

*Keckiella antirrhinoides*  
Yellow Bush Penstemon

MEDIUM SHRUB - deciduous in summer.

3 to 5' high, about equal spread.

Dense growth.

Narrow 1" long green leaves.

Clusters of many bright yellow flowers at the end of branches - spring.

Native habitat: scrub or woodland between 300' and 5000' - San Bernardino mountains to Arizona and Mexico.

Full sun or part shade.

Water 1 x /month after it is established.

Great effect when combined with late-spring blue colored flowering plants.

Pollinated by bumble bees.

Attracts hummingbirds.
