

Plant Species in Cascade-Siskiyou National Monument

This undocumented list was compiled by Frank Lang from a number of sources: Benoche (1999), Brock and Callagan (1999), Bradney (1999), Lang and others (1999a, 1999b), Lytjen and Otting (1999), Miller (1999), Wilson and others (1999), USDI-BLM (1999), USDI-BLM (1995) and personal observations (Lang). Nomenclature mostly follows Hickman (1993) and the NRCS Plant List for Oregon (NRCS 1999). The NRCS Plant List and some Sawyer and Keeler-Wolf (1995) recommendations are used for common names. To simplify and shorten common names the following conventions were adopted. Rather than -leaved and -flowered, -leaf and -flower are used. The possessive form ('s) for honorific names is not used, unless confusion would follow when spoken (Greene's mariposa lily rather than Greene mariposa Lily; is the lily green or Greene). We do not use the possessive for trees (Jeffrey pine) or for other plants (Howell false caraway). Hyphens are generally ignored.

Plants listed below may be widely distributed throughout the CSNM planing area or maybe very local. The following symbols are used to indicate geographical areas in the CSNM: cc = Cathedral Cliffs (Lower Camp Creek); cm = Chinkapin Mountain; hb = Hobart Bluff; jc = Jenny Creek; kc = Keene Creek area; lp = Lone Pine Ridge; lsr = former Jenny Creek Late Successional Reserve; mu = Mariposa Unit, Pilot Rock area; og = Oregon Gulch RNA; pbp = Parsnip Beaver Ponds; pdo = Porcupine/Dutch Oven Creek Ridge; plk = Parsnip Lakes; pr = Pilot Rock area; pru = Pilot Rock Unit, Pilot Rock; sc = Scotch Creek RNA; wsa = Soda Mountain Wilderness Study Area.

Native plants are indicated by italicized *New Times Roman*, alien plants by italicized *Arial*; noxious weeds by *italicized* and bold *Arial* scientific names.

Table AE -1. Plant Species in the CSNM		
Scientific Name	Common Name	Place
Aceraceae		
<i>Acer circinatum</i>	vine maple	kc
<i>Acer glabrum</i>	Rocky Mountain maple	kc, pr
