## DUNGLISON'S MEDICAL DICTIONARY.

## MEDICAL LEXICON;

a dictionary of medical science,

containing

a concise hxplanation of tile various subjects and terms of pirysiology, pathology, hyGiene, therapeutics, pharmacology, obsitetrics, MEDICAL JURISPRUDENCE, $\& 0 ., \& 0$.

## Witu tile french and other synonymes; notices of climate and of cele brated mineral waters; formule for various officinal, emptRICAL, AND DIETETIC PREPARATIONS, \&0. :

BY ROBLEY DUNGLISON, M.D., Professor of Institutes of Medicine in tbe Jefferson Medical College, Philadeiphia. TWELFTH EDIIION, REVISED.

In one very thick octravo volume, of over nine hundred large double-columned pages, stronghy bound in leather, with raised bands.
Notwithstanding the large size and completeness of this standard work, the price at which it is offered places it within the reach of all.

We welcome it cordially; it is an admirahie work, and indispensable to all iitcrary medical men. Tbe labor which has been bestowed upon it is somethiug prodigious. Tbe work, however, has now been done, and we are happy in the thougbt that no human being will have again to undertake the same gigantic task. Revised and corrected from time to time, Dr. Dunglison's "Medical Lexicon" will last for centuries.-British and Foreign Med. Chimurg. Review.
The fact that this exceilent and learned work has passed through eight editions, and that $\boldsymbol{r}$ ninth is rendered necessary by tbe demands of the public, affords a sufficient evidence of the general appreciation of Dr. Dunglison's labors hy the medical profession in England and America, It is a book which wili be of great service to the student, in teaching him the meaning of all the technical terms used in medicine, and will be of no less use to the practitioner who desires to keep himaself on a level with tbe advance of medical science.-London Medical Times and Gazelte.

In taking leave of our author, we feel compelled to confess that his work bears evidence of almost incredible labor having becn bestowed upon its composition.-Edinburgh Journal of Mcd. Sciences.

A mirade of labor and industry in one who has written abie and voluminous works on nearly every branch of medical science. There could be no moro useful book to the student or practitioner, in the present advancing age, than onc in which would be found, in addition to the ordinary meaning and derivation of medical terms - so many of which are of modern introduction - conclse descriptions of their explanation and employmeut; and ali this and mucb more is contained in the volume before us. It is, therefore, almost as indispensable to the otber icarned professions as to our own; in fact, to all who may have occasion to ascertain the meaning of any word beionging to tbe many branches of medicine. From a careful examination of tbe prescnt cdition, we can rouch for its accuracy, and for its being brought quite up to tbe date of publication; the author states in his preface tbat he has added to it about four thousand terms, which are not to be found in the preceding onc.-Dublin Quarterly Journal of Medicul Sciences.

It is certainiy more complete and comprehensive than any with which wo are nequainted in tho Foglisb language. Few, in fact, could be found better qualifed than Dr. Dunglison for the production of such a work. Learned, industrious, persevering, and accurate, he brings to the task mll the peculiar taients aceessary for its successful performance; while, at the same time, his familiarity with the writings of the ancient and modern "masters of our art," renders him skilful to note tbe exact usage of the several terms of science, and the various modifications which medical terminology has undergone witb the change of theorics or tie progress of improvement.-American Journal of the Medical Sciences.

The most compreinensive and best English Dictionary of medicai terms extant.-Buffulo Medical

OF

## TERMS USED IN MEDICINE

and the collateral sciences.
${ }^{\text {BY }}$
RICHARD D. HOBLYN, A.M. Oxon.

ANEW AMERICAN FROM THE LAST LONDON EDITION.

REVISED, WITH NUMEROUS ADDITIONS,
BY IS A AC HAYS, M.D.,

EDITOR OF THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES.

PHILADEIAPHIA:
BLANCIARD AND LEA. 1856.

Entered, according to the Act of Congress, in the year 1855, by BLANCHARD\&LEA,
in the Clerk's Office of the District Court of the United States for the Eastern District of Pennsylvania.

# MARSHALL HALL, M.D. F.R.S., \&c., 

 THIS LITTLE WORK, UNDERTAKEN AT HIS SUGGESTION,AND

PROMOTRD BY HIS ASSISTANCE,

THE AỤTHOR.

## EDITOR'S PREFACE.

The object of this work is to present to the Student, in a concise form, an explanation of the terms most used in Medicine, and the Sciences connected with it, by giving their etymology and signification. This design the author has so ably executed as to have elicited the highest encomiums of the Medical Press.

Believing that its republication in this country would be useful, the Editor consented to revise and adapt it to the wants of the American practitioner. With this view he has added, not only the terms recently introduced, but also the names of our native medicinal plants,the formulæ for the officinal preparations, \&c.,-and has made the work conforn with the latest edition of the Pharmacopœia of the United States. For the greater convenience of reference, he has also inserted in the body of the work most of the intcresting articles placed by the author in an Appendix; and also the Terms contained in the "Supplementary List" to the last London edition, with the exception of those under the first few letters of the alphabet, which have been appended in a separate list. To accommodate these additions, not only has the sizc of the page been materially enlarged, but also the number of pages has been incrcased by more than one hundred.

The Editor has availed himself of very many recent sources of information in preparing his additions, among which he would especially mention the Expository Lexicon, by Dr. R. G. Mayne; Medical Botany, by the late Dr. R. E. Griffith ; the recent works of Carpenter, Paget, Owen, and Jones and Sievering; and the admirable United States' Dispensatory of Professors Wood and Bache.

The aim of the Editor has been to render the work more complete, not by incorporating in it obsolcte words, but by adding such as modern investigations and doctrines have introduced, so that the student should be afforded an explanation of all the terms at present in use.

The Editor's additions are cnclosed within brackets.
Philadelphia, September, 1855.

## PREFACE

## TO THE SIXTH LONDON EDITION.

The present edition of the Dictionary of Medical Terms bas been enlarged by the addition of sixty pages, including the terms of the most recent introduction, and thus continuing the nomenclature employed in Medicine and the collateral Sciences, to the present day.

2 Subsex Place, Regent's Pare, August 1, 1854.

## DICTIONARY

OF

## MEDICAL TERMS.

## A

A (a). In words of Greek derivation this letter is employed, as a prefix, in $\AA$ privative [or negative] sense, as in $\alpha$-cephalous, headless, $a$-phonia, voicelessness.
$\overline{A A}$ (contracted from $\dot{a} \nu \grave{a}$ ), 'of each ;' an expression used in preseriptions, to denote that an cqual quantity of two or more substances is to be employed.
$\overline{A A A}$. A chemical abbreviation for amalgama, amalgamate.
[ABALENIATION ( $A b$, from; alieno, to estrange). Decay of the whole or part of the hody, also a loss of the senses or mental faculties.]
[ABANGA. The name given by the inhabitants of the Island of St. Thomas to the eatable fruit of a palm tree which they term Ady. This fruit contains a stonc, the kernel of which is much esteemed by the islanders in diseases of the chest. Three or four are given three or four times a day.]
ABAPTISTON, ( $a$, priv.; $\beta a \pi t i\}(\omega$, to plunge). The perforating part of the trephine, which had formerly the figure of a truneated cone, to prevent its sudden plunging into the brain.
[ABBREVIATION (brevis, short). The contraction of a word or passage, made by dropping some of the letters, or by substituting certain marks or characters in their place. Abbreviations are used principally either for celerity or secrecy; and were probably resorted to for both purposes by the older physicians, who made copious use of them. They are chiefly usod in prescriptions. Subjoined is a list of those now einployed :] A. Aa. Aun, of each ingredient.

Abdom. Abdomen, thu belly.

Abs. febr. Absentc febre, in the absence of fever.
Add. Adde et addantur, add, let thero be added; addendus, to be added; addendo, by adding.
Ad def. animi. Ad defectionem animi, to fainting.
Ad 2 vie. Ad duas vices, at twice taking. Ad gr. acid. Ad gratum aeiditatem, to an agrecable sourness.
Ad lib. Ad libitum, at plcasure.
Admov. Admove, apply ; admoveatur or admoveantur, let there be applied.
Ad recid. pree. Ad recidivum præeavendum, to prevent a relapse.
Adst. febrc. Adstante febre, when the fever is on.
Aggred. fcbre. Aggrediente febre, while the fever is coming on,
Altern. hodis. Alternis horis, every other hour.
Aliquant. Aliquantillum, a very little.
Alvo adst. Alvo adstrictâ, when the belly is bound.
Amp. Amplus, large.
Anodyn. Anodynus, anodyne.
Aperl. Apertus, elcar, \&c.
Applic. Applicetur, let there be applied. Aq. bull. Aqua bulliens, boiling water.
[Aq. comm. Aqua communis, common water.]
Aq. dest. Aqua destillata, distilled water. Aq. ferv. Aqua fervens, boiling water. [Aq. fluv. Aqua fluviatilis, river water.] Aq. font. Aqua fontana, spring water. [Aq. marin. Aqua marina, sea water.] [Ay. niv. Aqua nivalis, snow water.] [Aq. pluv. Aqua pluvialis, rain water.] [Aq. pur. Aqua pura, pure water.] [ $B . A$. Balncun arena, a sand bath.] Baln. mariar. Balneum maria, or Balneum maris, a warm water hath.]
Batn. tep. Balneum tepidum, warm bath.
B. V. or Buln. vap. Balncum vaporis, a (Cujusl. Cujuslihet, of any.

זupor bath.]
BB. Bbids. Barbadensis, Barbadoes.
[Bib. Bihe, drink.]
Bis. ind. Bis indies, twico a day.
[Bol. Bolus, a holus.]
Bull. Bulliat, let it hoil.
[But. Butyrum, butter.]
C. Cum, with.]

Cap. Capiat, let him talse.
Corul. Cæruleus, hluc.
Cat. Cataplasma, a cataplasm.
Cath. Catbarticus, cathartic.
C. C. Cucurbitula cruenta, a cuppingglass.
[Cormu cervi. Hartshorn.]
[C. C. U. Cornu cervi usta, burnt hartshorn.]
C. M. Cras mane, to-morrow morning.
C. $N$. Cras nocte, to-morrow night.

Cochleat. Cochleatim, by spoonfuls.
Coch. ampl. Cochleare amplum, a large spoon.
Cochl. infant. Cochleare infantis, a child's spoon.
Cochl. magn. Cochleare magnum, a large spoon [or table spoon].
Cochl. mod. Cochleare modicum, a dessert spoon.
Cochl. med. Cochleare medium, the same as cochlcare modicum.
Cochl. parv. Cocbleare parrum, a small spoon [or tea spoon].
Col. Colatus, strained, [or cola, strain].
Colat. Colatur, let it he strained; colaturx, of or to the strained liquor.
Colent. Colentur, let them be strained.
[Color. Coloretur, let it be colored.]
Comp. Compositus, compounded.
[Con. Concisus, cut.]
[Conf. Confectio, a confection.]
[Cong. Congius, a gallon.]
[Cons. Conserva, a conserve, also, keep thou.]
Cont. rem. Continuentur remedia, let the medicines be continued.
[Cort. Cortex, bark.]
Cop. Copiosus, plentoous.
Coq. Coque, boil; coquantur, let them be boiled.
[Coq. ad med. consumpt. Coque ad medietatis consumptionem, boil to tho consumption of lialf.]
[Cog. in S. A. Coque in sufficiente quantitate aqua, boil in sufficient quantity of water.]
Crast. Crastinus, for to-morrow.
C. V. Cras vespere, to-morrow evening.
[C.M.S. Cras inane suinendus, to be taken to-luorrow morning.]
$[C . N$. Cras nocte, to-morrow niglit.] Cncurb, crutent. See C. C.
Cuj. Cujus, of wbich.

Cyath. thea. Cyatho tbex, in a cup of tea.
Deaur. pil. Deaurentur pilulæ, let the pills be gilt.
Deb. 8piss. Dehita spissitudo, a proper consistence.
[Dec. Decanta, decant.]
Dccub. Decubitus, of lying down.
Ded.ind. De die in diem, from day to day.
[Deglut. Deglutiatur, may he or let he swallowed.]
Dej alvi. Dejectiones alvi, stools.
[Dep. Depuratus, purified.]
Det. Detur, let it he given.
[D. in 2 plo. Detur in duplo, let trice as much be giren.]
[D. in $p$.aq. Dividatur in partes æquales, let it be divided in equal parts.]
[D. Dosis, a dose.]
Dext. lat. Dextra lateralis, right side.
Dieb. alt. Diebus alternis, every other day.
Dieb. tert. Dicbus tertiis, every third day.
[Dig. Digeratur, let it be digested.]
[Dil. Dilutus, dilue, diluted, dilute.]
Diluc. Diluculo, at day-break.
[Dim. Dimidius, one-half.]
Dir.prop. Directionc propriâ, with a proper direction.
[Dist. Distalla, or distillata, distil or diztilled.]
Diuturn. Diuturnus, long-continned.
[Div. Divide, divide.]
Donec. alv. bis dcj. Donec alvus his dejiciatur, until two stools bave been obtained.]
Donec alv. sol. fuer. Donec alrus soluta fucrit, until a stool bas been obtained.
[Drach. Drachma, a dracbm.]
[Ed. Edulcora, sweeten.]
Efferv. Effervescentia, efferrescence.
Ejusd. Ejusdem, of the same.
Elcct. Electuarium, electuary.
Emp. Emplastrun, a plaster.
Encm. Enema, a clyster; enemata, clyslers.
Ex. Tel cxtr. Extractum, extract.
[Exhib. Exhibe, give, or exbiheatur, let it be giren.]
Ext. sup. alut. Exteude super alutam, spread upon leather.
$F$.ft. Fiat, let a be madc.
[F.S.A. Fiat sceundum artem, let it be made aceording to the rules of art.]
[F.L. A. Fiat lege artem, let it be made by the rules of art.]
[F, M. Fiat mistura, let a mixture be unade.]
[F.S. A. R. Fiat sceunde artis regulas, let it bo made according to the rules of art.]
F.h. Fiat haustus, let a draught be made. F. pil. aij. Fac pilulas dnodecim, make

Fcb. clu. Fobre durante, during the ferer.

Fem. intern. Femoribus internis, to the iuner part of the thighs.
F. venas. or F. V.S. Fiat veuxsectio, bleed.

## [Filt. Filtra, filter.

Fist. cum. Fistula armata, a clyster pipe and bladder fit for use.
[Fler. Flores, flowers.]
Fl. Fluidus, liquid; also, by measure.
[Fol. Folimm, a leaf, or folia, leaves.]
Fontic. Fonticulus, an issue.
Fot. Fotus, a fomentation.
[Fruct. Fruetus, fruit.]
[Frust. Frustillatim, in small pieees.]
Goig. Gargarisma, a gargle.
Gel. quâv. Gelatinấ quâvis, in any lrind of jelly.
G. G. G. Gummi gutta Gambix, gamboge.

Gr. Granum, $几$ grain; grana, grains.
Gtt. Gutta, a drop; gutto, drops.
[Gum. Gummi, gum.]
Gutt. quibusd. Guttis quibusdam, with a few drops.
[Guttat. Guttatim, by drops.]
Far. pil. sum. iij. Harum pilularum sumantur tres, let three of these pills be taken.
[Hanst. Haustus, a draught.
[Hl. Herba, the plant.]
H. d. or hor. decub. Horâ deenbitus, at guing to bed.
Heldom. Hebdomada, a week.
Hestern. Hesternus, of yesterday.
Hirud. Hirudo, a leeeh; hirudines, leeehes.
H. S. or hor. som. Horâ somni, just before going to sleep; or, on retiring to rest.
Hor. "un. spatio. Horre unius spatio, at the end of an hour.
Hor. interm. Horis intermediis, at the intermediato hours between what has been ordered at stated times.
[Inc. Incide, eut.]
Ind. Indies, from day to day, or daily.
In pulm. In pulmento, in gruel.
Inf. Infusum, infusion; [infunde, pour in.]
Inj. enem. Injieiatur enema, let a elyster be given.
Inject. Injeetio, an injeetion.
[Jul. Julepus, a julep.]
Lat. dol. Lateri dolenti, to the side affeeted.
lb. Libra, a pound weight, or wine piut: when preeeded ly Arabie ligures, avoirdupois weight is meant; but wheu sueceeded by Romna nuruerals, troy weight, or pint measures.
[Lim. Limones, lenons.]
[Liq. Tiquor, liquor.]
Lot. Lotio, lotion.
M. Misce, mix ; mensuri, by measure ; manipulus, a haudful; [miniuus, a uinim.]
[Mrae. Mncera, macerate.]
[./ran. Manipulus, a liandful.]
Mane pr. Mane primo, very early in the
[1F. $P$. Massn pilularum, a pil] mass.]
[1/. R. Mistura, a mixture.]
[Mciss. Massa, a mass.]
Mediet. Medietas, half.
Medioc. Merliocris, middle-sized.
[.Mic. pren. Mica panis, crumb of bread.]
Din. Minimum, the 60th part of a draehm measure.
Mist. Mistura, a mixture.
Mitt. Mitte, send; mittatur, or mittantur, let there be sent.
Mritt. sang. ad. $\overline{3} x i j$. sult. Mittatur sanguinem ad uncias duodecius saltem, take away at least 12 ounces of blood.
Mod. pras. Modo preseripto, in the manner direeted.
[More dict. More dicto, iu the manner direeted.]
Mor. sol. More solito, in the usual way.
[Muc. Mueilago, mucilage.]
N. Nocte, at night.

Narthec. Narthecium, a gallipot.
[No. Numero, in number.]
N. M. Nux mosehata, a nutmeg.
O. Oetarius, a pint.
[Ol. Oleun, oil.]
Ol. limis.i. Oleum lini sine igne, colddrawn linseed oil.
Omm. alt. hom: Omnibus alternis horis, every other hour.
Omn. hor. Omni horâ, every hour.
Omm. bid. Omni biduo, every two days.
Omm. bih. Omni bihorio, every two hours.
Omm. man. Ounni maue, every morning.
Omn. noct. Ounni nocte, every night.
Omn. quadr. hor. Omni quadrante hora, every quarter of an hour.
O. O. O. Oleum oliva optimum, best olive oil.
[Ov. Ovum, an egg.]
[Ox. Oxymel.]
Oz. The ounce avoirdupois, or eommon weight, as distinguished from that preseribed by physieians in their orders.
$P$. Pulvis, powder ; pondere, by weight ; pilnlir, pill.
$P . A$. Partes aquales, equal parts.
Ih. D. Pharmacopocia Dublinensis.
Ph. E. Plarmacopoia Erlinensis.
Ph. I. Phanmacoposia Jondinensis.
Th. U. S. Pharuncopoia of the United States.
Paracent. abd. P:uracentesis abdominis, tapping.
Part. "df. Parten affectam, the part affected.
Part. dolent. Parten dolentem, the part in pailu.
Pari. vic. Purtitis vieibus, to be given in divided doses, instead of all at onee.
[Post. P'rstillmm, (dim of pasfa, a lozenge) a lit tlo lump, $n$ pustil.]
Per. ops. cmet. Pernctâ pperationo eme-
tici, when the operation of the emetic is finished.
Per salt. - Per saltum, by leaps, i.c., from an artery.
[Pil. Pilula, a pill ; or pilulæ, pills.]
Plen. riv. Pleno rivo, in a full stream.
[Pocul. Poculum, a cup.]
[Pocil. Pocillum, a little cup.]
Post sing. sed. liq. Post singulas sedes liquidas, after cvery loose stool.
[Pot. Potio, a potion.]
Ppt. vel prep. Preparata, prepared.
P.r.n. Pro re nata, aceording as circumstanecs may requiro.
P. rat. at. Pro ratione etatis, according to the age of the patient.
Pro pot. com. vel pro pot. ord. Pro potu eommuni, or ordinario, for a common drink.
Prox. luc. Proximâ luce, the day before.
Pug. Pugillus, a gripe between the fiuger and thumb; lif. a little fist.
[Pulp. Pulpa, the pulp.]
[Pulv. Pulvis, powder.]
[Q.l. Quantum lubet, as much as you please.]
Q.p. Quantum placet, as much as you please.
Q. Q. $H$. vel quiâd. quart. hor. Quâque quartâ horâ, every four hours.
Q.8. Quantum sufficiat, as much as is sufficient.
Quadrihor. Quadrihorio, every four hours. Quadrupl. Quadruplicato, four times as much.
Quamp. Quamprimum, immediately.
Quaq. vel quisq. Quâquo, or quisquc, every one.
Quor. Quorum, of which.
[Quotidie, daily.]
[Q. V. Quantum volueris, as much as you wish.]
$R$. Recipe, take; hut for this the old authors, and the French to this day, use the sign 2 , being the old heathen invocation to Jupiter, seeking his blessing upon the formula; equivalent to the ushal invocation of the pocts, and of Mahommedan authors; or the Laus Deo of bookkecpers and merchants' elerks. Dr. Paris observes, that the astrologieal symbol is at present so disguised by the addition of the down stroke, which eonverts it into R, that, were it not for its cloven foot, we might be led to question the fuct of its superstitious origin.
[Rad. Radix, ront.]
[Ras. Rasura, shavings.]
[Rect. Rectificatus, rectilied.]
Red. in pulv. liedactus in pulverem, pordered.
licdig. in pulv. Redigatur in pulverem, let it be reduced into powder.

Key. hep. Rerrin hepatis, region of the liper. Rey. wub. Regio umbilici, region of the navel.
Repet. Repetatur, or repetantur, let it, or them, be repeated.
S. A. Secundum artem, aecording to art.
[Saceh. Saceharum, sugar.]
Scap. Scapula, the shoulder-blade.
[Sect. Seatula, a box.]
Scrob. cord. Scrobiculus eordis, the pit of the stomach.
Sed. Sedes, a stool.
[Scm. Scmen, seed.]
Scmidr: Scmidrachma, half a drachm.
Semih. Semibora, half an bour.
Sept. Septimana, a week.
[Serv. Serva, keep, or preserve.]
Sesunc. Sesuncia, an ounce and a balf.
Sesquih. Sesquihora, half an hour.
Setac. Setaccum, a seton; also a sieve.
Seq. luce. Sequenti luce, the following day.
Si n. val. Si non valeat, if it does not answer.
Si op. sit. Si opus sit, if there be occasion.
Si vir perm. Si vires permittant, if the strength will bear it.
Sign n. pr. Signetur nomine proprio, write upon it the usual name, not the trade name.
Signat. Signatura, a label.
Sing. Singulorum, of each.
S. S.S. Stratum super stratum, layer upon layer.
Sol. Solutio, solution.
[Solv. Solve, dissolve.]
S. O.S. vel si op. bit. Si opus sit, if there be occasion.
[Spt. Spiritus, spirit.]
[S\%, Squama, scale.]
Ss. Scunis, a balf.
S. Stet, let it stand; stent, let them stand.

Sub fin. ceet. Sub fincu coctionis, when the boiling is uearly finished.
Sub-8ulph. Sub-sulphas, a sub-sulphate.
Subtcp. Subtepidns, lukewarm.
Succ. Sncens, juice
Sum. Sumo, to take; sumendus, to he taken; [sumitates, the tops.]
Sum. ful. Sumat talem, let the patient take one like this.
S. I. Spiritus rinosus, ardent spirit of any strength.
S. I. R. Spiritus vinosus rectificatus. spirit of wine.
S. 1. T. Spiritus vinosns tenuis, proof spirit, or half and half spirit of wine and water.
[Syr. Syrupus, syrup.]
[Tubel. Tubella (dim. of tabula, a table) a lozenge.]
Temp. dext. Tempori dextro, to the right temple.
T. O. Tinetura opii, tincture of opium;
generally confounded with laudanum, which is, properly, the wine of opilum.
T. O. C. Tinctura opii camphorata, paregoric elisir.
$T r$. vel. linct.. Tinctura, tineture.
[Trit. Tritura, triturate.]
Truch. Trochiscus, a troch or lozenge.
Ult. prozer. Cltimo praseriptus, the last ordered.
Umb. Umbilicus, the navel.
Ung. Unguentum, ointment.
Uat. ut liq. anim. Usque ut liquerit animus, until fainting is produced.
Utend. Utendus, to be used.
Vent. Ventriculus, the stomach.
V. O.S. Vitello ovi solutus, dissolved in the yolk of an egg.
Tom. urg. Vomitione urgente, when the vomiting begins.
$V$ S. Venæsectio, bleeding.
$Z$ z. Zingiber, ginger.
[ m . Minimum, a minim, the 60th part of a fl. drachm.]
[Gr. Grana, a grain.]
Э. Scrupulum, a seruple, equal to 20 grains troy.
5. Drachma, a drachm, equal to three scruples, or, in liquids, the 8th part of an ounce measure.
3. Uncia, an ounce troy: or, in liquids, the 16 th part of a wine pint.
[lb. Lihra, a pound.]
[88. Semissis, half.]
[ $j$., one ; $i j$., two ; ${ }^{j i j \text {., three, \&e.] }}$
In labelling bottles, boxes, drawers, or pots in a shop, care should be taken that the name of the drug be left predominant, while a single letter is sufficient for denoting the technical terms; as radix, pulvis, pilulæ, eompositus, volatilus, de. Simple powders also speak for themselves to the eye, and surely do not require the addition of pulvis, as is usually done.
P. ipceacuan. e. not Pulvis ipec. comp.

Rhæi radix
Th. Andromachi
T. cantharidis

Vulerianor $r$.
U. Hydrarg. nitr. Pulvis rhæi r. Theriaen Andr. Tinct. canth. Valer. radix. Unguent. hydr. n. [The following abbreviations employed in botany may be introduced here :
[Cul. Calix.
[Corol. Corolla.
[Perl. Peduncle.
[Per. Pericarp.
[Pet. Petiole.
[Rec. Recepticle.
Stam. Stanen.
[Sip. Stipule.
[** signifies that the plant is an annmal one.
$\left\{\begin{array}{l} \\ 2\end{array}\right.$ signifies that the plant is a biennial one.
[. 4 simnifies that the plant is a pereunial one.] 2

ABDO'MEN (abdo, to hide ; or ablo and omentum). The belly, or the cavity situated hetween the thorax and the pelvis; so called from its containing the intestines, $\& 0$.

ABDOMINAL REGIONS. The abdomen is distinguished into three transverse zones, - an upper, a middle, and a lower. Each zone is divided, by perpendicular lines, into three compartments or regions; a middle, and two lateral. They are thus named :-

1. Epigastric Region. The middleregion of the upper zone, immediately over the small end of the stomach. The two lateral regions of this zone, situated under tho cartilages of the ribs, are called the hypochondrict.
2. Umbilical Region. The middle region of the middle zone, immedintely over the umbilicus. The two lateral regions of this 7.one, situated over the loins, are called tho lumbar.
3. Fypogastric Region. The middle region of the lowest zone, situated below the stomach. The two lateral regions of this zone, situated over the ilia, aro called the iliac.
4. Inguinal Region. By this term is denoted the vicinity of Poupart's ligament.
[ABDOMINAL (abdomen, the belly) belonging to the abdomen.]

ABDOMINA'LES (abdomen, the belly). An order of Fishes which have fins placed on the abdomen, as the salmon, the trout, \& $c$.
[ABDOMINOSCOPY (abdomen, the belly ; ткотвa, to observe). Examiuation of tho abdomen by percussion, inspection, measurement and manual examination, with a view of ascertaining the existence of disease there.]

ABDUC'OR (abdueo, to draw froms). Abducent. A muscle whose office is to draw one part of the body away from another. Thus, the rectus externus is called abducfor oculi, from the action of this musele in drawing the cye away from the nose. Its antagonist is culled abductor.

ABELMOSCHUS (an Arabic term, signifying muskel secds). Grana moschuta; the musky seeds of a species of Hibiseus. A powder, called poudre de Chypme is prepared from these seeds in the East, fur thavouring coffec.
[Abclmorchus esculcntus, or Hibiscus csculcutus. The systematio name for the olkra, bendee, or gombo, the finit of which abounds in mucliage, and is nsed in diarrhaea and dysentery, and also as a vege-
table.]

ABERRATION (nberro, to wander
from). A deviation from the natural state, as applied to the uind. Also, a deviation of the rays of light from the true focus of rellection or refraction, in certain lenses.

ABIES (abeo, quod in cœluun longè abeat). The Fir; a genus of plants of the order Coniferce, abounding in resin.

1. Abietis resina. L. Resin of the Spruce

Fir ; formerly called thus or frankincense; spontancous exudation from the tree. 2. Pix abietina. L. Pix Burgundica. [3. Pix Camadensis, Canada pitch.]
4. Pick liquida. Tar. [q. v.]
5. Pix nigra. Black pitch. [q. จ.]
6. Tar-water. A solution of tar in water, having a sbarp empyreumatic taste.
7. Abietic acid. An acid lately discovered in the resin of trees of the genus Abics. The old preparation, termed acidnm abietis, is the peculiar acid liquor, yielded along with the cssential oil, in distillation of the first branches or fruit of some species of Abies.
[ABIRRITATION (ab, priv.; irritatio, irritation). Literally, absence of irritation. This term was used by Broussais andis school to denote a diminution of the vital phenomena in the differeut tissucs.].

ABLACTATION ( $\alpha b$, from; lacto, to give suck). This term denotes the cessation of the period of suckling, as regards the mother. Tho same period, with regard to the iufant, is termed weaning.
[ABLATION (aufero, to remore). Formerly employed in a very extensivo signification, and expressed the subtraction of whatever was in excess, in the body; the reduction of regimen; and the diminution of the mass of blood, by bleeding, \&c. Its meaning has been much restricted in modern times, and it is now principally used in surgery, as a generic tcrm, expressive of all cases whero a part is taken away. It includes two species, Amputation and Extirpation.]
ABLEPSLA ( $\alpha$, priv.; $\beta \lambda$ ह́n $\omega$, to sce). Blindness; privation of sight.

ABLUENTS (ablun, to wash away).
Medicines formerly supposed to cleanso the blood, by washiner away impuritics.

ABNORMAL ( $a b$, from ; noma, a rule).
Irregular; that which deviates from the usual order. Tho term anormal is also employed to denote any thing that is without rovle or order. The terms are nearly Eynonymous.

ABOMA'SUM (ab. dim. ; numsm, the paunch). The fontly stomach of the Ruminamtio. It is in this stomach of calves and lambes that remet is formel.

ABORTION (nborine, to die ; to be born hefore the time). Alisparringe; the prema-
ture expulsion of the foetus from the uterins.
[ABORTIVES. Medicines supposed to act in a special manner on the gravid uterus, causing the expulsion of its contents.]

ABRANCIIIA ( $a$, priv.; $\beta$ pá $\gamma \chi \not a$, gills.) Animals which have uo gills, or apparent external organs of respiration, but respire by the entire surface of the skin, or by internal cavities; as tho carthworm, the leech, \&c.

ABRASION (abrado, to shave off). The act of wearing or rubbing off, as the mechanical removal of the epidermis. Also, the matters abraded by the friction of surfaces of bodies.

ABRUS PRECATORIUS. Jamaica or Wild Liquorice, a leguminous plant. Its polished and parti-colored seeds, called jumble beads, were formerly employed for rosaries, necklaces, \&c:

ABSCESS (abscedo, to separate). Apostema. An imposthume, gathering, or boil; a collcetion of pus formed or deposited in some tissue or organ. It is so named from the scparation of the sides of the cavity which is produced. Where the skin is nost thin, and fluctnation most palpable, the abcess is said to point, or to make its point.
[ABSCISSION (abscidere, to cut off).
The cutting a way of a part, more especially of a soft part. This is the only signification in which it is at present emplored, though formerly used in several others.]
[ABSINTHIN. The resin of the Absinthium.]

ABSINTHIUM ( $\alpha$ prir.; \&ivoos, plensurc; so named from its unpleasant taste). Common Wormrood; a species of Artemisia, yieldiug a bitter resin, termed absinthin. Infused in alc, it forms the beverage known by the name of parl. Its powers as a vermifuge bave guncel for it the name wormeood.
[ABSOLUTE (absolvo, to finish). Free from anything clse; pure. Absolute alcohol, alcohol free from water.]

ABSORBENTS (absorbeo, to suck up). Two distinct scts of vessels, which absorb and convey flnids to the thoracie duct. Theso are the lacteals, which take np the chyle from the alimentary c:nal ; and the lymphatics, which pervade almost every part of the body, which they take up in the form of lymph.
[lu Materia Medica, this term las been applied:-1st. To those articles which, when internally administered, have the property of chemically combining with, and thins, nemtralizing the acid secretions preduced in certuin morbid conditions of
the digestive canal ; and 2d, to certain external applications made to ulcers, gangrene, de., for the purposo of arresting the progress of these diseases, and also to prevent the patient or his attendants from suffering from the fetid discharges.]

ABSORPTION (absorbeo, to suek up). The function of the absorbents, and, it is said, of the capillaries and veins.

1. Interstitial Absorption. The function by which the particles of the tissue which fill the meshes of the capillary net-work are removed, as in the atrophy of the tail of the tadpole, and of the pupillary membrane in the foetus, and in the development of cells in bones.
2. Cutaneous Absorption. A function of tbe skin, by which certain preparations, rubbed into the skin, have the same action as when given internally, only in a less degree. Thus, mercury, applied in this manner, cures syphilis, and exeites salivation; tartrate of antimony is said to occasion vomiting; and arsenic produces poisonous effects.
3. Absorption, in Chemistry. This term denotes the passage of a gas or vapor into a liquid or solid substance; or that of a liquid into the pores of a solid. Thus, water ahsorbs carbonic acid gas, lime absorbs water, \&c.
[ABSTEMIOUS (abs, from; tenetum, winc). Strictly abstinence from wine, hut applied to moderation in diet.]

ABSTERGENTS (abstergeo, to cleanse). Abstersives. Lotions, or other applieations for cleansing sores. Applied to suppurating surfaces, they are called detersives.

ABSTINENCE (abstineo, to abstain). Cura famis. Excessive or total privation of food, [also sparing use of food, liquors, \&ce.] ABSTRACTION (abstraho, to dravy nway). Tbe process of distilling a liquid from any substance. See Oohobation.
[ABUTA. A name for the plant Pareira brava.]
[ABUTILON. The Seda abutilon, yellow mallow.]
[ABVACUATION. An old term denoting a large evacuation of a peccant fluid
[ABSUS. Cassia Absur. A small species of Egyptian lotus, terined by the natives chimchin. The seeds, powdered and mixed with an equal quantity of sugar, are used in Egypt in the commencement of purulent ophthalmia, as a dry.collyrium.]
$\mathrm{ACA}^{\prime} \mathrm{CIA}$ (íкáそう, to sharpen). A genus of epiny trees and sbrubs, of the order
Legnminnec.

1. Acacin Catechw. The Khair tree, which yields the Caterhin, or Terra Japonica.
2. Aeacia I'ara. The Egyptian Thom,
whicls Jiclds the Gum Arabic. This substance is produced by other specics of this genus, as A. Arabica and Scnegalensio. [See Gummi Arabicum.]
3. Ahucilago Accicice. Mucilage of Gum Arabic; a preparation consisting of one part of gum, and two of water.
4. [Acacia Arabica Gummi. A plarmaceutieal name for Gum Arabic.]
[ACACUS ( a priv.; како̀s, evil). Harmless; formerly applied to diseases which did not endanger life.]
[ACAJOU. Anacardium Occidentale, the eashew nut.]
 nettles; a class of gelatinous zoophytes found in the waters of the occan, and so named from the sensation which they pro. duce when touched.
[ACALYPHA. A genus of plants of the order Euphorbiacea.
[1. Acalypha Betulina. Birch-leaved Acalypha. A native of'India. The leaves hare an aromatic taste and smell, and they are much esteemed by the Hindoo practitioners as a stomachic in dyspepsia and cholera, and for their alterative properties. The dose is half a teacupful of the infusion twice a day.
[2. A. Indica. Iudian Acalypha. Tbis plant is much used by the Mindoos as an anthelmintic; the powder of the dried leaves or an infusion of them being given for the purpose.
[3. A. Virginica. Mercmry weed. This species found in most parts of tbe United States, is said to be useful as an expecto. rant and diuretic.]
[ACAMPSIA ( $a$, priv., канжтш, to bend). An inflexible joint. Sce Anahylosis.]
ACANTHA (äкaviva, a thoru). A spine or prickle of a plant. A prickly fin of a fish. A spinous process of a vertehra. The term has been used for the spina dorsi Hence-
5. Acantha-bolus ( $\beta$ aid $\lambda \omega$, to strike) Volsella. An instrument for extracting splinters of lones, \&c., from wounds, tha pharynx, \&e.
6. Acantho-pterygii ( $\pi \tau f \rho \rho \xi \xi$, a fin). Spi-nous-finned fishes, or fishes whoso backfins are bony and prickly.

ACAPDIAC ( $\alpha$, priv., kapoia, the heart). Without a heart.
A'CARUS, ("xkapl, a very minute animalcule, from $a$, priv., and keipe, to cut; a kind of animal atom). A mite found in cheese; a tick, said to bo found in the pustules of the itch.
[AUA'TALEPSY ( $a$, priv.; катадад6arw,
to appreliend). Uncertainty in diagnosis.] ACATADOSIS (a, priv., caritoors, deglutition). An inability to swallow liquids;
synonymous with hydrophobia; also difliculty in swallowing.
[ACATASTATIC (a, priv.; кu $\frac{\text { ssrnur, to }}{}$ determine). An epithet given to fevers, the paroxysins and suecession of symptoms of which are irregular.]
[ACATSJAVALLI. An astringent and aromatie Malahar plant.]
ACAULIS ( $a$, priv. ; kau入òs, a cahhagestalk). Acaulescent. Stemless; a term applied to certain plants, of which the stem is so short as to he almost reduced to nothing. The terin subcanlescent would be preferable in these eases.

ACAWERIA. The Singalese designation of the root of the Ophioxylon serpentinum; a supposed antidote to the venoun of serpents.

ACCELERATION (accelero, to hasten).
Inereased rapidity, as of the pulse, of the respiration, \&e.

ACCELERATOR (accelero, to hasten). [A hastener forward.] A muscle which contracts to expel or aceelerate the passage of the urine.
[ACCESS (accedo, to approach). Paroxysm.]

ACCESSION (accedo, to approneh). The approach or commencement of the pyrexial period, in fevers [or of the onset of diseases].

ACCESSORII WILLISII ( accedo, to be added to). The superior vespiratory nerves; a pair arising from the spinal marrow, and joining the par vagun..
[ACCESSORY (accedo, to he added to). That which has a dependence on, or is secondary to, some other. In anatomy, it is applied to ecrtain museles, ligaments, nerves, \&e., which are joined to other similar parts, and assist in their functions. In physiology, this term is given to certain phenomena which result from others which are primary or essential; such are the effects of tho contraction of the diaphragus, in respiration, upon the ahdominal visecra, the eirculation, \&e. In pathology, it is employed to designate certuin phenomena which follow others without heing a neeessary consequence of them; as the swelling in the arm-pit, resulting from whitlow, or injury of the hand, de. Finally, it is applied to several seienees, more or less intimately conneeted with medieine, hut whieh hold a seeondary rank, as respeets the impurtanee of a knowledgo of them to the physician.]
[ACCIDENT (accido, to happen). Accidens. Every fortuitons and unforseen occurrenee or symptom.]
[ACCIDENTAL (accido, to happen). That which liappens nexexectedly.]

supervene during a disease, but which are not necessarily connected with it. Sce Epiphenomena.]
[Aceidental Tissue. A structure developed by a morlid action.]

ACCIDENTAl, COLOURS. A serics of optical phenomena, so named hy Buffon, and now known hy the name of Ocular Spectra. If the eye he steadily direeted, for some time, to a white wafer upon a darlo ground, and be then turned aside, a welldefined iunge of the mafer will be perceived, with the colors reversed; the wafer will appear dark, the ground mhite. This new appearance is termed the aceidental color, or ocular spectrum. By using differeutly colored wafers, we ohtain the following results:

$$
\begin{aligned}
& \text { Culor of } \|^{\prime} \text { afer. Color of Spectra. } \\
& \text { Black ................. White. } \\
& \text { Red............... Bluish Green. } \\
& \text { Orange............ Blue. } \\
& \text { Iellow .............. } \begin{array}{l}
\text { Indigo } \\
\text { Green............... }
\end{array} \text { \{iolet, mith } \\
& \text { a little Red. } \\
& \text { Blue .................. Orange Red. } \\
& \text { Indigo............. Orange Yellow. } \\
& \text { Violet ............... Bluish Green. }
\end{aligned}
$$

Darwin elasses the Spectra under the two heads of direet and reverse; the former depending upon the permanence of the impression, the latter upon exhaustion. ACCIPITRES (aceipio, to take). Papreious hirds; hirds of prey: known hy their hooked heak and talons. They are the diurnal and noeturnal.
ACCLIMATION. [ACCLIMATED.]
Naturalization to a foreign or mnnsual elimate: a term applied to animals or plants.
[ACCLINAL (acelium, to bend upwards). Leaning or bending upwards.]

ACCOUCHEMENT (accowelier, to he hrought to bed). Parturition; a woman's delivery; the expulsion of the fotus from the uterus.
[ACCOUCIIEUR (accoucher, to deliver). An ohstetrician.]
ACCRETION (aceresco, to grom to). The addition of new parts, as in the formation of a crystal by the position of nem parts around a central nueleus. The nrganie and inorganie kingdoms are distinguished by their mode of inerense; the former increasing by infus-susception and alimentation, the latter hy accretion withont alimentation.
[ACCUMBENTT. Lying against. any thing, as the edges of the cotyledons against the radiele in some cruciferous plants.]
-ACEOUS. Terminations in -freors
membranaceons，resembling membrane； whereas terminations in－ous denote the substance itself，as memhranous，hclonging to membrane．

ACEPHALA（ $\pi$ ，priv．；$\kappa є \phi a \lambda \grave{\eta}$ ，the head）． Headless animals；a class of animals hav－ ing no head，hut mercly a mouth concealed within the folds of their mantle，as the oyster．
［ACEPHALOBRACHUS（ $\alpha$ ，priv．；кц－ $\phi a \lambda \eta$ ，head，$\beta_{\rho a \chi}(\omega \nu$ ，arm）．A monster witbout head or arms．］
［ACEPHALOCARDIUS（ $a$ ，priv．；к $\varepsilon$－ фа入 $\eta$ ，the head ；карঠta，the heart）．A mon－ ster without head or heart．］
［ACEPHALOCHEIRUS（ $a$ ，priv．；кєф $a-$ $\lambda \eta$ ，head；$\chi$ ¿cp，hand）．A monster without head or hands．］
ACE PHALOCYST（ $a$ ，priv．；кєфа入ウ），the head；кv́arıs，a bladder）．The hydatid，or headless hladder－worm．See Hyclatis．
［ACEPHALOGASTER（ $a$ ，priv．；кє $\varnothing$ a $\lambda \eta$ ， hearl；yaбтnp，stomach）．Monsters devoid of head，chest，and abdomen；or having an abdomen without head or chest．］
［ACEPIIALOPODUS（ $\alpha$ ，priv．；кะ $\varepsilon \phi a \lambda \eta$ ， the head；rovs，the foot．）A monster foetus without head or feet．］
［ACEPHALORACHIUS（ $\alpha$, priv．； кє申u入 $n$ ，the head ；prixts，the spinc．）A mon－ ster foetus without head or spine．］
［ACEPHALOSTOMA（ $\alpha$ ，priv．；кєф $\alpha \lambda \eta$ ， head；отјца，mouth）．An acephalous foetus，having at its upper part an opening resembling a mouth．］
［ACEPIIALOTHORUS（ $a$, priv．；$\kappa \varepsilon \phi a \lambda \eta$ ， head；and $\theta \omega p a \xi$ ，chest）．Monsters devoid of head and chest．］
［ACEPHALUS（ $\alpha$ ，priv．；кєфа入ì，tho head）．Without a head．］
［ACER SACCHARINUM．The sugar maple．］
［ACERATE．A combination of aceric acid with a salifiable basis．］
［ACERBITY（acer，sharp）．Sourness with harshness．］
［ACERIC ACID．A peculiar acid said to cxist in the sap of the Accr cannpestre， or common Maple，in the state of accrate of lime．］
［ACEROSE．Sharp－pointed，tapering to a fine point，as the leaves of juniper．］
ACERV ULUS（din．of accrvus，a heap）． Literally，a little heap；a term applied by Soeminering to a small quadrilatoral mass of concretious collected under tho tela ehoroidea，near the posterior cominissure of the brain．

ACESCENT（acesco，to hecoino sour）． A terin applied to substances which be－ come sourspontaneunsly，as vegetable and aniunal juices，or infusions．

ACETABULUM（acctuin，vincgar）．Lit－
crally，a vincgar－eruct．Hence it denotes the cup－like cavity of the os innominatum， which reccives the head of the os femoris． Also，a Roman measure containing two ounces and a half．

ACETAL．A compound of aldehyde with ether；formed by the action of platinum hlack on the vapor of alcohol with the presence of oxygen．It is a colorless，very fluid liquid，having a peculiar odour，sug－ gesting that of Hungary wines．
［ACETATE．A combination of acetic acid with a salifiable basis．］
［ACETIC ACID．The characteristio product of acctous fermentation．See Acctum．］
［ACETOMETER（acctum，vinegar ； $\mu \varepsilon \tau p o \nu$ ，a measure）．An instrument for ascertaining the strength of vinegar．］
［ACETONE．The new chemical name for pyro－acetic spirit；a limpid，colorless liquid，prepared hy distilling a mixture of two parts of crystallized acetate of lead and one part of quicklime in a salt－glaze jar．It is highly inflammable，and burns with a white flame．］
［ACETOSA（aceo，to he sour）．Specific name for the common sorrel，Rumex ace－ tosa．］
ACETO＇SE FOLIA（acetum，vinegar）． Common Sorrel leaves；the leaves of the Rumex Acetora．Their qualities depend on the presence of binoxulate of potassa．
ACE＇TUM（acer，sour）．Vinegar．The varietics of vinegar known in commerce are threo：winc vinegar，malt vinegar，and sugar yinegar．The strongest malt vinegar is termed mroof vinegar，and is called by the manufacturer No．24；it is estimated to contain $4 \cdot 73$ per cent．of real acetic acid． These vinegars are formed by fermentation．
［In the United States，the vinegar of cominerco is for the most part prepared from cider．Within a few years，bowever， a considerable amount has also been made hy tho Gcrman method．］

1．Acidum aceticum．The sour princi－ plo which exists in vinegar．It occurs， ready formed，in several products of the vegetable kingdom，and is generated dur－ ing the spontancous fcrmentation of many vegetahle and animal juices．By real acetic acid is meant such an neid as occurs in $\Omega$ dry acetnte ；it cannot exist in an uncom－ bined statc．
2．Acidum aceticum dilutum．Common distilled vinegar ；dilute acetie acid，with very minute portions of uncombined muci－ lage and extractive．

3．Acidum accticum fartins．This va－ ricty is obtained by distillation from rood， gencrally that of oak coppice deprived of its bark，and is then termed pyroligneous
acid; by decomposing the acetates by sulpburic acid, and it is then termed radical vinegar ; and when mixed with camphor and essential oils, it is called "Henry's Arouratic lissence of Vinegar," and Marseilles or Thieves' Vinegar, or Vinaigre des quatre volcurs. See Glacial Acid.
4. Acetas. An acetate; a salt formed by the union of aectic acid with an alkaline, earthy, or metallie base.
5. Acetis. An reetite; a term formerly applied to those salts which are now called acetates.
6. Acetica. Preparations of vinegar, consisting of vegetahle principles dissolved in vinegar, as that of colchicum, that of squill.
7. Aceto-meter ( $\mu$ и́тpov, a measure). An instrument for estimating the strength of vinegars.
8. Acetyl. A hypothetical radical, produced hy the ahstraction of two atoms of oxygen from ethyl, by oxidating processes. It pervades a series of compounds, including acetic acid, from which it derives its name.

ACHENIUM ( $a$, priv. ; $\chi a i v \omega$, to open). An indeliscent fruit; it is one-celled, oneseeded, superior, hard, and dry, with the integuments of the secd distinct from it. It occurs in the Lahiatro and the Boraginer.
[ACHEIRTIS ( $a$, priv.; $\chi^{\text {cı } \rho, ~ t h e ~ h a n d) . ~}$ Withnut hands.]
[ACHILLEA. Milfoil, Yarrow. A genus of plants, of the order Compositce, several species of which bave been employed as tonics and vermifuges.
[1. Achillea ageratum. Sweet Maudlin. Formerly employed as a vermifuge.
[2. A. millcfolizm. Milfoil. This species has the properties of a mild uromatic, tonic and astringent. It formerly had great reputation as a volnerary, and was also given internally for the suppression of hemorrhages and profuse mucous discharges. It contains a peculiar acid, denominated achilleic aed.]
[3. A. mosehata. The distilled water much used iu Europe under tho name of Esprit d'lua is prepared from this species.
[4. A. ptarmica. Sncezewort. The powder of the dried root and leaves are usch as a sternutatory. A deeoction of the plant has some reputation in Russia in Hamaturia and Mcnorrhagia.]

ACIILLLIS TENDO (tendon of Aelilles). The strong tendon of the gastrocuemius und solcus museles, which is inserted in the leee.

ACILLAMYD'EOUS (a, priv.; $\chi^{\lambda \lambda \mu \nu ̀ s, ~ a ~}$ cloak). The name of those plants in which the floral cnerloper-the calyx and the co-rolla-are both absent.
[ACHOLUS ( $a$, priv.; Xo入n, Lile). Deficient in bile.]
$A^{\prime} \mathrm{CH} O R$ (üxvpov, लhaif). A small acuminated pustule, which contains a strawenlored matter, and is suececded hy a thin brown or ycllowish scah. Sce Facus.
[ACHORIS'TUS ( $a$, priv.; $\chi \omega \rho!\zeta \omega$, to suppurate). A symptom which invariably aceompanies a discase.]

ACHROA (a priv. ; xpoa, color). A colorless state of the skin, depending upon a want of the pigmentary or usual coloring matter of the rete mucosum. Compare Dyschroa.
ACHROMATIC ( $a$, priv. ; $\chi$ р $\omega$ на, color). Without color; lenses are so designated, in which the dispersion of light is corrected.
[ACHROMATOPSIA ( $a$, prir. ; xpw $\mu$, color; ontouat, to sec). Inability to distinguish colors.]
ACICULAR (acicula, a little needle).
A term applied, in Crystallography, to necdle-shaped crystals; and, in Botany, to the leaves of certain plants which are long, stiff, and pointed, like a needle, [or marked with fine needle-like streaks, as applied to surfaces. Aciculate.]
ACID [aceo, to he sonr]. A compound which is capahle of uniting in definite proportions with allialiue bases, and which, when liquid or in a state of solution, has eitber a sour taste, or reddens litmus paper.

1. The Names of Acids, formed from the same base, vary in their terminations, according to the quantity of oxygen wbicls they are presumed to contain. Tbus, Acids which terminate in ic denote the maximum of oxidation; in ous, a lower proportion; those which begin with hyper (fंaip, ahove) denote an excess of oxidation; with hypo ( $\mathrm{G} \pi \mathrm{d}$, , uuder), the lowest proportion. Sec
2. The aeids which terminate in ic form compounds which terminate in ate; those which terminate in ous form compounds which terminate in ite; thus. sulphuric ncid forms salts which are called sulphater, while sulphurous acid forms salts which are called sulphites.
3. Acidifiable [acilus, acid; fio, to lecounc]. A term npplied to substances capable of being converted into an acid hy an acidifying principle. Substances possessing this property are ealled radicale, or acidifíable hascs.
4. Acidifying Principlc. That which possesses the property of converting a substance into an acid. Oxygen was formerly suple of to be the general acidifying prinhowever, exists.
5. Acidi-metry (hitpor, a neasurc). The
measurement of the strongth of acids. A given weight of an acid substance is saturated by an alkaline hase, the quautity of which, requisite for this purpose, is the neasure of its power.
6. Acilulous. Slightly acid; a term applied to those salts in which the hase is comhined with such an excess of acid that they manifestly exhihit acid properties, as the supertartrate of potassa.

ACINACIFORM Tacinaces, a scimetar; forma, resemhlance]. Scimetar shaped; plane on the sides, with one border thick, the other thin, as the leaves of mesembryonthemnm acinaciforme.

ACINESIA (a, priv., кıvíw, to move). Acinesis. Loss of motion.
AC'INI (pl. of acinus, a grape-stone). The minute parts of the lobules of the liver, connected together by vessels.

Acinifornt, (forma, likeness). A term applied hy the old anatomists to the choruild, from its resemblance to the grains of the raisin.

ACIPENSER. The Sturgeon. A genus of the seventh order of Pisces from which isinglass is prepared. See Zoology.
[ACME (axp, , a point). The top or beight of any thing. In pathology, the utmost height of a disease. The ancients distinguished diseases into four stages: J. A $\rho \chi \eta$, tho commencement; 2. avaßaots, the period of increase ; 3. aк䒑⿰ , the height; 4. Паракип, the dreline.]

ACNE ( $\hat{\kappa} \kappa \nu \eta$, quasi à $\kappa \mu \eta$, from its appearance in youth, or at the acme of the system; or from ä $\chi \downarrow \eta$, chaff, down, ecurtr). Stone-pock, maggut pimple, or whelks; tubercular tumors slowly suppurating, chiefly occurring on the face.

1. A. Siniplcx. Simple pimple.
2. A. Purctata. Maggot pimple. Grubs.
3. A. Indurata. Stone-pock.
4. A. Rosacea. Rosy drop. Carbuncled face. The Gutta rosea, or rosacea.

ACOLOGY (üxos, a remedy, doyos, a description). That department of Therapeutics which relates to the consideration of remedies. By some authors the term is limited to the cunsideration of surgical and mechanical remedies.
[ACONDYLUS (a, priv., kovdudos, a
joint). Without joints, joint). Without joints.]
[ACONITE. The plant Aconitum napellus, q. v.]

ACONITUM NAPELI,US, [Aconite.] Common Monk's-hood, or Wolf's-bane; a plant of the order Ranumeulacea, and one of our most active narcotico acrid poisons. The U. S. and Pritish Plarmacopocias acknowledge now as officinal only the A. mapellur, though some writers suppose the Aconitum paniculatum, to be the spocies introduced in medicine by Stöerck.]

1. Aconitic acid. An acid obtained from species of the genus Aconitum. It is also procured by the decomposition of citric acid by heat. It occurs in the form of small confused crystals.
2. Aconitin, aconitia, aconitina. An al. kaloid obtained from the dried and hruised root and leaves of several species of aconite. It is in the bighest degree poisonous.
ACOPA, ACOPUM, (a, priv.; котог, fatigue). Medicines against fatigue. Cclous.
[ACOR (acer, sharp). Sourness, acrimony, q. v.]

ACORIA (a, priv.; кopsw, to satisfy). Insatiahle hunger.

ACORUS CALAMUS. Common Sweet Flag; a plant of the order Aroidee, yielding the calamus aromaticus.
 a seed-lobe). A cotyledonous plants; plants whose embryos have no cotyledons, or seedlohes. But the acotyledonous embryo is not exactly, as its name seems to indicate, an embryo without cotyledons; for, in that case, cuscuta would be acotyledonous. On the, contrary, $i t$ is an embryo which does not germinate from two fixed invariable points, namely, the plumule and the radicle, but indifferently from any point of the surface, as in some Aracea, and in all Howerless plants.
[ACOUMETER (aкova, to hear; $\mu \varepsilon \tau \rho o v$, a measure). An instrument devised by Itaxd for measuring the degree of hearing.]
[ACOUOPHONLA. Cophonia. (From aкov $\omega$, to hear; $\phi \omega v \eta$, voice). A mode of auscultic investigation in which the observer places his ear to the chest and analyses the sounds produced by percussion of the surface. Domné.]

ACOUSTIC (àкoví, to hear). Relating to the hearing, as the nervus acousticus vel auditorius-the portio mollis of the seventh pair. See Auditory.
[ACQUISITIVENESS (acquiro, to obtain). The faculty producing the tendency to acquire property, and the desire to possess in general.]
[ACRANIA (a, priv.; крavlov, cranium). Deficiency of cranium.]
[ACRID. A term given to substances which produce, in the organs of tasto, a burning and irritating sensation.]
[ACRIMONY. Hunorme acrimonia, acrimony of the humours. A supposed change in the fluids which was conecived to exist in all discases. Sylvas de la Boe, Professur at Leyden, the author of this hypothesis, was of opinion that there were two spenies of acrimony, one acid, the other
alknline.]
[ACRLNLA ( $a$, priv.; кpıve, to separate).

A dininution in the quantity, or a suppression of the scerctions.]
[ACRODYNIA (ärpos, cxtremity; odơvn, paiu). This term was given to a disease which prevailed in Paris in the years 1828 and 1829 , and tho most promincnt symptom of which was intense pain in the wrists and ankles.]

ACRATIA (a, priv.; кpátos, strength). Weakness; intemperance.

ACROS (ăкpos). Extreme. An adjective denoting the termination of any thing.

1. Acro-bystia ( $\beta \dot{v} \omega$, to stop up). The extremity of the prepuco; or that part which covers the glans penis.
2. Acro-cheir ( $\chi$ ¢t $\rho$, the hand). A term uscd hy Hippocrates to designate the forearin and hand.
3. Acro-chordon ( $\chi$ opdi, a string). An exerescence on the skin, with a slender base.
4. Acro-gen (yevvàu, to produce). Pointgrower; the name of a plant which grows only at its point or top, as a fern tree. It is distinguished from an exogen, which grows hy deposition on the exterior, and from an endogen which grows hy deposition towards the interiur, of its trunk.
5. Acr-oleine (oleunn, oil). A substance of a highly pungent odor, giveu off by oils and fats when hoiling at a high temperature. It is a sure and delicate test of the presence of glycerinc in the oil.
6. Acro-pathia ( $\pi$ áOos, disease). A disease at any extreuity of the hody. Hippocrates applies this term to disense of the internal orifice of the utcrus, and to cancer.
7. Acro-posthia ( $\pi \delta 0011$, the prepuce). The extremity of the prepuce; a term synonymous with acro-bygtia.
8. Acro-spirc ( $\sigma \pi t i \overline{p a}$, a spirc). That part of a germinating embryo which botanists eall the plumula. It is sometimes called plantula.
9. Acro-thymion ( $\theta \dot{\mu} \mu \omega \nu$, a wart). $\Lambda$ conical, rugated, bleeding wart.
10. Acr-olenion ( $\omega$ dèm, the culit). The upper extremity of the ulua; a term synonymous with olceranon.
11. Acr-omion ( $\bar{\omega} \mu \mathrm{a}$, the shoulder). The humeral extremity of the spinous process of the scapula.
12. Acr-omphalion ( $\partial \mu \phi a \lambda \partial s$, umbilicus). The extremity of the umbilicus, or navel.
ACROTISMUS ( a, priv.; кротos, pulsc). Defect of pulsc. Asphyria is the term cuployed for this affection by Plouequet. Sce Crotophus.
[ACTEA. 1 genus of plants of the natural order Renunenlurce.]
13. Actaca liacemosa. Black snake-ront; an American plant, recommended for its expectorant, autispasmodic, and diaphoretie ¥ropertics.
[2. Aetora Spicatuo Banelerry. The root of this plant is purgative and sometimes emetic, and in over-doses poisonous.
[3. Acta Amcricana. White and red cohosh. This is supposed to have similar medical properties with the preceding.]
ACTI'NIA (àкriv, a ray of light). Sca Anemones or Animal Flowers; so named from tho resemhlance of their numerous tentacula to the petals of a flower.
[ACTINOBOLISMUS (àkztv, a ray; Gaג入m, to throw out.) An ancient term applied to the instantaneous flow of the animal spirits hy which volition is communicated to the different organs.]

ACTI'NOLITE (ákTiv, a ray of light;入itos, a stonc). A variety of hornhlende.
ACTINOMETER (àkזiv, a ray of light; nérpov, a measure). An instrument for measuring the intensity of light. This instrument indicates the force of sunshine at the Cape of Good Hope at $48^{\circ} 75^{\prime}$, while ordinary good sunshine in England is only from $25^{\circ}$ to $30^{\circ}$.
ACTION (ago, to act). The motions or changes ohserved in the animal hody, These are voluntary, involuntary, and mixed.

1. Voluntary actions are those produced hy acts of the will, as the contractions of the inuseles.
2. Involuatary actions are those excited either mediately, through the nerres and spinal marrow, as those of the larynx, pharynx, sphincters, \&c.; or immodiately, as those of irritability.
3. Mixed actions are those motions or alterations of inspiration and expiration which constitute the acts of respiration.
[ACTUAL CAUTERY. Iron heated to a high temperature, and used as a cautery.]

ACULEATE. Prickly; applied to a surface covered with prickles, as the stem of rosa.
ACUMIN'ATE. Pointed; tapering gradually to a point, as the lcaf of salix alba.

ACUPUNCTURE (ncus, a ncedle: pua$g o$, to prick). The insertiou of ncedles into the skin or flesh.
[ACUTE (acuo, to point). Ending in a point. Disenses are termed acute which are of severe character, have a rapid progress, and short duration. Pain is called acute when it is sharp and pungent.]
ACUTENACULUM (acus, a ncedle ; tcnaculum, a handle). A ucedle-haudle ; the name given by lleister to the porte-aiguille. [ACYANOBLELSIA ( $a$, priv.; кvaros, bluc ; $\beta \lambda \varepsilon=\omega$, to sce). Defect of rision consisting iu an inability to distinguish bluc.]
[ACYESIS ( $a$, priv.; $\kappa v \omega$, to conccire). Stcrility iu wounan.]

ADAMANT（ $a$, priv．；$\delta a \mu \pi i \omega$ ，to subdue）． The former name of tho diamond．

Adamantine Spar．The crystals of Co－ rundum，so named from their being next in hardness to adamant．
［ADANSONIA DIGITATA．The hoa－ bah．A plant growing on the wost coast of Africa，the bark，fruit and leaves of which afford a mucilage，which is used by the natives as a remedy for fever．］
－［ADDEPIAAGLA（aodnv，mueh；фaү由，to eat）．Voracity，hulimia．］
ADDITAMENTUM（addo，to ndd）．A term applied to the sutures which oonnect the parietal and oecipital hones to the mastuild portion of the temporal．

Additamentum pedum hippoeampi．The name given to a hulging ohserved in the substance which forms the hottom of the ventricles of the brain；it follows the di－ rection of the cornua ammonis，and is sometimes equally large．

ADIITIIONS（addo，to add）．The trivial name applied to sueh articles as are added to the fermenting wash of the distiller．

ABDUCTOR（addueo，to draw to）．Ad－ dueent．A muscle whose office is to hring one part toward another．Thus，the rec－ tus internus is also called adductor oculi， from the action of this muscle in turning the eye towards the nose．Its antagonist is called abductor．

ADELPHIA（á $\delta \varepsilon \lambda \phi \partial \rho$, a brother）．Lite－ rally，a brotherhood；a term applied in ho－ tany to a combination of the filaments of the stamens into a single mass．Thus，if there is only one comhination，as in Mal－ low，the filaments are said to he mon－adel－ phous；if there are two，as in Pea，they are di－adelphons；if three，as in some spe－ eies of St．John＇s Wort，they are tri－adel－ plous；if many，as in Melaleuca，they are called poly－aldelphous．The tube formed by the union of monadelphous filameuts is termed，by Mirbel，andrrphornm．
 A term used hy Hippocrates to denote anxiety，restlessness，\＆e．

ADEN（ưס $\dot{y} \nu)$ ．Agland．Hence－
［1．Adenalyiu（adyew，to suffer）．Pain in
gland． a gland．
［2．Adenemphraxia（ $с \mu \phi \rho a \sigma \sigma \omega$ ，to ob－ struct）．Engorgenient of $\Omega$ gland．
［3．Adeniform（fornea，form）．Of a glan． dular form．
［4．Adenitir．Inflammation of a gland．］
［ADENO－（adny，a gland）．A prefix in many compound terms，rlenoting relation to，or connection with，glauds．］
［Adenoecle（ $\kappa \eta \lambda \eta$, a tumour）．A glandu． lar tunnour．］

Adleno－graplyy（ $\gamma$ pif $\phi$ ，to deseribe）．A treatise on the glands．

Adenoïl（eidos，likeness）．Resembling a－ gland；a tern applied by Dr．Craigie to the flesh－like tnmour of the brain．

Adeno－logy（ $\lambda$ áyos，a treatise）．The doe－ trine of the glands．

Adeno－phyma（ $\psi \bar{\nu} \mu a$ ，a suppurating tu－ mour）．A swelling of a gland；as it oc－ ours in the liver，it is called hepatophyma； hut as it occurs in the inguinal gland，it is termed bnbo．
［Adeno－meningeal（ $\mu \eta v i \gamma \xi$ ，a mem brane）． Pinel gave this epitlet to the epidemic whioh prevailed at Goêttingen in 1710 ， because the seat of that fever was in the intestinal mucous membrane，and princi－ pally in the muciparous glands．It is the Dothinenteritis of Bretonnead．］
［Adeno－mesenteritis（ $\mu \varepsilon \sigma o s$, midst；iv－ tepov，intestine）．Inflammation of the lym－ phatic glands of the mesentery．Tahes mesenterica．］
［Adeno－nervous（vevpov，a nerve）．Pinel has applied this epithet to the plague，the principal seat of which be places in the nerves and in the lymphatic glands of the arm－pit and groin．］
［Adeno－pharyngitis（фapvy ，the pharynx）． Intlammation of the tonsils and pharynx．］ ［Adenophthalmia（oфөa⿱亠䒑os，the eye）．In＝ flammation of the glands of Meibomius． Lippiendo．］
［Adeno－selerosis（oxגnpos，hard）．SWE－ draur has given this name to tumefaetions and indurations of the glands，unaccompa－ nied with pain，and which do not become scirrhus or cancerous．］

ADEPHAGIA（äd $\varepsilon$ ，abundantly ；$\phi a \neq \omega$ ， to eat）．Voracious appetite．See Butimio． ADEPS．Fat ；animal oil．Hence，
1．Adepa praparata．L．Prepared Lard．
2．Adep．s suillus．D．Hog＇s lard；the fat of the Sus serofa；vulgò，axnugia por－ cina，used in the formation of ointments， plasters，and liniments．

3．Adeps rnserims．Goose grease；for－ merly used as an emollient in enemata，and as a inild emetic．
4．Adeps ovillus．Sevum，or mutton suet．

ADHESION（adhareo，to stiek to）．The process hy which parts which lave heen separated，by accident or design，unitc． This is owing to an intervening deposit of congulating lymph，or albumino－fibrin， commonly ealled eicatrix．

1．［Acluesive inflammation．］Union $b_{s}$ the first intention is a terin used by Galen to express tho union of surfaces，by bring－ ing them into aeourate contact with each other．It is now gencrally called the pro－ eess of arthesion，or adhesive inflamation．

2．Union by the accond intemion is a term used by tho samo author to denote othor
processes which take place in the healing of wounds, when their surfaces unite moro slowly. These are now generally comprised under the tern granulation.
[ADILESIVE PLASTER. The common name for the emplastrum resinc.]
[ADHESIVENESS. The quality of adhering to. A faculty producing the instinctire tendency to attach one's self to surrounding ohjects, animate or inanimate.]

ADIANTUM ( $a$, priv.; daive, to moisten). A ganus of Ferns, so called because they cannot easily be made wet.
A. Capillus Veneris. Maiden-bair; tbe species from which capillaire is made.
[ADIAPHORESIS (a priv.; дафорєш, to digest). Deficient cutaneous perspiration.]

ADIAPHORUS ( $a$, priv.; dıaфépe, it differs). A volatile inodorous principle extracted from tartar by distillation.

ADIAPNEUSTIA ( $a$, priv.; $\delta a$, through; $\pi v^{\prime}(\omega$, to breathe). Defective or impeded perspiration. Nearly synonymous with adiophoresis.

ADIPIC ACID (adeps, adipis, fat). An acid obtained by treating oleie witb nitrie acid.

ADIPOCIRE (adeps, fat; cera, wax). The fatty spermaceti-like suhstance into whicb muscle is converted hy long immersion in water or spirit, or hy burial in moist earth.

Adipocire mineral. A fatty matter found in the argillaccous iron ore of Merthyr ; it emits a slightly hituminous odor when heated.
[ADIPOSE (adcps, fat). Fatty.]
Adipose Membrane, or Tissuc. Tbat which encloses the adeps, or fat.

ADIPO'SIS (adeps, fat). Excessive deposition, or bypertrophy of tbe adipose substance.

ADIPSA ( $a$, priv.; di $\psi a$, thirst). Medicines which quench tbirst. A term applied hy Ilippocrates to oxymel.

ADIPSIA ( $a$, priv. ; $\delta!\psi a$, thirst). total absenco of thirst.

ADJUVANS (adjuvo, to help). A constituent part of a medicinal formula, denoting 'that which assists and promotes the oparation.' Seo Prescription.
[ADMIXTURE (admisceo, to blend together). The mixing of one substance with another.]

ADNATA (adnascor, to grow to). Literally, grom $t 0$, or adhering; a term applied to the tunica conjunctiva, or extermal cont of the cye. This term is applied, in botany, to the anther, when it is nttached to the filament by its back. [Adnate.] Seo

ADOLESCENCE (adolesco, to grow.) The period of life in which the body has acquired its utmost development; commencing at puberty, and terminating, in the malc, about the twenty-fifth, and in the female, in the twenty-first year.

ADOPTER, or ADAPTER. A vessel with two necks placed between a retort and a receiver, and serving to measuro the length of the neck of the former.

ADRAGANT, a corruption of tragacanth. [q. จ.]

Adragantine, see tragacanthin.
[ADROBOLUM. The Indian gum-resin Bdellium.]

ADUL'I' (adolesco, to grow). That which has reached the period, when the hody bas acquired its full development. This extends, in the male, from the twentyfifth to the fiftieth year; in the female, from the twenty-first to tbe forty-fifth.

ADULTERATION (adultero, to adulterate). The mixing up noxious or inert ingredients with articles of food or medicine; the dehasing any product of manufacture, especially ehernical, by the introduction of cheap materials.

ADUSTION (aduro, to burn). The action of heat as applied to the hody.

AD-UTERUM. The analogue in birds of the Fallopian tubes, or of the Cornua in the Mammalia.

ADVENTITIOUS (adrenio, to come to). Accidental, casual, that which is not normal; that which comes from some other person or thing; a term applied to false membranes; or opposed to the term hereditary.

ADYNAMIA ( $a$, priv. ; dúvauss, power). The defect of power.
[Adynamic. Deficient in rital power.]
EDCIA (aidoĩa, pudenda; from aidùs,
pudor). The pudenda. Hence-
[1. Aedceiodynia (oovvn, pain). Pain in the genital organs.
[2. Edci-tis. Inflammation of tbe genital organs.]
3. Aido-ptosis ( $\pi$ Tō̃ts, lapsus). Prolapsus of oue or more of the pudenda. Sauvages and Sagar apply the term to the mentus urinarius, ns well as to the uterns.
4. Aidce-psophia ( $\psi$ ó oos, a noise). [Sound produced hy the escapc of] Flatus from the urethra, or per raginam.

NGAGROPII,US (aǐ̆, a goat ; âyoros, wild; milhos, a ball of hair). $\Lambda$ hair-ball; a conerction sometimes found in the intestincs of the Ruminantia, de. Sec Bezoar.

GGGILOPS (aits, a goat; $\bar{\omega} \psi$, the eye).
Anchitapr. A sore just under the inner angle of the eye, so called from the supposition that goats were sulheet in it.

LGOBRONCHOPHONY. The bleating Anther.
and bronchinl voice, the principal symptom in plenropneumonia. Sce Auscultution.

FGOPHONY (aǐ, a goat; 申win, a voice). A peculiar sound of the voice, resemhliug the bleating of a goat. See Auscultation.

AOLIPILE (Eoli, pila, Æolus's ball). A hollow metal ball with a slender pipe for the purpose of converting water into steam.
AER ( $\dot{n} \grave{\rho} \dot{\rho}$, àt $\rho o s$, air). This prefix denotes the presence of air or gas in the following terms:-

1. Aërate. To impregnate with carbonic acid gas, or fixed air, as in aërated or gas waters. The process is termed aëration.
2. Aërial Acid. The name given by Bergmann to Carbonic Acid, from an idea that it entered into the composition of atmospheric air.
3. Aëri-form (forma, likeness). Airlike; a term applied to gaseons fluids, from the resemblance to common air.
4. Aëro-lite ( $\lambda i \theta_{0}$, a stone). Air-stone; metcoric stone; a miueral substance which falls through the air.
5. Aëro-meter ( $\mu$ é poov, a measure). An instrument constructed by Dr. M. Hall for ascertaining the changes in the temperature of the atmosphere; in the barometrical pressure; in the external and internal heights of the fluid in the pneumatic trough; and when this trough contains water, for the elevation and precipitation of aqueous vapour.
6. Aëro-phobia ( $\phi$ ßßéw, to fear). The drend of air; a symptom of hydrophobia.
7. Aëro-scopy (テкопtíw, to investigate). The investigation of the air.
8. Aëro-station. The art of raising heavy bodics into the atmosphere, by the buoyancy of heated air, or gases of simall specific gravity, enelosed in a balloon.
EIRO'SUS LAPIS (ex, copper). The name given hy Pliny to the lapis calaminuris, from the notion of its being a copper ore.
ERU'G0 ( $\infty$ \&, copper). Verdigris; an inipure sub-acetate of copper, formed by placing plates of the metal in contact with the fermenting mare of the grape, or with eloth dipped in vincgar. See Verdigris.

ES CORINTHIUM. A kind of hrass produced, as it is said, by an accidental mixture of inetals at the hurning of Corinth; it appears, however, from Pliny, to have been in use in Corinth long before the burning of that city.
[ESCULUS MIPPOCASTANUM. Morsechustunt. A plant of the order llippucustanca. Tho bark has been used as a
substitute fur cinchona, and the powdered substitute fur cinchona, and the powdered
kernel of the fruit as a sternutatory.]

ES USTUM. Burnt copper; a preps. ration consisting of equal parts of copper and rough brimstone, laid in strata, with a small quantity of common salt sprinkled on each layer, and exposed to the fire till the brimstone is burned out. It has been called $\mathscr{R}^{s}$ Veneris, $\mathfrak{R}^{s}$ cremantun, cinis ©ris, crocus Vencris, \&c.

ESCULINE. An alkaloïd lately discovered in the bark of the Dsculus Hippocastanum, or Horsechestnut; supposed to be a fehrifuge.
 aìөávouat, to perceive). Perception; feeling ; sensihility.

1. Dys-cesthesia. Defective perception; a morbid state of the corporeal senses generally.
2. An-cesthesia. Absence of the sense of touch. The former term is extended to all the senses; the present is limited to a single sense!
3. Estheterium. The sensorium.
[ AESTHETIC (ais $\theta a \nu o \mu a i$, to understand). Relating to the understanding or mental perception.]

ESTIVATION (astivus, belonging to the summer). Prafloration. A term used in botany, to express the manner in which the parts of a flower are arranged with respect to each other, before their expansion. Compare Vernation.

ESTUS VOLATICUS (astus, heat; volo, to fly). A term applied to transient heats, or erythema of the face.

ATAS. Age; a term including the several states of life, as infancy, youth, old age, \&c. The best Roman writers cxpressed these periods in the following terms:-

1. Etas firmata. The prime or full strength of age; the age of thirty.
2. Etaz constans. The steady age ; the age of forty.
3. Etas matura. The age of maturity, or prudence ; the age of fifty.
4. Attas provecta. Advanced age.
5. Stas ingravescens. The burdensomo age; the weight of years.
6. Detas decrepita. Decrepit nge, as relates to countenance and state of old age. 7. Sitas affecta. The state of total decay in the human frame.
7. Atas exanta, vel precipitata. The decline of age; tho end of life.
8. AEtas extrema. The approaching end of life.

ETHER (aiөip, ether). A highly volatilo and inflnumable fluid, produced by tho action of acids on alcohol.

1. Sither Mtofimanni. IInfman's anodyno solntion, or the Spiritus Litheris Sulpharici Compositus. Lo, [U. S.]
2. Wither sulphuricus rectificalur. L. | posed to prevent the eggs from becoming Rectified ether. This is the cthereal liquor sold under tho names of Ether, and Sulphuric or Vitriolic Ether.
3. Ather nitrosus. Nitrous ether, or the Naphitha Nitri.
4. Sther sulphuricus. L. Sulphuric or Vitrinlic ether, or Naphtha Vitrioli.

ETLIIOPS ( $a * i \omega \omega$, to burn ; $\omega \psi$, the eyc). The name of a medicine, so called from its hlack appearance, rescmbling that of the Ethiop.

1. Ethiops mineral. The black sulphuret of mercury, or the Hydrargyri sulphurelum cum sulphure. L. [Hydrargyri sulphuretam nigrum. U. S.] $A s$ an anthelmintie, it has received tbe name of pordre vormifuge mercurielle.
2. Aethiops per sc. The name given by Boerhave to the gray oxido formed by long agitation of mercury in a bottle half full of air.
3. Athiops vegetabilis. A name given to a species of cbarcoal, prepared hy burning the fucus vesiculosus in the open air, and reducing it to a hlack powder.
4. Athiops antimonialis. A term applied in Germany to a compound of the hydrargyri sulphuretum cum sulphure witb sulphuret of antimony.
5. Ethiops Hartial. An old name for the deutuxide of iron.

ATHOGEN ( $a$ ï $\theta \omega \nu$, hrilliant; ysivoua, to become). A compound of boron and nitrogen, lately discovered by Mr. Balmain. It gives a brilliant phosphorescent light when heated before tbe blowpipe.

ATHRIOSCOPE (ritpia, serene weather; oxonfte, to cxamine). An instrument invented by Sir John Leslic for indicating the power of the clouds in preventing radiation. It consists of the differentinl thermometer, having one of the balls excluded from the light, and the other placed in a polished metallic cup. Exposed to a clear part of the sky, the heat radiated froul it escapes rapidly, and the temperature falls; exposed to a cloud, the radinted heat is restored, and there is no reduction of temperature.

NTHUSA CYNAPIUM. Lessor Hemlock, or Fool's Parsley; a plant of the order Umbellifere, possessing poisonous propertics. It yields an alkaloĭd, called cynapia.

NTIOLOGY (uiria, a cause; $\lambda$ d́yds, a treatise). The doctrine of the causes of disensc.

NJTITES TAAPIS (derds, an eagle). Eagle-stone, $\Omega$ varicty of iron ore; so culled from the belief that it was found in the nest of the eagle, where it was sup-
[AFFECTION (affcin, to disturb). A terun ncarly synonjuous with discase.]
[AFFERENT (ad, to, and fcro, to carry). Afferens, bringing to. Applicd to the lymphatic vessels, because they convey lympb to the lympbatic glands.]

AFEINITY (afinitas, rclationship). Tbat kind of attraction by whicb different classes of hodies combine to form nevo bodies, as in the case of an acid with an alkali, forming a salt. The term was introduced from the idea that chemical attraction takes place hetween those substances only which resemble each other.

1. Single affinity is the power hy which two elementary hodies combine.
2. Elective affinity denotes tbe preference which one hody manifests in combining with another, ratber than witb a tbird, a fourth, \&c.
3. Double elective affinity occurs when two compounds decompose each other, and two new compounds are formed, by an exchange of elements. This is also called donblc deconiposition, or complex afinity.
4. Quiescent affinity is tbat which tends to maintain the elements of a compound in their present state, prerenting deenmposition. This, and the following term, were introduced by Kirwan.
5. Divellcnt affinity is that which tends to arrange the particles of a compound in a nevy form, produciug decomposition. In mixing different compounds, if the sunn total of the divellent be more powerful than that of the quicscent affinities, decomposition takes place.
6. Disposing affinity is that which promotes the tendency of bodies to combine in a particular way, by presenting to them a third substance which excrts a strong attraction to the counpound they form; when the combination has been effected, the third substance may he mithdrarn. Some writers call this tendency to unite, the affinity of internedium. Bertbollet styles it reciprocrl affinity.
7. Berthollet distinguishes affinity into elementruy, when it takes place betreen the elcmentary parts of bodies; and resulting, when it is a compound only, and wonld not take place with the elements of that compound.
[AFFIX. Soluething added to the end of $a$ word. A list of the principat affixes in connection with their componnds is given in the Appendix.]

AFFLATUS (ajlo, to hlow to). A hlnst, rapour, or blight. A species of erysipelas, which attacks persons suddenly.

AFFLUXUS (afluo, to flow to). Forma specifica. Names given in formor times to a supposed reciprocal influence of terrestrial bodies; it was compared to the effect of a magnet on iron, and of amber on chaff.
[In pathology it significs tbe flow or determination of humours to a part.]

AFFUSION (affundo, to pour upon). Generally, the pouring of water over the surface of the body, the hend, \&c. Tbere are different kinds of affusions, as -

1. Lotions, which consist in washing a part of the body with a sponge or rag soaked in a liquid.
2. Aspersione, wbich consist in throwing a liquid, drop by drop, like rain, upon the body.
3. Shower-baths, whicb consist in tbrowing a column of water with more or less violence upon the surface of the body. When water is thrown from a considerable beight, this kind of affusion is termed by the French douche, or dash.

AFTER-BIRTH. A term applied to tbe placenta and the membranes of the ovum, from their heing expelled after the delivery of the foetus.

AFTER-PAINS. A term applied to [the pains resulting from] the contractions of the uterus, which are continued for a certain length of time after delivery.
AGALACTIA ( $a$, priv. ; $\gamma a ́ \lambda a, ~ m i l k) . ~$ The defect of milk after child-hirth.

AGAMOUS (a, priv. ; $\gamma \dot{\alpha} \mu o s$, marriage). Scxless; a term applied to the cryptogemous plants, from tbe notion that they possess no sexual characters.

AGARICUS. Agaric; the generic name of the inushroom family: Order, Fungi; Class, Cryptogamia.

Agaricus Quercus. Boletus igniarius; Agaric of the Oak, or Toucbwood; a fungus formerly used for arresting external bæmorrhages.

AGARICUS MINERALIS. Tbo mountain mille or meal of the Germans; one of the purcst of the native carbonates of lime, found in clefts of rocks, \&c. It is named from its rescmblance to an agaric in texture and colour.

AGATE. A hard siliceous stone, used by lapiduries for engraving seals, cameos, and other objects of ornainent. It is composed chiefly of quartz witb various colouring matters.
[AGATHOSMA CRENATUM, Dinsma crenata, Baroнsmri crenatn. Sec Buchn.]
[AGAVE AMERICANA. The American aloc. It yields a sacelarine sap which hns heen used agninst scurry, and from it the nleoholic liquor called pulque is pre-
pared.]

3 碞

AGAVE CUBENSIS. A species of American aloe, the roots of whicb resemble the red sarsaparilla of the shops.

AGEDOITE. A name erroneously given by Robiquet to the juice of the liquorice root, which is, in fact, aspuragin.

AGENNESIA (a, priv. ; ycyváw, to beget). Male sterility; inability to heget offspring. As applied to the brain, it denotes imperfect development and atropby of that organ.

AGENT (ago, to act). A substance capable of producing chemical action.
AGES OF LIFE. The periods of human life characterized by the most remarkable processes of development, or by their completion, are the following :-

1. The period of embryonic life. During this period tbe processes of forniation and growtb are in tbeir greatest activity: The organs which are forming present none of their functional phenomena, or only a gradual commencement of tbem.
2. The period of immaturity. Tbis period cxtends from birth to puberty. It is marked by growtb, by the development of the forms of the different parts of the body, and by the gradual perception and analysis, by the mind, of the different phenomena of the senses. The period of childhood comprises the first six years; that of boyhood extends to the fifteenth year.
3. The period of maturity. This period begins at pubcrty and ends at the period When the generative power is lost, which in woman occurs about the forty-fifth or fiftieth year. This period is distinguished into the ages of youth, and manhood or 20omanhood.
4. The period of sterility. This period extends from the cessation of the fruitful exercise of the gencrative function to extreme old agc. Miiller.

AGEUSTIA ( $a$, priv. ; yevo $\mu a t$, to taste). Defect or loss of taste.
[AGGLOMERATE (agglomern, to form into a leap). Synonymous with aggregate; applied to glands.]

AGGLUTINATION (agglutinn, to glac). Adhesive union; the adhesion of parts by menns of a coagulating substancc. Sco Adhesion.

AGGREGATE (aggregatus, herded together). A body, or mass, mado up of smaller bodics or masses. The smallest parts into which na aggregate enn be divided withont destroying its chemical propertice are callod integrant parts.
[In botany, this term significs crowded together, as the florets of the composite, the carpcls of ranunculus, \&c.]
AGGREGATION (aygregn, to bring to.

## A L A

gether). A form of attraction, commonly enlled that of cohesion, by whieh the particles of bodies are aggregated or retained in the state of a solid.
AGLIA (ù $\bar{u} \lambda i \eta)$. A wbitish speck of the cornea.
AGNI'NA MEMBRANA (agninus, from agmus, a lamb; membranu, a membrane). The name given by Ac̈tius to one of the membranes of the feetus, from its tenderness.
: AGNUS CASTUS. The chaste tree, a species of Vitex, formerly celehrated as an antaphrodisiac. This name bas been given to Castor oil, or the oil of the Ricinus communis, from its effects upon tbe body and mind.
AGOMPHI'ASIS ( $\alpha$, priv.; $\gamma^{6 \mu \phi}{ }^{\circ}$, a nail). Agomphosis. Looseness of the teeth; a condition, the reverse of gomphosis.
[AGONY (ay $\omega$, a combat). The last struggle of life against deatb. The series of phenomena which usually precedc death, and whicb result from the gradual and successive aholition of the functions.]
AGRIA (äypos, wild). The name under which Celsus notices the Lichen ferus, or wild Lichen, as applied to it by the Greeks, from the violenee with which it rages.
[AGRIMONIA EUPATORIA. Common Agrinoony. A plant of the natural order Rosacea, used in medicine as a corrohorant and astringent. It bas also been recommended as a deobstruent in jaundice, and as an alterative in discases of the skin. Tbe plant is given in substance, infusion or decoction ; the dose of the first is a dracbm.]

AGRIPPA (äypa, capture ; $\pi$ oũs, a. foot). A cbild born witb the fect foremost. Hence the name of some celcbrated Romans.
[AGRYOTHYMIA (aypoos, wild; өvゃos, disposition). Furious insanity.]

AGRYPNIA (ăypa, a capture; ह̄nvos, sleep). Watchfulness; want of sleep.

AGRYPNOCOMA (à $\gamma p u \pi v i a$, sleeplessness; $\kappa \tilde{\omega} \mu$, drowsiness). A letbargic state without actual sleep.

AGUE. Interuittent fever This term appenrs to be derived from a Gotbic word denoting trembling or shuddering.

AGUE CAKE. Enlargement of the spleen, induced by ngue.

AGUE DROP. A solution of the Arsenite of Potassa, or the Liquor Potassa Arscnitios of the U. S. Ph.
AGYRTA (äypls, $a$ erowd of people). Formerly a mountehauk; a person who collected a crowd nbout him : a quaek.
AIR (ìip, nër). In popular lauguage, this terun denotes the ntmosphere, or the gaseous fluid which surrounds the enrth.

It consists, then pure, of 20 orygen and 80 nitrogen: it contains, however, carbonic acid, varying from 3 to 8 parts in 10,000 hy weight. The term is also generally used to denote a gas, or a permanently elastic or cëriform fluid.

1. Rarefied air is that whicb is expanded, or less dense than usual.
2. Condensed air is that which is rendered more dense than usual by pressure.
3. Inflammable air, formerly ealled plslogiston, or phlogisticated air, is a term applied to hydrogen gas, owing to its inflammable property.
4. Vital air, formerly called dephlogistieated air, empyreal air, \&c., is a term applied to oxygen gas, from its being indispensable to the maintenance of life.
5. Fixed air, formerly called mephitic air, is a term for carbonic acid, from its being found to exist in limestone, from which it may be expelled by heat.
6. Nitrous air is a term for nitric oxide, or the deutoxide of nitrogen.
7. Dephlogisticated uitrous air is a term for nitrous oxide, or the protoxide of nitrogen.
S. Alkaline air is a term applied to Ammonia, the volatile alkali.

AL. The Arabic article signifring the, prefixed to many terms formerly in nse, as al-chcmy, al-kahest, al-cahol, de.

ALA. A wing. Tbe uame of each lateral petal of a papilionaceons corolla.

1. Ala, or pavilion. The upper and cartilaginous part of the car.
2. Ala majores. Literally, larger vaings; another term for the labia externa of the pudenda.
3. Alce minores. Literally, lesser wings; a uame applied to the two small folds formed by the nymphe.
4. Ala Nasi. The lateral or morable cartilaginous parts of the nosc.
5. Ala vespertiliomum. Literally, bats' wings; the brosd ligaments situated between the uterus and the Fallopian tubes.
6. Alce vomeris. Two lamine constituting the sphenoidal edge of the vomer.

ALABASTLR (àdißaerpov; derivation remote). A stome nswally white, and son enough to be seratched by iron. There are two kinds of it:-

1. Gypecons alabaster; a natural semierystalline sulphate of lime, forming a compact gypsun of common oceurrence: it presents various eolours, and is cuployed for making statues, rases, de.
2. Calcarcone alabnsier. A carbmirie of lime. deposited ly the dripping of water in stalactitic eaves, and frequcuty found as a yellowish-white deposit in ecrtain

## ALA

ALC
fountains. The oriental alabaster is of this kind.

ALANTINE. A starch-like powder, obtained from the Angelica Archangelica.

ALARIS (ala, a wing). Pterygoïd or wing-like; as applied to the pterygoid processes of the sphenoid bone, to a ligament within the knee-joint, and to the inner vein of the bend of the arm.

ALBICANTIA CORPORA (albico, to hecome white). Two white hodies of the cerebrum. See Corpus.

ALBINISM. A state in which the skin is of an uniform dull milky white colour, the hair resembles hleached flax or silk, the iris is pink, and the retina and chorvïd, seen through the pupil, present another shade of the same colour; the sight is weak, and strongest in the dark. There is the Ethiopian variety, found among negroes; and the European, found among Enropeans and other white nations. See Leucopathia.

ALBINOES (albus, white). Persons in whom the skin, hair, and iris are light, and the pigmentum of the eye wanting. The term Albino is derived from the Por.tuguese, hy whom it was applied to individuals found on the coast of Africa, who resembled the negrocs in every respect except in their colour.

ALBITE. Soda Felspar. A silicate of alumina, resembling felspar in its properties, with the substitution of soda for potash.

ALBUGINEA (albus, white). Whitish. The word tunica being understood, we have the following terms:-

1. Albrginea oculi. The fihrous membrane situated immediately under the conjunctiva, formed hy the expansion of the tendons of the four recti muscles. From the hrilliancy of its whiteness, it has given rise to the popular expression of white of the eye.
2. Albuginea testis. A thick fibrons memhrano of a white appearance, forming the proper tunic of the testis.

ALBUGO (albus, white). Leucoma. The white opacity of the cornea.

ALBUM GRFCUM. Sterells eanis. The white and solid excrement of dogs which subsist chiefy on bones; it consists, for the most part, of tho carth of bones or lime, in combiation with phosphoric acid. It was formerly used in medicine; it is now sonctimes used to soften leather in the process of dressing it after tho depilatory action of lime.

ALIBUM NIGliUM. The excrement of mice and rats; formely used both externally and internally as a remedy, but now very properly abandoned.

ALBUMEN (albus, white). Albumen is of two kinds, animal and vegetahle.

1. Animal Albumon exists in two forms; the liquid, and the, solid. In the liquid state, it is a thick glairy fluid, constituting the principal part of the white of egg. In the solid state, it is contained in several of the textures of the body, as the cellular memhrane, the skin, glands, and vessels. A suhstance slightly differing from albumen has heen ohtained from the scrum of chyle, and termed hy Dr. Prout, incipient alumen.
2. Vegetable Albumen elosely resemhles auimal albumen, and appears to he an ingredient of emulsive seeds generally, and to exist in the sap of many plants. It has been found in wheat, ryc, barley, peas, and beans.
[ALBUMINURIA (albumen, albumen; urina, the urine). A pcculiar degeneration of the kidneys, attended with the presence of albumen in the urine. It is also termed Bright's disease, grounlar degeneration of the kidueys, fatty degencration of the kiducys, desquamative nephritis, albuminous nephritis, \&c.

ALBURNUM (albus, white). The external, last furmed, and whiter portion of the wood of exogenous trees. From its being the channel of the ascending sap, it is commonly called sap-wood. Compare Duramen.

ALCARGEN. Another name for cacodylic acid. It is found hy leaving eacodyl and its oxide under water to the slow action of the air.

ALCARRAZAS. A specics of porous pottery made in Spain, for the purpose of cooling water hy its transudacion and copious evaporation from the sides of the vessel.

ALCARSIN, Liquor of Cudet. A liquid obtained by the dry distillation of equal weights of acetato of potash and arsenious acid. It is remarkable for its insupportable odor and spontaneous inflammahility in air. See Cacodyl.

ALCHEMILLA. A genus of plants, so named from their pretended alchemical propertics. A arvensis is the Larly's Manthe, Parsley Breakstonc, or Parsley Piert (perse pierre ?), so named from its supposce efficacy in stone. Order, Sanguisorbea.

ALCHEMY (nl, Arab., chimia? chemistry). The fanciful senvel of tho Alehemints or Arlepts after the

1. Lapis ''hilosophorum, or philosopher's stone, by which the baser wero to be transmutod into tho preciuns metals.
2. Elixir vita, or essenco of life, by which lmman lifo was to bo indefiuitely protongerl.

ALCOlIOL (an alchemical term for tho
essence of bodies, separated by sublimation from the impure particles). Ardent spirit of winc. A term applicd to the pure spirit obtained by distillation from all liquids which have undergone vinous fermentation. When diluted with an equal weight of water, it is termed Proof Spirit, or Spiritus tenuior, of tbe Pharmacopocia. [Alcohol dilutum. Ph. U. S.]. The first product of distillation is technically called low voinc, and is again suhjected to distillation. The latter portions of what comes over are called feints, and are reserved for a further process in the wash-still. The second product is termed ravo spirit, and when again distilled is called rectified spirit. The strongest alcohol which can be procurcd is termed [anhydrous, or] absolute alcohol, to denote its ontire freedom from water.
[Alcohol amylicum. Amylic alcohol, Fusel oil, Grain oil, Corn spirit oil, Hydrated oxide of Amyle. An oily, colourless liquid, of a strong and disagreeable odour, and acrid, hurning taste.
[Methylic alcohol. Hydrated oxide of Methyle, Bihydrate of Methylene, Pyroligncous ether, wood napbtha, wood spirit, or alcohol, Pyroxalic alcohol. An inflammable, volatile liquid, ohtained in the destructive distillation of wood. It has heen employed as a remedy for consumption, and is used in diarrhoen, and as an antienctic in chronic romiting.]

Alcohol. L. D. Rectified spirit distilled from the subcarbonate of potassa dried.

1. Alcohol Ammoniatum. [Spiritus ammonice aromaticus. Ph. U. S.] A combination of alcohol and ammonia, prepared by passiug ammoniacal gas into alcobol, wbich must be kept cool.
2. Alcoliolates. Officinal medicincs, differing from alcoholic tinctures; first, in the menstruum containing the volatile principles of medicinal substances; and, secondly, in their mode of preparation, which consists in impregrating the alcohol with medicinal principles, first by maceration, and then by distillation.
3. Alcoates. Compounds of salts with alcohol, sinilar to hydrates, discovered by Mr. Graham.
4. Alcohometcr ( $\mu$ épov, a measure). Cnometer. An instrument for ascertaining the quantity of spirit contained in any vinous liquid.

ALCOIIOL OF SULPHUR. The name given to the bisulphuret of carbon hy Lamapatius, who regarted it as a componnd of sulphur and hydrogen. Sco Curbon.
[ALCORNOQUl:. A hark from Snuth Amerien at one time landed ns a specific in Amerien at one time Innded as a the pow-
phthisis pulunonntis. The dose of 3 iij.]
der is $3^{s s}$; of the strong decoction $3^{i j}$ to
ALDEHYDE. A newly discovered colourless liquid, one of the prodncts of the oxidation of alcohol. Its name is derived from the first syllables of the word alcohol and dehydrogenatus. Aldchyde is, in fact, alcobol minus hydrogen.

1. Aldehydic or Accouz Acid is prepared from aldehyde, and may be regarded as acetic acid deprived of an equivalent of water.
2. Resin of Aldehyde is a product of the decomposition of aldebyde by alkalics, with the assistance of air.
[ALDER, AMERICAN. Common name for the Almus serrulata.]
[ALDER, BLACK. Common name for the Prinos vericillatus.]
[ALDER, COMMON EUROPEAN. Common name for the Alnus glutinosa.]

ALE. The fermented infusion of pale malted barley, usually combined with infusion of hops. See Beer.

ALEMBIC (Arabic). A cbemical ves.
sel, of glass or metal, formerly used in distillation, hut now generally superseded by the retort. It consists of a body, cucurbit, matrass, or boiler; a head, or capital, fitted to the body by grinding, or lute ; and a tube, which conducts the distilled liquid into a recciver. Compare Retort.

ALEMBROTH SALT (a Chaldee term, signifying the key of art). The Salt of Wisdom of the Alchemists. The name formerly given to the crystals which separate from a solution of corrosive muriate of mercury and muriate of ammonia in water. It is a compouud of hichloride of mercury and sal ammoniac, from which the old white precipitate of mercury is made.
[ALETRIS FARINOSA. Star-grass. A plant of the order Liliacce, tbe root of which is employed as a tonic. The dose of the powder is ten grains.]

ALENIPHARMICS ( $\alpha \lambda \dot{\xi} \xi \omega$, to repel; фарракov, poison). Alexitcria. Antidotes to poisons.
[ALEZE, ALESE, or ALAISE ( $a \lambda_{c} \tau^{2} \omega$, to protect). A cloth scveral times folded; employed for the protection of the bed and clothes of patients from purulent and other discharges, hlood, \&c.]

ALGA (Alya, a sca-weed). Algacea. The Sea-weed tribe of Cellular or Cryptogamio plants. Leafless, flowerless plants, without any distinct axis of vegelation, growing in water. Reproductice matter, either absent or contained in the joints or the filaments, or depnsited in peculiar thece formed in the substance of the
frond．Sporvles without any preper in－ tegument．

ALGAROTII，POWDER OF．A com－ pound of oxido and chloride of nntimony， so called after a physician of Verona．It is $\pi$ precipitate，formed by pouring the sesqui－chloride of antimony into water．

ALDGE＇DO（üג $\lambda$ os，pain）．Inflammation of the neck of the bladder，occurring in gonorrhea；a term seldom used．
［ALGID（algeo，to be grievously cold）． Cold．Applied to cholera，and to a form of malignant fever，from the icy coldness of the surface of the bedy which occars in these diseases．］

ALGOR（algeo，to be cold）．A sudden chilliness or rigour．Sanvages．
［ALIBLE（alo，to nourish）．Nutritive．］
ALICA（alo，to nourish）．A kind of wheat；pottage，or drink made of corn，as frumenty，barley－broth，\＆c．Celsus．
［ALICES（ $a \lambda_{1} \zeta_{\omega}$ ，to sprinkle）．Reddish spots in the skin which precede the irrup－ tion of small－pox．］

ALIENATIO［Alienation］（alieno，to estrange）．Mental derangement．

ALIFORMIS（ala，a wing；forma，like－ ncss）．Pterygoìd，or wing－like；as ap－ plied to processes of the spheuoild bone． See Alarris．
ALIMENT（alimentum，food）．Sub－ stances which nourish the body．Accord－ ing to Hippocrates，there are different kinds of food，and but one kind of nutri－ ment or aliment；with him，the term ali－ ment denoted the product of digestion．

ALIMENTARY CANAL．The entire passage through which the aliment or food passes．It is a musculo－membra－ nous tube extending from the mouth to the anus．
［ALISMA PLANTAGO．Water Plan－ trin．A plant which was at one time be－ lieved to be a specific in hydrophobia．The leaves are rubefacient，and will sometimes even blister．They have been given in gravel and disorders of the bladder．］
［ALISPHENOID（ala，a wing；os sphe－ noider，the sphenoìd bone）．Term applied by Prof．Owen to the great wing of the sphenoïd bonc．］

ALIZARINE（alizari，madder）．The red colouring matter of madder．The roots of the Rubia I＇inetorun，which yield this substance，are sold in the south of France，under the name of alizari：a pow－ der is prepared from it，called garanee．

ALKAHEST．The pretended universal solvent，or inenstrum of the ancient che－ mists．But，if it dissolvo all substanecs，in what vessels can it be contained？
ALKALI（Arab，al，tho；kerli，the name of a particular plant，aud an old name for
potash）．A substance which unites with acids in definite proportions，and changes vegetable blucs to green．It is of three kinds：－

1．The Fegetable，
or Potash，
2．The Mineral， or Soda，
or fixed alkalies， being left in the ashes of inland and marine plants re－ spectively．
3．The Animal，or Ammonia，or volatile alkali，being raised by distillation from hartshorn，\＆c．

1．Alkali Prussian．Phlogisticated al－＊ kali．A name formerly given to a fixcd alkali，when united with some animal substanco，and lixiviated．It is found to be in a great measure saturated with Prussic acid．

2．Alkalescent．A term applied to sub－ stances in which alkaline（ammoniacal） properties are becoming developed．The term is generally applied to the urine．

3．Alkalimeter（ $\mu$ źт $\quad$ ov，a measure）．An instrument for ascertaining the quantity of alkali in given substances，by the quan－ tity of dilute sulphuric acid of a known strength which a certain weight of them can neutralize．

4．Alkalina．A class of substances do－ scribed by Cullen as comprehending the substances otherwise called antacida．

5．Alkaline air．The term by which Priestly first described ammonia or ammo－ niacal gas：the volatile alkali．

6．Alkaline earths．Substances which possess alkaline properties；such are mag－ nesia，lime，baryta，and strontin．

7．Alkalinity．The property of an al－ kali，that of turning vegetable blues into green．
8．Alkalization．The impregaation of any substance with an alkali．
9．Alkaloïds（alkali and sidos，likeness）． Vegetable Alkalies and Bases．These are substances having some of the properties of alkalies，the discovery of which may be dated from 1816.

ALCANA．The name of the root and leaves of the Lausonia inermis，a plant employed in the East for dycing the nails， teeth，hair，garments，\＆c．See IIenué．
ALKANET．The plant Anchusa Tine－ toria，tho root of which yields a red co－ louring matter．
ALKEKENGE．Winter Cherry；the fruit of the Physnlis Alkekengi，used in nephritis，dysuria，ascites，\＆c．

ALLANITE．The name of a mineral contairing cerium，found in Grcenland， and named in honour of Mr．Allan，who first distinguislocd it as a species．

ALLANTOIS（dìえत̃s，a sausage；zidos， likeness）．Allantoìdes membrana．1．A
thin transparent membrane，sithated be－ tween tbo amnion and the chorion．2．A vesicle or sno projecting at tho lower end of the alimentary eanal，in the embryo．

1．Allantoic Acid．A compound de－ scribed by Vanquelin under the name of ammiotic acid，and said to exist in the liquor amnii of the cow．It was found by Dzondi to be present solely in the liquor of the allantois，and to be in fact the urine of the foetus．

2．Allantoin．A erystalline substance found in the allantoio fluid of the cow，and produced artificially by boiling urie acid witb the pure－coloured oxide，or peroxide， of lead．
［ALLIACEOUS（alium，garlic）．Be－ longing to，or of the nature，of garlic．］

ALLIGATION（alligo，to bind）．An aritbmetical formula for aseertaining the proportion of constituents in a mixture， when they bave undergone no change of volume by ehemical action．When alco－ holic liquors are mixed with water，there is a condensation of bulk，which renders tbis aritbmetical rule inapplicable．The same thing occurs，to a certain extent，in the union of metals by fusion．

ALLIUM（oleo，to stink）．A genus of plants of the order Asphodelece，containing an aerid principle．

1．Allii Radix．Garlic bulb；tbe bulb of the Allium sativum．

2．Allii Cepre Bulbus．Onion bulb；the bulb of the Allium cepa．

3．Allium Porrum．Tbe Leek．
ALLOPATHIA（ä入入os，otber；$\pi a ́ \theta o s$, disease）．［Allopathy．］Heteropathia．The art of curing，founded on differences，by which one morbid state is removed by in－ dueing a different one．
［Tbis term＂bas been insidiously put fortb by bomcopaths to signify a doctrine of applying remedies according to tho ma－ terial condition of the organs affected by disease，and by sucb application，as it were，exciting anotber and different kind of disense，in which，twey pretend，tho en－ tire legitimate system or seience of medi－ cine，as opposed to bomoopathy，consists． It need scareely be stated that such a defi－ nition，so applied，is only an invention of tho homœopathic fraternity，to serve their own purposes．＂Mayne．］Sce Homwopathy．
［ALLOTROPIC（a入入os，other；тропท， change）．That modification of elementary bodies，by which，when to a well marked organic compound type，a certain quantity of carbon and hydrogen is added，crery such addition produces a new compound， analogons in proportion to the first．］
［Allotropism．The eapability of cerfain clemeuts of existing in two or moro condi－
tions，in which they poseess different physical and chenical propertics．］

AILOXAN．Ttic erythric acid of Brug－ natelli，discovered in the decomposition of uric acid．

Alloxanic acid is produced by the meta－ morpbosis of alloxan by caustic alkalies．

Alloxantin．A erystalline substance observed by Dr．Prout among the pro－ duets of the decomposition of uric acid by nitric acid．

ALLOY．A term applied to a combi－ nation of metals by fusion，except wben mercury is one of them，in which case，the compound is called an amalgam．

ALLSPICE．Pimento berries，or Ja－ maica pepper；tbe fruit of the Eugenia Pimenta，a Myrtaceous plant．

ALLU＇VIUM（alluo，to wash near to）． The soil whicb is formed by the destrue－ tion of mountains，wben their partieles are wasbed down and deposited by torrents of water．

ALMOND OIL．A bland fixed oil，ob－ tained usually from bitter almonds by the action of a bydraulic press，either in the cold or by means of hot iron plates．

ALMONDS．Anygdale．This term is applied，popularly，to the exterior glands of the neck and to the tonsils．［The nuts of the Anygdalus comnnmis．］
［ALNUS．Alder．A genus of plants of the order Betulinec．
［1．Aluns glutinosa．Common European Alder．Tbe bark of this plant has been used in intermittent fevers，the bruised leaves are sometimes applied to the mam－ ma to arrest the secretion of milk．
［2．A．serrulata．Common Amerienn Alder．Tbis species bns analogous proper－ ties to the preceding．］

ALOE．A genus of plants of the order Asphodelece；cbaracterised by an intenscly bitter taste．

1．Aloës Spicata Extractum．L．Aloes； nn extract prepared from the Aloe Spi－ eata，or Socotrine Aloe．In this species the bitter taste is accompanied by an aro－ matic flavonr．

2．Aloc IIpratica；Extractum．F．D． Barbadoes Aloes；an extract prepared from the Aloc Ilepatica，formerly Barbadensis； of a unueh stronger and less pleasaut odour than the preceding．

3．Fetid or Caballine Alocs．A very impure rariety，having the appearance of bitumen，and nsed ehiefly for horse medi－ cine，as one of its names imports．
4．Red Alocs．A variety supposed to be a matural exudation from the Aloe Spi－ enta，which has concreted in the sun．

5．Mocha Alocs．Probably only a variety
of that known in commerce as the Socotrine Aloes. Little is known of it.
*. Indian and Mozambiquc Aloes. A very impure varicty, apparently of an intermediate quality between the Hepatic and the Caballine.

ALOES WOOD (Lignum Aloës). A fragrant resinous substance, consisting of thc interior of the trunk, tbe Aquilaria ovata, and A. agallochnm.

ALOETIC ACID. The precipitate procured by beating nitric acid on aloes.

ALOETICS. Medicines in wbich aloes are the principal ingredient.
[ALOGOTROPHIA (aduyas; disproportionatc ; тpoфๆ, natrition). Unequal nutrition, as when one part receives a greater degrec of nourishment tban anotber.]
[ALOIN. Tbe cathartic principle of aloes.]
 erpillorum; area; calvities. Baldness, or tbe falling off of the bair.
[ALOUCHI. A gum afforded by the canella alba.]
ALPHAORCEIN. Dr. Kane finds the orcein of arcbil to be often a mixture of two substances, differing in tbeir proportion with the age of the arcbil, whicb be names alpha-orccin and beta-orcein; tbe latter is produced by the oxidation of tbe former, and is tbe orcein of Robiquet and otber cbemists.

ALPHITA (plural of ä $\lambda \phi$ ltov, farina). Barley meal ; barley meal fried.

ALPIIONSIN. An instrument for extracting balls, insented by Alphonso Ferricr, of Naples.
 nym for the Lepra alphoïdes, or White Lepra.

ALTERANTIA NERVINA. A class of substances, as spirituous liquors and narcotics, which produce material changes in the brain, attended by disturbance of the intcllectual functions.

ALTERATIVES (allcoo, to cbange). Remedies which very gradually re-establish the healthy habit, functions, secretions, \&c.
[ALTERNATE. Applied to leaves, flowers, and branches, which come out one above another, but on different sides.]

ALTHEA OFFICINALIS. Conimon Marsh Mallow ; a plant of the order Malvacea, abounding in mucilage. From the root arc prepared an alkaloïd called althea, and a denulcent lozenge, cmployed on tho continent under tho nauc of $p$ âte de guimanve.

ALTHIONIC ACID. An acid found in the residue of the preparation of olcfinat gas by incans of alcohol and sulphuric
acid. The namo is derived from the words alcohol and ethionic.

ALUDEL. A pear-shaped vessel used by the earlier chemists, resembling the head of an alembic, with the exception of the beak, \&c. A series of these vesscls, joined together, is used for distilling mercury in Spain.

ALU'MEN. Sulphas Alumince et Potas8c. Alum; a double, or sometimes a triple salt, consisting of sulpburic acid and alumina, with potass or ammonia, or frequently both of tbem. Tbe alumen of tbe Pharmacopœeias is prepared from schistose clays; in Italy, this salt is procured from alum stone, a mineral substance occurring in most volcanic districts.

1. Alumen rupeum. Roche or rock alnm. A varicty of alum brought from Roccba, formerly called Edessa, in Syria. That which is sold under tbis name is common English alum, artificially colourcd.
2. Alumen Ronianum. Roman alum; the purest variety of alum, containing no ammonia in its composition.
3. Ammoniacal ulum is a double salt, consisting of the sulphates of ammonia and of alumina.
4. Iron alum, Manganese alum, and Chrome alum, are salts of alumina, to which the generic term alum is applied, tbe species being distinguished by the name of tbe metallic peroxide which each contains.
5. Alumen exsiceatum, vel ustum. Dried alum; the pbarmacopeial name of alum when it has undergone watery fusion, and parted with all its water of crystallization, by tbe action of heat.
6. Alum curd of Riverins. Albumen aluminosum. A coagulum formed by briskly agitating a drachm of alum with tho white of an egg.
7. Alum zohey. Serum aluminosum. A wbey made by boiling two drachms of alum with a pint of milk, and then straining.
8. Alum water. A solution of alum in water, used by painters in water colours.
9. Alum ointment. Common turpentine, lard, and powdered alnm.
10. Boerhaave's astringent powder for the agne consisted of alum and nutmeg, with tho addition of Armenian bolc.

ALUMINA. Aluminous carth. Onc of tbe primitive earths, which, from constituting the plastio principle of all clays, lonms, and bolcs, was called argil, or argilleccons carth; but now, as being obtaincd in its greatost purity from alım, is ealled alunim, or tho sesqui-oxide of aln. minium. It occurs nearly in a puro stato in the sapphire and the ribly.

1. Aluminite. The name by which mineralogists designate the bydrated suhsulphate of alumina.
2. Aluminiun. The metallic hase of alumina. It is obtained from its chloride by the action of potassium.
3. Pctra aluminaris. Sulphuretted clay; the purest of all aluminous ores, and as bard as indurated clay; hence its name, alum rock.
[ALUM-R00T. Common name of the Hcuchera Americana.]

ALVEARIUM (alveare, a bee-hive). The meatus auditorius externus, or auditory canal of the ear.
[ALVEOLATE (alveolus, a little cavity). Having little grooves or cavities.]

ALVEOLI (dim. of alvei, channels). The alveolar processes or the sockets of the teeth. Hence the term alveolar, as applied to the arteries and veins of the sockets of the teeth.

Alveolar structure. A term applied by Hewson to minute superficial cavities found in the mucous membrane of the stomach, osophagus, and small intestine, and which be compared to the cells of honeycomh. They are distinct from the follicles.

ALVEUS COMMUNIS. The name given by Scarpa to the common duct or communication of the ampullæ of the semicircular canals of the ear.
[ALVINE (alvus, tho belly). Of, or belonging to, the belly.]

ALVUS (ah alluendo, quâ sordes alluuntur). The helly; the intestines; also the intestinal evacuation.

1. Alviduca. Medicines which promote evacuation of the contents of the intestines.
2. Alvifluxus. Diarrbœa; a flux or discharge of the contents of the intestincs.
3. Alvine Concretions. Calouli formed in the stomach or intestines. Seo Bezoar. 4. Aluus coacta. Literally, hard-bound belly; the state of costiveness. Celsus.

ALYSMUS (àdvopos, restlessness; from à $\lambda \dot{\prime} \omega$, to bo vexed). A term used hy Hippocrates to denote anxicty, or restlessness, cbiefly affecting the pracordia, with lowness of spirits, $\& 0$.

ALYSSUM [(a, pro duzi, against ; $\lambda \nu \sigma \sigma a$, madness). So called from its being supposed to bo a specific against lyydrophobia. Madwort Plantain. Sce Alisma Plantago.]

AMADOU. Agario; a spongy inflammable substance, prepared from the dried plant of the Boletras Igniarius, found on old nsh and other trecs. It is used for stopping hamorrhages, \&c.

AMALGAM (áभna, together; rapíw, to marry). A mixture of mereury with somo other metal. Sce Alloy.

Amalgamation. The process of mizing mercury with some other metal. It is extensively used in separating silver and gold from some other ores, and is founded on the property which mercury has to dissolve these metals out of the minerals with which they are associated.

AMANITA MUSCARIA. Fly Amanita; a plant of the order F'ungi, containing a poisonous principle, which has been called amanitine.
AMA'RA (sc. medicamenta; from amarus, hitter). Bitters; medicines with a hitter flavour, and tonic property, as camomile, gentian, \&c.

AMARYTHRIN. Erythrin Litter of Heeren. A hitter extractive matter, ohtained by dissolving erythrin in hot water, and exposing it some days to the action of air.
[AMATIVENESS. The sexual passion.]
AMATORII (amo, to love). Pathetici, or the superior obliqui muscles of the eyc; so named from the expression which they impart.

AMAURO'SIS (à ávpòs, ohscure). Caligo oculorum. Blindness; drop serene; [gutta serena; ] loss of sight from an afo fection of the retina, the optic nerre, or the brain. This term was employed by Hippocrates merely in the sense of obsenrity or dimness; by later writers it was used as the name of the particular disease. [Amaurotic cat's eye (amblopia senilis?); a term applied by Beer to an amaurotic affection, accompanied by a remartiable change of colour in the pupil, which presents a yellowish tint. It occurs chiefly in very old persons.]

AMBE (ă $\mu \eta \eta$, the edge of a rock). An old nachine for reducing dislocations of the shoulder.

AMBER. Succinum. A yellotish, translucent, and inflammable substance, which is found in beds of wood-conl, and appears to be the altered resin of trecs; by Berzelius it was considercd as a concreted bnlsam.

1. Acid of Amber, or Succinic Acid, is obtained from amber by dry distillation. It is a delicate reagent for separating red oxide of irga from compound metnllic solutions.
2. Amber Camphor. A rellowr, light sublimate, obtained by the destructive distillation of amber in a retort or alembic. By Vogel it was termed colatile resin of ambrr.
AMBERGRIS (ambre-gris, Fr.). A sebrecous substance found noating on the sea in warm climates, supposed to be a coneretion formed in the intestinal canal
of the Physeter Mfacrocephalus, or Spermaceti whale. The Japanese call it whale's deng.
[AMBIDEXTER (ambo, both; dexter, the right hand). Able to use both hands alike.]

AMBLO'SIS ( $\dot{\mu} \mu \beta \gamma \omega$, to eause abortion). Misearriage. Hence the term amblotica, as applied to medieines supposed to cause abortion. '

AMBLYAPHIA ( $\dot{a} \mu \beta \lambda \stackrel{s}{s}$, dull ; $\dot{a} \phi \grave{\prime}$, touch). Insensibility of touch or general feeling.

AMBLYGONITE. A rare mineral-a phosphate of alumina and lithia.

AMBLYOP1A ( $\dot{\pi} \mu \beta \backslash \dot{s}$, dull; $\dot{\omega} \psi$, the eye). Incomplete or incipient amaurosis; or weakness of sight.
AMBON (dvaßaivw, to aseend). The margin of the sockets in which the heads of the large hones are lodged.-Celsus.
AMBREIC ACID. A peculiar acid, obtained by digesting ambrein in nitric acid.

AMBREIN (ambre, Fr.). A substance analogous to cholesterine, forming the chief constinent of ambergris.

AMBULANCE (ambulo, to walk). A light caravan, furnished with surgeons' assistants and orderlies, for attending upon the wounded in the field of hattle.
AMENORRHEA (a, priv.; $\mu \bar{i} \nu$, a month; píc, to low). Suppressio mensium. Obstruction, or morhid deficiency of the menses or catamenia.

AMENTIA (amens, senseless). Imbecility of intelle et.

AMENTUM. A catkin; a form of inflorescence, in which the flowers of a spike are destitute of calyx and corolla, the place of which is taken hy hracts, and the whole inflorescence falls off in a single piece, either after flowering or the ripening of the fruit, as in the hazel, the willow, $\&$ e.
AMER (bitter). The bitter principle produced by digesting nitric acid on silk.
AMETHYST (a, priv. ; $\mu c \theta \hat{v} \omega$, to be intoxieated). A reddish violet-coloured guna variety of Corundam. Its name is derived from its reputed virtuc of preventing intoxication; topers were formerly in the habit of wearing it about their necks. It consists almost entircly of siliea.

AMIANTHUS ( $\alpha$, priv.; palvw, to pollute). Mountain flex. An incombustible mincral, consisting of very delicato and regular silky fibres. See Äsbestos.

AMIDES. A serics of saline compounds, in which the compound of nitrogen and hydrogen occurs, containing an atoon less of hydrogen than ammonia. The name
amidogen has been applied to their radical.

AMIDINE (amidon, starch). A substance intermediate, between gum and starch, obtained hy solution of the latter in water.

AMILENE. A liquid hydroearbon, obtained by distilling hydrate of oxide of amyl repeatedly with anhydrous phosphorie acid.

AMMELIDE. A substance formed by hoiling melamine in strong nitric acid, until the solution is complete.

AMMELINE. A substance generated by boiling melam in a solution of potassa; on adding acetic acid, the anmeline is thrown down as a white precipitate.
AMM1. The warm carminative fruit of several species of Sizon: Order Umbellifer.

AMMONIA. Ammoniacal gas. A transparent, colourless, pungent gas, formed hy the union of nitrogen and hydrogen. By Priestley it was called alkaline air; it is frequently termed the volatile alkali, to distinguish it from the fixed alkalies, soda and potash. Its present oame is derived from sal ammoniac, of which it constitutes the basis, and which received its title from heing first prepared in the district of Ammonia in Lihya.

1. Liquor Ammonica. Liquid ammonin; the incorrect name of the concentrated solution of ammonia. One volume of water takes up ahout 750 times its hulk of the gas, forming a liquid possessed of similar properties, and termed spirits of hartshorn, from its being raised by distillation from that substance.
2. Ammoniaco-. A term prefixed to salts, in which ammonia has been added in sufficient quantity to combine with both tho acid and the base.
3. Ammoniuret. A eompound, containing ammonia and a salifiable base, or other substance not acid.
4. Ammoniacal Amalgam. A substance formed by the action of galvanism on a salt of ammonia, in contact with a globule of mereury.
5. Anmonium. A term applied to a hypothetical compound of nitrogen and hydrogen. Berzelius considered it to be the metallic base of ammonia.
AMMONIACUM. Ammoniac, a gumresin, which exudes from tho surface of tho Dorcmas ammoniacum, a plant of the order Umbelliferce. I'wo rarieties oceur in tho market:-
6. Gutte Ammoniaci, oceurring in tears, whieh should bo white, clear, aud dry;
and and
7. Lapis Ammoniaci, oeeurriug in lumps.
very impure, and generally adulterated with eommon resin.

African Ammoniacum. A gum-resin, obtnined from the Ferula tingitann. It resembles the Persian Ammoniacum of tbe sbops in external appenrance, but it differs in its odour when hcated.
AMMONION (ä $\mu \mu \mathrm{s}$, sand). A collyrium, said to remove sand or gravel from tbe eyes.-Aëtins.

AMMONITE. A fossil molluseous animal, allied to the genus Nautilus. From its resemblance to tbe horns of the statues of Jupiter Ammon, it is named cornu amwionis: from its coiled torm, it is popularly called snake-stone. The term is frequently applied, in anatomy, to tbe pes hippocampi of the brain.

AMNE'SIA (a, priv. ; and $\mu \nu \tilde{\eta} \sigma 15$, memory). Forgetfulness; loss of memory.

AMNION ( $\dot{\mu \nu \grave{̀} s, ~ a ~ l a m b) . ~ T h e ~ i n t e r n a l ~}$ membrane of the ovum, or tbat wbicb immediately surrounds the fotus in utero.

1. Ammii liquor. Tbe fluid contained in the amnion.
2. Amniotic Acid. A weak acid diseovered in the liquor ammii of the cow.

AMOMUMGRANA PARADISI. Grains of Paradise Amomum; a plant of tbe-arder Scitaminere, tbe fruit of whicb is well known under the name of Grains of Paradise, or Mellegetta Pepper.

AMORPHOUS ( $u$, priv. ; $\mu$ op $\phi \dot{n}$, form). Shapeless; irregular. A term applied to mineral and other substanees, which occur in forms not easy to be defined; also to certain sediments found in the urine, in disease. Sce Culculus.
[AMORPHOUS QUININE. Quinoidine.]

AMPELIC ACID. An acid obtained by Laurent from the oils of bituminots sehist. The term ampelin lins been also applied to an oily matter prepared from the same substance.

AMPII- ( $\dot{\alpha} \mu \phi i)$. A Greek preposition, signifying about, on both sides, \&e.

1. Amph-cmerina ( $\dot{\eta} \mu \dot{\varepsilon} p a$, a day). Another term for quotidian ague.
2. Amph-arthrosis (äp $\theta p \omega \sigma t s$, articulation). A mixed kind of articulation, with obscure inotion, partaking of both diartbrosis and synarthrosis; it is also called contimone diarthrosis. See Arpicnlation.
3. Amphi-bin ( $\beta$ ios, life). The second class of tho Enceplacata or Vertebrata, comprising mophibious animals, which commenee their larva state as fishes, and undergo varions degrees of metamorphosis in advancing townrds the cundition of reptiles.

name given by Haily to the mineral hornblende; a silieate of lime and magnesia.
4. Amphi-gen (revvaiw, to produce). A name of the mineral leucite, or Vesuvian ; a varicty of clay, or silicate of alumina.
5. Amphi-troprl ( $\tau \rho i \pi \omega$, to turn). That which is curved round the body to which it belongs; a term applied to the embryo of tbe seed.
6. Amphi-tropous. Tbis term is applied to the ovule of plants, where the foraminal and chalazal ends are transverse witb respeet to the bilum.

AMPHORA ( $\dot{\mu} \phi \grave{i}$, on each side; фipw, to carry; so named from its being carried by two bandles). Quadrantal; cadus. A mensure of capacity, frequently mentioned by Roman authors, containing 2 urnce, 3 modii, 8 congii, 48 sextarii, and 96 henine or cotyle. But the Attic amphora, ealled by the Greeks metrèta or ceramium, contained 2 urnæ, and 52 sextarii. The ampbora was nearly equal to 9 gallons English, and tbe sextarius to one pint and a half Englisb, or one mutcblsin and a half Scntcb.

AMPHORIC RESONANCE (amphorn, a vessel). A sound of tbe cbest like that beard on blowing into a deeanter. See Auscultation.

AMPLEXICAUL (amplector, to embracc; canlis, a steun). A term applied, in botany, to the stalks of leares which are dilated, and embraee or form a sbeatb to, the stem. Some leaf-stalks perforin this office partially, and are called semiamplexicaul, or half-stem-sheathing.
AMPULLA. A big-bellied jug or bottle, used by the Romans for containing wine. Hence the teru is applied to a chemical vessel having tbe same form as a cueurbit. The term is used in medicine as synonymous with bulla ; hence pemphighs is called, by some of the continental writers, fchris ampullosa, or bullosa.

AMPULLULA (din. of ampulla, a botHe). A term applied by Lieberkuhn to the extremity of each villus of the mucous cont of the intestines; it is nn oval resicle, having its apes perforated by lacteal orifiees, througb which the chyle is taken up.

AMPUTATION (cmputo, to cut off). Tho removal of a limb, or other part of the body, hy means of the knifc.
AMULFT. $\lambda$ supposed charm against infeetion or diseasc; snch are anodyne nccklires. used in tcething of infants.

AMIELOUS (a. priv.: $\mu v e \lambda \partial s$, medulla). A term npplied to the fotus, in eases in whieh there is complete nbsence of the spiunl warrow. When the eneepbalon
also is absent, the foetus is termed amyencephalous. There may he absence of the encephalon-of the cerebrum and cercbellum only; in this case the foetus is called anencephalons. Or, the cerebrum morely may he in a state of defective development, or atrophy, more or less partial or extensive.

AMYGDAL雨. Literally, almonds; a popular name for the extcrior glands of the neck, and for the tonsils.

AMYGDALE AMARA, DULCES. Bitter and sweet almonds; the fruit of two varieties of tbe Amygdalus Communis. The hitter almond contains prussic acid, and enters in to the composition of noyau.

1. Amygdala placenta. Almond cake; the substance left after the expression of the oil, which, when ground, forms almond powder, so generally used for washing the hands.
2. Oil of litter almonds. For obtaining this oil, the expressed cake is submitted to distillation, when a bighly-volatile, pungent oil passes over.
3. Amygdalin. A substance extracted from the Anygdala amara, or bitter almond, and from the berries of the cherrylaurel.
4. Anygdalic acid. An acid obtained by the action of alkalies upon amygdalin.
AMYGDALEA. The Almond trike of Dicotyledonous plants; a sub-order of the Rosacece, yielding an abundance of hydrocyanic acid in their leaves and kernels. Trees or shrubs with leaves alternate; corolla polypetalons; stamens perigynous; ovary superior, solitary, simple; fruit, drupaceous.
AMYL. The hypothetical radical of a serics of compounds, of which the hydrate of the oxide has long been known as fusel oil, or as the oil of grain-spirit or potatoes, as it is produced in the fermentation of unmalted grain and potatoes, along with alcohol, and distils over with the latter.
[AMYLACEOUS (amylum, starch). Of or belonging to starch; starch-like.]

A $^{\prime}$ MYLUM (a, priv.; $\mu$ údos, a mill; as being prepared without a mill). Stareh; the fecula of tbe Triticum hybernum, or mheat.

1. Amylum Marantw. Arrow-root; a nutritive starch, prepared from the Araranta Arundinacea, very analogus to wellWashed potato-starch. See Parina and Feculu.
2. Amylic acid. A volatile acid, proeured by digesting moistened starch with peroxide of inanganese.

AMYRIDACEN. An order of Dicotyledonous plants, abounding in fragrant
resin. Trees or sbrubs, with lcaves compound, with pellucid dots; corolla polypetalous; stamens hypogynous; ovary superior; frui sub-drupaceous, ammaroid, or leguminnus.

AMYRIS ( $a$, intens.; $\mu$ úpov, myrrh). A genus of plants abounding in resin. A. Gileadensis is the Balsam of Gilead tree, yielding the liquid revin called Balsam, or Balm of Gilead, or Mecca. A. Elemifera. yields the resin oalled Gum Elemi.

ANA, or $\overline{A A}$, contracted from $\dot{d v a ̀}$, of each, used in prescriptions.

ANA- (àà). A Greek preposition, denoting through, upon, \&c.; and, in composition, again, upwards, \&c.

1. [Anabasis (avabacve, to ascend). An increase either of a disease, or of a particular paroxysm.]
2. Anc-catharsis (кaӨaipe, to cleanse). A tcrm used by the Greeks, and copied by Sauvages, to denote cougb attended by expectoration.
3. Ana-lepsis ( $\lambda a \mu \beta$ áv $\omega$, to take). Recovery of strength after sickness. Hence the term analepties or restoratives.
4. Aua-logons tissues ( $\lambda$ diyos, an account). A terin applied to all solid, morbid products, which resemble the natural elementary tissues of the body. (Carsiocll.) It is synonymous with the euplastic matter of Lobstein. See Heterologons Iromations.
5. Anc-lysis ( $\lambda \hat{i} \omega$, to solve). The resolution of compounds into their elementary parts. Every distinct compound, which exists ready formed, is called a proximate, or immediate principle, and the process of procuring it is termed proximate analysis. The reduction of the proximate principles in to their simplest parts, constitutes viltimate analysis. Compare Synthesis.
6. Ana-ptysis ( $\pi$ rúw, to spit). A term used by the Greeks in the same sense as anacatharsis.
7. Anc-8arca ( $\sigma a ́ p \xi$, the flesh). Aqua inter cutem; bydrops. General dropsy ; dropsy of the cellular substance; the lencophlegmasia of various writers.
8. Ana-stomosis (oropa, a mouth). The communication of vessels with ench other, as of the arteries with the veins, which hy touching at numerous points, form a network of reticulation. Sce Inosculation.
9. Ancetropous (rpita, to turn). A term applied to the ovule of plants, when the inside of this orgnin is reversed, so that the apex of the nucleus, and consequently tho foraulet, correspond with tho base of the ovule.
ANACARDIACEA. The Cnshew tribu of Dicotylerlonous plants, aboumling in a resinuus, sometimes acrid, highly poison-

## ANC

ous fuice. Trees or shrubs with leaves alternate; flowers usually uniscxual ; stumons parigynous; ovary superior; frut generally drupaceous.

ANACARDIUM. Anacrrdiam occiderttale. Cashew nut, or marking nut. The nut contains, hetween its rind and shell, a red, in lammahle, and very caustie liquor, used as a marking ink.
[ANACYCLUS PYRETHRUM. The systematic name of the plant pellitory of Spain.]

ANAEMIA ( $a$, priv.; aTua, blood). Sanguinis defectus. Exsanguinity, or a state of hloodlcssners. The term should be anhæmir.

AN EMOTROPHY ( $a$, priv.; a T $\mu a$, blood; тpoфin, nourishment). By this term, and hemotrophy, are implied simply a deficicncy, and an excess, of sanguineous nourishment. Atrophy and hypertrophy, as commonly understood, include the idea of diminished and increased magnitude; while anœmia and hyperamia have reference only to the quantity of hlood present, without regard to its putritive properties.l'rout.

AN ASTHESIA ( $\alpha$, priv. ; aivonots, perception). Loss of the sense of touch.
[ANAGALLIS ARVENSIS. Scarlet Piinpernel. A plant of the order Primulacere, much csteemed by the ancients as a counter-poison, and in more modern times as a preventive of bydrophohia.]
[ANALEPTIC (ava入aцßav, to repair). Food or medicine calculated to improve nutrition and restore strength.]
[ANALOGUE (avadojos, consentaneous). closely analogous to something else. Applied hy Professor Owen to a part or organ in one animal which has the saue function as another part or organ in a different animal.]
[ANALISIS (avadvw, to undo). The process of separating any compound substance into its constituents; decomposition.]
[ANAMNESTIC (avapvnots, remembrance). A medicine for streugthening the memory.]
ANAPIRODISIA ( a, priv.; 'Aфpodion, Venns). Impotence ; incapahility of sexual intercourso, from organic, functional, or moral cause; one of tho dysorcxice of Cullen.
[ANAPLASTIC (avamiaoow, to form again). The renewal, or forming anew. Applicd to surgienl operations for the restoration of lost parts, or for the reparation of certain deformitice, or of solutions of continuity, hy availing of honlthy structure.]
[ANASARCA. See Ama.]
[ANASTONOSIS. Sce Ana.]
[ANASTOMOTIC. Of the nature, or belongirg to, anastomosis.]
[ANATOMICAL (uratomia, anatomy). Of, or belonging to, anatomy.]

ANATOMI (dvatipvw, to cut up). The science of organization; the science whose object is the examination of the organs or instruments of life. Animal anatomy is divided into hunuan apatony and comparative unatomy, according as it treats of the organization of the human hody, or of that of other animals. Human anatomy may he distinguished into the following hranch-es:-

1. Descriptive Anatomy treats of the numerous organs of which the human body consists, with reference to their shape and mutual relations. This branch is subdivided into the particular anatomy of organs, and the anatomy of regions, or surgical anatomy.
2. Geveral Anatonty treats of the structure and property of the different tissues which are common to several organs. To this hranch belongs the examination of the general characters of all the organs and bumors.
3. Special Anatomy is that which treats of the healthy state of the organs, while morbid or pathological anatomy is that which treats of diseased states, or alterations of structure.
4. Transcendental Anatomy is that which investigates the mode, plan; or model upon which the animal frame or organs aro formed.
[ANATROPOUS (avatpėtu, to suhrert). Applied to the ovule of plants, in which the hilum and internal umbilicus are opposed to each other.]
ANAUDIA (a, priv.; aù ǹ, speech). Dumbness; privation of voice ; catalepsia. - Hippocratcs.
[AN AZOTURIA ( $a$, priv.; azotum, azote, the chief constituent of urea; urina, the urinc). A variety of chronic diuresis, in which the urine shows no excess of urea.]
ANCHILOPS (ăy $\chi$, near: ẅ̀, the cre). A soro under the inner angle of the cye. Incipient fistula lacrymalis. According to Blanchard, the swolling is called anchilops, while yot entire; and agilops, when the abcess has burst.

## ANCHU'SA TINCTORIA. Dycr'salka-

 nct ; a plant of the order Boraginacca, the root of which abounds in the red colouring matter called alkenct, used by dycrs, and for imparting a deep red to oils, ointments, and plasters.[Anchnsin. The red-colouring principle obtained from the Anchusa tinctoria, termed by some anehusic acid.]
$\left.\begin{array}{l}\text { [ANCHYLOSIS, } \\ \text { [ANCYTLOSIS. }\end{array}\right\}$ See Ankylosis.] $\left.\begin{array}{l}\text { [ANCHYLOBLEYHARON, } \\ \text { [ANCYLOBLEPHARON. }\end{array}\right\}$ Seo Arkyloblepharon.]

ANCON ( $a \gamma \alpha \omega \boldsymbol{y})$. The elbow. Ȟbice-

1. Anconéns. A muscle which assists in extending the fore-arm.
2. Auconoild ( ̂̃dos, likeness). Elbowlike; applicd to a process of the cubit.

ANCYROIDES ( ${ }^{\circ} \gamma \kappa v \rho a$, an anchor; عidos, likeness). A former designation of the coracoild process of the scapula, from its likeness to the beak of an anchor.

ANDROCEUM (ávinp, a man). A term applied to the male apparatus in plants, commonly ealled the stamens - the apices of old botanists.
 womnn). A bermaphrodite; a lusus untur $\propto$, in which the organs of generation appear to be a mixture of both sexes. [Having male and female flowers on tbe same plant.]
[ANDROMANIA (avnp, n man; $\mu a v t a$, madness. Insane love of man, nymphomania.]
[ANDROMEDA ARBOREA. Sorrel Tree. The leares of this tree have a pleasant, acid taste, and a decoction of them forms a pleasant drink in fevers.]
ANDRUM. A species of hydrocele, peculiar to the south of Asia, and deseribed by Kæmpfer.
[ANEMIA. See Anæmir.]
[ANEMONE PRA'TENSIG. Meadow Anemony. A plant of the order R(tumcnlacca, believed by Störek to be useful in diseases of the eyes, in secondary syphilis and in cutaneous eruptions. There are several elosely allied species, which possess the same medieal properties.]
 measure). An instrunent for ineasuring the strength or velocity of the wind.

A Ei ENCEPHALIA (a, priv.; i $\gamma \kappa$ ह́pados, tice brain). The state of an anencephalus; the : thence of a greater or less part of the eerel-al portion of the hend. Geoffrey St. Hilaire justly distingnishes-

1. Real Anencephatlia, or entire absence of the brain, which might be denominated ind-uncucephialia ( $\dot{\text { anos, entire), or paut- }}$ aneencephalia ( $\pi \bar{\alpha} 5$, тaviv̀s, all).
2. Cyst-rnencopleatia (кúorıs, a bladder), or the vesicular brain, in which, instead of $n$ brain, a bladder is found filled with
anid.
3. Der-rnencrphalia (dep , the neek), in which ouly a sumall portion of the bruin cxists, resting oulte cervieal vertebres.
4. Pod-anencephulirs (roùs, nodos, a foot or stalk). in which a brain indeed exists,
but it is situated outside tbe cranium, attached as it were to a stalk.
5. Not-anencephalia (yผิтos, the back), in whieh the brain is not within the skull, but (at least in great part) is thrust through a fissure of the back part of tho head, and so produces, like a spina bifida, not-enccphalocele.

ANENCEPHALUS ( $a$, priv.; i $\boldsymbol{\gamma \kappa \varepsilon ́ \phi a \lambda o s , ~}$ the brain). A monster without brains.
[ANEROID (a, priv.; àņ, air). A de. fective term intended to signify witbout air.]
[Aneroid Barometer. A newly invented instrument, consisting of a flat circular box, about a quarter of an incb in deptb, and made of some white metal, having tbe upper and under surfaces corrugated in concentric eirelcs. This box being exhausted of air, througb a short tube, which is subsequently mado air-tight by soldering, constitutes a spring, whieh is affected by every variation of pressure in the atmosphere, the corrugations on its surface giving it greater elasticity.]

AN'ESIS (àv( $\eta / 1$, to remit). A remission, or relaxation of a disease, or symptom.
ANETHUM GRAVEOLENS. Common or Garden Dill; a plant of the order $U m$ bellifcia, much valued for the earminative properties of its fruit.

ANEURYSM [ANEURISM] (avevpúve, to dilate). The dilatation of a vessel or
vesscls.

1. The old distinetion was between true and false ancurysm: the former compreheuds dilatation without rupture of any of the arterial coats; the latter, dilatation with rupture of some of the corts.
2. False Ancurysm admits of some distinetions. When the extravasation is diffused, the disease has been termed $n$ difficsed fulse aneurysm; when cireumseribed, a circumscribed false nneurysm. The French writers term the former ansvrisme faux primitif, the linter anterisme fanx conséntif.
3. Active Anemrysu of the ITeart. Tbe incrensed muscular structure of the left ventricle of the heart, which frequently necompanies the eartilaginous thiekeuing of the seinilunar valves of the aorta.
4. Aneurysne by Anastomosis. A tumor consisting of a congerics of small and netive arteries, absorbing veins, and intermediate cells. The eellular substance thruugh whield these vessels are expanded, resembles the gills of a turkey-coek; or the suletance of the placenta, spleen, or uterus; or the navi materni of infonts.
5. Anenrysmal Vmin. A particular kind of ancurysin, in which the blood effused from a wounded artery passes into a
neighbouring vein, which it dilates in tho form of $\Omega$ sac. It is produced when $a_{\text {a }}$ cutting instrument pierees a vein and a suhjacent artery at the same time, forming a dircet communication hetween the two vessels.
[6. Dissecting Aneurism. A form of aneurism resulting from a rupture of the internal coat, and the partinl laceration of the middle coat, of the artery, in consequence of which hlood passes hetween the lamina of the middle tunic, separating its internal from its external layer.]
ANFRACTUS (ả $\mu \phi i$, ahout; $\phi \rho \mathcal{R}^{\sigma} \sigma \omega$, to environ). A winding, or turning. The term denotes the anfractuosities, furrows, or depressions by which the convolutions of the hrain are separated.
[ANGEIAL (áyciov, a vessel). Vascular. Angeial tissue or angeial cystous tissuc. The serous membrane which lines the hlood-vessels and lymphatics is so tormed hy M. Blainville.]
ANGEIOSPERMIA (ăyysiov, a vessel ; oтip $\mu a$, seed). The name of plants which have their seeds enclosed in a vessel, or pericarp. Compare Gymnospermia.

ANGELICA ARCHANGELICA. Garden Angelica; a plant of the order Umbellifcre, the root of which is oecasionally used in pectoral disorders.
[There is an American species, the $A$. atropurpurea, which is supposed to have similar medical properties.]

Candied Angelica is made from the fresh stalks of this plant, boiled in syrup; an agreeahle sweetmeat, said to he aphrodisine.
[ANGIECTASIS (àvyєiov, a vessel ; єктáors, extension). Dilatation of a vessel.]
[ANGINA ( $a \gamma \chi \omega$, to strangle). Sense of suffocation; applied to disenses in which this is a prominent symptom; also to various affections of the throat.]

ANGI'NA PECTORIS (ango, to choke; from ü $\gamma \omega$, the samo). Broast-pang; spasm of the chest. This disease, which is attended hy neute pain, sense of suffocation, and syncope, has heen thus variously designated at different periods, by different writers:Cardiogmus cordis sinistri Sauvages 1763 Angina Pectoris............... Heberden 1768 Die Brusthräune...............Elsner 1750 Diaphragmatic gout......... Butter 1791 Asthma arthritieum.......... Schmidt 1795 Syncope angens.............. Parry 1799
Asthma dolorificum.........Darwin 1801 Asthma dolorificum............ Sluis 1502 $\left.\begin{array}{c}\text { Asthma spastico-arthriti- } \\ \text { cuun inconstans......... }\end{array}\right\}$ Stocller
cun inconstans..............Stephen
Suspirium cardincum.......... Stephen
Sternalgian................... Baues
Stenoenrdin......................Brera

Pnigophobia.................... Swediaur 1812
Angor Pcetoris................. Frank 1818
The following varietics of Angina are distinguished in practical medicine:-

1. A. tonsillaris. Sore throat.
2. A. maligna. Malignant sore throat.
3. A. trachealis. Tracheitis; Croup, or inflammation of the Trachea.
4. A. parotidea. The Mumps; a specific inflammation of the parotid and suh-maxillary glands.
5. [Angina epiglottidea. Edematous swelling of the glottis.]
6. [Angina externa. Mumps.]
7. [Angina membranacea. Membranous cronp.]
[ANGINOSUS. Anginose. Of or belonging to Angina.]
[ANGIOLEUCITIS (à $\gamma$ ciov, a ressel; גcuкos, white). Inflammation of the lymphatic vessels.]

ANGIOLOGY (à $\gamma \gamma \varepsilon i o v, ~ a ~ r e s s e l ; ~ \lambda b y o s, ~$ a discourse). The science of the rascular system.
[ANGIOSPERMATUS (àyyciov, a ressel; $\sigma \pi \varepsilon \rho \mu a$, seed). Having the seeds lodged in a pericarp or seed-vessel.]

ANGLICUS SUDOR. The English sweating-fever, or the ephemera maligna of Burserius, descrihed hy Dr. Caius as "a contagious pestilential fever of one day." It made its first appearance in London in 14S0, or 1483.

ANGO'NE (a้ $\gamma \chi \omega$, to strangle). A senso of strangulation and suffocation.

ANGOSTURA. [See Angustura.]
ANGULAR (angulus, an angle). [Of or helonging to an angle; formed like an angle.]

ANGULARIS SCAPULA. Another name for the levator anguli scapulc.
[ANGUSTIFOLIUS. (Angustus, narrow; folinm, a leaf.) Angustifoliate; having narrow leaves.]

ANGUSTURA BARK. This bark is referred by Humboldt to the Galipea Cueparia; hy Dr. Hancock to the G. Officiralis.

1. Augusturin. A neutral principle, obtained hy submitting the alcoholic tincture of angustura bark to spontancous eraporation.
2. False angustura. The bark of the Strychnos mux vomica, formerly assigned to the Brucea antidyecnterica.
[ANHAMIA. Sec Ancmia.]
ANHELATION (auhclo, to pant). Dyzpnca. Dificulty of breathing.
ANHIDRITE ( $a$, priv.; " $\delta \omega \rho$, mater).

Anlydrous sulphate of lime; a mineral.
ANHIDDROUS ( $a$, priw.; \& \&op, water). Withont rater: a term applicd to erystals and gases which are deprived of water. Compare llydientes.

ANIL. Nit. A plant growing in America, from the leaves of which indigo is preparcd.

1. Anilic Acid. A name given hy Dumas to the acid formed by the action of nitric acid upon indigo. It was formerly termed indigotic acid.
2. Aniline. An oily liquid, which distils over when finely-pulverized indigo is decomposed by a highly-concentrated solution of eaustic potash, or soda, in a retort.

ANIMA (the soul). The aame given hy Stahl to the intelligent agent supposed to preside over many parts of the animal economy. This is the Archeus of Van Helmont, and bas heen termed tbe vital principle, the spirit of animation, \&c.

ANIMA ARTICULORUM. Literally, life of the limhs; a name given to Hermodactyllus, or Colchicum, from its great popularity. It formed the basis of tbe dia articulorum, the pulvis artbritiens Turneri, and the Vienna gout decoction.

ANIMALCULES (dim. of animal). Microscopic animals. They douhtless exist in the atmospbere, and in all rivers or ponds ; they are, besides-

1. Infusory. Ohserved in all fluids impregnated with any animal or vegetahle substance.
2. Spermatic. Supposed to bave been discovered in the semen. See Spermatozor.

ANLMALIZATION. The process by which food is assimilated, or converted into animal matter.

ANIME'. A resinous substance, improperly called gum animé, said to be ohtained from the Hymenea Courbaril, and used in perfumes, varnishes, and certain plasters. It resembles copal in appearance, and is often sold under that name.

ANION ( $\dot{\alpha} \boldsymbol{v}_{i} y$, that which gocs up). A term applied by Dr. Faraday to the body which passes to the positive pole - to the anode of the decomposing body - as it is separated by electricity. See Kation.
[ANISE. The common name for the plant Rimpinella anisum.]
ANISETTE DE BOURDEAUX. A liqueur made by distilling aniso, fenncl, and coriander seeds, previonsly steeped in brandy, with sugar, and one-half water.

ANISI SEMINA. Anisecd; the fruit of the Pimpinclla Ani甘um, a plant of the order Umbellifera.
[ANISUM. The pharmaceutical namo for the fruit of the Pimpinclla anisum, the anisi semina.]

ANKERL. A liquid measure used at Ansterdan, containing about 32 gallons English wine mcasure.
[ANKYLOBLEPIIARON (arkúdos, bent;
$\beta \lambda$ ह́qapuy, the cyclid). union of the two lids.]
[ANKYLOGLOSSUM ( $\dot{\alpha} \gamma \times u ́ \lambda o s$, bent; $\gamma \lambda \bar{\omega} \sigma \sigma a$, the tongue). Abnormal connexion of the tongue and mouth restricting the motions of that organ, and arising either from shortness of the frænum, or from the presence of an adventitious membrane extending from tbis part to the tip of the tongue (Tongue-tie); or from adbesions hetween the mucous membrane of the tongue and that lining the cavity of the mouth.]

ANKYLOSIS (áyкúdшass; from áyкúdus, curved). A stiff joint from bony union. It admits of the following varieties :-

1. True Ankeylosis. An affection of the synovial membrane, in whicb the two surfaces of tbe joints adhere together, the synovial memh hrane disappcars, or is changed into cellular tissue, and the hones hecome firmly united.
2. False Antylosis. An affection in which all the parts composing the joint are thickened, the motion is limited, and a kind of amphiarthrosis produced.-Béclard.

ANNEALING, or NEALING. The process of beating a metallic body, and suffering it to cool again in a moderate temperature. If cooled too suddenly, it hecomes extremely brittle.

The Anncaling of Glass is conducted in the same manner, and is nccessary to prevent its flying to pieces on the application of violence or a high temperature. See
Rupert's Drops.

ANNOTTO. Rocou. A substance procured from the pellicles of the sceds of the Bixa Orellana, a Liliaccous plant, and used for colouring chcese, for dyeing, and other purposes.
[ANNULAR (anmulus, a ring). Ringlike.]
[AMNULATE (annulus, a ring), ringed; surrounded hy rings.]

ANN ULIDA (annulus, a ring). The fifth class of the Diplu-ncura or Helminthoida, consisting of long, cylindrical, mostly aquatic worms, with red blood, covered with a soft and more or less segmented and annulated skin.

AN'NULUS (Latin). A ring; a circle, or rounded margin.

1. Anmulus ciliaris. The ciliary circle or ligament; a white ring, forming tho bond of union betwixt the choroid enut, the iris, and the corona ciliaris. It is the annulus ganglifurmis tmica choroïdea of Socmmering.
2. Anuulus ovalis. The ronnded margin of the septun, which oecupies the place of the foramen ovale in the fretus. It is also called the ammbus forcmemin.

ANODE（ùva，upwards；$\delta 8 \delta s$, a way）．A term applied by Dr．Faraday to that part of the surface of a decouposing body which the electric current onfers－the part immediately touehing tho positive pole． See Kathodc．
［ANODIC（ävw，upwards；osds，a way）． Ascending；applied by Dr．Marshall Hall to the course of action of the nervous in－ Aluence．］

ANODYNES（a，priv．；jdúv»，pain）．Re－ medies against pain．

Anodyne Nechlaces．Necklaces made of the roots of Hyoscyamus，imagined to fa－ cilitate tecthing in infants．

ANOMALOUS（ $a$ ，priv．；д́дàos，oven）． Irregular；a term applied to diseases，in which the symptoms are irregular．
［ANOMOCEPHALUS（ $a$ ，priv．；vopos， rule；кєфа入ך，bead）．A foetus with a de－ formed head．］
［ANOMPHALUS（ $\alpha$, priv．；оцфалоs，um－ bilicus）．Without a navel．］

ANONYMUS（ $a$, priv．；$\delta \nu о \mu a$, a name）． Literally，nameless；a term formerly ap－ plied to the cricoid muscle．
［ANORCHIS or ANORCHIDES（ $a$ ， priv．；opkis，testicle）．Without testicles．］ ANOREXIA（ $\varepsilon$ ，priv．； öp $^{2} \xi_{1}$ ，appetite）． Want of appetite ；absence of appetite，un－ accompanied by loathing．

ANORMAL（anormis，without rule）．Ir－ regular ；contrary to the usual state．See Abnormal．

ANOSMIA（ $a$ ，priv．；$\delta \sigma \mu \eta े$ ，odour）．Loss of smell ；it is organic，arising from disease of the Schneiderian membrane，or atonic， occurring without manifest cause．
［ANTACID．See Anti．］
［ANTEFLEXION（ante，before；flecto， to bend）．A hending forward．Anteficxion of the uterus，a bending forward of the uterus，the fundus sinking down between the cervix and the nock of the bladder．］

ANTERYOR（Latin）．Before；as ap－ plied to muscles and nerves．
［ANTEVERSION（ante，before；verto， to turn）．A turning forwards．］

ANTEVERSIO UTERI（ante，before； verto，to turn）．A morbid inclination of the findus uteri forward．Compare Retro－ versio．

ANTHEMIS（áv日íw，to blossom）．A genus of plants of the order Composite． Chamomile flowers are the produce of the A．nobilis；Spanish Camomile，or Pclli－ tory of Spain，is the produce of tho A．py－ rethrum．

ANTHER（inonpds，from dvoíw，to flou－ rish）．Tho part of a plant which has hitherto been considered as the male sex－ nal organ．It is the esscutial part of the stamen，consisting，in most enses，of tro thece placed at the top of the filament，
and hence ealled the bilocular anther．The theco contain a powdery matter called pollen．grains，and these enclose a semi－ luid substance termed fovilla，composed in great part of minute granulations，the nature of whose motions is not understood． The anther is termed，

1．Innate，when it is attached to the filem ment hy its base，as in sparganium．

2．Adnate，when it is attached to the filament hy its back，as in polygonum．
3．Versatile，when it is attached to the filament by a single point of the connect－ ive，from which it lightly swings，as in grasses．

4．Antica or introrsa，when the line of its dehiscenee is torrards the pistil．

5．Postica or extrorsa，when the line of its dehiscence is towards the petals．

ANTHIARIN．The active priaciple of a gum resin obtained from the Anthiaris toxicaria，the most deadly of the Upas poisons，employed by the inhahitants of the East Indian Archipelago to poison their arrows．

ANTHRACITE（ǎv $\theta \rho a \xi$ ，a burning coal）． Stone coal，a species of coal which contains no bituminous substances，and does not yield inflammable gases by distillation．It consists，in some specimens，of 95 per cent． of carbon．

ANTHRACOKALI．The name given by Dr．Polja to a remedy in certain her－ petic affections．The simple preparation consists of a levigated coal－dust，and pure potassa；the sulphurated，of sulphur，levi－ gated coal－dust，and caustic potassa．
［ANTHRACOSIS（avepa $\xi$ ，a conl）．A specics of anthray which attacks the eje－ lids．］

ANTIIRANITIC ACID．An ncid ob－ tained by the action of fused potash on indigo．

ANTHRAX（ǎvOpa ，a burning coal）． Carbuncle．［q．F．］A namo also given by Vitruvius to the factitious cinnabar，or bisulphuret of mercury．
［ANTHRISCUS CEREFOLIUM．
Chervil．An annual European plant cul－
tivated as a pot－herb，and a decoction of which has been cinployed as a dcobetrucnt， diurctic，vulncrary，de．
［ANTIROPOFAGUS（avopuros，a man； фayen，to eat）．An catcr of human ficsh， it eannibal．］
［ANTIIROPOLOGY（av日potos，man； doyos，discourse）．A treatise on man，or the science of human nature．］
［ANTHROPOMORPIOUS（avOp man；ropфn，form）．Having the humas form．］
［ANTIROPOTONY（as opw：os，man； rinve，to cut）．The science which inverti－ gates the constructionof the hmman subject．］

ANTI- (duri). Against. A Greek preposition, signifying opposition.
I. Counter-Agents, or Remedies.

1. Ant-acidls. Remedies against acidity; synonymous with alknlines.
2. Ant-alkalines. Remedies against alkalescence, as applied to the urine.
3. Ant-alyica (ïdyos, pain). Remedies which remove or relieve pain.
4. Aut-aphrodisiacs ('A 1 poditn, Venus). Medicines which allay the venereal appetite.
5. Ant-arthritics (àpopitss, gout. Remedies against gout.
6. Anti-dotes ( $\delta i \delta \omega \mu$, to give). Alexipharmica; counter-poisons.
7. Anti-hamorrhagic Extract. The name given hy M. Bonjean to a styptic extract, obtained from ergot of rye.
8. Ant-helmintics ( $\ddagger \lambda \mu \nu \nu s$, a worm). Remedies against worms.
[9. Anti-hypnotics (uavos, sleep). Remedies against drowsiness or sleep.]
9. Anti-lithics ( $\lambda$ iOosy a stone). Remedies against stone.
10. Anti-lyssic (Auara, madness). The celehrated Ormskirk medicine.
11. Anti-pathio ( $\pi a \dot{\theta} 0 \mathrm{~s}$, a disease). A term applied to the method of employing medicines which produce effects of an opposite nature to the symptoms of the disease, and the maxim adopted is "contruria contrariis opponenda."
12. Anti-phlogistics ( $\phi \lambda \bar{\varepsilon} \gamma \omega$, to burn). Remedies against inflammation.
13. Anti-scorbutics. Remedies against scorhutus, or scurvy.
14. Anti-sceptics ( $\sigma \dot{\eta} \pi \omega$, to putrefy). Remedies against putrefaction.
15. Anti-spasmodics ( $\sigma$ táw, to draw). Remedies against spasm.
16. Anti-ppasis ( $\sigma \pi \dot{i} \omega$, to draw). Revulsion, or derivation; the effect produced by the application of a blister.
17. Ant-odontalgics ( (סovvadya, toothache). Remedies agninst tooth-ache.
II. Opposed in Siturtion.
18. Auti-cardium (kapdia, the heart). The scrobiculus cordis, or pit of the stomach.
19. Anti-cheir ( $\chi$ cip, the hand). The thumb; opposed to the hand.
20. Anti-cnemion ( $\kappa v \grave{\eta} \mu \eta$, the calf of the leg). The shin-bonc, as opposed to the calf.
21. Anti-hclix (eilicu, to turn ahont). An elevation parallel to, and in front of, the helix.
22. Ant-inial (iviov, the occiput). A term applied hy Barclay to an aspect towards the part of the head opposite to
the inion. the inion.
23. Anti-lobium. The tragus; tho process projecting over the opening of the ear
from tho face.
24. Anti-thenar ( $\theta$ ivap, the palm of the band). A muscle which cxtends tho thumb, or opposes it to the hand.
25. Anti-tragus (тpriyos, a goat). A prominence of the ear opposite to the tragus.
26. Anti-tragicus. The muscle arising from the anti-tragus.

2S. Anti-tropal ( $\tau \rho \dot{\varepsilon} \pi \omega$, to turn). Straight, and having a direction contrary to that of the body to which it belongs; a term applied to the embryo of the seed.
III. Opposed in Action or Feeling.
 muscle which acts in opposition to another, and counteracts its action, as the ahductors to the abductors.
30. Anti-pathy ( $\pi \dot{u} \theta_{0} 5$, affection). Aversion; a fceling of opposition.
31. Anti-peristaltic ( $\pi \varepsilon \rho 2 \sigma \tau \varepsilon \in \lambda \omega$, to contract). A motion contrary to the peristaltio motion of the intestines.

ANTIADITIS (iutiades, the tonsils, and the termination $i t i s)$. Inflammation of the tonsils. This is a classical term, whereas tonsillitis is barbarous.
[ANTICLINAL (avtc, against; clino, to bend). Bending against, or in opposite directions.

Antielinal axis. A longitudinal ridge, from which tho strata decline on both sides, usually at very acute angles.]
[ANTIMONIAL (antimonium, antimony). Of, or belonging to antimony. Applied to oompound medicines having antimony for their chief ingredient.]

ANTIMONIUM. Stibium. Antimony; a brittle, whitish metal, usually found associated with sulphur. In type foundries it is much uscd, to give hardness to lead, in the alloy called type metal. The etymology of the term has bcen fancifully derived from its fatal effects upon some monks (anti-moine), upon whom its properties were tried hy Valentine.

1. Crude Autimony. Tho name given to the ore of antimony, or stibinm, which was long regarded as the metal itself, the pure metal hoing termed regulus of antimony.
2. Argentine Flovers of Antimony. The sesqui-oxide of antimony; the result of the simple combustion of the metal. During this process a white vapour rises, which condenses on cool surfaces, frequently in the form of small shining needles of silvery whiteness; hence the name.
3. Powder of Alguroth. Sco Algaroth.
4. Glass, Liver, and Crocus of Antimony. These pharmaceutical preparations are oxysulphurets of the metal, and are similar in their nature to the red antimony ore of mineralogists; thcy are prepared by roasting and then vitrefying the ore. The oxide of antimony is dissolved out from the
glass by acids, nad a substance is left which is called saffrou of antimony.
5. Kermes Mineral. An orange-red substance, deposited when sulphuret of anti. mony is boiled in a solution of potassa or soda, and so ealled from its colour, and from its resemblance to the insect of that name. On subsequently neutralizing the cold solution with an acid, an additional quantity of similar substance, the golden sulphuret of the Pharmaeopeia, subsides.
6. Butter of Antiniony. The sesquicbloride of antimony; the result of distillation of the metal with ebloride of mercury. At eommon temperatures it is a soft solid, of the consistence of butter, wbicb is melted by a gentle heat, and crystallizes on cooling.
7. Antimonious Aeid. An acid obtrined by oxidating metallie antimony by nitrie acid, or hy roasting the sulpburet of antimony. Its salts are ealled antimonites.
8. Antimonic Aeid. An aeid, sometimes called peroxide of antimony, prepared by oxidation of oxide of antimony, by nitric aeid. Its salts are called antinioniates.
9. Autimonial powder. Tbis pbarmacopeial preparation is an oxide of antimony combined witb phosphate of lime. It is used as a substitute for James's Powder.
10. Tartar Emetie. This preparation, the antimouium tartarizatun of the Pharmacopœia, consists of the tartrates of antimony and of potasb, and is formed by digesting tbe oxide of antimony witb cream of tartar.
11. Antinonial Wine. Vinum antimonii. A solution of tartar emetic in sberry wine; two grains of the tartrate being contained in every fluid ounce of the preparation.
12. Bolus ad Quartanus. A compound of tartarized antimony and bark, employed by the French physicians.
[A UTIRRIINUM LINARIA. A plant of the order Serophularinea. It once was in repute as a purgative and diuretic. Its expressed juice is a useful application to bamorrhoidal tumours; and an ointinent made from the flowers is used for the same purpose and in diseases of the skin.]

ANTONII SANCTI IGNIS. St. Anthony's fire; so called because St. Antbony was supposed to eure it miraculously. Sco Erysipelas.

ANTRUM HIGHMORTANUM, or Maxiliame (antrum, a cave). The maxillary sinus; a cavity above tho molar teeth of the upper jaw.

ANTYLION (Autillur, its inventor). An astringent appliention, recommended by Panlus Agineta.
ANUS. The termination or vergo of
the rectum, serving as an outlot for tho fixces.
-1. Artificial Anur. [An opening made in the parietes of the abdomen by disease, aecident, or operation, through which the feecs are, in whole or in part, discharged during life. Also an opening made in the natural situation in cases of imperforate anus in infants.]
2. Imperforate Anus. Congenital closnre or obliteration of the anus.
3. Ani mrolapsus. Exania, or orcboptosis. Protrusion of the reetum, or of its internal memhrane.

ANUS; or, Foramen commune posterius ; the interior aperture of the aqueduct of Sylvius.

AORTA (dinp, air; inpéw, to keep; as baving been formerly supposed to contain only air). The great artery of the heart. It is distinguished into tbe aseending and descending. Hippocrites applies this term to the larger broncbi.

Aortitis. Inflammation of the aorta.
APATHY ( $\alpha$, priv.; $\pi a ́ \theta o s$, affection). Indifference, insensibility.

APATITE. A phosphate of lime.
APEPSIA ( $\alpha$, priv. ; $\pi \dot{\varepsilon} \pi \tau \omega$, to concoet).
Indigestion. Dyspepsia is now used.
APERIENTS (aperio, to open). Mild purgatives.

APETALOUS (a, priv.; пítadov, a petal). Plants whicb bave no petals, or flower-leaves. See Petal.

APEX (Latin). The extremity of a part, as of the tongue. Plural, apiecs.

APHLOGISTIC LAMP ( $\alpha$, priv.; $\phi \lambda i-$ $\gamma \omega$, to burn). A lamp mbieb burns without flame.

APHO NTA ( $a$, priv.; $\phi \omega y$, roice). Mfutitas; defectus loquele. Dumhness; loss of speech or voice, witbout syncope or coma.

APHORTA ( $\alpha$, priv.; фfिow, to bear).
Barrenness; sterility; inability to conceive offspring.
 maxim, principally as applicd to a book of IIippoerates.

APIIRODISIACS ('Aфpoditn, Yeuus). Medicines which excite the venereal appetite. Remedies against impotenee.

APHTIIA (äпte, to inflame). Uleuseula oris. Thrush; numerons miuute resieles, terminating in white sloughs. It occurs in the fauces and in the pudenda. In the former ease it has been distinguished into -

1. A. Inctantium. Infantile, or white.
2. A. adultoram. Of adults, or black.
3. A. arpinnsa. Of the thront.

APIIILLLOUS ( $a$, priv.; фüd $\lambda$ or, a leaf).
Loafloss ; as applied to ecrtain plants.

APIS MELLIFICA (mel, honey ; facio, to make). The honey-hec.

APIUM GRAVEOLENS. Celery; a plant of the order Umbelliferce. When wild, growing in wet meadows and ditehes, it is acrid and poisonous; when cultivated in dry ground, and partially blanched, it is used as salad.
[APLASTIC ( $a$, priv.; $\pi \lambda a \sigma \sigma \omega$, to form). Withont form, or having no true organization. Gerher so denominates those elements, which are unsusceptible of any farther organization.]
[APNGA, APNEUSTIA ( $\alpha$, priv.; $\pi \nu \epsilon \omega$, to respire). Absence of respiration.]

APO- (ínj.) From, off. A Greek preposition, denoting separation.

1. Ap-arthrosis (üpopov, a joint). Articulation ; connexion of the joints.
2. Aph-eresis (aфaspew, to remove). Formerly, that hranch of surgery which consists in removing any diseased or preternatural portion of the body.
3. Aph-elxia ( $\dot{u} \phi \varepsilon \lambda_{\wedge} \omega$, to abstract). Revery; inactivity of the attention to the impressions of surrounding ohjects during wak efulness.
4. Apo-carpce (кupпòs, fruit). Plants which hare distinct carpels, as distinguished from the syncarpe, in which the carpels cohere.
5. [Apo-cenoscs (к\&vшots, evaeuation). Superahundant flux of hlood or other fluid without pyrexia.-Cutlen.]
6. Apo-ncurosis (viòpov, a nerve). A fibrous or tendinous expansion, erroneously supposed by the ancients to he that of nerve; in the thigh it is termed the fascia lata.
7. Apo-phlegmatic medicines. Medicines which promote the secretion of phlcgm or mucus, as squill, \&c.
8. Apo-physis ( $\phi \dot{v} \omega$, to produce). A process of a hone, and a part of the same hone. During the earlier periods of life, thesc processes are for the most part called epiphyses. Compare Epiphysis.
9. Apo-plexia ( $\pi \lambda$ ijoow, to strike). Apoplexy; apoplectic fit or stroke. The term denotes congestion or rupture of the hrain, with sudden loss of sensation and motion. The affection is sometimes called sideratio, resolutio nervorum, \&e.
10. Apo-plexia pulmonaris. This term has been reeently applied to hæmorrhage into the parenchyma of the lungs, usually attended hy hrenoptöc.
11. Apo-ppychia ( $\psi$ vरخे, tbe soul). Leipapsychia of Hippocrates. Syncope, or
fainting. fainting.
 A substance formed frou the putrefaction
of animal matters; it is also called caseous oxide.
12. Apo-stasis (í $\sigma \pi \mu \mathrm{t}$, to stand). An aposteme, imposthume, or ahscess. When a discase passes away hy somo outlet, Hippocrates calls it apoatasis by excretion; when the morhific matter settles on any part, he calls it apostasis by settlement; and when ono discase turns to another, apostasis by metastasis.
13. Apo-8taxis (ará̧ $\omega$, to drop). The dropping of any fluid, as of blood from the nose.
14. Apo-stema (iorqut, to stand). An abscess; a separation of parts.
15. Apo-syringesis (aúpty , fistula). The degenerating of a sore into a fistula.
16. Apo-theca ( $\dot{a} \pi o \theta$ i)kn, a shop; from titn $\boldsymbol{t}$, to place). A shop where цedicines are sold. Hence-

Apo-thecrrins. An apothecary; a compounder of medicines. This designation is more corrcet than those of chemist and druggist.
18. Apo-thecia. Scutella, or little shields; a term applied, in hotany, to tho reproductive portions of lichens.
19. Apo-zem ( $\xi$ \& $\omega$, to hoil). A decoction; a preparation differing from a ptisan only in the addition of various medicines, and in its heing employed at prescribed intervals, and not as a habitual drink.

APOCYNACEF. An order of Dicotyledonous plants, agrecing with Asclepiadacer, hut of rather more suspicious propertics. Trees or shruhs, usually milky, with leaves opposite, sometimes whorled; corolla monopetalous, bypogynous; stamens inscrted into the corolla; ovaries two; fruit a follicle, capsule, drupe, or berry, single or douhle.

APOCYNINE. A bitter principle, ohtained from the Apocynum Cannabinum, or Indian-hemp, or Dog's-hane.
[APOCYNUM. A genus of the order मуросіпасес.
[1. A. androscmifolizm. Dog's-bane. The root of this species is a prompt emetic in the dose of thirty grains.
[2. A: canuabinum. Indian hemp. This species is powerfully emetic and eathartic, sometines diuretic, diaphoretic, and expectorant. It has been sucecssfully used
in dropsy.] in dropsy.]

A'PODLS (a, priv.; поũs, пodis, a foot).
Fishes which have no abclominal fins.
[APONEUROSIS. See Apm, 6.]
[APOPHYSIS. Sco Apo, S.]
[APOPLEXY. Sce Ap, 9.]
[A POETHMA. See Apn, I5.]
[APOZNM, Sce Apo, 19.]
APMARA'IUS (apparco, to be at hand). A term applied to instruncuts employed
in surgery, chemistry, \&c.; also to certain methods of cutting for the stonc. See Lithotomy. - [In physiology it significs an assemblage of organs coneurring in the performanec of the same function, and the aetions of which have a common object.]

APPENDIX (appendo, to hang to). Appendicula. A process or appendage ; something appended to another part, without being essential to the existence of this part, as a thorn or a gland in plants.

1. Appendix ceci vermiformis. A long worm-shaped tube or process, the rudiment of the lengthened cæeum, found in all the mammalia, except man and the bigher quadrumana.
2. Appendices Epiploica, vel pinguedinosce. Sinall, irregular pouches of peritonæum, filled with fat, and situated like fringes upon the large intestine. They are sometimes called omentala intestini crasio.
3. Appendix auricularis. A process situated at the anterior and upper part of the aurieles of the heart.

APPERT'S PROCESS. A method introduced by M. Appert for preserving articles of food unchanged for several years. The artieles are inclosed in bottles, which are filled to the top with any liquid, and hermetically elosed. They are then placed in kettles, filied with cold water, and subjeeted to heat till the water boils; the boiling temperature is kept up for a considerable time, and the bottles are then suffered to cool gradually. Instead of bottles, tin eanisters are sometimes used, and rendered tight by soldering.

APPETENCY ("ppeto, to seek). The disposition of organized bcings to acquire and appropriate substances adapted to their support.
[APPE'TITE (appeto, to desire). An instinetive desire to perform certain natural functions; cspecially those of digestion and generation.]

APPOSITION (appono, to place at). A term applied to that part of tho function of nutrition, by whieli the components of tho blood are transforned on the free surface of an organ into a solid unorganized substance, which is the mode of growth of the non-vascular tissucs. See Transformations.

APTERA (a, priv.; $\pi$ тcporv, a wing). Ap. terons, or wingless inscets.
[AlYMETIC ( $a$, priv.; лúpcros, fercr). Withont fever.]

APYRLIXIA ( $a$, priv. ; mipt $\xi$ s, a fever). Intermissions between the paroxysus of a fever.
APYROUS (a, priv.; rinp, fire). A term applied to borlies which sustain the action of a strong heat for a long tine, without
ehange of figure or other properties. It is synonymous with refractory.

AQUA. Water. This substance is composcd of one part of lyydrogen, and eight of oxygen, by weight; and of two of bydrogen and one of oxygen, hy volume.

1. Aqua pluvialis. Rain water; the purest natural water, bolding in solution carbonic acid, a minute portion of carbonate of lime, and traccs of muriate of lime.
2. Aqua foutana. Spring water; containing, in addition to the above eubstances, a small portion of muriate of soda, and frequently other salts. Spring water which dissolvcs soap, is termed soft; that which decomposes and curdles it, is called hard.
3. Aqua ex flumine, [uqua fluviatilis.] River water; generally of considerable purity, but liahle to hold in suspension particles of earthy matter, which impair its transpareney, and sometimes its salubrity.
4. Aqua ex puteo. Well water ; essentially the same as spring water, being derived from the same source; but more liable to impurity from its stagnation, or slow infiltration.
5. Aqua ex nive. Snow water; differing apparently from rain water only in being destitute of air, to which water is indebted for its briskness, and many of its good effects upon animals and vegetables.
6. Aqua ex laeu. Lake water ; a collection of rain, spring, and river waters, contaminated with various animal and regetable bodies, which, from its stagnant nature, have undergone putrcfaction in it.
7. Aqua ex palude. Marsh water the most impure, as heing the most stagnant of all water, and generally loaded with decomposing vegetahle matter.
8. Aqua destillata. Distilled water; having a rapid taste, fron the absence of air, and slightly cmpyreumatic, in conseqnence probably of the presence of a small quantity of extractive matter, which has undergonc partial decomposition.
9. Aqua marina. Sea water; containing sulphate of soda, the muriates of sodin, magnesia, and lime, a minate proportion of potass, and rarious animal and regetable bodies.-Paris.

AQUE DESTILLATE. Aqua Stillatitic. Distilled waters; waters impregnated with the essential oil of regetables, principally designed as grateful rehicles for the exhibition of more active remedies.

AQUAE MINERALES. Mineral waters; a terin conventionally applied to such waters as are distingnished from spring, lake, river, or other waters, by peculiarities of colomr, taste, smell, or real or supposed medieinal effects. : Pincral maters are of four kinds:-

1. Acidulous: owing their properties chiefly to carhonic acid; they are tonic and diuretic, and in large doses produce a transient exhilaration ; the most celehrated are Pyruont, Seltzer, Spa, Carlshad, and Scarhorough.
2. Chalybeate; containing iron in the form of sulphate, carbonate, or muriate; they have a styptic, inky taste. [Soe Chalybeate Waters.]
3. Sulphureous; deriving their character from sulphuretted hydrogen, either uncomhined, or united with lime or an alkali.
4. Saline; mostly purgative, and advantageously employed in those hypochondriacal and visceral diseases which require continued and moderate relaxation of the howels.

AQUA BINELLI. An Italian quack medicine, supposed to be a solution of creosote, and cclebrated at Naples for arresting hamorrhage.

AQUA CHALYBEATA. A water consisting of a solution of citrate of iron, highly charged with carbonio acid gas, and flavoured hy a little aromatized syrup.

AQUA FORTIS. A name applied by the alchemists to the nitric acid of the Pharmacopoia, on account of its strong solvent and corrosive properties. It is distinguished hy the terms double and single, the latter being only half the strength of the former. The more concentrated acid, which is much stronger even than the double aqua fortis, is termed by artists spirit of nitre.

AQUA LABYRINTHI. Liquor of Scarpa; a fluid found in the cavities of the petrous hone. It is secreted by a mucous membrane which lines the rcstihule and semicircular canals.

AQUA MARINE. A variety of beryl, a mineral of a green colour, of various shades. AQUA PHAGED ENICA. Phagedenic water; a lotion for ulcers, formed by the decomposition of corrosive sublimate in lime water.

AQUA POTASS天. The pharmacopeial name of the aqueous solution of potassa, prepared hy dccomposing carbonate of potassa hy lime.

AQUA REGIA. Royal water; the name given hy the alchemists to a mixture of the nitric and hydrochloric acids, from its property of dissolving gold, styled by them the king of metals. It is now called nitro-muriatic acid, and consists of one part of the former to two of the latter acid.
AQUA TOFFANA. A subtle, certain, slow-consuming poison, preparcd by a *oman of that name in Sioily, said by
some to consist of opium and cantharides; by others, of a solution of arsenic.

AQUA YIT Æ. Eul de Vie. A name given in commerce to ardent spirit of the first distillation. Distillers call it low ovines. As an intoxicating heverage, it might very properly be termed aqua moris.

AQUA VULNERARIA (vulnus, a wound). A remedy applied to wounds; another term for arquebusade.

AQUEDUCT (aquce ductus, a watercourse). A terin applied to certáin canals occurring in different parts of the body; as that-

1. Of F'allopius. The canal by which the portio dura winds through the petrous portion of the temporal bone.
2. Of Sylvius. The canal which extends backwards under the tuhercula quadrigemina, in to the fourth ventricle.
3. Of the Cochlea. A foramen of the temporal hone, for the transmission of a small vein from the cochlea.
4. Of the Vestibulum. The commencement of a small canal, which opens upon the posterior surface of the petrous bone, and transmits a small vein.

AQUEOUS (aqua, water). A term now coming into general use for designating definite combinations with water. The term hydrate has long been employed for the saine purpose. A prefix is used when there is more than one atom, as in binaqueons, ter-hydrate.

AQUEOUS HUMOUR (aqua, water). The fluid which fills the anterior and posterior chamhers of the eye.
[AQUETTA. Aqua Toffana, q. r.]
AQUILA. Literally, an eagle. A term which had formerly many epithets joined with it to denote particular substances; thus, aquila alba, seu mitigata was one of the fanciful names of calomel.
[AQUILEGIA VULGARIS. Colnmbine. A perennial herbaceous plant of the order Ranmentacca, formerly considercd diuretic, diaphoretio, antiscorbutic, and vulnerary.]
[AQUILICIA SAMBUCINA. The systematic name of a plant, nativo of Java, the Moluccas, \&c. The decoction of its root is used for the cure of heartburn, and of its wood to allay thirst.]

AQUULA (dim. of aqua, water). $\Lambda$ fatty tumour under the skin of tho cyclid.

ARACEEE. Aroidea. The Arum tribe of Monocotyledonous plants, containing an acrid, and in some casos a highly dangerous principle. Herbaccous plants with leaves shathing at the basc; flowers miniscxual, arranged upon a spadix, within a spathe; stamens hypogynous; ovary supe-
rior; fruit sueculent rior; fruit succulcat.

ARACHNI'DA (kprixuns, a spider). The third class of the Diplo-gangliata, or Entomoida, comprising articulated animals, generally with four pairs of legs, witheut wings or metamorphesis.

ARACHNOID MEMBRANE (àpáxvクs, a spider; aidos, likeness). Meninx melia. The fine cobroeb-like memhrane situated between the dura and pia mater. It is the serous membrane of the cerebro-spinal centres.

1. Arachnoiditie, or Arachnitis. Inflammation of the arachnoid memhrane.
2. Sub-arachnoidian fluid. An ahundant serous secretion, which fills all the vacuities existing between the arachnoid and pia mater, and distends the arachnoid of the spinal cord so completely, as to enahle it to occupy the whole of the space included in the sheath of the dura mater.

AREOMETER (àpatòs, thin; $\mu \dot{\varepsilon}$ measure). Hydrometerg An instrument for determining the specific gravity of liquids into which it is plunged, hy the depth to which it becomes immersed in them. The art or process of measuring the density or gravity of liquids is termed araometry.
[ARACK. See Arrack.]
[ARALIA. A genus of plants of the natnral order Araliaceæ.]
[Aralia hispida. The systematic name of the dwarf elder, a decoction of which is used as a diuretic in dropsy.]
[Aralia racemosa. The systenntic name of the American spikenard. It is said to possess similar medical properties with the A. nudicaulis.]
[Aralia spinosa. The systematic name of the Angelicn-tree hark. A decoction of the bark is used as a stimulant diaphoretic. An infusion of the recent bark of the root is said to he emetic and cathartic.]

Aralia undicanlis. The naked-stalked Aralia, the reots of which are sometines mixed with the split sarsaparilla of the shops. [It is used as a diaphoretic and alterative.]
ARBOR. A trec. The term is applied to certain arborescent forms assumed by metals:

1. Arbor Dianc. A term applicd to silver, when precipitated from its oxide in the metallic form by mercury.
2. Arbor Suturni. A term applicd to lead, when separatod from its salts in a metallic state hy zinc.

ARBORESCENT (arbor, trec). Having the character of a trec; as distinguisbed from that of an herb or shmb.

ARBOR VITAE. Litcrally, tree of life. A term applied to the arborescent appearance presented by the cervbellum, when cut inte rertically. heart.

Arbor vitce uterina. A term applied to an arborcsccut arrangement of folds on the interior of the cervix uteri. They resemble the smallest of the carncæ columnæ of the

ARBUTUS UVA URSI. Trailing ALbutus, or Red Bear-Berry; a plant of the ordcr Ericacece, employed in cases of irritahle hladder, of diabetes, \&c.

ARCA ARCANORUM. Literally, a chest of secrets. The alchemical name of the philosopher's stone.

ARCA'NUM. A secret; a secret remedy; a remedy which owes its value to its heing kept secret. Thus, sulphate of potash was formerly called areanum duplicatum; acetate of potash, arcanum tartari; deutoxide of mercury, arcanum corallinum, \&c.

ARCH, FEMORAL. The name of a considerable arch formed over the concare horder of the pelvis. It is bounded ahove hy Poupart's ligament, helow hy the horder of the puhes and ilium.
[ARCH of the AORTA. The enrred portion of the great artery, between the ascending and descending portions.]

ARCH ÆUS (d $\rho \times \bar{\eta}$, heginning). A hypothetical and intelligent agent, adopted by Van Helmont, resemhling the anima of Stabl. See Auima.
[ARCHETYPE (apxn, the chief; funos, from). The original type on which others are formed.]
[ARCHIATER (ap $\chi$ n, chief; iaTpos, a physician). The physician of kings or princes; also, the president of a medical college.]

ARCHIL. A riolet-red pastc, prepared from the Lichon rocellus, or Orseille, and other species of lichen, and used in dycing. The plant, reduced to a pulp, and trented with inupure ammoniacal liquor, yields a rich purple tincturc, called litmus or turnsole, used in chemistry as a test.

ARCHOPTO'MA ( $\dot{\rho} \rho \chi^{\partial} s$, anus; $-i \pi T \omega$, to fall). Archoptosis. I'rolapsus ani. A descent of the rectinm. See Arns.

ARCIFORM FIBRES (arcus, a bom; forma, likencss). A term applied hy Mr. Solly to a sct of fibres which proceed from the corpus pyramidalc, and pass outmards beucath the corpus olivare to the cercbellum. He distingnishes them into two layers, the nuperficial cerebellar, and decp cercbellar fibres.

ARCTATIO (arcto, to narram). Constipation of the intestincs; also pretcrnathral straightness of the vagina.
[ABCTIUAT
order Composita, the root of which of the sidered aperient, thisphnetic, depur conand dinretic. The bruised leaves, or a
decoction of them, have been used as an application to ulders and leprous eruptions. The seeds are diurctic.]
[ARCUATE (arcus, a bow). Bowed, bent like the arc of $a$ circle.]

ARCUATIO (arcus, a how). A gibbosity, or curvature, of the dorsal vertehre, sternum, or the tibin--Avicerna.
ARCUS SENILIS (bow of old age). [Geroutoxon.] An opacity round the margin of the cornea, occurring in advanced age, [from a fatty degeneration of the part.]

ARDENT SPIRIT. A term applied to alcohol of a moderate strength.

ARDOR (arden, to hurn). Heat; a sense of heat, or hurning.

1. Ardor Úvinc. A sense of scalding on passing the urine.
2. Ardor Ventricnli. Heartburn.

AREA. Literally, an open place. Under this term, Celsus describes two varieties of baldness, viz. -

1. Area diffleens. Diffluent areated hair; consisting of hald plots of an indeterminate figure, in the beard as well as in the scalp. This is the true alopecia of the Greeks.
2. Area serpens. Serpentine areated hair; consisting of haldness commencing at the occiput, and winding in a line not cxceeding two fingers' hreadth, to ench ear, somctimes to the forehead; often terminating spontaneously. This is the ophiasis of the Greeks.

AREA PELLUCIDA. The transparent space formed after the lapse of several hours in the incuhated egg, around the first trace of the emhryo, hy the middle portion of the germinal membrane.

1. Area Vasculosa. A second distinct space surrounding the area pellucida, and so named from the formation of the blood-
vessels in it.
2. Arca Vitellina. A third distinct space surrounding the arca vasculosa. This zone eventually encloses the whole yolk.
[ARECA CATECHU. The systematic name of an East India plant affording a nut like the nutmeg, hut larger and harder, froir which Catechu is extracted.]
[ARECA NUT. Betel-nut. The product of the Arcea Catcehu.]
ARE'NA. Sand; an obsolete term for gravel or scdiment in the urine.
AREOLA (dim. of area, a void spacc). The pink or brown circle which surrounds the nipple. Also the name given hy Brown to an opaque spot or nucleus observed in the cells of animals, and since termed by Schleiden, cytoblust.
[AREOLAR TISSUE, or MeMbrane. The cellular tissue or membrane of the older writers, a fibrous tissuo extensively
diffused over the animal body, connecting the component parts of the frame in such a manner as to allow of a greater or less freedom of motion hetween them.]
[AREOLATE (areola, a small space). Divided into areolze or small spaces, as applied to surfaces.]
[AREOMETER. See Arcometer.]
ARES. An alchemical term expressive of the Great First Cause.
ARGAND LAMP. A name applied, from one of the inventors, to all lamps with hollow or circular wicks. Tho intention of them is to furnish a more rapid supply of air to the flame, and to afford this air to the centre as well as to the outside of the flame.
ARGE'MA ( $\dot{\alpha} \rho \gamma \partial s$, white). A small white ulcer of the eye, described by Hippocrates.
[ARGRMONE MEXICANA. Thorn poppy. A plant of the natural order Papaveracea, the juice of which, after exposure to the air, resembles gamboge, and is said to be useful as a hydragogue in dropsies and jaundice. In Java, the juice is used externally and internally in cutaneous affections; and the Hindoos consider it as a valuable remedy in ophthalmia, rubhed on the tarsi, or dropped in the eye. The seeds are employed in the West Indies, as a substitute for ipecacuanha, in doses of two drachms infused in a pint of water.]

ARGENTINE FLOWERS OF ANTIMONY (argentum, silver). The sesquioxide of antimony, frequently occurring in the form of small shining needles of silvery whiteness. See Antimony.
ARGENTUM (ápyos, white). Silver; the tohitest of metals; it occurs in the inetallic state, and is also obtained from the ores of lead. It is employed in pharmacy only in the preparation of the nitrate.

1. Argenti nitras. Fused nitrate of silver, or lhnar canstic; formed hy dissolving pure silver in diluted nitrio acid, evaporating to dryness, melting, and pouring the melted mass into moulds.
2. Argentum foliatum (folium, a leaf). Silver leaf; used for covering pills and other suhstances.
3. Argentum in musculis (muscnlus, a mussel). Shell silver; inade by grinding the cuttings of silver leaf with strong gumwater, and spreading it in pond-mussel shclls; it is used for writing silver-coloured letters, hut it tarnishes, and is inferior to the argentuin musivuru.
4. Argentum zootinicum. Cyanide of silver, sonctimes called hydrocyanate, cyanuret, or cyanodido of silver.
The following are Misnomers:-
5. Argentum musivum. Mosaie silver; | epithet of 'panacea lapsorum.' [Tbe powmade of bismutb and tin melted together, witb the addition of quicksilver; used as a silver colour.
6. Argentum vivum. Quicksilver, or mercury, found native, but mostly cxtracted from the native sulpburets.
7. Argentuom vivum purificatum. Hydrargyrus purificatus; or quicksilver rubbed with an equal weigbt of iron filings, and distilled in an iron vessel.

ARGILLA (àpyòs, wbite). Argillaceous Earth. White clay, or potter's eartb; the eartb of elay, called in cbemistry alumina, from its being obtained in greatest purity from alum. See Alumina.

Argilla vitriolata. Alum.
[Argillaceous. Belonging to or of the nature of alumine.]

ARGOL, or ARGAL. Winc-stone. Crude tartar; an acidulous concrete salt, deposited by wine, and used by dyers as a mordant.

ARICINA. An alkaloid found in cincbona bark, and very analogous in its properties to cincbonia and quina. These tbree alkaloids may be viewed as oxides of the same compound radical.
ARILLUS. A term applied, in botany, to an expansion of the placenta, or funiculus, about the seed: the mace of the nutmeg, and the red covering of the seed of the spindle-tree, are instances of arillus.
[ARISTA (areo, to be dry). The beard or sbarp point issuing from the busk of grasses; the arrow.]
[Aristate. Having an arrow, or long rigid spine; bearded.]

ARISTOLOCHIACEE (ǎpiatos, the best; 入oxeia, delivery). The Birtbwort tribe of Dycotyledonous plants, 80 named from the reputed emmenagogue propertics of the genus Aristolocbia. Herbaceous plants or shrubs, with leaves alternate; flowers apetalous, bermaphrodite; stamens epigynous; ovary many-colled; fruit, dry or succulent, many-celled.

ARISTOLOCHIA SERPENTARIA. Virginia Birth-wort, or Snake-root; a plant supposed to possess the power of arresting the effects of serpents' venomous bites.

ARMORACIE RADIX. Horseradish root; the root of Cochlearia Armoracia. Its virtues depend on an essential oil combined with sulphur. Sce Horseradish.

ARNALDIA. A disense formerly known in England, and attended with Alopecia, or baldness.
ARNI'CA MONTANA. Lcopard's-banc; a plant of the order Composita. It lias been celebrated for internal paine and congostions from bruiscs, and has obtaiued the
of from 5 to 10 grs .]

ARO'MA (äpc, intensely; $\quad$ b̧ $\omega$, to emell). The odorous principle of plants, formerly ealled by Boerhave tbe Spiritus Rector.

Aromatics. Plants whicb possess an aroma united with pungency, and are warm to tbe taste.

AROMATIC VINEGAR. An acetic 8olution of campbor, oil of cloves, of lavender, and of rosemary. Tbe acetic aeid used for this purpose is of abont $145^{\circ}$ of tbe acetometer, containing 68.5 per cent. of real aeid. A preparation of tbis kind may be extemporaneously made by putting 3 j . of aeetate of potass into a pbial with a few drops of some fragrant oil, and Y x x. of sulphuric acid.

ARGUA. A term by whicb the Arabian writers sometimes designate tbe aqua, or gutta serena, or catnract.

ARQUATUS MORBUS (arcuatur, from arcu8, a bow). Literally, tbe arched dis. ease; a name formerly given to janndice, from tbe supposed resemblance of its colour to that of the rainbow.

ARQUEBUSADE (arquebus, a bandgun). Aqua Vulueraria. A lotion composed of vinegar, sulpburic acid, boney, alcohol, and various aromatics; originally applied to wounds inflicted by tbe arquebus.

ARQUIFOUX. A sort of lead ore, commonly called potterg' ore, from its being used by potters as a green varnish.

ARRACK, or RACK. An intoxicating beverage made in India, by distilling the fermented juice of the cocoa-nut, tbe palmyra tree, and rice in the busk. It may be initated by dissolving forty grains of flowers of benjamin in a quart of rum: Dr. Kitchener calls this "Vauxball Nectar."

1. Gor arrack is made from a regetable juieo called toddy, which flows by incision from the cocoa-nut tree.
2. Batavia arrack is obtained by distillation from molasses and rice, and is stronger than that of Goa.

ARRAGONITE. An impure specics of carbonate of liue, brougbt from Arragon in Spain.

ARROW-ROOT. A torm improperly applied to fecula or starch, prepared from the root of the Maranta Arundinacea, said to be efficacions in poisoned wounds. [It is also prepared from screral other plants.]
Arror-root, British. A fecula prepared from the roots of the Arum macnlatum, or Cuckon-pint, in the islo of Portiand, by beating them into a pulp, which is repentedly washed by passing it throngb a siefe; it is then dricd iu shallow pane.
[Arroic-root, Florida. Fecula of the Zamia integrifnlia or Z. pumila.]

ARSENICUM (apनeviкдेv, musculine; an ancient epithet, denoting strong and acrimonious properties). Arsenic; a brittle metal of a bluish-wbite colour.

1. Arsenions Acid. This compound, frequently called white arsenic, and tohite oxide of arsenic, is prepared hy digesting the metal in dilute nitric acid. It is well known as a violent poison. Its salts are called arsenites.
2. Arsenic Acid. The compound which results from the further acidification of the arseniots with nitric acid. Its salts are called riseniates.
3. F'ly Pooder. Poudre a mouches. A hlack powder, formed by the exposure of the metal to a moist atmosphere. It is generally regarded as a mixture of white oxide and metallic arsenic.
4. F'uming Liquor of Arsenic. A colourless, volatile liquid, which fumes strongly on exposure to the air. It is the sesqui-chloride of arsenic; and is formed hy throwing powdered arsenic into cblorine gas.
5. Realgar. Ruby or Red Arsenic; the protosulphuret. It occurs native, and may he formed by heating arsenious acid with about half its weight of sulphur.
6. Orpiment. Yellow arsenic; the ses-qui-sulphuret. It occurs native, and may he formed by fusing together equal parts of arsenious acid and sulphur. It constitutes a well-known paint, and is the colouring principle of the pigment called king's yellow.
7. Scheele's AFineral Green. A wellknown pigment, consisting of arsenite of copper, or the combination of the arsenious acid with oxide of copper.
8. Liqnor Arsenicralis. A pharmacopeeith preparation, called Foulcr's solution and Tasteless Agne Drop, consisting of arseniate of potash dissolved in water, and flavoured and coloured by spirit of lavender.
9. Pate Arsenicale. A remedly used in France, consisting of cinnabar, [70 parts,] sanguis draconis, [22 parts,] and arsenious neid, [8 parts,] made into a prsto with saliva.
ARSENOVINIC ACID. A new acid produced by the action of arsenic upon alcohol.
[ARTANTE ELONGATA. The Eystenatic name for the Matico plant, an efficient hemnstritic.]
ARTEMISIA. A genus of plants of the order Compasita. Tho species Chinevsis, Indica, and Vrulyarix, yicld the substance called $\begin{gathered}\sum_{5}^{*} \\ \text { maxa } \\ \text {, which is preparod hy beating }\end{gathered}$
the tops of these plants in a mortar, until they become like tow.
[Artemisia Absinthium. The systematic name for the plant wormmood, well known as a tonic.]

Artemisia Dracunculus. Tarragon; a plant which is used to impart a peculiar stimulating flavour to vinegar.
[Artemisia Santonica. Tartarian southern wood. Under the name of semen contra, seeds supposed to be of this plant are celebrated as a vermifuge. The dose of the powder is from gr. x. to gr. xxx.]

ARTERIA (ànp, air; tnpl $\omega$, to hold). A vessel which carries the blood from the heart; formerly supposed, from its being found empty after death, to contain only air.

1. Arteria innominata. A trunk arising from the arch of the aorta.
2. Arterice helicince. The name given by Müller to one set of the arterial branches of the corpora cavernosa penis. "They come off from the side of the arteries, and consist of short, slightly-curled hranches, terminating abruptly by a rounded, apparently closed extremity, turned back somewhat on itself: these are sometimes single; sometimes several arise from one stem, forming a tuft."
3. Arterice Venosce. The four pulmonary ycins were so called, because they contained arterial blood.
4. Arterial Circle of Willis. This is formed by hranches of the earotid and vertebral arteries at the base of the brain.
5. Artcrialization. The conversion of the venons into the arterial blood; $a$ term applied to the change iuduced in the blood as it passes through the lungs, by the evolution of carbonic acid, and the abstraction of oxygen from the air.
6. Arteritis. Inflammation of an artery or arteries.
7. Arteriotomy (topì, a scetion). The opening of an artery to let blood, generally the temporal.
8. [Arteria aspera. The rough artery; the trachca, so called from the iuequalitios caused hy cartilaginous rings which euter into its stmeture.]

ARTHANATIN. A name npplied by Saladin to a colourless crystalline matter, which is cextracted by alculiol from the thberons stem of the Cyclamen Europaum, or Sow-bread.

## Arthritis. Soe Arthron.

ARTHRON (ápOpov). A joint. Hence-

1. Arthr-itis. Pudagra, or Gout. Correctly, inflammation of a joint.
2. Arthro-dia. A kind of shallow articulation, ns that of the humerus with the glenoid orvity.
3. Arthr-odynia (zsúvn, pain). Pains in the joints.
4. Arthro-logy (Aoyos, a description). A description of the joints.
5. Arthro-pyosis ( $\pi \tilde{u} u v, ~ p u s$ ). Abscess of a joint.
6. Arthro-si8. Articulation, or joint.
[AR'TICHOKE. The common name for the plant Cinaria Scolymus.]
[Artichoke, Jerusalem. The common name for the plant Helianthus tubcrosus.]

ARTIOULARIS (articulus, a joint). Relating to joints; particularly applied to the arteries given off from the poplitcal.

Articularis genu. This, and the term subcrurcus, have been applied to a few detached muscular fibres, frequently found under the lower part of the cruralis, and attached to the eapsule of the knec-joint.

ARTICULATA (articulus, a joint). Articulated or jointed animals; one of the four great divisions of the animal kingdom.

ARTICULATION (articulus, a joint). Arthrosis, a joint. The mechanism by which the bones of the skeleton are connected with each other. All the forms of articulation may be reduced to three:-
I. Synarthrosis, or Immovable.

1. Harmonia (äp , to adapt). Close joining; in which tho hones merely lie in opposition to each other, as in the hones of the face.
2. Schindylesis ( $\sigma x$ เvdí入nб15, a fissure). A mode of joining, hy which a projection of one bone is inserted into a groove or fissure in another, as in the articulations of the vomer with the rostrum of the sphenoid, and with the central lamella of the ethmoid bone.
3. Gomphosis ( $\gamma \delta \mu \phi$ о , a nail). Nail-like insertion, as of the teeth in their sockets; their roots bcing fixed into the alveoli, like nails into a board. This is the only example of this kind of articulation.
4. Sutura. Literally, a scam. A dovetailing mode of articulation, the most solid of the four forms of synarthrosis; it occurs in the union of tho flat bones of the skull with each other. There are two varicties, viz:-
5. Sutura serrata, as in the serrated, or sato-like union of the frontal with the parietal bones, and of the parictal bones with ench other.
6. Sutura squamosa, as in the scalelike connexion of the temporal with the parietal honc.
II. Diarthrosis, or Movable.
7. Arthrodia. In this form of articula. tion, the extent of motion is limited, as in the articulation of both exiremities of the claviclo, and ribs; in the articulations of the radius with the ulna, of the filula with
the tibia, of the articular processes of the vcrtebre, and of the hones of the earpus and tarsus with each other, \&c.
8. Ginglymus ( $\gamma$ ( $\gamma \gamma \lambda \nu_{\mu} \partial_{5}$, a hinge). Hingelike articulation, in which the hones move upon each other in two directions only, viz., forwards and bnckwards; but the degree of motion may he very considerable. Examples occur in the elhow, the wrist, the knee, the ankle, the lower jaw, \&c.
9. Enarthrosis ( $\grave{v}$, in ; àp $\theta$ peots, articulation). Ball-and-soclet joint, the most extensive in its range of motion of all the movable joints. There are thrce examples of this kind of joint, viz., the hip, the shoulder, and the articulation of the metacarpal bone of the thumb with the trapezium.
III. Amphi-arthrosis, or Mixed.

This kind of articulation is intermediate between the immovahle and the movahle forms. It is characterized by having an intervening suhstance between the contiguous ends of the bones, and permitting only a slight or ohscure degree of motion. Examples occur in the connexion hetween the hodies of the vertehre, the union of the tro first pieces of the sternum, and the sacro-iliac and puhic symphyses.
[ARTIFICIAL ANUS. See Anur.]
[ARTIFICIAL JOINT. See Joint.]
[ARTIFICIAL PUPIL. See Pupil.]
ARTIMOMANTICO. An alloy of tin, sulphur, hismuth, aud copper.

ARTOS (äpros). The Greck term for bread, or panis of the Latins.

1. Arto-creas (кр́́as, flesh). A food made of hread and various ments hoiled together.
2. Arto-gala (yí̀a, milk). A food made of bread aud milk. A poulticc.
3. Arto-meli ( $\mu$ idt, boncy). A cataplasm made of bread and honey.
[ARUM. A genus of the natural order Aroidece. The officinal spccies are
[1. A. maculatum. Wake rohin, cuckoopint. The root when fresh contains an extremely acrid juice. The root partially dried, has hecn given in dyspepsia, in doses of ten or fifteen grains. The starch termed Portland arrow-root, or Portland sago, is prepared from the dried root.
[2. A. triphyllum. Indian turnip; dragon root. Tho recent root is a powerful local irritant. The recently dricd root, which is less active, has been given in asthma, pertussis, dyspepsia, ehronic rheumatisur, de., in the dose of ten graine, in an cmulsion, or made into a conserve.]

All'RENOLD (えpitama, a ewer: zidos, likeness). A term n!p!ied to tro friangnlar cartilages of the larynx. The derivation of the term relates to the appearanco of both cartiliges taken together, and co.
vered hy mucous membrane. In animals, which were the principal suhjects of dissection among the ancients, the opening of the larynx with the arytrnoid cartilages bears a striking resemblance to the mouth of a pitcher, having a large spout.

ASAPHATI (a, priv.; бaфìs, clear). A sort of serpigo, supposed to be generated in the pores, like worms.
ASAPHIA (a, priv.; бaф̀̀s, clcar). Defective utterance; a want of clearness of articulation or speech.
[ASARABACCA. The common name for the plant Asarum Europaum.]
ASARI FOLIA. Asarabacea leaves. The leaves of the Asarum. Europeum, a plant of the order Aristolochiacea, abounding in a bitter principle called asarin, and used as an errbine.
[ASARUM CANADENSE. Canada snake-root, wild ginger. A plant of the order Aristolochiacee, the root of which is aromatic, stimulant, tonic, and diaphoretio.]

ASBESTOS ( $\alpha$, priv.; $\sigma \beta \dot{\varepsilon} \nu \nu v \mu$, to extinguish). A mineral suhstance of a fibrous structure, from which an incombustible linen is made. There are several varieties, all more or less flexible and fibrous, and termed amianthus, or mountain flax, mountain leather, \&c.
[ASBOLIN (as $\delta 6 \lambda \eta$, soot). Name given to a substance, supposed to be a peculiar principle, discovered in soot; but said hy others to consist simply of acid pyretin, counhined with that species of pyretin and pyrelain formed during the distillation of pyretin. The anthelmintic powers ascribed to soot have been believed to reside in this suhstance.]
ASCARIS (àorapíco, to jump). A genus of parasitical worms found in the buman body.

1. Ascaris Lumbricoüdes. The long and round worm.
2. Ascaris Vermicnlaris. Tho thread or maw-worm. See Vermes.

ASCENSUS MORBI. The ascent or incrense of a discase.

ASCIA (an axe, or hatchet). A bandage, so called from its shapc, and described by Hippocrates.
[ASCIDIATUS (ascidum, a small bottle). Ascidinte; shaped like a small bottle.]
ASCI'TES (doxds, a sack; a skin-bottle; a hig-hcllied man). IIydrops ventris, vel
abelominis. Dropsy of the belly orabdomen. abclominis. Dropsy of the belly or abdomen. ASCLEPIADACEA. The Asclepins tribe of Dicotyledonous plants. Shrubs
or licrbaceous plants, with leaves or licrbaceous plants, with leaves opposite,
alternate, or whorled ; corolla nonope alternate, or whorled; corolla nonopetalous, hypogynous; stamens inserted into the bane of the corolla; onarien two ; frut
one or tro follicles. In this tribe the sexual apparatus is very peculiar.
[ASCLEPIAS CURASSAVICA. Systematic name of the hastard or white ipecacuanha of the West Indies, the root and expressed juice of which arc used as emetic, cathartic, and anthelmintic.]
[ASC€EPIAS GIGANTEA. See Calotropis gigantea.
[ASCLEPIAS INCARNATA. The systematic name (U. S. P.) of the flesh-coloured Asclepias, an American plant, the root of which is officinal, and is said to be a useful emetic and cathartic.]
[ASCLEPIAS SYRIACA. Silk-weed. The root of this species is said by some to possess anodyne properties, while others state that itacts as a cathartic and alterative. It has been used in asthma, scrofula, \&c.]

ASCLEPIAS TUBEROSA. Swallowwort: [Butterfly-weed;] an American plant, used as a diaphoretic in catarrh and rheumatism.
[ASCLEPIAS VINCETOXICUM. See Cynanchum Vincetoxicum.]

ASEPTA (a, priv.; बウेты, to putrefy). Substances free from the putrefactive process.

ASHES. The residuun of the combustion of regetahles, containing alkaline salts. ASIATIC PILLS. Each pill contains about one-thirteenth of a grain of white oxide of arsenic, and somewhat more than half a grain of hlack pepper.

ASITIA ( $a$, priv.; סiros, food). Loss of appetite.
[ASPARAGIN. Sce Asparamide.]
[ASPARAGUS OFFICINALIS. Common Asparagus. A well known plant of the natural order Asphodelea. The young shoots are diuretic, and are by some considered aperient, deohstruent, and to exert a sedative influence over the heart. A syrup and extract have heen prepared, which possess the same powers as the fresh plant.]
ASPARAMIDE. A principle discovered in the juice of the asparagus, and in the root of the marsh-mallow and liquorice. It is the same as the agedoite of Robiquet.
ASPARMIC ACID. An acid obtained from asparamide, when boiled some time with bydrated oxide of lead or magnesia.
[ASPER. Rough.]
ASPERA ARTERIA. Litcrally, a rough air-vessel. The trachea; so named from the inequality of its cartilages.

ASPERGILLIFORM. [Aspergillus, brush.] Brush-like; divided into uninute ramifications, as tho stigmas of grasses, certain hairs of the cuticle, de.
ASPERSION (arperyn, to sprinkle). A kind of affinsion, in which the liquid is thrown drop by drop, like rain, upon the
hody.

ASPHALTENE. A solid black suhstanee, obtained hy submitting the hitumen of Bechelborum, purified by cther, to a high and prolonged temperaturc.

ASPIIALTUM (a, priv.; cфф́д入 $\omega$, to slip; from its heing used for cement). Jeves' Pitch. Native bitumen; a solid, brittle hitunen, found principally on the shores and on the surface of the Dead Sea, and named from the lake Asphaltitis. A hrown colouring matter is formed from it, which, when dissolved in oil of turpentine, is semitransparent, and is used as a glaze.

ASPHODELEA. The Asphodel or Tily trihe of Monocotyledonous plants. Herhaceous plants, with bulbs, occasionally arhorescent, with leaves not articulated with the stem, parallel-veined; flowers hexapetaloïdeous ; stamens, hypogynous; ovary superior; fruit suceulent, or dry and eapsular. ASPHYXIA ( $a$, priv.; $\tau \phi \dot{j} \xi$,s, the pulse). Defectus pulsûs; defectus animi. Originally, interrupted pulse; but, more recently and generally, interrupted respiration, as in hanging, drowning; suspended animation; apparent death.
[ASPIDIUM FILIX MAS. Male fern. A fern, the root of which has aequired grent eelehrity as a cure for tape-worm.]
[ASPLENIUM. A genus of ferns, some of the speeies of which are thought to have medieinal properties.
[1. A. filix fumina. Female fern. The root is supposed to possess vermifuge properties.
[2. A.ruta muraria. White Maiden Hair.
[3. A.trichomanes. Common Spleenwort.
[4. A. adiantım nigrum. Black Spleenwort. The leaves of these three last species are mucilaginous and are employed as substitutes for the true Maiden Hair (Adiantum Capillus Vencris) in making Capillaire.]

ASSA-FETIDA. A fetid gum-resin, which exudes from the root of the Narthex Assafcetida, a plant of the order Umbellifcre. It oecurs massive, and in tears. It was used by the ancients as a condiment, under tho name of cidpidy (laserpitium) ; it has also heen called opium Cyrenaicum, or juiec from Cyrenc. The term assa-foetida is derived from the monks of the Salernian sehool. [Its medicinal properties are antispasmodie, stimulant, expectorant and laxative. Dose, gr. x. to gr. xx.]

ASSAIING. The elicmieal operation of ascertaining the quantity of any metal in an oro or mixture. It differs from Anelysis only in degree, and is performed in the dry 10 ay , as hy heat; in the moist way, ns by acids and other re-agents; or by both methods. Sec Cupellation.

ASSES' MILK. Lac Aninimum. The
artificial milk may be prepared in the fol. lowing way:-Boil eryngo root, pearl barlcy, sago, and rice, of each one ounce, in three pints of water till half wasted; strain, and put a teaspoonful of the mixture into a coffee-cup of boiling milk, so as to render it of the consistence of cream; sweeten with sugar or honey to the taste.

ASSIDENT SIGNS (as8ideo, to sit by).
Oceasional symptoms of a disease.
ASSIMILATION (assimilo, to assimilate). The conversion of the food into nutriment.

ASSOCIATE MOVEMENTS. Consensual Movements. Those movements which, eontrary to our will, aecompany other, voluntary, motions. Thus, the eye cannot he moved inwards by the action of the rectus internus, without contraction of the iris heing produeed.

ASSODES (ăcŋ, loathing). Asodes. A continual fever, attended with a loathing of food. Sauvages calls it Triteophya as8odes; and Callen arranges it under the tertian remittents.

ASSUS (quasi arsus, from ardere, to hurn). Roasted, as applied to foods. But Celsus has assa nutrix, a careful nurse; quòd pucro adsit, or assit, which is a different origin.

ASTATIC (a, priv.; orác, to stand). A term applied to a magnetic needle, when its directive property is destrojed hy the proximity of another needle of equal magnetic intensity fixed parallel to it, and iu a reversed position, each needle having its north pole adjacent to the south pole of the other. In this state the needles, ncutralizing each other, are unaffected hy the earth, while they are still subject to the influence of galranism.

ASTER (äc ${ }^{2} \dot{p} p$ ). A star.

1. Astro-bolismus ( $\beta$ ád $\lambda \omega$, to east). Sideratio. Apoplexy ; formerly supposed to be caused by the influence of the stars.
2. Astro-logy (גbyos, a description). A description of the stars. The pretended scicnce of forctelling cvents hy inquiring of the stars. Hippoerates ranks this, and astronomy, among the necessary studies of a physician.
3. Astro-nomy (ropos, a law). The seienee which investigates the laws of the stars, or the motions of the heavenly bodies.

ASTIIENIA (a. prir.; a日lvos, strength). Debility ; want of strength.
[Asthenic (asthenia). Wanting in strength.]
[ASTIENOPIA ( $a$, prir.; ootros, strength; eit, the cyc). Weakness of sight.] ASTHMA (dacopás, to brenthe heavils).

Auhclatio; spirandi dificultas; suspirium. Broken-wind; short-brenth; difficulty of hreathing, recurring in paroxysms, and independent of organic disease.
[Asthma, thymic. A spasmodic affection of the glottis supposed to result from enlarged thymus gland.]
[ASTIGMATICUS ( $a$, priv.; $\sigma \tau \iota \gamma \mu a$, a spot.) Defective or distorted rision from congenital or accidental malformation of the lens.]
[ASTOMIA ( $a$, priv.; отодa, mouth). Without a mouth.]

ASTRAGALUS (áorpáyàos, a die). The ankle-bone; the analogous hones of some animal were used by the ancients as dice.

ASTRAGALUS CRETICUS. Cretan milk-vetch; a plant of the order Leguminose, which yields the gum tragacanth of commerce. Several other speeies of Astragalus yield this suhstance, particularly the A. verus, the A. gummifer, \&c.

ASTRINGENT PRINCIPLE. A principle contained in the husks of nuts, of walnuts, in green tea, and ominently in the gall-nut. From the use of this principle in tanning skins, it has obtained the name of tannin.

ASTRINGENTS (astringo, to bind). Remedics which contract the animal fihre, and arrest fluxes, hemorrhages, diarrbœa, \&c.

Espèces Astringents. The name given in the Codex or Parisian Pharmacopocia to a mixture of equal parts of bistort-root, of tormentil-root, and of pomegranate-hark.

ATAXIA ( $a$, priv.; $\tau \dot{a} \xi \iota s$, order). Irregularity; a term applied to some diseases.
[ATELECTASIS (aтè $\eta s$, imperfect; $\varepsilon \kappa$ tauts, expansion). Imperfect cerpansion.
[Atelectasis pulnonum. Imperfect expansion of the lungs, such as exists in the foetus, and is also sometimes met with to a partial extent in infancy.]
ATHERO'MA (äənpa, pap). An encysted tumour, so called from its pap-like contents. Béclard ohserves, that this kind of cyst, as well as the varieties termed meliceris and steatoma, are merely sebaceous
follicles enormously follicles enormously dilated.
[Atheromatous. Of the nature, appearance, or consistenco of the constituents of Atheroma.]

ATHYMIA ( $\alpha$, priv.; $\theta u \mu \partial s$, courage). Lowness of spirits; depression.
ATLAS ( $7 \lambda \lambda^{\prime} \omega$, to sustain). The uppermost of the cervical vertebreo; so named from its supporting the head, as Atlas is said to support the world.
[ATLANTAD, ATLANTAL. Belong-
or relating to the atlas. ing or relating to the atlas.
[Allantal aspect. Aspect towards the
[Atlantal extremities. The upper ex-
[ATMIATRIA (athos, vapour, gas; ${ }^{\text {a }}$ to $\varepsilon$ ia, treatment). Treatment of diseases hy gases or vapours.].
[ATMIDIATRICE: Atmiatria.]
ATMOMETER ( $\dot{a} \tau \mu \partial े s$, vapour; $\mu$ érpov, a measure). An instrument contrived by Professor Leslie for measuring the quantity of exhalation from a moist surface in a given time.
 a sphere). That volume of air which surrounds the carth.

1. Atmospheric Pressure is indicated by the length of a column of mercury. A mercurial solumn, 30 inches in length, presses on a given surface with the same force as the atmosphere in its ordinary state; and hence the force of a 60 inch column is equal to the pressure of tion atmospheres; that of 15 inches to half an atmosphere; that of one inch to 1-30th of the atmospheric pressure.
2. Atmospheres-two, three, \&c. Multiplied pressures of air, arising from condensation, the ordinary pressure being fifteen pounds on the square inch.
[ATOCIA (атокоs, barren). Sterility. - ATOM (a, priv. ; $\tau i \mu \nu \omega$, to cut). An ultimate particle of matter, incapahle of further division. The term is frequently used in chemistry as synonymous with equivalent.

ATOMIC TIIEORY. A theory introduced hy Dalton for explaining the laws of definite preportions in chernical combinations. It is founded on the supposition that matter consists of ultimate indivisihle particles, called atoms: that these are of the same size and sliape in the same body, hut differ in weight in different bodics; and that bodies combine in definite proportions, with reference to those weights, which are hence called atomie wcights. The main features of this theory are briefly stated in the following paragraphs:-

1. In bodies capable of assuming the gaseous form, the weight of the atom is ohtained from the volume; thus, water being composed of one volume of oxygen, united with two volumes (or one atom) of hydrogen, the relative weights will he, oxygen 8 , hydrogen 1 , and water 9.
2. In bodies whicb do not assume the gaseous form in their simplo state, the weight of the atom is deduced from that of the compound; the weight of carbon, for instanee, is obtained froun that of carbonic acid gas, one volume of which weighs 22 times as much as our standard of unity; of these 22 parts, 16 are oxygen, leaving 6 to represent the primary molecule of carbou.
3. In the ease of bodies which are incapable of assuming $\Omega$ gascous form, cither alone or in combination, the weight must he obtained by analysis; thus, marble, or the carbonato of lime, is found to be com. posed of 22 parts of carbonic acid, and 28 of lime; 28 thercfore reprcsents the atomic weight of limc.
4. The atomie weights are generally supposed to be relnted to one another hy multiple; hence, this law is often called the law of multiples, or of combinations in multiple proportion. This will he easily seen by referring to the component parts of the following substances.

Nitrogen. Oxygen.

| Nitrous oxide ............ 14 | 8 |
| :--- | :--- | ---: |
| Nitric oxide............ 14 | 16 |
| Hyponitrous acid...... 14 | 24 |
| Nitrous acid.............. 14 | 32 |
| Nitric acid ............. 14 | 40 |

5. When only one combination of any two elementrry hodies exists, Dr. Dalton assumes that its elements are united, atom to atom singly, by what he calls binary combinations; if several compounds can he ohtained from the same elements, they combine, as he supposes, in proportions expressed hy some simple multiple of the number of atoms; as in the following tahle:-

## Atoms

1 of $\mathrm{A}+1$ of $\mathrm{B}=1$ of C , binary.
1 of $A+2$ of $B=1$ of $D$, ternary.
2 of $A+1$ of $B=1$ of $E$, ternary.
1 of $A+3$ of $B=1$ of $F$, quaternary.
3 of $A+1$ of $B=1$ of $G$, quaternary.
Berzelius has proposed a different classification of atoms; viz., into-

1. Elementary atoms; and
2. Compound atoms, which are-
3. Compound atoms of the first order, or atoms formed of only two elementary suhstances united.
4. Organic atoms, or those composed of more than two elementary suhstances; these he has named from their being only found in orgnnic hodics, or bodies obtained by the destruction of organic matter.
5. Compound atoms of the second order, or those formed by the union of two or more compound atoms, as the salts.
6. Dr. Wollaston applied the term equivalents to the combining proportions of elementary and compound suhstances, as, for instance, the quantitics of acid and base, in sults, required to neutralize each other: thus, 100 parts of sulphuric acid, and 68 parts of murintio acid, are equivalents of cach other, heing both necessary to saturate 71 parts of lime.
7. After all, Dr. Donovan obserres that there is not, perhaps, a word in the language that conveniently expresses the quantity of a body which enters into comhination. Atom is not only hypotheticnl, hut often inapplicahle, as when half atoms occur. Equivalent is only expressive when comparison with a correlative equivalent is directly implied. Proportion means similitude of ratios. Proportional is one of the terms of a proportion. Combining quantity or aceight is sometimes expressive, hut, hesides heing unwicldy, it is not always applieahle. Dr. Donavan adds, the word dose is universally cmployed to designate a determinate or definite quantity of a thing given; it has the quality of involving nothing heyond a fact, and can often he used with advantage.

ATONIA ( $a$, priv.; tovos, tone). Atony; a defect of muscular power.
[ATRABILIARY (atrabilis, hlack hile). Appertaining to hlack hile. Applied hy the ancients to the hypochondriac nad melancholy, those conditions heing supposed to be caused hy the presence of atra bilis.] ATRA BILIS (Latin). Black hile; melancholy. [See Bilis.]
[ATRACHELUS (a, priv.; тpà $\chi \eta$ गos, the neck). Without a neck, short-necked.]

ATRAMENTUM (ater, hlack). Ink. Celsus calls green vitriol atramentum sutorium, or cobhler's ink.
ATRESIA ( $a$, priv.; тpáw, to perforate). Imperforation; usually applied to the rectum, urethra, de.

ATRIPLEX FETIDA. The rild or stinking Orach, now called Chenopodium olidum or vulvaria, much used hy Dr. Cullen, as a volatile fetid, in convulsions. The plant exhales pure ammonia during its whole existence.
[ATROPA (aTpotos, one of the three fates whose special duty it was to cut the thread of life ; because of its dendly effects). A genus of plants of the natural order Solanaceæ.]

Atropa Bclladonna. Deadly Nightshade, or Dwale; a plant of the order Solance, belongiug to the narcotico-acrid class of poisons.
[Alropa Mrandragora. See Mandragora Oficinalis.

Atropia. An organic base, found in all parts of the Atropa Belladonna. It is highly poisonous, and in the most minute proportion possesses the property of dilating the pupil of the eye.

ATROPHIA ( $a$, priv.; Tpoфn, nourishment). Tubes. Atrophy; curaciation; defective nutrition; wasting of the hody rithout cough or evident ferer.
[ATROPOUS ( $\alpha$, priv.; т тет $\quad$, to turn). Not inverted. Sce Orthotropons.
[ATROPURPUREUS (ater, dark; purpureus, purple). Dark reddish purple colonr.]
[ATRORUBENS (ater, dark; rubeo, to be red). Of a dark red colour.]
[ATROVERENS (atcr, dark; vereo, to be grcen). Of $\Omega$ dark green colour.]
[ATTAR GHUL. Otto of roses.]
ATTENUANTS (attenuo, to make thin). Diluent medicines.

ATTENUATION (attenso, to make thin). The lessening of weight or of consistency; emaciation. The term is applied to the process by which a fluid hecomes of less specifio gravity, as when it undergoes fermentation, and parts with carhonic acid.

ATTOLLENS (attollo, to lift up). A muscle which draws any part upwards, as the attollens auriculum, or superior auris, which raises the ear.

ATTRACTION (uttraho, to draw to). A term denoting certain physical and chemical properties of matter.

1. Attraction of Gravitation. The tendencies of masses of hodies to each other. See Giravily.
2. Capillary Attraction. The power by which a liquid rises in a fine tube bigher than the surface of the liquid which surrounds it.
3. Electrical Attraction. The property displayed by certain suhstances of attracting certain others, on being rubbed.
4. Magnetic Attraction. The tendency of certain bodies, chiefly iron, towards the north pole of the earth and each other.
5. Attraction of Colesion. The tendency of the molecules of a hody to cohere, to forin masses. It is the antagonist of affinity.
6. Attraction of Affinity. The tendency of the atoms of certain bodies to comhine, to form chemical compounds. See Affinity.
ATTRAHENS AURIS (attraho, to draw to). A muscle which draws tho ear forwards and upwards; also called anterior auris, and prior auriculæ.
-ATUS. This termination, as also that of -itus, denotes the presence of the substance indicated by the word which it terminates; as alatus, having wings; auritus, having ears, \&c.
[ATYPIC, ATYPOS, ATYPUS (a, priv.; тижоя, a type). Having no regular form or type.]

AUDITORY (awdio, to hear). Bclonging to parts connected with the sense of hearing, as applicd to a process of the tornporal bone; to two pursiges in this bonctho external and the internal meatus; aud
to a nerve - the portio mollis of the seventh pair.

A UGITE. Pyroxene. A silicate of lime and magncsia.

AURA (ăw, to breathe). A breath; a gentle gale; a breeze. [A subtle vapour or exhalation.]

1. Aura Electrica. Electricity, as received from a point; so called from the sensation of its communication.
2. Aura Epileptica. A tingling sensation felt in the extrene parts of the hody hefore an attack of epilepsy - a kind of 'formicatio.'
3. Aura Podngrica. A peculiar sensation creeping through the system, in gout.
4. Aura Seminalis. A theory of the mode of action of the semen in the ovum, according to which it was supposed to take place through the intervention of a peculiar emanation, and not hy immediate contact.
[5. Aura Vitrlis. The vital principle.]
AURANTIACEE. Tho Orange tribe of Dicotyledonous plants, abounding in a volatile, fragrant, bitter, exciting oil. Trees or shrubs, with leaves alternate, often compound, dotted with transparent rcceptacles of volatile oil: flowers polypetalous; stamens hypogynons; ovary many-celled; fruit pulpy, many-celled, its rind filled with receptacles of oil.

## AURANTIUM The Seville Orange

 tree ; a species of Citrus. The unripe fruit is known hy the synonyms of orange peas, curasso oranges, \&c. See Citms.Aurantii bacca, cortex. The Seville Orange, and its rind, flowers, leaves, and immature fruit.
[Aurantii aqua. The distilled water of the flowers of Citrus vulgaris, and sometimes of Citrus anrautium. Taken in sweetened water, it produces a very soothing and tranquillizing effect on the nervous system ; and in some cases of nervous excitement will induce sloep when active narcotics fail to do so.]

> [Aurantii olemm. See Neroli oil.]
[AURATE OF AMMONIA. See Aurum fulmincme.]
[AURELIA (aurum, gold). The Chrysalis, Pupa, or Nympha of insects.]

AURIC ACID (rarnm, gold). A name proposed by Pclletier for the peroxide of gold, from its property of forıning salts with alkaline bases.

AURICULA (dim. of nuris, the ear). An auricle ; tho prominent part of the ear. Also the nanc of two cavitics of the heart.

AURICUL E CORDIS. Auricles; a term applied to those cavitics of the heart which lead to tho ventricles.

AUMICULA'RIS (aurix, the ear.)
Tho

## AUR

little finger; so called because it is generally put into the ear, when that organ is ohstructed. Also, a designation of the musele which extends the little finger, or the extensor minimi digiti, from its turuing up the little finger in pieking the ear.
[AURICULO- (auricula, an auricle). This word, used as a prefix in compound adjectives, denotes relation to, or conncetion with, the auricles of the heart.]
[AURICULATE (dimin. of auris, the ear). Earcd. In hotany this term is applied to leaves having two rounded lohes at the hase, as the leaf of the salvia officinalis.]

AURIGO (aurum, gold). Orange skin; a term applied to an orange hue, diffused over the entire surface of the skin in newborn infants; Sauvages terms it ephelis lutca. Also, an old name for jaundiee, derived from its colour.

AURIPIGMENTUM (aurum, gold; pigmeutum, paint). Yellow Orpiment. Sce Arвеиicum.

AURIS (aura, air). The ear. It is distinguished into the external and the internal.

AURISCALPUM (scalpo, to scrape). An instrument for eleansing the ear.
[AURISCOPE (auris, the ear; окопध $\omega$, to explore). An instrument for exploring the ear.]

AURIUM TINNITUS (timnio, to ring). A ringing noise in the ears.

AURUM. Gold; a yellow metal, of great malleability and ductility. It is found generally native, massive, and disseminated in threads through a rock, or in grains among the sand of rivers.

1. Aurum fulminans. Aurate of anmmonia; an explosive suhstance, produced by precipitating a solution of gold by ammonia.
2. Aurum graphicum. An ore of tellu. rium, occurring in veins in porphyry in Transylvania. According to Klaproth, 100 parts of it consist of 60 tellurium, 30 gold, and 10 silver.
3. Aurun foliafum. Aurum in libellis. Gold leaf, used for gilding pills, \&c.
4. Aurom in unsculis. Shell gold ; made by grinding the enttings of gold leaf with thick gum-water, and spreading the ground gold in pond-mussel shells.
5. Aurum potabile. Gold dissolred and mixed with volatile oil, to be drunk.
6. Aurum pulveratum. True gold powder; mado by rubbing torether grain gold and quieksilver, then distilling of the quieksilver, or eorroding it nway with spirit of nitre, and heating the black powder which is left to redness.

The following aro Misnomers:-

1. Aurum musivum, set mosaicum. Mosaic gold; the former name of the hi-sulphuret of tin. It is used as a pigment for giving a golden colour to small statues or plaster figures.
2. Aurum sophisticum. 'Powder gold, or hronze powder; made of verdigris, tutty, horax, nitre, and corrosive suhlimate, made into a paste with oil, and melted together; used in japan work as a gold colour.
[AUSCULT, AUSCULTATE] (ausculto, to listen). To listen; to practise auseultation. See Auscultation.

AUSCULTATION (ausculto, to listen; from the ancient auscs for aures, quasi aures culto, i. e., aurcs colo). Auricular exploration. The act of listening hy the application of the ear, in the examination of disense. It is termed immediate, when practised hy the unassisted ear; mediate, when performed by means of the stethescope.

## I. Sounds of the Respiration.

1. Vesieular Respiration is the sound of respiration produced in the vesieles of the lungs; it denotes that the lungs are permeahle to air. It is at its maximum in infants, and is termed puerile ; at its minimum in the aged, and termed senile.
2. Bronchial Respiration is the sound of respiration, as heard in the larynx, traehea, and large hronchi ; it appears dry, and the air seems to he passing through a large empty space. There are several Fa rieties of this sound.
3. Cavernous Respiration is the sound of respiration produced in roorhid carities of the lungs. During expiration, the wind appears to be puffed into the ear of the auscultator.
4. Soufle, or Blowing, is a sound resemhling that of the air heing actually dramn froro or propelled into the ear of the auscultator, when the patient speaks or coughs. The 'souffie' is sometimes modificd by the sensation, as of a reil interposed hetween a cavity and the ear, and is then termed souple voile, or the veiled homing sound.
II. Rattles, Râles, or Rhonchi.
5. Vesicnlar, or Crcpitating Rattles, are of tro kinds; the noist and the dry. Tho former resemhles the noise of salt thrown on the fire; the latter, that mado hy distending a dry hladder. The moist sound runs into the rarieties of the hronchial rattle, and, when the huhhles are large, is ealled suberepitation.
6. Bronchicel Ruttles are distinguished into the mueons, the sonorous, and the sibilant. The first resembles the rattling in the thront of the dying; the seeond, a sort of snoring sound, the tone of a hasc estring

## AUT

in ribration, or a cooing sound ; the third, a whistling sound. The mucous rattle, when seated in the bronchi or cavities, is termed cavernons, or gargling.
III. Somnds of the Voice.

1. Bronchophony is the resonance of the voice over the bronchi. It traverses the tuhe of the stethoscope, and is very similar to pectoriloquism. In thin persons it resembles laryngophony.
2. Pectoriloquism is distinguished from bronchophony by its cavernous and circumscrihed character. The voice comes directly from the chest to the ear, as if it were formed within the lnggs. It may be perfect or imperfect.
3. Agophony is a sound resembling the bleating of a goat, or a snufling human voice. It seems as if an echo of the voice, of an ncute, harsh, and silvery character, were heard at the surface of the lungs, rarely entering, and scarcely ever traversing, the tuhe of the stethoscope.
IV. Sounds of Cough.
4. Thbal Congh is a resonance of the concussion produced hy coughing, over the larynx, trachea, and large bronchi. There is the ohvious sensation of an internal canal. It denotes that the air is not allowed to enter the cells of the lungs.
5. Cavernous Cough is the resonance of the concussion produced by coughing, over a cavity. It is attended hy cavernous rattle.
6. Metallic Tinkling resemhles the sound of a metallic vessel, or glass, struck by a pin. It is heard in respiration, hut cspecially when the patient speaks or coughs; it is sometimes heard in cough, when inaudible in the respiration or in the voice.
7. Amphoric Resonance is a sound like that heard on blowing into a decanter. It is heard under the same circumstances as the previous sound.

## V. Sonnds of the Heart.

1. Cri du enir nenf. The sound resembling the creaking of the leather of a new saddle. This sound has been supposed to be produced by the friction of the heart against the pericardium, when one or hoth have lost their polish from the effusion of solid lymph with little or no serum.
2. Bruit de souflet. A sound of the beart rescmbling the puffing of a small pair of hellows, as employed to blow the firc. This sound usually takes the place of the natural one; sometimes the two are conjoincd; it may take place during the first and second sound, or only during one of these.
3. Bruit de scic. A grating sound of the beart, rescmbling that prodnced by the action of a saw upon rood; and-
4. Bruit de rape. A grating sound of the beart, like that produced by the action. of a file or rasp. There is every intermediate gradation, from the smoothness of: the bellows-somand to the roughest sounds produced by a large-toothed saw.
5. Frémissement cataire of Laennec, or brnissement of Corvisart. A peculiar thrill or tremor, perceived by the finger when applied to the heart or artery where it exists, resembling that communicated to the hand by the purring of a cat.
VI. Sounds of the Arteries.
6. Brnit de souflet intermittent. An intermittent blowing sound, occasioned by coutraction of the calibre of an artery, from tumour, \&c. It is sufficient to compress the artery with the stethoscope to produce this noise.
7. Bruit de souffet continu. A continuous blowing and snoring sound, resembling the blowing noise of the bellows of a forge: The bruit de diable, or sound of the hum-ming-top, is a variety of this soufflet. Sometimes a kind of tunc of the arteries is heard, resembling the humming of certain insects; this is called sifflement modulé, out chant des artères.
VII. Somels of Pregnaney.
8. Brut Placentaire. A sound of the placenta, produced, according to Bouillaud, by compression of one of the large vessels of the ahdomen by the gravid uterus. It is analogous to the intermittent blowing sound of the arterles.
9. Double pulsation.of the heart of the foetns. A tolcrahly cxact idea of this noise will he ohtained by listening to the tic-tac of a watch placed under a pillow upon which the head rests. It occurs at the middle of the period of gestation.
[AUTOGENOUS (auTos, itself; yevouat, to be born). Applied by Prof. Owen to the parts, or processes, which are usually developed from distinct and independent centres.]
[AUTOMATIC (avronatı乡(o, to act spontaneously). Applied to functions which are performed instinctively or involuntarily.]:

AUTOMATIC MOTIONS (airoцatos, of his own accord). Those muscular actions which are not dependent on the mind, and which are either persistent, or take place periodically with a regular rhythm, and are dependent on normal causes sented in the nerves or the central organs of the nervous system.
[ A UTOPIIONIA (autos, self; ¢wh, voice). An anscultatory process, which consists in noting the claracter of the obscrver's voice, while ho spenks with his head placed closely to the patient's chest. The voice will, it is alleged by M. Hour.
mann，be modified by the condition of the subjacent organs．］
［AUTOPLASTIC．Of or belonging to autoplasty．］
［AU＇TOPLASTY（aúròs，himself；$\pi \lambda a \sigma \sigma \omega$ ， to form）．A general term applicd to opc－ rations which have for thcir ohject the bringing into contact，and uniting by ad－ besion，surfaces and parts，which being naturally in relation to each other，have been separated hy disease，hy accident，or failed to unite in consequence of defective development；also to operations for the repair of certain lesions，by mcans of healthy integuments tnken from the neigh－ bourhood or even distant parts of the face or body，and made to supply a deficiency or remove a deformity，caused by disease or accident．］
［AUTOPSORIN（aìros，bimself；$\psi \omega \rho a$, the itch）．A homœopathic term to desig－ nate that which is given，under the absurd and disgusting doctrine of administering to a patient some of the virus of the dis－ ease under which he is lahouring，with a view to cure it，as itch，smallpox，cancer， syphilis．］

AUTOPSIA（aùros，on eself；öntoцai，to see）．Post－mortem examination．Inspec－ tion of the hody after death．

AVEN $\not$ SEMINA．Oats ；the fruit of the Avena Sativa，of the order Graminece， yielding a flour or meal which forms the common food in tho north．Groats aro the onts freed from the cuticle，and used in hroth and gruels．

1．Avence farina．Oat meal；employed for gruels or decoctions．

2．Avenaine．A principle discovered in tbe Avena Sativa，or ont．

AVES（avis，a bird）．The fourth class of the Encephalata or Vertebrata，compri－ sing hirds．

AVULSION（avello，to tear asunder）． The forcible separation from each other of parts of the hody which were previously more or less intimately united．
［AWN．The sbarp point or beard of the husk of grapes．－Arista．］

AXILLA（ala，a wing）．The arm－pit；
the space between the side of tho ohest and the shoulder．Mence the term－

Axillary．Applicd to parts bclonging to the axilia，or arm－pit．In hotany，this term is applicd to huds，which are deve－ loped in the angle foruicd hy a leaf－stalk and the stem ：the normal position of every bud is axillary in this sense．
AXINITE（ $\mathfrak{a} \xi i v \eta$ ，an axc）．A mincral， so called from the thinness and shurpuess of its edges．

AXIS（ago，to drive）．Mrodiolus．The
centrul conical bony nucleus of the cochlea． Its surface is spirally marked by a double groove．
［Anticlinal axis．A longitudinal ridge from which tho strata decline on hoth sides．

Synclinal axis．A longitudinal depres－ sion or trough towards wbich strata de－ cline．］

AXUNGIA（so called from its being used to grease wheels－ah axe rotarum quæ ungiamtur）．Axunge，bog＇s lard，or adeps．

1．Axungia praparata vel curata．Pre－ pared lard，or the Adeps Prœparata．
2．Axungia articularis．Unguen articu－ lare．Names of the peculiar fluid which favours the motions of the joints，and which is commonly called bynovia．

3．Axungia Castoris．Pinguedo Castoris． A name formerly given to the Eecretion found in the oil sacs near the rectum of the Castor Fihcr，or Beaver．The Indians use it in smoking．

AZELAIC ACID．An acid obtained by treating oleic with nitric acid．It closely resembles suberic acid．Another acid，the azoleic，is procured hy the same process． The terms are derived from the words azote and oleic．
［AZEDARACH．The pbarmacopœial name for the bark of the root of Mclia azedarach．］
［AZOBENZIDE．A new substance oh－ tained hy heating a mixture of nitrobenzide with an alcoholic solution of potass．］

AZOERYTHRIN．A colouring princi－ ple，ohtained from the archil of commerce．

AZOLITMIN．A pure colouring mate－ rial，of $n$ deep hlood－red colour，obtained from litmus．

AZOTE（ $a$ ，priv．；弓んクे，life）．A consti－ tuent part of the atmospherc，so called from its bcing incapable，alone，of sup－
 trogen，from its being the basis of Nitric Acid，or Aqua fortis．

AZOTIC ACID．Another name for ni－ tric acid．It exists only in combination． AZO＇TOUS ACID．Another name for nitrous acid，or the hyponitrous of Turner． ［AZOTURIA（azotum，azote；urina，the urine）．A class of discases charncterized by a grent increase of urea in the urinc．］

AZULMIC ACID．The name given by Boullay to the black matter deposited dur－ ing the decomposition of prussic acid；it is very simalar to ulnic acid．Sce Ulmin．

AZURE．A fine bluc pigment，com－ monly called small，consisting of a glass colourcd with oxide of cobalt，and ground to au impalpable porder．

AZURE STONE. Lapıs Lazuli. An azure-blue mineral, from which the unchangeable blue colour ultramarine is prepared.

AZYGOS (a, priv., 弓uyds, a yoke). A term applied to parts which are single, and not in pairs, as to a procers of the sphenoid bone, and a vein of the thorax.

BABLAH. The rind or shell which surrounds the fruit of the Mimosa cineraria; it is brought from the East Indies, noder the name of neb-neb; and is enployed as a dye-stuff.

BACCA. A herry; an inferior, indehis cent, pulpy fruit, as the gooseherry. The term is often otherwise applied by botanists.
[BACCATE (bacca, a herry). Berried. It also in Botany signifies having a juicy, succulent consistence.]

BACCHIA (bacchus, wine). Gutta rosacea. The name given by Linnæus to a pimpled or brandy face, - the kind of face that Bacchus rejoiced in.

BACHER'S TONIC PILLS. Extract of hellehore, and myrrh, of each, $z_{j}$., with 3 iij . of powdered carduus henedictus, to he divided into pills of one grain each; from two to six to he given three times every day, according to the effects they produce.

BACULUS. Literally, a stick; and hence the term has heen applied to a lozenge, shaped into a little short roll.

BAKER'S ITCH. Psoriasis pistoria. The vulgar name of a species of scall, occurring on the hack of the hand.

BAKER'S SALT. A name given to the subcarbonate of ammonia, or smelling salts, from its heing used by hakers, as a substitute for yeast, in the manufacture of some of the finer kinds of hread.

BALANCE ELECTROMETER. An instrument constructed on the application of the common halance and weights, to estimate the mutual attraction of oppo-sitely-electrified surfaces.
BALANITIS ( $\beta$ üdavos, glans). Inflammation of the mucous memhrane of the glans penis, and inner layer of the prepuce.
BALAUSTA (ßìえaúgriov). A name applicd to the many-celled, many-sceded, inferior, indehiscent fruit of the pomegranate.
BALBUTIES ( $\beta a \beta a \zeta \omega$, to babhle). Stammering. In pure Latin, bulbus denotes one who lisps, or is incapable of pronouncing certnin letters; blasux, one who stanmers, or has an impediment in his speccl.
BALDWIN'S PIOSPllORUS. The ignited nitrate of lime. This salt is so termed
from its property of emitting a heautiful white light in the dark, when kept in a stoppered phial, and exposed for some timo to the rays of the sun.

BALISTA ( $\beta \dot{a} \lambda \lambda \omega$, to cast). A sling. The astragalus was formerly called os balistce, from its heing cast by the ancients from their slings.

BALL. A form of medicino used in farriery, corresponding to the term bolus; it is generally that of a cylinder of two or three inches in length.

BALL AND SOCKET. Enarthroais. A species of movable articulation, as that of the hip. See Articulation.

BALLISMUS ( $\beta a \lambda \lambda i \xi \omega$, to trip or caper). A term which has heen generally applied to those forms of palsy which are attended with fits of leaping or running.

BALLOON. A chemical instrument or receiver, of a spherical form, for condensing vapours from retorts.
BALLOTA LANATA. A plant indigenous in Siheria, and much rccommended by Brera in rhcumatic and gouty affections.
BALLOTEMENT (French). The repercussion or falling back of the foetus, after being raised by an inipulse of the finger or hand, and so made to float in the liquor amnii.

BALM TEA. An infusion of the leaves of the Melissm officinalis, or Common Balm.

BALM OF GILEAD. Another name for the Mecea Balsam. See Balsam.
[BALNEUM. A hath. See Bath.]
BATSAM. A technical term used to cxpress a native compound of ethereal or essential oils with resin and Benzoic acid. Those compounds which have no Benzoio acid are miscalled balsams, being in fuet true turpentines.
I. Balsame with Bcnzoic Acid.

1. Balsam of Liquidambrr. Balsam which flows from incisions made into the trunk of the Liquidambar styraciflua. It dries up radily, and thus occurs in the solid form.
2. Liquid Balsam of Storax. Balsam said to be procured from the Liquidambar attinia and oricutalc. The substance sold as strained storax is prepared from an impuro variety of liquid storax.

- 3.' Balsam of Peru. Balsam procured from the Mryroxylon Pcruiferum. 'There are two kinds: the brown balsam, cxtracted by incision, very rare, iuported in the husk of the cocon-nut, and hence called balsan en coque; and the llack balsam, obtained by evaporating the decoction of the bark and branches of the tree. These are semilluid balsams.

4. Balsam of Tolu. Balsam which flows spontaneously from the trunk of the Myroxylon toluiferum, and dries into a reddish resinous mass.
5. Chinese Varaish. Balsam which flows from the bark of the Augia sinensis, and dries into a smooth shining lac, used for laequering and varnishing.
6. Benzoin. Balsam which exudes from incisions of the Styrax Benzoin. See Benzointm.
II. Balsams vithout Benzoic Acid.
7. Copaiba balsam. Balsam of copahu or eapivi; obtained by incisions made in the trunk of the Copaifera officinalis; used for making paper transparent, for laequers, and in medicine.
8. Mecca balsant, or Opobalsam. Balsam obtained by incisions of, and by boiling, the branches and leaves of the Balsamodendron Gileadense. It becomes eventually solid.
9. Japan lac varuish. Balsam which flows from incisions made in the trunk of the Rhus Veruix.
[BALSAM OF HONEY. A tincture of benzoin or tolu. Hill's balsam of honey is made of tolu, honey $\bar{a} \bar{a} \mathrm{lbj}$. ; and spirit 0 j . It is used in coughs.]

BALSAM OF HOREHOUND. (Ford's.) An aqueous infusion of horehound and liquorice root, with double the proportion of proof spirit, or brandy; to which are then added opium, camphor, benzoin, squills, oil of aniseed, and honey.

BALSAM OF LIQUORICE. This consists principally of paregoric elixir, very strongly impregnated with the oil of anisecd.

BALSAM OF SULPIUR. A solution of sulphur in volatile oils. The absurdity of the term will be evident on referring to tho article Balsam.
BALSAMICA. Balsamies; a term generally applicd to substances of a smooth and oily consistenee, possessing emollieut, sweet, and generally aromatio qualities. Sec Balsam.

BALSAMODENDRON MYRRIA. The Myrrh-tree; aplant of the order Tcrebinthacea, which yields the gaur-resin myrrh.

- BAMBALIA ( $\beta a \mu \beta a l v \omega$, to lisp) or stnmmer). Stammering; a kind of St. Vitus's
dance, confined to the vocal organs. Its varicties are hesitation and stuttering. See Ballutiea.

BANDAGE. An apparatus of linen or flannel for binding parts of the body. Some bandages are called simple, as the circular, the spiral, the uniting, the retaining bandages; others are compound, as the T bandage, the suspensory, the capistrum, the eighteen-tail bandage, \&e.

BANDANA. A style of calico printing practised in India, in whieh white or brightly-coloured spots are produced upon a red or dark ground. Sce Barcood.

BANG. Subjce or Sidhee. An intoxicating preparation made from the larger leaves and capsules of the Cannabis Indica, or Indian Memp.

BANYER'S OINTMENT. This consists of half a pound of litharge, two ounces of burnt alum, one ounce and a half of ealomel, half a pound of Venice turpentine, and two ponnds of lard, well rubbed together. It is used in Porrigo.
[BAPTISTA TINCTORIA. Wild Indigo. The root of this plant is said in small doses to act as a mild lasative; and in large doses to be violently emetic and cathartie. It has been used externally as a cataplasm in obstinate and painful ulcers and in threatened or existing mortification.]

BARBADOES LEG. The name under which Dr. Millary treats of the Arabian Elephantiasis. Dr. Hendy calls it the " Glandular disense of Barbadoes."

BARBADOES TAR. Petroleum. A species of bitumen, differing from nnphtlia in its greater weight and impurity. See

## Bitnmen.

BARBADOES NUTS. Nuces Barbadenses. The fruit of the Jutropha curcas. The seeds are culled physic nuts.
barbary gum. Morocco gum. A rariety of gum Arabie, said to be produced by the Acacia gummifera.
[BARBATE (barba, a beard). Bearded, covered with hairs.]

BARBIERS. A vernacular Indian term, of unknown derivation. It denotes a elronic affection, prevalent in India, and almost universally confounded by nosologists with leriberi.

BARCLAI'S ANTIBILIOUS PILLS.
Extract. colocynth, 5 ij ; resin of jalap (cxtract. jalap.) $\mathrm{J}^{\mathrm{i}}$; almond soap, $\mathrm{J}^{\text {iss }}$; guaiacum, Jiij; tartarized antimony, grs. viij.; essential oils of juniper, carraway, and roscmary, of each. gtt. iv. ; syrup of Buckthom, q. s. To be divided into sistyfurr pills.

BAREGE. A village situated on the French side of the Prrences, celebrated
for its thermal waters. A peculiar substance has been obtained from these and other watcrs, and termed baregin.

BARILLA. The crude suda extracted from the ashes of the plants Salsola and Salicorina. See Ǩelp.

BARIUMI ( $\beta a p \grave{s}$, heavy). The metallic basis of the earth baryta, so named from the great density of its compounds.

BARK. Peruvian bark; a name formerly promiscuously applied to the three species of Cinchona bark. See Cinchona.

Falge Bark. A term which has been applied to certain barks, as the canella alha, or false winter's bark.

BARK OF PLANTS. The external envelope of trees and shrubs. It was formerly distinguished into an external cortical or cellular integument, and an internal or fibrous portion, called liber. More recently, hark has been distinguished into four portions:-

1. Epidermis. The external and cellular envelope, continuous with the epidermis of the leaves. This is never renewed; the following parts increase by successive additions to their interior.
2. Epi-phloum ( $̇ \pi i$, upon; $\phi$ дotds, bark). A cellular portion lying immediately under the cpidermis. Cork is the epiphlœum of the Quereus suber.
3. Meso-phlœиm ( $\mu$ ќcos, middle ; фोо九дs, bark). A cellular portion, lying immediately under the epiphloeum. This portion differs from the preceding in the direction of its cells.
4. Endo-phlaum (evvov, within; ф入oùs, bark). The liber, part of which is cellular, part wondy.

BARK, ESSENTIAL SALT OF. This is merely an extract, prepared by maccrating the hruised substance of bark in cold water, and submitting the infusion to a very slow evaporation.
BARLEY. Hordei semina. The fruit, incorrectly called seeds, of the Hordeum distichon. The specifio nane is derived from its two-rowed ears. See Hordeum.
BARM, OR YEAST. The froth of fermenting becr, used, in its turn, as a ferment in making bread or beer.
[BAROMACROMETER (Bupos, vcight; нaxpos, long; $\mu \dot{\varepsilon}$ poov, a measure). An instrument for ascertaining the weight and length of new-born infants.]
BAROMETER ( $\beta$ ápos, wcight ; $\mu$ trpoy, a measure). A weather-glass, or instrument for measuring the varying pressure of the atinosphere.

BAROSMA (Bapùs. henvy ; ठ $\sigma \mu$ i, odour). Diosma. A genus of plants of the order Rutacec. The leaves of scveral species constitute buchu.

BARRAS. Galipot. An oleo-resinous substance, which exudes from incisions made in fir-trees.
[BARREN. Unable to produce offspring ; producing no perfect seeds.]

BARRY'S EXTRACTS. These extracts differ from the common by the evaporation being carried on in a vacuum produced by emitting stcam into the apparatus, which resembles a retort with its receiver; the part coutaining the liquor to be evaporated being a polished iron bowl. As the temperature is much lower than in the common way, the virtues of the plant are less altered, the extracts are generally green, and contain saline crystals, but some of them will not keep.-Gray.

BARWOOD. A red dye-wood brought from Africa, and used, with sulphate of iron, for producing the dark red upon British bandana handkerchiefs.

BARYPHONIA (Bapis, heavy; $\phi \omega \nu \overline{\text {, }}$ voice). Heaviness of voice; a difficulty of pronunciation.

BARYTA ( $\beta$ apòs, heavy). Barytes. An alkaline earth, the heaviest of all thc earths, and a violent poison. The native sulphate is called heavy spar. The native carbonate has been named after Dr. Withering, its discoverer, witherite.

BARYTIN. A new vegetable base, discovered in the rhizome of Veratrum album, and named in consequence of its heing procipitated from its solution, like baryta. See Jervin.

BASALT (basal, iron, Ethiopian). An argillaceous rock, consisting of silica, alumina, oxide of iron, lime, and magnesia.

BASANITE ( $\beta$ aбaui $\zeta \omega$, to test; from Báaavos, a Lydian stone). A stone by which the purity of gold was tried, and of which medical mortars were made. It consists of silica, lime, magnesia, carbon, and iron.
BASCULATION (basculer, French). A term used in examinations of the utcrus in retroversion; the fundus is pressed upwards, the cervix drawn downwards; it is half the see-saro movement.
[BASE. See Basis.]
[BASIBRANCHIAL (basis, the bnse; branchialis, branchial). Applicd hy Prof. Owen to certain parts of the branchial arch in fishes.]

BASIC WATER. A term applicd in cases in which water appears to act tho part of a bare: plonsploric acid, for instance, ceases to be phosphoric acid, unless three equivalents of water to ono of acid bc present.
[BASIHYAL (basis, the base; hyoider, tho hyoid). The tro small subcubical
bones on ench side, forming the body of the inverted hyoïd areh, and whieh complete the bony arch in small fishes.]

BASILAR [BASILARY] (Baioıs, a base). Belonging to the hase; a terin applied to several hones, to an artery of tho hrain, and to a process of the occipital bone.

BASILICA ( $\beta$ aбtiasos). Royal; a term generally of eminence; and bence applicd to the large vein of the arm.

1. Basilicon. The Ceratum Resinc. An ointment made of resin, piteh, oil, wax, \&e.,-a royal ointment.
2. Basilicur Pulvis. The Royal Powder; an ancient preparation of calomel, rhuharh, and jalap.

BASIO-GLOSSUS. A muscle running from the base of the os hyoides to the tongue.

1. Basio-chondro-cerato-glossus. An unwieldy designation of the component parts of the hyo-glossus muscle, according to their origins and insertions.
[2. Bazio-occipital. The hody or basilary process of the oecipital hone.]
2. Basio-pharyngeus. A term applied by Winslow to some fibres of the muscular layer of the pharynx, which proceed from the base of the os hyoïdes, and form part of the eonstrictor medius.
BASIS ( $\beta$ áots, a base). 1. The suhstance with which an aeid is combined in a salt. 2. A mordaunt ; a substance used in dyeing, which has an affinity hoth for the cloth and the colouring matter. 3. The prineipal medicine in a preseription.

BASIS CORDIS. The base of the heart; the hroad part of the heart is thus ealled, as distinguished from the apex or point.
[BASISPHENOID The base or body of the sphenoid hone.]

BASSORIN. A constituent part of $a$ species of gum hrought from Basbora, as also of gum tragaeanth, and of some gum resins.
[BASTARD. Applied to a disense or plant elosely resembling, but not really what it appears to he.]

BASTARD DITTANY. The root of the Dictanuus fraxinclla, now fallen into disuse.

BASYLE ( $\beta$ áos, a hase; ű $\lambda \eta$, nature or principle). A term proposed by Mr. Graham, to denote the metallic radieal of a salt. Thus, sodimu is the basyle of sulphate of soda; soda is the base, and sulphatoxygen the salt radical, if the salt be viewed as eonsisting of sulphatoxide of sodium.

BATEMAN'S PECTORAL DROPS. These consist principally of the tincture of
castor, with portions of campbor and opium; fiavoured with anise-seeds, and coloured by cochineal.

BATES'S ALUM WATER. Compound solution of alum or the liquor aluminis compusitur. Alum, sulphate of zinc, of each $\overline{3} \mathfrak{j}$.; hoiling water, Oiij. Dissolve and. strain.

BATES'S ANODYNE BALSAM. One part of tineture of opium, and two of opodeldoc.

BATES'S AQUA CAMPHORATA. This collyrium, which was highly esteemed by Mr. Ware, is prepared as follows:B Cupri sulph., holi gallic, āā gr. xv.; camphoræ, gr. iv. Solve in aquæ frigidæ, Oiv.; ct fiat collyrium.

BATH (ball, Sason). Balneum. Baths are general or partial; they may consist of simple water, or be medicated. The physiological and therapeutic effects of haths heing modified by their temperature, the following classification, constructed on these principles, will be found practically useful:-

## I. General Bathe.

1. Cold Bath. Balneum frigidum. The temperature ranges from $33^{\circ}$ to $60^{\circ}$ Fahr. Below $50^{\circ}$, it is considered very cold.
2. Cool Bath. Balneum frigidulnm. Temperature from $60^{\circ}$ to $75^{\circ} \mathrm{Fahr}$.
3. Temperate Bath. Balneum temperatum. Temperature from $75^{\circ}$ to $85^{\circ} \mathrm{F}$.
4. Tepid Bath. Balneum tepidum. Temsperature from $S 5^{\circ}$ to $92^{\circ}$ Fahr.
5. Warm Bath. Temp. from $92^{\circ}$ to $95^{\circ}$ Fahr.; that is, about that of the body.
6. Hot Bath. Balneum ealidum. Temperature from $95^{\circ}$ to $112^{\circ}$ Fahr.
7. Vapour Bath. Balneum raporis; halneum laconicum. Temp. from $122^{\circ}$ to $144 \cdot 5^{\circ}$ Fahr. When a vapour bath is applied only to a particular part of the don, it is called a fumigation or vapour ouche.
8. Hot-air Bath. Balneum sudatorium. The sweating hath. Temperature from $100^{\circ}$ to $130^{\circ}$ Falir.
9. Artificial Sca-water Bath. Balneum maris faetitium. A solution of one part of common salt in thirty parts of mater.
II. Partial Baths.
10. Arm Bath. Balneum brachiluvium.
11. Foot Buth. Balneum pedilurium.
12. Hand Bath. Baln. manulurium.
13. Head Bath. Baln. eapitiluvium.
14. Hip Bath. Coxaluvium, or demi-
bain of the French; in whieh the body is immersed as high as the hips or umbilicus.
III. Medicated Baths.
15. Salinc Bath. Irepared by adding common enlt to water. The temperature onglit not to excecal $92^{\circ}$ Fahr.

16: Sulphurous Bath Prepared hy dissolving four ounces of sulphuret of potassium in thirty gallons of water. It should he prepared in a woodon bathingvesscl.
17. Gelatino-sulphurous Bath. Prepared by adding one pound of Flanders' glue, previously dissolved in water, to the sulphurous bath above described. Dupuytren.
18. Alkaline Bath. Prepared with soap, the carbonates of soda and potash, or the solution of hydrate of potash.
19. Metalline Buth. Prepared by impregnating water with the scoriæ of metals, particularly of iron.
20. Ferruginous Bath. Prepared with muriated tincture of iron, or sulphate of iron.
21. Medicated Hot-air Bath. Prepared by impregnating the hot air with some gas or vapour, as sulphurous acid gas, or chlorine.

BATH, CHEMICAL. An apparatus for modifying and regulating the heat in various chemical processes, hy interposing a quantity of sand, or other suhstance, hetween the fire and the vessel intended to be heated.

1. Water Bath. Balneum aquosum; formerly called balneum mariæ, from the usc of a solution of salt instead of water only. Any vessel of water, capable of being heated to the boiling point, and of containing a retort, will answer the purpose. A hath of steam may sometimes be prefernhle to a water bath.
2. Sand Bath. Balneum arenæ. An iron vessel containing sand, heing gradually heated, communicates the heat to every ressel huried in the sand. Those distillations which, at any part of the process, require as much as a low red heat, are usually performed in sand baths.
3. Solution Bath. Where temperatures above $212^{\circ}$ are required in haths, saturated solutions are employed; thesc, hoiling at different temperatures, communicate hent up to their boiling points. Solution haths will produce temperatures up to $360^{\circ}$.
4. Metal Bath. For temperatures above $360^{\circ}$, metal haths arc employed, as those of mercury, fusible metal, tin, or lead. The tcmperature may thus be raised to $600^{\circ}$.
BATPACHIA (Britpaxos, a frog). An order of the class Reptilin, comprising the frog, toad, salamander, and siren
BA'TPACHUS ( $\beta$ ir $\mu a \chi \circ \mathrm{~s}$, a frog). Ranula. Designations of the distended submaxillary dact.

BATTERY, ELECTRICAL. A term
applied to an arrangement of Leyden jars which communiente together, and may all he charged with electricity and discharged at the same time.

Battery, Galvanic. A combination of several pairs of zine and copper plates soldered together, and so arranged that the same metal shall always be on the same side of the compound plate.

BATTLEY'S SOLUTION. Liquor opii sedativus. A narcotic preparation, generally supposcd to owe its efficacy to the acetate of morphia.

BAUHIN, VALVULE OF. Ileo-colic valve. A valve within the cæcum, whose office is to prevent the return of the excrementitious matters from the cæcum into the small intestine. The extremities of its two lips form ruga in the straight part of the cascum, called hy Morgagni freena, of the valvule of Bauhin.

BAY BERRIES. Bacce Lauri. The herries of the Laurus nobilis, or Sweet Bay. A solid suhstance is extracted from them, called laurin, or camphor of tho hay berry.

BAYNTON'S ADHESIVE PLASTER. This differs from the Emplastrum resince, L. P., only in containing less resin, six drachms only being added to one pound of the litharge plaster.
BAY SALT. Chloride of sodium, or common salt, as obtained hy solar evaporation on the shores of the Mediterranean.

BDELLAA ( $\beta \delta \dot{\alpha} \lambda \lambda \omega$, to suck). The Greek term for the lecch, or the hirudo, of the Latins. The latter is the term now used.

BDELLIUM. A name applied to two gum-resinous substances. One of these is the Indian bdellinm, or false myrrh, procured from the Amyris commiphora. The other is called African bdellinm, and is obtained from the INeudolotin Africana.
[BDELLOMETER ( $\beta \delta \varepsilon \lambda \lambda a$, a leech; MíTpov, a measure). An instrument employed as a suhstitute for the leech.]

BEAD-PROOF. A term denoting the strength of spirituous liquors, as shown by the continuance of the hubbles or beads on the surface.

BEARBERRY. The Arctostaphylos uvaursi, the leaves of which are employed in chronic affections of the bladder.
[BEAR'S FOOT. Common name for the Helleborus fortidus.]

BEAUME DE VIE. Balm of lifc. The compound decection of aloes.
[BEBEERIN. A vegetable alliali obtained from Bebecru burk, and possessing antiperiodic properties.]

BEBELiRU. A tree of Britisla Guiana, the timber of which is known to woodmerchants by the name of greenheart. It
periodic properties.
[BECONGUILLES. A root from South America, having properties similar to those of ipeencuanha.]
[BECUIBA NUX. A Brazillian nut which yields a balsam esteemed in rbeumatism.]

BEDEGUAR. A remarkable gall, termed proeet-briar sponge, found on various species of Rosa, and produced by the puneture of several inseet species.
BEER (bière, Fr.; bier, Germ.). Cerevisia. The fermented infusion of malted barlcy, flavoured with hops. Tbe term beer is also applied to beverages consisting of a saecharine liquor, partially advanced into the vinous fermentation, and flaroured with peculiar substanees, as spruee beer, ginger heer, \&e.

BEESTINGS. Tbe first milk taken from the cow after calving.

BEGUIN'S SULPHURATED SPI-
RIT. A variety of hydrosulphate of ammonia, commonly called hepatized nmmonia.
BELL-METAL. An alloy of 100 parts copper with 20 to 25 of tin. This compound forms a bard, sonorous, and durable composition, for making bells, eannon, statues, \&c.

BELLADONNA. Deadly nightshade; a species of Atropa, the juice of whicb is well known to produce a singular dilatation of the pupil of tbe cye. The name is derived from tbe words bella donna, beautiful woman, the juice of its berries being used as a cosmetie by the Italian women to make their faces pale.

Belladonnin. A volatile vegetable alkali, said to be distinct from atropia.

BELLOWS' SOUND. An unnatural sound of the beart, resembling that of the puffing of a small pair of bellows, as heard by the stethoscope. See Auscultotion.

BEN, OIL OF. The expressed oil of the Ben-nut, or the Morynga pterygo-sperma, remarkable for not becoming raucid for many years.

BENEDICTUS (benedico, to bless). Bencdiet or blessed; a term prefixed to compositions and herbs, on aecount of their supposed good qualities; thus antimonial wine was termed benedictum vinum; the pbilosopher's stono, benedietus lajis, de.

1. Bonedicta Aqua. Blessed water; lime-water; a water distilled from thyme; and, in Schroeder, an emetie.
2. Renedietum Inaratirum. Rhmbarb, and sometines the lenitive electuary.
3. Benedicfa erntanca. The blessed thistle; a plant of tho order Campmeniter. [BENNE: LEAYES. The leaves of Sc-
leaves abound in mueilage which they readily impart to water, and which is mucb used in cholera infantuin, diarrboea, and otber complaints to whicb demuleents are applicable.]
[BENNE OIL. An inodorous, bland, sweetisb oil, obtained from the Sesumnm Indicum and $S$.orientale. It resembles olive oil in its properties, and may be used for similar purposes.]

BENUMBERS. Agents wbich cause topieal numhness and muscular weakness. [BENZOIN ODORIFERUM. Laurus Benzoin, Linn. Spieewood, Fever-busb. A shruh indigenous in tbe United States, possessing a spicy, agreeahle flavour, and an infusion of whicb is sometimes used as a gently stimulant aromatic. The bark has also been used in domestic practiee, in intermittents.]

BENZOINUM. Benzoin; a balsam which exudes from incisions made in the Styrax Benzoin, or Benjamin tree.

1. Siam Benzoin. Benzoin of best quality. It oecurs in tears and in masees. The presence of the wbite tears embodded in the brown resiniform mass gives an almond-like appearance, suggested hy the term amygdaloid benzoin.
2. Calcutta Benzoin. Benzoin of second and third quality, corresponding with the common or brow benzoin of some writers.
3. Head benzoin is a technical term for the first and purest portion; belly benzoin is the next in purity, mixed with parings of wood; foot benzoin is rery foul, and used in India for furnigations, \&c.
4. Benzoic Acid. Flowcers of Benjamin. An acid exhaled from benzoin, dragon's blood, and other resins, by beat. Its salts are called benzoutes.
5. Benzine. The name applicd by Mitseherlich to the bicarburet of bydrogen, procured by heating benzoic acid with lime; tbis compound is termed by Liebig benzole, the termination in ole being assigned to hydroearbons.
6. Benzone. A volatile fluid procured by Pcligot, by licating dry benzoate of lime.
7. Benzoyl, benzoäle, or benznle. Tbe hypothetical radieal of a series of compounds, including benzoic neid, and the essence or volatile oil of hitter almonds.
S. Benz-amids. A compound prepared by saturating claloride of benzoyl by dry ammoniaeal gas, $\mathfrak{t c}$. Sce Amide.
8. Benzinidr. A substance discorered ly Laurent in erude essence of bitter nimonds.
9. Benzile. A sulistance procured by passing a stream of ehlorino gas through fused benzoin.
[Benzilate. A comhination of benzilic acid with a salifiable hase.]
[Benzilic acid. An acid obtained from benzile.]
[Benzoatc. A comhination of henzoic acid with a salifable hase:]
[Benzoine. A substance obtained from oil of hitter almonds, in the form of hrilliant, inodorous, and tasteless prismatic crystals.]

BERBERIN. A erystalline substance of a fine yellow colour, derived from the bark of the barherry root, used as a dyestuff.
[BERBERIS CANADENSIS. The systematic name of the American species of Barherry.].
[BERBERIS VULGARIS. The systematic name of the European Barberry shruh.]
BERGAMOT. An essence prepared from the rind of the Citrus bergamia, or Bergamot Citrus.

BEKGMEHL. Literally, Mountain meal ; an earth, so named in Sweden, resembling fine flour, and celehrated for its nutritious qualities. It is found to he composed entirely of the shells of microscopic animalcules.

BERIBERI. A spasmodio rlgidity of the lower limbs, \&o.; an acute disease occurring in India, and commonly confounded hy nosologists with barbiers. "Bontius and Ridley say that this term is derived from the Lndian word signifying a sheep, on account of the supposed resemblance of the gait of persons affected with it to that of the sheep. Good derives it from $\beta \dot{e} \rho \beta \varepsilon \rho 2$, the pearl oyster, or -other shell, and hence uses it figuratively for incurvation. Marshall derives it from the reduplication of the word beri, signifying, in the language of Ceylon, weakness or inahility, as if to express intensity of weakness." - Forbes.

BERLIN BLUE. Prussian Blue. The ferro-sesquicyanide of iron, sometimes called ferro-prussiate of iron.
BERRIES. Bacca. The fruits of different species of plants. See Bacca.

1. Bay berrice. The fruit of the Laurus nobilis; the herries and the oil ohtained by boiling them in water are imported from Italy and Spain.
2. Juinper berries. The fruit of the Juniperus communis, which yields an oil, upon which the peculiar flavour and diuretic qualities of Geneva principally depend.
3. Turkey Yellow berrica. The unripe fruit of the Rhammus infectorius of Linnxus, used for giving a yellow dyc in calico-printing.
4. Pergian Yellow berries. Said to be of the same species as the preceding. They are termed graines d'Avignon, or berries of Avignon.

BERYL. A variety of the emerald; a mineral or gem, usually of a green colour of various shades, passing into honeyyellow and sky-hlue. When coloured green by oxide of chromium, it forms the true emerald, and when colourless and transparent, aqua marina.

Chryso-beryl ( $\chi$ puoòs, gold). One of the finest of the gems, consisting of glucina and alumina.

BETEL. A famous masticatory employed in the East, consisting of the areca, betel, or pinang nut, the produce of the Areca Catechu, or Catechu Palm. A portion of the nut is rolled up with a little lime in the leaf of the Piper betel, and the whole chewed.
[BETONICA. A genus of plants of the natural order Labiata.]

- [Betonica Officinalis. Wood Betony. An European plant which was highly esteemed hy the ancients, and employed in many diseases, hut at present it is little used. The root has been considered emetic and purgative.]
[BETULA. A genus of plants of the natural order Betulinea.]
[Betula Alba. Common European birch An European tree, the inner bark of which has heen employed in intermittent fever. An infusion of its leaves has been used in gout, rheumatism, dropsy, and cutaneous affections; and the juice obtained hy wounding the hranches is considered nseful in complaints of the kidneys and bladder.]
[Betulin. A white, uncrystallizable, peculiar principle, ohtained from the bark of the Betula alba.]

BEZOAR (pa-zahar, Persian; a destroyer of poison). A morbid concretion formed in the hodies of land animals, to which many fanciful virtues were formerly ascrihed.

1. Bezoardics. A name given to a class of alexipharmic medicines, from the imputed properties of the bezoar.
2. Bezoardicum Joviale. A hezoar of tin and nitre, which differed littlo from the Antihecticum Potcrii.
3. Bezoardicum ninerale. A bezoar of antimony, mado by adding spirit of nitro to butter of antimony.
4. Bezoardicum animale. The name formerly given to tho heart and liver of vipers, onco used in medicine.
5. Camel-beznar. A bezoar found in tho gall-bladder of the camel, and much prized as a ycllow paint by, the Hindoos.
6. Goat-bezoar. A hezoar said to be procured from animals of the gont kind, capra guzella, in Persia. The Greek term for this specics of concretion is agagropila, literally, mountain-goat ball.
7. Hog-bezoar. A bezoar found in the stomach of the wild boar in India.
8. Bovine-bczoar. A bezoar found in the gall-bladder of the ox; common in Nepaul.
9. Oricntal bezoars. These were formerly much valued in medicine: they are smooth, polished, and of a green colour: three of these, sent by the Scbah of Persia to Bonaparte, were ligniform, or composed of fragments of wood; another was found to be composed of rosin.
10. Spurious,' or factitious bezoars. These were formerly made of lobsters' claws and oyster-shells, levigated on porphyry, made into a paste with musk and ambergris, and formed into balls like bezoars; of this 'kind were the pierrce de Goa, or de Malacca, \&c.
BI, BINUS (bis, twice). Two; a prir. Also a prefix of certain saline compounds, into wbicb two proportions of acid enter for one of hase, as bi-arseniate.
[1. Bi-basic (basis, a base). Having two bases, as the tartrate of potash and soda, or Rochelle salt.]
11. Bi-carbonates. Salts containing a double proportion of carbonic acid gns.
[3. Bi-caudal (cauda, a tail). Having two tails.]
12. Bi-ceps (caput, the head). Twoheaded, or baving two distinct origins, as applied to a muscle of tbe tbigh and of the arm. Tbe interossei muscles are termed bicipites, from tbeir having each two heads or origins.
[5. Bi-conjugate (conjugatus, coupled). Bigeminate ; arranged in two pairs.]
13. Bi-cornis (corme, a horn). A term applied to tbe os hyoildes, which has two processes or horns; and, formerly, to muscles which have two insertions.
[7. Bi-crenatc (crenatns, notched). Douhly crenate. Applied in hotany to laves, the crenate toothings of which are themselves crenate. See Crenate.]
14. Bi-cuspidati (cuspis, a spear). Maving two tubercles; as applied to the two first pairs of grinders in each jaw.
[9. Bi.dentatc (dens, a tooth). Having two teeth.]
15. Bi-cmial (anmus, a year). Enduring throughout two years, and then perishing ; plants which bear only leares the first year; leaves, flowerst and fruit the sccond y car, and then dic.
[11. Bi-farions. Arranged in two rows. [12. Bi-fid (bifidus, forked). Divided into two lyy a fissure.
[13. Bi-foliate (folium; a leaf). When two leaficts grow from tbe same point at the end of the petiole, as in zygopbyllum fabago. See Conjugate and Bi-uate.]
16. Bi-furcation (furca, a fork). The division of a vessel, or nerve, into two branches, as that of a two-pronged fork.
17. Bi-gazter (yaorìp, the belly). Twobellicd, as applied to muscles; a term synonymous witb bi-venter and di-gastricus.
[16. Bi-geminate (geminus, a twin). Arranged in two pairs.]
18. Bi-hernius (hernia, ípvos, a branch). Having a scrotal hernia on each side.
[18. Bi-jugous (jugatus, coupled). In two pairs.]
19. Bi-lobus (lobus, a lobe). Having two lohes, resembling the tips of ears.
20. Bi-locular (loculus, a cell). Trocelled; divided into two cells; a term applied, in botany, to the anther, to certain capsules, \&c.
21. Bi-mana (manus, a hand). Trohanded: as man: the first order of tbe Mammalia.
[22. Bi-nate (binus, a pair). Growing in pairs. Binary.]
22. Bin-oculus (oculus, an eye). Having two eyes; a handage for securing the dressings on both eyes.
[24. Bi-partite (partitus, divided). Parted in tro.]
[25. Bi-ped (per, a foot). Biped, haring two feet.]
23. Bi-pimnate (pinna, the fin of a fish). Doubly pinnate; a variety of compound leaves. See Pimnatc.
[27. Bi-serial (serics, a row). Arranged in two rows.
[28. Bi-serratc (serratus, sawed). Doubly sarred, as applicd to the margins of leaves, when the serrations aro themselres serrate. See Scrrate.
[29. Bi-ternate (ternus, tbree). Douhly ternate; when tbree secondary petioles proceed from the common petiole, and ench bears thrce leaflets.]
24. Bi-valricd (valva, a door). Trovalved, as the shell of the oyster, a legume, sc.
25. Bi-venter (venter, the belly). The nanic of muscles which bare two bellics, as the occipito-frontalis. Tbe term is synonymons with di-gastricus.
[BIBERON (bibo, to drink). A feedingbottle for infants.]
BIBITORIUS (biono, to drink). A forner name of the rectus intcruns oculi, from its drawing the cye inmards tomards the nose, and thus directing it into the cup in drinling.
[BIBUT,OUS (bibo, to drink). Absorbing moisture.]

BICE. A blue colour, prepared from the lapis armenius, for painting.

BILIS. Bile, gall, or choler; the secretion of the liver. Bile is distinguished as the hepatic, or that which flows immediately from the liver; and the cystic, or that contained in the gallbladder.

1. Bilin. The constituent principle of the hile. It is separated by chemical processes; and when it contains acetate of soda, and is modified by the action of acetic acid, it is called bile-sugar or picromel.
[2. Biliphein. The colouring matter which gives the characteristic hrownish yellow tint to the bile: termed also Cholepyrrhiu.]
2. Biliverdin. An ingredient in the bile, being the principal constituent of the ycllow matter forming the concretions found in the ox, and much prized by painters.
3. Bilis atra. Black bile; formerly supposed to he the cause of low spirits, an affection named accordingly from the same term in Greek, $\mu$ ídaiva $\chi$ o入̀̀, or melancholy.
4. Biliors. A term employed to characterize a class of diseases caused by a too copious secretion of bile.
[BIOLOGY (Bıos, life; $\lambda o y o s$, a discourse). The science of life; physiology.]

BIRDLIME. A glutinous substance prepared from the bark of the holly. It contains resin, which has been called viscina.

BISMUTH (wismuth, German). Marcasita, tectum argenti, or tin glance. A white metal, usually found in tin mines. It occurs as an oxide, under the name of bismuth ochre; as a sulphuret, called biemuth glance; as a sulphuret with copper, called copper bismuth ore ; and with copper and lead, called ueedle ore. Eight parts of bismuth, five of lead, and three of tin, constitute Newton's fusible metal. Sco Pearl Powder.

1. Mragistery of bisncuth. The trisnitrate of bismuth; [subnitrate of bismuth, U. S. Ph.] ; a white, inodorous, tasteless powder, also called Spanish white, and pearl white. [This preparation has tonic and antispasmodic properties, and has been used in gastrodynia and some nervons affections. Tho dose is five to ten grains.]
2. The buller of bisnuth is the chloride: the flovers of biamuth, the sublined oxide; and the glance of bisunth, the native sulphurct.

BISTORTAE RADIX (lis tocta, twice turnerl; so named from the form of the ront). The ront of the Polygonum bistorta, great Bistort or Snake-weed.

BISTOURY (bistoire, French). A small. curved knife for operations.

BISTRE. A brown colour made of wood soot boiled and evaporated. Beech soot is said to make the best.

BITTER. A term applied from its obvious meaning, to the following sub-stances:-

1. Bitter principle. A general term applied to an intensely bitter substance, procured by digesting nitric acid on silk, indigo, \&c.; also to quinia, quassia, salicina, \&c.
2. Bilter of Welter. Picric or carbazotio acid, produced by the action of nitric or indigotic acid.
3. Bittcr apple, or cucumber. The common name of the fruit of the Cucumis colocynthis.
4. Bitter earth. Talc earth. Vernacular designations of calcined magnesia.
5. Bitter iufusion. A term applied to the Extractum Gentianæ Compositum of the pharmacopœia.
6. Bitter-sweet. The vulgar name of the Solanum duleamara, a plant formerly used in medicine.
7. Bitters. A class of vegetable tonics, as gentian, chamomile, orange peel, \&c.

BITTERING. Corruptly Bittern. A preparation for adulterating beer, composed of cocculus indicus, liquorice, tobacco, quassia, and sulphate of iron or copperas. A similar preparation is sold for the same purpose under the name of bitter balls.
BITTERN. The mother water, or uncrystallizable residuc left after muriate of soda has been separated from sea-water by crystallization. It owes its bitterness to sulphate and muriate of magnesia. It contains bromine.

BITUMEN ( $\pi i \tau v \mu \pi, \pi i r v s$, pine). A mineral pitch, supposed to he formed in the earth by the decomposition of animal and vegctable substances. In its most fluid state it constitutes naphtha; when of the consistence of oil, it becomes petrolcum; at the next stage of incluration it becomes elastic bitumen; then maltha; and so on until it becomes a compact mass, and is then called asphaltum.
[Bituminous. Of the nature of bitumen.]
BLACK. A term applied to certain discases, to some chemical compounds, \&c., in consequenco of their black appearance.

1. Black Death. The name given in Germany and the North of Europe, to an Oriental plague, which occurred in the 14th century, characterized by inflammatory boils and black spots of tho skin, indicating putrid decomposition. In Italy it was called la mortelega grande, the
great mortality. In many of its characters, this pestilence resembled the prosent bubo plague, complicated witb pneumonia and hæmorrhages.
2. Bluck Diseasc. This, and black jaundicc, are English terms for the morhus niger of the Latin writers, and the melana of the Greeks.
3. Blacle Water. This, and waterbrash, are English terms for pyrosis.
4. Black Vomit. Melæna cruenta. [A fluid of a darls colour, depositing a sediment resembling coffee-grounds, cjected in yellow fever and some other discases. This fluid consists principally of hlood altered by the action of the acid secretions from the gastro-intestinal mucous membrane, and of epitbetial seales.]
5. Black Rust. A disease of wheat, in wbich a black moist matter is deposited in the fissure of tho grain. See Brozon Rust. (6. Black Dranght. A popular purgative, consisting of the infusion of senna with sulpbate of magnesia.
6. Black Drop. A preparation of opium. [A nostrum, under the name of Lancaster or Quakcrs' Black Drop, has long been in use, which is prepared as follows:-Take of opium, Hss.; verjuice (juice of tbe wild crab), Diij.; nutmegs, $\mathcal{Z}^{\text {iss., }}$ and saffron, $\mathcal{Z}^{\text {ss. }}$; boil tbem to a proper thickness, tben add a quarter of a pound of sugar and two spoonsful of yeast. Set the whole in a warm place near the fire, for six or eight weeks, tben place it in the open air until it becomes a syrup; lastly, decant, filter, and bottle it up, adding a little sugar to eacb bottle. One drop is considered equal to ahout three of the tincture of opium. Tbe vinegar of opium (acetum opii) bas been introduced into the pbarmacopocias as a substitute for, or imitation of, this preparation.]
7. Black Extract. Hard multum. A preparation from cocculus indicus, imparting an intoxicating quality to beer.
8. Black Wash. A lotion prepared by the decomposition of calomel in lime water. [ B calomel, $\mathrm{Zi}^{\mathrm{i}}$; aq. caleis, $\mathrm{Z}^{\mathrm{iv}}$.]
9. Black Flux. A mixture of charcoal and carhonate of potash.
10. Black Dye. A compound of oxide of iron, witb gallic acid and tannin.
11. Blach Lead. Plumbago, or graphite; a carburet of iron. It is named from its leaden appearance, for it does not contain a partielc of lead.
12. Black Chalk. Drawing-slate ; a soft clay, of a bluish-black colour, composed prineipally of siliea.
13. Black Jack. The name given by miners to a sulphuret of zinc.
14. Black Naphtha. A common name for petroleum, or rock oil.
15. Black Turpeth. Another name for tbe protoxide of inereury, commonly ealled the gray, asb, or black oxide.
16. Black Wadd. The peroxide of manganese; a well-known ore, commonly called, from its black appearance, black oxide of manganese; it is used as a drying ingredient in paints.
17. Ivory Black. Ebar nstuum, or animal cbarcoal; procured from charred ivory shavings, and used as a dentifrice and pigment, under the rame of blue black, hcing of a bluisb hue ; but bone-black is usually sold for it.
18. Black Salts. Tbe name given in America to wood-ashes, after tbey bave heen lixiviated, and the solution evaporated, until tbe mass bas become black.
19. Lamp Black. Fuligo lampadum. A form of cbarcoal, procured by burning resinons bodies, as tbe refuse of piteb, in furnaces.
20. Black sticling Plaster. A solution of isinglass, with some tincture of benjamin, brushed over black sarsenet.
21. Spanish Black. A form of cbarcoal made of burnt cork, and first used by the Spaniards.
22. Black Boy Gum. A red resin, recently imported from New Holland, and supposed to be produced by tbe Xanthorrhoea arborea.
[24. Black Snakcroot. Cimicifuga racemosa.
[25. Blackberry Root. Rubus rillosns.] BLADDER, URINARY. Verica urinaria. The reservoir wbicb contains tbe urine.
23. Columnar Bladder. A term applied in cases in which there is an unusual development of the muscular fascieuli of the bladder, giving an appearance of persistent prominences or columns.
24. Trigonal space of the bladder. A swooth trianguilar surface on the inside of tho bladder, in the middle of its fundus, where tbe mucous membrane is destitute of rug̊.
25. Neck of the bladder. The orifice of tbo urethra; it is crescentiform, and ensbraces a small tuberelo, called ucula vesica, formed by the projection of the mucous membrane.
26. F'undus of the bladdcr. All tbat part of its internal surface which corresponds to the inferior region of its external surface.
BLADDER GREEN. A greed pigment prepared from the ripe berries of the Whamnus catharticus, or Buck thorn, mixed with gum Arabie and lime water.

BLADDERY FEVER. Bullosa febris. ${ }^{\text {blcached by exposure to the vapour of sul- }}$ Vesicular fever, in which the skin is covered witb bulla. See Pcmphigns.
[BLadDDER SENNA. Common name of the Coluter arborescens.]
[BLADDER.WRACK. Common name of the Furus vesicnlosiz.]

BL ASITAS (blaisus, one who stammers). Misenunciation; a species of psellismus, in which articulate sounds are fieely, but inreenrately enunciated.

BLAIN. An elevation of the cuticle oontaining a watery fluid. See Rupia.

BLANC DE TROYES. Spanisb White, prepared cbalk, or the Creta preparata of tbe pharmacopoia.

BLANQUININE. A supposed new alkaloïd, discovered in White Cinchona.

BLASTEMA ( $\beta$ daqтáva, to bud). A term applied to the rudimental mass of an organ in the state of formation. According to Sch $\kappa a n n$, it consists partly of a fluid, partly of granules, whicb spontaneously change into the nuclei of cells and into cells, and partly, also, of such nucleated cells already formed. Mïller.
[BLASTODERM ( $\beta$ גaarave, to germinate; dsoua, the skin). The germinal membrane; a thin membrane, or cellnlar stratum, whieh envelopes the yolk of the ovom. In the progress of development it subdivides into two layers, the outer one known as the serous layer, and the inner as the mucous layer.]
[BLASTODERMIC. Bolonging to the blastoderm.]
[BLASTODERMIC VESICLE. The envelope formed by the blastoderm between the vitellus and its original sac.]
[BLAUD'S PILLS. The following is the original formula for these pills:"Take of gum tragacanth, in powder, six grains; water, one dracbm. Macerate in a glass or marble mortar until a tbick mucilage is formed; then add sulpbate of iron, in powder, half an ounco. Beat tell until the mixture is quite bomogeneous; then add subcarbonate of potassa half an ounce. Rub this until the mass, ウibich quickly becomes of a yellowish green, passes into a deep green, and assumes a soft consistence. Divide into forty-eight pills." This quantity M. Bland oonsiders sufficient for the cure of an ordinary case of chlorosis.]
[BLAZING STAR. One of the common names of the Alctris farinosn.]
BLEACHING. The chemical process of whitening linen or woollen stuffs. 1. Linen is bleached by tho old process, by exposure to air and moisture; by the ncw process, by means of chlorine or solution of chloride of lime. 2. Woollen stiffe are
phurous acid.

1. Bleaching powder. Chloride of lime, formerly called oxymuriate of lime; prepared by exposing hydrate of lime gradually to chlorine gas.
2. Bleaching liquid. Eau de Javelle. Oxymuriatic alkaline water. Tbis is the above eompound obtained in solution, by transmitting a stream of chlorine gas, tbrough hydrato of lime suspended in water.
BLEAR-EYE. A chronic catarrhal inflammation of the eyelids. See lippitudd.

BLEB. Pemphix. A bulla, vesiclo, or bladdery tumour of the sliin, distended by a fluid. See Pemphigus.

BLENDE (blenden, German ; to dazzle, or blind). Native sulphuret of zine; $\mathfrak{a}$ native mineral of an adamantine lustre, and often black. It is called by the miners black jack.

BLENNA ( $\beta \lambda \dot{\varepsilon} \nu v a$ ). The Greek term for mucus.
[1. Blenno-genii ( $\gamma$ syaw, to generate). Gencrating or forming mucus.]
2. Blenno-vhagia ( $\rho \dot{\eta} \gamma \nu v \mu t$, to burst forth). A discharge of mucus from the urethra.
3. Blenno-rrhaca ( $\delta \varepsilon \omega$, to flow). Gleet: A term used by Good as synonymous with gonorrh œa.
BLEPHARON ( $\beta \lambda \dot{\varepsilon} \phi a p o \nu$ ). Tho eyelid. Hence the compounds:-
[1. Blepharadenitis (ajny, a gland). Inflammation of the meibomian glands.]
[2. Blepharitis. Inflammation of the eyelids.]
[3. Blepharoblcnorrhcea (blenorrlica, is flow of mncus). Tbe first stage of puromucous inflammation of the ciryonetina.]
[4. Blepharonicus ( (дyк̀ेs, a tumour). A tumour on the eyelid.]
[5. Blepharoplcgia ( $\pi \lambda \eta \gamma \eta$, a strokc).
Paralysis of the upper eyclid-ptosis.]
6. Blephar-ophthalmia. Ophtbalmia, or inflammation of the eyelid.
[7. Blepharoplastice ( $\pi$ גaotixos, formative). Formation of a new eyelid.]
8. Blepharo-ptosis ( $\pi$ rũots, prolapsus). A falling of tbo upper eyclid-ptosis.
[9. Blepherospaвmus (oтaоноs, spasm). A spasmodic contraction of the orbicularis palpebrarum musclc.]
10. Ankylo-blepharon (à yoúdos, bent). A preternatural union of the two lids.
11. Pachy-blepharosis (maxiv, thick). A thickened state of the eyelids.
12. Sym-blepharon (oiv, together). The connexion of the lid to the globe of the eyc. [BLESSED 'THISTLE. Common namo for the Contauria Bencdicta.] BLIGIIT. A slight palsy, induced by
sudden cold or damp, applicd to one side of the face. The nerves which lose their power aro hranches of the portio dura, or the respiratory of Bell.
[BLISTER. A vesicle caused by a deposition of serous fluid heneath the cuticle.]
BLISTER. Vesicatorium. An application to the skin, producing a scrous or puriform discharge, hy exciting inflammation. The effect is termed revulsion, antispasis, or derivation. See Cantharis.

Flying Blisters. Vésicatoires volants. A mode of treatment employed by the continental practitioners, for tho purpose of ensuring a more diffusive counterirritation. According to this plan, the blister remains only till it produces a rubefacient effect, a second hlister is then applied to some other part, and so on in succession.

BLOOD (blod, Saxon). Sanguis. The well-known fluid which circulates through the tuhes called, from their function, blood-vcrsels. Blood contains alhumen in three states of modification, viz., alburmen, properly so called; fibrin, and red partieles. Blood separates, on coagulation, into-

1. Serum, a yellowish liquid, containing alhumen, and various saline matters, suspended in water; and
2. Crassamentum, cruor, or clot; $\Omega$ red solid, consisting of fihrin and red particles. BLOOD-LETTING. The ahstraction of hlood, as performed hy venesectiou, arteriotomy, eupping, or leeches.
3. Vencesection (vence sectio). The opening of a vein. When it is right to make an impression on the system, as well as the part affected, full venesection is employed. This, when duly instituted in the ercct position, hecomes a valuable diagnostic: the nature and seat of the disease, and the powrers of the patient, are denoted by the quantily of hlood which flows ou placing the pationt erect and looking upwards, and hlecding to incipient syncope. - (M. Hrll.) S'mall bleedings are employcd as a preventive, as for homoptysis. -(Chcync.)
4. Arteriotomy. The opening of an artery, as the temporal, in diseases of the head, of the cye, \&c.
5. Cupping. Usually prescribed in topical affections, cither when venesection has heen already duly employed, or is decued unncecssary or unsafe.
6. Lecches. Their use is similar to that of cupping. This and tho preceding are means of general, as well as topical bloodletting in infrunts.
[BLOOD ROOT. Common name for the Sanguinaria Conalensis.]

BLOOD-SHOT. A distention of the blood-vessels of the cye.

BLOODSTONE. Hamntites. A species of calcedony, supposed to have hecn useful in stopping a blecding from the nose.

BLOOD.STROKE. Conp de sang. An instantaneous and universal congestion, without any escape of hlood from the vessels.

BLOODY FLUX. Another name for dysentery, from the hloody nature of the intestinal discharges.

BLOWPIPE. A swall conical tuhe, hent at one end, so as to he ensily introduced into the flame of a candle or lamp, for the purpose of directing a stream of flame, by blowing through it, upon any ohject which is to bo heated.

Oxy-hydrogen blowpipe. An apparatus
for producing iutense heat, hy supplying a stream of hydrogen with pure oxygen, so that the two gases issue together in the form of a jet from the nozzle of the hlowpipe.

BLUE. A term applied to a particular disease, to several pigments, and other compounds, in consequence of their colour.

1. Blne Disease. Blue jaundice of the ancients; a disease in which the counplexion is tinged with hlue or venous blood. See Cyanosis.
[2. Blue Flag. Common name for the Iris versicolor.]
2. Prussian Blue. Berliu hlue. Sesquiferrocyanide of iron, prepared from hullocks' blood, carhonate of potash, sulphate of iron, and alum. The combination of Prussian hlue and peroxide of iron is called basic Prnsbian blue.
3. Saxon Blue. Sulphate of indigo; a solution of indigo in concentrated sulphuric acid.
4. Bluc Verditer. An impure carbonate of copper, said to he prepared by decomposing nitrate of copper by chalk.
5. Blue Copper-orc. The fincly erystallized suhcarhonate of copper.
6. Turnbull's Bluc. Ferrocranide of iron; a heautiful hluo precipitate, thrown down ou adding red prussiate of potash to a proto-salt of iron.
7. Blue Pill. The Pilule Ifydrargyri, or mercurial pill, prepared by triturating metallic mercury with conserre of roses.
8. Bluc Ointurent. Neapolitan ointment; the Ungucntu!n Hydrareyri, or mercurial ointment, prepared by mechanical mixture of metallic mercury, or chemical comhinstion of its oxide with lard.
9. Blne Eye-zater. The Liquor Cupri Ammoniati, or solution of ammoniated copper.
10. Blue Stone, or bluc vitriol. Blue copperas; the sulphate of copper.
11. Blue John. A name given by the miners to fluor spar, [q. v.] also called Derhyshire spar.
12. Blue Pot. Another term for a hlacklcad crucible, made of a mixture of coarse plumbago and clay.
13. Blue Black. Another nane for ivory-black, or the ehur ustum, from its hluish hue.
[BLUNT HOOK. A curved steel instrument employed to assist in extracting the foetus.]

BODY. Any determinate part of matter. Its forms are the solid, as crystals; and the fuid, which are elastic and aëriform, as gases; or inelastic and liquid, as water. [It is also employed to designate the main portion of the animal frame - the trunk; and likewise the whole conjointly.]
[BOFAREIRA. A common name for the Ricinis communis.
[BOG BEAN. A common name for the Menyanthes trifoliata.]
[BOHFA. The Thea nigra, or black tea.]
[BOHEIC ACID. A peculiar acid ohtained by Rochleder from hlack tea.]
[BOHUN UPAS. A hitter gum resin, deadly poisonous, which exudes from incisions in a tree of Java, the Antiaris toxicaric.]

BOIL. Furunculus. The popular name for a small resisting tumour, attended with inflammation and pain.

BOILING POINT. That degree in the scale of the thermometer, at which ebullition is produced under the medium pressure of the atmosphere. Thus, $212^{\circ}$ is the hoiling point of water, when the harometer stands at 30 inches; at 31 inches, it is $213 \cdot 76$; at 29 , it is only $210 \cdot 19$; in a common vacuum, it is $70^{\circ}$.

BOLE ( $\beta \vec{\omega} \lambda o s$, a mass). A massive mineral. Its colours are yellow-red, and hrownish-black, when it is called mountain soap.

BOLETIC ACID. An acid extracted from the expressed juice of the Boletus pseudo-igniarius, a species of mushroom.

BOLETUS. A genus of mushroom: Order, Fuagi. Some of its species are-

1. Boletus Ignirrius. Amadou, or German tinder; a fungus which grows on the trunks of trees, especially the oak, and is used for stopping hremorrhage from wounds. It is known in Scotland and the north of Ireland by the name of paddock stool.
[2. Boletns larycis. A species which grows on the European larch; tho white agaric, or purging agaric, of medical writers.]
2. Boletus purgans. Larch agarle, formerly employed as a drastic purgative.

BOLOGNA STONE. The native sulphate of baryta; a phosphoric stone found at Bologna.

BOLUS ( $\beta \tilde{\text { undos}}$, a bole). A form of medicine larger than a pill. [A term formerly applied to various forms of argillaceous earth.]

BOLUS AD QUARTANAM. A remedy used hy Laennec in pneumonia, consisting of one grain of emetic tartar to a drachm of hark, made into a mass by extract of juniper.
[BOLUS ALIMENTARIUS. The soft mass formed hy the food, after mastication and insalivation, preparatory to being swallowed.]

BOLUS ARMENIE RUBRA. Red Armenian hole ; a compound of aluminum found in Armenia. The substance sold under this name is made by grinding together pipeclay and red oxide of iron, and levigating.

BOMBIC ACID ( $\beta 6 \mu \beta \cdot \xi$, the silk-worm). An acid contained in a reservoir near the anus of the silk-worm. Its salts are called bombiates.

BOMBUS ( $\beta \delta \mu \beta_{05}$, the humming of bees). A sense of heating in the ears; a species of bourdonnement, consisting in a dull, heavy, intermitting sound.
[BONDUCH INDORUM. The Molucea or bezoar nut, the fruit of the Guilandina bonduc, employed in India as a tonic, carminative, \&c.]

BONE. A substanoo consisting chiefly of phosphate of lime and gelatine. See O8, ossis.

1. Bone earth. Phosphate of lime; the earthy basis of the hones of animals.
2. Bone ash. Animal ashes.
3. Bone spirit. A hrown ammoniacal liquor, ohtained in the process of manufacturing animal charcoal from boncs.
[BONESET. Eupatorium perfolintum.]
BONPLANDIA TRIFOLIATA. A name of the Galipea cusparia, which yields the Cusparia, or Angostura Bark.

BORACIC ACID. Homberg's sedative salt. An acid found native on the edges of hot springs in Florence, \&c. It occurs in small pearly scales, and also massive, fusing at the flame of a candle into a glassy globule. See Borax.

BORACITE. Bi-borate of magnesia, a rare natural production.
[BORAGE. The Borago officinalis.]
BORAGINACE.E. The Bornge tribe of Dicotyledonous plauts. Ilerhaceous plants or shruhs, with leaves alternate, covered with asperities; corolla gamo-petalous;
otamens inserted in the corolla; fruit, four nats, distinct.
[BORAGO OFTICINALIS. Borage. An European plant, an infusion of the leaves and flowers of which, sweetened with honey or syrup, is employed in France as a demulcont, refrigerant and gentle diaphoretic drink, in catarrhal affections, rheumatism, diseases of the skin, \&c.]

BORATE. A salt formed by combination of boracic acid with a salifiable base.

BORAX (baurach, Arab.). A native bi-borate of soda, chiefly found in an impure state, and then called cinkial, as a saline incrustation in the beds of certain small lakes in an upper province of Thibet. When the refined salt is deprived of its water of crystallization by fusion, it forms a vitreous transparent substance, called glass of borax.

Honey of borax. Mel boracis. Powdered borax and clarified honey.
BORBORYGMUS ( $\beta$ op $\beta$ opuypós). The rumbling noise occasioned by fatus within the intestines.
BORNEEN. The name given to a compound of carbon and hydrogen found in valeric acid, and which, on exposure to moisture, acquires the properties of borneo camphor; it is supposed to be identical with liquid camphor. The camphor itself has been named borneol, and it is converted, by the action of nitric acid, into laurel-canphor.

BORNEO CAMPHOR. Sumatra camphor. A crystalline solid found in crevices of the wood of the Dryobalanops aromatica. Dr. Pereirn says that it rarely comes to England as a commercial article.

1. Liquid Camphor; Camphor oil. A liquid obtained by making deep incisions into the Dryobalanops aromatica.
2. Artificial Caniphor. A hydrochlorate of oil of turpentine, or other volatilo oil.
BORON. A dark olive-coloured substance, forming the combustible base of boracic acid.
BOSOPRIC ACID (Boüs, an ox ; кórpos, dung). Cowr-dung acid; a strong colonrless acid, procured from fresh cow-dung, of great efficacy in purifying mordanted cotton in the cow-dung bath. A better term would be bucopric.
[BOSWFLLIA SERRATA. The Olibanum tree, a plant of tho order Tercbintaeca, yielding the Indian nlibamum.]
[BOTAL, FORAMEN OF. The foramen orate, q. v.]
BOTANY ( $\beta$ orávn, $\Omega$ plant). The science which trents of the Vegetable Kingence which trents of the Vegetabing divi-
dom. It embrace the following sions:-
3. Structural Botany, relating to the laws of vegctable structure, internal and external, independently of the presence of a vital principle.
4. Physiological. Botany, relnting to the history of vegetable life, the functions of the various organs of plants, their changes in disease or health, \&c.
5. Descriptive Botany, relating to the description and nomenclature of plants.
6. Systematic Bolany, relating to the principles upon which plants are connected with, and distinguished from, each other. [See Systematic Botany.]

## BOTANY-BAY RESIN. A spootaneous

 exudation from the Acarois Resinifera of New Holland.BOTHRENCHYMA ( $\beta 6 \theta \rho \circ$, a pit; ( $\gamma x v \mu a$, enchyma). A name recently applied in Botany to the pitted tissue or dotted ducts of former writers, the appearance of these tubes being occasioned by the presence of little pits sunk in their walls. It is either articulated or continuous.

BOTHRIOCEPHALUS LATUS ( $\beta 6$ Opıoy, a pit; $\kappa \varepsilon \phi a \lambda \eta$, the head). Tenia lala. The brond Tapeworm, found in the intestines. See Termes.
[BOTRYOID, BOTRYOIDAL, BOTRYOIDES ( Borpes, a cluster of grapes; ados, likeness). Resembling a bunch of grapes, or presenting a surface covered with smooth spherical masses.]
BOTTS. Worms which breed in the intestines of horses; the maggots of the horse gadtly.

BOTULINIC ACID. A peculiar fatty acid, produced by decomposing sausages, and supposed to be the cause of their deleterious qualities.

BOUGIE. Literally, a wax taper. Bougics are cylindrical instrumente, gene. rally made of elips of linen, spread with plaster, and rolled up with the plaster side outermost, on a hot glazed tile, and shaped. Tbese instruments are intended to be introduced into the canals of the urethra, the rectum, the œesophagus, \&c., for the purpose of dilating them.

1. B. Bell' Bougies are made in the same way, by melting in one vessel frur ounces of litharge plaster, and in abother three drachms of olive oil, and an ounce and a half of yellow wax, mixing them for use.
2. Plencl's Bongies are made of eatgut, and may swell after being introduced.
3. Elastic gnm Bougies aro not made of enoutchonc, but prepared is boiling linseed oil for a long time orer a slow fire, and with this varnishiug cotton, silk, or linen, employod as a basis.
4. Smyth's flexible metallic Bougies are liahle to hreak, and are clangerous.
5. Daran's medicated Bongies are made of materials which dissolve in the urethra; of this class are the armed hougies, which are prepared with potassa fusa, or nitrate of silver.
[6. Armed, or caustic Borgie. A hougie with a peice of caustic inserted in its extremity.]
[BOULLAY'S FILTER, or PERCOLATOR. A long cylindrical vessel having a funnel-shaped termination, with a metallic diaphragm pierced with small holes and fitting accurately in the lower part of the cylinder. It is employed for the process of displacement.]
[BOUNCING BET. A common name for the Saponaria officinalis.]

BOURDONNEMENT. The name given by the French to the several varicties of imaginary sounds, termed-

1. Syrigmus, or ringing in the ears.
2. Sustrrus, or whizzing sounds.
3. Bombus, or heating sounds.

BOVI'NA FAMES (bos, an ox ; fames, hunger). Bulimia. Voracious appetite.

BOYLE'S FUMING LIQUOR. Hydrosulphuret of Ammonia. See F'uming Liquor.

BRACIERIUM (brachiale, a hracelet). A term used hy some Latin writers for a truss, or handage, for hernia.
[BRACHIATE ( $\beta \rho a \chi i \omega \nu$, an arm). Armed. Applied in hotany to hranches which diverge nearly at right angles from the stem.]

BRACHIUM ( $\beta \rho u x i(\omega \nu$, an arm). The arm; the part from the shoulder to the elhow. The part from the elbow to the wrist is termed lacertus. Thus, 'suhjuncta lacertis hrachia.' Ovid.

Brachio-poda ( $\pi 0 \stackrel{u}{s}$, подds, a foot). Armfooted animals; animals which have arms instead of fect; they are all hivalves.

BRACTEA. A Latin term, denoting a thin leaf or plate of any metal. It is applied, in hotany, to all those modifications of leaves which are found upon the inflorescence, and are situated hetween the true leaves and the calyx of the flower. They compose the involucrum of Compositæ, the glumer of Graminew, the spathe of the Arum, \&e.
[Bracteote. Having floral leaves.]
[13racteiform (forma, resemblance). Formed like a floral leaf.]

BRADY-SPERMATISMUS ( $\beta$ padüs, slow; oripha, semen). Scminal mis-emis. sion, in which the discharge is retarded from organic weakness.

BRAIN, Encephalon. Ccrebrum. The largest portion of the central part of the
nervons system, occupying the whole upper part of the cavity of the cranium. This substance is not homogeneous throughout, but presents two distinct modifications, viz.:

1. A cortical, cineritions, or gray suhstance, which covers the hrain in general; and-
2. A medullary or white suhstance, or the mass contained within the former.

BRAN. Furfur tritici. The husk of ground wheat.

BRANCA (Spanish for a foot or branch). A term applied to some herhs supposed to resemhle a particular foot, as brankursine, or hranca ursina, the name of the Heraclenm sphondylium.

BRANCHIA ( $\beta \rho \dot{i} \gamma \chi$ a, gills). Gills; filamentous organs for breathing in water.

Branchio-poda ( $\pi о$ ũs, $\pi$ odos, a foot). Gillfooted animals; animals which have gills instead of feet, as the monoculus.
[Branchiostegal (oォءy ${ }^{2}$, to cover.) Gillcover.]
[Branchiosteus (dotcov, a bone). Having hony-gills.]

BRANDY. Laude Vie. The spiritdistilled from wine. See Spirit.

BRANKS. The vernacular name in Scotland for parotitis, or the mumps.

BRASQUE. A term used hy the French metallurgists to denote the lining of a crucible or a furnace with charcoal.

BRASS. ALs, aris. An alloy of copper and zinc. Common hrass consists of three parts of copper and one of zinc.
[BRASSICA. The plant cahbage, or colewrort.]
[1. Brassica Florida. The systematic name of the Cauliflower.]
2. Brassica Rubra. The Red Cabhage; employed hy chemists as an excellent test for acids and alkalies.
[3. Brassica Sativa. The common garden cahhage.]
[BRAYERA ANTHELMINTICA. The systcmatic name of the Ahyssinian tree, the flowers of which, termed koos80 or kousso, have hecn found effective against tape-worm.]

BRAZIL NUTS. Chestnuts of Brazil. The nuts of the Bertholletia excelsa.

BRAZIL WOOD. The wood of the Cessalpinia Brazilicntis, which yields a red colouring matter used hy dyers.

BRAZILLETTO. An inferior specics of Brazil wood, brought from Jamaica. It is one of the chcapost and least estecmed of the red dyc-woods.

BREAD-FRUIT TREE. The Artocarpus incisa, a trce of the order Urticacca, the fruit of which is, to the inhabitants of Polyncsia, what corn is to the inhabitants of other parts of the world.
[BREAK-BONE FEVER. A common name for tho disense called Dcuguc.]

BREGMA ( $\beta \rho \varepsilon \chi^{\omega}$, to moisten). Fontanel. The two spaces left in the bead of the infant, wbero the frontal and the occipital bones respectively join the parietal. It is distinguished as anterior and posterior. See Cranium.
[BRENNING. An old term for gonorrhœea:

BRESLAW FEVER. An epidemic which hroke out in the Prussian army at Breslaw, in the middle of the last century, and which has heen named hy Sauvages tritanphia Vratislavicusis.

BREVISSIMUS OCULI (superl. of brevis, short). A synonym of the obliquus inferior, from its being the shortest muscle of the eye.

BREZILIN. The name applied by Chevruel to the colouring matter of Brazil wood, ohtained from several species of Casalpinia.
[BRIANCON MANNA. A peculiar sweetish substance which exudes spontaneously from the Larix Europca, and concretes unon its hark.]

BRICKLAYERS' ITCH. A species of local tetter, or impetigo, produced on the hands of hricklayers hy the contact of lime. See Grocers' Itch.
[BRIGHT'S DISEASE. Granular degeneration of the kidncy; Albuminuria.]

BRIM OE THE PELVIS. The oval ring which parts the cavity of the pelvis from the cavity of the ahdomen. The Outlet of the Pelvis is a lower circle, composed hy the arch of the puhes and the sciatic ligaments.

BRIMSTONE. A name for sulphur. The sublimed sulphur of the Pharmacopoeia is termed flowers of brimstonc or of sulphur.

BRITISH GUM. A term applied to starch when reduced to a gum-like state by exposure to great heat. It then becomes of a hrown colour, and in that state is employed hy calico printers.
BRITISH OIL. Camphor, one ounce; rectified spirits of wine, four onnces; sweet oil, twelve ounces; and oil of hartshorn, fivo ounces; hoiled together.

This name is also given to tho Olcum petre vilgare, or common oil of petre; a varicty of petroloum.
[BROCOLI. Common namo for tho Brassica Oleracea.]

BRODIUM. A term synonymous, in pharmacy, with jusculum, or broth, the liquor in which any thing is boiled; as brodinm salis, a decoction of salt.
BROMA (ßрผ́vкш, to eat). Food; any thing that ls inasticated

Broma-tology (ג6yos, a description). A description or treatise on food.
BROMAL. A colourless oily liquid, formed by adding hromine to alcohol cooled hy ico.
[BROMIC ACID. A combination of hromine and oxygen.
[BROMIDE. A combination of hromic acid with a base.
[Bromide of Iron. A brick-red deliquescent salt, very soluhle and extremely styptic ; employed as a tonic and alterative.]
[Bromide of Potassium. A colourless salt, consisting of one oz. of bromine, 78.4 , and 1 of potassiun, $39-2=117 \cdot 6$; considered as alterative and resolvent.]
[Bromides of Mercury. Of these there are two,-the protohromide and the hibromide. Thcy are considered to possess alterative properties. The protohromide is given in the dose of a grain daily, gradually increased. The hibromide, like corrosive sublimate, is an irritant poison, and should not he given at first in larger dose than the sixteenth of a grain, nor increased hcyond the dose of one-fourth of a grain.]

BROMINE ( $\beta$ рĩ̈ $\mu$ s, a stench). A deep
red-coloured fetid.liqnid, formerly called maride; an ingredient of sea-water, of several salt springs, of the ashes of seaweeds, and of those of the Janthina violaced, and other animals. It comhines with oxygen, and forms bromic acid; and with hydrogen, forming the hydrobromic. [BROMOFORM. BROMLDE OF FOR-
MYL. A compound of hromine and formie acid, haring somewhat analogous properties to ohloroform.]

BROMURET. $A$ comhination of the bromic acid with iodine, phosphorus, sulphur, \&e.
[BRONCHIAL ( $\beta \rho 6 \gamma \chi^{\circ}$, the windpipe). of or helonging to the windpipc.] [BRONCHITIS. See Bronchus.]
BRONCIUS ( $\beta$ por $\gamma$ о 0 , the windpipe; from $\beta_{p} \chi \chi \omega$, to moisten). The windpipe; a ramification of tho trachen; so called from the ancient belicf that the solids were convered into the stomach hy the œsophagus, and the fluids by the bronchia.

1. Bronchial twos. The minute ramifi
entions of the bronchi, terminating in the bronchial cells, or air cells, of the lungs.
2. Brouch-ilis. Inflammation of the bronchi, or ramifications of tbe tracbea. It is known by the vernacular terms, bronchial inflamination, inflamatory catarrh, bastard peripneumony, and suffoca. tive entarrh.
3. Bromeh-lommifis ( $\lambda / \mu \mu a$, a sheath or membrane). A uembranc-like inflammation of the bronchin. Sere Jiphtherile.
4. Broncho-cele ( $\kappa \hat{\eta} \lambda \eta$, a tnmour). Botium ; thyrophraxia. An cnlargement of the thyroid gland. In Switzerland it is termed goitre ; in England it is called swelled neck, Derhyshire neck, or Derhyneck.
5. Broncho-hemorrhagia. A term recently proposed hy Andral to designate the exhalation of hlood from the lining memhrane of the bronchial tuhes, commonly called bronchial hæmprrhage. See Pиецто-hamorrhagia.
6. Broncho-phony ( $\phi \omega \nu \grave{\eta}$, voice). The resonance of the voice over the hronchi.
[7. Broncho-rrhce (pew, to flow). Increased discharge of mucus from the bronchi.]
7. Broncho-tomy (торі̀, section). An incision made into the larynx or trachen.

BRONZE. An alloy of copper, 8 or 10 per cent. of tin, and other metals, used for making statues, sc.
[BROOKLIME. A common name for the plant Veronica beccabunga.]
[BROOM. A common name for the Cytisus Scoparius.]

BROOM ASHES AND TOPS. A remedy formerly extolled for dropsy, consisting of the ashes and green tops of the Cytisus Scoparius, or common broom.
[BROOM-RAPE. Common name for the European specics of the genus Orobanche.]
[BROWN-MIXTURE. Mistura Glycyrihize composita, U.S. Ph. (q. v.)]

BROWN RUST. A disense of wheat, in which a dry hrown powder is suhstituted for the farina of the grain. Compare Blacle Rust.

BROWNING. A preparation of sugar, port-wine, spices, \&c., for colouring and flarouring meat and made dishes.

RRUCIA. A substance procured from the hark and seeds of nux vomica, and from St. Ignatius's hean. It is said to he a compound of strychnia and resin, and not a peculiar alkaloid.
[BRUIT. Sound. A term from the French, applied to various sounds heard on auscultation and percussion. See Auscultation.]

BRUNNER'S GLANDS. Small flattencd granular hodies of the mucous membrane of the small intestine, visihle to the naked eyc, distributed singly in the memhrane, and most numerous in the upper part of the small intestine. These glands, sometimes erroncously termed "solitary," were described hy Pcyer as heing as numerous as the "stars of hcaven." By Von Pruan they were comparcd collcetively to a second pancreas. See Pcyer's
Glauds.

BRUNOLIC ACID. One of the particular products which have heen isolated in the distillation of coal.

BRUNONIAN TIEORY. A theory founded by John Brown. [It is hased on the assumption that the hody possesses a peculiar property of excitability; that every agent capable of acting on it during life, does so as a stimulunt; that these stimulants, (or the oxcitement oaused by them,) when they are duly in exercise, produce the healthy performance of the natural functions; that when excessive, they produce exhaustion, or direct debility; when deficient, the effect is an accumulation of excitahility, or indivect debility; from one or other of which states of dehility, all diseases werc supposed to arise.]

BRUNSWICK GREEN. An ammo-niaco-muriate of copper, used for oil painting.
BRYGMUS ( $\beta \rho v \gamma \mu \grave{s}$; from $\beta$ pú $\chi \omega$, to gansh with the teeth). Gnashing or grating with the teeth.
[BRYONIA ( $\beta$ puw, to abound). Bryony. A genus of plants of the natural order Cur curbitacec.]
[1. Bryonia alba. White Bryony. An European perennial plant, the juice of the root and the berries of which are purgative. It is considered by some hotanists as merely a variety of the following spe= cies.]
2. Bryonia dioica. Bryony, or wild vine, a cucurbitaceous plant, of which the fresh root is sold under the name of pohile bryony. Its properties are owing to the presence of an extractire matter called bryonin. [It is an active hydragogue cathartic, and, in large doses, sometimes emetic. The dose of the powdered root is from a scruple to a draehm.]

BUBO ( $\beta$ av $\beta \stackrel{\omega}{2}$, the groin). A swelling of the lymphatic glands, particularly those of the groin and axilla. It has been distinguished by the terms-

1. Sympathetic, arising from the mere irritation of a local disorder.
2. Venereal, arising from the absorption of the syphilitic virus.
3. Constitutional, as the pestilential a symptom of the plague; or scrofulous swellings of the inguinal and axillary glands.
[BUBON. A Linnean genus of plants of the natural order Umbelliferce.]
[Bubon galbrtum. The plant which was formerly supposed to yield galbannm.]

BUBONOCELE ( $\beta$ ouß $\beta$ isv, the grein ; $\kappa \grave{\lambda} \lambda \eta$, a tumour). Ingninal hernia.

BUCCAL (bucce, the chcek). A term applied to a branch of the internal maxil. lary artery, to eertain branches of the facial

## B UR

Fein, and to a branch of the inferior maxillary nerve.

Buccal Glands. The namo of numerous follicles sitnated hencath the mucous layer of the check.
BUCCINATOR (buccina, a trumpet). The trumpeter's muscle; a muscle of the cheek, so called from its being much used in blowing the trumpct.

BUCCO-LABIALIS. The name given by Chaussier to a nerve of variahle origin, being sometimes a coutinuation of the exterior fasciculus of the portio minor ; at other times arising from the interior fasciculus, or from the decp temporal, though generally from the inferior maxillary. Bellingeri.

BUCCULA (dim. of bucca, the cheek). The fleshy part under the chin.

BUCHU LEAVES (bocchae, Ind.). The leaves of several species of Barosma, or Diosma, much extolled for chronic disorders of the hladder.

BUCKBEAN. The Menyanthes trifoliata, a plant of the order Gentianacea, employed by the brewers in some parts of Germany as a substitute for hops.
BUCKTHORN. The vernacular name of the Rhannus catharticus, derived froun the spinous nature of some of the species; for tho same reason it has heen termed spina cervina, or stag's horn. The herries yield a delicate green, named by painters verdevissa.
[BUCKWHEAT. Common name for the Polygonum fagopyrum.]

BUCNEMIA ( $\beta$ oũ, a Greek augmentative ; $\kappa \nu \eta \mu \eta$, the leg). Literally, hulky or tumid leg. See Phlegmaria dolens.

BUFEY COAT. The huff-coloured fibrin which appears on the surface of the crassamentum of hlood drawn in certain states of disease.
[BUGLE-WEED. The common name for the harb Lycopus Virginicus.]
[BUGLOSS. Common name for the plant Auchusa officinalis.]

BULAM FEVER. A name given to
Yellow Fever, from its fatal visitations on the Guinea coast and its adjoining islands. [By some writers it is considered as $a$ distinct form of fever.] See Fcbris.
[BULBIFEROUS (bulbue, a bulh; fero, to bear). Bearing hulhs; applied to plants with one or more hulbs.]

BULBO-CAVERNOSUS. The name of $\Omega$ muscle situated heneath the hulh of the urethra, and covering part of the corpus spongiosum. Chaussier termed it bulbourcthralis.
BULBUS. A hulb; a scaly leaf-bud, Which developes roots from its hase, and a stem from its centre. When the onter
scales are thin, and cohere in the form of a thin cnvclope, as in the onion, this is the tumicated bulb. When the outer scales are distinct and fleshy, as in the lily, this is called the naked bulb. There ean be no such thing ns a solid bulb. See Cormus.

1. Bulbus olfactorius. That portion of the olfactory nerve, which expands into a bulb-like form, and rests upon the cribriform plate.
2. Bulbus arteriosus. The name of the anterior of the three cavities of the heart in all vertebrata, as exhihited in the early period of its development.
3. Bulb of the urethru. The posterior bulb-like commencement of the corpus spongiosum penis; hence, the included urcthra is called the bulbous portion.

BULIMIA ( $\beta$ oùs, an ox; or $\beta$ oũ, aug.; $\lambda_{1}$ synonyms are-

Adephagia, Bupeina, Cynorexia, Fames canina, Phagedæna. [q. т.]
BULITHUM ( $\beta$ oús, an ox; $\lambda i \theta o s$, a stone). A hezoar or stone found in the kidneys, the gall, or urinary hladder of the ox. See Bezoar.
BULL® (bubbles). Blehs; hlans; spheroidal vesicles, or portions of the cuticle raised by a watery fluid. The genera

## are

1. Pemphigns. Vesicular fever.
2. Ponpholyx. Water hlehs.

BUNION. Inflammation of the bnrsa mucosa, at the inside of the hall of the great toe.
[BUPEINA ( $\beta$ oũs, an ox; $\pi$ clva, hunger).
Voracious appetite. See Bulimia.]
BUPHTHALMIA ( $\beta$ oũs, an ox: $\delta \phi \theta a \lambda-$ $\mu \mathrm{s}$, eye). Ox-eye; dropsy of the eye. See Hydropthalmia.
[BURDOCK. Common name for the plant Arctium lappa, Willd., Lappa minor.]

BURGUNDY PITCH. Prepared from
the ahietis resina. See Abies.
[BURN. The lesion of a part cnused hy the application of heat.]
[BURNETTS DISINFECTING
FLUID. An aqueous solution of the chloride of zinc, containing 200 grains of the salt in each duidounce.]
[BURNING BUSH. A common name for the plant Enonymus atropurpurens.]
[BURNT ALUSI. Alum dried or deprised by hent of its water of crystallization.]
[BURNT IIARTSHORNE. Bone-phos-
phate of lime, with a minute portion of lime.]
BURNT SPONGE. An article prepared hy cutting sponge into small picces, and hurniug it in a covercd vessel until it becomes black and friable, when it is ruhhed to a very fine powder.
[BURSA ( $\beta_{\nu \rho g \alpha,}$ a leathern bottie). A bag.]

1. Burse Mucose (ntrcous bags). Small sacs situated about the joints, being parts of the sheaths of tendons.
2. Bursalogy ( $\lambda$ byos, an account). The description of the burse mucosæ.
3. Bursalis, or narsupialis. Former designations of the obturator internus muscle.
[BUTEA FRONDOSA. The Dhak-trec of Hindostan, the concrete juice of which is called Butea gum.]

BUTEA GUM. A gum procured from natural fissnres and wounds made in the hark of the Rutea frondosa, a leguminous plant of India.

BUTTER (butyrum; from ßoũs, a cow; rupọs, coagulum). A suhstance procured from the cream of milk by churning.

1. Butter-milk. The thin and sour milk separated from the cream by churning.
2. Butyrin. A peouliar oleaginous principle procured from butter.
3. Butyric acid. An oily, limpid liquid, one of the volatile acids of butter. By distillation, it yields a substance called butyrone.
4. The term butter is applied to butterlike suhstances, as those of antimony, bis. muth, \&c., meaning the chlorides.
[BUTTER OF ANTIMONY. Pure terchloride of antimony.]

BUTTER OF CACAO. An oily concrete white matter, of a firmer consistence than suet, ohtained from the Cacao, or cocon-nut, of which chocolate is made.
[BUTTER OF ZINC. Chloride of zinc.]
[BUTTER-CUP. A common name for several species of Ranunculus.]
[BUTTER-NUT. Common name for the plant Juglans cinerca.]
[BUTTON-SNAKEROOT. A common name for the plants Liatris spicata, and the Eryngium aquaticum.]

BUTUA R00T. Abuta root. The name sometimes given in commerce to the root of the Cissampelos pareira, more commonly enlled Pareira brava.
[BUTYRACEOUS (butyrum, butter). Of the nature, appearance, or consistence of hutter.]
[BUTYRATE. A combination of butyric acid with a salifiable hase.]
[BUTYRIC ACID. See Butter.]
BUXINE. An alkaloïd procured from the Buxus Sempervirens.

BUXTON WATERS. Calcareous springs at Buxton in Derhyshire.
[BYSSACEOUS. Divided into very fine pieces, like wool, as the roots of some agarics.]
[BYSSUS. The filaments by which certain acephalous mollusca attach their shells to rocks.]
[CABALLINE (caballus, a horse). Of or belonging to a horse, Applied to a coarse kind of aloes, so drastic as to be fit only for horses.]
[CABBAGE. Common name for the genus Brassica.]

CABBAGE BARK. [CABBAGE-TREE BARK.] Surinam bark. The hark of the Audica inermis, a leguminous plant of the West Indies; anthelmintic.

CACAO. The Chocolate-nut tree, a specics of Thcobroma. See Cocoa.

CACHEXIA («акウ, bad; ${ }^{\varepsilon} \xi \leftarrow 5$, hahit). A had habit of body; the name either of an individual disease, or of a class of diseases. The latter are denominated hy Sagar cacochymiar, a term signifying faulty chymi-
fientions.
[Cachexia Africana. Desire of dirteating amongst the negroes.]
[CACHINNATION (cachinno, to laugh). Immoderate laughter, a symptom in manin, hysteria, \&c.]
[CACOClIYMIA (какòs, bad; xuuos, jnice). Unhealthy state of the bumours.]

CACODYL (какéðns, fetid). A limpid liquid, of fetid odour, the supposed radical of a series of arscnical compounds derived from acetyl.

Cacodylic Acid. An acid obtained by the oxidation of cacodyl and its oxide, and synonymous with alcargen.

CACOETHES (какòs, had; ÿos, habit). The name by which Celsus distiuguishes noli me tangere from cancer.
[CACOPLASTIC (кaкòs, had; $\pi \lambda a \sigma \sigma \omega$, to form). Morbid and imperfectly organized deposits.]
[CACOTHYMIA (kaкis, had; $\theta v \mu d s$, the mind). A disordered or depraved state of mind.]
[CADAVER (cado, to fall). A corpse, a dcad body.]
[CADAVERIC (cadaver, a corpse). Of or belonging to a dead body.]

CADET, LIQUOR OF. Alcarsin. A liquid obtaincd by distilling acctate of potash and arsenious acid, and remarkahle for its insupportable oduur and spontaneous iuflanmability iu nir.

CADMIUM. A hluish-white motal found in several of tho ores of zinc; so named from cadmia fossilis, a former name of the coramon ore of zinc.
[Sulplate of Cudmizun. Used as a collyrium for the removal of superficial opaeities of the cornea; one to four grains heing dissolved in an ounce of pure water.]

CADU'CA (cado, to fall). The deciduous memhrane; so called from its being east off from the uterus.

CADUCOUS (cado, to fall). A term applied in Botany to parts which fall early, as the calyx of the poppy, the petals of the gum cistus, \&e. Parts which continue on the plant long are termed persistent.
[CECAL. Belonging to the cæcum.]
C.ECITAS (cceus, blind). A general term for blindness See Eye, diseases of.

C $\mathbb{\Phi}$ CUM (cœcus, hlind). The eaput coli, or blind intestine; so named from its being prolonged inferiorly under the form of r cul-de-sac.
[C $\operatorname{\pi SSALPINA.~A~genus~of~Legumi-~}$ nous plants, the woods of all the species of which, under the name of Brazil wood, are used in dyeing.]

C ESARIAN SECTION. Hysterotomia. The operation by which the foetus is taken out of the uterus, hy an incision through the parietes of the abdomen. Persons so born were formerly called Casones-a caso matris utero.
[CASPITOSE (ccospes, turf). Growing in tults; forming dense patches, or tufts; as the young stems of many plants.]

CAFFEIC ACID. An acid discovered in coffee; it contains the aroma of roasted coffee.

Caffein. A erystalline substance ohtained from coffee, from tea, and from guarana - a prepared mass from the fruit of Paullinia sorbilis.
[CAHINCA, CAINCA. The Brazilian name for the root of a specics of Chiococca, lately introduced as a medicine. It is said to he tonie, emetie, diaphoretie, and very actively diuretic. It is esteemed in Brazil as a remedy for the bites of serpents, and its Indian name is said to be derived from this property. The dose of the powder of the bark of tho root, as an emetic and purgative, is from a seruple to a drachin ; but the aqueous extract is usually preferred, the dose of which is from ten to twenty grains.]
CAJUPUTI OLEUM (kayu-puti, whito wood). Kyapootio oil ; [Cajeput oil]; an essential oil procured from the leaves of the Melalcuea Minor, terined by Rumphins arbor alba, a Myrtaceous plant of the Moluecas.

CALAMI RADIX. [Calamus, U.S. Ph.] Sweet-Flag root; the rhizome of the Acorus Calamıs.

CALAMINA (calamus, a reed). Calamine; the impure carbonate of zine; a pulverulent mineral, generally of a reddish or flesh colour.

Calantina praparata. The calamine reduced to an impalpable powder hy roasting.
[CALAMUS. A genus of plants of tho order Aroidec. The pharmaceutical name for the rhizoma of the Acorus Calamus, U. S. Ph. See Calami Radix.]

CALAM US SCRIPTORIUS. Literally, a writing pen. A groove upon the anterior wall, or floor, of the fourth ventriele. Its pen-liko appearance is produced by the divergence of the posterior median columns, the feather hy the lineæ transrersæ. At the point of the pen is a small cavity, lined with gray suhstance, and ealled the Ventricle of Arantias.
CALCANEUM (calx, the heel). Calcar. The os calcis, or heel bone.
[CALCARATE (calcar, a spur). Having a spur, as the petals of aquilegia.]

CALCAREOUS. The name of a class of earths, consisting of lime and carbonie aeid, as chalk, marble, \&c.

Culcareous rock is another term for limestone.

Calcareous Spar. Crystallized carbonate of lime. Ieeland spar is one of its purest varieties.

CALCINATION (calx, lime). A term formerly applied to express the oxidation of a metal effected by the action of the air: the oxide thus formed was denominated a calx, from its heing earthy like lime. The term is now generally applied whenever any solid matter has heen suhjected to heat, so as to be convertible into a state of powder.
[CALCIS. Seo Calx.]
CALCIUM (calx, lime). The metallie base of lime, discovercd by Dary.

Calcii chloridum. Chloride of calcium, commonly called muriate of lime. The anhydrous chloride deliquesees in the air, and becomes oil of lime.
[Calcii sulphuretum. Sulphuret of Calcium. Used as a depilatory.]

CALCULUS (dim. of calx, a lime or clalk-stone). A solid or unorganized concretion found in various parts of the human hody, and commonly called stone, or gravel. It is apt to he formed in the kidney, in the circumstances of those constitutional derangenents which have been denominated calculous diathesis, of which the prineipal are,-

1. The Lithic Diathesis, characterized by jellow, red or lateritious, or pink depo-
sits of lithate of ammonia; or hy the formation of red gravel, or crystals of uric or lithic acid.
2. The Phosphatic Diathesis, characterized by the formation of white gravel, or crystals of phosphate of magnesia and ammonia; or hy the wbite sediment of the mixed phosphates of magnesia and ammonia, and of lime.

## I. Amorphous Sediments.

These are pulverulent, and may consist, 1. of uric acid, which is of a yellow or hrick-dust colour, like the ordinary sediment of cooled urine; 2 . of phosphatc of lime, mixed with phosphate of ammonia and magnesia, and a considerable quantity of mucus; and 3. of the mucus of the bladder, which, having no earthy salts, hecomes of a greenish yellow on drying, and the urine is always acid.

## II. Crystalline Deposits, or Gravel.

These substances usually consist of 1. acid urate of ammonia, in the form of small, shining, red or yellow, pointed, crystalline groups; 2. of oxalate of limc, in pale yellow or green crystals; or, of phosphate of ammonia and magnesia.

## III. Varieties of Calculus.

Urinary Calculi have usually a nucleus in the centre consisting of one substance, which afterwards alternates with unequal layers of other, and, in some cases, of all the principles of urinary calculi. Many ealculi consist of the same substance in successive layers. The varieties of caleulus may be thus arranged:

1. The Lithic or Uric Acid, or the light brown. This acid is the most constant constitnent of urinary calculus.
2. The Triple Phosphate of Magnesia and Ammonia, or the white. This is never found quite alone in calculi; hut is often one of their chief constituents.
3. The Mixed Phosphates of Maguesia and Ammonia, and of Limc. This variety, next to uric acid, consiitutes the most com= mon material of calculus. From its ready fusibility before the hlow-pipe, it is termed the fusible calculus.
4. The Oxalate of Lime. This is, apparently, a frequent constituent of calculus, particularly in children. The stone has usually an uncven surface, rescmbling the mulherry, and is hence called the mulberry calculus.
5. The Alternating. The nucleus is most frequently lithic acid, rarely the phosphates; these, on the contrary, generally form upon some nucleus, and are seldom covered by other depositions.
6. The Xanthic Oxide. Disenvered by Dr. Marcet, and so uancd from its forming
a lemon-coloured compound, when actod upon by nitric acid.
7. The Fibrinors. Discovered hy Dr. Marcet, and so termed from its resemblance to fibre.
[Calculous concretions are also met with in the gall-hladuer, hiliary ducts, liver, pineal gland, lungs, veins, articulations, tonsils, lachrymal passages, salivary glands, auditory canals, digestive. tuhe, prostate, vesiculi seminales, pancreas, uterus, and mammary glands. See Gall stones, Pineal concretions, Chalk-stones, Salivary calculi, Bezoar, Prostatic conerctions, \&c.]

CALEFACIENTS (calcfacio, to make warm). Medicines which excite warmth.
[CALENDULA OFFICINALIS. Marigold; a well-known garden plant, formerly much used in modicine, and thought to be antispasmodic, sudorific, deohstruent, and emmenagogue. It is now rarely employed.]
[Calendulin. A peculiar principle discovered hy Geiger in the Calendula oficinalis, and considered by Berzelius to be analogous to bassorin.]

CALENTURE (caleo, to be hot). A violent fever, attended with delirium, incident to persons in hot countrics. Under its influence it is said that sailors imagine the sea to be green fields, and will throw themselves into it, if not restrained.
[CALICO-BUSH. A common name for the plant Kalmia latifolia.]

CALICULUS (dim. of calyx, a cup). A little cup, or goblet. Celsus.

CALI'GO (darkness). A disease of tho eye, imparting dimness, cloudiness, obscurity. In old English, this opacity, as well as pterygium, was denominated a "web of the eye."

1. Caligo lentis. The true cataract, or the glaucoma Woulhousi.
2. Caligo cornce. Dimness, cloudiness, or npacity of the cornca.
3. Caligo pupilla. Synchisis, or amyosis. Blindness from obstruction in the pupil.
4. Caligo humorum. Glaucoma Vogelii. Blindness from an error in the humours of the cye.
5. Crtigo palpcbrarum. Blindness from disorder in the eyelids.
[CALISAYA BARK. Calisaya arrolada. Cominon name for the Yellow Bark. Sec Cincheme.]
[CALLiCOCA. A Limean genus of plants of the natural order Cinchonucee.

Cullicoca Ipecracmomha. Now called $C^{\prime} e$ placlis ipcoacнanhu, q. v.]
[CALLIPERS. Compasses with ourvod legs.]

CALLUS (Latin, hardness). New bone, or the substance which serves to join together the ends of a fracture, and to restore destroyed portions of hone.

Calli. Nodes in the gout.
Oallositar. [Callosity.] A horny product.

- [CALOMBA. The pharmaccutical name for the root of Coculus palmatus. See Culumba radix.]

CALOMELAS. Calomel, the [mild] chloride of mercury ; [Hydrargyri Chloridım nite, U. S. Ph.] formerly called hy a variety of fanciful names; as draco mitigatus, or mild dragon; aquila alba, or white eagle ; manna metallorum, or manna of the metals; panchymagogum minerale, sweet mercury, \&c. The term calomel, from kàòs, good, and $\mu \dot{\varepsilon} \lambda a s$, hlack, was first used by Sir Theodore Turquet de Mayenne, in consequence, as some say, of his having had a favourite hlack servant who prepared it; or, according to others, because it tras a good remedy for the black bile.
[CALOPHYLLUM (калоs, beautifnl ; $\phi \cup \lambda \lambda o \nu$, a leaf). A genus of tropical plants of the Myrtle family.
C. Calaba, Names of species
C. Inophyllum, supposed to furnish
C. Tacamahaca. the resinous substance commonly known hy the name Tacamahac.]

CALOR (Latin). Heat. Calor fervens denotes hoiling heat, or $212^{\circ} \mathrm{Fahr}$; calor lenis, gentle heat, hetween $90^{\circ}$ and $100^{\circ}$ Fahr.

CALOR MORDICANS. Literally, a biting heat; a term applied to a dangerous symptom in typhus, in which there is a biting and pungent heat upon tho skin, leaving a smarting sensation on the fingers for several minutes after touching it.

CALORIC (calor, heat). The causc of the sensation of heat-a fluid, or condition diffused through all hodies.

1. Serisible or free caloric is that which produces the scnsation of heat, or affects the thermometer; all calorie is sensible, if it be considered in reference to bodies of which the form is permanent.
2. Inscusible caloric, formerly supposed to be latent or combined, is that portion which passes into bodies during a change of form, without clevating their temperature; as into ice at $32^{\circ}$, as it hecomes water, and termed caloric of fluidity; or into water at $212^{\circ}$, as it passes into vapour, and termed caloric of vaporization.
3. Specific cotoric is the (unequal) quantity of ealorie required ly similar guantities of different bodies to heat them
cqually. The specific caloric of water is 23 times as great as that of mercury; thus if equal weights of the former at $40^{\circ}$, and of the latter at $160^{\circ}$, be mixed together, the resulting temperature is $45^{\circ}$. This quality of bodics is called their capacity for caloric.
4. Absolute caloric denotes the total nmount of heat in hodies; no method is known by which this can he ascertained.
5. Evolution of caloric denotes that which is set free on a change of capacities in bodies, from greater to less, as in combnstion, on mixing water with sulphurid acid, or alcohol, \&c.
6. Absorption of caloric ; the reverse of the former, as in the melting of ice, the evaporation of water or other fluids, \&c.
7. Diffusion of caloric denotes the mpdes hy which its equilibrium is effected; viz., by conduction, radiation, and convec-tion:-
8. Conduction of caloric, or its passage through hodies: those which allow it a free passage through their snhstance, as metals, are termed good condnctors; those of a different quality, had conductors.
9. Radiation of caloric, or its emission from the surface of all hodies equally in all directions, in the form of radii or rays; these, on falling upon other hodies, are either reflected, ahsorhed, or transmitted.
10. Convection, or the conreying of caloric; as when a portion of air, passing through and near a fire, has hecome heated, and has conveyed up the chimncy the temperature acquired from the fire. The convection of heat, philosophically considered, is in reality s modification of the conduction of heat; while the latter may be viewed as an extreme case of ra-diation.-Prout.
11. The effects of calorio are Expansion, or augmentation of hulk; Liquefaction, or change from the solid to the liquid form; sind Vaporization, or the passing of a liquid or solid into an ac̈riform state.
[CALORICITY. The faculty which living hodics possess of generating a sufficient quantity of calorio to maintain life and prescrve the temperature of the body.] calor, hent.]
[CALORIFICATION (calor, heat; facio, to make). The function of gencrating animal heat.]

CALORIMETER (calor, heat; petpor, incasure). An apparatus formensuring the hent given out ly a body in cooling by the quantily of ice it melts.

CALORLMOTOR (calor, heat; morco,
to move). An apparatus constructed by Dr. Haro of Philadelphia, for evolving caloric.
CALOTROPIS GIGANTEA. [Brown. Calotropis Madarii Indico-orientalis, Casanova.] An Asclepiadaceous plant introduced from India, under the name of mudar, or madar, as an alterative and sudorific. It is said to contain a peculiar principle, called mudarine.

CALUMBE RADIX (Kalumbo, Portuguese). [Colomba, Ph. U. S.] The root of the Cucculus palmatise, one of our most useful stomachics and tonics. It contains a bitter principle, called $c a$ lumbin.

CALVARIA (calvns, hald). The upper part of the cranium ; the skull, quasi calva capitis area.

Calvilies. Baldness. This term is synonymous with calvitas and calvitium.

CALX. (This term, when masculine, denotes the keel; when feminine, a chalkstone, or lime.) Lime ; oxide of calcium, commonly ealled caustio lime, or quicklime. [Formerly applied to any oxide of a metal.]

1. Col. viva. Quicklime; unslaked or uncombined lime; obtained by heating masses of limestone to redness in a limekiln.
2. Calx e testi8. Lime from shells; a pharmacopeial preparation from oystershells.
3. Calx cum kali puro. Lime with pure kali, or the potarsa cmm calce of the pharmacopœia.
4. Calcis hypochloris. [Calx Chlorinata, U. S. Ph. Chlorinated Lime.] Hy pochlorite of lime, or Tennant's bleaching powder. It has heen termed axymuriate of lime, chloride of lime, \&c.
5. Culcis carbonas. Carbonate of lime, a suhstance occurring in the forms of marble, chalk, \&c.
6. Calcis subphosphas. Suhpbosphate of lime; the principal part of the earth of bone.

CALY'CES (pl. of caly.x, a flowercup). Small membranous cup-like pouches, whicb invest the points of the papilla of the kidney. Tbeir union forms the infundiunla.

CALYCIFLOR F (calyx, a flower-cup; flos, a flower). Plants which have their flowers furnishod with both a calyx and a corolla, the latter consisting of distinct petals, and their stamens perigynous.
[CALYCULATE ( calyculus, a small calyx). Having an involucrum of bracts exterior to the caly $x$, as in many compo-
sitx.] sitæ.]
$\underset{8}{\text { CALYPTRA (ka入úrte, to veil). Lite- }}$
rally, a veil or hood. A term applied to a menbranous covering which envelopes the urn-like capsule of mosses, and is eventually ruptured and fills off.
[Calyptrate. Having a calyptra or hood.]

CALISAYA. [CALISAYA.] A name of the pale or crown hark. See Cinchona.

CALYX (xiגu , a cup). The flowereup, or external envelope of the floral apparatus. Its separate pieces are called sepals: when these are distinct from each other, the calyx is termed poly-sepalous; when they cohere, gamo-sepalous, or, incorrectly, mono-sepalous. A sepal may he hollowed out into a conical tube, as in larkspur, and is then said to be spurred. Compare Corolla.
[In anatomy, this term hạs heen given to the cup-like pouch, formed by macous membrane, around each papilla of the kidney.]

CAMBIUM. A viscid juice abounding in spring between the bark and wood of trees, and supposed to be closely connected with the development of woody fibre.

CAMBOGIA. Gamhoge : a gum-resin; procured from the Hebradendron Oambogioides, a Guttiferous plant. It issues from the broken leaves or hranches in drops, and has hence been termed gummi gultic.

CAMERA, Literally, a chamber. A term anplied to the chainbers of the eye.

CAMP VINEGAR. Steep in the best vinegar for a month one drachm of cayenne pepper, two tablespoonsful of soy, and four of walnut-ketchnp, six anchovies chopped, and a small clove of garlia minced fine. Sbake it frequently, strain through a tammis, and keep it woll corked in small hottles.

CAMPANULACEA (campamula, a litthe bell). The Campanula tribe of Dicotyledonous plants. Herbaceous plants or under shrubs, yielding a milky juiee. Corolla gamopetalous, inscrted into tbe top of the calyx, and withering on the fruit. Stomens inserted into the calyx, alternate with the lobes of the corolla. Ovary inferior, with two or more cells: Fruit dry, crowned by the withered ealyx and corolla, and dehiscing by apertures or valves.
Campannlatc, [Camprniform, Campanaceorr, Campammlote]. Bell-shaped; as applied, in botany, to the caly.x or corolla, when shaped like a littlo bell.

CAMPEACII WOOD. Tho Hematoxyli Lignum, or Logwood; used for dyeing, in the form of chips.
[CAMPIENEE. A name given by Dumas
to a radical which is represented by pure $\mid$ Thus we have the Comphor of Tobacco; $8=68$. redistilled.]
oil of turpentinc. It is composed of ten eqs. of carbon, 60 ; and eight of hydrogen,
CAMPHINE. A spirit for hurning in
[CAMPHIRE. Camphor.]
[CAMPHORA. The pharmacopocial name for camphor, a peculiar concrete suhstanoe obtained by distillation from the Camphora nfficinarum?.]
CAMPHORA OFFICINARUM. The Camphor-tree, a Lauraceous plant, the wood and leaves of which yield the officinal camphor hy means of dry distillation. Canphor is a kind of stearopten remaining after the elaopten or ethereal oil of the live tree is evaporated.

1. Dutch camphor. Japan camphor; brought from Batavia, and said to be the produce of Japan. It is imported in tuhs, and is hence called tub camphor.
2. China camphor. Ordinary crude camphor, produced in the island of Formosa. It is purified hy sublimation, and tben called refined camphor.
3. Liquid camphor. This suhstance contains the same proportions of carbon and hydrogen as solid camphor, hut only half as much oxygen. It is the elaopten of the oil of camphor of commerce.
4. Artificial camphor. The name given to a white granular crystalline volatile product, having a smell resembling tbat of camphor, whicb is ohtained hy passing hydro-chloric acid gas through oil of turpentine.
5. Camphorce flores. The suhtile suhstance whicb first ascends in suhliming camphor; it is merely campbor.
6. Camphore florcs compositi. Compound flowers of camphor; or camphor sublimed with henzoin.
7. Camphoric acid. A compound procured hy digesting campbor in nitric acid. Its salts are called camphoratcs.
8. Campholic acid. An acid with the consistence of camphor, hut containing two parts more of hydrogen and oxygen. 9. Camphogen. A colourless liquid obtaincd hy distilling campbor with anhydrous phosphoric acid.
9. Camphronc. A light oil obtained hy dropping fragments of camphor into a porcedain tuhe containing quicklime heated to redncss.
10. The torm Camplior has been npplicd to all the volatilo oils which are concreto at tho ordinary temperature, provided they do not, at the same time, provided they do not, at the sumetity of fluid oil.

## pane, \&c.

[CAMPIIORATE. A combination of Camphoric acid with a salifiahle base.]
[CAMPIIORATED. Combined with camphor. Applicd to certain medicines, in the composition of which camphor enters.
[1. Came
[1. Camphorated acetic acid. A combination of camphor, alcohol, and strong acetic acid.]
[2. Camphorated soap liniment. Opodeldoc. See Liniment.]
[3. Camphorated tincture of opium. Paregoric. See Tincture.]
[4. Camphorated tincture of soap. See Tincture.]

CAMPYLOTROPOUS (канпи́дог, curved; трध́т $\omega$, to turn). A term applied to the ovule of plants, when ite axis, instead of remaining rectilincar, is curved down upon itself, the hase of the nucleus still continuing to he contiguous to the hilum.

CAMWOOD. A red dye-rood, principally obtained from the vicinity of Sierra Leone.
[CANADA BALSAM. CANADA TURPENTINE. The resinous juice of the Abies balsamea.]
[CANADA FLEABANE. A common name for the herb Erygeron canadense.]
[CANADA PITCH. The prepared con-
crete juice of Abies Canadensis.]
[CANADA SNAKEROOT. The root of Asarum canadense.]
[CANALICULATE (Canaliculns, a small canal). Channelled; having a long furrow.]

CANALICULI (dim. of canalis, a ca-
nal). The name given by Morgagni to some large lacunæ, which secrete mucus in tbe canal of the urethra.

CANALIS (cama, a reed). A canal; so named from its heing hollowed out in the form of a reed. A bollow instrument used hy surgeons as a splint.-Cclsus.

1. Canalis artcriosus. A blood-vessel whicb unites the pulmonary artery and norta in the foetus.
2. Canalis venosus. A canal mhich conveys the blood from the vena porte of the liver to the ascending rena cara in tbe foetus.
3. Canal of Fontana. A minute rascular canal situated within the ciliary lignment, and so named from its discovercr. It is also termed the ciliary canol. situated inuucdinit. A triangular canal ference of the crystall around the circumsitunted of the erystalline lens: so named
ference its discovercr. When distended with
after
air, or size injection, it presents a plaited appearance, and has hence heen called hy the French canal godronné.
[5. Canal of Nuck. A cylindrical sheath formed around the round ligaments of the uterus by a prolongation of the peritoneum into the inguinal canal.]
[6. Canal of Schleum. A minute canal at the junction of the cornea and sclerotica.]
[CANARY SEED. Tbe seeds of Phalaris canariensis.]

CANCELLI. 'The Latin term for lattices, or windows, made with cross-hars of wood, iron, \&c. Hence it is applied to the spongy structure of hones; and hence the term cancellated is applied to anything which is cross-barred, or marked by lines crossing one another.

CANCER. Literally, a crab; and when used in this sense, its genitive case is cancri; hut when it signifies the disease designated hy the Greeks carcinoma, its genitive case is canceris. The term is applied to the disease from the claw-like spreading of the veins. The textures of cancer, as given by Bayle, are the following : 一

1. The Chondroïd ( $\chi$ 反रdoas, cartilage; sidos, likeness), or cartilaginiform.
2. The Hyaloïd (ü̃ㅊos, glass; होdos, likeness), or vitriform.
3. The Larinoïd ( $\lambda$ aptvòs, fat ; हifos, likeness), or lardiform.
4. The Bunioid ( $\beta$ oúvoov, a turnip; हỉdos, likeness), or napiform.
5. The Encephaloïd ( $\varepsilon \gamma \kappa$ к $i \phi$ a eldos, likeness), or cerehriform.
6. The Colloid (x $\delta \lambda \lambda a$, glue ; हर̇os, likeness), or gelatiniform.
7. The Componnd cancerous; the Mixed cancerous; and the Superficial cancerous.

CANCER SCROTI. Cancer munditorunt. Chimney-sweepers' cancer, or the soot-wart.

CANCER (BANDAGE). A crab; a term denoting a bandage resembling a crab in the number of its legs, and called the splitcloth of eight tails.
[CANCER ROOT Common name for the Orobanche Virginiana.]
[CANCROID (cancer; and cioos, form). Resembling cancer.]

CANCRORUM LAPILLI. Crabs' eyes, or crabs'stones; the names of two calcareous concretions found in the stomach of the Astacns Anviatilis, or Cray-fish, at the time when the animal is about to change its shell; these were formerly ground and employed in medicine as ahsorbents and
antacids.

Cancrorme chele. Crabs claws; the claws of the Cuncer pagurus, the Black-
clawed, or Large Edihle Crab; these, when prepared by grinding, constitute the preparcd crabs' claws of the shops, formerly used for the same purposes as the crabs' stones.

CANCRUM ORIS (carccr, a crah). Cnnker; a fetid ulcer, with jagged edgos, of the gums and inside of the lips and cheeks, attonded with a copious flow of offensive saliva. It occurs principally in children. Compare Gangrena oris and Aphtha.

CANDLE TREE OIL. A solid oil, obtained from the seed of the Croton sebiferum, or Candle tree, a native of China. It is used by the Chinese for making candles.

CANELLA ALBA. Laurel-leaved Canella or Wild Cinnamon; a Guttiferous plant, the inner bark of which constitutes the canellac bark of the shops, sometimes termed on the continent costus dulcis, or costus corticosus.

Canellin. A crystallizable saccharine substance found in canella bark.

CANINE APPETITE. Fames caninc. Voracity. See Bulimia.
[CANINE MADNESS. Hydrophobia.]
CANINE TEETH (canis, a dog). Cuspiclati. Eye-teeth; the four which immediately adjoin the incisors. See Dcns.

CANINUS (canis, a dog). A name given to the levator anguli oris, from its arising above the canini, or dog-teetb. Compare Incisivis.
[CAVITIES (canus, grey-haired). Greyness of the hair.]
[CANNA. Cinna starch. A fecula recently introduced from the West Indies under the French name of "Tous lcs mois."]

CANNABIS SATIVA (Kimnab, Arabic). Cannabis Indica (?). Common Hemp, лn Urticaceons plant, the leaves of which furnish an intoxicating drug, under the names of bang or gange in India, kinnab or hashish in Arahia, malach in Turkey, and dacha among the Hottentots.

1. Cherris. A concreted resinous exudation from the leaves, slender stems, and flowers.
2. Gunjah. The dricd hemp-plant which has flowered, and from wbich tho resiu has not bcen removed.
3. Bang, subjee, or sidhcc. This consists of the larger leaves and capsules without the stalks.

CANNEL COAI. A hituminous substance which yiclds, on combustion, a bright flame without smoke. The term is prohably a rulcarism for candlc coal, in allusion to its illuminating properties.

CANNON METAL. An alloy of copper, distillation of caoutchouc at a high tem: tin, and small quantities of other metals; used for ensting cannon.

- [CANTHARIDAL COLLODION. A blistering liquid mado by exhausting, by percolation, a pound of cantharides, with a mixture consisting of a pound of sulphurio cther and three ounces of acetic cther. Twenty-five grains of gun-cotton is to be dissolved in two ounces of this liquid; and to prevent the eontraction which takes place on its drying, ahout one per cent. of Venice turpentine may he added.]
[CANTMARIS ( $\kappa \dot{a} v a p o s$, a heetle). The pharmacopœeial riame of the blistering or Spanish fly. The insect most commonly used is the Cantharis vesicatoria; hut there are several indigenous species which are equally efficient, and may he employed as suhstitutes. Of these the Cantharis vittata is the only one adopted as officinal; hut the C. cinerea, C. marginata, C. atrata, bave equal vesicating powers. There are ahout twelve other indigenous species which have not been praetically employed, hut which may prove not inferior in vesicating powers to the preceding species.]

Cantharis Viesicatoria. The Blister Bectle, or Spanish Fly, a coleopterous insect, found on species of Oleacea and Caprifoliacea, but rare in England.

Cantharidir. A crystalline substance procured from the ahove insect, and existing prohably in all hlistering heetles; 1000 parts of cantharides yield four parts of pure cantharidin.
[CANTHOPLASTY (kav日ds, the angle of the cye; $\pi \lambda \dot{c} \sigma \sigma \omega$, to form). The formation of the anglo of the eye hy plastic operation.]

CANTIIUS (kavOis). The angle of the eye, where the eyelids meet; the inner canthus is that nearest to the nose; the other is called the outcr or lesser oanthus.
[CANTIANUS PULVIS. Lady Kent's Powder; a cordial powder, formerly in repite for cancer, composed of crah's claws, prepared pearls, red coral, and oricntal bezoar.]

CANTON'S PIIOSPIIORUS. A suhstance made hy cxposing calcined oystershells and sulphur to a red heat. On cxposure to light, it acquires the property of sluining in the darls.

CAN'UlA (dim, of canna, a reed). A small tuhe, gencrally applied to that of the trochar, \&c.

CAOUTCHOUC. Flastic ghm, or Indian ruhber; the concrete juice of the Hovert Caoutchonc, Iutropa Elestica, Ficus Indica, and Artncarpus Integrifolia.

CAPELINA (capeline, Fr., a woman's hat). A douhic-headed roller put around the head, \&c.

CAPERS. The pickled buds of the Capparis spinosa, a low shruh, groving out of the joints of old walls, and the fissures of rocks, in most of the warm parts of Europe.
CAPIOPICRITE ( $\kappa a \phi \epsilon$, , to exhale; $\pi!k \rho d s$, bitter). The hitter principle of rhubarh, also called rhabarberin. But what this principle consists in, appears to he wholly undetermincd. Quot homines, tot sententiæ.

CAPILLAIRE. A syrup made of sngar, honey, and orange-flower water. [More properly made of the Adiantum capillus veneris.]

CAPILLARY (capillus, a hair). Resembling a hair in size; a term applied to-

1. Tho Vessels which intervene hetween the minute arteries and veins.
2. A Fissure; capillatio; a very minute crack in the skinl.
3. Tuber; which are so small as to he less than the twentieth of an inch in diameter in the inside.
4. The Attraction hy which a liquid rises in a capillary tuhe higher than the surface of that which surrounds it.

CAPILLUS (quasi capitis pilus). The hair in general. It is thus distinguished:

1. Coma ( $\kappa \dot{d} \mu \eta$ ). A head of hair either dressed or not; and, by annlogy, the hranches and leaves of trees.
2. Crinis (кpivw, to put in order). The hair when set in order, or platted.
3. Ccesaries (ccedo, to eut). A man's head of hair; woman's hair being formerly never cut.
4. Cincinnos (kiktyros). A bush of hair crisped, curled, or braided; a curled or frizzled lock:
5. Cirrhus. Quasi in circum tortus. A curl or frizzle. From кépas, a horn; hceause the cirrhus resembled a horn in shape.
6. Cilium (cilco, to twinkle). The eyelashes.
7. Super-cilium. The cye-brow; the hair situated over the cilium.
S. Vibrissa (ribro, to quiver). The hair in the nostrils; so named from their strain. ing the air, as it were, in its passage, and preventing the introduction of foreign bodics in the nasal fosser.
8. Mystax (núr $\boldsymbol{\xi} \xi$, mustaehes). The hair on the apper lip.
9. Barba ( $¢$ ррß̀, nourishment). The heard, both of wath and of beasts. The hair
10. Pilus (sidos, earded wool). The lisir
11. Fillus (vellus, a ficecc). Weol; shaggy hair of beasts.
12. Seta (xarim, a horse's mane). A bristle, as of horses, pigs, \&c. See Seton.
13. Pappus (тámпаг). The down on the cheek, - on the seed-vesscl of certain plants.

CAPISTRUM (eapio, to take). Litcrally, a bridle. The single split-cloth handage, so called from its heing used to support the lower jaw like a bridle. [An old term for trismus.]
[CAPITATE (caput, the head). Headed; terminated hy a sudden enlargement. Capitnlate. Having a little head.]

CAPITILUVIUM (capnt, the head; lavo, to wash). A bath for the head.
[CAPITAL (caput, the head). Belonging to the bead. Applied hy way of eminence to the more inportant operations.]
CAPIVI. A miscalled halsam, yielded by several specics of Copaifera.

CAPNOMOR (капиàs, sinoke; $\mu$ oĩpa, part; so called from its heing one of the ingredients of smoke). A colourless transparent liquid, - the only ingredient in tar which can dissolve caoutchouc. It occurs along with creosote in the heavy oil of tar.
[CAPPARIS SPINOSA. The systematic name of the caper plant, a native of the south of Europe.; the hark of the root was formerly used as deohstruent. See Capers.]
[CAPRATE. A comhination of capric acid with a salifiahle hase.]
[CAPREOLARIS, CAPREOLATUS, (capreolus, a tendril). Capreolate; resembling the tendril of the vive. Vasa capreolaria, the spermatic vessels.]

CAPRIC and CAPROIC ACIDS. Volatile odoriferous compounds, yielded by butter on its conversion into soap.

CAPRIFOLIACE E. The Honey-suckle trihe of Dycotyledonous plants. Shruhs or herhaceous plants with leaves opposite; flovers corymhose, monopetalous; stamens alternating with the lohes of the corolla; ovarium inferior, many-celled; fruit iudebiscent.

CAPSICUM ANNUUM. Common Capsicuin, or Chilly; a plant of the order Solanacea, the dried fruit of which is sold under the name of copsisum or chillies.

1. Capsicum frutescens. The species which yields the capsules sold as Guinia papper, or bird pepper. Their powder is cayenne perper.
2. Capsicin. An acrid soft resin, obtained by digesting the alcoholic extract of the Capsicuin annuum in cther, and craporating the etherial solution.

CAPSULA (dim. of copar, a chest).

Literally, a little chest. 1. A capsule, or bag, which cncloses any part, as the capsule of Glisson, or the cellulo-vascular uembrane which envelopes the hepatic vessels. 2. In Botany it is a dry, superior fruit, dehiscent by valves, and always proccediug from a compound ovarium.
J. Renal capsules. Two yellowish, triangular, and flattened hodics, lying over the kidneys in the foetus, in which they are as large as the kidneys themselves. In the adult they are two lobes.
2. Capsular liganent. A loose bag which contains the synovia of the joints. This must be distinguished from the synovial memhrano which produces this fluid. The latter is allied, by structure and function, to the serous membrane; the former, to the fihrous.

CAPUT (quòd indè, says Varro, initium capiant scusus et nervi). The head. It is distinguished into the skull, or eranium, and the face, or facies.

1. Capnt coli. The head of the colon, the cæcum, or blind intestine.
2. Caput gallinaginis (woodcock's head). Veru Montanum. A lengthened fold of mucous membrane, situated on the inferior wall or floor of the prostatic portion of the urethra.
3. Caput mortum (dead head). The inert residuum of a distillation, or sublimation; a term nearly ohsolete.
4. Capnt obstipum (a stiff head). A term for torticollis, or wry-neck.
[5. Coput succedaneum. The œdematous swelling which forms on that part of the head of the foetus which presents in some cases of lahour, resulting from the circulation in the scalp being more or less impeded from the tightness with which the head is embraced by the vagina.]

CARAMEL. The name given to the hlack porous shining mass produced by heating sugar at a high temperature.
[CARANNA. A resinous substance, said to be derived from the Amyris Caranna, a tree growing in Mexico and South America.]
[CARAWAY. The fruit of the Carum carni, a pleasant stomachie and carminative.]

CARBAZOTIC ACID (carbon and azote). Nitro-picric Acid. An acid formed by the action of nitric acid on indigo.

CARBO LIGNI. Clarcoal of wood; $\Omega$ species of artificial coal, consisting of halfburnt wond.

CARBON (carbn, a coal). A suhstance well known under the form of conl, charcoal, lamp-black, \&c. In chemical lunguage, it denotes tho pure inflamuablo
principle of clareoal ; in its state of absolute purity, it constitutes the diamond.

1. Carbon vapour. The namo of a hypothetical substance, for carbon has never been obtained in the insulated form of vapour. When the term is used in chemical works, it denotes the condition of carbon as it exists in carbonio acid.
2. Carbon, animal. Animal cbarcoal, bone cbarcoal, and ivory-hlack, aro nanes applied to bones calcined, or converted into charcoal, in a close vessel. Animal charcoal is also. prepared by calcining dried blood, borns, lioofs, clippings of bides; \&c., in contact with carbonate of potasb, and wasbing the calcined mass afterwards with water.
3. Carbon, mineral. A term applied to charcoal, with various proportions of earth and iron, without bitumen. It bas a silky lustre, and the fihrous texture of wood: It occurs stratified witl various kinds of coal.
4. Carbonic oxide. A colourless gas, formed when carbon is burned with a minimum of oxygen, ns wben coke or charcoal is burned in a close vessel witb a limited draught.
5. Carbonic acid. A pungent and acidulous gas, produced by the combustion of carbonic oxide, or by that of charcoal in oxygen gas. Tbis gas wns termed by Black fixed air, from its having been found to exist, in a fixed state, in limestone, and the mild alkalies, from whicb it was expelled by heat and the action of acids.
6. Carbonates. Compounds of carbonic acid witb the salifiable bases. Tbey are composed eitber of one atom of acid and one of the base, or of two of acid and one of tbe base; the former aro called carbonates, the latter bi-carbonates.
7. Carburets. Comhinations of carbon with some metals by fusion; thus, stecl is a carburct of iron. The term has also been applied to a peculiar compound of sulpbur and hydrogen, tbe carburet of sulphur, also terined sulphurct of carbou, and alcohol of sulphur.
8. Carburettcd Hydrogen. A colourless inflammable gas, abundantly formed in nature in stagnant pools, wherever vegetables are undergoing the process of putrefaction; it also forms tho greater part of the gas obtained from coal. This gas was formerly enlled heavy inflammable air. Sce Olefiant Gus.
9. Carbramide. A compound of amidogen and carbonic acid - an ingredient of chloro-carbonate of aminonia. See Amide.
10. Carbydragen. A name suggested
for pyroxylic or wood epirit, which consists of one atom of hydrogen and one atom of carbon. The name consists of tbese two terms.
11. Carbomethylic acird. An acid obtained by Dumas and Peligot, hy acting upon pyroxylic spirit with carbonic acid.
12. Carbolic acid. One of the particular producte wbicb bave been isolated in the distillation of coal.
[13. Carboniferous (fero, to bear). Bearing or containing coal.]
[14. Carbonization. The process of converting organic substances into charcoal.]

CARBUNCLE (carbo, a burning coal). Anthrax. A boil, differing from the furuncle in having no central core, and terminating in gangrene under the skin, instead of suppuration.

CARCINOMA (кapxivos, a crab). The Greek term for cancer. See Cancer.
[Carcinomatous. Resembling or of the nature of Carcinoma.]
[CARCINUS (sapxiros). Caticer.]
[CARDAMINE (кapdia, the beart). A genus of Cruciferous plants:]
[Carlamine pratensis. The systematic name for the cuckoo-flower, a perennial herbaceous plant, the flowers of wbicb enjoyed the reputation of being diuretic and intispasmodic.]
CARDAMOM. Tbe name of the fruit of several species of Elettaria and Amomım.

Ceylon Cardamoms. The fruit of the Grain of Paradise plant of Ceglon. The term Grains of Paradise, as employed at present in Europe, applies to the hot acrid seeds called Malaguetta pepper, brought from Africa.-Pereira.
[Rozind Cardamom. This is supposed to be the fruit of the Amomum Cardanomum, (Willd.) growing in Jara, Sumatra, and other East India islands.]
[Jave Cardamam. This is supposed to be the fruit of the Anomum maximum, (Roxhurgh,) growing in the Mnlay islands.]
[Jadagascar Cardamom. The greater cardamom; supposed to be the fruit of tbe Amomum angustifolium, (Sunnerat,) whicbgrows in the marshy grounds of Madagasear.]
[CARDAMOMUM. Cardamom. The Pharmacopocial name for the fruit of Elcttavia Cardamomum.]

CARDIA ( кaplia, the beart). The entrance into the stomach, so called from being near the heart.

1. Cardi-alyia (àyos, pain). Litcrally, heart-ache; but cmployed to denote pain in the stumach, and hence synonymous with gastralgia, gastrodynia, curdiaca pursia, ic.
2. Carditis: Inflammation of the cardia or beart.
3. Cardiaens. Belonging to the heart or stomach. Hence, Cardiacns Morbut, a name given by the ancients to Typhus Fever; Cardiaca Confectio, the Aromatic Confection ; and Cardiacs, a term for cordial medicines.
4. Cardiogn2ıs. A term used by Galen and Saurages to denote a species of aneurism, called by some aneurysina pracordiorm, and by others polypus corclis.

CARDIAC (кapora, the heart). Relating to the heart.

1. A-cardiao. Not having a heart, as certain defective foetuses, the insect tribies, \&c.
2. Haplo-cardiac ( $\dot{a} \pi \lambda$ bos, single). Having a single beart ; this is pulmonic, as the fish trihes; or systemic, as the mollusca.
3. Diplo-cartiac ( (it $\pi \lambda 605$, double). Haring a douhle heart, pulmonic and systemic, as the mammalia, hirds, \&c.
[CARDIANOSTROPHE (кароia, the heart; àvactpo $\ddagger$ 方, conversion). Malpositiou of the beart.]
[CARDIECTASIS (kapoia, the heart; exragts, extension). Dilatation or aneurisu of the heart.]
[CARDIELCOSIS (Kapdia, the heart: è $\lambda \times \omega \sigma t s$, ulceration). Ulceration of the heart.]
[CARDIMELECH (Kapoia, the heart; מלך, a king). A supposed active principle seated in the heart, governing the vital functions.]
[CARDINAL FLOWER. The common name for the Lobelia cardinalis.]
[CARDIOGMUS. An old terio for Cardialgia, hut also applied to palpitation of the beart, to incipient ancurism of the heart, and to Angina pectoris.]
[CARDIOPALMUS (kapdia, the heart; тa $\lambda_{\mu} \partial_{s}$, palpitation). Palpitation of the heart.]
[CARDIORHEXIS (xapdia, the heart; $\rho \pi \xi i s$, a rupture). Rupture of the heart.]
[CARDIOTROMUS (xapota, the heart; тло́口оs, a tremor). Fluttering of the heart.]
[CARD L. A yellow, oleaginous li
[CARD OL. A yellow, oleaginous liquid ohtained from the juice of the casbervnut.]
[CARDUUS. A Linncan genus of plants of the natural order Cynarocephala.]
[Carduns bencdictus. A naune fur the blessed thistle. Sce Centanrea bencdicta.]
[CARIBEAN BARK. The hark of the Exostemina caribca.]

CARICA PAPAYA. The Papav tree, the milky juice of which contains an abundance of fibrin, resembling animal
matter.

CARICE FRUCTUS' The preserved fruit of the Fig, or Ficns Carica.

CARIES ( $\kappa \varepsilon i \rho \omega$, to abradc). Ulceration of the hones.

CARI'NA. Literally, a teel. A term applied to the two lower petals of a papilionaceous corolla, which cobere by their lower margins in the form of a keel.
[Carinate. Having a carina, or keel.]
CARMINATIVES (carmen, a verse or charm). Remedies which dispel fatulency, and allay pain of the stomach and howels-as by a charm.

CARMINE. A lake made of cochineal and aluinina, or oxide of tin.
[CARNARIOUS. CARNEOUS (caro; flesh). Fleshy; of the aature or colour of flesh.]
[CARNATION. A name for the Dianthus caryophillus: (q.v.)]

CARNIFICATION (caro, carnis, flesh; fio, to become). A term improperly used to designate common hepatization, hut applied hy Laennec to that state of the lungs, in pleurisy, complicated with slight pueumonia; in which the lungs have lost the granulated surface characteristic of bepatization, and are convërted into a substance resembling, both in appearance and consistence, muscalar flesh; which has been beaten to make it tender. [Compare Hcpatization.]

CARO; CARNIS. Flesh; the fibrous substance composing muscle.

1. Carncae colminae (fleshy columns). The muscular fasciculi within the cavities of the beart.
2. Cumivora (unro, to devour). Animals which subsist on flesh solely.
3. Camora. Fleshy animals; as the sea anemone.
[4. Carinse. Of a fleshy consistence.]
[CAROTA. The Pharmacopocial name for the fruit of Dancus carola.]

CAROTID ( $\kappa a p \delta \omega$, to induce sleep). The name of two large artcries of the neck; so called from an idea that tying them would induce coma. They suhdivide in to the cxternal carolid, or artery of the head; and the interual carotid, or principal artery of the brain.
[CAROTIN. A peculiar crystallizable, ruby-red, neuter principle, without odour or taste, obtained from the root of Daucus carota.]
[CARPAL (nipoxbs, the wrist). Belonging to the wrist.]
[CARPATIIAN BALSAM. A tercbinthinate juice said to be derived from the Pinus C'embro.]

CARPELLUM (kafà̀s, fruit). A technical term applicd, in Botany, to a leaf in a particular state of modification, cou-
stituting the pistil. The blade of the lenf |lage), of the nature, or resembling, cartiforms the ovary; the elongated midrib, the style; and the apex of the midrib, the stigma. The edge of the carpel which eorresponds to the midrib of the leaf, constitutes the dorsal suture; that of the uuited margins, the ventral. Sce Pistil.

CARPHOLOGIA ( $\kappa$ р́poos, the nap of elothes; $\lambda \hat{\varepsilon} y(w$, to pluels). Floccitatio. A picking of the bed-elothes, supposed to be an indication of approaching dissolution.
[CARPOBALSAMUM (карто̀s, fruit; Baגбаноу, a halsam). The fruit of the Anıyris Giliadensis.]
 scription). Tbat branch of Botany' which treats of fruits.
[CARPO-PEDAL SPASM. Laryngismus Stridulus; Cerebral Spasmodie Croup; Spasm of the Glottis; Thymic Asthma. A spasmodie affection occurring in young children, characterized hy excessive dyspnœa, with croupy inspiration, and spasmodic contraction of the thumbs and toes.]

CARPUS (карл $\delta$, the wrist). The ossa carpi, or carpal bones, are eight in number, and form two rows.

CARRAGEEN. Irish Moss. The Chondrus crispus, a nutrient Algaceous plant, employed on the coast of Ireland in making size.

Carragecnin. The name given by Dr . Pereira to the mucilaginous matter called by some writers vegetable jelly, hy others pectio.
[CARRON OIL. A liniment for burns, so called, heeause it was much used at the Carron iron works, in Seotland. It is corposed of linsced oil and lime water; the Linimeutum calcis, U. S. Ph.]
[CARROT. Common aame for the plant Dancus carota.]
[CARTHAGENA BARKS. Under this term aro classed all the Cinehona barks brought from the northern Atlantic ports of South America. They have been arranged aecording to their colour into: 1 . Yellow; 2. Red; 3. Orange; and 4. Brown Carthagena Bark.]

CARTIAMUS TINCTORIUS. A plant of the order Composite, the flowers of which are imported, for the use of dyers, under the name of saflower, or basturd saffron.

Carthamin, or Carthamic acid. A red eolouring inntter, obtained from saflower.

CARTIIAGL' (qunsi caruilngo). Gristle. It is attached to bones, and must be distinguished from the liganents of joints and tendons of museles.
[CARTILAGINOUS (cartilngo, earti.

CARUM CARUI. Caraway ; a naturalized Umbelliferoue plant, cultivated for the sake of its fruit, commonly, but erronoously, called caraway seeds. Pliny notiees the plant by the name of Careum, from Caria, its native country.

CARUNCULA (dim. of caro, flesh). [Caruncle.] A little piece of flesh. Hence:

1. Carmacula lacrymalis (lacryina, a tear). The small red substance situated in the inner angle of the cye.
2. Carnincula nyrtiformis (myrtus, a myrtle; forma, likeness). The granulations observed around the orifice of the vagina, from rupture of the hymen.

CARUS ( $\kappa$ ápa, the bead). Profound sleep; lethargy.

CARYOPHYLLACEA. The Chickweed tribe of Dicotyledonous plants. Herbaceous plants, with leaves opposite, and tumid nodes; flowers polypetalous, symmetrical ; stamens, definite ; ocarinm onecelled, with a free central placenta; fruit, a one-celled capsule, by obliteration of the dissepiments.

CARYOPHYLLUS AROMATICUS.
The Clore-tree; a Myrtaccous plant, yielding the Clove of commerce.

1. Caryophyllue (кápuov, a nut; фú入入ov, a leaf). The Clove, or unexpanded flower, of the above plant. The corolla forms a ball between the four tecth of the ealys, and this, witb the lengtbened tube of the ealyx, resembles a nail, or clut, of the French; bence the English term clovc.
2. Matrices caryophylli vel anthophylli. Mother cloves; the fruits of the clove, crowned superiorly by the teeth of the ealyx, with the remains of the style in the eentre.
3. Caryophyllin. Clove sub-resin; a erystalline substance extracted from elores by alcobol.
4. Caryophillic acid. Eugenie acid; clove acid, or heary oil of eloves; one of tho two oils composing oil of cloves; the carbon.
 ness). A one-eelled, one-secded, superior, dry, indehiseent fruit, with the integuments of the sced coberiug inseparably with the endocarp; the ebaraeteristie fruit of the Graminacere.
[CASCARILLA. The Pharmacopecin] name for the hark of the Crofon Elenteria.] CASCARILLIE CORTEA. Cascarilla bark: the produce of the Croton Cuscarilla,
or wild Rosenary or wild losemary bnsla of Jamaiea. By some it is referred to the Cioton eleuterio.

CASEUM (caseur, cheese). Oasein. Albumen of milk; the curd separated from milk by the addition of an acid or renuet, constituting the basis of cheese in a state of purity. Tbe liquid left after this separation is termed seribm lactis, or whey.

Cuscous oxide. Another name for aposcpedine, a substance procured by the putrefaction of animal matter.
[CASHEW-NUT. Tbe fruit of the Anacardium occidentale.]

CASSAVA. A fecula, separated from the jnice of the root of Jainipha Manihot, and exposed to heat ; a principal article of diet in South America. The same substance, differently prepared and granulated, constitutes tapioca.

CASSERIAN GANGLION. A large semilunar ganglion, formed by the fifth nerve, and immediately dividing into the ophthalmic, supérior and inferior maxillary nerves. It was named from Julius Casserius of Padua.

CASSIA. A genus of Leguminous plants, several species of which yield the senna of commerce. Cassia pulp is a soft blackish substance, snrrounding the seeds of the Cathartocarpus; formerly Cassia fistula, the Pudding-pipe tree or Purging Cassia.
[1. Cassia acutifolia. The plant which furnishes the Alexandria senna.]
[2. Athiopica. The plant which furnishes the Tripoli senna.]
[3. Elongata. The plant which affords the India senna.]
[4. Fistulct. The tree which yiclds the purging cassia.]
[5. Marylandica. The systematic name for the American or wild senna.]
[6. C. obovata. Tbe species which yields the Aleppo senna.]

CASSIA LIGNEA. Cortex Cassic. The bark of the Cinnamoraum Cassia. The best variety is China cinnamon.

1. Cassia buds. The unexpanded flowcrs of the Cinnamon Cassia, resembling cloves.
2. Cassia oil. The common oil of cinnamon, procured from cassia bark, and cassia buds.

CASSIUS, PURPLE OF. A purplecoloured precipitate, obtained by mixing the proto-chloride of tin with a dilute solution of gold. [Solution of gold in nitromuriatic acid one ounce, distilled water a pint and a half; mix and dip rods of tin in the mixture ns a precipitant.]

CASSONADE. Muscovado. Raw sugar ; the crystallized and dried portion of sugar.
[CASSUMUNIAR. Seo Zermbet.]
[CASTANEA. The chesnut. Thè pharmacopœinl name for the bark of the Chinquapin, Castanea pumila, which is astringent and tonic, and has been used as an antiperiodic.]
[Castanea pumila. The Chinquapin; an American shrub of the natural order $C u=$ pulifera.]
[CASTILLON'S POWDERS. These consist of sago, salep, and tragacanth, each, in powder, a drachm; prepared oystershell, a scruple, with a little cochineal to give colour. A drachni of this boiled in a pint of milk is used as diet in chronic bowel affections.]

CASTOR OIL. The oil extracted from the seeds of the Ricintis Communis.

OASTOREUM ( үáotw animal). Castor; a substance fonnd in the two castor sacs, near the pubes of both the male and the female Beaver, of Cab́tor Fiber.

Castorin. Castoreum Camphor; a crystalline, fatty substance, found in Castorenm. By boiling with nitric àcid, it is converted into castoric acid.

CASTRATION (casiro, to emasculate). Emasculation. The operation of removing the testes.

CAT'S EYE. A mineral brought from Ceylon, so called from a pecaliar play of light arising from white fibres interspersed. The French call this appearance chatoyant.

CAT'S PURR: A charactcristio sound of the chest, heard by means of the stetbo= scope. See Auscultationi.

CATA (кarà; кait'). A Greek preposi\& tion, signifying down, against, into, \&o. In composition, it is intensive, and signifies thoroughly.

1. Cata-causis (kalق, кaviбù, to burn): General combustibility of the body.
2. Cata-clysmus ( $\kappa \lambda u \bar{\zeta} \omega$; to wash). The name given by the nucients to the cold douche applied to the region of the stomach, or to the back opposite to the stomach.
3. Cata-lepsis ( $\lambda \alpha \mu \beta a i v \omega$, to seize). Literally, a seizure or attack. A spasmodio disease, in which the limbs remain in any position in which they arc placed, however painful or fatiguing.
4. Cata-lysi\& ( $\lambda \dot{v} \omega$, to decompose). Décomposition by contact. A body in which the catalytic force resides, resolves others into new compounds, merely by contact with them, or by an action of presence, as it has been termed, without gaining or losing anything itself. The body which determines clanges in nuother is called the catalytic agent.
5. Cata-menid ( $\mu$ iv, a month). Menece. The munthly utcrine discharge.
6. Catá-phora ( $\phi \hat{\xi} \rho \omega$, to bear). The coma somnolentum of many writers; a variety of letbargy, attended with short remissions, or intervals of imperfcet waking, sensation, and specch. Sce Lethargy.
7. Cata-plasma ( $\pi \lambda$ éro $\omega$, to sprcad). A poultice; an application which is spread over a part of the surface of the body. [Sce Poultice.]
8. Cata-potium ( $\pi 6$ rov, drink). A pill, or medicine, to be swallowed without chew-ing.-Celsus.
9. Cata-ract (àpá $\sigma \sigma \omega$, to confound). Glaucoma; gutta opaca; suffusio. Opacity of the crystalline lens.
10. Cata-rrhus ( $\$ \varepsilon \omega$, to flow). Literally, a flowing down; popularly, a cold. Inflammation of the mucous membrane of the nostrils and bronchia. It is synonymous with coryza, gravedo, \&c.
11. Cata-stagmus ( $\sigma \tau \alpha \dot{\zeta} \omega$, to drop). A term applied hy the later Greek physicians to a defluxion from the fauces and thorax.
12. Cath-artics ( $\kappa a \theta a i \rho \omega$, to purge). Modicines which produce alvine evacuations. These are termed laxative, when mild; purgative, when active; and drastic, when very violent.
13. Cath-artin (кaөaipe, to purge). The active principle of senna.
14. Cath-eter ( $\kappa a \theta \iota \eta \mu$, , to thrust into). A tuhe which is introduced through the urethra into the hladder.
15. Cath-olicon (ödos, universal). A panacea, or universal medicinc.
[CATALPA CORDIFOLIA. Catalpa or Catawha tree. The seeds are said to be useful in asthma.]
[CATARIA (catus, a cat). Catnep, or catmint. The pharmacopoial name for the leaves of Nepeta cataric.]
[CATARRHUS (ката $\rho \dot{p} \dot{f} \omega$, to flow down). Catarrh; applied also to a defluxion from any mucous memhrane.]
[1. Catarrhus suffocations. Suffocative catarrh. Croup.]
[2. Catarrhus urcthralis. Urethral catarrh. Gleet.]
[3. Catarrhus vaginc. Vaginal catarrh. Leucorrhœa.]
[4. Catarthus vesica. Vesical catarrh. A copious discharge of mucous from the bladder.]

CATECHU (catc, a tree; chu, juice). The name of a variety of astringent extracts, which are imported under the several names of catcchu, terra japonica, cutch, and gambir.

1. Square catechu. This is used by tnnners, under the name of terra japonica, from its heing supposed to be of mineral origiu; it is produced from the leaves of
the Uncaria gambir, and therefore is not catechu, but gambir.
2. Pegu cutch, or catechu. The produce of the Acacia catechu, brought from Pegu.
3. Bengal catechu. A pale extract, obtained also from the Acacia catechu; from its laminated texturc, it was compared by Jussieu to the bark of a tree.
4. Colombo catcehu. Round flat cakes procured hy making an extract of the betel nut, the seed of the Areca catechu.
5. Catechin. A particular principle ohtained from the portion of catechu which is insoluble in cold water.
6. Catechuic acid. Catechine. An acid ohtained by Buchner from catechu. This acid, when treated with caustic potash, \&e., yields japonic acid; and, when dissolved in carbonate of potash, rubinic acid.

CATHARTOCARPUS ( $\kappa$ A $A$ aipw, to purge; карпঠ̀s, fruit). A genus of Leguminous plants, of which the spccies fistula yields the cassia pulp of the pharmacopœia.
[CATHETERISM (catheter). The operation of introducing a catheter.]
[CATHODE (kaTà, down; dঠds, a may). A term in electro-chemieal action for that part of a decomposing hody which the electrio current leaves; the part next to the negative pole.]
[CATIIODIC. Proceeding downwards. Applied hy Dr. M. Hall to the domnward course of nervous aetion.]
[CATION (кaлa, down; $\varepsilon \ell \mu$, to go). A term in electro-chemical action for a hody that passes to the negative pole, to the cathode of the decomposing body.]
[CATKIN. Common name for Amentun, q. v.]

CATLING. A sharp-pointed, doubleedged knife, chiefly used in amputations of the fore-arm and leg, for dividing the interosseous ligaments.

CATOCIUS (xari $\chi$, to detain). A species of catalepsy, in which the hody is rigidly detnined in an ereet posture.
[CATOPTRIC EXAMINATION OF
TIIE EYE. A means of diagnosis founded on the property which the surfaces of the cornea and erystalline lens possess of reflecting imnges of a luminous hody. Thus wheu the cornen, the erystalline lens, and its enpsule, are transparent, if a lighted candle he held before tho eye, the pupil of which has been dilated, three images of the flame inay be seen: two mpright, one reflected from the anterior surface of the cornea, the other from the anterior eap sule of the lens; and an inverted one, refleeted from the posterior capsule of the lens. An opacity of any of these reflect-

Ing surfaces destroys their refleeting property.]
[CATOPTRICS. The branch of optics which treats of the reflection of the rays of light.]
[CAUDA (cadn, to fnll). A tail.]
CAUDA EQUINA. Hippuris, or horse's tail ; the final division of the spinal marrow, so called frou the disposition of the nerves which issue from it.
[CAUDAL (canda, a tail). Of, or belonging to a tail.]
[CAUDATE (cauda, a tail). Tailpointed; prolonged into a long and weak tail-like point.]

CAUDEX. The trunk of a tree. In Botany, the stem, or ascending axis of growth, is termed candex ascendens; the root, or descending axis, caudex descendens.
[CAUDLE. A nourishing gruel composed of flour or meal, with egg, wine or hrandy, nutmeg, \&c.]

CAUL. [English name for the omentum.] The trivial appellation of the amnion when it comes away with the child in the birth.
[CAULESCENT (canlesco, to grow to a stem). Growing to a stem.]
[CAULIFLOWER. Commou name for the Brassica Florida.]

CAULIFLOWER EXCRESCENCE. A disease of the os uteri; supposed by Gooch to be encephalosis.
[CAULINE (caulis, the stem). Belonging to the stem. Leaves are so called which arise directly from the stem.]
[CAUMA (кaiw, to hurn). Burniug heat of the atmosphere, or of the body from fever.]
[CAUSALITY (causa, a cause). The faculty of tracing effects to a cause.]
[CA USODES (кaũoos, hurning). Having a burning beat. Applicd to an ardent fever.]

CAUSTIC (кaíw, кav́ow, to hurn). A substance which destroys parts by chemically decomposing them. Such are the concentrated mineral acids, lunar caustie, \&c.

Causticum acerrimum. The old name for the hydrate of potash - the strongest common caustic.

CAUSUS (xalw, kav́vo, to burn). A variety of malignant remittent, thus denominated by Hippocrates from its extrene heat, \&c. It has been termed hy later writers febris ardens, ardent or burning remittent.

Cassur endemial. A namo given to the ycllow fever of the West Indics.

CAUTERY ( $\kappa$ af $\omega$, кavíow, to burn). The application of caustics. By the term
actual cautery is meant the whitebot iron; potential cantery is synonymous with caustic.

Cantérisation objective. The employment, by the French, of radiant heat from a red-hot iron or hurning coal, as a cautery to check bæmorrbages, and to promote the reduction of prolnpsus of the rectum and uterus, and of hernia.
[CAUTIOUSNESS. The faculty which produces wariness, and leads the possessor to he cautious.]

CAVERNOUS (caverna; from cavus; bollow). The name of a ganglion in the bead, and of two simuses of the sphenoid hone. [See Corpur.]
[Cavernous Respiration. See Auscultation.]
[CAVIARE. Name for the roe of the sturgeon, salted and dried.]

CAVITARIA (cuvitas, a cavity). Intestinal worms which have cavities or stomachs.

CAWK. The Sulphas Barytc, or vitriolated heavy spar.

CAYENNE PEPPER. The ground seeds of the Capsicum frutescens.
[CEANOTHUS AMERICANUS. New Jersey Tea. Red-root. A small shruh, of the order Rhamnacece, the root of which is astringent, and said to be useful in syphilitic complaints. The infusion is an exceedingly useful application in aphthous affections, in crusta lactea, in the sore throat of scarlatina, \&c., and also as an internal remedy in dysentery.]

CEBADILLA. The seeds of the Asagrea officinalis, a plant of the order Melanthacece. The seeds are also called snhadilla and cevadilla; but more properly cebadilla (from the Spanish cebada, harley), on account of thę supposed resemblanco of the inflorescence of the plant to that of Hordewn.-Pcreira.

1. Cevadic or sabadillic acid. A crystalline, fatty acid, ohtained hy saponification of the oil of eehadilla.
2. Sabadillina. A substance obtained from cebadilla seeds, said to be merely a compound of resinate of soda and resinate of veratria.
[CEDAR BERRIES. Small excresecnces sometimes found on the hranches of the Juniperus Virginiana, Red Cellar, popnlarly used as an anthelmintic in the dose of from ten to twenty grains three times a day.]
[CEDRIN. A name proposed by Mr. Lewry for a crystalline, illtenscly bitter substanco obtained by him from the seed of tho Simaber cedron.]

CEDRIRET. A substanee fonnd among the products of the distillation of wood.
[CEDRON. A tree of the natural order Simarubaceœ, growing in Central America, the seeds of which are a popular remedy for tho bites of serpents, for hydrophobia, and for intermittent fevers.]
[CELANDINE. Common name for the plant Ohelidonium majus.]
[CELASTRUS SCANDEUS. Climbing staff-trec. An indigenous shruh, the hark of which is said to possess emetic, diaphoretio and narcotic properties.]

CELESTINE (coelum, the sky). Sulphate of strontian, so named from its frequently presenting a blue colour.
[CELL. A cavity or hollow space. A closed vesicle or minute hag, constituting the universal elementary form of every tissue, formed by a memhrane in which no definite structure can be discerned, termed the cell-wall, and having a cavity which may contain matters of variable consistence. Eyery kind of cell has its own specific endowments, and generates in its interior a compound peouliar to itself. These endowments are various, and their diversities constitute the differences hetween the several tissues. Certain cells are endowed with the function of assimilation; others with the preparation of germs of a new generation; athers with that of effecting chemical transformations, \& c., \& Ec .]

CELLULA (dim. of cella). A little cell or cavity, as those of the hyaloid membrane.

1. Cellulur. The designation of the structure of the mastoild proeess, of the lungs, \&o.; also, of one of the elementary tissucs of plants.
2. Cellular membrane, or tissue. The filmy meshes which connect the minute component parts of most of the structures of the hody.
3. Cellulares. Cellular plants; those which have no flowers or spirnl vessels ; they are also called Cryptogamous, and Acotyledonous plants. Compare Vasculares.
[CELLULOSE. Tho substance which constitutes the cellular tissue of plants. It is found also in the Ascidia.]

CEMENT. A preparation made of various materials, which is applied in a soft state, and afterwards hardens and unites the surfuees to which it is applied.

CEMENTATION. A process by which the propertics of a body are changed, on being surrounded with the powder of other hodies, and exposed to a high temperature, as the conversion of iron into steol, by eementation with charcoal. The substanco so cuiployed is called cement potoder.
[CEMENTUM. Onc of the component parts of tecth. In tho human tooth it forms a thin layer which envelopes the root; in many lerhiverous mammals it dips down with the enamel to form the vertical plates of the interior of the tooth. It is also termed Crusta petrosa.]
[OENTAUREA BENEDICTA. Blessed Thistle. A plant of the natural order Conposite, which has heen employed as a tonic, diaphoretic, and emetic.]

CENTAURII CACUMINA. The flowering tops of the Erythrea centaurium, or Common [European] Centaury. The name is derived from Chiron the Centaur, whose wound is said to have heen cured by it.
[CENTAURIN. The bitter principle of the Erythraa centaurium.]
[CENTAURIUM. The U. S. Phafmacopocial name for the flowering heads of the Erythrea contaurium.]
[CENTAURY, AMERICAN. The berh of Sabbatia angularis.]
[CENTIGRADE. (centum, a hundred; gradus, a step or degree). Divided into a hundred degrees; applied to a thermometer divided into a hundred degrees hetween the point at which water freezes and that at which it hoils.]
[CENTIGRAMME. The hnndredth part of a gramme, a French measure, eqnal to $0 \cdot 1544 \mathrm{gr}$. Troy.]
[CENTILITRE. The hundredth part of $\Omega$ litre, a French measure, equal to 2.7053 fluid drachms.]
[CENTIMETRE. The hundredth part of a metre, a French measure, equal to 0.3937 inch.]
[CENTRIFUGAI (centrum, centre; fugio, to fly). Leaving the centre. In Botany this term is applied to inflorescences in which the central flowers open first.]
[CENTRIPETAI (centrum, centre; peto, to seek). Approaching the centre. In Botany it is applied to inflorescences in which the marginal flowers open first.]
[CENTRO-STALTIC (centrum, the centre ; stalticur, staltic). Applied hy Dr. M. Hall to the action of the ris nervosa in the spinal centre.]

CENTRUM ( $\kappa$ evitiw, to prick). The centre or middle point of any part.

1. Centrum ovale majus. The appenrance of $\Omega$ large centre of white substance surrounded hy a thin stratum of gray, prescuted when both hemispheres of the brain are cut down nearly to a level with the corpus callosum.
2. Centrum orcale minus. The appearance of $\Omega$ centre of white substance, surrounded by a narrow border of gray, oh-
served on removing the upper part of one hemisphere of the hrain.
3. Ceutrum tendinosuu. The teudinous centre of the diaphragm.
[CEPA ( $\kappa \propto ф a \lambda \eta$, a head). An onion. The hulb of Alliun cepa.]
[Ccpa Ascalonicr. Systematio name for the shalot or escalot.]
[CEPIIAELIS. A Linnean genus of plants of the natural order Cinchonacea.]
[Cephreëlis Ipecacuanha. The systematic name of the plant, the root of which is the Ipecacuanha.]

CEPHALE' ( $\kappa \approx \phi a \lambda \eta$ ). The head. Its compounds are-

1. Cephalnlgia (ä入yos, pain). Cephalæa. Pain in the head; headache.
2. Cephalic Vein. The anterior vein of the arm; formerly opened in disorders of the head.
3. Ccphalic8. Remedies for disorders of the head.
4. Cephatitis. Inflammation of the hrain.
5. Cephalodyne (ò oúvn, pain). Headache; pain in the head.
6. Cephaloma. Medullary tumour; a morbid product, resembling hrain, sometimes called enccphaloïd or cerebriform tumour, medullary sarcoma, fungus bæmatodes, \&c.
7. Cephalogeuesis ( $\gamma$ हैverts, creation). The doctrinc of the formation of the hrain.
8. Cephalo-pharyageus. A designation of the constrictor supcrior muscle, from its arising from the hase of the skull.
9. Cephalcmatoura [Cephalohcematoma] (aipa, blood). Sanguineous tumour of the head, forming spontaneously, and sometimes called alscessus capitis sangumens
neountorum.
10. Cephalo-poda (noũs, nooos, a foot). The fifth class of the Cyclo-ganglinta, or Mollusca, consisting of aquatio animals, with feet disposed around their head.
[11. Cephrlotome ( $\tau \varepsilon \mu \nu \omega$, to cut). An instrument for cutting or hreakiug down the head of the foctus in the opcration of embryotomy.]
[12. Cephalotribe ( $\tau \rho \beta \beta \omega$, to crush). A strong forceps invented hy Baudelocque tha nephew, for crushing the foetal head.]
CERA. Wax; a resinous substance se-
CERA. Wax ; a resinous suhstance secreted from the ventral scales of the Apis mellificr, or Honey-hce; also a product of Wegetahles, as of the Myrica ccrifera, tho Wax Myrtle, or Bayherry. Bees-wax is distinguished into tho zohitc, bleached, or virgin wax ; and the ycllow or unbleached
wax. wax.
11. Orrine. [Cerotic acid.] One of the constitucnts of wax, forming at least 70 per cent. of it. Tho other constituent is
myricime. Recently it has been stated that wax is homogeneous, that it posscsses the properties of myricine, and that the difference hetween these two substances is owing to the presence of ceric acid, formed by the oxidation of myricine.
12. Ceric acid. An acid produced by the action of the fixed alkalies on wax.

CERASIN. A substance contained in the gum exuded from the hark of the Prunus Cerasus, or Cherry-tree.

CERASUS LAURO-CERASUS. Common or Cherry-laurel ; a Rosacenus plant, the leaves of which aro employed for preparing the cherry-laurel wontcr.
[CERASUS SEROTINA, (De Cand.) C. VIRGINIANA, (Michaux). The systematic name for the tree which furnishes the wild-cherry bark. See Prunus Virginicun.]
[CERATITIS (кípas, a horn). Inflammation of the cornea.]
[CERATO-BRANCHIAL (кípas, a horn; Boayx ${ }^{\text {a }}$, the gills). Applied hy Prof. Owen to the longcr hent pieces supported hy the hones which form the lower extremities of the hranchinl arches in fishes.]
[CERATOCELE ( $\kappa \varepsilon$ р́as, cornea; $\kappa \dot{\eta} \lambda \eta$, tumour). Hernia or protusion of the inner layer of the cornea.]

CERATO-GLOSSUS (rípas, a horn; $\gamma^{\lambda} \tilde{\omega} \sigma \sigma a$, the tongue). A muscle running from one of the cornua of the os hyoïdes to the tongue. See Hyo-glossus.
[CERATOHYAL (népas, a horn; hyö̈dce, hyoïd). Applied by Prof. Owen to the lower and larger of the two principal parts of the corun of the hyoild bone.]

CERATOTOME (кfिas, a horn; тоرиे, section). The name given by Wenzel to the knife with which he divided the cornea.

CERA'TUM (cera, wax). A cerate, or composition of wax, \&c., characterized by a consistence intermediate hetween that of plasters and that of ointments.
[1. Ceratiem calamince. Ph. U.S. Calamine cerate. (Turner's Cerate.) Yellow wax, $\mathrm{Z}_{\mathrm{ij}}$; lard, thj. Melt together, and when upon cooling they begin to thicken, add preparcd calaminc $\bar{j} \mathrm{iij}$., and stir constantly until cool.]
[2. C. Cantharidis. Ph. U. S. Blistering Plaster. Yellow wax and resin, of each 3 vij.; lard, $\mathcal{Z}^{2} . ;$ melt together, and add of finely-powdered Spanish flies Ibj., and stir constantly uatil cold.]
[3. C. Cetacci. Ph. U. S. Spermaceti Ccrate. Spermaceti, $\overline{3} \mathbf{j}$;; white wax, $\bar{J}^{\text {iij.; }}$ melt together, then add of oil previously heated, f $\overline{\tilde{J}} \mathrm{vj}$. An cmollient dressing to sorcs.]
[4. O. IHydrargyri compositum. Lond. Ph. Compound cerato of Mereury. Mer-
curial ointment, compound sonp ccrate, ench Zvj.; camphor, Zjas.; mix. A discutient application to iudolent tumours.]
[5. C. Plumbi subacetatis. Pl. U.S. Ccrate of subacetate of learl, Goulard's cerate. To melted white wax, $\mathcal{J i v}^{2}$, add olive oil, $\mathrm{f}_{3} \mathrm{x}$; mlx, and remove from the fire; when it begins to thicken, add gradually subacetate of lead, f f iiss.; mix with a woorlen spatula till it becomes cool, and then add camphor, $3^{\text {ss., }}$ previously dissolved in one ounce of olive oil. Used to dry up excoriations, relieve the inflammation of burns, soalds, \&c.]
[6. C. Reainc. Ph. U. S. Resin Cerate. Basilicon Ointment. Resin, $\overline{3}$ v.; lard, 3 viij.; yellow wax, $3^{3} \mathrm{ij}$.; melt together, and strain through linen. A gently stimulating application, used to blistered surfaces, indolent ulcers, burns, \&c.]
[7. C. Resince conipositum. Ph. U. S. Compound Resin Cerate, Deshler's salve. Resin, suet, yellow wax, àā 1 bj .; turpentine, 1bss.; flax-seed oil, Oss.; melt together, and strain through linen. A stimulating application, used for indolent ulcers, \&c.]
[8. C. Sabince. Ph. U. S. Savine Cerate. Powdered savine, $\mathbf{Z}_{\text {ij.; resin cerate, }}$, Hoj.; nix. A stimulating application, used to keep up the discharge from blisters, setons, \&e.]
[9. C. Saponis. Ph. U. S. Sonp Cerate. Solution of subacetate of lead, Oij.; soap, $\overline{3} \mathrm{vj}$.; boil together over a slow fire to the consistenco of honey, then transfer to a water-bath und evaporate all the moisture ; lastly, add white wax, $z^{x}$., previously melted in olive oil, $0 \mathbf{j}$. A nrild, cooling dressing for scrofulous swcllings and other local inflammations, \&c.]
[10. C. Simplex. Ph. U. S. Simple Cerate. Lard, $\overline{3}$ viij.; white wax, $\mathrm{J}^{\text {iv. }}$; melt, and stir till cold. A mild and cooling dressing for inflamed surfaces.]
[11. C. Zinci carbonatie. Ph. U. S. Cerate of Carbonate of Zino. Precipitated carbonate of zinc, $\overline{i j} . ;$ simple ointment, 3 x.; mix. A mild astringent.]

CERCIINUS. Wheezing; a dense and impeded sound, produced below the larynx; a symptom common to asthma and dyspnoer.

CEREALIA (feasts dedicated to Cercs). All sorts of eorn, of which bread or any nutritious substance is made.

CEREBELLUM (dim. of cercbram). Tho littlo brain; the postero-inferior part of the encephalon, situated behind the larger hrain, or cercbrum.

CEREBRUM ( $\kappa$ áp, the head). The brain ; the chicf portion of the brain, nceupying the whole upper cavity of the skull.
[1. Cerebral (cerebrum, the brain). Of or belonging to the brain.]
12. Cerebrifurm (forma, likencss). Rescmbling the brain in form. Encephaloid.]
3. Cerebritis. Encephalitis; iuflammation of the cercbrum.
4. Cerebric acid. One of the peculiar acids found in the fatty matter of the brain. The other acid is termed the oleophosphoric.
[5. Cerebro-spinal fluid. The fluid existing beneath the arachnoid membrano of the brain and spinal cord.]
6. Cercbro-spinants. Another name for nareotics, from their affecting the functions of the cercbro-spinal system.
CEREVISIA (quasi ceresia, from Ceres, corn). Malt liquor; beer and ale; a fermented decoction of malt and hops. Theophrastus termed it wine of barley.

1. Cerevisice fermentum. Yeast, or barm; a substance procured from wort during fermentation, partly as a scum, partly as a sediment. It consists of vesicles, capable of generating other vesicles, and regarded by Turpin as a new plant, which he called torula cerevisic. Thus, fermentation is an effect of vitality.
2. Cerevisia abietis. Spruce beer; made from essence of spruce, pimento, ginger, hops, yeast, molasses, and water.

CERIN. A peculiar enbstance which precipitates, on eraporation, from alcohol which has been digested on grated cork. Subercerin would have been a fitter name.

CERIUM. A white metal found in a Swedish mineral called cerite, and more recently in allanite.
[CERNUOUS
[CERN UOUS (cermuns, banging down).
Drooping; inclining from the perpendicular towards the horizon.]

CEROMA (кпpds, wax). The name given
by Dr. Craigic to adlpose tomour of the brain, from its saxy appearance. By Andral it is termed fally production; by Hebreart, lardaceous degencration.
[CEROXYLON ANDICOLA. A lofty
palungrowing in the South American Andes, which furnishes a regctable wax.]

CERULIN (cerulens, blue). The name given to indigo in the modified state which it ncquires during solution.

CERU'MEN (cera, wax). Cerea. Arrium sordes. The waxy sceretion of the ear, furnished by the crumenous glands.
CERUSSA. Ccruse, or carbonate of
lead; [ungistery of lead] the erhite-lead of printers, used by them to give the property called body.

Ceruквa Acetafa. Sugar of lead, Saccharum Snturni; the sulper-acetate of lead. CERVI'CAL (cervix, the neek). A pil-
low or bolster. Celaus. [Belonging to tho neck. $]$

CERVIX. Tho neok; the binder part of the neck; the forepart is callced collum. The term cervix is also applied to the neck of the bladuer and of the uterus.

CERVUS ELAPIUUS. The stag, or hart, from the borns and hoofs of wbicb tbe hartsborn shavings are procured.
[CESPITOSUS (cespes, a turf). Cespitose. Producing many stems from one root, forming a surface of sod.]
[CESTOIDEUS ( $\kappa \varepsilon \sigma \tau d s$, a studded girdle). Having a band-like form; applied to a family of Entozoa; Cestoidean.]

CETACEA (cetur, a wbale). Wbale-like animals, as the dolpbin, dugong, \&o.

1. Cetaceum. Spermaceti; a peculiar reodification of fatty matter, obtained from the Physeter nacrocephalus, or Spermaceti Wbale.
2. Cetic acid. An acid procured from spermaceti, consisting of margarine and fatty matter.
3. Cetine. A white laminated substanee, constituting pure spermaceti. Tbe commercial spermaceti, or cetacerm, usually contains a little sperm oil.
4. Cetyl. Tbe supposed radical of a now series of compounds derived from epermaceti. Cetene is one of these, and is procured by distilling etbal with glacial phosphoric acid. See Ethal.
[CETRARIA. A genus of plants of tbe natural order Lichenacec. The pbarmacopeial name for the Iceland Moss, Lichen Sslandicus.]

Cetraria Solandica. Lichen Islandicue. Iceland Liverwort, or Moss; a licben employed as an aliment.
[CETRARIN. Tbe bitter principle of the Cetraria Islandica. It consists of three distinct substances:

1. Cetraric acid. The true bitter principle, a crystallizable substance.
2. Lichstearic acid. A substance resembling the fatty acids; and,
3. T'la llochlor. A green colouring substance.]

CEVADIC ACID. An reid produced by the saponification of the oil of the Veratrum sabadilla. It is also called sabadillic acill.
[CEVADILLA. See Sabadilla.]
[CEYLON CARDAMOM. The secds of the Elettaria major, a plant cultivated in Ceylon.]
[CEYLON CINNAMON. Tbe bark of Cinnamonum Znylanicum.]
CEYLON MOSS. The Fucus amylaceus, a Cryptogamio plant, of the order Algre. Intely introduced as a substituto for farinaceous foods. [Soe Gigartina.]

CHABERT'S OIL. An oil prepared by mixing three parts of oil of turpentine with one part of Dippel's oil, and distilling three parts.
[CHEROPHYLUM SATIVUM. Cbervil. See Authriscus cercfolium.]

CHALASIS ( $\chi$ á $\alpha \zeta_{a}$, a small swelling). The name given by Sauvages to the porcine species of serofula; the equine spccies he denominated scrofula farcimen.

CHALAZA ( $\chi$ úda $\alpha$, a small swelling). A small brown spot observed at the apex of some seeds, as of the orange, formed by the union of oertain vessels proceeding from the hilum.
[CHALAZES. Two twisted cords which bold the yolk-bag in its placo wltbin the egg.]

CHALAZIUM ( $\chi$ á入a\}a, a hạilstone). Chalazion. An indurated tumour of undefined margin, occupying the edge of the lid. It is called, in Latin, graudo; and, from its being supposed to be the indurated remains of a stye, it bas been termed hordeohum induratum.

CHALCANTHUM ( $\chi^{a} \lambda \kappa \delta$ s, brass ; ävOos, a flower). The flowers of brass, or the Sulphas Zinci. Pliny's term for capperas.

CHALK. Creta. Carbonate of lime; a common species of caloarcous earth.

1. Black chalh. Drawing slate; a bluikhblack clay, containing about 12 per cent. of carbon.
2. Red chall. A species of argillaeeous iron-stone ore.
3. Spanish chall. Steatite or soap rock.

CHALK-STONES. Gouty concretions, found in the joints, consisting of urate of soda and phosphate of lime.

CHALYBEATE WATERS. Ferruginous waters. Mineral waters, wbose predominating or active principle is iron. Tbere are two kinds; the carbonated, containing earbonate of the protoxide of iron; and the sulphated, containing sulphate of iron. Some of the latter contain sulphate of alumina, and aro called aluminous sulphated chalybeutcs.

CHALYBS (Chalyber, a people who dug iron out of the carth). A kind of hard iron, or steel. Hence the term chalybeate is applied to waters whicb are inpregnated with iron or steel.

Chalybis rubigo. Rust of iron; the prepared subearbonate of iron.
[CIIAMASDRYS (Xapai, on tlio ground; jpưs, the onk). The trivial name of the plant Germander. See Teucrium Ohamadrys.]
[C II AM APPITYS ( $\chi$ arai, on the ground; nirus, tho pinc tree). The trivinl name for tbo ground pine, (Ajnga ohamepritys,) is
creeping annual labiate plant, the leaves of which are said to be stimulant, diuretie and aperient.]

CHAMELEON MINERAL. A combination of black oxido of manganese and potash, which gives a green colour to water, passes gradually through all the shades of the prism, and at last becomes colourless.

CHAMOMILE FLOWERS. The floral heads of the Anthemis nobilis, an indigenous Composite plant. The single flowers have the largest yellow discs, in which the yolatile oil resides; the double flowers, in which the yellow tubular florets of the disc are more or less converted into white ligulate florets, contain less of this oil; the former are, therefore, to be preferred.
[German Chamomile. See Matricaria chamomilla.]
[ Wild Chamomile. A common name for the herb Anthemis cotula. See Cutula.]

CHANCRE (Fr., кapkivos, eancer). A sore which arises from the direct applieation of the syphilitie poison.

CHANDOO. An extract of opium, prepared by the Chinese for smoking.
[CHANGE OF LIFE. A popular term for the constitutional disturbance often attending the eessation of the eatamenia.]
[CHARANTIA. A ame for the Momordica elaterium.]

CHARA HISPIDA. A submersed leafless aquatie plant, interesting to the physiologist as displaying the speeial cireulation in plants, and as being analogous in botany to the frog in zoology.

CHARCOAL. Carbo Ligni. Tbe residue of animal, vegetahle, aud many mineral substances, when hented to redness in close vessels. There are several varieties of charconl, termed gas-carbon, lamp-hlack, wood-ehareoal, coke, and ivory-blaek.

CHARPIE (carpo, to scrape). The French term for seraped linen, or lint.

CHARTREUX, POUDRE DE. The Kerines mineral ; a term invented by some Carthusian friars.

CHAY, or CHAYA R00T. The ront of the Oldenlandia umbcllata, used for giving the beautiful red of the Madras cottons.

CHEESE. Ca8cur. The eurd of milk, separated from the whoy, pressed or bardencd, and eoloured with annotto, one ouuec of which will eolour a bundred weight of cheese.
]. Gouda checse is made in Holland; muriatic acid is used in curdling the milk: instead of rennet; this renders it pungent and preserves it from mites.
2. Purmcsan checsc, so ealled from Par-
ina in Italy, is merely a skim-milh: eleese, owing its flavour to the fine herbage of the meadows along the Po, where the cows feed.
3. Gruyère cheese, so named from a place in Fribourg, is made of skimmed, or partially skimmed, milk, and fiavoured with harbs.
[CHEESE RENNET. A common name for the plant Galium Verumt.]
 to form). The operation of supplying defieiences of the lips, or of forming a new lip, by appropriating a suffieient portion of the neighbouring healthy substanee to that purpose.]
[CHELA ( $\chi \eta \lambda \eta$, a elari). A clarr.]
[Chela cancrorum. Crabs' clams. Formerly used as an antacid.]
[CHELERYTHRIN. A peculiar alkaline principle found in the Chelidonium majus, said to he an aerid, narcotic poison.]
[CHELICERA ( $\chi \eta \lambda \eta$, a claw). A term applied to two articulated pieces, erroncously called mandibles, (chelicerx, nom. pl.) at the anterior superior extremity of the bead of eertain of the Arachnides, which are terminated hy two fingers, or hy a single one reseubling a hook or claw. Mayne.
[CHELIDONIC ACID. A peenliar acid obtained from the Chelidonium majus.]
[CHELIDONIN. A peculiar alkaline principle formed in the Chelidonium majus.]

CHELIDONIUM MAJUS. The Greater
Celadine ; a Papaveraceous berh, the yellow juice of whieh has been employed as an escharotic to destroy warts.
[CHELIDOXANTIIIN. A nenter, crrstallizable, hitter principle, of a vellow colour, obtained from the Chelidonium majus.]

CHELOIDE (xédus, a tortoisc; sicos, likeness). Cancroide. A designation of a discase of the skin, described under this name by Alibert, from its presenting a flattish raised patch of integument, resembling a tortoise's shell.

CIIELONIA ( $\chi^{i} \lambda\left(\begin{array}{l}u \\ \eta\end{array}, ~\right.$ a tortoise). The Tortoise tribe : the first order of the class Reptilia.

CHEMISTRY. A term, of Arabic origin, siguifying the knowledge of the composition of bodies, and of the elanges of constitution produced by their mutual aetion on each other.
CllEMO'SIS ( $\chi$ airo, to gape). An affection in which the coujnnetiva is clevated above the transparent cornea, [from exudation into the subiacent cellular tissue.]

CllELSEA PENSIONER. A nostruin
for the rhcumatisu, said to be the prescription of a Chelsea pensioner, by mbich

Lord Amherst was cured. Gum guaiac., $\overline{\mathrm{j}} . ;$ rbubarb, $\mathbf{Z}_{\mathrm{ij}}$.; cream of tartar, $\overline{\mathrm{J}} \mathbf{j}$.; flowers of sulphur, $\overline{3} j \mathrm{j}$. ; one nutmeg; clarified honey, one pound. Two large spoonsful to be taken night and morning.

CHELTENHAM SALTS. Sulphate of soda, grs. 120 ; sulphate of magnesia, grs. 66 ; muriate of soda, grs. 10; sulphate of iron, gr. $\frac{1}{2}$, triturated together.

1. "Eflorescence of Real Cheltenham Salts." The preceding salt deprived of its water of crystallization.
2. "Efforescence of the real Magnesian Cheltenham Salts," made from the waters of the Chalybeate Magnesian Spa. Epsom salt, with small portions of mngnesia, and muriate of magnesia, or muriate of soda.
3. Murio-Sulphate of Magnesia and Iron. A preparation so named hy Mr. Thomson, and consisting of Epsom ealt deprived of a part of its water of crystallization, and discoloured by a little rust of iron, and containing a small portion of muriate of magnesia.
4. "Original Combined Cheltenham Salts." The waters of the Spa evaporated to dryness.
[CHENOPODIUM ( $\chi$ ग̀̀, a goose; $\pi$ oũs, a foot). A genus of plants of the natural order Chemopodece. The U. S. Pbarmacopœial name for the fruit of Chenopium anthelminticum, wormseed.]
[Chenopodium anthelminticum. Wormseed, Jerusalem oak. An indigenous perennial plant. The seeds, and the expressed oil of the seeds, are a very efficient antheimintic.]
[C. ambrosioides. This species has also anthelmintic properties, and has heen employed in chorca.]
[C. Botrys. Another indigenous species possessing anthelmintio virtues.]

Ohennpodium Olidum. A plant of the Goosefoot tribe, remarkable for exhaling uncombined ammonia.
[CHERRY. The common name for the fruit of scveral species of the genus Prumb.]
[Cherry Birch. A oommon name for the plant Betula lentr.]
[Cherry Laurel. Common name for the Prunus Lawocerasus.]
[Cherry-Laurel water. A weak hydrocyanic acid, obtained by distillation from the fresh lenves of the Cherry Laurel.]
[CHERVIL. Common name for the plant Anthriscus cerefolium.]
[CIIESNUT. Common name for the fruit of the Fugus casfanea.]

CHEST. Thorax. An old English terin, commonly traced to the Latin cinta and Greok кiorn, which are of the same
import. "When it is considered that the same word was anciently used for a bayket, the nppropriation of it to the human thorax will nppear quite natural to any one who has ever seen a skeleton."Forbes.

CHEVASTER, or CHEVESTRE (capistrum, a balter). A double roller, applicd to the head in cnses of fracture, or luxation of the lower jaw.

CHEWING BALLS. Masticatories used in farriery, composed of the wood of the hay and juniper trees, assnfoetida, liver of antimony, and pellitory of Spain.
[CHIAN or CHIO TURPENTINE. A common name for the turpentine from the Pistucia Terebinthns.]

CHIASMA. The point of decussation of the optic nerves.

CHIASTRE. A bandage for stopping hæmorrbage from the temporal artory, and named from its being shaped like a cross, or the Greek letter X, chi.
[CHICA. A fermented liquor used in Peru, made from Indian meal and water.]

CHICKEN POX. The popular name of a species of Varicella.
[CIICORY. Succory. Common name for the Cichorium Intybus; an European, perennial, herbaceous plant, considered to possess tonic, deohstruent, and aperient virtues.]

CHIGRE, CHIGO, or CHIQUE. Chironcs. A small sand-flen of the West Indies, which insinuates itself into the soft and tender parts of the fingers and toes.

CHILBLAIN. Pernio. An inflammation of the extremo parts of the body, from exposure to cold.

CHILD-BED FEVER. Puerperal fever, and often called peritoncal fever.

CHILLIES. Long taper pods of the Capsicum anиum. Cayenne pepper consitets of the dried and ground seeds of Capsicum fiutescens.
[CHIMAPHILA ( $\chi$ cìua, winter; фidic, to love). A genus of plants of the natural order Pyrolacee. The Pharmacopœial name for the lenves of Chimaphila Umbellata.]
[1. C. maculala. Spotted winter-green. Possesses similar properties with the following species.]
2. Chimaphila Umbellata. A plant known by the names of Winter Green and Pipsissewa, and reputed as a specifio against serofula. [It has tonic, diuretic, and dinphoretic properties.]

CHIMNEY-SWERPERS' CANCER. A popular name of the Cancer Scroti, or Munditorum, or Soot-wart.

CHINA-CLAY. K゙aolin. A variety of clay propared from decnying granite.

CTINA GLAZE. A preparation for printing blue frit, made from ten parts of glass, two parts of lead, aud three or more of blue calx.

CHINA NOVA. The name given in Germany to the red bark, known in France as Quinquina nova; it is the produce of the Cinchona oblongifolia. It is very different from the red bark of English commerce, though they have heen confounded together by the London Col-lege.-Pharm. Journ.

Clinova bittcr. A snow-white substance, of acid properties, obtained hy operating on china nova.

CHINA ROOT. Radix Chince Orientalis. Tbe producc of the Smilax China, said to he brougbt from the province of Onansi in China.

American China Root. Radix Chinæ Americanæ. Said to he tbe produce of Smilax pseudo-China, hrougbt from Mexico.

CHINCOUGH. Probably a corruption of chinecough. Sce Pertussis.
[CHINOIDINE. Quinoidin; Amorphous Quinia.]
[CHINQUAPIN. A common name for the Castanca pumila.]
[CHIOCOCCA. A genus of plants of the family Rubiacece.]
[Chiococca racemosa. The Cahinca, q. v.]

CHIRAGRA ( $\chi$ हip, the hand; äypa, seizure). Gout of tbe hand.

CHIRETTA, CHIRAYTA. An intenscly bitter substance, procured from the Agathotcs Chirayta, a plant of tbe order Gentianacea, and closely allied to Gentian. The substance sold as sulphate of chyrayitine is sulphate of quinia.

CHIRURGIA ( $\chi$ cip, the hand; Ěpyov, work). Operation by means of the hand, commonly called chirurgery, or surgery.

CHITINE. A principle discovered hy M. Odier in the wings and elytra of coleopterous insects. It is obtaincd hy plunging beetles, \&c., in a hot solution of potass, which dissolves all but the chitine. It is also called cntomolinc. [A peculiar horny substance which enters into the structure of the tegumentary skeleton of insects.]

CLlLOASMA ( $\chi^{\lambda}$ ón, grass). Chloasma pseudo-porrigo. A designation of the Pi tyriasis versicolor, or chequcred dandriff. It has been called macule hepatice: or liver-spots, from an opinion that it originated in discase of the liver.

CIILORINE ( $\chi$ גwpos, green). A greenish gas, obtained by the action of muriatic acid on peroxide of manganesc. It wns first deseribed nuder the name of dephlogisticated marine acid, and wns afterrrards
called oxy-mmiatic acid. Its compounds, which are not neid, are called chlorides (or chlorurets), and are charactcrized by the same prefixes as the oxides.

1. Aqua chlorinii. Chlorine wnter; a solution of cblorine gas in water; also called aqua oxymuriata, or liquid oxy-muriatic acid.
2. Chloratcs. Tho salts of chloric acid, formerly called hyper oxymuriates. Tbo principal are those of potash and baryta.
3. Chloracetic acid. A remarkable acid,
in which the threc atoms of the hydrogen of acetic acid are replaced hy tbree atoms of chlorine.
4. Chloral. This term, derived from the first syllable of the words chlorine and alcohol, has been applied by Liebig to 8 ncw compound of chlorinc, earbon, and oxygen, prepared by the mutual action of alcohol and chlorine.
5. Chloriodic acid. The name given, from its acid properties, to a compound of chlorine and iodine. Gay-Lussac calls it chloride of iodine.
6. Chlorimietry. Tbe process of estimating the bleaching power of cbloride of lime, by the quantity of a solution of sulphate of indigo which a known weight of chloride can discolour or render yellow.
7. Chloroid. A term applied, on the electrical hypothesis, to the negative pole, from its cxhibiting the attraction whicb is characteristic of chlorine. The positive pole is termed the Zincoid.
8. Chlorydric acid. Tbe name given hy Thenard to muriatic now called hydrocbloric acid.
9. Chloric ether. Under this name iro compounds have been confounded. One of these results from the action of cblorine on olefiant gas, and is generally known as the oil of the Dutch chemists. The other is obtained hy passing hydrochloric acid gas into alcohol to saturation, and distilling the product; this is gencrally called hydrochloric ether.
10. Chlorcthrrise. A suhstance ohtaincd hy Laurent by passing chlorine through Dutch liquor, in Licbig's apparatus.
[CHLOROFORM. CHLOROFORMILE. The terchloride of formyle. A very dense, transparent, limpid liquid, obtaincd by tbe distillation of alcohol and the chloruret of lime dissolved in mater. It has a sacelarine, slightly alcoholic sarour, very analogous to that of cthers. It is satd to pussess antispasmodic properties, and to present cousiderable analogy of composition and action with the ethers.] contorniform, methylic. Chloroform largely nour vil.]

CHLOROPFANE（ $\chi$ 入 $\omega$ poेs，green；$\phi$ alvw， to shine）．A variety of fluor spar，which gives out an emerald green light，hy the mere heat of the hand．

CHLOROPHYLLE（ $\chi \lambda \omega \rho \partial_{\rho}$ ，green ；фú入－ $\lambda o v$, a leaf）．The grecn colouring matter of leares．See Chromute．

CHLORO＇SIS（ $\chi \lambda \omega \rho \partial s$ ，green，pale）． Green－sickness；an affection in which the blood becomes impaired，the countenance pallid，and，as a further consequence，the catamenia suppressed．
［CHOCOLATE．A preparation made from the ground seeds of the Theobroma cacao，used as an article of diet．］
［CHOCOLATE NUTS．Cocoa，cacao． The sceds of the Theobroma cacao．］
［CHOKE CHERRY．A common name for the Prunus Vivginiana．］

CHOKE DAMP．Carhonic acid；the irrespirable air of coal－pits，wells，\＆c． Compare Fire－Damp．

Cम1OLE＇（ $\chi 0 \lambda$ й）．Bile．The peculiar se－ cretion of the liver．

1．Cholagogues（ăy ，to move）．A term formerly applied to purgatives which cause the discharge of hile into the alimentary canal．They have heen called cholotics or bilitics．
［2．Cholamia（aı $\mu$ a，blood）．The pre－ sence of hile－pigment in the hlood．］
3．Choledochus ductus（dé $\chi o \mu a t$ ，to re－ ceive）．The common bile duct．
［4．Cholcpyrrhin（rupos，yellow）．Bili－ phein．The colouring matter of hile．Seo Biliphein．］

5．Cholio acid．A peculiar animal acid， prepared dircetly from bile．

6．Cholo－lithic（Xitos，a stone）．Gall－ stone；a hilious concretion found in the gall－hladder，or bilo ducts．

CHOLERA．An affection attended by vomiting，purging，\＆c．；in the European form，accompanied with bile；in the Indian，without hile or urine．The term is usually derived from $\chi$ o入n，hile；and pite，to flow；or it may be from $\chi$ o $\lambda$ épa， a water－trough－precisely，according to Dr．Forbes，＂as we have seen the word diabetes transferrerl，by metonymy，from an instrument to the disease．Others de－ rive the term from $\chi^{0} \lambda{ }_{\alpha} s$, an intestine；and píw，to flow－quasi bovel－flux，in place of bile．flue：＂
［CllOLERA INFANTUM．Summer Complaint．A diseasc of infonts；indi－ genous to the United States；prevalent during the bot weather in most of the towns of the Middlo and Southern，and many of the Wcstern States；ordinarily characterized by exoessive irritability of stomach，with purging，tho stools heing thin and colourless，or of varions hues of
green and pink，but never yellow，cxcept at the onset or during convalescence； fover of an obscmrely remittent character； rapid omaciation；cold feet and hands， with preternatural heat of head and abdo－ men；dry，harsh and wilted skin；excessive thirst；and in the latter stages somnolency， the patient sleeping with his eyes half open；coma；the case termipating often with convulsions．］
［CHOLERINE．Diminutive of Cho－ lera．The premonitory symptoms or early stage of cholera，or the slight diarrhœa with which many persons are affected during the prevalence of that disease as epidemic．］
［CHOLESTEATOMA（ $\chi$ o $\lambda$ ì，bile ；stca－ toma）．An encysted tumour principally composed of crystnls of cholesterine，pre－ senting a laminated aud pearly appear－ ance．］
CHOLESTERINE（ $\chi$ о $\lambda \grave{\eta}$ ，bile；or₹pèे ， solid）．A crystallizable substance which may be dissolved out of inspissated bile， by ether；it is also a constituent of the brain and nerves．

Cholcsteric acid．A substance produced by heating nitric acid with cholesterine．

CLIONDROS（ $\chi^{\text {brojoos }) . ~ C a r t i l a g e ; ~ a n ~}$ opaque elastic substance，capable of being reduced to gelatine hy hoiling．

1．Chandro－logy（ $\lambda$ byos，discourse）．A de－ scription of cartilages．

2．Chondro－pterygii（rтépu $\xi$ ，a fin）．Car－ tilaginous fishes，ns the ray，the second suh－class of the order Pisces．

3．Chondroma．The name given by Hooper and Craigio to scirrhons or fibro－ cartilaginous tumour of the brain．

4．Choulrinc．1．A modification of ani－ mal gelatinc，first found by Müller in a hony tumour，and afterwards obtained from permanent cartilages，\＆c．2．The substance of the cartilages of the ribs．

5．Chondro－glos8us．A muscle running from tho cartilaginous joining of the body and horn of the os hyoides to the tonguo． Seo Hyo－glosвив．

6．Syn－chondrosis．An articulation in which cartilage is employed to keep the hones together．

CHONDRUS CRISPUS．Carrageen or Irish Moss，sometimes sold as pearl moss； an Algaceous plant．

CHORDA，pl．Chorda．（ $\chi$ opón）．A eord； a tendon；a filament of nerve，\＆c．

1．Chorda Tymprani．A filament of the vidian nerve，which cnters tho tympanum．

2．Chorla Tendinece．Tho tendinons strings which conticet tho carnce columue of the heart to the aricular valves．

3．Chorda Ventriculi．A designation of the gastrie plexus of the par vagun
4. Chorde Tocales. The vocal chords, or the thyro-arytanoild ligaments.
5. Chorda Willisii. Tho small fibres erossing the sinuses of the dura mater.
 twist). A kind of violent spasmodic colic, iu which the large intestines seem, as it were, twisted into knots.-Celsus.
CHORDEE (French; from $\chi$ Opo $力$, a chord). A painful erection of the penis, attending gonorrhœa, sometimes with incurvation.

CHOREA SANCTI VITI ( $\chi$ opela, a dancing; from $\chi$ opds, a dance). Scelotyrbe: St. Vitus's Dance. Convulsive motions of the limbs, ns of a person dancing.

CHORION ( $\chi$ coiov, a domicile). The external membrane of the foetus.

Choroid (cidos, likeness). Resembling the chorion; a term applied to the plexus and web of the pia mater, to the inner tunic of the cye, \&e.
[Choroiditis. Inflammation of the choroid memhrane of the eye.]
[CHOROID MEMBRANE. The tunic of the eyeball immediately beneath the selerotica. Also a membrane of the brain, the Velum interpositum.]
[CHOROID MUSCLE. The ciliary muscle.]
[CHOROID PLEXUS. A plexus of vessels situated in the lateral ventricles of the brain.]

CHORIUM ( $\chi$ bpoov, skin, leather). The dermis, or innermost layer of the skin.

CHREME. A preparation of real cream, or an imitation of it, with fruits and flavoured substances.
[CHRISTMAS ROSE. A common name for the plant Helleborus niger.]
[CHROMATE. A combination of chromic acid with a salifinble base.]
[CHROMATISM ( $\chi$ р $\omega \mu$ аті $\zeta \omega$, to colour). The alteration of refrangibility, by which the rays of light are decomposed, and the correctacss of their transmission through convex lenses destroyed.]
[CIROMATOPSIA ( $\chi \rho \tilde{\omega} \mu a$, colour ; $\delta \psi(s$, vision). Chromatopscy. Coloured vision.]
[CHROMATROPE ( $\chi \rho \tilde{\mu} \mu$, colour; грі́ть, to turn). An instrument for exhibiting, on the principle of the magio lantern, a varicty of colours, combining by a rapid revolving motion so as to produce beautiful and lighly pleasing figures.-Mayne.]

CHROMIUM ( $\chi$ рјца, colour) A metal, so called from its remarkable tendency to form coloured compounds. Tho cmerald and the ruly owe their colours to the presence of this clcment.

1. Chrome iron. Tho ore from which
the compounds of ebromium, used in the arts are derived.
2. Chrome chum. A crystallizahle doublo salt formed of the sulphates of chromium aud of potash.
3. Chronce yelloto. This well-known pigment is the chromate of lead.

CHROMULE ( $\chi$ ри̃̈дп, colour). The name of the colouring matter of plants. It has been incorrectly termed chlorophylle.

CHRONIO (xporos, time). Long-continued, as applicd to diseascs of longstanding, and opposed to acute.
[CHRONOTHERMAL (xpovas, a period of time; $\theta \varepsilon p \mu \eta$, heat). Term applicd to, and intended to express, a theory that all discases occur in fits, and have periodic intermissions, with alternate chills and heats.-Mayue.]
[CHRUPSIA (xpoa, colour ; 8 $\psi$, sight). Literally, coloured vision; but the term is also applied to an inability to distinguish colours.]
[CHRYSALIS. The Pupa or Nympha; the second condition in the metamorphosis of insects.]
[CIRYSANTHEMUM. A genus of plants of the natural order Composita.] [C. Parthenium. Pyrethrum Parthenium, (Willd).]
[CHRYSEN (xpuoss, gold). A yellow crystalline substance ohtained from pitch, by distillation at a bigh temperature, hy M. Laurent.]
[CHRYSOPHYLLUM GLICT-
PHL ÆUM. A Brazillian tree, the bark of which yields the extract named moneria. See Moncsia.]

CIIRYSOS (xpuobs). Gold. Hence-

1. Chryso-balatue ( $\beta$ diavos, an acorn).

The Nutmeg, or the Myristicæ Nuclei.
2. Chryso-beryl. A gem of a pale ycllow or green colour, consisting of glucina and alumina.
3. Chryso-colla (кбд入a, glue). Golden gluc. The Greek name for borax. But it does not appear that borax was known to the ancients, their ehrysocolla heing $\Omega$ very different substance, composed of the rust of copper, triturated with urine.-Ure.
4. Chryso-life ( $\lambda$ iOos, a stone). Formerly a gencral name for precious stones; nor restricted to a stone termed by the Freuch peridot.
5. Chryso-melia ( $\mu \mathrm{in}$ aov, an apple). The Seville Orange, or the Aurantii Bacea.
[6. Chryso-phanic acid. A peculiar acid obtained from the lichen Parmelia parictic, and from rhubarb.]
7. Chryso-pranus (fphoov, a leek). A green stone with a golden lustre.
[CIIULARIOSE ( $\chi^{\text {viopov, syrup). A }}$
name given by Soubeiran to uncrystallizable sugar.]

CHURRUS. A resinous extract of Indian Hemp, prepared in Central India. A finer variety is sold in Nipal, and termed momeca, or waxen churrus.

CHYAZIC. A terin derived from the initials of carbon, hydrogen, and azote, and applied to an acid.

CHYLE ( $\chi$ v $\lambda$ dे, juice). The milk-like fluid ahsorbed by the lacteal vessels.
[1. Chyliferons (fero, to bear). Chylebearing. Applied to the lacteal vessels.\}
2. Chyli-fication (fio, to become). The process by which tbe chyle is separated from the chyme.
3. Chylo-poietic (rotic, to make). A term applied to the viscera and vessels which are connected with. the formation of chyle.

CHYME ( $\chi \mu д$ д, juice). Tbe semi-fluid matter which passes from the stomacb into the duodenum.

Chymi-fication (fio, to become). Tbe process by wbich the aliment is converted into cbyme.
[CIATOME ( $\kappa i \omega \nu$, a column; тi $\mu \nu \omega$, to out). An instrument for dividing pseudomembranous bands in the rectum and hladder.]
[CIBATION (cibus, food). Tbe act of taking food.]
[CICATRICULA. The germ spot in the oruin.]

CICATRIX (a scar). The mark left after the healing of a wound or ulcer.

Cicatrization. The process by which wounds and sores heal.
[CICHORIUM. A Linnean genus of plants of the natural order Composite.]
[1. C. endivia. Garden endive.]
[2. C. Intybns. The Chicory, or Succory; a perennial herbaceous plant, indigenous in Europe, the roots and leaves of wbich are said to be gently tonic, aperient and deobstruent. It is generally given in decoction. The root dried and roasted is used as a substitute for coffee.]
[CICUTA. A genus of umbelliferous plants. This term was formerly improperly applied to Conimn, and caro should be taken not to confound tbe Conium maculatum with tbe Cicnta macnlata.]
[Cicuta maculata. American Water Hemlock. An American species, closely analogous to the following in botanical character and in its action on tho system.]

Cicuta virosa. Water Cowbane; a poisonous plant of the order Umbellifere, supposed by Haller to be the conimm of the Greelis.
[CICUTINE. A synonym of Comia.]
[CIDER. Tbefermented juice of apples.]

CILIUM (cileo, to twinkle). Tbe eyclash, or eyolid. Cilia are also microscopio hairs, of a vibratile nature, ahundant in the lowest forin of animals.

1. Ciliary. The name of arteries, processes, follicles (Mcibomiam glands), \&c., belonging to tbe eyelids.
2. Ciliaris muscnlue. The name by which Riolan distinguished those fibres of the orbicularis palpebrarum, which are next to the tarsus or cartilaginous circle of the eyelids.
3. Ciliary circle or ligainent. Orbiculus ciliaris. A kind of grayish ring, situated hetween the choroid membrane, the iris, and the sclerotica.
4. Ciliary procesees. Small vasculomembranous bodies surrounding the crystalline lens in a radiating form.
5. Ciliary body. The name of the ring, which results from the union of the ciliary processes.
[6. Ciliated. Fringed with hairs, like an eyelash.]
[CIMEX. A genus of insects.]
[C. domesticus. The wall, or house, or bed-hug.]

CIMICIC ACID (cimex, a hug). An acid procured from the bug by Thenard.
[CIMICIFUGA. A genus of plants of the order Ramunculacea. The Pharmacopœial name (U.S.) of the root of Cimicifngas Racemosa.]
[Cimicifuga Racemosa. Actæa racemosa, (Willd.) Black Snakeroot. Cohosh; a plant indigenous in the United States, possessing tonic, antispasmodic, and expectorant properties. It has heen used witb marked success in the treatment of chorea, in the dose of a teaspoonful three times a day.]

CLMOLITE. Cimolian earth. A substance lately brought from Argentiera, the ancient Cimolus, consisting apparently of silex, alumina, oxide of iron, and water.
[CINARA SCOLIMUS. Tbe systematic name of the artichoke.]

CINCHONA. A genus of plants, sereral species of which yield Peruvian Bark. The terms Cinchona Bark and Comitese' Powder are derived from the circumstance that the Countess of Cinchon, wife of the Viccroy of Pern, brought some bark to Europe from South Ainerica, in 1639. Soon afterwards, tho Jesuits, and particularly Cardinal de Lugo, carricd it to Rome, and hence it was called Jesuits' bark, Jesuita' powder, Pulvis Cardinalis de Lugo, Pnlvis Patram, \&c. It whs subsequently employed in France by Sir Robert Talbor, and was hence called T'albor's powder, or tho English remedy.

1. Pcle Barks. Theso aro tho crown or

Loxa bark, the produce of Cinchona condaminea; the silucr, gray, or Muante bark, the produce of the Cinchona mierantha; the ash and the whitc Loxa barks of species unknown.
2. Yellow Barks. These aro the yellooro bark, the produce of Cinchona lanceolatia chicfly, also C. hirsuta, and nitida; the Calisaya, the produce of Cinchona lanceolata?; the Carthagena, of Cinchona cordifolia?; and the Cusco, of a speaics unknown.
3. Red Barlis.. Tbese are the red Cinchona bark of Lima, of a species unknown; and the Cinchona nova, the produce of Cincbona magnifolia.
4. Broton Bark. This is the Huamalies bark, the produce of Cinchona purpurea.Lindley.
5. Barks falsely called Cinchonas. Ba'rks which are not obtained from any species of Cinchona, and not known to contain quinia, cinchonia, or aricina. The principal of these are the St. Lucia bark, the Caribæan or Jamaica bark, the Peruvian (false) Cinchona, the Brazilian Cinchona, the Pitaya Cinchona, and the Rio Janeiro bark.
6. Cinchonic, kinic, or quinic acid. An acid found in tho Cinchona barks, and also in the alburnum of Abies communis. When herted in close vessels, it is dccomposed, and pyrokinic acid is formed.
7. Kinovic acid. A brilliant, white, light substance, discovered in Cinchona nova.
8. Red Cinchonic. An insoluble red colouring matter found in Cinchona barks, supposed by Berzelius to be a product of tannin altered by the air.
9. Cinchona alkalies. These are cinchonia, quinia, and aricina Tbey may be regarded as oxides of a common haso which has been termed quinogen. According to tbis viem, cinchonia is a monoxide, quina a binoxide, and aricina a ter-oxide.-Pereira.

CINCIIONACEA. The Cinchona tribe of dicotyledonous plants. Trees or shrubs, with leaves opposite; flovers in panicles; atameus arising from the corolla; fruit inferior, either splitting into two eocci or indchiscent.
[CINCHONIA. CINCHONIN. A peculiar vegetable base found in common with quinia in the different species of Cinchona bark. It possesses tho samo propertics as quinin, thongh in a less degree.]
[CINCHOVATIN. An alkaline substance from Jaën bark, formerly supposed to he peculiar, but now believed to ho identical with Aricina. Sco Aricina.]

CINCINNUS. Tho hair on the temples. Compare Oapillue.

CINERES CLAVELLATI (clavu, a wedgc). Rusici. Pcarl-ash, or the Potabsa impura. The name is derived from the little wedges or billets into which the wond was cut to make potash.

CINERITIOUS (cincres, ashcs) Asbcoloured ; a term applicd to the exterior or cortical part of the brain.

Cincritious tubercle. The floor of the tbird ventricle of the brain.

CINNABAR. A sulphuret of mercury. It is native and factitious; the former is called "ore of mercury;" the latter is the red hisulphuret.

CINNAMIC ACID. An acid procured from the oil of cinnamon. Its hypothetical bnse is called cinuamule.

CINNAMOMUM (kinnan, Hebr.) A genns of plants of the order Lauracea. [The Pharmacopoeial name for the hark of Cinnamomum Zeylanicum and C. aromaticum.]

1. Cinnamomum Zeylanicum. The Cinnamon plant which yields the true Ceylon cinnamon; the Laurus cassia of the gardens.
2. Cinnamonnm Catsia. The cinnamon

Cassia, which yields the carsia liguea, or cassia bark, and the cassia buds of commerce.

CINNAMON SUET. A production of the Cinnamon tree, used in Ceylon for making eandles. According to Dr. Cbristison, it contains 8 per cent. of a fluid oil, not unlike olive oil; the remainder is a waxy principle, which answers very nearly to the cerin of John.
CIPOLIN. A grecn marble, with white zones, brought from Rome; it gives fire with steel, though with difficulty.

CIRCINATE (circinatus, ronnded).
Rolled inwards from the point to the base, like a lock of hair, as the fronds of ferns. [CIRCOID ANEURISM. Aneurisn by anastomosis, מævus, morbid erectile tissue, \&c.]

CIRCULATION (circulus, a circle). The flow of the hlood through the heart, the arteries, and veins. It is-

1. Perfectly doulle in the adult; riz., that which takes place in the lungs, and
called called pulmonic; and that which takes placo through the entire system, and is called systemic.
2. Partially double in the forlus, the auriclcs communicating hy the foramen osus, - cxcept wo consider the placental circulation as analogous with the pucental nic; in fact, the blood of the fortus is circulated through the placenta, as that of the adult is through the lungs, and for the same purpose.
[OIROULUS. A cirole or ring. Applied to parts which have a circular form.]
3. Circulus Willisii. Circle of Willis. This consists of the communications established hetween the anterior cerebral arteries in front, and the internal carotids and postcrior cerebral arteries behind, by the communicating arteries.
4. Circulus articuli vasculosus. A term applied by W. Hunter to the appearance presented by the margin of the articular cartilages, where the blood-vessels terminate abruptly.
5. Circulus tonsillaris. A plexus formed by the lingual and glosso-pharyngeal nerves, around the tonsil.
CIRCUMAGENTES (circumago, to move rouud). A name applied to the obliqui muscles, from their supposed action of rolling the eye.

CIRCUMCISION (circumcido, to eut about). The removal of a circular portion of the prepuce. See Phimosis.

## [CIRCUMDUCTION. See Motion.]

CIRCUMFLEXUS (circnm, about; ficcto, to hend). A term applicd to a musole which stretches the palate horizontally, and is hence termed tensor palati mollis; and to the axillary nerve.
[CIRCUMSCISSILE (circumbcicne, cut round). Divided across by a transverse separation.]

CIRRIIOPODA (cirrhus, frizzled hair; moùs, $\pi$ odòs, a foot). The fourth class of the Diploneura or Helminthoida, consisting of aquatic animals, with numerous lateral articulated cirrhi, and their body fixed in a multivalve shell.
[CIRRHOSE (cirrus, a tendril). Terminated by a spiral or flexuose filiform appendage.]

CIRRHO'SIS (xtépos, yellowish). A disease consisting of diminution and degeneration of the liver, whicb is dense, granular, wrinkled, and frequently of a rustbrown colour. By Baillie, it was called common tubercle of the liver; hy Dr. Elliotson, gin liver, as being induced by drunkenness; hy others, granulated, lobulated, mammellated, or scirrbous liver.

CIRSOS. The Greck term for a varix or dilated vein.

1. Cirsoccle ( $\kappa \bar{\eta} \lambda \eta$, a tumour). A varicose enlargement of the spermatio vein.
[2. Cirsoid (ados, likc). Resembling a varix.]
[3. Cirsomphalos (duyadis, the navel). An aneurismal varix around the navel.]
2. Cirsophthalmia ( $\delta \varphi \theta_{0} \lambda \mu \partial{ }_{s}$, the eye). [Varicositas oculi.] A general varicose affection of the bluod.vessels of the cyo; a local complication of anaurosis.
[CISSAMPLLOS (xเซoápreגos: from
*ioads, ivy; $\mu_{\mu \pi c} \lambda_{0 s}$, the vine.) A genus of plants of the natural order Menispermaсca.]
[Cissampelos Canpeba. The systematio anme of aspecies believed by the Brazil. ians to be specific against the poison of serpents.]
[Cissampelos glaberrima. A species indigenous to Brazil, from which, according to Auguste St. Hilaire, the true pareira brava is obtained.]

Cissampelos Pareira. Pareira brava or Velvet Leaf, a Menispermaceous plant, the root of whicb, componly called pareira brava, and sometimes imported under the name of abuta or butua root, exercises a specific influence over the mucous membrane lining the urinary passages.

Cissampelin. A new vegetable alkali found in pareira hrava root.
[CISTUS. A Linnean genus of plants of the natural order Cistinece.]
[Cistus Canadensis. See Mclianthemum canadense.]
[Cistus C'reticus. Tbe systematic namo of the plant, indigenous to Syria and tho islands of the Grecian Archipelago, which yields the resinous substance named ladanum, formerly employed in catarrhal and dysenteric affections; is now used only in plasters.]
[Cistus ladaniferus. A species growing in Spain and Portugal, which yield a substance analogous to ladanum.]
[Cistus laurijolius. A species which grows in the south of France, and wbich yields a kind of ladanum.]
[CITRATE, A combination of citric acid with a salifiable basc.]

CITRIC ACID. The acid of lemons, or Coxwell's Concrete Salt of Lemon. It is decomposed hy exposure to beat, and a new acid sublimes, called the pyro-citric.

Citricic Acid. A new acid ubtained by Baup in tho preparation of pyro-citric acid; the latter acid was named by bim citribic.

CITRINE OINTMENT. Tbe common name of the Unguentum hydrargyri nitratis of the pharmacopœia.
[CITRON. The fruit of the Citrus Medica.]
[CITRULLUS COLOCYNTIIUS. New name for the Cucumis colocyuthus, the pulp of the fruit of which is the colocynth.]

CITRUS. A genus of Aurantiaceous plants, containing vesicular receptacles of volatile oil in the external yellow portion, called favedo, of their baccate fruit.

1. Citrus Limonmm. The Lemon tree. The juice of the fruit yields citric acid.
2. Citrus Aurantium. The Sweet Orange. The young unripo fruit, dried
and turned in a lathe, are the issuc peus of the shops.
3. Citrns Bigmradia. The Bigarade, or the Bitter or Seville Orange.
4. Citrus Medica. The Citron trec. Pliny calls the fruit malum citrenm.
5. Citrus Limetta. The Lime. The fruit yiclds the oil of bergamot of the shops.
[6. Citrus decumana. A species, the fruit of which is the Sbaddock.]
[7. Citrus Paradisi. The systematic name of the plant which yields the Paradise apple or forbidden fruit.]

CIVET. A suhstance collected in a bag under the tail of the civet-cat, and used as a perfume.

CLAIRVOYANCE. Clear-sightedness. A pcculiar mode of sensation, or second sight, connected with somambulism, and supposed to be diffused over the whole surface of the body, but to be especially seated in the epigastrium and fingers' ends.

CLAP. The vulgar name of a venercal infection. See Gonorrhou.

CLARIFICATION (clarus, clear; fio, to hecome). The process of clearing liquids. It is performed by-

1. Subsidence of the suspended particles, and decantation of the supernatant liquor.
2. Filtration, or straining tbrough filters of paper, linen, sand, charcoal, \&c.
3. Coagulation, or the admisture of albumen, or the white of egs, and the subsequent action of caloric, acids, \&c.
[CLARRY. Common name for the Salvia sclarea.]

CLAUSU'RA (claudo, to shut). The imperforation of any canal or cavity. [CLAVATE (clava, a club). Clubshaped; thickest at the upper end.]

CLAVATIO (clavn, a cluh). Gomphosis.
A sort of articulation, in which the parts are fixed like a nail by a hammer, as the teeth in the sockets.

CLAVICULA [CLAVICULUS] (dim. of clavia, a key). The clavicle, or collarbone ; so called from its resemblance to an ancient key.

CLAVUS (a nail). Spina pedum. Callns. A term applicd to corns, and to staphyloma, or tumour on the cyclids.

Clavns hystericus. A fixed pain in the forchead, as it produced hy a nail.

CLAY. One of the primitive earths, formerly called argil, but now alumina, from its being obtained in greatest purity from alum.

CLEAVAGE. The mechnnienl division of crystals, by which the iuclination of their lemino is determined.
[CLEAVERS. Common name for the
 seizure). The gout in the articulation of the clavicles.
[CLEMATIS ( $\kappa \lambda \dot{\mu} \mu a$, a tendril). A Linnean genus of plants of the natural order Ranmoulacece.]
[C. dioica. A species indigenous to Jamaica, a decoction of the root of which in sea water is said to act as a powerful hydragogue cathartic.]
[C. erccta. Upright Virgin's Bower. Flammula Jovis. An European perennial plant, having acrid properties, and extolled by Störck as useful in sccondary syphilis, cancerous and indolent ulcers, \&c. An infusion of the leaves was given internally by him, and the powdered leaves applied to the ulcer.]
[C. flammula. Sweet scented Virgin's Bower. An European species formerly used as a rubefacient and vesicant.]
${ }^{[C .}$ viorna. Lenther flower, These are
[C. virginica. Common Vir-]indigenous gin's Bower. $\quad$ species, formerly used externally in the treatment of eruptions and as vesicants, and internally as diuretics and sudorifics.]
[C. vitalba. Travcller's joy. An European species, successfully used for the cure of fits, and which has heen given internally to cure Lues venerea, and scrofula.]

CLIBANUS ( $\kappa$ dißavos). An oren; a stove, or hot-house.-Celsur.

CLIMACTERIC ( $\kappa \lambda \_\mu a \kappa \div \grave{\eta} \rho$, the step of
a ladder). The progression of the life of man. It is usually divided into periods of seven years; the ninth period, or 63d year, being the grand climacteric.

1. Climactcric disease. This term has
heen applied to a sudden and general alteration of health, occurring at a certain period of life, and of uncertain duration.
2. Climacteric teething. The production of teeth at a very late period of life, after the loss of the permanent teeth by accident or natural decay, commonly between the 63d and S1st year, or the interval which fills up the two grand climacterio years of the Greek physiologists.
CLIMATE (кגipa, a region). This term denotes, in medicinc, the condition of the atmosphere of different countrics, or districts, in reference to their cffects upou the health of persons inhabiting them. Tho following ohscrrations, compiled from the rell known work of Sir James Clark, comprises, l, a hrief account of the condition of the atmonjhere of different conntrics, or districts, in reforence to their effects upon the health of persons inhabiting thelu; and, 2, an enumeration of those discascs which are most deci-
dedly benefitted hy change of elimate, and the particular situation most suitable to each.

## I. Englisi Climates.

The great desiderata in this country are a mild climate and sheltered residence for pulmonary and other affeetions, during the winter and spring. The districts of England may he divided into-

1. The South Const. - This comprehends the tract of coust hetween Hastings and Portland Island, including the Isle of Wight. The superiority of the climate of this district exists chiefly during the months of Decemher, January, and Fehruary. The principal places are-
(1.) Undercliff; in the Isle of Wight, the most sheltered and warmest of all these places; it affords also a good summer clinate.
(2.) Hastings, which follows next in point of shelter and warmth, during the winter and spring months.
(3.) Brighton, which, though inferior to the preceding places as a residence in diseases of the respiratory organs accompanied with much irritation, is of a drier and more hracing atinosphere. Autumn is the season during which the climate of this plaee possesses the greatest advantages.
2. The Southwest Coast.-This reaches from the Isle of Wight to Cornwall. The temperature of the more sheltered spots of the south coast of Devon, during the months of Novemher, Decemher, and January, is, on the average, about five degrees higher than that of London during the same period; whereas on the south const, the difference scarcely exceeds two degrees. The principal places are Torquay, Davolish, Sidmouth, and Exmouth: the flrst of these is the most sheltered place in the island; Salcambe, the Montpelier of Huxham, is one of the warmest spots in this country during the winter.
3. The Land's End. - This district is most suitable for the irritable and inflammatory habit, and least so for the relaxed nervous constitution. The only places in this distriet deserving particular notiee, are-
(1.) Penzance, which is remarkable for the equal distrihution of its temperature throughout the year, throughout the day and night; indeed, it is only excelled in this respect hy the climato of Madeira. Tbe difference between the warmest and coldest months in London is $26^{\circ}$; at Penzance, it is only $18^{\circ}$. The climate of the Land's Eud is, howerer, very humid, and, from its exposure to the nortberly and
c:rsterly winds, colder during the spring than Torquay or Undercliff.
(2.) Flushing, a small village in the vicinity of Falunouth; its position differs from that of Penzance only in being somewhat protected from the north and east winds.
4. The West of England.-This comprehends the places along the horders of the Bristol Channel and estuary of the Severu. Of these it is necessary only to notice-

Clifton, which, compared with the Southwest Coast, is more exciting, more hracing, and drier, hut not so mild; it is therefore better suited to a relaxed, languid hahit, and less so for pulmonary and other diseases, accompanied with irritation and a tendeney to inflammation.

## II. Foneign Climates.

1. The Southwest of France. - This comprehends the tract of country extending from Bourdeaux and Bayonne to Toulouse. The mean annual temperaturo is only ahout four degrees bigher than that of the southwest of England: both are soft and rather humid, and agree and disagree, generally spealsing, with discases of the same character. The only place in this distriet which need be bere notieed, is -

Par, a little town remarkable for the mildness of the spring, and its comparative excmption from sharp cold winds during that senson ; its chief fault is the unsteadiness of its temperature.
2. The Southeast of France.-This includes that extensive tract of country which stretches along the shores of the Mediterrancan, from Montpelier to the hanks of the Var, the boundary stream hetween France and Piedmont. The climate of this district is warmer and drier, hut more irritating and exeiting than that of the Southwest. It is also suhject to sudden vicissitudes of temperature, and to frequent harsh, cold winds, especially the mistral, or the northwest, rendering the whole of this country an improper residence for palients suffering under, or peculiarly disposed to, inflammation or irritation of the respiratory organs. The principal places are-
(1.) Montpelier, tho high and exposed situation of which renders it liable to all the ahove mentioned ohjections in a remarkable degrec; it is well ascerthined that pulmonary inflammation and phthisis are among the most prevailing discases of the place.
(2.) Mrorseilles, which, thongh less exposed than the preceding plaee, is an

## CLI

equally improper residence for consumptive invalids. It forms a good winter residence for persons likely to benefit hy a dry sharp air.
(3.) Hyeres, which possesses the mildest climate in the whole of this district, bcing sheltered to a considerahle degree from the northerly winds.
3. Nice.- This place, situated in the same line of coast as Provence, is superior to it in several respects: it is protected from the northerly winds, especially the mistral; hut it is not exempt from cold winds, especially during the spring, and is therefore considered an unfavourable situation for consumption, cven in its earlier stages, for hronchial diseases of the dry irritable character, and for dyspepsia depending on an irritated or inflammatory condition of the mucous memhrane of tho stomach. This climate is found useful for languid, torpid constitutions, for scrofulous affections in persons of this kind of constitution, for chronic hronchial disease, accompanied with copious expectoration, for humoral asthma, \&c. The summer at Nice is too hot for any class of invalids.
4. Italy.-The climate of the south of Italy differs little in actual temperature from that of Provence and Nice, but it is softer, more humid, and less exciting. On the other hand, the sirocco, which is scarcely felt at the latter places, forms an ohjection to the Italian climate, though this ohjection is of not much weight during the winter. The diseases in which the climate in Italy proves most heneficial, are chronic hronchitis and rheumatism. The principal places for winter climates are-
(1.) Rome, which possesses one of the best climates in Italy: to the invalid, capable of taking exercise in the open air, it affords advantages over hoth Naples and Pisa. It is somewhat warmer in the winter, and drier than Pisa, though more humid than Nice and the parching climate of Provence.
(2.) Pisa, which resembles Rome in its general qualities, hut possesses advantages over cvery other placo in Italy, for patients who can hear little exposure to the air.
(3.) Naples, which is more suhject to winds, and the air of which is more cxciting than that of Pisa or Rome. As a residence for invalids lahouring under pulmonary irritation, or chronio rheumatism, it is inferior to both.
5. The Memterranean Tshands. Some parts of tho coast of Sicily afford a pretty good winter climato; it is, howover,
difficult to obtain in these parts the com. forts and convenienees of lifc. Although exception may he made in this respect in favour of Malta, the climate of this island bas little to recommend it to any class of invalids, least of all to suck as suffer from pulmonary affections.
6. Athantic Climate.-The climate of the Northern Atlantic, in the temperate latitudes, is more steady than that of the Mediterranean, and imparts a similar cha. racter to the climate of its islands. The principal of these are -
(1.) Madeira, the mean annual tempe-
rature of which is only ahout six degrees higher than that of the southeast of France and Italy; this temperature is, however, very differently distrihuted throughout the year, the range heing far less at Madcira than in the most favoured epots in the south of Europe. Thus, while the winter is twelve degrees warmer than in Italy and France, the summer is five degrees cooler; and, while the mean annual range at Madeira is only fourteen degrees, it is nearly douhle this at Pisa, Rome, Naples, and Nice. Madeira affords the hest climate of the Atlantic Islands for consumptive cases; Funohal is the most desirahle for a winter residence.
(2.) The Canary Islands, which rank next to Madeira in point of climate; they are somewhat warmer, hut the excess of temperature is not equally distributed over the whole year; for while Santa Cruz, the capital of Teneriffe, is seven degrees warmer than Funchal in summer, it is only five degrees warmer in winter. The temperature is also more cquahle throughout the ycar at Madeira than at Teneriffe; the difference hetween the mean temperature of summer and winter being $9^{\circ}$ at the former place, while it is $12^{\circ}$ at tho latter.
(3.) The Azores, or Western Ielandswhich in their cxternal characters resemhle Madeira and the Canaries. The climate appears to he mild, hut somerrhat humid; less warm than Madeira during the winter, and more oppressive during summer.
(4.) The Bermudas, which differ little from Madeira in tho mildness of their winter climate; they are, howerer, much more liahle to high winds in the minter, cxtremcly hot during the summer, and quite inproper at this season for the residence of such invalids as are likely to he sent from this country.
(5.) The Buhamas, in which the minter and spring are considerably cooler than the samc seasons in the West Indics, while the temperature of the summer
and autumn is nearly the same. During the winter, the temperature is suhject to rapid and cousiderable vicissitudes, and cold, harsh, northerly winds are not unfrequent.
(6.) The West Indies - of whicb the mean annual temperature, near the level of the sea, is about $80^{\circ}$, and during the six months which include the winter season, the temperature is only $2^{\circ}$ lower. The extreme annual range does not exceed $20^{\circ}$, while the mean daily range throughout the year is only $6^{\circ}$. Hence, this climate is improper, generally speaking, for consumptive invalids, who, nevertheless, are frequently sent there. Calculous disorders and scrofula are extremely rare in the West Indies; gout is not common; and rheumatism neither frequent nor severe.
[III. Climate of the United States.
[The United States stretch over a vast extent of territory, and embrace a corresponding variety of climate. The late Dr. Forry, who investigated this suhject with much care, classified the country in three general divisions, embracing three systenis of climate, viz.: the Northern, the Middle, and the Southern.
[I. The Northern Division. - This extends on the Atlantic coast from Eastport, Me., to the harbour of New York, and is characterized hy great range of temperature and violent contrasts in the seasons; the rigour of the climate being somewhat tempered on the sea-coast hy the ocean, and in the region of the lakes hy those inland seas.
[2. The Middle Drvision.-This extends from the Delaware Bay to Savannah, and is characterized hy great variahleness of temperature, though the extremes are much less tban in the Nortbern Division.
[3. The Southern Division.-This emhraces the whole region south and west to Texas and the Rocky Mountains, and is characterized by the predominance of high temperature.

1. Pulmonary Oonsumption. Of the Atlantic Islands, Madeira; in Italy, Rome and Pisa; and in England, Torquay and Undercliff afford the hest climate for consumptive cases.
[The Peninsula of Florida is characterized, according to Dr. Forry, by inildness and uniformity of climate ; and although the air is more humid than in the northern divisions, tho atmosphere in winter is comparatively dry and sorene, in conseqnence of much the larger proportion of rain, nearly two-thirds of the whole falling during the six months
from May to November. Tbe most favourahle situations for invalids lahouring nnder hronchitis and incipient phthisis, Dr. Forry states to he Fort King, in the interior; Key Biscayno on the southeastern coast; and Tampa Bay on the Gulf of Mexico. St. Augustine, on the eastern coast, Dr. F. conceives to he less favourable, in consequence of the frequency and severity of the northeast winds, which are chilly, and surcharged with vapour, and forbid the valetudinarian venturing from his domicile. Dr. Dunglison, however, adduces some evidence leading to a more favourahle estimate of the suitahleness of St. Augustine as a winter residence for invalids; and at all events showing that it is a far more favourable locality for a winter retreat than tbe nortbern portions of the United States.]
2. Chronic Bronchitis. Of tbe continental climates, those of Rome and Pisa are the most heneficial in cases attended with an irritahle state of the affected parts without much secretion ; and that of Nice, in cases attended with less sensihility, a more copious expectoration, and a relaxed state of the system generally. Madeira has heen found more beneficial in the former class than in the latter. In England, Torquay and Undercliff afford the best climates in the first class of cases, and Clifton in the latter, in which Brigbton also is a very favourable residence during the autumn.
3. Asthma. For bumoral astbma, Nice is the best residence; hut Rome is preferable when this disease is accompanied with an irritated state of the digestive organs, a complication which is exceedingly common.
4. Chronic Rheumatism. Rome and Nice are the best residences for persons suffering from this complaint. When the patient's constitution and digestive organs are irritable, the latter has heeu observed, generally, to disagree, whatever may be the more prominent disease.
5. Gout. A warm climate is found to alleviate this disease. It is of rare occurrence at Genoa, and has hecn remarkably reliever by residence in the West Indian climate.
6. Scrofula. Nice and Rome have been found to he favourable residences; and in some cases, the climate of the West Indics has proved more effectual than any in Europe, viz., those of an indolent character, with little disposition to fehrile excitement.
7. Dyspepsia. The south of Europe, especially of Italy, is found beneficial in different forms of dyspepsin, hypocbon.
driasis, and other nervous affections, intimately connected with a disordercd state of the digestive organs; all these arc aggravated by a cold and humid atmosphcre. Great attention to the diet is necessary in renoving from a cold to a warm climatc in this class of discases.
[CLIMBING STAFF TREE. Common name for tho plant Celastrus Scandeus, q. v .]

CLINTCAL (xגivn, a bed). A term applied to lectures given at the bedside.
CLINKER. Blaek oxide of iron, or tbe oxidum ferroso-ferricum of Berzelius. It is alwnys formed when iron is hcatcd to redness in the open air, and is therefore readily obtained at the blacksmith's forge.
CLINOID ( $\kappa \lambda i \nu \eta$, a bed; cỉ̃os, likeness). A designation of processes of the sella turcica of the sphenoid hone, from their resemblance to the knobs of a bedstead.
CLINOMETER ( $\mathrm{k} \lambda i v \omega$, to incline; $\mu$ ítpov, a measure). An instrument for measuring the dip of minernl strata.
[CLISEOMETER ( $\times \lambda i \sigma 15$, inclination ; $\mu$ ípov, a measure). An instrument for mensuring the inclination of the pelvis, and for determining tbe relative direction of the axis of tbis cavity and tbat of the body.]
CLITORIS ( $\kappa \lambda \varepsilon / \omega$, to hide). A small elongated orgna of the pudeudum, concealed by the labia majora.

Clitorismus. A morbid enlargement of the clitoris.

CLOA'CA (a sewer). A receptacle observed in the monotremata, in hirds, in reptiles, and in many fishes, which receives the fæces and the urine, together with the semen of the male, and the ovum of the female.
Cloacc. The openings in cases of necrosis, lending to the enclosed dead hone.
CLONIC ( $\kappa \lambda{ }^{2} v \kappa \omega$, to move to and fro). [Irregular convulsive movement. Spasms in which the contractions and relaxations arc alternate, in contradistinction to tonic, in wbich the contraetion is constant.] See Sparm.
[CLOT A common term for tbe Cras8amсиtum of tbe hlood.]
CLOVE. Cnryophyllus; the unexpanded and dricd flower-bud of tho Caryophyllus aromaticus.
[CLOVE BARK. Name of a bark brought from the Wcst Indies, derived, it is supposed, from tho Myrtus acria, (Schwarty.).]
[CLOVE PINK. Common name for tho plant Dianthus saryophyllus.]

CL, UB-EEET. P'cles contorti. A congenital distortion of the feet, arising from
contraction of the extensor museles. The following are some new tcrms, in troduced hy Dr. Krauss, to designate the varicties of club-foot:-

1. The Tip-foot, Horse-foot, or Pes equinus. When the sufferer walks on his tocs, and the heel is drawn upward. In this class may he included the knot-foot (pied-bot en dessons), when the patient walks upon the back of the foot.
2. The Cross-foot, Club-foot in ward, or Varus. When the sufferer walks on the outward edge of the foot, or the outward part of the dorsum, the point of the foot being turned inwards.
3. The Out-bov-foot, Club-foot outward, or Valgus. The suffercr treads upon the inward part of the foot; the point of the foot, and sometimes the heel, are turned outward.
4. The Heel club-foot, or Talipes calcaneus. The patient walks upon the heel.
[CLUB-MOSS. Common nanue for the plant Tycopodium clavatum.]
[CLYPEATE (clypeus, a shield). Shicld-shaped; in the form of an ancient huckler; synonymous with scutate or scutiform.]
CLYSSUS ( $k \lambda \hat{u} \tilde{\omega} \omega$, to wasb). A term fornerly used to denote the vapour produced hy the detonation of nitre with any infliminable substảnce.
CLYSTER (xגí̧ $\omega$, to wash out). An enema, or lavamentum. [The injection of a liquid per anum into the largc intestine, by means of a syringe, or other suitable apparatus.]
CNICUS BENEDICTUS. Blessed Thistle; an indigenous Composite plant, contnining a hrown, hitter suhstance, called cnicin.
[COAGULABLE (coagulo, to cardle). Having the property of coagulation.]

COAGULABLE LXMPII. The finid slowly cffused in wounds, wbich afterwards becomes the hond of union, or cicatrix.
COAGULATION (con and agere, to bring together). A term formerly synonymous with erystallization, but now npplied to the partial solidification of a flnid hody hy exposure to cold, or hy the addition of some agent.

1. Spoutancous coagulation denotes the cohcsion of the particles of the blood, of some effused fluids, te.
2. Induced coagulation denotes the effect produced upon nlbumed by heat, alcohol, ncids. rennet, de.

COAGULUM. The substance which results from congulation. As npplied to the blool only, it is termed clot; is applied to milk, it is called curd.

COAT. A combustible mineral, the varieties of which consist of bitumen and carbon in different proportions, and burn with tlame and a bituminous smell.
[COALESCENT (coalesco, to grow together). Growing together; adbesion or union of parts which had been separate.]

COAPTATION, or SETTING. The act of placing the broken extremities of a bone in their matural position.
[COARCTATION (coarcto, to strengthon). A straightening or pressing together. Applied to stricture of the intestine or urethra.]
[COAT. A covering or membrane.]
[COATED. Having a covering. Applied to the condition of the tongue which exists often in gastro-intestinal derangements. Loaded.]

COATING. Lorication. A method employed for securing or repairing retorts used in distillation. Coatings are made of marly earth, kneaded with fresh horsedung; slaked lime, and linseed oil, \&c.

COBALT (Cobrlus, the demon of mines). A metal, found chiefly in combination with arsenic, as arsenical cobalt; or with sulphur and arsenic, as gray cobalt ore. These ores are employed to give the blue colour of porcelain and stone-ware. See Zaffre and Sinalt.

COBALUS. The demon of mines, which obstructed and destroyed the miners. The ores of cobalt, being at first mysterious and intractable, received their name from this personage.
[COBWEB. See Tela aranearum.]
COCA. Ypada. The leaf of the Erythroxylon coca, a plant in extensive use among the Indians of the Andes, for the purpose of producing intoxication and stupor.
[COCCOLOBA UVIFERA. Sea-side grape. A West India plant, supposed to furnish the West India or Jamaica kino.]
[COCCULUS. A genus of plants of the natural order Menispermacea. The pharmacopœial name for the fruit of Anamirta cocculus, or cocculus Indicus.]
[COCCULULUS INDI AROMATICUS. A name for the Myrtus penicula, or Jamaica Pepper.]
[COCCULUS INDICUS. A name for the berries of the Denispermum cocculus, (Linn) Anamirta cocculu8.]

COCCULUS PALMATUS. The Calumba [Colomba] plant; a Menispermaceous plant, the root of which constitutes the calumbr of commerce.

Anamirta Coconlus. The coccnlus Indicus plant, the fruit of which is the cocculus Indicus, sometimes termed Levant nut, or bacea orientalis; and by tho Ger-
mans louse-grain, from its use in destroying pediculi.

COCCUS CACTI. Coccinella. The Cochineal insect; a Hemipterous insect, which feeds upon the Optentia cochinillifera. The cochincal of the shops consists of the dried female insects; there are the silver and the black varicties. The term granilla is applied to very small cochineal insects and minute masses, resembling fragments of the larger insects.

Cochinilin. A colouring matter obtained from cochineal. It is a constituent of carmine.

COCCYX (кбкки $\boldsymbol{c}_{\text {, a }}$ a cuckoo). The lower end of the spine, so called from its resemblance to the cuckoo's benk. Hence the terms o8 coceygis, the cauda, or coccyx; and coccygetr, a muscle of the os coccygis.

COCHINEAL. The dricd insect called Coccus Cacti, or Coccinella.

COCHLEA ( $\kappa$ ó $\chi$ дos, a conch). A cavity of the ear, resembling the spiral shell of the snail. It describes two turns and a half around a central pillar called the modiolus.

COCHLEARE (cochlen, a snail's shell). A spoon, so named from its resemblance to the shell of a snail; a spoonful. The following proportions are used in apportioning the dose of mixtures:-

1. Cochleare amplum. A table-spoonful, or half a fluid ounce.
2. Cochleare mediocre. A dessert-spoonful, or somewhat more than two fluid drachms.
3. Cochleare minimum. A tea-spoonful, or one fluid drachm.
cOCHLEARIA ARMORACIA. Horseradish; an indigenous Cruciferous plant, the root of which is considered antiscorbutic.
[COCHLEARIA OFFICINALIS. Common scurvy grass; a.Cruciferous plant, celebrated as a remedy in seascurvy. It is gently stimulant, aperient, and diuretic. It is eaten as a salad, and the infusion, expressed juice, \&c., may be taken.]
[COCHLEATE (cochlea, a snail's shell). Shell-shaped; twisted in a short spire, so as to resemblo the convolutions of a snailshell.]

COCINIC ACID. Cocostcaric acid. The crystallizable acid of the butter of the cocoa-nut.

COCOA. A substanco produced from the seeds of the Theobroma Cacao, or Chocolate tree.

COCTION (coquo, to digest). The process of reducing the aliment to chyle.

CODEINE [Cudeia, U. S. Ph.] (xídrıa,
a poppy head). An altrali discovered by Robiquet in hydrochlorate of morphia.

COD LIVER OIL. Oleum Jecoris Aselli. [Oleum Morrhuc, Ph. U. S.] An oil obtained from the livers of the Morrhua vulgaris, [Gadus Morrhua, L.] or Common Cod, formerly called Asellus major, and from allied species; cmployed in rheumatism and scrofula.

COECUM (coccus, blind). The blind pouch, or cul-de-sac, at the commencement of the large intestine.

CEELIA (xoitia; from koìlos, hollow). The belly, or abdomen; the cavity which contains the intestines.

1. Coliac, a term applied to an arterythe first hranch of the aorts in the abdomen: and to a plexus, a prolongation of the solar.
2. Cooliac Passion. The colic.
[3. Coliac plexus. The solar plexus, q. v .]

CONOSTHESIS [Concesthesis] (кouvos, common; aino $\eta_{0, t s, ~ p e r c e p t i o n) . ~ A ~ t e r m ~}^{\text {a }}$ expressive of the general sensibility of the system.

CEENURUS (koıvds, common; oupà, a tail). A cystose hladder, containing several animals grouped together, and adhering to its sides. See Hydatid.

COFFEA ARABICA. The Coffee tree, a Rubiaceous plant, of which the albumen of the seeds constitutes the coffce of commerce. Caffein is a volatile, crystalline, neutral constituent of coffee. Cafficic acid is a peculiar acid contained in raw coffce. Coffee green is a grcen substance produced by the action of alkalics on a volatile principle of coffee.
[COGNATE (con, together; nascor, to be horn). Allicd, related.]

COHESION (cohareo, to stick together). The power hy which the component particles of a body cohere, or are kept together. It is the opposite to expansion. See Attraction.

COHOBATION. The continuous redistillation of a liquid from the same materials, or from a fresh parcel of the same materials.
[COHOSH. See Cimicifuga racemosa, and Actara Americana.]

COITUS (cairc, to go together). The conjunction of the sexcs.

COKE. The residue of conl, when the volatile matters are driven off.

COLATURA (colo, to strain). Any filtered or strained liquor.
[COLCIIICI RADIX. Tho pharmacopoial name for the bulb or cornus of the Colchicum autumnalo; Colchici cormus, Lond. nnd Eid. Plı.]
[COLCIIICI SEAEEN. The phnrmaco-
pocial name for the secds of Colchicum autumnale.]

COLCHICUM AUTUMNALE. Meadow Saffron, a hulhous plant, used by the ancients under the name of hermodactyllus. The juice of the bulb is very poisonous to dogs; lience the Dutch name Hunder hodcn, and the French name Tuc-chien. All the species of Colchicum yield the alkaloild veratria.

Colchicine [Colchicia, U. S. Disp.]. A vegcto-alkali, procured from the Colchicum autumnale.

COLCOTHAR. A mixurc of red oxide of iron and the persulphate, uscd as a paint, \&c.

COLD. 1. As heat exists in all hodies, the term cold bas only a ncgativo sensc, implying a greater or less privation of heat. 2. In employing cold as a remedial agent, its proximate or physical effects must be distinguished from its remote or physiological; the formerare of a sedative, the latter of a stimulant nature. 3. A popular name for catarrh.
[COLD CREAM. Ceratum Galemi; Unguentum aquce rosce, U. S. Ph. Take of rose-water, oil of almonds, each two fluid ounces; spermaceti, half an ounce; white wax, a drachm. Melt together, by means of a water-hath, the oil, spermaceti, and wax; then add the rosewater, and stir the mixture constantly until cold.]

COLEOPTERA ( кodeds, a shenth; $\pi \tau \varepsilon \rho \grave{y}$, a wing). Sheath-minged insects; heetlcs.

COLES (אaudds, $\Omega$ stalk). A designation of the penis. Celsus.

COLICA ( $\kappa \bar{\omega} \lambda o y$, the colon). The colic. A painful affection of the colon, without inflammation or fever. See Mchs.

1. Celica accidentalis. [C. crapulosa.] Induced hy particular articles of diet.
2. Colica stercorca. From accumulation of the contents of the bowels.
3. Colica meconialis. From retention of the nieconium.
4. Colica calculosa. From intestinal calculi.
5. Colica Pietomum (an endemic at Poictou). The colic of the Pictones; dry belly-ache; Devonsliire colic; Painters' colic; also called saturnina, as hcing produced by the effects of lead.
[6. Oolica hepatica. Pain in the region of the liver, caused by the passage of a biliary calculi, through tho cystic and choledoch ducts.
[7. Calica nephritica. Acutc pains which nccompany nepliritis, nud particularly enlenlous nephritis, or the passage of a calculus throngh the urcters.
［8．Colica uterina．Pain in the uterus． See Hysteralgia．］
［COLI＇TIS（colon，the large intestinc）． Indammation of the colon．］

COLLA（кo八 $\lambda a$ ，gluc）．Gluten，glue； Colla piscium，fish glue，Ich thyocolla．］

COLLAPSE（collabor，to shrink down）． More or less sudden failure of the circula－ tion，or vital powers，as of the hrain，or of the whole system．
［COLLATICUS（кod $\lambda a$, glue）．Of a gluey nature，colletic．］
［COLLATITIOUS（confero，to bring to－ gether）．Collected together；applied to the stomach and intestines，which are termed the collatitious viscera，hecause they are the general receptacles of the dif－ ferent kinds of aliment．］
［COLLINSONIA CANADENSIS． Horseweed，Heal－all．An indigenous plant． A decoction of the fresh root is used in do－ mestic practice as a diuretic，and diapho－ retic；and the leaves are employed as a cataplasm to wounds，hruises，\＆c．］

COLLIQUAMENTUM（coiliqueo，to melt）．A term applied hy Harvey to the first rudiments of the embryo in genera－ tion．

Colliquative．A term applied to any excessive evacuation，as of diarrhœa，or perspiration．
［COLLODIUM；COLLODION（кa入入a， glue）．A liquid of a syrupy consistence， and adhesive properties，prepared hy dis－ solving gun－cotton in strong sulphuric ether．］
［COLLOID（ко $\lambda \lambda a$ ，glue ；$\varepsilon i \delta o s$, likeness）． A term applied to collections of gelatine Which not unfrequently appear in the body． See Cancer．］

COLLUM（кo入入áw，to join）．The neck； the part hy which the head is joined to the hody．It is distinguished from cervix， which is the hinder part of the neck，or the hollow part hetween the head and the nape of the neck．In Botany，the term collum denotes that portion of the axis of growth where the stem and the root di－ verge；hy Grew it was termed courcture； hy Lamarck，vilal knot．

COLLUTORIUM（colluo，to wash）． Gargarisma．A liquid applied to the mouth or throat for local purposes．

COLLYRIUM（кo入入ípiov）．Formerly，a solid substance applied to the eyes；now，a liquid wash，or eye－vater．
［COLOBOMA（ku入oßów，to mutilate）． Mutilated，or cut short．］

Coloboma Iridis（ $\kappa \omega \wedge \subset \beta \beta \omega \mu a$ ，a mutilated limh）．Fissure of the iris，with prolonga－ tion of the pupil．
［COLOCYNTlIIS（kòóruvaa，a gourd）． Tho pharmacopœeial name for the dried
pulp of the fruit of Cucumis Colocynthis ； colocynth．

Colocynthidis Pulpa．Bitter Cucumber Pulp；the medullary part of the fruit of the Cucumis Colocyuthis，the active principle of which is called colocynthin．
［COLOMBA．The root of the Cocculus Palmatus．］
［COLOMBIN or Calombin．A peculiar， crystallizahle hitter principle，ohtained by Wittstock from Culomha．］

COLON（ $\kappa \tilde{\omega} \lambda o v$, quasi；koì̀ov，hollow）． The first of the large intestines，commenc－ ing at the cecum，and terminating at the rectum．It is distinguished into the right lumbar or ascending colon；the arch of the colon，or transverse colon；the left lumhar， or descending colon；and the sigmoid flex－ ure，or left iliac colon．

1．Colic．The name of arteries of the colon，and of one of the omenta．
2．Colonitis．Inflammation of the colon； a term employed by Dr．Ballingall．

COLOPHONY（so termed from a city of the same name）．Pix nigra．Resin of turpentine．It has been distinguished into two different resins，called sylvic and pinic acids．

Colophonic acid．An acid formed hy the action of heat on pinic acid．Brown rosin，or colophony，owes its colour to this acid．
［COLOQUINTIDA．The colocynth．］
COLOSTRUM．Beestings；the milk first secreted after delivery．

COLOURING MATTER．A colour－ ing principle existing in vegetable suh－ stances．Colours are termed substantive， when they adhere to the cloth without a hasis；adjective，when they require a hasis．

COLPOCELE（ $\kappa \delta \lambda \pi$ os，the Yagina；$\kappa j \lambda \eta$ ， tumour）．A tumour or hernia of the va－ gina．

COLPOPTO＇SIS（xóגtas，the vagina； $\pi \tau \tilde{\omega} \sigma 15$, a falling down）．Prolapsus or fall－ ing down of the vagina．

COLTSFOOT．The vernacular name of the Tussilago Farfura．
［COLUMBATE．The combination of Columbic acid with a hase．］

COLUMBIC ACID．An acid ohtained hy fusing the ore of Columbinn with the carbonate or the bisulplate of potass；a soluble columbatc of potass is obtaincd， and the acid is precipitated in the form of a white hydratc．
［COLUMBINE．The common name for the plant Aquilegia vilgariw．］

COLUMBIUM．A metal，supposed to have been brought from Massachusetts， in North America．It is also termed Tan－
tulum．
[COLUMBO, AMERICAN. The root of the Frasera Walteri.]

COLUMNA. A column, or pillar, as those of the velum palati, and the columne carnce, or museular fasciculi of the internal walls of the heart.
[COLUTEA ARBORESCENS. Bladder Sennar An European plant, the leaflets of which have slight purgative properties, and are sometimes used as a substitute for senna.]

COLZA OIL. A liquid extracted from the grain of the Brabsica Arvensis, used in making soft soap.

COMA (к心ัца, drowsiness; from кध́ $\omega$, to lie). Drowsiness; lethargic sloep; dead sleep; torpor. See Cutaphora.

1. Coma somnolentum; in which the patient, when roused, immediately relapses into sleep.
2. Coma vigil; in which the patient is unahle to sleep, though so inclined.
COMATOSE (coma, drowsiness). Affected with coma or drowsiness.
[COMBATIVENESS. A phrenological term for the faculty which manifests itself in a disposition to quarrel and fight.]

COMBINATION (crm, with; binus,
two). The union of the partieles of different suhstances, hy chemical attraction, in forming new compounds.

COMBUSTION (comburo, to hurn). Burning; the disengagement of heat and light, which accompanies rapid chemical comhination.

Combustion spontaneous. This is said to occur in the human hody; and it does occur when masses of vegetahles, as damp hay, or oily cotton, are heaped together. Therc are also cases on record of the spontaneous ignition of chareoal, hoth dry and moist.

COMENICACID. A hihasic acid, formed by boiling a solution of meconic acid with a pretty strong acid.
[COMFREX. Common name for the Symphytum Officinale.]
COMMANDLR'S
COMMANDER'S BALSAM. Balsamum tranmaticnm. Friar's Balsam, Jesuits' Drops, Wade's Drops, or the Tinetura Benzoini composita.

COMMINUTED (comminuo, to break in pieces). A term applied to a fracture, when the hone is hroken into several pieces; also to any substance which has been ground into minutc partieles.

COMMISSU'ILA (committo, to unite). A teriu applied to the converging fibres which unito the hemispheres of the brain.

1. Commissura anterior et postering. Two whito eords situated aeross the anterior and posterior parts of the third ventriele.
2. Commissura mogna. The commissure of the corpus eallosum, so called from its being the largest.
3. Commissura mollis. The name of the gray mass which unites the thalami.
4. The term Commissure is also applied to the quadrilateral hody formed hy union of the optic nerves, to the acute angle formed on each sidc of the mouth hy the union of the lips, \&c.

COMMUNICANS TIBIE. The external saplienal hranch of the tihial nerve.

COMMUNICATING ARTERY OF WILLIS. A branch of the internal carotid artery.
[COMOSE (coma, hair). Having hair at the extremity.]

COMPLEXUS (complector, to comprise). A musele situated at the hack part of the neck. It is so named from the intrieate mixture of its muscular and tendinous parts. From the irregularity of its origins, it has heen termed complexus implicotus trigominus. Albinus distinguishes it into two parts, viz.:

1. Biventer, or the upper layer, hitherto ealled complesus; and,
2. Complexus, or the lower layer, never hefore distinguished from the rest.
[COMPLICATED; COMPLICATION, (complico, to mrap together). The union or comhination of several morbid conditions or injuries. In medicine, a complication of diseases means the co-existeuce of two or more diseases. In surgery, an injury is said to he complicated when it is comhined with some circumstance which adds to the difficulty of treatment, or with some additional injury.]

COMPOSITA. The Synantherous trihe of dicotyledonous plants. Herhaceous plants or shruhs with leaves altermate or opposite; flowers (called florets) unisexual or hermaphrodite, collected in dense hends upon a common receptacle, surrounded hy an involucrum ; florets monopetalous; anthers syngenesious; orariuns one-celled; fruit a dry, indehiscent periearp, termed achenium or cypsela.
COMPOTES. Fruits preserved with sugar; gencrully stone fruits.
[COMPOUND (compono, to put together). Composed of two or moro suhstances; applicd, in surgery, to fractures which commmicate with wounds of the soft parts, or where there is protrusion of the bone throngl the soft parts.]
COMPOUND MEDICINES. These have been divided into tro classes, riz.: Officinal Preparations, or those ordered in the pharmacopreias: and Mayistral or Exhyp herancms Formula, or those ennstructed hy the practitioner at the moment.

COMPOUNDS. The following terms are employed in designating compounds:

1. Binary, ternary, quaternary. These terms refer to the number of elemonts or proximate principles - two, threc, or four -which exist in a compound. The binary compounds of oxygen, chlorine, iodine, bromine, and fluorine, which are not acid, terminate in ide, as oxide, chloride, dc. ; those of all other substances terminate in uret, as hydruret of carbon, sulphuret of iron, \&c.
2. Bis, ter, quater. These are Latin numerals, indicating the number of atoms of acid which are comhined with one of the hase in a compound, as bi-sulphate of soda, \&c.
3. Dis, tris, tetrakis. These are Greek numerals, indicating the number of atoms of hase, which are combined with one of the acid in a compound, as di-chromate of lead, \&c. No prefix is used when the compound consists of one atom of each ingredient. But there are many exceptions to these rules: protoxide and deutoxide are frequently used for oxide and bin-oxide respectively.

COMPRESS (comprimo, to press). A pad of folded linen, lint, \&c., which surgeons place where they wish to make a pressure, \&c.

COMPRESSIBILITY (comprimo, to compress). A property of masses of matter, by which their particles are capahle of heing brought nearer together. Bodies which recover their former hulk on removal of the compressing cause, are called elastic.

COMPRESSION (comprimo, to press). A diseased state, usually of the brain, occasioned by pressure.

COMPRESSOR (comprimo, to press) A muscle which compresses a part, as that of the uose, and of the urethra.
[1. Compressor of Dupuytren. An instrument for compressing the crural artery. It consists of two pads placed at the extremities of a semi-circle of steel, which, passing from one to the other, restricts the compression to two opposite points of the thigh, and does not interrupt the collateral circulation.]
[2. Compressor of Nuc\%. An instrument for compressing the urethra and prerenting the involuntary discharge of the urinc.]
[COMPTONIA ASPLENIFOLIA. Sweet Fern. A plant of the fanily Aurentacca, indigenous in the United States, said to he tonic and astringent, and cmployed in the form of decoction, in domestic practice, as a remedy in diarrhœa and various other complaints.]

CONARIUM (comus, a cone). A designation of the pineal gland, from its conical form.

CONCENTRATION (concentro). The strengthening of solutions, mixtures, \&c., hy evaporation of their watery parts.

CONCEPTION (concipio, to conceive). The first stage of generation on the part of the female.

CONCHA (a shell). A term applied to parts resembling a shell; thus, we have concha auris, the cavity of the ear; and concha naris, the turbinated portion of the ethmoid hone.

CONCHIFERA (concha, a shell ; fero, to earry). The second elass of the Cyclogangliata or Mollusca, comprising acephalous, aquatie animals, covered with a hivalve or multivalve shell.

CONCOCTION (concoquo, to digest). The act of boiling. Digestion.
[CONCOURS. A term for the mode of obtaining appointments to hospitals and professorships by a public competition of the candidates before a professional jury.]
[CONCRETE (concresco, to grow together). A term applied to substances which have been converted from alluid to a solid consistence.]

CONCRETION (concresco, to grow together). Calculus; a term usually applied to that of the intestines.
[CONCUBITUS (concubo, to lie together). Coitus, the congress of the sexes.]

CONCUSSION (concutio, to shake together). A term applicd to injuries sustained hy the brain, and other viscera, from falls, hlows, \&c.

CONDENSATION (condenso, to make thick). The act of diminishing the hulk of a body, as hy the conversion of steam into water, gases into lluids, fluids in to solids, \&c.

CONDENSER. 1. A vessel in which steam is converted into water, by the application of cold. 2. An instrument employed in electrical experiments on the same principle as the electrophorus, the purpose of which is to collect a weak electricity, spread over a large surface, into a body of small dimensions, in which its intensity will be proportionably increased, and therefore become capable of being examined.

CONDIMENTA (condio, to season). Condiments; substances taken with the food to improve its flavour, to promote its digestion, or to correct its injurious qualities.

CONDUCTOR (conduco, to lead). An instrument used to direct the knife in operations. Comparc Divector.
CONLUPLICATE (conduplicatus, dou-
bled together). Donbled togetber; a form of vernation or æstivation, in which the sides of a leaf or petal are applied parallelly to the faces of each other.

CONDYLE (xóvסudos, a knuckle). A rounded eminence in the joints of scveral bones, as of the humerus and the femur.

1. Condyloïd (Eidos, likeness). A term applied to some of the foramina of the occipital hone, viz., the anterior, through which the liugnal nerves pass ; and the posterior, through which the yeins of the neck pass.
2. Coudyloma. A wart-like exereseence, which appears about the anus and pudendum.

CONE. The fruit of the Fir-tree. It is a conical amentum, of which the carpels are scale-like, spread open, and bear naked seeds.

CONFECTIO (conficio, to make up). A confection. Under this title, the London College [and Pharmacopoeia of the United States] comprehend the conserves and electuaries of its former pharmacopoeias. Strictly speaking, however, a conserve merely preserves the virtues of recent vegetables hy means of sugar; an electuary imparts convenience of form.
[1. C. Amygdalc. Lond. Almond confection. Sweet almonds, hlanched, $\overline{3}$ viij.; Gum Arabic, powdered, $\mathrm{Z}^{\mathrm{j} j}$; sugar, $\mathrm{Z}_{\mathrm{iv}}$. Beat all together until they are thoroughly incorporated.
[2. C. Aromatica. Ph. U. S. Aromatic confection. Aromatic powder, $\overline{3}$ vss.; saffron in powder, $z^{s s} ;$; rub together, and add syrup of orange, $\overline{3} \mathrm{Vj}$.; clarified honey, $\mathrm{Z}_{\mathrm{ij} .}$; beat the whole until thoroughly mixed. Dose, gr. x. to $3^{i}$ i.
[3. C. Aurantii corticis. Ph. U. S. Confection of orange peel. Fresh orange peel, grated, tDj.; add gradually loaf sugar, tbiij.; beating them till thoroughly mixed.
[4. C. Cassice. Lond. Confection of cassia. Manna, $\overline{3} \mathrm{ij}$.; dissolve in syrup of roses, $\mathrm{f}_{3}$ viij. ; ndd cassia (pulp), tiss. ; tamarind (pulp), $\mathrm{J}_{3} \mathrm{j}$. ; and evaporate to a proper consistence. A mild laxative. Dose,合ss.
[5. C. Catechu. Ed. Electuary of eaconsistence of red roses, reduced to the eateohu and kino, in powder, of each, Jiv.; cinnamon and nutmeg, in powder, of eaelr, $\overline{3} \mathbf{j}$. ; beat thoroughly into a uniform mass. Aromatic and astringent; useful in diarrhoma and chronio dyseutery. Dose, $\mathbf{J}^{\text {ss. }}$ to $\mathbf{Z}^{j}$.
[6. C. Opii. Ph. U. S. Confection of opium. Opium, powderd, 3 ivss.; aro-|3ij.]
[CONFERVA (conferven, to knit together). The tribe of cryptogamic plants, including the jointed Alya, or waterwecds.]
[CONFERVOID (confervero, to knit together; zıסos, like). Resembling a knitting together; applied to one of the elementary forms of diseasc, consisting of parasitic regetations, generally composed of elongated cells, so disposed as to form jointed tuhes more or less long, and frequently associnted with, and somctimes seen to terminate in, round or oval transparent hodies, which have been considered the sporules of the plant.-Mayne.]

CONFLATION (conflo, to hlow together). The casting or melting of metal.
[CONFLUENT (confluo, to flow together). Running together. It is applied to the exantherata when the pustules run together. In Botany it signifies growing together, and is synonymous with comnate, cohering, \&e.]
[CONFORMATION (conformo, to shape). The natural shape and form of any part.]

CONGELATION (congelo, to freeze). The passing from a fluid to a solid state hy the agency of cold.

CONGENER (con, and gemus, kind). A thing of the same kind or nature. Hence, the term congenerous is applied to diseases of the same kind.
[CONGENITAL (con, with ; genitus, begotten). Born with. A term applied to diseases or peculiarities of conformation existing at hirth.]
[CONGERIES (congero, to heap up). A collection or numher.]

CONGESTION (congero, to amass). Undue fulness of the hlood-vessels, [or any vessels or ducts.] By passive congestion is denoted torpid stagnation of the blood, ohserved in organs whose power of resistance has heen greatly exhausted.

CONGIUS. This measurc among the Romans was equivalent to the eighth of an amphora, to a cubic half foot, or to six sextarii. It is equal to our gallon, or a little more.

CONGLOBATE (conglabo, to gather into a hall). The designation of a gland [formed of contorted lymphatic vessels, baving neither cavity nor excretory duct.]

CONGLOMERATE (conglomero, to heap together). The designation of a yland composed of various glauds, having a common excretory duct, as the parotid, pancreas, \&c.
[CONGREGATE GLANDS; Aggregatc lands. Peyer's Glands or Patchcs.]
[CONIA. The activo principle of the slant Coninm maculatum. Tcrmed also :onein, couicin, and cicutin.]

CONI VASCULOSI. Vaseular cones; the conical convolutions of the vasa cfferentia. They constitute the epididymis.

CONIFERA. The Fir or cone-hcaring tribe of Dicotyledonous plants. Trees or shrubs with a stem ahounding with resin; leaves linear, acerose, or lanceolate; flowers monæcious, or diœcious; ovarium in the concs, sprcad open, appearing like a fiat scale, destitute of style or stigma; fruit a solitary naked seed or a cone; seeds with a hard crustaceous integument.
[CONII FOLIA, $\}$ The Pharmaco-
[CONII SEMEN. pœial names for the leaves and seeds of the Conium maculatum.]

CONI'UM MACULA'TUM. The Common or Spotted Hemlock; an Umhilliferous plant, termed Cicuta by the Latin authors, hut quite distinct from the Cicuta maculata of English writers.

Conia. The active principle of hemlock, iu which it exists in comhination with an acid called the conic acid.
[CONJUGATE (conjugatus, yoked together) ; growing in a pair.]

CONJUNCTIVA (conjungo, to unite). Adnata tunica. The mucous membrane which lines the posterior surface of tbe eyelids, and is continued over the forepart of the globe of the eye.

Conjunctiva Granular. A diseased condition of the conjunctiva, the sequel of purulent ophthalmia.
[Conjunctivitis. Inflammation of the conjunctiva.]

CONNATUS (connascor, to be born together). Connate. Born with another; congenital. A term applicd in hotany to two opposite leaves united at their bases, as in the garden honeysuckle.
[CONNIVENT (comiveo, to connive). Converging; having a direction inwards. In anatomy, applied to the valvular folds in the mucous mombrane of the small intestines, which are called valvulat comiventes, from their converging or approaching each other.]
[CONOID ( $\kappa \tilde{\omega} v o s$, a cone; घסos, likeness). Resembling a cone; coniform.]
[CONSCIENTIOUSNESS (conscicntia, consciencc). Uprightness; the innate faculty which views all actions in the point of rigbt or wrong, and manifests itself hy a fecliug of justice, and love of truth, and duty.]
[CONSENT OF PARTS. Sec Sympathy.]

CONSERVA (conscrvo, to kecp). A conserve, or eomposition of vegctablo and saccharinc matter. Sce Confectio.
[CONSERVATRIX (conservo, to keep entirc). Sho that preserveth. See Vis conservarix.]
[CONSOMME, (Fr. Jelly broth). A $\mid$ gin, and is overlapped by its other neighstrong broth mado of gclatinous meat, which hecomes a jelly when cold.]

CONSTIPATION (constipo, to crowd together; from con, and stipo, to cram). Obstipatio. Costiveness; confinement of the bowels; constipation ; the contents of the howels being so crammed together as to ohstruct the passage.
CONSTITUENS. The vehicle; a constituent part of a medicinal formula, signifying," that which imparts an agreeable form." See Prescription.

CONSTITUTION (constituo, to establish). A state of heing ; the temper of the body; natural qualities, \&c.

1. Constitution of the Body-Diathesis. The condition of the body; the "propria," or peculiarities, as distinguished from the "communia," or generalities. Celsus.
2. Constitution of the Air. That peculiar state of the air or vapour from the earth, which induces epidemics, or impresses upon epidemic or sporadic diseascs their peculiar characters on particular occasions. It is denominated hy Sydenham bilious, dysenteric, \&c.
[CONSTITUTIONAL. Inherent in the constitution.]

CONSTRICTOR (constringo, to hind together). A muscle which contracts any opening of the body, as that of the pharynx.
[CONSTRUCTIVENESS (construo, to build). The faculty producing the tendency to construct or fashion in general.]
[CONSULTATION (consulto, to seek or give counsel). A meeting of two or more physicians to deliberate respecting a case of disease, or injury, or, some case in which a medical opinion is desired.]

CONSUMPTION (consumo, to waste away). Wnsting of the body; phthisis, or marasmus.
CONTABESCENTIA (contabesco, to waste away). Atrophy, or consumption; wasting away of every organ.

CONTAGION (contingo, to touch one another). The propagation of diseasc frou ono individual to another, - properly by contact. Compare Infection.
[CONTAGIOUS. Capable of being communicated by contact.]
[CONTINUED (continuo, to hold on). Applied to fevers which continue rithout intermission till the discase terminates.]
[CONTINUITY. A perfect union of parts.]
[CONTORTED (con and torquen, to twist). Twisted. In butany significs twisted in such a nomner that cach picce of a Whorl overlaps its ncighbour by one mar-
bours by the other margin, as in the zestivation of oleander.]
[CONTRA. Counter, opposing. See Counter.]

CONTRA-FISSURE (contra, against; findo, to cleave). A fracture of the skull, produced by a contre-coup opposite to the part on which the blow is reccived.

CONTRA-INDICATION (contra, against; indico, to show). Circumstances which forbid the exhihition of a remedy.

CONTRACTILITY (contraho, to draw together) The property hy which bodies contract.

1. The property by which the fibrous tissues return to their former dimensions, after heing temporarily extended.
2. The property of the muscular fibre, by which it shortens on the application of a stimulus; more properly Irritability.

CONTRACTION (contraho, to draw together). A rigid state of the joints. Also, a decrease of volume, the usual effect of a diminution of heat.

CONTRAJERYA (contrayerva, Indian Spanish for alexipharmic). A species of Dorstenia, to which the contrayerva root was formerly referred; hut Dr. Pereira says that the root of this species is not met with in commerce. Sce Dorstenia.

CONTRE-COUP. A term used synonsmously with contra-fissure ; but it is rather the cause of this effect.
[CONTRO-STIMULANT (contra, against; stimulus, an excitant). A suhstance, according to Rasori, which has the property of directly diminishing vital action.
[CONTRO-STIMULUS. A term given hy Rasori to a doctrine which he originated, and which is founded on the contro-stimnlant properties supposed to be possessed by certain medicines.]

CONTUSION (contundo, to hruise). A bruise.

CONVALESCENCE (convalesco, to grow strong). The state of rccovery.
[CONVALLARIA (convallis, a raller).
A Linnean genus of plants of the natural order Litiaccer.]
[Convallaria majalis. Systematic namc of the Lily of the Valley, the flowers of which are said to be cmetic and cathartic; their catract purges in the dose of half a drachm. The flowers and the root, dried and pordered, are used as a stcrnutory.] [Comvallaria Polygonatum. Systematio name of the plant Solomon's scal. The root is said to he eunctic, and was formerly nsed externally in bruises, de.]

CONVOLUTA (roncolio, to mrap together). [Convolute.] A term applicd to
the upper and lower turbinated bones of the nose.
[In hotany, applicd to a form of æstivation or vernation, in which one petal or leaf is wholly rolled up iu another.]

CONVOLUTION (convolvo, to roll together). The state of anything which is rolled apon itself. Hence the term is applied to the windings and turnings of the cerebrum, callcd gyri; and to the foldings of the small intestines.

CONVOLVULACEA. The Bindweed tribe of Dicotyledonous plants. Herbaceous plants with leaves alternate; flovers regular, monopetalous; stamens inserted into the base of the corolla; ovarium superior, 2-4 celled; seeds albuminous.

1. Convolvulus Scummonia. The plant whose root yields the hard, brittle, ashcoloured resin called acammony. It contains a substance called comolvalin, supposed to be a vegetahle alkali.
2. Convolvnlus Jalapa. The former name of the Jalap plant. The drug is now said to be yielded by the Ipomica purga, and probably by other species.
[Convolvulns Batalas. A West India species, the root of which is esculent, and, when hoiled, tastes like the chesnut.]
[Convolvulus Mechoucana. A Mexican species, the root of which is aperient.
[Convolvulus vrizabensis. Male Jalap, a Mexican species, the root of which is cathartic, but less active than the true jalap.]
[Oonvolvulus Panduratus. The Wild Potato, a species indigenous throughout the United States, and the root of which is feebly cathartic and diurctic.]

CONVULSION (convello, to pull together). Spasm. Violent involuntary contractions of the muscles, with alternate relaxations, commonly called fits.
[COPAIBA. The Pharmacopœial name for the oleo-resin ohtained from incisions in the trunk of Copaifera officinalis, and other species of Copaifera. See Copaiva.]
[COPAIFERA. A Linnean genus of plants of the natural order Amyridacee, Lindley.]
[Copaifera officinalis. The systematic name of the plant which is recognised as affording the officinal Copaiba; but this balsam is more generally obtained from other species of Copaifera: as C. multijnga, C. Guianensis, C. Langsdorfii, C. coriacea, \&c.]

COPAIVA BALSAM. A balsam [oleo resin] obtained by making incisions into the stems of several species of Copuifera.

1. Resin of Copuiva. A brown rcsinous mass, left after the balsam has been de-
prived of its volatile oil by distillation. It consists of two resins: the one, a yellow, brittle resin, called copaivic acid; the other, the viscid resin of copaiva.
2. Gclatine Capsules of Copaiva. Capsules formed of a concentrated solution of gelatine, and containing each about ten grains of the balsam of copaiva.

COPAL. A resin obtained from the $H_{y}$ mencea Courbaril, and also termed jatahy or jatchy.
[COPALCHI BARK. The bark of the Croton Paendo-China of Schiede. It has some resemblance to Cascarilla.]
[COPALM BALSAM. A balsamio juice obtained from the plant Liquidambur styraciflua.]

COPHO'SIS (кшфф̀s, deaf). Deafness.
COPPER (Cuprum, quasi ces Cyprium, from the island of Cyprus, where it was first wrought). A red metal, found in the common ore called copper pyrites. Among its compounds are red copper, or the protoxide; blacle copper, or the peroxide; copper glance, or the protosulphuret; resin of copper, the protochloride or white muriate; and the white copper of the Chinese, an alloy of copper, zinc, nickel, and iron. See Cuprum.

COPPERAS. Sulphate of iron, or green vitriol. See Vitriol.

COPPERNICKEL. Anative arseniuret of nickel, a copper-coloured mineral of Westphalia.
[COPRAGOGUE ( $\kappa$ dтpos, excrement; ayw, to hring away). Carrying away the fæces; purging medicine.]

COPROSTASIS (котроे, fæces; $\bar{\sigma} \sigma \tau \mu \ell$; to stand). Costiveness; undue retention of the fæces in the intestines. Hence the terms copragoga or eccoprotica, denoting purgatives, or medicines to quicken the passage of the fæces.
[COPTIS. Goldthread. The pharmacopœial name for the root of Cojtis trifolia. It is a bitter tonic, and is much employed in New England as a local npplication in aphthous ulcerations of the mouth.]

COR, CORDIS. The heart ; the central organ of circulation. [See Heart.]

CORACO- (xópa $\xi$, a crow). Names compounded with this word belong to muscles which are attached to the

Coracoĩd Process (cidos, likeness). Tho upper and anterior point of the scapula, so called from its rcsemblance to a crow's beak.

CORALLICOLA (corallum, coral ; colo, to inlabit). Coral-inhabiters, as the hornwrack.

CORALLIUM RUBRUM. Red coral ;
the ealcareous internal skeleton of a $P O_{0}$ lypiferous animal, consisting of carbonate of lime, principally coloured with oxide of iron.
[CORDATE (cor; the heart). Mreartshaped.]

CORDIALS (cor, the heart). Cardiacs. Warm medicines; medicines which increase the action of the heart, or quicken the circulation.
CORE (cor, the heart). The slough which forms at the eentral part of hoils.
[CORECTOMIA (корп, the pupil ; іктоцทे, excision). Iridectomia. Formation of an artificial pupil by excision.]
[COREDIALXSIS (кopn, the pupil ; $\delta_{\text {a- }}$ duats, loosening). Iridudialysis. The formation of an ártificial pupil by separating the iris from its ciliary attachment.]
[COREMORPHOSIS ( $\kappa \delta \rho \eta$, pupil; $\mu \circ \rho-$ $\phi$ wors, formation). Operation for the formation of an artificial pupil. See Corctomia, Corectomia, Coredialysis, Iridenclciais, Iridectomedinlysis, Sclerectomia.]
[CORENCLEISIS ( $\kappa \circ \rho \eta$, the pupil; ; $\gamma$ $\kappa \lambda \varepsilon i \omega$, to include). Operation for artificial pupil, hy drawing out a portion of the iris through an incision in the cornea, and eutting it off.]
[COREONCION (Kорп, the pupil ; оүкоя, a hook). An instrument with a hooked extremity, devised by Langenheck for the operation of artificial pupil.]
[COREPLASTICY (кор $\eta$, the pupil: זAaбtikn, the art of making images). The operation for artificial pupil in general.]
[CORETOMIA (корп, the pripil $;$ єктонл, exstion). The formation of an artificial pupil by incision.]
[CORIACEOUS (corium, lenther).
Leathery; of a leathery consistence; applied to leaves and pods which are thick and tough without heing pulpy or succulent.]

CORIANDRUM SATIVUM. The Officinal Coriander; an Umbelliferous plant, yielding the fruit crroneously called coriander secds.

CORIUM (quasi carium, quod eo caro tegatar). Lenther. The deep layer of cutis, or true skin, forming the hase of support to tho skin.

CORMUS. The eularged subterranenn base of the stem of Colchicum, of Arum, \& c. falscly called root or bulb.

CORN (cormu, a horn). Clanus. Spina pedis. A horny induration of the skin, gencrally formed on the toes.

CORNEA (cornu, a horn). Cornca pellucida. The anterior transparent portion of the globo of the cye.
Cornera npaca. A term furmerly applied to the sclerotica.
[Corneitis, Ceratitis, Keratilis. Indammation of the cornea.]
[CORNEOUS (cornu, a horn). Morny; of a horny consistence.]
[CORNICULATE (cornu, a horn). Ilorned; terminating in a horn-like process.]

CORNICULUM (dim. of corme, a horn). A small cartilaginous hody, surmounting the summit of the arytenoid eartilage.

CORNINE. A term applied to a peculiar hitter principle, said to have been fonnd in the bark of the Cornus Florida; its properties resemble those of quinine.
[CORN SPIRIT OIL. Alcohol amylicum, q. v.]

CORNU. A horn; a term applied to warts, from their horny hardness; and to parts resembling a horn in form, as-

1. Cornu Ammonis. A designation of the pes hippocampi of the hrain, from its being hent like a ram's born, the famous erest of Jupiter Ammon.
2. Corma sacralia. Horns of the sacrum; two tuhercles, forming notches, which transmit the last sacral nerves.
3. Cornua uteri. The horn-like appearance of the angles of the uterus in certain animals.
4. Each lateral ventricle of the brain has heen divided into a body or central portion; an anterior or diverging cornu; a posterior or converging corma; and an inferior or descending cornn: bence the appellation of tricorne applied to this cavity.
CORNU CERVI. Stag's or Hart's horn $;$ the horn of the Certus Elaphas, formerly so much used for the preparation of ammonia, that the alkali was commouly called Salt or Spirit of Hartshorn.
5. Cornu ustum. Burnt hartshorn; $\boldsymbol{n}$ white friable substance, possessing no antacid properties.
6. Spiritus cormu usti. The resnlit of the destructive distillation of hartshorn.
[CORN US. A genus of plants of the natural order Cornacce.
[1. Cornus circinata. Round-leared dogwood. An indigenous plant, the hark of which is employed as a tonie and astringent.
[2. Corms Florida. Dogrood. An indigenons plant, believed to possess medicinal propertics closely analogous to those of Peruvian Bark. It is given in powder, decoction, and catract.
[3. Cornus scricca. This is also an indigenous specics, and has the sanue modicinal propertics as the preceding.]
[COMNUTE (corn", a born). Haring borns; born-shaped.]

COROLLA (dim. of corona, a cromn). Literally, a little crown. The internal envel ope of the floral apparatus. Its separate pieccs are called petals; when these are distinct from each other, the corolla is termed poly-petalnus; when they cohere, gamo-petalous, or incorrectly mono-petalous. A petal, like a sepal, may be spurred, as in violet. Compare Calyx.

CORONA. A crown. Hence the term coronal is applied to a suture of the head; and coronary to vessels, nerves, \&c., from their surrounding the parts like a crown.

1. Corona ciliaris. The ciliary ligament, or circle. See Cilium and Halosignatus.
2. Corona glandis. The prominent margin or ridge of the glans penis.
3. Corona tubulorim. A circle of minute tubes surrounding each of Peyer's glands, opening into the intestine, hut closed at the other extremity.
4. Corona Veneris. A term for venereal blotches appearing on the forehead.
[CORONAL SUTURE. The suture formed hy the union of the frontal with the two parietal hones.]
[CORONARY. Applied to vessels, ligaments, and nerres which encircle parts like a crown.]

CORO'NE (kopwivn, a crow). The acute process of the lower jaw-hone; so named from its supposed likeness to a crow's hill : whence-

Coron-oid (aidos, likeness). A process of the ulna, shaped like a crow's heak.
[CORPORA. Plural of corpus, q. จ.]
CORPULENCY (corpus, the hody). An excessive increase of the hody from accumulation of fat. See Obesity.

CORPUS. A body. Plural, Corpora. Hence the following terms:-

1. Corpus Arantii. A small fibro-cartilaginous tuhercle, situated in the centre of the free margin of each of the semi-lunar valves of the heart, and named after Aran. tius of Bologna.
2. Corpus callosum (callus, hardness). The hard substance which communicates between the hemispheres of the brain; also called commissura magna.
3. Corpus cavernosum vagince. The erectile spongy tissuc of the vagina, termed by Degraaf retiforme, or net-like.
4. Corpus dentatum vel serratum. A yellowish mattcr which appears on making a section of the crura cerebelli.
5. Corpus fimbriatum (fimbria, a fringe). A narrow white hand, - the lateral thin edge of the fornix, also called tenia hippocampi.
6. Corpus Highmorianum. A prominence of the suporior part of the testis,
so called from Highmore of Oxford. See Mediastinum testis.
7. Curpus lutcum (luteus, yellow). Tho cicatrix left in the ovarium, in consequence of the hursting of a Graffian vesicle.
8. Corpus mucosum. Rete mucosum. A soft, reticulated substance, first described by Malpighi as situated between the cuticle and cutis, and giving the proper colour to the skin, being hlack in the Negro, yellow in the Chinese, and copper-coloured in the aboriginal $\Delta$ mericans.
9. Corpus pampiniforme (pampinus, a tendril). A tendril-like plexus of the spermatic vein.
10. Oorpus psalloides. Another name for the lyra, considered by Gall as the general union of the communicating filaments of the fornix.
11. Corpus rhomboïdeum. Ganglion of the cerehellum; a gray body ohserved in the centre of the white substance of the ccrebellum, if an incision he made through the outer third of the organ.
12. Corpus spongioszim (spongia, a sponge). A lengthened body situated in the groove upon the under surface of the two corpora cavernosa.
13. Corpora albicantia (albico, to become white). Two white hodies of the cerebrum, situated behind the gray substance frow which the infundibulum arises. They are also called corpora candicantia, and mammillary or pisiform tubercles.
14. Corpora cavernosa (caverna, a cavern). Two lengthened bodies, constituting the chief bulk of the body of the penls. They are separated by an incomplete partition, named septum pectiniforme.
15. Corpora geniculata (geniculum, a knot). Two knotty prominences, the external and the internal, at the inferior surface of the thalami nerrorum opticorum.
16. Corjora olivaria. Two olive-shaped eminences of the medulla ohlongata. On making a section of the corpus olivare, an oval medullary substance is secn, surrounded by cineritious matter, and called corpus dentatum eminentice olivaris.
17. Corpora pyramidalia. Two small pyramidal eminences of the medulla oblongata.
18. Corpora quadrigemina (four double). Four emincnces (tubercula) of the hrain, supporting the pineal gland, formerly called nates and testes.
19. Corpora restiformia (restis, a cord). Two cord-like processes, cxtending from the medulla oblougata to the cerehcllum.
20. Corpora scsamoïdea. Another name
for the Corpuscula Arantii, from their being of the size of sesamum seeds.
21. Corpora striata (stria, a strcak). Two strcaly cminences in the lateral ventriole, termed hy Gall the great superior ganglion of the brain.
[22. Corpora Wol.fiana. The temporary renal organs of the embryo of the higher vertehrata, which are afterwards superseded by the permanent kidneys.]

CORPUSCULUM (dim. of corpus, a body). A corpuscle, or little body.

Corpuscula Arantii. A designation of threc small hard tuhercles, situated on the point of the valves of the aorta. They are also called corpora se8amö̈dea, from their being of the size of the sesamum seeds.
[CORPUSCULAR (corpusculum, an atom). Of, or belonging to, a corpuscle, or to the doctrine of atoms.]
.CORRIGENS. A constituent part of a medicinal formula, "that which corrects its operation." See Prescription.

CORROBORANTS (corroboro, to strengthen). Remedies which impart strength.

CORROSIVES (corrodo, to eat away). Substances which have the power of wearing away or consuming bodies, as caustics, eschariots, \&c.

CORROSIVE SUBLIMATE (corrodo, to eat away). The bi-chloride of mercury, formerly called the oxymuriate.

CORRUGATION (corrugo, to wrinkle). The contraction of the surface of the body into wrinkles.

Corrugator supercilii. A muscle which knits and contracts the brow into wrinkles. CORSICAN MOSS. The Gigartina hel-mintho-corton, a Cryptogamic plant, of the order Alga, used in Corsica as a remedy for intestinal worms.

CORTEX (bark). A term which is generally applied to Peruvian bark.

1. Corticine. An alknloid found in the bark of the Populus Tremens.
2. Cortical substance. The exterior part of the brain, also termed cineritions ; and of the kidney.
[CORTEX CARYOPHYLLATA. An aromatic bark brought from the West Indics, and supposed to be derived from the Myrtns acria (Schwartz) ; Cassia caryophyllata; Clove bark.]
[CORTEX CULILABAN. The bark of Cimamomim culilawan.]
[CORTEX FRANGULE. The bark of Rhamnus frangula.]
[CORTICOSUS (cortex, bark). Corticosc. Having inuch bark; having the property of hark.]
the bark of the root of which yields a milky juiee used for the cure of diarrhoca and dysentery.]

CORYDALIN. An alkaloïd contained in the root of the Corydalis bulbora and fabacea.

CORYMB. A form of inflorescence, in which the lower stalks are so long that their flowers are elevated to the same lerel as that of the uppermost flowers. The expansion of the flowers of a corymb is centripetal. See Fascicle.
[Corymbiferous (fero, to bear). Bearing or having corymbs.]
[CORYLUS ROSTRATA. Beaked Mazel. An indigenous plant, the speculæ of the involucre of which has been employed as an anthelmintic. It operates in the same way as cowhage, and is administered in the same manner and dose.]

CORT'ZA (ќ́pu弓a; from кбpus, or кápa, the head). An inflammatory affection of the mucous membrane lining the nose, and its contiguous carities, usually arising from cold. It is also called gravedo, nasal catarrh, cold in the head, stuffing in the head, \&c. See Catarrh.

COSMETIC ( $\kappa \sigma \sigma \mu o s$, ornament). A remedy which improves the complexion, and removes hlotches and freckles.
[COSMOS. A term applied by Hippocrates to the order and series of critical days.]

COSTA (custodio, to guard). A rib. The ribs are divided into-

1. The true, or sterno-vertebral. The first seven pairs; so called hecause they are uuited by their eartilages to the sternum ; these are called cnstoder, or the preservers of the heart.
2. The fulsc, or vertebral. The remaining five pairs, which are successively united to the lowest true rib, and to each other.
3. The vertebral extremity of a rih is called the head; the contracted part which adjoins it forms the nock; at the back of the rib is the tubercle; further nutward the bone bends formard, producing tho angle, from which procceds the body, which passes formards and downwards to the sternal cxtremity.
[Costatus. Costate. Rihbed.]
[Costo-. Used as a prefix in compound words to denote connection with, or origin from, $a$ rih or ribs.]

COSTIVENESS. Another term for constipation, or confinement of the borels.

COSTUS. A substance called puichuk in India, and produced by a genus of the order Composita, to which the nomo of Aucklandia has been given, in honour of tho Earl of Auckland.

COTTON. The hairy oovering of the seeds of several specics of Gosaypitum.

COTULA. Ph. U. S. The herb Anthemis Cotula. May-wecd. This plant possesses the same properties as Chamomile, and is given in the same form.]
[COTYLE. An old Roman measure. The socket of the hip-hone.

Cotyloild (ecios, likeness). A term applied to the acetahulum, or the eavity of the hip, for receiving the head of the thighbone, resembling an ancient cup.

COTILEDON (Korudndev, a cavity). The seed-lohe of a plant. Plants have been distinguished, with reference to the number of their cotyledons, into di-coty. ledonous, or those which have two cotylcdons in their seeds; mono-cotyledonous, or those which have only one; and a-cotyledonons, or those which have none.
$\left.\begin{array}{l}\text { [COTYLEDON UMBILICUS, } \\ \text { [COTYLEDON UMBILICUS } \\ \text { VENERIS. }\end{array}\right\} \begin{gathered}\text { The } \\ \text { navel- } \\ \text { Wort, }\end{gathered}$ the leaves of which have emollient properties, and have heen used as an external application to piles; of late years it has been vaunted as a remedy for epilepsy.]
[COUCH-GRASS. Common name for the Triticum Repens.]

COUCHING. The depression of a cataract.
[COUGH. A sonorous and violent expulsion of air from the lungs. See Auscultation.]

COUMARIN. The odoriferons principle of the Tonka hean, the produce of the Coumarouna odorata; and of the flowers of the Melilotur officinolis.

COUNTER-EXTENSION. A means of reducing a fracture by making extension in the opposite direction. See Extension.
[COUNTER-INDICATION. The existence of some special circumstance opposed to, or forbidding, the adoption of treatment which would otherwise have heen suitable.]

COUNTER-IRRITATION. Antagonism. The production of an artificial or secondary disease, in order to relieve anotber or primary one. Dr. Parry calls this the "cure of diseases by conversion." But as the secondary disease is not always a state of irritation, Dr. Pereira suggests the use of some other term, as connter-morbific. The practice is also called derivation and revulsion.

COUNTER-OPENING. Contra-aperturo. An opening made in a sccond part of an ahscess, opposite to a first.
[COUP. A blow or stroke.]
Coup-de-sang. Blood-stroke; an instantaneous and universal congestion, without
any escape of blood from the vessels. This is a form of hæmorrhage, occurring in the brain, the lungs, and in most of the other organs of the hody.

Coup-de-soleil. Sun-stroke. An affecr tion of the head, produced by the rays of the sun.
[Coup-de-vent. A wind-blast; an affection caused by exposure to a keen, cold wind.]

COUP or TOUR-DE-MAITRE. A mode of introducing the sound, with the convexity towards the abdomen.

COUPEROSE (cuprum, copper; rosa, a rose). Goutte-rose. The Acne, or gutta rosacea, or carbuncled face; so named from the redness of the spots.

COURAP. A form of Impetigo, peculiar to India, descrihed by Sauvages under the term scabies Indica.

COURONNE-DE-TASSES. Literally, a crown or circle of cups. An apparatus employed in voltaic electricity, consisting of a circle of cups containing salt water, and connccted together by compound metallic arcs of copper and zinc.

COUVRE-CHEF EN TRIANGLE. A triangular bandage for the head.
[COW-BANE. A common name for the plant Cicuta virosa.]

COW-ITCH, or COWHAGE. A substance procured from the strong, brown stinging hairs, covering the legume of the Mucuna pruriens, and employed as a mechanical anthelmintic.
COWPER'S GLANDS. Accessory Glonds. Two small granulated glandular bodies placed parallel to each other before the prostate.

COW-POX. The vernacular name for Vaccinia, from its having heen derived from the cow.

COW-TREE. Pala de Voea, A tree which yields, by incision, a glutinous sap or vegetahle milk.

COXA. The hip, or haunch; the huckle. hone; the joint of the hip. The term is synonymous with coxendix.

1. Os coxarum. Another term for the os iliacum, more generally called of innominatum.
2. Cox-algia (ä̀yos, pain). Pain of the hip or haunch.

COX ELUVIUM (coxa, the hip; lavo, to wash). The bip-bath, or demi-bain of the French, in which the patient is immersed as high as to tho unhilicus or hip.
[COXE'S MVE-SYRUP. Compound Syrup of Scuills. Sce Syrupus Scille compositus.]

CRAB-LOUSE. The pediculus pubis, or morpio ; a species of louse distinguished hy the cheliform structure of its legs, and
frequently inducing locel prurigo; it is creatine is converted by lieating it with an found chiefly on the groin and cye-brows of uncleanly persons.

CRAB-YAWS. Excreseences on the soles of the feet. Sce Framborsia.

CRAMP (krempen, German, to contract). Spasm ; violent contraction of the muscles.
[CRANBERRY. Common name for the fruit of the Vaccilitum oxycoccos.]
[CRANESBILL. Common name for the Geranium.]

CRANIUM ( $x$ ápa, the head). The skull, or cavity which contains the brain, its membranes, and vessels. The inner and outer surfaces of the hones are composed of compact layers, called the external or fibrous, and the internal or vitreous, tables of the skull. There is an intermediate cellular texture, termed diploe, which is similar to the cancelli of other bones.

1. Cranio-logy ( $\lambda$ byos, discourse). A description of the skull.
2. Cranio-scopy (oxoním, to ohserve). An inspection of the skull. Dr. Pricbard has charactcrized the primitive forms of the skull according to the width of the bregma, or space hetween the parietal bones: hence-
3. The steno-bregmate (orivos, narrow). or Æthiopian variety.
4. The meso-bregnate ( $\mu$ ह́гos, middle), or Caucasian variety.
5. The platy-bregmate ( $\pi \lambda$ arv̀s, broad). or Mongolian variety.
[Craniometer ( $\mu \varepsilon$ ¢pov, a measure). An instrument for measuring the cranium.]
[CRASIS (кєpávvup, to mix). The due distribution of the humours of the hody, so as to constitute a state of health; constitution ; teurperament.]

CRASSAMENTUM (crassus, thick). The cruor, or clot of blood, consisting of fihrin and red glohules.

CREAM OF LIME. A mirture of lime and water, used for purifying coal gas, by its property of ahsorbing or combining with the contaminating gases.

CREAM OF TARTAR. Cremor Tartari. Tho purificd hi-tartrate of potash. [CREASOTE, or] CREOSOTE (rpias, flesh; $\sigma \dot{\zeta} \zeta \omega$, to preserve). An oily, colourless, transparent liquid, discovered first in pyroligneous acid, and subsequently in the different kinds of tar. Its name is derived from its preventing the putrefaction of meat or fish, when dipped in it.

CREATINE ( $\kappa$ pias, flesh). A nitrogonous, crystallizable substance, obtained from muscular fibrc.
[CREATININL: A base, into which

CRFEPINGSICKNESS (krielel kranheit). The uaruc by which the gangrenous form of Ergotiom is known in Germany.

CREMASTER ( $\kappa \rho \rho \mu \dot{\alpha} \omega$, to suspend). A muscle which draws up the testis.

CREMOR PTISAN E. The thick juice of harley; panada water; gruel of frumenty. -Celsus.
[CRENATE (crenatus, notched). Having rounded tecth. Applied to certain leaves, the margins of which have rounded projections or teeth. When these teeth are themselves crenate, the leaf is said to he bicrenate.]

CREPITATION (crepito, to creak). The grating sensation, or noise, occasioned by pressing the finger upon a part affected with emphysema; or by the ends of a fractnre when moved; or by certain salts during calcination.

CREPITUS (crepo, to crsckle). The peculiar rattle of pneumonia; the grating made hy joints, in a deficiency of synovia, dc.

CRETA. Cbalk; a friahle carbonate of lime.

Creta praparata. Prepared chalk. This is common chalk, the coarser particles of which have heen removed by washing.

CRETINISM. Imperfect development of the hrain, with mental imbecility, usually conjoincd with hronchocele, observed in the valleys of Switzerland and on the Alps. See Goître.

CRIBRIFORMIS (cribrum, a sieve; forma, likeness). The name of the plate of the ethmoïd hone, from its being perforated like a sieve.

CRICOS (крікоя). A ring.

1. Cricoĩd (aidos, likeness). The name of the ring-like cartilage of the larynx.
2. Crico-. Terus compounded with this word belong to muscles of the larynx.
[CRINATUS (crinis, hair). Crinate; having hair.

CRINIS. The hair, when set in order or plaited. Sce Capilhus.
CRINONES. Grubs; a secretion from the scbaceous glands, appearing on the arms, legs, and backs of infants.

CRISIS (apıve, to decide). Literally, a decision or judgment. An event or period. which murks changes in disense.
[CRISTA. A crest. In anatomy it is applied to sceeral bony projections, and to a part of the nymplie. In surgery it is applied to excrescences like the comb of a enek nbout the anns.]

CRISTA GALLI (cocli's creat). The criatiform process of the ethmoid bone.
[CRISTATUS. Crested. Applied to several parts of plants.]

CRITICAL (xpivo, to decide). A term applied to symptoms or periods, especially connected with changes in a discase, as sudden perspiration, diarrhoa, or a deposit in the urine; and cortain days were so designated hy the ancient physicians.

CROCI STIGMATA. Saffron; the dried stigmas of Crocus sativis, or common crocus.

CROCKE. A kind of dyspnœa, observed in hawks, produced hy overstraining in flying. It is analogous to broken wind in horses. In hoth cases there is pulmonary emphysema.

CROCONIC ACID (crocus, saffron). An acid procured by heating potnsh with carhon, and so named from the saffron colour of its salts.

CROCUS ( $\kappa p$ óos). Saffron. An old term applied to oxides, and other preparations of the metals, from their saffion colour: thus we have crocus martis, or oxide of iron; crocus metallorum, or oxide of antimony/; crocus Veneris, or oxide of copper.

CROP, or CRAW. A sort of preliminary stomach in some hirds, formed by an expansion of the œsopbagns. Compare Gizzard.

CROSS-BIRTH. Parodinia perversa. Labour impeded by preternatural presentation of the foetus or its membranes.

CROTAPHITIC NERVE ( $\kappa \rho \sigma r a \phi o s$, the temple). A name given hy Palletta to a portion of the Fifth Pair, which he considered to be divided into three parts, viz.: the common trunk of the fiftb pair, or portio major; the crotaphitic, agreeing with the portio minor of other anatomists; and the buccinator.

CROTCHET. A curved instrument with a sharp hook to extract the foetus.

CROTON. A genus of Euphorbiaceous plants, abounding in a milky juice.

1. Croton tiglium. Purging Croton; the plant which yields the drastic croton oil, or oil of tiglium. The seeds, called grana tiglii, or parging nuts, are said to be produced by the Crotou pavana.
2. Croton eleuteria. Sea-side Balsam, or Sweet-wood; the plant which yiclds the cascarilla or eleutcria bark. [The croton eascarilla yields copalcbi, not cascarilla hark.]
3. Crotonic acid. Jatrophic acid. An aeid existing in the sceds of Crotun tiglium.
4. Crotonin. A vegeto-alkali found in the secds of Croton tiglium, and probably identical with tiylin.

CROTOIIIUS ( $x$ ofos, a pulse). Croro-
phium. A term importing painful pulsation, or throbling in the temple.

CROUP. The Cynanche Trachcalis, so called from the crouping noise attending it. This noise is similar to the sound emitted by a chicken affected with the pip, which in some parts of Scotland is called roup; hence, probably, the term croup. See Hives.
[CROWFOOT. Common name for several specics of Ranutculus.]

CRUCIAL [cruciate, cruciform] (crux, crucis, a cross). [Crosswise.] A term applied to-1, incisions made across one another, and - 2, to the crossing ligaments of the knce, \&c.

CRUCIBLE (crux, a cross, which the alchemists stamped upon the vessels; or from crucio, to torture). A chemical vesscl, in which the metals were tortured, to force them to hecome like gold.

CRUCIFERE (crux, crucis, a cross; fero, to hear). The Cruciferous tribe of Dicotyledonous plants. Herhaceons plants with leaves alternate; flovers, poly-petalous ; sepals, 4, deciduous, cruciate, alternating with four cruciate petals; stamens, 6, hypogynous, tetradynamous; fruit, a siliqua, or silicula.

CRUDITIES (crudus, raw). Undigested suhstances in the stomach.

CRUOR. Tbe crassamentum, or clot of the blood. Sce Blood.

CRUPSIA ( $\chi$ póa, colour; ò $\psi \iota$, sight). Visus coloratus. A defect of sight, consisting in the colouration of ohjects.

CRURA. Plural of Crus, a leg; $\Omega$ term applied to sume parts of the body, from their resemblauce to a leg or root, as the crura penis, crura corebri, crura cerebelli.

1. Crurcus. One of the extensor muscles of the leg, also called femorcus.
2. Crural arch. Tbe ligament of the thigh, also called inguinal ligament, ligament of Poupart, of Fallopius, \&c.

CRUSTA (Latin). A shell; a scab.

1. Crusta lactea. Milk scall; the Porrigo larvalis of Willan.
2. Crustacer. The fourth class of the Diplo-gargliata, or Entomoïda, comprising articulated animals, with an exterior shell which is gencrally bard and calcareous.
[3. Crusta petrosa. Sce Cementum.]
CRYOLITE. Tho double hydrofuate of alumina and soda.

CRYOlIIORUS (xpv́os, cold; фipw, to hring). Litcrally, the frost-bearer. An instrument for exhibiting tbe degree of cold produced by craporation.
CRIPJA (xpúrtw, to hide). Mucous follicles wbich are eoncealed.

CRYPTOGAMIA（xpentos，hidden； yá $\mu 0 \mathrm{~s}$, nuptials）．The 24 th class of plants in Linnexus＇s artificial system，compre－ hending those in which the function of reproduction has not been understood． All other plants are rauged under the class Phancrogania．

CRYSTALLI．A term formerly ap－ plicd to the appearances of Varicella，de－ scribed as white shining pustules contain－ ing lymph．

CRYSTALLINE（крv́бтa入入os，ice）．A term applied to the lens of the eye．

CRYSTALLIZATION（xpúorà入os，ice）． The process by which the particles of li－ quid or gaseous bodies form themsclves into crystals，or solid bodies of a regularly limited form．

1．Alternate Crystallization．This term is applied to a phenomenon which takes place when several crystallizable suh－ stances，having little attraction for cach other，are present in the same solution． That which is largest in quantity and least soluhle crystallizes first，in part； the least soluble substances next in quan－ tity then begin to separate；and thus dif－ ferent substances，as salts，are often depo－ sited in successive layers from the same solution．
2．Crystallography（ $\gamma$ pá $\phi \omega$ ，to descrihe）． The science which investigates tho forms of crystals．These have heen considered as primitive，or fundamental；and secondary， or derived．

CU＇BEBA（cubab，Indian）．Cubebs，or Java Pcpper，the berries of the Piper Cu－ beba，an Indian spice．
［Cubebin．A principle very analogous to，if not identioal with，piperin，obtained from Cubebs．］
［CUBITAL（cubitus，the fore－arm）．Of， or helonging to，the fore－arm．］

CUBITUS（cubo，to lie down；from the ancients reclining on this part at meals）． The fore－arm，consisting of the ulna and radius．
CUBOIDES（ $\kappa$ úßos，a cube；tỉos，like－ ness）．［Cuboid．］The name of a bone of the foot，somewhat resembling a cube， situated at the fore and outer part of the tarsus．
［CUCR00－FLOWER．Common name for the plant Cardamine pratensis．］

CUCULLA＇RIS（cucullun，a hood）．A broad hood－like mnscle of tho scapula．
［Cucullate．Hooded；having the apex and sides curved inwards．］
［CUCUMBER．The fruit of the diffe－ rent specics of cucumis．］

CUCUMIS COLOCYNTHIS．The Bitter Cucumber or Colocynth；a Cucur－ bitaceous plant，the fruit of which is the
colocynth or coloquintida of commerce． There are two kinds of colocynth，the Turkey or peeled，and the Mogudore or un－ peeled colocynth．

Colocyuthin．The bitter or purgative principle of the colocynth gourd．

CUCURBITA（a curvitate）．A gourd． A gourd－like vessel for distillation．
［CUCURBITA CITRULLUS，Water－ melon．The seeds of this well－known fruit are considered demulcent and diu－ retic，and an infusion of them is much used in domestic practice for stranguary and other affections of the urinary pas－ sages．］
CUCURBITACE 曆（cucurbita，a gourd）． The Gourd tribe of Dicotyledonous plants． Climbing plants with leaves palmated，suc－ culent；flowers unisexual，monopetalous； stamens cohering in three parcels；ovarium inferior；fruit lleshy；seeds flat；lesta cori－ aceous．
CUCURBITULA（dim．of cucurbita）．A cupping－glass；it is termed cruenta，when employed with scarification；sicca，when unaccompanied with scarification．

CUDBEAR．A colouring matter pre－ pared from the lichen Lecanora tartarea， and named from Sir Cuthhert Gordon．
［CUD－WEED．Common name for the Gnaphalium Margaritaceum．］
［CUICHUNCHULLI．A name given
in South America to the root of a species of Ionidium growing in Quito，and consi－ sidered as an efficacious remedy for ele－ phantiasis．］
［CULILAWAN．An aromatic bark， produced hy the Cinnamomun Culilawan． It is rarcly used．］

CULINARY（culina，a kitchen）．Any－ thing appertaining to the kitchen．

CULM．The name of the peculiar stem of grasses，sedges，\＆c．
［CULVER＇S PHYSIC．A common naine for the plant Leptandria Tirginica．］ ［CUMIN：Common name for the $C u$－ minum cyminum．］

CUMINUM CYMINUM．The Offici－ nal Cumin ；an Umbelliferous plant，sicld－ ing the fruit incorrectly termed cumin seeds．It is principally used in reterinary surgery．

Cumen or cymcu．One of the two oils composing oil of cumin ；a carbo－hydrogen． The other is an oxygenated oil，called hydruret of cumyl．Cumyl is a bypothe－ tical basc．
［CUNEATE（cuncus，a Tedge）．Wedge－ shaped；inversely triangular，with rounded angles，as applicd to certain leaves．Sy－ nonymous with cunciform．］

CUNEIFORM（cuncun，a wedge ；forma， likeness）．Wedge－like；the name of tbree
bones of the foot, the inner, middle, and outer cunciform.
[CUNILA. A Linnean genus of plants of the natural order Labiatce.]
[Cunila mariana. American Dittany. A suall, indigenous, perennial herb, possessing gently stimulant aromatio properties, analogous to the mints.]

CUPEL (kappel, German). A small, fiat, cup-like crucible, made of bone ash.

Cupellation. The process of purifying gold and silver, by melting them with lead, which becomes first oxidated, then vitrified, and sinks into the cupel, carrying along with it all the baser metals, nnd leaving the gold or silver upon its surfnce.

CUPOLA. The dome-like extremity of the canal of the cochlea.

CUPPING. The abstraction of hlood by the application of the cupping-glass.

CUPRUM (quasi as Cyprium, from the island of Cyprus). Copper; a red metal, found in America, and some parts of England. By the alchemists it was called Venus, See Copper.

1. Cupri sulphas. Sulphate of copper, also called blue vitriol, Roman vitriol, blue copperas, blue stone, and bisulphate of copper.
2. Cupro-sulphas ammonica. Cuprosulphate of ammonia, commonly called ammoniated copper, or ammoniuret of copper.
3. Cupri sub-acetas. Subacetate of copper, the ærugo of the ancients; it is frequently termed diacetate of copper.
4. Cupri acetas. Acetate of copper, improperly called distilled or crystallized verdigris.

CUPULIFER $\not \subset$ (cupula, a small cup). The Oak tribe of Dicotyledonous plants. Trees or shrubs with leaves alternate; flowers amentaccous, diœcious, apetalous; ovarium inferior, enclosed in a cupule; fruit, a borny or coriaceous nut.

CURA FAMIS. Abstinence; or, literally, regard for fasting.
[CURARE POISON. Wourali. A deadly poison, ohtained by the savages inhabiting the borders of the Oroonoko and Amazon rivers, from a species of Strychnia. It causcs instant death when introduced into the blood; but it is inert when introduced into the stomach.]

Curarine. An alkaloìd, extracted from the Curara or Wourali, a substance used by the Indians for poisoning arrows.
[CURCUMA. The pharmacopoial name for the rhizoma of the Curcunar longa.]

1. Curcuma angustifolia. The Narrowleaved Turmeric, tho tubers of which yield the East Indian Arrow-root of commerce.
2. Curcuma Longa (kurlum, Persinn for saffron). The Long-rooted Turmeric, the tubers of which yield the turmeric of commerce.
3. Curcuma Zedoaria. The species which yields the aromatic rhizome called zedoury root.
4. Curcuma Zerumbet. The species, perhaps, which yields the aromatic rbizome called Zerumbet root.

CURCUMA PAPER. Paper stained with a decoction of turmeric, and employed by chemists ns a test of free alkali, by the action of which it receives a brown stain.

CURCUMIN. The colouring matter of turmeric, obtained in a state of purity by separating it from its combination with oxide of lead.

CURD. The coagulum which separates from milk, upon the addition of acid, rennet, or wine.

CURETTE (a spoon). [Scoop.] A apoon-like instrument for the extraction of the cataract.
[CUSPARIA. The pharmacopoial name for the hark of the Galipea officinalis. A Linnean genus of plants of the natural order Rutacece.]
Cusparia Bark. Angustura Bark. The produce, according to Humboldt, of the Galipea cusparia; according to Dr. Hancock, of the $G$. officinalis.
[Cusparia febrifnga. The former systematic name for the tree which yields the Angustura bark.]
[Cusparin. A peculiar principle, crystallizable in tetrabedral prisms, ohtained by Saladin from Angustura Bark.]
[CUSPIDATE (cuspis, r point). Spearshaped; tapering to a stiff point ; abruptly acuminate.]

CUSPIDATI (cuspis, a point). The canine or eye-teeth. See Dens.
[CUTANEOUS (cutis, the skin). Belonging to the skin.]

CUTANEUS MUSCULIS (cutis, skin). A name of the platysma myoïdes, or latissimus colli, a muscle of the neck; it has the appearance of a very thin fleshy membrane.

CUTICLE (dim. of cutis). The epidermis or scarf-skin; under this is the cutis vera, or dcrma, the truc skin; and hetwcon these is the rele mucosum.

CUTIS (kúros, the skin). The derma, or true skin, as distinguished from the cuticle, epidermis, or scarf-skin.

Cutis anscrina. Goose-skin; an effect of cold upon tho skin, in which the cuta. neous tissuo becomes dry and shrivelled, while the bulbs of the hairs become clovated and manifosted.
［CYANATE．A combination of cyanic acid with a salifiable hase．］

CYAN＇OGEN（kưavos，blue；yevváw，to gencrate；so called from its heing an es－ sential ingredient in Prussian bluc）．Bi－ carburet of nitrogen；a gas．It forms， with oxygen，the cyanic，cyanoms，and fulminic acids；and with hydrogen，the hydro－cyanic or prussic．All its com－ pounds，which are not acid，are termed cyanides or cyanurcts．
［CYANOL（xúavos，blue）．An artificial basio suhstance found in the naphtha of coal gas．］

CYANOPATHIA（kìavos，blue；rá⿱日大日， disease）．Blue disease；another term for cyanosis．

CYAN O＇S IS（kuavoers，tho giving a hlue colour；from xúavas，hlue）．Morbus Coruleus．Blue disease；blue jaundice of the ancients：a discase in which the complexion is tinged with venous hlood， from malformation of the heart．The term has heen derived from xúavos voros，lite－ rally，blue diseuse；and it is synonymous with plethora venosa．
［CYANURIC ACID．An acid ohtained by distilling uric acid per se，when it yields carbonate and hydrocyanate of ammonia， and a sublimate of Pyrouric or Cyanuric acid；also ohtained from urea hy gradu－ ally heating it in a retort to ahout $600^{\circ}$ ， when it is resolved into ammonia and an－ bydrous cyanuric acid．］
［CYANURET．A combination of cya－ nogen with a base．］
［CYANURIN．A very rare suhstance found in the urine，deposited as a blue powder，which may be separated hy filter－ ing．］
［CYATHIFORM（cyathus，a drinking－ cup；forma，form）．Cup－shaped．］

CY＇ATIIUS（xúaOos，a drinking－cup）． A wine－glass，which may he estimated to contain an ounce and a half－as much as one could easily swallow at once．See Cochleare．
CYCAS CIRCINALIS．An East In－ dian Palm tree，the soft centre of which yields a kind of sago．

CYCLO－BRANCHIA（кúxגos，a circle； B $\alpha$ áx ca，gills）．Ring－gilled animals，as the chiton：Order 9，class Gasteropoda．

CICLO－GANGLIATA（xúxגos，a circle； yaydiov，a nerve－knot）．A term applied by Dr．Grant to the Fourth sub－kingdon of animals，or Mollusca，comprising ani－ mals mostly aquatic，slow－inoving，or fixed，without internal skelcton，covercd with a permanent calcareous or cartilagi－ nous shell，and distingnished by the high development of the cercbral ganglia，and thoir circular distribution around the ceso－
phagus．The classes are the Tunicata， Conchifera，Gastcropoda，Ptcropoda，and Cephalopoda．

CYCLO－NEURA（kúkגos，a circle ；veĩ． pov，a nerve）．A term applied by Dr． Grant to the First sub－kingdom of ani－ mals，or Radiata，as cxpressive not only of the circular form of the nervous axis in this division，but also of its rudimental state of simple filaments．The classes are Poriphera，Polypiphera，Malactinia，and Echinoderma．
［CYCLOPS（ $\kappa$ v́k ${ }^{2}$ os，a circle；$\omega \downarrow$ ，an eye）． A monster with a single eye，and that situ－ ated in the middle of the forehead．］

CYCLO＇SIS（кúкגos，a circle）．A cir－ eular movement of the glohular particles of the sap，as ohserved in the cells of Chara and Nitella，and in the jointed hairs projecting from the cuticle of seve－ ral other plants．A similar motion has been recently found by Mr．Lister to exist in a great numher of Polypiferous Zoo－ phytes．

CYCLO－STOMI（кúкגos，a circle；or $\delta \mu a$ ， a mouth）．Ring－mouthed fishes，as the lamprey．
［CYDONIA．A Linnean genus of plants of the natural order Pomacere．］
Cydonia Vulgaris．The Common Qnince， a Pomaceous plant，the seeds of which are employed in medicine for the sake of their mucilage，which is called bassorin，or more strictly cydonin．
［CYDONIUM．The pharmacopœial name for the seeds of Cydonia Vulgaris．］
［CYMBIFORM（cymba，a boat；forma， likeness）．Boat－shaped；navicular．］

CYME．A form of inflorescence resem－ bling an umhel and a corymh，hut rith a centrifugal expansion，indicated hy the presence of a solitary flower in the axis of the dichotomous ramifications．
［Cymose．Resembling a cyme，as ap－ plied to inflorescences and leafy branches．］
［CIMINUM．The pharmacopoial name for the fruit of the Cuminum cyminum．］
［CYMOGRAPIIION（xĩ $\mu$ ，warc；ypá－ $\phi \varepsilon$ ev，to write）．A name given hy Prof． Ludwig，of Zurich，to an instrument con－ trived hy him，and destined to measure and indicate the comparative force and duration of the pulsations of a vessel．］

CYNANCHE（xivuv，a dog；ăyXu，to strangle）．Literally，dog－choke．Squin－ ancy，squincy，quincy，sore throat，throat disorder．＂The disease is supposed hy some to be named from its occasioning a noise in breathing like that made by dogs when being strangled．By others it is said to be from the patient being ohliged to hreathe like a dog，with open mouth and protruded tongue．＂－Forbes．
[CYNANCIUM. A Linneán genus of plants of the family Apocinece.]
[1. Cynanchum argel. The systematic name of an Egyptian plant, the leaves of Which are used in adulterating those of Senna.]
[2. C. Monspeliacum. Montpellier Scammony; $\Omega$ spurious scammony manufactured in the south of France, said to be made from the expressed juice of this plant.]
[3. C. olexfolium. A species, the leaves of which were used to adulterate Alexandria senna.]
[4. C. vincetoxicum. White Swallowwort. An European species, the root of which was formerly esteemed as a counterpoison. The leaves are emetic.]

CYNAPIA. An alkaloïd discovered in the Athusa Cynapium, or lesser hemlock.
[CYNARA SCOLYMUS. The systematic name for the garden artichoke.]

CYNIPS QUERCIFOLII. A bymenopterous insect, whose habitation is the gall of the oak. The gall itself is called cynipus nidus, or the nest of the cynips.
[CYNOGLOSSUM OFFICINALE. Hound's Tongue. A plant of the family Boraginea, common both in Europe and this country, supposed to possess narcotic properties. It has been used as a demulcent and sedative in pectoral affections, and applied externally to burns, ulcers, \&c.]

CYNOLISSA ( $\kappa \dot{v} \omega v$, a dog ; $\lambda \hat{v} \sigma \sigma a$, madness). Canine madness.

CYNOREXIA ( $\kappa \dot{v} \omega \nu$, a dog; $\quad$ боє $\xi, 5$, appetite). Canine appetite. [Bulimia.]

CYNOSBATUS (kúluv, a dog; $\beta$ átos, a bramble). Rosa canina. The dog-rose, which yields the hep of medicine.
[CYPRIPEDIUM. A Linnean genus of plants of the natural order Orchidaсес.]
[Cypripedium parvifolium. Ladies'slipper, Moccasin plant. An indigenous species, the root of which is said to be sedative and antispasmodic, and quite equal to valerian in power.]
[Cypripedium pubescens. Yellow ladies' slipper, Noah's ark, \&c. Another indigenous specics, the root of which has been extolled in various nervous disenses, as epilepsy, hypochondriasis, neuralgia, and morbid sensitivencss of the nervous system generally, and cspecially of the eye.]
[Several other species, as $C$. acanle, $C$. hunile, and C. spectabile, are said to have similar propertics.]

CYR'TO'SIS (кขprds, curved). A term denoting, among the ancients, a recurvation of the spine, or posterior crookedness;
as Indosis denoted procurvation of the head, or anterior crookedncss. It has, more recently, been termed cyrfonozis, or " morbns incurvus." See Hybosis.
[CYS'I'ALGIA (кúvтıs, the bladder; ädros, pain). Pain in the bladder; neuralgia of the bladder.]
[CYSTECTASY (xv́atis, ${ }^{\text {the }}$ bladder; iктcive, to draw out). Lithectasy, (q. v.)]

CYSTIS (кúarıs, a bladder). [A bag or bladder; a membranous shut sac, containing a liquid or balf-liquid matter.]

1. Cystis fellea (fel, gall). The gallbladder, a membranous reservoir, situated at the under surface of the right lobe of the liver.
[2. Cystic. Of, or belonging to, the urinary or gall-bladder.]
2. Cystic duct. The duct leading from the gail-bladder, and uniting with the bepatic duct.
3. Cystic oxide. [Cystin.] A species of calculus, found in the bladder, \&c.
4. Oysticercus (кépкos, a tail). A cystose bladder, containing an unattached and almost always solitary animal. Compare Coenurus, and see Hylatid.
5. Cystirrhagia ( $\dot{\eta} \eta \nu v$ v́w, to burst forth). Hæ morrhage from the urinary bladder.
6. Cystirrhcea ( $\rho \dot{\varepsilon} \omega$, to flow). Catarrbus Vesicæ, or Catarrh of the bladder.
7. Cystitis. Inflammation of the bladder, the nosological termination in itis denoting inflammation.
8. Cystitome (тоні̀, section). An instrument for opening the capsule of the crystalline lens.
[10. Cysto-bubonoccle ( $\beta$ ou $\beta \omega \nu$, the groin; кj$\lambda \eta$, a tumour). Hernia of the bladder through the inguinal canal.]
9. Cystocele ( $\kappa \grave{\eta} \lambda \eta$, a tumour). A hernia formed by protrusion of the bladder.
[12. Cystogenesis (yivouat, to be produced). The generation or production of cavities or cells; cell-development.]
10. Cysto-plasty ( $\pi \lambda$ áन $\sigma \omega$, to form). A mode of treating vesico-vaginal fistula. The edges of the fistula are refreshed, $\Omega$ flap dissected off from the external labium, and united by suture with the refreshcd cdges of the sorc.
[14. Cyatotome ( $\tau \varepsilon \mu \nu \omega$, to cut). An instrument for opening the urinary bladder in the operation of Cystotomy.]
11. Cystotomy (ropì, section). The operation of opening the bladder for the oxtraction of a calculus.

CYI'ISSINA. The emctio principle of the Cytisus laburnum, Asarabacca, and Arnica montana.

CYTISUS SCOPARIUS. Common Broom; an indigenous Leguminous plant,
of which the tops and seeds are cmployed in medicine．Salt of broom，or sal genistæ， is obtained by burning the whole plant．

CYTOBLAST（लútos，a eavity ；$\beta \lambda a-$ orive，to sprout）．A nuclens obserred in the centre of some of the hladders of the
ecllular tissue of plants，and regarded hy Schleiden as a universal elementary organ．
［CYTOBLASTEMA．IHyaline eub． stance；intcrecllular substance．See Bla－ stema．］

## D

［DACRYO－（ $\triangle a x \rho \dot{\omega} \omega$ ，to weep）．Used as a prefix in certain compound words，to denote a reference to or conncetion with the lachrymal apparatus，or the tears．］
［Dacryodenitio（ád̀̀v，a gland）．Inflam－ mation of the lachrymal gland．］
［Dacryocystitis（kúorus，a bag）．Inflam－ mation of the lachrymal sac．］
［Dacryolites（ $\lambda_{i}$ Oos，a stone）．Calculous concretion in tbe lachrymal passage．］

Dacryóma（（бaxpíw，to wecp）．An im－ pervious state of one or hoth of the puncta laebrymalia；so named from the running down of the tear over the lower eyelid．
DEMONOMANIA（ $\delta a i \mu \omega \nu$ ，a demon； بava，maniness）．A species of melancholy， in which the patient supposes himself pos－ sessed by demons．
［DAFFODIL．Common name for the plant Narcissus pseudo－narcissu8．］

DAGUERREOTYPE．A process by which all images produced by the camera obscura are retained and fixed in a few minutes upon surfaces of silver by the ac－ tion of light．The name is derived from Daguerre，the inventor．
［DAFFY＇S ELIXIR．The compound tincture of senna，with the substitution of molasses for sugar candy，and the addition of anisecd and elecampane root．］
DAHLINE．A vegetahle principle dis－ covered in the dahlia，similar to inulin and starch．
［DALBY＇S CARMINATIVE．A ecle－ hrated empirical earminative for children， composed of earbonate of magnesia，$\exists \mathrm{ij}$ ．； oil of peppermint， 12 j ．$;$ nil of nutmeg， Thij．；oil of anisced，收iij．；tineture of enstor，MXxxx．；tincture of assafnetida，败xv．；tincture of opinm，呗v．；spirit of pennyroynl，mexv．；compound tincture of cardamom，mxxx．；peppermint water， fini．］
［DAMARRA TURPENTINE．The olen－resin derived from the Piuss Da－ marra．］
［DAMASK ROSE．Coumon naine for the Roma ceutifulicr．］

DAMPS．The perinanently elartic fluids whicn are cestricated in mince．These are
choke－damp，or carbonic acid；and fire－ damp，consisting almost solely of light car－ burctted hydrogen，exploding on contact with a light．
［DANDELION．Common name for the plant Leoutodon Taraxicum．］
DANDRIEF．A Saxon term for scurf of the head．See Pityriasis．
［DAPHNE．A Linnean genns of plants of the natural order Thymelacea．］
［1．Daphue alpina．The systematic name of a species of dwarf olive said to bo purgative．］

2．Daphue guidium．The hark of this species is employed in France as a vesiea－ tory，under the name of garou．The fruit is the кoxкos xuidoos，or Gnidian berry of Hipporates．

3．Daphne laureola．An indigenous speeies，agreeing in property with the pre－ ceding．

4．Daphne mezereon．The common Me－ zereon or Spurge Laurel，yielding the Me－ zercon Bark．

5．Daphuiu．A peculiar crystalline prin－ ciple，found in the Daphne mezercon，hat not constituting its active principle．Seo Lagella．
DARTOS（Sipw，to excoriate）．Darsis． A contractile fibrous layer，situated im－ mediately bencath the integument of the scrotum．

Dartoid fissue．The structnre of the dartos，intermediate hetrect musele and elastic fibrous tissuc．

D A RTRE（ $\delta a p+\delta s$, a shell or crust； from difw，to excoriate）．Tetter；a terol which has been used at different times to designato almost all discases of the skin．

DATES．The drupaccous fruit of the Phenuix daciyliferr，or Date Palm tree．
［DATURA．A Linnean genus of plants of the natural order Solanacere．］
［Datura ferox．An Enst Indian spe－ cies，the dried root of which is smoked by the natives for the relicf of the paroxysms of asthma．］

Datura Stramouium．The common Thorn apple；a plant，the effeets of which art similar to those of helladonna

Daturia. A vegetable alkali said to exist in the Datura Stramonium.

DAUCUS OAROTA. Common or Wild Carrot; an indigenous Umbelliferous plant. Tbe officinal root is that of the variety sativa, the cultivated or garden carrot. Tho officinal fruits, incorrectly called c(trrot-aecds, belong to the wild oarrot.

1. Rob dauci. Carrot-juive; the expressed juice of the carrot-roat. By standing, a feculent matter, called anylum dauci, recently employed in medicine, is deposited.
2. Carntin, A crystalline, ruhy-red, peutral substance ohtained from the carrot ront.

DAY-MARE. Ephialtes vigilantium. A species of incuhus, occurring during wakefulness, and attended with that severe pressure on the chest which peculiarly sharacterizes night-mare.

DAY: SIGHT. An affection of the vision, in which it is dull and confused in the dark, but clear and strong in the drylight; it is also called nyctalopia, or night-hlindness. Hens are well known to lahour under this affection; hence it is sometimes called hen-blindness.
[DEADLY NIGHT-SHADE. Common name for the plant Atropa Belladonne.]
[DEAFNESS. Diminution or total loss of hearing.]
[DEATH. The final cessation of all the functions which in their aggregate constitute life. Real death is distinguished from apparent death, the latter being simply the suspension of the same functions.]

DEBILITY (debilis, weak). Weakness, feehleness, decay of strength, hoth in mind and hody.
[DEBRIDEMENT (debrider, to unhridle). Unbridling; the division of soft parts which compress or constrict others, which impede the free action of any organ, or which prevent the free discharge from a wound or ahscess.]
[DECA- (dixa, ten). A prefix in many compound words, signifying ten.]

DECANDRIA (díka, ten; àvìp, a man). A class of plants in the Linnean system, charactcrized hy having ten stamens.

DECANTATION. The pouring off of clear fluid from sediments.

DECIDUA (decido, to fall off). A sp.ongy membranc, or chorion, produced at the period of conception, and thrown off from the uterus after parturition.

1. Decidna reflcera. That portion of the decidua which is reflected over, and surrounds the ovum.
2. Decidua vera. That portion of the
decidua which lines the interior of the nterus; the non-reflected portion.
DECIDUOUS (decido, to fall off). Falling off; in botany synonymous with caducous, and opposed to persistent, which denotes permanence.

DECLINATE (declino, to turn aside). Bent downwards; applied in botany to the stamens, when they all bend to one side, as in amaryllis,
[DECIGRAMME (dccinas, the tenth part ; ypuциа, a gramme). The tenth part of a gramsc, equal to 1.5434 grains Troy.]

DECOCTION (decoquo, to boil avay). 1. The operation of boiling. 2. A solution of the active principle of vegetables, ohtained by hoiling them in water.
[DECOCTUM. A decoction.]
[1. Decactuns Cetraria. Decoction of Iceland moss. B. Iceland moss, $\overline{\mathcal{Z}}_{\text {ss. }}$; water, Ojss. Boil dowa to a pint, and strain with compression.]
[2. Dccoctum Ohimaphila. Decootion of Pipsissowa. R. Pipsissewa (hruised), Zj.; water, Ojss. Boil down to a pint and strain.]
[3. Decoctum Cinchone flave. Decootion of yellow hark. B. Yellow hark (bruised), $\mathcal{Z}^{j}$.; water, 0 j . Boil for ten minutes in a covered vessel, and strain the liquor while hot.]
[4. Decoctum Cinchonas rubrce. Decoction of red hark. R. Red bark (hruised), $\mathcal{Z}_{j}$.; water, 0 j . Boil for ten minutes in a covered vessel, and strain the liquor while hot.]
[5. Decoctum Cornus Floride. Decoction of Dogwood. B. Dogwood (hruised), Jj. ; water, 0 j . Boil for ten minutes in a covered vessel, and strain the liquor while hot.]
[6. Decootun Dulcamare. Decoction of Bittersweet. R. Bittersweet (hruised), §j.; water, Ojss. Boil down to a pint, and strain.]
[7. Decoctum Hanatoxyli. Decoction of logwood. R. Logwood (rasped), $\mathfrak{Z}_{j}$.; water, Oij. Boil down to a pint, and strain.]
[8. Decnctum Hordei. Decoction of harley. R. Barley, Zij. ; water, Oivss. First wash away, with cold water, the extrancous matters which adhere to the harley; then pour upon it balf a pint of the water, and boil for a short time. Having thrown away the water, pour the remaining hoiling lot upon the harley; then boil down to two pints, and strain.]
[9. Decoctum Quercus alba. Decoction of white onk bark. R. Whito oak bark (bruised). ⿹\zh26龴.j.; water, Ojss. Boil down to a pint, and strain.]
[10. Dccoctum Sarsaparillas compositum.

Compound decoction of Sarsaparilla. Be. Sarsaparilla (slieed and hruised), hark of Sassafras root (sliced), Guaincum wood (rasped), Liquorice root (bruised), cach $\mathbf{J}_{j}$. ; mezereon (sliced), $3^{\mathrm{iij} .}$; water, Oiv. Maecrate for twelve hours; then boil for a quarter of an hour, and strain.]
[11. Decoctum Sencgre. Dccoction of Seneka. B. Seneka (hruised), ${ }^{\text {ju }}$ j.; water, Ojss. Boil down to a pint, and strain.]
[12. Decoctum Uva Ursi. Decoction of Uva Ursi. B. Uva Ursi, ${ }^{2} \mathrm{j}$.; water, fexx. Boil down to a pint, and strain.]

DECOLLATION (decollo, to behead; from collum, the neck). Deeapitation. The removal of the head.

DECOMPOSTTION. Analysis. The separation of the component parts or prineiples of hodies from each other.

DECORTICATION ( $d e$, from; cortex, bark). The removal or stripping off of the hark, husk, \&c.

DECREPITATION (de, from; crepitus, crackling). The crackling noise which takes place when certain hodies, as eommon salt, part with the water which they contain, hy the application of heat, and fall to pieces.
[DECUBITUS (decumbo, to lie down). The posture of lying; the attitude in which the hody reposes when lying down.]

DECUMBENT (decumbo, to lie down). Lying prostrate, hut rising from the earth at the upper extremity, as applied to the directions taken hy plants.

DECURRENT (decurro, to run down). Running down; applied to leaves whieb are prolonged down the stem, giving it a winged appearance.

DECUSSATION (decusso, to eross like an X). A term applied to parts which cross each other, as the optic nerve.

DECUSSORIUM (decu8so, to divide). An instrument for depressing the dura mater, after trephining.
[DEER-BERRY. One of the common names for the plant Gaultheria procumbens.] [DEFECATION (de, from ; faces, exerement). Tho separating of anything from its excrement. In physiology, the act by which the residual portion of the food is extruded from the body. In chemistry and pharmacy, the separating of the sediment which forms in any fluid.]
[DEFERENS (defero, to convey from). Deferent. Applicd in anatomy to the excretory eanal of the testicle. See Vas Dcfercis.]

DEFLAGRATION (deflagro, to be utterly consumed by fire). The oxidntion of metals by mixing them with nitrate or ehlorate of potash, and projecting the mixturo into a red-hot erucible.

1. Deflagrating mixturcs. These aro generally made with nitre, the oxygen of which is the activo ingredicnt in promoting their combustion.
2. Deflagrator. The name given by Dr. Ilare to a very effective battery, in which the plates were so connected together as to admit of the whole heing immersed into the exciting liquid, or removed from it, at the same instant.

DEFLUXION (defluo, to flow off). Destillatio. Catarrh. This term was formerly used, as well as fluxion, to denote a swelling arising from the sudden flow of bumours from a distant part.

DE'FRUTUM. A mixtnre made of new wine, mentioned hy Celsus. The term appears to he derived à defervendo, contracted for defervitum, i. e., decoctum. See Rob.
[DEGENERATION or DEGENERESCENCE (degenero, to grow worse). A change in the intimate composition of hodies which deteriorates them.]

DEGLUTITION (deglutio, to swallow). The act of swallowing.

DEHISCENCE (dehisco, to gape or open). A term used in hotany to denote the opening of a ripe fruit for the diseharge of the seeds.

DEJECTIO ALVI'NA (dejicio, to east down). The discharge of the freces.
[DELIGATION (dcligo, to hind up). The application of a bandage or of a ligature.]

DELIQUESCENCE (deliquesco, to melt). The property of some salts, of hecoming liquid hy their attracting moisture from the air.
[In hotany, the term deliquescent is applied to a panicle which is so much hranched that the primary axis disappears.]

DELIQUIUM ANIMI (delinquo, to leave). Syncope; fainting.

DELIRIUM (deliro, properly, to slip out of the furrow; from de, and lira, a furrow ; figuratively, to talk or act extravagantly, to swerve from reason). Raving; phrensy; disorder of the hrain.

1. Deliriun tremens. A barbarous expression, intended to conrey the idea of delirium co-existing with a tremulous condition of the bolly or limbs. It has been called brain fever, a peculiar disorder of drunkards, delirium et mania c̀ potu, delirium ehriositatis, erethismus chriosorum, \&e.
2. Delirinm traumaticum. A similar discase whieh necurs after scrious aceidents or operations. Dupuyercu.

DELITHSCliNCE ( (celitceco, to lic hid). A term used principally by tho French
physiologists to express a more sudden disappenrance of the synntoms of inflam. mation than necurs in resolution.
[DELPHINATE. A combination of delphinic reid with a salifiable hase.]

DELPHINIC ACID. An acid procured from the oil of the Delphinus delphis, or dolphin.
[DELPHINIUM ( $\delta \varepsilon \lambda \phi \iota v$, the dolphin). A Linnean genus of plants of the natural order Ranunculaccæ. The pharmacopœial name for the root of the plant Delphinium consolida.]
[1. Delphinium consolida. Larkspur. An European species, now naturalized in the United States, the flowers of which were considered diuretic, emmenagogue, and vermifuge.]
[2. Delphinium exaltatum. An indigenous species, a tincture of the seeds of which has heen used in spasmodic asthma and dropsy.]
3. Delphiuium staphisagria. Stavesacre; a Ranunculaceous plant, of narco-tico-acrid properties, depending on the presence of a peculiar principle called delphinia, and a volatile acid. The seeds have been used to destroy pediculi, and are hence termed by the Germans louseseeds.

DELTOIDES ( $\delta \dot{\varepsilon} \lambda r a$, the Greek letter $\Delta$; and cìos, likeness). [Shaped like $\Delta$.] The name of a muscle of the humerus, from its supposed resemhlance to the Greek letter $\Delta$.

DEMENTIA (de, from ; mens, the mind). Idiotcy; ahsence of intellect.

DEMI-BAIN. The French term for a hip-hath; literally half-bath.

DEMULCENTS (demulceo, to soften). Softening and diluting medicines.
[DENARCOTIZED LAUDANUM. Laudanum deprived of narcotina.]
[DENGUE. A form of fever which prevailed in the West Indies and the Southern States in the years 1827 and 1828, attended with violent pains in the joints, and in many cases with a sort of miliary eruption.]

DENIGRATION ( $d c$, from ; and niger, hlack). Another term for Melauosis, derived from its black appearance.

DENS. A tooth. The first set of teeth in children, called the milk tceth, consist of 20 , which are shed in childhood, and replaced by 28 permanent teeth at about 7 years of age; to which are alded 4 dentes sopientia or wisdom teeth at about the age of twenty.

The Classes of the teeth are threc :-

1. Incisores, the front or cutting teeth.
2. Cunini, or cuspidati, the eye or corner teeth.
3. Molarea, the grinders, the double or lateral tecth. The first two pairs have heen termed bicuspidati, from their two conical tubercles; the three next, the large grinders or milticuspidati.
4. The teeth in the Adult are-

$$
\text { In. } \frac{4}{4} ; \text { Can. } \frac{1}{1}-\frac{1}{1} ; \text { Mol. } \frac{5}{5}-\frac{5}{5}=32 .
$$

In Infants:
In. $\frac{4}{4}$; Can. $\frac{1}{1}-\frac{1}{1} ; M o l . \frac{2}{2}-\frac{2}{2}=20$.
5. In each tooth are observed the Crown, ahove the alveolus; the Necle, just helow the crown; and the Fang or fangs, within tho alveolus.
6. The Strueture of the Teeth is: 1. Enamel, encasing the crown, and the bardest production of the body; 2. Bone, constituting the whole of the root, and the interior of the crown; and 3, the Pulp, a bulhous prolongation of the mucous membrane of the gums, which fills the cavity of the teeth, forming their nucleus.

DENSITY (densus, thick). The property of a hody, hy which a certain quantity of matter is contained under a certain hulk. It is opposed to rarity.
[DENTAL (dens, a tooth). Of, or belonging to, the teeth.]

DENTA'TA (ders, a tooth). The name of the second vertehra, so called from its projecting tonth-like process.
[DENTATE (dens, a tooth). Toothed; in hotany having sharp teeth with concave edges.]
[DENTELLARTA (dentella, a little tooth). Plumbago Europaa.]
[DENTICULATE (denticulus, a little tooth). Having little teeth.]

DENTIFRICE (den8, a tooth). Various powders used for cleaning the teeth.
[DENTINE (dens, a tooth). Toothsuhstance; the hone-like substance of which the teeth are wholly or in part composed.]

DENTITION (dentio, to breed teeth; from dens, a tooth). Cutting the teeth; teething. See Dens.

Dedentition. The loss or shedding of the teeth.
DENUDATION (denudo, to make hare). The laying hare of any part in operations.

DEOBSTRUENTS (de, from ; obstruo, to ohstruct). Medicines for removing ohstructions.
[DEODORIZER (de, neg.; odor, a scent). A substance which corrcets or destroys foul or noxinus efluvia.]

DEOXIDATION (de, from ; and oxidation). The separation of oxygen from a borly; the reducing a body from the state of an oxide.

DEPAUPERATED. In botany, imper.
feetly defeloped ; slrivelled; as from senty nutriment, as applied to certain stipules, bracts, \&c.

DEPHLEGMATION (ic, from; and phlegma, a watery distilled liquor, as distinguished from a spirituous liquor). The depriving $a$ body of water. Thus, when the fluid is simply rendered stronger, as in the case of nlcohol, by bringing over the spirit by distillation, and leaving befind the supperfluous water, the process is called dephlegmation; ór concentration.
[DEPLETION (depleo, to empty). Thê act of emptying.]

DEPHLOGISTIOATED (dê, from ; âd phlogiston, the inflammable principle). Oxídized ; deprived of phlogiston.

1. Dephlogisticated air. Oxygen gas; called by Scheele empyreal ait, and by Condorcet vital dir.
2. Dephloyisticated marine dcid. Thè name given by Scheele to ohlorine.
DEPILATORY (de, from ; pilus, a hair). An application for remoring hdir from any part of the body.
[Atkinson's depilatory. This is said to eohsist of one part of orpiment, and six parts of quicklime, with some flour, and a yellow colouring matter.]
[Depilatory of Sulphutet of Calciumi. A greenish-gray paste; formed by passittg sulphnretted hydrogen, so long as it is absorbed, through water, holding lime in suspension. It is applied in a layer on the part to be deprived of hair, and at the end of fifteen minntes removed with a wet sponge.]

DEPLUMATION (de, from; pluma, i fenther). A disease of the cyelids, in which the hair falls off.

DEPOSIT (depono, to lay down). A sediment, or anything laid down. The mechanical deposits of urine are divided by Dr. Prout into the pulverulenit, or amorphous sediments ; the crystalline sediments, or gravel; and the solid concretions, or calculi, formed by the aggregation of these latter sodiments. Seo Calculus.
[DEPRAVATION (dep̂ràz, to vitiatc). A deterioration; applied to the secretions; and functions of tho organs.]
[DEPRESSED (dcptrimo, to préss dôn). Flattenod from apex to base, as applied to secds.]

DEPRESSION (deprimo, to press down). [In anatomy, a hollow or fossa. In surgery it is applied to fractures of the craninm, in which a portion of bone is forcod inwards.] Conching; an operntion for catnract, consisting in the removal of tho opaque lens out of the axis of vision, by means of a néedlé.

DEPRESSOR (deprimo, to press down). A muscle whlch depresses iny part, as those of the ala of the nose, of the angle of the month, of the lowicr lip.

DEPRIMENS OCULI (deprimo, to press down). A name given to the rectus inferior, from the action of this muscle in drawing the eychall down. See Altälléns oculi.
[DEPURATION (dupuro; to putify). The process of purifying br clatifying a liquid.]

DERBYSHIRE NECK. A nàmẻ given̉ by Prossér to bronchocéle, frbm its frequéncy in the hilly parts of that county:

DERBYSHIRE SPAR. Flnor Epaŕ. [q. v.]

DERIVATION (derivo, to drain off water from itś regnlar channel). Revulsion; of drawing artay of the fluids of an inflamed part, by applying blisters, \&c., over it, as in pleuritis; or at a distancé from it, as sinapisms to the feet, in comatose affections. Agents prodneing this effect, are termed derivatives.
DERMA ( (éppa). Dermís, of chorium. The cutis vera, or true skin, eonsisting of a superficial or papillary layer, and a deep linyer or corititi. See Caticle.
[1. Dermatalgia (adyos, pain). Neuralgia of the skin.]
2. Dermic. A term applied to the action of remedies through the skin.
3. Dcrinoid (sioos, likeness). A térm applied to tissues which resemble skin.
DERMATOLXSIS ( (¿́fpua, skin; $\lambda \hat{u} \omega$, to lonsen). Cutis pcudula. A form of hypertrophy of the skin, characterized by great extension of this organ, which is thromb into folds, forming occasionally large pendulous masses.

DEROSNE'S SALT. Narcotine: Opiane. A crystalline substance, ohtained by treating opium with eethcr.

DESCENDENS NONI. The descending cervical branch of the ninth pair of nerves, or hypoglossal.
[DESHLEX'S SALVE. The ceratum resine compositum.]

DESICCATION (débicco, tò dry up). The operation of drying ; the statc of being dry.
[DEESMA ( deopos, a ligament). A ligament.]
[Desmoid (eldos, likences). A term ap: plied to the ligamentons tissncs.]
DESPUMATION ( $d c$, from: spuma, foam). The clarifring of $n$ fluid, or a separating its fonl parts: literally, the throring off of froth or fonm.
DESQUAMATION (de, from ; sqimina, a scalc). The falling off of the cuticle, in the form of scalcs.
[DESTRUCTIVENESS (dcstruo, to destroy). The faculty producing a propensity to destroy and kill.]

DETERGENTS (detergo, to wipe a way). Substances which cleanse wounds, ulcers, \&c.

DETERMINATION (de, from; lerminus, a bound). An excessive flow of hlood to a part.

DETONATION (detono, to thunder). A sudden combustion and explosion.

DETRITUS (zoorn dovor). Suppuration ; softening; ramollissement.

DETRUSORURIN゙E (detrudo, to thrust out). The aggregate of the muscular fihres of the hladder which expel the urine.
[DEUTEROPATHIA (dev̀rcpos, second; па Өо о, disease). A secondary disease; a disease produced hy another.]

DEUT0- (¿cúrcpos, śecond). A prefix denoting two, or double, as deut-oxide, having two degrees of oxidation; deutochloride, \&c.

DEUTOXIDE (dsúrepos, second). A term applied to a substance which is in the second degree of oxidation. This term is often used to denote a compound of three atoms of oxygen with two of metal, as in deutoxide of manganese, of lead, \&c.
[DEVELOPMENT (développer, to unfold). The change, evolution, or metamorphosis of a part or parts of the hody, or of any of the organs.]
[DE VALANGIN'S ARSENICAL SOLUTTON. Solution of Chloride arsenic.]

DEVONSHIRE COLIC. Colic of Poitou. A species of colic, occasioned by the introduction of lead into the system, and named from its frequent occurrence in Devonshire and Poitou, where lead was formerly used to destroy the acidity of the weak wines and cider made in those parts. It is also called Painters' colic, from the same cause.

DEW. The moisture insensihly deposited from the atmospbere on the surface of the earth. It occurs whenever that surface is lower in temperature than that of the dew-point of the atmosphere immediately in contact with it.

Dero-point. That temperature of the atmosphere at which its moisture hegins to deposit.
[DEWBERRY ROOT. The root of Rubus trivialis, a favorite domestic remedy in howel affections. It is a useful and efficient astringent.]

DEXTRINE (dexter, right). Mucilaginous starch, prepared by boiling a solution of starch with a few drops of sulphuric acid. Its name is derived from its property
of turning the plane of the polarization of light to the right hand.

D IA (dıà). A Greek preposition, denoting through. Words compounded with dà imply extensiou, perversion, trunsition; also that which in English and Latin is. expressed hy the prefixes di- or dis-, as in divido, to divide ; disjungo, to disjoin.

1. Di-aresis (dıatpíc, to divide). A solution of continuity. This term was formerly applied to denote a cause of external aneurysm.
2. Di-arthrosis (üpOpov, a limh). A species of movahle articulation, constituting the greater proportion of the joiuts of the body.
 a siphon). An immoderate flow of urine. This disease bas been termed diarrbea urinosa, hydrops ad matulam, hydcrus, dipsacus, morhus stihundus, fluxus.urinæ, nimia urinæ profusio, polyuria. It is termed iusipidus (tasteless), in which the urine retains its usual taste; and mellitus (honied), in which the saccharine state is the characteristic symptom.

Diabetic sugar. The sweet prineiple of most acid fruits, and of diahetic urine. It is also termed starch sugar, sugar of fruits, grape sugar, glucosc, \&o.
4. Dia-chylon ( $\chi^{v} \lambda{ }^{2} \mathrm{~s}$, juice). An emollient digestive plaster, formerly prepared from expressed juices. It forms the Emplastrum plumbi of the Pharmacopœia.
5. Dia-codium (кẃdeıa, a poppy-head). The old name of the Syrupus Papaveris, or syrup of poppies.
6. Dia-gnosis (yıvéaxw, to discern). The act of discerning, or distinguishing, in general ; in medicine, the distiuction of diseases.
7. Di-agometer Electrical ( da' $\sigma$, to conduct; $\mu$ irpov, a measure). An apparatus used by Rosseau for ascertaining the conducting power of oil, as a mcans of detecting its adulteration. It consists of one of Zamhoni's dry piles, and a feebly-magnctized needle, moving freely on a pivot. The deviation of the needle is less in proportion to the low conducting power of the interposed suhstance.
8. Dia-grydium, or Dia-crydium. One part of quince juice, and two parts of scammony, digested for twelvo hours, and ovaporated to dryness.
9. Dia-luric acid (oìpov, urinc). A new acid produced by the decomposition of alloxantin.
10. Dia-lyses (גúш, to dissolvo). Solutions of continuity.
[11. Diastriltic (orcil $\omega$, to contract) Appliod by Dr. M. Hall to tho reflex ac-
tion or aets performed through the epinal marrow.]
12. Di-opirics (birouat, to see). The laws of refracted light.
13. Di-orthosis ( $\delta p \theta \delta \omega$, to regulate). The restoration of parts to their proper situation; one of the ancient divisions of surgery.
14. Did-pente (mivtt, five). Equal parts of myrrh, laurel berries, gentian root, ivory shavings, and birthwort root.
15. Dia-pedésis ( $\pi n \delta d \dot{d} \omega$, to spring). A tèrm formerly used to denote external aneurysm. "Per diapedesin," sầs Silvaticus, "id est, raréfactis ejus tunicis."
16. Dia-phanous ( $\phi$ aive, to Ehine). Trassparent; the name given by Pinel to the serous memhranes, from their transparcncy when detaehed from their organs, as the arachnoid, the omentum, \&c. In Chemisatry, the term denotes permeability to light.
17. Dici-phoresis ( $\phi$ opé $\omega$, to carry). Increased perspiration.
18. Did-phoretics ( $\phi$ opín, to carry). Me. dicines which increase the natural exhalation of the skin; when they are so powerful as to oceasion sweating, they liave been called sudorifics.
19. Dia-phragma ( $\phi$ páбow, to divide). The midriff, or diaphragm : the transverse muscular septum whicb separates the thorax from the nbdomen.
20. Dia-phragmatic Gout. A term appilied by Butter to the affection now called Angina Pectoris.
21. Dia-phragmatitis (фрй́o oíw, to divide). Inflammation of the diaphragm. A term sometimes applied to that varicty of partial pleurisy in which the effused fluid exists between the base of the lung and the diaphragm.
22. Dia-physis ( $\psi \dot{v} \omega$, to be ingrafted). A term applied to the middle part, or body, of the long or cylindrieal bones.
23. Dia-pnoics ( (ıaпvò̀, perspiration). A term synonymous with diaphoretics and eudorifics.
24. Dia-rrhœea ( $\hat{\rho}$ fí; to flow). A flux, or flowing through, or looseness. It is termed fluxus ventris, alrus fusa, lienterin, \&o.
25. Did-scordium. The Elcetuarium opintum astringens; an electuary made of Water Germander or Scordium leaves, and other ingredients.
26. Dia-stase. A vegetablo prineiple, allied in its general properties to gluten, which appears in the germination of barley and other seeds, and converts their stareh into gum and sugar for the nutrition of the embryo. The name is derived from dotornpu, to separuse, in reference to
its property of separating two supposed constituents of stáreh.
27. Dir-8tatis (dotَorŋm, to separâte). A forcible separation of bones, without fracture.
28. Dia-btole ( dıaffind $\omega$, to dilate). The dilatation of the heart and arteries. It is opposed to Systole.
29. Dia-thermanous ( $\theta_{\text {zp }}$ aivu, tó फैarm).

A term denoting frec permeability to heat.
It is synonymous with trnnslucent.
30. Dia-thermancy. The property possessed by nearly all diathermnnous bodies, of admitting the passage only of certain species of calorific rays. When the quantity of heat transmitted indépendently of the quality is to be denoted, the termi diallicrmaneily has been suggested by Melloni, in order to preserve the eame termination as in the word diaphaneity, indieating the analogons property in relation to light.
31. Dia-thesis (riڤnpl, to arrange). Constitutional disposition. Examples of diathesis are the rhenmatic, the scrofulous dispositions, \&e.
32. Di-uresis (oupém, to make mater). A copious flow of urine. Hence the term diuretics is applied to medicines which promote the secretion of urine.
 brother). The seventeenth class of plants in Linnæus's system, in which the filaments of the stamens are united into two parcels, or brotherhonds.
[Hence Diadelphous, baving the stamens arranged in two distinet fascieuli.]
DIAMOND. A gem; the erystallized and pure state of earbon, and the bardest nid most brilliant body in nature.
DIANDRIA (dis, trice; ávìp, a mản). The second elass of plants in Linnæus's. system, characterized by the presence of two stamens.
[Hence Diandrous, haring tro stamens of ahout the same length.]
[DIANTHUS CARTOPHILLUS.
Clove Pink. A Caryophyllaccous plant, the flowers of whieh are used to flarour a syrup which serves as a rehiele for less pleasant medicines.]
DIARY
mera. The FEVER (dics, a day). Ephemera. The simplest form of fever, distinit has one series of inerease and decreas with a tendeney to exacerbation and re mission, for the most part appearing twice in twenty-four hours.

DIClIOTOMOUS ( $8 f x^{a}$, doubly; tifve, to divide). A term applied to stems or branehes which bifureate, or are continually divided into pairs.

DICOTILEDONES ( $\delta i s$, trice; коru入ク.

8av; a seed-hobe); Plants whose cimbryo contains two cotyledons or sced-lobes. See Cotylcdon.

DICKOTIC ( (is, twice ; кpov́w, to strike). A term applied to the pulse, where the artery conveys the sensation of a double pulsation.
[DICTAMNU'S ALBU̇S. White Fraxinella. A plant of tbe family Rutacea, tbe root of which bas been used as anthelmintic, emmenagogue, and stomachic, in doses of from $Z j$. to $3 \mathfrak{j}$. It is not used in this country.]

DIDYM ( $\delta i \delta u \mu o s$, twin). Tbe name of a metal recently discovered united with oxide of cerium, and so called from its being, as it were, the twin-brother of lantanium, which was previously found in the same body.

DIDYMI (iidüpos, double). Twins. An obsolete term for the testes.

Epi-didymiz, the body wbich lies above the testes.
[Didymous in botany signifies growing in pairs.]

DIDYNAMIA (dis, twioe; divapts, power). The fourteenth class of Linnæus's system of plants, characterized hy the presence of four stamens, of whicb two are long, two sbort.
[Hence Didynamous, having two pairs of stamens of nequal lengtb.]

DIET (diatra, regimen). The food proper for invalids. La diète, used by the French physicians, means extreme abstimence.

1. Dietetics. That part of medicine which relates to the regulating of the diet and regimen.
2. Diet drink. Tbe Decoot. Sarsaparillæ comp. of the Pharmacopoia.
DIFFUSION VOLUME. A term adopted to express the different disposition of gases to intercbange particles; the diffusion volume of air being 1 , that of hydrogen gas is 3.33 .

Diffusion Tube. An instrument for determining the rate of diffusion for different gases. It is simply a graduated tube, closed at one end by plaster of Paris, a substance, when moderately dry, possessed of the requisite porosity.

DIGASTRIC GROOVE. A longitudinal depression of the mastoid process, so called from its giving attachment to the muscle of that name.

DIGASTRICUS (dis, twice; jaotip, a belly). Haring two bellies; the nanc of a muscle attached to the os hyoirles: it is sometimes called liventer maxilla inferioris. The term is also applied to one of the interior profundi of Meckel, given
off by the facial nerve; the other is called the stylo byoìdeus.

DIGESTER. A vessel of eopper or iron, for preventing tbe loss of heat by evaporation.

DIGESTION (digero; from diversini géro, to carry intö differeñt parts). A term employed in various senses :-..

1. In Physiology, the cbange of the food into chymie by the moutb, stomach, and small intestines; and tbe absorption and distribution of the more nutritious parts, or the chyle, tbrough the system.
2. In Surgery, the bringing a wound into: a staté in wbich it forms a healthy pus. Applications which promote this object are called digestives.
3. In Chemistry, the continued action of i solvent upon any suhstance.

DIGESTIVE SALT OF SYLVIUS. A salt discovered hy Sylvius, since named muriate of potash, and now cbloride of potassium.

DIGITALIS PURPUREA. Purple Foxglove; a plant of the order Scrophulariacece. The term is evidently derived from digitale, the finger of a glove, on account of the hlossoms resembling fingercases. See Foxgluve.

Digitalin. A colourless acrid substance obtained from the above plant. See Pir crin.

DIGITUS (digero, to point out). A finger or a toe -pes altera manus. The fingers of the hand are the index, or forefinger; tbe medius, or middle finger; the annularis, or ring-finger; and the auricularis, or little finger. The bones of tbe fingers are called phalanges.
[Digitate. Fingered. In botany, diverging from a common ecntre.]
DIGYNTA (dis, twice; $\gamma \dot{\ln } \mathrm{m}$, a woman). The second order in Linnæus's system of plants, characterized by tbe presence of two pistils.

DILATATION (dilato, from diversim fero, tuli, latum). The act of enlarging or making wide anything. In physiology, it may be a temporary act, as in the diastole of the heart; in pathology, a permanent act, as in the passive aneurysm of that organ.
[DILATOMETER. An instrument doviscd by Silbermann to determine tho alcoholic strength of wines.]
[DILATOR. A term applied to muscles whose office is to dilato certain caritics ; also to instruments employed to dilate wounds, canals, \&c.]

DILL. The common name of the Anethum graventens.

DILUENTS (diluo, to dilutc). Watory
liquors, which increase the fluidity of the |equivalent of oxygen is combined with blood, and render several of tho secreted and excreted vessels less viscid.
[DIMIDIATE (dimidius, half). Halved. In Botany, half-formed, or having one side only perfeet.]

DIMORPIIS M ( $\delta i s$, twice ; $\mu \circ \rho \phi \grave{\text {, }}$, form). The property of many solid hodies to assume two incompatihle erystalline forins; such are sulphur, carbon, arsenious acid, se.
[DINNEFORD'S MAGNESIA. A solution of Carhonate of Magnesia in Carhonic acid water.]
[DINNER PILLS. Lady Webster's Pills. Pilulæ stomachicæ. B. Best aloes, 3 vj .; Mastich and red roses, each 3 ij .; Syrup of Wormwood, or common syrup, sufficient to form a mass. To he divided into pills of three grains each; one or two for a dose.]

DIN US ( $\delta(\nu n$, vortex). Vertigo, or giddiness; illusory gyration of the person, or of the ohjects surrounding him.
D I OE CIA ( $\delta i s$, twiee; oixos, a house). The twenty-second class of plants in Linnæus's system, in which the stamens and pistils are in separate flowers, and on separate plants.
[Hence Dioceous, having stamens on one plant and pistils on another.]

DIOGENES'S CUP. A term applied to the cup-like cavity of the band, oecasioned by hending the metacarpal hone of the little finger.

## [D IOSMA. See Barosma and Buchu

 leaver.]DIOSME A. The Buchu trihe of Dicotyledonous plants. Trees and shruhs with leaves exstipulate, dotted; flovers axillary or terminal, polypetalous, hermaphrodite; stamens, hypogynous; ovarium many-celled; fruit consisting of sevcral concrete eapsules; seeds twin or solitary.
[DIOSPYROS. Ph. U.S. Persimmon. The Bark of the Diospyros Virginiana. An indigenous plant, common in the Middle and Sonthern States, belonging to the natural order Ebenacea. The hark und unripe fruit are very astringent, and have heen euployed in chronic dyseutery, uterine bemorrbage, uleernted sore thront, de.]

DIOXIDE. According to the elcetrochemical theory, the clements of a compound may, in relation to each other, oo eonsidered oppositely cleetric; the equivulents of the negative element may then be distingnished by Latin numerals, those of the poritive by Greek; thms a bin-oxide denotes a compound which contains two equivalents of the megative clement oxygen; whereas a di-oxide indicates that one
two of somo positive body. And so of the bi-ehloride, di-ehloride, \&c.

DIPHTHERITIS ( $\delta, \varphi \theta i p a$, skin). Under this term, Bretonneau has ineluded not only the acute and gangrenous varicties of pharyngitis, both of which are accompanied by exudation of a false membrane, hut also inflammation of the trachea; and he contends that this peculiar disease is identical with croup, arising from the same causes, and requiring the same mode of treatment.

DIPLOE ( (ıт入oũs, douhle). Meditullium. The cellular osseous tissue between the two tables of the skull.

DIPLO-GANGLIATA ( $\delta เ \pi \lambda_{0}$ ũs, double; rayरdiov, a nerve-knot). A term applied hy Dr. Grant to the Third Sub-kingdom of Animals, or Entomoïda, consisting chiefly of articulated animals, with articulated members, the insects of Linnæus, having their nerrous columns arranged in the same relative position as the diplo-neura, with the ganglia increased in size, and corresponding with the inereased development of the segments and of their lateral appendages. The elasses are myriapoda, insecta, arachnida, and crustacea.
 pov, a nerve). A term applied by Dr. Grant to the Second Suh-kingdom of Animals, or Helminthoida, comprising the various forms of Worms, in which the nerrous columns have their ganglionic enlargements very slightly developed, and are marked hy a greater lateral separation from ench other along the median line, than is observed in the next subkingdom.

DIPLO'MA ( $\delta i \pi \lambda \omega \mu a)$. Originally, letters patent of a prince, written on waxed tables fnlded together. The term is now restricted to an instrument by whieh a legalized corporation confers a title of dignity, or a privilege to practise in a learncd profession.

DIPLOPIA ( $\delta$ гпतoũs, double; $\bar{\omega} \psi$, the еус; from бптоцая, to sec). Viкив duplicatus. A disease of the eyc, in which the person sees an object douhle or triple; a species of prendublepsis. This disense is of two kinds: 1. The patient sees an object, double, trehle, \&e., only when he is looking at it with both his eyes, the one eye; or, 2. The patient sees erery
one object double, whether he surveys it with one or both his cyes.

DIPPEL'S OIL. An animal oil procured by the destructive distillation of
animal matter, especially of albuminous and gelatinous substances.

DIPSACUS (di\&a, thirst). A name formerly given to diahetes; from the thirst accompanying that affection.

DIPSO'SIS (diva, thirst). Morbid thirst; excessive or impalred desire of drinking.

DIPTERA (dis, twice; đ́rifov, à wing). Two-winged insects; as the common fy, or gnat.
[Dipterous. Two-winged : as applied to the two margins whlch are prolonged on the surface of certain seeds.]

DIPTEROCARPE The Camphortree trihe of Dicotyledonous plants: Trees ahounding in resinous juice; leáves alternate ; flowers poly petaloùs ; stament hÿpogynous; carpella concrete; cályx tubular; fruit coriaceous.
[DIRCA PALUSTRIS. Leablerwood. An indigenous plant of the natnral order Thyntelacke, the barlk of which appears to possess analogous properties to mezereon.]

DIRECTOR (dirigo, to direct). A nar-row-grooved instrumét of silver or steel, used to direct the knife.

DIRIGENS (dirigo, to direct): An incient constituent in a prescription, meaning that which directs the operation of the associated suhstances: thus, Nitre; in conjunction with Squill, is diuretic; with Guaiacum, it is diaphoretic.

DIRT-EATING. Mal d'estomac, ơr cachexia Africana; a disease ohserved ámong the negroes.
[DISCREET. Distinct. Applied in pathology to exanthemata when the pustules are distinct and not confluent.]
[DISCUSS (discutio, to discüss). To promote or cffect the resolntion of swellings or tumours.]

DISCUTIENTS (discutio, to shake in pieces). Substances which possess a power of resolving tamours.

DISEASE. Any morbid state in general; change of structure, as distinguished from disotder of furiction ln particular. It is termed acute, when severe, and of short duration; chronic, when less severe, and of long continuance ; sporadic, when arising from occasional causes, as cold, fatigue; epidenic, when arishrg from $\mathfrak{a}$ general cause, as excessive heat; contagion ; endemic, when prevailing locally, as from marsh miasma; intercurrent, when it is sporadie, occurring in the mldst of epidemic or endemic disease.

DISINFECTANTS. Agents which destroy miasmata, hoth odorous and ino-
dorvus dorvus.

DISINFECTION: The purifeation of infected air.

DISK. A term applied in botany to certain hodies or projections, situated hétween the base of the stamens and the hase of the ovary, forming part with neither. It is often incorfectily called nectary.

DISLOCATION (di8loco, td put out of place). A Luxation. The displacement of the articular surfaces of a bone, from their natural situation.

1. Dislocations are distinguisbed, with respect to their extent, Into the complete, ot incomplete; the latter termi is applied when the articular surfacés sttill remain partially in contact; thls only oce curus in ginglymoid articulations, as thóse of the foot, knee; and ellbow: Thé cotaplete lùzatlon almost always occurs in thè or̂hicular articulations.
2. The Direction of a Diblocation is natined uptoards dóbon̄bar̆d, forióafa, änd baclevard, in the orhicular articultions; and latertul, forivard, atid backioard, in the ginglymoid:
3. Dislocations are further distinguished, according to the accompanying circuizmstances, in to the simplé, when uitiattended by a wound communicating; intertially with the joint, and exteronally with the air; and the compound, when attended by such a wound:
4. When a Dialdcation occurs in consedquence of a disease destroying the cartilages, ligaments, and artlcular cavities of the hones, it is termed sporitaneoils.
5. Désault divided Dislocations of the humerus into the primitivé; which are the sudden effeects of exteriàl violencé ; and the consecutive, which follow the former, by the influence of other canses; as of a fresh fall, while the arm is sepdrated from the trunk.

DISPENSART (llispento; from diversint penso, frequent. of peridéo, to distrihute by weighing). A shop in which me: dicines are compounded; and an institution where the poor are supplied with medicines.
[DISPENSATORY ( diṣ̛eñdro, to distrihute). A hook which treáts of the ceompo: sition of medicincs, - Hoioper ${ }_{\text {i }}$ ]

DISPLACEMENT: A procéss applied to philrmaceutical preparations, and founded on the long-known fact; that any quantity of liquid with which in powder may hé saturnted, wilhen puéinto a proper appiarntos, may bo displaced by an additional quantity of that or of anothet liquid.

DISSECTION (disseco, to cut in picees).

The display of the different struetures of the animal hody by means of the scalpol.

DISSEPIMENT (dissepio, to separate). Septum. A term applied, in botany, to the partition which divides the eapsule into cells.
[DISTAD, DISTAL (disto, to he distant from a eentre). Distant from a centre ; farthest from the trunk or mesial line.]

DISTEMPER. Oatarrhus caninus. An affection oecurring among dogs, and vulgarly ealled the snaffes, or snufles, from the state of the nostrils.

DISTENTION (distendo, to streteh out). The dilatation of a hollow viseus by too great aceumulation of its contents.

DISTICHIA (dis, twice; arixos, a row). Distichiasis. A term applied hy Gorræus, Heister, and St. Ives, to an affection in which each tarsus has a double row of eyelashes, which, inelining inward, irritate the eye, and keep up ophtalmia. See Trichiasis.

Distichous. Arranged in two rows, as the florets of many grasses. Bifarious.

DISTILLATION (distillo, to drop hy little and little). The vaporization and subsequent condensation of liquids, by means of a retort, alemhie, or still. Dry distillation is performed in the same way as the humid, except that the suhstance is neither immersed nor dissolved in any menstruum. It is termed sublimation.

1. Distillation destructive. The suhjeetion of hodies to a red heat in close vessels, and the collection of the products.
2. Destillatio per latus, in which the vapour passes laterally from the retort to the receiver, where it is condensed.
3. Destillatio per ascensum, in which the vapour ascends into the head of the still, and thenee passes into the worm, before it is condensed.
4. Destillatio per descensum, in which the vapour descends into a lower cavity of the vessel, to he condensed, the fire being placed over the inaterials.

DISTOMA IIEPATICUM (dis, twice; $\sigma \pi \delta \mu a$, the mouth; $\eta_{i \pi a \rho}$, tho liver). Tho fluke, a worm sometimes found in tho liver and gall-hladder of man, but wore commonly of shcep, gonts, \&e.

D IS TORTION (distorquco, to wrest aside). A term applied to tho spine, or limhs, when they are bent from their natural form.
DISTORTOR ORIS (distorquco, to twist on one side). A namo given to one of the zygomatie museles, from its listortina the mouth, as iu rage, grinning, \& 0

DISTRIX ( $\delta i s$, twiee; $\theta p i \xi$, the hair).

Forky nair ; a disease of the hair, in which it splits at the ends.
[DITJANY. Common name for the genus Dictannus.]
[Dittany, American. Common name for the Cumila mariana.]
[Dittany, Bastard. Common name for the Dictamnus ulbur.]

DIU'RESIS ( $\delta i a$, , through ; oíp $\hat{\varepsilon}(\omega$, to make water). A large flow of urine.

Diuretics. Medicines which augment the urinary discharge.
DIURNATION (diurnus, daily). A term introduced by Dr. M. Hall to express the state of some animals, as the hat, during the day, contrasted with their activity at night. Compare Hilernation.

DIVARICATION (divarico, to straddle). The hifureation, or separating into two, of an artery, a nerve, \&c.
[DIVELLENT (divello, to undo). Putting asunder.]
[DIVERGENT (divergo, to eparate from a common eentre). To separate from a common centre; spreading out from the stem:]
[DIVERTICULUM (divertere, to turn aside). A hlind tuhe branching out from a longer one; an organ destined to receive more than its usual quantity of hlood when circumstances require it.]

Diverticulumz Nuckii. The opening through which the round ligament of the uterus passes.

DIVI-DIVI. The legume of the Casalpinia coriaria, imported from Carthage. It ahounds in tannin.
[DIVINUM REMEDIUM. An epithet for the Imperatoria ostruthium, or masterwort.]

DOBEREINER'S LAMP. A method of producing an instantaneous light, bj throwing a jet of hydrogen gas upon recently-prepared spongy platinum; the metal instantly becomes red-hot, and then sets fire to the gas. This discovery was made in 1824, hy Prof. Dobereiner of Jena.
[DOCIMASIA PULMONALIS. The
testing of the lungs of a foetus, in order to ascertain whether it has respired, and consequently whether it was born lising or dead.]

DOCIMASTIC ART ( $\delta o \kappa \tau \mu i \zeta \omega$, to preve by trial). The art of assaying.
[DOCK. Common name for the genus Rumex.]
[Dock, blunt leaved. Common name for the Rumex obtusifolius.]
[Dock, anur. Coumon name for the Rumex acetora.]
[Dock, water. Common name for the Rumex Britanniea.]
[Dock, yellow-rooted water. A common name for the Rumex Britannica.]
[DOCTOR (doctus, learned). A title of honour conferred on learned men skilled in sciences and arts. Popularly this title is wrongly applied to every practitioner of medicine, but it helongs only to graduates of medicine or sciences of a university, who have previously undergone examination and received a degree.]

DODECANDRIA ( $\dot{\omega} \delta \iota \kappa \kappa a$, twelve ; àvìp, a man). The eleventh class of plants in the Linnæan system, characterized by the presence of from twelve to nineteen stamens.
[DOGMATIC ( $о у \mu a$, dogma; from Sok $\varepsilon \omega$, to think). The name of an ancient sect of physicians, who endeavoured to discover the essence of diseases and their occult causes hy reasoning, whilst a rival sect, the Empirics, restricted themselves to experience, that is to the observation of facts.]
[D0G-GRASS. A common name for the plant Triticum repens.]

DOG-ROSE. Rosa Canina. Cynosbatum. The ripe fruit is called hip or hep, and is used for making the confection of that name.
[DOG'S BANE. A common name for the plant Apocynum androscmifulum.]
[DOGWOOD. The common name of the several species of Cornus.]
[DOLABRIFORM (dolabella, a hatchet; forma, rescmhlanec). Hatchet-shaped.]

DOLICHOS PRURIENS. Mrucuna prariens. Cowhage ; vulgo, cow-itch; a plant of the order Leguminosce.

Dolichi pubes. L. The stiff hairs of the Dolichos pods, employed as a mechanical anthelmintic.

DOLOMITE. A magnesian limestone; a mixture or comhination of the carbonates of lime and maynesia, having the crystalline form of calc-spar.
[DOMBEYA TURPENTINE. A glutinous, milky-looking fluid, of a strong odour and taste, dcrived from Dombeya excelaa.]
[DONOVAN'S SOLUTION. The liquor arsenici et hydrargyri iodidi, Ph. U.S.]

DORE'MA AMMONTACUM ( ס由́p $\eta \mu a$, a gift). The Ammonincum Dorema; an Umhelliferous plant, which yields the ammoniacum of commerce, or the Pergian ammoniacum. It occurs in the tcar and in lump. African ammoniacum is the produce of the Ferula tingitnna.

DORONICUM MONTANUM. Arnien montana. Mountain Tobacco, or Leopard's Banc; a virulent plant of the order Composita, said to owe its noxious qualities to the prosenco of cylisinc. On
the continent it has obtained the name of panacea lapsorım.

DORSTENIA. A genus of Urticaccous plants, in which the flowers are arranged upon a fleshy receptacle, usually flat and expanded, and of very variahle form. [The root named contrayerva, or contrajerva, is helieved to he derived from several species of this genus. Pereira and Martius refer it to the Dorstenia Braziliensis, others refer it to the D. contrayerva, D. Houstonia, and D. Drakina.] See Contrajerva.

DORSUM (Latin). The back; the round part of the hack of a man or heast.

1. Dorsal. Appertaining to the back, as applied to a region, ligaments, \&c.
2. Dorsi-spinal. A set of veins, forming a plexus around the spinous, transverse, and articular processes and arches of the vertebræ.
3. Dorso-cervical. The designation of the region at the hack part of the neck.

DOSE ( $\delta \sigma \sigma \iota s$, from ; $\delta i \delta \omega \mu \iota$, to give). A determinate quantity of a thing given. Rule. - For children under twelve years, the doses of most medicines must he diminished in the proportion of the age, to the age increased by 12 . Thus-
[At 1 year of age, $\frac{1}{1+12}=\frac{1}{13}$

| 2 years |  | $\frac{2}{2+12}=\frac{2}{14}=\frac{1}{4}$ |
| :--- | :--- | :--- |
| 3 | " |  |
| 4 | " | " |
| $3+12$ | $\frac{4}{15}=\frac{1}{5}$ |  |
| 5 | " | " |
|  | $\frac{5}{5+12}=\frac{4}{16}=\frac{1}{4}$ |  |

At 21, the full dose may be given.
It should be carefully remembered, however, that infants hear opiates far worse, and purgatives better, than according to the rule.
[The following list exhibits tho doses for an adult, of the medicines (Pb. U. S.) most commonly employed in practice.]

Absinthium. .................. to $Э_{\mathrm{ij}}$.
Acaciæ gummi............j. to $3^{\mathrm{ij}}$.
Acetum colchici............. $\times x$. to $\mathrm{f}^{\mathrm{j}}$.
Acetum scillæ...........fZss, to f3j.

DOUBLER. An instrument employed in electrical experiments, and so contrived that, by exceuting ecrtain movements, very small quantities of electricity communicated to a part of the apparatus may be continually doubled, until it becomes perceptible hy an clectroscope.

D O U CIIE (duccia). Affusion. The term applied to a column or current of fluid directed to, or made to fall on, some part of the body. According as the fluid employed is water or aqueous vapour, the application is called the liquid douche, or the vapour douche. According to the direction in which it is applied, we lave the descending, the lateral, and the ascending douche.

DOVE-TAIL JOINT. The suture or serrated articulation, as of the bones of tbe head.

DOVER'S POWDER. A valuable sudorific; the Pulvis Ipecacuanhac et Opii. Ph. U. S.

DRACINE (draco, a dragon). A precipitate formed by mixing cold water with a concentrated alcoholic solution of dragon's hlood.
[DRACCNA. A genus of Leguminous plants.]
[Dracana draco. A large tree inbabiting the Canary islands and East Indies, which furnishes a substance called dragon's blood.]
[Draconin. A red resin found in dragon's blood.]
[DRACONTIUM. Skunk Cabbage. The root of the Dracontium fotidum. An indigenous plant of the order Araceæ, the root of which is reputed to be stimulant, antispasmodic, and narcotic. Dose, grs. $x$. to xx .]

DRACUNCULUS (dim. of draco, a dragon). The Guinea Worm, which hreeds under the skin, and is common among the natives of Guinea, dc.

DRAGANTIN. A mucilage obtained from gum tragacantb.

DRAGON'S BLOOD. Sangnis draconis.
A term applicd to certain resinous substances, mostly obtained from some palms of the genus Calamus; to a product of the Dracena draco; also to a substance obtaincd from the Pterocarpus draco.
[DRAGON-ROOT. A common name for the Arum triphyllum.]

DRASTICS (סpriw, to cffect). Purgatives Which operate powerfully.
DRAUGIIT. Hanstns. A liquid form of medicinc, differing from a wisture only in quantity. It is usually taken at once, and should not exceed an ounce and a half.

DRENCH, $\triangle$ form of medicine ured in farriery, analogous to a draught.
[DRIMYS ( $\delta \rho t \mu v s^{s}$, pungent). A genus of plants of the uatural order Magnoliacea, (Juзs.), Winteraccæ (Lindley).]
[1. Drimys Chilensis. A species growing in Chili ; it is like the following species, a stimulant, aromatic tonic.]
2. Drimys Winteri. Wintera aromatica. The plant which yields the bark called Winter's bark. Under the name of casca d'anta, it is mucb used in Brazil against colic. It was employed by Winter in scurry, but is now obsolete.

DRIVELLING. Slavering; an involuntary flow of saliva, from a want of command over the muscles of deglutition.

DROPS. Gutte. A form of medicine in which the dose is measured by drops, as ague drop, black drop, \&c.

D ROPSY (from the Greek, $\dot{\delta} \delta \rho \omega \psi$ Latin, hydrops:-Th. wiowp, water; and $\omega \psi$, the look or aspect). Aqua inter cutem. An effusion into the cellular tissne, or into any of the natural cavities of the body. With the addition of the epithet encysted, it designates a collection of serous fluid in a sac, of which the ovarium is most frequently the seat. See Hydrops.

DRUPE. A pulpy fruit, without a valre or outward opening, containing a hony nut, as the cherry. It is commonly called a stone-fruit.

Drupaceons. Tbat kind of fruit wbich has an indehiscent pericarp, fleshy externally, stony internally, as the peach.

DRY CUPPING. The application of the cupping-glass, withont scarification, in order to produce revulsion of blood from any part of the body.

DRY PILE. The name of a galranic apparatus, constructed with pairs of metallic plates, separated by layers of farinaccous paste mixed with comuzon salt. The name is inappropriate, as the apparatus evidently owes its cfficacy to the moisture of the paste.
DRY ROT. A species of decay to which wood is subject. The wood loses all its cobesion, and becomes friahle, and fungi gencrally appear upon it; hut the fiast destructive change is probably of a elicmical kind, allicd to the action of fer-mentation.-Graham.

DRY YOMIT OF MARRIOTT. A vonit exhibited without drink, and consisting of equal proportions of tartarized antimony and sulphate of copper.

DRIOBALANOPS AlROMATICA. [D. Camphorra.] A trec of the order Dipteracce, yielding a liquid called camphor out, and a erystalline solid termed Sumatra or Borneo camphor.

DUCTILITI (duco, to drats). That
property of bodies by whicb they admit of being drawn out iuto wirc.

DŨCTUS (duen, to lead). A duct; a conduit-pipe for the conveyance of liquid.

1. Ductus hepaticus. The duct which results from the conjunction of the proper ducts of the liver.
2. Ductus cysticus. The excretory duct which leads from tbe neck of the gallbladder to join the hepatic, forming with it tbe following duct.
3. Ductus communis choledochus. The bile duct, formed hy tbe junction of tbe cystic and hepatic ducts.
4. Ductus pancreaticus. The pancreatic duct, which joins the gall-duct at its entrance into the duodenum. Near the duodenum tbis duct is joined by a smaller one, called ductus pancreaticus minor.
5. Ductus arteriosus. A tube which, in the foetus, joins the pulmonary artery with tbe aorta. It degenerates, after birtb, into a fibrous cord.
6. Ductus venosus. A branch which, in the foetus, joins the inferior vena cava with the umhilical vein.
7. Ductus ad nasum. A duct continued from the lacbrymal sac, and opening into tbe inferior meatus of the nose.
8. Ductus istisorius. A continuation of the foramen incisivum between the palatinc processes into the nose.
9. Ductus lymphaticus dexter. A duct formed hy the lymphatics of the right side of the thorax, \&c., and opening into the junction of tbe right jugular and suhclavian veins.
10. Ductus prostatici. Tbe ducts of the prostate, from twenty to twenty-five in number, opening into the prostatic uretbra, on each side of tbe veru montanum.
11. Ductus deferens. Another name for the var deferens, which arises from the tail of the epididymis, and enters the spermatic cord.
12. Ductus galactoferi vel lactiferi. Milk-ducts, arising from the glandular grains of the manima, and terminating in sinuses near the base of the nipple.
13. Ductus thoracicus. The great trunk formed hy the junction of tbe absorbent vessels.
14. Ductus thoracicus dexter. A desig. nation of the right great lymphatic vein, formed of lymplatic vesscls arising from the axillary ganglia of the right side.
15. Ductus cjaculatorius. A duct within the prostate gland, opening into the ure. thra; it is about three quarters of an incb in length.
16. Duct of Stenn. The excretory duct of tbo parntid gland.
17. Duct of Wharton. Tbe excretory duct of the suhmaxillary gland. These two last, with the sublingual, constitute the salivary ducts.
18. Ducts of Bellini. The orifices of the uriniferous canals of the kidncys.

DUELECH. A term employed by Van Helmont to denote the state in which the spirit of urine is precipitated when it forms calculous concretions.

DULCAMA'RA (dulcis, sweet; amarus, bitter). Woody Nightshade, or Bittersweet; a species of Solanum. The twigs of this plant yield a salifiable principle called solanine; a bitter principle, of a honey smell and sweet after-tsste, called picro-glycion; and a sweet principle called dulcarine.

DULCE'DO SPUTORUM. The name given by Frank to sweet-spittle, or that form of ptyalism, in wbich the saliva is distinguished by a sweet or mawkish taste.

1) UMASINE. An empyrenmatic oil, obtained by rectifying acetone derived from tbe acetates.

DUMOSE (dumur, a bush). Bushy. A shrub whicb is low and much branched.
DUNT. Tbe provincial nane of a staggering affection, particularly observed in yearling lambs, occasioned by hydatids of the hrain.
DUODENUM (duodeni, twelve). Ventriculus succenturiatus. Tbe twelve-inch intestine, so called from its being equal in length to the breadth of twelve fingers; the first portion of tbe small intestines, beginning from tbe pylorus. Tbe iuner surface of the duodenum is covered hy a mucous membrane, presenting a number of folds, called tbe valvula conniventes.
[Duodenitis. Inflammation of the duodenum.]

D UPL UM (duo, two; plica, a fold). Two-fold, as duplo-carburet, two-fold carburct.
[Duplicature. The folding of a part upon itself.]

DURA MATER (hard mother). Mreninx exterior. The outermost membrane of the hrain. See Matrer.

DURA'MEN (rlarus, hard). Tbe interior, moro decply-coloured, and harder portion of the trunk and brancbes of trecs, commonly called hearfocood, as distinguished from the cxterior portion, alburnuin, or sapwond.

DUTCI GOLD. An alloy of copper and zinc, in which the zinc is in grenter proportion than it exists in brass. It is allied io tombric and pinchbeck.
[DUTCH LIQUID. Commion name for the chloride of oletiant gas.]

DUTCI MINERAL. Metallic copper beaten out in rery thin leaves.

DUTCH PINK. Chalk or whiting, dyed yellow, with a decoction of birchleaves, French berries, and alum.
[DWARF RLDER. Common name for the Aralia hispida.]
[DWARF NETTLE. Common name for the Urtica urens.]

DYES. Colouring matters, derived from vegetable substances. Colouring matters form, with several metallic oxides, insoluble compounds called lakes.
[DYERS' ALKANET. Common name for the Anchuse tinctoria.]
[DYERS' BROOM. Common name for the Genista tinctoria.]
[DYERS' OAK. Common name for the Quercus infectoria.]
[DYERS' SAFFRON. Common name for the Carthamus tinctorius.]
'[DYERS' WEED. Common name for the Genista tinctoria and for the Reseda luteola.]
[DYNAMIA (סvvapıs, power). Vital power or strength.]
[Dynamic. Of, or belonging to, vital power or strength.]
[Dynanometer ( $\mu$ ctpav, a measure). An instrument for measuring force.]

DYS- (oús). An adverh, signifying with difficulty; badly. Hence-

1. Dys-asthesia (ai $\sigma$ ávopat, to perceive). Impaired feeling. Dr. Young terms defective memory dyscosthesia interna.
2. Dys-cataposia (кала́побts, the act of swallowing; from karativw, to swallow). Difficulty of swallowing liquids; a term applied hy Dr. Mead to hydrophobia.
3. Dys-chroa ( $\chi \rho \sigma a$, colour). A discoloured state of the skin.
4. Dys-cinesia (кıvtw, to move). Imperfect motion.
b. Dys-crasia (kpãots, the state of the blood, \&e.; from кepávvvpt, or кepriw, to mix). A morbid state of the constitution.
5. Dys-eccea (áкò), hearing). Cophosis, Impaired hearing.
6. Dys-entery (ivvepa, the borrels). Inflammation of the mucous lining of the large intestincs. By certain French writers it is named colite; and in common language it is.terined flux, or lloody fux, according as the intestinal discharges are free from hlood or sanguinolent.
7. Dys-lysin (גúas,s, solution). An ingredient of hilin, which remains undissolverl, as a resinous mass, during the 80lution and digestion of bilin in dilute bydrochloric acid.
8. Dys-menorrhcea ( $\mu \eta ̀ v$, a month; fifu, to flow). Difficult or painful menstruation.
9. Dys-odes ( $\delta \zeta \omega$, to smell). Having a had smell; a term applied by Hippocrates to a fetid disorder of the emall intestines.
10. Dys-opict ( $\psi \psi$, an eye). Impaired sight.
11. Dys-orexia (ópek $\varsigma$, appetite). Depraved appetite.
12. Dys-pepsia (rimtu, to concoct). Indigestion ; difficulty of digestion.
13. Dys-phagia ( $\phi$ ri $\gamma \omega$, to eat). Dificulty of swallowing; choking.
14. Dys-phonia ( $\varphi \omega \nu \bar{\eta}$, voice). Difficulty of speaking.
15. Dys-phoria ( $\phi$ if w, to bear). Inquietude; a difficulty of enduring one's self; it emhraces the affections of anxiety and fidgets.
16. Dys-pnœa (пvíw, to breathe). Difficult respiration; short breath; short-windcdness; pursiness; phthisic.
17. Dys-врегmatiamus ( $\sigma \pi i \rho \mu a$, semen). Slow or impeded emission of semeu.
18. Dys-tochia (тiктш, to bring forth). Difficult parturition.
19. Dys-uria (oöpoy, urine). Snppression or difficulty in disclarging the urine ; painful micturition. Total sappression is called ischuria; partial suppression, diysuria; the aggravated form, when the urine passes hy drops, strangury; when the discharge is attended with heat or pain, this is termed ardor urinc.

## E

EAR. Auris. The organ of hearing. It consists of three parts, viz.: the external car ; the middle ear, or tympanum; and the internal car, or lahyrinth.
[Ear ache. Common name for Otalgia.]
Ear-vonx. Cerumen aurium; [q. v.]
EARTII. The general term for the materials which compose the crust of the globe. In chemienl langunge the earths
aro termed metallic oxides; four of these, viz., haryta, strontia, lime, and magnesia, are termed, frou their propertics, alkaline carths. To these must be added-

1. Alumina, or clay : the oxide of aluminun: argilluceous earth, coustituting the bnsis of sapphirc, pipe-clay, slate, \&c.
2. Glucinc. the nxide of glucinum; found in the curlase, beryl, and cmerald.
3. Fitria, the oxide of yttrium ; found in the gadolinite of Ytterhy.
4. Thorina, the oxide of thorium; procured from the mincral thorite.
5. Zirconia, the oxide of zirconium; forming the hulk of hyacinth.
6. Silica, the oxide of silicum; constituting almost the whole of fint, opal, amethyst, rock crystal, \&c.

EARTH-BATH. A remedy consisting literally of a batb of earth, used on the continent.

EARTH OF ALUM. A preparation used in making paints, and procured by precipitating the earth from alum dissolved in water, by adding ammonia or potass.

EARTH OF BONE. A phosphate of lime, sometimes called bone phosphate, existing in hones after calcination.

EAU. The French term for water; the name of a distilled water.

1. Eau de Bababe. A liqueur manufactured in Barbadoes from lemon-peel.
2. Eau de Cologre. Aqua Coloniensis, or Cologne watcr ; a perfume, and an evaporating lotion in headache, fever, \&c.
3. Ear de Javelle. Bleaching liquid, or the Aqua Alkalina Oxymuriatica of the Dublin pharmacopœia.
4. Ear de Luce. The tinct. ammoniæ comp. of the pharmacopeia. The French name is derived from that of an apothccary at Lille.
5. Eau de Naphre. Aqua naphæ. A bitter aromatic water, prepared by distilling the leaves of the Seville orange with water.
6. Eau de Rabel. Aqua Rabelliana. So named from its inventor, the enpiric Rahel. It consists of one part of sulphuric acid and three of rectified spirit of wine, constituting a sort of sulpburic ether.
7. Eau de Vie. Aqna vitæ. Ardent spirit of the first distillation.
8. Ear Mfedicinale de Husson. Macerate two ounces of the root of colchicum, cut in slices, in four fluid ounces of Spanish white wine, and filter. Some practitioners maintain that the French preparation is a vinous infusion of the flowers of the colchicum.

EBLANIN. Pyroxauthin. A substance ohtained from raw pyroxylic spirit.
[EBULLISCOPE. An instrument devised by Conaty for ascertaining the alcoholie strength of wines.]

EBULLITION (ebullio, to bubble up). The boiling or bubbling of liquids; the production of vaponr at the boiliug point.
[EBURNATION (ebur, ivory).
process of becoming hard and dense like ivory.]

EBUR USTUM NIGRUM. Cologne black. Ivory hlack; charcoal prepared from charred ivory shavings.
[ECBALIUM AGRESTE. $\}$ Syno-
[ECBALIUM ELATERIUM.\} nyms of Memordica elaterium.]
 expels the foetus). Amblotica. Medicines which excite uterine contractions, and therehy promote the expulsion of the contents of the uterus.

ECCHYMOMA ( $\langle x \chi \hat{v} \omega$, to pour out). A term synonymous with Ecchymosis, or extravasation, or that form of the affection which takes the name vibices; it is sometimes called crustula and sugillatio.
Ecchymoma lymphatica. A term which bas heen given to puerperal tumid-leg, or phlegmasia dolens.
ECCHYMO'SIS ( $k x \chi$ úw, to pour outt). Extravasated blood, from bruises; in typhus, purpura, \&c. It assumes the several forms of -

1. Petechic. Stigmata, or specks.
2. Vibices, or ecchymomata. Patches.
3. Sanguineous dischurges.
[ECCOPROTICA ( $c \xi$, out of; kompos, feces). Mild aperients or laxatives. See Cathartics.]

ECCRITICA (ikאpivw, to strain off). Diseases of the excernent function.

ECCYESIS ( $\dot{\varepsilon \kappa x v e ́ w, ~ t o ~ b e ~ p r e g n a n t) . ~}$ Extra-uterinc fotation; imperfect fætation in some organ exterior to the uterus, as in one of the ovaria, the Fallopian tube, or the cavily of the abdomen.

ECHI'NUS (ixivos, the sea bedge-hog). A calcareous petrifaction of the echinus.
[Echinate. Bristly; covered with stiff hairs or prickles, like an echinus; as the fruit of the chestnut.]
[Echinococcus (кбxкos, a berry). A species of hydatid.]

Echino-derma (dipua, skin). The fourth class of the Cyclo-neura, or Radiata, consisting of simple aquatic animals, covered with a spiny shell or a coriaceous skin.
[Echinorhynchus (ṕóvoos, a beak). Name of a numerous genus of Entozon, belonging to tbe order Acanthocephalo of Kudolphi.]

ECLAMPSIA ( $i x, \dot{\lambda} \mu \pi \omega$, to shine forth). Circuli ignei. Convulsive motions, especially of the mouth, eyelids, and fingers, so excessively rapid that it is often dificult to follow them.
[Eclampsia Nutans. Salarm convulsion; a bending forward and dnwaward of the head, or quick nodding frequently
repented.]
[ECLECTIC ( $\dot{\kappa} \lambda \varepsilon \gamma \omega$, to select). Selected or chosen from among others.]

ECLEGMA ( $k \times \lambda c i \chi \omega$, to lick). Linctus ; linctuarium. A pbarmaccutical preparation of a certain consistence, and of a sweet flavour. Seo Lohoch.

ECPHLYSIS ( $\langle\kappa \phi \lambda \hat{\lambda}\} \omega$, to bubble up). Vesicular eruption confined in its action to the surface. This term comprchends the several species of pompholyx, herpes, rhypia, and cezema. Compare Emphlysis.

ECPHRONIA ( $\varepsilon \kappa \phi \rho \omega \nu$, out of one's mind). Insanity; craziness; a term comprising the species melancholy and madness.

ECPHYMA ( $\hat{\kappa ¢ \downarrow v \omega, ~ t o ~ s p r i n g ~ o u t) . ~ A ~}$ cutaneous excrescence, including the scveral species verruca, caruncula, clavus, callus.

ECPYESIS ( $\varepsilon \kappa \pi \operatorname{en}^{2} \omega$, to suppurate). Humid scall, including the species impetigo, porrigo, ecthyma, and scahies. Compare Empyesis.

ECSTASIS (ikiorapat, to be out of one's senses). Eestasy, or trance; [a total suspension of sensibility, voluntary motion, and generally of mental power.]

EC'THYMA (ixөviш, to break out). An eruption on the skin. Irritable pustule. Papulous scall. Tetter; ulcerated tetter. Inflammation of the sebaceous follicles, characterized by phlyzaceous pustules.

ECTOPI压 ( $\dot{\varepsilon k}$, out ; róos, a place). Displacement of hones; luxations.
[ECTOPTERYGOID ( ह̋<र̀̀े, without: arepuyocidis, pterygoid). Name given hy Prof. Owen for the transverse bone of Cu vier, in reptiles.]
[ECTOZOON (غंктоs, without; 弓ต́ov, an animal). A general term for parasitic animals which infest the exterior of the body.]

ECTROPIUM ( $\varepsilon \kappa т \rho \dot{\varepsilon} \pi \omega$, to evert). Eversio palpebra. Eversion of the eyelids. Compare Entropium.
[ECTROTIC ( $\kappa$ ктitp $\omega \sigma \kappa \omega$, to abort). Abortive; applied to a medicine which causes abortion; also to a method of treatment which arrests the development of a discase, or causes its abortion, as of smallpox, by the application to tbe pustules of mercurial ointment or nitratc of silver, \&c.]
EC'ZEMA ( $\dot{\varepsilon} \times \zeta \xi \dot{\xi} \omega$, to boil out). Literally, that which is thrown up hy boiliug. Heat cruption ; minute vesicles, wbich form into thin flakes or crusts.

1. Eczema solare. Sun heat; heat spots; arising in a part which has been exposed to the direct rays of the sum.
2. Eezema impetiginodes. Depending on a locnl irritation, and constituting tho grocers' and the bricklayers' itch, according as the exciting canse is sugar or lime.
3. Eczema rubrum. Excited by the use of mercury, and formerly called erythema mercuriale.

EDENTATA (edcntulus, toothless). Toothless animals; quadrupeds witbout front tecth, as the armadillo.

EDULCORATION (dulcis, sweet). The sweetening of any medicinal preparation. Also tbe process of freeing a difficultly soluhle sulstance from one that is easily soluble hy means of distilled water. It differs little from lixiviation, except that the former term respects the insoluble residue; the latter, tbe soluble portion.

EDULCORATOR. Dropping Bottle. An instrument for supplying small quantities of water to test tubes, watcb-glasses, \&c. It is made hy inserting a cork, containing a glass tube, into a phial holding some distilled water. The phial being inverted, the portion of air confined ahove tbe liquid is expanded by the warmth of the hand, and expels the water, drop hy drop, or in a stream, according as the position of the phial is perpendicular vr horizontal.

EEL OIL. An oil procured from eels by roasting; employed as an ointment for stiff joints, and hy ironmongers for preserring steel from rust.
[EFFERENT (e, from; fero, to convey). A term giren to ressels which convey a fluid from glands. See Tasa efferentia.]

EFFERVESCENCE (efferresco, to grow bot). Tbe commotion produced in fluids by the sudden escape of gas, in the form of bubbles, as on pouring acid on cbalk.

EFFERVESCING DRAUGITT. Dissolve a scruple of carbonate of soda or potass in an ounce of water, and two drachus of cinnamon wnter with a drachm and a half of syrup of orange pecl; add a tahlespoonful of fresh lemon juicc, and drink the mixture immediately.

EFFLORESCENCE (efloresco, to blow as $\Omega$ flower). The pulrerescence of crystals, by the removal of their moisture, on exposure to the air. It is opposed to dcliquescence. [In pathology it signifies an cruption of the skin. See Exanthema.]

EFFLUVIA (cfluo, to flow out). Exhalations, vapours, de. They are distingnished into the confagions, as the rubcolous; marsh, as miasmata; and those arising from animals or regefalles, as odours.

EFFUSION (cffundo, to pour out). The escape of a fluid out of its natural vessel or viscus into another part. Also, the secretion of fuids from the ressels, as of lympb or seruin, on different surfaces.

EGESTA (egero, to carry out). A Latin terin for the substances carried out of the hody, as the freces, \&c. See $I n$ gesta.
EIGHTH PAIR, or PNEUMO-GASTRIC. The nerve which supplies the lungs, the heart, tho stomach, \&c., - the exciter of respiration.
[EILOID (ci入cu, to coil ; cidos, likeness). Eiloides. A name given hy Dr. J. C. Warren to dermoid tumours, in which the skin has the appearance of a roll or coil.]

EJACULATORES (ejaculo, to cast out). A pair of muscles surrounding the whole of the hulb of the urethra. As ejaculatores seminis, they act under the influence of the reflex function; as acceleratores urine, as voluntary muscles.
[EJECTION (ejicio, to thrust out). The act of discharging anything from the body.]
[ELABORATION (laboro, to lahour). The different changes which assimilable snhstances undergo, by the action of the living organs, hefore hecoming nutritive.]

ELEOSACCHARA ( (̌asov, oil ; saccharum, sugar). The mixtures or compounds of volatile oils and sugar.
[ELAIDATE. A comhination of elaïdic acid with a snlifiahle hase.]
-ELAIDIC ACID (ĖAasov, oil). An acid related to the oleic acid of oils.

ELAIDIN. A white saponifiable fat, consisting of elaildic acid and glycerin.
ELA IN (È Aacov, oil). The more fluid part of one of the proximate principles of fat. This and stecarine constitute the fixed oils.
[ELAIODATE. A comhination of elaiodic acid with a salifiable base.]

ELAIODON (ĖAacov, oil). The name given hy Merherger to the igreusine of Boullay. See Igreusine.

ELAIOMETER (È入atov, oil; $\mu t t^{\prime} \rho o v, ~ a ~$ measure). An intrument for detecting the adultcration of olive oil.

ELAIS GUINEENSIS. The Guinea Palm, which yields the palm oil, and, it is said, the hest kind of palm wine.

ELALDEHYDE. The coherent mass into which pure and anhydrous aldehydc is transformed, when kept for some time
at $32^{\circ}$. EL
the liquid portion of a volatile oil. The concrete portion is called stearopten. The volatile oils, when exposed to cold, generally separate into a solid and a liquid portion, showing that they are mistures of two oils differing in fluidity. These terus were first applied to the solid and fluid portions of fixed oils.

ELASTIC GUM. Caontchouc; Indian rubher; the produce of the Ficus elustica and other plants.

ELASTICITY. The property or power hy which a body compressed or extended returns to its former state.

ELATER ( $\dot{\text { en }}$ av́rw, to drive). A spiral fibre, found in great numbers mixed with the sporules, in the theem of some cryptogamio plants.
 term applied hy the Greeks to any purgative substance. It now denotes a suhstance procured from the juice surrounding the sceds of the Momordica Elaterium, or Squirting Cucumber. There are two kinds, the English and the Maltese.

Elaterin. A crystalline substance, constituting the active principle of elaterium. Dr. Paris applied the term elatin to this suhstance comhined with the green resin also found in elaterium.

ELATIO. Quixotism; a species of mental extravagance, so named by the rhetoricians, and importing, with them, "elevated, exalted, magnificent style, or imagery."

ELAYL. The name given by Berzelius to hydruret of acetyl, otherwise called olefiant gas, and etherine.

ELDER. The Sambucus nigra. The dried berries are called grana actes; and their inspissated juice, elder rob.

ELECAMPANE (contracted from enula campana). The Inula Helenium, a plant of the order Composita, the root of which yields a white starchy powder, called inuline.

ELECTRICITY ( ${ }^{\prime} \lambda \in \kappa t \rho o \nu$, amber; the substance in which the electric property was first discovered). The fluid or property in nature which is called into action in its simplest form hy rubhing-

1. Glass - which exhihits the vitreous, plus, or positive electricity ; i. e., when the substance is overcharged.
2. Resin or Amber - which exhibits the resinous, minus, or negative electricity; i. $\theta$., when the substance is undercharged.

Phenomena of Electricity.

1. Excitation, or the disturhance of the elcctric equilihrium by friction, elevation of temperature, contact, \&c. Bodics hare heen distinguished into conductors and vion-conductors, recording to the facility with which the elcetric influence passes, or is conducted along their surfaces.
2. Attraction, or the law by which light hodies move rapidly towards an excited surface.
3. Repulaion, or the lnw by which light bodics fly off from an electrificd surfaco after contact.
4. Distribution, or the law by which electrified bodies transfer their properties to otbers with which they come in contact. It is similar to the conduction of calorie.
5. Induction, or the law hy whicb an electrified body tends to produce in contiguous substances an oleetrie state opposite to its 0 mn .
6. Tension or intensity, or the degree to whicb a body is excited, as estimated by the electrometer. It must be distinguished from grantity.
7. Electr-ode (8ঠos,' a way). A term synonymous with pole; it denotes the boundary of tbe decomposing matter in the direction of the clectric current. This, and the terms in tbe two following paragrapbs, were introdueed hy Dr. Faraday.
8. The Electric Currents round the eartb pursue a course from east (äva, up), to west (katw, down) ; hence, if a body to be decomposed he similarly placed, the Anode is the point or surface at which the electricity enters, the part immediately touching the positive pole; and the Catliode, the point or surface out of which it passes, - the part next to the negative pole.
9. Substances directly decomposable by electricity are termed Elcctro-lytes ( $\lambda \hat{\omega} \omega$, to set frec). The elements of an electrolyzed body are called ions; that which goes to the anode, anion; that to tbe cathode, catior. Thus, if water be electrolyzed, oxygen and hydrogen are ions-the former an anion, tbe latter a cation.
10. Electrical column. A species of electrical pile, invented by De Lue, composed of thin plates of different metals in the usual order, witb discs of writing paper interposed between them.
11. Electro-lysis ( $\lambda \dot{v} \omega$, to deeompose). A kind of decomposition effected by electricity. The chemical expression equivalent to this is zincolysis, the decompositions throughout the circle being referred to the inductive action of tbe affinitios of ziuc or tbe positive metal.
12. Electro-meter ( $\mu \dot{\text { írpov, a mensure). }}$ An instrument for ascertaining the intensity of electricity. Among the varieties of this instrument are the quadrant, invented by Mr. Henley, and the electrical balance of Coulomb.
13. Electro-phoriss ( $\phi$ (pa, to convey). An instrument invented by Volta, for the purpose of eollecting weak clectricity.
14. Electro-scope ( $\sigma \times 0 \pi i=$, to examinc). An instrument for indicating excitement, and tbe clectrical state by which it is produced.
15. Electro-motion. The terın applied by Volta to the development of electricity in voltaio eombinations. other.
16. Electro-dynamics (סivapis, power). That branch of clectrieity which relates to the action of voltaie conduetors on each
17. Electro-magnetism. The term applied to that branch of science which includes the mutual action of conductors and magnets.
18. Electro-metallurgy. The art of working in metals by the galvanic fluid. See Electrotype.
19. Electro-tint. An application of eleetrotype, in whieb tbe rcquired suhject is painted on copper with a tbick varnisb or paint; tbe plate is then prepared in the usual way, and submitted to the voltaic circuit; a plate is tbus obtained from which prints are furnisbed.
20. Electro-type. The science by wbich fac-simile medals are executed in copper by menns of electricity. It consists in preparing for a negative plate models or moulds of ohjects to be copied; and in so arranging the battery or apparatus release generates the voltaic current, as to form.
21. Electro-vital, or nearo-electric carrents. The name of two electric currents, supposed to exist in animals, - the one external and cutaneous, moving from the extremities to the cerebro-spinal axis; the other internal, going from the cerehrospinal axis to the internal organs situated beneath the skin.
22. Electric aura. A current or breeze of electrified air, employed as a mild stimulant in electrifying delicate parts, as the eye.
23. Electrtc friction. A mode of employing electric sparks as a remedial agent, hy drawing them through flannel, as recommended hy Cavallo.
24. Electrizar's, Harrington's. Plates of copper and zine, or silver and zinc, of various forms, for medieal purposes.

ELECTRO-PUNCTURATION (pungo, to prick). The operation of inserting two or more necdles in a part or organ affected, and then toucbing them with the wires from the poles of a galranic machine.

ELECTRO-STIMULATION. The name given by Dr. Turnbull to the sensation of heat and tingling caused by the application of veratria, in the form of ointment, to the skin.

ELECTRUM. A mixture of gold and silver, of which the fifth part mas silver. ELECTUARIUM (ikतertòv, Hipp). An Electuary; an ancient form of preseription, retained in the pharmacopecins of Edinburgb and Duhlin, bui rejected in tbat of

London. Electuaries arc in general extemyoraneous preparations composed of dry powders, formed into a proper consistence by the addition of syrup, boney, or mucilage. See Confectio.

ELEMENT. This term denotes, in Chemistry, a simple substance,- one not knoton to contain more than one kind of matter, as the metal iron. The rust of iron, on the other hand, is a compound, being resolvable into metallio iron, oxygen, and carhonic acid.

Ultimate Element. The last element into which a hody can he decomposed or analyzed; thus, oxygen, hydrogen, carhon, and azote are the ultimate elements of all organized matter.

LL EMI. A fragrant, fennel-scented resin, produced by several species of Anyris.
[Elemin. A erystallizahle resin found in Elemi.]
[ELEOPTENE. See E/aopten.]
ELEPHANTI'ASIS (èneфas, an elephant). Leprosy, black leprosy; elephant leg. There are two diseases so named, from the supposed resemblance of the skin of leprous persons to that of the elephant; or from the misshapen leg in the Arahian leprosy heing supposed to resemble that of the elephant.

1. Elephantiasis Arabum. The original Arahic name was dal fll-literally, elephant disease. In the West Indies, it is called Barbados leg, sometimes yam leg, from the supposed resemblance of the affected limh to the form of this root; in Ceylon it is called Galle leg; and on the peninsula of India, Cochin leg. In the Malahar language, it is called anay kaal, which also means elephant leg.
2. Elephantiasis Gracorum. Tuhercular Elephantiasis. It has heen ealled leontiasis and satyriasis, from the disfiguration of the countenance, suggesting the idea of a wild beast or satyr. It is the Juzam of the older Arahians.
3. The Pelagra of Milan, the Rosa arturica of Spain, the Crimean disease of Pallas and Gmelin, and the Dral rouge of Cayenne, are all closely allied to it.
[ELETTARIA. A new genus of plants of the natural order Scitamineæ (Brown), Zingiheraccæ (Lindley).]
[Elettaria Curdamonium. The systematic name for the plant which yields the
officinal Cardamom.].
[Elettaria major. The systematic name of the plant which yields the Ceylon Cardamom.]

ELEVA'TOR (elevo, to raise). A name applied to certain muscles, whose office it is to clevate any part; and to an iustru-
ment for raising depressed portions of the cranium.

ELF-SIDENNE. Elf-squatting; the old Anglo-Saxon name for Ephialtes, incuhus, or night-mare.

ELIQUATION (eliquo, to clarify). The separation hy heat of a moro fusihlo suhstance from nother less fusible.

ELIXIR. An Arahic term, denoting an essence, or pure mass without any dregs; and formerly applied to compound tinctures.

1. Elixir paregoricum. Paregoric Elixir, or the Tinct. Camphoræ Comp.
2. Elixir proprietatis. Elixir of Nature, or the Tinct. Alocs et Myrrhæ.
3. Elixir Sacrum. Sacred Elixir, or the Tinctura Rhei et Aloes.
4. Elixir salutis. Elixir of Health, or the Tinctura Sennæ Comp.
5. Elixir stomachicum. Stomaehic Elixir, or the Tinct. Gentianæ Comp.
6. Elixirvitrioli. The Acidum Sulphuricum Aromaticum.
7. Elixir anti-arthritic, of Cadet de Gassicourt. A mixture of the three tinctures of aloes, guaiacum, and myrrh.
8. Elixir of Daffy. The Tinct. Sennæ Comp., with treacle instead of sugar-candy, and the addition of aniseeds and elecampane roots.

ELLAGIC ACID (from the word galle, read hackward). An acid which is obtained from galls, in the process for making gallic acid.
[ELM BARK. The inner hark of $U l$ mus campestris. See Ulmus.]

ELUTRIATION (chatrio, to cleanse). The process of washing, by which the lighter earthy parts are separated from the heavicr and metallic.

ELY'TRON (è̀vTpov). A shcath; the hard case which covers the wings of coleopterous insects. The vagina.

1. Elytro-cele ( $\kappa \hat{\lambda} \lambda \eta$, a tumour). The nane given by Vogel to vaginal hernia.
2. Elytr-oïdcs (fidos, likeness). Sheathlike; a term applied to the tunica vaginalis; also to the pessary of M. J. Cloquet.
[3. Elytro-plusty ( $\pi \lambda$ í $\sigma \sigma \omega$, to form). The operation of closing a vesico-vaginal fistulous opering by taking a flap from the labia or nates.]
[4. Elytro-pposis ( $\pi$ rũors, a falling down). Prolapsus of the vagina.]
3. Elyfro-rrhapia ( $\hat{a} \not \phi_{\eta}$, a suture). Sıture of the vagina; an operation for the prevention of prolapsus uteri.
EMACIATION (emacio, to makc lean). Marasmis. Geveral extenuation of the body, with debility.

EMANSIO MENSIUM. Retention of the mouses, ealled by many writers meno-
otatio; and by Frank, amenorrhoca tirancularum.

EMARGINATE. Having a notch at the upper extremity, as if a portion had bcen cut out of the margin.

EMASCULATION (cmasculo, to render impotent). Privation of viriity; castration ; remoral of the testes.

EMBALMING. The filling a dead hody with spices, gums, and other antiseptics, to prevent putridity.

EMBOITEMENT (the situation of one hox witbin another; from boite, a box). A term used by Bonnet to descrihe that species of gencration, by which hundreds and thousands of individuals lie onc within the other, each possessing a complete series of organized parts. Sec Evolution.

EMBROCATION ( $i_{\mu} \beta \rho^{\ell} \chi(\omega)$, to moisten). An external fluid application, for rubbing any part of the hody.

EMBRYO ( $\ell \nu$, in; $\beta \rho u ̛ \omega$, to bud forth). The ovam in utero, hefore the fourth month, after which it is called foeturs. Also, the rudiment of the future plant, contained within the seed.

1. Enibryo-logy ( $\lambda$ byos, an account). A description of tho emhryo.
2. Embryo-tomy (típva, to cut). The dismemberment of the foetus in utero, in order to admit of delivery.
3. Enbry-ulcia ( $£ \lambda \kappa \omega$, to draw). The same as cmbryotomy. It is performed hy means of a blunt hook or forceps, termed embryulcus.
4. Embryo-tega (tego, to cover). A small callosity ohscrved in some seeds, at a short distance from the hilum; it gives way, like r lid, at the time of germiuation, for the enission of the radicle.

EMERY. A varicty of corundum. The powder is obtained by trituration, attached to hrown paper called emery paper, and used for polishing, for preparing razorstrops, \&c.
[EMESIS ( $/ \mu \ell \omega$, to romit). The act of romiting.]

EMETIC ( $\boldsymbol{l}_{\mu}\{\omega$, to vomit). A substance which eauses vomiting. Enetics aro termed ropical, when they act only when taken into the stomach, as mustard; apecific, when they act hy being introduced into tho circulation, as emetic tartar.

1. Enetic farlar, or tartarized antimony; tartrate of antimony and potash, or the antimonimm tartarizaturn.
2. Emetin. [Emetia, Emetina.] The cinctic principle of ipecacuanins; it has been discovered to consist of a peculiar alkaline basis which may bo termed emeta. acid, and colouring matter. Dr. l'aris say's
that encta is to emetin what white crystallized sugar is to moist sugar.
[EMETO-CATHARSIS. A componnd term, signifying vomiting and purging at the same time.]
[EMETO-CATIIARTIC. A medicine which excites, at the same time, romiting and purging.]

EMMENAGOGUES ( $\ell_{\mu \mu \text { भиia, the }}$ menses; äyw, to induce). Medicines which promote the catamenial discharge, or the menses.

EMME'NIA ( $\ell \nu$, in ; $\mu \eta \nu$, a month ). The catarnenial discharge, or menses.

EMOLLIENTS (emollio, to soften). Agents which diminish the tone of the living tissues, and cause relazation or weakness. When employed for the parpose of sheathing surfaces from the action of injurious suhstances, they are called demulcents.
EMPATHEMA ( $\{\nu$, and $\pi a \theta \eta \mu a$, affection). Ungovernable passion; including excitement, depression, and hair-hrained passion, or the manie sans delire of Pinel. EMPHLYSIS ( $i v$, and $\phi \lambda \dot{c} \sigma t s$, a vesicular tumour, or eruption). Ichorons exanthem; includiag miliary fever, thrush, cow-pox, water-pox, pemphigus, and erysipclas.

E M P HYMA (iv, and фú $\omega$, to spring forth). Tumonr; including the sarcomatous, the encysted, and the hony species.

EMPHYSE'MA ( $\dot{\mu} \phi$ varis, to inflatc). Literally, that which is hlown in; winddropsy. A swelling produced hy air, diffused in the cellular tissue. It is distinguished into the traumatic, when the air has been introduced hy a solution of continuity; and the idiopathic, or spontaneous, when the gas is developed withia the cells.

EMPIRIC ( $i v$, in ; mipa, expcriment). Formerly, one who practised modicine upon expericncc, without regard to the rules of science; it now significs a quack, or vender of nostrums.
[EMPIRICISM. The practice of physio acquired merely from cxperience.]

EMPLASTRUM ( $\ell \mu \pi \lambda$ á $\sigma \sigma \omega$, to spread upon). A plaster; a solid and tenacions compound, adhesive at the ordinary heat of the human hody. Plasters harc been termed antid oinemente, as they may he said to differ only in consiztence from linimeats, ointments, and cerates.
[The following are the officinal (Ph. U. S.) Plasters, with the formulæ for their preparation:- Emm Anmoninci. Ammoniac
plaster. l. . Ammoninc, $\overline{\tilde{J}}$ r.; diluted acetio acid, Osa. Dissolve the ammoniac in the diluted acetic acid, aud strain; then
evaporate the solution by means of $\Omega$ waterbath, stirring constantly until it acquires a proper consistence.]
[2. Emplastrum Ammoniaci cum Hydrarqy.ro. Plaster of Ammoniac with Mercury. R. Ammoniac, Hj.: Mercury, 亏iij.; Olive oil, frj.; Sulphur, gr. riij. Heat the oil, and gradually add the sulphur, constantly stirring until they unite; then add the mercury, and triturate until glohules no longer appear. Boil the ammoniac with sufficient water to cover it until they are mixed; then strain through a hair sieve, and evaporate, by means of a water-hath, until a small portion taken from the vessel hardens on cooling. Lastly, add the ammoniac, while yet bot, gradnally to the mixture of oil, sulphur, and mercury, and thoroughly incorporate all the ingredients.]
[3. Emplastrum Assafcetida. Assafoetida Plaster. R. Assafoetida, Lead Plaster, each Hj.; Galbanum, Yellow Wax, each thss.; alcohol, Oiij. Dissolve the assafoetida and galbanum in the alcohol with the aid of a water-hath, strain the liquor while hot, and evaporate to the consistence of honey; then add the lead plaster and wax previously melted together, stir the mixture well, and evaporate to the proper consistence.]
[4. Enplastram Belladonnce. Belladonna Plaster. Bx. Resin Plaster, Ziij.; Extract of. Belladonna, $\overline{3}$ iss. Add the extract to the plaster, previously melted. by the heat of a water-bath, and mix.]
[5. Emplastrum Ferri. Iron Plaster. (Enplastrunu rohorans - strengthening plaster.) R. Snhearbonate of Iron, $\mathrm{Z}_{\mathrm{iij} .}$; Lead Plaster, tbij. ; Burgundy Pitch, tbss. Add the suhcarbonate of iron to the lead plaster and Burgundy pitch, previously melted together, and stir them constantly until they thicken upon cooling.]
[6. Emplastrnn Galbani Compositum. Compound Galbanum Plaster. B. Galhanum. $\overline{3}$ viij.; 'Turpentine, 3 x.: Burgundy Pitch, ${ }^{3} \mathrm{iij}$. ; Lead Plaster, 1biij. To the galbanum and turpentine, previously melted together and strained, add first the Burgundy pitch, and afterwards the lead plaster, melted over a gentle firc, and mix the whole together.]
[7. Emplastrum Hydrargyri. Mercurial Plaster. R. Mercury, $\overline{3} \mathrm{Yj} . ;$ Olive oil, Resin, of cach, $\mathcal{Z}_{\mathrm{ij} .}$; Lead Plaster, thj. Melt tho oil and resin together, and when they hecome cool, ruh the mercury with them till the glohules disappear; then gradually add the lead plaster previously melted, and mix the whole together.]
[8. Emplastrum Opii. Opium Plaster. B. Opinm, in powder, $\overline{\mathrm{j}} \mathrm{ij} . ;$ Burgundy

Pitch, Jiij.; Lead Plaster, Djo.; bolling water, fĩiv. Melt together the lead plaster and Burgundy pitch; then add the opium previously mixed with the water, and hoil them over a gentle fire to the proper consistence.]
[9. Emplustruni Picis Burgundica. Burgundy Pitch Plastcr. R. Burgundy Pitch, ibvj.; Yellow Wax, Doss. Mell them together, and stir constantly till they thicken on cooling.]
[10. Emplastrum Picis cum Cantharide. Plaster of Pitch with Spanish Flies. (Emplastrum calefaciens-warming plaster.) R. Burgundy Pitch, Biijss.; Cerate of Spanish Flies, 1bss. Melt them together hy means of a water-hath, and stir them constantly till they thicken upon cooling.]
[11. Emplastrum Plumbi. Lead Plaster. R. Semi-vitrified Oxide of Lead, in very fine powder, 1 bv .; Olive oil, cong., j.; water, Oij. Boil them together over a gentle fire, stirring constantly, until the oil and oxide of lead unite into a plaster. It will be proper to add a little hoiling water, if that employed at the commencement be nearly all consumed hefore the end of the process.]
[12. Emplastrum Reaince. Resin Plaster. (Adhesive Plaster.) R. Resin, in powder, tbss. ; Lead Plaster, Hiij. T'o the lead plaster, melted over a gentle fire, add the resin, and mix them.]
[13. Emplnstrum Saponis. Soap Plaster. R. Soap, sliced, Siv.; Lead Plaster, \#biij. Rub the soap with sufficient water to bring it to a semi-fluid state; then mix it with the plaster previously melted, and boil to the proper consistence.]

EMPRESMA ( $i v$, and $\pi \rho \dot{\eta} \theta \omega$, to hurn). Internal inflammation; a term employed, in its simple sense, by Hippocrates, \&c., and revived hy Dr. Good as a generic term for all those visceral inflammations generally distinguished hy the suffix -itis.

EMPROSTHO'TONOS ( $\varepsilon \mu \pi \rho_{0} \sigma \varepsilon \nu$, hefore; reivw, to draw). Clonic spasm fixing the hody forward. Compare I'ctanus.

EMPYE"MA (iv, within ; $\pi$ úov, pus). An internal abscess, particularly of the lungs; matter in the chest. This term was originally applicd by the ancients to every collection of purulent matter; it was subsequently confined to effusions into the pleura, and abscesses of tho lungs; it is now applied by surgcons in effusions into the plcura only: hence the terms, cmpyema of pus, of blood, of water and uir, are often used ns synonyms of pleurisy, hemothorax, hydrothorax, and pneumotborux. Chronio plenrisy constitutes the "purulent cmpyema" of surgcons.

EMPYESIS ( $\ddagger \mu \pi v \epsilon \omega$, to suppurate). Pustulous exanthem; a term used by Hippocratcs, and including, in Dr. Good's systom, variola or swall-pox.
[Empyesis oculi (ìv, in; $\pi \dot{c} o \nu$, pus). Sup. puration of the eyo. Sec Hypopium.]

EMPYREUMA ( $\dot{\xi} \mu \pi \cup \rho \in \cup ́ \omega$, to set on fire ; from $\pi \tilde{v} \rho$, fire). Peculiar vapours produced by destructive distillation. Hence the term empyrenmatic is applied to the acid, and to the oil, which result from the destructive distillation of vegetable suhstances; and, hence, hartshorn is called the empyrcumatic alkali.

- EMULGENTS (emulgeo, to milk out). A designation of the arteries and veins of the kidneys, which were supposed to strain, or milk out, the serum. A term also applied to remedies which excite the flow of hile.

EMULSIN. Vegetahle alhumen of almonds; a constituent of almond emulsion. A peculiar acid is procured from it, termed emulsic acid.

EMULSIO (emulgeo, to milk). An emulsion; a mixture of oil and water, made hy means of mucilage, sugar, or yolk of egg. This term is used hy the Edinhurgh College for the Mistura of the London Pharmacopoeia [and Ph. U. S.]

EMUNCTORY (emungo, to wipe out). An excretory duct; a canal through which the contents of an organ, as the gall-hladder, are discharged.

ENAMEL. The hard exterior surface of the teeth. Also a white glass formed of peroxide of tin, \&c.
ENANTHESIS ( $\grave{\varepsilon} \nu$, and $\mathfrak{a} \nu \theta \dot{c} \omega$, to hlossom). Rash exanthem ; including scarletfever, measles, and nettle-rash.-Good.
 A ball-and-socket joint. See Articulation. ENCANTHUS ( $\dot{\ell} v$, in ; $\kappa \dot{q} \nu \theta o s$, the corner of the eye). A disease of the caruncula lachrymalis.

ENCEPHALON ( $\varepsilon v$, in ; кє中adr), the head). The hrain: the contents of the skull, consisting of the cerebrum, cerebellum, medulla oblongata, and membranes.

1. Encephalata. A term applied by Dr. Grant to the Fifth suh-kingdom of Animals, or Vertcbrata, comprising animals in which the brain is cnclosed in a bony cavity. The classes are the pisccs, amphihia, reptilia, arcs, and mammalia.
2. Encephal-itis. Inflammation of the brain; as distinguished from meningitis, arachnitis, or inflammation of the membranes.
3. Encephnlo-celc ( $\kappa \eta \lambda \eta$, a tumour). Mernia of the brain, tbrough the walls of the
cranium, by a congenital opening, a fracturc, \&c.
4. Encephal-oïd (cỉos, likeness). A term applied to a morbid product, or encephalosis, the cut surface of which resembles brain.
[5. Encephaloma. Hernia cerebri.]
ENCHELIDE MONAD. An animalcule which performs the usual function of the green parts of plants, decomposing carhonic acid and evolving oxygen, under the influence of the light of the sun.
[ENCHONDROMA ( $i v$, into; $\chi^{6 v \delta p o s, ~ a ~}$ cartilage). A tumour or growth of a cartilaginous consistence.]
EN-CYSTED ( $\varepsilon v$, in ; Kborts, a cyst). A term applied to tumours which consist of matter contained in a sac or cyst.

ENDE'MIC ( $\varepsilon v$, among ; $\delta \tilde{\eta} \mu a s$, a people). An epithet for diseases peculiar to the inhahitants of particular countries native diseases.

EN-DERMIC. A term indicatire of the method of applying medicines to the denuded dermis. It is also called the em-plastro-endermic method.
[ENDIVE. Common name for the Ci chorium endiva.]
[ENDEXOTERIC ( $\varepsilon v \delta o v$, within; $\varepsilon \xi \omega$, without). A term applied to a series of periodic, vital phenomena, or changes intended to denote such as result from causes hoth internal or proper to, and external or independent of the organism ; that is, compounded of esoteric and exoteric serics.Mayne.]

ENDO (èvov, within). A Greek preposition, signifying within.
[1. Endo-branchiatis (Bpayxia, gillsi.. Having gills within ; applied to a family of Annelides, which hare no external gills.]
2. Endo-cardium (kapoia, the harart). A colourless transparent memhrane, which lines the interior of the heart. Inflammation of this membrane is termed endocarditis.
3. Eudo-carp (карпds, fruit). The innerniost portion of the pericarp. In some fruits it presents a bony consistence, as in the pench, and has been termed putamen. Sce Pericarp.
[4. Endochrome ( $\chi$ рш̄ца. colour). The granular matter contaiued in the interior of the vegetable cell.]
[5. Eudogastritis (yaotìn, the stomach). Inflammation of tho lining membrane of the stomach.]
6. Endo-gen (ysrváw, to produce). A plant whose stenı grows by internal increase, as a palu. Sce Exngen.
7. Eudlo-phloum ( $\phi$ Nods, bark). Another
name for liber-the innermost layor of tho bark of exogeus.
8. Endo-pleura ( $\pi \lambda \varepsilon v p r i$, the side). The internal integument of the seed, also termed tunica interna, tegmen, hilofère, \&e.
9. Eudo-rrhizous ( $\beta_{i} \zeta \boldsymbol{\beta}$, a root). A term expressive of the mode of germination of Endogens, in which the radicle is emitted from the substance of the radicular extremity, and is sheathed at its hase by the suhstance from which it protrudes. This sheath is termed the coleoptile.
[10. Endo-8keleton. Internal skeleton, as the skeleton of the vertehrata, as distinet from the exo-skeleton or external skeleton of the crustacea and testacea. See Skeleton.]
11. Endo-spermium ( $\sigma \pi$ ह́p $a$ a, seed). The name given hy Richard to the albumen of other hotanists. Jussieu termed it perisperm.
12. Endo-stome (orbur, a mouth). The orifiee of the inner integument of the ovule, in plants.
13. Endo-thecium ( $\theta \dot{\eta} \kappa \eta$, a ease). The name given hy Purkinje to the lining of the anther, consisting of fibro-cellular tissue.
[ENDOGENOUS ANEURISMS. A term proposed hy Crisp to designate spontaneous aneurisms or those arising from lesinns of the inner conts of arteries.]

ENDOSMO'SIS ( ${ }^{*} \nu \delta o v$, within ; $\dot{\omega} \sigma \mu \mathrm{s}$, impulsion). [Eudosmose.] The property by which rarer fluids pass through memhranous suhstances into a cavity or space containing a denser fluid. M. Dutrochet, who has introduced this term, with a knowledge of the motory principle to which it refers, has used othere explientive of his views of some operations in the animal cconomy: such is hyperendosmose, or the state of things in inflaumation; with this are associated adfuxion, or accumulation of the fluids, and impulsion, or increased flow of the fluids onwards. Thus, inflammation is said to be "bat d'adfluxion, et origine d'impulsion."

Endorno-meter (endosmosis, impulsion; hetpov, a measure). An instrument contrived hy Dutrochet for measuring the foree of the endosmosmic function.

ENECIA ( $\eta$ vecì̀s, continuous). A term denoting contimued action, and applied hy Dr. Good to continued fever, including the several specics of inflammatory, typhus, and synochal fever. These were formerly called confinentes, from their being supposed to be unattended by any change or relaxation whatever.

EN'EMA (ivinue, to inject). A elyster, lavenent, or injection. A formula used fur conveying both nourishment and medi-
cine to the system, under particularly morhid cireumstances.
[1. Enema Aloes. Clyster of Aloes. B. Aloes, $\mathrm{Aij}_{\mathrm{j}}$; Carhonate of Potassa, gr. xv.; Decoction of Barley, Oss. Ruh and mix together. Used for ascarades in the rectum, and as a laxative in constipation.]
[2. Enema Assafoctida. Clyster of Assafoetida. R. Assafoetida, Zj.; Decoction of Barley, Oss. Ruh the assuffetida with the decoction gradually added till they aro tboroughly mixed. Used as carminative, antispasmodie, and laxative.]
[3. Enema Catharticum. Cathartic Clyster. B. Common Salt, a table-spoonful; Olive oil and molasses, of each, two table-spoonsful; warm water, $0 \mathbf{0}$. Used as a laxative.]
[4. Enema Colocynthidis. Clyster of Coloeynth. B. Extract of Colocynth, $\mathbf{Z}^{\text {ss. }}$; soft soap, ${ }^{3} \mathrm{j}$. ; water, Oj . Mix well. Used when an active purgative effect is desired, as in obstinate colic and constipation.]
[5. Enema Opii vel Anodynum. Clyster of Opium. B. Laudanum, gr. 1x.; Solution of Starch, or rich flaxseed mucilage, f ${ }^{3} \mathrm{j}$. to $\mathrm{f}_{\mathrm{z}}^{\mathrm{ij}} \mathrm{j}$.]
[6. Enema Terebinthina. Clyster of Turpentine. B . Oil of Turpentine, $\mathrm{f}_{\mathfrak{j}}^{\mathrm{j}}$.; yolk of one egg; Decoction of Barley, fyxix. Used as a laxative, and for the removal of worms from the rectum.]

EN-EPIDERMIC. A term indicative of the method of applying medicines to the epidermis, unassisted by frietion, as when blisters, fomentations, \&ce, are employed. See Endermic.
[ENGORGEMENT. An overfulness, or ohstruetion of the vessels of a part ; congestion.]
[ENGOUEMENT, Obstruction of a conduit by matters aceumulated in it.]

ENNEANDRIA (हैvvદu, nine ; àvìp, man). The ninth class of plants in Linnæus's systcm, eomprehending those whieh have nine stamens.
[Enneandrous. Having nine stamens of about equal length.]

ENNUI. Weariness; listless fatigue of the mind.

ENS. The participle present of the verb sum, employed as a substantive, in philosoplical language, for any heing or existence. This term denotes, in chemistry, a substaneo supposed to contain all the qualitics or virtues of the ingredients from which it is drawn, in a small compass:-

1. Ens Martis. Ferrum Ainmoniatum. Anmoniated Iron, or Martial Flowers of the muriate of ammonia and iron.
2. Eus Veneris. The ancient desig.
nation of the muriate of ammonia and copper.
3. Ens primum. A name given by the alchemists to a tineture which they supposed to have the power of transmuting the metals.

ENSIFORM (ensis, a sword; forma, likeness). [Sword-shaped.] A Latin term applied to the sword-like cartilage of the sternum. The corresponding term in Greek is xiphoid.

ENTASIS (ivrcivw, to streteh). A term denoting intention, or stretching, and applied hy Good to constrictive spasm, ineluding cramp, wry-neek, locked-jaw, \&c.

ENTERA (ěvT\&pa, the howels ; from ivrds, within). The intestines.
[1. Enteralgia (ä̀ $\lambda$ os, pain). Neuralgia of the howels.]
2. Enteric. Belonging to the intestines.
3. Enter-itis. Inflammation of the intestines - the termination in itis being the nosological sign of inflammation.
4. Entero-cele ( $\kappa \hat{\eta} \lambda \eta$, a tumour). A hernia, the contents of which are intestine.
5. Entero-epiplo-cele ( $\ell \pi i \pi \lambda o o v, ~ o m e n-~$ tum ; кîd $\eta$, a tumour). A hernia, the contents of which are both intestine and omentum.
6. Entero-lithus ( $\lambda$ iloos, a stone). An intestinal concretion, as a bezoar, a ealculus, \&c.
[7. Entero-rrhoea (pew, to flow). An inereased secretion from the mueous glands of the intestines.]
8. Entero-r $r$ haphia ( $\dot{\rho} \phi \boldsymbol{\eta}$, a suture). A suture of the divided edges of an intestine.
9. Entero-tome ( $\boldsymbol{\tau} \boldsymbol{i} \mu \nu \omega$, to cut). An instrument. for the operation of artificial anus.
ENTOMOLINE ( $\varepsilon$ zqouov, an insect). See Chitine.
 an account). That part of Zoology which treats of insects.
[ENTOPHYTUS (ivros, within ; фutд̀v, a plant). Entophyta, pl. Entophytes. Growing within plants; applied to parasitical fungi, which grow upon or within otber plants.]
[ENTOZOA (ivros, within: $\zeta \omega o v$, animal). A term given by Rudolphi to animals which live within the hodics of other animals; $\Omega$ parasite. Owen gives the following tahular arrangement of the parasites of the human hody, with their habitat:-
Entozoa llominis.
Class-Psychodidra. Bory St. Vineent.

1. Acephalocymis cndogena. Pill-box hydatid. Habitat.- the liver, carity of the abdonch, sc.
2. Echinoencens hominis. Living hydatid. Liver, spleen, omentum.

Class - Pulygastrica, Ebrenberg.
3. Animalcula Echinococci. Liver, \&e., eontained within the cehinoeoecus.
Class - Protelmintia.
4. Cercaria seminis. Zoosperm, spernatozoon, seminal animalcule. In the semen.
5. Trichina spitalis. In the voluntary museles.
Class - Sterelmistia.
6. Cysticercus cellnlosce. In the museles, cerehrum, and cye.
7. Tænia solium. Long-jointed tapeworm, or common tape-worm. In the small intestine.
8. Bothrio-cephalus latns. Broad tapeworm. Small intestine.
9. Polystoma Pinguiala. Ovaria.
10. Distoma hepaticum. Liver fluke. In the gall-bladder.
Class - Celelmintha.
11. Filaria Medinensis, Guinea rorm. In the cellular tissue.
12. Filaria ocnli. In the erystalline lens.
13. Filaria bronchialis. In the broncial glands.
14. Tricocephalus dispar. Long thrend-worm. In the eæcum and colon.
15. Spiroptera hominis. In the urinary bladder.
16. Strongylus gigas. Kidney.
17. Ascaris lumbricordes. Long round worm. In the small intestine.
18. Ascaris vermicnlaris. Maw-worm or thread-worm. In the rectum.]
ENTROPIUM ( $i v$, in; ;pinw, to turn). Inversio polpebra. Inversion of the eyelid. Compare Ectropinm.
ENURESIS (iv, in ; oripoy, urinc). Incontinence of urine ; involuntary disehargo of urine.

EPACTAL. Thename giren hy Fischer to the inter-parictal bone of Geoffres St. Hiaire. It is only dereloped after hirth, and is only oceasionally met with.

EPI (ini). A Greck preposition denoting upou, for, se. Hence the com-pounds:-

1. Ep-anetus (ávinpr, to remit). A term denoting remittent, and applied by Good to remittent fever, including the mild form, the malignant form, aud hectic ferer.
2. Eph-elis ( $\bar{n} \lambda$ los. the sun). Tan-spots; sun-burn ; dark freckles, confluent or corymbose, disappearing in the winser.
3. Eph-emera (i, ifipa, a day). A fever which runs its coursc of the cold, bet, and sweating stuges in twelve hours.
4. Eph ialtes (äddopas, to leap). Incubus, or nightmaro; the imaginary being

Which seems to leap upon the chest of the slecper．

5．Eph－idrósis（idpow，to perspire）．Pro－ fuse and morhid perspiration．

6．Eph－ippium（a saddle；from ètı，upon； intos，a horse）．Sella turcica．Part of the os sphenoïdes，so called from its saddle－ liko shape．
［7．Epi－canthus（kav0ds，tbe corncr of the eye）．A fold of skin eovering tbe internal canthus．］
S．Epi－carp（карпдs，fruit）．Tbe exte－ rior portion of the pericarp，commonly termed the skin of fruits．See Pericarp．

9．Epi－cra＇nium（xpaviov，the cranium）． Tbe integuments，and epineurotic expan－ sion wbich lie over the cranium．

10．Epi－cranius．A name sometimes given to the occipito－frontalis muscle，from its covering tbe craniuın．

11．Epi－chrosis（ $\chi$ ри̃̈ $\mu$ ，colour）．A co－ loured or spotted surface of any kind，ap－ plied to maculæ，or blemisbes of the skin， as freckles，sun－burn，\＆c．
［1．2．Epi－coracoid（coracoides，corncoid）． Name given hy Prof．Owen to that incon－ stant bone，or pair of hones，posterior to the coracoid bone of fishes．］

13．Epi－demic（（סँ̈ $\mu \mathrm{s}$ ，the people）．An epithet for a popular，prevailing，but not native disease，arising from a general cause， as excessive heat．See Endemic．

14．Epi－dernis（ঠéppa，the skin）．The cuticle，or scarf－skin；the thin horny layer Whicb protects tbe surface of the integu－ ment．The external layer of the bark of plants．

15．Epi－didymis（didumo，two ；the tes－ tes）．The small oblong body whicb lies above the testis，formed by the convolu－ tions of the vasa efferentia，external to the testis．

16．Epi．gastrium（yaбrip，the stomnch）． Tbe superior part of the abdomen；tbe part situated above the belly．

17．Epi－genesis（yiveats，generation）．A term applied to a theory of non－sexunl generation，in whicb each new germ is an entirely new production of the parent or－ ganism．Coinpare Evolution．
［18．Epi－yeous（ $\gamma \eta$ ，tbe earth）．Growing close upon the carth．］

19．Epi－glottis（ $\gamma \lambda \omega \tau r i s$, glottis）．A cartilage of tbe larynx，situated above the glottis．

20．Epi－gynous（rvin，a woman）．That eondition of the stamens of a plant，in which they adhere both to the calyx and the ovarium，as in umbelliferous plants．
［21．Epi－hyal（hyoides，hyoid）．A name giren by Prof．Owen to a triangular piece af bone，pretty constunt in fishes，which articulates ahove witb tho Styluhy，ar．］
14＊

22．Epi－lepsy（ $\lambda a \mu \beta i v \omega$ ，to seizo）．An attack，particularly of the falling sickness． This affection has heen called morbus di－ vinus，morhus herculcus，morbus sncer， morbus comitialis，morbus caducus，mal enduc，\＆e．

23．Epi－nyctis（vù ${ }^{\text {g }}$ ，ขvkтòs，night）．A pustule，so called，because the eruption first appeared，or only appeared，by night ； or because it was most troublesome at night．The term is applied by Sauvages to ectbyma．
［24．Epi－phenomenon．An adventitious symptom，one not essentially attendant on tbe disease．］

25．Epi－phlosum（ $\phi \lambda u$ ids，bark）．A layer of bark，situated immediately beneath the epidermis，termed by Mohl，phlœum，or peridermis．

26．Epi－phora（（ $\pi \iota 申 \bar{\rho} \rho \omega$ ，to carry with force）．The watery eye；flux of tears．It is distinguished from stillicidium lacryma－ rum，whicb consists in an obstacle to the absorption and conveyance of the tears from the lacus lacrymarum into the sac； wbereas Epiphora consists in a super－ abundant secretion of tears．
［27．Epi－phyllous（фü入入ov，a lenf）．Ap－ plied to flowers which grow on the surface of a leaf，and also to parasitical fungi which grow on the leaves of other plants．］

28．Epi－physis（ $\phi v{ }^{\prime} \omega$ ，to grow）．A pro－ cess of a hone attached hy cartilage to a bone，and not a part of the same bone． It differs from Apophysis，whicb is a pro－ cess of a bone，and a part of the same bone．
［29．Epiphyte（фurov，a plant）．A para－ sitic plant，or fungus，wbich grows on tbe leaves of otber plants，and whicb has been also found in the human organism，both upon exposed surfaccs，as the skin and mucous membranes，and floating in tbe animal fluids．］

30．Epi－ploon（ $\pi \lambda \dot{\prime} \omega$ ，to sail）．The omen－ tum；a membranous expansion which fluats upon the intestines．

31．Epi－plo－cele（ $\varepsilon$ rimhoov，omentum； к $\dot{\eta} \lambda \eta$ ，tumour）．Hernia of the Epiploon，or
omentum．

32．Epi－pl－oscheo－cele（inindoov，the omen－ tum； $\bar{\sigma} \chi \chi \varepsilon \circ v$ ，the scrotum ；кй $\lambda \eta$, a tumour）． A hernia in wbich tbe omentum descends into tbe scrotum．
33．Epirrhco－logy（imibpon，a flowing on； $\lambda$ byos，an account）．That brancb of scienco which treats of the effects of exterual agents upnn living plants．
34．Epi－8chesis（ $\quad \sigma \chi^{\omega} \omega$ ，to restrain）．Ob－ struction ；suppression of excretions．
35．Epi－spadias（ $\sigma \pi d \omega$ ，to draw）．That inalformation，when the urethra npens on the dorsum of the penis，not fir from the pubes．See Mypospadiers．
36. Epi-apastice (onáw, to draw). Vesicatorics; blisters; external applications to the skin, wbich produce a scrous or puriform discharge, by exciting inflummation. Wben these agents act so mildly as mercly to excite inflammation, witbout occasioning tbe effusion of serum, tbey are denominated rubefacients.
37. Epi-sperm ( $\sigma \pi\{\mu \mu \alpha$, sced). This, and perisperm, are terms applicd by Richard to the testa of seeds - tbe spermoderm of Deerndolle.
38. Epi-staxis ( $\sigma$ тá\}ıs, a dropping; from oráそ $\omega$, to distil or drop down). Nasal hæmorrbage; bleeding from the nose.
39. Epi-thelium ( $\tau$ i $\theta_{n \mu}$, to place). Tbe cuticle on tbe prolabium, or red part of the lips, and on tbe mucous membranes in general. It is distinguisbed into the scaly [or pavement] epithelium, which forms tbe inner surface of the blood and lympb vessels, tbe inner surface of many mucous and serous sacs, \&c.; tbe columnar epithelium, wbicb forms tbe surface of the intestinal canal, as well as the surface of the passages from most glands; and the ciliated epithelium, which forms the surface of the mucous membrane of the organs of respiration, \&c.
[40. Epithelial. Of, or belonging to, tbe epitbelium.]
41. Epi-them (ri日n $\mu$, to place). A general term for any external topical application to the body, except ointments and plasters.
[42. Epitympanic (tympanicus, tympanic). Applied by Professor Owen to the uppermost subdivision of the tympanic pedicle which supports the mandible in fishes.]
43. Ep-ulis (oĩ $\lambda a$, tbe gums). A small tuberclo on the gums, said sometimes to become cancerous.
44. Ep-ulotics (oidn, cicatrix). Medicines wbicb promoto the cicatrization of wounds. They are also called cicatrisantia.
[45. Epizoon (̧ஸัov, an animal). A parasitic animal.]
[46. Epizootic. An epidemic, contagious disease among cattle.]

EPIAN. Pian. A term denoting a raspberry, and applied on the American coast to frambosia. On the African eoast this affection is termed yavos.
[EPIDENDRUM ( $\varepsilon \pi i$, upon; jevopov, a tree). A Linncun genus of plants of the natural order Orchidacea, so oalled because they usually grow on the branches and trunks of trees.]
[Epidendrum vanilla. Tho systematic name for the plant which furnishes the vanilla of comperec, used to tharour ice-
cream, custards, \&c.,-and also as a perfume.]
[EPIFAGUSAMERTCANUS. Anotber systematic name for Orobanche Virginiana.]
[EPIGAA REPENS. Trailing arbutus, Ground-Laurel. An indigenous trailing plant, said to be useful in diseases of tbe urinary organs, as a substitute for Uva ursi and Buchu. The leaves and stems are prepared in tbe same manner, and given in the same doses as the Uva ursi.]
[EPITHELIOMA (epithelium). A term. applied to a special class of growtbs, formerly comprised under tbe term cancroid, "the essential anatomical character of which is, that it is cbiefly composed of cells wbich bear a general resemblance to tbose of such tesselated or scaly epitbelium as lines the interior of tbe lips and moutb; and tbat part of tbose cells are inserted or infiltrated in the interstices of tbe proper structures of tbe skin, or otber affected part."]

EPSOM SALT. Sal catharticus amarus. Sulpbate of magnesia, formerly procured by boiling down tbe mineral water of Epsom; but now prepared from sea water.

EQUILIBRIUM (equè, equally; libro, to balance). A term expressive of tbe equality of temperature, which all bodies on the earth are constantly tending to attain (see Caloric)-and of the equal distribution of the electrio fluid in its natural, undisturbed state.
[EQUINIA (equinue, belonging to a horse). Glanders. A contagious disease, to which borses are liable, attended mitb discbarge of the nostrils, ulceration of the nasal mucous membrane, \&c., and wbicb is communicated to tbe buman species by inoculation.]

EQUITANT. A form of vernation in whicb the leaves overlap eacb other parallelly and eutirely, without involution.

EQUIVALEN'TS (aquè, equally; valeo, to avail). A term applied by Dr. Wollaston to the combining proportions of elementary and compound substances, as the quantitics of acid and base, in salts, required to ncutralize each otber. The following are instances of tbis lare:-

$$
\begin{array}{ll}
\text { Arsenic acid.... } 5768 & \text { Limc......... } 28 \\
\text { Muriatic acid.... } 37 & \text { Magncsia... } 20 \\
\text { Nitric acid...... } 54 & \text { Potash..... } 48 \\
\text { Sulphuric acid.. } 40 & \text { Soda........ } 32
\end{array}
$$

Thus $57 \cdot 68$ of arsenic acid, 37 of muriatic, 54 of nitric, and 40 of sulphuric, combinc with $2 S$ of lime, furming, re!pectively, a nentral arseniate, murinte, nitrate, and sulphate of live ; se., do

ERBIUM. A newly-discovercd metal, occurring along with yttria. Sce Terbium.

ERECTILE TISSUE (erign, to erect). [A peculiar tissue susceptihle of erection or rapid turgescence by an inereased flow of blood; composed of arteries, veins, and nervous filaments, and forming a spongy suhstance, the areola of which communicate with eacb other.] The tissue peculiar to the penis, nipple, \&c. Tbat of the vagina has been termed, by De Graaf, retiformis, and latterly, corpus cavernosum vagince. Tbe term is also applied to a similar tissue, constituting nærvus, \&c.

ERECTOR (erigo, to raise). [A raiser up.] A muscle of the clitoris and of the penis, so named from its office.

EREMACAUSIS (ク̆pгpos, slow; кaṽots, burning). A term applied by Liebig to the slow combustion or oxidation of organic matters in air, as the conversion of wood into humus, the formation of acetie acid from alcohol, nitrification, \&c.

ERETHISMUS (ip\& $\theta i \zeta \omega$, to excite). Constitutional irritation, or excitement.

Erethismus Mercurialis. Mercurial erotbism; a peculiar state of erethism produced by mercury.

ERGOTA. Secale Cornutum. Spurred rye; a long black substance, like a horn or spur, formed on rye, and many otber of the gramina, and supposed to be produced by a parasitic fungus.

1. Ergotatia (ergota, and alria, origin). The generic name given by Mr. Quekett to the ergot fungus, to which was added tbe specific appellation of abortifaciens, in allusion to its destroying the germinating power of the grain of grasses.
2. Ergotine. A peculiar principle discovered in ergot, by M. Bonjean, wbo formerly termed it hemostatic extract, from its being a real specific for hæmorrhages in general.
3. Ergotism. An epidemic occurring in moist districts, as in that of Sologne, from the use of ergota, in rye-bread. Its forms are, the colnvilsive, - a nervous disease, characterized by violent spasmodic convulsions; and the gangrenous, a depraved state of the constitution, terminating in dry gangrene, and known in Germany by tbe name of the creeping sicknesg.
4. Ergot-mould. This substance, called by tbe late Mr. E. J. Quekett Ergotatia abortifaciens, and referred by him to tbe Gymnomycctes, a sub-order of Fungi, is considered by Link and others to be a species of Oidinm, and referred to the IIyphomycetes, anothersub-order of Fungi, closcly allied to Confervaces.

ERICACEFA. Tbo Heath tribe of Di-
cotyledonous plants. Shrubs, with leaves evergreen, rigid, entire; whorled, or opposite; flovers monopetalous, regular; staniens definite; ovarium superior, many-seeded; seeds aptcrous.
[ERIGERON ( $\eta \rho$, the spring ; $y^{\prime} \rho \omega \nu$, an old man). A Linnean genus of plants of the natural order Asteraceæ, (Lindley).]
[1. Erigeron Canadense. Canada fleabane. An indigenous plant, said to possess diuretic, tonio, and astringent properties.]
[2. Erigeron Heterophyllum. (Willd.) E. anınum (Persoon). Various-leaved fleabane; an indigenous plant used as a diuretic.]
[3. Erigeron Philadelphicum. (Barton). E. Strigosum, (Willd.) Philadelphia fleabane. This and the preceding species are diuretic, and have been employed in nephritic complaints and dropsy.]

ERO'DENTS (crodo, to gnaw off). Substances which eat avay, as it were, extraneous growths.
[EROSE (erodo, to gnaw off). Gnawed; having the margin irregularly divided, as if bitten by some animal; applied to leaves.]

EROSION (crodo, to gnaw off). Destruction by ulceration ; the name applied by Galen to the phenomena of ulcerative ahsorption.
[EROTIC (Epes, love). Relating to love.]
[EROTOMANIA ( $\varepsilon \rho \omega \mathrm{s}$, love ; $\mu$ ava $a$, madness). Melancholy caused by love.]

ERRATIC (erro, to wander). Wandering; irregular; as applied to pains, gout, erysipelas, gestation, \&c.

ERRHINES ( $\varepsilon \nu$, in ; $\dot{\rho} i v$, the nose). Medicines which produce an increased discbarge of nasal mucus. See Stcrnutatories.

ERROR LOCT (crror of place). A term formerly applied to certain derangements in the capillary circulation. Boerhanve conceived that the vessels were of different sizes for the circulation of blood, lymph, and serum; and that, when the larger-sized glohules passed into the sinaller vesscls by an error loci, an obstruction took place which gave rise to the phenomena of inflammation.

ERUCIN. A newly-discorcred, yellow-ish-white substance, obtained from the Si napis albre, or white mustard.
ERUCTATION (eructo, to helch forth). Flatulency, with frequent rejection upwards, as from a voleano.
ERUP'IION (crumpn, to break ont). A breaking out; a term applied to achte eu-
taneons diseases.

ERVALENTA. A substanee consisting
of the farina or meal of the Ervum lens, or common lentil. The dictetical use of it is said to prevent constipation. The mélasse de la Cochinchine possesscs a similar result, but is said to be nothing more tban common trenele. Seo Revalenta.
[ERYNGIUM. A Linncan genus of plants of the natural order Umbellifera. The Pbarmaeopœial (U. S. A.) name for the root of Eryngium aquaticum.]
[1. Eryngirm aquaticum. Button snakeroot. An indigenous plant, the root of whicb possesses diaphoretic and expcetorant, and, in large doses, emetic properties.]

ERYNGO. Tbe candied root of the Eryngium campestre, reekoned by Boerhaave as the first of aperient diuretic roots; [common name for the genus Eringo.]
[ERYSIMUM ( ( $\rho \dot{\prime} u$, to draw). A Linnean genus of plants of the natural order Cruciferæ.
[1. Erysimum alliaria. (Linn.) Alliaria officinalis. Hedgo Garlic. An European speeies, the berb and seeds of which are esteemed diurctic, diapboretic, and expectorant.]
[2. Erysimum officinale (Linn). Sisymbrium officinale (Scopoli). Hedge Mustard. Formerly esteemed as diuretic and expectorant.]

ERYSIPELAS (ipúw, to draw; rédas, adjoining; so namcd from its propensity to spread; or, simply, from épuもpòs, red). An eruptive fever, ealled by tbe Romans Ignis sacer; popularly, the Rose, frous the eolour of the skin; and St. Anthony's fire, from its burning heat, or beeause St. Antbony was supposed to eure it miraculously.
[Erysipelatous. Belonging to erysipelas.]
ERYTIE'MA ( ${ }^{\text {epuedpas, red). Morbid }}$ redness of the skin; inflammatory blush. A red fulness of the integuments, terminating in scales, and occasionally in gangrene.

ERYTHREA CENTAURIUM. Common Centaury ; a plant of the order Gentianacea, possessing similar cffeets to thosc of Gentian. Its bitter prineiple is ealled contaurin.

ERYTHRIC ACID (ipuopds, red). The nanac given by Brugnatelli to purpurie aeid.

GLYTHRIN (tpoopds, red). One of a series of substances, ineluding erythrilin, crythrin bitter, or amary thrin, telerythrin, \&c., obtained by Dr. Kiano frou tho Roceciln tinctorir.

ERYTHROGEN ('puOpds, red'; yevvic, to produce). A yreen-coloured sulistance found in the gall-bladder, in a caso of joun.
diec. It unites with nitrogen, and produees a red eompourd.

ERYTIIROID ( $\quad$ puOpds, red ; cîoos, likencss). A term applied to the eremasteric covering of tho spermatie cord and testis.

ERYTIIROLEIN, ERYTIIROLITMINE. Tbese, with azolitmine and spaniolitmine, are tbe four eolouring principles obtnined from litmus. Tbese, in their natural condition, are red; and the blue of litmus is produeed by combination witb a base.
[ERYTHRONIUM AMERICANUM. Erythronium. An indigenous, Liliaceous plant, tbe reeent bulb of which is emetio in the dose of ..j. to $3^{58}$.]
[ERYTHROPHLEUM JUDICIALE. The systcmatic name of the tree whieb furnishes tbe Sassy Bark, employed by tbe natives of western Africa as an ordeal in tbeir trials for soreery.]
[ERYTIIRORETIN ( ${ }^{\prime} \rho v \theta_{\rho} \partial s$, red). Tbe red resin of rbubarb; a colouring principle diseovered by Seblossberger and Döpping in rhubarb.]
 $\lambda o v$, a leaf). A term applied by Berzelius to tbe red eolouring matter of fruits and leaves in autumn.
 tuna, protein). A product of the action of a coneentrated boiling solution of potash on protein. It is of a reddish-hrown colour, readily soluble in water and in boiling aleohol. It is preeipitated by the salts of lead, silver and mereury, of a rose eolour.]
[ERTTHROSE. A name given by M. Garot to the fine Jellow eolouring matter produced by the reaction of nitrie acid on rbularb, in eonsequence of the splendid purples whicb it produces witb the alkalies.]

ERYTHROSIS (iputpòs, redi). Plethora arteriosa. A form of plethora, in wbieb the blood is rieh in fibrin and in brigbt red piguncut; a statc corresponding in some measure with what has been termed tbe arterial constitution.

ERYTIIROZIM (fpu $\rho$ ро̀s, red ; pŕ $\mu \eta$, lesven). The nanic reeently given to the pceuliar fermentativo substance of madder, whieh has the power of effeeting the decomposition of rubian.

ESCHAR (ioxapow, to form a scab or erust). A dry slough: a gangrenous portion, which has separated from the healthy substance of the body.

Lischarotics. Substanees whieh form nn eselar, or slough, wheu applied to the skin.

FiSCULENT. An appellation given to
those plants, or any part of them, which may he eaten for food.

ESCULIN. An alkaloïd ohtained from the Asculus Hippocastanum, or horsechestnut, from the ash, \&c.

ESENBECKINA. An organic alkali, procured from Brazilian Cinchona, or the bark of the Exostcma Souzanum, a native plant of Brazil, and named from the erroneons idea that the bark helonged to Esenbeckia febrifuga.
 ceeding to, or into, the spinal marrow; a term proposed hy Dr. M. Hall to be substituted for Incident Excitor.]

ESO-ENTERITIS ( $\check{\sigma} \sigma \omega$, within; and enteritis). Inflammation of the mucous membrane of the intestiaes.

ESO-GASTRITIS ( ह̈бw, within; and gastritis). Inflammation of the mucous memhrane of the stomach.
[ESOTERIC (हैँ系тpos, comparative of हैow, within). Internal; applied to vital phenomear, or to diseases which result from internal causes, in contradistinction to exoteric, or those produced hy external causes.]

ESPRIT. The French term for spirit, or esseace. Any suhtile and volatile product of distillation.

ESSENCE DE PETIT GRAIN. A term origiaally applied to the volatile oil of the orange herry, hut now denoting the volatile oil obtaiaed from the leaves of both the bitter and sweet orange.

ESSENTIA ABIETIS. Essence of Spruce; prepared by hoiling in water the young tops of some Coniferous plant, as the Abies nigra, or Black Spruce, and concentratiag the decoction hy evaporation.

LSSENTIA BINA. A substance used to colour hrandy, porter, \&c., and prepared hy hoiling eoarse sugar till it is black and hitter; it is then made into a syrup with lime-water.

ESSENTIAL OILS. Oils ohtained by distillation from odoriferous vegetable suhstances. Several of the volatile or essen. tial oils are essences.

ESSERA. The Nettle-rash, or the Urticaria of Willan.-Good.

ESTIVATION (astivus, belonging to summer). Prafloration. A term applied to the condition of a flower when its parts are unexpanded. See Vernation.

ETERIO (írapein, an association). A term applied by Mirbel to an aggregate fruit, the parts of which are achenia, as in ranunculus, rubus, \&c.

ETHAL. A peculiar oily substance, obtained from spermaceti; also termed hydrate of oxide of cetyl. The term is
formed of the first syllables of ether and alcohol.
[EIIIALIC ACID. Dumas and Stass have given this name to an acid formed by the action of the alkalies on spermaceti. More recent investigations seem to show that this is a complex substance, consisting of five distinct acids.]

ETHER (al市p, ether). A liquid produced hy a remarkahle decomposition of alcohol, by sulphuric, phosphoric, and arsenic acids. It is sometimes distinguished as sulphuric ether, from the modo of preparing it.

ETHEREAL OIL. The Oleum Vini, found in the residuun of sulphuric ether, and forming the basis of Hoffman's celehrated anodyne liquor.

ETHERINE. A term synonymous with olefiant gas, elayl, or hydruret of acetyl.
[ETHERIZATION. The state of insensihility to pain produced hy inhaling tho vapour of sulphuric cther.]

ETHEROLE. A carho-hydrogen, commonly known as light oil of wine.

ETHIONIC ACID. An acid formed hy the action of sulphuric acid on ether aad alcohol.

ETHMOID ( $\dot{\eta} \theta \mu \partial \bar{s}$, a sieve; a ${ }^{2} \delta o s$, likeness). Cribriform, or sieve-like; a hone of the nose, perforated for the transmission of the olfactory nerves.

Ethmoïdal crest, or spine. See Crista galli.
[ETHNOGRAPHY (e $e v o s$, a nation; ypa$\phi \omega$, to write). A history of the manners, customs, origin. \&c., of nations.]

ETHNO'LOGY ( $\epsilon$ Voos, a race; $\lambda o y o s, ~ a ~$ discoursc). The science of the different varieties of the human species. The term is frequently used as synonymous with ethnography; some writers, however, denote by the latter the strictly descriptive part of the suhject, hy the former the philosophy of it. See Anthropology.

ETHYLE (alө̀̀p, ether ; है $\lambda \eta$, matter). A hypothetical radical, existing in ether and its compounds; ether heiag the oxide of cthyl, and alcohol the hydrated oxide of ethyl.

ETIOLATION. The process of blanching plants, as celery, kale, \&c., hy shelteriag them from tho action of light. Tho natural colour of the plants is thus prevented from hoing formed.

EUCALY'PTIN. A peculiar substance, somewhat analogous to pectin and tannio acid, produced from Botany Bay kino, tho astringent inspissated juice of the Eucaliptus resinifera.
[EUCALYPTUS. A Linnean genus of plants.]
[1. E'scalyptus dumora. A speoies found
in New Holland, and which furnishes $\Omega$ species of manna.]
[2. Enculyptus mannifera. A species growing in New South Wales, and which affords a substance closely resembling manna.]
[3. Eucalyptus resinifera. A New Molland species, the conercte juice of which is the Botany Bay kino.]

EUCHLORINE ( $\varepsilon \vec{v}$, brilliant; $\chi^{\lambda \omega \rho o ̀ s, ~}$ green). The name given by Davy to the protoxide of chlorine, from its heing considerably more brilliant than simple chlorine.

EUCHRONIC ACID (eil Xpoos, of a fine colour). An acid procured by the decomposition of the neutral mellitate of ammonia by heat. It forms a blue compound with zinc, called euchrone.

EUDIOMETER (sboia, calm weather; $\mu$ érpov, a measure). An instrument for ascertaining the proportion of oxygen in a given gas.

EUGENIA PIMENTA. The Common Allspice, a Myrtaceous plant, the fruit of which constitutes Pimento, or Jamaica pepper, commonly called allopice, from its flavour approaching that of cinnamon, cloves, and nutmegs.

EUGENIC ACID. An acid found in the cloves along with a neutral salt. Eugenin is a crystallizahle compound, found also in cloves, nud of the same composition as Eugenic acid. Caryophyllin is another of these compounds.

EUGENATES. Compounds of Eugenic acid with an alkali, consisting of crystalline salts, also called alkaline caryophillates, and clove-oil alkalies.
[EUGENIN. A name proposed by Bonastre for a crystalline principle discovered by Dumas in cloves].
[EUNONYMUS. A genus of plants of the natural order Celastracce.]
[1. Exnonymus Americanus, These
[2. Eunonymus atropurpurcus. species grow throughout the United States, and are known by the common name of hurning bush. The hark of the latter species, under the name of Wahoo, was introduced to notice some years ago as a remedy for dropsy. The seeds of both species are said to be emetic rnd purgative.]
[EUPATORIUM. A Linnean genns of plants of the natural order Composite. The pharmacopoinl name (U. S. A.) for the tops and leaves of the Eupatorium perfolintum.]
[1. Eupatorirm aya-pana, A Brazilian species possessing aromatic, bitter properties.]
[2. Aupatoriam eannabinum. Iemp agrimony. An Europeau species, the root
of which was formerly employed as a purgative.]
[3. Eupatorium perfoliatum. Thoroughwort, boneset. An indigenous epeciea, employed as a tonic and diaphoretic, and in large doses as emetic and purgative.]
[4. Enputorium purpureum. Gravel root. An iudigenous species said to possers diuretie powers.]
[5. Eupatorium teucrifolium, Wild horehound. Also an indigenous species said to posecss tonic, diaphorctic, diuretic, and aperient properties, and has been employed as a domestic remedy in intermittent and remittent fevers.]

Eupatorine. An alkaloīd discovered in the Eupatorium Cannahinum.
[EUPHORBIA. A Linnean genus of plants of the natural order Euphorhiaceæ.]
[1. Euphorbia antiquorum. An Egyp-
tian species, supposed to produce the Euphorhinm.]
[2. Euphorbia canariensis. A species growing in the Canary Islands and Western Africa, which affords the Euphorbium.]
[3. Euphorbia corollata. Large flowering Spurge. An indigenons Euphorbiaceous plant, the root of which, in the dose of from ten to twenty grains, is an active emetic. In somewhat smaller dnses it is cathartic, and in still emaller doses diaphoretic and expectorant.]
[4. Euphorbia hypericifalia. Milk-meed. An indigenous species, said to be astringent and narcotic. An infusion of the whole plant has been extolled as uscful in dysentery, diarrbœa, leucorrbœa, \&c.]
[5. Euphorbia Ipecacuanha. Ipecacuanha Spurge. This is also an indigenous species. Its root is an active emetic and cothartic, in the dose of from gr. x. to gr. xv .]
[6. Euphorbia lathyris. The systematic name of the mole plant, the seeds of which furnish the oil of Euphorbia, $\Omega$ powerful purgative in doses of from five to ten drops.]
[7. Euphorbia maculata. A epecies said to possess similar properties with E. hypericifolia.]
[8. Euphorbia Nereifolia. An East India species, used in India as a purgative and deobstruent.]
[9. Buphorbia nficinarum. The erstematic name of the plant which is supposed to produce the substance Euphorbium.] EUPHORBIACEAE. The Euphorbium tribe of Dicotyledouns plants. Trees, shrubs, and herbsecous plants, with leares altermate; flozers apctalous, uniscxual; orarium threc-celled, the eclls separating with clasticity from their common axis.

EUPHORBIUM. A saline maxy resin,
produced by an undetermined species of Eupharbia.

EUPHRASIA OFFICINALIS. CoInmou Eye.bright; a plant of the order Scrophulariacece, and a popular remedy for diseases of the eye.

EUPION ( $\varepsilon \underset{\nu}{\nu}$, well; $\pi i \omega \nu, f a t$ ). A colourless liquid, ohtained hy distillation from the tar of animal matters, and so named from its great limpidity.

EUPLASTIC ( $\varepsilon \hat{v}$, well ; $\pi \lambda^{\gamma}$ rots, formation). A term applied by Lobstein to the elaborated organizable matter, by which the tissues of the body are renewed. The same writer speaks of another animal matter, the tendency of which is to softening and disorganization; this he terms cacoplastic.

EUPYRION ( $\varepsilon \tilde{v}$, easily; $\pi \tilde{y} 0$, fire). Any contrivance for ohtaining an instantaneous light, as the phosphorous bottle, the promethean, \&c.

EUSTACIIIAN TUBE. The Iter a palato ad auren; a canal which extends from the tympanum to the pharynx, called after Eustachins, its discoverer.

1. Dfuscnins tubae Eustachiance nonus. A designation of the circumflexus palati muscle, from its arising in part from the Eustachian tuhe.
2. Eustachian Valve. A fold of the lining meubrane of the auricle, which in the fretus is supposed to conduct the hlood in two different courses.
[EUTHANASIA ( $\varepsilon$ ǔ, well; $\theta$ aivatos, death). Easy death.]
EVACUANTS (evacuo, to empty). Agents which cause a discharge by some emunctory. Sone of the milder evacuants are called alteratives, or purifiers of the blood.

EVACUATION (evacuo, to empty). The discharge of the frees, \&c.
EVAPORATION. The production of vapour at common or moderate temperatures. Compare Ebullition.

Spontaneous Evaporation. The production of vapour by some natural agency, without the direct application of heat, as on the surface of the earth or ocean.
[EV ENTliATION ( $\varepsilon$, out of; venter, the belly). Extrusion or displacement of the bowels, either through a wound or a preternatural opening.]

EVENTUALITY. A term in Phreno$\log y$ indicative of the faculty which ohserves phenomena, occurrences, and cvents, and is devoted. to history and natural knowledge. "Individuality takes cognizance of things which are, the names of which are nouns; and Eventunlity of things which happen, the nancs of which are verbs." Its organ is situated in tho mell-
dle of the forchead, and, when much developed, imparts a peculiar prominence to this part of the sliull.

EVOLUTION (evolvo, to roll out). A term applied to a theory of non-sexual generation, according to which the first created enihryos of each species must contain within themselves, as it were in miniature, all the individuals of that species which shall ever exist; and must contain them so arranged, that each generation should include not only the next, but, encased within it, all succeeding generations. Hence this theory has also receired the name of the emboitement theory. Compare Epigeresis.

EVOLUTION, SPONTANEOUS. A term applied by Dr. Denman to natural delivery, in cases in which the shoulder is so far advanced into the pelvis as to preelude the possibility of relief by operation.
[EVULSION (evello, to plucik out). Forcihle extraction.]

EXACERBATION (exacerbo, to exasperate). An increasc of fehrile symptoms.

EX ARESIS ( $\ddagger \xi a \downarrow \rho \hat{\omega} \omega$, to remove). One
of the old divisions of surgery, implying the removal of parts.

EXANGEA ( $\langle\xi$, out of; äyyeiov, a vessel). A term sometimes applied to diseases in which the large vessels are ruptured, or unnaturally distended.

EXANIA (ex, and amus). Arehoptosiz. A prolapsus, or falling down of the anus.

EXANTHE'MA ( $(\xi a v 0 i \omega$, to blossom). Efflorescence; eruptive diseascs; a term formerly equivalent to eruption generally, but now limited to rashes, or superficial red patches, irregularly diffused, and terminating in cuticular exfoliations.
[Exanthenatous. Eruptive. Of, or bclonging to, the Exanthemata.]
EXANTHESIS ( $\dot{\varepsilon} \xi$, out; a à $\dot{f} \omega$, to blossom). A superficial or cutaneous efflorescence, as rose-rash; it is opposed to ellanthesis, or efflorescence springing from
within.
[EXARTHROSIS ( $\varepsilon \xi$, out of; ap $\theta_{\rho o v,}$ the socket of a joint). Luxation.]
[EXARTICULATION ( $\varepsilon \xi$, out of; articulue, a joint). A luxation or dislccation of a hone from its socket.]
[EXCIPIENT. Any substance cmployed to give consistence in a modical preseription, or used as a vchicle for the administration of medicines.]
[EXCISION (exciudo, to cut off). The cutting off of any part.]
[EXCITABILITY (pxcito, to raise up).
The capacity possessed by living beings of being rexcited by stimulants.]
EXCITANTS (cxcito, to stimulate). Stimulants; these are terined gencral, when
they excite the system, as spirit; and purticular, when they cxcite an organ, ns in the action of diuretics on the kidncys.

EXCITEMENT. The effect produced by excitants, especially the general.

EXCITO-MOTORY. A designation of that function of the nervous system, discovered by Dr. Marshall Mall, by which an impression is transmitted to a centre, and reflected so as to produce contraction of a muscle, without sensation or volition. This has also been termed the Reflex Function, and more recently the Diastaltic Nervous system.

EXCORIATION (exeorio, to take off the skin). Abrasion of the skin.
EXCREMENT (excerno, to separate from). The alvine feces, or excretion. A term applied to a preternatural growth, as a wart, a wen, \&c.
[EXCREMENTITIOUS. Of the nature of, or resembling excrement.]
EXCRESCENCE (excresco, to grow from). A term applied to a preternatural growth, as a wart, a wen, \&c.

EXCRETA ANIMALIA. Animal excretions used as stimulants, as castoreum and musk.
[EXCRETINE. A term proposed by Dr. Wm. Marcet for a new organic suhstance, possessing an alkaline reaction, discovered by him in human excrement.]

EXCRETION (excerno, to separate from). A general term for the perspiration, urine, fæces, \&c., which are separated and voided from the blood or the food.
[EXCRETOIC ACID. An acid, olivecoloured substance, of a fatty nature, found by Dr. Wm. Marcet in human excrement.]
EXCRETORY DUCT (excerno, to separate from). The duct which proceeds from a gland, as the parotid, hepatic, \&c., and transmits outwards, or into particular reservoirs, the fluid secreted hy it.
[EXEDENS (exedo, to eat like $n$ worm). Eating, wasting; applied to diseases in which there is ulceration.]

EXERCITATIO. Gynnastics. Exercisc; the action of the organs of locomotion.

EXFETATION ( $c x$, ontward ; and foctur). Extra-utcrino foetation, or imperfect foetation in some organ exterior to the uterus. See Fccyesis.

EXFOLIATION (exfolio, to cast the leaf). The scparation of a dead piece of bone from the living.
[EXHALANT. A term applied to capillary vessels which pour out a fluid.] EXIIALATION (exhalo, to exhule). Eflhwia. The vapours which arise from animal and regetablo hodies, marshes, the earth, de.
[EXIIUMATION (ex, from; humus, the ground). Disinterment ; the act of remoring a corpse from the ground.]

EXO- ( ${ }^{(z \xi} \xi$, outward). A Greck preposition, signifying outzord.

1. Exoccipital bone. In anthropotomy, the condyloid process of the occipital hone; its homologue in the archetypal skeleton is called the "neuropophysis." See Vertebra.
[2. Exodic (òds, a way). Proceeding out of, or from, the spinal marrow.]
2. Exo-gen ( $\gamma$ cvviu, to produce). A plant whose stem grows by external increase, and which exbihits, in a transverse soction, a series of concentric circles or zones. Compare Endogen.
3. Exogenous (yivouat, to be prodnced). A term applied hy Prof. Owen to those parts of a vertehra which grow out from parts previously ossified. These are the "processes," as distinguished from the "elements," which are autogenou. [Applied also to stems in which new matter, hy which they increase in diameter, is added at the external surface.]
[5. Exogenous aneurisms. A tcrm proposed by Mr. Crisp to designate traumatic aneurisms, or those produced hy external division of the arterial walls.]
4. Exo-rrhizous (pí̧a, a root). A term expressive of the mode of germination in Exogens, in which the radicle appears at once on the surface of the radicular extremity, and conscquently has no sheath at its hase. See Endorrhizous.
[7. Exo-8keleton. An external skeleton; applied to the skeleton of those animals which have a hard or hony case.]
5. Exo-stome ( $\sigma$ гò $\mu$ a, the mouth). The orifice of the outer integument of the orule in plants.
6. Exo-thecium (Ofkn, a ense). The name given by Purkinje to the coat of tho anther.
[EXOGONIUM PURGA. A name for the plant which furnishes jalap.]

EXOMPIIALOS ( $\langle\xi$, out; $\delta \mu \phi$ ф $\lambda \partial s$, umhilieus). Hernin at, or near, the umhilicus.
 the cye). Ophthalmoptosis. Plosis bulbi oculi. Protrusion of tho glohe of the еус.
 term used by the Grecks as synonymous with cethyma, or papulous skin, connprising gum-rash. \&c.

E IOSMO'S IS ( $\varepsilon \xi$, out : $\dot{\omega} \sigma \mu \partial ̀ s$, impulsion). The property by which rarer fluids: pass through nicmbranous substances, out of a carity into a denser fluid-"dehors iupulsion." Sec Endosmoris.
ELOSTO'SIS ( $a^{\zeta}$, out; detcor, a bone).

An exereseence or morbid enlargement of a bone.
 tcrm applied to an effect produced by a eause external to, and independent of, the system. See Esoteric.
[EXOTIC. Foreign. Applied to plants which are not native to a country.]

EXPANSIBILITY. Expansile power. These terms are employed by physiologists to denote a vital property moro or less ohservable in several organs, as the penis, the nipple, the heart, the utcrus, the retina, perbaps even the cellular substance of the hraiv.

EXPANSION (expando, to spread out). An enlargement of volume; the usual effect of caloric.
[EXPECTANT (expecto, to wait). Expectation. A term given to a method which consists in watehing the progress of diseases without giving any active medicine, unless symptoms appear which imperiously require such.]

EXPECTORANTS (ex pectore, from the chest). Medicines for promoting the discharge of macus or other matters from the trachea and its branehes.

Expectoration. The act of discharging any matter from the chest; also, the maiters so discharged.
[EXPERIENCE ( $\varepsilon \xi$. from; $\pi \tilde{\varepsilon} \imath p a, a$ trial). Practical knowledge; knowledge obtained by practice.]
[EXPERIMENT. A practical proof. A trial for the purpose of aseertaining a truth, or of obtaining knowledge.]
EXPIRATION (expiro, to breathe). That part of respiration in which the air is expelled. Compare Inspiration.
EXPLORATION (exploro, to examine). Exnmination of the abdomen, chest, \&c., with a view to aseertain the physical signs of disease, in contradistinction to those signs which are termed symptoms.

EXPRESSED OILS. Oils ohtained from bodies by pressure.
[EXPRESSION (exprimo, to press out). The indication of the feelings presented in tho countenanee, attitude, and gesture. The process of foreing out the liquid parts from animal regetable bodies.]
[EXPULSION (expello, to drive out). The aet of foreing out, as in voiding the bowels, or bladder, or uterus.]
[LXPULSIVE (expello, to drive out). Applied to the pains occurring in the second stage of labour, when the child is being extruded.]
[EXSANGUINE, $\left.\}_{\text {[EXSANGUINEOUS, }}\right\}$ (ex, priv.; sanWithout blood, anemic.]

EXSANGUINITY (ex, out; sanguis, blood). Anhcemia. A state of bloodlessness.
EXSICCATION (exsicco, to dry up). A variety of evaporation, producing tho expulsion of moisture from solid bodies by heat; it is generally employed for depriving salts of their water of erystallization.
[EXSTROPHIA ( $\varepsilon \xi$, out of ; $\sigma$ rоф $\eta$, as turniug). Exstrophy. Displacement of an organ. Applied to a congenital malformation, in which, from a deficiency in the anterior ahdominal parietes, the corresponding wall of the bladder appears to he turned inside out.]

EXTENSION (extendo, to stretch out). This term denotes, in physics, the property of occupying a certnin portion of space. In surgery, it signifies the act of pulling the broken part of a limb in a direction from the trunk, in order to bring the ends of the bones into their natural situation.

Counter-extension. The act of making extension in the opposite direction, in order to binder the limb from being drawn along by the extending power.
EXTENSOR (extendo, to streteh out). A muscle whieh extends any part.' It is opposed to flexor, or that whieh hends a part.
[EXTERN (externe, external): Applied to hospital and dispensary patients wbo are not inmates of sueh institutions; also to the assistants, \&c., who attend sueh, or who do not dwell in the institution.]

EXTIRPATION (extirpo, to eradicate; from stirps, a root). The entire removal of any part by the knife, or ligature.

EXTRA UTERINE. A term applied to those eases of pregnancy in which the foetus is contained in some organ exterior to the uterus.

EXTRACTION (extraho, to draw out). The operation of removing the teeth, a wusket-hall, \&e. The proeess of preparing a pharmaceutical extract.
EXTRACTIVE PRINCIPLES. Tho general designation of a variety of compounds, most of which erystallize and havo a bitter taste, hut are neutral, and cannot yet be referred to any particular series of compounds. They comprise all the nonazotized vegetable compounds.

EXTRACTUM (extraho, to draw out): An extract; a preparation obtained by tho evaporation of a vegetable solution, or a native vegetable juice. Its basis is termed extractive, or extractive principle.
[EXTRACTUM CANNABIS. Extraet
of Hemp；the U．S．Pharmacopeial name for the alcoholie extract of the dried tops of Cannabis Sativa，variety Indica．］

EXTRAVASATION（extra，out of ；vas， a vessel）．The passage of fluids out of their proper vessels，and their infiltration into the surrounding tissues．

EXTROVERSION（extra，without；ver－ sio，a turning）．An ahnormal position in an outward direction，of a viscus or other part of the body．

EXTROSE．Turned outward；turned
away from the axis to which it belongs； applied to certain anthers．

EXUDATION．Transpiration．The flow of liquid from the surface of the skin or membrnne，an ulcer，dc．

EXUVIF（exиo，to putoff）．The slough or cast－off covering of certain animals，as those of the snake－kind．

EYE．Oculus．The organ of vision． The following is a systematic arrange－ ment of the diseases to which this organ is liable：－

## I．Diseases of the Eye，generally．

1．Ophthalmia（ $\delta \phi \theta a \lambda \mu \partial s$ ，the eye）．Ge－ nerally，any inflammation of the eye．

2．Ophthalmitis．Inflammation of the globe of the eye．

3．Exophthalmia（ $\bar{\xi} \xi$ ，out；$\delta \beta \theta n \lambda \mu \partial s$ ，the eye）．Protopsis，or protrusion of the glohe of the eye．Beer proposes to call the af－ fection exopthalmus，when the protruded eye is in its natural state ；exophthalmia， when it is inflamed；and ophthalmoptosis， when the displacement is caused by divi－ sion of the nerves and muscles of the orbit， or by paralysis of the latter．

4．Lippitudo（lippur，blear－eyed）．Ca－ tarrbal ophthalmia．

5．Epiphora（emiфf，$\omega$ ，to carry with force）．Watery eye．

6．Cirsophthalmin（xıpods，varix；$\delta \phi \theta_{a} \lambda$－ $\mu \partial s$ ，the eyo）．Varicositns oculi，or varicose ophthalmia．A varicose affection of the blood－vessels of the oye．

7．Empyesis oculi（ $c v$ ，in；$\pi$ ṽov，pus）． Suppuration of the eye．

8．Ophthalmoplegia（ $\delta \phi \theta a \lambda \mu \partial s$ ，the eye； $\pi \lambda$ ño $\omega$ ，to strike）．Paralysis of one or more of the museles of the eyc．
 aıцu，blood）．A scorbutie blood－shot ap－ pearnnce of the eyc．
 $\mu \delta_{5}$ ，the cye）．Hydrops oculi，or dropsy of the eyc．This hns been also termed bu－ phthalmue（ $\beta$ oùs，an ox ；$\dot{\psi} \theta_{\mathrm{u}} \lambda_{\mu} \mathrm{o}_{\mathrm{s}}$ ，the cye）， or ox－eyc．

II．Discases of the Eyc－lile．
11．Ankylublepharon（izuvỉos，bent；$\beta \lambda i$－

фapov，the cye－lid）．A preternatural union of the two lids．

12．Chalczion（Xì入a̧a，a hail－stone）． An indurated tumour of undefined margin， occupying the edge of the lid．It is called， in Latin，grando；and，from its heing sup－ posed to be the indurated remains of a stye，it has been termed hordeolum indu－ ratum．

13．Ectropizm（ $\varepsilon \kappa$ ，out；$\tau \rho \ell \pi \omega$ ，to turn）． Eversion of the eye－lids．

14．Entropiun（ $\varepsilon v$, in；$\tau \rho i \pi \omega$ ，to turn）． Inversion of the eyo－lids．

15．Epicanthus（eni，upon；кav日多，the corner of the eye）．A fold of skin covering the internal cantbus．

16．Hordeolum（dim．of bordeum，bar－ ley）．Stye；a tumour resembling a barley－ curn．

17．Lagophthalmos（גayต̀s，a hare；$\delta \phi-$ $\theta a \lambda \mu \partial s$ ，the eye）．Hare－eye；shortening of the upper lid．

18．Milium（a millet seed）．A small white tumour on the margin of the lids， containing a substance nearly like hoiled rice．

19．Nevi materni，or mother－spots，oc－ curring on the eye－brow，or upper lid．
20．Pediculi ciliorum．Lice of the eye－ lashes．Phtheiriasis．

21．Phlyctenula（dim．of phlyctæna）．A watery resicle of the ciliary margin．
22．Ptilnsis（ $\pi$ ridwots，the monlting of hirds）．Madarosis．Alopecia．Loss of the eye－lashes．

23．Ptosis（rtũois，prolapsus）．A falling of the upper eye－lid．
24．Symblepharon（oòv，together with； $\beta \lambda \dot{\text { inapov，the eye－lid）．The connexion of }}$ the lid to the glohe of the eye．

25．Trichiasis（ $\theta \rho i \xi$ ，тpixds，hair）．An unnatural direction of the cilia inmards against the eyc－ball．
26．Tylosis（rúdos，callosity）．Thicken－ ing and induration of the palpebral mar－ gins．The terms pachyblcpharozis，pachea blephara，nnd pachytes（Taxùs，thick），de－ note the thickened state of the lids．

III．Diseases of the Conjunction．
27．Eucanthis（Ev，in ；Navès，the corner of the eye）．Enlargement of the caruncula Inerymnlis．
28．Pterygium（ $\pi$ ri $\rho u \xi$ ，a ring）．A thick－ enel state of the membrnne，probably ${ }^{\circ}$ called from its trinngular shnpe．
IV．Diseascs of the Cornca and chambers of the aqueous humours．
29．Ccratocelc（кipas．xiparos，cornu ；$\kappa \phi \lambda \pi$ ， a fumour）．Ilernia of the eornea．

30．Comeitis，ceratitis，or keratitis．In－ Anmmation of the cornea．

31．Hamophthamu＊（aía，blood；b̈q $\theta a \lambda-$
$\mu d s$ ，the ese）．Effusion of blood into the chambers of the eyc．

32．Hypogala（íjrò，under；yỉגa，milk）． The effusion of a milk－like fluid into the chambers of the eye．

33．Hypopyon（i̋noे，under；пั̃ov，pus）． The presence of pus in the anterior cham－ her．

34．Hypolympha（ $\mathfrak{i \pi j}$ ，under；and lym－ pha）．The effusion of lymph in the cham－ bers of the aqueous humour．

35．Opacity（opacus，opaque）．A gene－ ral term，popularly called film，including all changes affecting the transparency of the cornea：these arc－

1．Arcus senilis（senile how），or geron－ toxon．The opaque circle，or half cir－ cle，formed in old age．
2．Nebula（a cloud）．Haziness；dul－ ness．
3．Lencoma（ $\lambda$ evxd̀s，white），or albugo． A denser opacity extending through the lamina．
4．iifacula（a spot）．A small patch，or speck．
36．Staphylona（araфu入ो̀，a grape）．In－ creased size of the cornea，with opacity．
V．Diseases of the Iris，lens and capsule， and vitreons humour．
37．Coloboma ividis（ко入 $6 \beta \omega \mu a$ ，a muti－ lated limb）．Fissure of the iris，with pro－ longation of the pupil．

38．Glancoma（ $\gamma$ 入avkòs，azure）．For－ merly cataract，hut now discoloration of the pupil．

39．Iritis．Inflammation of the iris．
40．Mfydriasis（ $\mu v \delta^{\delta} 0$ ，moisture）．Di－ lated pupil．

41．Myosis（ $\mu \dot{v} \omega$ ，to close； $\bar{\omega} \psi$ ，the eye）． Contracted pupil．
42．Prolapsus iridis．A hernia－like pro－ trusion of the iris through a wound of the cornea．The tumour，thus formed，is some－ times called staphyloma iridie；the protru－ sion of the whole iris is termed staphyloma racemosum；a small prolapsus，myocephalon （ $\mu v i a$, a fly；$\kappa \varepsilon \varphi a \lambda i \bar{\eta}$ ，the hcad）；those of larger size have heen named clavirs（a nail），
 apple）．

43．Synchisis（aúyxuots，a melting．）A fluid state of the vitreous humour．

44．Synechia（avvix $\omega$ ，to keep together）． Adhesion of the uvea to the crystalline capsule，which is termed posterior；and that of the iris to the cornea，which is an－ terior．

45．Synizesis（ $\sigma u v i \zeta \eta \sigma t, 5$, oollapse，sink－ ing in）．Atresia iriulis．Closuro of the pupil．

## VI．Cataract．

46．Cataract．Opacity of tho crystal－ line lens，of its capsule，or of the Mor－
gagnian fluid，separately or conjointly． Cataracts were formerly denominated ripe， or unripe．Beer divides them into the true and the spurious．

## True Cataract．

1．The Lenticular，of various consist－ ence，as the hard or firm；and the soft， caseons，gelatinons，or milky．

2．The Capsular；＇termed the anterior＇， the posterior，and the complete．

3．The Morgagnian，sometimes called the milk cataract，or confounded with the purulent；one of the rarest forms of the disease．

4．The Capsulo－lenticular．The varicties of this form aro termed，with reference to to their appearances ：－

Marmoracea，or the marbled．
Fenestrata，or the latticed．
Stellata，or the starry．
Strinta，or the streaky，
Centralis，or the central．
Punctata，or the dotted．
Dimidiata，or the half－cataract．
Tremula，or the shaking．
Natatalis，or the swimming．
Pyramidalis，or the conical．
Siliquata arida，or the dry－shelled．
Gypsea，or the cretaceous．
Purulent encysted，or putrid．
The trabecularis，or the barred．This is the＂cataracte harrée，＂or bar－cataract of the French，and the＂cataract with a girth or zone，＂of Schmidt．

Spurious Cataract．
Lymphatica，or lymph－cataract．
Membranacca，or memhranous．
Purulenta，or spurious purulent．
Grumosa，or hlood－cataract．
Dendritica，arhorescent，or choroïd．
VII．Operations for Cataract．
1．Couching，or depression．An opera－ tion described hy Celsus，and consisting originally in the removal of the opaque lens out of the axis of vision，by means of a needle．See Reclination．

2．Extraction，or the removal of the opaque lens from the cye，by division of the cornea，and laceration of tho capsule．

3．Keratonyxis（кípas，кéparos，a horn； vioow，to puncture）；or the operation of couching performed by puncture of the cornea．
VIII．Operations for artificial pupil－ corcmorphosis（ $\kappa 6 \rho \eta$ ，pupil ；$\mu \dot{\rho} \phi \omega \omega \iota \iota$ ，for－ mation）：－
1．Coretonia（ $\kappa \delta \rho \eta$ ，pupil ；тиниे，sec－ tion），or iriditomia．Tho operation by in－ cision．

2．Corcctomia（ $\kappa 6 \rho \eta$ ，pupil ；єктоци，cxci－ sion，）or iridectomia．Tho operation by excision．

looscning），or iridudialysis．The operation by separation．

4．Iridencleisis（Tpıs，iris ；$\varepsilon y \kappa \lambda \varepsilon i \omega$ ，to in－ closc）．The strangulation of the detached portion of the iris．

5．Iridectomedialysis（Tpıs，iris；हктоцй， excision；dúduvas，separation）．The opc－ ration hy excision and separation．

6．Scleroticectome（sclerotica；and exтopm， excision）．The operation for forming an artificial pupil in the selerotica．

IX．Amaurosis．
Imperfection or loss of sight from affec－ tion of the retina，optic nerve，or senso－ rium．Literally，it means dimness of sight， and is applicd，generally，to the following forms and degrecs ：－

1．Anıblyopia（ $a_{\mu} \beta \lambda i ̀ s$ ，dull ；シ̈ $\psi$ ，the eye），the incipient or incomplete．The epithet amaurotica is sometimes attached to it．

2．Gutta serena（drop screne ；so named from the idea of an effused fluid at or behind the pupil），the complete．Often synonymous with amaurosis．

3．Suffusion（suffundo，to suffuse，）is a term applied generally by Celsus，\＆c．， to amaurosis，arising from cataract，\＆c． The $\dot{\varepsilon} \pi \bar{\delta} \chi u \mu a$ ，or $\mathfrak{i \pi o \chi \chi v a t s , ~ o f ~ t h e ~ e a r l i c r ~}$ Greek writers，includes amaurosis and cataract；the latter was afterwards called $\gamma \lambda u$ úx $\omega \boldsymbol{\mu} \boldsymbol{\mu}$ ．
X．In Incomplete Amawrosis there are－
4．Amanrotic cat＇s eye（amblyopia se－ nilis？）．A term applied by Beer to an amaurotic affection，accompanied hy a re－ markahly pale colour of the iris．It oecurs chiefly in very old persons．

5．Hemeralopïa（ $\eta \mu \dot{\varepsilon} \rho a$ ，day；$\ddot{\omega} \nmid$＇，the eye），day－eye ；or cocitas crepuscularis，or nocturna，－caligo，or dysopia tenebrarum －or night－blindness．

6．Nyctalopia（v̀े̧，vuxtòs，night；む̀ $\psi$ ， tho eye），night－eye．Cæcitas diurna，or day－blindness．
7．Myopia（ $\mu v \mathbf{\omega} \omega$ ，to close ； $\boldsymbol{\omega} \psi$ ，the eye）， or near－sightedness．

8．Presbyopia（ $\pi \rho \dot{\varepsilon} \sigma \beta$ ¢，old ；$\check{\omega} \psi$ ，the eyc），or far－sightedness．
9．Photophobia（ $¢ \omega \widetilde{s}, \phi \omega \tau \partial s$ ，light ；$\phi \delta \beta o \varsigma$ ， fear），or intolerance of light．This is con－ nected with

10．Oxyopiu（（ל乡ùs，acute；84ts，sight）； or acutences of sight，for a short time，at intervals．

11．Strabisntus（ $\sigma \tau \rho a ß \iota s \mu \grave{\varrho}$ ，squinting； from $\sigma \tau \rho \alpha \beta \partial \rho_{s, ~ i . ~ q ., ~}^{\sigma \tau \rho \varepsilon} \beta \lambda \partial \partial_{s}$ ，twisted），or squinting．When the cye turns inward it is called convergens；when outward，di－ vergens．

12．Luscitas（luscus，blind of one eye）， or obliquity of the eye．
XI．Other defcets of sight（vitia visús）－
13．Visus colorafus or chrupsia（xpóu， colour；$\delta \psi(5$, sight），or coloration of oh－ jects．

14．Visus defiguratus or metamorpho－ psia（ $\mu \varepsilon \tau a \mu \delta \mu \phi \omega \sigma \iota 5$ ，transformation；$\delta \frac{1}{15}$ ， sight），or distortion and confusion of oh－ jects．

15．Visus dimidiatus，or hemiopsia（グクutov， half； 84 ts，sight），or half－sight．An affec－ tion of the sight，in which the sphere of vision is diminished，so that the person sces only a part of an object．

16．Visus duplicatus，or diplopia（ $\delta$－ $\pi \lambda$ óos，double；and $\check{\omega} \psi$ ，sight），or double vision．

17．Visus intcrruptus（interrnmpo，to interfere with）；or broken，interrupted vi－ sion．

18．Visus lucidus，or photopsia（фััч．о̣ш－ ròs，light ；ö $\psi$ is，sight），or luminous vision， in which flashes of light appear to pass before the eyes，when the eyelids are shut， particularly in the dark．This is the marmarygc（ $\mu$ apرapvyì，dazzling light，）of Hippocrates．

19．Fisus muscarum，or myorlesapsia
 the appearance of ties，\＆c．，floating before the eyes．A single black speck is called scotoma（ $\sigma$ кoros，darkness）：the more moving substances are termed muscce rolitantes，or mouches volautes．

20．T＇isus nebulosus（nebula，a cloud），or misty，clouded rision．

21．Tisus reticulatus（rcte，a net），or s gauzy，net－like appearance of objcets．
［EYE－BRIGHT．Common name for tho Euphrasia officinalis．］

EYE OF TYPHON．The mrstic name giveu by tho Egyptians to the Squill，or sca－onion．

## F

F，or FT．Abbreviations of fat，or fiant－let it，or them，be mado；used in prescriptions．
［FABA．The bean or sced of the Vicia

Frba Sancti Ignatii．The hean of St． Ignatius．The product of the Ignatia antara，now considered a species of Strych－ noe．
FACE AGUE．Tic douloureux．A form jaba．］
of neuralgia, which occurs in the nerves of the face.

FACET (facette, a little face). A term applied to an articular cavity of a hone, when uearly plain.
[FACIAL (facier, the face). Of, or belonging to, the face.]

FACIES. The face. The lower and anterior part of the bead, including the nose, mouth, eyes, and cheeks. See Vultus and Frons.

1. Facies Hippocratica. The peculiar appearauce of the face immediately before death, descrihed by Hippocrates.
2. Facies rubra. The red face; another name for the gutta rosacea. See Acne.
3. Facial angle. An angle composed of two lines, one drawn in the direction of the basis of the skull, from the car to the roots of the upper incisor teeth, and the other from the latter point to the most projecting part of the forehead.
4. Facial nerve. The portiodura of the seventh pair. The fifth pair is designated as the trifacial.
5. Facial vein. A vein which commences at the summit of the head and forebead. See Angular.
6. Face grippée. The pincbed-in face; a peculiar expression of features in peritonitis. Sce Physiognomy.

FACTITIOUS (factito, to practise). Made by art, as factitious cinnabar, in distinction from the natural production. This term is also applied to diseases which are produced wholly, or in part, by the patient; and to vaters prepared in imitation of natural waters, as those of Brighton.

FACULTY (facultas; from facere, to make). The power or ability by which an action is performed. A term employed to denote the professors of the medical art.

FACEES (pl. of fax, dregs). Dregs or lees of wine; the settlement of any liquor. The excrement of animals.
FAX SACCHARI. Theriaca. Treacle or molasses; the viscid, dark-brown, unerystallizable syrup, which drains from refined sugar in the sugar-moulds.
[FAGARA (fagus, the beech-tree). A Linnean genus of plants of the natural order Terebinthaceæ.]
[1. Hagara octandra. The systematic natne of the plant supposed to furnish the resinous substance Tacamahac.]
[2. Fagara piperita. The systematic name of a plant found in Japan and the Philippine Islands, the berrics of which are said to possess similar properties with those of Cubchs.]

FAGIN. A nareotic substance obtained
from the nuts of the Fagus sylvatica, or common beoch.
[FAGUS ( $\phi$ ayciv, to eat). A Linnean genus of plants of the natural order Annotacear.]
[Fagus Castanea. The systematic name of the chesnut tree.]

FAINTS. The weak spirituons liquor which runs off from the still after the proof spirit is taken away.

FALCIFORM (falx, falcis, a scythe; forma, likeness). [Falcate.] Scythe-like; a term applied to a process of the dura mater, and the iliac process of the fascia lata.

FALLING SICKNESS. Caducus morbus. Epilepsy; an affection in which the patient suddenly falls to the ground.
FALLOPIAN TUBES. Two trumpetlike ducts, arising from the sides of the fundns uteri, and extending to the ovaria; so called from Gabriel Fallopius. The commencement of each is termed ostium uterinum; the termination, ostium abdominale; the fimhriated extremity, morsu* diaboli.
[FALSE (fallo, to deceive). Spurious, unnatural. Applied in medicine to some imperfectly formed diseases, and in Surgery to certain ahnormal conditions of parts.]
[FALSE ANGUSTURA BARK. A name given to a bark sometimes found mixed with true Angustura bark, possessing poisonous propertics, and supposed to be derived from Strychnos Nux Vomica.]
[FALSE BARKS. A name given to various harks resembling Cincbonas, but which differ from them by the ahsence of quinia, quinidia, and cinchonia.]

FALSE CONCEPTION. Anormal conception, in which, instead of a wellorganized cmbryo, a mole or some analogous production is formed.
[FALSE-JOINT. Sce Joint, artificial.]
FALSE MEMBRANE. This is always the result of inflammation, as that produced in pleurisy, in peritonitis, in croup, $\& c$.
[FALSE PASSAGE. An ahnormal passage produced by injury or discase. Applied more particularly to a passage made by laceration of the mucous membrane of the urethra, from a forcible introduction of a catheter in a wrong dircetion.]
[FALSE RIBS. The five inferior rihs.]
[FALSE SARSAPARILLA. A common name for the plant Aralia mudicaulis.] [FALSE SUNFLOWER. A cominen name for the plant Melcnium autumarle.]
［FALSE UNICORN PLANT．A com－ mon name for the plant Helonias cliviea．］ FALSE WATERS．Fanzzes eaux．A term applicd by the French to a scrous fllid whicb accumulates between the cho－ rion and tbe amnois，and is discharged at certain periods of pregnancy．This must be distinguished from tbe liquor amuii， which they term simply the waters．
［FALSIFICATION（falzus，falsc；facio， to make）．Adulteration，sopbistication，or fraudulent imitation of an article．］
FALX，FALCIS．A scythe，or sickle． A scythe，or sickle－like process．

1．Falx eercbri，or fulx major．The sickle－like process or lamina of the dura mater，situated betwcen the lobes of the cerebrum．

2．Falx cerebelli，or falx minor．The small sickle－like process of the dura mater， situated between the lohes of the ccrehel－ lum．

FAMES（ $\phi$ áyo，to eat）．Famine，hun－ ger．Hence the terms eura famis，or ahstinence from food；and fames canira， voracious or canine appetite．See $B u$ ， limia．
FAMILY．A group of genera，which are connected together by common cba－ racters of structure．The term order is synonymous．
［FANG．The root of a tooth；the sharp－ pointed，pervious tooth in the superior jaw of certain vipers．］
［FANTOME．An artificial figure em－ ployed to demonstrate the mechanism of lahour，and the application of bandages．］

FARCIMEN．The name given by Sau－ vages to the equine species of scrofula， commonly called farey．The porcine spe－ cics he denominated chalasis．
［FARCY．Glanders．See Equinia．］
FARI＇NA（ far，farris，corn）．Ment，or vegetahle flour，madc from the seed of the Triticum Hybernum，or Winter Whent．Sce Amylum．

F＇arinaceous．［Mcaly．］A term for all those suhstances wbich contain farian ； viz．，the ccrealia，legumes，\＆c．

FARRO（far，farris，corn or menl）．A suhstance usually prepared from spelt wheat steamed，dried，and pearled，as in making perrl harley．

FAR－SIGHTEDNESS．An affcetion occurring in incomplete amaurosis ；［nnd ns the result of a natural malformation．］ See Prerbyopia．
FASCIA（faseis，a bundle）．Literally， a searf or large hand． 11 ence，it is ap－ plied to the aponcurotic expansion of a muscle．
［1．Faseia eribriformis．A small weh collected Inte in the season．Sce Manna．］ ［1．Faseia eribriformis．A sman wed from the：FSTULTY（jatmus，without savonr：fig－
of cellular substance strotehed
lower edge of Poupart＇s ligament over the inguinal glands．］
［2．Faseia lliaca．A strong fascin which covers the inner surface of the Iliac and Psoas muscles．］
［3．Fascia Infundibulifnrmis．A portion of cellular membrane which passes down on the spermatic cord，where it penctrates the fascia transversalis．］
4．Fareia lata．A name frequently given to the aponeurosis of the thigb．
［5．Fascia propria．Tbe proper cellular envelope of a hernial sac．］

6．Fascia superficialis．A memhrane cxtending over the ahdomen，and down－ wards over the front of the thigb．

7．Fareia transversalis．A dense layer of cellular fihrous memhrane，lying beneath the peritoneum，and investing the trans－ versalis muscle．

8．Fasciulis．Another name for the teneor vagince femoris muscle．
Faseiated．Banded；grown unnaturally together，as contiguous stems，or fruits．

FASCICLE（farcieulus，a little hundle）． A form of inflorescence，resembling a co－ rymb，hut having a centrifugal，instead of a centripetal expansion．It is a bind of compornd corymb．

FASCICULUS（dim．of faseis，a hundle）． A littlc hundle；a bandful．Tbus，a nuscle consists of farciculi of fibres．

Fascienlate．［Fabeicular．］Clustered，as when several bodies spring from a common point．

FASCIOLA IIEPATICA．The fluke， a worm frequently found in the hepatio vessels of the sbeep．It is also called diz－ toma hepratica．
－FASTIGIATE．When the hranches of a tree are appressed to the stem，as－ suming nearly the same direction as in populus fastigiata．

FAT．Adeps．Solid animal oil．Ani－ mal fat is a non－azotized oily principle， resolvable into stearine，oleine，and luar－ garinc，and enpable of supporting nnimal temperature by the process of slow com－ bustion，enlled erema causis．Fatty or unc－ tuous bodies are divisible iuto－

1．The Oils，which are liquid at the or－ dinnry temperature，and are conmon to hoth the vegetahle and animal kingdoms； and－

2．The Fats，which are conerete at the ordinary temperature，and belong pria－ cipally to the nimal kingulom．The Croton Scbifcrum is the ouly vegetable linown which produces a real fat．Sce Oila．
［F』T MAN゙N゙A．A variety of manna
urately, nonsensieal). Foolishness, weakyess of understanding.

FAUCES. The gullet, or windpipe; the part where the mouth grows narrower; the space surrounded by the velum palati, the uvula, the tonsils, and the posterior part of the tongue.

FAUNA (Fauni, the rural divinities). A term denoting the animals peculiar to any particular country.
FAUX. The gullet-pipe; the space hetween the gula and the guttur, or the superior part of the gula. The term is used in hotany to denote the orifice of the tube formed hy the cohering petals of a gamopetalous corolla.
[FAVIFORM (favus, a honey-comh; forma, resemblance). Like a honeycomh.]

FAVUS (a honey-comb). A non-acuminated pustule, larger than the achor, and succeeded hy a yellow and cellular scab, resembling a honey-comb.

- Favose. Honey-comhed; excarated like a honey-comh.

FAYNARD'S POWDER. A celehrated powder for stopping hæmorrhage, said to bave heen nothing more than the charcoal of beech-wood, finely powdercd.
[FEBRICULA (dim. of febris, a fever). A slight degree of fever.]

FEBRIFUGE (febris, a fever; fugo, to dispel). A remedy against fever.

Febrifugum magnum. The name given hy Dr. Hancocke to cold water as a drink in ardent fever. The same remedy has been termed arthritifugum magnum, from its supposed eflicacy in gout.
[FEBRILE (febris, fever). Of, or bclonging to, fever; feverish.]

FEBRIS (ferveo, or ferbco, to be bot). Pyrexia. Fever; a class of diseases characterized by increased beat, \&c. It is termed idio-puthic, i. e., of the general system, not depending on local disease; or symptomatic, or sympathetic-a secondary affection of the constitution, dependent on local disease, as the inflammatory. The hectic is a remote effect. Pinel distinguishes the following varieties:-

1. The Angeio-tenic (ayyeiov, a vessel; $\tau \varepsilon i v \omega$, to stretch), or inflammatory fever, situated in the organs of circulation.
2. The Meningoogastric ( $\mu \hbar \nu \boldsymbol{\gamma} \gamma$, a inembrane; $\gamma^{n a \tau j}$, , the belly), or bilious fever, originating in the mucous membrane of the intestines.
3. The Adeno-moningeal (adìv, a gland; $\mu \not \approx \nu \boldsymbol{\gamma} \xi$, a membrane), $\Omega$ form of gastric fever, depending on disease of the mucous fullicles.
4. The Ataxic (a, priv.; túsıs, order), or
irregular fever, in which the brain and nervous system are chiefly affected.
5. The Adynamic (a, priv.; dívauts, power), or fever characterized by prostration or depression of the vital powers.

FEBURE'S LO'TION. A celehrated remedy for cancer, consisting of ten grains of the white oxide of arsenic dissolved in a pint of distilled water, to which were then added one ounce of the extractum conii, three ounces of the liquor plumbi suhacetatis, and a drachm of laudanum.

FECULA (fax, the grounds or settlement of any liquor). Originally any suhstance derived by spontaneous subsidence from a liquid; the term was afterwards applied to starch, which was thus deposited hy agitating the flour of wheat in water ; and, lastly, it denoted a peculiar vegetahle principle, which, like starch, is insoluble in cold, hut completcly soluble in hoiling water, with which it forms a gelatinous solution.-Paris.

FECUNDATION (fecundo, to make fruitful). Impregnation. The effect of the vivifying fluid upon the germ or ovum, which is then called the embryo. See Greneration.

FEELINGS. Affective faculties. Under this term, phrenologists-include propensities and scntiments. See Intellect.

FEIGNED DISEASES. Morbi ficti, vcl simulati. Alleged affections, which are either pretended or intentionally induced, as abdominal tumour, aninials in the stomach, \&c. The practice of feigning disease is technically termed in the British navy skulking, and in the army malingering.

FEL, FELLIS. Gall, or bile; a secretion found in the cystis fellea, or gallbladder.

1. Fel bovinum. Fel tauri, bilis hovina, or ox-gall. An extract is used by painters to remove the greasiness of colours, \&c.
[2. Fellinatc. A combination of fellinic acid with a salifiable hasc.]
2. Fellinic uciel. An acid formed in tho preparation of bilin.
3. Felliflua pussio. Gall-fiux disease; an ancient name for cholcra.

FELON. The name of malignant whitlow, in which the effiusion presses on tho periostcum.
[FEMALE FERN. A conimon name for tho plant Asplenium fllix fomina.]

FEMUR, FEMORIS. OB femoris. The thigb-bone; tho longest, largest, and beaviest of all the bones of the body.

1. Femntal. [Of, or belonging to, tho thigh.] Tho name given to the external
iliac artery immediately after it has emerged from under tho crural arch; and to tho crural vein, or continuation of the poplitenl.
2. F'cmoreus. Another name for the cruraus muscle,-an extensor of the leg.

FENESTRA ( $\phi$ aiv $\omega$, to shinc). Literally, a window; an entry into any place. Hence the terms fenestra ovalis and rotunda are respectively synonymous with fornmen ovale and rotundum, or the oval and round apertures of the internal car. Tho latter of these apertures, however, is not round, but triangular.

Fenestrate. Windowed; as applied to the incomplete dissepiment sometimes occurring in the siliqua of Cruciferous plants.
[FENNEL. Common name for the genus Faniculum.]
[Fennel Seed. The fruit of Fœniculum vulyare.]

FENU-GREC. [Fenugreek.] Tbe Trigonella fornum Grecum; a Leguminous plant, forming an article of food in Egypt, and employed in this country in veterinary medicine.

FER AZURE'. A mineral, described by Haiy, containing prussic acid.

FERMENTATION. Certain changes of animal or vegetable substances, reduced to tbe moist or liquid state by water. There are four kinds:-

1. Tbe Saccharine; when the change terminates in sugar, as that of starch.

Tbe Panary; as that of flour form-

## 2.

 ing bread; or-The Vinous; as that of the grape, \&e., forming wine; evolving alcohol.
3. The Acetous; when the result is acetic acid, or vinegar.
4. Tbe Putrefactive; generally of animal substances, evolving ammonia.

FERMENTUM (quasi fervimentum; from ferveo, to work). A ferment; a sub. stance which posscsses tho power of commencing fermentation, as yeast.

Fermentum cervizic. Barm, or yeast; a mass of microscopic cryptogamic plants, consisting of minute nucleated cells; the nuclei appear to consist of a mass of granules or nucleoli; tho latter aro called by Turpin globulinc.

FERN, MALE SHIELD. The Nephrodium filix mas, the rhizome and gem me of whicb havo been extolled as vermifuges. Batso found a peculiar acid, tho acidum filicum, and an alkali, filicina, in the rhizome.

FERONIA ELEPIIANTUM. A largo Aurantiaccous treo growing in many parts of India, and yiolding a gum-resin used
for medicinal purposes in lower India, and perbaps that portion of the East India gum which is brought to Europe.
[FERRO- (fcrrum, iron). Prcfixed to compound names, denotes that iron enters into the composition of the substance denoted. See Ferrum.]
FERRUGINOUS (fcrrum, iron). Tbat which contains iron, or is of the natnre of iron, as ccrtain salts, mineral waters, \&c.
FERRU'GO. Quasi ferri ๕rugo. Rust of iron; a term mostly used to express colours.

FERRUM. Iron; a whitish-gray metal, found in animals, plants, and almost all mineral substances. By the alchemists, iron was called Mfars.
[1. Ferro-cyanic. Of, or belonging to, the compound of iron with cyanogen.]
[2. Ferro-cyanate. A combination of ferro-cyanic acid with a salifiahle base.]
3. Ferric oxide. Anotber name for the peroxide of iron.
4. Ferro-cyanic acid. A compound of cyanogen, metallio iron, and hydrogen; also called ferruretted chyazic acid. It contains the elements of hydro-cyanic acid, but differs from it totally in its properties. Its salts, formerly called triple prussiates, are now termed ferro-cyanates. The beautiful pigment Prussian blue is a ferro-cyanate of the peroxide of iron.
5. Ferrid-cyanogen. The hypothetical radical of the ferrid-cyanides. It consists of two equivalents of ferro-cyanogen, and is tribasic.
6. Ferro-cyanngen. The hypothetical radical of the ferro-cyanide of potassium, or prussiate of potash. It is bibasic, com. bining with two equivalents of hydrogen or of metals.
7. Ferrobo-ferric oxide. Ferri oxidum nigrum, the black oxide, magnetic oxide, or martial æthiops. It occurs in the mineral kingdom under the name of nagnetic iron ore, the massive form of which is called native loadstonc.
8. Ferroso-ferric sulphate. The name given by Berzelius to a combination of the proto- and per-sulphates of iron.
9. Ferruretted chyazic acid. A name given by M. Porrett to ferro-cyanic acid.
10. Red or peroxide of iron. Ferri ses-qui-oxydnm, formerly called crocus martie; found native in the crystallized state as specnlar iron, or iron glance, and in stalactitic masses, as red hamatile; as obtained hy precipitation from sulphate of iron, it is frequently tcriucd carbonate, subcarbonate, or precipitated carhonate of iron ; as obtained by calcining sulphate of iron, it is known as colcother, capnt unortuum vitrioli, trip, brown.red, rouge, and crocu*.
11. Ammoniucal iron. Ferri ammonioehloridum, formerly enlled martial flowers of sal aumoniac, ens Vencris, \&c.
12. Prussian or Berlin Ulue. Ferri ferrosesquicyanidum, sometimes called ferroprussiate of iron.
13. Copperas. Ferri sulphas, commonly called green vitriol, sal martis, vitriolated iron, \&c. The Romans termed it atramentum sutorium, or shoemaker's black.
14. Rust of iron. Ferri rubigo; a protoxide, obtained by moistening iron wire with water, and exposing it to the air until it is eorroded into rust, wbich is then made up into small conical loaves, like prepared ehalk.
15. Iron filings. Ferri ramenta. Procured by filing pure iron with a clean file.
15. Iron liquor. The name given by dyers to the aeetate of iron.

FERTILISATION (fertilis, fertile). The function of the pollen of plants upon tbe pistil, by means of which the ovules are eonverted into seeds.

FERULA ASSAFCETIDA. Tbe Assafoetida Ferula; an Umbelliferous plant, yielding the assafoetida of eommerce. The F. persica is also supposed to yield tbis drug.
FERYOR (ferveo, to boil). A violent and scorching heat. Ardor denotes an excessive heat; calor, a moderate or natural heat. Calor expresses less than fervor, and fervor less than ardor.

FESTOONED RINGS. A popular designation of the fibrous zones or tendinous circles which surround the orifices of the beart. Mr. Savory states that tbese rings are the result of the attachment of the bases of the valves to the arterial coat, and arc formed by an intimate uuion of the fibrous tissue eomposing the valves witb the elastic coat of tbe artery.

FEU VOLAGE. Literally, flying fire; the French term for wstus volaticus of tbe earlier writers, and tbe erythema volaticum of Sauvages.
[FEVER. See Febris.]
[FEVER BUSH. Common name for the indigenous shrub Beuzoin odoriferum.]
[FEVERFEW. Common name for the plant Pyrethrum Partheniun.]
[FEVER ROOT. Common name for the plant Triosteum perfoliatum.]

FIBER. An old adjective for extramus, and applied by the Latins to the Beaver or Pontic Dog, from its residing at the cxtremities of rivers. It yields castoreum.
FIBRE (fibra, a filament). A filament or thread, of animal, vegetable, or inineral composition.

1. Animal fibre, or the filaments which compose the museular fascieuli, \&c. The
epithets carneous and tendinous are sometimes added, to mark the distinction between fleshy and sinewy fascieuli.
2. Woody fibre, or lignin; the fibrous structuro of vegetable substances.
3. Fibril. A suall filament, or fibre, as the ultimate division of a nerve. The term is derived from fibrilla, dim. of fibra, a filament.
4. Fibrin. A tough fibrous mass, wbicb, together witb albumen, forms the basis of musele. See Blood.
5. Fibro-cartilage. Membraniform cartilage. The substanee, intermediate between proper cartilage and ligament, which eonstitutes the base of the ear, determining the form of that part; and composes the rings of the tracbea, the epiglottis, \&c. By tbe older anatomists it was termed ligamentous cartilage, or cartilaginiform ligament. It appears to be merely ligament incrusted with gelatin.
[FIBRO-(fibra, a fibre). Used in eompound terms applied to morbid growth, denotes tbat fibrous tissue enters into tbeir eomposition.]
[1. Fibro-calcareous tumour. A fibrous tumour, coated with a tbin, rougb, nodulated layer of calearcous substance, or having this substanee interspersed througbout its texturc.]
[2. Fibro-ccllular tumour. Tumours whicb, in their minute strueture, resenible tbe fibro-eellular or areolar tissue of tbe body.]
[3. Fibro-cystic tumour. A tumour having cysts in its substanee.]
[4. Fibro-uncleated tumou: A term given by Hughes Bennett to tumours consisting of filaments infiltrated witb oral nuelei.]
[5. Fibro-plastic ( $\pi \lambda a \sigma \sigma \omega$, to form). Fibremaking; applied to an organised tissue formed by the eorpuscles in the matter exuded on sores; also applied by Lebert to tumours containing pecnliar, many-nueleated eorpuseles, the Myeloid tumour of Paget.]
[FIBROIN. An animal principle found by Mulder in tho interior of the fibres of silk.]

## [FIBROUS. Composed of fibres.]

FIBULA. Literally, a elasp or buckle. Henee, it denotes the lesser bone of tho leg, from its being placerl opposite to the part whero tho knce-buckle was attaehed. The term is also applied to a needle for sewing up wounds.

Fibular. [Belonging to the fibula.] The designation of the external poplitenl or peroneal nervo; of lymphatice, arterics, $\& \mathrm{c}$.

FICATIO, or FICUS (ficus, a fig). A
fig-like tuberele about the anus or pudenda. Sce Sycosis.
[FICUS. A Linnean genus of plants of the natural order Urticeæ. The U. S. Pharmacopocial name for the dried fruit of Ficus carica.]

Ficur Carica. The Common Fig. The fig is an aggregate fruit called a sycontes.
[Ficus Elastica. The systematic name of the tree which affords the Caoutehoue.]
[Ficus Indica, Two species grow-
[Ficus religiosa.] ing in the East Indies which furnish the resinous suhstance termed Lac.]

FIDGETS. Titubatio. A term derived from fidgety, prohahly a corruption of fugitive, and denoting general restlessness, with a desire of changing the position.

FIDICINALES (fidicen, a harper). A designation of the lumhricales of the hand, from their usefulness in playing upon musical instruments.
[FIGWORT. Common name for the Scrophularia nodosa.]

FI'LAMENT (filum, a thread). A small thread-like structure, or fibre, as that of a nerve, \&c. Also, the thread-like portion of the stamen, which supports the anther.

FILARIA (filum, a thread). A threadlike parasitic worm, which infests the cornea of the eye of the horse.

Filaria Midinensis. The systematiename of the Guinea worm.
FILICES (filix, filicis, fern). The Fern trihe of Acotyledonous plants. Lcafy plants, producing a rhizome; lcaves simple or variously divided; floverless; reproductive organs consisting of thece or semitrausparent cases appearing on the hack or margin of the leaves.

Filicis radix. The root of the Aspidium filix mas, or male fern.
[FILICIC ACID. A peculiar acid discovered hy Dr. Luck in the ethereal extract of Filix mas.]

Filicina. An alkali obtained from the rhizome of the Nephrodium Filix mas, or male shicld fern.
[FILIX. A Linnean genus of cryptogamous plants.]
[Filix mas. The U. S. Pharmacopeial name for the rhizoma of Aspidium filix mas.]

FILIFORM (filum, a thrend; forma, likeness). Thread-like; applied to the papillis at the cdges of the tonguc; [and in botany, to the filaments, and the styles of plants.]

FILM. The popular term for opaeity of the cornoa. Sce Lcucoma.
some porous substance, for clarifying liquids or for separating solids from their associated liquids.]
[FIL'TRATE. Any liquid which has heen filtercd.]

FILTRATION (filtrum, a strainer). Tho act of straining fluids through paper, linen, sand, \&c. The strainers are termed filters.

FILTRUM. The superficial groore along the upper lip, from the partition of the nose to the tip of the lip.
FIMBRIA. A fringe. The fringe-like extremity of the Fallopian tuhe.
[Fimbriated. Fringed; having the margin hordered with filiform processcs.]

FINERY CINDER. A name given hy
Dr. Priestly to the pulverized black oxide of iron.

FINGERS. Digiti. These consist of twelve hones, arranged in three rows, termed phalanges.

FIRE-DAMP. A gas evolved in coalmines, consisting alnoost solely of light carhuretted hydrogen. See Choke-Damp.

FIRMNESS. A term in Phrenology indicative of determination, perseverance, and steadiness of purpose. Its organ is situated at the very top of the head, cxtending to an equal distance on each side of the median line.
[FIRST INTENTION. Incised monnds are said to unite hy the first intention when they heal by adhesive inflammation without suppuration.]

FISH-GLUE. Isinglass; a glue pre-
pared from different kinds of fish. See Ichthyocolla.

FISH-SKIN DISEASE. A horny condition of the Ekin. See Ichthyosis.
[FISSIPAROUS. See Gcneration.]
FISSU'RA (findo, to cleave). A fissurc, a groove; a fine crack in a hone.

1. Fissura Glaseri. A fissure situated
in the deepest part of the glenoïd fossa.
2. Fissura longitudinalis. A deep fis-
sure observed in tho median line on the upper surfaco of the hrain, occupied by the falx cerehri of the dura mater.
3. Fisвura Silvii. The fissure which separates tho anterior and middle lohes of the cerebrum. It lodges the middle ccrehral artcry.
4. Fissura umbilicalis. The groove of the umbilical vein, situnted hetween the large and small lohes, at the upper and fore part of the liver, which, in the foctus, contains the umbilical vein.
5. Fissure of the splech. Tho grooro which divides the inner surface of the splecn. It is filled by ressels and fat. 6. Fissure of Bichat. The name given the transverse fissure of the hrain, from [IILTER. An apparatus, composed of, to the transverse fissure or the drain,
the opinion of Bichat that it was here that the arachnoid entered into the ventricles.
FISTULA. A pipe to carry water; hence it denotes a pipe-like sore, with a narror orifice, and without disposition to heal.
6. Fistula in ano; fistula penetrating into the cellular substance about the anus, or into the rectum itself. Those cases in which the matter has made its escape, by one or more openings through the skin only, are called blind external fistula; those in which the discharge has been made into the cavity of the intestine, withont, any orifice in the skin, are named bliud internal; and those which have an opening both throagh the skin and into the gut, are called complete fistulce.
7. Fistula in perinco; fistula in the course of the perinæum, sometimes extending to the urethra, bladder, vagina, or rectum.
8. Fistula lacrymalis, fistula penetrating into the lacrymal sac.
9. Fistula sulivary; fistula penetrating into the parotid duct, occasioned by a wound or ulcer.
[5. Fistulons. Haring many tubes, or pipe-like passages.]

FIXED AIR. A name formerly given by chemists to the air which was extricated from lime, magnesia, and alkalies, now called carhonic acid gas.

FIXED BODIES. Substances which do not evaporate by heat, as the fixed, opposed to the volatile, oils; or nonmetallic elements, which can neither he fused nor volatilized, as carhon, silicon, and boron. This property of resistance is called fixity.

FLXED NITRE. Nitrum fixum. A substance obtained by defagrating a mixture of nitre and charcoal.

FLABELLIFORM (flabellum, a fan; forma, likeness). Fan-shaped; plaited like the rays of a fan.
[FLAG. Applied to several aquatic plants with long narrow leaves.]

FLAGELLIFORM (flagellum, a small whip). Whip-like; long, taper, and supple.
[FLAKE-MANNA. The best varicty of manna.]

FLAKE. WHITE. Oxide of hismuth, so called from its occurring in small laminso or flakes.

FLAME (flamma). The combustion of an explosive mixture of inflammable gas, or vapour, with air.
[FLAMMULA JOVIS. A name for the plant Clematis erceta.]

FLASH. A preparation used for co-
louring brandy and rum, and giving them a fictitious strength; it consists of an extract of cayenne pepper, or capsicum, with burnt sugar.

FLATULENCE (flains, a blast). Wind in the intestines. The term flatus denotes the same thing.

FLAX. A suhstance prepared from tho fibrous portion of the hark of Limmen nsitatissimum. The short fibres which are removed in heckling constitute toro. Of flax is made linen, and this, when scraped, constitutes lint.
[FLAX, PURGING. Common name for the plant Linum catharticum.]
[FLAXSEED. The seeds of Linum usitatiosimum.]
[FLEA-BANE. Common name for somo species of Erigeron.]
[FLEA-WORT. Common name for the Plantago Psyliinm.]

FLEAM. An instrument for lancing the gums, and for blecding horses.
[FLESHI-COLOURED ASCLEPIAS. A common name for the plant Asclepias incarnata.]

FLEXOR (flecto, to bend). A muscle which hends the part into which it is inserted. Its antagonist is termed extensor.

FLEXUOSE. Wavy; bending alternatcly inwards and outwards.

FLINT. Silex. A mineral, consisting of silicious earth, nearly pure.

Liquor of fints, or liquor silicum. A name formerly given to the solution of silicated alkali.
[FLIX-WEED. Common name for the Sisymbrium Sophia.]

FLOCCI VOLITANTES. Musce Volitantes. A symptom consisting in the appearance of objects, such as locks of wool, or flies, hefore the eyes.

FLOCCILATIO (foccus, a lock of wool). Carphologia. Picking the bedclothes, a forerunuer of death. Dame Quickly says of Falstaff: "After I saw him fumble with the shcets, and play with flowers, and smile upon his fingers' ends, I knew there was but one way; for bis nose was as sharp as a pen, and 'a babbled of green fields."

FLOCCOSE (floccur, a lock of wool). Corcred with tufts of hair.

FLOCCULUS, vel lobus nervi pucamogastrici. A term applied to the pneumogastric lohule of the cerebellum; its form is that of a small foliated or lamellated tuft.

FLOODING. Uterine hæmorrhage. It occurs cither in the puerperal state, or from discase.

FLORA (flos, floris, a flower). A term expressive of the botanical productions of any particular country.
[FLORENCE RECEIVER. A eonical glass vessel, broad at the bottom and narrow towards the top, furnished very near its baso with a tuhulure or opening, to which is adapted, by means of a piereed cork, a bent tube, so sbaped as to rise perpendicularly to seven-eigbths of tbe beigbt of the receiver, then to pass off at right angles, and near tbe end to bend downwards.]

FLORES. Pl. of flos, floris. Flowers; a term formerly used to denote sucb bodies as assume a phlverulent form by sublimation or erystallization:

1. Flores Antimonii. Flowers of Antimony, or teroxide.
2. Flores Benzoes. Flowers of Benjamin, or benzoic acid.
3. Flores Salis Ammoniaci. Flowers of sal-ammonia, or tbe sub-carbonato of ammonia.
4. Flores Sulphuris. Flowers of sulphur; or sublimed sulphur.
5. Flores Martiales. Ammoniated Iron; formerly ens Vcneris, flowers of steel, \&c.
6. Flores Zinci. Flowers of zine ; oxide of zine, or philosophical wool.
7. Flores Bismuthi. Flowers of bismuth; a yellowish oxide of bismutb.

FLORET. Diminutive of flower; $\Omega$ term applied to the small flowers which compose tbe capitula, or flower-heads, of the Oomposilc. Tbey are sometimes called fluscules, a diminutive of the Latin flores.

FLORIDEA. Rose-tangles; a suborder of Algaceous plants, containing several esculent species, as dulse, $\& c$.

FLOS ERUGINIS. Cupri acetas, or neetate of copper, commonly called distilled or crystallized verdiyris.

FLOUR OF MUSTARD. The seeds of mustard, dried, powdered, and sifted.

FLUATE. A compound of fluoric acid with a salifiable base.

FLUCTUATION (fluctue, to riso in waves). The perceptible motion communicated to pus or other fluids hy pressure or percussion. The possession of the tuctus eraditus constitutes the practitioner's skill in aseertaining tho presenec of fluids in parts.

Fluctuation, superficial (périphérique). A new modo of deteeting ablominal effusions, described by M. Tarral.

FLUIDITY (flun, to flow). The state of bodics when their parts are very readily movable in all directions with respect to each other. There is a partial fluidity, in which the partieles are condensed or thickened into a colherent though tremulums mass. Jellies are of this kind, and may
be considered as bolding a middle place between liquids and solids.

FLUID OF CO'TUNNIUS. A thin gelatinous fluid, found in the bony cavities of tbe labyrinth of the car; so called from tbe namc of the anatomist who first distinetly described it. It bas been also called aqua labyrinthi; and by Bresehet, the perilymph.

FLUIDS. Substances which have tbe quality of fluidity, and are, in consequence, of no fixed sbape. They aro divided into tbe gaseous and the liquid, -otherwise expressed by the terms elastic and inelastic fluids.

FLUKE. The Fasciola hepatiea; an intestinal worm. See Vermes.
FLUOR ALBUS. Literally, white diseharge; another name for leucorrboa.

FLUOR SPAR (so called from its assisting tbe fusion of earthy minerals in metallurgic operations). Derbyshire spar; properly, fuoride of calcium.

1. Fluoric Acid. An acid obtained by treating fluor spar with sulphuric acid. Owing to its destructive propertics, it has bcen termed phthore; from $\phi \theta$ ofocos, destructive.
2. Fluorine A substance occurring chiefly in fluor spar, in a state of combination with lime; it is tbe imaginary radical of fluoric acid. [Drs. Will and Fresenius have detected it in the asbes of plants; it cxists in all the cereals, in the bones of all recent animals tbus far examined, and also in fossil bones.]
3. Fluo-boric Acid. A gas produced by the decomposition of fluor spar, by vitrified horacie acid.
4. F'luo-chromic Acid. A gaseous compound, formed by distilling a mixture of fluor spar and chromate of lead in fuming, or in common sulphurie acid.
5. F'luo-silicic Acill. A colourless gas, produced by the aetion of bydro-fluorie acid on glass. It combines witb mater, producing silico-hydrofluoric acid.
6. Fluo-silicates. Double salts, consisting of two proportionals of hydrofluato of silien, and one proportional of a hydrofluate of soluc other base.
7. Fluo-tantalic Acid. An acid prepared by trenting the metal tantalum witb fluorio acid.
8. Fluo-itanic Acicl. An acid consisting of $\Omega$ couppound of the fluoric and titanio aeids.

FLUX (Aluo, to flow). A discharge; nnother tern for diarrhea. Bloody flux is syonymons with dysentery.

FliUX, CHEMLCALA (gho, to flow). A substance or mixture frequently employed
to assist the fusion of minerals. Alkaline fluses are generally used, which render the earthy mixtures fusible hy converting them into glass.

1. Urnde fiux. A mixture of nitre and crystals of tartar.
2. Black flux. A carbonaceous mixtare, procured by heating cream of tartar alone.
3. White fux. White carbonate of potassa, prepared by deflagrating eream of tartar with two parts of nitre.
4. Cornish Redncing Flux. A mixture of ten ounces of tartar, three and a half ounces of nitre, and three ounces and a drachm of borax.
5. Cornish Refuning Flux. Two parts of nitre, and one part of tartar, deflagrated, and then pounded.

FLUXION (Ano, to flow). Fluxion de poîtrine. Another name for catarrh.

FLUXUS CAPILLORUM. A term applied by Celsus to Alopecia, or the falling off of the hair. Parts entirely deprived of hair were called hy him area; by Sauvages this affection was termed alopecia areata; and hy Willan, porrigo decalvans. When universal, it is designated, iu Freneh, la pelade.
FLY POWDER. See Arsenicum.
Fly Water. A solution of arsenic.
[FONICULUM. The U.S. Pharmacopocial name for the fruit of the Foniculum vulgare, $F^{\prime}$. dulce, and $F$. nficinale.]

1. F'œniculum vulgare. Common Fennel ; a European, Uwhelliferous plant, the fruit of which is ineorrectly called wild fennel oeed.
2. Foniculum dulce. A speeies or eultirated variety, which yields the sweet fennel reeds employed in medicine.

FETICIDE (foetns, and cado, to kill). The destruction of the feetus in utero, commonly called criminal abortion.

F ETOR (foteo, to stink). A strong offensive smell.

FGETUS. The young of any animal. The child in utero, after the fonrth month. At an carlier period, it is commonly ealled the embryo. Tho term foetus is also applicd adjectively to animals which are pregnant.
[FOJTACEOUS (folia, a leaf). Leaflike; full of leares.]

FOLIA CEREBELLI ( folinm, any sort of leaff. An assemblago of gray laminæ, ohserved on the surface of the eerebellum.
[FOLIA MALABATHRI. The leaves of different species of Cinnamomum mixed together.]

FOIIATION (folium, a leaf). Vernre tion. The manner in which the young leares are arranged within the leaf. bud.

FOLLICLE (dim. of follis, a pair of bellows). Literally, a little bag, or scrip of leather; in anatomy, a very minute secreting cavity.

1. Follicles of Licberkuhn. Microseopic foramina, depressions, or small pouches of the mueous membrane of the small intestinc, so numerous that, when suffieiently magnified, they give to the membrane tho appearance of a sieve.
2. Sebaceous Follicles. Small cavities, situated in the skin, which supply the cuticle with an oily or sebaceous' fluid, by minute ducts opening upon the snrface.
3. Mucous Follicles. These are situated in the mueous membranes, chiefly that of the intestines. See Gland.
4. Follicle in Plants. A one-celled, one-valved, superior fruit, dehiscent, along its face, as in Pæonia. The term donble follicle is applied by Mirhel to the conceptaculum of other writers, and consists of a two-celled, superior fruit, separating into two portions, the seeds of which do not adhere to marginal placenta, as in the follicle, but separate from their placentr, and lie loose in each cell, as in Asclepias.
FOMENTATION (foveo, to keep warm). The appliention of flannel, wet with warm water, or some medicinal concoction.

FOMES. Pl. Fomitcs. Literally, fuel. This term is generally applied to substances imbucd with contagion.

Fomics ventriculi. Hypochondriasis.
FONTANELLA (dim. of fons, a fountain). Brogma. The spaces left in the bead of an infant, where the frontal and oecipital hones join the parietal. It is also called fons pulsatilis, and commonly
mould.
FONTICULUS (dim. of fons, a fountain). A little fountain; an issue.

FOOT. Pes. The organ of locomotion, consisting of the tarsus, the metatarsus; and the phalanges.

FORAMEN (foro, to pierce). An opening. A passage observed at the aper of the ovale, in plants, and courprising both the exostome and the endostome.

1. Foramen of Monro. Foramen commune anterius. An opening under tho areh of the fornix, by which the lateral ventrieles communicato with each other, with the third ventricle, and with tho in. fundibulum.
2. Foramen of Socmmering. Foramen centralc. A circular forauien at the posterior part of tho retina, exactly in the axis of vision.
3. Foramen ovale. An oval opening,
situated in the partition which separates the right and left auricles in the foetus; it is also called the foramen of Botal. This term is also applied to an oval aperture communicating between the tympanum and the vestibule of the ear.
4. Foramen roundum. The round, or, more correctly, triangular aperture of the internal ear. This, and the preceding term, are, respectively, synonymous with fenestra ovalis and rotunda.
5. Foramen cœcum. The blind hole at the root of the spine of the frontal bone, so called from its not perforating the bone, or leadiug to any cavity. Also, the designation of a little sulcus, situated between the corpora pyramidalia and the pons Varolii.
6. Foramen cocum of Morgagni. A decp mucous follicle situated at the meeting of tbe papillæ circumvallatæ upon tbe middle of the ruot of the tongue.
7. Foramen supra-orbitarium. The upper orbitary hole, situated on the ridge over which the eyehrow is placed.
8. Foramen magnum occipitis. Tbe grcat opening at the under and fore part of the occipital bone.
9. Foramen incisivum. The opening immediately behind the incisor teeth.
10. Foramina Thebesii. Minute porelike openings, by which the venous blood exhales directly from the muscular structure of the beart into the auricle, without entering the venous current. They were originally described by Thebesius.
11. Foramen Vesalii. An indistinct hole, situated between the foramen rotundum, and foramen ovale of the sphenoïd hone, particularly pointed out by Vesalius.
12. Foramen of Winslono. An aperture situated behind the capsule of Glisson, first described by Winslow, and forming a communication between the large sac of the omentum, and the eavity of the abdomen.
13. Foramen, pheumatic. A large aperture near one end of tho long air-bones of birds, communicating with the interior.
14. This term is also applicd to numerous littlo holes (cribrosa foramina, ) of the cribriform plate; to several openings -the round, tho oval, the spinal- of the sphenoild bones; to certain holes - the mastoid, the stylo-mastoid, the videan, the glenoid - of tho temporal hones; to the opening (malar) through which tho malar nerve passes; to tbe opening (infra-orbitar) for the passage of nerves to the face; to the groove (palato-maxillary), through which the palatine nervo and wessels proceed to tho palate; to anotber opening
(the palatine) which transmits branches of the same to the soft palate; and to two openings at the base of the cranium, called, respectively, the anterior and posterior laccrated furamen.
[FORBIDDEN FRUIT. Common name for the fruit of Citrus Paradisi.]

FORCEPS (quasi ferriceps ; from ferrum, iron ; capio, to take). A pair of tonge, or pincers; an instrument for extracting the fetus. The artery or diseccting forceps is used for taking up the mouths of arteries, \&c. Celsus uses the word forfex for a pair of pincers for the extraction of teeth.

FORCES OF MEDICINES. The active forces of medicines, or those which reside in the medicines themselves, as distinguished from those which reside in the organism, are of three kinds :-

1. Physical forces. These act by weight, cobesion, external form, motion, \&c., and produce two classes of effectsthe physical and the vital; the entire effect may he termed physico-vital.
2. Chemical forces. These act by their mutual afinities, combine with the organic constituents, and act as caustics, escharotics, or irritants; the entire effect may he termed chemico-vital.
3. Dynamical forces. These are neitber physical nor chemical merely, hut exercise a powerful influence over the organism, as magnetism, electricity, \&c. [FORE-ARM. That portion of the arm which is between the elhow and wrist.]
[FOREIGN BODY. This term is applied to any substance, whether introduced from without or developed within the living hody, which docs not constitute a part of its organization, or bas ceascd to be so, and which is a source of irritation - as a hullet, piece of iron or glass, de., parasytic animals, calculi, certain morbid growths, sequestre of necrosed hones, \&c.]
[FORENSIC (forum, a place where eourts of law were bcld). Of, or belonging to, a court of lam.]
[Forensic Mcdicinc. Tbat part of the science of medieine rhich is connected with judicial inquiries.]
[FORM (formo, to mould). Extcrnal shape; tho faculty those function it is to takc cognizance of form.]

FORMI'CA. Litcrally, an ant. A term applicd by the Arabians to $H \mathrm{crpec}$, from its crecping progress.

1. Formicution. A sensation of crecping in a liznb, or on the surface of the hody, oceasioned by pressure or affection of a nerve.
2. Formic Acid. An acid extracted from red auts. Its salts are called formiates.
3. Formyl. A hypothetical radical of a sories of compounds, ono of which is formic acid.
FORMULA (dim. of forma, a form). A prescription; the mode of preparing medicincs used in the pharmacopocias and in extemporaneous practice. [Formule arc of tro kinds: 1. Extemporaneous or magistral, so called because they are constructed by the practitioner on tho instant, "ex tempore." 2. Officinal, those published in pharmacopœeias, or by some other authority.]
[Formulary. A collection of formulx.]
FORNIX. Literally, an arched vault. A triangular lamina of white substance, extending into each lateral ventricle, and terminating in two crura, which arch downwards to the base of the brain.

FOSSA (fodio, to dig). A ditch or trench; a little depression, or sinus.

1. Fossa hyaloïdea (そaios, glass; zidos, likeness). The cup-like excavation of the vitreous humour in which the crystalline lens is embedded.
2. Fossa innominata. The space between the helix and the antibelix.
3. Fossa lacrymulis (lacryma, a tear). A depression in the frontal bone for the reception of the lacrymal gland.
4. Fossa navicularis (navicula, a little boat). The superficial depression which separates the two roots of the antihelix. Also the dilatation towards the extremity of the spongy portion of the urethra. Also, the name of a small cavity immediately within the fourchette.
5. Fossa ovalis. The oval depression presented by the septum of the right auricle.
6. Fo88a pituitaria (pituita, phlegm). The sclla tnrcica, or cavity in the sphenoïd bone for receiving the pituitary body.
7. Fossa 8caphoüdes (бкафѝ, a little boat; हॉJos, likeness). A term synonymous with fossa navicularis.
8. Foвяа Sylvii. A designation of the fifth ventricle of the brain.

FOSSIL (fodio, to dig). Anything dug out of the earth. The term is nowapplied to the remains of animal or vegetable substances found embedded in the strata of the earth.

FOSSIL ALKALI. The mono-carbonate of neutral carbonate of soda, also termed mild mineral alkali, subcarbonate of soda, or commonly Carbonate of Soda.
[Fossiliferous (fcro, to bear). Containing fossils.]

FOURCIETTE (a fork). Frenum labiorum. The name of the th in conmissure, by which the labia majora of the pudendum unite together.

FOUR-TAILED BANDAGE. A bandage for the forebead, face, and jaws. Tho terms head and tail are used synonymously by writers; hence, this bandage is souetimes called the sling with four heads.

FOUSEL OIL. Oil of grain-spirits or potatoes. An oil produced in the fermentation of unmalted grain and potatoes. It is also called hydrate of oxido of amyl.
[FOVEA (fodio, to dig). A little pit or depression.]
[Foveate. Having depressions; pitted.]
FOVILLA. A viscous liquor contained in the resicles which compose the pollen of plants.

FOWLER'S SOLUTION. A solution of the arsenite of potassa, coloured and flavoured by the compound spirit of lavender, one fluid drachm of which contains half a grain of arsenious acid. It was introduced into practice by Dr. Fowler of Stafford, as a substitute for the empirical remedy known by the name of "The Tasteless Ague Drop."

Solutio Solventis Mineralis. The name of another preparation of this kind, introduced by the late Dr. Valangin; it is kept at A pothecaries' Hall, and is equally effica-cious.-Bateman.

FOXGLOVE. The common name of the Digitalis purpurea, probably derived from the fanciful resemblance of its flowers to finger-cases,-quasi folks' glove. $\}$

FRACTURE (frango, to break). A solution of continuity of one or more bones. It is termed transverse, longitudinal, or obliquc, according to its direction in regard to the axis of the bone. Fractures are distinguished as-

1. Simple; when the bone only is divided, without external wound.
2. Compound; the same sort of injury, with laceration of the integuments.
3. Comminuted; when the bone is broken into several pieces.
4. Complicated; when attended with diseases or accidents, as contusion, \&c.
[FRANULUM (dim. of frenum, a bridle). A little bridle.]

FRANUM (fiano, to curb a horse). A bridle; a part which performs the office of a check or curb.

1. Frana epiglotidis. Three folds of mucous membrano which unite the epiglottis to the os hyoïdes and the tonguc.
2. Frana of the valvule of Bauhin. The name given by Morgagni to the ruge, or lines observed at tho extremities of tho lips of tho valvule of Bauhiu, or ilco-colio valve.
3. Franum lubiorum. Tho fourchette,
or the lower commissure of the labia pudendi.
4. Franum lingua. A fold formed at the under surface of the tonguc, by the mucous membrane lining the mouth. Infants are said to be tougue-tied when the fresnum is very short, or continued too far forward.
5. Frcnum prøputii. A triangular fold, connecting the prepuee with the under part of the glans penis.
6. Freenum of the under lip. A fold of the mueous membrane of the mouth, formed opposite to the symphysis of the chin.

FRAGILITAS OSSIUM. Fragile vitreum. A morbid brittleness of the bones. See Mollities Ossium.

FRAGMENT (frango, to break). A piece of a thing broken. A splinter or detached portion of a fractured bonc.
FRAMBCESIA (framboise, French, a raspherry). A Latinized form of the French term for raspherry, applied to the disease ealled Yaws, which signifies tbe same in Africa; it is termed Silbens (a corruption of the Gaëlic Sivvens, wild rash,) in Scotland; and proved by Dr. Hibbert to be the same as the Great Gore, Pox, or Morbus Gallicus, of the fifteenth century. It consists of imperfectly suppurating tumours, gradually increasing to the size of a raspherry, with a fungous core.

1. Master, or Mother-yavo, termed Mamapian hy the Negroes; the designation of the largest tnmour.
2. Crab-ycuos. Tedious excrescences which occur on the soles of the feet, ealled tubba in the West Indies.

FRANGIPAN. An extract of milk, for preparing artificial milk, made by cvaporating skimmed milk to dryness, mixed with almonds and sugar.
[FRANGULA CORTEX. The bark of Rhamnus frangula.]
FRANKINCENSE. Formerly Olibanum, a gum-resin of the Juniperus Lycia; but now the Abictis resina, or Resin of the Spruce Fir.

FRASERA WALTERI. Tho Amcrican Calumba, a plant of the order Gicntianacce, with the properties of gentian. From its liaving been sold in France as calumba, it was called false calumba.

FRAXININE. A crystallizable bitter principle ohtained from the Fraxinus excelsior.
[FRAXINUS. A Linnean genus of plants of tho natural order Oleacce.]
[1. Fraxinns carcelsior. Common Ellropean Asla; this trec yiclds manna by in--isions in its truuk; its bark has been used
as an anteperiodie in intermittent ferer, and its leaves lave been recommended as a remedy for scrofula, \&c.]
2. Fraxinus ornus. The flowering Ash, or Manna trec ; an Oleaceous plant, which yields manna.

FRECKLES. The little yellow lentigines whioh appear on persons of fair skin; sun-hurn, \&c. See Ephelis,

FREEZING MIXTURE. A mixture for producing cold for therapeutic purposes. In these cases, five ounces of eal ammoniac, five ounces of nitre, and a pint of water, may be placed in a bladder, applied to a part of the body.

FREEZING-POINT. The degreo of temperature at which water is chauged into ice, or $32^{\circ}$ Fahr.
[FREMISSEMENT CATAIRE. A peculiar thrill or tremor, perceived hy the finger when applied to the beart or arteries where it exists, resemhling that commnnicated to the hand by the purring of a cat. See Auscultation.]
[FREMITUS. Vibration. In physical diagnosis, the vibration communicated to the hand under certain circumstances, when it is applied to the chest, $\& \mathrm{c}$. Thoracic fremitus may he produced by speaking (vocal); by coughing (tursive); hy the buhbling of air through fluids in the lung, (rhoncal); by the collision and rubbing together of plastic matter exuded upon the pleural surfaces (rubbing); and hy pulsation of the lung (pulsatile).]

FRENCH BERRIES. The fruit of several species of Rhamnus, called by the French Graines d'Avignon; they yield a yellow colour.

FRENCH POLISH. Gum lac dissolved in spirits of wine.
FRENCH RED, or ROUGE. Genuine carmine, one ounce, mixed with fine sifted starch powder, according to the shade required.

FRENCI WHITE. The common designation of finely pulverized talc.

FRIABILITY ( frio, to crumble). The property by which a substance is capable of heing crumbled and reduced to porder. FRIARS' BALSAM. The Tinctura benzoër comp., formerly balsamum traumaticun.

FRICTION (frico, to rub). The act of rubbing the surface of the body with the hand, a brush, or linen. It is perforned cither in the dry way, or with ointments, liniments, de.

FRIESLAND GREEN. Brunswick green: an ammoniaco-muriate of copper.

FRIGIDARILIM (frigidus, cold). The cold hath. Sce liohh.

FRIGORIFIC (friguz, coldness). Har-
ing the quality of producing extreme cold， or of converting liquids into ice，as applied to certain chemical mixtures．

FRIGUS（frigen，to he cold；from фpi⿱宀⿻三丨口巾，to have an ague fit）．Cold；trem－ bling with cold．This term differs from algor，which denotes a starving with cold， and is derived from ädyos，pain；because cold cnuses pain．
－FRITT．The mass produced by the materials of glass，on calcination．

FROND（frons，a branch）．A term applied to the leaves of Ferns，and other Cryptogamic plants，from their partaking at once of the nature of a leaf and a branch．

FRONS，FRONTIS．The forehead； that part of the face extending from the roots of the hair to the eyebrows．See F＇acies and Vultus．
［FRONTAL SINUSE厅．Two cavities， one over each orbit，and posterior to the supercilinry ridges of the frontal hone．］
FROST－BITE．A state of numbness， or torpefaction of any part of the body， followed，unless relieved，by the death of the part．It occurs in the nose and ears in cold climates．
［FROSTWEED，$\}$ Common names for
［FROSTWORT．］the plant Helianthe－ mum canadense．］

FROZEN SULPHURIC ACID．A term applied to the hinhydrate of sulphuric neid，when in the solid state．In the liquid state it is sometimes called eisöl， or ice oil．

FRUCTUS（fruor，to enjoy）．Fruit；a term denoting，in botany，the ovary or pistil arrived at maturity．
［1．Fructiferons（fero，to bear）．Bearing fruit．］
［2．Fructification．The flowers and fruit of a plant．］

FRUMENTUM．All kinds of corn or grain for making bread．

FRUSTUM．A piece or morsel of any－ thing．It differs from fragmentum，which is a piece broken，and from segmentum， which is a piece cut off．

FRUTEX．A shruh；a plant，of which the branches are perennial，proceeding di－ rectly from the surface of the earth with－ out any supporting trunk．When very small，the plant is termed fruticnlus，or little shruh．
［F U C U S（ $\phi \tilde{x} \times$ s，sea－wrack）．A Lin－ ncan genus of Cryptogamous plants，order
Algx．］
［1．Fucus crispus．The former systema－ tic name for the carragcen or Irish moss． See Chondrus crispus．］
［2．Fucushelminthocorton．The Linnean
systematic name of the Corsican worm． weed．］
［3．Fucus palmatus．The Linnean sys－ tematic name of the banded fucus，which is particularly rich in Iodine．］

4．Fncus vesiculosus．A sea－weed，termed vernacularly bladder－wrack，first descrihed by Clusius，under the name of quercus ma－ rina．Burnt in the open air，and reduced to a black powdcr，it forms the vegetable athiops，a species of charcoal．
［FUGACIOUS（fugax́）．Fading or pe－ rishing quickly．］

F ULI＇G0．Soot or smoke．Wood－ soot，or fuligo ligni，is the condensed smoke of hurning wood，used as a species of charcoal．

Fuliginous．The name of vapours which possess the property of smoke．
［FULIGOKALI（fuligo，soot；kali， potassa）．A remedy for chronic cuta－ neous diseases，prepared by hoiling one hundred parts of soot，and twenty parts of potassa，in water，then filtering and evaporating the solution．A sulphuretted fuligokali is prepared by dissolving four－ teen parts of potassa，and five of sulphur， in water，then adding sixty parts of fuli－ gokali，evaporating and drying the resi－ duum．］

FULLERS＇EARTH．A varicty of clay： containing about 25 per cent．of alumina， and so named from its heing used hy fullers to remove the grease from cloth hefore the soap is applied．
［FULMINATE．A combination of ful－ minic acid with a salifiable base．They detonate powerfully by heat，friction，or percussion．］

FULMINATING MIXTURE（ $f$ ul－ mino，to thunder）．A term applied to cer－ tain mixtures which detonate by beat or friction．

1．Fulminating gold；A deep olive－co－ loured powder prepared hy keeping re－ cently precipitated peroxide of gold in strong ammonia for ahout a day．
2．Fulminating Mercury．A powder obtained by dissolving mercury in nitrio acid，and pouring the solution into alco－ hol．It is employed for making percussion caps．
3．Fulminating silver：A black powder prepared by leaving oxido of silver for ten or twelve hours in contact with a strong solution of anmonia．
4．Fulminating ammoniuret of silver．A combination of oxide of silver and ammo－ nia，of violently explosive charaeter．
5．Fulminuting platinum．A substance prepared hy the rction of ammonia ou a solution of sulphate of platinum．
6. Fulminating pooder. A mixture of threo parts of chlorate of potass, and ono of sulphur ; or three parts of nitre, two of carbonate of potass, and onc of sulpbur, in powder.

FULMINATION (fulmen, a thunder: bolt). The explosion which takes place in chemical bndies by friction or beat.

FULMINIC ACID. A compound of cyanogen, which explodes when heated, rubbed, or struck. It is said to differ from cyanic acid in the ratio of its elements, and in containing hydrogen.
[FUMARIA. A Linnean genus of plants of the natural order Papaveraceæ.]
[1. Fumaria bulboza. Systematic name of a plant, the root of whicb was formerly given as antbelmintic and emmenagogue.]
[2. Fumaria officinalis. The systematic name of the Fumitory; the expressed juice of the leaves of which, or the extract prepared from it, is said to be mildly tonic; and, in large doses, cathartic, diuretic, and alterative.]

FUMARIC ACID. A monobasio acid, produced by heating malic acid, and also existing in fumitory, and in Iceland moss. FUMARAMIDE. A white insoluble powder, formed by tbe action of aqua ammoniz on the fumarate of oxide of etbyl.

FUMARATES. Compounds of tbe Fumaric or paramaleic acid.

FUMIGATION (fumigo, to perfume). The use of fumes, cbiefly cblorine, nitric acid, or vinegar, for the removal of effluvia or miasmata. Also the application of fumes, as of water to the tbroat, of mercury or sulphur to sores, \&c.

FUMING LIQUOR-(fumns, smoke). A chemical mixture, whicb emits fumes or vapour on exposure to the air.

1. Boyle's fuming liquor. The protosulpburet of ammonium; a volatile liquid, formerly called hepar sulphuris volatilis, \&c. The vapour is decomposed hy oxygen, producing fumes.
2. Cadet's fuming liquor. A liquid obtained hy the dry distillation of cqual weights of acetate $0^{f}$ potash and arscnious acid. It is remarkable for its insupportable odour and spontaneous inflammability in air. It is also called alcarsin.
3. Libavius's fuming liquor. The anhydrous bi-chloride of tin ; a colourless, limpid liquid, whicb fumes strongly in bumid sir.
[FUMITORY. Common namo of the Fumaria nfficinalis.]

FUNCTION (fungor, to discharge an office). The office of an organ in the animal or vegetable economy, as of the heart in circulation, of the leaf in respiration, \&c.

1. Vital functions. Functions immediately necessary to life; viz., those of the brain, the heart, the lungs, \&e., whence thesc bave been called the tripod of life.
2. Natural functions. Functions less instantly necessary to life; as digestion, absorption, assimilation; reabsorption, expulsion, \&c.
3. Animal functions. Functions of relation to the external world; as tbe senses, the voluntary motions.
4. Reflex function. A term applied by Dr. M. Hall to that action of the musclos whicb arises from a stimulus, acting through tbe medium of tbeir nerves and the spinal marrow: thus the larynx closes on the contact of carhonic acid, the pbarynx on tbat of food, the sphincter ani on that of the fæces, \&c.
[5. Functional. Belonging or relating to function.]
[6. Functional Diseare. A disease in which there is a ritiation of the function performed by an organ witbout any perceptible lesion of its structure.]
[FUNDUS. In anatomy, the bottom of any of the viscera.]
[FUNGATE, A comhination of fungic acid with a salifiable base.]
FUNGI. The Musbroom tribe of Cellular or Acotyledonous plants. Plants consisting of a congeries of cellules, chieffy growing upon decayed substances. Sporules lying either loose among the tissue, or enclosed in membranous cases called sporidia.
5. Fungic acid. An acid procured from sereral species of fungus, by expressing their juice, boiling it, forming an extract, and treating it with alcohol.
6. Fungin. A rbitish substance forming the base of fungi.

FUNGIFORM (fungus, \& musbroom; farma, likeness). Fungus-like; a term applied to the papillæ near the edges of the tonguc. Having a rounded conrex head, like that of a mushroom.

FUNGUS. A musbronm. A morbid growth of granulations in ulcers, commonly termed proud flceh. Granulations are often called fungous wben they are too bigh, large, flabby, and unhealthy.

Fungus Hamatadce (nipatwóns, bloody). Blecding fungus: Soft Cancer; Medullary Sarcoma; Spongoỉd Inflammation, de. In England, it is a form of encephalosis; in France, nxvus, morbid crectile tissue, de.
[Fungus rosarnm. A name for the Bedegnar.]
[F'ungoid (aidus, like). Resembling a mushroom, or the morbid condition fungus.]

EUNIOULUS (dim, of funis, a thick rope). A term applied to the spermatic cord, consisting of the spermatio artery and vein, \&e.

FUNIS UMBILICALIS. The umbilical cord; the means of communication between the foetus and the placenta. Its length is almost two feet.
[FURCATE (furca, a fork). Dividod into two parts ; forked; dichotomous.]

FURFUR, FURFURIS. Bran. A desquamation of the cuticle.

1. Furfur tritici. Bran. Panis furfuraceour, brown or bran bread.
2. Furfuraceous. Branny, or scaly; a term applied to a deposit in the urine, which is said to consist of the phosphates of that fluid.

FURNACE (furnus). A fire-place employed for pharmaceutical operations, as fusion, distillation, sublimation, the oxidisement, and the deoxidisement, or reduction of metals. Furnaces have accordingly been termed-

1. Evaporatory, when employed to reduce substances into vapour by heat.
2. Reverberatory, when so constructed as to prevent the fiamo from rising.
3. Forge, when the current of air is determined by bellows.
[FUROR (furo, to be mad). Great rage or madness.]

Furar Uterinus. Uterine madness; another term for nymphomania.

FURUNCULUS (furo, to rage). A boil, so named from its violent inflammation.
[FUSAGASUGA BARK. A variety of fibrous bark brought from Bagota, containing from 1 to 1.3 per cent. of sulphate of quinia; it is also called Bogota bark, and Coquetta bark.]

FUSCIN (fuscus, tawny). A brown colouring matter obtaiued from empyreumatic oils.

FUSELÖL. [FUSEL OIL.] An oily liquor obtained from alcohol, also termed
oil of grain, eorn-spirit oil, potato-spirit oil, and, hypothetically, hydrate of amule.

FUSIBILITY (fusius, melted or poured out). The property by which bodies assume the fluid state on the application of heat.

FUSIBLE CALCULUS. A variety of urinary concretion, consisting of the mixed phosphates of magnesia and ammonia, and of lime.

FUSIBLE METAL. An alloy of eight parts of bismuth, five of lead, and three of tin; it melts below the temperature at which water boils.

Rose's Fusible Alloy. An alloy consisting of two parts by weight of bismuth, with one of lead and one of tin.

FUSIFORM ( $f u 8 u 8$, a spindle; forma, likeness). Spindle-shaped; thickest at the middle, and tapering to both ends; a term applied to certain roots.
FUSION (fusu8, melted; from fundo, to pour out). The state of melting. Substances which admit of being fused are termed fusiblc, but those which resist the action of fire are termed refractory. Fusion differs from liquefaction in being applied chiefly to metals and other substances which melt at a high temperature.

1. Aqueous fusion. .The solution of salts which contain water of crystallization on exposure to increased temperature.
2. Dry fusion. The liquefaction produced by heat after the water has been expelled.
3. Igneous fusion. Tho melting of anhydrous salts by heat without undergoing any decomposition.

FUSTICK, or YELLOW WOOD. The wood of the Mrorus tinctoria, an Urticaceous plant, which yields much yellow coloured matter, which is very permanent.

Young fustick, or fustet. The wood of the Rhus Cotinus, the arbre à pervuque, or wig-tree of the French, and Venetian Sumach of the English; an Anacardiaceous plant, which yields a fine yellow colour, but not durable.

## G

GADOLINITE. The name of a mineral, so called from the Swedish chemist Gadolin, who discovered in it the carth yttria.
[GADUIN. A peculiar substance found in cod-liver oil.]
[GADUS. A genus of fishes of the order Jugulares.]
[1. Gadus aglefinus. Tho haddock, inhabiting the northern seas of Europe.]
[2. Gadus callarias. The dorsch, (Norrhua Americauta, Storer, frequenting the northern seas of Amerien, and furnishing the cod-liver oil of commerco.
[3. Gadus carbonarius. Coal fish, inhabiting the northern consts of Great Britain.]
[4. Gadies merluccius. The hake, inhabiting tho north and Mediterranean seas.]
[5. Gadis morrhua. The cod-fish (Morrhua vulguris, Storer, ) inhabiting the northern Atlantic, and from the liver of which the officiual cod-liver oil is obtained.]
[6. Gadus pollachins. The pollock, found on tho rocky coast of Britain and other parts of Europe; it also furnishes the codliver oil of commerce.]
[GALACTAGOGES (「ŕ̀ $\alpha$, milk ; $\alpha \gamma \omega$, to drive out). Medicines or applications which induce a flow of milk.]

GALACTIA ( $\gamma \dot{\lambda} \lambda \alpha$, milk). Mislactation; a morbid flow or deficiency of milk; the former affection has been termed galactirrheea, or milk-flux.

GALACTIC ACID (yída, milk). Lactic acid. The acid of milk, supposed to be mercly animalized acetic acid.
 substance which constitutes the principal ingredient in the sap of the Galactodendron utilc, or Cow Tree of South America, used as a suhstitute for cream.
[GALACTIRRHEA' ( $\gamma \dot{\lambda} \lambda a$, milk; $\rho \varepsilon \omega$, to flow). Excessive flow of milk.]
[GALAC'TOCELE ( $\gamma i \lambda a$, milk; $\kappa \eta \lambda \eta$, a tumour). A tumour containing a milky fluid.]

GALACTOPHOROUS ( $\gamma \dot{\lambda} \lambda a, \gamma \dot{\text { àdaxtos, }}$ milk; фf $\rho \omega$, to carry). Lactiferous, or milkconveying, as applied to the ducts of the mammary glands.

GALAM BUTTER. A vegetable solid oil or fat, procured from the Bassia butyracea.

GALANGA MAJOR. Radix Galanga. The pungent aromatic rhizome of the Alpinia Galanga, a plant of the order Zingiberacce, forming a substitute for ginger.
[Galanga minor. The root probably of the same plant as the G.major, at a different stage of growth.]

GALBANUM. A gum-resin; the seereted juice of the Galbamum Officinale, an Umbeliferous plant. It occurs in tear and in lamp.

GALBULUS. A kind of cone, differing from the strobile only in being round, and having the heads of the earpels much enlarged. Tho fruit of the Juniper is a galbulus.

GALEA. Literally, a helmet. The name of the arehed upper lip of the corolla of several labiate plants, as Lamium, \&c.

Galeate. Arched like a helmet; as applied to the lip of some labiato corollas.
[GALEGA OFFICINALIS. Guat's rie. An European, Leguminous plant,
formerly employed as a remedy in malignant fevers, hites of snakes, \&e.., but now not used.]
[Galeya Virginiana. Virginia goat's rue. An indigenous species, the root of which is said to be diaphoretic and powerfully anthelmintic. It is given in decoction.]

GALEN'S BANDAGE. A term sometimes applicd to the four-tailcd bandsge, or single split-cloth.

GALE'NA. Lead-glance; the native sulphuret of lead.
[GALENIST. A follower of the doetrine of Galen.]

GALIPEA CUSPARIA. A Rutaceous plant, said by Humholdt to produce $A n-$ gosfura bark, a substance assigned by Dr. Hancock to the Galipea Officinalis.

GALIPOT. Barras. A white resin, derived from the Pinus pinater, or cluster pine.
[GALITANNIC ACID. A variety of tannie acid discovered hy Schwartz in Galium aparine.]
[GALIUM APARINE. Cleavers; Goosegrass. A Rubiaceous plant common in Europe and the United States, the expressed juice of which is said to be aperient, diuretic, and antiscorbutic. The dose is ${ }^{3} \mathrm{iij}$. twice a day.
[G. verum. Yellow Lady's Bed-Straw; Cheese-rennet. An European species formorly esteemed as a remedy in epilepsy and hysteria. It is used to colour cheese yellow.
[G. Tinctorium. An American species, closely allied in properties to the preceding. It is employed by the Indians for staining their ornaments red.]

GALL-BLADDER. Cystis fcllea. A membranous reservoir, lodged in a fissure on the under surface of the right lobe of the liver, and containing the hile.

1. Gall-ducts. These are the cystic, proceeding from the gall-bladder; the hepatie, procceding from the liver: and the ductus communis choledochus, resulting from the union of the two preceding.
2. Gall-stones. Biliary conerctions found in the gall-bladder; [and sometimes in the liver and hepatic and choledoch ducts;] viz.: 一
3. Calculi, composed of cholesterine, nearly in a stato of purity.
4. Mellitic calculi, so named from their likeness to honey, in colour.
5. Calculi, cutirely conposed of inspisarted bile.
GALL-SICLENESS. A popular name for the Walcheren fever, which proved so futal to tho Kinglish in the year ISO9, and is attended with a romiting of bile.

GALLEA. Galls; excrescences formed on any part of a plant by tbe gall-flies, or bymenopterous insects of the genus Cynips, and sometimes by the plant-lice, or Aphidii, which are hemipterous insects. The Cbinese gall, or 2000 -pei-tze, is produced by an aphidian.

1. Oak-apple, or oak-sponge. Tbe largest Britisb species of oak-gall, produced hy Cynips Quercus terminalis.
2. Currant-gall. The small round gall produced by the O. Q. pedunculi. These are scattered over the racbis of tbe amentum, giving it tbe appearance of a bunch of currants.
3. Artichoke-gall, or oak-strobile. A beautiful foliose gall, produced by the C. Q. gemmas.
4. Cherry-gall. A real and succulent gall, produced on oak leaves by the $C$. Q. folii. A smaller one is called by Reaumur tbe currant gall.
5. Mecca, or Bussora gall. A large gall produced on the $Q$. infectoria by tbe Cynips insana. These are sometimes called ibe Dead-sea apples, mad apples, or apples of Sodom.
6. Acorn-gall. A very irregular, deeplyfurrowed, angular gall, formed on tbe capsule of the Q. pedunculata by the C. Q. calycis. It is sometimes used in Germany by dyers as a substitute for nutgalls, under the name of knopperi, or knobben.
7. Horned gall. A gall shaped like tbe preceding, attached by its middle to a young branch; tbis is tbe galle corniculée of M. Guibourt.
8. Nut-gall. Galla 0fficinarum. Tbe gall of commerce, produced by tbe C. galla tinctoria on tbe Q. infectoria. It varies much in different countries, and bas received various names - as coriander-gall, marmorine-gall, Turkisb diamond, \&c. See Pserto-Gall.
[GALLATE. Combination of gallic acid with a salifiable base.]

GALLIC ACID. An acid obtained from gall-nuts, but principally by decomposition of tannic acid.

GALLICOL $\neq$ (galla, a gall; colo, to inhabit). Gall-inbahiters; a tribe of bymenopterousinsects, or Diploleparia, whicb produce those excrescences on plants called galls. Latrielle comprebends all the insects of this tribe in one genus, viz., Cynips. See Galla.

GALLI'NA (gallus, a cock). Gallinaceous birds, so named from tbeir affinity to tbe domestic cock.

GALVANIC MOXA. A term applied by Fabre-Palaprat to tbe employment of voltaie electricity, as a therapeutical agent,
for producing the canterizing effects of the moxa

GALVANISM. A form of electricity named after Galvani, and usually clicited by the mutual action of various metals and cbemical agents upon each other, The additional discoveries of Volta led to tbe term Voltaism, or Voltaic Electricity; and its effects on the muscles of animals newly killed, suggested the term Animal Electricity.

1. Galvanic Battery, or Trough. An apparatus for accumulating Galvanism, consisting of plates of zino and copper fastened togetber, and cemented into a wooden or earthenware trough, so as to form a number of cells; the trough is then filled with diluted acid.
[2. Galvanic Pile. See Pile.]
2. Galvano-meter ( $\mu \dot{\kappa} \tau \rho o v$, a measure). An instrument which indicates the feeblest polarization of the magnetic needle, or slightest current in the connecting wire of a voltaic circle.
3. Galvana-scope ( $\sigma \times \pi i \omega$, to examine). An instrument by means of which the existence and direction of an electric current may be detected. A magnetio reedlo is a galvanoscope.

GAMBIR. The Malay name of an astringent extract, procured from the $U n$ caria gambir. The substance commonly called square catechu, and by tanners terra japonica, is tbe produce of this plant, and is therefore not catccbu, but gambir.

GAMBOGE. A gum-resin, said to be produced by a species of Hebradendron, a Guttiferous plant.

1. Gambogic acid. An acid procured by evaporating to dryncss the ethereal tincture of the pure gum-resin.
2. American Gamboge. A secretion similar to gamboge, yielded by several spocies of Vismia.
[GAMBOGIA. The U. S. Pharmacopœial name for Gamboge.]

GAMOPETALOUS ( $\gamma a \mu \dot{z} \omega$, to marry; пह́radov, a petal). A term applied to a corolla which consists of cohering petals, and whicb is incorreetly termed monopetalous.

Gamo-sepalous. A term applied to a calyx wbich oonsists of cohering sepals, and which is incorrectly termed monosepalous.
GANGLION ( ( ayy入iav, a nerve-knot). A small nervous centre, or an enlargement in the course of a nerve, sometimes termed a diminutive brain. In speaking of tho lympbatic system, a ganglion denotos what is cominonly called a conglobatc gland. The term also significs a morbid eulargement in tho course of a
tendon, or aponeurosis, from effusion into its theca, as in ganglion patellæ, or tho housemaid's knce. Sce Ifygroma.

1. Ganglion azygos, vel impar. A small ganglion situated on tho first bone of the coccyx.
2. Ganglion, cardiac. A plexus, constituting tho central point of union of the cardiac nerves.
3. Ganglion, Carserian. A large semilunar ganglion, formed of the fifth nerve, or trifacial.
4. Ganglion cavernosum. A ganglion placed at the outer side of the internal carotid artery, towards the middle of the cavernous sinus. It does not always exist.
5. Ganglion cervicale primum. The superior cervical ganglion, situated under the hase of the skull, and remarkablo for its size and the regularity of its occurrence. Under the term great sympathetic, or intercostal nerve, are commonly associated all the ganglia which occur from the upper part of the neck to the lower part of the sacrum, together with the filaments which issue from them.
6. Ganglion cervicale medium seu thysoïdeum. A ganglion situated opposite to the fifth or sixth vertehra. It is often entirely wanting ; sometimes double.
7. Ganglion cervicale inferius. The inferior cervical ganglion, situated behind the vertehral artery, between the transverse process of the seventh cervical vertehra and the neck of the first rih. It is sometimes double, and frequently eontinuous with the preceding ganglion.
8. Ganglia, lumbar. Five or fewer on each side, placed hetween the twelfth rih and the articulation of the last vertebra with the sacrum.
9. Ganglion of Meckel. The sphenopalatine ganglion, the largest of the cranial ganglia.
10. Ganglion, naso-palatinc. A ganglion discovered by Cloquet in the anterior paIatino foramen.
11. Ganglion ophthalmicum. The ophthalmie or lenticular ganglion, placed on the outer side of the optic nerve; one of the smallest ganglia of the hody.
12. Ganglion, otic. A small ganglion discovered by Arnold, noar the foramen ovale.
13. Ganglion petro8um. Ganglion of Andersch; a gangliform swelling on the glosso-pharyngeal nerve.
14. Ganglion of Ribes. A small ganglion of communication hetween tho sympathetic filaments of the antcrior ccrebral artcrics.
15. Gangliu, sacral. Threo or four on
each side, placed upon the sides of the anterior surface of the sacrum.
16. Ganglia, semilunar. Two ganglia of the abdowen, lying partly upon the crura of the diaphragm, partly upon the aorta, opposite tho cocliac trunk.
17. Ganglion, sub-maxillary. Aganglion which occurs opposite the suh-maxillary gland.
[GANGLIONIC. Having ganglions. This term is applicd to nerves which have ganglions in their course, and to the ganglions collectively as forming a system.]

GANGLIONICA ( $\gamma$ ajy $\lambda_{10}$, a nerveknot). A class of medicinal agents which affect the sensihility or muscular motion of parts supplied hy the ganglionie or sympathetic system of nerves.

GANGR $\mathbb{E N A}$ ORIS. A disease which affects or destroys the cheeks, or gums, in infants. A similar disease occurs in the pudenda.
[GANGRANA SENTLIS. The gaugrene of old age; a species of dry gangrene peculiar to old persons, which usually occurs on the inside of one of the toes.]
GANGRENE (ypaivw, to ent). The first stage of mortification, so named from its eating away the flesh.

1. Hot gangrene. That form of the disease which is preceded or accompanied hy inflammation: cold gangrene is unattended hy inflammation.
2. Humid gangrene. So called from the affected part containing a greater or less quantity of decomposed or other fluids: in dry gangrane these fluids are not present, or only in very small quantity. The latter form, heing frequently found to affect old people, has heen also named gangrana senilis.
GANNAL'S SOLUTION. A preparation for preserving animal substances, made by dissolving onc ounce of acetate of alumina in twenty ounces of water.

GARANCINE. The colouring matter of madder, mixed with tho carhonized residuc resulting from the action of oil of vitriol on the woody fibre and other constituents of madder. It is a hrownish or puec-coloured powder used in dyeing.
[GARCINIA. A Linnean genus of the natural order Guttiferes.]
[1. Garcinia Cambogia. The systematic name of a specics growing in Ceylon, supposed by some hotanists to yield gamboge.]
[2. Garcinia Morella. A species also growing in Ccylon, aud mhich yiclds a varicty of Gauboge.]
[3. Gercinia Mangostana. The Mangostan tree; a native of Java and the Moluoca Islands, the fruit of which is fineflavoured, and the dricd hark is esteemed a useful astringent in dysentery, \&c.]
[GARDEN ANGELICA. Common name for the plant Angelica archangelica.]
[GARDEN CARROT ROOT. Common name for the root of Daucus carota.]

GARDINER'S ALIMENTARY PREPARATION. A nutritious article, consisting of very finely ground rice-meal.
GARGARISMA ( $\gamma$ пр $\gamma a \rho i \zeta \omega$, to wash the throat). [Gargarism.] A gargle for the throat; a preparation used for rinsing the throat.
GARLTC. The bulh, or cloves, of the Allium sativam.
GARNET-BLENDE, or Zinc-blende. A sulphuret of zinc.
[GAROU BARK. The bark obtained from the Daphne gnidium.]

GARUM. A sauce or pickle made by the Romans, from the $\gamma \dot{i} \rho o s$, a small fish ; it resembled the modern anchovy sauce in nature and use.
GAS. An old Teutonic word, signifying air or spirit; now applied to any permanent aëriform fluid. Gases are distinguished from liquids hy the name of elastic fluids; and from vapours, hy their retaining their elasticity in all temperatures.

Gaseous. That which has the nature of gas; guseons fluids are thus distinguished from other fluids.

GASTE'R ( yaotíp). The Greek term for the stomach.

1. Gastric fever. A term firsty applied hy Baillou to common fever, when attended by unusual gastric derangement; it is the meningo-gastric of Pinel.
2. Gastric juice. The peculiar digestive fluid secreted hy the stomach.
3. Gastero-poda (roŭs, пodoेs. a foot). The third class of the Cyclo-gangliata, or Mollusca, comprising animals furnished with a muscular foot, extended under the abdomen, and adapted for creeping.
4. Gastr-itis. Inflammation of the stomach ; the nosological termination itis denoting inflammation.
5. Gastro-ccle ( $\kappa \bar{\eta} \lambda \eta$, a tumour). Hernia of the stomach.
 muscle, also called gemellus, which principally forms the calf or belly of the leg; it is distinguished into two fleshy masses, called the outer and inner heads. Its office is to extend the foot.
6. Gustr-odynia (doúvn, pain); or gastraigia (ädoos, pain). Pain in- the stomach.
S. Gastro-enteritis. Infammation of tbe gastro-intestinal mucous membrane.
7. Gastro-epiploic ( $\bar{\pi} \pi i \pi \lambda o o v$, the omentum). Belonging to the stomnch and omentum, as applied to a branch of the hepatic artery, lymphatic glands of the ahdomen, \&c.
8. Gastro-malacia ( $\mu$ 人 $\lambda a \kappa \partial े s$, soft). Softening of the stomach; a disease occurring in infauts, and usually preceded hy hydrocephalus, hy an acute exanthematous disease, or hy some disease of the respiratory organs.
9. Gastro-periodynia (teplodos, a period). Periodical pain of the stomach; a peculiar disease known in India hy the name of sool. So painful are the paroxysms of this disease, that it is supposed to he produced hy the deadly weapon in the hands of Siva, the destroying power of tho triad; and so incurable that even Siva bimself cannot remove it.
10. Gastro-raphe ( $\rho a \phi \grave{\eta}$, a suture). A suture uniting a wound of the belly, or of some of its contents.
11. Gastro-splenic omenta. A term applied to the laminæ of the peritoneum, which are comprised between tbe splcen and the stomach.
12. Gastro-tomia (тонѝ, section). [Gastrotomy.] The operation of opening the abdomen, as in the Cæsarian scetion.
[15. Gastro-hysterotomy (íatépa, the womb; $\tau \varepsilon \mu \nu \omega$, to cut). Cutting through the ahdomiual parietes into the womh; the Cæsarian operation.]
[GASTRO- ( a armp, the stomacb). This word, entering into compound words, signifies relation to, or connection with, the stomach.]
[GAULTHERIA PROCUMBENS. Partridge-herry; winter-green; teaherry. An indigenous plant of the order Ericaeece, which comhines the properties of an aromatic and astringent. An infusion of the leaves has heen employed in amenorrhœa and in chronic dysentery. Its volatile oil is used to flavour other medicines. In the dose of an ounce it is said to have caused fatal gastritis.]

GAULTHERIC ACID. Salicylate of mcthylene. The heavy oil of partridge herry, or Gaultheria procumbens, formerly a constituent of the commercial oil of wintergrocn. It combines with hases, and forms salts, called gaultheratcs. The light oil of partridge-berry is called gaultherylone.

GAYACINE. A substance procured from the hark of guaiacnm ; it dissolves in nitric acid, forming oxalic acid.

GE'INE, or GE'IC ACID (rnivos carlhy; from $\gamma \tilde{\pi}$, earth). A name given by Berrelius to humus, or vegetable mould,
tho result of the decomposition of vegetable substances.

GELATINE (gelu, frost). The principle of jelly. It is found in the skin, cartilages, tendons, membranes, and bones. The purest varicty of gelatine is isinglas8; the common gelatine of commerce is called glue; and the hydrate of gelatine jelly.

Gelatine Capsules. Capsules prepared from a concentrated solution of gelatine, and filled with medicines. When swallowed, tho capsules dissolve in the gastrointestinal juices, and the nauseous taste of the medicine is avoided.

GELATIGENOUS PRINCIPLES. Gelatinous principles. A class of alimentary principles which, on boiling in water, yield a jelly, and appear to serve for the production of the gelatinous tissues. They do not furnish protein. See Proteinaceous Principles.

GELATINO-SULPHUROUS BATH. Prepared by adding a pound of glue, previously dissolved in water, to the sulphurated bath (Dupuytren). The latter is prepared by dissolving four ounces of sulphuret of potassium in thirty gallons of water.

GELATINOUS TISSUES. Tissues which yield to boiling water a substance which, on cooling, forms a jelly, or may be called gelatine. They are chiefly found in the cellular membrane, the membranes in general, the tendons, ligaments, bones, cartilages, \&c.

GELE'E POUR LE GOITRE. A preparatiou sold at Lausanne in Switzerland, consisting of the indide of potassium.
[GELSEMINUM SEMPERVERENS. Yellow Jasmine, Carolina Jasmine; a beautiful climhing plant of the Southern States belonging to the natural family of Apocynacce, the root of which is said to be a cerebro-nervous sedative, without nauseating or purgative propertics, but' sometimes diaphoretic.]

GEMELLUS (dim. of gcminus, double). Tho name of two muscles - the superior and the inforior-situated bclow the ohturator cxternus. They arc also called museuli gemini.

GEMMA. The general name for any precious stonc; nlso, a lcaf-bud, or the rudiment of a young branch. The term gemme is also npplied to minuto green hodics found in little cups on the fronds of Marchantia.

Gemmile. A term used synonymonsly with plumule, the growing point of the embryo in plants.

GENAE. Tho chceks, forming tho latera: walls of the mouth. Sce Mala.

GENERATION (genero, to beget). Reproduction. This is-

1. Fis8iparous (fissus, cleft; from findo, to clcave; and pario, to bring forth). When it occurs by spontancous division of the body of tho parcnt into two or moro parts, each part, when separated, becoming a distinct individual, as in the monad, vorticella, \&c.; or by artificial division, as in the hydra, planaria, \&c.; in the propagation of plants by slips.
2. Gemmiparous (gemima, a bnd; and pario, to bring forth), or the multiplication of the species by buds or gemnules, arising from germs, as exemplified in the vegetable kingdom, in many of the infusoria, \&c.
3. By Fecundation (fecundus, fruitful), or the effect of the vivifying fluid provided by one class of organs upon the germ contained in a seed or ovum formed by another class; the germ, when feenndated, is termed the embryo. This process consists in impregnation in the male, conception in the female.
[GENERIC (genus, a kind). Of, or belonging to, the same genus.]
[GENESIS ( $\gamma$ vข $\mu$ al, to beget). Birth, origin, or generation.]

GENETICA ( $\boldsymbol{\gamma}^{2}$ vocis, generation). Medicines which act on the sexual organs. As affecting the venereal orgasm, they comprise the aphrodisiacs and the anaphrodisiacs; as affecting the uterus, they include the emimenagognes and the eebolics.

GENICULATE (gemu, a bnee). Kncejointed; bent abruptly in the middle, as the stems of some grasses.

GENI'O. (yivciov, the chin). Terms compounded of this word relate to muscles attached to the chin, ns-

1. Genio-glos8us ( $\gamma \lambda \bar{\omega} \sigma \sigma a$, the tongue). A muscle situated betricen the tongne and the lower jaw. This is also called genio-hyoglossus, from its being inserted also into the os byoides; and by Winslom, polychrestus, from its performing every motion of the tongue.
2. Genio-hyoüdcus. A muscle attached to the mental process of the lower jarm and to the os byoildcs. It pulls the throat upwards.
3. Gemial Procerses. The name of fonr eminences of the infcrior maxillary bonc, beneath the eymphysis of the chin.
[GENISTATINCTORIA. Dsersbroom ; grecn-wced. An Europcan, Leguminous plant, tho flowering tops and seeds of which are said to possess purgative and canctic properties. It was extolled some years ago ns a preventive of hydrophobin.]
[GENITO-(genilalia, the genitais).

This word, occurring as a prefix in compound terms, denotes relation to, or connexion with, the genital organs.]

Genito-crural. The name of a norve proceeding from the first lumbar, and dividing into an internal branch, which accompanies the spermatic cord; and an external, which is distributed into filaments at the crural arch.
[GENTIANA. The pharmacopœial name of the root of Gentiana luted; $\Omega$ genus of plants of the nataral order Gentiaпасеæ.]
[1. Gentiana Catesbæi. Blue Gentian; an indigenous species closely resembling the Gentiana lutea in medical properties.]
[2. Gentiana Chirayta. Cbiretta; a native of northern Iudia, the berb and root of wbich are esteemed as a bitter tonic.]
[3. Gentiana lutea. Gentiun. An European species, possessing well-establisbed tonic powers.]

GENTLANACEA. Tbe Gentian tribe of Dicotyledonous plants. Herbaceous plats with leaves opposite; flowers terminal, axillary; stamens, alternate with the segments of the corolla; ovarium single, superior, 1- or 2-celled; fruit a manyseeded berry.

1. Gentiance radix. Gentian root; the root of the Gentiance lutea, so called from Gentius, king of Illyria, its discovercr.
2. Gentianite. The bitter principle of gentian. This, and gentisin, were formerly coufounded under the name of gertirnin.
3. Gentisin or gentisic acid. A crystalline, tasteless substance procured from gentian.
4. Geutian spirit. An alcoholic liquor produced by the vinous fermentatiou of the infusion of gentian, and much admired by the Swiss.
GENU (yorv). A Latin term for the knee. It is indeclinable in the singular number. See Gonagra.
[Genn Valga. Knock-knecs.]
[GEOFFROYA. A Linncan genus of plants of the natural order Leguminosw.]

Geoffroya Inermis. The Cabbage tree ; a Leguminous plant, named from its offensive smell, bilge-water trec.
[Geoffroya Surinamensis. A specios growing in Surinam, the bark of which is used as an anthelmintic.]
[GEOPHILLUS ( $\gamma \eta$, tbe earth ; $\phi u \lambda \lambda o v$, a leaf). Having leaves of an earthy colour.]
[GEOPHILLUS ( $\gamma \eta$, the carth ; $\psi t \lambda \varepsilon \omega$, to love). Earth-loving; applied to plants that grow on the earth.]

GEORGIA BARK. The bark of the

Pinckncya pubens, an Amerlcan plant used as a substituto for Cinchonce.
[GERANIUM. A Linnean genus of plants of the natural order Geraneaceas; the U. S. Pharmacopœial name for tbo rbizome of Geranium maculatum.]
[Geranium maculatum. Cranesbill. An indigenous plant, the root of whicb is an astringent of cousiderable power, and is a popular remedy in various parts of the United States. It is given in substance, decoction, tincture, and extract. The dose of the powder is $Э \mathrm{j}$. to 3 j .
[G. Robertianum. Herb Robert. A species common to this country and Europe, thougb rare in the former. It has been used internally in intermittent fever, consumption, bemorrhages, jaundice, \&c.; as a gargle in affections of the throat; and oxternally, as a resolvent to swollen breasts, tumours, \&c.]
[GERM (gero, to bear). The embryo of a germinating seed; the rudiment of a new being yet undeveloped.]

Germ-Cell. The cell rosulting from the union of the spermatozoon with the germiual vesicle. This is the "primary" germcell ; those wbicb are propagated by it aro called "derivative" germ-cells. These and the assimilated yolk constitute the germmass, or matters prepared for the formation of the embryo.
[GERMANDER. Common name for tbe Teucrium chamaedrys.]
GERMAN PASTE. Beat together Hij. of pease flour, tijj. of blanched sweet alunonds, tbree ounces of fresh butter, the yolks of two fresb eggs, with a little boney and saffron; beat the mass gently; and pass it tbrough a sieve, to form it into grains.

GERMAN SILVER. Packfong. The white alloy of nickel, formed by fusing together 100 parts of oopper, 60 of zinc, and 40 of nickel.

GERMAN TINDER. Amadou. A substance prepared from tbe Polyporus, fomentarins and igniarins, by cutting the fungi into slices, beating, and soaking tbem in 』 solution of nitre.

GERMEN. Tbo term applied by Linnæus to tbe ovarium of plants, or the hollow case forming the base of the pistil, and containing tho ovnles.
[GERMINAL MEMBRANE. Sec Blastoderm.]

GERMINATION (germino, to bud). Tho growth of the plant from sech.

GERONTOXON ( yípwv, yipovtos, an old man ; ró̧ov, a bow). Arcus scuilis. Tho opaque circle, or half circle, which occurs in tho cornea, in elderly persons; [tho result of a fatty degencration of the part.]

GESTATION (gestatio uterinu). The or rye, and then distilled with juniperstate of preganey; tho carrying of the foetus in utero. Of crratic or extra-uterinc gestation, there are four kinds, viz.:-

1. The abdominal, iu which the foetus is lodged in the abdomen.
2. The interstitial, in which the foetus is lodged among the iuterstitial elements of the uterus.
3. The ovarial, in which the foetus is developed in the ovarium.
4. The tubular, in which the foetus is lodged in the Fallopian tube.
[GEUM. A Linuean genus of plants of the natural order Rosacea. The U.S. Pharmacopocial name for the root of Geum rivale.]
[1. Geum Rivale. Water Avens. A species common to Europe and the United States, the root of which is tonic and very astringent. It is used in passive hemorrhages, leucorrbœa, diarrhœa, and as a tonic in phthisis, dyspepsin, \&e. The dose of the root is from $\partial \mathrm{j}$. to 3 j .; of the decoction, made by hoiling an ounce of the root in a pint of water, $\mathrm{f}_{\mathrm{Z}}^{\mathrm{Z}} \mathrm{j}$. to $\mathrm{f}_{\mathrm{j}}^{7 \mathrm{ij}}$.]
5. Geum Urbanum. Common Avens, or Herb Bennet; a European, Rosaceous plant, the root of which is employed for flavouring and preserving the Augsburg beer.
[GIBBOUS (gibbus, protuherant). Having an irregularity or swelling on the back, or other part of the hody. In hotany, applied to leaves, petals, de., when irregularly swelled on one side or both.]
[GIGARTINA HELMINTHOCORTON. Corsican moss; a species of Algre said to he anthelmintic.]
[Gigartina liclenoides. Ceylon moss; a delicate fucus growing on the coast of Ceylon, and applicable to the same purposes as the carrageen.]
[GILLTNIA. A Linnean genus of plants of the natural order Rosacees. The U, S. pharmacopoial name for the root of the Gillenia trifoliata (Indinn plyssic), an indigenous plant; a mild and efficient emetie, and need as a suhstitute for Ipeeacuanha. The dose is from $Э \mathbf{j}$. to 3 ss. Another species, G. stipulacea, though not officinal, possesses the same medieal properties.]

GIMBERNAT'S IITGAMENT. The name given to that portion of the external oblique musele, which is inserted into the pectinenl line. It is commonly called "the third insertiou of Poupart's ligament." Gimhernat was surgeon to the king of Spain, and published an essay on femoral hernin in 1793.
berries. A very considerable portion of the liquor, however, sold for gin, is faetitious, and prepared from pernieious articles.]

GINGER. The rbizome of the Zingiber officinale, oceurring in flatish, jointed, hranched or lubed, palmate pieces, called races or liands, which rarely exceed four inches in length.

GINGILIE OIL. A bland fixed oil procured hy expression from the seeds of the Sesamum orientale, commonly called teel seeds.
GINGIV ※. The gums; the reddish tissue which surrounds the neek of the teeth.

GI'NGLTMUS ( $\gamma$ ' $\gamma$ y $\lambda$ upд̀s, a hinge). The linge-like joint. See Articnlation.

Ginglymoüd (eǐos, likeness). Hinge-like; as applied to that species of joint which admits of flexion and extension.

GIN-SENG. A term signifying human powers, and applied hy the Chinese to the root of the Panax quinquefolium, in high repute as a stimulant and restorative.

GIZZARD. The proper stomach of hirds, consisting of a strong hollow muscle. Compare Crop.

GLABELLA (glaber, smooth). The triangular space hetwixt the eyehrows.

Glabellar. A term used by Barelay to denote an aspect of the bead.
[Glabrous. Glaber. Smooth. Having a surface free from hairs or any asperities.]

GLACIAL ACID (glacics, iee). The strongest acetic acid which can be procured. It exists in a cryptalizized state under fifty degrees of Fahrenheit, and contains 79 per cent. of real acid. See Acetum.

GLACIAL PHOSPHORIC ACID. Mctnsphosphoric, or Monobasic phosphorio acid, appeariug in the form of a colourless transparent glass, which slowly dissolves in water.
[GLADIATE (gledins, a. sword.) Sword-shaped. Synonymous mith ensiforms.]

GLAIRINE. A term referred by some to a gelatinons vegetable matter: bry others, to a pseud-organie substance which forms on thermal waters.

GLAIRE. Albumen seu allum ori. The white of the egg.

GLANCE (glenz, splendour; or glacies,
ice). A name given to ecrtain ninerals whiel hare a metallic or pseudo-metallic GLiAND (glams, glamliz, an acorn). A small body, ocenrring in many parts of the body, and composed of its variuus
[GIN. A spirit dissolved from malt, the body, and compose
tissues, blood-ressels, nerres, \&c. Dr. Pemberton designates as glando of supply, the liver, the panereas, the splecn, de.; and, as glands of vaste, the kidneys, the mamma, \&c.

1. Gland, conglobate (con, together; globns, a ball), or simple; a gland suhsisting by itself, as those of the absorbent system.
2. Gland, conglomerate (con, together; glomus, glomeris, a heap), or compound ; a gland composed of various glands, as the salivary, parotid, pancreatic, \&e.
3. Glands, concatenate (chained together; from con and caténa, a chain), or glands of the neck, presenting, in children, a kind of knotty cord, extending from behind the ear to the collar-hone.
4. Glands, Brumer's, or the duodenal. Small flattened granular hodies, found in the duodenum, and compared collectively by Von Brunn to a second pancreas.
5. Glands of Coovper. Two small glandular hodies, placed parallel to each other hefore the prostate. They are also called accessory glands.
6. Glands, Haversian. The name of the fatty hodies which are found in connexion with most of the joints, and in general lying hehind the synovial fringes. Clopton Havers supposed them to he the agents of the synovial secretion, and called them glandula mucilaginosce. Weitbrecht called them adipo-glandulora.
7. Glands, Meibomiam. Minute follicles emhedded in the internal surface of the cartilages of the eyelids, resembling parallel strings of pearls.
8. Glands, Peyer's, or aggregate. Clustered glands, resemhling oval patches, principally situated near the lower end of the ileum.
9. Glands, solitary. Small flattened granular hodies, found in the stomach and intestines. They are sometimes erroneously called Brunner's.

GLANDERS. See Equinia.
GLANDULA (dim. of glans, an acorn, or gland). A little acorn ; a small gland. 1. Glandulae Odorifere. Glands of Tyson. The name of certain glands situated around the neck and corona of the glans penis in the male, and of the glans clitoridis in the female, seereting a strongly odorous humour, called amcgma preputii.
2. Glandule Pacchioni. The granulations found in the superior longitudinal sinus of tho membraues of the brain; so called after Pacchioni, their discoverer. These hodics have no analogy whatsoever with glands.
[3. Glandule Nabothi. Glands of Na -
both; follicles thickly studding the os and cerrix uteri.]
[GLANDULAR (glandula, a small gland). In anatomy, signifies having the appearance, structure, or function of a gland. In hotany, covered with hairs hearing glands upon their tips.]

GLANS, GLANDIS. An acorn. A pellet of lead, or other metal. In botany, a compound, inferior fruit, with a dry pericarp, hut proceeding from ar ovary which contains several cells, and sealed in a persistent involucrum called a cupulo. The glans is solitary in the oak; in the heech and sweet chesnut there are several completely enclosed in the cupule. The glans is termed Calybio by Mirhel, and Nucula hy Desvaux.

1. Glans clitoridis. A term applied to the extremity of the clitoris.
2. Glans penis. The rascular body forming the apex of the penis. It is circumscrihed by a prominent ridge, termed the corona glentis.

GLASS. Vitrum. A compound of silica and an alkali.

The term Glass is also applied to glassy suhstances, as the glass of antimony, or the sulphuret; to mica, glacies marix, or Muscovy glass; to bismuth, or tin glass; \&c., \&c.
Soluble glass is formed by combining potash or soda with the silicic acid or silica, without any third ingredient. It presents the usual vitreous aspect, hut is easily dissolved in water. It is employed as a kind of paint for paper, cloth, wood, \&c., to prevent or retard their inflammation on the contact of an ignited hody.

GLASS GALL. Sel de veire ; fel vitri; sandiver. The saline scum which swims on the glass when first madc.

GLAUBER'S SAL'T. Sulphate of soda; frequently found in mineral springs, and sometimes on the surface of the earth.

1. Glauber's secret sal anmoniac. Sulphate of ammonia; a constituent of soot from coals.
2. Glauberite. A crystallized salt, consisting of nearly equal parts of the sulphates of lime and soda; both auhydrous, or nearly so.

GLAUCIN (ydaukbs, azure). An alkaloid procured from the leaves and stem of tho Glaucium luteum. It is bitter and aerid, and forms salts with acids.
[GLAUCOMA. See Glancosis.]
GLAUCOPICRINE ( $\gamma$ dauxós, azure; $\pi \iota \kappa p d s$, bitter). An allknloid found in the root of tho Glancium lutcmm. It is bitter, and forms salts of a bitter and nuuseous
taste.

GLAUCOS ( $\gamma \lambda$ auc $\delta$ s $)$. Blue; of a scagreen colour ; aznre.

1. Glancic acid. An acid procured from the tea\%le and scabious plants.
2. Glaucina. A term proposed hy Hehenstreit for the natural form of cow-pox, from the bluish or azure tint of the vesicles.
3. Glaucbsis. Humoral opacity; a groenish or gray opacity of the vitreous humour; a name formerly given to eataract ; also called by the Grecks glaucoma, and hy the Romans glancedo. Dr. Good prefers glaucosis to glaucoma, "becauso the final ona imports usually, and, for the salse of simplicity and consisteucy, ought always to import, external protuberance, as in staphyloma, sarcoma, \&c."
[GLECIOMA HEDERACEA. Ground Ivy. A lahiate plant, indigenous in the United States and Europe, which formerly enjoyed some credit as a remedy in ehronic affections of the lungs and kidneys. The infusion was the usual form of administration.]

GLEET. A transparent mucous discharge, sometimes the sequela of gonorrhœea.

GLENOID ( $\gamma \lambda \dot{\eta} \nu \eta$, a eavity; cidos, likeness). The name of a part having a shallow eavity, as the socket of the shoulderjoint, a fissure and a foramen of the temporal bones, \&e.

GLIADINE ( $\gamma \lambda i a$, glue). Vegctable alhumen; one of the constituents of gluten. Compare Zynome.

GLISSON'S CAPSULE. A cellulovascular memhrane, which envelopes the hepatic vessels in the right border of the lesser omentum, and accompanies them through the transverse fissure to their ultimate ramifieations.
[GLOBATE (globus, a globe). Applied to glands formed of lympbatic vessels connected together hy ccllular tissue, and having no excretory duct.]
[GLOBULE (globus, a ball). A little ball.]

GLOBULES, RED (dim. of globus, a ball). The red coloming matter of the blood; a peculiar animal principle.

GLOBULI MARTIALES. Boules de Noncy. The ferrie tartrate of potash; the globuli of this salt were formerly wrapped in muslin, and suspended in water to form a chalybeate solution.

GLOBULINE. The principal constituent of the blood globules, closely allied to albumen. Also, the term applied by Turpin to the amylaccous gramules found in the tissue of plants, which he considered as tho elementary stato of tho tissue.

GLOBUS HYSTERICUS. A sensa-
tion attendant on lyysterin, as of a globus or ball ascending to the Elomach, then up tbe chest to the neek, and becoming fixed in tho throat.

1. Glubus major epididymis. A name applied to the upper end of the epididymis, which is of great size, owing to the large assemblage of convoluted tubes in the coni vasculosi.
2.: Globur minor epididymis. The lower portion of the epididymis, consisting of the convolutions of the vas deferens, previously to its eommencing its ascending coursc.

GLOMERATION (glomus, glomerin, a hall or clew of thread). Literally, beaping into a hall; a term sometimes applied to tumour.

GLOMERULE. Glomus. A form of inflorescence hearing the same relation to the capitulum that the compound does to the simple umhel ; that is, it is a cluster of capitula enclosed in a common involucrum, as in Echinops.

GLOSSA, or GLOTTA ( $\gamma \lambda \tilde{\omega} \tau \tau a)$. The tongue; the organ of speech.

1. Gloss-agra (äypa, seizure). Inflammation of the tongue; swelled tongue; a term synony mous with glossalgia, glossocelc, glossitis, \& c.
2. Gloss-itis. Inflammation of the tongue ; the terminal particle itis denoting inflammation.
3. Glosso-. Terms compounded of this word helong to nerves or muscles attached to the tongue, as in the three following terms.
4. Glosso-8taphylinus. A designation of the constrictor istbmi faucium, from its origin in the tongue, and iusertion into tbe urula.
5. Glosso-pharyngeus. A srnonsme of tbo constrictor superior, from its origin in the root of the tougue, and its insertion into the pharynx.
6. Glos80-pharyngeal nerves. Auother name for the eighth pair.
7. Glos8o-catochus (cati $\chi^{\omega}$, to hold down). An instrument for depressing the tongue.
8. Glosso-cele (кйд $\eta$, a tumour). An extrusion of the tongue; swelled tonguc.
9. Glos80-еомим (коніш, to gnard). Formerly, a ease for the tongue of a hantbor; but, metaphorically, a kiud of lngg box, or ense, for containing a fractured leg.
10. Glosso-hyal (hyoides os). A hone of the hrumal spine of most fishes, which enters the substance of the tongue. Sce Vertebra. 11. Glusso-logy ( $\lambda$ oyos, an account). [A treatise un the longuc. A definition of bard terius (glossn, a hard term); cxplanatory notes for illustrating an author.]

GLOTTIS ( $\gamma$ 入ütra, the tongue). Rima glottidis. The aperture between the arytrenoild cartilages. It is covered by a cartilage called the epi-glottis.

GLUCIC ACID ( $\gamma \lambda \nu \kappa \nu s^{\prime}$, sweet). An acid formed by the action of a saturated solution of lime or barytes on grape sugar.

GLUCI'NA ( $\gamma \lambda$ vxìs, sweet; many of its combinations having a sweet taste). An earth found in the emerald, the beryl, and tbe euclase. Its metallic base is called glucinum.

GLUCOSE ( $\gamma \lambda u k \dot{s}$, sweet). Another name for starch sugar, diabetic sugar, or the sugar of fruits.
[GLUCOSURIA ( $\gamma \lambda u \kappa \grave{s}$, sweet; $\rho \in \omega$, to flow). Saccharine diabetes, Diabetes melitus.]

GLUE (gluten). The common gelatine of commerce, made from the parings of hides, hoofs, \&c.

GLUME (gluma, the husk of corn). A term applied to the peculiar envelope of the floral apparatus in grasses, which are hence called glumacea. It is a modification of the bract.

Ghumaceous. Having the floral envelopes reduced to scales, called glumes, as in grasses.

GLUTEUS ( $\gamma$ 入ourds, the buttock). The name of three muscles of the hip, forming part of the buttocks. They are the maximus, which extends the tbigh; the medius, which acts in standing; and tbe minimus, which assists the others. Hence the term-

Glutaal. Applied to the posterior iliac artery-to lymphatics wbicb bave the same distribution as thatartery-and to a nerve distributed to the glutæi muscles.

GLUTEN (gelo, to congeal). A viscid substance obtained from wheaten flour. It has been decomposed into-

1. Gliadine ( $\gamma \lambda i a$, gluten). Vegetable albumen; and-
2. Zymome ( $\zeta \dot{\mu} \mu \eta$, leaven). That portion of the inass wbich the acid that is present has united with.

GLUTEN BREAD. An article of diet used in diabetes. It is not made of pure gluten, but one-sixth of the original quantity of starch contained in the flour is retained.

GLUTEN, CRUDE. Beccaria's Gluten. Names given to the thick tenacious mass which is left when wheaten dough is washed on a sieve by a strean of water; a milky liquid passes through, and the crude gluteu remains.

GLUTEN, GRANULATED. Gluten gramule. A paste made by the artificial addition of wheat-gluten to the ordinary
wheat, forming an agrecable and nutritious food.

GLUTINE. A principle resembling gluten, but differing from it in not being soluble in aluohol.

GLUTINOUS SAP. Milly sap. Vcgetable mills, or the juice obtained by incision from the Palo de Vaca, or Cow trce, which grows in the province of Caraccas.
GLYCERIN ( $\gamma \lambda \nu x \grave{s}$, sweet). The swcet principle of oil, also termed hydrato of oxide of glyccryl.
GLYCERYL [or GLYCERULE] ( $\gamma \lambda \lambda_{-}$ кùs, sweet; û̀ $\eta$, matter). A hypotbetical radical existing in glycerin.
[GLYCION. A synonyme of Glycirrhizin.]
[GLYCOCOLL ( $\gamma \lambda \nu \kappa \grave{s}$, sweet; ко $\lambda \lambda a$, glue). Sugar of gelatin.]

GLYCYRRHIZA ( $\gamma \lambda u \kappa \dot{\nu} \varsigma$, sweet; $\dot{\rho}!\zeta \pi$, a root). The pharmacopceial name of the root of Clycirrhiza glabra. A genus of plants of the natural order Leguminose.
[1. G. echinata. A species growing in Apulia, aud which yield a portion of the liquorice root of commerce.]
2. Glycirrhiza glabra ( $\gamma \lambda$ uкіेs, sweet; $\beta$ i $\zeta$, a root). Common Liquorice; a Leguminous plant, the underground stem of which is called liquorice-root, or stick liquoricc. The Greeks distinguisbed the liquorice-root by the nawe of adipson (from a, priv., and di $\psi$ a, thirst), from its property of assuaging thirst; perbaps the term liquorice may be derived from the same idea.
[3. G. lepidota. An indigenous species, and possessing in no inconsiderable degree the taste of liquorice.]

Glycyrrhizin [or Glycion]. Liquoricesugar ; the saccharine juice of liquoriceroot.
[GNAPHALIUM ( $\gamma v a \phi a \lambda o v$, the wool of the teazel). A Linnean genus of plants of the order Polygamia superflun. The cotton weed.]
[1. G. Margaritaceum. Cud-weed, lifeeverlasting. An indigenous, herbaccous plant, used as a domestic remedy, but probably possessing little medical virtuc.]
[2. G. polycephalum. Sweet-scented lifeeverlasting. Used like the preceding in domestic practice.]
[GNATHOPLASTY (yva0as, the cheek; $\pi \lambda a \sigma \sigma \omega$, to form). Plastic operation for restoring a deficioncy in the cheek,]

GOADBY'S SOLUTION. A preparation for preserving animal substapces, mado with bay-salt, corrosive sublunate, or arsenious acid, and water.
[G0AT'S RULD. Common name for the Galega natinalik.]

COBEL'S PYROPHORUS. A mixture of charcoal and lead, in which the latter is in such an extremo state of division, as to take fire on cxposure to the air. It is formed by heating the tartrate of lead in a close ressel or tube to dull redness.
[GODFREY'S CORDIAL. A celebrated carminative, and anodyne cordial. The following is the formula for preparing it, recominended by a committee of the Philadclphia College of Pharmacy. "Take of tincture of opium, Ojss.; molasses (from the sugar refiners), Oxvj.; alcohol, Oij.; water, Oxxvj.; carhonate of potassa, $\mathcal{Z}^{\text {iiss. }}$; oil of sassafrass, f 马iv. Dissolve the carhonate of potassa in the water, add the molasses, and heat over a gentle fire till they simmer; take off the scum which rises, and add the laudanum and oil of sassafras, having previously mixed them well together."]

GOITRE, or GOTRE (probably a corruption of guttar, the throat). The name given in Switzerland to Bronchocele, or the Thyrophraxia of Alihert. Heister thought it should he called tracheocele. Prosser, from its frequency in the hilly parts of Derbyshire, called it the Derbyshire neck; and, not satisfied respecting the similitude of this tumonr to that observed on the necks of women on the Alps, the English bronchocele. It consists in an enlargement of tho thyroild gland, and is frequently associated with eretinism.

GOLD. A yellow metal, generally found native in primary rocks, and in alluvial depositions. See Aurum.

Gold coin is termed-

1. Sterling, i. e., 22 gold +2 copper.
2. Standard, i.e., 18 gold +6 copper.

Gold becomes green when silver is substituted for copper.

GOLD LEAF ELECTROMETER. An instrument for detecting the presence of electricity by the divergence of two slips of gold leaf.
[GOLDEN-ROD. Cominon name for the Solidago odora.]

GOLDEN SULPHURET. A sulphuret of antimony, also termed sulphantinonic acid, and prepared by precipitating antimonio acid by sulphuretted hydrogen. See Kermes Mineral.
[GOLDTILIEAD. Common name for Coptis trifolin.]

GOMPHO'SIS ( $\gamma \dot{\mu} \mu$ фos, п peg). An articulation of bones, like that of a nail in a piece of wood: that of the tecth, for instanec, in their sockets.

GONAGRA ( $\gamma^{\prime}$ ov, the knee; arypa, soimure). Gout in the knee. The term
yenugre is sonctimes found, but it is bar. barous.
[GONDRET'S VESICATING ONTMENT. Tako of lard 32 parts, oil of sweet almonds 2 parts. Mix them torether by a genfle heat, and pour the melted mixture in a wide-mouthed bottle; then add 17 parts of solution of ammonia of $25^{\circ}$, and mix with continued agitation until cold. When well prepared it vesicates ia ten minutes.]

GONG-METAL. An alloy of 80 parts of copper and 20 of tin.

GONIOMETER ( $\gamma \omega v i a$, an angle; $\mu c-$ rpie, to measure). An instrument for measuring angles, particularly those of crystals.

GONORRHCEA (yovń, semen; píw, to flow). Literally, an involuntary discharge of the semen; but alwnys understood as a discharge of purulent infectious matter from the urethra, the ragina, \&c. In English, the diseasc is called a clap, from the old French mord clapises (public shops, kept and inhahited by prostitutes); in German, a tripper, from dripping; and, in French, a chaudepisse, from the heat and scalding in micturition.

GONYALGIA ( ${ }^{\text {ofvo }}$, the knee; älyos, pain). Gonalgia. Pain in the knee; gout in the knee.
[GOOSE-GRASS. Common name for the Galium aparine.]

GORDIUS. The Seta equina, or horschair worm of the old writers. It is supposed to oceasion-

1. Intestinal disease, occurring among the pcasantry of Lapland from drinking water impregnated mith this worm ; and-
2. Cuticular disease, when it is lodged under the skin, constituting the morbus pilaris of Horst, and the malis à crinonibus of Saurages, \&e.

GORGET. An instrument used in lithotomy, for cutting the prostate gland and neek of the bladder.

GOSSYPIUM HERBACEUM. Common Cotton; a Malvaceous plant, riclding the cetton of commerec. This substance consists of tubular hairs, which arise from tho surface of the seed-coat; in its unprepared stato it is ealled rato cotton.

GOULARD'S CERATF. The coratum plumbi [sub-actatis, Plo. U. S.] The formula for this differs, however, from Goularils original recipe, in ordering eamphur, while the other direets a large quantity of water to be mixcd with the serate.

GOULARD'S FN゙TRACT. A saturated solutiou of sub-acetate of lead, or
the Liquor Plumbi Sub-acetatis, [Pl. U. S.] the Aqua Lithargyri Acetati, P. L. 1767, olim, Extract of Saturn.
[GOULARD'S WATER. Liquor Plumbi Sub-acetatis dilutus, Ph. U. S.]

GOUT. Podagra; arthritis. A term derived from the French goutte, a drop; and this from the Latin gutta, also a drop; applied to the disease from the old notion of its being produced by a morbific drop. See Porlagra.

Gouty concretions. Calculi formed in the joints of gouty persons, resembling chalk-stones in colour and softness, and consisting of urate of soda.

GRACILIS. Slender; a long, thin, flat muscle, otherwise called rectus internus femoris, from its straight direction.

GRAINES D'AVIGNON. French berries. The unripe fruit of the Rhamnus infectorius, used for dyeing Maroquin leather yellow, \&c.
[GRAIN OIL. Hydrated oxide of Amyle, Fusel oil, alcohol amylicum.]
[GRAINS OF PARADISE. See Grana Paradisi.]

GRALLA (stilts). Waders; an order of rquatic birds, frequenting marshes, \& c., as the beron.

GRAMINACE ${ }^{\text {世 }}$ (gramen, grass). The Grass trihe of Monocotyledonous plants. Herbaceous plants with cylindrical stems; leaves alternate, with a split sheath; flowers hermaphrodite, sometimes monœecious, glumaceous; glumes alternate, unequal; stamens hypogynous; ovariun simple.
[GRAMME. A measure of weight, equal to $15 \cdot+340$ grains Troy.]

GRANADIN, GRENADIN. A swect substance procured from the root of the pomegranate, and now decided to be mannite.
GRANA MOLUCCA. Theso are said to he the seeds of the Croton Pavana, the original Tilly-seed plant.
[GRANA MOSCHATA. The seeds of the Hibiscus abelmoschus.]

GRANA PARADISI. Grains of Paradise, or Melligetta pepper; the seeds of the Amomum Grana Paradisi. The term appears to have becn applied to the produce of no fewer than six Scitamineous plants.

GRANA SECALIS DEGENERATI. Ergot; a substance found in the place of the grains of rye, of agrostis, \&c.; also termed Spermodia clevus, Sccale cornutum, Snurred rye, \&c. See Ergota.

GRANA TIGLIA. Grana Dilla; Grance Tilli. The socds of the Croton Tiglinn, from which the croton oil or oil of tigliun is procured.

GRANATI CORTEX, Pomorum Cortex. [Granati fructîs cortex, Ph. U. S.]: Pomegranate bark; the produce of the Punica Grauatum. [The hark of the root (Granati radicis cortex, Pb. U.S.) has heen used as a vermifuge.]

GRANDINES. Plural of grando, a hail-stone; a term applied by Wesser to tuhercles, as they hecome enlarged.
[GRANDO (gramum, a grain). An indolent, hard tumour of the eye-lid. See Chalazium.]
GRANULATION (granum, a grain). A process hy, which minute grain-likc fleshy hodies are formed on the surfacc of wounds or ulcers during their healing. In Chemistry, the term denotes a process for the mechanical division of metals and of phosphorus.

GRAPE SUGAR. Glucose, fruit sugar. See Sugar.

GRAPHITE ( $\gamma$ pá $\phi \omega$, to write; so termed from its use in the mannfacture of pencils). Plumhago, or hlack lead; [carhon.]

GRASS OIL OF NAMUR. A volatile oil procured, according to Royle, from the Andropogon Calamus aromaticus. It is sometimes called oil of spilcenard, though incorrectly, this substance being procured from the Nardostachys Jatamanci.

GRATIOLA OFFICINALIS. Hedge Hyssop; a plant of the order Scrophulariacee, formerly called Gratia Dei, on account of its remedial powers. It has heen said to he tho hasis of the eau medicinale.

GRAYE'DO (gravis, heavy). A catarrh, or cold, with a sense of heaviness in the head.

GRAVEL. Crystallinc sediments deposited in the hladder from the urinc. When these sediments are amorphous and pulverulent, they are-

1. Red, lateritious, or pink, and consist chictly of lithate of ammonia; or-
2. Whitc, consisting of mixed lithic and phosphatic sediments, with an iridescent pellicle.

When crystallized, they constitute -

1. The red gravel, consisting of crystals of uric or lithic acid; or-
2. The white gravel, gencrally consisting of the triple phosphate of ruagnesia and ammonia, and existing in the foru of perfectly white and shining crystals.
[GRAVEL ROOT. Common aame for Eupatorium purjuиreum.]
[GRAV1D (yravido, to impregnate).
Pregnant: applicd to the pregnant womb.]
QRAVITY (gravitar, heavincss). The tendency of all bodics towards the centre of the sarth; the unknown cause of this
phenomenon is called gravitation. Gravity differs from Attraction, in being a species of the latter; c. g., we speak of capillary attrnetion, magnetic attraction, \&c., but not of capillary or magnctic gravity.

Gravity, specific. The density of bodies, as ascertained by comparison with an equal bulk of water.

GREAT SYMPATHETIC. A nerve formed by a collection of filaments from overy nerve, which join each other at tho adjacent ganglia.

GRECIAN WATER. A solution of nitrato of silver disguised, for dyeing the hair black; the hair, thus dyed, soon becomes purple on exposure to light.

GREEK FIRE. An artificial fire, invented by the Greeks during their wars with the Arabs and Turks. It is supposed to have consisted of asphaltum, nitre, and sulphur.

GREEN MINERAL. A carbonate of copper, used as a pigment.

GREEN SICKNESS. The popular term for chlorosis, from the pale, lurid, and greenish cast of the skin.
[GREEN WEED. A common name for Genista tinctoria.]

GRENOUILLE. The French term for a frog; the distended submaxillary duct. See Batrachus.
[GREY BARK. Cinchona Cinerea, Lima or Huanuco Bark, supposed to be afforded by the Cinchona nitida and C.micrantha.]

GREY LOTION. A preparation for irritable sores, consisting of chloride of mercury and lime-water.

GRIFFITHS' MIXTURE. Compound mixture of iron, or the Mist. ferri comp.

GRIPPE. A French term applied to various epidemic forms of gastro-bronchitis. It is used by Laennec to denote an epidemic catarrh, which occurred in 1803, and which was characterized by the peculiar glutinous sputa observed in acute pneumonia.

GROATS. Tbo decorticated grains of tho Avena sativa, or oat.

GROCERS' ITCH. The Eczema impetiginodes, produecd in groecrs by tho irritation of sugar.
[GROMWELL. A common name for the Lithospermum officinulc.]

GROSSULINE (groscillc, n gooseberry). The name given by Guibourt to a pcculiar principle procurcd from gooseberries and other acid fruits, forming the basis of jelly.

GROTTO DEJ, CANE (dog's grotto). A cave in Italy, in which there is a constant natural exhalation of carbonic acid,
which, necupying the lowest etratum of the air, induces asphyxia in dogs taken into it, although man cscapes.
[GROUND IVY: A common name for the Glechoma hederacca.]
[GROUND LAAUREL. A common name for the Epigea rcpens.]
[GROUND PINE. A common name for the Ajuga chamapitys.]
[GROUNDSET, COMDON. Common name for tho Senecio vulgaris.]

GRUMOUS. Knotted, collected into grauular masses, as the fecula of the sago palm.

GRUTUM. The name given by Plenck to milinm, or millet-rash.
-GRILLUS VERRUCIVORUS. The wart-eating grasshopper of Sweden, which is caught for the purpose, as it is said, of biting off the excrescence, when it also discharges a corrosive liquor on the wound.
[GUACO. A name given in Central and South America, and the West Indies, to various plants having supposed alexipharmic properties, and helonging to the genera Mikania and Aribtolochia, but particularly to the Mikania Guaco.]
[GUAIACI LIGNUM. Guaiacum Wood. The U.S. Pharmacopoial name for the wood of Guaiacnm officinale.]
[GUAIACI RESINA. Guniac. The U. S. Pharmacopoial name for the concrete juice of Guaiacnm officinale.]
[GUAIACUM. A Linnean genus of plants of the natural order Zygophyllaceæ.]
[1. G. Arboreum. A species said to furnish some of the guaiacum of commerce.]
2. Guaiacum officinalc. Officinal Guaiacum; a Zygophyllaceous plant, the wood, resin, and bark of which are imported from St. Domingo.
3. Guaiacum rood. Commonly termed lignum vita, from its reputed cfficacy in syphilis. The shavings or raspinge, scobs vel rasura guaici, arc prepared by the turner for the use of tho druggist. [Seo Lignum.]
4. Guaiacum bark. Employed on the Continent, but not officinal in this country.
5. Gnaiacum resin. Commonly, though erroncously, called gum gnaiacum; obtained by various processcs from tbe stem of the tree. It occurs in tears and in mas8es.
6. Guaiacic acid. An acid obtaincd from the resin of guniachm.
7. Guciacinc. A peculiar substance obtained from guaincum.

GUAIACUM SOAPS. Saponer guaiacini. Alknline guaiacates, formed by soIntion of graincic acid in solutions of tho caustic alkalics, soda and potash.

GUAN゙O. A manure, consisting of urate of ammonia, and other ammoniacal salts. It appears to consist of the excrements of sea-fowl.
[Gncmine. A peculiar substance analogous to zauthic oxide, ohtained by Unger from Peruvian guano.]

GUARANINE. A new vegetahle principle, discovered in the fruit of the Paullinia sorbilis hy M. Martius.

GUBERNA'CULUM ( $\kappa v \beta \varepsilon \rho \vee a ́ \omega$, to command). Literally, the rudder of a ship. A name given hy Hunter to the fibro-vascular substance hetweeen the testes and scrotum in the fottus, from his considering it the principal agent in directing the course of the testis in its descent.
gUESTONIAN EMBROCATION FOR RHEUMATISM. 0l. Terebinth, fन̈jss.; 01. oliv. fZiss. ; Acid. sulph. dilut. f ${ }^{2 i j}$.

GUIDO'S BALSAM. The Tinctura, or Linimentum Saponis et Opii.
[GUILANDINA. A Linnean genus of plants of the natural order Leguminosse.]
[1. Gnilandina bonduc. The systematic name of a tree, the fruit of which is called Bonduch Indorum or hezoar nut, and considered to possess tonic and carminative powers.]
[2. Guilandina Moringa. A name for Moringa aptera, or hen nut.]

GUINEA-GRAINS. Another name for the grains of Paradise. Malagueta pepper, or fruit of the Amomum Granum Paradisi.

GUINEA PEPPER. Bird Pepper. The capsules of the Capsicum fratescens, the powder of which constitutes cayenne рерper.

GUINEA-HEN WEED. The vulgar name of the Peteveria alliacea, an extremely acrid plant, used in Jamaica as a sialogogue.

GUINEA-WORM. Malis filaric. A worm found chiefly in both the Indies, often twelve feet long, and about the thickness of a horse-hair; it burrows under the cuticle, for the most part, of the naked feet of the West India slaves. It is frequently called dracuaculus, vena Medinemsis, \&c.

GULA. The œsophagus or gullet ; the canal cxtending from the lower part of the pharynx to the superior orifice of the stomach.

GUM. A common proximate principle of vegetahles; the primary form of vegetable textures.

GUM-BOIL. Parmis. Inflammation, abscess, or boil of the gums.

GUM JUNIPER. A concrete resin

Which exudes in white tears from the Jnuiperus Communis. It has been called sandarach, and, bence, confounded with the ouvdapinn of Aristotle, which was a sulphuret of arsenic. Redueed to powder it is called ponnce, which prevents ink from sinking into paper, from which the cxtcrior coating of size has been scraped away.

GUM RASH. Red gum. A genus of cutaneous diseases. See Strophulus.

GUM-RESINS. The concrete juices of certain plants, consisting of resin, cssential oil, gum, and extractive vegetable matter, as aloes, ammoniac, assafoetida, euphorhium, scammony, \&c.

GUMMA. A soft tumour, so named from the resemhlance of its contents to gum.

GUMMI RUBRUM ASTRINGENS. An astringent substance, called butca gum, -an exudation from the Butea frondosa. Its Hindu name is kueni or hivennee, from which probahly our term kino is derived.

1. Gummi Arabicum seu Turcicum. Gum Arabic; the produce of the Acacia vera, and other species, especially A. Arabica. The white pieces constitute the gunmi electum of the druggists; on the Continent they are called gam Turic, from Tor, a seaport in Arabia, near the isthmus of Suez. The red pieces are sometimes called grm Gedda, from the name of another port.
2. Gumni gutta. A term applied to gamhoge, owing to its issuing guttatim, or hy drops, from the hroken leaves or hranchlets of the gamboge tree.
3. Gummi nostras. Cherry-tree fum; an cxudation from the stem of the Cerrsus avium. This, and the gommi prmmi, or plum-tree gum, produced by the Promas domestica, may be substituted in medicino for tragacauth gum. They contain two gummy principles, viz., arabin and prenin, or cerasin.

GUMS. Gingive. The red substance which covers the alveolar processes of the jaws, and embraces the necks of the tceth.
[GUN COTTON. Pyroxylin. An explosive preparation of cotton discovered hy Schönhein. Dissolved in ether it constitutes Collodium, q. v.]

GUNJAII. The dried plant of the Cannabis Indica, after it has Howered, and still retaining the resin; used iu Calcutta for smoking.

GUNPOWDER. A mixture of five parts of nitre, oue of sulphur, and one of charcoal, finely powdered, and very accurately blended. The grains are
smoothed by friction, and are then said to be glazed.

GUSTATORY (gusto, to taste). A name of the lingual nerve - a braneh of the inferior maxillary. See Nerves.

GUT. A substance marle hy pulling a silkworm, when ready to spin its cocoon, in two, extending the silk as far as it will go, and hanging it up to dry.

GUTIRIE'S MUSCLE. Aname given to the transverse portiou of tho compressor urethre muscle. The perpendicular or pubie portion is termed Wilson's muscle.
GUTTA (a drop). Pl. gutta, drops. A term applied to a measure in prescriptions, ahridged gt., pl. gtt., which should he equal to the minim. [Sce Quantity.] Also to certain affections and preparations.

1. Gutta opaca. Cataract, or opacity of the crystalline lens, of its capsule, or of the Morgagnian fluid, separately or conjointly.
2. Gutta serena. Drop serene; so named from the idea of an effused fllid at or hehind the pupil. A term said to. have heen first applied by Actuarius to amaurosis.
3. Gutta rosacea. Rosy drop, or earbuncled face; a species of acne.
4. Gutta anodyna. Anodyne drop. A solution of acetate of morphia.
5. Gutta nigra. Black drop; Lancashire drop. See Blach Drop.
6. Guttce vita. Drops of life ; a nostrum consisting of spirituous stimulants.
[GUTTA PERCHA. The concrete juice of the Isonandra gutta, a large tree belonging to the natural family Sapotacea, growing in the Malayan peninsula and adjacent islands. It softens when plunged in hoiling water, and may he moulded into any desired form, which it retains when cold. Splints, hougies, \&c., have heen made of it.]

GUTTIFERA (gutta, a drop ; fcro, to bear). The Mangostecn tribe of Dicotyledonous plants. Trces or shrubs, occasionally parasitical, yiclding resinous juice; leaves entire, opposite; flowers polypetalous; stamens hypogynous; carpella concrete; ovarium, of several cells.

G UTTUR. The throat; also, classically, the windpipe. Gula is the gullet, whereby the food passes into the sto-
mach; and furx the gullet-pipe, or space between the gula and the guttur, or the superior part of the gula, nearest the chin, hut interior, where the mouth grows narrower.

GYMNASTICS ( $\gamma v \mu \nu$ dác $\omega$, to exercise nalicd). Exercises systematically adapted to develope and preserve the playsical powers.

GYMNOGENS ( $\gamma v \mu$ iòs, naked ; $\gamma$ Ewopat, to grow). A division of exogenous plants, which have no ovary, style, or stiguna, but are so constructed that the pollen falls immediately upon the ovules without the introduction of any intermediate apparatus, as in Conifera, \&c.
 orípha, seed). Plants which have their seeds destitute of a periearp, as opposed to the Angiobperme.
[Hence Gynmospermous, having the seeds apparently naked.]
GYNE (yvvin). A woman. In the following compounds the term relates to the female apparatus, or the pistil, of plants:-

1. Gyneceum. A term applied by Röper to the entire female system of plants, more commonly called the pistil. See Androсеит.
2. Gyn-andria (ávท̀p, a man). The trentieth class of the Linnean system of plants, in which the stamens are situated upon the style, ahove the ovarium.
3. Gyno-base ( $\beta$ riots, a hase). This term is applied to the receptacle, when it is dilated, and supports a row of carpels, which have an ohlique inclination towards the axis of the flower, as in the Labiatæ, the Boriginaceæ, dc.
4. Gyno-phore ( $\phi \hat{\rho} \rho \omega$, to bear). A term applied to the stalk upon which the orarium is sometimes seated, instead of heing sessile, as in Passifora. It is also called thecaphore.
[Gyromia Virginica. Medeola virginica, Melilot.]
 and $\bar{\varepsilon} \phi \omega$, to hake). Sulphate of lime. When highly burnt, it falls into powder, constituting plaster of Paris:

GYRI (pl. gyrus, a circuit). The spiral cavities of the internal ear. Also, the convolutions of the brain.

Gyratc. Curved in from apex to base. Syuonymous with circinate.

## H

［HABITAT（habito，to dwell）．Dwell－ ing－place；applied to the place where a plant grows wild，or to the original dwell－ ing－place of an animal．］

HжMA，HeMATOS（aīa，aïцатоs）． Blood．The circulating fluid of animals．

1．Héma－celi－nosis（ $\kappa \bar{j} \lambda 25$ ，a spot；vózos， a disease）．Blood－spot disease；the name given hy Rayer to Purpura．
［2．Hœ⿱㇒冋а－cyanina，Hœmatocyania（кvи－ vos，hlue）．．A hlue colouring matter de－ tected in the hlood and in the hile．］
［3．Hæmad－dynamometer（дvvauts，power； $\mu \varepsilon \tau \rho o v$, a measure）．An instrument，in－ vented hy M．Poiseuille，for measuring the force with which the blood is propelled in the blood－vessels．］

4．Ham－agogues（äy $\omega$ ，to expel）．Ex－ pellers of hlood；medicines which pro－ mote the catamenial and hæmorrhoïdal discharges．

5．Hemal arch．That arch of the ver－ tebra，which is placed，heneath the＂cen－ trum，＂for the protection of a portion of the vascular system．See Nenral arch．

6．Hæ्セna－lopia（ $\ddot{\omega} \psi$ ，the eye）．Hæma－ lops．An cffusion of hlood in the glohe of the eye；hloodshot eye．

7．Hem－anthus（ävoos，a flower）．The Blood－flower，a plant of the natural order Amaryllidece；the Hottentots are said to dip their arrow－heads in the juice of its bulbs，on account of its poisonous proper－ ties．

8．Hœтарорhysis（aंतбфvots，apophysis， or a process of hone）．The name given hy Prof．Owen to a hone occurring on each side of the hæmal arch，in the typical ver－ tobra，between the pleurapophysis and the hæmal spine．（See Vertebra．）In the hu－ man thorax this hone closes the arch，as a ＂cartilage of the rib，＂with the aid of a hxemal spine or＂sternal hone．＂In the tail of the Saurian it forms，with the spine， the entire homal arch．

9．Homat－em＇esis（ $\dot{\xi} \dot{\beta}^{\prime} \omega$ ，to vomit）．Vo－ mitus cruentus．A vomiting of blood ；hæ－ morrhage from the stomach．

10．Hematin．The red colouring matter of the hlood，a peculiar alhuminous prin－ ciple，also called hœmachrome（ $\chi \rho \tilde{\omega} \mu a$ ，со－ lour，）and hamatosin．The nanc given by Chevreul to the colouring matter of the IIcmatorylon Campechianum，or log－ wood．

11．Hematica．Medicones which are supposed to act as thorapcutic agents by effecting changes in the condition of the hlood，as diluents，inspissants，spanz－ mics，\＆c．

12．Hœmatinica．Tonica analeptica．A class of the hamatica which augment the number of hlood－corpuscles or the amount of hæmatin in the hlood．They consist exclusively of iron and its compounds． Compare Spancmica．

13．Hematite．Blood－stone，a peroxide of iron，so named from its property of stop－ ping hæmorrhages，or from its colour．The red hæmatite is an anhydrous，the brown a hydrated，peroxide．

14．HCmato－celc（ки́d $\eta$ ，a tumour）．A collection of hlood in the tunica vaginalis． If serous fluid occupy the place of hlood， the case is that of hydrocele．
 as applied to a fungotis or fleshy excres－ cence．The termination in－odes（ $\omega \boldsymbol{j} \pi s_{\text {，}}$ ） sometimes expresses a fulness，as in the present case．

16．Hœmuto－logy（ dóyos，$^{\text {an account．）．}}$ The history of the blood．

17．Hcematolytica（ $\lambda v \omega$ ，to dissolve）．A term applied hy some writers to a class of remedies more commonly called Spance－ mica．

15．Hamato＇ma．A blood－like tumour， sometimes occurring in the brain．
［19．Hantato－plasma．The plastic prin－ ciple of tho hlood．］
［20．Ifcemutos－ch cocele（öa $\chi$ zov，the scro－ tum ；к $\hat{\lambda} \lambda \eta$ ，a tumour）．A sanguineous swell－ ing of the scrotum．］

21．Hamatosin．A characteristic con－ stituent of the blood，derived from tho glohules．

22．Hœmato＇sis．Sanguification，or the formation of the blood．

23．Hœmatoxyli lignum（ दúdov，wood）． Logwood；the wood of the IIcematoxylon Campechianum，a Leguminous plant of Campeachy．Its colouring matter is called homatoxylin，and by Chevreul ha－ matin．
［24．Hematozoon（弓w̃ov，an animal）．An animalcule discovered in the blood．］

25．Hacmo－tu＇ria（ò̀ $\rho$＇́ $\omega$ ，to void urine）． Sanguis in urinâ．Bluody urine；tho pass－ ing of blood in the urinc．
26．Hémo－ptysis（ $\pi$ vívis，spitting；from
$\pi r u ́ \omega$ ，to spit），Hemoptoe．The spitting of blood；expectoration of blood．It has been called pneumo－rrhagia．
27．Ifcmo－rrhage（ $\dot{\eta} \boldsymbol{\gamma} \boldsymbol{v} v \mu \mathrm{t}$ ，to break forth）． A rupture of a blood－vessel；a bursting forth of blood；loss of hlood．

28．Hemo－rrheea petechialis（ $\rho \dot{f} \omega$, to flow）．A term applied hy Dr．Adair to the chronie form of purpura．It has also heen designated as Petechice sine febre；land－ scurvy，\＆e．

29．Hamo－rrhoildal（ $\beta$ éw，to flow）．A term applied to a branch of the sciatic nerve；and to arteries of the rectum，he－ cause they often hleed；these are termed the superior，middle，and inferior，\＆o．，\＆e．

30．Hœm－ophthalmos（ $\circ \phi \theta a \lambda \mu \searrow$ ，the eye）． An effusion of hlood into the chambers of the eye．

31．Hamo－rrhoidds（ $\rho \dot{f} \dot{\epsilon} \omega$ ，to flow）．Lite－ rally，a hæmorrhage，and originally used in this sense iu general ；but now restricted to the piles．These are termed open，when they discharge hlood；and blind，when there is no discharge．

32．Homo－spastic system．A new sys－ tcal of medicine，introduced by Dr．Junod of Paris，consisting in the employment of a pneumatic apparatus of peculiar con－ struction，in which the arm or leg is so placed as to attract the hlood to the ex－ tremities，without diminishing the mass of this liquid．

33．Hamo－staria（ïđ $\tau \eta \mu$ ，to stand）．Stag－ nation of blood．Ilence－

34．Hamo－statica（＂arqut，to stand）． Stypties．Medicines which stop hæmor－ rhages．

35．Hemo－thorax．An effusion of hlood into the cavity of the pleura，from a wound，a contusion of the chest，certain diseases，\＆c．

36．Hœmo－trophy（rpoф $\dot{n}$ ，nourishment）． An excess of samguinenus nutriment，as distinguished from hypertrophy，and hy－ peramia．Sce Ancmotrophy．
［HENATOXYKON（at $\mu$ a，blood；そúlov， wood）．The U．S．Pharmacopeial name for the wood of Ifcmatoxylon Campechia－ mum，or logwood；a Linncan genus of plants of the natural order Leguminose．］
［1．Ifamatoxylon Compechianum．The systematic name of the logwood tree．］
HAIINEMANN＇S＇JEST LIQUOR．Li－ quor probatorius IIchhwememui．A test for detecting the presence of lead in winc，pre－ pared by alding a drachm of tartaric acid to four onuees of sulphuretted hydrogen water．It is，therefore，an neidulated sul－ phuretted hydrogen．
［11A1L．See Renn．］
HALR．Each hair consists of $n$ bulb，si－ tunted under the skin，and a fromb，which．
perforates the skin and cutiele，and is en－ veloped in a peculiar theath．The colour of the hair－llack，red，auburn，and white－ depends on that of the oil whieb enters into its composition．
［HAIR－CAP MOSS．Common name for the Polytrichum Juniperinum．］

HAIR－DYES．Tincture capillorum． The hasis of most of the powders，pastes， and liquids sold under this name is either lead or silver．To these are sometimes added litharge，slaked lime，nud starch．

HAIR－LICHEN．The Lichen pilaris； a variety of lichenous rash，in which the pimples are limited to the roots of the hair， and desquamate after ten days．

HAIR－SALT．The mincralogical name of sulphate of magnesia，when it occurs as an effiorescence on other minerals．

HAL＇ITUS（halo，to hreathe）．An aque－ ous vapour，or gas，for inhalation．

Halitus of the blood．The vapour which arises from the hlood when newly drawn from the hody．Plenek termed it gas avi－ male sanguinis．

HALLEX（äג入оцat，to leap；quod super proximum digitum seandat）．Hallus．The great toc．

HALLUCINATION（hallucinor，to mistake）．Depraved or erroneous imagi－ nation．The term has heen used as syno－ nymous with phantersm，from which it should，however，he distinguished，the phenomena of hallucination haring heen chiefly observed in the insane．See Phan－ tasm．

HALO（ã $\lambda \omega s$ ，an area）．Areola；the cir－ cle or ring surrounding the nipple．

HaLO SIGNATUS．The name given by Sir 0 ．Bell to the impression of the ciliary processes on the anterior surface of the ritreous humour，\＆e．，from its consisting of a circle of radiations，called by Haller，strim retina suhjecto ligamento ciliari．By Winslow these marks are called sulci ciliarls；hy Zinn，corona ci－ liaris．

HALOGENE（ä入s．salt；yevów，to pro－ duce）．A term employed by Berzelius to denote bodies which furm salts with me－ tals，as chlorine，bromine，iodine，fluorine， and eyanogen．The salts thus produced are called haluäds．
HALOID SALTS（äds，the sea，sea－ salts；हidos，likeness）．Salt－like com－ pounds，consisting of a metal on the one band，and of chlorinc，iodinc，and the radicals of the hydracids in general，ex－ ecpting sulphur，on the other．Besides the simple haloid salts，Berzelins dis－ tinguishes the three following coubian－ tions：－

1．IIydro－halvid saltz，or combiuntions
of a simple haloid salt and the bydracid of ite radical.
2. Oxy-haloid salts, or comhinations of a metallic oride with a haloid salt of the same metal.
3. Double haloid salts, consisting-

1. Of two simple haloid salts, which contain different metals, hut the same non-metallic ingredient.
2. Of two haloid salts, consisting of the same metal, hut in which the other element is different.
3. Of two simple haloïd salts, of which both elements are entirely different.
[HALONITIS (halonium, a little court). InHammation of the cellular tissue.]

HALOPHYTES (ä $\lambda \frac{1}{}$, salt; $\phi v \tau 0 v, ~ a ~$ plant). A class of saltworts which inhabit salt marshes, and by combustion yield barilla, as salsola, salicornia, and chenopodium.
[HAMAMELIS VIRGINICA. WitehHazel. An indigenous shrub, of the family Berberideæ, the hark of which is astringent aud bitter, and has been used in the shape of a poultice or of a decoction, and has been employed as a wash, in painful tumours and hæmorrhoilds, ophthalmia, \&c. The leaves are said to possess similar properties, and a decoction of them has been given in bowel complaints and hæmorrhnges.]

HAMULARIA LYMPHATICA. A new species of worm discovercd by Treutler, a German Physician, in 1789, in the bronchial glands of a phthisical subject.

HAMULUS COCHLEA. Literally, the small hook of the cochlea; a kind of hook, by which the lamina spiralis terminatcs upon the axis, towards the middle of the second turn, where the point of the infundibuluu commences.

HAND. Manus. The organ of prehen. sion, consisting of -

1. The Carpus, or wrist, which is composed of the eight following bones:-
2. The scaphoid, or boat-shaped.
3. The scimitunar, or half moon.
4. The cunciform, or wedge-like.
5. The pisiform, or pea-liko.
6. The trapezium, or four-sided.
7. Tho trapezoid, like the former.
8. The os magmam, or largo bone.
9. Tho unciform, or hook-like.
10. The Metacarpus, or the four bones constituting tho palim and back of the hand; tho upper ends have planc surfacer; the lower, connex. Sometimes tho first bono of the thumb is reckoned amoug
11. The Digiti, or fingers, consisting of
twelvo bones, arranged in three phalanges, or rows.
12. The Pollex, or thumb, consisting of three bones.

IIAPSUS (árropar, to touch). A handful; a bolster of linen, or woollen, to place upon a wound.-Celsus.
[IIARDHACK. The common name for the Spircea tomentosa.]

HARD'S FARINACEOUS FOOD. A fine wheat flour, which has been suhjected to some heating process.

HARE-BRAINED PASSION. Wayward passion, leading to acts of violcnce; the manie sans detire of M. Pinel, who ascribes it to the effect of a neglected or ill-directed education upon a mind naturally perverse or unruly.

IIARE-LIP (labia leporina). A congenital division of the lip; so called frolu a fancied resemblance to the upper lip of a hare.

HARMALANE. A beautiful colouring sukstance, ohtained from the seed of the Hermal plant (Peganum harmala), which grows wild in the salt steppes of the Crimea.
 from üp $\omega$, to fit together). A species of synarthrosis, or immovable articulation of bones. See Articulation.
HARTSHORN. Cormu cervi. The antlers of the Cervus Elaphus, or Stag.

Spirit of hartshorn. The aqueous solution of ammonia, formerly prepared from the cornu cervi, or hart's horn.

HARVEST BUG. The Acarre autrmnalis; a variety of the tick insect, which infests the skin in the autumn, producing intolerahle itching, succeeded by glossy wheals; it has henco been called wheul. 200 rm .
HASCHISCII. A preparation of hemp, used as an intoxicating drug by the Arabs, and generally throughout Syria; made by hoiling the leaves and flowers of the plant with water and fresh butter.

HASTATE (hasta, a spenr): Spearshaped; applied to lcaves which have thrce lance-shaped lobes, one in the dircetion of the midrib, the other two at tho base at right angles to tho first, as in Arum maculatun.

II A USTUS (hamio, to draw). $\Lambda$ draught. It differs from a mixture only in quantity, and should not excced an ounco and a half.
maverstan tubes or CANALS. A term given, from tho name of their discovercr, to a very complicated apparatus of minute canals found in the substance of bonc, und containing medullary matter The central canal, as well as the separate
cells, may be regarded as enlargements of them.

HEADACHE. An original English term for pain in the head, megrim, cephalalgia, cephalæa, \&c.

HEADING. A preparation of cqual parts of alum and green vitriol, used in brewing.

HEAD-MATTER. A yellow snbstanco consisting of spermaceti and sperm-oil.
[HEAL-ALL. A common name for the Collinsonia canadensis, and also for the Prmella vulgaris.]

HEART. Cor. Tho central organ of circulation. It is enveloped in a membrane called the pericardium. It is divided externally into a base, or its hroad part; a superior and an inferior surface; and an anterior and a posterior margin. Internally, it consists, in man, of four cavities, viz., two auricles and two ventricles, and is thence called doublc.

1. Heart, caudal. A pulsating palish sac, coutaining red hlood, and situated at the caudal extremity of the eel.
2. Heart, lymphatic. A term applied hy Muller to some small pulsating sacs in the frog, the snake, \&c., considered hy him as hearts of the lymphatic system.
3. Hearts, lateral; systenic. Terms applied to the threc separate hearts of the cuttle-fish. The middle, or systemic heart, transmits the red-coloured hlood by the aorta and its ramifications all over the hody; the blood, having hecome dark-coloured, is carried from the terminations of the aortic system hy the veins of the hody in two portions to each of the two lateral or pulmonic hearts ; from each lateral heart the hlood is propelled to the gills of one side, whence, having become red-coloured, it is carried again to the middle systemic ventricle.
4. Heart, displacement of. Ectopia cor-
 displaced). It is congenital ; or the effect of effused fluid, or of its subsequent absorption, \&c.
5. Heart-burn. Cardialgia mordens. A gnawing or burning uneasiness, felt chiefly at the cardia. Seo Circulation.

IIEAT. The sensation experienced on touching a body of a higher temperature than that of the blood. In chemieal language it is tho causc of that scusation, or caloric.

HEAT, PRICKIT. The Lichin tropicus; a species of lichenons rash.
IEEAVX SPAR. Sulphate of barytes.
[HEBETUDE (hebeto, to make dull). Dulness; insensibility.]
IIEBRADENDRON CAMBOGIOIDES. The Camboge Ilcbradendron; a Guttifc-
rous plant, which yiclds a kind of gamboge not distinguishahlc from that of Siam.

HECTIC (ikTikds, hnhitual). This term is sometimes used, like the Greek feminine, as a substantive, to denote a halitual or very protracted fcver; hut, more generally, as an adjcctive, in conjunction with the term fever, to designate the same disease.
[HECTOGRAMME. A French measure of weight, equal to $3 \mathrm{oz} ., 1 \mathrm{dr} ., 43 \cdot 4$ grains Troy.]
HEDEOMA PULEGIOIDES. A Lahiate plant of North America, highly reputed as an emmenagoguc, and called penmyroyal.
[HEDERA HELIX. Iry. An European plant, of the family Caprifolice; the fresh leaves are used exteraally for dressing issues, and a decoction of them has heen recommended in cutaneous affections.
[Hederic acid. An acid discovered by Professor Posselt in the seeds of Hedera helix.]
[Hederin. A peculiar alkaline principle, ohtained hy Vandamme and Cbevallier from ivy seeds, and which is said to be closcly allied to quinia in febrifuge properties.]
[HEDGE GARLIC. A common name for Alliaria officinalis.]
[HEDGE HYSOP. Common name for the Gratiola officinalis.]
[HEDGE MUSTARD. Common name for the Sisymbrium officinale.]
[HEDYSARUM ALHAGI. A small shruh of the natural order Leguminosx, growing in Persia and Mcsopotamia, the leaves of which are covered at night with a granular manna used as food.]
[HELCOSIS ( $\begin{gathered}\text { roos, an ulcer). Clcera- }\end{gathered}$ tion.]

HELENIN. Elccampanc camphor. A volatile, crystalline solid, obtained from the Inula helcuium. With nitric acid, it yields nitro-hellenine; distilled with an hydrous phosphoric acid, it yiclds hellenénc, a carho-hydrogen.
[HELENIUM AUTUMNALE. Sncezewort. An indigenous, perennial, herbaceous plant, the dried leares and flowers of which have heen used as an errhine.]
[IIELIANTHEMUM. A Linnean genus of plants of the untural order Cistacea; the U. S. Pharmacopoial name for the herb of Helianthemun canadensc.]
[1. Helianthemmm canadense. Systematic name of the Frostwort, an indigenous herb possessing tonic and astringent propertics.]
[2. Heliunthemum corymbobun!. This
species is said to possess similar propertics with the preceding.]
[HELIANTHUS ANNUS. The systematic name for the common sun-flower, tho pith of which has been used for moxa.]
 to $\operatorname{stan}$ ). An instrument by which tho sunbeam can be steadily directed to one spot during the whole of its diurnal period.

HELIOTROPIUM ( $\eta$ ilcos, the sun; трítw, to turn). The Blood-stone, so called from the blood-red specks occasionally appearing on its green surface, and formerly used to stop a bleeding from the nose.

HELIX ( ${ }^{(2 \lambda} \lambda \iota \xi$; from $\hat{\lambda}$ iloow, to turn about). A coil; a spiral, or winding line. This term denotes,-

1. The outer bar or margin of the external ear. Hence, helicis major and helicis minor, two muscles of the helix.
2. The name of a coil of wire, used in magneto-galvanic experiments.
3. A testaceoos animal, inhabiting a spiral shell, as the snail, \&c. The helix pomatia is the Great or Vinoyard Snail ; a popular remedy for emaciation, with hectic fever and phthisis.
[HELLEBORE. Common namo for the genus Helleborus, q. v.]

HELLEBORIN. An acrid oil, said to contain the acrid principle of the Hellcborus niger, black helletore, or Christmas rose.

HELLEUORUS ( $\varepsilon \lambda \lambda \varepsilon$ ह́ßopos, qu. $\dot{\varepsilon} \lambda \varepsilon \iota$, to seize ; ßopẽ, in eating). Hellebore; a poisonous genus of Ranunculaceous plants.

1. Hclleborus foctidus. Fœtid Hellebore, or Bear's-foot; a plant retained in the list of Materia Medica, but rarely used. Its leaves have been strongly reeommended as a vermifuge against the asearis lumbricoïdes.
2. Hclleborus niger. Black Hellebore, or Christmas rose; a plant reputed in classic writers as a remedy for mania, and bence recommended by Horace to the poets of his day. See Melampodium.
3. Helleborus orientalis. The root of this species was formerly much extolled in mania, epilepsy, and dropsy; it is still used in the Levant, and is called zoptême by the Turks, and $\sigma x a \rho \phi \eta$ by the Greeks.
4. The term IIellebore has been applied to the Veratrume album, probably from its similar properties. Yet the former is an exogenous, the latter an endogenous plant.

HELLOT'S TEST. A test for the discovery of a colorifio property in lichens. It ennsists in digesting the plant in a woak solution of ammonia, in a. corked vial, at a heat uot cxcceding $103^{\circ}$ Fahr.

IHELMINS ( $\left.{ }^{2} \lambda \mu \nu \nu \varsigma, ~ \varepsilon \lambda \mu \nu \nu \theta o s\right)$. Fermis. The Greek term for a worm.

1. Ifelminth-agogues (äyw, to expel). Anthelmintics; remedies agaiust worms.
2. Hclminthicusis. A disease peculiar to some countries, in which worms, or their larvæ, are bred under the skin, \&c.
3. Helmintho-corton ( $\chi$ bftos, food?). Corsican Moss; a species of Gigartina supposed to be particularly efficacious against the ascaris lumbricoides.

HELO'DES ( ${ }^{\prime 2} \lambda \lambda_{0}$, , 2 marsh). A term applied to fevers produced by marsh miasma.
[HELONIAS DIOICA. The systematic name of the star-wort, an indigenous herb, the root of which has been used in colic, in atony of the generative organs, and in leucorrhœa.]
[HELLONIAS OFFICINALIS. A systematic name of the plant supposed to produce Sabadilla.]

HELONIN. Resin of veratria, or pseudo veratria, distinguished from veratria by its insolubility in ether.

HE'LOS (h̆ given to the tumour formed by prolapsus or procidentia iridis. See Mfyocephalon.
[IIEMATOSINE (as $\mu a$, blood). Hæmatosin. A peculiar albnminous principle, to which the blood owes its colour.]

 blind; |  |
| :---: |
| $\psi$ | , the eye). Diurna cæcitudo, or day-blindness. This term is used by Hippocrates (by omission of the dats? ) to denote night-blindness - caligo tenebrarum; dysonia tenebrarum. Sauvages terms it amblyopice crcpuscularis. Seo Nyctalopia.

HEMI- ( $\mu_{\mu \iota \sigma \nu}$ ). The Greck prefix for half, corresponding with the Latin semi.

1. Hcmi-crania (кpariov, the head). A pain which affects only one side of the head. See Megrim.
2. Hemi-opia (" $\psi$, the eye). Visus dimidiatus. A defect of vision, in which only balf of the object is seen.
3. Hemi-plegia ( $\pi \lambda \dot{\eta} \sigma \sigma \omega$, to strike). Paralysis of one side of the body.
4. Hemi-ptera ( $\pi$ tipov, a wiug). Insects which have one half of their wings thick and coriaceous, and the other half membranous, as the bug, tick, \&c.
5. Hemi-sphercs ( $\sigma \phi \frac{1}{\rho} a$, a sphere). The two parts which constituto the upper surface of the cercbrum. They are separated by tho falx cerelori.

HEMIDESMUS INDICUS. An Asclepiadaccous, plant, tho root of which is used in Tndia under the name of country acrraparilla. It has been called Indien or scented sarsaparilla, namari, or tho root of omilax aspera.

HEMIDESMIN. Hemidesmic acid. A volatile crystnllizable acid, procured from the Ifemidesmus Indieus, or Indian sarsaparilla. It has been erroneously ealled smilasperic acid.

HEMIPINIC ACID. Semi-npianic acid. An aeid obtained by the oxidizement of the opianic acid.

HEMINA. A Roman measure of capacity, consisting of half a sextarius, or three quarters of a pint.
[HEMLOCK. Common name for the Conium maculatum.]
[HEMLOCK SPRUCE. A common name for the Abics canadensis.]
[HEMLOCK WATER-DROPWORT. Common name for the Wwanthe erocata.]

HEMP. A powerful stimulating narcotic, much employed in some countries as an intoxieating drug. See Camubis.

HEMP-SEED, CALCULUS. The name of some varieties of the mulberry calculus, which are remarkably smooth and palecoloured, resembling hemp-seed.

HENBANE. A powerfully nareotic plant, said to he poisonous to the domestic fowl. The hotanical namo suggests a different etymolngy. See IIyoseyamis.

HEN-BLINDNESS. A name sometimes given to nyetalopia, or night-blindness, from a natural defect in hens, in consequence of which they cannot see to pick up small grains in the dusk of the evening, and so employ this time in going to roost.

HENNE'. A substance procured in Egypt, from the Lavsonia inermis, with which the women stain their fingers and feet; it is also used for dyeing skins and marnquins of a reddish yellow.
 organ which secretes the hile.

1. IIepat-algia (ädyos, pain). Pain in the liver. Swelling of the liver is termed hepatalyia infarctu, liver disease, enlarged liver, \&e.
2. Ifcpatic. A term applied to any part belonging to the liver.
3. IIcpatic fur. Bilions flux; the name given in the East to a variety of dysentery, in which there is a frequent flow of bilious fluid from the reetum.
4. Hepat-itis. Inflammation of the liver. The term is used by Galen in the present sense, hat it is more usually employed adjeetively, with the sense of hepatic. The Latin word heprlitis is only nsed, aecording to Pliny. as "geumbe nowen a figura jocinoris."-Forbes.
5. Ifeputo-rthoca (péw, to flow). Literally, a liver-flow ; a morbid flow of bile.
G. Ifepatization. Carnification. A change iudueed in the lungs by inflatumation, in

Which it loses its vesieular and crepitating charaeter, and resembles the liver in firmness and weight, sinking in water. It is divided into the red, and into the gray, or purulent infiltration. Compare Spleenization.
7. Ifepato-cele ( $\kappa \mathfrak{j} \lambda \eta$, a tumonr). IIepatic liernia; hernia of the liver.
8. Hepato-gastric. A name of the smaller omentum, which passes from the liver to the stomach.
9. Hepato-phyma ( $\phi \tilde{v} \mu \pi$, a suppurating tumour). A suppurative swelling of the liver.

HEPAR ANTIMONII. Liver of Antimony; an oxy-sulphuret. The term hepar was formerly applied to the combinations of sulphur with alkalies, from their liver-like appearance. Henee we have also-

1. Hepar calcis. A erude bisulphuret of calcium, recommended as an external application to crusta lactea.
2. Mepar sulphuris. Liver of sulphur; the old pharmaceutic name of a liserbrown sulphuret of potash.
3. Hepar sniphuris volatilis. Volatile liver of sulphur. This is also termed Boyle's or Beguin's Fuming Spirit; sulphuretum ammonix; sulphuretted hydroguret of ammonia, or the hydro-sulphuret of ammonia.
4. Hepatic air. Another name for sulphuretted hydrogen gas.
5. Ifepatic ciunabar. A dark-coloured steel-gray variety of cinnahar.
6. Irepatic pyrites. Hepatic sulphnret of iron; a variety of prismatic iron pyrites, which becomes hrown on exposure to the air.
7. Ifepatite. A rariety of heary spar, or sulphate of barytes, containing a minute portion of sulphur, and cnitting, when heated or rubbed, a fetid sulphurous odour.
S. Hepatule. A name given by Kirwan to the hydrusuiphuret of other writers.
[IIEPATICA. Liverwort; the U.S. Plarmacopocial naus for the leaves of Henatica Americana; a Linmean genus of plants of the natural order Ranunculaсею.]
[IIepatica Amerieana. A species growing in most parts of the United States and northern parts of Europe, and possessing very mild demuleent tonic and astringent properties.]

IIEPATICE (thano. ?inatus, the liver). The Liver-wort tribe of Acotyledonons plants. Cellular, floteciless plants, consisting of an axis or stem, cither leafy or bordered; reproductive organs are valired theea of different kinds.

HEPATIZED AMMONIA. Bi-hydrosulphate of ammonia, or hydro-sulphuret of ammonia; eunployed as a test.

HEPTANDRIA ( $\dot{\varepsilon \pi T r a ̀, ~ s e v e n ; ~ d i v i ̣, ~ \Omega ~}$ man). The seventh class of the Linnean system, including those plants which have seven stamens.

IIeptandrous; having seven stamens of about equal length.

IIEPTAPHARMACUM ( $\dot{\varepsilon} \pi \tau a ̀$, scven; фа́ppaxov, a medicine). A medicine composed of seven ingredients: these were ceruse, litharge, pitch, wax, colophony, incense, and ox-fat.
[HEPTREE. A common name for Rosa caninr.]
[HERACLEUM. Masterwort; the U. S. Pharmacopocial name for the root of Heracleum lanatum; a Linnean genus of plants of the natural order Umbelliferæ.]
[1. Heracleum gummiferum. The systematic name of the trec formerly supposed to yield Ammoniac.]
[2. Heracleun lanatum. Masterwort. An indigenous species, the root of which is somewhat stimulant and carminative, and has been employed in epilepsy. The dose of the powdered root is from 3 ij . to 3 iij.]

HERB BENNET. The Geum urbanum, or Avens; the term is probably contracted from herba benedicta.

HERBARIUM (herba, an herb). A collection of dried specimens of plants, formerly known hy the expressive term hortus siccus. or dried garden.
[IERB CHRISTOPEER. One of the common names for the plant Actaa spicata.]
[IIERB ROBERT. Common aame for the plant Geranium Robertiamum.]

IIERCULES BOVII. Gold and mercury dissolved in a distillation of copperas, nitrc, and sea-salt ; a violently cathartic preparation.

HEREDITARY (hares, an heir). A term applied to diseases supposed to be transmitted from parents to their children.

IlERMAPHRODITE ('E $\rho \mu \tilde{n} s$, Mercury; 'A $\varphi$ poditn, Venus). Androgynus. A lusus nature, in which the organs of gencration appear to be a mixture of hoth sexes. In hotany, plants are so called which contain the stamen and pistil in the same flower: all other flowering plants ara called unisexий.

HERMETIC SEAL ('E $\rho \mu \tilde{\imath} s$, Mercury). The closing of the end of a glass vessel When heated to the melting point. The name is derived from the Egyptian II ermes, supposed to have been the futher of Chemistry, which has been called the Jermetic Art.
$18 *$

IIERMODACTYLUS ('Eppñs, Mercury; diaxtudos, a finger). The naine by which the ancients designated a plant supposed to be a species of Colchicum.

HERNIA (Ěpoos, a branch; so called from its protruding forward). The protrusion of one or more of the viscera into a sac, formed of the peritonæum. A hernia is termed reducible, when it admits of boing replaced in the abdomen; irreducible, when it suffers no constriction, yet cannot be put back, owing to adhesions or its large size; and incarcerated or strangulated, when it not only cannot be reduced, but also suffers constriction. This discase is distinguished with reference to-

## I. Its Situation.

1. Hernia cruralis. Femoral hernia; or a protrusion under Poupnrt's ligament. The passage through which the hernia descends is called, by Gimbernat, the crural; by Hey, the femoral ring; and by Cloquet, the crural canal.
2. Hernia ingninalis. Bubonocele; or hernia at the groin. It is termed incomplete or oblique, when it does not protrude through the ahdominal ring; and complete or direct, when it passes out at that opening.
3. Hernia inguino-intcrstitial. This term is applied by Dr. Goyraud to the form of hernia termed by most authors incomplete inguinal, and described by Boyer as intra-inguinal. The former term was considered ohjectionahle, because whatever may be their situation, when the viscera have escaped from the ahdomen; the hernia is complete; the latter was nlso objcctionable, because the inguinal canal does not always constitute the limits of tho protruded viscera.
4. Hermia ischiatica. Hernia occurring at the ischiatic noteh.
5. Hernia perincalis. Hernia of the perinæum, occurring, in men, between the bladder and rectum; and in women, between the rectum and vagina.
6. Hernia pudendalis. Hernia which descends, between the vagina aud ramus ischii, into the labium.
7. Hernia scrofalis. Oschcocele ; hernia enteroscheocele, or oschealis, when omentum or intestinc, or both, descend into the scrotum; epiploschcocelc, when omentum only; steatocele, when scbaccous matter descends.
8. IIernia thyroïdalis. Hernia of the foramen ovalc.
9. Hernia umbilicalis. Omphalocele, or cxomphalos. Hernia of the bowels at the umbilicus. It is enlled pacumatomphnlos, when owing to flatulency.

## IIET

10. Hermia vaginalis. Elytrocele; or bernia oceurring within the os externum.
11. Hernia ventralis. Ifypogastrocele; or hernia oceurring at any part of the front of the abdomen, most frequently hetween the reeti museles.
12. IIcrnia carnoza. Sarcoeelc. A fleshy enlargement of the testis; a turnour scated in the serotum.
13. Hernia mesenterica et mesocolica. Hernia through the lacerated mesentery, or mesocolon.
14. Hernia phrenica. Hernia of the diaphragm.
15. Hernia of the intestines. Hernia through a loop formed hy adhesions, \&c. II. Its Contents.
16. Hernia cevebri. Fungus cerehri. Encephaloeele. Heraia of the hrain.
17. Hernia intestinalis. Enterocele; containing intestine only.
18. Hernia omentalis. Epiplocele; containing a portion of omentum only. If hoth intestine and omentum contribute to the formation of the tumour, it is called entero-epiploccle.
19. Hernia uteri. Hysterocele. Hernia of the uterus.
20. IMernia vesicalis. Cystocele; or hernia of the bladder.
21. Hernia cornece. Ceratocele; or hernia of the cornea.
III. Its Condition.
22. Hernia congenita. Congenital hernia; appearing at hirth.
23. Hermia incarcerata. Strangulated hernia; or irrcducible hernia with constrietion.

## IV. Misapplied Terms.

24. Hernia gutturis. Bronchoeele, goitre, or enlargement of the thyroid gl:und.
25. Hernia humoralis. Inflammatio testis, or swelled testis.
26. Herniasacci lacrymalis. The name given by Beer to rupture of the lacrymal sae. It has been also ealled mucoccle. See Fistnla lacrymalis.
27. Hermia varicosa. Cirsoccle, or a varicose enlargement of the spermatio vein.
28. Hernia ventosa; or flatulenta.Pneumatoeele ; or hernia distended with flatus.

II ERNIOTOMY (hernia; and тоцخ, section). The operatiou for strangulated heruia.

II ERPES ( $₹ \rho \pi \omega$, to ereep). Tetter ; elustered vesicles, eonereting into scabs. The name is derived from the progressive oxtension of the eruption.

1. Heryes labialis. llerpes of the lip;
occasionally diffused on the velum and palate.
2. Herpes zoster. Merpes epreading aeross the waist or thorax, like a sash or sword-helt, commonly called shiagles.
3. Herpes phlyctanodes. Herpes sinilar to the preeeding, but of less regular form, occurring on any part of the hody, commonly ealled nirles.
4. Herpes circimatus. Herpes of a more elronic form than the preeeding; commonly ealled ringzorm.
5. Herpes praputialis. Herpes of the prepuee, or the labia pudendi.
6. Herpes iris. Rainbow ringworm.
[IIerpetic. Of the nature of herpes.]
HESPERIDIN. A eryetallizahle, neutral prineiple found in the white portion of the rind of the fruit of the genus Citrus.

HESPERIDIUM. A many-celled, superior, indebiscent fruit, eovered hy a spongy, separable rind, as the orange.

HETERO- (Écepos, other). A Greek term denoting difference:-

1. Heter-adelphia (ádc $\lambda \phi \partial s$, a hrother).

A term applied hy Geoffrey St. Hilaire to union of the bodies of two feetuses. In these cases, one foetus generally attains its perfect growth ; the other remains undeveloped, or aeephalous, maintaining a parasitie life upon its brother.
[2. Hetero-clite ( $\kappa$ dive, to ineline). That whieh does not follow the ordinary rule.]
3. Hetero-geneous ( $\gamma$ 'ivos, kind). A term used to denote substances, the parts of which are of different kinds. Compare

## Homogeneous.

4. Hetero-logous formation (Abyos, an aecount). A term applied to a solid or fluid substanee, different from any of the solids or fluids which enter into the lealthy eomposition of the hody. (Carsicell.) It is synonymous with the hetero-plastic matter of Lobstein.
[5. Hetcro-morphous ( $\mu$ орфу, form). Differing in form, shape, or cxternal appearanee.]
5. Irctero-pathy ( $\pi$ áoos, discase). The art of euring founded on differences, by whieh onc morbid enndition is remored by indueing a different onc. Compare IIomopathy.
6. Ifctero-plasis (rגáats, formation). A term employed by Lobstein in the same sense as tlint of hefcrologous formation, adopted by Carswell. The same writer applies the term cuplasis to organizable matter by which the tissues of the body are renewed.
S. Helero-fropal ( $\tau p \frac{\pi}{\pi} \omega$, to turn). That which has its direction acroses the hody to
which it belongs；a term applicd to the eubryo of the sced．
［HEUCHERA．Tbe U．S．Pharmaco－ paial name for the root of Heuchera Ane－ ricana；a Linnean genus of plants of the natural order Saxifragaceæ．］
［1．Henchera Americana．Alum－root． An indigenous species，the root of which is very astringent．］

HEVEENE．An oil obtained in the rectification of oil of caoutchouc，and de－ rived from tbe Hevea guianensis，one of the Euphorbiacer from which caoutchouc is extracted．

HEXANDRIA（ $\tilde{\xi} \xi$, six；à à $\bar{p}, ~ a ~ m a n) . ~$ The sisth class of the Linnean system， including those plants which have six sta－ mens．Hence－

Hexandrous；having six stamens of about equal lengtb．

HIATUS FALLOPII（hiatus，an open－ ing；from hio，to gape）．An opening in the tympanum，named from Fallopius．

HIBISCUS MOSCHATUS．A Malva－ ceous plant，reputed to be of powerful efficacy against the bite of venomous rep－ tiles．The present generic name is Abel－ moschus．
［Hibiscus esculentus．See Abelmoschus esculentus．］

HICCORY．An American plant which yields a yellow dye：Order Juglandece．

HICCUP or HICCOUGH．A spasmo－ dic contraction of the diaphragm，with partial closure of the larynx．The term corresponds with the French hoquet，and the German schlucken，and is perbaps meant to imitate the sound it denotes． The Greek $\lambda \dot{\nu} \gamma \xi$ or $\lambda v y \mu \partial{ }_{5}$ ，and the Latin siugultur，which bave been applied to this affection，ratber denote sobbing．
［HIDDEN SEIZURE．Term used by Dr．Marsball Hall for such a paroxysm in convulsive diseases as may have been un－ observed，because occurring in the night， or away from the patient＇s bome and friends，so that the attack，obvious enough in itself，may have passed unwitnessed or unrecorded；or the convulsion may have been limitcd to the deeply－seated inuscles， and to the dceply－seated veins in the neck， and have been actually hidden even from ncar observers．］

HIDE－BOUND．A term deseriptive of that state in borses，in which the skin is tightly drawn over the emaciated muscles； also，of a disease in trecs，when the bark cleaves too close to the wood．

IIIDROA（iठoc̀s，sweat）．The terın given by Sauvages and Vogel to eczcuur， or hent cruption；the halo，with wlich the vesicle is surrounded，is popularly called a
heat apot．
［IIIDROPLANIA（idpùs，sweat；$\pi \lambda a v a$, an error）．Used by Swediauer for sweating in an unusual part．］
［HIDRORRHEA（idp⿳亠二口欠，sweat；féco，to flow）．Profuse sweating．］
［HIDROSIS（idpùs，sweat）．Sweating． Applied by Dr．Kever to disease characte－ rized by sweating ］

HIDRO＇TICA（iঠрஸ̀s，idpüros，sweat）．Me－ dicines which cause perspiration．

HI＇ERA PI＇CRA（icpos，boly；$\pi \iota x \rho \partial s$, bitter）．Vulgò，hiccory piccory．A name which has been long applied in the shops to the Pulvis Aloes cum Canellâ．It was formerly called hiera logadii，and made in tbe form of an electuary with honey．

HIERONOSOS（iepòs，sacred ；vóros，dis－ ease）．Morbus sacer．Literally，sacred dis－ ease；an ancient term for epilepsy．

HIGHGATE RESIN．Fossil Copal； found in the bed of blue clay at High－ gate．

HILUM．The point of the seed by which it is attached to the placenta．This is the base of the sced．

HILUS LIENIS．A fissure observed on the internal and concare surface of the spleen，through which the vessels enter and leave the substance of the organ．
［HIMALAYA RHUBARB．The root of Rheum australe．］

HIP．The ripe fruit of the Rosa canina， or dog－rose；it is chiefly used for makiug the confection of tbat name．

HIPPO－（irinos，a horse）．A Greek term， denoting a reference to the horse，the sea－ borse；or，simply，a large size：－

1．Hippo－campus（кй $\mu \pi \tau \omega$ ，to bend）．The sea－horse；tbe name of a small marine animal．Hence the term is applied to two kinds of convolution of the brain，－ tbe hippocampus minor，situated in the posterior horn－and the hippocaupns major，situated in the inferior horn of the ventricles of the brain．See Cormu Am－ monis．

2．Hippo－castanum，or the Horse－chest－ nut．In tbis term，and in several others， as hippo－lappathum，hippo－marathrum， hippo－selinum，de．，the prefix is a Grecism， denoting size．

3．Hippo－lithus（ditos，a stone）．A con－ cretion found in the intestines of horscs， composed of aminoniacal phosphate of magnesia，derived from the busk of tho oats on whicb．they feed．
4．IHippo－manes（ $\mu$ avia，madness）．A humour in mares，said to be merely the inucus of the ragina in season，cmployed as an aphrodisiac．Anciently an ingre－
dicut in philtres．

5．Hipp－uric acid（or̀pov，urine）．An
acid ohtained from the urme of the horse, eow, and other graminiverous animals.
7. Hipp-uris (oùpá, a tail). The final division of tho spinal marrow, also termed cauda equina, or horse's tail, from tbe division of the nerves whieb issue from it. Also, a genus of plants, so cnlled from tbeir resemblane to a horse's tail.

HIPPUS PUPILLÆ. A peeuliar motion of the iris, consisting of a eonstant fluttering between expansion and contraction. It oceurs in amaurosis.

HIRCINE (hircus, a goat). A substanee contained in the fat of the goat and sheep, yielding, by saponifieation, the hircic acid.
[HIRSUTE (hirsutus, bairy). Hairy, shaggy.]

HIRSUTIES (kirrutus, sbaggy). Shagginess; superfluous growth of bair.

HIR U'DO MEDICINALIS. Tbe medicinal leeeb; named by the Romans haurio, as expressive of its well-known peeuliar action.
[HISPID (hispidus, bristly). Covered with long rigid hairs.]
[HISTOGENESIS (iards, a tissue; $\gamma$ fi $\gamma$ vopas, to engender). Tbe origin or formation of an organie tissue.]

HISTOLOGY (iotòs, a tissue or weh; $\lambda$ hyos, an acoount). The doetrine or study of the development of suhstance ind texture in organized hodies, as distinguisbed from their size and shape.
 eut). Dissection of the organie tissues.]

HISTRIONIC (histrio, a stage player). Mimisch. A term applied by German writers to nffections of the museles of expression, inducing epasms and paralysis.

HIVES. The popular name in tbe north of England, and in some parts of Seotland, for a speeies of Chicken-poxthe Varicella globalaris of Willan. See Croup.

HOFFMANNI LIQUOR ANODYNUS. Hoffman's Anodyne liquor, or the Spiritus Ftheris Compositus.

HOG GUM. A substance yielded by the Rhus metopium. Dr. Pereira says he has met with an unsaleable gun, under this name, resembling a samplo in bis possession of false tragacanth, or gomue de Sassn.
[IIOLLY. Common name for severul species of the genus Ilex.]
[HOLLYHOCK. Comulon name for the Alcaa rober.]

HOMBERG'S PHOSPHORUS. Ignited muriate of lime. See Phomphorus.

HOMBERG'S PYROPILORUS ( $\pi$ IN. fire; $\psi t p \omega$, to bring). A misture of alum and brown sugar, which tukes fire on
exposure to the nir. A more convenient mixture is made with three parts of lampblack, four of burnt alum, and eight of earbonate of potash.

HOMBERG'S SEDATIVE SALT. A name for horacie acid, which appears, bowever, to possess no sedative property.
[ IIOMGOMORPIIOUS (öpoos, like; $\mu \circ \rho \phi \grave{n}$, form). Having a similar form ; applied to tumours containing those elements which are found in a normal state of the organism.]

HOMEOPATHY (ő $\mu$ otos, हimilar; тátos, disease). The art of curing founded on resemblances, introdueed hy Samuel Habnemann. The prineiple is, that every disease is eurable by such medieines as would produce, in a healthy person, symptoms similar to those which eharacterize the given disease. "Similia similihus curentur," in opposition to tbe " eontraria contrariis," or heteropathy.

HOMOGENEOUS ( $\delta \mu \stackrel{̀}{5}$, like; fivos, kind) This term denotes suhstanees made up of parts possessing the same properties. Heterogcneous, on the contrary, denotes that the parts are of different qualities: thus, in minerals, sand-stone is a homogeneous, and granite a heterogeneons, body.

HOMOGENS ( $\delta \mu \partial \rho_{\text {, }}$ similar; ; feros, kind). A division of exogenous plants which differ in the structure of their rood from otber exogens, and approach that of some endogens; thus there is no suecessive deposition of eoneentric zones, but there is merely one zone of moody matter to whatever age they may have arriced. They are named, therefore, from the bomogeneity of tbeir wood, as the menispermacea. \&e.
HOMOLOGIES, DOCTRINE OF ( $\delta \mu$ ós, like ; גóyos, a deseription). That braneh of anntomical seience whieb investigates the correspondenee of parts and of plan in the construction of auimals. The great aim of Prof. Owen's work ou IIomologieal anatomy appears to be to put an end to the old controversy so long maintained, on the nssumption that a special adaptation of parts was ineompatible with a common type of eonstruction.

1. Special homology relates to the eorrespondenee of parts in diferent animals. Thus the wing of a birl is the homologuc of the arm of a man, or of the fore-leg of a liorse; the "os quadratum" of a bird is the homolngue of the "os tympaniemu" of the tortoise, or of the "nuditory process of the temporal bone" of $n$ manl.
2. Scrinl homology relates to the correspondence of parts in the same animal. Thus, the wing of a hird is the
homologue, in one segment of its body, of the leg of the bird in another segment; the frontal bone is in this sense the homologue of the occipital bone; the right neurapophysis is the homologue of the left neurapophysis in the same segment of a vertebra. The arm is the homologue of the leg, the humerus of the femur, the radius of the tibia, the ulna of the fibula.
3. General homology relates to correspondencies of parts viewed with reference to the ideal archetype of the vertebrate skeleton. Thus, the arm is the "diverging appendage" of its segment; the superoccipital bone is the "neural spine;" the exoccipital bone, or ". condyloid part of the occipital bone," in the human subject, is the "neurapophysis;" the "basioccipital bone," or "basilar process of the occipital bone," is the "centrum" or "body" of its segment.
[HOMOLOGOUS ( $\delta \mu \grave{\partial} s$, equal; $\lambda 6$ yos, nature). Applied to things or parts which are of the same essential nature, whatever different forms or names they may bear in different animal bodies.]

HOMOLOGUE ( ${ }^{\circ} \mu \mathrm{d} s$, the same; $\lambda$ byos, description). Honotype. A term applied to a part of an animal which corresponds to another part in a different animal, or to different but corresponding portions in the same animal, or to sub-divisions of the same part, or to parts viewed with reference to an idcal archetype of organization. See Homologies, Doctrine of.
[HOMOMORPHOUS (ópòs, equal; $\mu о \rho \phi \grave{\eta}$, form). Having the same form.]

HOMONYMOUS ( $\delta \mu д$ s, the same ; $\begin{gathered}\text { voua, }\end{gathered}$ name). Homotypal. These terms denote, in anatomy, a correlation of parts : the frontal bone is the homonym or homotype of the superoccipital bone; the humerus of the femur, $\& c$. It is the aim of serial homology to determine homonymous or homotypal relations.
[HOMOTYPE. See Homologue.]
HOMO-TROPAL ( $\delta \mu д$ s, the same ; т $\rho \delta$ то , a turn). Having the same direction as the hody to which it belongs, but not being straight; a term applied to the embryo of the seed.
HONEY. Mrel. A regetable juice, collected from the nectaries of flowers by the Apis mellifica, or Honey Bce. With vinegar it forms oxymel.

1. Virgin howey. Honey wrought by the young becs which have never swarmed, and which runs from tho comb without heat or pressurc.
2. Clarificd honey. Mel despumatum; honey melted in a water-bath, and cleared from scum.
3. Aectuted honey. Mel acetatum, or
the oxymel simplex; clarified honey and acetic acid.
4. Egyptian honcy. Oxymel ærnginis, or linimentum æruginis: clarified honcy, with ærugo and vinegar.
5. Honcy of borax. Mcl boracis ; clarified honey, and bruised borax.
6. Rose honey. Mel rosæ; clarified honey, the petals of the rosa gallica, and water.
HONEY-BAG. The crop or sucking stomach of the honey-bee, in which it transports the honey from the flower to the hive.

HONEY-DEW. A sweetish substance ejected by very small insects, called aphides, upon the leaves of plants, and vulgarly supposed to be caused by a blight, or some disease in the plant. There is another kind of honey-deno, observed only at particular times, and in certain states of the atmosphere, hanging occasionally in drops from the points of the leaves of plants; its cause is not known.
[HONEYSUCKLE. Common name for the Lonicera caprifolium.]
[HOOPER'S FEMALE PILLS. A nostrum which has been extensively used as a purgative and emmenagogue. The following is the formula for its preparation recommended by a committee of the Philadelphia College of Pharmacy. R . Aloes Barbadensis, ${ }^{5}$ viij.; Ferri sulph. exsic., $\mathrm{Z}_{\mathrm{ij} ., \overline{\mathrm{j}} \mathrm{iss} \text {., vel }}$ Ferri sulphat. crystal. Ziv.; Extr. hellebori nig., $\mathbf{Z}_{\mathrm{ij}}$. ; Myrrhw, Zij.; Saponis, $\mathrm{Z}_{\mathrm{ij} .}$; Canellæ in pulv. tritæ,
 them well together into a mass with water, and divide into pills, each containing two and a half grains.]

HOOPING COUGH. Whooping cough. These are vernacular English terms, derived from the verb to hoop or whoop, signifying to call with a loud voice. The affection is the tussus convulsiva of Willis, the tussis ferina of Hoffman. See Pertussis.

Chincough. According to Johnson, for kincongh; from kincken, to cough. Is it a corruption from chine-cough ?

HOPE. A term in Phrenology, indica. tive of a disposition to expect future good, and to believe in the possibility of whatever the faculties desire. Its organ is situated on each side of that of vencration.

HOPS. The strobiles of the Humalus lupulus, or Hop-plant.

HORDEI SEMINA. Pearl barley; tho grains of the Hordcum distichon, the Common or Long-cared Barley, after tho husks have been removed.

1. Hordeum mundatum. Scotch, hulled,
or pot barley, consisting of the grains deprived of their husk by a mill.
2. Hordeun perlatım. Pcarl barlcy; the grains dircsted of their husk, rounded aud polished. The farina obtained by grinding pearl barley to powder is called patent barley.
3. Hordei decoctun. Decoction of barley, commonly called harley water.
4. Hordein. The principle of barley ; a peculiar modification of starch.

HORDEOLUM (dim. of horderm, harley). A stye, or small tumour on the oyelids, resembling a harley-corn.
[HORDEUM. The U. S. Pharmacopcial name for the seeds of Hordeum distichon; a Linnean genus of plants of the natural order Graminaceæ.]
[HOREHOUND. Common name for the plant Marrubium vulgare.]

HOREHOUND TEA. Prepared by infusing an ounce of the Marrubium vulgare, or white horehound, in a pint of hoiling water. The dose is a wineglassful. Syrup of Horehound is prepared with the infusion and sugar. Candied Horehound ought to be made of the same ingredients.

HORN. A substance consisting of coagulated albumen and gelatine. It differs from bone in containing only a trace of carth.

HORN SILVER. Luna cornea. The chloride of silver; the term is derived from its forming a gray semi-transparent mass, which may be cut with a knife, and much resembles horn.

1. Horn Lead. Plumbum corneum ; the chloride of lead, a semi-transparent mass, resembling horn.
2. Horn Quicksilver. A natural protochloride of quioksilver; it has a white hornlike appearance.

HORN POCK. Crystalline pock. A form of Variola, in which the pimples are imperfectly suppurating, ichorous or horny, and semi-transparent.

HORNBLENDE. Amphilole. A silicate of lime and magnesia.

HORNY MATTER. One of the proximate principles of organic nature. There are two varictics, the membranous and the compact. 1. The membranous constitutes the epidermis and the epithelium, or lining memhrane of the vessels, the intestines, the pulmonary cells, \&c. 2. The compact forms hair, horn, nails, \&e. Feathers are allied to horny matter.

HORRIPILATIO (horren, to dread; pilus, the hair). [Horripilation.] A sense of creeping in different parts of the body; a symptom of the appronch of fever.
[HORSE ALOES. Fctid or Caballine Alocs. Seo Aloc.]
[HORSE BRIMSTONE. See Sulphur vivum.]
[HORSE BALM. A common name for the plant Collinsonia canadensis.]
[HORSE CHESTNU'T. Common name for the Abculus hippocastemum.]

HORSE MINT. Common name for the herh Monarda punetata.

HORSE-RADISH. The Cochlearia Armoracia. The term horse, as an epithet, in this case, is a Grecism, as also in horsemint, \&c.; the same may be said of the term bull, in bull-rush, \&c.; these terms are derived from innos and $\beta$ oũs, respectively, which merely denote greatness; Bucephalus, for Alexander's horse; Bu-limia, for voracious appetite; Bu-phthalmus, for dropsy of the eye; Bu-cnemia, for swelled leg, \&c. See Hippo.
[HORSE WEED. A common name for the plant Collinsonia canadensis.]

HORTUS SICCUS (a dry garden). An emphatic appellation given to a collection of specimens of plants, carefully dried and preserved; a more general term is herbarium.

HOSPITAL GANGRENE. A comhination of humid gangrene with phagedenic ulceration, occurring in cromded hospitals, \&c.; also termed phagedena gangrænosa, putrid or malignant ulcer, hospital sore, \&c.
[HOUND'S TONGUE. Common name for the Cynoglossum officinale.]

HOUR-GLASS CONTRACTION. An irregular and transverse contraction of the uterus, in which it assumes the form of an hour-glass.

HOUSE-LEEK. The Sempcrvirum tectorum; a plant of the order Crassulacca, common ou roofs and walls.

HOWARD'S or JEWEL'S HYDROSUBLIMATE. A patent calomel, prepared by exposing the salt in the act of sublimation to aqueous vapour and receiving it in watcr. It is lighter than common calomel, in the proportion of three to five, and canuot contain any corrosive sublimatc.
[HUAMILIES BARK. A raricty of bark derived from the province of Huamilics, in Peru.]
[HUANUCO BARK. A name for the Cinchona cincrea.]

IUMBOLDTITF. A mincral, consisting of oxalate of lime, and forming the hasis of a species of urimary calculus.

II UMECTANTIA (humecto, to moisten). Moistening and softening medicines.

HUMERUS ( $\stackrel{\uparrow}{\boldsymbol{\omega}} \mathrm{m}$ ). The shoulder, consisting of two boncs, the scapula and the chavicle.
[Humeral. Belonging to the arm.]

IIUME＇S TEST．A test for arsenious acid，consisting of the ammonionitrate of silver．If solutions of these substances be mised，a yellow arsenite of silver is preci－ pitated，and nitrate of ammonia remains in solution．

HUMILIS（bumble）．A name given to the rectur inferior，from the expression of humility or modesty wbich tbe action of this muscle imparts．
HUMORAL PATHOLOGY．A sys－ tem in medicine，which attributed all discases to morhid cbanges in the hu－ mours or fluid parts of the body，without assigning any influence to the state of the solids．
HUMORIC（humor，a humour）．A term applied by M．Piorry to a peculiar sound， produced on percussion，by the stomach， when that organ contains much air and liquid．It resembles tbe metallic tinkling of Laennec．

HUMOUR（humeo，to be moist；from humus，the ground）．A humour；an aqueous substance．［A general term for any fluid；hut particularly applied to those of the human body，both in their healthy and diseased states．］The hu－ mours of the eye are：the Aqueous，the Vitreons，and the Crystalline．［See these words．］

HUMULUS LUPULUS．The Common Hop；a Diœcious plant，of the order Urti－ cacer．［See Hops and Lupulin．］

HUMUS．Vegetable mould；woody fibre in a state of decay．The various names of nlmin，humic acid，coal of humus， and humin，are applicd to modifications of humus．

Humic acid of cbemists．A product of the decomposition of humus by alkalies； it does not exist in the humus of vegetable pbysiologists．－Liebig．
［HUNDRED－LEAVED ROSES．Rosa centifolia．］
［HUNGARIAN BALSAM．The exuded juice of the Pinns Pamilio．］
［HURA BRAZILIENSIS．A Brazilian tree helonging to the family Euphorbiacex． The milky juice，and also an infusion or dccoction of the bark，bas been employed in elephantiasis．］
［IIUXHAM＇S TINCTURE OF BARK． The Tinctura Cinchonæ Composita．］

IIYACINTII．A mincral occurring of various colours，composed principally of the earth called zirconia．
［HYALIN（धa入os，glass）．A term ap－ plicd to an interglobular substance forming one of the constant clements of tuberele． Applied also to the pellucid point which is the first stane of development of the uucle－ ulus of Schleiden．］
［IIYALINE（ṽados，glass）．Tranṣparent like glass；glassy．］

HYALOIDES（v̉a入os，glass；हỉos，likc－ ness）．The name of the membranc which encloses the vitreous humour of the eye； it consists of numerous cellules，communi－ cating with each other．
［HYALOIDEITIS，IYALOIDITIS， HYALITIS（vảos，glass）．Inflammation of the byaloid membrane．］
［HYALONYXIS（Va入os，glass；ví $\sigma \omega$, to puncture）．Operation of depressing tbe crystalline lens，for the removal of cata－ ract．］

HYBERNATION（hyberna，winter－ quarters for soldiers；from hyems，winter）． A reptile state of the functions，which oc－ curs in some animals in winter，as the bat， hedge－hog，dormouse，bamster，\＆c．Com－ pare Dinrnation．
HYBO＇SIS（ijoos，curved）．The name given by the Greck writers to the lateral curvature of the spine．It is the hyboma scoliosis of Swediaur，and the rhachybia of Dr．Good．

HYBRID（hybrida；from $\tilde{0} \beta$ pıs，injuria， 8c．illata nature）．Mongrel ；a term ap－ plied to plants and animals of a cross breed．
HYDARTHRTSS（üdop，water；ä $\rho \theta \rho o v$, a joint）．Hydarthrosis．White swelling； dropsy of an articulation，from an accu mu－ lation of synovia；generally occurring in the knee－joint；the spina ventosa of the Arabian writers．
［HYDATID．See IHydatis．］
HYDATIS（idaris，a vesicle ；from fixup， water）．A bydatid；a pellucid cyst，con－ taining a transparent fluid，developed in a carity or tissue of the buman body，\＆c．； the term is now used to designate an order of intestinal worms．

1．Hydatis acephalocystis（a，priv．；кє－ $\phi$ a入̀，the head；kúorts，a bladder）．The headless hydatid，or bladder－worm．

2．Hydatis coenurus（кotvòs，common； oupa，a tail）．The hydatid containing se－ veral animals gronped togetber，and ter－ minating in one tail．

3．Hydatis cysticercus（кv́arts，a bladder； кधिкор，a tail）．Tho hladder－tailed hydatid．
4．Hydatis ditrachyccros（dis，twice； трaxis，rough；кípas，a horn）．The hy－ datid furnisbed with a rough bifureated horn．

5．Hydrtis cchinococcus（ixivos，a bedge－ hog；кбккоs，a grain）．The round rough hydatid．
6．Hydatis polycephalus（rodv̀s，wany； $\kappa \varepsilon \phi=\lambda \eta$ ，the head）．The many－headed hy－ datid．
7．To theso may be added a white en－ cysted Lody，which Raspail names tho
ovuliger of the joint of the verist，and con－ siders as a now genus，in termediate between the Cysticercus and the Comurus．

8．The rot and the staggers in shcep are oecasioned by the development of two speeies of vesicular worms，tho Cysticercus lineatus and temicollis，and the Conurus cercbralis of Rudolpbi，tbe one in the liver，or some otber of the ahdominal viseera；the otber in the ventricles of tbe brain．The sheep wbich feed in salt meadows are exempt from this disorder．－ Laemnec．
［HYDATIFORM（ $\delta \delta \omega \rho$ ，water；forma， resemblanee）．Having the appearance of an hydatid or bag．］
［HYDATOTHERAPIA（ $\quad$ inop，water； $\theta_{c \rho a \pi \varepsilon v \omega, ~ t o ~ b e n l) . ~ T h e ~ s y s t e m ~ o f ~ t r e a t i n g ~}^{\text {a }}$ discases by cold water；hydropathy．］

HYDERUS（ $\overline{\delta \varepsilon f o s) . ~ L i t e r a l l y, ~ w a t e r-~}$ flux；a name given by the Greeks to dia－ betes，wbieb was also called urinal dropsy， urinary diarrbœa，and dipsaeus，from its aecompanying thirst．

HYDRA（ن幺 $\delta \omega \rho$ ，water）．A polypus indi－ genous in our hrooks，destitute of a stomach， brain，visecra，or lungs．
［HYDRACHNE，HYDRACHNIS．A small watery vesiele．］
［HYDRGAMA（Ud $\omega \rho$ ，water；alua，the blood）．A state of tbe blood in which tbe serum is usually transparent，and contains only a small quantity of eolouring matter．］
［HYDRALLAS（úcop，water；d̀ $\lambda \lambda a ̃ s, ~ a ~$ sausage）．Name given by Madame Boivin to a morbid inerease of the Liquor allan－ toïdis．
［HYDRAMNIOS（ the amnion）．Dropsy of tbe amnion，or morbid inerease of the fluid contained in the amnion．］
［HYDRANGEA ARBORESCENS． Common hydrangea．An indigenous sbruh of the natural order Saxifragacer，the root of which，in decoction or syrup，bas heen used in ealculous affeetions．］

HYDRARGYROMETIIYLIUM．Ara－ dieal formed by the aetion of sun－light upon iodide of methyl and metallie ner－ cury．
［HYDRASTIS CANADENSIS．Yel－ low root．An indigenous，Ramuncula－ ceous plant．The root is very bitter，and is popularly used as a tonie，and the infu－ sion has also been employed in oplthal－ mia．By the Indians it is used as a yellow dye．］

IIYDR－，HYDRO－（vido, vidatos，water）． A prefix generally denoting the presence of water in definite proportions；but，owing to the ehanges of nomenclature，it some－ times denotes the presence of hydrogen in certain chemical compounds．

1．Hydr－acids．Iydro－acids；a claes of aeid compounds，into which hydrogen enters，as tbe acidifying prineiple；as tbe bydro－ehloric，the hydro－eyanic，\＆c．

2．Hydr－ogogues（ $\check{\gamma} \boldsymbol{j}$ ，to expel）．The name of tbose catharties which produce liquid evacuations．
3．Hydr－amnios．A morbid aceumula－ tion of the liquor ammi．
4．Hydr－argyria（hydrargyrum，roer－ eury）．The Eezema rubrum ；termed also erythema mercuriale；a species of heat eruption，arising from tbe irritation of mereury．

5．Hydr－argyrum（idoápyupos，of the Greeks；from űjop，water；äpyupos，silver； so ealled from its fluidity and colour）． Formerly，Argentum vivum．Mercury，or quicksilver．See Mercury．

6．Hydr－ates．Cbemieal compounds of solid bodies and water，still retaining tbe solid form，as sulpbur，soap，\＆e．These are also termed hydroxures，and hydro－ oxides．Wben there is more tban one atom of water，prefixes are employed，as bin－aqueous，ter－hydrate，\＆e．

7．Hydr－elæun（è̉atov，oil）．A mixture of oil and water．
8．Hydr－encephalo－cole（ivkiффdo5，the brain；$\kappa \bar{n} \lambda \eta$, a tumour）．Watery rupture ［bernia］of the hrain．

9．Hydr－encephaloid（Eyré申a入os，the hrain ；zioos，likeness）．Affections whieh resemble bydrencepbalus；they arise from intestinal disorder，and exhaustion．

10．Hydr－enterocele（èvtcpa，the borrels； $\kappa \dot{\eta} \lambda \eta$ ，a tumour）．Hydrocele，or dropss of tbe serotum，eomplieated with intestinal hernia．

11．$H_{y} d r$－iatros， （ $v \delta \omega \rho$ ，water ；\｛arpòs，a Hydr－iatrus， ，pbysician）．A practi－ tioner of bydropathy，or who professes to praetise the so－called＂water－eure．＂
［12．Hydr－iodatc．A combination of hydriodie acid witb a salifiable hase．］
13．Hydr－iodie acid．An acid consisting of hydrogen and iodine rapour．
14．Irydro－a．A watery pustule．
15．Hydro－bcnzamidc．A colourless suh－ stance obtained by plaeing bydrate of hen－ zoilo in a solution of ammonia．
［16．Iydro－blepharum（ $\beta$ גibapor，tbe eye－lid）．Dropsy or watery swelling of the eye－lid．
［17．Hydro－bromate．A enmbination of hydrobromie aeid with a salifiable base．］ 18．Hydro－cardia（supdia，the heart）． Hydro－perieardia；dropsy of the periear－ dium．

19．Irydro－celc（sйдो，a tumour）．Ori－ ginally，any tumour containing water． The term is now applied，－ 1 ．to a collec－ tion of water in the tunica raginalis，with
a communication between the cavity of this membrane and that of the peritonæum, and termed congcnital hydrocelo; 2. to anasarcous tumour of the scrotum, termed odematons hydrocele, or the hydrocele by infiltration of the French; 3. to hydrocele of the spermatic cord, which is diffused, in volving the surrounding cellular substance, or encysted, the cellular substance being unaffected; and 4. to spina bifida, and terned hydrocelc spinalis.
"20. Hydro-cephalus (кєчадो), the head). More properly, hydreiccphalits; from l $\gamma-$ ké $\phi$ a oos, hrain. Dropsy of the hrain; water in the head. It is external; when it occurs betwcen the membranes; internal, when within the ventricles:
[21. Hydro-chlorate. A combination of hydrochloric acid with a salifiable hase.]
22. Hydro-chloric acid. An acid consisting of hydrogen and chlorine, and long known under the names of spirit of salt, marine acid, and muriatic acid. Some modern chemists term it chlorydric acid.
23. Hydro-chloric éther. An ether which has received the varions names of chlorydric, marine, and miviatic ether, and, hypothetically, chloride of ethule.
[24. Hydro-cirzocèle (kıpoùs, a varix; кi, $\lambda \eta$, a tumour). Hydrocele complicated with a varicose state of the veins of the spermatic cord.]
[25. Hydro-cyanate. A combination of hydrocyanic acid with a salifiable hase.]
26. Hydro-cyanic acid. An acid consisting of hydrogen and cyanogen, and commonly called prussic acid. The hydrocyanic acid of Scheele contains five per cent., hy weight, of real acid; that of the pharmacopeia contains ahout two-fifths of the ahove weight.
27. Hydro-cystis (xüarıs, a bladder). An encysted dropsy.
28. Hydro-dynamics (סúvajus, power). The mechanics of fluids; or that branch of natural philosophy which investigates the phenomena of cquilibrium and motion among fluid hodies, especially such as are beavy and liquid.
29. Hydro-fnoboracic acid. A compound of hydrolluoric acid and fluoride of boron.
30. Hydro-gen ( $\gamma \varepsilon \nu \nu a ́ \omega$, to produce). A gas formerly termed inflammahle air, phlogiston, or phlogisticated air; its present name refcrs to its forming water when oxidated.
31. Hydro-lafa. Aquo medicata. Medicated or distilled waters, ohtained by submitting fresh, salted, or dricd vegetables, or their essential oils, to distillation with water, or by diffusing the essential oils through water.
32. IIydro-lica. A term applied by the French to solutions [in water] of the active principles of medicinal ngents. Tbose obtained by distillation are called hydrolats.
[33. Hydroma. A cyst or hag containing water, a spurious hydatid.]
34. Hydro-magnesite. A compound of hydrate of magnesia and the bydrated carbonate.

3亏̄. Hydro-mancy ( $\mu a \nu \tau c i a$, prophocy). Án ancient superstition respecting the $^{\text {and }}$ divining nature of certain springs and fountains ; hence, perhaps, arose the discovery of the medicinal virtues of mineral waters.
36. Hydro-incl ( $\mu \bar{\varepsilon} \lambda c$, honey). Honey diluted with water; also called mulsum, melicratum, and aqua mulsa. When fermented, it hecomes mead. Metheglin wino is called hydromel vinosum.
37. Hydro-meter ( $\mu$ ह́rpov, a measure). An iustrument for measuring the gravity of fluids, particularly that of the urine. When floating in this liquid, it rises in proportion as tho density of the liquid increases; it is graduated from 1.000 to $1 \cdot 060$, so as to exhihit at once the specific gravity.
38. Hydro-me'tra ( $\mu \dot{T}$ pa, the nterus). Hydrops uteri. Dropsy of the uterus.
39. Hydr-omphalon ( $\delta \mu \phi$ а $\overline{\text { os, }}$, umbilicus). A tumour of the umbilicus containing water.
40. Hydro-oxalic acid. Oxalhydric acid. An acid procured by the action of nitric acid on sugar ; it is also termed saecharine acid.
41. Hydro-pathy ( $\pi \dot{d}$ Oos, affection). The [so-called] Water-cure; a mode of treating diseases hy the internal and external use of cold water, \&c. The term hydrotherapeia would be preferable.
42. Hydro-pedesis ( $\pi \eta \delta \dot{\alpha} \omega$, to spring forth). A violent breaking out of perspiration.
43. Hydro-pericardium. Hydrops pericardii. Dropsy of the pericardium.
44. Hydro-phane ( $\phi$ aiva, to appear). A. variety of opal, which hecomes transparent when immersed in pure water. It is also called ocnlus mundi.
45. Hydro-phobia ( $\phi \delta$ ßos, fear). A dread of water; an affection consisting of spasmodic contractions of tho larynx, and a difficulty of drinking. It has heen termed rabies canina, rabies, and rage: by the French, la ragc; hygro-phobia ( $\dot{y}$ pos, moist), from the patient hcing unable to swallow any kind of moisture; phobodipsia ( $\phi 6 \beta$ os, fear; and $\delta i \psi$ a, thirst), becauso the patient is thirsty, yet feara to drink; pheng-yclros ( $\phi$ cóyw, to avoid; iojop, water), from tho disposition to shun
water; Urachyposia, Hipp. (Bpaxis, short; $\pi \delta \sigma \iota$, tho act of drinking), either from tho act of drinking little, or frequently, at short intervals; canis rabidi morsus by Avicenna, \&c.; dys-cataposia (dùs, with difficulty; katúruots, swallowing), by Mead; and recently, cntasia lyssa ( $\lambda \dot{\prime} \sigma \sigma a$, canine madness), by Dr. Good. The old writers used the terms aëro-phobia, or a dread of air; and panto-phobia, or a fear of all things, as expressive of some of the symptoms.
46. Hydr-ophthalmia ( $\delta \phi \theta a \lambda \mu \partial s$, the cye). Dropsy of the eye. This affection is also called hydropthalmus; hydrops oculi; huphthalmus, or ox-eye, denoting the enlargement of the organ.
47. Hydro-physocele (фuodie, to inflate; $\kappa \dot{n} \lambda \eta$, a tumour). Hernia, complicated with hydrocele ; bernia, containing water and gas.
[48. Hydro-physometra ( $\phi \dot{i} \sigma a$, wind ; $\mu \eta$ tpa, the womb). Accumulation of gas and water in the womb.]
[49. Hydro-phyte (фurov, a plant). An aquatic plant.]
50. Hydro-pica ( $\hat{\delta} \delta \omega \omega \psi$, the dropsy). [Hydropic. Of, or helonging to, dropsy.] Medicines which relieve or cure dropsy.
51. Hydro-pleuritis. Pleuritis, acute or chronic, attended with effusion.
[52. Hydro-pnewmatocele ( $\phi v \varepsilon \pi ̃ \mu a, ~ a i r ; ~$ кй $\lambda \eta$, a tumour). Hydrophysocele.]
[53. Hydro-pnermonia ( $\pi v c i \mu \mu \nu$, the lung). Scrous infiltration of the lungs.]
54. Hydro-pnermo-sarca ( $\pi v c \tilde{c} \mu a$ air; oápद, flesh). A tumour containing air, water, and a flesh-like suhstance.
55. Iydro-pneumo-thorax. The complication of pneumothorax with liquid effusion.
56. Hydrop-oïdes (eloos, likeness). A term formerly applied to watery exercments.
57. Hydro-pyrctns ( $\pi$ uperòs, fever). Sudor Anglicus. Sweating fever, or sickness.
58. Hydro-rachitis ('िíxıs, the spinc). Dropsy of the spine. It is congenital, and is then termed spina bifida; or it is analogous to hydrencephalus.
[59. Iydrorch is (üp $\overline{\text { is, }}$, testicle). Dropsy of the testicle, hydroccle.]
60. IHydro-8accharum (saccharunn, sugar). A drink made of sugar and water.
61. IIydro-8arca ( $\sigma$ rip $\xi$, flesh). Anasarca. Dropsy of tho cellular uncmbrnne.
62. Hydro-sarco-celc ( $\sigma$ áp , flesh; кrin $\eta$, a tumour). Sarcoccle, attended with dropsy of the tunica vagimalis.
63. Hydro-thorax ( 00 opa $\xi_{\text {, }}$ the rhest). Hydrops pectoris. Dropsy of the chest; water on the chest.
64. Hydro-sulphurcts. Compounds of sulphuretted hydrogen with the salifiablo bascs. See Kermes mineral.
65. IIydro-thcionic (Ociov, sulphur). A name given by some of tho Gcrman chemists to sulphuretted hydrogen, or the hydro-sulphuric acid of M. Gay-Luseac.
66. IIydr-urcts. Compounds of hydrogen with metals.

HYDROPS ( $\quad \delta \rho \omega \psi$, from ṽ $\delta \omega \rho$, water, and $ึ \nmid \psi$, the aspect or appearance). Dropsy; a morbid accumulation of water in a cavity, or the cellular substance.
[Hydrops articuli. Dropsy of a joint.]
[11YDROSTATIC ( $\hat{\delta} \delta \omega \rho$, water; $\sigma$ бatik $\eta$, the science of weights). Belonging to the weight, or equilibrium of liquid hodies in a state of rest.]
[1. Hydrostatic Bed. A bed formed of a trough containing water, and covered over with water-proof cloth, so that the patient in lying on it floats on the water.]
[2. Hydrostatic test. In medical jurisprudence applied to the testing of the lungs of a new-horn child, by placing it in water, in order to asccrtain by their floating or sinking whether or not it has breathed. See Docimasia pnimonalis.]
[HYDROTHERAPEIA ( $v \delta \omega \rho$, water; Oгpuncvia, to heal). The treatment of diseases hy water; sometimes applied to the absurd system of charlatanry called the " water-cure."]
[HYDRURIA ( $\tilde{\delta} \delta \omega \rho$, water; $\rho=t$, to flow). Increased flow of urine.]

HYGIENE (iytaive, to he well). Health; the preservation of health: that part of medicine which regards the preservation of bealth.

Hygienic agents. Under this term ars included six things essential to health; viz., air, aliment, excrcise, cxcrctions, slcep, and affections of the mind. The ancients applied to them the absurd name of nonnaturals.
[IIYGIOCOMIUM (iyitia, health ; $\kappa \omega \mu \eta$, a villa). A house for tho reception of convalescents.]

HYGRO- (iypds, moist). This prefix denotes the presence of moisture.

1. Hygroma. A humoral tumour. This term is applied to dropsy of the burse mucosm, when the fluid is scrous, colourless and limpid; when it is of a reddish colour, thick, and viscous, the affection is called ganylion. The tcrm also denotes hygromatous tumour of the brain, or cysts coutainiug a scrous or albuminous fluid.
2. Hygro-meler ( $\mu$ ifpos, a ineasure). An instruncut for ascertaining the degrec of moisture of the atmospherc. Whatever
swells by moisturo and shrinks by dryness, may he employed for this purpose.
3. Hygro-meter condenser. A inodification of Daniell's hygrometer, proposed by Regnault, and considered to be the most perfect instrument of the class.
4. Hygro-metric zoater. That portion of humidity which gases yield to deliquescent salts.
[5. Hygro-philus (фi入ec, to love). Loving moisture, or moist places.]

HYMEN ( $\dot{\mu} \mu \dot{\eta} \nu$, a membrane). A crescentiform fold of the memhrane situated at the entrance of the virgin vagina. The remains of the hymen, when ruptured, are termed cartucula myrliformes.

HYMEN EA COURBARIL (Hymenঞa, corrupted from animé, or animæa?) The systematic name of the tree which affords the resin animé, frequently used as a suhstitute for gum guaiacum.

HYMENOPTERA (i $\mu \grave{\nu} \nu$, memhrane; $\pi$ т $\varepsilon$ '́pov, a wing). Insects which have memhranous wings, as the wasp.

HYO- (the Greek letter v). Names compounded with this word helong to muscles attached to the os hyoïdes: e.g., the hyo-glossus, attached to the os hyoildes, and to the tongue; the hyo-pharyngeus, a synonyme of the constrictor medius; the hyo-thyroideus, \&c.

HYOI'DES (the Greek letter $v$, and हidos, likeness). A hone situated between the root of the tongue and the larynx.
[HYOSCIAMI FOLIA, $\}$ The pharma-
HYOSCIAMI SEMEN, $\}$ copoial names for leaves and seeds of the Hyosciamus niger.]

HYOSCY'AMUS (ừs, ìds, a hog; кúauas, a hean; so named hecause hogs eat it, or hecause it is hairy, like swine). [A genus of plants of the natural order Solanacer.]
[1. Hyoscyamия albus. A species indigenous to the south of Europe, possessing similar properties' with the $H$. niger.]
[2. Hyoscyamus niger. Faba smila. Henbane. The systematic name of an European species, possessing narcotic properties.]

Hyoscyamia. A vegetable alkali proeured from the seeds and herhage of the Hyoscyanms niger.
 apophysis). A process, usually exogenous, "Which descends from the lower part of the "centrum," or hody of the vertebra. It is single, perforated, or sometimes double in a transverse pair. Sce Vertcbra.
HYPER ( $\dot{i} \pi \grave{\rho}$, over or ahovo). This prefix is a Greek preposition, denoting excess. In chemistry, it is applied to acids which contain nore oxygen than thoso to which the word per is prefixed.

1. Hyper-acusis (dкоч́w, to hear). Hypercousis. The name given by M. Itard to a morbidly acute sense of heariug. In a case given hy. Dr. Good, this affection singularly sympathized with the sense of sight: the patient said, "A loud sound affects my eyes, and a strong light my ears."
[2. Hyper-amia (alua, hlood). Excess of hlood in a part; hyperhomia.]
2. Hyper-asthesis (aï0nots, the faculty of sensation). Excessivo sensihility.
3. Hyper-resthetica (av̌a $\theta$ nors, the faculty of perception). A class of æsthetic remedies, which render sensation more acute, and excito the sensibility of paralyzed parts, as strychnia, brucia, \&c. See Anasthetica.
4. Hyper-algesia (ä̀ yos, pain). Increased sensibility to pain. See Analgesia.
[6. Hyper-borean ( $\beta_{0}$ ह́as, the north wind). Applied to a race of mankind dwelling in the extreme northern parts of the glohe.]
[7. Hyper-carposis (каuтоs, fruit.) A conditiou of the blood in which there is an increase of the blood-glohules, and diminution of the fibrine.]
5. Hyper-catharsis (кaAaipw, to purge). Super-purgation; excessive purgation.
6. Hyper-chloric acid. An acid contnining a greater proportion of oxygen than the chlorie acid.
7. Hyper-cinesis (кıvew, to move). Increased irritahility of the muscles, producing spasm. See Acinesis.
8. IIyper-crisis ( $\kappa$ pive, to decide). A crisis of unusual severity.
[12. Hyper-emesis ( $\bar{\xi} \mu \hat{\epsilon} \omega$, to vomit). Excessive vomiting.]
[13. Hyper-genesis (yeıvoual, to be horn). Congenital excess, or redundancy of parts.]
9. Hyper-hœmia (a ${ }^{\top} \mu a$, hlood). An excessive fulness of blood.
10. IIypcr-hydrosis (idpws, swent). A term applied by Swediaur to morbidlyprofuse perspiration. It is also called ephiclrosis.
[16. IIyper-metrotrophy ( $\mu$ ifpa, the womb; тр́申, to to nourish). A term given by Piorry to hypertrophy of the womb.]
[17. Hyper-orgosis ( $\quad$ pyaw, to incite). Excessive incitement or desire.]
[18. Hyper-orthrosis ( $\delta_{\rho} \theta \rho \omega \sigma$, ${ }^{\text {s }}$, erection). Excessive erection.]
11. Hyper-ostosis ( $\partial \sigma r$ t́ov, a bonc). Enlargement of a bone, or of its membranous covering.
12. Myper-oxymuriatic acid. Tho former name of chloric acid. Its compounds aro hyper-oxymuriates, or neutral salts, new called chlorates. See Chlorinc.

21．Hypar－sthenica（ootvos，strength）． Sthenica．A term applied to stimulants， as distinguished from hyposthenica（ijtb， under，）or contra－stimulants．

22．Hyper－trophy（rрофй，nutrition）．An excess of nutrition，as applied to tissucs and organs；it is indicated hy increase of size，and sometimes of the consistence， of the organic texture．Hypertrophy of the white suhstance of the liver is de－ scribed hy Baillie as the comnion tubercle of the liver，and is known in this country by the name of the drunkard＇s liver．The accidental erectile tissue is，in some cases， composed of capillary vessels in a state of hypertrophy．
［HYPERICUM．A Linnean ganus of plants of the natural order Hyperiacea．］
［Hypericum perforatum．St．John＇s Wort．A perennial shrub，common to Europe and the United States．It formerly enjoyed high repute sa medicine，and particularly as a vulnerary．It was employed for a very large numher of diseases，but at present it has fallen into disuse，except in domestic practice．］

HYPNICA（urvos，sleep）．Agents af－ fecting sleep，either by inducing it or hy checking it；the former are called hypnot－ ica，the latter agrypnotica．

HYPNOBATES（\％пvos，sleep；$\beta$ aive，to walk）．A sleep－walker；one who walks in his sleep．See Somnanibulisin．

HYPINOSIS（ $i_{5}$ ，ivos，the fihrin of the blood）．A condition in which the quantity of fibrin in the hlood is frequently less than in health，while the quantity of corpuscles is either absolutely or relatively increased； and the quantity of solid constituents is also frequently larger than in the normal fluid．See Hyperinosis．
 to fear）．Dread of sleep．］

HYPNOLOGIST（ $\because \pi \sim$ vos，sleep ；doyoss an account）．A name assumed by the late Mr．Gardner，on account of his method of procuring sound and refreshing sleep at will．It depends on the bringing of the mind to the contemplation of a single sen－ sation；＂that instant the sensorium abdi－ cates the throne，and the liypnotic faculty stecps it in oblivion．＂See Monntony．
HYPNOTICS（ $\%$ nvos，slecp）．Medicines whieh causo sleop．They are also termed narcotics，anodynes，and soporifics．
［IIYPNOTISM（ध̃vos，sleep）．A state of slecp．］

II YPO－（in $\delta$ ）．A Greck preposition signifying under，or deficiency．In che－ mistry，it denotes at smaller quantity of acid than is found in the compounds to which it is prefixed，as in hypo－sulphuric acid，\＆c．

1．Dyp－amia（aipa，blood）．Deficieney of blood；a term syuonymous with ancmiu， and denoting a disease analogous to etiola tion in plants．
［2．Hypo－branchial（ $\beta$ pávzta，the gills）． A term applied hy Prof．Owen to the ho－ mologues of the lateral lingual bones ia fishes，\＆c．］

3．Hypo－chlorous acid．A hleachiag compound of chlorino and oxygen．
［4．Hypo－chondriac（ $\chi$ bidoos，a cartilage）． Belongiug to the hypochondria；a person affected with hypochondriasiz．］

5．Hypo－chondriasis．Hyp；vapours； low spirits；hlue devils；dyspepsia，with a sense of uneasiness in the hypochon－ dria，\＆c．，and great lowness of epirits．It has heen designated，by Dr．Cheyne，the English malady；and has heen also termed ＂morbus literatorum．＂

6．＇Hypo－choudrium（ $\left.\chi^{6} v \delta \rho o s, ~ c a r t i l a g e\right) . ~$ The hypochondriac，or upper lateral re－ gion of the abdomen，under the cartilages of the false ribs．

7．Hypo－chyma（xiw，to pour out）．Hy－ pochysis；apochysis．These are terms applied hy the Greeks to cataract，which seems to have heen first introduced hy the Arahian writers；though the more common name among them was gutta ohscura．It is the suiffusio of the Latins．

8．Hypocroteriform（хparnp，a enp：forma， likeness）．Salver－shaped；as applied to a calyx or corolla，of which the tube is long and slender，and the limb fiat．
［9．Hypo－gastric（ya⿱刀⿰㇒⿻二丨冂刂⿱亠䒑口阝，the stomach）． Relating to，or belonging to，the sto－ mach．］

10．Hypo－gastrium（yaatinp，the helly）． Tha lower anterior region of the abdomen， or super－pubic．
［11．Hypogens（ $\gamma \eta$ ，the earth）．Suhterra－ nean．Applied，in botany，to those cotr－ ledons which remain beueath the carth； opposed to cpigcous．］

12．Hypo－glossal（ $\gamma \lambda \tilde{\omega} \sigma \sigma a$ ，the tongue）． ［Beneath the tongue．］The name of the lingualis，or ninth pair of nerves，situated beneath the tongue．

13．Mypo－gala（riina，milk），Effision
Hypo－hama（ajpa，blood），（of a milky
Hypo－lympha（lymph），sanguine－
Hypo－pyum（－їои，pus），Jous，lym－ phy，or purulent anid into the chamier of the aqueous humour of the eyc．Empye－ sis ocill（ $ह v$, in ；$\pi$ viov，pus，）denotes an effu－ sion of pus behind，as well as in front of， the iris．

14．Hypn－gynous（yury，a woman）．That condition of the stamens of a plant in which they contract no adhesion to the sides of the calyx，as in rannnculus．
［15．Hypo－nitromeconic acid．an acid
procured by the action of nitric acid on mecorine, and composed of one atom of meconine and balf an atom of hyponitrous acid.
16. Hypo-nitrous acid. The name given by Turncr to nitrous acid, or the azotous of Thenard; while hypo-mitric acid is anotber name for the nitrous acid of Turner, or the peroside of nitrogen.
17. Hypo-physis ( $\phi \cup \omega$, to be developed). Tbe gland-like hody and sac wbich form an appendage to the under surface of the third ventricle of the braiu, and are contained in tbe sella turcicæ. See Merencephalon.
18. Hypo-physis cerebri. Tbe pituitary gland or body, in wbich tbe infundibulum ends.
19. Hypo-picrotoxic acid. An amorphous, hrown, solid acid procured from Cocculus Indicus, a pproacbing to picrotoxin in its composition.
20. Hypo-spadias ( $\sigma \pi a ́ \omega$, to draw). Tbat malformation of the penis, when the uretbra opens in tbe under surface. See Epispadias.
21. Hypo-8arca ( $\sigma \grave{\rho} \rho \xi$, $\sigma \alpha \rho x \partial s$, flesh). A term used by Celsus, \&c., for anasarca; the aqua subter cutem of Cælius Aurelianus.
22. Hypo-8tasis ( $\sigma$ rá $\omega$, to stand). A sediment, as that of the urine.
[23. Hypo-8thenia (ot'́vos, strengtb). Weakness.]
24. Hypo-thenar ( $\theta$ évap, the palm of tbe hand). One of the muscles contracting the thumb.
25. Hypo-thesis (imori $\theta \eta \mu$, to putunder). A system, or doctrine, founded on a theory. Induction, on tho contrary, is the collecting together numerous facts, and drawing conclusions from a general examination of the wholc.
[26. Hypo-trophia ( $\tau \rho \AA \phi \omega$, to nourisb). Deficient nourishment.]
[27. Hypo-tympauic. Applied by Prof. 0 wen to the inferior sub-divisions of the tympanic pedicle wbich supports the mandihle in fishes.]

HYRACEUM. A substance procured
from the Hyrax Capensis, or Cape badger, and named in reference to tbo animal, in the same way as Castoreum to castor. It is probably an excrement of the animal, and it has heen proposed as a substitute for Castoreum.
[HYSSOPUS OFFICINALIS. A Labiato plant, a native of Europe. Tho flowering leaves and summits have a warm, bitter taste, and aromatic odour; and a decoction of tbem bas been used as an expectorant in cbronio catarrh, particularly in aged persons.]
HYS'TERA (iotipa). Tbe Greek term for the uterus, matrix, or womb. This term is the feminine of Úatspos, inferior; the womb being the lowest of the riscera.

1. Hyster-algia (ảдyas, pain). Dolor uteri. Pain situated in the uterus.
[2. Hyster-atresia (atresia, closure). Occlusion of the womb.]
2. Hysteria. Hysterics, vapours, bysteric fit, fits of tbe mother; a nervous affection, chiefly seen in females. See Clavus hystericus, Globus hystericus, \&c.
3. Hyster-itis. Inflammation of the uterus.
4. IIystero-cele (кฑं入n, a tumour). Hernia of the uterus.
[6. Hystero-cystocele (kúaris, the bladder ; $\kappa \bar{\eta} \lambda \eta$, a tumour). Hernia of the uterus, with displacement of the hladder.]
[7. Hystero-dynia (dóvı, pain). Pain in the womb; hysteralgia.]
[8. Hystero-mania. Nympbomania.]
[9. Ilystero-metrum ( $\mu$ ícoov, a measure). An instrument for measuring tbe size of the uterus.]
5. Hystero-ptosis ( $\pi$ rī̃ots, prolapsus). A prolapsus, or falling down of the uterus.
[11. Hystero-tome ( $\mathrm{T}_{1} \boldsymbol{\mu} \boldsymbol{w}$, to cut). An instrument for dividing the neck of the womb.]
6. Hystero-tomia (rop̀̀, a section) Tbo Cæsarian section, or incision into the abdomen and uterus, to extract the fætus.
HYSTRIACIS (var $\rho \ell \xi$, a porcupine). Porcupine hair; bristly bair; an affection in wbich the hair is thick, rigid, and bristly.

## I

IAMATOLOGIA ("a $\alpha a$, a remedy; doyos, an account). Acology. That department of therapeutios which is devoted to the considcration of remedics. Some writers linit the term acology to the considcration of surgical and mechanical renedies.

IATRALIPTA (latpòs, a physieian;
 A physician who cures hy ointinents and frictions.-Celsus.

Iatraliptic Mcthorl. The application of medicines to the skin, aided by friction. It has been terined tho epidermic method, espnoio medioine, \&o.

IATREUSOLOGIA (larpsúw, to cure; Aoyos, a description). A term applied by Sprengel to general Therapeutios.

IATROMATHEMATICI (iatpds, a physician; $\mu a v \theta a v \omega$, in learn). A schonl of physicians who explain the functions of tho body, and the action of remedies, on the principles of mechanical philosophy.
[IATRIA (larpds, a physician). The healing art; medicino.]
[IATRINE. A female practitioner of medicine.]
[IATRO (latpds, a physician). Used as a prefix in some compound words to designate some connection with tho healing art.]
[IBERIS AMARA. Bitter candy-tuft. A small herhaceous plant, indigenous in Europe ; the seeds, lehves, stem, and root of which are said to possess medicinal properties, but the first are most efficacious. It is said to be useful in quieting the excited action of the heart, especially in hypertrophy of that organ; and he also useful in asthma, bronchitis and dropsy. The dose of the seeds is. from one to three grains.]

ICE. Glacies. Congealed water. The temperature at which it is solidified is called the freezing or congealing point, or $32^{\circ}$ of Fahrenheit. During liquefaction, its temperature is not changed; and, hence, the caloric which it has ahsorbed is said to have become latent, and is sometimes called, from its effect, the caloric of fuidity.

ICE CAP. A hladder containing pounded ice, applied to the head in inflammation of the hrain.
[ICE PLANT. Common name for the Mesembryanthemum crystallinum.]

ICE POULTICE. This consists of a bladder, containing pounded ice, to he applied to hernial tumours, in order to diminish their size and facilitate their reduction.

ICELAND MOSS. Cetraria islandica. Alichen, growing on the ground in exposed situations in northern countries, and affording a light, nutritious aliment.

ICELAND SPAR. One of the purest varieties of calcareous spar, or crystallized carbonate of lime.

ICHOR (ix $\bar{\rho}$, sanies, corrupted blood). A thin acrid discharge, issuing from wounds, ulcers, \&c.

IC II THYOCOLIJA (i $\chi$ Oòs, ixOúos, a fish; к $\delta \lambda \lambda a$, glue). Isinglass; fish-glne; a substance prepared from the air-bladder or sound of different species of Acipenser, and other genera of fishes. Sometines the air-bladder is dried unopened, as in the ease of purse, pipe, and lump isinglass
of the shops. At other times it is laid open, and submitted to some preparation; being either dricd unfolded, as in the leaf and honeycomb isinglass; or folded, as in the staple and book isinglass; or rolled out, as in riblon iṣinglass. When it arrives in this country, it is picked or cut, - Pcreira.

ICHTHYOLOGY (ix日ìs, $l x$ 0uos, a fish; גóyos, a description). Tlat branch of Zoology which treats of fishes.

ICHTHYO'SIS (l义0úa, dricd fish-skin). Fish-skin disease; a papillary, indurated, horny condition of the skin. It is distinguished into the simple and the horny.

Ichthyiasis. A synonyme for the above disease, adopted hy Good. The termina-tion-iasis is more riccordant with the analogy followed in the formation of similar names- Forbes.
[ICICA ICICARLBA. A lofty tree, helieved to furnish the Brazilian elemi.]

ICOSANDRIA (eix oot, twenty ; àvip, a man). The twelfth class in Linnæus's system, comprising plants whieh hare twenty or more stamens inserted into the calyx, hence-
licosandrous. Having twenty or more stamens inserted into the calyx.

ICTERUS. The Jaundice ; also called morhus regius, morhus arcuatus, aurigo, \&c. According to Pliny, the term is derived from the name of a hird, called by the Greeks írepos, hy the Romans galbulus; the looking upon this bird by the jaundiced person was said to cure the patient, though it killed the hird.
[1. Icterus albns: White janndice; a term for chlorosis.]
[2. Icterus niger. Black janndice; so called when the colour is very dark.]
[3. Icterns viridis. Green jaundice; when the colour of the skin is of a greenish hue.]
4. Icterita. Infantile jaundice.
5. Ietcr-odes (zidos, likeness). A state of complexion resembling that of jaundice.
[ICTODES FGTIDUS. A synonyme of Symplocarpus fortilus.]
ICTUS SOLIS. Conp de solicl. Sunstroko; an effect produced by the rass of the sun upon a part of the body, as erysipelas, or inflammation of the brain or of its membranes.
[IDEAGENIC ( (8ia, a thought; yeváw, to beget). Creating ideas.]
[IDEALITY ( lica, a thought). A facnlty peculiar to man, producing the lore of the beautiful, and the desire of perfection.]
[IDEOOLOGI (idia, a thonght: $\lambda$ byos, a discourse). The science of thought; the plitusophy of mind.]
[IDEOSYNCIRTSIS (idia, an idca; ovyXuors). Confusion of ideas; delirium.]

IDEO-MOTION. Motion arising from dominant idca, - neither voluntary nor purely reflex.
-IDES ( हidos, resemblance). A terminal denating resemblance to the object indieated by the word to which it is affixed.]

IDIOPATHIC ( ${ }^{\delta} \delta \stackrel{s}{ }$, peculiar; $\pi \dot{a} \theta o s$, affection). Primary disease; aṣ opposed to symptomatic.

IDIOSYNCRASY (*\&८os, peculiar; oúzkpaots, composition). Individual peculiarities, hereditary or induced. Thus, there are persons in whom opium does not induce sleep; others, in whom milk seems to act as a poison; some, who. are purged by astringents; others, in whom purgatives appear to produce an astringent effect.

IDIOT (idicirns, an ignorant person, who does not practice an art or profession). A person deprived of sense.

IDRIALINE. A substance ohtained from a mineral from the quicksilver mines at Idria in Carniola. It consists of carhon and hydrogen.
[IDROSIS (ıסpow, tọ sweat). Sweating; Ephidrosis.]
[IGASUR. A name for the Faba Sancti Ignatii.]
[IGASURATE. A combination of iga, suric acid with a salifiable hase.]
[IGASURIA. A name given by M. Desnoix to an alkali discovered by him in nux vomica.]

IGASURIC ACID. The name given by Pelleticr and Caventou to a peeuliar aeid, which occurs in combination with stryehnia in nux vomica, and the St. Ignatius's bean; hut its existenee, as different from all other known acids, is doubtful. It is so called from the Malay, nane hy which the natives in India designate the Faba Sancti Ignatii.
[IGNATIA AMARA. A synonyme of Strychnos Ignatia.]
[IGNATII FABA SANCTI. St. Ignatius's. Bean; the seed of the Ignatia amara.]

IGNIS FATUUS. A luminous appearance or flame, frequently seen in the night in the country, and ealled Jack o' lantern, or Will with the wisp. It is prohably occasioncd by the extrication of phosphorus from rotting leayes and other vegetable matters.

IQNIS SACER (sacred fire). Ignis Sancti Antonii, or St. Anthony's, fire; [Ignis Persicns,] erysipclas, or the rose; or the febris erysipelatosa of Sydenham.

IGNIS VOLATICUS. Literally, flying fire; a term for erysipelas.

IGNITION (ignis, fire). An effeet of caloric, implying an cmission of light, from bodies which are much heated, without their suffering any change of composition. Bodies begin to hecome ignited, or red-hot, at about the 800th degree of Fahrenheit; the bighest point of ignition is a perfeetly white light.

IGREUUSINE, That portion of volatile oils which is odoriferous, and is coloured by treating it with nitric acid; it is called elaiödon hy Herherger.
[ILEADELPHOUS. Applied hy Geoffrey St. Hilaire to monsters which are double inferiorly; Diadelphous.]
[ILEITIS. Inflammation: of the ileum.]
[ILEO-. As a prefix to compound names, denotes connection with, or rclation to, tho, ileum intestine.]
[Ileo-creal valve,] The valve which
Meo-colic válvc. guards the opening from the ileum into the colon; called also the valve of Bauhin, valve of Tulpius, val ve of Fallopius:]
[Ileo-typhus. Abdominal Typhus; typoid fevcr.]

I'LEUM ( $\varepsilon$ i $\lambda \dot{f} \omega_{\mathrm{s},}$ to turn ahout). The lower three-fifths of the small intestine, so called from their convolutions, or peristaltic motions; they extend as far as the hypogastric and iliac regions.

I'LEUS (eìía, volvo, tọ turn about;hence volvulus). Costiveness, with twisting ahout the umbilical region. It is also called the Iliac Passion; Chordapsus ( $\chi$ орঠ才, a chord; ärra, to bind) ; Misercre, an invocation for pity, \&c.

ILEX. The Latin name for the holm oak; now the generic name for holly; [of: which several species have heen employed in medicine.]
[1. Ilex Aquifolium. Common European Holly. The leaves, bark, and berries of this species were considered to possess medical properties, The leaves were esteemed diaphoretic, and an infusion of them was used in catarrh, pleurisy, eruptive fevers, \&c. The bark, a few years, since, gained considerable reputation as an antiperiodic; it was given in powder, in the dose of a drachın. The berries aro. said to be eathartic in the dose of ten or twelve, and sometimes to produce emesis. Their expressed juice has heen given in jaundice.
[2. Ilex Cassina. An evergreen shrub, growing in the Southern States. A decoction made from the toasted leaves was employed by the Iudians as a medicine, and as a drink of etiquette at their eouncils. It acts as.an emetic.]
[3. Hex Dahoon. This possesses si-
milar properties with the preceding specics.]
[4. Ilex matc. A synonymo of Ilex Paraguaiensis, q. v.]
[5. Ilex opaca. American Holly. This species is said to possess similar propertics to the Aquifolium.]
[6. Ilex Paraguaiensis. This furnishes the celehrated Paraguay tea, a favourito South American heveragc.]
[7. Nlex vomitoria. Cassina. The decoction of the toasted leaves forms the black drink, employed hy tho Indians as a medicine and a drink of etiquette at their councils.]
[ILIAC. Belonging to, or connected with, the ilium. See Mium.]

Miac Passion. Another name for ileus, and also for colic.

ILIACUM OS. Os coxarum. [Iium.] Another name for the os innominatum, derived from the circumstance that this compound hone supports the parts which the ancients called ilia, or the flanks.

1. Itium os. The uppermost portion of the os iliacum, prohahly so named because it seems to support the intestine called the ileum. This hone is also termed pars iliaca ossis innominati.
2. Iliac fossa. A broad and shallow cavity at the upper part of the ahdominal or inner surface of the os iliacum. Another fossa, alternately concave and convex, on the femoral or external surface, is called the external iliac fossa.
3. Iliac region. The region situated on each side of the hypogastrium.
4. Hiac arteries. These are termed common, when they are formed hy the bifurcation of the aorta. They afterwards divide into the external iliac, and the internal or hypogastric arteries.
5. lliac mesocolon. A fold of the peritoneum, which embraces the sigmoid flexure of the colon.
6. lliacus internus. A muscle situated in the cavity of the ilium.
7. Ilio-. Terms cowpounded with this word denote parts connected with the ilium, as ilio-lumbur, ilio-sacral, \&e.

ILICIN. A non-azotized vegetahle compound, ohtained from the llex aquifolium, in tho form of brownish-yellow crystals, which are very hitter and fehrifuge.
[ILLICIUM ANISATUM. Star Aniseed. An evergreen tree of the family Magnoliacea, a nativo of China, Japran, and Tartary. Its fruit yields an oil (Oleum badiani) having the odour and taste of Anise, and often sold in this country as common oil of aniseed.
[Illicium Floridanum. Florida Anisetree. A species growing in Florida; its
bark and leaves have a taste analogous to Anisc.
[Illicium parviforum. This epecies grows in Georgia and Carolina; its hark has a flavour resembling that of Sassam fras.]

ILLUSION (illudo, to sport at). Deception, as of the sight, imagination, \&c.
ILLUTATIO (in, upon; lutum, mud). Mud-hatbing; immersion in the slime of rivers, or in saline mud. Hot dung is used in France and in Poland.

ILMENIUM. The name given to a supposed new metallic element.
[IMAGINATION (imagino, to make images). The faculty of creating, with acquired ideas, ideas of a different order from those formed by the judgment and ordinary reasoning, founded on experiencé and obscrvation.]

IMBECILITY (imbccillus, weak). Weakness of mind or intellect.

IMBIBITION (imbibo, to drink in). [The act of sucking up.] The terms imbibition and exudation, or transpiration, used in physiology, are analogous to those of aspiration and expiration, and have heen lately translated, by Dutroehet, by the two Greek words, endosmosis and exosmosis.

IMBRICATED (imbrex, imbricis, a roof-tile). A term applied to the hracteæ of plants, when they overlap each other, like tiles upon the roof of a house, a distinguishing character of the Glumaсес.
IMITATION. A term in Phrenology, indicative of a disposition to copy the manners, gestures, and actions of others; it is generally more active in children than in adults. Its organ is situated at the front of the head, on each side of that of Benevolence.
[IMMACULATUS (in, priv.; macula, a spot.). Immaculate; without spots.]
[IMMARGINATUS (in, priv.; marga, a horder). Imınarginate; haring no marked border.]

IMMERSION (immergo, to dipin). The act of plunging any thing into mater, or any other fluid.
[IMMOVABLEAPPARATUS. A handage imbncd with starch, dextrin, or some other adbesive suhstance, which, when dry, hecomes firm, and retains the parts to which it is applied in their proper position. It is emploged for certain fractures, dislocations, \&c.]
[IMPACTED (impingo, to drive in). Foreed in: nsed in reference to the head of the child when it has advanced some distance into the pelvis and cannot proceed further, or when it is immovable, cx-
cept upward into the pelvie carity; it is then said to ho impaeted or loeked.]
[IMPAR (in, neg.; par, equal). Unequal, odd.]
[IMPATIENS FULVA and I. PALLIDA. Toueb me not. Jewcl-Weed. Balsam Weed. Indigenous plants of the order Geraniacec. Drs. Wood and Bache state that an ointment made by hoiling the fresh plants in lard has been employed hy Dr. Ruan with great advantage in piles. The I. Balsumina, or Balsam Weed, resemhles the other species in its effects.]

IMPENETRABILITY (in, not; penetro, to penetrate). That property hy which a body occupies any space, to the exelusion of every otber body. In a popular sense, all matter is penetrable; but, philosophieally speaking, it is impenetrable, what is called penctration being merely the admission of one substance into the pores of another.
[IMPERATORIA OSTRUTHIUM. Masterwort. An Umhilliferous plant, indigenous in the south of Europe. It is a stimulant aromatic; at present it is rarely used, but formerly it was considered to possess diversified remedial powers, and was used in an extended range of diseases, with so mucb supposed sueeess, as to have gained for it the title of divinum remedium.]
[Imperatrin. A peculiar crystallizable suhstance discovered hy Osann in the root of Imperatoria ostruthium.]

IMPER'FORATE (in, not; perforatus, bored througb). A term applied to any part congenitally closed, as the anus, the hymen, \&e.

IMPERIAL. Ptisana imperialis. A cooling heverage, prepared by mixing half an ounce, each, of cream of tartar and fresh lemon peel, bruised, with four ounces of white sugar, and three pints of boiling
water. water.

IMPETIGINES. Cutaneous diseases ; depraved hahit, with affections of the skin; the third order of the class Cachexice of Cullen. See Impetigo.

IMPETI'GO (impeto, to infest). Humid or running tetter, or scall; yellow, itehing, clustered pustules, terminating in a yellow, thin, scaly crust. Bricklayers' iteh and Grocers' itch are loeal tetters, produced by tho aerid stimulus of lime and sugar.
[IMPETIOLAR (in, priv.; petiolus, a petiole). Applied to plants, the leaves of which are united to the stem without the intervention of a petiole.]

IMPLANTATIO (implanto, to engraft). A term applicd to a monstrosity, in whieh tivo bodies are uuited, but only one is per-
fectly developed, while the other remains in a rudimentary state.

1. Implantatio externa. This is of tro kinds:-1. Implantatio extorna aqualis, in which the parts of the imperfect embryo aro conneeted with corresponding parts of the perfect one; as when the posterior parts of the body of a diminutive foetus hang to the front of the thorax of a fully-formed child, or where a third foot, parasitic hand, or supernu merary jaw is present: and, 2. Implantatio externa incequalis, in which the perfect and imperfect foetus are connected hy dissimilar points.
2. Implantatio interna. In this ease one foetus contains within it a second.Miiller.

IMPLICATED. A term applied by Celsus and others to those parts of physio which bave a necessary dependence on one another ; but the term has been more signifieantly applied, by Bellini, to fevers, where two at a time afflict a person, either of the same kind, as a double tertian; or of different kinds, as an intermittent tertian, and a quotidien, called a semitertian.

IMPLUVIUM (in, and pluo, to rain). A shower-hath; an embrocation.

TMPONDERABLES (in, priv.; pondus, weight). Agents which are destitute of weight, as heat, light, and elcetricity.
[IMPOSTHUME. An abscess.]
IMPOTENCE (impotens, unahle). Ineapahility of sexual intercourse, from organic, functional, or moral cause.

IMPREGNATION. The aet of generation on the part of the male. The corresponding act in the female is conception.

INANITION (inanio, to empty). Emptiness, from want of food, exhaustion, \&c.

INCANDESOENCE (imeandesco, to hecome white-hot). The glowing or shining appearance of heated hodies; properly, the aequisition of a white heat.
INCANTATION (ineanto, to enchant). A charm or spell; a mode anciently employed of curing discases by poetry and music. See Carymatives.

INCARCERATION (in, and earcer, a prison). A term applicd to cases of hernia, in the same sense as strangulation. Scarpa, however, restriets the former term to interruption of the freal matter, without injury of the texture, or of the vitality
of the bowel of the bowel.
INCARNATION (in, and caro, carnis, flesh). A terin synonymous witb granulation, or the process which takes place in the healing of uleers.
INCIDENTIA (incido, to cut). A name formorly given to medicines which consist.
of pointed and sharp particles, as acids, and most salts, which are said to incide or cut the phlegm, when they hreak it so as to occasion its discharge.

INCINERATION (incincro, to reduce to ashes; from cinis, a cinder). Tho reducing to ashes by burning. Tho combustion of regetable or animal substances for the purposo of obtaining their ashes or fixed residue.

INCISION (incido, to cut). The act of cutting, with the bistoury, scissors, \&c.

INCISI'VUS (incisor, a cutting-tooth). A name sometimes given to the levator labii superioris proprins, from its arisiug just above the incisores.

1. Incisivus medius. The name given by Winslow to the depressor labii superioris alceque nasi, from its rising from the gum or socket of the fore-teeth. Alhinus termed it depressor aloe nasi.
2. Incisivus inferior. A name given to the levator wenti, from its arising at the root of the incisores.

INCISO'RES (incida, to cut). The fore or cutting teeth. Sce Dens.

INCISORIUM (incido, to cut). A table whereon a patient is laid for an operation, by incision or otherwise.

INCISURA (incido, to cut). A cut, gash, or noteb; a term applied to two notches of the posterior edge or crest of the ilium.

INCOMBUSTIBLE CLOTH. A cloth manufactured of the fibres of asbestos, supposed to have been anciently used for wrapping around dead hodies, when exposed on the funeral pile.
[INCOMPATIBLE (in, neg.; compatior, to agree). Not consisting ouc with another; applied to medicines which act chemically on each other, and cannot, therefore, with propriety be prescribed together.]

Inconipatible Sults. Salts which cannot exist together in solution, without mutual decomposition.

INCOMPRESSIBILITY. That property of a substance, whether solid or fluid, by which it resists being pressed or squeezed into a smaller bulk. The ultimate particles of all hodies are supposed to be incompressible.

INCONTINENCE (in, not; contineo, to contain). Inability to retain the natural cvacuations, as entresis, or incontinence of urine, \&c.
[INCRENENTUM (incresco, to grow upon). Growth, increase, increment.]

INCUBATION (incubo, to sit upon). A teru applied to tho period during which the lien sits on her eggs. This term also denotes the period ocenpied between the application of the cause of inflam-
mation, and the full establishment of that process.

IN'CUBUS (incubo, to lic or sit upon). Succubus; cphiultes; ludibria l'unni. Night-mare ; an oppressive sensation in the chest during sleep, accompanied with frightful dreams, \&c.
[INCUMBENS (incumbo, to lie upon). Lying upon any thing; in hotany, applied to the cotyledons of some Cruciferous plants, which are folded with their backs upon the radicle.]
[INCURVATUS (incurvo, to bow). Bowed or bent; incurvate; incurved.]
INCUS (an anvil). A small bone of the internal ear, with which the malleus is articulated; so named from its fancied resemblance to an anvil. It consists of a hody and two crura.
INDEHISCENT. Not opening spontaneously; as applied to certain ripe fruits.

INDEX (iudico, to point out). The fore-finger; the finger usually employed in pointing at any object.
[INDIAN. Of or belonging to India.]
[Indian Arrow-root. Common name for the root of Maranta arundinacea.]
[Indian Corn. Common name for the Zea mays.]
[Indian Fig. Common name for the Cactus opuntia.]
[Indian Hentp. Common name for Cannabis Indica.]

Indian Ink. See Ink.
[Indian Physic. A common name for Gillenia trifoliata.]

Indian Rubber. See Caoutchouc.
Indian Rubber, Vilcanized. Caoutchonc combined with a very small proportion of sulphur. This substance is much more elastic than common India rubher, and resists the extremes of cold and heat, also the effects of naphtha, oil of turpentine, ether, oils, \&c.
[Indian Tobacco. Common name for the Lobelia inflata.]
[Indigu Turnip. Common name for the Arum triphyllum.]
[Indian Wormzood. Common name for Artemisia Indica.]
Iudian Ycllow. A paint of a bright yellow colour, imported from India.
[INDICATED (indico, to point out). Applicd to means which are called for as proper to be used in the treatment of diseasc.]

INDICATION (indico, to point out). Circumstances which point out. in a diseasc, what remedy ought to be applied. When a remedy is forbiddeu, it is said to be coutra-indicated.

INDICATOR (indico, to point out). A muscle of tho fore-arm, which points the
index or fore-finger. It is also called the extensor digiti primi.
INDIGENOUS (indigena, a native). A term a pplied to diseases, animals, or plants, peculiar to a country.

INDIGESTION (in, neg.; digero, to distribute). Dyspepsia; interrupted, dificult, or painful digestion.

INDIGNABUNDUS (indignor, to bc indignant). Literally, angry, scornful: a name given to the rectus internus, from the expression of anger or scorn, whicb the action of tbis musele imparts.

INDIGO. A blue pigment, obtained from the leaves of all the species of Indigofera, and various other plants. Berzelius separated from it gluten of Indigo, indigo brown, and iudigo red.

1. White indigo, otherwise called reluced indigo, is produced by the action of deoxidating bodies upon blue indigo. In this state, Liehig termed it indigogen.
2. Indigotic or anilic acid is formed when indigo is dissolved in nitric acid considerahly diluted. This is the nitranilic acid of Berzelius.
3. Indigotin. Indigo-blue; a constituent of the indigo of commerce; the sublimate obtained hy heating indigo.
INDINE. A crystallized substance, of a benutiful rose-colour, formed by the action of potash on sulphesatyde. It is isomeric with white indigo.

INDIVIDUALITY. A term in Phrenology indicative of the intellectual faculty which perceives the existence of external objects and their physieal qualities, and, when in excess, induces men to personify ideas, passions, \&c. Its organ is situated behind the root of the nose, and its greater development enlarges the forehead between the eyebrows. See Eventuality.
[INDOLENT (in, priv.; doleo, to be in pain). A term applied to tumours which are slow in their progress, and attended witb little or no pain.]
INDOLES. The natural disposition, relating to the qualities of the mind.

INDUCTION. That law by whieb an electrified body induces in contiguous substances an electric state opposite to its own.
INDUPLICATE. A form of vernation or restivation, in which the margins of the leaves are bent abruptly inwards, and the external face of theso margins applied to each other, without any twisting.

INDURATLON (induro, to harden). An increaso of the natural eonsistence of organs, the effect of chronie inflammation; opposed to softering or ramollissc-
ment. ment.
[INDUSIUMI (induco, to draw over).

The involucrum or membranous covering of ferns; applicd also to the Amnion because it covers the foetus.]

INELRIANTS (inebrio, to intoxicate). Agents which produce intoxieation.
[INERMIS (in, priv.; arma, weapon). Unarmed; applicd, in botany, to parts of plants whieb have no spines.]

INERTIA (iners, sluggish). Erroneously called vis inertica. A term applied to express the inactivity or opposing force of matter with respect to rest or motion. It is overcome by attraction or by external force.

1. The Quantity of Matter of a body is determined by its quantity of inertia, and this latter is estimated hy the quantity of force necessary to put it in motion at a given rate.
2. The term Inertia is applied to tho condition of the uterus, when it does not contract properly after parturition ; it is a cause of hæmorrbage.

INFANTICIDE (infans, an infant; cado, to kill). The destruction of tbe child, either newly born, or in the course of parturition. Comparo Foticide.

INFARCTION (infarcio, to stuff or cram). Stuffing ; constipation.

INFECTION (inficio, to stain). The propagation of disease by effluvia from patients erowded together.

INFERIOR. A term applied to the ovarium or fruit, when the calyx adheres to its walls; when no such adhesion occurs, tho ovarium or fruit is termed superior. So also the calyx is said to be inferior in the latter case, supcrior in tho former.

INFERO-BRANCHIA. Animals which bave their gills ( $\beta$ pá $\gamma \chi$ ia) on their sides.
INFIBULATIO (infibulo, to buckle in). An affection in whicb the prepucc cannot be retracted.
INFILTRATION (infiltratio). The diffusion of fluids into the cellular tissue of organs. It may he serout, and is then termed œedema and anasarca; or sangnineous, and is then called hæmorrhage and apoplexy; or purulent, occurring in the third stage of pneumonia; or tuberculons, either gray or gelatiniform.
[INRINITESIMAL. An old terin revived by homoopathists and applicd to tbeir so-called doses of medicine, whieh are so minutc as to require tho largest sharo of eredulity to believo that they can exert any influence on the systcm whatever: such are their infinitesimal closes.]

INFIRMARY. A place whero tho sick poor aro received, or can get advice and medicines gratis.
[INFLAMMABLE (inflamm, to set on fire). Readily inflamed.]

Inflammable Air. Ilydrogen gas; formerly called phlogiston, or phlogistieated air.

INFLAMMATION (inflammo, to burn). A state ebaracterized, when situated externally, by pain, heat, redness, and turgidity. It is generally expressed in composition, in Greek words, by the termination itis, as pleur-itis, inflammation of the pleura; ir-itis, inflammation of the iris, \&e. Inflammation is distinguished
as- Heulthy, or adhesive ; that which disposes the part to heal or cicatrize.
2. Unhealthy; that whieh disposes to ulceration, erosion, slougbiug, \&e.
3. Common; that induced by common causes, as incisions, punctures, \&c.
4. Specific; tbat indueed by inoculation, \&c., as variola, \&e.
5. Acute, sub-acuite, and chronic; with reference to its intensity and duration.
6. Phlegmonous; that which is circumseribed, and disposed to suppuration.
7. Erysipelatons ; that which is diffused, and less disposed to suppurate.
S. Gangrenous; that which leads to mortification, or the deatb of a part.

INFLAMMATORY CRUSTI. The buffy coat which appears on the surface of the crassamentuu of blood drawn in inflammation, in pregnancy, \&c.

INFLATIO (inflo, to blow into). The state of tho stomacb and bowels, when distended by fiatus.
[INFLEXION (inflecto, to hend). Bending inwards.]
[INFLEXUS (inflecto, to bend in). Bent or curved inwards; inflexed.]

INFLORESCENC1 (infloresco, to flourish). A term expressing generally tho arrangement of fiowers upon a branch or stem.

INFT,UENZA (Ital. influevce, supposed of the stars; more probably of a peculiar state of the atmosphere). Epidemio febrile eatarrb. The French call it la grippe, under which name Sauvages first described the epidemic catarrhal fever of 1743. It was formerly called coccoluche, "becanse the siek wore a eap closo over their heads."
[INFRA. Bencath].
[1. Infra-maxillaris, Under the jaw.] 2. Infra-orbitar. [Infra-nrbital; infraorbitary.] Beneath the orbit; as applied to a foromen, a nerve, \&e.
[3. Infra-scapnlaris. Beneath tbe sloulder-blade.]
4. Infre-spinutns. A musele arising from the scapula below tho spine, aud
inserted into the humerus. See Supraspinatua.

INFUNDIBULIFORM (infundibulum, a funnel; forma, likeness). Funnel-shaped; a term applied by Winslow to a ligament joining tbe first vertebra to the occiput. In botany, applied to an organ with an obeonieal tube and an enlarged limh, as the corolla of tobacco.

INFUNDIBULUM (iiifundo, to pour in). A funnel; a term applied to-

1. A little funnel-shaped process of gray matter, attached to the pituitary gland. Unlike a funnel, bowever, it is not hollow internally.
2. Assmall eavity of the cochlea, at the termination of the modiolus.
3. The three large eavities formed hy the union of the calyces, and constituting, by their union, the pelvis of the kidney.

INFUSA (infoudo, to pour in). Infusions; aqueous solutions of vegetable substanees obtained without the aid of ebullition.

INFUSIBLE (in, not ; fundo, to pour). That which eannot be fused or reduced to tbe fluid state.

INFUSION (infundo, to ponr in). Tbe operation of pouring water, hot or cold, on vegetable substances, for the purpose of extracting their soluble and aromatie prineiples. [See Infusum.]

INFUSO'RIA (infundo, to pour in). Water animalcules; microscopic animals found in infusions of animal or regetable matter. Tbese are distinguished by Cuvier into-

1. Rotifcra (rota, a wheel; fern, to carry). Wheel-bearers, as the wheel inseet.
2. Homogena (ópoेs, the same; gévos, kind). Homogeneous animaleules, as the globe animalcule.
INFU'SUM (infundo, to pour in). An infusion; vulgò, a ter. A ratery solution, obtained by the maceration nf a vegctable substanee, in water, hot or cold.
[The following are tbe officinal (U. S. Ph.) infusions, with the formula for tbeir pre-paration:-]
[1. Infusnm Angusfure. Infnsion of Angustura Bark. R. Angustura Bark, bruised, $\hat{\jmath}^{\text {ss.; }}$ hoiling water, $0 j$. Maccrate for two hours in a eovered vessel, and strain.]
[2. Infusum Anthemidis. Infusion of Chamomilc. B. Chamomile, $\overline{\tilde{\jmath}}$ ss.: boiling water, $0 \mathbf{j}$. Maccrate for ten minutes in a covered ressel, and strain.]
[3. Infusum Armoracia. Infusion of Horse-radish. R. Horse-radish, sliced; wustard, bruised, each $\overline{\mathfrak{j} j}$.; boiling water,

Oj．Maccrate for two hours in a covered vessel，and strain．］
［4．Infusum Buchu．Infusion of Buchu． R．Buchu，氕j．；boiling water， 0 j．Mace－ rate for two hours in a covered vessel，and strain．］
［5．Infusum Capsici．Infusion of Ca－ yenne pepper． B．Cayenne pepper，in
 cerate for two hours in a covered vesscl， and strain．］
［6．Iufusum Caryophilli．Infusion of Cloves．Bu．Cloves，bruised，Zij．；boiling water， 0 j ．Macerate for two bours in a covered vessel，and strain．］
［7．Infnsum Cuscarillce．Infusion of Cascarilla．B．Cascarilla，bruised，Zj．； boiling water， Oj ．Macerate for two hours in a covered vessel，and strain．］
［8．Infusum Cutechu Composihum．Com－ pound infusion of Catechu．R．Catechu， in powder， $\mathcal{Z}^{\text {ss．}}$ ；cinnamon，hruised，$\overline{5}$ ．j．； boiling water， Oj ．Macerate for an hour in a covercd vessel，and strain．］
［9．Infusum．Cinchonce Compositum．Com－ pound infusion of Peruvian bark．R．Red bark，in powder， 3 j. ；aromatic sulphuric acid， f Zj. ；water， 0 j ．Macerate for twelve hours，occasionally shaking，and strain． The infusion may also be prepared from the same quantity of Red hark，in coarse powder，hy the process of displacement，in the manner directed for the infusion of Yellow bark；a fluid drachmof aromatic sulpburic acid being added to tbo water in which the hark is moistened．］
［10．Iufusum Cinchonce flavce．Infusion of Yellow hark．B．Yellow birk，bruised， Zj．；boiling water， $\mathrm{Oj}^{\mathrm{j}}$ ．Macerate for two hours in a covered vessel，and strain．Tbis infusion may also he prepared from the same quantity of Yellow bark，in coarso powder，in the following manner：Having inoistencd tbe bark thoroughly with water， introduce it into a percolator，press it sligbtly，and pour water upon its surface， so as to keep it covercd．So long as the liquid passes turbid，return it into tbe appa－ ratus；then allow the filtration to continue until a pint of clear infusion is obtained．］
［11．Infusum Cinchonce Rubrce．Infu－ sion of Red bark．R．Red bark，bruised， 3 j ．；boiling water，0j．Prepare the infu－ sion in the manner directed for infusion of
Ycllow bark．］
［12．Iufusum Colombce．Infusion of Co－ lumbo．R．Columbo，bruised，$\overline{3}$ ss．；boil－ ing water， 0 j ．Macerate for two hours in a covered ressel，and strain．］
［13．Inf wsmm Digitalis．Infusion of Foxglove．R．Foxglove， $\mathrm{Zj}^{2}$ ．；boiling water， Oss．；tincture of cinnainon，f $\overline{3} \mathrm{j}$ ．Macerato the Foxglove with tho water for two hours
20
in a covered vessel，and strain；then add the tincture of cinnamon．］
［14．Infusum Eupatorii．Infusion of Thoroughwort．R．Thoroughwort，亏j．； boiling water，Oj．Macerate for two bours in a cuvered vessel，and strain．］
［15．Infusum Gentiance Compositum． Compound infusion of Gentian．R．Gen－ tian，bruised，$\overline{3}$ ss．；orange peel，bruised； coriander，bruised，each， $\mathbf{3}$ j．；diluted alco－ hol， $\mathrm{f}_{3} \mathrm{iv}$ ．；water，f f xij．First pour on tbe diluted alcohol，and，tbree hours afterwards， the water；then macerate for twelyo hours， and strain．］
［16．Infusum Irumuli．Infusion of Hops．B．Hops，${ }^{2}$ ss．；boiling water， 0 j ． Macerate for two bours in a covered vessel， and strain．］
［17．Iиfusиm Kiamerice．Infusion of Rbatany．R．Rhatany，bruised， $\mathrm{Z}_{\mathrm{j}}$ ．；boil－ ing water， 0 j ．Macerate for four hours in a covered vessel，and strain．This infu－ sion may also be prepared from tbe same quantity of Rhatany，in coarse powder，by the process of displacement，in tbe manner directed for infusion of Yellow bark．］
［18．Infusum Lini Compositum．Cnm－ pound infusion of Flaxsced．R．Flaxseed， $\overline{3}$ ss．；liquorice root，bruised， $\mathrm{Z}_{\mathrm{ij} . ;}$ boiling water， 0 j ．Macerate for two bours in a covered vessel，and strain．］
［19．Infusum Pruni Virginianc．Infu－ sion of Wild－cherry bark．Rx．Wild－eherry bark，bruised，亏ss．；water，DJ．Maccrate for twenty－four bours，and strain．This infusion may also he preparcd from the samc quantity of Wild－cherry bark，in coarse powder，by the process of displace－ ment，as directed for infusion of Yellow bark．］
［20．Infusum Quassice．Infusion of Quassia．R．Quassia，rasped， $3^{\mathrm{ij} . ;}$ water， Oj．Maccrate for twelve bours，and strain．］
［21．Infusит Rhei．Infusion of Tibu－ barb．IR．Rbubarh，bruised， 3 j．；b boiling water，Oss．Digest for two hours in a co－ vered vessel，and strain．］
［22．Iufusum Rosce Compnsitum．Con－ pound infusion of Roses．R．Red roses， $\overline{3}$ ss．；boiling water，Oijss．：diluted sulphn－ ric acid，fZiij．；sugar，$\overline{3}$ iss．Pour the water upon thic roses in a glass vesscl； then add the acid，and macerate for lalf an bour；lastly，strain tbe liquor，and add the sugar．］
［23．Infusum Sarsaparilla．Infision of Sarsaparilla．R．Sarsaparilla，bruised，今jj．；boiling water， $0 \mathbf{j}$ ．Digest for two hours in a covered vessel，and strain．This iufusion may also be prepared from tho sarnc quantity of Sursaparilla，in coarso powder，by the process of displacement，in
the mode recommended for infusion of Yellow bark.]
[24. Infusum Sasвnfras Medulla. Infusion of Sussafras Pith. B. Sassafras pith, Zj.; water, 0 j . Macerate for three hours, and strain.]
[25. Infuвиm Sennc. Infusion of Senna. R. Senna, $\mathrm{Z}^{\mathrm{j} \cdot \text {; }}$ eoriander, hruised, $\mathrm{Zj}^{\mathrm{j}}$; boiling water, 0 j . Macerate for an bour in a covered vessel, and strain.]
[26. Infusum Scrpentaria. Infusion of Virginia Snake. root. B. Virginia Snakeroot, $\overline{3}$ ss.; boiling water, 0 j . Macerate for two hours in a envered ressel, and strain.]
[27. Iufuвum Spigelice. Infusion of Pink-root. B. Pink-root, $\bar{Z}^{\text {ss.; }}$; boiling water, 0 j . Macerate for two hours in a eovered vessel, and strain.]
[28. Infurum Tabaci. Infusion of Tobacco. B. Tobacco, 3 j .; boiling water, Oj . Macerate for an bour in a covered vessel, and strain.]
[29. Infusum Taraxici. Infusion of Dandelion. Rk. Dandclion, bruised, Zij.; boiling water, Oj . Macerate for two bours in a covered vessel, and strain.]
[30. Infusum Ulmi. Infusion of Slippery Elm bark. R. Slippery Elu bark, slieed and bruised, $\mathrm{Z}_{3} \mathrm{j} \cdot$; boiling water, Oj . Maccrate for two hours in a covered vessel, and strain.]
[31. Infusum Valeriance. Infusion of Valerian. B. Valerian, ${ }^{3}$ ss.; boiling water, 0j. Macerato for an bour in a eovered vessel, and strain.]
[32. Infusum Zingiberis. Infusion of Ginger. B. Ginger, bruised, $\bar{Z}^{\text {ss.; }}$ boiling water, Oj . Macerate for two bours in a covered vessel, and strain.]

INGESTA (ingero, to beap in). A Latin term for designating the food, drink, \&e. Sce Egesta.
[INGLUVIES. Gluttony; also erop or eraw of birds.]
INGRASSIAS, PROCESS OF. A triangular eminence of the upper aspeet of the spbenoid bone has heen termed the orbital process, or small wing of Ingrassias. [INGRAVIDATION. The ret of getting, or the state of being with young.]

INGUEN, -inis. The groin; the part between the abdomen and the thigh.

1. Inguinal glands, situated in the groin: tho superficial, between the skin and aponcurosis; the deep-seated, under the aponeurosis.
2. Inguinal hernia. Bubonocele; bernia of the groin. It is termed oblique, when it takes the course of the spermatic eanal ; direct, when it pushes direetly through tho external abdominal ring.
3. Ingninal ligamcut. A ligauent of the groin, commonly called Poupart's.

INHABITIVENESS. A term in Pbrenology indicative of a propensity in man, and the lower animals, to inhabit particular regions or countries, producing love of home, and determining in each species the welling and mode of life best adapted to it. Dr. Gall placed in this situation the organ of pride in man, and that of instinct in the lower animals, which prompts them to seek and inhabit the heights of mountains, tracing an analogy between the feelings which prompt to the pursuit of moral, and those which excite to physical, elevation. See, however, Concentrativenes8, with whicb this propensity has been confounded by other writers.

INHALATIO NITROSA. Fumigatio Nitrosa. A remedy for spasmodic asthma, consisting in the inhalation of the fumes produced by the deflagration of nitrate of potash with paper.

INHALATION OF WARM VAPOUR. An emollient remedy in irritation or inflammation of the tonsils, or of the membrane lining the laryna, trachea, or broncbial tubes. It consists in the inhalation of warm aqueous vapour, by means of Mudge's inhaler, or hy inspiring the rapour arising from warm water.
INHALATIONS (iuhalo, to inbrie). A general term comprehending tro classes of volatilized suhstances; viz., suffitus, or dry fumes; and halitus, or watery vapours.
[INHALER. An apparatus for inhaling vapours, employed in diseases of the pulmonary organs. Mudge's inhaler consists of a perster tankard, in the lid of which is a valve, and a ficxible tube. The ressel is partly filled with boiling water, and the rapour is inhaled through tbe tuhe. Various volatile articles may be added to the water, and the steam thus impregnated with them.]

INHUMATION (inhumo, to inter). The aet of interring. The placing a patient in an earth-hath.
[INIAD, INIAL (iviov, tbe oceipnt). Belonging to, or looking to, the oeciput; as term adopted by Dr. Barclay in rcferenee. to the aspects of the bead.]
[I'NION (iviov, the nape of the neek; from is, lvos, a sinew). The ridge of the oeciput. Henec-]
[I'nial. A term applied by Barclay to that aspect of the head which is towards tho inion. The opposite aspeet is ealled ant-inial.]

INJECTION (injicio, to throw in). A composition with which the resscls of any part of the body are filled for anatomical purposes. For ordinary purposes, it may be made of four parts of tallow, one part of rosin, and one part of bees-
wax; to which, when melted together, there is to be added some oil of turpentiue, having a sufficient quantity of colouring matter (vermillion for red, and king's yellow for yellow,) suspended in it to colour the injection. But for a fine preparation, the following may be used:-

1. The fine injection. Composed of brown spirit-varnish and white spirit-varnish, of each four parts; turpentine-varnish, one part; and colouring matter, one part, or as much as is sufficient. A little of this while hot is first thrown into the arteries, into the minute branches of which it is to be forced by-
2. The coarse injection. Composed of bees-wax, tro parts; rosin, one part; tur-pentine-varnish, one part; and colouring matter, q.s. To the bees-wax and rosin melted together add the turpentine varnish, and then the colouring matter suspended in some oil of turpentine.

INK. A liquor or pigment used for writing or printing.

1. Common ink; made. by adding an infusion or decoction of the nut-gall to sulphate of iron, dissolved in water. Red ink is composed of Brazil rood, gum, and alum. See Sympathetic ink.
2. Indian ink; made of lamp-black and size, or animal-glue, scented with musk or amber, and used in China for writing with a brush, and painting.
3. Printers $s^{\prime} i n k$; a black paint, made of linseed or nut oil and lamp-black.
4. Permanent iak. A solution of nitrate of silver, thickened with sap-green or cochineal; used for making linen. The pounce liquid, with which the linen is prepared, is a solution of soda, boiled with gum, or some animal mucilage. If potash be used, the ink will run.
INNATE. Growing upon any thing by one end, as when the anther is attached by its base to the apex of the filament.
INNERVATION (in, and nervus, a nerve). The properties or functions of the nervous system.
INNOMINATUS (in, priv.; nomen, name). Nameless. Hence,-
5. Innominata arteria. The branch given off to the right by the arch of the aorta, which subsequently divides into the earotid and subelavian.
6. Innominati nervi. A former name of the fifth pair of nerves.
7. Innminatum or. A bone composed of three portions; viz.:
8. The ilium, or haunch-bone.
9. The igchiunt, or lip-hone
10. The os pubis, or share-bone.

INOCULATION (in, and oculus, an eye). Tho insertion, intentional or aceidental, of a healthy or morbid virus, as the vaccine or syphilitie, into the system.
[INORGANIC (in, priv.; orgamum, an organ). Without organs; or any parts for the performance of special functions, as minerals. See Organization.]

INOSCULATION (in, and osculum, a little mouth). The union of vessels, or anastomosis; the latter term, however, is sometimes used to designate union by minute ramification; the former, a direct communication of trunks.

INOSINIC ACID (is, lvos, a muscle). An acid said by Liebig to exist in the juices of the muscles of animals.
[INSALIVATION. The mixture of the saliva with the food in the process of mastication.]

INSA'NIA (in, priv.; sanus, sound). Insanity; mania; deranged intellect. The Latin term insanitas is applied to bodily, and not to mental, indisposition.

INSECTA. The second elass of the Diplo-ganyliata, or Entomoïda; comprising articulated animals with six feet, which undergo metamorphosis, and acquire wings.
[Insectiverous (voro, to devour). Eating insects for food.]

INSERTION (insero, to implant). The attachment of a muscle to the part it moves. Compare Origin.

INSOLATIO (in, and sol, tho sun). [Insolation.] A term sometimes made use of to denote that exposure to the sun which is made in order to promote the chenical action of one substance upon another. Also, a disease which arises from the influence of the sun's heat upon the head, called coup-de-soleil. Lastly, it denotes exposure to the solar heat, as a therapeutie agent.
INSOLUBILITY (in, not; solvo, to loose). A property, resulting from cohesion, by which a substance resists solution.
INSOMNIA (in, not; somnus, sleep). Sleeplessness, watching, lying awake.
INSPIRATION (inspiro, to inhale). That part of respiration in which the air is inhaled. Compare Expiration.

INSPISSANTIA (inspisso, to thieken). Inspissants; agents which angment tho specific gravity of the plasma, either by withholding or diminishing the use of aliinentary fluids, or by the employusent of cvacuants, which carry off the watery portion of the blood.

INSPISSATION ( $i n$, and spissatus, thickened). The process of making a liquid of a thick consistence.

INSTINCT. This convenient term admits of tho following significations:-

1. The Inslinctive Faculy; or that faculty which leads the duekling, untaught, into the water; the heaver to build its hut; the bee its comh; the hen to incubate her eggs, \&e.; and,-
2. The Instinetive Motions; or those involuntary actions which are excited mediately tbrough the nerres,- a part of the reflex funtion. Tho principal instinctive motions are,-
3. The closure of the eyelids.
4. The act of sucking.
5. The act of closing the hand.
6. The aet of swallowing.
7. The closure of the glottis.
8. The aetion of the sphincters.
9. Inspiration, as an involuntary net.
10. The aets of sneezing ; of voniting.

All these phenomena accord with the definition, and take place even in the anenecphalous thild, on the due application of the appropriate stimuli.
[INSTRUMENT. Any mechanical appliance, or agent, used in manipulations or operations. Used also synonymously with organ.]
[INSUFFLATION (in, in ; sufflo, to blow). The act of blowing a gas or vapour into a cavity of the hody, as when tobaeco sinoke is injected into the rectum, or air blown into the lungs, \&e.]

INSULATION (insula, an island). A term applied to a body containing a quantity of electric fluid, and surrounded by non-conductors, so that its commnnication with other bodies is cut off.

INTEGRAL PARTICLES (integer, entire). The most minute particles into which any suhstance, simple or compound, can be divided, similar to each otber, and to the substance of which they are parts. Thus, the smallest portion of powdered marble is still marble; but if, hy ehemical means, the calcium, the carbon, and tho oxygen of this marhle he separated, we shall then have the elementary or constituent particles.

INTEGUMENT (in, and tego, to cover). The covering of any part of tho body, as the cutiele, cutis, \&e. The common integuments are the skin, with the fat and cellular membrane adhering to it; also, particular memhranes, which invest certain parts of the body, are called integuments, us the tunies or coats of the cye.

INTELLEC'S. Uuder this head arcincluded the perceptive and reflective foentlies, which, as well as the feelings, may be advantageously influcucel for therapeutical purposes. Sce Feelings.
arposcs. Sec Feelings.
INTENSI'T. A torm denoting the of the candal fin.
degree to which a body is eleetrically ex. cited.
[INTENTION. Sce Union.]
INTER. A Latin preposition, eignifying letiveen, or denoting intervals.

1. Inter-articular. A designation of cartilages whicb lie witbin joints, as that of the jaw ; and of certain ligaments, as the ligamentum teres within the acetabulum, \&c.
2. Inter-auricular. A term applied to the septum between the auricles of the heart, in the foetus.
3. Inter-clavicular. The name of a ligament conneeting the one clavicle with the other.
4. Inter-costales. The name of two sets of muscles between the ribs - the external and the internal - which have been compared, from their passing in contrary directions, to St. Andrew's cross.
5. Inter-current. Applied to fevers or other discases which occur sporadically in the midst of an epidemic.
6. Inter-hamal spines. A term applied to those dermal hones which support the rays of the fins on the lower part of the fish. Tbey are inserted deeply into the fish hetween the hremal spines. (See Vertebres.) The inter-hamal spincs support tbe dermo-homal spines, which support tbe rays of the anal fin, and the lower rays of the caudal fin.
7. Inter-lunius morbus (luna, the moon). Epilepsy; so called from its heing supposed to affeet persons horu in the wane of the moon.
S. Inter-maxillary (maxilla, the jnw). Applicd to a small bone existing between the superior maxillary bones of the human foetus, of various adult maramifera, whieb receives the superior incisor tecth.
8. Inter-mediute (medius, middle). A term applied to a third substance, cmployed for combining together two other substances; thus, alkati is an intermediate hetween oil and watcr, forming soap.
9. Inter-mittent (mitto, to send). A term applied to Ague, or fever recurring at intervals; it is called quotidian, when the paroxysms recur daily; tertian, wbon they recur each sccond day ; and quarlan, when they recur cach third day.
10. Inter-ncural spines. A term applied to those dermal bones which support the rays of the fins on the lower part of the fish. They are dagger-shaped, and are plunged, as it were, up to the hilt. into the flesh between the neural spincs. (Sce V"rtebra.) The inter-ncural spines support the dermo-neural apince, forming the rays of the dorsal fin or lins, and the upper rays
11. Inter-nuncial (nuncius, a messenger). A teriu applied to the office of the nerves, from their cstablishiog a communieation hetween the several parts of the body and the nervous centre, and between the nerrons centre and the several parts of the hody. See Nervous Texture.
12. Inter-nuntii dies (mmntins, a messenger). Critical days, or such as occur hetween the increase and decrease of a disease.
13. Inter-ossei. Muscles situated hetreen hones; as those between the metacarpal of the hand, and the metatarsal bones of the foot.
[15. Inter-parietal (parietalis, the parietal hone). Applied to a cranial hone situated between the parietal, frontal, and superior occipital hones in the Mammifere.]
[16. Inter-8eapular (scapula, the shoulder blade). Applied to the space hetween the shoulder-hlades.]
14. Inter-spinales cervicis. The designation of six small muscles, situated hetween the spinous processes of the neck. There are also inter. spinons liganents attached to the margins of the spinous processes.
15. Inter-stitial (intersto, to stand hetween). A term applied to an organ which occupies the interstices of contiguous cells, as the utcrus, the bladder, \&c.
16. Inter-transversales. The name of muscles situated between the transverse processes of the cervical, and the similar processes of the lumhar vertehro.
17. Inter-trigo (inter, between; terce, trivi, to ruh). The erythema, abrasion, fret, or chafing, of the skin of parts which are in contact, as hehind the ears, in the groins of fat persons, \&c.
18. Inter-vertebral. A term applied to the fibro-carilage between the vertehræ; to ligaments, \&c.
[INTERNE. A term applicd to physicians and thcir assistants, \&c., who reside in hospitals; or to the patients reccived into those institutions.]

INTERRUPTED. A term denoting a disturbance of a normal arrangement; a leaf is said to be interruptedly pinnate, when some of tho pinno are much smaller than the rest, or ahsent.
INTESTI'NA (intus, within). An order of worms which inhahit the bodies of other animals. Those are distinguished, hy Cuvier, into-

1. Cavilaria (envitas, a cavity). Worms which have cavities or stomachs.
2. Parenchymata (rapirरvura, tho substance of the lungs, \&c.). Cellular-bodied worms, as tho tape-worm.

INTESTINES (intus, within). That part of the alimentary canal which extends from the stomach to the anus. The intestines are distinguished into the small, consisting of the duodenum, jejunum, and ilcum ; and the large, comprising the cæcum, colon, and rectum.

1. Intestinum tenue. The small intestine in which the duodenum terminates; the upper portion is called jejunum, the lower portion is the ileum.
2. Intestinum crassum. The large intestine, comprising the cæcum and the colon; the former of these is called the intestinum сєen.

INTOLERANCE (in, not; tolero, to hear). A term applied to the condition when any remedy cannot be horne, as loss of hlood.

INTRITA (intero, to rub in). A term used by Celsus for panada, caudle, \&c.

INTROITUS (intrô ire, to go within). An entrance. Hence the term introitus, vel apertura pelvis superior is applied to the upper or ahdominal strait of the pelvis. The lower circumference or strait is called exitus vel apertura pelvis inferior.

INTRORSE. Turned inwards; applied, in hotany, to anthers whose line of dehiscence is towards the axis of the flower; opposed to extrorso.
INTUMESCENTIE (intumesco, to swell). Intumescences; external swelling of the whole or great part of the hody; the second order of the class Cachexice of Cullen.

INTUS-SUSCEPTIO (intus, within; suscipio, to receive). Intro-susception. The descent of a bigher portion of intestine into a lower one,- generally, of the ileuni into the colon. When it takes place downwards, it may he termed progressive; when upwards, retrograde. The terin Intus-8usecptio is also applied to the process of nutrition, or the transformation of tho components of tho hlood into the organized substance of tho various organs.
[INULA. A genus of plants of the natural order Asteraceæ (Lindley); the U. S. Pharmacopoial name for the root of Innla Hclenium.]

Inula Helenium. Elecampano; a European, composite plant, allied in its operation to swect-flag and sonega.

1. Imulin. A varicty of starch obtained from the root of the Imula IHelenium.
2. Helemin. A constituent of the root of the same plant, also called elceampanecemphor.

IN USTION (imuro, to hum in). A term applied to the burning operation of the
cantery.

INVAGINATION (in, and vagina, a slicath). A term synonyinous with iutursusception. [Applied also "to an operation for hernia, in which, after reduction, the skin is thrust lyy the finger of the operator into the canal, so as to form a cul de sac, open externally, and is so retained hy sutures, \&c., till inflammation and adhesion ensue, with a view of ohliterating the ca-nal."-Mayne.]
[INVASION (invado, to lay hold on). The access, or first appearance of disease.] INVENTUM NOVUM. A name given by Avenhrugger, a physician of Vienna, to the employment of percussion, which was first adopted hy him, in 1763, as a means of dingnosis.
INVERMINATION (in, and vermis, a worm). Helminthia. An affection in which worms, or the larvæ of insects, inhahit the stomach or intestines.
[INVERSIO ( $i n$, in ; verto, to turn). Inversion; a turning in, or outside in.]
[1. Inversio palpebrarum. Entropion; inversion of the eye-lids.]
2. Inversio uteri. That state of the uterus in which it is turned, wholly or partially, inside outward.

INVERTEBRATA. Animals which are destitute of a vertebral column and an internal skeleton. The skin is sometimes ossified, and therchy forms an external skeleton. The nervous system is not always evident.

INVOLU'CRUM (involvo, to wrap in). The designation of memhranes which cover any part. The term is also applied, in botany, to a whorl of hracts which surrounds several flowers, as in the Compositæ, Umbelliferæ, \&c.

INVOLUTE. A form of vernation or mstivation, in which the edges of the laves are rolled inwards spirally on each side, as in the apple.

IODICA. A class of pharmaceutical remedies, consisting of iodine and its compounds, employed as alteratives, liquefacients, resolvents, and sorbefacients.

IODINUM (ićs 0 s, or iocidrts, violetcoloured: from Yov, a violet; and zidos, likeness). Iodine; a crystallized solid substance, found in marinc plants. It becomes volatile hy a slight increase of temperature, and forms a heautiful violet vapour.

1. Iodal (iodine and alcohol). An oleaginous liquid ohtained by the action of iodine upon nitric aleohol.
[2. Iodate. A combination of iodine with a base.]
2. Jodic acid. An anhydrous acid, termed oxiodiuc by Davy, and produced by the combination of iodine with oxygen.

It combines with metallic oxides, and forms salts which are termed iodates.
4. Iodides, or iodurets. The compounds of iodine with metals, and with the simple non-inctallic substances.
5. Iodons acid. A compound prepared by the action of iodine on chloratc of pot-ast-probahly hy the combination of iodine and chlorine.
6. Chloriodic acid. This is also called chloride of iodine; and is formed by the absorption of chlorine hy dry iodine.

IODISM. A peculiar morhid state induced by the use of iodine.
[IODO-. Used as a prefix in componnd words; it denotes that iodine forms one of the ingredients of the combination.]

IODOFORM. [Teriodide of Formyle.] A saffron-coloured suhstance, which is precipitated when caustic soda is added to a solution of iodine in alcohol or woodspirit.

IODOSALICYLIC. An acid formed by the bydruret of salicyl with hromine and iodine.
[IONIDIUM. A genus of plants of the family Violaceæ.]

1. Ionidimn Ipccacnanhee. False Brazilian Ipecacuanba; a plant indigenous in the Brazils. The roots of several species of Iovidimm possess emetic qualities, and have been employed as substitutes for our officinal Ipecacuanha, which is a species of Cephaelis.
[2. Ionidium marcucci. A name giren by Dr. Bancroft to a South American plant, called by the Indians cuichunchulli, and the root of which is said to be diaphoretic, diuretic, and, in large doses, emctic and cathartic, and has been highly extolled for its efficacy in elephantiasis. The l. parviflorum (Yentinat), and I. microphyllum (Humholdt), possess similar properties, and the local name seems to have heen giren to the three species.]

IONTIIOS (ioveos, the root of the hair). Varus. Tho name by which most of the Greck writers designate the discase Acue, from its occurring during the growth of the lanngo, or first heard. Sce Acne.

IOTACISMUS (ī̈тa, the Greck letter 1 ). A species of pscllismus, in which the letters $j$ and $g$ are defectively pronounced. Seo Lambiaciamme.
IPECACUANHA (ipi, Perurinn for root; Cacuanha, the district from whence the root was first obtained). The root of the Cephac̈lis Ipecocumba, known in commeree by the names of the ammulated. Brazilian, or Lisbon Ipecacuanha, to distinguish it from the roots of other enetic plants also collected in Brazil for officinal uso. Its emetic principlo is terured cmatina.

1．Striated Ipecacuanha．The longitu－ dinally striated root of the Psychotria eme－ tica，called by some writers the black or Peruvian ipecacuanha．
2．Undulated Ipecacuanha．The semi－ circularly－grooved root of the Richardsontia scabra，or the amylaceous or white ipeca－ cuanha of Merat．
［3．Ipecacuanha Spurge．American Ipe－ cacuanha．Common names for the Euphor－ bia Ipecacuanha．］
［4．Ipecacuanhic acid．A peculiar acid discovered hy Erwin Willigk in Ipecacu－ anha．］
［IPOMAA．A genus of plants of the natural order Convolvulaceæ．］
［1．Ipome Jalapa（Nuttall），Ipome purga （Hayne）．This plant is a native of Mexico， and its dried tuhers constitute the Jalap of cominerce．］
［2．Ipomœa macrorhiza．A specics growing in Florida and Georgia，and which was at one time supposed to he iden－ tical with the species which furnishes the officinal Jalap．］
［IRIANKISTRON（iris，the iris；ayкı $\sigma$－ трov，a fish－hook）．Iridankistron；a hook－ shaped instrument devised by Schlangin－ tweit for the operation of making an arti－ ficial pupil hy separation．］

IRIDACEA．The Cornflag tribe of Monocotyledonous plants．Smooth herba－ ceous plants，with leaves equitant；flowers hexatepalous，triandrous；stamens 3 ；ova－ rium three－celled，many－secded．
［IRID AEMIA（iris，the iris；aija，hlood）． Hemorrhage from the iris．］
［IRIDAUXESIS（iris，the iris；aü乡クo七s， increase）．A thickening of the iris from exudation of lymph into its substance．］
［IRIDECTOMEDIALYSIS（ $\tilde{\rho}_{\rho}, 5$ ，iris； єктонך，excision；סıàvaıs，separation）．The operation for artificial pupil hy excision and separation．］
［IRIDECTOMIA（iris，the iris ；iкт $\varepsilon \mu \nu \omega$ ， to cat）．Iridectomy．Operation for cutting out a portiou of the iris．］
［IRIDENCLEISIS（ipts，iris；${ }^{\prime} \gamma_{\times \lambda} \varepsilon \iota \omega$ ，to enclose）．The strangulation of a detached portion of the iris．］
［IRIDEREMIA（iris，the iris；kpmpia， want of perfection）．Congenital deficiency of the iris．］

IRIDESCENT（iris，a rainbow）．－The property of shining with many colours，like the rainhow．

IRIDIOCYANOGEN．A radical which forms with hydrogen iridiocyanic acid．It bas not been isolated．

IRIDIUM（ivis，the rainhow）．Tho most infusible of all known metals；so called from the varicty of colours assumed by its salts．
［IRIDODIALYSIS（iris，the iris ；$\delta d \lambda v$－ ots，a scparation）．Operation for artificial pupil by separation of the iris from the ciliary ligament．］
［IRIDOCINESIS（iris，tho iris；Kivnots， motion）．Contraction and expansion of iris．］
［IRIDOCOLOBOMA（ivis，the iris；код6－ $\beta \omega \mu a$, mutilated）．Colohoma iridis；fissure of the iris．］
［IRIDODONESIS（ivis，tho iris ；ס6vŋのts， agitation）．Tremulous iris．］
［IRIDONCOSIS．Iridauxesis．］
［IRIDOTOMIA（iris，the iris ；$\tau \leftarrow \mu \nu \omega$ ，to cut）．Operation for artificial pupil by in－ cision．］

IRIS．Literally，a rainhow；and bence applied to the rainbow－like membrane which separates the anterior from the pos－ terior chamber of the eye．See Uvea．
Iritis．Inflammation of the iris．
IRTS DISEASE．Rainhow ringworm， a species of Herpes，occurring in small cir－ cular patches，each composed of concentric rings of different colours．
［IRIS．A genus of plants of the natural order Iridaceæ．The roots of all the spe－ cies，so far as examined，are more or less acrid，and possess cathartic and emetic properties．In Europe，the Iris foctidissi－ ma，I．Florentina，I．Germanica，I．pseudo－ acorus，and I．tubcrosa，have，at various times，heen admitted into use．］

1．Iris Florentina．Florentine Iris，or Orris；Fleur－de－Luce．The dried rhizoma of this plant is the orris－root of the shops．
［2．Iris versicolor．Blue flag．An indi－ genous species，the root of which is said to possess cathartic，emetic，and diuretic pro－ perties．］

IRIS GREEN．The juice of the petals of the Iris added to quicklime．
IRISH MOSS．Carragecn．The Chon－ drus crispus；a lichen growing ou rocks and stoncs in the sea．

IRON．See Ferrum．
IRON－ALUM．The sulphate of peroxide of iron and potash．

IRRIGATION（irrigo，to water）．The continual application of a cold lotion by dropping cold water on an affected part．

IRRITABILITY（irrito，to provake）． That action of certain muscles，as the heart，the intestines，\＆c．，which flows from a stimulus acting immediately upon their fibres；or，in the cuse of tho volun－ tary muscles，upon these，or tho nerves immediately procecding to them．This property has been termed by Maller vis insiter；by Goerter，vis vitalis；by Boer－ hanve，oscillution；by Stahl，tonic power； by Bell，muscular power；by Cullen，inhercnt． pover：；and hy Dr．Bostock，contractility．

IRRITATION (irrito, to excite). The actiou produced by any stimulus. This term, as a diseasc, is applied to,-

1. The case arising from calculus in the ureter, in the gall-duct, \&e.
2. The affection induced hy the preseuce of improper food in the stomach, or morbid matters retained in the howels, \&c., inducing symptoms resembling arachnitis, peritonitis, pleuritis, carditis.-Dr. M. Hall.

ISATINE. An interesting compound produced by the oxidation of Indigo. It is blue indigo, plus 2 equiv. oxygen. By the action of potash a new acid is yielded, ealled isatinic acid. By the action of sulphuret of ammonium, or an alcoholic solution of isatine, a grey crystalline powder is produced, called isatyde, which represents isatine, plus 1 equiv. hydrogen.

I'SATIS TINCTORIA. Woad. A plant from which an inferior kind of indigo is prepared.
[ISCHIADELPHUS (lox $00 v$, the ischium; à $\delta \lambda \lambda$ os, a hrother). Applied by Dehreuil to a variety of double monster, of which the bodies opposed to each other are united by the pelvis.]

ISCHIUM (ioxiov, the hip). Coxa vel acetabulum. The hip-bone, a spinous proeess of the os innominatum.

1. Ischi-agra (äypa, a seizure). An attack of the hip; hip-gout.
2. Ischi-algia (à yos, pain). Pain in the hip. See Sciatica.
3. Ischias. The term used hy the Latins for rheumatism of the hip-joint; it was afterwards eorrupted into ischiatica or sciatica.
4. Ischiatic. The designation of a notch of the os innominatum; of an artery which proceeds through that notch, \&c.
5. Ischiato-cele ( $\stackrel{\eta}{\lambda} \lambda \eta$, a tumour). An intestinal rupture through the sciatic ligaments.
6. Ischio-cavernosus. A muscle attached io the ischium and to the corpus cavernosum. It draws the root of tho penis downwards and hackwards. It is also ealled, from its office, erector penis; and the two together are ealled collaterales penis, from their lying on the sides of the penis.
ISCIINOPHONIA ( $/ \sigma \chi$ থ фovn, voice). Prellismus hasitans. A shrillness of the voice; liesitation of speceli, or stamncring.

ISCHURIA (io $\chi \omega$, to retain; ovepor, urine). Suppression or retention of the urine. The term is employed, in ischuria reualis, in the sense of suppression; in ischuria wetica, vesicrtis, and wethralis, iu the sense of retention.
ISITIIIONIC ACID. An acid formed
by the action of sulphuric acid on ether and alcohol.

ISINGLASS. Fish-glue; a substance prepared from the sound of several kinds of fish. The term is a corruption of the Dutch liyzenllas, an air-hladder; compounded of hyzen, to hoist, and blus, a bladder. Fishglue. See Ichthyocolla.

Isinglass, Pura. Under this name has heen lately imported a substance, which, on examination, proves to he not isinglass, hut the dried ovary of a large fish, prohably the Sudia gigas of Para.-Pareira.

ISO- (ǐros, equal). This prefix denotes equality, or similarity. Hence,-

1. Isa-barysm ( Bcipos, weight). Similarity of weight, supposed to he the cause of the identity in the size and shape of molecules which cohere into the crystalline form.
2. Iso-chromatic ( $\chi$ р $\tilde{\mu} a$, colour). Having the same colour, as applied to lenses.
3. Iso-chronous ( $\chi$ povos, time). That which occurs in equal times, as the strokes of the pulse, the vibrations of pendulums of the same length, \&c.
4. Iso-ineric compounds ( $\mu$ ípos, part). A term applied to different bodies which agree in composition, but differ in properties ; their relation to each other is termed isontcrism.
5. Iso-morphous bodies ( $\mu$ op $\bar{\eta}$, form) . A term applied by Mitscherlich to different hodies which assume the same erystalline form ; their relation in form is called isomorphism. When the relations are not exact, hut nearly so, they may he supposed to give origin to plesio-morphism ( $\bar{\pi}$ rocios, near), or an approximation to similarity of form.
6. Iso-perimetrical. Having the same length of perimeter ( $\pi \varepsilon \rho i$, around; $\mu$ itpoy, measure), or bounding linc.
[7. Isopathy ( $\pi$ aOos, disease). A term employed hy certain homoopaths to designate the cure of disease by the administration of the virus hy which it is produced; as by giving infinitesimal doses of rariolus virus for the cure of small-pox, of that of bugs for the cure of hug hites, ac. It bas also heen applied to another form of quackery, founded on the notion that the disease of an organ is to he cured hy the administration of the analogous organ of some healthy animal; as by giving the liver, kidncy, uterus, $\mathcal{E e}$., or the tinctures or concentrated essences of these parts, for the cure of the discases of these organs respectively. It has heen also eniplored by the late Dr. J. M. B. Harden. of Georgis, to express the "Parallelism of Discars," or the disposition of diseases to rear the livery of ench other.]
[3. Iro-petalous (лíradov, a petal). Having equal petals.]
7. Iso-poda (त̃oũs, roids, a foot). Animals which have equal feet, as the woodlonse.
8. Iso-thermal ( $\theta \dot{i} \rho \mu \eta$, heat). Of equal degrees of heat, as applied to lines of equal temperature in physical geography. Lines drawn through places having the same summer and the same winter, are denominated isotheral (0f́pos, summer), and iso-cheimal ( $\chi$ вiر a, winter), lines.

ISOLUSINE. A new principle, discovered by M. Peschier, in various species of polygala.

ISSUE. Fonticulus. An ulcer intentioually made and kept open, for the cure or prevention of disease.

Issue peas. The young unripe fruit of the Citrus aurantium, dried and turned in a lathe.

ISTHMITIS (la $\theta \mu \partial_{s}$, a narrow neck of land; the throat; and the particle itis). Inflammation of the throat. See Paristhmitis.

ISTHMUS VIEUSSENII. The isthmus of Vieussens; the ridge surrounding the oval fossa, or remains of the foramen ovale, in the right auricle of the heart.

Isthmus of the thyroizd gland. A transrerse cord which connects the two lobes composing the thyroild body.

ITACONIC ACID. Another name for the pyrocitric or citricic acid.

ITALIAN JUICE. Spanish Juice. The Extractum Glycirrhizæ, or extract of liquorice. The specific names are derived from the countries from which it is imported. The Italian extract is prepared in Calabria from G. echinata; the Spanish, in Catalonia, from G. glalra. Solazzi juice is most esteemed.

ITCH. The vulgar name for a cutancous disoase of the fingers, \&c. Sce Scalies.

Itch Insect. The Acarus Scabiei, a very minute animalcule, said to be found in or near the pustules of the itch ; they are called wheal-worms in man, and resemble the mitcs of cheese, \&c.

ITER. A passage of communication between two or more parts.

1. Iter ad infundibulum. The passage of communication between the third ven. tricle of the brain and the infundibulum, It is also termed foramen commune anterius.
2. Iter a palato ad aurem. The passage from the palate to the ear, or the Eustachian tube.
3. Iter a tertio ad quartum ventriculum. The passage between the third and fourth ventricles of the brain, known by the name of the aqueduct of Sylvius.
[-ITIS. A terminal which, added to Greek names of organs, denotes inflammation of such parts.]
IVORY. A modification of dentine observed in the tusks of tho proboscidian pachyderms. It exhibits, on transverse fractures or sections, striæ proceeding in the arc of a circie from the centre to the circumference, in opposite directions, and forming, by their decussations, curvilinear lozenges.
IVORY BLACK. Animal charcoal. The residue of heated bones; a mixture of charcoal and phosphate of lime.
[IVY. A common name for the Hedera helix.]
[IVY GUM. A resinous subtance which exudes through iucisions in the bark of the trunks of old ivy plants, formerly used as a stimulant and emmenagogue.]

## J

JACOB'S MEMBRANE. The thin external membrane of the retina, considered by Dr. Jacob as a serous membrane.

JACOBSON'S NERVE. Another name for the tympanic branch, described by Jacobson.
[JACTATION, or JACTITATION, (juctatio $\mathrm{\nabla cl}$ jactitatio, a tossing). Restlessness; a kind of physical inquietude, which impels the patient to change continually his position.]
[JAEN BARK. Ash Bark; the Quinquina de Loxa cendré of Guibourt; a variety of Loxa bark which probably derives
its name from the province of Jaen de Bracomoros.]

JAGGARY. A coarse, dark kind of sugar, procured by boiling from the juice of the spadix of the Sagucrus saccharifer, or Gomuto palm.

JALAP. The dricd tubers of the Ipomaa Purga [Ipomaca Jalapa (Nuttall),], a plant of the order Convolvilacea, so named from Jalnpa, a place in Mexico. The Ipomaa Orizabensis probably yields a portion of the imported drug.
[1. Jalapa. Tbo pharmacopoial name for the root of Ipomaca Jalapa.]
2. Jalapin. A substance constituting nearly uinc-tenths of jalap resin. The remaiuing portion is jalasic acid.
[JAMAICA DOGWOOD. The common name of tho Piscidice erythrina.]
[JAMAICA GINGER. White ginger; the root of the Zingiber officinale, deprived of its epidermis, and supposed to have undergone some further preparation by which its appearance is improved.]

JAMAICA KINO. An extract prepared from the bark of the Coccoloba uvifera, or sea-side grape, of the West Indies.

JAMAICA PEPPER. Allspice, or Pimento; tho fruit of the Eugenia Pimenta, which grows in Jamaica.
[JAMAICA SARSAPARILLA. A variety of sarsaparilla having a reddish-coloured epidermis.]

JAMAICINA. A crystalline suhstance found in Cabbage bark, the produce of the Andira inermis of the West Indies.

JAMES'S POWDER. Pulvis Jacobi verus. A celehrated fever powder, supposed to he the same as the Antimonii oxidum cum phosphate calcis, or antimonial powder.
[JAMESTOWN WEED. A common name of the Datura Stramonium.]
[JANIPHA MANIHOT. Sce Jatropha Manihot.]
JAPAN EARTH. The Catechu extractum, procured from the Acacia catechu, or Khair tree. It is also called terra japorica, from its heing supposed to he a mineral production ; dark catechu, as distinguished from the pale kind; Bengal cutch, in distinction from that of Bombay; Gummi Lyciun? \&o.

JAPAN SAGO. A feculent matter ohtained from the soft centre of the Cycas revoluta, and other species.

JAPONIC ACID. An acid produced when catechin with alkalies or alkaline carhonates ahsorbs oxygen from the air.
[JARGONELLE PEAR ESSENCE. An alcoholio solution of the Acctato of Amylic other, used for flavouring syrups and confectionary.]

JASPLR. A species of rhomhohedral quartz, found in tho composition of many mountains; its varieties aro distinguished hy the terms Egyptian, striped, porcclain, and commor.
[JATAMANSI. Seo Sumbul.]
[JATROPHA. A genis of plants of the natural order Euphorbiaceæ.]

1. Jatropha curcas. The species which yields the mux burbadensis of some writers, and the phyaic nuts of the sloops.
[2. Jatropha elustica. A systematic namo of the plant which furnishes Caoutchouc.]
2. Jutropha manihot. Jonipha manihat. The Cassava or Tapioca Plant, from the tubcrous root of which is prepared a fecula called tapioca. The pulp, when dried and baked into cakes, constitutes cassuva or cassudu bread.
[4. Jatrophue oil. An oil ohtained hy expression from the seeds of Jutropha curcas, and which is purgative in doses of from ten to fifteen drops.]
[JATROPHATE. A combination of Jatrophic acid with a salifiable hase.]

JATROPHA OIL. An oil expressed from physic nuts, or the seeds of the Curcas purgans, and C. multifidus, and commonly called oil of voild castor seeds.

JATROPHIC ACID. Crotonic acid. An acid procured hy converting croton oil into soap.

JAUNDICE. A disease proceeding from obstruction in the liver, and characterized by a yellow colour of the skin, \&c. The term is most probably a corruption of the French word jamisse, yellowness; from jaune, yellow. See Icterns.
[JAVERLE'S WATER. A solution of Chloride of Potassa.]
[JEFFERSONIA DEPHYLLA. Twin leaf-Rheumatism root. An indigenous, aunual plant, of the natural order Berberedaceæ; the root of which is suid to be expectorant and tonic, and to possess similar medicinal properties to those of Senega.]

JEJUNUM (jejunus, hungry). The upper two-fifths of the small intestines, so named from this portion heing generally found empty.

JELLY. A soft tremulous suhstance, the solution of gelatin, when cold.

1. Animal jelly, or gelatine, is extracted by boiling from the skiu, membranes, ligaments, cartilages, and hones of animals. Sce Gelatine.
2. Vcgetable jelly is procurcd from the recently expressed juices of certain fruits, as the currant; and consists of nucilage, or some modification of gum and vegetable acid.

JERUSALEM ARTICHOKE. The Helianthns tuberosus; a species of sunflower, tho root of which rescmbles the artichoke in taste. The term jerusalem, as npplied to artichoke, is a curious corruption of the Italinn term gira-sole; that is, turn-smu in English, and heliotrope in Grcek.
[JERUSALEM OAK. A common name for the Chenopodinm anthelminticum, and also for O. Botrys.]
JERYNNA. A netr hase disenvered by M. Simon, in the rhizome of Feratrion Album, and so named from jerra, the

Spanish name for a poison obtained from this rhizome.
JESUIT'S BARK, or POWDER. A term formerly applied promiscuously to the three kinds of bark, or Peruvian bark. See Cinchona.

JET', or PITCH COAL. A black velvetcoloured bituluen, used for fuel, and for making vessels, \&c.

JEWELLER'S PUTTY. Ignited and finely-leviagated oxide of tin, used by jewellers for polishing hard objects.
[JEWEL-WEED. A common name for Impatiens fulva and I. pallida.]
JOINT. Arthrosis. An articulation, or the mode by which bones are connected to eacb otber.
[Artificial Joint. Applied to the movable condition of a fractured bone which has not become consolidated by bony union, hut only connected by a fibrous ligamentous tissue allowing of motion. Termed, also, false joint, and ununited fracture.]

JUGALE, OS (jugum, a yoke). Os malo; os zygonaticum. The zygoma, or arcb formed by the zygomatic processes of tbe temporal and cbeek bones.

JUGALES (jugum, a yoke). A designation of the superficial temporal, or zygomatic nerves, given off from tbe facial.
[JUGLANS. A genus of plants of the natural order Juglandaces. The pharmacopreial name for tbe inner bark of the root of Juglans cinerea.]
[1. Juglans cinerea. Juglans cathartica, Michaux. Butternut, oil nut, white walnut. An indigenous species, the extract of which is a mild catbartic in the dose of from grs. $x$. to $x x x$.]
[2. Juglans vigra. Black walnut. An indigenous species; the rind of the unripe fruit is said to cure tetter, and a decoction of it has vermifuge powers.]
[3. Juglans regria. Commou European Walnut, Englisb Walnut. The bull of the fruit bas been employed as a vermifuge; the expressed oil of the fruit is deemed useful against tapeworm, and its leaves bave bcen extolled as efficacious in scrofula.]

JUGULUM. The tbroat ; the forepart of the neck, wbere the windpipe is situated.

Jugular. Belonging to the neck; applied chiefly to the principal veins of the neck.

JUGUM. The Latin terin for a yoke; and bence applied to cach pair of opposite leaflets on the petiole of a pinnate leaf. Thus a leaf with one pair is called unijugat; with two pairs, bijngal, \&e.

Juga, m Umbelliferous plants. The term juga also signifies ridges, and is hence applied to the elevated portions by wbich the carpels of Umbelliferous plants are traversed; of thesc juga, five are called primary; and four, alternating witb tbcm, secoudary.

Jugum Penis. An instrument for compressing some part of tbe urethra, to prevent dribbling in cases in which tbe urine cannot be retained.

JUJUBE, PATE DE. A pectoral lozenge, prepared from the Rhanmus jujuba and vulgaris.

JULEPUM. A Julep; a term wbicb, in former pbarmacopoias, expressed what is now understood by mistura.
[JUNIPER. Common name for the Juniperus communis.]
JUNIPER RESIN. Sandararl. A resin, also called gum jumiper, procured from the Callitris quadrivalvis. Its powder is called ponuce.
[JUNIPERUS. A genus of plants of the natural order Coniferæ or Pinaceæ.]

1. Juniperus commanis. Common Juniper; the plant wbicb yields the fruit called jumiper herries, and from which the oil of juniper is obtained.
[2. Juniperus oxycedrus. A species growing in tbe south of France, and which yields, hy distillation, a kind of tar, called oil of cade.]
2. Juniperus Sabina. Savin; the plant whicb yields the oil of savin.
3. Juniperus Virginiana. Red cedar; tbe wood of which is used for black-lead pencils.

JUPITER. The ancient cbemical name of tin, which was supposed to be under the control of that planet.
JURISPRUDENCE, MEDICAL. Forensic medicine; the science whicb treats of the legal proceedings in reference to medicine.

JUS. Broth; pottage; gravy; gruel. Tbe term jusculum is a diminutive of jus, and denotes tbe same thing; jusculum coactum is jelly.

JUSTAMOND'S ARSENICAL CAUSTIC. A preparation made by melting together in a crucible, antimony and arsenic, both in a state of powder.

JUVANTIA (juvo, to assist). Mcdicincs which assist or relicve diseases.

JUZAM, or JUDAM. Terms by which the Arabians designated Elephantiasis; it is still called, in Arabia and Persia, Dsjuddam, and Madsjuddam, according to Nicbubr.
[K AMPFERIA. A genus of East Indian plants of the natural order Scitaminew, and at one time supposed to furnish the Zedoaries of commerce.]

KAKOPLATYL. The radicle of a series of compounds derived from kakodyl containing platinum. It may be represented as consisting of protoxide of platinum, water, aud kakodyl. See Cacodyl.
KALI. A term of Arahic origin, denoting a particular plant; bence the word al-kali, with the article, originally signified the particular residuum obtained by lixiviating the ashes of that plant; the term was then used for potassa: thus, lali vitriolatum is an old name for sulphate of potassa; liali purum for potassa fusa; calx cum kali puro for potassa cum calce, \&c.

KALIUM. A synonymous term for potassium, the hasis of potash.
[KALMIA. A Linnean genus of plants of the natural order Ericaceæ.]
[Kalmia latifolia. Laurel; Monntain Laurel; Calico-hush, \&c. A well-known indigenous erergreen, the leaves of which are possessed of poisonous, narcotic properties,' and have been used in medicine. Other species of Kalmia, as $K$. angustifolia, or sheep-laurel; and $K$. glanea, or swamp-laurel; have probahly similar properties.]

KAOLIN. China-clay; a fine pure clay prepared by levigation from mouldering granite, and employed in the mannfacture of porcelain.

KASSU. A black astringent extract prepared from the seeds of the Areca Catechu; it occurs mixed with paddy-busks. It is imported from Ceylon in circular flat cakos. See Courig.
[KAVA, or AVA. An intoxicating drink used in the Sandwich Islands, made from the ront of Piper methisticum.]

KEDRIA TERRESTRIS. Barbadoes tar; a mineral oil. See Bitumen.

KEEL. Carina. A term applied to the two lower petals of a papilionaceous corolln, which cohere by their lower margin, so as to present a kecled appearance.
[KELOIDES ( $\kappa \eta \lambda \eta \eta$, a tumour ; cĩoos, rescmblance). Applied by the French to a disease rescmbling cancer; also termed cencroides. It has also been applied by Alibort and Dr. J. Warren to a fat, slightly reddened, firm projection of the cutis, like the cieatrix of $a$ burn.]

KELAP. Varec. The crude soda nbtained from tho ashes of the Fitci in IIolland,
and on the northern coast of France. It is used in the composition of eoap, in the manufacture of alum, and in the formation of crown and bottle glass. Sec Barilla.
[KEMPFERID. A supposed peculiar erystallizable substance found by Drandes in Galangal.]
[KERATITIS (кipas, a horn; terminal itis). Inflammation of the cornea.]

KERATOME (xifas, the cornen; Típvw, to cut). An instrnment for dividing the transparent cornea in the operation for cataract by extraction.

KERATONYXIS (xípas, xipatos, a horn, the cornea; víoow, to puncture). A term employed in Germany to denote the operation of couching performed through the cornea. When the opaque lens is, by this means, merely turned, presenting its anterior and posterior surface in the borizontal position, the term reclination is adopted.]
[KERATOPLASTY (кípas, a horn; $\overline{\text { há }} \sigma$ $\sigma \omega$, to form). Operation for removing an opaque cornea, and supplying its place with the transparent cornea taken from another individual.]

KERMES ANIMAL. Coccus Ilicis; a hemipterous insect, found upon the Quercus ilex, and formerly used for dyeing searlet; cloth so dyed was called cocci${ }^{n u m}$, and persons wearing this cloth mere termed by the Romans coccinati. The drug was termed grana kermes, from the rescmblance of the dried insects to grains or seeds.

KERMES MINERÁL. Formerly $P$ anacea Glaubcriana; a sulphnret of antimony; so named from its resemblance, in colour, to the insect kermes.
KIBE. Pernio exulceratus. Chilhlain, accompanied with nlecration.

KIDNEXS. Rencs. Two glandnlar bodics, situated in the lumbar regions, and consisting of a cortical or external, and a tubular or medullary substance.
[KIESTEINE (nvew, to conceirc ; عcorns, a vestment). A gelatino-alhuminous substance, existing in the urine of pregnant females, subsequent to the first month of pregnancy, which separates by rest, forming a pellicle on the surface. It is a useful test of pregnaney.]

KIKEKUNEMALO. A resin resembling copal, used for varnishes, and, in Anerien, for therapeutic purposes.

KIND'S ARTIFICIAL CAMPHOR. A solid compound obtained by passing by-
druchloric acid into oil of turpentine, surrounded by ice. A fluid couppund is procured at the same time, called liquid artificial camphor, tercbene, or terebyline.

KINGDOM. A term denoting any of the principal divisions of nature; thus we have the organic kingdom, comprehending substances which organize, and the inorganic. kingdom, comprebending substances which crystallize.
[KINESIPATHY (xivé $\omega$, to move; $\pi \dot{\alpha}-$ oos, disease). "Name given to a system of athletic exercises and feats of muscular strength, invented hy Pehr Menrik Ling, a fencing-master and teacher of gymnastics in Stockholn, which be began to convert into a species of charlatanism akin to homœopathy, isopathy, hydropathy, \&c., by pretending to regard his trained movements as therapeutic means which could he successfully applied also to the special treatment of individual discases of whatever description."-Mayne.]

KING'S EVIL. Morbus Regis. A scrofulous disease, the curing of which was formerly attributed to the king of England, from the timo of Edward the Confessor. This practice was called touching for the evil.

KINIC ACLD. Quinic acid. An acid found in the Cinchona harks. It forms salts called kinates.

Kinoïle. A nentral substance produced by the calcination of a kinate by a gentle heat.

KINO. An astringent extract, termed East Indian or genuine kino. [The pharmacopeial name for the resinous product of Pterocarpus Marsupium, a lofty tree growing upon the Malabar coast of Hindostan.]

1. Botany Bay kino. The produce of the Eucalyptus resinifera, or Iron-hark tree, imported from Van Diemen's land.
2. Jamaica kino. The produce of the Coccoloba uvifera, or sea-side grape.
3. African kino. Said to be the produce of the Pterocarpus crinaceus; but there is no evidence of it.-Pereira.
[4. South Amcrican kino; Caracas kino. Prohably the product of the Coccoloba uvifera.]
[KINOIC ACID. Kino red. A hright red substance deposited on cooling, from a decoction of kino.]
KINONE. A product of the decomposition of kinie acid. It combines with hydrogen, forming green hydrokinone; a brilliant gold-grcen compound, in long prisms, surpassing murcxide in beauty ; and whitc hydrokinone, which crystallizes iu six-sided prisms.
[KINOVATE. A oombination of kinovic acid with a salifiable base.]

KINOVIC ACID. Kinova Bitter; Chiococcic Acid. A white amorphous substauce, found in Calisaya hark, as well as in the falsc cinchona bark called quinquina nova. It has no fehrifuge qualities.
KIRKLAND'S NEUTRAL CERATE. Melt together $\overline{3}$ viij. of lead plaster with foiv. of olive il, into which are to he stirred $\overline{\mathrm{j}} \mathrm{iv}$. of prepared chalk; when the mixture is sufficiently cooled, add foiv. of acetic acid, and $5^{\text {iij. of }}$ of pulverized acetate of lead, and stir the whole until nearly cold.

KIRSCH-WASSER. A liqueur distilled from the fruit of the small cherry-tree, and called the hrandy of Switzerland.
KNEE-JOINT. A complex articulation, consisting of an angular ginglymus, formed by the condyles of the femur, the upper cxtremity of the tihia, and the posterior surface of the patella.

KNEE-PAN. Patella; the small round bone at the front of the knee-joint.
[KNOT-GRASS: A common name for the Polygonum aviculare.]

KOMENIC ACID. Paramconic acid. An acid formed by the action of heat on meconic acid.
KORE (кópq). The pupil of the eye. The compounds of this term will be found in p. 171.

KOSSO or KOUSSO [or KOOSSO]. The dricd flowers of the Brayera anthelmintica, a Rosaceous plant of Ahyssinia, employed as an anthelmintic for the expulsion of tape-worm.

KOUMISS. A vinous liquid, made by the Tartars from milk, principally from that of mares. Something similar is prepared in Orkncy and Shetland ; also by tho Turks under the name of yaourt, and by the Arahs under that of leban.
[KRAMERIA. A Linnean gonus of plants of the natural order Polygalacem. The pharmacopeial name for the root of the Kramcria triandra.]
[1. Krameria Ixina. A specics growing in Hayti and in Cumana, said to afford a root closely a nalogous in appearance and properties to the K. triandra.]
2. Krameria triandra. The Rhatany; a plant yiclding rhatumy root; tho stypticity of which has becn ascribed to tho prescnce of an acid called krameric acitl.

KREATINE (кр民́as, flesh). A crystallino compound obtained from the juice of flesh, consisting of oxygen, hydrogen, carbon, and nitrogen. It has neither acid nor basic propertics. By the action of strong
acids it is resolved into a new body called krettininc.

KREMNITZ WHITE. A pure variety of ccrussa, or white lead.

KRIEBEL KRANKHEIT. The German name of a disease which was endemic in Hessia and Westphalia during a season of dearth, in 1597. It has also heen called die Fever-flecke, ignis sacer, ignis Sancti Antonii, mal des ardens, ergot, \&c. It is arranged by Sauvages under the bead of

Erysipclas pestilens; and hy Sagar, under the genus Neciosia.

KUNDAII OIL. An oil ohtained from the sceds of the Carapa Toulouconna, also called talliconnah oil.

KUPFERNICKEL. The German name for sulphurct of nickel; in which the metal is generally mixed also with arsenic, iron, and cohalt.
[KYLLOSIS (кu入入us, crooked). A name given by Prof. Chaussier to cluhfoot.]

## L

[LABARIUM (labor, to fall). Loosening and falling out of the tecth.]

LABARRAQUE'S SOLUTION. A disinfecting liquid, of which chloride of soda is the active ingredient. It is analogous to the well-known bleaching powder, chloride of lime.

LABDANUM. Ladanum. A resinous exudation from the Cistue Creticus. [C. ladaniferus, C. laurifolius, and somo other species of Cistur.] It is formed into cylindrical pieces, called labdanum in tortis.

Labdauum factitium. Yellow wax and hog's lard, of each, six ounces; and hlack burnt ivory, four ounces.
[LABE ( $\lambda \pi \mu \beta$ à $\nu \omega$, to seize). Access or invasion of disease.]

LABELLUM (dim. of labium, a lip). A little lip; a term applied, in botany, to the lip-like petal of Orchidaceous plants.

LABIA (from $\lambda a \beta k i \nu$, to take). The lips; the two movable veils which close the cavity of the mouth anteriorly. They are laterally united by means of two acute angles, which are called their commissures.

1. Labia majora. The two large folds, constituting the external orifice of the pudendum; also called lahia pudendi.
2. Labia minora. The two smaller folds, situated within tho lahia majora, and frequently termed nymphas.
3. Labia lcporina (leporinus, from lepus, a hare). [Labium leporinuns.] The harelip; a division of the lip, resembling that of the upper lip of the hare.
4. Labia pudendi. The parts of the pudendum exterior to the nymphae; they are also called ala majorcs, as distinguished from the nymphe, or alx minores. The term is synonymous with labia majora.
[LABIALIS (labium, a lip). Of, or bcsonging to, the lip; lahial.]

LABIATA. The Mint tribe of Dicoty-
ledonons plants. Merbaccous plants, mith leaves opposite; flowers irregular, unsymmetrical ; stamens 4, didynoous, inserted in the corolla; ovarium deeply 4-lohed; fruit $1-4$ small nuts.

LABIATE (labia, a lip). Lipped; divided into two lips, as the corolla of lamiam, the calyx of prunella, \&c.

LABORATORY (laboro, to lahour). A place properly fitted up for the performance of chemical operations.
[LABOUR (lubor, exertion). The process of childhirth; parturition.]

LABRADOR STONE. A species of prismatic felspar, found in the island of St. Paul, on the coast of Lahrador, sc.
[LABRADOR TEA. A common name for the plant Ledum latifolinm.]

LABRUM. Literally, the extremity of the lips; also, the brim of any vessel. Hence the fibro-cartilaginous rim which surmounts the cotyloïd cavity has hecn termed acetabuli labrum cartilagineum.

LABYRINTH. The name of a series of cavities, viz.: the vestihule, the cochlea, and the semicircular canals, which are channelled through the suhstanec of the petrous hone, and situated hetreen the cavity of the tympanum and the meatus anditorius externus. The namo is derived from the complexity of its communications.

LABYRINTHODON ( $\lambda$ aßúpervos, a lahyrinth ; o̊oùs, a tooth). The name of a singular family of gigantic extinct hatracians, characterized by remarkable complexity of the tissues composing the tecth.

LiAC. Milk. A term used by the Duhlin College for tho mistura of the London -when white and opaque, or milk-likeand the emulsio of the Edinburgh Pharmaéproia.
LsAC, or GUM-LAC (laak, Arah.). A substance, improperly ealled a gum, produeed by an insect called kermes lacca,
on tbe lenres and hranches of tbe Ficns Indiea, the Croton lacciferum, tho Butea frondosa, ic. The substance is dcposited over the eggs of the insect, and serves as a present protection to the ovum, and as food for the maggot at a future stage. Lac yields a fine red dye; the resinous part is used in making sealing-wax and for a varnisb.

1. Stich lac is the term applied to the suhstance in its natural state, witb the encrusted leaves and twigs.
2. Lac dye, lac lake, or cake lac, are names applied to tbe colouring matter extracted from the stick lac.
3. Seed lac is the resinous powder which remains after tbe extraction of the colouring matter, by pounding and solution in water; so called from its resemblance to mustard seed. When melted, it is formed into cakes, and called lump lac; and, wben strained througb cotton over a cbarcoal firc, the resinous part, whicb melts the most easily, is formed into thin sheets, and called shell lac.
4. Laccic acid. An acid obtaincd, by Dr. John, from stick lac. Its salts are called laccates.
5. Lacein. A newly-discovered principle contained in lac, intermediate between wax and resin.

LAC AMMONIACI. Mistura ammoniaci. [Pb.U.S.] Ammoniacum mixture, consisting of ammoniacum mixed witb water and strained. It acts as a stimulant to tbe hronchial membrane, and is used as an expectorant in cbronic cougb, humoral asthma, \&c.
LAC AMYGDALAE. Mistura amygdala. [Ph. U. S.] Almond emulsion or milk, consisting of almond confection witb water, mixed and strained.

LAC ANALEPTICUM. A nutritious preparation of carrageen and milk.
[LAC ASSAFETIDA. Mistura Assafoctida, Ph. U. S. (q. v.)]
[LACIIRYMA SCAMMONY. Virgin Scammony, Pure Scammony. See Scammony.]

LAC LUN E. Literally, milk of tbe moon. A snowy-white substance, resemhling cbalk, consisting almost wbolly of alumina, saturated with carbonic acid.

LAC SULPIIURIS. Milk of sulpbur, or the sulphar precipitatum.

LAC VACCINUM. Cows' milk; an emulsive substance, consisting of globulue particles floating in a scrous liquid. The milk globules consist essentially of butter.

1. Cremor lactis. Flos lactis. Cram, or the glohular particles of milk, which
some caseum, and retaining some of the
scrum. scrum.
2. Cabeum. Albumen of milk; the coagulum, or curd, separated from milk by the addition to it of an acid or rennet.
3. Serum lactis. The whey of milk left after tbe separation of the curd.
4. Lactio. Saccholactin, or sugar of milk, obtained from whey by evaporation.
5. Lactic acid. Tbis is probably a product of the decomposition of milk.
6. Lactometer. A graduated glass tube for estimating the rclative quantity of cream afforded hy milk.

LACERATION (lacero, to tear). A rent; the tearing of any part. The term lacerated is applicd to two foramina at the base of the cranium, from their lacerated appearance.
LACERTUS (tbe arm; a lizard). Ari old term applied to a bundle of muscular fihres, which are enclosed in a membranous sheath, and are divisihle into smailer bundles, apparently in an indefinite scries.
LACINIATE (lacinia, a fringe). Slasbed; as a leaf divided by deep, taper-pointed incisions.
LACMUS. Another name for litmus; also called lacca musiva, lacca cærulea, \&c. Dutch turnsole, turnsole in cakes, \&c. Sce Litmus.

LACONICUM. A term applied to a vapour bath, from its baving been much used by the people of Laconia.

LACQUER, or LACKER. Solution of lac in alcohol; a kind of varnish for brass and other metals.

LACRYMA. [Lachryma.] A tear; tbe fluid secreted by tbe laerymal gland, and flowing on the surface of the eye.

1. The puncta lacrymalia are the external commencements of two small tubes, situated near tbe inner canthus, called-
2. Tbe lacrymal canals or ducts, wbich originate from the internal angle of the eyc, and terminate in-
3. The lacrymal sac; an oval bag, about tbe size of a small borse-bcan, constituting the upper extremity of the nasal duct.
4. The lacus lacrymarum consists of a small space in the inner angle of the eyc, between the two eyelids, towards which tbe tears flow.

LACTALBUMEN. Caseum; casein. Albrmen of milk; an albuminous substance, distinguished from alhumen of the egg and of the blood by its not congulating when heated, by its being congulated on the addition of acctic acid, and by the products of its spontancons decomposition.
[LACTATE. A combination of Lactios acid witn a salifiablo base.]
[LACTATE OF IRON. Ferri Lactas. Lactate of Protoxido of Iron. A preparation rceently introduced iuto use, and highly spolsen of in the treatment of chlorosis. It is given in the form of lozenge, pill, or syrup, in tho dose of 1 or 2 grains, repcated at intervals, to the extent of $Э$ ss. to $\because j$. a day.]

LACTATION (lac, milk). The proeess of secreting and supplying milk, of nursing, or suekling. Pliny uses the word lactatus, which is more classieal than lactatio.
[LACTEAL (lac, milk). Of, or helonging to, milk; milky; applied to certain vessels. See Lactcals.]

LACTEALS (lac, milk). Numerous minute tuhes which absorb or take up the chyle, or milk-like fluid, from the alimentary eanal.
[LACTESCENS (lacterco, to have milk). Lacteseent; having milk, or a milk-like fluid.]
[LACTEUS (lac, milk). Of a milk-white appearance; lactcous.]

LACTIC ACID (lac, lactis, milk). An acid produced whenever milk, and perhaps most animal fluids, hecome spontaneously sour, or when the juice of heet-root is kept for some months at a high temperature. [It has also heen found in the secretions, particularly in the urine.]

LACTICA. The Arahian name for that speeies of fever which the Greeks eall typhos, or typhodes.
[LACTIDE. Concrete lactic acid; a body ohtained by beating lactic acid to $480^{\circ}$.]

LACTIFEROUS DUCTS (lac, lactis, milk; fero, to convey). The milk-eonveying ducts of the mammary glands. The corresponding term in Greek is galactophorous.

LACTIFUGE (lac, lactis, milk; fugo, to expel). A medicine which checks or diminishes the secretion of milk in the mamma, as in eases of weaning; coriander seeds are reputed to have this property.

LACTIN (lac, lactir, milk). [Lactosc.] Sugar of mills; a crystallino substance proeured from milk.
[LACTIVOROUS (lac, nilk; voro, to devour). Living upon milk.]
[LACTOCELE (lac, milk; к斤גn, a tumour). A collection of milk, or milk-like fluid; applied to such eollection in the serotuin.]
[LACTOMETER (lac, milk; $\mu$ erpor, a measure). An instrument for determining the density of milk.]
[LACTOSCOPE (lac, milk; oxore examina). An instrument for ascertaining the quantity and quality of milk.]
[LACTUCARIUXI. Pb. U.S. The in. spissated juice of the Lactuca sativa. It possesses anodyne properties, and may be given in the dose of from gr. ij. to gr. xv.]
[LACTUCA. A genus of plants of the natural order Compositæ-ehicoracç, De Cand., Chicoraceæ, (Lindlcy).]
[1. Lactuca clongrata. Wild Lettuce. An indigenous speeies, said to possess medieal properties similar to those of the Lactuca virosa.]
2. Lactuca sativa. The Garden Lettuce; tho milky juice of which yields lactucarium, but in much less quantity than the $L$. virosa.
[3. Lactuca scariola. An European species, possessing similar properties and used for the same purposes as the Lactuca virosa.]
4. Lactuca virosa. The Strong-scented Lettuce; the milky juice of which, when inspissated, has heen used as a substitnte for opium, under the name of thridace or lactucarium.

LACTUCERIN (lactuca, lettuce; cera, wax). Lactucin. Waxy matter of lactncarium; a neutral crystalline substance ohtained from lactucarium.

LACTUCIC ACID. An acid ohtained frous the Lactuca virosa, resembling oxalic acid.

LACTUCIN. Bitter principle of lactucarium. A crystalline, resinoid, bitter sohstance, of anodyne properties, obtained from the juice of the Lactuca virora, ealled lactucarium.

LACTU'MINA (lacto, to suckle). Lactuciminc. A uame given hy Amatus Lucitanus to the infantile aphthæ, from the supposition that they originated in a ritiated condition of the milk.
LACUNA (lacus, a lakc). Literally, a ditch containing water. Hence, the term lacunce is applied to a multitude of follicles ohserved in the mueous memhrano of the urethra, and also named sinuses of Morgagmi.

1. Lacuma magna. The largest of the ahore-mentioned lacune, said to be the seat of the sceretion of the drop of matter which is squeezed from the urethra in old gonorrhœa.
2. Lacma, in plants. A tern applied hy Link to the air-cells whieh oecur in the vegetable tissuc.
LACUNAR. Literally, the inain heam of a housc, which is arched or hent like a how. Hence the term lacunar orlita, for the upper wall or vault of the orbit.

LACUNOSE. Haring large decp lacunæ or depressions on the surface.
[LADANUUM. See Labdanum.]
［TADIES＇MANTLE．A eommon name for Alchemilla vulyaris．］
［LADIES＇SLIPPER．A common anme for the plant Cypripediun parviflorum．］
［LADY WEBSTER＇S PILLS．Dinner Pills；Pilula stomachica of the Paris codex of 1758 ．They are composed of the best Aloes， $5^{\mathrm{vj} . ;}$ Mastich and Red Roses，of each， 5 jij ．；Syrup of Wormwood，sufficient to make a mass．To be divided into pills of three grains each．One or two will usually produce a free evacuation from the bowels．］
［Levo－TARTARIC ACID．See Tar－ taric acid．］

Lagetta lintearia．The Laee Bark Tree；a plant of the order Thyme－ lacece，possessing the properties of meze－ reum．Its hark is eapable of being sepa－ rated into thin white layers，resembling lace－vork，and may be even washed with soap like linen．

LiAGNE＇SIS（ $\lambda a ́ y v \eta s$, lustful）．Lust； inordinate desire of sexual intercourse； the name of a genus adopted hy Dr．Good， and intended to include the satyriasis and nymphomania of Sauvages．
［LAGNEUMA（ $\lambda$ a $\boldsymbol{\gamma}^{2} \varepsilon \dot{\imath} \omega$, to he libidinous）． Excessive venereal appetite；coition；semen genitale．］

LAGOPHTHALMIA（ $\lambda a y ⿳ 亠 二 口 丿, ~ a ~ h a r e ; ~ ; ~$ $\delta \phi \theta a \lambda \mu \partial s$ ，the eye）．Oculus lcporinus．The hare＇s eye；a disense in which the cye can－ not be completely shut．Shortening of the upper lid．

LAGOSTOMA（ $\lambda a y \omega \bar{s}$, a hare；$\sigma \tau \delta \mu a$ ，the mouth）．The Greek term for labia leporina， or hare－lip．

LAIT DE POULE．An emulsion， employed by the French as an artificial milk for infnnts，and consisting of the raw yolk of an egg，diffused by agitation in a pint of warm water swcetened with sugar．

LAKE．A term applicd to eertain in－ soluble compouuds，formed by precipi－ tating eolouring matter with an carth or oxide．Almost all vegetable colouring matters may bo precipitated into lakes，by means of alum or oxide of tin．The prin－ cipal lakes are－

1．Carminc；a red pigment，prepared from eochincal，by precipitation with Roman alum．

2．Florentine lake；propared from the sediment of the eochineal in the pre－ ceding process，by preeipitation with so－ lution of tin．A cheaper sort may be ob－ tained from Brazil wood，instead of coehi－ neal．

3．Mredrler lake；prepared from Dutel erop madder，by precipitation with alum． LALLATIO（lallo，to sing lullaby）．

Lullaby－speech；a name given by tho Romans to that variety of psellismus，in which the letter $L$ is rendered unduly li－ quid，or suhstituted for an $R$ ；as when de－ lusive is pronounced deliusive，as though the $l$ possessed the power of the Spanish $l l$ ， or the Italian gl ；or，as when parablo is pronouneed palable．

LALO．A favourite article of food in Africa，made of the dried and pulverized leaves of the Adansonia or Baobab tree， the largest，and，it is said，the oldest troé in the world．

LAMBDACISMUS（ $\lambda a ́ \mu \beta \delta a, ~ l a m b d a ;$ the Greek letter $\lambda$ ）．The Greek designa－ tion of that affection of the speech，which eonsists in a vicious enunciation of the letter l．See Lallatio，and Iotacismus：

LAMBDOIDAL（the Greek A，lambda； and cioos，likeness）．The name of a suture of the skull，from its fancied resemblanee in form to the letter A．See Suture．

LAMELLA（dim．of lamina，a plate）．A small plate or scale，as applied to the gills of a mushroom，\＆e．
［Lamellirr．Composed of thin plates．］
LAMINA．Literally，a small plate of any metal．A term applied to the foliated structure of bones or other organs．

1．Lamina cornea．A horn－coloured la mina at the antcrior part of the tænia tha－ lami optici，or semicireularis．

2．Lamina cribrosa．A cribriform or sieve－like layer，formed by the sclerotica at the entrance of the optic nerve，and so named from the numcrous minute openings by which it is picrced for the passage of the nervous filnments．

3．Lamina spiralis．The plate or sep－ tum of the eochlea，which is wound spirally round the modiolus，dividing the coehlea in to two parts．
［4．Laminated．Consisting of thin plates．］

LAMP－BLACK．Fuligo lampadum．A species of charcoal，of whieh the finest sort is produced by collecting the smoke＇ from a lamp；but it is generally obtained by burning resinous substanees，as the dregs of piteh，or pieces of fir－wood，in furnaces， and colleeting the smoke in a elose－boarded ehamber．

LAMP OF SAFETY．A lamp invented by Sir H．Davy，to prevent the explosion of fire－damp，or inflammable air，in eoal mines．It is made of wire－gauze，which is impcrmenble to flame．

LAMPIC ACID．An aeid obtained by Sir H．Davy from tho combustion of ether． It is mercly acetio acid，eombined with some etherous matter．
［Lampatc．A combination of lampic aeid with a salifiable base．］

LANA PHILOSOPIIICA. Philosophieal wool, flowers of yinc, or the snowy flases of white oxide of zinc, which arise and float in the air from the combustion of that metal.
[LANCASTER BLACK DROP. See Block Drop.]

LANCET (lancetta; dim. of lancea, a sperr). An instrument used in phlebotomy, in opening tumours, \&c.

LANCEOLATE. Lance-shaped; nar-rowly-elliptical, tapering to each end, as the leaf of mezereon.
[LANCIFORM (lancca, a lance; forma, likeness). Lance-shaped.]

LANCISI, NERVES OF. Some filaments, found on the anterior part of the corpus callosum, are hy some authors called the longitadinal nerves of Lancisi.

LAND-SCURVY. An affection, consisting in circular spots, stripes, or patches, scattered over the thighs, arms, and trunk; it is called hy Bateman purpura hamor$r$ hogica, from the occasional bæmorrbage from the mouth, nostrils, or viscera; and by the German writers, morbus maculosus Werlhofi.
LANGUAGE. A term in Phrenology indicative of the faculty which acquires a knowledge of arbitrary signs, and iudulges in all exercises counected with words. Its organ is situated at the very hack part of the orbit, and, when much developed, it pushes the orhit, aud with it the eye, forward.

LANTANUM ( $\lambda$ av $\theta$ cive, to be concealed). A newly-discovered metal, so named from its properties heing concealed by those of ccrium, with which it is found united. It occurs in the cerite of Bastnas.

LAPIDELLUM (lapis, a stone). The name of a kind of spoon, formerly used to take small stones out of the hladder.
[LAPIDEOUS (lapis, ? stone). Stony.]
[LAPILLIFORM (lapillus, a little stone; forma, likeness). Hsving the form of emall stones.]

LAPILLUS (dim. of lapis, a stone). A little stone. A term applied to a calcareous concretion found in the cray-fisl. Sce Cancrorum lapilli.

LAPIS. A gencric term, signifying all kinds of stones: thus, lapis calcarcus is limestone; lapis infernalis, an old name for caustic potash; lapis calaminaris, the impure carbonate of zinc; lapis lazuli, azure stonc, a mincral from which the blue colour ultra marine is prepared.

LAPIS DIVINUS. Pierre divine. A sulphate consisting of sulphate of copper, nitrate of potass, alum, and cauphor. Onc part of the lnpis divinus, dissolved in 259 parts of water, and the solution filtered, is !
used as a collyrium; hence it is also called lapis ophthatmicus.

JAPIS HIBEIRNICUS. Hardesia. Yrish slate ; an argillaccous slate, said to contain iron and sulphur, and found in different parts of Ireland.

LAPIS MEDICAMENTOSUS. Medicinal stone; a substance formed of alum, litharga, Armenian hole, colcothar of green vitriol, and vinegar, formerly used externally for fastening loosc teeth, \& c., and also in injections, in gonorrbcea.
[LAPPA. The pharmacopœial name (U. S.) for the root of Lappa minor, hurdock; a genus of plants of the natural order Cynaraceæ.-Lindley.]

Lappa minor. Common Burdock, or Clot-bur ; an indigenous Composite plant, the root of which is said to promote the lochial discharge.
[LAPSANA COMMUNIS. Dock-cresses; nipple-root. A plant of the natural order Compositæ, similar in its qualities to the chicory, dandelion, and endive; chiefly employed as an external application to sore nipples.]

LAQUEUS GUTTURIS. Literally, a noose of the throat. A malignant inflammation of the tonsils, in which the patient appears as if suffocated by a noose.

LARCH AGARIC. The Polyporus officinalis; a fungaceous plant growing on the larch, sold under the names of ogoric, vhite agaric, \&c.

LARD. Adeps suillus. The fat of the Sus scrofa, or Hog, melted down. It differs from suet chiefly in consistence.

LARDACEOUS. A term applied to tissucs which, from cancerous disease, resemble lard.

LARICIN. A peculiar substance supposed to constitute the active principle of the Polyporus officinalis, or Larch agaric.

LARIX EUROPFA. The Common Larch; a Coniferous tree, yielding the larch, or Venice turpentinc, and a saccharine matter called manna of the larch, or manna de Brançon.
[LARKSPUR. A common name for the Delphinium consolida.]
[LARVA. (A mask.) The caterpillar state, or first condition of the metamorphosis of insects after being hatched from the cgg.]
[LARVALIS. Bclonging to the larva of insects. Applicd also to certain diseases in which the skin of the face is disfigured, as if corcred with a mask, as in Porrigo lorealis.]

LARINX ( $\lambda$ apogy, the larynx). The superior part of the trachea, situated inmediately mader the os hyoides.

1. Laryugral. The designation of nerves
furnished by the parvagum, and distributed to the larynx; theso are the supcrior laryngeal, and the recurrent or inferior laryngeal дerves.
2. Laryngismus. A sonse of spasmodic suffocation in the larynx, oommonly called spasmodic croup, from its resemblance to that affectlon. [It has heen used hy Marshall Hall to express the partial or complete spasmodic closure of the larynx which sometimes occurs in epilepsy, hysteria, hydrophobia, tetanus, \&c.]
[3. Laryngismus stridulus. Thymic Asthma, Millar's Asthma, Spasm of the glottis, Crowing disease of Infants, Cerebral Croup. Crowing inspiration, with a sense of suffocation in the larynx, a tumid and livid countenance, coming on in paroxysms, which are sudden in their attack and of short duration.]
3. Laryngitis. Cynanche laryngæa. Inflammation of the larynx.
[ $\mathbf{5}$. Laryngophonism ( $\lambda a ́ p v y \xi$, the larynx; $\phi \omega \nu \eta$, the voice). Laryngapliony. The sound of the voice heard by means of the stethoscope in the larynx.]
4. Laryngotomy (rонй, section). The operation of making an opening into the larynx.

LASCIVUS. Wanton; an epithet applied, hy Paracelsus, to chorea, from the peculiar contortions of the limhs.

LASER. A term applied by the ancients to assafoetida, and to the succus Cyrenaicus. It has been suspected that the terin assafoetida is derived from laser-assa, quasi luser. The laser Cyrcnaicum, or assa clulcis of Cyrene, is the produce of the Thapaia silphion, an Umhelliferous plant, growing on the mountains of Cyrene.

LATENT (lateo, to be hidden). A term applicd to dieases of which the diagnosis is very ohscure.

LATERAL (latus, lateris, the side). Belonging to the side; a term applied to a mode of operation in cutting for tho stone. See Lithotomy.

LATERITIOUS (later, lateris, a brick). A term applicd to the red soctiment deposited from the urine in some stages of fever. This was supposed by Proust to constitute a peculiar acid, which he nancd the rosaic.

LATEX (lateo, to he hidden). Any kind of liquor squcezed out. This term denotes, in botany, a. highly elaborated and highly organized juice, which is not formed inmediatcly from the fluid matter absorbed from without. The tissne, in which this juice is found, is termed leterilious lisule, and more recently cinen-
chyma.

IATIBULUM (lateo, to lie hid). A hiding-plaoc. The fomes, or hidden matter, of infectious diseases.

LATISSIMUS DORSI (latissimus; superl. of latus, broad; dorsum, the hack). A flat muscle, situated on the back and side of the lower part of the trunk. It moves the arm backwards and downwards; or brings forward the body when the hand is fixed. It has received the offensive appellations of scalptor ani and tersor ani.

LAUDANUM. The Tinctura Opii sive Thehaica. Ninetcen [thirtcen] minims [or 25 drops] contain one grain of opium.

Laudanım liquidum Sydenhami. The original of the Vinum Opii, with double the quantity of opium, and with wine as the menstruum. One fluid drachm contains ten grains of opium.
[Denarcotized Laudumum. Laudanum deprived of the narcotina.]

LAUGHING GAS. The protoxide of nitrogen or nitrous oxide.

LAURACEA. The Cinnamon trihe of Dicotyledonous plants. Leaves entire, alternate ; flowers apetalous; stamens perigynous; fruit baccate or drupaceous; seeds without albumen.
[LAURET. A common name for the Kalmia latifolia, and also for the genus Laurus.]
LA UREL WATER. The distilled water of the Prunus lauro-cerasuв, a species of cherry.
LAURIN. Camphor of the bay-berry. A solid suhstance extracted from the herries of the Laurns Nobilis, or Sweet Bay.
[LAURO-CERASUS. The pharmacopocial name for the leaves of Prumus latrocerasus (Willd.), Cerasus lauro-ccrasus (Do Cand.).]
[LAURUS (laus, praise). The pharmacopoeial name for the fruit of Laurus nobilis; a genus of plants of the natural order Lauraceæ.]

## [1. Laurus Benzoin. See Benzoin odo-

 riferum.][2. Laurus camphora. See Camphora oficinarum.]
[3. Laurus cabsia. See Cinnamomums aromaticum.]
[4. Laurus cinnamomım. See Cinnamo-
um Zeylanicum.] mum Zcylanicum.]
[5. Laurus culilavan. See Oulilavan.] 6. Laurus nobilis. The Sweet Bay; tho plant which yields the bay-berry, and its camphor, calicd latriu.
[7. Laurus Pichurim. Sce Pichurim secels.]
[8. Laurus Susbafras. Seo Sassafras officinalc.]

JAVA. The matter thrown out from
volcanoes, in eonsequence of the combustion of bituminous masses. The lightest kind is called pumiee-stone.

LAVA'MEN (lavo, to wash). [Lavamentum.] The Latin term for enema, or injection.]
[LAVANDULA. The pharmaeopocial name for Lavandula vera; a genus of plants of the natural order Labiatæ.]

Lavandula vera. Common or Garden Lavender; the plant from which the oil and the spirit of lavender are prepared. It enters also into the composition of Eau de Cologne and the Vinaigre aux quatre voleurs.
Lavandula spica. French Lavender; which yields the oil of spike, sometimes enlled foreign oil of lavender, in order to distinguish it from the oil of Lavandula stochas, the true oil of spike. Used by painters on porcelain, and for making varnishes.
[LAVENDER. The common name for Lavandula vera.]

LAVER. The name of a species of fueus, which is eaten as a delieacy.

LAVER, PURPLE. The Porphyra laciniata; an algaceous plant; pickled with salt, it is antiscorbutic. The broad green iaver is the Ulva latissima, of inferior qualities.

LAVIPEDIUM (lavo, to wash ; pees, tho foot). A bath for the feet.

LAWSONIA INERMIS. Tbe plant from which the hemé of Egypt is obtained. It is principally used by the natives as a dye.

LaXatives (laxo, to loosen). Mild purgatives; medicines which loosen the contents of the intestines. See Catharties.
LAXATOR TYMPANI (laxa, to loosen). A muscle of the tympanum, attached to tho handle of the malleus.

LAZARETTO (lazzerétto, Italian; from lazzero, a leper). A pest-house, or establishment for facilitating the performance of quarantine, and particularly the purification of goods arriving from places infected with disease.

LGAD. Plumbum. A bluish-gray metal; the softest of all tho durable ructals. [See Plumbum, Black lead, Minium, and Cerussa.]
[LEAD WATER. The liquor plumbi subaectatis dilutus, Ph. U.S. See Liquor.] [LEADWORT. A common name for the Plumbago Enropaa.]

LEAPING AGUE. The name of a discase occurring in some parts of Seotland, and ennsisting of a morbid propensity to rumning, leaping, \&o.

LEATHER. The skins of animals,
macerated in lime-water, and tamed with astringent substances, particularly oak-bark.
[LEATHER FLOWER. A commea name for the plant Clematis Viorna.]
[LEATHER WOOD. A common namo for the Dirce palustris.]

LEAVEN, or YEAST. A substance which possesses the power of commeneing fermentation in other substances.
[LECANORA TARTAREA. Tartarean moss; a lichen growing in the north of Europe, and which furnisbes a blue colouring substance called Lacmus.]
[LECANORIC ACID. The blue or purple colouring principle obtained from Leeanora tartarea.]

LECCA GUM. Olive gum. These are inaceurate terms for a resiniform exudation of the Olea Europea, or European Olive. It eontains olivile, brown resin, and benzoic acid.

LECONORIN. A white erystalline snbstance obtained from the Leconora tartarea, and other liehens employed in the manufacture of cudhear.
LEDOYEN'S DISINFECTING FLUID. A solution of one drachm of nitrate of lead in an ounce of water, for destroying the uupleasant odour of animal and vegetable substances which are evolving sulphuretted hydrogen and hydrosulphuret of ammonia.
[LEDUM PALUSTRE. Marsh tea, Rosmarinus sylvestris. A plaut of the natural order Ericacer, the leaves of which are supposed to possess narcotie properties, and have been used in whoop-ing-eough, dysentery, various cutaneous diseases, \&e. They have been also used as a substitute for hops in making heer.
[Ledum latifolium. Labrador tea. An indigenous species, the leaves of which are considered pectoral and tonie.]
LEECII. A genus of the class Termes, and order Intestina. See Mirudo.
[LEECH, MECHANICAL. An instrument designed to imitate the action of the lecch in drawing blood.]
[LEEK. The common name for Allium porrun.]

LEGUMEN (lego, to gather). A legume; a one-celled, two-valved, superior fruit, dehiseent by a suture along its face and its back, and bearing seeds on each margin of its ventral suture.

1. Legumer lomentaccum. A lomentum; a fruit differing from a legume in being eontracted in the spaces between each seed, and there separating into distinet pieces.
2. Leegumin. A peculiar principle, found in tho fleshy cotyledons of the sceds of papilionaccons plants.

LEGUMINOSE (legımen, a legume). The Pea tribe of Dicutyledonous plants. Herhs with lcaves alternate ; stamens perigynous, monadclphous, or diadelphous; ovarinm superior, solitary, simple; fruit leguminous; seeds without alhumen.

LEIPOPSYCIIA ( $\lambda \varepsilon i \pi \omega$, to leave; $\psi v \chi\rangle$ ), the soul). The term used by Hippocrates for syncope; Galen uses apopsychia. It is synonymous with the leipo-thymia- of Sauvages.
LEIPOTHY'MIA ( $\lambda \varepsilon i \pi \omega$, to leare ; $\theta v \mu \grave{\varsigma}$, the mind). Deliquium animi. Fainting. The term is synonymous with tho leipopaychia of Hippocrates.

LEMERY'S WHITE PRECIPITATE. A term applied by Lemery to the amidochloride of mercury, to distinguish it from precipitated calomel ; also called, on the contincat, "white precipitate." It has had various other names, as cosmetic mercury, \&c.; it is popularly called white precipitate, or white oxide of mercury.

LEMNIAN EARTH. A compound of aluminum, found in the island of Lemnos. It is also called sphragide (oфpayis, a seal), and terra sigillata, from its being cut into pieces, and stamped with a seal. It is similar to Armenian hole.
[LEMON. The fruit of the Citrus medica.]

LEMONADE. A refrigerant acidulated drink, made by adding two lemons sliced, and two ounces of sugar, to two pints of hoiling water, and digesting until cold. A similar beverage is called ling's cup.

LEMON and KALI. A mixture forming an extemporaneous effervescing draught, and consisting of porvdered white sugar, dried and powdered citric acid, and powdered hicarbonate of potash. Tartaric acid is, however, usually substituted for the citric, owing to the diliquescence of the latter acid.
J.ENIENTIA (lenio, to assuago). Medicines which allay irritation.

LENITIVES (lenis, gentlc). Soothing medicines. Gentle purgatives.

Lenitive electuary. Elcetuarium Sennæ. The former name of the coufectio Senne. Sec [Confectio Sennce.]

LENS (lens, lentis, Latin, a bean). Properly, a sinall roundish glass, shaped like a leutil, or bean.

1. In Physies, the term is applicd to any transparent medium, of certain forms : these are, the convex, which converges the rays; the concave, which disperses them; the plano-convex, having one surface plane, and the other convex; the donble conncx, laving hoth sides convex; the plano-concave, having one surface plane,
and the other concrve; the double concare, having two concave surfaces; and the meniscus, having one side concave, and the other convex.
2. In Anatomy, the term is applied to the crystalline humonr of the eyc. Shortsightedness is occasioned by the convergence of the rays to a point before they fall upon the retina, and a concave lens is employed to delay their convergence; in long-sighteduess, the rays do not converge to a point till they have passed the retina, and a convex lens is employed to promote their convergence.

LENTICELLLE. Lenticular glands, or brown oval spots found upon the bark of many plants, especially willows.

LENTICULA (lens, a lentil sced). The term used by Celsus for freckles; it is now more generally written lentigo.

LENTICULAR (lens, lentis, a lentil). A term applied to parts which are about the size of a lentil seed.

1. Lenticular ganglion. Another name for the ciliary ganglion, situated at the external side of the optic nervo.
2. Lenticular papilla. The papillæ situated at the posterior part of the tongue; they are from nine to fifteen in number, of a round form, of the size of a large mustard seed.
3. Lenticnlar bone. Another name for the os orbiculare.

LENTICULAR (lenticulaire, doubly convex). An instrument for removing the irregularities of bone from the edge of the perforation made in the cranium by the trephine. [In botany, it signifies lens-shaped; small, depressed, and doubly convex.]

LENTIGO (lens, lentis, a lentil). Ephelis, freckles, or the little ycllow spots on the skin, produced by exposure to the rays of the sun, and so named from their likeness to lentil seeds.
[LENTIL. Common name for the genus Ervum.]
[LENTISK. A common name for the Pistacia lentiscus.]

LENTOR (lcutus, clammy). The viscidity or clamminess of a fluid.

Lentor of the blood. The name given by Boerhaave to viscidity of the blood, to which he ascrihed the cxistence of fever; maintaining that the geueral disturhance, which constitutes fever, procecds from an crror loei of the viscid blood, \&e. Hence the terms diluents, humeetants, attennants, de., were applied to medicincs which were supposed to dissolve that tenacity; while those of an opposite character wero called inspissants.
[JEONTODON TARAXICUM. Dandelion. A plant of the order Composito.

Its root is the officinal Taraxicum，and is estemed slightly tonio，diuretic，and ape－ rient．］

LEONTT＇ASIS（ $\lambda \dot{f} \omega v, \lambda$ हैovzos，a lion）．A designation of the tubereular species of Ele－ phantiasis；so termed from its imparting a fancied resemblanco to the physiognomy of the lion．
［LEOPARD＇S－BANE．A common name for Armica montana．］

LEPIDIN．A yellow substance pro－ cured by Leroux from the Lepidium ileris， a Cruciferous plant．

LEPIDOPTERA（ $\lambda \varepsilon \pi i s, \lambda \varepsilon \pi i \delta o s, ~ a ~ s c a l e ; ~$
 the butterfly．

LEPIDO＇SIS（ $\lambda \varepsilon \pi i s$ ，a scale）．Scale－ skin；an efflorescence of seales over dif－ ferent parts of the body，often thickening into crusts．

Lepidotc．Leprous，covered with minute peltate scales．

LEPRA（ $\lambda_{i ́ t p a}$ ；from $\lambda \hat{k} \pi \rho o s, \lambda \varepsilon \pi j a ̀$ ， sealy；th．$\lambda \varepsilon \pi i s$, or $\lambda$ firos，a scale）．The leprosy of tho Grecks；a sealy disease of the skin，occurring generally in circular patches．
［Lepra Mercurialis．A peculiar erup－ tion of the skin produced by mercury， termed also hydrargyria and Eczema ru－ brum．］

LEPROSY（ $\lambda \varepsilon \pi \rho o े s$, sealy ；from $\lambda_{\text {eris，}}$ a seale）．The leprosy of the Jews appears to have been the leuce（ $\lambda$ cuký）of the Greeks，the white baras of the Arabians， and the third species of vitiligo of Celsus． It is principally eharacterized by whiteness of the hair，and depression of the skin． Compare Lepra．
［LEPSIS（ $\lambda \alpha \mu \beta a \nu \omega$ ，to take）．A seizure， or attack．］
［LEPTANDRIA VIRGINICA．Nuttall． Vcronica Virginica，Linn．Culver＇s Physic． An indigenous perennial plant，the recent root of which is said to act violently as a eathartic and sometimes emetic．］
［LEPTO（ $\lambda \varepsilon \pi$ tos，thin）．Slender，deli－ eate ；as a prefix to words，it denotes deli－ eate or soft，thus：－
［Leptodactylus（ $\delta a \kappa$ vulos，a finger or toe）． Having slender fingers or toes．］
［Leptophonia（ $\phi \omega \nu \eta$ ，voice）．A soft，gentle voiee，\＆e．］

LERE＇MA（ג刀píw，to doat）．Dotage： superannuation；impotence of body and mind from premature old age．

LESION（lasio；from lado，to hurt）． Any hurt，injury，or morhid change．Un－ der tho term organic lesions，Pinel ineludes nost of the ehronic disorders which are unaccompanied by fover，inflammation， hæmorrliage，or nervous affection．

LETHARGY（ $\lambda \dot{b} \theta \eta$ ，forgetfulvess ；$\dot{a} \rho$－
ya，inactivity）．Profound and centinucd sleep．It is the slightest form of coma， and has been sometimes termed cuta－ phora．
［LETIIEON．A name given to pure eul－ pluric ether when first introduced as an anasthetic agent，with a view of concealing its truo nature．］
［LETTUCE．Common name for the genus Lactuca．］

LETTUCE OPIUM．Lactucarium．The inspissated milky juice of the Lactuca virosa and sativa．
［LEUCETHIOPIA，）（גcukòs，white； LEUC．ETHIOPS，\}ai月ıұ, a negro). Albinisun，albino．

LEUCIN（ $\lambda_{\text {euxd̀s，white）．A name ap－}}$ plied hy Braconnet to a peculiar white principle obtained from muscle．Nitric acid converts it into a erystallizable acid， called nitro－leucic．
［LEUCITIS．Sclerotitis．］
［LEUCOCYTH ÆMIA（ $\lambda$ عuк̀̀s，white；кũ－ тos，cell；aìma，blood）．Leukcemia，（Vir－ chow．）A peculiar condition of the blood， consisting in an increase in the vumber of white blood－cells in that fluid．］

LEUCOL．A particular substance pro－ duced in the distillation of coal．

LEUCO＇MA（ $\lambda$ cevers，white）．Albugo．A dense opacity，extending through the laminæ of the cornea．The slighter form of opacity is termed nebula，haziness，or dulncss；and a small patch or speck， macula．The popular term for opacity is film．

LEUCOPATHIA（ $\lambda$ cuxòs，white；mátos， affection）．The Alhino state．This de－ viation from the natural colour was first observed in Africa，and the individuals so affected were called Lauc－athiopes，or white negroes．In conscquence of the irk－ someness of light to Albinoes，the Dutch named those whom they met with in Java kakkerbakken，or cock－roaches，insects which run about in the dark．

LEUCOPHLEGMASIA（ $\lambda \varepsilon v \times o ̀ s$, white； $\phi \lambda \varepsilon ́ \gamma \mu a$ ，phlegms）．Leucophlegmatic ha－ bit；a term formerly applied to a dropsical hahit．
－LEUCORRH＠A（ $\lambda$ evkòs，white；jf $\omega$ ，to flow）．Literally，a white discharge－per vaginam．Its source is either tbe vagina itsclf，or tho utcrus．This affection has been also termed fluxus or fluor albus； fluor mulichris；les feurs blanches；sexual weakness；a weakness；and，rulgarly，the whites．

LEUCOSIS（ $\lambda$ en к⿵̀ c ，white）．A term ap－ plied by Alibert to the diseases of the 15 m － phatic resscle．
［L，E U K A MIA（ $\lambda_{\varepsilon v \kappa o ̀ s, ~ w h i t e ~ ; ~ a i ̀ \mu a, ~}^{\text {，}}$ blood）．A peenliar condition of the blood，
in Which there is an increased number of white blood-cells in that fluid.].

LEVANT NUT. Bacca orieutalis. A name soruetimes given to Cacculus Indicus, the fruit of the Anamirta Cocculus.

LEVATOR (levo, to lift up). A muscle which raises any part, as the rectus superior. Its antagonist is called depressor.

1. Levator pulati mollis. A muscle which arises from the point of tbe petrous bone, the Eustacbian tuhe, and the spbenoild bone, and is inserted into the velum palati, which it pulls up, acting at the same time as a valve to the nostrils. See Staphylinus.
2. Levator scapula, or levator proprius angularis. A muscle which arises from the transverse processes of the four or five upper cervical vertebro, and is inserted into the upper eorner of the senpula, which it raises, as in shrugging the sboulders; hence it has been called musculus patientia.

LEVIGATION (lavigo, to polish ; from lavis, smooth). The process of rubbing earths and some metallie suhstances with a muller upon a flat tahle of hard stone. Some fluid is added to assist the operation, and in tbis respect it differs from trituration.

LEXIPHARMACA ( $\lambda \dot{y} y \omega$, to cease; фа́pнакоу, poison). Medicines which resist or destroy the power of poisons.
LEY. Lixivium. A term used for a solution of alkali in water.
'LEYDEN PHIAL or JAR (so called from its effects having heen first exhibited in that city). A cylindrical glass vessel for collecting electricity. It is coated to a certain beight, inside and outside, with tinfoil or some conducting substance, so that every point of both sides of the glass may be brought into communication at the same moment. A combination of such phials is called an electrical battery.
[LIATRIS. A genus of plants of the natural order Composite, all the tuberousrooted species of which are said to be diuretic.]
[Liatris Spicata. Gay-fentber, Button Snakeroot. An indigenous perennial plant, tbe root of which has a warm, hitterish, terebinthinate taste, and is said to be diuretic.]
[I. Scarioza, These species are
L. Squamusa. \} known in Virginia, tho Carolinas, \&c., by the name of rattlcsnakes' master, and the root bruised and applied to the wound, is cinployed to cure the hite of the rattlesnake. A decnetion of the ront in milk is taken internally at the same time.]

LIBER. The inner hark of a tree, used instead of paper hy the ancients to writo upon. In botanical language, it denotes the interior fibrous portion of the bark, lying immediately upon the alburnum; tbe endophlowim of later writers.
[LIBRA. A pound weigbt.]
LICLIEN ( $\lambda$ हi $\chi \grave{\eta}$, lichen). Lichenous rash; an eruption of red papulx, usually terminating in scurf. Altbough Dioscorides says that the plant, so called, is named from its being a remuedy for the disease, the more gencral opinion is, tbat the disense is nanued from its supposed resemblance to the plant.-Forbes.

LICIIENIC ACID. Fumaric acid. An acid discovered by Pfaff in Iceland moss.

LICHE'NES. The Lichen trihe of the Apbyllæ, or leafless plants. Aerial, leafless, perennial plants, spreading over almost all dry surfaces, of trees, stones, \&c.; reproductive organs are spormles lying in tbecæ in the medullary suhstance, or scparated cellules of the medullary layer of the thallus.

1. Lichen Islandicus. Iceland, or Eryngoleaved liverwort; Iceland Moss, now called Cetraria islandica.
2. Lichen Orcclla. Dyer's Lichen, or Orchall; the species which furnisbes the litmus dye. See Litmus.
3. Lichenin. A feculoïd substance found in the Cetraria islandica, and other lichens.
4. Lichen Staveh. A variety of starch procured from the Cetraria islandica, and otber lichens, closely resembling common starch. See Cetraria.

LICHESTEARIC ACID ( $\lambda_{\varepsilon}(\chi \grave{\eta} v$, lichen; otiap, fat). An acid obtained from Iceland moss; it is perfectly white, and consists of pearly crystalline plates.
[LIEBERKUHN'S GLANDS, or FOLLICLES. The minute tuhular glands of the small intestines, which secrete the succus entericus, and were first described by Lieberkuhn.]

LIEN, LIE ${ }^{\prime}$ NIS. Tbe milt; the spleen. In Celsus, the nominative case of tbis word is lienis.

LIENTERIA ( $\lambda$ cios, smooth ; êvtepa, the intestines). Lavitas intestinorun. Lientery; a species of diarrhoea, in which the food has been only partially digested.
[LIFE. The state of action peculiar to an organized body or organism. This state commences witb the first production of the germ ; it is manifested in tbe phenomena of growth and reproduction; and it terminates in the death of the organized structure, when its eomponent parts aro disintegrated, more or less completcly, by the operation of tho common laws of matter.-Curpenter.]
[LIFE EVERLASTING. A common naune for tbe plant Gnaphulium Margaritaceum.]

LIGAMENTUM (ligo, to hind). A ligament; a membrane of a flexible but compret texture, which connects the urticular surfaces of hones and cartilages; and sometimes protects the joints by a eapsular envelope.
[LIGATION (ligo, to tie). Tbe aet of applying a ligature.]
LIGATURE (ligo, to bind). Tbread, or silk, or inklc, conmonly rubhed witb wbite wax, for tying arteries, exerescences, \&e.

Ligature d'attente. A loose ligature, used by the continental surgeons in the operation for aneurysm, \&c., for the purpose of being tied in the event of hxmorrhage.

LIGHT. Lux, lucis. The agent of vision. It is distinguished into two kinds; viz., natural light, proceeding from tbe sun and stars; and artificial light, proceeding from bodies which are strongly heated; this glowing or sbining appearance is called incandescence. The phenomena of light may be referred to the following heads:-

1. Radiation, or the emission of light; like that of raloric, in all directions, in the form of radii, or rays. A collection of such rays aecompanying each other, is termed a pencil. The radiant point is tbe point from which diverging rays proceed; tbe focus, the poiut into which converging rays are collected.
2. Reflection, or the rehound of a ray of light, as of caloric, from a polisbed surface; the angle of incidence being equal to the angle of reflection.
3. Refraction, or the break of the natural course of a ray of light, as it passes into a transparent suhstance, as glass or water; this is termed ordinary ref faction. If a ray fall upon the surface of Iceland spar, or eertain other substances, it will be eplit into two portions, making an angle witb each other, and each pursuing its own separate course; this is called donble refuction; one of these rays following the same rule as if the substance were glass or water, the other undergoing extraordinery refruction.
4. Polmizution, or the property by which a ray of light, after its emergenee from the substance, or reflection from the surface, of a body, aequires poles or sides with different properties, in relation to the plane of its incidence. Polarized light, may be proenred from common light in three ways, viz.:
5. By reflection from the surfaces of transparentand oparge bodies.
6. By hansurissiou through eeveral plates of uncrystallized bodies.
7. By transmission through bodies regularly erystallized, and possessing the property of double refraction, as Iceland spar, \&e.
8. Decomposition, or the division of a ray of light, in traversing a prism, into its constituent colours; the appearance, thus produced, is ealled the prismatic spectrum. See Prism.
9. Phosphorescence, or the emission of light from eertain substanees. These are artificial compounds, as Canton's phosphorus; some bodies when strongly beated, as marble; certain marinc animals, in tbe living or dead state, as tbe medusa, the herring, \&e.; certain animalcules, as the fire-fly of the West Indies, the glow-worm, \&e.; vegetahle suhstances, as rotten wood, peat-eartb, \&e.
[LIGHT JALAP. A name giren in the shops of Paris to a spurious jalap, probably the product of tbe Convolvulus Orizabensis. It is called hy Guibourt fusiform jalap. It possesses, like tbe true jalap, purgative properties, but in a much feebler degree.]
[LIGHT OIL OF WINE. An oily substance produced hy heating heary oil of wine with four parts of water. It floats on the surface, and consists of two substances which are separatire by time: one a thick oil called etherolc, and a conerete substanec in crystals; isomeric with it called concrete oil of wine, or oil of cine cannphor, and hy some chemists etherine.]

LIGNEOUS (lignum, wood). Woody; having the structure and other cbaracters of wood.

LIGNIN (ligmun, wood). Tbe basis of woody fihre - the most durahle product of vegctation. When heated in close resscls, it yields pyro-ligncous acid; and a peeuliar spirituous liquor is produced, called pyro-xylic spirit.

LIGNONE (lignnm, rood). Tylite. A liquid which exists in commercial pyroxylie spirit, - a product of tbo distillation of wood.

LIGNO-SULPHURIC ACID. Snlpho lignic acid. A peculiar acid prodnced by tbe action of sulphurie acid upon lignine.

LIGNUM. Wood: that portion of arhoreseent plants which eomprises the alburnum and the duramen.

1. Lignum Aloc̈s. See Alocs Hood.
2. Lignum Braziliense, lignum PernamUncense, l'ernambuco nood. See Brazil liond.
3. Lignum Campechianum, Nicaragua rood. Logwood. See Hamatoryli lignım.
4. Lignum colubrimum (coluber, a snake). Snake-wood; the wood of the Strychnos Colnbrina, supposed to he a preservative against the bite of serpents.
5. Lignum nephriticum (vع申pòs, a kidncy). The name of a bitter-tasted wood, imported from Mexico, and formerly supposed to be a sorereign remedy in nephritis, or inflammation of the kidneys.
6. Lignnm pavance. The wood of the Croton Tiglium. It has the same quality as the seeds, but weaker.
7. Lignum Qnarsice. Quassia Wood; the wnod of the Picrcma excelaa [Quassia cxcelsa, Willd.], or lofty Bitter-Wood tree. It is sometimes called Jamaica QuassiaWood, to distiuguish it from the Qutassia amara.
8. Lignuan rhodium (fádos, a rose). Jamaica Rosewood; the produce of the Amyris balsamifera; used in eephalic fumigations, \&e. The African lignum rbodium is the produce of the Convolvalus scoparius; the West Indian, of a species of Cordia.
9. Lignum Santali rubri. Red Saunders' wood. See Pterocarpus Santalimus.
10. Lignum serpentinnm. The wood of the Ophioxylon serpentinum; used in the hites of serpents.
11. Lignum vita. The wood of the Guriacum officinale, remarkahle for the direction of its fibres, each layer of which crosses the preceding diagonally. It is also called lignum benedictmm, or St. Benedict's wood; lignum indicnm, or Indian wood; and lignum sanctum, or holy wood.

LIGULA. A peculiar membranous process at the top of the sheath of Grasses, between the sheath and the blade.

Ligulate. Strap-shaped.
[LIGUSTICUM LEVISTICUM. Lotage. A European Umbelliferous plant, possessing carninative, diaphoretic, and emmenagogne propertics. The root, stem, leaves, and seeds bave been employed.]
[LIGUSTRIN. A peculiar substance ohtainerl hy Potex from the hark of Ligustrum vulyare.]
[LIGUSTRUM VULGARE. Privet. A shrub growing wild both in Europe and the United States, belouging to the natural order Olcacea, the berrics of which are said to posscss purgative properties, and to colour the urine brown.]
[LILAC. The common name for the Syringa vulgaris.]
LIJACIN. The bitter erystallizable principle of tho Syringr vulgaris, or Lilac. [LILIUM CANDIDUM. Common white lily. A well known plant, the bulb of which is said to he useful in dropsy.
[LILY OF THE VALLEY. The common name for the Convallaria majalis.]
[LIMA BARK. Ifuomuco Bur\%. Cinchona cincrea, Gray bark. There are two varieties : one the product of the Cinchona mitiala, and the other ascribed to C. Micrantha.]

LIMATU'RA (lima, a file). Ranenta. The powder or dust which comes from filing.

LIMAX (limus, slime). Cochlea terves. tris. The snail; so called from its sliminess.

LIMBUS LUTEUS. A yellow halo surrounding the foramen of Suemmering, ohserved in animals which bave the axis of the eyeballs parallel with each other, as in man, the quadrumana, and some reptiles.

LIME. [The fruit of the Citrus acris, a variety of lemon.]

The oxide of calcium ; an alkaline earth, found as a carbonate in marble, chalk, and limestone. These substances become limo when burned in a white beat. See Calx.

1. Quick lime. The name of limestone which has heen burned, and undergone a change of properties.
2. Slalied lime. The powder produced by pouring water upon quick-lime; the water is ahsorhed, the lime swells, evolves heat, and falls to powder. It is then termed dry lime, in contradistinction to that of lime water; the former heing simply a.hydrate, the latter holding lime in suspension with a lirrge quantity of fluid.
3. Mill: or cream of lime. The hydrate of lime diffused through water.
[LIME WATER. See Liqnor Calcis.]
LIMON. The Lemon; the fruit of the Citrus Medica, or Lemon tree; a native of Media.
LIMONIN. Limone. A bitter crystalline matter found in the seeds of oranges, lemons, de.
[LIMONIS CORTEX. Lemon Peel. The plarmacopocial name for the outer rind of the fruit of Citrus Limonm.]
[LIMONUM OLEUM. See Oleum $L_{i-}$ monix.]
[LIMONUM SUCCUS. Lemon juice. The pharmacopcial name for the juice of the fruit of Citrms Limonmm.]
[LIMOPSORA ( $\lambda_{t} \mu \partial \bar{s}$, hunger ; $\psi \dot{\mu} \rho a$, the iteh). A species of seabies which attacks men, and some animals, who havo been denrived of food.]
LIMO'SIS ( $\lambda_{\text {н }}$ òs, hunger). Morbid appetito; impaired, exeessive, or depraved appetite.
[LIMOTIIERA PETA ( $\lambda_{\mu}$ 文s, hunger; $\theta_{\varepsilon-}$ pancin, healing). The treatment of disease

LINACE E. The Flax tribe of Dicotyledonous plants. Herhaceons plants with leaves usually alternate; flowers symmetrical, polypetalous; stamens hypogynous; ovarium entirc, many-celled; seeds compressed and inverted.

1. Limum usitatissimum. The lint plant, or Common Flax. The sced is commonly called linseed, or more properly lintseed. The cake, or placenta lini, left after the expression of the oil, is called oil-eake; and this, when powdcred, forms linsced meal, or the farina lini.
2. Linum eatharticum. Purging Flax; a European plant, now almost obsolete.

LINAMENTUM (linum, linen). Lint; a tent for a wound.-Celsus.
[LINARIA VULGARIS. A systematic name for Common Toad flax See Antirrhinum linaria.]
LINCTUS (lingo, to lick). A term applied to soft suhstances, of the consistence of syrup, which are taken hy heing lieked off a spoon.

LINEA. A line or streak; a linear fibre, or process, \&c.

1. Linea alba. A white line formed by the meeting of the tendons of the ahdominal muscles; it extends from the ensiform cartilage to the puhes. This is the median line of Chaussier.
2. Linece semilunares. Two curved lines, a little external to the linea alba, extending from the sides of the chest to the pubes, and bounding the recti muscles.
3. Linea transversales. Three or four transverse lines, which connect the lineæ semilunares to the liuea alba.
4. Linea imominata. Literally, an unnamed line; an elevated line, forming a part of the hrim of the pelvis; and also termed linea ileo-pectinea.
5. Linea aspera. The rough prominence ohscrved along the posterior surface of the fenur.
6. Linea quadrata. The posterior intertrochanteric line of the femur, to which the quadratus femoris muscle and capsular ligament are attached.
7. Linece transversc. The name of some fibres which run aeross the raphe of the corpus callosum.

LINEAMENT (linea, a line). A delicate trait; the carlicst trace of the embryo.
LINEAR. Narrow, with the two opposite margins parallel.
[LINEATE (linea, a linc). Haring lines, streaked.]

LINGUA (lingo, to lick). The tongue ; the organ of taste and speceh.

1. Jingual. The designation of the gu8tatory nerve, or nerve of the tonguc.
2. Lingualis. [Of, or belonging to, the tongue.] A muscle of the tonguc arising from the root, and inserted into the tip; it is unconnected with any bone ; it contracts the tonguc, and compresses its point.

LINGUETTA LAMINOSA. A thin tonguclet of gray substance, cxtending from the gray substance of the cerchellum upon the valve of Vieussens.

LINIMENTUM (lino, to besmear). A liniment, or cmbrocation; an external application, having the consistence of an oil or halsam.
[The following are the officinal (Ph.U.S.) Linimenta, with the formulæ for their pre-paration:-]
[1. Linamentum Ammonic. Liniment of Anmonia. R. Solution of Ammonia, Izj.; $_{5}$ Olive oil, $\mathrm{f}_{\mathrm{j}}^{\mathrm{ij}}$. Mix.]
[2. Linimentum Calcis. Lime Liniment. R. Lime water, Flaxseed oil, of each, $\mathrm{f}_{\mathrm{Z}}^{\mathrm{Zj}}$. Mix.]
[3. Linimentum Camphore. Camphor Liniment. B. Camphor, Zss.; Olive oil, $\mathrm{f}_{3} \mathrm{ij}$. Dissolve the camphor in the oil.]
[4. Linimentum Cantharidis. Liniment of Spanish Flies. R. Spanish Flies, in powder, $\overline{\mathrm{J}} \mathrm{j} . ;$ Oil of Turpentine, Oss. Digest for three hours in a close ressel, by means of a water-hath, and strain.]
[5. Linimentum Saponis Camphoratum. Camphorated Soap Liniment. Opodeldoc. R. Common soap, sliced, $\bar{J}$ iij.; Camphor, $\mathrm{F}^{\mathrm{j} . ;}$; Oil of Rosemary, Oil of Origanum, of each, f -j. ; Alcohol, Oj . Digest the soap with the alcohol, hy means of a sand-hath, till it is dissolved; then add the camphor and oils, and, when they arc dissolved, pour the liquor into hroad-mouthed hottles.]
[6. Linimentum Terebinthinc. Liniment of Turpentinc. B. Oil of Turpentine, Oss.; Resin ccrate, 1 Dj . Add the oil of turpentine to the ccrate previously melted, and mix then.]
[LININ. A bitter principle procared from the Linum catharticum, or Purging Flax.]

LINNEAN SYSTEM. A method of classifying plants, introduced by Linneus, and founded on modifications of the sexual apparatus; hence, it is also called the ecxual system. (Sec Botany, in Appendix.)
[LINOSPERMUNL (Aivov, flax ; onipua: sced). Linseed.]
[LINSEED. Flaxseed. The sceds of Limmn usitatissimum.]

LINT. Linterm. The scrapings of fine liuen, for dressing wounds, ulecrs, dc. It is made into various forms, which hare different nanes, according to the difference of the figures: when made $u$ p in an oval or orbicular form, it is called a pledget;
when in a eylindrical form, or in the shape of a date or olive-stonc, it is called a dessil.

LINTEUM (quasi lineum; from lino, to anoint). A linen eloth, or napkin. Celsus uses the diminutive term linteolum, for a piece of linen clotb or a pledget.
[LINUM. The pharmacopoial name of Flaxseed ; a genus of plants of the natural order Linacew.]
[1. Linum catharticum. Purging Flax. An European plant which formerly enjoyed reputation as a cathartic, but it is now seldom used.]
[2. Linut usitatissimum. Common Flax. An annual plant, almost every where cultivated, the seeds of which, and the oil expressed from them, are officinal. The mucilage ohtained by infusing the seeds in hoiling water is used as a demulcent; while meal, formed by grinding the seeds, forms an excellent einollient poultice. The oil is laxative; and has heen recommended as a cure for piles, and, in combination with lime-water, it makes an excellent application to hurns and scalds.]
[LION'S FOOT. The common name for Prenanthes serpentaria.]

## [LIPARIA ( $\mathrm{i}_{\mathrm{i} \pi}$, fat). Ohesity.]

LIPAROCELE ( $\lambda i \pi o s$, fat; $\kappa \tilde{\eta} \lambda \eta$, a tumour). A species of sarcocele, in which the enclosed substance is fat.
[LIPH $\pi$ MIA ( $\lambda \varepsilon เ \pi \omega$, to give up; ai $\mu a$, blood). Deficiency of blood.]
[LIPIC ACID ( $\lambda i \pi=s$, fat $)$. An acid formed hy the action of nitric acid upon the stearic and oleic acids.]
[LIPODERMUS ( $\lambda \varepsilon i \pi \omega$, to relinquish). Without a prepuce.]

LIPO'MA ( $\lambda$ inos, fat). Adipose tumour, formed of fatty, unorganized substances.
[LIPOSIS ( $\lambda i \pi a$, fat). The formation or progressive accumulation of fat.]
LIPPITUD 0 (lippus, hlear-eyed). Blearedness; a chronic catarrhal inflammation of the eyelids. This affection commonly hegins towards tho angles of the eye, and is thence called lippitudo angnlaris; when it is attended with tingling and itching, it has heen termed lippitudo pruriginosa, and, hy Mr. Ware, psorophthalmia; syphilitic eruption on the eyelids of infants is termed lippitudo syphilitica nesnatorum.
[LIPSIS ANLMI ( $\lambda$ ci४ $s$, suspension). Fainting.]
LIPYRIA ( $\lambda \varepsilon i \pi \omega$, to leave; $\pi \tilde{v} \rho$, heat). Properly, Leipopyria. Coldness of the surface; a symptoth in somo fevers, as tho noted epidemic of Breslau, \&c.

LIQUATION (liquer, to melt). A modo of purifying the orc of tin. Thic iuppure metal heing exposed to lient, the pure tin is
first melted, and separated from a less fusible alloy, containing tho foreign metals.

LIQUEFACIENTS (liquefacio, to liquefy). Agents which augment the secretions, arrest the solidifying, and promote tho liquefying processes of the animal economy. They correspond with tho panchymagogues of the ancients. From their effect in checking phlegmonous inflammation, removing indurations, \&c., they are frequently termed resolvents.

LIQUEFACTION (liquefacio, to melt). The passing of a substance from the solid to the liquid state, - one of the effects of caloric. This term is sometimes synonymous with fusion, with deliquescence, and with solution.

LIQUEUR. A spirituous liquor, eomposed of water, alcohol, sugar, and some aromatic infusion, extracted from fruits, seeds, \&c. The same aromatic infusion may give its name to liqueurs of different qualities; thus, one proportion of ingredients gives eau-de-noyau; another, crême-de-noyou, \&c. The French distinguish three qualities, viz.:

1. The Ratafias, or simple liqueurs, in which the sugar, the alcohol, and the aromatic substance are in small quantities; as anise-water, noyau, \&c.
2. The Oils, or the fine liqueurs, containing more saceharine and spirituous matter; as anisetta, curacoa, \&c.
3. The Creams, or superfine liqueurs, as rosoglio, maraschino, Dantzic, \&c.

LIQUID (liqueo, to melt). An inelastio fluid. All liquids may he arranged into two great classes, viz., simple liquids, as mercury; and compound liquids, as compound gases, \&c.

LIQUIDAMBAR (liquidum, fluid; ambar, the aromatic substance which distils from the tree). A genus of plants, of Which the specics altingia yields the liquid storax, or rasamala of the Malayan archipelago.
[LIQUIDAMBAR STYRACIFLUA. Sweet Gum. An indigenous tree, the trunk of which, when wounded, yields a halsamic juice known by the name of liquidambar, or copalne balsam.]

LIQUID BLUE. To one ounee of Prussian hlue, add an ounce or two of strong hydroehlorio acid; let the mixture stand for twenty-four hours, and then add eight or ninc ounecs of water.
LIQUOR (liqueo, to become liquid). A liquor or solution; an intimato mixture of solid with fuid hodies; the dissolving fluid is termed tho solvent, or menstrunm.

1. Liquor aluminus compositus A compound solution of alum aud sulphato of
pine, formerly called aqua aluminosa Bateana.
2. Liquor ammonice. A solution of ammoniacal gas in water, ntherwise called aqua ammoniæ. [Sce Ammoniu.]
3. Liquor ammonia acetatis. A solution of the neutral acetate of ammonia, with a proportion of carbonic acid diffused through it, commonly called spirit of Mindcrerus.
[4. Liquor ammonias citratis. Solution of citrate of ammonia in distilled water.]
[5. Liquor ammonia fortior. An aqueous solution of ammonia of the specific gravity 0.882 U. S.]
[6. Liquor anmonia sesquicarbonatis. A saturated aqueous solution of earhonate of ammonia.]
4. Liquor ammonice sub-carbonatis. A solution of the solid sub-earhonate in distilled water.
[8. Liquor antipodagricus. A remedy for gout, consisting of one part of Boyle's fuming liquor of sulphur and three parts of spirit.]
5. Liquor arsenicalis. [See Liquor potarsce arsenitis, Ph. U. S. and Lond., Foiolev's Solution.]
[10. Liquor arsenici chloridi. Solution of chloride of arsenic ; a preparation intended to he an imitation of De Valangin's arsenical solution, called hy the inventor solutio solventis nineralis.]
[11. Liquor arsenici et Hydrargyri iodidi. Solution of hydriodate of arsenic and mercury; Donovan's Solution.]
[12. Liquor Barii chloridi. Solution of chloride of Barium.]
6. Liquor calcis. Lime water; a saturated solution of lime in water.
7. Liquor calcii chloridi. Solution of ehloride of calciuu.
8. Liquor cupri ammoniati. A simple solution of ammoniated copper in distilled water.
9. Liquor ferri alkalini. Solution of alkaline iron, similar to Stahl's tinctura martis alkalina.
[17. Liquor forri iodidi. Solution of iodide of iron.]
[18. Liquor ferri mitratis. Solution of nitrate of iron.]
10. Liquor hydrargyri bichloridi. Solution of corrosive sublimate.
[20. Liquor iodinii compositus. Compound solution of iodine.]
[21. Liquor magnesia citratis. Solution of citrate of magnesin.]
[22. Liqun morphia acctatis. Solution of acctate of inorphia.]
[23. Liquor morplice muriatis. Solution of hydrochlorate of ulorphia.]
[24. Liquor morphia sulphatie. Solution of sulphate of morphia.]
11. Liquor plunbi sub-acetatis. Solution of sub-iectate of lead, formerly called extract of Saturn, and now Goulard's extract.
12. Liquor plumbi sub-acetatis dilutus [Lead water.] The former preparation, diluted, and with the addition of a portion of spirit.
13. Liquor potarsa. Solution of potassa, formerly ealled aqua kali puri, lixivium saponarium.
[28. Liquor potassce arsenitis. Solution of arsenite of potassa; arsenical solution; Fowler's solution.]
14. Liquor potass carbonatis. Solution of the earbonate of potassa, formerly called aqua kali praparati, lixivium tartari, oleum tartari per deliquium.
[30. Liquor potasse citratis. Solution of citrate of potassa; neutral mixture.]
[31. Liquor potassii iodicli compositum. Compound solution of iodide of potassium. $]$
[32. Liquor soda. Solution of soda.]
[33. Liqnor sode chlorinatce. Solution of chlorinated soda; Labarraque's disinfeeting liquid.]

LIQUOR OF SURFACES. The fluid poured out on the surfaces of every carity in the hody. To this head may be referred the following fluids:-

1. Liquor ammii. A luid in the interior of the amnion, in which the foetus floats.
2. Liquor chorii. A gelatinous fluid which separates the inner surface of the chorion from the amnion in the carly period of gestation ; it is commonly called the false waters.
3. Liquor Cotunnii. A limpid fluid found in the restibulum of the ear, and in the nervous tuhes lodged in the semicircular canals.
4. Liquor entericne (evrepa, the homels).

The natural secretion of the interior coat of the bowels.
5. Liquor Jorgagni. A peculiar transparent fluid found hetween the crystalline lens and its membrane. Manyanatomists consider it as a post-mortem appcarance.
6. Liquor pericardii. A serous fluid contained in the pericardium.
7. Liquor of Scarpa. A liquor found in the cavitics of the labyrinth, and termed agna lerlyrinthi.

LIQUOR OF VAN SWIETEN. A solution of twelve grains of deutnchloride of meremry. in two pints of distilled water.

LIQUOK OF LOECHLIN. The name given in Germany to an ammoniacal com-
pound, with copper, employed in scrofulous affections by M. Baudelocque.

LIQUOK SILICUM. Literally, liquor of flints. The former name of a solution of the vitrcous mass formed by igniting one part of silicic acid with tbree of earbonate of potassa.

LIQUOR SANGUINIS. The fluid portion of the blood, in which the red particles float during life. It separates, on coagulation, into two parts, the serum, and the fibrin wbich was previously in solution. The fibrin coagulating encloses within it the red particles. The serum still retains the albumen in solution.
LIQUORICE (liquor, liquor (?)). The root of the Glycyrrhize Glabra.

Liquorice juice. The inspissated juice of the common liquorice root, usually imported in rolls or cakes, from Spain, and bence called Spanish liquorice.
[LIRIODENDRIN. A name given by the late Prof. Emmet to a substance obtained hy him from the root of the Liriodendron, and which he believed to be a peculiar principle in whieh resided the particular properties of the bark of that ront.]
[LIRIODENDRON. The U.S. Pharmacopoial name for the bark of the Liriodendron tulipifera, or Tulip-tree; an indigenous plant of the natural order Magnoliacere. It is a mild tonic and diaphoretic. The dose of the bark in powder is from $3^{\text {ss. }}$ to 7 ij .]
[LISRON DIET DRINK. A compound decoction of sarsaparilla.]

LISPING. A species of psellismus, or defective enunciation, commonly ealled speaking through the teeth, and produced by an unnatural lengtb of tongue, 一or by affectation.

LITHAGOGA (AiOos, a stone; ä $\gamma \omega$, to expel). Lithagogues; medicines whieb expel or dissolve stone.

LITHARGE (Ai撔, a stone; cupyvos, silver). Spuma argenti. An oxide of lead in an imperfect state of vitrification. Lead becomes oxidised and cbanged into litharge during the process of refining, which is performed for the purpose of separating the silver whicb it contains. Litharge is more or less white or red, according to the metals with wbich the silver is alloyed, the white being called litharge of silver; the red, litharge of golr.
[LITMECTASY (גiOos, a stonc; extaois, dilatation). Cystectasy. Tho operation for the removal of stone from the bladder by slowly dilating the neek of the bladder without cutting or lacerating the prostate, an incision being first made in the peri-
ngum and the membranous portion of the urethra opened.]

LITIIIA (גioos, a stonc). Tbe protoxide of lithium; an alkali discovered in 1818, by M. Arfwedson, of Sweden, in the mineral called petalite; it received its name from its baving been first found in an eartby mineral.

LITHI'ASIS ( $\lambda$ iOos, a stone). The formation of a ealculus, or stone, in tho urinary passages. It is sometimes termed lithia and lithus.

LITHICA ( $\lambda$ i $\theta o s$, a stone or calculus). Medicines wbich counteract the predisposition to tbe formation of calculous coneretions in the urinary organs.

LITHIC ACID ( $\lambda i \theta o s$, a stone). Uric acid. A principle constantly present in healtby urine, and generated by tbe action of the kidneys.

LITHIUM (גíoos, a stone). Tbe metallie base of a rare alkaline oxide called lithia, from its having been first derived from an earthy mineral.

LITHOFELLIC ACID ( $\lambda$ i $\theta o s$, a stone; fel, gall). An unclassical name for an aeid obtained from the hezoar stone.
[LITHOLIBY ( $\lambda i \theta_{o s}$, a stone; $\theta \lambda i \beta \omega$, to erush). A term applied by Dr. Denamiel to designate an operation consisting in crushing a urinary calculus as it lies in the trigon vesieæ, behind the prostate, between an instrument introduced by the uretbra into tbe bladder, and the fore and middle fingers of tbe left band, introduced per anum.]

LITHONLYTICS ( $\lambda i \theta o s$, a stone ; $\lambda v \omega$, to dissolve or break up). A term suggested by Pereira as preferable to litbontripties, lithonthriptics, \&e.

LITHONTRIPTICS ( $\lambda$ i $\theta_{0}$, a stone; тpißw, to wear by friction). Medicinal agents which dissolve or disintegrate urinary calculi within the body.

1. Lithontriptor. Tbe name of an instrument for reducing ealculi in the bladder into small particles or powder, which is tben wasbed out or voided with tho urine. The following instruments are used by Baron Heurteloup:-
2. "L'instrument à trois branches, avec un foret simple:" eonsisting of a canula, three tenaeula, and a drill, for crushing stones equal in diameter to tho drill.
3. "L'instrument a trois branches, avec le mandrin a virgule;" applicable to stones of from cight to ten lines in diameter; tho "virgule," or shoulder, being employed to excavate tbe calculus.
4. "L'instrument a quatre branches," or "pince à forceps ;" adapted to stones of from twelve to eighteen lines in diameter, and furnished witb a "mandrin a virgulc,"
the "virgnlo" of which makes a larger oxcavation than that of the preceding instruanent.
5. "Le brise coque," or the shell-breaker; adapted to hreaking down the shcll formed by the previous cxcavations, and also flat and small stones.

LITHOPEDION ( $\lambda i \theta o s$, a stone; $\pi a t-$ diov, a child). A kind of stony mass, into which tho foetus bas heen found to be converted in the utcrus. The terin osteopadion is also used to denote a bony mass, found on similar occasions.
[LITHOSPERMUM OFFICINALE.Gromwell. An European plant of the natural order Boraginaceæ, the seeds of which were formerly supposed to he uscful for the cure of calculous disorders, but are not now employed.]

LITHOTOMY (dilos, a stone; тон̀̀, section). The operation of cutting into the bladder, in order to extract a stone. The various modes of performing this operation are termed-

1. Tbe apparatus minor, or lesser apparatus; this bas been described by Celsus; and hence called lithotomia Celsiana. As the stone, fixed by the pressure of the fingers in the anus, was cut directly upon, this bas been called eutting on the gripe, a knife and a hook being the only instruments used.
2. Tbe apparatus major, or greater apparatus, so named from the numerous instruments employed; this has been also called the Marion method, from having been first published by Marianus Sanctus, in 1524, as the invention of his master, Johannes de Romanis.
3. Tbe high operation, first practised in Paris, in 1475 , and performed by making the incision above the pubes, in the direction of the linea alba.
4. Tbe lateral operation, so named from the prostate gland and neck of tbe bladder being laterally cut.
[ LITHOTRITY or LITHOTRIPSY ( $\lambda$ i $\theta o \mathrm{~s}$, , n stone ; repec, to perforate; or Opúr$\tau \omega$, to crush in pieces). The operation of boring or crushing calculi in tbe hladder, with a view of reducing them into small frugments, so that they may pass through the urethra with the urinc. Seo Lithontriptics.]

LTTMUS or TURNSOL. A blue pigment obtained from the Lichen Oreclla. In an earlier state of its preparation, it is of a purplish red colour, and is then called archil, orchall, and orseillc de Camarics. Litunus is employed by chemists for detecting the presence of a freo acid.

Litmus paper is prepared ly digesting powdered litmus in water, and painting
with lt white paper which is free from alum. Sce Cureuna P'aper.
LIVER. The largest glandular apparatus iu the body, the office of which is to secrete the bile. It is divided into three lobes-

1. The great lobe, situated in the rigbt hypochondriac region;
2. The small lobe, situated in the cpigas. tric region; and,
3. The lobulus Spigelii, situated on the left side of the great lohe. It has two prolongations, which have heen termed the lobulue candatus, and the lobulus anonynus or quadratus.

LIVER. Hepar. A term applied to combinations of sulphur witb alkalics, froms their liver-like appearance, as liver of antimony, liver of sulphur, \&c.

LIVER ORE OF MERCURY. Hepatic ore. A bituminous cinnabar or sulphuret of mercury from Idria.

LIVER-SPOTS. Chloasma. A vernacular term for the pityriasis versicolor.
[LIVERW ORT. Common name for the Hepatica Americana.]

LIVIDITY (livor, a livid colour). The discoloration which occurs in tbe body iu some discases of the beart, \&c.
LIVOR (liveo, to be hlack and hlne). A blackish mark on the body, produced by a blow, fall, \&c. A dark circle round the eye.

LIXIVIATION. A term denoting the application of water to a saline hody which consists of hoth soluble and insoluble ingredicnts. The solution obtained in tbe lixivium, or ley.

LIXIVIUM (lix, licis, anciently, water or liquor in general ; also lye). Lye, or ley, made of ashes ; also, the potassa impura. This term was formerly applied to some of the alkaline salts, and tbeir solutions.

1. Lixivia vitriolata. Vitriolated ley, or the sulphas potassx.
2. Lixivia vitriolata sulphurea. Sulphureous vitriolated ley, or the sulphas potassæ cum sulphurc.
3. Lixivinm alkali fixum regetabile. Fixed vegctable alkaline ley, or tho potassa impura.
4. Lixivium causticum. Caustie ley; another nane for the liquor potasse.
5. Lixivium вaponarium. Soap!es: another name for the liquor potasse.
6. Lixivium tartari. Tartar ley ; or the lignor potasso carbonatis, formerly called olcuin tartari per deliquium.
7. Lixivinm vinum. The wine which exudes from grapes before they are pressed.
8. Isixitium sanguinis. Blood ley; an
impure solution of ferro-eyanide of potassium.
LIXIVUS CINIS. A lye made of woodashes, mentioned by Pliny.

LOADSTONE. An ore of iron which possesses the peculiar properties of attracting iron, and of turning towards the north pole, when freely suspended. The properties of the natural loadstone may he communicated to iron and steel, which, when properly prepared and touched by the loadstone, are called artificial maguets. See Magnet.

LOAM. An impure potters' clay, mixed with mica and iron ochre.
[LOBE. See Lobur.]
[LOBED (lobus, a lohe). Partly divided into a number of segments. In hotany, applied to leaves the margins of which are deeply incised.]
[LOBELIA. The pharmacopeial name for the herb of the Lobelia inflata; a genus of plants of the natural order Loheliacea.]
[1. Lobelia cardinalis. Cardinal Flower. An indigenous species supposed to possess anthelmintic properties, hut seldom or never used.]
2. Lobelia inflata. Bladder-podded Lobelia, Indian Tohacco, or Emetic Weed; a plant with properties similar to those of tobacco.
3. Lobelia syphilitica. Blne Cardinal Flower; the root of which has been used hy the North American Indians as a specific in syphilis.
4. Lobelic acid. A peculiar acid ohtained from the Lobelia inflata, or Indian tohacco, formerly confounded with gallic acid.
5. Lubelina. A peculiar principle, procured from Lobelia inflatu, and said to resemble nicotin.
LOBELIACEA. The Lohclia tribe of Dicotyledonous plants. Herbaceous plants or shrubs, with leaves alternate; flowers axillary or tcrminal ; stamens syngenesious; ovarium inferior; fruit capsular.
[LOBLOLLY PINE. A common name for the Pinus Tceda.]

LOBULUS (dim. of lobus, a lobe). A lobule, or small lohe.

1. Lobulus Spigelii. A small lobe of the liver, on the left of the great lobe, and named from Adrian Spigel, a Belgian physician.
2. Lobulus quadratus vel anonymus. That portion of the liver which is between the gall-bladder and the unbilical fissure.
3. Lobulus vel processus caudatus. A small tail-like appendago to the lobulus Spigelii, from which it runs outwards, like a crest, in to the right lobe.
4. Lobule of the par vagum. The name
of a small tuft at the inferior part of the ccrehellum.
5. Lobulus pneumogastricus. A lobule of the cerebcllum, situated near the origin of the eighth pair of nerves; its form is that of a convoluted shell.
6. Lobulus auris. The lower dependent and fleshy portion of the pinna of the ear.
7. Lobuli testis. The lobules formed by the convolutions of the tuhuli seminiferi of the testis.

LOBUS ( $\lambda_{0} \beta \grave{o} s$, from $\lambda_{a \mu \beta a y \omega, ~ t o ~ t a k e ~}^{\text {a }}$ hold of). A lohe :-

1. The designation of the portions into which the lower surface of the hrain is divided: these are termed the anterior, the middle, and the posterior lobes.
2. The name of the lower and pendent part of the external ear.
3. The name of the divisions of the lungs, of the liver, \&c.
4. The lobns of Morgagni is a lobe at the hase of the prostate, discovered hy Morgagni, and since described hy Sir Everard Home.

LOCALES (locus, a place). Local diseascs; morbid affections which are partial; the fourth class of disenses in Cullen's nosology, comprising the following orders:

1. Dyscethesice. Impaired sensations; diseases in which the senses are depraved or destroyed, from a defect of the external organs ; as caligo, amaurosis, dysopia, pseudohlepsis, dysecœa, paracusis, anosmia, ageustia, and anæsthesia.
2. Dysorexic. Depraved appetites; false or defective appetites; as hulimia, polydipsia, pica, satyriasis, nymphomanin, nostalgia, anorexia, adipsia, and anaphrodisia.
3. Dyscincsiar. Depraved or impeded motions, from imperfection of au organ; as aphonia, mutitas, paraphonia, psellismus, strabismus, dysphagia, and contractura.
4. Apocenoses. Increased sccretions; superahundant fluxes of blood, or other fluid, without pyrexia; as profusio, ephidrosis, epiphora, ptyalismus, enuresis, and gonorrhea.
5. Episehesc8. Obstructions; suppression of excretions; as obstipatio, ischurin, dysuria, dyspermatismus, and amenorrhœa.
6. Tumorcs. Partial swellings, without inflamination; as ancurysma, varix, ccchymoma, scirrhus, cancer, bubo, sarcoma, verruca, clavus, lupia, ganglion, hydatis, hydrarthrus, and cxostosis.
7. Letopia. Protrnsions; parts displaced ; ns bernia, prolapsus, and luxntio.
8. Dialysce. Disunions; solutions of
continuity; as vulnus, uleus, herpes, tinea, psora, fractura, and carics.

LOCALITY. A term in Phrenology indicative of the faculty which gives the idea of relative position; cnabling the accomplished traveller, geographer, and landscapo painter, to retain a knowledge of localities, and imparting notions of perspective. Its organ is scated ahove and on cach side of the root of the nose - on each side of that of Eventuality.

LOCHIA ( $\lambda$ oxivi $\omega$, to hring forth). The uterine discharge which takes place for somo days after delivery; in cattle, it is termed the clcansings.

LOCKED JAW. A spasmodic affection, proventing the action of the jaws. See Trismus, and Tctamus.

LOCOMOTION (locis, a place; mioveo, to move). The act of moving from one place to another.

LOCULICIDAL. That mode of dehiscence of fruits, in which the loculi, or cells, are severed at their hack.

LOCUS NIGER. Jiterally, a black spot; a term applied to the dark-appearance in the centre of the section of the crus cerebri.

LOCUS PERFORATUS. A whitish gray suhstance situated between the crura cerehri, and perforated by several apertures for the transmission of vessels. It is sometimes called pons Tarini.

LOCUSTA. A spikelet, or partial spike; a portion of the inflorescence of many grasses.

LOCUSTIC ACID (locusta, a grasshopper). An acid procured from grasshoppers, differing little from acetic acid.

LOGW OOD. See Hamatoxyli, Lignum.
LOHOCH, or LOOCH. Eclegma. A thick syrup, mado of mucilaginous substances.

LOLIIN. A peculiar substance procured from the watery cxtract of Lolium temulentum, or hearded darnel.
[LOLIUM TEMULENTUM. DarnelGrass. A plant of the natural order Graminex, possessing decidedly poisonous properties.]

LOMENTUM. Legrmeu lomentaceum. A modification of the legume in which the spaces between each pair of contiguous secds are contracted, and separation takes place into distinct pieces, as in oruithopus.
[LONGEVITY. The prolongation of life to an advanced age.]
[LONGISSIMUS JORSI. The long musele of the back, which naintains the trunk of the body erect.]

LONG ISSIMÚS OCULI. A name given to the obliquns superior, from its being the
longest muscle of the cyc. See Brevissiтия.

LONGITUDINAT (longus, long). A terin applied to two sinuses of the dura matcr.
[LONG-LEAVED PINE. A common name for Pinus palustris.]
[LONG-PEPPER. The dried unripe fruit of Piper lougum.]

LONG SIGHT. An affection of the sight, in which the vision is only accurate when the object is far off: it is the dysopia proximorum of Cullen, and the vuc longue of the French. Seo Lens, [and Presbyopia.]

LONGUS COLLI. A long muscle at the hack of the œsophagus, which supports and bends the neck. The muscle hetween the spinous processes of the vertebreo and the angle of the ribs is called lougissimus dorsi.
[LONICERA CAPRIFOLIUM. Honeysuchle. A plant indigenous to the south of Europe, a syrup of the flowers of which has heen given in pectoral affections. The frnit of all the species of the genus are said to be emetic and catbartic.]
[LOOCH. Lohoch, Loch. A Linctns.]
[LOOSESTRIFE. A common name for Lythram salicaria.]

LORDO'SIS ( (opdòs, curred). Procnrvation of the head and shoulders, or anterior crookedness. Posterior incurration was formerly called cyrtosis; and the lateral form, hybosis.

LORI'CA. Literally, a coat of mail. A kiud of lute, with which vessels are coated hefore they are cxposed to the fire. Hence the term lorication, in chemistry, for coating. See Lute.

LOTIO. A lotion, or wash; a liqnid remedy, intended for external application. This gencric term comprehends emhrocations, fomentations, liuiments, coljyria, \&c.

Lotio nigra. Sec Black tensh.
LOUSINESS. Malis pediculi. An affection in which the cuticle is infested with lice; depositing their nits or eggs at the roots of the hair, accompanied with troublesome itching. Sec Pediculus.

LOVAGE. A liqucur prepared from an Umhelliferous plant called Levisticum offcinale.
LOVI'S BEADS. Specific grarity Beadz. IIollow-seated globes of glass, of about the size of small hullets. Each bend is a small hydrometer, intended to indicate one fixed density, by its remaining half-way between the top and the bottom of the liquid into which it is introduced. These bends are useful in making test-acids.

LOXA BARK. The Pale Crown hark,
tho produee of the Cinchona Condaminea.

LOXARTHRUS ( $\lambda_{0} \xi_{\partial s}$, trristed; äpOpov, a joint). An obliquity of a joint, without spasm or luxation, as varus, valgus, \&c.

LOXIA ( $\lambda_{0} \xi_{\partial s}$, twisted). Caput obstipum. Wry-neck ; a distortion of the head towards one side.

LOZENGES. Trochisci. These are composed of fine powders, mixed with mucilage and sugar, (or adulterated with pipeclay,) rolled into cakes, eut into shapes, and dried in a stove.

LUES VENEREA. Literally, the plague of Venus, or venereal disease. Syphilis; a diseaso also called morhus Aphrodisius, morbus Gallicus, morhus Indieus, morbus Neapolitanus, \&c.

LUFFA. The name of a tribe of Cu curbitaceous plants. One of these is the Cabocintha, employed as a violent purgative in Brazil, and recently introduced into England.

LUGOL'S SOLUTIONS. These are solutions of ioduretted iodide of potassium of various strengths, employed as caustics, ruhefacients, and stimulants. Lugol's iodurettcd cataplasm consists of the ruhefacient solution mixed with linseed meal.

LUMBA'G0 (lumbur, the loins). A rheumatio affection of the museles about the loins.

LUMBI. The loins; the inferior part of the back.

1. Lumbar. The designation of nerves, arteries, veins, \&c., helonging to the rcgion of the loins. Hence, also, the term lumbo-abdominal, or lumhar plexus; the lumbo-8acral nerves, and the lumbo-dorsal region.
2. Lumbar Abscess. Psoas abscess. A chronic collection of pus, which forms in the cellular substance of the loins, hehind the peritonæum, and descends in the course of the psoas musele.

LUMBRI'CALES (lumbricus, an earthworm). The name of four muscles of the hand and foot; so called from their resemblance to the earth-worm.

LUMBRI'CUS (lubricus, slippery). The earth-worm. Ascaris lumbricoides is the long and round worm, found in tho intestines.

Lumbricus cucterbitinus. The Gourdworm of Dr. Heherden, so called from its joints, when broken, presenting the appearance of gourd-seeds.

LUNA. The Moon; tho alchemical natee of silver.

LUNA CORNEA. Horn silver. Tho chloride of silver, so named from its hornlike appearance and consistenee.

LUNA FIXATA. Literally, fixed moon 3 the name given hy the famous empiric Luddemann to the cadmice of Gauhius, a remedy formerly much used in clonio affections, and consisting of oxide, or the flowers of zine.

LUNAR CAUSTIC (luna, the moon; the old alchemical name for silver). The Argenti nitras, or fused nitrate of silver. .
[LUNATE (luna, the moon). Crescentiform, or semi-lunar.

LUNATIC (luna, the moon). One who is affected by the changes of the moon, or is periodically deranged,

LUNATICA ISCHURIA (luna, the moon). A suppression of urine, which returns monthly, or with the moon.

LUNGS. Two vesicular organs, situated in the thorax. The right lung is divided into three lobes; the left, into two; each of them is subdivided into lobules, or small lohes. See Pulmo and Respiration.

LUNGWORT TREE. Sticta pulmonaria. A lichen containing a hitter and amylaceous matter, similar, but inferior, to that of Iceland moss.

LUNULA (dim. of luna, the moon). The white semi-lunar mark at the hase of the nail. The term lumula is applied to the thinner portions of the arterial valves of the heart.

LUPULINA. Lupulinic grains or glands. The name given by Dr. Ives to the active principle of the Humulus Lupulus, or the hop. [It occurs in the form of a yellow powder, on the surface of the scales of the fruit. It is tonie and moderately narcotio. The dose is from gr. vj. to gr. xij., and is usually given in the form of pills.]

Lupulite. [Lupuline.] The hitter principle of the hop, procured by treating the aqueous extract of the lupulinio grains, united with a little lime, with alcohol.

LUPUS (Lat. a wolf). Noli me tangere. A slow tuhercular affection, occurring especially ahout the face, commonly ending in ragged ulcerations of the nose, cheeks, forehead, cyelids, and lips. It is so called from its eating away the flesh, like a wolf.

LUSCITAS (luscus, blind of one eye). A term applied by Beer to a distortion of the eyehall, which resembles squinting, hut differs from it in the want of power to move the affected eye when the other is closed. It occurs as a symptom in amaurosis.

LUTE. A compound paste, made of clay, sand, nad other materials, for closing the joinings of retorts, receivers, \&c., in chemical experiments, in order to render them air-tight. lat lute is mado of powdered pipe-clay and boiled linseed oil,
otherwise called drying oil, formed into a mass like putty.

LUTEOLIN. The colouring prineiple of Reseda lutcola, commonly ealled Dyers' Rocket, Yellow Weed or Weld.

LUXATION (luxo, to put out of joint). Dislocation; or tho removal of the articular surfaces of bones out of their proper situation. See Diblocation.

LYCANTHROPIA ( $\lambda$ úxos, a wolf; ${ }^{\prime \prime \nu} \nu-$ Opwros, a man). Lupina insania. Wolfmadness, called cucubuth hy Avicenna; in which men fancy themselves to he wolves, bears, \&c. In Pliny's time this metamorphosis appears to have heen reeiprocal: he says, "homines interdum lupos fieri, et contra."
[LYCOPERDON PROTEUS. Puff-hall. A cryptogamous plant, the fumes of which, when inhaled, bare been shown hy Mr. B. W. Richardson to produce remarkable narcotic and anæsthetic effectz.]

IYCOPODIACEA. The elub-moss tribe of flowerless plants, characterized hy their creeping stems, the axis ahounding in annular ducits. The reproductive organs are axillary sessile thecæ, containing either minute powdery granules, or sporules marked at the apex with three minute ridges.
[LYCOPODIUM ( $\lambda$ úkоs, a wolf; тоиs, a foot). A genus of eryptogamous plants. The pharmaceutieal name for the fine paleyellow powder (sporula Lycopodii), ohtained from the capsules of the Lycopodium clavatum or elub-moss, and other species of the same genus. It is used as an ahsorhent application to excoriated surfaees, and in pharmecy it has heen employed to prevent pills from adhering.] It is sometimes called witch-meal, or vegetable sulphur.]
[LYCOPUS. The Pharmacopoial name for the Bugle weed; a genus of plants of the natural order Labiatr.]
[1. Lycopus Europeus. An Europenn speeies which has heen employed as a suhstitute for quinia.]
[2. Lyсприя Virginious. Bugle weed. An indigenous plant, said to possess mild narcotie properties, and to have been uscd with advantage in incipient phthisis and
hæmorrhage from the lungs. It is given in the form of infusion, made by macerating an ounce of the herb in a pint of boiling water, and dronk ad lilitum.]

LYE. A solution of potass, or other alkaline suhstances, used in the arts.

LYMPH (lympha, water). A eolonrless liquid whieh eireulates in the lymphaties. The liquid whiel moistens tho surface of the cellular memhrane.

Lymph of Plants. The unelaborated sap, so called from its resemhlance to watcr.

LYMPH CATARACT. The most frequent form of spurious cataract; so named hy Beer, who ohserves, that only this species deserves the name of membranoue, as alone consisting of an adventitious memhrane, formed hy inflammation.

LYMPHAT'ICS (lympha, water). Minute tubes which pervade every part of the body, which they absorb, or take up, in the form of lymph. They are sometimes called ductus aquosi.
[Lymphatic Hearts. Large receptaeles for lymph immediately under the skin, possessed hy frogs and several other animals, and which exhibit distinet and regular pulsations.]

LYNCURIUM. This is supposed to have been the aneient name of tourmalin. It possesses the property of attraeting light hodies, when heated. The Dutch, in Ceylon, call it aschentrikker, from its attraeting the ashes, when a portion of it is laid over the fire.

LYRA (a lyre). Psalterium. The name given to that part of the fornix which presents the appearance of some white lines, somewhat resembling the strings of a lyre.
[Lyratc. Lyre-straped; in hotany applied to a leaf which has several sinnses on each side, gradually diminishing in size from ahove downwards.]

LYSSA (גúara, eanine madness). Entaria lysaa; a term applied by Dr. Good to bydrophohia.

LYTHRUM SALICARTA. Spiked Purple Loosetrife; an indigenons plant, principally used in diarrhea and dysentery.

LYTTA. The former name of the Cantharis vesicatoria, or blistering beetle.

## M

M. This letter has the following significations in preseriptions:-

1. Manipulus, a handful; when herbs, nowers, ehips, \&c., aro ordered.
2. Misce, mix; thus, m. f. haust. signifies, mix and let a dranght be made.
3. Mcusura, by measure.

MACARONI. Turunde Italica.
dried paste or dough mado of the finest wheat flour, from which some of the starch has heen separated.

MACE. A thin, flat, membranous suhstance which envelopes the nutmeg; it is an expansion of the funiculus, and is termed, in botany, au arillus.

MACERATION (macero, to make soft by steeping). The steeping of a body for some time in cold or warm water.

MACIIAON. The name of an ancient physician, said to be a son of Æsculapius; hence, particular inventions have been dignified with his name, as nsclepics_Machaonis, a collyrium described hy Scribonius; and medicine in general is sometimes called ars Machnonia.

MaCIES (maceo, to be lean). Wasting, atrophy, or emaciation.
[MACIS. Mace. The Pharmacopœial name for the arillus of the fruit of Myristica moschata.]

MACQUER'S SALT. Neutral arsenical salt of Macquer; super-arseniate of potassa.

MACROCEPHALOUS ( $\mu \pi \kappa \rho o ̀ s, ~ l a r g e ; ~$ кє $\varnothing$ àjे, the head). Large-hcaded; a term applied by Richard to those Dicotyledonous emhryos, in which the two cotyledons cohere, as in horse-chestnut. Gærtner terins these embryos psendo-monocotyledonous.

Macropodal ( $\mu$ акрдs, large ; пойs, тоддя, a foot). Large-footed; a term applied by Richard to a modification of the monocotyledonous embryo, in which the radicle presents an unusual protuberance, as in wheat.

MACROCOSM ( $\mu a \kappa \rho \partial_{\varsigma}$, large; кó $\sigma \mu о \varsigma$, world). Large world; a term employed as synonymous with miverse; while microcosm, or little world, has heen used by some philosophers as a designation of man.

MACULA. A spot. A small patch or speck of the cornea. See Opacity.

1. Macula germinativa. The germinal spot, or nucleus germinativus of Wagner ; a spot found in the germinal vesicle of the ovum, consisting of one or more somewhat opaque corpuscules, and possibly the analogue of the nucleus of formative cells.
2. Macula. Spots; a permanent discoloration of the skin, generally the result of an alteration of the natural texturo of the part. Maculæ have been distinguished into ephelis, sun-burn or frcekles; navus, or mother-spots; spilus, or thickening and discoloration of the rete mucosuin ; and moles.
3. Macula hepatice. Hepatic spots; the term under which Sennertus deseribed
the Pityricsis versicolor, or varicgated dandriff.
4. Maculce volatica. Flying spots; a designation of the Erythema fugax, from its fugitivo character.

MAD APPLES. Apples of Sodom. A term applied to the Mecca or Bussorah Gall. Sce Gullce.

## [MADAR. See Mredar.]

MADARO'SIS ( $\mu$ adá $\omega$, to be bald). A defect or loss of the eyehrows or eyelashes.

MADDER. The root of the Rubia Tinctorum; used in dyeing the Adrianople, or Turlicy Red, and other colours. It is distinguished, in commerco, according to its quality, by the terms crop, ombro, gamene, and mull, of which the first is the best. Two colourlcss acids have been noticed in madder, viz., the madderic and the rubiacic acids. See Alizarine.
MADJOUN. Hadschy Malach. An intoxicating drug prepared by the Turks from the pistils of the flowers of the hemp plant, ground to powder, and mixed in honey with powdered cloves, nutmegs, and saffron.

MADREPORE. A species of coral ; a zoophyte, consisting of carbonate of lime, and a little animal, membranaceous substance.

MAGISTERY (magister, a master). A term formerly applied to alnost all precipitates, supposed to be suhtle and masterly preparations; but at present it is applicd only to a few, as the mayistcry of bismuth, or the sub-nitrate.

Magisterium Argenti. The alchemical name of the nitras argenti, also called crystalli Dianæ ; when fused, it was termed lapis infernalis.

Magistery of Lead. Cerussa, or white lead; also termed flake-white, suhcarbonate of Lead, \&c.

MAGISTRAL (magistralis, masterly). A term applied to medicines which are prepared cxtemporaneonsly, and which wcre, therefore, considered as masterly preparations.

MAGMA ( $\mu$ íббәцає, to knead dough). Literally, a kneaded or squeezed mass; dregs, or sediment; a kind of salve.

MAGNES ARSENICALIS. A corrosive preparation of equal parts of sulphur, white arsenic, and common antimony, mixed by fusion.

MAGNESIA (magner, a magnet, or loadstone). An alkaline earth, having a metallic haso called magnesium. The teru magncsia was originally cmployed to denoto any substance which had the power of attracting some principle from
the air; the peculiar body which we now denominate magnesia was first sold as a panacca, hy a canon at Rome, in the bcginning of the seventeenth century, under the title of Magnesia alba, or Count Palma's Powder.

1. Magnesia usta. [Calcincd magnesia.] Tho oxide of magnesium, prepared by calcining the artificial carbonato. It is sometimes called talc earth or bitter earth.
[2. Magnesic carbonas. Carbonate of magnesia; used as an antacid and purgative. See Mragneria alba.]
2. Magnesia albu. The carbonate of magnesia, prepared by precipitating a boiling solution of the sulphate by means of carbonate of potash. There are two kinds, the heary, and the light, commonly called Scotch magnesia.
[4. Magnesice acelas. Aeetate of magncsia. Tbis salt has been proposed as a purgative hy M. Regnault, hut it is inferior to the acetate for which it is proposed as a substitute.]
3. Magneria nigra. The black oxide of manganese was long known by this name, from its fancied relation to magnesia alha.
4. Magnesia vater. An aerated water preparcd by impregnating the carbonate of magnesia, dissolved in water, with ten times its volume of carbonio acid gas, by means of a forcing-pump or soda-water apparatus.
5. Magnesice sulphas. Sulphate of magnesia; bitter purging salt; Epsom salt; formerly magnesia vitriolata, and sal catharticum amarum.

MAGNESIAN LEMONADE. A solution of the citrate of magnesia, acidulated witb citric acid, and flavoured with syrup of orange peel. If taken in the effervescing state, it constitutes efferveseing magnesian lcmonade. See Liqnor magnesia citratis.

MAGNESITE. Native, anbydrous, neutral carbonate of magnesia, found in rarions parts of Europe, Asia, and America. MAGNESIUM. A metal baring the colour and lustre of silver. At a red heat it burns brilliantly, and forms magnesia.
[Chloride of Magnesium. Magnesii chloridum. This has lately been recon. mended as a saline aperient by M. Lebert. The dose is about an ouncc.]

MAGNET. An iron ore, commonly sallod loadstone, which exhibits the remarkable property of attracting other kinds of iron or stcel. Its name is derived from Magnesia, tho place in which the ore, or native magnet, was originally found. It has since been discovered in many other localities.

1. The magnet, or loadstone, in powder, was formerly an ingredicnt of eeveral plasters, and was supposed to puesces the power of drawing bullets and arrow-heads out of the body, as in the emplastrum divinum Nicolai, the emplastrum nigrum of Augsburg, tbe opodeldoc and attractivum of Paracelsus, \&c.
2. Artifieial magnet. If a straight bar of bard-tempered steel, devoid of all perceptible magnetism, be held in a positioa slightly inclined to the perpendicular, tbc lower end deviating to tbe nortb (i.e., with one end pointing about $242^{\circ}$ west of north, and downwards, so as to make an angle of $72 \frac{1}{2}^{\circ}$ witb tbe horizon), and struck several smart hlows with a hammer, it will be found to have aequired tbe properties of a magnct.
3. Mragnetic properties. These are of four kinds:-1. polarity ; 2. attraction of unmagnetic iron; 3. attractiou and repulsion of magnetic iron; and, 4. the power of inducing magnetism in other iron.
4. Magnetism. Tbe term wbich expresses tbe peculiar property, occasionally possessed by certain bodies, more especially hy iron and some of its compounds, hy wbich, under certain circnmstances, they mutually attract or repel one anotber, according to determinate laws.
5. Maynetic fuid. Tbe hypothetical agent, to whicb the phenomena of magnetism have been referred. Some have supposed two sucb fluids: a boreal, or northern, and an austral, or southern.
6. Magnetie Foree. A line of magnetie foree is defined by Mr. Faraday to he that described by a very small magnetic needle, when it is so moved, in either direction corresponding to its lengtb, as to remain constantly a tangent to the line of motioa; or as that along which, if a transrerse were to be moved in either direction, there is no tendency to the formation of an clectric current in the wire, whilst, if mored in any other direction, tbere is such a tendener. Such lines are indicated by iron filings sprinkled about a maguet. These liues have a determinate direction; they hare opposite qualities in and about this direction, and the forces in any part of them are determinate for a given magnet. They may, as the author thinks, be cmployed witb great adrantage to represent ibe magnetic force as to its nature, condition, direction, and comparative amount ; and that in many eases when other representations of the force, as centres of action, will not apply.
7. Magnetic Polarity. By this term Mr. Faraday understands the opposite and antithetical actions whicb are manifest at
the opposite ends, or the opposite sides, of a limited portion of a line of force. See Magnetic force, Lines of.
8. Magnetometer. A measure of magnetism; an instrument for ascertaining the direction and force of terrestrial magnetism. When employed for determining the declination of the magnetic needle, it is called a declinometer; for the inclination and vertical force, it hecomes an inclinometer.
9. Magnetic magazine. The name given to $a$ kind of hattery, formed of several magnets placed one over the other, with all their poles similarly disposed, and fastened firmly together.
10. Magnetic plates. Plates of magnetized steel, of various forms, for fitting any part of the hody.
11. Electro-magnetism. The designation of the phenomena showing the connexion hetween electricity and magnetism.
12. Animal magnetism. A fanciful system introduced hy Mesmer, from the supposed effects of the magnet upon the human hody, and hence termed Mes. merism.
[MAGNOLIA. A genus of plants of the natural order Magnoliaceæ. The hark of three of the species, MI. glauca, M. acuminata, and M. tripetala, are officinal in the U. S. Pharmacopocia. It is a mild aromatic tonic and diaphoretic, und has heen given in chronic rheumatism, and in intermittent fever. The dose of the recently dricd hark is from $3^{\text {ss. }}$ to 3 j .]

MAGNUS MORBUS. The great disease; a term applied hy Hippocrates to epilepsy.
[MAGUEY. A common name for the Agave Americana.]

MAHOGANY. The mood of the Svietenia Mahagoni, the hark of which is used in the West Indies as a substitute for Peruvian hark, hut is inferior to it.
[MAIDENHATR. The common name for Adiantum pedatum.]
[MAIZE. Indian corn. The common name for Zea mays.]

MAJORANA HORTENSIS. [Origanum marjorana, Willd.] Sweet Marjoram ; a Labiate plant, cultivated in kitchen gardens, and employed for preparing the oil of siceet marjoram.
MAL (malus, ovil). The French term for a malady or discase.

1. Mal de la Rosa. The name given by Thiery to scarlatina.
2. Mal de Siam. A name given in some parts of India to ycllow fever.
3. Nal del sole. A namo of the Italian

Elephantiasis, from its being commonly ascrihed to the heat of the sun's rays.
4. Mal des ardens. One of the designations of a fatal epidemic disease, which prevailed extensively in the early and dark ages, as the sequel of war and famine. It is placed hy Sauvages under the head or Erysipelas pestilens; and hy Sagar under the genus nccrosis.

MALA. A term contracted from maxilla, as ala from axilla. In classio writers, gence is propcrly the part of the face under the eyelids, while mala denotes the chceks, the round and lively-red part of the face; also the jav, the cheek-honc.
MALACENCEPHALON ( $\mu a \lambda a \kappa \partial s$, soft ;
 Dr. Craigie to simple diminished consistence of the brain, without change of structure.

MALACHITE. Green Bice. A beautiful native green carhonate of copper.

MALACIA ( $\mu$ aлакia, softness). Pica. Depraved appetite. The desire for ono particular kind of food, and disgust for all other kinds. It may assume the form of mal d'estomac, or dirt-eating.
[MALACOSIS ( $\mu$ a ${ }^{2}$ à̀s, soft). Softening; Mollities.]

MALACOSTEON ( $\mu$ a ${ }^{2} a \kappa \grave{s}$, soft ; dor $\mathfrak{c o v}$, a hone). Mollities ossium. Softness of the hones.

MALACTINIA ( $\mu$ àaк̀ेs, soft). The third class of the Cyclo-neura or Radiata, consisting of soft aquatic animals, emitting an acid secretion from their surface, which is capable of irritating and inflaming the human skin, like the stinging of a nettle; hence the name acalephe, or nettles, has heen commonly given to this class.

MALAGMA ( $\mu$ àáoб $\omega$, to soften). A term synonymous with cataplasma, and so called from its softening property.

MALAGUETTA PEPPER. Seeds resembling, if not identical with, the grains of paradise, and referred 'to the Amonum Grana Paradisi. Roscoe, however, affirms that they are the produce of A. melegueta.

MALAMBO BARK. Matias Bark. The lark of a tree said to be procured from Colombia, and used as a substitute for cinchona.
[MALAR (mala, the cheek). Of, or belonging to, tho cheek.]

MALARIA (mala aria, bad air, Ytal.). A term goncrally employed to designato certain cflluvia or cmanations from marshy ground. Henco the term marshfever, in Europe; jungle-fcecr in India. The mularia of Campagna is the name of an endemic intermittent, arising from
the aria cattiva, as it is called, exhaled from decaying vegetables in the neighhourbood of Rome, especially about the Pontine marshes.
[MALASSIMILATION (mal, had; as8imilatio, assimilation). Imperfect or morbid assimilation.]

MALATES. Neutral and acid salts formed by malio acid with alkaline and magnesian bases.
[MALE FERN. Common name for Aspidium filix mas.]
[MALE JALAP. Convolvulus Orizabensis.]
[MALE ORCHIS. Orchis mascula.]
MALFORMATION. A deviation from tho natural form of an organ. It is termed-

1. Defective; wben an organ is entirely deficient, as the beart, \&c., in acardiac cases.
2. Irregular; as in the misplacement, \&c., of parts in the beart, constituting the qualitative malformations of Meckel.
3. Superfluous; when consisting of excessive development of an organ, as in the case of supernumerary auricles, \&c.
MALIC ACID ( $\mu \tilde{\eta} \lambda o \nu$, Dor. $\mu \tilde{a} \lambda o v, ~ n a-$ lum, an apple). An acid existing in apples, but generally prepared from the berries of the Sorbus aucuparia, or mountain ash. By dry distillation, it yields anotber acid, termed the maleic.

MALICORIUM. Tbe rind or external coat of the pomegranate.

MALIGNANT. Malignus. A term applied to diseases in which the symptoms appear fatal, as in typbus, cholera, cynancbe, \&c.
[MALINGERER. A term applied to soldiers who feign disease.]

MALIS ( $\mu$ áגıs). Mraliasmus. A cutaneous disease, produced by parasitic worms, formerly called dodders. The different species of vermination arc-

1. Malis pediculi, or lousincss.
2. Malis pulicis, or flea-bite.
3. Malis acari, or tick-bite.
4. Malis filuria, or guinea-worm.
5. Malis estri, or gadfy-bite.
B. Malis gordii, or hair-worm.

MALLEABILITY (malleus, a bammer). A property of somo metals, by which they are beaten out in plates, or leares, by a bammer. Gold leaf, for instance, is so tbin, that less than five grains will cover a surface of $272 \frac{1}{4}$ square inches; and the thickness of each leaf does not cxceed the $\overline{2} 8 \frac{1}{2} \sigma \overline{3} \pi$ part of an incl.

MALLEATIO (malleus, a hammer). A form of chorea, consisting in a convnlsive action of ono or both hands, which striko the knce like a hammer.

MALLEOLAR (malleolus, dim. of malleus, a hammer). A term applied to two branches of the posterior tibial artery.

MALLEOLUS (dim. of malleus, a mallet). The ancle, so called from its resemblance to a mallet; there is an extermal and an interual malleolus. The term malleolus is applied, in botany, to the layer by whicb some plants are propagated.

MALLEUS ( $a_{r}$ bammer). One of the ossiculce auditas, or small bones of the ear, in form rescmbling a bammer. It consists of a head, a neck, a handle or munubrium, and two processes.
[MALLOW, COMMON. Malva Sylvestris.]

MALPIGHIAN BODIES. Corpuscula Malpighiana. Minute masses formed hy convolution of the blood-vessels in the substance of the kidney.

MALPIGHIAN CAPSULES. Capsule Malpighiance. The cup-sbaped sacs from which the tubuli uriniferi of the kidney commence; they envelope the minute plexuses called "Malpighian bodies."

MALPIGHIAN CORPUSCULES. The name of some whitish, round, minute bodies, discovered by Malpighi in the red substance of the spleen. They are very different from the grape-like corpuscules discorered by the same mriter in the spleen of some berbivorous quadrnpcds.

Malpighian vessels of insects. A term applied to the biliary crea of insects, as observed hy Malpighi, and considered to be analogous to the liver of the higher animals.

## [MALPRAXIS. Bad treatment.]

MALT. Brasium; byne. Barley made to germinate by moisture and rarintb, and then dried, in order to destroy the vitality of the emhryo. When scorched, it is called high-dricd malt.

MALTHA. Mineral pitch, or tallow; a variety of bitumon. See Bitumen.

MALTING. The process of making malt; it consists in the inducing of an artificial growth or germination of barley, by steeping in water, and then evolving the saccharine principle by the application of lieat. This process consists of four distinct stages, riz.:

1. Steeping, or immerging the grain in mater for about tro days, until considerahly swelled.
2. Couching, or dcpositing the grain in heapson the couch-franc, for about thirty hours; it then becomes warm and disposed to germinate.
3. Flooring, or spreading the grain on floors in lagers of a for inches in thick-
ness, to prerent its unequal or partinl germination.
4. Kilu-drying, or arresting the process of germination, when the saccharine matter is freely developed, hy exposure to a gradually increasing temperature in the kiln.

MALUM ( $\mu \tilde{a} \lambda o \nu$, Doricè pro $\mu \tilde{\eta} \lambda o \nu$ ). An apple. The following terms occur in classic writers:-

1. Malum citreum. The citron.
2. Malum cotonerm. The quince.
3. Malum Epiroticum. The apricot.
4. Malum granatum. The pomegranate.
5. Malum Medicum. The lemon.
6. Malum Persicum. The peach.

MALUM MORTUUM. A disease appearing in the form of a pustule, which soon acquires a dry, hrown, hard, and broad crust, remaining for a long time hefore it can be detached. It is mostly ohserved on the tihia and os coceygis.

MALUM PILARE (pilus, a hair). A complaint, sometimes confounded with crinonce, and said to be owing to hairs not duly expelled, which stick in the skin, especially in the hacks of young infants, inducing inccssant itching, and sometimes raising small tumours.
[MALVA. The Pharmacopoial name for the herb of Malva sylvestiv; a genus of plants of the natural order Malvaceæ. All the species ahound in mucilage, which they yield readily to water, and may be used as emollients and demulcents.]
[1. Malva rotundifolia. This has the same medical properties as the following species.]
2. Malva sylvestris. Common Mallow; a European plant ahounding in mucilage. The colouring matter of the flower is a very delicate test of alkalis, which render It green.

MALVACE 压. The Mallow tribe of Dicotyledonous plants. Herhaceous plants, trees, or shruhs, with leaves alternate; flowers polypetalous; stamens hypogynous, monadelphous; fruit capsular or baccate, containing seed with crumpled cotyledons.

MAMA-PIAN. The term applied in Africa, to the master-fungus, or motheryaw, supposed to he the source of all the other tumours in framboesia.
[MAMELLONATED (mamelon, Fr., a nipple). Mammillated. See Mammil lary.]

MAMMA. The brcast; the organ which secretes the milk. The deepcoloured circle which surrounds the papilla, or the nipple, is termed tho arcola. The tubuli lactifcri are laotiferous ducts, Which enter into the mammary gland,
situated behind the adipose tissue of the mamma.

MAMMALIA (manma, a teat). The fifth class of the Encephalata or Vertebrata, consisting of animals provided with mammary glands for the lactation of their young after birth.

1. Bi-mana (binus, two; manus, hand). Two-handed animals, as man.
2. Quadru-mana (quatuor, fonr; manue, hand). Four-handed animals, as monkeys.
3. Carnivora (caro, carnis, food; voro, to devour). Flesh-eating animals. These are subdivided into the cheiroptera ( $\chi$ cip, $\chi \varepsilon \iota \rho \delta s$, a hand; $\pi \tau \varepsilon \rho \partial \nu$, a wing), or animals with winged hands, as the hat; and insectivora, or animals which feed on insects, as the hedgehog. They are also distinguished into the plantigrada (plantu, the foot; gradior, to walk), or animals which walk on the soles of the feet; digitigrada, or such as walk on their digite, or toes; amphibia ( $\mu \mu \phi$, hoth; Bios, life), or animals which live indifferently, on land or in water, as the seal; and the marsupialia (marsupium,' a pouch), or pouch-hearing animals, as the kangaroo and opossum.
4. Rodentia (rodo, to gnaw). Glires, or gnawing animals, as the beaver.
5. Edentata (edentulus, toothless). Animals without teeth, as the armadillo.
6. Paehydermata (тađùs, thick; סíp $\mu$, skin). Belluæ, or thick-skinned animals, as the elephant.
7. Ruminantia (rumino, to chew the cud). Pecora, or ruminating animals, as the deer.
8. Cetacea (cete, a whale). The Whale tribe; mammiferous animals destitute of hind feet, and having their trunk terminating in a horizontal tail.

MAMMARY ABSCESS (namma, the breast). Another name for milk ahscess.

MAMMARY GLAND (mamma, the breast). The gland placed beneath the adipose layer of the mamma.
[MAMMIFER. Mammal; Mammiferous animal. An animal which suckles its young.]

MAMMILLA (dim. of mamma, a hreast). Literally, a little breast. A term synonymous with papilla, as applied to the conical hodies of the kidneys, at the points where the urine escapes.

1. Dammillary. [Mammillated.] Haring small rounded prominences, like teats; the name of an eminence of tho inferior vermiform procoss of tho cerchellum.
2. Mammillarce processus. A nanio given by the ancients to the olfaotory nerves, which they considered as emuno-
torles, or eanals, by whicb the serum and pituita, separated from the brain, llowed off.

MANCHINEAL. The Hippomane mancinella; a tree of sucb extremely poisonous properties, that persons have been said to die from merely sleeping beneath its shade; the juice is used to poison weapons: Order Euphorbiacece.

MANDELIC ACID (mandcln, German, almonds). A wbite crystalline acid obtained by the action of bydrocbloric acid on the oil of bitter almonds. It is also termed formo-benzoilic acid, from its eontaining the elements of formio acid and hydruret of benzoyl.

MANDIBULUM (mando, to cbew). Maxilla inferior. A mandible or lower jav. In insects, the upper jaw is termed mandible ; the lower jaw, maxilla.

Mandibulo-labialis. The inferior dental branch of the inferior maxillary nerve.

MANDIOCA STARCH. Cassava starch. Amylum mandioce, or Tapioca; a starch deposited from the juice expressed from tbe rasped root of tbe Dfanihot Utilissima, or Bitter Cassava.

MANDRAGORA OFFICINALIS.The Mandrake; a plant of the order Solanacere, the root of which, from its fancied resemblance to the buman form, bas been termed anthropomorphon (äンUp $\omega \pi o s$, man; $\mu \circ \rho \phi \grave{\eta}$, form), and supposed to prevent barrenness. The root of Bryonia dioica is somewhat similar iu form, and is sold for mandrake. The fruit of Mandragora has been termed malum caninum, or dog-apple.
[MANDRAKE. Common name for Mandrayora officinalis.]

MANDUCATION (manduco, to ent). The act of eating.]

MANGANESE. A grayisb-white metal, found in the ashes of plants, the hones of animals, and in many minerals. It was named by Grbn magnesium, a term wbicb has since been applied to the metallio hase of magnesia. The binoxide, used in chemistry, is commonly termed native black or peroxide of manganese.
[Sulphate of Manganesc. A neutral salt, wbich possesses cathartic properties, in the dose, according to Dr. Thomson, of from half an ounce to an ounce; but Mr. Ure says that he would be reluctant to give it to tbat cextent, and bas always found a much smaller quantity, one drachm, suffice. It should be given dissolved in a considerable quantity of water. It is said at first to excite the action of the liver, but if its use be long continued, to subsequently suppress the secretion of bile. Dr. Goolden staten that it rarcly acts as a purgative
alone, and that wben taken on an empty stomach, in the dose of one or two drachms, it invariably produces vomiting, but that this cmetic action is seldom induced after the first dose.]
[Iodide of Mrangancre. This preparation has been extolled by M. Hannon as particularly useful in tbe anæmia attendant oa scrofula, phthisis, and cancer, and in sypbilitic caehexy. He gives it in doses of about two grains daily, gradually increased to twelve.]
[Carlonate of Manganese. This عalt has also been introduced into tbe Materia Medica by M. Hannon as a tonic, and as a remedy for anæmia.]
[Phosphate, Tartrate, and Malate of Manganese. These ealts harc likewise been extolled as useful remedies by M. Hannon.]

MANGANIC ACID. An acid only known in combination with bases, especially potash, in whicb state it forms the cbief ingredient of the mass called Chameleon mineral.

MANGELTURZEL. Field-beet; a mongrel plant, between the red and white beet. It is used as food for cattle; also in distillation, and in the extraction of sugar.

MANIA ( $\mu$ aivoцat, to be mad). Insanity ; disordered intellect. In the works of Sauvages, and other writers, we find the terms vesanic, or hallucinotiones, denoting erroneous impressions of the understanding; morositates, or morbi pathetici, consisting of depraved appetites, and other morbid cbanges in the feelings and propensities.

1. Mono-mania ( $\mu$ bros, alone). Insanity upon one particular subject, the faculties bcing unaffected upon every other.
2. Damono-mania ( $\delta a i \mu \omega v, \AA$ dæmon). Insanity in wbich the pationt supposes himself to be possessed by dremons.
3. Eroto-mania (ěpws, lore). Insanity occasioned by excessive affection.
4. Demcutia. Incoberent or chaotic madness ; the first period of fatuity.
5. Amentia. The last stage of fatuity ; an almost total ohliteration of the faculties.
6. Nosto-mania (vóctos, a rcturn). Homemadness; an aggravated form of nostalgia.

MANIAC ( $\mu$ aria, madncss). A madman; one attacked by mania.

MANIPULATION (manipulur, a handful). The mode of handling utensils, materials, \&c., in experimental philosophy; the performance of experinents.

MANIP'ULUS (contr. manisplus-quod manam impleat, because it fills the hand). Properly, a sheaf. A handful, as of herbs, flowers, chipz, de.

MANNA ( $a$ term derived from a Chaldaic root, signifying what is it?). The concretc juice of the Ormus Europera, and the Eucalyptus mamifera of New 'South Wales.

1. Mama canmelata. Flake manna, the best variety, occurring in a stalactite form.
2. Sicilian Tolfa manna. An inferior variety, corresponding with manna in sorts of some writers. The commoncst kind is callcd Sicilian manna; and appears to be, according to Dr. Pereira, what is sometimes called common or fatty muma.
3. Manna of the larch. Manna de Briançon; a saccharine exudation from the Pinus larix.
4. Manna sugar, or mannite. The sweet principle of manna, and one of the products of the viscous fermentation of cane and grape sugar. It is identical with grenadin.

MANNACROUP. An article of food for children and invalids, consisting of granulated wheat deprived of bran.

MANUBRIUM (manu habere, to hold in the hand). A haft or handle; the upper bone of the sternum.
MANULUVIUM (manus, a hand; lavo, to wash). A hand-bath.

MANURES. Animal or vegetable matters deposited in the soil to accelerate vegetation and increase the production of crops. The principal manures are rape-cake, sea-weeds, bones, fish, nightsoil, soot, \&c.
[MAPLE SUGAR. Sugar made from the juice of the Acer saccharum.]
[MARANTA. Arrow root. The pharmacopeial name for the fecula of the rhizoma of the Maranta arundinaces; a genus of plants of the natural order Marantaceæ.

Maranta arundinacece. The Arrow-root plant; so called from its reputed property of counteracting the effects of poisoned nrrows. The tubers yield the fecula marantce, or the West Indian Arrow-root of commerce.
MARASCHINO. A liqueur made of Morello cherries.

MARASMUS ( $\mu a p a l \nu \omega$, to wither). Emaciation; a wasting of the body; formerly a generic term for atrophy, tabes, and phthisis.
MARBLE. Marmor. Carbonate of lime, as it occurs native. It is employed for the preparation of carbonic acid. The Carrara or statuary marble is the best for this purpose, on account of its freedom from iron.
MARCET'S BLOWPIPE. An apparatus for increasing temperature, by urging the flame of an alcohol lamp by a blowpipo supplied with oxygen gas.

MARCOR (marceo, to droop). A term employed by Celsus for drowsiness. In Cullen's nosology, the Marcores constitute the first order of Cachexia, denoting emaciations, or wasting of the whole body, as tabes and atrophia.
[MARESCENT (mareo, to wither). Withering. In botany, applied to flowers which fade some time before they fall off.]

MARGARIC ACID ( $\mu$ apyapis, a pearl). An acid obtained from human fat and vegetable fixed oils, and also produced by the dry distillation of ox and mutton suet, and of stearic acid. Its name is derived from its pearly lustre.

1. Margarine. Margarate of glyceryl ; a principle discovered in spermaceti.
2. Margarone. A pearly substance obtained by dry distillation of margaric acid. Margaritine. Ricino-stearine. A white solid crystalline fat procured from castor-oil, and yielding, on saponification, margaritic acid, resembling the stearic.

MARGARYL. The supposed radical of the stearic and margaric acids.

MARGINALIS (margo, a margin). Angularis. A designation of the shoot of the cervico-facialis, or inferior facial branch of the seventh pair of nerves.

MARINEACID (marc, the sea). Spirit of salt. Muriatic or hydrochloric acid, procured from common salt by distilling. it with sulphuric acid and water over a water-bath.
[MARISCA. A variety of hemorrhoidal tumour, consisting in fleshy tubercles, of a brownish or pale-red colour, having a somewhat solid or spongy feel, and presenting, when divided, a compact, or porous and bloorly surface.]
[MARJORAM. See Origanum.]
MARK IN THE HORSE. A "mark" in the incisor of the horse, indicating the age of the animal, and depeuding upon the appearance of the fold of enamel which, in the longitudinal section, is seen to penetrate the crown from its flat summit, like the inverted finger of a glove. When the tooth begins to be worn, the fold becomes an island of cnamel, inclosing a cavity filled with cement, and partly by the substances of the food. In aged liorses, the incisors are worn down below the extent of the fold, and the "mark" disappears. This cavity is usually obliterated in tho first or mid incisors at the sixth ycar, in the second incisors at the seventh year, and in the third or outer incisors at the eighth year, in tho lower jaw. The marls remains somewhat longer in tho incisors of the upper jaw.

MARLY CLAY. A varicty of clay, used in making pale bricks, and as a manure.

MARMALADE (marmello, Portuguese, a quince). Strictly, a conserve of quinces. But the term is generally applied to a conscrve of oranges, which are cut into thin slices, and preserved in a strong syrup.

MARMARYGE ( $\mu a \rho \mu a \rho \cup \gamma{ }^{\prime}$, dazzling light, Hipp.). Visus lucidus; photopsia. A disease of the eyes, in whicb sparks and flasbes of fire seem to present themselves. Homer applies the term to the rapid motion of the feet in dancing, - дарнириуаi тофஸัข.

MARMOR ALBUM. White marble; an indurated carbonate of lime.

Ifarmor metallicum. Metallic marble; tbe native sulpbate of barytes.

MARROW. Mcdulla. The animal fat found in the cavities of long bones.

MARRUBIUM VULGARE. Wbite Horehound ; a Labiate plant, employed for making horehound tea, \&e.
[MARRYA'T'S DRY VOMIT. Eqnal parts of tartar emetic and sulpbate of copper, exbibited without drink.]

MARS. Martis. The god of war. Tbe mytbological and alchemical name of iron. Hence the salts of iron were called martial salts; the protoxide, martial ethiops; the sulpburet, martial pyrites.
[MARSH MALLOW. Common name for Althesa officinalis.]
[MARSH ROSEMARY. Statice Caroliniana.]
[MARSH TEA. The Ledum palustre.]
[MARSH TREFOIL. A common name for Menyanthes trifoliata.]
[MARSH WATER-CRESS. The Nasturtium palustre.]

MARSH'S APPARATUS. An instrument for detecting the presence of arsenious acid in solution.

MARSH'S TEST. A test for arsenious acid, consisting in the action upon the acid of nascent hydrogen, ohtained by submitting zine to dilute sulphuric acid; the arsenions acid is deoxidized, witb evolution of arseniuretted hydrogen gas.

MARSEILLES VINEGAR. Thieves' vinegar. A solution of essential oils and camplor in vinegar. The reputation of this propbylactic in contagious fevers is said to have arisen from the confession of four thicves, who, during the plaguc at Marseilles, plundered the dead bodics with perfect security, being prescrved from contagion by this aromatic vinegar, whicb has hence heen ealled "Lo vinaigre des quatre voleurs."

MARSUPIUM. A purse or pouch. A dark-coloured membrane found in the vitreons humour of the eyc of birds.

1. Marsupialia. Animals possessing abdominal pouches, as the opossum.
2. Marsupialis. Another name of the bursalis muscle, or obturator internus.

MARTIAL (mars, iron). An old mythological designation of several preparations of iron. See Mars.

Martial Regulus. Metallic antimony, procured by decomposing the sulphuret of antimony by means of iron.

MARTIN'S CANCER POWDER. A famous cancer powder [formerly], known by this name in North America, and supposed to be prepared from the Orobanche Virginiana, in combination with white oxide of arsenic.

MARUM SYRIACUM. Teucrium marun. Syrian Herb Masticb; a bitter aromatic plant, smelling like ammonia, and used as an errhine. It bas lately been asserted to be excelient in nasal polypus.Quart. Journ. of For. Med.
[MARYGOLD. Calcudula officinalie.]
MASS ( $\mu \dot{\sigma} \sigma \nu \mu a l$, to knead together). A term synonymous with quantity; thus, the mass of a body is the quantity of matter it contains. Also a term generally applied to the compound of which pills are formed.

MASSA CARNEA, Jacobi Sylvii, or Plantæ Pedis. The flexor accessorius muscle, whicb lies in the sole of the foot. It is a small mass of flesh, connected witb the flexor longus.

MASSETER ( $\mu$ аб夫áo $\mu$ з, to cbew). A muscle wbicb assists in cherring. Hence the term masseteric, as applied to a branch of the inferior maxillary nerve.

MASSICOT. Yellow oxide, or protoxide of lead. When partially fused by heat, it is called litharge.

MASSING. A term applied to the use of the vapour-bath, accompanied by friction, kneading, and extension of the muscles, \&c., as practised by the Egrptians. It is termed shampooning in the East Indies.
[MASTERWORT. Tbe common name for the Heracleum lanatum; it is also applied to the Imperatoria ostruthium; and sometimes to the Angelica atropurpurea.]
[MASTICATION (nastico, to cher). Chewing. The act of comminuting food and impregnating it with salira. It is the first step in the process of digestion, and unless thoroughly performed, all the subsequent stages of that process are rendered dificult, and are imperfectly nccomplished.]

MASTICATORIES (mastico, to chew). Arrid sialogegues: sulstances which, on being masticated, stimulate the excre-
tory ducts, and increase the secretion of saliva.
MASTICH. [Mastiche.] A resinous substance produced by the Pistacia lentiscus; used in fumigations, in making varnishes, \&c.

1. Mastich water. A remedy employed by the Albanian physicians in infantile diarrhea; it is simply water which has been boiled along with mastich.
2. Masticin. A substancewhich remains on dissolving mastich in aloohol.
[MASTITIS ( $\mu a \sigma \tau d s$, the breast). Inflammation of the breast.]

MASTODINIA ( $\mu a \sigma \tau \partial s$, the breast; $\delta \delta \delta v \eta$, pain). Pain of the breasts in women, commonly a form of hysteria, or an attendant on lactation.

MASTOID ( $\mu a \sigma \tau \grave{s}$, a breast; cioos, likeness). Shaped like the breast or nipple; as applied to a proccs8, and a foramen of the temporal bone. The stylo-mastoïd formmen is situated between tho root of the styloild and mastoïd processes. [This term is also applied to a kind of cancerous tumour of firm growth, which is thought to resemble on section the boiled udder of the cow.]

Mastoïdeus. A muscle of the fore part of the neck, the origin and insertion of which are shortly described in its synonym, sterno-cleido-mastoïdeus.
[MASTURBATION (mastupratio, or mianustupratio; from manus, a hand; stupro, to commit adultery). The excitation of the genital organs by rubbing and titillating them with the hand; a horrid vice, productive of the most serious disturbance of the nervous system, and derangement of health.]

MATER ACETI. Mother of Vinegar ; a mould-plant, belonging to the genus mycoderma, which is developed in vinegar, and forms thereon a thick leather-like cont, similar to the inflammatory crust which cuvers the crassamentum of blood drawn from rheumatic patients.

MATERIA HERMAPHRODITA. Materia saponacea. Under these terms has been described a supposed proximate principle, or extractive matter, to which some of the vegctable tonics are said to owe their bitterness and medicinal activity.

MATERIA MEDICA. That braneh of merlical science which relates to medicines. Medicinal agents are-

1. Natural, or those which aro found ready-prepared by pature: these are simplo and compound substances, organic and inorganic ; the former bclonging to the animal and vegetable kingdoms; the latter to the mineral.
2. Artificial, or those which have been modified, either by addition or subtraction of some of their parts; these are called pharmaceutical preparations, and belong to the department of ehemistry.

Dr. Murray arranges the Materia Medica into four divisions:-

1. General stimulants: these are diffusible, as narcotios and antispasmodics; and permanent, as tonics and astringents.
2. Local stimulants: these are emetics, cathartics, emmenagogues, diuretics, diaphoretics, expectorants, sialogogues, crrhines, and epispastics.
3. Chemical remedies: these are refrigerants, antacids, lithontriptics, and escharotics.
4. Mechanical remedies: these are anthelmintics, demulcents, diluents, and emollients.

The following is an arrangement of medicinal substances, according to their therapeutic properties, copied from the work of Dr. James Johnstone :-

Class 1.-Medicines which aet upon the alimentary canal.

Class 2.-Medicines which act upon the glandular system, and upon the sceretory and excretory vessels.

Class 3.-Medicines which act upon the heart and arteries.

Class 4.-Medicines which act upon the brain and nervous system.

Clas8 5. -Medicines which act upon the muscular fibre.

Clas8 6.-Medicines which act upon the skin and extcrnal parts, by application to the surface of the body.

## Class I.

Mcdicincs which act upon the alimentary canal.
Orders.-1. Emetics.-Medicines which evacuate the stomach by exciting vomiting.
2. Cathartics.-Medicines which expel the fæces by increasing the peristaltic motion of the intestines.
3. Authelmintics.-Medicincs which destroy intestinal worms, or expel them from the body.
4. Antacids.-Medicines which counteract acidity in the stomach.
5. Demulcents.-Mcdicines which lubricate and protect the coats of the aliinentary canal.
6. Antidotes.-Medicines which neutralize poison when reccived into the stomach.

MAT
Crass II.
Medicincs which act upon the glawdular system, and upon the sccretory and cxeretory vessels.
Orders.-1. Secretory stimulants.-Medicines which act upon the whole glandular system.
2. Sialagogues. - Medicines which increase the secretion of saliva.
3. Expectorants.-Medicines which promote the secretion of mucus or pus from the hronchial tubes.
4. Errhines.-Medicines which promote the secretion of mucus in the nostrils.
5. Diaphoretics.-Medicines which excite cutaneous exhalation.
6. Diuretics.-Medicines which increase the secretion of urine by exciting the action of the kidneys.
7. Emmenagogucs.-Medicines which promote the secretion of the menstrual discbarge.

## Class III.

Medicines which act upon the heart and arteries.
Onders.-1. Sedatives.-Medicines which diminish the power and velocity of the circulation by their operation on the heart and large arteries.
2. Refrigerants. - Medicines which diminish the heat of the body, by their action on the extreme vessels.
3. Tonics.-Medicines which invigorate the circulation, and thus relieve debility or atony.
4. Arterial stimulants.-Medicines wbich excite the circulation.

Class IV.
Medicines which act upon the brain and nervous system.
Orders.-1. Narcotics.-Medicines which, hy their operation on the hrain and nerves, diminish sensibility, and induce sleep.
2. Antispasmodics.-Medicines which, by their operation on the nervous system, allay inordinate muscular action.
3. Nervous stimulants.-Medicines which excite the hrain and nervous system, and thereby increase their irritability and cnergy.

## Class V.

Medicines which act upon the muscular fibrc.
Order. - Astringents. - Medicines which, by inducing contraction of the mus-
cular fibre, restrain inordinate evacuations and hxmorrbages.

Class VI.
Medicincs which act upon the skin and external parts, by application to the surface of the body.
Onders.-1. Epispastics.-Mcdicines whieb excitc external irritation.
2. Emollients. - Medicines which allay external irritation by softening tbe skin.
Note.-All medicines externally applied (except those which belong to Class VI.) may he considered as stimulant, tonic, sedative, \&c., \&c., and are therefore arranged in their respective orders.

## Class I.

Order 1.-Emetics.

Anthemis. Ipecacuanba. Olivæ oleum. Sinapis alba.

Order 2.-Cathartics.

Aloë.
Camhogia.
Colocynthis.
Elaterium.
Hellehorus niger.
Jalapa.
Linum cathartieum. Potassæ sales.
Manna.
Pruna.
Rhamnus.
Rheum.
Ricinus. Tabacum. Tamarindns. Terehinthinæ olenm. Tiglii oleum. Veratrum. Hydrargyrum. Magnesia, ejusque sales. Soda, ejusque sales.

Antimonium. Cuprum. Zincum.

Order 3.-Anthelmintics.
Allium. Spigelia.
Assafortida.
Cambogia.
Dolichos.
Filix mas.
Granatum.
Hellehorus foetidus. Stannum.
Jalapa.
Tahacum.
Tiglii oleum.
Terehinthinx oleum.
Ferrum.
IIydrargyrum.

Scammonia.
Order 4.-Antacids.
Ammonix suhear- Liquor potassæ subhonas.
carbonatis.
Liquor ammoniæ Crcta preparata.
subcarhonatis. Iiquor calcis.
Spiritus ammonir. Magnesia.
Cornu ustum.
Testre preparatr.
Potassæ subcarbo.
nas.
Potasse carhonas.
Liquor potasss.

Magncsix subcarbonas.
Sode subcarbonas.
Sodre Eubcarbonas exsicenta.
Soda carhonas.

Cuminum.
Elcmi.
Fœniculum.
Guaiacum.
Yavandula.
Mastiche.
Mentba piperita.
Mezcreum.
Myristica.
Olibanum.
Pimenta.
Pix.
Pyrethrum.

Tercbinthinæ olcum.
Zingiber.
Ether sulphuricus.
Vinum.
Alcobol.
Chlorinum.
Chlorurctum calcis.
Cbloruretum sodæ.
Ferrum.
Petroleum.
Piper longum.
Piper nigrum.

Class IV.

- Order 1.-Narcotics.

Aconitum. Belladonna.
Conium.
Humulus. Lupulina.
Hyoscyamus. Camphora.

Lauri baccæ.
Lactucæ extractum.
Lactucarium.
Opium.
Morphia.
Narcotia.
Stramonium.

Order 2.-Autispasmodics.
Ammonia. Ipecacuanha.
Castoreum.
Moschus.
Assafætida.
Belladonna.
Opium.
Tabacum.
Stramonium.
Camphora.
Valeriana.
Etber sulphuricus.
Cardamine. Cuprum ammoniatum.
Argenti nitras.
Zinci oxydum.
Zinci sulphas.
Order 3.-Nervoue Stimulants.
Ammonia. Strychnia.
Allium porrum. Opoponax.
Allium sativum. Sceale cornutum.
Anetbum.
Assafoetida.
Galbanum.
Nux vomica.

## Aımonia. , Sabina. <br> Allium sativum. <br> Euphorbia. <br> Elcmi. <br> Potassa fusa. <br> Order 2.-Emollients. <br> Cctaceum. <br> Olivæ olcum. <br> Sevum.

[MATIAS BARK. See Malambo Bark.]
MATICO. Tbe native name of the Piper angustifolium; a Peruvian plant, recently introduced into use as a styptic. See Piper.
[Maticin. A peculiar bitter principle found in Matico by Dr. Hodges.

MATLOCK. A village in Derbysbire, affording a spring of saline water.

MATRASS. A cucurbit or vessel of glass, cartbenware, or metal, usually of a globular shape, and open at the top, for the purposes of digestion, evaporation, \&c. Sce Alembic.

MATRES. Motbers; a name formerly given to the membranes of the brain, the dura and pia mater, from tbe fanciful idea tbat-tbey were the origins of all tbe otber membranes of the body.

MATRICARIA (matrix, tbe uterns). Medicines for disorders of the uterus.
[MATRICARIA. Tbe pharmacopœial name for the Matricaria chamonilla; a genus of plants of the order Asteraceæ, Lindley.]
[1. Matricaria chamomilla. German Chamomile. An European plant, of the natural order Compositæ, the flowers of wbicb possess mild tonic properties, similar to those of cbamomile.
[2. Matricaria Parthenium. Pyrethrum parthenium.]

MATRIX. The earthy or stony matter which accompanies ores, or envelops them in the cartb. Also a desiggation of the uterus or womb.

Matrix of I'ceth. The formatire organ of a mammalian tooth, consisting of a pulp and a capsule; the former is converted into dentine, the latter into cement. When enamel is to be added, a peculiar organ is formed on the iuner surface of tbe capsnle, Which arranges tbe hardening material into the form, and of the density, cbaracteristic of enamel.

MATTER (materia). The general term for desiguating all ponderable bodies; their ultimate particles are called molcculcs or atome. Material substances have tro kinds of properties, physical and chemical, and the study of their phenomena has given rise to two corresponding
branches of knowledge, natural philosophy and chemistry.

MATURATION (maturo, to ripen). The process succeeding to inflammation, by which pus is formed in an abscess. Applications which promote suppuration have been called maturants.

MATURITY (maturus, ripe). A term applied to fruits and seeds which have reached the full period of their development.

MAW-WORM. The Ascaris vermicularis. The term is derived, according to Dr. Harrey, from the occasional visit which this animal makes to the mavo or stomach, in migrating from its proper region, which is the rectum; but, more probably, from the peculiar effects which it often produces on the maw or stomach, by sympathy, and without quitting its bome, as a gnawing pain, and faintness.from the intolerable itching it excites in the anus.

MAXILLA. The jaw; the jaw-bone. Hence the term maxillary, as applied to nerves, arteries, \&c., belonging to the jaw. See Mandibulum.

Maxillo-labialis. The name given by Chaussier to the triangularis lahiorum.

Maxillo-labii-nasalis. The name given by Dumas to the elevator labii superioris alæque nasi.

Mfuxillo-palpebralis. The name given by Dumas to the orbicularis palpebrarum.

MAXIMUM (superl. of magnus, great). A term denoting the greatest possible quantity or effect; it is opposed to minimum, or the least possible; and to medium, or the mean between these extremes.
[MAY APPLE. Podophyllum peltatum.]
MAY-DEW. Ros majalis. The dew collected off the grass with sponges; used as a cosmetic.
MAY FLOIVER. Epigea repens.]
[MAY WEED. See Cotnla.]
MEAD or METHEGLIN. Hydromel vinosum. The ancient beverage of the northern nations, prepared from boncy and water.
[MEADOW ANEMONE. Anemone pratensis.]
[MEADOW SAFFRON. Colchicum autumnale.]
[MEADOW SWEET. Spiraa nlmaria.]
MEAL. Farina. The edible part of whent, oats, ryc, barlcy, \&c., ground into a coarse flour.
[MEALY STARWORT. One of the cominon names for Aletris farinosa.]
MEASLES. A cutancous discase; tho first genus of the order Examthemata, of Bateman. See Rubeolu.
MEAT BISCUITS, AMERICAN ; [BORDEN'S]. Theso contain, in a con-
contrated and portable form, all the nutriment of the meat, combined with wheaten or other flour. One pound of this biscuit is said to contain the nutriment or essence of five pounds of good meat; a 22 gallon cask can contain the concentrated nutriment of 500 Hbs . of fresb meat with 70 Hbs . of flour.

MEA'TUS (meo, to pass, to flow). Literally, a passage. Hence-

1. Meatus auditorins [externus]. A canal, partly cartilaginous and partly osseus, which extends from the concha to tho tympanum.
[2. Meatns anditorius internus. The internal auditory passage; a small bony canal, beginning internally at the posterior surface of the petrous portion of the temporal bone, running towards the vestibulum and cochlea.]
2. Meatus urinarius. The orifice of the female urethra.

MECHANICAL ANTIDOTES. A term applied by Pereira to a class of topical medicines which act mechanically, by sheathing the mucous surface of the stomach and intestines in cases of poisoning, and by obstructing absorption.
[MECHANICAL LEECH. See Leech, Mechanical.]

MECHANICAL THEORY. A system of medicine, by which all diseases were attrihuted principally to lentor and norbid viscidity of the blood; attenuant and diluent medicines, or substances for promoting mechanical force, werc adopted; thus, mercury was supposed to act by its specific gravity.
[MECHANISM. The structure of a body or of a machine, or the mechanical arrangement of its parts.]

MECHOACAN. The slightly purgative root of a Mexican plant, probably some species of the genus Ipomœa.

MECHONIA. An alkaline principle found in opium, associated with narceia.

MECONICA ( $\mu \eta ; \kappa \omega \nu$, a poppy). Preparations of opium. The term meconium, or poppy-juice, was applied by Pliny to the exprcssed juice of the leaves and capsules of the Papaver somnifcrum.

MECONIC ACID ( $\mu \dot{\eta} \kappa \omega \nu$, a poppy). The characteristic acid of opium.

MECO'NIUM ( $\mu \eta \kappa \omega \nu เ o v$, the inspissated juice of the poppy; opium). The first discharge of foces, of a blackish green colour, in infants. It consists of the excrementitious matter of tho hile of the foetus, which collects togother with intestinal mucus in the lower part of the canal.
[MEDEOLA VIRGINICA. Indian cucumber. An indigenous plant, tho root of which is said to bo cateu by the Indians.

It probably posscsses some diuretic powers, and, according to Professor Barton, is thought uscful in dropsies.]
[MEDIAN. See Mcdius.]
MEDIASTI'NUM (ex medio stando). A middlo portion separating parts from each other, as tho septum, which divides the cavity of the thorax into distinct parts.

MEDICA'MEN. Any mixing or mixture. Tacitus has vis medicaminis, the violence of a poisonous mixture.

MEDICAMENTA ARCANA. Secret medicines; what are now called patent or proprietary medicines.

MEDICAMENTUM. A medicament; a term applied only to what heals bodily or mental disease, whereas remedium is said of any thing which contrihutes to the alleviation of pain. There are remedies against cold, hut no medicament. Medicamentum is the romedy that is made use of, and remedium the healing remedy. Medicamenta cruda are unprepared medicines or simples.
[MEDICATED. Imbued with the properties of a medicine.]
[Medicated wines. See Vina medicata.]
MEDICI'NA ( $\mu \hat{\eta} \delta o s$, care). Medicine; a term applied hoth to the art of physic, and to the remedy itself.

1. Forensic medicine. Medical jurisprudence; the application of medical knowledge to the preservation of the human species, and to the exercise of justice.
2. Veterinary mediciue. The application of medical knowledge to the treatment of the lower animals.
[MEDICINAL (medieina, medicine). Having the power of restoring bealth or of removing disease.]

MEDITULLIUM (ex medium et tullium, productio vocis). The very middle; a term synonymous with diplöe, or the cellular tissue of the bones of tho skull.

MEDIUS. Middle; equally distant from hoth extremities. Hence-

1. Mediana vena. Tho middle vein of the arm, situated botween the hasilic and cephalic veins.
2. Merlian nerve. The largest nerve of the hrachial plexus.
3. Median line. The rertical lino which divides the body into two equal parts.

MEDULLA. Narrow ; a kind of fixed oil occupying tho cavities of bones. In botany, the pith of plants.

1. Mednlla oblongota. Tho upper enlarged portion of the spinal cord, cxtending from the cerchral protuheranec to tho great occipital foramell.,
2. Medulla spinalis. The spinal marrow or cord, extending from tho great occipital foramen, to tho sccoud lumbar vertehra.

It finally scparates into the cauda equina, or horsc's tail.
3. Medullary. Tho designation of the white substance of the brain, contained within the cortical or cineritious substancc. In hotany, it is applied to radii proceeding from the medulla to the bark, in exogenous plants.

MEDULLIN (medulla, pith). The name given hy Dr. John to the porous pith of the sun-flower.

MEDU'SA. A genus of the Acalephæ, or sea-ncttles. On heing touched, they induco redness and a tingling sensation; they are also supposed to oscasion, in certain latitudes, the phosphorescent appearance of the sea.
MEERSCHAUM. A silicate of magnesia; a greasy, soapy substance, occurring in Cornwall. In Turkey and in Germany it is made into tobacco-pipes. It is also called keffekil, or earth of Kaffa; and écume de mer, or sea-foam.

MEGRIM. This term is prohahly a corruption from the Greek compound word hemicrania, through the French word migraine.
MEIBOMIAN GLANDS. Ciliary follicles. Small glands, first descrihed hy Meibomius, lying under the inner membrane of the eyelids. Ahout twenty or thirty ducts of these glands open apon tho tarsus of each eyelid.

MEL. Honey; a suhstance secreted by the nectariferous glands of flowers, and collected hy the working bee, which transports it in its crop or honey-bag to the hive. See Honey.

Mel Egyptiacum. The Linimentum cruginis of the [Lond.] Pharmacopeia; consisting of powdered verdigris, distilled vinegar, and clarified honcy.
[Mel Boracis. 'A mixture of powdered horax and clarified honcy, in the proportion of one drachm of the former to one ounce of the latter.]

Mel depuratum. [Mcl despumatum, U. S. Ph.] Clarificd honey; honey melted in a water-hath, and strained while hot through flannel.

Mel Rose. Honey of Roscs; prepared from the dricd red rose, hoiling distilled water, and honcy.
[ Mcl scilla compositum. Coxc's hivesyrup. See Syrupus scillce compositus.]

MELENA ( $\mu$ idalva vbros, norbus niger; tho black diseare; hence the name of the black jamdice). A term adopted by Saurages from tho writings of Hippocrates, to denote the occurrence of dark-coloured, grumous, and pitchy cracuations, generally accompanicd by sanguineous romiting. Tho adjectire is berc used singly;
the substantive heing understood. By Hoffimann the disease is called secessus niger.
MELALEUCA MINOR. [M. cajuputi Rumphius.] The Lesser Melaleuca; a Myrtaceous plant, yiclding cajeput oil.

MELAM. A substance fornicd by distilling dry bydro-sulpho-cyanate of ammonia. On boiling melam with hydro-chloric acid, a crystalline substance is gencrated, called melamine.

MELAMPODIUM. A name given by the Greeks to the Black Hellebore, from Melampus, who is said to have cured the daughters of Protus, king of Argos, of melancholy, with this plaut.
MELAMPYRIN. A substance ohtained from the Melaupyrum nemnosum. It appears to be somewhat analogous to gum and sugar.

MELAN EMA ( $\mu i \lambda a v a i \mu a$, hlack blood). The name given by Dr. Goodwin to asplysia, from the colour of the blood in that affection; be distinguisbes the disease into melanæma, from hanging; from drowning; and from inspiration of fixed air.
MELANCHOLIA ( $\mu i ́ \lambda a t v a \chi^{0 \lambda \grave{r}}$, hlack bile, or choler). Melancholy; mental dejection. The parieties are the gloomy, or attouita; the restless, or errabunda; the mischievous, or malevolens; and the selfcomplacent, or eomplecens.

MELANIC ACID ( $\mu \dot{k} \lambda a s, ~ \mu \dot{\varepsilon} \lambda a v a s$, black). The name given to a principle discovered by Dr. Marcet, in a speciunen of blucle urine. Dr. Prout says it is apparently connected with lithic acid.
[MELANOGOGUE ( $\mu \dot{\varepsilon} \lambda a s$, black; a $\omega \omega$, to expel). A medicine which purges off black bile.]
[MELANOID, or MELANOTIC CANCER. Medullary cancer modificd by the formation of black pigment in its elemental structure. Sec Mrlannsis.]
 This term implies more than the melanosis of Laennec ; for, whereas the latter denotes a morbid product, sui generis, the former is employed by Dr. Carswell to signify all "black discolourations or products," which he separates into two groups, tbe true and the spurious.

MELANO'SIS ( $\mu \mathrm{i} \lambda a s, \mu \dot{k} \lambda a v o s$, hlaek). A morbid product of a dark brown or black colour, first described hy Laennee, in 1806, under the forms of masses enclosed in cysts; masses without cysts; infiltration in the tissue of organs, and deposition on the surface of organs, a liquid
form of melanosis.
[Jfclunosis (meaning thereby the deposit of black pizment, is an extrenicly common
oceurrence, and may take place in healthy tissnes, in those which are variously diseased, and in new formations of any kind. When this black pigment is deposited in encephaloid structure it constitutes melanoid cancer.]

MELANOTANNIC ACID ( $\mu$ ídas, black). A black substance formed by the action of potassa, in excess, upon tannic and gallic acid.

MELANTHACE A. The Colchicum tribe of monocotyledonous plants. Herbs with a rhizone, sometimes fleshy; leaves sheathing at the base; flowers hexapetaloïdeous, tubular ; stamens 6; ovarium 3celled; seeds albuminous.

MELAS ( $\mu$ í $\lambda a s$, black). A term applied by the ancients to a superficial affection, rescmbling the alphos, except in its colour; it is synonymous with the lepra nigrieans, or black lepra.

MELASMA ( $\mu$ idas, black). Tho name given by writers to the eethyma luridum, or lurid papulous scall.

MELASSES (mel, honey). The uncrystallizable part of the juice of the sugarcane, separated from the sugar during its manufacture - a sort of mother-water of raw sugar. That which is imported into England is principally converted into a coarse, soft sugar, called bastards.
MELASSIC ACID ( $\mu i \lambda \ell$, honey). An acid produced by the simultaneous action of alkalies and heat upon grape sugar.
[MELEGUETA or MELLIGETTA PEPPER. Grana Paradisi, (q. v.).]
[MELIA AZEDARACH. Azedarach, Ph. U. S. Pride of India. Pride of China. A plant of tbe natural order Meliaceæ. The bark is cathartic and emetic, and in large doses is said to be narcotic. It is estecmed in the Soutbern States as a very efficient anthelmintic. It is given in the form of decoction, made by boiling four ounces of the fresh bark in a quart of water, down to a pint. The dose for a child is a tablespoonful every two or three hours until it affects the stomach - or it may be given morning and evening for several days, and then followed by an active cathartic.
MELIACE F. The Bead-tree trihe of dicotyledonous plants. Trees or sbrubs with leaves alternate; flowers symmetrical; calyx imbricated; stamens hypogynous; ovarium of several cells; seeds definite, apterous.

MELICERIS ( $\mu \lambda \lambda$, honey ; кnpds, wax). A tumour of the oneysted kind, filled with a substance resembling wax, or honcy, in consistence.

MELILLOTUS [OFFICINALIS. Melelot.] A Leguminous plant, said by Vogel
to owe its odoriferous principle to benzoic acid; others refer it to coumarine, the aromatic principle of the Tonka bean.

MELISSA OFFICINALIS ( $\mu i \lambda \downarrow \sigma \sigma \alpha$, a bee). The Common Balm, or Balm Mint; a Labiate plant, sometimes used for making balm tea.

MELLAGO (mel, honey). Any medicine which has the consistence and sweetness of honcy. Hence the term Mellago taraxaci, as applied to the fuid extract of dandelion.

MELLATE. A salt formed by combination of mellitic acid with a salifiable base.
[MELISSINE. A name given by Mr. Brodie to a peculiar hody obtained hy him from wax, and considered hy him as a wax alcohol.]
[MELLITA. Preparations of honey. 0xymels.]

MELLITIC ACID (mel, honey). An acid discovered in the mellite or honeystone, or mellitate of alumina.

MELLON. A salt-radical, consisting of varhon and nitrogen.

MELOE. A genus of insects. The meloe vesicatoria was the former name of the cantharis, or hlistering beetle.
[MELOPLASTIC ( $\mu \varepsilon \lambda \circ \nu$, the cheek; $\pi \lambda a \sigma \sigma \omega$, to form). The operation for forming a new cheek.]

MELTING POINT. That point of the thermometer at which a solid hecomes fluid. Thus ice melts at $32^{\circ}$, sulphur at $218^{\circ}$, gold at $5237^{\circ}$ Fahr.

MEMBRANA. This term formerly denoted the skin of animals, dressed like our parchment or vellum to write upon. In anatomy it signifies sometimes a hag for containing fluids, sometimes a thin suhstance lining a cavity. The membranes of the hody are the-

1. Mucous membranes, investing the sides of carities which communicate with the external air; they are divided into the mucous membranes properly so called, and the skin.
2. Serous membranes, lining cavities which are not externally open; they are divided into the splanchnie serous membranes, and the synovial menbranes.
3. Fibrous membranes, of varions forms, constituting capsules, sheaths, aponcuroses, \&e.; by their courhination with the two preceding kinds of membranc, they constitute the fibro-8erour and fibro-mucous membranes.
4. Membrana dentata. A process of the pia mater sent off from cither side of the cord, and forming a serration hetween each of the nerves.
rd, and forming a servation hetwecn cach
the nerves.
5. Aembranc, investing. The first layer $\begin{aligned} & \text { of a brilliant and variously-coloured mems } \\ & \text { 14. }\end{aligned}$
of cells which assumes a distinctly memhranous form upon the surface of the cicatricula of the ovum, hitherto called the serous layer of the germinal membranc.
6. Membrane, fulse. This is the result of inflammation, and is formed hy the coagulation of the fihrinous finid or lymph poured out on memhranes which have a free surface.
7. Membrana media. The name given by the earlier writers to that part of the allantois which lies in contact with the amnion, and which contains hut few ressels; it is the endochorion of Dutrochet.
8. Membrana capsulo-pupillaris. A vascular membrane extending backwards from the pupillar margin of the iris in the foetus of the mammalia and of man, and connecting the margin of the capsule of the lens with the margin of the iris. 3
9. Membrana vitellina. The vitellino merahrane, lying within the oricapsule, and surrounding the yolk of the orum.
10. Nembrance reunientes. A term recently applied hy Rathke to certain parts of the emhryo of all the vertehrate classes. To the very thin memhranous part of the ahdominal walls in the embryo, be gires the name of membrana reumiens inferior, and to the corresponding part in the dorsal region the name of nembrana remiens superior; while he reserves the terms lamince abdominalcs and lamince dorsales for the thicker parts of the ahdominal and dorsal regions of the embryo, which, advancing from each side, at length meet ahove and helow in the middle line. When these thicker lamina have thus united and cnclosed the cavities to which ther helong, the membranæ reunientes have lost their office.
11. Membrana germinativa. The germinal membrane, the earliest derclopment of the germ in fishes and the amphihia, in the form of a thin stratuen of yolk of definite extent; it gradually extends itself over the whole surface of the yolk, so as to nssume the form of a resicle including the mass of yolk.
12. Menibrana deeidua. The deciduous membrane, which is dereloped upon the inner surface of the nterus, hefore the orum reaches that organ. It consists of a whitish, gray, moist, and soft mass, simila: to congulated fibrin, and entirely formed of nucleated cells. See Decidua.
13. Membrana enticalis. The exteral transparent coat of the orum of mammalia, before the formatiou of the cmbryo, as obscrsed hy Von Baer.
14. Ifembrana reraicolor. The name
brane which forms part of the choroild in many animals. Mr, Dalrymple denies that any such membrane exists in tho human eye.
15. Membrana intermedia. A term applied to the memhraue which, in the ovum of the bird, lies hetween the rudimentary nervous centres and the mucous layer of the germinal membrane.
16. Membrana semilunaris. The name given to the conjunctiva at that part of its courso where it is posterior to the caruncula, and a little external to it. This membrana semilunaris has been supposed to be the rudiment of the membrana nictitans, or the third eyclid of the lower animals.
17. Membrana Jacobi. The external memhrane or layer of the retina.
18. Mcmbrana sacciformis. A synovial memhrane, which forms a duplicature between the radius and the ulna.
19. Membrana pigmenti. The internal layer of the choroìd membrane, which retains the pigmentum nigrum in its place.
20. Membrana nictitans (nicto, to wink). A memhrane with which birds and reptiles can occasionally cover their eyes. This term has been erroneously applied to a loose crescentiform fold of the conjunctiva at the inner angle of the eye, which has neither the office nor the muscular apparatus of the nictitating membrane.
21. Membrana pupillaris (pupilla, the pupil of the eye). A memhrane extended across the pupil of the fotus. It disappears at about the seventh month.
22. Membrana tympani. A membrane extended over the circular opening at the bottom of the meatus auditorius.
23. Membrana pituitaria, or Schneiderian. The membrane which lines the cavitics of the nose.
MEMBRANACEOUS [MEMBRANIFORM,] (membrana, a membrane). Resembling membrane. This terin must be distinguished from membranous, which denotes that the substance consists of memhrane.
[MEMBRANES. By the term "the membranes," is understood, in ohstetrical writings, the three memhranes which envelope the foetus, viz., the decidua, the chorion, and the amnion.]

MEMBRUM ( $\mu \varepsilon i p \omega$, to divide). A mem. ber or limb; an external part of the hody, distinguished from all the rost by some particular use, as membrum virile, the penis, \&e. It is not said of the head.
MENACIIANI'TE. A substance found in Coruwall, in which Mr. Gregor disco-
vered titanium. It consists of the oxide of titanium, iron, and manganese.

MENDO'SUS (mondax, falso). Spurious, or false : hence, mendosa costa, the false ribs; mendosa sutura, the bastard or squamous suture of the cranium.
[MENINGEAL. Of, or belonging to, the meninges.]
MENINGES ( pl . of $\mu \dot{\eta} \nu \iota \gamma \xi$, a membrane). The name of the membranes of the brainthe dura and pia mater.

1. Meningitis. Inflammation of the membranes of the brain and spinal marrow. See Encephalitis, and Myelitis.
2. Meningosis. An articulation in which membrano is employed.
3. Meningo-phylax ( $\phi$ идá $\sigma \sigma \omega$, to protect). An instrument formerly used for protecting the dura mater and brain from injury, during the operation of trepanning.

MENISCUS ( $\mu \dot{\eta} \nu \eta$, the moon). A lens which is concave on one side and convex on the other, its section resembling the appearance of the new moon. Also, $\Omega$ term applied by authors to interarticular cartilage.

MENISPERMACE T. The Cocculus tribe of Dicotyledonous plants. Leaves alternate; flowers polypetalous; unisexual; stamens hypogynous; fruit, a 1 -seeded drupe.
[MENISPERMUM. A Linnean genus of plants of the natural order Menispermaceæ.]
[1. Menispermum canadense. An indigenous climhing plant, the root of which is said to be a gently stimulating tonic, and to he used in Virginia as a suhstitute for sarsaparilla, in scrofulous affections.]
[2. Menispermum cocculus. Anamirta cocculus. A species growing in the East Indies, tho fruit of which is the cocculus Indicus.]
3. Menispermum palmatiom. The Kalumb or Calumba plant, now called Coceulus palmatus. It yields the Colomba root of the shops, and its seeds contain menispermic acid.

Menispermia; paramenispermia. Two crystallino substances found in the seedcoat of the Cocculus Indicus.

MENORRHAGIA ( $\mu \grave{\nu} \nu, \mu \eta v \partial s$, a month ; Sifyvur, to break forth). A morbidly profuse discharge of the catamenia, commonly called flooding, or uterine hæmorrhage.

MENOSTATION ( $\mu \grave{\eta} \nu, \mu \eta v o ̀ s, ~ m e n s i s, ~ a ~$ month ; 7ornuc, to stand). A suppression or retention of the catnmenial discharge.
MENSES (mensis, a month). The months; the monthly discharge or period; the catameuia, courses, or flowers.

MENSTRUATION (nenatrua, pl. ncut. of menstruus, used absolutcly). The periodical discharge from the female gencrative organs of a bloody fluid poured out by the inner surface of the uterus. Tho menstrual periods occur usually at intervals of a lunar month, their duration heing from threc to six days.

MENSTRUUM. A term synonymous with solvent. A liquid which does not change the nature of the substance to be dissolved. Thus, pure water is employed to dissolve gum, alcohol to dissolve resins, and acids to dissolve the bases of colchicum and squill.

MENSURATION (mensura, a measure). The process of ascertaining the comparative size of the two sides of the chest. It consists simply in measuring the superficial extent of the chest with a piece of tape stretched over it from certain fixed points.

MENTAGRA (nentum, the chin; äypa, seizure). The sycosis menti; an eruption about the chin. Sec Sycusis.

MENTHA. A genus of Labiate plants. According to Strabo, Miuthe was a chère amie of Pluto, and was metamorphosed by Proscrpine into a plant, which bore her name.

1. Mentha viridis is the spear-mint or grcen mint; mentha piperita, peppermint, from which the cordial of this name is prepared; and mevtha pulcgium, pennyroyal, which enters into the compositiou of the penuyroyal, or hystcric water of the shops.
2. Nenthene. Aliquid hydrocarbon obtained from the stearopten contained in oil of peppermint.
3. Roinla menthe piperita. Peppermint drops; peppermint lozenges; prepared from sugar and oil of peppermint.

MENTUM. The chin; the projecting surface of which is termed the nicutal process.

MENYANTHES TRIFOLIATA.Buckbean: an indigenous plant growing in marshes, and yielding a pcculiar substance called menyanthin.
MEPHI'TIS (the namo of the goddess of foul smells). An impure or poisouous exhalation.

1. Mephitic acid. The name given by Mr. Bewley to carbonic acid, from its oceasioning death on being respired.
2. Mephitic air. Nitrogen gas; [also carbonic acid and other irrespirable gases.]

MERA'CUS (merns, unmixed). Without mixture. Celsus lans meracas potiones, drnughts of pure winc ; and Pliny, vinum meraculum, wine pretty purc.

MERCAPTAN. A liquid of an etbe-
real character, named from its energetic action on peroxido of nercury-quasi mercurium captans. It is alcobol of wbich the oxygen is replaced by sulphur.
[MERCURIAL. Containing mercury, or rclating to mercury.]

MERCURIAL BALSAM. The Uugucntum hydrargyri nitratis, also called yellow or citrine ointment ; an imitation of the golden cyc-ointment.

MERCURIAL ERETHISM. An affection arising from the use of mercury, and characterized by irregular action of the heart, frequent sighing, trembling, \&c.
[MERCURIAL OINTMENT. See Unguentum Hydrargyri.]

MERCURIAL RASH. A variety of the Eczema rubrum, arising from the irritation of mercury; hence, it has been called eczema wercuriale; erythema mercuriale; hydrargyria; and mercurial lepra.

MERCURY. A metal differing from all others in being always fluid, inless subjected to a temperature of - $39^{\circ}$, when it hecomes solid. Some of its nannes euggest its silvery appearance and liquid furm, as hydrurgyrum, or silver-water; others, its mobility and liquidity, as well as its resemblance to silver, as argentum rivum, aqua argentea, aqua metallorum, and quicksilver. Its volatility has also gained for it the name of that locomotive personage, the messenger of the gods.

## Ores of Mercury.

1. Native or Virgin Mercury. The pare metal, found in the form of globnles, in cavities of the other ores of this metal.
2. Native Amalyam. An ore consisting of mercury combined with silrer.
3. Native Cinnabar. Native vermilion, or the bisulphuret of mercury ; the ore which jields the mercury of commerce.
4. Corncous Mercury. Mercurial horn ore, or the proto-chloride of mercury.

Pharmaccutical Prcparations.
5. Nercury and chalk. Hydrargyrnm cum cretâ; a compound of three parts of mercury and fivo of chalk, also called mercurius alkalisatus, or æthiops absorbens. [A mild laxative and alterative.]
6. Mercurial-Pills. Pilulæ brdrarguri, or l/ve pill; a mass consisting of mercury rubhed with confection of red roses until the globules can no longer be scen. nad then blender with liquorice powder. Three grains contain one grain of nicreury.
7. Jereurial Ointmom. Uuguentum hrdrargyri, formerly termed Blue or Nespolitan Ointment; consisting of mercury rubbed with suct and lard until the globules can no longer be scen.
8. Gray or black oride. Mrdrargyri oxidun, [IIydrargy ri oxidum nigrum, Ph .
U. S.] sometimes called the protoxide, and sub-oxide; used caternally, and for making bluck wnah.
9. Red oxide. Mydrargyri hinoxidum, foruerly called red precipitate per se, calcined mercury, and by Geher, coagulated mercury.
10. Red precipitate. [Hydrargyri oxiduca rubrum, Ph. U.S.] Hydrargyri nitricooxydum, commonly callcd red precipitated mercury; uscd externally.
11. Calomel. Hydrargyri cbloridum, [Hydrargyri chloridum mite, Ph. U. S.] formerly called the sub-muriate, or mild muriate, of mercury, [and sweet precipitate].
12. Corrosive sublimate. Hydrargyri hichloridum, [Hydrargyri chloridum corrosivum, Ph . U. S.] formerly called oxymuriate, or corrosive muriate of mercury.
13. White precipitate. Hydrargyri am-monio-chloridum, [Hydrargyri ammoniatum, Ph. U. S.] sometimes called Lemery's white precipitate, and cosmetic nercury.
[14. Iodide of Mereury. Hydrargyri iodidum. Green iodide of mercury; Protiodide of mercury. Given in scrofula and syphilis. The dose is a grain daily, gradually increased to three or four.]
15. Red iodide. Hydrargyri hiniodidum, [Hydrargyri iodidum ruhrum, Ph. U.S.;] also called the deutiodide or periodide of mercury. [Used in scrofula and syphilis. The dose is the sixtecnth of a grain, in pill, gradually increased to a fourth of a grain.]
16. Red sulphuret. Hydrargyri sulphuretum, rubrum, cinnabar, or, formerly, minium; reduced to powder, it is vermilion.
[17. Aeid nitrate of Mercury. Hydrargyri pernitratis liquor. Used as a caustic in malignant ulcerations and cancerous affections.]
18. AEthiops mineral. The common name of the hydrargyri sulphurctum nigrum. [Black sulphuret of mercury. It is sometimes given as an alterative in glandular affections, and in cutancous diseases, in doses of from 5 to 30 grains several times a day.]
19. Prussinn mereury. Hydrargyri hicyanidum, [llydrargyri cyanuretuin, Ph . U. S.] also called prussiatc, hydrocyanate, and cyanuret of inercury. [Oceasionally nsed as an antisyphilitic remedy; the dose is from a sixteenth to an eighth of a grain.]
20. Citrine Ointment. Unguenturn hydrargyri nitratis, also called ycllow oiutment, and nereurial balsam.
21. T'urpeth mineral. Hydrargỳi sulphas flavus, a compound which reseurbles in colour the root of the Ipomae turpethum. [An alterative and powerful emetic and crrhine. The dose, as an alterative, is from a quarter to balf a grain; as an emetic, from two to five grains.]
22. Hahnemann's soluble mereury. A velvety black precipitate, formed by adding very dilute ammonia to the soluhle nitrates of mercury, without neutralizing the wholc acid.
[23. Aeetate of Mereury. Mydrargyri acetas. Used as an antisyphilitic, in the doso of one grain, in pill, twice a day ; and also in solution, as an external application to cutaneous eruptions.]

MERICARP ( $\mu$ épиs, a part; кupпдs, fruit). The botanical designation of a half of the fruit of Umbelliferous plants. What are called carraway seeds are, in fact, fruits, each consisting of two achenia, or mericarps, placed face to face, and separating from a central axis. The two together arc called eremoearp ( $\kappa \rho \varepsilon \mu \alpha \omega^{\omega}$, to suspend), from their being suspended from the common central axis.

MEROCELE ( $\mu \eta \rho \partial े s$, the thigh ; к $\dot{\eta} \lambda \eta$, a tumour). Femoral or crural hernia.

MERORGANIZATION ( $\mu$ épos, a part). Organization in part; a modification of the general principles of organization.Pront.

MERUS. Mere, pure; unmixed, as merum vimum, neat wine, \&e. Hence, when merum is said of wine, vinum is un--derstood,-"curare genium mero ;" hence also " merobibus," one who drinks wine without water.
[MESEMBRYANTHEMUM CRYSTALLINUM. Ice plant. A native of the south of Europe; the expressed juice of it is considered demulcent and diurctic, and has been given in diseases of the mucous membranes of the pulmonary and urinary organs, and in dropsy.]
[MESENTERIC. Belonging to the Mesentery.]
[MESENTERY. Sec Meros.]
MESIAL ( $\mu \varepsilon \sigma 05$, the middle). Appertaining or relating to the middle.]

MESITE. A liquid existing in pyroxylio spirit, and produced in the distillation of wood. Mesiten is a similar product of the same process.

MESITYLE. The name given by Kane to the supposed radical of acetone.

MESITYLENE. A light oily liquid, produced by distilling pyro-acctic spirit (acetone) with fuming sulphurio acid.

MESMERISM. Animal magnctism; a systeru introduced by Mesmer.

MFSOS（ $\mu$ ívos）．Mcdiur．Tbe Greek terin for middle，or mediate，or that which is situated betrocen others．

I．Mes－araic（apakà，the small intes－ tines）．A term synonymous with mesen－ teric．
 A primary division of the braiu，consisting of the lohe of the third ventricle，the optic lohes and the appendages，termed cona－ rium and hypophysis，and in fishes the ＂hypoaria．＂

3．Mes－entery（évicpa，the bowels）．The membrane which connects the small in－ testines and the posterior wall of the ab－ domen．

4．Mes－enteritis．Inflammation of the mesentery．

5．Meso－carp（кгрпds，fruit）．The inter－ mediate part of the pericarp of fruits；when fleshy，it is called sarcocarp．

6．Meso－cephalon（ $\kappa \varepsilon ф a \lambda \eta$ ，the head）． The name given hy Chaussier to the pons Varolii．

7．Meso－cacum．That part of the peri－ tonæum which embraces the cæcum and its appendix．

8．Meso－colon（ $\kappa \tilde{\omega} \lambda o v$, the colon）．That part of the mesentery which connects the transverse colon and the posterior wall of the ahdomen．

9．Ifeso－gastrium（yaosìp，the stomach）． A kind of suspensory band of the stomach， observed in the earliest stage of embryonic life，which at a later period is converted into a sac，the great omentum．

10．Mero－lobe．Chnussier＇s designation of the corpus callosum，or the maxima commissura cerehri of Soemmering．

11．Meso－phloum（ $\phi$ doods，bark）．That portion of the hark of plants which lies between the epiphloum and the cndo－ phlœum or liher．

12．Meso－phyllum（фü入入ov，a leaf）．The cellular substance of the leaves of plants； also called diachyma and diploe．

13．Jfeso－rectum．That part of the pe－ ritonæum which conncets the rectum with the front of the sacrum．

14．Meso－spern？（ $\sigma \pi i \rho \mu a$, seed）．The mid－ dle one of the three membranes by which seeds are sometimes enveloped．
［15．Meso－thenar．The name given by Wiuslow to the muscular mass consisting of the abductor，and part of the short flexor of the thumh．］

16．Mcso－thorax（ $\theta \omega_{p} \boldsymbol{m}_{\xi}$ ，the chest）．That prart of the ehest in insects which gives origin to the second pair of legs，\＆e．
［MESOCOLIC ILERNIA．A name given dy $\operatorname{Sir} A$ ．Cooper to a ruriety of her－ nia in whiels the bowels glide between the layors of tho mesocolon．］

META（ $\mu$ ctd，prep．）．After；with；in composition this preposition denotes change， tranafercuec，\＆c．

1．Net－uretonc．A comhustible liquid， obtained，inixed with aectone，in distilling sugar with quicklimo．

2．Met－aldehyde．A product of the con－ densation of the elements of aldehyde When kept long，even in sealed tuhes，al． dehyde is transformed into two isomeric modifieations，viz．：metaldehyde，a hard， crystalline，inodorous solid；and clalde－ hyde，which is liquid．
［3．Meta－carpal．Relating or belonging to the metacarpus．］

4．Meta－carpus（карпѝs，the wrist）．That part of the hand which is situated between the carpus and the fingers．

5．Meta－cctonic acid．One of the pro－ ducts obtained when sugar is heated with hydrate of potash．It is evidently derived from metacetone hy oxidation at the ex－ pense of the hydrate．It is very similar to acetic neid．
［ 6 ．Meta－cinnameine．A crystalline suh－ stance，isomeric with hydruret of einnamyl， and which hy its oxidation gives rise to cinnamic acid．］

7．Meta－gallic acid．Melano－gallic acid． An acid ohtained hy the retion of heat upon pyro－gallic acid，this heing also pro－ duced hy similar action on gallic acid．

8．Meta－genebis（yivects，generation）．A term indicating a series of changes in or－ ganic development，aceording to the law of Parthenogenesis．Thus the Acalephe passes through hoth the infusorial and the Polype stages，and propagates hy germi－ nation，as well as by spontaneous fission， before it acquires the mature form and scxual organs．This differs from Meta－ morphosis，which denotes that the same individual changes its form，not that a series of successively generated individuals are developed from a single orum．
［9．Meta－phosphoric acid．Mono－hy－ draterl phosphoric neid，phosphate of rater． Sce Glacial phosphoric acid．］

10．Meta－meric（ $\mu$ epos，a part）．A term applied to compounds in which the nutti－ mate elements are the same as in other well－known combinations，hut are consi－ dered to he arranged in a different way： thus，oxygen，hydrogen，sulphur，and s metal，may be considered as combined in the form of sulphuretted hydrogen and a metallic oxide，or of water（consisting of oxygen and hydrogen，and a metallic sul－ phinret．Sec Yomeric and Polymeric．

11．Meta－morphopsia（ $\mu$ etaposp申wers，a change of form：ó 4, s，vision）．A species of amaurnsis，in thich objects appear con－ fused or distorted．
12. Meta-morphosis ( $\mu$ op $\phi\rangle$, form). Literally, a change of form. A term applied by Liehig to those chemical actions in which a given compound is caused, by the preseuce of a peculiar substance, to resolve itself into two or more compounds; as sugar, by the presence of yeast, into alcohol and carbonic acid.
13. Meta-phosphates. A term applied by Prof. Graham to the hydrates of phosphorio acid, to mark the cause of the retention of peculiar properties by their acid, when free and in solution; viz., that it was not then simply pbosphoric acid, but phosphoric acid together with water.
14. Meta-pophysis (à $\pi \delta \phi v a!s$, an apophysis). An exogenous process of a vertehra, situated between the diapophysis and tbe zygapopbysis in the archetypal vertebrate skeleton. See Vertebra.

1j. Meta-stasis ( $\mu \varepsilon$ 位бin $\mu$, to transfer). Literally, a removal from one place to another. Generally, tbe supervention of an affection of a new organ, on the subsidence of a similar disorder of a limh or organ primarily affected; as the cessation of rbeumatism, followed by pericarditis, \& c.
16. Meta-tar8us (тapoòs, the tarsus). That part of tbe foot which is situated between the tarsus and the toes.
17. Meta-thorax ( $\theta \dot{\omega} \rho_{a} \xi$, the chest). Tbe third and last segmeut of the thorax in insects.
[METABASIS ( $\mu$ हroßaivw, to digress). A change from one thing to another, either in tbe curative indications, the treatment, \&c.]
[METABOLIC. Appertaining to change or transformation.]
[Metabolic force. A term used by Sch wann to denote the power possessed hy living cells of assimilating the exuded plasma into the form of certain tissues.]
[METALLIC TINKLING. See Auscultation.]
METALLIC TRACTORS. A pair of rods of different metals, employed by Mr. Perkins in the treatment of diseascs. The operation has hence been termed Perkinism and Tractoration. It has had its day.
METALLOIDS ( $\mu \varepsilon \tau a \lambda \lambda o v$, a metal; हidos, likeness). A term applied to the thirteen non-metallic elementary substances.

METALS ( $\mu$ '́ra $\lambda \lambda a)$. A class of compact, heavy, opaque bodies, distinguished, in different degroes, by the following gencral properties:-

1. Mralleability; by which thoy admit of being hamnicred out into thin plates or leaves. Gold is the most malleable of all the metals. When a metal admits of
being extended by the rolling-press, it is called laminable.
2. Ductility; hy which they admit of being drawn out into wire. All the malleable metals posscss this property.
3. Fusibility; or tho capacity of being melted by heat. Tho point of fusion varies considerably in the diffcrent metals, though they are all solid, except mercury, at common temperatures.
4. Tenacity; by which they are capable of supporting considerable weight witbout breaking.
5. Elasticity and hardness; properties which adapt them for exciting sound.
6. Crystalline texture. Thus, iron is fibrous; zinc, lamellated; steel, granular; others are procured in crystals, as gold, silver, \&c. When they crystallize, they always assume the figure of a cube, tbe regular octobedron, or some form allied to it.

## I. Table of the Metals.

The Metals are here arranged according to the order in wbich they have been discovered, with the names of the persons who discovered, or first described them.

1. Gold...... Known to the ancients:
2. Silver .... Gold and silver are term-
3. Iron...... ed nolle metals; the for-
4. Copper... mer of these was consi-
5. Mercury sidered as the metallic
6. Lead..... element; the rest were
7. Tin........ called base metals.
8. Antimony..... B. Valeutine, 15 th cent.
9. Zinc.

Agricola...... 1520.
10. Bismuth....... Paracelsus... 16th cent.
$\left.\begin{array}{l}\text { 11. Arsenic...... } \\ \text { 12. Cobalt....... }\end{array}\right\}$ Brandt......... 1733.
13. Platinum....... W ood........... 1741.
14. Nickel ......... Cronstedt..... 1751.
15. Manganese... Scheele, \&c.. 1774.
16. Tungsten...... D'Elhuyart... 17 S1.
17. Tellurium ...... Müller .......... 1782.
18. Molybdenum, Hielm......... 1782.
19. Uranium...... Klaproth....... 1789.
20. Titaninm...... Gregor.......... 1791.
21. Cbromium .... Vauquelin.... 1797.
22. Columbium... Hatchett...... 1802.
$\left.\begin{array}{l}\text { 23. Palladium.. } \\ \text { 24. Rhodium... }\end{array}\right\}$ Wollaston .... 1803.
25. Iridium........ Descotils, \&c. 1803.
26. Osmium ....... S. Tennant... 1803.
27. Cerimin.......... Berzelius, \&c. 1s04.
28. Potassiun
29. Sodium .....
30. Barium ..... \} Davy .......... 1807.
31. Strontium..
32. Calcinm....
33. Cadmium...... Stromeycr.... 1818.
34. Lithiln ....... Arfwedson ... 1818.
35. Selenium...... Berzelius, \&e. 1818.
36. Silicium ....
37. Zirconinm.
38. Aluminium
39. Glucinium .
40. Yttrium ....
41. Thorium ...... Berzelius...... 1829.
42. Magnesium... Bussy, \&e...... 1829.
II. Classes of the Metals.

1. Metallic bases of the allalies; viz., potassium, sodium, and lithium. These powerfully attract oxygeu; the oxides are termed alkalies: and the metallic bases, alkaline or alkaligenous metals.
2. Metallic bases of the alkaline earths; viz., barium, strontium, calcium, and magnesium. These also powerfully attract oxygen, and their oxides are termed allcaline earthe.
3. Metallic bases of the Earths; viz., aluminium, zirconium, glucinium, silicium, $y$ trium, and thorium. The oxides of these metals are the pure earths.
4. Metals yiclding oxides, which are neutral salifiable bases; viz., gold, silver, mercury, copper, lead, iron, tin, platinum, palladium, nickel, cadmium, zine, bismuth, antimony, cobalt, and manganese.
5. Metals which are acidifiable, hy comhination with oxygen; viz., tellurium, arsenic, chromiun, molybdenum, tungsten, columbinm, and selenium. Of the oxides of the rest, little is known.
6. Metals magnetic; viz., iron, nickel, and cobalt; cehromium has also been affirmed to be magnetic.

## III. Terms conneeted with Mretals.

1. Metals are termed native, when found in an uncombined form; mincralized, when combined with other bodies; compounds of two or more metals, except mercury, are ealled alloys, and possess the charaeteristic properties of pure metals; those of mercury with other metals are called amalgams.
2. The termination in uret denotes combinations of the simple non-metallio clements, either with one another, witb a netal, or with a metallic oxide; thus, sulph-uret and earb-uret of iron signify compounds of sulpbur and carbon with iron.
3. The result of the oxidation of motals, when heated in the air, was formerly called a eal., and the process of forming it, calcination; when mixed with nitrate or ehlorate of potash, and projected into a red-hot crucible, they are said to be cleflagrated; when the oxides are redued to the metallie state, they are said to suffer reduction. Metals are the best reflectors of caloric, and the worst radiators.

METALLOGRAPIIY ( $\mu$ ira $a \lambda o v$, a metal; रpá $\phi \omega$, to describe). T'bat brauch of $\varepsilon$ cience which treats of metals.

METALLOID ( $\mu \mathrm{i}$ тa入入ov, a metal ; di̛os, likeness). A terrn applied, at first, to the metals obtained from tho fixed alkalies and some of tho earths. They are now called metallic.

MEIALLURGY ( $\mu$ irad $\lambda_{0} v$, a metal; ěpyov, work). The separation of metals from their ores. It comprises the several operations of assaying, refining, smelting, $\& c$.

METEORISM ( $\mu \varepsilon \tau_{i} \omega \rho o s$, a meteor). Distention of the abdomen by gas.

METEOROLITES ( $\mu \varepsilon \tau \dot{\varepsilon} \omega \rho o s$, floating in the air; $\lambda$ iOos, a stone). Meteoric stones; aërolites; solid compounds of earthy and metallie matters, descending from the atmosphere; such was the ancile, or shield of Mars, which fell in the reign of Numa; the arx julia of 1561 , \&c. They all contain iron alloyed with nickel.

METEOROLOGY ( $\mu \varepsilon \tau i \omega \rho a$, meteors; from $\mu \varepsilon \tau \dot{\alpha}$, and alwpiw, to suspend; doyos, a description). The doctrine of meteors, or tbe study of the variable pbenomena of the atmosphere.

METHIONICACID ( $\mu \varepsilon \tau a$, change; $\theta_{\text {ziòr }}$, sulphur). An acid ohtained by the aetion of anhydrous sulphuric acid on ether. See Althionic acid, which is formed at the same time.

METHOD BY INGESTION. A term applied to the employment of medicines at the upper extremity of the intestinal canal.

ME'THODE NUME'RIQUE. A method of pursuing the study of physic, invented by MI. Louis. It consists-

1. In the collection, with every precaution to secure accuracy, and to aroid omissions, of individual Cases; and-
2. In the analysis and collation of these eases, so as to deduce general Laics and conclusions.

METHODIC SECT. [Methodics; M/ethodists.] A class of practitioners founded by the Roman physician Themison, a diseiple of Asclepiades, who attributed all diseases to over-bracing, or relaxation; hence, all medicines were classed as relaxing and bracing remedies.

METHILE. Thenerly-discorered radical, or basyle, of wood spirit.
[1. Methylic aicohol. Pyroligneous spirit, wood spirit, Pyroligneous ether, wood naphtha, lyroxylic alcohol, wood alcohol, Hydrated oxide of methyle.]
[2. Mcthylic chlorojorm. Chloroforn1 uade by the action of ehlorinated lime on pyroxalie spirit, and hence largely contamiInated with a chlorinated [yrogenous oil.]
3. Methylic ether. Oxide of methyl; a celourless gas.
4. Methylal. A compound of hydrato of oxide of formyl with oxido of methyl.
5. Methol. A liquid produced in the distillation of wood.
[6. Methylamine. A pecnliar volatile alkali obtained by distilling inetbylic narcotina with potassa.]

METHYSTICA ( $\mu$ í $\theta v$, wine). Substanoes employed for the purposes of exhilaration and inebriation, as wine, ardent spirits, \&o.

METOPOSCOPY ( $\mu i \tau \omega \pi \sigma$, the forehead ; бколín, to examine). Tbe art of divining by inspection of the forehead; practised among the Romans, and in tbe middle agcs.

METRE. The French standard measure of length, equivalent to $39 \cdot 371$, or very nearly 393 English inches. The French measures ascend and descend in a decimal progression. See Quantity.

METRITIS ( $\mu$ itpa, the uterus). Inflammation of the uterus.
[METRO-PERITONITIS. Inflammation of the womb and peritoneum.]

METRORRHAGIA ( $\mu \dot{\eta} \tau \rho a$, the uterus; fingvept, to burst forth). Uterine hamorrhage.

METROSCOPE ( $\mu$ п́т $\rho$ a, the uterus ; okonic, to observe). An instrument, designed by M. Nauche, for examining the os uteri.

MEZEREON. A species of Daphne, which yields the mezereon barlc. As a local irritant, this bark is used in France, under the name of garou, to produce vesication.

MIASMA ( $\mu i a \sigma \mu \alpha$, from $\mu 九 \alpha \iota \omega$, to pollute). Originally, pollution or contagion; but, with the addition of the term marsh, it denotes certain effluvia, or emanations, from marshy grounds.

MICA. A mineral of various colours, but usually gray. It occurs in the form of very thin plates, which are employed in Russia for window-panes, and are tben called Muscovy glass.
[MICA PANIS. The crumb of bread.]
[MICROCEPHALUS ( $\mu<x \rho d s$, small ; $\kappa \varepsilon$ $\phi$ a $\lambda \eta$, a bead). A monster with a small, imperfect hend.]
[MICROCOSM ( $\mu$ ккрдs, small; ко́ә $о \varsigma$, world). A little world.]
MICROCOSMIC SALT ( $\mu$ expos, little ; кófuos, order). A triple salt, obtained by mixing equal parts of the phosphates of soda and of ammonia, in solution, and then crystallizing. It is much cmployed as a flux, in experiments witb the blowpipe.
MICROGLOSSIA ( $\mu$ ckpos, small; $\gamma \lambda \tilde{\omega} \sigma-$ $\sigma a$, the tongue). Congcnital sinaliness of
the tongue ; one of tho cruses of dysphagia. It is owing, according to Andral, to an arrest of devclopment, and the consequent existence of the hyoid portion only of the tonguc.
[MICROPTHALMUS ( $\mu \ll \rho \delta s$, small; o $\psi \theta a \lambda \mu \mathrm{~s}$, eyc). One who has very small eyes; a monstrosity arising from arrest of development of tho eyes.]

MICROPYLE ( $\mu \iota<\rho \partial s$, small ; $\pi u ́ \lambda \eta$, a gate). In botany, the foramen of the ripe seed, comprising the exostome and the endostome of the ovule, which lead to the internal portion of the ovule, or the nucleus.
[MICTURITION (micturio, to make water). The act of voiding the urine.]

MIDNIGHT FRIEND. An acoustio apparatus, consisting of a gutta-percha tube, extending from the "doctor's" streetdoor to his bed, by which $\Omega$ message ean be transmitted to the awakened practitioner, instead of merely the sound of his bell. Hence it has been fancifully termed the "Mcdical man's Midnight Friend."

MIDRIB. The principal vein of a leaf, running from the base to the apex.

MIDRIFF. Diaphragma. The muscle which divides the body into the thorax and the abdomen.

MIDWIFERY. The art of aiding and facilitating child-birth.
[MIKANIA GUACO. A plant of intertropical America, belonging to the natural order Asteraceæ, employed by the natives as a preventive and cure of the bites of poisonous serpents. It has also been used as a febrifuge and anthelmintic, and was at one time supposed to have prophylactio and remedial powers in epidemic cbolera. It is closely allied to Eupatoria, and has probably similar properties.]

MILDEW MORTIFICATION. Gangrana ustilaginea; a disease supposed to arise from the use of grain vitiated by tbe growth of parasitic plants in the intorior of the culm, or straw, cbiefly tho "ustilago," blight or mildew.
[MILFOIL. A common aame for the plaut Achillea millefolium.]

MILIARIA (milium, a millet-seed). Miliary fever - febris being understood; minute transparent vesicles, of the size of millet-seeds, filled with $\Omega$ colourless acrid fluid, and terminating in scurf; the fifth genus of the order Vesicula of Bateman. Miliary fever has becn designated by the terms-

1. Miliaria rubra, or red; when the ve. sicles, on their first rising, being filled with transparent lymph, cxhibit the red colour of the inflamed surfaco beneath.
2. Liliaria alba, or whito; when, the
lymph having acquired in thirty hours a milky opacity, the vesicles assume a white or pearly appearancc.

MILIUM (a millet-seed). A small white tumour, of the size of a millet-sced, or larger, on the margin of the cyclids, containing a suhstance like boiled rice.

MILK. Lac. A fluid secreted by the females of the mammalia, for tho nourisbment of tbeir offspring. It separates, on standing, into a thick whitish fluid, called cream, and wbat is termed skimmed milk; and by the addition of rennet, acids, or wine, into a solid coagulum called curd, and a limpid fluid termed whey: the curd is considered to be caseous matter, or the basis of cheese in a state of purity.

Mill, Sugar of. Lactin; saccho-lactin. A substance ohtained from whey by evaporation. It occurs in cormmerce in cylindrical masses, in the axis of which is a cord which serves as a nucleus for the crystals.

Milk, Albumen of. This is caseum, or casein. See Lactalbumen.
[MILK OF AMMONIAC, \&c. See Lac.]
MILK ABSCESS. Tumour seated in
the breast, proceeding from a redundancy of milk, when first secreted after childBirtb.

MILK FEVER. Febris lactea. An aggravated form of the excitement which takes place at the onset of lactation. It is commonly said, in such cases, that the mills flies to the head.

MILK SICKNESS. [Trembles.] A disease endemic in the Western States of Alabama, Indiana, and Kentucky. It affects hoth man and beast. It is commonly attributed, in cattle, to something eaten or drunken by them; and in man, to the eating of the flesh of animals which have been affected with this disease. From the rigours which occur in animals, this disease has been called trembles.

MILK TEETII. The first sot in children, wbieb are shed in cbildhood.
[MILK WEED. A common name for the plant Aselepias Syriaca, and also for tho Euphorbia corollota.]
[MILLAR'S ASTHMA. See Laryngismus stridulus.]
[MILLEFOLIUM. Achillca millefolium.]

MILLEPEDES (mille, a thousand; pes, pediy, a foot). Slaters, or Wood-lice. These insects, killed hy the vapour of spirit of wine, formerly obtained a place in the pharmacopoias, and were employed in humoral asthma and dropsy.

MIMOSA SENSITIVA. The Sensitive plant, which exhibits the phenomena of srrtability, residing in an intumes-
cence situated at the articulation of the leaf-stalks. In the natural Etate during the day the stalk is clevated, the leaves expanded, and the intumescenec elongatcd, but cqually convex superiorly and inferiorly. But at night, or when irritated, the stalk is depressed, the leaves applied to each other in pairs, and the intumes. cenco curved 50 as to he convex superiorly, concave inferiorly.
[MIMOSA NILOTICA. The Linnean title for two of the species of Acacia, the A. vera and A. Arabica, whicb furnich the Gum Arahic.]

MIMOTANNIC ACID. An acid procured from the Mimosa cateehu, and so named hy Berzelius, to distinguish it from the tannio acid of galls, which he calls Quercitannic acid-from Qucrcus, an oak.

MINDERERUS' SPIRIT. The liquor ammonia acetatis, or liquid acetate of ammonia.
[MINERAL. Any inorganic substance.]
MINERAL CAOUTCHOUC. A rariety of hitumen, resembling caoutcbouc in elasticity and eoftness, and in remoring pencil-marks.

MINERAL CHARCOAL. A fibrous variety of non-hituminous mineral coal.

MINERAL GREEN. A hydrated suhcarhonate of copper, used as a pigment.

MINERAL SOLUTION. Liquor arsenicalis. Fowler's solution, or the Liquor potasse arsenitis.

MINERAL WATERS. Waters impregnated with mineral substances. See Aqua minerales.

MINERAL YELLOW. Patent Tellor. A pigment consisting of chloride and protoxide of lead.

MINERALIZATION. Tbe process of converting a substance into a mineral. A metal comhined with oxygen, sulphur, tc., loses its metallic properties, and becomes mineralized; the latter bodies are thon termed mineralizers.

MINERALOGY. The science which treats of inorganic suhstances. These are generally solids, extracted from the earth by mining, and bence called minerals. The term fossil is now commonly applicd to organic substances, penetrated with earthy or inctallic matters.
[MLNERS' ELBOW. An enlargement of tho bursa over the olccranon, resulting frou pressure, and occurring in miners $\pi$ tho rest much on the elbow.]
MINIA BATTA OIL. A solid oit, said to be extractod by the natives of Borneo fron a tree of that country. The term minia batta means stonc oil.
MINIMUM. A minim; the eixticth
part of a fluidrachm. Also, the least part of any thing, as opposed to the maximum, or great cst part.
MINIUM. Red lead, or vermilion; an oxide of lead, of an intensely red colour, employed as a pigment.
Minii Gleba. The red earth from which vermilion is procured.-Cclsus.
[MINT. Spearmint. The herb Mentha viridis.]
MISCARRIAGE. The expulsion of the foetus from the uterus, within six weeks after conception, is usually called miscarriage ; if it occur hetween six weeks and six months, it is called abortion; and, if during any part of the last three months before the completion of the natural term, premature labour.
MISCEE. The name of an Indian dentifrice, which produces indeed a hlack jet upon the teeth, hut leaves the enamel untouched, while it destroys the tartar and hardens the gums. Its ingredients are not known.
MISERERE MEI. Literally, Pityme; a name given to the iliac passion, or ileus, from the pain it creates.

MISHMEE BITTER. Mishmee Teeta. The name of the root of a Ranunculaceous plant, called hy Dr. Wallich Coptis T'eeta; it is much used in the east as a powerful tonic and stomachic.
[MISTLETOE. The common name for the plant Viseum album.]

MISTU'RA (misceo, te mix). A mixture; an extemporaneous preparation, in which different ingredients are mingled together in the liquid form, or in which solid substances are diffused through liquid, hy the medium of mucilage or syrup.
[1. Mistura Ammoniaci. Ammoniac mixture. Ammoniac, $\mathbf{5}^{\mathrm{ij} . ;}$ water, Oss.; mix thoroughly.
[2. Afistara Amygdalae. Almond mixture. Swcet almonds (blanched), $\mathrm{J}_{\mathrm{J}} \mathrm{ss}$; gum Arabic, in powder, $\overline{3} s$ s.; white sugar, $3^{\mathrm{ij} . ;}$; rub woll together in $\Omega$ marhle mortar, and then add distilled water, f $\overline{\mathrm{j}}$ viij., and strain.
[3. Mistura Assafoticla. Assafoetida mixture. Milk of Assafoetida. Assafeetida, 3 ij . ; water, Oss.
[4. Mistura Crcasoti. Creasote mixture. Creasoto and reetic acid, of each, $\begin{aligned} & \text { axj. ; }\end{aligned}$ compound spirit of juniper and syrup, of

[5. Mistura Cretæ. Chalk inixture. Prepared chalk, Jss.; white sugar, powdered gum Arabic, of each, 3 ij.; cinnamon water, water, of cach, fZiv.; mix thoroughly. Laudanum is frequently and lino is sometimes addcd.
[6. Misturu ferri composita. Compoūnd mixture of iron. Myrrh, $3 \mathbf{j}$.; carbonate of potassa, gr. xxv.; rose water, $\mathrm{f}_{\mathrm{z}}^{\text {² }}$ viiss. ; sulphate of iron, in powder, $\exists \mathrm{j}$. ; spirit of lavender, f $\overline{3}$ ss.; white sugar, $\mathrm{Jj}^{\mathrm{j} .}$. Ruh the myrrh with the rose water gradually added; then mix with these the spirit of lavender, sugar, and carhonate of potassa, and, lastly, the sulphate of iron. Pour the mixture immediately into a glass hottle, which is to bo well stopped. Pb. U.S. This is nearly the same as the antibectic myrrh mixture of Dr. Griffith. It is given in the hectic fever of phthisis, in chlorosis, debility of the digestive organs, \&c.]
[7. Mistura Glycyrrhiza composita.Componnd mixturc of liquorice. Brown mixture. Take of liquorice [extract], in powder, gum Arahic, in powder, sugar, each, half an ounce; camphorated tincture of opium, two fluid ounces; antimonial wine, a fluid nunce; spirit of nitric ether, half a fluid ounce; water, twelve fluid onnces. Rub the liquorice, gum Arabic, and sugar, with the water gradually poured upon them ; then add the other ingredients, and mix.
[MITCHELLA. A genus of plants of the order Rubiaceæ.]
[Mitchella repens. Partridge berry. An indigenous evergreen, said to possess expectorant, emmenagogue, and diuretic properties.]

MITHRIDATE. An ancient composition, having opium for its basis, and now replaced hy the confection of opium.

MITRAL VALVES (mitra, a mitre). The name of two valves which guard the left ventricle of the heart. 'Ihe difference of size of the two valves, both being triangular, and the space between them, have given rise to the idea of a bishop's mitrc, after which they are named.

MIXTURE. Mistura. A chemical mixture should be distinguished from a chemical solution. In the former, the aggregate particles can again be separated by mechanical means, and the proportion of the different particles determined ; but, in solution, no mechanical power whatsoever can separate them. [Seo Mistura.]

MOBILITY (mobilis, movable). A term applied hy Dr. Cullen to exccssivo susceptibility to impressions-one of the afllictions of nervous persons.
[MOCCASIN PLANT. A common name for the Cyripedium parviflorum.]
[mocha alolis. A name given in London to an inferior sort of hepatic aloes, from Museat.]
[MOCHA SENNA. India Senna. Carbir elongata.]

MODI'OLUS (dim. of modus, a measurc). The bony pillar, in the centre of tho cochlea, encircled by the lamina spiralis. Also, the crown, or saw, of the trephine.

MODIUS. The chicf Roman measure for things $d r y$, the third part of a cubic foot, somewhat more than a peck English. Six modii were callicd a medimnus, an Attic measure.
[MODUS OPERANDI. Mode of operating. In Materia Medica, this term is applied to the general principles on which medicines when applied to the body alter or modify its vital actions.]

MOIRE'E ME'TALLIQUE. Crystallized tin-plate, ohtained by pouring on heated tin-plate a mixture of two parts of nitric acid, and three of muriatic acid, diluted with eight of water. When varnished, it is worked into ornamented ressels.

MOLA'RES (mola, a mill-stone). The douhlc or grinding teeth. Those with two fangs are called bicuspid, or false molars.

Molar glands. Two small hodies, placed hetween the masseter and huccinator muscles, having the orifice of their excretory duct situated opposite the last molar tooth.

- [MOLASSES. The uncrystallizable sugar, combined with acid and extractive matters, drained off in the manufacture of sugar.]

MOLE (mola, a mill-stone). A hrown macula, or spot, generally, though not always, congenital. Also, a morhid product of conception, consisting of a false germ, or, as it. is called in hirds, cuf elair; a fleshy substance; a hydatid suhstanee, \&c.
[MOLE PLANT. Common name for Euphorbia lathyris.]
[MOLECULAR. Of, or belonging to, molecules.]

MOLECULE (dim. of moles, a mass). A minute particle of a mass or hody. It differs from atom, in heing always considered as a portion of some aggregatc.

1. Complex organie molecule. An association of two or more binary compounds, comparatively simple in constitntion, often isolahlo substances, and possessed of considerable stability.
2. Integrant molecules. Tho name given by Haiiy to tho last particles in to which the nucleus of a crystal can ho mechanically divided.
[MOLIMEN (molior, to move). An effort or impulse to a certain effect.]
[Jolimen criticum. An attempt or effort to $\Omega$ solution or crisis of a discase.]
[Molimen hamorrhagienm. A hæmorrhagic tendency or diathesis.
[Molimen menstruale. A tendency or effort to produce the menstrual flow.]

MOLLITIES (mollis, soft). Softness; softening. Hence-

1. Mollities eerebri. Ramollissement of the French. Softening of the hrain.
2. Mollities ossium. A morbid softness and flexibility of the houes, commonly called the rickets of adults. See Fragilitas ossium.

MOLLUSCA (mollis, soft). Literally, a nut with a soft shell. Soft, invertehral, inarticulate animals, often protected hy a shell. They constituted division 2d of Cuvier's Animal Kingdom, and are distinguished into the following classes: viz.-

1. Cephalopoda; 2. Pteropoda; 3. Gasteropoda; 4. Brachiopoda; 5. Cirropoda.

MOLLUSCUM (mollis, soft). Wen; a movable tumour, little sensihle, and often elastic to the touch, containing an atheromatous matter ; the third genus of the $T_{u} u$ bercula of Bateman.

MOLYBDENUM ( $\mu \delta \lambda \nu \beta \delta o s$, lead). A white metal, closcly allied to tungsten. Its name was derived from the resemhlance of its native sulphnret to plumbago.

Molybdie aeid. An acid obtained from the native sulphuret of molyhdennm.
[MOMORDICA. A genus of plants of the natural order Cuenrhitaceæ.]
[1. Momordica Balsamina. Balsam Apple. A native of the East Indies. The fruit was formerly highly esteemed as a vulnerary, and is still used in domestic practice.
2. Momordica Elaterium. The Sqnirting Cucumber; a Cucurbitaceous plant, cultivated at Mitcham for the sake of the elaterimm found in the juice surrounding the seeds.

MOMORDICINE. Another name for elaterin; a crystalline componnd, constituting the active principle of the Momordiea elateriun.

MON-, MONO- ( $\mu 6$ vos, single). A Greck prcfix, denoting nuity.

1. Mon-adelphia (ads ${ }^{\text {dos }}$, a hrother). The sixtcentl class of plants in the Linnean system, in which the filaments are all united into one tube. IIcnce-
2. Mourdelpheus. IIrving the filaments all united in one tube.
3. Mom-andria (àmp, a man). The first class of plants in the Linnasan system, containing only one stamen. Hence-
4. Alouendrous. Haring only onc sta, men.
［5．Ifuno－lepsis（ $\beta \lambda$ sпо七七，sight）．Con－ fusion and imperfection of vision when both eyes are uscd，whilst the sight with either eye singly is distinct．］

6．Mono－chlamydece（ $\chi$ дaцùs，a tunie）． A sub－class of exogenous plants，in which the flowers have only one envelope，viz．， a calyx．

7．Mono－cotyledones（кorv入nduv，a seed－ lobe）．Plants which have only one coty－ ledon，or seed－lobe；those which bave two are termed di－cotyledoncs；and those which bave none，$\alpha$－cotyledones．The first and second of these classes，respectively identical with the endogence and exogene， constitute the first division of plants in the natnral system，or Vasculares；the third is identical with Cellulares，the second division．Hence－
S．Monocotyledonous．Having only one cotyledon or seed－lobe．

9．Mon－oculus（oculus，an eye）．An unclassical term，signifying one－eyed，and applied to a bandage formerly used for fistula lacrymalis，and diseases of the eye．

10．Mron－ocia（otros，a house）．The 21st class of plants in the Linnæan sys－ tem，in which the stamens and pistils grow on separate flowers，but on the same individual．

11．Monomania（ $\mu$ avta，madness）．Mad－ ness upon one subject only．See Mfania．

12．Mono－petalouя（пध́тa入ov，a leaf）．Li－ rerally，baving a single petal or leaf，as applied to the corolla of plants．The dificrence，however，between a mono－ petalous and a poly－petalous corolla is， that in the one，the leaves out of which it is formed are distinct；in the other， they are united．A more proper term for the latter is gamo－petalous．Where there are no petals，the plants are termed a－petalous．

13．Mono－phyllus（фúd 10 ，a leaf）．A term used syoonymously with monosepa－ lous，denoting cohesion of the sepals of the calyx．
［14．Mono－plastic（ $\pi \lambda_{a \sigma \sigma \omega,}$ to form）． Not cbanging its form．Gerber applics the term monoplastic element to one which rc－ tains its primary form．］

15．Mon－archid（ $\delta \rho \times 15$ ，a testis）．Having a single testis．

16．Mono－sepalous．Having a single sepal，or calyx－leaf．The remarks at mono－ petalous are applicable here，by merely cbanging－petalous into－sepalous．

17．Mono－tremata（rpiaw，to bore a hole）． The third tribe of Cuvicr＇s Edentata，or toothless animals．See Cloaca．

MONAD（ $\mu$ ovàs，unity）．The smallest of all visible animalcules．Ehrenberg computed that a single drop of fluid may
contain $500,000,000$ monads－a number equal to that of all the human beings on the surface of the globe．

1．Monad of the Physiologists．An ele－ mientary particle of an organic body． Thus，the primary cell or germ，from which all the other cells of the brain are produced，is termed the primary monad； and the secondary cells or particles，pro－ duced by this，are termed secondary mo－ nad8．

2．Mfonad of the Metaphysicians．An active kind of principle，endued with per－ ception and appetitc，ascribed to each elementary particle of matter．The mu－ tual reaction of the mind and body upon eaeh other，accordingly，consists of the action of the mental monad upon the in－ teranl state of the monads of the body，and vice versâ．
［MONARDA．Ph．U．S．The herb Monarda punctata，horsemint；an indi－ genous，Labiate plant．The volatile oil prepared from it is a powerful rubefa－ cient．］

MONESIA．A vegetable substance， prepared from the hark of a tree of South America；supposed to be a Chrysophyllum． ［C．glycyphloum．］［It is moderately astringent and a gentle stimulant to the stomach．It has been recommended in diarrhœa，leucorrhœea，hemoptysis，menor－ rhagia，dyspepsia，\＆c．The dose is from gr．ij．to gr．x．，ropeated to the extent of from gr．x．to $\overline{3}$ j．daily．］

MONESIA BARK．Cortex，Monesia． The hark of the Crysophyllum glycyphloum； a Saponaccous tree，growing in the Brazils， near Rio de Janeiro．It yields monesin； an acrid principle，analogous to saponin． A blackish extract of the bark is used under the name of extract of buranhem，or guaranhem．
MONOBASIC SALTS．A class of oxy－ gen－acid salts，which，in the language of the acid theory，contain one equivalent of base to one of acid．

MONOPHYODONTS（ $\mu$ bvos，once；$\phi \nu \omega$ ，
 of the group of the mammalia which ge－ nerates a single set of tecth，as distin－ guished from the diphyodonts，which gene－ rate two sets．
MONOTONY（ $\mu 026$ govas，of one，or the sametone）．Monotonous impressions pro－ ducod on the senses are provocatives of slecp，as the ticking of a clock，the hum of becs，the bahhling of a brook，\＆c．See Hypnologist．
［MONILIFORM（monilc，a neeklace； forma，likencss）．Necklace－like；eylin－ drical，and contracted at regular inter－ vals．］
[MONKSHOOD. A common name for the species of Aconitum enployed in medieine.]
[MONNINA POLYSTACIIIA. A South American plant of the natural order Polygalaceæ, the hark of the root of which is very astringent, and has heen used in diarrhoea and dysentery.]

MONS VENERIS. The eminence of integument situated immediately over the os puhis, in women.

MONSTRUM. Luвus naturce. A monster ; any thing out of the common course of nature, as a bicephalous, hemicephalous, or acephalous fretus.

MONTANIN. The bitter principle of the St. Lucia Bark, or tho hark of the Exostema floribundum, a native of the West Indian islands.

MONTICULUS (dim. of mons, a mountain). A little mountain. The term monticuli has heen applied to two little eminences, situated upon the antcrior part of the thalami nervorum opticorum.
[MONTPELIER SCAMMONY. A factitious seammony manufactured in the south of France, said to he made from the expressed juice of Cynanchum Monspeliacum, incorporated with various resins and other purgative substances.]

MORBILLI (morbillus, dim. of morbus, a disease). The minor plague; a term by which the continental writers have in general designated Rubeola or Measles. The term is horrowed from the Italians, among whom il morbo (the disease) signified the plague.

Morbilli regulares. Common Measles, Sydenham; the Rubeola vulgaris of Bateman.

MORBOSUM AUGMENTUM. An old term denoting an increased mass, a preternatural growth, or new matter.

MORBUS. A disease; disordered action of any part of the machinery of the body.

1. Morbus aphirodisius Lucs Vcnerea, or syphilis. It has also been called morbus Gallicus: morbus Indicus; morbus Neapolitanus, \&c.
2. Morbus arcuatus, or arquatus (arcus, a bow ; so called from one of the colours of the rainbow). The Jaundice.
3. Morbus caducus. Epilepsy, or fall. ing sickness. This has been also termed morbus attonitus; murbus comitialis, or "electioneering disease," so called from its oceurring at the time of the comilia, or popular assemblies at Roinc, from excitement, de.; morbus divinus: morbus herculcus, morbus infantilis: norbus interJunius; morbus magnus, or major; morbus zaecr, se.
[4. Morbus coxarius. Hip-joint discasc.]
4. Morbus incurvus. Another name for cyrtosis, incurvation of the spine, or posterior crookedness.
5. Morbus interpellatus (interpello, to interrupt). A disease attended with irregular or uncertain paroxysms.
[7. Morbus Regis. See King's Evil.]
6. Morbus sacer. A name for epilepsy. The notion of demoniacal agency is of the remotest antiquity ; and amongst the Greeks nervous affections were cunsidered as of divine infliction, and were called sacred diseases.
7. Morbus strangulatorius. The name given by Dr. Starr to a species of angina maligna, which raged in Cornwall in the year 1748.
8. Morbi pathetici. Morositates. Depraved appetites, and morbid changes in the feelings and propensities

MORDANT. A suhstance used in dyeing, which has an affinity hoth for the colouring matter, and for the stuff to he dyed; the combination of the colonr with the texture is thus aided hy a kind of douhle decomposition. The term basis is commonly employed.
[MORDICANT. Calor mordicans. A pungent heat.]

MOREL. The Morchella esculenta ; s fungus employed for flavouring graries, \&e.

MORIA ( $\mu \omega \rho \partial_{s}$, foolish). Foolishness; fatuity; defect or behetude of the naderstanding.

MORIBUNDUS (morior, to die). Morihund; dying, ready to die.

MORINE. A yellow colouring matter ohtained from the Drorus tinctoria, or fustic.
[MORI SUCCUS. Mulberry juice. The pharmacopeeial namo for the juice of the fruit, of Morns nigra.]
[MORINGA. A genus of plants of the fanily Leguminosæ, inhabiting India, Arabia, de.
[M. aptera, \} The seeds of
M. plerygosperma. $\}$ these species afford the oil of Ben.
[MORIOPLASTY. Morioplasticc. Aufoplasty. The restoration of lost parts.]

MOROXYLIC ACID ( $\mu$ ofov, the mulberry ; छỉav, wood). An acid produced from the hark of the mulberry tree.

MOR PIIA (Morphere, the god of slecp). A vegeto-alkali, existing in opium, in combination with a peculiar acid, which has been named the meconic, in the form of a niceonate. Norphia is generally allwitted to constitute the nareotic prineiple of opiusu.
[1. Morphice acetas. Acetate of Morphia. One-sixtb of a grain is considered equivalent to a grain of opium.
[2. Morphios murias. Muriate or Hy droehlorate of Morphia. One-sixth of a grain is ahout equivalent to one grain of opium.
[3. Morphice sulphas. Sulphate of Morphia. The dose is from gr. $\frac{1}{8}$ to gr. $\frac{1}{2}$.]
MORPHIOMETRY (morphia, and $\mu \varepsilon$ tpov, a measure). The process of estimating the quantity of morphia in opium. There is no constant ratio hetween the quantity of morphia in a given sample of opium, and that of any other constituent; bence the extraction of the morphia is the only true morphiometrical metbod of proceeding. See Couerbe's Process.
[MORPHOLOGY ( $\mu \circ \rho \phi \eta$, form ; גoyos, п description). Anatomy. That brancb of the science of organization wbich teacbes the homologies of the organs, or which considers the several tribes of organized beings not as a mere aggregation of individuals, each formed on an independent model, and presenting a type of structure peculiar to itself, but as presenting throughout each asscmblage a conformity to a general plan, which may he expressed in an archetype or ideal model, and of which every modification has reference to the peculiar conditions under which the race is destined to exist, or to its relation to other heings. See Homologies.]
MORPHOLYSIS ( $\mu \nu \rho \phi \eta$, form ; $\lambda \nu \omega$, to dissolve). The destruction of organization ; that effect of medicines which is seen in physical and cbemical change, unconnected with vital effect, or biolysis.

MORPIO. The pediculus pubis, or crablouse ; an insect whicb burrows in the skin of the groins and eyebrows.
[MORRHU ${ }^{\text {E }}$ OLEUM. A pharmacopocinal name for the oil of tbe liver of Gadus Morrhua.]

MORS, MORTIS. Death; properly, the cessation of life, the separation of the suul from the body. Nex is a violent deatb, or slaughter.
MORSULUS. A little mouth ful; a term applied to a form of medicine liko drops, or lozenges, without regular form.
MORSU'S DIABOLI. Literally, devil's bite; an uncouth designstion of the fimbriated extrcmity of the Fallopian tube.
MORT DE CHIEN (dog's deatb). A name of the spasmodic cbolera, of Mr. Curtis; it is said to be a corruption of mordezym, the Indian name of the discase; or of the Arabic mordelie, or "the death-blow,"-according to Golius, actio inferens mortem, and honce synonymous
with "mors violenta" with "mors violenta."

MORTAR CEMENT. A mixture of limo and siliccous saud, used for building.

MORTIFICATION (mors, mortis, death; fio, to hecome). A generic term denoting the death of any part of the body, occasioned by inflammation : the circulation in the part is completely arrested, the blood in the capillaries is not only coagulated, but decomposed, while the tissue itself undergoes decomposition. The particular stages of mortification are designated in this country by tbe terms-

1. Gangrene, or the incipient stage. On tbe continent it denotes the complete form. Sce Gangrene.
2. Sphacelus, or complete mortification. Some apply the term gangrene to the deatb of the superficial texture, and spbacelus to the death of the whole substance of au organ.
3. Slough; the tecbnical term for the fibrous, senseless substance, resulting from sphacelus.
4. Necrosis, or death of the bones; the term caries meaning ulceration of bone.
5. Hospital gangrene, or the combination of humid gangrene witb pbagedænic ulceration.
6. Pustulc maligne, or charbon of the Frencb; malignant pustule, or carbuncle, supposed by some to originate in borned cattle.
7. Gangrenous argotism, necrosis ustiliginca seu epidemica, arising from the use of spurred rye.
MORUS TINCTORIA. Tbe plant which yields the yellow dye called fustic. The colouring principle is termed morin.
8. Morus nigra. The mulberry tree. Tbe fruit, commonly called a berry, is a sorosis.
[2. Morus rubra. An indigenous species, the fruit of whicb, like that of tbe preceding species, is an agrceable article of food, and is esteemed refreshing and laxative.]

MOSAIC GOLD. Aurum musivum. The alcbemical name of the hi-sulphuret of tin. It is produced in fine flakes of a heautiful gold colour, and is used as a pigment.

MOSCHUS. Musk; a granular substance found in the preputial musk sao under the helly of the Mosch me moselifcrus, a species of deer inhabiting tho Alpino mountains of the east of Asia.

Moschus factitius. Artificinl musk, prepared with nitric acid, fetid aniusal oil, and rectified spirit.

MOTHER SPOTS. Mfacule materna. Congenital spots and disoolourations of the skin. See Navus.

- [MOTILITY (motus, motion). The porter of moving.]

MOTION (moven, to more). This term, ns employed in Auimal Physiology, denotes the following phenomena:-

1. Voluutary Motion. The spontancous act of the will of the individual ; a function attached to the brain.
2. Excited Motion, or that of the Reflex Function; as in the closure of the larynx on the contact of acrid vapours, of the pharyns on that of the food, \&c., a function of the medulla.
3. Motion of Inritability; as tbe action of the heart, the intestinal canal, \&c., a function of the muscular fibre.
4. Ciliary motion. The peculine vibrating motion of the cilia of animals, as observed on the external surface, in the alimentary canal, the respiratory system, the generative organs, in the cavities of the nervous system, and on the surface of serous membranes.

MOTIONS OF THE LIMBS. The motions whicb may take place between any two segments of a limb, are distinguished by the following terms:-

1. Gliding; the simplest kind of motion, existing between two contiguous surfaces, when one glides over tbe other.
2. Flcxina: by which two segments of a limb, placed in a direct line, or nearly so, are brought to form an angle. This is opposed hy-
3. Extension; by wbich the segments are restored to the direct line. These two motions belong to what Bichat calls limited opposition, and they are illustrated by tbe flexion and extension of the fore-arm.
4. Abduction; by wbich the thigb-bone is separated from the middle line of the body, so as to form an angle witb the lateral surface of the trunk; and-
5. Adduction; by which it is restored, and made to npproximate the middle linc. Bichat terms this "opposition rague."
6. Circumduction; or a continuous motion performed rapidly in directions intermediate to the four preceding: the distal extrenity of the limb describes a circle indicating the base of a conc, whose apex is the articular extremity moving in the joint.
7. Rotation; or the revolving of a bonc round its axis.

MOTOR (moveo, to move). A mover; a part whose function is motion.

1. Motor tract. The prolongation of the anterior colnmas of the spinal cord through the pons Varolii into the crura cerchri. This tract gives origin to the tbree motor nerves.
2. Mutores ocnlorum. The movers of the cycs, or the third pair of nerves.
3. The metals were denominated, by Volta, motors of clectricity, from their property of transferring electricity to each other hy eimple contact; this process was called, hy Davy, elcetro-motion.

MOTORY; SENSORY. By tbe former of these terms, Hartlcy designated those nerves which convey the stimulus to the muscles ; by the latter, those which conrey the impressions to the neural axis. See Function, Reflex.

MOULDINESS. A peculiar fnngus plant, propagated by spores, infinitely small. Reaumur found the interior of an addled egg mouldy; bence the spores must bave passed through the pores of the sbell.

MOUNTAIN BLUE. Malacbite, or carbonate of copper. Mountain green is the common copper green, also a carbonate.

MOUNTAIN CORK. The name of tbe elastic varicty of asbestos. Mountain leather is tbe tough variety. When in very tbin pieces, it is called mountain paper. The ligniform variety is called mountain or rock wood.
[MOUNTAIN DAMSON. The common name in Jamaica for tbe Simaruba officinalis.]
[MOUNTAIN LAUREL. A common name for the Kalmia latifolia.]
[MOUNTAIN MAHOGANT. One of the common names for an indigenous species of hircb, Betnla lenta, remarkable for the aromatic flavour of its hark and leaves.]
[MOUNTAIN RHUBARB. A common name in some parts of Europe for Rumex Alpimus.]

MOUN'AIN SOAP. A mineral snbstance occurring in the island of Skye; used in crayon-painting.
[MOUNCAIN TEA. One of the common names for Gaultheria procumbens.]

MOUSTACHES. The hair which grows on the upper lip of men, forming two oblique rows, meeting under the nose, and prolonged as far as the commissures of the lips.

MOXA. A small mass of combustible vegetable matter prepared from the Artemisia moxa, or Moxa-wced, a Chinese plant of the order Compositre, and euployed as an actual cautcry.

1. European moxa. Usunlly made with cotton-wonl, which has been eoaked in a solution of nitrate or chlorate of potash ; or the pith of the Helianthus anmuns, or sun-flower, which contains naturally nitrate iof potash.
2. Percy's moxa. Consists of pith, rolled in cotton, and enveloped in muslin.
3. Porte-moxa. A pair of forceps, or other instrument for fixing the cylinder of moxa upon the spot where it is to he applied.

MOXIBUSTION (moxa, the moxaweed; ustio, the act of burning). Moxybustion. The employment of moxa for the purpose of cauterization.
MUCIC ACID. An acid first obtained from sugar of milk (saccharum lactis), and hence termed saclactic, or saccholactic; hut as all the gums appear to afford it, and the principal acid in the sugar of milk is the oxalic, it is now called mucic.

MUCILAGO. Mucilage; an aqueous solution of gum.

1. Mucilaginous matter. The name given hy chemists to the white flocculent deposit formed in the distilled waters of plants.
2. Mucilaginous Extracts. Extracts which readily dissolve in water, scarcely at all in spirits of wine, and undergo spirituous fermentation.

MUCIPAROUS (nucus, and pario, to producc). Producing mucus; a term applied to the follicles of the mucous membranes.

MUCOCELE (mucus, and к $\dot{\lambda} \lambda \eta$, a tumour). Hernia sacci lacrymalis. An enlargement of the lacrymal sac, constituting a soft swelling, which contains tears mixed with mucus.
[MUCOUS (mucosus, from mucus). Related to mucus, or to mucilage.]
[MUCOUS MEMBRANES. The memhranes which line the internal passages and other cavities which open on the surface of the hody, as well as various recesses, sinuses, gland-ducts, and receptacles of secretion which open into such passages.]
MUCRONATE [( mucro, a sharp point)]. Abruptly terminated by a hard short point; applied to leaves.
[MUCUNA. A genus of plants of the matural order Leguminose ; the pharmacopceial name for the bristles of the pods of Jucuna pruriens.]

1. Mucnna pruricns. Common Cowhage, or Cow-itch; a leguminous plant, [a native of tropical America,] baving its legumes covered with stinging hairs, called cowhage, or cou-itch, employed as an anthelmintic.
[2. Mucuna prurita. An East India plant, formerly supposed to ho the same with M. pruriens, hut now considered a distinct species.]

MUCUS ( $\mu \mathrm{v} \xi \mathrm{a}$, the mucus of tho nos-
trils). The liqnor secreted by the mucous surfaces, as of the nostrils, intended as a protection to the parts exposed to exteraal influences.

MUDAR. By this name, and those of akmm and yercund, are designated the rout, hark, and inspissated juice of the Calotropis gigantea.

Mudarine. The active principle of the ahovo plant, remarkahle for its property of coagulating hy heat, and becoming again fluid hy exposure to cold.

MUD-BATHING. Illutatio. The practice of plunging the patient into the slime of a river, or the saline mud found on the sea-shore, in scuryy, hypochondriasis, scrofula, \&c.
MUFFLE. A small earthen oven, fixed in a furnace, and used in cupellation, and other processes which require the access of air.
MUGWORT. The common name of the Artemisia Vulgaris, a European Composite plant.
MULBERRY CALOULUS. A species of urinary calculus, consisting of oxalate of lime, and named from its rough and tuherculated surface. There is a variety of it, denominated from its colour and general appearance, the hemp-seed calculus, which scems to contain lithate of ammonia.

MULBERRY EYELID. An ancient designation of the ophthalmia purulenta; said also to he the pladarotis ( $\pi$ गadapis, moist) of the Greeks.
[MULLEIN. Coinmon name for the plant Verbascum Thapsis.]

MULSUM (scilicet vinum mulsum). Hydromel. A drink chiefly made of water, wine, and honey, mixed and boiled together.

MULTICUSPIDATI (unceltus, many; cuspis, a spear). The name of the three last molares; so called from their having several tuhercles. See Dens.
MULTIFID (multur, many; findo, to cleave). Cut into many parts; applied to leaves which have numerous shallow segments.
MULTIFIDUS SPIN A (multus, many; fudo, to cleave). The name of a mass of muscles, which are placed obliquely from the transverso to the spinous processes. They have heen described as three distinct scts of muscles, by the names-

1. Transverso-spinalis oolli.
2. Transverso-spinalis dorsi.
3. Transverso-spinalis lumborum.
[MULTILOOULAR (multne, many; loculus, a small cell). Hạving mạy cella or cavitied.]
[MULTIPAROUS (multus, many; parco, to bring forth). Ono which brings forth severnl young at one time.]

MULTIPARTITE (multus, many ; partio, to divide). Divided into many parts; applied to leaves which havo many deep lobes.

MULTIPLE (multus, many). A number which includes nother, a certain number of times; as 6 the multiple of 2 ; 18 tbe multiple of $6, \& c$.

MULTUM. Tbe name of a compound of extract of quassia and liquorice, used by brewers for tbe purpose of economizing malt and hops.

Hard multum, or Black Extract, is a preparation made from Cocculus Indicus, and used by brewers to impart an intoxicating quality to beer.
MUM. A malt liquor, made in the same way as beer, by using wbeat malt.

MUMIA MINERALIS. A variety of bitumen resembling brown asphalt.

MUMPS. A popular name for Cynanche parotidæa. In Scotland it is called branles.

MUNDIC. The mineralogical name of common or yellow iron pyrites, or bisulphuret of iron.

MUNGO. The root of the Ophiorrliza mungos, supposed to be a specific for tbe bite of tbe cobra di capello and tbe rattlesnake. In India and Ceylon it is still used as an antidoto against tbe bite of tbe mad dog. The parts are so intensely bitter, that the plant is called by the Malays, earth gall.

MUNJEET. A species of Rubia tinctorum, or madder, produced in Nepaul and in various districts of India. That which is brought to Eagland is imported from Calcutta.

MUREX. A shell-fish noted among the ancients for its purple dye.

1. Murexide. A beautiful purple product of the decomposition of uric reid, first described by Dr. Prout under the name of purpurate of ammonia.
2. Murexan. The purpuric acid of Prout. It is prepared by dissolving murexide in caustic potash, heating till tho blue colour disappears, and then adding an excess of diluto sulphuric acid.

MURIAS. A muriate, or hydro-chlorate; a salt formed by the union of muriatic acid with an alkaline, carthy, or metallic base. Metallic muriates contain either an excess or deficiency of acid; in the former ease, the salt is called an oxymuriate; in the latter, a sub-muriate.

1. Murias Amnonic. Muriate of Ammonia; gencrally called sal-ammoniac, and formerly imported from Egypt, whero it is
procured by sublimation from the soot of the camel's dung.
2. Murias calcir. Muriate of lime; formerly known by the names of marine selenite; calcareous mariue salt; muria; calx salita; fixcd sal-ammoniac, de. When deliquesced, it has been called oil of lime; and Ilomberg found that, on being reduced by heat to a vitreous mass, it emitted a phosphoric light on being struck by a hard body, and in tbat state it was called Homberg's phosphorus.
3. Murias ferri. Muriate of Iron; formerly called ferrum salitunt ; oleum martis per deliquiunt, \&c.
4. Murias potassce. Muriate of potash; formerly known by the names of febrifuge salt of Sylvius; digestive salt; regenerated sea-8alt, \&c.
5. Murias soda. Muriate of soda, or common salt, found in large masses, or in rocks under tbe eartb. In the solid form it is called sal gem, or rock salt; that obtained by evaporation from salt water is called bay salt.

MURIATIC ACID (nuria, brine). The hydro-chloric of tbe Frencb chemists, formerly called spiritus salis, \&c.; an acid contained in great abundance in seawater, in combination with soda and magnesia. It consists of cblorine and bydrogen. Its salts are called muriates or hydrochlorates.

Oxygenated muriatic acid. Cblorine.
[MURIATIC ETHER. Ether muriatiсия. Muriate of Etberine. Chloride of Ethyle. An Ether discorered by Ronelle, so extremely volatile that it cannot bo preserred in tbe shops. It is a diffusible stimulant, and wben used in medicine it is generally mixed with an equal bulk of alcobol, forming what is called alceholic muriatic ether.]

MURICATED. Covered with nnmerous short, bard protuberances.
MURIDE (muria, brinc). The name first given to bromine, from its being an ingredient of sea-water.

MURIFORM [(nturus, a wall ; forma, likeness)]. Wall-like. Applied to the tissues constituting tbe modullary rars in plants, from its presenting an appearance similar to that of bricks in a wall.

MUSCA. The Fly; r genus of insects which deposit their eggs in meat which is becoming putrid, and have hence passed into the luman intestines.

1. Murea canaria. the desh-it.
2. Musca :mmitnit. the blow-fle.
3. Mubea cibaria, the pantry-fif.
4. Musen putris, a species of which the larrae are known by the name of hoppert, as those of all of them are by that of
maggots; the latter term has often been applied, though in a looser sense, to the gruhs of insects generally.

MUSCE VOLITANTES. Visus muscarum. An appearance of motes or small hodies floating hefore the eyes - a common precursor of amaurosis, [hut often occurring also entirely independent of that disease.]
MUSCI. The Moss trihe of Acotyledonous plants. Cellular, flowerless plants, with leaves imhricated, entire, or serrated; reproductive organs either axillary bodies containing spherical or oval particles, emitted on the application of water, or thece, seated on a seta or stalk.
[MUSCLE See Musculus.]
MUSCOVADO SUGAR. Ravo Sugar. The [unrefined] concentrated juice of the sugar-cane.
[MUSCULAR (nusculus, a muscle). Of, or helonging to, muscles. Having welldeveloped muscles.]

MUSCULAR TEXTURE (musculus, a muscle). Myonine. One of the chief component textures of organic hodies. There are two well-marked varieties: the striped muscular fihre occurs in the voluntary muscles, and is named from its conspicuous cross-markings; the unstriped muscular fihre is found in the alimentary canal, the uterus, and the hladder, and is destitute of such cross-markings.

MUSCULI PECTINATI (pecten, a comh). The name of the muscular fasciculi within the auricles of the heart; so called from their heing arranged like the teeth of a comh.

MUSCULO-CUTANEUS. The external cutaneous nerve, or nervus perforans, Casserii.

Musculo-spiralis. Another name for the radial nerve.

MUSCULUS ( $\mu \tilde{\mathrm{u}} \mathrm{s}$, a mouse). A muscle; an organ of motion, constituting the flesh of animals, and consisting of headed or cylindrical fihres, which are unhranched, and are arranged parallel to each other in fasciculi. In gencral, the name of venter or belly is given to the middle portion of a muscle, while its extremities arc named the head and tail, or, more commonly, the origin and insertion. Hence the terms digastricus, or two-bellied, triceps, or threeheaded, \&c.

> I. Properties of Muscles.

1. Contractility; hy which their fibres return to their former dimensions, after being extended; and,
2. Irritalility; hy which their fihres shorten on the application of a stimulus.

> II. Forms of Muscles.

1. The muscles, like the hones, may be
divided into long, broad, and short; and each of these kinds may present muscles, cither aimple or compound.
2. The simple, or those which have their fibres arranged in a similar or parallel direction. They are in gencral bulging, i.e., their transverse outline is more or less inflated in the middle. The simple muscles are sometimes flat, as the sartorius.
3. The radiated, or those which have their fibres converging, like the radii of a circle, to their tendinous insertion, as the pectoralis.
4. The ventriform, or belly-shaped, which have their centre large, diminishing towards their tendons, or extremities, as the hiceps.
5. The pemiform, or pen-shaped, which have their fihres arranged ohliquely on each side of the tendon, as the rectus femoris.
6. The semi-penniform, which have their fibres arranged on one side of the tendon, as the peronæus longus.
7. The complicated, or compound, which have two or more tendons, as the flexors of the fingers; or a variety in the insertion of ohlique fibres into the tendons, as the linguales.

## III. Actions of Muselce.

1. The voluntary, or those which are suhject to the will, as the muscles of locomotion.
2. The involuntary, or those which act independently of the will, as the heart, \&c.
3. The mixed, or those which act imperceptibly, hut yet are suhject, more or less, to the coutrol of the will, as the muscles of respiration.
[MUSHROOMS. An extensive family of cryptogamous plants, some of which are esculent, and others poisonous. Most of them contain a peculiar principle called fungin, a peculiar acid named fungic acid, and a peculiar saccharine matter.]

MUSHROOM SUGAR. A sugar ohtained by trenting the tincture of the ergot of rye with watcr.

MUSK. A suhstance procured from the Musk deer. See Moschus.
[MUSK, ARTIFICIAL. Sco Moschus fuctitus.]
[MUSKMELLON SEEDS. The sceds of Cucumis Melo; which, when bruised and ruhhed up with water, form an emulsion formerly used as a demulcent.]
[MUSK-ROOT. Ono of the names of Sumbul.]

MUST. The common name for the expressed juice of the grape.
[MUSSITATION (mussito, to mutter to onesclf). A morement of the lips, as if the
patient spoke in a low voiee; an unfavourable symptom in disensc.]
[MUSTARD. The powdered seeds of Sinapis nigra and alla. See Sinapis Scmina.]
[MUSTARD CATAPLASM. See Sinapism.]

MUTTTAS (mutns, dumb). Dumbness; an inahility of articulation.
[MYCODERMA ( $\mu v \kappa \eta$, , a mushroom; סгpнa, skin). A genus of cryptogamous plants.

1. Mycoderma cerevissia. The yeast plant.
2. Mycoderma aceta. The fungus found in vinegar.]

MYDRI'ASIS ( $\mu$ ט́dos, moisture). A preternatural dilatation of the pupil. Compare Myosis.

MYELENCEPHALA ( $\mu v \varepsilon \lambda \partial ̀ s$, marrow; Eyxèфuiov, the hrain). A term applied hy Owen to the grand primary division Vertebrata of the animal kingdom, comprising animals which possess a hrain and spinal marrow. These are the Spinicerebrata of Grant.

MYELI'TIS ( $\mu v \varepsilon \lambda \partial े$, marrow). Inflammation of the substance of the hrain or spinal marrow, as distinguished from meningitios, specifically, or encephalitis, generally.
[MYELOID ( $\mu v ट \lambda \omega$ or̀s, marrow-like). A term proposed hy Paget for certain tumours named "fibro-plastic" hy Lehert, the characteristic constituents of which are peculiar, many-nucleated corpuscles, such as constitute the marrow and diploe of bones in early life.]

- MYELONEURA ( $\mu v \subset \lambda \partial \partial_{\text {, }}$ marrow ; veṽpov, a nerve). The name given hy Rudolphi to a group of animals corresponding with the Articulata of Cuvier, which bave a ganglionic nervous system, forming a cord considered analogous to the spinal marrow of the vertehrata.

MYLABRIS. A genus of [coleopterous] insects.

1. Mylabris variabilis. A species brought from China, and used as a substitute for Cantharides.
2. Mylabris chicorii. A species said to be the same as the buprestis of the Grecks, and used, aceording to Pliny, in the same manner as the hlister-hectle.

MYLO- ( $\mu v \hat{\lambda} \eta$, a mill-stone). Names compounded with this word helong to muscles attached near the grinders.

1. Mylo-hyö̈dens. A triangular musele, arising from the inside of the lower jaw, hetween the molar teeth and the chin, and inserted into the os hyoides. It raises the os byoildes, or depresses the jaw.
. 2. Mylo-pharyngens. A synonyme of the
constrictor superior muscle, from its arising from the alvcolar process.

MYOCEPIIALON ( $\mu v i a, ~ a ~ f l y ; ~ к є \psi a \lambda \grave{\eta}$, the head). A small prolapsus of the iris, forming a brownish tumour, as large as a fly's head.

MYODESOPSIA ( $\mu v i ̃ a, ~ a ~ f l y ~ ; ~ c i o o o s, ~ l i k e . ~ . ~$ ness; $\delta \boldsymbol{b} \psi^{\prime}(5$, sight). Visur muscarum. The imaginary appearance of floating hodics ia the air, - a common symptom of incipient amaurosis. The technical term for these objects is muscae volitantes, or monches rolantes, commonly called motes.

MYOIDES ( $\mu$ üs, $\mu v \partial{ }^{\circ} s$, a muscle ; ciòos, likeness). Platysma myoïdes; a muscular expansion on the neck.
[MYOLEMMA ( $\mu \tilde{s}$, a muscle ; $\lambda с \mu \mu a$, a covering). The delicate tubular sheath which contains the muscular fihrillæ.]

MYOLOGY ( $\mu u ̃ s, ~ \mu$ ròs, a muscle ; dòos, a description). A description of the mascles; one of the divisions in the study of anatomy.
 name for muscular matter. See Aluscular Texture.

MY0'PIA ( $\mu \nu \dot{\omega} \omega$, to close; $\begin{gathered} \\ \psi\end{gathered}$, the eye). Paropsis propinqua. Short-sight; nearsight. It is also called myopiasis ( $\mu \bar{v} 5, \mu v o s$, a mouse), or " mouse-sight," from the supposition that mice have naturally this kind of vision. See Lens.

MYO'SIS ( $\mu v \omega$, to close the eyes). An unnatural contraction of the pupil). Compare Mydriasis.
 section). Dissection of the muscles; a hranch of anatomy.

MYRIAPODA ( $\mu$ vios, innumerable; поũs, rodos, a foot). The first class of the Diplogangliata, or Entomoïda, comprising animals with articulated hodies, all the segments of the trunk heing provided each with one or two pairs of jointed ambulatory feet.
MYRICA CERIFERA. The Tax myrtle, or Bayherry; the berries of which are employed for the same purposes as hces' wax and candles.

Myricin. The ingredient of max, which remains after digestion in alcohol. See Ccra.
[MYRINGITIS (myringa, the memhrana tympani). Intlammation of the membrana tympani.]
MYRISTICACEN. The Nutmeg trihe of Dicotyledonous plants. Trees rith learcs alternate; flowers diœecions, with no traeo of a sccond sex ; fruit haceate, deliscent, 2 -valyed; seed nut-like, enveloped in a many-parted arillus.

1. Myristice muclei. Nutmegs; the seeds of the Myristira officinalis. [M. Mor-
chata, Willd.] They are partially enveloped by an arillus, constituting the spice called mace.
2. Myristice adeps. Butter of nutmegs; prepared by beating the nutmegs to a paste, which is then exposed to the vapour of water, and expressed by heated plates. It is often called expresscd oil of mace.
3. Myristic acid. An acid obtained from the solid portion of the butter of nutmegs, in which it is combined with glycerine.
 davos, an acorn). Dried fruits of the plum kind, brought from Bengal and other parts of India. There are five kinds, viz. : the belleric, the emblic, the chebulic, the Indian, and the yellow.

MYRONIC ACID ( $\mu$ ujoov, an odorous oil). A bittcr acid procured from black mustard seeds.

MYROSPERMINE ; MYROXILINE. Two oils, said by Richter to constitute oil of Balsam of Peru; the former soluble, the latter insoluble, in alcohol.

MYROSPERMUM ( $\mu$ úpov, a liquid perfume; $\sigma \pi \rho_{\rho} \mu$, seed). A genus of Leguminous plants, the seeds of which are besmeared with balsamic juice.

1. Myrospermum Peruiferum. [Myroxylon Peruiferum, Willd.] The Quinquino; the species which yields the balsam of Peru, called also black or liquid halsam of Pern.
[2. Myrospermum Pereira. Myrospermum of Sonsonate. A tree of Central America which furnishes a balsam believed to be the "Balsam of Peru."]
2. Myrospermum Toluiferum. The Balsam of Tolu tree; the species which yields the balsam of that name.
 with). Emulsion of black mustard sceds; a peculiar substance which derives its name from its yielding, with myronic acid, the volatile oil of mustard.

MYROXOCARPINE. A new chemical principle obtained from the white Balsam, a species of Myrospermum. It appears to be a very indifferent crystallizahle resin, in some respects resembling santonine.
MYROXYLIC ACID ( $\mu$ úpov, odorous oil; 乡ن̉ Cov, wood). A substance procured from Perrvian Balsam, the product of the Myroxylon Peruiferum.
[MYROXYLON. See Myrospermum Peruiferam.
MYRRHA ( $\mu$ úpov, an ointment). Myrrh; an exudation from the bark of the Protium Kataf. It is also called stacte; from $\sigma \tau \dot{\zeta} \zeta$, to distil.
MYRRHIC ACID (myrrha, myrrh). An acid obtained by the action of heat on the resin of myrrh.

MYRTACEA. The Myrtle tribe of Dicotyledonous plants. Trees or shrubs with leaves opposite, entire, and marked with transparent dots; flower's polypetalous; stamens perigynous; carpella concrete; inferior ovarium, with several cells.
Myrtus pimenta. The Pimenta, or Allspice tree; a native of South America; where it is called Pumalee (in the Maypure language); and of the West India islands; hence the fruit is also called $J a$ maica pepper.

MYRTIFORM. The name of the carunculde which remain after the laceration. of the hymen, from their supposed resemblance to the myrtle.

MYRTLE-WAX. A wax procured from the herries of the Myrica ccrifera, a native of the United States.
N. This letter, in prescriptions, denotes numero, in number. [The symbol for Nitrogen.]
[NABALUS. A genus of plants of the natural order Asterncero.
[Nabalus albus. White lettuce; Rattlesnake root; Rattlesnake's master ; Lion's foot. An indigenous species, which, like many of its congeners, laas had a reputation as an antidote to snake-bites; and its root has also been used in dysentery.]
[NABOTIII GLANDULE. Mucous follicles in the duplicatures of the mucous membrane of the cervix uteri.]
[NACREOUS. Reflecting irridescent light, like pearl.]

NAVUS. Congenitce notor. Envies. Macule materno, or mother-spots; congenital spots and discolonrations of the skin; tho second genus of the Order Maculce, of Dateman. These marks are vulgarly ascribed to tho influence of the imagination of the mother upon the child in utero; hence, we have the-
N. araueus, the spider-like stain.
N. foliaceous, the leaf-liko stain.
N. ccrasus, the cherry stain.
N. fragarius, the strawberry stain.
N. morts, the mulberry stain.
N. ribes, the currant stain.
N. rubus, the blackherry stain.

To these may bo added the clarct, or port winc stain, supposed to be represented by the flat and purple novus, or the navus flammens of Plenck; and those resembling a slice of bacon, or other flesh. See Spilus.

## Vascular Ňavi.

1. The Arterial, consisting in numerous enlarged cutaneous arteries, as is seen in the nævus araneus.
2. The Capillary, consisting in dilated capillary vessels, the points of dilatation being frequently manifest on the surface.
3. The Sub-cutaneous, so denominated by Dr. Wardrop, and probably identical with the preceding species, when seated more deeply and unattended by discolouration. It may involve the subjacent textures, and is then called the complicated nævus.
4. The Venous, or varicose. This is sub-cutaneous; and when the veins are large, the sensation which it imparts to the finger, is precisely that conveyed by varicoccle.
5. The Increscens. This must be distinguished from the stationary næ vus, because, as Celsus observes-" quadam remedia increscentibus, morbis, plura jam incliantibus, conveniunt."

NAILS. Ungues. Horny laminæ oovering the backs of the extremities of the fingers and toes. A nail is divided into a root, a body, and a free extremity.

NANCEIC ACID. An acid procured from sour rice, and other acescent vegetahle substances, and named by Braconnot in honour of the town of Nanoy, where he resides.

NANKEEN DYE, A dye mado by boiling arnotto and carbonate of Potash in water, about an ounce of each to a pint of water.
[NANUS. A dwarf.]
NAPHTIIA. A native liquid bitumen, occurring in springs on the shores of the Caspian Sea; and procurcd also by distillation from petrolcum. Naphthene and naphthol are liquid bitumens of similar nature.

NAPHTHALASE. A ycllow crystalline solid, produced by gently heating nitronaphtalaso with lime. It gives to oil of vitriol a magnificent blue colour.

NAPHTHALIC ACID. Phtalic Acid. An acid formed by the action of nitric acid on chloride of naphthalinc.

NAPHTHALIDAN. An important base, formed by tho action of sulphuretted
hydrogen, aided by ammonia, on an alcoholic solution of nitronaphtalasc.

NAPIITHALINE. A compound obtnined by distillation from coal-tar; said to he a sesquicarburet of hydrogen. [Recommended hy Dupasquicr as an expectorant in chronic catarrb of old people, attended with difficult expectoration.]

NAPHTHEINE. A substance analogous to asphaltum, found in the lime-stones of the Mainc et Loire.

NAPIFORM (uapus, a turnip; forma, likeness). A term applied to one of the textures of cancer, the bunioïd of Bayle; and to certain roots (or stems) which present the form of a depressed spbere, like that of the turnip.

NAPLES YELLOW. A colour prepared by calcining lead with antimony aad potash.

NARCEIN (vápкך, stupor). A $\pi c a k$ base existing in opium in a very small proportion.
[NARCISSUS PSEUDO-NARCISSUS. Daffodil. A well-known plant, the bulh of which is emetic, and the flowers, it is said, are emetic and antispasmodic.

NARCOGENINE ( $\mu \dot{\rho} \rho \kappa \eta$, stnpor: yivo$\mu a c$, to become). A basic compound, formed by the oxidation of narcotine.
[NARCOSIS FOLLICULORUM. A state of the scalp depending, according to Mr. Erasmus Wilson, on chronic inflammation of the hair-follicles, and in which the scalp and hairs are covered rith a yellowish and dirty-looking powder, composed of an admixture of granular particles and furfuraceous scales.]

NARCOTIC SALT. Sal Sedativum Hombergi. Boracio acid.

NARCOTICS (vápky, stupor). Hypnotics. Medicines which induce sleep or stupor, as opiates.
NARCOTINA (vápкך, stupor). A crystalline substance derived from opium, formerly called salt of Derosne.

NARCOTINIC ACID. A compound formed hy heating narcotine with potash.

NARCOTISM (v ${ }^{2} \rho \kappa \pi$, stupor). [Narcosis.] A state of unnatural sleep, induced by the effect of narcotic substances.
[NARCOTIZED. In a state of narcotism.
[NARD. Spikenard. Several aromatio roots werc known to the ancients under the name of Nardus. They are supposed to have been derived from different species of Valeriann.]

NARDOSTACHYS JATAMANST. An Indian plant of the order Valerianacea, the root of which appears to be the epikenard of the ancients.

NARIS. Cava naris. The nostril, the hole of the nasus, or nose.
[NARTHEX. A genus of plants of the natural order Umbelliferæ.]
[Jarthex Assafotida. (Ferula Assafcetida, Willd.) A species, indigenous to Persia and adjoining countries, whicb furnishes the officinal Assafœtida.]
[NASAL (nasus, the nose). Relating or helonging to the nose. See Ncesur.]

NASCENT S'TATE (nascor, to be born). A term applied to the state of gases, at the moment of their generation, before tbey bave acquired the repulsive power.
[NASTURTIUM OFFICINALE. Wa-ter-cress. A cruciferous plant, eaten as a salad, and esteemed uscful in scurvy and visceral ohstruction. The N. palustre and N. amphibium possess the same virtues as tbe N. officinale.]

NASUS. The nose, or orgau of smell ; the exterial part of the nose.

1: Naral fosse. Two irregular, compressed cavities, extending backwards from the nose to the pharynx, and constitnting the internal part of tbe nose.
2. Nasal duct. A sbort canal leading from the lacrymal sae to the inferior meatus of the nose.
3. Ale nasi. The two movable sides, or vings, of the nose.
[NA'TANS (nato, to swim). Swimming. Applied in hotany to the leaves of aquatic plants which foat on the water.]
[NATATION (nato, to swim). The ret of swimming, or of floating and moving in the water by the action of the muscles of locomotion.]

NATES. Tbe buttocks. Tbe name of the upper pair of tbe tubercula quadrigemina of tbe brain; tbe lower pair is called the testes.

NATRIUM. A term formerly used to designate sodiun.

NATRON. Native carbonate of soda. It is found in mineral seams or crusts, and is bence ealled the mineral alkali.

NATRON VITRIOLATUM. Glauber's salt, or sulphate of soda. Natron carbonicum is the bi-earbonate of soda, or the sesquicarbonas of tbe London Pharmaeopœin.

NAUCLEA GAMBIR. The plant which yields an extraet ealled gambir. Dr. Pereira considers this gambir not to form any of the kinos of the shops, but to he one of the substanees called catcchu in commerce. See Kïn。

NAUCUM. An old Latin term applicd by hotanists to the extcrior coat of tho drupe; it is soft and neshy, and ecparable from the intcrior, hard, and bony cont, which is called the cudocarpium, or stone.

Gartner applied the term nanca to sceds which bave a very large hilum, as that of the horse-cbestnut.

NAUSEA (sca-sickness; from vaüs, a ship). Sickness of the stomach; loatbing; tendency to reject, but without regurgitation.
[Nauseants. Medicines which exeite nausen.]
[NAVEL-WORT. Common name for Cotyledon unbilicus.]
[NAVICULAR. Naviform (navicula, a little ship). Boat-sbaped. Scaphiform, Scaphoid.]

NAVICULARE OS (navicula, dim. of novis, a boat). A hoat-shaped hono of the carpus, and of the tarsus. The term navicular is applied in botany to tbe glumes of grasses, owing to their hoatshaped appcarance. It significs tbe same as the term carinated, or keeled. See Keel.
[NEATS-FOOT OIL. The oil prepared from the hones of the Bos domesticus. It bas reeently been recommended as a substitute for cod-liver oil.]
[NEBUEL, or NEBUED. The name given hy the natives to the tree which furnishes the red gum Senegal.]

Nebula. A cloud. Haziness, or dulness: a slight form of opacity.
 blood). Death heginning with the blood. A term given by Dr. C. J. B. Willians to those fatal cases, in whieb the first and most remarkable ehange is exhibited in the bloorl.]
[NECROPHOBIA (vธxpos, death ; фоßos, fear). An exaggerated fear of death, a common symptom of bypochondriasis.]
[NECROPSIA (veкpos, death ; їптоиае, to see). Necropsy, Necroscopia. An examination of the body after death.]
 $\pi \dot{\epsilon} \omega$, to examine). Relating to post-mortem examination. or autopsia.

NECRO'SIS (veкрб 6 , to mortify). Literally, mortification; it is confined to that affection of the bones, nnd is the consequence either of an unfavourable termination of inflammation of the bone in a bad constitution, or of its vascular supply being eut off by tho destruction of its periosteum or medullary membrane. It is termed-

1. Simple; when it is confined to ono bone, the patient being in other respects bealthy.
2. Componnd; when several parts of the samo honc, or several distinct bones, nro affected at tho same time; when the henlth is bond, de.
3. Necrosie ustilaginca. The name given
by Snuvages to that speoies of mortification which arises from the uso of grain infected by "ustilngo," or blight.
[NECTANDRA. A genus of plants of the natural order Lauraceæ.]
[1. Nectandra cimamomoides. Santa Fé Cinnamon. The hark of this specics has the smell and flavour of cinnamon, and is employed as a suhstitute for it in some parts of South America.]
[2. Nectandra cymbarum. Orinoko Sassafras. The bark of this specices is hitter, aromatic, and stomachic.]
[3. Nectandra puchury. A South American species supposed to furnish the "Pichurim Bcans."
[4. Nectandra Rodiei. A spccies growing in British Guiana, helieved to afford the Beheeru Bark, from which is obtained the alkaloid heheerin, much extolled lately as a substitute for quinia.]

NECTARY. That part of a flower which secretes nectar, or honey. The term has heen vaguely applied to several parts which have no such function.

NEEDHAMIANA CORPORA. A term applied to the spermatozoa, or organized animals, found in the seminal reservoirs of the loligo, as obscrved hy Needbam.

NEGRO CACHEXY. Mal d'eatomac of the French. A propensity for eating dirt, peculiar to the natives of the West Indies and Africa, and probahly similar to chlorosis.
[NEOPLASTY (yeos, new ; $\pi \lambda a \sigma \sigma \omega$, to form). The reparation of parts by granulations, adhesions, or autoplastic processes. -Burdach.]

NEPENTIIES ( $\nu \grave{\eta}$, neg.; $\pi \varepsilon v \theta o s$, grief). The ancient name of a drug, probahly opium, mentioned in Homer. Hence tho old pharmacopocia termed the common opiate pills ncpouthes opiatrm.
[NEPETA CATARIA. Catnip. Cataria. Ph. U.S. A Labiate plant, an infusion of which is used iu domestic practice, in amenorrhœe, infantilo colic, hysterin. \&c.]
[NEPHRODIUM FIKIX MAS (Richard). Polyporlium filix mas (Linn). Aspidinm filir mus (Schwartz). Sec this last.]
[NEPHROID (vrфpos. a kidncy; cisos. likeness). Renifurm. Resembling a kidney.]

NEPHROS (reppos). Ren. A kidney; the scereting organ of the urino.

1. Nephr-algia (üdyos, pain). Pain of the kidneys, from calculus, or gravel.
2. Nephr-itic. Belongiag to the kidney; a medicine which acts on the kidncy.
3. Nephr-itia. Inflammation or other discase of tho kidney.
4. Ncphro-logy ( $\lambda 6$ yos, an account). An account or description of the kidneys.
5. Nephro-tomy (тощウ̀, section). The operation of cutting a stone out of the kidney.

NERA, or TODDY. A saccharine juice, ohtained in large quantities by wounding the spadices of the Sagnerus saccharifer, or Gomuto Palm, and receiving the liqnor in earthenware pots or hamboos. See Jaggary.
NEROLI OIL. Oleum Aurantii. Oil procurcd from the flowers of the Citrus Aurantinm, or sweet orange.

NERVES (nervus, a string). White cords arising from the brain or the spinal marrow, and distributed to every part of the system.

## I. Cerebral Nerves.

1. First pair, or olfactory nerves, expanding on the membrane of the nose.
2. Second pair, or optic nerves, terminating at the middle of the retina.
3. Third pair, or oculo-motory nerres, distrihuted to the muscles of the eye.
4. Fourth pair, or nervi pathetici sen trochleares, distrihuted to the superior ohlique muscle of the eye.
5. Fifth pair, trigemini, or trifacial ncrves, the grand sensitive nerves of the head and face. It includes-
6. The large, ganglionic, or trifucial portion, the sentient and organic nerve of the face ; and-
7. The small, aganglionic, or masticatory portion, the motor nerve of the temporal, masseter, \&c.
8. Sixth pair, or abducens, distribnted to the exteranl rectus of the eye.
9. Screnth pair, consisting of the portio dura, facial, or the respiratory of the face, of Bell; and the portio mollis, or auditory.
10. Eighth pair, or grand respiratory nerve, consisting of -
11. The glosso-pharyngcal, penetrating into the hack of the tongue;
12. Tho puenmo-gastric, nerri ragi, par vagum, or middle sympathetic; and-
13. Tho spinal acces8rry, nerrus ad par vagum accessorins, or superior respiratory of the trunk, of Bell.
14. Finth pair, sublingual, or hypoglossal, terininatiug in the tongnc.
II. Spinel Norres.
15. Cervical nerees. Eight pairs; the first passiug hetween the occipital bone and atlas, and termed sub-occipital, or tenth nerve of the head; the last passing hetween the seventh cervical vertehra and the first dorsal.
16. Dorsal nerves. Trelvo pairs; the first issuing between the first two dorsal vertcbra, the last betwcen the twelfth dorsal and the first lumbar vertehra.
17. Lumbar nerves. Five pairs; the first issuing between the first two vertehra of the loins, the last between the last vertebra aud the sacrum.
18. Sacral nerves. - Generally six pairs; the first issuing hy the upper sacral boles, the last by the notches at the upper part of the coccyx.
III. Rcspiratory Ncrves, arising from the Medulla Oblongata.
19. The fourth pair, or pathetici.
20. The portio dura of the seventh.
21. The glos8o-pharyngeal nerve.
22. The par vagrm, and accessorius.
23. The phrenic nerve.
24. The eaternal respiratory.
25. The fifth, and certaiu spinal nerres, with the par vagum, should be distinguished as exciters of respiration, the rest being motors.-Dr. M. Hall.
IV. Sympathetic Nerve.

A collection of ganglia and branches connected with the sixth nerve, the Vidian portion of the fifth, the portio dura, the eighth, ninth, and all the spinal nerves. It is, in fact, a collection of branches from almost every nerve in the frame, which join it at the adjacent ganglia.

NERVINE (nervimus; from nervus, a nerve). Neurotic; that which relieves disorders of the nerves, as antispasmodics, \&c.
[NERVOUS. Belonging or relating to the nerves; strong, vigorous; excessive irritahility or mobility of the nervous system.]
[1. Nervons centres. The parts from which the nerves originate, the hrain, spinal marrow, and ganglions.]
[2. Nervous fluid. A fluid supposed to circulate in the nerves, and helieved to be the agent of sensation and motion.]
3. Nervous Quinqy. A name given by Dr. Heherden to tho globus hystericus of Dr. Darwin and other writers.
[4. Nervous system. The nerves of the body considered collectively.]
5. Nervons Texture. Nerrinc. One of the ehicf component textures of organic hodies. It exhibits two forms : the vesicular nervous matter, which is grey or cineritious in colour, and granular in texture, and contains nucleated nervo-vesicles; and tho fibrous. nervous matter, which is white and tuhular, though in somo parts its colour is gray and its fibres solid. When hoth these kinds of nervous matter are united into a variable-shaped body,
this Is termed a nervous centre; and the thrcads of fihrous matter which pass to and from it are termed nerves. See Intermuncirtl.

NESTS. Edible Birds' nests. The nests of a spccies of swallow inbahiting the Indian Archipelago. They are formed of a mucous slime secreted in tho stomach of the hird, and ejected for the purposo of aiding in the construction of the nest. They are uscd for thickening soup.
[NETTLE. Urtica Dioica.]
NETTLE-RASF. Elevations of the cuticle, or wheals resembling the sting of the nettle. See Urticaria.

NEURAL ARCH (veṽov, a nerve). That arch of the vertebra which is placed above the "centrum," for the protection of a portion of the nervous axis. See Hocmal Arch.

NEURAL AXIS. Cerebro-spinal axis. The central column of the nervous system, comprising the cerehrum and the spinal cord.

NEURAPOPHYSIS ( $\nu E \check{v} \rho \circ v$, a nerve; ḋóфvors, an apophysis). The name applicd hy Professor Owen to the autogenous element on each side of the "neural arch" of the vertchra. See Vertebra.

NEURINE (veũpov, a nerve). Another name for nervous matter. See Nervous Texture.
NEURON (vẽ̃pov). A nerve; a cord arising from the brain or spinal marrow.

1. Neur-alyia (ä丸yos, pain). Nerveache, or pain in a nerve. It occurs in nerves of the face, and is then called face ague, tic cloulourenx, \&c.
2. Neuri-lemma ( $\lambda \not \mu \mu a, \pi$ coat). The sheath of a nerve.
3. Neuro-logy ( $\lambda$ óros, a description). The doctrine of the nerves.
[4. Neuromn, Neuromation. A powerful tumour on a nerve. Odier has given the terin Neuroma, to movable, circumscribed, and very painful tumours, caused, according to him, hy the swelling of a nerve. Craigie gives the epithet neuromation to those pisiform painful tumours or hard tubercles which form beneath the skin, and which are scated in the subeutaneous nervolls twigs. These are termed paiuful subcutaneous tubercle by Wood.]
[5. Nenromalncia ( $\mu a \lambda a x t a$, softening). A softening of the nerves.]
[6. Neuro-plasty ( $\pi \lambda a \sigma \sigma \omega$, to form). A teru given by Serres to a ganglionary transformation of the ramifications of tho nerves of life, of relation, and of organic lifc.]
4. Nearo-ptera (пrepòv, a wing). Netwinged insects, as tho dragon-fy, ant-lion,
5. Neurobes. Nervous diseases. A class of diseases of Cullen.
6. Neuro-sthenia (o0ivos, force). An excess of nervous irritation; an inflammatory affection of the nerres.
7. Ncuro-tica. Medicines which produce a specific influence on the nervous system. A term synonymous with nervincs.
8. Neuro-tomy (rодi, section). Dissection of the nerves.
9. Neur-ypno-logy ( $\ddot{i}$ vos, sleep; $\lambda$ бros, a description). An account of nervons sleep, considered in relation to animal magnetism.

NEUROSES (veṽoov, a nerve), Nervous diseases, in which sense and motion are impaired, without idiopathic pyrexia, or any local disease; the second class of diseases in Cullen's nosology, comprising the orders comata, adynamio, spasmi, and vesaniæ.
[NEUTRAL MIXTURE. Liquor Potassæ Citratis. Ph. U. S. This is best prepared by saturating fresh lemon jnice with hicarhonate of potassa, and filtering. It is a valuable diaphoretic. The dose is from $3^{\mathrm{ij} . \text { to }} \overline{\mathrm{S}}$ ss.]

NEUTRAL OINTMENT. Compound ointment of lead, applied by Mr. Higginbottom as a defence for nleers after the application of nitrate of silver.

NEUTRAL SALTS. Salts in which the hase is perfectly saturated with the alkali, thus possessing the character neither of acid nor alkaline salts.

NEUTRALIZATION. A term denoting the loss of characteristic properties, which frequently attends chemieal combiration. It is exemplified when an acid and alkali are combined in such proportions that the compound does not change tl e colour of litmus or violets. The compound is called neutral, and one ingredient is said to be neutralizcd or saturated by the other. See Sal.

NICARAGUA WOOD. Peach roood. A tree of the same genus (Cosalpinia) as the Brazil wood; it grows near tho lake of Nicaragua. It is used as a dye.

NICKEL. A scarce white metal, occurring in combination with other metals. It is cmployed in potteries, and in the manufacture of porcclain.
[1. Sulphate of Nickel. This salt is snid by Prof. Simpson to be a gentle tonic, and to have been given by him with great bencfit in ohstinate periodic headache. The dose is from half a grain to a grain, three times a day.]
2. Cupjer-mickel. False copper; a name given by tho German miners to the arecnical ore of nickel, after their vain attempts to extract copper from it.
3. Speis8. An artificial arseniuret.

NICOTIANA. A genus of plants, of which the species tabacum yields the Virginian, Havana, and pigtail tobaccos of the shops; the rustica, the Syrian and Turkish tobaccos; and the persica, the fragrant tobacco of Shiraz. The term Nicatiana is derived from the name of Joan Nicot, who sent the seeds or the plant to France about the year 1560.

1. [Nicotia, Nicolina,] Nicotine. An organic base existing in the leaves, root, and seeds of different species of Nicotiana.
2. Nicotianin. Concrete volatile oil of tobaceo, or tolacco-camphor, ohtained by suhmitting tobacco leaves with water, to distillation.

NICTITATIO (nictito, to wink). [Nictitation.] Twinkling of the eyelids; winking. It occurs as a symptom in amaurosis, generally accompanying a convulsive state of the iris. See Membrana nictitans.
[NIGELLA SATIVA. Nutmeg-flover. Small fenncl-flower.' A Ranunculaceous plant, native of south of Europe and Syria, and formerly used in medicine.]
[Nigellin. A pecnliar hitter principle ohtained from Nigclla Sativa.]
[NIGHTBLINDNESS. See Hemeralopia.]
NIGHTMARE. See Incubus.
[NIGHTSHADE, AMERICAN. Phytolacca decandria.]
[NIGHTSHADE, DEADLY. Atropa Belladonna.]
[NIGHTSHADE, PALESTINE. Solanum sanctum.]
[NIGHTSHADE, WOODY. Solanam dielcamara.]

NIGRITIES (niger, black). Blackness; thus, $a$ caries is called nigritice ossium, or a hlackness of the hone.

NIHIL ALBUM. Literally, white nothing; a former name of the flowers of white oxide of zine; lana philosophica, or philosophienl rool, is a scareely less curious designation.
[NIMA. A genus of plants of the natural order Simarubacer.
[Nima quas8ioides. A bitter tonic, and used as sueh in the north of India.]
[NINE DAY FITS. A rulgar name for Trismus nascontium.]
NIOBIUM. A new metal discorered in the Bavarian tantalite. Rose has given it the name ahove stated, after Niobc, the daughter of Tantalus, to show the ana$\log y$ of tho metal to Tantalium. Sce Pclopium.

NIPPLE. Papilla. The prominent part of the integunent in tho centre of tho areola of the mamma.

NIRLES. The popular appellation of the hevpes phlyctaiodes, or miliary herpes of Batetran.

NISUS FORMATIVUS. Literally, a formative effort; a principle similar to gravitation, applied by Blumenbach to organized matter, by which each organ is endowed, as soon as it acquires structure, with a vita propria.

NITRARIA, ARTTFICIAL. Saltpetre plantations. Name given to those places in which nitre is artificially produced.

NITRAS. A nitrate; a onmpound of nitric acid with a salifiahle base.

1. Nitras potassa. The salt known hy the name of nitre, or saltpetre.
2. Nitras soda. Formerly called cubic or quadrangular nitre.
3. Nitras calcis. Formerly called calcareous nitre. The ignited nigrate of lime is called Baldvin's phosphorus.
4. Nitras ammonice. Formerly called nitrum flammans, from its property of exploding at the temperature of $600^{\circ}$.
5. Nitras magnesia. Also called magnesian nitre; it comhines with the preceding salt, and forms a triple salt, called the ammoniaco-magnesien nitrate.
6. Nitras argenti. Fused nitrate of silver, or lunar canstic.

NITRATION. The hypothetical nitrateradical of hydrated nitric acid, or aqua fortis, which hecomes the mitrationide of hydrogen instead of the nitrate of water. So the nitrate of potash becomes the nitrationide of potassium, and so of all other nitrates.

NITRE. Saltpetre. The common name of the nitrate of potash. When fused, and poured into moulds, it is called sal-prunella, or crystal mineral; when mixed with charcoal, and hurnt, the residuum was formerly called clyssus of nitre; mixed with carbonate of potash and sulphur, in a warm mortar, it forms the fulminating powder; mixed with sulphur and charcoal, it forms gmpoueder; and when mixed with sulphur and fine saw-dust, it constitutes the powder of fusion.

NITRIC ACID. A constituent of nitre or saltpetre. From its corrosive qualities, it is commonly called aqua fortis, [q. v.]

NITROBENZIDE. Nitrobenzole, Nitrobenznle. A heavy oil, formed when henzole is dissolved to saturation in fuming nitric acid, and water added to the hot solution.

NITROGEN (virpov, nitre ; $\gamma \varepsilon \nu \nu a ̉ \omega$, to produce; so called from its heing a genorator of nitre). Azotc. An elementary principle, constituting four-fiftls of tho volume of atuospheric air. It was for-
merly called mephitic air, and, by Pricstley, phlogisticated air.

1. Nitrous oxide. Formerly called by Priestly, who discovered it, dephlogisticated mitrous air; but moro properly protoxide of nitrogen. Its common aame is laughing gas.
2. Nitric oxide, or nitrous gas. Formerly called nitrous air; hut, more properly, deutoxide of nitrogen. When mixed with atmospherio air, nitrous acid vapours are produced, of a red or orange brown colour.
3. Nitrous acid. Formerly called fuming nitrous acid. An acid of uncertain constitution, termed hyponitrous hy Turner.
4. Peroxide of nitrogen. A compound forming the principal part of the nitrous acid vapours above mentioned; the nitrous acid of Turner, the hyponitric acid or nitrous gas of Berzelius.
5. Nitric acid. A constituent of nitre or saltpetre, and existing only in combination. It is called aqua fortis, Glauber's spirit of nitre, \&c.
6. Nitro-saccharic acid. An acid procured from the sugar of gelatine and nitric acid, hy heat.
7. Nitro-lencic acid. An acid formed by treating lucine with nitric acid.
8. Nitro-muriatic acid. A compound acid formed by the union of the nitric and muriatic acids ; it is generally known hy the name of aqua regia, from its property of dissolving gold.
9. Nitro-naphthalase, Three new pro-
10. Nitro-naphthalese, $\}$ ducts obtained
11. Nitro-naphthalisc. $\int$ by the action of nitric acid on naphthaline, and named aecording to Laurent's plan of distinguishing compounds obtained successively from the same root by the vowels, $a, e, i, o, \& c$.
NITROGENIZED FOODS. Substances containing nitrogen, and supposed to he the only substances eapable of heing converted into blood, and of forining organic tissues; hence they have heen termed by Liebig the plastic elements of nutrition.

Non-nitrogenized foods. Substances which contain no nitrogen, and supposed to he incapable of forming organized or living tissues. Liehig states that their function is to promote tho process of respiration, and he therefore terms them clements of respiration.

NITRONAPITTIATE. A crystalline suhstance, formed by the long-continued action of nitric acid on naphthalinc. For the other componnds, see Nitrogen.

NITROPICRIC ACID. Carbazotio acid; nitrophenisic acid. Those aro syno-

Dymes of pierie acid, formed by the aetion of nitrie acid on various substances.

NITROSALICIC ACID. An acid formed by the action of nitric acid on hydruret of salicyl. It forms yellow prisms, and, with bases, yictds yellow detonating salts.
[NITROPRUSSIDES. A series of salts made by saturating nitroprussio aeid, generated by the action of nitrio acid on ferroeyanuret of potassium, with different basee.]
[NITROUS OXIDE WATER. Searles' Oxygenous aërated water. Water impregnated by pressure with five times its volume of nitrous oxide, said to possess tonic, resolvent, exhilarant, and diuretic properties.]

NITROUS POWDER. A comhination of nitrate of potash with tartar emetic and calomel.

NITRUM FLAMMANS. A name given to nitrate of ammonia, from its property of exploding, and heing totally decomposed, at the temperature of $600^{\circ}$.

NITRUM PRISMATICUM. Prismatic nitre ; a designation of nitrate of potash, owing to its crystallizing in the form of a six-sided prism, with dihedral summits, which belongs to the "rigbt prismatie" system. See Crystals.
NITRUM SATURNINUM. Plumbum nitricum. Nitrate of lead.

NOCTAMBULATIO (nox, noctis, nigbt; ambulo, to walk). Sleep-walking; literally, night-walking.
[NOCTURNAL EMISSION. Spermatorrhoea.]

NODE (nodus, a knot). A swelling of a bone, or a thickening of the periosteum, from a venereal cause. In botany, the term node signifies the tbickened part of a stem or branch from which a leaf is developed. The space between tro nodes is termed an internode.

NODOSITY (nodus, a node). A caleareous concretion found in joints, in gout or articular rbeumatism.

NODULE (dim. of nodus, a node). A little node; a small woody body found iu the bark of the beech, and some otber trees, and formed of concentric layers of wood arranged around a central nucleus. Dutrochet terms it an embryo-bud.

NODUS CEREBRI. A designation of the pons Varolii, or tuber annulare of the brail.

NOLI ME TANGERE (toweh me not). A name given hy various writers to lupus, the seventh gemens of the Tuberenla of Bateuan. It is the cancer lupus of Sanvages, and the dartre rongeante of tho French writers. Tho disenso is termed from its impatienee of handling, and its
being aggravated by most kinds of treatment. Sec Lupus.
NOMA (ropic, to eat). Water-eanker; a form of sphacelus oceurring generally in children, and also ealled stomacace gangrenosa seu maligna, necrosis infantilis, gangrenous aphther, \&c.
[NOMAD, NOMADIC (vour, pasturage). Roving, wandering ; a name given to people who have no fixed hahitation, but rove with their floeks from place to place.]

NOMENCLATURE. A general dekig. nation for the terms employed in any art or seience.
[NON-NATURALS. The ancient pbysieians comprchended under this term, air, meat and drink, sleep and watcbing, motion and rest, the retentions and exeretions, and the affections of the mind; or, in other words, those principal matters which do not enter into the composition of the body, hut at the same time are necessary to its existenee.]

NOOTH'S APPARATUS. An apparatus invented by Nooth for the purpose of making a solution of earbonie acid gas.
NORDHAUSEN SULPHURIC ACID. This is the fuming or Saxony sulphuric acid, as prepared at Nordbausen. It is usually a dark hrown oily liquid, interme. diate hetween the anhydrous and the monohydrated acid, and gires out copious white fumes in the air.

NORMAL (norma, a rnle). That which is regular; that in whicb there is no deviation from the ordinary structure. See Abnormal.

NOSE. Nasus. Tbe organ of smell. It is composed, superiorly, of hones, and inferiorly of cartilages ; and it is lined hy a mucous membrane, termed the nembrana pituitaria, or Schnciderean membrane; the two movable sides are called alce nasi, or the wings of the nose.
[NOSOCOMIAL (nosncomium, a bospital). Relating to a hospital. Nosocomial practice, i. e., hospital practice.]
NOSOCOMIUM (vóros, disease; sopíu, to take carc of). A hospital ; a place where discuses are treated.

NOSOGRAPIY (rócos, disease ; roáce, to deseribe in writing). A description or treatise of diseases.

NOSOLOGY (vócos, disease ; $\lambda$ byos, description). An arrangement of diseases aecording to their elusses, orders, genera, and speeies.

NOSTALGTA (vóoros. a retırn: àdyos, pain). Honte-sickuess; a vehement lesire to return to onc's country. Nostomania is the samo morbid desire aggravated to madness. Nostraraia is a similar term, derived from nostras, of our country.

NOSTRUM. Literally, our oven ; a terus applied to a quack medicine, and indicative of exclusireness.
[NOTENCEPHALUS ( $\nu \omega$ tos, tho back; iेरiqundos, the hrain). An epithct hestowed hy G. St. Hilare on monsters who have their hoad with the hrain on their hack.]
[NOTHUS (NoOos, spurious). Spurious, Bastard.]

NOTOCHORD (עल̃таs, the hack; Xopסך, a chord; Chorda vocalis). A term applied to the fibro-cellulo-gelatinous column, constituting the central hasis of the neuroskeleton in the embryo of every vertehrate animal. See Skeleton.
[NOUFFER'S VERMIFUGE. Three drachms of the root of the male fern, reduced to a fine powder, and mixed with water: this constitutes one dose. Two hours after taking the powder, a holus of calomel, scammony, and gamhoge is to be administered.]

NOVARGENT. A substance used for re-silvering plated articles, and prepared hy moistening chalk with a solution of oxide of silver in a solution of cyanide of potassium.

NOYAUX (noyau, the stone of a fruit). A liqueur made from hitter almonds.

NUCHA. Cervix. The hind part or nape of the neck.
[ N U CLEATED (nucleus, a kernel). Having a nucleus. Applied to the elementary cell which is furnished with one or more cytohlasts or nuclei. See Cytoblast.]

N UCLEUS. The kernel of a nut. The solid centre around which the particles of a erystal arc aggregated. This term is applicd to the centre of the red partieles of the hlood, and also to the pulp of the teeth.

1. Nucleus cicatriculce. A granular mass situated heneath the germinal disk in the hen's egg, also called cumulus proligerus, or nucleus of the germinal disk.
2. Nucleus germinativus. The germinal spot found in the germinal vesicle of the orum. It is synonymous with macula germinativa.
3. Nucleus, in plants. A pulpy, conical mass, constituting the central part of the ovulum.

N UCULA (dim. of nux, a nut). A term applicd hy Desvaux to the fruit of the oak, the hazcl, \&c. It is commonly
called glrams.

NUCULANIUM. A superior, indehis. cent, fleshy fruit, containing two or more cells, and several secds, as the grape. By Desvaux it was called breca; from which it differe, however, in being superior.

NUMBER. A term applied in Pbrenology to an organ which has heen described under the term Calculation.
NUMBNESS. Insensibility of touch, or gencral feeling.

NUMMULARY (nummus, moncy). A term applied to the sputa in phthisis, when they flatten at the hottom of the vessel like a piece of money.

NUT. A dry, hony, indehiscent, onecelled fruit, proceeding from a pistil of three cells, and inclosed in a cupule, as the hazel, acorn, ic.

NUTANS (muto, to bend). Nodding; inclining from the perpendicular with the npper extremity pointing downward.

NUTGALL. An excrescence of the hark of the Quercus infcctoria, or the Gall or Dyers' Oak, caused by the puncture of a hymenopterous insect, of the tribe called Gallicolce. The egg is deposited and hatched inside the gall, the young insect undergoes its transformations, and, in its imago state, perforates the gall and escapes. The galls from which the insect has escaped, are called white galls, from their lighter colour; those gathered hefore the insect has escaped are called black or blue, and green galls.
NUTMEG. The seed of the Myristica Officinalis, [Myristica moschata, Willd.] or Nutmeg tree. The common nutmeg of commerce was formorly called the $f e-$ mule nutineg; a longer kind of nutineg, imported in the shell, being called the male nutmeg.
[NUTMEG-FLOWER. Nigella Sativa.

NUTRITION (nutrio, to nourish). The process of nourishing the frame.
[NUTRITIVE CENTRE. A cell, the nucleus of which is the pcrmanent source of successive broods of young cells, which, from time to time fill the cavity of their parent, and carrying with them the cell-wall of the parent, pass off, in certain directions, and under certain forms, according to the texture or organ of which their parent forms a part. Goodsir.]
NUX. A nut; a term applied hy some botanists to the fruit of the borago, the lithospermum, \&c. It is more generally called achanium.
Nux baccata. A term sometimes applicd to the fruit of the taxus, \&c. Desvaux calls it sphalerocarpum.
[NUX MOSCHATA. Nutmeg. The kernels of the fruit of the Myristica moschata.]

NUX VOMICA. The common term for the zeeds of the Stryehnos nux vomica.

The plant yields a poisonous principle called strychnia.

Nux romica bark. This has been dctermined to be identieal with fulse Angustura, and is sold at Calcutta under the name of rohim.

NYCTALOPIA (vข̀ , vuктdे, night; ひ̈廿, the cye). Visus nocturnus. Night-eye, or day-blinducss, vulgarly ealled owl-sight; an affection of the sight, in which the patient is blind in the day, but sees very well at night. It is sometimes called nightblindness. The term bas been confounded with hemeralopia; the following distinction is given by Dr. Forbes:-

1. Nyctalopia. Vision lost or obscure by day, comparatively good at night-night-sight, day-hlindness.
2. Hemeralopia. Vision lost or obscure by night, good, or comparatively good, by day - day-sight, night-blindness, benblindness.
NYMPH (Núpфai, Nymphs). Labia minora. Two semi-circular glandular membranes, situated within the lahia ma-
jora of the pudendum ; so called because they dircet the course of the urinc, and preside over its enissiou, as the Nymphe do over fountains.
3. Nynyho-mauia ( $\mu a v i a$, madness). Lascivious madness in females; in males it is tho satyriasis furens of Cullen.
4. Nympho-tomia (roùn, section). The operation of removing the nymphr.
[NYMPII EA. A genus of plants of the natural order Nymphæaceæ.]
[1. Nymphea alba. White water-lilly. A European epecies, the root of which was, hy tho ancients, considcred aphrodisinc.]
[2. Nymphaca odorata. Srect-scented water-lilly. An indigenous plant, the root of which is very astringent, and has heen used in the form of poultice as a discutient application.
 to be sleepy). A term applied by Plenck to denote hahitual squinting. It occurs in amaurosis, as an involuntary pendulumlike rolling of the eyehall.

OAK-APPLE. A well-known gall, of spongy texture, produced on the Quercus pedunculata. See Nutgall.

OAK-BARK. The bark of the Quercus pedunculata, or common British Oak ; employed for its astringent properties, which are similar to those of other vegetahle products containing tannic acid.

OAK-GALL. Gall-mut. - An excrescence found on the Quercus infectoria, or Gall, or Dyers' oak, a native of Asia Minor. See Galla.

OAT-MEAL. Farena cx avence seminibus. A meal prepared by grinding the grains (caryopsides) of the Avena sativa, or Common Oat.

0ATS. Semina avence cruda. The grains (earyopsides) of the Avena sativa, or Common Oat. When deprived of their integuments, they are called groats, or grutum; and these, when crushed, aro termed Embden groats. By grinding the oat, a farina is obtained, called outmeal; and, by boiling an ounce of this, with three quarts of water, to a quart, vouter grucl is prepared.

OB. A Latin preposition, employed in some botanical terins, and denoting inversion; thus, olovate means inversely ovato; obeordate, inversely cordate; ob-
conical, inversely conical. Hence it is evident that this prefix must be restricted to terms which indicate that the apper and lower parts of a hody are of a different width.

OBESITY (obesus, corpulent; from ob and cdo, to eat). Fatness, corpulency; an excessive development of fat in the hody; it is synonymous with polysarcia. There are two varicties, viz.:

1. General obesity, extending over the hody and limbs; a kind of dropsy of auimal oil, instead of a dropsy of water.
2. Splanchmic obcsity, confined to the organs. It most generally overloads the omentum, and gives that rotundity to the abdomen which is rulgarly called pot-belly, and described, in the person of Falstaff, as "a huge hill of flesh,"-"a globe of sinful continents."

OBLIQUUS. Oblique or slanting; not direct, perpendicular, or parallel.

1. Obliquns catcruns. A musele of the abdomen, also enlled descendens, arising from the eight lowest ribs, and inserted into tho linea alba and the pubes.
2. Obliquus internus. A nuscle situated withint the preceding, also called arcendens or nuinor, arising from the spine of the iliuin, \&c., and inscrted into the cartilages
of the serenth and all the false rils, \&c. This, and the proceding muscle, turu the trunk upon its axis, \&c.
3. Obliquas inferior. A muscle which arises from the outer edge of the orbitar process of the upper jaw-bonc, and is iuserted into the sclerotica. It is also called brevissimus oculi, from being the shortest muscle of the eye. This and the following muscle are said to roll the eye, and have hence been named circumagentes; and, from the expression they impart, amatorii.
4. Obliquus superior. A muscle which arises from the optic foramen, passes through the ring of the cartilaginous pulley which is in the margin of the socket, and is inserted into the sclerotica. It is also called longissimus oculi, from heing the longest muscle of the eye; and trochlearis, from its passing through the trochlea or pulley.

OBLITERATION (oblitero, to efface). The closure of a canal or cavity of the body, hy adhesion of its parictes.

OBLIVION (obliviscor, to forget). Amnestia. Forgetfulness; failure of memory.
OBOMA'SUM. The fourth stomach of the Ruminantia. See Omasum.
OBSIDIANUM. A species of glass, discovered by one Ohsidius, in Ethiopia. Pliny says that Ohsidianum was a sort of colour with which vessels were glazed; and Lihavius applies the term to glass of antimony.

OBSTE'TRIC (obstetrix, a midwife). Belonging to midwifery. Pliny uses the term obstetricia, sc. officia, for the office of a midwife.

OBSTIPATIO (obstipo, to stop up). A form of costiveness, in which the fæces, when discharged, are hard, slender, and often scybalous; one of the epischeses of Cullen.

OBSTI'PUS (ob, and stipes, a stake). Stiff, awry. Hence the term capnt obstipum, for torticollis, or wry-neck.

OBSTRUENTS (obstruo, to shut up). Mcdicines which close the orifices of vessels, \&c.

OBTUNDENTS (obtundo, to make hlunt). Suhstances which sheathe, or blunt, irritation; a term applied by the bumoral pathologists to remedies which are supposed to soften the acrimony of the hninours.

OB'TURA'TOR (obturo, to stop up). The name of two muscles of the thigh, and of a nerve, [an artery, vein, foramen, and ligament]:-

1. Ooturator cxtermus; arising from the obturator foramen, \&c., and inserted in to
the root of tho trochanter major. It is sometimes called rotator fenoris extrossmm.
2. Obfurator internus; arising and inserted as the externus, and formerly called marsupialis, or bursalis. This and the preceding muscle move the thigh hack. wards, and roll it upon its axis.
3. Nervus obturatorius. The obturator nerve, which comes principally from the second and third lumbar nerves, and sometimes from the fourth.
[4. Obturator artery. This arises most commonly from the bypogastric, but not unfrequently from the epigastric.
[5. Obturator vcin. This corresponds generally to the artery.
[6. Obturator or thyroid foramen. A large oval foramen between the ischium and puhis.
[7. Obfurator ligament or membrane. A tendino-fibrous membrane stretched across the obturator foramen, having an opening in the upper part for the passage of the obturator vessels and nerve.]

OBVOLUTE. A form of vernation or æstivation, in which the margins of one leaf alternately overlap those of the leaf which is opposite to it.
[OCCIPITAL. Belonging to the occiput.]

OCCIPITO-FRONTALIS. The name of a muscle which arises from the transverse ridge of the occipital bone, passes over tho upper part of the cranium, and is inserted into the orbicularis palpebrarum and the skin under tho eyebrows. A slip, sometimes called pyramidalis nasi, goes down over the nasal bones, and is fixed by its base to the compressor nasi. This muscle has been also termed epieranius, biventer, or digastricus, capitis, dc. It raiscs the eyebrow, wrinkles the forchead, \&c.
OCCIPUT (ob caput). The back part of the head; tho part opposite to the front or sinciput.

Os occipitis. The occipital hone, situated at the postcrior, middle, and inferior part of the skull. It was termed by Soemmering pars occipitalis ossis spheno-occipitalis, because he considered the sphenoid and occipital as but one bone, they bciug never found separate in the adult.

OCCLUSIO (occludo, to close up). [00clusion.] Total or partial closure of a vessel. cavity, or hollow organ.

1. Occlusio mpilla lymphatica. Closurc of the pupil by an adventitions membranc.
2. Occlusio pupilla cumt syncehiâ postcriori. Closure of the pupil, with adbesion of its cargin to an opaque capsule, the
lens being at the same time generally, if not always, opaque; a consequence of iritis.

OCCULT (occultus). Midden; as applied to discasce, the causes and treatinent of whicb are not understood; or to qualities of hodies, which do not admit of any rational explanation.
[OCHLESIS (ox 105, a crowd). A term applied by Gregory to designate the general condition of disease, produced hy the accumulation of a vast numher of sick persons under one roof.]

OCHRE ( $\chi \chi$ ¢òs, pale). An argillaceous earth, impregnated with iron of a red or yellovo colour; used in painting.

OCHREA. Literally, a hoot. A membraneous tuhe, sheathing the stem of rhubarh and other plants, and consisting of two stipules cohering hy their margins.
[OCIMUM. A genus of plants of tbe natural order Labiatæ.]
[Ocimum Basilicum. Basil. This species is a native of India and Persia, and has the ordinary properties of the aromatic plants. The seeds are used in India as a remedy in gonorrhoea and nephritic affections.]

OCTA'NA (octo, eight). Sub. febris. An erratic intermitting fever, which returns every eighth day.

OCTANDRIA (ঠктஸ̈, eight; «̀vท̀p, a male). The eighth class of plants in the Linnean systenu, characterized hy their flowers having eight stanens. Hence-

Octandrous; having eight stamens of nearly equal length.

Octo-gynia ( $\gamma$ vvì, a female). The name given by Linnæus to those orders of plants wbich have eight pistils in their flowers.
[OCTARIUS. The eighth part of a wine-gallon.]

OCULAR SPECTRES. Phantasmata. Imaginary ohjects floating before tbe cyes, and assuming the fortu of musce volitantes, net-work, sparks, iridescent appearance, \&c.

OCULIST (oculus, the eye). One who practices in diseases of the eye.
[OCYTOCIC (o弓us, quick; токоs, labour). That which quickens parturition.]

0D. A name proposed by Reichen bach for the peculiar forec or influence produced on the nervous system by all magnetic agents, and, according as it is found in crystals, maguets, the living hody, hent, light, \&e., he terins it crystalloid, magnetoid, Lind, thermon, photod, \&c.

ODORAMENTA (odor, odour). Odornments; substances cuployed in medicinc on account of their odour: as sachet, or sweat-bag; pot-pourri, or seent-jar, \&e.

ODAXISMUS ( $\delta \delta \delta_{a} \xi \omega$, to bite). Pain or irritation of the gums, indicating the period of teething.

0 D 0 U S (dơoùs, doduros). Dens. The Greek term for a tooth.

1. Odont-agra (ăypa, a seizure). Gout in the tecth; pain in the teeth, as a sequcla of gout or rhcumatism.
2. Odont-algia (ädyos, pain). Tooth. ache; pain in the tecth. Remedies for the toothache are called odontalgics.
3. Odontiasis. Dentition, or the culting of teeth.
4. Odont-oïdes (ciòos, likeness). Toothlike; the name of a process of the dentata, or second vertebra.
[5. Odontology (ג6yos, a discourse). A treatise on the teeth.]
 Literally, a swelling of any kind : but now confined to a swelling of a dropsical nature, situated in the cellular tissue, and commonly called watery swelling or puffing. The affection, when cxtensire, and accompanied with a general dropsical tendency, is termed anasarca.
[ENANTHE (olvos, wine; üv日os, a flower). A genus of plants of the natural order Umbelliferæ. Apiacere (Lindley).
5. Enanthe crocata: Hemlock-dropwort, or Dead-tongue ; the most encrgetic of the narcotico-aerid Cmbelliferoue plants. It has been called five-fingered root.
[2. Enanthe phellandrium. Fine leaved water-hemlock. The seeds have been said to he apcrient, diuretic, expectorant, and sedative.]
EENANTHIC ETHER (ờvos, wine; ã. alos, $^{2}$ flower). An oily liquid, which gives the characteristic odour to all mines.

Enanthic acid. An acid found in the foregoing compound, in comhination with ether.
[Onanthin. A peculiar resinoid principle found hy M. Gcrdiug in Enamthe fistulnga.]
(ENANTHOL. A colourless, limpid, aromatic liquid, produced in the distillation of eastor oil. It rapidly oxidizes in the air, and becomes amanthylic acid. By the action of nitric acid, it yields an isomeric compound called metonanthol.

GNANTHYLIC ACID. An acid procured by the action of nitric acid on eastor oil.
[GNOTHERA BIENNIS. Tree Primrose, Evening Primrose, 'Scabish, Scabions. An indigenons plant, the bark of which is nucilaginous and astringent, and n decoetion of it has been beneficially cm ployed by Dr. R. E. Griffith in iufantile eruptions, in tetter, de.]

GESOPHAGUS (oin, oicw, to carry; pray, to cat. The carrier of food; the gullet; a musculo-membranous canal, extending from the lower part of the pharynx to the superior orifice of the stomach.

1. Esophageal cords. Two elongated cords, formed of the pneumogastric nerves, whioh descend along the œsophagus.
2. Esophageal glands. A name sometimes given to the mucous follicles of the œesophagus.
[3. Eisophagitis (terminal itis). Inflammation of the œsophagus.]
3. Erophago-tomy (ropi, section). The operation of cutting into the œsophagus, for the purpose of extracting any foreign body.
[ESTRUM (oívpos, venereal orgasm). The orgasm or strong excitement experienced during the operation of the appetites or passions.]

GSTRUS (olarpos). The Breeze, or Gad-fly; a variety of ascaris, the larvæ of which, called bots, are found convoluted in the mucus and fæces of man, but more generally in those of the borse.

OFFICINAL (officina, a shop). A term applied to any medicines directed by the colleges to be kept in the shops.

OFFSET. Propagulum. A short branch of certain herbaceous plants, which is terminated by a tuft of leaves, and is capable of taking root when separated from the parent plant, as in Houseleek. It differs little from the runner.

OIDUM ABORTIFACIENS ( $\omega \partial v$, an egg; aldos, likeness). A mucedenous fungus, supposed to be the same as the ergotmould. This substance has recently been referred to the genus Hymenula, and species clavus.

OIL (oleum, from olea, the olive). The designation of a number of unctuous liquors, which give a greasy stain to paper. These have been divided into the fixed oils and the volatile oils.

1. Fixed Oils. These are comparatively fixed in the fire, and give a permanently greasy stain to paper. The term philosopher's oil was formerly given to them when acrid and empyreumatic ; and oil of brick, from their being sometimes obtaincd in this state, by steeping hot brick in oil, and suhmitting it to distillation. They aro vegetable or animal.
2. Vegetable Oils; obtained from regetahles by expression, with or without heat: in the latter case they are termed cold-draton. Some of them lose thcir limpidity on exposure to the air, and are bence called drying oils.
3. Animal Oils; obtained from animals, by boiling. They are solid or fluid.
4. Volatile Oils. These are so called from their evaporating, or flying off, when exposed to the air ; they are also called essential, from their constituting the chief ingredient, or essence, of the vegetable from which they are obtained; the other parts being considered as an useless caput morturm.

OIL OF SPIKENARD. Grass oil of Namur; a volatile oil, yielded by the $A n$ dropogon calannes aromaticus. It is not the spikenard of the ancients, which Professor Royle conceives to be the Nardostachys Jatamansi. The name of the oil of spikcnard is, therefore, incorrect.

OIL OF WINE. Heavy oil of wine. The Oleum æthereum of the pharmacopœia. See Etherole.
[OINTMENT. See Unguentum.]
[OKRA. Olva gumbo. Hibiseus esculentur. A malvaceous annual the fruit of which abounds in mucilage.]

OLD OLL. The name given by watchmakers to olive oil, after it has been purified and reduced to limpidity.

OLEA DESTIJLATA. Distilled, volatile, or essential oils. The British pharmacopœia directs these to be prepared by distillation only; the French Codex orders several of them to be prepared by expression.
[The following are officinal (Pharm. U. S.):-

1. Oleum Anisi. Oil of Anise. Sce Pimpinella Anisum.
2. Oleum Cari. Oil of Caraway. See Carum carui.
3. Oleum Caryophylli. Oil of Cloves. See Caryophyllus aromaticus.
4. Oleum Chenopodii. Oil of Wormseed. See Chenopodium anthelminticum.
5. Oleum Cubebce. Oil of Cubebs. See Piper Cubeba.
6. Oleum Fœniculi. Oil of Fennel-seed. See Foniculum vulgare.
7. Oleum Gualtheric. Oil of Partridgeberry. See Gualtheria prooumbens.
8.. Olenm Hedeoma. Oil of Pennyroyal. See Hedeoma pulegioides.
8. Oleum Juniperi. Oil of Juniper. See Juniperıs соттипis.
9. Oleum Lavandulc. Oil of Lavender. See Lavandula vera.
10. Oleum Menthe piperita. Oil of Pep. permint. Sec Mentha piperita.
11. Olerm Mentha viridis. Oil of Spearmint. See Mentha viridis.
12. Queum Mfonarda. Oil of Horsemint. See Monarda punctata.
13. Ole九m Origani. Oil of Origanum. Sco Oraganum vulgare.
14. Oleum Pimenta. Oil of Pimento. Seo Myrtus pimenta.
15. Oleum Rosmarimi. Oil of Rosemary. Sce Rosmurinus officinalis.
16. Olerm Sabince. Oil of Savinc. Sce Juniperus Salina.
17. Oleum Saszrfras. Oil of Sassafyas, Seo Sarsafras oficinale.
18. Oleum Valerianc. Oil of Valerian. Seo Valeriana officinalis.
19. Oleum Copaiba. Oil of Copaiba. See Copaifera officinalis.
20. Oleum Succini. Oil of Amber.
21. Oleum Succini Rectificatum. Rectified oil of Amher.
22. Oleum Tabaci. Oil of Tobacco. See Nicotiani Tabacum.]

OLEA EXPRESSA. Expressed or fixed oils. Theso are obtained from animal matter by fusion, and from vegetables by expression, or decoction with water.

OLEACE A. The Olive tribe of Dicotyledonous plants. Trees or shruhs with leaves opposite; flowers regular, monopeto lous, hermaphrodite, or diœcious; stamens two; ovarium simple, superior, 2 -celled; seeds pendulous.

Olea Europea. The European Olive, the products of which are a resiniform exudation, called leoca gum; and a drupaceous fruit, which, in the unripe state, constitutes the olive of commerce, and in the ripe state yields olive oil.

OLEAGINOUS (oleum, oil). That which contains or resembles oil.

OLECRANON (ผ́入ívn, the ulna; крávav, the head). Tho large apophysis, constituting the elhow, or head of the ulna.

OLEFIANT GAS (oleum, oil ; fio, to become). A oompound gas consisting of carbon vapour and hydrogen, and now viewed as $\Omega$ compound of the organic radical acctyl with hydrogen. Its uame was derived from its forming an oily substance with chlorine.

OLEIC ACID (oleum, oil). An acid forming the essential part of fat oils which are not drying, as oil of almonds.

1. Oleine. Tho oleate of oxide of glyceryl, forming the greater part of the fat oils, and of most of the solid fats found in nature.
2. Oleëne. This and elaëne aro two hydrocarbons formed hy distillation of tho metoleic and liydroleio acids.

OLEO-RESINS. Native componnds of volatile oil and resin, the proper juices of conifcrous and other plants.

OLEO-RICINIC ACID. An acid proeured by distillation from castor oil, along with the ricinic and stcaro-ricinic acids.

OLEOSACCIIARUM (olcum, oil; saccharum, sugar). Tho namo given to a
mixture of oil and sugar incorporated with each other, to render the oil more casily diffusible in watcry liquors.

OLFRA. Plural of clus, a pot-berb. A class of alliaceous and cruciferous plants, yielding the allyle oils, and constituting the "officinal, volatilc, pungent stimuli" of Dr. Duncan.

OLERACEOUS (olus, any garden herbs for food). An epithet applied to potherbs, or plants grown for food.

OLEUM (olea, the olive). Oil ; an nnctuous liquid, animal or vegetahle. See Oil and Olca.

1. Oleum animalc. Animal oil; an empyreumatic oil obtained by distillation from animal substances, and called Dippel's oil.
2. Oleum athereum. 厓therial oil, or oil of roine, used as an ingredient in the compound spirit of æther.
3. Olerm sulphuratum. Sulphnretted oil, formerly simple halsam of sulphur.
4. Oleum e vitcllis. Oil of eggs ; ohtained hy boiling the yolks, and then submitting them to pressure; fifty eggs yield about five ounces of oil. It is used on the continent for killing mercury.
5. Olenm vivum. A name given by some Latin writers to bitumen, when in a finid state. See Bitumen.
[6. Oleum Amygdala. Oil of Almonds. The fixed oil of the kernels of the fruit of Amygdalus communis.]
[7. Oleum Amygrale amara. Oil of Bitter Almonds. The oil obtained by distilling with water the kernels of the fruit of Amygdalus comnunis, variety amara.]
[8. Dleum Bergamii. Dil of Bergarot. The rolatile oil of the rind of tho frnit of Citrus Limetta.]
[9. Oleum Bubulum. Neats-foot oil. The oil prepared from the bones of Bas domcsticues.]
[10. Olenm Cinuàmomi. Oil of Cinnamon. The volatile oil of the bark of Cinnamomum Zeylanicum, and of C. aromatiсиm.]
[11. Oleum Limonis. Oil of Lemons. The volatile oil of the rind of the fruit of Citrus Limonum.]
[12. Oleum Lini. Flaxseed oil. The oil of the secds of Linum usitatissimum.]
[13. Oleum Morrhuc. Cod-liver oil. A fixed oil ohtained from the liver of Gadus Morrhun.]
[14. Oleum Myristica. Oil of Nutmeg. The volatile oil of the keruels of the fruit of Myristica moschata.]
[15. Oleum Oliva. Olive oil. The oil of the fruit of Olen Europea.]
[16. Olema Ricini. Castor oil. The oil of tho seeds of Ricinus communis.]
[17. Olemm Rose. Oil of Roses. Tho rolatile oil of tho petals of Rosa centifolin.]
[18. Oleum Terebinthina. Oil of Turpentinc. The volatile oil distilled from the turpentine of Pinns palustris, and other species of Pinus.]
[19. Oleum Tiglii. Croton oil. The oil of the seeds of Croton tiglium.]

OLFACTORY (olfacio, to smell). Belonging to the smell; the name of the first pair of cerehral nerres, \&c.

OLFACTUS (olfacio, to smell). The senso of smell, or the aet of smelling.

OLIBANUM. A gum-resin, the produce of the Bobzellia serrata. It has heen supposed to be the thus, or frankineense of the ancients.

OLIGO- ( $\mathrm{d}_{\mathrm{i}} \mathrm{i}$ os, little, few). A term used in Greek compounds, to denote that the number of any thing is small, not indefinite. It is contrasted by the prefix poly- (rodìs, many), signifying that the number is large and not definite. Thus we have oligo-spermous and poly-spermous fruits.

OLIVARIS (oliva, an olive). Resembling an olive; bence, the term corpora olivaria denotes two olive-shaped eminences of the medulla ohlongata.

OLIVE OIL. The oil expressed from the ripe fruit of the Olea Ewropea. There are four kinds of olive oil, known in the districts where it is prepared, viz., in Aix and Montpellier:-

1. Virgin oil. The oil which separates spontaneously from the paste of erushed olives; or, that ohtained from the olives ground to a paste, and submitted to slight pressure.
2. Ordinary oil. The oil prepared by pressing the olives, previously crushed and mixed with boiling water; or, that made from the olives which have been used for ohtaining the virgin oil.
3. Oil of the infernal regions. The oil which rewains mixed with the water employed in the preceding operation; the water is eondueted into large reservoirs, called the infernal ragions, and the oil collects on the surface. It is used for lamps, and is sometimes called lamp-oil. It never oecurs in commerec.
4. Fermented oil. Tho oil obtained by leaving the fresh olives in heaps for some time, and pouring hoiling water over them before pressing the oil. It is rarely met with in commerce.

OLIVILE. The name given by Pelletier to a peculiar substance which remains after gently cvaporating the alcololie solution of the gum which exudes from the olive tree.

OLIVINE. A bitter erystalline matter found in the leaves of the olive tree.

OLOPHLYCTIS ( ${ }^{\circ} \lambda \lambda o s$, whole ; $\phi \lambda \dot{\wedge} \zeta \omega$, to he full, or hot). A small hot eruption, eovering the whole body; when partial, it is termed phlyetrena.

OMA'SUM. Manyplics. The third stomach of the Ruminantia. The food, laving been softened in the first and seeond stomachs, termed respectively the panuch and the reticnlum, is after a time returned to the œsophagus and mouth, and having heen a second tiwe masticated, descends through the œesophagus into the third stomach, whence it passes by a narrow opening into the fourth stomach, or obomasum.

OMENTUM (omen, an omen). Epiploon. The caul; a fold or reflexion of the peritoneum. There are fonr of these, sometimes considered as separate omenta, viz: -

1. The heputo-gastric, or smaller omentum, surrounding the liver, and passing to. the stomach.
2. The great omentum, surrounding the stomach, and returning to the transverse colon.
3. The colic omentum, surrounding the transterse colon, and passing backward to the vertehral column.
4. The gastro-splenic omentum, conneeting the spleen to the stomach.

OMNIVOROUS (onmis, all ; voro, to dovour). A term applied to animals which feed on all substances indifferently. A synonymous, though unelassical, term is omniphagous.
 pounded with this term belong to museles attached to the seapula.

1. Oni-agra (äypa, a seizure). Gout in the shoulder; pain of the shoulder.
2. Omo-hyoïdeus. The name of a musele which arises from the shoulder, and is inserted into the os hyoides. It depresses that bone and the lower jaw.
 of the scapula, or shoulder-blade.

OMPHALOCELE (ó $\mu \phi$ ù̀s, umbilieus; $\kappa \eta \lambda \eta$, a tumour). A rupture, or hernia, at the umbilieus.

1. Omphalo-mesenteric. The namo of the vessels which, at an early period of uterine life, are seen to pass from the umbilicus to tho mesentery. They aro the first developed vessels of the germ.
2. Omphalo-tomia (тонй, scetion). Tho scparation of the umbilical eord, or anvelstring.

OMPIFALODIUM ( $\delta \mu \phi a \lambda o s$, the umbilleus). A term applied hy Turpin to the ecntre of the hilum of the eeed, through

Which the nutrient vessels pass to the embryo.
[ONANISM. Masturbation.]
ONEIRODYNIA (övépos, a dream ; o̊dú${ }_{v} \eta$, pain). Disturbed imagination during slecp, comprebending nightmare and somnambulism.
[ONION. Cepa. The bulb of Allium сера.]

ONISCUS ASELLUS. The Woodlouse, or slater; the name of an insect, otherwise called millcpede. It is found in rotten wood, and has ohtained a place in the pharmacopeia as a medicinal agent, but it is seldom used in this country.
[ONOPORDIUM ACANTIIIUM. The Cotton Thistle. A plant of the order Compositæ, the expressed juice of which has becn extolled as an external application for the cure of cancer.]

ONYCHIA (ŏvv , the nail). An ahscess near the nail of the finger. See Whitlow.

ONYX (övv $\xi$, the nail). Unguis. A small eollection of pus in the anterior chamber of the aqueous humour, so named from its being shaped like a nail; it is of the same nature as hypopyum. Some denote, by this term, a small abscess between the layers of the cornea.

OOLITE ( $\omega_{0} v$, an egg; $\lambda i \theta o s$, a stone). A limestone; so named from its heing composed of rounded particles, like the roe or eggs of a fish. The term is also applied to a large group of strata, characterized hy peculiar fossils, in which limestone of this texture occurs.

0 PACITY (opacitas, from opacus, opaque). Popularly, film. Any change which affects the transparency of the cornea, from a slight film to an intense whiteness, like that of marble or chalk. Opacities are distinguished into leucoma or albugo, the denser form ; nebula, or haziness, the slighter form; and macula, a small patch or speck.

OPAL. A stone, distinguished by the name prccious opal, of which there are several varicties, found in different parts of Europe. Some have the property of emitting various-coloured rays; thesc are distinguished by lapidaries by the term Orieatal; and, by mineralogists, by that of nobilis. Opal is almost entirely composed of silica.
[OPALINE. Of a milky, irridescent colour, like the opal.]

OPERATION. Any excrcise of the surgical art performed by the hand, or by the assistance of iustruments. It is termed-

1. Simple, when one kind of operation only is required, as iucision, \&c.
2. Complicated, when it consists of more
than one kind, as in the operation for cataract, requiring incision, extraction, \&c.

OPERCULATE. Having an operculum or lid.

OPERCULUM (operio, to shut up). A cover or lid; a term applied to the lid-like extremity of the pitcher-like leaf of Nepenthes and Sarracenia; also to the lid which closes the sporangium of mosses. Also to the appendage which serves to open and close the branchial fissure on each side in the fish. It consists of four bones: the one articulated to the tympanic pedicle is called pre-opercular; the other three are, counting downwards, the opercular, the $\begin{gathered}\text { sub-opercular, and the inter- }\end{gathered}$ opercular.
[OPHELIA CHIRAYTA. One of the systematic names for Chiretta.]

OPHI'ASIS (óфıs, a serpent). A term applied by Celsus to a variety of Arca, which spreads in a serpentine form, ronnd both sides of the head, from the occipnt. That which spreads in irregular patches be denominates alopecia.
[OPHIDIA ( $\delta \phi 15$, a serpent). An order of the class Reptilia, comprising the serpent tribe.]

OPHIOSTOMA ( $\delta \phi 1 s$, a serpent; $\sigma \tau \delta \mu a$, a mouth). A genus of intestinal worms, having their mouths furnished with two lips; one species has been found in the human subject.

OPHTHALMIA ( $\delta \phi \theta a \lambda \mu \partial$, the eye). Inflammation of the eye.

1. Catarchal ophthalmia. Arising from atmospheric causes, and popularly designated by the terms cold, or blight; the expression ophthalmia mucosa denotes the increascd mucous discharge, which accompanies it. It is seated in the conjunctiva.
2. Purulent ophthalmia. Acnte ophthalmia, attended with a puriform secretion. This is the blephuro-blentorrhad nnd ophthalmo-bleunorrhica of Schmidt and Becr. Its forms are-
3. Purulcut ophthalmia of infants. This is the oplethalmia neonatorum; or the "puruleut cyc" of children.
4. Purulcut ophthalmia after infaner. This is the Egyptiau ophthalmia, so called from being endemic in Egspt, and brought to Europe by the French and English troops ; contagious ophthalmia, \&c.
5. Gonorrhaval ophthalnia. This is the blepharophthalmia, and ophthalmia gonorrhoica rera of Bcer.
6. Rhcumatic ophthalmia. Inflammation chicfly confined to the selerotica, and caused by exposure to cold.
7. Cutarrho-rhermatic ophthelmia. An
active externa. inflammation, embracing the mucous and fibrous coats of tho eye.
8. Erysipelatous ophthalmia. A modification of conjunctival inflammation, and attended with erysipelatous redness and swelling of the palpebre, and the surrounding parts.
9. Pustular ophthalmia. Inflammation of the mucous membrane, attended with tho formation of pustules, and constituting an intermediate link between catarrhal and strumous inflammation.
10. Scrofulous or strumous ophthalnia. An external inflammation of the eye, occurring in scrofulous subjects.
S. Variolous ophthalmia. Occuring in small-pox; morbillous, occurring in measles; and scarlatinous, in scarlet fever.
11. Exterual ophthalmia. Inflammation of the outer coats of the eye; the ophthalmitis externa idiopathica of Beer. The modifications of this species are called ophthalmia levis, ophthalmia angularis, taraxis, and sometimes chemosis, and ophthalmia sicca.
12. Internal ophthalmia. Idiopathic inflammation of the internal textures of the eyeball.
[11. Ophthalmitis. This term is at present applied to inflammation involving nearly all the tissues of the eye-ball. It occurs sometimes in connection with phlehitis, puerperal fever, gout, rheumatism, \&c., and is then desiguated as phlebitic, puerperal, arthritic, or rheumatic ophthalmitis.]
OPHTHALMODYNIA ( $\langle\phi \theta a \lambda \mu \partial s$, the eye; dóvø, pain). Pain of the eye, producing a sensation as if the ball were forcibly compressed. Neuralgia of the eye.
[OPHTHALMOLOGY ( $\delta \phi \theta a \lambda \mu \partial s$, the eyc ; $\lambda$ óyos, a discourse). A treatise on the eyc, in health and disease.]

OPHTHALMOPLEGIA ( $\delta \phi \theta a \lambda \mu \partial{ }_{s}$, the eye; $\pi \lambda \dot{\eta} \sigma \sigma \omega$, to strike). Paralysis of one or more of the muscles of the eye; a local complication of amaurosis.

OPHTHALMOPTO'SIS ( $\delta \phi \theta a \lambda \mu \delta_{s}$, the eye; $\pi$ т出片, prolapsus). Prolapsus of the globe of tho eye. This term is applied hy Beer, when the displacement is caused by division of the nerves and muscles of the orbit, or by paralysis of the latter.
[OPHTHALMOSCOPE ( $\langle\phi \theta a \lambda \mu \partial s$, tho eye; $\sigma к о \pi \epsilon \omega$, to regard attentively). An instrument latcly invented for examining the condition of the dcep-seated tissues of the eyc.]
[OPIANIA, OPIANINE. Name given by Hinterherger to a supposed new alkaloid diseovered hy him in some narcotina obtained from Egyptian opium. It poseesses narcotic properties.]

OPIANE. Narcotine. A new principle called S'alt of Derosue, from its discoverer; it is procured by digesting opium in sulphuric ether.

OPIANIC ACID. A crystalline substance obtained by the oxidation of narcotine.

OPIATE (opiatum, sc. medicamentum). An anodyne; a medicine which acts like opium, in producing sleep, \&c.
[OPINE (Berzelius). A synonyme of Porphyroxin, one of the constituents of opium.]

OPISTHOTONOS ( $\partial \pi \iota \sigma \theta \varepsilon \nu$, hackwards ; reiva, to bend). Tctanus of tho extensor muscles, the body being rigidly bent backwards. See Emprosthotonos.

OPIUM ( $\mathrm{g}_{\mathrm{d}} \mathrm{s}$, juice; quasi, the juice, par excellence). The juice which exudes from incisions made into the half-ripe capsule of the Papaver somniferum. The following table shows in what proportion opium is contained in some compound medicines of the [United States] Pharmaсорœіа :-

1. Oonfectio Opii, in about thirty-six grains, contains one grain of opium.
2. Pilula Saponis composila, in fivo grains, contains one grain of opium.
3. Pulvis Creta compositus cum Opio, Lond., in two scruples, contains one grain of opium.
4. Pulvis Ipecacuanhae compositus, in ten grains, contains one grain of opium.
5. Pulvis Kino compositus, Lond., in one scruple, contains one grain of opium.

OPOBALSAMUM ( $\overline{\pi d s}$, juice; balsamum, balsam). Balsam of Mccca. The most valued of all the balsams, yielded by the wounded bark of the Protium gileadense.

OPOCALPASUM. A dark-coloured hitter halsam. The tree which yields it is not ascertained.

OPODELDOC. A solution of soap in alcohol, with the addition of camphor and volatile oils.

OPOIDIA GALBANIFERA. The name of the plant to which the Dublin College has recently referred the gum-resin galbanum. It grows in the province of Khorasan, near Durrood.

OPOPONAX. A fetid gum resin formed of the milky juice which exudes from tho wounded root of the Opoponax chironiun, a plant of the order Umbellifers. It occurs in lumps and in tars.

OPPILATION (oppilo, to eloso up). Obstruction; tho closing of a cavity by adhesion of its parietcs. The term oppilatives has been applied to remedies which closo tho porcs.

OPPONENS POLLICIS. A musclo
whioh arises from tho annular ligament of the wrist, \&c., und is inserted into the thumb. It brings the thumb invards, so as to oppose the fingers.

OP'SIC (önтopai, to seo). Belonging to the sight; a term applied to the second pair of nerves, to two thalami of the hrain, \&c.

OPTICS (önтодai, to sce). That branch of natural philosophy which treats of the properties of light and vision. It is distinguished into-

1. Optic8, properly so called, which treats of direct vision.
2. Catoptrics, which treats of reflected vision, or the progress of rays of light after they are reflected from plane and spherical surfaces, and of the formation of images from ohjects placed before such surfaces.
3. Dioptrics, which treats of refracted vision, or the progress of rays of light whioh enter into transparent hodies, and are transmitted through their substance.

OPUNTIA COCHINILLEFERA. The Nopal, a cactaceous plant on which the cochineal insects feed.

ORA SERRATA. A serrated border, or dentated line, constituting the posterior edge of the oiliary processes.
[ORANGE. The fruit of the Citris aurantium.]

ORANGEADE. Essence of orangepeel, added to lemon-juice, with water and sugar.
[ORANGE-FLOWER WATER. The distilled water of the flowers of Citrus vallgaris. See Aurantii aqua.]

ORANGE-LAKE. A colouring matter formed of arnotto, pearl-ash, and alum.

ORANGE-PEAS. The young unripe fruit of the Citrus aurantium, or Sweet Orange, dried, and turned in a lathe, constituting the issuc peas of the shops.

ORANGE-RED. Sandix. A pigment made hy calcining whito lead. It is of a brighter colour than red lead.
[ORANGE-ROOT. A common name for Hydrastis canadcnsi8.]

ORANGE-SKIN. An orange buo of the skin, chietly ohserved in newly-horn infants, and improperly terned cphelis lutea by Sauvages.

ORBICULARE OS (orbiculus, a littlo orb). Os lenticularc. The suall orbed bone of the ear, articulating with the head of the stapes.

ORBICULARIS. Tho name of two muscles of the face:-

1. Orbicularis oris; $a$ muscle constituting the substance of the lips, and often termed constrictor oris, sphincter, or osculator. It has been considered as consisting of two semi-eircular muscles, ealled the
semi-orlicularis superior and inferior. The nasalis lubii superimris is a small slip of this muscle, sometimes cxteuding to the tip of the nose.
2. Orbicnlaris palpebrarum; a muscle arising from the outer edge of the orhitar process, and inserted into the nasal process of the superior maxillary bone. It shuts the eye.

OREICULUS CILIARIS. Annulus or circulus ciliaris. The white circle formed by the ciliary ligament, marking the distinction hetween the choroid and iris. A similar circle defines the houndary of the cornea.

ORBIT (orbita, an orbit, a track). The cavity under the forehead, in which the eye is fixed. The angles of the orhit are ealled canthi.
[ORBITAL, ORBITAR. Of, or helonging to, the orhit.]

ORBITOSPHENOID. The name of two hones in the human skull, constituting the "neurapophyses" of the frontal rertehrex, viewed in relation to the archetype vertehrate skeleton.

ORCHELLA. Dyers' Orchil. The Rocella tinctoria, a cryptogamic plant of the order Lichenes, which yields the colouring matter called orchil or archil.

1. Orcin. A colourless snhstance ohtained from the Lichen deulbatus, and assuming a deep violet colour when exposed to the joint action of ammonia and air, owing to the formation of orcein.
2. Orcein. A red colouring princinle fonnd in archil, and referred hy Dr. Kane to a mixture of two substances, differing in their proportion with the age of the archil; these he calls alpha-orcein and beta-orccin, the latter being produced by oxidation of the former.
[ORCHILLA WEED. Rocella tinctoria.]
ORCHIL-LIQUOR. The name of tro liquid or thin puipy substances procured from the lichen Orclilla. They are called the blue and the red; hut they differ merely in the degrec of their red tint.

ORCHIS (op X (s). The testis. Hence, the term mon-orchid denotes a person possessed of only one testis.

1. Orchitis. Infiammation of the testis; a teriu adopted by Dr. M. Good, as more appropriato than the unmeaning namo hernia humoralis.
2. Orcho-tomy (roun, section). Castration; the operatiou of extirpating one or both of the testes.

ORCIIS MASCULA. The Male Orchis; a plant, from the tuhers of which is prepared the substance called salep, so renarkable as the source of bassorinc.

ORDER. A term in Phrenology indicative of a love of physical arrangement. Its organ is situated above the eyebrow, hetween those of Colouring and Calculation.

ORENBURGH GUM. Gummi Orenburgense. A gum which issues from the medullary part of the trunk of the Pinus larix, when the larch forests in Russia take fire.
[OREODAPHNE. A genus of plants of the natural order Lauracea.
[1. Oreodaphne cupularis. Isle of France cinnamon. The bark of this species resembles cinnamon in its properties.]
[2. Oreodaphne opifcra. A Brazilian species which abounds in a valatile oil, reputed to be an excellent discutient. The fruit also yields a fragrant oil mucb used in Brazil in pains of the limbs, contractions of the joints, \&c.]

ORES. The mineral bodies from which metals are extracted. These are termed sulphurets, when combined with sulphur; oxides, when combined with oxygen; and salts, when combined with acids.

ORGAN (öpyavov). A part which has a determinate office in the animal economy. Therê are organs-

1. Of Circulation, as the heart, the arteries, veins, capillaries, \&c.
2. Of Absorption, as the lymphatic vessels and glands, the lacteals, \&c.
3. Of Sensation, as the eye, ear, nose, tongue, skir, the muscles, \&c.
4. Of Digestion, as the mouth, the stomach, the intestines, \&c.
5. Of Respiration, as the lungs, the trachea, the bronchia, \&c.
6. Of the Voice, as the larynx, the cartilages and muscles of the thront, \&c.
7. Of Secretion, as the liver, for the secretion of the bile ; the kidneys for that of the urine; the lacrymal gland for that of the tears, \&c.
8. Of Generation, as the testes, penis, \&c., in the male ; the pudendum, uterus, \& $\&$. , in the fomale.
[ORGANIC. Having organization. Relating to an organ. Applied to alterations of structure, organic diseases, in contradistinction to those of function merely, functional diseases.]

ORGANIC ATTRACTION. A term applied to the phenomenon by which blood is attracted into parts which are capable of erection, and which are, at the same time, in a statc of excitenent; to the union of germs by which a part of tho double monstere is to be explained, \&c.

ORGANIC FORCE. A term applied to that power which resides in organized
bodies, on which the existenco of each part depends, and which has the property of generating from organic matter the individual organs necessary to the whole. It exists already in the germ, and creates in it the essential parts of the future animal. The germ is potentially the wholc animal; during the development of the germ, the essential parts which constitute the actual whole are produced. The result of the union of the organic creative power and organic matter is callcd organism, or the organized state.

ORGANIC MOLECULES. A term applied hy Spallanzani to certain floating bodies supposed to exist in the male semen, and which he regarded as primordial monads of peculiar activity, existing through all nature, and constituting the nutrient elements of living matter. These are the animalcules, or homuncular tadpoles, of Leewenhoeck; the vital germs of Darwin, \&c.

ORGANIZATION. A term applied to a system composed of several individual parts, each of which has its proper function, hut all conduce to the existence of the entire system.

0 RGASMUS ( $\delta \rho \gamma a ́ \omega$, to desire vehemently). Orgasm. A term denoting evanescent congestive phenomena, whicb manifest themselves in one or in several organs at once.

ORGEAT. A sweetened emulsion of almonds with orange-flower water.

ORICHALCUM (aurichalcum; froms aurum, gold ; and $\chi a \lambda k \delta s$, brass). The brass of the ancients; their ces was a species of bronze.

ORIFICIUM (os, a mouth; facio, to make). An orifice; a mouth or entrance to any cavity of the body; hence, orificium vagince, that part of the pudendum which is below the level of the uretbra.
[ORIGANUM. A genus of plants of the natural order Labiatæ; the pharmacopocial name for the herb of Origanam vulgare.]

1. Origanum marjorana. Sweet Marjoram. Principally used as a condiment in cookery; but an infusion of it is also employed, in domestic practice, as a stimulating diaphoretic to hasten the eruption in exanthematous affections.]
2. Origanum vulgnre. Cominon Marjoran; a Labiate plant, which yields the oil of thyme of the shops.

ORIGIN (origo). The commencement of n muscle from uny part. Its attaehment to the part it moves is called its insertion.
[ORNITIIOGALUM. A genus of plants of tho natural order Liliaceee.]
[1. Ornithogalum altissimum. A species growing in South Afriea, and the bulb of -which resembles squills iu medical properties.]

ORNITHOLOGY (öpvıs, a bird; 入oyos, an account). That department of Natural History whicb treats of birds.
[ORNUS. A genus of plants of the natural order Oleaceæ.]

1. Ornus Europaa. Tho European Flowering Ash; an Oleaceous plant, which yields mama.
[2. Ornus rotundifolia. This species also yields the manna of commerce.]
[OROBANCHE VIRGINIANA. Can-cer-Root. Beech-drops. An indigenous, parasitic plant, growing upon the roots of the beech tree, and supposed to he an ingredient in the nostrum, once cclehrated in this country as Martin's Cancer Powder. Other species of Orobanche, as the O. Americana, O. unifora, \&c., are said to have similar properties with the O. Virginiana, and like it are called Caneer-root.]

ORPIMENT (auri pigmentum). See Arsenieum.

ORRIS ROOT. The rhizome of the Iris Florentina, and perhaps also of the Iris pallida.

ORSEDEW. Manheim, or Duteh Gold. An inferior sort of gold-leaf, prepared of copper and zinc, sometimes called leafbrass, and principally manufactured at Manheim.

ORTHO- ( $\delta \rho \theta 0$ s, straight). A Greek adjective, denoting straightness or ereetness of position.

1. Orth-padia (madsia, the rearing of children). The rearing of children with reference to the prevention or cure of physieal deformity.
[2. Ortho-gnathous (yvaOos, a jaw).Having a straight or vertical jaw, as when the facial angle approacbes a right angle.]
2. Ortho-pncea ( $\pi \nu^{\prime} \omega$, to breatbc). An affection of the breathing when it takes place only in the erect position.
3. Ortho-ptera ( $\pi \tau \varepsilon \rho \partial \nu, \Omega$ wing). Straightwinged insects, as the locust, grasshopper, $\& c$.
4. Ortho-tropal ( $\tau \rho f \pi \omega$, to turn). That whicb is straight, and has the same direction as the body to wbich it belongs, as applied to the embryo of the seed, when its radicle coincides with the hilum ; the embryo is then orect with respect to the sced, as in the apple, \&c.
5. Ortho-tropouta (трinc, to turn). A term appled by Mirbel to the axis of the ovule in plants, when it is rectilinear, the foramen heing at the extremity most
remote from the hilum, as in cistus, urtica, \&c.

ORYCTOLOGY (bpuktos, buried under ground; $\lambda$ 人jos, a description). That branch of geology which comprehends the study of fossils, or organic remains. It is sometimes known hy the name orycto-gnosy; from $\gamma \nu \omega \widetilde{\omega} \tau s$, knowledge or science.

ORYZA SATIVA. The grain, or rather the endosperm of the seed of rice, used for making ptisans, \&c.

OS, ORIS. A mouth; a passage or entrance into any place.

1. O\& tinca. The tench's mouth; the os uteri, or orifice of the uterus.
2. O8 externum. The entrance of the vagina; so named to distinguish it from the os internum, or orifice of the uterus.

OS, OSSIS. A hone; a portion of the skcleton, constituting a pabsive organ of locomotion, as distinguished from a muscle, or active organ of tbis faculty. See Tibsue of Bones.

1. Ossa longa vel eylindriea. Tbe long or cylindrical bones, occurring in the limhs. Their middle part is called the $b o d y$ or diaphysis, and their centre is traversed by a cylindrical carity, called the medullary canal.
2. Ossa lata vel plana. The flat or broad bones which protect important riscera, or form the walls of certain cavities, as those of the cranium.
3. Os8a erassa. The short bones, generally of a glohular, tetrabedral, cuboídal, cuneiform, or polyhedral form, and occurring in the tarsus, the carpus, and the vertehral column.
4. Processes of bones. The name given to certain emincnces by which the surface of bones is frequently surmounted. The following is an enumerntion of the different kinds of processes, together with their peculiar characters:-
5. Processes which helong to the morahle articulations are termed heads, when they are nearly hemisphcrical ; and condyles, when they are broader in one direction than in the others.
6. Processes which belong to the immovable articulations are termed serre, or dentations, as in the bones of the cranium; roots, as in the tecth; and ridges, as in those articulations called sehindyleses.
7. Processes which serve for the insertion of fibrous organs, whose points of attachment they multiply are termed-
8. According to their general form ; impressions, or irregular eminences, not mueb elevated, but rather hroad,
and formed of a grent number of small tuhercles placed very close together, and separated by slight depressions; lines, or unequal eminences, long, but not very prominent; crests, or eniinences resembling lines, but broader and more prominent; prominences, when rounded, hroad, and smooth; and tuberosities, when rounded and rough.
9. After the bodies to which they have been compared; spinous processes, of the form of a spine; styloid, resembling a style or pen; coracoĩd, like a crow's beak; odoutoïd, like a tooth; and mastoid, like a nipple.
10. According to their uses; trochanters, or those which are subservient to the act of turning ; and oibitur, belonging to the orbit, \&c.
11. According to their direction and relative situation; ascending processcs, vertical, transverse, superior, \&c.
12. Processes which serve for the reflection of certain tendons which deviate from their original direction, are termed processes of reflection.
13. Processes which correspond to cavities existing on the surface of some organs are called processes of impression.
14. Membrane of boues. A dense fibrous membrane, surrounding the bones in their fresh state, except at the surfaces by which they are articulated to each other ; on the skull it is called pericronium; on the cartilages, perichondriums on the bones in general, periosteum.

OSCHEOCELE ( $\delta \sigma \chi$ عov, the scrotum; $\kappa \hat{j} \lambda \eta$, a tumour). A bernia which has descended into the scrotum.
[OSCHEOPLASTY (öoxcov, the serotum; $\pi \lambda_{1} \sigma \sigma \omega$, to form). Operation for the formation of $\Omega$ new scrotum.]

OSCILTATION (oscillum, an image hang on ropes, and swung up and down in the air). A term applied by Boerbaave to nuscular irritability. See Irritability.
OSCILLATORIA. A filamentous Aigaceous plant, interesting to the physiologist, as exhibiting the first traces of organic contractility in its simplest con-
dition. dition.

OSCILLATORIUS. [Oscillating.] Versatile, or that which is slightly nitached by its middle to any body, so that the two halves are balanced, and swung back wards and forwards; a tern applied to tho anther of certain plants.

OSCITANCY (oscito, to gape; from os ciere, to streteb the moutb). Yawning, or gaping.
$\underset{27^{*}}{\text { OSCUTOR (nsculor, to kise). A name }}$
given to the orbicularis oris, or muscle forming the substance of the lips.

OSMAZOME ( $\bar{\sigma} \mu \bar{\eta}$, odour; 广 $\omega \mu \dot{\rho}$, broth). Alcoholic extract of meat. An alcoholic extract ohtainod from muscular fibre, brain, \&c., having the taste and smell of hroth.

OSMIUM ( $\dot{o} \sigma \mu \mathrm{\eta}$, odour). A new metal lately discovered by Mr. Tennant anong platina, and so named by. him from the pungent and peculiar smell of its oxide.

Osmic acid. The volatile oxide of osmium, ot extremely acid and penetrating odour.

OSMOMETER ( $\omega \sigma \mu \dot{s}$, impulsion; $\mu$ !Tpov, a measure). An apparatus for exhibiting the osmotic force. It consists of a porous vessel, filled with a saline solution, and immersed in pure water. The passage of the salt outcard takes place entirely by diffusion, and this molecular process is not sensibly impeded by the intervention of a thin membrane. But the flow of water iuward affects sensible masses of fluid, and is the only one of the movements which can be correctly described as a current. This is called ormose, and it cannot be accounted for on the principle of diffusion.

OSMOTIC FORCE ( $\omega \boldsymbol{\omega} \mu \mathrm{\partial}$ s, impulsion). [OSMOSIS.] A name applied to the power by which liquids are impelled through moist memhrane, and other porous septr, in experiments of endosmose and exosmose.

OSSA ALBA. White bones. The name given by Van Helmont to the precipitate formed by the natural salt of the urine, in the production of calculus. It was called by Paracelsus, tartar.

OSSA DEUSTA ALBA. Oвва calciwata. Bone nsh; the white product obtained by calcining bones in open vessels, until the whole of the carbonaceous matter is hurnt off. It is also called terra-ossium, or hone-eartb.

OSSIC ULUM (dim. of os, ossis, $\pi$ bone). A little bone. Hence the ogsicula auditûs, a series of four small boncs contained in the cavity of the tympanum, viz., the malleus, the incus, the orbiculare os, and the stapes; they arc subservicut to the propagation of sound.

OSSIFICATION (os, ossis, a hone; fio, to hecome). The formation of bone; tho deposition of calcareous plosphate, or earbonato on tho soft solids of animal hodies.

OSTEINE (jortov, a bone). Another namo for tho ozseous substance, or hony tissuc.

OSTEO- (bariov, a bone). A prefix denuting the prescnce of bunc.

1. Osteo-anabrosis (ivißperts, ahsorption). A name given by Dr. Cuuin to the simple absorption of bonc, unaccompanied by secretion of pus. It is hy this process that Naturo produces the removal of tho milk-teeth, \&e.
2. Osteo-Dentine. A term applicd to that modification of the fundaucntal tissue of the tooth, in which the cellular basis is arranged in concentrie layers around the "vascular canals," and contains "radiated cells," like those of the osseous tissue. The transition of dentine to vaso-dentine, and from this to osteo-dentine, is gradual, and the resemblance of the last to true bone is very close.
3. Osteo-geny ( $\gamma^{\text {fuects, }}$ formation). The growth of hones.
4. Ostco-graphy (ypá $\phi \omega$, to describe). A description of the hones.
[5. Ostoid tumour. A tumour of irregularly protuberant surface; sometimes of rapid, sometimes of slow growth; occasionally attaining a very considerable magnitude; consisting of a cancellous bony tissue, which is plunged amid agrayish white, vascular, fibrous material, in which a sparing quantity of cells and nuclei are discernible. Rokitansky regards it as simply cancer, in which the stroma bas undergone true ossification; while Lcbert distinguishes it from cancer.]
5. Ostco-logy (גayus, an account). A treatise of the bones.
6. Obteoma. Bony tumour; a caleareous concretion, oceasionally found in the brain.
7. Osteo-malacia ( $\mu$ á̀aкd̀s, soft). Softening of the bones, or rachitis.
8. Osteo-padion (maidiov, a child). Lithopedion. An osseous or stony mass into which the foetus is sometimes found to have been converted in the uterus.
[10. Osteo-plastic diathesis. A disposition to the formation of hone.]
9. Osteo-sarcoma (fàp $\xi$, flesb). Osteosorcosis. The growth of a flesby, merlullary, or cartilaginous mass within a bone.
10. Ost-hexia ( $\ell \xi \zeta s$, a labit). Ossifie diathesis; an affection in which soft parts become indurated by a deposit of ossific matter.
11. Ost-itis. Inflammation of a bonc.
[Osteotomist. An instrument for hreaking up the boncs of the child's hend, particularly at tho base of the skull, so as to enable the operator to extract the foetus through a narrow pelvis.]
[OSTEOPHYTE. A bony regetation growing from the surfaco of hone, or cncircling the artienlatious, generully the
product of an infammatory process in the superfieial part of the bone, and in the periostcum. It differs from exostosis in its greater irregularity, and its being easily separated from the hone.]
[There are several varieties of this adventitious growth.]
[1. Gelatinous ostcophyte. Osteophyton gelatinosum (Gluge). This is eaid by Gluge to he formed by the ossification of a fluid, gelatinous mass, effused on the surface of bone; the mass consisting of granular cells, which are successively converted into eartilage and bone-corpuscles disposed in rows or layers, forming lamellæ or spiculæ at right angles to the bone.]
[2. Velvety villous osteophyte. Pucrperal osteophyte, (Rokitonsky). Difiused and fibro-reticular osteophyte, (Lobstein). An osseous layer investing a bone which is ntherwise bealthy; sometimes remorable, at others firmly soldered to it; and, under a lens, presenting a furrowed surface, or appearing to be composed of minute upright spiculæ. This variety, Rokitansky appears to regard as a uniform accompaniment of pregnancy, and it generally occupies the frontal and parietal bones, but is sometimes found covering the whole inner surface of the cranial vault, and scattered in patches over the base of the skull.]
[3. Splintered or laminated ostcophyte. This presents itself in excrescences and lamellæ several lines in length, of a conical shapc, and terminating in a sbarp point, whieb are found ebiefly in the neighhourhood of the cancellous parts of bone affected with earies.]
[4. Gouty and rhermatic osteophyte. This is distinguished by forming excrescences of a warty and stalactitic character, which are developed in the vicinity of joints of persons labouring under gout or rheumatism.]
[5. Botryoidal or caulifncer ostenphyte. This is described by Lobstein as a large sessile tumour, which is more or less compact at the base, and beeomes spongy towards the surface, sometinues nttaining the size of the head of a scven-months' child; it occasionally merely forms a eapsule to other heterengeneous matter.]

OSTIOLUM (diu. of ostium, a door). A little door; the orifice of the peritheciun of some Fungaccous plants, as spheria.

OSTIUM (es, the month). The door of a chamber, the month of a river.

1. Oxtium nbdominnle. The orifice at the limbriated extrenity of the Fallopiau
tube, - the only place in the aotole body where a serous membrane commmicates with the cxterior.
2. Osteum utcrinum. The orifioe at the uterine extreuity of tho Fallopian tube.

OSTREA EDULIS (öбтpakov, a shell). The common edihle Oyster, a Conchiferous Molluscous animal.

Testæ prœparatce. Prepared oystershells. The shells are freed from impurities hy hoiling water, then crushed and pulverized previous to elutriation. - They consist principally of carhonate of lime, and therefore possess the same medicinal properties as chalk.

OTALGIA (oùs, 由ros, the ear ; àkyos, pain). Otitis. Ear-ache; pain in the ear. It has heen distinguished into-

1. Externa, which generally suppurates, and forms what is vulgarly called an imposteme or imposthume in the head-a term corrupted from aposteme. It sometimes hecomes chronic, and is then called otorrhœa.
2. Interna, or internal imposteme.
[OTIC (oùs, wrds, the ear). Of, or belonging to, the ear.]
[OTITIS. Inflammation of the living membrane of the cavity of the tympanum.]

OTOCONITE (ous, wrds, the ear ; kovis, dust). A calcareous deposit found in the sacs of the restibule, analogous to the otolites, or calcareous crystalline masses found in the vestibular sac of fishes.

OTOCRANE (oưs, wros, the car; xpaviov, the skull). The cavity formed hy the modified vertebral elements for the reception of the auditory nerve.

OTOLITES (uuvs, ídos, the ear ; $\lambda i \theta 05$, a stone). [Otoliths.] Calcareous concretions found in the labyrinth of fishes and fishlike amphihia, which, hy heing in contact with the memhranous parts of the lahyrinth, increase hy their resoance the sonorous vihrations.
[OTOPLASTICE (ov̌s, the ear; $\pi \lambda$ artikos, forming). [Otoplasty.] Plastic operation for the restoration of the ear.]

OTORRHEA (oùs, ஸ̀oेs, the ear ; fíc, to flow). The designation of otitis, when it has passed into a chronio state; it then becomes an otitic catarrh.

OTOSTEAL (oũs, wros, the ear; bortov, a hone). The proper ear-hone of the cod; it is as hard as shell, and resemhlos half a split alınond.

OTTO or ATTAR OF ROSES. Prepared from the petals of the damask and other roses, hy distillation, exposing the produet to the night air, and skimming off the finc oil noating on the surface.

OURETIC ACID (oũpov, urinc). A sapposed new acid of Proust and Berginann, shown by Kilaproth to be hiphosphate of soda.
[OVAL (ovum, nn egg). Egg-shaped.]
OVAL or ELLIPTICAL SKUULL. Under this name, Dr. Prichard describes that form of the skull which Blumenhach termed Cancasian. It is distinguished by the symmetry of its form,-there heing no excess either of prominence or compression. The cranial cavity is large, the forehead full and elevated, the face small in proportion; thus indicating the predominance of the intellectual powers over the instinctive propensities more directly connected with sensation.

OVARIUM (ovum, an egg). An organ containing the ova of animals. The ovaries of the human subject, formerly called testes muliebres, are two small oval bodies placed in the substance of the hroad ligaments.

Ovarium, in plants. The hollow case at the haso of the pistil, inclosing the ovules. It is said to be inferior, when the tube of the calyx contracts an adhesion with its sides; superior, when no such adhesion exists; consequently, an inferior ovary involves a superior calyx; a superior ovary, an inferior calyx. When an ovary adheres to the calyx merely by its back, it is termed parietal.

Ovate. Egg-shaped; ohlong or elliptical, and hroadest at the lower end.

OVICAPSULE. The eapsule of the ovum, which, in many invertehrata, is insulated from the proper tissue of the ovary, and may even escape with the ovum; hut, in the oviparous vertehrata, coalesces with the theca of the ovary, forming there what is termed the calyx.
[OVIDUCT (ovum, an egg; ductus, a. canal). The canal through which the ovum or egg passes. In the mammalia the Fallopian tuhe is so called.]

OVIPAROUS. See Ovim.
[OVISAC. The parent cell, within which each ovum is developed.]
[OVO-VIVAPOROUS. See Ovum.]
[OVUSE. See Ovulum.]
[OVULATION. The formation of ova in tho ovary, and their discharge therefrom.]

OVULIGER (ovulum, a little cgg ; gero, to bear). The anmo of a new kind of lydatid, supposed to be formed in the articulation of the wrist. See Hydatis.

OVULUM (dim. of ovum, an egg). A little egg; a term cominonly used synonymously with nvum. Sco Otum.

1. Oinle Graafiana. Serous vesicles
found in the structure of the ovarium－tbe ova in which tho future embryo is deve－ loped．

2．Ovula of NaZoth．［Glandulx Nabo－ thii．］Small vesicles found in and around the os uteri，and mistaken by Nahoth for ova．

3．Ovule of plants．A small pulpy body borne by the placenta，and gradually changing into a sced．It consists of two tunics and a nucleus．

OVUM．An egg；a small vesicle within the ovarium，containing the embryo，or rudiments of the foetus．

1．Ovalis．Egg－like．Hence the term ovale is applied to a foramen hetween the auricles in the foetus．

2．Ovi－duct（ductue，a canal）．A name sometimes given to the Fallopian tube， which conducts the ovum to the uterus．

3．Ovi－parous（pario，to hring forth）． Animals which bring forth their young in the egg．

4．Ovo－viviparous．Animals which bring forth their young in a living state，the egg having heen previously batched within the body of the parent．

OXALATES．Compounds of oxalic acid with $\Omega$ salifiable hase．

OXALIC ACID．An acid existing，in the form of an acid salt of potash，in many plants，particularly in the species of Oxalis and Rumex；combined with lime，it forms a part of several lichens．
［OXALIC ETHER．Oxalate of Ethyle．］
OXALIDACEA．The Wood－sorrel tribe of Dicotyledonous plants．Herbaceous plants，undersbrubs，or trees，with leaves nlternate；flowers symmetrical ；stamens hypogynous；fruit capsular．

1．Oxalis Acetorella．Common Wood－ sorrel，a plant which yields the hinoxalate of potash，or salt of wood－sorrel．
［2．Oxalis crassicaulis．A Peruvian spe－ cies，the leaves of which yield，by cxpres－ sion，an acid，astringent juice，said to be useful in hemorrhages，chronio catarrh， bowel affections，and gonorrhœe．］

OXALOVINIC ACID．A designation of tbe acid oxalate of cthyl，formed when the alcoholic solution of tho double oxalate of ethyl and potash is treated by fluosilicic acid．
［OXALURIA．Tbat condition of the urine in which oxalates are developed．］

OXALYL．Tho hypothetical radical of oxalic acid．

OXAMETHANE．Oxamate of ethyl， or oxalate of cthyl plas oxamide．An analogous compound is oxamethylanc， formed by the action of dry ammonia on the oxalate of oxide of methyl，and con－ sisting of oxamate of oxide of methyl．

OXAMIC ACID．An acid proenred by the action of heat on oxalate of amonila， in tho form of a honey－yellow residuc， which renains in the retort．

OX－BILE．［Ox－Gall．］Fel lovinum vel tauri．Extract of ox－hile，recently re－ introdnced into practice in dyspepsia and hiliary derangements．
 The namo given by the French pharma cologists to medicated vinegars，or solu－ tions of medicinal suhstances in vinegar．

OXIDATION．The process of con－ verting metals or other substances into oxides，hy combining with them a certain portion of oxygen．It differs from acidifi－ cation，in the addition of oxygen not heing sufficient to form an acid with the substance oxidated．

OXIDES（formerly called calces）．Sub－ stances combined with oxygen，without being in the state of an acid．Oxides are distinguished by the prefixes－

1．Proto（ $\pi \rho \tilde{\omega} \mathrm{Tos}$, first），denoting the minimum of oxygen，as protoside．

2．Deuto（ סcurcpos，second），denoting a second proportion as deutoxide．This is also called binoxide．

3．Trito（rpicos，third），denoting a third proportion，as tritoxide．This is also called teroxide．

4．Per（very nuch），denoting tbe maxi－ mum of nxidation，as peroxide．

OXIODINE．Acidum Iodicum．Iodic acid；a white，transparent solid，obtained by boiling iodine mith nitric acid，or hy decomposing iodate of haryta by dilute sulphuric acid．

OXY－（b乡⿰幺幺s，acid）．A prefix，denoting， in some terms，the presence of acidity；in others，the presence of oxygen ；in a third class of terms，acutcness of sense or func－ tion；and，lastly，sharp－pointedness．

1．Oxy－gen（ $\gamma$ cuvaiw，to generate）．A gas which forms ahout a fifth of atmo－ spheric air，is capable of supporting flame， and is cssential to tho respiration of ani－ mals．Its present name was proposed by Lavoisier，from the supposition that it was tho sole cause of acidity．It was called by Pricstly dephlogisticated air；by Schecle，cmpyreal air；and by Condorcet， vital air．

2．Oxygen acid salts．A term applied to all compounds consisting of a binary acid oxide with a binary basic oxide．
3．Oxygen zater．A solution of oxygen in water．This must not be confounded with oxygenated water，which is the per－ oxide of hydrogen；nor mith Searle＇s ox＇ygcnous aërated ratcr，which is an aqucons solution of the protoxide of ni－ trogen．
4. Oxy-mel ( $\mu \lambda_{1}$, honey). A compound of honey and acetic acid.
5. Ox-acid. An acid containing orygen. The relative number of atoms of oxygen in different acids formed by the same element with this suhstance is indicated by prefires and terminations.
6. Oxy-chloride. A combination of an oxide and a chloride of the same metal, exccpting the potassium family. The oxychlorides aro commonly termed submuriates, on the supposition that they consist of hydrochloric acid combined with tro or more equivalents of an oxide.
7. Oxy-crat (кคá $\omega$, to mix). A mixture of vinegar and water.
8. Oxy-croceum. A warm discutient plaster, consisting of wax, resin, pitch, turpentine, saffron, and several gums.
9. Oxy-genation. A term often used as synonymous with oxidation; it differs, however, from it in being of more general import, every union with oxygen being an oxygenation; whereas oxidation takes place only when an oxide is formed.
10. Oxy-alcohol blowpipe. An apparatus contrived hy Dr. Marcet for increasing temperature. It consists in urging the flame of an alcohol lamp by a blow-pipe supplied with oxygen gas. The oxygen may be furnished from an air-holder, a gas-bag, or any other vessel in which it has been stored.
11. Oxy-hydrogen blowpipe. An apparatus, hy means of which a stream of hydrogen is supplied with pure oxygen as it escapes from a nozzle, and an intense heat thus produced.
12. Oxy-iodine. A name given by Sir H. Davy to anhydrous iodic acid, or the compound of oxygen and iodine. Its compounds with metallio bases were called oxyiodes, and hy Gay Lussac iodates.
13. Oxy-muriate of lime. Chloride of lime, or bleaching powder, prepared by exposing thin strata of recently slaked line in fine powder to an atmosphere of chlorine. The gas is absorbed in large quatity, and combines directly with the lime.
14. Oxy-muriatic acid. The former name of chlorine; it was also formerly
called dephlogisticated marine acid; and by tho French, oxygenized muriatic acid. Seo Chlorine.
15. Oxy-prussic acid. A name formerly given to chloro-cyanic, or chloro-prussio acid, from its being supposed that the hydro-cyanio acid had acquired oxygen on being mixed with chlorine.
16. Oxy-8alt. A compound in which oxygen is found both in the acid and the base; thus, in phosphate of soda, it is associated with phosphorus in phosphoric acid, and with sodium in soda.
17. Oxy-apia (obts, vision). Acuteness of sight. Increased sensibility of the retina, by which the smallest objects are clearly seen for a few moments in an extremely weak light; yet, excepting at such periods, ctien larger objects are not seen in the samo degree of light.
18. Oxy-phonia ( $\phi \omega \imath \eta$, voice). Acuteness or shrillness of voice; synonymous with paraphonia clangens.
19. Oxy-urus (oipà, a tail). The Vermicular Ascaris; a parasitic animal, sometimes found in the uterus, or its appendages, the intestines, \&c.
[OXYTOCIA (o乡vs, quick; тఁктט, to bring forth). Rapid parturition.]
[OXYTOCIC. A medicine which hastens delivery, as ergot.]

OYSTER-SHELLS, PREPARED.Testa preparata. The shells of the Ostrea edulis, or common Oyster; they yield carhonate of lime, intimately hlended with some phosplate of lime and animal matter.

0 Z $\mathbb{E}$ NA (ö̧ $\eta$, a stench). An ulcer, situated in the nosc, discharging a foetid, purulent matter, and sometimes accompanied with caries of the hone. In its early state it is generally termed catarrh; when more advanced it is called cancer of the nostril or throat, as it occupics principally the one or the other of theso parts.

OZONE (ŏ̧ $\omega$, to smell). A new clementary substance, to which Schönben ascribes tho peculiar smell evolved, in electrical operations, at the anode or positive surface. Me supposes it to be a constituent of an elcetrolytc, small quantities of which exist in both air and water.

PABULUM. Forage, food for cattle. The animal leat and animal spirits are callcd the pabula vita, or food of lifo.
PACCHIONI'S GLANDS. The grant-
lations found in the supcrior longitudinal sinus of the inembranes of the brain.

PACIIYBLEPIIAROSIS ( $\pi \alpha \chi \imath ̀ s$, thick; $\beta$ \&\&фароv, tho eyelid). Thickening of tho
tissuc of the eyelid, from chronic inflanmation.

PACIIYDIRRMATA ( $\pi \alpha \chi$ ùs, thick; סípua, skin). Thick-skinned animals, as the elephant; the seventh order of the class Mammalia.
[PACINIAN CORPUSCLES. A namo given by Henlé and Kölliker to small bodies connected with the nerves, first described by Pacini. They are found in the human subject in great numhers, in connexion with the nerves of the hand and foot, and sparingly on other spinal nerves, and on the plexuses of the sympathetic, hut have not heen ohserved on the nerves of motion. They are more or less oval, often elongated and hent, ncarly transparent, and consist, first, of a series of memhranous capsules, from thirty to sixty or more in numher, enclosed one within the other; and secondly, of a single nervous fibre, of the tuhular kind, enclosed in the stalk, and advancing to the central capsule, which it traverses from end to end. Their office is unknown.]

PADOTROPHIA (тaîs, a child ; тр£́申ш, to nourish). That hranch of hygiene which treats of the nourishment of infants and children.
[PEONIA. A genus of plants of the natural order Ranunculaceæ.
[Pronia officinalis. Peony. A native of Southern Europe, the root, flowers, and seeds of which were formerly officinal, but are not now used in regular practice.]
[PAGLIARI'S STYPTIC. A styptic Iiquid which acquired somo reputation as an hæmostatic.]
[PETERIA. A genus of plants of the natural order Cinchonaceæ.]
[Pateria factida. The leaves of this species are foetid, and a decoction of them is employed in India to relieve retention of urine, and in certain fehrile affections. The root is said to he emetic.]

PA'GINA. Literally, a page of a book. A term applied to the surface of a leaf, the upper surface being called pagina superior; the lower surface, pagiza inferior.

PAINTERS' COLIC. Colica pictorum. A species of colio, incident to painters from the use of lead.

Painters' purge. A medicino used in painters' colic, and consisting of $\Omega$ decoction of half an ounce of senna in a pound of water, mixed with half an ounce of sulphate of magnesia, and four ounces of the wine of antimony.

PAKFONG. Tho white copper of tho Chinese, said to bo an alloy of eopper, niekol, and zine.

PAIAFONTOLOGY (raAads, ancient; övta, beings: $\lambda$ oyos, a discourse). The seience which treats of fossil remains, both animal and vegetable; of their forms and relations, of the changes which they have undergone, and of the causes which bave produced their immersion in the strata.

PALATUM. Fornix palati. The palate, or upper wall of the mouth.

1. Velum palati. The soft palate; the posterior limit of the palate.
2. Palato-labialis. The name given by Chaussier to the external maxillary or fa cial artery.
3. Palato-pharyngeus, or thyro-staphylinus. A muscle which arises from the arch of the palate, and is inserted into the thyroild cartilage and the pharyns. It draws the uvula downwards and backwards, and closes the hack of the nostrils. See S'alpingo-pharyngeus.
4. Palato-salpingeus. A designation of the circumflexus palati muscle, from its origin and insertion.
[Palatine. Relating or belonging to the palate.]

PALEA. Chaff. The term palece is applied to the minute colourless hracts at the hase of the florets of a capitulum; and to the floral envelope of grasses, which immediately surrounds the sexual organs. Hence-

Paleaceous. Chaffy; corered with palea, or membranous scales.
[PALICOUREA. A genus of plants of the naturnl order Cinchonacea. Many of the species possess active properties. The $P$. marcgravii is poisonous; the leares of P. longifolia, diuretica, officinalis, strepens, \&c., are active diuretics; the leaves of P.speciosa are said to he diuretic and antisyphilitic; and the root of P. crocea is cmetio.]

PALLADIUM. A new metal found by Wollaston in the ore of platinum.
PALLIATIVES (pallio, to be concealed; from pallium, an upper garment morn by the Grecks). Medicines which produce mercly temporary relicf, thus palliating or cloaking the diseasc.

PALLOR (palleo, to be palc; from $\bar{\approx} d \lambda \lambda \omega$, to quiver). Paleness, pale colour: the usual colour of those who quiver from fear or other eause.

PALM OIL. The prodnce of the palm ealled Elais guineensis, and, according to Burnett, of some specics of Bassia and other Sapotaces.

PALM SUGAR. Joggary. The Eugar of palms in the crude state.

PALMA. The palm of the hand; the internal sof part of the band.

1. Palnar arch. A branch of the radiai
artery, which passes over the inetaearpal hones. The superficial palmar ureh is a continuation of the ulnar artery, which also crosses the metacarpus.
2. Palmaris longus. A muscle arising from the inner condyle of the os bumeri, and spread out into the palmar aponewrosis, which is finally fixed to the roots of all the fingers. It is a flexor of the wrist.
3. Palmaris brevis. A muscle arising from the annular ligament of the wrist and the palmar aponeurosis, and inserted into the skin of the inner edge of the hand; it is sometimes called palmaris cutanens. It contracts the skin of the palm.

PALMA CHRISTI. The Ricinus Communis, or castor oil plant.

PALMACE E. The Palm trihe of Monocotyledonous plants. Plants with an arborescent trunk, covered with the sheathing hases of leaves; leaves terminal, clustered, pinnate, or flahelliform; flowers hexapetaloìdeuss; stamens definite; ovarium superior, 3-celled ; fruit baccate, or drupaceous, with fihrous flesh.

PALMATE. A form of leaf, having fine lobes, with the midrihs radiating from a common point at the hase of the leaf, and resembling the palm of the hand.

Palmatifd. A variety of the palmate Ieaf, in which the lobes are divided as far down as half the hrcadth of the leaf.

Palmatipartite. A variety of the palmate leaf, in which the lo hes are divided heyond the middle, and the parenchyma is not interrupted.

Palmatisected. A variety of the palmate leaf, in which the lohes are divided down to the midrih, and the parenchyma is interrupted.

Palmatilobate. A variety of the palmate leaf, in which the leaves are divided to an uncertain depth.

PA'LMIC ACID. A fatty acid, formed by the action of nitrous acid on castor oil.

PALMINE. A solid, odorous fat, procured hy the action of hyponitrous acid on castor oil.

PALMIPEDES (palma, the palro of the hand; pes, peclis, a foot). Weh-footed animals, as the goose; the sixth order of the class Aves.

PALMITIC ACID. An acid ohtained by decomposing a soap of the palm oil of commerce.

Pulmaitine. Palmitate of glyeeryl.
PALO DE VACA. The Cow Tree; a native of the Caraccas, from which the vegetrlle milk, or glutinous or milky sap, is ohtained by incision.

PALPATION (palpo, to feel). The act of fceling ; manual examination, or a method of cxploring the abdumen by touch
nand pressure, for the purpose of ascertaining its form, size, \&c.

PALPEBRA. The eyelid. The utmost edge of the palpchra, out of which the hairs grow, is called cilimm, a term also applied to the hairs themsclves; while the eyehrow, or ridge of hair above the eyelid, is called super-ciliun.
[PALPEBRAL. Belonging or relating to the Palpehra.]

PALPITATION (palpito, to throb). An increase in the force or frequency of the heart's contraction, or in botb. When this affection results from loss of hlood, it is termed reaction.
PALSY. Paralysis.
PAMPINIFORM (pampinus, a tendril; forma, likeness). Kesembling a tendril; as applied to the smaller veius of the spermatic cord, from their peculiar tendril-like arrangement.

PAN- (neuter gender of $\pi a ̃ s$, all). Panta. All; every one. Hence-

1. Pan-chrestus ( $\chi$ pnatos, useful). A term applied to a medicine in the same sense as panacea, from its general usefulness.
2. Pan-chynagogues ( $\chi \nu \mu$ ऽ s, juice; ả $\gamma \omega$, to expel). Tho former name of purgatives which caused evacuations mixed nearly equally with the humours of the intestinal canal. Thus, calomel was called panchymagogum minerale.
3. Pun-demic ( $\delta \tilde{\eta} \mu o s$, the people). Affecting all the people of a district; a term synonymous with epidemic.
4. Pant-agoga (uizw, to expel). Medicines which expel all morhid matters; a term synonymous with panchymagogucs.
5. Panto-pholia ( $\phi \dot{\beta} \beta o s$, fear). A fear or dread of all things; a term used by the old writers as expressive of some of the symptoms of hydrophobia.

PANACEA ( $\pi \tilde{a} \nu$, all ; $\dot{a} \kappa \hat{\varepsilon} о \mu a \imath$, to heal). A universal remedy. A teru formerly applied to remedies of high repute.

1. Panacea anticancrosa. The name given by Mr. Justamond to the liquid iuvented hy him for external use in cancers; it partools considerably of the nature of the tinctura ferri muriatis, which, indeed, with an equal quantity of spirit of wine, was sometimes substituted for it.
2. Panacea duplicata vel IIfolsatica. Tho bisulphate of potassa.
3. Panacea Glanberiana. The Fiermes mineral, a sulphuret of antimony.
4. Punacea laprorum. This name has been given to Arnice, or Leopard's hanc, a plant of the order Composite, from its long reputation in internal paius and congestions from bruises, or wore probably in prolepses.
5. Panacca mercurinlis. Calomel ; the sub-murinte or chloride of uercury.
6. Pemacca vegctalilis. I'he eroei stigmata, or saffron.

PANADA (panc, hread, Ital.). Bread pap; bread boiled in water to a proper consistence, as food for children.

PANARIS ( $\pi a \rho \check{a}$, near; ơvv乡, the nail). Panaritiom; a term prohably corrupted from paronychia, or whitlow.

PANAX QUINQUEFOLIUM. An Araliaceous plañt, the root of which constitutes the American ginseng, or radix ginseng. Tho Asiatic gineeng, or radix ninsi, is the root of the Panax schinseng.

PANCREAS ( $\bar{\pi} \tilde{a}$, all ; кpias, flesb). A conglomerate gland, situated transversely across the posterior wall of the abdomen. In cattle it is called the suocet-bread.

1. Small pancrcas. A sinall glandular mass, frequently found heneath the pancreas, and of similar structure. The French term it pancreas d'Aselli.
2. Pancreatic duct. The duct formed by the union of the numerous exeretory ducts proceeding from the lohules of the pancreas.
3. Pancreatic juice. The peculiar fluid secreted hy the pancreas.
4. Pancreatic liquor. A colourless, limpid fluid, apparently designed for the special digestiou of oils and fat.
5. Pancreat-algia (üג $\gamma o s$, pain). Pain of the pancreas. The term is seldom used.
[6. Pancreatic sarcoma. A variety of tumour described hy Abernethy, oceurring among the lymphatic glands of the subcutaneous tissne, and having the tuberculated appearance and colour of the pancreas.]
6. Pancrat-itis. Inflammation of the pancreas; from pancrecas, and the terminal particle itis.
7. Pancreat-oncне (öүкоs, tumour). Swelling of tho pancreas; the cmphrexis pancreatis of Swediaur.

PANCREA'TICA ( $\pi$ djкргas, the pancreas). Medicines which affect the pancreas. They are probably the same ns the sialica, or those which affect the salivary glands.
 An epidemic which affects a whole population.]

PANDICULATIO (pando, to spread). [Pandiculution.] Stretching; clongation of the extensor miscles.

PANDURIFORM (prindma, a fiddle; forma, likeness). Fiddle-shaped; obovate, with a deep simes on each side.

PA'NES SACCIIARA'TI PURGA'N'TES. I'urgative cakes or biscuits, consisting of jalap, flour, cgos, and sugar.

PANICLE (panicnla, the woof wound round the quill in the shuttle). A form of infloresecnee, in which the fower-buds of a raceme bave in elongating developed other flower-huds, as in the oat. When the rachis of infloreseence separates irregularly into branches, so as to lose the form of an axis, this is called, by Willdenow, a deliquescent paniclc.

PANIFICATION (panis, hread; fio, to become). The process of making hread.

PANIS. Bread. The following terms are of usual occurrence:-panis triticens, wheaten bread; mica panis, crumb of bread; panis tostus,, toasted bread, for making toast-water; panis furfuraceus, hrown or hran hread; panis liscoctus, biscuit; pania nanticus, sea-biscuit.

Panis triticcus. Wheaten bread. It is of two kinds: panis fermentatus, fermented or leavened bread, made of wheatflour, salt, water, and yeast ; and pamis sive fermento, panis azymus, or unfermented hread, which is distinguished into the heavy and compact, as in sea-hiscuit, and the light and porous; the latter kind owes its lightness and porosity to the addition of some substance, as solid sesquicarbonate of ammonia, \&e.

PANNICULUS CARNOSUS (panniculus, dim. of panmur, a covering; and caro, carmis, flesh). A fleshy covering; a set of subeutancous muscular hands, which serve to erect the "quills upon the fretful poreupine," the hedgehog, \& e.

PANNUS. Literally, a piece of clath, or a rag. The designation of that state of vascularity of the cornea, in which its mucous covering is so loosencd and thickened as to present the appearance of a dense pellicle.

PA'NNUS YESI'CATORIUS. Tafietas vesican. Blistering cloth; prepared by digesting powder of cantharides in sulphuric ether, distilling the tincture, eraporating the residue, and spreading the oily mass which remains, melted with twice its weight of wax, on eloth prepared with waxed plaster.
[PANOPHOBLA (rav, a Greck deity; фoßoso fear). That kind of melancholy principally characterized by groundless fears.]
[PANSI. Common name for the Tiola tricolor.]
[PANTHODIC (ras, all : odos, a way). A term employed hy M. Hall to designate the conrse of nerrous action from one point in all directions.]
[PAPAVARINA, PAPAYARNEE. A name given by Dr. Merek to a supposed new alkaloid ohtained by him from opiam.]

PAPdVERACEE. The Porpy tribe of

Dicotyledonous plants. Herbareous pinnts with leaves rivided, alternate: flowers polypetalons, single on long peduncles; petals 4. or some multiplo of 4, crueiate ; stamens hypogynous; ovarium solitary; seeds numerous.

1. Papaver somnifermm. The White Poppy, the capsules of whicl yield opium.
2. Papaver rhœas. The Corn or Red Poppy, the petals of which are used to impart their fine red colour to syrup.
PAPAW. The Curica Papaya; a tree with a milky juice, containing fibrin in such ahundanee, that the juice bears a most extraordinary resemblance to animal matter.
PAPER COAL. A bituminous shale, which separates into thin laminæ of coal, like paper.

PA'PIER E'PISPA'STIQUE. Epispastic Paper ; a hlistering paper, made of white wax, spermaceti, turpentine, powdered cantharides, and water, boiled togetber, strained, and spread on paper.

PAPILIONACEOUS (papilio, a butterlly). A form of corolla resembling a butterly, and found in all the leguminous plants of Europe. Of the five petals, the uppermost is dilated, and ealled vexillum or the standard ; the two lateral are contracted and parallel, and called alce, or the wings: the two lower are contracted, parallel, generally coherent by their anterior margin, and termed earina, or the keel.

PAPILLA (dim. of papula, a pimple). A teat, or nipple. The term papilla denotes the small cminences which constitute the roughness of the upper surface of the tongue. Tbey aro distinguisbed as-

1. Papilla circumvallata. Situated on the dorsum of the tongue, near its roof, and forming a row on each side, which meets its fellow at the middle line, like the two branches of the letter A. They rcsemhlo concs attached hy tho apex to the bottom of a cup-shaped depression, and are hence named ealyciformes. This cup-shaped cavity forms a kind of fossa around the papillæ, and hence they are called eircunvalluta.
2. Punilla conica et filifurmes. Covering tho whole surface of the tonguo in front of tho circuuvallate, but most ahundant at the tip; of a conical and filiform shape, with their points directed backward.
3. Pupilla fungiformes. Irrcgularly dispersed over the dorsum of the tongne, and having rounded heads.

PAPILLA CONICA. The small flatteued promincuce formed by the optic
nerve in the interior of tho globe, at its fundus.

PAPPUS ( $\pi a ́ \pi \pi n$ ). The down or mossiness of the under $\mathrm{li}_{1 j}$, the cheek, \&c. The botanieal tertn for the feathery appendage which crowns the fruit of many Composite plants, and wbich is, in fact, a reduced calyx.

PAPULA (" of the matter or nature of pappus; from па́тпаs, the sprouting of down or buds; and űin (ulè or ile), mat-ter."-Good). A pimple; a small, acuminated elevation of the cuticle, witb an inflamed base, very seldom coutaining a fluid, or suppurating, and commonly terminating in scurf; it is the eethyma and exormia of the Greeks. The varieties of papulous eruptions, according to Bateman, are serophulus, licben, and prurigo.

Papulce ardentes. A torm applied by Gotwald to the trailing vesications which occurred in the Dantzic plague, and which Goodwin translates fire-bladders. At first they werc as small as a nillet-seed; and, when larger, they were termed in Holland, grana piperis.

PARA- ( $\pi a \rho a ́) . ~ A ~ G r c e k ~ p r e p o s i t i o n, ~$ signifying through, near, about, \&c. In some cbemical compounds it denotes near. to, and expresses a close alliance between two compounds.

1. Para.centćsis ( $\kappa \varepsilon \nu+\varepsilon \in \omega$, to perforate). The operation of tapping, or making an opening into the abdomen, thorax, or bladder, for the purpose of discharging the fluid contained in them in disease.
2. Par-fucusis (גккove, to henr). A peculiar state of the hearing, in which deaf persons hear sounds hetter when a loud noise prevails at the same time. Of this, Willis describes two cases; - one, of a person who could maintain a conversation only when a drum was heat near hilu; the other, of a person who could hear only when a bell was ringing.
3. Para-cyanogen. A hlack coaly matter, obtained by decomposing cyanide of mercury.
4. Para-lysis ( $\lambda \dot{\prime} \omega$, to relax). Palsy; the total loss, or diminution, of sensation or of motion, or of both ; the resolutio nervorum of Cullen.
5. Para-lysis agitans. The Shaking Palsy of Mr. Parkinson; the scelotyrbe ferfinans of Saunages; and, from the peculiarity of the patient's gait, it has been called by Good, synclonus berlismus, a teriu dcrived froin $\beta a \lambda \lambda i \zeta \omega$, to dance.
6. Para-menispermia. [Paramenispermin.] A crystalline substnnce, besides menispermin, fonud in the secd-coat of cocculus indicus.
7. I'a, marphia. Another name for
thebainc, a erystallizable baso existing in opium, and named from its boing isoureric with morphia.
S. Para-naphthaline. A substance which accompanies naphthaline in tar.
8. Para-phimozis ( $\psi ц \dot{\sigma} \omega$, to bridle). Cireumligatura. An affection of the prepuce, when it is drawn quite behind the glans penis, and cannot be brought forward again. This is the strangulating phimosis of Good. Compare Phimosis.
9. Para-plegia ( $\pi \lambda \dot{\eta} \sigma \sigma \omega$, to strike). That species of paralysis in which the lower balf of the body is more or less impaired in its nervous power.
10. Para-8ite (oitos, provisions). Literally, a hanger-on at the tables of the great. This term is used to designate animals wbich are found in tbe organs, intestines, blood, \&c., of other living animals, and appear to live at their expense, as the hydatids of the brain, intestinal worms, \&c. It is also the general name of plants which grow upon others, as moss, mistletoe, \&c.
[12. Para-spadia (omaw, to draw). A preternatural opening of the urethra at tbe side of the penis.]
11. Para-8tata (iбтapal, to be placed). Another name for the epididymis.
12. Para-tartaric. Tho name of an acid resembling tbe tartaric, and also called racemic.
13. Par-egoric (тapayopeúw, to mitigate). A medicine which allays pain. The paregoric elixir is the Tinctura Camphoræ composita of the pharmacopœia.
[16. Par-encephalocele ( $\varepsilon \gamma к \varepsilon ф а \lambda о \varsigma$, the brain; кरid $\eta$, a rupture). Hernia of the cerebellum.]
14. Par-enchyma (ì $\gamma \chi$ v́ $\omega$, to pour in). A term employed by Erasistratus, from an idea that the common mass, or inner substance of a viscus, is produced hy concreted blood, strained off through the pores of the blood-vessels, which enter into its general structure, or membranes. It is now applied to the spongy suhstance composing the lungs, the liver, \&e.; and to all the pulpy parts of plants.
15. Par-isthmitis (lo $\theta \mu \mathrm{d}$ s, the fauces). Paristhınia of Hippocrates. Inflummation about the thront ; the squincy or squinancy of the old writers, and tho cynancbe, or angina, of tho moderns.
16. Par-onychia ( $\delta v=\xi$, tbe nail). An abseess at the end of the finger, near tho nail ; in whitlow. When tho cffusion is beneath the periostemm, it is the most severe form, and is termed felm.
17. Par-otid (ouvs, wids, tho enr). The name of tho largo salivary gland situated
near the ear. Its excretory ducts, uniting form the duct of Stemo.
18. ''ar-atitis ( $\pi a \rho \omega \tau i s$, tho parotid gland). Inflammation of the parotid gland; the cynamchc parotidac of Cullen. It is called, in this country, mumps; in Scotland, branks; and in France, oreillons and ourles.
[22. Par-ovarium. A name given by Kobelt to a body analogous in strueture to the cpidimus, situated in the hroad ligament, between the Fallopian tube and the ovary.]
19. Par-oxy/8m (b乡ùs, sharp). A periodical exacerbation, or fit, of a disease.
20. Par-ulis (oždov, the gum). Inflammation, boil, or ahscess of the gums.
21. In the following terms, used by Dr. Good, the preposition uniformly signifies fanltiness, or a morbid state.
Par-acusis .......... Morbid hearing.
Par-apsis ......... Morbid touch.
Para-bysma ....... Morbid congestion.
Para-cycsis ....... Morhid pregnancy.
Para-gensis ....... Morhid taste.
Para-menia ....... Mis-menstruation.
Para-phonia ...... Altered roice.
Par-odivia ........ Morbid labonr.
Par-oniria ....... Depraved dreaming.
Par-opis ......... Deprared rision.
Par-osmis......... Morhid smell.
Par-ostia.......... Mis-ossification.
Par-uria......... Mis-micturition.

PARABA'NICACID. A new and powerful acid, formed by boiling alloxan or uric acid with nitric acid.

PARAEFINE. Petrolinc. A particular hydro-carbon produced in the distillation of wood. Its name is derived from parum affuis, denoting its remarkable indiference to other bodies, in a chemical point of view.
[PARAGUAY TEA. Tbe leaves of the Ilex Paragnaiensis (I. Mate, St. Hilaire), an infinsion of wbich is extensively con. sumed in the interior of South America as a beverage. They contain a principle identical with eaffeine.]
[PARALACTIC ACID. A name proposed by Heintz for the acid from flesh, considered by him as isomeric with lactic a.eid.]

PARALLINIC ACID. The name giren by Batka to smilacin, the actire principle of sareaparilla.

PARALI'TICA (mapádvots, paralysis). Agents which diminish the irritability of tho miseles, and occasion weakness or paralysis. When employed in the treatment of spasmodic affections, they are termed antippasmodics.

PARAPO'PHDSIS ( $\quad$ apù, transrerse;
dino申uots, apophysis). A process exteuding outwards from the "centrum," or hody of the vertehra in fishes, commonly ealled the "iuferior transverse process." See Vertebra.

PA'RARRIIODEORE'TIN (Tapà, hesides; podeos, rose-red; porivn, resin). A simple resin, ohtained from the male or fusiform jalap, or Ipomcea Orizabensis.

PAREIRA BRAVA. Literally, wild vine; the root of the Cissampelos Pareira, cinployed in discharges from the urinogenital mucous membrane.

PARIES, PARIETIS. The wall of a house, or any other building.

1. Parietal. Belonging to the walls of an organ; the placenta of a plant is so ealled when it is attached to the valls of the ovarium, as in poppy, violet, \&e.
2. Parietalia. The name of the bones of the cranium, which serve as walls to the hrain.
[PARIETARIA. A genus of plants of the natural order Urticacere.]
[Parietaria officinalis. Wall Pellitory. An European plant, formerly employed in various complaints, hut now seldom used except in domestic practice. It is diurctic and refrigerant.]

PA'RIETINE. Parictinie aeid. These are names given to chrysophanic acid (formerly called rhabarherine), from its having been found in the Parmelia parietina. For the same reason it has also been ealled parictimic acid.

PARIGLIN. The name given by $\mathrm{Pa}-$ lotta to similuein, a principle of sarsaparilla.

PARI-PINNATE. Equally pinnate, abruptly pinnate; when the petiole of a pinnate leaf is terminated hy neither a leaflet nor a tendril. [Whon the petiole is terminated hy a single leaflet or tendril, it is termed Impari-pinnate.]

PARME'LIA PARIE'TINA. Common Yellow Wall-Lichen, usually sold under the name of common yelloro rallmoss. It has heen proposed as a test for alkalies, which communicate to its yellow colouring matter, called parietio, a beautiful red tint.
PAP-OCCIPITAL BONE. In tho doctrine of Homologics, this bone is ealled the "diapophysis." Sce Vertebra.
[PARSLEY. The common name for Petroselimum sativam.]
[PARTHENIUM. A genus of plants of the natural order Compositeo.]
[Parthenium integrifolium. Prairle Dock. An indigenous plant, tho flowering tops of which aro said to be powerfully antiperiodic.]

PA'RTHENOGE'NESIS ( $\pi$ apoívos, a
virgin ; rivects, generation). "Virgingeneration, or tho successive production of procreating indivicluals from a single ovuu." This is the namo of a work, published by Prof. Owen in 1849 ; the author shows the iutent of the "cleavage proeess," as it has been called, to be that hy which the spermatic principle is distributed throughout the germ-luass; and he there points out the consequent relation of such inherited subdivision of the spermatie principle to future developments of embryos in virgin-parents. See Metagenesis.

PARTITE. Parted or divided into a fixed number of segments, which are divided nearly down to the base, as applied to leaves: a leaf with two divisions is bipartite; with three, tripartite; with many, pluripartile, \&c.

PA'RTRIDGE-BERRY. The name of the Gantheria proenmbens; an American plant, known in the United States hy the names of grouse-berry, deer-berry, $\&$. The volatile oil is sold in this country under the name of oil of winter-green. See Ganltheric Acill.

PARTURIFACIENT (parturio, to bring forth; facio, to causc). A medicine which excites uterine action, or facilitates parturition, as crgot.

PARTURITION (parturio, to bring forth). The act of bringing forth, or being delivered of, children.

PAR VAGUAI (wandering pair). The name of the eighth pair of nerves, or pneumo-gastric. See Nerves.
[PASSIVE. Applied in medicine to those diseases in which the vital forces are deficient, and there is little or no reaction.]

PA'STA ARSENICA'LIS. Arsenical paste, made of einnabar, powdered dragon's blood, and fincly levigated arsenions acid, made into a paste with saliva or mucilage.

PA'STA CACA'O CUM CHO'NDRO. Carrageen Cocoa, prepared from roasted and derorticated caeao seeds, white sugar, and powdered carrageen, mixed and formed into quadrangular sticks.

PA'STA ESCHARO'TICA. The name sometimes given hy continental writers to the Potar8a eum calee of tho London Plarmacopoí.
[PASTEL. A common name for $I_{s a t i s}$ tinctoria.]
l'ASTI'LLI FUMA'NTES. Fumigating or arounatie pastilcs, made of henzoin, balsam of tolu, habdanum, \&c. The species ad su!ficudimn consists of benzoin, amber, and lavender flowers.

PAS?ILLUUS. Literally, a perfumed or
sweet ball. $\Lambda$ metlicine in the form of a small round ball; a lownge.
[PASTINACA OPOPANAX. An European plant of the natural order Umbellifere, which yields the gum resin, opopanax, formerly cmployed as an antispasmodic, deobstrucut, and eminenagogue.]

PA'TCHOULI. The dried foliaceous tops of a strongly odoriferous plant, ealled, in Hindostan, pucha pat. It is a speeies of Pogostemon, and belongs to the family Labintæ. In Europe it is prineipally used for perfumery purposes; in India, it is employed with tobaceo for smoking, and for seenting the hair of women.

PATE. Pasta. A paste; a preparation of sugary and mueilaginous substanees. Pâte de guimauve is a demuleent lozenge prepared from the root of the Althaa officinclis.

PATE ARSENICALE. Arsenical paste, composed of cinnabar, dragon's blood, and arsenious acid, and employed to eauterize eancerous wounds.

PATELLA (dim. of patina, a pan). Literally, a small pan. The knee-pan.

PA'THE'CICI (ráoos, passion). Trochleares. A name given by Willis to the fourth pair of nerves, because the eyes, by means of tbese, express certain passions.
[PATHOGENY ( $\pi \dot{\theta} 0$ os, disease ; $\gamma \varepsilon v \varepsilon \sigma t s$, generation). That branch of pathology which relates to the origin and development of diseases.]

PATHOGNOMONIC ( $\pi$ ádos, disease ; $\gamma \nu \omega \mu \mu \nu$, a discerner). A term applied to symptoms which are charaeteristic of, and peculiar to, a disease.

PATHOLOGY ( $\pi a ́ \theta o s$, disease ; $\lambda \gamma^{\prime} u s$, an account). That branch of medieine which investigates the nature of diseases.
[PATNA OPIUM. Bengal npium.]
PAULINA CONFECTIO. A warm opiate, similar to the confeetio opii.

PAULLI'NIA. Guarana. A powder, prepared from the seeds of Paullinia sorbilis, of South America. It contains a principle resembling Caffein.
[PAULLINIA SORBILIS. A Brazilian plant of the natural fanily Sapindacere, from the seeds of which is prepared the Paullinia or Guarana, a medicine reeently introduced into Europe by Dr. Garrelle, who extols it as a useful tonie. Martius found in it a erystallizable prineiple, which he named guaranin, and which appears from the researches of Berthemot and Deehastelus to be identical with caffein.]

PAVILTON. The name of the ala, or greater part of the external ear.
[PEACII-LEAVES. The leaves of Amygdahes Persica. They abound in hydrocyanic acid, and have been used as a verinifuge and purgative.]

PEACII-WOOD. A dye-wood, yielded by a species of Casalpinia; cmployed in ealieo-printing.

PEARL. A spherical conerction formed within the pearl oyster. Sir Everard Home considered that the abortive ova of the animal were the nuelei upon which the pearls were formed.

PEARL ASH. The name of potash when it is calcined, and of a whitish pearly lustre. It is employed in making flint glass, soap, de.

PEARL BARLEY. Common barley divested of its cuticle, and rounded and polished in a mill, so as to aequire a pearly appearance.
PEARL EYE. Pearl in the eye. The old English name of cataract.

PEARL POWDER. A powder nsed by perfumers, and obtained from the nitric solution of bismnth, by adding a proportion of muriatic acid, and then precipitating by a small quantity of water. In this way it is obtained in the form of minute seales of a pearly lustre.
[PEARL SAGO. Refined sago made into grains.]
[PEARL TAPIOCA. A factítious tapioea in small spherical grains, supposed to be prepared from potato starch.]

PEARL WHITE. Magistery of Bismuth; the sub-nitrate of bismuth.
[PEARSON'S ARSENICAL SOLUTION. One grain of arseniate of soda dissolved in a fluid ounce of water.]

PEAS FOR ISSUES. These are made of tow, or flax, rolled up with gum water and wax; to which are sometimes added powdered savine, cantharides, or verdigris; orange peas from the unripe Curacoa oranges are also used.

PECCANT ( pecco, to be in fault). A term applied by the lumoral pathologists to those humours of the body which were supposed to be faulty in quality or in quantity.
[PECIIURIM. See Pichurim.]
[PECTASE. Pectin ferment. A peculiar, uncrystallizable substance, existing in vegetables, whieh possesses the remarkable property of transforming, in a short time, peetin into a gelatinous substance, insoluble in cold water, without any apparent chemieal intervention of its cleusents in the transformation.]

PECTEN, D'ECTINIS (perto, to eomb). A comb, or crest. A pramidal plicated process, situated in the posterior and ex-
temal part of the cavity of the eye in bircls, and covered with pigment. It is also called marsupinm.

1. Pectinati musculi. A designntion of the muscular fasciculi of the heart, from their resemblance to the teeth of a comb.
2. Pectinens. A flat quadrangular muscle arising from the pectineal line of the os pubis, and inserted into the line lcading from the trochanter minor to the linea aspera.

PECTIC ACID ( $\pi \eta \kappa \tau i s$, a coagulum). A substance ohtained from the carrot and other vegetahles, so named from its remarkable tendency to gelatinize.

PECTIN. A principle which forms the basis of vegetable jelly.

PECTINATE (pecten, a comb). A modification of the pinnatifid lcaf, in.which the segments are long, close, and narrow, like the teeth of a comb.

PE'CTORAL DECO'CTION. The Decoctum Hordei coinpositum of the London Pharmacopocia, consisting of decoction of harley, figs, liquorice-root, raisins, and water.

PECTORA'LIS ( pectns, the breast). The name of two muscles of the trunk.

1. Pectoralis major, arising from half the clavicle, all the edge of the sternum, and the cartilages of the three lower true rihs, and inserted into the outcr border of the occipital groove of the humerus. It moves the arm forwards, \&c., and is a muscle of respiration.
2. Pectoralis minor, arising from the third, fourth, and fifth ribs, and inserted into the coracoid process of the scapula. It draws the shoulder-hone forwards and downwards, and elevates the rihs.

PECTORALS (medicamenta pectoralia; from pectus, pectoris, the breast). Medicines which relicve disorders of the chest.
PECTORILOQUY (pectus, the breast; loquor, to speak). A chest-sound ; a voicc Which appears to proceed dircctly from the chest, and to traverse the tube of the stcthoscope.

CPECTOSE. An immediate principle, insoluble in water, existing in all vcgetables, and which is transformed under the influence of acids and heat into pectin.?
PEDATE (per, a foot). A modification of the palnate leaf, in which the two lateral lobes are themsclves suhdivided, as in hellehurus niger. The sarne modifications occur as in the palmate leaf, with similar terma, ns pedatifitl, pedatipartite, pedati-
sectel, perdatilobate.

PEIICEL (pedicellus, dim. of pedienlus). A partial flower-stalk. When soveral peduncles spring from the axis, at
short distances from each other, the axis is terined rachis, and the peduncles are called pediccls.

PEDICULATION ( pediculns, a louse). Phthciriasis. An affection in which lice are bred under the skin.

PEDICULUS (dim. of per, a foot). Litcrally, a little foot. A louse.

1. Pediculus humanus. The common louse, infesting the head.
2. Pediculns pubis. The morpio, or crab-louse, infesting the puhes.
[PEDILANTHUS. A genus of plants of the natural order Euphorbiaceæ.]
[Pedilanthus tithymaloides. A species indigenous in the West Indies and South America, employcd there in venereal cases, and also as an emmenagogue.]

PEDILUVIUM (per, pedis, the foot; lavn, to wnsh). A foot-bath.

PEDUNCULUS (pedo, one that has broad or splay feet). A person somewhat splay-footed. A peduncle; the axis of the flower-hud, from the point of connexion with the stem, as far as the floral envelopes. The term pedunenli is applied to two medullary cords which connect the pineal gland to the optic thalami.
[PEGMIN ( $\pi \eta \gamma \mu a$, coagulum). A tcrm given by Dr. R. D. Thomson to a coating of a buff colour, which usually exhibits itself on the surface of inflamed blood.
[PEGU CATECHU. A variety of catechu, so called from the section of country whence it is exported.]
[PELARGONATE OF ETHYLIC ETHER. Pelargonic Ether. Enanthic Ether.]
[PELARGONICACID. Enanthic acid.]
[Pelargoneum roseum. The systematio name for Rosc geranium.]

PELLAGRA. An affection in which a morhid condition of the skin is a prominent symptom ; it is very prevalent among the peasantry of the northern States of Italy. It is called mal del sole, from its being ascrihed to the heat of the sun's rays; Italian elcphantiasis, \&c. The term is commonly derived from pellis agria, or wild skin; but it would scem that tho old Itnlinn name for it was pellarella.
PELLICLE (dim. of pellis, the skin or hide of a bcast flayed off). A thin skin, or film. Among chemists, it denotes a thin surface of crystals uniformly spread over a saline liquor evaporated to a certain degreo.

PELLI'CULA OVI. Mcmbrana puraminis. An albuminous membranc which lines the shell of the egg. At the larger end of the cgg it forms the follicula ac̈ris, the air of which contains $23 \cdot 475$ per cent. of oxygen.

PELLITTORY. The root of the Amacyclus I'yrethrum, imported from the Levant under the name of Pellitory of Spain.

PELO'PIUM. A new netallic element found in the tantalite of Bavaria. See Niobiun.

PELOSIN. A colourless substanee lately extracted from the root of the Cissampelos parcira. It is a powerful base, forming salte with scveral acids.

PEL'TATE (pelta, a shield). Shicldshaped; applied to leaves which are fixed to the petiole hy their centre, or by some point within the margin.
[PELTIDIA APHTHOSA. A lichen said to possess purgative and anthelmintic properties.]

PELTI'DIA CANI'NA. Ash-coloured Ground Liverwort; a lichen which, mixed with half its weight of black pepper, formed the pulvis antilyssus of the London Pbar. macopeia of 1721.
[PELTOBRYON. A genus of plants of the natural order Piperaceæ.]
[Peltobryou longifolium. A South American species, the fruit of which is there substituted for Long Pepper.]
[Peltobryon parthenium. A Brazilian species, used as a remedy in mucous discharges of genito-urinary organs, and in menorrhagia.]
[PELVIC. Of, or helonging to, the pelvis.]
[PELVIMETER (pelvis; $\mu$ ícpor, a measure). An instrument for measuring the diameters of the pelvis.]

PELVIS ( $\pi$ é $\lambda \boldsymbol{u}$, a basin). The basin, or the large bony cavity which terminates the trunk inferiorly, containing the urinary and genital organs, and, in women, the utcrus.
[Pelvis of the kidncys. An irregularly oval, membranous sac, oecupying the posterior fissure of the kidncy. It is formed by union of the infundihula, from which it receives the urine, and conveys that fluid to the urcter.]
[PEMMICAN. Muscular flesh, eut in thin strips, thoroughly dried and rednced to powder, and then mixed with melted fat.]

PEMPIIIGUS ( $\pi \dot{\varepsilon} \mu \phi \downarrow \xi, \pi i \mu \phi \imath \gamma o s$, a small blister or pustule). Febris vesicularin, ampullosa, vel bullosa. A term npplicd by Sanvages to vesicular or bladder fever, a disease belonging to the order Bulla of Bateman. A form of this disense prevails among children in many parts of Ireland, where it is called white blisters, burnt holes, euting hive, \&e.
[PEN NA. A genus of plants of the uatural order Pencaces: Some of tho spe-
cies yield the peculiar vegetable prodnet Sirremenlla. Scc Sarcocolla.]

PBNICILLUS (dim. of peniculum, a brush). A tent, or pledget. Any thing which has its end divided like a painter's brush; in this sense the extremities of the vena porta have been termed poricilli.
PENIS. The uale organ of gencration, consisting of threc lengthened hodies, closely united to eaeh other, viz., the two corpora cavernosa and the corpus spongiosum.

PENNIFORM (penna, a feather or quill ; forma, likeness). Feather-shaped; a term applied to those muscles which have their fibres arranged on each side of the tendon, as the rectus femoris.

Semi-pcnniform. Half-feather-shaped; the designation of those muscles whieh have their fihres arranged on one side of the tendon, as the peronæus longus.

PENNYROYAL. The common name of the Mentha pulegium. Under the same naue, the Hedeoma puleginides is highly repated in North America as an emmenagoguc.
[PENNY-WORT. One of the common naines for Cntyletlon umbilicus.]

PENTANDRIA ( $\pi \dot{\varepsilon} \nu \tau \varepsilon$, five ; $\mathfrak{u} v \eta \eta_{p}$, a man). Having five stamens; the character of the fifth class of plants in Linnæus's system.

Pentagynia (nivre, five ; juvi, a roman). Hnving five pistils; an ordinal character in Linneus's system of plants.
[PEONY. Common uame for Pconia officinalis.]

PEPO. A gourd; a three-celled fleshy indehiscent fruit, with parictal placentr, as the cucumber.

PEPPER. The berries of the Piper vigrum. The hot acrid black papper of the shops consists of the herrics with the pulp adhering; the ohite pepper is the same thing, only the pulp is washed off hefore the fruit is dried. They yield a erystalline substance called piperin.

Long Peppor. The dricd female spikes of the Piper longum, composed of firmlyunited 1 -seeded drupes.
[PEPPERMINT. Common name for Mcutha pipcritr.]

PEPSIN ( $\pi i \pi r \omega$, to digest). A pcculiar animal principle scereted by the stomach, and present in the gastric juice. It is usually prepared by infusing the mucons membranc of the fourth stomach of the calf, which is known ns rennct.

PEPTIC ( $\pi$ errw, to ripen). Any substance which is digestible. Hence the term peppice, applied to medicines which promote digestion.

PER-. A Latin preposition, which, when prefixed to tho name of an oxide, indicates the presence of the greatest quantity of oxygen which can exist in a compound of such materials, as in peroxide.

Bi-per-. This double prefix is used when there is more than ono atom of oxygen in the base, as well as an uncqual number of atoms of acid and hase, as in the bi-per-sulphate of mercury, where bi indicates the presence of two atoms of acid, and per that the mercury is in the form of a per-oxide.

PER-ACUTE. Very sharp; a term applied to diseases when greatly aggravated, or attended hy considerable inflammation. $P e r$ is an intensive particle.
[PERCHLORIDE OF CARBON. An erroneous name sometimes applied to ehtoroform.]

PERCOLATION (percolo, to strain through). Filtration; the passing of fluids through a strainer [or percolator].

PERCUSSION (percutio, to strike). The aet of striking upon the chest, ahdomen, \&c., with the view of producing sounds by which the state of the subjacent parts may he ascertained. This is distinguished into-

1. Direct percussion, which consists in striking the surface of the chest. \&c., with one, two, or more fingers, and ohserving the degree and quality of the sounds produced ; and,
2. Mediate percussion, which differs from the former chiefly in the employment of a small plate of ivory, called a pleximeter, a piece of leather or caoutchouc, or the second phalanx of the forefinger of the left hand; one of these is placed on the part to he examined, and struck with the pulpy ends of the middle and forefinger of the right band.
3. The scale of sounds which may be distinguished on the surface of the hody are tho following, heginning with the dallest: - the femoral, the jecoral, the cardial, the pulmonal, and the stomachal, the clearest of all. Besides these, therc are the osteal, the humoric (when organs are filled with air and liquid), tho bydatic,
and-
4. The bruit de pot fêlé, a sound heard on percussing over a cavity near the surfaee of the lungs, usually at the upper part of the chest. It resenihles the noise of a crackel carthenware vessel, when struck with the finger.

PERE'NNIBRA'NCIIIA (pereunis, perpetual; branchice, gills). A desiguation of the fish-like batrachin, or amphibions animals which retain moro or tess of the
branchial apparatus through the whole period of their life, as the proteus, the siren, \&c.

PERFOLTATE (per, through; folium, a leaf). A designation of a leaf, which, by union of its margins, encloses the stem, which thns secms to pass through it.

PERFORANS (perforo, to pierce through). A designation of the flexor digitorum profundus, from its perforating the tendon of the flexor sublimis.

Nervus perforans Casserii. Another name for the musculo-cutaneus, or external eutaneous nerve.

PERFORATION (perforo, to pierce). A term employed to denote a solution of continuity, from disease of the parietes of a hollow organ, as of the intestines.

Spontaneous perforation is that which occurs without having heeu preceded hy any pereeptible modification of function, local or general.
[PERFORATOR. An instrument for opening the bead of tho child in utero.]

PERFORATUS (perforo, to hore through). Bored through; a term applied to-

1. The coraco-brachialis musele, from its heing perforated by the cxternal cutaneous nerve, as discovered hy Casserius.
2. The flexor digitorum communis sublimis muscle, from its tendon being perforated by the tendon of the flexor profundus.

PERI- ( $\pi \varepsilon \rho i$ ). A Grcek preposition, signifying aronnd, \&c.

1. Pcri-anthium (avyos, a flower). A collective term for the floral envelopes, when it is not evident whether they consist of ealyx and corolla, or of calyx only, as in tulip.
2. Peri-cardium (kapoia, the beart). A fibro-serous membrane which surrounds the heart.
3. Peri-carditis. Inflammation of the pericardinm. Cerditis is inflammation of the muscular substance of the heart.
4. Peri-carp (кaprós, fruit). That part of a frnit which constituted the ovarium of the pistil. It consists of an outcr coat, or cpicerp; an inner coat, ealled cndocarp, or putamen; and an intermediatc substanec tcrined mesocarp, and, when of a fleshy consistence, sarcocarp.
5. Peri-chretial ( $\chi$ aitn, scta). A term applied to the pecnliar leaves which surround the basc of the scta, or stalk, of mosses.
6. Pcri-chondrium ( $\chi$ óvopos, cartilago). The synovial meubranc which eovers cartilage.
7. Peri-cranimm (xpaviov, the sknll). The periostemm or membrane which covers the bones of the cranium.
8. Peri-didymis ( $\delta i \delta u \mu 01$, twins). The serous eoat which covers the testes. By the older anatomists it was confounded with the fibrous coat, under the name of tunica vaginalis, or clytroütles.
9. Peri-glottis. A mass of small glandular grains at the lower part of the anterior surface of the epiglottis.
10. Peri-goninm (yovì, generation). A term synonymous with peri-anthium, and denoting the parts which surround the organs of generation, viz., the floral envelopes.
11. Peri-gynous ( $\gamma v v \eta$, a woman). That condition of the stamens of a plant in which they contract adhesion to the sides of the calyx, as in the rose.
12. Peri-lymph. See Fluid of Cotunnius.
[13. Peri-mysium. ( $\mu v \mathrm{~s}$, a muscle). The areolar sheath which surrounds a muscle or its fasciculi.]
13. Peri-ncum (valu, to flow). The inferior part of the trunk of the body, in which are situated the two great excretory outlets, the urethra and the anus.
14. Peri-nephritis (véфpiris, inflammation of the kidney). Inflammation of the peritoneal covering of the kidney.
[16. Périnève. A term given by M. Rohin to n structure investing the primitive hundles of tho nerves, forming an uninterrupted sheath, which extends from the point of exit of the nerves from the dura mater or the ganglia, to the peripheral terminations of the nerve-tuhes; it is absent from the hrancbes of the sympathetic, which present a grey colour and soft consistence, hut exists in those which are white.]
15. Peri-orbita. The fibrous membrane which lines the orbit of the eye.
16. Peri-ostenm (joriov, a bone). The membrane which surrounds the hones. In the recent state of the teeth, their root is surrounded by a prolongation of the mucous membrane of the mouth, called the alveolo-lentar periosterm.
17. Jeri-ostitis. Inflammation of the periosteum, or investing membrane of the hones.
18. Peri-astosis. A tumour formed by swelling of the periosteum.
19. Peri-pherie impnlses. A term applied by Nammann to the influence which is transmitted from the nerves of any particular part of the body to the centres of the nervous system, i. e., the brain and the spinul cord. On the other hand, by central impulses is meant the inflnence which is conveyed back again from those eentres to the nerves of a particular part.
20. Peri-phery ( $\psi$ ipw, to carry). The
circumference or external surface of a body.
21. Peri-pncumonia ( $\pi \nu$ vúpev, the lungs). Peripneumony; infanmation of the parenchyma of the lung. The term is synonymous with puenmonia, although it would secm to inply either a more intense degree of the disease, or a more superficial affection.
22. Peri-pnermonia notha. Spurious or bastard peripncumony; a form of bronchitis, termed by Dr. Badham, asthenic. It is sometimes called catarrhns suffocativus; and, by Frank, cutarrhus broneliorum.
23. Peri-sperm ( $\sigma \pi \hat{\varepsilon} \rho \mu \pi$, seed). Another name for the albumen or the substance lying hetween the integuments and the embryo of some seeds.
24. Peri-staltic ( $\sigma \tau i \lambda \lambda \omega$, to contract). A term applied to the vermicular contractions of the intestines upon themselves. This motion is sometimes called peristole.
25. Peri-staphylinns (araфu入̀े, the aru1a). A term applied to two muscles of the palate; the externus, or the circumflexus palati; and the internus, or the levator palati mollis.
26. Peristaphylo-pharyngens. The first or upper portion of the palato-pharyngeus muscle; the second or middle portion is termed pharyngo-staphylinns; the third or lower portion, thyro-8taphylimus.
27. Peri-stomia ( $\sigma=\delta \mu a$, the mouth). The membrane, or series of tooth-like processes, which closes the orifice of the theca of mosses.
28. Peri-stroma ( $\sigma \tau \rho \omega \overline{\mu a}$, a cushion). Literally, rich tapestry-work, wherewith floors or heds were spread. This term is prohably applied, hy Pecquet, to the mucous or villous cont of the intestines, called by Bilsius muscum villosum; hy Bartholine, erusta nembranosa; and by De Granf, ernsta vermicnlaris.
29. Peri-thecium ( 0 пкт, a theca). The hag of fructification in some fungi; the organ in which some asci are immersed.
30. Peri-toncum (rive, to extend). The scrous membrane which lines the interior of the abdomen, and invests all the riscera contained therein.
31. Peritoncal fever. Puerperal, or child-hed ferer, so called from its occurring frequently after lahour.
32. Peritonitis. Inflammation of the peritonaum. It is acute, or chronic.
33. Pevi-etropal (rpint. to turn). A term applied to the embryo of the seed when it is directed from the axis to the horizon.
 ceccus). Inflammation of the peritoneal eovering of the ceecum.
34. Peri-zoma ( $\zeta \omega v p \mu$, to gird). Litcrally, a girdle; a truss. It has beon used to designate the diaphragm.

PERIOD. The interval between the paroxysus in intermittent fever.

PERIODIC ACID. Hyperiodic acid. An acid eonsisting of iodine and oxygen.
[PERIODICITY. The aptitude of certain physiological and pathological phenomena, in health and disease, to recur at particular periods, after longer or shorter intervals, during which they completely cease. Diseases whieh manifest this character are termed Periodical.Nysten.]
[PERIODOSCOPE (TEpLoios, a period; oкот $\varepsilon \omega$, to view). An instrument devised by Dr. Tyler Smith for calculating with readiness the periodical functions of the female.]
[PERIPLOCA INDICA. (Willd.) One of the systematic names for Hemidesmuts Indicus.]

PERKINISM. A mode of treatment introduced hy Perkins, of America, and consisting in the application to diseased parts of the extremities of two needles made of different metals, called by him metallic tractors.

PERLATE ACID. The name given by Bergman to the acidulous phosphate of soda; the phosphate of soda had been previously called sal mirabile perlatum. It was named by Guyton-Morveau, ouretic acid.

## PERMANENT INK. See Ink.

PERMANENT WHITE. Sulphate of baryta. At a high temperature it fuses into an opaque white enamel, which is used in the manufacture of fine earthenware, and as a pigment.
[PERMANGANATE OF POTASSA. Hypermanganate of Potassa. A salt recently extolled for its efficacy in diabetes, but its value is donbtful.]

PERMEABILITY (per, through ; meo, to pass). That property of certain bodies by which they admit the passage of other bodies through their substance. The cellular tissue of plants is permeable hy fluids, though at the same time imperforatc.
[PERNAMBUCOWOOD. Brazil Wood.]

PERNIO ( $\pi$ é $\rho v a$, or $\pi$ T $\hat{\rho} \rho \sqrt{2}$, the heel). A chilblain, especially one on the hecl; the effect of inflummation caused by cold.

1. Pernio simplex. Simple chilblain, in which the cuticle is unbroken.
2. Pernio exulceratus. Kibe; accompanied with ulceration.

PERONE' ( $\pi \varepsilon \rho \delta \nu \eta$, a brooch ). Tho fibula, or small bone of the leg ; so called from its resembling the pin of a brooch.
[1. Peroneal. Belonging to the fibula.]
2. Pcroncus longus. A muscle placed at the outer part of the leg, and under the sole of the foot.
3. Peroncus brevis. A muscle having the same form as the preceding, but not so long. They are both cxtensors of the leg.
4. Peroneus tertius. A muscle which appears to he a part of the extensor longus digitorum, but may be considered as analogous to the flexor carpi ulnaris of the fore-arm.
5. Nervus peroneus. The external popliteal or peroneal nerve. The internal popliteal is the tibialis.

PEROXIDE. A term applied in chemical nomenclature to denote the highest degree of oxidation, of which a compound is capable. See Per.

PERRY. A fermented liquor made from pears, as cider from apples.
[PERSEA. A genus of plants of the natural order Lauraceæ.]
[Persea gratissima. Avocado Pear. A West India species; the seeds of the fruit are very astringent, and have been used in diseases of the howcls and in menorrhagia; and the leaves and buds are employed as emmenagogues, carminatives, vulnerarics, antispasmodics, \& c.]

PE'RSIAN BERRIES. Grains d'Avignon. The berries of the Rhamuns tinctoria, which yield a yellow colouring matter, called rhannine.

PERSICA VULGARIS. The peach; a rosaceous plant of Persia, the drupaceous fruit of which has been termed nalun persicum.
Persica lavis. The nectarine; distinguished from the peach by its smooth rind.

PERSICUS IGNIS. Persian fire; a term applied by Avicenna to that speeies of carbuncle which is attended with pustules and vesications.
[PERSIMMON. Common name for the Diospyros Virginiana.]
PERSISTENS FEBRIS. A regular intermittent, the paroxysms of which return at constant and stated times.

PERSISTENT. A terin applied to those parts of plants which do not fall at the usual period, as the corolla of campanula, the calyx of pronia See Caduсоия.
PERSONATE (persona, a mask). Masked. A terin applicd to that form of the gamopetalous corolla, in which tho limb is unequally divided: tho upper division, or lip, being arched; the lower prominent, and pressed against it, so that the whole resenibles tho mouth of a gaping animal, as in antirrhinum. Sce Riin. gent.

PERSPIRATION ( perspiro, to breatho threugh). The watcry vapour whieh is constantly passing off through the skin, is termed insensible perspiration; when it is so excessive as to eollect in drops upon the surface, it constitutes sensille perspiration, or sweat.
Pcrspiratory ducts. Spiral tuhes which commence apparently in the corium, proceed upwards between the papilla, and terminate by open pores upon the surface of the cutiele.
[PERTURBATIO (perturbo, to disturb). Perturbation. Disturbance of the natural progress of a disease by therapeutic agents. Perturbating medicine, a term applied to a mode of treating disenscs by very active means, fitted to change their natural course or arrest their progress.]

PERTUSSIS. The name first given by Sydenham to hooping-eough, so ealled from the peculiar whooping sound which it occasions. See Hooping-congh.
[PERUVIAN BALSAM. A fragrantresinous substance ebtained from Myroxylon Peruiferum.]
[PERUVIAN BARK. The bark of different species of Ciuchona.]
[PERUVIAN CALISAYA. The bark of Cinchona scrobiculata var. Delondriana, Weddell.]

PE'RUVINE. A neutral, light, oily body, ohtained in the distillation of Peruvian halsam.
[PERVIGILIUM ( per, much; vigilo, to wateh). Wakefulness.]

PES. A foot. Hence, the term is applied to parts resembling a foot.

1. Pes anscrinus. The goose's foot: the name of a plexus of nerves formed by the facial, or portio dura of the seventh pair, on the side of the face, and somewhat resembling the spreading foot of a palmipede.
2. Pes accessorius. A swelling on the outer wall of the cornu ammonis, somewhat resembling the hippocampus major, but of smaller size.
3. Pes hippocampi. The extremity of the hippocaupus major, which has heen likened to the eluh-foot of some animal, from its presenting numerous knuckle-like prominences on its surface.

PESSARY ( $\pi \varepsilon \sigma \sigma \delta$, a small stone). An instrument made of wood, \&c., formerly cmployed to keep medicinal substances applied within the pudenda; but now used for preventing prolapsus of the uterus or vagina, or keeping up a particular kind of rupturc. The various forms of the pessary are the bung-shaped, the conical, the elytroid
or sheath-like of Cloquet, the cup-and-ball, and the ring pessary.
[PESTLLFNJIIAL (pestis, plaguc). Of the nature of plague; diseases of an epidemic and very fatal eharacter.]

PESTIS (perdo, to destroy). A term applied to any thing pernicious, as plagae, calamity, ruin, destruction: it is feldom used hy good authors to signify infectious disorders. Pestilentia denotes infeetious air, or a contagious disorder.

PETAL (nitadoy). A flower-leaf; the name of a division of the corolla. See Monopetala.
Petaloild (eroos, likeness). That which resembles a pctal, as applied to the expanded filament of certain stamens, as of nymphæa, \&e.

PETECHIA ( petechio, Italian, a fleahite). A speck or spot resembling a fleahite. These spots constantly oceur in certain epidemic fevers, which were consequently described under the term petechial fever.

Petechice sine febre. A term applied hy various authors to purpura simplex, or petechial scurvy; also ealled hœmorrica petechialis, land-scurvy, de.

PETIOLE. The foot-stalk, or leaf-stalk, of a plant. The apex is the part inserted into the leaf; the base, that which comes from the stem. Hence-

Petiolate. A term applied to leares formed with a stalk, whether long or short, simple or compound.

PETRO- ( $\pi \dot{\varepsilon}$ rpa, a rock). A term relating to the os petrosum, or petrous portion of the temporal hone, as petro-occipital, petro-sphenoïdal, de.
Pet ro-salpingo-staphylinus. An unwieldy designation of the levator palati mollis, from its arising from the petrous process and the Eustachian tube, and heing inserted into the velum palati.

PETROLE'UM (nítpa, a rock; è̀alov, oil). Literally, rock oil. Barbadoes tar; a hituminous liquid, named from its oozing out of roeks.

Petrolenc. According to Bonssingault, hitumens may be considered mixtures of two bodics; viz., a liquid to which he has given the name of petrolenc, and a solid, whieh he terms asphattene.

PETRO'SAL (petrosus, rockr). A term applied to the ossificd part of the car-ease of the eod, in which it is unusually large.
[PETROSELINUM. Ph. IV.S. Parsley root. The root of the Petroselinam sativum (IIofunan), Apium Petroselimum (Willd.), an infusion of which is used as a diuretie.]

PETUNTSE'. The aame of a species
of fellfspar，used as the vitrifying ingre－ dient in the percelain of the Chivese．
PEUCE＇DANINE．A very aerid erys－ talline principle derived frolu tbe root of the Pencedanum odicinale，or Ilog＇s fennel．
PE U＇CILE（ $\pi \varepsilon v ์ \wedge \eta$ ，a fir－tree）．A liquid obtained by the action of lime upon the liydrochlorate of oil of turpentine．

PEWTER．A factitious metal，the basis of which is tin ；it is commonly called étain in France，where it is generally confounded witb true tin．Tbere are three kinds，dis－ tinguisbed by the names of plate，trifle， and ley－peicter．

PEDER＇S GLANDS．Plexus intesti－ nales．The clusterel glands of the intes－ tines，or aggregatæ，first discovered by Peyer．Each gland is surrounded by a circle of minute tubes，ealled corona tubu－ lorum．See Brumner＇s Glands．

PHACIA（фakia，a lentil seed）．The Greek term for lentigo，or freckles．

PHENOGAMOUS（ $\phi$ aiv，to show； үd́uoc，nuptials）．A term applied to tbose plauts in whicb the sexual organs are visi－ ble．All others are called cryptogamons．

PHEORE＇TINE（ $\varphi$ atoेs，red brown；$\rho \eta$－ Tivy，resin）．Brown resin of rhubarb．See Ery，horetine．

PIIAGEDANA（ $\phi$ áy $\boldsymbol{F}$ ，to eat）．An ulcer which spreads，and，as it were，eats away the flesh．

PHALANX（фádayそ）．A battalion in the Macelonian armies，composed of $16,000 \mathrm{men}$ ．Inence the term phalunges is applied to the bones of the fingers and toes，from their regularity．
［PHALARIS CANARIENSIS．A plant of the natural order Gramineæ，the seeds of wbich were formerly esteemed medi－ einal，but are now userl only for emollient cataplasms and as food for Canary birds．］

PHANEROGAMOUS（（avepds，mani－ fest；yípos，nuptials）．A term applied to tbose plants in which the reproductive organs are visible．It is synonomous with phenngamous．

PHANTASM（ $\phi$ avtá̧ $\omega$ ，to make ap－ pear）．A perception of sensation in the organs of the senses，dependent on inter－ nal causes，and not excited by cxternal objects．See Mallucination．
PIIARBI＇TIS NIL．A convolvulace－ ons tropical plant，with purgative seeds， which may be substituted for jalap．
PIIARMACEUTICS（фápuaкov，a mo－ dicine）．That branel of mediciuc which consists in eompounding drugs．
Plla RMaco＇logy（pripuraov，a poison or medicine ；$\lambda$ dous a description）．Dfaterin merlica．That braneb of Acology which relates to medicines．Generul pbarmaco－
$\operatorname{logy}$ treats of medicines generally，and embraces the subjects belonging to genc－ ral pharmacodynamies．Speeicl pharma－ colugy treats of medieines individually． Tbesc are arranged by Pereira into two groups，the inorganic and the organic； the former is subdivided aceording to the chemical relations of its members，the latter according to its external，or，as they are usually termed，natural history characters．

PHARMACON（фа́рнакоv）．A poison． A medicine，or drug．

1．Pharmaco－dynamies，（dúvauts，power）． That branch of Materia Mediea，which treats of tho yower or cffects of medicines．

2．Pharmaco－gnosy（ $у$（yvต́oк $\omega$ ，to know）． That branch of Materia Medica which treats of the natural and chemieal history of unprepared medicines or simples．It is also termed pharmacography，pharmaco－ mathia，\＆c．

3．Pharma－cologia（ $\lambda 6$ yos，description）． The method of administering medieines．

4．Pharmaco－pœia（ $\pi ⿰ 丿 ㇄$ tí $\omega$ ，to make）．The process of preparing medicines．The term is now used to denote a standard code of medicine．
5．Pharmaco－pola（ $\pi \omega \lambda \varepsilon{ }^{\prime} \omega$ ，to sell）．A seller of drugs；a druggist．

PHARMACY（фірдакоу，a drug）．The application of chemical，and to a certain extent of physical，knowledge，to the pro－ paration of medicinal substances．

PHARYNX（ $\phi$ ápuy $\xi$ ，the throat）．A musculo－membranous bag，situated at the baek part of tbe mouth，leading to the stomach．
［1．Pharyngeal．Relating to the pha－ rynx．］

2．Pharyngitis．Inflammation of the pharynx．See Cynanche．

3．Pharyngotomy（тонウ̀，section）．The operation of cutting into the pharynx，for the purpose of extracting any foreign body．

4．Pharyngotomus．An instrument，in－ vented by Petit，for scarifying the tonsils， and opening abscesses about the fauces．

5．Pharyngo－staphylimus．The second or middle portion of the palato－pharyngeus．
［PHASIANUS GALLUS．Tho syste－ matie name for the columon dunghill fowl．］
［PHELLANDRIUM AQUATICUM． Fine－leaved water－hemloek．An European Unbelliferous plant，tho sceds of which are said to be stimulant and narcotie，and they have been given in asthma，interuit－ tent fever，dyspepsia，atonio uleers，\＆e．］
［PHENE．Benzole．Benzine；Benzeno； hydruret of Placnyle．］
［PIIENOMENON（фatvopat，to appear）． Any apereciable change which takes place
in an organ or function．Any remarkable or unexpeeted oceurrenec．］

PHE＇NYLE（ $\phi \neq \nu \eta$ ，the osprey，a chemi－ eal synonyun of benzole ；and $u \lambda \eta$ ，mat－ ter）．The name of a radieal hydroearbon． Carbolie aeid is the hydrated oxide of phenyle．
［PHENYLIC ACID．Carbolic acid．One of the products of the distillation of the oil of coal tar．］
［PHILADELPHIA FLEABANE．Eri－ geron Philudelphicum．］

PHILLYRIN．A snbstance obtained from the bark of the Phillyrea media and latifolia．

PHILO＇NIUM．Philo＇s Antidote．A fa－ mous opiate electuary，invented by Philo， of Tarsus，in the time of Augustus．Hence the term is sometimes applied to a modern eonfection，as Philonium Londincuse，for the Confection of Opium．

PHILOPROGE＇NITIVENESS．A term in Phrenology，indieative of affection towards offspring．It is eommon to man with the lower animals．Its organ is seated at the back of the head，imme－ diately above Amativeness，extending to an equal distance on each side of the me－ dian line．

PIIILOSOPHICAL CANDLE．A bot－ tle fitted with a eork，through which a slender glass or metallie tube passes．On introducing the materials for generating hydrogen，and fixing the cork and tube air－tight，a jet of hydrogen is diseharged， which may be ignited by the applieation of a burning body，or an electric spark．

PIIILTRE（ $\psi i \lambda \tau \rho o v$, from $\phi_{i} \lambda i ́ \omega$, to love）． A love－potion；a medicine supposed to in－ spire love．

PHIMO＇SIS（ $\phi$ р $\mu \bar{s}$ ，a muzzle）．Capis－ tratio．An affeetion of the prepuee，in Which it eannot be drawn back，so as to uneover the glans penis．This is tbe in－ carcerating phimosis of Good．Compare Paraphimosis．
［PHLEBISMUS（ $\phi \lambda$ 立 $\psi$ ，a vein．）A term devised by Marshall Hale to designate an arrest of the flow of blood through the vcins．］

PHLEBI＇TIS（ $\phi \lambda \dot{\varepsilon} \psi$ ，a vein）．Inflam－ mation of the veins．It is distingnished by a hard，eord－like，tender line，pursuing the conrse of a vein or reins，from an in－ cision or wonnd．It is termed－

1．Suppurative，and diffiused；and at－ tended by typhoid fever，and abseesses．

2．Suppurative，and adhesive；and ac－ eompanied by distinet abseesses in the eourse of the inflamed vein，with pro－ traeted fever．

PHLEBOLITE（ $\phi \lambda \dot{\psi} \psi, \phi \lambda \varepsilon \beta \delta_{s}$ a rein； $\lambda i \theta o s$, a stoue）．［Phlebolitbe，rein－stone．］

A small ealeareous concretion found in the carity of the veins．

PHLEBOTOMY（ $\phi \lambda \stackrel{\sim}{2} \psi$ ，a vein；rou ${ }^{2}$ ， section）．Vencesectio．The opening of a vein，for the purpose of blood－letting．

PHLEGMA（ $\phi \lambda i \not \gamma \mu a)$ ．Phlegm；a thick， tenacious matter seereted in the lungs．

1．Phlegm－agogues（üy $\omega$ ，to exclte）．Tbe ancient name of purgatives，which pro－ duced glairy evaeuations，from excitement of the mucous follicles．

2．Phlegmatic．A term applied to tbe pituitous temperament．Sce Temperament．

3．Phlegmo－rrhagia（＇ṕryvopt，to burst fortb）．Profuse pituitous secretion．

4．Phlegma，in Chemistry，denotes a watery distilled liquor，as distinguished from a spirituous liquor．Hence the term dephlegmation signifies the depriving any liquid of its superfluous water．
［PHLEGMASIA（ $\varphi \lambda \varepsilon \gamma \omega$ ，to burn．）In－ flammation．］

PHLEGMASIA DOLENS（ $\psi \lambda \varepsilon \hat{\varepsilon} \mathrm{F} \omega$ ，to burn）．Puerperal tumid leg；an affection depending on inflammation of the iliae and femoral veins．It has been termed oclema lactenm，hysteralgia laetea，metastasis lactis， ecchymoma lymphatica；by Dr．Cullen， anasarea serosa；and by Dr．Lee，crural phlebitis．The term consists of a Greek substantive and a Latin adjective，and de－ notes painful inflammation．

PHLEGMASL天（ $\phi \lambda \varepsilon ́ \gamma \omega$ ，to burn）．A general term used by Cullen，Saurages， \＆e．，for local inflammations；＂bnt，as phlegmasia and phlegmatic import，in me－ dieal language，a very different and almost an opposite idea，＂Dr．Good prefers the term phlogotica，derived from the same root．

PHLEGMON（ $\phi \lambda \varepsilon \dot{\varepsilon} \gamma \omega$ ，to burn）．A tense， painful，red，circumseribed swelling，raised more or less abore the level of the sur－ rounding integuments，attended by a sense of tbrobbing，and a tendeney to suppnra－ tion．See Phyma．
［PHLEGMONOUS（zidos，resemblanee）． Relating to or resembling phlegmon．］
［PIILOGISTIC（ $\phi \lambda o \gamma i \zeta \omega$, to burn．）In－ fanmatory．］

PHLCEUM（ $\phi$ 入oods，bark）．Pcridermis． The name given by Mohl to one of the layers of bark，the cpi－phlowm of Link． Sec Bark of Plants．

PIILOGI＇STICATED AIR．The name given by Priestly to nitrogen，or the me－ phitic air of Rutherford．

PIILOGISTON（ $\phi \lambda i \gamma \omega$ ，to burn）．A name given by Stabl to an imaginary sub－ stance，whicla was the principle of inflam－ uability．Combustible bodies were sup－ poscd to eonsist of an ineombustible base， united to this phlogiston，which escaped
during combustion. This process is now attrihuted to tho coubination of combustiblo matter with oxygen, which is hence called a supporter of combustion.

PIILOGO'SIS ( $\varphi \lambda 0 \gamma \delta \omega$, to inflamc). An inflammation; a flushing. The first genus of the order phlegmasice in Cullen's noso$\log y$; it is distinguished into simple phlegmon and erysipelas, and is succceded hy abscess, gangrene, or sphacelation.

PILLORIDZIN ( $\varphi \lambda$ oı̀े, hark; $p \iota \xi a$, a root). A substance discovered in the bark of the root of the apple, pear, cherry, and plum tree. It has heen considered as crystallized salicin plus two atoms of oxygen.

1. Phloretin. A compound obtained by boiling a solution of phloridzin with any acid, except the nitric and chromic.
2. Phlorefic acicl. Obtained by the action of nitric acid on phloridzin.
3. Phlorizein. A red suhstance obtained by the joint action of air and anmonia on humid phloridzin.

PHLYCTENA ( $\phi \lambda$ र́xfaiva, a vesicle, from $\varphi \lambda$ रí $\zeta \omega$, to be full, or hot). A vesicle containing ichorous fluid; said to be synonymous with the pustule of Celsus.

PHLYCTENULA (dim. of phlyctana). A watery vesicle of the ciliary margin.

PIILYSIS ( $\phi \lambda \dot{\jmath}\} \boldsymbol{\omega}$, to be hot). A term formerly employed to denote a cutaneous eruption filled with any kind of fluid, generally ichorons, or vesicular pimples. The term phlyctana is now used.

PHLYZACIUM ( $\phi \lambda \dot{v}$ दे $\omega$, to be hot). A pustule, commonly of a large sizo, raised on a hard circular base, of a vivid red colour, and succeeded by a thick, hard, darkcoloured scab.
PHOCENIC ACID (phocana, a porpoise). Delphinic acid. A volatile acid contained in train oil or seal oil, and in the berries of Viburnum opulus.

Phocenin. A peculiar fatty substance contained in train oil or seal oil, mixed with clain.
PHENICIN (фoiv\}, purple). Indigopurple; supposed to be a hydrate of indigo, with two equivalents of water.
[PLIONATION ( $\phi \omega \%$, the wice). Tho phenomena which concur to the production of the voice.]
[PHONICS ( $\phi \omega 1 \eta$, sound.) A term synonymous with acoustics, denoting the doctrine of sound. The phenomena of direct, refliceted and refracted sound havo given rise to the three corresponding ternis of phonics, cataphonics, and diaphonies.]
PIIORANTIIIUM ( $\phi \dot{\rho} \rho \omega$, to bear: ¿ "LDOos, a flower). Tho term applied by Riclard to that form of the receptacle in planis, which is not fleslyy, but is surrounded by an involucrum, as in Composita. It is
also termed clincuthium, and moro commonly thalemus.

PHOSGENE GAS ( $\phi \tilde{\omega} s$, ligbt; $\gamma \varepsilon v v \alpha ं \omega$, to produce). Chloro-carbonic acid gas; a compound of chlorine and protoxide of charcual. It is named from the peculiar power of the sunbeam in effecting this combination.

PHO'SPHAM. The name givon by Gerbardt to nitride of phosphorus; a compound of phosphorus, nitrogen, and hydrogen.

PHOSHAS. A phosphate; a salt formed by the union of phosphoric acid with a salifiable base.
[1. Phosphas Ammonic. Phosphate of Aminonia. The neutral tribasic phosphate of ammonia has been extolled by Dr. T. H. Buckler as a remedy for gout and rheumatism.]
2. Phosphas Calcis. Phosphate of Lime, or the cormu ustum of the pharmacopœia.
[3. Phosphas Ferri. Plosphate of Iron. A valuable chalybeate.]
[4. Phosphas Potassc. Phosphate of Potassa. The neutral tribasic phosphate of potassa, lately come into use as an alterative in scrofula and phthisis.]
5. Phosphas Sode. Phosphate of Soda. Tasteless purging salt, pre pared from bones and carbonate of soda. It was first discovered combined with ammonia, in urine, by Shockwitz, and was called fusible or microcosmic sult.

PHOSPHATIC DIATHESIS. A morbid state of the constitution, characterized by the formation of the phosphates of magnesia, ammonia, and lime. See Calculus.
[PHOSPIENE ( $\phi \tilde{\omega} s$, light; and $\phi$ aivw, I cause to appear). The annular luminous appearance caused by abrupt pressure on the eyeball, behind the line of juncturo of the cornea and selerotica.]

PHOSPHITE. A salt formed by the union of phosphorous acid with a salifiable base.

PHOSPHORESCENCE ( $\phi \tilde{s} s$, light; $\phi \hat{\rho} \omega$, to carry). A term applied to the luminous appearance of tho sea, especially in tho track of sailing vessels, oceasioncd, according to Meyen, 1. by mucus dissolved in the sea-water; 2. by animals covered with a luminous mueus, as meduse; and, 3. by animals possessing phosplorescent organs, as oniscus fulgens. Seo Soler Phosphorus.

1IIOSPHORUS ( $\varphi \tilde{\omega} s$, light; фipw, to bring; so called from its luminous appearanco in the dark). A yellow, waxy substance, originally prepared from urine, and afterwards from hones.

1. Gride of phorphorws. A rod matter,
ohtained by buming phosphorus in air or oxygen.
2. Hypo-phasphorous acid. An acid obtained by the action of water upon the phosphuret of barium.
3. Phosphorous acid. An acid produced in the form of a white volatile powder, by the slow comhustion of pbosphorus. Its salts are called phosphites.
4. Phosphoric acid. An acid ohtained in the form of whito flakes, by igniting phosphorus under a large bell jar. Its salts are called phosphates.
5. Meta-phosphoric acid. A provisional name for a modification of phospboric acid (from $\mu \varepsilon \tau a$, , together with), implying phosrhoric acid and something hesides.
6. Pyro-phosphoric acid (тĩp, fire). A term indicative of plosphorie acid as modified hy lieat.
7. Phospho-mesitic acid. An acid obtained by Dr. Kane, by causing chloride of phospliorus to aet upon acetone.
8. Phosphuret. A compound of phosphorus with a comhustiblo or metallie oxide.
9. Phosphorus of Balduoin is the ignited muriate of lime; phosphorus of Canton, oyster-sbells, ealcined with sulphur; and phosphorus of Bulogna, the sulphate of barytes. These are consequeutly misnomers.

PHOSPHORUS BOTTLE. A contrivance for obtaining instantaneous ligbt. It is mado by stirring a piece of phosphorus about in a dry bottle witb a bot wire; tho phosphorus undergoes a partial combustion, and forms a bigbly combustible cont over the interior; a common sulphur mateh rubbed against the inside of the bottle, and drawn out into the air, immediatcly inflames.
PHOTOGENIC DRAWING ( $\phi \hat{\varsigma}, \phi \omega T o ̀ s$, light; yeváw, to produce.) [Photograpby.] A process of drawing by the netion of light introduced by M. Daguerro. See Daguerrcotype.

P II OTOMETER ( $\phi$ T̃s, $\phi \omega \tau \Delta s$, light; pítpov, a mensure). An iustrument for measuring the intensity of light. It consists of Leslie's differential thermometer with one of the balls blackened. The clear hall transmits all the light that fulls upon it, and therefore its temperature is not affected; the blate ball, on the contrary, absorbs all the light, and a corrosponding elevatiou of temperaturo takes place. The action of the photometer depends, therefore, on the beat produced by the absorption of light.
 Bos. fear). Intoletance of light, a symptom of retinitis, \& e.

FHOTOPSIA ( $\psi \omega \bar{s}, \phi \omega=\bar{o} s, ~ l i g h t ; ~ ช \psi ' s$, sight). Visus lucidus. Luminous vision, a symptoru of amaurosis. It is the marmaryye of Ilippocrates.

PIIRENES (plural of $\phi$ pinv, the mind). The diaphragm; so called because the ancients supposed it to he the scat of the mind. Henco the term-

1. Phrenic. A designation of the iateraal respiratory nerve, whiell goes to the diaphragm.
2. Phrenica ( $\phi$ piv, the mind). Phrenics; medicines which affect the rental faculties. They are exhilarants, inelriants, and narcotics.
3. Phrenitis. Phrensy; inflammation of the brain; a term under which have been confounded arachnoïditis and encephalitis. It constitutes the third genus of the order phlegmasice of Cullen.
4. 'Phrcno-logy (doyos, an account). A description of the mind; a science, introduced by Gall and Spurzheim, by which particular characters and propensities are indiented by the conformation and protuberances of the skull.
[5. Phreno-magnetibn. Phreno-mesmerism. A term applied to a pretended power of exciting particular phrenological organs in mesmerized persous.]

PHTA'LAMDDE. A crystalline solid, obtained by acting on anhydrous phtalic or naphthalic acid hy ammonia.

PHTALIC ACID. Another name for naphthalic acid, formed by the aetion of nitric acid on cbloride of naphthaline.

PHTHEIRIASIS ( $\varphi \theta \varepsilon$ cip, a louse). $P e-$ diculi cilinrum. Lice of the eyelashes.

PHTHISIS ( $\ddagger \theta i v \omega$, to corrupt). Consumption ; pulmonary consumption, or deeline ; emaciation of the body, and debility, attended with a cough, heetic ferer, and generally purulent expectoration. It is also termed marabmus, tabes pulmonalis, \&e.
PIITHOE ( $\phi \theta i v \omega$, to corrupt). Cleeration of tho lungs. This, and phthisis, are the two branches under which the Greek pathologists generally treated of consumption.

PIITIIORE ( $\phi$ oi $\omega$, to eorrupt). The name given by Urfila to the lypothetical radieal of fluoric acid.
PHYLLODILIM ( $\phi$ indov, a leaf). A term applied to the petiole of a leaf, when it is expanded and leafy, and tbe lamina abortive, as in many specics of Aeacia.
[PIIYLLANTHUS. A genus of plauts of the natural order Euphorbiacere.]
[1. Phyllanthus nimri. The root of this species is hitter nut nstringent, and is msed iu India in jaundice. The leares are a
good stomachic, and in Buzzil are considered a specific for diabctes.]
[2. Pleyllenthus urinaria. This is esteemed in Ceylon to be a powerful diuretic.]
[3. Phyllanthus virosus. The bark of this species is a powerful astringent.]

PIIY'MA ( $\phi \bar{\omega} \mu \pi$, froin $\phi \hat{v} \omega$, to produce). An imperfectly suppurating tumour, forming an abscess, ofteu with a core in tho centre; a genus of the tubercula of Bateman, including boils, carhuncles, \&c. See Phlegmon.

PHYSAGO'GA (фṽ $\sigma$, flatus; àywyos, earrying off). Physagogues or carminatives; medicines for dispelling flatulence and relieving colicky pain.
[PHYSALIN. The bitter principle of Physalis Alkekengi.]
[PHYSALIS. A genus of plants of the natural order Solanaceæ.]
[1. Physalis Alkekengi. Alkekengi. Common winter cherry. A species of Southern Europe, the berries of which are said to he aperient and diurctic, and have been given in suppression of urine, and other diseases of urinary passages.]
[2. Physalis flexuosa. An East Indinn species, the root of which is considered as dcohstruent and diuretic, aud to possess some alexipharmic powers.]
[3. Physalis somnifera. An Egyptian species, the root of which is narcotic.]
[4. Physalis viscosa. An indigenous specics, the berrics of which are said to be remarkahly diuretic.

PHYSCONIA ( $\phi v \sigma a ́ \omega$, to inflate). Inflation; a term suhstituted for tho megalosplanchnns, or hig bowel, of Hippocrates. Dr. Good uses parabysma, generally, for visceral turgescence.

PHYSETER MACROCEPHALUS
 Spermaceti Whale, characterized by its enormous head, which sometimes contains several tons of oily suhstance. On the death of the animal, this substance congeals into a white unctuous mass, from which are obtained-

1. Pure whale oil, in considcrable quantity, hy expression; and
2. Spermaceti, or cetaccum. [q. v.]

PHY'SICAL SALT. Tho name by Which sulphate of magnesia is known at Lymington, in Hampshire.

PHY'SIC NUT. The sced of the Curcus pargans and C. multifidus. The expressed oil, called jatropha oil, has heen lately imported under the namo of oil of wild cristor seeds.

PHXSICS ( $\phi$ viots, naturo). The science which is employed in observing the phenomena of nature. Tho term metr-phyysics denotes a science which is distinct from,
or beyourl physics, as, abstractions, accidents, relations, de.
[1IYSICK'S LYE TEA. Hickory ashes, oue quart; soot, half a pint; boiling water, Cong. j. Mix, and allow to stand for twenty-four hours, then decant. Au excellent antacid mediciue, higbly csteemed and used by the lato Dr. Physick.]

PHYSIOGNOMY ( $\phi$ viols, nature; $\gamma$ t$\gamma \nu \omega \in \sigma \omega$, to judge of). The study of the general character, or of diseased states, from tho fatures of the face, and the cast of the counteuance. Tho three principal traits obscrvablo in the counteuances of young children are-

1. The oculo-zygomatictrait, commencing at the greater angle of the eye, and lost a little below the projection formed by tho check-bone. This is the index of disorders of tho cerchro-nervous system.
2. The nasal trait, beginning at the upper part of the ala nasi, and embrncing in a scmicircle, more or less perfect, tho outer line of the orhicularis oris. A trait is sometimes observed towards the middle of the cheek, forming a kind of tangcut with the nasal trait, and sometimes constituting the dimple of the cheels; this is called the genal trait. These indicato disorders of the digestive passages and abdominal viscera.
3. The labial trait, beginning at the angle of tho lips, and lost on the lower portion of the face. It indicates diseases of the heart and air passages.
4. To these may he added the face grippée, or pinched-in fucc, a term applied by the French to the expression of the countenance in peritonitis; the features are altered, and appenr drawn up towards the forehead, which is wrinkled, and the nose pointed.

PHYSIOLOGY ( $\phi$ v́ols, nature ; $\lambda 6$ yos, $\Omega$ n account). The science which treats of the properties of organic bodies, animal and vegetable, of the phenomena which they present, and of the laws which govern their actions.
The animal economy consists of three systems, the Sanguineous, the Nervous, and the Mruscular; theso are the tripod of life. The rest of the nimal frame is a mere permanent scaffolding. Theso threo systems are intimately linked or mingled together. The nervous system and tho muscular systom would lose their propertics, if unsupplied hy arterial blood; the action of the nervous system is essentinl to tho due constitution, and the muscular to the due impulso and moveluent, of the hlood.
The Nervous Systeu consists of, 1. the Brain, tho sent of the soul, and, consoquently, of the pisychical faculties, of son-
sation, volition, judgment, \&e.; 2. the Spinal Marrov, or the nervous organ of all the acts of ingestion, and of expulsion, in the aniual cconomy, as roeently developed by tho labours of Dr. Marshall LIall;
und, 3. The Canylia, or the nervous organs of secretion, nutrition, \&c.

The Sanguineous System consists of 1. tho Blood itsclf, which may he eaid to circulate between-
I. The Organs of Ingestion,
i. e. chicfly

1. Tho Stomach.
2. The Ileum.
II. The Organs of Egestion, i. e. chicfly
3. The Kidneys.
4. Tho Colon.
5. Tho Lungs.
6. Tho Liver.
7. The Lacteals.
8. The Seeernent, and
9. Tho Ahsorhents.
10. The Nutrient Vessels.

2, the Heart, Arteries and Veins, which are mere machinery to effect,-3, the $C a$ pillary circulation, or the irrigation of all the tissues.

The Muscular System requires the continual influence of the nervous and sanguineous systems, without either of which its functions ceaso.

The whole machine is contrived for the ingurgitation and assimilation of food and of air, and for the absorption nnd oxpulsion of those matters become effete; from
the wholo of this process arises the evolution of animal heat, and perhaps, of the galranic agency.

The ultimate design of this machinery is to constitute an organ-the brain-which may he a temple, as it were, for the soul to inhabit, in its wonderful relation, through sensatiou, volition, \&c., with the external world.

A more comprehensive view of this subject is taken in the annexed tahle :-

## CLASSIFICATION.

## III. THE MENTAL FACULTIES AND THE PASSIONS.

IV. The Nervous System.
6. The Truo Spinal.
7. Tho Ganglionic.

PIIYSOME'TRA ( $\phi$ vona, to inflate; $\mu$ ítpa, the uterus). Inflation of the uterus; the presence of air witbin the uterus, or uterine tympany.

PHYTE U'MACO'LLA ( $\phi$ útevuu, a plant; ~ $\delta \lambda \lambda a$, jelly). Vegetable jelly.

PHYTOGRAPHY (фutdv, a plant; rpáq(e, to write). An account of the rules observed in describing and naming plants.
[PHYTOLACCA DECANDRA. Poke. An indigenons plant of the natural order Phytolacacco. The berries and root have a place in the secondary list of tbe U. S. Pb . They are emetic, purgative, and slightly narcotic. An ointment made by mixing $3 \mathbf{j}$. of tbe powdered root witb 3j. of lard, has becn used in psora, tinea capitis, \&ce.]

PHYTOLOGY ( $\psi v \tau o ̀ v$, a plant; $\lambda$ byos, an aceount). That branch of science wbicb treats of the forms and properties of plants.

PHYTOTOMY (фvтdv, a plant; тí $\mu \nu \omega$, to cut). Vegetable anatomy; the display of the tissues of plants by means of dissection.

PIA MATER. Meninx media. A vascular membrane, investing the wbole surface of the brain, dipping into its convolutions, and forming a fold in its interior, called velum interpositum. See Matres.

PIAN (a raspberry). Tbe name given, on tbe American coast, to Frambœesia, or Yaws. See Framboesia.
 A morbid condition of the blood, in which it contains uncombined fat.]

PICA (a magpie). Picatio. Depraved appetite. Craving for improper substances. See Malacia.

PICAMAR (in pice amarum). Tbe bitter principle of tar, and of all empyreumatie products.
[PICHURIM BEANS. The seeds of a Soutb American tree, supposed to be tbe Nectandra puchury. They bave the flavour of inferior nutmegs, and are esteemed in Brazil as useful in bowel affections.]
[PICRAMMIA. A genus of plants of the natural order Amyridacea.]
[Picrammia ciliata. A specics, the bark of which is said to be a good substitute for Cascarilla.]

PICRENA EXCELSA. Tbe Lofty Bitter-wood Tree; a Simarubaccous plant, Which yields quassia wood, sometimes called Jamaica quassia wood, in order to distinguish it from the wood of Quassia amara. It contains a bitter principle called quassite. The intenscly bitter timber furnishes the quassia chips of the shops.

PICRIC ACID. The last product of tbe action of nitric acid upon indigo or Welter's hitter.

PICRIN. A bitter substance, procured from Digitulis purpurea, and said to be identical with digitalin.

PICRO- ( $\pi$ เкро́s, litter). A Greek ad. jective, denoting litterness.

1. Picro-glycion ( $\gamma \lambda v \kappa \dot{s}$, sweet). Dulcarin. A principle obtained from the Solanum dulcamara, or Bitter-sweet, supposcd by Pelletier to be sugar combined with solanina.
2. Picro-lichenine. An intensely bitter erystalline compound, found in the licben Variolara amara. It is principally febrifuge.
3. Picro-mel ( $\mu i \lambda t$, honey). Literally, litter-8ioeet. The characteristic principle of bile, or bile-sugar.
4. Pier-toxic acid. Picro-toxin (то弓«кду, poison). A white, crystalline, intensely bitter substance, procured from Cocculus indicus. At first it was supposed to be an alkaline substance, and was called picrotoxic.

- PIGMENT ( pingo, to paint). Painters' colours. An artificial preparation, in imitation of any colour for painting.

PIGMENTUM NIGRUM (pingo, to paint). A dark brown substance, which covers the outer and inner surface of the choroid membrane. T'be absence of tbis substance in the Albino gives the red colour to the iris and the pupil.

Membrana pigmenti. A delicate membrane which retains the pigmentum in its place. Under tbe microscope it is seen to be composed of regular bexagonal plates, and resembles a tessellated parement.

PILARE MALUM (pilus, a hair). Trichiasis. Hair-disense; morbid organization or deficiency of bair.

PILE, GALVANIC. An apparatus for exhibiting tbe phenomena of galranism, and consisting of a pilc or column of metallic plates of zinc or copper, and dises of wet card, placed in succession to each other in the same regular order tbroughout the serics.

1. Pilc of Dc Luc. An "electrieal colunın," constructed of pieces of paper, silvercd on one side by means of silver leaf, and alternating with thin leares of zinc; the silvered surfaces of the paper dises peing always in the same direction.
2. Dry pilc. The inappropriate name of an arrangement of pairs of metallic plates, separated by lapers of farinaceous paste, mixed with comuinn salt. The apparatus evidently orres its effieaey to the mainture of the paste.
3. Secosidary piles. Piles formed sim.
ply of dises of copper and moistened card， placed alterately．These have no power of developing electricity by their own ac－ tion，but are capahle of receiving a chargc by being placed in the circuit of a power－ ful voltaic battery，and of thus acquiring， though in $\Omega n$ inferior degree，the properties of the hattery itself．

PILES．The common vernacular de－ signation of hæmorrhoids．See Hemor－ rhoids．

PILEUS．A cap．The uppermost part of an Agaric，resembling an umbrella in form．
PI＇LINE（pilus，a hair）．Impermeable spongio－piline．A kind of cloth，composed of a mixture of sponge and wool，felted together so as to form an even and soft fabric，and afterwards rendered waterproof by a coating of caoutchouc；employed as a substitute for poultices and fomentation－ cloths．

PILOSITY（ pilosus，hairy），A term applied to that kind of hairiness in which the hairs are long，soft，and erect，as in Daucus carota：

PILULA（dim．of pila，a ball）．A pill． A mass of a consistence sufficient to pre－ serve tho glohular form，yet not so hard as to he of too dificult solution in the stomach．
［The following are the officinal pills of the Ph．U．S．：
［Pilulce aloëд．Aloetic pills．Powdered aloes，soap，of each，$\overline{3} j$ ．Beat with water to form a mass，and divide into 240 pills．
［Pilulee aloës et assafotidce．Pills of alocs and assafoetida．Powdered alocs， assafoetida，soap，of each，$\overline{\tilde{亏}} \mathrm{ss}$ ．Beat with water to form a mass，and divide into 180 pills．
［Pilnloe aloës et myrrha．Pills of aloes and myrrh．Ponvdered aloes， $\mathrm{Z}_{\mathrm{ij} .}$ ；pow－
 sufficient quantity．Beat together to form a mass，and divide into 480 pills．
［Pilulce asrafcetider．Assafoetida pills． Assafoetida，そiss．；soap，${ }^{3} \mathrm{ss}$ ．Beat with sufficient water to form a mass，and divide into 240 pills．
［Piluloe catharticer composite．Com－ pound cathartic pills．Compound extract of colocynth，in powder，$\overline{3}$ ss．；extract of jalnp，calomel，of each， $\mathrm{Z}_{\mathrm{ijj} .}$ ；gannboge，in powder，$\exists \mathrm{ij}$ ．Mix together，with water，to form a mass，and divide into 180 pills．
［Pilule copaiba．Pills of copaiba．Co－ paiba，${ }^{\text {Sij}}$ ；；magnesia，recently prepared， 3j．Mix，and set aside until the mixture concretes into a pilular mass，then divide into 200 pills．
［Piluler forri carbnatis．Pills of car－
bonate of iron．Vallet＇s ferruginous pills． Sulphate of iron，${ }^{3}$ viij．；carbonate of soda， 3x．；clarified honcy，号ij．；sugar，in pow－ der，${ }^{3} \mathrm{Zij}$ ；boiling water，Oij．；syrup，a suffi－ cient quantity．＂Dissolve the sulphato of iron and carbonate of soda，each，in a pint of the water，a fluid ounce of syrup having heen previously added to each pint； then mix the two solutions，when cold，in a hottle just large cnough to contain them， elose it accurately with a stopper，and set it hy that the carhonate of iron may suh－ side．Pour off the supernatant liquid，and， having washed the precipitate with warm water，sweetened with syrup，in the pro－ portion of a \＆uid ounce of the latter to a pint of the former，until the washings no longer have a saline taste，place it upon a flannel cloth to drain，and afterwards ex－ press as much of the watcr as possible； then immediately mix the precipitate with the honey and sugar．Lastly，heat the mixture，by means of a water－bath，con－ stantly stirring，until it atrains a pilular consistence on cooling．＂－Ph．U．S．
［Pilula ferri composite．Compound pills of iron．Powdered myrrh，$\overline{\mathrm{j} j}$ ．；car－ bonate of soda，sulphate of iron，of each， 3．j．；syrup，q．s．Rub the myrrh with tho carbonate of soda；then add the sulphate of iron，and again rub them；lastly，beat them with the syrup so as to form a mass， to he divided into eighty pills．
［Pilule ferri iodidi．Pills of iodide of iron．Sulphate of iron， $\mathrm{Zj}^{\mathrm{j}}$ ．；iodide of po－ tassium，Эiv．；powdered tragacanth，gr．x．； powdered sugar， $3^{\text {ss }}$ ．Beat them with syrup so as to form a mass，to be divided into forty pills．］
［Pilule galbani compositce．Compound pills of galbanum．Galbauum，myrrh，cach， $\sigma^{\mathrm{Vj} . ;}$ assafœetida，$Z^{\mathrm{ij} .}$ ；syrup，a sufficient quantity．Mix，and make 240 pills．
［Pilule hydrargyri．Blue pills．Mer－ cury，$\overline{3} \mathrm{j}$. ；confection of roses， $\mathrm{Z}_{3}$ iss．；rub together until the globulcs disappear，then add powdered liquorice root，$\overline{\mathcal{Z}}$ ss．Mix， and make 480 pills．
［Pilula hydrargyri chloridi mitis．Ca－ lomel pills．Calonnel，そss．；powdered gum arabic， 3 j ．；mix together，and then add syrup，q．s．Mix，and make 240 pills．
［Pilule opii．Pills of opium．Powdered opium， $\mathrm{Z}_{\mathrm{j} .}$ ；soap，gr．xij．Mix，and mako 60 pills．
［Pilula quinice sulphatis．Pills of snl－ plato of quinine．Sulphate of quinine， $\mathrm{S}_{\mathrm{j}} \mathrm{j}$ ．； powdered gum arabic， 3 ij ．；honcy，q．s． Mix，and divide into 480 pills．
［Pilule rhei．Pills of rluubarb．Pow－
 make 120 pills．
［Pilula rhei compesita．Componnd
pills of rhuherb. Powdered rhutarb, $\mathrm{F}_{\mathrm{j}} \mathrm{j}$; puwdered alues, $5^{5} \mathrm{vj}$.; powdered myrrh, $\overline{3}$ ss.; oil of peppermint, fzes.; beat them with water so as to form a mass, and make 240 pills.
[Pilula saponis composita. Compound soap pills. Powdered opium, $\overline{3}$ ss.; soap, $\bar{j} \mathrm{j}$. Beat with water so as to form a pilular mass.]
[Pilula scilla composita. Compound pills of squill. Powdered squill, $3 \mathbf{j}$.; powdered ginger, powdered ammoniac, of each, $\mathrm{Zij}^{\mathrm{ij} . ; ~ m i x ~ t o g e t h e r, ~ t h e n ~ a d d ~}$ soap, $Z^{\text {iij., and finally a sufficient quan- }}$ tity of syrup to form a mass. Make 120 pills.]

PILUS. The general term for the hair of the head, heard, or other part of any creature. Villus is the hair of heasts.

1. Pili congeniti. The hairs which grow during the foetal state, as those of the head, the eyehrow, the eyelash.
2. Pili postgeniti.' The hairs which grow after hirth, as distinguished from the congenital hairs.
[PIMENTA. Pimento. The U.S. Pharmacopoial name for the unripe herries of Myrtus Pimenta.]

PIMENTA BACCA. Pimenta berries, Jamaica pepper, or Allspice; the fruit of the Eugenia Pimenta. [Myrtus Pimenta, (Willd).]

Ovate Pimento. The fruit of the Myrtus pimentoider, resembling the common allspice, except in shape.

PIMENTATES, ALKALINE. Crystalline compounds, formed by combination of pimentic acid with the alkalies.

PIME'NTIC ACID. Heavy oil of pimento, a coustituent of the oil of pinento or all-spice. The other constituent, or light oil, is called pimento-liydro-carbon.
[PIMPINELLA. A genus of plants of the uaturnl order Umhelliferw.]

1. Pimpinella anisum. The Anise; cultivated in Spain and Germany for the sake of its fruit, incorrectly termed aniseed.
[2. Pimpinclla saxifraga. Saxifraga. An European species, the root of which is oonsidered diaphoretio, diuretic, and stomachic.]

PIMPLE. A small acuminated elevation of the cutiele, with an inflamed hase. See Papula.

PIN, or PIN-EYE. A variety of synizesis, or contracted pupil, so called from its being sometimes contracted to nearly the diameter of a pin's head. IIenee the words of Shakspeare:

> "Wish all eyes

Blind with the pin and voeb."
PINCHBECK. An alloy of eopper, or brass, and gine, made in imitation of gold.

It is sometimes called tombac, similor, and petil-or.
[PINCKNEYA PUBENS. A large shrub, growing in moist situations along the sea-const of South Carolina, Gcorgia, and Florida, closely allied in hotavical characters to the cinchonæ, and the lark of which has heen used in Georgia as a substitute for Peruvian hark. The dose and mode of preparation are the same with those of cinchona.]

PINEAL GLAND (pineur, of pinc). A soft gray substance of the brain, situated ahove the tuhercula quadrigemina; it is of a conical form, resembling a pine, and lence it is also termed conarium. It is very improperly called a gland.

Pincal concretions. Caleuli of the pineal gland, proved hy Dr. Wollaston to consist of pbosphate of lime.
[PINE APPLE. The Bromelia ananas and its fruit.]

PINGUECULA (pinguis, fat). A form of pterygium, occurring in clderly persone, and consisting of little sellor granules towards the angles of the eye, under the conjunctiva.

PINGUEDO (pinguis, fat). Fat or fatness. It is said that pinguedo melts quicker, and hardens slower, than adeps; aud that, while adeps lies at the extremity of the muscles, and adheres to the memhranes, pinguedo lies between the flesh and the skin. Pinguitudo is fatness, hut it is only used figuratirely.

PINIC ACID (pinus, the pine). An acid ohtained from rosin ; it may he regarded as an oxide of oil of turpentinc.

PINK DYE. A dye made hy macerating safflower and carhonate of potash in spirit of wine and water, and then adding distilled water or lemon-juice to produce a fine rose-colour, and straining.
PINKROOT. One of the common names for Spigelia Marylandica.

PINNA. The fin of a fish. A portion of the external ear, terued pinna auricula, or the auriele, representing a kind of fuunel, which eolleets the ribrations of the atmosphere. The other portion is terined meatur, and represents a tube, which convoys the vibrations to the tympanum.

PINNATE (pinna, the fin of a fisli). That foru of leaf in which simple leaficts are placed on each side of a common petiole, as in polypody. The same modifications oceur as in the paluate leaf, with similar terms, as pinnatifid, pinnatipartite, pinnatisected, and pinnatilohate.
Abruplly pinnate. When the petiole of a pimmate leaf has no terminal lealet or tendril, as in orobus tuberosus.

Alternately pinnate. When the leadets
of a pinnate leaf are placed alternately on the common petiolc, as in Potentilla rupestris.
Bi-pinnate (bis, twice, pima, the fin of a fish). Doubly pinnate, as when the leaflets of a pinnate leaf themselves become pinuate.

PINT. Oetarius. A term of High Dutch orimin, signifying a little measure of wine. The imperial liquid measure contains $34 \cdot 659$ cubic inches: it is equivalent to sixtecn fluid ounces.
PINTA. Blue stain; a disease which prevails in Mexico, and which appears to be a rariety of Pityriasis nigra.

PINUS. The name of a genus of plants of the order Coniferce, or the Fir trihe. [This Linnæan genus has been divided into three genera, viz: 1. Pinus, which includes the pines; 2. Abies, which includes the firs and spruces, and 3d, Larix, which comprises the larches.] The term Pine, derived from the Celtic pin or pen, a rock or hill, appears to suggest tho place of growth, and to indicate a mountain tree. A similar derivation has been attributed to the English towns Pen-ryn, Pen-rith, and the Spanish towns Penna-flor, Penuafiel, as being built on hills, or emhosomed in mountains.
[1. Pinus abies. Abies excelsa. (De Cand.) Norway spruce; one of the sources of Burgundy pitch.]
[2. Pinus Australis (Michaux). See Pinus palustris (Willd).]
[3. Pimus balsamea (Willd), Abies balsamea (Lindley), A. balsrmifera (Michaux), American silver fir; balm of Gilead trec. It furnishes the Canada balsam.]
[4. Pinus Canadensis (Willd). Abies Canadensis (Michaux). The hemlock spruce, which affords the Canada pitch.]
5. Pinus cembra. The Siberian Stone Pine, yielding Carpathian balsam.
[6. Pinus Damurra (Lamabert). Agathis Damarra (Richard). An East Indianl species, which affords the Damarra turpentine.]
[7. Pinus Lambertina. A tree of Southern Oregon, from incisions in which a substance resembling manna exudes, which is actively purgative.]
[8. Pinus larix (Willd). Larix Europaa (De Cand). The Eurpean lareh
which furnishes the Venice turpentine, and which furnishes the Venice turpentine, and Briunçon manna.?
[9. Pinus Nigra (Abies Nigra). The black spruce, an indigenous species which yields the cssenco of spruce, much used in the preparation of spruce beer.]
10. Pinus palustris. Tho Swamp or Long-leared Pino, [yellow Pine, Pitch Pino], yiclding tho greater proportion of turpentine, tar, \&c.
[11. Pinus picea (Linn) Abies pieea (A. pectinata, De Cand). The Europenn silver fir, which yields the Strasburgh turpentine.]
12. Pinus pinaster. Tho Pinaster or Cluster Pine, yielding tho Bordeaux turpentine, galipot, tar, and pitch.
13. Pinns pinea. The Stone Piue, yielding the cones called pignoli pines, tho seeds of which, named pine nuts, aro used as a dessert.
14. Pinus pumilio. The Mugho or Mountain Pine, yielding an oleo-resin called Hungarian balsam, and an essential oil called olenn templinum.
[15. Pinus rigida. Piteh pine which yields tar.]
16. Pinus sylvestris. The Wild Pine, Scotch Fir, or Red Deal, yielding common turpeutine, tar, and pitch.
17. Pinus tada. The Frankincense Pine, yielding common turpentine.
[PIPER. Black Pepper. The pharmacopœial name for the berries of Piper nigrim, a genus of plants of the natural order Piperaceæ.]

PIPERACEA. The Pepper tribe of Dicotyledonous plants. Shruhs or herbaceous plants, with leaves opposite; flower's achlamydeous; stcmens adhering to the base of the ovarium, which is superior, onecelled.]

1. Piperis longi bacece. Long pepper. The varieties in tho market are the short long pepper, and the long long pepper.
2. Piperis nigri bacca. Black pepper; the fiucst kind is called shot pepper, from its density and hardness. White pepper is made hy separating tho first skin of the berry, by soaking it in salt and water.
3. $P$. D. The technical title of pepper dust, consisting of the powdered husk of the mustard seed mixed with powdered pepper.
4. Piperin. The crystalliue prineiple of blaek, white, and long pepper, but not the cause of the acrimony of pepper, which is duo to a peculiar soft resin.
5. Piper angustifolium. A Peruvian plant, rezently introduced into this country under tho native namo of Matico. The leaves and flowering tops aro recommended as a most valuablo reunedy in diseases of the genital organs and rectum.
6. Piper betel. The leaf of this plant, with quick-lime and areca nut, is much valued by tho Malays as a masticatory.
7. Piper candutum. The dried unripe fruit of the Piper cubeba, or tho cnbebs of the shops.
[8. Piper cubeba. Cubebs. A nativo of tho East Indies whieh afiords the offioinal cubehs.]
8. Piper elongatum. A synonymo of Piper ancrustifolium.]
9. Piper methysticum. The Ava or Cava plant of tho Sandwich or Tonga islands; its specific name, derived from $\mu \varepsilon 0 \dot{v} \omega$, to be intoxicated, denotes its incbriating properties. Captain Cook and other travellers descriho the "eava drinking" hahits of the natives of these islands. The root is the part principally employed.
[11. Piper nigrum. Black pepper. Seo Piperis nigri baccu.]
[PIPSISSEWA. The common name for Chimaphela umbellata.]
PISCES ( piscis, a fish). The first class of tho Enecphalata or Vertehrata, consisting of fishes.

PISCI'DIA ERYTHRINA. Jamaica Dogwood; a leguminous plant, indigenous in the West Indies; the hark of its root is a common fish-poison in Jamaica; a tincture of the bark is most powerfully narcotic and diaphoretic, and is specific in removing the pain of carious teeth.

PISIFORM ( pisum, a pea; forma, likeness). Pea-like; the designation of the fourth hone of the first row of the earpus.

PISTACIA. The name of a genus of plants, of the order Terebinthacea.

1. Pistaeia vera. The species which yields the pistacia nut, and a large quantity of fixed oil, used as an excellent emulsion in irritation of the urethra.
2. Pistacia terebinthus. The Turpentine Pistacia; the species which yields the Chian or Oypress turpentine, and certain follicular horn-like galls, used in the manufacture of a sanative balsam.
3. Pistacia lentisens. The Mastic or Lentisk tree; the species which yiclds the resin called mastic.

PISTILLUM. Literaliy, a pestle. The pistil or pointed, or the female organ of generation in plants, consisting of the ovarium, the style, and the stigna.

PITAYNA. A new alkaline principle, found in Cinchona pitaya, or the bark of an undetermined tree.

PITCH. The residuum which remains on inspissating tar, or boiling it down to dryness. [See Pix.]

PITCHBLENDE. A mineral of Saxony, in which the metal uranium was discovered; it was named from its black appearnuce.

PITCHER PLANT. A plant in which the petiole is dilated and hollowed out, like a pitcher, the lanina being articulated to it, and closing the orifice. The piteher is called aseilium; and the lid, opereulum. It occurs in Nepenthes, in Sarracenia, \&c.

PITH. The medulla of plants; a cylindrical or angular column of cellular tissue,
traversing the stem and branches of exogenous plants, and terminating in the leaf. buds.

IITTACAL (-irra, pitcb: ка入дя, beautiful). A beautiful blue colouriag matter, discovered in the oil of tar.

PITTACIUM ( $\pi$ itra, pitch). A piece of cloth covered with a salve; a soothing plaster for tho head, or other part.Сесяия.

PITTED TISSUE. Bothrenchyma. A modification of the cellular tissue in plants, having its sides marked hy pits, suuk in the substance of the membranc. It was formerly called dotted duety, vasiform tissue, \&c.

PITUITA (пnrv́a, a coagulum). Phlegm; viscid mucus ; serosity.

1. Pituitary membrane. A designation of the Schneiderinn membrane, which lines the envity of the nose.
2. Pituitary 8 em. A portion of the hrain, formerly called the infundibulum.
3. Pituitary body. A portion of the hrain which is lodged in the sclla turcica, and was formerly called the pituitary gland. It is not glandular.
PITYRI'ASIS (木irvoov, furfur; hran). Dandriff or scurf; irregular patches of thin, bran-like scales, which repeatedly exfoliate and recur, without cruats or excoriations. The species, as given hy Bateman, are-
4. Pityriasis capitis. Dandriff of the head, occurring in iufants.
5. Pityriasis rubra. Red dandriff, occurring in advanced life.
6. Pityriasis versicolor. Characterized hy the variegated appearance of the skin.
7. Pityriasis nigra. Black dandriff, occurring in children horn in India.

PIX, PICIS (ritra). Pitch; the resin of the wood of coniferous plants, extracted by fire and inspissated.

1. Pix Burgundica. Burgundy pitch; prepared hy melting common frankincense in hot mater, and straining through a coarse cloth.
[2. Pix Canadensis. The U. S. Pharmacopeial name for the prepared concrcte juice of the Abies Canadensis, hemlock spruce. It is a gentle rubefacient closely analogous in its properties to Burgundy pitch. $]$
2. Pix liquida. Veqetable tar; prepared by a kind of destillatio per deseensum of the roots and other woody parts of old pines.
3. Pix nigra. Black pitell : the residuum after veget:ible tar has been submitted to distillation.

PLACEBO. Literally, though incorrectly, I voill please; a term applied to
any modiciue given to please or humour the patient.

PLACENTA ( $\pi \lambda$ 入i , a plain). Iiterally, a. cuke. The after-birth; an organ formed for, and appropriated to, the service of the foetus. The human placenta is composed of two parts :-

1. The fretal placenta, consisting entirely of dense tufts of hranched vascular villi; and,
2. The utcrine placenta, formed of the substance of the decidua, which penetrates between the villi of tho former, even to the surface of the chorion, and completely cucloses them.
[3. Placeuta Previa. Presentation of the Placenta.]

PLADAROSIS ( $\pi \lambda \lambda d a p \partial s, w e t) . ~ \Lambda ~ f u n-~$ gous and flaccid tumour within the eyelicl. It has heen supposed to be the purulent ophthalinia.

PLAGUE ( $\pi \lambda \eta \gamma \eta$, plaga, $\pi$ stroke; from $\pi \lambda_{n j \sigma \sigma \omega, ~ t o ~ s t r i k e) . ~ T h e ~ n a m e ~ o f ~ a ~ d i s e a s e ~}^{\text {a }}$ which is endemic in Egypt, \&c., and has made frequent irruptions into Europe. It is denominated do七 $\mu \mathrm{d}$ s, by the Greeks; pestis and pestilentia, by the Latins; la peste, hy the French; pestilenza, hy the Italians; and pest, by the Germans.
PLATTED. Plicatus. A form of æstivation or veraation, in which the leaves are folded lengthwise like the plaits of a fan, as in many palms.
[PLANTAGO. A genuss of plants of the natural order Plantaginaceæ.]
[1. Plantago lancifolia. Rih-grass. An indigen ous species which possesses properties similar to P. major.]
[2. Plantayo major. Plantain. A perenuial herb, formerly esteemed refrigerant, diuretic, deolstruent, \&c., but at prosent rarely given internally. The leaves are used in domestic practice as a vulncrary, and as a dressing to blisters and sures.]
[3. Plantago Psyllium. Flea-wort. A species which grows in the south of Europe and Barhary; the seeds are very mucilaginous, and resemble flaxsced in properties, and may ho used for tho same purposes.]
[PLANTAIN. The common name for Plrntaga major.]
PLA'NTATN-MEAL. Conquin-tay.A whitish-meal, ohtained from the core of the Musa Sapientum, Plantain or Banana. A starch is also proeured from this plant.

PLANTA PEDIS. The sole of the foot; the under surface of the foot.

PLANTARIS ( planta. the sole of the foot). A muscle arising from the external condyle of the femur, and inserted iuto the
inside of the os calcis. It extends the font. [The term plantur is applied to sceveral parts which helong to the sole of the foot, as arteries, aponcurosis, ligmonts, nerves, and veins.]

PLANUM OS (planum, smooth). The former name of the orhital portion of the ethmoild hone.

PLA'SMA ( $\pi \lambda{ }^{\prime} \sigma \mu a$, any thing formed or moulded). The colourless fluid of the hloorl, also ealled liquor sunguinis.
PLASTER. Euplustrum. A solid and tenacious compound, produced hy the action of oxide of lead on fixed oils and fats. See [Emplastrum and] Sapo.
pLaSTER OF RIVERIUS. Composed of Armenian hole, terra sigillata, vinegar, and white of egg; used in cases of rneurism.
PLASTER OF PARIS. The whito powder oltained hy exposing gypsum to a high temperature, and named from its ahounding in the vicinity of Paris.
[PLAS'TIC ( $\pi \lambda a \sigma \sigma \omega$, to form). Having the power of forming or producing parts.]
[1. Plastic element. That which coutains within it the germs of a bigher form, or that from which growth takes place.]
[2. Plastic force. Nisus formativus. The force hy which organic matter, in appropriate conditions, is shaped and arranged into organic structure.]

PLATLEIASMA ( $\pi \lambda a t u ̀ s$, broad). A defect in speech, characterized hy the term llobler-lipped, and olserved in persons with very thick and broad lips.

PLA'TINOCYA'NOGEN. The supposed radical of a series of bodies called platinocyanides. It is not known in the separate statc.

PLATINUM. A metal discovered in the auriferous sand of certain rivers in America. Its name is a diminutive of plafa, silver, and was applied to it on aecount of its whiteness. The protoxide of platinum is called platinous oxide; the
peroxide, platinic nxide. peroxide, platinic nxide.

1. Resin of platinum. A residuary resinous matter, obtained hy distilling bi-chloride of phatinum with acctone.
2. Platimum, spongy. Platinum procured in a state of extreme division, though the particles adhere slightly together. It has the appearance of sponge, though perfectly metallic.

PLATYSMA-MYOIDES ( $\pi \lambda a r$ v̀s, broad; $\mu \overline{\mathrm{n}}$, a muscle ; cidos, tikences). A muscular expansion, arising from the cellular substance of the neck, and inserted into the lower jaw, whence it extemis superiorly to the face; it is also called musculus cutuurus, \&ec. It draws the skin of the check downateds; and, wheu the month is shut,
hrings tho skin under the lower jaw upwards.
PLEDGET. A picco of lint, rolled up into an oval or orbicular forn.

PLENCK'S SOLUTION. Mercury suspended in water hy heing rubhed for a considerable time with gum arabic.

PLETHO'RA ( $\pi \lambda \eta \theta$ wipa, fulness; from $\pi \lambda i j \theta \omega$, to fill). Repletion; full habit of body; an excessive fulness of the bloodvessels.

1. Plethora ad molem, ad vasn, ad venas. In which the redundancy absolutely exceeds what the healthy state of the individual constitution would require or hear.
2. Plethora ad vires. In which the redundancy is relatively excessive in reference to the actual strength of the system.
3. Plethora ad spatium. In which the redundancy is referred to reduced capacity of vessels, the actual quantity remaining the same.
4. Plethora ad volumen. In which the redundancy arises from increase of bulk without actual increase of quantity.

PLEURA ( $\pi \lambda \varepsilon v \rho a ̀$, the side). A serous meubranc which encloses each lung, inyests it as far as the root, and is then reflected upon the parietes of the chest. That portion of the memhrane which is in relation with the lung is called pléura pulmontis; that in contact with the parietes, pleura costalis.

1. Pleur-algia (ä入yos, pain). Pleurodynia; pain of the side.
2. Pleur-itis. Pleurisy ; inflammation of the pleura; pain of the side.
3. Plerro-pncumonia. [Pleuroperipneumony.] Acute pleurisy complicated with pneumonia.
4. P'leuro-sthotnnus (тiive, to stretch). Tetanus of the lateral muscles: a spasinodie disease, iu which the body is bent to one silc.

PLEURENCHYMA ( $\pi \lambda$ cupa, tho side ; êyoupa, any thing pourcd iu). A desig. mation of the woody tissue of plants, consisting of clongated tubes, tapering to each end.
[PLEURISY ROOT. A common uame for the Aselepirse tubernsm.]

PLEXIMETER ( $\pi \lambda \lambda_{n} \xi_{t 5}$, percussion ; $\mu$ itoov, a ueasure). A measurer of percussion; a term applied by M. Piorry to the ivory plate with which be performed metliate percusion.

PLEXUS (plectn, to weave). A kind of net-work of blond-vessels, or merves.

1. Plexus choroides. A shall mass of blowl-iessels and reddish granulations, found in the ventricle of the ecrelhelan, or fourth ventricle, and wamed fiom its resemblane to the chorem.
2. Plesus retiformis. A term applied to the erectile spongy tissue of the vagina, from its net-like appearance.
3. Plexus solaris. An assemblage of ganglia, and interlaced and anastomosing filaments, surrounding the two semilunar ganglia of the ahdomen. It gives off numerous filaments, which accompany, under the namo of plexuses, all the hranches given off hy tho ahdominal aorta. Thus, from the solar plexus are dcrived the phrenic, the gastric, the hepatic plexus, \&c.

PLICA (plico, to knit togcther). A fold, a plait, or duplicature.

1. Plica semilunuris. A slight duplicature of the conjunctiva, on the outer side of the caruncula; the rudiment of the third lid of animals, the membrana nictitans of hirds.
2. Plica longitudinales. A term applied to the disposition of the mucous membrane of the æsophagus.

PLICA POLONICA (pliea, a fold, from plico, to knit together). Literally, the Polish plait or fold; a disease so named from the manner in which the hair is plaited or matted together, occurring most frequently in Poland. Alibert distinguishes this affection, according to the form it assumes, into-

1. Plique multiforme, in which the hairs form a great nuusher of ropes hanging round the face, like serpents round the Gorgon's head.
2. Plique a queue, ou solitaire, in which the whole hair is united into one long plica, or tail, principally occurring in fcuales, and in those who wenr their hair after the natioual Polish fashion.
3. Plique cn massc, out larice, in which the hair is all matted into oue cake, covering the head like a helmet.
4. This affection is said to be frequeutly preceded hy perverted appectite: hence the proverb, "Sæpo suh picâ latet scu foctus seu plica."

PLI'CIDENTINE (plica, a fold; dens, a tooth). A term applied to that modifeation of the findnumental tissuc of the teeth, in which, on a transverse section, the dentine exbibits sinnons wavings, diverging from the central "pulp-carity" of the tooth, as in the labyrinthodon.

PLOCA'RIA CA'NDIDA. Cerlon Moss; an algaceous plant, abounding in mucilaginous and starehy matter, and yiclding a decoction and a jelly emploved is pharmacy.

PLUMBAGIN. A prineiple extracted from the root of the Plumbugo Lumper.

PLUM13.dGO. A mineral, also kanm as binclifcuel and grophite: a [pure natural form of carben].

## PNH

[PLUMBAGO. A genus of plants of the natural order Plumbaginacer.]
[1. Plumbago Enropara. Lendwort, Dentellaria. An European species, the root of which was formerly esteemed as a remedy for twothaclie.]
[2. Plumbingo rosea. An East Indian species, the contused root of which is an active vesicant.]
[3. Plumbayo scandeus. A native of South America and the West Indies, said to be a violent emetie.]

PLUMBER'S SOLDER. An alloy consisting of one part of tin and two of lead.

PLU MBICACID (plumbum, lead). Peroxide of lead. It forms compounds with bases, called plumbates.

PLU'MBITE OF LIME. Calcis plumbis. A bair-dye, prepared by boiling oxide of lead with cream of lime.

PLUMBUM. Lead; a metal of a bluish gray colour. Plumbum was formerly used as a general terin; thus, according to Pling, tin was called plumbum allum; and Agricola calls lead, plumbum nigrum. By the alchemists lead was called Sation.

Ores of lcod. Lead is combined with sulphur, forming galena; with chlorine, forming horn lead; with oxygen, forming native minium; and with carbonic acid, forming white lead ore.

See Massicot. Minium, Horn Lead, Cerussa, Suyar of lead, Goulard's extract.
[PLUMIERA. A genus of plants of the natural order Apocynaceæ.]
[1. Plumiera alba. A native of tropical America, the fruit of which is edible, and the milky juice of the plant is used by the Mexicun Indians as a purgative.]
[2. Plumiera drastira. The millsy juice of this species is used in Brazil, mixed with milk of almonds, in small doses, in intermittent fcvers, jaundice, chronie obstructions, \&e.]
[3. Plumiera phagedenica. The milky juice of this species is employed in Rio Janciro as a vermifure.]
PLUMMER'S PILL. The compound enlomel pill of the pharinacopœia.
PLUMULE (plumulir, a little feather). The ascending axis of the embryo of a secd. It is also ealled gemmile. Sce Radicle.
[PLUNKETT'S CAUSTIC or OINT. MENT. An empirieal remedy for cancer, composed of Renunculus acris and Ranunculus flummula, of cach an ounce, bruised and inixed with a drachm of arscnious acid and fivo scruples of sulphur; the whole beaten into a paste, formed into balls and dried in the smn. When used, to be made into a paste with the white of an egg and appliced on a picee of pis's bladder to the cancer.]

PLURILOCULAR ( pins, pluris, many, inculue, a cell). A term applied to fruits which have several carpels, as tho orange.

PLUVIOMETER (phuvizs, rain, pétpov, a measure). A rain-guage ; an instrument or vessel for catching the rain as it falls, with a vicw of determining, at any given period, the quantity of rain which has fallen within that period.

PNEUMA, PNEUMATOS ( $\pi v \varepsilon \tau ̃ \mu$, -atos). Wiud; any aëriform fluid.

1. Pneum-arthrosis. An effusion of air within the joiuts, which disappears spontaneously, and frequently in the course of a few days, and even hours. It often occurs in the knee during the convalescence from articular rheumatisul, \&c.
2. Pneumatica. Pncumatics, or medicines which influence the functions of respiration and calorification.
3. Pneumatic trough. A trough or cistern of wood or japanned tin for collecting gases which are not capable of being ahsorbed by water. It is gencrally furnished with a shelf about two inches under the intended surface of the water, for supporting jars or vials while they are filling with gas.
4. Pnermatics. The science which treats of the mechanical properties of air, and other compressible fluids, as fluidity, weight, elasticity, \&e.
5. Pncumato-cele (кijn $\eta$, a tumour). Hernia ventosa seu flatulenta. Hernia distended with flatus.
6. Phemmatosis. A distension of the collular unembrane by air.' [It is also employed to denote an excessive secretion or accumulation of gas in any organ of the
body.] body.]
7. Pncumo-pericardium. A collection of air within the pericardium, frequently obscrved in the cxamination of dead bodies, particularly such as have been kept for some time. It may cxist also previously to death.
8. Pneumo-fhnrax ( $\theta$ 由́pa $\xi$, the chest). A collection of acriform fuid in the cavity of the pleura. Dr. Forbes observes, that as wo have many terms relating to the luags, commencing with pueumo, nnd scveral relating to air coumencing with pneumato, it might have been better fur the sake of minformity to lavo cupployed the term puermatrothorax, -a term which uight he claimed also on classical grounds.
 tho laloorl.) A pathological condition consisting in the formation of gas in tho blonil.]
[PNEUMATIC SECT. A sect of plyysicians, fuunded by Athenæus, who iuragined that there cxisted a hypothetical.
immaterina prineiple or element, which they termed Pneuma, ( $\pi \nu \in \mu(z)$, and upon which they conceived health aud all diseases to depend.]

PNEUMO-GASTRIC NERVES. The par vaguin, nervi vagi, or eighth pair of nerves, distributed to the lungs and the stomach. From its numerous distributions, it has been termed the middle sympathetic nerve.

PNEUMO-H AMORRHAGIA. A term recently proposed by Andral to denote puluonary apoplexy, the term "apoplexy" having been originally applied to a determinate group of symptoms, and not to any particular form of organic lesion. See Broncho-hemorrhagia.

PNEUMONO'MLTER • ( $\pi v \varepsilon \varepsilon^{\prime} \mu \omega v$, the lung; $\mu$ érpov, a measure). Pulmometer. An apparatus for ascertaining the power of the lungs, by mensuring the quantity of air inhaled at a single inspiration. In diseases of the lungs, only two or three pints will be inhaled; in health, eight or nine pints may be inspired.

PNEUMONIA ( $\pi v \varepsilon \dot{v} \mu \omega \nu$, $\pi v \varepsilon \dot{\mu} \mu \circ v o s$, the lung). Peripneumonia. Inflammation of the substauce of the lungs. Laennec distinguishes acute pneumonia into engorgemcut, or inflammatory congestion; hepatization, or the red hepatization of Andral ; and purulent infiltration, or the gray bepatization of that writer.

Lobar, lobular, or vesicular pnenmonia. Terms applied to pneumonia, according as it affects whole or continuous parts of lobes, the polygonal subdivision of these, or the vesicles in general.
[PNEUMONIC ( $\pi \nu \varepsilon \nu \mu \omega v$, the lungs.) Of, or belonging to the lungs.]

PODAGRA (пои̃s, nuסঠ̀s, a foot; ärpa, seizure). Gout in the feet; goulte of the French; a genus of the Phlegmasice of Cullen, who deseribes the following spe-cics:-

1. Regrlar gout. Violent inflnmmation, remaining for a ferv dass, and gradually receding with swelling, itehing, and desquamation of tho part.
2. Atonic gout. Accompanied with atony of the stomach, or other internal part, witis the usual inflammation of the joints; or with slight and temporary pains; with dyspepsia, and other eymptoms of atony, often alternating with cach other.
3. Retroyrade yout. Marked by infanmation of the joints suddenly disappearing, and atony of sone iuterual part immediately following.
4. Alcrvemt yout. Attended with infimmation of in internal part; the inflamation of the joint either not preweding, or suddenly disappearins.
[PODALYRIA TINCTORIA. A Eynonyme of Liaptistu tinctoriu.]
[PODENCLPPILALUS (Tous, a foot; кe$\phi a \lambda \eta$, a head). A term given by G. St. Hilaire to monsters whose brain is of the ordinary size but placed outside of the skull, and supported on a pedicle which traverses the summit of the craniun.]

PODETIUM (noũs, nod̀s, a foot). A little foot; the stalk-like elongation of tho thallus, which supports the fructification of the Cenomyce, a plant of the order Lichenes.

PODOGYNIUM ( $\pi$ oũs, noids, a foot; youn, a female). A term applied to the stalk upon which the ovary is seated in certain plants, as the Passiflora, Tacsonia, \&e. It is also called gynophore, and thecaphore.
[PODOPHYLLUM PELTATUM. May apple. Mandrake. An indigenous plant of the natural order Ranunculaceæ ( Podophyllca, Lind.). The root (rhizoma) is netively cathartie, producing watery discharges without much griping. Its certainty is increased by combining it with calomel. The dose of the powdered root is grs. xx.; of the extract which possesses all the properties of the former gr. x. to gr. xv.]
[Podophillin. A peculiar bitter principle discovered by Mr. Wm. Hodgson, jr., of Philadelphia, in the root of Podophyllam peltatum. It has lately been extolled as an alterative.]

PODOSPERMIUM ( $=0$ ũs, nodòs, a foot; ontepua, seed). A term applied by some writers to the funiculus or unbilical cord, by which the ovule of plants is connected with the placenta.

PODOTHECA ( $\pi 0$ ũs, xod̀s, a foot; $\theta \dot{k} \times \pi$, a receptacle). The cuticle of the foot; an anatomical preparation. Thus, chirothecu ( $\chi$ zip, $\chi$ cipos, the band,) is the cuticle of the hand.

PaECILIA (покinos, variegated). Pyeballed skin.
[POISON OAK. Rhus Toxicodendron.]
[POISON VINE. Rhus radicans.]
POISONS. Pharmaca. Substances which derange the vital fuuctions, and produce denth, by an action uot nucchanical. These substances are arranged by Dr. Christison, according to their action upon the animal ceouoruy, juto three classes, viz:-

1. Irritant poisone, or thase which pioduce irritation or inflammation, as the mineral acids; oxatic acid: arsenic: mercury; enpper; antimony; zine: leal; baryta; and cantharides.
2. Naroutic poisons, or those which produce stupor, deliriun, and uther affee-
tions of the brain and nerrous system, as opium, hydrocyanic acid, and poisonous gascs.
3. Nurentico-acrid poisons, or those Which produce sometimes irritation, souetimes uarcotism, sometimes both together; theso are all derived from the vegetable kingdom, as strychnia, nux vomica, and poisonous fungi.
4. The Mineral Acids.-The prineipal of these are the Sulphurie, the Hydrochloric, and the Nitric.

Symptoms.- Sense of burning in the stomach and throat; eructations from the gases evolved in the stomach by chemical decomposition ; the lips shrivelled, at first whitish; afterwards, if from nitric acid, yellowish; if from sulphurie acid, hrownish; difficulty of swallowing; vomiting of brownish or black matter; costiveness, tenesmus, weak pulse ; countenance glazed ; extremities cold and clammy; [lahorious respiration, and sense of suffocation from thick mucus in the throat.]

Tcols.-The common properties are, those of reddening the vegetable blues, and of corroding all articles of dress, especially those made of wool, hair, and leather. The parficular tests are-

1. For Sulphuric acid,-its property of evolving beat on being diluted; and the addition to it, in this state, of a little nitric acid, and afterwards of a solution of the nitrate of haryta, the precipitate being sulphate of haryta.
2. For Hydrochloric acid,-its peculiar vapour, or fumes, in the concentrated state; or the white vapour formed when a rod dipped in it is brought near a rod dipped in ammonia; when diluted, it forms, with nitrate of silver, a white precipitate, whieh is the chloride of silver.
3. For Nitric acid.- the action of eopper, lead, or tin; nitric oxide gas is disengaged, and ruddy fumes of nitrous acid gas are formed when the gas comes in contact with the oxygen of the air.

Treatment.-Administer chalk, or mag. nesia, or, in the absence of both, the plaster of the apartment heat down and made into thin pasto with water; solution of soap, \&e. Dilute freely, both before and after the antidote is given, with any mild fluid, milk or oleaginous matters heing preferred. The treatment of the supervening inflammation is the same as that of gastritis.
2. Oxalic Acin- This is tho most rapid and unerriag of all the common poisons; it is frequently mistaken for Epsoin salts.
Symptoms.-Execssive irritation; burning pain in the stomach and thront, generally followed by violcut vomiting, though
sometimes by none; feeble pulse, or total failure of the pulse, skin cold and elaminy; nervous symptoms in lingering eases; oecasioually couvulsions.

Tests.- In the form of a pure solution, its acidity is ascertained by its effects on litmus paper. With ammonia it produces a radiated crystallization, the oxalate of ammonia formed being much less solublo than the oxalic acid itself. The other tests are the hydrochlorate of lime, sulphate of copper, and nitrate of silver forming oxalates.

Treatment.-Emetics may be administered, if vomiting is not already freo, but waste no time in giving them, if an antidote is at hand; and especially avoid diluting with warm water: Administer, as soon as possible, large doses of magnesia, or chalk, suspended in water ; and, in default of these, the plaster of the apartment. Alkalis are inadmissible, as they form only
soluble salts. soluble salts.
3. Arsenic.-All the arsenieal poisons operate nearly in the same manner as the white oxide, and therefore require similar tests and treatment.
Symptoms.-Sickness and faintness; burning pain in the region of the stomach; violent vomiting and retching, often preceded by tightness and beat in the throat, and incessant desire for drink; hoarseness, and difficulty of speech; the matter vomited is greenish or yellowish, sometimes streaked with hlood; diarrhoea, or tenesmus; abdomen tense and tender, sometimes swollen, sometimes drawn in at the umbilieus; sometimes irritation of the lungs and air-passages, and of the urinary passages; cramps of the legs and arms; pulse small, fceble, rapid, and soon impereeptible, attended with great coldness, elaminy sweats, and even lividity of the feet and bands; sometimes, though rarely, palpitation; the countenance collapsed from an early period, and expressive of great torture and anxicty; the eyes red and sparkling; the tongıo and mouth parched; delirium and stupor; death.

Tests for the White Oxide.-1. Reduce tho solid oxide to the metallic state with freshly ignited chareoal. Other tests are, its alliaceous or garlicky odonr, and tho production of a silvery alloy, when the oxide is mixed with earbonaccous matter, and heated between two copper plates.
2. In solution, tho oxide is detected by the reduction-process, the mltimato objeet of which is to exhibit metallie arsenic ; and by the liquid tosts, as sulpluretted lyydrogen, ammoniated nitrate of silver, and an-
moniacal sulphate of copper, the indications of each of which must concur.

Treotment.-Evacnato the contents of tho stomach by an enctic, administering milk, or strong farinaceous decoctions, buth before and after the vomiting lias begun. [or what is better, the hydrated sesquioxide of iron, diffised thirough water, in large quantity.] Allay the inflanmation by blood-letting, and other antiphlogistic treatment.
4. Mercury.-The most important of the mercurial poisons is the Corrosive Sublimote, or Hydrargyri oxymurias, as being the most activo, and most frequeutly used for criminal purposes.

Symptons.-Similar to those of poisoning with arsenic; romiting, especially when any thing is swallowed; violent pain in the pit of the stomach, as well as over the wholo belly, and profuse diarrboen.

Tests.-Reduce the mercury to its metallic state. The liquid tests are sulphuretted hydrogen gas, hydriodate of potass, protochloride of tin, and nitrate of silver.

Treatment.-Give white of egg [or gluten] diluted in water, which converts the bichloride of mercury into a protochloride; if alhumen or gluten cannot be had, milk should he used; iron filings reduced to the metallic stato; meconic aeid, from its tendency to form insoluble salts with the metallic oxides, is a good antidote; alkaline meconates are also usefnl. The treatment for salivation consists in exposure to a cool purc air, nourishing diet, purgatives, [iodide of potass:um,] and sometimes veuesection.
5. Copper.-The most important among the poisonous salts of this metal are the sulphate, or blue vitriol, and the mixed acetates, or artificial verdigris.

Symptoms.-Generally the same as those caused hy arsenic and eorrosive sublimate. Somo peculiaritics havo been observed, as violent headache, then vomiting, and cutting paius in the bowels, and afterwards cramps in tho legs, and pains in the thighs. Sonctimes, thronghont the whole course of tho symptoms, there is a peculiar coppory tasto in tho mouth, and a singular aversion to the smell of copper; occasionally there is jaundice; death is gencrally preceded by convulsions and insensibility.

Tests. -The four following tests, taken together, aro sufficient for copper in solu-tion:-

1. Ammonia, -which causes a palc, azurc-eolonred precipitate, which is re-dissolved by an cxeess of the test, forming at deep violet-blue transparent tluid.
2. Sulphuretted hydrogen gas, - Which eanses a dark brownish-black precipitate, the sulphurct of copper.
3. Ferra-cyanote of potassa, - which canses a fine hair-hrown precipitate, the ferro-cyanate of copper.
4. Metallie irom, - a polished rod, or plate of which, held in a solution of copper, soon becomes covered with a red powlery crust, which is the copper in its metallic state.

Tircatment.-The best antidotes are the white of eggs and metallic irou. Avoid vinegar, which must be more injurious than uscful, on account of its solvent power over the insoluble compounds formed by the salts of copper with animal and vegetable matters.
6. Antimony.-Poisoning with the preparations of antimony is not common; accidents, however, sometimes occur, from their extensive comployment in merlicine. The principal preparation is Tartor Emetic.

Symptoms. - Vomiting, attended with hurning pain in the pit of the stomach, and followed by purging and colic pains; tightness in the throat, and violent cramps.

Tcests.-The tests for the solution of fortar emetic, are一

1. Canstic potass, which precipitates it white, if tolcrably concentrated.
2. Lime vater, whieh also precipitates it white, when the solution eontains more than half a grain to an ounce.
3. Subcarbonote of potass, which throws down a. white precipitate when it contains more than a quarter of a grain to an ounce.
4. Muriatic and Sulphuric acids, whieb throw down a white prccipitate, and take it up again when added in excess.
5. Infusion of gall-nuts, which causes a dirty, yellowish-white precipitate, but will not act on a solution which contains much less than tro grains per ounce.
6. Sulphuretted hydrogen, the lest rcagent, which, in a solution eontaining only an eighth part of a grain per ounce, strikes an orange-red eolour, which, when the excess of gas is expelled by heat, becomes an orange-red precipitate.

Treatment.-Administer large_draughts of warm water, and tickle the throat. to induce vomiting; and while that is doing. prepare a decuction of ycllow bark, to decompose the poison: aikminister the bark in powder, bcfore the decoctiou is ready. [Where Peruvian bark is not at hand, a decoction of any bark containing tannin will answer the same purpose.] Afterwards opinm may be given, and renesection employed, if sigus of inflammation of the stomach he obstinate.
7. Zisc.-The only important compound of this metal is the sulphate, or White Titriol.
symptome - In a case in which about two ounces of white vitriol in solution were swallowed, the countenance becamo immediately pale, the cxtremities cold, the eyes dull, the pulse fluttering; burning pain was felt in the stomacb, and violent vomitiug ensued.

Tests. -Tbe solution of the pure salt is precipitated wbite by-

1. The Caustic alkalis, by which an oxide is tbrown down, wbich is soluble in an excess of ammonia.
2. The Alkaline carbonates,- the carbonate of ammonia heing the most delicate of these re-agents. The precipitate is soluble in an excess of carhonate of ammonia, and is not tbrown down again by boiling.
3. Sulphuretted hydrogen.-Tbe colour of the precipitate distinguishes the present genus of poisons from all those previously mentioned, as well as from the poisons of lead.

## 4. The Ferro-eyanate of potars.

Treatment.- [All infusions containing tannin may he usefnlly exhibited]; potass in syrup, also cream, butter, and chalk.
S. Lead.- The principal preparations of this metal are Litharge, Red Lead, White Lead, Sugar of Lead, and Goulard's Extract. The first tbree are mucb used hy house-painters and glaziers; the last two in surgery, and the sugar of lead iu the arts.
Symptome.-These are of three kinds: one class of symptoms indicates inflammation of the alimentary canal, the leading fcature of which is violent and obstinate colic; another, spasm of its muscles; the third, injury of the nervous system, sometimes apoplexy, more commonly palsy, and that almost always partial and incomplete. Eacb of these classes of symptoms may exist independently of the otber two ; hut the last two are more commonly combined.

Tests.-These may be distinguished according to the several compounds of lead.

1. Litharge and Red Leed may be known by their colour, - tho former being gencrally in tbe form of a grayish-red, heavy powder; the latter of a brigbt red powder, resembling vermilion;-hy their beconing hlack when suspended in water, and treated with a stream of sulphurctted hydrogen gas; and hy the former becouning entirely, the latter partly, soluble in nitrie acid.
2. White Lead is known by its heing blackened by sulphuretted hyilrogen; by being soluble, with effervescence, in nitric acid; and by becoming permanently ycllow when heated to redness.
3. Sugar of Lead is known, in the solid state, by its solubility in water, and by the effects of heat. It first undergues the aqueous fusion, then abandons $\Omega$ part of its acid empyreumatized, next becomes charred, and finally the oxide of lead is reduced to the metallic state by the charcoal of the reid. In the fluid slate, tho acetate of lead, as well as all its soluble salts, may be detected by the following tests, provided they act cbaracteristically:

Sulphuretted hydrogen gas, - which causes a black preeipitate, the sulphuret of lead; a test of extreme delicacy.
Chromate of Potass,-which, in the state of proto-chromate and bi-cbromate, causes a fine gamboge-yellow precipitate, the chromate of lead. For the characteristic action of this re-agent, it is desirable that the suspeeted liquid be neutral.
Hydriodate of pota8s,-which causes also a lively gamhoge-yellow precipitate, the iodide of lead.
A picce of zinc, beld for some time in a solution not too diluted; it displaces the lead, taking its place in tbe solution; and the lead is deposited in the form of a crystalline arborescence. This is a very characteristic test.
4. Goulard's Extract is distinguished from sugar of lead by the effect of a stream of carbonic neid, wbich throws down a copious precipitate of carbonate of lead.

Treatment.-For the ivritant form of poisoning, administer any of the soluble alkaline or carthy sulpbates; in default of them the alkaline carbonates, particularly the hicarbonates, which are not so irritating as the carhonates. The phosphate of sodia is an excellent antidote. If the patient does not vomit, give an cmetic of tho sulphate of zinc. In otber respects, the treatment is tho same as that of poisoning with the irritants gencrally. In the advanced period, when palsy is the chief symptom remaining, tho treatment depends almost entirely on regimen.
9. Baryta. -The preparations of this earth are of importanco, from their beiug very energetic, and easily procured. Theso are the pure eartl, or oxide, the muriate, and tho carbonate.

Symptoms.-In a case in which an ounce of the inurinte was swallowed, by mistake for Glauber's salt, a senso of burning was felt in the stomach; vomiting, convolsions, bead-a alic, and deafness ensucd; and deatli took placo within an hour. Violent vomiting, gripes, and diarrhoen, havo been produced hy a quantity not much excecding
the usual uedieinal doses.

Tests. - The Carbonate is known by its whito eolour, insolubility in water, solubility, with effervescence, in muriatic acid, and the properties of the resulting muriate of baryta. The tests for the Muriate are the following:-

1. Sulphuretted hydrogen distinguishes it from all other metallic poisons, as it causes no change in the harytic solutions.
2. The Alkaline sulphates distinguish it from the alkaline and magnesian salts, as they do not act upon these compounds, but cause, in all solutions of baryta, a heavy white precipitate, which is insoluble in nitric acid.
3. It is distinguished from the muriates of lime and strontia, by evaporating the solution till it crystallizes. The crystals are known not to be muriate of lime, hecnuse they are not deliquescent. The crystals of the muriate of strontia, which is not poisonous, are delieate six-sided prisms, while those of the barytic salt are four-sided tables, often truncated on two opposite angles, sometimes on all four; the muriate of strontia is further distinguished from the poison by its solubility iu alcohol, which does not take up the muriate of baryta, - and hy its effect on the flame of alcohol, which it colours rosered, while the harytic salts colour it yellow.
4. It is distinguisbed from the other soluhle barytic salts, by the action of nitrate of silver, which throws down a white precipitate.

Treatment.-Administer speedily some alkaline or earthy sulphate, as that of soda or magnesia, which immediately converts the poison into the insoluble sulphate of baryta, which is quite inert.
10. Cantharides. - The principle of this poison appears to be, according to M. Rohiquet, a white, crystalline, scaly substance, termed Cancharidin.

S'ymptoms.- In a case in which a drachm of tho powder was taken by a young man, there was a sense of huruing in the throat and stomach, and, in about an hour, violent pain in the lower belly; the yoice became feeble, the brathing laborious, and the pulse contracted; thero was excessive thirst, and unutterahlo anguish in swallowing any liquid; there was also priapism. To these symptoms may be added tenesmus, strangury, salivation, and oceasionally signs of injury of tho nervous system; headache, and delirium.

Testa. - When the case las been rapid, the remains of the powder will probably be found in the stomach, nnd may be easily discovered by its resplendent green colonr. It appears that it does not undergo deeom-
position for a long time when mixed with decaying animal matters.

Treatment. - No antidote has yet been discovered. If vomiting has not begun, emeties may be given; if otherwise, they should be discouraged. Olcaginous and demulcent injections into the bladder generally relieve the strangury. The warm bath is a useful auxiliary. Leeches and blood-letting are required, according to the degree of the inflammation.

1. Opitm.-The principles contained in this substance, and which are thromn down hy boiling a watery infusion of it with magnesia, are morphia, the alkaloild of opium,-narcotine, a poison, not an alkaloïd, - a peculiar acid named the meconic, 一and $\AA$ resinoïd suhstance.

Symptons.-Giddiness and stupor; the person becomes motionless, and insensible to external impressions, breathes slowly, and lies quite still, with his eyes shut, and the pupils contracted, the $\pi$ hole expression of the countenance being that of deep and perfect repose. As the poisoning adrances, the features hecome ghastly, the pulse feeble and imperceptible, the muscles excessively relaxed, and, unless assistance is speedily procured, death ensues. If the person recovers, the sopor is attended by prolonged sleep, which commonly ends in twenty-four or thirty-six hours, and is followed hy nausea, vomiting, giddiness, aud loathing of food. It should be reincmbered, that the possibility of rousing the patient from the lethargy eaused hy opium is in general a good criterion for distinguishing the effects of this poison from apoplexy and epilepsy.

Tests.-These may be distinguished according to their action upon the different principles of opium.

1. Morphia, when trented with nitrie acid, is dissolved with effervescence, and becomes instantly orange-red, which, if too much acid bas been used, changes quickly to yellow. When suspended in water, in the form of fine powder, and treated with a drop or two of permuriate of iron, it is dissolved, and forms a deep, greenish-hlue solution. Morphia is precipitated from its solutions by the alkalis.
2. Narcotine docs not undergo tbe changes prodnced on morphia by nitrie acid and the permuriate of iron. When crystallized together from alcohol, and not quite pure, the narcotine forms tufts of pearly thin tabular erystals, while the morphia is in short, thick, adamantine, prisuatic crystals.
3. Meconic acid, when beated in a tube, is partly decomposed, and partly sublimed;
and the snblimato condenses in filamentous, radiated erystals. When dissolved, even in a very large quantity of water, the solution acquires an intense cherry-red colour with the permuriate of iron. The sublimed crystals have the same property. Its solution gives a pale-green precipitate with the sulphate of copper, and if the precipitate is not too ahundant, it is dissolved hy boiling, but reappears on cooling.

Treatment. - The primary object is to remove the poison from the stomach; this is done by emetics of sulphate of zinc, in the dose of balf a drachm, or two scruples, by the stomach-pump,-by the injection of tartar emetic into tbe rectum, or, as a last resource, by the injection of a grain of tartar emetic into the veins, care being taken not to introduce air into the vein. The next object is to keep tbe patient constantly roused, by dragging him up and down between two men. Cold water, dashed over the head and hreast bas sueceeded in restoring consciousness for a short time, and appears to be an excellent way to insure tbe operation of emetics. In. ternal stimulants bave been given with advantage, as assafæetida, ammonia, camphor, musk, \&e. Venesection has also heen successfully used; and, in desperato cases, artificial respiration may he adopted with propriety. [Electro-magnctism has been applied with success.] When the opium has heen completely removed, the vegetable acids and infusion of coffee have been found useful for reviving the patient, and suhsequently in subduing siekness, vomiting, and headache.
2. Hydrocyanic Acid. This poison is found in the essential oils and distilled waters of the Bitter Almond, tbe Cherry Laurel, the Peach-blossom, \&c.

Symptoms. A person who swallowed an ounce of the alcoholized acid, containing about forty grains of the pure acid, was observed immediately to stagger, and then to sink down without a groan, apparently lifeless; the pulse was gone, and the breatbing was for some time imperceptible. After a short interval, he made so forcible an expiration that the rihs seemed drawn almost to the spine. The legs and arms becamo cold, the eyes prominent, glistening, and quite insellitible ; and after one or two more convilsive expirations he died, fire minutes after swallowing the poison.

Tests.-1. Its Peculiar Odowr, which, when diffuscd through the air, has a distant resemblance to that of bitter almonds, but is accompanied with a peculiar impression of acridity in the nostrils and bnek of the throat.
2. Tho Sulphate of Conpper forms with
it, when rendered alkaline with a little potass, a grcen precipitate, which beeomes nearly white on the addition of a little bydrochloris acid.
3. If the acid is rendered alkaline by potass, the Salts of the Protnaide of Iron produce a grayish-green precipitate, which, on the addition of a little sulphuric acid, becomes of a deep Prissian-hlue colour. The common green vitriol answers very well for this purpose.
4. The Nitrate of Silver produces, in a very diluted solution, a white precipitate; which, when dried and beated, emits cyanogen gas, which is easily known by the beautiful rose-red colour of its flame.

Treatment.-This consists in the use of the cold affusion, and the inhalation of diluted ammonia or chlorine, venesection [at tbe jugular vein, and the administration of carhonate of potash, and tbe mixed sulphates of iron, if aid has been obtained in good time].
3. Poisonous Gasfes. - 1. Sulphuretted Hydrogen, the most deleterious of all the gases. Tbe Symptoms, in enses where tbe vapours are breathed in a state of concentration, are sudden weakness, and all tbe signs of ordinary asphyxia. When the emanations are less concentrated, two varieties of affections have heen observed, the one consisting of puro coma, the other of coma and tetanic convulsions.

Test.-The prescnoe of this gas, in all. noxious emanations, is best proved by exposing to them a hit of filtering paper moistened with a solution of lead. The smell alone must not be relied on, as putrescent animal matter exhales an odour like that of sulphuretted hydrogen, though none he present.
2. Carbonic acid, the most important of the deleterious gases, as being the daily source of fatal accidents. A person immersed in this gas diluted with air, was at first affected with violent and irregular convulsions of tbe whole body, and perfeet insensibility, afterwards with fits of spasm liko tetanus; and during the second day, wben these symptoms had gone off, he continucd to be affected witb dumbness.
3. Tho Ftancs of Burning Chercoal appear to have produced, in a certain case, slight oppression, then violent palpitation, and next confusion of idens, gradually ending in insensibility. Sometimes there are tightness in the temples, and an undefinable senso of alarin; at other times, a pleasing scnsation.

T'reatment. -This consists olicfly in the occasional cmployment of tho cold affusion, and in moderato blood-letting from tho arm or from the head.

1. Sprychina. This is the most energetic poison next to the Prussie acid.

Symptoms.-[In a caso in whieh Stryeh nia had heen preserihed in too largo doses, the patient was seized with spasin of the musoles about the larynx and those of one arm ; she felt as if strangled. On a repetition of the dose, the same symptoms were renewed; she felt and looked as if strangled. -Dr. MI. Hall.]

Tests.-An intensely bitter taste; its alooholic solution has an alkaline reaetion; it forms neutral and crystallizable salts with the aeids; in its ordinary form it is turned orange-red by the action of nitric aeid, owing to the presence of a yellow colouring matter, or of hrueen; pure stryehuin is not turned orange-red hy nitric acid; the orange colour is destroyed by proto-chloride of tin.
2. Nox Vomica. - This is the most common speeies of Strychnos; no poison causes so much torture. It is very often fonnd iu the stomach of those poisoned with it.

Symptoms.-In the most eharacteristic case yet published, there were convulsions, with unueh agitation and anxicty; during the fits "the whole hody was stiffened and straightened, the legs pushed out, and forced wide apart; no pulso or breathing could he perceived; the face and hands were livid, and the museles of the former violently convulsed." In the short intervals hetween the fits, the patient was quite sensible, had a quick, faint pulse, complained of siekness, with great thirst, and perspired freely. "A fourth and most violent fit soon succeeded, in which the whole hody was extended to the utmost from head to foot. From this she never recovered: she seemed to full into a state of asphyxia, relaxed her grasp, and dropped her hands on her knces. Her hrows, however, remained eontraeted, her lips drawn apart, salivary foam issued from the corners of her inouth, and the expression of the countenance was altogether most horrific." She died in an hour after swallowing tho poison.

T'ests. - 1. The powder has a dirty greenish-gray colour, an intensely bitter taste, and an odaur like powder of liquoricc. It inflames on burning charcoal ; and, wheu trented with nitric acid, acquires an orange-red colour, which is clestroyed hy the aldition of proto-ehloride of tin. Its infusion also is turned orangered hy nitrie acid, and precipitated grayishwhite with tineture of galls.
2. It many be detocted in tho stomach by boiling the contente, - or the powder,
if it can be separated, - in water aeldulated with sulphuric acid. The liquid, after filtration, is neutralized with carhonate of lime, and then evaporated to dryness. The dry mass is then aeted on with suceessive portions of alcohol, and cvaporated to the consistence of a thin syrup. The product has an intensely bitter taste, preeipitates with ammonia, beeomes orange-red with nitric acid, and will sometimes deposit crystals of stryehnia on standing two or three days.

I'reatment.-Little is known of the treatmeut. Evacuate the stomach thoroughly with the stomach-pump, or emeties; the powdered nux vomiea adheres with great ohstinacy to the inside of the stomach. If the patient is not attacked with spasms in two hours, he will generally he safe.
3. Poisonous Fusai. The general symptoms present a well-marked conjunction of deep nareotism and riolent irritation. Emeties are of primary importance; the sopor and inflammation of the howels are to be treated in the usual way. No antidote is known.
[POKE BERRIES. The berries of Phytolneca deerudra.]
[POKE ROOT. The root of Phytolacea dccandra.]
[POLANISIA. A genus of plants of the natural order Capparidaceæ.]
[1. Pulanisia graveolens. Clammy-weed. An Ameriean spceies, possessing actire anthelmintie powers.]

POLARITY. A disposition in the partieles of matter to more in a regnlar and determinate manner, and not confusedly, when affected by other agents.

1. Magnetic polarity. The tendeney of a magnet, when freely and borizontally suspended, to settle spontaneously in a position direeted nearly north and south. The two ends of the magnet are ealled its poles,-that whieh turns to the north, the north pole; that to the south, the south pole. The straight line joining the two poles of $n$ magnet is called its axis.
2. Tho polaritics. A tern expressire of two antagonist chergies, each of which repels that which is similar, and attracts that which is opposite, to itself. Thus, the two north or two south poles of two magnetie needles mutually repel each other; hut the north pole of one needle, and the south polo of auother, mutually attraet each other.
3. Rerersion of terns. The earth itself being eonsidered as a magnet, or as containing within itself a powerful magnet, lying in a position nearly eoineiding with its axis of rotation. the south pole of a mag!etie ncelle would point towards the
sorth pole of the earth; so that the morth end is the south pole, and the smuth end tho north pole of a magnetic needle.
4. Borcal and Austral polarities. To avoil the above confusion of terms, the words Boreal and Austral have heen applied to the magnetism of the earth, while the terms north and south have heen restricted to that of the needle; what had been called northern polarity, being now Austral polarity; what had been called southern, being Boreal polarity.
5. Chemical and cohesive polarities. Two hypothetical forces, supposed hy Dr. Prout to reside in the ultimate molecules of matter; the chemical heing of a binary character, existing hetween molecule and molecule, and chiefly hetween molecules of different matter; the cohesive determining, under certain circumstances, the cohesion of the molecules of the same matter.
POLARIZATTON. The property hy which a ray of light, under certain circumstances, acquires poles, or sides with different properties, like those of a magnetic bar. See Light.
[POLIANTHES. A genus of plants of the natural order Liliaceæ.]
[Polianthes tuberosa. Tuberose. A native of India, the root of which is acrid and emetic, and, according to Lemery, detersive, resolvent, and astringent.]
POLLEN. Literally, fine flour; a term applied to the powdery matter, or grains, inclosed within the anthers of plants. They contain a fluid termed fovilla, charged with molecular matter.
6. Pollen-tube. A delicate transparent tuhe emitted hy the pollen-grain, when this falls upon the stigma; the fovilla passes down the tuhe, until the grain is emptied.
7. Pollen-mass. A term applied to the peculiar state of the pollen in Asclepiadacea and Orchidacea, in which the pollen-grains cohere into a solid wasy mass.
8. Pollenin. A peculiar substance obtained from the pollen of tulips.
[POLLODIC ( $\quad$ duvs, many ; oios, a way). A term applied hy Marshall Hall to a course of nervous action proceeding from one point to another in many directions.]

POL-, POLY- ( $\quad$ odis, many). A Greek prefix, denoting many or much.

1. Pol-akenium. A term applied by Richard to a fruit consisting of several akenia (see Achanium). When there are two cells, the fruit is a di-akcninm; when threc, a tri-akenium; and so on. Tho diakenium is found in tho Umbelliferev. Seo Mericarp.
2. Poly-adelphia ( $\dot{\alpha} \delta \varepsilon \lambda \phi \partial \varsigma_{s}$ a brother). The eigliteenth class of plants in the Linnæan systcm, in which the stamens are associated in several parcels, as in Hyporicum. Hence polyadelphous, having the stamens arranged in several fasciculi.
3. Poly-andria (àvip, a man). The thirteenth class in the Linnæan system of plants, comprising those which have more than twenty stamens inserted beneath the ovarium. Hence polyandrous, having an indefinite numher of stamens inserted heneath the pistil.
4. Poly-chrestus ( $\chi$ pnard̀s, useful). A term applied to medicines which have many virtues, or uses, as sal polychrest.
5. Poly-chroite ( $\chi$ póa, colour). The name given hy Bouillon, \&c. to the extractive matter of saffron, from the fact of its watery infusion assuming different colours when treated with different agents.
6. Poly-chrome ( $\chi$ рш̈a, colour). A peculiar crystalline principle found in some vegetahles, as quassia. It gives to water the quality of exhibiting a curious play of colours, among which hlue predominates, like that of the opal, when the solution is viewed hy reflected light; one part will give this property to $1,500,000$ of water.
7. Poly-dipsia (di廿a, thirst). Excessive thirst ; insatiahle desire of drinking.
8. Poly-gala (yá̀a, milk). A genus of plants, so named from the ahundance of their milky juice. By hoiling the powder of the root of the Polygala senega, an acid is procured, called polygalie acid; a new alkaloìd is also ohtained from soveral species, called polygalin.
9. Poly-gamia (yáuos, nnptials). The twenty-third class in Linnæus's system of plants, comprising those which hear hermaphrodite and unisexual flowers on the same individual ; or hermaphrodites on one individual, malos on a second, and females on a third.
10. Poly-gastrica (ya־rìp, a stomach). The first class of the Diplo-neura or Helminthoïda, consisting of minute, transparent, soft, aquatic animals, with numerous stomachs or cocer communicating with an internal alimentary cavity, without perceptihlo nerves or muscles, moving ly external vilbratile cilia.
11. Poly-gonum (yovv, the knee). A genus of plants, so named from their numerous joints. Tho only species worth noticing is tho P. bistorta, Great Bistort, or Snako-weerl. Seo Bistorta.
12. Poly-gynia ( $\gamma$ vun), a woman). An order of plants in tho Linuean system, in which thero is an indefinite number of pistils.
13. Poly-meric ( $\mu$ ipos, a part). A torm
applied to compounds in whiel the ratio of the elements is the same in differcut compounds, but tho total number of each is greater in one compound than in the others.
14. Poly-petalours (лદ́тa入ov, a flowerleaf). A term applied to a corolla, of which the petals are distinct from each other.
15. Poly-phagia ( $\phi$ á $\gamma \omega$, to eat). Excessive desire of cating. See Bulimia.
16. Polypi-fera. The second class of the Cyclo-neura, or radiata, consisting of soft, aquatic animals, of a plant-like form, which develope small tubular digestive sacs called polypi.
17. Poly-puıs (пои̃ร, a foot). A tumour, generally of a pyriform shape, occurring in the nose, uterus, \&e. ; and named from an erroneous idea that it has several feet, or roots, like the animal so ealled.
18. Poly-sarcia ( $\alpha \grave{\mu} \xi$, flesh). Corpulency; obesity; bulkiness of the body.
19. Poly-sepalous. A term applied to a calyx of which the sepals are distinet from each other.
20. Poly-spermous ( $\sigma \pi \dot{\varepsilon} \rho \mu u$, seed). A term applied to fruits which contain many seeds, as distinguished from those which have few, or the oligo-8permous.
21. Poly-uria (ovipov, urine). Excessive discharge of urine.

POLY-ATO'MIC BASES. A term explanatory of the theory of M. Millon respecting the constritution of subsalts. He assumes that two, three, four, and even six equivalents of water or a metallic oxide, may together constitute a single equivalent of base, and unite as such with a single equivalent of acid to form a neutral salt.

POLYGALEA. The Milkwort tribe of dicotyledonous plants. Shrubs or herbaceous plants with leaves generally alternate ; flowers polypetalous, unsymmetrical; stamens hypogynous; ovarium 2-celled; fruit dehiscent.
[1. Polygala Rubella. Bitter Polygala. An indigenous plant introduced into the Secondary list of the Ph. U. S. ; and the root and herb of which is considered to be, in small doses, tonic, and in larger, laxative and diaphoretic.
[2. Polygala Scnega. Seneka Snake root. An indigcoous plant, tho root of which is in small doses stimulating, expectorant, dinretic and diaphoretic, and in large doses cmetic and purgatire, and sometimes emmenagnguc. It scems indeed to excito all the secretions. It is chiefly cmployed however as an expectormit, aud is cons!dered a valuable remedy in chronie catarrb, humoral asthwa, sceondary stages
of eroup, and in peri-pucumonia notha. It has also been cmployed as an emetic, purgative and diaphoretic in rheumatisn, as a diuretic in dropsy, and an emmenagogne in amenorrhce. It is inost Eenerally used in decoction, of which the dose is $\int \mathbf{z} \mathrm{ij}$. The dose of the powdered root is from yr. x. to Aj .]
[POLIGALIC ACID. A name giren by Qucrenne to a peculiar acrid principle obtained from Polygula senegu.]
POLIGONEE. The Buck-wheat tribe of dicotyledonous plants. Herbaceous plants with leaves alternate; flovers oecasionally uniscxual; stumens definite; orarium superior; seed with farinaceous albumen.
[POLYGONUM. A genns of plants of the natural order Polygonaceæ.]
[1. Polygonum aviculare. Knot-grass. This is a mild astringent, and was formerly used as a vulnerary and styptie.]
[2. Polygourm Bistorta. Bistort ront. This species is a native of Europe and the north of Asia. The root, whieh is officinal, is powerfully astringent. It is rarely nsed in this country.
[3. Polygonum Hydropiper. Water-pepper. (Pergicaria urens). An European species, the leaves of which have a barning taste, inflame the skin when rubbed upon it, and are esteemed diuretic.]
[4. Polygounm hydropiperoides (Michaux); P. punctatum (Elliott). Materpepper, smart weed. An indigenous species which has similar properties with $P$. hydropiper, and is strongly recommended in amenorrhœa, by Dr. Eberle.

PO'LYPARY. A term sometimes employed to express the common connecting basis of the polypes of a composite zouphyte; at other times applied to the solid protective struetures, whether forming for the zoopliyte an external corering, or constituting an intcrnal axis. To obviate this ambiguity, Dr. Allman cmploys the term cresonare in the former sense, restrieting the term polypary to the latter.

PO'LYPE. An ambignous term often employed to designato the entire composite fabric of a zoophyte, the aggregate result of gemuation; at other times, it is intended to indicate each of those peculiar organisms, whicb, almost always furnished with a mouth and tentacula, are developed upon rarious points of a common living hasis, and are cminently charaetcristic of zoophytic form. To obviate this ambiguity. Dr. Alluan employs tho term polype strictly in the latter signifieation, applying the tern zorphytc to the entire mass, whether consisting of a
single polype, as in hydra, or of many united iuto a more or less definite assemblage.

## [POLYPODIUM FILIX FEEMINA.

 Aspleuium filix fremina, q. r.][POLIPODIUM FILLX MAS. Aspidium filix mas, q. v.]
[POLYPODIUM VULGARE. Common Polypody. A fern, the root of which was formerly employed as a purgative and expectorant, but is now rarely used, being generally considered inert.]
[POLYPORUS JARICIS. A fungus, at one time prescribed as a drastic purge.]

P O'L Y T IIE I O'N IC ( $\pi$ odùs, many ; Ofiov, sulphur). A term applied to a series of three new acids of sulphur, all containing, like hyposulphuric acid, 5 equir. of osygen, but evidently more related in constitution and properties to hyposulphurous acid. These acids are named by Berzelius-

1. Trithionic, or mono-sul-hyposulphuric.
2. Tetrathionic, or bisul-hyposulpburic.
3. Pentathionic, or trisul-byposulphuric.

「POLYTRICHUM JUNIPERINUM. Hair-cap moss. Robbin's Ryc. A moss growing abundantly in New England, highly extolled by Dr. Wm. Wood as a diurctic.]

POMACEA (ponum, an apple). The Apple tribe of dicotyleclonous plants. Trees or shrubs with leaves alternatc; flowers polypctalous; stamens perigynous; fruit 1 to 5 -celled.

POMPIOLIX ( $\pi о \mu \phi б \lambda v \xi$, a water-bubble). Watcr-blebs; an eruption of bullæ or blebs, without inflammatiou round them, aud withont fever, breaking and healing without scale or crust.

POMUM. An Applc. A fruit consisting of two or more iuferior carpels, united togetber, the pericarp being fleshy, and formed of the Doral envelope and ovary closely cohering.

POMOM ADAMI (Adam's apple). The prominent part of the thyroid cartilage, so called from its projectiug moro in men than in women.

PONDERABLE (pondus, weight). A term applied to matters posscssing weight, as metals, gases, \&c., anel used in contradistinction to the impunderable agents, as light, heat, and elcetricity.
l'ONDO (pondus, weight). A pound weight; a term indoclinable both in the singular and the plural numbers.

PONS, PONTIS. A bridge; a medium of commanication between two parts.

1. Pons haprais. A portion of the suhstance of the liver, which passes from une lube to the other, frequently convertiug the
lower balf of the longitudinal fissure into a true canal.
2. Pons Tarimi. A layer of whitish-gray substance, connccted on either side with the crura cerebri. From its being perforated by several thick tufts of arteries, it is also called locns perforutus. It forms part of the floor of the third ventricle.
3. Pons Varolii. A broad transverse band of white fibres which arches, like a bridge, across the upper part of the medulla oblougata. It is the commissure of tbo cerebellum, and associates the two lateral lobes in their common function. It is also called protubercintia annularis, nodus, encephali, \&c.
PO'NTEFRACT LOZ KNGES. Lozenges prepared from refined liquorice, employed in cough and irritation of the fauces.

POPLES (plico, to fold). The ham of the leg behind the knee.
[Poplitaal. Relating to the ham of the leg.]

Poplifous. A musclo arising from the external condyle of the femur, and inserted into the superior triangular surface at tho back of the tibia. It bends tbo thigh and leg.

POPULIN. An alkaloìd found in the bark of tbe Populus tramula, where it is accompanied by salicin.
[POPULUS. Poplar. A genus of plants of the family Amentaceæ. The leaf buds of many of the species are covered with a resinous exudation to which they owe their virtues. They have been uscd in pectoral, rheumatic, and nephritic affections. An ointment, prepared witb the buds of $P$. nigru, was formerly officinal. Tho bark of some of the specics, as $P$. tremale and $P$. tremuloides, is tonic, and has been used in intermittent fever.]

PORCELAIN. A fine and pure clay, prepared by levigation from mouldering granite or other disintegrated felspathic rocks, and terined, in Staffordshire, Chino clay. The art was first practised in Dresden.
[PORCUPINE DISEASE. Ichthyosis; fish-skin disease.]

PORIFERA (porns, a pore: fero, to hear). The first class of tho Cycloneura, or Radiata; consisting of soft, gelatinous animals, which have tbein body traversed internally by numerous anastomosing cnnals, commencing frow superficial minute pores, and termiuating in larger opon vents.
loROSITY (porks, a poro). Tbe property of laving pores; a property of all marses of matter, even the densust. Sce Impenctrability.
[PORPHYROXIN. Opine (Bcrzelius). An alkaloid obtained from opium.]
[PORPHYROZATION. Levigation.]
[PORRACEOUS (porrum, a leek). Green ; of the colour of leeks.]

PORRI'GO (porrum, garlic; from tho peculiar odour of the discharge; or from porrigo, to spread). Moist scall; an eruption of straw-coloured pustules, concreting into yellow or brownish crusts, or cellular scabs. The species are-

1. Porrigo larvalis. Milk scall, or the crustea lactea of authors. It envelopes the face of infants, like a larva, or mask.
2. Porrigo furfurans. An eruption of pustules which successively issue in thin scabs, like furfur, bran, or scurf.
3. Porrigo lupinosa. An eruption of pnstules which terminate in small scabs, like lupine-seeds.
4. Porrigo scutulata. An eruption of pustules leading to thin scabs, and eventually becoming ringworm, which affects the whole scalp like a scutulum, or little shield.
5. Porrigo decalvans. An eruption ob. scurely pustular, and consisting in calvities, or bald patches of the scalp.
6. Porrigo favosa. An eraption ocenrring in all parts of the body, and resembling a faves, or honeycomb.
[PORRUM. Leek-root. A species of Allium. The bulb, which is the officinal portion, is stimulant, expectorant, diuretic, and rubefacient.]
[PORTA. A gato. A name for the fewale pudenda; also for the transverse fissure of the liver, through which the hepatic ducts, hepatic artery, and portal vein enter this gland.]

PORTAL CIRCULATION. A subordinate part of the venous circulation, in which the blood makes an additional circuit before it joins the rest of the venous blood. There are in the vertebrate classes two portal circulations; one of the liver, the other of the kidncys. The former exists iu all the vertebrata; the latter, only in reptiles, amphibia, and fishes.

PORTAL VEIN. Vena porta. A vein originating from all the organs within the abdomen, execpt the kidneys and bladder, and the uterus in the female. It has two principal trunks, tho splenic and superior mesenteric veins.

PO'RTER. An infusion of malt and hops, owing its dark colour to high-dried or charred inalt.

PORTIO DURA. The hard portion of the seventh pair of werves, or facial, arising from the upper part of tho respiratory tract, where it joins the pons Varolii.

Portio mollis. 'Jhe roft zurtion of the
seventh pair of nerves, or auditory, arising from the anterior wall or floor of the fourth vcutricle, by means of the linea traneversa, or white fibres, of the calamus scriptorius.

PORTLAND SAGO. Portland Arrovroot. A fecula prepared, in the island of Portland, from the cormus of tbe Arum maculatum, Wake-robin, or Cuckoo-pint.
[PORTULACA OLEACRA. Garden Purslain. An annual succulent plant, cultivated in gardens, and considered a cooling diuretic.]

PORUS. A pore; a minute orifice in the skin, which serves as a passage for the perspiration, cutancous absorption, \&c. Also, a small interstice between the particles of matter which compose bodies.

1. Porus opticus. An opening in the centre of the cribriform lamella, for the transmission of the arteria centralis retinæ to the cye.
2. Pori biliarii. Biliary pores; the slender roots of the hepatic duct arising from the granulations of the liver.

POSCA. A term used by Celsus for sour wine mingled with water, and probably derived from poto, to drink, as esca is from edo, to eat.

POSOLOGY ( $\pi 6 \sigma 05$, how much ; $\lambda 6$ yos, description). That branch of medicine which treats of quantity, or doses. A table of doses of the principal medicines is given under the term Dose.

POSSET. Milk curdled with mine, or an acid. The term is probably derifed from poser,

POSTERIOR AURIS. A muscle situated hehind the ear, and consisting of one or more hundles of fleshy fibres, sometimes called musculi retrahentes auriculam.
[POSTHITIS (rootiov, the prepuce). Inflammation of the prepuce]

POST-MORTEM ESAMINATION. A barbarous cxpression for the opening and examination of the dead body. Sectio is not satisfactory. Autopsia is unintelligible.

## [POST PARTUM. After delirery.]

POT-METAL. A mixture of copper, and about a fourth its weight of lead.

POTASSA. Potass, or potash; the ICgetable Alkali, so called from its being obtained by the incineration of regetables. It is the hydrated protoxide of potassium, and is known by the names of potassa fusa, kali cnusticum, lapis infernalis, causticum commune necrrinum, \&.c. The term potash is derived from the circumstance that the water in which the asbes ure washed is craporated in iron pots.

1. Potassa impura. The pearl-ash of commerce, also called cineres clavellati.
2. Potasser actas. Acetate of potass,
also called sal diureticus, terra foliata tarturi, sal digestirus Sylvii, \&c.
3. Potasise carbomas. Carhonate of potash, formerly called salt of tartar, mild vegetable alkali, fixed nitre, and sub-carbonate of potash.
4. Potrasce li-earboncr. Bi-carbonate of potash, formerly called earbonate of potash, or aërated kali.
5. Potasxa sub-carbonas. Sub-earbonate of potass, formerly called kali proparatum, sal absinthii, sal tartari, \&e.
6. Potursce chloras. Chlorate of potash, also called oxymuriate or hyperoxymuriate of potash.
7. Potassae nitras. Nitrate of potass, nitre, or saltpetre; when fused and cast iuto'moulds, it is known hy the name of sal prunelle.
8. Potrosce sulphas. Sulphate of potass, formerly called kali vitriolatum, tartarum vitriolatum, sul de duobus, sal polychrest, arcanum duplicatum, \&e.
9. Potassce bi-sulphas. Bi-sulpbate of potass, the sal enixun of commerce; also called acid vitriolated tartar, sal auri philosophicum.
10. Potassce sulphuretum. Sulphuret of potass, formerly called kali sulphuretum, hepar sulphuris, \&c.
11. Potashice tartras. Tartrate of potass, formerly called tartarum solubile, kali tartarizatum, vegetable salt, \&e.
12. Potassie bi-tartras. Bitartrate of potash, also called cream of tartar, supertartrate of potash, and acidulous tartrate of potash.
13. Liquor potassa. A solution of eaustic potash, formerly called lixivium sapo-
narium.

POTASSIUM. Kulium. The metallic basc of the well-known alkaline substance, potassa.
POTATO. The tuher occurring on the subterrancan stem of tho Solanum tubernsum. It is multiplied hy means of its buds,
or eyes, which are separated toget or eyes, which are separated together with portions of the tuber, and planted under the name of sets. The namo appears to have been derived from its resemblance to tho Convolvnlus battatas, or sweet potato, an aphrodisiac.

1. Potato starch. A fecula obtained from the potato, and ealled English Arrozo-
root. root.
2. Potato sugar. A species of sugar manufactured from potato flour, and called patent sugar. A sugar of this lind has been sold in Paris as a substitute for manna.
3. Oil of Potatnes. AlPotato spirit oil.
Fuscl oil. Amylic Alcohol. Fuscl oil. Amylic Alcohol. IIydrated oxido of Amyle]. A peculiar oil which girez the tasto and sucll to epirits made
from eorn or potatoes. It appoars to be
an alcohol.
POTA'TO-FLI. The Cantharis vittata, a colcopterous insect cmployed for vesiea, tory purposes in North Amcrica.
[POTINTIAL (potentia, power). A term applied to caustic substances which, though energetic, do not act until some time after their application; sueh are tho caustic alkalies aud nitrate of silver, which are therefore termed potential, in contradistinction to tho bot iron, which is termed the actual cautery.]
POTENTILLATORMENTILLA. COMmon Tormentil or Scptfoil; a European Rosaceous plant, the root of which has been recommended for its astringent effects without causing cxcitcment.
[Potentilla Reptans. Cinquefoil. This species possesses similar properties with the preceding.]
[POTHOMORPHA. A genus of plants of the natural order Piperaceæ.]
[1. Pothomorpha peltata. Caapela. A Braziliun species, considered an effectual diuretic and useful in strangury.]
[2. Pothomorpha umbellata. This spocies is also known by the name of Coapeba iu Brazil, where it is much esteemed in obstructions of the abdominal organs, and is believed to promote all the secretions.]

POTIO (poto, to driuk). A potion, or eompound, commonly ealled a mixture, or
mistura.

Potion pectorale (Magenclic). Pótion of hydrocyanic acid; consisting of fifteen drops of medicinal prussic acid, two ounces of infusion of ground ivy, and one ounco of syrup of marsh-mallows. A teaspoonful to be taken every six hours, in the same cases as the acid.

POT-POURRI. A misture of fragrant flowers, roots, gums, \&c., either mixed together dry, or preserved with salt.
[POTTS' DISEASE. Caries of the bodies of the vertebra, causing eurvature of the spine forward.]

POTULENTA (potus, drink). Drinks; liquids taken by the mouth to quonch

POTUS ANTATROPHICUS. A remedy extolled by Hufeland against the emaciation resulting from mesenteric disease of childron. He directs, according to the age, half or a whole yolk of an egg to be treated with a quart of water, so as to form a milky fluid; to this a littlo salt is to bo added, and the child is to take it as its ordinary drink.
[POULTICE. Cataplasm. A moist substance intonded for exterual applieation. They may be made of various articles:]
taking wood－charcoal red－hot from the fire，extinguishing it by sprinkling dry sand over it，reducing it to a very fine pow－ der，and adding it to the simplo cataplasm warm．］
［2．Flaxseed Poultice．Take boiling water $f \overline{3} x . ;$ add gradually powdered flax－ seed Jivss．，constantly stirring．］
［3．Slippery－elm Poultice．Take boiling water，and add to it，constantly stirring，a sufficient quantity of the powdered hark of the ulmus fulva，to make a light，frotby mass．This is the lightest，most sootbing， and most agreeable poultice in usc．］
［4．Yerst Ponltice．Take of yeast，wa－ ter heated to $100^{\circ}$ ，each f $\overline{\mathrm{v}} . ;$ wheat flour 1bj．Mix the yeast with the water，and add the four，stirring well；then place it near the fire until it begins to swell up．］

POUNCE．The powder of gam sanda－ rac sifted very fine．

POUPART＇S LIGAMENT．The lower border of the aponeurosis of the external oblique muscle of the ahdomen，which is stretched between the nnterior superior spinulus process of the ilium and the spine of the pubis．
［POWDER．A substance in minute particles．］

POWDER OF FAFNARD．See Fay－ nerd．
［POWDERS，CASTILLON．These bave enjoyed considerable repute as a remedy for diarrhoei and dysentery．They are composed as follows ：－－Sago，salep，traga－ canth，of each，in powder，eight parts；pre－ pared chalk two parts；cochineal one part． Rub togetber and divide into porders of one drachm ench，of which one is to be given thrce or four times a day．］

POX．The vulgar name of syphilis； formerly called great pox，to distinguish it from Variola，or small pox，on account of the larger size of its blotches．

PR ECORDIA（prce，before，cor，the heart）．The forc part of the region of the thorax．This terni is，however，geucrally used in the sense of epigastrium．

Pll EFLORATION（ pra，before，florco， to flower．See Aestivation．

PRAPUTLUM（pra，befurc，puto，to cut off）．The prepuce；the foreskin of tho peuis．It is connected to the under part of the glans by a triangular fold， terined the freenum prepmii．
［PRAIRIA DOCK．Common name for Parthenium integrifolimn．］
［PRAXIS（テ̈pa⿱宀⿱一兀口灬，to perform）．The practice of any thing．］

PRECIPITATE（praeeps，hendlong）． A solid substance precipituted，or thrown down，frow a solution，by adding a re－ agent．

1．Rell precipitate．See Mereury．
2．White precipitate．See Jereury．
3．Sueet precipitute．［Sce Calomel，and Mercury．］
4．Precipitate per ye．Sce Merenry，Red Oxide of．
5．Pinple precipitate of Cassius．Seo Cassius．

6．Precipitated sulphur．See Sulphur Pracipitatum．

PRECIPITATION（prceceps，head－ long）．Tho process of throwing doicn solids from solutions in which they are contained． The substance so separated is called a pre－ eipitate；and the substance employed to produce this cffect，a preeipitunt．

PRECOCITY（pracoctus，ripe before its time）．Premature development of sexual organization or power．
PRECURSOR（pra，before；curro，to run）．A term applied to symptoms which precede，or indicate the approach of，a discase．

PREDISPOSING CAUSE．［Predispo－ sition．］A state which renders the body susceptible of disease，as temperament， age，sex，\＆c．

PREGNANCY（pragnans，quasi gig－ nere pra，pregnant）．Utero－gestation；the period of child－hearing．In classic writers， pregnans is said of a woman whose lying－ in is near at hand，and gravida of a woman with child，whether the time of her delivery be near or distant．But this distinction is not coustant．

1．Spurious pregnancy．An affection， described by Dr．Gooch，in which the mam－ ma are swollen．and discharge a serous fluid resembling thin milk，being precisely what takes place in real pregnancy．

2．Madane Boivin deserihes three kinds of Mole，which always consist in a morbid product of conceptiou；these are the fillse germ，the fleshy mole，and the resicular or hydatid mole．
［3．Abdominal pregnancy．In which the foetus is in the abdominal cavity．
［4．Complex pregnaney．When the ute－ rus contains，in addition to a foetus，a mole， liydatids，\＆c．
［5．Interstitial pregnaney．Then the emhryo is developed in thic substance of the nterus．
［6．Orarian pregnancy．When the foetus is developed within the ovary．
［7．Tubal pregnancy．When the foetus is developed in the Fallopian tube．
［8．Vtero－abidominal．When there are two fertuses：one in the uterus，the other in the ithlominal cavity．
［9．literomarion prequancy．There being two fretuses：one in tho uterus，the oher withiu the ovary．］
[10. Liero-lnberl pregnancy. Where there are two feetuses: one in the utcrus, the other in the Fallopian tube.]

PREMO'LAR (pre, before; molaris, n molar tooth). A teriu applied to the teeth which appear, in the diphyodont mammalia, between the true molars and the caniaes. In human anatomy they are called bicuspids.
[PRENANTHES. A genus of plants of the natural order Cichoracer.]
[Prenanthes serpentaria. This is an indigenous plant in great repute in the mountainous districts of Virginia and North Carolina, as a remedy for the bites of venomous serpents.]
[PREPUCE. See Praputinm.]
[PREHENSILE (prehendere, to take hold of). Adapted for taking bold of, or grasping.]
[Prehension (prehendere, to take hold of). Taking hold of. Prehellsion of food. The act of conveying food to the mouth, aud introduciag it iuto that eavity.]

PRESBYOPIA ( $\pi$ píaßus, old ; $\omega \psi$, the eye). [Preshytia.] Far-sightedness. A state of the eye ohserved in advanced age, and strongly marked in old persons. It is the npposite of myopia.

PRESCRIPTION ( prescribo, to write before). A medicinal formula. It has been divided iuto four constituent parts, suggested witb a view of enabling the basis to operate, in the language of Asclepiades, "cilo," "tuto," et "jucundè;" quickly, safely, and pleasantly. These are-

1. The Basis, or principle medicine.
2. The Adjuvens, that which assists and promotes its operation-"Citठ."
3. Tbe Corrigens; that which corrects its operation-"Tuid."
4. The Constitnens; that which imparts an agreeable form-"Jucuude."
For Abbreviations used in Preseriptions, see Abbrevintion.
[PRESENTATION (prarento, to offer). Ia ohstetries, this terin is applied to denote the manner in which the foetus offers itsclf in its passage through the os uteri; and the different presentations are denominated according to the part of the ehild which presents at the mouth of the womb.]
PRESPIE'NOID (prac, before ; sphemoides, the sphenoid bone). The name of a bone in the human skull, which, in
Prof. Owen's Homolories, Prof. Owen's Homologies, eonstitutes the " eeatrun" of the frontal vertebra, viewed in relation to the arehetype vertehrate
skeleton.

PRESTON SALTS. Prepard by adding a few drops of liquor amnionioy fortior
and some volatile oils to coarsely powdered sesquicarbounte of ammouia.

PRIAPISM. Permanent rigidity and erection of the penis withont concupisecnee. The teruu is derived from Priapus, as satyriasis frou satyrus.
[PRIDE OF CHINA. Pride of Thdia. Comanon names for Amelia Azeiforcoh.]

PRIMA VIE. The first passages, viz., tbe stomach and intestinal tuhe, as distinguished from the lacteals, or secundce vice, the second passages.

PRIMINE (primus, first). The first or outermost sae of the ovule in plants.

PRIMIPARA (prima, first; pario, to bring forth). One who is delivered of her first child.
[PRIMULA. A genus of plants of the natural order Prinulaceæ.]
[1. Primula veris. Cowslip. The flowers of this species were considered as uildly tonie, antispasmodie, and anodyne.]
[2. Primmla vulgaris. Comuson primrose. The leaves and roots have bcen used as sternutatories.]
PRIMULIN. A bitter tineture obtained by digesting the rools of the Primala veris, or cowslip, in water or spirit.

PRINCE'S METAL. Prince Rupert's metal. An alloy of copper and zinc.
[PRINOS VERTICILLATUS, Black Alder. An indigenous plant of the natural order Aquifoliaceæ, the bark of whieh possesses tonic and astringent properties. It has been recommended in intermittent fever, diarrhoca, and gangrene; and is a popular remedy for gangrenous, or illconditioned uleers, and chronic cutaneous eruptions. It is given internally, and applied externally as a mash. It is most generally 1 nsed in decoction, made by boiling.
${ }_{\mathrm{Z}}^{\mathrm{ij}}$. of tho bark in $\mathrm{J}^{\mathrm{ij} . \text { of } \text { of tho bark in tbree pints of water to. }}$ a quart.]

PIRISM ( $\pi \rho i \sigma \mu a ;$ from $\pi \rho i \omega$, to saw). A solid glass in the form of a triangle. so termed from its sepurating a ray of light into its constituent parts.

PRISMATIC SPECTRUM. Soler spec trum. The variously-coloured apperrame presented by a ray of white light, when separated by refraction through a glass prisin. This appearance consists of an oblong inage, contwining seven colours, which nre ealled simple, or homngeneons, in opposition to white light, which is enlled compound or heterogencons.
[PRIYET. Common name for Ligustrum vilgare.]
PROBANG. A long, slender piece of whalebonc, with a piece of sponge at ono end, for examining the oesophagus, or re. moving any obstruotion in it.

PROBE ( prozo, to try). Au ingtrument witb which the depth and oxtent of wounds are tricd.

PROCESSUS (procedo, to issuc forth). Apophysis. A process, or eminence of a bone. Also, a lobe, or purtion of the brain.

1. Proecs8is a cerebello ad testes. The name of two cords, which pass from the nates and testes of the brain to the cerebellum. They are the superior peduncles; the corpora restiformia are the inferior peduncles.
2. Processus cochleoriformis. A small, spoon-like, hony plate, on the anterior wall of the pyramid.
3. Processus mommillores. A name formerly given to the olfactory nerves, from their being considered as emunctorics, or canals, hy which the serum and pituita, separated by the hrain, were conyeyed arvay.
4. Processus verniformes. Two wormlike lobes of the cerebellum, connecting the lateral hemispberes superiorly and inferiorly.
5. Process, azygour. Tbe rostrum, or ridge, on the median line of the guttural aspect of the sphenoild hone.
6. Process, digital. A name given to the extremity of the cornu ammonis, from its bulbous form resembling the point of a finger.
7. Process of Ravo. A very elongated slender process, supported anteriorly by tbe neak of the malleus.
8. Processes of boncs. See Os, orsis.

PROCIDENTIA, ( pro, bcforc, and cado, to fall). Prolapsub. The falling down of a part, as of the anus, uterus, \&c.

PROCC'LIAN ( $\pi \rho$ ), hefore; кoîlos, hollow). A designation of those vertebroe which have a cavity in front of the "centrum" or body, and a ball at the back part.

PROCTALGIA ( $\pi \rho \omega \kappa$ tos, the anus; ji yos, pain). Pain or derangement ahout the anus, without primary inflammation. Dr. Good uses the term proctica.
[PRODROMUS (Tpo, before; ipouos, course). The period immediately preceding an attack of diseasc, and in wbich the precursory symptoms appear.]

PROFLUVIA (profluo, to flow down). Tluxes; pyrexia, attended with an incrensed excretion of a matter not natnrally bloody; the fifth order of the Pyrexice of Cullen's nosology, ineluding the geuera catarrlus aud dysenterin.

PROFUNDUS. Literally. deep, or deepseated. A desiguation of one of the flexors of tbe fingers, from its being situated more deoply tban the flexor sublimis.

PROEUSIO (profundo, to ppur forth). A loss of blood; a genus of the order Apoccnoses, or inercased secretions, of Cullen's nosolory.
[PROGNATIIOUS (mpo, before; $\gamma$ vaios, the jaw.) Having a projecting jarr.]

PROGNA'TIIOUS SKULL ( $\pi \rho$ b, forward; $\gamma^{\text {viO }}$ os, the jaw). Under this term, Dr. Prichard descrines tbat form of the skull which is cbaracterized by the forward prominence of the jaws, and which is most marked in some of the Negro races of the Guinea coast, and in some of the Polynesian and Australian races. A jaw may be so prognathous as to be almost a muszle.

PROGNO'SIS (Tpoyvwots, foreknowledgc). Prognostication, or tbe faculty of foreseeiug and predicting what will take place in diseases.

PROLABIUM (pro, before; labium, the lip). The membrane which invests the front part of the lips.

PROLAPSUS (prolabor, to fall forward). Procidentia. The falling down of any part, as of the anus, ragina, uterus, bladder, \&c. A genus of the Eictopic, or protrusions, of Cullen's nosology.
Prolepsus iridis. A hernia-like protrnsion of the iris through a wound of the cornea. The tumour, thus formed, is sometimes called staphyloma iridis; the protrnsion of the whole iris is termed stophyloma racemosum; a small prolapsus, myocephalon ( $\mu v i a, ~$ a fly; кєфа入ì, the head); tbose of larger size bave been named clarns (a nail), helos, й̉力os, a nail), and melon ( $\mu \bar{\eta} \lambda o r$, an apple).

PROLIFEROUS ( proles, offspring: fero, to bear). A term applied in botany to a flower which produces another flower from its ceutre, as in certain roses, $\&$ c.

PROMETHEANS (Promethens, the firestealer). Sinall glass bulbs, filled with concentrated sulphuric acid, and surrounded with an inflaminable mixture, which it ignites on being pressed, affording an instantanenus light.

PROMONTORIUM. A promontor: an cminence of the internal car, forined by the outer side of the restibule, and by the corresponding scala of the cochlea.

PRONATION (pronus, bending downward). The act of turning the palm of the hand downwards, by rotating the radins upon the ulna by meaus of the pronator muscles.

PRONA'TOR TERES (pronms. bending duwnrard). A muscle arising from the inner condigle of the humerns aud the cormont process of the ulua, and inserted iuto the middle of the radins.

Pronator quadratus. A muscle arising
from the edge of the ulna, and inserted into the edge of tho radius. This, and the preceding muscle, turn the radius and the hand inwards.

PROOF. This term, as applied to spirit, is said to have been derived from an old pratice of trying the strengtb of spirit by pouring it over gunpowder in a cup, and then setting fire to the spirit; if, when the spirit had burned away, the gunpowder exploded, the spirit was said to be over proof; if, on the other hand, the gunpowder failed to be ignited, owing to the presence of water left from tbe spirit, it was said to be under proof. It requires, however, n spirit nearly of the strength of what is now ealled rectified spirit to stand this test. See Standard Proof Spirit.

PROOF SPIRIT. Spiritus temuior. Spirit which, on proof or trial, is found to be of the proper strength. The proof spirit of the pharmacopeia is directed to be of specific gravity 0.930 .

PROPAGO. A term applied by the older botanists to the branch laid down in the process of layering.
PROPAGULUM. The term applied by Link to tbe offset in certain plants. See Offet.
 to guard). Any means employed for the preservation of health.

PROPOLIS ( $\pi \rho \delta$, before ; $\pi \delta \lambda \iota s$, a city). Bee-bread; a resinous substance collected by bees from the buds of trees, and used by them for lining the cells of n new comb, stopping crevices, \&c.
[PROPYLAMIN. A peculiar volatile alkali, having the smell of berring-pickle.]

PROSECTOR ( $p r o$, before; secn, to eut). One who prepares the subjects for anatomical lectures.

PROSENCHYMA. A term applied by Link to that form of parenehyma in plants, in which tbe cells taper to each end, and overlap each other; the term parenchyma being restricted to that form of the tissue, in whieh the eells have truncated extremities.

PROSOPALGIA ( $\pi \rho \circ \sigma \omega \boldsymbol{\omega} \pi о$, the face; a $\lambda$ jos, pnin). Pnin of the face; face ague; neuralgia, or tie douloureux of the face.

PROSTATE ( $p r o$, before; sto, to state). Prostata. A gland situnted beforc the vesiculx seminales, and surrounding the commencement of the urethra in the male.
[1. Prostatic. Relating to the prostate.]
2. Prostatic urethra. The nost dilnted pnrt of the urethra, a little more than an gland.
3. Prostate concretions. Caleuli of the
prostate gland, proved, by Dr. Wollastou, to be phosphate of lime, not distinetly striatified, and tinged by the secretion of the prostate gland.

PRO'TEAN STONE (Protcus, the many-shaped sea-deity). Artificial ivory. A material invented by Mr. Cbeverton; it is manufactured from gypsum, which, by various modes of treating it, is made to rescmble ivory, granite, or diffcreut kinds of marble.

PROTEINE (Tpcutsúw, to hold the first place). Tbe name given by Mülder to the preeipitate obtained by adding aeetic acid to a solution of eaustic potash, containing fibrin, albumen, or gelatine, animal or vegetable, in solution.

PROTEINA'CEOUS PRINCIPLES.A term applied to albuminous nlimentary principles from their yiclding proteine. Their composition is identical with that of the constituents of the blood, and henee tbey may be ealled the "flesh-and-blood making principles." See Gelatigenous Principles.

PR O'TIDE. One of the products yielded hy boiling protein with potash. The other products are erythroprotide and leacin.
PROTO- ( $\pi \rho \tilde{\omega} \tau o s$, the first). This prefix denotes the lowest degree in which one body unites witb another, as prot-oxide. Per denotes the highest degree, as peroxide.

PRO'TO-COMPOUND. A binary compound of single equivalents of salt-radical and basyl, as hydrochloric acid, protochloride of tin, \&c.

PROTOPLA'SMA ( $\pi p \tilde{\omega} \neq 0$ s. first; $\pi \lambda a ́ \sigma \mu a$, any thing formed or moulded). A term applied by Mohl to the mucilaginous granular contents of the vegetable eell, which ho supposes to be especially concerned in the elaboration of mew cells.
PRO'「OPLAST ( $\pi \rho \omega \bar{\omega} \tau o s$, first ; $\pi \lambda a ́ \sigma \sigma \omega$, to form). An organized individual, capable (either vingly or as one of a pair) of proparating indiriduals; itself having been propagated by no such previous individual or pair. Iencc-

1. A species is a elass of individuals, each of which is bypothetically considered to be the descendant of the same protoplast, or of the same pnir of protoplasts.
2. A variety is a class of individuals, each belonging to the same specics, but each differing from other individuals of the species in the points whercin they agree anongst one another.
3. A race is a class of individuuls concerning whieh there are doubts ns to
whether they constitute n separatc spocics, or a variety of a recognized one.-. Lathom.
[PROTOZOA (трйтоц, first, ऍшov, animal). The lowest class of animals; those which bave the simplest organization.]

PROTRACTOR (protralo, to draw forward). An instrument for drawing extraneous hodies out of a wound.

PROTUBERANCE ( pro, hefore, tuber, a swelling). An eminence, or projecting art; thus, the pons Varolii is called the ammilar protuberance; the cornun Ammonis are termed by Cbaussier protuberances cylindroüdes; \&e.

PROXIMATE CAUSE ( proximus, nearest). A tcrun often used to denote the first links in the chain of diseased effeets,-the ncarest cause.

PROXIMATE PRINCIPLE. A term applied, in analyzing any hody, to the prineiple which is nearest to the natural constitution of the hody, and more inumediately the object of sense, as distinguished from intermediate or ultimate principles.

Ultimate principles are the elements of which proximate principles are composed.
[PRUNELLA VULGARIS. Self-heal; Heal-all. A lahiate plant, an infusiou or decoction of which was formerly used in hemorrhages and diarrbea, and as a gargle in sore throat.]

PRUNUS DOMESTICA. The Plumtree; a Rosaceous plant, the dried fruit of which is the prune of commeree. The part employed in medicine is the pulp of the drupe.
[Prunus lauro-cerasus. Cberry laurel. The leaves of this plant contain hydrocyanic acid, and the water distilled from them is sometimes used as a sulstitute for that medicine.
[Prumus Virginiana. Wild-cherry. An indigenous plant, the hark of which possesses the eonjoined powers of tonic and sedative. It is a useful remedy in heetio and intermittent fevers, phthisis, some forms of dyspepsia, \&e. It is most generally given either in infusion or syrup; the dose of the former heing two or three, and of the latter one fluid ounce.]

PRURI'GO (prurio, to itch). Pruriginous rash; severe itehing, affecting the whole, or part, of the skin, with or without an eruption of papulæ.

Prurigo formicans (formica, an ant.) Formicative prurigo; attended with the sensation as of ants or other insects creeping over and stinging the skin, or of hot needles piereing it.

PRURI'TUS ( prurio, to iteh). Itching; a term synonymons with prurigo. The former term, bowover, sinply denotes
itching, while the latter is applied to the cutancous diseases attended by itehing.

PRUSSIAN BLLUE. Tho seqqui-ferroeyanide of iron. [Sce Blue.]

PRUSSIAS. A prussiate; a name now exploded, except in commerce, when it dewotes a eyanide: what is terned the ycllovo prussiate of potash, is a ferrocyanide of potassium.

PRUSSIC ACID. A designation of $h y-$ alrocyanic acid, from its being an ingredient in Prussian blue.

PRUSSINE. Prussic gas. The eyanogen of Gay Lussae. See Oyanogen.

PSALTERIUM ( $\psi a ́ \lambda \lambda \omega$, to play upon the harp). Lyrct. A part of the brain, consisting of lines impressed upon the under surface of the posterior part of the Lody of the fornix.
-PSELLISMUS ( $\psi(\lambda \lambda i \zeta \omega$, to stammer). Misenunciation; inaecurate articulation; a genus of the Dyscinesice of Cullen, comprising the following species:-

1. Psellismus Lallutiens. Lisping; ricious multiplication of labials.
2. Psellismus emolliens. Vieious substitution of soft for harsber letters.
3. Psellizmus lallans. Lullaby-speech; vicious pronunciation of the letter $l$.
4. Psellismus ringens. Rotacismus; vicious pronunciation of the letter $r$.
5. Prellismus lagostomatum. Vicious pronunciation oceasioned hy hare-lip.
6. Psellismus acheilos. Vicious pronunciation arising from defeet of lip.
7. Psellismus hasitans. Hesitation.

PSELLISMUS METALLICUS. The stammering which sometimes attends tremor mercurialis.

PSEUDO- ( $\phi$ vedins, false). A prefix denoting spuriousness; thus, pseudo-menbrane signifies false membrane.
[1. Pseud-arthrosi8, (apOpov, a joint). A falso joint.]
2. Psendo-blcpsis ( $\beta \lambda$ ín $\omega$, to see). False or depraved sight; a genus of the Dyearthesice of Cullen, comprising the species imaginaria, in whielo ohjects are supposed to appear, which have no real existcnce; and mutans, in which objects are really present, but appear somewhat changed.
3. Pseudo-bulb. A term applied to tho enlarged aërial stem of Orchidaceous plants. It resembles a tuber.
4. Preudo-crythrin. A substance similar to crythrill, occasionally obtained, and occasionally altogether rauting, in the alcoholie solutions of the lichens.
5. Pacudo-gall. A turm applied to certain anomalons excrescences upon trees and other phuts, which. though they much resemble galls, are not so distinctly traceable to the operations of ans insech.

Ono of these cecurs on the common bramhle, and bears some rescmblanco to tho bedeguar of tho rosc. They appear to be simply hypertrophic diseases, like wens in aniuals.
6. Preudo-membrane. A false memhranc, resulting from inflammation, as that formed in pleurisy, in peritonitis, in croup, \&c.
7. Pscutlo-morphia. A baso discovered in certain species of opium. Pelletier thinks it is some combination of morphia, in which this substance has lost its poisonous properties.
8. Pseudo-quina. A species of Strychnos, the bark of which, called quina do campo, is employed in the Brazils as a suhstitute for cinchona hark.
9. Pseudo-scope ( $\sigma$ кoлit $\omega$, to see). An instrument invonted by Mr. Wheatstone for producing the "conversion of the relief" of any solid object to whicb it is directed, thus conveying to the mind a false perception of all external ohjects, by transposition of the distances of the points whicb compose them. The inside of a tea-cup appears a solid convex body; and a small terrestrial globe appears a concave hemisphere.
10. Pseudo-syphilis. A disease resembling syphilis, hut not of the same nature. By some writers it is supposed to be syphilis, more or less modified hy the mercurial disease.
11. Psendo-toxin. A hrownisb-ycllow suhstance, obtained from the watery extract of belladonna.

PSOAS ( $\psi$ oat, the loins). The name of two muscles of the lungs, viz.:

1. Psocts magnus. A muscle arising from the last dorsal, and the four superior lumbar vertehræ, and inserted into the lesser trochanter of the os femoris. It mores the thigh forwards.
2. Psoas parvus. A muscle arising from the last dorsal vertebro, and inserted into the hrim of tho pelris: it is very often wanting. It bends the spine upon the polvis.
3. Psoas alscess. Another namo for lumbar abscess, the femoro-coxalgio of Chaussier.
[4. Psoitis. Inflammation of the psoas muscies.]

PSORA ( $\downarrow$ ©pa, the itch). Itcb ; a gonus of the Dialyses of Cullen; the scabics of Willan.

PSORI'ASIS ( $\psi$ ẃpa, the itch). Psora. Dry scall, or scaly tetter; a discase of the order Squama, consisting of patches of dry, amorphous scales, continuous, or of intermedinte outline; skin often chappy.

PSOROPIITIIALAILA (4 üpa, the itch;
$\partial_{\psi} \theta_{a} \lambda \mu i a$, inflammation of the cye). Infiammation of tho cyelids with ulceration, tinca of the eyclids, \&c. Itch of the eyelids. [See Lippitudo.]

PSI'CHICAL REMEDIES ( $\psi v \chi$ (koेs, belonging to the $\psi v \chi \grave{\eta}$, psyché, or soul). These consist in the employment of the mental affections, to promote the healthy functions of the body, or to modify the progress of disease.

PSYCHOLOGY ( $\psi v \chi$ иे, the soul ; $\lambda \delta \gamma o s$, a description). A description of the intcllectual and moral faculties.

PSYCHRO'METER ( $\psi v \chi$ р $\partial s$, cold; $\mu \dot{\varepsilon}-$ rpov, a measure). An instrument for measuring the tension of the aqueous vapour contained in the atmosphere. It is a particular kind of hygrometer, a general term for every kind of apparatus employed for ascertaining the hygrometric condition of the atmosphere.

PSYCHOTRIA EMETICA. A plant of the order Cinchonaceæ, the root of which constitutes the Striuted Ipecacuanha of Percira, the black or Pevuvion Ipecacuanha of others.

PSYDRACIUM (quasi $\psi$ v̌pà íjpákıa, id est, frigida seu frigifacta guttules). A small pustule, often irregularly circumscribed, producing hut a sligbt elcration of the cuticle, and terminating in a lamelInted scab. Compare Phlyzacium, which is denominated from the opposite quality of heat.
PTARMICS (rTaipw, to sneeze). Stermutatories. Merlicines wbicb excite sncezing. Sce Errhines.
[PTERITANNIC ACID. A peculiar acid obtained by E. Luck from the root of the Filix mas.]

PTEROCARPUS ( $\pi \tau \varepsilon р \partial \nu$, a wing ; карпдs, fruit). A genus of Leguninous plants, witb legumes surrounded by a wing.

1. Ptcrocarpus erinacells. Hedgelog Pterocarpus, the species whicb yields the original gum kino of the shops.
2. Pterocarpus draco. The species wbich yields the dragon's blood of commerce.
3. Pterocarpus santalimus. Threc-leaved Pterocarpus, the specics which yiclds the red sandal wood, used by dyers and colour manufacturers.
PTEROPODA ( $\pi$ repòv, $\Omega$ wing; $\pi$ oũs, Todds, a foot). The fourth class of tho Cyclo-yangliata, or Moilusea; consisting of small, soft, floating marine aniuals, which swim by the contractions of tro lateral inusculo-cutancous fins, as tho cicodora, clin. de.

PTERYGIUM (rTépuk, a wing). A thickened state of the conjunctiva, probably so called from its triangular shape.

PTERYGOLDEUS (птípuk, a wing; zỉßos, likeness). [Pterygoid.] Resembling a wing ; the name of a process of the sphenoïd bone.

1. Pterygoïdeus internus. A muscle arising from the inncr plate of the pterygoïd process of the sphenoid bone, and iuserted into the inside of the angle of the lower jaw.
2. Pterygoïdeus externus. A muscle arising from the outer plate of tho pterygoild process, \&e., and inserted into tho condyle of the lower jaw, \&c. This, and the preceding muscle, move the jaw from side to side, and perform the action of grinding with the teeth.
3. Nervus pterygoïdeus. The ptcrygoïd or Vidian nerve, which passes hackwards from the spheno-palatine ganglion, through the pterygoid canal, and divides into the earotid and petrosal branches.
4. Pterygo-pharyngeus. A synonym of the constrictor superior musele, from its arising from the ptcrygoild process of the sphenoïd honc.
5. Pterygo-staplyylinus ( $\sigma$ raфu $\grave{r}$, a bunch of grapes). The name of a muscle arising from the pterygoild process of the sphenoid bone, and inserted into the velum palati.

PTILO'SIS ( $\pi$ rì $\omega \sigma 15$, the moulting of birds). Madarosis; Alopecia. Loss of the eyelashes, occasioned by chronic inflammation of the eyelids.

PTISAN ( $\pi$ т८adivn, from rrioow, to pound or peel). Barley-broth; a term applied to decoctions of pearl barley. Horace speaks of the "ptisanarium oryza," or ptisan drink of rice; and Celsus has eremor ptisana, or the thick juice of harley.

PTO'SIS ( $\pi \tau \tilde{\omega} \sigma 15$, prolapsus ; from $\pi \iota \pi \tau \omega$, to fall). A falliug of the upper eyelid, with a partial or complete want of power to elevate it. It is also called blepharoptosis, lapsus palpebras superioris, \&c. It appears to be the same affection as Beer terms atonia palpebrarum, or relaxation of the eyelids.

PTY'ALINE (mfúadoy, saliva). A pceuliar animal matter said to exist in saliva, and to he analogous to the diastase of plants.

PTYALISM ( $\pi$ rúw, to spit). Salivation; an involuntary flow of saliva; a genus of tho Apocenose8, or increased secretions, of Cullen's nosology.

PTYALOGOGUES ( $\pi$ rvaddv, saliva; a $\gamma \omega$, to induce). Medieines which cause salivation, or a flow of saliva.

PUBERTY ( $\quad$ mbes, covered with hair). Jiterally, the appearance of the first downy hair on young people; the hair itself; tho vigour of youth, usnally at the fourtecnth year for the malo, and the
twelfth for the femalc. It varice, however, iu different climates.

PUBES. Literally, covered with hair; the rlowny hair of puberty. Hence the term is applied to a persun of the age of puberty.

PUBESCENCE (pules, covered with hair). The down of plants, consisting of suft short hairs, which partially eover the cutielc, as in Geranium molle. Hence

Pubescent, corered with puhescence or hair.
[PUBIC. Of, or belonging to the pubis.]
PUBIS OS. The puhic, or share bone; a part of the os innominatum.
[PUCCOON. Common name for Sanguinaria Canadensis.]

PUDENDUM ( $p$ udor, shame). Viiva. A term applied to the external parts of generation in the female.

PUDIC ( pudeo, to be ashamed). Nervus pudendalis superior. The name of a branch of the sciatie plexus.

PUERPERAL (puerpera, a woman recently delivered; from puer, a hoy ; pario, to hring forth). Belonging to child-bed.

Puerperal fever. A term generally eonsidered synonymous with those of puerperal peritonitis, child-bed fever, peritoneal fever, or the epidemic disease of lying-in women.

PUFF-BALL. The Lycoperdon gigntteum ; a fungaceous plant used for staunching hlood, and for making tinder.
PUGILLUS (dim. of pugnus, a fist). A little handful; the eighth part of a handful; a gripe between the finger and thumb.
[PULEGIUM. The pharmacopeial name of tho Mentha pulegiunr.]

PULEX. A species of insect, in whieh a single impregnation suffices for at least six or seven generations. It is also remarkable, that in the warmer summer months the young of this inseet are produced viviparously; and in the cooler autumnal months, oviparously. The same phenomena apply to tho Apis (puecron, or green-plant lousc), with the additional fact, that many of its offspring are winged, and many without wings, or distiuction of sex; in this respect making an approach to the working-bees, and still more nearly to the working-ants, known, till of late, by the name of neuters.-Good.

PULMO, PULMONIS. The lungs; the organs which occupy the sides of the ehest. [PUTMONARIA OFFICINALIS. Lungwort. An Enrupean plant, of the family Boraginere, the leares of which have been used as a pectoral.]
[ $/$ 'ulmonary. Belonging to the lungs.]
Pulmonary transpiration. The aqucous rapour which escapes in expiration.

Pulmonic Relating to the lungs.]
PUimionic CIRCULATION. The passage of the blood from the right side of the heart through the pulmonary arteries to the lungs, and back to the left side of the heart through the pulmonary veins. This is also called the lesser civealation, in order to distinguish it from the greater circulation, or the passage of the blood from the left side of the heart through the arteries of the hody, and back again through the veins to the right side of the heart. See Portal circulation.

PULPA. Pulp; a piece of meat without hones. The nucleus of the teeth, a bulbous prolongation of their mucous membrane.

PULP OF TOOTH. A term applied to the nucleated cells of the primary, hasis of the tooth. It is containod in the hollow of the tooth, or pulp-cavity.

PULS, PULTIS. A thick porridge used by the ancients; also water-gruel, panada, \&c. From this term are derived pulmentunt and pulmentarium, words of similar meaning; pulterine, a pipkin, and pulticula, gruel, or panada, used hy Celsus.

PULSE (pulsus, a stroke). A heating or striking ; and, hence, the stroke or beat of an artery.

1. Pulsns dicrotus (dic, twice, кpozím, to beat). Rebounding pulse; so named from its action conveying the idea of a double pulsation.
2. Pulse, pulmonic. A term applied by Dr. Mollison to a phemomenon which occurs in operations of the chest, and consists in the expulsion of a certain quantity of the air in the ohest, synchronously with each contraction of the heurt, and beat of the pulse.
3. Pulselessuess. The Entasia acrotismus of Dr. Good. Failure or cessation of the pulse, often accompanied with pain in the epigastrium; the perception and the voluntary muscles remaining undisturbed.

PULSUS CORDIS. The impulse of the heart, or the shock communicated by the apex of the heart to the walls of the thorax in the neighbourhood of the fifth and sixth ribs. This must not be confounded with the arterial pulse.

Pulsus venosus. The regurgitation, or, rather, periollic arrest of the hlood in the grent venous trunks.

PULTACEOUS (puls, porridge). A term applied to suhstances which have the consistence of porridge.
PULVERULENT (pulois, powder). Any thing reduced to powder, or covered over with powder.

PULVI'NAR. A pillow, or cushion. Hence pulvinar scu cervicale lupuli denotes
a pillow of hops, occasionally employed in mania.

PULVIS. A powder; a substance roduced to extrcmely minte particies.

1. Pulvis aluës cum crncllâ. Sold uncier the name of hicra piera, vulgo, hicenry piccory. [Aloes, finely powdered, Hbj . ; canella, 勇iij.; mix.]
2. Pulvis anti-lyssus. Mcad's powder against the bite of a mad dog, consisting of ash-coloured liver-wort in powder, with an equal quantity of black pepper.
3. Pulvis antimonialis. Oxidum antimonii cum phosphate calcis. A succedaneum of the celehrated fever pozoder of $D r$. James.
[4. Pulvis aromaticus. Cinnamon, ginger, of each $\overline{3} \mathrm{ij}$. ; cardamom, depriver of the capsules, nutmeg, grated, of cach $\mathrm{Z}_{\mathrm{j}}$.; mix. An agreeable carminative; dosc, gres. x. to ${ }^{5} \mathrm{ss}$.]
4. Pulvis Cobbii or Tunguinensis. The famous Tonquin powder, introduced into this country hy Mr. Cobb, as a specific in lyssa, and consisting of musk, cinnabar, and arrack.
5. Pulvis ipecacuanhare comp. [Pulvis ipecacuanhee et opii, Ph. U. S. Ipecacuanha, in powder, opium, do., of each $\mathrm{Zj} \cdot$; sulphate of potassa, $\mathcal{Z}_{j}$. Rub well together. The editor has been in the habit of substituting, in some cases, for the opium in this comhination, its equivalent of sulphate or muriate of morphium, and with great advantage.] A valuable sudorific, sold under the name of Dover's powder.
[7. Pulvis julape compositus. P. U.S. Jalap. in powder, $\mathrm{S}_{\mathrm{j}} \mathrm{j} \cdot$; bitartrate of potassa, do., Zij. Mix. Dose, $3^{\text {ss. }}$ to 7 j.$\left.\right]$
PUMICE. A light, spongy, vitreons stone, usually found in the neighbourloorl of volcanoes. The island of Lipari is chiefly formed of this substance.
[PUMPKIN SEEDS. The secds of Cucurlito Pepo, which have been administered with great success for the expulsion of tapeworm.]
PUNCTUM (pungo, to prick). A point; that which is without extent.
I. Punctum ccecum. The blind spot; a term applied to that part of tho retina which is situated imurediately above tho point of union with the optic nerve, and is fonnd to be insensible to the stimulus of light.
6. Pancta luchrymalia. The external commencements of tho lachrymal ducts, situated on the lachrymal tubereles near the inner canthi of tho cyelids.
7. Punctum saliens. A nause given to tho first rudiments of the heart, the pulsations of which are perceived thrulugh tho cnveloping mucous organs.

PUNICA GRANATUM. The Common Pomegranate; a Myrtaceous plant, yielding granarlin or mannite. See Balanatine.
[PUNICIN. A peculiar principle extracted from the barls of Punica Granatum.]

PUPILLA (dim. of pupa, a puppet). The pupil, or the round aperture in the eentre of the iris of the cye.

Artificial pupil. A term applied to the opening made by division of the itis; and also to the opcration by which a new pupil is formed, when the natural ono has become useless from opacity of tho transparent cornea.

PURGATIVES ( purgo, to eleanse). Active cathartics. See Cathartic.
[PURGING NUTS. Nuts of curcus purgans.]

PURIFORM ( $p u s$, matter ; forma, likeness. Resembling pus.

PURL. A heverage formed by the infusion of absiuthium, or common wormwood, in ale.
[PURO-MUCOUS. Having the eharaeter of pus and mueus.]

PURPLE OF CASSIUS. [See Carsins.] PURPURA. Literally, the purple, or livid disease. Scorbutus, or Seurry; an eruption of small, distinct, purple speeks and patehes, attended with languor, general debility, and pains in the limbs. The term purpura originally deuoted the shellfish from which the purple dye was produced; hence it was used for the dye itself, and was transferred to the disense from the analogy of colour.

PURPURATE. A combination of purpurie acid with a salifiahle base.

PURPURIC ACID. An acid first descrihed by Dr. Prout, and named by Dr. Wollaston from its remarkahle tendency to form red or purple-coloured salts with alkaline hases. It is obtained from uric or lithie aeid.

PU'RPURINE. Oxylizaric Acid. Mad-der-purplo; a suhstance differing little from alizarine.

PU'RREE (Tupposs, ycllowish-red). A heautiful yellow piguzent, adapted for oil or water-colour paiuting, and known by the names of Iudian yellow, or jame indicn. Its origin is unecrtain. An acid has heen obtained from it, called curanthinic and purreic acid.
[PURRING TREMOR. Tremissement catuirc. A peculiar vibration, compared to the purring of a eat, eommunicated to the hand in those stntes of the heart or arteries in whieh the bellows or rusp) sound is deteeted by anseultation.]

PURSINESS ( $p$ nrey, from ponssif, French). The colloquial term for obesity in stuuted persons.

PURLTENT ( $\quad$ ma, matter). Of the nature of pus; attended with pus.

PUS ( $\pi$ Ưov, matter). The fluid formed by the process of suppuration; a matier consisting of globules larger than those of the blontl.

PUS11. A common phlegmon, differing fron a boil or furunculus, in containing uniform and mature pus; that of the boil always containing a corc.

I'USTULA (of the matter or nature of pus; from $\pi \tilde{\pi} o v$, pus ; $\tilde{v} \lambda \eta$, matter.Good). A pustule; an elevation of the cuticle, with an inflamed base, containing pus. The varieties, as given by Bateman, are phlyzacium, psydracium, aehor, and favus.

Pustule malignant. A form of mortifieation, generally believed to originate in horned cattle, and to be communicated from them to man. It is the charbon of the French.

PUTANEN (puto, to prone or cut). A synonymous term for the endocerp, or innermost layer of the pericarp, of osseons fruits.

PUTREFACTION ( putris, putrid; facio, to make). The spontaneous decomposition of animal or regetahle matters, attended with foetor; a epecies of fermentation.

PUTRID FEVER. A name given to typh $1 / 18$, from its symptoms of putrescency. It has been ealled spotted fever, froms its heing attended with petechiæ, or flea-bite spots; and by the Spaniards, cavardillo, from tavardo, a spotted clonk.

PUTRILAGE. A term applied to animal matters whicb are partly decomposed.
[PY AMIIA, Pyohemia (xìov, pus; aìa, blood). A morbid condition of the hlond, in which pus globules are present in that fluid.]

PYELI'TIS ( $\pi$ vichos, pelvis; and itis, the Greek termination for inflammation). Inflammation of the mucons membrane, \& e., of the pelvis of the kidner.

PYINE (tinu, pus). A peeuliar matter, besides albumen, found by Gueterbock in solution in pus. Vogel doubts whether it is an essential component of pus. The saue matter is contained in mueus.
[PYLORIC. Relating to the pylorus.]
PYLO'RUS ( $\bar{v} \lambda \lambda \eta$, a gate ; їpa, care). Literally, a gate-kecper. The lower and contracted orifice of the stomaeh, guarding the entrance into the bowels. Sce Gerophngus, or the porter.

Vitlec of the pylorus. An inenrreet designation of a circular rim placed intermally at the narrowest part of the pylorus; it is merely a replication of the coats of the stomach.
[PYOGENIA, Pyogencsis ( $\pi$ ĩv, pus; yevears, generation). The furmation or elaboration of plls.]
[PYOGENIC. Related to the fomation of pus.]

PYOH $\mathbb{E}^{\prime}$ MIA ( $\pi \tilde{v} \nu \nu$, pus; a ${ }^{\prime} \mu a$, hlood). Pyemia. A eonstitutional. state of the blood dependent on the presence of pus in this fluid.

PYRAMID. A conienl bony eminence situated on the posterior wall of the tympanum, immediately behind the fenestra ovalis.

1. Pyramidalis. A musele arising from the pubes, and inserted into the linea alha, near half way between the puhes and umbilieus. It assists the rectus.
2. Pyramidalis nasi. A slip of the oe-eipito-frontalis musele, whieb goes down over the nasal bones, and is fixed to the compressor nasi.
3. Emmentia pyramidalis. A small, hollow, conical eminence, situated behind the fenestra ovalis, and at the lower part of the prominence formed by the aqueduet of Fallopius.
4. The name pyramidalis was also given by Winslow, Casserius, and others, to the levator labii superior is alcque nasi, from its dividing into two small fasciculi, one of whieh is implanted into the alæ nasi, while tbe other goes to the upper lip; it is thus pyramidal, with its base downward.

PYRA'HIDAL SKULL. Under tbis name, Dr. Priebard deseribes that form of the skull which Blumenbaeh terms Mongolian, and whieh is most eharaeteristieally seen in tbe Esquimaux. The whole faee, instead of approaching the oval or elliptical, as in Europeans, is of a lozenge-shape; and the larger proportion which it bears to the eapaeity of the cranium indieates in the pyramidal skull a moro ample extension of the organs of sensation.
[PYRECTICA ( $\pi$ uperòs, fever). Fevers.]
[PYREN. A eolourless, erystallizahle substance, obtained from pitch, by distillation at a high teunperature, by ir. Laurent.]

PYRETIIRIN. The active prineiple of the root of the Anacyelus pyrethum, or Pellitory of Spain.
[PYRETHRUM (Plı. U. S.) Pellitory. The root of Aurrcyclus pyrethrum.]
[PYRETIRUM PARTIIENITHM. Feverfer. An European plant whiel resembles ehamomile in odour and taste, and in medical properties.]
[PYRLITIC ( $\pi$ üp, fire). Appertnining to fever.]

PYRE'TINE (-ù $\rho$, firc). A pyrogenous
or emprreumatie resin, whieh, eombined with asctic acid, exists in wood-soot, or fuligns ligni.

PYRE'TINE, CRYSTALLIZED.The name giren by Ber\%elins to a yellow, light sublimate, observed in the neek of the retort, in the destrnctive distillation of amber. This was called, hy Vogel, volutile resin of rmber; hy Gmelin, ambercamphor.

PYRETOLOGY ( $\quad$ vperds, fever; $\lambda$ 'yos, an aceount). A doseription or troatise of fevers.
[PYREXIA ( $\pi \tilde{v} \rho$, fire). Fever.]
PYRIFORMIS (pyrua, a pear; forma, likeness). Pear-shaped; a musele arising from the hollow of the saerum, and inscrted into the eavily at the root of the troelianter inajor: it is also ealled pyramidalis. It noves the thigh.

PYRMONT WATER. A eelebrated mineral spring at Pyrmont, a village in the cirele of Westphalia, in Germany.

PYRO- ( $\pi \tilde{v} \rho$, fire). Words compounded with this term denote the presence of fire, heat, fever, \&e.

1. Pyr.acid. An acid produced by the destructive distillation of an organic acid, ns the pyro-citrie, by decomposition of the eitrie, \&e.
2. Pyrexia. Fever. Under the term Pyrexice, Cullen elassed togetber febrile disenses, including intermittent and continued fevers.
3. Pyrites. Native compounds of metals with sulphur; as iron pyrites, or the sulphuret of iron. The term pyrites originally denoted a fire-stone, a sort of stone out of whieh firc eould be struek.
4. Pyro-acctic ether. An ethereal fluid, proeured by the distillation of neetie aeid.
5. Pyro-acetic spirit. An inllammable fluid, also called acetone, erolved on heating some of tho aeetates of potash, lead, and copper.
6. Pyro-conia. Einpyreumatic oil of hemlock; an oil obtained by the destruetivo distillation of hemlock, said to resemble tbat procured from fox-glove.
7. P'yro-daturin. Empyreumatic oil of stramoniuin; an oil obtained by the destructive distillation of stramonium, resembling tar and the aquenus fluid whieh distils along with its acid. In its physieal and chemical properties, it resembles pyrodigitaline.
S. Pyro-digitulina. Empyreumatic oil of foxglove, obtainod by destruetive distillation of the dried leaves. Similar terms linve been sugrested for tho empyreumatic wils of other plans, as pyro-duturia, pyrohignscy mict. \&e.
8. Pyro-gullic acid. An acid prorluced
by heating gallic acid，which evolves ear－ bonio acid，and is converted into the pyro－ genous acid．

10．Pyro－hyoscyamia．Empyrcumatic oil of henbanc；an acid produced by the de－ structive distillation of henbane，and iden－ tical in its properties with pyro－digitcline．

11．Pyro－ligncous ucid．An acid ohtained by distillation from wood．In its strongest form it is acctic acid．

12．Pyro－ligneous ether．An impure liquor，sometines，but erroneously，called naphtha，obtained in the destructive dis－ tillation of wood．It is also termed pyro－ xylic spirit，hydrate of oxide of methyle， and bihydrate of metbyrene．

13．Pyro－ligncous spirit．A substance produced during the distillation of wood． It is more volatile tban alcohol，but hurns very well in a spirit lamp，and has the ad－ vantage of heing chcap．
［14．Pyro－lusite．The hlack or deutoxide of Mangancse．］

15．Pyro－neter（ $\mu \dot{\prime}$＇poov，a measure）．An instrument for measuring bigh tempera－ tures．Wedgewood＇s pyrometer is founded on tbe principle，that clay progressively contracts in its dimensions，as it is pro－ gressively exposed to higher degrees of beat．The indications of Daniell＇s pyro－ meter result from a difference in the ex－ pansion and contraction of a platinum bar， and a tube of hlack lead ware in which it is contained：these differences are made avallahle by connecting an inder witb the platinum har，which traverses a circular scalc fixed on to the tube．

16．Pyro－metry（ $\mu$ ípoav，a mensure）．That branch of science wbich investigates the dilatation of bodies by heat．

17．Pyro－phorws（ $\dot{\ell} \rho(\rho)$ ，to carry）．An artificial product，which takes fire on expo－ sure to the air：hence it has been called， in Germany，lift－zumder，or air－tinder．It is prepared from alum by calcination，with various inflammable substinces．

18．Pyro－phosphate．Prof．Graham sug－ gests the substitution of the terins pyro－ phosphate of water and meta－phospliate of water for the terms pyro－phosphoric acid and meta－phosphoric ncid；if tho latter terms arocmployed at all，it is to be re－ inembered that they are applicable to the proto－and deuto－lydrates，and not to the acid itself，which is the smino in all the hydrates．

19．Pyrbsis（пи́ports．burning；from－ĩp， fire）．P＇ain in the epigastrium，as of ex－ rreme heat（cmplintically called by the French，fer chand），with eruption of watery fluid．This disense is called in Fingland bluck－muter；and in Scotland neter－braah．

20．Pyro－tartaric acid．A crystalline acid yielded hy the distillation of tartaric acid，together with an oily acid called pyruvic acid．

21．Pyro－techny（Ti $\chi$ vn，art）．The art of fire，or the management and applica－ tion of fire in chemical operations．

22．Pyr－othonide（ $300 \mathrm{v} \eta$ ，linen）．A liquid prepared by distilling rags，and tben called rag－oil；hut commonly pro－ cured hy hurning a cone of paper on a plate，and then termed paper－oil．It is a popular remedy for tootbache．

23．Pyro－xanthine；pyroxylene．A crys－ talline，orange－red substance，ohtained from raw pyroxylic spirit．

24．Pyro－xylic spirit（ $\xi$ indov，wood）．An－ other，and a more classical，name for pyro－ligneous spirit．This was formerly termed by Mr．Taylor，pyroligaeous ether．

## ［25．Pyro－xylin．Gun－cotton．］

［PYROGUALACINE．A crystallized product by the dry distillation of guaia－ cum resin．］

PYROLACEE．TbeWinter－grcen trihe of dicotyledonous plants．Herbaceous plants with leaves either wanting or sim－ ple，entire or toothed；flovers monopetal－ ous；stamens bypogynous，double the number of the petals；orarium superior， many－seeded；secds winged．

Pyrola umbellata．Ground Holly，Win－ ter Green，or Pipsiserra；a plant mueb celebrated for its specific action．on the urinary organs．It is now called Chima－ phila umbellnta．In America it is called the King＇s Cure．

PYROMANIA（ $\pi$ Ũp，fire ；$\mu$ airopat，to he mad）．Incendiary madness ；a modifica． tion of the hlind impulse to destroy．

PYRRHIN（ $\pi v \rho \dot{p} \rho \dot{s}$ ，red）．A terın ap－ plied by Zimmermann to an almospheric orgnnic substance which reddens solutions of silver．

PIRUS AUCUPARIA．The Mountain Ash；a Pomaccous plant，which yields a large quantity of bydrocranic acid．

Pyrus cydonia．The former name of the Quince，now termed Cydonia mulgarie： it has all the characters of Pyrus，except that the cells of the fruit are many－sceded， and the seeds cnveloped iu a thick soluble mucus．

PYRU＇VIC ACID．An acid derived from the destructive distillation of the racemic and tartaric acils．

Pリ゙ズIDIUM（pyris，a box）．A fruit which dehisecs ly a transverse incision， so that，when ripe，the seed and their placeuta appear as if seated in a sup， corered by an epercilum or lid，as in hyoscyamus，anazallis，\＆c．
Q. S. An abhreviation, employed in prescriptions, for quautum sufficit, or quantum satis, as much as is sufficient.

QUACK (quacken, Dutch). A term applied, by way of derision, to a person who professes to cure all diseases by a single remedy [or in accordance with a single dogua]; also to remedies which are sold under the protection of a patent.

QUADRANT ELECTROMETER. An instrument for estimating the degrce or intensity of electricity, invented hy Mr. Henley. The differences of electric intensity are denoted by an index which traverses a quadrant divided into ninety equal parts, called degrees.

QUADRA'TUS. The name of several miscles, derived from their square, or ohlong, form. These are-

1. Quadratus lumborum, arising from the erest of the ilium, and inserted into tho last rib, and the transverse processes of the first four lumbar vertebre. It inclines the loins to one side; and when hoth act, they hend the loins forward.
2. Quadratus femorie, arising from the tuber ischii, and inserted into the intertrochanteral line. It moves the thigh backwards.
3. Quadrotus gena. A namo given to the muscle, otherwise called depressor lahii inferioris.

QUADRI- (quethor, four). A Latin prctix, denoting the number four, and correspoudiug with the Greek terra, as in quadri-locular ; four-celled; tetra-spermous, four-seeded.

QUADRIGEMINUS. Four double; a term applied to four tuhercles situated on the upper part of the posterior surface of the brain; the two upper tubercles are called tho nates, the two lower the testes.

QUADRUMANA (quatnor, four, manus, a hand). Four-handed; the designation of an order of Mammalia, including the nonkey, the lemur, \&c., which have a movable thumh on their lower extremities opposed to the fingers; all their extremities are, in fact, instruments of prehension.

QUADRUPLICI (quatnor, four, plica, a fold). A Latin numeral, denoting fourfold.
[QUALITATIVE. Relating to quality.]
[QUALITATIVE ANALYSIS. An analysis to determine the constituents of $a$ compound, without reference to their relative proportions.]

QUALM. A Saxon term for a sudden attack of sickness.

QUANTITY. Under this article is shown tho correspondence between the French and English Weights and Measures, as calculated by Dr. Duncan, jun.
1.-Measures of Length: the Metre being at $32^{\circ}$, and the Foot at $62^{\circ}$.

| Milliuetre | $=$ | English inche -03937 |  |  |  |  |  |

QUARANTINE (quarante, forty). The trial which passengers and goods are obliged to undergo in slips supposed to he infected with solne disense. It eonsists in their being stationed at a distance from tho shore for a certain period, perhaps forty days.

QUART (quart, fourth). Tho fourth part; a quarter; the fourth part, or a quarter, of a gallon.
[QUARTAN. Belonging to the fourth.]
QUARTAN AGUE. A species of intermittent fever, in which the intermission is generally about seveuty-two hours, the paroxysni commeneing in the afternonn: the usual duration beiag muder niue hours. The varieties, as given by Dr. Good, are-
]. The double quartan, in which the parnxysms of the ono ;et occur in the intermissious of the other, eviucing a differ-
ence of duration or of riolence, with an interval on the third day only.
2. The triple quartan, consisting of a single quartan with regularly returning paroxysms, while each of the intervenias days is marked with a slighter or separate attaek.
3. The duplicate quartan, consisting of a single quartan. with two paroxysme on the regular day of attack, the interrals being of ordinary duration.
4. The triplicate quartan, eonsisting of a single quartan, with three paroxysms on the regular day of attack, the intervals being undisturbed, and of ordinary duration.
QUARTATION (quartus, the fourth). An operation by whieh the quantity of one substance is made equal to a fourth part of the quantity of auother: thus, in
separating gold from silver, three parts of silver are added to the supposed gold, and they are then fused together, the gold thus becoming at most one-fourth of the rass ouly. They are then partcd by the action of nitric acid.
QUARTERN (quartus, fourth). A gill, or a fourth part of a pint.

QUARTNE (quartus, fourth). The name of the fourth membrane or envelope of the nucleus in plants, as deseribed by Mirbel.

QUASSIA. The U. S. Pharmacopœial name for the wood of Simaruba cxcclsa; a genus of plants of the natural order Simarubaceæ.]

1. Qurassia Amara. A Simarubaceous plant, which bas been employed in medicine under the name of Surinam quassia wood. The name Quassia is that of a black slave, who employed the root as a secret remedy in the case of endemic malignant fevers at Surinam.
[2. Qnassia excelsa (Willd) ; Simaruba excelsu (De Cand.) Bitter ash. This species grows in Jamaier and the Caribhean Islands, and its wood is used as a bitter tonic.]
[3. Quassia Simarouba. See Simarouba officinalis.]
2. Quassict chips. The commercial name for the intensely bitter wood of a Simarubaceous plant, referred by some to the Quassic amara, by others to the Picrana excelsa, [Lindley, Quasia excelsa, Willd.]
3. Quassine. A yellow, erystalline, and very hitter substance, obtained from the wood of the Quassia amara.
4. Quassite. The term applied by Wiggers to the hitter principle of quassia wood. [Winkler called it quassin.]

QUATERNARY (quaternarius, of the number four). A terin applied in chemistry to those compounds which contaiu four elements, as gum, fibrin, \&c. The term is also applied to any arrangement in which the prevailing number is four, as in the floral envelopes of Cruciferous plants, \&c.

QUATERNI, QUATERNATI. Latin numerals oecurring in compound terms, and denoting four together.

QUEASINESS. A term of uneertain origin, denoting yursea.

QUEEN'S BLUE. Finely-powdered indigo, mixed with starch paste. It is also called stone-blue, fig-blue, thumb-blue, erown hlue, and Mecklenburgh-hlue.

QUEEN'S YELLOW. A nother name for turpeth, or tubith mincral, the subsulphate of mercury, prepared by boiling together mercury and oil of vitriul.
[QUERCIN. A peculiar bitter princi-
ple discovered by Gerber in European onk Lark.]
[QUERCI-TANNIC ACID. Gallo-tamic acid. Trannic aeid procured from galls. See Mimotamic acid.
[QUERCITRIC ACID. Quercitrin. The eolouring principle of Querous tinctoria.]

QUERCITRON. The bark of the Quercus tinctoria, or Dyers' Oak. It yields a yellow eolouring matter, called quercitrin and quercitronic acid.

QUERCUS. A genus of plants of the order Cupuliferce, or the Dak tribe.

1. Quercus agilops. A species of oak, of which the large cupules are imported from the Levant, under the name of Velonia, and employed by dyers.
[2. Quercus alba. White Oak. An indigenous species, the bark of whieh is officinal in the Ph. U. S., and is considered preferable to that of the preceding species, as an internal remedy.]
2. Quercus coccifera. A species of oak infested by an insect belonging to the genus Coccus, and yielding the kermes dye, from which searlet cloths are often prepared.
3. Querchs infectoria. The Gall, or Dyers' Oak, which yields the nutgalls of. commerce.
4. Quercus pedunculata. The Common British Oak, every part of which, but especially the liber, possesses an astringent property.
5. Quercus suber. The Cork Oak, the cortical layers of which constitute the cork of commerce.
6. Quercus finctoria. The Black Oak, the bark of whieh, ealled quercitron, is used by dyers.
[QUEVENNE'S IRON. Férri pulvis. Metallic iron in fine powder, obtained by reducing the sesquioxide by hydrogen at a dull-red heat.]
[QUICKENING. The period of pregnancy when the motion of the child first becomes perceptible to the mother; also the peculiar effects which are frequently observed when the uterus quits the pelvis, and rises into the abdominal cavity, viz., fainting, sickness, \&c.-Rigly. The usual period of quickening is the 18 th week after conception.]

QUICKLIME. The protoxide of calcium, a compound obtained by exposing earbonate of lime to a strong red heat, so as to expel its carhonic acid.

QUICKSILVER (quick, the old Saxon term for lieing, as expressive of mobility). Arycutum vivam. Mercury.

QUI'NA DO CA'MPO. The bark of the Strychnos pseudo-quina, employed ir.
the Brazils as a suhstitute for einchona hark.

QUINARY (quinarius, of the number five). A term applicd to a system in which the prevailing number is five. Thus, in dicotyledonous plants, the floral envelopes in most cases present this number, five sepals, five petals, separate or combined.
[QUINCE. The common namo for Cydonia vulgaris.]

QUINCUNX. A form of sestivation or veruation, in which there are five leaves, two of which aro exterior, two interior, aud the fifth covers the interior with one margin, while its other margin is covered by the exterior, as in the roso.

QUINI, QUINATI. Latin numerals, occurring in compound terms, and denoting five together.
[QUINIA, QUININA, QUININE. See Cinchona.]

QU'INIC ACID. Kinic acid. An acid existing in cinchona barks, in combination, prohably, with the cinchona alkaloids and with lime.

QUININE. An alkaloïd found in the bark of several species of Cinchona. See Cinchona.
[QUININISM. Cinchonism. The condition of the system induced by over doses of quinine.]

QUINOI'DINE. Czinoidine. A dark brown or black substance, obtained by precipitation, on adding an alkali to the dark-coloured mother-liquor remaining after the crystallization of sulphate of quinine.

QUINOI'LINE. A nitrogenous oily basc, formed artificially by distilling quinine, cinchonine, or strychnine, along with caustic potash.

QUINQUE. A Latin numeral denoting the number five, and corresponding with the Greek perte, as quinque-fid, pent-andria, \&c.

QUINQUINO. The Myrospermam peruiferrm; an Amyridnccous plaut, which yields the halsam of Peru.

QUINSY (squinsy, or squinancy, of the old writers; a terin derived from tho Greek root cynonche, through the intermediate corruption of the French word
esquinancic). Paristhmitis; throat affection, or sore throat.

QUINTAN. A form of intermittent which reenrs every fuurth day.

QUINTESSENCE (quinta essentia, a fiftlo heing). A term denoting, in alchemical language, the fifth and last, or highest essence of any natural body. It is now applied to any extract which contains all the virtues of a smbstance in a small quantity; to the most volatilc part of a substanec, as being considered the most valuahle; and sometimes to alcohol, when it contains some pharmaceutic agent.

QUINTINE (quintus, fifth). The name of the fifth membrane or envelope of the nucleus in plants, as described by Mirbel. It is the vesicula amnins of Malpighi, the additional membrane of Brown, and the sac of the embryo of Adolphe Brongniart.

QÜINTUPLICI (quinqne, fire; plica, a fold). A Latin numeral, denoting fivefold.

QUOTIDIAN AGUE. A species of intermittent fever, in which the intermission is ahout every twenty-four hours, the paroxysm commencing in the morning; the usual duration being under eighteen hours. The varieties, as given by Dr. Good, are-

1. The pratial quotidian, in which the febrile attack is confined to a particular part or organ, and usually accompanied with distressing pain.
2. The catenating quntidim, in which the disease associates with, or gives rise to, various foreign symptoms, or other discases.
3. The protracted quatidian, in which the intermission is inordinately short or imperfect. This is the quofidiano continua of the Latins, and the amphimerinc of the Greeks.
4. The amicipating quotidian of Dr. Fordyec, in which the paroxysu precedes its airtecedent period usually by ahout tro hours, and continues the sane furemarch at every recurrence. This is the febris subintrine of Frank, dc.
5. The retarding quatidian, of Dr. Fordyce. froming a direct counterpart to the anticiputing.

## R

B. An abbreviation of Recipe, take, ness). Roll-like: a term formerly applicd placed at the beginning of preseriptions.

RABDOIDAL (pápdos, a rod, cídos, liko-
to the sagittal suturc.
RABIES. Lyssa. Madness occurring
after the bite of a rubid animal. Celsus obscrves, "omnis ferè morsus habet quoddim virus."

1. Raties comina. Caninc Rabies ; produced by the hite of a rabid dog, wolf, or fox. The spastic constriction, for the most part, extcuds to the muscles of deglutition, which are violently convulsed at the appearance or iden of liquids.
2. Rabies felina. Feline Rabies; produced by the bite of a rabid cat. The spastic symptoms are less acute, and frequently intermitting.
[RACAHOUT. An Arabian name for the starch prepared from the fruit of Quercus Ilex. The preparation sold in Paris under the name of Racohout, is a compound of starch, chocolate, aromatics. \&c.]
[RACCOON BERRY. Poduphyllum montamim.]

RACE. The Races of man are different forms of one species, which are capable of fruitful union, and are propagated by generation. - They are not different species of one genus, for in that case their hybrids would be unfruitful. Blumenbach distinguishes the following races:

1. Cancasian race. Skin white, passing into flesh colour, occasionally brownish; hair wavy, of a light or dark tint; face oval, facial angle large, viz. from $80^{\circ}$ to $85^{\circ}$. The Europeans, excepting the Laplanders and Finns; the inhabitants of Western Asia, as far as the Obe, the Ganges. and the Caspian sea; and the North Africans.
2. Mongolian race. Skin yellow; hair black, straight, scanty; facc broad, flat; glabella flat and broad. All the Asintics, except those of the Caucasian variety, and the Malays; the Laplanders and Finns; the most northern Americans, the Esquimaux, and Grcenlanders.
3. American race. Skin brownish, cop-per-coloured; hair black, straight, scanty. All the Americans not included in the preceding varicty.
4. Ethinpian race. Skin black or brownish hlack; hair black, coarse, short, woolly, and frizzly; skinll narrow, long; facial angle of only $70^{\circ}$ to $75^{\circ}$. All the A fricans, excepting those of the Caucasian variety, viz. the African negrocs, the negrocs of Nevr Holland, and the Indian Archipclago, or the Papias.
5. Mariy race. Skin black; hair black, soft, curling, and abunclant; cranium moderately narrow. The hrown islanders of the South Sea: the inhahitants of the Sunda Jsles, the Moluceas, the Philippine, and Marianne Isles, and the truc Malays of Malacea. Sec Cranioserpy.

RACEMF
$32 *$
(racemus, a bunch of grapes).

A form of inflorescence, in which all the buds of an elongated branch are developed as flower-buds, and at the same time produce peduncles, as in byacinth. Compare Spilie.
[RACEMIC ACID. Paratartaric acid. See Tartaric Acid.]
[RACHIASMUS (pُíx's, the spine). A term devised by Marshall Hall to denote interrupted circulation in the rachiclian or vertebral vein.]

RACHIS ( $\dot{\rho} \dot{X}(5)$. Properly, Rhachis. The spinc; the vertebral colnmn.

1. Rachi-algia (ü入үos, pain). Literally, Spine-achc. or Back-bone-ache; a designation of Painter's Colic, from the pains striking through the back.
2. Rach-itis. The Rickets; a discase which seems to consist in a want of due firmness in the bones, in consequence of a deficiency of the phosphate of lime in their structure. The affection is named from its having been supposed to depend on disease of the spinal marrow.

RACHIS (IN BOTANY). That form of floral axis in which several pedicles, or flower-stalks, are developed at short distances from each other, as in Grasses.

RACK. Arrack. A spirit obtained, in Batavia, by distillation from fermented infusions of rice, and hence termed rice spirit.
[RADCLIFFE'S ELIXIR. Aloes socot. $\overline{3} \mathbf{v j}$; cort. cinnann. ct rad. zedoar, āā $\overline{3}^{\text {ss. }}$; rad. rbei 3 i. ; coccinel $\overline{3}^{\text {ss. }}$; syrup. rhamini $f Z_{\mathrm{Z}} \mathrm{j}$. ; Spirit tenuior Oj .;

[RADIAL. Of or belonging to the radius.]

RADIATA (radiur, $\Omega$ ray). A designation of animals which are disposed around an axis in a radiated form, as the star-fish.

RADIATION (radius, a ray). The emission of heat, or of light, from the surface of a heated or of a luminous body, in the form of rays.
[RADICAL (radius). Relating to the radins. 7

RADICAL (radix, a root). A term applicd generally to any substance which is A capable of combining with simple bodics. A radical is termed simple, when it is itsclf an elementary body, as chlorinc in hydrochloric acid; or compoturl, when, though itself a compound, it acts as a simple body in its modes of combination, as cyanogen in the cyanides. In general terms, a radical, simple or courpound, forms an acid with hydrogen, and a sall with a metal. In botany it signifies, arising from the radix, or root, as applied to the leaves of what are ralled acauleseent plants.
RADICALS, COMTOUND. Com-
pounds capable of combining with simple bodies, as earbonic oxide with oxygen and chlorine in certain eompounds. Compound radicals may bo divided into two great classes:-

1. The Basyl class, consisting of metals, the oxides of which are bases, hydrogen, and the corresponding compound radicals, ammonium, ethyl, \&c. These are electro-positive hodies.
2. The Sult-radical class, ns ehlorine, sulphur, oxygen, \&c., with cyanocren and other compond radieals which combine with metals and other incmhers of the former class, and form salts or compouuds partaking of the saline character. Sueh radicals are also termed sulogens; they are electropositive.
RADICLE (radicula, dim. of radix, a root). The rudiment of the deseending nxis of plants, as it occurs in the embryo. See Plumule.

RADIUS. The spoke of a wheel ; the semi-diameter of a circle. The small bone of the fore-arm; so called from its fancied resemblance to the spoke of a wheel.
[RADIX. A root.]
RA'DULIFORM TEETH (radula, a rasp; forma, likeness). Rasp-tecth; a desiguation of the teeth of certain fishes, when conical, as elose-set nod sharppointed as the villiform tecth, hut of larger size. The teeth of the sheat fish (Silurus glanis) present all the gradations between the villiform and the raduliform types.
[RADZYGE. Radezyge, Radesyge, Thain, Norwegian Leprosy.]
[RAFELESIA. A genus of plants of the natural order Raflesiacce.]
[Raflesia Arnoldi. A native of Jara, the flower of which is immense; a decoetion of it is employed in Java as an astringent in diseases of the genito-urinary orgnns.]

RAG TURNSOLE. Linen impregnated with the blue dye obtained from the juice of Crozophora tinctoria.

RAGWORT. The eonmon name of the Scnecio jacobara, an indigennus Composite plant, recently recommended in gonorrhon. [Also of an. Aucrican species S.) urreus, said to be a favourite vulnerary with the Indians.]

RAIN. When the tempcrature of the nir is above $32^{\circ}$, or the freezing point, the water separated from the nir falls to tho earth in the state of rain. It is gencrally thought that the precipitation of water from the atmosphere is the effect of the mingling logether of curcuts of warlu and of cold nir.

1. Hail inay be considered as consisting of drops of rain, more or less suddenly frozen by exposure to a teuperature below $32^{\circ}$.
2. Frost-mmoke consists of frozen partieles of water floating in the atmosphere in the form of crystallized spiculæ. When these oecur in large quantities, they agglutinate together into flakes, forming suor, or the frozen visible vapour of which elouds are composed. Sleet is half-melted snow.
3. Raiu Gauge. An instrument for estimating the amount of rain which falls upon a given surface. See Pluvioneter.

RAINBOW WORM. The Herpes Itis of Bateman; a species of tetter, occurring in small eireular patehes, each of which is composed of coneentric rings, of different eolours.

RAISINS. Uve parsce. Dried grapes. There are tro kinds:-игœ рпвксе majores, or raisins, properly so called; and uve pasaula minores, Corinthian raisius or currants, ohtained from a remarkably small variety of grape, called the Black Corinth.

RALE. A French term, denoting a rhonehus, or rattle. See Auscultation.

RAMENTA (rado, to scrape off). Filings; as of iron, or of tin. In hotany, the term denotes the thin, brown, foliaceous scales, which appear on the hack of the fronds of ferns, \&e.

RAMIFICATION (ramus, a hranch; fio, to become). The issuing of a small branch from a large one, as of the minute branches from the larger arteries.
[RAMOLLISSEMENT. A French term for the morbid softening of the texture of an organ.]

RAMOSE (ramus, a branch of a tree). Branched: having many ramifications: when only somewhat branched, the term subramose is used.

RAMUS. A braneb of a tree; and, henee, a hranch of an artery, as the ramus auastomoticus maguus, a branch of the brachial artery. Also, the lower portion of the os pulis, and the anterior portion of the isehimm, have each been denominated the branch or rauns of those divisinns of the os innominatum.
RAMUSCLile (dim. of ramus, a branch). A small branch, us those of the pia mater, which penctrate into the substanec of the hrain.

RANCIDITY. The change which oils undergn hy exposure to the air.
[RANDIA. A genus of plants of the natural order Ruhiacer.]
[Randia Duncntoruur. An Indian plunt, the pulverulent fruit of which it
emplosed by the native plysicians as an emetic.]

RANINE ARTERY (rana, a frog). That portion of the lingual artery, which runs in a serpentine direction along the under surface of the tongue to the tip of that organ.

RANULA (dim. of rana, a frog). Grenoville. Frog-tongue; a tumour under the tongue, arising from an accumulation of saliva and mucus in the ducts of the suhlingual gland. The term is derived either from an imaginary resemblance of the swelling to a frog, or from the peculinr eronking noise which the patient makes When nffected with it.

RANUNCULACE $\mathbb{E}$. The Cromfoot trihe of Dicotyledonous plants. Herhaccous plants with divided leoves, opposite or alternate; calyx of 3.6 sepals; petals $5-15$, hypogynous; stamens hypogynous, indefinite in number ; frvit distinct, simple carpella, nud alhuminous seeds.
[RANUNCULUS. Croofoot. The pharmacopœial name of the cormus and herb of Remunculns bulbosus; a geaus of plants of the natural order Ranunculaceæ.]
[Ranunculus bnlbosus. Crowfoot. The cormus nnd herb are rubefacient and epispastic. Other species of Ranunculus, as R. acris, R. flommvla, R. vepens, and R. scclcratus, possess similar properties.]
[RAPE. Carnal connection with a woman by force against ber will.]

RAPE OIT. An oil procured by expression from rape-seed, and used in making ointments, \&c.
RAPHANIA. All affection supposed to bave heen produced hy eating the seeds of the Raphanns rhaphanistrom, or Wild Charlock; it is attended with spasm of the joints, trembling, \&c.

RAPHE' ( $\dot{\beta} \dot{\pi} \pi \omega$, to sew). Literally, a seam. Hence the term is applied to lines having the appearance of a seam.

1. Raphé corporis callosi. A linear depression along the middle of the corpus callosum, between two slightly-elevated longitudinal hands.
2. Raphé perinci. An elevated line which runs along the midule of the perineum to the anns.
3. Raphé, in Botany. A fasciculus of ressels which connects the base of the ovvel with the hase of the nucleus, as in the orange.
[RAPIIANKISTRON (paфıov, a neesle; ayxiorpoy, a hook). An instrument consisting of a necdle and hook combined, used for the formation of an artificial

RAPHIDES (קantw, to sew). Small
acicular crystals, fonnd within the cells of the parcnchyma of plants.

RAPTUS (rapio, to scize). A forciblo seizure. Hencc the terms raptus nervoram, or cramp; raptus supinns, or opisthotonos.

RAREFACTION (rarma, thin; facio, to make). The act of making a suhstance less denso; also the state of this dimiuished density. The term is generally applied to elastic fluids, which cxpand hy meaus of: heat, and thence become thinner or more rarefied.

RASHES. Patches of superficial redness of the skin. See Exanthemata.

RASPATORY (rado, to scrape). An instrument for scraping diseased bones.
[RASPBERRY. The common name for Rubns idans.]

RASU'RA (rado, to scrape off). A rasure or scratch. The raspings or shavings of any suhstance.

RATAFI'A. A term denoting a sweet, aromatic, spirituous liquor, drunk at the ratification of an agreement. Ratafias aro prepared by maceration, by distillation, or with the juice of fruits.

RATANHY ROOT. The root of the Krameria triandra, a Pernvian plant, [much used as an astringent.]

RAUCE'DO (ranens, hoarse). Raucitas. Hoarseness; husliness of voice.
[RATTLE. Râle, rhonchus.]
[RA TTLESNAKE'S MASTER. Common name for Agave Virginica, and also for Liatris scariosce, and L. squarrosa.]

RAI (radius, a shoot or rod). The smallest form in which light and caloric are emitted from bodies. Rays are distinguished into-

1. Calorific rays, which excite heat; the highest degree of caloric being indicated in the red ray of the prismatic spectrum.
2. Luminons rays, which impart light; the highest degree of illumination being confined to the brightest yellow or palest green of the prismatic spectrum.
3. Chemical rays, which eause neither heat nor light, hut produce powerful chemical changes, as that of darkening the white chloride of silver: these are also termed dc-oxidizing or hydrogenating rays, from their charncteristic effect in withdrawing oxygen from water and other oxides. The grentest chemical action is found to be exerted just beyond the viulet ray of the prismatic spectruns.

REACTION (re, again; agn, to aet). A modification of the organic property of the unimal systom, a vital plenomenom, arising frou tho application of an extermal
influence; the influence producing it is called irvitation, and the cause of the irritation is termed the stimulus or irritant.

REAGENT (rc, again; ayo, to act). A substauce cmployed in ehcuical analysis, for ascertaining the quantity or quality of the component parts of bodies, by re-acting upon their elcments. It is synonymus with tcst.

REALGAR. The proto-sulphuret of arsenic. See Arscuicum.

RECEIVER. A vessel fitted to the neck of a retort, alemhic, \&c., for the purpose of reeeiving the products of distillation. It is either plain, tubulated, or quillcd. It is also called refrigeratory, from its cooling the contents.

RECEPTACLE. A term applied, in botany, to the dilated and depressed axis of the Capitulum, constituting the seat of the artichoke, \&c.

RECEPTACULUM CHYLI. Cisterua chyli, or Reservoil of Pecquet. The receptacle of the chyle, an enlargement of the thoracic duct, aear the aortic aperture of the diaphragm.
[RECIPE. B. Take.]
RECLINATION. A term employed in Germany, to denote the operation of turning a cataraet, so as to change the position of its anterior and posterior surfaces. [The lens is so displaced that its anterior surface looks upwards and its posterior surface downwards.]
[RECREMENTITIAL HUMOURS. Humours which, after having heen separated from the blood hy the secretory organs, are ahsorhed and again introdueed into the circulation, as the saliva, bile, \&c.
[RECRUDESCENCE ( $r$ c, again, crudus, raw). Aggravation of the symptoms of a disense after a sensible abatement of them.]

RECTIFICATION. The repeating a distillation or subliuation several times, in order to render the suhstance purer and finer.

RECTIFIED SPIRIT. Ardent spirit Thich has been deprived of its volatile oil and water liy the proeess of rectification.

RECYOR SPIRTIUS. The aromatic principle of plants.

RECTUM (rectus, straight). The atraight gut, the last of the intestines, extending from the last lumbar vertebra to the anus. The name is taken from the old anatomists, whose descriptions were derivell from examination of brites. It has been called curvun!

RECTUS (straight). The name of scveral muscles; viz.

1. Reetns snperiul, arising from the up-
per part of the optic foramen, and inserted into the superior and fore part of the sclerotica. It is also named attollens, or levator oculi, from its office of raising the eyc; and superbus, as giving an expression of pride. Its antagonist is the-
2. Rectus inferior, arising from the lower part of the optic foramen, and inserted opposite to the preceding muscle. It is also named deprimens oculi, from its drawing the eye downwards; and humilis as giving an expression of modesty.
3. Rectus Internns, arising from the margin of the optic foramcu, and inserted into the inner side of the eyc. It is also named adduceus, from its drawing the eje towards the nose; and bilitorius, from its directing the eye to the cup. Its antagonist is the-
4. Rectus externys, arising from the margin of the optic foramen, and inserted into the outer side of the eye. It is also named abductor ocnli, from its turning the eye outwards; and indignabundus, as giving an expression of scorn.
5. Rictus capitis, the name of fire muscles arising from the upper cervical vertehra, and inscrted into the occipital bone. These are-

The R. capitis anticus major.
The R. capitis anticns minor.
The R. capitis lateralis.
The R. capitis posticus major.
The R. capitis pasticus minor.
6. Rectus abdominis, arising from the puhes, and inserted into the three inferior truc ribs, and the ensiform cartilagc. It pulls down the ribs in respiration, \&c.
7. Rectus femoris, arising by two heads from the ilemn and acetabulum, and inserted into the patella; it is sometimes called rectus ciruis. It extends the legs, \&c.

RECURRENT (rccurro, to ran back). The designation of a branch of the posterior tibial artery; and of the inferior laryngeal nerves, - a portion of the par vagum.
[RED BARK. Cinchona rubra.]
[RED CEDAR. Juniperus Virginiana.]
[RED CIIALK. See Reddle.]
[RED COllosif. Actan Americana var. rubra.]

REDDLE, or RED CHALK. A kind of clay iron-stouc.

RED FIRE. A pyrotechnical compound of nitrate of strontia, sulphur, antimony, and chlorate of potash, which burns with a red flame. It is liable to explode spontanenusly.

RED GUM. Dr. Willan says that this is a corruption of the term Reil gorn, its variegated plots of red upon a lale ground
being supposed to resemble a piece of red printed linen. Seo Strophulus.

RED LEAD. See Minium.
RED PRECIPITATE. The red oxide of mereury. See Mercury.
[RED ROOT. One of the common names for Ccanothus Americanus.]

RED SANDERS. See Pterocarpus Santalinus.
[REDUCED IRON. Sce Quevemes Iron.]
REDUCTION (reduco, to bring back). A chemical process, also called revivification, by which a suhstance is reduced, or restored, to its natural state ; generally applied to the restoration of metallic oxides to the metallic state. Also, a surgical oporation, by which a dislocated hone is restored to its proper situation.

REFINED LIQUORICE. This is made hy gently evaporating a solution of the pure extract of liquorice with half its weight of gum arahic, rolling the mass, and cutting it in lengths, and then polishing them together in a hox.

REFLNING. The act of purifying any thing; partieularly the assaying or purifying gold and silver, hy separating them from other bodies which are comhined with them.
[REFLECTION (reflecto, to hend back). In anatomy, a duplicature or fold of memhrane.]

RE'FLEX FUNCTION. A designation of the Diastaltic nervous system, diseovered hy Dr. Marshall Hall. It is explained under the term Excito-Motory.

REFRACTION (refractus, broken back.) That property of light, hy which a ray hecomes hent, or refracted, when passing from a rarer into a denser medium, and vicc versa.

Double refraction. A property of certain transparent minerals, as Iceland Spar, by which they present two inages of any ohject seen through them, and by which a ray of light, after entering such a medium, becomes divided into two portions, each of which presents an image of the ohject.

REFRACTO'METER. An instrument for measuring the light-refracting power of fluids.
REFRIGERANTS (refrigcro, to cool). Temperants. Medicines which diminish the morbid heat of tho body.

REFRIGERATION (rcfirigero, to cool).
The act of cooling any body; tho condition of a hody which has been cooled.

REFRIGERATORY (refrigero, to cool). A chemical vessel filled with. water, for condensing vapours, or for cooling any substance as it passes through it.-
[REGENERATION. Reproduction of lost parts.]

REGMA (मদウoनw, to hreak). Capsula tricocca. A fruit, consisting of three or more cells, each of which hursts from the axis with elasticity into two valves, as in Euphorhia. The cells of this kind of fruit are ealled cocci.

REGIMEN (rego, to rule). A rule of diet, \&c., prescribed for a pationt.

REGION. A term applied to the artificial divisions of the hody, as those of the chest, those of the ahdomen.

REGIUS (rex, regis, a king). Royal ; a term used by way of distinction.

1. Regius morbus. Royal disease, or jaundice, so called from its yellow or golden colour.
2. Regia aqua. Royal water; a mixture of the nitric and muriatic acids, so named from its power of dissolring gold.

REGULUS (rex, regis, a king). A name originally given by the alchymists to metallic matters when separated from other suhstances by fusion, from their expectation of finding gold, the king of metals, at the hottom of the crucille. It has since heen applied to the metal extracted from an ore, as regulus of antimony, of oohalt, \&c.

REGURGITATION. The action by which a gas or a liquid passes from the stomach into the mouth without effort.

REIN-DEER MOSS. The Cladonia rangiferina, a lichen on which the reindeer suhsist for the greatest part of the year.
[RELAPSE. Recurrence of a disease soon after its cessation.]

RELAXA'NTIA DEPRIME'NTIA.Depressing relaxants; agents which depress and lower the tonicity of the fibre, and thereby cause relaxation of the muscular and other tissues. They comprise the nauseating emetics, the sedatives, and the anæsthetica pncumatica.

RELAXATIO UTERI. Relaxation of the uterus; a partial descent of the uterns, when it falls down to the middle of the vagina; if it descend to tho labia, it is termed procidentia; if lower than the lahin, prolapsus.

REMEDIUM ( $r c$, and medcor, to hcal). An agent used in palliating or curing diseases. Remedics are paychical or mental, and somatical or corporal.

1. Renctium catholicon ( $\kappa$ ä $\theta_{0}$ dos, mniversal). A panacea, or universal remedy.
2. Iemcdinm panchrestum ( $\pi \bar{u} s$, all, $\chi$ рибтòs, nseful). A panacea.
3. Remcdium polychrestum ( $\pi$ odìs, many; Xp $\eta \sigma$ ods, useful). A remedy which has many virtucs, or uses.
[REMIGA. A genus of plants of the natural order Cinchoniacea. The bark of all the species is bitter and febrifuge, and is used iu Brazil in fevers.]

REMISSION (remitto, to remit). A cessation of febrile symptoms occurring between the accessions of remittent fever. Also, a diminution of the symptoms of continuous fever.

REMITTENT. The nanc of a class of Fevors, characterized by remissions and exacerbations, but without intermissions; one paroxysm occurring every twenty-four hours. The species may be distinguished into-

1. Tho Mild Remittent, or Gastric fever of Frank, so termed from its being usually precedcd by some affection of the abdominal viscera. The remittent fever of infancy, ganerally ascribed to worms, does not essentially differ from this species.
2. The Malignant Remittent, of which there are four varieties, viz.:
3. The Autmmal Remittent, or the febris continua gastrica of Frank.
4. The Yellow Fever, so denominated from the lemon or orange hue presented by the whole surface of the body; this is the febris gastrico-nervosa of Frank.
5. The Buruing Remittent, denominated causus by Hippocrates ; and by Frank, febris gastrico-inflammatoria, from its being usually accompanied with much disturbance of the stomach and intestines.
6. The Asthenic Remittent, inclining to a deep nervous depression, sensorial debility, or a typhous character; of this kind were the noted epidemic of Breslaw, the bybrid fever of Blane, \&c.; the malignant pestilential fever of Chisholm, \&c. \&c.
7. Hectic fever. This is arranged by some among continued, by some among remittent, and by others anong intermittent fevers.
[REMORA. A stoppage or obstacle. A namo also given to two surgical instruments destined to keep parts iu their position.

REN, RENES ( $\rho \dot{\rho} \dot{\omega}$, to flow). The reins, or kidneys; the secretiug organs of the urine.

Rences atecenturiati. Capsulee atrabiliarix, or the supra-renal eapsules; two small bodics placed above the kidneys, and cmbracing their upper extremity; they are hollow and oval in the adult, prixmatic and granulated in the foetus. See Suceenturiatus.
[Renal. Relating to tho kidney.]
RENGULU'S (dim. of ren, the kidney).

The name of each distinct lobe of the kidney, in the cmbryo of the mammalia, aud of the human sulject.
[RENEALMLA. A genus of plants of the natural order Seituminee.]
[Rencalmia e.caltata. The bruised rizome is used in British Guiana as a diaphoretic and diuretic, and in large doses as an emetic.]
[RENTFORM (ren, a kidney, forma, likeness). Kidney-shaped.]

RENNET. A fluid made by infusing the remet bag, or inner coat of a calf's stomach in hot water.

Rennet whocy. Serum lactis. Milk two pints, rennet half an ounce, infused in a little hot water; mix, and keep in a gentle heat for some hours, then strain.

REPELLENT (repello, to drive back). An application which causes a disease to reccde from the surface of the body.
[REPERCUSSION. The disappearance of a tumour, abscess, or eruption, by the action of a repellant.]

REPERCU'SSIVES. Repellentr. A class of astringents employed to subdue inflammation of superficial parts. This is commonly called the stimulant method of treatment.
[REPLETION. Over-fulness; plethora.]

REPLICATE. A form of vernation, or æstivation, in which the upper part of the leaf is curved back and applied to the lower, as in aconite.

REPLUM. A leaf of a door. A term applied, in botany, to the frame-work formed by the scparation of the tro sutures of a legume from the valres, as in carmichaelia.

RE'PRIMENTS. Sistentia. Remedies for fluxes, as cercbro-spiuals, astringents, and ncrid stimulants.

REPRODUCTION (reproduco, to produce again). Generation, or the continuation of the species.

REPTILIA (repo, to creep). The third elass of the Encephalata, or Vertebrata, consisting of reptiles, most of which are terrestrial. [It is divided into the following orders.]

1. Chelonia ( $\chi^{\text {idus, }}$ a tortoise). The tortoise tribe ; the turtle, $\& \mathrm{c}$.
2. Sauria ( $a$ àpa, a lizard). The lizard tribe; the crocodile, \&c.
3. Ophidia (ópts, a serpent). The serpent tribe; the boa, viper, \&c.
4. Batruchia ( $\beta$ atpa才os, a frog). The from tribe: the salamander, \&c.

REPUSSION (rcpello, to repel). That effect of caloric, by which the particles of a body, into which it enters, are remored
from each other. It is the antagonist of attraction.
[RESECTION (reseco, to cut ont). The cutting away of a portion of hone, either of an articular extremity of a bone, of the ends of a fractured bone, of the bony parts contiguous to an articulation, or of a part from the continuity of a bone.]
RESEDA LUTEOLA. Dyer's Weed. Yellow Wecd, Weld, or Wold ; a European plant, employed to give a fine, permanent yellow colour to cottons, silks, and woollens, in a variety of shades, by the aid of alum, \&c.
[RESIDUUM. Residue. Tbat which remains after any chemical process of separation.]

RESI'NA. Rosin, or common resin; the residue of the process for ohtaining oil of turpentine. When the product contains a little water, it is opaque, and termed yellowo rosin; when the water is expelled, it hecomes transparcnt rosin; at a still higher degree of distillation, it becomes broun or black rosin, or colophony.

1. Flockiton's patent rosin. A palo yellow product, formed by the solidification of melted rosin in cold water.
2. Rosin oil and rosin gas. A volatile oil (Luscombe's), and an inflammable gas (Daniell's), produced by the decomposition of rosin.
3. Alpha-resin: beta-rcsin. The two constituent resins of colophony, or resin of turpentine, respectively called pinic acid, and syluic acid.

RE'SINIGOMME. Gum-resin of sabadilline, ohtained from the Asagran officinalis. See Ccbadilla.

RE'SINITE. Rctinasphalnm. A substance intermediate between resin and asphalt.

RESIN OF COPPER. The name given by Mr. Boyle to the proto-chloride of copper, from its resemblance to common resin.

RESINO'SA. Resinous stimulants; regetable stimulants which owe the whole of their activity to resin, as the various resins properly so called, olco-resins, gumresins, \&c.
RESOLUTION (resolvn, to relax). The subsidence of inflammation without abscess, ulceration, mortification, \&c. Also, the dispersion of swellings, indurations, \&c.
RESOLVENT (rcsolvn, to loosen). A suhstance employed to discuss inflammatory and other tumours.
[RESONANCE (re, again, sono, to sound). A return of sound. The transmission of the voice throngh the stethoscopo to the car. The unodifications of na-
tural resonance which arlse in disense are classed by Dr. Walshe as follows:
[Diminished in intensitg-1. Weak resonance. 2. Suppressed resonance.
[Increased in intensity--3. Exaggerated resonance. 4. Bronchophony.
[Increased in intensity, and altered in special character-5. Agophony. 6. Pectoriloquy. 7. Amphoric resonance. See Anscultation.]
[RESORPTION (re, again, sorbere, to ahsorh). Absorption of what has been proviously secretion.]
[RESPIRABLE. That which may be respired without injury.]

RESPIRATION. The function of breathing. It consists of two acts, viz. :

1. Inspiration, which generally takes place, according to Sir H. Davy, about twenty-six times in a minute, thirteen cubic inches of air being the quantity usually inspired at each time.
2. Expiration, which takes place alteruately with the preceding act; the quantity of air usually respired being the same as that which is inspired.
[RESPIRATOR. An instrument for tempering the air before it enters the tracher.]

RESPIRATORY NERVES. A series of nerves proceeding from a narrow white fasciculus, situated between the corpus olivare and the corpus restiforme in the medulla oblongata, supposed by Bell to be analogons in their functions.

RESPIRATORY TRACT. A natrow whito band situated hehind the corpus olivarc, and descending along tho side of the medulla oblongata at the bottom of the lateral sulcus.-Bcll.
[RESPIRATORY MURMUR. The sound heard hy auscultation dnring inspiration and expiration, in a healthy adult.]

RESUSCITATION (rcsuscito, to rouso again). The act of reriving, or recovering lifc. See Revivification.

RESTIFORM (restis, a cord; forma, likeness). A term applied to two cordlike processes of the medulla oblongata. Sce Corpus.

RETCHING. Tomituritio. An ineffectual effort to vomit.

RETE. A net; a vascular net-work, or plexus of vesscls.

1. Rete Malpighii. The finc net-work of the extremities of tho pulmonary arteries.
2. Retc mirabilc. A net-work of bloodvessels in tho basis of tho brain of quadrupeds.
3. Rete mucosum. A soft layer situated hetween tho cuticlo and the cutis, contaiuiug the colouriug particles of the
skin. It is neither a net-work, nor is it mucous.
4. Rete testis. A net-work of minute tubes, formed by the vasa recta, and running upwards into the substanco of the mediastinum.
5. Rete vasculosum, or plexus retiformis. Names sometimes given to the corpus cavernosum vaginæ.
[RETENTION (retineo, to keep back). The kecping back of any thing which should be expelled; the accumulation of an cxcretion or secretion in a canal intended for its passage, or in a cavity which should retain it only for a short time.
[Retention of urine. The accumulation of urine in the hladder.
[Retention of the menses. The accumulation of the menstrual fluid in the uterus. This may result from imperforate hymen, \& c .]
[RETICULATE. Reticular. Resembling a net; netted. Applied, in hotany, to the vernation of the leaves of exogenous plants.]

RETICULUM (dim. of rete, a net). A little net; the second stomach of the Ruminantia. See Omasum.

RETIFORMIS (rete, a net; forma, likeness). Net-like; a name given hy De Graaf to the erectile spongy tissue of the vagina.

RETINA (rete, a net). The net-like expansion of the optic nerve on the inner surface of the eye. It consists of three layors: the external, or Jacob's menibrane ; the middle, or nervous; and the internal, or vascular meunhranc.

RETINACULUM (retineo, to hold hack). Any thing by which another is held back. An instrument employed in amputation, and consisting of a compress, and a concave plate, which are made to press upon the stump by means of two straps, which cross cach other, and are attached to a broad leathern strap surrounding the thigh.

- Tho term retinacula is applied to some granular bands, by means of which the ovnlum is attached to the parictes of the Graafion vesicle.

REITNAPHTIIA. A compound of enrhon and hydrogen, formed by dropping resin into a eylinder heated to a cherry-red.

RETINASPIIALTUM. A substance consisting partly of hitumen, and partly of resin, found associated with the brown sual of Bovey, in Devoushire.

RETIS'TERENE. A solid product of colophony, having the same composition as naphthaline. Other products are reyineine, retin? ${ }^{\text {hither }}$, retinglene and retinole.

RETORT. A glohular vessel of glase, \&c., with a long neck hent on one side, and used for distillation. Some retorts have another neck or opening at their upper part, through which they may be charged, and the opening afterwards closed with a stopper: these are called tubulated retorts.

RE'TOSE (rete, a net). A term formerly applied hy Dr. Lindley to a division of endogens which have reticulated leaves, as smilax. Their mode of growth is essentially different from that of endogens in general, and the spccies composing this group stand in the eame relation to the mass of Endogens, as Homogens to the mass of Exogens.

RETRACTOI (retraho, to draw back). A piece of linen employed in ampntation for drawing the divided muscles uprard, and thus keeping every part of the wound out of the way of the saw.

RETRAHENS AURIS (retraho, to draw hack). A name given to the posterior auris muscle, from its action of drawing back the ear.
[RETROCEDENT (retro, backwards; eedo, to go). When a disease which has uo fixed seat, after having heen some time in its more common situation, leaves it and seizes upon another, it is termed retracedent.]
[RETROCESSION (retro, hackwards, cerlo, to go). The translation of a disease from the surface to the interior of the hody.]
[RETROFLEXION (retro, hackwards; flexere, to hend). Bent hackmards.]
[Retroflexion of the Uterus. The hending hack of the hody of the uterus upon the neck.]

RETROVERSIO UTERI (retro, backward; verto, to turn). A morbid inclination of the uterus hackward.
[REUNION. The union of parts which have been separated.]

REU'SSITE. Sulphate of magnesia with sulphate of soda and a little chloride of magnesium.

REVALE'NTA. This substance, described by the yendor as a "nutritive and emincutly curative fccula," appears to consist, like the ervalenta, of lentil meal.

REVERBERATORY (reverbero, to beat back again). A term applicd to that kind of furnace, in which the flame is driven back, or prevented from rising.

REVERIE. Inactivity of the attention to the impression of surrounding objects. Dr. Good deseribes three kinds of this mental aberration, viz.:-

1. Alsence of mind; in which the attention is truant, and does not yield readily to the dietates of the will.
2. Abutraction of mind; iu which the attention is riveted, at the iustigation of the will itself, to some particular theme, unconnected with surrounding objects.
3. Brown study; in which the attention has the consent of the will to relas itself, and give play to whatever trains of ideas are uppermost. It is the studium inane of Darwin.

REVIVIFICATION (revivisco, to recover life). The recovery of life; a phenomenon occurring in some animalculcs, as the rotifer redivivus, which lives in water, hut, after remaining for years in a dry state, with all its rital functions suspeuded, revives in a few minutes on being placed in water.

REVOLUTE. A form of vernation or mstivation, in which the edges of the leaf are rolled hackwards spirally on each side, as in rosemary.

REVULSION (revello, to pull away). The occurrence of a secondary disease in a part remote from the seat of tho primary affection. Revulsion is, in fact, derivation at a distant part.

REX METALLo'RUM. Sol. The alchemical name of gold, the king of metals.

REYNOLDS'S SPECIFIC. A nostrum for gout and rheumatism, consisting of the fresh hulb of colchicum, $亏 3$ viij.; and sherry wine, $\overline{3} \times \mathrm{xj}$.; macerate for 8 or 10 days in a gentle heat; colour it with syrup of poppies, and flarour it with rum. Reynolds is said to have killed himself hy taking an over-dose of it.
RHABARBARIC ACID. An acid supposed by Braudes to be the active principle of rhubarb. Dulk refers the active principle to rhein, which, by oxidatiou, becomes rhabarbaric acid.
[RIIACHIS. Sec Raehis.]
[RHAGADES (payas, a fissure). Chaps, clefts, or fissures; long, narrow ulcers, most eommonly situated in the folds of the skin around the anus, and also sometimes oecurring between the fingers and toes, in the folds of the skin of tho genital
organs, and rarely on the lips, organs, and rarely on the lips, mammæ, \&c. Generally they have a syphilitie oripin.]

RHAMNACEIE. The Buckthorn trihe of Dieotyledonous plants. Trees or shrubs with leaves alternate; flowers axillary or terminal, polypetalous; petals cuenllate; slamens perigynous; ovarium superior; seeds alhuminous.
[RHAMNOXANTHIN. A peculiar yellow, volatile, colouring principle, nltained by Buehner from the bark of Rhamms I'rangula.]
[RIIAMNUS. A genus of plauts of the natural order Rhamnaceæ.]

1. Rhammes catharticns. Common Buckthorn; an indigenous plant, the herries of which, as well as their expressed juice, are powerful hydragogue cathartics. Tho juice, evaporated to dryness with lime, constitutes the pigment called sap-green, or the vert de vessic of the French.
[2. Rhamnus Frangula. Black Alder. Tho bark is sometimes used ns a cathartic.]
2. Rhamine. A erystalline matter, extracted from the mare of the huck-thorn berries, and existing also in the juiee of the herries.

RHAPONTICIN. A yellow, crystallizable, tasteless suhstance, procured from the root of Furopean rhubarb.

RHA'TANY. The name of the Krameria triandra, a Polygalaeeous plant, the root of which possesses astringent qualities, owing to the presenee of tho tannie and kramerie aeids.

RHE'IC ACID (rheum, rbubarb). The yellow, crystallinc, granular matter of rhubarb, procured from the plant by means of ether in Robiquet's displacement-apparatus. See Chrysophanic Aeid.
RHEIN. A suhstanee procured by heating powdered rhubarb with nitric aeid, evaporating to the consistence of a syrup, and diluting with cold water.

RHEO'METER ( $\beta$ éw, to flow, $\mu$ ícpov, a measure). A term employed by French writers as synonymous with galvanoineter; an instrument for measuring the force of an electrie eurrent. On the same principle, Mr. Wheatstone applies the terms rheomotor to an apparatus which originates sueh a eurrent; rheoscope; to an instrument whieh aseertains the existence of sueh a eurrent; rhcostat to the regulator, theotome to the interrupter, and rheotrope to the alternate inverter, of the electric current. To theso terms may be added rheophore, the carrier of the current, or the conneeting wire of a voltaic apparatus.

RHEUM. [The pharmacopoeial name for the root of Rhemu palniatunn.] A genus of plants of the order Polygonaeer, frou which tho rhei radix, or rhubarb of commerce, is procured, but tho specics is not ascertained.

1. Rhcum palmatum. Leaves roundishcordate, half palmate. Cultivated in England for the culinary rhubarb leaf-stalks.
2. Rheum undulatum. Leaves oval, ohtuse, extremoly wary. Cultivated in Franee, and yields part of the $F^{\prime}$ rench rhubarb.
3. Nheum compaetum. Leaves beart-

## R H 0

shaped, obtusc, very wavy, of a thick texture. Cultivated in Franec, and yields part of the French rhubord.
[4. Rhcum anstralc. This species is cultivated, and its petioles answer for tarts.]
[5. Rheum Rhaponticum. Rhapontic Rhubarb. This species grows on the hanks of the Caspian Sea and in Siberia, and is eultivated as a garden plant.]
[Other species of Rheum yield roots which have been employcd as purgatives, or possess properties more or less analogous to thoso of officiaal rhubarb, as $R$. leucorrhizum, growing in Tartary ; R. caspicum, from the Altai mountains; $R$. Wedbiantm, $R$. Spiciforme, and R. Moorcroftianum, natives of the ITimalaya mountains; and R.crassinervium, and R. hybridum, of unknown origin.]

RHEUMA ( $\bar{\varepsilon} \dot{\epsilon} \omega$, to flow). A defluxion; a flowing down of humours. The term signifies-

1. A morbid Rheum; a term formerly synonymous with gutta. Thus, cataract was called the obscure rhem, or gutta; amaurosis, the transparent, or serene rheum, or gutta.
2. A Cold, or fcbrile defluxion of the chest. The old pathologiste distinguished Rheuma into three species: that of the chest catarrhus; that of the fauces, bronchus; and that of the nostrils, coryza.
RHEUMATISM ( $\overline{\varepsilon \varepsilon \tau} \mu a$, a fluxion; from $\hat{\beta} \dot{\epsilon} \omega$, to flow). Pain and iaflammation about the joints and surrounding muscles. The varieties are-
3. Articular rhcumatism; occurring in the joints aud muscles of the extromities.
4. Lumbago; occurring in the loins, and mostly shooting upwards.
5. Sciatica; occurring in the hip-joint, with emaciation of the nates.
6. Spurious pleurisy; occurring in tho muscles of tbo diaphragm, often producing pleurisy of the diaphragm.
[RHEUMATISM ROOT. A common name for the Jefficroonia diphylla.

RHEUMIC ACID. A peculiar vegetable acid found in the Rheum palmatum, which is, however, no other than oxalic acid.
[RIIINOLITHES ( $\beta \iota v$, a nose ; $\lambda i \theta o s$, a stone). A teru given by Graaf to calculi of the nasal fosse.]

RHINOPLASTIC OPFRATION (piv, a nose ; $\pi \lambda \dot{\alpha} \sigma \sigma \omega$, to form). The formation of a nose from the integuanents of the forehead, \&c.; also called tho Taliacotian operation.

RHIPIPTERA ( $\bar{n} \pi \overline{i s}$, a fan ; $\pi$ rrpòv, a wing). Fan-winged insects, as the stylops, de.
flower). A class of parasitical plants, which, with many of the peculiaritics of cndogens, scem to constitute an intermediate form of organization between them and the lower acrogens. They are all of a fungus-like consistence, with few traces of a vascular system; the flowers are propagated by the agency of sexes; the secds have no embryo, but consist of a homogeneous sporuliferous mass. See Sporogens.

RHIZO'MA ( $\dot{\zeta} \zeta$ दa, a root). A rhizome or rootstock; a root-like_stem, which lies prostrate on the carth, and emits roots from its under side, as in Iris.

RHO'DANIC ACID (foior, a rose). Sulphocyanic acid. The name suggests the red colour it forms with persalts of iron.
RIIODEORRIIETTNE ( (6ós 105 , rosecoloured; 户́nTivn, resin). Jalapin. The name given by Kayser to the jalap-resin, obtained from the genuine jalap-tuber, the Ipomeea Schiedeana of Zuccharini. Its characteristic property is to assnme a beautiful crimson colour with coacentrated sulphurie acid. When acted on by hydrochloric acid, it is resolved into grapesugar, and an oily liquid called rhodeorrhetinole.

RHODIUM (pooov, a rose). A new metal discovered in the ore of platinum, and named from the rose colour of some of its compounds.

RHODIZONIC ACID ( $\beta 6 \delta o v$, a rose). An acid derived from carbonic oxide, and named from the red colour of its salts.
[RHODODENDRUM. A genus of plants of the natural order Ericacer.]
[Rhododendrum crysanthum. Sellomflowered Rhododendron. A Siherian plant, the leares of which are stimulant, narcotic and diaphoretic, and have beca extolled in rhcumatism.]
[RHODOMENIA PALMATA. Dulsc, Dillesk. An Algaccous plant extensirely employed as food in the inaritime countries of tho uorth of Europe.]

RHOA'DOS PE'TALA. The petals of the Papaver thecas, Common Red or Corn Poppy, cuployed for a colouring matter and for the syrup of poppy of the Pharuacopoia.
[RHGAS. Red Poppy. The Pharmaenpocial nauce for the reccut petals of $P a-$ parer rhacrs.

RHOMHOIDELS (pornGos, a rhombus, tidos, likeness). The name of two unuscles, the major and the minor, of the posterior thoracic region, which belong in their action to the scapula.

RHONCHLS ( of Lacnuce. Fattling in the tbroat; mor-
bid sounds occasioned, in respiration, by the passago of air through fluids in the bronchia, or by its transmissiou through any of the air-passages partially contracted. See Anscultation.

RIIUBARB. Rhei radix. The root of an undetermined species of Kheum. Dr. Pereira notices the following varieties:-

1. Rusbian or Bucharian rhbbarb. Imported from St. Petersburgh, formerly hy way of Natolia, and hence called T'nrkey rhubarb. Specimens occasionally occur as white as milk; these are termed white or imperial rhnbarb, and are said to be produced hy Rhenm lencorrhizum.
2. Dutch-trimmed or Batavian rhubarb. Imported from Canton and Singapore. In the trade it is said to be trinmed, and, according to the shape of the pieces, they are called flats or ronnds.
3. China or East Indian rhubarb. Imported from China or the East Indies, and distinguished as rouncls and flats. Druggists frequently term it half-trimmed or antrimined rhubarb.
4. Himalayan rhubarb. Probably the produce of Rheum Emodi and Webbianum, hrought from the Himalayas.
5. English rhubarb. This is of two kinds : the dressed or trimmed rhubarb, the produce prohably of Rheum palmatum; and the stick rhubarb, said to be the produce of Rherm undnlatum.
6. French rhibarb. The produce of Rherm rhaponticun, urdulatum, and especially compactum.
7. Toasted rhubarb. Rhubarh powder toasted in an iron crucihle, stirred until it is blackened, then smothored in a covered jar.

RHUBARBARIN. Tho name given hy Pfaff to the purgative principle of rhubarh.
[RHUS. A genus of plants of the natural order Anacardiaceæ.]
[1. Rhus coriaria. Sumach, Tanner's Sumacb. A species indigenous to the middle of Europe and north of Africa. The leaves are principally used for tanning leather, but they have heen used as febrifuge, and the berries havo heen given in dysen-
tery.] tery.]
[2. Rhus glabrum. Sumach, smooth sumach, Pennsylvania sumach, upland sumach. An indigenous shruh, the berries of which are astringent and refrigerant, and an infusion of thern has heen used in febrile diseases, and as a gargle in inflammation and ulceration of the throat, and in the soro mouth from mereurial salivation.]
[3. Rhus radicans. Willd. R. toxicodendron. Pursh. Poison vine, Poison nak. This species is poisonous, and applicd to the skin produces in some persous very scvere erysipelatous inflammation.]
[4. Rhus vernid. Swamp eumach. This is more poisonous thau the preceding species.]
[5. Rhwe pmurilnm. This is said to be tho most poisonous of the genus.
6. Rhus Toxicodendron. Trailing poisonoak, or Sumach. Its juice foruns an indclible ink when applied to cotton or linen.

RHUTENIUM. This, and Pluranium, are names of two supposed metals, contained in the insoluhle residue left after tho action of uitro-muriatic acid on the Uralian ore of platinum.

RHYTHM ( ${ }^{p} v \theta \mu$ о́). A term cxpressive of the order which cxists in the pulsations of tho heart or arteries, in the vibrations of a sonorous hody, in the tones of tho voice, \&e.

RHYTIDOSIS (弓utidó, to grow wrinkled). A state of the cornea, in which it oollapses so considerahly, without its transparency being affected, that the sight is impaired or destroyed.

RIBS. The lateral bones of the Chest or Thorax. See Costa.
[RIBES. A genus of plants of the ñtural order Grossulaccæ.]
[1. Ribes migrum. Black currant. The herries are used in domestic practice, in sore throat, \&c.]
[2. Ribes rubrum. Red currant. It is esteemed as refrigerant, and a jelly made from the fruit aflords with water, an agrecahle, refreshing, suh-acid drink, in fevers, dc.]

RICE. The grains of the Oryza sativa, an Indian grass, employed as a nutrient article in various forms.
[RICHARDSONIA. A genus of plants peculiar to America, helonging to the natural order Ciuchonaceæ. Several of tho specios are used in South America; their roots possess properties similar to those of ip.ecacuanha.]

Richardsomia scabra. Tho undulated Ipecacuanha. It agrees in properties with the annulated ipecacuanha; hut neithor is used in this country.
[RICIN. One of the threo supposed principles of castor-oil.]

RICINO'LEINE (ricimus, the castoroil plant, olerm, oil). Au ingredient of castor-oil which yields on saponification oxide of glyceryl, and a liquid acid called ricinoleic acid.

RI'CINO-STEARINE. Margaritine. A solid, white crystalline fat procured from castor oil. Ricino-stearic acid is one of tho acids procured by tho saponification of castor oil.

RICINUS COMMUNIS (ricinis, tho tick; to which tho seeds of this plant bear resemblanoo in shape and colour). The

Castor, or Palma Christi; the seede of which yield, by expression, castor oil. This plant is called, in the Morea, Agra Staphylit, or Wild Vinc, from the resemblance of its leaves to those of the Vine; nnd in the Bosphorus, Kroton, from the resemblance of its seeds to tho tick inseet, which fastens on dogs' ears. It yields the ricinic, the elaiodic, and the margaritic ncids.

RICKETS. Seo Rachitis. Dr. Good thinks it probable that the English word is derived from the Saxon ricg or rick, n heap or bump, particularly as applied to the back, which also it denotes in $n$ second sense: hence ricked, or rickct, means "hump-backed;" hence we also derive hay-rick, "a heap of hay;" and not, as Dr. Johnson bas given it, from "reek," to smoke.

RIGA BALSAM. Baume de Cnrpatbes, from the shoots of the Pinus Cembra, previously hruised, and macerated for $n$ month in wnter. The same fir yields also the Briançon turpentine.

RIGOR (rigeo, to he stiff). Rigidity; a coldness, attended by shivering.
[Rigor mortis. The muscular rigidity which takes placo a few hours after death].

RIMA. A fissure, a crack, or eleft; a narrow longitudinal opening.

Rima glottidis. The fissure of the glottis, or the longitudinal aperture through whicb the air passes into and from the lungs. It is bounded Interally by the chordes vocriles.

RING, FEMORAL. An opening bounded in front hy Poupart's lignment, behind by the pubcs, on the outer side hy the femoral vein, on the inner by Gimbernat's ligament.

1. External abdominal ring. A triangular opening abovo the crest of the pubes, formed by separation of the fibres of the aponeurosis of the obliquus externus.
2. Internal abdominal ring. An oblique opening in the fascia trnneversalis, about half an inch above Poupart's ligament.

RINGENT (ringo, to grin). A term npplicd in botany to ecrtain corollas, the petals of which cohere iuto the form of a mouth, which gapes on pressing the sides, as in Antirrhinum.

RINGWORM. The vulgar designation of the Herpes circinatus of Bateuran. It nppears in suall circular patches, iu which the vesieles arise only round the eireumference.

Ringrorm of the scalp. Sealled Head; or the Porrigo sentulatra of Bateman. It nppears in distinct and even distant patches, of an irregularly circular figure,
upon the sculp, forehcad, and neck. The former is the resicular, the latter the pustular, ringworm.
[RIPOGONIUM PARVIFLORUM.New Zealand Sarsaparilla. A plant of the family Sinilacere, said to possess the same properties as the officinal sarsaparilla.]

RISORIUS (risus, laughter). The laughing muscle of Santorini; a thin muscular planc, whicb arises before the parotid gland, and proceeds towards the angle of tbe mouth.

RISUS SARDONICUS. A specics of convulsive laughter, sometimes closely resembling the smile and laugbter of healtb, especially in infants, but often more violent.

ROASTING. A chemical process, hy which mineral suhstances are divided, some of their prineiples being volatilized, and others changed, so as to prepare them for further operations.

ROB (rob, dense, Arab.). An old term for an inspissated juice.

Rob anti-syphilique, par M. Laffeeteur, Médecin Chemiste. The principal ingredient is corrosive sublimate. A strong decoction of the arundo phragmatis, or hulrush, is made, with the addition of sareaparilla and aniseeds towards the eud, which is evaporated and made into a rob or syrup, to which the suhlimate is added.
[ROBBIN'S RYE. One of tbe popular names for Polytrichum Juniperiunm.]
[ROBINIA. A genus of plants of the natural order Fahacere.]
[Robinia psendacacer. A species found in many parts of the United States. The bark of its root is used in domestic practice as cathartio and emetic.]

ROBORANT (roboro, to strengthen). A medicine which strengthens.

ROCELLA TINCTORIA. Dyers' Orchil; a lichen which yields the colouring matter, called orchil or archil, and, aceording to Dr. Kane, the various substanees named erythryline, erythrine, nuarythrine, telerythrine, and rocelline. Litmus, formerly referred to this plant, is now said to bo probably the produce of Lecanura tartarea.

ROCHE ALUM. Rock Alum. [See Alumen rupewm.]
ROCIIE'S EMBROCATION FOR IIOOPING-COUGH. Olire oil mixed with about half its quantity of the oils of clores and amber.

ROCIIE LIMF. Quiek-lime: the designation of limestone after it bas been burned and its propertics changed.
rochelle SALT. Sol de Scignette. Tartrate of potash and soda.

ROCK OIL. Petroleum; a fariety of
liquid bitumen or mineral oil, frequently found exuding iu the form of an oily liquid from rocks.
ROCK SALT. Sal-gem. The name given to heds of salt found at Northwich in Cheshire, in Spain, Poland, \&c.

ROCK-SOAP. An earthy silicate of alumina, used for crayons, \&c.

ROCK-WOOD. The popular name for the ligniform variety of ashestos.
RODENTIA (rodo, to gnair). Glires, or gnawing animals, as the heaver, the hamster, the rat, \&c.

ROLLER. A long, broad ligature, used in surgery for keeping the parts of the hody in their places,
[ROMAN CHAMOMILE. A common name in Europe for Authemis nobilis.]
ROSACEEA. The rose tribe of dicotyledonous plants. Herbaceous plants, and shruhs with leaves alternate; flowers polypetalous; stamens perigynous; ovaria superior, solitary, or several, fruit 1 -seeded nuts, or acini, or follicles containing several seeds.

1. Rosa canina. Common Dog-rose, the fruit of which constitutes the hip or hep, employed for the conserve.
2. Rosa Gallica. French or Red Rose, the dried petals of which constitute the red rose-leaves of the shops.
3. Rosa centifolia. The Hundred-leaved or Cahhage-Rose, the petals of which are the Provins or Cahhage-rose leaves of the shops. This rose is used for the distillation of rose-vocter, and for preparing the English attar of roses.

ROSACIC ACID. The name given hy Proust to a peculiar acid, supposed to exist in the lateritions sediment deposited from the urine in some stages of fever.
ROSALIA (rosa, a rose). The ancient and classical term for the modern and unclassical term Scarlatina, or Scarlet Fever.

ROS CALABRINUS. Dew of Calabria; a desigation of the officiaal manna.
ROSE CAMPHOR. A solid oil of roses, onc of the two volatile oils composing attar of roses; the other is a liquid oil. The former is a stearopten, the latter an claopten.
ROSEMARY. The Rosmarinus officinalis; a Labiate plant, used in the manufacture of Huagary water. Tho flowers are terned anthos, (from ävoos, a flower,) signifying that they are the flowers par excellence; just as we call cinchoan the bark, and the inspissated juice of the poppy opium, or the juice.-Pereira.

ROSEOLA (rosens, rosy). Rose-Rash; a rose-coloured efflorescence, variously figured, moztly circular and oval, without
wheals or papulm, oceasionally fadiug and reviviag ; not contagious.

ROSE PINK. A pigment prepared by dyeing chalk or whiting with a decoction of Erazil wood and alum.

ROSIN. A substance obtained from some species of Pinus. See Resina.
[ROSMARINUS. See Rosemary.]
[ROSTRATE (rostrum, the beak of a bird). Beaked ; in hotany, terminating in a long, hard process.]

ROSTRUM. The heak of birds, the snout of heasts. A ridge, also called the azygous process, observed on the median line of the guttural or lower aspect of the sphenoïd hone.

ROSULATE. Having the leaves or other parts arranged in clusters, like the petals of a double rose, owing to contraction of the interrodes of the stem.

ROSY DROP. Carhuncled face; the Acne rosacea of Bateman. Shakspearo, descrihing the physiognomy of a hard drinker, tells us, that "his face is all buhukles, nud whelks, and knobs, and flames of fire!" In Treland these protuberances are called grog-blossoms.

ROTACISMUS. Faulty pronunciation of the letter $R$; a species of psellismus.

ROTAL ACTION OF AFFINITY. A term applied to the inductive action of affinity, as exhibited in the Voltaic circle.

ROTATE. Wheel-shaped; applied, in botany, to a calyx or corolla of whieh the tuhe is very short, and the segments spreading, like the radii of a wheel, as in horago.

ROTATION (rota, a wheel). The motion of a wheel ; the revolving motion of a bone round its axis.

ROTATOR (rota, a wheel). The name of a muscle which wheels any part round; as the lateral portions of the deltoildes muscle enable the arm to perform the guards in fencing.
ROTIFERA (vota, a whecl ; fero, to carry). The sceond class of the Diploneurra, or Helminthoilda; consisting of minute, transparent, soft, aquatic animals, with distinct muscular and nervous systems, and having the appearance of revolring wheels, produced by the rapil movement of the cilia placed round the mouth.

ROTULA (dim. of rota, a wheel). A little wheel ; and hence the knce-pan. Also, a preparation of sugar and a volatile oil, called a lozenge, or a drop.
IKOUGE. A pigarent containing preci pitated carthaunin intiunatcly mixed with finely divided talc.
[ROUSSEAU'S LAUDANUM. A tineturo of opinm, made with very weals alco-
hol; soven drops eontain about a graln of opium.]
[ROUTINIST. Routine Practitioner. One who pursucs an uniform course of treatment, unvaried by circumstances.]

ROYAL STITCH. The name of an old operation for tho cure of Bubonocelc. It consisted in putting a ligature under the neck of tho hernial sac, elose to the abdominal ring, aud then tying that part of tho sac, so as to render it impervious, by the adhesive inflamuation thus excited.

RUBE'D0 (rubeo, to he red). A diffused redness, as that of blushing.

RUBEFACIENT (rubefacio, to make red). A substance which, wben applied to the skin, induces a redness without hlistering.

RUBEOLA (mber, red). Measles; an eruption of crimson stigmata, or dots, grouped in irregular circles, or cresceuts, occurring for four days, and terminating in minute furfuraceous scales.
[RUBIA. A genus of plants of the natural order Ruhiaceæ.]

Rubia tinctorum. Dyers' Madder; the root of which constitutes the madder of commerce.

RU'BIAN. The colouring matter of madder. By decomposition it yields various products, as rubiretine, ruhiadinc, $\& c$.
[RUBICHLORIC ACID. A peculiar acid discovered hy Schwartz and Rochleder in Galium Apariue.]
[RUBIGINOUS. Of the colour of rust.]

RUBIGO. Mildew in plants; also, the rust of metals.
[Rubigo ferri. Rust of Iron.]
RUBIN'IC ACID. A red-coloured acid ohtained by the action of carbonato of potash on catechin or tamningennic acid.

RUBULA (rubus, a blackherry or raspberry). A classieal name, uscd by Dr. Good, instead of tho barbarous term Frambecia, or Yaws.
[RUBUS. A gedus of plants of the natural order Rosacew.]
[1. Rubue Trivialis. (Pursh.) R. Canadensis, (Linn.). Dewherry. It bas similar properties with tho following species.]
[2. Rubus villosus. Blackberry. This, and the preceding, is an indigenous plaut. Tho root, whicb is the officinal part, is tonic and very astringent; and a decoction of it is a favourito and useful remedy iu diarrhœea.]
[RUE. Common name for Ruta graveolens.]

RU'FINE (rufns, red). A red substanco formed by tho action of sulphurie acid ou salicino.

RU'FUS'S PILLS. The Pilule Aluē cum Myrrha of the London Pharma сорюі.
IRUGA. A wrinkle. Hence the terins ruyore, wrinkled, and rugosity, applicd to a wriakled surface, as the mucous membrane of the stomach.

RUGINE (ruga, a wrinkle). An instrument cmployed for removing the diseased surface of bones.

RUMEX. A genus of Polygonaccous plants, rarcly uscd. Rumex acctora is the common Sorrcl, which, from its usc as a salad, has heen termed green sauce. The herh and root of Rumex hydrolapathum, or the Great Water Dock, were formerly used under the name of herba et radic Britannia. [The roots of Rumex Britannica, R. obtusifolizs, and R. aquaticus are officinal, the two first in the U. S., and the last in the Dublin Pharmacopøi,. Those of $R$. patientia, R. alpinus, $R$. crispus, $R$. acutus, and R. sanguineous, have also been employed, and possess the same properties as the officinal. The roots of Rumex are astringent and somewhat tonic, and are supposed to be also alterative. The roots of $R$. aquaticus and $R$. Britannica are the most astringent. The roots of $R$. crispue, $R$. obtusifoliis and $R$. alpinus, unite laxative with their tonic aud astringent properties. Dock root is gisen in powder or decoction, and it is also applied externally in the form of ointment, cataplasm, and decoction, in cutaneous eruptions, ulecrations, \& c.]
[RUMICIN. A name given by Ricgel to what he supposes to be a peculiar prineiple ohtained from the root of Rumex obtusifoliis, but whieh some consider as an impure form of chrysophanic acid.]

RUMINANTIA (rmmino, to clew the cud). Pecora, or animals which chew the cud, as the deer. See Omasum.

RUMINATED. A term applied in hotany to the albumen in certain cases, in which it is perforated in various directions by dry cellular tissuc, as in butmeg.

RUMINATION. A voluntary regurgitation of food for further uastication; pecnliar to the ox, shecp, and other animals having numerous stomachs; it is commonly called chercing the cud.

RUNCINATE. Hook-backed; having its segments pointing downwards, like the teeth of a saw, as the leaf of taraxicum.

RUNNER. A prostrate aërial stem, forming at its cxtremity roots and a young plaut, which itself gives origin to netr runners, as in strawberry.

RUPERT'S DROLS (so called from their being first hrought to Eugland by Prince Rupert). Gluss drops with long
and slender tails, which will bear a smart stroke of a hammer; but hurst into atoms, with a loud report, if the surface be scratched, or the tip of the tail broken off. They are mado by dropping melted glass into cold water, which condenses the outer surface, and imprisons the beated particles while in a state of repulsion.

RUPIA ( $\dot{\rho} u \pi=s$, filth; as indicative of the ill smell and sordid condition of the diseased parts). Properly, Rhypia. Sordid Blain; an eruption of flat, distiact vesicles, with the base slightly inflamed; coataining a sanious fluid; scabs accumulating, sometimes in a conical form; easily rubhed off, and soon reproduced.

RUPTURE (rmpo, to break). A protrusion of some part of the abdominal viscera, hut principally of the intestine.
RUPTURING. A mode of dehiscence, in which the pericarp is spontaneously perforated hy holes, as in antirrhinum.
[RUSCUS. A genus of plants of the natural order Liliaceæ.]
[Ruscus aculcatus. Butcher's broom. The root has been uscd as a diuretic in dropsies and diseases of the urinary organs.]

RUSPINI'S TINCTURE FOR THE TEETH. Root of the Florentine iris $\bar{j}$ viij. ; cloves ${ }^{3} \mathrm{j}$. ; rectified spirit $\mathrm{Oij}^{2}$.; amhergris $\exists \mathrm{j}$.

RUSPINT'S STYPTIC. Dr. A. T.

Thompson says, that he has discovered this to be little more than a solution of gallic acid in alcohol, diluted with rosewater. A simple solution of gallic acid, he says, is equally effective.

RU'TACEE. The Rue tribe of Dicotyledonous plants. Herbaceous plants, with leaves alternate, dotted; flowers symmetrical ; petals alternate with the divisions of the calyx ; stamens hypogynous; ovarium entire, celled; fruit capsular.

Ruta Graveoleus. Common or Garden Rue; a plant formcrly cxtolled as antispasmodic, emmenagogue, and anthelmintic, and still used in the form of rue tea in domestic medicine.

RUTHE'NIUM. A new metal discovcred in native platinum, in 1844, by Klaus, who considers it to be isomorphous with rhodium, from the correspondenco in composition of their doublo chlorides.

RUTILIN (rutilus, quasi rufulus, fieryred). The name given by Braconnot to the product of the decomposition of salicin by sulphuric acid.

RUTIN'IC ACID. An acid contained in the leaves of the Ruta graveolens, or Common or Garden Rue.

RYE. The Secale cereale: a grass resembling wheat in its nutritive qualities, but containing less protein matter and more sugar. Sec Ergota.
S. or SS. immediately following any quantity, signifies semis, or half.
[SABADILLA. Ph. U. S. Cevadilla. The seeds of Feratrom, Sabadilla. Its principal use is fur the preparation of Veratria.]
SABADI'LLIN. Veratria Sabadillia. A vegetable alkaloid obtained from cebadilla, or sabadilla of commerce.

SABADI'LLIC ACID. Cevadic acid. A crystalline fatty acid obtained by saponification of the oil of cebadilla, a product of the Asagraa officinalis.
[SABBATIA augularis. American ecntaury. An indigenous plant of the natural order Gentianacere. It is a mild tonic, and is usually given in tho form of infu-
sion.]

SABIN. FOLIA. [Sabina, Pb. U. S.] Savinc leaves; the leaves of the Juniperus sabinc, a plant which has a specific influence orer the urino-genital apparatus.
SABULOUS (scabulunt

SABULOUS (sabolum, sand). Gritty:
a term sometimes applicd to the calcareous matter deposited in the urine.

SABURRA. Ballast for ships, consisting of sand or gravel. Hence the term has heen applied to the sordes which accumulates on the tongue, or on the lining membrane of the stomach.

SABURRA'TION (saburra, sand).Areuation. Psammismus. Sand-bathing; the application of hot sand enclosed in a bag or bladder to a part of the body.
SAC (sacens, a hag). A term applied to a small natural cavity, as tho lacrymal sac ; or to a morbid cavity, as a hernial sac.
Suce of the embryo. The name given by A. Brongniart to tho inncrmost integument of the nueleus of a sced, the ammintic vesicle of Malpighi, tho quintine of Mirabcl, . Ec .

SAC'Charates. Salts obtained by combination of the saccharie acid with salifiablc bases.

SACCIIARIC ACID (saccharnm, sumar).

A produet of the action of dilate nitric acid on cither cane or grape sugar. It has boen called oxalhydric acid.
[SACCHARI FEXX. Molasses.]
SACCHARO'METER ( $\sigma a ́ \kappa \chi a \rho o v$, sugar, дítpoy, a measure). A hydrometer for dctermining the density of syrups, graduated in the same manner as Baumés Acidometer. The graduation is sometimes so arranged as to indicate the proportion of sugar in the solution.

SACCHARUM. Sugar ; a sweet granulated substance, chicfly prepared from the expressed juice of the Sacchurum officinarum, or sugar-cane. [See Sugar.]

1. Rave or Mhscovado sugar. The dry crystallized sugar, after the molasses or uncrystallizahle portion has been drawn off.
2. Refincd or Loaf-sugar. The result of hoiling a solution of the raw sugar with white of eggs, or the serum of bullock's blood.
3. Sugar candy. Crystals procured hy the slow evaporation of the aqueous solution of sugar.
4. Barley stgar. Sugar which has heen heated, and in which the tendency to crystallize has heen thus destroyed.
5. Burnt sugar or caramel. Sugar which has been sufficiently heated to acquire a hrowu colour, a bitter taste, and a peculiar odour.
6. Syrup. A saturated solution of common sugar.

SAC'CHARUM ALUMINA'TUM. Equal parts of white sugar and alum.

SA'CCHARUM CA'NDUM. Sugarcandy ; crystallized cane-sugar.

SACCHARUM SATURNI. Sugar of Lead, or the Plumbi Acetas. [Also called acetated ceruse, and superacetate of lead.]

SACCHOLACTIC ACID (saccharum, sugar, lac, milk). Saclactic. The name of an acid which was first obtained from sugar of milk; it is now generally known hy the name of mucic aeid. Its salts aro called saclactatcs.

SACCHOLA ${ }^{\prime}$ CTIN (8accharum, sugar, lac, milk). Lactin. Sugar of milk, obtained from whey by evaporation.

SACCHULMINE. A crystalline suhstance, obtained by boiling cane sugar iu very dilute sulphuric, hydro-chlorio, or nitric acid. Sacchulmic acid is formod at tho same time.

SACCULUS (dim. of aaccue, a hag). A little bag. The minute vesicular bags, constituting the adipose membrane, were originally described by Malpighi under tho mame of membranous sacculi; and by Morgagni, under that of sacculi pinguedinиші.

1. Sacculus laryngis. A pouch extending upwards frou the ventricle of the larynx to the upper border of the thyroid eartilage.
2. Sacculus mисовив. A mucous عaо, lying behind the tendon of the rectus fe. moris.
3. Sacculus proprius. The emaller of the two saes of the vestihulum, formed by the expansion of the auditory nerve. Tho large sac is called utriculus conmunis.

SACER. Sacred; a term applied to diseases formerly supposed to he immediately inflicted from Hearen, as sacer norbur, or epilepsy ; sacer ignis, or erysipelas.

Sacer musculus. A designation of the transversalis lumborum.

SA'CHET (sacculus, a little hag). A small hag for containing odorous suhstances, similar to those of pot-pourri, but in the form of powder.
[SACRAL. Belonging or relating to the sacrum.]
[SACRED ELIXIR. Tinctura Rhei et Aloes.]

SACRO-LTMBALIS. A muscle arising from the sacrum, \&c., and inserted into the angles of the six lower ribs.

SACRUM. The hone which forms the basis of the vertebral column, so called from its having heen offered in sacrifice, and hence considered sacred.

SACRO-. A term applied to parts connected with the sacrum; hence we have sacro-iliac symphysis, sacro-spinal ligament, sacro-vertehral angle, \&c.

SAFETY-LAMP, MU'ESELER'S. In this lamp a part of the metallic covering which surrounds the flame and forms the chimney is replaced by a glass, by which means a much stronger light is insured than that given hy the Davy-lamp. The air is introduced from aborc, and escapes by a central chimuey.
SAFFLOWER. Bastard saffron. The flowers of the Cathamus tinctorius, imported, in flaky masses, for the use of djers.

SAFFRON (zafaran, Arabic). A substanco consisting of the stigmata and part of the styles of the Crocus sativus, or Saffron crocus. See Polychroitc.

1. Hay saffron. Cracus in fono. The stigmata with part of the style, carefully dried. Dr. Percira says that one grain of good commercial saffron contains the stigmata and styles of nine flowers; hence 4,320 flowers are required to sield an ounce of saffron.
2. Cake safiron. Crocus in placentâ. Formerly, compressed hay saffron, but the eakes now sold are mado of safflower and gum-water.
SAGAPENTM. A enneretegum-resin,
the produce of an unknown Persian plant, supposed, though without suflicient evidence, to he the Ferrla Peraica. The best kind occurs in tears; a commoner kind occurs in soft masses, and is called soft sayaреним.
[SAGE. Common name for Salvia officinalis.]
SAGITTA'LIS (saryitta, an arrow). The zame of the arroo-like suture of tho craium. See Suture.
[SAGITTARIA. A gonus of plants of the natural order Alismaceæ.]
3. Sagittaria sagittifolia. The root of this species is esculent, and is much employed as food by our aboriginal tribes.]
[2. Sugittaria variabilis. Wapata. Ar-row-head. The root of this species is also esculent, and yields a farina like arrowroot.]
SAGITTATE (sagitta, an arrow). Ar-row-headed; applied, in botany, to leaves which are pointed at the apex, and gradually enlarge at the base into two acute lobes, as in sagittaria.

SAGO (saga, the Java word for bread). A farina obtained from the medulla or pith of the Sagus Rumphii, the Malay or Rumphius's Sago Palm, and other species of palm. In the state of powder it is called sago meal or flour; it occurs also gramulated, and this is either pearl sago, or common brown sago.
[SAGUS. A genus of plants of the natural order Palmaceæ.]
[Sagus rumphii. Sago palm. An East Indian tree which furnishes the sago of cominerce.]
[ST. ANTHONY'S FIRE. Erysipelas.]
[ST. VITUS'S DANCE. Chorca.]
ST. IGNA'TIUS'S BEANS. The secds of the Ignatia amara, similar in their properties to those of nux vomica.

ST. LU'CIA BARK. St. Domingo Bark, A false cinchona bark yielded by the Exostemma foribundum.

SAL. A Salt. A definite compound of an acid with an alkaline, or salifiable base. Salts are distinguished by the six following prefixes:

1. Super, denoting excess of acid in general, as super-tartrate of potash.
2. Sub, denoting excess of tho base, as sub-horate of soda. See Sub-salt.
3. $B i$ i, denoting two equivalents of acid, as $b i$-sulphate of potash.
4. Quadr, denoting four equivalents of acid, as quadr-oxalate of potash.
5. Sesqui, denoting one equivalent and a half of acid, as sesqui-carbonate of aun-
monia. monia.
6. Oxy, denoting the presence of a perfoct oxide, as oxy-muriate.
7. Deliquescent salts are those which atwact moisture from tbe nir, and become liquid, as the nitrates of lime and magnesia.
8. Eflorescent salts are those which lose a portion of their water of crystallization, and fall into powder, by exposure to the air, as sulphate and phosphate of soda. By a strong heat the whole of the water is expelled, and the salt, if soluhle, is dissolved, undergoing what is called watery fusion.
9. Permanent salts aro those which nudergo no change on exposure to the air.
10. Decrepitating salts are those which burst, when heated, with a crackling noise, into smaller fragments, as the nitrates of baryta and lead.
11. Neutral salts are those in which the base is perfectly saturated with the acid. It does not, however, follow that neutrality and saturation accompany each other: an alkali may unite with ay acid so as to saturate it, though it still manifests alkaline properties.
12. Doulle salts, formerly called triple salts, are composed of one acid and two bases, of two acids and one base, or of two different acids and two different bases.
13. Native salts are mineral bodies, resembling precious stones or gems in their external character, and so named to distinguish them from artificial salts.
14. Snlpho-salts consist of compounds, both of which contain sulphur.
15. Haloïd salts are compounds of metals with bodies, such as chlorine, iodine, $\&$ e., but uot containing oxygen and sulphur.
16. Sub-8cilis, or ncutral salts, are those in which the excess of oxide docs not stand in the relation of hase to the ncid.
17. Common balt, or Day salt, a muriate of soda, is procurod, hy eraporation, from sea-water, or from the produco of brine springs.
18. Essential salts are procured from the juices of plants by crystallization.
19. Fixed salts are prepared by calcining, then boiling the matter in water, straining off the liquor, and evaporating all the moisture, when the salt remains iu the form of a powder.
20. Volutile salts are procured principally from animal substances, or the fermented parts of plants.

Sal absimthii. Salt of wormwood, or the sub carbonas potassa.

Sul AEgyptiacum. Egyptian salt, or tho nitras potassic.
[S'rl aëraths. $\Lambda$ salt of potassa betwcen a carbenate and bicarbonate.]

Sul ulembroth. A compound muriate of mercury and ammonia.

Sal allalimes volatilis. Volatilo alkaline salt, or the sub-carbonas ammonie.

Sal ammoniacun. Sal ammoniac; so called from its having been once manufactured in Egypt, near tho temple of Jupiter Ammon; sometimes contracted into salmiac ; it is the murias ammonix.

Sal anmoniacum acetatum, or liquidum, or vegctabile. Acetated, or liquid, or vegetahle, salt of ammonia; the liquor ammoniæ acetatis.

Sal ammoniacum fixum. Fixed salt of ammonia, or the calcii chloridum.

Sal anmouiacum martiale. Martinl salt of ammonia, or the ferrum ammoniacum.

Sal anmoniacum secretum. Secret salt of amwonia, or the sulphas ammoniæ, so ealled by its discoverer, Glauber.

Sal ummoniacum volatile. Volatile salt of ammonia, or the sub-carbonas ammoniæ.

Sal Anglicum. . Epsom salt, or the sulphas magnesia.

Sal antinonii. Salt of antimony, or the antimonium tartarizatum.

Sal aquarume vel lucidum. Salt of water, or the shining salt, or the nitras potassæ.

Sal argenti. Salt of silver, lunar caustic, or the nitras argenti.

Sal auri philosophicum. The bi-sulphate of potash, or sal enixum.

Sal catharticus antarus, or Anglicanus. Bitter, or English, purging salt, Epsom salt, or the sulphas magnesio.

Sal catharticus Glauberi. Glauber's purging salt, or the sulphas sodæ.

Sal chalybis. Salt of iron, or the sulphas ferri.

Sal commune, or culinare, common or culinary salt; the murias sodæ, or chloride of sodium.

Sal cormu cervi volatile. Volatile salt of hartshorn, or the sub-earbonas ammoniæ.

Sal dc duobus. The sulphas potasse, formerly called fixed nitre, sal polyehrest, $\& c$.

Sal digestivus. Digestivo salt, or the murias sodæ.

Sul digestivur Sylvir. Digestivo salt of Sylvius, or the acotas potasse.

Sal diurcticus. Diuretio salt, or the aectas potasse.

Sal eni.xum. The bi-sulphate of potash, or sal auri philosophicum.

Sul crsentiale vini. Essential salt of winc, or the acctas potasse.

Sul foutium, vel fossilis. Fountain, or fossil salt, or tho murias sodæ.

Sul genima, vel marinus. Roek or sea
salt, or the murins sodx, also ealled sal fossilis, or fossil salt.

Sal gicnistce. Salt of broom, obtained by buruing the broom plant.

Sal Glauberi. Glauber's ealt, or the sulphas sodæ.

Sal herbarum, vel plantarum. Salt of berhs, or of plants, or the sub-carbonas potassx.

Sul martis. Martial salt, salt of iron, or the sulphas ferri.

Sul martis unriaticum sublimatum. Sublimated muriatic salt of iron, or the ferrum ammoniatum.

Sal mercurii. Salt of mercury, lunar caustic, or the nitras argenti.

Sal nicrocosmicum. Microcosmic ealt, or triple phosphate of soda and ammonia.

Sal mirabilis Glauberi. Glauber's salt, or the sulphas sodæ.

Sal muriaticus. Muriatic salt, or the murias sodæ.

Sal perlatum, or mirabile perlatum. The phosphas sodæ, or tasteless purging salts.

Sul polychrestus (Glaseri). Polychrest salt of Glaser, or the sulphas potassæ cum sulphure.

Sal polychrestus (Seignetti). Polycbrest salt of Seignette, or the soda tartarizats.

Sal prumella, or crystal mineral. The nitras potasse, cast into cakes or round balls, after fusion.

Sal rupellcusis. Rochello salt, salt of Seignette, or the soda tartarizata.

Sul Saturni. Salt of lead, or the acetas plumbi.

Sal scdativum Hombergi. Sedative salt of Homberg, or horacic acid.

Sal Seidlitzcnsc. Epsom salt, or the sulphas magnesiæ.

Sal sode. Salt of soda, or the subearhonas sodæ.

Sal succini. Salt of amber, or the acidnm snccinicum.

Sal tartari. Salt of tartar; an old appellation for the carbonas potassa purissimus; but applied to the sub-carbonas potassa.

Sal vegetabilis. Vegetable salt, or the tartras potasse.

Sal vitrioli. Salt of vitriol, or the sulphas zinci.

Sal volatilc. Volatile salt, or the subearbonas ammonie.

Sal volatilc salis ammoniaci. Volatile salt of sal aumoniac, or the sub-carbonas ammonix.

Salt, arsenical neutral, of Macquer. The super-arscnias potassa.

Salt, bay. The sodii chloridum, as procured by solar craporntion.

Salt, culinary, or commnn. The sodii chloridum, or muriate of soda.

Sult, fcbrifuge of Sylvius. Regenerated sea salt, or the murias potassæ.

Salt, fusible. The phosphas ammonir.
Salt, jusible, of urine. The triple phosphate of soda and ammonia.

Salt, green. The name given hy the workmen, in the mines of Wieliozka, to the upper stratum of native salt, which is rendered impure by a mixture of clay.

Salt, marine argillaceous. The murias aluanine.

Salt, nitrous ammoniacal. Tho nitras ammoniæ.

Salt of benzoin, Benzoic acid.
Salt of canal. The sulphas magnesiæ.
Salt of colcothar: The sulphas ferri.
Salt of lemons, essential. Salt of sorrel, or the super-oxalas potassæ.

Salt of Siedlitz. Dr. Grew's salt, or the sulphas mngnesiæ.

Salt of tariar. The carhonas potasse, formerly fixed nitre, mild vegetable alkali, and suhearhonate of potash.

Salt of wisdon. A compound muriate of mercury and ammonia.

Salt-petre. Sal petræ. Literally, rock salt; nitre, or the nitras potassæ.

Salt, sedative. Boracic acid.
Salt, spirit of. Muriatic acid.
Salt, sulphurcons, of Stahi. The sulphite of potass.
[SALAAM CONVULSION. A peculiar form of convulsion occuring in children, and characterized by repeated hobbings of the head forwards.]

SALACITY (salax, salacious). The natural orgasmus of the sexual system.

SALEP. The prepared and dried tuhers of several Orchideous plant. Indigenous salep is prepared from the Orchis mascula, Orchis latifolia, \&c. Oriental salcp is the produce of other Orehidea. Tho salep of Cachmere is said to he procured from a species of Eulophia.
SA'LEP, OTAIIE'ITE. Another name for Tacen starch or Tahiti arrowroot.

SA'LIA NEUTRA ET ME'DIA. The alkaline and earthy salts; a class of medicinal substances including the neutrai and indifferent combinations of the alkalies and enrths with acids, as well ns some of tho acidulous or supersalts of the alkalies.
SALICACEA (silix, tho willow). The Willow tribe of Dicotytcdonous plants. Trees or shruhs with leaves alternate ; flowers achlamydeons, amentaceous; ovarium superior. 1 or 2 -celled; fruit coriaceous; steds indefinite, comose.
SALICARIA. The Lousestrifo tribe of Dicotyledonous plauts. Ilerlys wilh
leaver opposite, entire; flovers polypetalous; culyx tubular; stemens perigynons; carpella concrete; and a superior ovarium with scveral cells.

SALICIN (salix, the willow). A ve-geto-nlkali found in about fourteen species of Salix, and eight species of Populus.

SALICY L. The hypothetical radical of the salicylnus and salycilic acids, \&e.

SALICY'LIC ACID. An acidohtnined by the action of fused potassa on salicine.

SALICY'LIMIDEF. A compound of salicylous acid, occurring in the form of golden yellow brilliant prisms. Another compound has heen named salicylamide, and is procured in colourless prismatio crystals.

SALIFIABLE BASE (sal, a salt; fio, to hecome). A substance which forms definite coupounds with an acid, and which, when liquid, or in a state of solution, has an alkaline reaction. The acid, of whatever kind, was denominated by Lavoisier, the salifying principle.

SALINE (8al, salt). That which contains salt, or is of the nature of salt.
[Saline mixture; neutral mixture. See Effervescing Draught.]

SALIRE'TIN. A yellowish-white powder, with the character of a resin, obtained by boiling salicin with dilute sulphuric or hydrochloric acid.

SALIVA (oiados). The insipid, transparent, viscous liquid, secreted by the salivary glands, principally the parotid, and discharged into the mouth by the duct of Steno.
[SALIVARY CALCULI. Coneretions which form in the salivary glands or their excretory ducts.]

SALIVARY GLANDS. The name of three glands, situated on each side of the face behind and bencath the lower jaw, for the purposo of secreting and excreting the saliva. They are tho parotid, the submaxillary, and the sub-lingual glands.

SALIVATION. Piyalism. Augmented secretion of tho mucous follicles of tho mouth and salivary glands, accompanied with tenderness and infammation of these parts.

SALIX. The Willow; a genus of plants [of the natural order Salicacear], whose harks in many cases possess great bitterness, combined with astringency, and havo been cumployed as substitutes for cinchona. [The pharmaccpocial namo for the bark of Sulix alba.]
[Salix alba. Cominon European, or white willow; the bark of which is tonic and astringent, nud las been cuployed as a substisute for Cinchona. Various other European speeies of Salix, as $S$. copreer, $S$

Russelliana, S. purpuriu, S. peturdru, and our native specios S. nigra, S. erioccphala, S. conifera, \&e., prohably possess similar medical properties.]

SALOO'P. Sassafras tea flavoured with milk and sugar.
 A term applied, in combination with others, to the levator palati mollis, in consequence of this musele arising from the Eustachian tube. - Sce Staphylinus.

1. Salpingo-pharyngews. That part of the palato-pharyngeus which arises from the mouth of the Eustachian tuhe.
2. Salpingo-staphylinus (otaфu入̀े, uvula). The name given hy some writers to the peristaphylinus internus.

SALSEPARIN. The name given by Thubeuf to smilacin, a principle of sarsaparilla.

SALSOLA'CEAE. Salt-worts; a family of plants containing a large quantity of alkali, combined with an organic base, as the halophytes, bect, spinach, \&c.
[SALT. A compound, in definito proportions, of an acid with an alkali, earth or metallic oxide.]

SALTPETRE. Sal petre. Nitre, or the nitrate of potash. See Nitre.

SALVATELLA (salvo, to preserve). A rein of the foot, the opening of which was said to preserve health, and to cure melancholy.

SALVE. A popular term for an ointment, cerate, \&c.
[SALVIA. The pharmacopeial name for the leares of Salvia officinalis, a genus of plants of the natural order Labiate.]
[1. Sírbia officinalis. Sage. A plant, principally used as a condiment. It is aromatic, and slightly tonio and astringent. The leaves are the officinal portion; and an infusion of them is sometimes given as a curminative, and is ofteu used as a gargle in sore thrmat.]
[SAMADERA. A genus of plants of the naturnl order Simarubacer.]
[Srmadera Indica. A species which furnishes the Niepa bark, in some estecm as a febrifuge.]

SAMARA. A two or more eclled superior fruit, bordered hy wing-like cxpausions, as in Elu, Ash. Sycamore, de.
SAMBUCUS NIGRA. Common Filder, a European Coprifoliaccous plant, the motoers of which are used for making elder-flower water, and elder ointment; the berrics for elder wine, and their inspissated juice for elder rob.
[Our inlligenous specios, S. Canadensis, possesses the sume properties as the buropean. The fowers are diaphnretic: the berries are said to be alterative, diupho-
retic, and luxative; the inner bark hydrogoguo cathartic, and also emetic in large doses; and the juice of the root, diuretic.]

SA'MOVY ISINGLASS. A variety of isinglass procured from the Russian fish som. The Russians, having no article, make an adjective of som by adding ovy, and then pronounce it samovy, although they spell it somovy.

SAND BATH. Balneum arena. A bath, in which a quantity of sand is intorposed hetween the fire and the vessel intended to he heated.

SANDAL WOOD. Red Sandera' wood. The wood of the Pterocarpus santalinus. The terin sandal has heen supposed to be a corruption of chandama, the name by which the wood is known in Timor.

SANDARACH. Juniper resin. A resin obtained from a coniferous plant called Callitris quadrivalvis, nad used for varnishes. In the state of powder it constitutes pounce.

SANDERS' BLUE. Ultramarine ashes. The residue left after the extraction of ultramarine, the resinous cement bcing burned away and the ashes washed.

SA'NDIVER. Glass-gall. A saline scum which rises to the surface of the melted glass in the melting pot, containing the sulphates of soda and of lime, de.
[SANDORICUM. A genus of plants of the natural order Meliaceæ.]
[Sandoricum Indicnm. An East Indian speeios, the root of which is aromatic, and is used in leucorrhœa.]
[SANGAREE. A heverage made of wine or porter, with water, sugar, and nutmeg.]

SANGUIFICATION (8angnis, hlood; fio, to hecome). The process by which the chyle is converted into blond.
[SANGUINARIA CANADENSIS.Sanguinaria. Ph. U.S. Llood root, puccoon. An indigenous Papaveraceous plant, the rhizoma of which is an acrid stimulating emetic, aud narcotic. It has been principally enployed in pulmonary affections and rheumatism. It is also used as an escharotic to fungous surfaces. The dose of the powder, as an emetic, is from gr. $x$. to gr. x.x.]

SANGUINARINA. A brittle, Tcllom: and tasteless powder, obtained from the root of the Singuinaria Candedensis. It instantly cxcites sucezing. and, in an atmosplicre containing a small quantity of acill rapours, immediately assumes a red colour.
[SANGUINEOUS (sanguis, hlood.) Bhonly: appertaining to the blood.]

SAYGUIS. Blood; the fluid which circulates in the heart, arteries, and reins.

SA'NGUIS DRACO'NIS. A resinous substance procured frow plants of different families. See Dragan's Bhord.

SANGUISUGA (sengnis, blood: sugo, to suck). The blood-sucking leech, an annulose animal, the $\beta \bar{i} \dot{\lambda} \lambda \alpha$ of the Greeks, the hirndo of the Romans. The speeics most coin inonly employed are-

1. Sauguisuga oficinalis. The officinal or green lecch, imported from Bourdeaux, Lisbon, and Hamburgh.
2. Surgrisuga madicinalis. The true English or speekled lcech; a rare species; imported from Hamburgh. Each species comprises several varieties.
[By many zonlogists these two are regarded as inere varieties of the same species. The medicinal leceh of America is described by Mr. Say under the name of Hirndo decora. It makes a less deep and smaller incision than the European leech, and is preferable for application to very vascular parts, as there is less risk from hemorrhage.]
[SANICLE. Common name for Sanicula Minrylandica.]
[SANICULA. A genus of plants of the natmral order Umbellifera.]
[Sanicula Ifarylundica. Sanicle; black snake-root. An indigenous plant, the root of which has been given in intermittent fever and in eholera.]

SANIES. A thin, serous, fetid matter, discharged from unhealthy sores.
[SANITARIUM. An institution in a salubrious situation, for confirming the recovery of convalescents from discase, or for iuproving the bealth of valetudinarians; it has also been used synonymously with hospital, or an institution for the treatment of the sick.]

SA'NTALIN. A peculiar dark-red colouring matter procured from the Pterocarpus Stutulinns, or Threc-leaved Pteroand Cers, a leguminous plant of Coromandel and Ceylon.
[SANTALUM. Red Saunders; the Pharmacopoial namo for the wood of Picroctrpur Sontuliuns, a genus of plants of the natural order Santalaeee.]
[1. S. albnm. White Saunders. An East Indian speeies, growing also in South America. It is estecmed in India as refreshing and uscful in remitting fevers, gonorrhoca, \&e.]
[2. S. freycinctianmm. Yellow Snunders. This specics grows in the Snndwich Islands, the Marquesas, de., and supplies the saudal wood so valuct ly the Chinesc.]
[SANTOLINA. $A$ genus of plants of the natural order Asteracese.]
[1. Santolina fragrentissina. The fowers of this species are very udurous when
dry, and are employed in Egypt as a substitute for Chamomile.]
[2. Scutolina incena. This species is used iu the south of Europe as an antispasmadic, tonie and vermifuge.]

SANTONIN. A crystallizable substance, obtained from the seeds of Artemisin santmica, or Southernwood.

SAP. The asccuding juice of plants, as distinguished from the elaborated or dcrcending juice.

SAP-GREEN. Vert de vessie. A colouring matter, preparcd from the expressed juice of the Rhamnus Catharticus, or common buckthorn, evaporated to dryness with lime.

SAPIIE'NA (aa乡ウ̀s, manifest). The name of two conspicuous veins of the lower extremities-the interual, which runs along the inuer side of the foot, lcg, and thigh ; and the external, commencing on the outer border of the foot, and terminating in the popliteal vein.

SAPO. Soap. The term soap is usually applicd to the product of the aetion of alkalis on fixed oils and fats, while the term plaster is commonly applied to the product of the action of oxide of lead on fixed oils and fits. The former is frequently termed a soluble soap, while a ; plaster is denominated an insoluble soap. Tbe term soap is also applied to alkaline resinates.

1. Supo dmus. Hard soap, made with solda and fatty or resinous matters. To this elass belong the Crstile soaps, the almond or medicinal soap of the French, the common soaps of domestic use, and the yolloz or resin soap.
2. Sapn mollis. Soft soap, made with caustic potash and acid oil or fat. To this class belony the common soft soap, and the olive-oil potash soap of the pharmaeopocin.
[SAPONARIA OFFICINALIS. Soapwort. A plant of the family Caryophyllaceæ, a decoction and extract of which has been usell as an altcrative in vencreal and serofulous affections, cutaneons eruptions, de.]

SA PONIFICATION (sapo, soap; fucio, to make). The manufacture of soap; the conversion of any sulstance into soap.

Scuponine. A pecnliar principle found in the root of the Saponaria officinalis; a powerful sternutatory.
SA'RCINA VENTRI'CULIL. A rege rative growth in the stomach.
 fruit). Thio flesh of fruits ; the feshy snbstauce which, in tho peach, lies between tho opiearp, or skiu, and the endocarp, or
stono.
[S.IRCOCELE. Scé Sutr.x.]
［SARCOCOLIA．Sco Sarx．］
［Sarcocollin．A peculiar substanco ob－ tained from sarencolla．］
［SARCOLEMMA（ $\sigma \check{\rho} \rho \xi$ ，flesh ；$\lambda \varepsilon \mu \mu a$, a coat）．Tho delicate tuhular sheath which binds together the elements of muscular fibre．It is distinct from tho areular tis－ sue，which binds the fibres into faseieuli．］

SARCOMA（od̀p $\xi$ ，flesh）．Tho name formerly given to all excrescences which had the consistence of flesh．

SARCO＇PTES HO＇MINIS．The name given by Raspail to the Acarus scabiei，or itch－insect．It is a parasite bolonging to the class Araehnida，or spiders，and is thereforo an articulated animal，not an in－ sect．

SA＇RCOSINE（ $\sigma a ̀ p \xi$ ，flesh）．A basie substance ohtained by boiling kreatine with hydrate of haryta．
［SARCOUS．Fleshy．Sarcons elements． A name given by Bowman to the elemen－ tary or primitive partieles，which by uniting，form the mass of muscular fibre．］

SARDONIC．A term applied to a con－ vulsive kind of laughter，which，aecording to the ancients，was oceasioned by inflam－ mation or wounds of the diaphragm． Virgil has＂Sardois amarior herbis；＂tbis Sardinian plant was perbaps a species of ranunculus，the juice of which，when drunk，produced madness，together with distortions of the face，so peculiar as to resemble laughter．

SARMENTUM．The name given by Linnæus and others to that modification of the acirial stem called a rumer．
［SARRACENTA．Side－saddle plant． Fly－trap．A genus of plants of the natural order Sarraceniaecæ．］
［Sarraccria flava，
，Two species
［Sarracenia variolaris．］indigenous to the Southern States，the roots of which are stimulating tonie，and are bclieved to be offieaeious in dyspepsia．］
［SARSA．A synonyme of sarsaparilla．］
SARSAPARILLA（zarzaparilla，Span－ ish，from zarza，a bramble，aud perilla，a vinc）．Sarza．The ronts of several spe－ cies of Smilax．The following varicties oceur in the market：

1．Jamaica sarsaparilla．Red－bearded sarsaparilla，perhaps the root of the Smilare officinctis．Its bark has a red tint，and its roots are furnished with uumerous fibrons routlets called the beard．It is imported in bundles of spirally－folded roots，and is heneo called sarsaparilla roturdu．

2．Brazilian anrsaparilla．Lisbon，Por－ tugal，or Rio Negro sarsaparilha，said to be the ront of the Smitare symhilitica．It is brought over unfolded，with its rools
tied in bundles in a parallel direotion，and honee called sararaprivilla longa．

3．Jimasarsaparilla．Formerly brought from Lima，now frum Valparaiso；proha－ bly the root of the Smilaic officinalis．It is imported folded．

4．Honduras sarbaparilla．Mealy sar－ saparilla，so termed from the mealy appear－ ance which it presents when broken； prohably the root of the Smilax officinalis． It is imported folded．［This is the variety most used in the United States．］

5．Vera Oruz sarsaparilla．The ront of the Smilax medica．It is imported unfolded．－Pereira．

SARTORIUS（sartor，a tailor）．The musele hy means of which the tailor erosses his legs．It arises from the spinous proeess of the ilium，and is inserted into the inner tubercle of the head of the tihia．

SARX（ $\sigma \dot{\alpha} p \xi$ ，баркоs）．Flesh；the mus－ cular parts of animals．

1．Sarco－cele（кn่入 $\eta$ ，a tumour）．A fleshy enlargement of the testis，also called her－ nia carnosa．

2．Sareo－colla（кö入入a，glue）．The eon－ crete juice of the Pchaa sarcocolla，a native plant of Africa，so named from its supposed power of agglutinating wounds． ［ It is said to be purgative．］

3．Sarco－lerm（rippa，skin）．The name given by some botanists to the parenchyma of fruits．

4．Sareoma．Saroosis．A fleshy tumour．
［SARZA．An offieinal synonyme of Sarsaparilla．］

SASSAFRAS WOOD．The wood of the Sasafras officinale，a tree of the order Lauracea．The beverage called salonp consists－of sassafras tea，flavourcd with milk and sugar．

Sussafras mits．The seeds of some Lauraeeous plant，said to be a species of Nectandra．
［Sassafras medulla．The pith of the stems of Lautus Sassafras．By macera－ tion in water it yields a mucilage which is useful as a soothing collyrium in sone inflammations of the cye，and as a drink in irritations of the mucous surfaces，$\& \mathrm{c}$ ．
［Sassafras radicis cortox．Bark of Sas－ safras Rout．A mild stimulant，sudorifie and alterative．It is generally used in combination with sarsaparilla or guaiacum．］
［SASSAFRID．A name given hy Reiueh to a peeuliar prineiple obtained by him from the hark of Sasanfras noticinale．］
［SASSA GUM．A navic given by Gui－ bourt to a gum lrought from the cast．］
［SASSY BARK．The bark of a species of Erythrophlenm，employed by the natives of western Africa as an ordeal in their trials for witcheraft．］

SASSOLIN. Native borneie neid, found on the edges of bot springs near Sasse, in the territory of Florence.

SATELLITE VEINS. Vence comites. The veins whicb accompany the bracbial artery as far as the bend of the cubit.

SATURATION (saturo, to satisfy; from .sctur, full). This term is applied in tho two following senses, viz.

1. A fluid, which holds in solution as much of any substaneo as it can dissolve, is said to he saturated with it. Thus, water will dissolve about one-third of its weight of common salt, and if more be added it will remain solid.
2. When two principles, which have united to form a new hody, arc in, such proportion that neither predominates, they are said to he saturated with each other, or the affinities are said to he satisfied. If otherwise, tho predominant principle is said to be sub-saturated, or under-saturated, and the other super-saturated, or over-saturated.
[SATUREJA. A genus of plants of the natural order Labiatæ.]
[I. Satureja hortensis. Summer savory. An European plant, eultivated in gardens as a culinary berb. It is a carminative stimulant.]
[2. Satureja montana. Winter savory. Also cultivated in gardens, and has similar properties with the preceding species.]

SATU'RNI EXTRA'CTUM. Goulard's Extract; the diacetate of lead.

SATURNUS. The ancient designation of lead, from the planet of that name.

SATYRI'ASIS (sutyrus, a satyr). Lascivious madness. As it occurs in males, it is the salyriasis furens of Culleu; as it occurs in females, it is the nymphomania furibunda of Sauvages.

SAUE'RKRAUT. Fermented eabbage ; estecmed for its anti-scorbutie propertics.
[SAURIA (faĩpa, a lizard). An order of the class Reptilia, comprising the lizard tribe, the crocudile, \&e.]

SA'VIN. The Juniperus sabina, a coniferous plant, the officinal parts of which are the young hranehes with their leaves. Sec Subina T'ulia.

SANI'FRAGA (saxum, a stone, frango, to brcak). Lithonthryptica. Pliny's term for medicincs wbich counteract the forination of calculus in the arinary bladder. They are eommonly ealled antilithics, or simply lilhicя.
[SAXIFRAGE. Suxifraga. See Pimpinella racerifrerge.]

SAXOONY BLUE. An intensely deep blue, imparted by dyeing with sulplate of indigo. [Seo Bluc.]

SCAB (scabo, to stratch). A hard substanec, formed by a concretion of the fluid discharged from superficial ulcerations.

SCABIES (scabo, to scratch). An cruption of miunte pimples, occurring chiefly between the fingers and in the flexures of the joints, terminating in scabs. It is callcd, popularly, in English, itch.
[SCABIOSA. A genus of plants of the natural order Dipsaceæ.]
[1. Scabiosa arvensis. Common ficld scabious. This plant has a bitter subastringent taste, and was formerly employed in some leprous affections, \&c.]
[2. Scabiosa succisa. Devil's-bit scabious. This has similar properties with the preceding species.]
[SCABIOUS. The herb of E'rigeron heterophyllum and E. Philadelphicum.]

SCABROUS. Rough ; eovered witb hard, short projections from tbe eutiele.

SCALA. Literally, a Iadder, or a flight of stairs. Hence-

Scalce of the cochlea. The two eavities which result from the presence of the lamina spiralis, or spiral septum of the eochlea. They are, in fact, two balves of a eanal, and are separately designatcd as the scala tympani and the scala vestibuli.

SCALE'NUS ( $\sigma \kappa a \lambda \eta \nu \partial s$, a geometrical figure with three unequal sides). The name of two muscles, the anticus and the posticus, which bend the head and neck, \&c. They arise from the transverse processes of the vertebre of the neck, and are inserted into the first and seeond ribs.

SCALL. An old English term, derived from the Saxon scala, or sccala, uscd mueh in the same sense as the word scale.

Dry Scall is the psoriasis of Bateman; moist or humid scall, the impetigo of the same writer.
SCALPEL (scalpo, to serape). Originally a raspatory, or instrument for scraping diseased hones, \&c. Tho term now signifies a eommon straight knife, used in surgery.

SCA'LPRIFORM (scalprum, a knife, forma, likeness). A designation of tbe incisor teeth of the rodentia, which, by dcfieiency of the enamel on one side, present a cutting cdge, like that of a knife.

SCAMMONIA. Scammony; a term applicd by pharmacologists to purgative resinous substances obtained from plants of the orders Convolvalacea and Asclepiaducere.

1. Virgin scammony. Ineryma, or superior Alcppo, scammony; the produce of the Convolvulus Seammonia. Seammony of inferior quality oceurs in eommereg, under f:10 names of seconds and thirels.
2. French or Montpellier Scammony.
[Factitious Scammony.] A substance made in the south of Franee, with the expressed juice of Cynanchun Monspcliacum, mixed with different resins and other purgative substanees.
[SCAMMONIUM. Scanmony. The pharmacopoial name for the eonerete juice of the root of Convolvulus Scammonia.]
[SCANDIX CEREFOLIUM. A synonyme of Authriscus cerefolium.]

SCAPHA ( $\sigma \alpha ф \eta$ ), a skiff; from oкáттu, to hollow). A hoat mado of a bollowed trec. Hence, the term is applied to-

1. The depression of the outer ear which separates the two roots of the antihelix.
2. The nodose bandage; a double-headcd roller, employed for stopping hæmorrhage, or for securing the compress after the performance of arteriotomy in the temples.

SCAPHOIDES ( $\sigma к a \psi \eta$, a skiff; हॉरoц, likeness). Resembling a seupha, or skiff; the designation of a bone of the carpus, and of the tarsus; and synonynous with the term naviculur, as applied to the fossa whieh separates the two roots of the antihelis.

SCAPTIN. A brown, almost tasteless extractive, procured from the Digitalis ригригса.

SCAPULA. The shoulder-blade. Its upper surface is traversed by the spine, or dorsum scapula, a ridge of bone terminating in the acromion, or the point of the shoulder. The flat surface is sometimes called venter.
[SCAPULAR. Of, or belonging to, the scapula.]

SCARABEUS. The Beetle. The larvæ of this insect, ealled beetle-grubs, constitute a variety of anal worms.

SCARF-SIIN. The epidermis, or outcrmost layer of the skin.

SCARIFICATION (scarifico, to searify). The making of smali ineisions, or punctures, for the purpose of abstracting blood, fluid in anasarea, or air in enphysema.
[SCARIFICATOR. An instrument for making searifieations. It usually consists in a number of short lanects arranged on pivots in a metalllic box, and so construeted with springs that all the lancets may be made to instantanconsly projeet, and penetrate the skin over which they are applied. 7

SCARIOUS. Dry, thin. and shrivelled.
SCARLATLNA. A harbarons term, npparently of British origin, whieh has snperseded the original and more elassical name, llosalia, or Searlet Fever; or it may
be from the Italian scarlatino, the colour searlet. It was named by Morton, morbilli confluenters by Iloffinan, rubeola rossalia; aud hy Heberden, fobris rubra.

SCELOTYRBE (oní入os, the leg; тúp $\beta \eta$, comuotion). Litcrally, leg-commotion. A contracted and palsied state of the limbs; an affection supposed to resemble our sea, scurvy. The scelotyrbe festinans of Sauvages is the shaking pulay of Mr. Parkinson. Sauvages speaks of eborea under the naue of sclerotyrbe Stucti Viti.

SCHEELE'S GREEN. A green pigment, consisting of the arsenite of copper. See Arsenicum.

SCHERO'MA ( $\xi$ npòs, dry). A dry inflammation of the eye.

SCHINDYLE'SIS ( $\sigma x$ เvóvinocs, the act of splitting into small pieces, from $\sigma x i \zeta_{\omega}$, to cleave). A form of immorable joint. See Articulrtion.
[SCHISTOCEPHALUS (oxioros, cleft; $\kappa<\phi a \lambda \eta$, the head). A name giren by Gurlt to a monster having a fissure in its head.]
[SCHISTOCOMUS (oxictos, eleft; корpos, the trunk). A monster baving a fissure in its trunk.]
[SCHISTOMELUS ( $\sigma$ Xioros, eleft ; $\mu$ ह $\lambda$ os, a limh). A monster whose limbs are fissured.]
[SCHISTOSOMUS ( $\sigma$ Xiotos, eleft; $\sigma \omega \mu$, the body). A monster in which there is a fissure through the entire extent of the abdomen, with the lower extremities but slightly developed, or entirely deficient.]

SCIINEIDERIAN MEMBRANE. The pitnitary mombrane, whieh secrctes the mueus of the nose; so named from Schneider, who first deseribed it.

SCIIWE'INFURTH GREEN. A compound of arsenious acid and oxide of copper, rescmhling Sehecle's Green.

SCIATICA (eorrupted from ischiar, derised from "oxtov, the hip). Hip-gout: inflammation of the aponenrotic parts of the glutri museles; [ncuralgia of the seiatic nerve.]

SCIATIC NERVE. The termination of the saeral or sciatic plexus; it is the largest of all the nerves.

SCILLA MARITIMA. The Sea Oninn, or Officinal Squill, a plant of the order $\mathrm{Li}_{-}$ liacca. Two kinds of squill ocenr in commerec, the white and the red, so called from the colour of the seales of the bulh. Squill was used by the Egyptians under the mystie title of the eyc nf Typhon.

Scillitio. The bitter active principle of the hulb of the Scilla merritima.
SCIRIRHUS (oxippos, a fragment of marble: a hard tumonr). This term ras formerly employed to denote every kind of
induration whieh remained after an attack of iuthmmation ; it now denotes the morbid condition which precedes cancer in the ulcerated state.

SCITAMINEA. The Ginger tribe of monocotyledonous plants. Herbaceous plants with a creeping, often-jointed rhizome; leaves simple, sheathing ; flowers tripetaloideous; stamens 3, distinct; ovarium 3-celled; fruit capsular, 3-celled, many-seeded: seeds with or without an arillus.
[SCLEREMA ( $\kappa \kappa \lambda \eta \rho o s$, , hard). Induration of the cellular tissue.]

SCLERENCEPHALIA ( $\sigma \kappa \lambda \eta \rho \partial े s$, hard;
 ening of the brain.

SCLERI'ASIS ( $\sigma \kappa \lambda \eta \rho \grave{s}$, hard). Sclerosis. A hard tumonr, or induration.
 indicating hardness.]

SCLEROGEN ( $\sigma \kappa \lambda \eta$ pòs, hard; $\boldsymbol{\text { gevváw, to }}$ produce). The matter of lignification which is deposited on the inner surface of the cells of plants, contributing to their thickness.

SCLEROMA ( $\sigma \kappa \lambda \eta \rho o ̀ s$, hard). The name given by Chambon to the fibrous bodies sometimes found in the uterus.

SCLEROPHTHALMIA ( $\sigma \kappa \lambda \eta \rho \partial े s$, hard; $\delta_{\phi} \phi \theta_{a} \lambda \mu \bar{s}$, the eye). Protrusion of the eyeball. Inflammation of the eye, attended with hardness. [Aëtius applies this term to hordeulum. Its signification is unsettled.]

SCLERO'TAL ( $\sigma \kappa \lambda \eta \rho o ̀ s$, hard). A term applied to the ossified part of the eye-capsule, commonly in two pieces.

SCLEROTICA ( $\sigma \kappa \lambda \eta \rho \bar{s} s$, hard). Tbe dense fibrous membrane which, with the cornea, forms the external tunic of the eyeball.

1. Sclerotic-ectome [Sclerectomia] (iкки$\mu \eta \eta_{\text {, excision). The removing of a portion }}$ of the sclerotic and choroild coats, for the purpose of forming an artificial pupil.
2. Sclerotitis. Selerotic inflammation.
[SCLEROTIUM CLAVUS. A name given by Dc Cundolle to Ergot.]

SCOBS (scabo, to scratch). Any kind of powder or dust, produced by sawing, filing, or boring. Hence we have scobs guaiaci, the slavings, turnings, or raspinge of guaincum wood. Sce Storax.

SCODS STYRACI'NA. A term applied to the styrax calrmita of the shops, from its consisting mainly of saw-dust. Sec Strorax.
SCOLIO'SIS (axodios, crouked). Crookedncss; distortion of the vertebral column; rachitis.
[SCOLOPENDRUM OFFICINARUM. Hart's-tonguc. A fern, tho leaves of wbich
were formerly esteemed deobstruent, and astringent.]

SCO'PARINE. A green gelatinous matter obtained from the Cytisus scoparins, or common broom.
[SCOPARIUS. The fresh tops of $C y$ tisus Scoparius.]

SCOURING DROPS. A preparation for removing grease spots from silks, consisting of distilled essence of lemon, camphor, and rectified spirit.
SCORBUTUS. Scurvy. This is a barharous term, probably derived from the Sclavonic word scorb, with a Latin termination. Scorbutus has also been termed gingibrachimm and gingipedum, from its affecting the gums, arms, and legs, and it is usually distinguished by a set of symptoms designated by the term putrescent.
 The scum or dross of metals; the refuse or useless part of any substance; excrement.

SCOTO'MA ( $\kappa$ котоя, darkness). Pl. Scotomata. Dark appearances before the eyes; an affection attendant upon various organic diseases of the head. Blind beadache. Nervous fainting-fit.

SCOTT'S ACID BATH. A bath of diluted aqua regia, employed by the late Dr. Scott as a remedy for jaundice. The aqua regia should be compounded of threo parts in measure of muriatic acid, and two of nitric acid; and in preparing them for use, a pint of the combincd acid is to bo mixed with the same mcasure of water. The acid bath is to consist of threc ounces of this diluted acid to every gallon of water.

SCROBICULATE (scrobicults, a small depression). Having numerous small irregular pits or dopressions.

SCROBICULUS CORDIS (dim. of scrolus, a depression). The pit of the stomach; the slight depression observed just hefore the ensiform cartilage.

SCROFULA (scrofa, a sow). A diseaso principally characterized hy a cbronic swelling of the absorbent glands, which tend very slowly to imperfect suppuration. It is more classically called stroma; by the French, ccronelles, which is to be found corrupted, in Scotland, in to the crnels; by the Germans, der kropft, from the swelling under the cbin; and by tho English, the Ling's evil.
l'anciful derivation. The Grecks termed the discaso Choiras ( $\chi$ orpàs, diminutive of रoîpus, n sow). Dr. Forbes conjuctures that "the smouth, roundel, conglomeratod swellings of the submaxillary glands, to which the term was at first restrieted, suggested the namo from their fanciful resemblance to a litter of young pigs lying
buddled together, or cren from tho form of a single swelling, bearing some resemblance in its rounded outline to tho animal. This notion may sceu to derivo greater plausibility from the fact, that the Greeks actually gave tbe samo name of a young pig ( $\chi$ oipas) to small rocks just rising abovo the surface of the sea, from their fancied resemblance to the back of a pig when swimming; and it may not be altogether irrelevant to add, that the swelling produced by a blow upon the face or head is vulgarly termed "a mouse."
[SCROFULOUS. Affected with, or relating to, scrofula.]

SCROPHULARIACE.E. The Figwort tribe of Dicotyledonous plants. Herbaceous plants with leaves opposite; flowers irregular, unsymmetrical ; stamens 2 or 4, didynamous; fruit capsular; seeds albuminous.
[SCROPHULARIA. A genus of plants of the natural order Scropbulariacce.]
[1. S. lanceolata, $\}$ Tbese are in-
[2. S. Mfarylandica. $]$ digenous species, used in poultices and fomentations, and esteemed soothing and vulnerary.]
3. Scrophularia nodosa. Knotty-rooted Figwort. The tuberous root was formerly used in scrofula, and fiom this circumstance the name originated.
[SCROTAL. Belonging to the scrotum.]

SCROTUM. A leatbern bag. A collective term for tho envelopes of the testes, consisting of the cutaneous envelope, the dartos, the cremaster muscle, the fibrous coat, and the tunica vaginalis.

1. Scrotum, cancer of. Chimney-sweeper's cancer, or the Soot-wart; a peculiar disorder, beginning as a wart-like excreseence, in the iuforior part of the scrotum.
2. Seroto-cele ( $\kappa \mathfrak{j} \lambda \eta$, a tumour). Rupture, or hernia, of the scrotum.

SCRU'PLE (scrupulum, dim. of scrupus, a term for a sort of pebble, probably used in eounting). A term now used for the third part of a drachm, or the twentyfourth part of an ounec, in tho apothecarics' division of the troy pound. The scrupúlum has also been deseribed as a small pebble, such as found its way between the sandal and the foot, and hence tho word has beon used to denoto a difficulty or objection.
[SCUDAMORES MIXTURE. Magnes. gr. xv. to $\exists \mathrm{j}$. ; marnes. sulphat. S.j. to $\mathrm{Z}_{\mathrm{ij}}$; aceti culchici $\overline{\mathrm{j} j}$. to $\mathrm{Jij}^{\mathrm{ij} \text {. ; in any }}$ ngrecable distilled water, and swoctened with any pleasant syrup. It should bo repeated at intervals of four, six, or cight lours, necording to tho freedom of its
opcration and the urgency of the eymptoms. Recommended in gout and rheumatism.?
[SCULL-CAP. Common name for Seutellaria luterifolia.]

SCURF. Furfur. Exfoliation of the cuticle; as in furfurcs capitis, scurf, or dandriff of the head.

SCURVY. The vernacular term, anciently scorbie, for scorbutus. Sco Scorbutus.

SCU'RVY-GRASS. The Cochlearia officineelis, un European cruciferous plant of anti-scorbutic properties.
[SCUTELLARIA. A genus of plants of the natural order Labiate.]
[1. Scutellaria galericulata. European Scull-cap. This was formerly employed in intermittents, and externally, to old ulcers; and an infusion of it has lately been extolled in Epilepsy.]
[2. S. Hyssopifolia, These species S. integrifolia. $\}$ are intensely bitter, and may be a useful tonic.]
[3. Scatellaria laterifolia. Senll-cap. An indigenous species, which at one time bnd great celebrity as a cure for bydropbobia.]

SCUTELLUM (dim. of scutnm, a sbield). Apothecium. A little sbield; a term applied to tbe little coloured cup or disk, found in the substance of licbens; it is surrounded by a rim, and contains areci, or tubes filled witb sporules.

SCUTIFORM (scutum, a sbield, formn, likeness). [Scutate.] Xiphoïd. Sbaped like a shield; a term applied to the cartilage of the sternum. The knee-pan is sometimes called the os scutiforme.

SCYBALA ( $\quad$ кú $\beta$ a $\lambda a y$, excrement). Small indurated balls or fragments, into which the fæces become converted, after long retention in the colon.

SCYPIIO'PHORUS PYIID'ATUS.A lichen constituting the Cup-mose of tbe sbops; uscd in booping-cough.
[SEA-SIDE BALSAM. Croton Elertteria.]
[SEA-SIDE GRAPE. Coccoloba urifcra.]
[SEA-WRACK. Tucus vcsiculosus.]
SEARCIIING. The mperation of introducing a metallic instrument, through the urethra, into the bladder, for the purpose of ascertaining the presence of a calculns.

SEBACEOUS (sebum, suct). Suctr; a term applied to follicles which secrete a peculiar oily matter, nud are abundant in sone parts of tho slim, as in the uose, \&c.

SEBACIC ACID (scbum, lard). An acid ohtained from olcic acid, or frou any of the fats which contain this acid.

SEBATE. A salt formed by the union of sebacio reid with a salifiablo hase.

SECALE CEREALE. Common Rye; a grass yielding rye-flour, which is employed in making hread. Pulmeutum, or jusculum secalinum, is rye-pottage.

Secale cornutum. Spurred rye, or ergot; a disease of the grain, caused hy the presence of a parasitic fungus. See Ergota.
[SECALIN. A name given by Winkler to a volatile alkaloìd found hy him in Ergot.]
[SECAMONE. A genus of plants of the natural order Asclepiadacec.]
[1. Secamone emetica. An East Indian plant, the root of whieh has emetic properties.]
[2. Secamone thunbergii. This speeies is said to he aetively purgative.]
[SECONDARY. Succeeding to, or subordinate to something else.]
[1. Secondary amputations. Amputations performed after the immediate effeets on the constitution, of the injury requiring it, have passed away.]
[2. Secondary fever. Fever arising after a erisis, or after the declension of an eruptive or other disease.]
[3. Secondary hemorrhage. Hemorrhage occurring some time after wounds or operations.]
[4. Secondary symptoms. Those whieh present themselves some time suhsequent to the invasion of disease, or the indiction of injuries.]

SECERNENTS (secerno, to separate). The name of those vessels whose function it is to deposit matters separated from the blood, for the reproduction of the several parts of the hody.

SECOND SIGHT. A kind of phantasm, in which fearful forms of dead or living persons appear, occurring in northern nations. See Phantasm.

SECRETION (secerno, to separate). A substance secreted or scparated from the hlood, by the action of a secreting organ. Secreted suhstanees are of two kinds; viz.

1. Excretions. Substances which existed previously in the blood, and are merely eliminated from it, as the urea, which is excreted hy the kidneys; and the hactic acid and its salts, which are components both of the urine and of the eutaneous per-
spiration.
2. Secretious. Substanees which cannot bo simply separated from the hlood, since they do not pre-exist in it, but are newly produced from the proximate components of the blood, by a chemical pro-
cess, as the hile, tho cess, as the hile, tho semen, the milk, mu-
eus, \&c.

SECRE'TLVENESS (secretur, separate).

A term in phrenology indieative of a propensity to conceal emotion, and to be secret in thought, word, and action. It is common to man with tho lower animals. Its organ is seated immediately above that of Destructiveness.

SECUNDINES (secundus, seeond). The after-hirth, consisting of the placenta and its memhranes. In botany, the secundine is the intorior of tho two saes of the ovule.

SEDA'NTIA (sedo, to allay). Sedativa: deprimentia. A class of neurotie medieines which directly diminish the foree of the aetion of the heart and other organs hy repressing the nerrous infuence. Seo Stimulantia.

SEDATIVES (sedo, te allay). Medicinal agents which depress the vital powers without previous stimulation.

SE'DATIVE SALT. Sal sedativum Hombergi. Boracic acid.

SEDIMENT (sedeo, to sit). That which suhsides, or scttles at the hottom of any liquid; dregs.
[SEDUM ACRE. Small houseleek. A plant of the family Crassulaceæ. The frcsh herb and the expressed juice have heen given as an antiscorhatic, emetic, cathartic, and diuretic ; and they have heen used as an external application to warts, cancerous and malignant ulcers, \&c.]

SEIDLITZ POWDERS. Two draehms of tartrate of potassa and soda, and two scruples of hi-carbonate of soda, in a blue paper; and half a drachm of powdercd tartaric acid in a white paper. Dissolve the former in half a pint of spring water, and add the latter. This preparation cannot he said to resemhle the mineral water of Seidlitz, exeept in its purgative property.

SEIG'NETTE'S SALT. Tartrate of potash and soda, discovered hy Seignette, an apothecary of Rochelle. It has reecived various names, as alkalino salt, Rochelle salt, tartarised soda, \&e.
SELENITE ( $\sigma \varepsilon \lambda \eta \nu \eta$, the moon). A metal discovered in the sulphur of Fahluu, and named from its strong analogy to another metal cellurium, which is named from tellus, the earth. It colubines with oxygen, forming the selchious and selcnic acids.

SELENIUM ( $\sigma$ 站in, the moon). A name sometimes given to the puro crystallized specimens of gypsum.

SELF-ESTEEM. A term in plyenology indieative of self-respect, self-interest, lovo of independence, and personal lignity. It is common to man with the lower aninals. Its organ is seated at the middle of the upper and baek part of tho head, diroctly ahore Inlabitiveness, with which Dr. Gall confounded it.
[SELF-HEAL. One of the common naines for Priunella vulgaris.]
SELIBRA (semis, half, libra, a pound). Half a pound ; six ounces.

SELLA TURCICA (sella, a seat). A designation of a part of the sphenoid bone, resembling a Turkish saddlc, and likewise termed sella equina and sella sphenoides.

SEMEIOLOGY ( $\sigma \eta \mu \varepsilon i o \nu$, a sign ; $\lambda 6$ yos, an account). That branch of medicine which treats of the sigus of diseases.
[SEMEIOTIC ( $\sigma \eta \mu \varepsilon i o s, ~ a ~ s i g n) . ~ R e l a t-~$ ing to tho signs of disease.]

SEMEN (sero, to sow). The fecundating fluid of the male, consisting of three distinct clements, viz. a fluid, granules, and animalcules or spermatnzoa.
[SEMEN ABELMOSCHI. Tbe sceds of Hibiscus Abelmosehus.]
SEMEN-CONTRA. Semencine; barbotine. A strong aromatic bitter drug imported from Aleppo and Barbary as a vermifuge, and produced, according to Batka, by the Artemisia Sieberi.
[SEMEN NIGELLA. The seeds of Nigella sativa.]
[SEMEN PSYLLII. The seeds of Plantago psyllium, and some other species of Plantago.]

SEMI-. A Latin prefix, derived from sewis, denoting half. In Greek compounds, the term hemi- is correctly employed.

1. Semi-amplexicaul. Half stem-embracing; applied to leaves which partially sheath tbe stem.
2. Semi-anatropous. A term denoting the same as amphitropous, except that in the former the ovule is parallel witb the funiculus, while in tho latter it is at right angles with it.
3. Semi-cireular canals. Three bony passages of the internal car, situated in the substance of the petrous portion of the temporal bone, and opening into the vestibule. One of these is perpendicular, the second oblique, and the tbird horizontal.
4. Semi-cupium. A half-bath; a batb which reacbes only to tho bip; called by the French, demi-bain.
5. Semi-flosculous. A term applied to those florets of the Composite, which are lignlate, or strap-shaped, as in Taraxacum. The limbs of tho cohcring petals coliere on one side of the floret, giving it the appearance of half a fluret.
6. Semi-lunn fibro-cartilnges. Two falciform plates of fibro-cartilage, situnted around the margin of the head of the tibia.
7. Semi-hmar y!nglia. Two ganglia, sitnated on each sido of tho norta, on a level with the eneliace artery:
8. Semi-lunar noteh. An indentation, in the form of a half-moon, betweea the cora-
coild proeess and the superior boider of the scapula.
9. Semi-huar valves. Three semi-circular valves, whicb guard the orifice of the pulmonary artery. Similar valves are placed around the commencoment of the aorta.
10. Semi-metals. A term formerly applied to those bodies which possess the qualitics of metals, with the exception of mallcability.
11. Semi-membranosus. A muscle arising from the tuber ischii, and inserted into the head of the tibia. It bends the leg.
12. Semi-spinales. Two muscles connected with the transverse and spinous processes of the vertcbree.
13. Semi-tendinosus. A muscle arising from the tuber ischii, and inserted into the tibia; it is the semi-nervosus of Winslow. It bends the leg.
[SEMINIFEROUS (semen, Epenn; fero, to carry.) Applied to the vessels which secrete, and to the ducts which convey tbe senninal fluid.]

SEMOLI'NA (Semo, a tutelary deity of sown corn). This suhstance, together with soujee and manna croup, are granular preparations of wheat, deprived of bran.
[SEMPERVINUM TECTOROM. Common Houseleek. A plant of the family Crassulacca, employed in the recent state as a cooling application to stings of renomous insects, ulcers, \&c.]
[SENECA OIL. A raricty of Petrolium obtained from Seneca Lake, New Tork.]

SENECA SNAKEROOT. Tbe root of the Polygala Senega. The name of this plant is derived from its having been employed by the Sencer Indians as a remedy for the bite of the rattlesmake.

Sencgir. A name given to polygaic acirl, the active principle of the senega ront, residing in its cortical part.
[SENECIO. A genus of plants of the natural order Composite.]
[1. Senceio aurcus. Ragmort. An indigenous species, said to be a farourite rul nerary with the Indians.]
[2. Senccio vulgaris. Coamon Gromadsel. An European plant, used sometimes, bruised, as an exterual application to paiaful swellings and uleers.]
[SENEGA. Sencka. The Pharmacopocial namo for the root of Polygala Senega. 7
[SENEKA. Common name for Polygnin Srnega.]
SENNA. A general term for the dried leares of several species of Cassis. Their purgative principle has been nrocured in a separato form, and called cathartime.

1. Tinnerelly semad. The leaves of the Cassia clonyata, the fiuest senna of commerce.
2. Acnte-leaved senna. The leaves of the Cassia acutifolia; the principal part of the scnna cousumod in Great Britain, is produced by this species; it is, however, much adulterated.
3. Mecca senna. The leaves of the Cassia lanceolata, aecording to Forskhal.
4. Tripoli senna. The leaves of the Cussia Sithiopica, of very uniform appearance.
5. Aleppo and Italian senna. The leaves of the Cassia obovata, of inferior quality : this species is prohably identieal with the Cassia obtusa of Roxburgh.
[6. Alcxandria semna. The leaflets of Cassia acntifolia, C. obovata, and sometimes C. Ethiopica always mixed with the leaves of Cynanchum Argel, and sometimes with those of Tephrosia Apollinea:
[7. American Semna. The leaves of the Cassia Marylandica.]
SENSIBILITY (sentio, to pereeive). A term expressing, generally, the state of the feelings or character, hut employed in physiology to denote a property belonging exclusively to animal life, and always connected with the nervous system. To avoid this ambiguous signification, the term sensitivity has been suggested, which may bear the same relation to the nervous system, as contractility bears to the muscular.
6. Sensible. An amhiguous term, applied in the French language, to a body capable of receiving, of producing, or of conducting sensations. In English, part of the difficulty may be removed by employing the word sentient in the first, and sensitive in the third of these cases; hut we have still a fourth, and that the most ordinary use of the word sensible, as expressing the state of the intellectual powers.
7. Scnsation. A term generally applied to the effect produced on the sensorium by an impression transmitted to it by a nerve. Dr. Bostock would extend tho term to all the actions of the nervous system, including hoth the organic and animal sensibility of Bichat, and the nervous and sensorial powers of Dr. Philip.
8. Perception. A mode or species of sensation, corresponding, to a certain extent, with Bichat's animal sensibility, and more nearly with Dr. Philip's sensorial powers.
9. Sentinient. A term employed by Magendie, and some other Frenel writers, as nearly synonomous with perception. Bichat uses the word tact in nearly the
same sense. Legallois, howerer, employs the word scutiment as correlative to mouvement, expressing nervous action generally.
10. Perceptivity. A term suggested to express the power which certain parts of tho nervous system possess of exciting pereeptions. Richerand employed perceptibilité in this sense.-Bostock.

SENSORIUM (sentio, to pereeive). A term applied to a supposed centre of pereeption, residing in the brain, from which volition originates, and to which all impressions are referred or conveyed, before they excite perceptions.

SEN'SORX. A term applied by Hartley to those nerves which convey impressions to the neural axis, as distinguished from the motory nerves, which convey stimuli to the museles. See Funetion, Reflex.
SEPAL. A term of uneertain origin, denoting each division of the calyx in plants. When theso are distinct from each other, the ealyx is ealled polysepalous; when they cohere by their margins, the ealyx is termed monosepalous, or, more correctly, gamosepalous.
SEPARATORY. An instrument for separating fluids of different speeifie gravities.
SEPIA. The Cuttle-fish; a genus of Cephalopods, the hone of which, when ground into pcwder, constitutes pounce, and is sometimes used as a dentifrice. The pigment ealled sepia is obtained from the ink-bag of an oriental species.
[SEPTFOIL. Potentilla Tormentilla.]
SEPTIC ( $\sigma \dot{\eta} \pi \omega$, to putrefy). Relating to putrefaction; eausing putrefaction.

SEPTICIDAL. That kind of dehiscence in which the septa of a compound fruit separate each into two lamina.

SEPTIFRAGAL. That kind of dehiseence in which the hacks of the earpels separato from the septa, which adhere to the axis.

SEPTUM (sepes, a hedge). Literally, an enclosure, or fenced plaee.

1. Septum auricularum. The partition which separates the right from the left auricle of tho heart.
2. Septum ventriculormm. The partition which separates the right from the luft ventriele of the heart.
3. Septum lucidum. Tho internal boundary of the lateral ventricle of the brain, so called from its being thin and semi.. transparent.
4. Septum narium. Tho eartilaginous partition of tho nostrils.
5. Septum transversum. The diaphragm, whicl separates tho thorax from tho abiomon. This term is also applied to tho ten-
torium cercbell, which separates the eerebrurn from the eorebellum.
6. Septum pectiniforme. An ineomplote partition, which divides the cavity of the corpus eavernosum into two lateral portions.
7. Septum recto-vaginal. A vaseular lacework, which connects the rectum with the vagina.
8. Septum scroti. A partition formed by the dartos, dividing the serotum into two equal eavities, and separating the testes.
9. Septum or dissepiment, in botany, denotes a partition found in a compound ovary, formed by the united sides of two eohering earpels. There are, conscquently, as many septa as there are carpels.

SEQUE'LA (sequor, to follow). A morbid affection which follows another, as anasarea after searlatina, \&e.

SEQUESTRUM (sequestro, to sever). The portion of bone which is detached in neerosis.

SERICEOUS. Silky; eovered with long, fine, appressed hairs, giving the surface a silky appearance.

SERICIC ACID. Myristic acid. An acid obtained from the solid portion of the butter of nutmegs, the seeds of tho Myristica moschata.

Sericine. A white erystalline fat, forming an ingredient of the butter of nutmegs, and composed of serieic acid and glyeerine.
[SEROLIN. A peculiar fatty matter found in the blood.]

SERO'SITY. The watery fluid which remains after the albuminous coagulation of serum by heat of $160^{\circ}$ Fahr.

SERPENTARIA. Virginian Snakeroot, or Birthwort; a speeies of Aristolochia. It received its name from its root having been used as a remedy for the bites of serpents.
SERPI'GO (8erpo, to ereep). Ringworm, or tetter. It is so ealled from its erecping over the surface of the skin.
[Scrpiginous. A term given to certain superfieial ulcers, tetters, \&c., which as they heal in one part extend in another.?

SEROSITY. A colourless, limpid fluid, which oozes out from eongulated serim, on being subjeeted to pressure.

SERRA. Literally, a saw. A dentation, or tooth-like articulating process of certain bones, as those of the eranimu.

1. Serratns magnus. A musele of the lateral thoracie region, arising by fleshy serrations from the upper ribs, and inserted into the whole length of the seapula.
2. Serrutus posticus. The name of two
ruuseles of the back, the superior and the inferior, arising from some of the verte. bra, and inserted by serrations into several of the ribs.
3. Serrate. Sawed; having the edre divided into sharp, straight-edged teeti, pointing upwards like a saw. When the serrations are themselves serrate, the margin of the leaf is termed bi-serrate.

SERRE-ARTE'RE. An instrument invented by Deschamps, for compressing the artery, and tightening the ligature in the operation for aneurism.

SERRE-NOEUD. An instrument used iu applying ligatures, and consisting of a long, narrow, round picee of silver, terminating at oue end in a little ring, or hole ; and at the other, in a kind of groove or notch.

SERTULUM. A name applied by some continental botanists to the simple umbel, the term umbel being by them restricted to the eompound form of this infloreseenee.

SERUM LACTIS. Whey; the fluid part of milk, obtained by separation of the curd and oil. It contains the saccharine principle.

SERUM OF THE BLOOD. The thin, yellowish fluid constituent of the blood, which separates from the crassamentum, during eoagulation. It must be distinguished from the lympha or liquor sanguinis, which is a clear colourless fluid, and can be obtained frce from the red globules before coagulation has taken place. See Blood.

Serum of the chylc. The thin fluid which separates from the congulum of the ehyle, after it has becn remored from the thoraeic duct. It is a solution of albumen.

SESAMOID ( $\sigma \eta \sigma \alpha \dot{\mu} \eta$, an Indian bean; eioos, likeness). The designation of small boues, resembling the semen sesami, found at the roots of the first joiut of the thumb and of the great toe.
[SESAMI FOLIA. The Pharmacopœial name for the leaves of Sesanum Indicnm and S. Orientale.]
[SESAMUM INDICUM, and S. ORIENTALE. Scsami folia. Ph. U. S. Benne. The leaves of this plant, when plaeed in water, ifupart to it a bland mneilage, usefully employed as a demuleent drink in cholera iufintum, and other alvine fluxes, in affections of the urinary passafes, \&c.]

SLSEQUI (contracted from semisque, and a half). A prefix denoting the due quautity and a half more. It is used when the elements of an oxide are as 1 to $1 \frac{1}{2}$, or as 2 to 3. The sulphurets, carburets, \&c., of the same substance, are similarly designated.

1. Sescuneia (quasi sesqui-uncia). An ounce and a balf.
2. Sescuplum (quasi sesqui-plum, from sesqui, and plica, a fold). One and a balffold; thus sescuplo-carburet, one aud a balf-fold carburet.
3. Sesqui-hora. An hour and a half.
4. Sesqui-pes. A foot and a half; a cubit. On tho same principle, the adjective sesqui-pedalis, denotes a foot and a half.

SESSILE. That which is seated upon any thing: a leaf is sessile on the stem when it has no pctiole; an anther is scssile which bas no filament, \&c.

SETA. A bristle. The stalk which supports the theca or urn of Mosses. A short, and stiff bristle of certain plants.

SETA EQUINA. The horsc-hair-worm, or gordius. The Laplanders are subject to a disense, which they term ullen or hotine, supposed to arise from drinking the halfputrid water of stagnant marshes or ditches inhabited by this worm.

SE'TIFORM TEETH (seta, a bristle, forma, likeness). A designation of the tecth in certain fishes, which are similar to the ciliiforn teeth, but rather stronger. See Raduliform Tecth.
SETON (seta, a bristle). A kind of issue, usually made with a flat needle, threaded with a skein of silk, and termed a seton-needle; it was formerly made with a horse-hair; hence the name.

SETOSE (seta, a bristle). Bristly, corered with short, stiff hairs.
[SEVEN BARKS. Common name for Hydranger arboreseens.]
SEVUM OVILLUM. Adeps ovillus. [Sevam, Pb. U. S.] Mutton suct; the fat from the neighbourhood of the kidneys of the sheep.
Sevum preparatum. Prepared suet; the fat prepared by melting it over a slow fire, and straining through linen or flannel in order to separate the membranous portions.

SEXTARIUS. A Roman measure of eapacity, which was equal to one pint and a balf English. See Amphora.

SEXUAL SYSTEM. The system of elassifying plants, invented by Linneus, and founded upon the number and peeuliarities of the sexual organs. See Systematie Rotany.
[SHADDOCK. The fruit of Citrus Deenmerter.]

SIIAMPOOING. The employment of the vapour bath, accompanied by a process of friction, kneading, and extension of the muscles, tendons, and ligaments. The Fipyptians call it merssi:s!.
[SIIEATH. A covering applied to the
fascia, cellılar tissue, \&c., surrounding certain parts.]
[SIIEEP LAUREL. Kalmia Angnstifulia.]

SHERBET. An Arabic term for a cooling beverage mado of acidulous juices of fruits, swcetened and flavoured to the tnste.

SHINGLES. This is probably a corruption of the Latin term cingulm, a girdle, so called from the situation which it occupies on the trunk of the body. It is the Herpes zoster of Bateman.

SHOE'MAKERS' BLACK. Atramentum sutorinm. Green vitriol or sulphate of iron, employed to impart a black dyo to tanned leather.

SHO'LA. A substance manufactured in India from the cellular pith-like stems of the Hedysarum layenarium, and wrought into various articles of useful application.
[SHOWER BATH. See Affusion.]
SIALOGOGUES ( $\sigma i a \lambda o \nu$, saliva; $\ddot{\gamma} \gamma \omega$, to expel). Substances which increaso tho discharge of saliva.

1. Loeal sialogogues. Substances applied to the mouth. When used in a soft or solid state, they are called masticatories, as tobacco, ginger, \&c.
2. Specific or remote sialogogues. Substances which produce salivation or ptyalism by internal use, as mercurial preparations.
[SIALOLI'THE ( $\sigma t a \lambda o v$, saliva ; $\lambda_{1} \theta o s, ~ a ~$ stone.) A salivary calculus.]

SIBBENS. See Sivvens.
[SIBILANT (sibilo, to whistle.) Making a whistling sound.]

SIDERATIO (sidns, a start). A namo given to erysipelas of the face or scalp, from an idea of its being produced by tho influence of the planets.

SIDERUM. The name given by Bergmann to phosphuret of iron, which he eonsidered to be a new metal.
[SIDE-SADDLE PLANT. Ono of tho columon names for Sarracenia.]

SIGAU'LTIAN OPERATION. Tho division of the symphysis pubis, in cascs of difficult labour, first practised by tho French surgeon Sigault.

SIGMOID (the Greek letter $\Sigma$, aigma; and aioos, likeness). Resembling the letter $\Sigma$, as applied to a flexure of the colon, where it forms a doublo curvo in tho iliae region; and to the semiciveular valves, which guard the orifico of the pulmonary artery, and of the norta.

SIG'NATURES. Marks or indications suggestive of resemblances in form, colour, de., between mediciues and parts of the organism, supposed to arise from astral inflemeas.
[SIGNATURES, DOCTRINE OF. Ars signata; cabalistio art. According to this doctrine cvery natural substance which possesses any medicinal virtues, indicates, hy an external charncter, the discase for which it is a remedy, or the ohject for which it should be employed.]
[SILENE. A genus of plants of the natural order Silenaccæ.]
[1. Silcne Virginica. Catch fly; Wild pink. An indigenous specics, a decoction of the roots of which is said to be an efficacious anthelmintic.]
[2. Silene Pennsylvanica. Also an indigenous species, and prohably possessing similar properties with the preceding.]

SILEX. Flint; an oxide of silicon, forming the basis of chalcedony, cornelian, jasper, \&c.

SILICA. Silicious earth ; the oxide of silicon, constituting almost the whole of silex or flint. It combines with many of the metallic oxides, and is hence sometimes called silicic acid.

SIL'ICATE. A compound of silica or silicic acid with a hase.

SILIC'EOUS WATERS. Mineral waters containing a large proportion of silica, which is associated with soda in the form of silicate, sulphate of soda, and chloride of sodium.

SILICON. Silicium. An elementary body constituting the hasis of silica.

SILIQUA. A fruit consisting of two carpels cohering togcther, the placentro of which are parictal, and separate from tho valves, presenting a kind of frame called a rephum, and connceted hy a memhranous expansion, as in the stock.

Silicula. A designation of tbe siliqua, when it is very short, or hroader than it is long, as in Candytuft. The term is a diminutive of siliqua.
[SILK-WEED. Asclepias Syriaca.]
SILVAN. Tbe name given by Werner to Tellurium.

SI'LVA'TE. A compound of silvic acid with a salifiable base.

SILVER. A uctal occurring native in mines, and in combination with other metals. Sec Argentum.

1. Horn silver: Chloride of silver; a compound resconbling hora, and which, like that substance, may be cut with a knife.
2. Fulminating silver. An explosivo sub. stance, formed of oxide of silver combined with ammonia.

SILVER INK. Made by mixing silver powder with thin gum-water.

SILVIC ACLD. An a eid procured from the resiu of the Scoteh lir.
[SIMABA. A genus of plants of the natural order Simarubacex.]
[Simaba cedron. Cedron. A spocios growing in Central America, where it is used for the bitcs of venomous serpents, and as a preventive of hydrophohia, in the treatment of intermittent fever, dyspepsia, \&c.]
[SIMARUBA. The pharmacopœial name for the bark of the root of Simaruba officinalis; a genus of plants of the natural order Simaruhaceæ.]

1. Simaruba amara. Bitter Simaruba, or Mountain Damson; the root of which yields the simaruba bark of the shops. From its use in dysentery, the Germans have termed it dysentery bark.
[2. Simarnba excelsa. A synonyme of Quassia excelaa.]
[3. Simaruba officinalis. A West Indian tree, the hark of the root of which is used as a tonic. See S. amara, which hy some is considered identical, and by others a distinct species.]

SIMARUBACEA. The Quassia tribe of Dicotyledonous plants. Trees or shruhs with leaves altcrnate; flowers polypetalous; stamens twice as many as the petals, hypogynous; ovarium 4- or 5 -celled; fruit, indehiscent drupes.

SIMILOR. The designation of an alloy of zinc and copper.

SIMPLE. A general name for all herbs which have any medicinal value.
[Simple cerate. See Ceratum simplex.]
[Simple syrup. See Syrupus simplex.]
[SINAPIS. Ifustard. Pharmacopoial name for the seeds of Sinapis nigra and $S$. alba; a genus of plants of the natural order Cruciferæ.]
[1. Sinapis alba. White mustard.]
[2. Sinapis nigra. Black mustard. Both aro European species, and cultivated in our gardens. Sec Sinapis semina.]
3. Sinapis scmina. Mustard sceds; tho sceds of the sinapis nigra and albr, which, when reduced to flour, form the well-known condiment mustard. A peculiar suhstance has heen ohtained from black mustardsceds, and called sinapisin.

SLNAPISM (sinapis, mustard). An external stiumulant, formed of the fariua of mustard sceds, made into a paste with cruluhs of bread aud vincgar; [or with water.]

SINAPOLINE. A new base procured by the action of moist hydrated oxide of lead ou oil of mustard.

SINCIPUT. The fore part of the head. The hack part is called occiput.

SINEW. The ligament which joins tro boncs.

SNGGE-FLUID SERIES. A term
applied by Dr. Williams to the mollusenu series, as explanatory of his views of two distinct nutrient fluids. See Double-F'lnid Series.

SIN'GLES. Single Epsom salts. A term applied to the crystalline sulphate of magnesia, as obtained from a concentrated solution of bittern. See Doublcs.

SINGULIS DIEBUS. Every or cach day, denoting a time finite and determinate. But, in dics singulos menns daily, or from day to day, denoting a progression of tilue. Quack medicines are advertised in dies sing nlos, and are swallowed by the public singulis diebus.

SINGULTUS. This term properly signifies sobbing. See Miccup.

SIN'NAMINE. A new hase, formed by reting on thciosiunamiue hy dry oxide of lead or of mercury, by which the latter loses all its sulphur.

SINUATE. Having a wavy margin, irregularly eonvex and concave.

SINUS. A gulf. Henee it denotes a eavity or a eell within the substanee of a bone, as of the forehead; also, a large venous eanal, as those of the dura mater.

1. Simuses of the dura mater. Certain ehannels whieh traverse the dura mater in varions points, for the reception of the renous blood.
2. Sinuses of Morgagui. The numerous small furamina which open upon the surface of the mucous lining of the urethra.
3. Sinus aortici. The fosse situated between the semilunar valves and the eylinder of the aorta.
4. Sinnser, pulmonary. Tbree pouchcs situated hetween the semilunar valyes and the cylinder of the pulmonary artery.
5. Simus pocularis. A cup-like pouch of mucous membrane, situated at the commenceunent of the caput gallinaginis.
6. Simus urogenitalis. A sinus existing in the embryo of the mammalia and of man. It is a eavity or canal, opening externally, in which the excretory ducts of the Wolftian bodies, the ureters, and the efferent parts of the generative apparatue terminate internally. This canal is also prolonged into the urachus, and is subsequently divided into a pars urinaria and a pars genitalis.
7. Siurs terminalis. A circular venous canal, which surrounds the arca vasculosa in the chiek.
[SIPEERIN. An alkaline principle discovered by Rodie in Bebecru bark.]
[SIPIIONIA. A genus of plants of the natural order Euphorbincer.]
[1. Siphonia eahuchu,\} Synonymes of [2. Siphonia elastica.] Jatropha elastica.]

SIPIRI'NA. Sipirine: a product of tho oxidation of hibirine or bebeerinc. Sce Rcbecru.

SIRIASIS (бtpòs, a cavity). An affection described by Paulus as an inflammation about the cerebrum, in which the brain is said oftentimes to mortify within thrce days; it is so named from the bones ahout the fontanelle, or sometimes the membrane only, being depressed or drawn in. The term is also derived from osipros, the dog-star: as implying a sunstroke.
SISTE'NTIA (8isto, to eheck). Reprimentia. Rewedics for fluxes, as cerebrospinals, astringents, and acrid stimulants.

SITIOLOGY (oitcov, food; $\lambda$ óyos, a description). A treatise on food.
[SIUM. A genus of plants of the natural order Umhellifere.]
[1. Sium latifolium. Common waterparsnip. Said to be poisonous.]
[2. Sium nodiflorum. Water-parsnip. An European species said to be useful in cutaneous discases, in scrofula, \&c. It is also generally considered poisonous.]
[3. Sium sasarum. Skirret. A Chineso plant caten as salad.]

SIVVENS or SIBBENS. The Scotch word for the wild raspberry, applied to the discase called Yaws, just as the French term framboise has been used for tbe same purpose, from fancied resemblance.

SIXTH SENSE. A tcrm applied to muscular sensation, arising from the sensitive department of the fifth pair, and tbe compound spinal nerves.
The Seventh or Visceral sense, is a term applied to the instinctive sensations arising from the ganglionic department of the nervous system.

SIZE. The buffy coat which appears on the surface of congulated blood drawn in indammation. The surface of the coagulun is frcquently contracted, puckered up at its edges, and concave in the centre: the hlood is in such cascs said to he cupper.

SIZE. A term in phrenology indicative of the fuculty for mensuring the size of hodies, as distinguished from their form, which is appreciated by Configuration. Its organ is placed at tho inner corner of the arch of the eyehrow.

SKELETON ( $\kappa \kappa \delta \lambda \lambda \omega$, to dry up). Tho dry bony frame-work of an animal, which sustains the other organs. When the bones arc connected by their own ligatnents, the skelcton is called natural; then joined by
wires or plates of silver, iron, \&e., it is termed arlificial. The skeleton in man is divided into trmale and extremitice.

1. The Trumle eonsists of $\Omega$ middle part and two extremities. The middle part is formed by the vertebral column and the ebest. The vertebral column is composed of twenty-four hones, called vertebre, and is divided into three regions, the cervieal, the dorsal, and the lumbar.
2. The Upper Extremity of the Trunk is the head, which eomprehends the cranium and face. The face is divided into the upper and lower jaw. The lower extremity of the trunk is the pelvis.
3. The Superior or Thoracic Extremities consist each of four parts, viz., the shoulder, the arm, the fore-arm, and the hand. The last of these is suhdivided into the earpus, the metacarpus, and the fingers.
4. The Inferior or Aldominal Extremifies are each divided into three parts, viz., the thigh, the leg, and the foot. The last of these is suhdivided into the tarsus, the metatarsus, and the tocs.
5. Eno-skeleton, endo-skeleton, te. The following is a primary classification of the parts of the osscous system aceording to their preyalent position. The superfieial or slin-hones constitute the system of the dermo-skeleton ( $\delta \hat{f} f \mu a$, skin); the deepsented bones, in relation to the nervous axis and locomotion, form the neuro-skeleton (veĩpov, n nerve); the hones connected with the sense-organs and viseera form the splanchno-skcleton ( $\sigma \pi$ ativरvov, a viseus) ; and those developed in tendons, ligaments, and aponcuroses, the sclero-slielcton ( $\sigma \kappa \lambda$ n $\rho$ os, hard). The neuro-skcleton constitutes the main part of the skeleton in vertebrate animals.
SKIN. The organ of touch. It is eomposed of three layers, the cutis, dermis, or true skin: the rete mincosum, which gives the colour to the skin; and the cuticle, epidermis, or searf-skin.

SKIN-BOUND DISEASE. A peeuliar affection of infaney, originating in chronio inflamation of the cellular membrane. The whole surfiee of tho body is swelled and hard, and the skin is eold and tightbount.
[SliUNK CAPBAGE. Comuion name for Irrocnutinm firtidam.]
[SLATERTNG. Drivelling.]
SLING. A bandago for supporting a wounded limb.
[SLEEP. The cessation of the activity of tho eerebral hemispheres and ganglia of epecial sense, while the mednita ohiongatia and spinal eorl is in complete funetional activity.]
[SLIPPERY ELM BARK. The inner bark of Ulmus fulver.]

SLOUGII. A thin, foul, or mortified suhstance in a moist state which frequently appears on the surface of parts in the states of suppuration and uleeration. [The disorganized part separated in sphacelus.]

SMALL POX. A term derived from poc, Saxon, a hag or pouch; the epithet small was added in the fifteenth century, on the introduction of the great pox, or syphilis. See Tariola.

SMALT or SMALTZ. An oxide of eohalt melted with silicious earth and putash. When ground very fine, it is known by the name of powder-llue; it is used in the arts, and in the painting of eartbenware.
[SMART-WEED. Polygonium punctatum. $]$

SMEGMIA PREPUTIT ( $\sigma \mu \tilde{\eta} \gamma \mu a$, sosp). The name of the odorous humour secreted by the glandulæ odoriferæ, from its tendency to solidity, like sonp.

SMELLING-SALTS. Tolatile salte. Sesquiearbonate of ammonia; also called subcarbonate and carbonate of ammonia. See Baliers' Salt.

SMILACE A. The Smilax tribe of Monoeotyledonous plants. Herbaceous elimbing plants; flowers hexapetaloïdeous, hermaphrodite, sometimes diecious; stamens 6 ; ovarium 3-eelled; fruit a berry.

1. Smilax aspera. The plant generally supposed to produce Indian sarsaparilla, and hence Mr. Garden has named a new principle be has found in it, smilasperic acid. Dr. Lindley states, howcrer, that the sarsaparilla of India is chiefly the root of the Hemilesmus Indicus, an Aselepiadaecous plant.
2. Smilax sarsaparilla. A species groming in the [widdle and] Southern United States, and not known to possess any medicinal properties.
3. Similax purhampuy. A speeies highly extolled by Ruiz, who calls it China Pernvima, as one of the rery best linds of sarsaparilla. Dr. Tindley supposes it to be identical with Smilax afficinalis.
4. Smilare supphilitica. A South Ameriean species, which, aceording to Mr. Pereira, yields Lisbon or Brazilian sarsaparilla.
5. Smilar nfficinalis. A species growing on the banks of the Magdalcma, and supposed hy. Dr. Percira to produce Jamaica sarsaparilla, tho most valuable kind in the market.
6. Smilax China. A species growing in China, the rhizome of which forms one of the Chine mots of the slops, and is reenmmendod as a substitute for sarsaparilla.
7. Smilacin. A principle procured from sarsaparilla, and designated by the various names of pariglin, salseparin, aud parallinic acid.

SMILASPERIC ACID. A peculiar volatile substance procured from the root of Hemidesmus Indicus. Tho name was occasioned by the belief that the root was that of the Smilax asperct.

SNAKEROOT. Radix serpentaria. The root of the Aristoloehia serpentaria, or Virginia snakeroot, formerly termed alexipharmic, on account of its fancied power of curing the bite of the rattlcsnake and of a mad dog.
[Black snakeroot. Cimicifuga racemosa.
[Button snakeroot. Eryngium aquaticuIL
[Canada makeroot. Asarum Canadense.
[Seneka snakeroot. Polygala Senega.]
[SNEEZEWORT. Helerium autumnale.]

SNEERING. A convulsive action of the muscles of the chest, from irritation of the Schneiderian membrane.

SNOW BLINDNESS. An affection of the eycs, caused by the reflection of light from the snow; the Esquimaux wear as a preventive against it a kind of gnggles, called snov-eyes, inade of extremely light wood, resting by a bridge on the nose, like spectacles, and with a narrow slit, through which they look.
[SOAP CERATE. See Ceratum saponis.]
[SOAPWORT. Saponaria officinalis.] [SOAP. See Sapn.]
SOCIA PAROTIDIS. The name of a second portion of the parotid gland, which is frequently developed from the duct, while on the masseter muscle.

SODA. An alkali procured from the ashes of marine plants; formerly called the mineral alkali, from its heing found native, under the name of natron, in mineral seains or crusts.

1. Soda tartarizata. Tartrate of soda and potass, formerly called sel de seignctte, sal rupellensis, or Rochelle salt, sal polychrest, \&c.
2. Suda aeetar. Acetate of soda, formerly called terra foliata tartari crystallizata, or terra foliata mineralis.
3. Soda bi-boras. Bi-borate of soda, or borax ; when heated, it becomes a friable mass, called calcined borax ; at a stils higher temperature, it pusses into a transparent glass, called glass of borur, which is anhydrous.
4. Sudar carbonar. Carbonato of soda, also called the sub-carbonate, mild mineral or fossil alkali, aerated mineral alkali, and
5. Soda hypochloris. Hypochlorate of soda, comuionly called chloride of soda, Labarraque's soda disinfecting liquid, oxymuriate of soda, and chlorurct of the oxide of sodium.
6. Sodre murias. Múriate or hydrochlorate of soda, chloride of sodium, or common salt.
7. Sodre nitras. Nitrate of soda, also termed cubic, quadrangular, or rhomboidal nitre; employed for pyrotechnical purposes, and as a manure.
8. Socla phorphias. Phosphate of soda, formerly called alkali minerale and sal mirabile perlatum. In the shops it is sold as tasteless purging salts.
9. Sode sulphas. Sulphate of sodr, formerly called natron vitriolatum, sal catharticus Glauberi, or Glauber's salt.

SODA-WATER. A heverage formed by a solution of the carbonate of soda in water, which is afterwards impregnated with more carbonic acid than is sufficient for saturation. The bottled soda water of the shops is merely carbonic acid water.

SODIUM. A pecnliar metal, constituting the hasis of soda. Soda is the protoxide.

Sodit ehloridmm. Chloride of sodium, also called muriate or bydrochlorato of soda, cnlinary salt, and common salt.

SOFT PALATE. Velum pendulum palati. A soft movable curtain, appended to the extremity of the rault of the palate, and separating the mouth from the pharyax.

SOFTENING. Rumollissement. A term employed to denote a diminution of the natural and healthy consistence of organs.

Softening of the Brain. Mollities cerebri. An affection of the hrain, in which it is found to he pulpy or pasty, sometimes as liquescent as soup.

SOL. The Sinn the namo given to gold by the former chemists. See Luna.

SOLANACEE. The nightshade tribo of Dicotyledonous plants. Herbaccous plants or shrubs, with leaves alternate; flowers monopetalous, regular ; stamens inserted in the corolla; ovarium 2 -colled; fruit succulent.

1. Solamam dnleamara. Woody Nightshadc, or Bitter-swcet; an indigenous plant recominended by Bateman in lepra, and by Rayer in eczema und psoriasis.
2. Sulamm. nigrum. Black Nightshade ; an indigenous plant, the extract of which possesses nearly the samo porrer as lettuce-opium.
3. Solamum tuberosum. The Potato plant, well kuown for its large subterraneau tubers, called potatoes.
4. Sularine. A vegetable alkan, pro-
cured from several species of solanum, and from the first shoots of growing potatoes.

SOLAR PHOSPHORUS. A substance which, after exposure to light, exhihits phosphorescent propertios, as Canton's phosphorus, \&c.

SOLAR PLEXUS. An asscmblage of ganglia, which are distributed to all the divisions of the aorta.

SOLDERS. Simple or mixed metals, by which metallic bodies are firmly united with each other. Bismuth is much used in the composition of soft solders, from its capability of forming with several metals compounds of remarkable fusibility. The common solder of glaziers consists of equal parts of tin, lead, antimony, and bismuth.

SOLEUS (solea, a sole). A muscle of the leg, shaped like the sole-fish. It arises from the head of the fibula, \&c., and is inserted into the os calcis; it has also been named gastrocnemius internus. It extends the foot.
[SOLIDAGO. Golden-rod, The pharmacopœial name for the leaves of Sulidago odura; a genus of plants of the natural order Asteraceæ.]
[1. Sulidago odora. Solidago, Ph. U.S. Golden-ror. An indigenous plant, the leaves of which are aromatic, and slightly stimulant. An infusion of them is given as a carminative.]
[2. Sulidago virgaurea. This species is astringent, and was forwerly supposed to possess lithontriptic virtues.]
[SOLIDISTS. A medical sect, who maintaincd that the fluids performed a passive and secondary part in the phenomena of lifc, and that the solids alono were endowed with rital properties - that they alone were susceptible to tho impression of morbific couses, and were the exclusive seat of discase. Their doctrine is termed solidism.]

SOLIDS. Bodics, the cohesion of whose particles is so strong, that they are movable only as a combined mass. Compare Fluidity.

SOLIUM (perlaps allicd to sclla, and so from sedeo, aud so for sodium). A high seat, or thronc ; in Celsus, a bathing-tub. Pliny has solium balncarrm.

SOL-LUNAR INFLUENCE. The influcnec supposed to be produced on vorious disenses, when the sun and moon ure in a stato of conjunction: thus, paroxysins and exacerbations in feycr may be oxpected to take place (and do in fact take place, at spring-tides, nud crises at neap-tides.

SOLOMON'S SEAL. The Polygonatum convallaria; a Liliaceous plant, tho fresh
rhizone of which is a popular application to a bruised c.jc, \&c.
SO'LUBLE TARTAR. Potansce tartrus. The neutral or Libasic tartrate of potash. Sioluble crcam of tartar is the boro-tartrate of potash.

SOLUTION (nolvo, to dissolve). The act of dissolviug a solid or aërifurn bolly in a liquid; this liquid is called the sol vent. Also, a liquid containing a dissolved body.

SO'LUTIVE WATER. A name formerly given to nitric acid.

SOLVENT. A liquid in which a sub. stance is dissolved. The latter is sometimes called $\Omega$ solvend. [This term was applied in medicine to remedies which were supposed to possess the property of dissolving or liquefying the thickened or coagulated bumours, and thus of remoring engorgements. In pharmacy it is appplied to all liquors used as dissolvents, or to extract the rirtnes of ingredients, by infusion, decoction, \&c. See Solution.]

SOMNAMBULISM (somnns, sleep; ambulo, to walk). Sleep-walking; sometimes enlled noctambulism, or night-walking. See Clairvoyance.

SOMNI'FERA (sommu, slecp, fero, to bring). Somnifica. Agents which cause slecp, usually called hypmotics.

SONDE A DARD. A kind of catheter, furnished with a stilette.

Sonde corique. A conical silver catheter, frequently employed in France.

SOOT. Fnligo ligni, (q. v.).
SOOT-DROPS. Hysteric mixturc. Tincture of soot, consisting of wood-soot, assafoetida, and proof spirit; used in hysteria.

SOPHISTICATION. A term denoting, in pharmacy, the adulterating of any medicine.
[SOPHORA TINCTORIA. Asynonyme of Baptista tinctoria.]

SOPOR. Profonnd sleep, like that of a person intoxicated or fatigucd.

Soporifics. Sulbstances which induce sopor, alsn called bypnotics.
[SORBEliACIENT. Ahsorbent.]
SORBIC ACID. An acid obtained from the berries of the Sorbus, or Pyruk ancuparia, or Mountain Aslı. It appears that the sorbic and pure malic acids are identicnl.
[SORBINE. The sugar of the berries of the Sorbua aucuparia.]
SORBITO (sorbro, to sup, as olle does an cegs). A potion, or broth. Celsus bas sorbita oryza, a rice potion.

SORDES. The viscid matter discharged from ulcers, \&c.; [also, scurf or filth of any kind.]

SORE, BAY. A disease considered by Dr. Musely as true eanoer, commencing with an ulcer. It is endemic at the Bay of Honduras.

SORO'SIS ( $\sigma$ wòs, a bcap). A collectire fruit, consisting of a succulent spike or raceme, having all its ovaria and floral envelopes cohering into a single mass, as in tbe pine apple, the mulherry, tbe breadfruit, \&c.
[SORREL. A common name for several species of Rumex.]
[SORREL TREE. Andromeda arborea. (q. v.)

SORUS ( $\sigma \omega \rho o ̀ s$, a heap). The botanical term for each cluster of sporuliferous thecæ developed on the under surface of the fronds of Ferns.

SOU'JEE. A granular preparation of wheat, deprived of bran.
[SOULAMEA. A genus of plants of tbe natural order Polygalaceæ.]
[Soultamea amara. An East Indian species, used in cholera, and regarded as a valuable febrifuge.]

SOUND. An instrument whicb is introduced into the bladder, for the purpose of ascertaining the presence of a calculus.

SOUNDS. A gelatinous suhstance, constituting the swimming-bladder of the fisb.
[SOUR DOCK. Rumex Acctora.]
[SOUTHERN WOOD. Artemisia abrotanum.]
[SOYMIDA. A genus of plants of tbo natural order Cedrclaceæ.]
[Soymida febrifuga. A native of the East Iudies, where it is esteemed as a tonic and astringent, and is said to be efficacious as a febrifuge in intermittent and remittent fevers.]

SPADIX. A form of inflorescence, in which the flowers are arranged close together upon a succulent axis, which is enveloped in a sheath, or spathe, as in Arum.

Spadicose. Having the organns of reproduction arpanged upon a spadix, as Arum.

SPANE'MTA [Spanhcmia,] (onavds, poor; aï $\mu$ a, blood). Cuchœmia. Poverty of blood; a termapplied by Simon to that condition of the blood in which the monount of its solid constituents is diminished.-Hence-

Spancemics arc agents which, by longcontinued use, impoverish tho blond. Theso are also called antiplastic alteratives, \&c.

SPA'NIOLI'TMINE (onávos, rare).A colouring principle obtained from litmus, but of rare occurrence. Sco Ery-
[SPANISII BROOM. A common namo for the plnnt Spartium juncoum.]

35 \%

SPANTEII CHALK. French chalk. A variety of steatite or silicate of magnesin.

SPA'NISH FLY. The hlister-heetle, originally, perhaps, found in Italy and Spain. Sco Cantharis.

SPA'NLSII WHITE. White bismuth. Nitrato of hismutb; also called pearlwhite, magistery of bismutb, \&c.
[SPARADRAPUM. Sparadrap. A general term for all adbesive plasters spread upon muslin or any other tissue.]

SPARGANO'SIS ( $\sigma \pi a \rho y a ́ \omega$, to tumefy). A term applied by Dioscorides to puerperal tumid-leg. Sce Phlegmasia dolens.

SPA'RTIINE. A volatile base constitutiag the narcotic principle of the Cytisus Scoparius, or common Broom.

SPARTIUM JUNCEUM. Spanish Broom; a Leguminons plant, the secds of which hare been employed in drospical affections.

SPASM ( $\sigma \pi a ́ \omega$, to draw). Cramp; irrcgular contraction of the muscles.

1. Constrictive spasm is attended with contraction, rigidity, or hoth; as wryneck, lock-jaw, tetanus, \& c.
2. Clonic spasm is the violent agitation of one or more muscles, in sudden and irrcgular snatches, as hiccough, sncezing, \& 0
3. Synclonic spasm is the tremulous, simultaneous, and chronic agitation of various muscles; as St. Vitus's dance, shaking palsy, \&c.
4. Tonic apasm consists in contraction of a contractile organ. When there are alternate contraction and relaxation, tbe spasm is called clonic.-Lacunc.
SPASMOLOGY ( $\sigma \pi \sigma^{\prime} \sigma_{\mu} \pi$, a spasm; $\lambda$ dóos, a description). A treatise on spasms or convulsions.

SPASM CYNICUS. The Sardonic grin. If onc sisle of the face only be affected, the nffection is denomiuated tortura oris. Seo Sardonicus.

## [SPASTIC. Spasmodic.]

SPA'STICA ( $\sigma \pi i ́ \sigma \mu c a$, a spasm). Agents whicb incrense the irritability of the museles and induce spasin of convulsion.
SPATHE. A large bract, which envelopes the spadix of the Arum.

Spathaceous. Having the organs of reproduction enclosed within a spathe, or large sheathing bract.

SPATULA (dim. of spatha, a spattle). An instrument for spreading salves or ointments.

Spatulatc. Like a spatula; oblong, with the lower end much contracted, as the leaf of chasy.
[SPEARM[NT. Mentha viridis.]
SPRCIFIC. An infalliblo reruely for any particular disensc.
[Also applied to agents which exert their aetion on somo partieular organ more than on others, as crgot appears to have a specific action on the uterus.]

SPECULUM. Literally, a glass. An instrument for facilitating the examination of parts, and also the performance of operations on them, as the speculum uteri, \&e.

SPECULUM METAL. An alloy of about two parts of copper and one of tin ; used for malking mirrors.
[SPEEDWELL. A common name for the plant Veronica officinalis.]

SPERMA ( $\sigma \pi \varepsilon i \rho \omega$, to sow). Semen. The seminal fluid. The seed of plants.

1. Spermatic cord. A cord consisting of the vessels and nerves which pass to and from the testis, enclosed in several tunies or fasciæ.
2. Spermatic canal. The oblique space in the abdominal parietes, near to Poupart's ligament, which transmits the spermatie cord.
3. Spermato-cele (кj̊dn, a tumour). An enlargemeut of the testis, supposed to be produced by the semen.
4. Spermo-derm ( $\delta \dot{\rho} \rho \mu a$, skin). The testa, primine, or external membrane of the seed of plants. The term is sometimes applied, colleetively, to all the integuments of the seed.
5. Spermato-zoa (३ผัจv, an animal). Animalcules found in the semen of animals, and sometimes, though much more rarely, in plants. In the former, they occur in the vas deferens and in the vesicule seminales; in the latter, in cryptogamic plants, and perhaps in the pollen grains of the higher orders of plants.
[6. Spermatorrhcea (pcu, to flow). Spermorrhcea. Seminal fux.]
6. Spcrmatoon (idv, an egg). A seed. egg; a cell constituting a nueleus of a sperm-cell.
7. Spermatophora ( $\phi \ell \rho \omega$, to carry). Seedbearers ; alhuminous envelopes containing masses of spermatozon.

SPERMACETI ( $\sigma$ rippa, semen; and $\kappa \bar{\eta} r a$, a whale). Cetaccum. A suhstance found principally in the head of the Physeter mactoccphalus, or Great beaded Cachalot. Absolutely pure spermaceti is called cetinc.

SPERM-CELL. A eell contained in the liquor seminis, in which are developed the spermatoa, or nuelei from which the sperinatozoa originate.
 to produce). A general term for those endogens whieh propagate by sced, as distinguished from Sporogens, which aro reprodneed by apores. Sicrmogens are
divided into true eudogens with striated inarticulated leaves, and false eudogens with reticulated disarticulating leaves or dictyogens.

SPIACE'LIA SE'GETUM. The name applicd by Leverille to the terminal tuber. cles of the ergot-grain, which he considered a parasitic fungus. Pereira says, they are merely masses of sporidia.

SPHACELISMUS (бфákE入os, gangrene). A term simply denoting gangrene, but also signifying "agitation from excessive pain;" and bence, probably, it has been employed as synonymous with phrenitis.
SPHACELUS ( $\sigma \phi \dot{a} \zeta \omega$, to destroy). Complete mortification ; generally preceded by gangrene, the incoinplete state.

There is a form of sphacelus, which generally occurs in infants, and young children, attacking the mouth and cheeks, and the external parts of the female organs of generation. It has heen termed noma, cheilacace, stomacace, gangrenosa seu maligna, ncerosis infuntilis, gangrenous aphthe, ionter-canker, \&c.
[SPHAGIASMUS. A term devised by Marshall Hall to denote compression of the internal jugular reín.]

SPHENOID ( $\sigma \psi \dot{\eta} \nu$, a wedge ; \&ioos, likeness). Wedge-like, as applied to a hone of the skull, which veriges in and locks together most of the other hones.

1. Sphenoidal. A term applied to wedse-like fis8ures and cells of the sphenoïd bone.
2. Spheno-palatinc ganglion. The largest of the crauial ganglia, situated in the ptery-go-palatine fossa.
3. Spheno-salpingo-staphylims. A designation of the circumflexus palati muscle, from its origin and insertion.
4. Sphcno-staphylinur. A designation of the levator palati mollis, from its arising from the sphenoïd hone, and heing inserted into the relum palati.

SPIIINCTER ( $\sigma$ glyy, to contract). A muscle whoso office it is to close the sperture around which it is plaeed.

1. Sphincter ani. A thin layer of museular fibres, surrounding the anus like an ellipse, is termed sphincter ani externus; another layer embraciug the lower extremity of the rectum, is called ephincter ani intcrius.
2. Sphincter nris. A name of the orbieularis oris, or muscle situated round the mouth.
3. Sphincter resice. An incorrect designation of a few trameverse fibres found at the neek of the bladder; they do not Eurround the neck, and therefore cannot act as a sphineter.

SPIITGMOMETER ( $\sigma \phi v \gamma \mu \partial s$, the pulsc ; رírpav, a measure). The name of au instrument which renders tho action of the arteries apparent to the eye.

SPICA. Literally, an ear of corn; a clove of garlic. The name of a bandage, so called from its turns, or doloires, being thought to resemble the rows of an ear of corn.

SPICA DESCENDENS. The uniting banduge, used in rectilinear wounds; it consists of a double-beaded roller, witb a longitudinal slit in the middle, three or four inches long. The roller having one head passed throngb the slit, enables the surgeon to draw the lips of the wound together.
[SPICE-BUSH. SPICE-WOOD. Common names for Benzoin odoriferum.]
[SPICULA. A pointed piece of bone.] [SPIGELIA: Pinkroot. The pharmacopøial name for the root of Spigelia Marylandica; a genus of plants of the natural order Spigeliaceæ.]
[1. Spigelia anthelmia. A species growing in the West Indies and South America, and used there as an anthelmintic.]
2. Spigelia Marylandica. Carolina Pink, an American plant, named from Adrian Spigelius, and collected and sold by the Chcrokee Indians. It is a much valued anthelmintic in the United States.

SPIKE. A form of inflorescence, in whicb all the buds of an elongated branch develope as flower-buds, without forming peduncles, as in barley. Compare Raceme.

Spikelet or Locusta. A small spike; an integral portion of the inflorescence of wheat, and otber grasses.
[SPIKE, OIL OF. See Lavanduta spica.]

SPIKENARD. A perfume and stimulant medicine, procured from the Nardostachys Jntamansi, an Indian plant of the order Yralorianacea.
[SPIKENARD AMERICAN. Aralia racemnsa. (q.v).]
[SPIKENARD, SMALL. Aralia medicaulis.]

SPILUS ( $\sigma \pi i \lambda a s$, a spot). A congenital spot, appearing to consist of a partial thickening of the rete mucosum, sometimes of a ycllow, or yellowish-brown, sometimes of a bluish, livid, or nearly black colour. Compare Nevus.

SPINA. Literally, a thorn: henco it is sometimes applied to the back-hone, fron the thorn-like process of tho vertebree. It sometimes denotes tho shin-bonc.
[1. Spinal. Belonging to the spinal co[1m.]
2. S'pinulis dorsi. A muscle of the back, which, with its fellow, forns an cl.
lipse, inclosing the spinous processes of all the dorsal vertebre.

SPINA BIFIDA (bis, twice; findo, to cleave). Hydro-rachitis. Litcrally, the cloven spine. This term denotes-

1. A disease attended with an incompleto state of some of the vertebræ, and $a$ fluid swelling, commonly situated over the lower lumbar vertebræ.
2. An analogous tumour, sometimes occurring on children's beads, attended with an imperfect ossification of a part of tbe cranium.

SPINA VENTOSA. A term first used by the Arabian writers to designate a disease in which matter formed in the intcrior of a bone, and afterwards made its way outward, beneath the skin. The word spina was employed before tbe time of the Arabians, to express the nature of the pain attendant on the discase; and ventosa was added by them, from the resemblance of the affection to emphysema. [Spina ventosa is analogous to the encysted tumour of eoft parts. It consists of an equable cxpansion of the laminx of bone, forming a cavity in the interior, occupied by a fluid not always purulent; sometimes only puriform, sometimes clear and glairy. The parietes, as the cavity slowly enlarges, are more and more attenuated ; at some points they become only mombranous, and ultimately the membrane too may give way. No osseous deposit accompanies the dilatation, as in chronic abscess; for the morbid process is from the first independent of and unconnected with the inflammatory. The cavity is lined by a membrane more of a serous than of a pyrogenous character; and sometimes membranous septa subdivide, as in tho multilocular serous cysts.Millcr.]

SPINAL CORD. Medulla spinalis. The medullary matter contained within the spina, or vertehral column.
[SPINOUS. Resembling a spine or thorn; beset with spines or thorns.]
[SPIRAA. Hardhack. The Pharmacopœial name for the root of Spira tomentosa; a genus of plants of the natural order Rosacew.]
[1. S'pireu opulifcra. Ninc-hark. An indigcuous species, used sometimes in the form of poultice to nleers and tunonrs.]
[2. Spirea tomentosr. Spirma, Plı. U. S.; Ifardlach. An indigenous shrub. The root is the only oflicinal part, but the whole plaut possesses tonic and astringent properties, and lisis been used in cholera infantum, diarrhew, \&c. Tho best form of administration is the extract, of which the dose is gr. v. to gr. xv.]
[3. S'pirace ulmaria. Qucen of the mea
dow ; meadow-sweet. An Enropean species, said to possess valuablo dinretic powers, united with tbose of a moderato tonic and astringent.]

SPIRAL ( $\sigma \pi \varepsilon$ ) $\rho a$, any tbing rolled around another thing). A curve which turns around like a circle, but, instead of ending where it began, it continucs to revolve, receding further and further from the centre liko the spring which moves tbo wheels of a watch. It may be bricfly described as a curve which winds round a point, in successive convolutions.

SPIRAL VESSELS. Trachenchyma. Long cylindrical tubes, tapering to cach end, and having an elastic spiral fibre generated within them; these are the type of the vascular tissue of plants.

SPIRIT OF SALT. A concentrated solution of muriatic acid gas in water. It is also known by tbe name of marinc, or muriatic acid.

SPIRITUO'SA ET 庣THE'REA. Alcoholica. A class of powerful and diffusible stimulants, including ardent spirits, wine, beer, and the ethers.

SPIRITUS. Spirit; a general term, comprising all infammable liquors obtained by distillation, as brandy, geneva, \&c. Tho first spirit known in Europe was made from grapes, and sold as a medicine in Italy and Spain, under the name of alcohol. The Genoese afterwards prepared it from grain, and sold it under the name of aqua vita.

1. Spiritus rectificatus. Rectified spirit, or alcohol in nearly its highest state of concentration, commonly called spirit of wine. It varies from 54 to 60 , or cren 64 per ecnt. over-proof, in the language of Sike's hydrometer.
2. Spiritus tentior: Proof spirit, or rectified spirit mixed witb watcr.
3. Spiritus vini Gallici. Brandy; an ardent spirit obtained by the distillation of wine.
4. Spiritus sacchari. Rum; an ardent spirit obtained by distillation from the fermented skimmings of the sugar boilers' molasses, \&c.
5. Spiritus frumenti compositus. Compound corn spirit, oltained by distillation from fermented infusious of corn, as gin, whiskey, and tho various Componds.
6. Spiritus, in pharmacy. Alcoholates, or spirits; alcoholic solutions of volatile substances, gencrally vegetable, obtained hy distillation, and used in medicine.
[SPIROMETER (8piro, to breathe: нétpor, a measure.) An instrument for measuring the "vital enpacity" of tho lungs, which is accomplished by determining the greatest amount of air an in-
dividual can expire after the fullest inspiration.]
[SPLANCIINIC ( $\sigma$ adarरvov, the viscera.) Relating to, or belonging to the viscera. Sce Splanchnon.]

SPLANCILNON ( $\sigma \pi \lambda a ́ \gamma \chi$ vov). A viscus or intestine.

1. Splanchno-logy ( $\lambda$ byos, an account). A description of the viscera; one of the divisions of the study of anatomy.
2. Splanchnic Nerves. These are tw in number on cach side, distinguished into tbe great, wbicb pass behind the stomach, and terminate in the scmilunar ganglion; and the small, wbicb communicate with the former, and terminate in tbe renal ganglion.
[3. Splanchic cavities. The carities of the cranium, chest, and abdomen.]

SPLEN ( $\sigma \pi \lambda j \nu)$. Tbe Splecn; an organ situated on the postcrior part of the left hypochondrium. Its outer surface is convex; the inncr is divided by a groove, called the fissure of the spleen. Hippocrates calls the spleen tbe left, and Aristotle the bastard liver, from the alliance which subsists between them.

1. Splen-algia (å入yos, pain). Splenis dolor. Pain in the splecn. Aguc-cake. Splenalgict congestionis is the most nsual of the chronie splcen diseases prevalent in India.
2. Splen-emphraxis ( $\hat{\mu} \phi \rho$ ricow, to obstruct). Congestion of the splcen.
3. Splen-itis. Inflammation of the splecn; it appears to be principally seated in the proper membranc of the spleen.
4. Splenius. A musele of the back, resembling the splcen; it is single at its origin, and divides in to the splenius capitis and the splenins colli, which bave distinct insertions. The tro splenii are so maned from their lying, like surgical splints, along the side of the neck; both together they bave the appearance of tbe letter I; the complexus being seen betreen tbean in the upper part of the augle.
[SPLEENWOOF. Sce Asplenium.]
SPLENICA ( $\sigma$ miv, the splecn). Medieines which nffect the spleeu, as quinia, the chalybentes, \&e.

SPLENIZATION. A change indnced in tho lungs by inflammation, in which they resemble the substance of the splecn. This state differs from hepatization in the absence of the grannles, and a consequently darker and more uniform texture; in appearance it rescmbles that condition of the lung produced in pleuro-pneumonia, ealled by Laneunce carnification.

SPLINT BONF. The fibula, or small bone of tho leg: so named from its resembling a surcical splint.

SPLINTS. Long, tbin pieces of rood, tin, \&e., used for preventing the ends of broken bones from moving, so as to interrupt the process of their maiting.

SPLIT-CLOTII. Scissum linteum. A bandage for the head, consisting of a central part, and six or eight tails or heads. The most convenient bandage for the forehead, faec, and jaws, is the four-tailed, or single split-cloth.

SPODIUM ( $\sigma \pi a d \partial s$, a cinder). A name sometimes given to the oxide of zinc, which sublimes during calcination.

SYONGIA OFFICINALIS. Offieinal Sponge; a porous substance, found adhering to rocks, and generally referred to the class of Poripherous animals. Commercial sponge is the dry skeleton of the animal, from which the gelatinous flesh has been removed.

1. Spongia cerata. Cerated Sponge. Sponge, prepared by washing and drying, is dipped into melted wax, and then pressed between metallie plates slightly heated. It is nsed for tents.
2. Spongin preparatc. Prepared sponge, or sponge-tent, usually made of compressed sponge impregnated with wax, and formerly employed for dilating sinnses and small openings.
3. Spongia usta. Calcined or burnt sponge; the sponge is cut into pieces, burned in a elose iron vessel, and pulverized.

SPONGIOLA (dim. of spongia, a sponge). A spongelet, or small oval body, terminating each of the capillary roots in trees or plants, and analngous, in its absorbing power, to the ampullulw of the human intestine.
[SPONGY. Having a texture resembling syonge.]
SPONTANEOUS (sponte, of one's own free will). A term applied to any pbysiological phenomenon which takes plaee witbout external agency; to discases which occur witbout external cause, \&e.
SPORADIC ( $\sigma \pi \varepsilon i \rho \omega$, to sow). A general term for diseases arising from occasional causes, as cold, fatigue, \&c. The term denotes any tbing seattered bere and tbere, like seeds.
SPORE ( $\sigma \pi \varepsilon i p \omega$, to sow). Tho roprodactive body in flowerless plants, which is analugous to the seed of flowering plants, but differs from this in not germinating from any fixed point, but iu producing its root and stem indifferently from any point of its surface. The theca which contains the spores is callen sporangium; from a dyciov, a vessel. Sporidia aro bodies resembling spores, which oecur in Algaceous plants.

SPO'ROGENS (omopus, a spore; youváw, to produce). A division of endogenous plants, whose reproductive borlics are not secds, as in endogens proper, but spores, as in Raflesiacce. These plants are commonly called rhizanths.
[SPOTTED WINTER GREEN. Chimcphila maeulata, (q. v.).
[SPRAIN or STRAIN. A stretching and partial laceration of the ligamentous apparatus of a joint, without displacement of its articulating surfaces.]

SPRUCE BEER. A liquor made of treacle and the essence of spruce, well boiled in water, to which yeast is afterwards added, to assist the formentation.]
[SPRUCE, ESSENCE OF. A tbick liquid prepared by boiling the young branches of $A$ bies nigra iu water, and evaporating tbe decoction.]
[SPURRED RYE. Secale cornutum.]
[SPUNK. Agaric. Touchwood. Boletus igniarius.]
[SPURGE LAUREL. Daphne Laureola, a species said to furnish a portion of the mezereon of commerce.]

SPUTUM (spuo, to spit). Any kind of expectoration. Tbe sputa of consumptive persons consists of eatarrhal mucus, of the matter of tubercles more or less softened, and sometimes of pus sccreted by tuberculous cxcavations wbieh are completely empty. See Nummulary.

SQUAMA. The scale of a fish. A scale-like substance: thus, eris squama denotes the scales of brass blown from the metal in melting; squama ferri the blaek oxido of iron, obtained in the form of scales.

Squamons suture. A suture of the cranium, so called from its edges covering each other like the scales of fishes; also the name of the scaly portion of the temporal bone.
SQUARROSE. Consisting of parts which spread out at right angles from a common centre; applied to leaves.
[SQUILL. Scilla maritima.]
[SQUILLA. Sec Sciller.]
SQUINTING. This affectiou was formerly called gogale-eye; honee, the term goggles is still applicd to the glasses used in this complaint. Sce Strabismus.
[SQUIRTING CUCUMBER. Momordiea eloteriun.]
STACTE (arif to distil). That kind of myrrh which distils or falls in drops from tho tree. Also, a moro liquid kind of auber thau is geuerally met with in tho shops.

STAFF. Tho director for the gorget, or knife, usord in lithotony.
[STAGE. The period or degreo of a
disease；especially used to designate the three periods of a paroxysm of internit－ tent fever，－the hot，cold，and sweating stages．］

STAGMA（ará̧ ${ }^{\text {St }}$ ，to distil）．A distilled liquor．Vitriolic acid．

STAGNATION．Accumnlation or rc－ teution of a liquid in any part；a term ap－ plied by the humoral pathologists to that state of the hlood，which they considered the eauso of many diseases．

STALACTITES（ $\sigma$ тa入á̧ı，to drop）． Substances found suspended from vaults， being formed by the oozing of water charged with calcareous particles，the former of which evaporatez，leaving the 1 atter behind．

STAMEN．The male organ of flower－ ing plants．It occurs in one or more se－ ries immediately within the petals，and the entire apparatus is called the androcerm．

STAMMERING．Psellismus．Inter－ ruption of speech by irregular intermis－ sions or suatehes．It is distinguished into a hesitation and stuttering．Shakspeare compriscs them both：－＂I would thon couldst stammer，that thou mightest pour out of thy mouth，as wine comes out of a narrow－mouthed bottle，either too much at onec，or none at all．＂

STANDARD PROOF SPIRIT．This spirit is defined，by the Excise law，as ＂that which，at a temperature of $51^{\circ} \mathrm{F}$ ．， weighs exactly twelve－thirteenths of an cqual measure of distilled water．＂At this temperature the spirit will have a specific gravity of 923 ，or about 920 at $60^{\circ} \mathrm{F}$ ．The standard alcohol of the Ex－ cise is spirit of specifio gravity 825 at $60^{\circ}$ F．By＂spirit 60 degrees over proof＂is understood a spirit， 100 measures of which added to 60 measures of water，will form standard proof spirit，sp．gr．， 920 ．By ＂spirit 10 degrees under proof，＂is under－ stood a spirit， 100 measures of which mixed with $10^{\circ}$ measures of standard alcohol，sp．gr． 825 ，will form standard proof spirit．

STANETHY＇LIUM．A crystalline body formed by the direct uuion of stannmm，or tin，with iodide of ethyl；it is the iodide of a now organic radicle．

Stanmethylium and Stanamylium are forued when the iodides of methyl and amyl，respcetively，are oxposed to the ac－ tion of light in contact with tin；their salts are isomorphous with thoso of stanethy－ lium．but they havo not yet been com－ pletcly investigated．

STANNUM．Plumbum albrm．Tin； n metal，ocenrring pleutifully in Cornwall， \＆e，It is found united with sulphur and copper，and is then called tim pyrites；
when combined with oxido of iron and silcx，it is ealled tim－stonc，and couod－tin．

1．Staumum folictum．Tin foil；an alloy composed ehiefly of tin，with a small pur－ tion of lead，and sold in the form of a leaf of about 1－1000th part of an inch in thiek－ ness．

2．Stami pultio．Porsder of tin；granu． lated tin；a remedy for tapc－worm．

3．Stami limatura．Tin filings．
STAPEDIUS．A small misele arising from the interior of the pyramid，and in－ serted into the neek of the stapes．

STAPES．Literally，a stirrup．A stir－ rup－like bone of the internal ear．

STAPHISAGRIA．Staves－acre，a spe－ cies of Delphinium，the sceds of which are principally employed in fowder，mixed with hair－powder，for destroying pediculi of the bead．Their active properties de－ pend on a peculiar alkaline principle called delphia，or delphinia．

STAPHYLE＇（ $\sigma$ Taфu入̀े，a bunch of grapes）．A Greek term for the urnla， which enters into the designations of several muscles of the palate．Thus， peri－staphylinus extermus is a synonyme of the circumflexus palati；peri－slaphy－ linus internus，of the levator palati mellis． Then，the palato－pharyngeus has heen dis－ tinguished by Winslow into three portions， with reference to its origin，viz．，the peri－ staphylo－pharyngeus，or upper，pharyngo－ staphylinus，or middle，and thyro－staphy－ limus，or lower portion．

STAPHYLO＇MA（ $\sigma$ Taфu入̀̀，a bunch of grapes）．［Staphyloma cornese．］An in－ ercase in the size of the cornca，almost invariably accompanied by moro or less opacity．Also a protrusion of the iris through openings of the cornea［staphy－ loma iridis］；that of the whole iris，after general slough of the cornea，is called staphyloma racemosum．
［Staphyloma sclerotica．Morbid promi－ nence of tho sclerotica，consisting of ono or morc elerations；a frequent consequenco of choroiditis．］
［STAPIIYLOPLASTY（ $\sigma$ aфu入n，the uvula；$\pi \lambda a \sigma \sigma \omega$ ，to form）．Operation for forming a new palate．］

STAPIITLORRHAPIIYA（ $\sigma \tau a \phi v \lambda$ ），the palate；反aфn，a suture）．Suture of the palate．［Operation for uniting a cleft palatc．］
［STAPHYLOTOMY（ $\sigma$ avdry，the urula； roн $\quad$ ，scetion）．Operation fur excision of the nvula．］

STAR－ANISE．Anisnm stellatm，The fruit of the Mliciun anisetum，a Magnolia－ econs plant．By distillation it viclds the oil of star－anise，or olenm badiani，em－ ployed by liqueur－makers．
[STAR GRASS. Alctris forimosa.]
STARCH. A substance obtained from vegetables, particularly from tuberose roots, and the grains of gramineous plants. See Amylum.
[STAR-WORT. Helonias Dioica.]
STASSIS ( $\sigma \tau a ́ \omega$, to stand): Stagnation of the blood, or of the bumours.
[STATICE. The pharmacopøial name for the root of Statice Caroliniana; a genus of plants of the natural order Plumhaginacere.]
[Statice Caroliniana. Marsh Rosemary. An indigenous plant, the root of which is powerfully astringent.]

STATISTICS. A term applied to tbe investigation and exposition of the actual eondition of states and countries.

Mcdicalstatistics eonsist in the application of numbers to illastrate the natural history of men in health and discase.
[STAVESACRE. See Staphisagria.]
STEAM. The vapour of water raised to a high degree of elasticity by beat. Stenm is always of the same temperature as the water from which it rises, and, accordingly, the terms high pressure steam, stenm produced at a high temperature, and steam of great density, may be considered as synonymous terms.

STEARIC ACID (otéap, suet). An acid procured from animal and vegetable fats. and from the bile of many animals.

STEARINE ( $\sigma \tau \dot{\varepsilon} \dot{\varepsilon} \rho$, suel). A solid crystallizable substance, the essential part of all kinds of suet. Compare Elain.

STEAROPTEN ( $\sigma$ т $\dot{\varepsilon} \alpha$, suet). The solid portion of a volatile. oil. Sce Elaopten.

STEARO-RICINIC ACID. An acid procured by distillation from castor oil.

STEATOCELE ( $\sigma \tau \dot{\varepsilon} \alpha \rho$, suet, $\kappa \hat{\lambda} \lambda \eta$, a tumour). A tumour seated in the scrotum, and consisting of a suety substance.

STEATO'MA ( $\sigma$ 的 $a_{\rho}$, fat). A wen, or encysted tumour, containing a fat-like matter.
[STEATOMATOUS. Relating to, or of the nature of, stentoma.]

STEEL. Carburetted iron. Tbe proportion of carbon is supposed to amount, at an average, to $1-140 \mathrm{th}$ part. Stecl is usually divided into the ree sorts, according to the metliod in which it is prepared, viz., nutural steel, steel of cementation, aud cast steel.

STEEL MIXTURE. Grifith's mixture. This is the Mistura Ferri Composita of the Pharmacopocia.

S'PELLA. Stellated Bandrye. A bandage, so naned from its furming a star, or eross, on the back. It is a roller, applied in the form of the figure 8 , so as to keep back tho shoulders.

STEPUENS'S (Mrs.) REMEDY FOR STONE. This consisted of lime, wbich was produced by calcining the shells of eggs and snails, and made into pills with soap. A decoction was also administered, consisting of chamomile, fennel, parsley, and burdock, together with a portion of Alicant soap. [The British parlianeut paid Mrs. Stephens $£ 5000$ to make public this nostrum !]

STENON'S DUCT. The duct of the parotid gland, discovered by Stenon.
[STERCUS. Excrement.]
Stercus Diaboli. Devil's dung, a term applied by the Germans to assafueticla, owing to its disagreeable taste and odour. To some, however, it is a most grateful condiment, and has acquired the very different appellation of cibus deorum, or food of the gods.
[Stercoraceons. Relating to, or of the nature of excrement.]

S'TERELAII'NTHA ( $\quad \tau \varepsilon \rho \varepsilon d s$, solid; E $\lambda \mu \nu \nu s$, a worm). The name applied to two species of intestinal worms, which have no true abdominal cavity, and are therefore termed solid. These are the tænia solium and the botbriocepbalus latus. See Vermes and Colelmintha.

STE'REO-ELE'CIRIC CURRENT ( $\sigma$ epesis, solid). A current ${ }^{\text {o }}$ of thermoclectricity tbrongh solid hodics, as metals, when hrought into contact at different temperatures. It is thus distinguished from the Voltaic or bydro-clectric. eurrent, for which the presence of fluids is necessary.
 $\pi \hat{f} \omega$, to sce). Binocular glass. An instrument invented by Mr. Wheatstonc, fur making two plain pictnres seem to coalesce into one relicro, or raised object.
[STEREOSCOPE ( $\sigma \tau \varepsilon \rho \varepsilon d$, , solid ; $\sigma \kappa \sigma \pi \epsilon \epsilon$, to examinc). An instrument invented by M. Cornay, for the purposo of applying auscultation to the detection of resical calculi, and even foreign bodies situnted in the soft parts of the body. Tho instrument resembles a common eatheter, and presents at its frec extremity a sort of broad pavilion somewhat rescmbling that of a speaking trumpet.]

STERILITY (sterilis, barren). Barrenness. Iupotence in the male ; inability to conceive in the female.
[STERNAL, (atcmum). Belonging or relating to the sternum.]
[STBRNALGIA (oteprov, the sternim; a. yos, pain). Painabout tho sternum ; angima pectoris.]

STERNUAS. Tho breast honc. It is divited into two or threc parts, termiuating o below in the ensiform cartilage.

1. Sterno-clavicular. The designation of a ligmment extending from the sternum to the claviele.
2. Sterno-clcido-maetoïdeus. A musele arising hy two origins from the summit of the sternum and the sternal portion of the claviele, and inserted into the mastoid process of the temporal bone. It turns the head to one side, and hends it forwards.
3. Sterno-hyoïdeus. A musele arising from the sternum and inserted into the os hyoildes. It depresses the larynx, and furnishes a fixed point for the depressors of the jaw.
4. Sterno-thyroïdens. A musele arising from the sternum, and inserted into the thyroïd eartilage. It draws the larynx downwards.

STERNUTATIO (sternuto, to sneeze often). Sneezing. Henee the term sternutatories, or ptarmies, applied to medieines whiel exeite sneezing. See Errhincs.

STERTOR (sterto, to snore in sleeping). The Latin term for snoring or snorting.

STETHO'METER ( $\sigma$ 刘 $\theta o s$, the ebest; $\mu \dot{\varepsilon} \rho \circ \frac{\nu}{,}$ a measure). A ehest-measurer; an instrument invented by Dr. Quain, for facilitating diagnosis, hy measuring the difference in the mobility of the opposite sides of the ehest.

STETHOSCOPE ( $\sigma \tau \tilde{\eta} \theta o g$, the hreast; акопite, to explore). An instrument invented hy Laënnee, to assist the ear in exauining the morbid sounds of the ehest. See Auscultation.

STIIENIC (ativas, strength). A term applied by Dr. Brown to diseases produeed aceording to his thenry, by aceumulated excitability. All other diseases were supposer to be oceasioned by exhausted excitability, and were marked by indireet debility: these he termed a-stlicnic..

STIBIUM. The aneient term for the ore of antimony. Hence, Berzelius described the antimonious and nntimonic acids, under the names stibious and stibic.

STICTA PULMON'ARIA. Tree Lungwort: a liehen employed in pulnouary eomplnints, but inferior to Iceland moss.

STHGMA ( $\sigma$ i弓̆u, to priek). A small red sperk. Stigmata are generally distinct from ench other; when livid, they are termed petaclia.

Stigma, in puluts. The upper extremity of the pistil. It has been termed the pistillary spongefot, from its property of absorbing the feeundating uatter contained in the antleer.

ST'LEBENE. One of the produets of the decomposition of the liydmet of sulphobenzoyl. It oecurs in pearly erystalline sralue.

STILILICIDICM atilla, to ooze in drops,
cado, to fall). Strangury; a discharge of the urine gutfatim, or in drops. Also, the uct of pumping upon any part.
[STILIIINGIA SYLVATICA. Queen's Root. An indigenous plant of the natural order Euphorhiaece. The root is much used in the southern States and is said to be purgative and alterative.]
STIMMI ( $\sigma$ тipht, quo aliquid oríipcrat, densatur). Stibium. A suhstanee, prohahly antimony, which the aneients used to apply to the eyelids, for the purpose of eontraeting them, and thus giving the eyes an appearance of largeness, whieh was eonsidered a mark of heauty.

STIMULANT (stimulus, a goad). An agent whieh inereases the vital activity of an organ. When this effeet is produced in all the organs or funetions, the agent is termed a general stimulant; when limited to one or two organs, a local stimulont; when it affeets merely the part to whieh it is applied, it is ealled an irritant.

STIMULA'NTIA. "Stimulants," हays Dr. Billing, "promote the extrication of nervous influence, as evineed hy inereased aetion; sedatives, the reverse. Narcotics do not appear to alter the quantity of nervous influenee, but merely to impede its eommunieation. Tonics, on the other hand, neither immediaiely nor sensihly eall forth aetions like stimulants, nor depress them like sedatives, but give power to the nervous system to generate or secrete the nervous influence by which the whole frame is strengthened."

STIM'ULI, HOMOGENEOCS. A term applied hy Müler to those stimulants which, though not essentially renovating, yet "exert a vivifying influence when their action on the organie matter farours the procluction of the natural eomposition of the parts." These are the true tonies.

STIMULT, YTITAL or VIVIFIING. By this expression is denoted those external conditions which are necessary to the unintenanee of life in orgunized beings. They must he distinguished from the rilterative or modicinal stimuli, whieh, while they eause temporary exeitement, prodnce ultimate exhaustion.
[STIMULUS. That which rouses the action or energy of a part.]

STIPES. $A$ term applied to the stems of endogenous trees, to the stalk of the mushronm, ete.

Stipitntr. Stalked; that whieh is furnislicil with a stalk. as the pappus of some composite plants. The terin does not apply to the petiole of a leaf, or the pedmele of a flower.
sTIICLE. A small leaf-like orcan, at-
fached to the bnse of the peliole of the leat in many plants. See Ochref.

Stipulate. Furnished with stipules; exstipulate, having no stipules.

STITCH. A spasmodic action of the muscles of the side, accompanied with pain, proluced by running, etc.
[STIZOLOBIUM PRURIENS. A synonyme of Mucrua pruriens.]

STOMACACE' ( $\sigma$ róna, the mouth ; кпкдे , bad). Literally, mouth disease, or canker ; ulceration of the moutb, generally a symp. tom of scurvy.
[STOMACH. See Stomaehus.]
STOMACFIC. A mẽdiciue which stimulates and strengthens the powers of the stomach.
[STOMACH PUMP. An instrument for removing fluids from or injecting them into the stomach.]
[STOMATITIS ( $\sigma \sigma \sigma a$, the mouth). Inflamation of the mouth.]
[Stomaticis, pscudomembranous. Inflanmation of the mucous menbrane of the month, attended with the exudation of lymph on its surface.]
STOMACHUS ( $\sigma \tau \delta \mu a$, a mouth; $\chi^{\varepsilon \omega}$. to pour). The stomach; an expansion of the alimentary canal, situated in the left hypuchondriac region, and extending into the epigastric. The orifice communicating with tbe œesophagus is called the cardia; that communicating with the duodenum, the pylnrus. The upper space between the two orifices is usually termed the small curvature; the lower space, tbe lurgc curvature of the stomach.

STOMATE ( $\sigma \tau \delta \mu a$, a month). An oval space, lying belween the sides of the cells in the epidermis of plants, and ahove a cavity in the subjacent tissue.

STONE BLUE. This is indigo, mixed with starch or whiting.

STONE POCK. Tuherculartumours of the face, the acne indurata of Bateman.

STORAX. The name of various substances, somo of which are prorluced by the Styrax officinale, while others are referred to a plant helonging to Liquiramber. Ir. Pcreira notices the following varicties:-
]. Storax in the tear. Styrax in grains. Yelowish-white or reddish-yellow tears, about the size of pcas. 'Tbis, and white storax, are very rare.
2. Amyydaloül storax. Occurs in masscs, interspersed with whito tears, Giving them an amygdaloid appearance. This, and white storax, were formerly inported rolled up in a monocotyledonons lenf, under tho nunc of cane or reed
storax.
3. Rerldizh.brown atorax. Differs from
36
the preceding in the absence of the white tears, and in the presence of satw-dust.
4. Blackestorax. Oceurs in reduisb-hrown masscs, apparently formed of a balsam, which has been melted and inspissated by heat with saw-dust.
5. Liquid storax. Usually considered as the produce of a Liquid amber, but more rccently referred to the Styrax officinalis.
6. Soobs styracina. Under this name, Dr. Pereira includes several substances sold as storax, but which are evidently fine saw-dust impregnated with a suffclency of some resinors liquid, in some eases perhaps liquid storax, to give them cobesiveness. These are common storax, solid or cake stolax, drop or gum storax, and hard blackish storax.

STORM-GLASS. A glass tnbe about twelve inches long and tbree-fourths of an inch in diameter, filled with a solution of camphor, nitrate of potash, sal. ammoniac, and proof spirit, mixed together. The following indications are said to be afforded :-

1. When the solution is very clear, with only a small quantity of crystalline matter at tbe hottom of the glass, fine and dry weather may be expected.
2. Wben fresh crystals are formed and extcud upward through the glass, while the liquid still continues elear, a cbange of weather with raiu way be $\mathrm{ex}_{\mathrm{I}}$ ected.
3. When plnmose crystals are furmed, some of which float in the upper portiou of the solution, while the liquid itself assumes a turbid appearance, a storm with bigh wind may be expected.
STRABISMUS ( $\sigma \tau \rho a \beta \delta \varsigma$, i. q., $\sigma \tau \rho \varepsilon \beta \lambda \sigma \rho$, twisted). Squinting; an affection in which the optic axes of the eyes are not directed to the same object. In the convergent form, the eye turns inward, towards the nose; in the divergent, it turns outward, towarls the temple.

STRAMONIUM. Thorn-apple; a species of Datura, yielding in activo principle called daturia. In some parts of Ehrolo this plant is vulgarly called herbe rux sorciers, from its intoxicating effects, in which it resembles helladoua.
[STRANGULATION. The close constriction of a part. Thus, a hernia is said to be in a state of strungulation when tho contents of the rupture are so constricted by the margins of the opening througn which they havo passed as to interrupt or suspene? their nathral offices or functions. In leyal medicine it means the constriction of tbe trachoa, by a ligature around tho
neek, or by the appliention of pressure through the fingers or otherwise to the trachea.]

STRANGURY ( $\sigma$ Tpà $\xi$, a drop; oùpov, urine). Discharge of the urine with pain and by drops; the dysuriu of Sauvages, \&c.
[STRASBURG TURPENTINE. Turpentine obtained from the Abics Picea.]

STREMMA ( $\sigma \tau \rho \dot{\phi} \phi \omega$, to turn). A strain, or sprain, of a joint.

STRIA. A streak, or groove. Hence, the term corpora striata, denoting two streaky emiucnees in the lateral ventricle of the hrain.
STRICTURE (stringo, to bind). A contracted state of some part of a tube or duct. Stricture also denotes, in strangulated hernia, the narrowest part of the opening through which the viscera protrude.

STRIDOR DENTIUM. Brygmus. Grinding or gnashing of the teeth.
STRIGIL, or STRIGILIS. A scraper or flesh-brush; an instrument used in bathing, for removing dirt or perspiration from the body.

STRIGOSE. A term applied to a surface which is covered with stiff hairs.

S'TROBILE. Cone. An amentiform fruit, in which the carpels are scale-like, spread open, and hear nalied seeds; the scales are woody and coherent in the pine, thin and without cohesion in the hop.
[STROMA. The foundation texture of an organ; the bed or base of any morbid deposit.]

STRONTIUM. The metallic base of Strontia, so called from Strontian, a mining village in Argyleshire.

Strontia, strontian, or strontites. An alkaline earth, of which the metallic base is strontium.

STROPHIOLATE. A term applied to the umbilicus of sceds, when they are surrounded hy irregular protuberances, called strophioleo or caruncula.

STROPIIOS ( $\sigma$ Tpíqu, to turn). A term used by Celsus for tormina or griping.

STROPIIULUS. A genus of cutaneous disenses peculiar to infants, known by the names of gum-resh, red-gum, tooth-eruption, \&e., and consisting of pimples on the fuce, neek, arms, and loins, generally in elusters, surrounded with a reddish halo,
[STRUCTURE. The arrangement of the tissucs ; a texturo or menhrane.]

STLUMA ( $\sigma$ тюшиa, a heaping up). Serofula, vulgarly called the King's Evil. Cicero uses the metaphor "struma ciritatis," the serofula, or Kinges Evil of the State.
STRUVE'S HOTION FOR HOOPING COUG11. 'Cartarized antimony $\overline{J j}$., dis-
solved in fiju. of water, to which was added f ${ }^{3} j$ of tincture of eantharides. [STRYCINIA. Sce Siryelmor.]
STRYCINOS NUX VOMICA. The Poison-rut; a plant of the order Apocynacece, the bark of which was furmerly confounded with angustura bark, and was hence called fulse angustura. The seeds, or muces vonica, are called by the Germans crows' cyce,

1. Strychnia. An nlkaloïd discovered in strychnos nux vomica, St. Ignatia, and other species, in which it is frequently associated with brucia.
2. Strychnic or igasuric acid. An acid found in tho seeds of nux romica, St Ignatius's hean, and snake wood.

ST. VITUS'S DANCE. Chorca Sancti Viti; called, in colloquial French, dance de St. Guy. It consists in tremulous and jerking motions of the limbs. The name of St. Vitus's Dance was given to this affection, according to Horstius, in consequence of the cure produced on certain wornen of disordered mind, upon their visiting the chapel of St. Vitus, ncar Ulm, and there dancing from morning till night.

STUCCO. Plaster of Paris, made into a paste with water ; its composition is that of native gypsum, or sulpbate of lime.

STUPA, or STUPPA (बтúnt). Tow; the coarse part of flax.

Stupose. Having a tuft of hair at some part, as certain filaments, \&c.

STUPEFA'CIENTS. Narcotics. Those phrenic medicines which stupefy the mind, as opium.

STUPOR (stupeo, to be senseless). A state of insensibility.

1. Stupor-dentium. An affection commonly called teeth-on-cdgc.
2. Stupefacients. Medicines which produce stupor or insensibility; narcotics.
[STUPRUM. Rape. The carnalknowledge of a woman by foree and against her will.]

STYE (stihan, Saxon; a sprinçing in).
Stian. A little inflammatory tumour on the eyelid. Sec Hordcolnm.
[STIGMATES. A name proposed by J. Cloquet, to designate the white, radiated, fibro-cartilaginons cicatrices which remain on the peritoncum after the oblitcration of the neek of the hernial sac.]

STYLE (orìdos, a pillar). That part of the pistil, in plants, which surmounts the orary, and supports the stigun.

STYLOID (orĩ̉os, a pillar, or pencil: ridos, likeness). The name of a pencil-like process of the temporal bonc. Ilence the terins-

1. Stylo-glonsus. A muscle arising from the sty luid process and the stylo-maxillary
ligament, and inserted into the root of the tongne. It moves the tongue laterally and hackwards.
2. Stylo-hyyödeus. A muscle arising from the styloìd process, and inserted into the os hyoüdes, which it raises. It is sometimes accompanied by nother small muscle resembling it, named by Innes, stylohyoüders alter:
3. Stylo-pharyngeus. A muscle arising from the styloïd process, and inserted into the pharynx and back part of the thyroid cartilage. It raises the pbarynx, and draws up the thyroid cartilage.
4. Stylo-mastoid. Tbe designation of a foramen, situated between the styloïd and mastoïd processes througb which the portio dura of the seventh pair of nerves passes; also of an artery which enters tbat foramen.
5. Stylo-maxillary. Tbe name of a ligament which extends from the styloïd process to the angle of the jaw.

STY'PHNIC ACID (orúqvos, astringent). Nitrostyphnic acid. An astringent acid formed hy the action of nitric acid on certain gum-resins.

STYPTIC (orún $\eta$, tow). An astringent application for stopping hemorrhage.

STYRACE $\mathbb{E}$. The Styrax tribe of Dicotyledonous plants. Trees or shrubs with leaves alternate; flovers monopetalous; stamens of unequal length; ovarium superior, containing eclls ; fruit drnpaceous.

STY'RACINE. A crystallizable substance found in the still after the distillation of styrole from liquid storax.
[STYRAX, Storax. The pharmacopœial name for the concrete juice of Styrax officinale; a genus of plants of tbe natural order Styraceæ.]

1. Styrax Benzoin. The Benjamin tree, which yields the benzoin of commerce.
2. Styrax ealumita, (кá入aнos, a cane or reed). Styrax vilgaris. Common storax; prohahly an inferior sort of storax, imported, perhaps, formerly in reeds.
3. Styrax nficinale. The Oflicinal Storax; a trce which yields the resinous juice called sfornac.
[STYROLE. A volatile oil obtained by distilling sturax. At ordinary temperatures it is a limpid tluid; when heated up to a certain point it hecomes a transparent colourless glass, and remains so wheu it again becowes cool.]

SUB-. A Latin preposition, denoting, 1. a position beneath any body : 2. a slight modification, curresponding to the English terin somerohif, as in sub-ovate, somewhat ovate, sub-viridis, somewhat green; mad 3. in chemical terms, an intermediate degree of oxidation, as in sub-sulphurous acid, or
that which is intermediate between tbe sulphurous and hypo-sulphurous acids.

1. Sub-arachnoïdean fuid. An abundant scrous secretion, situated between the arachnoild and the pir mater.
2. Sub-aracmoüdean space. The space hetween the arachnoid and the spinal cord.
3. Sub-clavian. The designation of an artery, situated noder the clavicle. The right arises from tbe arteria innominata; the left separates from the aorta at the termination of its arch.
4. Sub-elavius. A muscle arising from tbe cartilage of the first rib, and inserted into the lower surface of the clavicle. It hrings the clavicle and shoulder forwards and hackwards.
5. Sub-cutaneus. Beneath the skin; a name of the platysma myoïdes.
6. Sub-diaphragmatie. The designation of a plexus, furnished by tho solar plexus, and distributed to the diaphragm.
7. Sub-lingual. The name of a gland, situated beneath the mucous membrane of the floor of the mouth, on each side of the frænum linguæ.

## [8. Sub-luxation. A sprain.]

9. Sub-mastoild. The name of a branch given off hy the seventh pair of nerves, as it pusses out from tho stylo-mastoid foramen.
10. Sub-maxillary. The name of a gland, situated on the inner side of the ramus of the lower jaw; and of a ganglion which occurs on a level with the suh-maxillary gland.
11. Sub-mental. The name of an artery and veins running heneatb the chin.
12. Sub-oxides. Certain inferior uxides which do not combine with acids, as tbe suboxide of lead, which contains less oxygen than the oxide distinguisbed as the protoxide of the same metal. Sco Binoxide.
13. Sub-resin. The name given by Bonastre to that portion of a resin which is soluhle only in boiling alcohol, and is thrown down agnin as the alcohol cools, forming a kind of seeming crystallizations. It is a sort of stearine of rcsins.
14. Sub-salt. Originally, a salt which contained an excess of base. This term now relates to atomic composition, in truo sub-salt being that in which there is less than one atom of acid to each atom of hase: thus, the sub-carbonate of soda is no longer a sub-salt, but is genorally termed carbonarte of soda.
15. S'ub-seipularis. A muscle arising from all the internal surfaco of the seapula, and inserted into the humerns. It pulls tho arm backwards and downwards.
16. Sub-sternal. The name of the lyiaplatics heneath the sternmu.
17. Sub-sultus (salio, to leap). Twitchings; sudden and irregular smatches of the tendons.
18. Sub-tepidus (tepidur, warm). Lukewarm. In this term, the preposition diminishes the quality.
19. Sub-ubcres (ubera, the hreasts). A terin applied to children during the period of suckling, in contra-distinction to those who have been weaned, or the cxuberes.

SUBER. The species of Quercus, or Oak, which yields the cork of commerce.

1. Subcric acid. A crystallino acid, obtained by the action of nitric acid ou cork.
2. Suberin. The name applied by Cherreul to cork, when deprived of the substances which are taken up by water, alcohol, and ether.

SUBLIMATION. The process hy which volatile substances are raised by heat, and again condensed into the solid form ; it is, in fact, dry distillation. The substances so obtained are called sublimatcs.

SUBLIMIS. A designation of the flexor digitorum communis muscle, from its being more superficial than the flexor profundus.

SU'BSALTS. These compounds appear to be salts which have assumed a fixed metallic oxide in the place of water of crystallization. They may, therefore, be truly neutral in composition, the excess of oxide not standing in the relation of base to the acid.

SUBSTANTIA (substo, to stand one's ground). Substance or matter.

1. Substantia perforata antica. A whitish substance, situated at the inner extremity of the fissure of Sylvius, and perforated by numerous openings for vessels.
2. Substantia perforata media. A white substance at the hottom of a triangular cavity hetween the crura cercbri, perforated by several apertures for vessels.

SUBSTANTIVE. A term applied by Dr. Paris to those uedicinal agents which possoss an inherent and independent activity. Those which are in themselves inert, but are capable of iuparting impulse and increased encrgy to the former, when combined with them, are termed adjective coustituents.

SUBSTITU'TION. A term applicd to those effeets of chemieal aftinity which depend on the replacement of certain proportions of one body by the same proportions of another body. Seo Consccutive Combination.
SUBULLATE. Awl-shaped; linear, tapering to a fine point, as the leaves of ules.

SUCCEDANEUM (succedo, to follow after). A medicine substituted for another.

SUCCENTURIA'IUS (one who supplies the place of another, from succouturio [sub, centurio], the substitute of a centurion). Supplementary ; the former name of the pyramidal muscles of the abdomen, and of the supra-renal capsules.

SU'CCINAMIDE. A compound formed by the action of ammonia on succinie ether.
[SUCCINATE. A combination of suecinic acid with a salifiable base.]

SUCCINIC ACID (succinum, amber). An acid deriven from the distillation of amber, and found also in the resin of some Conifcrous plants.
[SUCCINUM. Amber. The pharmacopocial name for a kind of fossil resin derived probably from extinct conifere.]
[SUCCORY. Chicory. Chicorium intybus.]

SUCCCSS. Juice ; the expressed liquor of a fruit or plant.

Succus крівsatus. Inspissated juice, preparcd by expressing the juices from fresh plants, and evaporating them in a waterbath.

Succulent. Yery cellular and juicy.
SUCCUSSION. A mode of exploring the chest, hy forcibly shaking the patient's body, and observing the sounds which are thereby produced, as in pneumothorax, \&c.

SUCKER. Surculus. A term applied in botany to a modification of the aerial stem, consisting of a branch which proceeds from the neck of a plant beneath the surface of the ground, and hecomes crect as soon as it emerges from the earth, producing leaves and branches, and subsequently roots. It has been termed soboles.

SUCTION (sugo, to suck). The nct of sucking; a teruu applied to the raising of liquids throngh a tube, by means of a piston, which lifts and sustains the weight of the atmosphere from that part of the well which is corered with the tube, leaving it to press on the other parts of the surface.

SUCTORIA (sugo, to suck). The third class of the Diplo-ncura, or llelminthoids, counprising the cufnzoa, and a fer other similar helminthoid animals. which hare their mouth adapted for sucking fluid aliment.

SUl)AMINA. Miliaria; resicles resembling millet-sceds, appearing iu puerperal ferer, typhns, $\&$ c.

SUlOOR (sudo. to sweat). Sirent: the rapour which passes throngh the skin, and condenses on the surface of the body.

1. Sudor Anglicus. The sweating $\lambda$ rer;
a eontayious pestilentinal fever of one day, which appeared in England in the 15 th and 16 th centurics.
2. Sndurifics (fio, to hecome). Medieines which occasion sweating.
3. Suchatoriun. The hot-air hath. At a temperature of $85^{\circ}$, profuso perspiration is produced.
4. Sudoriferous canals. Minute spiral follicles, distributed over the whole surface of the skin, for the secretion of the sweat.

SUDORIPAROUS GLAND (audor, sweat; pario, to produce). Asweat gland, consisting of a minute tube coiled up in a globular form, situated in the subcutaneous areolar tissue, and surrounded hy a mass of fat. It is proposed to distinguish that portion of the tube wbich is situated within and below the dermis, hy the name sudoriparous, as it probahly has tbe same office as the gland, viz., that of secretion; and that portion of the upparatus situated in the epidermis as the sudoriferous part, being in fuct the true excretory portion.
[SUET. See Sevum.]
SUFFI'TUS (suffio, to fumigate). Fumes of burning substances, used for inhalation, as tar fumes. Sce Halitus.
[SUFFOCATION (sub, under, faux, the throat). Arrest of the respiratory function, by any cause which operates independently of external pressure.]

SUFFRUTEX. An under-shrub; a plant which differs from the frutex, or shrub, in its perishing annually, either wholly or in part; and from the herb, in having branches of a woody texture, which frequently exist more than one year, as in the trce Mignonette.

SUFFUSION (suffundo, to pour down; so called becauso the aneients supposed opacity to he caused by something running under the crystalline humour). A term employed by Cclsus, \&c., to denote generally imperfiction or loss of sight, whether arising from catarnet or from affection of the nervous structurc. The latter has sometimes been called suffusio nigra, or catarneta nigra, from the natural blackness of the pupil. The $\dot{i \pi \sigma} \chi u \mu a$, or $\hat{i} \pi \delta \chi \chi \sigma \iota s$, of the earlier Grcek writers, includes amaurosis and cataract; the latter was aftorwards called $\gamma \lambda$ дичкшда.

SUGAR. A general term for several substances which agree in having a sweet taste, but differ in other respects. See Saceharum.
[The different varictics of useful sugars may be arranged in four classes: 1. tho grape sugurs; 2. the canc sugars ; 3. the manna sugars; and 4. willi or animal sugar,]
[1. The grape augars include the sugar of the grape, the sugars of boney, the sugar of fruits, and potato or stareh sugar. A species of sugar similar to grape sugar in chemical composition, hut differing from it in its crystalline form and in some of its properties, has been ohtained hy M. Pelouze from the herries of Sorbus aucuparia and named by him Sorbine.]
[2. Cane sugars. The principal varictics of cane sugar known in commerce, are cane sugar, properly so callied, beet sugar, palm or date sugar, maple sugar, and maize sugar.]
[3. The manna sugars. These are distinguished from grape and eane sugars, by their chemical composition, their inferior sweetness, and their not fermenting when mixed with yeast. Of this class there are several varietics, as the manna afforded by the ash, the Encalyptus sugar or gum-tree manna, nad the sweet suhstances afforded by Quercus mannifera, Larix. Europaen, Pinus cedrus, Hedysarum alhagi, Tamarix mamifera, certain species of lichen, orein sugar, or orcin manna, \&c.]
[4. Milk sugar. Milk contains a peculiar species of sugar, less soluble and less swect than cane sugar, to whicb the sweetness of milk is owing.]
[A sweet substance is afforded by the root of Glycyrrhiza glabra, which differs in flavour from all the other sugars, does not crystallize, and docs not ferment when yeast is added to it.]

SUGILLATION (sugillo, to discolour the skin by a blow). Eechymosis, or extravasation of blood.

SULCUS. A groove or furrow; generally applied to hones. The depressions by wbich the convolutions of the hrain are separated, are termed sulci, or furrows. See Anfractur.

SULPHAME'THYLANE. A crystalline compound formed by tho action of ammonia on tho neutral sulphate of metliyl.
SULPIAMIDE. A eomponnd contnining the radical sulphurous neid, combined with amidogen. Seo Amides.

SULPIIAS. A sulphate. A combination of sulphuric acid with a basc.

1. Sultphas potassa. Formerly called kali vitriolatum, vitriolnted tartar, sal do duobus, arcanum duplicatum, \&o.
2. Sulphas ferri. Commonly called green vitriol or copperas; formerly sal martis, ferrum vitriolatum, \&c.
3. Sulphas soda. Formerly celled vitriolated natron, sal mirabile ; and now Glauber's salt.
4. Sulphasainci. Commonly callerl whito vitriol, white copperas, vitriolated zine, \&e.
5. Sulphas calcis. Sclenite; anhydrite, gypsum, plaster of Paris, or alabaster.
6. Sulphes maguesia. Formerly called vitriolated magnesia, sal catbarticus amarus; and now Epsom salt.n.
7. Sulphas anmonic. Formerly called by Glauber, secret ammoniacal salt.
8. Sulphas baryto. Formerly ealled vitriolated heavy spar, cawk, \&c.
9. Sulphas cupri. Comuouly called blue stone, blue vitriol, mortooth, lapis cœrulea, Roman vitriol, \&c.

SULPHA'TIC ETHER. The namo given hy Dumas to ethcreal oil, commonly called heavy oil of wine or simply oil of wine.

SULPHATOXYGEN. According to the new view of compound radicals, this hody is the sulphate radical of sulphate of soda, the oxygen of the soda heing referred to the acid; its compounds are termed sulphatoxides.

SULPHE'SATYDE. A product of the oxidation of indigo. It is isatyde, in which 2 eq. of oxygen are replaced by sulphur. Sulphasatyde differs from tbis in having only 1 eq. of oxygen replaced by sulphur.

SU'LPHION. The salt-radical of the sulphates has been so named from the circumstance that, in the voltaic decomposition of a sulphate, $\mathrm{SO}_{4}$ travels to the positive pole, and the metal or hydrogen to the negative pole. Its compounds, or the sulphates, hecome sulphionides.

SULPHOBENZIDE. A neutral product of the decomposition of benzole by anly ydrous sulphurous ncid.
SULPIIOCY'ANOGEN. Bisulphuret of cyanogen, the supposed radical of the sulphocyanide of potassium.

SULPHO-SALTS. These are mcrely double sulphurets, in the constitution of which Berzelius has traced a close aualogy to salts.

SULPHOLEIC ACID. A double acid, consisting of oleic acid and concentrated sulphurie rcid.
SULPIIONA'PIITHALINE. This, and Sulphonaphthalide, are two neutral bodies formed when the vapours of anlydrous sulphuric acid are passed over naphthaline in excess. Tho former is a crystalline fusible solid: the latter, a crystalline powder not fusible at $212^{\circ}$.

SUTPHOSINA'PISIN. A white, crystnllizable bitter substance, obtained from the Sinapis alba, or White Mustard.

SULPIOVINIC ACID. The name given by Vogel to an acid, or class of acids, which may be obtained by digesting alcohol and sulphurie neid tngether with heat. It secms probable that this acid is mercly
the bypo-sulphuric, cembined with a peculiar oily matter.

SULPHUR. Brimstone. A crystallized, hard, hrittle substance, dug up in soine parts of Italy and Sicily, and manufactural in this country by roasting the sulpluret of iron or martiol pyrites.

1. Sulphur crudum. Rough or arude sulphur, the result of the distillation of native sulphur.
2. Sulphur rotundum. Stick, roll, or cane sulphur; refined sulphur, which bas been cast into wooden moulds, and is hence also called sulphur in baculis.
3. Sulphur bullimatum. Sublimated sulphur, commonly termed flovers of sulphur, from its occurring in the form of a bright yellow powder.
4. Sulphur vivum. The dregs remaining after the purification of sulphur, also called sulphur cahallinum, horse-hrimstone, \&o.
5. Sulphur precipitatum. Precipitated sulphur, coḿmonly called milk of sulphur; a white hydrate, consisting of sulphur and a little water.
6. Oleun sulphuratum. Snlphnrated oil, or balsnm of sulphur, prepared hy dissolving sublimed sulphur in olive oil.
7. Alcohol of sulphur. The former absurd name of hi-sulphuret of carbon.
8. Sulphuric acid. An acid produced by tho hurning of sulphur, mixed with nitrate of potash. It was formerly called oil of vitriol, because it mas distilled from a substance of miucral origin, called vitriol. on account of its imperfect resemblance to green glass. This acid, when obtained in the latter ray, cmits white rapours on exposure to the air, and is bence called fuming sulphuric acid.
9. Sulphurous acid. The fluid formed by the rapour of sulphur imbibed by water. It was forucrly enlled rolntile sulphurous acid, and, from the old mode of preparing it, spirit of sulphur by the bell.
10. Sulphuretum. A sulphuret; a combination of sulphur with a basc.
11. Sutphuretted hydrogen. Hydro-sulpluric acid; a noxious gas, consisting of bydrogen and sulphur rapour.
12. Sulph-indilic acid. A bluc acid, formed by the action of sulphuric acid upon indigo. Tbe purple substance which appears during the reactiou is called sulphopurpuric acid.
13. Sulphn-cetic acid. An acid formed by henting sulphuric acid in contact with cthyl, in a water-bath, and agitating the mixturc.
14. Sulpho-glyorric acid. An acid obtained by acting uponglyecrine, the smeet principle of oils, with sulphuric acid.

SUT.PHURA'TION. The subjection of woollen and other articles to the fumes of burning sulphur, or sulphurous acid, for decolouring or bleachiug purposes.

SUlPhUREOUS WATERS. Hepatic waters. Mineral waters impregnated with hydro-sulphuric aeid.

SU'LPHURETTED SU'LPHITES.The hyposulphites, or salts of hyposulpburous acid; they contain a peculiar acid.

SULPIUR LOZENGES. Sublimed sulphur, one part ; sugar, eight parts ; tragacanth mucilage, q.s. Used in asthma and in hæmorrhoïds.

SULPHURO'SA. A class of resolvent spanæmics, including sulphur, sulphuretted hydrogen, and the alkaline sulphurets.
[SUMACH. Common дame for Rhus glabrum.]

SU'MBUL ROOT (sumbul, Arabic, an ear or spike). A drug recently imported from Russia and from India. Its botanical origin is unknown, but it is supposed, from its resemblance to Angelica, to be some nearly allied Umhelliferous plant. A crystallizable acid has been ohtained from it, called Sumbulic acid.

SUPER. A Latin preposition, signifying on, upon, beyond.

1. Super-cilium (cilium, tbe eyelid). The eyebrow; the projecting arch of integument, covered with short hairs, which forms the upper boundary of the orbit.
2. Super-ficial (fucies, the face, or tbe outer surface). That which is upon the surface, as the fascia which is placed, beneath the integument, over every part of the hody.
3. Super-ficialis volca. The name of a branch of the radial artery, which is distributed to the muscles and integuments of the vola, or palm.
4. Super-fotation. Literally, the impregnation of a person already pregnant. This is a term formerly applied to a supposed snbsequent conception, in cases in which a lend and apparently premature foetns is discharged with a living one at a common hirth.

SUPER-OCCI'PITAL BONE. In the "doctrine of Homologies, this hone is the "neural spine." See Vertebra.

SUPERBUS. A name sometimes given to the levator menti, and to the rectus superior, from tho expression of pride which the action of these muscles imparts.

SUPERIOR. A term applied to the fruit when it has no cohesion with the calys, the latter heing then tormed the inferior. Contrariwise, a cohering ealyx
is termed superior, the invested fruit being then termed inferior.

SUPERIOR AURIS. A muscle of the external ear, arising from the aponeurosis of the occipito-froutalis, and inserted into the hack part of the anti-helix. It lifts the ear upwards. See Altollens auris.

SUPINATION (supime, lying with the face upwards). The act of turning the palm of the hand upward, by rotating the radius upon the ulna. The opposite action is called pronation.

SUPINATOR (supinus, lying witb the face upwards). The name of a muscle which turns the palm of the hand upwards.

SUPPOSITORY (suppono, to put under). A medicated solid, formerly of a conical or ohlong shape, introduced into the rectum.

SUPPRESSION (supprimo, to press down). A term applied to a cessation of any secretion, excretion, \&c.

SUPPURATTVES (sul, beneath; pus, matter). A variety of Epispastics, producing phlegmonous inflammation: they differ in this respect from vesicants and rubefacients, which produce erythematic inflammation.

SUPPURATION (sul, beneatb; pus, matter). The process by which pus is formed, or deposited on the surface, or in the substance of any tissue. The accumulation of pus in any part is called an abscess.

SUPRA-. A Latin preposition, signifying above.
-1. Supra-costales. A designation of tbe levatores costarum muscles, from their lying above or upon the rihs.
2. Supra-orbitar. Tho designation of an artery seut off by the ophthalmic along the superior wall of the orbit, and passing tbrough the supra-orbitary foramen.
3. Supra-rcnal. The name of two capsulcs situated abore the kidneys.
4. Supra-spinatus. A muscle arising from above the spine of the seapula, and inserted into the humerus. It raises the arın, \&c. Sce Infra-spinutns.
SURA. The calf of the leg, consisting principally of the soleus and gastroenomius museles, together termed by Socmmering the musculus sure.
SURDITAS (surdus, deaf). Deafness; hardness of hearing.
[SURGEON. One who practises Surgery.]

SURGERY, or CHIRURGERY ( $\chi$ Eip, the hand; épyov, work). That branch of Medicine which treats diseases by the application of the hand alone, the employnient of instruments, or the use of topical reruedies.

SURINAM BARK. Worm bark. The bark of the Andira inormis, or Cabbagebark tree, a Leguminous plant of the W'est Indics.

SURRENAL ( $84 b$, beneath ; renes, the kidneys). Tho designation of arteries, \&e., situated heneath the kidney.

SURTURBRAND. The name given in Ieeland to brown coal, called in Devonshire Bovey Coal.
[SURVIVORSHIP. Outliving another ; a term applied in medical jurisprudence in reference to a person who survives an aceident or event which has proved fatal to another or to others.]

SUSPENDED ANIMATION. A term employed to designate the state of children still-born, and the effeet produced by the inhalatiou of carhonic acid, and other deleterious gases, by strangulation, or by submersion; the respiration being interrupted, the patient, as it has heen strongly but quaintly expressed, dies poisoned by his own bloort.

SUSPENSION (snspendeo, to suspend). A term applied to the state of solid bodies, the particles of which are held undissolved in water, and may be separated from it by filtration. The solid is then said to ho suspended in the liquid.

SUSPENSORY (suspendeo, to suspend). A bandage for supporting the scrotum; a bag-truss. Also, a term applied to the longitudinal ligament of the liver, to the ligament which supports the penis, \&c.

SUSURRUS. Whizziug ; an acute, continuous hissing sound. A whisper.

SUTURAL. A mode of dehiscence, in which the suture of a follicle or legume separates spontaneously.

SUTURE IN ANATOMY (sno, to scw). A seam; the junction of the bones of the eranium by a serrated line, resembling the stitches of a scam. There are the true and the spurious kinds of suture, with tho following subdivisions:-

## I. Sutura Vera.

1. Sutura dentata, in which the processes are long and tooth-like, as iu the interparietal suture of the skull.
2. Sutura servatu, in which the processes are small and fine like the tecth of a saw, as in the suture between the two portions of the frontal bone.
3. Sutura limbosa, in which, together with the dentated margins, there is a degrec of bevelling of one, so that one bone rests on the other, as in the oceipito-phrietal suture.

> II. Sutura Noptha.

1. Sutura squamose, in whieh the bevelled edge of one bune overlaps and rests
upon the other, as in the temporo-parietal suturc.
2. Harmonia, in whieh there is fimple apposition, occurring wherever the mechanism of the parts is alone eufficient to maintain then in their proper situation, as in the union of most of the bones of the face.
III. Sutures, distinguished according to their sitnation on the skull.
3. Coronal suture, which passes transversely over the skull, and is nauned from its heing situated at that part of the head upon which the coroma, or crown, given to the conquerors in the games, was formerly placed.
4. Sagittal suture, which passes from the middle of the superior margin of the frontal to the angle of the occipital bone, and is named from its arrow-like or straight course. It is sometimes continued down the frontal bone to the nose; this part is then named the fromtal suture.
5. Lambdoidal sufure, which hegins at the termination of the sagittal suture, and extends on each side to the base of the cranium ; it is named from its resemblanee to the Greek $\Lambda$, lambda. The small separate bones, which sometimes occur in this suture, have heen called ossa 1 riquetra, or Wormiana.
6. Squamons suture, which joins the superior portions of the temporal bones to the parietals, and is so named from its scaly overlapping appearance. Near the occipital angle it loses this character, and is termed additamentum suture squamose.
SUTURE, IN BOTANY (8uo to sem). A term applied to the junction of the valves of a simple carpel, as the legume. The junction corresponding to the margins of the carpellary leaf, is called the ventral suture; that which corresponds to the midrib of the carpellary leaf, is the dorsal sutne.

SUTURE IN SURGERY (8no, to sers). The union of the edges of a wound by stithes, according to the folloring modes :-

1. Interripied sufure. So named from the interspaees between the stitehes. The needle is earried from rithout, inwards to the bottom, and so on from withiu outwards.
2. Uniuterrupted, or Glorer's Suture. The needle is introluced first into one lip of the wound from within ontwards, thea into the other in the same way; and so on for the whole track.
3. Quillecl, or Componid Suture. This is merely the interrupted suture, with this
difference, that the ligatures are not tied over the faec of the wound, but over two quills, or rolls of plaster, or hougies, which are laid along the sides of the wound.
4. Twisted Suture. Generally used in the operation for hare-lip, \&c. Two pius heing introduced through the edges of the wound, the thread is repeatedly wound round the ends of the pins, from oue side of the division to the other, first transversely, then obliquely, from the right or left end of one pin to the opposite end of tho other, \&e.
5. False or Dry Suture. "In the sutura sicca, so called in opposition to the sutura cruenta, where blood followed the needle, some adhesive plaster was spread on linen, having a selvage; a picee of this was applied along each side of the wound (the selvages heing opposed to each other), and then drawn together hy sewing them with a common needle, without bloodshed."Carwardine.
[SWAB. A piece of sponge or a rag, fastened to a rod, used for cleansing or applying remedial agents to deep-seated parts.]
[SWEATING SICKNESS. Sudor Anglicus. A very fatal epidemie whieh prevailed in England and in some other countries, at times, during the 15 th and 16 th centuries, characterised by profuse sweating, prostration of strength, \&c.]

SWEE'TBREAD. The popular name for the thymus gland of the calf.

SWEE'S SPI'TTLE. Dulcedo sputorum of Frank. An increased secretion of saliva, distinguished by a sweet taste.
[SWEET PRINCIPLE OF OIL. See Glycerin. $]$
[SWEET SPIRIT OF NITRE. Tbe Spiritus Etheris nitrici of tho U. S. Pharmacopœia.]
[SWIETENTA. A genus of plants of the natural order Cedrelaceæ.]
[1. Swietenia febrifugn. An East Indian species, the hark of which possesses tonie properties, and is much used in India as a substitute for Peruvian bark.]
2. Swietenin mahagoni. The Mahogany tree, a nativo of the hotter parts of Ainerica. Tho bark is used in the West Indies, as a substitute for Peruvian bark, but
is inferior to it.
[3. Sivietenia Senegnlensis. An African species, the bark of which is used in the cure of intermittents; it yiclds an alkali which bas been suggested as a cheap substitute for quinia.]

SYCONUS. An argregate fruit, consisting of a flesby rachis, having the form of a flattened disk, or of a hollow recepta-
ele, with distinct flowers and dry pericarps; as in the fig, the dorstenia, \&c.

SYCO'SIS (oũкov, a fig). Mentagra. An eruption of inflamed, fleshy, darkish-red tubercles on the bearded portion of the face, and on the scalp; gregarious; often coaleseing: discharge partial and sanious. The disease is named from the granulated and prominent surface of the ulceration which ensues, and which somewhat rescmbles the soft inside pulp of a fig.

## [SYDENHAM'S LAUDANUM. See Tinum Opii.]

SYLVIC ACID. One of the acids composing colophony, or resin of turpentine; the other is ealled pinic acid. The former is also ealled alpha-resin, the latter betr-resin.

SYMBOLS, CHEMICAL. An abbreviated mode of expressing the composition of bodies. The elementary substances, instead of being written at full length, are indicated by the first letter of their names, a sccond letter being employed when more than one substanco begins with the samo letter,-thus C stands for earbon, Al for aluminium, As for arsenic, \&e.
[SYMPHYTUM OFFICINALE. Comfrey. A European plant of the family Boraginacer, the root of which eontains a great abundance of mueilage, and a little tannin, and has been much uscd as a demuleento It is given in decoetion.]
[SYMPLOCARPUS FETIDUS. Bar. ton. Draeontium foetidum. See Dracontium.]
[SYM-. See Syn.]
SYN- (oúv). A preposition, signifying with, together, \&c.-N. B. For the sake of euphony, the final $n$ of the preposition is changed into $m$, before the labials $\mathrm{b}, \mathrm{m}, \mathrm{p}$, $\mathrm{ph}, \mathrm{ps}, \& e$. ; into $s, l, r$, before those letters; and is entirely omitted when followed by two eonsonants, or a doublo one. Henco wc have-

1. Sym-blepharon ( $\beta \lambda$ źqapov, the eyelid). A eonuexion of the lid to the globe of the eye.
2. Sym-metry ( $\mu$ érpov, a measure). The exact and harmonions proportion of the different parts of the body.
3. Sym-pathetic ink. A solution of chloride of cobalt. Tbe characters made on paper with this preparation, when dry, will be invisible; on being held to the fire, tho writing will assume a bright bluc or green colour; as tho paper cools, the colour will agnin disappar, in consequence of its absorlhing moistare from the air ; and the phenomenon may bo reprodneed mauy times in succession.
4. Sym-pathetic nerve. A nerve consist-
ing of a chain of ganglia, extending along the side of tho vertebral column from the head to the coccyx, communicating with all the other nerves of the body, and supposed to produce a sympathy between the affections of differont parts.

5: Syme-pathy ( $\pi$ ílos, affection). The consent, or suffering together, of parts. Thus, pain is felt at the termination of the urethra in calculus of the bladder; vomiting is produced by irritating the fances; vascular action is induced in the kidney on the application of cold to the skin, \&c.
6. Sym-phoresis (фopéc, to carry). Congestion. In the present day we speak of "simple vascular irritation," which is likewise termed active congestion.
7. Sym-physis ( $\dot{0} \mathbf{\omega}$, to grow). The growing together, or connexion of bones, which have no manifest motion, as the symphysis puhis. Hence, symphysiotomy is the operation of dividing the symphysis puhis.
8. Syni-ptom ( $\pi \tau \tilde{\omega} \mu a$, from $\pi i \pi \tau \omega$, to fall). A sign or mark by which a disease is characterized.
9. Sym-ptomatology ( $\sigma \dot{\mu} \mu \pi \tau \omega \mu a$, a symptom, גuyos, a description). That branch of medicine which treats of the diagnosis, or symptoms of diseases.
10. Syn-antherous (anther). Growing torcther hy the anthers. See Syngenesious.
11. Syn-arthrosis (üp $\theta \rho o v$, a joint). That form of articulation in which the hones are intimately and immovably connected together. See Articulation.
12. Syn-carpous (карпд̀s, fruit). A term applied to the carpels of a plant, when they cohere together, as in Poppy. When distinct from each other, they are called apocarpous, as in Ranunculus.
13. Syn-chondrosis ( $\chi$ budfos, cartilage). Articulation by means of intervening cartilage.
14. Syn-chronous ( $\chi$ poros, time). That which oceurs in equal times, as the strokes of the pulsc; a term synonymous with isochronous.
15. Syn-chysis ( $\sigma v y \chi^{v} \omega$, to confound or dissolvo). Literally, a confusion, or a melting ; a term applied to tho confusion of the lhumours of the cye, from hlows, attended with rupture of tho interual meubrancs and capsules; or to the conversion of the vitreous bumours into a fluid state.
16. Syn-clonus ( $\kappa$ dovos, arritation). Multiplied, or compound agitation; a specics of spasm.
17. Syn-cope ( $\sigma u \gamma \times \delta \pi \tau \omega$, to cut down). Lecothymia; animi deliquium. Fainting or swoon; a sudden suspension of the heart's action, accompanied by cossation oi tho fuuctions of tho organs of respira-
tion, internal and external sensation, and voluntary motion.
18. Syn-desmology (oívċeapos, a ligament; 入óvos, a description). A description of ligaments.
19. Syn-desmosis (oúvdeøpos, a ligament; from oiv, together, and diw, to bind). Tho connexion of honcs by liganent.
20. Syn-echia ( $\begin{gathered} \\ \chi \\ \text { ( } \\ \text { a }\end{gathered}$, to hold). Literally, an adbesion; that of the uvea to the crystallinc capsule is called synechia posterior ; that of the iris to the cornea, syncelia anterior.
21. Syn-genesious (yéveros, generation). A term applied to anthers which grow together hy their margin, as in the Compositw. A hetter term is syn-antherous.
22. Syn-izesis (ouvi乡 $\omega$, to coalesce). Considentia pupillæ. Atresia iridis. Collapse of the pupil.
23. Syn-neurosis (vєũpov, a nerve). Theconnexion of bones by ligament, formerly mistaken for nerve.
24. Syno-chus (avvéx ${ }^{2}$, to continne). Continued fever; the common fever of this climate. The milder form has been termed synochus mitior; the more intense synochus gravior. See Febris.
25. Syn-ovia ( $\dot{\omega}$ ò, an egg). A peculiar liquid found within the capsular ligaments of the joints, which it lubricates. The term is of ohscure origin, and appears to have hcen employed by Paracelsus to designate a disease; or it may hare been applied to the fluid in question, from its resemblance to the alhumen of egg. It bas heen termed unguen articulaire, axungin articularis, \&c.
26. Syn-thcsis (à̀v, together; AÉos, position). A generic term in surgery, formerly comprehending every operation by which parts, which had heen divided, were re-united. Also, the anatomical connexion of the hones of the skcleton. And, in chemistry, it significs the formatiou of any body from its clements; as opposed to anolysis, or the resolution of a body into its component parts.
27. Sys-8arcosis ( $\sigma$ de $\rho$ бapkds, flesh). Tho conncxion of hones by luuscle, as of the os hyoïdes.

2S. Sy-stolc ( $\sigma v \sigma \tau i d \lambda \omega$, to contract). The contraction of the beart, auricles, and arterics; opposed to diastole, or their dilatation.

SYNAPTASE. A peculiar matter obtained from the sweet aud the bitter almond.

SYPIIILS. Lues Vencrea. The TVenereal Diseases; vulgarly called Pox, formerly Grat Pox, as distinguisned from Variola, or Small-pox.

Syphiluïd diseasc, - or bastard pox,-
comprehends many affections resembling syphilix, but differing in the progress of their symptoms, and the meaus of cure.

SYRIGMUS ( oupioбw, to hiss). Ringing, or tinkling; a sharp, shrill, continuous sound.
[SYRINGA VULGARIS. Common Lilac. The leaves and fruit of this well known garden plant belonging to the family Jasmineæ, are said to be tonic and febrifuge, and are used in France for the cure of intermittent fever.]

SYRU'PUS. A syrup. A solation of sugar in water, in watery infusions, or vegetable juiees; the proportions aro generally two parts of sugar to one of the fluid.

Syrupus domesticus. A name given, in the time of Sydenham, to the syrup of huckthorn, from its cxtensive use as a medicine for children.
[The following are the officinal syrups of the $\mathrm{Pb}: \mathrm{U}$. S., with the mode of preparing them:-
[1. Syrupus. Syrup. Refined sugar, Ibiiss. ; water, 0 j . Dissolve the sugar in the water with tho aid of beat, remore any scum which may form, and strain the solution while hot.
[2. Syrupus Acacic. Syrup of Gum Arabic. Gum Arahie, ${ }^{3} \mathrm{ij} . ;$ sugar, $\mathrm{Z}_{3} \mathrm{x} v$. ; water, foviij. Dissolvc the gum in the water without heat, then the sugar with a gentle heat, and strain.]
[3. Syrupus acidi citrici. Syrup of citric acid. Citrie acid, in powder, $\mathrm{K}_{\mathrm{ij} \text {. ; }}$ oil of Lemons, Miv.; syrup, Oij. Rub the citric acid and oil of lemons with a fluid ounce of the syrup, then add the mixture to the remainder of the syrup, and dissolve with a gentle heat.]
[4. Syrupus allii. Syrup of Garlic. Fresh garlic, sliced and bruised, $\overline{3}$ vj. ; diluterl acetic acid: $\mathrm{Oj}_{\mathrm{j}}$; sugar, in coarse powder, Hij. Maccrate the garlic in ten fluid ounces of the diluted aeetic acid, in a glass vessel, for four days, and express the liquor. Then mix the residue witb what remains of the acid, and again express until sufficient has passed to make the whole, when filtered, measure a pint. Lastly, pour the filtered liquor on the sugar contained in a quart bottle, and agitate it until dissolved.]
[5. Syyr. Amygdalce. Syrup of almonds; syrup of orgent. Sweet alinouds, blanclied, thi.; bitter almonds, do., そiv.; witer, Oiij.; sugar, tb vj. Rub the almonds in a marble mortar into a fine paste, adding, during tho trituration, threc fluid ounces of tho water, and a pound of tho sugar.

Mix tho paste thoroughly with the remaincler of tho water, strain with strong expressiou, add the remaiuder of the sugar to the strained liquor and dissolve it. with the aid of a gentle heat. Strain through fine linen, allow, to cool, and then preserve in well closed hottles in a cool place. Ph. U. S. Orangeflower water, in the quantity of half a pint is an agreeable and useful addition. It is demulcent, nutritious, and slightly sedative.
[6. Syr. Aurantii corticis. Syrup of orange-pcel. Orange-peel, hruised, §ij.; boiling water, Oj.; refined sugar, Disiss. Macerate the orangc-pecl in the water in a covered vessel for twelve bours, and strain: then add the sugar, and proceed in the manner directed for syrup.
[7. Syr. Ipecacu(nha. Syrup of Ipecrcuanba. Macerate, Ipecacuanha, in coarse powder, $\mathcal{Z}_{j}$., for fourteen days in diluted alcohol, Oj., and filter. Evaporate the filtered liquor to $f$ vi., and again filter, and add sufficient water to make the liquid measure a pint. Lastly, add sugar, Hiiss., and proceed in the manner directed for syrup. Syrup of Ipccacuanha may also be preparcd by patting the Ipecacuanha, previously moistencd with diluted alcohol, into a percolator; pouring upon it gradually diluted alcobol, until a pint of filtered liquor is obtained, tben evaporating to six fluid ounces, and completing the process as ahove directed. Ph. U. S. Enctic and expectorant. Doso for an
 one or.two years old, from $\mathrm{f}_{\mathrm{G}} \mathrm{j}$. to f 3 ij .
[8. Syr. Kramerice. Syrup of rhatauy. Rhatany, in coarse powder, thj.; sugar, Hiiss.; water, q.s. Mix the Rbatany with a pint of water, and baviug allowed the mixture to staud for twenty-four hours, introduce it into a percolator, and gradually pour water upon it, until four pints of filtered liquor are obtained. Evaporato this, by means of a water-hath, to seventecn fluid ounces; then add the sugar, and proceed in tho manner directed for syrup.
[This syrup may also be prepared in the following manner:-Extract of Rhatany, ĳ. ; water, Oj. ; sugar, Dbiiss. Dissolve the extract in the water, and filter; then add the sugar, and proceed in the manner directed for syrup. 1 P b. U. S. Astringent. Dose for an adult, $f$ zss.; for a child 1 or 2 ycars old, gett. xv., to gtt. xx.]
[9. Syrupur Limonik. Lemon Syrup. Leuon juice, strained, $\mathrm{Oj}_{\mathrm{j}}$; refined sugar, thij. Ald the sugare to the juice, and proceed in the same manner as directed for Eyrup. Cooling.]
[10. Syrupus Pruni Virginiance. Syrup of Wild-cherry bark. Wild-cherry bark, in coarse powder, $\bar{\jmath}$ v.; sugar, 也ij.; watcr, q. s. Moisten the bark thoroughly with water, let it stand for twenty-four bours in a close vessel, then transfer it to a percolator, and pour water upon it gradually until a pint of filtered liquor is obtained. To tbis add the sugar, in a bottle, and agitate occasionally until it is dissolved.]
[10. Syr. Rhei. Syrup of Rhubarb. Rhubarb in coarse powder, $\mathrm{J}_{\mathrm{ij}}$.; alcohol, Oss.; water, Ojss.; sugar, 1Bij. Mix the alcohol and water, pour four fluid ounces of the liquid on the rhubarb previously mixed witb an equal bulk of sand, and allow the whole to stand four hours; then transfer the mass to a percolator, and gradually pour upon it the remainder of the mixed alcohol and water. Wben the liquor has censed to pass, evaporate it hy means of a water-bath to thirteen fluid ounces, and, having added the sugar, proceed in the manner directed for syrup. Pb. U. S. A laxative. Dose for a child, fZj. to f $\mathrm{f}^{\mathrm{ij}} \mathrm{i}$.]
[11. Syr. Rhei aromaticus. Aromatic syrup of rbubarb; spiced syrup of rhubarh. Rhubarh, bruised, Jiiss.; cloves, hruised; cinnamon, bruised, each $\overline{3}$ ss.; nutmeg, bruised, $Z_{i j}$. Macerate for fourteen days in diluted alcohol, Oij., and strain ; then by means of a watcr bath evaporate the liquor to 0 j ., and while hot add syrup, 0 vj . Ph. U. S. It may also be prepared by putting the rhubarh and aromatics, previously reduced to coarse powder and moistened with diluted alcohol, into a percolator; pouring upon them gradually diluted alcohol until two pints of filtered liquor are obtained; then evaporating to a pint, and completing the process as above directed. Warm, stomachic, laxatire. Used in bowel complaints, especially of children.]
[12. Syp. sarsaparilla compositus. Compound syrup of sarsaparilla. Sarsaparilla, hruised, tbij.; guniacum wood, rasped, $Z_{\mathrm{Z}}^{\mathrm{ijj} .}$; hundred-leaved roses, scnna, liquorice root, bruised, cach, $\overline{3} i j . ;$ macerate fourteen days in diluted alcohol, Ox.; express and filter; evaporate the tincture by means of a water bath to Oiv., filter; add sugar, tbviij. and make a syrup. Lastly, tako oil of sassafras, nil of anise, each Mv.; oil of partridge berry, Miij.; rub them with a small quantity of the syrup, and then mix thoroughly with the remainder. Pli. U. S. It may also be made by displacenent. Alterative. Dose, f $\bar{j}$ ss. to $\mathrm{f}_{\mathrm{j}}^{\mathrm{F}} \mathrm{j}$. : threce or four times a day.]
[13. Syr. Scilla. Syrup of squill. Vinegar of squill, Oj .; refined sugar, bij.

Make a syrup. Ph. U. S. Expectorant. Dosc, f3j.]
[14. Sygr. Scille compositus. Compound syrup of equill ; hive syrup. Squill, bruised; scneka, bruised, cach 马iv.; water, Oiv.; boil to one balf, strain, and add sugar, thiijss. ; then evaporate to three pints, and while the syrup is hot, dissolve in it tartratc of antimony and potassa, gr. ziviii. It may also bo made hy dieplacement. Emetic, diaphoretic, expectorant, and frequently cathartic.]
[15. Syr. Senegc. Syrup of seneka. Seneka, bruised, $\overline{3}$ iv.; water, Oj. Boil the water with the seneka to one balf, and strain ; then add sngar, refined, tbj. ; make a syrup. It may also he made hy displacement. Ph. U. S. Stimulating, expectorant. Dose, fZj. to fZij.]
[16. Syr. Sennce. Syrup of senna. Scnna, $\overline{3} \mathrm{ij}$. ; fennel-seed, hruised, $\overline{3} \mathrm{j}$. ; digest for an hour, at a gentle beat, in boiling water, $0 \mathrm{j} . ;$ strain, add sugar, $\overline{5} \mathrm{xv}$. and evaporate to a proper consistence. Ph. U. S. Catbartic. Dose for a cbild, fZi. to fZij.
[18. Syr. Tolutamus. Syrup of toln. Tincture of tolu, f jjss.; water, 0 j. ; sugar, thiiss. Mix the tincture with the sngar in coarse powder; expose the mixture in a shallow dish to a gentle heat until the alcohol has evaporated; then ponr the water upon it in a covered vessel, hcat gradually till the sugar is dissolved, and strain. Pb. U. S. Used to flarour mistures.]
[19. Syr. Zingiberis. Syrup of ginger. Tincture of ginger, f sugar, bx. Mix tbe tincture with four pounds of the sugar, in coarse powder. and expose to a gentle beat until the alcohol has evaporated. Add the residue of the sugar, and subsequently the water: beat gradually until the sugar is dissolred, and strain.]
[20. Syr. Ferri iodidi. Srrup of iodide of iron. The following formula, though : not officinal, is the best that has been proposed. Take of pure iodinc one bundred grains; iron filings, fifty grains; distilled water, onc ounce. Digest these for some time, filter and wash the fcrruginous mass with a little distilled water; unito tho nuids and add balf an ounce of sugar ; then eraporate down to one ouncc. Fonr parts of this syrup contain one part of iodurct of iron. Dose, six to twelve drops, three times a day.]
[21. Syr. Ferri sesquinitratis. Syrup of sesquinitrate of iron. The folloring formula for this very uscful preparation is
given by Mr. A. Duhamel, in the Am. Jour. of Pharmucy, for July, 1845. "Take of irnn wire, free from rust, and cut in picces,
 gar. $\overline{3} x i v$. Add to the iron the acid previously mixed with the water, and set asido the mixture for twelve hours, that the acid may be saturated. Decant the liquor from the undissolved iron, add the sugar, which you dissolve in it hy heat, and finally strain." Dose, gtt. x. to gtt. xxx. Very eficacious in some forms of chronic diarrhœea.]
[SYSTALLIC ( $\sigma v \nu$, with; $\sigma \sigma^{2} \lambda \lambda \omega$, to con. tract). Applied to the movement of parts which alternately contract and dilate.]
[SYSTEM ( $\sigma v \nu$, together; loテnu, to place). This word, taken in a good sense, signifies the assemblage and arrangement of things between which there exists an analogy, or which concur to the same end. In natural bistory it means the methodical arrangement of objects, in order to facilitate their study: it is then synonymous with method. But the word system is often used in an unfavorable sense, in the physical sciences, and then signifies a purely gratuitous supposition, to aecord with which nature is made to hend. In anatomy it signifies an assemblage of the organs composed of the same tissues, and designed for analogous functions.-Nysten.]
[SYSTEMIC. Belonging to the general circulation.]
[SYSTOLE. The movement of contraction of the heart to propel the blood.]
[SYSTOLIC. Relating to the systole of the heart.]
[SYSTEMATIC. Relating or appertaining to systems.]
[SYSTEMATIC BOTANY. An arrangement of plants nccording to the principles upon which they are connected with, and distinguished from, one another.]

The following is a sketch of the Artifi-
cial or Sexual System of Linnæus, and also of the Natural System:-
I. System of Livneus.

1. Classes.-Plants are distributed into twenty-four classes, founded on the number, position, aud relative connexion of the sexual organs. Of these classes, the first twenty have hermaphrodite flowers; the following throe, unisexual flowers; the last has no flowers. The first cleven classes are founded on the number of tho stamens; the 12th and 13th, on their mamber and position; the 14th and 15th, on their number and relative length; the 16th, 17 th, and 18 th , on modes of connexion subsisting hetween the filaments of the stamens; tho 19th, on connerion of the anthers of the stamens; the 20th, on connexion of the stamens with the pistil; the 21 st, 22 d , and 23 d , on modifications arising from unisexuality and hermaphroditism; the 24 th, on the ahsence, or ohscure nature, of the sexual organs, as compared with those of all the other classes.
2. Orders.-The classes are distributed into orders, the first thirteen classes being divided, each, into several orders depending on the number of the styles; the 14th, into two orders, the seeds, in the one, heing covered hy a seed-vessel, those in the other heing, as Linnæus erroneously supposed, naked; the 15 th, into two orders, the one characterised hy a long seed-vessel, or siliqua, the other hy a short one, or silicula; the $16 \mathrm{th}, 17 \mathrm{th}$, and 18 th , into several orders founded on the number of the stamens; the 19th, into threc orders relating to the unisexual, hermaphrodite, or neutral condition of the florets; the 20th, 21 st, and 22 d , into several orders dependent on the number and modes of connexion of the stamens; the 23d, into three orders founded on uniscxuality and hermaphroditism; the 24 th, on gencral natural aftinities. This, and tho preceding paragrapı, may he studied in connexion with the tables on the tro following pages.

## CLASSES AND ORDERS

$0 \mathrm{~F}^{\prime}$
THE LINNEAN SYSTEM OE BOTANY.
 These twenty-four Clabses are divided into Orders, as follows:-

1. The Orders of the first thirteen Classes are founded ou the number of styles in each flower:-
2. Monogynia, 1 style.
3. Digynia, 2 styles.
4. Hexagynia, 6 styles.
5. Trigyuia, 3 styles.
6. Heptagynia, 7 styles.
7. Trigyuia, 3 styles.
8. Tetragynia, 4 styles.
9. Pentagynia, 5 styles.
10. Octogynia, 8 styles.
11. Decayynia, 9 styles.
12. Polygynia, many styles.
13. The Orders of the fourteenth Class are tro, fouuded on the presence or (supposed) absence of a seed-vessel:-
14. Gymипкрermia, sceds 4, apparently naked; or, more correctly speaking, 2. Angciospermia, seeds in a distinet seed-vessel.
15. The Orders of the fifteenth Class are two, founded on the eomparatire length of tho sced-vessel:-
16. Siliqnosa, sceds in a long seed-vessel, or siliqua.
17. Siliculora, seeds in a short seed-vessel, or silicula.
18. The Orders of the sixteenth, seventeenth, nud cighteenth Classes are founded on the mumber of strmens in enels adelphia, or brotherhond:-
19. Triandria, 3 stamens.
20. Pentandria, 5 stamené.
21. Polyrudria, many stamene.
22. Tho Oiders of the nineteenth Class are three, fuunded on the strueture of the flower:-
23. Siqualis. All the florets perfeet.
24. Superflua. Florets of the disk perfeet; of the ray, pistilliferous only.
25. Frustranea. Florots of the disk perleet; thoso of the ray neuter.
26. The Orders of the twentieth Class are founded on the number of the stamens:1. Monandria, 1 stamen.
27. Diaudria, 2 stamens, \&e.
28. The Orders of the twenty-first and twenty-second Classes are founded on the number, union, and situation of the stamens:-
29. Mouandria, I stamen. 2 2. Diandria, 2 stamens.
30. Monadelphia, \&e.
31. The Orders of the twenty-third Class are three, founded on the eeparation of the sexes in the sane plant, or in different plants:-
32. Afoncecia. Unisexual flowers, aceompanied by barren or fertile flowers, or botb, all on one plant.
33. Diacia. The same, on two different plants.
34. Tricecia. The same, on three different plants.
35. The Orders of the twenty-fourth Class are Natural Orders, or Families :-
36. Filices.
37. Hepatica.
38. Funyi.
39. Mивсі.
40. Lichenes.
41. Alya.

## II. NATURAL SYSTEM.

Class I.-Exogens, or Dicotyledonous Flowertna Plants.
Leaves reticulated. Sten with bark, wood, medullary rays, and pith; increasing in diameter by the addition of new matter to the extevior. Flowers with a quinary, or, noore rarely, a quaternary, division. Seeds in a pericarp. Cutyledous t100, opposite; or, if more, whorled, or ou the same plane. Germiuution exorvhizous.

1. Divisions of Jussien.- The primary divisions are founded on the separation, the combination, and the absence of the petals, and are termed the polypetalous, tho monopetalous, and the apetalous groups; to whieh is added a fourth, founded on tho separation of the sexes in flowers baving no petals, and termed diclinous. The first three are divided with reference to the insertion of the stamens, which are epigynous, perigynous, or hypogynous; further, the monopetalous epigynous group is subdivided into plants which have their stamens united, and those which have them distinct. Hence we have eleven elasses:-

| Polypetalous | Stamens epirynous Clas |
| :---: | :---: |
|  | Stamens perirynnous .................................... 1 |
|  | $\{$ Stamens bypog |
| Monopetalous | Corolla hypogynou |
|  | orolla perigynous |
|  | Corolla epigyuous $\left\{\begin{array}{l}\text { Anthers united }\end{array}\right.$ |
| Apetalous | Stamens epigynous |
|  | $\{$ Stamens perigynous |
|  | (Stamens hypogynous .......... .............................. ${ }^{\text {a }}$. ${ }^{9}$ |
| i8ions of |  |

2. Divisions of De Candolle.-D............................................... II to four ; the first three being founded on the separation or even elasses of Jussieu parts of the flower, the fourth on the suppression of the flor eolesion of the several Thalaniforx, all the parts are present and distinet from eaeh other; in Culyeif, in the stamens adhere to the ealyx; in Corolliforme tho petals eother; in Calyeiflore, in Monoehlamydea, the corolia is suppressed and, in petals enhero with each other; enlyx also.
Polypetalous $\left\{\begin{array}{l}\text { Stamens hypogynous ................. Thalamifora. } \\ \text { Stamens perigynous ................. Culyciflora. }\end{array}\right.$
Monopotalous ....................................... Corollifora.
Apetalous .............................................. Monochlanydew.
3. Divieione of Dr. Lindley.-Dr. Lindley frst distributes the Class Into the Polypetalous, Monopetalous, and Incomplete sub-claszes; thesc are next divided into groups. The principles on which these divisions are founded are stated in the fullusping tuble:-

> Table of Groups. Sub-class I. Polypetalæ. Groups.

Albumen very considerably larger than the minute cmbryo

Albuminozc.

Albumen absent, or only forming a laycr between the embryo and the secd-coat.
Ovary inferior (often with an epigynous disk)
Epigynora.
Ovary superior.
Placentar parietal.
Placenta in the axis.
Calyx dislocated
Parietara.

Calyx complete; its parts being all on the same plane.
Carpels united into a solid pistil, parallel with each other

Syncarpore.
Carpels oblique, upon a gynobase
Gynobascosع.
Carpels disunited
Aросагровс.
Sub-class II. Incompletæ, or Apetalæ.
Calyx altogether absent
Aehlamydosc.
Calyx present.
Curvembryosc.
Embryo curved round albumen Columnora.
Embryo straight.
Stamens monadelphous
Stamens distinct.
Calyx tubular, often corolliform ............................... Tubiferose.
Calyx very imperfect ...................................... Rectembryose.
Sub-class III. Monopetalx.
Fruit consisting of but one perfect carpel ................... ................ Aggregora.
Fruit of several carpels.
Ovary inferior
Epigynoze.
0 rary superior.
Polycarpose.
Carpels thrée or morè Nucamentore.
Carpels only two.

4. Natural Orders.-The following are the Exogenous Orders, containing mediciual plants, arranged according to the above groups :-

1. Albuminosć

Ranunculaceæ.
Papaveracce.
Myristicaceæ.
Winteracce.
Umbelliferw.

## 2. Epigynorce.

Myrtacer.
Cucurbitacce.
3. Parietore.

Crucifere.
Violacer.

## 4. Calycasc.

Gnttifers.
Polygalacero.
Linacer.
5. Syncarposc.

Mnlvacce.
Diptcracce.
Aurantiacce.
Khamnacer.
Euphorbiacce.
Caryophyllacce.
6. Gynobarcosa.

Simarubacero.
Rntacer.
7.ygophyllacer.

Oxalidncere.
7. Apecarposc.

Rosacer.
lomacer.
Anygdalcre.
Leguminnse.
Amyridaces.

1. Achlamydose.

Piperaceæ.
Salicaceæ.
Balsamacer.
2. Curvembryosc.

Chenopodiacce.
Polygonacew.
Menispermacex.
3. Columnosc.

Aristolochiaceæ.
4. Tubiferosce.

Thymelacer.
Lauraceæ.
5. Rectembryosæ.

Cupulifere.
Urticacer.
Ulmaceæ.

1. Aggregoвce.

Composita.
Valerianaceæ.
2. Epigynosa.

Cinchonaceæ. Rubiaceæ.

## 3. Polycarpoвс.

Pyrolaccæ.
Convolvulacer.

## 4. Nucamentora.

Boraginaceæ.
Labiatæ.

## 5. Dicarposce.

Scrophulariaceæ.
Solanaceæ. Gentianacex. Oleacer.

## Class II.- Endogens, or Moxocotyledonous Flotvering Plants.

Leaves straight-veined. Stem increasing in diameter by the addition of nevo matter to the centre. Flovers with a ternary division. Embryo with one cotyledon. Gcrmination endorrhizous.

Divisions of Dr. Lindley. - There are two primary divisions, one having the organization of the flowers perfect, i.e., with a distinct calys and corolla, and a regular consulidated cotyledon; the other imperfect, tho calx and corolla being either entircly absent, or in an incompletc condition, and the cotyledon being commonly rolled up without consolidation, or actually flat. The former includes four groups, the latter two, the characters of which are stated in the following table:-

## Perfect Endogens.

Group 1.-Epigroses. Anthers distinct. Flowers complete, formed upon a ternary plan. Ovary inferior; or, if superior, then the leaves either scurfy or equitant.

Zingiheraceæ. Musaceæ. Hæmodoraccæ. Taccaceæ. Bromeliaceæ. Marantaceæ. Amaryllidaceæ. Burmanniaccæ. Iridaccæ. Hydrocharaceæ.
Group 2.-Gynandrose. Stamens and style consolidated into a central columu. Flowers complete, formed upon a tcrnary plan. Ovary inferior, usually one-celled, with scobiform seeds.

Orchidaceæ. Vanillaceæ. Apostasincer.
Group 3.-IIrpogynose. Flowers colourcd, formed upon a ternary plan. Ovary superior.

Palmaceæ. Melanthaceæ. Liliaccæ. Butomaceæ. Juncaccæ.
Pontederaccæ. Gilliesiaccæ. Coumelinaccæ. Alismaccr. Plilydraceæ.
Group 4.-Retose. Jacaves either with many ribs, the intervals betwceen which are irregularly netted, or with a midrib and netted sides; foot-stall taper, articulated with the stem. Embryo without a lateral slit. Flowers never arranged in a spadix. Floral envelopes complete.

Smilacer. Dioscorcaceæ, Roxburghiace.

## Imperfect Findogens.

Group 5.-Spadicoser. Flowers herbacenus or imperfect; the perinnth sometimes absent. Embryo with a lateral slit fur the ennission of the plumule. Pandanacer. Araces. Typhaceæ. Juncaginacea.

Group 6.-Gromoses. Bracts scale-like, glumaceous, imbricated, in the room of a calyx.

Graminacer. Desrauxiacer.
Сурсгасеw. Restiaceæ. Xyridaceæ.
Class IIf.-Acrogens, Cryptogamic, ob Flotrerless Plants.
Plants usually composed of cellular tissue only. Slem, when euch exists, increasing by extension of its point. Reproduction taking place either by spores enclosed in theco, or imbedded in the substance of the plant. Germination occurring at any part of the surface of the spore.
Sub-class 1.-Atheogamous. Plants furnished with air-vessels and stomates.
Filices. Marsiliacex. Lycopodiaceæ.
Equisetacer. Salviniacex. Marchantinccæ. Jungermanniaces.
Sub-class 2.-Amphigamotis. Plants having neitber air-vessels nor stomates. Characea. Andræaceæ. Fungaceæ.
Musci. Lichenaceæ. Algaceæ.

T BANDAGE. The peculiar bandage of the body, so named from its resemblance to the letter T. There is also a dmble $T$ bandage, which has two perpendicular pieces sowed to the transverse one.

TABACI FOLIA. Tobacco; tbe dried leaves of the Nicotiania tabrcum. The specifio name is perhaps derived from tabac, an instrument used in America for smoking tohaceo; hy some it is derived from Tubago, or from Tubasco, a town in New Spain.
[TABACUM. Tobacco. The Pbarmacopocial name for the leaves of Nicotiana Tabacum.]

TABASHEER. A siliceous suhstance found in tbe joints of the hamhoo, sometimes fluid, but generally in a concreted state. In foreign countries it is termed bamboo milk, salt of hamboo, and hamhoo crmphor. The word is derived from the Persian scher, or the Sanscrit kschirum, siguifying milk.

TABELLA (dim. of tabula, a tablo). A tablette, or lozenge.
'IABES. Literally, a wasting or melting; hence applied to consumption, and other emaciating disenses.

1. Tubcs dorsalis. Decline, from intemperate indulgence in lihidinous pleasures, 80 called from the weakness which it causes in the back or loins.
2. Tabes mesenterica. Mesenterio disease; tuherculous discase of the nbdomen, de. It has been termed by Sauvages, serofule mesenterica, as indientive of scrofulous diatbesis, and of the organs in which it appears; and by the French, carreau, whicla seems to refer to the hard and cushim-like prominenco of the abdo-
men; it has also been termed entero-mesenterite.
3. Taber saturnina. Tabes sicea. Wasting of the body produced by lead.
TABULA VITREA. The glassy table; a term applied to the dense internal plate of the skull.

TACAMAHACA. A resin procured from the Caluphyllum Calaba, a Guttiferous plant of the Enst Indies; it bas been termed olenm maria, green balsam, \&c.
[The hest authorities now suppose the Tacamnhac to he derived from the Fagara Octandra (Linn.), a tree of considerable size, growing in the island of Curaçoa, and in Venezuela.

A varicty obtained from the East Indies, and called tacamahacr orientale, or tacamabaca in testis, is supposed to he derived from the Calophyllum Inophyllunr.]

TENIA. The Tape-worm; an intestinal worm. See Ycrmis.

TIENIA (reivw, to streteb). A ligature; a long and narrow riband.

1. Tcnia hippocanipi. Trnia fimbriata; or the plaited edges of the processes of the fornix, which pass into the inferior cornus of the ventricles of the brain.
2. Tania semicircularis. A white line running between the esnrex surface of the optic thalami and the corpora striata.
3. Tania Tarini. A yellowisld 'horny bnad,' which lies over the vena corporis striata, first noticed by Tarinus. It is a thickening of the lining membrane of the rentricle.

TA'FEETAS VE'SICANT. Blistering cloth; employed as a substitute for the ordiunry blistering plaster. Sce Раиии ecoirutnrius.

TAFIA. Cane spirit. A spirit obtained, by distillation, from the fermonted juice of the sugar-canc.

TAHITI ARROW-ROOT. Otaheite salep. A nutritious fecula, prepared from the root of the Tasca pirmatifida, a native of the Molucca isles, aud of the islands of the Pacific Ocean.

TA'LBOR'S POWDER. Euglish Remedy. The name formerly given in France to cinchona, from the successful use of it in intermittent fever hy Sir Robert Talbor, who employed it as a secret remedy. For a similar reason it has at different times received the names of the Countess' Powder, Jesuits' Powder, \&c.

TALC. A foliated mineral, nearly allied to mica, and sometimes used as a suhstitute for glass.
TALC-EARTH. Ditter earth; bitter-salt-earth. Names for magnesia.

TALIACOTIAN OPERATION. A mode of forming a new nose from the integuments of the forehead, or from the arm, \&c. of another person. The statue of Gaspar Taliacotius stands in the anatomical theatre of Bononia, holding a nose in his hand.

TALIPES (talus, the ankle; pes, foot). Cluh-foot; a distortion of the feet, occasioned by the balance of the action of muscles being destroyed. See Clubfoot.

TALLICOONAH or KUNDAH OIL. The oil procured from the seeds of the Carmpa T'ouloncama, a tree growing abunduntly in Sierra Leone, much estcemed as an anthelmintic.

TALLOW. Animal fat, melted, and scparated from the fibrous matter mixed with it. There are the white and yellow candle talloo, and the common and Siherian soap tallow.
[TALLOW, VEGETABLE. A substance obtained hy the Chinese from the fruit of Stilliagia sebifera.]

TALPA. Literally, a mole. Hence, it is a tumour under the skin, compared to a mole under the ground. Sometimes it signifies an encysted tumour on the head.

TALUS. Literally, a dic, or a hucklc. hone, with which a game of dice was played. Hence the term is used for the astragalus, a bone of the tarsus rescmbling an ancicut die.

TAMARINDI PULPA. The pulp or preserved fruit of the Tamarindus Indica, a Leguminous plaut, named from the terms tumar, a date, and Indus, in reference to its Indian origin.
[TAMARINDUS. Tamarinds. The Pharmaeopeial name for the prescrved fruit of Treateriadus Indica; it genus
of plants of the natural erder Leguminos:e.]
[Tamarindus Indica. A native of the East and West Indies, Arabia, \&c., the preserved fruit of which is used as laxative and refrigerant.].
[TAMARIX. Tamarisk. A genus of plants of the natural order Tamaricaccer.]
[Tamarix gallica. T. mannifera. A species growing in the neighbourhood of Mt. Sinai, and affording a variety of manna.]

TA'MUS COMMUNIS. Commou Black Bryony, an indigenous plant, the root of which is employed for removing the marks of bruises. In France it is called the hes be "aux femmes batiues, tho herb for bruised women.
[TAMPON. A plug.]
TANACE'TIN. A non-azotized componnd, obtained from the Tanacetrm. Vulgare, and very similar to absinthin.
[TANACETIC ACID. A name given by Peschier to a peculiar acid found by him in Tanacetnm vulgare.]
[TANACETUM. Tansy. The pharmacopœial name for the herb of Tanacetum vulgare; a genus of plants of the natural ordcr Asteraceæ.]

Tanacetum vilgare. Common Tansy; a European plant, occasionally used for culinary purposes, and for making tansy tea. It contains an acid, called tatacetic acid.
[TANNASPIDIC ACID. A name given hy Luck to a peculiar acid found by him in the root of Aspidium Filix mas.]
[TANNATE. A combination of tannic acil with a salifiahlc base.]
[TANGHINIA VEN ENIFERA. A tree, native of Madagascar, belonging to the natural order Apocynacex, the kernel of the fruit of wbich is very poisonous, and was formerly used as an ordeal to ascertain the guilt of suspected persons.]

TA'NGUINE. Tunghicin. A bitter crystalline poisoneus principle procured from the seeds of the Tanghinia Madaguвсагіensis.

TANNIC ACID. [Tunnin.] An acid occurring iu the bark of all the varicties of Quercus and many other trces, and in gallnuts, from which it is procurcd in greatest purity. What is commonly called tennin is tannic acid mixcd with some forcign matters.

1. Arfificial termin. Producod by tho action of nitric acid on charcoal, or on substances containing charcoal.
2. Tumno-gchetior. A yellow flocculent procipitatc, cansed by a mixture of tamic acid with a solution of gelatinc. It is the essential busis of leather, hoing always formed when skins ure macerated in an infusion of bark.
[TANSY. Common name for Tunacetum vulgure.]

TANTALUM. A metal found in tho Swedish minerals tantolite and yttro-tantalite, and uaned on account of the insolubility of its oxide in acids, in allusion to the fible of Tantalus. It is identical with Columbiun.

TAPE'TUM ( тánns, tapestry). Literally, a cloth wrought with various colours; a term applicd by some anatomists to the inner surface of the choroidd, and, by Bell, to that portion which has also been known as the tunica Ruyschiana. Mr. Dalrymple denies that any such structuro occurs in the human cye.

TAPIOCA. A fecula prepared from the root of the Janipha Manihot. There are two kinds, viz., the granular tapioca, occurring in lumps or granules; and tapioca meal, a white amylaceous powder, supposed to be identical with Brazilian arrowroot.

TAPPING. The operation of puncturing the abdomen, and drawing off the fluid, in dropsy. Seo Paracentesis.

TAR. A thick, black, unctuous substance, chiefly obtained from the pine, and other turpentine trees, by burning them in a close smothering heat.

Tar-water. A once celebrated remedy, made by infusing tar in water, stirring it from time to time, and, lastly, pouring off the elear liquor, now impregnated with the colour and virtues of the tar.
[Tar-beer or Wine of Tar. A preparation used in pulmonary affections. It may be prepared as follows:-Take of ground malt, honey, and tar, each one pound; yeast, half a pint. Mix the malt and honey with six pints of water, in an earthen vessel; keep the mixture for three hours, with occasional stirring, at a temperature of $80^{\circ} \mathrm{F}$., and add the yeast. Sustain the fermentation for thirty-six hours by a heat hetween $70^{\circ}$ and $80^{\circ}$, then decant the supernatant liquid, add tho tar gradually to the dregs, stirring constantly, so as to make an uniform mixture, and return the decanted fluid to the vessel. Stir the whole oceasionally for a wcek, adding water so as to preserve tho original measure; then strain with strong expression, allow the expressed liquor to stand until it becomes nearly elear by subsidenee, and finally, filter through paper.]

TARANTISMUS (tarantula, an animal whose bite is supposed to bo cured only hy musie). Tho dancing produced by the bite of tho taramala; min affection, deseribed by Sanvages, which appears to constitute a form of chorea.
[TARANTULA. Aspecies of renomons
spider, the bite of wbich was said to be cured by music.]

TARAXACUM. The root of the Leontodon T'araxucum, or Dandelion, a plant of the order Composite.

Taraxacine. A crystallizable eubstanco extracted from the milky juice of the above plant.
'TARA'XACUM COFFEE. Dandelion Coffeo; a powder consistiug of taraxacum roots, well cleaned, dried, and powdered, and mixed with coffec.

TARAXIS ( $\tau \alpha \rho \dot{\sigma} \sigma \sigma \omega$, to confound). A slight inflammation of the eyc.

TARRAS, or TERRAS. A volcanic earth, found in Germany aud Sweden, and used as a cement.

TARSUS. The instep; the space between the bones of the leg and the metatarsus. Also, the thin cartilage situated at the edge of the eyelids.
[Tarsul. Relating to the tarsus.]
[TARTAR. A peculiar substance which concretes on the inside of wine-casks, being deposited there during the fermentation of the wine. When purified and reduced to powder it is the cream of tartar of the shops.]

TARTAR EMETIC. Tartrate of antimony and potass. Sce Antimony.

TARTAR OF THE TEETH. Tbe popular name for a concretion which encrusts the teeth. It appears to be a deposit from the saliva.

TARTAREOUS MOSS. The Lecanora tartarea, a cryptoganic plant, of the order Algacea, which yields the red and blue cudbcar. In Hollaud, litmus is prepared from this plant.
[TARTAREAN MOSS. Lccarora Tartarca.]

TARTARIC ACID. An acid existing in many fruits, and in several roots, but prepared only from the juice of the grape, in which it occurs in the form of tartar, or bi-tartrate of potash.

1. Para-tartaric acid. An aeid contained in the cream of tartar of tbo wines of the Vosges.
2. Tartralic acid. The first modification of tartarie acid, when exposed to a temperature of about $342^{\circ}$. The second modification is called tartrelic acid. The paratartarie acid undergoes similar modifications by exposuro to heat.
3. Tortro-vinic acid. Obtained by boiling tartaric aeid with absolute alcohol.
4. Tartro-carbydric acid. Obtained by treating pyroxylic, or mond spirit, with tartaric acid. Sce Carbydrogen.
5. Tartraf. A tartrate; a salt formed by the union of tartaric acid with a base.

The Edinhurgh Phormdcopeia formerly made use of the term tartris, or tartrite.

TARTARUM. Tartar, or the bi-tartrate of potash; a salt which precipitates duriug the fermentation of wine, owing to its iusolubility in aleohol. In the crude state, it is called argol; when purified, it is termed cream of tartar.

1. Serum lactis tartarizatum. Cream of tartar whey; prepared hy adding ahout two drachms of the bi-tartrate to a pint of milk.
2. Oleum tartari per deliquium. A liquid proeured hy oxposing carbonate of potash, ealled salt of tartar, to the air; it attracts water, and changes its form.
[TARTRATE. A combination of tartaric acid with a salitiahle hase.]
[1. Tartrate of autinony and potarsa. Tartar Enetic.]
[2. Turtrate of potassa and soda. Rochelle salt.]
[TASTELESS AGUE DROP. Fowler's solution, liquor potassce arsenitis.]

TAURIN (tcurus, an ox). A neutral snbstance, derived from unprepared oxbile.

TAXIDER'MY (тá̧ıs, order; dépна, skin). The art of preparing and preserving specinens of the skins of animals.

TAXIS (ráqow, to put in order). The operation of reducing a hernia with the hand.
[TAXUS BACCATA. The Yew. A tree belonging to the natural order Pinaceæ, the fretid leaves of which are said to be poisonous, especially to cattle.]
[TEA. The dried leaves of the Thea Chinensis, an evergreen shruh belonging to the natural order Ternstræmiaceæ, a native of China and Japan.]
[TEA BERRY. One of the common names for Gaultheria procumbens.]

TEA OIL. An oil procured from the seeds of the Camellia olcifera of China, hy expression. The Chinese term it chayew, which signifies tea oil.

TEARS. The peculiar fluid which lubricates the eye. This term denotes, in chemistry, any fluid falling in drops, as gnms or resins, exuding in the form of tears.
[TECOMA. A genus of plants of the natural urder Bignoniacer.]
[1. Tecoma impetiginosa. This plant ahounds in tannin, and a decoction of the bark is used as an astringent.].
[2. Tecomr ipe. This species has similar properties to the preceding, and is used in Brazil to forn a gargle for aphthous affeetions of the fances.]
[3. Tocomir stons. This is said to possess diurctic powers.]
[4. Tecoma speciosa. This is said to be both diuretic and cathartic.]

TE'CTUM ARGE'NTI. Marcasita. Names sometimes given to bismutl.

TEEL SEEDS. The produce of the Sesamum orientule, an Indian plant of the order Peduliacece. The sceds yield a bland fixed oil, ealled gingilic oil.

TEGUMENT (tego, to cover). A covering of the hody, as the cuticle, \&e.
TELA. A web of eloth; a term appliod to web-like tissues.

1. Tela cellulosa vel mucosa. The cellular tissues of organized hodies. It oeeurs in all parts of the animal body in general, and is termed intermedia vel laxa; it surronnds all the organs, and is then called stricta; penetrates into their interstices, and is then designated stipata; and is the hasis of all, serving in one sense to unite, and in another to separate them, and is then named organica vel parenchymalis. It has beon supposed to consist merely of mucus.
2. Tela adiposa. The adipose tissue of animals, consisting of an aggregation of microscopie resicles, grouped together, and connceted hy laminar cellular tissue. It is the resorvoir of the fat. See Tissute.
3. Tela aranearum. Spider's web, or cohweh; employed as a styptic, and internaily, in America, in intermittents.
4. Tela choroïdea. A memhraneous prolongation of the pia mater in the third ventriclo; it is also called velum interpositum.

TE'LA VESI'CATORIA. Taffetas vesicant. Blistering tissue. See Pammevesicatorills.
[TELANGIECTASIS ( $\tau \eta \lambda \varepsilon$, remote : $a \gamma-$ yesov, vessel ; eкtages, dilatation). Nievis maternus. Aneurism from Anastomosis. Dilatation of vessels reniote from the heart.]
TELERY'THRIN. A colouring matter ohtained by a further oxidation of crythrin.

TELLURIUM (tcllus, the earth). A rare metal, of a brilliant silvery-whito lustre.

TEMPERAMENT (tempero, to mix together, to temper). Crasis. A mixture or tempering of elements; a notion foundod on an ancient doetrinc of four qualities, supposed to temper each other: theso are, in the ahstract, hot, cold, dry, moist ; in tho conerete, fire, air, earth, water. Thus we lave--

1. The Sruguine or Sangninens tenperament, indicative of the predominanec of the sanguincous system; supposed to be characterized hy a full habit, soft skin, rudly eomplexion, hlue cyes, red or au-
burn hair (the flaves of the Romans, and the yellow-haired of the Scotel), frequent pulse, large veins, and vivid sensations.
2. The Mclencholic, or atrabilarious temperament. This is described as existing in a firmer and thinner frame than in the proceding ease, with a dark complexion, black hair, and a slow circulation ; the nervous system is less easily moved; the disposition is grave and meditative (medita-bundus.-Gregory).
3. The Chaleric, or hilious temperament. This is intermediate between the two preceding, and is marked by hlack curling hair, dark eyes, a swarthy, and at the same time ruldy, complexion, a thick, rougb, hairy skin, and a strong and full pulse.
4. The Phlegmatic, or pituitous temperament. This differs from all the preceding in the laxity of the skin, the lighter colour of the hair, and the greater sluggisbness of the fuculties hoth of animal and physical life.

TEMPERA'NTIA (tempero, to moderate). Refrigerantia. Agents which reduce the temperature of the hody when unduly augmented, as cold, acids, certain salts, \&c.

TEMPERATURE (tempero, to mix various things in due proportions). The comparative degree of active heat accumulated in a hody, as measured by an instrument, or by its effects on other bodies.

TEMPERING. The operation of heating iron to a certain extent, indicated by the colour presented on the surfaco of the metal.

TEMPORA (pl. of tempus, time). The temples, or that part of the head on which the hair generally hegins to turn gray, thus indicating the age.

Temporalis. A ruusele arising from the temporal fossa aud the semicircular line bounding it, and inserted into the upper part of tho coronoild process of the lower jaw. It draws the lower jaw upward.
[TEMULENTIA. Drunkenncss. Frequently applied in the deseription of diseases to a condition rosembling drunkenness. Mfania e temulentia synony mons with mania it potu and delirium tremens.]

TENACITY (teneo, to hold). The dogreo of foree with which tho particles of hodies coliere, or are hold together: a term particularly applied to metals which may bo drawn into wire, as gold and silver.

TENACULUM (tenco, to hold). A hook to lay hold of tho bieeding vessels in surgienl operations.

TENDON (reive, to stretch). A fibrous eord at the oxtremity of a menselo, by which tho muselo is attached to a bone.
[TENDRII. A filifurm appendage by which a climbing plant supports itself.]
TEN ESMUS (rcivw, to strain.) Straining; painful and perpetual urgency to alvine discharges. with dejection of mueus only, and in small quantity.
[TENOTOMY ( $\tau \varepsilon i v \omega$, to stretch; $\tau \varepsilon \mu \mathrm{r} \omega$, to cut). This term originally signified exclusively tho division of tendons; but as the ohject of this operation is to remedy accidents and particularly defurnitics which are proluced by adventitious fibrous hands, and hy the retraction of muscles and ligaments, as well as hy the retraction of tendons, it is now applied to every operation in which any part, which is shortened, or retracted, is dirided.]

TENSOR (tendo, to stretch). A muscle which stretches any part.

1. Tensor tympani. A muscle of the tympanum, which, hy its contraction, acts upon the membrana tympani, and modifies the sense of hearing.
2. Tensor vagince femoris. A mnscle arising from the spine of the ilium, and inserted into the fascia lata; whence it is also called fascialis. It stretches the fascia, \&c.

TENT. A roll of lint, or prepared sponge, for dilating openings, sinuses, $\& 0$.

TENTACULA (pl. of tentaculum, from tento, to feel). Feelers; organs hy which certain animals attach themselves to surrounding objects, \&c.

TENTORIUM (tendo, to streteh). A tent, or pavilion.

Tentorinm cerebelli. A roof of dura mater thrown across the cerchellum. In leaping animals, it is a bony tent.
[TEPHROSIA. A genus of plants of the natural order Fahacere.]
[1. Tephrosia Apollinea. A species growing in Egypt and Nuhin, said to be used to arlulterate the Alcxnndria Senna.]
[2. Tephrosia Leptostachya. This species has somo reputation in Senegal as a purgatire.]
[3. Tephrosia purpurca. An East Indian species proseribed by Ilindoo practitioners in dyspepsia, lientery, and tympanitis.]
[4. Tephrosia semna. This is used in Popayan as a snbstitute for senna.]
[5. Tephrosia toxicaria. This is employed in Jamaiea for intoxieating fisli.]
[0. Tephrosia Virginiama. An indigenons species, a decoction of the ronte of which is used by the Indians, aud in popular practice as a rermifuge.]

TEPIDARIUM (tepidus, warm). The warm bath. Sce Ruths.
[TERATOLOGY (repas, a monster;
doyos, a discourse.) A treatise on monsters.]

TERBIUM. A newly-discovered metal, occurring along with yttria. Sce Erbium.
[TERCHLORIDE OF FORMYLE.Chloriform.]

TERCINE (ter, thrice). The designation of the third integument of the ovale in plants, said to be the cpidermis of the nucleus.

TEREBELLA (dim. of terebra, a perforating instrument). A trepan, trephine, or instrument for sawing out circular pieces of the skull.

TEREBINTHINA (tifpuvos of Theophrastus). Turpentine ; a resinous juice yielded by most species of Pinus; the appellation, however, more properly belongs to the product of the genus Pistacia, which eontains the true terebinthus of the ancients. See Turpentine.

TE'REBYLE'NE. Terebenc. Liquid artificial camphor, obtained by passing bydrochloric acid into oil of turpentine, surrounded by ice. A solid compound is obtained at the same time, called solid or Kind's artificial eamphor.

TERES. Long and round. The name of two muscles, the major and the minor, which arise from the scapula, and are inserted into the humerus. They move the arm in various directions.

TERETE. Taper ; as applied to stems, and distinguished from angular.
[TERIODIDE OF FORMYLE. Iodoform.]
[TERMINALIA. A genus of plants of the natural order Comhretacea. The fruits of some of the species are known hy the aame of Myrohalans.]
[TERMINOLOGY ( $\tau \varepsilon \rho \mu \omega \nu$, a term;入oyos, a discourse.) A treatise on terms.]
TERNARY (ter, thrice). A term applied by Dalton to any chemical substanco composed of three atoms. See Atomie Theory.

Ternate. A term applied to parts which are united in threes.
TERRA. Enrth; as distinguished from mineruls, metals, etc.

1. Terra alba. Tho name given in trade to the povodered gypsum, employed in the manufacture of inferior lozenges, as a substitute for sugar.
2. Terra eariose. [Terra Tripolitana.] Tripoli, or rotten stone, consisting of sile. and clay.
3. Terra damnata vel mortue. Condeinned, or dead earth. The residne of some distillations; a term synonymous with caput mortusm.
4. Terra foliatu tertari. Foliated carth of tartar, or tho acetas potasse.
5. Terra Japonica. Jnpan earth, or Catechu. This is a mirnomer, the substance heing the inspissated juice of a species of Acacia.
6. Terra Lemnia. A holar earth, found in Lemmos; a compound of aluminum.
7. Terra marita. A name sometimes gisen to the curcuma or turmeric root.
8. Terra ponderosa. Heavy earth, calk, or harytes. The muriate is called terra ponderosa salita.
9. T'orra Siemna. A brown bole, or ochre, with an orange cast, brought from Sienna, and used in painting.
10. T'erra sigillota. Sealed earth. Little cakes of Lemnian earth, stamped with impressions, and formerly used as absorbents.
11. I'erra verte. Green earth; this is used as a pigment, and contains iron mixed with clay, and sometimes with chalk and pyrites.

TE'RRO-META'LLIC. Mfetallie earth. A material introduced by Mr. Peake, of Burslem, and consisting of a mixture of several kinds of clay, pulverized and tempered to a very fine state, the iron-hardness of the compound heing due to the peculiar quality of the clays employed.

TERTIAN (tertius, the third). A species of intermittent, or ague, in which the intermission continues for forty-eight hours, the paroxysm generally commencing about noon, and usually remaining under twelve hours. It occnsionally exhibits tho crtenating and protracted varictics. See Quotidian.

TERTIUM SAL (tertius, third). A neutral salt, so named from its constituting a third body, different from the acid and the alkali which compose it.

TEST (testis, a witness). A re-agent; a substance which, heing added to another suhstance, tests or distinguishes its chemical nature or cotoposition.

Test paper. Paper dipped several times in a filtered infusion of litmus, and dried after each immersion, until it is of a deep purple coloar.

TESTA. A shell. The shell of the Ostrea edulis, or Oyster.

1. T'esta preparata. Prepared shells. Tho shells are to bo well cleaned with hoiiing water, and then treated as in tho preparation of chalk.
2. Testa, in Botany. A general term for the intoguments of the seed, from its frequently presenting a glossy, shell-like appearance. Tho term is sometimes limited to the outermost of theso integuments.

TE'STA OYI. Putcmen ovi. Eiggshell. See Pellicnla ovi.

I'ESTIS (litorally, a witness, quas testio virilitatis). Orchis. a testicle;
the designation of two glandular bodies, also called didymi, situated iu the serotuni.

1. Tesics muliebrea. A former designation of the ovaries in women.
2. Of the Tubercula quadragemina of tho brain, the two upper aro named the nutes; the two lower, the testes.

TESTU'DO. Literally, a shell-erab, or tortoisc. A term under which Vogel has described a species of wen, or cyst, containing a fluid, which readily hardens into horn or nail.
[TETANIC. Appertaining to tetanus.]
TETA'NICA. Spastica. Agents which augment the irritability of the museles, indueing tetanus or spasm, as strychnia, \&o.

TETAN US ( $\tau \varepsilon i \nu \omega$, to stretch). Literally, stretched or stiff, but used suhstantively for contraction of the muscles of voluntary motion, attended with tension and rigidity of the parts affected. Its varieties aro founded on the particular manner in whieh the body is bent:-

1. Trismus, or Locked Jaw, in which the effects are confined to the flexor museles of the jaw or throat.
2. Tetauns, in whieh all the hody is affected, and becomes rigid, but retains its ordinary straightness; its effects are con. fined to the posterior and anterior muscles.
3. Emprosthotonos, in which the hody is bent furward; tetanus of the flexor muscles.
4. Opisthotonos, in whieh the body is bent haekwards; tetanus of the extensor muscles.
5. Pletrosthotonos, in which the hody is drawn to one side; this is the tetanus lateralis of Sauvages.
6. Tetanus is also distinguished, according to its intensity, into the acnte and the chronie; tranmatic, arising from wounds; and idioprathic, from various canses.
'JETRADINAMIA (тєгpàs, four', dúvauı, power). The fifceenth class of Linneus's systcuu of plants, characterized by the presence of six stamens, of which four are long, two short, as in Stock.

Tetrodyuemous. Having six stanens, of which two pair are longer than the third pair.

TETRANDRIA (terpis, four, dyin, male). The fourth class of plants in Liunæus's system, characterized by the presence of furr staruens of equal length. See Didynamia.

Tctrandrons. Having four stamens of about equal length.
[TETRANTHERA. A genus of plants of the oatural order Lauraece.

Tctramhera. Roxburghii. The fruit
of this eontains mueh fatty matter which is employed by the Chinese, as a substitute for tallow in the manufacture of candles. $]$

TEITER. A corruption from the French dartre, or the Greek daptós. This term has heen used synonymously with seall ; but its proper meaning is Herpes.
[TEUCRIUM CHAMEDRYS. Germander. A European Labiate plant, the leaves and tops of which have heen employed as a mild corroborant, in uterine, gouty, rheumatie, and scrofulous affections and intermittent fevers.]
[Teucrium marum. Cat thyme. A warm, stimulating, aromatic bitter, recommended for hysteria, amenorrbœa, \&e.
[Tcucrium acordium. Water germander. Formerly esteemed as a corroborant in low forms of diseases.]

THALAMIFLOR ※ (thalamus, a bed, flos, a flower). A sub-class of Exogenous plants, having a ealyx and corolla, pctals distinct, and stamens hypogynous. Every part of the flower springs separately from the thalamus, without contraeting cohesion with each other, as in Ranunculaceæ.
 applied to a part of the hrain from which the optic nerve arises. The thalamin nervorum opticorum were termed by Gall the inferior great ganglia of the brain.
[TIIALICTRUM. A genus of plants of the order Ranunculacee.]
[1. Thalictrum flarum. The root of this species is purgative, and is considered in Russia beneficial in bydrophobia.]
[2. Thalictrum sinensc. This is said to be laxative and demulcent, and is used in China in pectoral complaints.]

THALLEI'OCHIN ( $\theta i \lambda \lambda \in e w$, to flourish). A term suggested as preferable to dalleiochin, by which Brandes and Leber designated the green product of the action of chlorine and ammonia on quinia.
THA'LLLOGENS ( $\theta a \lambda \lambda d$ s. thallus; yivonat, to be produced). A division of acrogenous plauts, iu whieh there is no distinction bctween stem and leares, as in lichens, ulgre, and fungi. Sce Cormogens.
[TUALLOCHLOR. A grecer colouring substance, obtained from cetrarin.]

TIIALLDS. A term applied to the lobed frond of lichens, and to the bed of fibres from wbieh many fungi arise; it is generally euployed to deuote the combination of steu and leares in the lower eryptoganic plants.
[THAPSLA. A genus of plants of the natural order Umbelliferes.]
[Thapsia asclepias. Deadly earrot. The root is a viulent emetie and eathartic. It is not now used.]

THEA. A genus of plants of the order Ternstromiacee, including the Thea viridie, or green tea, and the Thea bohea, or bluck: tea.

Thein. A crystallizable substance, obtained by Oudry from tea. It is identical with caffein.

Thebinina. Paramorphia. A white crystalline substance, with alkaline properties, procured from opium. Its name is deriver from that of Thebes, an ancient city of Egypt.

TIIECA ( $\theta i \omega$, to put). A case or sheath. Hence, the dura mater of the spinal cord is sometimes called theea vertebrulis.

Theen in plants. A term applied to the arrity of the anther, to the sporangium of ferns, to the urn of mosses, \&c.

THECAPIIORE ( $0 \dot{\prime \prime} \kappa \eta$, a capsule ; ф́p $\omega$, to bear). The stalk upon which the ovary of plants is sonctimes scated. It is synonymous with gynophore, podogynium, \&e.

THEDEN'S BANDAGE. A particular handage, sometimes employed in bracbial ancurism ; it begins from the fingers, and extends gradually to the axilla. Scarpa says that it ought to be called the bandage of Genga.

TIIEIOTHE'RMIN. The name given by Monbeim to an organic substance found in mineral waters, whicb derives its origin from confervals. See Zongen.

TIlENAR ( $\theta_{\text {évep }}$ ). Vola. The palm of the hand. A muscle extending the thunh.

THE'NARD'S BLUE. A blne pigment obtained by beating phospbate of cobalt with pure alninina.
THEOBROMA CACAO. A plant of the order Sterenliacers, the seeds of which, when roasted and made into a paste with vanilla, constitute chocolute. The fragments of the seed-coats, mixed witb portions of the kernels, form cocon.

Theobromine. A crystallizable substance, obtained from the above plant, resembling caffein.
[TILEORY. A connected arrangement of facts, according to their bearing on some real or bypothetical law. An hypothesis has been distinguisbed from theory, as au assumption which is conceived to of ford a support to a discovered law. The abstract principles of any science or art considered without reference to practice. 1
THERAPEUTICS ( $\theta \varepsilon \rho a \pi \varepsilon \dot{v} \omega$, to heal). [Therapeir.] That brancb of nicdicine which relates to the treatment of disenses. It is distinguisbed into general and speeial therapcuties.
THERTACA ( $\theta$ nptakds, from Onpiov, a heast). Originally; a medical preparation against the bite of serpente, and against
poison in gencral; a term now applied to trencle.
TIIERM庣 ( $\theta$ t́pu7, beat). Warm batbs or springs.
[THERMAL. Appertaining to heat.]
TIIERMOMETER ( $\theta \dot{\varepsilon} \rho \mu \eta$, beat; $\mu \dot{\text { írpor, }}$ a measure). Literally, a measurer of heat; an instrument for comparing the degree of active heat existing in other bodies, by its effect in expanding a column of mercury.

1. Fahrenheit's Thermometer. That arrangement of the scale of the instrument, in which the space between the freezing aud the boiling points of water, under a medium pressure of the atmosphere, is divided into 180 parts, or degrees, the freezing being marked $32^{\circ}$, and the boiling 212. This scalo was adopted by Fabrenheit, hecause he smpposed, erroneonsly, that 32 of those divisions below the freezing point of water (which was therefore 0 on his scale) was the zero, or greatest degree of cold.
2. Centigrade Thermometer. Tbis is the thermometer of Celsius, whicb is used in France, and is the most convenient in practice : it consists in that arrangement of the scale, in wbicb the freezing point is marked 0 , or zero; and tbe boiling point, 100.
3. Recrumu's Thermometer. In this scale, the freezing point is marked 0 , or zero, and the hoiling point $80^{\circ}$. The degrees are continued of the same size, below and abore thesc points, those below being reckoned negative.
4. These different morles of graduation are casily convertible: the scale of Centigrade is redued to that of Fabrenheit by multiplying by nine and dividing by five; that of Reaunur to that of Fubrenheit by dividing by four instead of tive: or that of Fnhrenbeit to either of these, by reversing the process. Thus-
C. $100^{\circ} \times 9=900 \div 5=180+32^{\circ}=212^{\circ} \mathrm{F}$. R. $80^{\circ} \times 9=720 \div 4=180+32^{\circ}=212^{\circ} \mathrm{F}$. Or, hy reversing the order-
F. $212^{\circ}-32=180 \times 5=900 \div 9=100^{\circ} \mathrm{C}$. F. $212^{\circ}-32=180 \times 4=720 \div 9=80^{\circ} \mathrm{R}$.
5. A Table is added, showing the correspondence of tho three thermometers:
Fabrenheit. Centigrade. Renmur.

| 212 | $100^{\circ}$ |  |
| :---: | :---: | :---: |
| 200 | 93:33 | $74 \cdot 66$ |
| 190 | 87.77 | 70.22 |
| 180 | 82.22 | 6.5:77 |
| 170 | 76.66 | 61.33 |
| 180 | $71 \cdot 11$ | $56 \cdot 88$ |
| 150 | 65.55 | $52 \cdot 33$ |
| 140 | 60. | 48. |
| 1.30 | 55:50 | 43.53 |
| 120 | 4.85 | $38 \cdot 11$ |
| 110 | $43 \cdot 33$ | 3.46 |
| 100 | 375 | $30 \cdot 22$ |

Fahrenhoit. Centigrade.

THE'RMO-MU'LTIPLIER. An instrument invented by Melloni for investigating the phenomena of radiant beat. It consists of an arrangement of thirty pairs of hisuruth and antimony bars contained in a brass eylinder, and having the wires from its poles connected with an extremely delieate magnctie galranometcr.

THERMOSCOPE ( $\theta$ íp $\eta \eta$, beat; $\sigma \kappa 0 \pi \varepsilon$, $\omega$, to observe). The namo of a particular kind of thermometer, which shows or c.xhibits the changes of heat to the eye. So, pyroscope is the name of a partieular kind of pyrometer.

THERMOSTAT ( $\theta$ ह́p $\mu \eta$, heat; " ${ }^{\prime} \sigma \tau \eta \mu$, to fix). A self-acting apparatus for regulating temperature, constructed on the principle of the unequal expansion of metals by heat.
[THESIS. A dissertation on some suhject. An essay prepared hy a candidate for the degree of Doctor of Medicine.]
[THEVETIA. A genus of plants of the natural order Apocyuaceæ.]
[1. Thevetia ahouai. A Brazilian tree, the seeds of which are aero-narcotic, and its hark narcotic and purgative.]
[2. Thevetia neriffolia. A West Indian specics, the seeds of which aro violently acro-narcotic, and its hark eminently fehrifuge, two graius heing said to be equal to a full dose of einehona.]

THLIACE'TIC ACID. An acid formed by distilling pentasulphide of phosphorus with fused acetate of soda.

TIIIONU'RIC ACID. An aeid formed by adding sulplite of ammonia to a solution of alloxan.

TUIOSINNAMINE. A bitter crystalline organic base procured by the acction of ammonia on oil of mustard. Sco Sinnctmine.
[TIILASPI. $A$ genis of plants of the natural order Crueiferes.]
[1. Thlispi arvensc ; Treaele Mustard.
[2. Thlaspi conprestre $\}$ Mithredate mustard. The seeds of both these species have an acrid biting taste resembling mustard, and possess sinilar properties.]
[3. Thlaspi bursit pastoris. Common Shepherd's purse. Au extract prepured from the juiec of this speeies has been
lately extolled in hemorrhages, when the fibrin of the blood is diminished. The dose is ono to two drachus a day.]
[TIOMPSONIANISM. An absurd doetrine put forth by a Dr. Samuel Thompson of New York, which at one time found many dupes, and still prevaits, in a modified form, under the names of Botanic Medicine, Reformed Medicine, Eclectie Medicine, \&e. Its leading dogmaz are, that the buman body is composed of four elements, eartl, air, fire and water; that metals and mincrals are in the earth, and being extraeted from the depths of the earth, have a tendeney to carry down into the earth those who use them; that the tendency of all vegetables is to spring up from the earth, and therefore to uphold mankind from the grave. Consequently, Thompson repudiated all mineral medicines, and restricted bimself to regetahlo ones, and to steam.]

THORAX $(\theta \dot{\omega} \rho a \xi)$. The chest; or that eavity of the hody which contains the heart and lungs.

Thoracic duct. The great trunk formed hy the junetion of the absorhent resscls. See Ductns.

THORIUM. A metal ohtained from a hlack mineral, ealled thoritc, and named from the Scandinarian deity Thor. Thorina is considered to he a protoxide.
[THORN-APPLE. Drtura Stramonium.]
[THOROUGHWORT. Enpatorium perfoliatum.]
[THRIDACE. The inspissated exprcssed juice of the Lachen sativa.]

THRIDA'CIUM. French Lactuenrium. Extract of lettuce, obtained by evapornting the juice expressed from the stalks of the lettuce in the flowering senson.
TIIROMBUS ( $\theta \rho \delta \mu \beta$ os, congrulated hlood). A clot of hlood. Also, a thmour, formed by a collection of extravasated, coagulated blood. under the integuments after bleeding. When not considerable, it is generally termed ecchymosis.

TIIRUSII. The popular name for Aphther. The resicles of this disease hare been ealled by some writers "little white specke, or sloughs," or merely "a thlite fir," from attencling only to the ultimate state of the eruption. See Aplitha.

THUS ( $\theta i \hat{\omega}$, to saerifice). Frankinecnse; or the abietis resina of the lharmacopecin.
[TIIUYA OCCIDENTALIS. Arlor vita. An indigenons Coniferons trec. A deenction of the leaves and small twigs have been used in intermittent ferer, scurvy, rhemmatisu, de. The oil obtained from the leares by distillation bas been given as min anthelmintic.]

THLIIOSIS. A name given by Swe-
diaur to Frambeesia, arranged by him under the division of cachectic nleers.

THITMUS (Oúpos, a kind of oniou; a small blister on the flesh, \&c.) A conglomerate gland, sitnated in the thorax of the lutus, part of which remains during youth, and the whole of which usually disappears in old are.
[THYMUS VULGARIS. Thyme. A Labiate plant, well known as a potherb; aud occasionally used in baths, fomentations, and poultices, with other aromatic herbs.]

TIIYREO- ( $\theta$ upeos, a sbield). Names compounded with this word belong to parts attached to the thyreoild (eidos, likeness), or shield-like cartilage of the larynx.

1. Thyreo-arytanoïdens. A muscle arising from the thyreoid, aud inserted into the arytænoild eartilage. It widens the glottis.
2. Thyreo-epiglottideus. A muscle arisiug from the thyreoid cartilage, and inserted into the side of the epiglottis. It bas been divided hy Albinus into the major and the minor.
3. Thyreo-hyö̈deus. A muscle arising from the thyreoid cartilage, and inserted into the os hyoïdcs. It brings the laryng and hyoild bone towards each other.
4. Thyreo-pharyngeus. A designation of the constrictor inferior muscle, from its arising from the thyrcoild cartilage.
5. Thyreo-stophyliuus. A designation of the palato-pbaryngeus musele, from its origin and insertion.
[THYROID CARTILAGE. The largest cartilage of the Imrynx. It consists of two alæ, which meet in front at an acute angle, and form the projection termed pomum Adrami.]

THYROID GLAND. A body composed of two oval lobes, which are situated one on each side of the trachea, and are connected together by means of an isthmus, which crosses its upper rings.
THYRSUS. A form of inflorescence, consisting of a panicle, the middle branches of which are longer than those of the apex or base, as in lilac.
TIITSANOURA (0ívow, obsoleto; from Oúw, to move rapidly ; oùpù, a tail). Insects which junp by means of their tail, as the spring-tail.

TLBLA. Literally, a flute or pipe. The slin-bone; or the great bone of tho leg, so named from its resemblance to a pipe, the upper part representing the expanded or trumpet-like end; the lower part, tho Hute end of the pipe.

Tibictis. Tho name of two muscles of the tibia, the auticus or flexor, and tho pusticus or extensor tarsi tibialis.

TIC. A sound expressive of the action it iuports; derivel from the pungent stroke of pain, rescmbling the hite of an insect; or from the sound made by horses, which hite the mangor when thus affected. As a medical term it bas generally been applied to the discase ealled-

1. Tie douloureux. An affection of the fifth pair of nerves, or the nerves of sensation in tho face; it may have its seat in other sentient nerves in the limbs. It is the trismus dolorificus of Sauvages.
2. Besides this form of tic, there is anotber, which, in the face, is an affection of the seventh pair of nerves, or the nerves of expression: on being excited, the face of the patient is variously and spasmodically drawn ou one side, without pain. It seems to be occasioned sometimes by exposure to cold.

TICK-BITE. Infestment of tho skin by the Aearus, or lick ; an insect which presents the following varieties:

1. Aearus domesticns. The domestic tick; observed in great numbers on the head, near gangronous sores, and dead bodies; it is probably the Acarus leueurus of Linnæus.
2. Acarus seabiei. The itch-tiek; burrowiug in, or near, the pustules of the itch. See Itch Inseet.
3. Acarrs outnmalis. The harvestbug, so called from its biting in the autumn. From the glossy wheals which its bite produces, it bas been called whealworm.
[TICORE'A. A genus of plants of the natural order Rutaceæ.]
[Ticorea febrifuga. A South American trec, the hark of which is said to be a very active antiperiodic.]

TIGLII OLEUM. Oil expressed from the seeds of tho Croton tiglium. Tho seeds are known under tho names of grana Molucea, tiglii grana, and grana tiglia; their acrid principle is called tiglin. Tho wood of the plant is termed ligurm proance.

TI'KOR. A fecula prepared in tho East Iudies from the tubers of several species of Curemma.

TLME. A term in phrenology indientive of tho faculty which conceives tho duration of phenomena, their siaultaneousness or succession. Its organ is seated above the middle of tho eychrow.

TIN. A white metal, foumd abundantly in Coruwall. The alehemists called it Jove, or Sifiter: See Sianmm.

Till-foil (folium, a leaf). Leaf tin; an alloy of tin and lead, sold in the form of a thin lenf.
'ILNC. OS (tinca, a tench). Musear
de tanche. The tench's mouth; a desig- it diluted aleohol, until two pints of filtered nation of the os uteri, from its fancied resemblunce.

TINCAL. Crude borax, as it is imported from the Eust Indies, in yellow greasy erystals. Wheu purified, it constitutes the refined borax of commerce.

TINCTIJRA (tingo, to tinge). A solution of certain principles of vegetables or animal inatter, in alcohol, proof spirit, or spirit of greater or less density.
[The officinal Tinctures of the Ph. U.S., and the formulw for preparing them, are as follows :-
[1. Tinctura Aconiti foliorım. Tincture of aconite leaves. Aconite leaves, $\overline{3}$ iv.; diluted alcohol, Oij. Macerate for fourteen days, express, and filter tbrough paper. This tincture may also be prepared by thoroughly moistening the aconite leaves, in powder, with diluted alcohol, allowing tbe mixture to stand for twentyfour hours, then transferring it to a percolator, and gradually pouring upon it diluted alcolol until two pints of filtered liquor are obtained.]
[2. T'r. Aconiti Radicis. Tineture of aconite root. Aconito root, well bruised, \#bj.; diluted alcohol, Oij. Maeerate for fourteen days, express, and filter through paper. It may also be prepared by displacemert, in tbe following manner:Aconite root, in powder, lbj. ; alcohol, q. s. Mix the aconite root with a pint of alcohol, and allow the mixture to stand for twentyfour hours; then transfer it to a percolator, and pour alcohol gradually upon it until two pints of the filtered liquid are obtained.]
[3. Tis: Aloes. Tincture of aloes. Porvdered alues, $\overline{3}$ j. ; liquorice, ${ }^{3}$ iij. ; alcohol, Oss.: distilled water, Ojss. Macerate for fourteen days, and filter through paper.
[4. Tr. Alocs ct Myrrhe. Tineture of alues and myrrb. Powdered nloes, $\overline{\text { onijo }}$; saffron, $\mathrm{J}_{\mathrm{j}}$.; tinct. of myrrl, Oij. Macerate for fourteen days, and filter through paper.
[5. Tinctnra Assafoxtida Tincture of assafoctida. Assafoctida, ${ }^{\mathrm{J}} \mathrm{iv}$. ; alcohol, Oij. Macerate for fourtecu days, and filter.
[6. Tr. Belladonme. Tincture of belladonma. Belladonna, ${ }^{\text {J. iv.; diluted ateohol, }}$ 0 ij . Macerate for fourteen days, express, and filter through paper. This tincture may also bo prepured by thoroughly moistening tho belludomna, in powder, with diluted aleohol, allowing it to stand for twenty-four honrs, then transferring it to a percolator, and gradually pouring upon
liquor are obtained.]
[7. Tr. Benzoini Composita. Compound tincture of henzoin. Benzoin, 亏ijij.; puri-
 dered aloes, $\overline{3}^{\text {sse }}$; alcohol, Oij. Macerats for fourteen days, and filter through-paper. Stimulating expectorant.
[8. Th:. Campherce. Tincture of campbor. Camphor, Ziv.; alcohol, Oij. Dissolve.
[9. Tr. Cantharidis. Tincture of Spanish flies. Spanish flies, bruised, ${ }^{\text {J.j. }}$; diluted aleohol, Oij. Macerate for fourteen days. Express and filter. It may also be prepared by displacement.
[10. Tr. Cupsici. Tincture of Cayenne pepper. Cayenne pepper, $\overline{\mathfrak{j}}$ j. ; diluted alcohol, Oij. Macerate for fourteen days, and filter. It may also be prepared by displacement.
[11. Tr. Cardamomi. Tincture of eardamom. Cardamoun, bruised, $\overline{3}$ iv.; diluted alcohol, Oij. Macerate for fourteen days, express, and filter. It may also be prepared by displacement.
[12. Tr. Cardamomi Composita. Compound tincture of cardamon. Cardamom,
 namon, bruised, $3^{\text {r.; raisins, deprived of }}$ their seeds, $\overline{\mathrm{J}}$ r.; cochineal, bruised, 3 j - ; diluted aleohol, Oijss. Macerate for fuurteen days, express, and filter.]

- [13. Tir. Custarei. Tincture of enstor. Castor, bruised, $\overline{\text { 亏1 }} \mathrm{ij}$.; alcohol, Oij. Macerate for seven days, and filter.
[14. Tir. Cutechn. Tincture of cateehu. Catechu, $\bar{J}^{\mathrm{iij} .:}$ cinnamon, bruised. ${ }^{\mathrm{J}} \mathrm{ij}$.; diluted alcohol, Oij. Macerate for fourieeu days, express, and filter.
[15. Tr. Cinchone. Tincture of Perurian bark. Yellow bark, in powder, $\overline{5}$ ri.; diluted aleohol, Oij. Mneerate for fourteen doys, express, and filter. It may also bo prepared by displacement.
[16. 7r. Cinchonce Composita. Compound tineture of Peruvian bark. Iuxhau's tincture of bark. Red bark, in powder, $\tilde{J}^{\mathrm{ij}}$. ; orange peel, hruised, $\mathbb{J}_{\mathrm{J}} \mathrm{iss}$; Virginia snakeroot, brnised, Jiij.: s.atlron, eut, red sanders, rasped, each, $\overline{\mathrm{j}}$. : diluted aleohol, foxx. Macerate for fourteen days, express, and filter. It may also be prepared by displacement. Au excellent stomachic eordial.
[17. Tir. Cinnamomi. Tineture of cinnamon. Cimamon, bruiserl. $\overline{\tilde{j}} \mathrm{iij}$. ; diluted alcohol, Oij. Marerate for furticen days, express, and filter. 1t may also be prepared by displacemento Aromatic and astringent.
[15. Tr. Cinnamomi Composita. Com-
pound tincture of cinnamon．Cinnamon， bruised，$\overline{3} j . ;$ cardnnom，bruised， $\bar{J}$ SS．； ginger，bruised， 3 iij ．；diluted alcohol， Oij ． Macerate for fourteen days，cxpress，and filter．It may also be prepared by dis－ placement．
［19．Ti．Colchici Seminis．Tincture of colcbicum seed．Colchicum sced，bruised，亏iv．；diluted alcohol，Oij．Macerate for fourteen days，express，and filter．It may also be mide by displacement．
［20．Tr．Colombe．Tincture of columbo． Columbo，bruised，${ }^{3} \mathrm{iv} . ;$ diluted alcohol， Oij．Macerate for fourteen days，express， and filter．It may also bo prepared by displacement．
［21．Ti．Conii．Tincture of hemlock． IIemlock leaves，$\overline{3} \mathrm{iv}$. ；diluted alcohol， Oij．Macerate for fourteen days，express， and filtcr．It may also be prepared by displacement．
［22．Tr．Cubebe．Tineture of cubebs． Cubebs，bruised，亏iv．；diluted alcohol， Oij．Macerate for fourteen days，express， and filter．It may also be prepared by displacement．
［23．Tr．Digitalis，Tincture of Fox－ glove．Foxglove，矛iv．；diluted alcohol， Oij．Macerate for fourteen days，express， and filter．It may also be prepared by displacement．
［24．Tr．Galle．Tincture of galls． Gills，bruiscd，$\tilde{亏} \mathrm{iv} . ;$ diluted alcohol，Oij． Macerate for fourteen days，express，and filter．It may also be prepared by dis－ placement．Powerful astringent．
［25．Tr．Gentiana Composita．Com－ pound tincture of gentiau．Gentian， bruised， $\bar{z}^{\mathrm{ij} .}$ ；orangc－peel，$\overline{\mathrm{J}} \mathrm{j} . ;$ carda－ mom，bruised，${ }^{\text {S }}$ ss．；diluted alcolsol，Oij． Maceratc for fourteen days，express，and filter．It may also be prepared by dis－ placement．
［26．Tr．Gıaiaei．Tineture of guiaiae． Guiaise，powdered，thss．；alcohol，Oij． Mrcerate fourtcen days，and filter．
［27．Tr．Guaivei Ammoniata．Guniac， powdered， $\bar{z}$ iv．；aromatic spirit of ammo－ nia，Oiss．Maccrate for fourteen days，and filter．
［The following is the formula for the volatile tincture of guaiacum，recom－ mended as so efficacious by tho lato Dr． Dewces，in suppression of the menses，and dysmenorrboca．Best guaiac，in powder， Jiv．；earbonate of sola or potassa，$\overline{3}$ iss．； pinento，in powder，${ }^{3} j$ ．；diluted alcohol， ibj．Digest for a few days．The volatile spirit of ammonia is to be added，pro re nata，in the proportion of ono or two drachms，to every four ounces of tho tincture；more or less agreeably to tho state of the systom．Dosc，a teaspoonful，
morning，noon，and evening，in a wine－ glassful of sweetencd mills，or，where not contra－indicated，as much wine．
［28．Tr．Hellebori．Tincture of hlack hcllebore．Black hellebore，bruised，Ziv．； diluted aleobol，Oij．Maceratc for four－ teen days，express，and filter．It may also be prepared by displacement．
［29．Tr．Humnti．Tincture of hops． Hops，${ }^{2} \mathrm{~V}$. ；diluted alcobol，Oij．Macerate for fourteen days，express，and filter．
［30．Tr．Hyoseyami．Tincture of hen－ banc．Henbane leaves，$\overline{3} \mathrm{ir}$ ．；diluted al－ cohol，Oij．Maeerate for fourteen days， express，and filter．It may also be pre－ pared by displacement．
［31．Tr．Fodini．Tineture of iodine． Iodine，${ }_{3} \mathrm{j} . \hat{\xi}$ alcoliol，Oj．Dissolve．
［32．Th＇Iodini Composita．Compound tincture of iodinc．Iodine， $\bar{z}$ ss．：judide of potassium，${ }^{3} j$ ．；alcohol， 0 j ．Dissolve．
［33．Tr．Jalapae．Tincture of jalap． Jalap，powdered， $\bar{j}^{7} \mathrm{Vj}$ ．；diluted alcohol， Oij．Mneerate for fourteen days，express， and filter．It may also be prepared by displaeement．
［34．Tr．Kino．Tineture of kino．Kino， in powder，$\overline{3}^{\text {vj．；diluted nlcobol，q．s．}}$ Mix the kino with an equal bulk of sand， and，having introduced it into a perco－ lator，pour diluted alcohol gradually upon it until cight fluid ounces of filtered liquor are obtained．This tincturo is apt to de－ tcriorate rapidly by exposurc．
［35．I＇r．Kramerice．Tincture of rha－ tany．Rhatnoy，powdered，$\overline{3} \mathrm{vj}$. ；diluted alcohol，Oij．Macerate for fourteen days， express，and filter．It may ulso be pre－ pared by displacement．
［36．Tr．Lubelice．Tincture of lobelia． Lobclia，$Z^{2} \mathrm{iv}$ ．；diluted alcohol，Oij．Ma－ ccrate for fourtecn days，express，and filter．It may also be prepared by dis－ placement．
［37．Tr．Lupulince．Tincture of Jupu－ lin．Lupulin，Siv．；alcohol，Oij．Maee－ rate for fourtcen days，and filter．
［38．Tr．Myrrha．Tincture of myrrh． Myrrh，bruised，$\overline{3}$ iv．；alcohol，Oiij．Ma－ eerate for fourtecn days，and filter．
［39．Tr．Nucis Vomica．Tincturo of nux vomica．Nux vomica，rasped，$\overline{\tilde{j}}$ viij．； alcohol，Oij．Maccrate for fourtcen days， express，and filter．It may also bo pre－ pured by displacement．
［40．Ti．Olei Mentha Piperite．Tine－ turo of oil of peppermint．（Essence of peppermint．）Oil of peppermint，fīij．； alcohol，Oj．Dissolve．
［41．Tr．Olei Mcntha rivitis．Tincture $\frac{0}{3} \mathrm{ij}$ ．：ulcolol，oj Oj ．Dissolve．spearmint，
［12．Tr．Opii：Tincture of opium（hu－
danum）．Opium，powdered，$\overline{3}$ iiss．；di－ luted alcohol，Oij．Macerate for fourteen days，express，and filter．
［43．Tr．Opii Acetala．Acetated tinc－ ture of opium．Opium，$z_{i j}$ ；vincgar， $f_{3} \mathrm{xij}$ ．；alcobol，Oss．Rub the opium witb the vinegar，tben add the alcobol，mace－ rato for fourteen days，express，aud filter．
［44．Tr：Opii Ćamphorata．Campho－ rated tincture of opiun（paregoric elixir）． Opium，powdered，benzoic acid，each，．j．－； oil of anise，fZj．；clarificd honcy， $\mathrm{Z}^{\mathrm{ij} .}$ ； ermphor，Эij．；diluted alcobol，Oij．Ma－ cerate for fourteen days，and filter．
［45．Tir．Quassice．Tincture of quassia． Qunssia，rasped， $\mathrm{Jij}^{\mathrm{ij} . ; ~ d i l u t e d ~ a l c o h o l, ~ O i j . ~}$ Macerate for fourtcen days，express，and filter．It may also be prepared by displace－ ment．
［46．Tr．Rhei．Tincture of Rhabarb． Rhubarb，bruised，Jiij．；cardamom， bruised， $\mathrm{Z}^{\text {ss．}}$ ；diluted alcohol，Oij．Mn－ cerate for fourteen days，express，and fil－ ter．It may also be prepared by displace－ ment．
［47．Tr．Rhei et Aloës．Tincture of rlubarb and aloes（sacred elixir）．Rhu－ barb，bruised， 3 x. ；aloes，powdered， 3 rj ； cardamom，bruised，$\overline{3}$ ss．；diluted alcobol， Oij．Macerate for fourteen days，express， and filter．
［48．Tr．Rhei et Gentiance．Tincture of rhubarb and gentian．Rbubarb，bruised， Zij．；gentian，bruised，$\tilde{亏}_{3}$ ss．；diluted alco－ hol，Oij．Maccrate for fourteen days，ex－ press，and filter．It may also be prepared by displacement．
［49．Tr：Rhei et Senur．Tincture of rhubarb and senna（Warner＇s gout cor－
 coriander，bruised，fennel－secd，bruised， eacb，$Z_{j}$ ．；red sanders，rasped， 3 ij．；saf－ fron，liquorice，each， $\mathbf{J s s}^{\text {ss．}}$ ；raisins，dc－ prived of their seeds，\＃ss．；diluted alco－ hol，Oiij．Macerate for fourtcen days，ex－ press，and filter．
［50．Tro．Sanguinaria．Tincture of bloodroot．Bloodroot，bruised， $\mathrm{J}_{\mathrm{ir}}^{\mathrm{ir}}$ ；rli－ luted alcohol，Oij．Maccrate for fourteen days，express，and filter．It may also be prepared by displacement．
［51．Tr．Suponis Camphorata．Campho－ rated tincture of sonp（sonp liniment）． Suap，in shavings， $\bar{J} \mathrm{iv}$ ．；camphor， $\mathrm{Jij}^{\mathrm{ij} . ;}$ nil of rosemary，fosss．；alcohol，Oij．Di－ gest tho soap with tho alcoliol by means of a water bath till it is dissulved；then filter，and add the cauphor and oil．
［52．Ti．Scille．＇I＇incture of squill． Squill， $\mathrm{Z}_{\mathrm{iv}}$ ；rliluted aleohol，Oij．Mnce－ rate for fourteen days，express and filter． It may also bo prepared by displace－ ment．
［33．Tio．Sennce et Julupa．Tincture of senna and jalap．Senna，Ziij．；jalap，in powder，${ }^{3} j$ ：coriander，bruised，caraway， bruised，cach，そss．；cardamotn，bruised， Zij．；sugar，${ }^{\text {iv．}}$ ；diluted alcobol，Oiij． Maccrate for fourtecn days，express，and filter．It may also be prepared by dis－ placement．
［54．Tr．Serpentaria．Tineture of Vir－ ginia snakeroot．Virginia snakeroot， bruised，Ziij．；diluted alcohol，Oij．Macc－ rate for fourteen days，express，and filter． It may also be prepared by displace－ ment．
［55．Ir．Stramonii．Tincture of stramo－ nium．Stramonium seed，bruised，そiv．； diluted alcohol，Oij．Macerate for fourteen days，express，and filter，It may also be prepared by displacement．
［56．Tr．Tolutana．Tincture of tclu． Balsam of tolu，$\overline{3}$ iij．；alcohol，Oij．Mace－ rate until the balsam is dissolved，tben filter．
［57．Tr．Valeriance．Tincture of rale－ rian．Valerian，bruised，$\overline{3}$ iv．；diluted al－ cohol，Oij．Macerate for fourteen days， express，and filter．It may also be pre－ pared by displacement．
［58．Ir．Valeriance Ammoniata．Am－ moniated tincture of valerian．Valerian， bruised，Jir．；aromatic spirit of ammonia， Oij．Macerate for fourteen days，cxpress， and filter．It may also be prepared by displacement．
［59．Tr．Zingiberis．Tincture of ginger． Ginger，bruised， $\bar{j}$ riij．；alcohol，Oij．Ma－ cerate for fourteen days，express，and fil－ ter．It may also be prepared by displace－ ment．］

TINEA．Literally，a moth－morm．A term applied to scald head，when the scabs have resembled moth－boles in cloth．This has been termed favus，when it resembles a boncy－comb；and achores，wben tbe dis－ charge has been unusually＂acrimonious． See Porrigo．

TINNI＇TUS AURIUML（imnio，to tinkic，as metals）．Ringing iu the cars．

TI＇SAN DE FELTZ．A remedy some－ times used in entaneous discases；prepared from sarsaparilla，crude antimony，and isinglass．

TISSUE．Ticla．A web，or web－like structure，eonstituting tho elementary structures of animals and plants．

1．Cellular tissuc．An assemblage of whitish，filamentous cxtensile，tenacious， and retractile lamino，found in all parts of organized bolies，runuing in all direc－ tions，and leaving hetween thens small spaces or cellules of variable cxtent．

2．Adipose tiasuc．A variety of the eel－
lular, forming a reservoir for the adeps, or fut.

3 Reticular tissue. A variety of the eellular, in which the cellules are larger, and the lamina and fibres by which they are bonuded much thinner and more delieate.
4. Compact tissue. A tissue formed by fihres plaeed so elose together as to leave no intervals : it exists at the surfaee of bones, and forms the walls of the various apertures and eanals which may oeeur in them. The bones of the skull eonsist of eellular tissue, ealled diploë or meditullium, plaeed between two thin tahles of compact tissue.
5. Tissue, adventitious, or accidental. A morbid production in general, either of entirely new formation, or resembling any of the natural tissues of the body.

TITANIUM (fitavos, ealx). A metal which, in the form of titanic acid, eonstitutes several minerals, as menaehanite, \&e.
[TITHONICITY. A ehemical foree, supposed to he an independent imponderable, distinct from light, beat, and electrieity, - existing in the spectrum, whether solar, or from artificial light.
[TITIONOMETER. An instrument for measuring the foree of the ehemical rays in any ray of light.]

TITILLA'TION ( (itillo, to tickle). The production of laughter, suggested as a remedy for paralysis. A feather is passed lightly aeross the palm of the band, three or four times daily, until laughter is oeeasioned.

TITUBATIO (titubo, to stagger). [Tituhation.] Fidgets. General restlessness, accompanied with a perpetaal desire of changing the position.

TOADSTOOLS. Fiungivenenati. Poisonous fungi ; these inelude all the speeies of Amanita, a sub-genus of Agaricus. See the last paragraph of the article Poisons.

TOBACCO. The dried leaves of the Nicotania tabuerm, a plant indigenous to Ameriea; its peeuliar prineiple is termed nientin.
TO'DDY. Palm-wino; prepared, by fermentation, from palm-singar.

TOILE PREPARÉE À LA CIRE.A blistering plaster employed by the Freneh, and prepared by spreading on eloth eight parts of white wax, four parts of olive oil, and ono part of turpentino (Henry and Guibourt).
[TOKOLOGY. Obstetries.]
TOLERANCE (mpero, to hear). A term employed hy Rasori to denoto the power of hearing a remedy. Poiseuille suggests that tho "tolerance of remedies" may be
due to the eontact of the same snlostanco with the membranes of the digestive tube, whieh, in consequence, becomes unfitted for transmitting the same quantity of fluid in to the blood.
[TOLUIDINE. An organic base obtained from the oil of the halsan of Tolu. This new alkali is volatile, eontains no nitrogen, and belongs to a elass of bases represented by aniline.
[TOLUIFERA BALSAMUM. A synonyme of Myroxylon Tolutanum.]

TO'LUOLE. An oily hydroearbon obtained by distillation from balsam of Tolu.
[TOLUTANUM. Ph. U. S. Balsam of Tolu. The juice of the Myroxylon Tolutanm.]

TOMBAC. A white alloy of copper with arsenic, ealled white copper.

TOMENTOSE. Covered with tomentum.

TOMENTUM. Short, elose down.
TONGUE. Lingma. The organ of taste and speeeh. See Papilla.
[TONIC (rcive, to draw). A rigid contraetion of the museles, without relaxation, as in trismus, \&e.]

TONICA. Tonies; "substanees whiel neither immediately nor sensibly eall forth aetions like stimulants, nor depress them like sedatives, but give power to the nervous system to generate or seerete the nervous influence by whieh the wholo frame is strengthened."-Dr. Billing.

Tonica mincralia. Mineral tonies, comprising the metallie tonies, the mineral aeids, and alum.

TONICITY. A property of the museles, distinet from the true or Ilallerian irritability, and probahly dependent on an aetion of their nerves, and the nervous eentres; by this power of the dilators of the larynx, this organ is kept open, whereas it beeomes partially elosed on dividing the recurrent nerves; by this power the face is symmetrieal, whereas it becomes distorted when the seventh nerve on one side is paralyzed; ly this power the sphincters are kept elosed, \&e.

The term tomicity is often used synonymously with elastieity, to denote that property of the museular fibre.
[TONKA LEAN. The seed of the Dipterix. aderote. Willd.]

TONSILS (Iomdeo, to clip, or shear). Amyylula. The round glands situated between the pillars of the velum palati.

Tomsillitis. Inllammation of the tomsils; a barbarous combination of the Latin word tonsilla and the Greek termination itis.
[TOOTII. See Dens.]

TOOTH-RASTI. A cutanenus disease. peculiar to infauts. See Strophulus.

TOPII US (ró申os, a crumbling gravel stone). A swelling which particularly affeets a hone, or the periostcum.

Tophaceous. A term frequently applied to bodies, found in the lungs, resenbling stone, and consisting of eartilage, with points hero and thero of incipient ossification.

TOPICA ( $\boldsymbol{t} \boldsymbol{\pi} \pi \mathbf{o s}$, a place). A class of medicines employed for their external or topical effects. Tbey are called mechanieal, when tbey exert a physieal or mechanical agoncy, as some anthelmintics; ehemical, when they act cbemically, as caustics; aud dynamieal, when they act dynamically, as acrids and emollients.

TORCULAR HEROPHILL. Literally, Herophilus's wine-press. A term applicd to an irregular cavity, where the principal sinuses of the dura mater become confluent. The columas of blood, eoming in different directions, were supposed to be pressed together in this part.
[TORMENTILLA. The U.S. Pharmacopocial name for the root of Potentilla Tormentilla.]
[1. T. crecta, $\}$ Synonymes of $P o-$ [2. T. officinalis. $\}$ tentilla Tormentilla.]
TORMENTIL ROOT. The root of the Potentilla Tormentilla, a European plant of astringent qualities, used in the Orcades for tanning leather.

TORMINA (plur. of tormen, not in use). Griping; the pain whicb aceompanies enteritis and diarrhœa.

TORPOR (torpeo, to be benumbed). Insensibility, mental or oorporeal.

TORRICELLIAN VACUUN. The vacuum at the top of the column of mercury in a barometer, so called from Torricelli, tbe inventor of that instrument.
[TORSION. Twisting. Sometiues employed as a means of arresting arterial hemorrhage. The artery is seized with forceps, drawn outwards, half an inch or more ; the baso of this isolated part is then seized by another pair of foreeps, and held firmly, while the extremity of the vessel is twisted several times on itself, by meaus of the evellent forceps.]

TORSION-BALANCE. A delicate electrometer, so ealled becanse its principle consists in the forsion or twisting of a single fibre of the weh of the silk-worm.

TORTICOLALS (torquen, to twist, enllum, tho neek). Wry neek; an inelination of the neck laterally or forward, arising from rheumatism.
[TORULAW (Pl. of torula.) Microsropic confervoill bodies discoverable in fermenting Huids.]
[1. Torala aceti. A mieroscopie fungus developed during the acetous fermentation.]
[2. Tomula eerevisic. A microscopic vegetable, in the form of diaplanous globules, found in fluids undergoing tho vinous fermentation.]

TORULOSE. Knotted; irregularly contracted and distended, as applied to eylindrical bodies, or seed vessels.

TORUS. A rope or cord made of twisted grass or straw, on which the ancients laid their skins or other furniture for the convenience of sleeping; hence, the terin is taken for a bed, and is used in hotany as synonymous with thalamins or receptacle. It also signifies the protuherance of the muscles, and bence the term torosus, or muscular.

TOU'CHWOOD. The popular name of the Polyporns igniarius, or Hard Amadou Polyporus; an indigenous fungus found on willow and other trees, and commonly linown by the name of agaric of the oali; it is employed for checking hæmorrhage.

TOURMALINE. A mineral which is hard enough to scrateb glass, and becumes electric by heat. It is of various colonrs and forms; it is transparent when riewed across the thickness of a erystal, but perfectly opaque when turned in the opposite direction.

TOURNIQUET (French, from tourner, to turn). An instrument for checking the flow of blood into a limb, until sorne operation has heen perforned, or a more permanent plan of checking bæmorrhage has been adopted.

TOUS LES MOIS. An article of diet, commonly called the St. Kitt's Arrour-root. It is said to he the feculit of the rhizome of the Camna coccinen, which flowers every month, and has hence received its French name.
[TOXICAL (to stiov, a poison.) Poisonous.]
[TONICODENDRON. Ph. U. S. Pnison Oak. The Pharuacopocial nane for the lenves of Rhns Toxicodendron.]
 atha, bloot.) Poisoning of the blood.]
 a deseription). An aecount of poisons, their classification, effects. Se.

TRABECULA (dim. of trabns, a beam). A small berm ; a term applied to the small medullary fibres of the brain, which constitute the eommissures.

ThdClllíd (tpaxin aptspia, arteria aspera, or rough artery). The windpipe. The term is derised from the inequality of its eartilages.

1. Trache-itis. Inflammation of the trachen.
2. Tracheo-tomy (roùे, section). The operation of waking an opening into the wind-pipe.
3. Trach-cnehyma ('̇yxúw, to pour in). The vascular tissue of plants, consisting of spiral vessels, which resemble the trachece of insects.
[TRACHELISMUS (тpađzia, the trachea.) A term devised by Marshall Hall to express that paroxysmal affection of the neck, in which, the muscles acting inordinately, the neck is affected with opistholonos, or hecomes twisted, or otherwise contorted; whilst the subjacent veins are subjected to compression, and the blood flowing along them, is arrested or impeded in its course.]

TRACHE'LOS (трáхп入o5). Callum. The Greek term for the neck.

1. Tiachclo-mastoïdeur. A muscle arising from the transverse processes of the four last cervical, and sometimes of the first dorsal vertehre, and inserted into the mastoïd process of the temporal hone. It draws the head hackward, or obliquely.
2. Trachelo-scapular. The designation of certain veins, which arise near the neck and shoulder, and contrihute to form the external jugular vein.
[TRACHOMA (tpaxus, rough.) An asperity on the internal surface of the eyelids.]

TRACTUS (traho, to draw). A drawing in length; a region; a space.

1. Tractus motorius. Motor tract; the name given to the prolongation of the corpora pyramidalia through the pons Varolii into the crura cerebri. The motor nerves arise from this tract.
2. Tructus opticus. Optic tract; a flattened hand, which arises from the thalamus opticus, and turns round the crus cerebri.
3. Tractus respiratorius. Respiratory tract; a name given by Bell to a narrow white hand, which descends along the side of the medulla oblongata at the bottom of the lateral sulcus.

TRACING PAPER. Paper brushed over with a thin varnish made of colourless Dammara resin, the varnish being allowed to soak through the paper without any apparent coating remaining on tho surface.

TRAGACANTII. A gum which cxudes from several species of Ahtrogghlus, and is frequently ealled grom dragon. There are two kinds; viz. the faky or Sinyrna, and the vermiform or Morea, tragacanth.

1. Tragacamthin or Adragamin. Solnble gum of tragacanth. From its resem-
blance to gum arabic, it has been termed arabine.
2. Bassorin. The insoluble part of gum tragacanth, named from its similarity to gum bassora.
[TRAGIA. A genus of plants of the natural order Euphorhiaceæ.]
[1. Tragia cannatina. An East Indian plant, the root of which is considered diaphoretic and alterative; and an infusion of it is given in ardent fevers.]
[2. Tragia involucrata. A small annual East Indian plant, the root of which is esteemed hy Hindoo practitioners to he an excellent alterative, and a decoction of it said to be useful in suppression of urine.]
[3. Tragia volubilis. A West Indian species, the root of which is said to be diuretic and aperient.]
[TRAGOPOGON. A genus of plants of the natural order Cichoraceæ. The root of $T$. porrifolium, salsifi, and the young shoots of T. pratense, meadow salsifi, are eaten as food.]

TRAGUS (rpáyos, a goat). A small eminence situated over the meatus externus of the ear, upon which hair often grows like the heard of a goat.

Tragicus. A muscle of triangular form, arising from the middle and outer part of the concha, and inserted into the tip of the tragus, which it pulls forward. Sce Anti-tragicus.
[TRAILING ARBUTUS. Epigea repens.]

TRANSCENDE'NTAL (transcendo, to go heyond a certain limit). In philosophy, this term denotes that which is heyond the reach of our senses, as distinguished from what is cmpirical ; it is thus synonymous with metaphysical. Transccudental Anatomy is that which investigates the model upon wbich the nnimal frame is constructed, and treats of the homologies which exist hetweeu the parts of the body, or the correspondence of parts beyond that which appears to the external sense; thus, the wing of a bird is the homologue of the arm of a man; the leaf of a plant is the homologue of the lung of an animal; the human seapula is the rih of the occiput, \&c. See Homologics.

TRANSFORMATION (transformo, to change from one shapo into another). Metrmorphosis. The clange which takes place in tho eomponent parts of the blood, during its pascago from the minute arterics through tho capillary system of vessels into the radicles of the renous system. There are three kinds of change:

1. Transformation of tho components of the blood into the organized substance of
the different organs, termed intusbuseeptio or nutrition.
2. Transformation of the components of the blood on the freo surfice of an organ into a solid organized suhstauce, which is the mode of growth of the nonvascular textures, or appositio.
3. Transformation of the components of the hlood into a fluid matter, which escapes on the free surface of the organ, or secre-tion.-Miuller.

TRANSFUSION (transfundo, to pour from one vessel into another). The operation of transfusing the hlood of one animal into the veins of another.

## [TRANSLATION. Metastasis.]

TRANSUDATION (transudo, to perspire). Tho process by which fluids pass through porous substances. Thus, the arteries and veins are sometimes represented as heing porous; and bence, as parting with contained fluids by transudation, and imbihing extraneous fluids by capillary attraotion. See Secretion.

TRANSVERSALIS (transversus, across). That which is placed across or erosswise. Hence the terms-

1. Transversalis abdominis. A muscle arising from the cartilages of the seven lower ribs, \&c., and inserted into the linea alha, and the crest of the ilium. It supports and compresses the howels.
2. Transversalis colli. A muscle arising from the transverse processes of the second, third, fourth, fifth, and sixth cervical vertebrex, and inserted into those of the third, fourth, fifth, sixth, and seventh upper dorsal vertebræ. It turns the neck obliquely backwards and to one sidc.

TRANSVERSUS. That which is placed across or crosswise.

1. Transversus auris of Albinus. A muscle arising from the prominent part of the eoncha, and inserted opposite to the outer side of the anti-helix. It draws the parts to which it is connected towards each other, aud stretches the scapha and concba.
2. Transvergus pedis. A muscle arising from the metatarsal bone of the great toe, and inserted into that of tho little toe.
3. Tranavcrsus perinai. A musclo arising from the tuber ischii, and inserted into the middle line with its fellow. It is supposed to dilate the arethra.

TRAPEZA ( $\tau p a \pi \varepsilon \zeta^{\prime}(z)$. The Greck term for a table, or a table-enver.

1. Trapezinm. A bone of the sernnd row of the earpal bones, also called os multangnlnm majns. From its name it miyht be supposed to be square.
2. Trapezoides or. A bone of the second row of the earpal bones, smaller than the
trapezium, and also called os multangulun minns.
3. Trapezius. A muscle so named from its lozenge form, arising from the superior transverse line of the occipital bonc, from the spinous processes of the seventh cervical, and of all the dorsal vertebre, and inserted into tho clavicle, the acromion, and the scapula. It is sometimes called cucullaris, from its rescmbling a cucullus, or monk's hood, hanging on the ncek: and where it is united to its fcllow in the nape of the neck, it is named ligamentnna nucho, or colli. It draws the scapula according to the three directions of its fibres.
4. Trapeziform. Four-sided, with the opposite margins not parallel, as certain leaves.

TRAUMATIC (траи̃цa, a round). Bclonging to wounds; caused by wounds.
[TRAUMATICINE. A name given to a solution of gutta percha in chloroform.]
[TREE PRIMROSE. Enothera biennis.]

TREACLE. Molasses. The uncrystallizable part of common sugar.

TREMOR (tremo, to tremble). Tremhling; trcmulous agitation of the bead, limbs, \&c.

1. Tremor mercurialis. The shaking palsy; an affection of the nerwous systen induced by the inhalation or other application to the body of mercurial vaponrs.
2. Tremor tendinum. Shaking palsy. A morbid intermittent action of the spasmodic kind, which sometimes continues more or less constantly present through a series of years.

TREPAN ( $\tau \rho \cup \pi a ́ \omega$, to perforate). Terebellum; modiolus. A circular saw, for perfornting the skull in the operation of repaming. It resembles the instrument called a wimble, and is worked in tho same manner. It is now superseded, in this eountry, by the trephine. Sce Alaphtiston.

TREPHINE. An instrument used for perforating the cranium.

TRTADELPHOUS. Haring the stamens disposed in three parcels on fascieuli.
'TRIANDRIA (ppais, three ; cuvip, a man). The third class in Limmans's system of plants, in which there are three stamens.

Triandrous. Ilaving tbree stamens of about equal length.
[TRLANGULARIS. Triangular; baring threc angles.]

Triangularis sterni. A muscle arising from the lower part of the sternmm and ensiform cartilage. and inserted into the eartilages of the thirl, forrth, fiftb, and sisth ribs. It is also called sterno costalis. It
depresses the ribs, and is a muscle of expiration.

Triangularis labiornm. A nane frequently given to the depressor auguli oris, from its triancular shape.

TRIBA'SIC SALTS. A class of tho oxygen-acid salts, which, in the language of the acid theory, contain three equivalents of hase to one of acid.

TRICEPS (tria capita habens). Having three heads. Hence-

1. Iriccps auris. A name frequently given to the posterior auris, in consequence of this muscle arising by three distinct slips.
2. Triceps extensor cubiti. A muscle arising, by three heads, from the infcrior border of the scapula, and from the os lumeri, and inserted into the olecranon. It has bcen distinguished into the cxtensor longus, the cxtensor brevis, and the brachialis extcrmus. It extends the forearm.
3. Triceps extensor cruris. This muscle cxtends the leg. It has been described as consisting of -
4. The Vastus extermus, arising from the trochanter major, and inserted into the patella and fascia of the same joint;-
5. The Vastus internus, arising from the trochanter minor, and inserted into the patella and fascia; and,
6. The Crureus, arising from between the trochanters, and inserted into the patella. Under this portion is frequently found a muscle, termed subсинген.
TRICHIASIS ( $\theta_{\rho}$ 刍, трı $\chi \grave{\partial}$, the hair). An unnatural direction of the cilia, in which they turn inwards against the eyehall. This affection. has been called pilare malum; and, by Actuarius, trichosis.

Distichiasis, or "double row," is a modification of this-affection; not that thero is properly a double row, hut a partial series of cilia produced on the inner uargin of the lid, in addition to the natural row.
[TRICIIILIA. A genus of plants of the natural order Meliaceas.]
[1. Trichilia cathartica. A Brazilian plant, possessing great hitterncss, and violently purgative.]
[2. Trichilim emeficr. A nativo of Arabia and Senegal, the fruit of whieh is eaten; its ront is conployerl as an emctic.] [3. Trichilire glabra. This specics is
actively purgative.] actively purgative.]
[4. Trichilia moschata. A West India speries, the hark of which has the odour
of musk, and is said to bo cuinently febriof musk, and is said to bo cluanently febri-
fuge.]
[5. Trichilia spinnsa. Aul East Indian
spceies, which affords a fragrant, stimulating nil, cmployed in India in chronio rhemmatism and iu paralytic affections.]
[TRICHINA SPIRALIS. A species of entozon, consisting of very minute oblong cysts, found in the muscles of voluntary motion.]

TRICHOCE'PHALUS DISPAR. The long thread-worm; an intestinal cœlelminthous worm. See Vermes.
[TRICHURIS. See Vermes.
TRICORNE (tria cornua, three horns). A term applied to each lateral ventricle of the brain, from its three-borued shape. Sce Cornu.
[TRICOSANTHES. A genus of plants of the natural order Cucurbitaceæ.]
[1. T. amara. This species, found in the West Indies and also in Bengal, hears a bitter fruit, which, when taken internally, purges actively like colocynth.]
[2. T. cordatc. The root of this species is bitter, and has heen employed in India as a substitute for columba.]
[3. T'. cucumerina. An East Indlian species, the fruit of which is very bitter, and both violently purgative and emetic, and is considered in India anthelmintic.]
[4. T. palmata. A native of Coromandel, the seeds of which, pounded and mixed with warm cocon-nut oil, is esteemed in India as a valuable application to ulecrs of the ears, and to the nosc in ozoena.]

TRICOTOMOUS. Having the divisions or ramifications always in threes.

TRICUSPID (tres cuspides habens). Having three points; a terın applied to three triangular folds or values situated between tho right auricle and the right ventricle of the heart.
TRIFACIAL (trce fucies habens). Triplefacial; a term applicd to the fifth pair of nerves, the grand sensitive nerve of the hearl and facc.
[TRIFID. Three cleft ]
[TRIFOLIUM. Trefoil. A genus of plants of the natural order Legnininose.] [Trifolium Mclilotus officinalis. Sce Mclitotur.]
[TRIGASTRIC (rpeis, threo; yaatnp, a belly). Threc-lellicd. A term applied to certain muscles.]
TRIGEMINI (tres, threc; geminus, donble). The name of hrauches of the fifth pair of nervos, or tri-facial. Seo Nerres.

TRTGONAL (fpeis, threc; ywvia, an angle). A term applied to $\Omega$ triangular spaco on the fundus of tho bladder, whero tho mucous membrane is void of ruge.
['TRIGONELLA FANUMGRASUM. Fenugreck. A Furopeau legnminous plant, the sceds of which are cmployed in Lurope
in the preparation of emollient cataplasms and cuemata, and they enter into the composition of some ointments, \&c.]

TRIGYNIA ( $\tau$ ciis, three ; $\gamma v v \grave{̀}$, female). The name given hy Linnæus to those orders of plants in which there aro three pistils.
[TRILLIUM. An extensive genus of North American herhaceous plants, allied to the order Melanthaceæ, the roots of which are reputed to possess valuable astringent, tonic, expectorant, and alterative propertics. They were used hy the ahorigines, and are employed in domestic practice.]
[TRIOSTEUM. Ph. U. S. Fever-root. The pharmacopoial name for the root of Triosteum perfoiiatum, a genus of plants of the natural order Caprifoliaceæ.
[1. Triosteum angustifolium. An indigenous plant, possessing the same medical properties as the following species.]
[2. Triosteum perfoliatum. Fever-root. An indigenous plant; the root is cathartie in doses of gr. xx. to gr. xxx., and in larger doses emetic.]
[TRIPARTITE. Divided into three parts.]

TRIPE. The stomachs of the ruminantia, prepared for food.

TRIPE DE ROCHE. The name given to several species of Gyrophora, a genus of lichens, employed by the hunters of the Arctic regions of America as artieles of food.
TRIPINNATE. A term applied to a leaf in which there are three scries of pinnation, viz., when the leaflets of a hipinnate leaf are themselves pinnate.

TRIPOLI. A mineral originally brought from Tripoli, ennsisting of silex and clay, and used for polishing and cleaning metals.

TRIQUETRA (tres, threc). Ossa Wormiana. I'he triangular bones sometimes found in the course of the lambdnidal suture.

TRISMUS ( $\tau \rho i \zeta \omega$, to gnash tho teeth). Lncked jaw. [Seo Tetanus.] The "nine day fits" of infants are termed trismus nasсеніны.
[TRISPLANCIINIC ( $\tau$ piss, three ; $\sigma \pi \lambda$ a $\gamma \chi^{\text {vov, }}$, viseus). Relating to the three orders of viscera. An epithet given by from iter to the great sympathetic nerve, great splanchuic carities.]
[TRITICUM HYBERNUM. Seminum farina. Wheat flour.]
[Trilicum repens. Couch-grass. The decoction of the roots of this plant is slightly aperient and nutritive, aud is used in solue parts of Furope.]

TRITERNATE. A term applied to a leaf in which there are three serics of ternation, viz., when the leaflets of a biternate leaf are themselves ternate.

TRITURATION (tritus, rubbed; from teror). The act of ruhbing or pounding.
[TROCAR. See Trocher.]
TROCHANTER ( ( $\rho \circ \chi n ̃ \omega$, to run or roll). The name of two processes of the thighbone, - the major and the minor. They are named from their office of receiving those large muscles which hend and extend the thigh, and turn it upon its axis. They form, as it were, shoulders to the thigh-bone.

Intra-trochantral line. A rongh line, situated hetween the greater and lesser trochanters, to which the capsular ligament is attached, and into which the quadratus femoris is inserted.

TROCHAR or TROCAR (trois quart, three-fourths; from its point being triangular). An instrument used for discharging aqueous fluids, \&c., from diferent eavities of the body. It consists of a perforator or stilette, and a canula.

TROCHISCUS (dim. of $\tau \rho \phi \chi 05$, a wheel). A troche, lozenge, or round tablet; it is composed of powders made up, with glutinous suhstances, into little cakes, and afterwards dried.
[The following are the officinal Troches, Ph . U. S., with the formulæ for their preparation.
[1. Trochisci creta. Troches of chalk. Prepared chalk, $\overline{3}$ ir; gum arahic, in porrder, $\mathbf{Z}^{j}$. ; nutmeg, in powder, 3 jj .; sugar, in powder, $\overline{3} \mathrm{vj}$. Mix intimately, then add sufficient water to make a mass and divido into troches, weighing each ten grains.
[2. Trochisci Glycyrrhiza et opii. Troches of liquorice and opium. Powdered opium, 弱ss. ; liquorice, sugar, guin arahic, in powder, each $\bar{j} \mathrm{x}$; oil of anise, 5 j . Mix, add water sufficient to make a mass; make into troches weighing each six graius. Deinuleent and anodyne.
[3. Trochisei Jpecacuanha. Troehes of Ipecacuanlia. Ipecacuanlia, in powder.
 iu power, ${ }^{\text {jiv. }}$; mucilage of tragacanth, a suticient quantity. Mix, and divide into troehes, cach weighing ten grains. Expectorant.
[4. Trochisci magucsirp. Troches of magnesia. Magncsia, $\overline{5} \mathrm{ir}$; sugar, tbj.; nutmeg, in powder, 5 j. ; mucilage of tragacanth, a sufficient quantity. Ruh the magncsin, sugar, and nutmeg tngether, ndd the mucilage, and form into troehes, each weighing ten grains. Antacid.
[5. Trochisci unenthe piprrite. Troches of peppermint. Dil of peppertuint, fajo
sugar, in powder, lbj.: muciluge of tragaennth, a sufficient quautity. . Mix, and divide into troches, each weighing ten grains. Carminative.]
[6. Trochisci Sode Bicarbonatis. Troches of Bicarhonate of Soda. Bicarhouate of sodi, Jiv. ; sugar, in powder, thj. ; mucilage of gum tragacanth, q. s. Ruh the hicarhonate of soda with the sugar until they are thoroughly mixed; then with the mncilage form them into a mass, to he divided into troches, each weighing ten grains.]

TROCHLEA (тpoХos, a wheel). A kind of cartilaginous pulley. Hence-

1. Trochlearis. An articulation in which one part moves round another like a pulley. Also, a name of the ohliquus superior, or that muscle of the eye which passes through the trochlea or pulley.
2. Trochleares. Another name for the nervi pathetici, or nerves of the fourth pair, distrihuted to the trochlearis muscle of the eye.

TROCHOIDES (Tpoxos, a wheel; zidos, likeness). Wheel-like; a species of diarthrosis, or movable articulation of hones, in which one hone rotatcs upon another; as the radius upon the ulna.

TRONA. The name given in Africa to the scsqui-carhonate of soda, imported from the coast of Barbary, where it is collected hy the natives.

TROPHOSPERM (TPé $\phi \omega$, to nourish; $\sigma \pi \hat{q}^{\prime} \mu a$, seed). The narne given hy Richard to the placenta in plants.

TRU'FFLE. The Tuber cibariun, an indigenous subtcrranean fungus, used for culinary purposes.

TRUNCATE. Terminating very abruptly, as if a portion had been cut off.

TUNE. Melody. A term in phrenology indicative of a sense of melody and harmony, and hearing the same relation to the ear as the sense of colour to the eye. Its organ is situated above the external part of the eyebrow, and, when much developed, it enlarges the lower and lateral part of the forehead.

TRUSS (trousse, French). Bracherium. A bandage, or apparatus, for keeping a hernia reduced.

TUBA (tubus, a tube). A trumpet; a eanal resembling a trumpet.

1. Tuba Eustachicua. A eanal, partly bony, partly cartilaginous and inembranous, which extends from the cavity of the tympanum to the upper part of the pha-
ryna.
2. Tube Fallopianc. The Fallopian tuhes; two canals at the fundus uteri, of a trumpet form, described by Fallopius.

TUBE, OF SAFETY. A tube open at
hoth ends, inserted into a receiver, the upper end communicating with the external air, and the lower being immersed in water.

TUBER (tumeo, to swell). A protuberance or tuberosity.

1. Tuber amulare. A designation of the pons Varolii, the commencement of the medulla oblongata. This part of the hrain has bcen not inappropriately designated nodus encephali, nerud vital, \&c.
2. Tuber ciucreum. An eminence of gray suhstance, forming part of the floor of the third ventricle.
3. Tuber ischii. A round knob, forming that point of the ischium upon which we sit; hence, this hone has been named os sedentarium.
4. The Tuberosities of the os humeri are two small prominences of unequal size, called the greater and the smaller, situated at the upper end of the bone, just hehind the head.

TUBER, OF PLANTS. An annual thickened subterranean stem, provided at the sides with latent huds, from whieh nerr plants are produced, as the potato. When very small, it is called tuberculum.
[Tuber cibarium. The systematie name for the Truffle.]
[TUBERCULAR or TUBERCULOUS. Of or relating to tuhereles.]
[Tubcrcular diathesis. The particular hahit of body predisposing to tubercular phthisis.]
[Tubercular phthisis. The form of phthisis characterized by the presence of tuhercles in the lungs.]
[TUBERCULOSIS. A term introduced by the German pathologists to express that proecss or ehange in the constitution which produces and aceompanics a tuhercular exudation. It comprises the caehexia, diathesis or dyserasia, which has heen supposed to he the constitutional or blood malady, as well as the local diseases which that malady induces.]

TUBERCULUM (dim. of tuber, a swelling). A tuhercle, or small swelling ; a peculiar morhid product, oceurring in various organs, in the form of a small round body. The term is now restricted to a small swelling or collection of a peculiar morbid matter.
[Tuhereles are distinguished by the following physical eharaeters:- they are of a ycllowish-white eolour, of a variable size and form, but most commonly ronndish, hard, hat not frinble, in their first slage; subsequently they soften, change into a matter composed of tender, eurd-like fragments, susponded iu a sero-purulent
lignid.]

Tubercula quadragemina. Tour tubereles ocenrring ou the posterior surface of the pons Varulii ; the two upper are termed the nates; the two lower, the testes. In the lower animals tbey are called optic lohes.

Tubcrculum Loweri. A portion of auricle intervening hetween the orifices of tho veuæ cavæ, supposed hy Lower to direct the blood from the superior cava into the auriculo-ventricular opening.

T'uberculnm Aurantii. A small tuhercle situated at the middle part of the free edge of the aortic and pulmonary valves.
[TUBEROSITY. An eminence or projection on a bone.]

TUBULATURE (tubulus, a little pipe). The moutb, or short neck, at the upper part of a tubulated retort. The long neck is called the beak. See Refort.

TUBULUS (dim. of tubus, a pipe). A little tuhe, or pipe.

1. Tubuli lactiferi. The minute ducts or tubes of the papilla, tbrough wbich tbe milk passes.
2. Tubnli seminiferi. Vasa scminalia. Minute tuhes, coustituting tbe parenchyma of the testis. According to tbc observations of Monro, they do not exceed 1-200th part of an inch in diameter.
3. Tubuli uriniferi. Minute convergent excretory tubes, constituting the tissuc of tbe tubular substance of the kidney. Their orifices are called the ducts of Belini.
4. Tubnlorum coronf. The circle of minute tubes surrounding each of Peyer's glinds in the intestines. See Corona.
[TULIP-TREE. Liviodendron tulipifera.]
[TUMEFACTION. A swelling.]
TUMOUR (tumeo, to swell). A swelling. Tumours may be distinguished into the sarcomatous, so named fron their firm fleshy feel, and the cneysted, commonly called wens. The former liave been classified, by Mr. Ahernethy, into-
5. Common Vascular, or Organized Sarcoma; including all those tumours which appear to bo composed of the gelatinoms part of the hlood, rendered more or less vascular by the growth of vessels through it.
6. Arlipose Sarcoma; including fitty tumours, formed at first, like the preceding, of congulable lymph, rendered vascular by the growth of vessels into them, and wepending for their future structure on the particular power and action of the vesects.
7. Pancrentic Surcoma: so culled from the resemblanec of its structure to that of tho pancreas.
 ealled frou the resemblance of its struc-
ture to that of tbe mammary glands. Tbis species is placed between such sarconatous tumours as aro attended with no malignity, and the following ones, which have tbis quality in a very destructivo degrec.
8. Thberculated Surcoma; composed of a great many small, firm, roundish tumours, of different sizes and colours, connected together by cellular substance.
9. Mednllary S'arcoma; so named from its presenting the appearance of tbe medullary matter of the brain.
10. Curcinomatous Sarcoma; or cancerous tumour.
11. Encysted Tnmours. These present a cyst, which is filled with different matters. The species are steatoma, containing fatlike watter; meliceris, or honey-like matter; and atheromo, or pap-like matter.

TUNGSTEN. A name, signifying heary sfonc, given by tbe Swedes to a mineral, which Scheelc found to contain a peculiar metal; this mineral consists of the tungstic acid, united with lime. Tungsten may also he obtained from anotber mineral, called volfrom, in wbich it is united with iron and manganese.

Tiungstic acid. An acid precipitated on decoluposing tungstate of lime by hydrochloric acid.

TUNICA. The upper tunie of the Romans. Hence it is applied to several memhranes of the hody; viz.

1. Thuica alluginca ocull. A thin tendinous layer covering the anterior surface of tbe sclerotica, and formed hy the expansion of the tendons of the four recti muscles.
2. Timica albnginea testis. A thick fihrous membrane, constituting tbe proper tunic of the testis.
3. Tunica urachnoüder. A cohweh-like menbrane, situated betweeu tbe dura and pin miter.
4. Tunica conjunctiva or adnata. A mucous membrane, which lincs the posterior surface of the eyclids, and is reffected over the fore part of the globe of the eye.
5. Tuiicu elytroüles (Èdurpov, vagina; sidos, likcuess). Tunica raginalis; the names under which the old anatomists confounded the filbous with the scrons coat of the scrotum.
6. Tunica reythroïdes (íperpods. red : cióos? likeness). The cremasteric covering of the spermatic cord and testis, formed hy the cxpansion of the fibres of the cremaster muscle.
7. Timica nervea. A former name of the fibrous coat of the intestines.
8. Timier Ruyschiant. An inner lawina of the choroid membrance. so called after Ruyseh, who first ingected it.
9. Tunica raginalis testis. A pouch of serous membrane dcrived from the peritoneum, and covering the testis.
10. Tumica vasculosa testis. A vascular membrane lying upon the inner surface of the tunica albuginea, and constituting the nutrient membrane of the testis.
11. Tunica vasculosa retina. The inner and fibro-vascular lamina of the retina, which supports the outer, medullary, pulpy, or mucous lamina.

TUNICATA (tunica, a mantle). Tbe first class of tbe Cyclo-gangliata, or Mollusca, comprising soft, aquatic, acephalous animals, having their hody enveloped in an elastic tunic furnished witb at least two apertures.
[TUPA. A genus of plants belonging to the natural order Lobeliacer.]
[Tupa fenillai. A shrubby Cbilian plant, said to be extremely acrid and poisonous.]

TU'RBINAL (turbo, a top). A term applied to the ossified part of tbe capsule of the organ of smell.

TURBINATE (turbo, a top). Topshaped; inversely conical, and contracted towards the point.

TURBINATED BONES (turbo, a top). Two hones of the nostrils, so called from their being formed iu the shape of $\Omega$ top, or inverted cone. They are also called the inferior spongy bones, to distinguish them from the upper spongy bones, which form part of tbe ethmoid hone; and from their spongy appearance, in wbicb tbey resemble raised paste.
[TURGESCENCE. A state of congestion or preternatural accumulation of bumours in a part.]

TURGOR VITALIS (turgeo, to be swollen). Turgescence, or orgasm; a state characterized by well-defined symptoms of active congestion, nccompanied by copious though not morbidly-augmented secretions.
[TURKEY GUM. Soe Gunmi Arabicum.]

TURKEY RED. A dye procured from alizarine, or tho sublimed crystals of madder red.
[TURLINGTON'S BALSAM. A popnlar expectorant and vulncrary. The following is tho formula adopted hy tbe Philadelphia College of Pharinacy for its preparation:-Alcohol Oviij.; benzoin,

 ingelica root, $Z$ ss. ; halsam of tolu, Jiv.; extract of liquorice root, §iv. Digest for ten lays, and strain.]

TURMERIC (terra merita). Tho tubers
of the Curcuma lougn, which yield a beautiful bright yellow colour.

Turmeric paper. Charta curcumæ. White, hibulous, or unsized paper, brushed over with tincture of turmeric, prepared by digesting one part of hruised turmerio in six parts of proof spirit.

TURNBULL'S BLUE. [Sce Blue.]
TURNER'S CERATE. [See ceratum zinci carbonatis.]

TU'RNER'S YELTOW. Patent or Cassel Yelloor. The fused oxichloride of lead, fincly powdered; used as a paint.
[TURNING. That operation, by wbicb, withont danger to the mother or ber child, the position of tbe latter is changed, eitber for the purpose of renderiug the labour more favourahle, or for ndapting the position of the cbild for delivering it artificially.]

TURNSOLE. A deep purple dye obtnined from the Crozophora tinctoria, an Euphorbiaceous plant.
TURIO. A term applied, in botany, to a scaly bud, developed from a perennial subterranean root, as in asparagus.

TURPENTINE. Torcbinthina. A term applied to a liquid or soft soliduleo-resinous juice of certain coniferous plants, as well as of the Pistacia terebinthus.

1. Common turpentine. Terebinthina vulgaris. The general name of oleo-resins obtained from several species of Pimus, the most inportant of which are the American or whitc, and the Bordeaux turpentines.
2. Larch or Venice turpentine. Terebinthina laricea scu Veueta. Ohtnined from the Larix Europau, by boring the trunk of tbe tree.
3. Strasburgh turpentine. Terehinthina argentoratensis. Obtnined from the Abies picea, by puncturing tho vesicles of the bark.
4. Canadlian turpentine. Terebinthina Canadensis. Obtained from the Abies bolsamea, from vesicles hetween the bark and the wood. It is also called Comada balsam.
5. Common frankincense. Abictis resina. The spontancous exudation of the Abies communis.

TURPETH MINERAT. The name given by chemists to tho sub-sulphnto of mercury.

TURUNDA. A pellet of bread, paste, $\&$ c. A tent for mounds.

TURU'ND E ITA'LICA. Pastes made with the finest and most glutinons wheat, and known by the names of macaroni, vermicelli, and Italinn or Caglaur paste.

TUSSICULA'RIA (tussis, a cough).-

Bechica．Cough－medicince，as demulcents， cercbro－spinals，and expectorants．

TUSSILAGO FARTARA．Coltsfont； a European Composito plant，empluyed as a popular remedy in puluonary com－ plaints．

TUSSIS（tussio，to cough）．Bex．A cough．See Pertussis．
TUTENAG．The commercial mane for the zine or spelter of China；also the name of a white metallic compound，called Chi－ nese copper．

TU＇TIA．Tutty，furnace cadmia，or im－ pure oxide of zinc．It incrusts the flues of furnaces employed for smelting lead ores containing zine，or ores mixed with lapis calaminaris．Medicinal tutty is a brown powder with a sbade of hlue．

TWINS．Gemini．Twins are mostly produced at a common birth；but，owing to the incidental deatb of ono of them while the other continues alive，there is sometimes a material difference in the time of their expulsion，and，consequently， in their bulk，or degrec of maturity；giv－ ing us，according to Dr．Good，the follow－ ing varieties：－

1．Congruous twinuing．Of equal，or nearly equal growth，and produced at a common birth．

2．Incongruous twiuning．Of unequal growth，and produced at different births．

TWITCHING．Subsultus terdimun． Sudden or irregular snatches of the ten－ duns．
［TYLOPHORA．A genus of plants of the natural order Asclepediaceæ．］
［Tylophora asthmatica．An Enst In－ diun plant，the root of which is enetic， and is used in India as a substitute for Ipecacuanha．In small doses it is said to purge．］
len and knotty state of the eyelids，in whicb their margin often loses altogether its natural form and appearance．Thick－ ching of the lids has been also termed puchy－hlepharosis；and，when attended with loss of the cilia，the affection has been terined ptilosis．

TYMPANL＇TES（rúpतavov，a drum）． Tympauy；abdominal emphysema；dry dropsy，or wind dropsy．It is named from the drum－like distension of tbe abdomen．

TYMPANUM（т́йTavov，a drum）．The drum of the ear；an irregular hony carity， compressed from without inwards，and situated within the petrous bone．
［TYPE（тunos，a stamp．）The cbarac－ ter representing prominently the several characteristics of a group．］

TYPE－METAL．An alloy of three parts of lead and onc of antimony．
 madness）．An affection consisting in per－ fect lethargy of hody，but imperfect le－ thargy of mind；wandering ideas，and helief of wakefutness during sleep．
［TYPHLO－ENTERITIS（Tuழ有，the crecum；enteritio．）Inflammation of the cæ位．］
［TYPHOID．Resembling typbus．］
［Typhoid fever．A fever resemhling typhus，but by many pathologists re－ garded as distinct，and cbaracterized hy inflamination and ulceration of the mucous follicles of the intestines．］

TIPHUS゙（Túゆos，stupor）．Malignant ferer．See lebris．

TYRO＇MA（rupds，cheese）．A term ap－ plied hy Dr．Craigic to tuhercular secre－ tion of the hrain，from its cheese－like ap－ pearance．

TYSON＇S GLANDS．Glandula odori－ ferce．Sebaccous glands situated around the corona penis．

ULCER（Édros，ulcus，a wound）．A so－ lution of continuity in any of the soft parts of the body，attended with a secretion of pus，or some kind of discharge．Uleers arc divided into－
1．Local，or those confined，like a pri－ mary syphilitic uleer，to one spot．

2．Constitutional，or those liablo to oc－ cur ith any part，from geucral affectiou of the system．

3．Specific，or thoso oceasioned by spe－ ciflo poisons，or by particular diatheses．

4．Simple，or those which do not appear
to proceed from auy specific discasc，or morbid diathesis．

ULCERATION．The process by which sores，or ulecrs，are produced；a function of the absorbents，attended by a solution of continuity，and the formation of pus．

ULMACEE（u／mus，the clm）．The Elm tribe of Dicotyledonoms plants．Trees and shrulis with leaves alternate；finsers ape－ talous：orarimm superior；fruit 1 or 2－ eelled，indehiseent ；seeds pendulous．
［ULMUS．The U．S．Phariuncopœial naine for the inner bark of tbe ulmus fulua；
a genus of plants of the natural order Ulmacce.]

1. Ulmus cmmpestris. The Common sruall-leared Elm. [A Europearı species.] Elm bark, or tho liber of the bark, is [demulcent, and is] still ordered in the form of a decoctiou.
[2. Ulmus fulva. (U. mubra.) Slippery Elm. Red Elm. An indigenous specics, the inner bark of which contains a great quantity of mucilage, which it readily imparts to water. It is an excellent demulcent, feebly astringent, and very nutritious. The infusion is highly useful in bowel complaints and in iullammations of mucous membranes. The ground bark, mixed with hot water, forms an admirable poultice, and the fresh bark, rolled up in tbe form of a bougie, bas wcen extolled for the dilatation of fistulas and strictures.]
2. Ulmic acid, or Ulmin. A brown substance found on many trees, especially the elm, produced by the action of acids or alkalis on vegetable matter. It is a modification of humus.

ULNA ( $\dot{\omega} \lambda \hat{\prime} \mathrm{v}$, the cubit). The large bone of the fore-arin, so named from its being often used as a measure, under the term ell. Tbe binge-like surface at the elbow presents, in profile, somewhat of the sbape of the letter $S$, and is therefore called the sigmoid cavity of the ulaa. See Olecranon.
ULNA'RIS (ulna, the cubit). The name of two muscles of the fore-arm :-

1. A flexor muscle, arising from the inner condyle of the os humeri, and insertcd into the pisiform bone.
2. An extensor muscle, arising from tho outer condyle of the os humeri, and iuserted into the little finger.

ULTRA-MARINE. A fine blue powder, made from the blue parts of lapis lazuli. It has the property of neither fading, nor becoming tarnished, on exposure to the air, or a moderate heat.

U'LVA LATI'SSIMA. Broad green laver; an algaccous plant, inferior in quality to the Porphyra lacimiata, or laciniated purple laver, but said to be employed for the same culinary purposes.

UMBEL (umbella, an umbrella). A form of inflorescence, in which all the pedicels of the flowers procced from a single point, and aro of equal length or corymbosc. When cacli pedicel bears a single flower, as in Eryngium, the umbel is said to be simple; when each pediecl diviles, aud bears other unbels, as in Heraclcum, the umbel is termed eompound. In the latter case, the assemblage of unbels is ralled the miversal mubel, enel of
the secondary umbels being called the partial umbel. The peduncles which support the partial umbels are called radii.

UMBELLIFER E (unbella, an umbel; fero, to bear). Tbe Umbel-bearing tribe of Dicotyledonous plants. Herbaceous plauts, with leaves usually divided; flower: in umbels; calyx entire or 5 -toothed; petals 5 , alternate with 5 stamens; ovarium didymous, with 2 styles and solitary pendulous ovala.

UMDER. A brown clay iron ore, occurring in beds in the island of Cyprus, and used as a pigment.

UMBILI'CUS (dim. of umbo, the boss of a shicld). Tbe navel.

1. Umbilical cord. Funis umbilicalis. A cord connccting tho foetus with the placenta, and consisting of the umbilical vein and the two umbilical arterios twisted together like a rope, and surrounded by the reflections of the chorion and the amnion.
2. Unbilical vesicle. Vesicula umbilicalis. A small sac, situated between the chorion and the amnion, and connected to the foetus by a duct, an artery, and a vein.
3. Umbilieal region. That portion of the abdominal parietes situated about two inches around the umbilicus.
4. Umbilical hernia. Omphalocele. Hernia of the bowels at the umbilicus.
5. In botany, the term umbilicus is synonymous with hilum, and denotes the scar wbere the sced is united with the placenta.

UNCARIA GAMBIR. Tbe Gambir; a Rubiaceous plant, the leaves of which yicld tbe gambir of commerce.

UNCLA. An ounce; the twelfth part of a pound. Unciatim, ounce by ounce.

UNCIFORME OS (uncus, a hook; forma, likeness). A bone of the carpus, or wrist, having a hook-like process.

UNGUENTUM (ungo, to anoint). An nintment; an unctuous substance, differing but little from cerates, cxcept in consistence, wbich is about that of butter.
[Tbe following are the officinal ointments of the $\mathrm{Ph} . \mathrm{U}$. S., with the formulæ for their preparation:-
[1. Ungucutum Antimonii. Antimonial ointment. Tartrate of antinony and potassa, in very tiue powder, $\bar{\sigma}^{\mathrm{ij} .}$. lard, $\mathrm{J}_{\mathrm{j}} \mathrm{j}$. Mix.
[2. Ung. Aqua Rosce. Ointinent of rosewater (cold cream). Rosc-water, f oil of almonds, f $\tilde{\tilde{J}}^{\mathrm{ij} .}$ : speruaceti, $\tilde{\sim}$ ss.; whito wax, 3j. Melt together by means of a water-bath, the oil, spermacti. and wax; then add the rose-water and stir till cold.
[3. Unfиentum Belladonna. Ointment of Belladonna. Extract of Belladonna, 3j. ; lard, ${ }^{2} \mathrm{j}$. Mix. 1
［4．Ung．Cantharidis．Ointment of Spanish flics．Spanish flies，in powder， $\bar{Z}_{\mathrm{Ij}} \mathrm{ij}$ ；distilled water，Oss．Boil together to oue－lualf，aud strain．Mix the strained liquor with resin cerate，$\overline{3}$ viij．；and eva－ porate to a proper consistence．
［5．Ung．Creasoti．Ointment of creasote． Creasote，f5ss．；lard，melted， $\mathbf{Z}^{j}$ ．Mix till cold．
［6．Ung．Cupri Subacetatis．Ointment of subacetate of copper．Simple ointment， $3^{x v .}$ ；melt，and add subacetate of copper， in fine powder，$\overline{3}$ j．Stir till cold．
［7．Uny．Galle．Ointment of galls． Galls，in powder， $\mathcal{Z}^{\mathbf{j}}$. ；lard，${ }^{3} \mathrm{Vij}$ ．Mix．
［8．Ung．Hydrargyri．Mercurial oint－ ment．Mercury，Tbij．；lard，$\overline{3}$ xxiii．；suet， $3 j$ ．Rub the mercury with the suet and a small portion of the lard until the glo－ bules disappear；then add the remainder of the lard and mix．
［9．Ung．Hydrargyri Ammoniati．Oint－ ment of ainruoniated mercury．Simple ointment， $\mathcal{J}^{\text {iss．；melt and add ammoniated }}$ mercury． $\mathbf{3} \mathbf{j}$ ．Mix．
［10．Uig．Hydrargyri Nitratis．Oint－ ment of nitrate of nuercury（citrine oint－ ment）．Mercury， $\mathcal{Z}_{\text {i．}}$ ；nitric acid，fZxiv．； fresh neatsfont oil，穹ix．：lard，$\overline{3}$ iij．Dis－ solve the mercury in the acid；then thelt the oil and lard together，in an earthen vessel，to $200^{\circ}$ ；lastly add the mercurial solution，and stir with a wooden spatula， constantly，as long as effervescence conti－ nues，and until the ointurent stifiens．
［11．Ung．Hydrargyri Oxidi Rubri． Ointment of red oxide of mercury．Sim－ ple ointment， 3 j．；soften over．a gentle fire and add red oxide of mercury，in very fine powder， 3 j ．Mix．
［12．Ung．Iodiuii．Ointment of iodine． Iodine， $\mathrm{Hj}_{\mathrm{j}}$ ；iodide of potassium，gr．iv．； water，Mvj．；lard， $\mathcal{Z}_{\mathbf{j}} \mathbf{j}$ ．Ruh the iodine and the iodide first with the water until lique－ fied，then with the lard until thoroughly mixed．
［13．Ung．Indinii Compositum．Com－ pound ointment of iodine．Iodine， $\boldsymbol{Z}^{\text {ss．}}$ ； jodide of potassinm，${ }^{2}$ j．：nlcohol，f 5 j．；ruh together and add lard，亏ij．Mix．
［14．Uug．Mezerci．Ointment of meze－ roon．Mnisten inczereon，sliced trans－ verscly，Jiv．，with a littlo alcohol，and beat it in an iron mortar till reduced to a fibrous mass；then digest it with lard，㞣xiv．；whito wax，亏ij．，in a salt－water Wath for twelve hours；strain with a strong cxpression，and allow the strained liquid to cool slowly，so that any undissolved matters may subside．From these sepa－ rate the medieated ointment．
［15．Ung．Picia Liqnida．Tar olnt－
ment．Suct，thj．；melt and add tar，tbjo Stir till cold．
［16．Ung．Plumbi Crarbnatix．Ointment of carbonate oi lear．Sinple ointment， thj．；soften over a gentle firc and add car－ honate of lead，in very finc porder，亏ij． Mix．
［17．Ung．Potassii Iodidi．Ointment of iodide of potassium．Iodide of potassium， in fine powder， $\mathbf{3 j}$ ．；dissolve in hoiling wn－ ter， $\mathrm{f}_{\mathrm{j}} \mathrm{j}$ ．，then mix with lard， $\mathrm{Z}_{\mathrm{j}} \mathrm{j}$ ．
［18．Uug．Simplex．Simple ointment． White wax，thj．；lard，thir．Melt together with a moderate heat，and stir till cold．
［19．Ung．Stramonii．Stramonium oint－ ment．Extract of stramonium leaves， 3 j ．； lard， $\mathrm{Z}_{j}$ ．Ruh the extract with a little water until soft，and then with the lard．
［20．Ung．Sulphuris．Sulphur ointment． Sulphur，itj．；lard，Əbij．Mix．
［21．Ung．Sulphuris Compositum．Com－ pound sulphur ointmento Lard，ibss．； melt and add ammoniated mercury，hen－ zoic acid，each，$\overline{3}$ j．；oil of herganot，sul－ pluric acid，ench，fygj．；nitrate of potassa， 3 ij．Mix till cold．
［22．Ung．Tubaci．Tohacco ointment． Lard， 1 bj ．；fresh tohaceo leaves，cut in picces，${ }_{3} \mathrm{j}$. ；hoil till the leaves hecome fri－ able；then strain through linen．
［23．Uug．Veratri Albi．Ointment of white hellehore．White hellehore，in pow－ der，$\tilde{亏}^{\mathrm{j} j}$ ；oil of lemons，Mux．；lard，$\overline{\tilde{\jmath}}_{\text {viij．}}$ Mix．
［24．Ung．Zinci Oxidi．Ointment of oxide of zinc．Oxide of zinc，$\overline{3} j$ j．；lard，告v．Mix．］

UNGUIS．Literally，a finger－nail． Hence it is applied to a collection of pus in the eye，when the abscess appears to he shaped like a finger－nail．

1．Phalanges unguium．The name of the third，extreme，or distal phalanges of the fingers and toes．

2．Unguis，in Botany．The lower part of a petal which tapers conspicuously to－ mards the base，as in the pink．The upper part is called the limb．The petal itself is termed unguiculate．
［UNILOCULAR（umus，onc；locilus，a ecll）．Haring one cell or cavity．］

UNION BY THE FIRST INTEN－ TION．The growing，together of the op－ posito surfaces of a wound，when brought into contact，without suppuration．If hen wounds heal by suppurating，granulating， de．，they are sometiues said to beal by the second intention．
［UNIPAROIS（umur，one；pario，to bring forth）．I＇rnducing one at a hirth．］
［＇NIDOLAR．A teriu applicd by Ehr－
mann to substances of the imperfect conducting power, which are capable of receiving only one kind of electricity, when made to form links in the voltaic chain.

UNIT JAR. An apparatus contrived hy Mr. Harris for charging Leyden jars with known proportions of electricity, the quantity of elcetricity employed heing proportioned to the number of charges.

UNITY OF ORGANIZATION. A term suggestive of certain generalizations in anatomy and physiology, and capahle of two applications; -oue, to the analogics which exist hetween the permanent organization of the lower animals, and certain transitory states of the higher species; the other, to the correspondences traceable between the parts composing the organization of different species. See Homologies.

UNNAMED BONES. Ossa innominata. Two large hones, forming the sides of the pelvis, and so called from the difficulty of explaining them under one name. Each of these has, however, been divided into three parts, viz. :

1. The Os ilium, or Haunch bone, so named from its forming the flank. The flat upper part is called the ala, or wing; the lower or rounder part, the body of the bone. The unnamed line (livea innominata), is that which divides the ala from the part which forns the true pelvis.
2. Tbe $O \&$ ischium, or Hip-hone, placed perpendicularly under the proceding. The round protuberance on which we rest when seated, is called the tuber, or os sedentarium ; and that portion, of which one edge forms the arch of the puhcs, and the other the margin of the thyroild hole, is called the ramus, or hranch.
3. The Os pubis, or Share-hone; so named from the Mons Vencris being placed upon it, and its hair heing a biarls of puherty. This hone completes the brim of the pelvis, and is divided into three parts, viz. the lody, forming part of the socket of the thigh-bone; the angle, or crest; and the ramus, joining the ramas of tho ischium.

UPAS. Antrax. The Antiaris toxicaria of Java; an Urticaceous plant; one of the most virulent of known poisons, tho concrete juice of which has, nevertheless, heen used medicinally.
Upar Ralja or Tjelleli. One of the most dangerous of known poisons, prepared in Java from the barle of tho root of the Strychnos Tiente; it acts like nux volnica, but in a more violent manncr.
URACHUS (ov pov, urine; $x^{f} \omega$, to pour). A fibrous corl which is attached to the
apcex of the bindder, and aseends to the umbilicus; it is formed by the obliteration of a tubular communication in the emhryo, and appears destined solely to fix the hiadder.
[URAMIA. See Urincemia.]
U'RAMILE. A product of the oxidation of uric acid. It occurs as a crystalline powder, or in dendritic or feathery crystallizations, of a very beautiful aspect. By evaporation with dilute sulphuric acid, uramitic acid is obtaiued.

URANIUM. A metal discovered in 1789, in the mineral called, from its hlack colour, pitch-blende. It was named by Klaproth after tho new planet Uranus, the discovery of which took placo in the same year.

URATES. Compounds of uric or lithic acid with the salifinble bases.
[URCEOLATE (urceolus, a little pitcher). Pitcher-shaped; as applied to the envelope formed hy the two confluent bracts of Carex, to certain corollas, \&e.]

URCEOLUS (dim. of urcens, a water pitcher). A small pitcher-like body, formed by the two hracts which, in the genus Carex, become confluent at their edges, and enclose the pistil.

UREA (oũpov, urine). A principlo peculiar to the urine, and considered as a result of the action of the kidneys upon some of the constituents of the blood; perhaps, as Dr. Prout suggests, upon its alhuminous matter.

URE'DO (uro, to burn). An itching or hurning sensation of the slin, which accompanies several disenses.
[URESIS. The act of roiding the urinc. 7

URETER (ory yov, urine). The memhranous tuhe which transmits the urine from the kidney into the bladder.

UR'ETHANE. A compound of ethyl, which may be viewed as chloro-carbonio ether, in which amide has heen substituted for chlorinc. Urethylane is a corresponding compound, consisting, possibly, of one equiv. of urca, and two equiv. of neutral carhonate of methyl.

URE'THRA (oùpov, urinc). Tho exerctory canal of the bladder, commencing at the neck of this organ. and terminating at the meatus upon the glans penis. It is divided into three portione, viz.:

1. The mostatic portion, a little inoro than an inch in length, and situated in tho prostate gland.
2. The membramms prition, a little less than an inch in length, and situater within the two layers of the Jeep perineal
farscia.
3. The spongy portion, so named from being enclosed by the corpus spongiosum penis. The cominencement of the corpus spongiosum forms the bulb, and hence the included urethra is called the bullows portion.
[URETHROPASTY (oupn$\theta p a$, the urethra; $\pi \lambda a \sigma \sigma \omega$, to form). An operation for restoring the integrity of the urethral canal.]
[URETHROTOME (oupn $\theta \rho a$, the urethra; $\tau \varepsilon \mu \nu \omega$, to cut). An iustrument for dividing strictures of the urethra.]

URETICA (oưpov, urine). Medicines which promote a discharge of urine.

URIC ACID (oưpov, urine). Lithic acid. A common constituent of urinary and gouty concretions; and of healthy urine, combined with ammonia or some other alkali.
[URIC 0XIDF. Xanthic oxide.]
URIN A'MIA (ov̀por, urine; aipa, hlood). Urcmia. The presence of urea or urinary elements in the hlood.

URINE (uvpov). The fluid secreted hy the kidneys from the arterial blood. The ancients considered the urine as a kind of extract of animal suhstances, a true lixivium, by which every thing impure in the animal economy was washed away; hence they gave it the name of lotium.

1. Urina chyli; urina potûe. These terms denote, respectively, the urine secreted subsequently to the digestion of food, and the tasteless limpid urine seereted after fluids have heen taken.
2. Urine, incontinence of. The involuntary flow of the urine ont of the hladder. It is the reverse of retention.
3. Urine, retention of. An inability, total or partial, of expelling the urine contained in the hladder.
4. Urine, suppression of. This affection properly points out a defect in the scerction of the kidneys.
5. Urinary fistula. A deep, narrow ulcer, leading into some of the urinary passages.
6. Urinary abscess. Extravasations of urine may he in three different states: tho fluid may be collected in a particular pouch; or it may be widely diffused in the cellular membrane; or it may present itself in a purulent form, after laving cxeited inflammation and suppuration in the parts anong which it is sitnated.
7. Urinat. Urinatorinm. A vessel for receiving the urine in eases of incontinonce.

URINO'METER (orpov, urine; $\mu$ itpov, a measurc). A small lyydrometer, for estimating the density of the urine.

URN. The peculiar theea or capsule of mosses, containing the sporcs. It is placed at the apex of a stalk or befa, bearing on its suminit a hood or calyptra, and closed by a lid or operculum.
U'RO-HYAL (ovocu, the tail or underpart, and hyoides 08). A constituent bone of the hamal spine of most fishe3, directed hackward. See Vertebra.

UROPLANIA (ov̌ $\rho \frac{0}{}$, urine ; $\pi \lambda a \sim \eta$, wandering). Erratic urine; an affection in which a urinous fluid is secreted from various parts of the hody, as the salivary glands, the stomach, the lining membrane of the ventricles of the hrain, dc.
[UROSTEALITH (ořpov, the urine; oreap, zuet; $\lambda i \theta o s$, a stone). A term given hy Dr. Heller to a peculiar fatty substadce which formed a urinary calculus in a man.]
[UROXANTHIN. A ycllow pigment of diseased urine, derived, according to Heller, from a change in the Urea.]
[URSIN. A name proposed hy Mr. Hughes for a crystallizable principle ohtained by him from Ura Ursi.]

URTICACE A (urtica, a nettle). The Nettle tribe of Dicotsledonous plants. Trees or shrubs with leaves alternate: flovers apetalous, solitary, or clustered; ovarium superior, 2-celled; fruit, a simple indehiscent nut.
[Urtica dioica. Common nettle. The leaves, seeds, and roots were formerly considered diuretic and astringent, and wero used in various complaints.
[Uritica urens. Dwarf nettle. Possesses similar properties.]

URTICARIA (urtica, a nettle). Nettlerash; itching, nettle-sting wheals, fading and reviving, and wandering from part to part. It is named from the resemblance of the eruption to that produced by tho nettle.

URTICATION (urtica, a nettle). The act of whipping a palsied or henumbed limh with nettles, to restore its feeling.

U'RIL. Cyanoxalic acid. A radical supposed to exist in uric acid and its compounds.
US'NINE. Usnic Acid. A yellow ertstalline compound, obtained from different lichens of the genns l'snca.

USQUEBAUGH. Escubac. The original name in Ireland for whiskey. A liqueur made of brandy, saffron, mace, orangepeel, citrons, and sugar.
[USTULATION. The operation of washing metallic ores, to drive off volatile matters, arsenic, ic.]

U'TERT'NA (uterue, the womb). A class of medicines which act specifically on the utcrus, us emmenagngues and cholics.

ÜTERO-GESTATION. The period of pregnancy, commencing with eoneeption, and terminating with delivery.

पTERUS (íarípa). The womb; a flattened organ, of a pyriform shape, baving its base turned upward, and eorresponding in its direction with the axis of the inlet of the pelvis. It is distinguished into four parts, viz.

1. The fundus, or upper part.
2. The body, or tho largest part.
3. The cervix, or the narrow noek.
4. The os tinca, or the orifice.

UTRICULUS (diminutive of $u t e r$, a leathern bag). A little sac. Hence tho term utriculus communis, applied to the larger of the two saes of the vestibule; the smaller is called sacculus proprius.

Utriculus, in Botany. The peculiar fruit of Amarantbus, Chenopodium, \&c. It is a caryopsis, the periearp of whieh has no rdbesion with the integuments of the seeds.

UYA PASSA. A dried grape, or raisin; the dried fruit of the black-raisin and white raisin grape.

UVA URSI. A species of Arctostaphylus, called Bear-berry, Trailing Arbutus, Bear's Whortle-berry, Wild Cranberry, \&c. ; used in cases of irritable bladder. [The U.S. Pharmacopoial name for the leaves of Arctostaphylos Uva Ursi.]

UVEA (uva, grape). The posterior surface of the iris, so ealled from its resem $\rightarrow$ blance in colour to a ripe grape. Seo Iris.

U'VIC ACID (uva, a grape). Racenic acid. An acid isomeric with tartarie acid, but differing in certain respects, as in its relations to polarized light, \&c.

UVULA (dim. of uva, a grape). The pendulous body which hangs down from the middle of the soft palate.

Uunla vesicce. A small tubercle, situated in the neck of the bladder, formed by the projection of the mueous membrane.

## V

VACCINATION (vacca, a eow). The act of inserting vaccine matter; inoculation for the cow-pox.

VACCINE MATTER. The lymph eontained within the vaccine pustule.

VACCINIA (vacea, a cow). Inoculated Cow-pox; a circular vesicle confined to the place of puncture, surrounded with a red areola, and concreting into a hard dark-coloured seab. In Ireland, the disease in the eow is ealled shinach, a term derived from two Celtie words, signifying udder and cow. The following are its varieties:

1. Natural Cov-pox, immediately reeeived by milking a diseased animal.
2. Spurious Co1o-pox, resembling the genuine disease, but destitute of its prophylactic powers.
3. Inoculated Cow-pox, or the discase propagated by inserting genuine virus.
4. Degenerated Cov-pox, so named by Sir Gilbert Blane, and destitute of prophylactic power.
VACCI'NIC ACID. An acid which semetimes replaces the butyrie aud eaproic aeids in butter.

VACCI'NIUM VITIS IDE'A. Red Whortleberry, a plant ocensionally substituted in medicine for the Uva ursi, a specics of Arctostaphylos.

VACUUM (vacaus, einpty). Literally, an empty place. This term generally de-
notes the interior of a close vessel, from which the atmospheric air and every other gas has been extracted, as in the Torricellian vacume of the barometer. The vacnum of the air-pump is always imperfect; the ressel is, nevertheless, termed an exhansted rcceiver.

VAGINA. Literally, a sheath. The membranous canal which extends from the os externum to the cervis uteri.

Vagina funculi umbilicalis. The rcflected tube of the amnion, which shcuths the umbilical cord.
VAGINAL PULSE. A term applied by Osiander to the increased pulsation of the arteria vaginalis, which oecurs in pregnancy during the immiuenee of abortion, \&c.

VAGINALIS GUL FI (vagina, a sheath). A muscular eoat, chiefly of longitudinal fibres, surrounding the tube of the osophagus, like a slienth.
[VAGINO-RECTAL FISSURE. A fissuro or opening between the vagina aud rectum.]
[VAGINO-URETIIRAL, FISSURE. A fissure or opening betwecn tho vagina and urethra.]
[VAGINO-VESICAL FISSURE. A fissure or opening between the vagina and bladdor:]

VAblitus (ragio, to ery as a ehild or infunt). The eryiug of young eliildren.

Celsus applies the term to the screaming of a patient under the surgeon's hands.
[VALERIANA. Valerinn. The pharunacopocial name for the root of valeriune aficinulis; a genus of plants of the natural order valerianacew.]

1. Vuleriana officinalis. Common Valerian, an indigenous plant, with a fetid root, which produces a specific influence on the cerebro-spinal system.
-2. Valerianic or valeric acid. An acid obtained by distillation of the root of Valeriana officinalis. Its salts are called valerianates.
2. Valerol. The name of one of the oils-the less volatile-composing the oil of valcrian.

VALERIANACEA. The Valerian tribe of Dicotyledonous plants. Herbs with leaves opposite; flowers corymbose, panicled, or in heads; stamens distinct; ovariums inferior, 2 -celled; fruit dry, indehiscent.
[VALERIANATE. A combination of Yalerianic acid with a salifiable hase.]
[VALERIANIC ACID. Valeric acid. A peculiar volatile acid obtained from the roots of Valeriana officinalis.]

VALE'RIANIN. A peculiar extractive matter obtained from tbe Valcriana officinalis, or Common Valerian.

VALETUDINARIAN (valetudo, bealth). One who is weakly, sickly, or infirm of health.

VALLEY (vallis). Tbe name of a depression of the cerebellum, in which is lodged the commencement of the spinal marrow.
[VALLET'S FERRUGINOUS PILLS. See Pilule ferri carbonatis.]

VALONIA. The acorn of the Qucrens egilops. It contains tannin.

VALSALVA, SINUSES OF. Tbe name of three prominences, formed by dilatation of the walls of the aorta, in the places which correspond to the sigmoid valves.

VALVE (valve, folding-doors). A close lid affixed to a tuhe or opening iu some vessel, by means of a hinge, or other movable joint, and which ean be opened only in one directien. Hence it signifies \& little membrane which provents the return of fluid in the blood-vessels and absorheuts.

VALVES, ACTIVE-PASSIVE. The valves of the heart are distinguished inte active and passive, in consequence of their connection with the uuscular columns. The active valves are the trienspid and the nitral; the passive are the mere folds of lining membrane, viz., tho seutunar, the Eustachian, and the corenary.

VALVULA (dinn. of value). A litule valve.

1. Valvula Vicussenii. Valvula cerebri. The name of a lannan which asecnde, behind the tubercula quadrigemina, towards the cerchellum.
2. Valuhle comicentes. The name of the numerous folds ohserved upon the inner surface of the mucous membrane of the duodennm.

VA'NADIC ACID. An acid obtained from vanadiate of lead. It is distinguished from chromic acid by yielding a blue solution, when deoxidized, instead of a green one.

YANADIUM (Vanadis, a Scandinavian deity). A newly-discovered metal, found combined with lead and iron ores. It occurs in the state of vanadic acid.
[VANDELLIA. A genus of plants of the natural order scrophulariaceæ.]
[Vandellia difusa. This plant is esteemed in Guiana as a valuahle emetic and febrifuge in malignant fever and dysentery.]

VANILLA. The dried fruit of the Vanilla aromatica, and probably of other species, used in tbe manufacture of cbocolate, of liqueurs, \&c. It contains a great quantity of essential oil, and of benzoic acid.

VAPORARIUM (vapor, vapour). A vapour-bath.

VAPORIZATION. Tbe conversion of a liquid or solid body into vapour. Tbis may be considered under two beads, viz.

1. Ebullition, or the production of rapour so rapidly, that its escape causes a visible commotion in the liquid; the temperature at wbich this takes place, is called tbe boiling point.
2. Evaporation, or the preduction of vapour in a quiet and insensible manner at cominon temperntures.

VAPOUR (rapor). Any liquid expanded into an elastic or gaseons fluid, by means of heat. It differs from gas in its want of permanency, for it returns into the liquid state, when exposed to a diminished temperature. Bodies which are so convertible hy heat, are teruned volatile; those which resist the heat of the furnace withont raperising, are said to be fixed in the fire.

VAPOUR DOUCIIE. A topical vapourbnth, consisting in the dircetion of a jet of aqueous rapour oll some part of the body.

ViPOURS. Hypochoudriacal maladies: melancholy ; spleen.

VAREC. The French name for kelp, er incinerated sca-weed.
VARICELLA. The name giren by

Willan to the chicken-pnx of Morton. It consists iu an eruption of vesicles, seldou passing into suppuratiou, but bursting at the tip, and concreting into puckered scabs. It was formerly described hy Vidus Vidius under the name of crysialli, from the whito shining appearance of the vesicles; by Heberden it is named variula pusilla; by others, variolæ spuriæ, volatice, and lymphaticæ; by Frank, pemphigus variolodes vesicularis.
YARICOCELE (varix, a distended vein; кỉd $\eta$, a tumeur). An enlargement and distension of the blood-vessels of the scrotum. A varicose enlargement of the spermatic veins, is called cirrocele.
[VARICOSE. Belonging to, or dependent on, varix.]

VARIOLA (quasi, parvi vari, small spots or pimples). Small-pox; an eruption of pustules, which suppurate from the eighth to the teath day; with fever.
VARIOLOID DISEASES (variola, and eidos, likeness). Diseases resembling Variola.

VARIX (varins, unequal). A kind of knotty, unequal, dark-coloured swelling, arising from a morbid dilatation of veins. This disease is to veins what the true or eneysted aneurism is to arteries.
VARNISH. A substance made by dissolving resins in alcobol, or oil of turpentinc, or in a mixture of eil of turpentine and a drying oil. Lacker is a lac varnish, applied to articles of brass, and containing shell lac, \&c.

VARUS. A speck, or spot. Pimple eruption. There are two varieties, viz.

1. Vaus simplex. Simple pimple; with a broad base, bright red colour, and of solid consistency.
2. Varus punctatus. Maggot pimple; tipped with a black spot, and discharging, on pressure, a grub-like concretion of mucus. Stone-pock is the Acne indurata of Bateman.

VARVICITE. A compound knewn only as a natural production, having been lately fonnd among some ores of manganese in Warwickshire, and named from its locality.

VAS, VASIS. Plural Vasa. A vessel, or any utensil, to hold liquor.

1. Var aberrans. A cecal appendage, usually found at the angle where the vas defcrens applics itself to the epididyonis.
2. Vas deferens. The largo excretory duct of the testis.
3. Vasa brevia. Short branches passing from the divisions of the splenic artery, and distributed to tho large extremity of
the etomach.
4. Tesa efferentia. Absorbent vesscls which convey fluids away from tbe glands, towards the thoracic duct.
5. Vasa inferentia. Absorbent vessels which cenvey fluids into the glands.
6. Vasa omphalo-mesenterica. The bloedvessels of the umbilical vesicle.
7. Vast pampiniformia. A name sometimes given to the veins of the spermatie cord, from their tendril-like arrangement.
8. Vase preparantia. A term applied by the old physiologists to tho corpus pyramidale and spermatic artery; from their tortuosity aud tendril-like form they supposed that the blood here began te be changed into semen.
9. Vasa propria. Certain cavities in plants, centaining the proper secretions of the specics; of this nature are the cysts in the rind of the orange, the turpentiae vessels of the pine, the milk vessels of the sumach, the vittre of umbellifereus plants, \&c.
10. Vasa recta. Small, straight ducts; terminating the apices of the lobules of the testis.
11. Vasa seminalia. Tubuli seminiferi. Very minute tubes, constituting the parenchyma of the testis.
12. Vaba mmbilicalia. The name of the hlood-vessels of the allantois.
13. Vasa vasorum. Very minute nutrient vessels, which supply the arterics and veins.

VASCULA'RES (varculem, a littlo vessel). Vascular plants; a term applied to the twe great divisions of plants called Exogens and Endogens, owing to the high development of varculter tiasue in these plants, and in order to distinguish them from the Cellulares or Cryptogamic plants, in which the tissue is principally cellular.

VASCULAR SYSTEM. That part of the animal economy which relates to the vessels. Harvey tonk the heart as tho centre, and described the two circulations as the pulmonic, through the lungs; the systemic, through the system. The French physiologists havo departed from this method, and have assumed the lungs as the eentre. Hence-

1. The système it sang noir; compreliending the veins of the body and the arteries of the lungs, and containing the dark-coloured hloord; and,
2. Tho systeme it sang ronge; comprehending the pulmonic veins and the arterial systenn of the body, and containing the bright-red blood.

## TABLE OF THE ARTERIES.

## I. PULMONARY ARTERY.

This divides into two branches, one of which is distrihuted to each lung.

> II. AORTA.

1. ARTERIES FURNISHED BY THE AORTA AT ITS ORIGIN. Anterior and Posterior Coronary.
2. ARTERIES FURNISHED BY THE ARCH OF THE AORTA.

Arteria innominata. The first given off hy the arch.
Primitive earotid.-Divided into external and internal carotids.
Furnishes

1. Supcrior thyroid.
2. Lingual, which gives-
\{1. The dorsal, and
$\{2$. The two sub-lingual.
(1. The inferior palatine.
3. External maxillary, which furnishes-
4. The sub-mental.
5. The coronary arteries of the lips.
6. Occipital, which gives the posterior mastoid.
7. Posterior auricular, which furnishes the stylo-mastoid.
8. Inferior pharyngeal.

The external earotid terminates in dividing into the temporal and internal maxillary.

Internal carotid.
7. Temporal artery.
8. Internal maxillary artery.

Furnishes

1. Ophthalmic, whicla gives-

2. Communicating artery of Willis.
3 Choroid artery.
3. Anterior cerchal.
4. Nitclle cerebral.
f Furnishes (1. The anterior

Suhclavian artery.

Axillary artery.

Brachial artery.

1. Radial artery.
2. Ulinar artery.
3. The vertebral, which gives-
4. The anterior
and posterior
spinal.
5. The anterior
and posterior
spinal.
6. The inferior 1. Tho superior cerecerebellic.
7. The basilar, divided into-
bellic.
8. The posterior cerebral.
9. Inferior thyroid, which gives the ascendiag cervical.
10. Internal mammary, \{1. The anterior mediastinal. which gives- $\{$ 2. Superior diaphragmatic.
11. Superior intercostal.
12. Transverse cervical.
13. Superior scapular.
14. Deep cervical. Continuing its course, the suhclavian takes the name of axillary.

Furnishes

1. Acromial.
2. Superior thoracic.
3. Inferior thoracic, or external mammary.
4. Inferior scapular.
5. Posterior circumflex.
6. Anterior circumflex.

In continuing it takes the name of brachial.
Furnishes

1. Deep humeral or external collateral.
2. Internal collateral.

It divides afterwards into the radial and ulnar.
Furnishes

1. The radial recurrent.
2. Dorsal artery of the carpus.
3. Dorsal artery of the metacarpus.
4. Dorsal artery of the thumh, and terminates in forming the deep palinar arch.

Furnishes

1. The anterior and posterior ulnar recurrent.
2. The anterior and postcrior interosseous, which furnishes the posterior radial rccurrent. It terminates in forming the superficial palmar arch, which gives tho collateral arteries of the fingers.

## 3. ARTERIES FURNISHED BY THE AORTA IN THE THORAX.

J. The right and left hronchial.
2. Fsophageal, (four, fire, or six in number.)
3. Posterior mediastional.
4. Iuferior intercostals, (eight, nine, or ten in number.)

## 4. ARTERIES FURNISHED BY THE AORTA IN THE ABDOMEN

1. Inferior right and left diaphragmatic arteries.

Divided into three branches.

1. Coronary of the stomach.
2. Coliac artery.
3. Superinr mesenteric artery.
4. $\{$ 1. The pyloric.
5. The Hepatic, which gives- $\left\{\begin{array}{l}\text { 2. The gastro-epiploica } \\ \text { dextra. } \\ \text { 3. The cystic. }\end{array}\right.$
6. The Splenic, which gives- $\left\{\begin{array}{l}\text { 1. The gastro-epiploica } \\ \text { sinistra. } \\ \text { 2. The vasa brevia. }\end{array}\right.$ Furnishes from its concavity- $\left\{\begin{array}{l}\text { 1. Tho superior midlde, and } \\ \text { inferior rifglt colic. } \\ \text { 2. From fifteen to twenty }\end{array}\right.$

Furnishes
4. Inferior mesenterie artery.

1. The superior.
2. The middle.
3. Tho left colic; and divides into the superior bæmorrhoidal arteries.
4. The middle eapsular arteries (two on cither side).
5. Renal or emulgent.
6. Spermatic.
7. Lumbar (four or five on either side).

## 5. ARTERIES RESULTING FROM THE BIFURCATION OF THE AURTA.

The Aorta furnishes a little before its bifur-cation-

Internal iliae artery.

1. The middle sacral, and divides into the primitive iliaes, which are divided into-
2. The internal, and
3. The external iliac artery.

Furnishes

1. The ilio-lumbar.
2. Lateral sacral.
3. Glutæal.
4. Umbilical.
5. Vesical.
6. Ohturator.
7. Middle hæmorrhoidal.
S. Uterine.
8. Vaginal.
9. Ischiatic.
10. Internal pudic, which gives-
11. Inferior hæmorrhoidal.
12. Artery of the septum scroti.
13. Transcersus perinæi.
14. Artery of the corpus cavernosum.
15. Dorsalis penis.

External iliac artery.

Femoral artery.

Popliteal artery.

1. Peroneal artery.
2. Posterior tibial arters.

Furnishes

1. The epigastric.
2. Circumflex ilii, and continues downwards under the name of the femoral artery. Turnishes
3. External epigastric.
4. External superficial and ( deeply-seated pudies.
5. Profunda, which gires-

In continuing its course it

1. The external and internal sircumflex.
2. The superior middle and inferior perforating arteries. takes the name of popliteal.

Furnishes

1. The superior middle, external and internal articular arteries.
2. Tho inferior internal and external arteries.
3. The auterior tibial; its continuation is called tho dorsal artery of the foot, which furnishes-.

The poplitenl is divided into

1. The tarsal.
2. Metatarsal.
3. Interosseous.
4. Dorsal arteries of the great toc. the peroneal, and posterior tibial arteries.
Divided into the anterior and posterior fibular.
Divided into intermal and external plantar. It forms in andetmosing with the contimation of the anterior tibial, the plantar arch, from which the superior, posterior, inferior, aud anterior branclies are giren off.

## IABLE OF THE VEINS.

## 1. VEINS Whicil form the superior vena cava.

1. Subelavians.
2. External jugular.
3. Internal jugular.

Reccives the
(1. Posterior ulnar.

1. Basilic, formed $\{2$. Anterior ulnar. of the (3. Median basilic.
2. Cephalic, form- $\{$ 1. Supericial radial. ing the $\{2$. Median cephalic.
3. Circumflex veins.
4. Inferior scapular.
5. Long thoracic.
6. Superior thoracic.
7. Acromial veins.
8. Pterygoïd.
9. Spheno-palatine.

Reccives the

1. Internal Maxillary, composed of the
2. Alveolar.
3. Infra-orbitar.
4. Mental.
5. Inferior dental.
6. Deep temporal.
7. Superficial 1. Middle temporal.
8. Anterior auricuTemporal com- $\{$ posed of the lars.
9. Transverse of the
10. Posterior Auricular. The trunk then takes the name of External Jugular, and, in its course along the ueck, reccives-
11. Cervical Cutaneous.
(5. Trachelo-scapular, \&c.

> Receives

1. Superior Ccrebral Veins.
2. Vein of the Corpus Striatum.
3. Veins of the Choroïd plexus.
4. Superior Ccrebellar Veins.
5. Inferior Cerobel. lar Veins.
6. Lateral and inferior Cercbral Veins.
(1. Iachrymal.
7. Central of the retima.
8. Ophthalmic Yin composed of the
9. Infra-orbitar.
10. Ciliary.
11. Ethmoidal.
12. Palpebral, and
13. Nasal, Vcins.
14. Subelavians (continued.)
15. Internal Jugular (continued.

VAS

1. Palpebral, and
2. Supereiliary V'eins.
3. Dorsals of the nose.
4. Faeial Yein, eallerl anymlar; near the cye, receiving the

8. Supcrior Mesenterio Vein.

VASO-DE'NTINE. A term applied to that modification of dentine, or the fundamental tissue of the teeth, in which capillary tracts of the primitive vascular pulp remain uncalcified, and, under the name of "rascular canals," permanently curry red blood into the substance of the tissuc. See Osteo-dentine.

VASTUS. A term applied to two portions of the triceps extensor cruris, the fleshy mass upon each side being distinguished by the names of vastus internus and externus, the middle portion by that of crurcuts.

VAUGUELINE. A name which has been given to Strychnia, a chemical principle discovered in nux vomica, and in the upas of Java.

VAU'QUELINITE. The ative double cliromate of lead and copper, named after the French chemist, Vauquelin.
VEAL-SKIN. An eruption of spots, giving a veal-like appearance to the skin. See $\underset{\text { vitiligo. }}{ }$

## [VECTIS. A lever.]

[VEGETABLE IVORY. The product of Phytelephas mucrocarpa, a species of palm.]

VEGETABLE ATHIOPS. A charcoal prepared hy incinerating Fucus vesieulosus in a covered crucible.

VE'GETABLE SALT. Sal Vegetabile. Tartrate of potash; also culled soluble tartar, tartarized tartar, \&c.

VEGETABLE SULPMUR. Witchmeal. A powder procured from the theew of the Lycopodium clavatum, or Common Club-moss. It is very inflammable, nod employed for pyrotechnical purposes.
VE'GETABLE TAR. Pix liquidaObtained hy the destructive distillation of fir-timber; also as a secondary product in the manufacturo of pyroligncous acid and gunpowder charcoal. Tho former is the kind used in medicinc.

VE'GETABIFE WAX. Wax produced
from vegetables, as myrtle-wax, the produce of the Myriea eerifera, \&c.

VE'GETAL FUNCTIONS. The functions common to plants and animals, as distinguish ed from the "animal functions," which are restricted to animals; the former comprise circulation, digestion, \&c.; the latter, sensation and volition.

VEGETATIONS (vegeto, to grow). A term applied by Corvisart to the fungous excrescences which sometimes appcar on the semilunar valves of the aorta, and which be considered as the effect of syphilis. Their appearance is similar to that of the wart-like excrescences which form about tho organs of generation, and are commonly termed venereal.

VEGETO-ALKALI. Alkaloïd. A body obtained from the vegetable kingdom, which has the propertics of the basic or metallic oxides, and forms salts with acids.

VEGETO-SULPHURIC ACID. An acid procured by treating ligncous fihro with sulphuric acid.
[VEHICLE. In pharmacy, the menstruum in which medicines are dissolved or suspended.]

## [VE[N. See Vena.]

VELUM. A veil; a piece of linen which hides any part.

1. Velum interpositum. A reflection of the pia mater, introduced into the interior of the brain, through the transverse fissure. It is also called velum vasculosum, tela choroidea, and, from its similarity to the mesentery of the intestines, mosentery of the plexus chmoüdes.
2. Velum palnti. The soft palate; tho movable partition which separates tho wouth from the pharynx.

VENA. A vein; an clastic tube, whieh conveys the dark or venous blood from tho arteries to the henrt. [Sco l'ascular Sys. tem.]

1. Tena cava superior, or descendens. The graud trunk which transmits the blood
of the head, the neck, the superior extremities, and part of the circulation of the thorax, to the heart.
2. Vena cava inferior, or ascendens. The large trunk which extends from the articulation of the fourth and fifth lumbar vertebre to the right auricle of the heart.
3. Vena porte. The large trunk which extends along the groove of the liver. The canal which it seems to form under that organ, has heen termed the simus of the veua porte.
4. Vena arteriosa. The portal vein; so called heeause it ramifies like an artery, and conveys hlood for secretion; hut it is an arterial vein in another sense, heing a vein to the hepatic artery, and an artery to the hepatic vein.-Kiernan.
5. Vena azygos (a, priv., 广uyàs, a yoke). A vein of the thorax, which has no eorresponding vein-no yoke-fellow.
6. Vena semi-azygos. A considerable branch which ascends parallel to the vena azygos, on the left side of the vertebra.
7. Vena basilica. The royal or large vein of the arm. The ancients termed the basilic vein of the right arm, the vein of the liver, or vena hapatica brachii; and that of tho left, vena splenica brachii. See Salvatella.
8. Vent cephalica pollicis. The vein of the haek of the thumb, which passes over the outside of the wrist. From this vein, and the division of the plexus of the hack of the hand, proceeds the cephatica minor, or radialis externa, which, as it rises upon the outside of the humerus, hecomes the $g$ "eut cephalic vein.
9. Veuce Galeni. Two parallel branches, hy which the choroïd plexus returns its hlood. They terminate in the straight sinus.
10. Vence peronece. The two or three venre comites of the fihular artcry.
11. Vence vorticosc. A designation of the veins which prineipally eompose the external venous layer of the choroild membrane, from the vorticose marking which they present on the membrane.

VENA MEDIN ENSIS. This is the irk Mrdiui of the Arabian writers, improperly translated vena, instead of vermis Medinensis, or the Guinea-worm.

VENERA'TION. A term in phrenology indieative of a disposition to renerate whatever is grent and good, and considered hy Dr. Gall the organ of religious adoration. Its organ is situated on tho front part of tho top of the middle of the head. When the organ is much dereloped, it eauses a remarkable elcration of the head.

VENESECTION (rnma, a vein; sectio.
a division). Phlebotomy. The opening a vein for the purpose of blood-letting. Seo Blond-letting.

VENE'TIAN RED. Bolus Veneta. A kind of red ochre, brought from Venice.

VE'NICE WHITE. A white pigment consisting of carhouate of lead and sulphate of baryta.
[VENTILATION. The process of renewing the air of $n$ room, or other confined place, by pure air from without.]

VENTRAL (venter, the helly). A term in descriptive anatomy applied to the aspect or region of the helly. See Dorsal. A term applied to that suture of the legume to which the seeds are attached; the opposite suture is the clorsal.

VENTRICOSE. Bellying ; inflated in some part.

VENTRICULUS (dim. of venter, the helly). The stomach, the principal organ of digestion. The term ventricle is also applied to two eavities of the heart, which communicate with the two auricles; and to several eavities of the hrain.

1. Ventriculus succenturiatus. A reserve stomach; a name of the duodenum.
2. Ventricali tricornes. The threehorned ventricles; a designation of the two lateral ventricles of the hrain, from their heing prolonged into certain cavities called horns.
3. Ventriculns Arantii. The rentricle of Arantius; a small carity situated at the point of the calamus scriptorius.
4. Teutriculus laryngis. The ventricle of the larynx ; a depressed fossa, situated immediately ahove the horizontal projeetion of the chorda rocalis, at each side.

VENTRILOQUISM (venter, the helly; loquor, to speak). Speaking, as it mere, from the belly; a particular modifieation of the roice.
VENUS. The name given hy the old eliemists to eopper. Hence the term sales veneris, a former designation of the saline eombinations of copper.
VERATRIA. Sabadillin. A regetable alkaloïd ohtained frnus sabadilla, or the sceds of the Asagrea officinalis, [Veratrum Sabadilla, Ph. U. S.].

1. Veratric acid. A crystalline, volatile acid, ohtained from sabadilla.
2. Teratrin. Resin of veratria : a brown solid suhstance obtained from sabadilla.
3. Sales veratria. The sulphate and tartrate of veratria, prepared by saturating veratria with sulphnric or tartaric acid.

VERATRUM ALBUM. White Hellchore, an cudogenous plant of the order Melanthaca. The gencrie name veratrum appears to be derived from the hlackness of the rhizome, quasi vere atrum. Two
new bases have been diseovered in the rhizome, viz., barytin and jervin.
[Vcratrum viridc. American Hellehore. This species, which is indigenous, resembles its European congener in its effects on the system, though said to bo destitute of purgative propertics. It is an active emetie, exerts a powerful influence over the nervous system, producing faintness, somnolency, vertigo, dilated pupils, \&c.]

VERBASCUM THAPSUS. Tho Great Mullein, or High Taper ; a European plant of the order Scrophulariacca. The generie term appears to be derived from the shagginess of the plants, quasi barbascum, from barba, a beard. Fishes are stupefied by the seeds.
[VERBENA OFFICINALIS. Vervain. A European plant of the family Verbenacere, esteemed by the aneients, but not now used.]
VERDIGRIS (verde-gris, Sp.). An impure acetate of peroxide of copper, of a heautiful bluish-green colour, formed from the corrosion of eopper by fermented vegetahles.

1. Distilled verdigris. The improper name under whieh the green salt is found in commeree.
2. English verdigris. A spurious kind, consisting of sulphate of eopper and acetate of lead; to make the fraud more complete, the soft mass is mixed with the stalks of raisins.
VERDITER. A blue pigment, ohtained by adding chalk or whiting to the solution of copper in aquafortis.

VER'DITER GREEN. A pigment prepared much in the same way as blue verditer, the difference in colour resulting from differences in the proportions of the ingredients, or from aecidental eircumstances.

VERJUICE (verjus, Fr.). A kind of harsh vinegar, made of the expressed juice of the wild apple or crah, which has undergone the aeetous fermentation. The French give this name to unripe grapes, and to tho sour liquor obtained
from them.

VERMES. A worm. There are five species of worms which infest the human intestines, viz.:

1. Ascaris lambricoides (lumbriens, the earth-worm; eidos, likeness). The long round worm, principally inhabiting the intestines; it sometimes, however, ascends into the stomach, and erceps out at the mouth and nostrils. It is from twelve to fifteen inches in length.
2. Ascaris vermicularis. Tho Mant or Thread-worm; the oryurin ecrmicularian of

Bremser; commonly found in the reetum: it is, however, erratic, and is oecasionally found as high as the stomach. These worms resemble the ends of threads out off, and are ahout half an inch in length; hence the term thread-worm, and perhaps that of bots, derived from the French bouts, ends or extremitics.
3. Tania lata, or vulgaris. The broad Tape-worm, oceupying the upper part of the intestines, from three to fifteen feet in length. This worm is of a white colour; hut when maecrated in spirit of wine, becomes darker; whence it was formerly called hy Pallas, tenia grisea.
4. Tania solium. The long Tape-worm, occupying the upper part of the intestines, from thirty to forty feet long. Van Doevern asserts that a peasant, after having taken an emetic, vomited up forty Dutch ells of tape-worm, and "would hare got clear of more, if he had not heen afraid of puking out all his guts, and for that reason hit the worm off." It is the lumbricus cucurbitinus, or Gourd-worm of Heberden.
5. Trichocephalus (Opi\}, tpixps, the hair; кєфа入入, the head). Trichuris ( $\theta \rho i \xi$, hair; and oipà, the tail). The long Thread-worm, generally found in the excum. The thinner part (head or tail?) is twice as long as the thicker, and terminates in a fine hairlike point. The wholo length of this worm is about two inches.

Worms of rarer occurrence.

1. Farciola heputica, also called Distoma hepaticum, or the Fluke; occasionally found in the gall-bladder of inan, but commonly infesting the liver of sheep when diseased with the rot. The young worms are from one to four lines in length; the adult, ahout an iuch in length.
2. Strongylus gigas. Sometimes met with in the kidneys of man, and several of the mammalia; and confounded by Chabert and others with the Ascaris limbrieoïdes. It varies in length from five inches to three feet.
3. Ascaris costrus. The Brecze or Gadfly, the larva of which, called bots, are said to haro been found in the homau feces, hut more commonly in tho horse. The astrus ovis deposits its egrgs on tho interior nostrils of the sheep, whenee the grubs, when batched, travel into tho frontal sinuses or horns, and are expelled through the nostrils.
.4. Ascaris scarabans. The Beetle; tho grubs of which are said to have becu found in tho rectum; almost all the grabs of the genus Scarahæus being used to feed on dung. Seo M/usca and Sefa Equina.
4. Formerly, the toothache was attributed
to the presence of $\Omega$ worm; as appears from the words of Shakspeare:-
"What! sigh for the toothache!
Which is buta bumour or a vorm."
VERMICELLI (vcrmis, a worm). An litalian preparation, made of lour, cheese, yelks of eggs, sugar, and saffron, and reduced into long worm-like pieces by foreing it through holes.

VER'MICIDES (vermis, a worm ; cado, to kill). That class of anthelminties whieb destroy intestinal worms, as powdered tin and cowhage.

VERMIFORM (vermis, a worm ; forma, likeness). Worm-like; the designation of two processes of the cerebellum, which conneet the lateral lobes abnve and below.
VERMIFUGE (vermis, a worm ; fugo, to expel). Anthelmintic. A remedy wbich expels worms.

VERMILION. A red pigment, consisting of powdered cinnabar.

VERMINATION (vermis, a worm). Infestment of the skin by parasitic animalcules; a breeding of worms. See Malis.
[VER MINOUS. Caused by worms.]
VERNATION (vernus, helonging to the spring). Gemmation. The mode in which leaves are arranged within tbeir bud.
[VERNONIA. A genus of plants of the natural order Cumpositz.]
[1. Vernonia anthelmintica. This species is a native of the East Indies, where it is esteemed as a bitter tonic, and its sceds are used as an anthelmintic.]
[2. Vernonia Noveboracensis. An indigenous species, the flowers of wbich are said to be cathartic.]
[VERONICA. A genus of plants of tbe natural order Serophulariaeew.]
[1. Veronica bcceabunga. Brooklime. A succulent plant formerly used to purify the blood, and as a remedy in seurvy.]
[2. Veronica officinalis. Spcedwell. This species has a warm, bitterish, and somewhat astringent taste, and bas been considered diaphoretic, diuretic, expectorant, tonic, \&c.]
[3. Veronica Virginica. Leptandra Virginica, Nuttnll, (q. v.)]

VERRU'CA. A wart. An exeresceneo from the eutis, or a tumour formed upon it.

Verrucose. Warty; covered with little cxerescences or warts.

VERSATILE. Swinging backwards and furwards, as applicd to anthers, and synonymous with oseillating.

VEATTEBRA (verto, to turn). A bone of the spine, so naned from its turning upon the aljoining one. A vertebra consists of a neural areh (reĩpov, a nerve), or bony hoop, situnted nbove a central piece of boue, for the protection of a ergment of
the nervous axis; and a hemal areh (uipa, blood), or bony hoop, beneath the central piece, for the protection of a segment of the vascular system. Their euminon eentre is called the ceutrum (кivppov, centre). Bones are also developed and diverge as rays from one or more parts of a vertebra.

1. The neural arch is formed by a pair of bones, called neurapophyscs (reṽpov, a nerve, and ámoquats, apophysis, a process of bone), and by a hone, sometimes cleft or bifid, ealled the neural spinc. It also sometimes includes a pair of bones, called diapophyses (du, tbrough or across, and apophysisj.
2. The hermal arch is formed by a pair of bones, called plenrapophyses ( $\pi \lambda \varepsilon u \rho \grave{\partial} v$, a rib, and apopbysie) ; by a second pair, ealled hamapophyses (aipa, blood, and apopbysis); and by a hone, sometimes cleft or bifid, called the hemal spine. It also sometimes includes parts, or bones, called para-
 physis).
3. The parts of a vertehra wbicb are developed from independent centres of ossification are called autogemons (aùtos, oneself; yivopat, to he produced) ; those parts which grow out from previously ossified parts are called exogenous ( ${ }_{\xi} \xi \boldsymbol{\xi}$, outward; ;ivopat, to be produced). The autogenous parts of a vertebra are its "elements," the exogenous parts are its "processes."
4. Otber terms explanatory of exogenous parts of a rertebra, and compounded of apoplysis, are-
5. Anapophysis, frou àvà, hackward.
6. Epipophysis, from $\varepsilon$ ㅍi, ahore.
7. Hypripophysis, froun $\dot{v} \pi \mathrm{~d}$, helow.
8. Nretapophysis, from $\mu \varepsilon \tau \underset{a}{\text {, }}$, hetween.
9. Zygupophysis, from ̧uyòs, junetion.
[Terms employed by Prof. Oicen in his Analysis of the skivill of the Gadus Morrhuta, or Cod, as the Archetype Vertcbrate shelcton.]
10. Tho elements of the neural areh of the hindmost segment of the skull undergo much development and modifiention, and have received special names. Thus the eentrum is called basioccipital; the neurapophyses, exoccipitals; the neural spine, supcreecipital: the diapophrses, paroccipitals. In the human skeleton all these parts are blended together into a mass, ealled the "oecipital bone," in which the elements have hecome conflucnt, and were not commate.
11. Again: in the nerral arch the centrum is called brsisphenoid (hasis, the base, and sphenoides, the sphenoid bone): the neurapophysis is aliaphenoid (ala, a wing, and sphenoides) : the neural spine is parietul; the diapophysis, mastuid.
12. In the hemal arch the pleurapophysis is suh-divided into two parts, the upper called epitympanic (èmi, upon; ти́ $\mu \pi a \nu 0 \nu$, the tympanum) ; the lower one stylohyal (styloides and hyoides). The hæmapophysis is a broader, slightly arched bone; the upper division is called epihyal ( $\grave{\text { enin}}$, above, and hyoides) ; the lower division, ceratohyal (*ípas, a horn, the horn or cornu of the hyoid hone, and hyoides). The hæmal spine is subdivided into four stumpy bones, called collectively babihyal (brsis, base, and hyoides) ; and which, in most fishes, support a bone directed forwards, entering the suhstance of the tongue, called glossohyal ( $\gamma \lambda \bar{\omega} \sigma \sigma a$, the tonguc, and byoides), and another hone directed backivards, called urohyal (ojpà, the tail or underpart, and hyoides). The ceratohyal part of the hæmapophysis supports in the eod seven long and slender hent hones, called branchiostegal rays (ßрáy $\mathfrak{c}$ a, gills; oréy $\omega$, to cover), owing to their covering and protecting the gills.
13. The penultimate segment of the skull ahove described is called the parietal vertebra; and the hæmal arch is called the hyoidean arch, in reference to its supporting and suhserving the movements of the tongue.
14. In the second segment of the skull, counting hackwards, the centrum, called presphenoid, is produced far forwards, slightly expanding; the neurapophyses, called orbito-sphenoids, nre small scmi-oval plates, protecting the sides of the cerebrum ; the neural spine, or key-hone of the areh, called frontal, is enormously expanded, hut in the cod and most fishes is single ; the diapophyses, called postfrontals, project outwards from the under angles of the frontal, and give attachment to the piers of the inverted hemal areh. The pleurapophysis is subdivided into four pieces; the upper one is called eqitymprenic; the hindmost of the two middle picces is the mesotynipanic; the foremost of the two middle pieces is the pretympanic; the lowar piece is the hypotymprinic ; this forms a joint surfnec, convex in one way, concavo in tie
other, called a "ginglymoid condyle," for the hemapophysis, or lower division of the areh.
The scveral elements of which a vertebra consists, are found most isolated and distinet in the lowest classes of animals, and in the embryo state of the highest: these are distinguished hy Dr. Grant, into
15. The cyclo-vertebral element, or the round hody forming the centre.
16. The peri-vertebral elements, or the two superior laminæ which encompass the spinal chords.
17. The epi-vertebral elements, or the two portions of the supcrior spinous process.
18. The para-vertebral elements, or the two inferior lamine, which form a eavity for the hlood-vessels.
19. The cata-vertebral elements, or the two portions of the inferior spinous process.

General Divisions of a Vertebra.

1. A body, or the main part, forming the centre of the spine, and bearing, chicfly, the weight of the hody.
2. An articulating process, by which it is joined to the next vertebra. This is sometimes called the oblique process-the upper one, the ascending oblique; the lower one, the descending oblique process.
3. The spinous processcs, which project directly backward, forming with their points the ridge of the hack; it is from their sharpness that the whole vertehral column is called The spine.
4. The transverse processes, which stand out at right angles, or transversely, from the body of the vertebra.
5. The foramina, or holes for lodging the spinal marrow, transwitting the bloodvessels, and attaching the ligaments.

Position and Number of Vertebres.

1. The Cervical, or thoso of the neck, seven in number, and characterized by having their transverse processes perforated for the passage of the vertehral artery. The first of these is called the atlas, from its immediately supporting the head; the sccond, the dentata, odontoidce, or axis, from its axis, or tonth-like process, upon which it turns; and the lowest, vertebra prominens, from its spinous process being so minch longer than tho others.
2. The Dorgrt, or those of the back, twelvo in number. Theso are distinguished hy baving articular surfaces for the heads of the rihs.
3. The Lumbrer, or those of the loins, five in namber, and distinguislied by their size, and the length of the transverse processes.
[VERTEBRAI. Pertaining to tho vertclora.]
rertebral artery. A large artery, so named from its passing througl a bony canal, formed for it by the perforations of the ecrvical vertebre. This, and the Carotid, are the arteries of the brain.

VERTEBRATA. Animals which have an internal skelcton, supported hy a vertehral column.

VERTEX (verto, to turn). The top or crown of the head.
VERTICILLUS (verto, to turn ahout). A whorl; that arrangement of leaves upon the stem, when more than two of them are opposite, or upon the same plane, as in Galium.

VERTI'GO (vertex, or vortex, a whirlpool). Giddiness; dizziness, with a fear of falling. It is a popular expression to say the brain turns.

VERU MONTANUM. A little eminence in the urethra, at the termination of the ductus ejaculatorius. It is also called caput gallinaginis, or the woodcock's head.
[VERVAIN. Common name for Verbena officinalis.]

VESANIA. Madness. An order in Cullen's Nosology, comprehending diseases in which the judgment is impaired, without coma or pyrexia.

VESICA. A hladder. The urinary bladder is termed vesica urinaria; the gall hladder, cystis fellea.

VESI'CAN'TS (vesica, a hladder).Epispastics. Topical agents which cause the cxhalation of a thin serous fluid under the cuticle, as cantharides.
[VESICATION. The effects of a vesicant ; the formation of hlisters.]

VESI'CATORIN. Another name for cantharidin or eantharides-camphor; the blistering principle of the blister-bectles.

VESICATORIUM (vesica, a bladder). A vesicatory, epispastic, or hlister.

Vesicatory Sill:. A substitute for the eommon blistering plaster. The following is tho formula of Cadet do Gassicourt:Tincture of cantharides, q. s., evaporate, and, when in a state of sufficient coneentration, spread it hot upon silk stretched on a fraure; it will bo necessary then to spread two or three layors one upon another.

Guillcrt's Epispatic Silk. Mezercon bark, 24 parts; water, 1500 parts. Boil, strain, and add pulverized aantharides, myrrh, euphorbium, āā 192 parts. Boil, strain through a donble linen cloth, and evaporate until the liquor is of sufficient density to allow it to be spread upon waxed silk.
VE'SICLE, GE'RMUNAI. Purkingian vesiclc. A nucleated vesiele, being
the earliest formed part of the ovum; its nuclens is called the germinal spot. See Gcrm-cell.
VESICULA (din. of vesica, a bladder). A resicle or little bladder. A small clevation of the cuticle, containing a transparent, serous fluid.

1. Vesicula umbilicalis. A vesicle containing a yellowish fluid, situated between the chorion and the aminon, and connected with the foetus. It is also called vesicula alba.
2. Vesiculce accessoric. The name of certain blind ducts, opening into the urethra, near its commencement, ohserved in most Rodentia.
3. Vesicula seminales. Trro small bags situated at the hase of the prostate gland, forming reservoirs for the seminal fluid.
4. Vesicles of Naboth. Sunall semi-transparent vesicles on the interior of the cervix uteri, which were mistaken hy Naboth for ovula.
5. Vesicles of Degraaf. From fifteen to twenty small transparent vesicles in the midst of the lobules composing the parenchyma of the ovaries. According to Baër, they contain germs, and, when hurst, leare the appearance of what are called corporca lutea, or yellow hodies.

VESTIBULE (veatibulum, a threshold). A small oval cavity of the internal ear, so named from its forming an entry to the cochlea and semicircular canals. This term is also applied to a triangular space which separates the nympho from each other.
VETA, or MAREA (sea-sickness). The vulgar name of an affection prevalent iu South America, and described by Lient. Smyth, who experienced it in 1834, while crossing the Andes, as "an aeute pain passing through the temples to the lower part of the back of the head, and completely disabling the person affected."

VEXILLUM (dius. of velum, a reil). A standard, or small banner; a term applied to the upper petal of a papiliouaceous corolla, from its erect and expanded state.

TIE LACRYMALES. The tear passages; a collective term for the double apparatns for the secretion and exeretion of the tears. Each of them consists of the lacrymal gland, the puneta lacrymalia, the lacrymal dnets, the lacrymal sac, and the nusal canal.
[VIE PRIME. The first passages, or the aliuentary passages.]
VIABILITY (ria, a way). [riable.] A term expressing the eapability which a child has of supporting extra-uterine or independent existence.

VIBEX, VIBICES. The large purple
spots appearing under the skin in certaiu qualignant fevers.

VIBRISSA (vibro, to quiver). The hair of the nostrils.
[VICARIOUS. In the piace of another ; as where one secrction repiaces another, or where a secretion appears in one part instead of another.]

VIDIAN NERVE. A designation of the pterygoid nerve, from Vidus Vidius, a professor at Paris. [See Pterygoidcus.]
[VIENNA CAUSTIC. Equal parts of potassa and lime, mixed together and prepared for use by heing made into a paste with a litlle alcohol.]

VIENNA-GREEN. Sweinfurt-green.A double salt formed of the acetate and the arsenite of copper.

VIGANL'S ELIXIR. Sweet elixir of vitriol; or the Sp. Ftheris Aromaticus.

VI'LLIFORM TEETH (villus, plush; forma, likeness). A designation of the teeth of the perch and other fishes, in which they are slender, sharp-pointed, and so minute, numerous, and closely aggregater, as to resemble the plush or pile of velvet. See Ciliiform Teeth.
VILLOUS. Covered with long, soft, shaggy hair.

VILLUS. Literally, the sbaggy hair of beasts. Some of the membranes of the body, as the mucous memhrane of the stomach and of the intestinal canal, present a surface of minute papillæ, termed villi or villosities, resembling a downy tissue, continually covered with fluid. Seo $A m$ pullula.
[VINCETOXICUM. Cynauchum vincetnxicum.]

VINEGAR. Acctic acid, derived by the action of air upon alcoholic liquors, as wine and heer; by the contact of platinum hlack with alcohol, \&e.

Wood Vincgar. Pyroligneous acid, procured by the distillation of wood.
[British vinegar. French vinegar. Impure dilute acetic acid, prepared by fomen-
tation.]

VINEGAR EEL. The augnitulla aceti, a microscopic animal which is generated and nourished in vinegar.

VI'NEGAR, MOTIIER OF. A fungous plant, refcrred to the Iryphomycetes, a sub-order of the Fungi.

VINUM. Wine; the juice of the grape, or fruit of the Vitis vinifera.

1. Vinum Xericune. Vinum alhum Hispanicum, or Sherry, the officinal wine elluployed in the preparation of the rina medicura, er medicated wincs.
2. Viaum Lnsitanicuǹ. Vinum Portugallicum, or Port wine, usually cmployed
in hospitals, in cases in which a stimulant and tonic is required.
3. Vimm Burgundicum. Burgundy wine; a stimulant and sounewhat astringent wine, rarely used for medicinal purposes.
4. Vinum Campanicum. Champagne; a diuretio wine, occasionally employed to allay vomiting, owing to the evolution of carbonic acid.
5. Vinum Mraderaicum. Madeira; a more stimulating winc than sherry; an excellent wine for invalids.
6. Vinum Rherantm. Rhine wine, comprising Hock and Moselle. Their acidity adapts them for use in cascs of phosphatic deposits in the urlne.
7. Vinum Rubellum. Claret; a wine adapted for the same cases as the Rhine wines, but objectionahle in gouty cases and lithic acid deposits.
[VINUM MEDICATUM. Medicated Wine. Wine holding medicinal substances in solution. The following are the medicated wines in the Ph. U. S., with the formula for their preparation.
[1. Vinum aloes. Wine of aloes. Aloes in powder, ${ }^{j}$ j. ; Cardamom, bruised; ginger, bruised, each $3 \mathbf{j}$. ; wine, $0 j$. Macerate for 14 days, with occasional agitation, and filter through paper.]
[2. Vinum colchici radicis. Winc of colchicum root. Colchicum root, well. hruised, Hj.; white wine 0 ij . Macerate for 14 days with occasional agitation; then express strongly and filter. It may also ho prepared hy displacement.
[3. Vinum colchici semintis. Winc of colchicum seed. Colchicum secds, hruised, Ziv.; wine, Oij. Macerate for 14 days, with occasional agitation; then express and filter through paper.
[4. Vinun ergotce. Wine of ergot. Ergot, hruised, ${ }^{\mathbf{j}} \mathrm{jj}$. ; wine, 0 j . Macerate for 14 days, with occasional agitation; then express and filter.
[5. Vinum Ipccacuantice. Wine of Ipecacuanhr. Ipecacıanha, bruised, §ij.; white wine, 0 ij . Maceratc for 14 days, with oceasional agitation ; then oxpress and filter through paper.
[6. Viuum Opii. Winc of opium. (Sydenham's laudanum.) Opilun, in powder, ${ }^{3} \mathrm{ij}$. ; cinnamon, bruisod; clowes, hruised, cach, 3 j . ; white winc, Oj. Macerate for 14 days, and then express and filter. [7. Vinum rhei. Wine of rhularh. Rluubarb, bruised, Zii. ; canella, hruiserl, 3i. ; diluted alcohol, $\mathrm{f}_{\mathrm{J}}^{\mathrm{Zj}} \mathrm{i}$; white wine, 0 j . Macerats for 14 days, with occasional agitation ; then cxpress and filter through priper.
[8. Vinum Tabaci. Wine of tobacco. Tohacco, cut in picces, 羿j.; wine, $0 \mathbf{j}$. Macerate for 14 days, with occasional agita tion; then express and filter.
[9. Vinum Veratri Albi. Winc of white hellcbore. White hellcbore, hruised, З̄iv.; wine, 0j. Macerate for 14 days, with occasional agitation; then express and filter.]
[VIOLA. Violet. The U. S. pharmacopœial name for tbe herb of Viola pedata; a genus of plants of the natural order Violaceæ.]
8. Viola Odorata. Tbe Sweet Violet; a European plant, formerly used in medicine.
[2. Viola Ovata. An indigenous species recommended as a remedy for the bite of a rattle-snake.]
[3. Viola Pedata. An indigenous species; the herb is officinal, Pb . $\mathrm{U} . \mathrm{S}$. It is considered a useful expectorant and demulcent.

VIOLACE E (viola, a violet). The Violet tribe of Dicotyledonous plants. Herbs with leaves usually alternate; flovcrs polypetalous; petals bypogynous; stamens alternate with the petals; ovarium 1-celled, many-seeded.

VIOLINA. Violine ; also called emetine of the vinlet, or indigenous entetine; an alkaline principle obtained from the roots, leaves, flowers, and seeds of the Viola odorata, similar to the etaetine of ipecacuanba. It is said by M. Orfila to be highly poisonous.

VIRGIN'S MILK. A favourite cosmetic, prepared by mixing one drachm of the simple tincture of benzoin with four ounces of water.

VIRGIN OIL. This is the suhstance whicb flows first from the pulp of the ripe juice of the olive, on expression.

VIRGIN-SULPHUR. Native sulphur, as it occurs imbedded in rocks, or is produced by sublimation. In the latter case it is called volcrmic sulphur.
[VIRGINIA SNAKE-ROOT. Scrpentariu Virginiana.]

VIRGINIC ACID. An oily acid obtained from Sencka root, and named from Virginia, whence the plant was originally sent by Dr. Tennent, in 1738.
[VİRULENT. Highly poisonous.]
VIR US (vis, violence). Venom, poison:a term used synonymously with contagion.

VIS. Force, power; a tertn expressive of strength in gencral. Ience-.

1. Vis à tergo. Litcrally, force from behind; a terin applied to the forec communicated irom the ventricles of the heart
to the blood in the arteries, capillaries, and veins.
2. Vis cellulosa. A term applied by Blumenbach to tbe contraction which membrane occasionally undergocs, when it has been over-distended, and the distending force withdrawn, as in the propulsion of the serous exhalation into the lymphatic vessels. It is very different from the contractility of tbe muscular fibre.
3. Vis conservatrix. See Vis medicatrix naturce.
4. Vis formativa. Tbe formative process; the process by whicb the parts of the hody are nourished, and tbe sccretions are promoted.
5. Vis inertic. Inertness, or the principle of inactivity, hy wbich a body perseveres in the same state of rest or motion, in a straight line, unless obliged to change it by a foreign force.
6. Vis incita. Tbe name given hy Haller, Girtanner, \&c., to irritability of the muscular fibre, arising from the action of a stimulus. By Goerter, it was called vis vitalis.
7. Vis nervea. The name given hy Haller to that power in the muscular fibre which enables it to receive impressions conveyed to it by the nerves.
8. Vis medicatrix naturce. [Vis conservatrix.] A power supposed hy Cullen to preside over the living body, and to posscss a faculty of resisting, to a certain extent. the effects of disease.
9. Vis mortua. That property by which a muscle contracts, after the deatb of the animal to which it belongs, or after haring been cut from a living body.
10. Vis suctionis vel attractionis. A teron applied to the supposed power hy which an organ creates for itsclf an increased aftux of blood, or becomes congested.
11. Vis vita. The natural porer of the animal body in prescrving life.
[VISCUM ALBUM. Mistletoc. A European parasite plant, of the fanily Caprifoliacea, which once enjoyed great reputation as a remedy for epilepsy, palsy, \&c., but which is now out of use.]

VISCUS. Pl. Tiscera. A bowel, or intestine. Any organ whicb bas an appropriate use.
[VISION (videre, to sce). The action of sceing; the function which cnables us to perccive the form, colour, distance, \&c., of objects.]
[VISUAT.. Relating to rision.]
VISUS (rideo. to sce). The sight: tbe seuse of sccing. The various defects of sight, or the vilia risiks, are

1. Viers coluratus, or chrapsia ( $x$ pba, co'our, bi is, sight), or coloration of objects.
2. Visus defiguratus or metamorphopsia,
 or disturtion and confusion of objects.
3. Fisus dimidiatus, or hemiopsia (グmevv, balf; ò $4(5$, sight), or half-sight; an affection of the sight, in which the sphere of vision is diminished, so that the person sees only a part of an ohject.
4. Visuz duplicatus, or diplopia, ( $\delta$ ( $\pi \lambda$ дoos, double; and $\bar{\omega} \psi$, sight), or double vision.
5. Visus interraptus (interrumpo, to interfere with), or hroken interrupted vision.
6. Visus lucidus, or photopsia ( $\phi$ ธัs, $\phi \omega \tau \dot{s}$, light; ${ }^{\circ} \psi \psi(s$, sight), or luminous vision, in which flashes of light appear to pass before the cyes, when the eyelids are shut, particularly in the dark. This is the marmarygc ( $\mu$ appapvy $\dot{\eta}_{\text {, }}$ dazzling light) of Hippocrates.
7. Visus muscarum, or myodesopsia ( $\mu \nu \mathrm{i} a$, musca, a fly ; ö $\psi c s$, visus, sight), or the appearance of flies, \&c., flonting before the eycs. A single black speck is called scotoma (aк6ros, darkness); the more moving substances are termed muscce volitantes or monches volantes.
8. Tisus nebulosus (nebula, a cloud), or misty, clouded vision.
9. Visus reticulatus (rete, a net), or a gauzy, net-like appearance of objects.
VI'TAL AIR. The name applied by Condorcet to oxygen gas.
VITA PROPRTA. A term applicd by Blumenhach to the peculiar power by which the motions of the iris and of some other parts are determined. The expression, however, gives no idea of the facts.
VITE'LLICLE (vitelliculus, a little yolk). The little yolk-bag, or the bag containing that part of the yolk which has not been converted into the germmass and embryo. In man, it is the umbilical vesicle.
[VITELLINE (vitellus, the yolk of an egg). Appertaining to the yollz of an egg ;

VITRE'LLINE DUCTS. The name given to the constricted part at which the vitellicle is continued into the wall of the intestinal cannl.
A vide duct intesti'NAL DUCT. A wide duct by menns of which the nutritive suhstance of the yolk enters the alimentary canal for the nutrition of the emhryo.

VITELLUS OVI. The yollk of egge ; a kind of yellow cmulsion, consisting of oil suspended in water by means of albumen, and inclosed in a sack called the yolh: bug; principally employed for rendering oils and balsams miscible with water.

YITES (citis, n vinc). The Vine tribe of Dicotyledonous plants. Climbing shrubs with tumid joints, and leaves stipulate; flowers polypetalous, on ramose peduncles; stamens liypogynous; ovarium 2celled ; fruit baceate; seeds albuminous.

Vitis vinifera. Common Grape-vine. Various parts of this plant have heen employed in medicine under various names: thus, the leaves are termed pampini ; the cirrhi or tendrils, capreoli; the tender shoots, palmites; tho ripe grape, uva; the dried grapo or raisin, uva pasart; the juice or sap of the ripe grape, lacryma; that of the unripe grape, oniphacium, or commonly agrestr.

VITILIGO (vitulus, a calf; so called from the veal-like appearance presented by the affection). White, shining, smooth tubercles arising in the skin, about tho ears, neck, and face ; terminating without suppuration. The term is also employed generally to comprehend alphos, melas, and leuce.
[VITREOUS (vitrum, glass). Glassy; like glass.]

VITREOUS BODY (vitrum, glass). Vitrcous humour. A transparent mass, rescinbling melted glass, occupying the globe of the eye, and enclosed in the hyaloîd mem. brane.

VITRIFICATION (vitrum, glass; fio, to become). The conversion of a substance, as silica, \&o., into glass.
VITRIOL (vitrune, glass). A term originally applied to any crystalline body possessing a certain degree of transparency, hut now restricted to the following sub-stances:-

1. Green vitriol. Copperas, or sulphate of iron. When the salt is exposed to heat in a retort, it first gives off water of crystallization, or phlegm of vitriol; next comes an acid, called spirit of vitriol; then a stronger acid, called oil of vitriol; the latter part of this becomes solid, and has been called glacial oil of vitriol.
2. Blue vitriol. Sulphate of copper, comunonly called Roman vitriol.
3. White vitriol. Sulphate of zinc.

VITRIO'LIC NAPHTIIA. Naphtha vitrioli. A name given by the Germans to sulphuric ether.

VITRUM. Glass. This term is also applied to certain glaнsy substances, viz. :

1. Vitrum autimonii. Glass of antimony; a reddish-brown coloured glass, obtained by first calcining antimony, and then fusing it in a crucible. It is medicinally employed in preparing the antinonium tartarizatum.
2. Vitrum antimonii coralun. Cerated
glass of antimony, or the vitrified oxide of antimony with wax.

VITTA. Literally, a riband. A term applied to the vessels of oil found in the coat of the fruit of Umbelliferous plants. They afford an instance of the vasa propria, or reeeptaeles of secretion.

VITTIE-VAYR. The Indian name of the fibrous root of the Andropogon muvicatus. See Cuscus.

VIVIPAROUS (vivus, alive: pario, to bring forth). A term applied to animals which bring forth their young alive and perfeet, as distinguished from oviparous animals, which produce their young in the egg.

VIVISECTION (vivus, alive; seco, to cut). Dissection of living animals for the purposes of experiment.

VOCAL LIGAMENTS. Yocal cords. A name given to the thyro-arytænoild articulation.

## [VOLATILE ALKALI. Ammonia.]

VOLATILITY (valatilis, from volo, to fly). A property of bodies, hy which they are disposed to assume the state of vapour, and $f y$ nff.
[VOLI'TION (volo, to will. The act of willing.]

VOLTA, PILE OF. An apparatus consisting of plates of zine, and silver, aud. pieces of moistened woollen eloth, piled in the order of zine, silver, eloth ; zinc, silver, eloth; for twenty or more repctitions. See Galvanism.

Volta-meter. A cell of decomposition, containing dilute sulphuric acid, and so formed as to admit of the ovolved gases being collected and measured.

V0'LTAISM. Voltaic electricity; chemieal eleetricity. See Galvanism.

VOLUBLE. Twisting; as applied to stems which twist around other bodies, the hop to the right, the bindweed to the left.

VOLUME (volumen, from volvo, to roll). The apparent space which a body oecupies is called its volume; the effective space which the same body occupies, or its real bulk of matter, is its mass; the relation of tho mass to the volume (or the quotient of the one by tho other) is its density; and the empty spaces, or voids, which render the volume larger than tho mass, are its pores.

Definite Volumer. Tho union of gases is always effeeted in simple proportions of their volumes : a volume of une gas com-
bines mith an equal volume, or twice or three times the rolume, of another gas, and in no intermediate proportion; this is enlled the law of definite columes.
[VOLUNTARY (unluntas, will). Relating to the will; applied to muscles which aet in obedience to the rill.]

VOLVA (volvo, to roll). The wrapper which covers many Fungneeous plants in their early state, as the Agaries.

VOLVULUS (volvo, to roll up). Intussurceptio. A disease produced by the passing of one portion of an intestine into another, commonly the upper into the lower part.

VOMER (a ploughshare). A bone of the nose, forming the partition hetween the nostrils, and so named from its resenblance to a ploughshare.

VOMICA (vomo, to spit up). An ahscess or imposthume of the lungs; so ealled, hecause it diseharges a sanies.

VOMICI'NA. Another name for brucia, from its being found in the bark and seeds of nux-romiea.
VOMITO'RIA (como, to vomit). Emetica. Agents which produce vomiting.

VOMITURITIO (vomo, to romit). Retehing. An ineffectual effort to romit.
VOMITUS (vomo, to vomit). The aet of vomiting ; this consists of a forcible contraction of the museles of expiration, and of those only; the glottis heing elosed, and the eardia opened.
[YULCANIZED CAOUTCHOUC. Caoutehoue which has been subjected to tha action of sulphur, by which it acquires nem properties.]
[VULNERARY (culnus, a round). A medicine which possesses the property of favouring the healing of mounds.]

VULPIS MORBUS. Alopecia. Literally, fox-disease. Baldness; decay and fall of the hair. It is so named from the fox being supposed to lose its hair sooner than any other quadruped. See Fluxus Capillorum.

VULTUS (volo, to mill). Tho looks, tho eourtenance; that which deelares the sentiments of tho uiud. Compare Facice and Frons.

VULYA. An elliptic opening enclosed hy the labia majora of the pudendum, or external parts of generation in the female.
lulue cerebri. A small aperture of the brain, forming the part by which the three yentricles communieate.

WADD. A namo given to plumbago, or black-lead.

Black readd. An ore of manganese found in Derhyshire; remarkable for its property of taking fire when mised with linseed oil.

WAFER-PAPER. An article of confectionery, recently employed for pharinaceutical purposes. It is made of fine wheat-flour and milk, or of cream and water, with a little white wine and sugar.
[WAHLENBERGIA. A genus of plants of the natural order Camphanulaceæ.]
[1. Wahlenbergia graminifolia. This species is used in the south of Europe as a remedy in Epilepsy.]
[2. Wahlenbergio linarioides. A Chilian species, thought by the natives to bo effieacious in tormina.]
[WAHOO. One of the common names for Enoиymия atropurpureus.]
[WAKE-ROBIN. Arum triphyllum.]
[WALL PELLITORY. Parietaria officinalis.]
[WALNUT, BJ_ACK. Jiglans nigra.]
[WALNUT, EUROPEAN. Juglans regia.]
[WALNUT, WHITE. Juglans cinerea.]
[WALTHERlA. A genus of plants of the natural order Sterculineeæ.]
[1. W. douradinbr. A South Ameriean species, employed in Brazil as a vulnerary, and reputed efficaceous in syphilis and in eatarrhal complaints.]
[2. W. fruticosa. A species growing in Surinam, said to possess febrifuge and anti-venereal powers.]
[WARD'S PASTE. An empyrical remedy for piles, supposed to be similar to the coufcctio piperis niyrre.]

WARE'S GOLDEN OINTMENT. An ointment for ophthalmia and uleers, consisting of fresh butter $\overline{3} j$, and $\bar{j}$. of the powder of nitrated oxide of mercury.

WARM-BLOODED. A term applied to the mammalia and birds which havo a $t w o$-fold circulation, and are in fact diplocardiac. Sec Cordiac.

WARMING PLASTER. A stimulant, rubefacient, and sometimes vesicant plaster, made of cantharides and Burgundy pitch.
[WARNTR'S GOUT CORDIAL. Seo Tincturr Rhei et Semme.]

WART. Verrico. A hard protuborance or excrescence of the slin.

WASII, The technical terin for the fermented liquor, of any kind, from which

WASII, BLACK; WIIITE. Described under the article Yellow Wush.

WASIIED SULPHUR. Sulphur lotum vel depuratum. Sublimed sulphur purified of its adhering acid (formed by the oxidation of sulphur) by washing.

WASIIER-WOMAN'S SCALL. P8oriasis lotorum; a species of scall which appears on the wrists and fore-arms of washerwomen, from the irritation of soap.
[WATER AVENS. Gemm rivalc.]
WATER-BED, ARNOTT'S. Hydrostatic bed. A water-bath eovered hy a sheet of waterproof india-rubber eloth. By the use of this bed, all sensible pressure on any part of the body is removed, and the weight of the body itself seems annihilated.
[WATER BRASH. Pyrosis.]
[WATER DOCK. Rumen Britannica.]
WATER-GILDING. The process of gilding by the application of amalgam of gold to the surface of metals; the mercury of the amalgam is driven off hy beat, and a thin enating of gold remains.
[WATER IIEMLOCK. Cicuta virosa.]
[WATER IIEMLOCK. American cicutr maculatr.]
[WATER PLANTAIN. Alisma Plantago.]
[IVATER.CRESS. Nasturtinm officinale.]

WATEI OF CRYSTALLIZATION. That portion of water which combines in a dry state with many substances, forming an essential condition of their crystalline character.

WATER-TIGIIT. That degree of closeness in a vessel, or tubo, which prevents the passage of water.
[WAX. See Ccra.]
WAX-PAPER. Charta ceratr. Melt, iu a water-bath, 48 parts each of white wax and fine turpentine, and 32 parts of spermaceti, and spread on puper.

WEB. The old English term for Calign, or opacity of the cye, from its giving tho idea of a filu spreading across the simht. Hence Shakspeare, in King Lear: "This is the foul fiend Flibbertigiblet: be gives the wan und the pris; squints the cye, and mulics the hare-lip."
[WEANING. See Ablactation.]
WEIGHT. A term in phrenology indicativo of the faculty which estimates the weight. resistance, momentum, and other qualities of bodies, not loy a senso of fecling, but by a peculine intermal operatiou. Its orgam is scated abovo the eye-
brow, betweeu those of Size and Colouring.

## [WEIGHTS. Seo Quaurity.]

WELD, or DYERS' WEED. The Resedu lefeola, [q. v.] a plant employed in the dyeing of yellow.

WELDING. A property of eertain metals, as platinum, by which, at a whito heat, an incipient fusion takes place, which covers their surface with a kind of varnish, so that, when brought into contact in this state, different species may be permanently united hy forging.

WEN. An eneysted tumour, presenting the following varieties, viz. -

1. Stentona. Adipose wen.
2. Atheroma. Mealy wen.
3. Melliceris. Honeyed wen.
4. Testudo. IIorney ren.
5. Ganglion. Ganglion.

WHARTON'S DUCT. The exeretory duet of the sub-maxillary gland.
[WIIEALE. WEAL. A ridge or cleration of the skin like that produced by a blow with a whip.]

WIIEAL WORM. The Aearus autumnalis, or Harvest-hug; so named from the glossy wheals which its bite produces.
wheat. Tritici seminc. The grains (caryopsides) of the Triticum Lybernum, or Common Wheat. When gronnd and sifted in mills, they form flour, or farina tritici, and bran, or furfur tritiei. By steeping wheat flour in water, stareh or amylum is procured; and this, when boiled in water, forms a culinary jelly, which is hydrate of starch.

WHELK. Ionthus. An unsuppurative tubercular tumour, generally oceurring on the fice.

Whiey. Serm lactis. The fluid part of milk, which remains after tho curd has been separaterl.

WHI'SKEY. Ardent spirit obtained by distillation from a fermented infusion of corn. It diffors from gin in its peeuliar smoky flavour and odlur; theso it aequires from the malt, which is dried by turf fires.
WIIITE GUM. Tho Strophulus albidus, a species of gum-rash, in which the pimples are minute, hard, and whitish, surrounded by a reddish halo.

WIITTE LEAD. See Cerusaa and Lead.
WIIITE PRECIPITATE. A compound formed when atumonia is added to a solution of ehlorido of mercury.
WHITE SUBSTANCE OF SCIIFANN. A white substance furming an interior lining of the nerve-tube.

WHITE SWELLING. IIydarthrus. A eolourless swelling, ehiefly of the larger joints. It may commence in the syuorial
monbrane, in the cartilages, or in the hones.

WHITES. The vulgar name for leueorrhoea, or the discharge of a yellowishwhite mueus from the ragina. See Lewcorrhcea.

WHITING. Chalk eleared of its impurities, ground in a mill, and made up into small loaves.

WHI'TLAW'S ETHE'REAL TINCTURE. A preparation of lobelia, rectified spirit, spirit of nitric ether, and spirit of sulphuric ether, maeerated for fourteen days in a dark place.

WHITLOW. Onychia; Paronychia. An inflammation at the end of one of the fingers, or thumbs, very painful, and much disposed to suppurate. The effusion may be immediately under the skin; among the tendons; or it may press on the periosteum ; it is to this last, or malignant form, that the term felon is most correctly applied.
[WHOOPING-COUGH. Pertussis.]
[WHORLED. A term synonymous with verficillate.]

WI'DEMANN'S CRY'STALLINE MATTER. Obtained from unripe oranges.
[WILD-CHERKY. Prunus Virginiana.]
TVILD-FIRE. A popular name of the Lichen circumscriptus, or Clustered Liehen.

WILD-FIRE RASIH. The Strophnlus volaticus; a species of gum-rash, in which the pimples are in elusters or patehes, generally flying from part to part.

WILD LICHEN. The Lichen ferus, described by Celsus under the name agria, as applied to it by the Greeks, from the violence with which it rages.

WILKINSON'S WHITE. A pigment made by grinding litharge with sea-mater until the whiteness is no longer improved.
[WILLOW. Salix.]
WILSON'S MUSCLE. The perpendienlar portion of the compressor urethra, described by Mr. Wilson. The transverse portion was discorered hy Mr. Guthrie, and bears his name.

WILD CONTUSION. A eontusion supposed to be occasioned hy the air. When rapidly displaced by the impetus of a projectile. It is now said to be occasioned by the projectile itself, either striking tho bidy obliquely, or being iu the condition of a srent baill.
[WINE. See Vinum.]
IUINE TLEST. A reagent for detecting the presence of lead in mine, hy converting the acid into a salt of lead. That whieh is usually sold is made by dissolving half an ounce of sulphuret of arsenic, and one ounce of lime, in baif a
pint of distilled water, and filtering the solution.
[WINTERA. WINTERANA. Winter's Bark. The U. S. Pharmacopœial name for the bark of Drimys Wiutera.]

Wintere aromatica. [A synonyme of Drimys IVinteri.] An aromatic tree, the bark of which, called Winter's bark, is used as an aromatic tonic.

WINTERACE E. The Winter's Bark tribe of Dicotyledonous plants. Trees or shrubs, with lcaves alternate; flowers bermapbrodite or unisexual ; stamens hypogynous; fruit consisting of a single row of carpella.
[WINTER BERRY. One of tbo common names for Prinos Verticillatus.]
[WINTER GREEN. Chimaphita umbellata. q. v.]

WIT. Mirthfuluess. A term in phrenology indieative of a disposition to view every thing in a gay and joyful manner, of a feeling of the ludicrous, and a tendency to mirth. Its organ is situated in tbe upper aud lateral part of tbe forehead, by the side of that of Causality, downward.
[WITCH-HAZEL. Hamamclis Virginica.]

WITCH-MEAL. Tegetable Sulphur.Terms applied to lycopodium, or the sporules of the Lycopodium clavatum, or Common Club-moss, from its producing an instantaveous finsh of light when thrown into the flame of a candle.

WOAD. The Isatis tinctoria of botanists; a plant formerly used in the dyeing of blue.

WOLFFIAN BODIES. False kidueys. These names were given by Rathke to the substance by which the kidneys are preceded in the embryo, and wbicb was first remarked by Wolff.

WOLFRAM. A mineral consisting of tungstate of manganese and iron, employed for procuring tungsten.
[WOLFSBANE. Aronitnm napellies.]
WONDER. Marvellousnces. A term in phrenology indicative of a belief in miraculous and supernatural circumstinnces, of a love of novelty, and of a delight in whatever is surprising and wonderful. Its organ is situated immediately in front of that of Hope, and between those of Ideality and Imitation.
[WOOD ALCOIIOL. Pyrnxitic spirit.] [WOOD BETONY. Betunica objicinalis.]

## $\left.\begin{array}{l}\text { [WOOD NAPHTIAA. } \\ \text { [WOOI) SPIRIT. }\end{array}\right\} \begin{gathered}\text { Pyroxilic } \\ \text { spirit.] }\end{gathered}$

[WOOD SORREL. Oxth spis actinsclle.]
[W OOD VINEGAR. Pyroligneous acid.]

## 41 "

WOODS. The Woods. A term applica to sarsaparilla, guaiae, sassafras, and mezeren.
[WOODY NIGHTSHADE. Solamum dulcamara.]

WOODY TISSUE. Pleurenchyma. Elongatcd cells, tapering to eacb end, and constituting the elementary structure of wood.

WOOLFE'S APPARATUS. An пpparatus for impregnating water, for medicinal purposes, with carbonic acid.

WOORALY. IToorari. A celebrated poison, also called woorari, ourari, or urari, produced by the Strychnos toxifcra of Guayana. Dr. IIancock considers the bark to be one of the most potent sedatives in nature.

WOOTZ. Indian steel; supposed to be an allny of steel with small quantities of silicium and aluminum.

WORMIAN BONES. The Ossa triquetra, or triangular boncs somctimes found in the course of the suture of the parietal and occipital bones, so named from Olaus Wormius, who first described them.
[WORMS. See Vermes:]
WORMSEED. The Spigelia Mrarilandica, or Carolina Pink; the root and leaves of which are active anthelminties.

1. IVormseet oil. A powerfully anthelmintic oil obtained from the seeds of the Chenopnodiun cantheminticum.
2. The term $1 V^{\text {romseed }}$ is also applied to a substance consisting, not of the secds, but of the broken peduncles, mixed with the colyx and flower-buds, of the Artemi. sia santonica, and also known by the names of semer santonicum, semen cinæ, semen contra, semen sementina, \&e.
WORM-TEA. A preparation used in the United Statcs, consisting of spigelia root, senna, manua, and savine, mixed in various proportions.
WORMWOOD. The verarcular name of the Artemisia absinthinm, a European Coin posite plant, said to be efficacious as an anthelmintic. Its bitter principle is
termed wusinthin.
WORT. Decoction of malt, prepared by boiling three ounces of malt in a quart
of water.

TYORT (OF HERBALISTS). The Teutonic term for herb, Hence the names liver-wort, St. Jolin's wort, lung-wort, \&c.
WOUNDS. A recent solution of continuity in the soft parts, suddenly ocensioned by external eauses, and generally attended at first with hamorrhage.

1. Incizrd Wromitr are those made by simple division of the fibres with a sharp. cutting instrumeut, without contusion or
2. Lacerated Wounds are those in which the fibres, instead of being divided by a cutting instrument, have been torn nsunder by some volence; the edges, instead of heing straight and regular, are jagged or unequal.
3. Contused Wounds are those made hy a violent blow from some hlunt instrument or surface. These resemhle the preceding species, and require nearly the same kind of treatment.
4. Punclured Wounds are those made with a narrow-pointed instrument, as hy the thrust of a sword or hayonet.
5. Poisoned Wounds are the bite of a viper, mad dogs, \&o.; wounds of the hand in dissection, \&e.
6. Gunshot Wounds are those caused by hard, metallie bodies projected from firearms.

WOUND BALSAM. Trarmatic bal.
sam. The Compound Tineture of Benzoin, used in contused wounds.
[WRTGHTIA. A genus of plants of the natural order Apocynace..]
[Wrightia antidysentcrica. A native of the East Indies; it affords the Conessi or Malabar bark, said to he a valuahle febrifuge and astringent, and much used in India in dysentery.
[WRIST-DROP. Paralysis of the muscles of the forearm, usually produced by poisoning by lead.]

WRY-NECK. Caput Obstipum ; Torticollis. An involuntary and fixed inclination of the head towards one of the sboulders. Cooper says, it must not he confounded with a mere rheumatic tension and stifness of the neck, nor with the faulty position of the head, arising from deformity of the cervical vertcbre.

## X

XA'NTHOPI'CRITE ( $\xi \alpha \nu \theta \partial s$, yellow; тıкро́s, bitter). A erystalline hitter principle found in the bark of the Xauthoxylum Caribeum.
XANTHOPROTEIC ACID. An acid procured in tbe form of a tasteless orangeyellow powder, when albumen or any otber protein-compound is digested in nitric acid. It combines equally well with acids as with bases.
[XANTHORRHIZA. Yellow root. The U. S. Pharmacopeial name for the root of Xrnthorrhiza "piifolia; a genus of plants of the natural order Ranunculaceæ.]
[Xanthorrhiza apiifolia (Willd) X. tinctoria (Woodhouse). Yellow Root. Anindigenous shrub, the root of which possesses properties similar to Columbo, nnd the other simple bitter tonies, and may be used in the same manner.]
 pold́s, flowing). A genus of Australian plants, called Grass Trees ; they produce two resins which have been imported into tbis eonntry, viz.

1. Yellow resin of Xanthortharr, known by the nanes of yellow resin of New Holland, Botany Bay resin, and aearoid resin or gum: and
2. Red resin of Xanthorrhca, sometimes imported under the name of blackboy gum.

XANTHOS ( $\ddagger \dot{\alpha} v 06 \varsigma)$. The Greek term for yellow. Hicnce, -

1. Nanthic acid. An oily liquid, named from the ycllow colour of its salts. It is the sulpho-earbonate of the oxide of etbsl and water.
2. Xanthic oxide. A species of calculus ohserved hy Dr. Marcet, and named from the lemon-eoloured compound which it forms hy the action of nitrie acid.
3. Xanthine. A yellow colouring principle lately discovered in madder.
4. Xantho-gen (yevvíw, to produce). A term applied hy M. Zeise to the radical of hydroxantbic neid, from its property of forming yellow oompounds with eertain metals.
5. Xautho-phyll ( $\phi \dot{v} \lambda \lambda \frac{1}{2}$, a leaf). The name given by Berzelius to anthoxanthine, or the yellow colouring matter of leares in autumn.

XANTHOXILUM (弓údor, wood). Prickly Ash; the [Pbarmacopocial name for the] bark of the Tanthoxylum Fraxineum, used in the United States in chronic rheumatism. [A genns of plants of the natural order Simuthoxylacere.]
[Janthoxylum Fraxincum (Willd.), T. Americanun (Miller). Prickly ash. An indigenous species, the bark of which has stimulant properties, and is thought to rescmble mezerin and guaiae in its remedial action.]
[Tanthorylin. A supposed peculiar crrstallizable principle found in the bark of Xnathorylum Fraxineum.]
［Xerophia．A name given by Mr． Proctor to an alkali obtained by bim from Xerophyllum setifolium．］

XEROPHTHALMIA（ $\xi \eta \rho \partial \varsigma$, dry ；$\delta \downarrow \theta a \lambda-$ $\mu \grave{s}$ ，the eye）．A form of ophthalmia，de－ noting the dryness of the eye in a parti－ cular stage of the affection．
［XEROPHYLLUM．A genns of plants of the natural order Melanthaccæ．］
［ $X$ ．setifolium．An indigenous plant， probably possessing the properties of tbe mild vegetable bitters．］

XIPHOID（ $\ddagger i \phi a s, ~ a ~ s w o r d ; ~ z i \delta o s, ~ l i k e-~$ ness）．Sword－like；a term applied to the cartilage of the sternum．

XYLITE（弓ülov，wood）．Lignone．A liquid existing in commercial pyroxylic spirit．By treating anhydrous xylite with hydrate of potash，xylitic acid is obtained． Other products are xylite－naphtha，xylite－ resin，and xylite oil．
 a a $\mu$ о ，balsam）．A balsam obtained by decoction of the twigs and leaves of the Amyris Gileadensis in water．It is thicker and less odoriferous than the balsamoleon
（Ě̀acov，oil），or oil of balsam，Which is pre－ pared in tho same way，but by a shorter decoction．

XILO＇IDINE．A bighly combustible substance，obtained，by dissolving starch in strong nitric acid of sp．gr． $1 \cdot 5$ ，with gentle heat，and then adding water．Tbe xyloidine is precipitated in the form of a wbite powder．Sce Gun－Cotton．

The term Syloidine has also been ap－ plied to paper which has been immersed for a moment in strong nitrio acid，and then washed in distilled water．The paper assumes the feel and toughness of parchment，and is so combustible as to serve for tinder．

XY＇LOPYRO＇GRAPHY（ $\xi$ údov，wood； $\pi \tilde{\mu} \rho$ ，fire；$\gamma \rho \dot{\beta} \phi \omega$ ，to draw）．Hot－wood drawing，or poker－painting．The process of producing a picture by applying a hot iron to tho snrface of wood，which be－ comes charred or scorched wherever it is touched．

XYLORE＇TINE（ $\xi \dot{\lambda} \lambda a v$, wood；$\beta \eta r i \nu \eta$ ， resin）．A crystalline resinous substance found in some varieties of turf．

## Y

YAM．A plant introduced from the East into the West Indies．It produces tubers，resembling a potato，which form an important part of the food of the negroes．

## ［YARROW．Achillea millefolium．］

YAVA－SKIN．The name given，in the Polynesian Islcs，to Elephantiazis Arabum，or Barbadoes leg，from its being supposed to originate from drinking tbe heating beverage called yava．Dr．Good observes tbat，like the gout among our－ selves，it is there regarded in a sort of bonourable ligbt．

YAW（a raspberry，Afric．）．The name given by the Africans to the discase called Framboesia．On the American coast it is termed pian and epian．See Framboria．

YEAST．Fermentum．A substance ge－ nerated during tbe vinous fermeutation of vegetable juices and dococtions，rising to the surface in the form of a frothy， flocculent，and somewhat viscid matter． It is used for promoting fermentation．See Catolysir．

Artificial Yeast may be made by loiling malt，pouring off the water，and keoping
the grains in a warm place to ferment，re－ peating the process till a sufficient quantity is procured．

YEAST－PLANT．A fungous plant referred to the Hyphomycetes，a sub－ order of the Fungi．The substance called Yeast is，tberefore，a mass of microscopio cryptogamic plants．

YELLOW EARTII．A mixture of bydrated silicate of alumina and peroxide of iron；sometimes used as a piguent．

YELLOW FEVER．One of the se－ verest forms of malignant fover ；so named from the lemion or orange hue presented by the whole surface of tbe body，and attended with voıniting of a yellowish matter at tho beginuing，and of a chocolate－coloured colluvies towards its close．See Febris．
YELLOW GUM．Icterus Infantum，or Jaundice of Infunts．This is the mildest forn under which jaundico nakes its ap－ pearance．
YELLOW，KING＇S．A ycllow pigment， tho hasis of which is sulphar－scuious acid or orpiment．
どELLAOW LAKE．A pigment pro．
cured by boiling Persian or French berries in a solution of potash, and precipitating the coloming matter by means of alum.
[YELLOW ROO'L. Common name for Xenthoxylum Hraxineum, and also for Hydrastis Comadensis.]

YELLOW WASH. Aqua phagedenica. A lotion for ulcers, formed by the decomposition of eorrosive sublimate in lime-water, whieh occasions a precipitato of a deep yellow colour, being a peroxide of mereury, containing a little muriatic acid; one fluid draehm of lime-water should be employed for the decompositiou of two grains of the salt.

The Black Wash is formed by the decomposition of ealomel by lime-water, which turns it blaek in eonsequence of its preeipitating the black oxide of the metal ; Hjj . of lime-water should be employed to two drachms of calomel.

The White Wash, or Royal Preventive, is the Liquor Plumbi Subaectatis dilutus, and consists of solution of eubacelate of lead and proof spirit, one drachon of each, mixed with one pint of distilled water.

YTTRLA. A new carth, discovered by Gadolin, in a mincral from Ytterby in Sweden. Its metallic base is yttrium, of whiel it is considered to be a protoxide.

YUCA. The name of a plant in South America, from which the natives prepare an intoxieating heverage. The leaves are first chewed by the women till reduced to a pulp; they then spit it out into a large jar, and leavo it to ferment, and after tro or three days drink it mixed with water, when it does its work, as Rohinson Crusoe says of his glass of rum, "to their excecding refreshment."
[YUCCA. A genus of plants of the natural order Liliaeeæ.

## Z

ZAFFRE. The impure oxide of cobalt, which remains after the native arseniuret of this metal has parted with most of its arsenie hy repeated roasting.

ZA'MIA. A genus of Cycadaceous plants, indigenous in the West India islauds, and yielding a starch cmployed as an excellent sort of arrowroot.
ZANTHOPI'CRINE. A bitter, nonazotized, neutral, crystalline substance, procured from the hark of the Zanthoxylum Clava Herculis.
[ZANTHORIZA. See Xanthorrhiza.]
ZE'A MAYS. Indian Corn or Maize. It yields a meal sold under the name of polenta.

ZEDOARY (jedwar or zadwar, Arab). The name given to the tubers of soinc species of Curcuma, the zedoaria longa being referred to the C. zerumbet; the zedoaria rotunda to the C. zedoaria.

ZEINE. A principle obtained from maize, or Indian corn.

ZEOLITES ( $\zeta$ 'íw, to boil ; $\lambda i \theta o s$, a stone). A term applied to the silieates of lime aud of alumina, from their frothing when heated before the blow-pipe.

ZERO (probably from the Arabic tsaphara, cinpty). Nothing. It is used to denote a eypher, and to fill the blunk between the aseending and descending numbers in a scale or serics.
[ZERUMBET. Cabsmmumar. An Fast India root possessing analogous sensiblc and medieiml properties to ginger, and formerly used as a medieine.]
[ZIBETHUM. Civet.]

ZINCOID (zincum, zinc ; घiסos, likeness). Like zinc, quasi-zine; a term applied to the zincous plate which is in connexion with a eopper plate in a voltaie circle, and denoting the positive pole, the positive eleetrode, the anode, and the zincode. See Chloroïd.

1. Zinco-lysis ( $\lambda \dot{\prime} \omega$, to decompose). A eheunieal term equisalent to clectrolysie, denoting a mode of decomposition oeeasioned by the inductive action of the affinities of zinc or the positive metal.
2. Zinco-lytc ( $\lambda \dot{\nu} \omega$, to decompose). A ehemienl term equivalent to cicctrolyte, denoting a body decomposable by clcetrieity, tho dccomposition being referred to the action of zinc or the positive metal.
3. Zincons element. The hasic or positive element of a binary eompound. The negative clement is terwed chlorous.

ZINC PAINT. The white oxide of zinc, proposed as a substitute for the deleterious white lead.

ZINCMETHY:LIUM. A radical formed in an uncombined state wheu iodide of methyl and zinc arc exposed to a temperature of ahout $150^{\circ} \mathrm{C}$. in a sealcd tube.

Zinccthylium and Zincamyliums are homologous bodies formed by similar proecsscs; their investigatiou is not yet completed.

7INCOPOLAR. A term spplied, in voltaism, to the surface of the zine presented to the neid, which has zincous affinity. See Chloropolar.

ZI'NOOUS POLE. A term founded on the thenry that the particles of matter
arc susceptible of polarity. Hence that pole of a particle of zinc or of liydrochloric acid which has the attraetion or attinity which is characteristic of zine, or zincous attraction, is called the zincous pole. Sce Chlorons Pole.

ZINCUM. Zinc; a hluish-white metal, found in the form of oxide, or red zine; of sulphuret, or blende or black jack; of carbonate, or calamine; of sulphate, or iohite vitriol; of silicate, or clectric calamine ; and of aluminate, or automalite or gahuite. It has heen called golden marcasite, Indian tin, and spelter. When rolled into thin leaves, it is termed sheet zinc.

1. Flowers or calx of zinc. Oxide of zinc, formed hy exposing the metal to the air at a temperature a little above its melting point, when it flies up in the form of white flowers. It has hence received the fanciful names of philosophical wool, and wihil album. The ancients called it pompholyx. In Holland, it was sold as a secret remedy under the names of arcanam Ludemami and luna fixata.
2. I'utty or furnace cadmia. Impure oxide of zinc, found in the chimney of the furnace in which zinc ores are roasted, or in which zinciferous lead ores are smelted. When prepared by levigation and elutriation, it is called prepared tutty.
3. Butter of zinc. Chloride of zinc, also called the muriate or hydrochlorate; a whitish-gray mass, with the consistency of wax.
4. White Vitriol. Sulphate of zinc, a crystalline mass resembling lump-sugar, and formerly called sal vitrioli and gilla Theophrasti.
5. Calumine. Impure carbonate of zinc. When calcined, pulverized, and suhmitted to the process of elutriation, it is called prepared calamine.
[6. Zinci Iodinum. Iodide of zine. A deliquescent, very solublo salt, possessing tonic and astringent properties. It has been given internally for chorea, scrofula, hysteria, \&c., and also been employed as an external application to enlarged tonsils and other glands.]
[7. Zinci valerianas. This salt has lately been introduccd into use in neuralgic and other nervous affections. It is highly useful in chorca and epilcpsy. Tho dosc is one to two grains several times a day.]
ZINGIBER OFFICINALE. The Nar-row-lcaved Ginger, the rhizome of which constitutes the ginger-root of comuncrec. Black ginger is dried, after being scalded, without being scraped; white ginger, on the coutrary, is carefully ecraped. It is
stated, howevcr, that there are two ginger plants, the vhite and the black. The annual shoots put forth from the perennial rhizome are uscd for making preserved ginger.

Zingiber Cassamumar. This is perhaps. the plant which yields the cassamunar root of the shops.

ZIRCONIUM. The metallic basis of zirconia, a substance found in the jargon or zircon from Ceylon, and in the red mineral hyacinth.
[ZITTMANN'S DECOCTION. Decoctenh Zittmani. A preparation of sarsaparilla much used in Germany, for similar purposes with the compound decoction of sarsaparilla. The following is the formula of the Prussian Pharmacopceia for its preparation :-

Sarsaparilla, $\overline{3}$ xij.; spring water, ibxc. Digest for twenty-four hours; then introduce, enclosed in a small hag. saccharine aluin (a paste formed of alum, $\overline{3} \mathrm{vj}$.; white lead, $3^{\mathrm{rj}}$.; sulphate of zinc, $\mathbf{J}_{\mathrm{ijj} . ; ~ w h i t e ~}^{\text {a }}$ sugar, $\overline{3}$ iss.; white of egg and distilled vinegar, each q. s.) Ziss.; calomcl, Zss. ; cinnahar, 3 j. Boil to thirty pounde, and near the end of the hoiling add of aniseed
 liquorice root, Ziss. Put aside the liquor under the name of the strong decortion. To the residue add sarsaparilla, $\overline{3} \mathrm{vj}$. ; water, Hoxc. Boil to thirty pounds, and near the end add lemon-peel, cinnamon, cardamom, liqurrice, of each $Z^{\mathrm{iij}}$. Strain and set aside the liquor under the name of the weak decaction. It should not be prepared in metallic vessels. Tho decoction may he drunk freely.]
[ZIZANIA AQUATICA. Wild Ricc. An indigenous graminaccous plant, which affords an excellent grain, somerrhat resembling rice, and is used by the Indians for fond.]
[ZIZYPHUS. A genus of plants of the natural order Rlamnaceæ.]
Zizyphus vulgaris. A shruh growing on the shores of the Mediterrancan, the fruit of which is nutritive and demulcent, and a decoction of it is used in pectoral
complaints.

The fruit of several other specics, as the Z. agrestis of Cochin China, the Z. EEnoplin of Ceylon, the Z. Lotus of the north of Africa, the Z. Juguba of the East Indies, aro used as food by tho inlahitants of tho countrics where they grow. The fruit of 2. Barclei of Senegal is there considered poisonous.]

ZO'MIDINE ( $\zeta \omega \mu \partial{ }^{\prime} s$, broth). Aqueous extract of flesh, probably identical with osmazomc.

ZONA FELLUCIDA. A thick mem.
brane，constituting the cxtcrnal invest－ ment of the ovum．By Wagner it is terus－ ed chorion．

ZONULA CILIARIS．A thin vascular layer which connects the anterior inargin of the rotina with the circumference of the lens．

ZONULE OF ZINN．The name given to an assemblage of membranous folds or lamino observed in the hyaloïd membrane， which project outwards，and are dove－ tailed，as it wero，with the ciliary pro－ cesses．

ZO＇OGEN（ $\zeta \tilde{\omega} 0 \nu$ ，an animal ；$\gamma \in \nu v \chi^{\prime} \omega$ ，to gencrate）．The name given by Gim－ bernat to an organic substance found in mineral waters，also termed baregine theiothermin，and glairine．It is a glairy or mucus－like substance，said to com－ mnnieate the flavour and odour of flesh－ broth to water in which it is eontained．

ZOOGONY（ $\zeta \tilde{\omega} a v$, an animal ；yovǹ，gene－ ration）．＂Zoognic；＂a term under which M．Serres treats of the laws，which he supposes to regulate the formation of the organs，or according to which the different parts of which they arc composed scem to be produced．These laws are two in number．viz．

1．The law of Symmetry，which is desig－ nated ss＂the principle of the double de－ velopinent of the organs．＂This principle is also observed in the progress of ossifi－ cation，the external parts of bones being first visible，and the intcrior and central parts being composed of productions from these．In consequence of this eccentric progress，the double development of the single parts，which compose the centre of the skeleton，is cffected；and hence arises the law of symmetry，by which，with a few exceptions，the two sides of the skele－ ton correspond with each other．

2．The law of＂Cmjugainon，＂which is designated as＂the principle of their re－ union．＂Thus，the intestinal canal is said to be＂un canal de conjugaison，résultant de la double engrenure，antéricure et pos－ térieure，de ses lames qui les constituent primitivement．＂This principle is also observed in tho formation of the various eavities，holes，and canals，which are found in the bones，and which are supposed to bo produced by a union of what were ori－ ginally separate parts．

ZOOLOGY（弓⿳⺈⿴囗十一日⿹勹亾欠，an animal，dóyos，a description）．That brancle of Natimal History which trents of animals．The fol－ lowing primary divisions of the Animal Kingdom have been derived from the no－ difications of tho nervons system observed in the living economy of animuls．

1．Cycloneurct．This division exbibits the nervous system in the radiated or lowest clusses；it is here found in the form of filaments，disposed in a circular manner around the oral extremity of the body．

2．Diplo－ncura．In this division，com－ prising the articulated classes，therc is obscrved，almost from the lowest entozoa to the highest crustacea，a double nervous chord or column，reaching along the whole of the ventral surface of the body．

3．Cyclo－gangliata．In this division the nervous system is more concentrated around the entrauce to the alimentary canal in the molluscous classes，where it generally forms a transverse series of ganglia，disposed around the oesopha－ gus．

4．Spini－cerebrata．This division em－ braces the rertebrated elasses，in which the central parts are in the form of a lengthened dorsal nervous chord，deve－ loped anteriorly into a brain，and protected by a vertebral column and cranium．－Dr． Grant．

ZOON（弓⿱̃ov）．An animal．Hence，
1．Zoo－gony（ yovi，generation）．The science which treats of the formation of orgaus．

2．Zoo－logy（גdyos，a description）．That branch of Natural History which treats of animals．

3．Zoon－ic ocid．This has been shown by Thonard to be merely the acetous， bolding animal matter in solution．

4．Zuo－nomia（vopos，a law）．The sei－ ence which treats of the laws of organic life．
5．Zoo－pliyta（фúrov，a plant）．A class of animals resembling plants．

6．Zootomy（fopì，seetion）．The ana－ tomy or dissection of animals．
ZOOPHYTA（弓⿳亠二口欠彡，an animal；фírov，a plant）．Animal plants ：a division of the animal kingdom，considered by Cuvicr as synonymous with the Radiata．

1．Echino－derniata（ $\bar{x}$ īos，a hedge．hog； dipra，a skin）．Having a spiuous skin，as the star－fish，sea－urchin，de．

2．Entn－zoa（ $\mathfrak{l}_{1}+\frac{1}{s}$ ，within：广wh，life）． Intestinal animal，as the truia de．

3．Acrelcpha（ákinípq，a nettle）．Sca－ nettles．as the medusa，polypus．te．

4．Polypi（rodis．many；zoîs，a foot）．
Many－fuoted animals，as the hydra，de．
5．Infusorior（infundo，to pour in）．In－ fusory imimalcules，found in infusions or stagnant water，as the monas，de．

ZO＇OTIC ACID（弓⿳亠丷厂犬，an animal）．A designation of bydrocyanie acid，from its being a product peeuliar to the organized

## ZYM

kingdom．It is seldom，howerer，found in animals．

ZOSTER（ $\zeta$ шorìp，a belt）．Zona；zona igner．Sbingles；a．species of Herpes，so termed from its surrounding the body，like a helt．See Shingles．

ZUMIC ACID（弓i $\mu \eta$ ，leaven）．An acid discovered in regetable substances which have undergone the acetous fermentation： it has heen shown that it closcly resembles the lactic（aectic）acid．

ZYGAPO＇PHYSIS（广vyoेs，junetion； ȧróфuats，apophysis）．A process，or exo－ genous portion of a vertebra，hy which it is connceted with the adjoining vertebra． See Vertebra．

ZYGO＇MA（弓uydे，a yole）．The arch formed by the zygomatic processes of the temporal and cheek－hones．

1．Zyymmatic process．A thin，narrow projection of hone，bounding the squamous portion of the temporal bone at its base．

2．Zygomaticus major．A muscle arising from the cheek－bone，and inserted into the angle of the mouth．

3．Zygnnaficus minor．A muscle arising a little higher up on the cheek－bone，and inserted into the upper lip，near the angle of the mouth；it is often wanting．These muscles raise the angles of the month，as in laughter：hence the term distortor oris has been applied to them．

ZYGOPHYLLACEAF．The Bean Caper trike of Dicotyledonous plants．Trees， shruhs，and herbaeeous plants，with leaves opposite；flowers polypetalous，symuretri－ eal；stamens hypogynous；ovarium many－ eelled；fruit capsular．
［ZYGOPHYLLUM．A genus of plants of the natural order Zygophyllacer．］
［1．Zygophyllum fabago．An Egyptian plant，said to be vermifuge．］

ZYMOME（乡v́ $\mu \eta$ ，leaven）．This and gliadine form the constituent principles of glinten．See Gluten．

ZYMO＇TIC（广⿱́⿰口口 plied to those diseases which seem to be occasioned by a rirus or poison，which is diffused through the frame，and operates upon it like leaven．

## SUPPLEMENTARY LIST.

## ABI

ABIE'TE Æ. A sub-order of Coniferous plants, including the gencra Pinus, Abies, Larix, \&c. Oviles inverted; pollen oval, curved. Sce Conifere.

A'BIETIN. A crystallizable resin, procured from the Abietis vesina, or common frunkincense.

ABSI'NTIIIC ACID. An acid procured from the Artemisia absinthium, or wormwood. It way be preeipitated, according to Braconnot, from the watery infusion of the plant by acetato of lead. It is very acid, uncrystallizable, and deliquescent.

ACCU'BITUS JUNIORIS. The animal heat of a young and healthy person; a remedy employed in cases of extreue exhaustion with great depression of the temperature of the body, especially in the aged.
ACETA'RIA (acetum, vinegar). Salads, prepared from certain alliaceons and cruciferous plants, mixed with vinegar and other condliments.

ACE'TIFICATION. The proeess of making ncetic acid, or vinegar.

ACETY'JIC ACID. Pyroligucous acid. Another name for rinegar, formed by the oxidation of alcohol, or by the destructive distillation of wood. See Acctyl.

ACETY'LOUS ACID. Aldelhydic acid; lampic acid. An acid obtained in combination with oxide of silver, when aldehyde is gently beated with excess of that oxide in water.

ACHILIEXINE. A peeuliar bitter prineiple procured from the Achillan. Millefoliem, common yarrow or milfoil, an indigenous composite plant.

ACLDS, COUPLED. Orgnnie acids which contain an acid coupled with another body, which does not neutralize tho acid, but nccompanies it in all its combinations. Tlus, in hydro-sulphimonaphthalic acid, we bave hydro-sulphuric acid coupled with naphthaline, and the coupled acid nentralizes exactly as much base as the hydro-sulphuric acid alone would neutralize.

ACRID RESIS. A substance obtained

## 雨TH

by Sonbeiran from castor-oil, and supposed by him to he a soft resinous oil, but, which was evidently a complex product.Pereira.

A'CRIDA (acris, pungent). A class of topical medicines which stimulate, irritate, or inflame the living tissues, independently of any known chemical action. They may, therefore, be termed dynamical irvitants.
$A^{\prime}$ CRITA. A subdivision of invertebrate animals, in which the nervous system is indistinct, diffused, or moleeular.Oven.

ACRYL. The name of a bypothetical radical, analogous to acetyl. Acrylic acid is a compound analogous to acetic acid. See Acroleinc.

ACTI'NOGRAPII (àктìv, a sun-beam; $\gamma$ fá $\psi \omega$, to descrihe). An instrument, contrived by Mr. Hunt for registering the variations which occur in the chemical inAuence of the solar rays, the intensity of which bears no direct relation to the quantity of light, hut varies at different periods of the day and year.

A'DIPOSE ARTERIES. Arteries which supply adeps or fat, particularly applied to those branches of the diaphragmatic, capsular, and renal arteries, which supply the fat about the kidneys.

ADRIANOPLE RED. Turkey red. A teru applied by dyers to the red colouring mattcr obtained from madder.

A'ERATED WATERS. Bevernges which owo their effervescence to carbonic acid gas. Soda waler, as a name applicd to an effervescing beverage, is often entirely incorrect, and always ill-applied, tho effervescent quality being never due to sodn, even if this substance be present, but to the forced combination of carbonic acid gas with water or other liquids.

JSSTHE'TICA (nioontinds, belonging 10 aio0nous, or scusation). Agents affecting schsation, and employed cither to increase or to diminish sensibility; in the furmer ease they may bo termed hyperostheticn,
in the latter allosithetich. in the latter ancestheficte.

FTHFR ACliTIClis. Acetic ether:
milder, more agreeahle, and more diaphoretic tlian the other ethers, but not used in medicine in this country.

E'TILE'REA. Spirituosa. 1 class of stimulants, jucluding ardent spirits, wine, beer, and the cthers. Sce Methystica.

ETHEREO-OLEOSA. A class of vegetable stimulants which owe their medicinal powers wholly or chiefly to volatile oil.

ETHIO'NIC ACID (ai0ìp, ether; and Ociov, sulphur). An acid formed by the action of the vapour of anhydrous sulphuric acid on alcohol.

A'FFERENT (affero, to convey to). A term applied to those lymphatic vessels which convey fluids into the glands, as distinguisbed from the efferent vessels, which convey the fluids from the glands towards the thoracic duct. The term afferent has also been applicd to those nerves which convey impressions to the central axis, and which Hartlcy called sensory nerves, in contradistinction to the efferent or motory nerves.

AFFI'NITY, BA'SYLOUS, HALO'GENOUS. Tcrms employed in the investigation of chemical polarity, and denoting two attractive powers of opposite natures; thus, in a binary compound, as chloride of potassium, there is the basylour affinity of the metal potassium, and the halogenous affinity of the salt-radical ehlorine. The former corresponds with vitreous electricity, the latter with resinons elcetricity.

A'GMINATE GLANDS (ogmen, a beap). Another name for the aggregate or clustered glands of Peyer, in the small intestincs.
 applied by Schultz to tbat affcet of remedies, which is seen in their power to defend against medicines and diseases, by expelling them from the system, as in the use of acrids and evacuants.

AGRYPNO'TICA ( $\alpha \not \rho \cup \pi \nu \delta \omega$, to cause wakefulness). Authypuotica. Agents which cause wakefulness, as tea, coffce, $\mathbb{\&}$ c. Sce IIypuica.

ALBU'MENIN. Oonin. Names given by Couerbe to the membranous tissue in which the liquid albumen of the egge is eontained, and which he considered devoid of nitrogen.

ALBUMINOSE. The name giren by Bouchardat to the dissolved matier found when moist fibrin or albumen is placell in water acidulated with hydrochloric acid. But it is cither protein or binoxide of protein. Sec Epidermoнe.

ALEURO'METER (üdsuoov, wheaten four ; pirpos, a measure). An instrument, invented by M. Boland, fur the purpose
of indicating the panifiable propertics of wheaten flour. T'he indications depend upon the expansion of the gluten contained in a given quantity of flour, when freed by elutriation from its starch.

A'LKALI, MILD MINERAL. One of the modern names of the neutral carbonate of sodia, cominonly called carbonate of soda. Other designations of this salt are fossil alkali, aërated mineral alkali, subcarhonate of soda, natrum carhonicum, $\& c$.

Alkali, mild fixed vegetable. One of the former names of the neutral carbonate of potash, gencrally termed subcarbonata of potash. It is also called prepared kuli; and, with refcrence to the sources from which it was ohtaincd, or the mode of procuring it, it has heen called sal tartari or salt of tartar, sal absinthii or salt of wormwood, sal genistce or salt of broom, nitrum fixum or fixed nitrc, fluxus albus, or white flux, \&c.

ALLOPHA'NIC ACID (ä入入os, different; фaivopat, to appear). An acid ohtained by introducing the vapour of cyanic acid into alcohol.

ALLO'TRIOPHA'GIA (ù $\lambda \lambda$ átpoos, extraneous; $\psi \dot{\alpha} \boldsymbol{\gamma} \omega$, to eat). A desire to eat improper food; dcpraved appetite. Sce Pica.

ALLO'TROPY ( $\dot{a} \lambda \lambda$ órpoños, of a different nature). Allatropy. A terns applied by Berzelius to the variable propertics often observed in a solid which is not crystalline, or of which the crystalline form is indeterminate. Sulphide of mercury, for instance, may be procured in the black aud in the red state, yet its composition is preciscly the same in hoth. Dimorphism, or diversity in crystalline form, is, thercfore, a particular case of allotropy.
$A^{\prime} L L Y L E$ (allum, garlic ; ìnn, matter). The hypothetical radical of the oils ohtained from alliaceous and crnciferous plants. These oils may be termed the allyle oils, to distinguish them from other sulphurated oils.

ALOESIN. The principal constituent of aloes, jrobably a mixture or compound of various proxiuate principles.

1. Aloe resin. The substance which deposits from a decoction of alocs on cooling.
2. Alocsic acid. A peculiar acid obtained from aloes. This is not the aloetic acid, obtained by the action of nitrie acid on aloes.
3. Almine. A supposed alkali in aloes.

ALPIIA-ORSELLIC ACID. Onc of the colurifie principles of the Orehella weeds. The others are the beta-orsellic and the crythric acids.

ALPHA-RESIN. 1. The name of one of the two resins of colophony, or pinic acid; the otber, or beto-resin, is identical with sylvic acid. 2. Turf or peat contains several resinous bodies, respectively designated by the terms alpha, beta, gamma, delta. See Alpha-orcein.

ALTERNATE GENERATION. term expressive of reseublances occurring in allernate generations; that is, not between the offspring and the parent, but between the offspring and the grand-parent. The solitary a alpu, for instance, produces a series of connected salpæ, each individual of which, in turn, yields a solitary salpa, the mode of generation being alternately solitary and aggregate.

ALTERNATIVES, VOLTAIC. A term applied to the modification produced in the electric current by its continued passage along the nerves.

ALUM WHITE (Baume's). A pigment obtained by caleining a mixture of honey and alum.

ALVERESINIC ACID. This and aloetic acid appear to constitute the artificial hitter of aloes. They form red salts.

AMARINE. The name giren by Laurent to a hypothetical base of certain compounds of benzoyl.

A'MATIVENESS (amo, to love). A term in phrenology, indicative of a propensity to the sexual passion. It is eommon to man with the lower animals. Its organ is the cerebellum, and its energy is denoted hy the extent of the space on each side of the head hetween the mastoid process, immediately behind the ear and the spine of the occipital bone.

AMMONIACA'LIA. A class of ammoniacal stimulants, comprisingammonia and its carbonates.

ANABIO'TIC (àvaßıo term applied by Schultz to that effect of remedies which is evidenced by an organizing tendeney and production of strength, as in the use of wines, tonics, aromatics, $\& c$.

ANACA'RDIC ACID. An rerid, fatty substance, ohtained from the fruit of the Anacardium Occidentale, or cashew-nut tree.

ANACATIA'RTICA (ivakaAaipe, to cleanse or purge upwards). Vomitoria. Emetics, or inedicines which produce vomiting. When they produce merely nausea, they are termed nausconts.

AN ESTIIE'TICA ( $n$, priv. ; aloөntixis, belonging to ǎ̌o日चats or sensation). Mcdicinal agents which diminish common sensibility or sensibility to pain. Sce Al'sthetica.

Anerthetica pacrunatica. A term ap-
plied by Perera to vapours or gases which produee insensibility, and are thereby fitted for preventing pain during surgical operations and parturition, as chloroform and sulphuric ether.

ANALGE'SIA (a, priv.; äגyos, pain). Diminished sensihility to pain, as distinguished from hyperalgesia, in whieh the sensibility is increascd.

ANAMORPHO'SIS (ávarópфwots, the act of forming anero). A term indicative of an ascending or progressive development of species in the animal and the vegetahle kingdoms. The term would have a distinct meaning as applied to the immgo state of an inseet; but in cases in whicl the scnses deteet no progression the word metamorphosis is, perhaps, eo-extensivo with our knowledge.

ANAPHRODISI'ACA (àvaфpodıöa, absence of the sexual feelings). Mcdicinal agents supposed to repress or diminish the sexual fcelings.

ANAPO'PHYSIS (ảvà, baekward ; ànó$\phi$ vocs, a process of bone). A term applied to that process of a vertebra which arises above the diapophysis or transverse process, and projects more or less backward. See Vertebra.

ANASTA'LTIC ( $\dot{\alpha} v a ̀, ~ u p w a r d s ; ~ \sigma \tau \varepsilon \lambda \lambda \omega$, to contract). A term applicd by Dr. Marshall Hall to the upward direction of the nervous influence. See Diabtaltic.

ANATRIPSOLO'GTA (ávarpißu, to rub in: $\lambda$ áyos, a description). The application of medicines to the skin, aided by friction. This process has also heen called the iatraleptic methorl, the epidermic method, and espuoic medicinc.
ANEMO'NINE. A concrete volatile principle, procured from rarious species of Anemonc. With bases it yields anemonic acirl.

ANEURA'LGICON ( $a$, priv.; veṽpov, a nerve ; ä̀ $\boldsymbol{y}^{\circ} \varsigma$, pain). An instrument for allaying pain of the nerves. It is a kind of fumigating apparatus, in which dried herbs are burned, and the heated vapour is then clirected to any part of the hody.

ANGELICIC ACID. An acid obtained from the root of Augclica, similar to valerianic acid.

ANGE'LICINE. A crystallized eompound found in the root of Augelica.

ANGO'STURINE. A neutral prineiple obtained in the form of tetrahedral crystals by submitting the aleoholic tincture of cusparia hark (prepared without heat) to spontanems cyaporation.

ANIDRO'SIS. Hippocrates employs this word for the act of sweating, deriving it from dudoow, to get into asweat. Later writers view it as composed of $a_{0}$ priv., and
\{fuus, sreat, and hence it denotes the suppression or diminution of this function of the sudoriparous glands.
$A^{\prime}$ NISIC AClD. An acid ohtaincd when the concrete essence of anise-sced is aeted on by nitrie acid. When heated with an excess of baryta, it yields an oily liquid, called anisole.

A'NTHRACENE. A compound isomerie with naphthaline, found in coal-tar, and sometimes called paranaphthaline.

ANTHROPO'LOGY (ävөpwnos, man; $\lambda \delta \gamma o s, a \operatorname{description})$. That division of the natural history of man which determines bis relations to tbe other mammalia, as distinguisbed from cthnology, which investigates tho relatious of the different varieties of mankind to one another. The former is more immediately connected with zoology; the latter with history. Whilst history exhibits the actions of man as determined hy moral, ethnology ascertains the effects of physical inlluences.

A'NTIARIN. The poisonous principle contained in the milky juicc of Antiaris toxicaria, or Upus tree of Java.

ANTI'DYNOUS LOTION. Under tbis name has heen prescribed in London the Linimentum Ammonise Compositum of the Edinburgh Pharmacopœia.

ANTIPLA'STIC AL'TERATIVES (ávri, against, $\pi \lambda a ́ \sigma \sigma \omega$, to form). Dysplastica. 'I'erms applied by Oesterlen to the class of inedicines more commonly termed spancemics.

ANTLTIIETIC or POLAR FORMULÆ. A method of writing a chemical formula in two lines, plaeing all tbe negative constituents in the upper, and the positive in the lower line. From their construction these formulæ are named autithetic, the two orders of constituents being, placed opposite or against each other; or polar, from exhihiting the opposite attractivo forces of the elemeuts. Graham.

A'PINE. A gelatinous substance obtnined from the Apium petroselinum, or common parslcy. It yields a blood-red colour with solution of sulplate of iron.

APORE'TINE (ind, froin $\dot{\rho} \eta \tau i v \eta$, resin.) A product or deposit of the resin of rbubarl).

A'PO'IIEM (aтотiӨnц, to deposit). An old term fur extractive matter.

APPROBATION, LOVE OF (approbo, to approve). A term in Phrenology, indicative of a desire of the cstecm of others, lovo of praise, desire of fame or glory. It is comumon tu man with the lower animals. Its orgau is situated on ench side of Self-estecm; when much developed, it generally elongates the upper and baek
part of the head, but it sometimes spreads out laterally so as to widen rather tban lengthen it.

A'PYRLNR. A white alkaline powder found in the Cocos lupideu, and forming crystalline salts with acids.

AQUA INFERNA'LIS. Hell-water; the name of a liquor obtained by macerating the fruit of the Saguerus Saccharifer, or Gomuto palm, and used by the inhabitants of the Moluccas in tbeir wars.

A'RABINE. A gummy principle, obtained from the gum of the eherry and other rosaceous plants. The other prineiple is pramin or cercasin.

ARBOL-A-BREA. A resin somewhat resembling elemi, supposed to be procured from the Canarium album of the Pinilippinc Islands. It yiclds several subslances, tcrmed antyrine, breine, bryoidine, bréidine, \&c.

ARCH NEURAL; HÆMAL. Terms applied by Prof. Owen to the hony hoops constituting the chief part of the primary segment of the vertebra in the archelype vertebrate skeleton. 1. The neural arch is that which is placed above the centrum or body of the vertebra (or projects backward in the human skeleton), for the protection of $u$ segment of the nervous axis. 2. The hemal arch is that mbich is placed beneath the centrum (or extends forward in man), for the protection of a segment of the vascular system. See Vertebra.

Arches, visceral. A term applied to the hæual arches of tbe cranial vertehre in the embryo. Their interspaces have been eulled visceral clefts.

ARENA'TION' (arena, sand). Saburration. 'The practice of sand-batbing; the application of hot sand, cnclosed in a bag or bladder, to the body as a stimulant and sudorific.

A'RGEL. An Asclepiadaecous plant, the leares of whieh form a portion of most samples of Alexandrian senua.

A'RILLODE. A false arillus or aril; a term now applicd to the mace of the nutucg, said to be nothing hat an cxpansion of the cxostome. A true aril is an cxpansion of the placenta, or funiculus, around the sced.

A'RNICIN. A resin procured from the Arnica montana, and said to contain the acrid prineiple of the root and flowers.

Aruicina. An alkaloid found iu the flowers of the Arniea ruontana.

ARTE'SIAN WliLl. A perpendicular perfuration or boring into the ground, though which water rises from various deptlis, according to circumstances, abovo the surface of the soil, producing a constant flow or stream. These wells are
snpposed to have been first used in the district of Artois in France. They are scldon more than a few inches in diameter, and their action is due to the constant endeavour of water to seek its level. In the remarkable Artesian brine-well of Kissingen, a column of water started up, in 1850, to a height of 58 feet ahove the ground, from a depth of 1878 feet.

ARTHRI'TI'FUGUM MAGNUM. A name given by Heyden to cold water, from its supposed great efficacy in arthritic complaints. Owing to its employment in fever, as a drink, it was termed hy Dr. Hancocke febrifngum magnum.

ASA DULCIS. An old term for henzoin. Asa is Arabic for healer.

A'SARITE. A volatile oily matter ohtained from asarabacea root.

1. Asarone. A volatile solid obtained from.the Abarum Europanm. It has a remarkable tendency to crystallize in beautifully defined forms, and also to pass in to the amorphous condition; from which it may he again hrought into the crystalline state.
2. Asarum-camphor. Another volatile oily matter procured from the same plant.
ASPA'RAGIN. A crystallizahle substance found in asparagus, in Althicer officinalis, and in other plants, especially those grown in the dark. Sec Aspartic Acid.

ATHE'RMANOUS ( $\alpha$, priv., $\theta$ өр $\mu$ aivoда, to become hot). A term applied to suhstances which are impervious to heat. See Diathermanous.

ATMOSPHE'RIC RECO'RDER. The name given by the Messrs. Dollond to a meteorological apparatus of a very complicated character, for self-registering simultaneously on paper the varying pressures of the atmosphere, the changes in temperature and in evaporation, the electrical changes in the air, the fall of rain, and the force and direction of the wind. These phenomena are recorded during any length of time, according to the length of paper employed.

ATO'MIC HEAT. The term applied by Regnault to the specific heat of atoms. It is obtained hy multiplying the observed specific l ent of each body hy its equivalent, the latter heing taken upon tho oxygen scalc.

ATO MIC VOLUME. The volume or measure of an equivalent or atomic proportion of a body, termed by M. Kopp the sperific volume. By dividing the atonic weight hy this volume, we obtain the calculated demsity.

A'TROPIC ACID. A volatile crystal-
lizable acid, proeured from Atropa belladonna, and distinguished from henzoic acid by its not precipitating the salts of iron.

AURA'NTIIN. The bitter principle of lemon-pcel.

AURI'CULO-VENTRI'CULARRING. The fihrous ring or opening which communicates betwecn the auricle and the ventricle of the heart. This ring is larger on the rigbt than on the left side.

AXIS. Vertebra dentata. A designation of tho second cervical vertebra, from its presenting a tooth-like process, on which, as on an axis, the atlas, or first vertebra, turns.

AXIS-CYLINDER. The central matter of the primitive nerve-fibre.

AZURE, EGYPTIAN. Carbonate of soda, calcined flints, and copper filings, mixed and fused together in a crucible for two hours, and, when cold, reduced to powder.

## B.

BA'LNEA ANIMA'LIA. Animal haths; baths prepared with hlood and the soft parts of rccently killed animals.
BALSAMI'TE. Essence or tincture of virgin halsam. This is a tincture of the fruit, and it is made by digesting the fruit (deprived of its wings) in rum.

BA'NDOLINE. Fixature; clysphitique. A thick mucilage of carrageen scented with prepared spirit, and sold for stiffening the hair.

BAPTORRHOE'A ( $\beta a \pi$ тòs, infected, from $\beta \alpha{ }^{3} \pi \tau \omega$, to imbue, corrupt, poison, or infect; ṕéw, to flow). A generic term proposed hy Dr. R. G. Mayne, for the disease hitherto called Gonorrhoa, Blemorrea, Blennorrhagia, \&c., epithets which in their application to the affection indicated are incorrect. It literally means an infected, or infectious flon, and this he holds to be the essential characteristic of the discharge from the mucous inculranes of the cannls, \&c., implicated in the affection, which infectious dischargo constitutes the disense itself.

BAPTOTHECORRIIGA (ßattds, infceted or infectious; $\theta$ ńkn, a sheath, and so, the vagina; fico, to flow). A term proposed hy Dr. 1.. G. Mayno for gonorrhoa, or, as he designates it, by the new torm Buptorrhara, in women; literally, it denotes an infections flow from the vagina.

BAPTURHTHRORRHCE'A (Bartos, infectod or infectious; ó príopa, the nrethra; (i. M, to flow). A term proposed by Dr. I. G. Mayne for gonorthœa, or, as lie designates it, by the new term of Baptorhea in men; literally it means au infectious
flow or discharge from the urethra, which he conceives is quite distinctive, for the affection cannot occur in the urethra of womeu without heing also present in the vagina.

BARO'METER, REGISTERING. A barometer patented in 1848 hy Mr. David Napicr, for marking the variation of atmospheric pressure throughout an entire period of twenty-four hours.

BASES, ORGANIC. Alkaloids. These names are given to a class of nitrogenized organic compounds, wbich, in tbeir relations, are quite analogous to ammonia, or rather to oxide of ammonium. They must be distinguished from such basic oxides as oxide of ethyl, oxide of metbyl, \&c., which contain no nitrogen, and, although they form neutral compounds with acids, yet exist in a peculiar state in thesc compounds, wbich cannot he decomposed like ordinary salts, by douhle decomposition; whereas the salts of the alkaloids undergo the same decomposition as those of ammonia.

BA'TTERE, CA'RBO-ZINC (Bunsen's). A modification of the nitric acid battery, in which charcoal in contact with the nitric acid is substituted for platinum.

BA'TTERY, GAS. An apparatus in which a supply of hoth negative and positive gas is kept over the liquid at each plate, to supply loss hy absorption.

BA'TTERY, PNEUMA'TIC. An apparatus for effecting an explosion of gunpowder in mining operations, by means of pressure of air produced hy the air-pump. It is used as a suhstitute for the more costly and delicate galranic blasting in ordinary mining and quarrying.

BAY-SORE. A disease endemic in Honduras, said to be allied to cancer.

BDELLO'METER ( $\beta \delta \dot{\text { A }} \lambda a$ a, a leech; $\mu$ érpov, a measurc). An instrument invented by Demours as a substituto for tbe leech, and consisting of a cupping-glass, $\Omega$ scarificator, and an exhausting syringe. Its advantage consists in its measuring tho quantity of hlood which is drawu. Kraus proposes tho more corroct term antibdella.

BEAUME DE PE'ROU EN COCOS. Balsam of Peru in cocon-nut shclls; a balsam similar to that of Tolu, witb a strong agrecable odour, between that of 'Tolu and soft liquidambar, but distinet from hoth.
 Tuasiculnria; tursiculosa. Cough medicincs; demulecnt, eercbro-spinal, and cxpectorant remedics.

BENE'VOLENCE. A term in phrenology indientive of a disposition for tiud-
ness, compassion, and other amiable qualities. It is coumon to man with tbe lower animals. Its organ is scated in tbe upper and uiddle part of the forebcad, just where the hair begins to grow.

BENZIY'DRAMIDE. A compound isomeric witb hydrobenzamide, contained in the crude oil of bitter almonds.

BE'RGAMOT PEAR OIL. An ether formed by the action of acetic acid on fousel oil.
BE'RLIN IRON. The exquisitely-deliente ornaments made of this material consist of Berlin cast iron, tbe fluidity of wbich is supposed to he increased hy the admixture of a little arsenic. In 1820, when the fashion was at its bcight, these iron ornaments sold for nearly their weight in gold.

BERTIN, SPONGY BONES OF. Two sinall triangular turbinated bones, sometimes found beneath the orifice of tbe spbenoïd sinus, and first observed by Bertin.
BETA ORCEIN. One of the constituent compounds of archil. See Alpha Orcein.

BETA RESIN. Sylvic acid. One of the resins of colophony. See Alpha Resin.

BIBI'RU, Sipiri. Tbese names bare heen lately given to the Nectandra Rodicei, Bibiru or Greenheart Tree, also called Bebeeru. The bark and seeds yield an alkaloid, called bibirina or hebeerin; sipirina, a product of tbe oxidation of bibirina; and bibiric acid. Tbe bark appears to possess the properties of cinchona barks.

BI'DDERY-WARE. A peculiar material made by tbe inbabitants of Bider, near Hyderabad, and said to be a compound of copper, lead, and tin, in the proportions of 8,4 , and 1 . Tbése metnls are melted together, and to every tbree onnces of tbe alloy sixteen ounces of zinc are added when the alloy is melted for use.

BIGA'RADE. The bitter orange, or fruit of the Citrus Bigaradia, known in the English market as the Scrille orange. The leaves yicld a bitter aromatic water, known as cau de naphre, aud a volatile oil called essence de petit grain. The flowers yicld orange-flower water and oil of Jicroli. The uiripe fruits are called orange berrics. The rind of the fruit is cuiployed for medical purposes, also in the preparation of candied orange-pecl aud for flavouring Curaça.

13 LIF $E L L I C$ ACID. The term bitifollic acid with excess of biline has been applied by Berzelius to biliary matter, or the acid choleate of eoda. "But tbe biline of this chemist, and also his sugar of bile,
are nothing more nor loss than either pure bile or choleic acid"-Gregory.

BINO'XIDE; SE'SQUIO'XIDE. Naues applied by Théard to oxides which are capable of combining with acids, and contain, respectively, twice and once and a half as much oxygen as the protoxides of the same metal. He avoids the use of the word "deutoxice," and limits the application of "peroxide" to those oxides which do not combine with acids.

BIO'LYSIS ( $\beta i o s$, life ; $\lambda \hat{\prime} \omega$, to dissolve). The destruotion of life. Hence the term biolytic is applied by Schultz to those agents which have a disorganizing tendency, and lessen or destroy strength, as acids, salts, metallic substances, and narcotics. See Morpholysis.

BLANQUETTE. A kind of harilla procured from different species of salioornia and salsola, and containing from three to eight per cent. of carbonate of soda.

BLOOD-CORPUSCLES (corpusculum, a little hody). Another term for the red particles, constituting the heaviest part of the solid matter of the blood.

BLOOD-PLASMA ( $\pi \lambda \tilde{a} \sigma \mu a$, any thing formed or moulded). Another name for the liquor sanguinis, or the colourless fluid portion of the blood, in which the red particles float during life.
BLOOD-PROPER FLUID. A term applied by Dr. Williams to a distinct kind of nutrient fluid, which exists in invertebrate animals, which is always contained in definitely organized, or walled, bloodvessels, and which has a determinate circulatory movement. See Chylo-Aqueous Fluid.

BLOOM OF ROSES. Carminc dissolved in liquor ammoniæ, and diluted with rosewater and spirit of wine.

BOLO'GNA PIIIAL. A phial differing from an ordinary phial only in heing much thicker at the bottom than at the sides, and in having been suddenly cooled in the open air instead of slowly cooled.in an anncaling oven. The result on its susceptihility to fracture is most extraordinary. Sce Rupert's Drops.

BOROFLU'ORIDES. Compounds of horon and fluorine.

BRACHILU'VIUM (brachium, the arm; lavo, to wash). An arm-bath. Other topical baths are indicated by the analogous terms coxæluvium, manuluvium, and pediIuvium.

BRA'NCIIIAL ARCIIES ( $\beta$ piry̌ia, gills). An assemhlage of splanchno-skeleton boncs, which support the gills, and are in the form of slender hony hoops.
BRANCHIO'STEfAL, (Bpiy,ia, gills;
oti $\gamma \omega$, to eover). Covering the gills; a designation of seven long and slender curved bones, found in the "hemal arch" of ecrtain fishes. See Vertebra.

BRAZIL-WOOD LAKE. Prepared by hoiling Brazil wood in water, adding alum and solution of tin, and precipitating with a solution of carhonate of potash or of soda.

BRO'MICA. A class of pharmaceutical remedies, consisting of bromine and its compounds, employed as alteratives, liquefacients, resolvents, andi sorhefacients.

BROMISA'TINE. Bromine acts on isatine, and forms two compounds, bromisatine and bibromisatine, forming the bromisatinic and the bibromisatinic acids.

BRONZING. The art of giving to objects of wood, plaster, or other material, the appearance of their heing made of bronze; or the imparting of any metallic appearance to such ohjeets. Seo Aurum Sophisticum.

BROW-AGUE. Rheumatic pain, felt generally just a hove the eye-brow.

BROWN PINK. A pigment formed by hoiling French herries, fustic, and pearlash, and precipitating the colouring matter by means of alum.

BRUNSWICK BLACK. A prepara tion for varnishing grates, made of common a\&phaltum, linseed oil, and oil of turpentine.

BU'RANHEM. Guaranhem. An extract of the bark of the Chrysophyllum Buranheim, a Brazilian tree. The bark was introduced, a few years ago, into France, under the name of monesia, or monesia bark. It contains an acrid principle analogous to saponinc, called moncsine.

BU'TYRIC ETHER. Butyrate of oxide of ethyl. An ether formed by distilling alcohol and hutyric acid with sulphuric acid. It is employed to flavour spirits.

BYNE' ( $\beta$ úvq, malt for hrewing). Brasium; maltum. Malt; barlcy which has heen made to gerininato hy moisture and warmtb, and afterwards dried; hy which process part of the protcin matter of the barley is converted into diastasc.

## c.

CACHOU AROMATISE'. Aromatio pastiles, made of Spanish liquorice, flavoured with essential oils.

CACO'THELINE. A substanco obtained by the action of nitric acid upon
brucia. brncia.

CA'DMIA FORNA'Clim. Culmia fac-
titia. Furnace cadmia or tutty ; an inpure oxide of zine fonnd in the climncy of the furnaee in which the zinc ores are ronsted, or in which zineiferous lead ores are smelted. When prepared by levigation and elutriation, it is called prepared tutty.

CA'FFEONE. A brown aromatic oil produced in the roasting of coflec.

CAGLIA'RI PASTE. Turunda Italicoe. Maenroni, Vermicelli, or Italian pastes, made with the finest and most glutinous wheat, in the form of stars, lentils, $\& 0$.

CA'LAMUS AROMA'TICUS. A species of Audropogon, from whieh the grassoil of Nemaur, or ginger-grass oil, is obtained. This oil is known to perfumers by the name of oil of geranium.

CA'LAMUS DRACO. The Dragon's Blood Calamus, a plant of the Indian Arehipelago, the berry of whieh yields the resinous substance called in eommeree dragon's blnod.

CALCAREOUS SOAP. An oleo-margarate of lime, formed by mixing linseed and olive oils with lime-water.

CALCULA'TION. Number. A term in Phrenology indieative of the faculty of arithmetie, and of whatever relates to number or ealeulation. In those in whom the power is strongly developed, the external angle of the eye-hrow is either much depressed or elevated, the organ of this fueulty heing situated beneath that part of the brow.

CALORI'DE (calor, heat). A term applied to the state of a hody with reference to its capacity for oombined heat. Thus, as the oxide of chromium possesses more combined heat when in the soluble than in the insoluble state, the former is vicwed as the higher Caloride, and the body in question may have different proportions of this as well as of any other constituent.

CALORIFA'CIENT (calor, heat; facio, to make). A term applied to substanecs supposed to generate licat in the animal system, as fat, starel, and the other nonazotized articles of food. These are termed by Liebig "elements of respiration." See Nitroyenized Forals.

CALX EXTI'NCTA. Calcis hydran. Slaked lime, or the hydrate of lime; procured by addling water to calce vien, or quicklime, which then swells, crneks, and subsequently falls to powder. Sce Calx.

CANDLES, MERCUMIAL. Candles made of was and vermilion, reeommended for meremrinl fimigation.

CAPER-SPURGE. The Euphmbin Lathyrif, an indigenous or naturalized
biennal plant; the sceds of which, called grana regin minara, yield an oil which may bc employed as an indigenous suhstituto for eroton oil.

CAPI'TULUM (dim. of capur, a head). A little head; a form of inflorescence in which numerous flowers are seated on a depressed axis, as in the Compositæ. It is also termed anthodium, ealathium, \&e.

CA'PSULES (capsilu, a little ease). Small egg-shaped bulbs or eases made of a mixture of gelatine and sugar, or of animal membrane, used for administering nauseous medieines.

CARABA'YA BARK. The prodnce of the Cinchona ovata var. a vulgaris; first imported into London in 1846 from Islay, the nearest port to the provinee of Carabaya, where the bark is collected. Pcreira.

CARBO-HFYDOGENS. Combinations of earbon and hydrogen. These are highly inflammable compounds, resembling one another in ehemical eharacters generally.

CA'RMINIC ACID. Carmeine; coccinelline. The colouring principle of eochinenl.

CA'RRAGEEN COCOA. Pasta cacao cum Lichene Carragheno. Prepared from roasted and decorticated eaeno seeds, white sugar, and powdered earrageen. The Carrageen, or white chocolate, is made of coeoa paste, powdered carrageen, white sugar, and flour.

CA'RRAGEEN JELLT. Gelatina Chondri. A jelly prepared by adding sugar to the strained deeoetion of Carrageen or Irish Moss, and boiling till sufficiently eoncentrated to gelatinize on cooling. By employing milk instead of water, Carragecu blane-mange is ohtained.

CARRA'RA WATER. Carbonnted Lime vater. A patent beverage, consisting of an aërated solution of bicarbonate of time. The title of "Carrara" has been applied on account of the Carrara marblo being the sourec whence the purest lime is obtained, and of its being enployed in the manufacture of this water.

CARTUU'SIAN POWDER. Poudre de Chatrcux. Pulvis Carthusinnorum. A designation of the Kermes mincral, or auorphous tersulpluret of antimony, from its successful employment by a Carthusian friar, named Simon.

CARYO'TA URENS. The Sago palm of Assam, which yields a sago cousidered little inferior to that of the Malay countries.

CASSkLL YELLOW. Turner's yclow; patent yellome. A compound of oxide and ellloritle of lead.
reaserimlosial korot. L'uter Mily name lo wids a rorat whichs thas lorndon

 Xjewices os! C'meremems,
 prased with olive oll ard a moletiors of ean\%tic, orda,

 tion, an Joidian lormp.

 Ifr. Shaplatl Ifall, in hiz Jisastaltio Sier. verta fyymern, wo the direction of the ner-
 Arroxtullíro.
 A claze of sanustice, whiche are mideder In their operation Aban the cerelaarotiono fiuch aro iodinue, alum, aremeate, be\%.
 wroe on linacerens plant, emplegod In the linited ficates any is anbutituts: Por wavls. Thes wotad ly azed for bisuck-lead pencily.

 lular or opesieular mateor found In the ner-

 an eztes:mely deliestes memberance, cemenirn. In\% a $y$ iff hout tenacious linely granalar mase. Tlos porevailitres form In ghobalar, bete thlo ligures Ix liables of be chateged by puaklng. Peallulozo hat, writl lataly, lowen prexamed th les limites th the vegetatse etrisetures.
 The tianase whichl forme ther antur erust of
 berdy of thes woth lo callerd dentine; thes
 twesen the cerserat and thes Jentines, end is tarmed ranourel,
citesilitish, A ergtre; the common
 morily eallord the "hedy" of the vertelira.

 niliable fat chetained fromen ecrive, ly haporg. silication with pertash,

 Gilli.
 nalw: a cilaven if nementide agenta whích ex-

at thes Punctione of the brain ard prinal
 blierting the inental fareuliose are vallal

 inge slosels, liypurica.
Clf: ziven by loursay vi the waz if the wigarcanc.
 revernty applicel be, wrim.
 the yellow axide uf lead.
ryity'sar; arily. Jithation umin, An ared, Denenerice with ehe pailrsitice, and formers Whais athal, ar boglrated cuide of eetyl, in lesented with hydratsa of lines ind potash. Bex refyl.

 itw wishlt of the ntrongext cil of ritrios, and then dilated with water and neutralized with relalk or putazh.

CHICefley. 'Jlae dried, wathes, and Eground roitt of the Civaloriurn intylana, an
 callead willd muctary, and ernnstitatinge the principal ablulerating ingerniont of enfore.

Chicory, udulteritionn of. Thase are
 rosisted and gromind peray, be., eroloured whth Venctian reed; and Ciopole-flighlen, or thes thata memberancuas conat, ir endectarp, which esejarates from the cesfece-reerf In the ast of resastíng.
 lifuid obtainesf by dintillimg gainine with cearatios patansa,

Cllfeir)ifte A gryatilline golden-enlaared bubtance, obtained by dixtilling cortain malt, erortaining kinio acid, with uxide of manganeme athef zulphurie acid.
 A turm aspliad th the incizar tecth of the Padentia, owing to the wear and togir from the reseiproceal astion of the uppes and lower jairy jorodureing an oblique burface which Blopere Jrom as sharp anteriar inargin formed bey the denker ensmes, like that which, in a chingel, elopere from the eharp eofge formed by the pilate of hard atecel laid on the back of that thes.
CHIONAPPITTABLE, Thimand varirus ether eromprourds are prodecered by the aetion of elblorines on naphohatine: Thun wa havere clilanapliteare, chlunasplize, se.; and, when the vewolly fail, we bogin aznińn with ", adding a yyllaitla the tho word, as in

 ane, \ⅇ then liramnjuhtulume, Berosmaphtreleme, \&x. Tlien, agaim, the action of chlo-
rine and bromine on maphthaline yielle eompounds, called chlorobronaphtisc, hromochlonaphtosc, \&c.

CHLO'RIC ACID. An acid composed of 1 ntom of ehlorine and 5 of oxygen.

CHLORI'SATIN. This and various other products, of analogous derivation, are produced by the oxidation of indigo. Thus we have chlorisatyde, ehlorindine, chlorindopten, ebloranilam, \&e. The terms are compounded of chlorinc, isatis, indigo, and anil.

CHLO'ROCIILO'RIC ACID. A gas formed when ehlorate of potash is treated with hydrochloric acid (euchlorine) ; it should he considered a compound of chloric and ehlornus aeid.

CHLORONI'TRIC ACID. Chloroazotic Acid. An aeid said to ho formed by the mutual aetion of nitrie and hydrochloric aeids, and to he the effeetive solvent of aqua regia.

CHLO'ROPERCHLO'RIC ACID. A double acid, formed when humid ohlorous acid is exposed to light, and condenses as a red liquid.

CHLOROPO'LAR. A term applied, in voltaism, to the surface of the eopper presented to the aeid, which has chlorous affinity. See Zinco-polar.

CHLO'ROTHALLE ( $\chi \lambda \omega \rho o े s$, green ; $\theta a \lambda-$ dos, a young shoot). Thallochlor. The green colouring matter of the Cetraria Islandica, or Ieeland Moss.

CHLO'ROUS POLE. A term founded on the theory that the partieles of matter aro susceptible of polarity. Hence, that pole of a particle of zinc or hydrochloric aeid which has the attraction or affinity which is charaetcristie of ehlorine, or ehlorous attraction, is called the chlorous pole. Sec Zincour Polc.

CHOLE'IC ACID ( $\chi^{\circ} \lambda \dot{n}$, bile). Bilic acid. A fatty ảeid, whieh, in combination with soda, constitutes the principal part of the bile. Cholie acid is formed from the choleie by the action of eaustio potassa. Cholordie acid differs from the eholeie in containing no nitrogen. Cholinic acid is another non-azotized aeid, formed by the action of caustie alkalies on bilc. Cholrnic acid is a resinoid neid, found in putrid bile, and very similar to choloidic acid, if not identical with it.

CHRYSA'MMIC ACID ( $\chi$ puoòs, gold; a $\mu \mu \mathrm{os}$, sand). A ycllow precipitate obtained by henting alocs with excess of nitric acid.

CIIRISA'NILIC ACID. An acid nbtained by leating indigo with concentrated potash.

ClIRYSO'LIEPIC ACID ( $\chi$ puod̀s, gold; גeris, a scale). A crystallizable neid, ob-
tained, together with ehrysammic acid, by the action of nitric aeid on iudigo.

CHRYSO'PHANIC ACID ( $\chi$ puoòs, gold; фaire, to make to shine). Rheicacid. The yellow erystalline granular matter of rhubarb. In the pure or morc or less impure state, it has long been known under the names of rhabarbaric acid, rheumin, rhabarlerin, and rhein.

CHYLE-CORPUSCLES. The minute cells developed in the ebylc. When they oeeur in the hlood, they are called "white corpuseles."

CIIYLO-AQUEOUS FLUID. A term applied hy Dr. Williams to a distinct kind of nutrient fluid which exists in invertebrate animals, and is eontained in chamhers and irregular eavities and eelle, cammunicating invariably with the peritoneal space, and having no determinate circulation, hut a to-and-fro movement, maintained hy museular and eiliary agency. See Blood-Proper Fhid.

CIBA'TION (cilus, food). The act of taking food, particularly the more solid kinds of food, especially those prepared from wheat. The term cibus has also heen applied to the chyle elahorated from food in the stomach.

CICATRI'CULA (dim. of cicntrix, a sear). A small, round, milk-white spot, ohserved on the surface of the yolk-hag of the egg; it is surrounded hy one or more whitish coneentric eireles. It is the blastoderm, or germinal memhrane, from whieh the future heing is developed.

CI'LIIFORM TEETH (cilium, an cyelash; forma, likeness). A designation of the teeth of ecrtain fishes, when equally fine and numerous, as the villiform teeth of the perch, but longer. See Sctiform Teeth.

CINETTCA (кıv仑́ $\omega$, to move). Medieinal agents which affeet the voluntary and reflex-spinal movements. Sce CcrebroSpinalia.

CINIS ANTLMONII. Autimony Asho A sulphurated teroxide of antimony, ohtained by roasting the powdered blael sulplaret.

CI'NNAMEINE, Oil of Balsain of Peru, said ly Richter to eonsist of tiro distinct nils-myrospermine and myroxiline.

CIN'NAMYL. The radienl of essenee of cinnamon, but unknown in a separate form. The hydruret is the purified essence, or uil of einuamon.

CITRACO'NIC ACID. An acid produced by the aetion of heat on citrie and on itneonic aeid, bnt derired from aconitie neid. which is formed during the proeess.

CLAIRET. Rossmlis des six araince. The sceds of anisc, dill, feuncl, coriander,
carraway, and daucus creticus, with sugar, macerated for a week in proof spirit, and strainer.

CLE'ARING NUT. The seed of the Strychun Polatornu, sold in the markets of India for clearing water.

CLEAVAGE PROCESS. A term relating to the theory of Virgin-generation. It is oxplained under the term of Parthe-no-gенеяis.

CLI'CHY WHITE. A pure carhonate of lead, or white lead, prepared at Clichy, in France.

CNI'CINE. A crystalline matter, found in the Cemtaurea benedicta, and other plants of the same family. It is similar to Columbine.

COBALT, BLUE. Chinese blue. A colouring matter, formed by adding recently precipitated and moist alumina to a solution of nitrate of cohalt.

COBA'LTOCYA'NOGEN. The hypothetical trihasic radical of the cobaltocyanides, hut not yet isolated.

CO'CCUS (кóxoos, a kernel). A term applied in hotany to a pericarp of dry, elastic pieces, or coccules, as in Euphorhia. In this plant the cocci are three in number, and the fruit, generally called a regura, is therefore also called a $t$ ricoccous capsule.

CGLLELMI'NTHA (אoîגas, hollow; Éd$\mu \mu \nu$, a worm.) The name of those intestinal worms which are hollow, or possess an alimentary canal. These are the trichoecphulus dispar, or long thread-worin, found in the cœellun and large intestine; the ascaris lumbricoides, or large round worm, found in the small intestine; and the ascaris vernicularis, or small threadworm, found in the rectum. See Sterelmiutha.

CEE'LIACA (кorlia, the belly). Medicines which act on the digestive organs.
CGF'NOSARC (xavaş, common; $\sigma \grave{o} \rho \xi$, flesh). A term applied by Dr. Allman to the common living hasis hy which the sereral polypes in a composite zoophyte are connected with one another. Every composite zoophyte is thus viewed as consisting of $\pi$ variable number of polypes, devetoping themselves from certain more or less definite points of a common conosare.

COIL MACIIINE. A machinc for the employment of temporary nuagnets in producing magnetic electricity. Those in which permonnent magnets are used are termed matmeto-elcrfric machines.

COLOGNE DARTIF. A deep brown pigment, or species of umber, supposed to he of verctable origin.
COLOPHO'NIUM SU'CCINI. The residual mass ubtained on fusing succimum.
or auber, after the evolution of water, vo. latile oil, and succinic acid.

CO'LOURING. A term in phrenology indicative of a peculiar faculty for the appreciation of the relations of colvur. Its organ is seated in the middle of the arch of the eye-hrow.

CO'LUMBINE. A crystalline bitter substance, ohtained from Columho or Calumba, the root of the Menispornuzm palmatuan, and somewhat analogous to picrotoxine.

COLUMNS; CORDS; CURTAINS. Terms introduced by Mr. King in his description of the tricuspid valves of the heart. Thase valves consist of curtains, cords, and columns. 1. The anterior valve, or curtain, is the largest, and is so placed as to prevent the filling of tho pulmonary artery during the distension of the ventricle. 2. The right value, or curtain, is of smaller size, and is situated upon the right side of the auriculo-ventricular openiug. 3. The third valve, or fixcd curtain, is connected hy its cords to the septum ventriculorum.

1. The cords, or chordre tendinæ, of the " anterior curtain" are attached, principally, to a long column, or columna carnea, which is connected with the "right or thin and yielding wall of the ventricle." From the lower part of this column a transverse muscular band, the "long moderator baud," is stretched to the scptum ventriculorum, or "solid wall" of the ventricle.
2. The "right curtain" is ennnected, hy means of its cords, partly with the long column, and partly with its own proper column, the sccour column, which is also attrehed to the "yielding wall" of the ventricle. A third and smaller column is generally connected with the right curtain.
3. The "fixed curtain" is named from its attachment to the "solid rall" of the ventricle, by means of cords only, without fleshy.columns.
COMBUSTION-HEAT. Animal beat produced by combination of the oxygen derived from the air with the carbon and hydrogen of alimentary substances.

COMPA'RISON. A termin Phrenology indicative of the reflective faculty which investigates analogies, rescmblances, and differences. It leads to the invention and employment of figurative language. Its urgan is situated in the middle of the upper part of the forchead, between those of Culusility, immediately above Eventuality, and helow Benevolence.

CONCENTRATIVENESS. A term in Phrenology indicative, according to Mr.

Combe and the Edinburgh sehool, of a desire, common to man and the lower animals, of permanence in place, of a disposition to render permanent emotions and ideas in the mind, and of the faculty of maintaining two or more powers in simultaneous and combined activity; a faculty disposing to sedentary pursuits, and a close and steady attention, especially in meditation, to a given object. The organ is immediately above Philoprogenitiveness, and below Self-esteem. Compare Inhabitiveness.

CONFE'RV F. A section of algaceous plants, consisting of simple tubular jointed species, inhabiting fresh watet. Some of these are developed in pharmaceutical and other liquids, as cryptococcus incqualis in aqua calami, ulvina myxophila in mucilage of quince-seed, sirocrocis stibica in solution of emetio tartar, \&c. Some writers, however, consider these substances to be imperfect mucedinous fungi.

CONFIGURA'TION. A term in Phrenology indicative of the faculty which investigates forms and figures generally, enables a person to remember forms and features, and induces a love of portraits and of taking likenesses. Its organ is seated in the internal angle of the orbit, and, when large, it pushes the eye-hall outwards and downwards, giving its possessor a sopuewhat squinting appearance, and causing the eyes to appear wide apart.

CO'NFLUENT and CO'NNATE. Terms employed in deseribing the development of bone. By conflucnt, is meant the cohesion or blending together of two bones which wero originally separate; by connate, that the ossification of the coinmon fibrous or cartilaginons bases of two bones proceeds from one point or centre, and so converts such bases into one hone, as in the radius and ulna, in the tihia and fibula of the frog. In both instances they are to the eye a single bone; but the mind, transeending the senses, recognizes such single bone ns being essentially two.

CONNE'XIVE TISSUE. A term applied to the areolur tissue of organized hodies, owing to its eonnecting the various eomponent parts of the frame in such a manner as to allow of a greater or less freedom of motion among them.

CONQUIN-TAY. The name by which the inhabitunts of Guiana designate the Jlentain mecrel, or tho ineal procured by powdering and sifting the dried core of the Muse S'口 picutmm and Musa Paradisiaca, respectivoly termed the Plantain and the Banmat. They aro probably only varietics of the same species.

CONSE'CUTIVE COMBINA'TION. A term applied to the eltemical process by which a series of salts are formed from one another. Thus, the quadroxalate of potash is derived in the same way from the binoxalate, as the binoxalate itself is derived from the neutral oxalate, two atoms of water being displaced by two atoms of hydrated oxalic acid. Seo Substitution.

CONSE'NSUAL MOTIONS. A term applied to two or more simultaneous motions, of which the secondary and remoter motions are independent of the will. Thus the iris contracts when the eye is open to admit tho light.

CONSTITUTIONAL WATER. A term applied in chemistry to the water which is superadded to a salt, and which can he removed and replaced by very different compounds, without affecting the structure of the body to whieh it is attached. This never happens to basic water. See Substitution.

CONTRA-STIMULANTS. Hyporthewics. A class of medicines which counteract the effeets of stimulants, and depress the vital energies. Thus, wine being a stimulant, whatever relieves its intoxieating effeet is called a contra-stimulant.

CONVULSI'VA. Spastica. Agents which augment the irritability of museles, and excite spasm and convulsion, as strychnia and brucia. These excite common sensibility, and act as hyperasthefic agents.

COPPER, GREEN. Bluc bice. A mineral earbonate of copper, found in mines, and prepared for paints hy grinding and washing.

CO'PROLITE ( $\kappa 6 \pi$ pos, excrement ; $\lambda$ ใ $\theta 05$, a stone). A substance supposed to consist of the excrement of fossil reptiles. Calcis triphosphas, or triphosphate of lime, ahounds in eoprolites.

CO'RMOGENS (rophòs, the trunk of a tree; रivopal, to be produced). A term applied in boteny to a elass of Acrogens, in which there is a distinet axis of growth, or stem and root, symmetrically elothed with leaves. In these we find a trace of something equiralent to the sexes of Exogens and Endogens. They comprise the Ferus, Mosscs, Equisetums, \&o. See Thallogeris.

CORO'LLIFLO'R E (comella, the inner envelope of the flower; flos, a flower). A sub-class of exogenous plants, eharacterized ly the presence of a ealyx and a eorolln, and ly united petals, bearing the stamens.

COSAl'TIC, INFAILIBLE. Tnder
this name is sold in Paris and Frankfort a seeret remedy for cracked nipples, consisting of a solution of ten grains of nitrate of lead in an ounce of water, coloured (probably with alkanet). Two very fine leadeu nipple-shields are sold with the solution.

COTA'RNINE. A bitter, alkalize base formed along with opianic acid.

COUE'RBE'S PROCESS. A process for the detection of the quantity of morphia in opium. "Boil an infusion of opium with lime (which dissolves the morphia), and filter through paper. Saturate the filtered liquor with an acid, and precipitate the morphia by ammonia." There are otber processes, but this is, perhaps, the most speedy. See Morphiometry.

COU'RIG. A yellowish-brown astringent extract, prepared from the seeds of the Areea Catechu. It has an earthy fracture, and is free from the admisture of foreign bodies. See Kassu.

CREMOCA'RPIUM ( $\kappa \rho \varepsilon \mu \dot{a} \omega$, to suspend; картos, fruit). In botany, a compound fruit, 2-5-celled, inferior; cells 1 -seeded, indehiscent, dry, perfectly closo at all times; when ripe, separating and hanging from a common axis. Mirbel re-
stricts the term to the fruit of Umbelliferx. See Polcklenium.

CRE'NIC ACID (крй $\quad \eta$, a fountain). Kirenic Acid. A term applied by Berzelius to a spocies of extractive matter contained in spring water.

CRETA'CEOUS MIXTURE. A convenient form for exhibiting chalk in diarrhoea. It consists of half an ounce of prepared chalk, three drachms of sugar, an ounce and a half of mixture of acaeia, and eighteen ounces of cinnamon water, mixed together. The dose is from half a drachm to two ounces.

CROZO'PHORA TINCTORIA. A Euphorbiaccous plant, the expressed juice of which is known in commerce by the name of turnsole. The juice is green, but becomes purplish on cxposure to air and ammonia. Turnsole rags consist of coarso sacking stained purple by this juice.

CRYSTALS, SYSTEMS OF. Modern crystallographers arrange crystalline forms in six groups, called systems, each of which comprehends all those forms which agree in the number, length, and direction of the axes. These six systems may be conveniently arranged in two classcs, as follows :-

## classes.

## SYSTEMS.

I. Equiaxed, or Monometric $\}$
II. Unequilixed
I. Equiaxed, or
Monometric

1. Crystals, monometric ( $\mu$ бvos, one; $\mu \dot{\text { ít } \rho o \nu \text {, }}$ a measure). Crystals having axes of one kind or measure. These are also called isometric (icos, equal), having axes equal. 1. To this system belong tho cube, the regular octohedron, the rhombic dodecahedron, and the regular tetrabedron.
2. Crystals, dimetric ( $\delta i s$, twico; $\mu$ t́ppov, a measure). Crystals having axes of two kinds. 2. To the Square Prismatic System belong the octohedron with a square base, and the right square prism. 3. To the Rhombohedric Systen helong the rbombohedron (frequently called a rhomboid), the hexagonal prism, and tho sealenohedron.
3. Orystals, trimetric ( $\mathrm{p} i \mathrm{~s}$, thrice; $\mu \dot{\varepsilon}$ rpov, a measure). Crystals having axes of three kinds. 4. To the Right Prismatic System belong the octoledron with a rectangular base, the right rectangular prism, tho octoliedron with a rhombic base, and the right rhombic prisin. 5. To the Oblique Prismutic S'ystem belong

CUPRAMMO'NIUM, CHLORIDE OF. The compound of nuhydrous chloride of eopper with a singlo equivalent of ammonia. It appears to be strictly analogous to chloride of ammonium, hut contains an equivalent of copper in the place of hydrogen.

CURCAS PURGANS. This, and $C$. multifidus, are Euphorhiaceous plants, yielding the physic nuts of commeree. The expressed oil of these seeds, commonly ealled jatropha oil, was lately imported under the name of oil of wild castor seeds.

CUSCO BARK. Cortex Cinchonce de Cusco. The bark of Cinchona pubesccns var. a Pelletieriana, first introduced into Europe in 1829 as yellow or Calisaya bark. Bergen calls it rusty bark on aceount of its rusty yellow colour. The Arica bark is a variety.

CU'SCUS. Khus-lihus. The root of the Andropogon muricatus, Vittie-Vayr, or Cuscus, imported from Bombay for perfumery purposes. Under the name of Vetivcria it has also heen employed in medicine.

CUTCH. A variety of catechu, derived from the Acacia catechu. See Catechu.

CUTTLE-FISH BONE. Os sepice. The oval or oblong calcareous bone deposited in the mantle of the Sepia officinalis and S. elegans. It is used as a dentifrice and in the arts.

CY'AMELIDE. A white solid hody, being an isomerie modification of cyanic acid.

CYANU'RIC ACID. A tribasic aeid discovercd among the products of the distillation of urie acid.

CY'CLAMINE. A erystalline matter obtained from the root of the Cyclamen Europreum.
 to grow). A colleetive name for all those exogens which are characterized by the conecntrically zoned growth of their wood, as distinguished from homogens, which are named from the homogeueity of their wood. OY'STINE (кúaris, a bladder). Cystic oxide, a constitueut of certain urinary calculi.

CYTOBLASTEMA (кútos, a eavity; B $\lambda$ agrave, to sprout). The elementary structureless substanee, in whieh the muelei or cytohlasts, in whieh the several tissues originate, are developed.

## D.

DALIEIOCIIN. The name given by Brandes and Leber to the green product of the action of chloriue aud ammouia on
quinia. Pereira observes that thallei'ochin (from 0idतctv, to hecome green) is a more proper term. They also mention two other products of decomposition - one termed molanochin, the other rusiochin.

DA'MMARA. A species of pine which yields the Cowdie pine resin, used in varnishes.

DA'TISCIN. This and Dahlin are synonymous terms for Inulin, an anylaceous substance, organized like common starch, and procured from the Inula Helenium, or Elecampane.
DEAURA'TUS ( $d c$, of, aurum, gold). Gilded; a term applied to pills when ordered to be rolled up in gold-leaf, to please the patient.

DECAGY'NIA ( (íка, ten; yvvì, a ซoman). The designation of those orders of plants in the Linnæan system, which are charaeterized by the presence of ten pistils.

DECOCTION OF THE WOODS. An old name for the decoctum guaiaci, or deeoction of guaiacum, prepared from guaiaeum turnings, raisins, sassafras, liquorice root, and water.

DECO'CTO-INFU'SA. Deeocto-infusions. These are decoctions to which, after they have ceased to hoil, hut while they are still hot, other suhstances are added, and allowed to digest therein.

DE'COMPOUND. Decompositus. A term applied in botany to those ramifieations of plants whieh are variously compounded, as to leares in which the petiole hears secondary petioles. When the secondary petioles are divided into a third set, such leaves are said to he supra-decompused.
DEFLORA'TION (dcfloro, to deflower). The net of deflowering; a term denoting sexual intercourse, without inferring vio-

## lence.

DEFLU'VIUM CAPILLORUM (deftuo, to fall offi). Alopocia. A falling off of the hair from discase or agc.

DELPHI'NIA. A white, inodorous powder, obtained from tho Delphinims Stavisagria or Stavesacrc. It contains a resinons matter, aud an acrid resin called staphysain.

Delphinic acid. A white crystalline rolatile acid, proenred from the Stavesacre, of powerful emetic properties.

DELTOID LIGAMENT ( $\delta \lambda \lambda t a$, the Greck letter $\Delta$, and cidos, likeness). The internal lateral ligauent of the ankle joint. It is a triangular layer of fibres, attached superiorly by its apex to the internal malleolus, and inferionly by an expanded base to the astragalus and os calcis.

DENDRODE'NTINE (Sivסoov, a tree, and dentine). A term applied to that modification of the fundnmental tissue of the teeth which is producod hy the aggregation of many simple tecth into a single mass, exhibiting, on section, a dendritic appearance hy the interhlending of the dentine, enamel, and cement, as in dendrodus.

DENITRA'TION. The process of separating nitrogen from a suhstauce. Thus, in the manufacture of sulphuric acid, this suhstance, after heing charged with nitrous vapours or nitric acid, is exposed to sulphurous acid; this exposure denitrates the sulphuric acid, much sulphurous acid hecoming sulphuric acid, and peroxide of nitrogen heing liberated in the state of vapour.

DE'NTINE (dens, dentis, a tooth). Dentinum. The tissue which forms the hody of the tooth ; it consists of an organized animal hasis disposed in the form of extremely minute tuhes and cells, and of earthy particles.

Dentinal tubes. The minute tuhes of the dentine or tissue of the tooth; they diverge from the "pulp-cavity" or hollow of the tooth, and proceed with a slightly wayy course at right angles, or nearly so, to the outer surface.

DERMATO'LOGY ( (غ́p $\mu a$, the skin; גóyos, a discourse). That branch of anatomy which investigates the nature and qualities of the skin. By dermatography ( $\gamma$ pá $\phi \omega$, to write) is meant a description of the skin; by dermatalgia (ä $\lambda$ yos, pain), pain of the skin.

DESICCA'NTIA (desicco, to dry up). A class of astringents which check secretion and exhalation, and exercise hut little corrugating power over the solids.
 likeness). Resembling a fasciculus; a term applied to the fasciculate appearance presented by the whito fibres in certain fibrous tumors.

DESMO'LOGY ( $\delta \varepsilon \sigma \mu \partial s$, a bond, $\lambda 6$ yos, a description). That hrancl of anatomy which relates to the tendons and ligaments.

DIAMAGNE'TIC. A term applied to those substances which place thomselves equatorially, and, by conscquence, across (dai) the axial direction, or line of magnetic force. Sce Direction, Axial.

DIA'METER, PARIE'TAL. The distance hetween the two parictal bones of tho cranium, or, in popular languago, the side-to-side diameter; as distinguished from the occipito frontal, or forc-and-aft, diameter, or tho distance botween the forehead and the occiput. Tho latter is
almost alwnys the greater; when more than two iuches greater, a skull is longhcaded; when less than oue, short-headed.

DIAPO'PHYSIS ( ( $\delta$ à̀, through or across; $\dot{a} \pi b \phi v \sigma t s, a$ process of hone). A term applied hy Prof. Owen to the homolugue of the upper transverse process of the neural arch of the vertehra. Sce Vertebra.

DIAS'TE'MA ( $\delta \hat{\sigma} \tau \tau \eta \mu$, to separate). A term applicd in odontography to that hreals in the dental sories which occurs in certain quadrumana for the reception of the crown of the disproportionally large cauines when the mouth is shat. It is seen in the chimpanzees and orangs.

DI'CTYOGENS ( $\delta$ ikrvov, a nct; yivopa, to hecome). The name of a division of Endogenous plants, of which the stem has the structure of endogens, the root that of the stem of exogens nearly, with nctted or reticulatcd, disarticulating lcaves, as Smilax. They constitute a subdivision of the Spermogens of Lindley.

DIELEC'TRIC. A term used in explainiug electrical induction, which Mr. Faraday has shown to be always an action of contiguous particles, chains of particles of air, or some other diclectric ( $\delta$ ca, . through), extending hetrreen the excited hody which is inducing, and the induced hody.

DIO'SMIN. A brownish-yellow, bitter extractive matter procured from buchu. Sce Buchu.

DI'PHYODONTS ( $\delta i s$, twice; $\phi v ́ \omega$, to gencrate; doov̀s, a tooth). A designation of that group of the mammalia which generates two scts of teeth, as distinguished from the monophyodonte, which generate only one set.
DIRE'CTION, A'XIAL - EQUATO'RIAL. The axial direction, or line of magnetic force, is that which connects the two poles of a nagnet; the cquatorial direction is that which is perpendicular to the axial. Bodies which place themselves across the axial direction are called diamagnetic.
DITHIO'NIC ACID ( $\delta i s$, twice ; $\theta$ eiov, sulpbur). A term applied by Berzelius to hyposulphuric acid. The hyposulphurous acid he calls dithionous. Wach contains two atoms of sulphur.
DODLCAGY'NIA ( $\delta \omega \delta^{\prime} \varepsilon^{\prime} \alpha$, twelve; $\left.\gamma v n\right)$, a woman). The designation of those orclers of plants in tho linmenn system, which aro characterized by tho presence of twelve styles.

DONA'RIUM. A new metal found at Brevig in Norway, in the same nireousycuite that contains wöhlerito and onkolito. Its name is derived from that of the god Donar.

DOUBLE FLUID SERIES. A term applicd by Dr. Williams, with reference to his doctrine of the distinct blood-praper and chylo-aqueous fluide, to those invertobrate animals corresponding to the radiate and articulate series of systematic zoologists. To the whole molluscan serics, in which the chain diverges from the radiate and articulate chain, he devotes the term single-fluid series.

DOUBLE TOUCH. A term applied to surgical examination per rectum and per vaginam at the samo time.

DOUBLES. Double Epsom Salts. A term applied to the single Epsom salts, after they have been drained, dissolved, and recrystallized. See Singles.

DRAGÉES. Drages. Sugar-plums; lately employed for administering medicines. In some of these the centres or nuclei are almonds, or some seeds or fruit; in others, the nuclei are pills or boluses; in a third varicty, the centres consist of a liquid; in some forms of drages there is no separate nucleus.

DRAGEES MINERALES. Dragées for extemporaneously preparing artificial mineral waters. The prepared dragée is to be dropped into a glass of water, and allowed slowly to dissolvo, the discngaged carbonic acid being partly retained by the water.
DRU'MMOND LIGHT. Lime light. A brilliant light procured by exposing a small hall of lime to the action of a spiritflame fed by pure 8 xygen gas; the flame, in a highly vivid state, heats the lime to an intense degree, and, in this heated state, it emits a light exceeding in brilliancy any flame yet known.

DRY DIET. A term denoting restriction in the amount of alimentary fluids. By dry treatment is signified the total abstinence from liquids.

DUPLO- (duplum, from duo, two, plica, a fold). A Latin prefix signifying two-fold, as in duplo-carburet; also that the organs of any hody to which the term is prefixed are twice as numerous or large as those of some other body.
 ekk

## E.

 secretion). Agents which affect tho functions of the excernent system, by augmenting, lessening, or altering the sceretions.

E'CTODERM - E'NDODERM (ExTds, outward; ह̈д $\delta o v$, inward; $\delta i \rho \mu a, ~ s k i n) . ~$

Terms applied by Dr. Allman to two distinct inembranes, an external and an internal, of whieh all the hydroid zoophytes essentially consist.

EISO"L. Yee oil. Bindydrate of sulphuric acid, or congealable vitriolic acid. In the solid state, this acid has boen called frozen sulphuric acid.

ELE'IS GUINEE'NSIS. The Palmoil tree, a native of Guinea. The oil is procured from the sarcocarp of the drupe.

ELE'CTOGRAPHY. The process of copying a line engraving, of cxquisite delicacy, from a copper or steel plate to an electro-copper deposit.

ELE'CTRIC CLOCK, BAIN'S. A clock which "performs" by means of a feeble but constant galvanic current generated by means of a layer of coke, a layer of earth, and a few zinc plates. Thesc are buried in the earth, and the current is conveyed hy copper wires to an electromagnet, which constitutes the bob of the pendulum of the clock.

ELE'CTRIC LI'GHT. An intense light, produced by the passage of the electric fluid between the points of two cylinder3 of carbon placed in the direction of the circuit through the wires of a galvanic battery.

ELE'CTRO-BIO'LOGY. A recent term for Mesmerism or Animal Magnetism, suggestive of the connexion of electricity with the phenomena of life.

ELE'CTRO-NE'GATIVES and PO'SITIVES. These terms denote that, in elec-tro-chemical decomposition, bodies exhihit a different electric condition from that of the pole at which they appear. Bodies which appear at the anode or electro-positive pole are, accordingly, termed electronegative; those which appear at the cathode or electro-negativo pole aro termed electro-positive.

ELECTROGE-NESIS (electro, and $\gamma^{i-}$ vecis, generation). A term applied to the effect of electricity, when tetanus is induced in a limb by the trausmission of electricity along the nerves or spinal marrow.

ELECTROPO'LAR. A term applied to conductors, one end or surfaee of which is positive, the other negative-a condition which they commonly exhibit under tho influence of induction.

ELEUTIIE'RIA BARK. Cascarilla bark; the produce of the Croton Eleuteria, called Sea-side Balsam or Sweetwood.

ELI'XUS (lix, water). Boiled; as applied to foods. See Assu8.

EMPYREUMA'TICA ( $\grave{\mu \pi \nu \rho r i v, ~ t o ~ s e t ~}$ on fire). A class of stimulants obtained hy the dry distillation of substances of orga-
nic origin. They comprise ethereal oils, vision of tbe brnin, including the medulla olco-resins, and resins.

E'NAMEL. Encaustum; adamas. That tissue of the teeth, which, when present, is situated between the cement and the dentine.

E'NDO-CA'RDIAC; E'XO.C'ARDIAC
 heart). Terms applied to diseases, and to sounds beard by auscultation in tbe region of the beart ; the former arise from the substance of the heart itself, the latter from diseased conditions of adjacent parts.

ENGLISH PINK. A pigment prepared like Dutch pink, but with more whiting.
 Agents which affect the alimentary canal. - They include stomacbics, tonics, anæsthetics, \&c.

ENTERODY'NIA ( $้ \nu T \varepsilon \rho a, ~ t b e ~ b o w e l s ; ~$ doúvn, pain). Pain of the howcls.

EPENCE'PHALON ( $\varepsilon \pi i$, upon ; $z^{\prime} \times \varepsilon \dot{\xi} \phi \alpha-$ $\lambda_{o v}$, the brain). The posterior primary di-
oblongata, pons varolii, cerehellum, and fourth ventriclc. The epencephalie arch is the neural arch of tbe occipital vertehra, whicb embraces and protects the epencephalon.

EPIDE'RMIC METHOD ( $\dot{\pi} \tilde{i}$, upon; dippa, tbe skin). Iatraliptic method. The application of remedies to the skin, aided by friction. Tbis is sometimes called anatripsologia and espnoic medicine. The application of remedies, unaided hy friction, as of hlisters, lotions, \&c., is termed the enepidermie method.
 The name given by Boucbardat to the few flocculi of fibrin or alhumen whicb resist solution, when these substances are placed in water acidulated with bydrochloric acid. See Albuminose.
 That portion of the segment of articulate animals which is above the joint of the limb.

保 The remainder of tbe "Supplementary List," to tbe last London edition, has been introduced in tbe body of the present edition.

## A P P E N D I X．

AFFIXES．In this article are exhibited the principal affixes or terminations of words，in connection with their componnds．By such a classification，in which a series of words presents one part common to all，the memory is assisted，and the difficulty arising from technical terms considerably lessened．It is obvious that these affixes could not be introduced into the body of the work；indeed，they constitute a separate study．

ERESIS（alporis，a taking of any thing ； from aipéw，to take）．A termination de－ noting a removal of a part．
Aph－aresis，（ $\dot{\pi} \dot{\pi}$ ，from）．The remov－ ing of any diseased part．
Di－cresis（（dà，throughoat）．A solution or breach of continuity．
Ex－aresis（i乡；out）．An old term，de－ noting the removal of a part．
 who leads；from äyw，to lead or drive）． A termination denoting substances which expel others．Hence－
Chol－agogues＂（ $\chi$ oh̀n，bile）．Purgatives which produce bilious discharges．
Copr－agogues，（котро̀s，fæces）．Medi－ cines which quieken the passage of the feces．
 Medicines which promote the catamenial discharge．
Hern－agogues（aǐ $\mu a$, blood）．Medicines which promote the catamenial and hæ－ morrhoidal discharges．
Helminth－agogues（ $\mathfrak{t} \lambda \mu u v s$ ，${ }^{2} \lambda \mu \nu v 0 o s$ ，a worm）．Remedics for expelling worms； ant－helmintics．
Hydr－agogues（ž $\delta \omega \rho$ ，watcr）．Medicines which produce watery evacuations．
Lith－agogues（aitos，a stone）．Anti－ lithics．Medicines which expel．or dis－ solve calculus．
Panchym－agogues（пãs，all，$\chi^{\text {vụ̀ेs，}}$ chyme）．Medicines which cause eracua－ tions mixed with humours of the intes－ tinal canal．
Pant－agogues（návta，plural of $\pi a ̃ s$, all）． Medicines which expel all morbid mat－ ters．
Phlcgm－agogues（ $\phi \lambda$ दура，phlegm）．Mo－ dicines which produce glairy evacuations．
Ptyal－agogues（пrún入ov，saliva）．Medi－ cinos which indace a flow of saliva．
Sial－agognea（gindos，saliva）．Modi－ cines which promote a flow of saliva．
－AGRA（àypa，seizure）．A termination denoting a seizure or pain ；generally ap－ plied to gout．Hence－
Cheir－agra，（xcip，the hand）．Seizure of the hand；gout in the hand．

Cleis－agra．（kגeis，the clavicle）．Seizure or gout in the clavicle．
Ğloss－agra（ $\gamma \lambda \tilde{\omega} \sigma \sigma a$ ，the tongue）．Sei－ zure of the tongue；s．welled tongue．
Gony－agra（（ ${ }^{\text {orv，}}$ ，the knee）．Genugra； gout in the knec．
Tschi－agra（isxiov，the hip）：Seizure of the hip，or hip－gout．

Ment－agra（mentum，the chin）．Syco－ sis；an eruption about the chin．

Odont－agra（ojò̀s，boburos，a tooth）． Seizure，or gout in the teeth．

On－agra（ङ $\mu \mathrm{\mu}$ ，the shoulder）．Seizure， or gout in the shoulder．

Pod－agra（roùs，$\pi$ odòs．the foot）．Sei－ zure，or gout in the fout．
－ALGIA（ä̀zos，pain）．A termination denoting，like odynia，the presence of pain．Hence－

Cardi－algia（kapoía，the heart，the en－ trance into the stomach）．Pain in tho stomach ；heart－burn．

Cephal：algia（ $\kappa \varepsilon \phi a \lambda \grave{y}_{,}$the head）．Pain in the head．

Cox－algia（cosa，the hip or hannch）． Pain in the hip or haunch．
Enter－algia（ěvrcpa，the bowels）．Pain of the bowels or intestines．

Gastr－algia（ $\gamma$ acrì，tho stomach）．Pain， in the stomach．

Gony－algia（yovv，the knco）．Pain，or gout，in the knee．
Hepat－algia（グтар，务raтos，the liver）． Pain in the liver．
IIyster－algia（ioripa，tho uterus）．Pain in the uterus．
Ischi－nlyia（laxiov，the hip or haunch）． Prin of the hip or haunch；a olassical
term，identieal with the barbarous term cox－algia．

Nephr－alyia（ $\nu=\phi \rho \dot{d}_{s}$ ，the kidney）．Pain of the kidney，from calculus．

Neur－algia（veũpov，a nerve）．Nerve－ aelıe；pain in a nerve．

Nost－algia（vбorus，a return）．Home－ siekness；a desire to return to one＇s coun－ try．

Odont－algia（ḋoùs，$\delta \dot{\delta}$ ytos，a tooth）． Toothache；pain in the teeth．

Ot－algia（oùs，woòs，the ear）．Earache； pain of the ear．

Pleur－algia（ $\pi \lambda$ rupà，the side）．Pain，or ache，in the side．

Proct－algia（пршктоेs，the anus）．Pain， or derangement about the anus．

Prosop－algia（ $\quad$ рбow $\quad$ тоv，the face）．Tic douloureux，or neuralgia of the face．

Rhachi－algia（ $\dot{f} \AA \chi$ ss，the spine）．Spine－ ache；hackbone ache；painters＇eolic．

Splen－algia（ $\sigma \pi \lambda \eta \dot{\eta} \nu$ ，the spleen）．Pain in the spleen．

Stern－algia（sternum，the breast－bone）． Pain of the sternum．
－CARDIA（kapoia，the heart）．A ter－ mination denoting the heart．Hence－

A－cardiac（ $a$ ，privative）．A term ap－ plied to animals without a heart．

Hydro－cardia（乡ठw $\rho$ ，water）．Hydro－ pericardia．Dropsy of the perieardium．

Peri－cardium（ $\pi \varepsilon \rho \grave{\prime}$ ，around）．The mem－ brane whieh surrounds the heart．
－CELE（ $\kappa \dot{\eta} \lambda \eta$ ，a tumour）．A termina－ tion denoting a tumour，particularly that of hernia．Henee－

Broncho－ccle（ $\beta$ poyरos，the windpipe）． Goitro．A tumour of the thyroild gland．

Bubono－ccle（ $\beta$ ovßüv，$\beta$ ovß̄̃vos，the groin）．A tumour in the groin；inguinal hernia．

Cerato－ccle（кépas，кéparos，cornea）．Her－ nia of the cornea．
：Cirso－celc（kipoos，varix）．A varicose tumour of the spermatic vein．
：Colpo－cele（кdл $\kappa$ os，the vagina）．A tu－ mour，or hernia，in the vagina．

Cysto－cele（kúaris，tho bladder）．Hernia of the hladder．

Elytro－celc（Ėגurpov，a shenth；the va－ gina）．Vaginal hernia；hernia within the os externum．

Encephalo－cole（＇zүкiфados，the brain）． Hernia of the brain．

Entcro－cele（Evripa，the intestines）．A hernia eontaining intestine．

Entcro－epiplo－cclc（évtepa，intestines， ：mimhoov，omentum）．A hernia containing intestino and omentum．

Epiplo－celc（im＜inoov，ounentum）．A tu－ mour，or hernin，of the omentum．

Epipl－oscheo－cele（＇̇nendoov，omentum， ăव $\chi$ cov，serotum）．A hernia，in which a portion of the omentum descends into the serotum．

Gastro－cele（ya⿱宀八力），the Etomach）．\＆ tumour，or hernia，of the stomach．

Glosвo－cele（ $\gamma \lambda \tilde{\omega} \sigma \sigma a$ ，the tongue）．An extrusion of the tongue．

Hœmato－cele（ǎ̌ ¿a，aiparos，blood）．A tumour of the serotum，or spermatic cord， caused hy blood．
 tumour，or hernia，of the liver．

Hydr－enccphalo－cele（wiow $\rho$ ，water，${ }^{\prime} \gamma \kappa \ell-$ фalos，the hrain）．Watery rupture of the hrain．

Hydr－entero－cele（vidup，water，zur $\varepsilon \rho a$ ，the intestines）．Hydrocele，complieated with intestinal hernia．

Hydro－cele（ $\delta \delta \omega \rho$ ，water）．A tamour containing water；a collection of water in the tuniea vaginalis，\＆e．

Hydro－physo－cele（vैठ $\omega \rho$ ，water，$\phi$ vadं $\omega$ ，to inflate）．Hernia，eomplicated with hydro－ eele；hernia containing water and gas．

Hydro－8arco－cele（ǐd $\omega \rho$ ，water，бàp $\xi$ ， oapкòs，flesh）．Sareocele，attended with dropsy of the tuniea raginalis．

Hypo－gastro－cele（ $\left\{\begin{aligned} \text { do，} \\ \text { ，beneath，yavtìp，}\end{aligned}\right.$ the stomaeh）．Ventral hernia；occurring in front of the ahdomen，generally he－ tween the recti muscles．
Hystero－cele（ívipa，uterus）．Hernia of the uterus．

Ischiato－ccle ．（ioxiov，the－hip）．Intes－ tinal rupture through the seiatic liga－ ments．

Liparo－celc（ $\lambda$ eñapòs，fat）．A species of sarcocele，containing fat．

Mero－ccle（ $\mu$ дpoेs，the thigh）．Hernia of the thigh；femoral hernia．

Muco－cele（mncus）．More properly， myxo－cele．Hernia of the laerymal sac， containing tears and mucus．

Omphalo－ccle（ $\partial \mu \phi$ àds，unbilieus）．Ex－ omplalos；bernia of the bowels at the umbilieus．

Oscheo－ccle（öqxos，the scrotum）．A hernia which has descended into tho sero－ tum．
 Hernia distended with flatus．
Sarco－celc（ $\sigma$ ì $\rho$ द，$\sigma a \rho \kappa \dot{\partial} s$ ，flesh）．A fleshy enlargement of the testis．

Scroto－celc（scrotum，the eutaneous en－ relope of the testes）．．Hernia，or rupture of the scrotum．

Spermato－celc（ $\sigma$ rípua，anípuatos，semen）． An enlargement of the testes，supposed to be produeed by semen．

Stcrito－cele（oriap，oriaros，suet）．A her－ nin，in which sebuceous matter descends into the serotum．

Tarico－celc（rarix，varicis，a distended vein）．An enlargement of the blood－ves－ scls of the scrotum．
－CEPHALUS（ $x \varepsilon \phi a \lambda \lambda$ ），tbe head）．A termination of words denoting some affec－ tion of the head，\＆c．Hence－

A－cephalus（a，privative）．Headless；a class of mollnscous animals．

Anen－cephalus（a，priv．；＇̀ $\gamma \kappa \dot{\varepsilon} \phi a \lambda o s$ ，the brain）．A monster without hrains．

Bothrio－cephalus（ $\beta \dot{i}$ pıov，a pit）．The name of the broad tape－worm．

En－ccphalon（ $\mathfrak{v} v$, within）．The brain． Hence en－cephalitis，\＆c．

Hydr－encephalus（火火ס $\rho$ ，water；＇＇$\gamma \kappa$ ќ $\phi$－ dos，the brain）．Dropsy of the brain．

Macro－cephalus（ $\mu$ ккрòs，great）．Large－ headed；the name of the spermaceti whale．

Meso－cephalon（ $\mu$ źros，middle）．A de－ signation of the pons Varolii．

Myo－cephalon（ $\mu$ via，a ty）．A small prolapsus of the iris，of the size of a fly＇s head．
［Notencephalus（vatos，the hack）．A mon－ ster whose head，with the hrain，is on the back．］

Poly－cephalus（modùs，many）．Many－ headed；the name of a hyatid．

Tricho－cephalus（ $\theta$ pi $\xi$ ，тpıкдs，hair）．The long thread－worm，whieh terminates in a hair－like point．
－COLLA（кס $\lambda \lambda \alpha$ ，glue）．A termination denoting glue．Hence－

Ohryso－colla（ $\chi$ puaòs，gold）．Golden－ glue；the Greek name for horax．
 glue ；ișinglass．

Sarco－colla（ oúp $\xi$ ，бapxòs，flesh）．Flesh－ glue；the concrete juice of the Penæa sarcocolla．
－CRANIUM（кpaviov，the skull）．A ter－ mination denoting the head or the slaull． Hence－

Epi－cranizm（ $\frac{1 \pi i,}{}$ upon）．Tho integu－ ments，\＆c．；which lie over tho cranium．

Hemi－crania（ ${ }^{\eta} \mu \boldsymbol{\sigma} \boldsymbol{\sigma} s$, half）．A pain af－ fecting only ono side，or half，of the head．

Ole－cranon（ $\dot{\omega} \lambda i v \eta$ ，the ulna）．The head of the ulna，or the elbow．

Peri－cranium（ $\pi \varepsilon \rho i$, around）．The mem－ brane which covers the cranium．
－DEMIC（ $\delta \tilde{\eta} \mu о$ ，a pooplo）．A termina－ tion of words denoting discases peculiar to certain localities．Hence－

En－demic．（ $i v$, in，among）．Diseascs peculiar to people of a particular country．

Epi－lcmic（lini，upon）．Discasos arising from a genoral cause，as oxcessivo heat，\＆c．

Pan－demic（nãv，all）．A term synony－ mous with cpidemic．
－DIPSIA（סiчo，thirst）．A termination denoting thirst．Hence－

A－dipsia（a，privative）．The total ah－ sence of thirst．

Phobo－dipsia（ $\phi$ bßos，fear）．A term sy－ nonymous with hydrophobia，expressive of the fear which the patient experiences to allay his thirst．

Poly－dipsia（mo入ùs，much）．Excessive thirst．
－ENTERY（ยขт ìvòs，within）．A termination of words denoting some affection of，or part con－ nected with，the bowels．Hence－

Dothin－euterite（ $\delta o \theta i v i n$, a pustule）．In－ flammation of the mucous follicles of Peyer and Brunner．It would be hetter to use the word aden－enteritiq，from ádinv， a gland．

Dys－cntery（ $\delta \delta s$, with difficulty）．In－ flammation of the mucous lining of the large intestines．

Mes－entery（piras，middle）．The mem－ brane in the middle of the intestines．
－FACIENT（facio，to make）．A ter－ mination denoting the production of any particular effect．Hence－

Cale－facient（caleo，to be warm）．A medioine which causes warmth．

Rube－facient（ruheo，to be red）．A sub－ stance which induces redness．

Siupe－facient（stupeo，to be senseless）． A medicine which produces insensihility．
－FORM（forma，likeness）．A Latin termination，denoting rescmblance，and sy－ nonymous with tho Greek term oid．

Acini－form（acinus，a grape－stone）．A former name of the choroid．

Aëri－form（aër，aëris，air）．Air－like；a term applied to gases．
Ali－form（ala，a wing）．Wing－like；sy－ nonymous with pteryg－oid ；processes of the sphenoild hone．

Arci－form（arcus，a bnw）．Bow－like；a term applied to some fibres of the brain．

Cardini－form（eardo，cardinis，a hinge）． Hinge－like，as applied to a specics of articulation；also tormed ginglymoïd．

Cochleari－form（cochlcare，a spoon）． Spoon－like，as appliod to a process of the tympanum．

Cordi－form（corda，a cord）．Cord－like， as applicd to the aponourosis of the dia－ phragm．

Crihri－form（cribrum，a sicve）．Siero－ like；a term applied to the plate of the cthmoïd bonc．

Cunei－form（cuncus，a wedgc）．Wedge．
like; the designation of several bones of the feet.

Digiti-form (digitus, a finger). Fingerlike ; applicd to certain appendices or prolongations of the intestines.

Entri-form (ensis, a sword). Swordlike; synonymous with xiph-oïd; a cartilage of the sternum.

Falci-form (falx, falcis, a seythe). Scythe-like; a process of the dura mater.

Fili-form (filum, a thread). Threadlike; applied to some of the papille of the tongue.

Fungi-form (fungus, a mushroom). Fungus-like; applied to some of the papilla of the tongue.

Gelutini-form. Resemhling gelatine; as applied to a species of tuberculous infiltration in the lungs.

Glandi-form (glans, glandis, a gland). Gland-like; a term applicd to the thymus body.

Hypocrateri-form (ind кратѝp, a winecup). Salver-shaped; as applied to the corolla of various plants.

- Infundibuli-form (infundibulum, a fun-nel).- Funnel-shaped; a ligament of the oceiput and the first vertebra.

Muri-form (murus, a wall). Wall-like; applied to the arrangement of the cells in the medullary rays of plants.

Myrti-form (myrtus, a myrtle). Myr-tle-formed ; the designation of the remains of the lacerated hymen.

Pampini-form (pampinus, a tendril). Tendril.like; a plexus of the spermatic vein.

Pectini-form (pecten, pectinis, a comb or crest). Crest-like; as applicd to the septum of the corpus cavernosum.

Penicilli-form (penicillus, a painter's brush). Brush-like; as applied to the disposition of filaments, \&e.

Pcmi-form (penna, a pen). Pen-shaped; the shape of certain museles.

Pisi-form (pisum, a pea). Pca-like; the designation of a hone of the earpus.

Plani-form (planus, plane). Of a plane kind; as applied to the obseure or close diarthrosis.
Puri-forin (pus, matter). Rescmbling pus; as applied to certain matters secreted in abscesses, dic.

Pyri-form (pyrus, a par). Pearshaped; a muscle of the sacrum, dc.; also called pyramidalis.
lesti-form (restis, a cord). Cord-like; a process of the medulla oblongata.

Reti-form (rete, a net). Net-like; a designation of the crectile spongy tissue of the vagina.

Scuti-form (scutum, a shield). Shicldlike; a cartilage of the sternum.

Unci-form (uncus, a hook). Mook-liko; a hono of the carpus.

Ventri-form (venter, the belly). Bollyshaped; the form of certain muecles.

Vermi-form (vermis, a worm). Wormliko; two processes of the brain.
-FUGE (fugo, to expel). A termination denoting a suhstance which expels another suhstance, or a disease. Hence-

Febri-fuge (fehris, a fever). A remedy against fever.
Lacti-fuge (lac, lactis, mills). A medicinc which checks or diminishes the secretion of milk.

Vermi-fuge (vermis, a norm). Anthclmintic ; a rcmedy for worms.
-GEN, -GENESIS, -GENOUS, \&e. (yivos, birth; yivecis, generation; from revvic, to produce). Terminations denoting production, or generation.

Acro-genous (äkpos, at the top). Topgrowing; as applied to plants whieh grow hy extension of their upper extremity.

Campho.gen. Camphene; the hasis of camphor, or pure essence of turpentine.

Cephalo-genesis ( $\kappa \varepsilon \phi=\lambda \lambda$, , the head). The doetrine of the formation of the brain.

Cyano-gen (kúavos, blue). Bi-carburet of nitrogen ; an ingredient in Prussian hlue.

Endo-genous (ěvo̊ov, within). Insidegrowing; as applied to plants whieh grov by internal inerease.

E'pi-genesis ( $\dot{z} \pi i$, upon). A theory of generation, in whieh the foctus was supposed to be produced by the joint produstion of matter afforded by hoth sexes.

Erythro-gen (épu $\theta \rho \partial_{s}$, red). A substance sometimes fouud in the gall-bladder, which produces a red compound with nitrogen.

Exo-genous (है\}由, outward). Outsidegrowing ; as applied to plants which grow by external increase.

Halo-gen (üds. salt). A hody whieh forms salt with metals, as chlurine.
Hetcro-gencuus (ẽefpos, different). Substances consisting of parts of a different kind.

Homo-geneous ( $\delta \mu д$ г, similar). Substances consisting of parts of a similar kind.
 enters into the formation of water.

Indi-genous (indigena, a mative). $\mathrm{Pe}-$ culiar to a country, as certain disenses.

Indigo-gcn. The name applied to deoxidated indigo.

Myxo-gen ( $\mu i \xi a$, mucus). The designation, by M. Blaud, of that form of eroup which is characterized by the diseharge of
mueus．When the principal effect is pus， he terus it puo－gen（rưov，pus）；if attended by the production of a false membranc， meningo－gen（ $\mu \boldsymbol{\eta} \mu \gamma \xi$ ，a membrane）．

Nitro－gen（vitpov，nitre）．A gas，so called from its generating nitre．

Osteo－geny（óorévy，a bone）．The growth of bones．

Oxy－gen（j乡̀̀s，aeid）．A gas，so called from its being supposed to be the eause of acidity．

Phos－gene（ $\phi \tilde{\omega}$ ，light）．A designation of ehloro－carbonous aeid，from the pecu－ liar effect of the sun－beams in produeing the combination．

Xautho－gen（ $\xi$ a $\nu$ ods，yellow）．The name of the radical of bydroxanthie acid from its yellow compounds．

Zoo－gony（ $\zeta$ wov，an animal）．The sci－ ence which treats of the formation of the organs of animals．
－GNOSIS（ $\gamma \nu \tilde{\omega} \sigma t$ ，knowledge，from yเvшّкш，to know）．A termination de－ noting linowledge．Hence－．

Dia－grosis（dıa，a preposition sometimes denoting distinction）．Distinetion of diseases．

Pro－gnosis（ $\pi \rho \delta$ ，before）．Previous know－ ledge ；the foreseeing of what will oeeur in diseases．
－GRAPHY（ $\gamma \rho a \phi \bar{\eta}$ ， ，riting or painting， from yó $\phi \omega$ ，to write）．A description of any thing，properly in woriting or painting． Hence－
Adeno－graphy（ảdìv，a gland）．A de－ seription of the glands．

Crystallo－graphy（крúara入入os，iee；a erys－ tal）．The scienee whieh investigates the forms of erystals．

Osteo－graphy（bartov，a bone）．A de－ scription of the bones．

Phyto－graphy（ $\phi$ urd̀v，a plant）．An ae－ count of the rules to be observed in naming and deseribing plants．
－HEXIA（ ${ }_{6}^{5} 55$ ，a babit，from ${ }^{2} \chi \omega$ ，to have the mind，or body，in a ecrtain state）． A termination denoting a habitual state． Hence－

Cac－hexia（kaкòs，bad）．A bad state or habit of body．

Ost－hexill（joréov，a bone）．An ossifie diathesis．
－LEPSIS（ $\lambda \tilde{\eta} \psi \iota s, a$ taking，from $\lambda a \mu \beta a ́ v \omega$ ， to take）．A termination denoting tho act of taking．Hence－

Aua－lepsis（àva，again）．Recovery of strength after sickuess．

Cuta－lepsis（kard，thoroughly）．A spas－
modie attack of the limbs，retaiuing them in one position．

Epi－lepsis（ìmi，upon）．The falling sick－ ness．Morbus caducus．
－LOGY（dajos，an acconut）．A termi－ nation denoting a treatise or deseription of any thing．Hence－

Adeno－logy（å̀ $\bar{y}$ ，a gland）．A treatise or description of the glands．

Etio－logy（altia，a cruse）．A descrip－ tion of the eauses of disease．

Angei－ology（á $\gamma \gamma \overline{0} o v$, a vessel）．A de－ scription of the vessels，or of the vaseular system．

Arthro－logy（äp $\theta_{\mu} \rho$, a joint）．A de－ seription of the joints．
Bromato－logy（ $\beta$ рїциа $\beta$ ри́цатая，food）．A treatise on food．

Bursa－logy（ $\beta$ v́poa，a bide）．A deserip－ tion of the bursæ mucosæ．

Chondro－logy（ $\chi$ bropos，eartilage）．A description of eartilages．

Cranio－logy（kpaviov，the skull）．A de－ seription of the skull．

Embryo－logy（ ${ }^{\prime} \mu$ Bpuav，an embryo）．A description of the embryo．

Entomo－logy（हैँrouov，an inseet）．A de－ seription of inseets．

Glosso－logy（ $\gamma \lambda \bar{\omega} \sigma \sigma a$ ，the tongue）．An explanation of the terms employed in any seienee．

Hamato－logy（aiॅ $\mu a, a_{i \prime \mu} \mu$ asos，blood）．The history of the blood．

A description of worms．
Herpeto－logy（ép $\pi \varepsilon \tau \delta s$, a reptile）．A de－ scription of reptiles．

Ychthyo－logy（i $\chi$ vùs，i $\chi$ Oúos，a fish）．A． description of fishes．

Meteoro－logy（ $\mu \mathrm{ct}$ éwos，floating in the air）．The doctrine of meteors．
Minerc－logy．The science of minerals， or inorganic substances．

Myo－logy（ $\mu \tilde{s}, \mu \nu \partial s$, a musele）．A de－ seription of tho museles．

Neuro－logy（veṽpov，a norve）．A descrip－ tion of the nerves．

Noso－logy（ $\nu$ б́os，a disease）．An arrange－ ment of diseases．

Ornitho－logy（öpvts，öpvioos，a bird）．A description of birds．

Osteo－logy（joréov，a bone）．A descrip． tion of tho bones．

Patho－logy（nioos，a disease）．A descrip－ tion of discases．

Phurmaco－logia（фи́pнaкov，a medieine）．
Tbe method of aduinistering medicines．
Phreno－logy（ $\phi p \eta \eta, \phi \rho \varepsilon v \partial s$, the mind）．A description of the mind as diseovered by the formation of the skull．

Physio－logy（ （ $\dot{\sigma} \sigma$ s，nature）．An aeeount of the nature，or funetious of tho body．

Phyto－logy（фитঠेv，a plant）．A descrip． tion of plants．

Po8o－logy（ $\pi$ ббos，how much）．An ac－ count of the quatity，or the doses，of mo－ dicines．

Semeio－logy（oŋ $\mu \mathrm{i} o \nu, \mathrm{a}$ sign）．The doc－ trine of the signs of discase．

Sitio－logy（oitiov，food）．A treatise on food．

Spasmo－logy（ $\sigma \pi \dot{a} \sigma \mu a$ ，a spasm）．A trea－ tiso on spasms or convulsions．

Splanchno－logy（ $\sigma \pi \lambda a ́ \gamma \chi^{\nu} \circ$ ，a viscus）．A deseription of the viscera．

Symptomato－logy（бט́ $\mu \pi \tau \omega \mu a$, a symptom）． A description of the diagnosis，or symp－ toms of diseases．

Syudesmo－logy（ $\sigma v ́ v \delta \varepsilon \sigma \mu \circ \varsigma$ ，a ligament）． A description of ligaments．

Toco－logy（róros，child－hirth）．The science of midwifery．

Toxico－logy（rokıxдv，a poison）．An ac－ count of poisons．

Zoo－logy（弓ֹ̃ov，an animal）．A history of the animal kingdom．
－LYSIS（ $\lambda$ úres，a solution，from $\lambda \dot{v} \omega$ ，to loosen）．A termination denoting solution， resolution，\＆c．Hence－

Anct－lysis（à añ，again）．The resolution of a compound into its constituent parts．

Cata－lysis（xaтù，downwards）．Decom－ position by contact．

Dia－lysis（ $\delta$ tà，through）．A solution of continuity in any part．A loosening；hence kore－dialysis，the operation for artificial pupil，by separation．
Electro－lysis．Decomposition by means of electricity．

Para－lysis（mapà，throughout）．Palsy； a relaxation of nervous energy．
－MANIA（ $\mu$ avia，madness；from $\mu$ аігони， to rage）．A termination denoting madness． Henco－

Danoono－mania（ $\delta a i \mu \omega \nu$ ，daipovos，a de－ mon）．Madness from supposition of de－ moniacal possession． －Mono－mania（ $\mu$ óvos，alono）．Madness upon one suhject only． $\therefore$ Nympho－mamia（yú $\phi \eta$ ，the nympha）． Lascivious madness in femates．

Typho－menia（rúqos，stupor：typhus）． perfect lothargy of body，with partial lethargy of miind．
－METER（ $\mu$ ípoov，a measure）．A termi－ nation donoting a mewsurer．Henco－

Aceto－meter（acctum，vinegar）．An in－ strumont for mensuring the strength of vinegar．

Aetino－meter（ikriv，a ray of light）．An instrumont for measuring the intensity of light．

Ä̈ro－meter（ùǹp，áépos，air）．An air－mea－ surer；an instrament for asecrtaining the mean bulk of gases．

Alcoho－meter（aloohol，essence）．A mea－ surer of the spirit contained in any vinous liquid．

Alkali－meter．An instrument for mean suring the quantity of alkali in a given suhstance．

Atmo－meter（ì $\quad$ pı̀s，vapour）．An instru－ ment for measuring the quantity of exha－ lation from a moist surface．

Baro－meter（ $\beta$ ápos，weight）．An instru． ment for measuring the weight of the air； a weather－glass．

Calori－meter（ealor，heat）．An instru－ ment for measuring the heat of a body as it cools．

Clino－meter（ $\kappa \lambda i v \omega$, to incline）．An in－ strument for measuring the dip of mineral strata．

Electro－meter（ $\hat{n} \lambda \varepsilon \kappa т \rho o v$, amber．See Elec－ tricity）．An instrument for measuring the intensity of electricity．

Eudio－meter（eidia，calm weather）．An instrument for measuring the propartion of oxygen in a given gas．

Gonio－meter（ywvia，an angle）．An in－ strument for measuring angles，as those of crystals，\＆c．

Hydro－meter（ひ $\delta \omega \rho$, water）．An instru－ ment for measuring the strength of any spirit，in distillation ；or for measuring the gravity of fluids．
Hygro－meter iypos，moist）．An instru－ ment for measuring the degree of mois－ ture of the atmosphicre．

CEno－meter（oivas，wine）．A measurer of the wine contained in any vinous liquid．
．Photo－meter（ $\phi$ w̄s，$\phi$ wròs，light）．An in－ strument for measuring the degrees of in－ tensity of light．

Plexi－meter（ $\pi \lambda \tilde{j} \xi, s$ ，percussion）．An in－ strument for measuring percussion，in ex－ amination of the chest，\＆c．

Pyro－meter（rịp，तथv pòs，fire）．An instru－ ment for measuriug the degrees of high temperatures．

Saceharo－meter（oá＾Xapov，sugar）．An instrument userl in distillation，for mea－ suring the quantity of saccharine matter in the wash．

Sphygmo－meter（ $\sigma \phi$ uymòs，the pulse）．An instrument for measuring the pulsations of the arteries．

Thermo－meter（ $\theta i \rho \mu \mu$, heat）．An instru－ ment for mensuring the degree of heat in any body．
－ODYNE＇，－ODYNIA（ zoúr⿻コ一，pain）．A termination denoting pain．Hence－ An－odyne（a，prirative）．Without pain； a remedy agaiust paiu．

Arth－odynia（üpOpov，a joint）．Pain in a joint．

Cephal－odynia（ $\kappa \varnothing \phi$ д入̀，the bead）．Head－ ache；pain in the hcad．

Gustr－odynia（yaarı̀p，the stomach）． Pain in the stomach．

Mast－odyuia（ $\mu$ aatòs，the breast）．Pain of the brenst，in women．

Oneir－odynia（àvapos，a dream）．Dis－ turbance during sleep．

Ophthalm－odynia（ $\partial \phi \theta a \lambda \mu \partial_{s}$ ；the eye）． Pain in tbe eyc．

Pleur－odynia（ $\pi \lambda \varepsilon v \rho a$ ，the side）．Pain， or ache，in tbe side．
－OID（ हidos，likeness，from cìठopat，to re－ semble；oida，perf．）．A suffix，signifying resemblance．（The terminatiou in odes denotes sometimes a fulness，as in hamat－ odes，ass－odce，dc．；when it expresses re－ semblance，it coincides with the terms in oïdes，and is probably formed from it．） Hence－

Aden－oïd（ảdウ̀v，a gland）．Resembling a gland．

Alkal－oïrl（alkali）．A new substance resembling an alkali．
 Sausage－like；the name of a membrane of the fætus．

Ancon－ö̀d（ $\dot{\alpha} \gamma \kappa \omega े v$ ，tbe elbow）．Resem－ bling the elbow ；a，process of the cubit．

Ancyr－oüd（äyкирa，an anchor）．Anchor－ like；a former designation of the coracoïd process of the scapula．

Arachn－oīd（ùprixuns，a spider）．Cob－ web－like；a meinbranc of tbe hrain．

Aryicen－ö̈d（ápúraıva，an ewer）．Ewer－ like；the name of two cartilages of the larynx．

Chel－ö̈d（ $\chi$ ह́dus，a tortoise）．Cancr－oïd， a disease of the skin，resembling a tor－ toise＇s sbell．

Chor－oïd（ $\chi \omega \rho i o v$, a domicile）．Resem． bling the chorion，a tunic of the eye．

Clin－oül（ $\kappa \lambda i v \eta$ ，a hed）．The processes of tbe sclla turcica are so called from their resembling the knobs of a bedstead．

Condyl－oïd（кóvסuдos，a knuckle）．Re－ 8 cmbling a knuckle；applicd to some fo－ ramina of the occipital bone．

Corac－oüd（ко́pa̧，кб́ракоя，a crow）．Crow－ like；a process of the scapula．

Coron－oïd（кopévn，a erow）．The namo of a process of tho ulna，shaped like a crow＇s heak．

Coryl－oïd（kuridn，an old measure）．A designation of the acctabulum，rescmbling an ancient cup．

Cric－oüd（крíkos，a ring）．Ring－like，or anmular；a eartilage of the larynx．

Cub－oïd（kúßos，a cube）．Cubo－liko；the name of a bonc of tho foot．
＇Dell－ö̈l（ $\delta \dot{\lambda} \lambda \tau a$ ，the Greck letter $\Delta$ ）． Deltn－shaped；a muscle of tho hunerus．

Derm－oid（dép $\mu a$ ，skin）．Slkin－like；a tissue which resembles skin．
 gina）．Sheath－likc；as the tunica vagi－ nalis．
 term applied to encephalosis，a morbid product resembling brain．

Erythr－oïd（ ${ }^{2} \rho u \theta \rho \bar{\rho}$ s，red）．Of a red ap－ pearance；a term applied to the cremas－ teric covering of the spermatic cord and testis．

Ethm－oüd（ $\dot{\eta} \theta_{\mu} \dot{\rho}$ ，a sieve）．Sieve－like ； a bone of the nose；synonymous with cribri－form．

Glen－ö̈d（ $\gamma \lambda \dot{\eta} v \eta$ ，a cavity）．Resembling a cavity；as the socket of the shoulder－ joint，\＆c．

Ginglym－oïd（ $\gamma$ เүү入ข $\mu \grave{s}$ ，a binge）．Hinge－ like；a term synonymous with cardiniform， and applied to certain articulations．

Hal－oïd（üds，the sea）．The designation of certain salt－like compounds，described by Berzelius．＝

Hyal－oïd（bàos，glass）．Glass－like； the membrane wbich contains the vitreous humour of the eye．

Hydr－enccphal－oüd（ひ̈d $\omega \rho$ ，water；$\dot{\varepsilon} \gamma \kappa \varepsilon$－ $\phi$ àos，tho brain）．The name of certain affectious which rescmble hydrencephalus．

Hydrop－oïdes（ujop，water）．A terı formerly applied to watery excrements．

Hy－oid（he Greek letter $v$ ）．A bone situated between tbe root of the tongue and tbe larynx．

Lambd－oïdal（lambdn，the Greek letter A）．Reseınbling tbe letter lambda；a su－ turc of the skull．
Lumbric－nides（lumbrieus，the eartb－ worm）．The name of a long，round，in－ testinal wornu．It would be more correct to call this lembrici－form．

Mast－oüd（ $\mu$ aoròs，the breast）．Brcast－ like；applied to a process，\＆c．，of the tem－ poral bone．

Melan－ö̈d（ $\mu$ ह̇גas，black）．Of a black appearance，as applied to inelanosis．

My－ö̈lles（ $\mu$ ũs，$\mu v \mathrm{~d}_{\mathrm{s}}, ~ a \mathrm{muscl}$ ）．Resem－ bling a muscle ；hence platypma myö̈dcs，a designation of the musculus cutancus．

Odont－oïdca（j̇oùs，j̇ठ́vtos，a tooth）． Tootb－like；a designation of the second vertebra，or tho denduta．

Ov－ö̈d（ovim，un cgg）．Egg－shapod， as applied to the testis．

Phlegmon－oitl（ $\phi \lambda \varepsilon \gamma \mu 0 v\rangle$ ，phleginon）．Rc－ scmbline a phlegmon，as applicd to some kinds of abscess．

Pbull－oïd（ $\psi$ ì $\lambda \lambda \omega$ ，to play upon the lyro）． Lyre－liko；a terma applied to a portion of tho brain，otberwise called lyru．

Pteryy-oïd ( $\pi \tau \mathfrak{t} \rho v \xi$, a wing). Wing-likc; the name of a process of the sphenoid bone.

Rhomb-oïdal (ро́дßos, a rhombus). Resembling a rhombus; the name of a ligament of the elavicle.

Scaph-oïd (oxa $\dot{r}$, a skiff). Rescmbling a skiff; a bone of the tarsus and carpus.

Sesam-oïd (onoírn, an Indian bean). Resembling the semen sesami ; applied to small bones of the thumb and great toc.

Signi-oid (sigma, the Greek letter $\Sigma$ ). Resembling the letter signa, as applied to a flexure of the colon, and valves of the aorta.

Sphen-oïd ( $\sigma \phi \grave{\eta} v$, a wedge). Wedge-like; the ngme of a bonc of the skull.

Styl-oĩd (arũ̉os, a pencil). Pencil-like; a process of the temporal bone.
 synonymous with scuti-form; a cartilage of the larynx.

Trapez-oïd (трáлє̧̌s, a table). Resembling a trapezium, or table; the name of a bone of the carpus.

Troch-oïdes (rpózos, a wheel). Wheellike; a rotatory kind of articulation.

Typh-ö̈d (rúqos, typhus, or stupor). Resembling typhus; a class of diseases.

Variol-öd (variola, small-pox). Resembling variola; a class of diseases.

Xiph-oid (弓i申os, a sword). Sword-like; synonymous with ensi-form, a cartilage which tips the sternum.
-OPHTHALMOS ( $\delta \phi \theta a \lambda \mu o े s$, the eye). A termination of words denoting some affection of the eye. Ophthalmia, or inflammation of the eye, is also used as an affix. Hence,

Blephar-ophthalmia ( $\beta$ дефарov, an eyelid). Inflammation of the eye-lid.

Bu-phthalmos ( $\beta$ oũs, an ox). Ox-eyo; dropsy of the eye.

Cirg-ophthalmia (кıfods, varix). A varicose affection of the blood-vessels of the eyc.

Ex-ophthalmia ( $\xi \xi$, out). Pratrusion of the globe of the eye.

Hœm-ophthalmus (aiцa, blood). Efusion of blood into the chambers of the eye.

Hydr-ophthalmia ( $0 \delta \omega \rho$, water). Dropsy of the eye; ox-cye.

Lag-ophthalmia ( $\lambda a \gamma \omega \bar{s}$, a hare). Hareeye; shortening of the upper lid.
$P_{80 r-o p h t h a l m i a ~(\psi u ́ p a, ~ t h e ~ i t c h) . ~ I t c h ~}^{\text {a }}$ of the eye-lids; tinea, \&c.

Seler-ophthalmia ( $\sigma \kappa \lambda \eta p \partial s$, hard). Inflammation of the cye, attended with hardness.

Xer-ophhthalmia ( $\xi \eta p o ̀ s, ~ d r y) . ~ A ~ f o r m ~$ of ophthalmia, denoting dryness of the syc.
-OPS, -OPSIS, -OPIA, -OPTIC ( $\check{4} \psi$, the eye, $0 \psi$ ts, the act of seeing, бirtids, belonging to the sight; from д̈птодаи, to $^{\text {ecee). }}$ These affixes relate to the eye and vision. Hence,

Ayil-ops (aī\}, aiخòs, a goat). Goat-eye; a sore under the inner angle of the eye.

Athi-0) ${ }^{2}$ (atow, to burn). Literally, Zurnt-face ; an Athiop; and hence a powder as black as an Ethiop.

Ambly-opia ( $\dot{\mu} \beta \lambda \lambda_{\mathrm{s}}$, dull). Dulness of sight; incipient amaurosis.

Anchil-ops (ăvxi, near). Literally, near the eye; the incipient state of ægilops.

Aut-opsia (aúrds, himself). A term denoting a post-mortem examination.

Chro-opsia ( $\chi$ poa, colour). Chrupsia; coloration of objects; an affection of the sight.

Dipl-opia ( $\delta \iota \pi \lambda$ bos, double). Double vision; objects seen twofold.

Dys-opia (dús, with difficulty). Difficulty of sight ; impaired vision.

Hamal-opia (aipa, blood). An effusion of blood in the globe of the eye.

Hemeral-opia (ípepa, the day). Day-eye; or night-blindness.

Hemi-opsia ( $\boldsymbol{\eta} \mu$ oov, half). Half-sight ; an appearance of half an object.
$H_{y} d r$-ops ( $\delta \delta \omega \rho$, water). Dropsy; the aspect or appearance of mater.

Metamorph-opsia ( $\mu \varepsilon \tau а \mu \delta р \phi \omega \sigma t s$, transformation). A distortion or confusion of objects; an affection of the sight.

Myodes-opsia ( $\mu v i a, ~$ a fly ; हiòos, likeness). The appearance of fly-like objects before the eyes.

My-opia ( $\mu \dot{v} \omega$, to close). Close-cyedness; or near-sightedness.

Nyctal-opia (v̀̀,$\nu v \kappa \tau \grave{s}$, night). Nighteye ; or day-blindness.

Oxy-opia ( $\partial \xi \mathrm{v}$ s, sharp). Acuteness of sight, at interrals.

Phot-opsia ( $\phi \tilde{\omega} \mathrm{s}, \phi \omega \tau{ }^{2} \mathrm{~s}$, light). Marmaryge, or luminous vision.

Presby-opia ( $\pi \rho \dot{\varepsilon} \sigma \beta \cup s, o l d$ ). Old-eyedness, or far-sightedness.
-OREXIA (ö $\rho \varepsilon \xi \iota s$, nppetite; from ó $\rho\left\{\gamma^{\omega}\right.$, b $\rho\{\xi \omega$, to extend). A termination denoting appctite or desirc. Hence-

An-orexia ( $a$, privative). Want of appetite.
Cyn-orexia (xúwv, xuròs, a dog). Canine appetite ; synonymous with bulimia.

Dys-orcxia (ঠ̀̀s, with difficulty). Depraved appetite.
-PATIIIA, PATIIY (ra0os, affection; from $\pi n \sigma \chi^{v}$, to suffer). A teriuination, denoting an afjcction. II

Acro-prthia (ixpos, extreme). Discase at an extremity of the body.

Allo-pathice (ä入入os, nnother). The art of curing by inducing symptoms different from those of the primary disease.

Anti-pathy (avil, against). Aversion, or dislike of an object.

A-pathy (a, privative). Ahsence of feeling, or iudifference towards an object.

Cyano-pathia (xúavos, blue). Cyanosis, morbus coruleus, or hlue disease.

Hetero-pathy ( ${ }^{\prime \prime}$ repos, different). The art of curing, by inducing a different disease.

Homceo-pathy (őpocos, similar). The art of curing, by inducing a similar diseasc.

Idio-pathic ("doos, peculiar). Primary, as opposed to syniptomatic, or secondary.

Leuco-pathia ( ccu к̀̀s, white). White $^{\text {a }}$ affection; the Albino state.

Sym-pathy (ratos, nffection). Fellowfeeling; corresponding feeling.
-PEPSIA ( $\pi \dot{\varepsilon} \psi / 5$, coction, or digestion; from $\pi \varepsilon \pi \tau \omega$, to digest). A termination denoting digestion. Hence-

A-pepsia (a, privative). Indigestion; the ahsence of digestion.

Brady-pepsia ( $\beta$ pad̀̀s, slow). Slowness of digestion; indigestion.

Dys-pepsia ( $\delta \stackrel{y}{s}$, with difficulty). Difículty of digestion; indigestion.
-PHAGIA ( $\phi a ́ y \omega$, to eat). A termination of words denoting the act of eating. Hence-

Ade-phagia (ädnv, ahundantly). Excessive appctite ; synonymous with hulimia.

Dys-phagia (dùs, with difficulty). Diffeulty of swallowing.

Esso-phagus (o\%w, ollow, to carry). The gullet, which carries the food in to the stomach.
-PHOBIA ( $\phi$ oßos, fear; from $\phi \circ \beta \dot{\varepsilon} \omega$, to fear). A termination denoting fear. -Hence-

Aëro-phobia (àǹp, dépos, air). Fear of air; a symptom of hydrophohia.

Hydro-phobia (vidwp, water). Dread of water; a symptom of canine madness.

Hygro-phobia (iypds, moist). Dread of moisture ; synonymous with hydrophobia.

Panto-pholia ( $\pi \tilde{\rho} \varsigma, \pi a \nu \tau \bar{s}$, all). Fear of all things; a symptom of hydrophohia.

Photo-phobia ( $\phi \tilde{\omega} s, \phi \omega \tau d s$, light). Intolerance of light; ; an affection of the sight.
-PIIONIA, PHONY ( $\phi \omega \nu \eta$, voice). A termination denoting voice. Hence-

A-phonia (a, privative). Loss of voice; duinhness.

Ago-phony (aik, alyds, n goat). Coatvoice; a sound of the voice rescmbling tho bleating of a goat.

Bary-phonia (ßapùs, heavy). Heaviness of voice; difficulty of speaking.

Broncho-phony (Bporरos, the windpipe). A peculiar sound of the voice over the bronchia.

Dys-phonia ( $\delta \dot{s}$, with difficulty). Difficulty of speaking; impaired specch.

Ischo-phonia (ıoxv̀ेs, slender). Shrillness of voice, hesitation, \&c.

Oxy-phonia ( $\langle\xi \stackrel{y}{s}$, sharp). Acuteness, or shrillness of voice.

Para-phonia (rapà, n preposition denoting faultincss). Altered voice.
-PHORUS• ( $\phi$ ह́p $\omega$, to convey). A termination denoting conveyance. Henco-

Cryo-phorus (крíos, cold). An instrument for exhihiting the degree of cold produced by evaporation.

Electro-phorus. An instrument for collecting weak elcetricity.
 Conveying milk; the designation of the ducts of the mammnry glands.

Phos-phorus ( $\phi$ üs, light). A suhstance procured from boncs, and so named from its luminous appearance in the dark.

Pyro-phorus ( $\pi \tilde{\nu} \rho, \pi v \rho \grave{s}$, fire). An artificial product, which ignites on exposure to the air.
-PIIYSIS ( $\phi \dot{\sigma}$ ts, nature; from $\phi \hat{u} \omega$, to he born). A termination denoting produetion or existence. Hence-

Apo-physis ( $\dot{\varepsilon} \pi \mathrm{d}$, from). A process of a honc, and a part of the same hone.

Dia-physis ( $\delta i a$, through). The middle part, or body, of the long hones.

Epi-physis (éri, upon). A process of a hone attached hy cartilage.

Hipo-physis (und, under). The small organ in which the infundibulum ends.

Sym-physis (ov̀v, together). The growing together of boncs, as of the ossa puhis.
-PLEGIA ( $\pi \lambda \eta \gamma \eta \dot{\eta}$, a stroke ; from $\pi \lambda \eta \sigma \sigma \omega$, to strike). A termination denoting a stroke or attack of any part. Hence,

Hemi-plcgice (ñuavs, half. A stroke or paralysis of one hnlf or ono side of the hody.

Ophthalmo-plegia ( $3 \phi \theta a \lambda \mu \partial s$, tho cye). Pralysis of tho muscles of the cyc.

Para-plegia (rapà, ncar). A strokc, or paralysis, in which the lower half of the body is attacked.
-PN(EA ( $\pi v o c a ̀$, breathing ; from $\pi v^{\prime} \omega$, to hrenthe). A termination which denotes lrerthing; it is connceted with terms indicating some peculiarity of that function. IIenco,

## RII © A

Dys－pacea（ $\delta \dot{s}$ ，with diffieulty）．Diffi－whenever it is preeeded by a vowel，either culty of breathing．

Ortho－pucea（òpò̀s，ereet）．An affection of the breathing，in which it cau only take place iu the erect position．
－POSIA，－POSIS（ $\pi \delta \sigma \tau \varsigma$, drinking ；from $\pi i v \omega$ ，to drink）．A termination denoting the act of drinking．Heace，

Brachy－posia（ $\beta_{\rho a \chi i}$ s，short）．A term used synonymously with hydrophohia， from the aet of drinking little．

Cata－posis（кarà，down）．The act of swallowing down meat or drink．

Dyscata－posia（dis，with diffieulty of кататобьs，the act of swallowing）．A diffi－ culty of swallowing liquids．
－PTOSIS（ $\pi \tau \omega \tau t$ ，prolapsus，from $\pi i \pi \tau \omega$ ， or $\pi \tau \delta{ }^{\circ} \omega, \pi \tau \omega \sigma \omega$ ，to fall）．A prolapsus，or falling down．Hence，

Addo－ptosis（aidoía，pudenda）．Pro－ lapsus of the pudenda．

Archo－ptosis（à $\rho \chi \grave{\partial}$, anus）．Archoptoma． Prolapsus of the anus．

Blepharo－ptosis（ $\beta$ ह́f $\phi$ apov，the eyelid）． A falling of the upper eyelid．

Colpo－ptosis（kódतos，vagina）．Prolapsus of the vagina．

Hystero－ptosis（ícrípa，the uterus）．Pro－ lapsus of the uterus．

Ophthalmo－ptosis（ $\delta \phi \theta_{12} \lambda \mu \sigma_{5}$ ，the eye）．A swelling of the hulb of the eye．

Pro－ptosis（ $\pi p d$ ，forward）．Protrusion of the globe of the eye．
－PTYSIS（ $\pi$ rúots，a spitting ；from $\pi$ rúw， to spit）．A termination denoting the act of spitting．Hence，

Ano－ptysis（à $\nu a ̀$ ，again，or äy ，upwards）． Expeetoration；a diseharge from the chest．

Hamo－ptysis（aipa，apairos，blood）．The spitting of hlood．
－PYOSIS，－PYEMA，\＆e．（ $\pi \dot{v} \omega \sigma t s$, sup－ puration ；from $\pi$ úav，pus）．A termination denoting the presence of pus．Hence，

Arthro－pyosis（äpopov，a joint）．An ab－ seess，or a collcetion of pus，in a joint．

Le－pyesis（ $k$ к，out）．Humid scall，in－ cluding impetigo，porrigo，ete．

Em－pyenra（ $\downarrow$ ，within）．Em－pyesis．A collcetion of pus in the eavity of the thorax．

IIypo－pyon（نंगे，under）．An effusion of pus into the ehambor of tho aqueous humour of the eye．
 to hurst forth）．A termination denoting a bursting forth，as of a fluid．（Tho letter $\rho$ ， or $r$ ，is doubled in tho beginning of a word，
in composition or deelension．See llhaa）． Hence，

Blemno－rrhagia（ $\beta$ 人民́vva，mueus）．A dis－ coarge of mucus by the urethra．

Cysti－rrhugia（kuarıs，a bladder）．A dis－ eharge of blood from the urinary hladder．

Hœmo－rrhagia（aija，blood）．A dis－ eharge，or the loss，of hlood．
Meno－rrhogia（ $\mu \grave{\nu} \nu, \mu \eta \partial ̀ \nu$ ，measis）．A profuse discharge of the menses．

Metro－rrhagia（ $\mu \dot{\tau} \tau \boldsymbol{}$ ，the uterus）．Hæ－ morrhage from the uterus．

Phlegmo－vrhagia（ $\phi \lambda \dot{\varepsilon} \gamma \mu a$, phlegm）．Pro－ fuse pituitous sccretion．

Pneamo－rrhagia（ $\pi v c u ́ \mu \omega \nu$ ，the langs）． A discharge of blood from the lungs；ex－ peetoration of blood．
－RAPIIE，－RAPHIA（ $\beta$ aфخ̀，a snture； from $\langle\dot{\pi} \pi \tau \omega$ ，to serf）．Terminations denoting a sumure，or the aet of making a suture． Hence，

Elytro－rrhaphia（Exurpov，a sheath，the vagina）．Suture of the vagina，some－ times termed epiciorrhaphio，from＇ziolov， pudendum．

Eutero－vrhaghi（ěvrcpa，the bowels）．Su－ ture of the divided edges of an intestine．

Gastro－rrhaphia（ a a ritip，$^{2}$ tbe stomach）． Suture of a wound of the belly，or of some of its contents．

Staphylo－rrhaphia（araфu入h，uvula）．Sn－ ture of the palate．
－RHEA（ $\dot{\rho}$ ora，a diseharge，from $\rho \dot{\rho} \omega$ ，to fiow）．A termination denoting a discharge． （The letter $p$ ，or $r$ ，is douhled after a ror－ el．See Rhagia）．Hence，

Ameno－rrhasa（ $\alpha$ ，priv．，$\mu \bar{\nu} v, \mu \eta$ ròs，\＆ month）．Defieient menstrual discharge．

Blenmo－rrhaer（ $\beta$ 人évva，mueus）．A dis－ eharge of mucus；glect．
Cysti－r．rhcea（кviotis，the hladder）．A discharge from the bladder；catarrb of the bladder．

Dia－rrheea（iıà，through）．A flux，lax， or loosencss．

Dysmeno－rrhœca（ $\delta i_{s}$ ，with dificultr，$\mu \eta$ ， vnvos，a month）．Difficult or painful men－ struul discharge．

Galacti－rrhơa（yá̀a，yá入aктos，milk）．A discharge，or flow，of milk．

Gono－rthoa（youn，scmen）．A discharge
of semen ；a discharge of purulent matter．
Hamo－rrhaua（aipu，blood）．A discharge
of blood．Hence the term homorrhoids， or piles，so called from their bleeding．

Ileputi－rrhaca（ĭnap，jīaros，the liver）． A morbid flow of bile from the liver．

Lenco－rrhoa（ $\lambda$ evós，white）．A white discharge per vaginam；the tchites． Oto－rvhoea（oũs，wids，the ear）．A dis－
charge by the ear；the state of chronic otitis．

Spermo－rrhcea（бпíp $\mu a$, somen）．A dis－ charge of semen．

Uro－rrhœa（ov̀ pov，urine）．An cxcessive discbarge of the urine．
－SARCA，－SARCIA（ $\sigma \grave{\rho} \rho \xi, \sigma \alpha \rho \kappa \partial े$, flesh）． A termination denoting flesh，or an affec－ tion of the flesh．Hence，

Ana－8arca（dंvà，through）．Dropsy of the cellular suhstance．

Hydro－pneumo－sarca（ $\ddot{\delta} \delta \omega \rho$ ，water；$\pi v \varepsilon \tilde{v}-$ $\mu a$ ，air）．A tumour containing water，air， and a flesh－like substance．

Hydro－8arca（ud $\quad$ op，water）．Hyposarca； ana－sarca．Dropsy of the cellular suh－ stance．

Poly－sarcia（тo入̀ेs，much）．Corpulency ； bulkiness of the hody．
－SCOPE，－SCOPY（ $\sigma \times 0 \pi \partial_{s}$ ，an inspec－ tor，scope，or object，from $\sigma \times 0 \pi i \in$ ，to exa－ mine）．A termination denoting ocular ex－ amination．Hence，

Athrio－scope（ai日pia，serene weather）． An instrument for indicating the power of the clouds in preventing radiation．

Cranio－scopy（kpaviov，the skull）．An in－ spection of the skull．

Electro－scope（ク̈入єкртov，amher．See Elec－ tricity）．An instrument for indicating electrical excitement．

Metopo－scopy（ $\mu$ í $\tau \omega \pi$ то，the forehead）． The art of divining by inspection of the forehead．

Metro－scope（ $\mu$ 斤ifpa，the uterus）．An in－ strument for examining the os uteri．

Micro－scope（ $\mu$ «крঠ̀s，small）．An instru－ ment for examining minute ohjects．

Necro－scopic（vєкрд̀s，dead）．A term ap－ plied to post－mortem examinations．

Pyro－8cope（ $\pi \bar{\nu} \rho, \pi \nu \rho \partial{ }_{s}$ ，fire）．An instru－ ment for examining the degree of high temperatures．

Stetho－scope（ $\sigma r \tilde{\eta} \theta o s$, the breast）．An in－ strument for examining the sounds of the chest．

Thermo－scope（ $\theta \dot{\text { íp }} \boldsymbol{\rho} \boldsymbol{\eta} \eta$ ，heat）．An instru－ ment for examining the changes of heat．
－STASIS（í $\sigma \tau \eta \mu$ ，to stand）．A termina－ tion denoting a standing，or a position in a place．

Copro－stasis（котроेs，freces）．Undue re－ tention of the freces in the intestines．

Meta－stesis（ $\mu \mathrm{cta}$ ，a preposition denoting change or transference）．A removal from one place to another．
－STOLE＇（ $\sigma \tau 0 \lambda \eta$ ，a mission；from $\sigma$ тi $\lambda \lambda \omega$ ， to send）．The termination of two words denoting the two reciprocal actions of the heart and arteries．These are－

Dia－stole（ $\delta$ ta－$-\dot{\beta} \lambda \lambda \omega$ ，to dilate）．The dilatation of the heart and arterics．

Sy－stole（ $\sigma v-\sigma \tau \dot{\varepsilon} \lambda \lambda \omega$ ，to contract）．The contraction of the heart and arteries．
－STOMA（ $\sigma \tau \partial_{\mu} \alpha$ ，the mouth）．A termi－ nation denoting the mouth．Hence，

Cyclo－stoma（кúкдоя，a circle）．Círcular－ mouthed ；an order of fishes．

Di－stoma（dis，twice）．Two－mouthed； the designation of the fluke．

Lago－stoma（ $\lambda a y \tilde{\omega} s$, a hare）．Hare－ mouth；hare－lip；a congenital division of the lip，resembling that of $a$ hare．
 to place）．A termination denoting an ar－ rangement．Hence，

Dia－thesis（dıà，throughout）．The con－ stitutional disposition or hahit．

Syn－thesis（oiv，together）．The anato－ mical connexion of the hones of the skele－ ton．The constitution of a body from its elements，as opposed to analysis．
－TOM，－TOME，－TOMIA，－TOMY（торخ， a section，from $\operatorname{Tí}^{\prime} \mu \nu \omega$ ，to cut）．A termina． tion denoting incision．Hence－

Ana－tomy（divà，throughout）．Literally， cutting up；dissection．

Arterio－tomy（áprnpia，an artery）．The opening of an artery for blood－letting．
A－tom（a，privative）．A particle of matter，incapable of further division．
Broncho－tomy（ $\beta$ p $\sigma \gamma \chi^{\circ}$ ，the windpipe）． The operation of cutting into the hronchia， or bronchi．

Cerato－tome（kípas，kípatos，a horn）．A knife for dividing the cornea．

Core－tomia（кбрп，the pupil）．The ope－ ration hy incision，for artificial pupil ；sy－ nonymous with iridi－tomia．
 cision）．The operation，hy excision，for artificial pupil；synonymous with irid－ ectomia．

Cysti－tome（kúarts，the bladder）．An in－ strument for opening the capsule of the crystalline Iens．

Cysto－tomy（xúotcs，the bladder）．The operation of cutting into the bladder，for the extraction of a calculus．

Embryo－tomy（ $\kappa \mu \beta \rho$ ovov，an cmbryo）．The operation of opening the foetal head，for the purpose of delivery．

Entcro－tome（ěve $\varepsilon \rho a$ ，the intestines）．An instrument for the operation of artificial anus．

Gastro－fomia（ $\gamma$ natip，the stomach）．The operation of opening the abdonien．
Hernio－tomy（hernia，from épvos，$\Omega$ branch）．The operation for strangulated hernia．

Kore-tomia ( $\kappa \delta \rho \eta$, the pupil of the eyc). Irido-tomia. The operation for artificial pupil, by incision. Connceted with this is Ror-ectomia ( $\bar{\kappa}-\tau \sigma \mu \bar{n}$, oxcision), or iridotomia, the operation by excision.

Laryngo-tomy (גápuy $\xi$, the larynx). The operation of culting into the larynx.

Litho-tomy ( $\lambda$ íos, a stone). Tho operation of cutting a stone out of the cladder. Myo-tomy ( $\mu$ ṽs, $\mu \nu \dot{a}$, a muscle). Dissection of the muscles.

Nephro-tomy (yeq $\rho \delta_{s}$, a kidney). The operation of cutting a stone out of the kidney.

Neuro-tomy (veṽpov, a nerve). A dissection of the nerves.

Nympho-tomia (víup , the nympha). The operation of removing the nymphr.

CEsophago-tomy (oloodíyos, the gullet). The operation of cutting into the œesophagus.

Omphalo-tomia ( $\delta \mu \phi п \lambda \grave{s}_{5}, \quad$ umbilicus). The separation of the umhilical cord.

Orcho-tomy (ö $\rho \chi 15$, the testis). Castration; the removal of the testes.

Pharyngo-tomy ( $\phi \dot{\alpha} p u \xi$, the pharynx). The operation of cutting into the pharynx. The instrument is called pharyngo-tomus.

Phlebo-tomy ( $\phi \lambda \hat{\xi} \psi, \phi \lambda_{\varepsilon} \beta o s$, a vein). Venesection. The opening of a vein.

Scleroticec-tomia (sclerotica, and ìктонѝ, excision). The operation for forming an artificial pupil in the sclerotica.

Tracheo-tomy ( $\tau \rho a \chi$ ̀ेs, rough; hence trachea, the wind-pipe). The operation of cutting into the trachea.

Zoo-tomy ( $\zeta \tilde{\omega} \nu$, an animal. The dissection of animals.
-TONIA, -TONOS, -TON $\not$ AUM (Tòvas, tension, from $\tau \varepsilon i v \omega$, to stretch). A ternination denoting tension or tone. Hence-A-tonia ( $\alpha$, privative). Atony; defect of tone or muscular powcr. -
 Spasm fixing the hody forward.
 Backward tension; tetanus of tho extensor muscles.

Peri-toncum ( $\pi \varepsilon \rho i ̀$, nround). Tho membrano which lines the interior of the abdomon:

Pleurostho-tonos ( $\pi \lambda \varepsilon ข \rho a ̀$, tho side). Tetanus of the latoral muscles.
-TROPIIIA, -TROPIIY (трофѝ, nou-
rishment; from $\tau \rho \dot{\text { ciqw, to nourish). A }}$ termination denoting nourishment. Hence,

A-frophia (a, privative). Atrophy; defective nutrition.

Hyper-trophia (īп̀े, ahove). Excessivo nutrition, as of an organ or tissue.

Para-trophia ( $\pi a \rho a ̆, ~ a ~ p r e p o s i t i o n ~ d e-~-~$ noting fanltiness). Mis-nutrition.
-URESIS, -URIA (oưp $\begin{gathered}\text { ots, the act of }\end{gathered}$ discharging urine; from où $\varepsilon$ é, to make water; or orpos, urine). A termination denoting the act of micturition, or affections of that function. Hence,

Di-urcsis (סıà, through). An unusually large flow of urine.

Dis-uria (סùs, with difficulty). Diffculty in discharging the urinc.

En-uresis ( $\varepsilon v$-oupé $\omega$, to be incontinent of urine). Incontinence of urine.

Hemat-uria (aì $\alpha$, aï $\mu a \tau o s$, blood). The passing of hlood in the urine.

Hipp-uric (iños, a horse). Tbe name of an acid obtained from the urine of the horse.

Isch-uria ( ${ }^{\circ} \sigma \chi \omega$, to retain). A suppression of the discharge of the urine.

Par-uria (кара̀, ュ preposition denoting faultiness). Mis-micturition; a morhid discharge of urine.

Poly-uria (тo入ùs, many). An abundant discharge of urine; synonymous with diahetes.

Pyro-uric ( $\pi$ ũp, пupòs, fire). The name of an acid ohtained by the decomposition of uric acid by heat.

Strang-ury ( $\sigma$ грà $\bar{\xi}$, a drop). . A discharge of the urine by drops.
-URUS, -URIS (oùpà, a tail). A termination denoting a tail. Hence,

Cen-urus (кowds, common). A hydatid, consisting of a group of animals, terminating in one tail.

Hipp-uris (ī̃пos, a horse). Cauda equina. Tho final division of the spinal marrow.

Oxy-urus ( $\delta \xi \stackrel{y}{s}$, sharp). A sharp-tailed intestinal worm.

Thysan-oura ( $\theta \dot{v} \sigma \sigma \omega$, obsolcte; from $\theta \dot{v} w$, to move rapidly). Tail-jumpers; a species of inscets.
 thread-worm, which terminates in a hairliko point.

AMERICAN JOURNAL OF THE MEDICAL SOTENCES. - Edited by IsAAO HAFs, M.D. Published Quarterly, each number containing about 300 large octavo pages. Price, $\$ 5$ per annum. When paid for in advance, it is sent free by post, and the "Medical News aud Library," a monthly of 32 large 8 vo. pages, is furnished gratis. Price of the "Medical News, ${ }^{\text {T }}$ separate, $\$ 1$ per annum, in advance.
aLLEN (J. M.), M.D.-The Practicai Anatomist; or, The Student's Guide in the DissectivgRoom. With over 200 illustrations. In one handsome royal 12mo. polume. (Nearly Ready.)

ABEL (F. A.), F. C.S., and C. L. BLOXAM.-Handbook of Chemistry, Theoretical, Practical, and Technical, with a Recommendatory Preface by Dr. Hofmann. In one large octavo volume of 662 pages, with illustrations.
ashwell (SAMUEL), M.D.-A Practioal Treatise on the Diseases peculiar to Women. Illustrated by Cases dérived from Hospital and Private Practice. Third American cdition. In one octavo volume of 520 pages.

ARNOTT (NETLL), M. D.-Elements of Physics; or, Natural Philosophy, General and Medical. Written for universal use, in plain or non-technical language. A new edition, by Tsaac Hays, M. D. Complete in one octavo volume, of $48 \pm$ pages, with about two bundred illustrations.

BROWN (ISAAC BAKER), M.D. - On some Diseases of Women admiting of Suraioal Treatment. With handsome illustrations. I volume, 8vo., extra cloth.

Bennett (J. HUGHES), M.D.-Tro Patholooy and Treatment of Pulmonary Tuberonlosis, and on the Local Medication of Pharyngeal and Laryngcal Diseases, frcquently mistaken for, or associated with, Phthisis. In one handsome octavo volume. with beautiful wood-cuts.

Bennett (Henry), M. D.-A Practical Treatisi on Inflammation of the Uterug, its Cervix and Appendaoes, and on lts Connection with Uterine Diseaso. Fourth Amerlcan, from the third and revised London edition. To whlch ls added (July, 1856), 1 REview of the Present State of Uterine Pathology. In onc ncat octavo volumo, of 500 pagce, with wood-cuts.
Also, for sale separate, A Revifit of the Present State of Uterine Patholooy. I small 8 ro, volume, flexible cloth. (Now Ready.)
beale (Lionel Joifn), M. R.C.S.-The Laws of Mealtif in Relation to Mind and Bodt. A Serles of Letters from an old Practitloner to a Patlent. In ono handsome volume, royal $12 \mathrm{mo} .$, extra cloth.

Bithing (arcimbatid), M. D.-The Principlis of Medione. Second Amcrican, from the fifth and improved Loadon cdition. In ono handsome octavo volume, oxtra cloth, 250 pages.
bliakiston (peyton), M. D.-Practical Observations on Certain Diseases of the Cuest, and on the Principles of Auscultation. In onc volume, 8 ro., 384 pagce.

BURRows (George), M. D.-On Disorders of the Cerebral Cmbulation, and on the Connection between the Affections of the Brain and Discases of the Heart. In one $\delta \mathbf{v o}$. vol., with colored plates, pp. 216.

BUDD (GEORGE), M.D.-ON Diseases of the Liver. Sccond American, from the scond and enlarged London edition. In one very handsome octavo volume, with four beautifully colored platcs, and numerous wood-cuts. 468 pages. New edition.

BUDD (Georgi), M.d.-On the Organio Diseases and Functional Disorders of the Stomace. In one neat octavo volume, extra cloth. (Now Ready.)
bUCKLER (T. H.), M.D.-On tee Etiology, Pathology, and Treatment of Fibro-Beonceitis and Rheumatic Pneunoma. In one handsome octavo volume, extra cloth.
bushnan (J. S.), M. D.-Princtples of Animal and Vegetable Phystology. A Popular Treatisc on the Functions and Phenomena of Organic Lifc. In one handsome royal 12 mo . volume, extra cloth, with numerous illustrations.
blood and urine (Mandals on).-By Joen Williab Griffth, G. Owen Repse: and Alfred Markwick. One thick volume, royal 12 mo ., extra cloth, with plates. 460 pages.

BRODIE (SIR BENJAMIN C.), M.D.-Clinical Lectures on Surgery. One vol., 8ro., cloth. 350 pagcs.
bird (Golding), M. D.-Urinary Deposits: their Diagnosis, Pathology, and Tberapeotyoal Indications. A new and enlarged American, from the last improved London edition. With over sixty illustrations. In one royal 12 mo . volume, extra cloth.

Bartlett (ELISHA), M.D.-The Mistory, Diagnosis, and Treatment of the Fevers of the United States. Fourth edition, revised, with Additions by Alonzo Clark, M. D. In one handsome octavo volume. (Nearly Ready.)
bowman (John E.), M. D.-Practical Handboot of Medical Chemistry. Second American, from the third and revised London cdition. In one neat volume, royal 12 mo ., with numerous illustrations. 288 pages.
bowman (JOTIN E.), M.D.-Introduction to Practical Chemistrt, including Ayaltsis. Second American, from the second and rcvised English edition. With numerous illnstrations. In one neat volume, royal 12 mo .350 pages. (Now Ready.)
barlow (george T.), m.d.-A Manuar of the Practior of Medicine. With Additions by D. F. Condic, M. D. In onc handsomo octavo rolumo, leather, of 600 pages. (Now Ready.)
curling (T. B.), F.R.S.-A Practioal Treatise on Diseases of the Testis, Spermatio Cord, and Scrotom. Sccond Amcrican. from tho second and enlarged English edition. With numerous illustratlons. In ono handsome octaro volume, oxtra cloth. (Novo Ready.)

Cotombat de L'TSERN-A Treatise on the Diseases of Females, and on the Special Hygricne of thoir Sex. Translated, with many Notes and Additions, by C. D. Meigs, M. D. Second cdition, revised and improved. Iu ono largo rolume, octaro, with numcrous woodcuts. 720 pages.

COPLAND (TAMES), M.D-Of tme Causes, Naturr, and Treatment or Palsy and Aporlexy, and of the Forms, Sents, Complientions, and Morbid Relations of Paralytic and Apoplectic Disenses. In one volume, royal 12mo., extra cloth. 326 pages

Carson (JOSEPII), M. D.-Synopsis of the Course of Lectcres on Materia Medioa and Pharmacy, delivered in tho University of Penusylvania. Second edition, revised. In one very neat octavo volume, of 208 pages.

Carpenter (William B.), M.d.-Principles of Honan Physiolocy; with their chief applications to Psychology, Pathology, Therapeutics, Hygiene, and Forensio Medicine. A new American, from the last and revised Iondon edition. With nearly three hundred illustrations. Edited, with Additions, by Francis Guruey Smith, M. D., Professor of the Institutes of Medicine in the Pennsylvania Medical College, etc. In one very large and beautiful octavo volnme, of about 900 large pages, handsomely printed, and strongly bound in leather, with raised bands. (Just Issued.)

Carpenter (william B.), M.D.-Principles of Comparative Physiology. New Amorican, from the fourth and revised London cdition. In one large and handsome octavo volume, with over three hundred beautiful illustrations.

Carpenter (willitam B.), M.D.-The Microscope and its Revelations. With an Appendix containing the Applications of the Microscope to Clinical Medicine, by F. G. Smith, M.D. With $43 t$ beautiful wood engraviugs. In one large and very handsomo octavo volume of 724 pagcs, extra cloth or leather. (Now Ready.)

Carpenter (William B.), M.D.-Elements (or Mandal) of Physiology, including Physhologral Anatomy. Second American, from a new and revised London edition. With one hundred and ninety illustrations. In one very handsome octavo volume.

Carpenter (william B.), M. D.-Principles of General Physiologt, including Organio Chemistry and Histoloay. With a General Sketch of the Vegetable and Animal Kingdom. In one large and handsome octavo volume, with several hundred illustrations. (Preparing.)
$\qquad$
Carpenter (william B.), M.D.-A Prize Essay on the Use of Aloonolio Liquors in Health and Disease. New edition, with a Preface by D. F. Oondie, M. D., and explanations of scientific words. In one neat 12mo. volume.

CHRISTISON (ROBERT), M. D.-A DISPENSATORY; or, Commentary on the Pharmacopoeias of Great Britain and the United States: comprising the Natural Ilistory, Description, Cheraistry, Pharmacy, Actions, Uses, and Doses of the Articles of the Matcria Medica. Second edition, revised and improved, with a Supplement containing the most important New Remedies. With copious Additions, and two hundred and thirteen Iarge woodengravings. By R. Eglesfeld Griffith, M.D. In one very large and handsomo octavo volume, of over 1000 pages.

CHELIUS (J. M.), M. D.-A System of Sunaery. Translated from tho Gcrman, and accompanied with additional Notes and References, by John F. South. Complete in threo very large octavo volumes, of nearly 2200 pages, strongly bound, with raised bande and doublo titlos.

CONDIE (D. F.), M. D.-A Praotical Treatise on the Diseases of Chimpren. Fourth cdition, revised and augmentod. In one large volume, 8 vo., of nearly 750 pagos.

Cooper (Bransby B.), M. D.-Lectures on tar Principles and Praomoe of Suraery. In ono very large octavo volumo, of 750 pages.

Conpfer (SIR AStLEY P.) - A Treatigr on Dislocations and Fractures of the Jonts. Edited by Bransby B. Cooper, F.R.S., ctc. Wlth additional Observations by l'rof. J. C. Warron. A new American edition. In ono octavo volumo, with numerous wood-cuts.

COOPER (SIR ASTLEY P.)-On tie Structure and Diseases of the Testis, and on the Thymus Gland. One vol. imperial 8vo., with 177 figures, on 29 plates.

COOPER (SIR ASTLEY P.)-On the Anatomy and Digeases of the Breast, with twenty-five Miscellancous and Surgical Papers. One large volumo, imperial 8vo., with 252 figures, on 36 plates

CHURCHILL (FLEETWOOD), M.D.-On tue Taeory and Practice of Midwifery. A new American, from the last and improved English edition. Edited, with Notes and Additions, by D. Trancis Condie, M. D., author of a "Practical Treatise on the Diseases of Chiluren," etc. With 199 illustrations. In one vory handsome octaro volume, 510 pages.

CHURCHILL (FLEETWOOD), M.D. - On the Diseases of Infants ayd Cemprex. Second American edition, revised and cnlarged by the author. With Additions by W. V. Keating, M. D. In one large and handsome volume of 700 pages. (Now Ready.)

CHURCIILL (Fleetw00D), M. D.-Essays on the Puerperat Fever, and other Digeases peculiar to Women. Selected from the writings of British authors previous to the close of the eightcenth century. In one neat octavo volume, of about 450 pages.

CHURCIILL (FLEETWOOD), M. D.-On the Diseases of Wonen ; including those of Pregnancy and Childbed. A new Amorican edition, reviscd by the author. With Notes and Additions, by D. Francis Condie, M. D., author of a "Practical Treatise on the Diseases of Children." In one large and handsome octavo volume, with wood-cuts. (Nearly Ready.)

DEWEES (W. P.), M. D.-A Comprehensive Sysmem op Midwfrer. Ilustrated by occasional Cases and many Engravings. Twclfth cdition, with the Author's last 1 mprovements and Corrections. In one octaro volume, of 600 pages.
dewees (W. P.), M. D.-A Treatise on the Physical and Medical Trratarent of Crildrex. Tenth edition. In one volume, octavo, 548 pages.

Dewees (W. P.), M. D.-A Treatise on the Diseases of Femanes. Tenth edition. In one volume, octavo, 532 pages, with plates.
druttt (robert), M. R.C.S.-The Principles and Practice of Modern Surgert. A new American, from tho improved London edition. Edited by F. W. Sargent, J. D., suthor of "Minor Surgery," \&c. 1llustrated with one hundred and uinety-three Food-engravings. In one very haudsomely-printed octavo volume, of 576 large pages.
dUNGLISON, FORBES, TWEEDIE, AND CONOLLY.-The Crolopent of Practical MentCIne: comprising Trentises on the Nature and Treatment of Diseases, Materia Medica and Therapeutics, Diseases of Women and Children, Medical Jurisprudence, dc. de. In four large super-royal octavo volumes, of 3254 double-columned pages, strongly and handsomely bound.
*. * This work contains no less than four hundred and elghteen distinct treatises, contributed by sixty-eight distinguished physicians.

DUNGLISON (ROBLEY), M. D. - Medtcal Texicon; a Diotionary of Medical Science, containing a conciso lixplanation of the various Suljects and lerms of Phyaiology, Pathology, Mygiene, Therapontics, Plariuacology, Obstetrics, Medical Jurisprulence, fc. With the French and other Synonymes; Notices of Climate and of celebrated Mineral Waters; Formule for various Officinal. Empirical, and Dietetic lepparations, Se. Thirleenthedition, revised. In one very thick octaro volumo, of over 900 large doublecolumned pages, strongly bound in leathor, with raised bauds. (Just Issued.)

DUn LISON (ROBLEY), M.D.-The Practice of Medicine. A Treatise on Special Pathology and 「herapeutics. Third edition. In two large octavo volumes, of 1500 pages.
dunglison (ROBLEy), M.D.-General Therapmutics and Matemia Mrdioa; adapted for a Medical Text-book. Fifth edition, much improved. With one hundred and eighty-seven illustrations. In tro large and handsomely printed octavo volumes, of about 1100 pages. (Just Issued.)
dunglison (RObLEY), M. D.-New Remedies, with Formules for their Preparation and Administration. Seventh Edition, with cxtensive Additions. In one very large octavo volume, of 770 pages. (Now Ready.)

DUNGLISON (ROBLEY), M.D.-Human PHysiolooy. Eighth edition. Thoroughly revised and extensively modified and enlarged, with over 500 illustrations. In two large and handsomely printed octaro volumes, containing about 1500 pages.

DICKSON (S. H.), M.D.-Elements of Medicine: a Compendious View of Pathology and Therapeutics, or the History and Treatment of Diseases. In one large and handsome octavo volume of 750 pages, leather. (Just İssued.)
de Jong (L. J.), M. D.-The Three Kinds op Cod-Liver Ort. comparatively considered, with their Chemical and Therapeutic Properties. Translated, with an Appendix and Cases, by Edward Carey, M.D. To which is added an article on the subject from "Dunglison on New Remedies." In one small 12 mo . volume, extra cloth.

DAY (George E.), M. D.-A Practical Treatise on the Domestio Management and morb Impontant Diseases of Advanced Life. With an Appendix on a new and successful mode of treating Lumbago and other forms of Chronic Rheumatism. One volume octavo, 228 pages.

ELLIS (BENJAMIN), M.D.-The Medioal Formolarx; being a Collection of Prescriptione, derived from the writings and practice of many of the most eminent physicians of America and Europe. Together with the usual Dietetic Preparations and Antidotes for Poisons. To which is added an Appendix on the Endermic use of Medicines, and on the use of Ether and Cbloroform. The whole accompanied with a few brief Pharmaceutic and Medical Observations. Tenth edition, revised and much extended, by lobert P. Thomas, M.D., Professor of Materia Medica in the Philadelphia College of Pharmacy. In one neat octavo volume of 296 pages.

ERICHSEN (JOHN).-TRE SOEVCz AND ART OF SUROERT; being a Treatise on Surgical Injuries, Diseases, and Operations. With Notes and Additions by the American editor. Illustrated with over 300 engravings on wood. In one large and handsome octavo volume of nearly 900 closely printed pages.

Flint (austin), M.D.-Physical Explonation and Dianosis or Diseases affecting the Respiratory Oroans. In one handsome octavo volume, extra cloth, of 636 pages. (Now Ready.)

FERGUSSON (WILLIAM), F.R.S.-A Srstem of Practical Suroery. Fourth American, from the third and enlarged London edition. In onc largo and beautifully printed octavo volume of about 700 pages, with 393 handsome illustrations.

Frick (CHARLES), M.D.-Renal Affections: their Diagnosis and Pathology. With illus. trations. Onc volume, royal 12mo., extra cloth.

TOWNES (GEORGE), PII.D. - Elementary Chemistry, Theorctical nad Practicnl. With numerous illustrations. A now American, from the last and revised London editiou. Edited, with Additions, by Robert Bridgee, M.D. In ono large royal 12 mo . volumo, of over BEO pages, with 181 mood-outs: shoep, or extra cloth. (Now Ready.)

Grailam (Thomas), r. R. S.-The Eldments of Cemsistry. Including the Application of the Science to the Arts. With numerous iilustrations. With Notes and Additions, by Rohert Bridges, M. D., etc., etc. Secoud American, from the second and enlarged London edition.
PART I. (Lately Issued) large 8vo., 430 pages, 185 illustrations.
