  - XVI. FIGURES ILLUSTRATING VARIOUS EGG-CONTOURS.
- XVII. COMPARATIVE SCALE OF MEASUREMENT STAND-ARDS.

### INTRODUCTION.

THE present volume is intended to supply a want much felt by the author during the course of his ornithological studies, and therefore presumably experienced by other workers in the same field; namely, a nomenclature of colors and a compendious dictionary of technical terms used in descriptive ornithology, together with a series of plates or diagrams illustrating the external anatomy of a bird in relation to the terms employed, and such other things as are more clearly expressed by a picture than by a mere definition. Probably few, if any, naturalists have not on more than one occasion deplored the absence of such an aid to their studies; for it is very difficult, if not impossible, for any one to keep all these things clearly in mind.

Undoubtedly one of the chief desiderata of naturalists, both professional and amateur, is a means of identifying the various shades of colors named in descriptions, and of being able to determine exactly what name to apply to a particular tint which it is desired to designate in an original description. No modern work of this character, it appears, is extant,—the latest publication of the kind which the author has been able to consult being Syme's edition of "Werner's Nomenclature of Colors," published

in Edinburgh in 1821,1 a copy of which the writer has been able to procure through the kind attentions of a correspondent in England. In the selection of plates which accompany the present work, and in forming the definitions to which they refer, the book just cited has been carefully consulted, as have also various others bearing to a greater or less degree upon the same subject. It is found, however, that in Syme's "Nomenclature" the colors have become so modified by time, that in very few cases do they correspond with the tints they were intended to represent. On this account it has not been possible, except in a very few instances, to make the examples given in the present volume agree with those of the book in question, — which is much to be regretted, since as great uniformity as possible is highly desirable in so important a matter. It has occurred to the writer, however, that by careful selection from the fine artists' colors manufactured by the most celebrated makers of the present day (which are believed to be very far superior in purity, as well as much more varied, than those made in Werner's time), some of these may be made the standard by which to fix definitely names for certain tints which otherwise must remain more or less arbitrary. A basis for a fixed nomenclature of colors may thus be obtained, - with this additional advantage, that artists may thereby be furnished a clew to the manufactured colors which are required for

Werner's | Nomenclature of Colors, | with additions | arranged so as to render it highly useful to the | Arts and Sciences, | particularly | Zoology, Botany, Chemistry, Mineralogy, and Morbid Anatomy. | Annexed to which are | examples selected from well-known objects | in the | Animal, Vegetable, and Mineral Kingdoms. | = | By Patrick Syme, | Flower-Painter, Edinburgh; | Painter to the Wernerian and Caledonian | Horticultural Societies. | Second Edition. | = Edinburgh: | Printed for William Blackwood, Edinburgh; | and T. Cadell, | Strand, London. | — | 1821. | Small 8vo., pp. 47, 13 pls.

the reproduction of particular tints. As having the highest reputation and perhaps the greatest merit, the colors manufactured by Messrs. Winsor & Newton of London, and Fr. Schoenfeld & Co. of Düsseldorf, have been chiefly selected as the standards for this work. The colors manufactured by these firms embrace so great a variety that it has been found possible to identify with them a large number of those named in descriptions, the mixture of two or more being of course occasionally necessary.

In regard to the external anatomy or "topography" of a bird, a system as little complicated as possible is desirable. The one presented in this work, while substantially the same as that usually adopted, and offering no innovations, is considerably simplified, thereby greatly facilitating the acquirement by the student of a knowledge of this essential adjunct of descriptive ornithology.

It is believed also that the figures representing the typical forms of color-markings, and of egg-contours, and the concordant scale of different standards of measurement, will also be found of great practical utility.

The author has in every case endeavored to give the plainest possible definition of a term consistent with accuracy. All expressions having reference solely to internal characters, and which therefore seldom if ever enter into ordinary descriptions of birds, have been excluded, though many anatomical and osteological terms occasionally employed in diagnoses of the higher groups, and others pertaining to the general treatment of the subject, are considered and carefully defined.

Acknowledgments are due from the author to several friends for their generous assistance. Dr. Leonhard Stejneger suggested and prepared the comparative scale of standard measurements and the tables for the conversion of English inches to millimetres, and vice versa,

together with the explanations pertaining thereto. He also aided in the compilation of the comparative color-vocabulary, in which he was substantially assisted by Mr. José C. Zeledon. The outline drawings were executed by Mr. John L. Ridgway from the author's cruder originals.

In the hope that ornithologists in general, and those of the "rising generation" in particular, may find in this volume a convenient and useful book of reference, it is respectfully submitted by

THE AUTHOR.

# PART I. NOMENCLATURE OF COLORS.

# PREFACE.

THE want of a nomenclature of colors adapted particularly to the use of naturalists has ever been more or less an obstacle to the study of Nature; and although there have been many works published on the subject of color, they either pertain exclusively to the purely scientific or technical aspects of the case or to the manufacturing industries, or are otherwise unsuited to the special purposes of the zoölogist, the botanist, and the mineralogist.

According to a learned authority, who, among others, has been carefully consulted in the preparation of this work, "the names of colors, as usually employed, have so little to do with the scientific or technical aspects of the subject, that we are in reality dealing with the peculiarities of language." This is of course true as considered from the stand-point of pure science; but popular and even technical natural history demands a nomenclature which shall fix a standard for the numerous hues, tints, and shades which are currently adopted, and now form part of the language of descriptive natural history.

It has been the earnest endeavor of the author to attain this object in the present work; and in order to do so he has spared no pains, having for this purpose

<sup>&</sup>lt;sup>1</sup> Von Bezold: Theory of Color, p. 99.

procured the finest prepared colors known to modern art, including those of all the best manufacturers,—as Winsor & Newton, George Rowney & Co., and Ackermann, of London, England; Dr. Fr. Schoenfeld & Co., Düsseldorf; Chenal, Burgeois, Binant, and Lefranc, of Paris; Osborne of Philadelphia, and others. He has, besides, consulted all the authorities accessible to him.

In determining the standard for those arbitrary or conventional tints and shades (as chestnut, hair-brown, ash-color, lilac, etc.) whose names are taken from some familiar substance or object, which itself varies so much in color that the name without such fixed standard would be practically valueless, care has been taken to select a characteristic example.

The selection of appropriate names for the colors depicted on the plates has been in some cases a matter of considerable difficulty. With regard to certain ones it may appear that the names adopted are not entirely satisfactory; but, to forestall such criticism, it may be explained that the purpose of these plates is not to show the color of the particular objects or substances which the names suggest, but to provide for the colors which it has seemed desirable to represent, appropriate, or at least approximately appropriate, names. In other words, certain colors are selected for illustration, for which names must be provided; and when names that are exclusively pertinent or otherwise entirely satisfactory are not at hand, they must be looked up or invented. It should also be borne in mind that almost any object or substance varies more or less in color; and that therefore if the "orange," "lemon," or "chestnut" of the plates does not match exactly in color the particular orange, lemon, or chestnut which one may compare it with, it may (or in fact does) correspond with other specimens. It is, in fact, only in

the case of those colors which derive their names directly from the pigments which represent them (as Paris green, orange-cadmium, vermilion, ultramarine blue, madder-brown, etc.) that we have absolute pertinence of name to color.

# PRINCIPLES OF COLOR

AND

### GENERAL REMARKS.

THE popular nomenclature of colors has of late years, especially since the introduction of aniline dyes and pigments, become involved in almost chaotic confusion through the coinage of a multitude of new names, many of them synonymous, and still more of them vague or variable in their meaning. These new names are far too numerous to be of any practical utility, even were each one identifiable with a particular fixed tint. Many of them are invented at the caprice of the dyer or manufacturer of fabrics, and are as capricious in their meaning as in their origin; among them being such fanciful names as "Zulu," "Crushed Strawberry," "Baby Blue," "Woodbine-berry," "Night Green," etc., besides such nonsensical names as "Ashes of Roses" and "Elephant's Breath." An inspection of the sample-books of manufacturers of various fancy goods (such as embroidery silks and crewels) is sufficient to show the absolute want of system or classification which prevails, thus rendering these names peculiarly unavailable for the purposes of science, where absolute fixity of the nomenclature is even more necessary than its simplification.<sup>1</sup>

As is stated on page 23, had we pigments representing the three primary colors in their absolute purity, it would be a simple matter to produce all possible modifications of color by their combination with one another, together with the addition of black or white, when required. Even with the imperfect pigments now available, by far the larger number can be made (see pages 29–32).

According to Von Bezold, the term "hue" is synonymous with color; a "tint" denotes a color or hue modified by admixture of white; while a "shade" implies a color darkened with black. The same author classifies colors as follows:—

- I. Gold, silver, black, and white.
- II. Full colors, or those of the solar spectrum (that is, blue, green, and red, or, as some authorities have it, and especially as popularly supposed, blue, yellow, and red).
- III. a. Dark colors, or those shaded with black. Such may be properly termed "shades" of blue, green, red, etc.
  - b. Light colors (diluted or mixed with white) and pale colors (which are still further lightened or diluted).
  - c. Broken colors, by which is meant "those colors which reach the eye mixed with faint white, that is to say, gray light, but in which the specific character of their hue is still expressed with tolerable decision. If the gray predominates to such an extent that we receive only a very slight sensation of color, we speak of a gray with the addition of the name of a color, such as greenish gray, bluish gray, etc." (pages 97, 98).

<sup>&</sup>lt;sup>1</sup> The author is under obligations to the Nonotuck Silk Company, of Florence, Mass., for sample-books of their Corticelli embroidery silks, which at his request were most courteously and gratuitously supplied.

Without thought of improving upon the above arrangement, the author would nevertheless present the following classification, as perhaps a more convenient one for the purposes of the present work.

- I. Pure colors of the solar spectrum.
  - a. Primary colors, or those not produced by mixture.
    - 1. Red.
    - 2. Yellow.
    - 3. Blue.
  - b. Secondary colors, or those produced by the mixture of two primary colors.
    - 4. Orange (= red + yellow).
    - 5. Green (= yellow + blue).
    - 6. Purple (= blue + red).
- II. Impure colors, or those not found in the solar spectrum.
  - a. Shades, which may consist of either primary or secondary colors <sup>1</sup> darkened by black (= complete or absolute shade).
  - b. Tints, which may consist of either primary or secondary colors lightened by the admixture of white (= absolute degree of light).
  - c. Subdued colors, which consist of combinations of two or more secondary colors, or of a secondary color with the primary which does not enter into its composition, that is, its complementary color, as green with red, purple with yellow, orange with blue, etc., —the effect being to subdue or neutralize the colors which are thus combined.
- 1 The principal shades may be classified as follows:
  - a. Shades of primary colors.
    - 1. Of red (= red + black) = "maroon."
    - 2. Of yellow (= yellow + black) = "olive."
    - 3. Of blue (= blue + black) = "indigo," or "blue-black."
  - b. Shades of secondary colors.
    - 4. Of orange (= yellow + red + black) = brown.
    - Of green (= yellow + blue + black) = dark green, "bottlegreen," "myrtle-green."
    - 6. Of purple (= blue + red + black) = "plum-purple."

It seems scarcely necessary to include the so-called gold and silver colors in the above classification, since they are nearly related, or at least analogous, to yellow and white respectively, the difference consisting chiefly in the existence of a metallic medium or surface.

Observing the colors of the solar spectrum, it is obvious that each secondary color grades insensibly into the two primaries composing it, and that thus results an unbroken transition from one end of the series to the other. The transitions may be shown by the following sequence, the names of the primary colors being given in heavy-faced type (and also preceded by a Roman numeral) and those of the secondary colors in italics.

### Spectrum Series.

- I. 1. Red.
  - 2. Orange-red.
  - 3. Reddish orange.
  - 4. Orange.
  - 5. Yellowish orange.
  - 6. Orange-yellow.
- II. 7. Yellow.
  - 8. Greenish yellow.
  - 9. Yellowish green.
  - 10. Green.
  - 11. Bluish green.
  - 12. Greenish blue.
- III. 13. Blue.
  - 14. Purplish blue.
  - 15. Bluish purple.
  - 16. Purple.
  - 17. Reddish purple.
  - 18. Purplish red.

Not only is the transition complete from nos. 1 to 18, but could the names be arranged in the form of a circle,

so as to bring the first and last in juxtaposition, these would be found to merge, and thus complete an unbroken ring of graded colors. The three primary colors each enter into the composition of eleven of the eighteen named in the list, as follows: *Red*, in nos. 1 to 6 and 14 to 18, inclusive; *yellow*, in nos. 2 to 12; and *blue*, in nos. 8 to 18.

Returning to the impure colors, or those which do not occur in the solar spectrum, it may be premised that black and white represent, respectively, the absorption and refraction of the sun's rays, the former being in reality a combination of all colors.

It is an axiom of chromatologists that the multitudinous hues, shades, and tints of Nature are simply the results of various combinations of three primary colors, together with the two additional elements of absorption and refraction; making five elements in all, from which it of course follows, as a mathematical deduction, that one hundred and twenty combinations, that is, specific colors (using the latter term in the comprehensive sense) are possible. Additional modifications almost ad infinitum are produced by varying circumstances, as different relative proportions of the component elements, effects of contrast, etc.

Accepting this theory as correct, it would therefore seem that in order to reproduce from Nature any color, tint, or shade whatsoever, that might be desired, the artist would require only three pigments to represent the primary colors, that is, a red, a yellow, and a blue; together

<sup>&</sup>lt;sup>1</sup> We here speak of yellow as one of the primary colors, for the reason that it is really so to all appearance and intent, so far as the requirements of the artist are concerned. It has, however, we think, been conclusively proven that it is green and not yellow which is the third primary color, in addition to red and blue. Says Von Bezold (Theory of Color, p. 128): "Red, yellow, and blue were generally looked upon in former times as the fundamental colors, the results accepted by the mixture of pigments

with black and white, the two latter to represent the elements of absorption and refraction of the sun's rays (or darkness and light respectively). Such would really be the case, and the manipulation of colors therefore a very simple process, were we able to get pigments representing absolutely pure primary colors. Unfortunately, however, the artist's palette does not yet contain even one of them in its requisite purity, neither do the black and white pigments represent satisfactorily the elements of darkness and light. Therefore, it becomes necessary, in order to obtain certain desired results, to make a combination of pigments different from that of the solar spectrum, as, for example, the substitution of yellow for green.<sup>1</sup>

We may take hope, however, from the fact that many important discoveries and improvements in the manufacture of artist's colors have been made in the past few years, that the final surmounting of present difficulties may be entirely within the possibilities of chemistry.<sup>2</sup>

having been accepted as a basis. Later investigations lead to the conclusion that green must be substituted for yellow; and a variety of reasons might be cited, all of which speak unanimously in favor of assuming red, green, and a blue which borders closely upon violet, to be the fundamental colors." And again, on p. 138: "Yellow was formerly included among the fundamental colors, from purely technical motives. This was simply owing to the fact that green can be produced by mixing yellow and blue pigments, while by the mixture of green and red only a very dark yellow, that is to say, a brown, can be obtained."

1 See preceding foot-note.

<sup>2</sup> Already colors approaching very minutely to the pure hues of the spectrum have been discovered; indeed, they are even manufactured, and to some extent used. Unfortunately they are not permanent. The aniline reds and purples ("rose-Tyrien," "geranium-red," "solferino," "magenta," "mauve," etc.) are of a purity and richness not approached by the madder or cochineal tints, nor by any combination of these with other colors. The "rose-carthame," or "safflorroth," of Schoenfeld is incomparably purer than the finest vermilions, madder-reds, or carmines, and is perhaps as permanent as the last named, but fades after exposure to

The scope of the present work will not allow an extended dissertation on this subject, the aim being to furnish the student with a convenient means of identifying or determining those colors regarding which he may be more or less uncertain. It is obviously impracticable to illustrate all the numerous hues, shades, and tints which occur in the plumage of birds; but it is believed that the carefully selected assortment depicted on plates II. to X. will answer every reasonable requirement. A great difficulty has been encountered in the arrangement of the colors on the plates, from the circumstance that a linear series, which shall express all the relations, gradations, and transitions, is here quite as impossible as in zoölogical or botanical classifications. Thus, all the purples have more or less of blue and red in their composition; but some of them through the admixture of yellow or gray (black and white) tend more or less toward brown or gray; any other series of compound colors presenting equally perplexing

the light; which is unfortunate, since in this color we have almost the exact red of the solar spectrum, and can therefore produce by its combination with the purest yellow (light cadmium) and blue (ultramarine), purer orange and purple tints than can be obtained by the use of any other red. Genuine ultramarine is said to be the most perfect of known pigments, and the same may be said of the lighter cadmium-yellows; so that the great desideratum is a perfect red. Among trustworthy pigments, vermilion, Paris green, and ultramarine are named by Von Bezold (p. 136) as those which most nearly represent the primary colors. However, while the two latter are probably as pure as it will be possible to obtain, the first is very far from a perfect red, making neither a pure orange with yellow nor a purple with any blue.

Speaking of this matter, a writer in the "Art Union" (we make the quotation at second hand, from the "Art Interchange," vol. xii. no. 13, p. 148) makes the following observations: "We have a good supply of yellows of every shade, some of them quite durable; we are pretty well furnished with blues, but good reds are very few. The reds of iron [Venetian red, light red, etc.] are too dull, the madder preparations are too weak. Vermilion is excellent in its place, but there is absolutely no true red of good body and quite durable."

complications. In order to make comparison of allied shades and tints more easy, it has been endeavored to place all belonging to a particular class together on one plate; but in not a few cases it has been a difficult matter to decide upon which plate a certain one should be put, the decision being in some instances almost purely arbitrary.

# COLORS REQUIRED BY THE ZOÖLOGICAL OR BOTANICAL ARTIST.

Notwithstanding so great a variety of colors exist in Nature, especially in the animal and vegetable kingdoms, and that an almost unlimited number of pigments are manufactured for the use of artists, a comparatively very small number is really required. The author has in his collection considerably over three hundred water-colors, each bearing a different name, representing the productions of the best makers (see page 16). Nearly three hundred of them are put aside, however, since very careful experiments have proved that they are superfluous. His working palette, selected from the above number, is limited to thirty-six colors, at least one half of which are used for convenience rather than because they are necessary. Following is the list, those most essential being distinguished by an asterisk (\*).

### Black.

\*1. Lamp-Black.

### Browns.

- \*2. Bone-Brown, or Bistre.
- \*3. Roman Brown (Schoenfeld's).
- \*4. Raw Umber.
- \*5. Sepia.

### Brown-Reds.

- \*6. Burnt Sienna.
  - 7. Light Red.
  - 8. Neutral Orange.
- \*9. Indian Red (Schoenfeld's).

### Reds.

- \*10. Madder Carmine (Winsor & Newton's), or Deep Madder Lake (Schoenfeld's).
- \*11. Scarlet Vermilion.

### Orange.

\*12. Orange Cadmium (Winsor & Newton's).

### Yellows.

- 13. Middle Cadmium (Schoenfeld's).
- \*14. Light Cadmium (Schoenfeld's).
  - 15. Ultramarine Yellow (Schoenfeld's) or Lemon Yellow (Winsor & Newton's).
  - 16. Aureolin.

### Brown-Yellows.

- \*17. Yellow Ochre.
- \*18. Raw Sienna.

### Greens.

- 19. Terre Verte (Winsor & Newton's.)
- \*20. Dark Zinnober Green (Schoenfeld's).
  - 21. Light Zinnober Green (Schoenfeld's).
- \*22. Viridian (Winsor & Newton's).
  - 23. Green Oxide Chromium (Schoenfeld's).
  - 24. Paris Green.
- \*25. Emerald Green.

### Blues.

- 26. Intense Blue (Winsor & Newton's).
- \*27. Antwerp Blue.

- \*28. Violet Ultramarine (Schoenfeld's).
- \*29. French Ultramarine.
  - 30. Italian Ultramarine (Rowney's).
- \*31. Cobalt Blue.

### Gray.

32. Payne's Gray.

### Purples.

- 33. Violet Krapplack (Schoenfeld's).
- 34. Blue Krapplack (Schoenfeld's).
- \*35. Purple Madder (Winsor & Newton's).

### White.

\*36. Chinese White (Schoenfeld's "gouache-färben").

Colors (including some of the above-named) which are sometimes considered necessary, may be readily produced by combination of others, as follows:—

Burnt Umber, by mixture of sepia or bistre with burnt sienna. raw sienna. Raw Umber. burnt sienna. Vandyke Brown, French blue and cobalt. Ultramarine Blue, ,, violet ultramarine. Smalt Blue, 23 ,, emerald green and light cadmium. Paris Green, " French blue and madder-carmine. Violet Madder-lake, viridian with black and white. Terre-verte Green,

As may be inferred from the circumstance that the author has, in the above list, occasionally indicated his preference for the particular "make," colors of the same name vary in tone or quality according to the manufacturer. Thus, the olive-greens of Winsor & Newton and Schoenfeld respectively are conspicuously different, being equally useful, however. It is quite likely that the wares of each manufacturer may vary to a greater or less extent,

but the writer's actual experience is indicated by the preferences noted above. Certain it is that he has uniformly found Schoenfeld's Permanent Chinese White ("gouache-färben"), put up in small wide-mouthed glass bottles, superior in working and keeping qualities to Winsor & Newton's preparation of the same name. It should further be explained that for convenience English names are given in the above list to Schoenfeld's colors, and that the names by which they are labelled may be found in the comparative vernacular synonymy (giving English, French, and German names for each pigment) on pages 38–55.

Were the cochineal and aniline colors permanent, the above list would have to be increased by the addition of carmine, rosalack (light), mauve (aniline-violet), rose Tyrien, and dark aniline-green; 1 since, with possibly the exception of the first, it is impossible to imitate them by combinations of other colors, so great are their purity and intensity. Rose-carthame (safflorroth, or safflower-red), a vegetable color, is incomparably purer than any variety of vermilion or carmine; in fact, it is the only red which will, combined with yellow and blue respectively, produce both a pure orange and purple. It has the reputation of being evanescent, however, and therefore, like the aniline and cochineal colors, should not be used where permanence of color is an object, unless in cases where the pictures thus colored are to be only occasionally, and for short periods at a time, exposed to the light.

<sup>&</sup>lt;sup>1</sup> The nearest approach to mauve that can be attained by mixture of permanent colors is that produced by combination of permanent blue, or Italian ultramarine, with madder-carmine or madder-lake. Carmine may be quite closely imitated by mixture of madder-carmine and scarlet-vermilion. Rose-carthame, rosalack, rose Tyrien, and dark aniline-green are absolutely inimitable; so, for that matter, is mauve.

A very large number of pigments which are in general use, but which are really superfluous, can be exactly imitated by mixtures of those named in the foregoing list; for example:—

The cochineal reds (crimson-lake, carmine, scarlet-lake, etc.), by mixture of madder-carmine (or deep madder-lake) and scarlet-vermilion, in proper proportion.

Red-lead, Saturn-red, and orange-chrome, by combination of scarlet-vermilion and orange-cadmium; the colors thus produced being decidedly superior in working qualities to the pigments they are intended to replace, while they are at least equal in brilliancy.

Purple-lake may be imitated by mixture of madder-carmine and lamp-black.

Dragon's-blood red, by light vermilion and lamp-black.

Mars violet, by ultramarine blue (or Italian ultra) and light vermilion.

Burnt madder-lake, by madder-carmine and permanent blue.

Purple (Schoenfeld's), by madder-carmine and Antwerp blue.

Madder-violet (Chenal's), by Antwerp blue and rose-madder.

Rubens's madder, by madder-carmine and burnt sienna.

Brown madder, by madder-carmine, burnt sienna, and sepia.

Burnt carmine, by madder-carmine and lamp-black.

Violet carmine, by madder-carmine, lamp-black, and Antwerp blue.

Dahlia carmine, by madder-carmine and lamp-black.

Indigo, by Italian ultra or permanent blue and lamp-black.

Middle cadmium, by orange-cadmium and pale cadmium.

Olive-green (Schoenfeld's), by Italian ultra, lamp-black, pale cadmium, and sepia.

Olive-green (Winsor & Newton's), by Antwerp blue, aureolin, lamp-black, and sepia.

Dark aniline-blue and violet-ultramarine, by mixture of French blue and madder-carmine.

Azure-blue, by combinations of Italian ultra or permanent blue and Chinese white.

Turquoise-blue, celestial blue (colinblau of Schoenfeld), rock-blue (bergblau of Schoenfeld), cerulean blue, and blue oxide, by mixture of Antwerp blue and Chinese white.

Blue-verditer and green-blue oxide, by Antwerp blue, light cadmium, and Chinese white.

Green-lake, by viridian and lamp-black.

The foregoing are only a few examples, and the list might be increased almost indefinitely; but these will suffice.

Regarding the selection of colors by an artist, an authority in the "Art Union" says:—

"Among the pigments prepared by the modern colormen, many of the most attractive are utterly untrustworthy. We will say nothing of the brilliant auiline colors which are so showy and yet will scarcely last a day, but we will select three colors which are in constant use, and which it seems almost impossible to get along without. These are chrome-yellow, carmine-red, and Prussian blue. Samples of these hung in a strong light will within a year completely lose their color, turning green and black."

With very few exceptions, all of the colors depicted on the plates of this work can be produced from a palette of five pigments, — black, white, red, yellow, and blue. For convenience, however, the primary colors should be combined into secondaries (orange, green, and purple), while a gray and a brown should be added, the first produced by mixture of black and white, the second by combination of red and green, — making all together ten elements, as follows:—

- 1. Black (lamp-black).
- 2. White (Chinese white).
- 3. Red (madder-carmine or deep madder-lake + scarlet-ver-milion).<sup>1</sup>
- 4. Orange (scarlet-vermilion + Schoenfeld's light cadmium).
- 5. Yellow (Schoenfeld's light cadmium).
- 6. Green (Schoenfeld's light cadmium + Italian ultramarine).
- 7. Blue (Italian ultramarine).
- 8. Purple (Italian ultramarine + madder-carmine).
- 9. Gray (lamp-black + Chinese white).
- 10. Brown (red + green).

With these ten elements ninety binary combinations may be made, resulting in as many more or less distinct colors, the number of which may be increased almost indefinitely by varying the relative proportion of the component parts. The following is a list of these combinations, together with the names of the resultant colors:—

#### a. Modifications of Black.

- 11. Black + white = slate.
- 12. , + red = seal-brown.
- 13. , + orange = clove-brown.
- 14. ,, + yellow = dark olive-green.
- 15. , + green = greenish black.
- 16. , + blue = bluish black; indigo.
- 17. , + purple = purplish black.

<sup>&</sup>lt;sup>1</sup> In compounding a purple, the madder-red should be used, and not vermilion, while in preparing an orange, the latter should be used and not the former. These two reds are necessary, for the reason that they form the nearest approach to a pure red among pigments that can be relied on for permanence. Neither of them, however, will by itself serve all the purposes for which a pure red is necessary, since a pure orange cannot be made with the madder-reds, nor a purple with vermilion. Rose-carthame or safflorroth (safflower-red) is of the requisite purity, but is said to lack permanence.

- 18. Black + gray = slate-black.
- 19. , + brown = brownish black.

#### b. Modifications of White.

- 20. White + black = gray.
- 21. , + red = pink.
- 22. , + orange = yellowish salmon-color.
- 23. , + yellow = primrose-yellow.
- 24. , + green = pea-green.
- 25. ,, + blue = pale blue.
- 26. , + purple = lilac.
- 27. , + gray = pale gray.
- 28. , + brown = Isabella-color.

#### c. Modifications of Red.

- 29. Red + black = burnt carmine.
- 30. , + white = reddish pink.
- 31. , + orange = orange-red.
- 32. ,, + yellow = orange-red.
- 33. , + green = brownish red; brick red.
- 34. ,, + blue = reddish purple.
- 35. , + purple = purplish red.
- 36. " + gray = grayish purple.
- 37. , + brown = brownish red; brick red.,

#### d. Modifications of Orange.

- 38. Orange + black = russet-olive.
- 39. , + white = creamy orange.
- 40. , + red = reddish orange; intense orange.
- 41. , + yellow = yellowish orange.
- 42. , + green = yellowish ochraceous.
- 43. ,, + blue = brownish ochraceous.
- 44. ,, + purple = tawny ochraceous.
- 45. ,, + gray = ochraceous-buff.
- 46. ,, + brown = orpiment-orange; brownish orange.

#### e. Modifications of Yellow.

- 47. Yellow + black = olive-green.
- 48. ,, + white = canary-yellow.
- 49. , + red = orange.
- 50. ,, + orange = orange-yellow.
- 51. ,, + green = citron-yellow.
- 52. ,, + blue = yellowish green.
- 53. ,, + purple = wax-yellow.
- 54. ,, + gray = olive-yellow.
- 55. , + brown = saffron-yellow.

#### f. Modifications of Green.

- 56. Green + black = bottle-green.
- 57. , + white = malachite-green.
- 58. , + red = sage-green.
- 59. ,, + orange = olive-green.
- 60. , + yellow = yellowish green.
- 61. ,, + blue = bluish green.
- 62. ,, + purple = dark sage-green.
- 63. ,, + gray = grayish green.
- 64. , + brown = olive.

# g. Modifications of Blue.

- 65. Blue + black = marine-blue.
- 66. , + white = cobalt-blue; azure-blue.
- 67. ,, + red = violet.
- 68. ,, + orange = dark sage-green.
- 69. ,, + yellow = bluish green; sea-green.
- 70. , + green = greenish blue.
- 71. , + purple = purplish blue; hyacinth-blue.
- 72. " + gray = grayish blue.
- 73. ,, + brown = indigo.

#### h. Modifications of Purple.

- 74. Purple + black = auricula-purple.
- 75. , + white = lilac-purple.

```
76. Purple + red = reddish purple; magenta.
```

- 77. , + orange == brownish purple.
- 78. , + yellow = brownish purple.
- 79. , + green = grayish purple; livid purple.
- 80. ,, + blue = violet.
- 81. " + gray = grayish purple.
- 82. ,, + brown = brownish purple; Indian purple.

#### i. Modifications of Gray.

- 83. Gray + black = slate-color.
- 84. , + white = pale gray.
- 85. , + red = vinaceous-gray.
- 86. , + orange = Isabella-drab.
- 87. , + yellow = yellowish gray; olive-gray.
- 88. , + green = greenish gray.
- 89. ,, + blue = bluish gray.
- 90. , + purple = purplish gray.
- 91. ,, + brown = brownish gray; drab-gray.

#### j. Modifications of Brown.

- 92. Brown + black = dark brown; bistre.
- 93. , + white = wood-brown.
- 94. " + red = reddish brown.
- 95. , + orange = russet.
- 96. , + yellow = yellowish brown.
- 97. ,, + green = olive-brown.
- 98. " + blue = dark olive.
- 99. ,, + purple = purplish brown; Vandyke brown.
- 100., + gray = grayish brown; drab.

Note. — It should be remembered that each of the above represents a combination distinct from all the others. For example, "red + black" and "black + red" imply very different relative proportions of the two colors; the former being black modified by admixture of a small quantity of red, the latter being red modified by the addition of a little black.

The following colors have after careful experiment been found to be unsafe, as being liable to fade or change in time, or produce chemical reaction when combined with others; their absolute rejection by the artist is therefore advised: The chrome-yellows, for which the cadmiums should be substituted; the chrome-greens, which may be exactly imitated by mixture of Antwerp blue and light cadmium; all the cochincal colors (carmine, crimson-lake. purple-lake, and scarlet-lake); all the aniline colors, including the pigments known as geranium-red (geranium-lack of Schoenfield), rosalack, solferino, magenta, mauve, etc.; roseearthame (safflorroth); yellow lake, Italian pink, brownpink; pure searlet (which is completely and very rapidly evanescent), quano red and Prussian blue. Gamboge is also of doubtful permanence, but there is no other equally pure transparent yellow known. The list of unreliable colors is a very large one; therefore, instead of giving it in full, the author will merely caution the reader against the use of any of those mentioned above, and at the same time assure him that by adopting the "palette" recommended on pages 27-29 he will be able to reproduce almost any color that he may have occasion to imitate.

#### BIBLIOGRAPHY.

THE more important works specially consulted in this connection are the following, mentioned nearly in order of their relative importance:—

Bezold, Dr. William von. — The | Theory of Color | in its relation to | Art and Art-Industry | By | Dr. William von Bezold | Professor of Physics at the Royal Polytechnic School of Munich, and member | of the Royal Bavarian Academy of Sciences. | Translated from the German | by | S. R. Koehler. | With an Introduction and Notes | by | Edward C. Pickering | Thayer Professor of Physics at the Massachusetts Institute of Technology. | Authorized American edition. | Revised and enlarged by the Author. | Illustrated by chromo-lithographic Plates and Wood-cuts. | Vignette. | Boston: | L. Prang and Company. | 1876 | 8vo. pp. iii—xxxiii, 1—274, pls. xi. [Without nomenclature of colors.]

Rood, Ogden N. — The International Scientific Series. | —— | Students' | Text-Book of Color; | or, | Modern Chromatics, | with | Applications to Art and Industry. | By | Ogden N. Rood, | Professor of Physics in Columbia College, New York. | With 130 original illustrations. | New York: | D. Appleton and Company, | 1, 3, and 5 Bond Street. | 1881. Small 8vo., pages 329; 1 colored plate.

Herrick, H. W. — Water Color Painting: | Description of Materials | with | directions for their use in elementary Practice. | — | Sketching from Nature in Water Color. | — | By | H. W. Herrick. | — | "Artists' Edition." Containing hand-washed examples of one hundred and twenty colors on

Water-Color Paper. | — | New York : | F. W. Devoe & Co., | Corner Fulton and William Streets. | — | 1882. | 12 mo., pages i-vii, 9-128, pls. I, II, A—I.

Hay, D. R. — A | Nomenclature of Colours | applicable to the | Arts and Natural Sciences | to | Manufactures | and other Purposes of General | Utility | Second Edition improved | William Blackwood and Sons | Edinburgh and London | MDCCCXLVI | [8vo., cloth, containing 40 full-page colored plates illustrating 228 colors, hues, tints, and shades, but these not named according to the requirements of Natural History.]

Syme, Patrick. — Werner's | Nomenclature of Colors, | with additions, | arranged so as to render it highly useful | to the | Arts and Sciences, | particularly | Zoölogy, Botany, Chemistry, Mineralogy, | and Morbid Anatomy. | Annexed to which are | examples selected from well-known objects | in the Animal, Vegetable, and Mineral Kingdoms. | = | By | Patrick Syme, | Flower-Painter, Edinburgh; | Painter to the Wernerian and Caledonian | Horticultural Societies. | Second Edition. | = | Edinburgh: | Printed for William Blackwood, Edinburgh; | and T. Cadell, Strand, London. | — | 1821. Svo., pages 47.

Martel, Charles. — The | Principles of Colouring | in Painting. | By Charles Martel. | "To imitate the model faithfully, we must copy it differently from what we see it." Chevreul. | Twelfth Edition. | Ars probat artificem. | London: | Winsor & Newton, 38, Rathbone Place, | Manufacturing Artists' Colourmen, by Special Appointment to Her Majesty | and Their Royal Highnesses the Prince and Princess of Wales.

Radde, Otto. — Radde's | Internationale Farbenskala. | 42 Gammen mit circa 900 Tönen. [Index.] | Gesetzlich deponirt. Verlag der Stenochromatischen Anstalt von Otto Radde, Hamburg. | [This work consists of a single separate leaf of unpaged text and 42 colored quarto plates, enclosed in book-shaped box.]

# PART II. ORNITHOLOGISTS' COMPENDIUM.

# GLOSSARY OF TECHNICAL TERMS

USED IN

#### DESCRIPTIVE ORNITHOLOGY

Ab'domen (L. abdo'men), n. The belly. (Plate XI.)

Abdo'minal, (L. abdomina'lis), a. Pertaining to the abdomen.

Aber'rant, (L. aber'rans), a. Deviating from the usual, or normal, character.

Abnor'mal (L. abnorma'lis), a. Of very unusual or extraordinary character. The opposite of normal.

Abor'tive (L. abor'tivus), a. Imperfectly developed.

Acces'sory, a. Joined to another thing; additional (as an accessory plume).

Accipitres (L.), n. Plural of Accipiter; also the name of a more or less artificial group of birds, including the so-called "Birds of Prey," or Raptores of some authors.

Accip'itrine (L. accipitri'nus), a. Hawk-like.

Acic'ular (L. acicula'ris), a. Needle-shaped. (Plate XIV. fig. 11.)

Acu'leate (L. aculea'tus), a. Slender-pointed.

Acu'minate (L. acumina'tus), a. Tapering gradually to a point.

Acute' (L. acu'tus), a. Sharp-pointed.

Adoles'cence, n. Youth.

Adult', n. As applied to birds, an individual which has attained the final

or mature plumage.

Adult', a. In Ornithology, having reached the fully mature or final plumage. (A bird may be adult as regards organization without being of adult plumage.)

Æstiv'al (L. astiva'lis), a. Pertaining to summer.

Aetomor'phæ (L.), n. A nam & (signifying "eagle-formed") proposed by Professor Huxley for the Birds of Prey (Raptores or Accipitres of other authors).

Ag'gregated, a. Collected together; accumulated. Thus, by aggregation, a number of individual spots or other markings may form, collectively, a larger patch or stripe.

Affin'ed (L. af'finis), a. Related by affinity.

Affin'ity, n. Direct relationship.

Af'ter-shaft, n. Properly, the stem of the supplementary plume springing from near the base of some feathers; ordinarily, however, applied to the plume itself.

Al'ar (L. ala'ris), a. Pertaining to the wing.

Alaud'ine (L. alaudi'nus), a. Lark-like.

Al'binism, n. An abnormal condition of plumage, with white replacing the ordinary colors to a greater or less extent. Albinism results from a deficiency or entire absence of pigment in the skin which supplies the coloring of the feathers, and is complete only when all colors are obliterated from the plumage. (In birds, complete albinism of the plumage is not necessarily accompanied by change of colors of the bill, feet, and eyes.)

Albi'no, n. An animal affected with albinism.

Albinis'tic, \alpha a. Affected with albinism.

Albinot'ic,

Alec'troid (L. alectroi'deus), a. Cock-like; resembling the domestic cock (Gallus ferrugineus, &).

Alec'torine (L. alectori'nus), a. Pertaining to the domestic cock.

Alectoromorph'æ (L.), n. The Huxleyau name (meaning "cockformed") for the Gallinaceous birds (Gallinea or Gallinacea of other authors).

Al'iform (L. alifor'mis), a. Wing-like.

Alp'ine (L. alpi'nus), a. Pertaining to the Alps. (Often used in relation to any high mountain-range for species inhabiting high altitudes, which are termed "Alpine" species.)

Al'trices (L.), n. Birds whose young are reared in the nest and fed by the parents. With the exception of the Raptores, some of the Steganopodes and Pygopodes, the Longipennes and Sphenisci, the young of the Altrices are psilopædic, that is, born naked, or only partially

Altri'cial, a. Having the character of, or pertaining to, the Altrices.

Alu'la (L.; pl. alu'la), n. The "bastard-wing," composed of several stiff feathers growing on the so-called thumb. They are situated directly below the secondary or greater coverts, and collectively resemble a miniature wing, whence the name. (Plate XI.)

Alu'lar, a. Pertaining to the alula.

Am'bulatory, a. Gradieut; walking or running. (Opposite of Saltatory, hopping or leaping.)

Amphimorph'æ (L.), n. The Huxleyan name for a natural group, or so-called "order" of birds, including only the Flamingoes (Phanicopteridæ).

A'nal (L. ana'lis), a. Pertaining to the anus.

A'nal region (L. régio-ana'lis), n. The feathers immediately surrounding the anus. (Plate XI.)

Analog'ical, a. Having analogy.

An'alogue, n. Anything having analogy with another. Thus, the Cathartidae are the New World analogues of the Old World vultures.

Anal'ogous, a. Having analogy.

Anal'ogy, n. Superficial or general resemblance, without structural agreement, or affinity; the resemblance between the *Cathartidæ* (New World Vultures) and the Vultures of the Old World (Falconidæ) is purely one of analogy.

Anal'ysis, n. In the usual natural history sense, the definition of species or higher groups by a tabular arrangement of characters, usually

antithetical, with subdivisions under appropriate headings.

Analyt'ic, An analytical table is a tabular arrangement of antithetical characters, distinguishing genera, species, or higher groups.

An'atine (L. anati'nus), a. Duck-like.

Ancip'ital, a. Two-edged; double-edged.

Angle of Chin (L. an'gulus menta'lis), n. The anterior point of the space between the rhami of the lower jaw. (See Mental Apex. Plate XII. fig. 4.)

Anisodac'tylæ (L.), n. The name of a group of birds having three toes in front and one behind.

Anisodac'tylous (L. anisodac'tylus), a. Having three toes in front and one behind.

Anisopo'gonous, a. Said of a feather when the two webs are of unequal breadth.

An'notine (L. annoti'nus), n. A bird one year or less old, or which has moulted but once. (Little used.)

An'nular (L. annula'ris), a. Ringed.

Anomalogona'tæ (L.), n. A primary subdivision of the order *Euripidura*, proposed by A. H. Garrod.

Ano'malous (L. ano'malus), a. Very unusual; strange; abnormal.

An'serine (L. anseri'nus), a. Goose-like.

An'te (in composition). Anterior to, or before; as anteorbital, anteocular, etc.

Ante'rior, a. Forward; in front of.

An'thine (L. anthi'nus), a. Pipit-like.

Antith'esis, n. An opposition of words or sentences distinguishing at a glance the diagnostic characters of two or more groups or species.

Antithet'ic, Antithet'ical, a. Contrasted by, or pertaining to, antitheses.

Antrorse', a. Directed forward, as the nasal tufts of most jays and crows, and the rictal bristles of many birds.

Ant'werp Blue, n. A very rich and intense blue color, similar to but purer than Prussian Blue. (Plate IX. fig. 10.)

A'pex (L.; pl. a'pices), n. The tip or point of anything.

Apple Green, n. A very light yellowish green color. (Light green zinnober + lemon yellow + white.) (Plate X. fig. 20.)

Aquat'ic (L. aqua'ticus), a. Pertaining to the water. Aquatic birds are those which derive their subsistence chiefly from seas, lakes, or rivers, and include two artificial groups known as "Waders" and "Swimmers."

Aq'uiline (L. aquili'nus), a. Eagle-like.

Arbo'real, Arbo'reus), a. Tree-inhabiting.

Arcu'ate (L. arcua'tus), a. Bow-shaped; arched.

Are olæ (L. pl. of are ola), n. The small uaked spaces between the seales of the feet, usually called interspaces.

Arie'tiform (L. arie'tiform'is), a. Ilaving the form of the zodiacal sign Aries, T. (Plate XV. fig. 11.)

Armil'la (L.), n. A colored ring round the lower end of the tibia; an anklet.

Articulation, n. A joint or hinge. (Usually applied to the limbs.)

Ash-color (L. cine'reus), n. (See Cinereous.) (Plate II. fig. 16.)

As'ter Purple, n. A rich clear purple color, like some varieties of the aster. (Winsor & Newton's intense blue, or Schoenfeld's violet madder lake + Bourgeois's "rose tyrien.") (Plate VIII. fig. 8.)

Asymmetrical, a. Without symmetry, or without close resemblance between corresponding parts, as opposite sides. (The pattern of coloration in partial albinos is often asymmetrical.)

Asym'metry, n. Disproportion, or want of close resemblance, between corresponding parts or organs. (Very decided asymmetry of opposite sides of the skull is observable in some Owls.)

At'rophy, n. The wasting away, or obliteration, of an organ or part through deficient nutrition.

Atten'uate (L. attenua'tus), a. Tapering or growing gradually narrower toward the extremity, but not necessarily pointed (which would be acuminate).

Auric'ular (L. auricula'ris), a. Pertaining to the ear.

Auric'ula Purple, n. A deep but rather dull purple, like the color of the purple auricula. (Schoenfeld's violet madder lake, or Winsor & Newton's violet carmine.) (Plate VIII. fig. 3.)

Auric'ulars (L. re'gio auricula'ris), n. The (usually) well-defined feathered area which conceals the ears in birds. (Plate XI.)

Autop'tical, a. Personally inspected.

Autum'nal Plu'mage (L. ves'tis autumna'lis), n. The full dress of autumn. In most birds it remains essentially unchanged till the spring moult. In many species the young possess a peculiar autumnal plumage (assumed by their first moult) which differs not only from their first livery but also from that of adults at the same season. In such, the adult or mature plumage may be completely assumed at the next moult, or it may be gradually acquired by successive moults, as in the

case of many Orioles (*Icteridæ*), Tanagers, and other bright-colored Passerine groups.

Avian Fauna, a. The bird-life of a particular country or locality.

Ax'illa (L.), n. The armpit.

Ax'illar, Ax'illary, (L. axilla'ris), a. Pertaining to the armpit.

Ax'illaries, { (L. axilla'res), n. A more or less distinct tuft of graduated, usually soft and elongated, feathers growing from the armpit. (Plate XIII. fig. 4.)

Az'ure Blue (L. azu'reus), n. A fine light blue color, like the blue of the sky. (Cobalt blue + white.) (Plate IX. fig. 15.)

#### В.

Back (L. dor'sum), n. In descriptive Ornithology, usually includes the scapulars and interscapulars, but should properly be restricted to the latter alone. (Plate XI.)

Band (L. vit'ta; fas'cia), n. A broad transverse mark with regular and nearly parallel edges; a broad bar of color. (A broad band is usually called a zone.) (Plate IV. fig. 18.)

Band'ed (L. vitta'tus; fascia'tus), a. Marked with bands. (Plate XV-fig. 18.)

Bar (L. vit'ta; fas'cia), n. A narrow transverse mark of color. (Plate IV. fig. 17.)

Barb (L. bar'bus), n. Any one of the fibrillæ, or laminæ, composing the web of a feather.

Barb'ed (L. barba'tus), a. Furnished with barbs; bearded.

Barb'ule (L. bar'bulus), n. A barb of a barb.

Barred (L. vitta'tus; fascia'tus), a. Marked with bars. (Plate XV. fig. 17.)

Base (L. ba'sis), n. Root; origin.

Ba'sal (L. basa'lis), a. Pertaining to the base.

Bay (L. ba'dius), n. A very rich dark reddish chestnut. (Burnt sienna + purple madder.) (Plate IV. fig. 5.)

Bel'ly (L. abdo'men), n. The central posterior portion of the under surface of the body; bounded laterally by the sides, posteriorly by the vent or anal region, and anteriorly by the breast. (Plate XI.)

Belt (L. bal'tens), n. A broad band of color across the breast or belly. (Distinguished from zone in that the latter may cross the wings or tail.)

Belt'ed (L. baltea'tus), a. Marked with a broad band or belt of color across the lower part of the body.

Bend of the Wing (L. flex'ura; pli'ca), n. The angle or prominence at the carpus, or wrist-joint, in the folded wing. (Plate XIII. fig. 5.)

Berlin' Blue, n. A deep dark blue color, rather lighter and less purplish than marine blue. (Schoenfeld's Berlin blue.) (Plate IX. fig. 4.)

Beryl Green (L. beryli'nus), n. A light bluish green similar to verdigris, but more bluish. (Dark permanent green + Schoenfeld's "licht blau.") (Plate X. fig. 14.)

Bev'elled, a. Having two plane surfaces joining obliquely.

Bev'y, n. A flock of quails or partridges.

Bi- (in composition). Twice; double. As bicolored (two-colored), biped (two-footed), bifarcate (double-forked), etc.

Bibliog'raphy, n. Condensed history of the literature of a subject.

Bice Green, n. A yellowish green color, lighter and more yellow than parrot green. (Light zinnober-green + lemon-yellow.) (Plate X. fig. 10.)

Bi'colored (L. bi'color), a. Two-colored.

Bifur'cate (L. bifurca'tus), a. Doubly forked.

Bino'mial,
Bino'minal,
Bino'mi

Biol'ogy, n. The study of living beings with relation to the laws and results of their organization.

Biolog'ical, a. Pertaining to Biology. Biological science embraces the study of all organic creations, and thus includes Zoölogy and Botany, both recent and fossil.

Bis'tre, n. A dark brown color somewhat more reddish than sepia, but much less so than burnt umber. (Plate III. fig. 6.)

Boat-shaped (L. cymbifor'mis), a. A boat-shaped tail has the opposite sides, or halves, meeting below along the median line, the outer edges being elevated. The tail of Quiscalus (Boat-tailed Blackbird) is a familiar example, while that of the domestic fowl (Gallus bankiva) exemplifies the opposite form, with the edges below and the middle feathers forming the ridge instead of the keel. A boat-shaped bill is one in which the maxilla resembles an inverted boat, as in the genus Cancroma.

Boot, n. In birds, the tarsal envelope, when entire.

Boot'ed (L. ocrea'tus), a. A booted tarsus has the usual scales fused so as to form a continuous or uninterrupted covering. The tarsus of the smaller Thrushes and the American Robin (Merula migratoria) well illustrates this character.

Bor'dered (with) (I. limba'tus), a. Having the edge or margin all round of a different color.

Bo'real (L. borea'lis), a. Northern.

Boss, n. A knob or short rounded protuberance.

Bottle Green, n. A dark green color like the color of some varieties of glass. (Schoenfeld's "dark zinnober-green" or Winsor & Newton's Prussian green + Winsor & Newton's "olive-green.") (Plate X. fig. 1.)

Brac'cate (L. bracca'tus), a. Having the feathers on the outer side of the tibia elongated, or plume-like, as in most of the Falconidæ.

Brace-shaped, n. Shaped like the brace (~~) of printers. (Plate XV. fig. 6.)

Brach'ial (L. brachia'lis), a. Pertaining to the wing. (Little used.)

Brachyp'terous (L. brachyp'terus), a. Short-winged.

Brachyu'rous (L. brachyu'rus), a. Short-tailed.

Breast (L. pcc'tus), n. In birds, an artificial and somewhat arbitrary subdivision of the under surface, lying between the jugulum and abdomen. Its position corresponds nearly with that of the underlying pectoral muscles. (Plate XI.)

Brevipen'nes (L.), n. The systematic name of a group of short-winged

birds, including the ostriches and kindred forms.

Brevipen'nine (L. brevipen'nis), a. Short-feathered; short-winged (im-

properly so used); pertaining to the Brevipennes.

Brick Red (L. testa'ceus; lateri'tius; ru'tilus), n. A dull brownish red color like the color of burnt bricks. (Corresponding very nearly with Winsor & Newton's Indian red. Same as tile red.) (Plate IV. fig. 11.)

Bridle (L. fre'num), n. A stripe of color extending back from the bill, along the lower sides of the head.

Bridled (L. frena'tus), a. Marked with a distinct stripe of color from the bill backward, beneath the eye, along the lower jaw, or the sides of the throat.

Bris'tle, n. A small hair-like feather, consisting chiefly of the shaft, commonly developed near the angle of the month, or rictus, but sometimes on other portions of the plumage also.

Broc'coli Brown, n. A grayish brown color, intermediate in tone between drab and hair-brown. (Bistre + raw umber + black + white.) (Plate III. fig. 15.)

Buc'cal (L. bucca'lis), a. Pertaining to the cheeks.

Buff (L. lu'teus; luteo'lus), n. A light dull brownish vellow, like the color of dressed buckskin or chamois. (Raw sienna + white.) Plate V. fig. 13.

Buff-Pink, n. A pink color tinged with, or inclining to, buff. (Light red + cadmium orange + white.) (Plate IV. fig. 20.)

Buff-Yellow (L. lu'teo-fla'vus), n. A yellow color tinged with or inclining to buff. (Orange-cadmium + pale cadmium + white.) (Plate VI. fig. 19.)

Bul'late (L. bulla'tus), a. Having a blistered appearance.

Burnt Carmine, n. A very rich brownish crimson inclining to maroon or claret-color. (Madder-carmine + scarlet-vermilion + black.) (Plate VII. fig. 1.)

Burnt Sienna (L. spadi'ceus), n. A rich reddish brown color, like the pigment of the same name. (Plate IV. fig. 6.)

Burnt Umber (L. satura'te umbri'nus), n. A deep rich brown color, more reddish than sepia and bistre. (Plate III. fig. 8.)

C.

Cad'mium Orange (L. cadmiumi'no-auran'tius), n. An exquisitely rich, mellow orange-color (much purer in tint than a true orange) like the breast of the fully adult male Baltimore oriole, or the throat of the Blackburnian Warbler. (Plate VI. fig. 2.)

Cad'mium Yellow (L. cadmiumi'no-fla'vus), n. A very intense pure orange-yellow color, a little deeper and much purer than Indian yellow, and much more orange than gamboge. (Plate VI. fig. 6.)

Cadu'cous (L. cadu'cus), a. Falling off early.

Calca'reous, a. Chalky.

Campan'ula Blue, n. A moderately deep purplish blue color, like the hue of some species or varieties of the blue-bell or Canterbury-bell (Campanula). (Smalt + white.) (Plate IX. fig. 11.)

Canal'iculated (L. canalicula'tus), a. Channelled or furrowed.

Cana'ry Yellow, n. A delicate pure yellow color, paler than gamboge but deeper than maize or primrose. Nearly the same tint as King's yellow. (Schoenfeld's "heller cadmium" and white.) (Plate VI. fig. 12.)

Can'cellate (L. cancella'tus), a. Latticed; marked both longitudinally and transversely.

Candes'cent (L. candes'cens), a. Whitish; hoary; frost-like.

Cap'illary (L. capilla'rius), a. Hair-like.

Capillary (L. capilla rius), a. Hair-like.

Cap'istrate (L. capistra'tus), a. Hooded or cowled.

Capis'trum (L), n. A hood or cowl. In descriptive Ornithology, the fore part of the head all round, or that portion immediately surrounding the base of the bill.

Cap'ital (L. capita'lis), a. Pertaining to the head.

Cap'itate (L. capita'tus), a. A capitate feather has the end enlarged.

Cap'ut (L.; gen. cap'itis, pl. cap'ita), n. The head.

Carbona'ceous (L. carbona'ceus), a. Pertaining to carbon, or charcoal. Thus, carbonaceous-black = coal-black.

Cari'na (L.) n. A keel, or median ridge.

Car'inate (L. carina'tus), a. Keeled, or with a median ridge. Carinate Birds (Aves carinatæ) are those furnished with a keeled sternum.

Car'neous (L. car'neus), a. Fleshy.

Carniv'orous (L. carniv'orus), a. Flesh-eating.

Car'mine (L. carmin'cus; coccin'cus), n. A very pure and intense crimson.

The purest of the cochineal colors. (Madder-carmine + scarlet-vermilion.) (Plate VII. fig. 6.)

Car'pal (L. carpa'lis), a. Pertaining to the wrist, or carpus.

Car'pal joint, Car'pal angle,

(L. carpus), n. The prominence formed by the wristjoint, or carpus, when the wing is closed. The length of the wing, in descriptions, is measured from the carpal angle to the tip of the longest quill. (Same as Bend of the Wing, or flexura.) (Pl. XIII. fig. 5.)

Car'po-metacar'pal joint, n. The last wing-joint, covered exteriorly by the alula. (Plate XIII. fig. 6.)

Car'pus (L.), n. The wrist. In a bird, the space between the bend ( flexura) and the hand-joint of the wing.

Car'uncle (L. carun'culus), n. A naked fleshy excrescence, usually about the head or neck, and ordinarily brightly colored, wrinkled, or warty.

Carun'culate, (L. caruncula'tus), a. Having carnneles.

Castan'eous (L. casta'neus), a. or n. Chestnut-colored; chestnut-color. (Plate IV. fig. 9.)

Caud'al (L. cauda'lis), a. Pertaining to the tail.

Caud'a (L.), n. The tail.

Caud'ate (L. cauda'tus), a. Tailed.

Cecomorph'æ (L.), n. The Huxleyan name (meaning "gull-formed") of the gull-tribe, or Gaviæ.

Celeomorph'æ (L) n. The Huxleyan name (meaning "woodpeckerformed") of the natural group of birds including the Woodpeckers (Picidæ).

Cephal'ic (L. cephal'icus), a. Pertaining to the head.

Cera'ceous (L. cera'ceus) a. Wax-like.

Cere (L. ce'ra), n. The naked skin or membrane in which the nostrils are situated, common to most Birds of Prey (Raptores) and many of the Parrot-tribe (Psittaci), as well as the Pigeons (Columbæ) and some other groups. It usually has a more or less distinct line of demarcation anteriorly (except in the Pigeons).

Ceru'lean Blue (L. caru'leus; calesti'nus; cales'tis; calico'lor), n. A fine light blue color, less purplish or more greenish than azure.

(Winsor & Newton's cerulean blue.) (Plate IX. fig. 21.)

Cer'vical (L. cervica'lis), a. Pertaining to the cervix or hind neck.

Cer'vix (L.), n. The hind neck, extending from the occiput to the commencement of the back. It has two subdivisions, namely, the nape and scruff (nucha and auchenium), which occupy respectively the upper and lower halves of the cervix. (Plate XI.)

Change'able, a. As applied to colors, varying in tint with different in-

clinations to the light; iridescent.

Char'acter, n. Any peculiarity of structure or plumage, or other distinctive attribute, available for the diagnosis of a species, genus, or higher group.

Charadriomorph'æ (L.), n. The Huxleyan name (meaning "ploverformed") for the group of smaller wading birds usually called Limicolæ.

Cheek (L. qe'na; buc'ca), n. An arbitrary subdivision of the side of the head, differently employed by various writers, but usually corresponding to the malar region, or the feathered portion of the lower jaw. (Plate XII.)

Chenomorph'æ (L.), n. The Huxleyan name (meaning "goose-formed") of a group of birds equivalent to the *Anatidæ* of authors.

Chest'nut (L. casta'neus; spadi'ceus), n. A rich dark reddish brown, of a slightly purplish cast. (Vermilion + burnt umber.) (Plate IV. fig. 9.)

Chin (L. men'tum), n. The extreme anterior point of the gular region, or the space between the lateral branches (rhami) of the lower jaw. (Plate XI.)

China Blue, n. A dull medium blue color. (Intense blue + white.) (Plate IX. fig. 13.)

Chinese Or'ange, n. A very intense orange-red color, of a peculiar tint, very different from orange-chrome. (Cadmium-orange + burnt sienna.) (Plate VII. fig. 15.)

Choc'olate Brown (L. chocolati'nus), n. A rich dark reddish brown color, like the exterior glazed surface of a cake of chocolate. (Purple madder + sepia.) (Plate III. fig. 4.)

Chrome Yellow, n. A deep yellow, much less pure or intense than light cadminu. (Winsor & Newton's "chrome-yellow.") (Plate VI. fig. 8.)

Chro'mium Green, n. A dull green color, nearly intermediate between malachite green and sage green. (Green oxide of chromium.) (Plate X. fig. 12.)

Cic'onine (L. ciconi'nus), a. Stork-like.

Cil'ium (L.; pl. cilia), n. An eyelash.

Cine'reous (L. cine'reus),
Cinera'ceous (L. cinera'ceus),

(n. Ash-gray: a clear bluish gray color, lighter than plumbeous. (Lamp-black + Chinese white.) (Plate II. fig. 16.)

Cinnamo'meous (L. cinnamo'meus), {
 n. or a. A light reddish brown color, like the inner surface of cinnamon bark. (Indian red + raw umber.) (Plate III. fig. 20.)

Cin'namon Ru'fous (L. cinnamo'meo-rufus), n. Rufous, with a tinge of cinnamon. (Burnt sienna + burnt umber + light red + white.) (Plate IV. fig. 16.)

Cir'cular, n. Of a rounded shape. (Plate XIV. fig. 4.)

Cir'cum- (in composition). Around, encircling; as, circumorbital (around the eye), circumventral (around the vent), etc.

Cir'rhous (L. cirra'tus), a. Tufted.

Cit'ron Yellow, n. A light greenish yellow, deeper and less pure than sulphur-yellow. (Light cadmium + light zinnober-green.) (Plate VI. fig. 15.)

Clar'et Brown (L. vina'ceo-brunn'eus), n. A rich dark brownish purple, much like the pigment called "Purple-madder." Nearly the same as "maroon," but more purple. (Purple-madder.) (Plate IV. fig. 1.)

Class (L. clas'sis), n. A primary division of animals, as the class of Birds (Class Aves).

Classifica'tion, n. A systematic arrangement.

Claw (L. un'guis), n. The horny, pointed, and compressed sheath of the terminal phalanx of the toe.

Clay-color (L. lutes'cens, lute'olus, luto'sus), n. A dull light brownish yellow color, nearly intermediate between yellow-ochre and Isabellacolor. (Yellow ochre + raw umber + white.) (Plate V. fig. 8.)

Clove Brown, n. A dark brown color, like dried cloves. (Black+cadmium-orange). (Plate III. fig. 2.)

Clutch, n. A nest-complement or "set" of eggs.

Co'balt Blue (L. cobalti'nus), n. A very fine pure light blue color, less intense and more azure than ultramarine. (Plate IX. fig. 12.)

Coccy'ges (L.) n. The systematic name of a natural group of zygodactyle birds, including the Cuckoos (Cuculidae), Plantain-eaters, Turacous (Musophagidae), Trogons (Trogonidae), etc.

Coccygomorph'æ (L). n. The Huxleyan name (meaning "Cuckooformed") of the Coccyges.

Col'lar (L. tor'ques), n. A ring of color encircling the neck.

Col'lared (L. torqua'tus; colla'ris), a. Marked with a neck-ring of a different color from surrounding parts.

Col'lum (L.), n. The neck.

Colora'tion, n. Pattern of coloring, or the colors of the plumage collectively.

Col'ored (L. colora'tus) a. In Ornithology, different from white. Thus, the colored phase of a dichromatic species is that in which the plumage is other than white.

Comb, n. An erect, fleshy, longitudinal caruncle on the top of the head, as in the domestic fowl (Gallus ferrugineus, var.) and the adult male Condor (Sarcorhamphus gryphus).

Commis'sural, a. Pertaining to the commissure.

Com'missure (L. commis'sura), n. The outlines of the closed mouth, or the opposed edges of the mandible and maxilla.

Compress'ed, a. Flattened sideways, or higher than broad. A compressed tail has the two halves folded together with the two edges separated below, the median feathers forming the ridge, as in the domestic fowl. (The opposite form is seen in the boat-shaped tail of the American Grackles, Quiscalus.)

Con'cave (L. conca'vus), a. Hollowed on one side, as the inside of a curved line, the under side of an arch, or the hollow of a spoon.

Concen'tric (L. concen'tricus), a. Having a common centre, as a series of rings one within another. (Plate XV. fig. 19.)

Con'colored (L. conco'lor), a. Of a uniform color. (Same as unicolored.)

Con'fluent (L. confluen'tus), a. Run together.

Con'gener, n. A species belonging to the same genus with another.

Congener'ic, a. Belonging to the same genus with another.

Coniros'tral, a. Having a conical bill, like that of a Finch or Sparrow; pertaining to the so-called *Conirostres*.

Coniros'tres (L.), n. An arbitrary group of birds, in classifications, of which the Sparrow tribe (Fringillidæ) are typical.

Contin'uous, a. (As applied to markings.) Without interruption.

Con'tour Feathers, n. The surface feathers of the head, neck, and body. Coracomorph'æ (L.), n. The Huxleyan name (meaning raven-formed) for the Passeres.

Cor'al Red (L. corolli'nus, coralli'no-ru'ber), n. A light, rather dull vermilion, like the color of red coral. (Madder-carmine, orange-vermilion + white.) (Plate VII. fig. 4.)

Cord'ate (L. corda'tus), Cord'iform (L. cordifor'mis), a. Heart-shaped. (Plate XIV. fig. 15.)

Coria'ceous (L. coria'ceus), a. Of leathery texture.

Corn'eous (L. cor'neus), a. Horny.

Cornic'ulate (L. cornicula'tus), a. Furnished with a small horn.

Corn'iplume, n. A horn-like tuft of feathers on the head.

Cor'onate (L. corona'tus), a. Crowned; having the top of the head ornamented by lengthened or otherwise distinguished feathers.

Cor'rugate, { (L. corruga'tus), a. Wrinkled.

Co'vey, n. A family (or broad with or without their parents) of Quails or other game-birds.

Cream-color, n. A light pinkish yellow color, like cream. (Cadmium yellow + white.) (Plate VI. fig. 20.)

Cream'y Buff, n. (Yellow ochre + white.) (Plate. V. fig. 11.)

Cre'nate, (L. crena'tus), a. Having rounded teeth. (Plate XV. fig. 21.)

Cren'ulate (L. crenula'tus), a. Finely crenate.

Crepus'cular (L. crepuscula'ris), a. Pertaining to twilight. (Crepuscular birds are those which become active after sunset.)

Cres'cent, n. A figure having the shape of the new moon.

Crescent'ic (L. luna'tus), a. Shaped like the new moon. (Plate XV. fig. 9.)

Crest (L. cris'ta), n. A more or less lengthened, erectile, or permanently erect, tuft of feathers on top of the head.

Crest'ed (L. crista'tus), a. Furnished with a crest.

Crim'son (L. carmesi'nus; sanguin'eus; sanguin'eo-ru'ber), n. Blood-red; the color of the cruder sorts of carmine. (Madder-carmine, or dark madder-lake.) (Plate VII. fig. 3.)

Cris'sum (L.), n. A term usually applied to the lower tail-coverts collectively, but properly belonging to the feathers situated between the lower tail-coverts and the anal region. (Plate XI. See especially note facing plate.)

Cris'sal (L. crissa'lis), a. Pertaining to the crissum.

Crown (L. coro'na), a. Properly the vertex, or that portion of the top of the head between the forehead and the occiput. (Plate XI.)

Cru'ciate (L. crucia'tus), Cruci'form (L. crucifor'mis), \( \rmathref{a}. \) Cross-like. (Plate XV. fig. 10.)

Cru'ral (L. crura'lis), a. Pertaining to the crus, or tibia.

Crus (L.), n. The "thigh," or tibia.

Cu'bital (L. cubita'lis), a. Pertaining to the forearm.

Cu'cullate (L. cuculla'tus), a. Hooded, or having the head colored differently from the rest of the plumage.

Cul'men (L), n. The ridge or upper outline of the maxilla, or upper mandible. (Plate XII. fig. 7.)

Cul'minal (L. culmina'tus), a. Pertaining to the culmen.

Cul'trate (L. cultra'tus), a. Knife-like.

Cultriros'tral (L. cultriros'tris), a. Having a knife-shaped bill, or the bill lengthened, compressed, and pointed, like a Heron's. Pertaining to the so-called Cultrirostres.

Cultriros'tres (L.), n. An artificial group of wading birds, including the Herons (Ardeidæ) and Storks (Ciconüdæ), so named on account of the knife-shaped bill, and in this sense nearly equivalent to Herodiones. Also applied to a group of Passerine birds, which includes the Corvidee, Sturnidæ, Icteridæ, etc.

Cu'neate (L. cunea'tus), Cu'neiform (L. cuneifor'mis), a. Wedge-shaped. (Plate XIV. fig. 13.)

Cu'preous (L. cu'preus), a. Coppery; like copper.

Curso'res (L.), n. An artificial group of birds, in the older systems, including the Bustards and other "conrsers" or "runners."

Curso'rial, a. Running; pertaining to the Cursores.

Cus'pidate (L. cuspida'tus), a. Stiff-pointed.

Cuta'neous, a. Pertaining to the skin. (Same as dermal.)

Cyp'seline (L. cypseli'nus), a. Swift-like; pertaining to the Cypselidæ, or Swifts.

Cypselomorph'æ (L.), n. The Huxleyan name (meaning "swift-formed") of a group of ægithognathous "Picariæ," including the Goat-suckers (Caprimulgidæ), Swifts (Cypselidæ), and Humming-birds (Trochilidæ). (Equivalent to the Macrochires and Cypseli of other authors.)

Cylin'dric-o'vate, n. An elongate ovate with parallel sides. (Plate XVI. fig. 6.)

Cym'biform (L. cymbifor'mis), a. Boat-shaped.

# D.

Dah'lia Pur'ple, n. A rich dark purple color, like some varieties of the dahlia (Dahlia variabilis). (Madder-carmine + intense blue.) (Plate VIII. fig. 2.)

Dasypæ'dic, a. Clothed with down at birth. (Same as Ptilopædic.)
Decid'uous, a. Temporary, or shed periodically, as the horns of a deer and the "nuptial ornaments" of many birds.

Declin'ate, ) (L. declina'tus), a. Bent downward.

Decompos'ed, a. Said of a feather when the barbs are separated, not forming a continuous or compact web.

Decum'bent (L. decum'bens), a. Hanging downward; drooping.

Decus'sate (L. decussa'tus), a. Crossed; intersected. (Plate XV. fig. 16.)

Deep Chrome Yellow, n. A very deep but not brilliant yellow color. (Winsor & Newton's "deep chrome," or Schoenfeld's "goldgelb" or "mittel chromgelb.") (Plate VI. fig. 9.)

Del'toid (L. deltoid'eus), α. Triangular, or shaped like the Greek character "Delta," Δ. (Plate XIV. fig. 14.)

Den'tate (L. denta'tus), a. Toothed. (Plate XV. fig. 20.)

Dentic'ulate (L. denticula'tus), a. With small teeth.

Dentig'erous (L. dentiger'), a. Bearing teeth.

Dentiros'tres (L.), n. An artificial or arbitrary group in classifications, the members of which have the maxilla more or less notched near the tip.

Dentiros'tral (L. dentiros'tris), a. Tooth-billed; pertaining to the Denti-

Denuda'tion, a. Nakedness.

Deplum'ate (L. depluma'tus), a. Bare of feathers.

Depress'ed (L. depres'sus), a. Flattened vertically; broader than high. (Opposite of compressed.)

Der'mal (L. derma'lis), a. Pertaining to the skin.

Desquama'tion, n. Peeling or scaling off.

Di- (in composition). Twice; double (as dichromatic = two colored).

Diagno'sis, n. A condensed statement of the characters which are exclusively applicable to a species, genus, or higher group; a description which omits all non-essential characters.

Diagnos'tic, a. Pertaining to diagnoses; exclusively applicable, or distinctly characteristic.

Dichot'omous, a. Paired, or by twos.

Dichromat'ic, a. In descriptive Ornithology a species is said to be dichromatic when it exists in two distinct plumages which are entirely independent of sex, age, or season. These distinct plumages were formerly, in the case of most dichromatic birds, supposed to represent distinct species, and the nature of their real relationship is a comparatively recent discovery. Familiar examples of dichromatism are the rufous and gray forms of the little Screech Owl (Scops asio), and the white and bluish or dusky forms of some Herons (as Ardea occidentalis and Dichromanassa rufa).

Dichrom'atism, n. The state of existing in two distinct phases of coloration, which are wholly independent of the usual causes of color differences (as sex, age, and season). Dichromatism among birds is somewhat analogous to dimorphism in insects.

Didac'tyle, Didac'tylus), a. Two-toed, as the Ostrich.

Dig'itigrade, a. Walking on the toes. (Applicable to most birds.)

Dimorph'ic, a. Existing in two forms, as some species of insects.

Dimorph'ism, n. The state of existing in two forms. (The nearest approach to dimorphism among birds is the state of dichromatism, which see.)

Set of radiating feathers surrounding the eye in some birds. Disk, \n. especially the Owls.

Dis'tal, a. Toward or at the extremity. (Opposite of proximal, or toward the base.)

Dis'tichous (L. dis'tichus), a. Two-rowed, as the webs of a feather.

Ditok'ous, a. Producing but two eggs for each clutch, as the Pigeons (Columbida), Humming-birds (Trochilida), and a few other groups.

Diur'nal (L. diurna'lis), a. Pertaining to the daytime. Among birds, those which are active during the daytime and repose at night. (Many diurnal birds, however, are nocturnal in their migrations).

Divar'icate (L. divarica'tus), a. Spreading or curving apart.

Dor'sal (L. dorsa'lis), a. Pertaining to the back.

Dor'sum (L), n. The back. (Plate XI.)

Double-emarginate, ( (L. biemargina'tus), a. A doubly emarginate tail has the middle and lateral feathers slightly Doubly emarginate, longer than the intervening ones.

Double-forked, (L. bifurca'tus), a. A doubly forked tail has the middle and lateral feathers decidedly longer than those Doubly forked, / between.

Double-rounded, ( (L. birotundu'tus), a. A doubly rounded tail has the middle and lateral feathers shorter than those Doubly rounded, between.

Down (L. floc'cus), n. Small soft decomposed feathers, which clothe the nestlings of many birds, and which also grow between and underneath the true feathers in the adults of many others, especially the various kinds of water-fowl.

Down'y (L. pubes'cens), a. Pertaining to or having the nature of down, or clad with down.

Drab, n. A brownish gray color. (Black + white + raw umber.) (Plate III. fig. 18.)

Drab-Gray, n. (Black + white + burnt umber.) (Plate II. fig. 13.)

Dragon's-blood Red, n. A rich brownish red color, of a peculiar tint. (The pigment called dragon's blood is made from the inspissated juice of certain tropical plants, particularly the Calamus draco and Dracena droco.) (Light red + madder-brown.) (Plate IV. fig. 8.)

Dusk'y (L. obscu'rus; nigres'cens; ni'gricans), n. or a. A dark color of more or less indefinite or neutral tint; of a dark, indefinite color.

Dysporomorph'æ (L.), n. The Huxleyan name (meaning gannet-formed) for the Steganopodes.

### E.

Ear-cov'erts (L. re'gio auricula'ris), n. The usually well-defined tract of feathers overlying the ears of most birds. The ear-coverts (or auriculars, as they are usually termed in descriptions) are bounded above by the backward extension of the supercilium, or lateral portion of the crown, posteriorly by the occiput and nape, below by the malar region or "cheeks," and anteriorly by the suborbital region. Same as auriculars. (Plate XI.)

Ear'ed (L. auri'tus), a. Decorated with tufts of feathers, distinguished either by length or color, which by their appearance suggest the

external ears of mammals.

Ear-tufts, n. Erectile tufts of clongated feathers springing from each side of the crown or forehead, and presenting a close superficial resemblance to the external ears of many mammalia. They are especially characteristic of certain Owls (Strigida).

Econ'omy, n. Physiological disposition.

E'cru Drab, n. A very light, somewhat pinkish, drab color. (Burnt umber + sepia + white.) (Plate III. fig. 21.)

Ec'to- (in composition). Outer; as ectozoon, an external parasite.

Edg'ed (with) (L. limba'tus), v. Having the edge or lateral margin of a different color.

Edge of wing (L. campte'rium; mar'go-car'pi), n. The anterior border of the wing, from the armpit to the base of the outer primary.

El'evated, a. Said of the hallux, or hind toe, when inserted above the level of the anterior toes.

Ellip'tical, n. Having the form of an ellipse. (Plate XIV. fig. 9; plate XVI. fig. 14.)

Ellip'tical-oval, n. See plate XVI. fig. 10.

Ellip'tical-ovate, n. See plate XVI. fig. 4.

Elon'gate (L. elonga'tus), a. Lengthened.

Elon'gate-ovate, n. See plate XVI. fig. 5.

(L. emargina'tus), a. An emarginate tail has the middle feather shortest, the rest successively a little longer; hence an emarginate tail is very slightly forked. Emarg'inate, An emarginate quill has the web suddenly narrowed Emarg'inated, by an abrupt cutting away of the edge. (Plate XIII. fig. a.)

Em'bryo, n. In birds, the young before leaving the egg.

Em'erald Green (L. smaragdi'nus), n. A very bright light peculiar green color, like an emerald, but more especially like the pigment so called. (Plate X. fig. 16.)

En'siform (L. ensifor'mis), \ a. Sword-shaped.

En'to- (in composition). Inner; as entozoön, an internal parasite.

Ep'i- (in composition). Upon; as epidermis, upon the skin, that is, the surface skin.

Epider'mis (L.), n. The cuticle, or scarf-skin.

Epider'mic, a. Pertaining to the epidermis.

Epignath'ous (L. epigna'thus). Hook-billed, as a Hawk or Parrot.

Epithe'ma, n. A horny excrescence upon the bill.

Erec'tile, a. Capable of being raised or erected, as an erectile crest.

Erythris'mal, a. The state of being red or rufous, instead of the usual or "normal" color.

E'rythrism (L. erythris'mus), n. A particular state of plumage caused by excess of red or rufous pigment; it is one of the dichromatic states of many birds, as certain species of Owls (Strix stridula, Scops asio, etc.), also some species of Accipiter and Micrastur, among Hawks.

E'tiolated (L. athiola'tus), a. Whitened; bleached.

Etyp'ical, a. Tending away from normal or typical character.

Eurhipidu'ra (L.), n. The name of one of the primary groups of birds, comprising all existing species.

E'ven (L. trunca'tus), a. An even or "square" tail has, when closed, all the feathers terminating on the same transverse line; in other words, it is truncated at the tip. When spread, the tips of the feathers describe a semicircle, while an emarginate or slightly forked tail becomes even or truncated when spread.

Ex- (in composition). Out; out of; away from. As, exterior, on the outside.

Excres'cence, n. Any outgrowth, whether cutaneous, corneous, or fleshy.

Exot'ic (L. exot'icus), a. Foreign.

Exten'sile (L. cxten'silis), a. Susceptible of being extended or lengthened. Eye'brow (L. supercil'ium), n. The middle portion of the superciliary region, or that part immediately above the eye.

Ey're, n. The nest of a bird of prey, especially an Eagle.

# F.

Fa'cial (L. facia'lis), a. Pertaining to the face.

Fal'cate (L. falca'tus), Fal'ciform (L. falcifor'mis), a. Shaped like a sickle or scythe.

Fal'conine (L. falconi'nus), a. Falcon-like.

Fam'ily (L. fami'lia), n. A systematic group in scientific classification, embracing a greater or less number of genera which agree in certain characters not shared by other birds of the same Order. In rank, a Family stands between Order and Genus, the former being composed of a greater or less number of nearly related families. In

zoölogical nomenclature the name of a Family is taken from a typical Genus, the name of which is modified by the termination ida: as Falconidæ, Columbidæ, etc. (Subfamilies are distinguished by the termination inæ.)

Fas'cia (L.), n. A band or broad bar of color.

Fas'ciated (L. fascia'tus), a. Banded or broadly barred.

Fas'cicle (L. fasci'culus), n. A bundle.

Fascic'ulate, (L. fascicula'tus), a. Bundled.

Fastig'iate (L. fastigia'tus), a. Bundled together like a sheaf.

Fau'na (L.), n. The animal-life of a country. (Distinguished from the Flora, or plant-life.)

Fawn-color, (L. cervi'nus; cervin'eus), n. A light warm brown color. (Burnt umber + white.) (Plate III. fig. 22.)

Fem'oral (L. femora'lis), a. Pertaining to the thigh proper, or the inner segment of the leg. (To be carefully distinguished from tibial, which refers to the so-called "thigh," or middle segment of the leg.)

Fe'mur (L.), n. The thigh; the thigh-bone.

Fe'ral (L. fe'rus), a. Wild, or undomesticated. The wild Jungle Fowl (Gallus ferrugineus) is the feral stock of the domestic fowl.

Ferrugin'eous, (L. ferrugin'eus), n. or a. Rust-red, or the color of iron-rust. (Medium tint of burnt sienna.) (Plate IV. fig. 10.)

Fibril'la (L.; pl. fibril'læ), n. A small fibre.

Fil'ament (L. filamen'tum), n. A slender or thread-like fibre.

Filament'ous (L. filamento'sus), } a. Thread-like.

Fil'iform (L. filiform'is),

Filopluma'ceous (L. filopluma'ceus), a. Having the structure of a filoplume.

Fil'oplume (L. filoplu'ma), n. A thread-like feather.

Fim'briated (L. fimbria'tus), a. Fringed.

Fissipal'mate (L. fissipalma'tus), a. With half-webbed feet, the free portion of the toes lobed, as a Grebe's foot.

Fis'siped (L. fis'sipes), a. Having cleft toes. (Opposite of palmiped.)

Fissiros'tral (L. fissiros'tris), a. Having the mouth cleft far back of the base of the bill, as in the Goatsuckers, Swifts, etc.; pertaining to the Fissinostres.

Fissiros'tres (L), n. An obsolete name of an artificial group of birds, with deeply cleft mouths, including the Goatsuckers, Swifts, and other "fissirostral" families.

Flame Red,
Flame Scarlet,

(L. flam'meus; io'neus), n. A very intense orange-red
color, intermediate between scarlet and saturn-red.
(Rose carthame + cadmium-orange.) (Pl.VII. fig. 14.)

Flam'mulated (L. flummula'tus), a. Pervaded with a reddish color.

Flanks (L. hypochon'dria), n. In descriptive Ornithology the most posterior feathers of the sides. (Plate XI.)

Flax-flower Blue, n. A delicate light purplish blue color. (French blue + white.) (Plate IX. fig. 14.)

Flesh-color (L. car'neus; incarna'tus), n. A pinkish color, like that observable in the cheeks of a person of fair complexion; carnation. (Scarlet-vermilion + white.) (Plate VII. fig. 18.)

Floc'culent (L. floccula'tus), a. In descriptive Ornithology, pertaining to

the down of newly hatched or unfledged young birds.

Floc'cus (L.), n. The down peculiar to unfledged or newly hatched young birds; in ptilopædic birds it covers the general surface and is unconnected with the future plumage, while in psilopædic birds it sprouts only from the undeveloped feathers, to the tips of which it is often seen clinging when the latter are considerably grown.

Flu'viatile (L. fluvia'tilis), a. Pertaining to rivers.

Fore head, (L frons), n. Fore part of the top of the head, from the Front, base of the bill to the vertex, or crown. (Plate XI.)

Fore-neck (L. gut'tur), n. A rather indefinite and arbitrary term, variously applied, but usually referring to the lower throat and jugulum, though not infrequently to the whole of the space included by the chin, throat, and jugulum. In long-necked birds only does the term become of definite application. (See note facing plate XI.)

For'ficate (L. forfica'tus), a. Deeply forked, as the tail of a Kite.

Form (L. for'mis), n. In a special sense, a sort of non-committal term frequently used by modern writers to designate what is of doubtful rank. The term "form" is thus used for what may prove to be a species, or may be only a race, but as to the rank of which the author is in doubt.

Fos'sa (L.; pl. fos'sw), n. A ditch or groove. In descriptive Ornithology, used chiefly in the plural, to denote the depressions in which the nostrils are placed.

Fosso'rial, a. Digging into the earth for a habitation. (The Burrowing Owl, Speotyto canicularia, is a fossorial bird.)

Fos'ter-parent, n. A bird which has reared the young of a parasitic species.

Fos'ter-young, n. The young of a parasitic species which has been reared in the nest of another bird.

Free, a. Said of a leg with the tibia unconfined within the skin of the body.

French Blue, n. A very rich blue color, deeper than ultramarine. (French blue.) (Plate IX. fig. 6.)

French Gray, n. A fine light bluish gray color, darker than pearl-gray, lighter and bluer than cinereous. (Black + intense blue + smalt-blue + white.) (Plate II. fig. 17.)

French Green, n. A very pure rich green color; the typical green. (Italian ultramarine + light cadmium.) (Plate X. fig. 19.)

Fre'num (L.), n. A bridle or marking about the head resembling or recalling a bridle. Fringe (L. lo'ma; fim'bria; lacin'ia), n. A lacerated marginal membrane. Front'al (L. fronta'tus), a. Pertaining to the forehead.

Front'let (L. an'tia), n. The extreme anterior portion of the forehead; usually distinguished by a difference of level (usually more depressed) from the forehead, as in the Woodpeckers. When divided by the base of the culmen (as in the Woodpeckers), the frontal points are called antiæ. (See plate XII. fig. 1.)

Frugiv'orous (L. frugi'vorus), a. Fruit-eating.

Fulig'inous (L. fuligino'sus), n. or a. Sooty brown, or dark smoke-color.

Fulves'cent (L. fulves'cens), a. Inclining to a fulvous color.

Ful'vous (L. ful'vus), n. Λ rather indefinite brownish yellow, or yellowish brown tint, like tanned leather; tawny.

Fur'cate (L. furca'tus), a. Forked.

Fus'cous (L. fus'cus), n. or α. Dark brown, of a rather indefinite shade.
Fu'siform (L. fusifor'mis), α. Spindle-shaped, or tapering at each end.
(Plate XVI. fig. 13.)

#### G.

Gal'eate (L. galea'tus), a. Helmeted, or armed or ornamented with a frontal shield, as the Gallinules, Coots, Cassowaries, etc.

Gallina'cea (L.), n. A name of the Fowl tribe, or Order Gallineæ of some authors.

Gallina'ceous (L. gallina'ceus), a. Belonging to the Order Gallinacea or Gallineæ, or that which embraces the domestic fowl and kindred birds. Having the characteristics or nature of the Gallineæ.

Gall'-stone Yel'low, n. A very strong brownish yellow, somewhat like yellow ochre, but transparent, and much brighter in its paler tints. (Aureolin, raw sienna, and cadmium-orange.) (Plate V. fig. 6.)

Gam'boge Yel'low, n. A pure yellow color, of a lemon tint; less intense and somewhat less pure than the lighter cadmiums, but very transparent. The pigment thus called is the concreted juice of the Hebradendron cambogioides, a plant which grows in Cambodia. (Plate VI. fig. 10.)

Gape (L. ric'tus), n. The opening of the mouth.

Gastræ'um (L.), n. The lower parts, collectively.

Gen'a (L.), n. The cheek, or feathered portion of the lower jaw.

Gen'era, n. Plural of Genus.

Gener'ic, a. Pertaining to a Genus.

Gen'esis, n. In biological science, the derivation or origin of a form, whether by evolution or direct creation.

Genet'ic, a. Pertaining to Genesis.

Ge'nus (pl. gen'era), n. An assemblage of species which agree in the possession of certain characters distinguishing them from otherwise

allied forms. (In taxonomic value a genus ranks next below a subfamily.)

Gen'ys (L.), n. (Same as Gonys, which see.)

Geograph'ical Race, n. (See Race.)

Geograph'ical Varia'tion, n. Modification of form or coloration according to change of locality or country. (The majority of widely distributed species are more or less affected by geographical variation, from varying influences of climate and other surroundings. Many species have evidently sprung from Geographical Races through the extermination of intermediate specimens, or, in the case of remote islands, by long and complete isolation from the parent stock.)

Gera'nium Pink, n. A lighter tint of geranium red. (Plate VII. fig. 19.) Gera'nium Red (L. carthami'nus), n. The purest possible red color, or a red which combined with yellow will produce a pure orange, and with blue a pure purple. It is less orange in tint than scarlet. (Rose carthame or safflorroth.) (Plate VII. fig. 7.)

Gib'bose, (L. gibbo'sus), a. Swollen.

Gibbos'ity, n. A swelling, or rounded protuberance.

Gla'brous (L. gla'brus), a. Smooth.

Gla'cial (L. glacia'lis), a. Pertaining to ice.

Glauces'cent (L. glauces'cens), a. Inclining to Glaucous.

Glau'cous (L. glau'cus), a. or n. A whitish blue color, like the "bloom" of a cabbage-leaf. (Black + Antwerp blue + white.) (Plate IX. fig. 19.)

Glau'cous Green (L. glau'co-vir'idis), n. (Viridian + white.) (See plate X. fig. 17.)

Gnathid'ium (L.: pl. gnathid'ia), n. The branch or rhamus of the lower jaw, as far as it is covered by the horny sheath. (Chiefly used in the plural.)

Gol'den Yel'low (L. au'reo-fla'vus; au'reus), n. A very intense yellow color, like the paler tints of the pigment called Jaune d'Or (that is, golden yellow), which, however, in its deeper tint becomes an intense orange.

Go'nys (L.), n. The keel or lower outline of the maxilla or lower mandible, from the tip to the point where the rhami begin to diverge. (Plate XII. fig. 6.)

Gorg'et, n. An ornamented throat-patch, distinguished by color or texture of feathers, as the gorget of a Humming-bird.

Gra'dient (L. gra'diens), a. Walking or running by steps. (Same as ambulatory, but preferable to that term.)

Grad'uated, { (L. gradua'tus), a. A graduated tail has the middle feathers longest, the rest successively shorter; the difference in length not so great, however, as in a cuneate tail.

Grallato'res, \(\((L.\)\), n. An arbitrary and artificial group of the older Grallato'riæ,\) classifications, including the wading birds.

Grallato'rial, a. Wading; pertaining to the wading birds, or Grallatores.
Graminiv'orous (L. gramini'vorus), a. Grass-eating. (Geese are graminivorus.)

Graniv'orous (L. grani'vorus), a. Seed-eating, like certain finches.

Gran'ular (L. granula'ris), \ a. With a roughened surface, like coarse Gran'ulate (L. granula'tus), \ sand-paper.

Grass-Green (L. vir'idis; prasi'nus), n. A deep green color, like growing grass. (Sap-green.) (Plate X. fig. 4.)

Gray (L. gris'eus; cœ'sius; cine'reus; cœ'nus; leucophœ'us), n. A color produced by the mixture of black and white. Various shades, dependent on varying relative proportions of the components, are represented on Plate 1I. figs. 2-10.

Greater coverts (L. tec'trices a'læ ma'jor), Greater Wing-coverts (L. tec'trices seconda'rii), n. The most posterior series of wing-coverts, or those which immediately overlay the base of the secondaries; hence, often and very appropriately called Secondary coverts. (Plate XI.)

Grega'rious (L. grega'rius), a. Going in flocks.

Ground-color, n. The prevalent color of the general surface. (Used chiefly in oölogy.)

Gu'la (L.), n. The throat. (Plate XI.)

Gu'lar (L. gula'ris), a. Pertaining to the throat.

Gut'tate (L. gutta'tus),
Gut'tiform (L. guttifor'mis),

a. Drop-shaped or tear-shaped; having drop-or tear-shaped spots. (Plate XIV. fig. 8.)

Gymnopæd'ic, a. Naked at birth. (Synonymous with ptilopædic.)

Gymnorhin'al (L. gymnorhi'nus) a. Having naked or unfeathered nostrils.

### H.

Hab'itat (L. habita'tus), n. The region or locality inhabited by a species. Hab'itus (L.), n. Mode of life.

Hack'le, n. A long lanceolate or falcate feather adorning the neck of the domestic cock. (Used chiefly in the plural, or in combination with neck, as neck-hackles.)

Hæmatit'ic (L. hæmati'ticus) a. Of a blood-red color; crimson.

Hair Brown, n. A clear, somewhat grayish tint of brown, resembling the "brown" hair of human beings; the typical brown color, composed of equal proportions of red and green. (Bistre + raw umber + black + white.) (Plate III. fig. 12.)

Hal'lucal, a. Pertaining to the hallux, or hind toe.

Hal'lux (L.), n. In birds possessing four toes, the hinder one is the hallux, no known bird having four toes directed forwards. In some birds, as certain Plovers, the Bustards (Otididæ), the Struthiones, etc., the hallux or hind toe is wanting. In three-toed birds having two toes in front and one behind, the hallux is usually the one wanting, the hind toe being in reality the fourth (or outer) toe reversed. When the toes are in pairs (two before and two behind), the hallux is usually the inner of the hinder pair, the exception being in the Trogons (Trogonidæ). The hallux reaches its best development in the Passeres, the Acceptives, Striges, and Rallidæ, but more especially in the first, in which it is usually as strong as if not stronger than the largest of the anterior toes. (Plate XI.)

Ham'ulate (L. hamula'tus), a. Furnished with a small hook.

Ham'ulus (L.; pl. ham'uli), n. A small hook; sometimes applied to the barbules or barbials of a feather, when hook-shaped.

Hand-quills, n. The Primary quills, or primaries.

Has'tate (L. hasta'tus), a. Shaped like a spear-head. (Plate XV. fig. 2.)

Ha'zel (L. coryllin'us; avellin'us; avellan'eus), n. An orange-brown color, like the shell of a hazel-nut or filbert; similar to chestnut, but with less red and more yellow. (Vermilion + raw sienna + black.) (Plate IV. fig. 12.)

Heel (L. suffra'go; calca'neus; ta'lus), n. The upper posterior extremity of the tarsus. (Plate XI.)

He'liotrope Pur'ple, n. A grayish purple color. (Violet madder-lake + sepia + French blue + white.) (Plate VIII. fig. 18.)

Hel'met (L. galea'tus), n. A naked shield or protuberance on the top or fore part of the head.

Hepat'ic (L. hepa'ticus), a. Pertaining to the liver; hence, liver-colored.

Herodio'nes (L.), n. A natural group of altricial waders, embracing the Storks, Wood-Ibises, true Ibises, Spoonbills, Boatbills, and Herons.

Herodio'nine, a. Pertaining to or partaking of the character of the Herodiones.

Her'ring-bone (markings), n. A series of transverse lines or bars connected along the middle of a feather by a longitudinal stripe or line of the same color. (Plate XV. fig. 15.)

Heterodac'tylæ (L.), n. The name of a natural group of birds, including only the Trogons.

Heteroge'neous, a. Of dissimilar nature or miscellaneous character. (Opposite of homogeneous.)

Hex'agon, n. A figure of six sides.

Hexag'onal (L. hexagona'lis), a. Having six sides.

Hiber'nal (L. hiber'nus), a. Pertaining to winter.

Hind-neck (L. cer'vix), n. (See plate XI.)

Hind-toe (L. hal'lux), n. The posterior toe or hallux (which see). (See plate XI).

Hir'sute (L. hirsu'tus), a. Hairy, or shaggy, as the foot of a Grouse.

Histol'ogy, n. Minute anatomy.

Hoar'y (L. al'bens; albes'cens; canes'cens; pruino'sus), n. or a. Of a frosty gray or silvery hue.

Holorhi'nal, a. Having the posterior border of the osseous nares rounded. (See Schizorhinal.)

Homogen'ity, n. Structural similarity.

Homoge'neous, a. Of the same character or nature. (Opposite of heterogeneous.)

Homolog'ical, a. Structurally related or affined. (Opposite to ana-Homol'ogous, logical or analogous.)

Homologonat'æ (L.), n. A primary subdivision of the Order Euripidura, proposed by Professor A. H. Garrod.

Homology, n. Structural affinity. (Opposite of analogy, or superficial resemblance.)

Ho'monym, n. A word which in several senses has different meanings. As Sylvicola, Swainson, a genus of birds (now called Dendroica) is a homonym of Sylvicola, Humphreys, previously applied to a genus of mollusks. (Opposite of synonym.)

Homotyp'ical, a. Of the same structural type.

Homot'opy, n. A particular kind of homology.

Hood'ed (L. cuculla'tus), a. Having the head conspicuously different in color from the rest of the plumage.

Hor'notine (L. hornoti'nus), a. or n. A young bird in its first year.

Hu'meral (L. humera'lis), a. Pertaining to the humerus, or, more generally, to the upper arm.

Hu'merus (L.), n. The upper arm-bone; or, the whole of the upper arm.

Hy'acinth Blue (I. hyacin'thinus), n. An exceedingly intense purplish blue color, similar to but richer than smalt blue. (Schoenfeld's "violet ultramarine.") (Plate IX. fig. 5.)

**Hy**'brid (L. hybri'dus), a. or n. The progeny resulting from sexual intercourse of distinct species.

Hybridiza'tion, n. Production of hybrids.

Hy'bridize, a. To cross and bear offspring which unite the characters of two species.

Hye'mal (L. hiema'lis), a. Pertaining to winter.

Hy'oid, a. Properly, pertaining to the os hyoides, or tongue-bone, but frequently applied with reference to the tongue itself.

Hyperbo'rean (L. hyperbo'reus), a. Pertaining to the extreme North.

Hyperchrom'atism, n. State of highly increased brightness or intensity of coloration, or excess of pigment.

Hyper'trophy, n. Unusual development of a part or organ. (Opposite of atrophy.)

Hypochon'driis, (L.; pl. hypochon'dria). The flanks. (Used chiefly

Hypochon'drium, in the plural.) (See plate XI.)

Hypochon'driac (L. hypochondria'cus), a. Pertaining to the flanks.

Hypognath'ous, a. Having the maxilla, or lower mandible, longer than the mandible, as in the Skimmers (Rhynchops).

Hypopti'lum (L.), n. An accessory plume, attached to the barrel or stem of ordinary feathers, excepting always the remiges and rectrices. (Essentially the same as after-shaft.)

Hypora'dii (L.; pl.), n. Barbs of the hypotilum, or after-shaft.

Hyporrha'chis (L.), n. The after-shaft, or stem of the accessory plume, or hypoptilum.

**Hypoth'esis**, n. A reasonable presumption to account for what is not understood, and hence to be distinguished from *theory*, based upon known facts.

Hypothet'ical, a. Reasonably presumptive, or probable, though assumed without proof.

### I.

Identifica'tion, n. The determination of the species to which a given specimen belongs.

Iden'tify, v. To determine the systematic name of a specimen.

Igno'ble (L. igno'bilis), a. Said of certain Hawks used in falconry. Technically, applied to the short-winged Hawks (that is, the Goshawk and Sparrowhawk), to distinguish them from the noble Falcons (that is, true Falcons).

Il'iac (L. ili'acus), a. Pertaining to the flanks.

Im'bricate, (L. imbrica'tus), a. Overlapped, like shingles upon a Im'bricated, roof.

Immac'ulate (L. immacula'tus), a. Entirely free from spots or other markings.

Immature', a. Not adult.

Imper'forate (L. imperfora'tus), a. Not pierced through.

Incised' (L. inci'sus), a. Cut out; cut away.

Incubation, n. The act of sitting on eggs in order to hatch them.

Incum'bent (L. incum'bens), a. Laid at full length. (Said of the hallux, or hind toe, when inserted on a level with the anterior toes.)

Indent'ed (L. indenta'tus), a. Notched along the margin with a different color.

In'dian Pur'ple, n. A very dull purple color, like the pigment of the same name. (Madder-carmine + intense blue + black.) (Plate VIII. fig. 6.)

In'dian Red, n. A fine rufous-red color, of a slightly more purplish tint than the pigments called Light Red and Venetian Red. Same as brick red. (See plate IV. fig. 11.)

In'dian Yel'low, n. A very intense, rich yellow color, much deeper than gamboge, but less pure than cadmium. (Plate VII. fig. 5.)

Indig'enous, a. Native of a country.

In'digo Blue (L. indigo'ticus), n. A dark dull blue color, like the indigo of commerce. (Plate IX. fig. 1.) In'fra- (in composition). Situated under, or beneath. (Opposite of supra, — above.)

Infraorb'ital (L. infraorbita'lis), a. Below the orbit. (Same as suborbital, which is more often used.)

Infla'ted (L. infla'tus), a. Blown out.

Inflex'ed (L. inflex'us) a. Turned inward.

Infundibu'liform, a. Funnel-shaped.

Inguin'al (L. inquina'lis), a. Pertaining to the groin.

In ner Toe, n. That situated on the inner side of the foot, whether anterior or posterior, but usually the former. (The anterior inner toe is usually the second, but in some zygodactyle forms, as the Trogons, it is the third, the second toe being reversed, thus becoming the inner posterior toe. In a very few—as certain Kingfishers—the second toe is rudimentary or wanting; while in others the first, or hallux, is reversed, and thus becomes the inner anterior toe.) (Plate XI.)

Insectivorous (L. insectivorus), a. Feeding upon insects.

Insesso'res (L.), n. An obsolete name formerly applied to an artificial group embracing the Passeres and other "perching" birds.

Insesso'rial, a. Pertaining to or having the character of perching birds. Insist'ent, a. Said of the hind toe when the greater part of its under

surface touches the ground. (Same as incumbent.)

In'stinct, n. "A certain power or disposition of mind, by which, independent of all instruction or experience, without deliberation, and without having any end in view, animals are unerringly directed to do spontaneously whatever is necessary for the preservation of the individual or the continuation of the kind."

Integ'ument, n. A covering or envelope, usually membraneous, as the skin of animals, the covering of a seed, etc.

In'ter (in composition). Between.

Intermax'illary, n. or a. The principal bone of the upper jaw, or relating to the same. (Same as premaxillary.)

Interorb'ital, a. Between the eye-sockets.

Interrham'al, a. Between the forks or rhami of the lower jaw.

Interrupt'ed (L. interrup'tus), a. Discontinued, or broken up.

Interme'diæ, n. The middle pair of tail-feathers, or middle rectrices. (Plate XI.)

Interscap'ular (L. interscapula'ris), a. Between the seapulars.

Interscap'ulars, n. The feathers of the interscapulum, or back.

Interscap'ulum (L.), n. The region between the scapular tracts, or the back proper. (Plate XI.)

Intertrop'ical, a. Between the Tropies; tropical.

Invag'inate (L. invagina'tus), a. Sheathed.

Inverse', a. Inverted; upside down.

I'rian, a. Pertaining to the iris.

Irides'cent (L. irides'cens), a. With changeable colors, or tints which vary with different inclinations to the light.

I'ris, n. The (usually) colored circle of the eye surrounding the pupil.
(Plate XII. fig. 11.)

Isabel'la-col'or (L. isabelli'nus), n. A light grayish cinnamon color, or light buffy brown. (Raw umber + raw sienna + white.) (Plate III. fig. 23.)

Isopo'gonous, a. Having the two webs equal in breadth.

Isth'mus, n. A narrow strip, or neck, connecting two larger areas.

### J.

Jug'ular (L. jugula'ris), a. Pertaining to the jugulum.

Jug'ulum (L.), n. The lower throat or foreneck, immediately above the breast. It is a well-defined area in the Hawks, Vultures, Pigeons, Ducks, and some other groups. (Plate XI.)

# K.

Kid'ney-shaped (L. renifor'mis), a. Somewhat heart-shaped, but without the point, and broader than long. (See reniform, plate XIV. fig. 19.)

Knee, n. Properly the femoro-tibial joint, concealed in most birds; but usually the tibio-metatarsal articulation, or heel, is so called.

# L.

Lac'erate (L. lacera'tus), a. Jagged, or slashed at the end or along Lacin'iate (L. lacinia'tus), the edge.

Lach'rymal (bone), n. A large bone bounding the orbit anteriorly and above; it is especially well-developed in certain Falconidæ.

Lacus'trine (L. lacus'tris), a. Lake-inhabiting.

Lake Red, n. A purplish red color, not so intense as crimson. (Medium tint of madder-carmine.) (Plate VII. fig. 2.)

Lamb'doid, a. L-shaped.

Lamelliros'tral (L. lamelliros'tris), a. Having a lamellate bill.

Lamelliros'tres (L.), n. A group of birds embracing the Anatidæ and Flamingoes, in which the bill is lamellate-edged.

Lam'ina,  $\{(L.), n. A \text{ thin plate or scale.} \}$ 

Lam'inate (L. lamina'tus), Lam'ellate (L. lamella'tus), a. Plated, or scaled.

Lan'ceolate (L. lanceola'tus), a. Lance-shaped; tapering gradually to a point at one end, and more abruptly at the other. (Plate XIV. fig. 12.)

Lanu'ginous (L. lanugino'sus), a. Woolly.

Lat'eral (L. latera'lis), a. Towards or on the side; pertaining to the side of anything.

Lat'erally, a. Sidewise; toward the side.

Lav'ender (L. lavendula'ceus), n. A very pale purplish color, paler and more delicate than lilac. (Violet + white.) (Plate VII. fig. 16.)

Lav'ender-Gray (L. lavendula'ceo-ca'nus), n. (Black + white + smaltblue.) (Plate II. fig. 19).

Lead-col'or (L. plum'beus), n. (See plumbeous.) (Plate I. fig. 15.)

Leg, n. As generally used, synonymous with tarsus; as, "legs and feet," = tarsi and toes.

Lem'on Yel'low (L. cit'reus; citrin'us), n. A very pure light yellow color, much like gamboge, but purer and richer. (Schoenfeld's "heller cadmium.") (Plate VI. fig. 11.)

Les'ser Wing-cov'erts (L. tec'trices mino'res), n. The smaller wing-coverts, forming a more or less well-defined tract immediately anterior to the middle coverts, and thence to the anterior border of the inner wing. (Plate XI.)

Li'lac, (L. lilaci'nus; lila'ceus), n. A light purple color, like the Lila'ceous, flowers of the lilac. (Purple + white.) (Pl.VIII. fig. 19.) Li'lac-Gray (L. lilaci'no-ca'nus), n. (Lamp-black + white + cobalt blue + madder-carmine.) (Plate II. fig. 18.)

Lim'bate (L. limba'tus), a. Edged with a different color.

Limico'læ (L.), n. The group of shore-birds; a more or less natural group, embracing the Plovers, Sandpipers, Snipe, Curlew, etc.

Limic'oline (L. limico'lus), a. Shore-inhabiting. Pertaining to, or having the character of, the Limicolae.

Lin'ear (L. linea'ris), a. Narrow, with straight parallel edges; line-like. (Plate XIV. fig. 10.)

Lin'eate (L. linea'tus), a. Marked with lines.

Lin'eolate (L. lineola'tus), a. Marked with little lines.

Li'ning of the Wing, n. The under wing-coverts collectively, especially the lesser and middle. (Plate XIII. fig. 1.)

Lit'toral (L. litto'ralis; litora'lis), a. Pertaining to the sea-shore.

Liv'er Brown (L. hepa'ticus), n. A dark purplish brown color, like raw liver. (Vermilion + black.) (Plate IV. fig. 4.)

Lo'bate, (L. loba'tus), a. Furnished with membraneous flaps, as the Lobed, toes of a Coot (Fulica).

Lobe (L. lo'bus), n. A membraneous flap.

Long-exsert'ed, a. Said of tail-feathers when abruptly much longer than the rest.

Longipen'nes (L.), n. A group of long-winged swimming birds, formerly embracing the gulls and their allies, and the *Procellariidæ* (petrels, albatrosses, and fulmars), but properly restricted to the Laridæ, Rhynchopidæ, and Stercorariidæ.

Longipen'nine (L. longipen'nis), a. Pertaining to the Longipennes.

Longiros'tral (L. longiros'tris), a. Having a long bill, or pertaining to the artificial and obsolete group Longirostres.

Longiros'tres (L.), n. An obsolete group of birds, embracing certain long-billed forms.

Longitud'inal (L. longitudina'lis), a. Running lengthwise, or in the direction of the antero-posterior axis of a body or object.

Lo'ral (L. lora'lis), a. Pertaining to the lores. (Plate XII. fig. 16.)

Lore (L. 'b'rum), n. The space between the eye and bill in birds. (Plate XI.)

Low'er Parts (L. gas'træum), n. The entire under surface of a bird, from the chin to the crissum, inclusive. (See plate XI., and note facing the same.)

Low'er Tail-cov'erts (L. tec'trices cau'dæ inferio'res; tec'trices subcauda'les), n. The feathers immediately underneath the tail. (See Crissum.) (Plate XI.)

Lum'bar, a. Pertaining to the loins.

Lu'minous (L. lumino'sus), a. Brilliantly shining; emitting light.

Lu'nulate (L. lunula'tus), a. Narrowly crescent-shaped. (Plate XV. fig. 5.)

Lu'nule (L. lu'nulus), n. A small or narrow crescent.

Lur'id (L. lur''dus), a. "A color between purple, yellow, and gray;" livid.

Lu'teous (L. lu'teus), a. Yellowish; more or less like buff or clay-color. Ly'rate (L. lyra'tus), a. Shaped like a lyre, as the tail of the male Black-cock (Lyrurus tetrix), or that of the Lyre-bird (Menura superba).

# M.

Mac'ula (L. ma'cula), n. A spot.

Mac'ulate (L. macula'tus), a. Spotted.

Mad'der Brown, n. A very rich reddish brown color, more purplish than burnt sienna. (Purple madder + burnt sienna.) (Plate IV. fig. 3.)

Magen'ta,
Magen'ta Pur'ple,

(\*\*n. An exceedingly rich reddish purple color, similar to solferino, but darker. (Anilinrosa or rose aniline + aniline violet.) (Plate VIII. fig. 14.)

Maize Yel'low, n. A delicate pale yellow, similar to Naples Yellow, but paler; more creamy than primrose-yellow. (Light cadmium + white.) (Plate VI. fig. 21.)

Mala (L.), n. The side of the lower jaw, behind the horny covering of the mandible.

Mal'achite Green, n. A light green color, like the mineral called malachite. (Italian ultramarine + light cadmium + white.) (Plate X. fig. 6.)

Ma'lar (L. mala'ris), a. Pertaining to the mala. (Plate XII. figs. 3, 19.) Ma'lar A'pex (L. an'gulus malar'is), n. The extreme anterior point of the

malar region. (Plate XII. fig. 3.)

Ma'lar Re'gion (I. re'gio mala'ris), n. The side of the lower jaw behind the horny covering of the mandible, usually feathered. In most birds it is a well-defined tract, extending backward from the base of the maxilla, beneath the lores, orbits, and auriculars; and bounded beneath by the chin and throat. (Plate XI.)

Man'dible (L. mandi'bula), n. The jaw; when not otherwise indicated, the lower part of the bill is understood. (Plate XI.)

Mandib'ular (L. mandibula'ris), a. Pertaining to the mandible.

Man'tle (L. pal'lium: stra'gulum), n. In certain Laridæ and some other birds, the mantle is that portion of the upper plumage distinguished from the other parts by a peculiar and uniform color, suggesting, by its position, a mantle thrown over the body. It usually includes simply the back, scapulars, and wings, and the term is perhaps appropriate only when thus restricted. (See plate XI., and note facing the same.)

Mar'bled (L. marmora'tus), a. Distinctly varied with irregular markings,

or a confused blending of irregular spots, streaks, etc.

Mar'bling, n. Markings which resemble, or suggest, the variegation of marble. In marbling, as applied to the plumage of birds, the markings are much more definite and distinct than in clouding, or nebulation.

Marine' (L. mari'nus), a. Pertaining to the sea.

Marine' Blue, n. A very rich dark blue color. (Winsor & Newton's "intense blue.") (Plate IX. fig. 2.)

Mar'gined (L. margina'tus), a. Narrowly bordered with a different color.

Maroon' (L. a'tro-purpu'reus; a'tro-coccin'eus), n. A rich brownish crimson,
nearly like the pigment called Purple Madder; claret color. (Maddercarmine + purple madder.) (Plate IV. fig. 2.)

Maroon'-Pur'ple, n. See plate VIII. fig. 9. (Madder-carmine + purple

madder.)

Mars Brown, n. A bright, somewhat yellowish brown color, nearly intermediate between cinnamon and mnmmy brown. (Sepia + burnt umber + orange-cadmium.) (Plate III. fig. 13.)

Mask'ed (L. persona'tus; larva'tus; capistra'tus), a. Having the anterior portion of the head colored differently, in a conspicuous manner, from

the rest of the plumage.

Max'illa (L.), n. The jaw; but best restricted to the upper jaw, sometimes called upper mandible. (Plate XI.)

Max'illar, Max'illary, (L. maxilla'ris), a. Pertaining to the maxilla or upper bill.

Mauve (L. malva'ceus; malvi'nus), n. A light tint of violet. (Aniline violet + white.) (Plate VIII. fig. 13.)

Me'dian, (L. media'nus), a. Along the middle line.

Mel'anism (L. melanis'mus), n. A peculiar state of coloration resulting from excess of black or dark pigment. The normal colors of the plumage are replaced by a more or less continuous black or dusky color. The opposite extreme of color from albinism, and of frequent occurrence in the family Falconide.

Melanis'tic (L. melanis'ticus), a. Affected with melanism. Melanot'ic,

Mem'brane (L. mem'brana), n. A thin, flexible integument or skin, as the webs between the toes of ducks, etc.

Mem'braneous, a. Of a soft skinny nature, as the soft skin about the base of the bill of pigeons, the webs between the toes in ducks, etc.

Men'tal (L. menta'lis), a. Pertaining to the chin, or mentum.

Men'tal A'pex (L. an'gulus menta'lis), n. The extreme anterior point of the chin. (Plate XII. fig. 4.)

Men'tum (L.), n. The chin, or anterior part of the space between the rhami of the lower jaw.

Me'sial, a. Along the middle line. (Same as medial.)

Meso- (in composition). Middle; median.

Mesorhin'al (L. mesorhi'nus), a. Situated between the nostrils.

Metacar'pal (L. metacarpa'lis), a. Pertaining to the hand, or metacarpus.

Metacar'pus (L.), n. The hand, exclusive of the fingers; the segment of the wing between the carpus and digits.

Metagnath'ous (L. metagna'thus), a. Cross-billed, with the points of the maxilla and mandible crossing on the right and left.

Metal'lic (L. metal'licus), a. As applied to colors having a brilliant appearance, like burnished metal.

Metatar'sal, a. Pertaining to the metatarsus.

Metatar'sus (L.), n. That portion of the leg of birds which in descriptive Ornithology is called the *tarsus*; or that portion, usually unfeathered, which extends from the toes to the so-called "knee" (that is, the heel).

Mid'dle Toe, n. The middle one of the three anterior toes. It is usually 4-jointed, and longer than the lateral toes. In numerical order it is the third, the hind toe, or hallux, being the first, and the inner toe the second. In zygodactylous birds it corresponds to the outer anterior toe, the fourth toe being reversed. (Plate XI.)

Mid'dle Cov'erts, Mid'dle Wing-cov'erts, Me'dian Cov'erts, (L. tec'trices a'læ me'diæ; tec'trices a'læ perver'sæ), n. The series of coverts, usually in a single transverse row, situated between the lesser and greater, or secondary coverts. They usually overlap one another in the reverse manner from the other coverts, the inner or upper edge being the one exposed. (Plate XI.)

Migra'tion (L. migra'tio), n. Periodical change of abode, influenced chiefly by seasonal changes in climate, in which case the migration

is regularly periodical, the vernal or spring migration being in the northern hemisphere, northward, the autumnal migration southward, but vice versa in the southern hemisphere. The migrations of many birds, however, are irregular or erratic, being prompted by the necessity of finding the requisite food-supply. The Passenger Pigeon (Ectopistes migratoria), American Robin (Merula migratoria), Cedar-bird (Ampelis cedrorum), etc., are migratory in this sense; while the Tanagers, Orioles, and others, which pass the summer only in northern latitudes and the winter entirely within the tropics, are periodical migrants.

Mimet'ic (L. mimet'icus), a. Imitative; pertaining to or given to mimiery.

Mim'esis (L),

Mim'icry,

mim'icry,

mim'icry,

mim'icry,

mim'icry,

mim'icry,

mim'icry,

mim'icry or imitation of voice, shape, color, etc.

mimicry is applied to animals which imitate in color or shape objects by which they are surrounded or species with which they are associated.

Mir'ror (L. spec'ulum), n. A name occasionally given to the speculum or metallic wing-spot of ducks, etc.

Mol'lipilose (L. mollipilo'sus), a. Softly downy.

Monog'amous, a. Mating with a single individual of the opposite sex.

Applied to species which pair. Those in which the male assists in incubation and rearing the young are doubly monogamous.

Monog'amy, n. The state of pairing, or having a single companion.

Mon'ograph, n. A special treatise upon a given subject; as, a Monograph of the Woodpeckers, a Monograph of the Genus Sylvia, a Monograph of the Great Auk, etc.

Monomorph'ic, a. Of essentially the same or similar type of structure. (Opposite of polymorphic.)

Monoto'kous, a. Laying a single egg, as the Petrels, Auks, etc. (Same as uniparous.)

Morpholog'ical, a. Pertaining to morphology.

Morphol'ogy, n. The science which treats of the laws of form, or the principles of structure. Morphology is the basis of homology, while analogy is based upon teleology.

Mouse Gray (L. muri'no-gris'eus; murinus), n. (Lamp-black + white + sepia.) (Plate II. fig. 11.)

Moustache' (L. mys'tux), n. In descriptive Ornithology any conspicuous stripe on the side of the head beneath the eye.

Mu'cronate (L. mucrona'tus), a. Spine-tipped, as the rectrices of the Chimney-swift (Chatura pelagica).

Mucron'ulate (L. mucronula'tus), a. Tipped with small points.

Multip'arous, a. Producing many eggs.

Mum'my Brown, n. A bright brown color, nearly intermediate in tint between burnt umber and raw umber. The pigment of this name is prepared from ground Egyptian mummies. (Mummy; also, sepia + raw umber + burnt sienna.) (Plate III. fig. 10.)

Mu'ral (L. mura'lis), a. Pertaining to a wall.

Mu'ricate, Mu'ricated, (L. murica'tus), a. Clothed with sharp points, or prickles.

Myr'motherine (L. myrmotheri'nus), a. Applied to birds which feed upon ants.

Myr'tle Green, n. A dark bluish green color, like the upper surface of leaves of the myrtle (Myrtus communis). (Schoenfeld's "dark zinnober green," or Winsor & Newton's "Prussian green.") (Plate X. fig. 2.)

### N.

Nape (L. nu'cha), n. The upper portion of the hind-neck, or cervix.

Na'ples Yel'low, n. A very pale ochrey yellow, varying in shade from a very pale buff (as in the pigment called French Naples-yellow) to a deep yellowish buff or straw-yellow tint (as in the English pigment). (Plate VI. fig. 18.)

Na'ris (L.; pl. na'res), n. The nostril. The external nares open upon some part of the maxilla or upper mandible. In some birds (as the Pelicans, Cormorants, and other Steganopodes, and the Toncans, they are basal and more or less obsolete; in others, as the Woodpeckers and members of the Crow family, they are concealed by the antrorse frontal tufts of feathers. The internal nares open as longitudinal slits in the posterior portion of the palate.

Na'sal (L. nasa'lis), a. Pertaining to the nostrils.

Na'sal oper'culum, n. The scale or hardened membrane overhanging the nostril in some birds. (Plate XII. fig. 9.)

Nas'cent, a. Beginning to grow or exist, or in process of development. A nascent species is one which is yet connected with the ancestral stock by individuals of intermediate character. Well-known examples may be cited in the Colaptes auratus and C. mexicanus, which possess very uniform and pronounced characteristics of color, etc., but are connected by specimens of intermediate characters, formerly supposed to be hybrids, but which are now with good reason believed to be merely representatives of the ancestral stock, and tending more or less toward one or the other of the extremes of differentiation represented by the above-named nascent species.

Nata'tion, n. Act of swimming.

Natato'res (L.), n. Swimming birds, as geese, ducks, gulls, etc.

Natato'rial (L. natato'rius), a. Capable of swimming; pertaining to the act of swimming, or to swimming birds.

Navic'ular (L. navicula'ris), a. Boat-shaped.

Nearc'tic (L. nearc'ticus), a. Pertaining to the northern portion of the New World or Western Hemisphere. The Nearctic Realm, or Region, is a primary zoö-geographical division of the earth's surface, made with reference to the natural distribution of animals, and is essentially coincident in area with the North American continent.

Neb'ulated (L. nebulo'sus), a. Clouded, or indistinctly marked with faint, indefinite, and irregular colors.

Ne'moral (L. nemora'lis), a. Pertaining to a wood or grove.

Neogæ'an, a. Pertaining to the Western Hemisphere or New World.

Neossol'ogy, n. The study of young birds.

Neotrop'ical (L. neotropica'lus), n. Pertaining to the tropical portions of America, or the New World.

Nidifica'tion, n. Nest-building, or nesting habits.

Nile Blue, n. A very delicate fine light greenish blue color. (Schoenfeld's "lichtblau.") (Plate IX. fig. 23.)

No'menclature, n. The names of things, according to a recognized principle of naming, or those peculiar to any department of science. Various systems of nomenclature have been employed in the naming of animals and plants. Previous to the institution of the binomial system by Linnaus (first promulgated as to zoology in 1758), the polynomial system, or the use of several terms as the name of a species, was much in vogue. That now employed is the binomial system of Linnaus, in which usually only two terms are used, the one generic, the other specific, but occasionally modified, according to the requirements of modern science, by the use of a third term after the specific one, for the designation of nascent species, or "subspecies."

Nor'mal (L. norma'lis), a. Usual; regular; or in conformity with a particular rule or standard.

Nos'tril (L. na'ris, pl. na'res), n. The external openings of the organs of respiration.

Notæ'um (L.), n. The Latin equivalent for "Upper Parts."

Nu'cha (L.), n. The nape, or upper part of the cervix. (Often, but incorrectly, used for the whole cervix.)

Nu'chal (L. nucha'lis), a. Pertaining to the nape.

Nup'tial or'naments (L. ornamen'ta nuptia'lia), n. As distinguished from nuptial plumes, any temporary growth from the unfeathered portion of a bird, characteristic of or peculiar to the breeding season. The compressed maxillary process of the American White Pelican (Pelecanus erythrorhynchos), and the accessory or supernumerary portions of the bill in many Alcidæ, are among the best-known examples.

Nup'tial plu'mage (L. ves'tis nuptia'lis), n. A particular plumage, peculiar to the breeding season, characteristic of some birds.

Nup'tial plumes (L. plu'mæ nuptia'les), n. Ornamental feathers acquired at the approach of the breeding season, and cast at the close of that period; as the lengthened plumes of many Herons, the crests and filamentous feathers of some Cormorants, etc.

# 0.

Oar'ed, a. An oared foot (L. stegano'pus) has the hind toe or hallux united on one side with the anterior toes by a web or connecting membrane. Hence the name Steganopodes, applied to the group including the Pelicans, Cormorants, etc., in which the feet are of this character.

Obcord'ate (L. obcorda'tus), a. Shaped like an inverted heart.

Oblique' (L. obli'quus), a. Slanting; crossing, or running, diagonally.

Ob'long (L. oblon'gus), a. Longer than broad.

Obome'goid (L. obome'goideus), a. Obversely omegoid. (Plate XV. fig. 8.)

Obo'vate (L. obova'tus), a. Inversely ovate. (Plate XIV. fig. 6.)

Obscure' (I. obscu'rus), a. Dusky, or without distinct definition; little known. It is sometimes improperly used in the same sense as obsolete, but the two terms are quite distinct in meaning; an obscure or obscured marking is one which is rendered indefinite by a suffusion with the surrounding color; an obsolete marking is one rendered indistinct by lack of intensity or depth of color.

Ob'solete (L. obsole'tus), a. As applied to words or writings, disused or neglected. In the natural-history sense, indistinct, rudimental, faded. An obsolete spot, or bar, is one which, while representing a well-developed marking on another individual of the same species, or on another species with which the one being described is compared, is nearly or quite wanting from encroachment of the adjacent color, or lack of intensity of color in itself. Hence, obsolete, as used in this sense, is quite distinct from obscure, often improperly treated as synonymous; an obscure spot or other marking being one which lacks distinct definition through suffusion of its own color with that adjacent.

Obtuse' (L. obtu'sus), a. Blunt. (Opposed to acute.)

Occip'ital (L. occipita'lis), a. Pertaining to the hind-head, or occiput.

Oc'ciput (L.), n. The back part of the head, bounded below by the nape, anteriorly by the vertex. (Plate XI.)

Oc'ellate (L. ocella'tus), a. Marked with ocelli, or eye-spots. (Plate XIV. fig. 3.)

Ocel'lus (L.; pl. ocel'li), n. A distinct, rounded, usually brightly colored spot, more or less resembling the "eyes," or ocelli, of a Peacock's train.

Ochra'ceous, (L. ochra'ceus), a. Of the color of certain ochre pigments; Och'reous, a brownish orange color, or intense buff. (Light och'rey, No. 2, of Schoenfeld.) (Plate V. fig. 7.)

Ochra'ceous-Buff (L. ochra'ceo-lu'teus), n. (Yellow ochre + burnt sienna + white.) (Plate V. fig. 10.)

Ochra'ceous-Ru'fous (L. ochra'ceo-ru'fus), n.(Yellow ochre + burnt sienna + light red). (Plate V. fig. 5.)

O'chre-Yel'low (L. ochra'ceo:flavus), n. The color of the pigment called vellow ochre. (Plate V. fig. 9.)

Oc'reate (L. ocrea'tus), a. Booted, or having the anterior covering of the tarsus undivided for the greater part of its length.

Odontor'nithes (L.), n. The name of an extinct order or primary group of birds, comprising forms which possessed teeth in sockets, and thus, as well as in other features, more nearly approaching the reptiles in their structure than any living forms.

Oil Green (L. oleagin'eus), u. A dull light yellowish green. (Schoenfeld's yellow-green zinnober.) (Plate X. fig. 21.)

Olfac'tory, n. Pertaining to the sense of smell.

Oligoto'kous, a. Producing few eggs.

Oliva'ceous, (L. oliva'ceus; olivi'nus), n. A greenish brown color, like that of olives. (Sepia + light zinnober green.) (Plate III. fig. 9.)

Ol'ive-Buff (L. oliva'ceo-lu'teus), n. (Yellow ochre + cobalt blue + white.) (Plate V. fig. 12.)

Ol'ive-Gray (L. oliva'cco-ca'nus), n. (Black + white + light cadmium.) (Plate II. fig. 14.)

Ol'ive-Green (L. oliva'cco-vi'ridis), n. A peculiar color, common in birds (especially the Warblers, and hence sometimes called "warblergreen"), produced by the mixture of yellow and gray, resulting in a tint somewhat between olive and dull yellowish green. (Light zinnober green + raw umber.) (Plate X. fig. 18.)

Ol'ive-Yel'low (L. oliva'ceo-fla'vus), n. (Light cadmium + black + white.) (Plate VI. fig. 16.)

Omniv'orous (L. omniv'orus), a. Feeding upon anything catable; cating indiscriminately.

Ome'goid (L. ome'goideus), a. Resembling in form the Greek capital letter Ome'ga,  $\Omega$ .

Oölog'ical, a. Pertaining to oölogy.

Oöl'ogy, n. The science of birds' eggs.

Opales'cence, n. A reflection of pearly tints from a pale or milky ground-color.

Opales'cent (L. opales'cens; margarita'ceus¹), a. Reflecting changeable tints from a pale or milky ground-color.

Opaque' (L. opa'cus), a. In descriptive Ornithology, the opposite of metallic, or brilliant. Dull, or without gloss.

Oper'culum (L.), n. A lid, or cover, such as the scale overhanging the nostrils (operculum naris) of many birds.

Ophthal'mic (L. ophthal'micus), a. Pertaining to the eye.

Op'tic, a. Pertaining to the sight.

<sup>&</sup>lt;sup>1</sup> Properly, this term means pearly; but as used in descriptions the terms are essentially synonymous.

O'ral (L. ora'lis), a. Pertaining to the mouth.

Or'ange (L. aurau'tius), n. A deep reddish yellow, like the rind of an orange. (Winsor & Newton's cadmium-yellow.) (Plate VI. fig. 3.)

Or'ange-Buff (L. auran'tio-lu'teus), n. (Cadmium-orange + white.)
(Plate VI. fig. 22.)

Or'ange-Chrome, (L. auran'tio-ru'brum; flam'meus; ig'neus), n. A fine bright light red color, verging somewhat to orange, like the pigment called orange-chrome. (Plate VII. fig. 13.)

Or'ange-Ochra'ceous (L. auron'tio-ochra'ceus), n. (Cadmium-orange + yellow ochre + burnt sienna.) (Plate V. fig. 3.)

Or'ange-Ru'fous (L. auran'tio-ru'fus), n. (Neutral orange, or cadmiumorange + light red.) (Plate IV. fig. 13.)

Or'ange-Vermil'ion (L. auran'tio-cinnabari'nus), n. See plate VII. fig. 12. (Scarlet-vermilion + orange-cadmium.)

Or'ange-Yellow (L. auran'tio-fla'vus), n. A color intermediate between orange and yellow.

Orbic'ular (L. orbicula'ris), a. Circular.

Or'bit (L. or'bitus), n. The region immediately around the eye.

Or'bital Ring, n. A ring or circle of color immediately surrounding the eyc. (Plate XII. fig. 12.)

Or'der (L. or'do, pl. ordines), n. In natural history, a group of families possessing in common peculiar characteristics.

Or'dinal, a. Pertaining to an order.

Ornith'ic, a. Pertaining to birds.

Ornithol'ogy, n. The science of birds.

Ornithot'omy, n. The anatomy of birds.

Or'piment Or'ange, n. A deep dull orange color, much less pure than cadmium. (Cadmium-orange + burnt sienna.) (Plate VI. fig. 1.)

Os'cinine, a. Pertaining to the Oscines; musical, or capable of singing.

Os'cines (L.), n. The name of a natural group of singing passerine birds, comprising the singing-birds par excellence, characterized by a highly specialized vocal apparatus. (Same as Polymyodæ.)

Os'seous, a. Bony.

Os'sified, a. Become bony.

Osteolog'ical, a. Pertaining to osteology.

Osteol'ogy, n. The science of bones; description of the bones or the bony structure of animals; also, the osseous system.

Out'er Web (L. pogo'nium exte'rius; pogo'nium externum), n. The outer web of a feather is that farthest from the central line of the body; in wing-feathers it is that farthest from the base of the wing, or toward the outer edge of the wing.

Out'er Toe, n. See plate XI.

O'val (L. ova'lis), a. Shaped like the longitudinal outline of an egg which has both ends of equal or of similar contour. (Plate XIV. fig. 5; plate XVI. fig. 11.)

O'vate, O'void, Ovoid'al, (L. ova'tus), a. Shaped like an egg which has one end more pointed than the other. (Plate XIV. fig. 7; plate XVI. fig. 1.)

Ova'rium (L.; pl. ova'ria), n. The organ in which eggs are developed. O'vary (pl. ova'ries),

O'viduct (L.), n. The tube through which the egg passes from the ovary.

Ovip'arous, a. Producing eggs in which the young develop after exclusion from the body.

Oviposi'tion, n. Act of laying eggs.

### Ρ.

Palæarc'tic (L. palæarc'ticus), a. Pertaining to the northern portion of the Eastern Hemisphere, or Old World.

Palæogæ'an, a. Pertaining to the Eastern Hemisphere, or Old World.

Palæornithol'ogy, n. The science of fossil birds.

Pal'ama (L.), n. The web or membrane between the toes of certain birds.

Pal'atal, Pertaining to the palate.

Pal'ate (L. pal'atum), n. The roof of the mouth.

Pal'ea (L.), n. A dewlap, or fleshy pendulous skin on the throat or chin, as in a Turkey or domestic fowl.

Pal'lium (L.), n. A mantle.

Pal'mate, { (L. palma'tus), a. Having the three anterior toes full-Pal'miped, (Compare Semipalmate and Totipalmate.)

Pal'pebra (L.), n. The eyelid.

Pal'pebral (L. palpebro'sus), a. Pertaining to the eyelids.

Pal'pebrate (L. palpebra'tus), a. Having eyelids.

Palu'dicole (L. paludi'colus), a. Marsh-inhabiting.

Pal'udine (L. paludi'nus), Palus'trine (L. palus'tris), a. Pertaining to a marsh or swamp.

Pan'durate (L. pandura'tus), \(\rangle a\). Fiddle-shaped. (Plate XIV.

Pandu'riform (L. pandurifor'mis), fig. 18.)

Pan'sy Pur'ple, n. An exceedingly rich and very intense deep purple color, like that of some varieties of the pansy (*Viola tricolor*). (Intense blue + madder carmine + rose tyrien.) (Plate VIII. fig. 5.)

Pap'illa (L. pl. papil'la), n. A small nipple-like elevation.

Pap'illose (L. papillo'sus), a. Having papillæ.

Pap'ula (L.; pl. pap'ula), n. A pimple, or pimple-like elevation.

Pap'ulous, \ (L. papulo'sus), a. Pertaining to or having pimples. Pap'ulose,

Paragnath'ous, a. Having both mandibles of equal length, the tips meeting.

Par'asite, n. In Oölogy, a species which constructs no nest and performs none of the duties of incubation or rearing of the young, but imposes on other birds for this purpose. A parasitic bird is also a species which obtains its food by systematically robbing other species; as the Parasitic Jaeger (Stercorarius parasiticus), Bald Eagle (Haliæetus leucocephalus).

Parasit'ic (L. parasit'icus), a. Depositing the eggs in the nests of other birds, to which are left the duties of incubation and care of the young. The European Cuckoo (Cuculus canorus) and the common Cow Blackbird (Molothrus ater) are well-known examples.

Par'is Blue, n. A rich blue color, nearly intermediate between Berlin blue and Antwerp blue. (Schoenfeld's Paris blue.) (Plate IX. fig. 7.)

Par'is Green, n. The finest and most intense of all green pigments. (Paris green.) (Plate X. fig. 13.)

Parot'ic, (L. parot'icus), a. Pertaining to the region immediately Parot'id, beneath the ear.

Par'rot Green (I. psitta'ceus; psittacin'us), n. A rich, somewhat yellowish green color, like the plumage of many species of Parrots. (Schoenfeld's light green zinnober.) (Plate X. fig. 7.)

Pas'seres (L.), n. A group of birds including the most highly developed forms, such as the Thrushes, Warblers, the Sparrow tribe, Crow family, etc., but not the Swifts, Humming-birds, Kingfishers, Woodpeckers, etc., which belong to entirely distinct orders.

Pas'serine (L. passeri'nus), a. Pertaining to or having the characters of the Passeres.

Pea Green, n. A pale dull green color, like the color of green pea-pods. (Sap green + white.) (Plate X. fig. 9.)

Peach-blossom Pink, n. A delicate light pink color, of a more fleshy tint than rose pink. (Schoenfeld's pink madder.) (Plate VII. fig. 21.)

Pearl Blue, n. A very pale purplish blue color. (White + French blue.) (Plate IX. fig. 17.)

Pearl Gray (L. margarita'ceus; margarita'cco-ca'nus), n. A very pale, delicate blue-gray color, like the mantle of certain gulls. (White + intense blue.) (Plate II. fig. 20.)

Pec'tinate, \(\) (L. pectina'tus), a. Having tooth-like projections like the Pec'tinated, \(\) teeth of a comb, as the toes of the grouse.

Pectina'tion, n. Comb-like toothing.

Pec'toral (L. pectora'lis), a. Pertaining to the breast.

Pec'tus (L.), n. The breast.

Pe'des (L.; pl. of pes), n. The feet, which in birds includes the leg below the tibia.

Pelag'ic (L. pela'gicus), a. Frequenting the high seas.

Pelas'gic (L. pelas'gicus), a. Wandering.

Pel'ma (L.), n. The under surface of the foot.

Penicil'late (L. penicilla'tus), a. Brush-tipped or pencil-like.

Pen'na (L.), n. A perfect feather.

Penna'ceous (L. penna'ceus), a. Pertaining to a perfect feather, or having the character of the same.

Per'forate (L. perfora'tus), a. Pierced through; said of nostrils which communicate with one another by reason of the absence of a septum, as in the American Vultures (Cathartidæ).

Peristeromorph'æ (L.), n. The Huxleyan name, meaning "dove-formed," of the order Columbæ.

Per'vious, a. Open; used synonymously with perforate, as applied to the nostrils.

Pe'trous, a. Stony; hard like stone.

Phal'anx (L.; pl. phalan'ges), n. In birds, a joint (not hinge, or articulation) or segment of the toes.

Phase, n. Used more especially in the case of dichromatic species, as the melanistic phase, the rufescent phase, etc.

Phlox Pur'ple, n. A very fine, medium, or rather light reddish purple, like the color of some varieties of Phlox. (Violet madder + rose tyrien.) (Plate VIII. fig. 11.)

Phys'ical, a. Pertaining to the bodily organization.

Physiog'nomy, n. The general appearance. Properly, the countenance, with respect to the temper of the mind.

Physiol'ogy, n. The science of bodily functions.

Pi'ci (L.), n. The name of a natural group, or Order, of zygodactyle birds, comprising the Woodpeckers and Wrynecks.

Pi'cine (L. pici'nus), α. Pertaining to the Woodpecker tribe; woodpeckerlike.

Pictu'ra (L.; pl. pictu'ræ), n. Pattern of coloration of a particular part, or a particular feather.

Pig'ment, n. Coloring-matter.

Pil'eated, { (L. pilea'tus), a. Capped, or with the whole pileum crested. Differing from crested, in that the latter is used to designate an elongation of the feathers on a particular part of the pileum, as a frontal, vertical, or occipital crest.

Pil'eum (L. pi'leus), n. The cap, or whole top of head from bill to nape, and therefore including the forehead, vertex (or crown), and occiput. (Plate XII.)

Pil'ose (L. pilo'sus), a. Slightly hairy.

Pink (L. caryophylla'ceus), n. A dilute rose-red color. (See Rose Pink, and Peach-blossom Pink.)

Pink'ish Buff (L. caryophylla'ceo-lu'teus), n. (Yellow ochre + light red + white.) (Plate V. fig. 14.)

Pink'ish Vina'ceous (L. caryophylla'ceo-vina'ceus), n. (Winsor & Newton's Indian red + white.) (Plate IV. fig. 18.)

Pin'nate, (L. pinna'tus), a. Having wing-like tufts of elongated Pin'nated, feathers on the side of the neck.

Pin'niform (L. pinnifor'mis), a. Fin-like, as a Penguin's wing.

Pin'tailed, a. Having the central tail-feathers elongated and narrowly acuminate, as in the male Pin-tail Duck (Dafila acuta).

Pisciv'orous (L. pisci'vorus), a. Feeding upon fish.

Pla'ga (L.), n. A stripe.

Plan'ta (L.), n. The posterior face of the tarsus.

Plan'tar, a. Pertaining to the planta.

Plan'tigrade, a. Walking on the back of the tarsus.

Plas'tic, a. Capable of being moulded; easily modified.

Plum Pur'ple, n. A rich dark violet-purple. (Madder carmine + intense blue.) (Plate VIII. fig. 4.)

Plu'ma (L.), n. A feather.

Plu'mage (L. indumen'tum), n. The feathering in general.

Plum'beous (L. plum'beus), n. A deep bluish gray color, like tarnished lead: lead-color. (Lamp-black + intense blue + white.) (Plate II. fig. 15.)

Plum'iped (L. plum'ipes), a. Having the feet feathered.

Plu'mose (L. plumo'sus), a. Feathered.

Plu'mula (L.), n. A down-feather.

Plumula'ceous (L. plumula'ceus), a. Downy; bearing down.

Po'dium (L.), n. The foot.

Podothe'ca (L.), n. The whole envelope of the legs and feet.

Pogo'nium (L.; pl. pogo'nia), n. The web of a feather.

Pol'lex (L.), n. The thumb. In birds, the joint (homologous with the index-finger of man) which bears the alula, or bastard-wing.

Polyg'amous, a. Mating with many females, as the domestic cock.

Polymorph'ic, a. Many-formed; containing or consisting of many forms, or different types. In Ornithology, a species is "polymorphic" when it presents several distinct phases of coloration in the same locality or within a restricted geographical area. Thus, some of the hawks (e. g. Buteo swainsoni) are polymorphic in this sense.

Polymyo'dæ, n. The name of a natural group of passerine birds, characterized by highly specialized vocal organs. (Synonymous with

Oscines.)

Polyno'mial, a. or n. Consisting of several words, as the polynomial nomenclature, by which a species was designated by a descriptive phrase. This system of nomenclature preceded the establishment of the binomial system, established by Linuæus. A name consisting of several words.

Polyto'kous, a. Producing many eggs, or young. (Synonymous with

multiparous.)

Pomegran'ate Pur'ple (L. puni'ceo-purpu'reus; puni'ceus; phæni'ceus), n. A dull reddish-purple color, like the pulp of some varieties of the pomegranate (Punica granatum). (Madder carmine + violet madder.) (Plate VIII. fig. 12.)

Pop'py Red, n. A very intense red color, intermediate between vermilion and carmine. (Bourgeois's "laque ponceau.") (Plate VII. fig. 9.)

Poste rior (Upper or Lower) Parts, n. The hinder half of a bird, above or below.

Poste'rior Toe, n. In most birds, the hallux, or hind toe. In some, however, one of the "anterior" toes is directed backward, and also becomes a posterior, or hind, toe.

Postoc'ular (L. postocul'aris), {
 a. Back of, or posterior to, the eye.
 The former is most used. (Plate XII. fig. 17.)

Pow'der-down Feath'ers, n. Peculiar, imperfect feathers, which grow in matted patches, usually on the interspaces between the true feather-tracts; characterized by a greasy texture and scurfy exfoliation. They are particularly characteristic of the Heron tribe (Ardeidæ), but are found in other groups also.

Præco'ces (L.), n. A more or less artificial group of birds, whose young run about and feed themselves immediately after emerging from the egg. The group is composed of the orders Gallinea, Limicola, Alectorides, Anseres, Pygopodes, and Struthiones.

Præco'cial, a. Having the nature of, or pertaining to, the Præcoces.

Pressiros'tral, a. Pertaining to the Pressirostres.

Pressiros'tres (L.), n. The systematic name of a Cuvierian artificial group of grallatorial birds with hard and compressed bill, comprising the Plovers, Cranes, etc.

Pri'mary (L. rem'iges prima'riæ), n. Any one of the quill-feathers of the "hand-wing," usually nine to eleven in number. Used chiefly in the plural, as distinguished from the secondaries, or those remiges which grow upon the forearm. (Plate XI.)

Pri'mary Cov'erts (L. tec'trices prima'riæ), n. The series of stiff feathers, usually corresponding with the primaries in their graduation, which

overlie the basal portion of the latter. (Plate XI.)

Prim'rose Yel'low (L. primula'ceo-fla'vus), n. A very delicate pale yellow, of a more creamy tint than sulphur-yellow. (Pale cadmium + white.) (Plate VI. fig. 13.)

Proce'res, { (L.), n. A name given by Illiger to the Struthiones.

Protrac'tile, a. Capable of being thrust forward or elongated, as the Protru'sile, tongue of a Woodpecker or a Humming-bird.

Prout's Brown n. A medium brown color, or the typical brown, composed of equal proportions of green and red. (Madder carmine + vermilion + pale cadmium + Italian ultramarine; or, Winsor & Newton's "Prout's brown.") (Plate III. fig. 11.)

Prune Pur'ple, n. A dark reddish-purple color, darker and duller than dahlia purple. (Purple madder + violet madder.) (Plate VIII.

fig. 1.)

Prus'sian Blue, n. A very intense and rich blue color, darker and more greenish than ultramarine and cobalt. Similar to, but less pure than, Antwerp blue, and not a reliable color.

Psilopæ'des (L.), n. A more or less artificial group of birds born weak and helpless, and further distinguished by a scant growth of down affixed to the undeveloped pterylæ, or future feathers, to which it is temporarily attached. The Passeres and most of the Picariæ belong to this group. (Synonymous with Gymnopædes.)

Psilopæ'dic, a. Pertaining to, or having the nature of, the Psilopædes.

Psitta'ci (L.), n. A very natural group of birds, comprising the Parrot-

tribe only.

Psittacomorph'æ (L.), n. The Huxleyan name, meaning "Parrot formed," for the order *Psittaci*.

Ptery'la (L.; pl. ptery'læ), n. An area or tract of the skin on which feathers grow. A "feather tract."

Pterylog'raphy, n. A description of the plumage, with reference to the distribution of the feather-tracts or pterylæ.

Pterylo'sis (L.), n. The plumage, considered with reference to its distribution on the skin.

Ptilopæ'des (L.), n. A more or less artificial group of birds, instituted by Professor Sundevall, including those which at birth are covered with down. (Synonymous with Dasypædes.)

Ptilopæ'dic, a. Pertaining to or having the character of *Ptilopædes*.

Clothed at birth with down, like the chick of the domestic fowl, a duckling, or a gosling.

Ptilo'sis (L.), n. Plumage.

Pul'lus (L.), n. A chick. Applied to the downy young of Ptilopædic or Præcocial birds.

Punc'tate (L. puncta'tus), a. Dotted. (Plate XV. fig. 12.)

Pu'pil (L. pupil'la), n. The central black (or dark blue) spot or disk of the eye, enclosed within the iris. (Plate XII. fig. 10.)

Pur'ple (L. purpu'reus), n. A color intermediate between red and blue, or produced by the combination of these colors.

Pygopo'des (L.), n. A group of swimming birds, containing the families  $Podicipidid\alpha$ ,  $Colymbid\alpha$ , and  $Alcid\alpha$ , distinguished by the extreme posterior position of the legs.

Pygop'odous, a. Pertaining to or having the character of the *Pygopodes*. Pyr'iform (L. pyrifor'mis), a. Pear-shaped. (Plate XIV. fig. 17; plate XVI. fig. 7.)

## Q

Quadran'gular (L. quadrangula'ris), a. Four-angled, or square. Quad'rate (L. quadra'tus), a. Square. (Plate XIV. fig. 2.)

Quill, n. As generally used, one of the primary remiges; and perhaps best so restricted.

Qui'nary, a. Consisting of, or arranged by, fives. The quinary system of classification, formerly much in vogue, presumed five types for each natural group (that is, five species to a genus, five genera to a family, etc.).

Quin'cunx (L.), n. A set of five, arranged thus :.

### R.

Race, n. A nascent species, or a "form," which on account of the existence of intermediate specimens cannot be considered a species, no matter how great a degree of differentiation may have been reached. Races are distinguished as "Geographical" and "Local," according as to whether they occupy extensive or limited areas of country. Geographical races are usually correlative with definite geographical areas, being, in fact, the expression of geographical variation.

Ra'dial, a. Pertaining to the radius.

Ra'dii Accesso'rii (L.), n. The barbs of a supplementary feather, or aftershaft.

Ra'dii (L.), n. The barbs of a perfect feather.

Radio'li (L.), n. The barbs of the Radii, or barbules.

Radio'li Accesso'rii (L.), n. The barbules of a supplementary plume, or aftershaft.

Ra'dius (L.), n. The outer bone of the forearm.

Ra'mus (L.; pl. ra'mi), n. A branch or fork, as the ramus of the lower mandible (that is, mandibular ramus). (Plate XII. fig. 5.)

Rapto'res, n. An artificial group of birds, including the so-called Birds of Prev.

Rapto'rial, a. Pertaining to the Birds of Prey, or having the characteristics of the Raptores.

Raso'res (L.), n. The name of the Gallinaceæ in some of the older classifications.

Raso'rial, a. Pertaining to the Rasores, or scratching birds.

Rati'tæ (L.), n. A group of birds, more or less artificial, including those with a flat or unkeeled sternum, and comprising the orders Struthiones and Apteryges, all other existing birds being included in the Carinate, which have a keeled sternum.

Rau'cous (L. rau'cus), a. Hoarse-voiced.

Raw Sien'na, n. A bright yellowish brown, like the pigment of the same name. (Plate V. fig. 2.)

Raw Um'ber, n. A light, rather yellowish brown, similar to the pigment of the same name. (Plate III. fig. 14.)

Rec'trix (L.; pl. rec'trices), n. Any one of the tail-feathers. (Used chiefly in the plural.) (Plate XI.)

Recur'ved (L. recurv'us), a. Curved upward.

Reflect'ed (L. reflec'tus), a. Turned backward.

Reflec'tion (L. reflec'tio), n. Change of color with different inclination to the light.

Refract'ed (L. refrac'tus), a. Abruptly bent, as if broken.

Re'gion (L. re'gio), n. Any portion of the body localized, as the anal region (regio analis), dorsal region (regio dorsalis), etc.

Re'mex (L.; pl. rem'iges), n. Any one of the longer wing-feathers. Used chiefly in the plural. The remiges are of two kinds; namely, the primary remiges, or quills of the hand-wing, and the secondary remiges, or quills of the forearm.

Ren'iform (L. reniform'is), a. Kidney-shaped. (Plate XIV. fig. 19.)

Rep'licate, (L. replica'tus), a. Folded over so as to form a groove or Rep'licated, channel.

Retic'ulate, \ (L. reticula'tus), a. Marked with cross-lines like the meshes Retic'ulated, \ of a net.

Reticula'tion, n. Net-work.

Retrac'tile, a. Susceptible of being drawn back and driven forward, as a cat's claw.

Retrorse' (L. retror'sus), a. Directed backward.

Rhach'is (L.; pl. rhach'ides), n. The shaft of a feather, exclusive of the hollow basal portion, or "barrel."

Rhi'nal (L. rhina'lis), a. Pertaining to the nose.

Rhomb'oid (L. rhomboid'eus), a. Lozenge-shaped. (Plate XIV. fig. 1.)

Ric'tal, n. Pertaining to the rictus. (Plate XII. fig. 18.)

Ric'tus (L.), n. The gape; sometimes restricted to the corner of the mouth, or angulus oris. (Plate XII. fig. 2.)

Rosa'ceous, { (L. rosa'ceus; pal'lide-ro'seus; caryophylla'ceus), n. A very pure purplish-pink color, like some varieties of roses. (Rose carthame + rose tyrien + white.) (Plate VII. fig. 20.)

Rose Pur'ple (L. rosa'ceo-purpu'reus), n. A light rosy purple hue, like the petals of some roses. (Madder carmine + violet ultramarine + white.) (Plate VIII. fig. 20.)

Rose Red (L. ro'seus; rosa'ceo-ruber), n. The purest possible purplish red color. (Rose carthame + rose tyrien.) (Plate VII. fig. 5.)

Ros'trum (L.), n. The beak.

Round'ed (L. rotunda'tus), a. A rounded tail has the central pair of feathers longest, the remainder successively a little shorter. A rounded wing is one in which the first primary is short, the longest quill being the third, fourth, or fifth, or one nearly midway between the first and last.

Roy'al Pur'ple (L. ianthin'us), n. A very rich intense violet color, verging toward blue. (Anilin violet + violet-ultramarine.) (Plate VIII. fig. 7.)

Ru'diment, n. A beginning.

Rudiment'ary, a. Imperfectly developed, as if only begun.

Rufes'cent (L. rufes'cens), a. Inclining to a rufous color.

Ruff, n. A collar of elongated or otherwise modified feathers round or on the neck.

Ru'fous (L. ru'fus), n. A brownish red color, like the pigments called Venetian Red, Light Red, Indian Red, Red Chalk, etc., which represent various shades of rufous. The typical shade is light red. (Plate IV. fig. 7.)

Ru'ga (L.), n. A ridge or wrinkle.

Ru'gose (L. rugo'sus), a. Wrinkled.

Rump (L. uropy'gium), n. That portion of the upper surface of the body lying between the interscapulars and upper tail-coverts. (Plate XI.)

Rupi'coline (L. rupi'colus), n. Rock-inhabiting.

Rus'set (L. russa'tus), n. A bright tawny-brown color, with a tinge of rusty. (Burnt sienna + cadmium orange + raw umber.) (Plate III. fig. 16.)

## S.

Saf'fron Yel'low (L. cro'ceus), n. A peculiar shade of yellow, like that produced from the infusion of flowers of the saffron (Crocus sativus). (Plate VI. fig. 4.)

Sage Green, n. A dull grayish-green color, like leaves of the garden sage. (Green oxide of chromium + black + white.) (Plate X. fig. 15.)

Sag'ittate (L. sag'itta'tus), a. Shaped like an arrow-head. (Plate XV. fig. 1.)

Sali'va (L.), n. Spittle.

Sal'ivary Glands, n. The organs which secrete the saliva, or spittle.

Sal'mon-Buff (L. salmona'ceo-lu'teus), n. (Light red + cadmium orange + white.) (Plate IV. fig. 19.)

Sal'mon-Col'or (L. salmona'ceus), n. A color intermediate between flesh-color and orange, like the flesh of the salmon. (Saturn red or orange-chrome + white.) (Plate VII. fig. 17.)

Sal'tatory, a. Progressing by leaps; hopping. (Opposite to ambulatory, or gradient.)

Sanguina'ceous (L. sanguina'ceus; sanguin'eus), n. or a. Blood-red (Same as crimson). (Plate VII. fig. 3.)

Sat'urn Red (L. minia'tus), n. A very fine orange-red color; the same as red lead. (Red lead or saturn red.) (Plate VII. fig. 16.)

Saurop'sida (L.), n. A primary group of vertebrate animals comprising birds and reptiles.

Sauru'ræ (L.), n. The name of an extinct primary group or order of birds, including the fossil Archæopteryx.

Saxic'oline (L. saxi'colus), a. Stone-inhabiting; pertaining to, or having the characteristics of, the Stone Chats (Saxicola).

Scab'rous, a. Scabby; scurfy; scaly.

Scalloped (L. crena'tus), a. Cut along the edge, or border, into segments of a circle. (Plate XV. fig. 21.)

Scan'dent (L. scan'dens), a. Climbing.

Scanso'rial, a. Capable of climbing, as a Woodpecker. Pertaining to the obsolete group Scansores.

Scap'ula (L.), n. The shoulder-blade.

Scap'ular (L. scapula'ris), a. Pertaining to the scapula.

Scap'ular Re'gion (L. re'gio scapula'ris), n. The usually well-defined longitudinal area of feathers overlying the shoulder-blade. They lie along each side of the back (whence the feathers of the latter region are frequently called interscapulars).

Scap'ulars, (L. scapula'res), n. The feathers of the scapular region.

Scap'ularies, (Plate XI.)

Scar'let (L. scarlati'nus), n. The purest possible red color, lighter and less rosy than carmine, richer and purer than vermilion. (Rose carthame + cadmium orange.) (Plate VII. fig. 11.)

Scar'let-Vermil'ion (L. scarlati'no-cinnabari'nus), n. Scarlet-vermilion + rose carthame + cadmium orange.) (Plate VII. fig. 10.)

Schista'ceous (L. schista'ceus), n. Slate-color. (Plate II. fig. 4.)

Schizognath'ous, a. Having the maxillo-palatine bones separated.

Schizorhi'nal, a. Having the posterior margin of the osseous nares decidedly slit-like or triangular.

Scis'sor-shaped, a. A scissor-shaped tail is one that is deeply forficate, thus resembling the blades of a pair of shears.

Scolo'pacine (L. scolopaci'nus), a. Snipe-like. Pertaining to or having characteristics of the Snipe family (Scolopacidæ).

Scu'tellate (L. scutella'tus), a. Provided with scutella, or transverse scales.

Scutel'lum (L.; pl. scutel'la), n. One of the regular transverse scales or plates of the tarsus or toes of a bird.

Scu'tiform (L. scutifor'mis), a. Shield-shaped. (Plate XIV. fig. 16.)

Sea Green (L. thalassi'nus), n. A beautiful deep bluish green color. (Italian ultramarine + viridian.) (Plate X. fig. 5.)

Seal Brown, n. A rich, very dark brown color, like the fur of dressed seal-skin. (Lamp-black + vermilion.) (Plate III. fig. 1.)

Sec'ondary Cov'erts (L. tec'trices seconda'rıæ; tec'trices a'læ ma'jores), n.

Properly, the posterior row of wing-coverts, which overlie the basal portion of the secondaries. The greater wing-coverts. (Plate XI.)

Sec'ondaries,
Sec'ondary Quills,
Sec'ondary Rem'iges,

(L. rem'iges seconda'riæ), n. The long feathers of
the forearm, which in the spread wing appear
in a continuous row with the primaries.
(Plate XI.)

Seg'ment, n. A division or specified portion of anything.

Segmenta'tion, a. Division into parts or segments.

Semicir'cular, a. Divided into one half of a circular figure. (Plate XIV. fig. 20.)

Semilu'nar, a. Shaped like a half-moon.

Semipal'mate, (L. semipalma'tus), a. Half-webbed; having the membrane between the anterior toes reaching not more than half-way to their ends.

Se'nile (L. seni'lis), a. Aged; pertaining to old age.

Se'pia (L.), n. A deep dark brown color, with little red in its composition. The pigment called sepia is a carbonaceous matter prepared from the natural ink of a species of cuttle-fish. (Plate III. fig. 3.)

Sep'tum (L.), n. A partition.

Seri'ceous (L. seri'ceus), a. Silky.

Ser'rate, { (L. serra'tus), a. Toothed like a saw.

Ses'sile (L. ses'silis), a. Resting directly upon an object, without stem, or peduncle.

Seta'ceous (L. seta'ceus), a. Bristly, bristled.

Se'tæ (L.), n. Bristles, or bristle-like feathers.

Se'tiform (L. setifor'mis), a. Bristle-like.

Se'vres Blue, n. A very light blue color. (Antwerp blue + cobalt blue + white.) (Plate IX. fig. 18.)

Sex'ual, a. Pertaining to sex.

Shaft (L. rha'chis), n. The mid-rib of a feather.

Sib'ilant (L. sibi'lans), a. Hissing.

Side of neck (L. parauchen'ium), n. The space included between the cervix and the jugulum. (Plate XI.)

Sides, n. The lateral portions of the inferior surface of a bird's body, extending from near the armpits to, and including, the flanks. The sides are subdivisible into (1) sides of breast, (2) sides proper, and (3) flanks. (Plate XI.)

Sig'moid, a. Shaped like the letter S.

Sign (L. sig'num), n. Any character or figure used to denote a word.

As, & = male; Q = female; o = young; > (in synonymy) = more than; < (in synonymy) = less than; ? = doubt; ! = certainty, etc.

Sincip'ital (L. sincipita'lis), a. Pertaining to the sinciput, or anterior half of the pileum.

Sin'ciput (L.), n. The anterior half of the pileum. (Nearly synonymous with forehead, but denoting a more extensive area, that is, the frontlet, forehead, and anterior part of the crown, together.)

Sin'uate, (L. sinua'tus), a. Said of a feather when the edge is gradu-

Sin'uated, ally cut away. (Plate XIII. fig. 6.)

Sky Blue (L. azu'reus; cæru'leus; cæles'tis; cælesti'nus; cæ'lico'lor), n. Azure, or light cobalt blue. (Same as azure.) (Plate IX. fig. 15.)

Slate-Black (L. schista'ceo-ni'ger), n. See plate II. fig. 2.

Slate-co'lor (L. schista'ceus), n. A dark gray, or blackish gray color, less bluish in tint than plumbeous or lead-color. (Lamp-black + white.) (Plate II. fig. 4.)

Slate-Gray (L. schista'ceo-ca'nus), n. (Black + white.) (Plate II. fig. 5.)
Smalt Blue, n. A very deep purplish-blue color, only less intense and rich than hyacinth blue. (Smalt.) (Plate IX. fig. 8.)

Smoke-Gray (L. fum'ido-ca'nus), n. (Black + white + raw umber.)
(Plate II. fig. 12.)

Snuff Brown, n. A dark brown, essentially the same as a very deep tone of sepia, bistre, or Vandyke brown.

Solferi'no, Solferi'no Pur'ple, (n. A very beautiful purplish rose-color, intermediate in tint between magenta and rose-red. (Rose aniline + rose tyrien.) (Plate VIII. fig. 17.)

Spat'ulate (L. spatula'tus), a. Spoon-shaped, or spatule-shaped, that is, gradually narrowed toward the end, when suddenly widely expanded.

Species, n. The aggregate of individuals related by genetic descent, and differing constantly in certain features whereby they are distinguished from all other beings.

Specific (L. specificus), a. Pertaining to a species; as, specific name, specific characters, etc.

Spec'ulum (L.), n. A mirror-like or brightly colored area, usually comprising the secondaries, on the wing of certain ducks.

Spher'ical, n. Having the form of a sphere or globe. (Plate XVI. fig. 12, representing a section of a sphere.)

Spi'nose, (L. spino'sus), a. Having spines; sometimes said of a mucro-Spi'nous, nate, or spine-tipped, feather.

Spu'rious (L. spu'rius), a. False; imperfect; bastard; rudimentary. Spu'rious Pri'mary, n. The first primary, when much reduced in size.

(Plate XIII. fig. 3.)

Spu'rious Wing, n. The alula or bastard wing. (Plate XI.)

Squam'ose, (L. squamo'sus), a. Scaly; scale-like, or bearing scales.

Stage, n. Used specially for the progressive plumages of birds, as the immature stage, adult stage, downy stage, etc. The word state is also employed in the same sense.

Steganopo'des (L.), n. A group of "Swimming Birds" characterized by having the hind-toe united, on the inner side, to the inner anterior one by a full web. The group includes the Pelicans and allied families. (Same as *Totipalmi*.)

Steganopo'dous, a. Having the hallux connected with the anterior toes, as in the Steganopodes.

Stel'late (L. stella'tus), a. Star-shaped.

Stel'lulate (L. stellula'tus), a. Resembling little stars.

Ster'ile (L. ster'ilis), a. Unfruitful; barren. Stip'ula (L.), n. A newly sprouted feather.

Strag'ulum (L.), n. The mantle, or the back and upper surface of the wings taken together. (Synonymous with pallium.)

Straw-co'lor, { (L. strami'neus), n. A very light impure yellow, like cured straw. (Aureolin + white.) (Plate VI. fig. 17.)

Streak, n. A narrow longitudinal color-mark; a narrow stripe.

Stri'a (L.; pl. striæ), n. A streak.

Stri'ate, { (L. stria'tus), a. Streaked.

Stri'dent (L. stri'dens), a. Shrill.

Stri'ges (L., plural of Strix), n. The name given to the Owl-tribe by those who consider these birds as constituting a distinct order.

Stri'gine, a. Owl-like; pertaining to or having characteristics of the Owl family (Strigidae).

Stripe (L. pla'ga), n. A broad, longitudinal color-mark; a broad streak.

Struthio'nes (L.), n. The ordinal name of the Ostrich-tribe.

Struthio'nine (L. struthioni'nus), a. Pertaining to or having characteristics of the Ostrich tribe (Struthiones).

Stru'thious, a. Ostrich-like.

Sty liform (L. stylifor'mis), a. Shaped like a peg or pin.

Subarc'uate, { (L. subarcuc'tus), a. Slightly arched.

Sub-ba'sal (L. subba'salis), a. Near the base.

Sub-caud'al (L. subcauda'lis), a. Beneath the tail.

Sub-class (L. subclas'sis), n. A group often recognized, having taxonomic rank intermediate between a class and an order.

Subfam'ily (L. subfami'lia), n. A subdivision of a family including one or more genera.

Subge'nus, n. A subdivision of a genus, of indefinite value, and frequently not recognized by name except in the grouping of species.

Sub-ma'lar, a. Beneath the malus, or malar region, as a sub-malar streak. (Plate XII. fig. 20.)

Sub-or'bital, a. Beneath the eye. (Plate XII. fig. 21.)

Sub-or'der (L. subor'do), n. A group intermediate in taxonomic rank between an order and a family.

Sub-spe'cies, n. A nascent species; a variation, usually geographical, of a species, but not accorded full specific rank on account of the incompleteness of its differentiation; hence, usually a geographical race, or form.

Subtyp'ical, a. Not quite typical; somewhat aberrant.

Sub'ulate (L. subula'tus), a. Awl-shaped.

Suffu'sion, n. A running together of colors.

Sul'cate (L. sulca'tus), a. Grooved.

Sul'cus (L.), n. A groove.

Sul'phur Yel'low (L. sulphu'reus), n. A very pale pure yellow color, less orange in tint than dilute gamboge or lemon-yellow. (Winsor & Newton's lemon-yellow, or Schoenfeld's gelber ultramarin.) (Plate VI. fig. 14.)

Supercil'iary (L. supercilia'ris), a. Above the eye. A superciliary streak, in its usual sense, denotes a continuous marking of color from the base of the upper mandible over the eye, and extended back above the auriculars to the sides of the occiput. (Plate XII. figs. 13, 14, 15, inclusive.)

Supercil'ium (L.), n. The eyebrow.

Super-fam'ily (L. superfam'ilia), n. A group containing several families, yet not of ordinal rank. (Next in rank below a sub-order.)

Supe'rior, a. Lying over; topmost, or uppermost.

Super-or'der (L. superor'do), n. A group consisting of one or more orders, but not ranking as high as a class. (Next in rank below a sub-class.)

Supra-auri'cular (L. supra-auricula'ris), a. Situate above the auriculars or ear-coverts. (Plate XII. fig. 13.)

Supralo'ral (L. supralora'lis), a. Situate above the lores. (Plate XII. fig. 15.)

Su'pra-or'bital, a. Pertaining to the region immediately above the eye. (Plate XII. fig. 14.)

Sym'bol, n. An arbitrary sign to denote a word. (See Sign.)

Sym'phesis (L.), n. A growing together, as symphesis of the lower jaw (symphesis menti).

Syndac'tyle, Syndac'tylous, Syngne'sious, (L. syndac'tylus), a. Having two toes coalescent for a considerable portion of their length.

(Pl. syn'onyms or synon'yma), n. In natural history, a specific or generic name which is suppressed on account of having been proposed subsequent to another name for the same object, or for reason of its being otherwise unavailable. Thus, the common Song-sparrow having been first named fasciata, in 1788, by Gmelin, the name melodia, given by Wilson in 1810, becomes a synonym by reason of its later date. (The opposite of homonym, which see.)

Syn'onym, Syn'onyme,

Synon'ymous, a. Expressing the same meaning in different terms; or indicating the same genus, species, etc., by a different name.

Synon'ymy, n. A collection of synonyms, such as nearly every species is more or less burdened with. The pleasure derived from the study of natural history is seriously marred by the obstacles presented by the synonymy.

Synop'sis, n. A comprehensive treatment of a given subject, in which only leading points are used.

Synop'tical, a. Pertaining to a synopsis, as a synoptical table, in which species or higher groups are distinguished by only the leading characters, arranged antithetically.

Syn'thesis, n. Generalization from analyzed facts. (Opposed to analysis.)

## T.

Tail-cov'erts (L. tec'trices-cauda'les), n. The most posterior feathers of the body, or those which immediately cover the basal portion of the

Tar'sal (L. tarsa'lis), a. Pertaining to the tarsus, so-called.

Tar'sus (L.), n. In descriptive Ornithology, the leg of a bird, or that portion from the foot (that is, the toes) to the heel joint. (Plate XI.)

Taw'ny (L. ful'vus; fulves'cens; aluta'ceus; musteli'nus; fusces'cens), a. The color of tanned leather. (Nearly synonymous with fulvous.) (Neutral orange + raw sienna.) (Plate V. fig. 1.)

Taw'ny-ochra'ceous (L. ful'vo-ochra'ceus), n. (Yellow ochre + burnt sienna + burnt umber.) (Plate V. fig. 4.)

Taw'ny-Ol'ive (L. ful'vo-oliva'ceus), n. (Yellow ochre + raw umber.) (Plate III. fig. 17.)

Tax'idermist, n. A person who prepares and preserves the skins of animals, with the view to imitate their appearance in life.

Taxid'ermy, n. The art of preparing and preserving the skins of animals so as to imitate the appearance of life.

Taxonom'ic, a. Classificatory; pertaining to taxonomy.

Taxon'omy, n. Classification, according to scientific principles.

Tec'trices (L.), n. Coverts, especially those of the wing.

Tec'trices Ala'res, { (L.), n. Wing-coverts.

Tec'trices Ala'res Inferio'res (L.), n. The under wing-coverts, or those of the under surface of the wing.

Tec'trices Cau'dæ (L.), n. Tail-coverts.

Tec'trices Me'diæ, Tec'trices Perver'sæ, (L.), n. The middle wing-coverts.

Teleolog'ical, a. Pertaining to teleology. A teleological character is a modification resulting from necessity of adaptation to particular ends. Thus, the naked head and other "vulturine" aspects of the Old World Vultures (belonging to the family Falconide) and those of the New World (Cathartide) are teleological, inasmuch as their mode of living necessitates in both certain modifications of external structure fitting them to act the part of seavengers, their actual (morphological) structure being very different.

Teleology, n. The science or doctrine of adaptation.

Tem'poral (L. tempora'lis), a. Pertaining to the temples.

Tenuiros'tral (L. tenuiros'tris), a. Sleuder-billed. Pertaining to the obsolete group "Tenuirostres."

Tenuiros'tres (L.), n. An obsolete and exceedingly artificial group of birds embracing various slender-billed forms.

Te'rete, a. Cylindrical and tapering; fusiform.

Ter'minal (L. termina'lis), a. At the end.

Ter'minally, ad. Toward the end.

Terminolog'ical, a. Pertaining to terminology.

Terminol'ogy, n. The science of calling things by their right names, according to fixed or scientific principles; hence, essentially synonymous with Nomenclature.

Terre-verte' Green, n. A dull green color, like that produced by the pigment of the same name. (Terre-verte.) (Plate X. fig. 3.)

n. Properly, the inner quills of the wing, growing from the elbow or humerus, and usually more or less concealed (in the closed wing) by the longer scapulars. Frequently, however, the graduated inner secondaries are incorrectly so called, especially when distinguished, as they very often are, by different color, size, or shape. (Plate XI.)

Ter'tials, Ter'tiaries,

Tes'sellated (L. tessella'tus), a. Checkered.

Testa'ceous (L. testa'ceus), n. or a. (Same as brick-red.) (Plate IV. fig. 11.)

Tetradac'tyle (L. letradac'tylus), a. Four-toed. (Most birds are tetradactyle.)

The ory, n. Scientific speculation, based upon inference from established principles.

Thorac'ic (L. thora'cicus), a. Pertaining to the thorax, or chest.

Tho'rax (L.), n. The chest, or breast.

Throat (L. Gu'la), n. In descriptive Ornithology, the space between the rami of the lower jaw, including also a small portion of the upper part of the foreneck. (Plate XI.)

Thy'roid (L. thyroi'des), a. Shield-shaped.

Tib'ia (L.), n. In Osteology, the principal bone of the leg, between the knee and the heel; but in descriptive Ornithology, the so-called "thigh," or shin. (Plate XI.)

Tib'ial (L. tibia'lis), a. Pertaining to the tibia.

Tile Red (L. testa'ceus), n. (Same as brick red.) (Plate IV. fig. 11.)

Tinamomorph'æ (L.), n. The "Tinamou-form," equivalent to the Dromæo'qnathæ of Huxley.

To'mium (L.; pl. to'mia), n. The cutting-edge of the mandibles, that of the upper being the maxillary tomium, that of the lower the mandibular tomium.

Tor'quate (L. torqua'tus), a. Collared.

Totipal'mate (L. totipalma'tus), a. Having the hind-toe united to the anterior toes by a web on one side, as in the Pelicans and other Steganopodes. (Same as Steganopodous.)

Totipal'mi (L.), n. (Same as Steganopodes, which see.)

Tracheopho'næ (L.), n. The name of a natural group of passerine birds, characterized by having the syriux placed at the lower end of the trachea.

Transverse' (L. transver'sus), a. Crosswise, or at right angles with the longitudinal axis of the body or feather.

Transverse'ly, ad. Crosswise.

Tridac'tyle (L. tridac'tylus), a. Three-toed.

Trino'mial, a. Composed of three names. In Biology, a name composed of three terms, — a generic, a specific, and a subspecific.

Triv'ial (L. trivia'lis), a. Sometimes said of a specific name.

Trochi'li (L.), n. The ordinal or sub-ordinal name of a natural group of "Picariæ," including only the Humming-birds (Trochilidæ). By most authors, however, the group is accorded only family rank, and associated with the families Cypselidæ and Caprimulgidæ, in a so-called order Macrochires, or Cypseli.

Trun'cate (L. trunca'tus), a. Cut squarely off.

Turkois' Blue,
Turquoise' Blue,
(L. turco'sus), n. The finest possible light blue color, similar to the stone of the same name. (Italian ultramarine + Schoenfeld's "lichtblau" + white.)
(Plate 1X. fig. 20.)

Tylar'i (L.; pl.), n. The pads on the under surface of the toes.

Tym'panum (L.), n. Properly, the ear-drum; but also the naked inflatable air-sacs on the neck of some species of Grouse (*Tetraonida*).

Type (L. ty/pus), n. Of various signification in Ornithology. The type of a genus is that species from which the generic characters have been taken, or which is specified as the standard; the type of a species is the particular specimen from which the species was originally described. The type, or typical, form of a group is that which answers best to the diagnosis of that group.

Typ'ical, a. Agreeing closely with the characters assigned to a group,

genus, or species.

# U.

Ul'na (L.), n. The posterior bone of the forearm.

Ul'nar, a. Pertaining to the ulna.

Ultramarine' Blue (L. ultramari'nus; lazuli'nus), n. A very pure lovely blue color, like the pigment called ultramarine. (Plate IX. fig. 9.)

Um'ber Brown (L. umbri'nus), n. The color of the pigment called raw umber. (Plate III. fig. 14.)

Unarm'ed (L. mu'ticus), a. Said of a toe which has no claw; a tarsus, or a wing, which has no spur; etc.

Un'ciform (L. uncifor'mis), a. Hooked.

Un'der Parts (L. qastræ'um), n. The entire lower surface of a bird, from chin to crissum, inclusive. (Same as Lower Parts.) (See note facing plate XI.)

Un'der Pri'mary-cov'erts, n. The primary-coverts of the under surface

of the wing. (Plate XIII. fig. 2.)

Un'der Tail-cov'erts (L. tec'trices subcau'dales; calypte'ria inferio'ra), n. The feathers immediately beneath the tail. (Practically synonymous with Crissum.) (Plate XI.)

Un'der Wing-cov'erts (L. tec'trices suba'lares), n. The coverts of the under surface of the wing. Taken collectively, the term Lining of the Wing, or Wing-lining, is generally used. (Plate XIII. fig. 1.)

Un'dulate, (L. undula'tus), a. Marked with wavy lines. (Plate XV.

Un'dulated, fig. 14.)

Unguic'ulate (L. unquicula'tus), a. Clawed.

Un'guis (L.; pl. un'gues), n. A claw.

Unip'arous, a. Producing but one egg, as the Petrels (Procellariidae) and Auks (Alcidæ).

Up'per Parts (L. notæ'um), n. The entire upper surface, from forehead

to tail inclusive. (See note facing plate XI.) Up'per Tail-cov'erts (L. tec'trices cau'dæ superio'res; calypte'ria superio'ra),

n. The feathers overlying the base of the tail, — sometimes produced beyond its tip and simulating the true tail, as in the Peacock (Pavo cristatus) and Paradise Trogon (Pharomacrus moccino).

Uropy'gial (L. uropygia'lis), a. Pertaining to the rump.

Uropy'gium (L.), n. The rump. (See plate XI.)

**U-shaped**, a. Having the form of the letter U. (Plate XV. fig. 4.)

# V.

Vandyke' Brown, n. A rich deep brown, very similar to burnt umber but rather less reddish. (Plate III. fig. 5.)

Vane, n. The whole of a feather excepting the stem.

Vari'etal, a. Pertaining to or having the characteristics of a variety.

Vari'ety (L. vari'etas), n. Properly, an individual or unusual and irregular variation from the normal type of form or coloration, as the various breeds or "strains" of domesticated animals. But the term is often, though improperly, applied to subspecies, or geographical races.

Vent (L. ven'ter), n. The anus.

Vent'ral (L. ventra'lis), a. Pertaining to the vent.

Vent'ral Re'gion (L. re'gio ventra'lis; re'gio anal'is), n. The feathers surrounding or immediately adjacent to the vent. (Plate XI.)

Ver'digris Green (L. ærugino'sus), n. A very pure and rich green color, appreciably more bluish than viridian. (Schoenfeld's dark permanent green.) (Plate X. fig. 11.)

Ver'diter-Blue, n. A pale greenish blue, like the pigment of the same

name. (Plate IX. fig. 22.)

Vermic'ulate, (L. vermicula'tus), a. Marked with irregular fine lines, Vermic'ulated, like the tracks of small worms. (Plate XV. fig. 13.) Ver'miform (L. vermifor'mis), a. Worm-shaped, as a Woodpecker's

tongue

Vermil'ion (L. cinnabari'nus; cinnabari'no-ru'ber), n. A very fine red color, lighter and less rosy than carmine, and not so pure or rich as scarlet. (Plate VII. fig. 8.)

Ver'nal (L. verna'lis), a. Pertaining to Spring.

Ver'rucose, { (L. rerruco'sus), a. Warty.

Ver'satile, a. Susceptible of being turned either way; reversible as to position.

Ver'tex (I.), n. The crown, or central portion of the pileum. (Plate XI.) Ver'tical (L. vertica'lis), a. Pertaining to the vertex.

Vesti'tus (L.), a. or n. Clothed; feathered. Clothing, or plumage, as vesti'tus nuptia'lis, nuptial or breeding plumage.

Vexil'lum (L.), n. The whole of a feather excepting the stem.

Vibris'sa (L.; pl. vibriss'æ), n. A bristly or bristle-tipped feather, such as those about the gape of a bird.

Vina'ceous (L. vina'ceus), n. or a. A brownish pink, or delicate brownish purple color, like wine-dregs; a soft, delicate wine-colored pink or purple. (Schoenfeld's Indian red + white.) (Plate IV. fig. 17.)

Vina'ceous-Buff (L. vina'ceo-lu'teus), n. (Indian red + yellow ochre + white.) (Plate V. fig. 15.)

Vina'ceous-Cin'namon (L. vina'ceo-cinnamo'meus), n. (Burnt umber + burnt sienna + white.) (Plate IV. fig. 15.)

Vina'ceous-Pink (L. vina'ceo-caryophylla'ceus), n. (Madder earmine + light red + white.) (Plate IV. fig. 21.)

Vina ceous-Ru'fous (L. vina ceo-ru'fus), n. (Schoenfeld's Indian red + light red + white.) (Plate IV. fig. 14.)

Vi'olet, (L. viola'ceus; ianthi'nus), n. A purplish blue color, like viola'ceous, (Plate VIII. fig. 10.)

(Color de violet), (Aniline-violet, or mauve.)

Vires'cent (L. vires'cens), a. Greenish.

Virid'ian Green, n. A rich bright green color, somewhat similar to grass-green, but much purer. (Plate X. fig. 8.)

Vit'reous (L. vit'reus), a. Glassy, or resembling glass.

Vit'ta (L.), n. A band of color.

V-shaped, a. Having the form of the letter V. (Plate XV. fig. 3.)

## W.

- Wal'nut Brown, n. A deep warm brown color, like heart-wood of the black walnut. (Sepia + purple madder.) (Plate III. fig. 7.)
- War'bler Green, n. (See Olive-Green.) (Plate X. fig. 18.)
- Wash'ed (L. affla'tus; perfu'sus; lava'tus), a. Thinly overlaid with a different color.
- Wat'tle (L. pa'lea; verru'ca), n. A pendulous, somewhat fleshy cutaneous flap, usually brightly colored, and often more or less wrinkled, as the "dewlap" of a turkey and the "gills" of the domestic cock.
- Wa'ved (L. undula'tus), a. Marked with narrow undulating lines of color.
  Wax Yel'low (L. cera'ceus), n. A deep but dull yellow, resembling the color of fresh bees-wax. (Winsor & Newton's "aureolin," or Schoenfeld's "gelber krapplack.") (Plate VI. fig. 7.)
- Web (L. pogo'nium), n. Either lateral half of the vane of a feather, exclusive of the shaft.
- Wedge-shaped (L. cunea'tus), a. A wedge-shaped tail has the middle pair of feathers longest, the rest successively and decidedly shorter, all more or less attenuate. (Plate XIV. fig. 13.)
- Whis'kered (L. mystaca'lis; barba'tus), a. Ornamented by lengthened feathers on the malar region or contiguous portions of the head.
- Wine Pur'ple (L. vina'ceo-purpu'reus), n. A clear reddish purple of a slightly brownish cast. (Madder carmine + violet madder.) (Plate VIII. fig. 15.)
- Wood Brown, n. A light brown color, like some varieties of wood. (Raw umber + burnt sienna + white.) (Plate III. fig. 19.)

## X.

Xiph'oid, a. Sword-shaped.

# Y.

Yel'low O'chre, n. A bright yellowish ochraceous or ochre-yellow color. (Yellow ochre.) (Plate V. fig. 9.)

## Z.

Zone (L. zo'nus), n. A broad band of color, completely encircling the circumference of a body.

Zoölog'ical, a. Pertaining to zoölogy.

Zoöl'ogy, n. The natural history of animals in general.

Zygodac'tylæ (L.), n. A group of zygodactyle birds comprising the families Rhamphastidæ (Toucans), Capitonidæ (Barbets), Bucconidæ (Puff-birds), and Galbulidæ (Jacamars). In obsolete systems the group was much more extensive, embracing all yoke-footed birds, which are now divided in several distinct groups, e. g., the Pici (Woodpeckers and Wrynecks), Anisodactylæ (Motmots, Todies, Kingfishers, etc.), and Coccyges (Cuckoos and Plaintain-eaters.)

Zygodac'tyle (L. zygodac'tylus), a. Yoke-toed, or with the toes in pairs, two before and two behind, as in the Woodpeckers, Parrots, etc. Per-

taining to the Zygodactylæ.

# TABLE

# FOR CONVERTING MILLIMETRES INTO ENGLISH INCHES AND DECIMALS.

#### EXPLANATION.

The table herewith given shows the equivalents in English inches, and decimals thereof, of every tenth of a millimetre, from 1.0 to 100.9. From 100 to 1,000 millimetres may be reduced to inches and decimals by multiplying the corresponding figures of this table by ten; that is, by moving the point in the column of inches one place to the right. In a similar way, if multiplying by 100, move the point two places to the right. For example:—

- (1) To reduce 72.7 millimetres to English inches: Find in the vertical column to the left the figures 72; then follow the horizontal line to the column headed .7. The number found there (or, what would be sufficient for all practical purposes, 2.86) is the equivalent of 72.7 millimetres in English inches.
- (2) To reduce 605 millimetres to English inches, find in the vertical column to the left 60, then follow the line to the column headed .5, where will be found 2.3819; move the point to the right, and you will have as the equivalent of 605 millimetres 23.819 (or, what is essentially the same, 23.82) inches.
- (3) To reduce 1930 millimetres, find in the same way the equivalent of 19.3, which is 0.7599; move the point two places to the right, and 75.99 results, which expresses exactly the equivalent of 1930 millimetres in English inches.

TABLE FOR THE REDUCTION OF MILLIMETRES TO ENGLISH INCHES.

# TABLE

# FOR CONVERTING ENGLISH INCHES AND DECIMALS INTO MILLIMETRES.

#### EXPLANATION.

The accompanying table shows the equivalent of every hundredth of an English inch, from 0.01 to 10.09 inches, in millimetres and decimals thereof. From 10 to 100 inches may be reduced to millimetres and decimals by multiplying the corresponding figures of this table by 10; that is, by moving the point in the column of inches one place to the right. In a similar way, if multiplying by 100, move the point two places to the right. For example:—

- (1) To reduce 4.36 inches to millimetres: Find in the first or left-hand column the figures 4.3; then follow the horizontal line toward the right to the column headed .06. The number found there, 110.74 (or, what would be sufficiently near for all practical purposes, 111), is the equivalent of 4.36 inches in millimetres.
- (2) To reduce 15.77 inches to millimetres: Find in the first or left-hand column the figures 1.5; then follow the horizontal line toward the right to the column headed .07, where will be found the figures 39.88; now move the point one place to the right, and you have 398.8, which is the exact equivalent of 15.70 inches; now find the equivalent of 0.07 inches, which is 1.78 millimetres, and add to the

above amount, the result being 400.58 millimetres (or, what is sufficiently near, 401 millimetres), which = 15.77 inches.

(3) To reduce 120.44 inches to millimetres, find in the same manner the equivalent of 1.2, which is 30.48, move the point two places to the right, and 3048. results; add the equivalent of 0.44, which is 11.18, and the result is 3059 millimetres = 120.44 inches.

#### PLATE I.

#### I. - PRIMARY COMBINATIONS.

The primaries here used are: -

Yellow - light cadmium.

Red — scarlet vermilion + madder carmine.

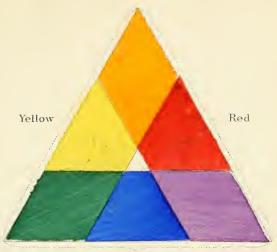

Blue - ultramarine.

The secondaries, however, are not all of them produced by the mixture of the pigments used as primaries, the orange being orange cadmium, and the purple, aniline violet. This is necessary on account of the impurity of the red.

#### II. - SECONDARY COMBINATIONS.

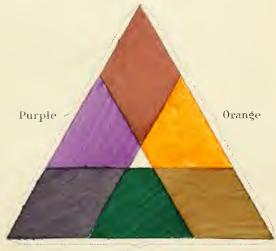

The pure secondaries in this figure are the same as those in the one above. The tertiaries, however, are here in each case actual mixtures of the pigments.

# I.\_ Primary Combinations.

Blue

# II. Secondary Combinations.

Green

## PLATE II.

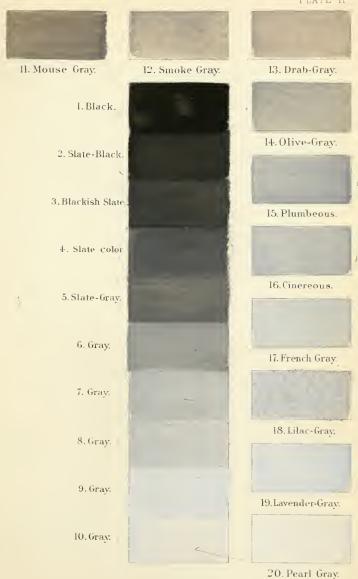

#### Composed of

1. Black . . . Lamp-black.

2.	Plumbeous .	Lamp-black + white + smalt blue.
3.	Olive-Gray .	Lamp-black + white + light cadmium.
4.	Slate-color .	Lamp-black + white.
5.	Cinereous .	Lamp-black + white + smalt blue.
6.	Mouse Gray	Lamp-black + white + sepia.
7.	Slate-Gray .	Lamp-black + white.
8.	Lilac Gray .	Lamp-black + white + cobalt blue + madder car-
		mine.
9.	Smoke Gray.	Lamp-black + white + raw umber.
10.	French Gray.	Lamp-black + white + intense blue.
11.	Lavender Gray	Lamp-black + white + smalt blue.
12.	Drab-Gray .	Lamp-black + white + burnt umber.

13. Pearl Gray . . Lamp-black + white + cobalt blue.

## PLATE III.

### Composed of

- 1. Seal Brown . Lamp-black + vermilion.
- 2. Clove Brown . Lamp-black + cadmium orange.
- 3. Sepia . . . (Sepia).
- 4. Chocolate Brown Purple madder + sepia.
- 5. Vandyke Brown (Vandyke brown).
- 6. Bistre . . . (Bistre).
- 7. Walnut Brown Burnt umber + purple madder.
- 8. Burnt Umber . (Burnt umber).
- 9. Olive . . . Sepia + yellow ochre + Antwerp blue.
- 10. Mummy Brown Raw umber + burnt sienna.
- 11. Prout's Brown Raw umber + burnt umber + sepia.
- 12. Hair Brown . Raw umber + sepia + black + white.
- 13. Mars Brown . Burnt umber + yellow ochre + burnt sienna.
- 14. Raw Umber . (Raw umber).
- 15. Broccoli Brown Sepia + raw umber + white.
- 16. Russet . . . Burnt umber + burnt sienna + yellow ochre.
- 17. Tawny Olive Raw umber + yellow ochre.
- 18. Drab . . . Sepia + white.
- 19. Wood Brown . Burnt umber + raw umber + yellow ochre + white.
- 20. Cinnamon . Yellow ochre + burnt umber + burnt sienna + white.
- 21. Eeru-Drab . . Burnt umber + sepia + white.
- 22. Fawn-color . Burnt umber + white.
- 23. Isabella-color . Raw umber + yellow ochre + white.

# PLATE III 3. Sepia.

4. Chocolate.

5. Vandyke Brown.

6. Bistre.

7. Walnut Brown.

8. Burnt Umber.

9. Olive.

10. Mummy Brown.

11. Prout's Brown,

12. Hair Brown.

13. Mars Brown.

14. Raw Umber.

15. Broccoli Brown.

16. Russet.

17. Tawny-Olive.

18. Drab.

19. Wood Brown.

20. Cinnamon.

21. Ecru Drab,

22. Fawn color.

23.Isabella color.

## PLATE IV.

## Composed of

1.	Claret Brown	Purple madder.
2.	Maroon	Purple madder + madder carmine + scarlet ver-
		milion.
3.	Madder Brown	Purple madder + burnt sienna.
4.	Liver Brown	Schoenfeld's Indian red or Persian red.
5.	Bay	Schoenfeld's Indian red + burnt sienna.
	Burnt Sienna	
	Rufous	
8.	Dragon's-blood Red	Light red + vermilion + madder carmine.
9.	Chestnut	Burnt umber + vermilion.
10.	Ferruginous	(Burnt sienna, light tint).
11.	Brick Red	Winsor & Newton's Indian red.
12.	Hazel	Burnt sienna + vermilion + raw sienna.
13.	Orange-Rufous	Neutral orange, or light red + orange cadmium.
14.	Vinaceous Rufons .	Persian red + light red + white.
15.	Vinaceous Cinnamon	Burnt umber + burnt sienna + white.
16.	Cinnamon-Rufous .	Burnt sienna + burnt umber + light red + white.
17.	Vinaceous	Schoenfeld's Indian red + white.
18.	Pinkish Vinaceous.	Winsor & Newton's Indian red + white.
19.	Salmon-Buff	Light red + cadmium orange + white.
20.	Buff-Pink	
	Vinaceous Pink .	

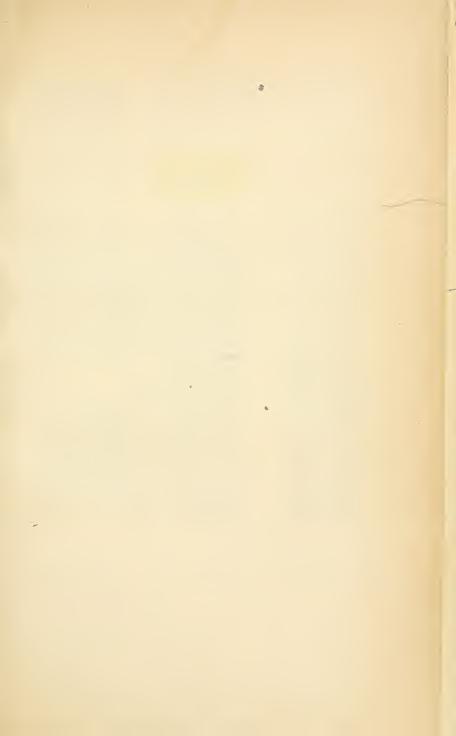

## PLATE V.

### Composed of

- 1. Tawny . . . . Raw sienna + burnt sienna.
- 2. Raw Sienna . . (Raw sienna).
- 3. Orange-Ochraceous Cadmium orange + yellow ochre + burnt sienna.
- 4. Tawny Ochraceous Burnt sienna + burnt umber + yellow ochre.
- 5. Ochraceous Rufous Yellow ochre + light red + burnt sienna.
- 6. Gallstone Yellow Raw sienna + light cadmium.
- 7. Ochraceous . . Yellow ochre + burnt umber + burnt sienna.
- 8. Clay-color . . . Yellow ochre + raw umber + burnt sienna + white.
- 9. Ochre Yellow . . (Yellow ochre).
- 10. Ochraceous Buff . Yellow ochre + burnt sienna + white.
- 11. Cream Buff . . Yellow ochre + white.
- 12. Olive-Buff . . . Yellow ochre + white + cobalt blue.
- 13. Buff . . . . Raw sienna + white.
- 14. Pinkish Buff . . Yellow ochre + light red + white.
- 15. Vinaceous Buff . Yellow ochre + white + Schoenfeld's Indian red.

## PLATE VI.

#### Composed of

Orpiment Orange . . Cadmium orange + burnt sienna.

Cadmium Orange . . (Cadmium orange).

Orange . . . . Orange cadmium + pale cadmium.

Saffron Yellow . . . Pale cadmium + orange cadmium + raw sienna.

Indian Yellow . . . Pale cadmium + orange cadmium + yellow ochre.

Cadmium Yellow . . . Pale cadmium + orange cadmium.

Wax Yellow . . . Pale cadmium + raw umber.

Chrome Yellow . . Pale cadmium + orange cadmium + white.

Deep Chrome . . . Pale cadmium + orange cadmium + white.

Gamboge Yellow . . Pale cadmium + yellow ochre.

Lemon Yellow . . . Pale cadmium.

Canary Yellow . . . Pale cadmium + white.

Primrose Yellow . . Pale cadmium + white.

Sulphur Yellow . . Pale cadmium + white + Paris green.
Citron Yellow . . Pale cadmium + Antwerp blue.
Olive Yellow . . . Pale cadmium + black + white.
Straw Yellow . . . Pale cadmium + raw umber + white.

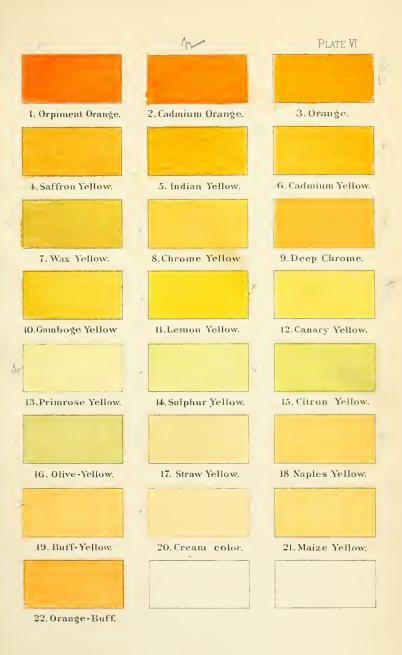

Naples Yellow . . . Pale cadmium + yellow ochre + white.

Buff Yellow . . . Pale cadmium + orange cadmium + white.

Cream-color . . . Orange cadmium + pale cadmium + white.

Maize Yellow . . . Orange cadmium + pale cadmium + white.

Orange-Buff . . . Orange cadmium + white.

## PLATE VII.

## Composed of

Burnt Carmine . . . Madder carmine + scarlet vermilion + black.

Lake Red . . . Madder carmine or deep madder lake.

Crimson . . . Madder carmine or deep madder lake.

Coral Red . . . Madder carmine + cadmium orange + vermilion +

white.

Rose Red . . . Burgeois's "rose-Tyrien" + Schoenfeld's "safflor-

roth."

Carmine.

Geranium Red . . Schoenfeld's "safflorroth."

Vermilion . . . Winsor & Newton's vermilion.

Poppy Red . . . Burgeois's "laque ponceau."

Scarlet Vermilion . Winsor & Newton's scarlet vermilion.

Scarlet . . . . Safflorroth + cadmium orange.

Orange-Vermilion . Scarlet vermilion + cadmium orange.
Orange Chrome . Vermilion + cadmium orange.

Flame-scarlet . Safflorroth + cadmium orange.

Chinese Orange. . Scarlet vermilion + cadmium orange + burnt sienna.

Saturn Red . . . Scarlet vermilion + cadmium orange.

Salmon-color . . Scarlet vermilion + cadmium orange + white.

Flesh-color . . . Scarlet vermilion + white.

Geranium Pink . Safflorroth + white.
Rose Pink . . . Safflorroth + white.
Peach-blossom Pink Pink madder.

## PLATE VII.

## PLATE VIII.

## Composed of

Prune Purple . . . Violet madder lake + purple madder.

Dahlia Purple. . . Madder carmine + black + violet ultramarine.

Auricula Purple . . Violet madder lake (Schoenfeld's).
Plum Purple . . . Violet madder lake + Antwerp blue.

Pansy Purple . . . Madder carmine + violet ultramarine + black.

Indian Purple . . Violet madder lake + sepia.

Royal Purple . . . Aniline violet + violet ultramarine.

Aster Purple . . . Violet madder lake + violet ultramarine + madder

carmine.

Maroon Purple . . Madder carmine + purple madder.

Violet . . . . Aniline violet.

Phlox Purple . . . Violet madder lake + violet ultramarine + madder

carmine + white.

Pomegranate Purple. Madder carmine + violet madder lake.

Mauve . . . . Aniline violet + white.

Magenta . . . Aniline violet + rose aniline.

Wine Purple . . . Madder carmine + violet madder lake.

Lavender . . . Violet ultramarine + white.

Solferino . . . Rose aniline.

Heliotrope . . . Violet madder lake + sepia + violet ultramarine +

white.

Lilac . . . . Violet ultramarine + madder carmine + white.

Rose Purple . . . Violet ultramarine + madder carmine + white.

## PLATE VIII.

## PLATE IX.

#### Composed of

Indigo Blue . . . Antwerp blue + black.

Marine Blue . . . French blue + black.

Berlin Blue . . . French blue + violet ultramarine.

Berlin Blue . . . Antwerp blue + French blue + black.

Hyacinth Blue . . Schoenfeld's violet ultramarine.

French Blue . . . (French blue).

Paris Blue . . . Antwerp blue + French blue + black.

Smalt Blue . . . Smalt, or French blue + violet ultramarine.

Ultramarine Blue . . (Genuine ultramarine, or Italian ultramarine).

Antwerp Blue . . . (Antwerp blue).

Campanula Blue . . . Smalt blue + white.

Cobalt Blue . . . Cobalt blue.

China Blue . . . Antwerp blue + black + white.

Flax-flower Blue . . French blue + white.

Azure Blue . . Cobalt blue + white.

— . . . . Antwerp blue + white.

Pearl Blue . . . French blue + white.

Sevres Blue . . . Antwerp blue + cobalt blue + white.

Glaucous Blue . . . Antwerp blue + black + white.

Turquoise Blue  $\,$  . Antwerp blue + cobalt blue + emerald green +

white.

Cerulean Blue. . . Antwerp blue + cobalt blue + white.

Verditer Blue . . . Antwerp blue + black + light cadmium + white.

Nile Blue . . . . Antwerp blue + emerald green + white.

## PLATE IX.

23. Nile Blue.

22. Verditer Blue.

## PLATE X.

#### Composed of

Bottle Green . . . Cadmium orange + Antwerp blue.

Myrtle Green . . . Antwerp blue + cadmium orange.

Terre-verte Green . (Terre verte).

Grass Green . . . Cadmium yellow + cadmium orange + Antwerp

Sea Green . . . Viridian + Antwerp blue.

Malachite Green . . . Ultramarine blue + pale cadmium + white.

Parrot Green . . . Antwerp blue + pale cadmium + raw sienna.

Viridian Green . . (Viridian).

Pea Green . . . . Ultramarine blue + pale cadmium + raw sienna +

white.

Bice Green . . . . Ultramarine blue + pale cadmium + raw sienna +

white.

Verdigris Green . . Viridian + pale cadminm + white.

Chromium Green . . Ultramarine blue + pale cadmium + black + white.

Paris Green . . . Emerald green + pale cadmium + white.

Beryl Green . . . Viridian + emerald green + Antwerp blue + white.

Sage Green . . . Ultramarine blue + pale cadmium + black + white.

Emerald Green . . (Emerald green).
Glaucous Green . . Viridian + white.

Olive-Green . . . Raw sienna + Antwerp blue.

French Green . . . Italian ultramarine + pale cadmium.

Apple Green . . . Antwerp blue + pale cadmium + white.

Oil Green . . . . Antwerp blue + pale cadmium + raw sienna.

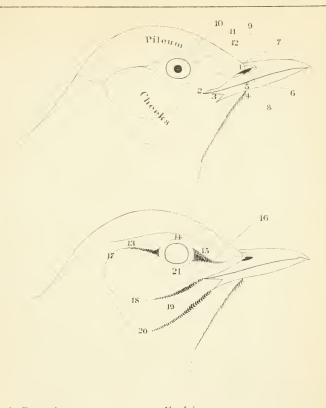

### NOTE.

The pileum includes the forehead, erown, and oeciput.

The term *checks* is more or less indefinite in meaning, but in its widest sense may be said to include the *auriculars*, *suborbital region*, and *malar region*. It is, however, sometimes restricted to one or the other of these divisions.

The supraloral region (15), superciliary region (14), and supra-auricular region (13) together, or when continuous with one another (as in the figure), constitute a superciliary stripe.

- 1. Frontal apex.
- 2. Rictus.
- 3. Malar apex.
- 4. Mental apex.
- 5. Ramus of Mandible.
- 6. Gonys.
- 7. Culmen.
- 8. Nostril.
- 9. Nasal operculum.
- 10. Pupil

- 11. Iris.
- 12. Orbital ring.
- 13. Supra-auricular region.
- 14. Supra-orbital region.
- 15. Supra-local region.
- 16. Loral streak,
- 17. Postocular streak.
- 18. Rictal streak.
- 19. Malar stripe.
- 20. Sub-malar streak.
- 21. Sub-orbital region.

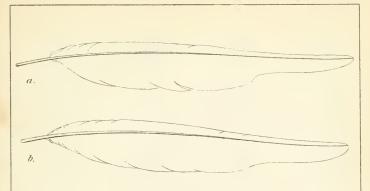

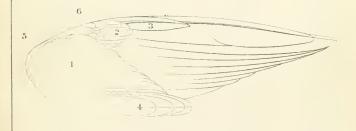

## NOTE.

The following divisions include two or more of those distinguished on the figure: (1) The Upper Parts comprise the entire upper surface, from forehead to tail, inclusive, and include also the outer or upper surface of the wings. (2) The Lower Parts comprise the entire under surface, from chin to lower tail-coverts, inclusive, but do not necessarily include the under surface of the wing. The boundary line between the upper and lower parts, on the sides of the head and neck, is indefinite, or variable, and is usually indicated in each particular case in the description of a bird. (3) The Pileum includes the forehead, crown, and occiput. (4) The Foreneck includes the chin, throat, and jugulum. (5) The Sides, in the comprehensive sense of the term, include the flanks as well as the sides proper. (6) The Mantle includes the back, scapulars, and outer or upper surface of the wings.

The Crissum is properly that portion between the lower tail-coverts and anal region which in the figure is concealed by the primaries. When the lower tail-coverts and crissum are different in color, they are then distinguished; but when they are concolored, they are usually considered synonymous, the term crissum being used for the tract itself, and that of lower tail-coverts for the individual feathers.

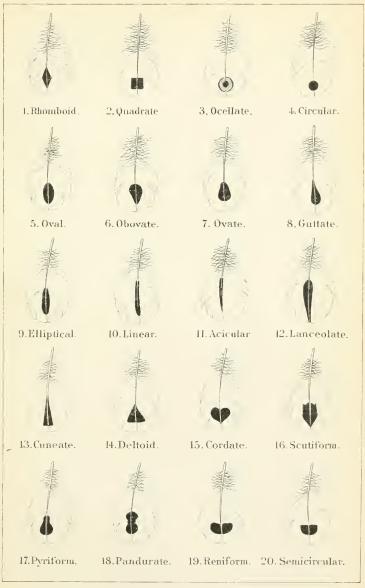

- a. An emarginated primary quill.
- b. A sinuated primary quill.

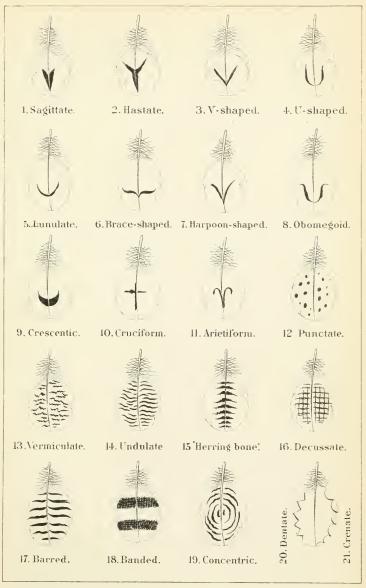

- 1. Under wing-coverts, or "lining of wing."
- 2. Under primary-coverts.
  - 3. Spurious primary.
  - 4. Axillars.
  - 5. "Bend of wing" or carpal joint.
  - 6. Carpo-metacarpal joint.

## NOTE.

The diagrams shown on this plate, in illustration of the various typical variations in the outline or contour of birds' eggs, are taken, with considerable modification, from a work on Swedish oölogy, having the following title:—

Skandinavisk Oologi. | Utbredning, Bo och Ägg af Sveriges och Norges foglar | jemte | Ornithologisk Exkursions-Fauna | af | Carl Agardh Westerland. | —— | Stockholm. | Albert Bonniers Förlag. |

(Published in 1867; 8vo., pll. 4, pp. 1-250, i-vi, 1 pl.)

## NOTE.

Pied du Roi. This standard is used in the works of Bonaparte, Finsch, Hartlaub, Schlegel, and Temminck, and also in those of most of the older French authors.

English Duodecimal. Used by AUDUBON, MACGILLIVRAY, PALLAS, and all earlier American, English, and Russian authors.

English Decimal. Used by BAIRD, and most recent American, English, and Russian authors who have not adopted the metric system.

Metric System. Most modern authors, except those mentioned above.

Naumann uses "Leipziger oder gewohnliches Werkmass." The Leipzig foot = 0.9275 English foot, 0.2827 metre, or 0.8703 French foot.

The foot used by S. Nilsson and other Swedish ornithologists is 0.9742 English foot, 0.9141 French foot, or 0.2969 metre.

The Rhineland foot (which is the same as the Prussian, Rotterdam, and Danish foot) is frequently used by the earlier German authors. It corresponds to 1.0298 English feet, 0.9663 French foot, and 0.3139 metre.
