**ABSTRACT:** A search of the *International Plant Names Index* for records associated with Dr. Hu Shiu Ying (1910–2012), revealed that 250 plants within 35 families were named by her, and one genus and seven species were named in her honor. Her own collections served as type specimens for 22 plant names. In the 1950s, Shiu Ying Hu produced a card file of Chinese plant names, later digitized in the 1990s as “The Hu Card Index,” which provided data for previously non-indexed infraspecific names. Dr. Hu is recognized for her contributions to China’s flora.

**KEY WORDS:** Dr. Shiu Ying Hu, S. Y. Hu, Flora of China, International Plant Names Index (IPNI), Tropicos.

**INTRODUCTION**

Dr. Hu Shiu Ying (胡秀英博士), emeritus senior research fellow of the Arnold Arboretum at Harvard University, honorary professor of Chinese medicine at the Chinese University of Hong Kong (CUHK), honorary senior research fellow of the School of Life Sciences (CUHK), and senior college tutor of Chung Chi College (CUHK), passed away on May 22, 2012 at 102 years of age. Building upon the collections and discoveries of earlier botanists (see Bretschneider, 1898; Li, 1944; Hu, 1975), she was known for her field surveys in China and Hong Kong (Walden and Hu, 1977, 1988, 2005) and research on economic plants of China, particularly those used for horticulture (Hu, 1961, 1977), medicine (Hu, 1998, 1999), and food (Hu, 2005). In August 2012, her student, recently retired professor Dr. Paul P. H. But (CUHK), inquired if there was a method to locate the many plant names she proposed during her lifelong dedication to botany.

**MATERIALS AND METHODS**

To locate type specimens collected by Shiu Ying Hu, the Harvard University Herbaria’s *Index of Botanical Specimens* ([http://kiki.huh.harvard.edu/databases/specimen\\_index.html](http://kiki.huh.harvard.edu/databases/specimen_index.html)) was searched for “S. Y. Hu” within the ‘Collector name’ field together with ‘Types only’ selected. To find plant names published by Dr. Hu, the *International Plant Names Index* (IPNI: [www.ipni.org](http://www.ipni.org)), a standardized database of plant names, was queried for the standardized author name “S.Y.Hu.” Similarly, IPNI was checked for plants named in honor of Dr. Hu. The genus and species epithet fields were searched separately for the character strings “shiuying%” and “huae,” respectively.

**RESULTS**

Harvard University Herbaria’s database included type specimens collected by Shiu Ying Hu, for 22 plant names (Table 1). IPNI listed 250 names proposed by Shiu Ying Hu within a total of 35 families (Table 2), mainly published between 1946 and 2003. Sixty-seven of her names are currently accepted in the *Flora of China* (Wu and Raven, 1994–2000; Wu et al., 2001–), while the others are treated as synonyms or were beyond the scope of the project, e.g., plants occurring in regions outside of China or cultivated. Plants named by Shiu Ying Hu include 45 in the Aquifoliaceae, 10 in Araceae, 24 in Araliaceae, 15 in Asteraceae, 47 in Hydrangeaceae, 14 in Malvaceae, 10 in Melastomataceae, 45 in Orchidaceae, and 40 others in a variety of families.

Searching IPNI for names honoring Shiu Ying Hu yielded the following eight:

Scrophulariaceae *Shiuyinghua* Paclt, J. Arnold Arbor. 43: 217. 1962 (not treated in the *Flora of China*; Type Species: *Shiuyinghua silvestrii* (Pamp. & Bonati) Paclt = *Catalpa silvestrii* (Pamp. & Bonati) S.Y. Hu, based on *Paulownia silvestrii*).

Celastraceae *Euonymus huae* J.S. Ma, Harvard Pap. Bot. 10: 96 (fig. 11). 1997, [‘hui’].

Cyperaceae *Scirpus huae* T. Koyama, Naturaliste Canad. 88: 239 (–242, fig. 32). 1961.

Dryopteridaceae *Polystichum huae* H.S. Kung & L.B. Zhang, Acta Phytotax. Sin. 33: 311 (–312, fig. 2: C–G). 1995.

Orchidaceae *Hetaeria shiuyingiana* L. Li & F.W. Xing, Novon 19(2): 187 (–190; fig. 1). 2009 (=*Hetaeria youngsayei* Ormerod).

Orchidaceae *Pinalia shiuyingiana* Ormerod & E.W. Wood, Harvard Pap. Bot. 15(2): 349 (–351; figs. 1–2).

2010 (published after the respective *Flora of China* volume).

Poaceae *Arundinaria shiuyingiana* L.C. Chia & But, Kew Bull. 37(4): 591. 1983 (= *Oligostachyum shiuyingianum* (L. C. Chia & But) G. H. Ye & Z. P. Wang).

Rubiaceae *Hedyotis shiuyingiae* Tao Chen, Harvard Pap. Bot. 13(2): 283 (–288; figs. 1–2). 2008 (not treated in the *Flora of China*).

## DISCUSSION

The web interfaces for Harvard University Herbaria's specimen data and IPNI enabled successful searches for plants both named by Shiu Ying Hu and those named in her honor. The wide array of plant families represented by Dr. Hu's collections and plant names is a testament to her dedication to the Chinese flora in the broadest sense.

Shiu Ying Hu was ahead of her time with regard to recording Chinese plant names. One of IPNI's integral components, the *Index Kewensis* (1893–2002; Hooker and Jackson, 1893), did not begin databasing infraspecific names until 1971. In the 1950s, however, Shiu Ying Hu and a staff of four or five persons searched all available botanical literature (1753–1955) to locate all the names that had ever been used for the plants of China, including infraspecific names, resulting in an index file of 158,844 cards, as preparatory material for a *Flora of China* (Hu, 1955). In 1999, the card file was digitally imaged and thereafter referred to as "The Hu Card Index" (<http://flora.huh.harvard.edu/HuCards/>) (Brach and Song, 2006).

In a previously available web format the card images of about 9000 infraspecific names were transcribed into a web page ([http://flora.huh.harvard.edu/HuCards/Doc/infraspecific\\_citations.html](http://flora.huh.harvard.edu/HuCards/Doc/infraspecific_citations.html)) so that they could be indexed by internet search engines and more easily located via web searches. Ideally, these names will be indexed by IPNI and Tropicos ([www.tropicos.org](http://www.tropicos.org); Missouri Botanical Garden), and linked to images of type specimens and protogues.

Shiu Ying Hu's early efforts to produce a *Flora of China*, her dedication to Chinese botany, and her eagerness to share knowledge about the plants of China are well known. Although, because of the political climate of the time, she was unable to personally achieve her goal of a *Flora of China*, another *Flora of China*, begun 35 years after her initial efforts, is nearing completion ([www.foc.org](http://www.foc.org)), this time with broad worldwide support and input. With the use of new technological tools, the *Flora* will continue to be available, regularly updated and improved, and online (Brach and Boufford, 2011) far into the future.

Although Shiu Ying Hu did not live to see the completion of the project, it was one in which she gave her full and enthusiastic support, and one that will be a lasting tribute to her lifetime dream.

## ACKNOWLEDGMENTS

Dr. Paul Pui-Hay But (畢培曦, Chinese University of Hong Kong) recommended that I prepare this botanical note. I am grateful to him, Dr. David Boufford and Dr. Kanchi N. Gandhi (Harvard University Herbaria) for helpful comments. I thank Dr. Libing Zhang (張麗兵, Missouri Botanical Garden) and my wife Ying Han Brach (韓英) for translating the abstract into Chinese and the curatorial and library staff of the Harvard University Herbaria and my wife Ying for assisting the Flora of China Project.

**摘要：**國際植物名稱索引(*International Plant Names Index*)收載了由胡秀英博士(1910-2012)在35個科中命名的植物名稱共計250個，另有一個屬名和七個種名以她的名字命名。她自己採集的植物標本包含了22種的模式標本。在20世紀50年代，胡秀英製作了中國植物名稱檢索卡。後來在90年代她的檢索卡數位化後成為“胡氏植物名稱索引”。與以前的植物名稱索引不同，她的植物名稱索引還包括了種下分類群。胡秀英博士為《中國植物誌》做出了重要貢獻。

**關鍵詞：**胡秀英博士、中國植物誌、國際植物名稱索引、TROPICOS。
