

What To Expect During a SAP/PVR Procedure

Your physician has ordered a SAP/PVR procedure and you may be wondering what to expect. The below information will provide you with an overview of the test and hopefully answer any questions you may have and reduce any feelings of anxiety you may have as well.

What is a SAP/PVR procedure?

It is a non-invasive procedure that measures the blood pressures at different points in your legs to evaluate the blood flow.

Why did my doctor order this test?

How long will the test take and can I bring someone with me?

The full test will take approximately 30 minutes to an hour. During COVID we must limit guests in our office and have limited waiting space during the test. It is preferred that you do not bring a guest unless medically necessary for support or translation assistance for this reason.

Are there any special instructions for this test?

Please wear or bring loose fitting shorts, a short sleeve shirt, and shoes that can easily be removed.

What will happen on the day of my appointment?

You will check-in for your test downstairs in suite 100. A member of our vascular team will escort you to your room.

Our friendly, experienced, and knowledgeable staff are happy to answer any questions or address any concerns you have throughout your test in our office. Please do not hesitate to ask, we love to educate!
