce the burden of conflicting requirements that several layers of building standards tend to create. Moreover, this rule is consistent with both the Administration's policy of federalism and the Department's statutory mandate.

Another commenter argued that the existing MPS should be retained because model and State or local codes are primarily concerned with health and safety issues. They do not regulate performance and durability, as the existing MPS do. According to this commenter, the elimination of HUD's MPS will enable builders and developers to increase their profits and in the process build shoddier houses, which, in the long run, will reduce the quality of housing. For several reasons, the Department believes that the new system will not be deleterious to HUD-financed or other housing. First of all, the elimination of some criteria does not mean that builders will eliminate quality materials or good design. Conventionally financed housing has for years been built to meet specifications that exceed HUD's standards, because HUD has historically set only minimum standards. Consumer taste has often dictated more than the MPS requires. While elimination of the MPS will not reduce the quality of construction, it will eliminate the adherence to duplicative building codes, which can increase the cost of construction. Additionally, elimination of a single federal standard will allow for greater flexibility in addressing local needs through the use of local or regional codes. Further, buyers in today's market place are better educated and able to determine for themselves whether they wish to purchase homes containing marketability or liveability fixtures.

Moreover, the rule addresses only the construction criteria of home building, not the valuation procedures. If a buyer chooses to accept smaller spaces or fewer features in a home so that he or she can save money, the valuation procedures will reflect this choice. These valuation procedures establish

the maximum mortgage amount the Department will insure.

Finally, the primary purpose for the MPS throughout its history was to reduce the risk to the Department's insurance fund by ensuring that HUD could dispose of homes acquired through foreclosure at a minimum of loss to the Department. The Department has concluded that because of the increasing acceptability of local codes, buyer education, and builder interest, the use of model codes and the additional criteria of the Rule are sufficient to produce construction which will be adequate collateral to support an acceptable mortgage insurance risk. In sum, the Department is confident that construction meeting acceptable State or local codes or the CABO code, plus the additional requirements set forth herein, is adequate for HUD purposes and ensures that the quality of construction will remain high for the homebuyer.

The Department solicited comment on six subjects. See the proposed rule to revise the Minimum Property Standards for one and two family dwellings published on October 11, 1984 at 49 FR 39858. The discussion of the comments below corresponds to these six inquiries. Comments not pertaining to any of these areas are discussed in section II.g.

B. Energy

In the proposed rule, the Department solicited comment concerning the energy requirements of the MPS.

The Department is considering making changes to the energy requirements discussed above. In particular, the Department is considering whether to adopt the energy standards contained in the January 29, 1984 Addenda to ANSI/ASHRAE/IES 90A-1980 or the standards contained in the 1983 edition of the Model Energy Code. The Department seeks comment on these alternatives and on the availability and the propriety of other options. 49 FR 39858.

In response, the Department received numerous comments relating to energy requirements. Many commenters expressed concern that adoption of a model code or standard would eliminate the special consideration for masonry construction granted by HUD's Local Acceptable Standard for Arizona and Florida. Many other commenters suggested that we adopt one of the versions of the Model Energy Code or the ANSI/ASHRAE/IES Standard. Finally, the Department received many comments suggesting specific changes to the MPS energy standards.

After reviewing these comments, the Department has decided not to proceed to a final rule with respect to the energy

requirements of the MPS for one and two family dwellings. Rather, the Department will continue to evaluate the comments and to study possible alternatives, and will issue a final rule for energy criteria in the future.

The energy criteria will, therefore, remain unchanged from those currently in effect. To be consistent with the new structure of the MPS, however, the current energy criteria will be published in the Code of Federal Regulations, at 24 CFR 200.926(d). One commenter suggested that the energy criteria should remain in handbook form because the Code of Federal Regulations (CFR) is not available to builders. The Department believes that publication in the CFR ensures that any standards contained therein are widely available. Moreover, the HUD Field Offices will reprint and make available to builders the construction requirements in § 200.926 d and e.

C. Burden on Small Homebuilders

The second subject on which the Department solicited comment was whether this rule would "reduce burdens on small homebuilders, who often find it especially difficult to comply with two different sets of construction standards." 49 FR 39858. The Department also sought comment as to "whether the proposed arrangements will lead to any particular difficulties for small builders in learning of the standards to which they must comply, and as to what additional measures the Department might adopt to alleviate the disadvantages inherent in small operations." 49 FR 39858. Only a few commenters responded directly concerning this matter. In general, the commenters who responded believed that the Department's proposal would reduce regulatory conflicts, minimize waste and bring home costs down. They also commented that neither lenders nor builders would have problems in complying with the simplified requirements.

One commenter recognized that lenders and builders will need some type of education program to acquaint them with the changes. The Department realizes there will be some uncertainty as to the correct procedures during the transition period from the current system to the new system. During this transition, the Department's staff will be trained in code acceptance and use and will be instructed to give as much assistance to lenders and builders as possible. Formal or organized training by the Department for lenders and builders is not possible because of staff and funding limitations. However, if problems arise, appropriate information

will be disseminated to ensure a full understanding of the necessary program functions by private sector participants.

D. Applicable Construction Standards

The Department requested comment on whether the proposed approach to correcting deficiencies in State or local codes, when they are judged partially acceptable, would impose any serious burdens upon builders. The Department also requested comment on whether there was an alternative, less burdensome approach that is consistent with the Department's mandate.

One commenter expressed concern that when local codes are supplemented by referencing portions of model codes (in the final rule, only the CABO code), there is a possibility that conflicts between the local and CABO codes could occur. The commenter suggested that when conflicts arise, the local code should prevail.

The Department's intent is to allow the use, where possible, of State or local codes as HUD's health and safety criteria. When the State or local code is deficient in that it does not cover subareas in only one area, CABO code criteria will be used only to supplement the deficient State or local code. The Department recognizes that there may be times when the State or local code criteria are not compatible with the portion of the CABO code designated to supplement the deficient code. When conflict occurs, the local HUD Field Office will determine, on a case-by-case basis, which criteria will apply. See § 200.926(b). The Department believes that this approach provides sufficient flexibility for lenders and builders, yet will ensure that the Department's interest in providing decent, safe and sanitary housing is met.

Another commenter pointed out that, under the Proposed Rule, the local HUD Field Office would have been required to designate an appropriate model code to be used when a jurisdiction has a partially accepted code. This could result in more than one model code being designated by a HUD Field Office, depending upon which part of the local code was deficient. Further, in neighboring local jurisdictions under the same or a different HUD Field Office jurisdiction, a different model code could be referenced for the same deficient part of a local code. Finally, it was pointed out that when there is no acceptable local code, the Proposed Rule directed the lender or other interested party to select the model code to be used. The commenter concluded that this system could yield a maze of construction requirements. It would have been very difficult for the small

home builder, fee inspectors, direct endorsement mortgagees, and HUD Field Office staff to know which criteria would be applicable in every local jurisdiction, to keep current editions of the local and model codes, and to build, review plans and specifications and inspect construction to so many different combinations of local and model codes.

To eliminate potential conflicts or confusion, we are eliminating the options that permit the HUD Field Office and the lender or other interested party to choose which model code applies. The Final Rule now incorporates by reference only the CABO One and Two Family Dwelling Code as a model building code. Where there is no acceptable local code, the lender or other interested party is required to comply with the State building code, if it is acceptable or partially acceptable. If there is not an acceptable or partially acceptable State building code, then the CABO One and Two Family Dwelling Codes applies. Where the State or local code is partially acceptable, the HUD Field Office will supplement it with portions of the CABO code.

The Department has decided to use only the CABO code for several reasons other than the simplicity that the use of only one code will provide. First, the CABO code has been widely adopted throughout the country. Second, it is a model code created strictly for the regulation of single family dwellings. Third, it was created and is referenced by the three major model code organizations as single family dwelling criteria. Fourth, referencing only the CABO code will obviate the need for including a mechanism in the rule to ensure that all of the model code references are current. Finally, the CABO code regulates the construction areas identified in § 200.926a in a way that the Department has concluded adequately protects its interests.

One commenter argued that the Department should not supplement a deficient subarea of a State or local code by substituting an entire major area of a model (now CABO) code. Another commenter suggested that HUD should specify, on a case-by-case basis, what modifications would be necessary. The Department believes, however, that the system as proposed will effectively supplement partially acceptable codes. It has been the Department's experience that if a State or local code is deficient in one subarea, there are likely to be other deficiencies in other subareas within the major area involved. Thus, substitution of the entire major area ensures that all relevant criteria are

adequately addressed. Further, by establishing a uniform system under which partially acceptable codes will be supplemented, the Department can both minimize confusion and attain some uniformity within a State or local jurisdiction.

E. The Developer Submission of "No Change" Certificate

Comment was solicited as to whether the Department's requirement for a certificate of "no change" and the requirement to submit all changes made to a local code since it was previously accepted or partially accepted were overly burdensome to small builders. We asked if there were alternatives to this approach that would be less burdensome but still meet HUD's objectives.

In response, the Department received several comments. One commenter stated that the certification of "no change" would in fact increase the burden on builders and on lenders and other interested parties. The commenter also argued that the Department should maintain, and that lenders or others should not be required to submit, this information. Another commenter believed that it is not unreasonable to require that all current local amendments to the codes be submitted to the HUD Field Office by the builder, lender or other interested party.

The Department believes that the certificate of "no change" is the least burdensome way of ensuring that a code has remained acceptable or partially acceptable. The Department does not have the resources to monitor the status of the thousands of building codes that exist in the country. In contrast, a builder must always comply with local codes whether or not he participates in HUD programs. Thus, he must know what the latest edition of an applicable code requires and is in a better position to know whether any changes have been made on the code since he last used it.

F. Procedures for Acceptance of Products and Materials

The Department also solicited comments concerning how its procedures for acceptance of materials and products under section 521 of the National Housing Act could be streamlined so that the Department would not duplicate functions and analyses performed by adjuncts to the national recognized model code organizations.

Several commenters approved of HUD's moving toward private sector product acceptance systems, such as those of the model code organizations and the National Evaluation Service

(NES). These comments however, failed to discuss any other means of acceptance of materials and products available to HUD that would not be duplicative of the functions of the code organizations or the NES. In reply to our question on how HUD duplicates NES or model code procedures, one commenter suggested that internal HUD procedures be developed to permit HUD recognition of CABO National Evaluation Reports (NER) or new products, thus avoiding duplication. The commenter pointed out that the present HUD system requires the product manufacturer to pay Material Release and Structural Engineering Bulletin fees for the same product for which he has previously paid a fee for CABO analysis and issuance of an NER. The commenter concluded that this additional Federal agency expense and overlap should be avoided.

Similarly, in response to the Department's inquiry regarding how product durability might be ensured, several commenters suggested that the long-term durability of products and materials which are evaluated by NES and the model code organizations is assured because the reports are prepared on the basis of compliance with the code criteria and with nationally recognized industry standards. The commenters were not aware of any long-term durability problem with products, materials and housing systems that are evaluated by the model code organizations.

On the other hand, some commenters wanted to continue with HUD's Technical Suitability of Products Program, particularly the certification of products program. To do otherwise, the commenters argued, would compromise HUD's acceptance/assurance activity as well as cause considerable disruption to the current industry-wide certification process.

The Department has carefully evaluated these comments, and has decided to make no changes to the Technical Suitability of Products Program at this time. Although the Proposed Rule set forth no changes in the program, it requested comment on the issue to determine whether there was more information available since our last request for comment on this issue, on March 1, 1984. At that time, the Department published a proposed rule, at 49 FR 7587, that would have instituted a system of fees to cover the costs of services provided by the Technical Suitability of Products Program. On August 9, 1984, at 49 FR 31854, the Final Rule was published. The preamble of that Final Rule explained that, for several reasons, the Department decided

not to make any changes in the present system for evaluating new products and materials.

As explained therein, the Department is required by statute to maintain such a system. Section 521 of the National Housing Act, 12 U.S.C. 1735e, states, in part, that "[t]he Secretary shall adopt a uniform procedure for the acceptance of materials and products to be used in structures approved for mortgages or loans insured under this Act. Under such procedure any material or product which the Secretary finds is technically suitable for the use proposed shall be accepted." The Department has complied with the statute by instituting the Technical Suitability of Products Program, and the system cannot, in accordance with the statute, be eliminated.

Because the Department received no new information since its previous determination to maintain current procedures, we are not changing the Technical Suitability of Products Program at this time.

The Department also received comments on the manner, if any, in which the new structure of the MPS would affect the current system of products and materials acceptance. Some commenters suggested that HUD, in view of the necessity to maintain durability criteria, should maintain in the MPS for One and Two Family Dwellings a list of product standards similar to that found in the MPS for Multifamily Housing. By so doing, it was suggested, HUD could assure that products and materials would at least meet an industry standard of quality and safety. It was also pointed out that some standards will never be listed in CABO because they relate to components or products such as cabinets, furnishings and carpet, which are not subject to building code enforcement. The commenters concluded that the omission of these standards from CABO necessitated HUD's referencing the standards, because homes with mortgages insured by HUD contain those components and products, and HUD should therefore ensure that they would meet acceptable levels of quality, safety and durability.

We agree that many products standards, and particularly HUD Use of Materials Bulletins, are not and probably will never be listed in model codes such as CABO. Because of our need to ensure the continued durability of products which are likely to be used in HUD-insured dwellings, we will reference, in § 200.926d, Appendices C and F of HUD Handbook 4910.1, MPS for Multifamily Housing. These appendices

are lists of standards referenced by the Department.

Finally, a commenter recommended that HUD management coordinate any changes regarding the HUD Technical Suitability of Products Program with the Farmers Home Administration, Veterans Administration, and the Office of Management and Budget. The commenter noted that various agencies have conflicting requirements with respect to materials acceptance, and suggested that three Federal agencies and OMB jointly decide on workable acceptance procedures for new products, to be followed by the three agencies in the future. The Department agrees that this idea is worthwhile, and will investigate the possibility of coordinating acceptance procedures among these agencies.

G. Design Criteria for Housing for the Elderly

The last subject on which the Department solicited comment was its proposal to eliminate criteria for housing for the elderly. The Department asked whether any of these requirements should remain and whether other requirements should be incorporated.

Only a few commenters responded to the question. One commenter agreed that the Department should delete the design criteria for housing for the elderly. The commenter suggested that the free market should dictate design criteria, and that private sector committees under AARP, ANSI and others provide adequate guidelines.

Another commenter questioned whether the Department intended to adopt Appendix M of the Standard Building Code (SBC), which contains criteria for the handicapped. Because the final rule adopts only the CABO code and does not reference the SBC, it is inappropriate to adopt Appendix M of the SBC.

The Final Rule remains unchanged on this issue. We will therefore eliminate specific criteria for housing for the elderly.

H. Other Comments

The Department received many comments which suggested that the various appendices or supplements to the model codes be incorporated or excluded. One commenter also suggested that the Department designate the model code predominantly in use in any given area when supplementing partially acceptable codes. Because the final rule references only the CABO One and Two Family Dwelling Code, and not the four model codes, these issues are no longer of concern.

Several commenters expressed concern over the rule's impact on the Technical Suitability of Products Program. Some urged the Department to retain Use of Materials Bulletin No. 44, which establishes a standard for carpets. Another commenter suggested that HUD retain certain Federal Specifications for the tile and sheet vinyl flooring, as was done for the MPS for multifamily structures. As discussed above, we have incorporated Appendices C and F of the MPS for Multifamily Housing, HUD Handbook 4910.1, which list material standards and Use of Materials Bulletins that may be used in HUD-insured housing. Another commenter stated that § 200.926d(d), which covers Special Construction and Product Acceptance, was unclear with reference to whether HUD will continue to accept existing certification programs for HUD-approved products. This section has been rewritten to clarify that the procedures of HUD Handbook 4950.1 and Use of Materials Bulletins shall be applicable to the MPS for One and Two Family Dwellings.

One commenter suggested that the list of construction comparison items at § 200.926a be rewritten so as to require a State or local code to regulate certain subareas only if local conditions warrant criteria on those subareas. The Department finds this comment persuasive, and has revised § 200.926a by requiring a code to regulate certain subareas only if certain conditions of ANSI A58.1-82 are present in the specific jurisdiction.

One commenter suggested that the number of major areas listed in § 200.926a be reduced, arguing that the Model Codes are not broken down in the same manner as the list of major areas. The Department based this list on the Model Codes themselves, and we believe that our list is reasonably consistent with the codes. The Department, however, has modified the list, which is also used to review codes for multifamily use, by deleting some subareas that apply primarily to multifamily-type construction. For example, the "Mechanical" major area no longer contains the "Boiler and Pressure Vessels" subarea.

One commenter suggested that the Department exempt modular construction from the rule. Although the Department is sympathetic to modular home manufacturers' concern regarding inconsistent local requirements, we see no reason to exempt modular construction from the system set forth in this rule, because modular housing always must comply with local requirements, whether it is being financed through HUD or through other

means. The Department has no authority to promulgate a preemptive national code for modular housing.

One commenter suggested that local building officials should serve as the model code enforcement officials, instead of the Secretary's designee, as set forth in § 200.926b(b)(2). The Department, however, has no means of ascertaining the qualifications of local officials; therefore, to ensure that this function is adequately performed, the final rule is unchanged in this regard.

Another commenter suggested that the local code acceptance system could be simplified by using the certification of a State or local official or other qualified individual that the local or State code regulates the areas and subareas identified in § 200.926a.

Section 526 of the National Housing Act, however, states that the "Secretary shall be responsible for determining the acceptability of the State and local codes to . . . model codes." The Department therefore cannot delegate this responsibility. Moreover, the HUD Field Offices are responsible for determining whether a house complies with the applicable requirements. They must therefore be familiar with the codes, and should have responsibility for their acceptance.

One commenter argued that the system for code acceptance is too complex and should be simplified. The Department believes that, as set forth in the final rule, the system for acceptance is as simple as possible, considering the need for flexibility and thoroughness. The result of the system—reliance on State or local codes as much as possible—will ease the burden of unnecessary standards on builders and lenders. The Department believes that this goal justifies the complexity of the acceptance process.

Finally, the Department received many comments of an editorial nature. We have evaluated these comments, and have made changes in the Final Rule as appropriate.

III. Procedural Requirements

The collection of information requirements contained in this rule have been approved by the Office of Management and Budget (OMB) and assigned approval number 2502-0338.

This final rule does not constitute a "major rule" as that term is defined in section 1(b) of Executive Order 12291 on Federal Regulation issued by the President on February 17, 1981. The rule does not: (1) Have an annual effect on the economy of one hundred million dollars or more; (2) cause a major increase in costs or prices for

consumers, individual industries, Federal State, or local government agencies or geographic regions; or (3) have significant adverse effect on competition, employment, investment, productivity, innovation or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Consistent with the provisions of 5 U.S.C. 605(b) (The Regulatory Flexibility Act), the Secretary hereby certifies that this rule does not have a significant economic impact on a substantial number of small entities. In all cases, one and two family residential structures must be built in compliance with State or local codes. Upon the effective date of this rule, the Department generally will accept such compliance as satisfying the Department's concerns relating to the health and safety aspects of those structures. Further, this rule will generally reduce the burden of compliance which already exists for both small and large entities.

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations in 24 CFR Part 50, which implement section 102(2)(C) of the National Environmental Policy Act of 1969. The Finding of No Significant Impact is available for public inspection during regular business hours at the Office of Rules Docket Clerk at Room 10276, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, D.C. 20410.

This rule is listed as item H-74-82 in the Department's Semiannual Agenda of Regulations published at 50 FR 17286, 17298 on April 29, 1985 pursuant to Executive Order 12291 and the Regulatory Flexibility Act.

The catalog of Federal Domestic Assistance does not apply to this Rule.

Paperwork Reduction Act

Information collection requirements contained in this regulation (§ 200.926) have been approved by the Office of Management and Budget under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96-511) and have been assigned OMB control number 2502-033B.

List of Subjects in 24 CFR Part 200

Administrative practice and procedure, Claims, Equal employment opportunity, Fair housing, Housing standards, Loan programs: Housing and community development, Mortgage insurance, Organization and functions (Government agencies), Reporting and recordkeeping requirements, Minimum

Property Standards, Incorporation by reference.

Accordingly, HUD proposes to amend 24 CFR Part 200 as follows:

PART 200—INTRODUCTION

Subpart S—Minimum Property Standards

1. The authority citation for Part 200 continues to read as follows:

Authority: Titles I and II of the National Housing Act (12 U.S.C. 1701 through 1715a-18); sec. 7(d), Department of Housing and Urban Development Act (42 U.S.C. 3335(d)).

2. § 200.927 is revised as follows:

§ 200.927 Incorporation by reference of minimum property standards.

The Minimum Property Standards as contained in the handbooks identified in § 200.929(b) are incorporated by reference into this section as though set forth in full in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51.

3. Section 200.929 is amended by revising the introductory paragraph of paragraph (b) and paragraph (b)(1) as follows:

§ 200.929 [Amended]

(b) **Identification.** The Minimum Property Standards have been published as described below:

(1) MPS for One and Two Family Dwellings. See §§ 200.926, 200.926a–e.

4. 24 CFR Part 200 is amended by adding §§ 200.926, 200.926a, 200.926b, 200.926c, 200.926d and 200.926e as follows:

§ 200.926 Minimum property standards for one and two family dwellings.

(a) **Construction standards.—(1)**

Applicable structures. The standards identified or contained in §§ 200.926 and 200.926a–200.926e shall apply to single family detached homes, duplexes, triplexes and to living units in a structure where the units are located side by side in townhouse fashion.

(2) **Applicability of standards to new construction.** The standards referenced in paragraph (a)(1) of this section are applicable to:

(i) Structures approved for insurance or other benefits prior to the start of construction;

(ii) Structures which are approved for insurance or other benefits based upon participation in an insured warranty program;

(iii) Structures which are insured as new construction based upon a Certificate of Reasonable Value issued by the Veterans Administration; and

(iv) Proposed construction insured under the Direct Endorsement program.

(b) **Conflicting standards.** The requirements contained in § 200.926d do not preempt local or State standards, nor do they alter or affect a builder's obligation to comply with any local or State requirements. However, a property shall be eligible for benefits only if it complies with the requirements of this subpart, including any referenced standards. When any of the requirements identified in § 200.926c are in conflict with a partially accepted local or state code, the conflict will be resolved by the HUD Field Office servicing the jurisdiction in which the property is to be located.

(c) **Standard for evaluating local or state building codes.** The Secretary shall compare a local building code submitted under § 200.926(d) or a State code to the list of construction related areas contained in § 200.926a.

(1) A local or State code will be accepted if it regulates each area and subarea on the list.

(2) A local or State building code will be partially accepted if it regulates most of the areas on the list. Provided, however, that no code may be partially accepted if it fails to regulate one or more subareas in more than one of the major areas. The major areas are: fire safety, light and ventilation, structural loads, foundation systems, materials standards, construction components, glass, mechanical, plumbing and electrical. See § 200.926a.

(3) For purposes of this paragraph, a local or State code regulates an area or subarea if it establishes a standard concerning that area or subarea.

(d) **Code selection.** Any materials required to be submitted under this section must be submitted by the time the lender or other interested party applies for mortgage insurance or other benefits.

(1) **Jurisdictions without previously accepted building codes.** The following submission requirements apply to lenders and other interested parties in jurisdictions without building codes, jurisdictions with building codes which have never been submitted for acceptance, and jurisdictions with building codes which previously have been submitted for acceptance and have not been accepted or partially accepted by the Secretary.

(i) **In jurisdictions without local building codes:**

(A) If the State building code is acceptable, the lender or other interested party must comply with the State building code and the requirements of § 200.926d;

(B) If the State building code is partially acceptable, the lender or other interested party must comply with:

(1) The acceptable portions of the partially acceptable code; and

(2) Those portions of the CABO One and Two Family Dwelling Code or the Electrical Code for One-and-Two-Family Dwellings designated by the HUD Field Office in accordance with § 200.926c; and

(3) The requirements of § 200.926d.

(C) If there is no State building code or if the State building code is unacceptable, the lender or other interested party must comply with:

(1) The CABO One and Two Family Code and the Electrical Code for One and Two Family Dwellings, as identified in § 200.926b(a); and

(2) The requirements of § 200.926d.

(ii) In jurisdictions with local building codes which have never been submitted for review, lenders or other interested parties must:

(A) Comply with the requirements of § 200.926(d)(1)(i) (A), (B) or (C), as appropriate; or

(B) Request the Secretary's acceptance of the local building code in accordance with § 200.926(d)(1)(iv).

(1) If the Secretary determines that the local building code is unacceptable, then the lender or other interested party must comply with the requirements of § 200.926(d)(1)(i) (A), (B) or (C) as appropriate.

(2) If the Secretary determines that the local code is partially acceptable, then the lender or other interested party must comply with:

(i) The acceptable portions of the partially acceptable local code; and

(ii) Those portions of the CABO One and Two Family Dwelling Code or the Electrical Code for One and Two Family Dwellings designated by the HUD Field Office in accordance with § 200.926c; and

(iii) The requirements of § 200.926d.

(3) If the Secretary determines that the local code is acceptable, then the lender or other interested party must comply with the local building code and the requirements of § 200.926d.

(iii) In jurisdictions with local building codes which previously have been submitted for review and which have been found unacceptable by the Secretary:

(A) If the local code has not been changed since the date the code or changes thereto were submitted to the Secretary, the lender or other interested party must comply with the requirements of § 200.926(d)(1)(i) (A), (B) or (C), as appropriate; or

(B) If the local code has been changed since the date when the code or changes

thereto were submitted to the Secretary, the lender or other interested party must submit a copy of all changes to the local building code, including all applicable service codes and appendices and a copy of the statute, ordinance, regulation or order making such changes in the code, which have been made since the date when the code or other changes thereto were last submitted to the Secretary. However, the lender or other interested party need not submit any part already in the possession of the HUD Field Office. Based upon the Secretary's determination concerning the acceptability of the local code as changed, the lender or other interested party must comply with the requirements of § 200.926(d)(1)(ii)(B) (1), (2) or (3), as appropriate.

(iv) In order to obtain the Department's approval of a local code, the lender or other interested party must submit the following material to the HUD Field Office serving the jurisdiction in which the property is to be constructed:

(A) A copy of the jurisdiction's local building code, including all applicable service codes and appendices; and

(B) A copy of the statute, ordinance, regulation, or order establishing the code, if such statute, ordinance, regulation or order is not contained in the building code itself.

However, the lender or other interested party need not submit any document already on file in the HUD Field Office.

(2) *Jurisdictions with previously accepted or partially accepted building codes.* The following submission requirements apply to lenders or other interested parties in any jurisdiction with a building code which has been accepted or partially accepted by the Secretary:

(i) The lender or other interested party shall submit to the HUD Field Office serving the jurisdiction in which the property is to be constructed:

(A) A certificate stating that, since the date when the code or any changes thereto were last submitted to the Secretary, the jurisdiction's local building code has not been changed; or

(B) (1) A copy of all changes to the jurisdiction's building code, including all applicable service codes and appendices, which have been made since the date when the code or other changes thereto were last submitted to the Secretary. However, the lender or other interested party need not submit any part already in the possession of the HUD Field Office; and

(2) A copy of the statute, ordinance, regulation, or order making such changes in the code.

(ii) If, based upon changes to the local building code, the Secretary determines that it is unacceptable, the lender or other interested party must comply with the requirements of § 200.926(d)(1) (i)(A), (B) or (C), as appropriate.

(iii) If the local building code was previously found by the Secretary to be partially acceptable and there have been no changes to it or if the local building code was previously found by the Secretary to be partially acceptable and if, based upon changes to it, the Secretary determines that it is still partially acceptable or if the local building code was previously found by the Secretary to be acceptable and if, based upon changes to it, the Secretary determines that it is partially acceptable, then the lender or other interested party must comply with § 200.926(d)(1)(ii)(B)(2) (i), (ii) and (iii).

(iv) If the local building code was previously found by the Secretary to be partially acceptable and if, based upon changes to it, the Secretary determines that it is acceptable, or if the local building code was previously found by the Secretary to be acceptable and there have been no changes to the code, or if the local building code was previously found by the Secretary to be acceptable and if, based upon changes to it, the Secretary determines that it is still acceptable, then the lender or other interested party must comply with the local building code and the requirements of § 200.926d.

(3) *Notification of decision.* The Secretary shall review the material submitted under § 200.926(d). Following that review, the Secretary shall issue a written notice (except where there is a previously accepted or partially accepted code which has not been changed) to the submitting party stating whether the local building code is acceptable, partially acceptable, or not acceptable. Where the local building code is not acceptable, the notice shall also state whether the State code is acceptable, partially acceptable or not acceptable. The notice shall also contain the basis for the Secretary's decision and a notification of the submitting party's right to present its views concerning the denial of acceptance if the code is neither accepted nor partially accepted. The Secretary may, in his discretion, permit either an oral or written presentation of views.

(4) *Department's responsibilities.* (i) Each Regional and Field Office will maintain a current list of jurisdictions with accepted local or State building codes, a current list of jurisdictions with partially accepted local or State building codes and a current list of jurisdictions

with local or State building codes which have not been accepted. For local codes, the lists will state the most recent date when the code or changes thereto were submitted to the Secretary. The lists, which shall be prepared by the Field Offices and submitted to the Regional Offices, will be available to any interested party upon request. In addition, the list of jurisdictions whose codes have been partially accepted shall identify in accordance with § 200.926c those portions of the codes listed at § 200.926b(a) with which the property must comply.

(ii) The Department is responsible for obtaining copies of the State codes and any changes thereto.

§ 200.926a Residential building code comparison items.

HUD will review each local and State code submitted under this subpart to determine whether it regulates all of the following areas and subareas:

- (a) *Fire Safety.*
 - (1) Allowable height;
 - (2) Fire separations;
 - (3) Fire resistance requirements;
 - (4) Egress doors and windows;
 - (5) Unit smoke detectors;
 - (6) Flame spread.
- (b) *Light and ventilation.*
 - (1) Habitable rooms;
 - (2) Bath and toilet rooms.
- (c) *Structural loads.*
 - (1) Design live loads;
 - (2) Design dead loads;
 - (3) Snow loads (for jurisdictions with snow loading conditions identified in Section 7 of ANSI A58.1-82);
 - (4) Wind loads;
 - (5) Earthquake loads (for jurisdictions in seismic zones 3 or 4 as identified in Section 9 of ANSI A58.1-82).
- (d) *Foundation systems.*
 - (1) Foundation depths;
 - (2) Footings;
 - (3) Foundation materials criteria.
- (e) *Materials standards.*
 - (1) Materials standards.
 - (f) *Construction components.*
 - (1) Steel;
 - (2) Masonry;
 - (3) Concrete;
 - (4) Lumber;
 - (5) Roof construction and covering;
 - (6) Chimneys and fireplaces.
 - (g) *Glass.*
 - (1) Thickness/area requirements;
 - (2) Safety glazing.
 - (h) *Mechanical.*
 - (1) Heating, cooling and ventilation systems;
 - (2) Gas, liquid and solid fuel piping and equipment;
 - (3) Chimneys and vents;
 - (4) Ventilation (air changes).
 - (i) *Plumbing.*

- (1) Materials standards;
- (2) Sizing and installing drainage systems;
- (3) Vents and venting;
- (4) Traps;
- (5) Cleanouts;
- (6) Plumbing fixtures;
- (7) Water supply and distribution;
- (8) Sewage disposal systems.
- (j) *Electrical.*
 - (1) Branch circuits;
 - (2) Services;
 - (3) Grounding;
 - (4) Wiring methods;
 - (5) Cable;
 - (6) Conduit;
 - (7) Outlets, switches and junction boxes;
 - (8) Panelboards.

§ 200.926b Model codes.

(a) *Incorporation by reference.* The following model code publications are incorporated by reference in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. The incorporation by reference of these publications has been approved by the Director of the Federal Register. The locations where copies of these publications are available are set forth below.

(1) *CABO One and Two Family Dwelling Code*, 1983 edition, with the 1984 and 1985 Amendments, excluding Chapter 1—Administrative; Part VI—Electrical; and Part VII—Energy Conservation, but including Appendices A and B of the Code. Available from Council of American Building Officials, 5203 Leesburg Pike, Falls Church, VA 22041.

(2) *Electrical Code for One and Two Family Dwellings*, NFPA 70A, 1984 Edition, including appendices. Available from the National Fire Protection Association, Batterymarch Park, Quincy, Massachusetts 02269.

(b) *Model code compliance requirements.* (1) When a one or two family dwelling is to comply with the model codes set forth in § 200.926b(a), the following requirements of those model codes shall not apply to those properties:

(i) Those provisions of the model codes that establish energy requirements for one and two family dwellings; and

(ii) Those provisions of the model codes that require or allow the issuance of permits of any sort.

(2) Where the model codes set forth in § 200.926b(a) designate a building, fire, mechanical, plumbing or other official, the Secretary's designee in the HUD Field Office serving the jurisdiction in which the dwelling is to be constructed shall act as such official.

(c) *Designation of Model Codes.* When a one or two family dwelling is to

comply with portions of a model code or the entire model code, it shall comply with the model codes in paragraph (c)(1) and/or (c)(2) of this section as designated by the HUD Field Office serving the jurisdiction in which the property is located. In addition, such property shall comply with all of the standards which are referenced in such code or codes.

(1) *CABO One and Two Family Dwelling Code/1983 with 1984 and 1985 Amendments.*

(2) *Electrical Code for One and Two Family Dwellings, NFPA 70A/1984.*

§ 200.926c Model code provisions for use in partially accepted code jurisdictions.

If a lender or other interested party is notified that a State or local building code has been partially accepted, then the properties eligible for HUD benefits in that jurisdiction shall be constructed in accordance with the applicable State or local building code, plus those additional requirements identified below. Depending upon the major area identified in § 200.926a which is not adequately regulated by the State or local code, the HUD Field Office will designate, in accordance with the schedule below, those portions of one of the model codes with which the property must comply.

SCHEDULE FOR MODEL CODE SUPPLEMENTS TO LOCAL OR STATE CODES

Deficient major from § 200.926a as determined by field office review	Portions of the CABO 1- and 2-family dwelling code/1983 with 1984 and 1985 amendments with which property must comply
(a) Fire safety	Chapters 2, 9; Section R-402.
(b) Light and ventilation	Chapter 2; Section R-309.
(c) Structural loads	Chapter 2.
(d) Foundation systems	Chapter 3.
(e) Materials standards	Chapter 26.
(f) Construction components	Part III.
(g) Glass	Chapter 2.
(h) Mechanical	Part IV.
(i) Plumbing	Part V.
(j) Electrical	Electrical code for 1- and 2-family dwellings (NFPA 70A-1984).

§ 200.926d Construction requirements.

(a) *Application.* (1) *General.* These standards cover the actual site, the immediate site environment for the dwellings, including streets, storm water disposal, and other services and facilities for the site.

(2) *Requirements for accessibility to physically handicapped people.* The HUD Field Office will advise project sponsors as to the extent accessibility will be required for new construction of one- and two-family dwellings on a project-by-project basis.

(i) *Technical standards.* See HUD Handbook, 4910.1, Sections 100-1.3b and 100-1.3c.

(3) *Variations to standards.*—

(i) *New materials and technologies.* See § 200.926d(d). Alternatives, nonconventional or innovative methods and materials shall be equivalent to these standards in the areas of structural soundness, durability, economy of maintenance or operation and usability.

(ii) *Variation procedures.* Variations from the requirements of any standard with which the Department requires compliance shall be made in the following ways:

(A) For a particular design or construction method to be used on a single case or project, the decision is the responsibility of the Field Office. Headquarters concurrence is not required.

(B) Where a variation is intended to be on a repetitive basis, a recommendation for a Local Acceptable Standard, substantiating data, and background information shall be submitted by the Field Office to the Director, Office of Manufactured Housing and Regulatory Functions.

(iii) Variances which require individual analysis and decision in each instance are not considered as repetitive variances even though one particular standard is repeatedly the subject of variation. Such variances are covered by § 200.926d(a)(3)(ii)(A).

(b) *General acceptability criteria.*—(1) *Real estate entity.* The property shall comprise a single plot except that a primary plot with a secondary plot for an appurtenant garage or for other use contributing to the marketability of the property will be acceptable provided the two plots are in such proximity as to comprise a readily marketable real estate entity.

(2) *Service and facilities.*—(i)

Trespass. Each living unit shall be one that can be used and maintained individually without trespass upon adjoining properties, except when the windowless wall of a detached dwelling is located on a side lot line. A detached dwelling may be located on a side lot line if:

(A) legal provision is made for permanent access for the maintenance of the exterior portion of the lot line wall, and

(B) the minimum distances from the dwelling to the dwellings on the abutting properties are not less than the sum of the side yard distances computed as appropriate for the type of opposing walls. (minimum distance 10 ft).

(ii) *Utilities.* Utility services shall be independent for each living unit, except

that common services such as water, sewer, gas and electricity may be provided for living units under a single mortgage or ownership. Separate utility service shut-off for each unit shall be provided. For living units under separate ownership, common utility services may be provided from the main to the building line when protected by an easement or covenant and maintenance agreement acceptable to HUD, but shall not pass over, under or through any other living unit. Individual utilities serving a living unit may not pass over, under or through another living unit under the same mortgage unless provision is made for repair and maintenance of utilities without trespass or when protected by an easement or covenant providing permanent access for maintenance and repair of the utilities. Building drain cleanouts shall be accessible from the exterior where a single drain line within the building serves more than one unit.

(3) *Site conditions.* (i) The property shall be free of those foreseeable hazards and adverse conditions which may affect the health and safety of the occupants or the structural soundness of the improvements, or which may impair the customary use and enjoyment of the property. The hazards include toxic chemicals, radioactive materials, other pollution, hazardous activities, potential damage from soil or other differential ground movements, ground water, inadequate surface drainage, flood, erosion, or others located on or off site. The site must meet the standards set forth at 24 CFR Part 51.

(ii) When special conditions exist or arise during construction which were unforeseen and which necessitate precautionary or hazard mitigation measures, the HUD Field Office shall require corrective work to mitigate potential adverse effects from the special conditions as necessary. Special conditions include rock formations, unstable soils or slopes, high ground water levels, springs, or other conditions which may adversely affect a property. It shall be the builder's responsibility to ensure proper design, construction and satisfactory performance where these conditions are present.

(4) *Access.* (i) Each property shall be provided with vehicular or pedestrian access by a public or private street. Private streets shall be protected by permanent easement.

(ii) Each living unit shall have a means of access such that it is unnecessary to pass through any other living unit.

(iii) The rear yard shall be accessible without passing through any other living unit.

(iv) For a townhouse type dwelling, access to the rear yard may be by means of alley, easement, passage through the dwelling, or other means acceptable to the HUD Field Office.

(c) *Site design.*—(1) *General.* (i) A site design shall be provided which includes an arrangement of all site facilities necessary to create a safe, functional, healthful, durable and energy efficient living environment.

(ii) These site design standards are applicable only in communities which have not adopted criteria for site development applicable to one and two family dwellings.

(iii) Single family detached houses situated on individual lots located on existing streets with utilities need not comply with the requirements of § 200.926d(c) (2), (3) and (4)(ii).

(2) *Streets.* (i) Existing or proposed streets on the site shall connect to private or public streets and shall provide all-weather access to all buildings for essential and emergency use, including access needed for deliveries, service, maintenance and fire equipment.

(ii) Streets shall be designed for dedication for public use and maintenance or, when approved by the HUD Field Office, may be retained as private streets where protected by permanent easements.

(3) *Dedication.* Utilities shall be located to permit dedication to the local government or appropriate public body.

(4) *Drainage and flood hazard exposure.* (i) The minimum grades at buildings and at openings into basements shall be at elevations which prevent adverse effect by water or water entering basements from flood levels equivalent to a 50 year return frequency after full development. The floor elevations of all habitable space shall be above runoff and flood levels equivalent to a 100 year return frequency after full development.

(ii) Streets shall be usable during runoff equivalent to a 10 year return frequency. Where drainage outfall is inadequate to prevent runoff equivalent to a 10 year return frequency from ponding over 6 inches deep, streets shall be made passable for commonly used emergency vehicles during runoff equivalent to a 25 year return frequency, except where an alternate access street not subject to such ponding is available.

(iii) Crawl spaces shall not pond water or be subject to prolonged dampness.

(d) *Special construction and product acceptance.*—(1) *Structural features of factory produced (modular or panelized) housing or components.*

(i) For factory fabricated systems or components, HUD Handbook 4950.1, "Technical Suitability of Products Program Technical and Processing Procedures" shall apply.

(ii) The requirements of this Part shall apply to structural features, consisting of factory fabricated systems or components assembled either at the factory or at the construction site, if the total construction is covered by these standards and can be inspected on-site for determination of compliance.

(2) *Non-structural or non-standard features.* These features include methods of construction, systems, sub-systems, components, materials and processes which are not covered by these requirements. See HUD Handbook 4950.1 for procedures to be followed in order to obtain acceptance of non-structural components or materials. See HUD Handbook 4910.1, Appendix F for a list of Use of Materials Bulletins. Products and methods shall conform to the appropriate Use of Materials Bulletin.

(3) *Standard features.* These features include methods of construction, systems, sub-systems, components, materials and processes which are covered by national society or industry standards. For a list of standards to which compliance is required, see HUD Handbook 4910.1, Appendix C.

(e) *Thermal requirements.—(1) Building insulation.*

(i) *General.* Buildings shall be insulated so as to ensure conservation of energy, economy of operation and comfort to the occupants.

(ii) *Overall coefficient of heat transmission.* (A) All buildings which are heated or cooled mechanically shall be constructed to comply with the U values shown in the table at § 200.928d(e)(1)(iii). The U values shown do not include adjustments for framing in walls, ceilings or floors, nor for the sash frame in windows or glass doors.

(B) Where the stated U value of any one component of roof deck, ceiling, wall or floor cannot be practically obtained, such U value may be increased to the minimum figure attainable and the U value for other components decreased until the overall heat gain or heat loss does not exceed the total attained by conformance to the stated U values. (See Note 2 of the table at § 200.928d(e)(1)(iii)).

(iii) *Component coefficient values.* For ceilings, walls, floors and openings, U values shall not exceed those shown in the following table:

MAXIMUM U VALUES FOR CEILING, WALL AND FLOOR SECTIONS FOR ELECTRIC RESISTANCE HFAT (E.R.) AND HEAT PUMP OR FOSSIL FUEL HEAT (F.F.)^a

Heating degree days (65° F base)	Ceilings **		Walls *		Floors *		Windows *		Sliding glass doors *		Storm doors *	
	E.R.	F.F.	E.R.	F.F.	E.R.	F.F.	E.R.	F.F.	E.R.	F.F.	E.R.	F.F.
0 to 1000	.05	.05	.08	.08					1.13	1.13	1.13	1.13
1001 to 2500	.04	.05	.07	.08					.69	1.13	.69	1.13
2501 to 3500	.03	.04	.05	.06	.07				.69	1.13	.69	1.13
3501 to 4500	.03	.03	.05	.07	.05	.05			.69	.69	.69	.69
4501 to 6000	.03	.03	.05	.07	.05	.05	.07	.47	.69	.69	.69	Yes
6001 to 7000	.026	.03	.05	.07	.05	.05	.07	.47	.69	.69	.69	Yes
70001 +	.026	.026	.05	.05	.05	.05	.05	.47	.47	.69	.69	Yes

Notes

^a For areas of 5,000 heating degree days (HDD) or less, houses using heat pumps may be insulated to levels required for fossil fuels. In areas above 5,000 HDD, houses using air-to-air heat pumps shall be insulated to levels required for electric resistance (E.R.) heating, except where the following are used:

- a. Water source heat pumps.
- b. Fossil fuel supplement heat.
- c. Units with multiple capacity.
- (1) Dual compressors
- (2) Modulating compressor speed
- (3) Dual speed compressor
- d. Uni-directional heat pumps (such as annual cycle energy systems (ACES)).
- e. Units with balanced heating and cooling load.

The following combinations of wall and ceiling values are considered to provide annual heating and cooling consumption comparable to that predicted for values in the above Table and may be substituted accordingly. Other components shall conform to the values shown below for the specific heating degree day (HDD):

HDD (65° F)	ER		FF	
	CLG	Wall	CLG	Wall
0 to 1000	.04	.14	.04	.14
	.03	.15	.03	.15
	.026	.16	.026	.16
1001 to 1500	+	+	.04	.13
	.03	.13	.03	.14
	.026	.14	.026	.16
1501 to 2500	+	+	.04	.12
	.03	.11	.03	.13
	.026	.12	.026	.14
2501 to 3000	+	+	.03	.12
	.026	.07	.026	.13

(+) See Table at § 200.928d(e)(1)(iii).

^b Includes roof/ceiling assemblies, in which the finished ceiling is the underside of the roof deck.

* For floors of heated spaces over unheated basements, unheated garages or unheated crawl spaces. A basement, crawl space or garage shall be considered unheated unless it is provided with positive heat supply sufficient to maintain a minimum temperature of 50°F. A positive heat supply is defined as heat supplied to a space by design or by heat losses occurring from energy-consuming systems or components associated with that space. Where the walls of an unheated basement or crawl space are insulated in lieu of floor insulation, the total heat loss

attributed to the floor from the heated area shall not exceed the heat loss calculated for floors with required insulation.

^c Maximum glass area shall not exceed 15 percent of the gross area of all exterior walls enclosing heated spaces, except when it can be demonstrated that the winter daily solar heat gain exceeds the 24 hour heat loss and the glass area is properly screened from summer solar heat gain. In areas where cooling is the predominant load and the heating load is insignificant (as an example, 2000 or more cooling hours and 2000 or less heating degree days), the maximum glazing area stated above may be waived when glass area is properly screened from solar heat gain. Any additional glass area shall have a significant portion of operable sash in order to provide natural ventilation.

^d A 1-3/4 inch metal faced door system with an insulated core and durable weatherstripping providing a U value equal or better than 0.32, and an infiltration rate not greater than .50 cfm per foot of crack length, tested according to ASTM E 283 at 1.567 psf of air pressure, may be substituted for a conventional door and storm door. All exterior doors shall be weatherstripped.

^e In areas with 1501 or more heating degree days, a storm door is required when the primary door is a hollow core door or is over 25% glass.

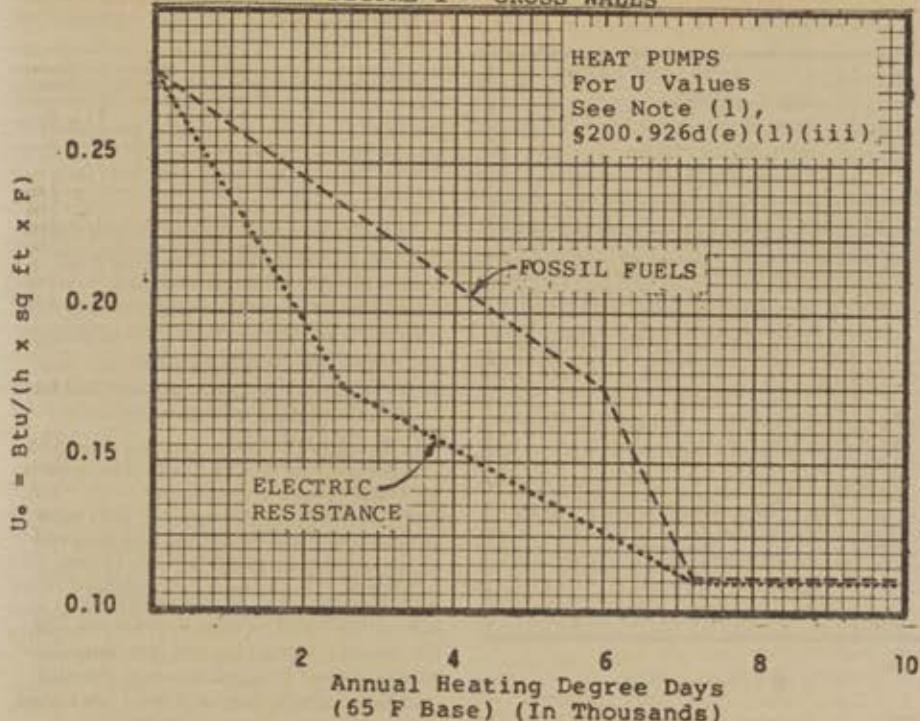

(iv) *Alternate performance criteria.*

(A) As an alternative to conformance with the table at § 200.928d(e)(1)(iii), dwellings which conform to the performance criteria of this section shall be considered acceptable.

(B) *U_o (gross wall).*—Total exterior wall area (opaque wall and window and door) shall have a combined thermal transmittance value (U_o value) not to exceed the values shown in Figure 1. Equation 1 shall be used to determine acceptable combinations to meet the requirements of Figure 1.

(C) *U_o (gross ceiling).*—Total ceiling area (opaque ceiling and skylights) shall have a combined thermal transmittance value (U_o value) not to exceed the values shown in Figure 2. Equation 2 shall be used to determine acceptable combinations to meet the requirements of Figure 2.

FIGURE 1 - GROSS WALLS

Equation 1 Formula for Determining Combinations (See Figure 1)

where

$$U_0 = (U_{\text{wall}} A_{\text{wall}} + U_{\text{window}} A_{\text{window}} + U_{\text{door}} A_{\text{door}}) / A$$

U_0 = the average thermal transmittance of the gross wall area, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times F)$

A = the gross area of all exterior walls enclosing heated spaces, sq. ft.

U_{wall} = the thermal transmittance of all elements of the opaque wall area, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times F)$

A_{wall} = opaque wall area enclosing heated spaces, sq. ft.

$U_{\text{window}} =$ the thermal transmittance of the window area, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times F)$

$A_{\text{window}} =$ window area (including sash), sq. ft.

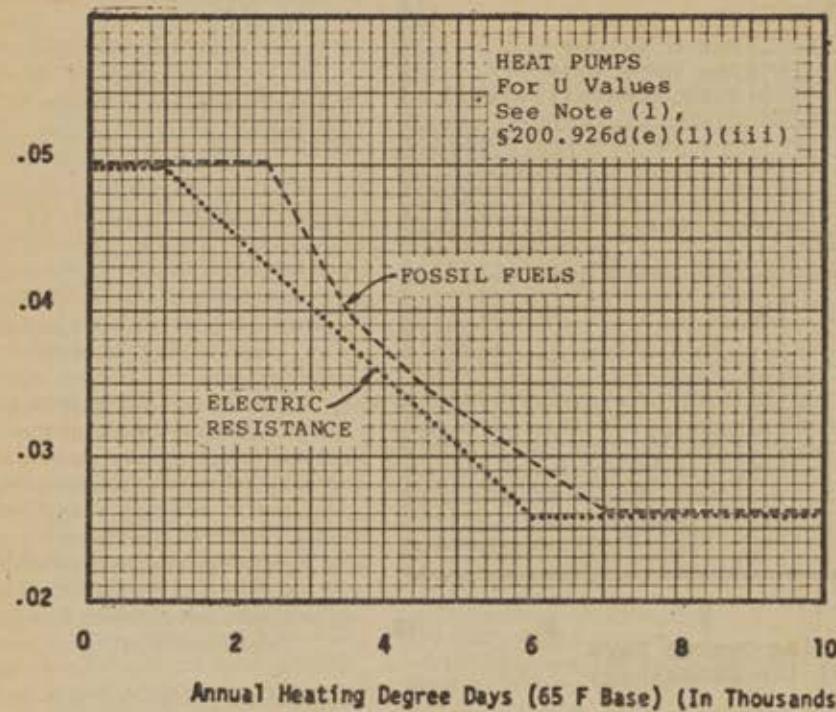

$U_{\text{door}} =$ the thermal transmittance of the door area, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times F)$

$A_{\text{door}} =$ door area (including sash), sq. ft.

Note.—Where more than one type of wall, window and/or door is used, the $U \times A$ term for that exposure shall be expanded into its sub-elements, as follows:

$$U_{\text{wall}_1} A_{\text{wall}_1} + U_{\text{wall}_2} A_{\text{wall}_2}, \text{etc.}$$

GROSS CEILING - FIGURE 2

$$U_0 = \text{Btu}/(\text{h} \times \text{sq ft} \times \text{F})$$

Equation 2 Formula for Determining Roof/Ceiling Combinations

where:

$$U_0 = (U_{\text{rooft}})^{\text{A}} \text{rooft} + (U_{\text{skylight}})^{\text{A}} \text{skylight} / A$$

U_0 = the average thermal transmittance of the gross roof/ceiling area, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times \text{F})$

A_0 = the gross area of a roof/ceiling assembly, sq. ft.

U_{rooft} = opaque roof/ceiling area, sq. ft.

U_{rooft} = the thermal transmittance of all elements of the opaque roof/ceiling area, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times \text{F})$.

U_{skylight} = the thermal transmittance of all skylight elements in the roof/ceiling assembly, $\text{Btu}/(\text{h} \times \text{sq. ft.} \times \text{F})$

A_{skylight} = skylight area (including frame), sq. ft.

Note to Equation 2.—Where more than one type of roof/ceiling and/or skylight is used, the $U \times A$ term for that exposure shall be expanded into its subelements, as:

U_{rooft} , U_{skylight} , etc.

(v) *Overall structure performance alternative.* Structures which can be shown by accepted engineering practice to have energy consumption equal to or less than that which would be obtained by conformance to the criteria of § 200.926(e)(1)(iii) or (iv) shall be considered acceptable. The contribution of passive solar energy and the related storage and reradiation capacity of masonry, water and other mass may be recognized in computing energy consumption under this alternate method. The following requirements

shall govern in determining comparability:

(A) The methodology shall be cost effective to the energy consumer.

(B) The methodology shall not adversely affect the structural capacity, durability, or safety aspects of the structure.

(C) All data and calculations must show valid performance comparison between the proposed option and a structure comparable in size, configuration, orientation and occupant usage designed in accordance with § 200.926d(e)(1) (iii) or (iv).

(vi) *Basement or crawl space foundation walls.* Insulation may be omitted from floors over heated basement areas or heated crawl spaces if foundation walls are insulated.

Foundation walls of heated areas below grade need not be insulated except where recreation or similar use rooms or habitable rooms are provided, or where more than 50 percent of the wall is exposed to outside air. The U value of foundation wall sections shall not exceed the values shown in the following table except where the alternative methods shown in § 200.926d(e)(1) (iv) or (v) are employed and foundation walls are included in the determination of the average thermal transmittance of the gross wall area.

MAXIMUM U VALUES OF THE FOUNDATION WALL SECTIONS OF HEATED BASEMENT OR HEATED CRAWL SPACE

Heating degree days (65 °F base)	Maximum U value
2500 or less.....	No requirement.
2501 to 4500.....	0.17
4501 or more.....	0.10

(vii) *Crawl space plenum walls.* When a crawl space is used as a supply or return plenum, the crawl space perimeter wall shall be insulated to provide a maximum heat loss of 35 Btuh per lineal foot of perimeter wall, assuming a crawl space air temperature of 70 °F for return plenums and 110 °F for supply plenums.

(viii) *Slab-on-grade floors.* For slab-on-grade floors of heated or mechanically cooled spaces, the thermal resistance of the insulation around the perimeter of the floor shall be not less than shown in the following table. Insulation shall extend downward from the top of the slab for not less than 24 in. or downward to the bottom of the slab and horizontally beneath the slab for a minimum total distance of 24 in.

MINIMUM R VALUES OF PERIMETER INSULATION FOR SLABS-ON-GRADE

Heating degree days (65 °F base)	Minimum R values ¹	
	Heated slab	Unheated slab
500 or less.....	2.8	
1,000.....	3.5	
2,000.....	4.0	
2,500.....	4.4	2.5
3,000.....	4.8	2.8
4,000.....	5.5	3.5
5,000.....	6.3	4.2
6,000.....	7.0	4.8
7,000.....	7.8	5.5
8,000.....	8.5	6.2
9,000.....	9.2	6.8
10,000 or greater.....	10.0	7.5

¹ For increments between degree days shown, U values may be interpolated, or the values shown in Figure 3 of ASHRAE 90A-80 may be substituted.

(ix) *Heat loss and heat gain calculations.* (A) Calculations of heat loss and heat gain shall be made in accordance with the data and procedures contained in the American Society of Heating Refrigerating and Air-conditioning Engineers' (ASHRAE) Handbook of Fundamentals-1985, the Hydronics Institute's "Heat Loss Calculation Guide" H-21-1984 and "Cooling Load Calculation Guide" C-30-1965, and the Air Conditioning Contractors of America's "Load Calculation for Residential Winter and Summer Air Conditioning" Manual J-1981.

(B) Inside design temperature shall be 70 °F for heating and 75 °F for cooling. The outside design temperature for

heating shall be that established by the ASHRAE Handbook of Fundamentals at the 97.5% winter design dry bulb temperature for the location involved. The outside design temperature for cooling shall be that established by the ASHRAE Handbook of Fundamentals at the 2.5% summer design dry bulb temperature for the location involved.

(f) *Water supply systems.*—(1)

General. (i) Each living unit shall be provided with a continuing and sufficient supply of safe water under adequate pressure and of appropriate quality for all household uses. This system shall not impair the function or durability of the plumbing system or attachments.

(ii) The chemical and bacteriological standards of the local health authority shall apply. In the absence of such standards, the maximum contaminant levels of EPA shall apply. A water analysis may be required by either the health authority or the HUD Field Office.

(iii) Whenever feasible, connection shall be made to a public water system. When a public system is not available, connection shall be made to a community system which complies with HUD Handbook 4940.2, if feasible.

(2) *Individual water systems.* (i) The system should be capable of delivering a flow of 5 gpm over at least a 4 hour period.

(ii) Water that requires continuing or repetitive treatment to be safe bacterially or chemically is not acceptable. Individual dwelling water purification units are not an acceptable alternative but may be used to improve acceptable water.

(iii) After installation, the system shall be disinfected in accordance with the recommendations or requirements of the local health authority. In the absence of a health authority, system cleaning and disinfection shall conform to the current EPA Manual of Individual Water Supply Systems.

(iv) Bacteriological or chemical examination of a water sample collected by a representative of the local or state health authority shall be made when required by that authority or the HUD Field Office.

(3) *Location of wells.* (i) A well located within the foundation walls of a dwelling is not acceptable except in arctic or subarctic regions.

(ii) Water which comes from any soil formation which may be polluted, contaminated, fissured, creviced or less than 20 ft. below the natural ground surface is not acceptable, unless acceptable to the local health authority.

(iii) Individual water supply systems are not acceptable for individual lots in

areas where chemical soil poisoning has been or is practiced if the overburden of soil between the ground surface and the water bearing strata is coarse grained sand, gravel, or porous rock, or is creviced in a manner which will permit the recharge water to carry the toxicants into the zone of saturation.

(iv) The following table shall be used in establishing the minimum acceptable distances between wells and sources of pollution located on either the same or adjoining lots. These distances may be increased by either the health authority having jurisdiction or the HUD Field Office.

DISTANCE FROM SOURCE OF POLLUTION

Source of pollution	Minimum horizontal distance (feet)
Property Line	10
Septic Tank	50
Absorption Field	100
Seepage Pit	100
Absorption Bed	100
Sewer Lines w/ Permanent Watertight Joints	10
Other Sewer Lines	50
Chemically Poisoned Soil	25
Dry Well	50
Other	(*)

* This clearance may be increased or decreased depending upon soil and rock penetrated by the well and aquifer conditions. The clearance may be increased in creviced limestone and permeable strata of gravel and sand. The clearance may be reduced to 50 ft. only where the ground surface is effectively separated from the water bearing formation by an extensive, continuous and impervious strata of clay, hardpan, or rock. The well shall be constructed so as to prevent the entrance of surface water and contaminants.

* The recommendations or requirements of the local health authority shall apply.

* This clearance may be reduced to 15 feet only where the ground surface is effectively separated from the water bearing formation by an extensive, continuous and impervious strata of clay, hardpan, or rock.

(4) *Well construction.* (i) The well shall be constructed so as to allow the pump to be easily placed and to function properly.

(ii)(A) All drilled wells shall be provided with a sound, durable and watertight casing capable of sustaining the loads imposed.

(B) The casing shall extend from a point several feet below the water level at drawdown or from an impervious strata above the water level to 12 in. above either the ground surface or the pump room floor. The casing shall be sealed at the upper opening to a depth of at least 15 feet.

(iii) Bored wells shall be lined with concrete, vitrified clay or equivalent materials.

(iv) The space between the casing or liner and the wall of the well hole shall be sealed with cement grout.

(v) The well casing shall not be used to convey water except under positive pressure. A separate drop pipe shall be used for the suction line.

(vi) When sand or silt is encountered in the water-bearing formation, the well

shall either be compacted and gravel packed, or a removable strainer or screen shall be installed.

(vii) The surface of the ground above and around the well shall be compacted and graded to drain surface water away from the well.

(viii) Openings in the casing, cap, or concrete cover for the entrance of pipes, pumps or manholes shall be watertight.

(ix) If a breather is provided, it shall extend above the highest level to which surface water may rise. The breather shall be watertight, and the open end shall be screened and positioned to prevent entry of dust, insects and foreign objects.

(5) *Pump and equipment.* (i) Pumps shall be capable of delivering the volume of water required under normal operating pressure within the living unit. Pump capacity shall not exceed the output of the well.

(ii) Pumps and equipment shall be mounted to be free of objectionable noises, vibrations, flooding, pollution, and freezing.

(iii) Suction lines shall terminate below maximum drawdown of the water level in the well.

(iv) Horizontal segments of suction line shall be placed below the frost line in a sealed casing pipe or in at least 4 in. of concrete. The distance from suction line to sources of pollution shall be not less than shown in the table at § 200.926d(f)(3)(iv).

(6) *Storage tanks.* (i) A pressure tank having a minimum capacity of 42 gallons shall be provided. However, prepressured tanks and other pressurizing devices are acceptable provided that delivery between pump cycles equals or exceeds that of a 42 gallon tank.

(ii) Tanks shall be equipped with a clean-out plug at the lowest point, and a suitable pressure relief valve.

§ 200.926e Supplemental information for use with the CABO One and Two Family Dwelling Code.

The following shall be used in Table No. R-202, Climatic and Geographic Design Criteria of the CABO One and Two Family Dwelling Code.

(a) *Roof live loads.*

Roof slope 3 in 12 or less: 20 psf

Roof slope over 3 in 12: 15 psf

Roof used as deck: 40 psf

(b) *Roof snow load.* The roof snow load shall be in accordance with section 7 of ANSI A58.1-82.

(c) *Wind pressures.* The minimum Design Wind Pressures (net pressures) set forth below apply to areas designated as experiencing basic wind speeds up to and including 80 mph, as

shown in ANSI A58.1-82, Figure 1, Basic Wind Speed Map. These pressures also apply to buildings not over 30 ft. in height above finish grade, assuming exposure C or defined in ANSI A58.1-82.

(1) Minimum design wind pressure criteria.

(i) Buildings (for overturning racking or sliding); $p=20$ psf.

(ii) Chimneys, $p=30$ psf.

(iii) Exterior walls, $p=15$ psf inward or outward. Local pressure at corners of walls shall be not less than $p=30$ psf outward. These local pressures shall not be included with the design pressure when computing overall loads. The pressures shall be applied perpendicularly outward on strips of width equal to 10 percent of the least width of building.

(iv) Partitions, $p=10$ psf.

(v) Windows, $p=20$ psf inward or outward.

(vi) Roof, $p=20$ psf inward or outward.

Roofs with slopes greater than 6 in 12 shall be designed to withstand pressures acting inward normal to the surface, equal to the design wind pressure for exterior walls. Overhanging eaves, cornices, and ridges, 40 psf upward normal to roof surface. These local pressures shall not be included with the design pressure when computing overall loads. The pressures shall be applied perpendicularly outward on strips of width equal to 10 percent of the least width of building.

Net uplift on horizontal projection of roof shall not be less than 12 psf.

(2) Severe wind design pressures. If the construction is higher than 30 ft., or if it is located in an area experiencing wind speeds greater than 80 mph, higher design wind pressures than shown above are required. Use Section 6 of ANSI A58.1-82 for higher criteria and for determining where wind speeds greater than 80 mph occur.

Pressures are assumed to act horizontally on the gross area of the vertical projection of the structure except as noted for roof design.

(d) Seismic conditions shall be in accordance with Section 9 of ANSI A58.1-82.

(e) Subject to damage from: weathering. A jurisdiction's weathering

region shall be as established by the map in ASTM C 62-83.

(f) Subject to damage from: frost line depth. Exterior wall footings or foundation walls including those of accessory buildings shall extend a minimum of 6 in. below the finished grade and, where applicable, the prevailing frost line.

(g) Subject to damage from: termites. "Yes" shall be used in locations designated as Regions I, II or III. "No" shall be used in locations designated as Region IV. The map for Termite Infestation Probability in Appendix A of CABO, One and Two Family Dwelling Code shall be used to determine the jurisdiction's region.

(h) Subject to damage from: decay. "Yes" shall be used in locations designated as moderate to severe and slight to moderate. "No" shall be used in locations designated as none to slight. The Decay Probability map in Appendix A of CABO, One and Two Family Dwelling Code shall be used to determine the jurisdiction's decay designation.

(Approved by the Office of Management and Budget under OMB control number 2502-0338.)

5. The Appendix to Part 200 is revised as follows:

Appendix to Part 200—Standards Incorporated by Reference in the Minimum Property Standards for One and Two Family Dwellings

The following publications are incorporated by reference in the HUD Minimum Property Standards (MPS). The MPS are in turn incorporated by reference in 24 CFR Part 200, Subpart S. The MPS may be purchased from the U.S. Government Printing Office, Washington, DC 20402. It is also available for public inspection at the HUD Program Information Center, Room 1104, 451 Seventh Street, S.W., Washington, DC, at each HUD Regional, Area, and Service Office, and at the Office of the Federal Register, 1100 L Street, NW, Washington, DC. The individual standards referenced in the MPS are available at the addresses contained in the following table. They are also available for public inspection at HUD, Manufactured Housing and Construction Standards Division, Room 9156, 451 Seventh Street, SW, Washington, DC and the Office of the Federal Register.

U.S. DEPARTMENT OF JUSTICE
OFFICE OF JUVENILE JUSTICE AND DELINQUENCY PREVENTION

Friday
September 27, 1985

Part VI

**Department of
Justice**

**Office of Juvenile Justice and
Delinquency Prevention**

**Program Announcement; School Crime
and Discipline Research and
Development; Notice**

DEPARTMENT OF JUSTICE**Office of Juvenile Justice and Delinquency Prevention****Program Announcement: School Crime and Discipline Research and Development Program**

AGENCY: Office of Juvenile Justice and Delinquency Prevention, Justice.

ACTION: Notice of issuance of a solicitation of applications to conduct a research and development program on school crime.

SUMMARY: The Office of Juvenile Justice and Delinquency Prevention (OJJDP), pursuant to section 243 of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, announces a new OJJDP initiative entitled, "School Crime and Discipline Research and Development Program." The primary goal is to test promising strategies for the development, implementation, and monitoring of disciplinary and crime control policies and procedures which are intended to reduce school crime and disorder to provide for a safer school environment.

OJJDP's National Institute for Juvenile Justice and Delinquency Prevention (NIJJD) invites public or private agencies to submit competitive grant applications to design, develop and test the efficacy of improved disciplinary policies and procedures for the reduction of school crime and disorder in secondary schools. Targeted schools must be experiencing a high level of disciplinary or crime problems. Emphasis will be placed on the assessment of the effects of legislation, case law, regulations and lawsuits related to discipline and crime control. This initiative will require a collaborative effort among researchers, program planners, school administrators, faculty, and law enforcement personnel, as appropriate.

The deadline for submission of applications is December 6, 1985.

FOR FURTHER INFORMATION CONTACT:

Deborah A. Wysinger, Office of Juvenile Justice and Delinquency Prevention, 633 Indiana Ave., N.W., Room 742, Washington, D.C. 20531, telephone (202) 724-7560.

I. Introduction

This solicitation for applications to conduct a School Crime and Discipline Research and Development Program is issued by the National Institute for Juvenile Justice and Delinquency Prevention (NIJJD), of the Office of Juvenile Justice and Delinquency Prevention (OJJDP), U.S. Department of Justice. The OJJDP and its NIJJD were established by the Juvenile Justice and Delinquency Prevention Act of 1974, as amended (JJDP Act).

The JJDP Act authorizes NIJJD to: "encourage the development of demonstration projects in new, innovative techniques and methods to prevent and treat juvenile delinquency;" (Section 243(2)) and to "provide for the evaluation of all juvenile delinquency programs assisted under this title in order to determine the results and the effectiveness of such programs." (Section 243(3)).

OJJDP's National Institute for Juvenile Justice and Delinquency Prevention invites public or private agencies to submit applications designed to develop and test promising strategies for the reduction of school crime and improvement of disciplinary procedures and school environment.

OJJDP has allocated a total of \$300,000 for the first phase of this Initiative. Up to three projects not to exceed \$100,000 each for the initial twelve month budget period will be funded as a result of this competition. It is anticipated that this research and development initiative will entail three to four years of program activity to conduct the necessary planning, implementation and testing. Therefore project periods will not exceed four years. The second phase of this initiative will consist of awards to each of the three selected R&D projects for up to \$200,000 for each subsequent twelve month budget period.

This competition will be conducted according to the OJJDP Competition and Peer Review Policy, 28 CFR Part 34, Subpart A, published August 2, 1985 at 50 FR 31365-31366.

II. Background

Creating a safe and orderly school environment is a prerequisite for students to focus their attention on learning. Many of the recent reports on educational reform—while agreeing on the need for improved curricula and graduation standards—insist that little

reform can occur unless schools become safer. President Reagan put the problem in perspective while speaking to secondary school principals, "As long as one teacher is assaulted, one classroom disrupted, or one student attacked, then I must and will speak out to give you the support you need to enforce discipline in our schools. I can't say it too forcefully, to get learning back into our schools, we must get crime and violence out." The issue of student rights and administrative control have become a focal point for political discussion.

The most comprehensive recent national study specifically devoted to school crime is the *Safe School Study*, which was conducted by the National Institute of Education (NIE) in the mid 1970's. The major objectives of that study were to determine the frequency and seriousness of crime in elementary and secondary schools in the United States and what schools are doing to prevent it. The findings, published in 1978, indicated that 8% of the nation's schools had a serious problem with crime, that one-fourth of all schools in the country were vandalized in a given month and 10% were burglarized.

Based on student reports, NIE estimated that 2.4 million secondary school students (11%) had something stolen from them in a typical month. Approximately 1.3% of the students (282,000) reported being attacked in a typical month, with more than two-fifths of the attacks involving some injury. Junior high school students were twice as likely to report being attacked as high school students. The risk of serious attack was greater in urban areas. Teacher victimization rates reported in the NIE study were roughly similar to those of students.

A 1983 report on school violence by Jackson Toby, Director of Rutgers University's Institute for Criminological Research, concluded that the NIE data had probably underestimated the actual instances of school violence at the time the survey was conducted ("Violence in School," *Crime and Justice: An Annual Review of Research*, Vol. 4).

Problems with school discipline are not only recognized by the general public—teachers also list discipline problems as a major concern. The National Education Association (1977) reported that 66% of responding teachers viewed managing student behavior as the main problem faced in teaching. Many teachers felt they were unable to even cope with, much less resolve, the discipline problems they faced each day (Kindsfetter, 1978).

The operation of public schools has traditionally been largely a matter for

local determination, subject to state control in certain respects. Recently, however, a number of federal statutes and judicial decisions have regulated, in one way or another, the activities of public schools,² and some of these have engendered state legislative action also affecting local practices.³ The complexity of this regulatory enterprise is apparent. On the one hand, legislative and judicial decisions set policies at a remote level that are expected to produce consistent behavior in schools. This requires collaboration and cooperation among various levels. The rule or desired practice must be clearly expressed and understood by those charged with implementation. Local administrators must be able and willing to carry out the policy,⁴ and where several agencies are responsible for administration, they must agree about their obligations and discharge them in a coordinated and uniform fashion for policy implementation to be complete.

On the other hand, regulation has significance for local officials whether or not they accurately follow specific commands. While appellate courts usually address these discipline and crime control issues on a piecemeal basis, program administrators ordinarily cannot.

The relationship between judicial or legislative regulation and the behavior of those affected by regulatory activity is a complicated matter from a number of perspectives. Courts are mandated to make decisions of specific issues and in contrast school officials need to develop comprehensive policies. For example, based on the United States Supreme Court decision in *Goss v. Lopez*, 419 U.S. 565 (1975), the Indiana State legislature applied that decision through the imposition of procedural rules for short disciplinary suspensions of students.⁵ School districts have gone somewhat further by specifying procedures for expulsion and exclusion from school, or for inschool suspension of students and other forms of discipline.

However, school administrators must also decide what procedures are required for other alternative methods of discipline they employ. Another example is the recent analysis of the court decision of the *New Jersey v. T.L.O.*, 105 S. Ct. 733 (1985), where the court provided general guidelines for permissible student searches by school officials, but did not specifically address issues such as: whether students have a legitimate expectation of privacy in lockers, desks or other school property in which school supplies are stored; or standards governing searches of those areas by school officials or other public

authorities acting at school officials' request.⁶ School administrators and teachers must either abandon procedures for which clear guidance is lacking, which may be undesirable or even impracticable, or they must consider additional safeguards in terms of what will probably be required by courts when they ultimately address the procedural requirements for those alternatives. This latter approach carries with it some significant risks, including the possibility that the action taken will not only be declared invalid but will give rise to a lawsuit for damages predicated upon violation of a student's civil rights.⁷

Some commentators have suggested that certain legislative code provisions and case law may prevent the use of disciplinary and crime control techniques perceived as necessary to maintain a safe education environment. One problem appears to be the effectiveness of the punishment that is both legally acceptable and educationally sound. Several reports indicate that student lawsuits filed against teachers and administrators, the threat of such suits, and the belief that they may be filed inhibit effective discipline in schools. Specifically, lawsuits brought pursuant to 42 U.S.C. Section 1983, as interpreted by *Wood v. Strickland*, 420 U.S. 308 (1975), are believed to influence disciplinary and crime control practices, although empirical evidence is virtually nonexistent. In addition, those practices are influenced by court decision such as *Goss v. Lopez*, 419 U.S. 565 (1975), and *New Jersey v. T.L.O.*, 105 S.Ct. 733 (1985). The following questions merit further investigation: whether changes in the law, including court decisions, have resulted in more or less effective school discipline and crime control; to what extent does the perception that lawsuits might be filed actually inhibit implementation of certain approaches to school discipline and their effectiveness; to what extent do lawsuits (potential suits and those actually filed and decided) have an impact on the effectiveness of school discipline and how widespread are these perceptions and effects; what changes, if any, in the law are desirable.

Opinions differ regarding whether the justice system standards and procedures of due process are appropriate for schools, or, whether they interfere with effective disciplining of disruptive students. Certain studies, supporting the incorporation of justice system due process, associate observance of these standards with more positive student attitudes towards school rules, the legal

system and academic achievement. Other educators would argue that following the burdensome procedures of due process unduly inhibits their ability to discipline a disruptive student in a timely and effective fashion.

Preliminary findings based on a 12 percent return from a study currently being conducted by the National Center for Education Statistics on school principals' perceptions of school discipline policies and practices show that only a small percentage of the principals surveyed consider the Supreme Court rulings to be a moderate or large operational burden. The findings also indicated that the principals believed that lack of security personnel, or fear of being sued for disciplining students had little effect on the ability of teachers or themselves to maintain order and discipline students. Other constraints, such as inadequate teacher training in discipline procedures and school law and inadequate alternative placement programs for disruptive students, had a greater effect on the ability to maintain order than those previously discussed. It should be noted, however, that the study findings are very preliminary and that the survey was only of school principals and not teachers.

In assessing the impact of federal case precedents on local school operations, it is important to assess the level of knowledge of administrators and teachers about relevant legislation and major court decisions. A recent survey conducted by Julius Menacker and Ernest Pascarella of teachers and administrators of inner city and suburban Chicago public schools on their knowledge of education-related Supreme Court rulings revealed that administrators scored significantly higher (74%) than teachers (63%) on a questionnaire about 13 major Supreme Court cases. Findings from this survey also revealed an ineffective and haphazard communication network for transmitting important Supreme Court decisions to the schools where they have the greatest impact—at the classroom level.

While there does not appear to be a consensus among educators, researchers and parents regarding the impact of legislation, case law and litigation on school disciplinary policies and procedures, there is national recognition that some secondary schools are experiencing unacceptably high levels of disruption. The magnitude of this problem appears to be greatest among those schools located in urban areas serving junior high populations.

OJJDP has sponsored demonstrations of a variety of innovative approaches designed to reduce school crime, to improve disciplinary policies and practices, to improve teacher and student safety, and to enhance academic achievement. Practitioners in the field have also identified a number of promising approaches that attempt to deal with problems of school crime, discipline and school environment. While there has been considerable attention to various aspects of disciplinary and crime control policies—e.g., the role of law enforcement in schools, appropriate strategies to respond to classroom disruption, improvement of the school environment to prevent delinquency—less attention has been given to the relationship between Federal and State legislation, case law and litigation, and development of comprehensive school disciplinary and crime control policies and procedures.

III. Program Goal and Objectives

A. Program Goal

To test promising strategies for the development, implementation, and monitoring of disciplinary and crime control policies and procedures, which are intended to reduce school crime and disorder to provide for a safer school environment.

B. Major Objectives

1. To identify significant Federal and State legislation, case law, and litigation that are relevant to the development of disciplinary and crime control policies, procedures and practices in selected schools/school districts.
2. To develop clear, consistent discipline and crime control codes, based on analysis of legislation, case laws state regulations, and lawsuits.
3. To develop strategies to implement discipline and crime control codes.
4. To implement procedures that translate the codes into practice.
5. To document the planning and implementation of approaches to discipline and to school crime in order to identify the essential components of this process.
6. To measure the impact of strategy implementation on the reduction of disciplinary infractions and school crime.
7. To assess the strategies in terms of cost effectiveness and suitability for replication and institutionalization within school systems.

IV. R&D Strategy

This Research and Development (R&D) model is designed to develop and

test the efficacy of improved disciplinary policies and procedures for the reduction of school crime and disorder in secondary schools. It calls for the development of policies and procedures based on a careful analysis of relevant legislation, case law and litigation against the schools. This program will consist of three separate R&D projects, which will be coordinated by OJJDP. This initiative requires a collaborative effort at each site among researchers, program planners, school administrators, faculty, and law enforcement personnel, as appropriate. This working group will be referred to as the "program team" throughout this solicitation.

The program team will first conduct a thorough assessment of the school crime and discipline problems, taking into account relevant legislation, case law, and previous lawsuits. This should include the identification of significant legislative provisions and case law that may promote or inhibit the development of effective policies and procedures for discipline and crime problems. It should also include an assessment of the perceived effects of previous lawsuits on discipline and crime control practices. The program team will generate a strategy for crime reduction and improvement of disciplinary policies and procedures in target school(s). The program team should develop clear policy statements and should communicate these policies to those responsible for implementation. Finally, implementation of disciplinary policies and practices should be monitored by school administrators and evaluated by the program team.

Under this initiative each program team *will be required* to conduct a review of existing discipline codes and establish revised school-wide disciplinary policies and procedures based on assessment of legislation, case law and lawsuits. These revisions should be characterized by clear stipulation of sanctions for disciplinary infractions, consistent and fair enforcement of rules, and differentiation between disciplinary violations and criminal acts. Local jurisdictions will be allowed considerable flexibility in determining which specific program strategies offer the greatest potential for improvement of disciplinary practices in their target schools. Examples of strategies for implementing revised policies which can be tested:

1. Involvement of students and parents in the development of disciplinary codes;
2. development of written guidelines and/or statements of understanding with police and courts;

3. development of in-service training for teachers and administrators on their legal rights and responsibilities related to discipline and crime control, including an emphasis on protecting themselves from lawsuits as appropriate;

4. improved communications procedures for day-to-day operations, delineation of respective roles and responsibilities, establishment of cooperative working relationships through written policies and procedures for working with law enforcement agencies and the courts;

5. training of teachers in techniques of effective classroom management and control of disruptive behavior;

6. improved school incident reporting procedures and utilization of crime analysis techniques.

All projects are required to utilize a systematic program development process in both the planning and implementation stages. This process provides a structure for identifying possible relationships between legislation, case law, and lawsuits and discipline and crime control strategies, assessing the nature and extent of discipline and crime problems, establishing clear measurable goals, designating measurable objectives, developing appropriate strategies and interventions, identifying potential obstacles and resources for program implementation, developing work plans, and establishing an on-going data collection and feedback system. It is expected that the assessment and planning process will require six to nine months. *Successful completion of the assessment, policy revisions and action plan will be a requirement for continued funding (by special condition).* The following outline is provided to serve as a conceptual framework for all members of the working team involved in the collaborative effort of the program development process. The ultimate aim of this collaboration is to generate a common focus and shared vision of what the program is being designed to accomplish.

A. Problem Statement

Clear articulation of the problem being addressed requires identification of the various relevant legislation, case law and data sources and utilization of this information to define the nature and extent of the problem.

B. Clear Goals

Researchers and program implementers focus their activities on the problem at hand by delineating measurable goals. Goal statements

describe what the organization is ultimately trying to achieve.

C. Theory

A theoretical framework must be developed which clearly outlines why the problem exists and provides guidance for project implementers' use in building their strategies.

D. Measurable Objectives

The statement of the project objectives must specify the time frame for achievement of these intermediary outcomes, the anticipated level of improvement, as well as the basis for measurement of change. Clearly delineated objectives provide the foundation for the evaluation design.

E. Strategies

Interventions and strategies are those selected activities designed to achieve an objective or set of objectives. For the purposes of this initiative, applicants will be allowed considerable local discretion in choosing to test a variety of strategies for policy implementation. The selection and development of strategies or interventions must be based on systematic analysis of crime and discipline problems and relevant laws and regulations.

F. Work Plans

Work plans are to be developed with specific strategies for implementation of project interventions. Fully articulated strategies include specification of two elements: critical bench marks and tasks. Critical bench marks are those key decisions, agreements, or actions necessary to progress with implementation of the plan. Failure to accomplish critical bench marks in a timely fashion will signal program planners to devise a new strategy. To effectively execute strategies, action planners should also specify time frames for task completion and individuals responsible. The action plan serves as a management tool and provides objective standards for achievement.

G. Evaluation

During the program development process, researchers and program managers work together to specify key research questions and develop a process and impact evaluation design. Data collection activities are jointly planned and carefully executed. Researchers provide timely interim feedback to program managers on: (1) progress toward executing program strategies as well as (2) success or failure in meeting measurable objectives.

The program development process begins with the initial conceptualization of the problem and continues throughout the duration of this program test. For the purpose of responding to this RFP, applicants must include all components listed in section V, "Application Requirements." The work plan included in the application will be considered preliminary and subject to continued development and refinement during the planning period to be scheduled for the first six to nine months following the grant award.

OJJDP will encourage coordination among individual R&D projects in terms of developing and utilizing similar concepts and comparable "core" measures. With cross-site adoption of comparable measures, a substantial data base could be generated. This coordinated effort is expected to enhance the potential contribution of this research initiative to the state-of-the-art of developing safe school environments.

V. Eligibility Criteria

Eligible applicants include public or private research agencies or organizations. In order to implement this program design, it is required that a collaborative relationship exist between researchers, school administrators and justice system representatives, as appropriate. The intent of this initiative is to assess the effects of legislation, case law, regulations and lawsuits related to discipline and crime control; and to develop methods for establishing comprehensive, and consistent discipline and crime control codes, and to determine if the policy has been effectively implemented. School districts targeted for program change must be experiencing a high level of disciplinary or crime problems within the school. They should also have experienced several lawsuits or significant threats of lawsuits related to disciplinary actions in the past couple years. Research organizations will apply directly for grant awards and may choose to provide limited support through subcontracts to schools to cover on-site costs critical for program implementation. The primary cost of implementing the intervention strategies must be supported by available community and school system resources. This requirement is in keeping with the intent of this program to test cost effective program models which would be suitable for replication in other jurisdictions without external funding.

In order to maximize open competition in the award of this R&D grant, "for-profit" organizations are

eligible to apply, provided they certify compliance with the following two requirements:

(1) The OJJDP grant award will not be used to support the normal profit-making operations of the organization, but will serve to support or stimulate the legislatively authorized research and evaluation objectives of NIJJD.

(2) For at least one year following the termination of this award, the recipient will not compete for or accept any procurement or assistance award supported by OJJDP funds which may have resulted or been derived from the original award.

VI. Minimum Program Application Requirements

Applicants must complete all parts of the application for Federal Assistance (Standard Form 424). Particular attention should be paid to the Budget Information, Part III, and Program Narrative, Part IV. In addition to the requirements set forth under the Program Narrative, the following information must be included in the application:

(1) A succinct statement of your understanding of the goal and objectives of the School Crime and Discipline R&D Program.

(2) A problem statement which clearly documents the nature and extent of school crime and disciplinary problems in the schools or school systems targeted for change. Identify the criteria utilized in school site selection and provide data to justify this selection. Document recent experiences with actual lawsuits or significant threats of lawsuits related to disciplinary actions.

(3) A description of those long-range measurable goals which your program is designed to reach. Specify how goals will be measured, when a substantial level of goal accomplishment is expected, and how progress in meeting goals can be attributed to program interventions.

(4) A review of the theoretical and empirical literature relevant to relationship of legislation and case law to discipline and crime control problems. Include a discussion of the theoretical framework developed to specifically guide the identification and assessment of problems identified at the targeted school system(s).

(5) A description of program objectives which specifies what measurable changes are expected, and when change is anticipated.

(6) A description of assessment and planning process.

(7) A work plan which describes time frames for accomplishing critical bench

marks and specifies responsibilities for tasks for the planning process. This work plan must provide a detailed description of the six to nine month planning period and a preliminary plan for implementation of program interventions, evaluation activities and for the development of research products. It should also include a plan for delivering training and technical assistance to local school administrators, faculty, and justice system personnel, as appropriate, to assist them in incorporating the program development process into their routine operations.

(8) A preliminary evaluation design which includes research questions, key concepts and variables, research methodology (including sampling procedures and measurement of key variables), and a plan for data analysis and feedback. Applicants must provide evidence that the most rigorous experimental design possible will be utilized in order to increase the strength of attributions of program impact. Applicants must address the issue of coordination with other research sites funded under this program investigating and developing comparable measures of similar concepts across schools.

A Privacy Certificate must be submitted with the application in accordance with funding agency regulations, copies of which are available upon request.

(9) Written verification from authorized officials of all parties involved in the R&D program team (e.g., school administrators, faculty, and justice system personnel) of commitment to collaborate in the program planning, implementation, data collection, and program refinement processes. Access to specific types of data (official school records, police arrest records, student and teacher interviews) must also be verified in writing.

(10) If it is determined to be necessary for the research organization grantee to provide financial support from the grant award to another organization to cover costs critical for program implementation, the application must include: a statement of work for the proposed contract; and the procedures to be followed for competitive selection or a justification for noncompetitive award for these support services.

(11) A detailed budget must be provided for the initial twelve months budget period including travel funds for coordination meetings with other program grantees (estimate costs for three two-day meetings to be hosted by various participating grantees), and any costs which might be required to serve

as a host site for one meeting. An annual estimate of costs to complete the R&D program must also be included.

(12) A description of the project management structure which includes proposed staffing plan, brief position descriptions which delineate roles and responsibilities, description of relevant staff experience and expertise, and resumes of key project staff (include as an appendix to the application). The project director must devote a minimum of fifty percent (50%) of his/her time to this effort.

(13) An organizational capability statement which describes relevant organizational experience and demonstrates that the applicant has the substantive and financial capability to effectively administer the project.

(14) The applicant must indicate a willingness to host an on-site visit by OJJDP staff and/or Peer Review Panel.

VII. Selection Procedures and Criteria

In general, all applications received in response to this solicitation will be reviewed in terms of the rigor and feasibility of the R&D design, and thoroughness regarding approaches to planning, implementation and evaluation problems. Applications will be technically evaluated by Department of Justice (DOJ) employees who are qualified by training and experience and by a peer review panel (a group of experts other than officers and employees of the DOJ). Site visits may be conducted by peer review panel and/or OJJDP staff to verify information provided by those applicants ranked as best qualified for further consideration.

Specifically, applications will be rated according to the following criteria and weights:

- (1) The problem to be addressed is clearly stated including evidence of knowledge of related literature and justification for site selection (refer to Section V (3) and (4)) 15
- (2) An understanding of the goal and objectives of this research and development program is clearly articulated, including a description of the goals and objectives of the proposed research (refer to Sections V (3), (4), (5) and (6)) 20
- (3) The research and development design and methodology is sound and contains program elements directly linked to the achievement of project objectives including written verification of commitment to collaborate and accessibility of data (refer to Sections V (8) and (9)) 20
- (4) The project management structure is adequate to the successful conduct of the project (refer to Sections V(12)) 10

- (5) Organizational capability is demonstrated at a level sufficient to successfully support the project (refer to Section V(14)) 10
- (6) Budget costs are reasonable, complete and appropriate in comparison to the activities proposed to be undertaken (refer to Sections V (11), (12) and (10)) 10
- (7) The workplan is adequate, clear and feasible and will support the development of useful products (refer to Section V(7)) 15

In order to examine variations in state level impact on school crime and discipline only one site will be funded in a given state.

Applications receiving the highest total score on the above criteria will be recommended for funding to the Administrator, OJJDP. Peer review recommendations in conjunction with the results of internal review and any necessary supplementary review will assist the Administrator's consideration of competing applications and selection of applications for funding. The final award decision will be made by the OJJDP Administrator.

VIII. Submission Requirements

All applicants responding to this solicitation should be aware of the following requirements for submission:

1. Applicants which plan to respond to this announcement are requested to submit written notification of their intent to apply to NIJJD/P/OJJDP by October 21, 1985. Such notification should specify: the name of the applicant organization, mailing address, telephone number, and primary contact person. This notification should be forwarded to Deborah Wysinger, NIJJD/P/OJJDP, U.S. Department of Justice, 633 Indiana Ave., N.W., Washington, D.C. 20531.

2. Applicants must submit the original signed application and three copies to NIJJD/P/OJJDP. The necessary forms for applications (Standard Form 424) will be provided upon request.

3. The NIJJD/P/OJJDP will notify applicants in writing of the receipt of their application. Subsequently, applicants will be notified by letter as to the decision made regarding whether or not their submission will be recommended for funding. It is anticipated that the grant may be awarded as early as April, 1986.

4. Applications must be received by mail or hand delivered to the NIJJD/P/OJJDP by 5:00 p.m. e.s.t. on December 6, 1985. Those applications sent by mail should be addressed to Deborah Wysinger, NIJJD/P/OJJDP, U.S.

Department of Justice, 633 Indiana Avenue, NW., Washington, D.C. 20531. Hand delivered applications must be taken to the NIJJDP/OJJDP, Room 784, 633 Indiana Avenue, N.W., Washington, D.C. between the hours of 8:00 and 5:30 p.m. except Saturdays, Sundays or federal holidays.

IX. Civil Rights Compliance

A. All recipients of OJJDP assistance must comply with the non-discrimination requirements of the Juvenile Justice and Delinquency Prevention Act of 1974 as amended; Title VI of the Civil Rights Act of 1964; Section 504 of the Rehabilitation Act of 1973 as amended; Title IX of the Education Amendments of 1972; the Age Discrimination Act of 1975; and the Department of Justice Non-Discrimination Regulations (28 CFR Part 42, Subparts C, D, E, and G).

B. In the event a Federal or State court of Federal or State administrative agency makes a finding of discrimination after a due process hearing on the grounds of race, color, religion, national origin or sex against a recipient of funds, the recipient will forward a copy of the finding to the Office of Civil Rights Compliance (CRC) of the Office of Justice Programs.

C. Applicants shall maintain such records and submit to the OJJDP upon request timely, complete and accurate data establishing the fact that no person or persons will be or have been denied or prohibited from participation in, benefits of, or denied or prohibited from obtaining employment in connection with any program activity funded in whole or in part with funds made available under this program because of their race, national origin, sex, religion,

handicap or age. In the case of any program under which a primary recipient of Federal funds extends financial assistance to any other recipient or contracts with any other persons(s) or group(s), such other recipient, persons(s) or group(s) shall also submit such compliance reports to the primary recipient as may be necessary to enable the primary recipient to assure its civil rights compliance obligations under any grant award.
