Hofrat Prof. Dr. Karl FRITSCH
(*24.2.1864 in Wien, † 17.1.1934 in Graz)

K. FRITSCH studierte nach einem Jahr in Innsbruck an der Universität Wien Botanik und wurde dort 1886 zum Dr.phil. promoviert; 1890 habilitierte er sich. Nach Anstellungen in Wien wurde FRITSCH 1900 als Professor für Systematische Botanik an die Universität Graz berufen, wo er aus bescheidenen Anfängen ein Institut aufbaute. 1910 wurde er Direktor des Botanischen Gartens, 1916 wurde das neu errichtete Institutsgebäude bezogen. Aus der sehr breiten wissenschaftlichen Tätigkeit sind vor allem drei Schwerpunkte hervorzuheben: Floristisch-systematische Studien, besonders zur Flora von Österreich, monographische Arbeiten (besonders über *Gesneriaceae*) und Arbeiten zur systematischen Stellung und Gliederung der Monocotylen. An Kryptogamen interessierten ihn besonders Pilze und Myxomyceten.

Die Serie FRITSCHIANA wurde als Publikationsorgan für die zahlreichen Aktivitäten im Zusammenhang mit der botanischen Sammlung des Institutes für Botanik der Karl-Franzens-Universität Graz (GZU) gegründet. Vor allem zahlreiche Schedae-Hefte der von den Mitarbeitern herausgegebenen Exsiccataenwerke werden hier erscheinen, aber auch Listen und Indices besonders wertvoller Bestände in GZU sowie Exkursionsberichte. Die Schedae-Hefte des von Prof. Dr. Josef POELT begründeten, inzwischen abgeschlossenen Exsiccataenwerkes *Plantae Graecenses* sind die Vorläufer dieser Schriftenreihe.

OBERMAYER, W. 1998: Lichenotheca Graecensis. Fasc. 6 (Nos 101 - 120). - Fritschiana 16: 1 - 6. Graz. - ISSN 1024-0306

Abstract: Lichenotheca Graecensis (Fasc. 6) comprises 20 lichen collections from the following countries (and administrative subdivisions): Austria (Salzburg, Styria, Tirol, Upper Austria), Brazil (Santa Catarina), China (Tibet, prov. Xizang), Germany (Niedersachsen), Portugal (Madeira), Slovakia, Uruguay (Canelones). Noteworthy are fruiting material of *Lasallia pustulata* (from Upper Austria) and the unusual substrate of *Porina aenea* (stems of *Equisetum hyemale*). TLC-investigations have been carried out for *Oropogon orientalis*, *Rinodina atrocinerea* and *R. olivaceobrunnea*. The issue of *Heterodermia hypoleuca* and *Oropogon orientalis* is part of the results of the 'SINO-GERMAN JOINT EXPEDITION TO SOUTHEASTERN AND EASTERN TIBET 1994'.

The exsiccata series Lichenotheca Graecensis is edited in 20 sets and distributed on an exchange basis to the following herbaria and private collections (herbarium abbreviations after HOLMGREN, P.K., HOLMGREN, N.H. & BARNETT, L.C. 1990: Index Herbariorum, Part I. The herbaria of the world, Ed. 8. Regnum Vegetabile Vol. 120): ASU, B, C, CANB (from now on all sets formerly sent to ANUC will be transmitted to herbarium CANB), CANL, E, ESS, G, GZU, H, HMAS, LE, M, MAF, MIN, O, TNS, UPS, Dr. K. Kalb, Dr. A. Vězda. Abbreviations of authors of plant names follows BRUMMITT, R. K. & POWELL, C. E. 1992: Authors of Plant Names. Kew, Royal Botanic Gardens. (Also available as internet database under: <http://django.harvard.edu:/huh/author.html>). An internet-online version of Lichenotheca Graecensis is accessible under: <http://www-ang.kfunigraz.ac.at/~oberma/li-grz1.htm>.

I am very grateful to the following collectors who have contributed material to the sixth fascicle: Tassilo FEUERER, Erwin GRUBER, Angela & Josef HAFELLNER, Marietta KOCH, Zuzana KYSELOVA, Martin MAGNES, Helmut MAYRHOFER, Héctor S. OSORIO, Josef POELT (†), Robert REITER, Adolf SCHRÖPPEL (†), Eva B. TIMPE, Roman TÜRK. Special thanks are due to Ulf ARUP, Ulrik SØCHTING and Theodore L. ESSLINGER for determination and/or confirmation of doublets. The expedition of the author to southeastern Tibet in 1994 was kindly supported by the 'Fonds zur Förderung der wissenschaftlichen Forschung, Projekt P09663-BIO'.

'Dupla Graecensis Lichenum' is a series for the distribution and publication of lichen collections (including lichenicolous fungi) with small and irregular numbers of specimens (min: 5, max: 10). It will be issued by the herbarium of the Institute of Botany of the Karl-Franzens-University, Graz, Austria (internat. abbr.: GZU). Every institution receiving a duplicate is cited (at the bottom line of every label) with its international herbarium-abbreviation (see HOLMGREN, P.K., HOLMGREN, N.H. & BARNETT, L.C. 1990: Index Herbariorum, Part I. The herbaria of the world, Ed. 8. - Regnum Vegetabile Vol. 120). Five herbaria (CANB, GZU, M, NY, UPS) will get all distributed species continuously. To make every single specimen unique and thus easier to cite, the abbreviation of the herbarium, where the specimen should be housed, is underlined on the labels.

The main purposes of the new series are to publish noteworthy floristical data on lichens and lichenicolous fungi (from all over the world in general and from Austria in particular) as well as to accommodate duplicates of valuable collections in other herbaria, making them better accessible to scientists and protecting them from being entirely destroyed (e.g., in case of fire). A yearly issue of the collection of doublets (sorted in alphabetical order) is projected.

I am much indebted to the persons listed below, who have contributed collections for the first issue of 'Dupla Graecensis Lichenum': Thomas FEUERER, Josef HAFELLNER, Claudia MARTH, Helmut MAYRHOFER, Georg and Sabine MIEHE, Josef POELT (†), Franz PRIEMETZHOFER, Adolf SCHRÖPPEL (†). Additional determinations or confirmations were kindly carried out by Franz BERGER, Josef HAFELLNER and Helmut MAYRHOFER. Tibetan collections of lichens have been made in 1994 on the occasion of the 'Sino-German-Joint-Expedition on Environmental and Climatic Changes and Mountain Hazards in Southeastern and Eastern Tibet', which partly has been sponsored by the 'Fonds zur Förderung der wissenschaftlichen Forschung, Projekt P09663-BIO'.
