Abstract – Examination of previously unstudied liverwort collections made by R.M. Schuster during 1962 and 1967 was undertaken. We report 13 new records for the Fiji Islands including *Cheilolejeunea xanthocarpa*, *Cololejeunea appressa*, *Cololejeunea floccosa*, *Cololejeunea koponenii*, *Cololejeunea magnilobula*, *Cololejeunea subtriapiculata*, *Drepanolejeunea pentadactyla*, *Heteroscyphus splendens*, *Lopholejeunea wiltensis*, *Mastigolejeunea indica*, *Schiffnerolejeunea pulopenangensis* and *Schiffnerolejeunea tumida* var. *haskarliana*. Range extensions for eight additional species were reported, which were previously known only from one locality in the islands prior to the current investigation. New morphologic features of *Cololejeunea bifalcata*, *Cololejeunea tuiawiana* Pócs and *Phaeolejeunea amicorum* were also observed. One species, *Cheilolejeunea occlusa* was collected by Schuster in Western Samoa, which is a new record to the South Pacific.

East Melanesia / Fiji / liverworts / new records

Résumé – Une collection, non encore étudiée, d'hépatiques collectée par R.M. Schuster pendant 1962 et 1967 dans les îles Fidji a montré 13 espèces comme nouvelles pour ces îles : *Cheilolejeunea xanthocarpa*, *Cololejeunea appressa*, *Cololejeunea floccosa*, *Cololejeunea koponenii*, *Cololejeunea magnilobula*, *Cololejeunea subtriapiculata*, *Drepanolejeunea pentadactyla*, *Heteroscyphus splendens*, *Lopholejeunea wiltensis*, *Mastigolejeunea indica*, *Schiffnerolejeunea pulopenangensis* et *Schiffnerolejeunea tumida* var. *haskarliana*. Huit autres espèces, connues uniquement d'une localité dans ces îles, ont été retrouvées. De nouveaux caractères morphologiques pour *Cololejeunea bifalcata* Pócs, *Cololejeunea tuiawiana* et *Phaeolejeunea amicorum* sont observés. Une espèce, *Cheilolejeunea occlusa*, récoltée par Schuster en W Samoa de l'Ouest est nouvelle pour la Pacifique Sud.

Est Mélanésie / Fidji / hépatiques / nouveaux records

INTRODUCTION

There have been very few bryophyte collections made in Fiji since 1945 (von Konrat *et al.* 2011). Recently, there has been a concerted effort to increase our knowledge about the liverwort and hornwort flora of the region (e.g., von Konrat *et al.*, 2011, Pócs *et al.*, 2011; Söderström *et al.*, 2011). Yet, as those authors predicted, many new records will undoubtedly be reported for the Fijian islands in future. Significantly, we were able to assess a hitherto hidden, unidentified collection made by the late professor R. M. Schuster. The Field Museum is now fortunate to have recently acquired his entire herbarium of an estimated 50,000 specimens (Qiu *et al.*, 2015). Schuster collected twice in the Fiji Islands, 699 specimens during 11-29 June 1962 and 647 specimens between 27 June and 6 July 1967. Many collections contained more than one species. The specimens remained unidentified except a few tentative field identifications written on packets until Matt von Konrat and Laura Briscoe (F) sorted out and labelled the collections. Tamás Pócs and Andrea Sass-Gyarmati (EGR) identified 170 out of the 1346 specimens, from the groups familiar to them, largely representing epiphyllous taxa. Interestingly, Schuster collected several specimens of *Cololejeunea* which were described by Pócs (2012) from later collections as new to science. Based on these determinations, we here report 13 species are new to the Fiji Islands, and eight species were that were previously known from only one Fijian locality. The hitherto unknown perianths of *Cololejeunea bifalcata* Pócs and *Phaeolejeunea amicorum* (Huerlimann) Pócs are described. Identification of the remaining specimens is ongoing and no doubt will reveal further new records. Duplicate specimens are kept at EGR and SUVA.

ENUMERATION OF SPECIES

The list contains species new to the Fiji Islands* and species previously known from only one locality in the Fiji Islands. In addition, one species new to Samoa and the South Pacific is listed. Abbreviations: VL: Viti Levu Island. TP: Tamás Pócs, AG: Andrea Sass-Gyarmati.

****Cheilolejeunea xanthocarpa* (Lehm. & Lindenb.) Malombe**

VL: Summit of Mt. Tomanivi (Mt. Victoria), *ca* 2.5-3 mi E of Navai, 4200-4330 ft, 17° 38'S, 178°W, in wet dense rain forest, accompanied by *Acrolejeunea pycnoclada*, *Lopholejeunea eulopha*, *Frullania chevalieri* and *Microlejeunea lunulatiloba*, Schuster 56475c, p.p., 56489a, 56493b, 56494a,b, 56496a, 23 June 1962, det. TP. Pantropical species (Zhu & So, 2001).

****Cololejeunea appressa* (A.Evans) Benedix**

VL: Mt. Tomanivi (Mt. Victoria), lower slopes, 3000-3500 ft, wet rain forest, accompanied by *Metalejeunea cucullata* and *Ephemeropsis tibodenensis*, Schuster 67-70101a, 27 June 1967, det. TP. Pantropical species (Müller & Pócs, 2007).

***Cololejeunea bifalcata* Pócs**

Figs 1-3

VL: Mt. Tomanivi (Mt. Victoria), lower slopes and near summit, 3000-4200 ft, 17°38'S, 178°W, wet rain forest, accompanied by *Leptolejeunea* sp., Schuster 62-120a, 67-701a, 21 June 1962 and 27 June 1967; *ca* 2 km W of Nadarivatu, 3200-

3360 ft, in open, mixed *Agathis*-*Podocarp*-Hardwood forest, accompanied by *Leptolejeunea* sp., Schuster 67-102c, 67105, 67-120a, det. TP. New to Viti Levu Island, hitherto known only from Taveuni Island without gametangia. The Schuster specimen is autoicous. The female bracts are about half of the length of the perianth and with a rounded lobe apex. The perianth is dorsiventrally compressed, obpyriform with a spindle-shaped body, 500-520 × 300-320 µm, with two lateral wings and a short, 1-2 cells high beak. The androecia on the observed specimen are terminal with vegetative leaves gradually transient into male bracts (Fig. 2). Distribution: Fiji endemic (Pócs, 2012).

****Cololejeunea floccosa* (Lehm. & Lindenb.) Steph.**

VL: Slopes of Mt. Goroo (Mt. Yoo), SW of Ndelainadarivatu, west of Nadarivatu, 2700-2900 ft, rich Podocarp-*Agathis* hardwood forest, Schuster 67-7471, 29 June 1967; Summit of Mt. Tomanivi (Mt. Victoria), 3900-4300 ft, epiphyllous on *Asplenium* sp. in mossy “elfin” woodland, accompanied by *Cololejeunea tridentata* and *Cheilolejeunea* sp., Schuster 67-7936, 2 July 1967, det. TP. Widespread palaeotropical species (Pócs & Ninh, 2012).

****Cololejeunea koponenii* (Pócs) Pócs**

Fig. 4

VL: Summit of Mt. Tomanivi (Mt. Victoria), ca 2.5-3 mi E of Navai, 4200-4330 ft, 17°38'S, 178°W, in wet, dense rain forest, Schuster 57066c, 23 June 1962, det. TP. New to Fiji Islands. Previously known distribution: New Guinea, Philippines (Pócs & Bernecker, 2009).

****Cololejeunea magnilobula* (Horik.) S. Hatt.**

Figs 5-6

VL: Summit of Mt. Tomanivi (Mt. Victoria), ca 2.5-3 mi E of Navai, 4200-4330 ft, 17°38'S, 178°W, in wet, dense rain forest, Schuster 56491, 23 June 1962, det. TP. New to Fiji Islands. Previously known only from S China (Taiwan, Zhejiang, Zhu 1995) and its variety, *C. magnilobula* var. *falcidentata* Pócs & G.E. Lee from Malaysia: Kelantan. (Pócs & Lee, 2016).

***Cololejeunea societatis* Tixier**

Figs 7-8

VL: Nausori Highlands, E of Nadi, 1800 ft, open but primeval forest, accompanied by *Cololejeunea tridentata*, Schuster 5731, 26 June 1962; summit of Mt. Victoria, ca 2.5-3 mi E of Navai, 4200-4330 ft, 17° 38'S, 178°W, in wet dense rain forest, accompanied by *Radula nymanii* Steph. and *Leptolejeunea epiphylla*, Schuster 5705a, 23 June 1962, det. TP. The Fiji plants are autoicous. (Tixier in Hürlimann [1987] describes it with question mark, as dioicous). New to Viti Levu. Previously known distribution: Fiji, Taveuni Island; Society Islands (Pócs et al., 2011).

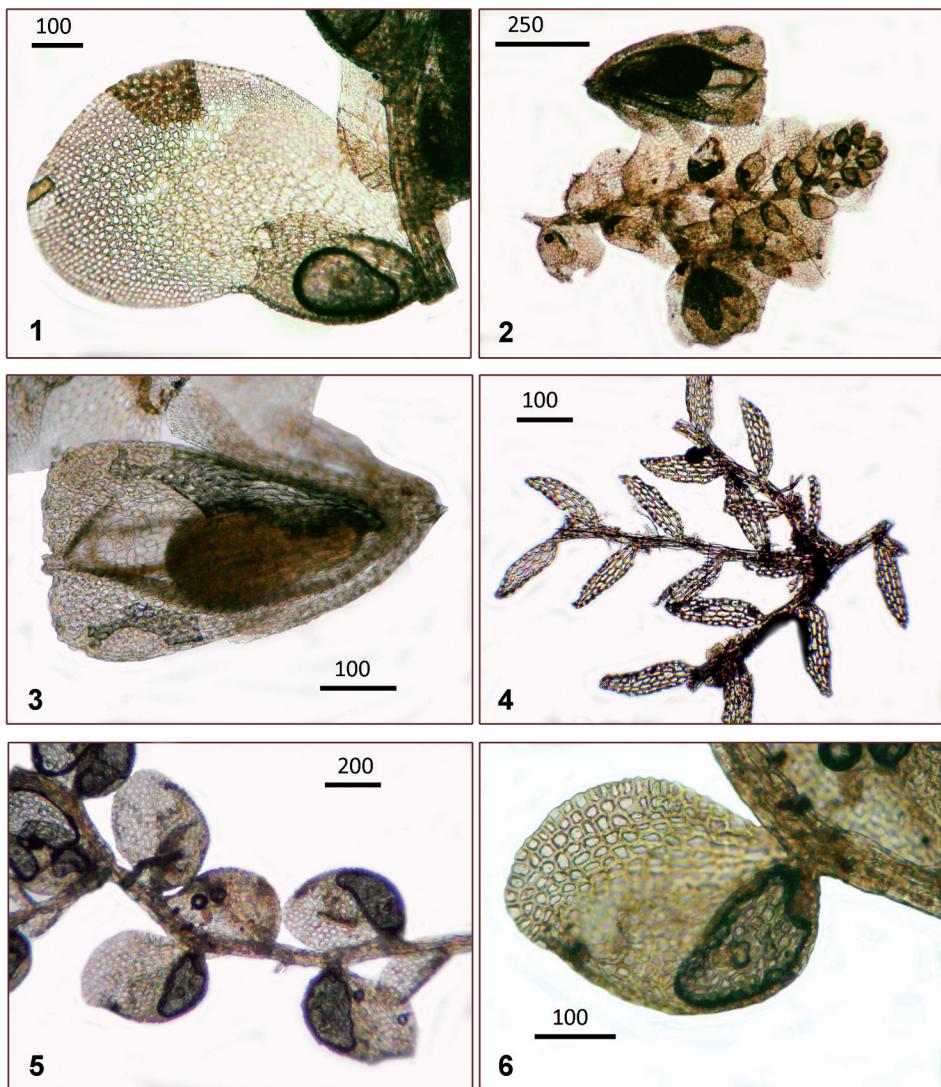

****Cololejeunea subtriapiculata* Tixier**

VL: Nausori Highlands, E of Nadi, 1800 ft, open but primeval forest, accompanied by *Leptolejeunea epiphylla* and *Radula nymanii*, Schuster 5755b, 26 June 1962, det. TP. New to Fiji Islands. Previously known distribution: New Caledonia (Tixier, 1979).

***Cololejeunea tridentata* Tixier**

Fig. 9

VL: N facing slopes W. of Mt. Goroo (Mt. Yoo), 3-4 mi W of Nadarivatu, 2700-3200 ft, open mixed *Agathis*-*Podocarpus*-forest, accompanied by *Lejeunea micholitzii*, Schuster 67-7407, 67-7481a,d, 6 July and 29 June 1967, det. TP. New to Viti Levu. Previously known from Fiji (Taveuni Island), Borneo and Malaysia (Pócs et al., 2011).

Figs 1-6. Figs 1-3. *Cololejeunea bifalcata* Pócs, from Schuster 67-70105. **1.** Leaf, ventral view. **2.** Shoot with gametangia and a perianth, ventral view. **3.** Perianth, ventral view. Fig. **4.** *Cololejeunea koponenii* (Pócs) Pócs, shoot, ventral view, from Schuster 57066/c. Figs. 5-6. *Cololejeunea magnilobula* (Horik.) Hatt. from Schuster 56491. **5.** Shoot, ventral view. **6.** Leaf, ventral view. (Scales in µm).

Cololejeunea tuiawana Pócs

VL: Mt. Goroo (Mt. Yoo), ca 2 mi W of Nadarivatu, 3200-3360 ft, in open mixed *Agathis-Podocarpus*-forest, Schuster 67-70104, 67-70128a, 28 June 1967, det. TP. With sporophyte. Although both lobule teeth in the type are blunt or obsolete, some of Schuster's specimens have acute, stout, 2-3-cells long first lobule teeth, or lobules with or without a long first tooth on the same plant. The lobule tooth variation is

Figs 10-11

similar to that in *Cololejeunea grushvitzkiana* Pócs (1971) from Vietnam, but *C. tuiwawana* well differs by its ellipsoid-ovate, entire leaves (oblong and toothed in *C. grushvitzkiana*), female bracts less than half the length of the perianth (*C. grushvitzkiana* has female bracts of half perianth length) and by its spindle-shaped perianth with two broad, auriculate wings (*C. grushvitzkiana* has an obovate perianth with four narrow, not-auriculate wings). *Cololejeunea tuiwawana* was known only from its type specimen from Viti Levu Island, Rairaimatuku Plateau (Pócs, 2012).

****Drepanolejeunea pentadactyla* (Mont.) Steph.**

VL: Slopes of Mt. Lomalagi, above Nadarivatu, 3100-3600 ft, epiphyll *Schuster 67-70268a*, 30 June 1967; Mt. Goroo (Mt. Yoo), ca 2 m W of Nadarivatu, 3200-3360 ft, in open mixed *Agathis-Podocarpus*-forest, *Schuster 67-70136* pp. det. TP. New to Fiji Islands. Widespread Palaeotropc species distributed from East Africa to Society Islands (Zhu & So 2001; Wigginton, 2009 under *Drepanolejeunea cambouena* (Mont.) Steph.; Pócs, 2011).

****Heteroscyphus splendens* (Lehm & Lindenb.) Grolle**

VL: Summit of Mt. Tomanivi (Mt. Victoria), ca 2.5-3 mi E of Navai, 4200-4330 ft, 17° 38'S, 178°W, in wet dense rain forest and elfin forest, *Schuster 56475c* pp., 23 June 1962, det. TP. New to Fiji Islands. Palaeotropc species distributed from East Africa to Hawaii, Vanuatu and Samoa (Pócs, 1976).

***Lejeunea pulchritflora* (Pears.) G.E.Lee, Bechteler, Pócs, Schäf.-Verw. & Heinrichs**
VL: Summit of Mt. Tomanivi (Mt. Victoria), ca. 2.5-3 mi E of Navai, 4200-4330 ft, 17°38'S, 178°W, in wet rain forest, *Schuster 56467b*, 23 June 1962, det. TP. New to Viti Levu, known from Kadavu Island (Pócs & Wei, 2017). Distribution: Paleotropical (see map in Lee *et al.*, 2016: 19) from West Africa to Fiji Islands.

****Lopholejeunea wiltensis* Steph.**

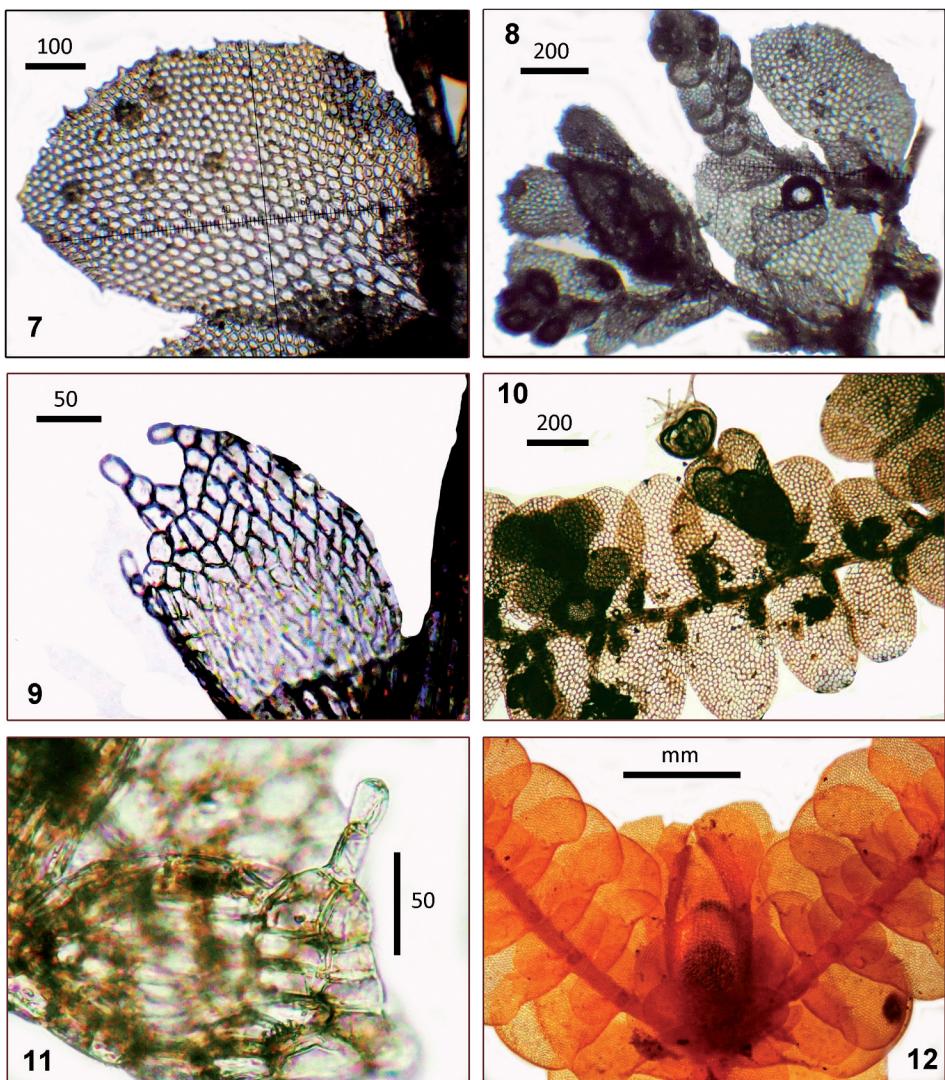

VL: Ridge crest from Mt. Lomalagi to NE of Naggarambuluti, near Nadarivatu, 3550-3690 ft, mossy hardwood- *Podocarpus* forest, accompanied by *Mastigolejeunea calcarata*, *Schuster 67-7441*, 4 July 1967; Nausori Highlands, E of Nadi, 1800 ft, in relatively open but primeval *Dacrydium-Agathis* - forest, within 3-5 m of edge of the grassland, *Schuster 57050*, 26 June 1962, det. AG. New to Fiji Islands. Distributed from Malaysia through Indonesia, Philippines to New Caledonia (Zhu & Gradstein, 2005).

****Mastigolejeunea indica* Steph.**

VL: Slopes SW of Ndelainadarivatu, west of Nadarivatu, 2700-2900 ft, rich *Podocarpus-Agathis* forest, *Schuster 67-7467a*, 29 June 1967, det. AG. New to Fiji Islands, widely distributed Indomalesian-Australasian species known from India to New Guinea and New Caledonia (Sukkharak & Gradstein, 2014; Thouvenot *et al.*, 2011).

***Metalejeunea crassitexta* (J.B.Jack) Pócs**

VL: Mt. Goroo (Mt. Yoo), ca 2 mi W. of Nadarivatu, 3200-3360 ft, in open mixed *Agathis-Podocarpus*-forest, Mt. Goroo (Mt. Yoo), ca 2 m W of Nadarivatu, 3200-3360 ft, accompanied by *Radula tibidensis* and *Drepanolejeunea pentadactyla*. *Schuster 67-70136*, 28 June 1967, det. TP. This species seems to be endemic to the Fiji Islands and was hitherto known only from Ovalau and Taveuni Islands (Miller *et al.*, 1963; Pócs *et al.*, 2011).

Figs. 7-12. Figs. 7-8. *Cololejeunea societatis* Tixier, from Schuster 57055/a. **7.** Leaf. **8.** Shoot with male and female gametangia, ventral view. Fig. 9. *Cololejeunea tridentata* Tixier, from Schuster 67-7936, lobule. Figs. 10-11. *Cololejeunea tuiawana* Pócs, from Schuster 67-70128. **10.** Shoot with sporophyte. **11.** Lobule, ventral view. Fig. 12. *Phaeolejeunea amicorum* (Hürl.) Pócs, from Schuster 67-7024/b. Perianth with two innovations, dorsal view.

Microlejeunea lunulatiloba Horik.

VL: Summit of Mt. Tomanivi (Mt. Victoria), *ca* 2.5-3 mi E of Navai, 4200-4330 ft, 17° 38'S, 178°W, in wet dense rain forest, R.M. Schuster 56495b, 23 June 1962, det. TP. Thus far only one record from Viti Levu Island. A species with Pacific distribution (Miller *et al.*, 1963).

***Myriocoleopsis minutissima* (Sm.) R.L. Zhu, Y.Yu & Pócs**

Syn.: *Cololejeunea minutissima* (Sm.) Schiffn.

VL: at the same locality as the previous, *Schuster 56495c*, 23 June 1962, det. TP. In the Fiji Islands hitherto known only from one locality, in Viti Levu, Sigatoka (Hürlmann, 1987). A widespread pantropical and warm-temperate species (Pócs & Piippo, 2011).

***Phaeolejeunea amicorum* (Hürl.) Pócs**

Fig. 12

VL: Slopes of Mt. Lomalagi, above Nadarivatu, 3100-3600 ft, *Schuster 67-7024b*, 30 June 1967, det. AG. The perianth of the species, which was previously unknown, is obovate, flattened, with two broad lateral wings and two narrower ventral wings (Fig. 12). It is similar to that of *Phaeolejeunea latistipula* (Schiffn.) Mizut., as illustrated by Mizutani (1968: 132, fig. 1/2), but differs by its wider, auriculate wings and by its two subfloral innovations. The distribution of the species is seemingly restricted to Fiji and Tonga islands (Pócs, 2008).

****Schiffnerolejeunea pulopenangensis* (Gottsch.) Gradst.**

VL: Tholo North Distr., steep N-facing slope of Nandarivatu, 3200-3600 ft, 17°35'S, 177°57'W, mixed broadleaved *Agathis* forest, *Schuster 57200*, 23 June 1962, det. AG. New to Fiji Islands. Widely distributed in Indomalesia to Australasia (Australia and New Caledonia) (Thiers & Gradstein, 1989; Gradstein, 2015).

****Schiffnerolejeunea tumida* (Gottsch.) Gradst. var. *haskarliana* (Gottsch.) Gradst. & Terken**

VL: Slopes of SW of Ndelainadarivatu, west of Nadarivatu, 2700-2900 ft, in rich *Podocarpus-Agathis* forest, *Schuster 67-7504*, 29 June 1967, det. AG. New to Fiji. Widespread Indomalesian-Pacific species reaching westwards the Seychelles Islands (Gradstein & Terken, 1981; Gradstein *et al.* 2002; Gradstein 2015).

****Cheilolejeunea occlusa* (Herz.) Kodama & Kitag.**

Western Samoa: Savai'i, N. side of island, above Upopo, moist, undisturbed forest over old lava flow, epiphyllous, *R.M. Schuster 56407 p.p.*, 14 June 1962, det. T. Pócs. New to the Pacific. Known distribution: Sumatra, Malaysia (Sarawak, Sabah), Kalimantan and Australia (Queensland) (Mizutani, 1980; Pócs, 2015).

Acknowledgements: The Museum Collection Spending Fund administered by The Field Museum and the National Science Foundation (Award No.1458300 and No.1145898) are kindly acknowledged by all authors. The authors express thanks to Prof. S.R. Gradstein (PC) for the careful revision of the manuscript. The second author is grateful for the financial support of the Project EFOP-3.6.1-16-2016-00001: "Complex development of research capacity and services of the Eszterhazy Karoly University".
