

SAP S/4HANA

Focus Group Meeting

SAPSA Impuls Online 2020

2020-11-03

Agenda

Why a Focus Group for SAP S/4HANA?

- What are we doing?

Experience Sharing

Event high-lights

Influencing SAP (“Meet the Experts” in Walldorf)

Logistics day

10 steps to S/4HANA

Why a Focus Group SAP S/4HANA

- Collect and distribute information within the focus group
- Discuss with SAP experts around SAP S/4HANA topics
- Arrange workshops
- Participate in focus group team lead meetings with SAP in Walldorf for experience exchange and influence towards SAP
- To join the focus group:
 - <http://www.anpdm.com/form/4546584475414A5A43/41455E4B7545475D43>
- You can also sign up for the SAPSA newsletter
- To read more around the different focus groups :
 - <http://www.sapsa.se/fokusgrupper/>

SAP S/4HANA Activities 2020 & 2021

2020:

Q1 Influencing SAP (“Meet the Experts”)

Q2

Q3 SAP MOVE - 10steps2S4

Q4 S/4HANA Logistic Day Online

Q4 Impuls Online/ Focus Group

2021: What should we focus on?

What Projects are Cooking?

Gallup – Who is currently running a **SAP S/4HANA** project?

- If not, what is stopping you?

Lack of Functionality?

Lack of Tools?

– Who are live already?

Experience Sharing Session

- Input from some SAP S/4HANA projects...
 - Customer stories...
 - Partner stories...

Lessons learned from a partner view (greenfield OnPrem)

- SAP Best Practice is an excellent “quick start” help, but it’s not a ready to run solution covering everything
 - Some processes are better covered than others.
 - SAP BP process flows and test scripts often covers only the main flow, not all the additional steps that are needed (like reversing postings).
 - If you are a manufacturing company, discrete manufacturing has a better coverage than process manufacturing. According to SAP, PP-PI will have a “full” coverage within a couple of years.
 - There are still many transactions where the Fiori app just calls the GUI transaction.
 - Before deciding to go for a Best Practice project, it’s recommended to do a high level Fit-Gap analysis to see if BP is a suitable approach for your project.

Lessons learned from a partner view (greenfield OnPrem)

- Some SAP ECC functionalities (core license) will only be available in Advanced/Extended Planning (additional license) going forward, for example:
 - Sales and Operations Planning
 - Long Term Planning
 - Simulated MRP
- If you are running a greenfield project, be careful so that you are not including functionalities that are in compability pack by mistake.
 - If you do, you will HAVE to replace them by S/4HANA functionalities no later than 2025 (*see note 2269324*)
- Be careful so that you don't activate functionalities that trigger extra licence by mistake.
 - See the “Administration Guide to Implementation of SAP S/4HANA with SAP Best Practices” (*SAP Help Portal*) for a complete list of BPs that triggers additional license.
- If you install a SAP Best Practise client, you will only get IMG-settings for BP. If you know that SAP BP will not be enough for your business, you should install a merged client, where you also will have all “SAP standard” IMG settings in client 000 available.

Influencing SAP

“Meet the Experts” in Walldorf 2020 was replaced by a virtual session this year. Most probably 2021 will be the same.

Influencing SAP – Key take aways 2020

- S/4HANA OnPrem will be supported at least until 2040. After that it might be only Cloud that are supported.
- SAP Best Practices: Long term call is that OnPrem and Cloud will be the same (they are not there yet). However, Cloud will often have more simple/standardized processes and less possibilities than OnPrem.
 - Note: Some areas (like Professional Services) will have functionalities only available in Cloud.
- Going from S/4HANA OnPrem to Cloud/Hybrid later on: Today, there are not yet any tools available for this scenario. However, SAP are discussing how/if they can offer conversion tools for this as well going forward. Today, this scenario is more or less always greenfield.

Influencing SAP

Transformation Navigator:

- Based on input from SAPSA (our focus group), SAP has prepared a small presentation on how to use the SAP Transformation Navigator when you are working with multiple systems / multiple installations of the same product. The presentation is embedded here:

STN Multiple
Systems

Logistics Day 2020-10-06

How can customers execute SAP projects successfully? Lessons Learned from Customer Care & Regional Implementation Group (RIG)

Arne Schmidthals
Global Head of S/4HANA Regional Implementation Group and Customer Care, SAP

October 2020

PUBLIC

SAP S/4HANA 2020 Release Highlights

Ulrike Raidl, Vice President Solution Management SAP S/4HANA, SAP SE
October 6, 2020

INTERNAL

Logistics Day 2020-10-06

Offerings by the SAP S/4HANA Customer Care Program and Regional Implementation Group (RIG)

10 Steps to S/4HANA Bootcamp for Customers
Powered by the S/4HANA Regional Implementation Group (RIG)

Boost your knowledge and confidence by executing an end-to-end system conversion from SAP ERP to SAP S/4HANA.

S/4HANA/RE Expert experts take you step-by-step from a central system to SAP S/4HANA in six vital milestone scenarios distributed over a four-month period.

Every customer enrolled in this program performs the system conversion activities in a dedicated SAP ERP system provided by SAP.

REI experts will provide activity documents for each step and will be available to answer questions and assist you through the entire duration of the bootcamp.

If you, as an SAP ERP customer, are planning to move to S/4HANA, this is a great opportunity to get hands-on experience and gain confidence and a good understanding of what it takes to convert your system. We expect you to participate as a team (including technical basis, ABAP development, functional experts, functional experts) and complete all 10 steps to system FREE from SAP to you. Please go to saps.com for registration information.

S/4HANA Customer Care Program

The S/4HANA Customer Care Program will help to make your SAP S/4HANA go-live project a success by offering:

- A tailored Project Coach during all 4 months covered by phases 200 to 210 and 220 to 230.
- A tailored Development Agent from the Regional Implementation Group (RIG) facilitating the access to the SAP S/4HANA development organization.

The offer is free of charge. To apply please email rig@sap.com to: rig@sap.com, rig@sap.com.

Eligibility is currently open for active go-live projects between the SAP S/4HANA 2020 (the Process and Financial Cloud) and SAP Integrated Business Planning for Supply Chain.

Persons are invited: SAP ERP customers who transition to SAP S/4HANA, as well as customers implementing S/4HANA (the Process and Financial Cloud) and SAP Integrated Business Planning for Supply Chain.

For more information, please contact your SAP account manager or visit saps.com.

The program support will commence with the start of your go-live project and end six months after your first Go-Live. Last follow-up: 12 months.

5 Steps to Fiori Learning Bootcamp for Customers
Powered by the S/4HANA Regional Implementation Group (RIG)

Boost your knowledge and confidence by executing an end-to-end SAP Fiori implementation in SAP S/4HANA.

S/4HANA/REI Experts enable you to take time to implement and troubleshoot SAP Fiori in an SAP S/4HANA system in a 5 one-hour virtual classroom sessions distributed over a four-week period.

Every customer enrolled in this program performs the system implementation activities in their own SAP S/4HANA sandbox system.

REI experts will provide activity documents for each step and will be available to answer questions and assist you through the entire duration of the bootcamp.

If you, as an SAP customer, are planning to implement SAP Fiori, this is a great opportunity to get hands-on experience and work with confidence and a good understanding of what it takes to take SAP Fiori. We expect you to participate as a team (including technical basis, ABAP development, and application experts) and complete all 5 steps.

It comes free from SAP to you. Please contact SAP Customer Care rig@sap.com for registration.

- Before a go-live project
- 4-week remote bootcamp for customers considering a system conversion
- Free of charge
- Open for direct and indirect customers

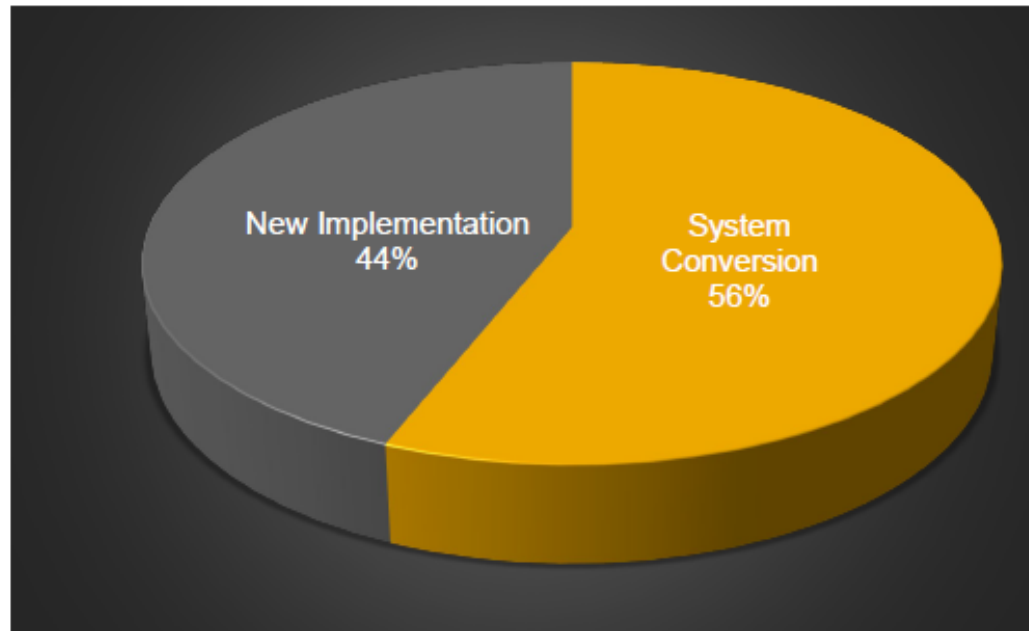

- During a go-live project
- Regular remote interaction during the entire go-live project
- Free of charge
- Open for direct and indirect customers

- After (or during) a go-live project
- 2-week remote bootcamp for customers interested in SAP Fiori
- Free of charge
- Open for direct and indirect customers

Logistics Day 2020-10-06

S/4HANA Projects by project type for SAP ERP customers

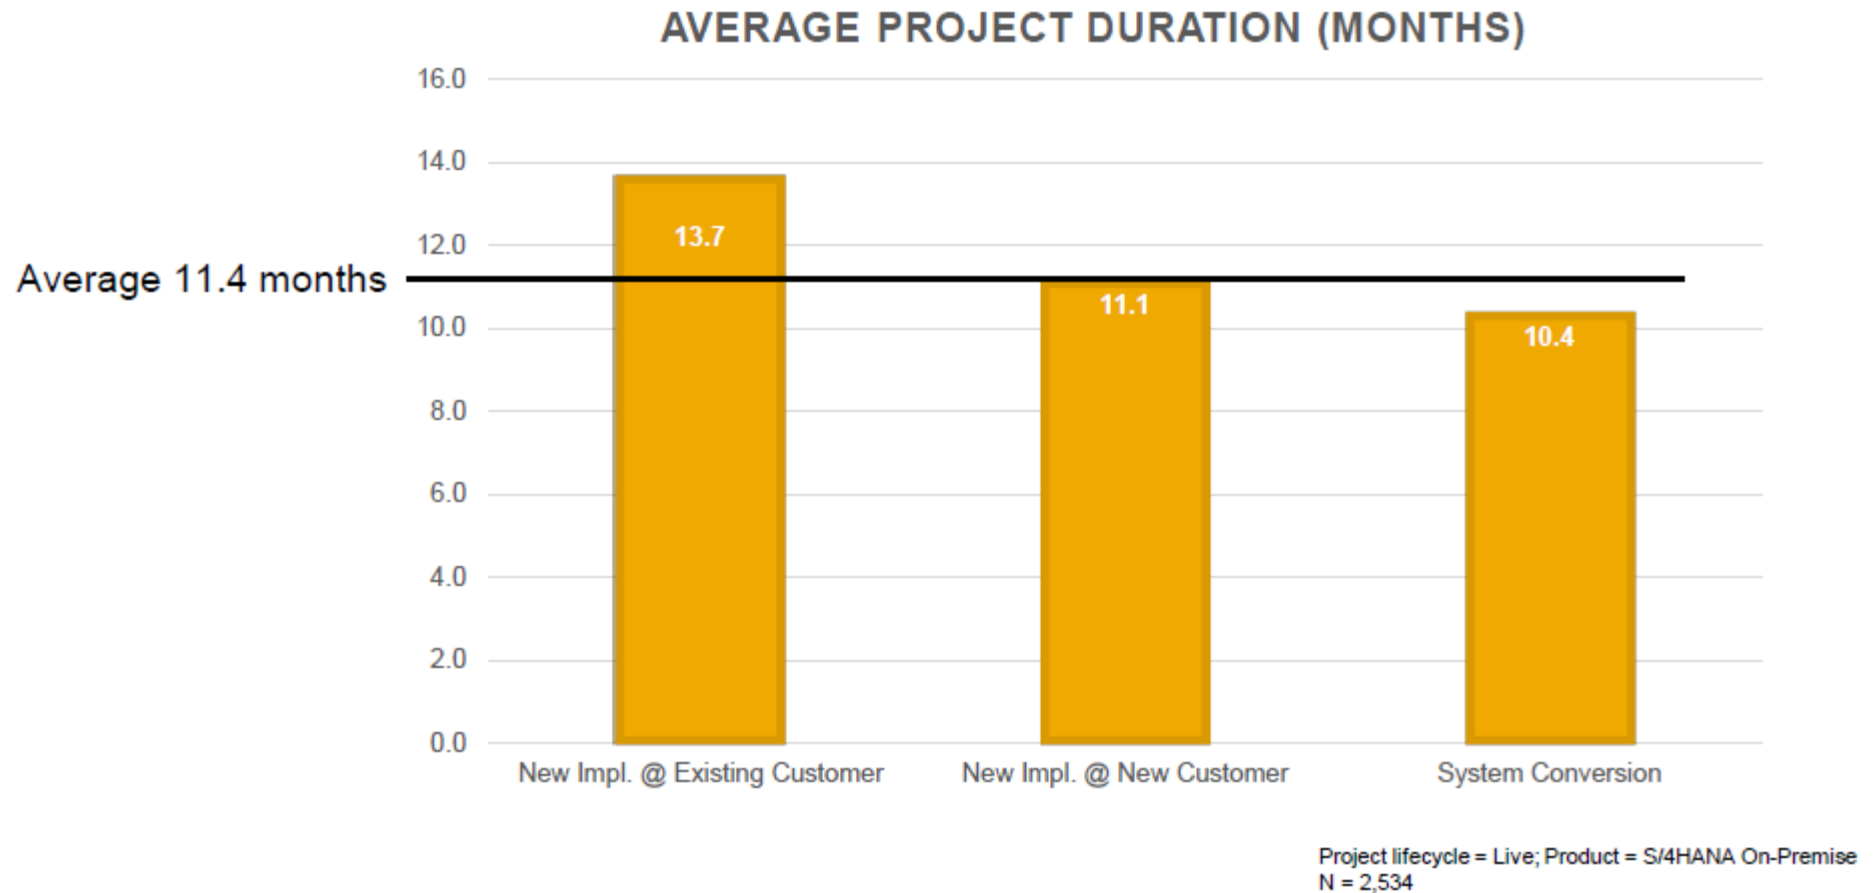

Excluding net-new customers (that obviously all do a new implementation)

Logistics Day 2020-10-06

S/4HANA On-Premise - Average Project Duration

Logistics Day 2020-10-06

Recommended Immediate Next Steps for Customers

Review and clean up your **custom code**.

Run the **SAP Readiness Check** to get fast and early insights for your S/4HANA project.

Become familiar with the **simplification items** for the target release.

Remember: Your SAP ERP knowledge still counts!

Decide on your **transition approach** (system conversion vs. new implementation), or at least clarify your decision criteria.

Look into **Fiori** quick wins.
Avoid the temptation to continue only with SAPGUI!

Leverage the many enablement options such as **OpenSAP**.

SAP S/4HANA 2020 - Business Area Overview

10-steps-to-S/4HANA

- An offering that has been available to SAP Partners for some time, and that is now also available to Customers.
- An ECC system and a S/4HANA system is set up for each customer attending, and then you do a system conversion in these systems.
- You assign your own team, who is actually doing the conversion – real hands on training over a period of two weeks.
- Requires dedication and time from the participants.
- Contact person at SAP:
Karl Bergström, SAP
Enterprise Architect

karl.bergstrom@sap.com

10-steps-to-S/4HANA

Decide on Deployment Approaches

New Implementation vs. System Conversion

NEW IMPLEMENTATION

- New install / deploy new practices
- Data migration (harder for old data)
- Full innovation from day one

Recommended when:

- ✓ Not happy with existing installation (no reuse)
- ✓ New processes / business models (model company)

Considerations:

- ✗ Requires business process redesign
- ✗ Might take longer to roll out to all users (disruptive)
- ✗ Need parallel systems during implementation

SYSTEM CONVERSION

- Copy complete system + data
- Reuse of existing implementation
- Add innovation later (LOB / Fiori / ML)

Recommended when:

- ✓ Mostly happy with existing SAP landscape
- ✓ Rapid roll-out without business involvement

Considerations:

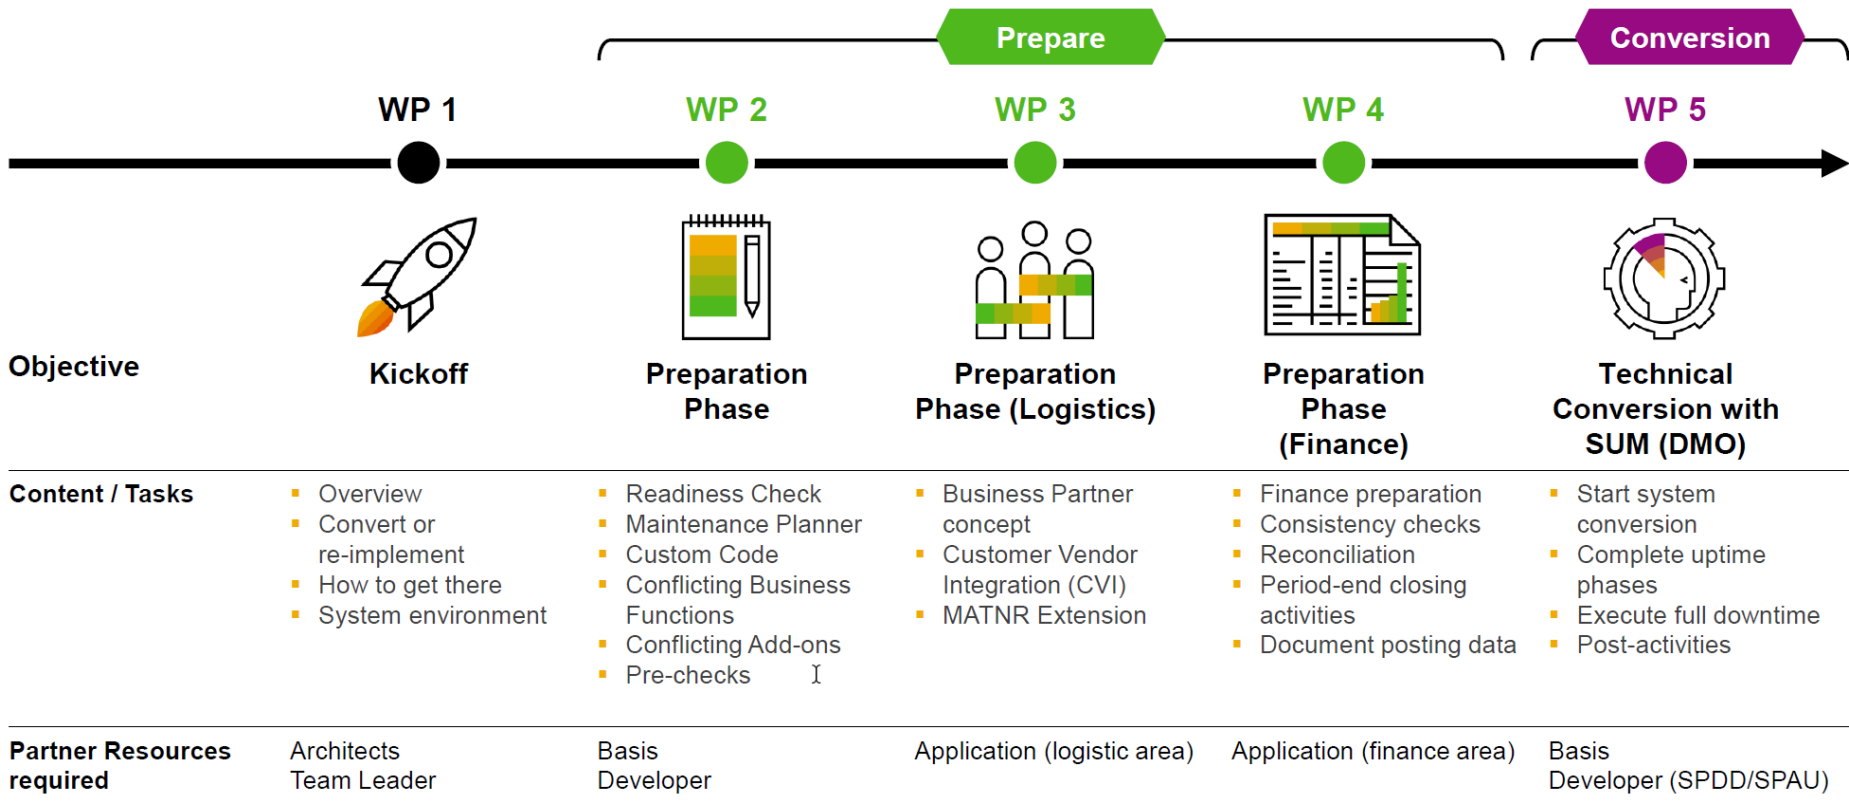

- ✗ Low initial business value
- ✗ S/4 simplification list / custom code remediation
- ✗ Downtime during conversion

Trade Offs

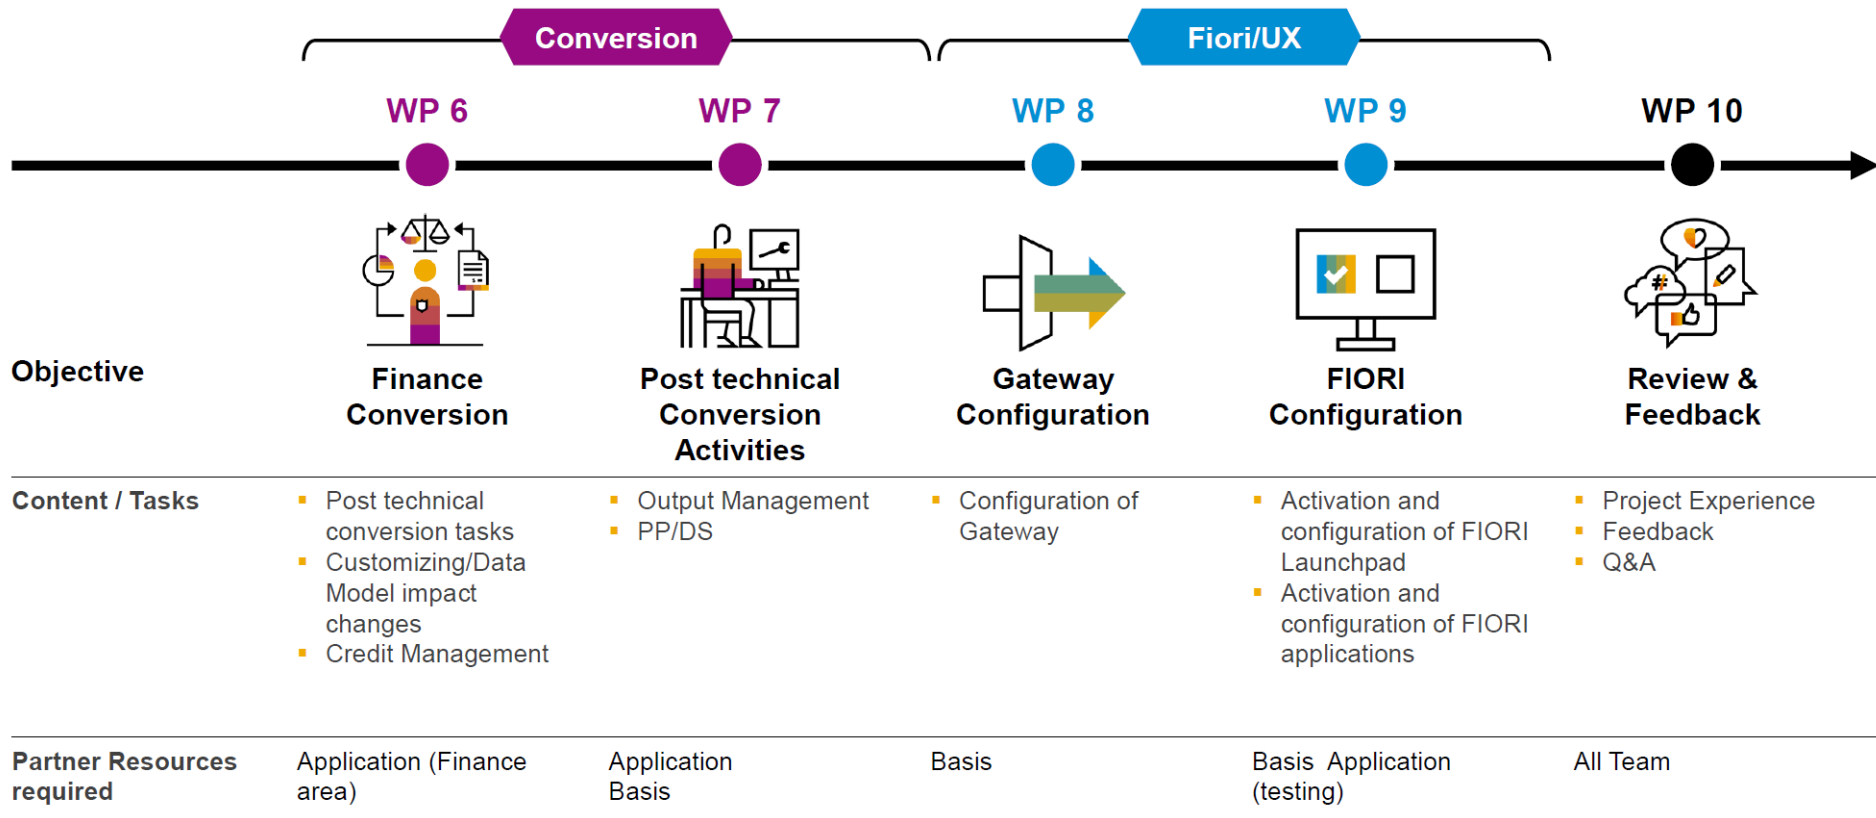

10-steps-to-S/4HANA

10steps2S4 (1/2)

10-steps-to-S/4HANA

10steps2S4 (2/2)

SAP Transformation Navigator

Working with multiple Systems / multiple Installations of the same Product

Hans-Juergen Schoepp, SAP
March, 2020

EXTERNAL

Tips regarding Systems and multiple installations of the same Product

Products:

The **SAP Transformation Navigator works with the entity of a product and/or capabilities** within products.

A product can be only added once – since the recommendation for a product (or capability) will always be the same (independent of your systems-landscape, usage etc.).

Systems:

The list of systems and systems IDs that are shown in the application are there to help identify the products or capabilities that you are currently using – but what you add to your product map is still a product (or capability) and not a system.

What does this mean for the Navigator when you want to analyze only one specific system?

When selecting one system in any of the applicable screens in the application, other systems might also marked/highlighted – *this not an error* – it only means that the same product or capability you've selected is also part of those other systems.

To focus/analyze only one specific system/instance/installation: (see next slides for details)

→ Start creating a product map from *scratch*

→ Create *several product maps* / transformation maps – e.g. one for each ERP/ECC installation or instance etc.

→ Name the maps in a way that you recognize what products or systems are analyzed

→ Within such a map - wherever applicable: always apply/select the same system(s) to be consistent in your analysis

Challenge 1: You have a (complex) system landscape and use several of the same products in several instances (e.g. SAP ERP / ECC) – but want to get recommendations only for a specific instance/system or specific product(s)

1

- Start creating your transformation map 'from scratch'
- With this you have the maximum flexibility what to add/select

Create a Product Map

Start by selecting an industry for which you want to create a Product Map.

Your Industry:
Automotive

How do you want to start your Product Map?

Use Quick Start
Landscape Usage Data Agreement accepted, full Quick Start functionality is available

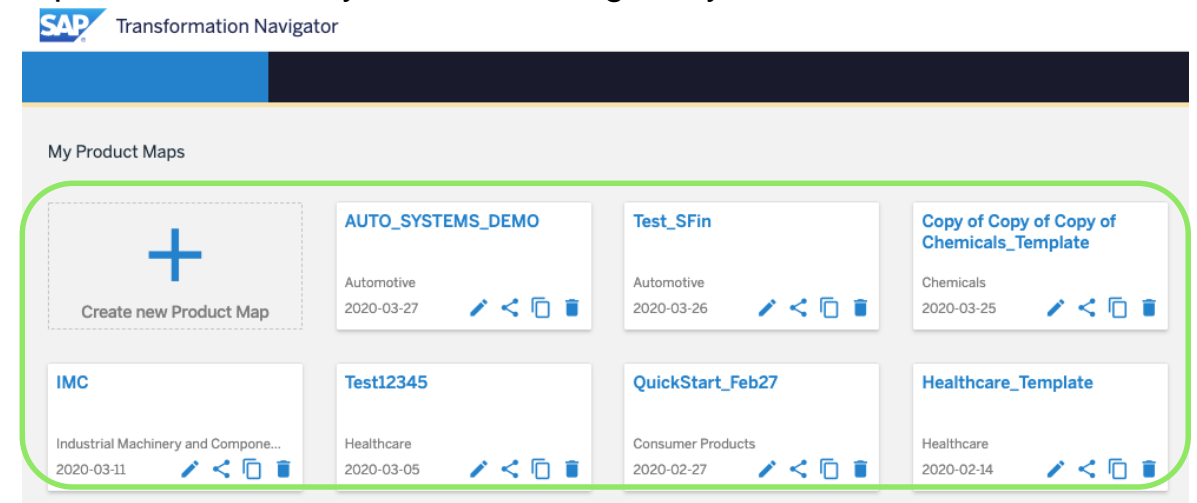

Start from scratch

Start with industry template

Next

2

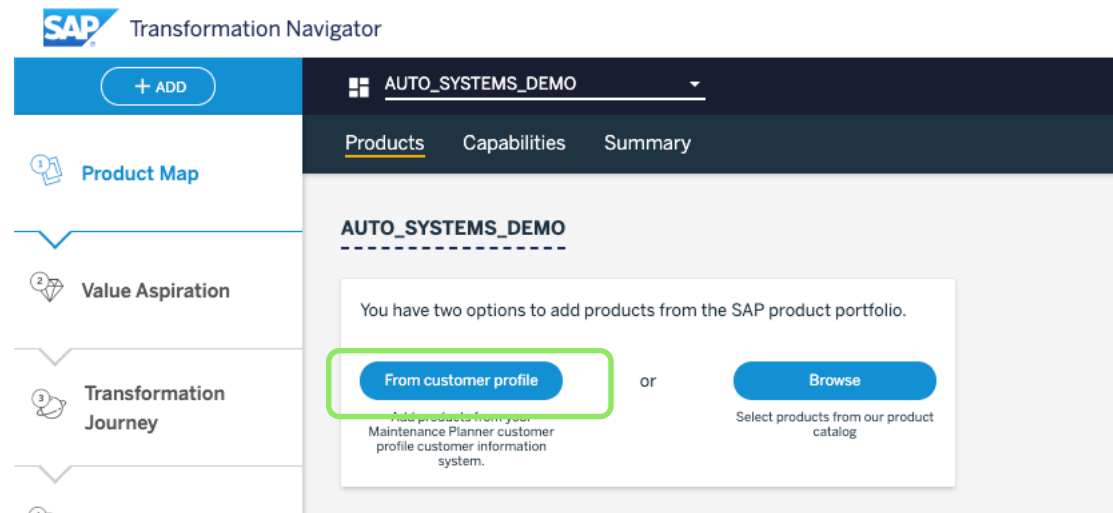

- Create such a map for each individual instance – e.g. One map for your HR-system, one for your finance system, or one for your subsidiary in country xyz
- There is no limit to the number of maps – create as many as required / as little as necessary; focus e.g. on instances/systems, regions, or also responsibilities with regards to products or systems
- Give each map a name or rename existing ones to distinguish which products and/or systems are being analyzed

Challenge 1: You have a (complex) system landscape and use several of the same products in several instances (e.g. SAP ERP / ECC) – but want to get recommendations only for a specific instance/system or specific product(s)

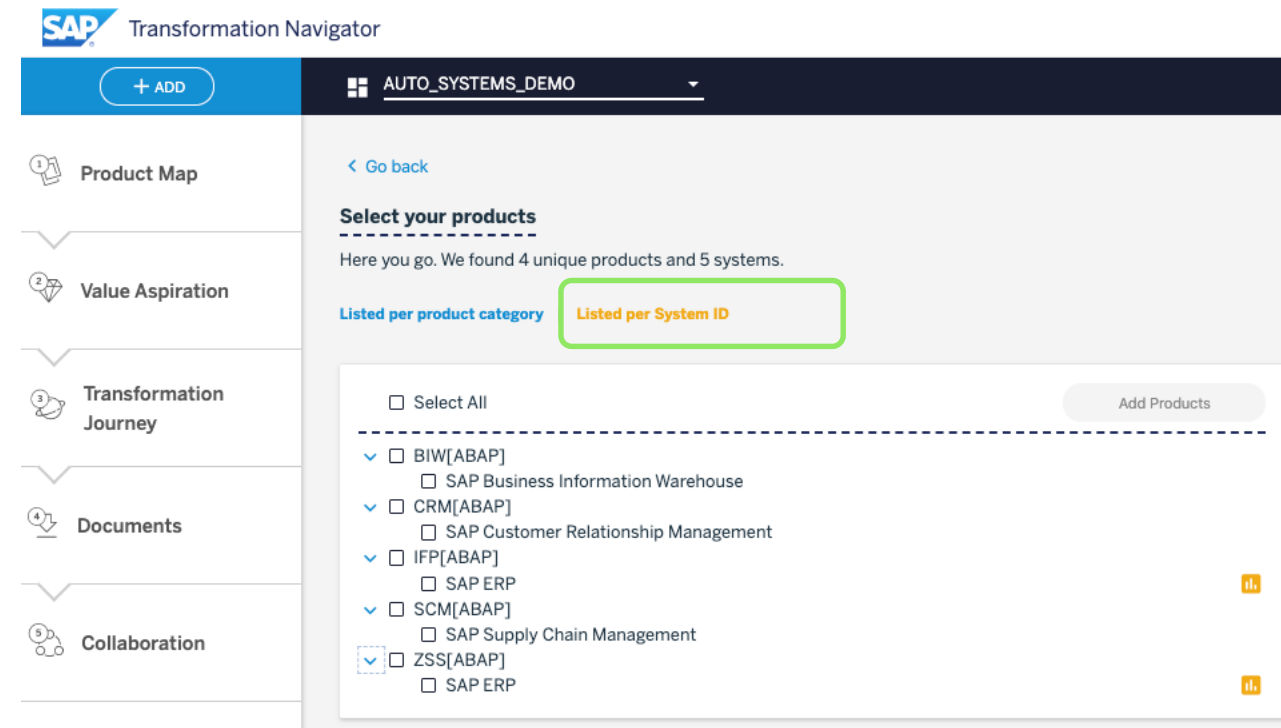

3

- Once the map is created, select “from customer profile” to view and access the products/systems that we were able to identify (this I based on the info in ‘Maintenance Planner’ in SAP Solution Manager – the software used to install and maintain SAP’s software)
- In cases the product(s) you are looking for are not listed in your customer profile, you can still select & add them by clicking “browse” to view or search the complete SAP product catalog

4

- If you know the product(s) that you want to get a recommendation for by name, you can select them from the “list per product category”
- If you’d like to see the products listed by systems, select the corresponding view

Challenge 2: When using the “Listed per System ID” option and selecting one single system/ ID, multiple systems or products are automatically selected which you not want to assess now

5

- Select the system(s) or individual products within systems that you want to get a recommendation for, and click “add products”
- **NOTE:** even though you selected only one system / one product – all other systems / products that are the same as the one you selected are being marked / selected, too - *this is not an error* since, as described on slide 1, the entity we work with is a product, not a system → you add products to your map, not a system

Listed per product category | Listed per System ID

Select All Add Products

- BIW[ABAP]
 - SAP Business Information Warehouse
- CRM[ABAP]
 - SAP Customer Relationship Management
- IFP[ABAP]
 - SAP ERP
- SCM[ABAP]
 - SAP Supply Chain Management
- ZSS[ABAP]
 - SAP ERP

Same products are selected/marked

6

- If necessary, go back to the overview of your maps, and rename the map to make clear which systems/products you analyze/focus on in this specific map

Transformation Navigator

+ ADD

AUTO_SYSTEMS_DEMO

Products Capabilities Summary

+ Add Another Product

Current Products

My Product Maps

AUTO_System:IFP / Prod; ERP

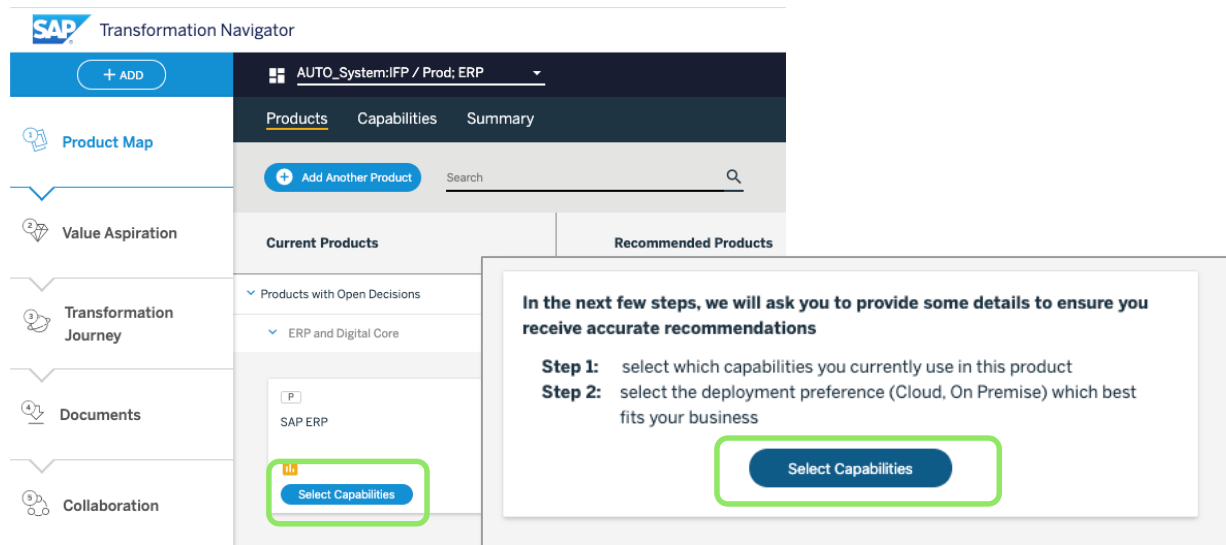

Automotive

2020-03-27

Challenge 3: You want to select capabilities that you are currently using in the so called “complex products” – and you want to apply the usage data from EarlyWatch Alert (EWA) to preselect capabilities – again multiple systems are automatically selected which you not want to assess now

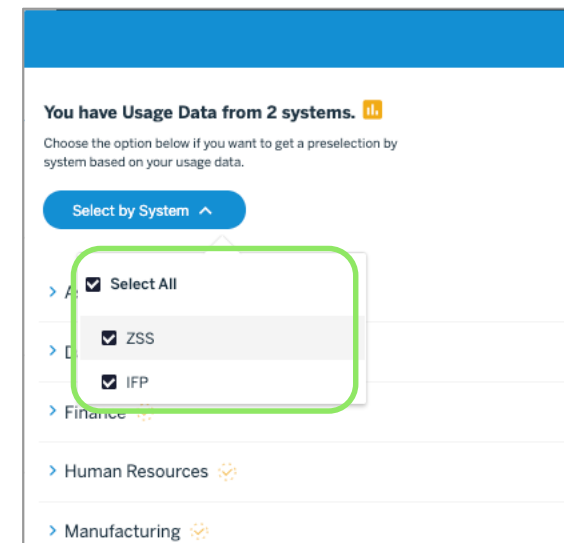

7

- For more complex products like SAP ERP,, SAP SCM, SAP CRM and other – you need to select the modules (so called capabilities) that you are currently using in the product to get to your recommendation
- Depending on the product, the list of capabilities to choose from can be extensive – to help identify which capabilities you are currently using, we map data that we get from EarlyWatch Alert to capabilities

8

- You can apply this EWA-data per system: select the same system as you did in the previous step (→ challenge 2) to be consistent in which system you are analyzing
- If you select one system, another system might also be marked – again, this is not an error, but only indicates that the usage data/capabilities are the same in those systems → the entity used is capability, not systems, and the recommendation for the capabilities will be the same no matter what system they are used in

Things are different with SAP S/4HANA ...

SAP S/4HANA Enterprise Management is SAP's next-generation digital core ...

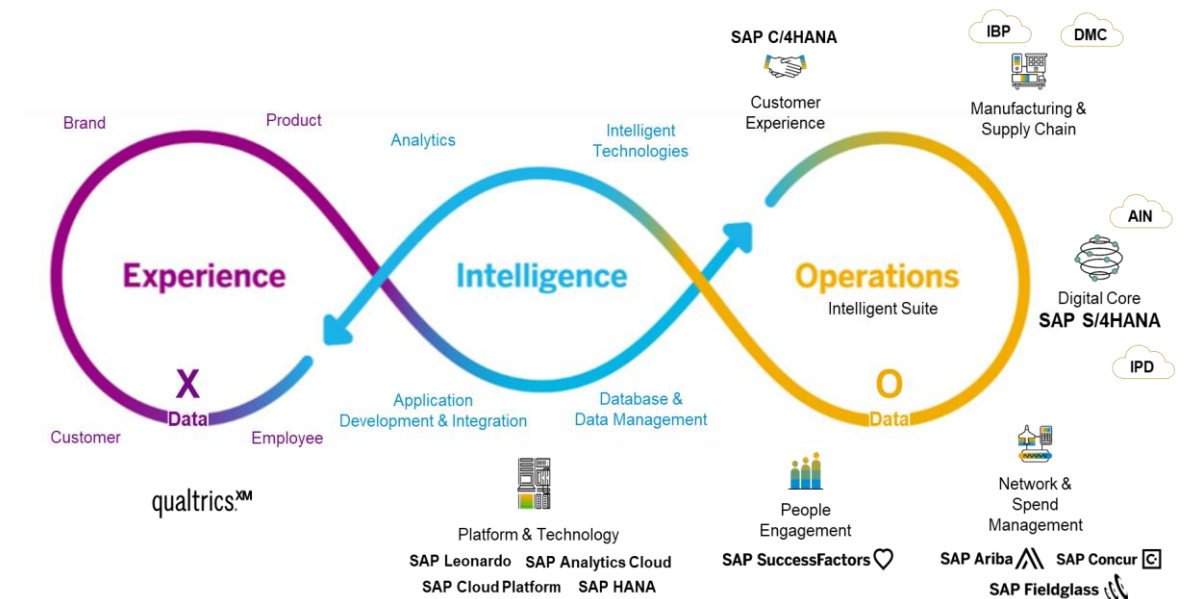

- Innovative in-memory database
- New architecture and new data models
- Renewed applications
- Cloud & on-premise deployment models
- New UI technology (Fiori) & digital assistance & natural language conversations
- Intelligent Automation
- Natively integrated

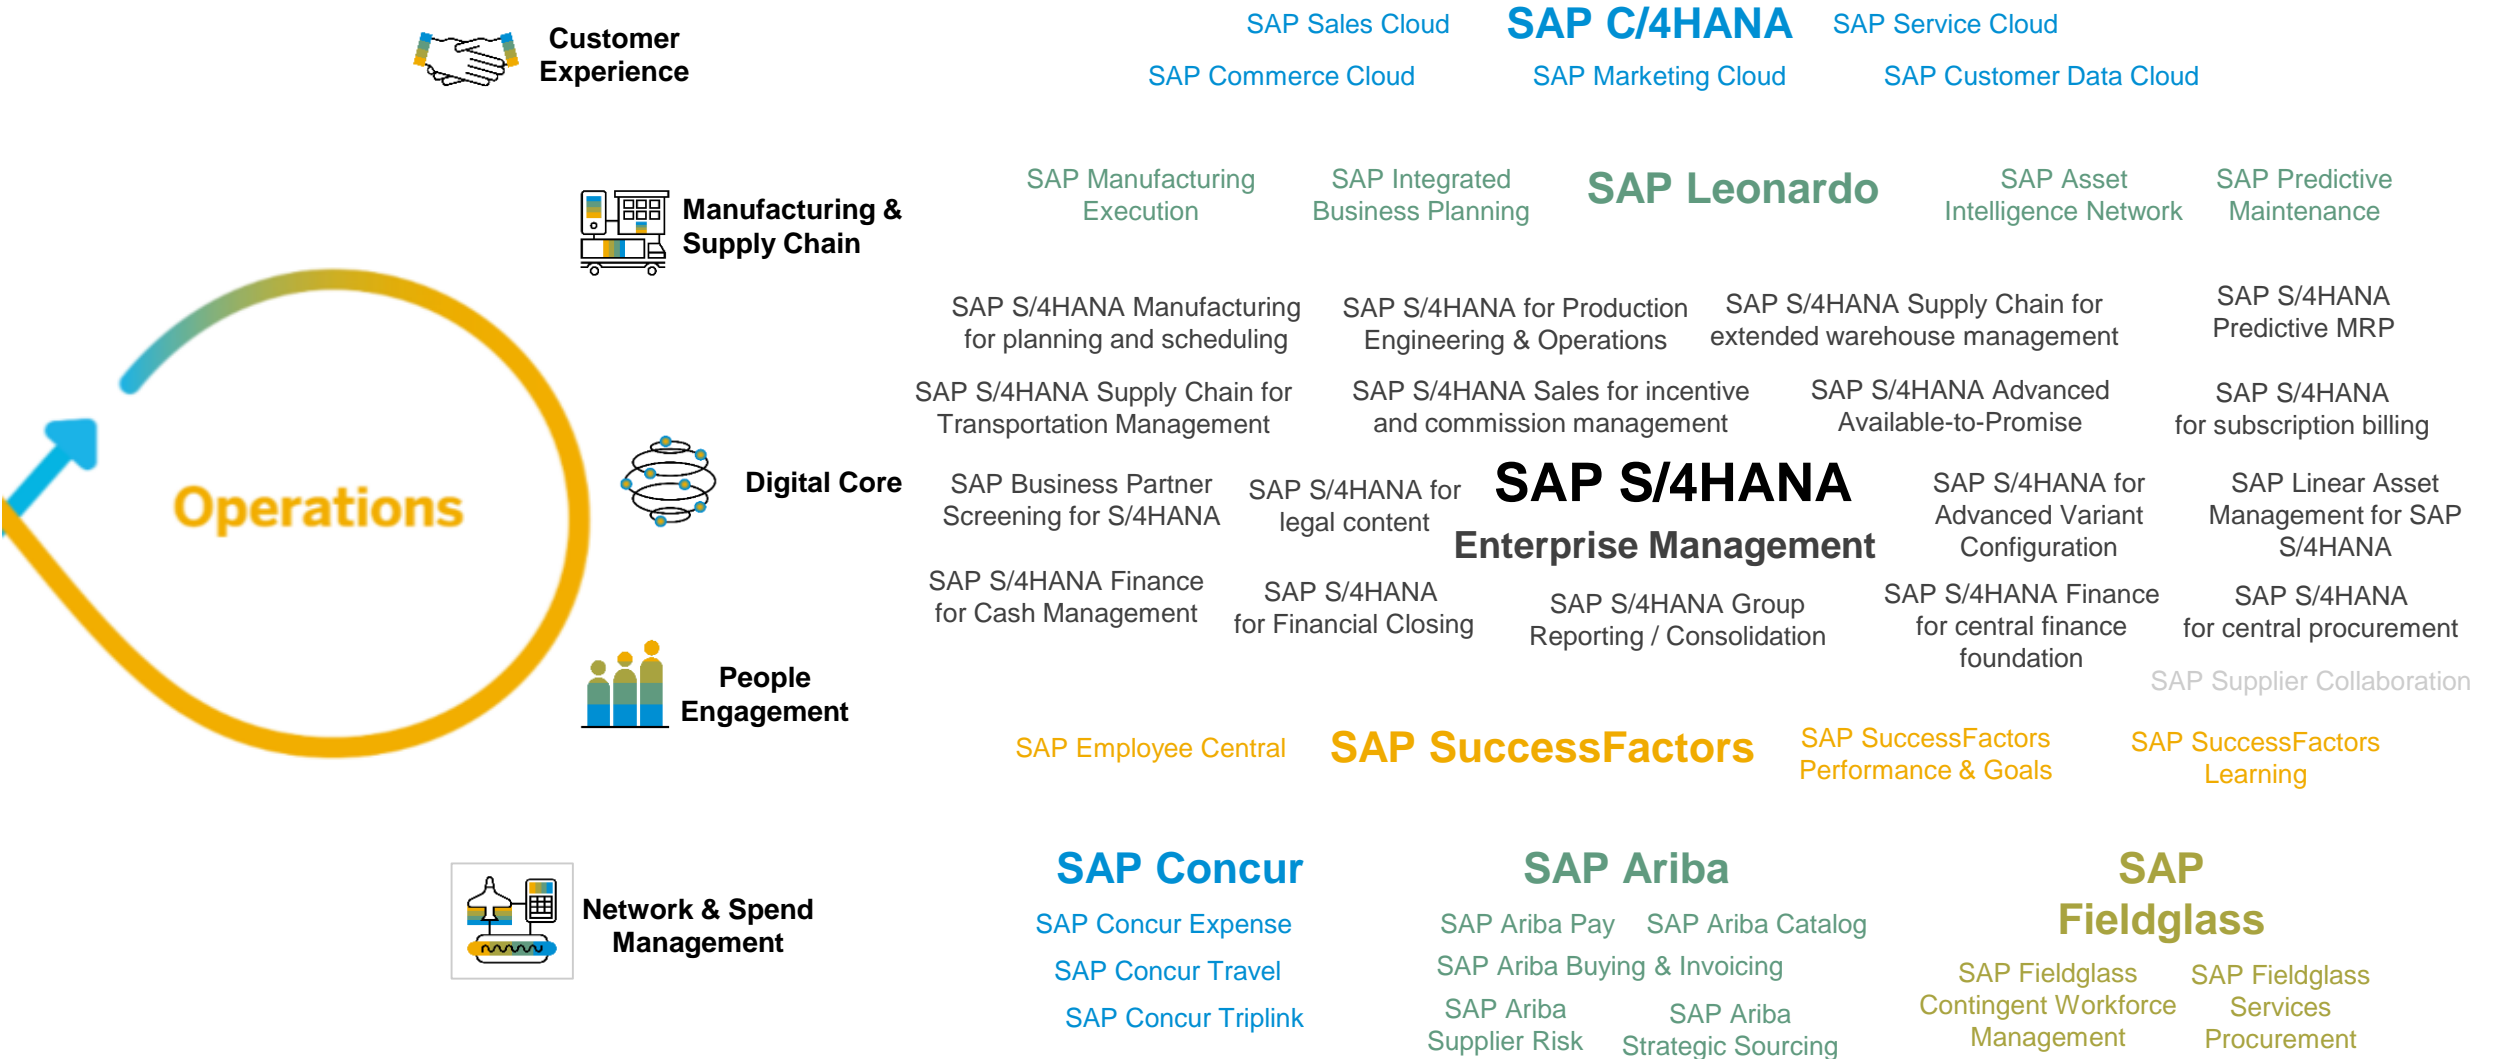

→ **SAP S/4HANA is a new product line.**

It enables you to consume those innovations which can improve your business processes to run best in a modern economy. The classical SAP Business Suite incl. SAP ERP is a separate product line and will still be available.

... and a cornerstone of the NEW Intelligent Enterprise Framework

- Talent management
- Time and attendance management
- Human capital analytics

Human Resources

Choice of Deployment

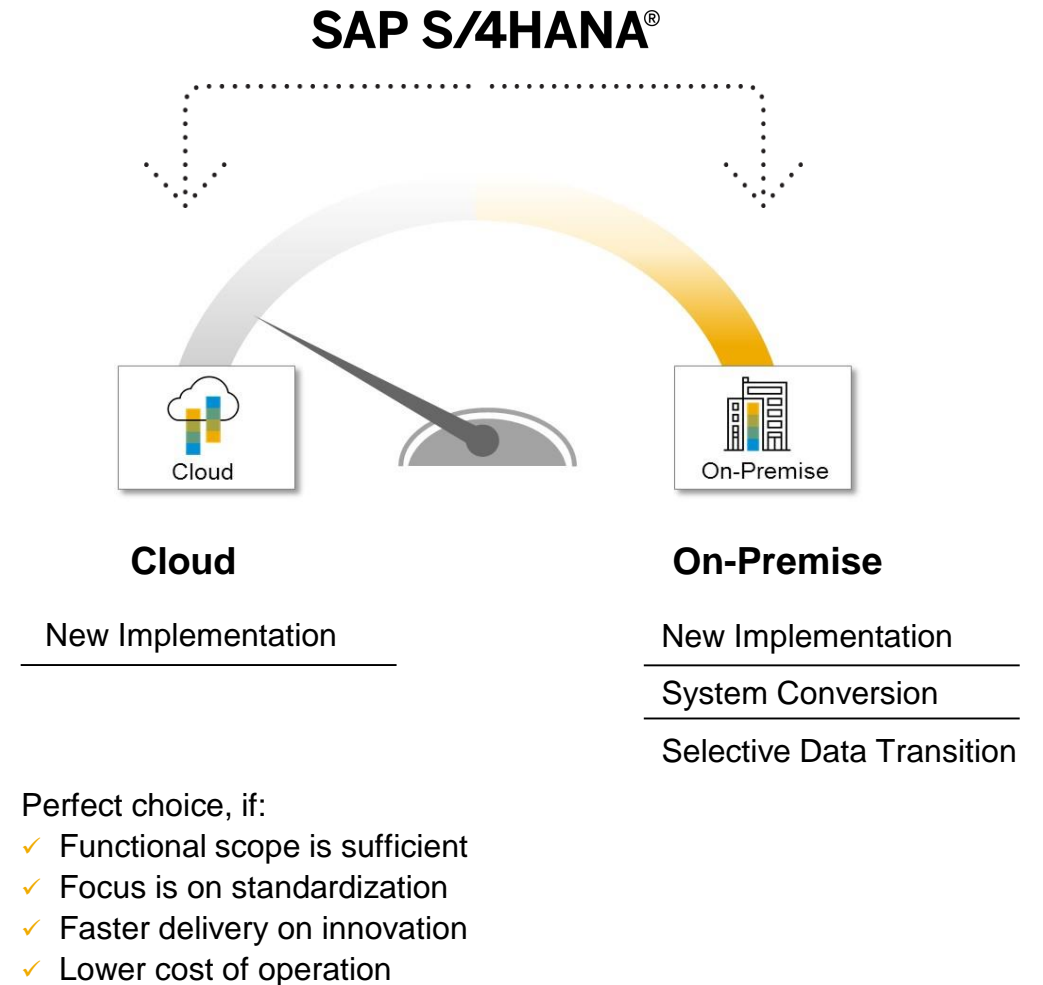

SAP S/4HANA and SAP S/4HANA Cloud share following characteristics for consistency at every level of your enterprise:

- Share same code line
- Designed for in-memory
- Same simplified data model
- Improved use experience

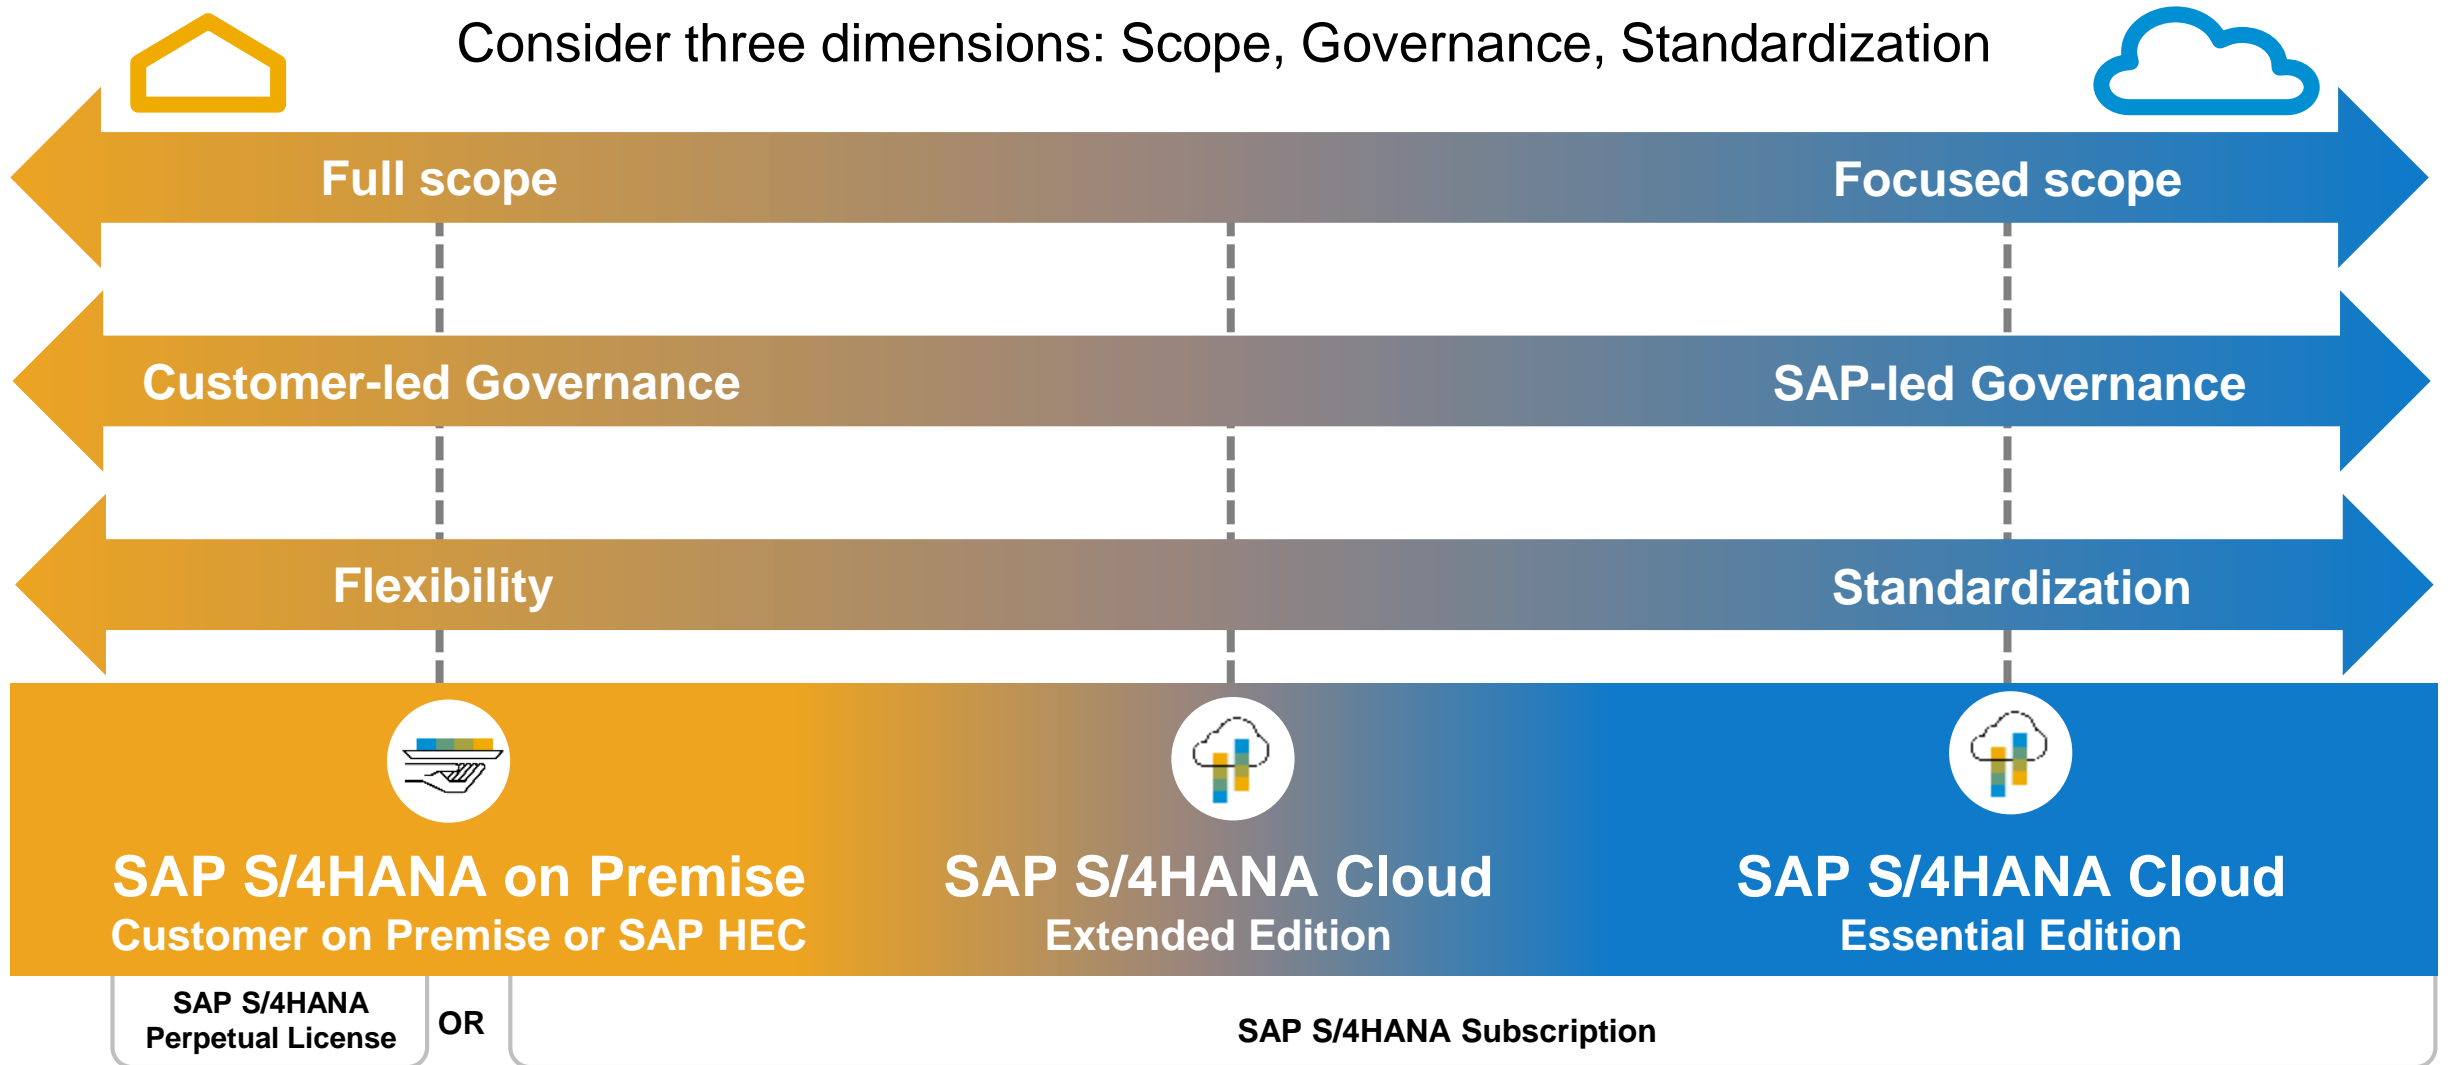

Important considerations:

- Scope of business functionality (i.e. industry solutions)
- Deployment times
- Update frequency / impact on running processes
- Customizations
- Regulatory, industry, and regional requirements
- System operations skills and efforts
- Efforts for maintaining custom code and modifications during every maintenance event

Extended Innovation Commitment for SAP S/4HANA Clarity and Choice on SAP Business Suite 7

- SAP has announced a maintenance commitment for SAP S/4HANA until the end of 2040.
- At the same time, SAP will provide **mainstream maintenance** for SAP Business Suite 7 core applications until end of 2027. This offboarding phase will be followed by **optional extended maintenance** until end of 2030.
- SAP will provide mainstream maintenance until end of 2027 for SAP Business Suite 7 core applications, which are also core applications of SAP Business All-in-One, including:
 - SAP ERP 6.0,
 - SAP Customer Relationship Management 7.0,
 - SAP Supply Chain Management 7.0,
 - SAP Supplier Relationship Management 7.0 applications,
 - SAP Business Suite powered by SAP HANA.
- Following mainstream maintenance, SAP will offer customers choice on maintenance for SAP Business Suite 7 core applications from 2028 onwards:
 - Customer needing support for their Business Suite 7 core applications in longer conversion phases to SAP S/4HANA can choose the **extended maintenance** offering. This comes with a premium of two percent points on the maintenance basis for all support offerings for the scope of SAP Business Suite 7. It will be available for three years from beginning of 2028 until end of 2030.
 - Customers who do not opt for the extended maintenance, or where extended maintenance has ended, will receive **customer specific maintenance** for their SAP Business Suite 7 applications.
- For more information on SAP's release and maintenance strategy, visit the dedicated pages on the [SAP Support Portal](#):

Maintenance 2040

Extended Innovation Commitment for SAP S/4HANA Clarity and Choice on SAP Business Suite 7

On February 4, 2020, SAP has announced a maintenance commitment for SAP S/4HANA until the end of 2040. At the same time, SAP will provide mainstream maintenance for SAP Business Suite 7 core applications until end of 2027. This offboarding phase will be followed by optional extended maintenance until end of 2030.

SAP will provide mainstream maintenance until end of 2027 for SAP Business Suite 7 core applications, which are also core applications of SAP Business All-in-One, including:

- ✓ SAP ERP 6.0,
- ✓ SAP Customer Relationship Management 7.0,
- ✓ SAP Supply Chain Management 7.0,
- ✓ SAP Supplier Relationship Management 7.0 applications,
- ✓ SAP Business Suite powered by SAP HANA.

Following mainstream maintenance, SAP will offer customers choice on maintenance for SAP Business Suite 7 core applications from 2028 onwards:

- ✓ Customer needing support for their Business Suite 7 core applications in longer conversion phases to SAP S/4HANA can choose the extended maintenance offering. This comes with a premium of two percent points on the maintenance basis for all support offerings for the scope of SAP Business Suite 7. It will be available for three years from beginning of 2028 until end of 2030.
- ✓ Customers who do not opt for the extended maintenance, or where extended maintenance has ended, will receive customer specific maintenance for their SAP Business Suite 7 applications.

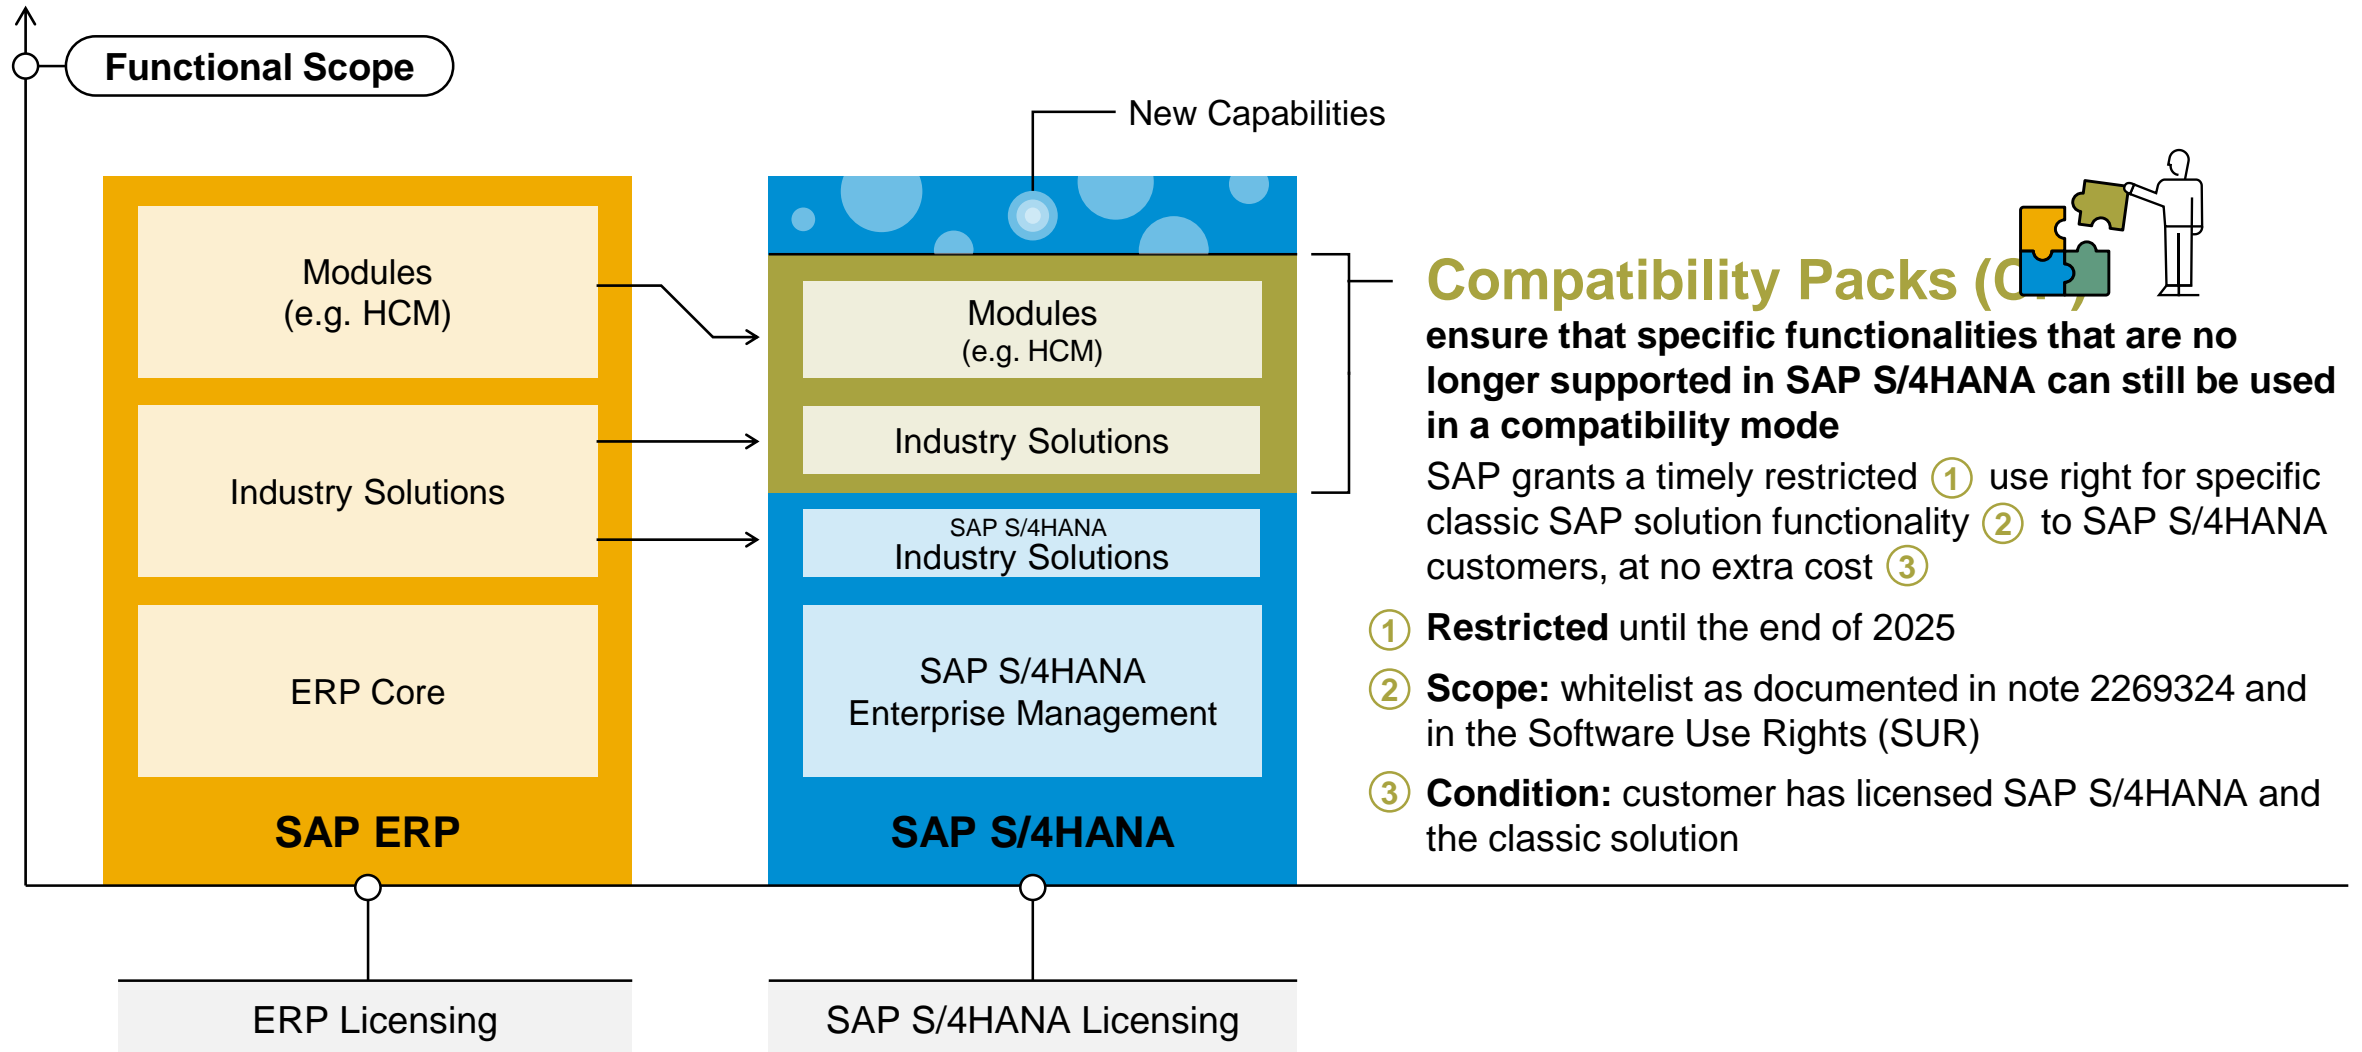

Additional context can be found in the [related press release](#) as well as in the [SAP News interview](#) with Michael Kleinemeier, member of the Executive Board, SAP Digital Business Services and Thomas Saueressig, member of the Executive Board, SAP Product Engineering, about the long-term maintenance commitments for SAP S/4HANA and SAP Business Suite 7.

System conversion – essentials

SAP Readiness Check for SAP S/4HANA

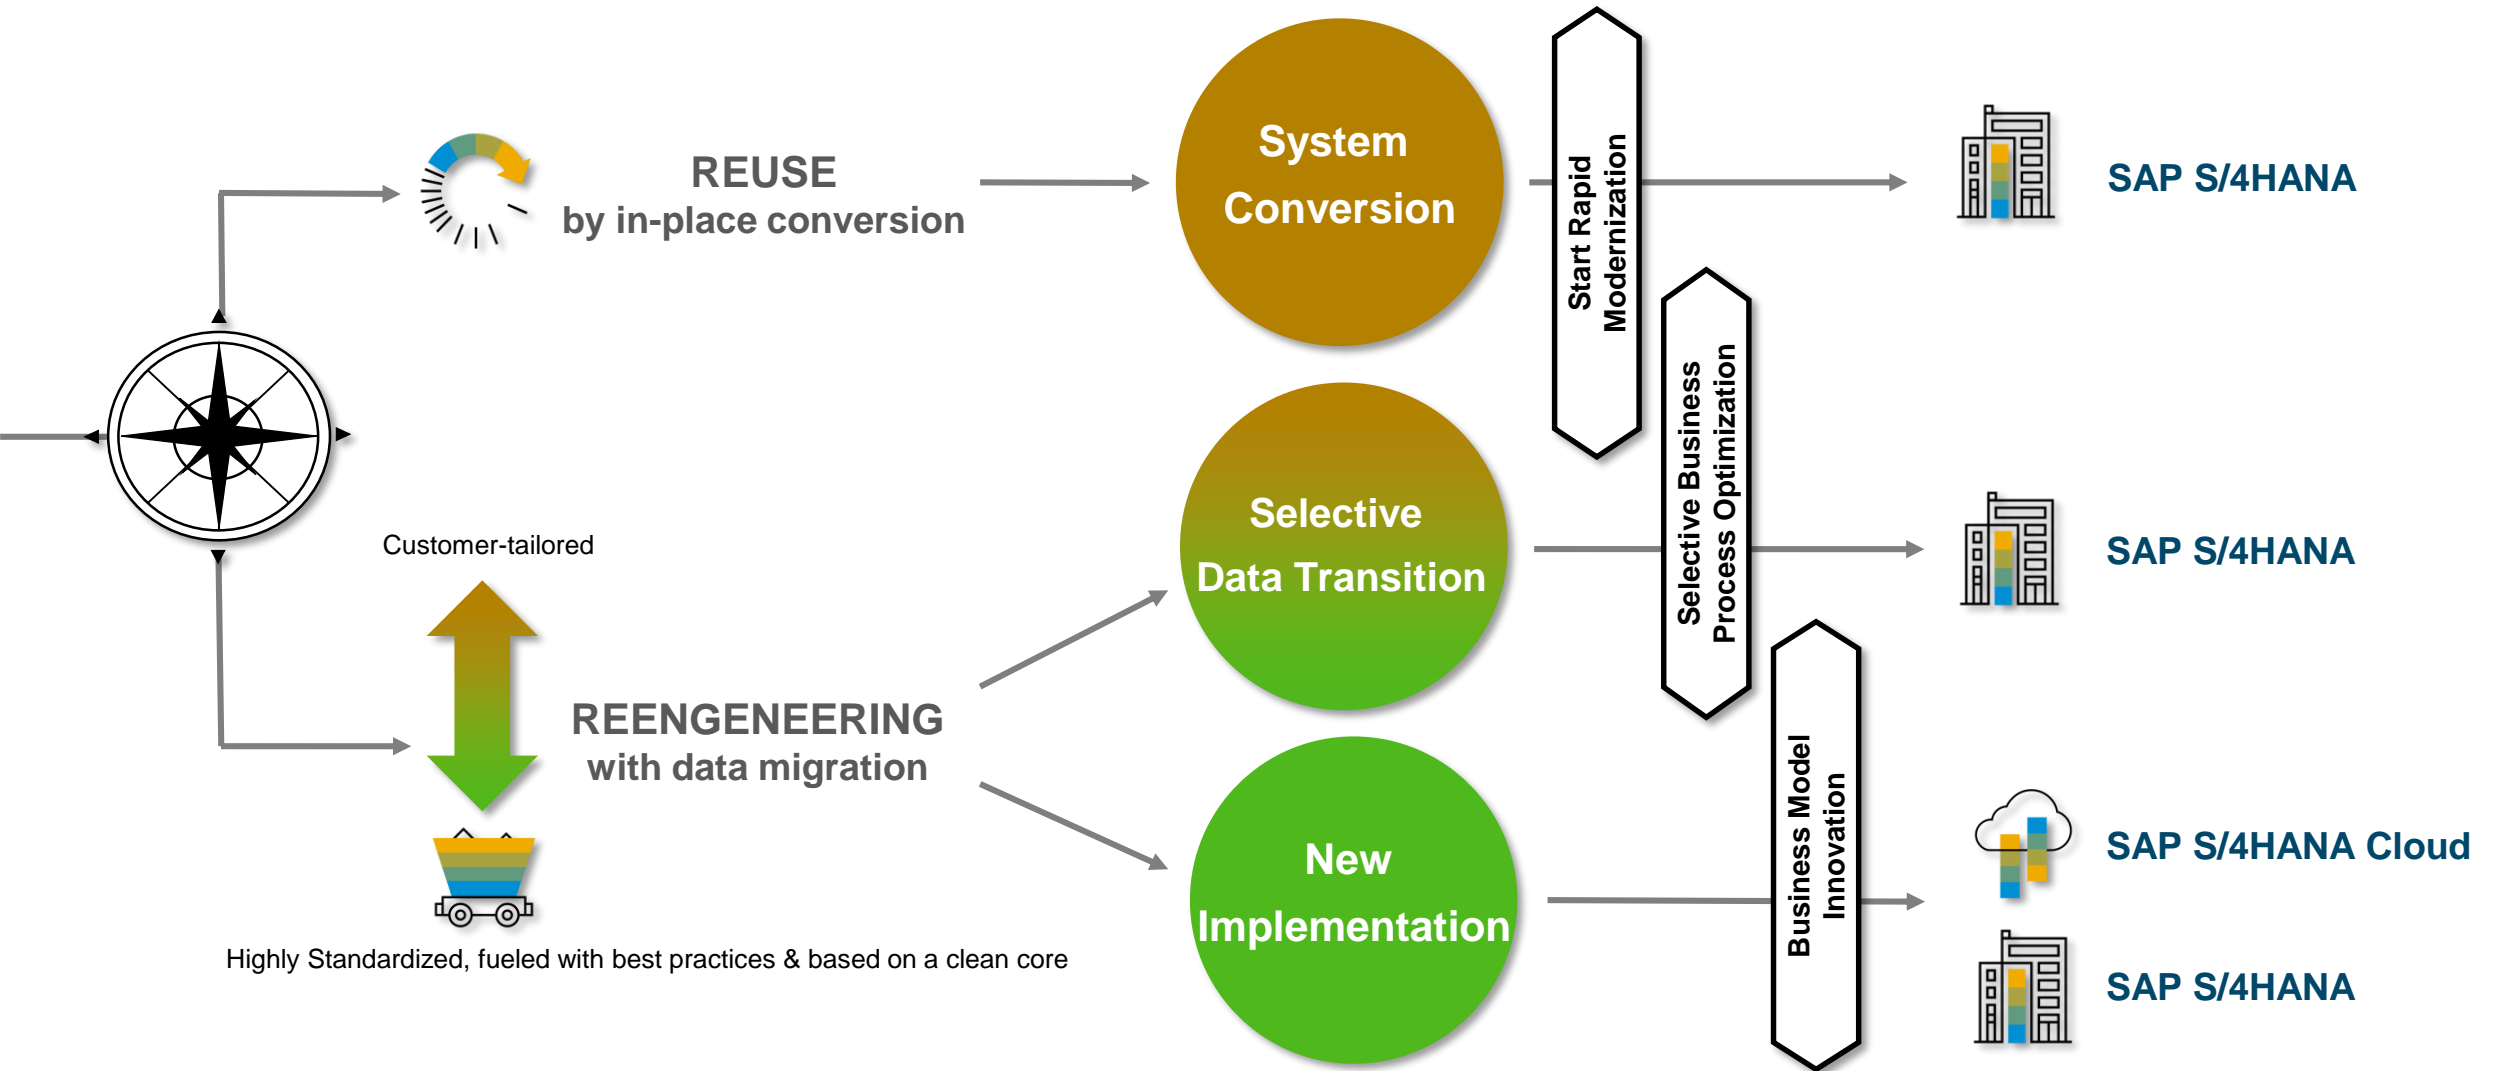

Summary

APPENDIX

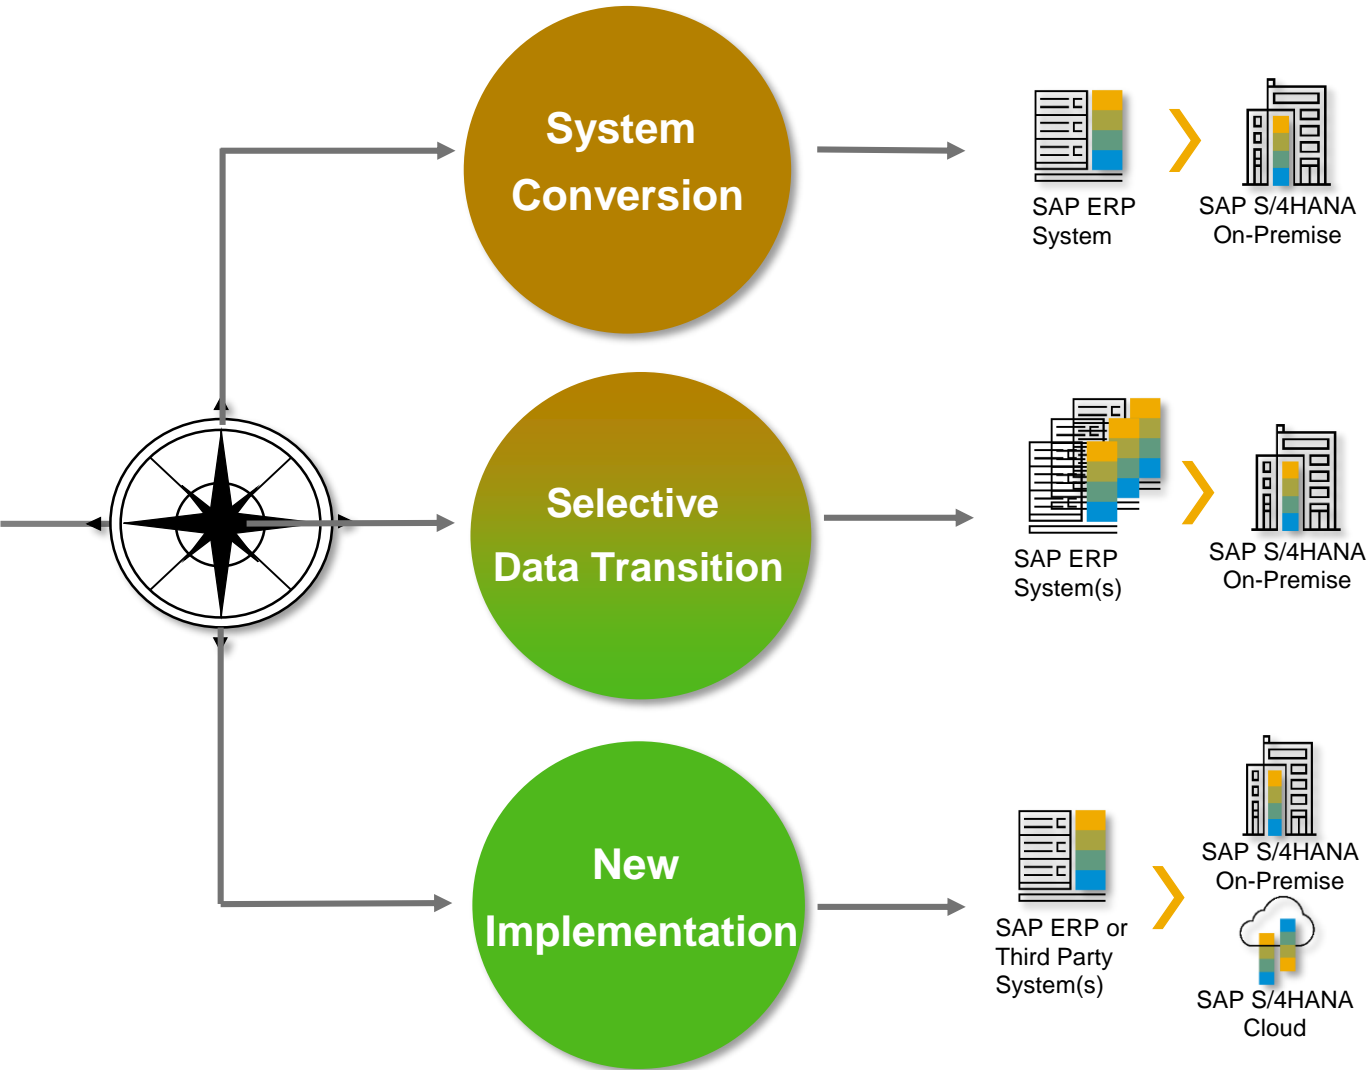

- recommended links to further information

Your way to SAP S/4HANA (1/2)

Your way to SAP S/4HANA (2/2)

Bring your business processes to the new platform

- A complete technical in-place conversion of an existing SAP Business Suite ERP system to SAP S/4HANA
- Adopt new innovations at your speed
- Delivery model in S/4HANA shipment included

Partly re-use, partly re-implementation

- Covers the migration of relevant business data from SAP ERP to SAP S/4HANA
- Allows to combine redesign of business processes with retaining historical data
- Realized by a combination of standard functions used for New Implementation or System Conversion together with complementing expert functions which are not released to general availability
- Delivery model as a service / consulting project

New implementation / re-implementation

- Reengineering and process simplification based on latest innovations
- Highly standardized, fueled with best practices & based on a clean core
- Implement innovative business processes with pre-configured best practice content on an innovative platform
- Migrate your master data & retire old landscape
- Delivery model in S/4HANA shipment included

Transition to SAP S/4HANA - System Conversion

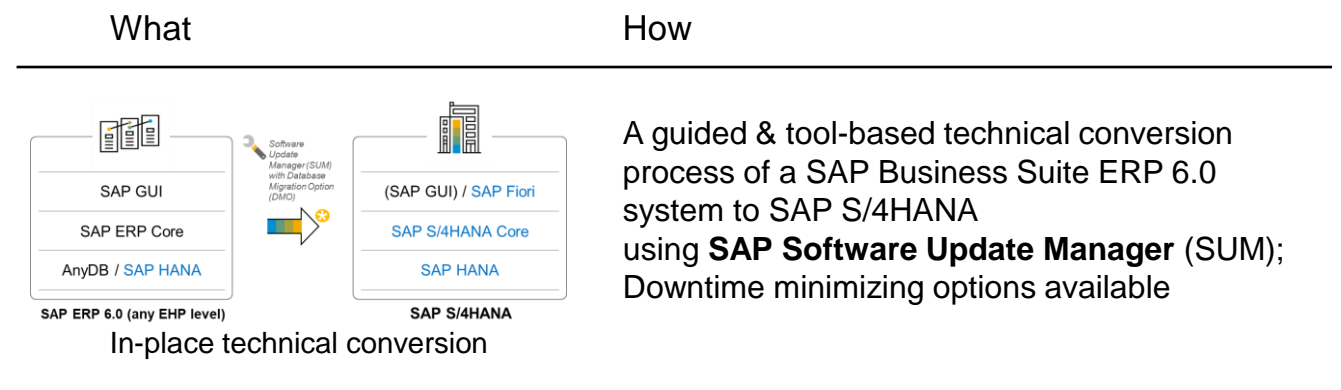

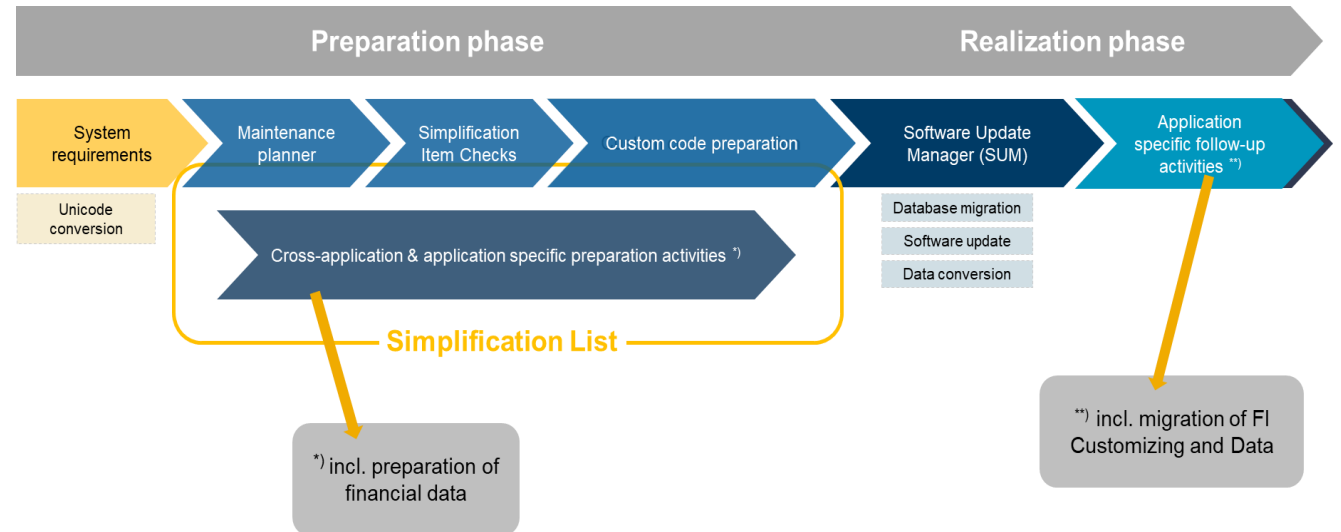

Scenario description

A complete technical in-place conversion of an existing SAP Business Suite ERP 6.0 system to SAP S/4HANA

- Comprehensive analysis and check tools ensure data consistency and system readiness
- SAP Readiness Check and the conversion tools ensure appropriate project planning and smooth execution

Why you chose this option

- Bring your existing business processes to the new platform.
- Keep your investment in custom code
- Mitigate the risk and investment of a big bang conversion project by running a technical conversion project with some focused, selected innovation,
- Adopt more new innovations at your speed at a later point of time and in a phased approach.

[SCN Blog: SAP S/4HANA System Conversion – At a glance](#)

Transition to SAP S/4HANA - New Implementation

Scenario description

New implementation of SAP S/4HANA, e.g. for customers migrating a legacy system, also known as “greenfield” approach

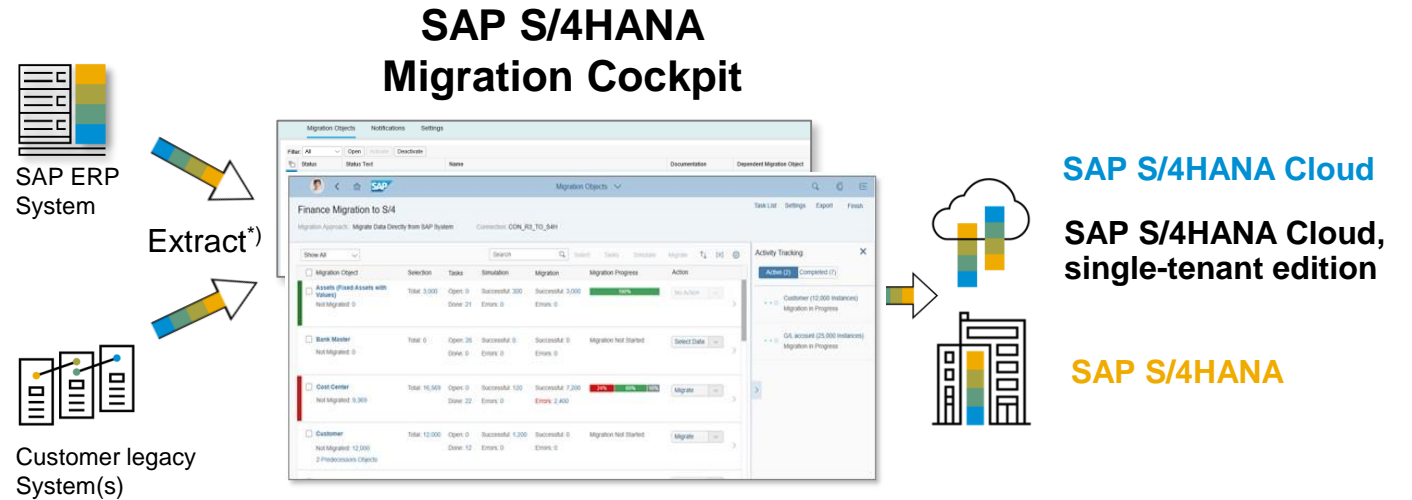

Why would you choose this option?

Customers planning to migrate

- A non-SAP / 3rd-part legacy system,
- A good option for a SAP system, which
 - Maybe of an older release and/or
 - Is highly customized/modified and/or
 - Does not meet the system requirements for a technical system conversion

Benefits for the customer are

- Reengineering and process simplification based on pre-configured, best practice business processes and on a clean core
- Rapid adoption of new innovations in a standardized manner

*) Three migration approaches available:

- Data upload from file or staging tables
- Direct transfer of data from SAP sources (new with release 1909); see [overview presentation](#) for details

What	How
 Install SAP S/4HANA	Software Provisioning Manager
 Initial data load from source system	- SAP S/4HANA Migration Cockpit – SAP’s recommended tool of choice - can be complemented by SAP Data Services (DS) or SAP Advanced Data migration (ADM) by Syniti

Transition to SAP S/4HANA - Selective Data Transition

The selective data transition covers the migration of relevant business data from SAP ERP to SAP S/4HANA. It includes many options related to the handling of software & data provisioning, requiring additional expert services and tools to accomplish.

SAP strongly advises you to engage SAP Digital Business Services or specialized SAP Partners equipped with the necessary tools and experience with such an approach.

Reasons for selecting a Selective Data Transition approach:

- Large, multi-national corporation
- Multi-SAP ERP instance environment
- Business requirement to harmonize or to do just a partial redesign / leverage partly today's ECC installation
- Necessity to retain historic data in productive system
- Often effort intense & complex to load historical data
- Increased risk vs. other options

[Join the SAP S/4HANA Movement](#)

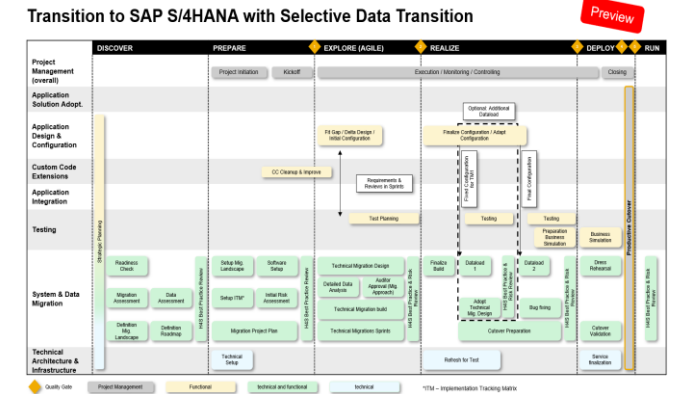

SAP S/4HANA Selective Data Transition Engagement ^{*)}

Pilot member companies: ^{**)}

Customer value proposition:

- Quality standards
 - Solutioning, project management, and delivery of complex selective data transitions to SAP S/4HANA
- Aligned valid transition scenarios
- Best practices & solution patterns for resolution of transition scenarios
- A common approach for a tool-based migration

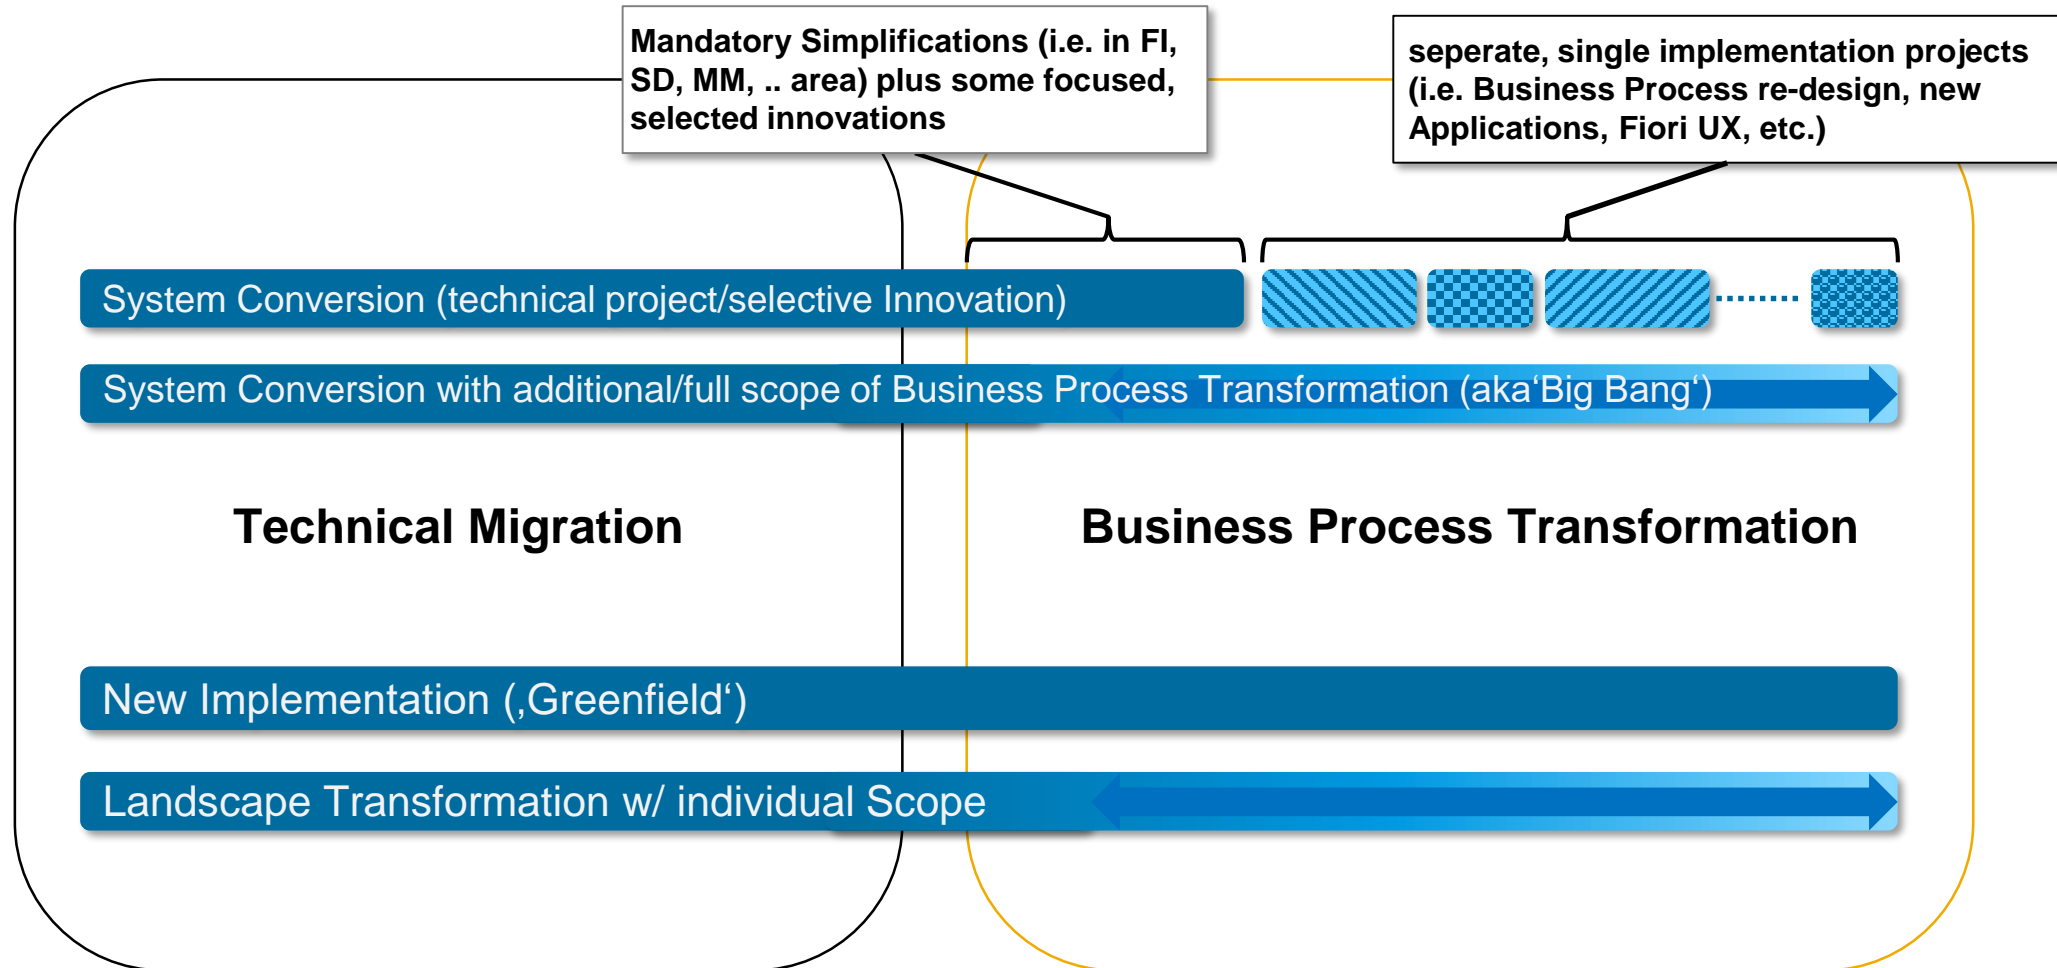

^{*)} A global expert community has been recently founded that agrees on joint standards, methods and processes to provide customers with a reliable & proven migration approach to SAP S/4HANA.

^{**)} This is the current state of planning and may be changed by SAP at any time without notice.

Transition to SAP S/4HANA

Scope of Business Process “cloud mind-set.”

Step-by-step Transition to SAP S/4HANA: some remarks

Situation

- There are customers who are considering to migrate their individual business units sequentially from SAP ERP to SAP S/4HANA via “a phased roll-out” / “phased approach”.
- Challenges perceived in preparation for a "big bang": Change management, responsiveness of IT support, ...

Impact

- A phased approach is usually neither cheaper, faster, nor less risky than a “big bang” scenario.
- Each step in a phased transition to SAP S/4HANA means a separate (sub-)project of significant size with impact on business users, interfaces, and systems availability during go-live (depending on approach).
- Proper integration, synchronization and orchestration has to be ensured
- Comprehensive evaluation, careful customer-individual decision, and proper overall planning is necessary.

Step-by-step Transition to SAP S/4HANA

Careful evaluation of the customer's individual situation necessary

The interim period starts with the first step of the transition and lasts until the completion of the last step.
During the interim period ...

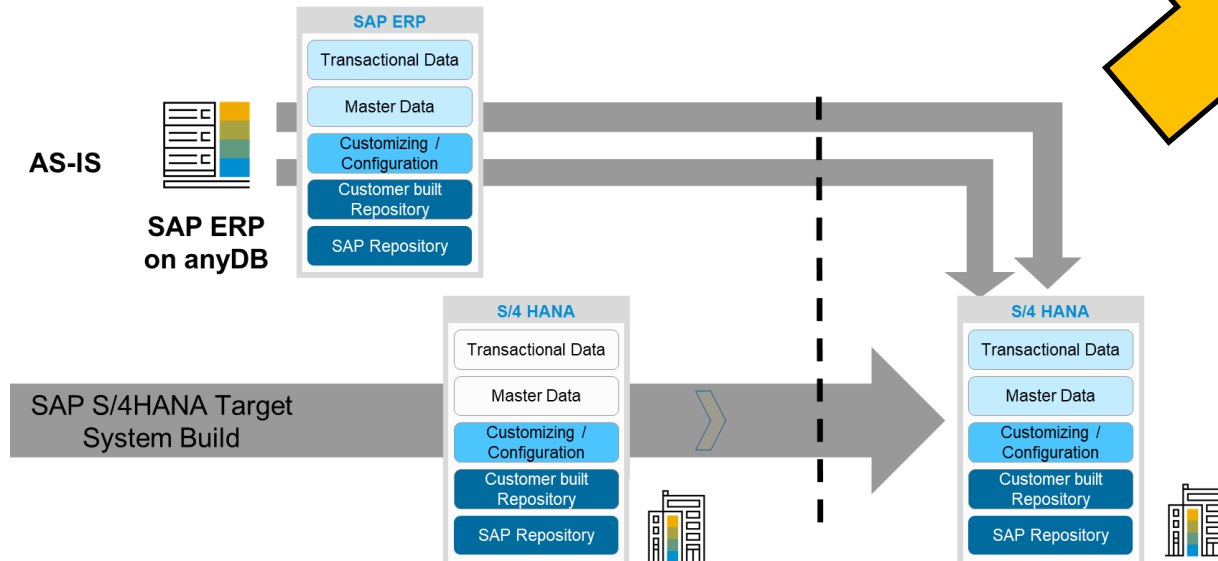

- Business processes might cross system borders during the interim period, which might impact business users. Common processes, for example financial and legal reporting, might require additional steps to be completed.
- Concept and rules needed for master data management, customizing and custom development and all involved members have to adhere to.
- ERP and SAP S/4HANA system landscapes are operated in parallel
 - Double IT operations, double maintenance
 - Keep in sync what needs to be kept in sync
- Potential duplication of interfaces and connections to satellite systems
- ...

All this has to be defined, set up, tested, operated and maintained for the interim period.

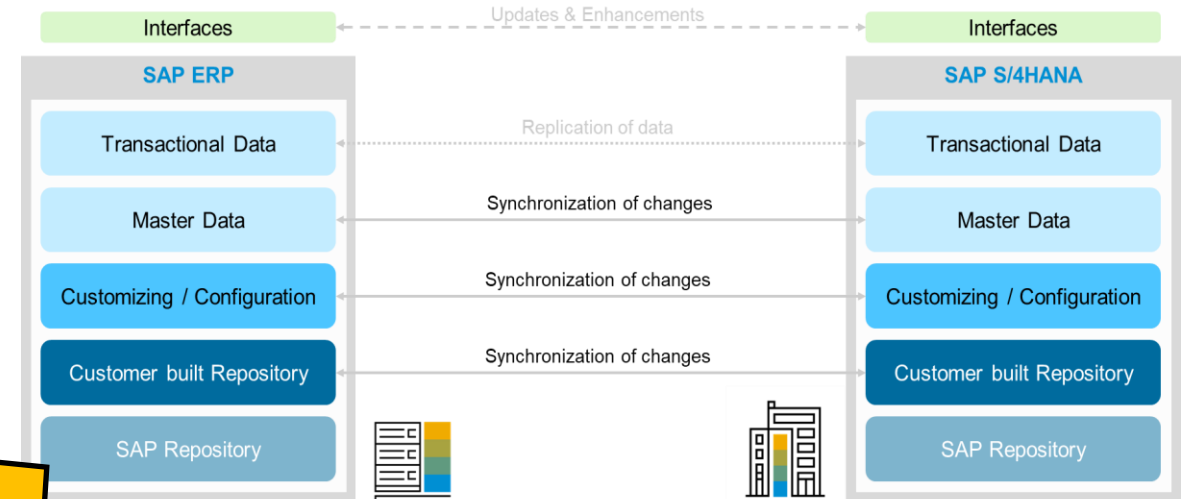

Phased Roll-Out Approach Overview between Systems

Important Points:

- Step-by-steps transitions require intermediate integration scenarios
- Impact on business processes during the phased roll-out needs to be analysed
- Every system element needs to be considered during the evaluation phase

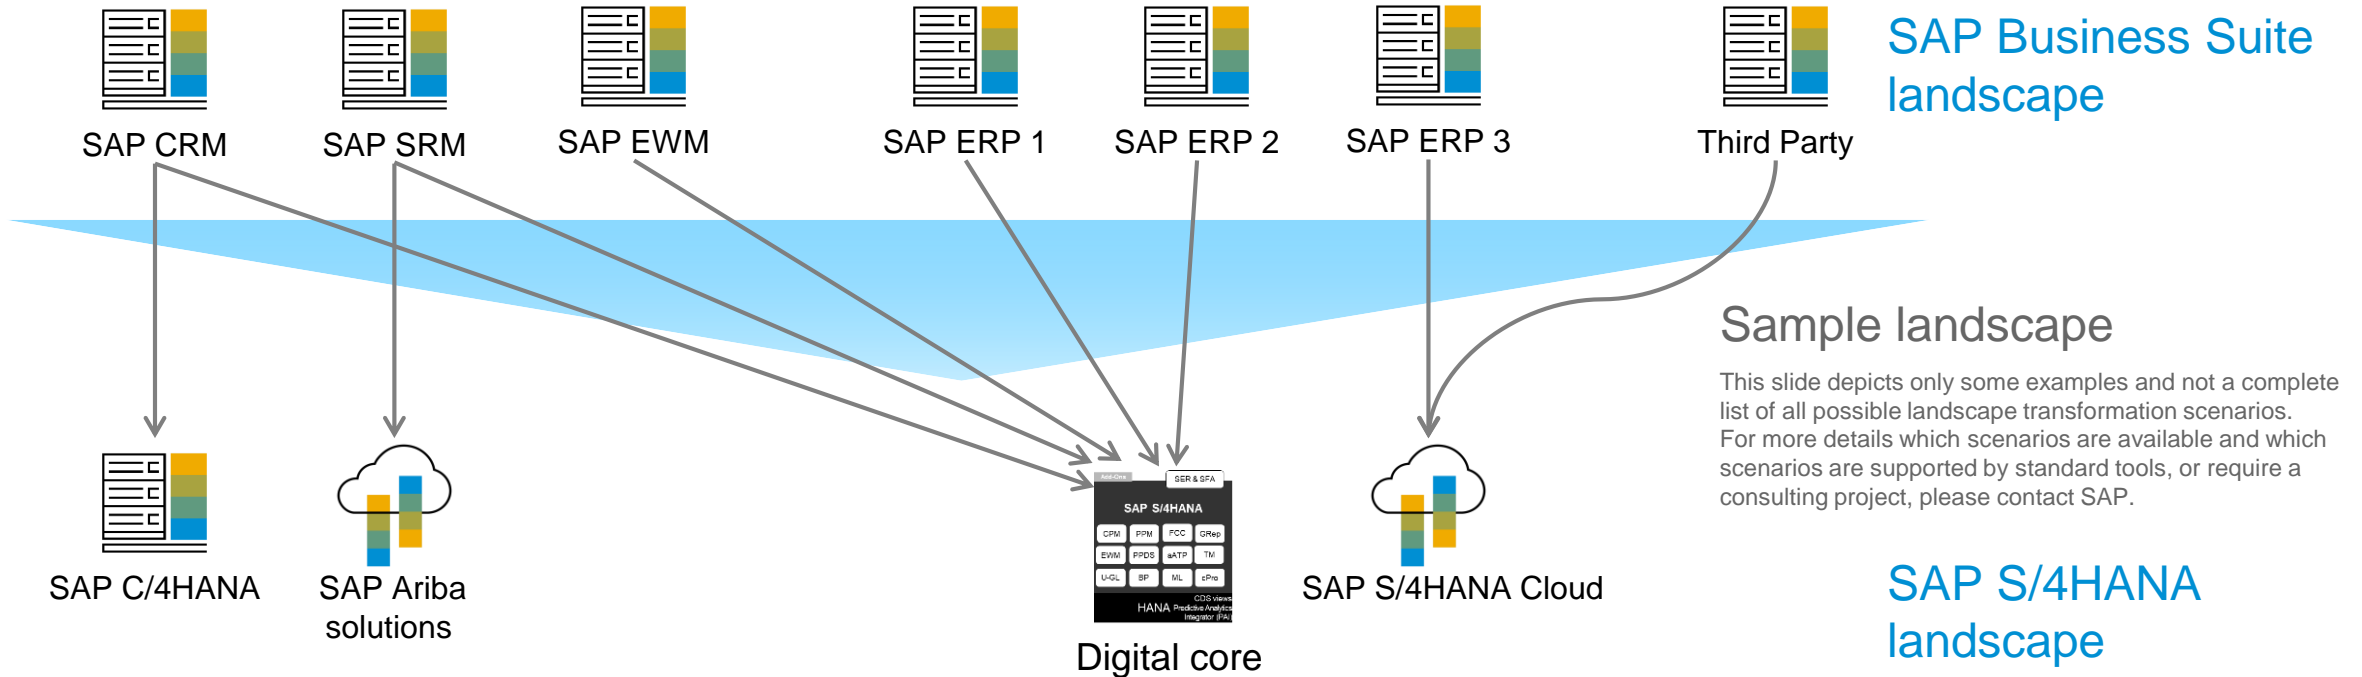

Different synchronization requirements on all levels

- SAP offers services and solutions for proper evaluation
- Integration across different SAP products and levels increase complexity
- Risk and Impact of a phased roll-out needs to be carefully assessed

Transition to SAP S/4HANA - The IT Landscape point of view

Example

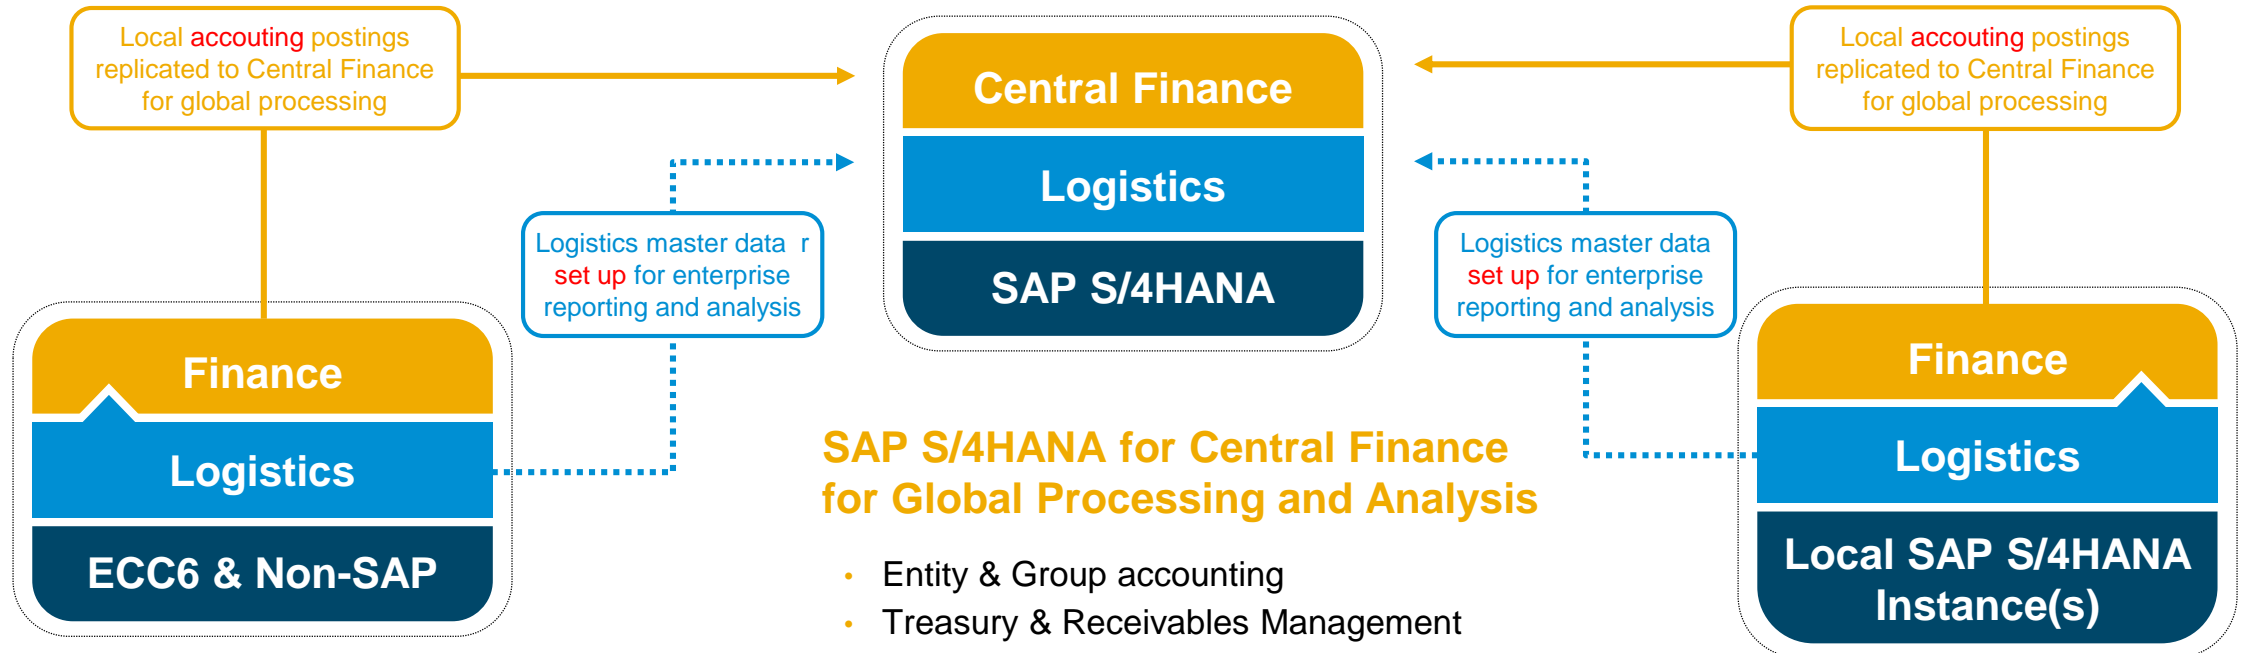

- Start with the transition of your SAP ERP application to SAP S/4HANA
- Successively transform your current solution landscape based on SAP Business Suite into a hybrid landscape around SAP S/4HANA as the digital core to be ready for the Intelligent Enterprise
- Migrate data and processes between systems

Discover www.sap.com/TransformationNavigator* for guidance to your future product map centered on SAP S/4HANA

Central Finance – Nondisruptive Approach Connecting to Logistics Systems

Local processes can remain intact while replicating the financial transactions centrally

SAP S/4HANA for Central Finance for Global Processing and Analysis

- Entity & Group accounting
- Treasury & Receivables Management
- Legal and Management Reporting & Analytics
- Logistics master data for management analysis
- Indirect Processes (HR/Travel and Expense/Procurement)
- Period end Orchestration

Local Logistics Systems Transactions and Data

- Local financial postings and transactions
- Local regulatory reporting and closing
- Procurement
- Sales order processing
- Manufacturing
- Inventory management

Local Logistics Systems

- Can be **moved** from ECC6 directly to S/4HANA as and when convenient
- Take advantage of S/4HANA enhancements for Logistics processes
- Benefit from S/4HANA Digital Supply Chain Solutions

SAP S/4HANA 1909 – delivered incl. “Industry to Core”

ONE physical shipment

from Automotive

- Integrated Product and Process Engineering
- Packaging Logistics
- Executing Inbound Deliveries
- Just-in-Time, Just-in-Sequence
- Automotive-specific Kanban features
- Production Backflush for Discrete Industries
- Self-Billing and Evaluated Receipt Settlement
- Scheduling Agreement Processing (enhancements)
- Vehicle Management System, Vehicle Search
- Long Material Number

from E&C, Aerospace & Defense, Mill

- Equipment Tools Management
- Bill of Services
- MRO Maintenance, Repair & Overhaul
- Order Combination for Production and Process Orders (Mill)

from Utilities

- Asset Operations and Maintenance
- Meter Logistics and Operations Services
- Intelligent Meter Reading Processing
- Bill to Cash for Energy Prosumers
- Credit and Collection Management

from Professional Services

- Commercial Project Management

from Consumer Products

- Catch Weight Management (incl. conversion)
- SAP Agricultural Contract Management

from Retail & Fashion / Wholesale

- Master Data Management for Merchandising
- Omnichannel Merchandise and Assortment Planning
- Pricing and Promotions
- Merchandise Procurement
- Demand and Supply Planning
- Inventory Management and Order Response
- Store Commerce

from Oil & Gas

- Hydrocarbon Product Management
- Trader’s and Scheduler’s Workbench (TSW)
- Joint Venture Accounting
- Retail Fuel Network Operations
- Secondary Distribution Management

from Banking

- Average Daily Balances
- Amount Field Length Extension in the General Ledger
- Multi-Currency Processes and Accounting
- Error Correction and Suspense Accounting

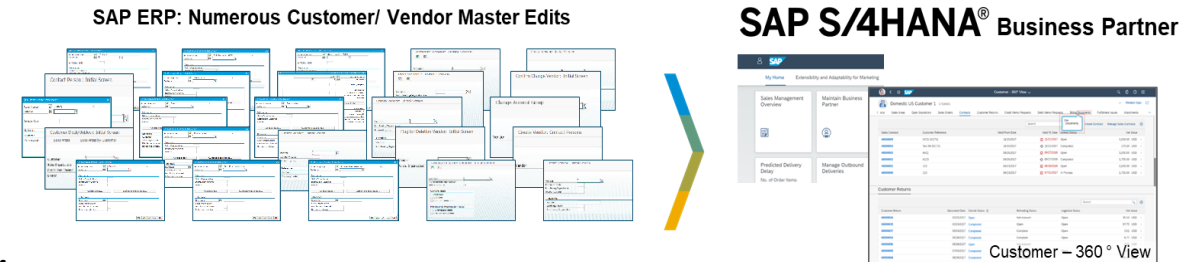

from Media

- Product Master Hierarchy

Simplifications – Examples for essential changes

Customer Vendor Integration (CVI) and Business Partners

- In SAP S/4HANA, Business Partner is the leading object and single entry point to maintain business partners, customer and vendor master data.
- There is a new data model with Business Partner (e.g. categories, roles, multiple addresses and relationships)
- Customer Vendor Integration (CVI) ensures that customer and vendor master data tables are updated automatically after a business partner is created/changed

Key Examples*) Finance:

- **Universal Journal**
- **Material Ledger and Asset Accounting**
- **New Cash Management**
- **SAP Credit Management (FSCM)**
- Revenue Recognition SD not available, replaced by **SAP Revenue Accounting and Reporting (RAR)** – Migration before conversion
- Classic Real Estate not available, replaced by **Flexible Real Estate Management** – Migration before conversion
- **SAP Trade Finance**

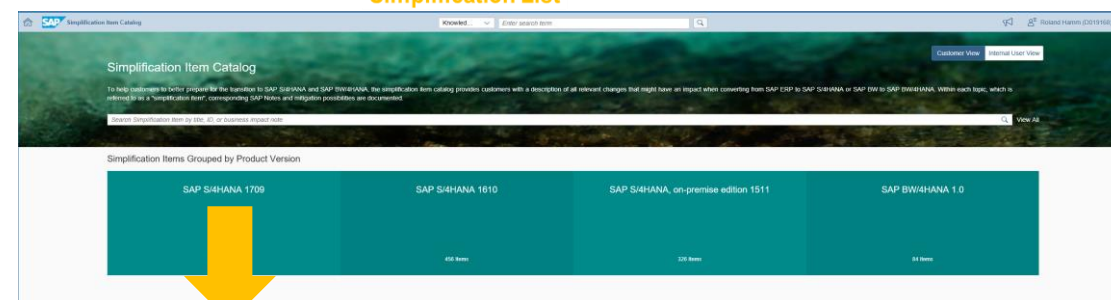

Key Examples*) Logistics:

- **Changes in MRP** (e.g. material field length extension, output management, MRP area, simplified sourcing and production version)
- **Inventory Management - new data model**
- Data model changes in **SD pricing**
- **ERP foreign trade, replaced in SAP S/4HANA** (e.g. SAP S/4HANA for international trade and SAP Global Trade Services)
- Changes in **Settlement Management**
- **Transportation Management and Extended Warehouse Management** embedded in SAP S/4HANA

SAP S/4HANA System Conversion - Simplification List

The **simplification list** is a collection of **simplification items**:

- A simplification item documents differences in application functionality (changed, replaced, removed) between SAP ERP 6.0 and SAP S/4HANA
- A simplification item provides information about the potential impact of this change for the customer
- The simplification list provides this information per SAP S/4HANA On-Premise release as part of the SAP S/4HANA documentation
- The **SAP Readiness Check for SAP S/4HANA**, the **SAPABAP custom code analysis**, as well as the **simplification item checks** are based on the information in the Simplification Items

SAP S/4HANA System Conversion - Simplification Item Checks

- Simplification item ('SI') Checks are shipped as SAP TCI Notes.
- SI-checks are executed on the (SAP Business Suite) start system (preparation phase) to **determine relevant Simplification Items and mandatory application specific preparation steps.**
- Check if serious issues exist in the system which could cause the system conversion/upgrade to fail.
- Support **not only system conversions** to SAP S/4HANA, but **also upgrades** within SAP S/4HANA
- SI-Checks are executed again as step in the Software Update Manager (SUM). In case dedicated Simplification Items require mandatory preparation steps the conversion procedure can stop to ensure a consistent system conversion.

Component	Category	Relevance	Last Consist.	Exemption	Note	Summary
LO-MD-BP	Change of existing functionality	▲	⊘	⊘	2265093	Check performed, item is probably relevant. Check business impact note.

FIN-MIG-ML	Change of existing functionality	▲	⊘	⊘	2352383	Check performed, item is probably relevant. Check business impact note.

Relevance Check

Consistency Check

Relevance Check:

- Identifies probably relevant Simplification Items based on an analysis of the data in the system.
- For informational purpose, so customers know which Simplification Items and related SAP notes to have a closer look at.

Consistency Check:

- Identify critical issues which could prevent a successful system conversion and where an action from customer side is required.
- Will prevent Software Update Manager from going into the downtime, if not all critical errors are fixed or exempted.

Transition to SAP S/4HANA

Introducing ...

Business Value

- Faster, less service intensive initial implementation in the cloud or on-premise
- Rapid adoption of innovations throughout the entire product lifecycle
- Extensible framework for partners

Faster **Time-to-Value**
(initial and ongoing)

Reduced **Total-Cost-of-Ownership**
(over total lifecycle cloud and on-premise)

SAP S/4HANA supports the intelligent enterprise through four key pillars

Digital Age User Experience

Digital assistance and natural language conversations for increased productivity and user satisfaction

Intelligent Automation

Artificial intelligence and robotic process automation eliminate more than half of manual tasks

New Business Models

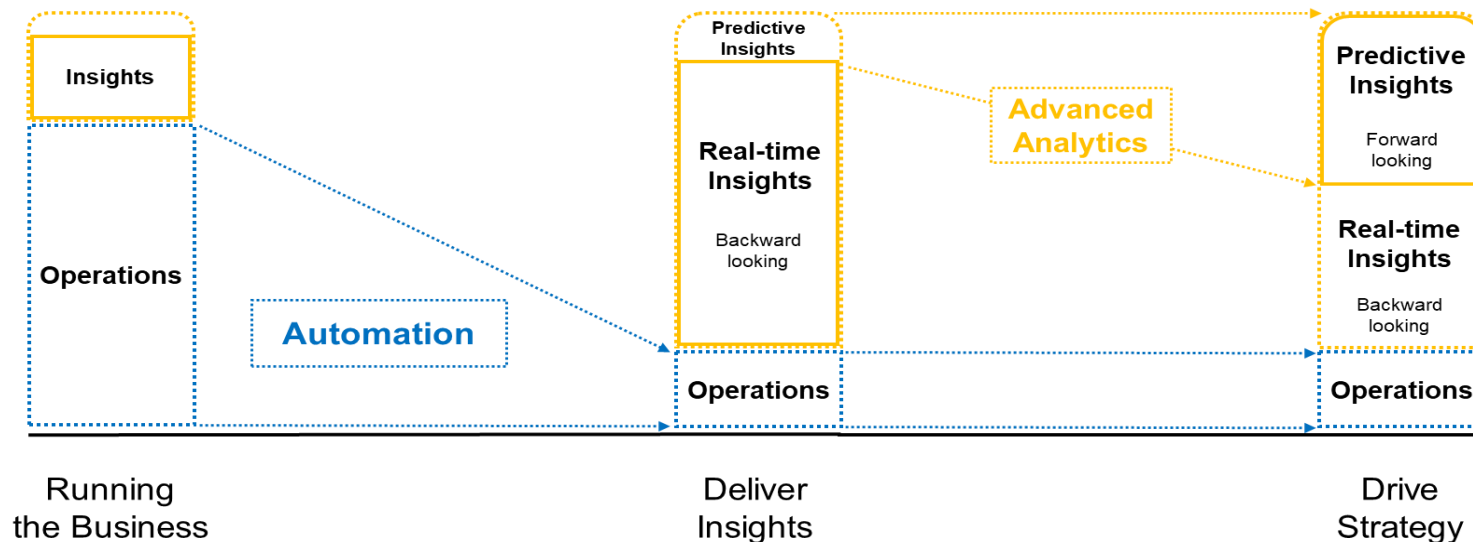

Rapidly design and execute new business models and digital services, based on advanced end-to-end processes

End-to-end Analytics & Real-time Steering

Context aware, real time, predictive insights so you can make better decisions, adjustments, faster

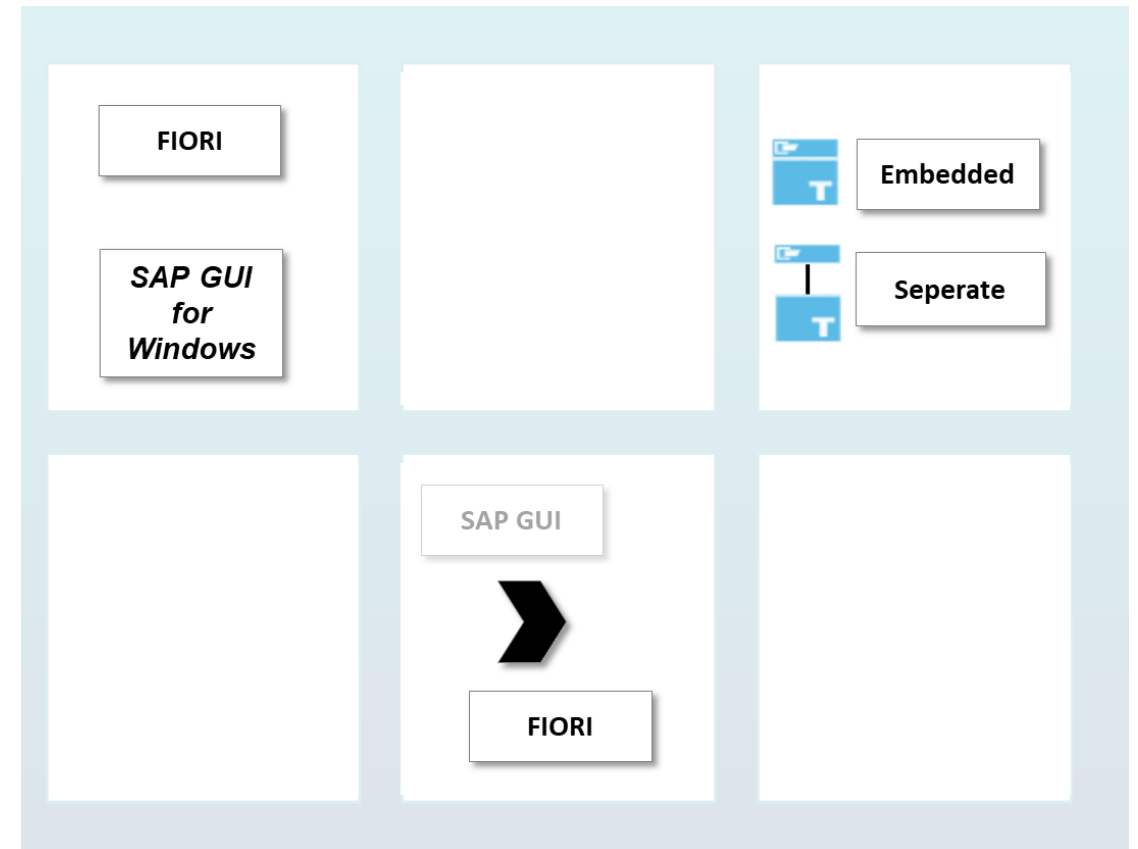

Digital Transformation: From daily routine to supporting growth and new business models

SAP S/4HANA - FIORI Aspects

- **SAP Fiori UX is new UI experience**, target architecture for SAP S/4HANA
- **Fiori und SAP GUI** are both supported (for exceptions see *Simplification List*)
- **Relevance and Readiness Analysis** recommends Fiori Apps based on T-codes
- **Deployment:** embedded or separate
- **Stepwise Implementation** of Fiori Apps possible

Comparing the Paths to SAP S/4HANA

Tasks that you have to consider independent of the transition scenario

- **Preparation of master data for customers, vendors, employees, or materials**

Some master data has to obey to stricter check rules in SAP S/4HANA. Therefore, this data has to be checked and corrected before going to SAP S/4HANA independent of transition scenario.

- **SAP S/4HANA simplifications**

- Become familiar with Simplification Items for target release. Sufficient time for workshops, training (Change Management) has to be included in project plan.
- Concepts such as central business partner, new general ledger or new asset accounting are obligatory in SAP S/4HANA. Design and implementation of these topics are largely the same for any transition scenario.
- For certain applications or functions that are no longer available in SAP S/4HANA you have to implement new solutions as replacement. Efforts for these activities are virtually the same in both transition scenarios

- **SAP HANA DB**

If you move for the first time to SAP HANA as database, operational changes are the same.

- **Interfaces**

Most standard interfaces to external systems and data sources shall still work with SAP S/4HANA. In case of exceptions, necessary adjustments are virtually the same in both transition scenarios. New implementation means new implementation of interfaces, too.

New Implementation approach - best practises

SAP Model Company as a Foundation

- Using SAP Model Company as a template and foundation for system design means **applying a fit-to-standard approach** instead of writing a blueprint from scratch or reworking a legacy design.
- It has at least three advantages:
 - Allows for much faster implementation, (i.e. shortening significantly the project's discovery and implementation phase).
 - 1. results in a higher "fit to standard" i.e. cutting down the custom development
 - 2. SAP Model Company services are built to cloud standards

Clean Core

- In practical terms, keeping the core clean means:
 - Applying a zero-modification policy from the project's first day
 - Using white-listed APIs only
 - Leveraging SAP S/4HANA in-app extensibility to its full extent
 - Employing the capabilities and services offered by SAP Cloud Platform to build larger extension applications
 - Utilizing the SAP Cloud Platform Integration service

Key Success Factors

Conversion to SAP S/4HANA requires applications, functional staff and consultants with broad knowledge of Financials, Controlling and Asset Accounting

- Ensure availability of key business people to work with application consultants on resolving functional issues

Consistency checks for master data are more restrictive in SAP S/4HANA, especially important: Customer/Vendor/Employee, Financials/Controlling and Material master

- Prior to running the system conversion this data shall be thoroughly analyzed and cleaned.
- Consider setting up a pre-project to resolve data inconsistencies in Finance. They should be resolved before project starts in order to avoid any delays

Plan 2 to 3 test conversions on a sandbox/isolated system

(refresh / new copy of the system might be necessary) before setting up development system

- An accurate project planning can be done only after the first conversion on a sandbox/copy of production has been finished
- Identify all the activities which can be done at any time and execute them before or during the preparation phase
- Plan Dress Rehearsal (test conversion of productive system under real-time conditions)
- Maintain a detailed 'Run Book' with as much as possible details, all the steps performed, the sequence, the errors and the resolution and also the time required for each activity.

Recommendations for System Conversion

- Check if (consistent) **archiving** can be done to reduce data volume to be converted
- Check the **compatibility of the 3rd party products** as soon as possible and allocate time for more extensive testing
- Both **SAP Fiori** and **Embedded Analytics** should be considered to leverage the full potential of SAP S/4HANA
- Plan a dedicated **SAP Fiori Expert Role** as part of the project team to work with business, functional and basis
- Plan **sufficient time for testing of roles and changes in authorizations**
- Use the **opportunity to replace Custom Code** with standard functionality where possible
- BW Extractors → Simplification Item **2500202** - S4TWL - BW Extractors in SAP S/4HANA
- Consider to migrate from SAPscript forms to **Adobe Document Services**
- Deletion of obsolete data after successful validation of the completed Conversion:
→ **SAP obsolete data handling tool and application specific SAP notes:**

Component	SAP Note	SAP Note Title
CA-EPT-ODH, CA-EPT-TAS	2661837	How to enable and use the obsolete data handling tool in SAP S/4HANA
MM-IM-GF	2569435	Remove content from obsolete tables in MM-IM: Save DB memory and remove data that is not covered by Information Lifecycle Management
FIN-MIG	2190137	S/4HANA Finance: Reduce memory footprint of obsolete tables

Actual findings from customer projects & recommendations

System conversion projects are in average shorter and cost less than new implementation (Greenfield) projects

- Many customers choose system conversion for doing a 'technical uplift' to the SAP S/4HANA platform; intensive adoption of new SAP S/4HANA applications and SAP Fiori UI Technology is often addressed in follow-up projects.
- Analysis of installed-base SAP S/4HANA projects with a (planned) go-live in 2018 or later shows, that more than 60% chose system conversion, this trend is rising...

Is a phased approach possible?

- Phased move to SAP S/4HANA by organization units (company code- / client-wise → Selective Data Transition scenario), vs.
- System conversion approach with reduced scope as a technical uplift for all organizational entities with low impact, followed by individual process optimizations/adaptations per organizational entity.

For SAP ERP on any DB customers a two-step approach via SAP ERP on SAP HANA has in general no significant benefits

- individual exceptions may make sense in case of for non-unicode systems & for SAP ERP system releases < SAP ERP 6.0

SAP stopped offering system conversion paths from SAP ERP to older SAP S/4HANA releases for new projects.

- System conversions will always be possible to the latest two SAP S/4HANA releases (on 'stable stacks').
i.e. with RTC of release 1809 FPS02 the simplification item pre-check will not allow conversions to releases 1511 & 1610. *)

SAP S/4HANA customer momentum is strong as of January 2020

Facilitate Migration Projects with SAP S/4HANA Migration Cockpit

1. Tool of choice for migration to SAP S/4HANA

- Part of SAP S/4HANA and SAP S/4HANA Cloud (included in these licenses)
- Ready-to-use solution
- Support for customers with new implementations

2. Preconfigured migration content specific to SAP S/4HANA

- **Comprehensive set of preconfigured migration objects**, such as customers, suppliers, and so on
- **Automated mapping** between source data and SAP S/4HANA target values

3. Integrated in SAP Activate methodology

- Proven methodology integrated in SAP Activate road map: *Transition to SAP S/4HANA*
- Part of the SAP Model Company service
- Best practices

4. Easy and safe migration

- **Direct data transfer from SAP source systems** (new with SAP S/4HANA 1909)
- **Step-by-step guidance** through the migration process
- **Template files for each migration object**
- **Data validation** to ensure high-data quality and consistency

5. Flexible and extendable

- **Migration object modeler for custom-specific requirements**
- **Ability to extend existing SAP migration objects**
- **Integration of custom-specific objects**

6. Outlook

- Automated validation of migration results
- Facilitated auditing
- Complementing Apps for SAP S/4HANA Cloud
- Data cleansing and integration with MDG

SAP S/4HANA Migration Cockpit - Migration Object Modeler

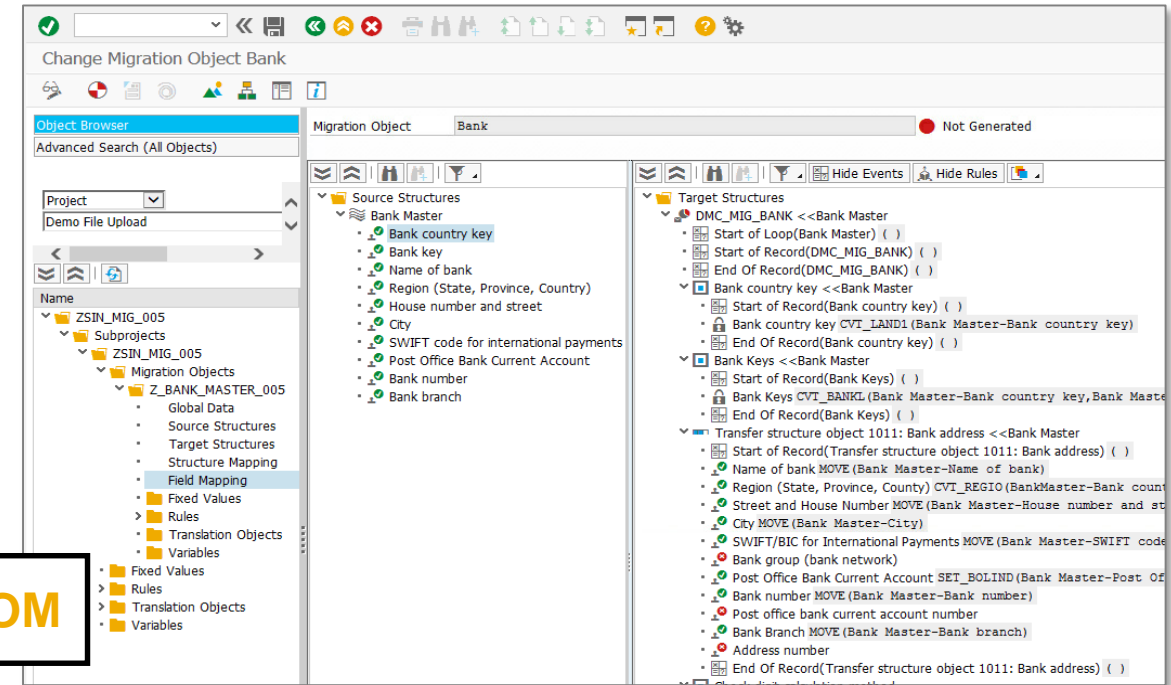

New
Implementation

Key Benefits

- Design functionality to easily integrate custom objects and enhancements into the migration project
- Integration of newly created objects:
 - Custom objects
 - SAP standard objects that are not yet in scope of the SAP S/4HANA Migration Cockpit
- Customer-specific enhancements (e.g. add new fields) to SAP standard objects delivered with the SAP S/4HANA Migration Cockpit
- Easily adjust source structure
- Use Standard APIs or code your function module
- Map structure and fields
- Available for SAP S/4HANA On-Premise and SAP S/4HANA Cloud, single-tenant edition

Agenda

SAP S/4HANA – a short introduction

- architecture & release strategy

Overview transition options

Managing simplifications

Best practices & recommendations

New implementation - essentials

System conversion – essentials

SAP Readiness Check for SAP S/4HANA

Summary

APPENDIX

- recommended links to further information

Summary: Recommended Preparation

Valid for all scenarios:

- Read: [Mapping Your Journey to SAP S/4HANA - A Practical Guide for Senior IT Leadership](#)
- **Familiarize yourself** with the available tools which can support your transition project!
- [SAP Roadmap Viewer](#) provides access to complete SAP Activate Methodology content (all tasks, templates and accelerators) and contains project experience from SAP S/4HANA implementations and supports implementation projects of SAP S/4HANA with a structured documentation
- Use [SAP Transformation Navigator](#) for guidance to your future SAP S/4HANA-centric product map

System Conversion specific:

- Start your project planning by running the [SAP Readiness Check for SAP S/4HANA](#) to get an overview and planning baseline about important topics you need to take care about and the related efforts and required skills.
- Run the [Maintenance Planner](#) early to confirm that your SAP ERP system (incl. SAP and partner add-ons) can technically be converted to SAP S/4HANA.
- Run the [Simplification Items checks](#) as soon as possible, as some business process adaptations may be complex and require more time than expected.
- **Start early with those preparation and cleanup activities** which can already be done in your current SAP ERP system – as indicated by the Simplification Items. I.e. clean up of your customer and vendor data in preparation for the Customer/Vendor Integration (CVI) in SAP S/4HANA.
- Check your custom code with [ABAP Test Cockpit](#) and optimize it for SAP S/4HANA. Further info on <https://blogs.sap.com/2017/02/15/sap-s4hana-system-conversion-custom-code-adaptation-process/>

SAP supports you on your way to SAP S/4HANA

“Transition to SAP S/4HANA” road map:

- Best Practices project documentation in the Roadmap Viewer for all SAP customers to transition to SAP S/4HANA on-premise
- Graphical overview and structured end-to-end documentation of an implementation or conversion project, incl. project file templates
- Helps customers, partners, and SAP to prepare and run transition projects according to SAP Best Practices
- Accelerators link to more detailed information, blogs, templates, training
- Links from project activities and tasks to services → Your guidance for SAP Support offerings

Ask for **SAP Service Offerings**

If you want SAP to support and safeguard your project, ask your account representative for SAP service offerings: SAP Value Assurance, SAP MaxAttention™, and SAP ActiveAttention services.
