ABSTRACT

A record and discussion of the Cunene–Zambezi Expedition that took place in Angola from 1899 to 1900 is provided. Although the main aim of the expedition was to evaluate the economic potential of southern Angola, it also resulted in significant botanical collections made by Hugo Baum (1867–1950), many of which serve as holotypes of names of plants from the region, and beyond. The itinerary is supplemented by a map illustrating the route followed by the expedition, and locality names are clarified and updated. A full list of the type specimens of flowering plants is provided, with their nomenclature updated and an indication of where known duplicates are housed.

INTRODUCTION

The collector Hugo Baum (1867–1950) participated in the Cunene–Zambezi Expedition, which took place in Angola from 1899 to 1900, led by the Dutchman, Pieter van der Kellen. In addition to botanical and zoological collections, ethnological observations were also recorded. All of these were described in German by Warburg (1903) in the now very rare book *Kunene–Sambesi Expedition. H. Baum*, which can only be found in highly specialized libraries or in the collections of rare book antiquarians. The book includes a folded map (Figure 1) that illustrates the course of the expedition, which left Moçâmedes (Namibe) on 11 August 1899 in an easterly direction, through the actual provinces of Cunene and Cuando-Cubango, reaching

the Cuando River in March 1900. After turning around, the expedition finally arrived back at Moçâmedes on 26 June 1900, more than 10 months later.

The expedition resulted in over 1 000 plant collections, many of which are types. In Warburg (1903), 281 taxa of flowering plants new to science are described based on these collections, with 310 numbers referred to as types. To these must be added an unknown number of taxa that were published later. In the Aluka database of types of African plant names (Aluka 2008, accessed in January 2008), there are 1 209 images of specimens collected by Baum. This figure includes duplicates of the same collection number. In fact, the Baum collections provided a series of duplicates distributed among European herbaria. This is fortunate because the holotypes of the taxa published in Warburg (1903) were deposited in the Herbarium of Berlin (B) and many of these specimens were destroyed in a fire during the Second World War. For that reason the Aluka database presently hosts only 48 images of Baum specimens from B. Duplicates have been recorded in various herbaria, namely B, BM, BR, COI, E, G, K, M, NY, P, S, W and Z (Holmgren, *et al.* 1990), which include several herbaria that were not listed as depositories of Baum collections in Lanjouw & Stafleu (1954). However, for some taxa, the holotype destroyed at B was apparently unique.

In terms of type material the Baum collection is one of the most important among those that originated in Angola, and is only surpassed by those of F. Welwitsch and J. Gossweiler. In addition to their type status, they provide information on type locality. This is very important in the case of rare plants, particularly those that were collected only once. Information on the exact collecting localities helps researchers find rare plants in the field, which in turn facilitates the eventual proposal of specific conservation measures. In the case of the Baum collection, pinpointing the collecting localities is often difficult for several reasons: 1, localities recorded on the labels are often not consistent with duplicates of the same collection, or localities given in the book; 2, the changes of geographical place names that took place in Angola over the last century; and 3, the original spelling of the localities that does not match the more recent spelling used in maps and gazetteers.

FIGURE 1.—Original map of expedition itinerary divided into three sections (Warburg 1903).

To facilitate the work of taxonomists and systematists studying the flora of southern Africa, the Baum collections and expedition itinerary were analysed. In the present work we include an historical overview of the expedition and an analysis of the flowering plant type material cited in the book (Warburg 1903). Based on the original map, a new map has been produced, which is complemented by a list of old locality names, as cited in Warburg (1903), and the corresponding current names and, whenever possible, geographical co-ordinates.

MATERIAL AND METHODS

The information on type collections was obtained from several sources. Initially, the information on types cited in Warburg (1903) was databased, using Figueiredo & Smith (2008) to update the nomenclature. The location of duplicates was determined mostly using internet resources. In this regard, the Aluka database (www.aluka.org) was particularly useful. Several herbaria online, such as K (www.kew.org/herbcat), B (www.bgbm.org) and Z (<http://www.zuerich-herbarien.unizh.ch/>) also provided much information. Duplicates cited in the literature but not seen (either in herbaria or as images) were included in the database. Information from COI was obtained from a card catalogue. The existence of B types was verified using the resources mentioned above and a list of families including extant collections at B (Hiepko 1987). It was noted that the localities recorded on the labels are often not consistent with duplicates of the same collec-

tion. Furthermore, they often do not match exactly the localities given in the book. As a compromise the collecting localities given in Warburg (1903) are used.

The types are listed in alphabetical order by family, genus and species, in their currently accepted taxonomy (Figueiredo & Smith 2008). An index to all the scientific names as well as a sequential index of type numbers referring to their name in this list, is also presented.

A list of several geographical names, cited in Warburg (1903) as collecting localities, as well as those shown on the map, was compiled. The location of the names was determined using maps and gazetteers. An annotated copy of the Warburg (1903) map, produced at LISC, was examined. A new map (Figure 2) showing the itinerary and updated locality names was produced based on the information compiled.

HISTORICAL OVERVIEW AND ITINERARY OF THE EXPEDITION

Hugo Baum was born on 17 January 1867 in Forst Niederlehmsitz, the son of a railwayman. He was raised in Guben on the river Neisse (then in Brandenburg, Germany; now Polish and called Gubin) in a forested area where he developed an interest in plants and insects. After concluding his school education in Guben, he started his professional training as a gardener in Nettkow (Silesia; then German now Polish) and later attended a

two-year study course in pomology in Proskau (Silesia). Following his compulsory military service in Magdeburg, he worked for ten years at the old Botanical Garden in Berlin. In 1899, thanks to his extensive botanical knowledge, he was invited to participate in the Cunene-Zambezi Expedition. After his return from Angola, in 1901, Baum was employed as master gardener by the Botanical Garden of the University of Rostock. In the same year he married Auguste Tank. For the following few years Baum busied himself evaluating the Cunene-Zambezi Expedition and in 1903 the expedition report was published. Baum undertook another botanical expedition to Mexico, from January to May 1925. In 1926 he was promoted to chief garden inspector (Gartenoberinspector) of the University of Rostock, and in 1933, at the age of 66, he retired. On 15 April 1950, shortly after his 83rd birthday, Baum died impoverished. His wife passed away the following year. Altogether 71 taxa, including two genera, namely *Baumiella* (a mushroom) and *Baumia* (belonging to the Scrophulariaceae), have been named after Baum (Mansfeld 1983; Heintze 2007).

The Cunene-Zambezi Expedition was carried out at the request of the Berlin-based Colonial-Economic Committee together with the Compagnie de Moçâmedes (Paris) and the South West Africa Company (London). Its objective was to investigate the economic potential of the south of Angola. The expedition was the result of the interest of German Southwest Africa (now Namibia) in the planned train connection between Porto Alexandre (presently Tombua) in Angola and the then independent Zuid-Afrikaanse Republiek, later the Transvaal province of South Africa. At the time, there was a lack of knowledge of wild-growing cash crops and local African cultures in the area. In his expedition report Hugo Baum did not only describe the flora, but also provided information on the geography, geology, climate, the local people encountered on the expedition, and some of their cus-

toms. The leader of the expedition was the Dutchman, Pieter van der Kellen, who was the representative of the Compagnie de Moçâmedes in Ediva.

On 11 August 1899, the expedition left Moçâmedes (presently Namibe) with three ox-wagons for the rivers Kunene, Kubango, Kuito, up to the Cuando, and on 26 June 1900 it returned to the place from which it departed (Figures 1, 2; refer to Appendix 1 for actual name and co-ordinates of localities, which are mentioned in this text with the original spelling). At the time Moçâmedes was a town of 1 500 inhabitants with a local economy dominated by the trade in dried fish.

The most common acacia species found between Ediva and Humbe was *Acacia verrucifera* Harms [= *Acacia kirkii* Oliv. subsp. *kirkii* var. *kirkii*] that provided the best transparent gum (*gummi arabica*) of great bonding strength. The distribution area of this acacia extended from the Chela Mountains to the Kunene River, and from the Chitanda and the Kubango Rivers downwards to the territory of the Kuangari tribe. Near Chihinde, Baum collected *Strophanthus amboensis* (Schinz) Engl. & Pax of which only a few plants were found. At the same location he found for the first time a plant that was referred to as *Gardenia thunbergia* Thunb. [of which the collected specimen is *Gardenia volkensii* K.Schum. subsp. *spathulifolia* (Stapf & Hutch.) Verdc.], which was called *stompdorn*, the German version of the Afrikaans *stompdoring*, a name recorded by Smith (1966), and *mulavi* by the local Africans. This tree appeared frequently along the Kunene, Chitanda and Kubango Rivers, but also along the Longa and Kuito Rivers and grew predominantly in the low grounds of the rivers or on the river islands.

The expedition arrived at Ediva on 3 September and there they met the leader Van der Kellen and two Boers

and two Africans with horses, who had been hired by the Dutchman at Humpata as hunters to provide game meat for the expedition. Van der Kellen's brother Emil managed a large farm in Ediva. It was owned by the Compagnie de Moçâmedes, and cultivated various food and cash crops, and carried between 800 and 1 000 head of cattle.

After Ediva, the first place reached by the expedition on their way to Humbe was called Otjikutsie. Humbe used to have a trading post for cattle. However, it had lost importance since the outbreak of the cattle plague. The local population in Humbe cultivated sorghum, pennisetum, groundnuts, groundpeas and to a lesser extent beans, locally called *macundi*. From Humbe the expedition travelled on the same day to the Kunene River. On 12 September they crossed the Kunene with the support of the people of Humbe, of whom some 40 men had joined the expedition as porters. On the left bank of the Kunene the expedition headed upstream to the mouth of the Chitanda River.

At the Chitanda, the *houtbosch*, *Berlinia baumii* Harms [= *Julbernardia paniculata* (Benth.) Troupin], which they considered the most common tree in southern Angola, was noticed for the first time. The local population used the bark of this tree for the production of boats. In Goudkopje, on the banks of the Chitanda, a place also locally called Ompopo, the expedition spent several days searching for alluvial gold in the river; they did find a small quantity. In early October the expedition reached Kassinga, also on the banks of the Chitanda. From there, they went on to the Nambali stream which flows into the Kubango River.

On 8 October the explorers reached the Kubango at Linghonung, the first village they came across since Kassinga. Following the Kubango, on 15 October the expedition came to the village of Chirumbo, located on a river island to protect the population against assaults by the Kuinghamama tribe (Kwanhamama?) from Ovamboland. On 16 October they crossed the Kubango for the first time between the Kutsi River and Massaca, a fortified village inhabited by some 500 people. From Massaca the explorers travelled the Kubango downstream to a village called Kanjundu, where they left the Kubango to proceed to the Kuebe River, which they followed downstream to its confluence with the Kubango. Then they continued along the Kubango to the mouth of the Quatiri River. Downstream from the mouth of the Quatiri, the expedition passed through the village of Kavanga on the Kubango that was inhabited by the Kangella tribe. From there, the explorers followed the Kubango downstream along the border with German Southwest Africa (presently Namibia) to Imbala, the principal village of the Kuangaris. On 27 November, the expedition left Imbala accompanied by a dozen Kuangari guides following the Kubango upstream to the confluence with the Habungu and then along this stream further upstream.

From the Habungu the journey continued to the Bondo, a small stream that contained little water even during the rainy season, which they followed for only a small distance. From there the expedition went to the lake-like pan called Ungombekike from where some of the Kuangari guides returned home. After passing through two other pans the group reached the Kuito River. Moving upstream along the Kuito, after a few days the group reached the mouth of the stream Jonko and from there,

the nearby mouth of the Longa. On 26 December, the explorers arrived at the village Napalanka, situated in a valley between the Longa and inaccessible swamps. After following the Longa upstream for four days, the expedition arrived at a place called Minnesera, which is situated in the swampy area of the mouth of the Quiriri.

On 16 January 1900, the group crossed the Longa, of which the banks were so swampy that 80 oxen were needed to pull the wagons out of the swamp. Downstream from the mouth of the Quiriri the expedition erected a camp where they were visited by the chief of Minnesera and 30 of his people. A few kilometres downstream from Minnesera, the Longa was crossed again with a float. On 31 January the expedition reached the same location at the Longa where they had been on the 12th. Due to a lack of food supplies for the expedition, following the local population's refusal to barter for food supplies, sweet potatoes were simply taken in sacks from nearby fields to feed the carriers and the horses. The shortage of maize rations had weakened the horses, which forced the expedition to reduce the hunting parties, which, in turn, resulted in a lack of game meat.

Subsequently the expedition reached a ford at the Longa, which rubber dealers used as passage-way. At that place, several residing dealers exchanged root rubber, *Carpodinus chylorrhiza* K.Schum. [= *Landolphia thollonii* Dewèvre] for commodities. Two-wheeled carriages were also sent to collect the rubber in the surrounding region. The dealers kept considerable rubber stocks tied up in bundles of 40 finger-strong rubber strips (see below), which as an exchange unit were called *manga*. The weight of one *manga* was about one kilogram. The expedition managed to purchase eleven sacks of maize from a local Portuguese man. That became their only foodstuff and had to be rationed. Due to the food shortage, 17 of the porters were sent back to Humbe and Ediva.

One of the ox-wagons left the Longa for the Quiriri, while the two others remained at the Longa to trade. The expedition avoided contact with the Portuguese traders at the Quiriri, because '...the Portuguese in the colonies were often deported persons...' (Warburg 1903: 93). However, they associated with the Swedish trader Swanström who sent them freshly baked bread. Later the two ox-wagons that were left at the Longa rejoined the expedition at the Quiriri, where in a few days, 300 *mangas* would be exchanged for cotton cloth. From the Quiriri downstream the inhabitants of the many villages were busy with the preparation of rubber. In a village at the Quiriri called Sakkemecho, the expedition exchanged consumer goods and cattle for 297 *mangas* on credit that would be collected after a few months during the return journey.

In the rubber-producing area, rubber completely replaced money as local currency. Root rubber was predominantly found on large grass fields on sandy soils, called chanas (*sannas*), which were surrounded by forests. The plant did not grow near the streams and rivers, but on the waterless chanas between the streams. Formerly, the root rubber plant had occurred commonly at the Kutsi and the Kubango Rivers at Massaca, where it had now become completely extinct. However, the plant was said to exist in the territory of the Kuinghamama tribe and occurred above the mouth of the Luassingua, reach-

ing the Longa, Quiriri, Kampuluve and Kuito Rivers. Its range went beyond the latter and extended even as far as the Cuando. After having been dug out with short hoes, the roots, tied up into stacks of \pm 2 m tall, were watered regularly to soften the bark so that it later peeled off easily. Thereafter, the bales were again dried in the sun and the single roots were cut into 30 to 40 cm long pieces that were beaten on a board to remove the bark from the wood. The pieces of bark were then worked with a wooden hammer until they took the form of a cake. This cake was boiled and again beaten with clubs. Finally the cake was cut into square pieces, which were placed in boiling water and, while still hot, were shaped into cylindrical, finger- to thumb-thick strips, about the length of a span of the hand (\pm 22 cm) called *matali*, of which 40 pieces constituted one *manga*. There were a total of eleven traders in the entire rubber area, of whom nine were Portuguese, one was an Englishman and one a Swede.

The expedition continued the journey from Sakkemecho, crossing a waterless and hilly area between the Quiriri stream and the Kampuluve, which ran into the Kuito River. The expedition reached the Kampuluve at its source in a swampy valley that extended for 25 to 30 km up to the mouth of the stream. They arrived there on 27 February 1900 and reached the Kuito River for the second time. At that point the Kuito was at most 150 m wide, but with very deep and fast-flowing water. On 14 March, the expedition crossed the Kuito with canoes and on the same day reached a stream called Chinpulu on foot. Due to the lack of grass for the oxen at the Kuito the wagons and oxen had been sent back with two people to the Onschingue River where the others were expected to arrive at the end of March. From the Chinpulu River the men reached a small stream called Miané that they followed up to its source. Then the march continued through waterless hills to the Kuisi stream in the Zambezi area. The expedition followed the Kuisi downstream, then crossed it and after several hours reached the village Konjongo at the Konjumbu, a small stream.

By the time the expedition reached Konjongo, Baum was weakened by fever and stomach pains and he decided to return with two porters to the Kuito River, which they crossed to the right bank. From there the group went to the Onschingue where on 1 April they met part of the expedition that had remained at the Cuando. On 4 April, the expedition initiated the return journey along the previous route, upstream along the Kuito and Kampuluve Rivers up to the Sakkemecho village, where they delivered to the local inhabitants part of the rubber they owed them from the previous transaction.

From the Sakkemecho village, the men followed the Quiriri upstream and then crossed the sandy hills to the Longa. From the Longa the expedition travelled to the Lazingua, and then westwards passing the Quatiri to the Bundju stream, where they remained for some time to allow the oxen some rest. The journey continued to the Kuebe and the Kulei, a tributary of the Kutsi. The passage across the Kutsi, which was rather deep, took three days. From there the journey went on to the Kubango. The crossing of the Kubango with more than a hundred head of cattle and the wagons that had to be disassembled to be ferried across the river, took another five days. The

group then followed the Cubango upstream and turned westward behind Kohi.

On 19 May, the expedition arrived at the Chitanga River and shortly afterwards at nearby Kassinga. After a half-day stay in Kassinga, the expedition followed the Chitanga downstream to Goudkopje. The Chitanga area was rich in game. On 29 May the expedition reached the Kunene at Kiteve. The local population provided eight large boats to help the expedition cross the Kunene within two days. From Kiteve the expedition followed the Kunene downstream. On 5 June the men arrived at Humbe where the porters from that place left the expedition after having been paid for their services. For the remaining journey to the coast the expedition recruited other local porters. On their way to Ediva at the Kaculovar River that was reached after two and a half days, they met the Dutchman Emil van der Kellen who had come by horse from Ediva when he had heard about the expedition's return.

At a place called Kahama, the expedition crossed the Kaculovar a second time and then followed it upstream. In the clay soils along the Kaculovar, Baum again frequently found *Acacia kirkii* Oliv., which was said to produce the best gum. Within two days the expedition crossed the passage through the Chela Mountains. After leaving the mountains, the men went along a stream called Tschikutt passing consecutively through Pietfontein [Pietfontein in modern Afrikaans], the dry Olefantsrivier [Olifantsrivier], the Bumbo and the Kitibe. At Monino village they had a longer rest before they walked the long and dry way to the Giraul River. From there the expedition travelled the last part to Moçâmedes, where they arrived on 26 June 1900.

During the ten-month journey, members of the expedition killed 175 antelopes, 3 hippos, 2 boars, and 3 crocodiles. Baum collected a total of 1 016 plant collection numbers, of which more than 300 were later described as new taxa. More than 60 of the new species were named after Baum. Besides this haul, Baum caught more than 300 butterflies, prepared them and sent them to Europe.

With regard to the economic importance of southern Angola, Baum recommended the areas close to the coast at the small rivers Bero, Giraul, Monino, and Coroca for the establishment of plantations, particularly for the cultivation of cotton. In his opinion, the high plateau, predominantly constituted of heavy loamy or clay soils was suitable for the cultivation of maize, wheat, rye, oats, barley, and European vegetables, subtropical fruits such as citrus, and grapevines. According to Baum, there was much fertile land for colonization at the Cuando. The part of this area east of the Cuebe and north of the Lomba was characterized by a wealth of root rubber plants. He considered the region particularly rich in trees providing tanning agents, such as the *mopane*, *Colophospermum mopane* (J.Kirk ex Benth.) J.Léonard, and the *houtbosch*, *Julbernardia paniculata* (Benth.) Troupin. The distribution area of the acacia that provided the best gum was located in the region of the Caculuvar and Kunene. Thanks to its large forests, southern Angola was considered very rich in timber; however, the cost of transport to the coast was very high. Although gold was panned in the Chitanda River at Goudkopje beneath

Cassinga, the main value of southern Angola was that it was very suitable for livestock. In Baum's opinion the transport of cattle to the coast was easy, given the availability of water and pastures along the whole way. Finally, he emphasized the abundance of fish resources at Moçamedes (Namibe), Tiger Bay, and particularly Porto Alexandre (Tombua), where salterns that produced salt for the preservation of fish were located.

LIST OF BAUM TYPE COLLECTIONS GIVEN IN WARBURG (1903)

All the holotypes (or syntypes) of the names published in Warburg (1903) were deposited at B. Information is available in the literature and on the internet concerning the families which survived the fire that consumed the herbarium during the Second World War (see www.bgbm.org). At the time of the bombardment, the staff of the herbarium was undertaking the task of transferring the type specimens to a safer location. Types belonging to certain families are therefore still extant at Berlin. Likewise, material on loan to other herbaria obviously also survived. The remaining material has been reported as lost. In the case of the Baum collections, out of the 311 type collection numbers of flowering plants cited in Warburg (1903), only 40 holotypes and four syntypes are confirmed to exist. There are 181 holotypes reported as destroyed, and 34 belonging to families for which type material apparently survived, could not be located in any of the databases cited above. In rare cases, types that were reported as destroyed in the literature were found to be extant as they are available in the Aluka database. This is the case for the holotype of *Lobelia minutidens-tata* Engl. & Gilg, that had been reported as destroyed (Thulin 1984). This was probably due to the misplacement of the specimen as the locality data provided to Aluka wrongly assigns it to Namibia. It was noticed that several Baum collections have been attributed to the wrong country, and depending on the arrangement of herbaria, this may be a reason for the material not having been found in the past. For instance, Baum 894 (*Cephalaria retroseta* Engl. & Gilg), is represented in Aluka (accessed in February 2008) by three duplicates: the K duplicate is attributed to South Africa, the BM duplicate to the Democratic Republic of Congo and only the duplicate in E is correctly assigned to Angola. In other cases it was found that types belonging to families that were reported as destroyed still exist. For example, in the Rubiaceae, at least four Baum types are extant.

Note: duplicate specimens in bold were accessible in Aluka (accessed in February 2008); duplicate specimens not in bold were accessible in other databases or examined by one of the authors; the * sign is used for duplicates listed in the literature but not in databases. The original spelling of the localities is kept.

OCHNACEAE

OCHNA L.

arenaria De Wild. & T.Durand

813 Type of *Ochna roseiflora* Engl. & Gilg (B, lecto., designated by Exell & Mendonça (1951d: 285)†; K, W, isolecto.). Chimpungu-Kulei, 11-4-1900, 1 350 m. Note: Exell & Mendonça (1951d: 285) cited the two syntype collections 813 and 813a, but referred to the B duplicate of no. 813 as type, which is thus the lectotype. However, this specimen was destroyed. Verdcourt (2005) cited Baum 813 (B) as holotype.

813a Type of *Ochna roseiflora* Engl. & Gilg (B, syn. †; BM, E, isosyn.). Quiriri, Sakkemecho, 11-4-1900, 1 200 m. Reference: Exell & Mendonça (1951d: 285).

cinnabrina Engl. & Gilg

550 (B, holo. †; E, W, Z, iso.). Kuito, Longa, 16-12-1899, 1 150 m. Reference: Exell & Mendonça (1951d: 292).

pulchra Hook.

114 ? Type of *Ochna antunesii* Engl. & Gilg (B, holo. †; COI, K, P, W, Z, iso.). Hartebeest-Lövenpan, 18-9-1899, 1 100 m. Note: although the description in Warburg (1903) is based on this collection, the name had been previously considered a synonym by Tieghem (see Exell & Mendonça 1951d: 291) and the type may be a specimen collected by Antunes.

145 Type of *Ochna brunnescens* Engl. & Gilg (B, holo. †; BM, COI, E, K, P, Z, iso.). Chitanda (left bank), 24-9-1899, 1 150 m. Note: the name had been previously considered a synonym by Tieghem (see Exell & Mendonça 1951d: 291).

pygmaea Hiern

172 Type of *Ochna hoepfneri* Engl. & Gilg (B, lecto., designated by Exell & Mendonça (1951d: 287)†; BM, BR, *COI, K, M, P, W, iso.). Chitanda (right margin), 27-9-1899, 1 150 m. Note: Exell & Mendonça (1951d: 287) cite the two syntypes 172 and 220 but designate the B duplicate of the former as type (i.e. lectotype). This was apparently destroyed.

220 Type of *Ochna hoepfneri* Engl. & Gilg (B, syn. †; BM, COI, K, M, P, W, Z, isosyn.). Kuelleis (Maramba), 5-10-1899, 1 400 m. Reference: Exell & Mendonça (1951d: 287).

SAUVAGESIA L.

africana (Baill.) Bamps

620 Type of *Vausagesia bellidifolia* Engl. & Gilg (B, holo. †; BM, COI, E, G, K, M, W, Z, iso.). Longa, Chijija, 4-1-1900, 1 200 m. Reference: Exell & Mendonça (1951d: 284).

ONAGRACEAE

LUDWIGIA L.

senegalensis (DC.) J.Troch.

97 Type of *Ludwigia pulvinaris* Gilg (B, holo. †; COI, lecto., designated by Fernandes & Fernandes (1970: 196); G, K, M, W, Z, iso.). Kunene (left bank), Humbe, 12-9-1899, 1 066 m.

ORCHIDACEAE

BRACHYCORYTHIS Lindl.

angolensis (Schltr.) Schltr.

326 Type of *Platanthera angolensis* Schltr. (B, holo. †; BM, *COI, E, K, M, S, W, iso.).

Kuebe, 26-10-1899, 1 150 m. Reference: Summerhayes (1968: 21).

614 Type of *Brachycorythis oligophylla* Kraenzl. (B, holo. †; BM, W, iso.). Longa, Napalanka, 1-1-1900, 1 150 m.

rhodostachys (Schltr.) Summerh.

381 Type of *Platanthera rhodostachys* Schltr. (B, syn. †; *BM, E, W, isosyn.). Kubango, Kueio, 4-11-1899, 1 120 m. Note: Summerhayes (1968: 18) cited the collection 381 at B as holotype. In fact, there were two syntypes, 381 and 629. The 381 duplicate cited as holotype was also reported as destroyed, therefore this is not considered a lectotypification.

629 Type of *Platanthera rhodostachys* Schltr. (B, syn. †; W, isosyn.). Longa, Chijija, 5-1-1900, 1 200 m.

EULOPHIA R.Br. ex Lindl.

adenoglossa (Lindl.) Rchb.f.

505 Type of *Eulophia baumiana* Kraenzl. (B, holo. †; K, W, iso.). Ungombekike, 5-12-1899, 1 200 m. Note: the holotype is cited by Cribb (1989: 455) as seen; however, it is not available in Aluka nor in the B website.

arenicola Schltr.

384 (B, holo. †; COI, E, K, M, W, iso.). Kubango, Kueio, 11-1899, 1 120 m.

calantha Schltr.

382 Type of *Eulophia calantha* Schltr. var. *kubangensis* Schltr. (B, holo. †). Kubango, Kueio, 4-11-1899, 1 120 m. Reference: Cribb (1989: 435).

631 (B, holo. †; BM, COI, E, *G, *K, M, S, W, iso.). Longa, Chijija, 5-1-1900, 1 200 m. Reference: Cribb (1989: 434).

coeloglossa Schltr.

367 (B, holo. †; BM, COI, E, *G, K, M, S, W, iso.). Kubango, Kueio, 11-1899, 1 120 m. Reference: Cribb (1989: 435).

corymbosa Schltr.

377 (B, holo. †; E, K, M, S, W, iso.). Kubango, Kueio, 4-11-1899, 1 120 m.

gonychila Schltr.

261 (B, holo. †). Nambali, Kubango (near), 7-10-1899, 1 200 m. Reference: Cribb (1989: 471).

malangana (Rchb.f.) Summerh.

496 Type of *Eulophia warburgii* Schltr. (B, holo. †; COI, E, K, M, S, W, iso.). Habungu, 30-11-1899, 1 100 m. Reference: Cribb (1989: 434).

rolfeaana Kraenzl.

369 (B, holo. †). Kubango (right bank), Kueio (mouth), 3-11-1899.

tricristata Schltr.

357 (B, holo. †; COI, K, M, S, W, iso.). Kubango, Kabindere, 30-11-1899, 1 130 m.

trilamellata De Wild.

341 Type of *Eulophia macra* Schltr., nom. illeg. (B, holo. †; COI, K, M, S, W, *Z, iso.). Kubango, Kabindere, 10-1899, 1 130 m. Note: the holotype is cited by Cribb (1989: 455) as seen; however, it is not available in Aluka nor in the B website.

HABENARIA Willd.

holothrix Schltr.

578 (B, holo. †; BM, COI, K, M, *S, W, Z, iso.). Longa, Napalanka, 12-1899, 1 150 m. Reference: Summerhayes (1968: 122).

holubii Rolfe

598 Type of *Habenaria rhopaloceras* Schltr. (B, holo. †; BM, *COI, K, M, W, Z, iso.). Maschonge, Napalanka, 28-12-1899, 1 150 m. Reference: Summerhayes (1968: 110).

huillensis Rchb.f.

425 Type of *Habenaria kubangensis* Schltr. (B, holo. †; BM, M, S, W, Z, iso.). Kubango, Kavanga-Kalolo, 19-11-1899, 1 100 m.

macroplectron Schltr.

603 (B, holo. †; BM, K, M, S, W, Z, iso.). Longa, Napalanka, 1-1-1900, 1 150 m.

HABENARIA Willd. (cont.)**verdickii** (De Wild.) Schltr.

561 Type of *Habenaria monophylla* Schltr., nom. illeg. (B, holo. †; **BM**, **K**, **M**, **S**, **W**, **Z**, iso.). Jonkoa, 20-12-1899, 1 150 m.

PHAIUS Lour.**occidentalis** Schltr.

374 (B, holo. †). Kubango, Kueio, 3-11-1899, 1 120 m. Reference: Cribb (1984: 281).

POLYSTACHYA Hook.**dendrobiiflora** Rchb.f.

839 Type of *Polystachya holochila* Schltr. (B, holo. †; COI, **G**, **K**, **M**, **S**, **W**, iso.). Lazingua, 20-4-1900, 1 300 m. Reference: Cribb (1984: 286).

SATYRIUM Sw.**oliganthum** Schltr.

383 Type of *Satyrium paludosum* Rchb.f. var. *parvibracteatum* Schltr. (B, holo. †; **K**, **W**, iso.). Kubango, Kueio, 4-11-1899, 1 120 m.

OROBANCHACEAE**BUCHNERA** L.**baumii** Engl. & Gilg

225 (B, holo. †; COI, **G**, **K**, **M**, **W**, **Z**, iso.). Kuelleis (Maramba), 5-10-1899, 1 400 m.

prorrepens Engl. & Gilg

875 (B, holo. †; COI, **G**, **K**, **M**, **W**, iso.). Kulei-Kutsi, 29-4-1900, 1 300 m.

strictissima Engl. & Gilg

734 (B, holo. †; **BM**, COI, **K**, **M**, **W**, iso.). Kampuluve (at source), 25-2-1900, 1 210 m.

CYCNIUM E.Mey. ex Benth. emend. Engl.**tubulosum** (L.f.) Engl. subsp. **tubulosum**

403 Type of *Cycnium hamatum* Engl. & Gilg (B, holo. †; **BM**, lecto., designated by Jansen (1978: 34); COI, HBG, **K**, **W**, iso.). Quatiri (mouth), 13-11-1899, 1 100 m.

HARVEYA Hook.**andongensis** Hiern

869 Type of *Harveya macrantha* Engl. & Gilg (B, holo. †; COI, **E**, **K**, **M**, **W**, iso.). Kulei, 26-4-1900, 1 300 m.

SOPUBIA Buch.-Ham. ex D.Don**mannii** Skan

475 Type of *Sopubia dregeana* Benth. var. *tenuifolia* Engl. & Gilg (B, holo. †; COI, **E**, **G**, **K**, **M**, **W**, iso.). Habungu, Maramba, 28-11-1899, 1 100 m.

PASSIFLORACEAE**BASANANTHE** Peyr.**baumii** (Harms) W.J.de Wilde

391 Type of *Tryphostemma baumii* Harms (B, holo. †?; ***BM**, *COI, **G**, ***K**, **M**, **W**, **Z**, iso.). Kubango (right bank), Kueio (right bank), 7-11-1899, 1 120 m.

PEDALIACEAE**SESAMUM** L.**calycinum** Welw. subsp. **repens** (Engl. & Gilg) Seidenst.

660 Type of *Sesamum repens* Engl. & Gilg (B, holo. †; **K**, **W**, iso.). Longa (left bank), Lazingua, 20-1-1900, 1 250 m.

POACEAE**ELYTROPHORUS** P.Beauv.**globularis** Hack.

112 Type of *Elytrophorus interruptus* Pilg. (B, holo. †?; **BM**, **K**, **M**, **W**, iso.). Kunene (left bank), Soba Gongo (near), 17-9-1899, 1 115 m.

SPOROBOLUS R.Br.**welwitschii** Rendle

511 Type of *Sporobolus baumianus* Pilg. (B, holo. †?; **M**, iso.). Ungombekike, 5-12-1899, 1 200 m.

PODOSTEMACEAE**LEDERMANNIELLA** Engl.**warmingiana** (Gilg) C.Cusset

904 Type of *Sphaerothylax warmingiana* Gilg (B, holo. †; **BM**, COI, **K**, **M**, **W**, iso.). Kubango, Menempremp, 11-5-1900, 1 300 m.

POLYGALACEAE**POLYGALA** L.**arenicola** Gürke

301 (B, holo. †; **BM**, lecto., designated by Paiva (1998: 235); *COI, **E**, **K**, **M**, **W**, **Z**, iso.). Kuebe, 23-10-1899, 1 170 m. Reference: Exell & Mendonça (1937i: 107).

baumii Gürke

815 (B, holo. †; **BM**, lecto., designated by Paiva (1998: 231); **BR**, *COI, **E**, **K**, **M**, **W**, **Z**, iso.). Quiriri, Sakkemecho, 16-4-1900, 1 200 m. Reference: Exell & Mendonça (1937i: 106).

kalaxariensis Schinz

287 Type of *Polygala kubangensis* Gürke (B, holo. †; **BM**, *COI, **E**, ***K**, **M**, **W**, iso.). Kubango, Massaca, 19-10-1899, 1 150 m. References: Exell & Mendonça (1937i: 106); Paiva (1998: 234).

nambalensis Gürke

244 (B, holo. †; **BM**, iso.). Nambali (Maramba), 6-10-1899, 1 275 m. Reference: Exell & Mendonça (1937i: 99).

817 Type of *Polygala psammophila* Gürke, nom. illeg. (B, syn. †; **BM**, *COI, ***K**, **W**, isosyn.). Quiriri, Sakkemecho, 16-4-1900, 1 200 m. Reference: Exell & Mendonça (1937i: 99).

871 Type of *Polygala psammophila* Gürke, nom. illeg. (B, lecto., designated by Exell & Mendonça (1937i: 99) †; **BM**, *COI, **K**, **M**, **W**, iso.). Kulei-Kutsi, 29-4-1900, 1 300 m. Note: Exell & Mendonça (1937i) cited the two syntypes 817 and 871, but they indicated the B duplicate of the latter as type, making it a lectotype. This specimen was later destroyed.

paludicola Gürke

315a (B, syn. †). Kuebe, 23-10-1899, 1 170 m.

373 (B, lecto., designated by Exell & Mendonça (1937i: 100) †; **BM**, lecto., designated by Paiva (1998: 209) without collection number; **E**, **K**, **W**, isolecto.). Kubango (right bank), Kueio (mouth), 3-11-1899, 1 120 m. Note: Exell & Mendonça (1937i: 100) cited the three syntype collections, 373, 373a and 315a, referring to the B duplicate of the first as type. However, this duplicate was later destroyed. Paiva (1998) indicated as lectotype the duplicate at BM of a Baum collection from R.Cubango but the number was omitted. It is assumed that it is no. 373, since the other two syntype collections are from other localities.

373a (B, syn. †; **BM**, *COI, **E**, ***K**, **W**, **Z**, isosyn.). Longa, Maschonge, 30-12-1899, 1 120 m. Reference: Exell & Mendonça (1937i: 100).

rivularis Gürke

595 (B, syn. †; ***BM**, *COI, **K**, **W**, **Z**, isosyn.). Maschonge, Napanlanka, 28-12-1899, 1 150 m. Reference: Exell & Mendonça (1937i: 105).

911 (BM, lecto., designated by Paiva (1998: 224); *COI, **E**, **K**, **W**, **Z**, iso.). Kubango, Kohi, 15-5-1900, 1 350 m. Note: Exell & Mendonça (1937i: 105) cited the two syntype collections 595 and 911, referring to the B duplicate of the latter as type. This specimen was later destroyed. The BM duplicate was later designated as lectotype by Paiva (1998).

robusta Gürke

704 Type of *Polygala robusta* Gürke var. *coerulea* Gürke (B, holo. †; **BM**, lecto., designated by Paiva (1998: 230); **BR**, *COI, **E**, **K**, **M**, **W**, **Z**, iso.). Longa, Quiriri, 3-2-1900, 1 275 m. Reference: Exell & Mendonça (1937i: 106). Note: this is the lectotype of *P. robusta*.

704a Type of *Polygala robusta* Gürke var. *rubra* Gürke (B, holo. †). Quiriri, Sakkemecho, 15-4-1900, 1 200 m. References: Exell & Mendonça (1937i: 106); Paiva (1998: 230).

POLYGALA L. (cont.)**schinziana** Chodat

554 Type of *Polygala benguellensis* Gürke (B, holo. †; BM, *COI, *K, W, Z, iso.). Jonkoia, 17-12-1899, 1 150 m. References: Exell & Mendonça (1937i: 104); Paiva (1998: 219).

PRIMULACEAE**ANAGALLIS** L.**filifolia** Engl. & Gilg

211 (B, holo. †; COI, M, W, iso.). Chitanda, Kassinga, 4-10-1899, 1 290 m.

pleurocephala Gilg

828 (B, holo. †; W, iso.). Longa, 18-4-1900, 1 275 m.

TILIACEAE

GREWIA L.

avellana Hiern

289 Type of *Grewia perennans* K.Schum. (B, holo. †; G, iso.). Kubango, Massaca, 19-10-1899, 1 150 m. Reference: Exell & Mendonça (1951g: 218).

535 Type of *Grewia hydrophila* K.Schum. (B, holo. †; *BM, COI, E, G, *K, M, Z, iso.). Kuito (near), 12-12-1899. Reference: Exell & Mendonça (1951g: 218).

falcistipula K.Schum.

353 (B, holo. †; COI, E, G, K, M, S, W, Z, iso.). Kubango (right bank), Kueio, 1-11-1899, 1 300 m. Reference: Exell & Mendonça (1951g: 216).

schinzi K.Schum.

420 Type of *Grewia pinacostigma* K.Schum. (B, holo. †; BM, E, G, W, iso.). Kubango (left bank), Kavanga, 18-11-1899, 1 100 m. Reference: Exell & Mendonça (1951g: 217).

suffruticosa K.Schum.

189 Type of *Grewia brevicaulis* K.Schum. (B, holo. †; *BM, COI, E, G, *K, M, S, Z, iso.). Goudkopje-Kakele, 3-10-1899, 1 210 m. Reference: Exell & Mendonça (1951g: 224).

VERBENACEAE

LIPPIA L.

baumii Gürke var. **baumii**

515 (B, holo. †; *BM, COI, G, K, M, W, iso.). Ungombekike-Kuito, 9-12-1899, 1 200 m. Reference: Verdcourt (1992: 32).

VITACEAE

AMPELOCISSUS Planch.

brunneo-rubra Gilg

509 (B, holo. †; *BM, COI, G, K, W, iso.). Ungombekike, 5-12-1899, 1 200 m. Reference: Exell & Mendonça (1954c: 38).

CISSUS L.

jatrophoides (Welw. ex Baker) Planch.

278 Type of *Cissus chlorantha* Gilg (B, holo. †; G, W, iso.). Kubango, Chirumbu, 14-10-1899, 1 200 m.

CYPHOSTEMMA (Planch) Alston

chloroleucum (Welw. ex Baker) Desc. ex Wild & R.B.Drumm.

361 Type of *Cissus hypargyrea* Gilg (B, holo. †; *BM, COI, G, *K, W, iso.). Kubango (left bank), Kabindere, 2-11-1899, 1 150 m. Reference: Exell & Mendonça (1954c: 60).

fugosioides (Gilg) Desc. ex Wild & R.B.Drumm.

174 (B, holo. †; *BM, COI, G, *K, M, W, iso.). Chitanda (right margin), 27-9-1899, 1 150 m. Reference: Exell & Mendonça (1954c: 58).

violaceo-glandulosum (Gilg) Desc.

270 (B, lecto., designated by Exell & Mendonça (1954c: 56)†; *BM, COI, G, *K, M, S, isolecto.). Kubango, Chirumbu, 11-10-1899, 1 200 m. Note: Exell & Mendonça (1954c) cited the two syntypes but only 270 is referred to as 'type'. This is considered a lectotypification.

276a (B, syn. †). Kubango, Chirumbu, 10-1899, 1 200 m. Reference: Exell & Mendonça (1954c: 56).

XYRIDACEAE

XYRIS L.

congensis Büttner

333 Type of *Xyris baumii* L.A.Nilsson (B, holo.; BM, BR, K, M, iso.). Kuebe and Kubango (confl.), 28-10-1899, 1 150 m.

ACKNOWLEDGEMENTS

The authors would like to thank: Ms Hester Steyn and Ms Sandra Turck, SANBI, for the map; Dr Eurico Martins, for information on collecting localities; Dr David Goyder and Dr Henk Beentje, for information on types.
