# TA+ Software
## ADVANCED TIME ATTENDANCE SOFTWARE
### ALL THE TA SOFTWARE'S RICH FEATURES

Do you want maximum control over the time planning in your organisation? Then Safescan TA+ is the ideal solution. TA+ is the more extensive version of the software provided with your Safescan Clocking In System and offers you several extra options to manage the working hours of your personnel even better. For example, you could introduce a full office hour planning in advance for each employee or department. TA+ then registers and identifies accurately and clearly whether the actual worked hours correspond. The pre-made planning can be made per day, per week, per month and per year. It is possible to take into account certain events that are important to a planning, for example holidays or other days on which different working hours apply. Additionally, you can even download all official holidays per country with the Safescan software so that your planning is automatically attuned to this.

- Daily / weekly/ monthly / periodic reports per department / employee
