

Urinary Incontinence

Attila Majoros

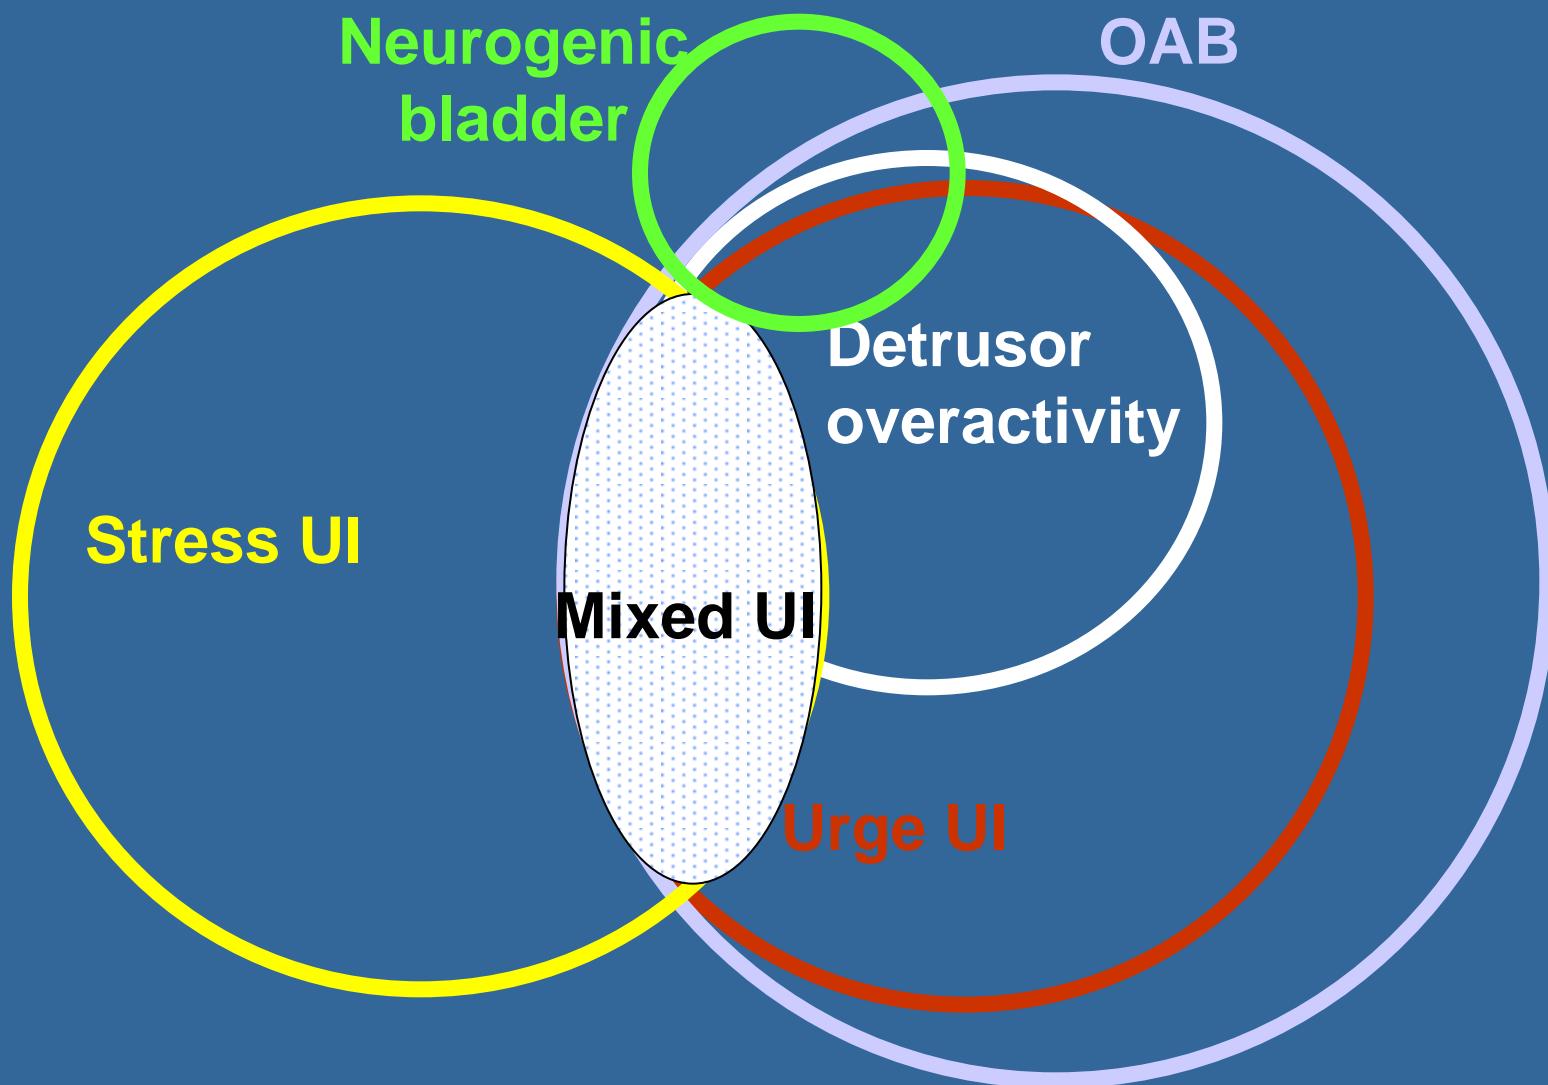

Department of Urology
Semmelweis University, Budapest, Hungary

Definition

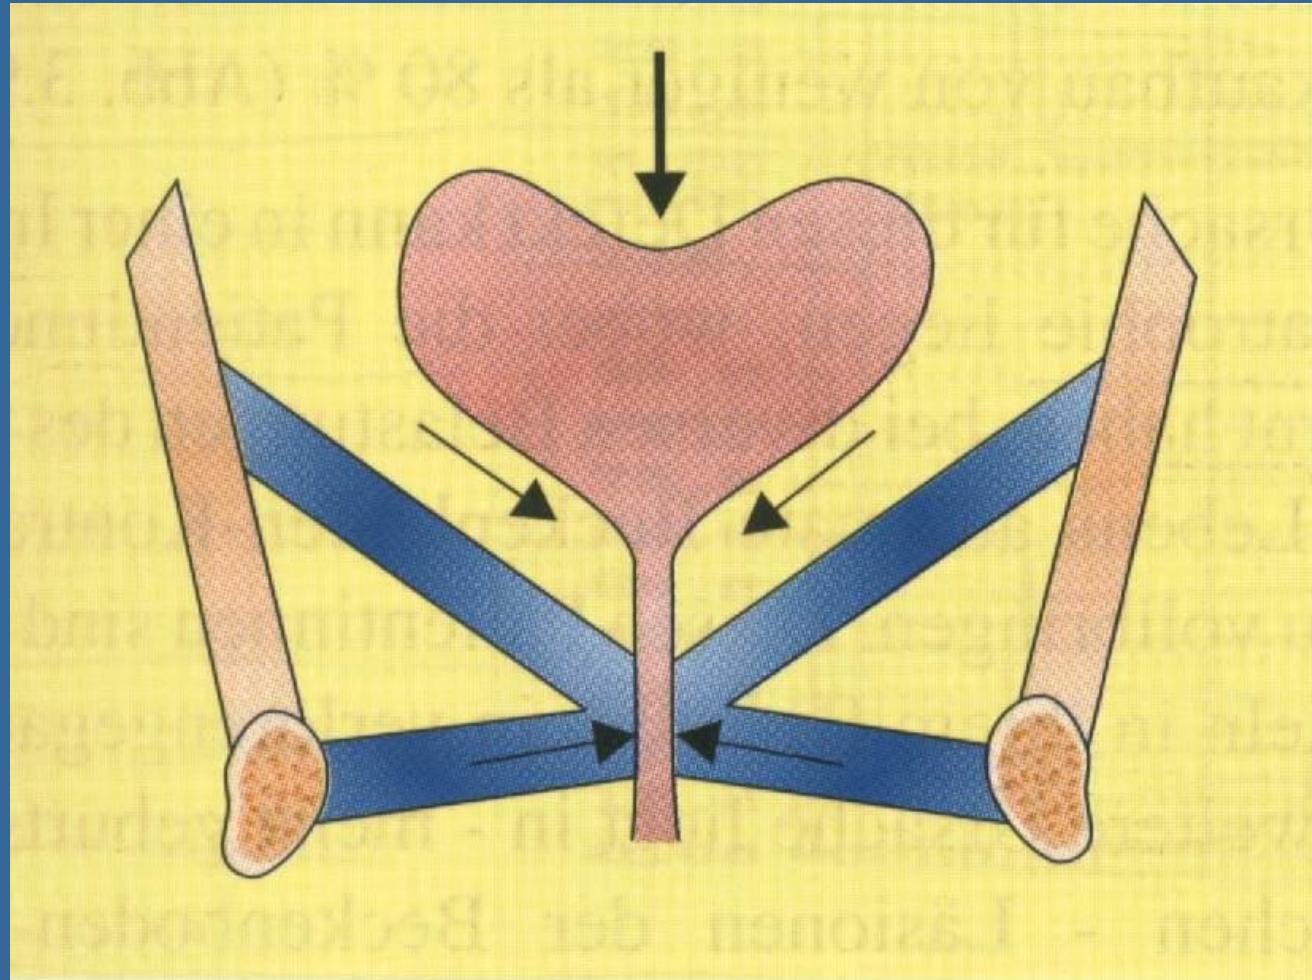

Incontinence is an involuntary leakage of urine through the urethra.

(International Continence Society)

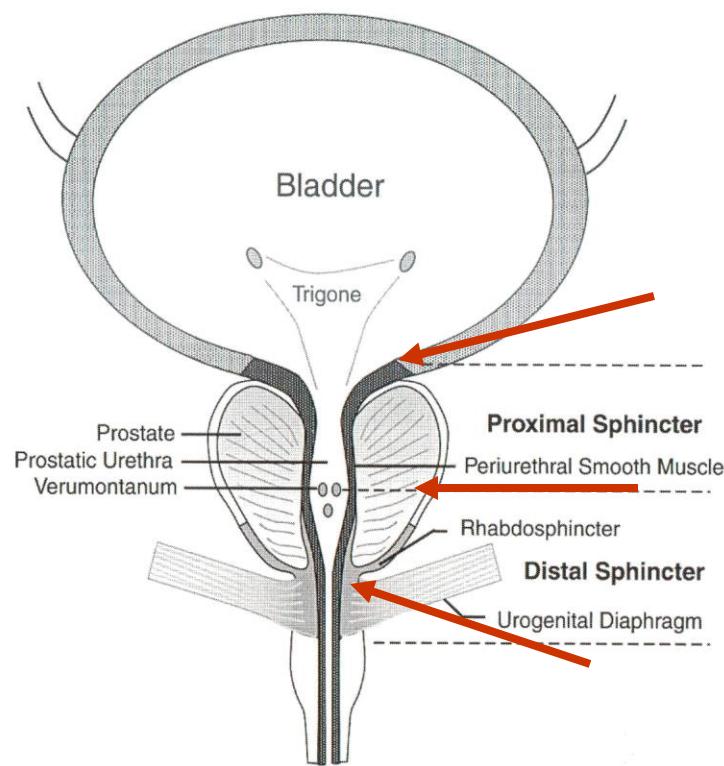

Urinary Incontinence (UI) and Overactive Bladder (OAB)

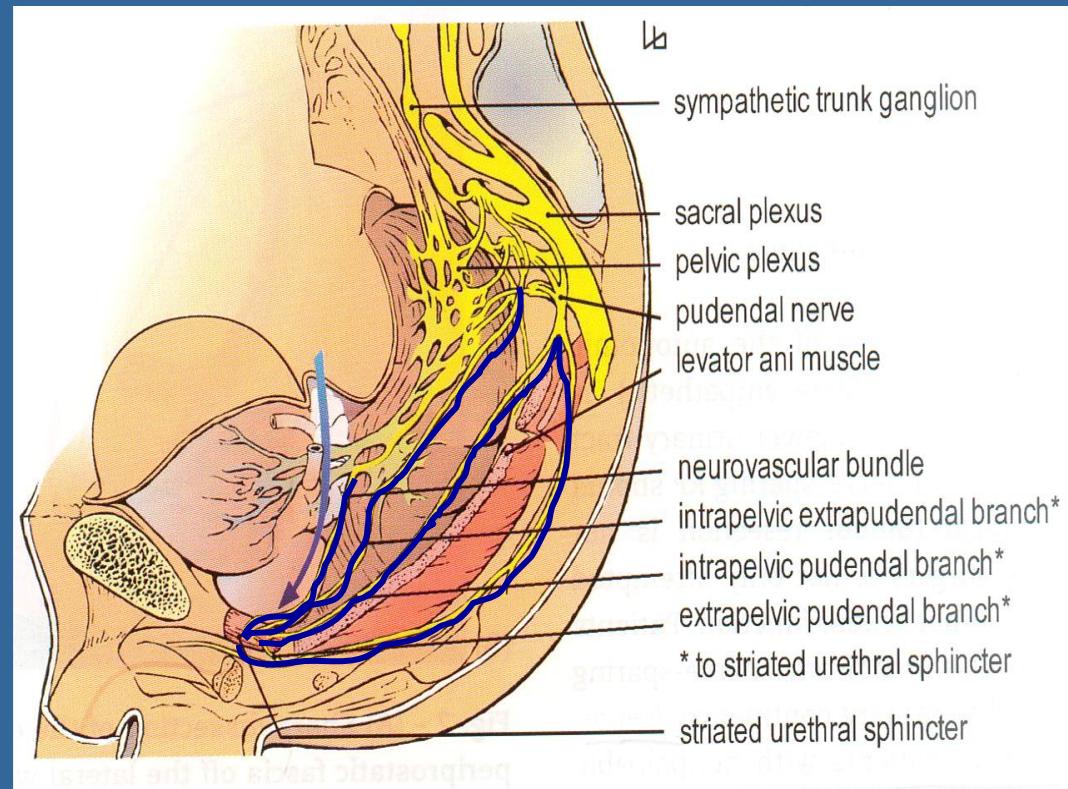

Anatomy of female lower urinary tract and pelvic floor

Anatomy of male lower urinary tract and pelvic floor

RA Appel: Voiding Dysfunction, Humana Press, 2000

Kessler TM et al, Eur Urol, 2007, 51:90-97

The innervation of the lower urinary tract

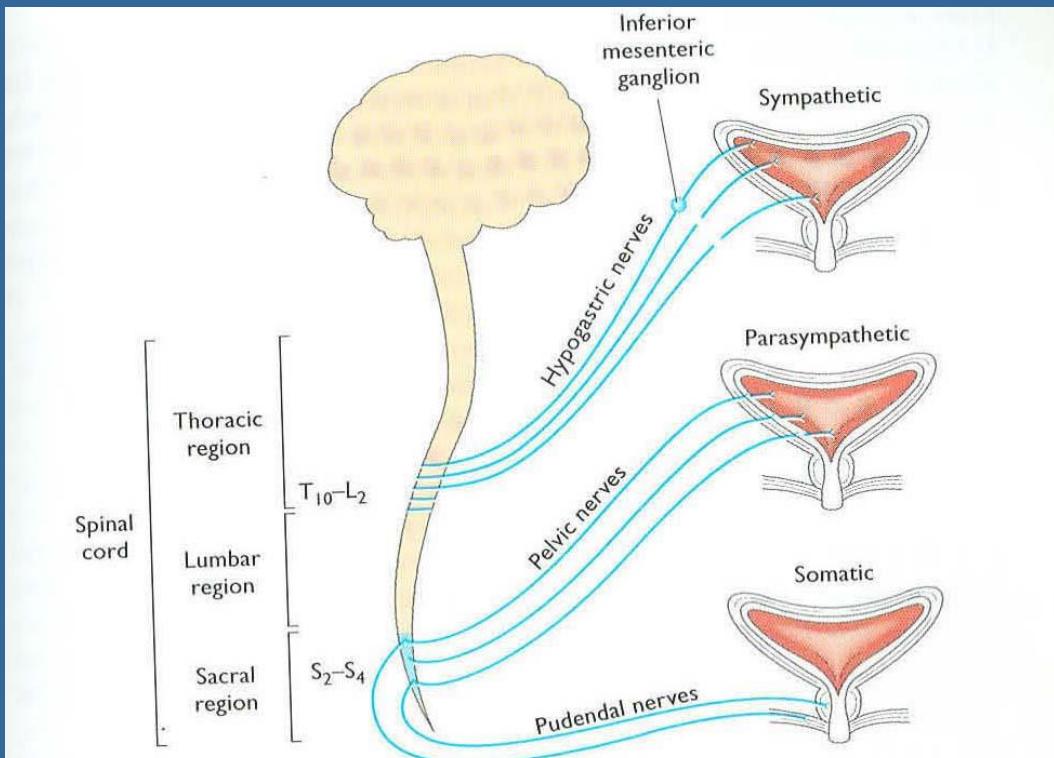

Figure 2.4.
Innervation of the lower urinary tract.

The function of the lower urinary tract is controlled by the central nervous system via a complex system of reflex mechanisms. The principle nerve supply to the bladder is via the pelvic nerves. Sensory fibres detect the degree of stretch in the bladder wall.

Epidemiology

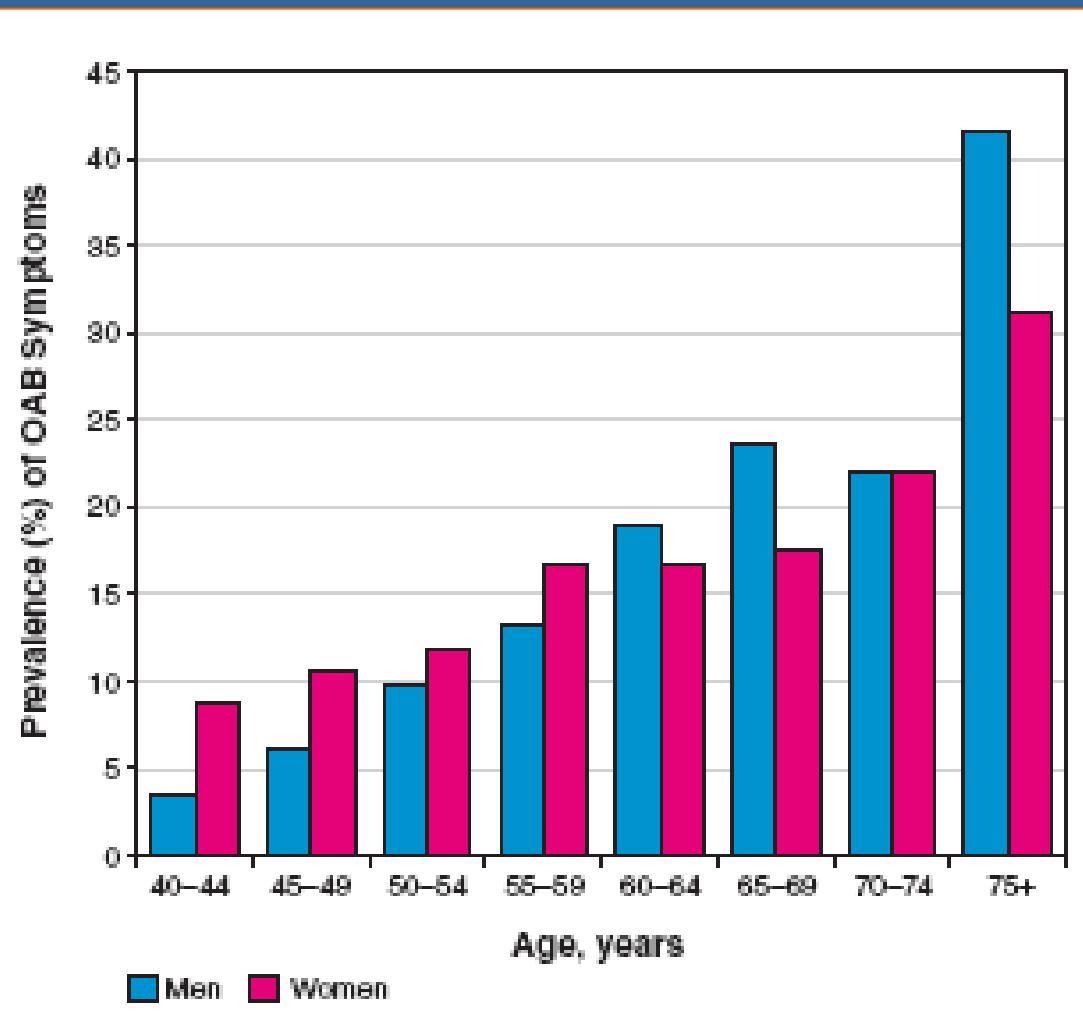

Frequency of urinary incontinence (%)

	<i>female</i>	<i>male</i>	<i>literature</i>
USA	37 (12-52)	19 (6-23)	Hampel és mtsai Urology 1997 (50)
Europe	26 (12-58)	24 (5-21)	Hampel és mtsai Urology 1997 (50)
GB	14	6,6	Brocklehurst és mtsi BMJ 1993 (36)
Spain	64,2	35,8	Damian és mtsai Eur Urol 1998 (34)
Italy	11,4	3,4	Bortolotti és mtsai Eur Urol 2000 (37)
Belgien	16,3	5,2	Schulman és mtsai Eur Urol 1997 (32)

Prevalence of overactive bladder: ~ 16 %

male-female

13,6 % vs 7,6% (continent)
2,4% vs 9,3% (incontinent)

Diagnosis

- Patient's history
 - Voiding diary*
 - Questionnaires*
- Urine examination
- Vaginal and rectal examination
- Uroflowmetry
- Residual urine
- Ultrasound
- Urodynamical measurement
- Endoscopy
- Radiology

Voiding diary

Fluid intake:
When ?
How much ?

Voiding:
When ?
How much ?
Leakage ?
Urgency ?

VIZELÉSI NAPLÓ

Elő- és utónév _____

Kezelési időtartam 19 _____ tól _____ ig

A vizelési naplót minden ellenőrzés alkalmával hozza magával!

A legközelebbi ellenőrzés időpontja:

19	óra

Orvosi Bélyegző ➡

Dátum: _____

Idő (óra)	Folyadék-bevitel (ml)	Üritett mennyiség (ml)	Erős inger +/–	Vizeletvesztés inger kapcsán +/–	Vizeletvesztés inger nélkül +/–	Vizeletvesztés foka 1 2 3

Physical examination

Vaginal inspection

Rectal palpation

Neurological examination

Urodynamics

Uroflowmetry

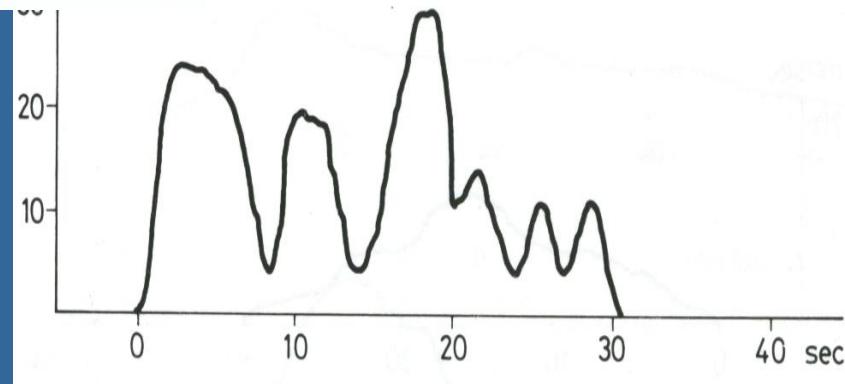

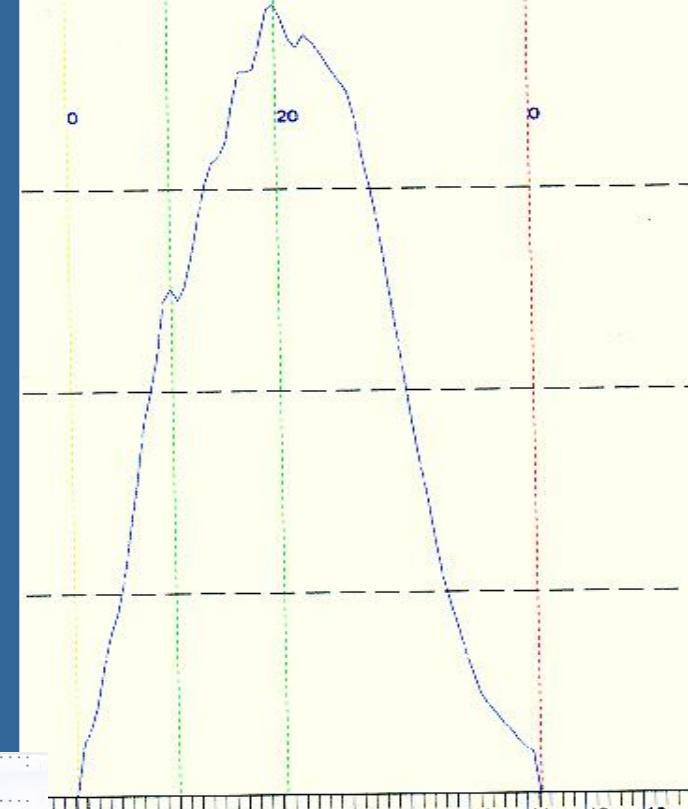

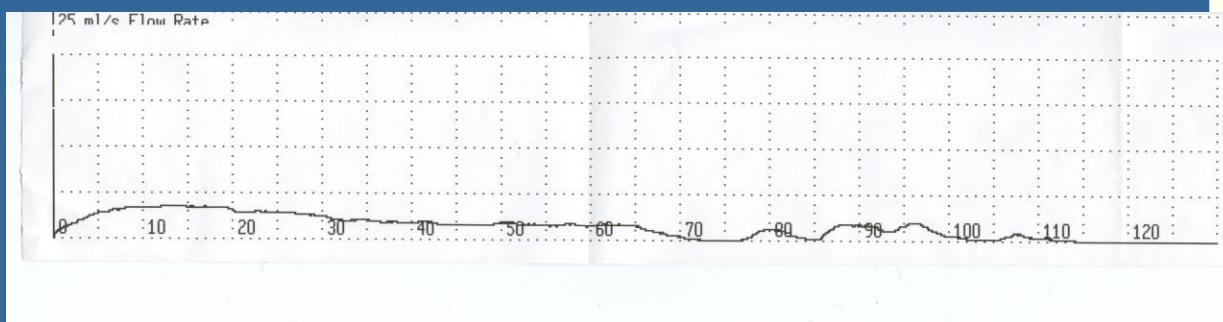

Cystometry

Pressure Flow Study

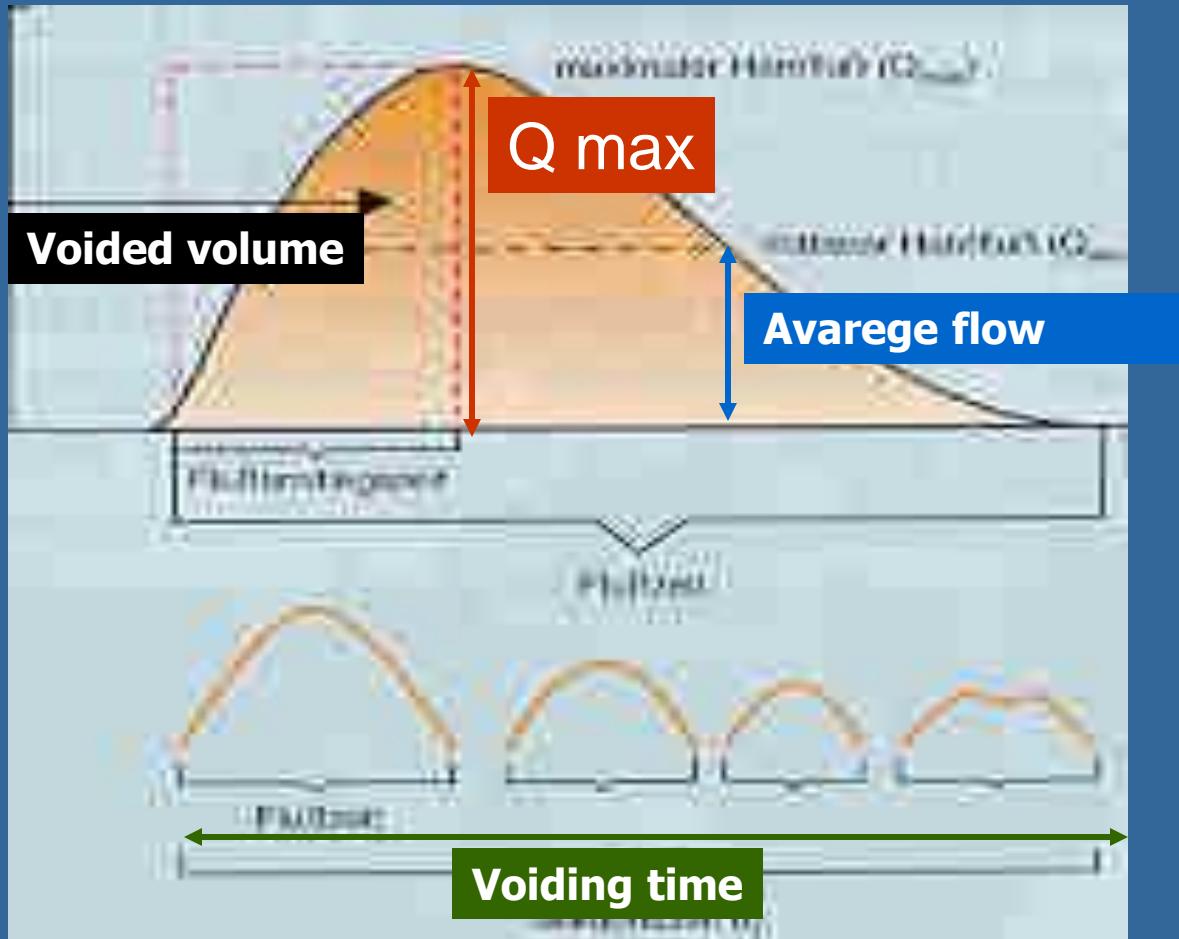

Urethral Pressure Profile

Pelvic floor EMG

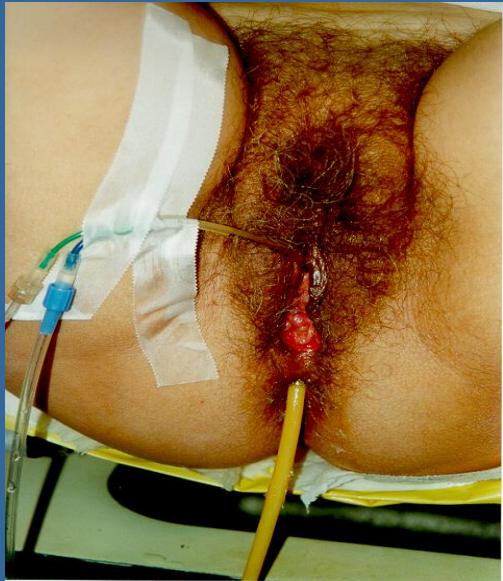

Uroflowmetry

Uroflowmetry: definition

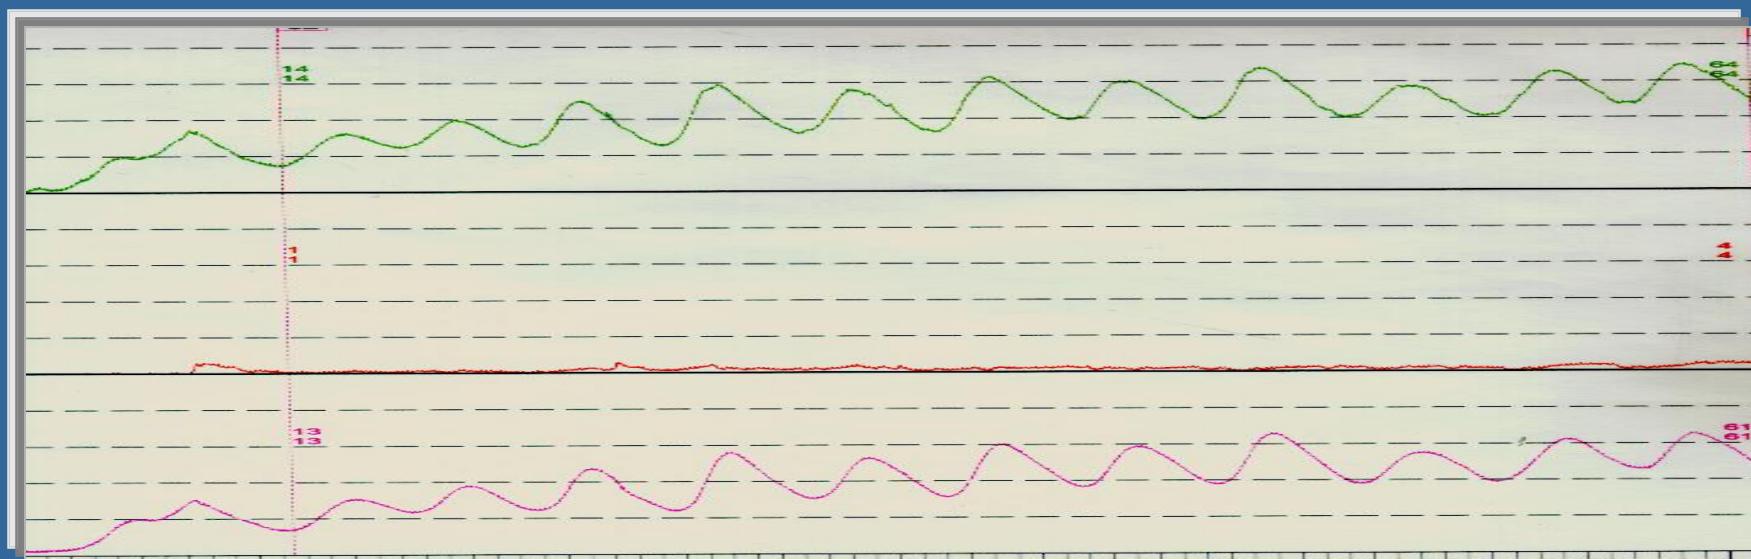

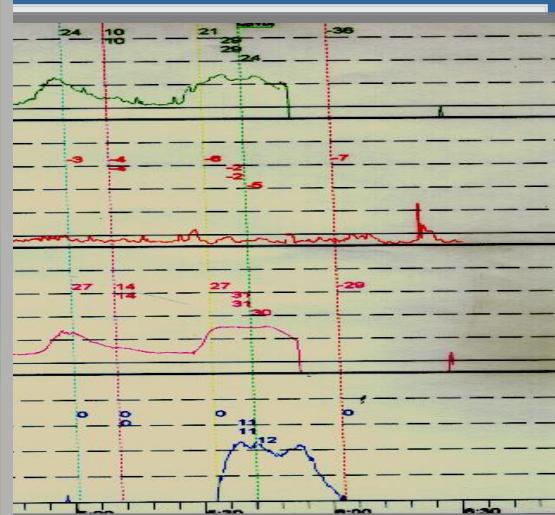

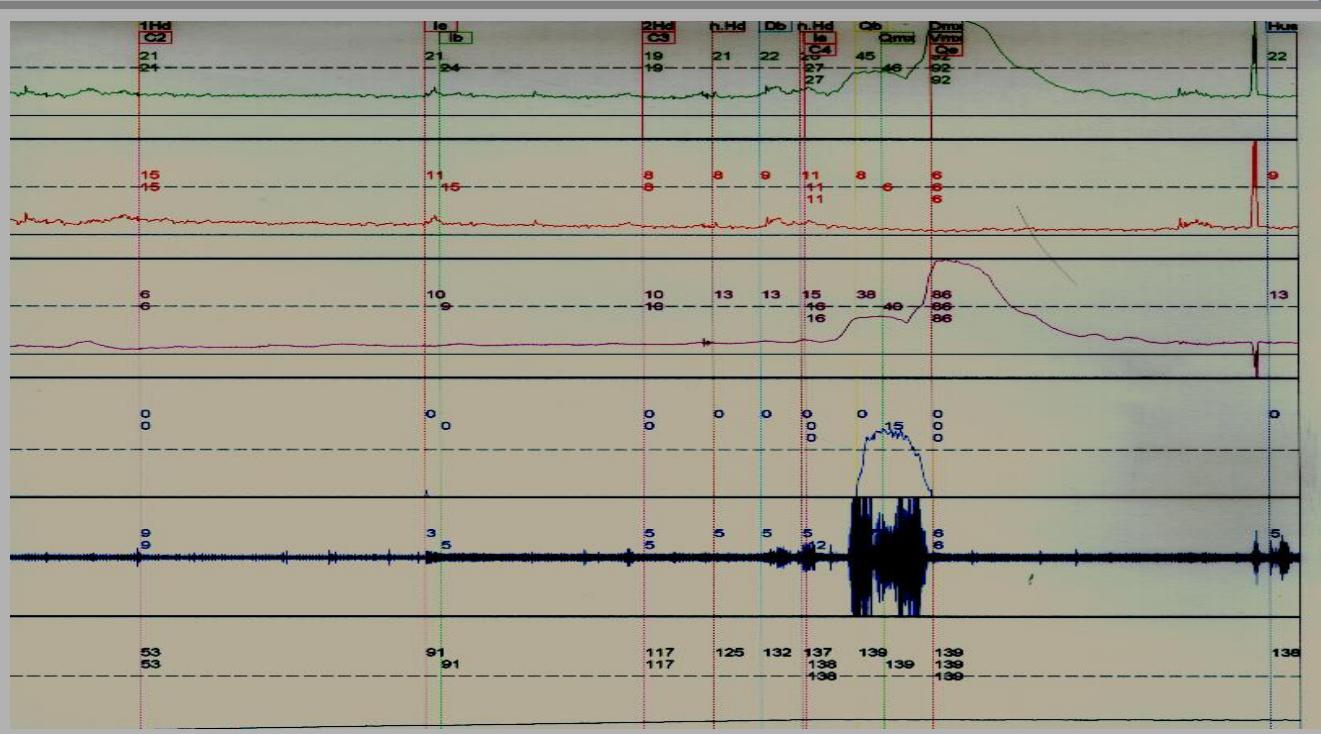

Cystomanometry

Definition:

- *maximal Bladder capacity*
- *Compliance*
- *Detrusor overactivity*

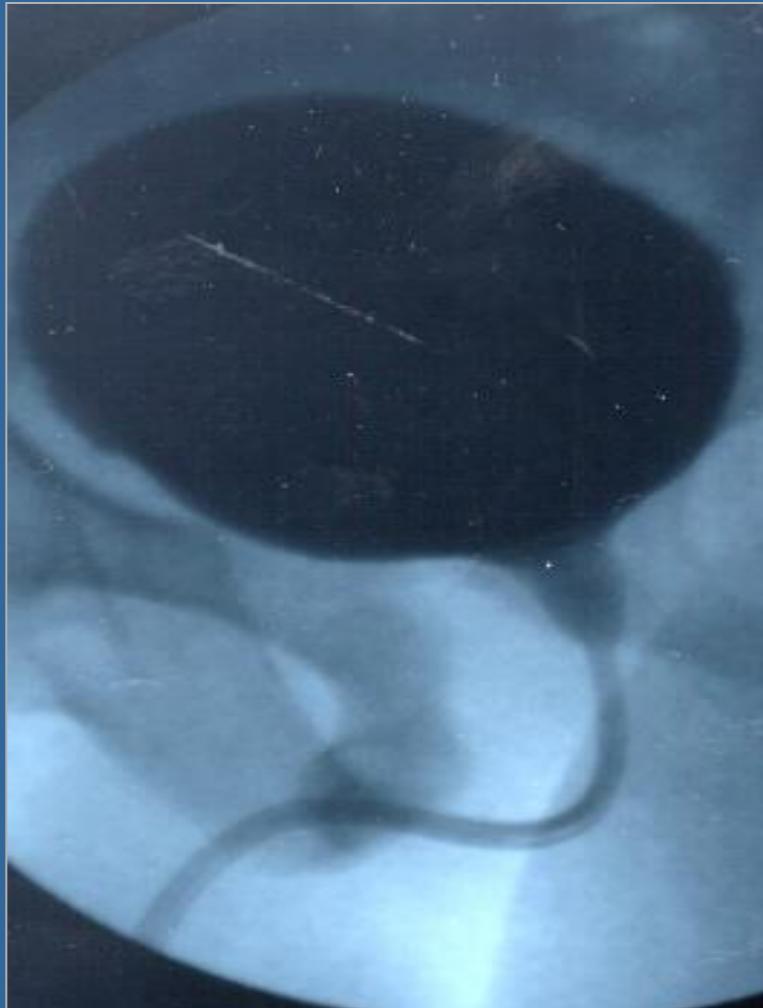

Pressure-Flow-Study

Detrusor function: normal, hypokontraktile, akontraktile

„simple“ classification:

high flow, low pressure	→	normal
low flow, high pressure	→	obstruction
low flow, low pressure	→	detrusor weakness
high flow, high pressure	→	„high-flow-obstruction“

Videourodynamics

The conservative therapy of stress urinary incontinence

Lifestyle intervention

Pelvic Floor Muscle Training (PFMT)

Biofeedback

Electrostimulation

Magnetic Stimulation

Pharmacotherapy

Urinary devices and aids

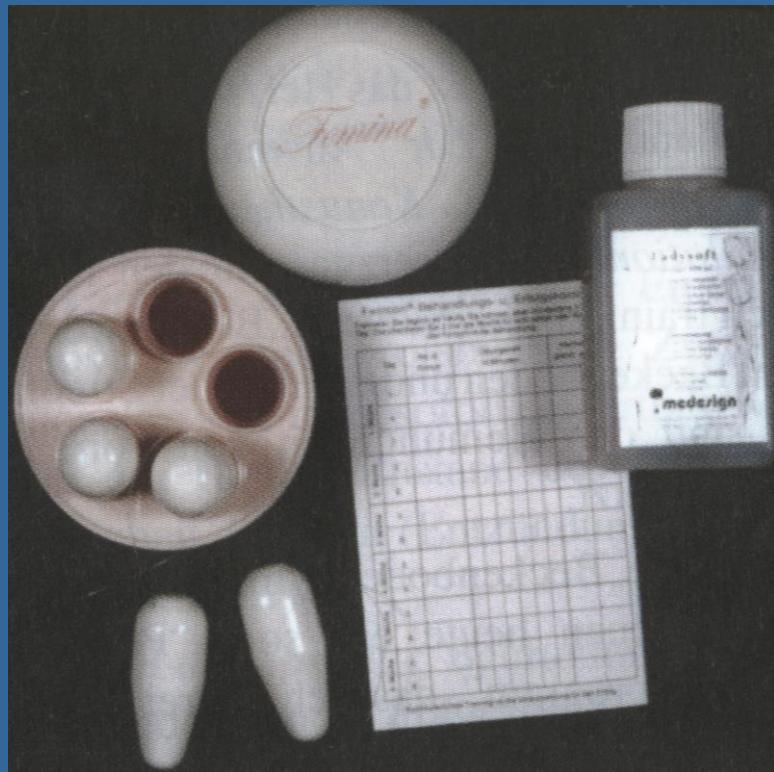

Lifestyle interventions

Weight reduction

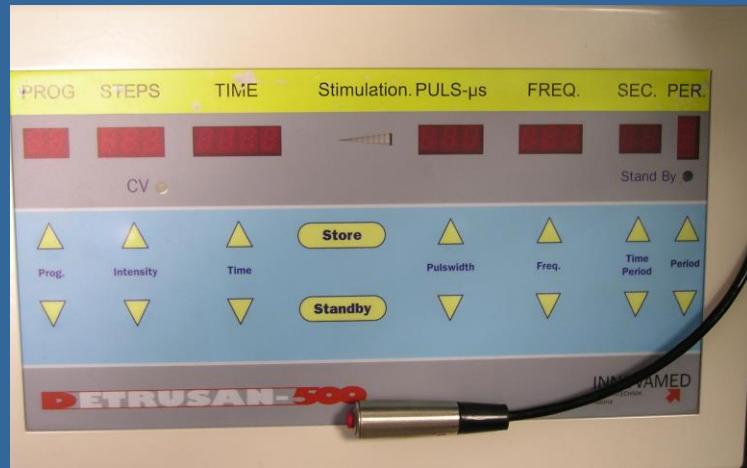

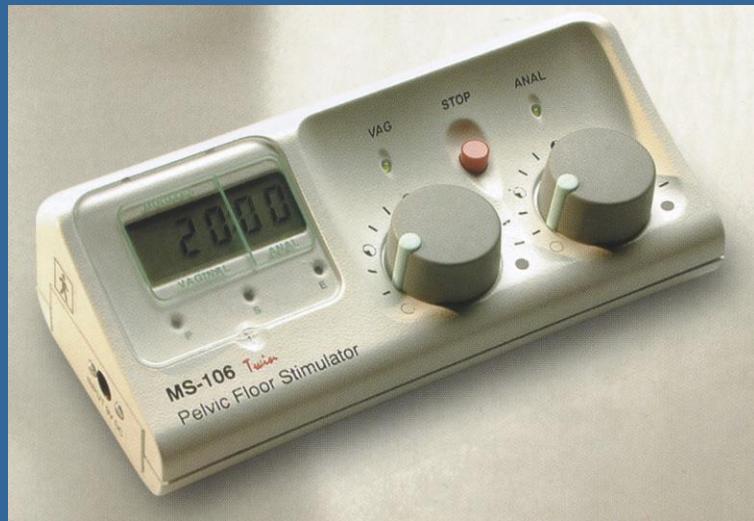

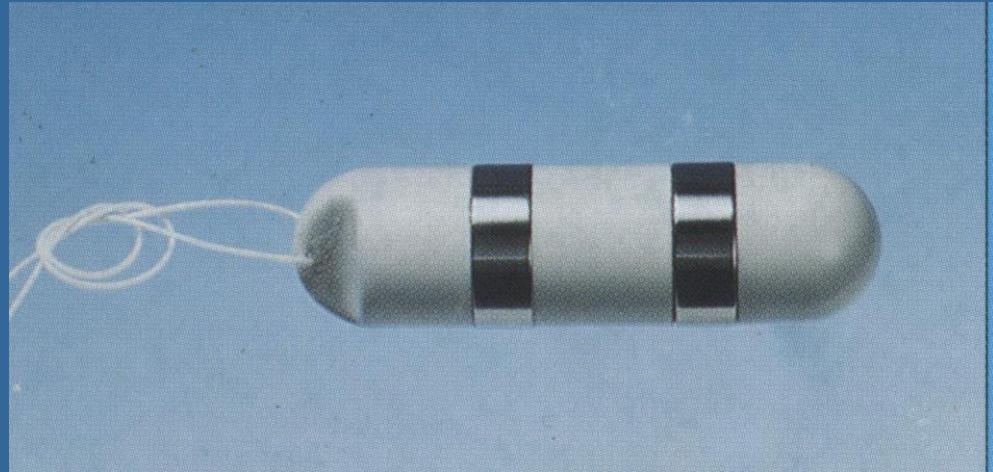

Avoiding of heavy physical activity and work

Pelvic Floor Muscle Training in prevention

Pelvic Floor Muscle Training and Biofeedback

Electrostimulation

Magnetic stimulation

Pharmacotherapy

Oestrogen

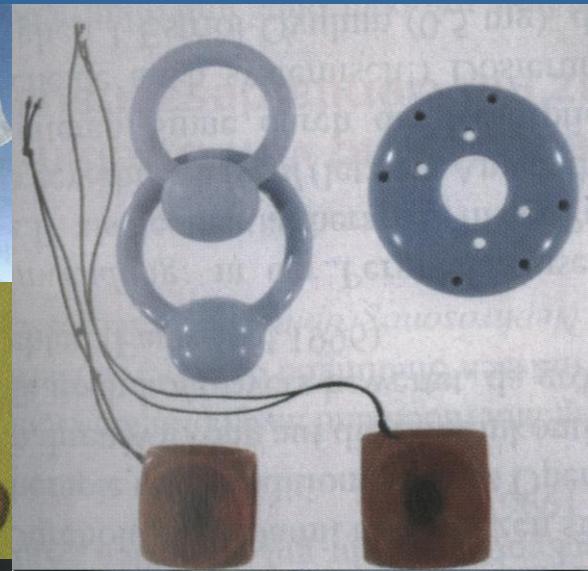

Alpha adrenoceptor agonists

Duloxetin

Incontinence devices

Only by high risk patients, who are not suitable for any other therapy

Pads
Condom urinal
Epicystostomy
Urethral catheter

Surgical treatment of female stress urinary incontinence

- Submucosal urethral bulking agents

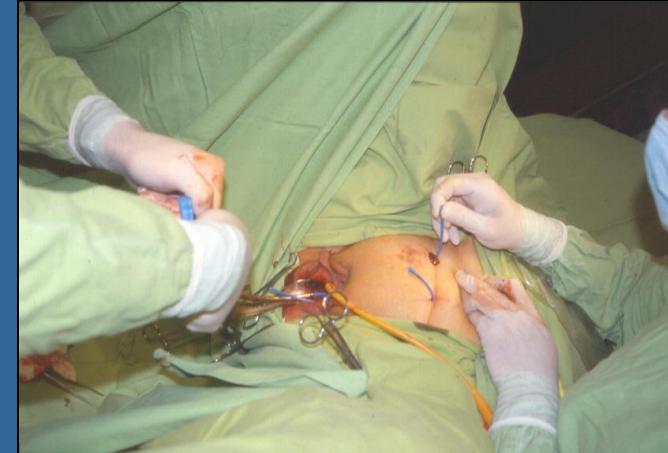

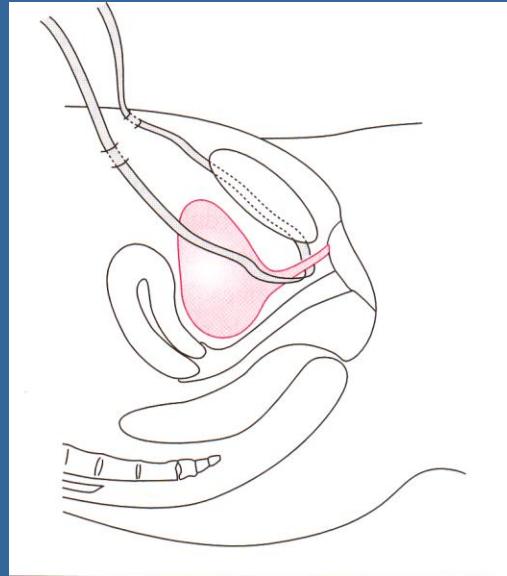

- Anterior vaginal repair

- Colposuspension

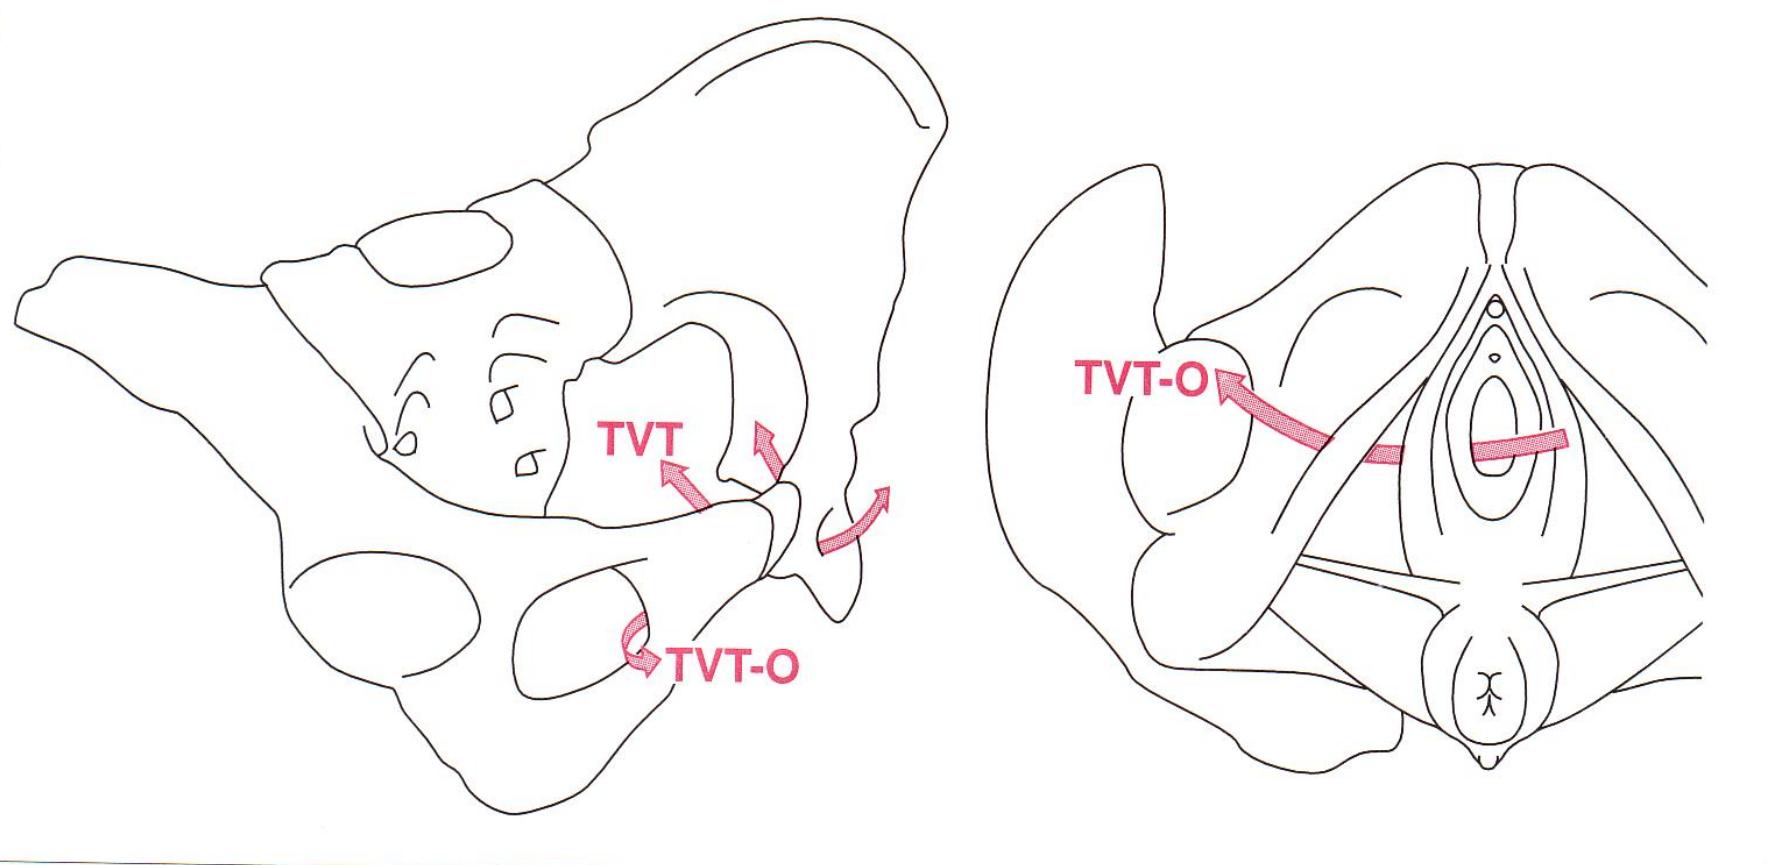

- Slings

- Artificial sphincter implantation

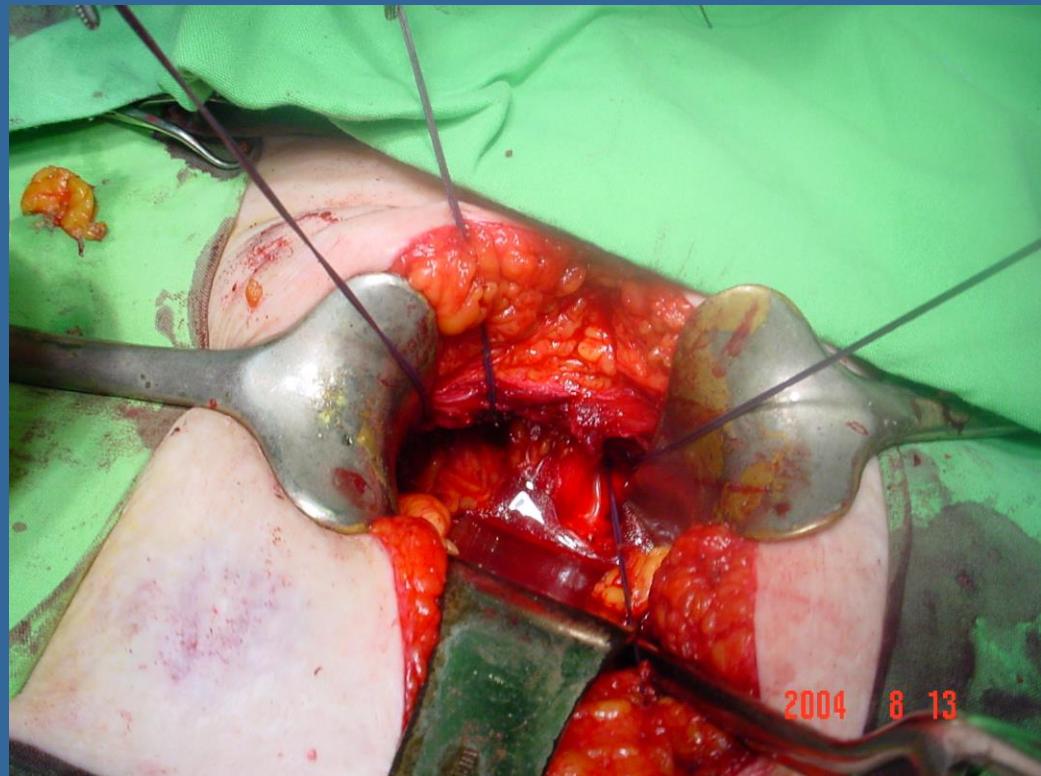

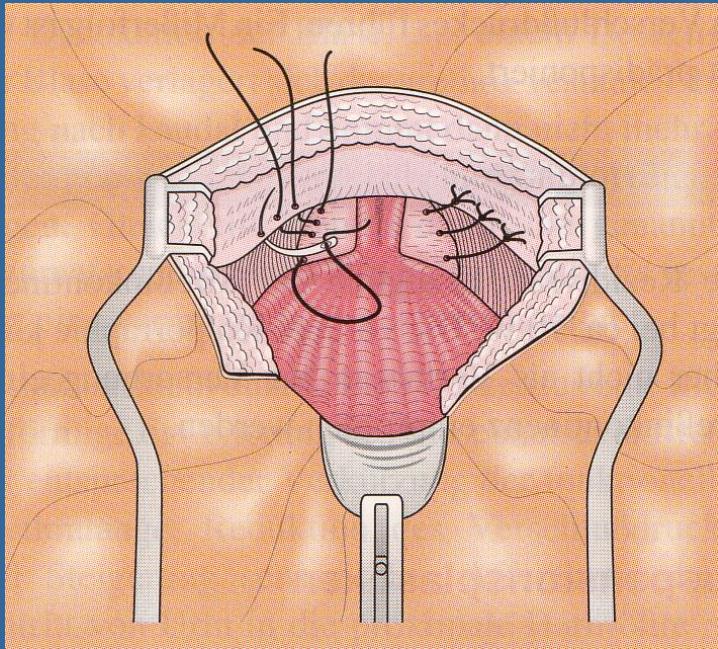

Tension free vaginal tape (TVT)

TVT and Transvaginal obturator tape

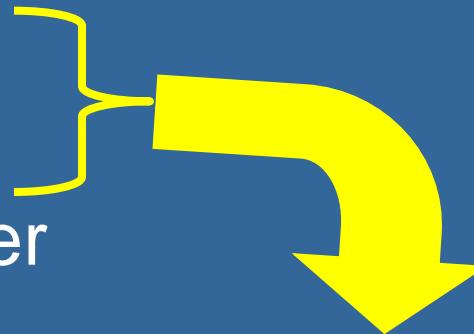

Colposuspensions (Burch, MMK)

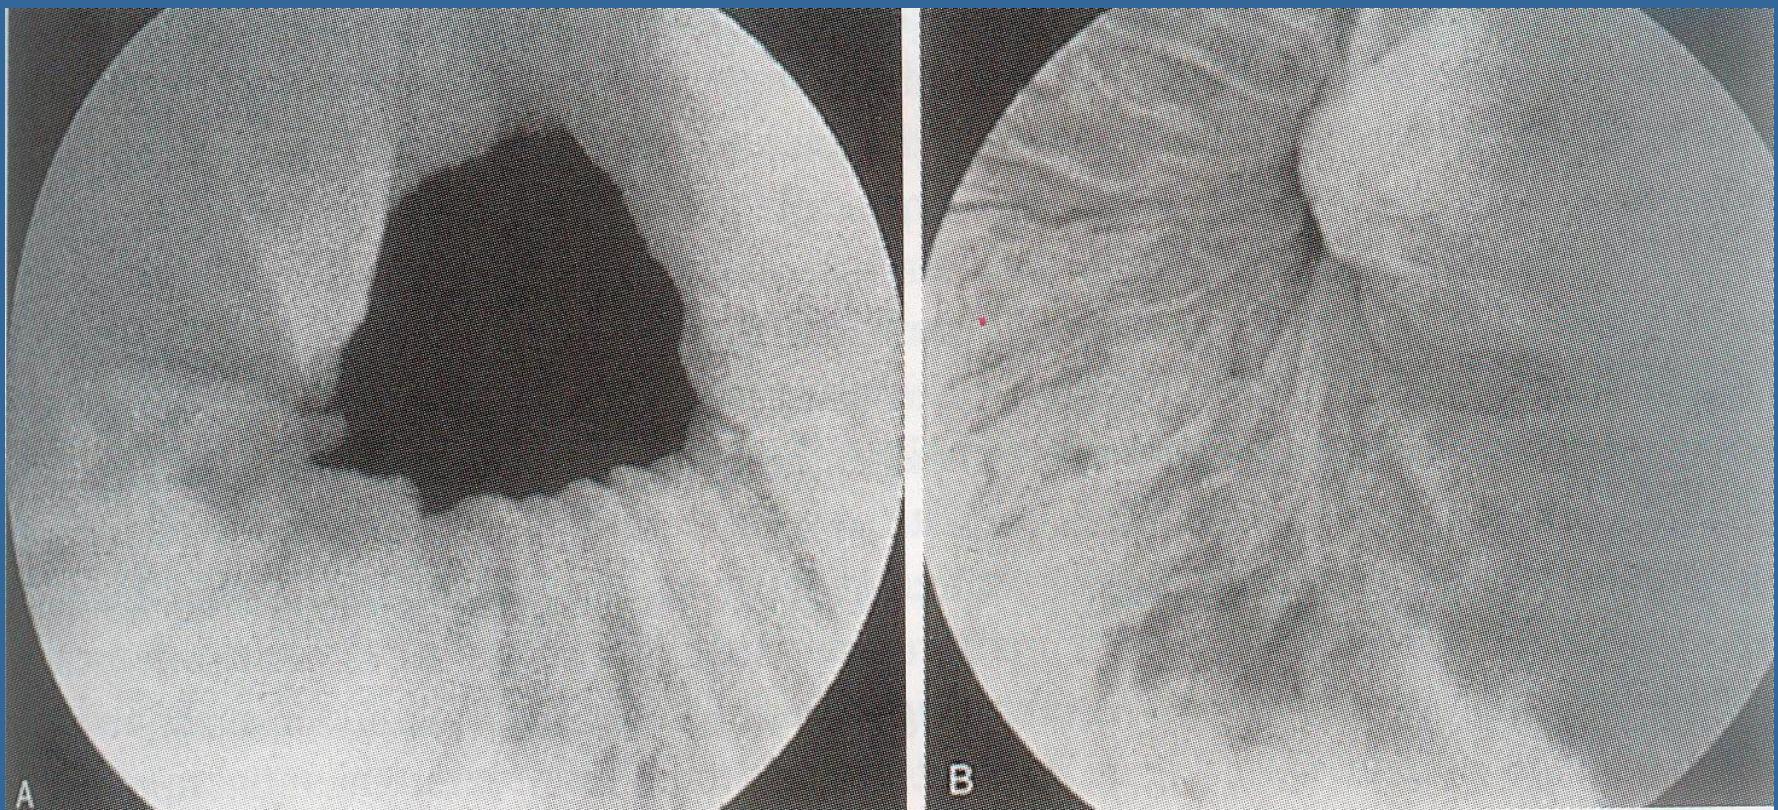

Surgical treatments of male stress incontinence

- Urethral bulking agents
- Periurethral balloons
- Male slings
- Artificial urinary sphincter (AUS)

**Adjustable Continence Therapy
(ACT)
Readjustable Slings**

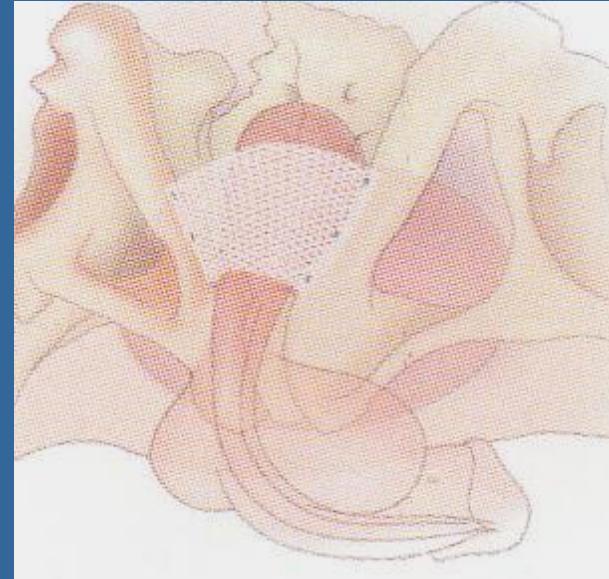

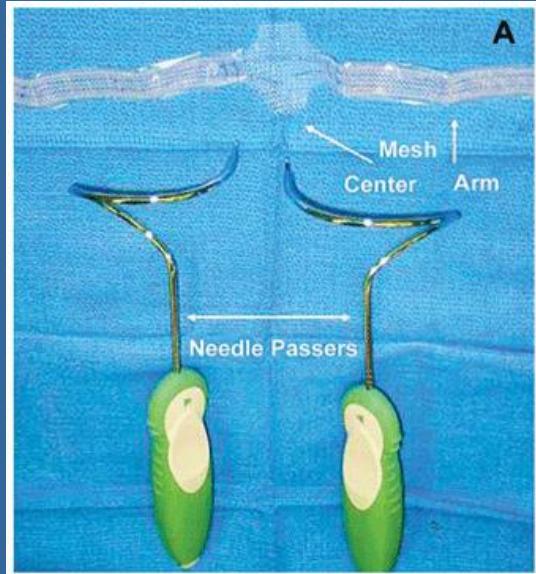

Urethral bulking agents

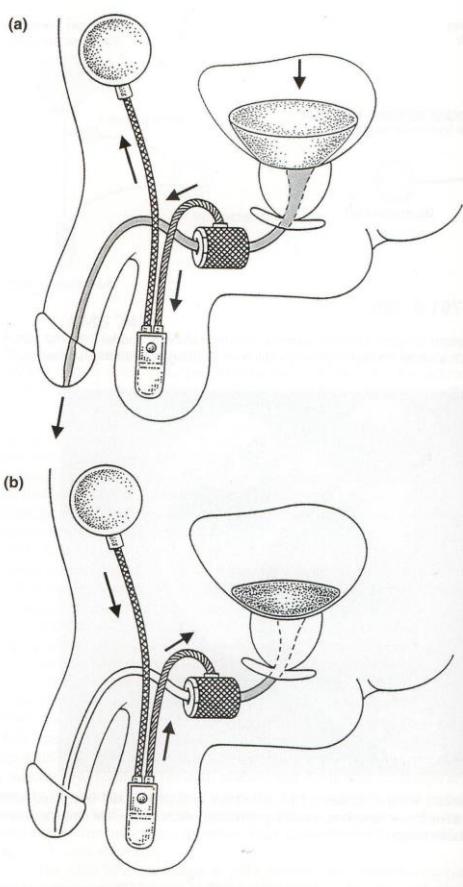

Adjustable Continence Therapy (ProACT)

Male slings

Artificial Urinary Sphincter (AUS)

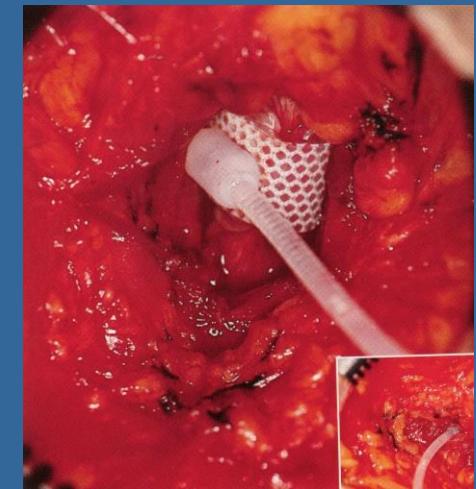

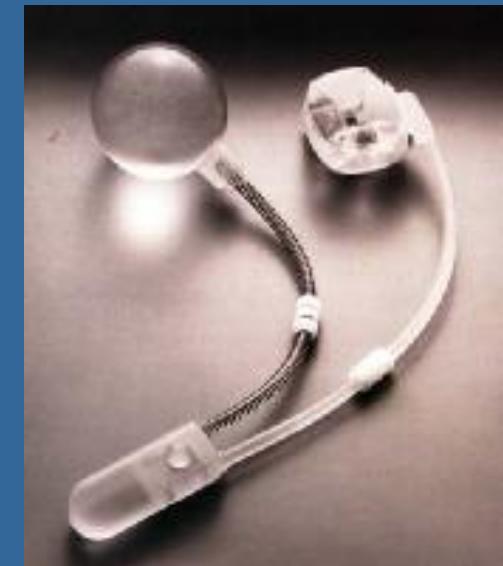

AMS 800 artiefcial sphincter

Succes rate: 90%

Complication rate:40 %

Reoperation: 12,5-25 %

Disadvantage: high cost

The therapy of urge urinary incontinence

Solution of etiological factors

Bladder and micturation training

Pharmacotherapy

Electrostimulation

Neuromodulation

Supplementary therapy

Behavioural therapy

To correct of incorrect habits regarding fluid in take

Bladder training

Toilette training

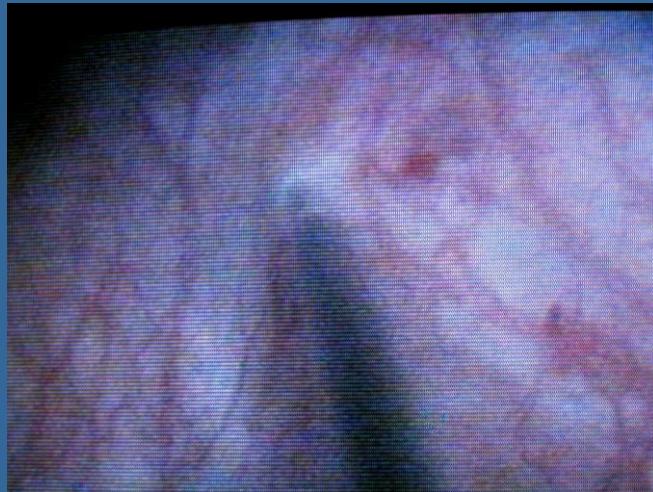

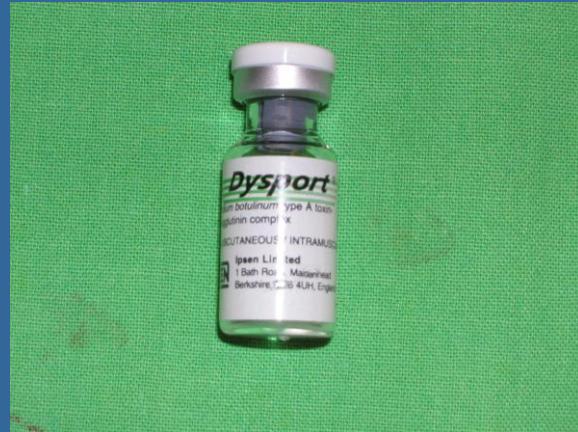

Pharmacological Treatment of urge urinary incontinence

Anticholinergics

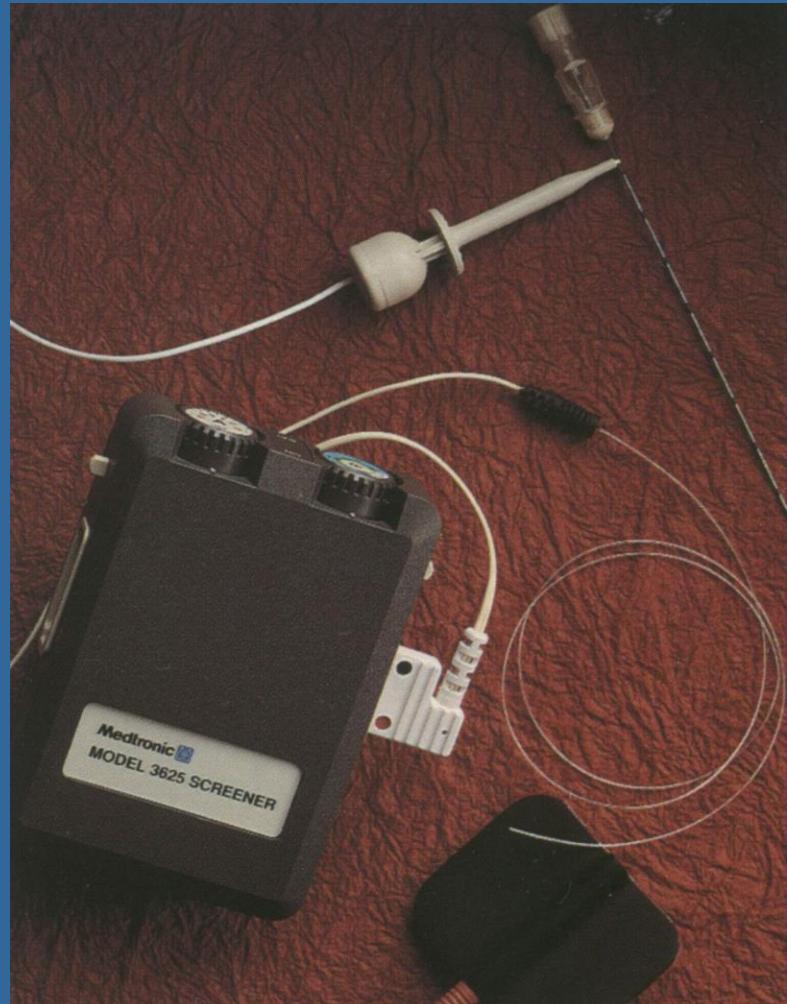

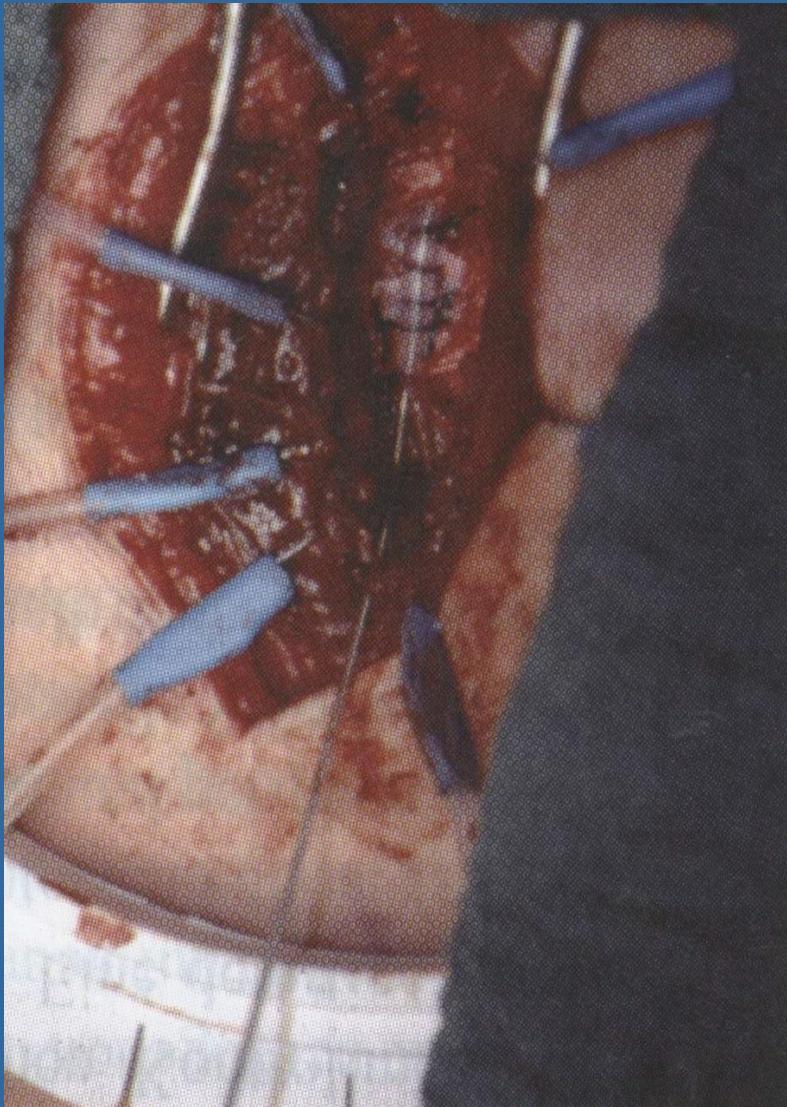

Medications with mixed spectrum

Oestrogens

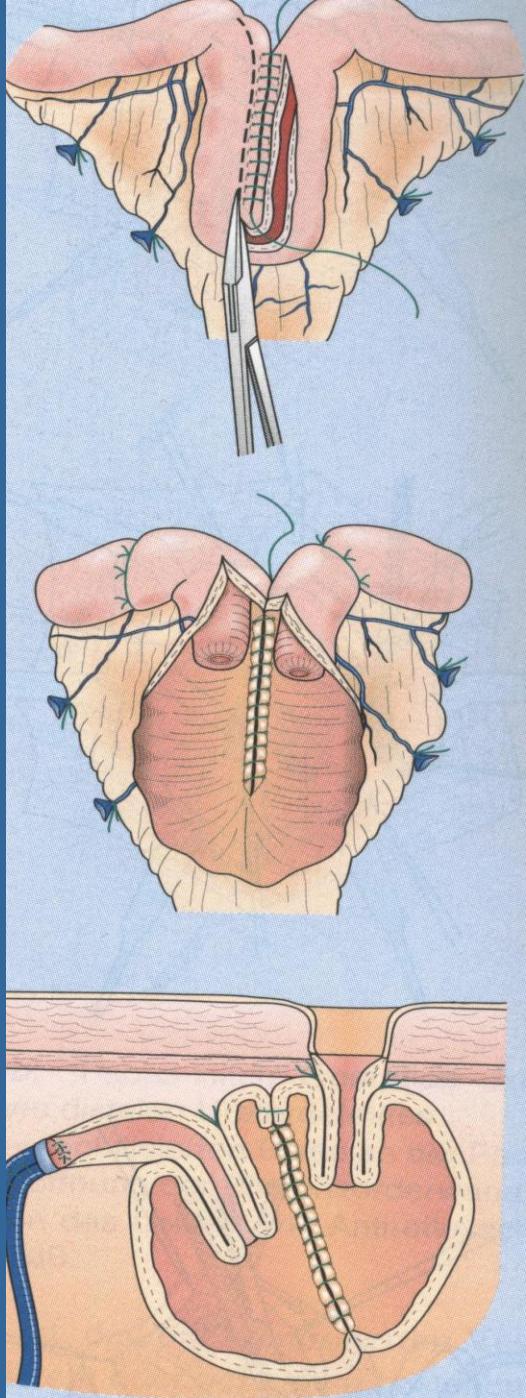

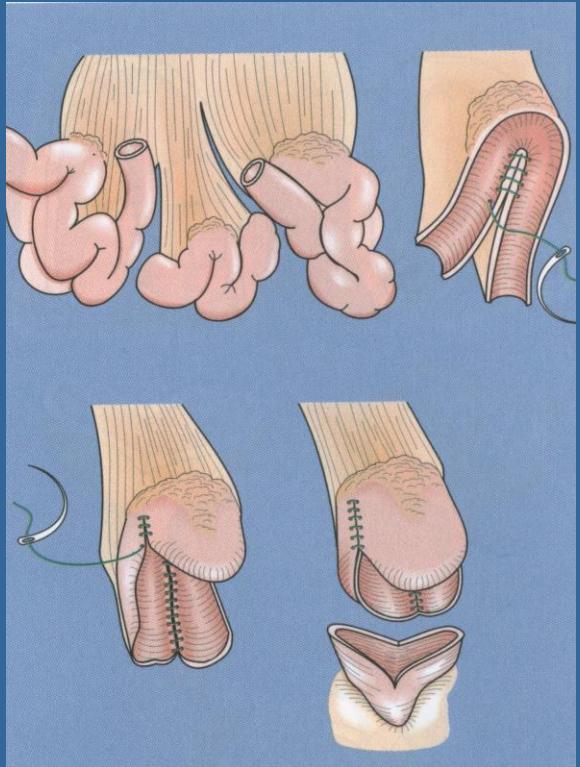

Botulinum toxin A Injection

Sacral Neuromodulation

Bladder Augmentation
